“Rich is relative,” said Pallida. “But yes, quite rich. That’s the advantage of age, if you stay on your toes.”

“Nothing compared to Amaryllis, of course,” said Bethel, appearing beside us as we walked up.

“Hells, can you give some warning when you’re about to do that?” asked Pallida. She’d almost dropped the load, and I had to wait for her to get her bearings again.

“Amaryllis has as much wealth as the rest of us,” I said. “Maybe she was rich before her fall from grace, but not now.”

“She lends her wealth quite magnanimously,” said Bethel, though there was sarcasm dripping from her voice. She was back in her normal form, a slender woman nearly eight feet tall wrapped in gossamer robes, with skin the color of cedar. It was a relief that she didn’t look like Tiff anymore. “A fair fraction of your entads are keyed to her, invested by her will. She could retract them with a thought, should she desire. Beyond that, and aside from whatever Anglecynn has claimed from her, she has a great many entads she owns by claim-in-fact, useless in the hands of others and profitable to her. All of them Uther’s spoils.”

“Does that piss you off?” I asked.

“That she’s the beneficiary of ill-gotten gains?” asked Bethel. “Such is the way of the world. It’s useless to be upset about.”

But she *sounded* upset.

“I knew a few of her ancestors, in passing,” said Pallida. “Shitheels, the lot of them. Same goes for the current crop.”

“I won’t be so easily wooed as that,” replied Bethel. I glanced back for long enough to see her wearing a smile, shortly before she blinked out of existence again.

We placed the crates down in Pallida’s new room, which was in the same style as most of the rest of the house, tall and ornate. The windows were stained glass, which served to make the cold, bleak light from the Isle of Poran look as multi-colored and warm as the stars that dotted Aerb’s night sky.
Everything was done up in pinks, though the designs weren’t as lacy or girly as that might lead you to believe. I wasn’t so sure about whether it made sense to theme a room’s colors around a person’s skin color, but Pallida seemed to like it, and that, in turn, made Bethel very pleased with herself.

“Okay, so,” said Pallida. “First things first, I have twenty million obols,” she said, opening one of the crates. “That’s about as much money as I would like to commit to this life, but there’s about twice as much in holdings, which I could get with varying degrees of time and hassle.”

“Shit,” I swore.

“Shit?” asked Pallida, stopping what she was doing and looking up at me.

“Ah, nothing,” I said. “It’s just … some internal issues.”

“Seems like the sort of thing a new member in good standing should hear about,” said Pallida, still frozen where she was.

“Grakhuil Leadbraids is our team warder, though there’s some overlap with Bethel’s abilities,” I said. “He’s not really that interested in saving the world with us or being a continued member of the team. We had an agreement with him that once we had the funds, we would see him on his way. It’s an honor thing, a penance he needs to pay. He might be coming back, or he might not, but if we’re absorbing your money into our own, that will probably force the issue.”

“Ah,” said Pallida. She slowly closed the crate. “How do you want me to handle this? Say that I don’t have any money? Or say that he can’t have any?”

“No,” I said. “I wouldn’t want to do that to him. I’m increasingly of the opinion that it’s probably better to handle soon anyway.”

“Ah,” said Pallida. “Any other minefields I need to worry about? I’m slowly getting a handle on what everyone’s deal is, I think. Demon hunter, pretty princess, last of the druids, murder house, grumpy dwarf, and of course, the Chosen One.”

I thought for a moment. “Solace has some pretty damned obvious problems with the Second Empire,” I said. “I don’t think you’d be dumb enough to put your foot in your mouth on that one though, not if you’ve been alive for thirty thousand years.”

“It’s really not like that,” said Pallida. “I pretend it is, sometimes, to claim seniority, but it’s more like … like all the lives compound with each other and get lived through at the same time, and I can remember what my parallel selves were doing when they were exactly my same age. Younger or older, it fades off a bit. The way back lives, from the dawn of time, those are weak too. But there’s this compounding effect, because I don’t just remember, I remember remembering, and the really big things that have happened to me have so much weight to them that they’re almost impossible to ignore, since it’s the event itself, and then all the things I’ve thought about it, and my reactions to those previous thoughts.”

“You explain this a lot?” I asked.

“We’re rare,” said Pallida with a smile and a shrug. “I’d say I’ve probably said something similar hundreds of thousands of times before. A hundred times per lifetime? Maybe that’s even on the low side.” She rummaged around in the crate, before pulling up a ring. “Ah,” she said, flicking it toward me. I caught and turned it around, raising an eyebrow. “Try it.”

I slipped the ring onto my finger. “What’s it do?” I asked.
“Makes you incorporeal,” said Pallida. She looked down into the crate. “Looks like I’ve got six or seven entads here for you and your people, the ones that aren’t exclusive to me.”

“Sorry,” I said, trying to feel a mental connection to the ring, if there was one. “Incorporeal how?”

“You can make a part of your body incorporeal, so long as it’s only one part,” said Pallida. “That’s a big limiter on it, because it means you couldn’t do something like, say, reach through a door and unlock it from the inside.”

“Huh,” I said. I could feel it, now that I knew what I was looking for. I could retract my fingers from reality, allowing them to smoothly pass through my arm without resistance. It was a little bit awkward to get it to cover all the fingers, since apparently the keyword was ‘contiguous’, and it wasn’t just that I could only have one splotch of incorporeality, it was also that I couldn’t have it separating two areas of corporeality. In other words, I could make my whole leg incorporeal, but not just my knee, since that would leave my thigh and calf disconnected.

“What happens if I go full incorporeal?” I asked.

“Oh,” said Pallida, looking up. “Don’t do that. You’d fall through the floor, then down into the rocks, and then probably die of starvation or dehydration unless you had a clever trick.”

*I wonder whether there’s an achievement for that.*

“Is there a reason you weren’t wearing this?” I asked.

“Race restrictions,” said Pallida, making a face. “It only works for humans, not renacim, but it is bound to me. Happens sometimes. I have a few like that. I’m hoping that Amaryllis knows where some that go the other way are.” She stopped for a moment in her rummaging. “Can I ask you why you all call her Mary?”

“She’s supposed to be dead,” I said. “Before we became the Council of Arches, it was less of a paper thin disguise than it is now. Also, we didn’t know that she was a lookalike of Dahlia, which obviously makes her actual identity even more obvious.”

“But why Mary?” asked Pallida.

“Oh,” I said. “Fenn thought it would irritate her.”

“Ah,” replied Pallida. She glanced away. “And we were just speaking of landmines.” She pulled out a cloak, and threw it to me. “Now, this one belonged to a man named Elhart Cloakshield.”

“Swish it around and it becomes impenetrable?” I asked.

“Sniff it around and it becomes impenetrable?” I asked.

Pallida stared at me. “Is Bethel looking at my stuff and helping you out?” she asked.

“It’s from a game I ran,” I said.

“Bullshit,” said Pallida. “There are a billion entads, what are the odds that -- or wait, did your Dungeon Master arrange this, is that what you’re saying?”

“He’s not my Dungeon Master, but yes, probably,” I replied.

“How?” asked Pallida.

“Unlimited power,” I said. “Temporal manipulation, metaphysical shenanigans, memory modifications, just take whatever power you’ve heard about someone or something using on Aerb or
“Fuck,” said Pallida, swallowing as her eyes went wide. “You know, it was enough of a mindfuck when I came to accept that the world was catastrophically warping itself to make Uther into a hero. This is … I mean, I had thought that maybe someday we would find the hand of fate and actually be able to do something about it.”

“We might,” I said. “I’d consider it a slim possibility. That was a concept I toyed with from time to time.” It helped explain why the PCs were special. Most of the time, you didn’t need it, but sometimes a justification for the extreme feats that the player characters could do was fun.

“It was?” asked Pallida. “And all the stuff around Aerb is pulled from ideas that you had?”

“Kind of,” I said. “Here would typically be the part where you say that maybe I was implanted with a bunch of memories of having made up Aerb. That’s still possible, I guess, but it doesn’t seem very likely to me.”

“I wasn’t thinking that at all,” said Pallida, shaking her head. “I was thinking about the beginning of the world. I was there for it, you know.”

“Thirty thousand years ago?” I asked. “There’s some debate -- you know that, though.”

(The question of how old Aerb actually was had occupied a lot of scholars for a lot of time. According to the renacim, it was thirty thousand years old, because that was around how old they all were. It was also around where most of recorded history actually began, if you looked at the oldest accounts. There were anomalies though, places where history went a lot further back, some with appreciable amounts of evidence. Some of the species were obviously not the result of evolution, but some were, which the timeline didn’t leave enough room for. Similarly, there were mountains with more than thirty thousand years of erosion and rock strata that seemed like they’d have taken millions of years to form.)

“I know lots of things,” said Pallida. “You live long enough, you either get comfortable rehashing conversations or you go insane. But yes, I was thinking about thirty thousand years ago, when the world was shiny and new, and we didn’t have much else but language and fire. And I was thinking about a being that could draw a line from then to now with such precision that I would end up here, right where I needed to be to give you these things and lend my aid.”

“It churns my guts,” I said. “I try not to think about it, even though it’s important, because there’s not much I can do about it.”

“Sounds like a plan,” said Pallida. She pulled out a circlet. “Want this one? It lets you see what everyone else on your team sees and compensates for the sensory overload.”

“How much compensation?” asked Bethel, appearing in the room beside us.

“Fuck!” shouted Pallida. “Stop doing that!” Her armor had moved to cover her more completely, seemingly of its own volition. “One of these times I’m going to … I don’t know.”

“Kill me?” asked Bethel with a laugh.

“Yes, there are obvious problems with that plan,” said Pallida. She turned to me and said, in a whisper, “Does she have any weaknesses?”

“Not that I know of,” I said. “We’ve removed the major one, and I can’t think of what’s left. Grak assures me that the warding around this place is impeccable, which cuts off a lot of possibilities, and
the fact that she’s a warder means that you’d be hard-pressed to put up a ward to disable her.” I was quite chipper about all this.

“Have you been thinking of ways to kill me, little Juniper?” asked Bethel, cocked her head to the side and giving me a devilish smile.

“Have a plan to kill everyone you meet,” I said.

Bethel bent over cackling with laughter. “I do!” she said with a manic grin.

*Loyalty Increased: Bethel lvl 6!!*

“Do you actually have a plan to kill everyone you meet?” asked Pallida with an eyebrow raised.

“No,” I said. “I mean, sometimes we do, but it’s a rare plan that survives contact with the enemy. It was just a quote from an Earth general.” It felt weird to phrase it like that, but I thought ‘United States Army general’ was needlessly specific.

“Amaryllis is the one with plans to kill people,” said Bethel, wiping an illusory tear from her eye and still shaking off the laughter.

“Is she?” asked Pallida, suddenly looking concerned. “She seemed more level-headed than that.”

“I’m not sure that you’re treating her like a reincarnation of Dahlia,” I said. “But if you are, I should probably warn you that they’re different people. I don’t know virtually anything about Dahlia aside from what you’ve told me, but … yeah. To her, it is reasonable to have plans to deal with threats, especially given mind manipulation bullshit or whatever else. You called it Face Protocol, right?”

“Technically Face is for someone who can imitate an ally’s appearance,” said Pallida. “If you’re fighting against their *abilities*, that’s Cat Protocol, and if they’ve been completely compromised by a hostile entity, then it’s Puppet Protocol. I’m not sure if you’ve got anything similar in place, but maybe you should. We didn’t use them often, but Uther thought it was important for his inner circle to at least have basic awareness of them.”

“So I can have the circlet?” asked Bethel. She’d taken it from me and looked it over.

“You’re going to … eat it?” asked Pallida, raising an eyebrow. “I’m never going to get it back?”

“And we won’t be able to use it on missions?” I asked, though it wasn’t really a question.

“My sensorium is vast and troublesome,” said Bethel, eyeing me. “This would be the first request I’ve made since I first met you.”

I thought about that some. “It’s ultimately Pallida’s call,” I said. “I’m going to assume these entads are on indefinite loan, rather than owned by me or the group outright. If you’d like, we can set aside some of the incoming funds to go entad shopping and find something that can make you a more effective house.”

*Loyalty Increased: Bethel lvl 7!!*

“A *more* effective house?” asked Pallida, gawping at me.

“She has a few limits,” I said. I glanced at Bethel. “I’m not really concerned from an opsec standpoint, but from a personal standpoint, I think she’d prefer to choose what gets revealed about those limits.”
The loyalty increases were gratifying feedback. I hadn’t really been angling for them, but I had been trying to take Bethel’s feelings into account. I had done that in the past, to little effect, and now, for some reason, it was working. My guess was that something had changed in how she saw me, and that made it easier for subsequent loyalty increases to happen. I had no worldly idea what would happen if or when Bethel got to Loyalty 10, given how differently things had gone with Valencia.

The question of loyalty had been on my mind a lot, because of all the new people we’d brought in, none of them had pinged. I was pretty sure there was some kind of grace period involved that staved off loyalty increases until after I’d known the person for some token amount of time, since it was rarely immediate, but it really had seemed like it had been long enough for both Pallida and Raven. Pallida had pledged her life to me, after all. Still, there were no increases.

“Fine, she can take it,” said Pallida with a sigh. “Let’s give the terrifying house even more powers.”

“Thank you,” said Bethel, looking over the circlet. “You taste very nice, by the way.” Pallida froze in place, and Bethel laughed in that way she sometimes did, where the laughter seemed to come from everywhere in the house at once. Bethel flipped the circlet over once, then handed it to me. “Take it for now, I think. Someone needs to keep track of the more devious of our party members while you’re outside me.”

I took the circlet, happy for the change of heart.

“What else do you have?” asked Bethel.

“Hrm,” said Pallida. “A lot of this is just clothing, and what’s not is relatively minor. I have a hairpin that makes me more attractive,” she put it in her hair as she spoke, apparently not putting that one on offer, and indeed, becoming a shade more pretty, though she’d already been pretty to start with, “Some marbles that are paired with each other, good for recon, a dagger that tells you the name of people you stab, an infinitely extensible rope, a pair of dice that will always roll the number you’re thinking, a deck of cards that never runs out -- do you have any use for a dagger that hurts everyone in line of sight when you stab yourself?” she asked, looking hopefully between Bethel and me.

“Seems useful,” I said with a frown. “But only useful in some very specific scenarios.”

“It’s redundant for me,” said Bethel.

As it turned out, Pallida had a lot of stuff, but a lot of it was niche or useless, the kind of thing that you could maybe find some use for, but which wasn’t a game-breaker in its own right. The biggest boon among the stuff that wasn’t locked to her was armor I had already decided was probably going to Grak, an ornate affair with silver scales that apparently allowed limited temporal manipulation, which would allow him not just combat ability, but also the ability to put down wards a lot faster. Pallida also showed off a lot of her things, which she seemed quite proud of. The trick, she explained, was trying to hold onto all of it between lives, since she inevitably spent at least a few years out of commission.

“You like the hairpin then?” asked Pallida, as we were wrapping up. Bethel had disappeared, as her ‘presence’ was requested elsewhere, leaving the two of us alone.

“What?” I asked. I had been looking through a book that logged the internal thoughts of the person holding it. The words were unfortunately only visible to the person holding it, making it semi-useless for interrogation, and also unfortunately, I was sitting there reading through my own thoughts, which I didn’t really like that much. On the plus side, it was an open book, so I had a grey cat sitting in my
lap that Bethel had spawned in.

“You’ve been looking at me more, since I put it in,” Pallida explained with a smile. “Always fun to see how people react.”

“Ah,” I said. “Sorry.”

“Don’t be sorry,” Pallida shrugged.

“I was actually thinking about Amaryllis,” I said. I flipped through a few pages of the book, until I found the passage of disjointed internal narration. Right there, right after I’d noted that she was, in fact, prettier, I’d had a stray thought about whether Amaryllis would think the same, and then a long passage that I’d done my best to steer my thoughts away from. Confused emotions, mostly.

“She’s certainly pretty,” said Pallida, making a non-committal noise. “The two of you …”

“Not an item, if that’s what you’re thinking,” I said. “Fenn … she was, ah.” I swallowed and tried to clear my head. I was sure that if I looked down, I would see ‘true love’ written in the book, followed by scattered thoughts about how true it had really been, and no, ‘true love’ wasn’t a concept that I had ever believed in, but it was a feeling that I had for her, as though it was true, even if it wasn’t. I decided that I really didn’t like the book. “Landmines, as you said.”

“Ah,” said Pallida. “So there’s not anything that I need to worry about with Amaryllis?” she asked. She had a hopeful look on her face.

“There’s some personal stuff,” I said. “Things we had to work out together, or, um,” I tried my best to be a better person than I had been in the past. I owed that to Fenn. “I don’t think I should be the one to tell you. If or when you ask her about it, just let her know that I said I wanted to respect her privacy?”

“Cryptic,” said Pallida with an eyebrow raised. “But okay. Sorry if I’m stepping on toes.”

“It’s fine,” I said. “Better than stepping on landmines. Just … weird to be asked about, I guess. I’m going to go check on the others, since it looks like I’ll be gone with Raven a few days.”

When I stepped out into the hallways, Bethel was waiting there, leaning up against the door and looking like Tiff, still wearing the same ‘Kansas Swim’ t-shirt.

“Ah, young love,” she said.

“Did you pick that form just to make things difficult for me?” I asked.

“This?” she asked, looking down at her body. “A bit,” she said. “If you ask nicely, I’ll change into something else.”

“I was actually just wishing that I could talk to Tiff,” I said. “There’s a lot that I’d want to say. She gave good advice, most of the time.” I shook my head. “But right now, being swamped with more of the past isn’t really something that I can handle so well.” I started walking down the hallway, and she accompanied me, still not changing.

“How do you think I feel about having Raven here?” asked Bethel.

“She’s here at your pleasure,” I said. “We can eject her and either send her down to the village, or if that’s not enough, across the sea to a hotel in one of the Ha-lunde cities. I was planning on leaving tonight though, so we’ll be gone soon enough.”
Bethel made a ‘harrumph’ sound. “I understand,” she said. “I don’t need her to leave, but I’m still unhappy about her being here.”

“I know,” I said. “I’m sorry.”

“I suppose I’ll content myself with frightening her from time to time,” said Bethel. She blinked out of existence and then right back in. A smile crossed her face. “Ah, that was a good one.”

“What was it?” I asked.

“Oh, just a flash of myself in the corner of her eye,” said Bethel, still smiling. “Heart rate up, pupils dilated, hairs standing up. I’ll admit she’s keeping her cool, but I can read the fear response of all but those trained by the Elon Gar.” She looked at me. “You’re not upset by it.”

“I’m,” I began, then stopped. I wished that I’d held onto the book that gave internal narration. Maybe it would have helped me get my thoughts in order. “I am upset by it, but I also get it,” I said. “I don’t think that Raven really deserves it, and I don’t think that you should do it, but I really do empathize with that impulse. I understand it. I told you that, back when we first met, but you brushed it off as manipulation or something.”

“If I had known how socially inept you were, I would have believed you,” said Bethel with a laugh.

“Your Loyalty has gone up, by the way,” I said.

“Has it?” asked Bethel, her voice still light and airy. “I had wondered.”

“I just thought that you should know,” I said. “After everything with both Fenn and Valencia, I’m far less concerned that Loyalty is essentially mind control, but that also means that it’s not really a measure of trust either, so … I don’t know. I just wanted you to know, so you could be prepared for the game to throw something at you.”

**Loyalty Increased: Bethel lvl 9!**

“If I find out you don’t actually care for me, I’ll cut off your penis,” said Bethel, reaching forward to poke me in the chest. We’d arrived at Grak’s room some time ago, and were just standing in front of it. “I know how fond you are of it.”

I smiled slightly. “You know, I complain about Aerb a lot, but this is the first time someone has threatened to cut off my penis. So, congratulations on being the first.”

“I’m very serious,” said Bethel, staring at me with Tiff’s eyes.

“Sure you are,” I said.

I felt her grip me, *there*, quite firmly, just for a moment.

“Ah,” she said as she backed away slightly. “That wasn’t the reaction I was expecting.”

“I loved Tiff, a lot, and you’re wearing her body,” I said. My face was flushed. “Look, let’s forget that this was ever a thing.”

“Oh, well that might be hard,” said Bethel, “Because I just told everyone in the house.” She had a wicked smile on her face.

I stopped and stared at her, not knowing what the hell I was supposed to think about that.
Bethel cackled again, her booming laugh seeming to echo through the halls.

“I’m kidding, of course,” said Bethel, watching me closely.

“Okay,” I said, shifting around. She’d thrown me far off-kilter. I pointed at Grak’s door. “I do need to speak with him for a bit. It would probably be better if you weren’t ‘there’ for it.”

Bethel watched me for a moment, then transformed, from Tiff back into the form she’d been wearing for the past month. “I’m sorry,” she said.

“Forgiven,” I replied with a wave of my hand. “I get your sense of humor.”

**Loyalty Increased: Bethel lvl 10!**

**Companion Passive Unlocked: Full House!**

“One sec,” I said.

“Oh,” said Bethel, eyes wide.

**Full House:** Bethel knows the location of every entad inside her, even if she wouldn’t otherwise. Bethel can use the powers of any entad inside her, so long as it remains inside her.

“Huh,” I said, opening my eyes. “You got a perk.”

Bethel let out a laugh of pure joy and leapt up into the air, then flew down the hallway like a banshee. I was vaguely aware of the feeling of my house moving under my feet, but before I could move or even question it, she had returned to me, blinking into place in front of me.

“I’m invincible,” she said to me. There was something brilliant in the way her eyes sparkled, this towering woman looking down at me like I was the light of her life. “I don’t have to eat them anymore, I can just borrow them, and I don’t have to take their senses,” she said. “The things I can do now, I --”

She stopped short, then blinked out of existence.

“Bethel?” I asked the empty hallway. “Are you okay?”

There was no response.

<Bethel?> I asked again. I could feel the connection still there, the conduit that I would use to speak to her, but there was no response from the other end.

I tried to mentally take stock of all of the entads we had in the house. If we equated Bethel’s absorption of entads to ‘eating’, then this new version would be ‘tasting’, or maybe just holding them in her ‘mouth’. Could some of those have been poisonous to her in some fashion? I hadn’t been given a brief on what all of Raven’s entads were, and it was hard to tell with warding alone, but for the others --

It suddenly occurred to me that there was one sentient entad in the house, one that I customarily wore around my waist, but was sitting in my room at the moment. There was nothing about Ropey that would put him at risk, I didn’t think, but it was still a little worrisome.

I knocked on Grak’s door.

“Come in,” he said.
I stepped into his room. The fire was going in his fireplace, and he was sitting on the edge of his bed, staring at it. His bed was low to the ground, befitting his stature, and the walls were hewn rock. I wasn’t entirely sure that Bethel’s stylistic choices suited him; after all, he hadn’t really liked being a cave dwarf, and giving him a reminder of home didn’t seem like something he would want. Then again, maybe he had requested this.

“Hey,” I said. “Bethel hit Loyalty 10, which gave her the ability to use any entad in the house without having to eat it. She seemed really happy, but then she went silent. Can you see anything?” I spoke Groglir, which I tended to do when we were alone together.

Grak frowned and looked up slightly, at the wall. “I can see that there’s been a change, but can’t tell you much more. She’s always been wide-spectrum.” He resumed looking at the fire.

“You okay?” I asked.

“Fine,” said Grak. He looked over at me. His gray he’d used to dye his braided beard had faded. I wondered when that had happened, and tried to think back. While he was in the time chamber, maybe? It made me a bit sad to see.

“Did you pick the decor?” I asked.

“No,” said Grak.

“Ah,” I replied. “You could ask Bethel to change it, if it bothers you.”

“It’s fine,” said Grak. He returned to looking at the fire.

I frowned a bit. Given whatever mysterious thing had happened to Bethel, I probably should have been making my way to Amaryllis, because she would certainly want to be informed, but I didn’t want to just leave Grak here by himself, not if this was the kind of mood he was in. I was pretty sure I’d been in that mood before. People would ask me if I was okay, and I would lie to them, because I didn’t think that they could help me.

“Can I sit?” I asked.

“Suit yourself,” Grak replied.

I sat down on his bed, right next to him. “Pallida brought some money with her,” I said. “A lot of money, actually, more than I would have thought she would have, but I guess that she’s been a thief for most of her lives, and accumulated a lot.” I looked over at him. He was still staring in the fire. “I was thinking that maybe after we had some room to breathe, we could go to Darili Irid together, with a thousand pounds of gold.”

Grak turned to look at me. “Hrm,” he said, then looked back at the fire.

“Did something about the meeting bother you?” I asked.

“No,” I said. That stung a little bit. I had hoped that we were past all that, but apparently we weren’t. Maybe it was just a bad day for him. “Look,” I said, then stopped, because this was one of those situations where I really didn’t want to put my foot in my mouth. “I care about you, and I want to support you,” I said. I put my hand on his shoulder. It felt a little awkward, but I had always been weird about physical affection with other guys. “If there was something at the meeting that bothered
you, I would rather we talk about it than just letting it simmer.”

Grak kept watching the fire. I wondered how long he’d been doing that before I had come in.

“I envy the way you are with Amaryllis,” said Grak.

“We fight a lot,” I said. “She’s not happy about me leaving for the Library alone.”

“You’re partners,” said Grak.

I wanted to say that we were all partners, but I knew that wasn’t actually true.

Arthur gave a shit about things. It was one of the things that set us apart from each other.

He’d pressured me into mock trial with the argument that it would look good on a college application, that I liked the law, and that we would be able to spend more time together outside of our games. I had eventually relented, and halfway through the first meeting, had started regretting it.

After it was done, and I was supposed to be going through the facts of the case on my own, Arthur came over.

“Floating islands again?” he asked, looking down at my notepad.

“Yeah,” I said, staring at the legal pad. I wasn’t sure when I had gotten in the habit of taking notes on legal paper, but it had been a thing for a while. “Just trying to figure it out, I don’t know. It’s the pastoral thing again, Stardew Valley.” I didn’t really need to tell him more than that. We’d talked enough that he got it.

“Sorry if you’re not having fun,” said Arthur.

I noticed the if there, giving me an out, so I could lie and say, ‘no, no, I am having fun’.

“It’s just not really my thing,” I said. “I was sitting there while everyone was talking and just felt adrift, like I was floating through it all with only a vague understanding of what was actually being discussed.”

“Floating?” asked Arthur. He pointed down to a doodle. “Hence the islands?” There was something that I found irritating about the way he said ‘hence’.

“Oh,” I said. “Yeah, I guess.” I frowned at the paper. That wasn’t really it though. I’d wanted a place that was simple, confined, warm, and cozy.

Arthur frowned. “Let me know if you need anything,” he said. “I can go over the case with you for a bit. The big thing is having a testimony that fits the facts as presented here, one that you can answer all the questions about on cross.”

He walked over to talk to someone else, and I looked down at my legal pad, wondering how much I was going to keep up the charade of caring about something that didn’t really interest me.

“You don’t want to save the world?” I asked. “There’s no judgment there,” I quickly added.

“There’s an old legend about a dwarf who was cursed to mine forever,” said Grak. “Every day he gripped his pick-axe and dug a little deeper. Every day the gods would fill his hole back in. I see the future stretching out before us, and it’s not a future I have any enthusiasm for.”
“Yeah,” I said. *But odds are we’ll all be dead before it gets too monotonous.* “Can I ask what you would want, if you could have your choice of future?”

Grak’s lips twitched, as though he had a quick answer, but he stayed silent, staring at the fire.

“Oblivion?” I asked.

Grak glanced over at me and then back toward the fire.

“It took me a long time to see why you might have been happy for Fallatehr to alter your values,” I said. “I get it now.”

“Congratulations,” said Grak.

I winced again. I wasn’t saying the right things. I thought I’d been doing pretty well with Bethel. I was failing to help Grak though, and frankly, he needed me much more than she did.

“You can speak up, when we’re all in a group like that,” I said. “If you think that would help with feeling like you lack power, or purpose, or companionship, or whatever.”

“No,” said Grak with a sigh. “I don’t think it would help.” He still wasn’t meeting my eyes.

He was in a truly foul mood. I still had my hand on his shoulder, and I wanted to do something for him, but I had no idea what to do. He was reminding me of similar moods that I had been in, similar conversations where I had been on the other side, unreasonable and wanting to sulk.

“Magoron,” I said. “The dwarf from the train. Did you ever end up sending him an invite?”

“He wanted to fuck. Nothing more,” said Grak. Groglir had a fair number of words for sex, and he’d chosen to use the most vulgar of them. It called to mind two sopping wet cloacas, both ripened and pressed up against each other. I had no memory of having ever learned the word, but the Language skill point must have added it to my vocabulary.

“You got a response back then?” I asked.

Grak nodded. “He was apologetic. Kind.”

“When?” I asked.

“I got the letter this morning,” said Grak. “It was foolish to invite him here. Desperate.” He said the word like he was tasting it, making sure that it fit.

“Ah,” I said. “You know, I don’t think it’s foolish to make a try for happiness, if --”

“I am done talking,” said Grak, switching to Anglish.

*He got rejected, at a time like this.* But it was foolish, and it was desperate, to meet someone on a train and have what probably wasn’t much better than a one-night stand, then invite them to come visit you after … it was desperate, but I could relate to the desperation, that feeling of needing someone for validation, of wanting a relationship that I could cling to for some sense of purpose and worth.

“Okay,” I said, pulling away from him and standing. “I should go figure out what’s happened to Bethel anyway.” I stopped near the door as I made my way out. “You know that you can talk to me any time, right?” I asked. “My door is always open.”
“I know,” said Grak.

I felt like I had fucked things up, but I didn’t know what more I could have done. I had been on the other side of the fence so many times before, shutting down people who had come to me trying to help. I was still hurting from the loss of Fenn, but I wanted to be better, damn it, and I just had no idea how. I didn’t even know what someone could have said to have helped me, when I was like that. I didn’t know what I was supposed to say to Grak.

“I’m fine,” said Bethel after I’d shut the door. There was a precursor to her appearing beside me, a slight shimmer of warning, which I assumed was for my benefit. “I didn’t want to interrupt.”

“Thanks,” I said. “I wasn’t doing so hot in there.”

“You did fine,” said Bethel. “I should have burned the letter when it came, or at least given some warning to the rest of you.”

I looked her over, not that it would have told me anything. “Where did you go?” I asked.

“I was exploring my new abilities,” said Bethel. She raised an eyebrow and spent some time evaluating me -- showing that she was evaluating me. “I have some news.”

“Yeah?” I asked.

“Ropey and I are getting married,” she replied.
By ‘married’, Bethel apparently meant ‘I am going to irrevocably swallow him and our essential natures will merge’. There were a few equivalents across Aerb, species that would merge with each other and lose individual identity as part of pair-bonding, or who would take on parts of each other as part of the process, but it was manifestly not marriage.

“Well, we’re doing it anyway,” said Bethel. “It’s what we both want. I can take on part of him so long as he’s in the house, but he can’t do the same.”

“I’ll talk to him,” I said with a sigh, rubbing my face a bit. “Can you … would it be too much to ask to hold off on doing something that you can’t reverse until after I get back from the Library? And maybe you can talk about it with other people first, instead of just deciding between the two of you?”

“Amaryllis already gave me her blessing,” said Bethel. “I spoke to her first.”

“Really?” I asked. “That doesn’t seem like her. I would have assumed that she would have had some strategic considerations.” Namely the fact that having sentient rope is really useful and has saved my life a few times.

“I believe her considerations are strategic,” replied Bethel, smiling a bit. “She wishes to temper me and thinks that Ropey would be a good influence on my makeup.”

“Ah,” I replied. “That does sound a bit more like her.” I was trying to think about the philosophical, moral, emotional, and intellectual issues inherent in Bethel taking in another sentient entad. “Do you even want my input?” I asked.

“Not particularly,” said Bethel, with a nonchalant air.

“Well … thanks for telling me before doing it,” I said. “I do appreciate that much. I’ll miss him.”

“You’ll miss him like you would miss having a dog,” said Bethel.

“I have a tendency to let people fall by the wayside when they’re not directly promoted to my attention,” I said. “It’s one of my worst habits, I’ll admit that.” I swallowed. “So am I going to attend a wedding before leaving for the Library?”

“We will wait,” said Bethel, frowning slightly. It occurred to me that it was entirely possible for her to be in conference with Ropey at the same time that she was talking to me. I didn’t know how many conversations she could hold at once, especially with her expanded scope, but my guess was that it was more than one.

“Thank you,” she replied, but it was a fairly frosty response.

I had no idea what I was supposed to think. Maybe the whole thing would have seemed less like it was coming from nowhere if I had spent more time trying to get at what Ropey thought about things, or if I had a better handle on Bethel. I had tried, with both of them, but not gotten anywhere, and there was a limited amount of social labor I was willing to put in when I was getting nothing back in return. With Ropey, the problem had largely been that he would respond with the sentient rope equivalent of “k” or “yeah”. With Bethel, I think it was some inherent suspicion of me, which had only recently broken down enough that she could take me at face value.
I gave an internal sigh, then went to go find Raven.

Amaryllis was dead-set against me going alone, naturally, but I had already come up with all of the objections that she was ready to use, and so her arguments didn’t really land that well. We’d had it out when I first said I was going, then again in the common room, where she was sitting with Raven.

<Is this because of Maddie?> asked Amaryllis, using the thought-speak channel instead of saying it out loud.

<No.> I replied. <But not having everyone constantly around seems like it might be better for getting some answers from her.>

“You’re using the other channel?” asked Raven, looking between the two of us.

“Yes,” I replied. “Sorry, it’s not incredibly sensitive, but Amaryllis felt the need to check whether I was speaking carefully.”

“I see,” said Raven with a short nod. “Well, we can leave for the Library at any time.”

“Juniper, if you’re going, you’re going in as well-equipped as you can possibly be,” said Amaryllis. “With the funds that you said Pallida is bringing in, we could get a few of the more expensive tattoos, or make a trip to one of the major cities for an entad auction.”

I held my tongue. I was pretty sure that this was a stalling tactic, a way to get more time so she could convince me not to go, or convince Raven to take more of us.

“I think I’ll be fine with what I have,” I replied. “That goes double if I don’t have to be watching out for everyone else.”

“And what if you level up?” asked Amaryllis. “There would be no one to put you back the way you were, and no one to save the librarians from you.”

“I actually had a thought about that,” said Raven, clearing her throat. She pulled some papers from her satchel, and when I glanced at them I realized that they were her copy of my character sheet. “Here,” she said, pointing to one, “Spirit.”

“We don’t know what that one does,” I replied. “It’s meaningful to you?”

Raven nodded. “I believe it to be the same skill that Uther used to make knowledge of the Outer Reaches safe for us.”

“But you said that all the masters who might teach me were dead,” I replied slowly. “And I’m not clear on what this secret skill was. I can’t use the skills until I have some base level of learning and competence.”

“Uther described it as a companion or counterpart to soul magic,” said Raven, shifting in her seat. “And to answer your second question … it’s not something that we often use the Library for, but it’s possible that you might be able to learn Spirit from a book. Uther did that, more than once.”

“A counterpart to Essentialism?” asked Amaryllis, furrowing her eyebrows. “In what sense, specifically?”

“That was never entirely clear to me,” said Raven. “Uther had hoped that the art would die with him. He found it nearly as abhorrent as he found soul magic. He said that if a person’s soul was a rock,
then their spirit was water flowing over it. If the soul was etched in a book, then the spirit was the pen that wrote that book.”

**Quest Accepted: As the Spirit Moves You** - There are no spirit mages left alive. The art has been dead for some five hundred years, and Uther was the one to kill it. Though the books have all been destroyed since long ago, there is one place where books can never be entirely removed from. Once you find the entrance to the Infinite Library, you might be able to find the lost power.

<Just got a quest for it,> I sent to Amaryllis. <Which means she’s telling the truth.>

<Not necessarily,> replied Amaryllis. <Point taken though,> she continued after a moment of hesitation. <I’ll need the full text.>

“Well, it’s probably of vital importance that I find a book like that sooner than later,” I said. “I’ll add that to the list of things I need to accomplish while I’m in the Library.”

“And if you level up before you find the book?” asked Amaryllis, still insistent. “Juniper, that could very well be a failure condition.”

“I know,” I said. I rubbed my face as I tried to think. “Raven, how negotiable is your limit of one person?”

“It’s not negotiable,” said Raven. Her voice was as firm as I’d ever heard it. She looked at Amaryllis. “It’s going to be far easier to cloak a single person in some kind of excuse, but even with that aside, the Isle of Poran is demonstrably important. Removing the entire Council of Arches would change the course of history, making the predictions from the Library far less accurate. It’s better to have someone on the outside attempting to maintain stability. That’s what Uther did.”

“Everett led us to believe that your experiences with the Library didn’t turn out well,” said Amaryllis. Her lips had gone thin.

“They didn’t,” said Raven. “Part of that is that Uther was trying far too hard to shape and mold the future, and in ways that the Library reacted negatively. That’s one of the reasons that I want it to be Juniper alone. From everything you’ve said, he’s the single most capable of you.”

“That’s not true in terms of raw power,” I said. “But I suppose that doesn’t equate to ‘capable’.”

“He’s also vitally important,” said Amaryllis. “You’re removing the single most important person from future history. That won’t have impacts?”

“It will,” said Raven. “It always did, when Uther went in. But if we’d come in with him, the world would be even more tilted than without.”

Amaryllis looked at me with something like a glare. “And how long are we supposed to wait for him to come back out?”

“Indefinitely,” I said. “I mean, logically you would want to continue on as though nothing had actually happened, because if you go into the Library, that’s what the books in the Library will show, and then there’s nothing much that we can do about it.” I turned to Raven. “Right? I assume that you have procedures in place like that?”

“We do,” nodded Raven.

“Besides,” I said, turning back to Amaryllis. “I can’t give you a report on what went right or wrong with your schemes if I can’t see them from the inside.”
That was what finally got Amaryllis to relent. “Fine,” she said. “Leave as soon as you can, then return as soon as you’ve done everything you need to do.” She paused. “Stay safe.”

“I will,” I said with a nod.

“We can leave now, if you’d like,” said Raven. “Normally I would wait for the shift change, which isn’t for another week and a half, but I think the benefits outweigh the costs, so we might as well just go directly. Do you have a large collection of books?”

“One hundred would do,” said Raven with a nod.

“Then sure, let me take you to the library,” I replied.

Our library wasn’t actually that big. We had quite a few books from Earth, and a couple dozen reference works from Aerb, but all in all, it was barely enough to fill a bookshelf, in part because many of our books were stored in the glove, and that aside, Bethel could simply grab any book from Earth we wanted with no need to have it on the shelf. The room was particularly nice though, even by Bethel’s usual high standards, with a large mahogany desk for quiet reading and a pair of comfortable chairs that sat beneath lamps for something a little more sedate.

When I opened the door, that wasn’t what I saw.

Instead, the library was cavernous, stretching forty feet from floor to ceiling, with a row of chandeliers hanging down to illuminate row upon row of books. The door I’d opened had once gone into a room not more than twenty feet across, but this one was as large as a football field. I was high up, with a staircase in front of me, which gave me a better view of it. I counted the rows, trying to figure out how many books there were, and my best guess was that there were close to a million of them. That would have been stunning, if I hadn’t been distracted by the fact that the room in no way fit within the confines of the house.

“Is this the Infinite Library?” I asked, turning to Raven.

“No,” she said, looking over row after row of books.

“Huh,” I said. At the base of the stairs there was a reading area, not too different from what we’d had in the old room. If my eye had been drawn to that first, maybe I would have realized that this was Bethel’s handiwork. “Bethel?” I asked.

“Yes, Juniper?” asked Bethel, appearing right next to me. She was looking out over the books with me with a smile on her face.

“Explain?” I asked.

“I made a new library,” she said. “I also took the liberty of adding a few books.”

“A few,” I said. “How many are in here?”

“One and a half million,” said Bethel. “I first tried to fill it with books I thought would be useful or interesting, then ensured that we would be able to check citations found in each of those books.” She pointed to the left side. “That side contains books from Aerb,” she said, then turned to the other side. “And that side contains books from Earth.”
“Wait,” I said. “How did you get books from Aerb?”

“Truly, I am the greatest house to have ever existed,” said Bethel.

<The bottle’s power allows me to greatly expand interior spaces without regards for physical topology,> Bethel said. <The books from Aerb come from an entad that Raven carries on her person, one which has a prodigious number of books stored on it. I had to use a different power to copy them into physical form, and I’m still working on getting titles on all of them, since my existing power for copying only replaced the pages of the blanks, but that takes both time and attention.> The thought-speak was fast, barely at my limit of comprehension.

“Was it wise to bring in so many books from Earth?” I asked.

Bethel frowned at me, mouth drawn. “Because you’re worried about Shia LaBeouf?” she asked.

My heart skipped a beat.

“Fuck,” I said, “Fuck, you can’t do that,” I looked over at Raven, who was looking between the two of us with confusion. “Don’t say it,” I said. “It’s a name of power.” I turned back to Bethel. “If this is how I die --”

“It’s fine,” said Bethel. “I can say it. I tested it while you were gone at Speculation and Scrutiny. It stands to reason that I wouldn’t be able to trigger it, given that I’m not a person.” She smiled at me and leaned in. “It was very nice to see you so scared.”

“Is this because I have mixed feelings about your wedding?” I asked.

“Wedding?” asked Raven, looking between the two of us.

“Perhaps,” said Bethel. “With that scare, I’ll consider us to have made amends.”

“And if Raven had said it without knowing what it was?” I asked. “We could have died, it’s not funny.”

“Oh,” said Bethel, cocking her head to the side. “You said that you understood my sense of humor.” She glanced at Raven. “Naturally I was prepared to sever her vocal cords if it came to that. I’m not an idiot.” She looked down at her fingernails for a moment, affecting boredom, even though her fingernails and eyes were both illusions. “I’ll see you around, Juniper. Stay safe.” She disappeared in a blast of smoke. Apparently she was still experimenting with special effects.

“I’m serious,” I said, looking at Raven. “Don’t say that name, or you’ll die, and if I understand it right, I’ll die too. Infohazard protocol, understand?”

“Can I think it?” asked Raven. She seemed strangely calm. “Am I in danger just from knowing it?”

“No,” I said. “Just don’t say, write, or otherwise transmit it, even with a cipher.” I resisted the urge to say something about Bethel. I was suddenly eager for her to merge with Ropey, if that was what they would both want, because it was hard to imagine she’d pull that kind of stunt if he was sharing her brain-space.

“It’s not an infohazard,” said Raven. “It’s a commhazard. Infohazards are dangerous to know, cognitohazards are dangerous to think about, and commhazards are dangerous to communicate.”

“Ah,” I said. “Just warning you. It’s not quite instant death, but it’s close.” I have a plan, and it might even work, but --
“This is one of the things that I’ve been dealing with for the last hundred years,” said Raven. Her face was impassive. “The Infinite Library contains every book ever published, or that will be published. Some small fraction are hazardous. For the most part, we’ve made it through.”

“Ah,” I said. “That … does cast a rather different light on things.”

“I don’t want you to go in blind,” said Raven. She moved past me and began descending the staircase. “I should warn you that going in direct is irregular, for special circumstances only. We’ll arrive in the Library vestibule, with the Library having undergone a full reset. There will be perhaps a hundred librarians in the vestibule with us, some having been woken up from sleep by the transition, some having lost their place whatever book they were reading, and in either case, no one is going to be happy about it. However, our other option is to go in with the shift change, which would mean waiting a week and a half, and I don’t think that we can spare the time to do that.”

Raven had made her way into the stacks and was holding a finger out in front of her like a divining rod, moving it first one way and then the other.

“But you’re the head librarian, right?” I asked. “You have ultimate authority.”

“If you’ve read about Uther, then you know he was big on consent of the governed,” said Raven. She stopped in place and pointed to a book. We were in the Aerb section, which I had noticed had books of uniform size and color, all without titles. Raven picked a book from the shelves, seemingly at random, opened it, leafed through it, then put it back. “Here is good,” she said. She looked over at me and held out her hand.

I took it and swallowed, nervously.

“Close your eyes,” said Raven. “Don’t open them until we’ve come to a stop.”

I did as she requested, and felt her tug me forward. Based on my sense of direction, we were walking directly toward, then through the bookshelves. I listened for the sound of my footsteps, then realized that I couldn’t hear them, even as I kept on walking. The world seemed like it was reduced down to simply Raven’s hand, gently pulling me along. The menu popped up, but I squinted it away. I wanted to open my eyes, but she hadn’t clarified whether it was merely a bad idea, or whether something might kill me.

**Achievement Unlocked: We’re Not in Kansas Anymore**

**Achievement Progress: Oh the Places You’ll Go (2/64)**

**Loading …**

When we came to a stop, I opened my eyes, and saw the vestibule of the Infinite Library in all its glory. My body had changed, shifting position: I was standing straight, with my arms out to the side. I lowered them as soon as I became aware of how I was standing and looked around.

There were, as Raven had said, perhaps a hundred people standing around. They ran the gamut of species on Aerb, though I noted a distinct trend toward both the smaller races (gnomes, halflings, kle’tan, tywood, and nearly twenty goblins) and the longer-lived ones (elves, lennsi, vitrics, and to my mild surprise, one of the renacim). Robes were common, but there didn’t appear to be much of a dress code, which ran counter to my expectation.

My eyes traveled past the place we were all standing to take in the rest of the ‘vestibule’. It was a huge domed room with marble columns, each of them as thick around as my house back in Kansas.
had been wide. To one side were double doors, thirty feet high, the most prominent feature of the room. On the opposite end from the doors, maybe two city blocks away, there were incongruous adobe huts, shaped like spheres with circular porthole windows. They clashed with the Grecco-Roman aesthetic of the dome itself, and the tiled floor we were standing on. Above, light streamed in through a hole in the dome, with blue sky visible next to the sun.

There was some commotion toward the edge of the group, with a handful of the librarians standing over someone on the ground. A handful of others had moved toward the doors and were opening them up.

“Xorbus, Entwell, Majom, to me!” called Raven. “Stay with me,” she said to me.

“You’re early,” said a tall, lanky man with swirls of red and green going down his bare arms. He was wearing a vest, with a bare chest beneath it. The temperature in the Library was moderate, bordering on cool, and I didn’t imagine that heating the space was remotely possible without some powerful or specific magic. He seemed under-dressed. “And you’re alone. Who is this?”

“A recruit,” replied Raven.

“Important?” asked the man.

“Obviously,” replied Raven. Her cloak twisted around her once, then un twisted itself, and she held up her hand to make three orbs appear, all of which promptly blinked out. “Diagnostic,” she explained. “My entads were out of commission.”

“Oh?” asked a woman who came up to us. “A very prepared warder, or something else?” She paused and looked between Raven and I. I tried to place her species and came up with nothing. She was a few inches shorter than Raven, and had a swell at her belly, but I didn’t think she was pregnant. Her too-wide mouth was the only sign she wasn’t bog-standard human. “You came alone, with someone new?”

“Yes,” replied Raven. She looked around the room. “Xorbus!” she called.

One of the goblins who was standing in the cluster looked over, then began jogging to us. “What’s going on?” it asked. Gender wasn’t clear to me; it had a large number of earrings, but I couldn’t really assume that meant anything, nor was ‘Xorbus’ seemingly a gendered name. I decided on female, for no particular reason. She was wearing something similar to a sarong, which came a few inches from the ground. (Goblins on Aerb had ears that stuck far out to the sides, sharp teeth, and knobbly joints that stretched out their green-hued skin. Xorbus didn’t seem like anything special in that regard.)

“What happened over there?” asked Raven, nodding toward the huddle.

“One of the piles collapsed, apparently,” said Xorbus. “Timothy and Angela had been missing for two days, and they weren’t where they were supposed to be. We were going to reset to try to get them back, but I suppose that’s moot.” He paused. “Timothy didn’t come back on reset, by the way.”

Raven grimaced. “He shouldn’t have been out.” She winced, then shook her head. “We’ll have a memorial tomorrow. In the meantime, how is Angela?”

“Broken leg, which is why she didn’t make it back,” said Xorbus. “And Timothy was healer-on-duty, which means that you’re going to need to make a call on what happens with her.”

“Exactly why he shouldn’t have been out,” replied Raven. “What was he even doing in the field?”
Xorbus glanced at the others. “He was sweet on her,” she said.

“Expeditions offer some privacy,” said the tall man. “Not the ideal place for love-making, but --”

“I’ll be sure to mention it at his memorial,” said Raven, lips thin. “His wife will be pleased, I’m sure.”

Again the three around us exchanged looks. It felt like there was a long-buried argument there, or perhaps some background information that I was missing. I assumed that Raven was being sarcastic by saying that she’d talk about his infidelity at his funeral, but it was hard to tell.

“At any rate,” said Xorbus, “Would you mind terribly cluing us in on this hulking fellow?”

I was mildly surprised to hear myself described that way, since it wasn’t how I thought of myself. If I was looking in a mirror, I would have agreed that it fit, given my musculature and height, but that wasn’t something that I thought of often, except when I noticed how much taller I was than any of the girls in my party.

“Consider it infohazardous for now,” said Raven. “I’m going to be going into the stacks to teach him, personally.”

“Teach him?” asked Xorbus. “At a time like this?”

“And go yourself?” asked the tall man. “Who is he?”

“You can call him Rakon, for now, until I know more,” said Raven. “Rakon, this is Xorbus, Entwell, and Majom.” Entwell was apparently the woman, and Majom was the tall guy. “They’re in charge of various executive functions within the Library.”

I nodded to them. They were giving me skeptical looks.

“He seems awfully well-armed,” said Entwell. “Coactus es?” she asked, the words unfamiliar.

“No, it’s not duress,” said Raven. “I told you, infohazard standards.”

“Standards,” said Majom. “But not in actuality?”

Raven let out a sigh.

“I only ask because we’ve had a freeze on recruiting for a few years now,” continued Majom. “And if you bring in some mysterious new person without consulting anyone, it’s going to raise some obvious questions about nepotism, not to mention protocol abuse.”

“I understand that,” said Raven. “I will let you know more once I know more, and once I know enough to know how safe it is to be sharing the information. It’s very complicated. Also, let Pinno know that we’re going to need access to his exclusion contingencies, particularly the Fel Seed one.”

“Did things go that badly on the Isle of Poran?” asked Xorbus with a laugh.

“Yes,” said Raven, lips pressed thin. Xorbus’ smile fell. “We’re going to have to keep tracking them.” She looked to me. “Rakon, with me please. I’ll explain once we’re out of earshot of the entrance.”

“Wait,” I said, glancing at the woman who was still surrounded by people. “You need a healer? I’m a bone mage.”
“Bones aren’t something that we keep around,” said Raven. She was watching me closely.

“That’s fine,” I said. “I’ll make do.”

I walked over to where the people were grouped up around the woman, Angela. I had a handful of bones in my bandolier, most of them from the unicorn. I also had a complement of healing fairies, but just like the unicorn bones, those were only for emergencies, a limited resource for times of need. I hoped that I wasn’t giving away too much by revealing that I was a bone mage, but I didn’t wholly agree with Raven’s policy of silence. I imagined that she was concerned about politics, especially Utherian politics. From a quick survey of the people here, perhaps thirty of them had potentially been alive during Uther’s era. I supposed they would all probably have their own thoughts on Uther, whether they had been alive then or not, especially given that their head librarian had been one of his Knights. I had to place a bit of trust in Raven’s judgment, which was an uncomfortable feeling, partly because Maddie hadn’t been an exemplar of rational thought. It was hard to divide my feelings on them.

The healing itself didn’t take long, once I had cut away some of the cloth and cleaned the wound. There were no signs of infection, at least so far as I could tell, which was the biggest risk for a treatment like this, since bone magic didn’t handle infection or disease very well.

Once it was done, Raven and I were on our way.

The books started right past the doorway, which led into a hallway that stretched up as far as the light reached. Granted, that wasn’t very far, since the library proper didn’t seem to have any light sources, and the sun coming in through the hole in the dome didn’t penetrate very far into the gloom of the endless books. Sitting to one side of the doorway was a crate, which Raven reached into to pull out a burning torch. When I looked over, it was full of the things, all merrily burning away without giving any sign that the crate itself was going to catch fire anytime soon. She handed one to me, then took one for herself.

“Do you have an initial report?” Raven asked a librarian, who was standing inside the door.

“Nothing much right now,” the librarian replied, raising an eyebrow in my direction. “We need a little more time than that. The first population sample gave us nothing too suggestive, no obvious language, subject, author, or title groupings. The library is a little more twisted than usual, which is going to make things difficult.” She eyed me again. “Who is this?”

“Need to know,” said Raven. “I’ll call a meeting in the next day or two if there’s need. We’re going in.”

“You’re going in?” asked the woman. “It’s been a few years, hasn’t it?”

“Yes, it has,” replied Raven. “We’d like some place that no one else is going. Which path takes us away from the sampling crews?”

“Left, left, straight, right, Head Librarix,” said the librarian with a short, casual bow. “Nominal directions, of course.”

“Of course,” said Raven with a curt nod. “I remember that much. We hopefully won’t be long.” She set off, and I quickly followed behind her.

“You’re different, in the Library,” I said.

“It’s hard to be in charge,” said Raven. “I didn’t take naturally to it. My appearance also makes people question me, even those who have known me for more than a century.”
“Ah,” I said. It didn’t seem to me like she’d done that good a job keeping discipline among her people, but I knew essentially nothing about management styles.

The hallway got more narrow as we walked, though it didn’t seem to lose any appreciable height. The everburning torch that we carried lit our way, not casting terribly much light ahead of us. It was funny, given how incredibly important they tended to be in low-level tabletop games, but I had never actually experienced torchlight before. It seemed like one of the things that I should have done, back on Earth, just to get a feel for it. Lord knows I’d done enough stuff like that, though I’d stopped short of taking archery lessons like Reimer did.

The first junction we came to was split five different ways, two of them with narrow staircases that I was pretty sure I would struggle to fit through, and one that looked like you would have to get down on all fours to duck beneath the archway. Everything was a little bit off-kilter, with bespoke angles. When I paid attention to it, I realized that the floor itself was uneven, just a few degrees off from being level. We took the left, which was a narrow, crooked passage, without any actual discussion.

“Okay,” said Raven, once we had taken a few twists and turns that more-or-less equated to ‘left, left, straight, right’. “We should be safe and private for the time being.” She let out a breath, and it felt like she’d been holding it for a long time. The hallway was narrow, with books crowding around us. Raven was doing her best not to make it awkward, but the uncomfortably cramped quarters made that difficult.

“Do we need privacy?” I asked.

“There are limits to what I will say when someone eager to cut off parts of my body is listening to my every word,” said Raven. Her voice was firm. “There are also limits to what I’m willing to say in front of a hopefully former non-anima with unspecified powers and one of Uther’s descendants.”

“That’s understandable,” I said, even if it was annoying. I wondered, briefly, whether or not I could take Raven in a fight. Bethel had fed us everything she could divine about Raven’s entads, and while the armor would be tough to deal with, and the cape was reactive, I would probably be able to either go for her head or use the sword’s ability to cleave through her chest while bypassing the metal. It was grim and grisly, but I had given it the requisite thought before we left. “What were you refraining from saying?”

“Uther,” said Raven. “You knew him. It’s not beyond a shadow of a doubt, but you’ve given us enough, and the things in those books … it explains some mistakes that he made, especially early on. They didn’t just call him the Poet King because of the breadth of art he produced, sometimes he seemed to have his head in the clouds, like he was a step out of phase with the rest of us. It caused problems, on occasion. It’s not something that you’ll find in any biography, but he screamed the first time he met an elf. Apparently he had gone his whole life without knowing what their teeth looked like. It makes more sense, if he truly was dream-skewered.”

“But that’s not what you were keeping from the others,” I said.

“No,” replied Raven. She took a steadying breath. “First, I can tell you the reason that no one ever found him. He wore an entad of almost absurd power, an amulet that –”

“Wait,” I said. “Can I have a guess?”

Raven stared at me. “You know it?”

“I might,” I said. “Nondetection?”
“Go on,” Raven nodded.

“Firstly, it protects him from divination magics of all kinds, most likely including the sorts of entads that you’d use to find him,” I said. That was how the standard nondetection spell worked in D&D. “But it also protects against detection by any means, including sight and sound, and probably a few more exotic methods, with the amulet itself being covered under the same effect while worn. So how did you find him then?”

“How did you know?” asked Raven.

“It was in one of my games,” I said. “I was just turning the concept up as high as it would go. Well, not as high as it would go, because there was no element of redaction, but pretty high.”

“You’re so … blunt about it,” said Raven, staring at me. “That amulet was made by forge frenzy and unknown to anyone outside Uther and the Knights.”

“Sure,” I said. “I’m sorry, but this is the reality of the world. I don’t like it any more than you do.” That probably wasn’t true. “So how did you find him, if you couldn’t detect him?”

“Second order effects,” said Raven. “The amulet doesn’t allow the detection of direct effects like light or sound, not even footprints, but it’s possible to detect the effects of those effects.”

I nodded. “Meaning … okay, if you put the amulet around an apple, you wouldn’t be able to see the apple, because you wouldn’t be able to see the light bouncing off of it, but you would be able to see that the paper the apple was sitting on was tinted red, because the red light reflected from the apple would hit the paper, and the amulet’s powers don’t extend that far.” There was probably some inherent wonkiness there in terms of definition. I wondered whether the amulet would protect against cameras.

“I could have used you four hundred years ago,” said Raven with a soft smile. “It took me a long time to wrap my head around it, and longer still to figure out some way to use that weakness to try to track him.”

“Which led you to the exclusion zone,” I said.

“Yes,” replied Raven. “And from there, he appears to have gone somewhere else.”

“Meaning that we could get into the exclusion zone only to find that he was last there five hundred years ago?” I asked. “And logically, there would be no trace of him, given how long ago it was?”

“I’m more hopeful than that,” said Raven. “The Second Empire put in some work on the exclusion zone, most of it classified. They were trying to figure out a way to kill Fel Seed, partly because they thought it was necessary, partly because they were worried about exclusion breaks, and partly because it would be a political victory if they could accomplish something that no one else had. They tried a lot of different things, but only one of them bore any fruit.” She was watching me, probably to see whether I could complete the thought, which I obviously couldn’t. “There was a dimensional survey of the exclusion zone, from a distance, looking primarily for infernal influence. What they found instead was a tunnel leading somewhere else.”

“You?” I asked, more confused than anything.

“They never found out,” replied Raven. “The project was costing money without producing results, so they stopped trying. I didn’t find out about it until we had a particularly good run at the Library and got our hands on numerous classified documents, which was a good twenty years after the fall of the Empire.”

“Twenty pages, where the majority are filled with symbolic language, the majority of the pages are bound in some fashion, and there are covers surrounding the pages.” said Raven, clearly going from some internal script. “There are some definitional issues there, specifically about what constitutes a ‘page’ or ‘cover’ in terms of material, shape, size, and topology. Why?”

“I was just thinking that if you knew about the Library, there would be things that you might do in order to prevent sensitive materials from ending up here,” I said. “That was all.”

“The Second Empire’s misadventures with the Library will have to wait for another time,” said Raven. “I’m telling you all of this because I think that it might be important to finding out what happened to Uther. I can show you the literature, if you’d like. I have the books stored in an entad I carry with me, but that will come later, unless you have any particular insights.”

“No,” I said. “Cosmology isn’t a strong suit for me, and it was one of the things that varied so much in my games it’s hard to tell what might have made the translation to Aerb.”

*A Tour of the Elemental Planes* listed twenty-eight of them: acid, base, blood, bone, chitin, clay, earth, electricity, fire, flesh, glass, gold, ice, iron, lava, light, magnetism, mist, rust, salt, sand, shadow, smoke, steam, stone, vacuum, water, and wood. There had been hundreds of demi-planes, but they were excluded back in Uther’s day. There had been a mirror dimension and a dream dimension, both excluded. There were a handful of planes which were even more entirely hostile to human life than the elemental planes, including m-space, n-space, t-space, and p-space, most of which had only been detected by exotic instruments or mathematical proofs. There were nine thousand hells and no heavens. There was an equivalent to the Ethereal Plane, but it was badly out of sync with Aerb, and you could only get there if you were a star mage. The Plane of Drift had similarly harsh requirements for access, unless you ended up there by chance, and was largely useless (its Earth origin was what Reimer had called ‘the Amelia Earhart dimension’). There were no less than thirty-seven dangerous parallel dimensions, three that were excluded, eight that had apparently been destroyed, and another twenty-six that were ‘inaccessible’, a fact that everyone seemed to accept. There were hints of alternate timeline Aerbs, though not enough hints that anyone could say that they had ever actually existed. Long story short, cosmology was fucking complicated, and there were a ton of places that Uther could have gone if he wasn’t on Aerb. Given my experiences so far, I wouldn’t have been surprised if there were another twenty places I hadn’t heard of so far. (Oh, and there was also Earth.)

“It’s one avenue worth exploring,” said Raven. “If we can figure out where that deformation in space leads to, we might know why he went, and failing that, we might be able to skip the exclusion zone altogether.”

“If I had to make one guess about where Uther went, it would be back to Earth,” I said. “So far as I know, the only magics in existence that can bridge to Earth are under the power of the Dungeon Master, whether that’s dream-skewering or the backpack he gave me, and the examples we have are one way, from Earth to Aerb.” I shrugged. “That’s as much as I know.”

“He never talked about Earth,” said Raven, shaking her head. “He had a wife here, two sons, and even if he never connected with his sons, he had *Dahlia*, his pride and joy. He had his Knights, he loved us, he had his Empire and everything that he’d built. To believe that he would have left all of that…”

“I don’t think we’re going to get anywhere with psychoanalysis,” I said. “I actually don’t think that we’re going to get anywhere by talking.” I gestured to the books around us. “Teach me library magic and we can start working.”
Raven paused, looking me in the eye, then nodded. “You’re right,” she said. “Uther always prefered action, when we were in the thick of it.” She looked at the shelves that were crowding us in. “I have to warn you that it might be difficult. One of the reasons that we’ve temporarily stopped recruitment is that the Library is more twisted and dangerous than it used to be.”

“Since I showed up on Aerb?” I asked.

“No,” replied Raven. “No, it’s been deteriorating for some time, even before that. It’s gotten far worse in the last few months though, and that, I think, we can attribute to you, or whatever phenomenon has attached itself to you.” She plucked a book off the shelf and handed it to me.

I took it, silently, and looked at its spine. Merriweather Mysteries by Nghi Thanh. “It’s in Anglish,” I said, frowning slightly.

I flipped to the inside cover and read the front matter. “Published by a company in Caledwich, but the actual printing was in Cidium, dated to 324 FE, author is Harmonian, judging by the name,” I began flipping through it, “And the book itself appears to be a collection of detective stories. One hundred and seventy-two pages,” I closed it, “Red cover, made from linen wrapped over cardboard, I think.”

“Good,” said Raven. “And how do we know that it belongs there?” she asked, pointing at its empty spot on the shelf.

I stared at it. “There’s a schema,” I said. I looked on either side of the gap, at the titles for the others. Both were languages that I didn’t speak. “In a typical library, it would be similar subjects clustered together, then with ordering by either author or alphabetically by title.” I looked at the books around us. “But naturally this is the Library, with all the books ever written, so it can’t be that simple.”

“All the books ever published,” said Raven. “Written would be a different story. Publish, in this case, meaning at least two copies issued for consumption. It’s a very low bar.”

I tried to do some math in my head. “How many books are in the Library?” I asked. “I know it varies from future to future, so I suppose I’m asking how many historical books are in here. Even if I ballpark it at a million a year, which seems high, that would be what … five hundred million?” I thought about that, in the context of how far we’d walked, how many intersections there had been, and the way that the ceilings had been, for the most part, higher than I could see. If the library that Bethel had made was a football field, then the ‘Infinite’ Library should only be five hundred times larger, and that was at an upper bound.

“Your math is off,” said Raven. “And that’s because we’re using different definitions of ‘published’. When you say it, you’re likely referring to the book as entity, some collection of sigils which happens to have been put onto paper. Yes?”

“Yes,” I said slowly.

“When I say ‘published’, I mean the specific act of putting those sigils onto paper,” said Raven.

“You mean … printed,” I said.

“No,” sighed Raven. “Printing is the physical act, publication is issuing for consumption. The Library contains all books that have been or will be published.”

“It contains copies,” I said, with understanding dawning on me. That bumped up the number of
books in the Library by a factor of a hundred, maybe even a thousand. Hells, maybe even more.

“Wait, or probably not copies in your parlance, they would be, um, instances, right?” I looked at the gap again, the place that I had taken Merriweather Mysteries from. “Except that you said ‘publish’ meant at least two books, and this one doesn’t have a partner.” I looked at the shelves around me. “None of these do.”

“They do,” said Raven. “They must. It’s one of the laws of this place. Unfortunately, one of the more consistent aspects of the schema is that the positioning of the books is dependent upon print order.”

I frowned at that. “So,” I said, looking over the books. “All of these books would be, say, the two hundred and twenty-eighth of their print run?” I asked.

“Unlikely,” said Raven. “The schema is rarely that simple. The Library is too tangled these days. It just reset itself, and we need the new schema, but in the past a book’s position in the Library might be encoded by a multiplication of the first author’s middle initial, the print order, and the date of printing, with any duplication being resolved through some other similarly bizarre identifier or combination of identifiers.” She sighed as she looked over the books.

“Ah,” I said. The book in my hands was starting to feel a little bit heavy. I slotted it back into place. “I can see the problems,” I said. “You have no way of knowing where any given book is, even if there should be a thousand copies of it, and decoding each new schema must be maddeningly difficult work.” I paused. “Except that there’s Library Magic, etched on my soul, which must be the reason that it’s possible for the Library to provide any information at all outside of just randomly grabbing books off the shelves.”

“Yes,” said Raven, nodding. “Were you this smart on Earth?”

“No, and I’m not that smart,” I said. “It’s just a way that I’m used to thinking.”

“Usually it takes longer for recruits to understand all of it,” said Raven.

“I have a couple legs up,” I said. Not least of which is the fact that I designed a fair chunk of this place.

“Still,” said Raven, watching me. I wondered whether she was thinking about Uther.

“Are you going to teach me library magic, or not?” I asked.

“I am,” said Raven, taking a breath. “You need to get a feel for the connections between books.” She pointed to Merriweather Mysteries again, then to the two books on either side of it. “Can you feel the similarity between these three?”

I stared at the books. “I don’t actually speak either of those languages. I have Anglish, Groglir, and that’s it.” For now.

“I’m not asking you to find the common denominator,” said Raven. “I’m asking you to feel it. This Library has chosen a schema, one that was used to place every book within it. There is a single place that exact copy of Merriweather Mysteries belongs, and it’s right there. All of that absolute order has a thrumming power to it, one that a practiced librarian can feel just standing here. Handle the books if you need to, move them around to feel the disorder of having them out of place, do whatever you’d like. I’m going to leave you here, I’ll be back in an hour or two, or I’ll send someone to find you. Don’t wander too far.”

“You’re leaving me?” I asked. “I can probably find my way back, but, ah --”
“I don’t know how long this is going to take,” said Raven. “The time after the reset tends to be the most critical, and when organization is most sorely needed. I also need to smooth over some of the disruption that our arrival has caused, and prepare for the memorial.”

“Sure,” I said. “I’ll just stay here, checking out books, I guess.” I looked at the cramped shelves around us. “What are the chances that I randomly run into infohazardous material here?”

“From a random selection?” asked Raven. “So low it’s not worth worrying about. Besides, if you practice mindful reading you should start to notice the effects before any real damage is done, at least for the vast majority of cases. There are relatively few that would just kill you outright without recourse.”

“Alright,” I said, though that was far from reassuring. I was pretty sure that if Amaryllis had been with us, she would have insisted that we run the numbers and find out how likely it was that I would die from picking up the wrong book. “I’ll be here. Hopefully I’ll be a master by the time you come back.”

“Hopefully,” said Raven with a nod. She didn’t seem like she fully believed it. I was probably going to have to grill her about the specifics of Uther’s Knack at some point, in the same way that I was going to have to grill her about a lot of things. She turned and left, with the light of her torch fading as she stepped away.

I turned to look at the books, and browsed for a bit until I saw three that were all in Anglish. The Library was dominated by Anglish, which was, after all, the native language of the printing press, the trade language of Aerb, and the official language of the Second Empire. I was grateful for that, in the same way that I was grateful that English was a hugely popular language on Earth.

_The Briars Once More, The Commoner’s Guide to Gem Magic, and Imperial Index, 5th edition, vol. IV_ were all sitting together. I had read all the books in the _Commoner’s Guide_, or at least skimmed them, which I thought might put me in a better starting place. Flipping through the other two, _The Briars Once More_ seemed to be prose fiction, and the _Imperial Index_ was something that the Second Empire had printed around the height of its power to catalog … lots of stuff, basically.

I had no idea what these three things had in common, aside from the language. Based on the front matter, they all had different dates, authors, publishers, and countries of origin. There wasn’t anything in the subject matter that was remotely similar, at least on first glance, no mention of gem magic in the index, at least not under the headings I would have expected, and from what I could tell, _The Briars Once More_ was, of all things, a fantasy novel.

I was looking at it wrong. I knew that. Raven had told me that it would be something that I would feel, rather than something I would know. It was Library Magic, not pattern analysis, though from everything that they said, pattern analysis had to play a part in figuring out each fresh new schema.

I stuck my hand between the books, trying to feel something. The soul was supposed to mediate a lot of things, and I was hoping that putting an extension of my soul between the books would help me to feel whatever I was supposed to be feeling. I’d had some luck with trying a cross-disciplinary approach before, but here, it didn’t seem to help.

I put the books back down and stared at them.

The problem was, the connection between the books could have been anything. If the books were uniquely ordered, then I was looking at the end product of that ordering, the point where whatever schema was at work thought that these books were very similar and was splitting hairs in the final stage. Alphabetical organization meant that you would sort by the first letter, then the second letter,
then the third, until finally, if you went through some alphabetical organization, three randomly selected books that were all next to each other would have gotten their position by virtue of whatever was different between them -- but the titles themselves would be mostly the same.

Here, there seemed to be nothing that the books had in common. They didn’t have a similar font or font size, so that was out, and they were different lengths, which meant --

I stopped and stared at the books.

They were different fonts and font sizes, which meant that they might be similar lengths. There was no way to do a word count in any reasonable amount of time, but from doing a quick page count and comparison of the fonts, it did seem like they might have roughly the same number of total words. Of course, that might be a proxy for something else, because if the Library was being obtuse about organization, then it could do something like counting the number of periods, or the number of hyphens, or some addition or multiplication of character counts, or it might do word counts, or average words per page, or a catalog of parts of speech, or the number of periods, and all of those might approximate to ‘length’ if you didn’t actually have the information and hadn’t done a proper survey. In fact, the number of periods --

I realized, slowly, that I had somehow fixated on that idea. It didn’t have to mean anything, people tended to fixate on the first idea that came into their head, I had seen that in action a number of times at the gaming table, but this felt different. It was just a twinge, as though the knowledge had snuck into my head from somewhere else. It was a thread that I could follow.

**Skill unlocked: Library Magic!**

**Achievement unlocked: Bookworm**

I frowned. I had just the barest taste of Library Magic, and I already didn’t like it. I could feel more clearly now the way that it was intruding into my head, placing thoughts there as though they were my own. That itself wasn’t so unusual, since I had all sorts of knowledge from various skills that hadn’t been rightfully come by, but there was something in the way the Library’s schema came to me that was entirely unsubtle.

I got up and stretched, then put the books back where they belonged. Technically, the unlock was the most important part, because I could sacrifice skills in order to boost it up to absurd levels. I wasn’t going to do that just now, especially not if I could use the librarians to get what I needed, but even if they couldn’t, I was hesitant, because it really was getting harder to get the sacrificed skills back up to what they had been. I had sacrificed Bows twice now, and even the early levels of the skill were slow to come now.

I had some time before Raven came back, so I set myself to work trying to get a better feel for the magic.

I was hoping that within the schema there would be some way to find a book written by a specific author; my guess was that there on the outside, in the future the Library was sketching out, some version of Amaryllis Penndraig had written a book for me.
It wasn’t Raven who came back, but Xorbus, the goblin. I had gotten my Library Magic up to level 8 while I was waiting, but stopped as soon as I saw someone’s torchlight joining my own.

“Getting anywhere?” asked Xorbus with a toothy smile.

“Some,” I said. “I was expecting Raven.”

“Bah,” said Xorbus with a wave of her hand. “She’s dealing with dread politics, sent me to fetch you. Ready to go back?”

“I probably could have found my way,” I replied. “I was paying attention, and we’re not too far from the entrance.”

“Ah, but if you get lost, then you get more lost, then we’ve got to send search parties out, and you can understand how that would get troublesome for us,” she said. “This place can be deadly.”

“I’m sure,” I said. “Lead the way.”

“All the books are back in their place?” she asked, peering over the shelves around me.

“Yes,” I replied.

“Good, good,” she said with a sniff as she inspected to make sure I was telling the truth. “Unlikely that it would matter, but you never know, do you?”

“I … don’t know enough to know,” I said. “I’d think that with a billion books or however many are in here, plus all the copies, you would almost never run into the situation where, if you knew the position of the book you wanted, you would find it gone.” I shrugged. “I’m not going to buck tradition for no reason though. You’ve been doing this for hundreds of years.”

“We haven’t, actually,” said Xorbus with another toothy smile. “Almost all the librarians here date to after the Second Empire. Not so long, really, especially for some of the elders.”

“So … there was a purge?” I asked. “Following the Second Empire?”

Xorbus nodded. “Come, let us talk while we walk, as the saying goes.” She turned to go, and I picked up my torch from the ground to follow.

“Two purges, actually,” said Xorbus. “Uther was the one to find the Library, you know?”

“I didn’t know,” I said. “I mean, I knew that he found it, but I assumed that there were librarians here before him.”

“Oh, there were,” said Xorbus. “They weren’t from Aerb though, unless it was in the distant past. No, these were indigenous creatures, infovores, as it happened, lanky things that crawled their way through the stacks. They didn’t even know that Aerb was a real place until Uther showed up, for you see, they had some inkling of Library Magic, but not much. It was also the first time the place had reset, so far as we know.”

“So what happened to them?” I asked.

“Well, maybe you would call it three purges, I suppose,” said Xorbus. “The Lost King didn’t kill the
existing librarians by intent, but he threw their world into disorder, and there was a civil war of sorts that he got caught in the middle of, those who cared for Aerb and those who didn’t. It’s a long story, one that only Raven knows all the details of, but it ended with not enough of them to continue their species.” She sighed. “Endlings,” she said, by way of explanation. “A tragedy, really, but they were subsisting on the books, not actually using them for any real purpose.”

“Huh,” I said. That had not been in my original design.

“Well, Uther set up his own librarians,” continued Xorbus, “‘Keepers of the Future’, he called them, but after he went missing and the First Empire collapsed, they were working with relatively little support and only a loose mandate from anyone on the outside. The Library was a secret, but not a closely guarded one, so when the Second Empire came to power, they came storming in and took things over. When the Second Empire fell, Raven showed up with a flaming sword to cleanse this place and take over.”

“Wait,” I said. “Raven?”

“She’s more dangerous than she looks,” said Xorbus. She reached out and trailed her fingers along the spines of the books as we walked. “She’d pretty much have to be, but you know what I mean. She’s more dangerous than you’d give her credit for, is what I mean, even if you’d known her for a while.”

“In terms of martial prowess?” I asked.

“All sorts of things,” said Xorbus. She glanced back at me. “Not that I’m bad-mouthing the boss, you understand? Just saying.”

“Just giving me a warning?” I asked.

“You’re armored up and wearing a sword at your hip,” said Xorbus. “That’s not the norm around here, in case you hadn’t noticed. You’re a big strong man, certainly, soaked in magic, and definitely her type, but I hope you’re not underestimating the boss, that’s all.”

“I see,” I replied.

Definitely her type?

“No, I try my best not to underestimate anyone.”

“So how did she find you?” asked Xorbus. She took a turn I was pretty sure was the wrong way. I stopped dead in my tracks.

“Isn’t it this way?” I asked, gesturing through the archway.

Xorbus stopped and looked back at me with a raised eyebrow. “Ah,” she said. “Well, I just wanted to talk a little bit longer,” she said. “Find out more about you. I thought we could take the scenic route.”

“You could have just said that,” I replied. I stood stock still and took inventory, making sure I knew where my sword was, and that my dagger could be pulled from whatever place it was plausibly hidden in. The unicorn bones in my bandolier were my trump card. “And you know that I know there were only four turns, so I would have figured it out anyway.”

“Call it a test of how perceptive you are,” said Xorbus. She didn’t look hostile. “Raven is still mum on what you’re doing here.” She snorted. “‘Infohazard protocols’, that’s a fancy way of saying that she doesn’t want to have to tell anyone. Which is exactly what makes people stop taking infohazard protocols seriously, if you ask me.”
“So, are we going back?” I asked, pointing through the archway again.

“Sure,” she said, shifting her weight between her feet for a moment. “You’re not going to tell me anything about yourself?”

“I’m placing some trust in Raven,” I said with a shrug. I let my hand fall so that I’d have to expend less effort in drawing my blade. The shelves were going to be a problem, constraining my moves, and perhaps the dagger was a better bet. “If she doesn’t want to say, then I won’t spill the beans.”

“Spill the beans?” asked Xorbus. She let out a little laugh. “I’ve never heard that one. It’s clear enough, though.”

We were still standing in the intersection. She was supposed to be my guide, but she wasn’t moving yet.

“You know,” I said. “Where I come from, if someone leads you down the wrong path, it’s to an ambush, where they’re going to mug you, kill you, or worse. Those are the vibes I’m getting right now.”

Xorbus’ eyes widened at that. “By the grace of Skaduwee, where are you from?” She hurried past me, through the archway. “You should know that’s not really how it is in the Library.”

“Sorry,” I said, following after her and still on edge. “I guess we’ll wait to see how much Raven wants to fill you all in, but I’ve had a few attempts on my life in the past couple of months.”

“People don’t fight in the Library,” said Xorbus. She seemed offended. “People don’t even raise their voice unless they can’t help it.”

“Sorry,” I said again. “It’s … I’ve had a lot go wrong for me, and you trying to lead me down the wrong path just activated a lot of those thoughts. I’ve been ambushed before. A few times, actually. Some of them I didn’t come out in one piece.” Fenn, the thought thrummed in my head.

Xorbus turned around, and I almost ran into her. “I should be the one apologizing,” she said with a quick bow. “I don’t know what you’ve been told, but the situation at the Library is very difficult right now.” She looked me up and down. “Politically difficult, not violent. How much do you know? She was here training you, that much is clear, but why she expects that to pay dividends, I have no idea.”

“I’m a fast learner,” I said.

“It’ll take you years just to feel the schema,” said Xorbus. She turned back and began leading the way again. “Perhaps you have some background in mathematics or a similar field? Unlikely, if you’re a bone mage, but you never know.”

“No,” I said. “No background in mathematics.” No specialization in Mathematics either. Who would have guessed that skill might be useful? Not that it actually was, if I could skip ahead so effectively.

“Well, mystery man, we’ll see what you can do,” said Xorbus.

We eventually got to our final turn, which brought bright light from the vestibule. Most of the people who had been there for the reset had cleared out, either into the spherical houses toward the back or into the library, but there was a small core of people standing around a large desk that must have been pulled from somewhere, looking over a handful of papers.

“Rakon!” Raven called to me, and it took me a moment to realize that was the fake name that she’d
given me. A fake name seemed like a bit of paranoia, but I’d almost shanked one of her lieutenants for being nosy, so who was I to judge? I also realized that my ‘floating’ points were still in MEN, not SOC, since I hadn’t had an opportunity to change them. Per my soul, Library Magic was KNO and INS, so I had been trying to maximize gains while I leveled it up.

“Rakon,” said Raven as I came over. “You’ve met Entwell and Majom, this is Centh, Archist, and Paul.” She gestured quickly at three people whose names I was already forgetting. “We’re going over the initial surveys and trying to establish the basics of the schema.”

“I don’t know what you hope to accomplish bringing him in,” said Majom, the tall man who had some unspecified role in running this place. I noticed that the swirls of color on his arms had changed position. “I can’t possibly know, because you haven’t given us the first clue as to who he is.”

“Save it for later,” said Raven. “Rakon, do you have any insights into the schema?”

“Um,” I said, looking at the gathered people. “Probably nothing your people haven’t already found,” I said. Everyone was watching me. “The lowest level of division first appeared to be the number of periods in the text, or possibly full stops, since one of the books I looked at had a different sort of symbol -- sorry, I don’t know the parlance, you probably have names for everything. But I eventually found two books that had a lower division, since they were equal on periods or full stops, and there the division seemed to be by number of letters in the author’s first listed name.” I shrugged. “I guess I should say first author’s first listed name, but I wasn’t able to find examples to confirm or deny what happens when there’s more than one author or no author at all, or a pseudonym or something like that.” They had been watching me: now they were staring. “I believe the level up from that is probably distance of cover from edge of page, width-wise, but I could only find one boundary area for that, which made it a little more difficult to feel.”

I looked around at the silent faces. Based on the smug look on Raven’s face, apparently I had vindicated her.

“You coached him,” said Majom, frowning at me.

“No,” said Raven, shaking her head. “This is the reason that he’s here.”

“You’re talking about a few years worth of training distilled down into a half hour, maybe less,” said Majom. “That’s impossible.”

“It wasn’t for Uther,” said Entwell. She was staring at me with wide eyes.

“Who is this man?” asked Majom, turning to Raven. “Where did you find him?”

“The Isle of Poran,” said Raven. “I won’t say more. I think it should be clear that he’s an asset to us, and I want him working with us on the current iteration, both in helping to develop our understanding of the schema, and in directing our search for useful books.”

There was an uncomfortable silence around the table.

“Young?” asked Raven.

“Yes, Head Librarix,” said Majom. Nods of assent followed that. Consent of the governed, eh? Nobody seemed particularly happy about me being there or being given a position of power, not on such short notice and with the veil of secrecy that Raven had put up. They were obeying her command though, in spite of that unhappiness.

“Then let’s keep going,” said Raven, looking down at the papers in front of them. “Rakon, we’re
building up the schema right now from the sampling reports and initial surveys. We want to establish the highest levels of organization first, then continue down until we find at least some semblance of useful structure, something that will allow us to find the most relevant books. Obviously what we care most about is the publication date, but as of fifty years ago, we haven’t seen it show up in the schema without adulteration with other variables, making it less useful.” She looked to the others. “Do we have an upper bound on date?”

“598 FE,” said one of the people who had been introduced, and whose name I had promptly forgotten. He was tall for a halfling, but still stood on a small stool to make his height roughly equivalent to Raven’s. “That’s liable to change though, once the second wave crews come back.”

“That’s a significant increase,” said Raven, frowning slightly. She glanced at me.

“You’re the one that changed things,” said Majom. “I suppose we’re not going to hear a report?” I was watching him closely, and saw the coloration on his arms shift slightly. I wondered whether that was done automatically, or whether he controlled it.

“I believe I’ve dealt with the situation on the Isle of Poran,” said Raven. “I’ve also gotten some information on the cause of the infernal threat, which I believe should be neutralized, though we’ll see whether the books bear that out.”

“Neutralized?” asked Majom. “How? And what was the cause?”

“Need to know,” said Raven.

“I’d argue that we do have need to know,” said Majom. “If something were to happen to you, that information would die with you, and if you’re going to be making more trips into the Library, then it’s all the more important that we know what you know.”

“I understand,” said Raven with a nod. “But given that this is an existential threat to the infernals, I’m exercising caution in controlling who knows what. We’re talking about no less than the complete eradication of infernals from the hells.”

“You’re worried about leaks?” asked Majom. “If there are leaks, then they already know they’re at risk, and you know that they have their own interests in keeping Aerb a safe and stable place for the mortal populations.” He glanced at me. “How much does this one know?”

“I’ll have to talk with him later,” said Raven, looking at me with a frown. “He’s only been partially read in, but he knew quite a bit before I found him. He also knew a handful of things I was ignorant of.”

“And was he connected with whatever is killing the infernals en masse?” asked Majom. “Whatever has been causing problems there?”

“Need to know,” repeated Raven. “I won’t say it again. Infohazard protocols are in effect.”

Majom had a sour look on his face, but didn’t gainsay her.

“We’ll start looking for the bigger principles,” said Raven. “When we have a better schema, report to me, or when we have more firmly identifying metrics that we can begin a search on. From the look I had in the stacks, and initial reports, we’re probably looking at one or two levels of the schema being interleaved, and given the state the Library is, I wouldn’t be surprised if there was some schema divergence. For the time being, I need to speak with Rakon, in private, then prepare some remarks for Timothy’s memorial.”
“And the staples?” asked Xorbus. “Should we start looking for them?”

Raven hesitated. “Yes,” she said. “I suppose so. Obviously they should be grabbed if anyone happens to spot them. Divert one of the second wave teams when they return.” She made a ‘come hither’ gesture to me, then turned and walked away without waiting for my response. I gave the others an apologetic look, then followed after.

“You did well,” she said in a low voice once we were out of earshot.

“Thanks,” I said. “Sorry if my being here is causing you problems.”

“There are always problems, in never-ending supply,” said Raven. “At least the current problem isn’t the imminent end of the world. 598 FE is far more breathing room than I had hoped to buy us when I left, but I hadn’t known how many of our problems would end up being connected to each other.”

“Are these political problems something I should worry about?” I asked.

“No,” said Raven. “I’ll explain more, in due time, but the fact that you’re who you are is still settling in my head, and I don’t want to say anything before it has. I’m not sure that telling the full truth about you would be the smart thing to do.”

We were heading to the spherical adobe houses. Raven’s legs were shorter than mine by a fair bit, but she was putting on enough speed that I had to hurry to keep pace with her. Her voice was level, but she seemed pissed off.

“Does it take much longer for things to settle in your head, given what race you are?” I asked.

“Race?” asked Raven, turning back to look at me with a raised eyebrow.

“Sorry,” I said. “Species.”

“Oh,” replied Raven. “In the normal case, yes, but I was one of Uther’s Knights, and that provided me with some level of compensation, especially as the years went on, until eventually I was able to understand and adapt faster than any human could. That’s less true now.”

“Alright,” I said. “I just didn’t want to make any kind of faux pas because I haven’t read up enough on your species.”

All the spherical houses were clustered together, with their shells overlapping so they shared walls. Based on the fact that some of the shells didn’t have entryways, it seemed likely that some of these ‘houses’ had more than one shell to them. Raven went to one of them and opened the wooden door, which was small enough that I had to hurry to keep pace with her. Her voice was level, but she seemed pissed off.

“Does it take much longer for things to settle in your head, given what race you are?” I asked.

“Race?” asked Raven, turning back to look at me with a raised eyebrow.

“Sorry,” I said. “Species.”

“Oh,” replied Raven. “In the normal case, yes, but I was one of Uther’s Knights, and that provided me with some level of compensation, especially as the years went on, until eventually I was able to understand and adapt faster than any human could. That’s less true now.”

“Alright,” I said. “I just didn’t want to make any kind of faux pas because I haven’t read up enough on your species.”

All the spherical houses were clustered together, with their shells overlapping so they shared walls. Based on the fact that some of the shells didn’t have entryways, it seemed likely that some of these ‘houses’ had more than one shell to them. Raven went to one of them and opened the wooden door, which was small enough that I had to duck to avoid hitting my head when I followed her.

“This is my home,” said Raven, gesturing around the place. I saw a surprising amount of plants around us, set in various pots and sitting on shelves next to the porthole windows. Most of the furnishings in Raven’s home were rustic, with clear marks on the frames and shelves where the wood had been cut with a handaxe, and obvious stitches on the blankets that covered her bed. There was a small kitchen in a separate shell to the side, with a beaten copper kettle sitting on a stove, though the kitchen area was so small I imagined that she ate most of her meals in a different part of the vestibule. The main space held her bed and a chair with a glowing orb above it, which provided most of the light. Off to one side, another, larger shell held a table with a number of chairs.

“It’s cozy,” I said.

“Yes,” replied Raven. “Made by entad, naturally, since if we had to haul materials in here you can be
assured we’d have done something else.”

“It’s nice,” I said.

“I’ve seen the conditions you live in,” replied Raven. “You don’t need to flatter me.”

“It’s not flattery,” I said. “To be honest, I find Bethel’s style to be a little bit on the ostentatious side.”

“Either way,” said Raven. She moved to what I might have called the dining room, save for the fact that I didn’t think she did much dining there. “I didn’t bring you here to talk about amenities, I brought you here to talk about your needs.” She sat down in a chair, and gestured for me to do the same.

“My needs?” I asked as I took the chair. “In no particular order, I’d like to find a solution that would allow us to release the locus from the entad it’s trapped within, I’d like to find whatever book or books Amaryllis has written me, and I want to know as much as there is to know about either finding Uther or dealing with Fel Seed. Before any of that, I want to learn the lost art of Spirit, which will help prevent me from going crazy and killing everyone.”

“Tall orders,” said Raven.

“Having seen some of the scope of the problem, I’m inclined to agree,” I said. “Half of what you were saying about the Library I didn’t even understand. If necessary, I can stay for more time, after the shift change.”

“Removing you from time apparently greatly increased the odds of Aerb’s survival,” said Raven. “Beyond that, I’m planning to leave with you, so long as I’m still wanted. It might take longer than a week and a half to get my affairs in order. Having you stay here longer is, so far as I’m concerned, probably a good thing.”

“Most of the times the world ended weren’t my fault,” I said with a faint smile. “I mean, you can’t pin them on me.”

“Certainly,” said Raven, rubbing her face. She didn’t seem to find the humor in it. “Sorry,” she said, on seeing my face fall. “We’ve been working long hours, and the time I spent within Kuum Doona was stressful.”

“I can imagine,” I said. I shifted around in my seat. “So where do we start?”

“We can start with the historical books,” Raven sighed. “Those are always easier, since their parameters are more known. As I’ve said, I have someone preparing information on Fel Seed already. We likely won’t have the books on hand, but we’ll have them indexed as completely as is feasible.”

“Meaning that you wrote down a bunch of metrics to find them better?” I asked.

“Yes,” nodded Raven.

“Any chance that you’d have indexed the Second Empire’s research efforts on the loci?” I asked.

“Possibly, but unlikely,” said Raven. “No one has had any cause to go looking for them, given they’ve been assumed eradicated for centuries. I should warn you that late into the Second Empire, it was standard practice to lace classified documents with cognitohazards.”

“What, really?” I asked. “Memetic kill agents on the front cover?”
“It was one of the ways they handled security clearances,” said Raven with a nod. “There were methods of inoculation for them, some of which have been lost to time, making those books especially dangerous. Usually they would be tucked into a designated corner on every page, rather than the cover.”

“Well, shit,” I said. I slumped slightly. “Meaning that even if I did find a dossier with everything that they learned about the loci, it might drive me insane to look at.”

“No, most likely it would kill you outright,” said Raven. “Some would induce a headache that takes a few hours to recover from and prevents reading, but for the truly secret things, they would use memes that were instantly lethal if you weren’t inoculated, or if not instantly lethal, then powerful enough to make you catatonic, with death from starvation or dehydration following days or weeks later.”

“Sure,” I said with a nod. All stuff that was part of SCP and therefore Long Stairs. Looks like more made it in from that campaign than I thought. “But you can help me?”

“How much longer do you need for your Knack to fully take effect?” asked Raven.

“Two days or so,” I said. “I should be at the equivalent of eight years experience by the end of today, and the equivalent of twelve years by the end of tomorrow. That’s a rough estimate, anyway, it’s different every time.”

“Okay,” sighed Raven. “You can handle yourself in the stacks?”

“I should be able to,” I said. I paused. “I should say, when Xorbus was taking me back, she -- she?”

“She,” nodded Raven.

“She tried to divert me away from the most direct path, as though I wouldn’t notice. I didn’t outright accuse her of taking me to an ambush site, but that’s what it felt like to me,” I said.

“That’s because you’ve lived a life like Uther’s,” said Raven. “He was like that too, in the beginning. When people try to kill you on a weekly basis, you start treating everyone like a potential assassin. It took him some time to unlearn the habit. It can sour relationships in a hurry.”

“Okay,” I said. “I just thought that you should know.”

“Appreciated,” said Raven. “Come back here once you’re done in the stacks.”

“I could use company,” I said. “It goes faster with a teacher, someone to point me in the right direction, at least once I’m over the initial hump.”

“I have too much going on here,” said Raven. “I’ll get someone to help you though. Perhaps Entwell. She’s been better about this than the other senior staff.” I assumed ‘this’ meant my sudden appearance.

“Okay,” I said. “And when I’m done for the day, maybe we’ll have a chance to talk about less serious things.”

“Perhaps,” said Raven. When I left, she was still sitting at the table, drumming her fingers and lost in thought.

“Let’s get the jargon out of the way first,” said Entwell as we walked the stacks together. We each
held one of the torches, which gave us poor light. My eye kept being drawn to the bulge beneath her blouse, which was definitely not from a pregnancy, but too pronounced to make me think of anything else. “‘Symbol’ is what we say when we’re talking about an individual representational glyph. ‘Symbol sequencing’, or just ‘sequencing’ is the order that the Library has chosen for those symbols, which these days is different each time.”

“And what does that look like?” I asked.

“Right now?” asked Entwell. “No idea, it’s part of figuring out the schema. Back when the Library was first discovered, symbol sequencing was always the same, with the order roughly mapping to what Uther called the UPA, Universal Phonetic Alphabet, with non-phonetic languages having their own, separate order to them. Languages that don’t map to phonetics are rare, but they do exist, and those languages have been used to write books, which means they’re here. During the time of the Second Empire, the Library’s symbol sequencing mutated -- mutations, that’s what we call changes to the breadth and depth of schema parameters, as distinct from a mere reset of the schema into a different configuration -- and the sequence was mathematically reordered from UPA standard, guessable if you had half of the order in place. Nowadays though, it’s essentially random.”

“So you’re saying that instead of being alphabetical, order is just totally random, but the order is consistent across the Library?” I asked. “Instead of ABCDE, it might be ADCEB?”

“Yes and no,” said Entwell. “We also have to deal with what we call ‘schema divergence’, or just ‘divergence’. Let’s say that the first-order division split the Library into books before or during 0 FE and books after 0 FE, just as an example. Well, if the schema is divergent, then it’s possible that sequencing is different for the two halves of the library.”

I groaned. “Ugh. That’s just … so unnecessarily convoluted.”

Entwell laughed. “It is. It’s the price you pay for trying to mess with the Library,” she said. “If the job were easy, or the Library were resilient, then perhaps we would be doing more out there in the real world. There’s a reason that we have a policy of non-intervention unless the world is at risk.”

A policy that both Uther and the Second Empire didn’t appear to have. “None of that jargon seems to be so bad,” I said.

“I don’t think it is,” said Entwell. “But we wouldn’t want you getting lost. And I should say that the intervention side of things has its own systems, most of which you won’t need to know about. Will you?”

“I don’t know,” I said. “I’m not here for good though. I assume when I leave, that’s going to count as intervention?”

“Depends on what you do on the outside,” said Entwell. “Majom is in charge of the Library side of intervention.” I assumed someone else was in charge of the Aerb side, enacting plans that Majom and his people whipped up.

“And what’s your specialty?” I asked.

“My title is Head Schematrix,” said Entwell with a little laugh. “We all tend to do a bit of everything though, and we have our teams to do whatever is needed at the particular moment. Strictly speaking, I’m of a high enough rank that I shouldn’t be teaching a rank amateur, but you’re obviously not a rank amateur. Beyond that, I imagine that Raven’s hoping that I’ll land on her ‘side’ if I spend some time with you.”
“Assuming that I do well,” I said. I reached out and touched the spine of a book. “Should we begin?”

“Certainly,” said Entwell. “Grab whichever book catches your fancy, then let’s go to a different section of the library. If you want to feel the differences in the schema, sometimes that’s the easiest way to do it. You can get a feel for why a book doesn’t belong in a foreign place, which gets you to higher parts of the schema. Come, this way.”

I plucked a book from the shelf, *Tales of Moderation*, then followed her, trying to feel the place of the book as well as I could.

“So you’re like Uther?” she asked. “Clearly the connection to Raven is suggestive.”

“I don’t think Raven really wants me to talk about it,” I said.

“But do you want to talk about it?” asked Entwell.

“Not really,” I said. “I mean, I don’t see as much need to keep silent, but Raven is in charge here, and it would be disrespectful to ignore her wishes, I think.”

“Fine, fine,” said Entwell. “We don’t get much in the way of visitors, as you might understand, and librarians are curious sorts, as a general rule. Besides that, of course, all the problems that come from being an insular community.” She stopped, looked at the books around us. “Here,” she said. “Tell me why the book doesn’t belong here.”

I looked around us, opened the book I was carrying, and turned the pages a bit. Books had a ‘feel’ to them, an extrasensory something that gave the sense of information being just a turn of the page away. I was quite familiar with extra senses by this point, but Library Magic was a bit weird, because it felt like the information was being subtly nudged into my head. The others were more along the lines of tacked-on awareness, things that had been grafted onto my sensorium (to use Bethel’s word).

*Tales of Moderation* -- no, this copy of *Tales of Moderation* -- didn’t belong in this aisle. It was off somehow, but when I tried to probe that feeling of wrongness, what I got back was only a number, too abstract to make sense of.

“The number is, uh, too small?” I asked.

“And what does the number represent?” asked Entwell, folding her hands behind her like a prim schoolmarm. It made the bulge at her front more prominent. It briefly occurred to me that she might be a member of the species where the females absorbed the subsentient males.

“I’ve never been good with numbers,” I replied with a self-deprecating laugh.

“Try to feel it,” said Entwell. “If you’re progressing as quickly as Raven thinks you are, perhaps you’ll be able to work it out.”

I tried to feel the number. It wasn’t *just* a number, obviously, it held meaning, but it wasn’t like feeling the widths of the pages, or the number of periods in a book, it was more mathematical than that. I teased at it, trying to get deeper into the meaning, and something clicked in my head as the number split in two.

**Skill increased: Library Magic lvl 9!**

“Oh,” I said. “It’s two numbers multiplied with each other.”
“Is it multiplication?” asked Entwell, watching me. “Or something else?”

I felt at the number again, splitting it down. “Uh, no, subtraction,” I replied.

**Skill increased: Library Magic lvl 10!**

**New Virtue: Open Book!**

I immediately closed my eyes and waited the three seconds in order to get to the Virtues tab. I was surprised by how quickly the skill up had come, but I wasn’t about to complain. Skills (arguably) improved faster when I was being actively trained, but it was hard to quantify how much that active training helped.

**Open Book: You gain an intuitive sense of all schema-relevant metrics in any book you handle.**

I opened my eyes and looked at Entwell. “Huh,” I said. “I, uh, think that I might be able to help you with the schema.”

“But where are these insights coming from?” asked Majom.

We were back at the big table, and I was touching the book with my right hand and writing with my left. I had been right-handed, back on Earth, but the Ambidexterity virtue had made it so that I used left and right without it really mattering. I still preferred my right hand, but it was on an intellectual level, not a motor/coordination level.

“I’m special,” I said. “That’s one of the reasons that Raven brought me here. I don’t know what level of the schema these metrics are important at, and I don’t know whether some of them might only be important in divergent cases, but according to what I feel, these metrics are the ones that are relevant to the current schema. It should hopefully help you narrow things down.”

“That’s not how Library Magic works,” said Majom.

“Yes,” I said. “I know. But I have this information, and I think that it might be able to help narrow things down.”

“If we can trust it,” said Majom, crossing his arms.

“Yes,” I said. “I know. But I have this information, and I think that it might be able to help narrow things down.”

“If we can trust it,” said Majom, crossing his arms.

“Sure,” I said. “I’m not asking you to take it on faith.” I finished writing down the last of the accessible metrics and looked over the list. There were forty-seven in total. I tried to think about that in terms of information theory and bits of specificity. Breaking down the books by sequence ordering meant that you were already separating them into hundreds if not thousands of buckets. Dividing them by print number would narrow it down even more. Even if there were, as a conservative upper bound, a hundred billion books, you would only need something like thirty binary splits to uniquely identify each of them, and these weren’t binary splits, they were at a much higher order than that.

But as I thought about it some more, I realized that wasn’t quite right, because it wasn’t like random generation, which very, very rarely generated hash collisions, because the metrics had almost nothing to do with random chance. The distributions were the way that they were because of printing and binding technologies, the standard power laws that governed letter distribution, languages, and author’s names, and all sorts of other things like that. Maybe you really did need that many divisions.

“It looks good,” said Entwell, peering over my shoulder. “No idea if it’s accurate, but it doesn’t seem like it’s necessarily inaccurate, and I’m sure you’ll agree that Rakon has written down things that match the information collected thus far. Otherwise you would have said something.” That last bit
was directed to Majom.

“I suppose,” said Majom.

“It probably doesn’t save you much time, no,” I said. “Since you still need to know which levels
the metrics are on and where the divergences are.”

“It’ll save a few hundred man-hours if it’s correct,” said Majom. He was staring at me, and the
colored skin on his arms was swirling.

“Hopefully it is,” I said. “I don’t really have a way to verify it, it just … came to me. I was going to
go back in with Entwell now. It was my hope that maybe I could learn a bit more before the day is
done.” The hole in the dome was letting in considerably less light.

I couldn’t decide whether Open Book was a better or worse lvl 10 virtue than the ones I’d had
before. On the one hand, saving a hundred man-hours was great. On the other hand, it was a skill
that was only really useful in this specific place, and only when the library had just reset, and all it
really did was help save on labor.

I had often wondered how balanced the skills were. The short answer was ‘they’re not’, but the
longer answer was that even the bad ones had something to them, especially as the levels increased.
At the back of my mind was this feeling that if Library Magic was only useful in this one place, and I
was only going to be here for a week, then it had better be really, really good to justify its place as
one of my forty skills. I wasn’t sure whether that was going to bear out though.

“I think it’s time we talked about interleaving,” said Entwell as we made our way back. “Though at
the rate you’re going, I almost suspect that you could tell me all about it.”

“I do have a guess,” I said slowly.

“Oh?” asked Entwell. She smiled at me. “Do tell.”

“Well, to interleave is to alternate between two things, right?” I asked.

“No,” said Entwell. “I mean, yes, in the sense that we use it, but I don’t know where you would
possibly have heard it before. An interleaf is an extra page in a book, usually blank, often a
consequence of the printing process.”

“Oh,” I said. I had no idea whether that etymology was from Aerb or Earth. Either way, I felt like I
had just given myself away. “Well, uh, I’m not sure where I picked it up.”

“You’re right though,” said Entwell. “The schema defines the order of the books, but sometimes
parts of the schema are interleaved, alternated one after the other, or in more complex arrangements.”

“Okay,” I said, frowning a bit. “So, say that you had a shelf of three hundred books, and it was triple
interleaved, the books might be, in order, 1, 101, 201, 2, 102, 202, 3, and so on?”

“If I didn’t know better, I would agree that Raven had coached you,” said Entwell with a smile.

“I have some familiarity with the concepts used,” I said with a shrug. “And I’m …” I was going to
say special. “I have certain talents.”

“Apparently so,” she replied with a smile.
I made it to the soft cap of lvl 20 before the end of the day, at which point I had an instinctive feel for the books and their place within the schema. I would still need the catalog that the librarians were in the middle of constructing, and probably a map (also under construction), but I had a good feel for the Library. I hadn’t read a single book, nor was I really flipping through them anymore, but I supposed that reading would come later on. I was eager to hit lvl 30, where, if historical precedent was anything to go by, another virtue was waiting for me, this one far more powerful than Open Book.

The hole in the dome stopped giving us any light, and it was strangely devoid of stars or moon, so the entirety of the vestibule was lit by the everburning torches and whatever light was coming from the adobe houses at the vestibule’s edge. Entwell took me to the largest of the spheres, which turned out to be a dining hall with long tables crammed inside it. I looked around for a kitchen but could find none, and in fact, there didn’t seem to be any connections to this one large room. That puzzled me for a moment, until I saw the bowls filled with a colorful pudding-like substance being moved around the tables, each of them with a large serving spoon in it. I supposed there wasn’t much need for a kitchen if that was what you were going to eat.

Entwell found us a seat at the table, with people I didn’t know, and spooned some of the goop onto my plate.

“It’s called miraculous,” she said. “The bowls can feed a hundred fifty people three square meals a day, as nutritious as regular food is and suited to any of the varied diets of the mortal species.” She grinned as she served up more to me.

I looked skeptically at the goop on my plate. The consistency seemed, from a poke of my spoon (the only utensil we were given), to be somewhere between pudding and whipped cream. The color was an off-putting bright red, almost neon. I looked around, and saw people staring at me expectantly, some of them with smiles on their face.

I was worried about poison. I had taken the bracelet that gave poison immunity, but I was still worried about poison, because if you were clever, you could probably poison your way around the entad, or set up a ward to shut it down.

Thinking back to my interaction with Xorbus, I realized that maybe I was a deeply damaged individual with no trust in anyone but my core group of companions, and even them not that much. Maybe I was subconsciously thinking of what happened to Fenn, now that I had stuck my neck out to be with these people against the advice of Amaryllis. I took a moment to relax myself and remember that if someone wanted to poison me, it probably wouldn’t be here. I had just seen the Miraculous taken from a communal bowl, after all.

I took a small spoonful of the ‘miraculous’ and put it into my mouth.

“What does it taste like?” asked Entwell with a smile on her face.

“Um,” I said, quickly swallowing down a mouthful. “Nothing much.”

“Oh?” she asked, still smiling. “Unusual, that. I’ll bet you that the next bite tastes like roast chicken.”

People were still watching me. I took another small spoonful and slipped it into my mouth, and then spat it right back out onto the plate. It hadn’t just tasted of roast chicken, it had the texture of it too.
On the plate, it just looked like the same bright red stuff, covered with my saliva.

“The hells?” I asked, looking around to the sound of laughter.

“Oh, come now,” said Entwell. “Harmless fun. It’s tradition. We didn’t even get mean with it.”

“Yet,” said a gnome sitting on a booster seat next to her.

“I don’t understand,” I said, looking at the plates around me. “It’s something different every time?”

“That’s not quite the trick,” said Entwell. She still had that same knowing smile.

“You’re supposed to be clever,” said a goblin sitting across from us. “Can you figure it out?”

I looked down at the miraculous. So, it’s a challenge then. First bite had been nothing, second bite had been roast chicken, then what would third bite be? Did the taste and feel of the miraculous change when someone said something out loud?

I leaned in close to my plate. “Chocolate,” I said in a soft but firm voice.

Entwell laughed, as did some of the others, but when I put a spoonful in my mouth, it tasted like chocolate and felt like chocolate chips.

“Close?” I asked.

“Close,” nodded Entwell.

Close, but not correct. “Ah, then it’s based on expectation?” I asked.

“Try it,” said Entwell with a nod.

I lifted up another spoonful of miraculous. I expect you to taste like … something they don’t have on Aerb. Twizzlers. I put the spoon in my mouth, and as soon as it touched my tongue, the texture and shape had transformed. I chewed away at it, quite pleased with myself, but I saw Entwell looking at me with a raised eyebrow, as though I had missed a trick.

She leaned in close to me.

“Broccoli,” she said.

The Twizzlers immediately changed into broccoli, right while I was in mid-chew, the taste completely different and texture off. For a brief moment, it was like I was eating the two together.

“Ah,” I said once I had swallowed it down. “Then it’s just whatever food you’re thinking about. You primed me with roast chicken.”

“You get half marks for deduction,” said Entwell.

“Wait,” I said. “So what happens if someone thinks about snot?”

Half the people around us began gagging, spitting miraculous back onto their plates. Entwell gave a mad laugh at that, and I heard others join her, mostly tittering.

“If that were a real infohazard, you would be dead,” said Raven from behind us. I hadn’t heard her approach. When I looked back at her, she was standing there in her robe, with it fluttering slightly behind her, arms crossed over her chest. “Everyone here should be able to eat the miraculous without
being bothered by what they hear. Words are symbols, and you should be able to dissociate symbols from meaning and prevent them from spurring trains of thought. There are cognitohazards in the library, those which slowly kill you as you think of them. You shouldn’t be spitting out your food when some new recruit talks about snot, you should continue eating while resisting the urge to think about what he said.” Her voice was hard.

The whole dining hall had gone silent.

“For a long time, this Library has been my calling,” said Raven. “It’s been the place in the world that I could do the most good. With that said, my calling has changed in the past few days. When Rakon leaves, I’m going to be leaving with him. I don’t want what we’ve built here to crumble.”

“Leaving?” asked Majom from across the dining hall. He’d stood up from his chair. “Just like that?”

“Yes,” said Raven with a firm nod. It would have had more weight if she hadn’t been so short and so young. I imagined that she had been struggling against that for quite some time. “Sometimes the pendulum of the world shifts, and we must shift with it. Once we’re past the most intensive part of the current reset, I’ll start talking with all of you individually about what roles and responsibilities might look like once I’m gone.”

She turned and walked out of the dining hall when she was finished, which caused the librarians to burst into fervent conversation. I was getting a lot of looks my way, naturally.

“What’s this all about?” asked Entwell, leaning in close to me.

I sighed. “It has to do with the good future,” I said. “I really can’t say more. I probably shouldn’t have even said that.”

“The good future?” asked the goblin across from us. “Won’t work.”

“We don’t know that,” said Entwell.

“Uther tried it,” the goblin replied. “I know he looks impressive, but this runt here has nothing on Uther. Every time Uther got a good-enough future, it turned out that the exclusions were in play, or there was something else that the Library can’t account for. Something out there isn’t going to let us have a good future.”

“So we’re just destined to be a stopgap measure until the end of time?” asked one of the librarians.

“No,” replied the goblin. “We’re a stopgap until we’ve got no support system left, until we lose too much personnel, or until the end is coming too fast for the Library to do any damned good.”

“Xenxares, that’s too grim,” said Entwell.

He shrugged and ate a mouthful of miraculous. “It’s a sensible thing to think.”

Entwell turned to me. “And you’re a part of salvation?” she asked. Her eyes were wide.

“I hope so,” I replied, because I didn’t feel like I could hold my silence in the face of the desperation on her face.

When I went to Raven’s home, she had finally changed out of her adventuring gear, with the black robe and banded mail gone, replaced with something cream-colored that looked more like a bathrobe. When I saw that her hair was wet, I realized that it was a bathrobe.
“Sorry, I dropped the ball,” said Raven. “I was going to have a home cast for you, but with everything that’s been going on, it slipped my mind. You can take my bed, if you’d like. I’ll get a change of sheets.”

“And you’ll sleep -- ah, right,” I said.

“The bed is mostly for meditation,” said Raven. “I can count the number of times I’ve slept in the last five hundred years on one hand.”

“How?” I asked. “If you don’t mind me asking.”

“I don’t actually know how,” said Raven. “It was a side effect of us being expelled from the Land of Dreams. I think that the Lord of Dreams was trying his best to make sure that we wouldn’t ever return.”

“That one’s not in the history books,” I said. “I mean, I know that the plane of dreams is excluded, but I’ve read all the most popular biographies, and there’s no mention of who or what caused the exclusion.”

“It’s not actually excluded,” said Raven. “The Lord of Dreams simply shut the usual pathways. It has nothing to do with the exclusionary principle.”

“Oh,” I said. “Well. At least you got a perk out of it?”

Raven nodded. “It was far more of a boon for me than for the others. Before that, I had used a magical blanket of Uther’s that cut the amount of sleep I needed down, but I would still be out for days at a time. Sometimes entire adventures would happen while I slept, which as you can understand, is troublesome for an archivist.” She waved a hand. “All ancient history, of course.”

“Maybe,” I said. “We sometimes take our tours through history.”

Raven frowned, then turned away from me and began stripping the sheets from her bed. “Water closet is through the kitchen, if you need it. There’s a shower with warm water too. I assume you made it through dinner without further problems?”

“ Mostly,” I said. “People talked. I asked about someone who seemed to have a disability, which I apparently shouldn’t have done.”

“Some of the librarians get hit with memetic hazards,” said Raven. “We have a few counter-memes, but they’re like firing a shotgun at someone wrestling with a mountain lion, almost as likely to kill the person you’re trying to save as to rescue them, and it leaves wounds in the psyche. Was it Reus?”

“Maybe,” I said. “It was awkward. Other than that, I tried my best not to tell them anything when they inevitably asked. I think they have their suspicions, but … I don’t know. This is your domain, not mine, and I’m trying not to step on your toes.”

Raven finished pulling the sheets off the bed, folded them up, and put them in a small basket that she pulled from a storage place under the bedframe. From a different basket, she pulled clean sheets, and began putting them on.

“I thought you would be more similar to him,” she finally said, as she was smoothing the sheets down.

“Oh?” I asked.
She turned around to look at me. “You yield,” she said. “You defer.”

“And he didn’t,” I said with a nod. “He would just barrel ahead and fuck what anyone else thinks.”

Raven frowned at the f-word. “It worked out well for him.”

“I guess,” I said. “I could point to his failures, but you knew him better than most.”

“There were plenty of failures,” said Raven, nodding. “That’s one of the things that gets papered over. People will say, with a straight face, that Uther never once lost.”

“Your father said that,” I replied.

“I keep forgetting that you met him,” said Raven. She hesitated, then sat down on the bed, settling in. “How was he?”

“Fine,” I said. “Obsessive, tried to trap me using excluded magic, kidnapped Val … maybe fine is overselling it. Amaryllis thought that he was probably obsessive because of you, and I’m inclined to agree.”

“He didn’t like me running off,” said Raven, sighing. “When I met Uther … I was twenty years into being twelve years old. It’s hard, for our species, harder than for almost any other. I was a baby for a hundred years, if you can wrap your head around that.”

“I can’t, really,” I said.

“There’s a weight that comes with time, certainly, so it’s not the same, but it’s close. To say that my father, in his forties, was watching his twelve year old daughter run off with a strange man in his twenties … well, it’s not accurate, but it’s not wholly inaccurate either.” She sighed. “It took me a long time to have any misgivings about leaving. It wasn’t until after Uther was gone, actually. My father and I reconnected a bit, but it was still strained.”

“Can I ask why you went with Uther?” I asked.

“I was a kid,” said Raven with a weak smile. “I wanted adventures, and he was at the point in his career where it was clear that was what was on offer. I didn’t track him down, like some of the others did, but we had a chance encounter in a library, and … I suppose what you’ve said puts a rather different light on things. I never did get a straight answer from him about why he took me along. I suppose he was told to.”

“Not necessarily,” I said. I cleared my throat. “It’s possible that Uther’s Knack was something different from what I have. And, ah, there’s something I haven’t said yet, which is that you bear a very close resemblance to a girl we used to play with.”

“I do?” asked Raven.

“I wish that I could show you somehow, but I’m not terribly good at art, and it would just look like you anyway,” I said. *Two years younger though.* “Her name was Maddie. One of the characters she played was named Raven.”

Raven stared at me. “Oh,” she said.

“Yeah,” I replied.

“So Uther knew who I was, when he saw me?” asked Raven. “That -- I’m going to have to think
about that.” She shook her head. “Sorry, I’m keeping you up, I’m going to go find a quiet place to read and do some work.”

“Do you want to change first?” I asked.

“Oh,” she replied, looking down at her bath robe, then up at me. “Right. Could you … ?”

“Sure,” I said. “I’ll just step outside.” I felt myself unexpectedly flustered, and slipped out of her home before I could do or say anything to embarrass myself.

It was hard to untangle my thoughts. Raven reminded me of Maddie, in more ways than one, but there were a few places that they were completely different from one another. It was hard to picture Maddie as ever being a leader, even one that wasn’t suited to the task. Maybe the difference was the point.

One of the interesting things about comparing how Arthur and I had found Aerb was thinking about whether things were meant for him or me. Perhaps Arthur’s life had been ruled by the narrative, and perhaps he’d only thought that it was, but there were kingdoms, people, and scenarios that looked like they had been constructed in order to be part of his story. But my experience of Aerb wasn’t just that of someone journeying through the remnants of someone else’s old save file, because there were elements of Aerb I was pretty sure had been crafted to say something to me, challenges that I was supposed to meet.

Had the Dungeon Master setup everything with Arthur in preparation for me to come along five hundred years later? It was possible, but I didn’t think it was likely, mostly because there was so much random bullshit through the entirety of Uther’s life that I didn’t think even a fraction of it was ever going to be relevant to me. But that meant that some parts of Aerb were made with Arthur in mind, and some parts were made with me in mind, and how could anyone tell which was which? More to the point, what about those parts of Aerb where Arthur’s experience and my own overlapped, as with Raven?

I didn’t have any idea. It seemed like it made the most sense to simply treat Raven as her own person, rather than a pawn in the Dungeon Master’s plans. That was how I tried (and sometimes failed) to treat everyone else.

“Done,” said Raven, coming out the door and startling me from my reverie. She was dressed in her cloak once again, allowing it to ripple behind her. “I think everything should be in order. Come find me if you need more.”

“Okay,” I said. “Thank you.”

“It’s nothing,” said Raven. “I use my home for meetings and little else. The room with the table has heavy wards on it.”

“Ah,” I said. I wanted to say more to her, but I still hadn’t switched over the SOC points, and that was my excuse for feeling like everything was weird and awkward. “Can I ask, did you ever have cat ears?”

Raven looked at me with a raised eyebrow. “Yes,” she said. “When Uther first met me.” She swallowed. “I’m not sure how you know that.” I didn’t know what to say to that, which she took as an invitation to continue. “I didn’t like being Ell, didn’t like feeling like I was going to be little forever when big things were happening, and so I got it into my head that I wanted to be an Animalia instead. A cat, specifically. It’s mortifying, of course, but it was just one of a string of those incidents, as it often is with my kind. We’re slow to outgrow our mistakes.”
“But you do?” I asked.

Raven smiled at me. “Oh yes. I haven’t worn cat ears in at least twenty years,” she said.

When I woke up in the morning, there were books waiting for me, and along with them, an old man with eels for a beard.

They weren’t technically eels. Male zildin kept their tadpole-like young on their face, each one of them attached to a small, nipple-like growth. Unlike a tadpole though, these weren’t actually young zildin, because they were unfertilized, and wouldn’t grow until they had been swallowed by the female of the species and incubated in her womb sac. I still felt comfortable calling them eels, because that’s what they looked like, each no bigger than a pinky, packed in tight and moving like kelp beneath the sea. The number and health of eels on a zildin male’s face said a lot about him to female zildin; too many on a young man was a signal that there was something wrong with him, while too few were a sign that he was either careless or had so many young that he wouldn’t be able to do his fair share in caring for them.

He introduced himself as Pinno, and came into Raven’s home, bobbing his head slightly as he walked, which made the eels on his face writhe around. I wasn’t an expert in zildin, despite being their initial designer, but the eels looked healthy to me, and there were a lot of them (though I didn’t know if there were too many). Eel-beard aside, he was bald, with dark blue skin and bumpy ridges where eyebrows were on a human. He was hunched slightly, with spindly arms, and had a stack of books bound together with a leather strap, carried over his shoulder, with a small cane in the other hand. He sat down at the table like he wasn’t going to be moving for awhile. I sat down across from him.

“So,” he said. “How much do you know about Fel Seed?” he asked.

I thought about that. “I’ve read his entry in The Exclusionary Principle,” I said. “That’s about it.” (This was not even remotely true.)

“Seventh,” I replied. “I wasn’t aware that it had changed much between editions.”

“Bits and pieces,” said Pinno. “I actually contributed to the first edition, long ago, the one written by the Lost King.”

I could believe that; zildin were one of the longer-lived species. “You knew him then?” I asked.

“Some,” replied Pinno. “More through his works than in person. I believe myself to have read everything the man ever wrote, even those works that never made it to the masses. Word is that you might have some connection to him.”

“I might,” I said evenly. “Right now, I’m more concerned with Fel Seed and how to beat him.”

“Yes, yes,” said Pinno, patting his pile of books. “So, seventh edition? Let’s start there then.” He slid a book across to me. “This is the twentieth edition.”

“Twentieth?” I asked as I picked it up. “Oh, from the future?”

“From a future that didn’t happen,” said Pinno, nodding. “Reset five-six-two-four. It’s written in the inside cover, along with a few details. We can be the beneficiaries of their trials and tribulations. To wit, they had the most successful attempt against Fel Seed we’ve ever seen, and that’s across
“hundreds of resets.”

“They used a combination of entads and magics,” said Pinno. “The biggest problem with killing him is that you need to kill almost everything in the zone, all at once. The entity we call ‘Fel Seed’ is in fact just an avatar of the phenomenon, capable of being ‘regrown’ or ‘expressed’ from any of the biological lacework that covers and is buried beneath the zone, from spores in the air, from his flesh beasts, or from any of his brides.”

“You have to kill the brides too,” I said.

“Yes,” nodded Pinno. “Obviously they are, so far as anyone can tell, innocents in all this, and it’s regrettable, but on average, death would send them to a gentler hell than Fel Seed’s domain, assuming you couldn’t retrieve their souls. So yes, the brides need to die, if you want to kill Fel Seed, but … you know that he breeds them?”

I swallowed and nodded.

“It wasn’t mentioned in the seventh edition, I didn’t think,” said Pinno. “It’s not a secret, per se, but around the time it became clear that nothing was ever going to be done about Fel Seed, the language started to be toned down a bit in the interests of keeping morale high.”

“Toned down by whom?” I asked.

“The editors,” replied Pinno with a shrug. “A reaction to the abject despair that some people felt over the exclusion zones, I suppose, especially that one. A sugared truth isn’t uncommon in the books of the Library, that’s one of the things that makes our job difficult.” He pointed to the book in front of me. “Would you like some time to read, or would you rather trust me to distill it down?”

“Go ahead,” I replied.

“Well,” said Pinno. “It started with a ward against Fel Seed’s magic around the entirety of the exclusion zone.” I stared at him with my mouth agape, and I could see a smile beneath his eel-beard. “Yes, impressive, isn’t it?”

“I was under the impression that five warders working at once was as much as anyone had done,” I said. “And even that takes a huge toll and can only cover, at most, a small town.” Or a mile-wide extradimensional space within a bottle. “Fel Seed’s zone is enormous.”

“Yes,” replied Pinno with a nod. “Eighty-two thousand square miles, the largest of them. They used a trick, as you might expect. The normal limitations of collective warding were surpassed by having them all submit to an entity known as Thargox, who marshalled four thousand warders together and drained them all of their concordance. Even then, the organizing authority -- the Fifth Empire, though it didn’t go by that name -- knew that it was a temporary ward, something that would stop Fel Seed from using his particular brand of magic, but which wouldn’t kill him outright. In that, they failed, and it’s instructive as to Fel Seed’s capabilities without his magic, but getting to that stage without four thousand warders and whatever Thargox happens to be is a tall order.”

“You don’t know Thargox?” I asked, raising an eyebrow.

“No,” replied Pinno. “The name appears in that text as though it’s a common enough entity or concept that it needs only a brief explanation, but we never found a full explanation in that reset, and I don’t believe we’ve ever seen another mention of it, which means that it might be something
specific to that future."

“I only ask because I met Thargox a few days ago,” I said, not sure whether or not I should share that.

“You did?” asked Pinno. His eyebrow bumps raised slightly. More disconcertingly, his eel-beard started moving around a lot more, with the eels making a fleshy sound as they slapped against each other. “Are you serious?”

“Yes,” I said. “I didn’t get much information on what it was, but I spoke with an entity by that name. It was communicating through an entad.”

“I see,” said Pinno. “Then … we could actually make that plan work.”

“Except that it didn’t work,” I replied.

“No,” replied Pinno. “It didn’t. The relevant section in that book is a chronicle of their failure. To me, it reads as a civilization saying, ‘we tried, dammit’, but perhaps it’s just the author asserting as much, to assuage his own conscience.”

“And how did it not work?” I asked.

“Fel Seed is, ultimately, biological,” said Pinno. “The thought was that with the magic suppressed, all that would need to be done was to kill everything in the zone. They brought weapons to bear on the surface of the zone, weapons that would probably have been excluded in the real world, scarring the surface down to bedrock. That might have been all well and good for cleansing the countryside, but the City of a Thousand Brides was a tougher nut to crack. I have some books here on it, classified ones from the Second Empire, but apparently Fel Seed has or had warders of his own, either captured from assaulting forces, taken in one of his ‘expansions’, or less likely, captured by cultists or cultists themselves. The Fifth Empire knew all that, so it sent in thousands of trained magi equipped with the most powerful entads they had. Fel Seed -- the avatar of Fel Seed -- came to meet them on the field of battle, moving fast, but still well within the limits of what’s possible with flesh and bone, cutting people down, but still only with the power of keratinous claws. And of course his flesh beasts joined him, but they were lesser too, only physically perfect killing machines, with none of his magic on top of that.”

I frowned, trying to picture it. A massed battle of magic users and tens of thousands of entads, all with their unique effects? In my mind, it was like someone threw all the special effects on screen at one. “And then … let me guess, Fel Seed pulled out another trick?”

“He pulled out a great many of them,” said Pinno. “There are caverns beneath Thousand Brides, visible only with the most extreme examples of clairvoyant ability. Those caverns disgorged massive armies of flesh beasts more fearsome than any seen before. Novel poisons were released from flesh-flowers, clouding the air. A large flesh-mast became erect and sprayed hundreds of gallons of acid into the sky, which came down like rain on the invading army. The army had prepared, and sealed themselves off from the outside world as much as possible, not so much as letting unfiltered air touch their skin.” He sighed. “Again, they had better magic and technology than we will likely ever have, things which would likely be excluded, but which they’d somehow managed to rein in temporarily. But no, it didn’t end up mattering that much, because they still failed. When the losses began to grow, when too many warders were dying trying to remove the wards throughout Thousand Brides, the Fifth Empire called in their ultimate weapon of last resort. They tore a hole through space and time, destroying Thousand Brides utterly and killing thousands of their own. Someone, somehow, convinced Aarde to get off his butt and confirm that there was no living thing left in the entire zone. I don’t know who got the god to owe them a favor, but that was what they spent it on.”
I frowned. “Okay … so what happened? You already said it was a failure.”

“Fel Seed came back,” replied Pinno with a humorless laugh. His eel-beard wriggled. “They had reason to think that Fel Seed would be completely dead if he couldn’t regenerate his avatar, or move himself into a new one, because the explicit magic that’s excluded doesn’t appear to come with any governing intelligence to it. Fel Seed the entity is just … well, someone or something using that magic for effective immortality and to take sadistic pleasure from the world. Even if another person came into the zone later on, once the magic was back, and began to practice it, they might turn into a monster, but they wouldn’t be Fel Seed. Only when he returned, that’s who he was, the same entity he’d always been, ready to retake the battle zone and rebuild his City.”

“But they had theories as to what happened, right?” I asked.

“Of course,” replied Pinno. “It’s hard to say whether those theories are correct though. The one put forward in that book is that Fel Seed imprinted his mind onto one of the magi, or possibly many of them, through unknown means, perhaps one of the entads that had been used in an earlier assassination attempt and claimed by him, or some other novel method. Then later, once the ward had inevitably fallen and the magic had returned to the zone, the imprinted person had simply walked back in and started up again.”

“But if he could do that, he could send out agents,” I said. “Right? If he could do that, then he could have done it before they made a giant costly attack on him.”

“Yes,” nodded Pinno. “We do know that he sends out survivors, on rare occasions, to tell the world about him. Anything he’s touched with his magic can’t escape the exclusion zone, which is one of the reasons that any attempt on his life is a suicide mission, but it’s entirely possible that the survivors are sleeper agents who are technically untouched by his magic but perverted by other means. The anolia would likely be able to detect it on screening, but perhaps not.” (Anolia was the proper name for the lizardfolk that could see into someone’s soul without actually being soul mages themselves. I had run into one of their kind back in Parsmont.)

I rubbed my face some as I tried to take all that in. “And that’s the most successful attempt anyone has ever made?” I asked. “Jesus.”

“Jesus?” asked Pinno.

“Just something I say when I’m irritated,” I replied. “Fel Seed really can’t be beat.”

“I don’t believe I ever said that,” replied Pinno. “Are you going to give up so easily? Raven had told me that you were determined.”

“I am,” I said. “I mean, I just don’t think … for my purposes, I don’t need to actually kill him, just incapacitate him for bit, and I don’t think that I can just stick a bag over his head.”

“A bag?” asked Pinno.

“Long story,” I said. “Sorry, I’m just getting unfocused here, the scope of the problem is bigger than I thought it would be, and I had already thought it would be really, really big.”

“Those are precisely the sorts of problems we librarians like to deal with,” said Pinno with a little nod that excited his eels.

“So how would you do it?” I asked. “If you had to deal with Fel Seed, or at least incapacitate him … how? He doesn’t have any weaknesses.”
“His weaknesses are unclear,” replied Pinno. “That doesn’t mean that they don’t exist. Every attempt at killing him has failed, whether it be poison, radiation, kinetics, acid, memetics, anti-memetics, attacks against his soul, if he even has one -- nothing has worked. So then, if I were putting my full effort into killing him, I would try something that hasn’t been tried in the past, or scale up efforts that seemed to hold promise.”

“Okay,” I said. I looked at the book in front of me, thinking of the failure it recorded, then over at the pile of books that Pinno had brought. “Okay,” I said again. “I guess I’ll get to reading. Show me what else you have.”
Chapter Notes

See the end of the chapter for notes

**Skill increased: Library Magic lvl 30!**

**New Virtue: Bookish Instinct!**

*Bookish Instinct:* Through focused meditation, you can learn the qualities of the book you’re looking for, so long as it exists within the library, and so long as the quality is part of the current schema. The more qualities of the book you know, the easier it is to learn more. If multiple books have the specified qualities, you will learn how many books there are with those qualities, and may meditate to distinguish them.

It took four days to get there, far longer than I had hoped, but still far faster than anyone could have reasonably expected of me. As usual, the distance between 20 and 30 was far, far greater than the distance between 10 and 20, but I was aided somewhat by the fact that I had the foremost experts in Library Magic actively teaching me, and by the fact that I was doing actual, useful library work.

Most of the first two or three days after the reset were fully devoted to the schema, working out the meaning behind the specific paths, untangling where the interleaving was occurring, and trying to find the places that the schema ‘diverged’. Once there was a skeletal schema in place, the bulk of the librarians shifted their efforts to the collection and reading of useful books. This process started with the ‘staples’, books that were almost certain to be written and published in the future and were largely consistent across timelines (and could thus be compared with one another). New editions of old books were one of the most common staples, but to my surprise, the librarians also had people writing books specifically for the Library.

“Doesn’t that hurt the Library?” I asked Raven one night. We’d begun having little chats in her home after dinner, the same as we had on my first full day, though not always focused on the Library.

“It would, if we had any active hand in it,” said Raven. “There’s a whole field of Library-responsiveness, which is actually one of my specialties, in part because I was there for Uther’s initial experience with it. We use the word ‘hurts’, but what we really mean is that there are changes in the Library structure or schema that make it more difficult for us to use.”

“Okay,” I nodded. “And I’ve already picked up from Majom that one of the principles of intervention is that any response to the Library should be systemic rather than specific.”

“Point intervention was the first thing we tried,” said Raven. “I can’t remember who came up with systemic intervention as a solution. Perhaps it was Vervain.”

“Hrm,” I said. *The Dungeon Master explaining the rules, perhaps? Or just the wizened wizard knowing too many things?*

“There are thought to be two reasons,” said Raven. “First, systemic interventions, by which we mean reshaping the world, are less likely to require further intervention.”

“Feed a man a fish, teach a man to fish, sure,” I said.

“Excuse me?” asked Raven with a frown.
“Oh come on,” I said. “How did that one never make it over?”

“I refuse to believe that everything Uther ever said was plagiarized from Earth,” said Raven with a frown. “Explain the expression?”

“It was the shortened form,” I said. “Feed a man a fish, you keep him fed for a day, teach a man to fish, you keep him fed for the rest of his life. It’s partly about dependency and self-sufficiency, but it’s also about permanent solutions rather than temporary ones.”

“Then yes, it’s apt,” said Raven. She cleared her throat. “Uther had a similar saying, actually, but it was with regards to keeping a cow fed.” She looked off to the distance a moment. “At any rate, yes, the Library tends to have less of a negative reaction to fundamental changes to the world, for whatever reason. Assassinating a king will cause substantial changes that are slow to fade, but fomenting revolt will usually cause only a ripple, so far as we can tell what causes what.”

I pursed my lips. Obviously, at the highest level, the Dungeon Master was responsible for the difficulties inherent in using the Library. But on a lower level, there was probably some governing rule or intelligence to what caused changes to the Library.

“Have you heard of i-factor analysis?” asked Raven.

“Impact factor analysis,” said Raven. “It’s part of entad studies at Speculation and Scrutiny.” She held out her hand, and a book appeared in it, courtesy of one of the entads she wore -- the same one that Bethel had copied all the books from. As with most of the books I’d seen her pull out, this one had a number of fabric bookmarks in it. It reminded me of Amaryllis going crazy with Post-It tabs. She cleared her throat and began to read. “Once the metric has been applied to a sample population of entads, it becomes clear that i-factor follows a power law, with high i-factor entads being more and more rare as i-factor increases.”

She paused for a moment, skipping ahead. “However, this difference is not accounted for by distribution of effects alone, and in fact appears to only be fully explained by a combination of usage restrictions, timing restrictions, and identity restrictions. These restrictions occur in various entads at exactly the rates necessary to ensure rough adherence to the power law, despite the distribution of raw effects following its own quixotic pattern.” She looked up at me. “Translated, there’s some apparent force at work which limits entads such that they can’t be too strong, and it’s not along the lines you would expect. Given our recent conversations, I believe I have a better understanding of what that force is. It’s the same force that decides on exclusions, the same force that sabotages attempts at using the Library, and likely the same force that’s responsible for the designs of the schema. It’s all interconnected. You can explain a lot about schema responsiveness by just looking at i-factor. I actually think that I might start working on a new i-factor metric for timeline changes, which seems like it would explain a lot, but I’d have to include caveats about what’s actually ‘important’.”

“Eh,” I said. “I mean, yes, I do agree that you can see the Dungeon Master’s fingerprints in a few places, but so far as I’ve seen, his style is to farm things out or create some organizing principle that acts as an immutable law. Amaryllis thought it was odd that Aerb’s technological development was so far behind Earth’s, and yes, there are factors that you could point to for that, but most of the answer is that the Infinite Library is staffed by librarians who are actively working to prevent technological advancement, and that kicks the can further down the road to the four-factor explanation for why technology is typically disastrous or misguided, and then that probably has some explanation as well, like meme-eating entities, infovores, or something else.”

“So you don’t think that he directly interferes?” asked Raven.
“No, he definitely does,” I replied. “He’s a meddler. But … okay, can you imagine sitting there and designing a *billion* entads?”

“Yes,” said Raven with a nod.

I smiled. “Right, of course, but you probably wouldn’t want to, not if you were more concerned with small-scale groups of people. You would instead figure out a way to automate it, or if you couldn’t, you would get someone else to do it. Right?”

“I suppose,” replied Raven. “But what does that mean in relation to the Library and the ways that we’re forced to interact with the world to keep it useable?”

“I don’t know,” I replied. “Only that perhaps there *are* rules, just rules that we haven’t discovered yet, or that might be theoretically undiscoverable from our position.”

“‘We’ and ‘our’ so soon?” asked Raven. She gave me a faint smile and a raised eyebrow.

“Oh,” I said. I shrugged. “I don’t know, being here has been … good, I guess. Miraculous took some getting used to, but it at least makes the meals interesting. The people here have a sort of obsessiveness that I identify with.”

“They’re trying to save the world,” said Raven, tilting her head to the side a bit in the same way that Maddie used to do, but just a touch less exaggerated.

“Yes and no,” I replied. “I mean yes, they’re perpetually trying to save the world, but most of the people you’ve recruited here have this, I don’t know, this *frisson* toward what they’re doing. There are people who very obviously love the schema for the schema’s sake, who care about the books and the timelines, and all sorts of other stuff. They’re excited. It’s nice.”

It was how I’d usually felt about DMing, especially in the planning stages. I would be sketching out a small village that the players were going to in the next session, and lose myself in adding detail and embellishments, putting in an inn and giving it some history, thinking about the people who lived there and what they were like. And then, of course, the party would breeze through it with barely a thought, not knowing or caring about all the stuff in the background, but that was okay, because it wasn’t really that much about the game, it was about the act of creation. (Besides, if no one saw the things I had planned, they could get recycled later.)

“Are you going to miss it?” I asked Raven, who had gone quiet.

“No,” she replied. “Maybe if I had been a junior librarian, but no, I took it upon myself to lead the efforts here, to keep things on track and the inner devils away, and that’s taken too much time and effort. I’ll be glad to be gone, frankly, now that I’m needed elsewhere.” She sat in silence for a moment. “That’s the first time I’ve said that out loud.” Her eyes met mine. “Don’t tell anyone.”

“Of course,” I said. “Are they going to be able to keep it together without you?”

“I dearly hope so,” said Raven. She stood up from where she’d been sitting. “I’ll leave you to your meditation then?”

“Sure,” I said. “I’m narrowing it down. I might go get the first one tonight, actually, if I think I have enough to go on.”

Raven nodded. “Let me know if you want company. Usually we do teams of two, but you’re considerably more well-equipped and well-trained than the average librarian, at least when it comes to physical prowess.”
In reality, I was better at Library Magic than almost anyone in the Library, with very few exceptions, both because of my advanced rate of learning, and because of my unique virtues that gave me substantial shortcuts. The meditation virtue wasn’t quite a card catalog, but it meant that I could learn what was on offer, rather than doing the usual method of making guesses and then going into the stacks to look around in the right general area.

Meditating was painfully slow, and slowed down more whenever I thought about how slow it was (because it meant that I was derailed from the actual meditation), but I had a good deal of information on the book(s) that Amaryllis was writing, courtesy of some conversations that she’d had with Raven before we left, and the necessary pieces that I didn’t have had slotted into place, coming as epiphanies in the midst of meditation.

_A Cypress Waits, First Printing_, by Amaryllis Penndraig, was eight and a half inches tall, five and three quarters inches wide, written primarily in a font called Carrington, set at 11 point. It was written in Third Empire Anglish. It consisted of three hundred and one pages, with 80,931 words. There were 2,988 full stops. The right margin on right-hand pages was 68 em. Two copies had been printed, both at the same time, with issue following soon after, all on the same day, 26th Akkers of 528 FE. The subject matter, per the Library’s reckoning, was ‘Personal’. The most common proper noun was ‘Juniper’.

I knew all this, and much more, before I ever laid eyes on the book.

The vestibule had day and night, with light coming in through the hole in the dome, but the same couldn’t really be said for the Library itself, as there were no windows, and not so much as a hint of anything shining through from beyond its walls. It wasn’t too uncommon for teams to go through the Library at ‘night’, especially during crunch time, but the librarians had settled on working during the day as the default, and so there was less in the way of hustle and bustle as I went through the open door in late evening, grabbed myself a torch, and set off to find Amaryllis’ book.

The Library had hazards. There were places where, in accordance with the schema, the books went vertically, stacked on top of each other, sometimes precariously. Similarly, there were places where the floor went at such a steep grade that you were climbing rather than walking, and the books around you weren’t necessarily put in the walls with an eye toward keeping them in place. There were places where the hallways became more like tunnels, usually large enough for a human to squeeze through, but it was possible to get stuck or trapped. Beyond that, while the Library typically segregated out physically hazardous books, it was imprecise in how it did this, and I had been told, repeatedly, that I should run the other way if I ever smelled ammonia. (Fire, the other big hazard when you had a billion books in close proximity, wasn’t a natural occurrence, but it did happen from time to time, and was one of the few things that called for an immediate reset.)

I walked a full mile until I got to where _A Cypress Waits, First Printing_ awaited me. The shelves went sixty feet up to the ceiling, and it took a bit of climbing to get up there. I had to make footholds and handholds by pushing books off, sending them fluttering down to the floor below me. My everburning torch was slipped through my belt, giving me terrible light to see by, which made the climb all the more difficult. I finally found the book, right where the schema and my intensive meditation had said it would be, a relatively slender book whose color was the same glacial blue of Amaryllis’ eyes. With a sigh of relief, I half-climbed and half-fell down to the library floor, landing among the books I’d knocked off.

Not wanting to waste time, I set the torch on a shelf to give me light, and began to read.

_Juniper,”_
I hope that you’re able to find this book, otherwise none of what I’ve been doing will mean anything to anyone.

I don’t know if you’ve thought about what it’s like being outside the library. I’m going to be here, in this future that won’t matter, until the end of the world. It’s been a few months now, long enough that I know you’re not coming back, which means that what I’m experiencing right now must be the future that the Library is predicting, rather than actual reality.

It feels real to me.

If we assume that the entirety of Aerb and all its connected planes are a simulation running on some vast computing substrate, there would be a few different ways to implement the Library.

The first, most costly method, would be for the Library to do a complete simulation of Aerb for however many years it takes until there are no books. Such a simulation would have to take into account planar clairvoyance and travel, which would mean simulating all of the hells and every connected plane, save for the Library itself. However much computing power it takes to run the simulation, running the Library this way would increase it by several orders of magnitude, because hundreds of simulation-years would get added on each time anyone went into or out of the Library.

The second, less costly method, would be to somehow generate all of the books without actually having to simulate the world itself. My computer programming is lacking, given that I haven’t invented computers yet, but I can imagine stopping the simulation and generating a horde of book-writing homunculi to extrapolate from what was available. They would need to be clever homunculi, able to keep all of their books internally consistent and consistent with each other, and they would need to be powerful, capable of peering into the inner thoughts of frozen people and understanding as much as everyone who ever wrote a book understood, but I have to imagine that would take considerably less computing power.

The third, extremely cheap method would be to not actually generate any books until they’re read by a real person in the Library. After all, the Library is so vast that most of the books in it will never be read by anyone, so an efficient implementation would simply have the book-writing gremlins on standby, waiting until the moment the information is needed. Perhaps, if they have the ability to see the future, they would write all the books that people will read ahead of time. That would reduce the number of books needed from millions or billions down to hundreds.

But as I’ve said, it feels real to me. Perhaps I’m some book-writing gremlin, only pretending to be Amaryllis because Amaryllis would have written a book, but I would have no way to prove that to you one way or another. I can only tell you how it feels.

I’ve done my best not to let the fact that I’m living in a doomed timeline affect my outlook or my work. I took what you said to heart and have proceeded with the understanding that the Dungeon Master is challenging me, rather than shutting me down completely. Raven understood that I would probably write a book, and cautioned me against specific attempts at using ‘future’ information to bootstrap. She issued no particular warnings against writing books in general though, and gave me some advice on how best to go about writing something for you, and while I won’t be writing with the intent to give instructions to my past, alternate, or unsimulated selves, I will be chronicling what I’ve been doing.

Summarizing a three hundred page book would be difficult enough if it were a coherent narrative, but what Amaryllis had prepared for me was a combination of journal, research notes, political observations, and management log. It was all impeccably organized, of course, but I got the sense that it wasn’t a book written “for” someone, it was a book that was compiled from notes that had
been made to serve some other primary purpose. That made sense, I supposed, because Amaryllis was busy with her work and dedicating a significant chunk of time to make the book more fully-edited wasn’t a good use of her resources.

Some highlights:

- The first group of tuung had hatched, and were undergoing accelerated training. The enhancements to my companions had apparently remained in my absence, even though I had no access to their souls along the soul-lines, which meant that Bethel was able to leverage her enormous magical powers to generate huge amounts of spare time, which then went into massive, spatially compact sub-structures. She apparently didn’t take much enjoyment from having what was effectively a small town inside her, but she went along with it. She had merged with Ropey shortly after I had failed to come back, which put her on a more even keel, at least according to Amaryllis.
- Pallida joined the Council of Arches, filling the empty seventh seat. Amaryllis didn’t seem terribly pleased about it, but given the fact that four of the seven members were needed for a quorum, it was necessary. Fenn had died, leaving that seat permanently empty, and I was ‘in the Library’, which took out another. That should have left five of the seven, but reality wasn’t so kind.
- Grak had insisted that if I was going to be permanently absent, he should be allowed to take his share of the gold and return to Darili Irid. Amaryllis had reluctantly agreed, and they had all made a trip together (Bethel excluded). Amaryllis described a mausoleum, with the stale stench of death hanging in the air. After Grak had laid the gold down and warded it, he had attempted ritual suicide by cutting through his neck with his axe. Amaryllis had stopped him before he could kill himself, but things had been a little bit fraught. Eventually, Valencia had intervened and arranged another dwarf as krin for him, but she had also insisted that Grak no longer live in the house, as it was “contributing to his depression”. He refused to attend Council sessions.
- Amaryllis had moved ahead with her Earth exploitation endeavors, perhaps emboldened by the fact that she was living in a “doomed” timeline. She engaged in some ethically questionable television testing using volunteer tuung and worked out several solutions to the Couch Potato problem, but none that she thought would survive reverse engineering. She had labs set up within Bethel for other projects as well, most notably for growing plants, with screening procedures and tests for anomalous properties. Beyond that, she was working on incremental improvements to existing Aerbian designs, and building factories on the Isle of Poran to put out better products than were available anywhere else.
- Valencia worked closely with Uniquities, and eventually a plan was put together for a “lessening” of the hells. With me gone, her progress had mostly stopped, meaning that she didn’t have enough killing power to fully depopulate the hells, but surgical strikes against key players in infernal politics managed to make improvements in the conditions of the mortals trapped there without inciting a full-on infernal unification. (She also married Jorge, our contact from Uniquities, five months after they’d first met, which, uh, might have been explainable without her using her powers, maybe. Amaryllis agreed that either way, it was inadvisable.)
- Solace changed back into her five-year-old crantek body, with the addition of small horns, but aside from that, sequestered herself within the bottle, coming out for Council sessions and little else. Somewhat surprisingly, she was able to find some common ground with Heshnel, despite their places on opposite sides of the Second Empire. Heshnel eventually moved into the bottle with her. Amaryllis characterized it as being a relationship founded on a mutual belief that the “doomed timeline” was, if not pointless, then at least not worth putting maximal effort into.

Once I had gotten as much from it as I thought I could, I stuck it into my pack and headed back
toward the vestibule. I had a long night of meditation ahead of me.

When I’d first gone looking for the book that Amaryllis had written, I had tried the meditation with her name and a general time range alone. It had come to me, like an epiphany, that there were dozens of books matching my request. Initially, I had thought that Amaryllis had done a larger print run, but no, the books were spread out over time, two copies each year, from 528 FE to 596 FE.

Raven set the copy of *A Cypress Waits, First Printing* down, then pinched the bridge of her nose.

“This is a problem,” she said.

“You knew that she was going to write a book,” I replied. “It’s my understanding that you helped her with it?”

“I gave her some broad guidelines and information, yes,” said Raven. “I knew that she was going to write a book, and I didn’t want her to pollute the Library like the Second Empire did, nor did I want her to waste time and effort because of the Library, but this … this is a complete guide from her, to herself, about the future, and there are so many of them. It’s going to be a massive distortion.”

“Me leaving was already a massive distortion,” I said.

“No,” replied Raven. “Generally speaking, pulling people into the Library, while it might drastically change the future, doesn’t count against us, at least not by itself.”

“As with so many things, we don’t know,” replied Raven. “We know that attempting to change the course of history through systemic measures is better than point measures, and we know that choke points are more favorable than stable periods, but there’s so much that we don’t know about what the Library does or does not respond to, which is one of the reasons we are, as you’ve pointed out in the past, conservative.”

I frowned, trying to work out a theory. “Okay,” I finally said. “Can I put forward a potential mechanism?”

“Sure,” said Raven with a shrug. “I’ll only be mildly upset if it’s something that we missed.”

“Well, okay,” I said. “Imagine that you could simulate the entirety of Aerb and all of the planes, aside from the Infinite Library itself.”

“That’s simulation theory, yes,” said Raven. “We had thought of that. It was one of the first things that Uther considered.”

“Okay, so, imagine that you have the ability to run the world forward a thousand times, or a hundred thousand times, or … whatever. Enough that you could do statistical analysis on it. For that to be useful, the universe would have to be non-deterministic, or at the very least, your simulations would. From there you would be able to make some measure of a person’s impact on the world, because you would be able to simulate the universe with them, and then simulate the universe without them, and look at the differences in what’s statistically likely to happen.” I grabbed a nearby piece of paper and made a little drawing on it, one of a simple bell curve. “Do you ever meddle in elections?”

“No typically,” said Raven, which wasn’t a no.

“Well, imagine that this graph is election outcomes,” I said. I drew a line roughly in the middle.
“Let’s say that 51% of the time it’s candidate A, and 49% candidate B, with negligible votes for third parties or write-ins.” I tapped the paper with the pencil. “So, let’s say that I get ejected from the Library, and I went to change that election. The Library could then run a second set of simulations, which would give a statistical distribution of the election, and maybe a third set of simulations where I was ejected from the Library roughly the same as I went in with no future knowledge, and compare all those against each other.”

“You would only need two sets,” replied Raven. “One set where you were altered by the Library, one where you weren’t.”

“Sure,” I said. “And you would also have to compensate for the fact that I went into the Library but came out without memories, which would drastically change what I would do even absent any actual change in knowledge, so … right, anyway, you could compare your data sets and then look at the election, and your measure of how much it had changed would be a measure of the impact that the Library had on actual reality, regardless of what actually happened in reality. Right?”

“Right,” Raven said slowly. “I’ll admit that it’s novel, but I’m not sure that it’s useful, given that we can’t actually run such simulations, or know what it is we’ve changed.”

“Oh, I’m not suggesting that the simulations are actually run, you could do practically the same thing with good enough predictors that took into account enough information,” I said. Despite myself, I was getting a bit excited. It felt like I was close to cracking open something important. “You wouldn’t need to simulate the entirety of reality unless you actually cared about all of reality. Obviously the hypothetical change detection process wouldn’t just care about the outcome of a single election, but you could have the equivalent of a market basket or something like that. And the important takeaway is that it doesn’t actually matter how much you change the future, it only matters how much you alter the probabilities of the events. And my guess is that domino effects are on your side, in terms of accounting.”

“Domino?” asked Raven.

“Uh, causal chains?” I asked.

“Ah,” she said. She folded her arms. “It’s a theory, certainly.”

“But you don’t think it’s right?” I asked. “I’ll admit that there are a lot of questions about implementation, which I’ve kind of hand-waved away, and which is probably really important, but it roughly fits with the general rules that you’ve outlined. One of the reasons that iteratively grabbing information from the future is bad is that it massively swings probabilities, because it’s creating information from nothing, at least from the Library’s perspective, which would be a huge improbability without the Library’s help. Just shooting some politician in the head to swing an election is, basically, moving the needle from 51% to 0%, but working behind the scenes to help secure the victory with a groundswell of support might look more naturalistic and map more cleanly to the winning percentages.”

“Okay,” said Raven. She shrugged. “Let’s say you’ve convinced me. What do we do with that information?”

“Well, for one thing, we can definitely advise Amaryllis,” I said. “We can become our own predictors of what is and is not probable to have happened without future information, and act in accordance with the highest probabilities for how we would have behaved. I mean, you still need to deal with the butterfly effect, but –”

“Butterfly magic is excluded,” said Raven, cutting in.
I stared at her for a moment. I had a skill in my soul, Butterfly Magic, which was excluded, but I didn’t actually know what it did. “Explain the butterfly effect to me?”

Raven gave me a curious look. “Butterfly mages were capable of altering probabilities,” she said. “They usually traveled with cages of butterflies and released them at specific times and places to attain the effects that they wanted in ways that weren’t obvious to anyone else.”

“Oh, okay,” I said. “I was using the phrase colloquially, it’s an Earth expression that must have been used as the basis for the magic system.” It sounded like something out of my ‘make idioms into magic’ phase, but I didn’t remember it. “Regardless, you would have to worry about all the effects, and the effects of the effects, and so on. Assuming that the Library does care about probabilities, then it would be a matter of the specific way that it cares.”

“I’m against giving Amaryllis that book,” said Raven. “I’m against giving her any of them. Even if I’m not going to be head librarian for much longer, I have a duty to this place, and it could be a valuable asset for you, just like it was a valuable asset for Uther, once he got a handle on it. If we hadn’t gone from two years left to one hundred twenty left, I would probably order you to stop reading them as well, but they might have information in them that’s too valuable for us to ignore.”

I didn’t particularly like her saying that she would order me, but we both knew that I wasn’t really her subordinate here, as much as I had been trying to pretend that I was for her sake.

“I’m going to go out and find the others,” I said. “I think given how long it takes me to get the metrics and then translate that into a physical location using the schema, I can do one a day until it’s time for the shift change, but there are still things that I need before we go. Have you had any luck in locating a book that can teach me Spirit?”

“I’m working on it,” said Raven, grimacing slightly. “That far in the past, prior to the printing press, there are far, far fewer books, but there are also more languages, some of them no longer spoken. I might have to divert your meditation, if we can’t find them the old fashioned way, but we would still need enough to go on.”

A Cypress Waits, Seventh Printing, 535 FE:

Juniper,

Another year passed, another book for you. I don’t know how many of these books will end up finding you, if any. They are, in some ways, messages in bottles, cast out into the ocean with a faint hope that they manage to reach someone willing to read.

Because of this, I’ve tried to organize these books with the assumption that you haven’t read the others. I’ve also done my best to cut things down to the essentials, though I imagine that the early years will remain the most important, given how wildly things will diverge with you back in the picture. I find myself reducing chapters down to pages, and pages down to paragraphs, then paragraphs down to single sentences, until finally the sentence gets removed too, and it’s like it never was.

These prefaces are, or have become, an indulgence. This is my yearly time to reflect on you. I stopped making the morning modifications to myself earlier this year. It surprised me how strong the trend toward the old baseline was. You were the love of my life, and you slipped through my fingers like sand. I know that you probably don’t want to hear that, given how little time has passed for you, but I’ve spent seven years in this doomed timeline now, nine if you count time in the chamber, and I think that I deserve to speak my piece.
I think about going into the Library, from time to time. There are librarians still left in the world, going about their business, and now that we’ve reached an agreement with the Doris Finches, I think I might be able to find them. I don’t know what I would find in the Library though. Perhaps it would be oblivion. In my nightmares, I step into the Library to find it littered with bodies from some calamity that came and went seven years ago, and your body is among them, not divinely protected after all. I wake up sweating and crying, and Pallida holds me until I fall back asleep.

We’ve accomplished so much that I’ve had to increase my ambitions. The Republic of Miunun has joined the Empire of Common Cause and become an economic powerhouse, the leading light of what people are calling the Golden Wave. We’ve managed to keep the greater threats at bay, though I don’t know whether that’s because the Dungeon Master is going easy on us, or because our clever solutions were just that clever. I very recently made a play for Anglecynn, and I’m still waiting to see how that pans out. My identity has been public for a long time, and I’ve been gathering allies for even longer. It’s the first time I’ve felt nervous in a very long time, which should tell you something about how well things have been going. The rest of this book goes into detail, naturally.

I miss you. I wish that you could share in my triumphs. I’m hopeful that the other me, the real one, will get that some day. There are things that I wish I could say to her that I would only say in confidence, and this book can’t possibly be considered secure. No book can, so long as the Library exists. We could have done one-time pads, if I had thought about it, and I could certainly figure out an encryption scheme that I would understand, but I don’t think that’s a particularly good use of my time, nor do I think I would take the advice in the spirit in which it was intended.

As for you, Juniper, know that I love you. There’s a part of me that wants to be soppy and romantic, and say that I’m doing all of this for you, but of course the truth is that I’m doing my best to keep my world alive and I would smash your head in with a hammer if it would accomplish that. You always liked that about me, didn’t you?

A Cypress Waits, Twentieth Printing, 548 FE

Juniper,

Twenty years is longer than I expected to last. I was nineteen when I signed up for this, and now I’m nearing fifty.

This was finally the year that Pallida left. As a natural consequence of that, the Council of Arches can no longer make a quorum, meaning that we had effectively no power over the Republic of Miunun anymore. As with Pallida leaving, it was a long time coming. The tuung citizenry tried to get us to stay, first with pleas and then with threats, but there wasn’t much to hold us there any longer. I’ll be taking a portion of the profits from their industry in perpetuity, which was cause for some tension, but I put years of my life into developing the Republic, and I consider that money well-earned.

We’re in Anglecynn now. They’ve been calling me the Returned Queen for quite a while now, but it appears possible that we might be able to make that name a reality in the future. Anglecynn is five hundred years overdue for a rewriting of the constitution, and I’m the best candidate for the position of monarch. That would give me an unprecedented amount of power within the Empire of Common Cause. People might be more frightened if I appeared to be building a dynasty, but I’m childless, and beyond that, I’ve managed to appear scrupulously fair in both my political and business dealings.

That said, my personal life is in shambles. I have hard-working, competent staff, but few close friends. Solace barely speaks to me, or to anyone else, and she’s made offhand mentions of Zorisad
Yosivun, which would be likely to kill her. Valencia is still in the process of fostering whatever children the state will allow her and Jorge to take in, with her side career as a killer of infernals only occasionally relevant when they’re caught violating the Compact. And Bethel, who helps me write these, has ascended to the level where she doesn’t get much from our conversations (a list of entads, their sources, and effects is in appendix B).

I don’t want you to think that I’m not happy. If I’m remembering you right, you might blame yourself for leaving me in this situation. The truth is, neither of us was fully aware of what it would be like for me to inhabit a doomed timeline, nor did we think it would last so long. I will say that my happiness is muted, more satisfaction at the way my plans have fallen into place than actual joy or contentment. It’s sufficient.

The following is for my younger self. She’ll know how to decode it. I’ll leave it to her whether or not to share it with you.

I hope that you’re well.

A Cypress Waits, Thirty-second Printing, 560 FE

Juniper,

Barring a complete rewriting of the foundational agreements that created the Empire of Common Cause, I’ve ascended as high as I can possibly go. There’s more power to accumulate, but it seems it will have to be through careful maneuvering and political frog-boiling rather than any moves to bigger and better things.

I hold three positions: Queen of Anglecynn, Secretary General of the Empire of Common Cause, and Commander of the Imperial Defense Force. The anolia can’t see my skill as a soul mage, likely because it comes from your soul, not from mine, though I try not to use the skill very much, given how much of a liability it might be. I’ve also spent a good third of my life in the time chamber at this point, making me fifty by the records, seventy by my own accounting, and with the body of a thirty-year-old.

Time is going to catch up with me soon, as my soul succumbs to senescence. I have another few decades before it happens, but I already feel twice doomed, a doomed woman living in a doomed timeline. Unfortunately for us, Valencia is growing old too, and the Compact with the hells won’t outlive her. I’m starting to understand how you feel about death, how you might prefer torture to oblivion. There are practical reasons to prefer oblivion; I know too much, and hold no illusions about resisting the devils and demons as they try to torture or coerce it out of me. I’ve had Valencia as a friend for long enough to know better.

I’ve lost faith that these books are of any practical use to you. The only sign of the Dungeon Master that remains in this world is in the abilities that we were gifted with, and in Bethel’s link to Earth, but the gifts are entirely static, and the backpack’s functionality is, to quote Bethel, ‘stale’. The rejection notes from it still come back on yellow legal pad, still in your handwriting, but they only say ‘no’, with no customization. The timeline isn’t just doomed, it’s been abandoned by the closest thing to a true god we ever had. I suppose that’s still useful, as it offers some way to measure whether and how the Dungeon Master interferes, but I’d be hard-pressed to believe he hasn’t thought of that.
How can these books be of any use when the whole universe is just going through the motions? How can we depend on them when there’s no narrative in this doomed world? Everything around me exists only for the purpose of producing written works for you, a small fraction of which you’ll actually see. The Dungeon Master has no greater purpose for this world, and apparently sees no point in actually being here.

My prediction, should you actually read this book, is that things will diverge so quickly and so wildly that almost everything written here is functionally useless.

The following is for my younger self. She’ll know how to decode it. I’ll leave it to her whether or not to share it with you.

All my love.

A Cypress Waits, Final Printing, 596 FE

Juniper,

The title is, I’ll admit, on the pessimistic side. I might be able to eke out another few years. I can see into my soul though, and I’ve seen the clear signs of deterioration. There are memories that have simply vanished, skills that have gone soft faster than they should have, and a pallor that hangs over the entire thing. If I’m not dead this time next year, then I probably won’t be in a state to write another book for you.

I don’t know how much longer the world has left either. Our policy of Void Beast redirection has come to a head much sooner than thought. Sixteen of the elemental planes are completely gone, impacting all manner of magic, and two of those happened in the past year. Unrelatedly, it seems that the infernals are preparing for an assault on the surface, a likely result of our Compact bringing them into closer cooperation, though infernal unification never lasts long, and we’ve been starving them of good leaders for decades. They’ll wait until Valencia is dead, but she’s eighty-six years old now, and healing magic doesn’t work on her. There are talks of bringing her to Fel Seed, if that helps give you a sign of how dire that particular situation is. He could do as he pleases with her flesh; we tested it years ago by sending him a non-anima aged up with the time chamber. Counting on Fel Seed to keep the hells in check is, naturally, not a good plan, but every intelligence report I’ve gotten from both our infernoscopes and our spies has indicated that it might be necessary.

I’d like to say that I’ve done everything that I possibly could have in this timeline, but that’s not true. I haven’t always been maximizing for what goes into the books, or what would be best for what happens in the true reality. I could have gotten further using sex and romance as tools in my toolbox. I could have worked harder at my relationship with Pallida, who was a valuable ally for a good many years. I wouldn’t say that I’ve been weak, but I’ve indulged, from time to time, particularly in petty morality. A better Amaryllis might have ripped apart the world to get at its secrets, or authorized the sorts of experiments that would have made the Second Empire queasy. I crossed lines, a great many of them, but I wish that I had crossed more, because these books are all that will remain of me when I go.

The following is for my younger self. She’ll know how to decode it. I’ll leave it to her whether or not to share it with you.

Yours, in this timeline and the other,

Amaryllis

Chapter End Notes

The enciphered texts have been decrypted by dedicated readers. You can read them on reddit here.
It took me a long time to get as many editions of Amaryllis’ books as I did, not just the focused meditation to get their information, and the work I needed to correlate that information to the schema and map it to a physical location within the Library, but actually trekking through miles of corridors in order to retrieve the book.

That gave me a fair amount of time to think.

On the grand scale, the future as laid out by the Library was clear enough. The Empire of Common Cause had continued the same trajectory it had been on for decades, taking more and more power that had once belonged to its member polities and shoveling as much as it possibly could under the umbrella of ‘mutual cooperation’ and working hard to fit new governmental powers within the language of existing laws. A series of technological revolutions, spearheaded by Amaryllis, brought Aerb kicking and screaming into the computing age, which changed all manner of institutions and helped to solidify the Empire as a coherent whole. There were cultural and political divides that cropped up, with neo-traditionalist ethnostates, popular after the fall of the Second Empire, coming back in vogue for a time. Eventually the flavor of the day became reactionary fusion and crypto-traditionalism, which led to merged and bespoke aesthetics, all of which was fascinating to me but largely useless in terms of saving the world.

Behind the scenes, and sometimes in front of them, Amaryllis had been at work.

The Gates of Leron were reinforced; whatever method Uther had used, Amaryllis had used Thargox and more warders than you could shake a stick at, a trick that she had independently discovered before I’d had a chance to bring that information back from the Library.

With Valencia’s power, Amaryllis had made an ambitious and covert compact with the hells, essentially putting them all in line so long as Valencia was alive. It was a tenuous thing, but it was the first bit of leverage that the mortals had been able to grasp through most of Aerb’s history, leading to some amount of mortal-led reforms of the hells.

Fifteen years in, Celestar had fired a beam of enormous power at Aerb, enough that it might have boiled the oceans if it had lasted long enough. It represented the single largest loss of life since the Wandering Blight. A week later, the beam was stopped when ten thousand pounds of antimatter were dropped directly adjacent to the beam’s source. The ejecta from that explosion landed all over Aerb, causing even more damage and death, but the threat was dealt with. Amaryllis apologized for that solution, which used a combination of high-powered, high-tech magnetic containment and an overlooked part of rune magic, because she was fairly certain that it would have been excluded as soon as anyone tried it. She also didn’t give the full specification for it; it was a state secret at the highest level, and she didn’t want it in the Library where someone could find it.

Whatever the Outer Reaches were, Amaryllis made no mention of them. If they were dealt with, whatever they were, someone else had done been the one to do it.

And of all the potential threats, that left the Void Beast. Because regulatory schemes weren’t enough, the solution had been simple; divert the Beast’s extradimensional course somewhere else. The vast stockpiles of void crystals that had been a byproduct of the imperial ban had been taken to the elemental planes and detonated in such a way as to call the Void Beast there, instead of to Aerb. It was a stopgap solution, but it was one that bought Aerb another hundred years.

It was the Void Beast that got them in the end. People blamed the diversionary plan, naturally,
insisting that harsh regulations would have worked, but it was all somewhat moot by the time the end came.

Beyond all that though, there were a large number of personal details in the books, some of them explicit, others hinted at by references to past editions I wasn’t able to find, and a few implicit. I cared about the future of Aerb, I really did, but the personal stuff was easier to relate to, and while the threats against Aerb were direly important, the insights into the people around me showed new sides of them. I was going to have to talk to all of them when I got back, especially Grak, whose problems seemed like they were coming to a head sooner than later. He faded from the books pretty early on, and from what I could tell, was living -- had lived -- out his life without much in the way of interaction with Amaryllis and the others.

I would have to talk to Valencia too. She married Jorge early on and adopted out of fear that any natural children would be non-anima, and from there became a doting mother, later grandmother, who baked cookies and knit sweaters. She published a number of children’s books too, though I wasn’t about to go through the effort of finding them in the Library. In her spare time, she kept the hells in check. If she was a manipulator of people, then it was only in order to raise exceptional children and maintain a happy home, and if that was what she’d decided to do with her life in the doomed timeline … well, I owed her an apology.

And then there was Amaryllis. Amaryllis, who didn’t just snag a lifetime appointment as Secretary General of the Empire of Common Cause, who didn’t just return to and restructure Anglecynn with herself as Queen, but who consolidated power on top of that and made herself into the closest thing that the world had seen to Uther Penndraig. She was humble about it, at least in the books she wrote, explaining that she was more than she’d been born as thanks to the gifts from me, and that a fair amount of her success was in leveraging the resources of Uniquities, the absurd amount of magical items and resources afforded her by her line, the hidden talents of Valencia, Bethel, and a soul magic that the lizardfolk soul-seers couldn’t detect. To hear her tell it, it had taken an inordinate amount of work to get there, but it wasn’t really surprising that she should be the most important person on Aerb, especially not given that she was abusing the time chamber.

I cried, briefly, while I was sitting in the stacks reading her words. The thought of Amaryllis, alone, in the doomed timeline, trying her best with what she had, knowing that none of it mattered but doing it anyway … and the casual way she declared her love for me on top of it. It was heartbreaking. And of course that was an Amaryllis that was never going to exist, one that I could never talk to or thank. I longed for her, even though I only knew her through her words.

After I’d read the last book I was going to have time for, I went back to talk to Raven, and we had a fight.

“No,” said Raven. “These have explicit instructions for how to irrevocably change the world. She can’t read them. It’s bad enough that you read them. The damage that this could cause to the Library might be enough to make it wholly unusable without your help, and we’re not going to have your help.”

“You’re worried about what, hallways so narrow that no one can fit through them?” I asked. I tapped the stack of books. “I hate to say it, but this is more important than the Library.”

“It’s a series of stopgap measures and incomplete solutions, some of which likely aren’t going to be viable in the real,” said Raven. “Some kind of massive bomb, bigger than a nuclear weapon? That’s going to be excluded, with certainty. They didn’t actually solve the Void Beast problem, they just delayed it, in a way that’s been known to us for as long as we’ve known about the Void Beast.”
“Then you should have shared that with her,” I said. “She would have tried something else.”

“That’s exactly the problem,” sighed Raven. “The type of iterative problem-solving that she’s clearly attempting here has had disastrous results in the past.”

“She gave her life for this,” I said.

“Juniper, we don’t even know if those people are real,” replied Raven. “It’s not a true future. You said yourself that if you were doing it, you wouldn’t simulate everything, you would just abstract it, or create some entity that would write all the books. We’re not beholden to the wishes of hypothetical people, not when they’re wrong about the balance of priorities.”

I frowned at her. “Your mandate is to save the world, isn’t it?” I asked.

“It is,” replied Raven. “That’s the entire point. And if we have to save the world by suppressing technological revolutions, or keeping people in the dark about what’s going to happen, that’s what we’re going to do. We’ve stood by as we watched dictators come to power, we’ve stayed silent after unearthing heinous crimes against the mortal species, we’ve seen plagues rip through communities and done nothing, because they aren’t important enough. We have our priorities in place. We’re not going to bend for her.”

I stared at her. “You don’t control me,” I finally said. “I’m not a part of your chain of command.”

“Think rationally,” said Raven. She was looking me over, and had backed up a step. I kept forgetting how big our size difference was, not to mention the differences in our martial/magical ability. “First, you can’t leave the Library with those books, you’ll need someone to copy them, and we have all the entads that do that, which means that yes, you do need our help. Second, what is there of value in these books? You’re thinking emotionally instead of acting rationally. You want her time to have been worth something, I understand that, but keeping the Library as a useful tool is too important to allow sentimentality to outweigh a strict cost-benefit analysis.”

“So I’m just supposed to say nothing?” I asked.

“No,” said Raven. “As little as possible. From what I know of her, it’s what she would want.” She tapped one of the books. “Here, in this preface, she explicitly says that she would take a hammer to your face if it would save Aerb. Do you really think that she wouldn’t do the same to herself? Is that the sort of person she is?”

“No,” I said. “No, she would sacrifice herself, did sacrifice herself, all to make the world a better place.” I rubbed my face for a moment and tried to think calmly and rationally. The real problem for me was that it felt like Amaryllis had died, somewhere out there in the other timeline. Raven was right that I needed to separate myself from that emotional impulse, but that didn’t mean that she was right about the dissemination of information. “What would Uther have done?” I asked.

Raven froze. “He would have told her,” she said. “He had a softness for what he called the small stories.”

“And somehow it always worked out,” I said.

“Yes,” replied Raven. “Usually with blood, sweat, and tears by the gallon to make it work out.” She had the same distant look she sometimes got when thinking about him. “You’ve said yourself that you’re under no such guarantees. Do you still believe that?”

“I do,” I replied. I shifted in my seat. “Okay. I’ll do a limited release. I still need to copy the books though, just in case there’s something relevant. I haven’t actually read them all yet, because just
getting them has been taking up all my time. So far as I’m concerned though, these books have
almost everything that we could possibly want from this timeline.”

Raven hesitated. “I agree.” She reached forward and touched each of the books I had gathered in
turn, absorbing them into the entad she wore on her wrist. “Talk to Oja about having physical copies
made.”

I wanted to say more, but I stayed silent. The truth was, most of what Amaryllis had accomplished
had been by virtue of intelligence, caution, and dedication. She’d done her exhaustive, questionably
ethical tests on every technology she released, every seed she’d taken from Earth, and every work of
fiction she’d translated over. And if she had done all of that without the help of future knowledge,
then it was arguable that she didn’t actually need information from the future, not if it was going to
be a malus on the Library. The books might be able to save her years, maybe even decades, but if
they would contribute to making the Library unusable … well. I tried to imagine what Amaryllis
would say to all this, and I thought she might agree.

“We have two days until the shift change,” said Raven. “We might have to stay after, if you still
want that book on the lost magic of spirit. Fortunately, because it’s a book that was written before the
present instead of after, most of the research work we’ve been doing won’t be for nothing.”

“I should help,” I said. “I might be able to target an appropriate text through meditation. I’d planned
to get another book from the series, but each is worth less than the last, and we have the gist of the
future.”

“Certainly,” said Raven. “If you’d like to meditate, the current title we have is ‘Uskine Nervedah’,
though we’re not certain whether it’s an actual book of knowledge or just an overview. You’ll need
help translating, most likely.”

“Ohay,” I said. “I’ll let you know when I know.”

After a day of meditation, I was off to the stacks once more, trying to hunt down Uskine Nervedah. I
would have considered it a bit of a long shot, if the game hadn’t come close to outright stating that
the Library had the book that would teach me Spirit.

The librarians had a number of translation magics available, which we were almost certainly going to
need. I had the publication date of the book now, 142 BE, and the language, Kindeh, which I had
never heard of. Aerb was bigger than Earth, with more (and more varied) civilizations, and the
occasionally phonemically incompatible species. In the modern age though, most of the languages
that had been around in Uther’s time had gone extinct, either brutally extinguished by the Second
Empire’s cultural pogroms, or by the more gentle erosion that happened as the peoples of Aerb
began to congregate into the great cities of the world and slowly meld with each other. Kindeh was
one of the latter, as far as any of the librarians knew, a language that got supplanted, kicked around
as a “connection to the home country” cultural artifact for a few generations, and then quietly
stopped being spoken.

Translation magic on Aerb was uncommon, and a bit of a crapshoot in terms of what the various
forms of it could actually do. Translation tattoos were expensive, and you needed one for each
language you wanted to speak: the librarians had a large stock of them, and a tattoo mage proficient
enough to move them around, but they didn’t have one for Kindeh (because, again, dead language).
High-level pustule mages could grow a growth near their collarbone that assisted in translation, but it
required roughly a week of exposure to someone speaking the target language, so that was out on a
number of counts. That left entads.
The Library unfortunately didn’t have anything like the Terridoc linkages, which granted (close to) full polygot status and were held in trust by the Empire. What they did have were a multitude of entads that could do at least some of the work, like a pair of glasses that would translate words into numbers that correlated to concepts, and which could then be consulted against a list of previously number-translated words from other languages. There were only a small handful of full polygot entads, most of them with restrictions, but it was much more common (meaning still rare) for entads that would translate specific languages. They were still working on the plan for how they would translate Kindeh for me, but it was likely going to take three entads working in a chain.

All that turned out to be totally moot though, because I learned Kindeh without really meaning to.

**Skill Increased: Language lvl 3!**

I had been looking through the book, primarily seeking tables, charts, or illustrations that might give me an idea of what the book’s contents were (training or commentary being the two big guesses), pausing only briefly to squint at the words in the torchlight when they seemed close to Groglir or Anglish. For me to learn Groglir took months of lessons with Grak and a working vocabulary of something like a thousand words, if that was what had actually triggered it. For Kindeh, now that I had unlocked the Language skill, all it had taken was looking at a book and trying to figure out how to read it.

(I didn’t particularly want Kindeh as a language. So far as I could tell, Language would still be capped by primary and secondary abilities, which, because of my low CHA, meant capping out at 10. That, and the depression that had been hounding me following Fenn’s death, had been the reason that I hadn’t been throwing myself into learning as many additional languages as I could. Aside from this one book, Kindeh was useless, but it was apparently going to take up the number three slot. I was grateful that I hadn’t accidentally learned lenssi.)

I waited to actually read it until I was back in the vestibule, in part because torchlight didn’t make for a good reading experience.

“We’ll have the entad chain ready in an hour or two, the Toque of Lipsum is being used for a different project that we’re in the middle of,” said Raven when I came back into her/our home. She’d never ended up having one cast for me, either because she liked my company or because we weren’t staying long. She was sitting at the table, reading through the books that Amaryllis had written.

“Oh, it’s fine,” I said. “I speak Kindeh now. And this should be the book that I need, if my skim of it is accurate.”

“You just … speak a dead language?” asked Raven.

“Yes,” I said. “I’m not too happy about it though, because it takes a slot. I’ll pick some others up soon. Let me know if you have any suggestions for what’s best.”

“Just like that?” asked Raven, staring at me.

“Yeah,” I said. “That’s how it goes sometimes.”

“I’ll compile a list,” said Raven with a sigh. “I don’t think Uther was ever so fast or so constrained.”

“He wouldn’t have told you if he was,” I replied.

Raven hesitated. “I suppose I have to assume that’s true.”

I sat down to read the book as she left to go deal with administrative duties. The title, *Uskine*
*Nervedah*, translated to something like ‘the inner veins of the immortal essence’, and it became clear halfway into the first chapter that the author was both ignorant of the concept of the soul as it existed on Aerb, and was also conflating the ‘soul’ and ‘spirit’ concepts. It was like someone who had never heard of muscles explaining what purpose veins served within the body.

I found myself entering into a flow state as I read, one of my virtues taking effect and allowing the outside world to fall away around me. I had always been good at that, but the text was dense, with too many words given special meanings that my ability with Kindeh didn’t give me access to.

I got through the text before even realizing it, and came up on the index in the back having expected more chapters. I still hadn’t had some brilliant insight into Spirit though; all I had was a confusing jumble of analogies, none of which made all that much coherent sense when put together, and some of which overlapped with the concept of ‘soul’ so much that I thought they were probably spirit-based explanations for what were actually soul-based phenomena.

The largest case study in *Uskine Nervedah* was that of the passion mages, who were something like a mix of barbarians and wizards, dependent on evoking emotion in order to access their magic. It was a discipline taught at Ink and Ardor, but one that had fallen out of favor in preference for more consistent magics. Passion mages had access to a wide spectrum of effects, but those effects were determined almost solely by the mood and emotion of the passion mage.

The author of *Uskine Nervedah* was a spirit mage, and had met with the passion mages specifically for the purposes of seeing whether he could make their magic more than it was. He started with interviews with the passion mages, getting them to describe their art to him and the way that it felt, then after two weeks, finally began an attempt.

Like essentialism, spirit magic required physical contact with the subject. Like essentialism, there was some component of viewpoint manipulation inherent to the art, what I would describe as a GUI and the author of *Uskine Nervedah* described as the “view of the fourth eye”. But as far as what was actually seen, that was something else entirely.

Where Fallatehr described the soul as a book with every important detail of a person written in it, the man who’d written *Uskine Nervedah* (‘Enkad’, which was an obvious pseudonym if you knew Kindeh) described the spirit, as, variously, a collection of pulsing veins, flowing rivers swollen with water, and pathways through a city, never seeming to settle on a singular metaphor, either because he didn’t understand enough of what he was doing, or because he got fed up with the inaccuracies.

He was difficult to deal with when the enfadilo he’d sniffed began to fill him with its customary rage, though he insisted that it was custom for practitioners of his art, and would give me a better view of how he was when in the field. He cracked his knuckles every few seconds and sniffed almost as often. I could feel his sweat with my hand pressed against his bare chest, which I was using as the point of contact between us.

It was difficult to focus on anything but the rapid beating of his heart and the creak of his teeth as he clenched his jaw, but the raw emotion that he felt was like a throbbing vein sticking out of his spirit, which made the entire process easier for me. Once I had centered myself on that, his spirit splayed out in front of me, taking up my full vision. I could see the venous mass of it in front of me, with the paths of anger touching so many others that it was like a hundred-limbed spider staking claim over his spirit. I began my work slowly, tentatively, enlarging that engorged pathway that I could see most clearly and looking for other parts and pieces that were similar to it, which might provoke the same effect.

I was too ambitious in my alterations though, because it wasn’t long before I was laying
on the ground with a horrid gash upon my head, crying in pain as a number of the men around me restrained the irate passion mage. I had stoked his fury too much, opened it too wide, and left him in a rage that was beyond his capacity to control, a lesson that I would take some months to properly integrate into my understanding of the art.

That was more or less how it went, through most of the book. The spirit’s “channels” or “pathways” sometimes linked to each other, threading through and altering each other on the fly, especially with regards to emotions, bits and pieces of it moved … and none of it was really all that clear in terms of how I could unlock it or how it functioned on a base level. I had a better view of the spirit than the one put forward in *Uskine Nervedah*, because I knew there was such a thing as a soul, and if they were complementary, and if I knew everything that the soul contained, then I could work backward a bit.

The soul was mostly numbers. Those numbers weren’t static; they changed and shifted with time, and if you altered one part of the soul, it would eventually drag itself back into ‘alignment’ or ‘coherence’, though the guy who knew the most about what those precise terms had meant, regrettably, died before he could give me more in-depth theory. There was no mechanism to explain why the numbers shifted around, though I had always thought that the mechanism must have been my mind.

Now, I had a different candidate.

I stepped into my soul for a moment, thinking that it might offer a better vantage point, or at least a link, in the same way that blood, bone, and skin magic were links to the soul. As my first order of business, I pushed ‘Level Up’ back down, which was something I did every single morning and most nights. This time, though, I sat there and watched as it reliably ticked back up. That was something that I hadn’t really done much before, because it was one of those problems that I just wanted to go away.

I thought about the feeling of leveling up as I watched it tick up, and saw it increase its upward climb. If you didn’t accept that there was such a thing as a spirit, maybe you would talk about coherence and internal balance, the way that all parts of your soul played into making the soul one internally consistent thing. You could implicate memories, saying that your values were the sum of them. None of that actually explained what was happening in the soul to make all that work.

Because I’d just gotten done reading through a half dozen clumsy metaphors, I decided to make one of my own. ‘Spirit’, not very helpfully named, was at least partly ‘Soul Number Changer’. That wasn’t the entire function, but something had to be changing those numbers around. If the soul was a database, then the spirit was the collection of queries that accessed that database, or maybe some stored functions. That, at least, seemed close to the analogies I had heard before, with soul as the book and spirit as the pen that wrote the book. Maybe a better metaphor, for my own purposes, was to view these ‘pathways’ as individual threads, some of which were running and some of which were paused. If Spirit was capable of protecting people from whatever memetic threat was in the Outer Reaches, then it was probably in altering the characteristics of that thread, or the general response to whatever class of threat it was.

If that was the case, then there was a thread responsible for slowly incrementing ‘Level Up’, which would be connected to it, in the same way that a passion mage’s anger would show up well when it was being stoked. I focused in on the internal feeling of ‘Level Up’ rising, trying to turn it over in my head a few times, and eventually, I found it, the seam between essentialism and spirit, a brief glimmer of perspective that I latched onto.

**Skill unlocked: Spirit!**
Achievement Unlocked: Kindred

Quest Completed: As the Spirit Moves You - Uther did his best to remove it from the world, but there are some places where secrets are archived. You are now the sole practitioner of the art. Use it wisely.

Level Up!
The Critical Path

I was almost out the door by the time the afterglow started fading and I came to my senses. I’d been acting on half-formed ideas and baked-in instinct, not actually thinking about what I was doing. Without any thought applied to the matter, I would have left Raven’s home with sword in hand and commenced with the slaughter of the librarians one by one, taking them as they came, then going after the stragglers and those who fled before my bloodlust.

That would be idiotic, of course, and counter to my actual goals.

I wanted to level up, more than anything. I wanted to feel that feeling of transcendent, universal bliss flowing through my veins again. Immediately going to kill all the librarians wasn’t likely to accomplish that, just as killing tuung hadn’t given me a level either. At the end of slaughtering them, I would be left with a bloodied sword and only incremental progress toward my goal, having burned through resources that were likely necessary toward completing the quests I had available to me.

I would get the book or books that would let me pull the locus from its bottle, learn the method for exiting the Library on my own, and then I would slaughter the librarians. That made much more sense.

I sheathed my sword and went to go find Raven.

“Done?” she asked. Her eyes went to the sword at my hip, which I’d brought with me. I was wearing the bandolier too, the one with bones and fairies in it, but unarmored, both of which were normal for how I spent my days in the Library.

“Yes,” I replied. “How close are you to finding the information on the locus?”

She was giving me an odd look. “Why?” she asked.

“It’s the last thing I need before I leave,” I said. “You’ve made copies of all the relevant information on Fel Seed, copies of everything Amaryllis wrote, and I’ve acquired the Spirit skill. That’s everything that I expected to get from the Library. I’m also ready to learn how to get out, though I can already tell that it has something to do with the universality of schemata.”

“Are you okay?” she asked. Some of the librarians around her were giving me odd looks.

“Fine,” I said. The word came out too fast, too clipped and precise. I wanted to get through his conversation as quickly as possible, and it was showing. “Ready to go.” It dawned on me that I might not have the social specialization necessary to maintain the charade for very long, which would mean that it would be better to abandon the locus quest and kill them all sooner than later.

“We have time left before the shift change,” said Raven. “You can’t leave early.”

“I know,” I replied, making an effort to sound pleasant and carefree. “I just want everything to be in order so that I can leave when the time is right.”

“And you’re okay?” asked Raven. She was looking me over.

I smiled at her, forcing the smile to reach my eyes. “Fine,” I said. “I was able to fix the issues I was having.”

“Alright,” said Raven, frowning a bit. “I’ll go talk to the team I assigned to that. Trawling through
the Second Empire indices is a bit of a niche skill, but last I checked they thought they were on the right path.”

“I’ll come with,” I said.

“You’re acting strange,” said Raven. She took a half step back from me. “I’m enacting Puppet Protocol. Stay where you are.”

_Fucking SOC._

This was going to burn time, even if I could convince them that I was completely normal, but I was pretty sure that I couldn’t, which would mean that they would tie me up, ward me, and gag me. From there … I knew that they had counter-memetic programming, the equivalent of chemotherapy or radiation, a cure that was almost as bad as the disease, or if they couldn’t identify the vector, Raven might bring me to Amaryllis to have a look at my soul. They would put me to sleep, so I couldn’t overpower her with my superior Essentialism, she would immediately see the problem, and I would be turned back into a Juniper that didn’t care about chasing the pure bliss of the next level.

They didn’t know about the soul connection though. I could alter Amaryllis from a distance and remove her as a threat, so long as I did it before I was put to sleep. Valencia might be a problem, but she wasn’t a problem that I could do much about, at least not immediately. Unfortunately, the lines to my companion’s souls were blocked to me while I was in the Library, whether because it was across a planar boundary or because the Library was blocked off from the rest of the world, and I wasn’t guaranteed to have time inside my soul to make the changes that I needed to.

“What does Puppet Protocol look like inside the Library?” I asked. “Pallida told me about it, but I don’t know your procedures. You think I’m compromised?”

“First, disarm,” said Raven. We were out in the open, and it was still light out in the vestibule. She made a gesture for people to come closer. “Unbuckle your sheath and let it drop to the ground. After that, we’ll bring the warder over and wrap you in wards, then go through the most obvious tests and look over the book you were reading for memetic signatures.”

“Seems --” I began.

“Don’t speak until then,” said Raven. “There are relatively few threats that travel by spoken word, but I’m not about to break memetic hygiene until you’re confirmed clear.”

“This is --” I started.

“I’m serious,” said Raven. “I need dead silence from you. Anything else will be treated as the act of a hostile agent working with your mind and body as its tool.”

I kept my mouth shut. This was a problem. I tried to work out what they would do. The truth was, it wasn’t memetic in nature, and aside from looking at my soul (or presumably, spirit), they wouldn’t actually be able to find anything, but that wouldn’t necessarily keep them from understanding that there was something “wrong” about me. The only way that they would be able to tell is with a soul mage, which I was pretty sure they didn’t have (though that was the kind of thing you’d leave up your sleeve if at all possible), or with one of the anolia, the species that had given me a once-over in Parsmont, which they definitely didn’t have. Unfortunately, that wouldn’t necessarily stop them from knocking me out and taking me to Amaryllis, warding me in completely, or deploying their memetic counter-programming.

I had until the warder arrived and started wrapping wards around me. At that point, I would lose a
significant amount of control over the situation, and my strike potential would begin to drop to nothing. I still had tricks up my sleeve, but a skilled warder could eliminate them one by one as I was divested of entads and my various magical abilities were shut down. If there was a time to strike, then it was now, and if there was a way out by saying something clever, I didn’t know it.

I reached up and touched one of the unicorn bones that sat in my bandolier. I saw Raven’s eyes start to go wide, which was natural, as it was as clear a sign that a bone mage was about to start something as someone reaching for the gun at their hip.

I wished that I’d had more practice with unicorn bones. As predicted, it was the ability granted to me by level 30 Bone Magic, but I had only a single test run with it, back before my conversion, out of a desire not to run through what was a terribly limited supply.

(I had a lot of regrets. I wished that I had a better build, one more suited to straight combat. I wished that I had redone my character sheet in order to prioritize useful magics and potential synergies, along the lines of the character sheet that Amaryllis had laid out for me. I regretted not holding Raven down and soul fucking her into compliance, which would have sped up my time in the Library and allowed me to get back into the field all the sooner. As soon as I was done killing all the librarians, soul fucking was going to be my default method of handling anyone I needed to. I had let moral strictures keep me weak for far too long.)

As I reached inside the unicorn’s bone for its magic, Raven went into combat mode. Banded armor appeared around her, three seafoam-green orbs appeared in the air around her head, and her mirrored blade sprang to life in her hands. Despite that, she was retreating, moving back and yelling at everyone else to do the same.

I ducked down for my sword and tapped my femur for SPD. It was difficult to pull two different attributes from two bones at once, but as Raven threw one of the orbs and I dodged it by inches, I was grateful that I’d thought to do it. Bethel had seen the orbs spring to life from some entad that Raven controlled, but hadn’t known their function, aside from the fact that they were obviously offensive in nature. The moment I touched my hand to my sword on the ground, I was racing forward, drawing it and discarding the sheath with one hand, boosted by the pulse of my blood. My mind was already on the blade and the command I would speak to make it pass through her armor.

A second orb flew toward me, aimed right for center mass, and I slammed my foot down, pushing myself off the straight path toward her and over to one side, narrowly avoiding contact with the orb. She seemed to have expected that though, because the third orb came right after the first, and I was left without any opportunity to dodge. The orb hit me in the center of my forehead --

**Achievement Unlocked: Grande Mort**

And I was back where I’d been, burning through the unicorn magic, watching Raven’s eyes go wide, watching her activate her entads as quickly as she could, with threat responsiveness that would have been admirable if it weren’t so potentially lethal. She had no awareness that we’d done this before, not yet. Our local loop was invisible to her until it reached its conclusion, which was a point in my favor, and now I knew not just what the orbs did, but how she would behave.

I reached down for the sword again, and charged forward again, this time fractions of a second ahead of where I’d been in the past. The sea-foam green orb that came toward me was off-center, and my grip on my sword was firmer. I parried the orb on instinct, but it passed straight through my sword and then on through my chest, removing pieces of my ribs and a good chunk of my lung without any immediate sensation of pain.

**Skill increased: Unarmored lvl 21! (Skill capped at triple the value of primary stat SPD.)**
The tip of my sword fell to the ground as I kept moving forward, and I could feel the magic rush out of it, the mental connection to it going dead in the space of a rapid heartbeat.

I released my sword and drew my dagger, throwing it hard, directly at Raven’s face, and dodging another of the orbs at the same time. I heard, rather than saw, the dagger striking solid air in front of her nose and bouncing off wildly. The dagger’s tumble through the air was arrested almost immediately, and it homed in right back to my hand, where I caught it with a familiar sting of its grip hitting my palm at speed. I raced in toward Raven, driving the dagger toward her chest, and I had enough time to see it glance off the banded metal with no apparent harm when the third orb came down at a steep angle and trace a line straight through my body, starting at the top of my head.

And then I was standing there, watching her eyes widen, as I contemplated my next move. I was drawing on the magic of the unicorn’s bone, and it seemed diminished by the fact that I had, from my perspective, moved backward in time.

I was getting better as we fought, and I was gaining new information, but I had no idea how many times I would be able to attempt this fight. A single hit from the orb was enough to grievously wound me past the point my healing could recover from, if it didn’t kill me outright, and my sword was the only thing that could get through her armor, and then only with the single charge that let it pass through metal, if that would even work. It grated at me that even with unicorn magic as my trump card, I might still lose this fight.

My dagger moved around my body to stay hidden, and if I didn’t focus on it, it seemed to disappear entirely, probabilistically located somewhere out of sight. I reached into my pocket and pulled it out as quickly as I could, burning SPD and throwing it directly at Raven’s unprotected face as her bands of armor encircled her. There was a shimmer in the air in front of her, followed by an audible click, which seemed to happen concurrently with the dagger striking the invisible surface of whatever magic was protecting her. The dagger glanced off, and was back in my hand in half a second, ready for another throw. I couldn’t tell whether her shield was reactive, or whether she was just that fast, but either way, I didn’t seem to be able to stab her in the face even in full-draw SPD bullet time mode.

I didn’t have time to be cautious, not with the unicorn’s bone gradually running down. I threw the dagger again, more as covering fire than attack, and ducked down to pick up my sword from the ground. Raven was fully armed and defended, with her cloak billowing out behind her. My sword was out as she shot one of the orbs at me, and I felt the instinct to parry, but I twirled away and dodged instead, feeling cool air where the sleeve of my shirt had been vaporized. It was possible that I could simply outlast the orbs, if she had only three of them, staying at a distance from her until she had spent her payload, then closing the distance with my sword.

Unfortunately, there were people all around us, and while I had written most of them off as being soft and weak librarians, an analysis I’d made long ago in the dining hall, it wasn’t entirely accurate. A man and a goblin were approaching from the houses, both of them with rifles. I recognized the goblin as Xorbus. They hadn’t been part of how I’d modeled this scenario, but as they raised their rifles, I realized that attempting to stall would be met with rifle fire, and me without my armor. I could parry the bullets, I was fairly sure, but that would leave me open to Raven, and parrying two firing in tandem was likely at the limits of my ability.

I should have taken the time to get into my armor when I left the house, I realized that now, I should have taken the time to think and plan, I should have put my two points from the level up into something, but in the moment it had seemed like I needed to do something concrete to get me closer to my goal. Values had a metric for time sensitivity, and it was clear, now, that ‘Level Up’ had a perilously high time sensitivity, so high that it had compromised my decision-making.
I could feel the unicorn magic slipping away, the last of it draining, which would force a reset or bring the loop to an end, but I hadn’t put myself in a more advantageous position, let alone won. I opted to reset.

Raven’s eyes were widening as she looked at me. I glanced at the man and goblin coming out of the houses, each carrying a rifle, then around at the other librarians, the distant ones jogging closer and the close ones backing away. No other elements in play that I had missed then.

I wanted to pull my hand away from the bone and try to buy time, to say soothing words and explain that I hadn’t meant anything by touching it, but as soon as the magic was up, the timelines would come crashing back together, solidified, and Maddie would remember me trying to kill her.

In another life, I would have marveled at her ability to go into full combat mode at the drop of a hat, or at the way she seemed to prioritize the activation of her entads. Perhaps I’d just forgotten that she’d traveled with Uther for so long.

I tried gem magic, though I worried that the effects would carry over from one timeline to the next. I had a sapphire on a bracelet, pressed tight against my skin, for emergencies only. As soon as I was at the beginning of the loop, as I saw her eyes widening, I fired off the blue beams of light. They were weaker, not coming from the palm of my hand, something having to do with the position of the endpoint of my soul, but they came as a surprise to the people around me, and went in all directions as they sought their targets.

Franklin Nho defeated!

Xentrus Sharptooth defeated!

Lollis Hentra defeated!

Skill increased: Gem Magic lvl 21!

They weren’t the messages that I wanted to see, just bystanders hit hard enough by the auto-homing gem-light to bring them down, whether lethally or otherwise. Three hit Raven against whatever invisible field was protecting her head. Automatically, reactively deployed then? Another four hit her on her body, arms, and legs, pushing her backward and staggering her just before her armor closed around her. It was the first solid hit I’d gotten.

I could feel the drain of the gem though, which was especially potent against a mind trying to suck down SPD and maintain a hold on unicorn magic. I could see that a second volley wasn’t going to do any good against Raven, so I grabbed my sword up from the floor again, pulling it from its sheath, and hoped that whatever injuries I’d managed to give Raven, they would slow her down enough that I could land a killing blow.

It might have been easy to miss, given the circumstances, but the magic I was pulling from the unicorn bones was definitely getting weaker. I wouldn’t be able to keep trying indefinitely.

I said the word to activate my sword and swung it at Raven, though I was too far away, and she ducked backward. My second strike landed though, passing cleanly through her armor to sink into her flesh beneath it, but I had gotten too close, and her orbs came down faithfully, all three of them at once, ending me at the same time I ended her.

Raven Masters defeated!

Achievement Unlocked: Coup de Companion
And then I was staring at her eyes widening again, even as I knew, with grim inevitability, that she would be in full combat mode within half a second.

I fired off the gem magic again, that meter having been thankfully refilled on reset, and watched as messages flashed across my HUD. Four hits to Raven this time, plus those that went to her head, which was entirely protected by whatever entad was springing to life to aid her. The mental fatigue didn’t appear to carry over, but it was still draining in the moment. With Raven injured I stepped back, trying to bide my time and hoping that I could pursue a strategy of distance. I drew and threw the dagger at her, aiming for her unprotected hands, which managed to score a hit that drew blood. She cried out, and I took the opportunity to pick my sword up from the floor and unsheath it while she was distracted.

Perhaps I wouldn’t need the sword, if I could dodge the three orbs and then cut off her hands.

I dodged first one orb, then another, feinting to bait her into using them, dodging with practiced ease, as though it was every day that I moved out of the way of projectiles that could instantly kill me. That left one remaining, the one she often held in reserve, but unicorn time was running short.

I darted forward, preparing to dodge the last one and speaking the word that would activate my sword. From the corner of my eye, I saw a rifle raised and aimed at me, and when the gun fired, I was already moving to parry it away, hoping that I wouldn’t die to the orb.

The bullet passed straight through the sword and struck me in the chest like a hard punch, and when I staggered back, the third orb hit me, wiping away bone and flesh to make a circular hole in me. I tried to shift my blood around within my body to prevent myself from fainting, but the unicorn magic was near its end, so I slipped backward in time instead of trying to salvage the timeline.

(It might have been painfully embarrassing to get shot like that, but my ego was the last thing on my mind in the midst of battle and with the need for the next level pushing away other thoughts.)

I didn’t know how many times through I had left, but from the feel of the bone, it was in the low single digits. The plan then, since the others had been abject failures, would be to put myself in a better starting position, or possibly to kill as many of the surrounding librarians as possible and then retreat to set up an ambush. It was all going to take more time than I’d wanted it to, hours that I was never going to get back.

I watched as Raven’s eyes widened, and reached down to pick up the sword as her defenses slammed into place. This time, I didn’t go for her, and instead dashed backward as I drew my sword. I grabbed one of the librarians by his collar and spun him around, putting him between Raven and myself, a human shield that would hopefully --

One of the seafoam-green orbs flew from its position above Raven’s head, aimed directly at me, and by consequence, my hostage. I pushed him away with inhuman strength, watching as the orb simply removed the matter in the way, a hole that he wasn’t going to recover from, and I narrowly avoided being caught by the orb as it continued on.

*Franklin Nho defeated!*

She’d done it with hardly a moment of hesitation, and again, I had to remind myself that she was more dangerous than she looked.

I said the word to turn my blade to smoke, and threw it at her, more out of frustration than any actual hope that it would work. To my surprise, it struck true, passing straight through her armor and presumably delivering a wound that either hit hard enough or cut deep enough that she fell
backward.

Critical hit!

I rushed forward, dagger drawn, not wanting to waste my opportunity.

The librarians with the rifles began firing on me. I parried one of the bullets and took a hit to the shoulder from the other, but that didn’t stop me from throwing the dagger and taking one of them down.

Alyx Gallens defeated!

Another shot came my way when I was temporarily unarmed, but I brought my hand up by reflex. The bullet passed through my wrist and pelted me in the neck, with no more force than if it had been fired from a slingshot. The dagger returned to my hand and I wasted no time throwing it again, then kept moving toward Raven.

Xorbus Longclaw defeated!

My sword’s charge was used up, but if I was able to dodge the two remaining orbs, I might be able to grab Raven’s sword from her, though that was a slim hope given that it had appeared from nowhere and could probably return there.

A faint awareness of my augmented fighting abilities caused me to drop the dagger when it returned. When I was unarmed and unarmored, I was twice as good at dodging, and that was enough for me to slip through the two orbs that spun toward me at high speed and close range. Once they were past, a feral grin slipped onto my face, because she was still scrambling to her feet and with her most dangerous weapon completely used up.

I kicked the sword from her hand as she was standing up, sending it spinning through the air. It gouged the tile floor of the vestibule with every rotation, then disappeared. When I looked back at Raven, she was holding it in her hand again.

I fell into a fighting stance, one hand still clutching the unicorn bone and depriving it of magic. I had single-digit seconds left before I would have to either collapse the timeline or reset again, and this was as much as I had been able to accomplish through all my attempts.

I released my hold on the magic, and saw understanding dawn on Raven’s face as the memories of all that had happened came crashing into her at the same time. It could be disorienting, I knew, and I was counting on that as my hand moved down to the second unicorn bone. They were a precious resource, but I still didn’t know what her sword did, and she had killed me enough times that I had to assume that she would attack me with lethal intent. I would get myself into a better position before I used it, ideally collecting my bloodied sword from Raven’s feet.

Instead, a book appeared in her left hand, opened to a page with a curious fractal diagram on it.

I stopped where I was and stared at it, unable to do otherwise, even as the image burned itself into my brain. Every attempt to think of something else looped back to the image, and it became an obsession that crowded out all thoughts, even those of survival, even those of leveling. Whatever training I had during mealtimes in the Library simply wasn’t enough, because the image was the source of all insight and the destination of all trains of thought. Even when Raven closed the book, I held the image in my mind’s eye, in rapt attention.

The veil lifted, and I could think again, in a manner of speaking.

I could feel a train of thought that was focused on the image, running alongside my normal thoughts, which were painfully unfocused. It was like playing a videogame and paying the minimal amount of attention to what my mom was saying to me, except the videogame was an image, and in place of my mom talking about dinner was everything in the universe. I was a cognitive cripple. It was worse than the worst strain that gem magic had ever placed on me, but the qualia was distinctly different, like a buzzing in my brain or a fire alarm screeching in the next room over.

Maddie was saying something to the other librarians, but I couldn’t focus on what she was saying. Someone was circling me with a wand in hand, and it took me some time to understand the significance of. Warding.

I realized, with vague concern, that I needed to extricate myself from this situation, and that I might not have the tools to do so given how much of my attention the image was still taking up in the back of my mind, and how crowded out my consciousness was.

I knew that their go-to solution for memetic infection was one of a class of counter-memes, the destructive kind that would chew through my brain and hopefully root out the infection before it burned itself up. I couldn’t think about much, but I knew that I needed to prevent that.

The warder circling me was constraining my options by the minute. It was so hard to think though, so hard to maintain a proper train of thought. I would be useless in combat, even if I could pull from another of my unicorn bones. A ward against bone magic might already be encircling me.

I dove into my soul, hoping to find a solution there, some way to lift the curse that Maddie had put on me. No, not Maddie, Raven, just Maddie’s doppelganger, a person that Maddie would have liked to be. Raven had a purpose, where Maddie had none, intellect and drive where Maddie was hopelessly adrift and unable to figure out her place in the world. Even their fathers were a symptom of it, a doting, overly involved father for Raven where Maddie’s had skipped town when she was
I’d lost my train of thought. I was inside my soul, but there was nothing obvious to indicate the meme was even there. I had expected a crater, or some clear sign of impact. I pushed into my memories, looking around, and found part of the infection right away, because the complex three-dimensional graph was warped, with too many lines all leading to the same place. It was simplicity to trace them back to their source, and the image whose chittering was still occupying most of my brain. It was a cluster of memories and memories of memories, with more of them spawning with every moment, and more connections being drawn.

I tried to rip them out. I had never removed a memory before, given how difficult they were to make sense of and how central to my being they seemed. It was like pulling out kudzu that was multiplying too fast, or cutting the head off a hydra, a monumental task whose growth and spread I couldn’t keep up with.

I stopped when I seemed to be making no progress and backed away. The infection was in the soul, but the soul and spirit moved in concert. The spirit was a set of interconnected function calls that depended on data from the soul, and if trying to hit one wasn’t working, then I would have to try the other.

I ascended into the spirit, and stared at a pulsing green mass whose tendrils seemed to reach into every aspect of both soul and spirit. Function calls that were calling other functions? Whatever was actually happening at the object level, all I had access to was the metaphor, the pathways of action that I could see.

The green mass had a backbone, and I yanked on it with as much intent as my muddled mind could manage. It evaporated in an instant, taking every tendril with it, then returned just as quickly as it had been erased. I frowned, then tried to still my face, lest that frown had shown up outside my body and given something away. The soul and spirit were having similar issues. I couldn’t get rid of the base data in the soul without the process within the spirit making more, and I couldn’t get rid of the process in the spirit, because it would be restarted from the data in the soul. Unfortunately, I couldn’t get rid of both at the same time.

I changed my tactic, and instead of trying to get rid of the bludging green vein on my spirit, I tried squeezing it instead, mentally gripping it so that I could constrain its size. As I did, I saw bits and pieces of my spirit return to vibrancy, some kind of indicator that whatever those pathways were, they were being used. I could feel my mind being given room as I squeezed out the invader, which made the process of squeezing easier. Every ounce of mental pressure made the next step easier, until eventually the green pipe was thin as a hair and barely visible amongst the rest of my spirit. The subsidiary branches were even less visible, and I knew where they were because I could sense them, more than because I could actually see them in what passed for a GUI.

I slowly backed away and watched, hoping that it wouldn’t resurface, and breathed an internal sigh of relief when it didn’t. A quick check of my memories revealed that they were the same tangle as before, with the image taking prominence, but when I thought about things, the image didn’t come to mind, and to all appearances, whatever enormous fraction of my mind the image had been taking up, it had dwindled down to nothing.

I resurfaced to the real world, triumphant, only to realize that I was stuck behind a large number of wards and surrounded by a group of hostile librarians.

I still wanted to kill them all. That hadn’t changed. I didn’t think that I was in a position to do so though. Raven was speaking to the other librarians in a huddle, occasionally glancing my way. I tried to make my eyes go vacant, but mostly relied on the fact that I was far enough away that any
changes in expression wouldn’t be noticeable. One of the wards must have been against sound, because I couldn’t hear anything.

I had been saved from the meme by the game or whatever sat on top of it, that much was clear, but it had put me in an absolutely dreadful position. Raven knew that I had tried to kill her. I had seriously injured two of the librarians, if not outright killed them. She also likely knew that I had been taken by the so-called affliction that accompanied leveling up, and if she hadn’t figured that out, then she knew something was wrong with me. I wasn’t sure what weapons or scalpels would be leveled against me, but I was certain that tools would be brought to bear. I still had hope that I would be taken to Aerb so I could convert Amaryllis to my cause before she touched my soul, but having tangled with Raven, I didn’t think she would be so incautious as to take me across the border between worlds without knocking me out first.

I could summon the Cannibal, if he would come to the Library. That was certainly a thought worth considering.

The truth was, I was stuck, with only one good way out.

In my current state of devotion to the ‘Level Up’, I would be dependent on my social graces and ability to act innocent in order to convince Raven to let me out. To be blunt, that wasn’t going to happen. However, if I was going to be subjected to their ministrations and be forced back into my old state anyway, that would likely put me back weeks or even months from the next level. The easiest way to pass the tests wasn’t to lie, it was to really pass them, because I was who I claimed to be. If I actually wanted to level up, which I desperately did, then the most logical thing to do was to alter the core of my being. Future self, you must put real, meaningful effort into leveling up, or if I ever gain power again, I will destroy the things you love. I stepped back into my soul and lowered the ‘Level Up’ value back down to rock bottom.

The first feeling was of horror at what I had done. I had died a few times, killed Raven once, and there were three dead librarians that were entirely my fault. I tried to put distance between who I had been then and who I was now, but the decision hadn’t felt too different from my normal mode of operation in a crisis, where people became inconvenient meat that needed to stop moving.

I went back through the thought process that I’d gone through to get back to normal. Had that really been my other self thinking that? Had ‘I’ had some hand in the argument, swaying myself away from evil? Or had I really just thought that the fastest way to level up was to go back to normal and tossed my values in the garbage to get it done? I had no real way of knowing. The idea that I would sacrifice something so essential with almost no thought put into it was frightening. The threat … I wasn’t sure how to take that.

I stood up and waved to Raven. She stopped where she was and stared at me. She was still fully armored, and her sword was in her hand the second she saw me moving. She walked over to me, slowly and cautiously, as the rest of the librarians cleared out. She shouted something inaudible and a book appeared in her hand, with her finger between a specific set of pages. Another meme, I suspected, which meant the shout was for people to look away.

I held up a hand, then said ‘watermelon’ a few times, gesturing to my mouth, to show that there was a sound barrier between us. I wasn’t sure whether or not she knew that. She said something to the side, and we waited while one of the librarians, their warder, came over and slowly undid the sound ward.

“I fixed myself,” I said.

“Why were you saying watermelon?” she asked, still holding the book so she could open it at a
moment’s notice. I’d seen now how fast she could move; she was almost as fast as I was with a full
dose of SPD.

“Oh,” I said. “That’s just … something people on Earth say when they want their mouth to look like
they’re talking.” It hadn’t occurred to me that the sound barrier would be one way. “Weren’t you
concerned I knew a spoken meme?”

“The ward was two-way,” said Raven. “I can read lips.”

“Oh,” I replied. “Are you okay?” I asked. There was dried blood between the bands of her armor. It
must have been wiped away but not removed from the cracks. I still had a vivid memory of throwing
my sword at her.

“I stole two of your fairies,” she replied. “You cut halfway through my breast.”

“Sorry,” I said. “I -- I wasn’t in my right mind. You were right to call Puppet Protocol. That was -- it
was admirable.” I wanted to say more, to say that it hadn’t been me, it had been this other version of
me, a horrible killer obsessed with chasing the next high, but that was exactly what he would have
said. He seemed to think that I would be able to dig myself out from this hole with authenticity, but
making the exact pleas that he had wanted me to make made my skin crawl.

“You killed one of our librarians and seriously wounded another,” said Raven. There was nothing in
her voice or expression that gave it away, but I didn’t think she believed me. “What happened?”

“I learned Spirit from the book and then leveled up when the quest completed, before I could do
anything with it,” I said. “After that, I -- I was going to kill you and everyone else here, and then I
decided that I wanted that last book I needed before I killed you. Fortunately, you were harder to kill
than I’d thought you would be.” I hesitated. “You have really impressive reflexes.”

“You were burning bone,” said Raven. “Speed, right?”

I nodded, slightly confused. “How did you know?”

“I have an entad,” said Raven. “One that gives me a benefit when someone is boosting their own
abilities. It didn’t allow me any of the magic, unfortunately, or I would have been able to end that on
more favorable terms. As it stands, we have two librarians dead and another five catatonic.”

“Catatonic?” I asked. “Oh. Friendly fire?”

Raven nodded. “I had to stop you, and it was the only way I could think of. People were watching
us. I couldn’t warn them without warning you. Some of them saw the image.”

“I can fix them,” I said. “Probably. I can probably fix them.”

“How?” asked Raven. “How did you just shrug off one of the most powerful memetic kill agents we
have on record?”

“I was protected,” I said. I tapped the side of my head. “It’s still there, just strangled.” Which
probably means that I have a weapon that I can deploy against other soul mages, should it come to
that. I might even be immune to that one.

“And your other problem?” asked Raven. “The desire to kill me?”

“I fixed that too,” I said. “I think I was thinking that it was the fastest way to get me out of here so I
could go level up again. And I think that I also know how to solve that problem for the future.” I
shifted my weight from one foot to the other. Her finger was still between the pages. I was very consciously not looking at the book. If she didn’t believe me, I was probably fucked.

“You tried to kill me,” said Raven.

“I know,” I said. “It wasn't me. I mean, it was, that's the horrible thing, it was me, it was how I thought with all empathy and morality stripped away, but I can't even call that the same person. Or, I don't want to. I'm not going to say that you have to believe me, because you don't have to, but I'm glad that I wasn't able to kill you, and I hope you can understand the way things are.”

“I spent thirty years with Uther. Trust me when I say that I understand. Per protocols, I can’t clear you,” said Raven. “We have mandatory forty-eight hour quarantine, which unfortunately overlaps with the next shift change. Protocol is that we knock you out and keep you knocked out until after the reset, because the reset would put you back in the personnel grid, unrestrained.”

“Shit,” I said. “That’s … I understand it. So long as no one kills me.”

“That might also be a problem,” said Raven. “You shouldn’t have been able to shrug off the meme, but now that you have, Majom is going to argue for counter-programming. Do you think you could weather that too?”

“It depends on how long it takes to work, and the precise mechanism,” I said.

“Seconds,” replied Raven.

“Then no,” I said, frowning. “Even if I was allowed to prepare, I think it would probably just tear through me. The agent you used to paralyzed me was relatively benign. It wasn’t trying to kill me, it was just trying to make me think about it as much as possible.” I touched my fingers to my temple, trying to focus. “I’d prefer not to have my personality nuked because someone was being overly cautious.”

“There are dozens of witnesses to everything you did using unicorn magic,” said Raven. She was staring at me. “If I didn’t have some inkling of your place in the universe, I would issue the counter-programming myself.”

“But you do know what I’m here for,” I said. “You know me.”

“No,” said Raven, shaking her head. “We’re practically strangers, for all the familiarity you treat me with.”

“Sorry,” I said.

Raven eyed me. “I don’t have the authority to release you,” she said. “Given our protocols, if I acted unilaterally, it would be taken as a sign that I had been infected with something, and rightfully so. And even if we quarantine you, I’m not sure that someone wouldn’t slip you the counter-programming just to be safe. I’m not sure that I have enough control here, not when everyone knows that I’m on the way out, not when there are rumors swirling about us.”

“Rumors?” I asked.

Raven waved a hand. “Impropriety.”

“Ah,” I replied. I tried to move past that as swiftly as possible. “So you’re saying that if you don’t break me out, I might be doomed?”
“Yes,” said Raven with a nod. She was staring at me. “Convince me.”

“I …” I didn’t know where to begin. “I haven’t told you about Maddie.”

“Maddie?” asked Raven. “The one I look like?”

“Yes,” I nodded. “She was … she wore cat ears around school. That was why I asked you about it. I think she was the inspiration for you, similar in some ways and opposite in others.” I thought about what Fenn had said about the relationship of Japanese culture to the elves. “And I’ve been starting to think, more and more, that there’s purpose to the world, and to the people I’ve met, even if it’s not always obvious. You? For Arthur, I think you were his moral compass, the person that kept him grounded and reminded him of home, except that he didn’t tell you everything, and it didn’t always work. For me, the purpose is probably just to show me who Maddie could have been, I think. I wasn’t very nice to her, even though she was nice to me, and our relationship was dysfunctional, but … I don’t know, if I were a better person, maybe I could have made things work. So maybe this is my chance to be a better person.” I sighed. “Except that I don’t think it’s that simple, because maybe I’m supposed to be something to you too. I just don’t know what. Maybe I’m supposed to be the opposite of Uther, or at least opposite in some ways, trusting where he was secretive, taking advice where he ignored it, working together instead of charging ahead. I don’t know. I just think that my role is to be someone to you, and I probably won’t be able to do that if I get smacked in the brain with your counter-memes.”

Raven watched me for a moment, not making a move. “Okay,” she finally said. “I’ll get you out.”

*Loyalty increased: Raven lvl 1!*

That had been a long time coming. Because she was Ell, or because she was slow to trust? Or because I hadn’t done or said the right things until now?

“I’m going to need that last book,” I said. “The one that will tell us what the Second Empire knows about the locus. I’m sorry, I know that’s going to be tough, but --”

“It’s fine,” said Raven. Her face was set. “I’ll get it done.”

I was left to wait behind the wards until the warder came back, but instead of dropping them and letting me out, she put up a new one, blocking out the light entirely. I lit up my finger as a makeshift candle, but there was nothing to see, and it was really more to preserve my day vision when the ward inevitably dropped. I stopped when I’d lost too much heat and began to feel a chill.

Hours passed. I needed to pee.

Then in an instant, the wards all dropped, and I was momentarily blinded by the light. Raven was there, and she grabbed me by the hand, pulling me along as she ran toward the stacks. There were librarians behind her, and two bodies on the ground either wounded or dead.

“Don’t look back,” she said, voice tight.

I took her advice and ran after her, until we finally reached the first shelf of books, which parted way to display a dizzying kaleidoscope of shelves. It made my eyes water and stomach lurch, until I closed my eyes and let Raven lead me.

We came out in other shelves, and my body was jerked into position with my arms at the side for just a moment before I was blinking and rubbing eyes, trying to recover.

“So,” asked Bethel. “How did it go?”
We had a debriefing in what Bethel called ‘the conference room’. Even before she had gained the ability to fold space, she liked to go big, making rooms with ceilings that stretched up dozens of feet and more space than was needed for the people and furniture. With the ability to make rooms as large as a small town, she’d opted to do away with any pretense of restraint. The conference room was a massive place of gray marble and thick timbers that looked like they’d been cut from thousand-year-old trees. It took a legitimately long walk to get to the center, where the timbers overhead were arranged so they formed a wide, fluted cylinder that went up a few hundred feet. My first thought was that this was probably what the inside of a nuclear cooling tower looked like, but it was too skinny for that, and too well-lit.

The whole thing was also just too fucking big for nine people to have a meeting, but I held my tongue.

"Why don’t you tell me what you did first?" I asked. "I’m going to go ahead and assume that you had a less exciting time than I did, no offense."

“I spent the month trying to work out how I would recover from the setbacks that the Dungeon Master put in front of me,” said Amaryllis. I hadn’t been gone a month; Amaryllis was borrowing more time, but at least she was being forthright about it. “The tuung have hatched, and are being tended to by the helpers and teachers we hired, which I’m keeping a close eye on. Aside from that, the only thing that we have to report is that the water mage was unavoidably delayed due to a storm.”

“I thought they dealt with storms?” I asked.

“Yes,” nodded Amaryllis. “That was what I meant; she had to deal with a storm.”

Bethel leaned forward. “There are too many people in me,” she said with a frown. “I’m feeling less like a house and more like a facility.”

“It’s temporary,” said Amaryllis. Her voice was tight. “And I asked you before I made any plans.”

“That doesn’t mean I can’t grumble, now that your better half is back,” said Bethel.

Pallida and Heshnel were with us at the table. My eyes went to Pallida at the comment from Bethel, and I saw a slight frown cross her face. She had designs on Amaryllis, that much was clear, and in the doomed timeline, it had apparently worked, for a time. I wasn’t sure what Bethel was playing at, unless she was just trying to stir up shit. Or maybe I had misunderstood, and our murderous house had just been saying ‘better half’ in a strictly non-romantic way. I might have been reading too much into it.

“And you, Juniper?” asked Amaryllis. “How was your time in the Library?”

“I learned Library Magic,” I said. “I also learned Spirit. Unfortunately, that triggered quest completion, which, ah, turned me into my worst self.”

“A number of people died,” said Raven. “I think it would suffice to say that it’s better we don’t go back there unless we want a fight.”

“A fight you would win, surely?” asked Bethel.

“Maybe,” I said. “Some of their weapons are novel. I was hit with one.” I glanced at Raven. “I’m not
saying that we shouldn’t ever return, but we came out with a large cache of books, and I accomplished everything that I meant to do there.” I looked over at Solace. True to what the books had said, she was back to her five-year-old crantek body, with small antlers coming from her forehead as embellishment. Druidic bullshit, I was pretty sure, but I was still happy about it, because her being in the body of some random guy hadn’t felt quite right. “I haven’t read through all the books yet, but we were able to get all of the Second Empire’s research into the nature of the loci. It’s knowledge that was paid for in blood, but I’m hopeful that I can find something in there that gives me a hint as to what I can do to help get the locus established in the outside world, some way to spread its power and let it take on new lands.”

“Hrm,” said Solace. She narrowed her eyes and cast a glance at Heshnel, who didn’t meet her gaze. “I’m doubtful that such materials would prove useful. The Second Empire never truly understood the loci. That was one of the reasons they killed so many of those I loved.”

“It’s as good as I’ve got right now,” I said. I cleared my throat. “I’d also like to sleep in the bottle from now on, if that’s okay with you.”

“Certainly,” said Solace. She seemed much more pleased with that. “Keep your soiled research outside though.”

I nodded, then turned to the others. “That aside, there are a few other things to report on. I guess the first is that Fel Seed is going to be more difficult to deal with than I thought he would be.” I took a breath. “I’d like to postpone going into his exclusion zone until after we’ve managed to concoct a good enough plan. I have a book that chronicles the closest anyone has ever gotten to killing him, along with some research and case studies done by the Second Empire, all of which might be helpful. It also looks like we’re going to bring Thargox into the mix.” I looked over at Pallida and Heshnel.

“That can be arranged,” said Heshnel. “We have the entad it used for communication, or failing that, we can meet it. I don’t know its specific stance on you, as yet. Lyda died swiftly, in that confrontation, before Thargox could weigh in.”

“I’m hopeful,” I said. I took another look at the seats around us as I realized something. “Gemma hasn’t come back?”

“She’s going through a warrior’s trial, last I heard,” said Pallida. “Her account was challenged. The Foxguard customs haven’t really kept up with the times. If she’s unlucky, she won’t return. She did bring the Egress back though.”

“Good,” I said. “I’m pretty sure that we’re going to be making heavy use of it in the coming weeks. I’d like to hit a few of Uther’s old caches, and we’re due for a return to Speculation and Scrutiny, or as close as we can get and still be outside the zone. Masters has a cache of entads that should, as close as I can figure, go to us.” I was the new Chosen One, like it or not, and on my side was not just the last of Uther’s Knights, but Masters’ daughter as well.

“Can I ask if you found any books I wrote?” asked Amaryllis, leaning forward some in her chair.

“Yes,” I said. “You managed to single-handedly revolutionize a number of fields on Aerb and kept things running for nearly a hundred years.” I hesitated. “There are limits on how much it’s good to show you.”

“Oh?” asked Amaryllis.

“For the safety of the Library,” I said. “We might have burnt some bridges on our way out, to put it
mildly -- no, sorry, I ... I killed some people, and more died because of me, when I leveled. I don’t want to downplay that. That’s the primary reason that we won’t be going back, that and the fact that I have work to do in the real world. But even if we’re not going to be actively using the Library, it’s still a valuable resource, one that I don’t want to compromise.”

“So the books stay sealed?” asked Amaryllis.

“No,” I replied. “Not sealed, just ... it’s important that you do the things you were going to do anyway. I brought back six different editions, and I’d like some time in the chamber to read through them, but I agree with Raven that it would probably be better that you don’t try to skip past all the hard work, not at the expense of the Library.”

“Fine,” said Amaryllis. “Read carefully and tell me what I need to know.”

“You left some messages to yourself,” I said. “Personal ones, I gather. I’ll write them down for you. They were encrypted.”

Amaryllis raised an eyebrow. “I promised myself I wouldn’t do that.”

“It seemed like something that you really wanted to say to yourself,” I said. “We can talk about it more later. For now, I’d prefer if you limited your chamber time, at least until I’ve gotten caught back up to speed on what you’re doing.”

“Do you actually care?” asked Amaryllis.

“I do,” I nodded. “I think I’ve been sitting on the sidelines for too long, and some of what you have planned is ... well, I wouldn’t want to miss it.”

“Are we done here then?” asked Pallida, leaning forward in her seat.

“No,” I said. “There’s one more thing.” I turned to Grak. “Grak, if it’s alright with you, I’d like to make the trip to Darili Irid. It might take a day or two to get all the gold ready, but we promised you our assistance long ago, and I want to make good on that.”

Grak’s face showed no emotion. “You want to be with me,” he said.

“Fine,” he answered, and that was that.

“Can I verify the integrity of your soul?” asked Amaryllis.

We’d had a group dinner, with custom meals created on the spot by Bethel, where I’d given the longer version of my time in the Library, and I’d been filled in on the more mundane goings-on around the Isle of Poran. Grak had started in on the Harry Potter series at Valencia’s request, Solace had taken to designing some rituals and holidays for the tuung to take part in, and our two newest members had settled into life on the island. Amaryllis was working on a prototype television that wouldn’t kill or brainwash anyone, but it was going to take awhile; in the meantime, we had the film projector, along with all of the verified-safe films that we’d already watched once or twice, which helped serve as an introduction to Earth culture for the newbies.

After we were done eating, Amaryllis had taken me aside, into her room, and asked to look into my soul.
“No,” I said. “There’s an image in my memories that you might see that would make you catatonic. I could maybe fix you with Spirit, or it’s possible that with half my skill you could fix yourself, but … no, you probably can’t verify integrity, or at least not safely.”

“That’s a problem,” Amaryllis frowned.

“Do you have specific concerns about my soul being compromised?” I asked. “Uh, technically you have to worry about both soul and spirit, because I think that you can effectively replicate most effects using one or the other.”

“Lovely,” said Amaryllis with a sigh. “I’ll probably take some time in the chamber to get a handle on it.”

“Maybe we both should,” I said. “Things got kind of fucked at the Library, and I have two new points that my evil twin thankfully didn’t spend, which means that I can raise the caps on skills.” I stopped myself, unsure whether or not I should say what I was thinking. “When I was reading the books that you wrote … I missed you.”

“I missed you too,” nodded Amaryllis, as though it were a statement of simple fact rather than anything emotional. “I’d prefer if you don’t go running off on your own again, but I recognize that the rule of three is in play.”

“Rule of three?” I asked. “Ah, Speculation and Scrutiny was the first, the Infinite Library was the second?”

“Yes,” replied Amaryllis. “Uther writes about the rule of three a lot, especially in Degenerate Cycles. Either two times establish a pattern so the third time deviates, or two encounters with a win and a loss set up a tiebreaker. He notes that infinite cycles have to find ways around that.”

“And that’s some of what you spent time in the chamber thinking about?” I asked.

“It’s one of the things, yes,” said Amaryllis. “Mostly it was in setting up experimental protocols for dealing with hostile, unknown memetic threats, eldritch entities, and/or hostile and contagious magic. I drew up some designs for labs that would self-seal and incinerate everyone inside, for example.” She raised an eyebrow. “I don’t suppose that you can tell me much? Or that you’re willing to? Obviously I had some success.”

“The world lasted an extra hundred years without me around,” I said. “A lot of that is on you. You figured out solutions and worked your ass off, all the while knowing that it was all for the sake of the books you were writing and little else.” I paused. “So whatever you came up with, it worked there. I don’t know how much knowing that will change what you do.”

“I’ll be interested in reading whatever you clear me for,” said Amaryllis with a shrug.

“You’re very nonchalant about it,” I said.

“Curiosity is something that I tamed long ago,” said Amaryllis. “Do I want to read my notes from decades in the future? Obviously. It’s like a burning itch. But part of being a rational, competent person is in understanding that there are some itches that you shouldn’t scratch, for your own good.”

“Yeah,” I said. “I’ll give you the encrypted messages you left yourself though. I assume they were personal.” Amaryllis was sitting on her big, fluffy, four-poster bed, and I was sitting on a chair next to her fireplace. I shifted around some, not quite comfortable. There were things that I wanted to say to her, but not quite her, the person she was in the books, that doomed Amaryllis who had lived out her life in service of the world. Cypress. It was the fake name she’d given me when we’d first met.
“Just say it,” said Amaryllis.

“Yeah?” I asked.

“Whatever you’re thinking about or stopping yourself from saying, just say it, unless it’s one of those itches that you know you shouldn’t scratch,” said Amaryllis.

“I was thinking of putting my points into SOC first,” I said.

“Permanent points?” asked Amaryllis.

“Yeah,” I nodded. “I know they’re not the direction that your roadmap points to, but … it’s sort of a question of what’s important, you know? And that depends on what the Dungeon Master wants from me, which is guessable but unknowable, at this point.”

“SOC would help to solve personal problems, not hexal ones,” said Amaryllis.

“And I’m a lever to move the world, not a lever to help my friends?” I asked.

“That’s not --” Amaryllis began.

“Sorry,” I said. “That came out wrong, which I’m going to blame on my low SOC. I didn’t mean it to sound snarky, I meant … I can understand how it would seem, from your perspective, like I’m burning an extremely valuable resource in order to solve what are ultimately small problems. But when I look at everything that happened in the last month? Even if I’m thinking rationally, I have to look at all the stuff that got fucked because I didn’t have enough SOC. How are we going to get allies if even using half your considerable skill sees me completely screwing everything up? Narrative aside, Fenn was close to walking away. Solace and Grak have both expressed their reservations about staying, and I don’t think that’s entirely about goals and values. SOC leads to Loyalty, whether we like it or not, and Loyalty leads to power.”

“You’re saying that the personal is political,” said Amaryllis.

“Political?” I asked. “You mean global? Er, hexal?”

“It’s a second wave feminism slogan,” said Amaryllis. “I’ve been reading some of Tiff’s books in anticipation of her showing up. It’s not entirely apt. Sorry, I thought you would recognize it.” I shook my head. “Whatever. I understand your argument. I even think there’s some merit in it. The problem is that you have so few skills that are capped by SOC, or that use it at all, that you’re essentially wasting the level as far as combat and utility go.”

“And how much utility do we lose if people keep stepping away?” I asked. “What if I say the wrong thing to Pallida and she leaves? In purely mercenary terms, she represents more power than an extra three ranks in half my skills do.”

“Point taken,” said Amaryllis with a shrug. “You could take more time to think about it.”

“I know,” I said. “I will. I just … to get back to what we were talking about earlier, the thing that I wanted to tell you but was having trouble with, I just wanted to, I don’t know.”

“You don’t know, or you don’t want to say?” asked Amaryllis with a raised eyebrow.

“You were lonely,” I said. “She was. Cypress, I guess we’ll call her. In that doomed timeline, you had your work and almost nothing else. I know that you don’t need people to function, but it was still sad, and I don’t have the SOC to say it properly, but I want you to know that if you need a person, if
you want a person, I’m there for you.”

“I see,” said Amaryllis. She was watching me. “I stopped interfering with the natural processes of the soul, in the doomed timeline?”

“You did,” I said.

“So I loved you,” she said with a sigh. “How many years in the future?”

“Until you died,” I said. “596 FE, but with extra subjective decades in the chamber.” It ran contrary to what the Dungeon Master had told me, but I didn’t know whether that was because the rules were different in the other timeline, because he’d lied, or because I hadn’t ‘let’ her get over me.

“Fuck,” said Amaryllis. She closed her eyes and made a melodramatic flop backward onto the bed. “And I suppose I was forthright with you about this in the books, and that’s part of the reason you’re feeling whatever you’re feeling?”

“I have no idea why I would choose that,” said Amaryllis. “To love someone who was gone?”

“I think maybe it made it easier for you,” I said. “You were in this doomed timeline, knowing that you were going through all this work to become Queen of Aerb so that --”

“Queen of Aerb?” asked Amaryllis, sitting up and looking at me.

“I don’t think that’s something I need to hold back on,” I said. “That wasn’t actually your title. You were Secretary General of the Empire of Common Cause, Queen of Anglecynn, and Commander of the Imperial Defense Force.”

“Anglecynn doesn’t have a queen,” said Amaryllis. She was looking me over. “Hasn’t had a queen since Zona, nor a king since Uther.”

“Things can change. Constitutions can be rewritten,” I said. “I’m pretty sure that the Imperial Defense Force isn’t a thing either.”

“It’s been floated for the better part of a decade,” replied Amaryllis. She sat back on the bed slightly. “I was actually able to accomplish all that?”

“You blew up Celestar,” I said with a smile.

Amaryllis stared at me. “You’re piquing my curiosity after having told me that you won’t sate it,” she said.

“I’m not trying to,” I lied. “I’m just in awe of what you managed to accomplish over there, how far you were able to advance the state of the art, even as you were pushing through this loneliness and solitude. I wanted to give you a hug. That was all, really, all I wanted to say, just that I value you and I want you to be happy.”

*Loyalty increased: Amaryllis lvl 23!*

“I would accept a hug,” said Amaryllis. She opened her arms wide.

I came over to her and wrapped her in a hug. She was small, compared to me, but with hard muscles. I held her for a moment, thinking of the old woman sitting at the end of the world with a figurative army of personnel working beneath her and a literal army of magus-soldiers at her command, the
woman who had done all that she could just to send a message to an audience of one. A Cypress Waits.

“This doesn’t mean anything,” Amaryllis murmured into my ear.

“No?” I asked. I tried to pull back, to see her face, but she held tight, keeping me where I was.

“I like hugs,” she said. Her voice was low. She rested her head against mine. “I’m not in love with you. I just missed you, and I like being hugged. Don’t take it the wrong way.”

“I won’t,” I replied. I stayed silent for a bit, as the hug went on. I felt myself wanting to cry, because I missed Fenn, because it was obvious that Amaryllis had wanted someone to hold her, and because some other Amaryllis that never was had waited until the end of the world.

“Would you be upset,” Amaryllis began, then stopped. “Would you be upset if I did this with Pallida?”

“No,” I said, even as I felt my heart sink a bit. ‘Upset’ wouldn’t be quite the right word, but I wasn’t sure what word would fit.

“We did,” said Amaryllis. Her voice was near a whisper. She was still holding me tight. “I asked Valencia what you would think and she refused to say.” She paused. “I shouldn’t have asked her, obviously, but how you would feel about it didn’t enter my mind until after Pallida was touching me.”

“Ah,” I said. “Pallida likes you.”

“Yes,” said Amaryllis. She had gone tense.

“You can relax,” I said. I waited until she did. “If you don’t want to hug, then --”

“I do,” replied Amaryllis, squeezing me once. “I’m sorry.”

“For what?” I asked.

She shook her head, which I felt rather than saw. “I don’t know,” she said. “I’m sorry if my other self complicated things. I’m sorry if it was me who made the mistake, not her.” She finally pulled back and disentangled herself from me. “I don’t want to lead you on. You’re not the person who should be giving me physical affection.” She was staring at me with her pale blue eyes.

I shrugged. “Maybe,” I said. “Do you think it should be Pallida?”

“No,” said Amaryllis. “She wants … well, she wants Dahlia. It’s an awkward and confusing mess for different reasons. I shouldn’t have led her on either.”

“How far did it go?” I asked, not really wanting to know the answer. It wasn’t a betrayal, obviously, I’d told Pallida that I wasn’t standing in her way. I still didn’t really want to hear it.

“She kissed me,” said Amaryllis. “On the neck. I pushed her away, and that was that, but she had this hunger in her eyes. Like you sometimes get.”

“I’m sorry,” I said. “If it weren’t against my principles, I would edit that right out. We’re platonic friends, I get that, you don’t want me to complicate things, I understand it, that’s -- I mean, you’re right, probably no more hugs.”

“It was nice,” said Amaryllis. “It’s nice to be touched. To cuddle.”
“You miss Fenn,” I said.

Amaryllis nodded.

“I do too,” I said. “With what I know about Spirit, I’m more convinced than ever that she’s gone, unless there’s some analog to the anima exa that sticks to the soul. If there’s not, then we only have a fraction of the real thing, and there’s no way to get her back, not even in principle, besides maybe letting her show up in the hells.”

“I never thought we’d be able to get her back,” said Amaryllis.

“No,” I said with a long sigh. “Me neither, not really.”

Amaryllis moved away from me and stood up, leaving me alone on her bed. She walked to one of her windows and took out the ribbon that was tying her hair back, then redid it. “I should get going. There’s work to do, as there always is.”

“You okay?” I asked.

“Yes,” she said. “I’m good. I was just thinking about you.” She was facing away from me, hiding her face. “Can I be blunt?”

“Of course,” I said. My mind went racing back to when we’d been in the bottle, and she had said that if I had wanted to have sex with her, she would have endured it. That still stung.

“I don’t love you,” she said, still looking out the window. “You’re my best friend, you’re physically pleasant to look at, and you’re usually the most powerful person in a given room, but I don’t love you. Every morning, I go into my soul and dial things down specifically so that I don’t love you. It made sense, when you were with Fenn, when I didn’t want to live with the distracting emotional pain of wanting you and not being able to have you. And now that she’s gone, and she’s been gone, a month for you, a month and a half for me, there’s the question of whether it would be a good thing or a bad thing, on balance, for me to let myself love you.”

I watched her. She was still standing facing the window, and still toying with her hair, but it was clear to me that it was just an excuse not to look at me. Maybe it was easier for her to be clinical that way.

“You made a pros and cons list?” I asked. I was feeling melancholy at the moment, but that didn’t stop me from being faintly amused by the idea.

“I’m making one, right now,” said Amaryllis as she looked out the window. “I don’t really want to share with you and Bethel until I have something worth presenting.”

“You said we’d make a horrible couple, when we talked about it back in the chamber,” I said. “Though I guess you also said that you were wrong, and that was horseshit.”

“I did say both those things,” said Amaryllis, “Is it too soon?” she asked.

“As far as Fenn goes?” I asked. I hesitated and tried to break that question down. Would it be a betrayal of Fenn’s memory, and the relationship I had shared with her? It would certainly feel like it, but that feeling seemed like it would belong in the class of stupid feelings that don’t really have a reason to exist. Would it be too soon for me though? Would Fenn pollute every thought I had and hang over me like a ghost? Would I wake up in the middle of the night and touch Amaryllis, thinking that it was Fenn until my waking mind caught up with my sleeping one, would I have intrusive thoughts about Fenn that clouded any new relationship, whether it was with Amaryllis or not?
Probably. “I think I need more time,” I said. “Or I would need more time, if you thought it was more pro than con.”

“Okay,” said Amaryllis. She finally turned back to face me, and looked at me with piercing blue eyes. “Thank you for the hug. I’m sure my other self would have appreciated it.”

That felt like a dismissal to me, so I stood up and awkwardly walked out the door, muttering something about how I would see her later. When I left, Bethel was leaned up against the wall, waiting for me and smiling.

“Well that was interesting,” she said.

“Do you ever think about how one of the functions of a house is to provide privacy for its occupants?” I asked. “In your grand theory of houseness, is that at all a consideration?”

Bethel pressed a finger to her lips and pretended to think about that. “Not one bit,” she finally said. She was in her usual form, the tall woman with cedar-colored skin and an impossibly gauzy dress (in its current form, it looked like each of the thousand layers was as thin and translucent as a soap bubble). Her hair was somewhat different though: while it had always been braided and coiled like rope, now it was much explicitly closer to looking like Ropey. We hadn’t talked about the wedding, but it was going to happen soon.

“Is Grak in his room?” I asked.

“Why?” asked Bethel.

“I was going to pay him a visit,” I said. I began walking without waiting for a response.

“Yes, he’s in his room,” said Bethel.

I glanced over at her. “Can I ask a favor from you?” I asked.

“Can we talk about you and Amaryllis?” asked Bethel with a pleased smile. “That’s my price.”

“Sure,” I said. “My favor is that you redecorate Grak’s room. No more explicitly dwarf stuff, it’s too much of a reminder of his old home, which he’s got some bad feelings about.”

“Did you talk to him about it?” asked Bethel.

“No,” I said. “For all I know, he picked it out himself as a form of self-flagellation, but that would be all the more reason to change it. I’d rather he not know I asked, but it doesn’t need to be a big secret. I just think he’d be happier if he was living in a place that didn’t remind him of Darili Irid.”

“Done,” said Bethel. “And no, he didn’t ask for it to be like that. It offends his sensibilities?”

“It’s complicated,” I said. I kept walking. “Now go on, you can make whatever snide remarks you want to me.”

“You think so little of me?” asked Bethel with a little laugh that echoed through the enormous halls.

“I know you like getting your digs in,” I said. “I choose to take it as good-natured ribbing, and you should choose to take my complaining as being equally good-natured.”

*Loyalty increased: Bethel lvl 11!*

“Hrm, where to start then?” asked Bethel. She was floating along beside me, not bothering to
animate her legs moving, though she did have her toes pointed down, as was traditional for ghosts. “You had quite the erection, for someone who was hugging a platonic friend who has about as much interest in your penis as she does in a jar of pickled onions.”

I laughed. “You know, I had forgotten how creepy you are? You’re also a pervert, but you knew that.”

“I’m a house,” replied Bethel with a sniff. “I can’t possibly be perverted, the concept simply doesn’t apply. I only mention these things because I enjoy your reaction.”

“That’s the perversion,” I said. “Next thing you’ll be telling me something like, I don’t know --”

“The taste of Raven’s cervix?” asked Bethel with a smile.

I stopped in my tracks and looked over at her. “Ew,” I finally said, before I started walking again.

“Was that a step too far?” asked Bethel.

“Yes,” I replied. “I really don’t like thinking of Raven like that.”

“Even though you had sex with her doppelganger?” asked Bethel.

“How did you know about that?” I asked. “My letters to Fenn?”

“I snooped, yes,” said Bethel. “I have access to everything inside the glove, so long as the glove is inside me.” She paused for a moment. “You wrote those letters with the understanding that I might read them, around when we first met.”

“I didn’t count on them staying private,” I said. “But I was still hoping they would. Just like I was hoping that Amaryllis and I could speak our thoughts without an audience, but I knew that it was possible, maybe even probable, that you were listening in.”

“Hrm,” said Bethel. “You think I should apologize for being invasive, where a Penndraig is concerned?”

“I didn’t say that,” I replied as I continued down the hallway. “I’m just talking about what I want. And really, I’m pretty simple. The thing I want most in the world is for my house to not keep track of the time, location, and presumed cause of all my erections.”

Bethel laughed at that. “If you’d give me a moment, I could probably construct a chart for you.”

“Please don’t,” I said. I kept putting one foot in front of the other. “This hallway is getting suspiciously long.”

“Ah,” I said. “No. If Amaryllis was downplaying it, or even if she was lying, or massaging the truth,
then I have to trust her to have her reasons.”

*Loyalty increased: Bethel lvl 12!*

“You restrain yourself so,” said Bethel with a moue. “It’s unbecoming.”

“And yet,” I replied.

“And yet what?” she asked, tilting her head.

“Nothing,” I said. “I really did want to see Grak though, so if this hallway could be a little less endless, I would appreciate it. If you’d like to needle me more later, I’ll be available.”

“You didn’t answer my question about the dwarf,” said Bethel. “You’re going to see him. Why?”

“I wanted to give him a hug,” I replied.
“So,” I said as I came into Grak’s room. “I’m giving out hugs today.”

Grak stared at me, looking me over.

“Why?” he asked.

“I thought that you would like one,” I said, switching over to Grogli. “When I left you were upset that Magor wasn’t coming. I can be your krinrael instead.”

“Your command of the language hasn’t given you the understanding of culture you think it has,” replied Grak, scowling at me.

“You were the one who taught me,” I said. “I knew the term krinrael because you were the one to teach it to me, not because it got implanted into my head through unknown means. If I’m misusing it, it’s because I didn’t understand what you were trying to say, not because I was given the wrong understanding by a higher power. Does krinrael not denote physical affection?”

“It does,” said Grak. He was still scowling. “You could not be krinrael to me. I disgust you.”

“What?” I asked. That seemed like it had come from nowhere. “You don’t disgust me.”

“I’m not stupid,” said Grak. “I see the way that you look at them, and I see the way that you look at me.”

“Them?” I asked, still dumbfounded.

“Amaryllis, Fenn, Valencia, Bethel, even Solace, before she turned into a child,” said Grak. “You’re pleased with how they look. You barely meet my eyes.”

“Oh,” I said. “Sorry. I don’t think that means what you think it means though. It’s one half aesthetic preference, one half cultural artifacts from Earth. I know that you’re not actually male, but you look male, and on Earth, I wouldn’t look at a man like I look at Amaryllis, even if he were beautiful.”

“Am I beautiful?” asked Grak.

I had no idea how to answer that. Obviously from a ‘keep Grak happy’ standpoint, the answer should be yes, but … “The way dwarves were built, back on Earth, by people who came before me, was by appealing to a specific kind of fantasy about what humans were, or could be. Elves were the erudite upper class, effeminate and gracile, perceptive and aloof. For dwarves, it’s about strength and brute power, hard work and stubbornness. They weren’t the farmer-miners they are on Aerb, they were just miners, usually with no clear source of food.”

“That wasn’t the question,” said Grak.

I stifled a sigh. “No,” I said. “I don’t think that you’re beautiful. You’re appealing in a way that’s sort of separate from what I would consider to be beauty. That’s different from what I would call disgust. I know that’s not what you want to hear, but it’s the truth, and I assume you prefer that.” I was getting exasperated, mostly because this conversation felt like I’d walked into an ambush. “Forget the krinrael thing, I just thought that you would like a hug.”

Grak frowned at me. “Yes,” he finally said.
I gave Grak his hug, trying to put as much love and warmth into it as I could, because I did care about him, and I did want him around. The idea of him being sequestered off from the others in the doomed timeline, or killing himself in the crypt that his hometown had become was heartbreaking. I could see his unhappiness as having mirrored my own, when I was in the depths of depression, that kind of rabid animal wounded that wanted to lash out at everything and everyone around me. Would I have wanted a hug? Yes. I probably wouldn’t have accepted it though. I probably wouldn’t have thought that I deserved it, or I would have seen it as a betrayal of the pain that I should be feeling. At my worst, maybe it wouldn’t have done anything for me, but there had been bad nights when all I wanted was to be held.

“I’m sorry,” said Grak.

“It’s fine,” I said. “I understand.”

*Loyalty increased: Grak lvl 17!*

I sat there in silence for a moment as I held him. I still needed to read the books, which would hopefully say more about his ultimate fate. I didn’t actually believe that pairing him off with some random dwarf and writing him out of the story was the best that we could do for him though, not by a long shot.

“Is this about what you read in the Library?” asked Grak. He still hadn’t let go of me.

“A bit,” I replied.

“That’s why you want to go to Darili Irid?” asked Grak.

“No,” I said. “I wanted to go there before, because it was important to you, and something you need to do. If you don’t go, it will linger and consume your thoughts. I knew that before I left.”

“Hurmph,” said Grak. He pulled away from me and looked me in the eyes. “I think I am done.”

(This was a mildly unusual construction in Groglir, because all statements were inherently considered to be subjective expressions. To say that you thought you were done required bending a word that was normally used for other agents, not yourself, and placed extra emphasis on the act of thinking.)

“Oh,” I said. “I didn’t ask if it had helped, because I didn’t want him to feel compelled to answer. ‘We could do movie night tonight?’”

“Yes,” replied Grak, switching back to Anglish, which was usually his cue that he was done talking.

When I left the room, Bethel was waiting for me. “An interesting day for Juniper Smith, it seems.”

I made the necessary alteration to my spirit, the one that would hopefully lock away the ‘evil’ Juniper forever. It took a fair bit of work, most of which involved peering at my soul and tracing threads back into the spirit, and it was hellishly difficult to see where anything was, because the ‘Level Up’ value was suppressed so low that the relevant threads were hard to feel and harder to see. I did eventually find them though, and after I had leveled Spirit a few times, got a perk that made the whole thing easier.

*Skill increased: Spirit lvl 10!*

*New Virtue: Threadbare*

*Threadbare: When analyzing a thread, you gain information on which threads it has historically
had some connection with, which aspects of the soul it has connected with, and a sense of historic thread size.

The language there settled on a metaphor, at least, that of ‘threads’, but I didn’t particularly like the terminology, because ‘thread’ meant something in computer science, and these didn’t really seem to fit, especially because so many of the threads were dormant. I liked ‘functions’ better, especially since it seemed like they could ‘call’ each other, but whatever, it was close enough, and ‘thread’ was what I would stick with.

Once I could see more of the threads, it was easy enough to trace back and see which one needed to be restricted. I squeezed it down, as I’d done with the meme that still laced through my spirit, until there was practically nothing left. The ‘Level Up’ value was still increasing, but some more debugging of my soul/spirit let me fix that too; it was ticking up because I had the memory of ecstasy. That was easy enough to change, once I had found it, though I opted to strangle the spiritual connection between the memory cluster and the spirit, rather than at the endpoint where the spirit touched back into the soul.

I hoped it would all be enough. After a day, ‘Level Up’ still hadn’t moved from the position I’d left it at, right between ‘Belly button lint’ and ‘Anise’. I was tempted to do another big sacrifice, pushing skill points into Spirit and bumping it up to absurd levels so that I could get all of the Virtues for it and be as good as I could be to within the limits of what the game would allow, but I had done two of those sacrifices now, and it was legitimately difficult to raise the skills that had been traded in, especially those that had been traded in twice.

The day before we were set for our expedition to Darili Irid, Amaryllis and I spent a week in the chamber together, mostly so that I could read through the books her other self had written, and she could read through the other books (notably, the locus materials and Fel Seed manifests) and practice her newfound skill in Spirit.

In the evenings, we usually spent an hour or two together, sometimes playing games and other times watching movies using the projector (the television had been shelved). She would lean into me sometimes, resting her head on my shoulder, and I would put my arm around her. She decoded the messages from herself, but never told me what was in them, and I never asked.

She had the capacity to make more permanent changes now that she had half my skill in Spirit. We didn’t talk about the implications of that either, or at least not the implications it had for what she felt for me. She would have to decide, as someone who wasn’t at all in love with me, whether the ancillary benefits of letting herself be in love would be worth the change in personality.

Other than that, it was good to be back together, and to have someone to talk to about the things that were weighing on me.

“I keep thinking about him,” I said. “The other Juniper. I have to think about him like that, like he’s not me, because if I think about him as though we’re the same person, then I have to accept that I was responsible for killing a number of innocent people. Not just innocent people, but innocent people that I knew and liked.”

“I do have some experience with the feeling,” said Amaryllis. “After what Fallatehr did to me.”

“Yeah,” I said. “She was more competent though.”

“From what you described, you weren’t incompetent, just optimizing for the very near future,” said Amaryllis. “Like a drug addict who just wants the next hit, rather than making plans to have as many hits as consistently as possible over the rest of his life.”

“Surely you’re glad that you didn’t succeed?” asked Amaryllis.

“I am,” I replied. “It’s just weird and upsetting to have had all those thoughts. Especially that last one.”

“When he ended himself?” asked Amaryllis.

“Yeah,” I said. “I keep thinking about -- well, about Fenn. I keep thinking about what I would do if someone offered to bring Fenn back, except I would have to carve out the part of myself that cared about her. And I think … yeah, maybe?”

“You used Fenn in that example, not Arthur,” Amaryllis remarked.

“More immediate, more visceral to me,” I said. I felt my stomach churn. I had been spending a fair amount of time in my soul; I knew where the values stood. “Sorry.”

“It doesn’t warrant apology,” said Amaryllis. “I was just pointing it out. It’s not a mark against you, just something that you might think about, the next time you’re considering going to have a chat with Fel Seed for Arthur’s sake.”

I waved away the argument that would start, which we’d already had more than once. “I think that the obvious parallel is to a drug addict, right? So if you put a drug addict into withdrawal, and you tell them that they’ll get more of the drug, and they’ll get that rush, but they’ll no longer be addicted … I don’t know.”

“You don’t know?” asked Amaryllis.

“I mean, yes, obviously my model of a drug addict would take that deal, and that’s what happened, but I suppose I just want it to have been me that made the choice, rather than him,” I said. I thought that got to the crux of it. “I wanted it to be homicide, not suicide.”

“That’s not how he was thinking of it,” said Amaryllis, shaking her head. “At least, when I was soulfucked by Fallatehr, -- you suddenly don’t like that expression?” She was watching my face.

“I wouldn’t want the act in euphemism to make it more palatable, I guess,” I replied. “So it’s fine.”

“For me,” said Amaryllis, “The important thing was Fallatehr, only Fallatehr, that he survive, that he stay coherent. I would have killed myself, if I had thought that it was necessary. I would have defiled myself in whatever way I thought would work. I’d have consigned myself to the hells for eternity. Personal identity wasn’t really a factor in it. It was different, for the ‘other’ Juniper, because he needed to be alive to get the feeling, but in the face of such overwhelming desire, especially short-term, things like personal identity and continuity of consciousness go out the window. He was just doing whatever he could to get to the next level up as quickly as possible and probably not being philosophical about it.”

“I guess,” I said.

“‘You wish that you’d have overcome him, somehow, through sheer willpower?’” asked Amaryllis. “‘Even though ‘you’ weren’t a coherent entity at the time?”

“Yes,” I replied with a smile. “Yes, that’s exactly what I wish had happened. It’s one of the reasons so many stories have heroes win through the power of grit and determination, or the power of love and friendship, rather than because they were smart and planned things out.”
“Of course, you weren’t smart, and you didn’t plan things out,” said Amaryllis. “Raven should have tied you to a chair while you learned Spirit.”

“I didn’t think the game would fuck me like that,” I said, but even as the words were out of my mouth, I knew how foolish that sounded. People had died because I didn’t take the threat seriously. More people would have died, if I had been capable of (or amenable to) long-term planning. And there were a lot of scenarios in which I would have died.

“Lesson learned, I suppose?” asked Amaryllis with a raised eyebrow.

“Lesson learned,” I agreed. “All the more reason to power up before Fel Seed.”

Amaryllis nodded, but I was sure that there was a part of her that wanted to launch into an argument about going for Fel Seed at all.

I fell in love with the doomed timeline, I have to admit. I wanted to live there, in the same way that I had wanted to live in Hogwarts when I was a little boy (or really, the way I wanted to live anywhere that wasn’t home). There were so many little details that I wanted to explore, but couldn’t. They weren’t just locked away and visible only through books, but locked away and only visible through these books, because the Library had reset, and it had all been wiped away except for those particular books we’d copied.

Computers were, apparently, a problem, because too much computation in one place led to a specific type of magic to crop up, one which was difficult to control and could prove deadly to anyone who practiced it. Computational magic could go rampant in an instant, leading to runaway processes that would eventually destroy all of Aerb if they weren’t stopped. Amaryllis had known that it was dangerous though, and done almost all of the initial research and development in what she called SCRsIs, Secure Compartmented Research Institutes, all of which were wrapped in heavy wards and with strict protocols regarding screening and quarantine.

And as for actually using the computers? Well, once the principles were understood, computing magic could be warded against, allowing engineers and programmers a relative measure of safety. That still made computers too unsafe, if they were going to be used like we used them on Earth, but Amaryllis had settled on a workaround by inventing cloud computing right from the get-go (following an evolutionary path that had died out on Earth fairly early on). Instead of a global internet of connected computers, there were enormous mainframes with ‘dumb’ terminals that communicated with a heavily warded central hub that was rigged up with fail-dangerous traps to destroy the mainframes and kill everyone inside the perimeter if anyone attempted to tamper with any of it. That also gave Amaryllis a fairly effective stranglehold on the technology and dystopic surveillance of anyone using it.

She put up a network of ‘satellites’, hung in place above Aerb using rotating shifts of still mages and other magics, and allowed by a complicated agreement with the Draconic Confederacy. It was a huge investment of capital, but it made the ground repeaters for radio obsolete, allowed for the construction of ‘dumb’ geolocation devices, served as a centralization point for distribution of television and radio programming, and acted as both a stationary weapons platform and eye-in-the-sky. Much of this had government funding as a way of keeping people ‘safe’.

The Imperial Defense Force had been brought into existence as a means of having a ‘cooperative’ armed forces that could deal with Empire-scale threats, which in principle meant border-crossing threats and exclusion zones, but in practice meant whatever the people in charge wanted to aim their guns at. ‘People in charge’ mostly meant Amaryllis, a handful of tuung that she had known since their birth, Valencia’s adoptive children, and to a lesser extent, the rest of the Council of Arches.
Their chief weapons were fear, surprise, and ruthless efficiency, but beyond those, they also had the recovered entads that were Amaryllis’ by claim-in-fact, the systems and technology that Amaryllis had set in place, and a secret weapon; plastic mages.

Aerb didn’t have much in the way of fossil fuels, which made sense given that it was (supposedly) thirty thousand years old. They had rubbers, mostly harvested from trees, and some crude hard plastics that reminded me of something like Bakelite, but not much else. If Amaryllis had been a quitter, maybe she would have seen this as a branch of chemistry and industry that wasn’t worth trying to crack. Instead, she had purchased, at great expense, an open portal to the elemental plane of wood, from which she imported vast quantities of wood which went through a number of esoteric processes in order to turn those delicious hydrocarbons into usable solids, liquids, and gases. There were a huge number of useless (or largely useless) byproducts, especially given that the fuel they produced couldn’t out-compete what soul energy could produce in very many areas. None of that mattered so much though, because it opened up the world of plastics, and plastic had its own brand of magic to it.

The first half of it was easy enough; it was Reed Richards’ superpower, flexibility and stretchiness, which came with an ability to tank hits like there was no tomorrow, mediated by the plastic plates that were attached, fused, or integrated into their skin. At the magus level, with ten years of training, they could reshape themselves nearly at will, altering most aspects of their appearance. The second half of that was a bit scarier, with plasticity applied to their minds, allowing them to think and adapt faster than they could before. The old lady version of Amaryllis joked that she’d accidentally reinvented dopplegangers, but it wasn’t too far from the truth, especially given how often they were given infiltration and assassination missions.

(Two or more sufficiently skilled plastic mages could merge with one another, and that was where you started getting problems, insofar as things that might be exclusion worthy. That research was permanently banned after an incident that came close to destroying the world and was only stopped through heavy use of void weapons. After that, the members of the Plasticlique were rarely given assignments together, for fear that they would try something inadvisable.)

There were elements of fantasypunk dystopia, certainly, but I still marveled at it. Was this why people liked fascists?

“Problem,” said Amaryllis. She was knee-deep in the Second Empire’s locus research, while I sat at the other end of the ‘living room’, making notes on the future that I thought I could actually give to her without terminally fucking things up for the Library. It was hard work, and I was ready for a break.

“Problem?” I asked, coming over to her.

“The Second Empire did locus recovery studies,” she said. She slipped a piece of paper out of its binding and slid it over to me. “Apparently, when they were in the course of their study and extermination campaign, someone thought to ask to what extent a locus could spring back from having their druids murdered, their lands salted, and their corporeal form injured. Look there, on that chart. For any with less than three druids, growth is completely stagnant. For any with less than ten square miles, growth is stagnant. Our locus has a single druid and a single square mile, beyond just the fact that it’s in an extradimensional space.”

“Ah,” I said. “Maybe the fact that they were measuring affected the results?” I asked.

“I’m still reading through their procedures,” sighed Amaryllis. “I just thought that you should know.”

“It’s pretty grim,” I said.
“Yes,” replied Amaryllis. “I don’t suppose there’s any sort of hint from the future-that-never-was?”

“You outlived the locus,” I replied.

“Fuck,” said Amaryllis, squeezing her eyes shut for a moment. “Okay, we have these books now, maybe there’s something of use in them. And you’re here, which means maybe there’s something we can try that’s outside context.”

“Maybe,” I replied.

As far as research went, it was a pretty frustrating week. The Fel Seed problem seemed more intractable than it had before, and we got almost nothing but bad news so far as the locus went. The books from Amaryllis were more helpful, especially in pointing out some strategies that she’d used in order to deal with existing threats. In particular, it seemed like the work of a week, at most, for us to find Thargox and seal up the Gates of Leron, especially if we enlisted Uniquities. I was pretty sure that was an idea that we’d have come up with on our own, and was thus okay to deploy. Similarly, the future Amaryllis had a working relationship with Doris Finch, along with specific advice on how to deal with her.

I was of the opinion that we should spend a few weeks of our time mopping up old quests for the (presumed) XP, especially those that seemed like they would be trivial given our deeper roster and expanded resources. Amaryllis felt the opposite: the oldest quests were the ones that made her the most leery, largely because our trip to Speculation and Scrutiny had turned into such a clusterfuck.

At the top of my personal list, there was Grak.

It took some time for us to gather together the gold, largely because we needed to do some currency exchange. It was a considerable sum, all told, more money than we could actually afford, but I had promised Grak, and if this was what it was going to take, this was what I was going to do.

“What’s he going to do with it though?” asked Pallida, who had contributed a fair share of the money. Our pink-skinned companion had come to my room to speak with me in confidence. She was out of her inky black armor and wearing a dress, which made the muscles of her legs and arms much more noticeable.

“I read through the dwarven myth that Grak’s been basing his penance on,” I said. “If he follows that, which I assume he will, because he’s a clan traditionalist, or at least acting like one, then he’ll probably leave it there with a handful of wards around it. Maybe he won’t put up the wards, I’m not sure.”

“And you plan to actually leave it all there?” asked Pallida. “That’s insane.”

“Ideally we don’t have to,” I said. I was comfortable enough admitting that. “But if that’s what it takes, then yeah, we’ll leave twenty million obols worth of gold there.”

“That’s insane,” Pallida repeated. She raised an eyebrow. “Amaryllis will never go for it.”

“Yes?” I asked. “She already agreed to it.”

“Then there’s some kind of trick,” said Pallida. “Lead coated with gold, maybe. Or fool’s gold, maybe. Something like that.”

“Maybe,” I said with a shrug. “Remember that he’s got warder’s sight, and will be directly looking at the gold. I’ll be pretty fucking pissed off if Grak finds out that we were duping him, because I
explicitly said that it had to be the real thing, not just pretend. It’s not symbolic. Or it is, but for the symbol to have any weight, it has to be actual gold. So yes, we’re doing this.”

“I’m going to talk to her,” said Pallida. She got up and turned to me. “And I’d like to come with.”

“I was going to ask you,” I said. “Your armor helps you breathe fouled air, right? I think we might have enough magic between us to suit a team of five or six, which would mean we could use the key.”

“It is absolutely bizarre that you have one of those,” said Pallida. “If I hadn’t pledged my life to you, I would steal the key in a heartbeat.”

“Well, I’m glad to have you with us,” I said. “I’d prefer if you not mention the idea of fake gold to Grak? He’s pretty slow to trust, and I don’t want him to think there’s reason to doubt.”

“Aye aye, captain,” said Pallida with a lazy salute.
Darili Irid

Chapter Notes

See the end of the chapter for notes

There were three thousand miles between the Athenaeum of Barriers and Darili Irid. Using a teleportation key for a single dwarf was out of the question. The typical cost for traveling between touchstones in major cities was ten thousand obols, but that assumed that you had four other people who would be splitting the cost, and there were service fees on top of that. Teleportation for a single person into an insecure location started at five times as much, and then on top of that, you would need to pay for some trusted key-keeper to go with, their expenses for returning to civilization, and the costs of having the key teleported out by bulk teleport.

Instead, Grak took the trains.

It was a long journey, with a large number of connections and layovers, but Grak was glad for that. When he had left Darili Irid ten years prior, he had been gawping at the world and nervous about the train schedules, frightened of so many strangers, all of them taller than him, and so many new and different things that he had only read about in the books and newspapers that came in by bulk teleport. The world was too big and too interconnected, with too many different people to see, and it had all washed over him in a torrent, most of it unintelligible. On top of that, he’d spoken only halting Anglish, which made the conversations around him utterly confusing, as people spoke too fast to follow.

On the return home, it all seemed so provincial. Grak had spent ten years at Barriers, in the grand city of Junah, and he had always taken an interest in exploring the world and seeing new things. The cities and towns that the trains passed through on his long journey home had little new to offer him, when compared to Junah. The food selections were horrifically limited, the people were uninteresting, and while the scenery went through some marvelous changes, the actual experience of riding a train was very close to standardized throughout Aerb.

Still, it was better than what waited for him at home.

The train didn’t go straight to Darili Irid, obviously. It was a town of two thousand some people, tucked away in the side of a mountain, and the number of people that came and went in a given year could be counted on two hands. Trains were among the services that suffered from ‘last mile’ problems, and in the case of Darili Irid, the ‘last mile’ was actually thirty miles.

When the train arrived in the city of Meerhan, the majority of the people on the train were altek, because Meerhan had started life as an altek city, and never grew much beyond that. When Grak had first made the trip there, he had marveled at it, but now he saw it for what it was; a cut-rate ethnicity that had barely grown beyond what it had been five hundred years ago, even as the Empires rose and fell. It was as provincial a place as you could find within the Empire, almost everyone of the same species, steeped in the same culture, and wearing the same fashions. The buildings were all similar to each other, the result of architects copying each other and putting little effort into creating something truly new. Perhaps it was even worse than that, and the local government had made prohibitions against ‘imperial sensibilities’. That was common in the more backward parts of the Empire, Grak knew.

And for all that Meerhan was depressing, it would be nothing compared to Darili Irid. Growing up, Meerhan had been the ‘big city’, thirty miles away and utterly exotic. It was dominated by the altek, but there were occasional ‘foreigners’ of other species, enough that if you spent an hour or two
sitting on a bench next to the train station, you might see one.

Eventually Grak went over to one of the phones and placed a call to Darili Irid, to let them know that he was in Meerhan. The response was terse, and the first time that Grak had heard Groglir in months, a simple acknowledgement and a reply that a truck would come out to get him in due time.

Grak walked through Meerhan for a bit, found an altek cafe, and ordered a frongal-stuffed roll. His server spoke only broken, halting Anglish, but Grak was used to dealing with a variety of language barriers, and got what he wanted through a combination of pointing at the menu and pantomime. He ate the roll and thought about the fact that it was going to be the last good food he ate before going back into Darili Irid and eating little else but the kear that consumed the rocks. He could order through the catalogs, and have food delivered in bulk once a month, but it wouldn’t be the same, and while the matter of wages would have to be discussed with his father, he was certain that he wasn’t going to be making nearly what he’d been pulling in as a tutor and student worker in Junah. Food that had been through the bulk teleport wouldn’t taste the same anyway, and that aside, he would be expected to eat with the others and share in a sense of community. The obligation was already strangling, thirty miles from the place that had once been home.

It was Naridalogor that arrived in the truck, honking once as he pulled up at the train station. Darili Irid owned three trucks, all of them communal, all built specifically for a dwarf’s stature and range of motion by a dwarven company in one of the metropolitan dwarfholds. The truck was low to the ground, with a long bed in back.

“Come on,” said Nari, leaning over to pop the passenger door open. “I don’t have all day.”

Grak placed his two large trunks into the back of the truck, fussing for a moment to make sure they were secure. Those trunks were the entirety of his worldly possessions. He had been a good and faithful dwarf, and brought back all sorts of things for people in Darili Irid, toys and games, treats and foodstuffs, whatever you couldn’t get through the catalogs (or not for as cheap as in the market stalls of the city).

They were outside of Meerhan when Nari started talking.

“There’s a trial going on,” said Nari. “When they got the call, they decided to wait for you.”

“Okay,” said Grak. He hadn’t seen Nari in ten years, yet there were no questions about what the Athenaeum of Barriers was like, and no comments about how Grak had stayed longer than planned.

“Young Dalonakla was on deathwatch for Dalin-nai,” said Nari. “We don’t know if Dalon fell asleep or just wasn’t paying attention. Dalin’s soul passed on to the hells.”

“We used to have two for deathwatch,” said Grak. He had done it more than once, as part of his duties to the clan as most-pure. You had a half hour after death to retrieve the soul, work that was usually done by the clan’s doctor. The final days of a dwarf could stretch on though, so the duty was often given over to younger dwarves. They would watch through the night and run to wake the doctor as soon as the old one’s heart stopped beating or their lungs stopped moving air.

“It was supposed to be two,” replied Nari, nodding slightly. “Dalin was a long time dying.”

“Is that Dalon’s defense?” asked Grak.

“No,” replied Nari. “He has none. He threw himself on the mercy of his elders.”

“Did he say how he missed it?” asked Grak, pressing the issue.
“He doesn’t know,” replied Nari.

Grak sat for a moment and thought about that. In Darili Irid, the traditional penalty for allowing someone’s soul to go to hell, whether through malice or neglect, was that the responsible party’s soul should follow. In practice, that was rarely actually followed, because it took quite a bit to prove malice or neglect, and because the interests of the families had to be balanced against each other. The families that made up the clan were likely going to be the focus of the trial, and Grak’s presence would only be to cement the return of the prodigal son, rather than because his input was desired.

It was all so small and pointless.

Nari filled the silence with more talk. He didn’t seem to mind that Grak was quiet. From what Nari said, Darili Irid hadn’t changed one bit. The social fabric was different, but the pattern was the same, a balance of power between families, new scandals that put people out of favor, births and deaths, all of it as it had been when he’d left ten years ago. There were new rooms and structures in Darili Irid, carved from the stone, and there were mild improvements to infrastructure, new pipes, vents, and wires, but Darili Irid was still decades if not centuries behind the rest of the Empire. Part of that was poverty, and part of it was obstinate refusal to change.

The truck made the switchback climb up the hill on gravel roads to the dwarfhold’s mouth, which was filled with familiar outbuildings and didn’t seem to have a stone moved in ten years time. Nari parked the truck, took one of the trunks, and set off to the main lift down. He looked back only briefly at Grak, and Grak took the other trunk, aware that he had been standing, unmoving, for too long.

They took the lift down and reached Darili Irid fifteen minutes later. Dozens of people were waiting for Grak, and the conversation immediately became a furious noise. Dwarves weren’t much for pleasantries, preferring a blunt approach to conversation, to the point that other cultures might consider it rude. People spoke their true thoughts to Grak, not seeming to care that he had been gone for ten years and might like some time to readjust. He was told that he should have come home earlier, that it would have been better if he had been able to take the reins from the clan warder, Dalin-nai, rather than coming in afterward to figure things out. It was impossibly rude by imperial standards, and the part of Grak that had acclimated to foreign mores itched under the barrage of questions and comments.

Grak felt a hand around his wrist, grasping him, and was pulled in for a rough hug. Grak only realized it was his father when they were already hugging. When the hug was complete, his father held him at arm’s length, looking him over. They were the same, or close enough, with Grak’s father having an extra twenty-five years of age etched on his face. Grak was surprised by how old his father looked. Ten years was a fair amount of time, especially for the leader of the clan.

“It’s been too long,” Grak’s father said. There might have been some trace of sentimentality there, but it was hard for Grak to take it as anything but a simple statement of fact. “We should talk. Privately.”

They made their way through the crowds, with Grak trailing behind his father the way he’d done as a child. Grak was full grown now, with a braided beard just like his father’s, but he still felt small. He squared his shoulders and projected none of that as he walked through the hallways; he had always been better about hiding his feelings than the other dwarves, which was one of the reasons that he had been a prime candidate for Barriers.

When they entered into Grak’s childhood home, the sense of the past was overwhelming and unpleasant. Grak’s room was visible through an open archway, seemingly unchanged, with a thick-fibered blanket and a hard surface. Grak had gotten used to proper beds, the kinds filled with soft
things. A dwarf was expected to go without so much as a pillow; they didn’t ‘need’ them in the way the other species did, but Grak had always liked having one. The cubby above the bed was still filled with books that Grak had gotten through the catalogs with his allowance, along with the wax cylinders and player that Grak had been gifted so he could hear spoken Anglish and pick up more of the language before he left.

“We have had a home carved out for you for several years,” said Grak’s father. “You should have returned when five years passed.”

“I was doing well,” replied Grak. “My teachers said I had promise. I was sending money home.” That much was true; Grak had a gift for warding that had won him scholarships starting in his second year.

“You did not wish to return,” replied Grak’s father.

Grak stayed silent at that accusation. It was true, after all, and he had always done his best never to lie to his father. He was here, back in Darili Irid, fulfilling his obligation, that was what was important. It shouldn’t have mattered what he wanted, only what he was doing. Action was more important than thought.

“I’ve arranged a childbond for you,” said Grak’s father.

“What?” asked Grak, momentarily startled. His heart began to sink as the impact of the words set in.

“It will do you good,” said Grak’s father. “It will strengthen the ties that have grown weak.”

“Who?” asked Grak. He could feel the stiffness in his voice and the tension in all his muscles.

“Kradohogon Kadok,” replied Grak’s father. “It is a good match.”

It was political as well, Grak imagined, given that the Kadok line was among the largest and most powerful. He had only faint memories of Kradoh, who had been two years younger than Grak, and was now surely a completely different person. In truth, it didn’t much matter who his father had chosen for the childbond. Grak would have been aghast no matter whose child he was meant to bear.

He turned away from his father. Bad enough to be home, back in Darili Irid, away from all that was bright and new. The world was a great and flowing river, and Darili Irid was a rock stuck at the bottom of that river, unmoving. It was difficult to imagine being with Kradoh, pressing up against him. His krin in Junah had been tall men of different species, needful men, and there were very few dwarves that could match that passion. It was incredibly doubtful that Kradoh would be one of them.

“No,” said Grak.

“You are not allowed to say no,” replied Grak’s father. “I order it by my position as most-pure. The deal has been struck. He is a good dwarf. A good match.”

“No,” replied Grak. “I refuse.”

“You cannot refuse duty,” Grak’s father said. “No one can.” He turned away. “Come. We’ve waited on you for a trial. It will help you get back into the rhythms of rule.”

They moved through the city, flanked by his father’s friends and allies, until they got to the main hall. Tiered seating surrounded a circular space in the center, with a domed roof overhead. It was the biggest room in Darili Irid, and insofar as the dwarfhold could be considered to have a centerpiece, this was it. There was seating for five hundred, nearly a quarter of the population, and the place was
packed when there were performances or festivals.

Here, instead of a celebrating populace, there were twenty dwarves, the most important in Darili Irid, and those who would decide Dalonakla’s fate.

Most of the ‘trial’ was already done, and Grak could immediately see that much of this had been arranged for his benefit. The timing was too suspicious; Dalin-nai had died a week ago, and the trial was only now, far later than it should have been. At issue was the question of duty and responsibility, and the parallel was bluntly obvious, even by dwarven standards. ‘This is what happens when you don’t do as you’re told!’, the assembly might as well have screamed.

Grak had been gone too long. He’d been expected to stay at the Athenaeum of Barriers for five years, which had stretched to seven, then nine, and finally ten. He had been on the cusp of becoming a proper magus, and from there -- well, it was all immaterial, because he was back at Darili Irid, over-educated for what would be asked of him. He had argued to his father, in a series of long letters, that every bit of extra skill he developed would be useful, that his skills as a warder would bring in money outside of Darili Irid, but it was all just a sequence of excuses. He hadn’t wanted to come home. Being clan warder and most-pure hadn’t been his dream, not when he was a child, and certainly not now. To be childbound with a dwarf chosen by his father was another turn of the vise.

Grak found himself mumbling assent at the verdict delivered unto Dalonakla. Dalon was young, the elders declared, derelict in his duty and grievously in the wrong, but young nonetheless, with a life within Darili Irid ahead of him. He would have to wear the black mark, so all would know what he had done (not that they wouldn’t in any case), and eventually, he might gather back some scrap of redemption for allowing another dwarf and valued member of the community to be eternally tortured. Forgiveness was the dwarven way, the elders agreed.

The community would abide much, so long as duty was followed. It was another message meant for Grak. He wondered, idly, what the dwarves of Darili Irid had said about him during his extended absence, but found that he didn’t much care. He would hear all about it, he was certain.

Dinner was in the great hall, the second largest room in Darili Irid, where the noise of dwarves eating and talking was nearly deafening. They ate kear, as expected, baked into flat loaves and completely without spices or seasonings. Grak forced it down while answering questions directed his way with as few words as possible. He might get used to it again, eventually, eating the same thing every day, for every meal, with only minor variations. Dwarves didn’t have the same palates that other species had, and didn’t need the same variety that others did, but Grak had been a city dwarf for too long, and the kear was beyond bland.

When Grak entered his new home for the first time, late at night, Kradohogon Kadok was waiting for him.

“'I've had a long journey, and a long day after that,'” said Grak, pushing past the other dwarf. The house that had been created for Grak was palatial, by dwarfhold standards, with four different rooms, including a private bathroom. There was room for expansion as well, places where the rock walls could be carved away without running into the neighbors. It was generous, but all that Grak could see was the exposed wiring where the lights hooked into the dwarfhold’s power system and piping where water was pumped in and out, and the marks where tools had obviously been used to craft this space. In Junah, buildings were constructed to hide how they’d been made, and electricity and plumbing were tucked away, out of sight. Everything seemed so small, compared to the imperial standard of keeping ceilings fifteen feet high. Small and crude.

“We’re to be childbound,” said Kradoh. He wasn’t unattractive, as dwarfs went, but Grak had grown to prefer taller, larger species.
“Childbound,” said Grak. He stifled a sigh. “Yes, we are.”

“We should spend the night together,” said Kradoh. He reached up and began undoing a button on his shirt. “Better to be krin first. Better to know each other’s touch.”

When Grak made no move to object, Kradoh undid a second button, then a third. Grak’s heart started beating faster. It had taken a long time to get to Darili Irid, a long time without anyone so much as looking at him, and even before then, it had been a dry spell, a time with neither krin nor krinrael. He felt that familiar response stirring inside him, the response to need, until he looked at Kradoh’s eyes. There was no need there, and no desire, despite the forcefulness that Kradoh was displaying.

Grak accepted it nonetheless. He had been too long without touch. He removed his clothes, as Kradoh did, and they lay together, holding each other. Grak tried to take comfort in the feel of someone’s skin against his own, the heat that another body generated beneath the covers, but his mind kept going to the idea that this was all he would ever have. Even if he could learn to love Kradoh, even if they could raise children together without quarrels, it wouldn’t ever be enough.

Grak waited until Kradoh was asleep, then rose from the bed and dressed himself. He had no real plans about what he would do. He only knew that he couldn’t stay in Darili Irid and spend the rest of his life as the clan’s warder.

It was late, and Darili Irid had emptied. Grak grabbed only a single one of his trunks, the lighter of the two, and took the lift up to the surface, where the multi-colored stars hung overhead. He took one of the trucks and drove, without thinking too much about where he was going. He would park it somewhere, he decided, and send a letter back to Darili Irid so that they would know where to go to retrieve it. Bad enough that he was depriving them of a warder, he wouldn’t deprive them of a truck as well.

It was six months later, as he was sitting in a cafe in Junah eating breakfast, that he learned what had happened.

From the outside, Darili Irid presented as a crop of outbuildings on the side of a mountain, with a single unpaved road leading away from them. We were high enough up the mountain that we were above the treeline, but there were still smaller plants trying to struggle against the low pressure and get enough air to breathe. Some of them had sprung up in places they clearly wouldn’t have been, had these outbuildings still been the surface protrusion of the dwarfhold. The buildings were all still in good repair though, either locked down and shuttered as a matter of course, or closed up by whatever poor soul had survived the deaths of two thousand dwarves down below.

It took me half a tick to realize that the dwarf who survived and packed everything up might have been Grak.

It was Grak, Amarillus, Valencia, Pallida, and myself, with the others staying back. We’d taken the teleport key, though there was some talk of taking either the Egress or Bethel; Bethel had made a garage to house the ‘ship’, which gave her its powers so long as it was parked, and meant that she could be moved without having to collapse down into staff size. She was much more amenable to moving like that, given that she could retain her form (and all the contents inside her) and be a ‘moving house’ rather than a ‘fake human’. For this particular situation, it didn’t seem like it would be at all necessary, especially since we were going to be far underground for most of it.

Entrance to the dwarfhold proper was through a long shaft at a forty-five degree angle. It was wide, with thick rails running through it and a chain that laid limp against the ground. Beside the rails were
the stairs, which were just wide enough for Grak. The tunnel was cramped, as I had been warned the entire place would be; it was built for a species that was, on average, more than two feet shorter than I was, which would mean a lot of ducking.

We walked down in silence, with Grak leading the way. We wore breathing tanks, brought in from Earth courtesy of Bethel, and then our various entads as a backup, just to be on the safe side. Pallida was the one exception, because her armor covered her mouth entirely, meaning she had to use either one or the other.

“These rails were rarely used,” said Grak. His speech was somewhat muffled beneath his mask. It took me a moment to realize that he was speaking Groglir, which meant that he was speaking to me and not the others, unless Valencia was borrowing the right kind of devil.

“Most of what came in and out was bulk teleport, right?” I asked.

“Yes,” Grak replied. I was waiting for more, but nothing came. I already knew a fair amount about how dwarfholds tended to work, through talking with Grak, from reading a number of dwarven books, and from the words that popped into my head when I looked around.

The main shaft still had its uses, in the case where it was cheaper to ship to a close neighbor, which wasn’t often, and for when people wanted to leave the dwarfhold, for whatever reason. A dwarfhold was supposed to be a self-sustaining thing, but there were still rare occurrences where a dwarf might want to go somewhere. A fair number of the dwarven romance novels I’d read (research, much more than prurient interest) were epistolary, because it was common for dwarves to have pen pals a long way away, and that was often the foundation for a romance to blossom. It was, of course, a dwarven romance, which was much more about mutual understanding, intellectual compatibility, and close intimacy than it was about the physical. At the end of the novels, there inevitably came a point when one or the other, or in one case both, had to leave their dwarfhold in order to meet up with the person that they’d fallen in love with, and it was always this big, dramatic moment, because it wasn’t common for dwarves to leave their dwarfholds, and for the target audience, the departure was this momentous thing.

It was possible Grak would have used this main shaft only three times: the first time when he left to go to Barriers, the second time when he came home, and the third time when he left again, this time for good.

“Did you come back?” I asked. “After the accident?” I wasn’t sure whether to call it that.

“No,” replied Grak. Again, it seemed like there was more to say on the matter, but he stayed silent. I followed after him as we took the stairs, watching the back of his head, and trying to think about what I was going to say, if I needed to say something to him.

We had Valencia with us, in case I really fucked things up.

After half an hour and barely more than a few sentences of conversation, we reached the bottom of the shaft. The stench of death came in through the mask I was wearing, slow and subtle at first, and then pervasive. It was a stale smell, like my grandparents’ basement, the smell of a place that had settled into stagnation. It had been two years since the accident had happened. I still wasn’t sure that was the right word.

It felt too small, but to say anything else might make it seem like I felt it was Grak’s fault, and, well …

When Arthur died, I thought a lot about alternate timelines and what might have been. I thought
about all the things that I could have done differently that would have resulted in him not dying, and I felt like shit over it. It wasn’t my fault, but there were things that I could have done that would have made it not happen. In Grak’s case? He had a lot more cause to think that his actions had directly led to the deaths of everyone in his dwarfhold. His clan had invested money and time into him, so that he could take up the role, and he had left them in the lurch, which led them to hire on a warder who only had three years at the Athenaeum and a provisional license. That was the primary thing you would point to, if you were trying to explain how it had all gone wrong.

Putting myself in Grak’s shoes, if I had gone off to college to become a doctor and come back home to Bumblefuck out of a sense of obligation, rather than because I actually wanted to … well, that already didn’t sound too much like me. But if my dad had said, “Hey, you have to marry this woman you don’t know and have some children with her!”, I would have told him to go fuck himself and then left that very night. My mom would probably have tried to guilt me into staying by saying that people would die without my medical expertise, and I would probably still have left, either downplaying the possibility or telling myself that I didn’t actually owe them anything.

Then, when a fifth of the population of Bumblefuck died, two thousand people, I … I had no idea. It sucked. It sucked that Grak had been saddled with this expectation. It sucked that Darili Irid wasn’t what he wanted from life. It sucked that his father had picked the worst possible way to try to keep him chained to the dwarves, and then when a stupid random failure made it all go to shit … ‘sucked’ was underselling it.

We found our first corpse at the base of the main shaft. Grak walked past it without stopping, and I followed after him, considerably more aware of the corpse. We were using Earth flashlights, because we could, and the beam of my flashlight lingered on the body. The smell that came in through the mask around my mouth was far stronger, here in Darili Irid proper, not just that rotten meat smell, but feces and mold mixed in with it. The corpse still had its hair, but that was nearly it; the skin was partially eaten away by insects that must have gorged on the body, and where it hadn’t been consumed, it was stretched tight around bone. Beneath the body was a large stain where the internal fluids had leaked out.

I hoped that it was no one that Grak knew.

The ceilings were low enough that I had to stoop down as I walked, following behind Grak in silence. It was fucking creepy in Darili Irid, what with the terrible smell that my oxygen line did little to mask, the utter silence, the complete darkness, and the claustrophobic way that everything was too small for me. Worse, my mind kept making up stories whenever we saw a body or bodies. Most of the people in Darili Irid had been asleep when the accident happened, but there were bodies in the hallways, which meant that it hadn’t been instant. A few people had woken up and tried to escape, or cover their mouths, but none had made it very far. I felt my stomach churn when I saw a larger corpse cradling a smaller one in its arms.

“There have been collapses,” said Grak, his voice tight, still speaking Groglir to me and me alone. “The mine-farms, left untended, eat away too much rock.”

“Is it safe?” I asked.

“If we stay to the center,” replied Grak. He kept walking, not stopping for anything. He held his flashlight steady and ignored the bodies we saw. I didn’t mistake that for callousness on his part; he was focused on his task, because if he stopped, he was liable to break down.

We eventually made our way to a large room, one with a high enough ceiling that I could actually stand up without hitting my head. It was a dome shape, with a smoother surface than I had seen in
Darili Irid thus far, and a number of passages branched off from it in different directions. There were benches, or something like them, ringing the center floor. It seemed like an arena or a theater, though I couldn’t be sure which. Grak pulled out his wand and began tracing a large circle on the ground, in the center of the room. The rest of us stood back and watched.

“Juniper, you can stay,” he said. “Tell the rest to go.”

Amaryllis looked to me for translation. (My three points in Language had, so far, given her nothing.)

“Go back the way we came,” I said. “We’ll return to you when it’s done.”

“I don’t think that’s a good idea,” murmured Amaryllis. She kept her voice low.

“It’s fine,” said Valencia. She was looking at me from beneath her crown of thorns, with her red armor in place and the oxygen mask firmly attached. “Good luck.”

Amaryllis glanced at her. “What do you know?” she asked.

“You said it’s fine,” replied Amaryllis.

“Because Juniper can handle himself,” replied Valencia. “Whatever happens. You have to trust him.” She looked back at me. “I trust him.”

“Let’s go,” said Pallida. “Whatever this is, I’d rather have it over with, and if the dwarf wants us gone, then the sooner we move, the faster we leave.”

Amaryllis furrowed her eyebrows. She was outnumbered. “Watch him, Juniper,” she said. “And whatever you’re planning to say, to convince him to stay with us, just -- good luck.”

I was pretty sure that Grak could hear everything that we were saying, which was why Amaryllis had used the euphemism, ‘convince him to stay with us’. Maybe no one had told Pallida, but the rest of us knew that Grak wasn’t just bringing this gold down into Darili Irid for the ceremony of it all.

When the three women had left, it was just Grak and I in the domed room. Amaryllis had given him the glove for this trip, and he was placing the gold in the center of the circle he’d made. I watched him in silence while I tried to figure out how I was going to start this. I had put the points from the level up into SOC, and the floating points were there too, which meant a (respectable, in my opinion) 6 in Insight and a less-respectable 4 in Charisma and Poise. I wasn’t leaning on those stats to help me, but I had taken whatever help the game might give me.

“When I was ten years old, my grandfather died of lung cancer,” I said. “He took a long time to die though, seven days, and we stayed in South Dakota for all of it, with all my aunts and uncles there while he was dying. He was on his deathbed, with translucent skin and barely any meat on his bones, writhing around, because they didn’t want to keep him drugged out of his mind, I guess, or maybe they just didn’t have access to pain medication because it was in-home hospice. So when he was lucid, he was in pain.” I paused and took a breath.

“My aunt was a doctor. She was doing most of the work, making sure that he was turned so he wouldn’t get bed sores, giving him water, trying to get him to eat food, things like that, but it was cancer in his lungs, his brain, his stomach, all through his body, and there was only one thing that he wanted, which he asked her for a couple of times.” I paused. “He wanted to die.”

Grak stopped what he was doing for a moment, then continued on, carefully placing more of the
gold into the circle. They were heavy bars of gold, each one twenty pounds, fifty in total.

“My aunt didn’t want to kill her father,” I said. “I don’t really blame her for that. So my grandfather tried to get his other children to do it. I don’t think it was the pain, or not just the pain, it was the fact that this body was failing and he was dying, and everyone knew it. He was in this body he no longer recognized as his own, incapable of doing anything but feel his flesh and organs degrade until something gave out.” I cleared my throat. I was getting upset just thinking about it. “None of his children did anything about it. They wouldn’t put him out of his misery. And so I remember sitting there, looking at him on his deathbed, and thinking that I was going to figure out a way to do the proper thing, which was to end it for him.” I had done it with deer, later in life, when my shot hadn’t landed right and I’d had to chase after a wounded animal trailing blood through the woods. “I didn’t actually do it, because I was only ten years old, but it always stuck with me, this feeling that you should be allowed to die, if you really wanted to.”

Grak stopped what he was doing and turned to me. He was watching me now. I had his attention. The pile of gold was only half finished.

“Fast-forward seven years later,” I said. “I was seventeen, and Arthur had died, and I had pushed away damned near everyone, and it was all just … shit. Total, utter, shit. I hated my life. I was failing my classes. I was barely eating. I wasn’t taking any enjoyment from anything, not movies, not the internet, not even D&D, which I had managed to ruin for everyone anyway. I kept thinking about my grandfather, and the way he must have felt, and after everything was just about as broken as it could be,” after Maddie broke up with me, “I kept thinking that there just wasn’t that much point in living anymore, not if this was what my life was going to be like. It started with idle thoughts, I guess, just me thinking about how great it would be to have that release, to not be alive anymore. I was assuming that oblivion was waiting for me, no heaven or hell, just nothingness, and it seemed so preferable to my life as I was experiencing it. I didn’t believe in heaven or hell. Maybe if I had, that would have stopped me. But no, I was thinking about my grandfather, and how everyone had made him keep going even though he wanted to stop, and how unjust that had seemed to me.”

Grak was silent, but he was listening.

“I didn’t start out making plans,” I said. “I would see a big semi truck go by and I would think about stepping in front of it. I would look up at the radio towers and think about throwing myself off one, head down so that my skull would split open and I wouldn’t have any possibility of surviving the fall. I wrote some letters to people, not suicide notes, but written so that they might serve as that, if I died. It became a part of the fabric of my life, where I would spend time online looking up how many grams were in a lethal dose of various household poisons, or reading stories about how people had killed themselves, not with sympathy, just looking for tips.” I paused and licked my lips.

“My biggest fear was that I would screw it up. I had this horrible, gut-sick feeling whenever I thought about that, about trying to strangle myself and losing blood flow to the brain, but not dying from it. You can lose IQ points by the dozens, if that happens, and if I was mentally crippled on top of everything else … there were so many scenarios like that going through my head, my digestive system destroyed by bleach, half the bones in my body broken from a fall, things like that, attempts that left me still alive and only more broken than before. You can survive getting shot in the head, if you shoot yourself in the wrong place. And then you end up in the hospital, disfigured or brain damaged or both, and how does that help anything?”

Grak looked to the pile of gold. “What was your plan?” he asked. His voice was tight, and he sounded far away, even though I was standing right next to him.

“There were some train tracks that ran through town,” I said. “If you get hit in the head by a train
going full speed, there’s almost no chance that you’ll survive, and it seemed like it would be fast, just
by its nature. I followed the train tracks through the woods until I found a little bridge that passed
over a creek, then stayed there for a bit with my backpack beside me. It was cold out, tail end of
winter, and not very comfortable. I thought I was probably far enough away from any roads that
even if I didn’t die right away, I would bleed out before anyone could get me to a hospital. Before I
could get myself to the hospital, I guess, since I didn’t trust myself to go silently.”

“What happened?” asked Grak. I realized that I’d stopped talking for a bit too long.

“I took some pills that I had crushed up and mixed into a drink,” I said. “That was the backup plan.
There’s something called the LD50,” I had to bring in Anglish for that, “Which is the dose that’s
lethal half the time, so I took about three times that amount. I was dumb though, or just ignorant,
because all it really did was make me puke, when my body started reacting. Turns out for it to be
lethal dose, you have to have some way of keeping the drug in your system when your body realizes
that something is wrong and tries to save you.”

“You were talking about a train,” said Grak. He was slightly muffled by the oxygen mask he wore. I
saw his wooden hand, curled into a fist.

“Sorry,” I said, shaking my head. “The pills were the backup plan. I knew when the train was
coming, so I drank the drink right before. The train … probably not a surprise, but it’s actually really
hard to face down a train. I was on this bridge, hidden from sight behind one of the struts, and I just
kept thinking, ‘All you need to do is stick your head out, you fucking coward’. It was terrifying
though, to be staring down death like that, and there were these hidden animal instincts that were
holding me back, parts of me that hadn’t made themselves known when I was still trying to plan
things out. Trains are huge. They shake the ground as they approach, and they make a hell of a lot of
noise, like a beast on the savannah coming to kill me, and my brain didn’t know much about dealing
with Earth, but it had some firm opinions on being hunted by a beast like that. I couldn’t do it. So the
train just went by, a foot away from me, barrelling on its way. And after it had passed, that was when
the pills started to take effect, and I started to get really sick. My pupils got so crazily dilated it was
hard to see, my heart was hammering in my chest, and then I started to throw up, and didn’t really
stop throwing up. Beyond all that was a sense of relief that I wasn’t actually dead.”

Grak grunted just a bit. I was waiting for him to say something, but he was still silent, still staring at
the pile of gold.

“It didn’t help,” I said. “I mean, it didn’t help me with being depressed, and it didn’t make me less
suicidal, not really. I spent half the day puking in the woods, and when I got home, my parents were
pissed because I hadn’t been in school. I guess they thought it was drugs, which was almost right.
And I was still failing school, and my life was still in shambles, and I still just didn’t want to be,
if that makes sense.”

“It does,” said Grak. His voice was soft.

“Yeah,” I said. I’d thought it might. “So at around three in the morning, I got in my car and took my
rifle down to the local police station, then I sat there trying to work up the courage to shoot myself in
the brain stem. From what I’d found, that was the surest way to make it actually fatal, because the
brain stem controlled a lot of important, base-level stuff, like keeping my blood flowing and my
lungs working. That was the plan, anyway. When it came down to it, I was sitting there with the gun
in my mouth, stock between my knees, tasting the metal of the barrel, crying as I tried to force myself
to put more pressure on the trigger. That was the most scared I’ve ever been, even with all the shit
that’s happened here.” I paused, thinking about it. “Turns out that there was a part of me that wanted
to live after all. I think that’s true, for most people in that situation.”
Grak closed his eyes and took a heavy breath. “The Second Empire used wards for execution,” he said. “Annihilation wards against skin and blood. Death was instant. They would route trains full of living people through a standing ward and dump the bodies at their destination. I learned that in one of my first classes at the Athenaeum of Barriers. It always seemed a gentle, painless way to go.”

Grak sat down and began to cry.

I moved over to him and sat down next to him, within the wards and next to the absurd amount of material wealth we’d brought, then put my arm around him.

It took him some time to get it out of his system enough that he could speak.

“I set the wards up,” he said. He was looking off into the distance. “All I would have had to do was walk through. I couldn’t do it. All I thought of was the hells. I deserved eternal torture. It was what they got,” he waved a hand to encompass Darili Irid, and the thousands of people who had died here, “But I couldn’t. I wanted it all to end, and I couldn’t.”

“Yeah,” I said. It had been the same for me. He leaned in toward me, and I held him. I was crying a little bit myself.

“I set out to pay a penance,” said Grak. He was speaking softly, but his voice was loud in the silence of Darili Irid. “It was supposed to be impossible. I thought I would die along the way.”

“I know how it is,” I said. “I know how seductive it is, to feel like the solution to all your problems is to just stop existing.” I gave him a squeeze with the arm I had around him. “But if there’s any part of you that wants to be in this world --”

“There is,” he said.

“Then you’ve got to start working toward building a life back up,” I said. “I know it might seem impossible to think about anything else but what happened here, that every moment of happiness feels like a betrayal, but … the world needs us. It’s not fair that it does, that it’s another burden that’s been placed on you, but the world really, really needs us. And after Fenn -- I don’t want to lose another member of the party. We’re family, Grak, and I just,” I lost my sense of words. I wanted to be honest with him, but I couldn’t tell him that it was going to be okay, because I didn’t know that, and all signs were that things were only going to get tougher. I wanted to tell him that he was stronger than I ever was, and if I could get through it, then he could too, but even as I tried to think of a way to express that it seemed like it would come out wrong. “I care about you.” I didn’t think anything I could express could possibly be sufficient, and I already felt like I had failed him.

“Okay,” Grak said. He leaned into me harder.

“Okay?” I asked.

“Okay,” repeated Grak. “I’ll try to make a life.”

*Loyalty Increased: Grak lvl 18!*

*Quest Complete: All That Glitters - Grak has returned to da nad home and confronted the disaster that took place there. Keep an eye on di. (Companion Quest)*

*Companion Passive Unlocked: Wardproof (Grak)!*

*Wardproof: Grak can selectively ignore wards that would apply to di, the things da wears and carries, and up to one other person (at a time). This ability activates automatically when the effect of*
the ward would be undesirable and can be selectively applied to any ward Grak chooses.

End Book VI

Chapter End Notes

Special note: If you'd like a version of this first half of this chapter which uses non-gendered Groglir pronouns, it's available here. This is more true to Grak's internal understanding of da-self, but it gets in the way of the story (in my opinion).

Level: 14

Quests

■ **God Botherer**: There are gods in this world, titans of power and masters of domains, each their own creature with their own special rules. Tread carefully around these creatures, especially if you wish to someday join their ranks.

■ **The Lost King, Found?**: Five hundred years ago, Uther Penndraig, figure of legend, King of Anglecynn, and ancestor of Amaryllis, disappeared from this world while on a quest of grave importance. This enduring mystery must have an answer for those brave or foolish enough to seek it, mustn't it?

■ **They Say You Can't Go Home Again** - He had a life, before you, and you had a life, before this.

■ **Through the Lashing Glass** - Far inside the Glassy Fields exclusion zone, the only place on Aerb where glass magic still works, lies a castle coated in shards. The treasures within are unknown to the world, but you could unearth them, if you dared.

■ **Taking Root** - The world has but a single druid, tending to but a single locus. With the locus so constrained within a magic bottle, no more druids may be inducted, but removal might prove fatal. With your help, druids might stalk the world once more. (Companion Quest)

■ **The Slayer of Horrors (0/13)**:

□ **Murder in Duplicate** - As soon as it was discovered by a precocious young girl, the ability for a person to duplicate themselves was excluded to a thousand square miles and that single person. Doris Finch lives her life in duplicate; to complete the exclusion, it will be necessary to kill every single one of her. (0/9,532,119)

□ **Manifest Destiny** - The fall of the Second Empire was, by some accountings, inevitable, but by others, it was the work of a single incident. The exact nature of the magic that allows the immortal man named Manifest to puppet his subjects from a distance is unknown, as is his exact location, but it is clear that with the magic excluded, his range is limited to only Lankwon, once the Imperial City, now the City Made Manifest. Defeating him will be an impossible task, but one that you have taken upon yourself.
- **A Door Into the Soul** - Caldwell Gatesmith has the dubious distinction of being responsible for two exclusions. Through his portals, he keeps watch over his domain. If he spies you, and you do not meet with his satisfaction, his portals will cut with an edge designed to cleave time and space.

- **The Z-word** - Captain Blue-in-the-Bottle is the reason that no one says it. That's his word.

- **Everything Eater** - More monster than man, no one has seen Rove's face in four hundred years and lived to tell the tale. He sits at the center of a half mile of dirt, flesh, and garbage. If you slay him, you will be the first to have survived contact with him.

- **Better with Loops** - Through magics unknown, a young boy of eighteen found himself reliving the same month over and over again, with death only bringing him back to the same crisp spring morning. Time does not behave within his exclusion zone, and only bringing a permanent end to his life will restore the area to normalcy. Beware, lest you be trapped in the cycle.

- **[REDACTED]** - The more you [REDACTED], the more you [REDACTED], until [REDACTED]. Merely knowing his name makes him [REDACTED], and his gender alone is a piece of information you might wish you didn't have, if [REDACTED]. Better to go in blind.

- **Unwavering** - In the beginning, they said that the goblin inspired loyalty, until it became clear that what he was doing was more literal than figurative. To kill him, you'll need to fight through a veritable army of his loyal servants, if you don't end up becoming one of them yourself.

- **Fleshsmith** - For millennia, fleshsmithing was a noble trade of Pendleham, one practiced by noscere and ignoscere alike. When a small cabal took the craft too far, exclusion reared its ugly head, leaving Pendleham as the City of Flesh, where none dare tread.

- **Aches and Plains** - Perhaps farming might seem an innocuous thing to evoke the exclusionary principle, but given the time and attention brought to it by a billion minds, it was inevitable that someone would breach its deeper secrets. The land of Pai Shep is now guarded by a single warrior-farmer, his fields impeccable, his power absolute.

- **Guardian of the Underworld** - A machine of vast intellect, funneled into the body of a broken man. The people of Aerb have yet to pass his tests, but perhaps someone of a different world has the wherewithal to be allowed within his inner sanctum.

- **Finger of the Sun** - When the elves broke Celestar, there were a small few who continued on with their research. The product of their effort brought nothing but pain.

- **Gone to Seed** - There is a place on Aerb considered worse than the first four thousand hells. Fel Seed sits on a throne of living flesh, unable to spread beyond his domain, but with a rule of horror within it. You know his weakness.

**Birth of a Nation:** You've set out to become a real power in this world, no longer independent agents bumbling from crisis to crisis, but instead a nation, bumbling from crisis to crisis. Quest completion entails becoming accepted as a member nation of the Empire of Common Cause.

**Tragedy of the Commons:** Following the discovery of the Void Beast, void weapons and tools were made illegal under international law, usable only with expensive permits or in situations that called for it. For a time, this was sufficient. Now the Void Beast stirs once again, and imperial regulatory schemes won't be enough.

**We're Going To Need Books, Lots of Books:** The latest report from the 'Infinite' Library is that the world will stop publishing books roughly two years from now. The man who left the library changed the future, and if you go in, you'll change the future too -- but perhaps that’s for the best.
Amaryllis Penndraig, Loyalty lvl 23

Amaryllis is the most direct descendant of Uther Penndraig, the Lost King, which gives her special claim-in-fact to a fair number of his estates and heirlooms bound along cognatic or enatic primogeniture, ultimogeniture, and gavelkind rules. She was once a keystone member of a bloc of power within the Lost King’s Court, but now she has been cast out through means both semi-legal and downright nefarious. Her homeland of Anglecynn is forbidden to her now, at least until she’s gathered enough power to wedge open some doors.

Grakhuil Leadbraids, Loyalty lvl 18

Grakhuil comes from the largely parthenogenetic clan of dwarves in Darili Irid (loosely, Gold Hole). Due to da nad skill in the game of Ranks and overall empathic nature relative to da nad kin, Grak was selected to leave Darili Irid for the Athenaeum of Barriers with the plan that da would return and become the next master warder of the clanhome. Upon returning home, da was entered into a rare arranged pair-bond with another dwarf, and fled from Darili Irid after refusing the Kiss on da nad bond night. Da has spent da nad time looking to make amends for the damage da nad absence caused to da nad clan.

Six-eyed Doe, Loyalty lvl 7

[I’d closed my eyes and paged through after my little experiment in experiencing awe and wonder, only to find that instead of text, the Six-Eyed Doe had a picture that expanded outside the box it was meant to be set within. This was the first time that the game interface had shown me anything other than text, symbols, or lines to make boxes.

The picture had various scenes, devoid of any clear chronology and bleeding into each other where they met. When I looked at it, the view zoomed in, leaving the rest of the game interface behind and filling my vision with only the pictorial story of the Six-Eyed Doe. Most of it signified little to me, because it was focused on rivers and forests, with the occasional animal. I focused in on people, where I could find them, and ended up looking at a full-on orgy with writhing, naked bodies of a hundred different species. To one side of it, up and to the right, armored men were coming in and slaughtering the people, but toward the bottom there were a handful of pregnant women sitting around, and beneath them various women giving birth, with naked children walking away through the woods, and some donning leather armor of their own to fight off the attackers.

This was the story of the locus, as told by some insane artist who had the ability to paint photorealistically at a yottapixel scale but lacked any idea of how to tell a coherent narrative. It took me some time to find the bottle, which sat all by itself, away from everyone. There was no attempt at being literal; it was only barely big enough to contain Solace, who sat with legs folded and her staff across her lap. It was such a small thing, in comparison to the rest, and that was probably the point.]

Valencia the Red, Loyalty lvl 26

Valencia is a nonanima, a humanoid without a soul, created by the essentialist Fallatehr Whiteshell in the Amoureux Penitentiary where she lived for the first seventeen years of her life. Until recently she was subject to repeated possession by demons and devils at random intervals, but now, touched by your magic, she has become something to be
feared, for much different reasons than she was before. She is nearly a newborn, in some ways, trying to find her feet.

**Bethel, Loyalty lvl 12**

Bethel is not just an entad, but a meta-entad, capable of taking magical items and adding them to itself. Initially created by Omar Antoun using funds and labor provided by Uther Penndraig, it stood empty for several years until Uther returned. Once he discovered the house’s abilities, he began adding entads to it, eventually raising it to a sort of sentience, and after that, despite its objections and pleas. Five hundred years later, it had sequestered itself partway down the Boundless Pit, until you came along.

---

**Entads and Equipment of Note**

**Group:**

- **Marzipan Urn:** A ceramic container filled with small cubbies where marzipan fairies grow. Each may be consumed for healing, but serious injuries will require more than one. Doesn't restore lost blood. Doesn't regrow missing bones. Bound to Amaryllis.

- **The Egress:** A ship whose exterior is modeled after the "Cloud Gate" sculpture in Chicago. Moves with little regard for physics, and at extreme speed, without disturbing the people who fly in it.

- **Bottle of Manifold Space:** Appears as a large, five gallon glass jug. When a person touches the spout, they're (apparently) shrunk down and fall inside it, roughly two miles down. The interior space of the bottle appears to be roughly a mile and a half across. A set of wards provide support to the interior ecosystem, ensuring the movement of water through the bottle, and regulating atmosphere. Currently inhabited by the last known locus, whose domain covers the entire interior of the bottle. Exiting the bottle requires either some appropriate magic, or leaving through the spout.

- **Teleportation Key:** Allows the user to teleport himself, plus another four people, and all the equipment they carry on them, up to 200 lbs each (plus any amount of objects carried in extradimensional space). "People" is defined rigidly, and does not include non-anima, sentient entads, or the locus. People in extradimensional/warped space still count against the limit.

**Juniper:**

- **Sword of Transient Metal:** Once per day, with a command word, the sword will change so as to pass through metal (though not anything else). Bound to Amaryllis, invested in Juniper.

- **Slink-thief’s Dagger:** A throwing dagger that returns to the person who threw it shortly after it's either missed or hit its target. Exists in whatever spot is remotely plausible for it to exist on the wielder, meaning that it can be drawn from a cuff, inside a jacket, pulled from within a waistband, etc. Stays hidden when the wielder is searched.

- **Ropey (the Eternal Golden Braid):** Sentient length of rope. Entirely prehensile. Bound to Amaryllis.

- **Sander's Bow:** A bow with a sandstone grip. When activated, arrows fired from it will appear to hang in the air for thirty seconds before resuming its previous velocity.

- **Unicorn Bones:** Aside from their other properties, they can be pulled on to allow extremely short time loops (from the perspective of the user) and multiple lived timelines (from the perspective of everyone else).

- **Sapphire:** An expensive gem, precisely cut and useful for gem magic, worn around the wrist on a leather thong that can be shifted to put the gem in the hand for better contact/use.

- **Void Rifle:** Uses void effect to put holes through things. Can fire a maximum of once every
six seconds. The void effect travels through half an inch of steel, six inches of flesh, or five hundred feet of air.

- **Ring of Partial Incorporeality**: Allows the wearer to make a single part of themselves incorporeal, so long as that part is contiguous and does not create two non-contiguous stretches of corporeal matter (ex. it can make a hole of incorporeality in someone's palm, but not one which was wide enough that both fingers and wrist were corporeal with nothing connecting them). Bound to Pallida.

- **Bracelet of Panacea**: Cures the wearer of any short-term (less than 24-hour) poisons by purging them. The mechanism that allows it to work is unknown, but it's believed to be predictive, as it has previously responded to poisons both novel and unknown. Its power allows the wearer to breathe fouled air, so long as there's sufficient oxygen.

- **Cloakshield**: A cloak which, when swished, causes it to become as hard as a metal shield for one second before returning to cloth form. Bound to Pallida.

**Amaryllis:**

- **Immobility Plate**: Stops the wearer in place with a thought, then allows them to resume motion with another thought. Contains inertial dampers to prevent injury to the wearer. When immobile, becomes much harder to affect with kinetic weapons/forces. Immobility is not absolute; sufficient force can still move it, but it takes a lot. Reference frame is Aerb.

- **Ancestor's Amulet**: Contains a facsimile of a previous owner, which can be overwritten. This ancestor can be spoken to, and has some ability to form new memories based on conversation, as well as 'feel' emotion, though personality is static. Currently, the ancestor is Cyclamine Penndraig, Amaryllis' great-grandfather.

- **Flickerblade**: A sword that can blink in and out of existence with a thought. When the blade materializes, any material in its way is instantly removed from existence.

- **Sable**: A vanta black glove, capable of putting things into a limitless extradimensional space after ten seconds of contact and a thought (the thought can come any time after the initial ten seconds of contact, so long as contact is maintained). Objects stored within the glove must be "whole" objects and will exit if they split. There is no breathable air. Decay and other processes continue to happen. Anyone who wants to can easily exit the glove with a minimum amount of exerted will.

**Grak:**

- **Temporal Plate**: Allows manipulation of time to give the wearer more time to perform actions. In physics terms, behaves as though time were accelerated for the wearer. Doesn't allow for more powerful punches or greater kinetic energy (does allow for faster wards and better aimed pistols). Bound to Pallida.

- **Spectrum Glasses**: Eyeglass which, when worn, give people colored auras. These colors are clearly non-random, but the meaning behind them is opaque. Most civilians show up as somewhere between blue and orange. Most allies show up as purple. Most 'enemies' show up as red. The unclear significance of these colors, false positives, and false negatives, mean that they're rarely if ever used anymore. Bound to Amaryllis.

- **Hair Axe**: An axe that causes anyone cut by it to grow an extra foot of hair, where 'hair' excludes eyebrows, body hair, etc., and full effect may vary by species. Depth of cut does not matter, and with magical healing, the axe may be used cosmetically. Can be returned to his hand, sailing through the air, with a thought. Bound to Grak.

- **Warder's Monocle**: Allows the warder to see magic at various wavelengths. Burns the retinas if used too long. Superceded by warder's sight.

- **Warder's Wand**: Allows for the warder to create or manipulate wards, drawing on their concordance.

- **Ironwood Fist**: A wooden left hand, harder than iron and fully mobile, with joints that bend
both directions, greatly increased grip strength, and the ability to slowly change shape on demand.

Valencia the Red:

- Red Armor of Arramor: Prevents physical/kinetic damage to the wearer, then transfers the entirety of the damage that would have been at the top of the hour (minus whatever the armor itself would block or redistribute), as well as dealing the same damage to whoever had damaged her, so long as they're still living. (Note: Valencia has no soul and does not take the damage, though damage is still prevented.)
- Crown of Malingering Thorns: Prevents poisoning and purges existing poisons. Any poison negated in this way is "paid back" with a mental affliction. (Note: Valencia has no soul and does not receive magical mental afflictions, though poison is still negated.)
- Memory Blade: Becomes sharper the more it hits. Each hit removes memories from both the wielder and the person struck, with the magnitude of memories removed dependent upon the severity of the strike. (Note: Valencia has no soul and does not have her memories removed.)
- Handguns: Two, holstered at her hips.

Solace:

- Cloak of Leaves: Extradimensional space, accessed by putting things behind her back. Storage space is limited to approximately nine cubic feet.
- Flower buds: Various effects.

Raven:

- Orb of Three Spirits: A small orb, carried about the person. At a thought, three sea-foam green orbs appear above her, each of which can be fired off in a straight line, carving through any solid or liquid in their path with no resistance. Each orb, once used, will take one week to recharge. Bound to Raven.
- Anklet of Reactive Radiance: When someone increases their physical abilities near her using magic, typically bone magic, her own physical abilities rise an equal amount. This effect also matches the effects of permanent increases from entads. Bound to Raven.
- Banded Grasp: Worn as a single band of metal, usually under the clothes, allows armor to snap around the user with a thought. Doesn't cover head or hands. Armor is extremely resistant to kinetic damage, and absorbs a fair amount of power from other attacks (heat, electricity, radiation, etc.). Disbands with a thought. Bound to Raven.
- Shadow's Cloak: A pseudo-sentient cloak, which will twist and flutter in an imagined wind unless instructed otherwise. Has a wide variety of weak powers, including extradimensional interior pockets, resistance to tearing and ripping, and the ability to defensively react to threats. Bound to Raven.
- Mirrored Blade: A blade that can be summoned to hand with a thought and disappears into extradimensional space when not in use. The blade itself is made of a slice of stilled time and capable of cutting through nearly anything. Bound to Raven.
- Brace of the Bound: A brace that can store information from books in it when the wearer touches a book. A single book at a time can be made manifest with a thought, though it's not a "real" book and cannot leave the wearer's possession. Holds 32,768 books, with new books requiring an old one to be cast out. (Currently full.)

Pallida:

- Trident of Bubbling Flame: With one command, this trident will activate, allowing it to warp and bubble away at a wide variety of materials. Bound to Pallida.
- Inkscape Armor: Skintight armor that can retract or cover at will. Wardproof, and makes anything it covers wardproof as well. When covering the face, it provides air supply.

Bethel:

- Contains multitudes.
The knock on my door was a timid one.

“Come in!” I called.

I was surprised to see Valencia step through. She looked trepidatious, with her hair (white, dyed brown) covering her face some. Her eyes were crimson red, rather than the purple they took on when she put her lenses in. She wasn’t the same girl we’d rescued from the Amoureux Penitentiary: she was healthier now, with better posture, and a fair amount of muscle from the training that she’d been putting in, some of it in the time chamber.

“No devils,” she said, holding up a hand.

“Oh, I said. I turned back to my things. “I’m just in the middle of packing up. I’m going to be living in the tree soon, in the bottle, to be with the locus. Historically, trying to force loyalty hasn’t worked, but it’s worth a shot. Maybe I’ll come to understand it better.” I’d meant to make the move sooner, but things had been a little bit hectic.

“You did well with Grak today,” said Valencia.

“Devil’s insight?” I asked. I tried to keep the frown from my face.

“In this case, yes,” said Valencia. “Not when you were there, just with him alone. I wanted to be sure that he wasn’t going to try something.”

“He has feelings for you,” said Valencia.

I stopped what I was doing to stare at her. “I mean, that’s … what kind of feelings?”

“You’re going to have to talk with him about that,” said Valencia.

“Is he?” I asked.

“No,” replied Valencia. “I don’t think so,” she hedged. “There’s something that I want to talk to you about though.”

“Oh?” I asked.

“He has feelings for you,” said Valencia.

I stopped what I was doing to stare at her. “I mean, that’s … what kind of feelings?”

“You’re going to have to talk with him about that,” said Valencia.

“Is he in love with me?” I asked.

“It’s complicated,” said Valencia. She gave me a frown that was very reminiscent of Amaryllis. “I just didn’t want you to get blindsided.”

I closed my eyes. “Shit,” I said. “Okay, well that’s going to make things awkward.”

“Probably,” nodded Valencia. “I just thought that you should know. You were planning on having him move into the tree with you, weren’t you?”

“I was,” I said. I kept my eyes screwed shut. “Fuck,” I said. “I wanted to be able to keep an eye on him and maybe help with the loneliness. Dwarves like to have someone to sleep beside, I thought … I offered to be his krinrael.”

“Bethel told me,” replied Valencia.
“Lovely,” I said with a sigh. I opened my eyes and looked at Valencia. She was watching me. I had no way of knowing whether or not she had a devil in her or not. “Okay,” I said. “Do you have advice?”

“Advice?” asked Valencia, momentarily nonplussed.

“What do you think I should do?” I clarified.

“I -- why?” asked Valencia.

“Because you’re here?” I asked. “I don’t know, I just wanted some insight into what you thought I should do.”

“You want me to use a devil against Grak?” asked Valencia.

“No,” I said. “I want your advice.”

“But … you hate me,” said Valencia.

“I don’t hate you,” I replied. “I think what you did to me and Fenn was shitty, and I don’t actually trust that it was for the ‘right’ reasons, whatever those are, and yeah, it pissed me off, especially after she was gone, but I didn’t and don’t hate you.”

“You did,” said Valencia, shaking her head. “Devils know hate.”

“Alright, well, fine,” I replied. “Maybe I hated you for a bit, but if we don’t give each other second chances, then we’re not going to be a very effective team.”

*Loyalty increased: Valencia the Red lvl 27!*

“Thank you,” she whispered.

“I’m glad we could clear that up,” I said. “But do you have advice on how to handle Grak?”

“Find him someone, or wait until the Dungeon Master does,” said Valencia. “That’s how I got over you.”

“Ah,” I said. “Wait until he gets a Jorge?”

“Do you still not like him?” asked Valencia, cocking her head to the side. “Why?”

“I don’t know,” I said. “He’s an interloper. He’s … maybe this isn’t an analogy that you would get, but it feels like when you have a long-running sitcom, and a new character gets dropped in at the start of the seventh season, and you’re just supposed to accept that he’s there now, a part of the crew without any real introduction.”

“It’s not because you still want to have sex with me?” asked Valencia.

I winced. “Jesus,” I said. “That’s --”

“I’m only asking,” said Valencia, frowning at me. “Can’t we talk openly?”

“We can,” I said, rubbing my forehead. “It’s just hard to be laid bare like that.”

“Well I didn’t want to tiptoe around it,” said Valencia. “Sometimes it seems like half of what you people do.” She crossed her arms in front of her chest. “I haven’t looked at you while holding a devil
since you asked me not to, not even when it would have made sense to for other reasons, and I’ve tried my best not to think about you while I had a devil either, so I was just asking, because I don’t know how else I’m supposed to know.” She hesitated and let her arms drop a bit. “I’ve missed talking to you. So just … talk to me, if you’re going to?”

“If there’s some part of me that finds you physically attractive,” I began.

“There is,” said Valencia with a nod.

“Then my ideal version of myself shouldn’t be thinking about that or taking that into consideration where Jorge is concerned,” I said. Especially since there’s absolutely no chance I would ever act on that attraction. “So I’m just going to resolve not to do that. I do think that it’s a little weird that you’re dating so quickly, and as far as emotional and social maturity I’m skeptical, but … he’s a good guy?”

Valencia gave a firm nod. “He’s the best person I’ve ever met. No offense.”

“None taken,” I said, and tried to mean it. “But, wait, really? Of everyone?”

“Yes,” replied Valencia. “I checked him over very thoroughly.”

I frowned. “I’m not going to say that your judgment is suspect, but, uh.”

“Everyone has dark, ugly parts to them,” said Valencia. “I’ve seen them in everyone I’ve met. It’s just how people are. Jorge’s dark parts are only a little dark, and his ugly parts are only faintly unattractive.”

My mind drifted, naturally, to the dark and ugly parts of myself. “You said my flaws were beautiful, back when we first met,” I said.

“No,” said Valencia. “I said that it was beautiful to see you struggle against those flaws.”

“Ah,” I said. “I guess I didn’t remember it exactly right.”

“You probably didn’t want to,” said Valencia. “I still think it’s true, by the way. What you’re doing for Grak doesn’t come naturally to you. You’re comforting him. You’re being a warm blanket to curl up in. When people are hurting, you want to be a rock for them, a solid, dependable protector. It’s what you wanted to be, for me, I think.”

“You think?” I asked. “You don’t know?”

“I don’t trust the devils,” said Valencia. “I don’t trust myself when I’m borrowing their wisdom and knowledge.”

“Probably smart,” I said. “But I think that’s right, for what it’s worth. That is what I would have wanted to be for you. It just … it couldn’t be tied in with all the romance stuff, not when you’re still developing as a person.”

“Romance and sex,” said Valencia.

“I … yeah,” I said. “That’s one of those things I’d rather we never said out loud.”

“I know that,” said Valencia. She frowned at me. “One of the hardest things about people is all the things that they don’t say, especially the things that everyone knows, or everyone but me knows. With a devil I can figure it out, but even then it seems so pointless. And we could become the sorts of
people who just talk about all the things we’re thinking, but we don’t, because it would be work.”

“It’s just people,” I said. “People are hard. Really hard, sometimes, or even most of the time.”

“I wish they weren’t,” said Valencia. “I wish that I could have a devil in me all the time, and change people so they aren’t so much work. You and Mary both told me not to do that though, even if it would make us a better team together.”

“We’d have to trust in your judgment,” I said.

“I know,” said Valencia. “And I know that I don’t know enough to start fixing everything. Don’t worry, I’m not going to try.”

“Okay,” I said. “Thank you for the heads up about Grak though.”

“I wasn’t sure whether I should say it, or whether I should have said it earlier,” said Valencia. “You’re really not mad at me?”

“No,” I said, and I found that I meant it. “In the other timeline -- you and Jorge were happy.”

“We were?” asked Valencia. “For a long time?”

“Yes,” I replied. “Up until you died and the world ended.”

“I’m not sure that I want that with him,” said Valencia. She shifted on her feet. “The forever future, I mean, not the death and apocalypse, obviously.”

“Well, the books just show a single future,” I said. “You don’t need to feel bound by them.”

“I don’t know,” said Valencia. She frowned. “I think … I think I fixate on things. That’s what Mary said, but I think that she’s right. I don’t know if that’s bad or good, but Mary thinks that it’s bad.”

“I fixate on things,” I said with a shrug.

“Mary said that I fixate on the first thing that I come across,” said Valencia. She looked down a bit. “Because I’m broken.”

“Did she say that?” I asked. I felt a flash of anger at the hypothetical Amaryllis who would have called Valencia broken, even if it was sort of true, and even if Amaryllis would never say that.

“No, she didn’t say it,” said Valencia. “But she thought it.”

“We’re all broken,” I said, resisting the urge to tell her that she couldn’t actually see inside Amaryllis’ head. “It’s just a matter of how we deal with the broken parts of ourselves. If you find that you have a tendency to fixate on the first thing that you come across, you have ways of dealing with that. I guess I would argue that it’s not a real negative, unless it’s stopping you from finding something that you’d like more, or if you’re just deluding yourself.”

“Do you think I am, with Jorge?” asked Valencia. “Deluding myself?”

“Er,” I said. “I don’t know him. I’ve met him once or twice, briefly, but everything that I know about Jorge comes from what you’ve said about him, and from that, he seems nice, so … not really my place to judge.” And the bias I feel … well, better not to give it a chance to express itself. “If we were talking about Harry Potter though? Then yeah, I think you’re wrapping yourself in the first thing that resonated with you and holding onto it a bit too tightly.” I shrugged. “I do like the books.”
“Thank you,” said Valencia. “For talking to me. And for giving me something to think about.”

“I’m not saying that Jorge isn’t great,” I said. “I really want to make that clear. I’m just saying that if you find yourself falling in love with the first thing you come across too often, maybe that’s not because it’s the best ever, it’s just a case of you giving too strong a weight to what looks like an island of stability in a sea of uncertainty.” I paused. “I guess I should probably meet Jorge. Bring him around to dinner, maybe?”

“Yes,” nodded Valencia. “I think I would like that.”

After having lived in Bethel for quite some time, the tree house in the center of the bottle was a pleasant change of pace. Everything was small and cozy, with a great deal of thought going into the proper placement of everything. It wasn’t that Bethel was thoughtless, it was just that she liked to go big and luxuriant, more of a palace than a house, for all that she complained about having too many people in her and feeling more like a facility. She also changed frequently, moving around rooms on us to fit her whims.

“I’ll need you to get in and out, when I’m staying here,” I told Solace. “So I would appreciate if you stay in here when I’m here, if that’s okay, just in case there’s an emergency.”

“Understood,” said Solace with a bow in my direction. She was three feet tall, in her child’s body, with the green skin of a crantek and two small antlers on her forehead, new additions and from what I could tell, only added for a little bit of flair. She was wearing clothes, thankfully, most likely out of respect for my wishes. “I’m happy that you’re here.”

“I’m hoping that it will help,” I said. “I have no idea how it would, but maybe not knowing is to our benefit.”

“Your profane texts didn’t hold any clues?” asked Solace.

‘Profane’ was a strong word, and one that I didn’t think really fit with the Second Empire’s research. They didn’t give a shit about the loci and saw them as both a political tool and an impediment to progress, but ‘evil’ was another strong word, and while it did fit, it was at least goal-oriented evil, the kind of evil of people who were willing to pay steep prices, so long as someone else was willing to foot the bill.

“No, nothing,” I said, keeping my thoughts to myself. “I think our plan is to knock out as many quests as we can as quickly as possible, and in the downtime, I’ll try to, um, connect with the locus.”

“Good,” said Solace with another small bow. “Grak will help me tend to the domain in the meantime.”

I saw Grak nod beside me. We’d flown down into the bottle together, as birds. “Whatever I can do to help,” he said.

I had invited him to come live with me before Valencia had said anything about him having feelings for me. That was something that I wasn’t looking forward to navigating, but I would try to be as forthright and honest as I could be, and then hope that the Dungeon Master would throw Grak his Jorge.

“Excellent,” said Solace with a pleased smile.

On cue, the Six-Eyed Doe showed up, tall and imposing, but with a slender body and six curious eyes. I looked it over, trying to see the beauty in it, trying to feel some sense of wonder and majesty,
and failed entirely. Why a deer though?

“Let’s go for a walk, shall we?” I asked.

The doe huffed at me and nodded its head once.

I began walking, and the doe followed along beside me. I had no idea what I was supposed to say to it, or how I was going to have to have a conversation with it given that it didn’t actually talk.

“Alright,” I said. “First things first, can I call you a she, rather than it? Everyone just calls you ‘the locus’, or talks around it, but I think it helps me, mentally, to compare you to a living thing rather than an inanimate object. Maybe that’s me placing a bit too much faith in Sapir-Whorf.” I’d already been making an effort on that front, but I had forgotten to ask the locus’ opinion on the matter.

The doe bent its head once.

“Second question,” I said. “Do you want me to explain references that I assume you won’t get? I don’t even know if you speak Anglish, or you’re just reading intent, or maybe feeling my aura or something, but --”

The doe shook its head once.

“Okay,” I said. “No explanations. I guess I’ll just talk then, because I don’t know what else I’m supposed to do.”

There was no response to that. The doe kept on walking beside me. I was following one of the little trails that ran through the bottle, one I’d been on a few times before, when Fenn and I had wanted to get away from the house.

“I guess I’ll talk about the personal stuff,” I said. “We can start with Fenn. She was …” I trailed off and then stopped. *She was.* “I wish that I could have saved her. It’s hard for me to not blame myself for that, and maybe I shouldn’t even be trying to skirt blame. Maybe I should just accept some share of responsibility.” I sighed. “And now that she’s gone, it’s like she’s sitting over my shoulder, and I might be able to shake that off, but I don’t think I want to. I think about what she would say sometimes, if she were here, and sometimes it just seems like we all stop talking so she can make the obvious joke, until we realize that she’s not making jokes anymore.” I sighed again. “That’s probably just me, seeing meaning in silences, because I miss her.”

The doe huffed once. I looked over at her, and the three eyes that were pointed my direction. Only one was watching me. I had no idea whether she was finding this worthwhile.

“So that’s its own thing,” I said. “But at least it’s nothing actionable, nothing that I could confront or change. With Grak … Valencia said that he has ‘feelings’ for me, but I’m not sure exactly what that maps to, and I’m not looking forward to that conversation. Dwarves aren’t so different from humans, I guess.” I paused. “I’m not gay. I mean, he’s not technically a man, but he’s got a beard, and no boobs, so the lack of attraction is, I don’t know. It’s nothing against him. And even if he looked like Amaryllis,” I paused again as I tried to contemplate that. “It would be weird. He would carry himself differently than she does, and we’d probably use female pronouns for *her*, even if *she* still had a cloaca and all the other dwarven internals, but, I don’t know.”

I glanced over at the doe as we walked. “I think that Amaryllis is legitimately as beautiful as I could find a woman to be. Pallida has this hairpin that makes whoever wears it more pretty, and I keep thinking about what it would be like if Amaryllis put that hairpin in. Would it just not do anything? Would there be a buffer overflow that would make the game crash? I don’t mean to objectify her,
because she’s so much more than how amazingly pretty she is, but it’s really hard for me to properly express what I feel when I look at her. I thought that I was mostly past the ‘holy shit she’s gorgeous’ part of things, and maybe I was for a while, but I came back from the Library and when I saw her I just thought, ‘Oh.’ It’s so hard to believe I’d gotten used to it. I have higher Poise now, and I have no idea whether or not that’s even doing anything, but if it is, it’s not enough to be noticeable.”

The doe nodded once.

“But when I think about Grak in Amaryllis’ body, besides the fact that it weirds me out, I still don’t feel the same way about hypothetical-her. It’s not like I’m in love with him and I wish that he had a different body that I was attracted to, it’s just … there’s nothing there. He’s a friend, and I care about him, and if what he needs is physical affection, I’ll get over my cultural hang-ups and provide it, but this kind of puts me in a bad spot, because I don’t want to lead him on, and I also don’t want to just reject him, because I feel like that’s me telling him, ‘Hey, live! But not with me, ew’, which isn’t what I would have wanted to hear in his position.” That was an understatement. I’d have been crushed. “I can’t just lie to him though.”

The doe nodded along. I had no idea what she was thinking, if anything.

“And moving down what’s a very long list, we have people pairing up, or seeming to, and,” I stopped and looked at the doe. She seemed a bit like she was smiling, or as much as a deer could smile. “I’m a total shitheel. I don’t know if you know that about me. I have these stupid feelings, all probably rooted in reasons that have obvious evo psych origins. I was evil for a bit, you probably know that, but this is a different sort of evil that I keep having to go over in my head. It’s like, I want Amaryllis to be happy, I want Valencia to be happy, but there’s this part of me that sees them with partners or potential partners and screams, ‘No, mine!’. And how fucked is that? I don’t actually think, on an intellectual level, that either of them owes anything to me, but there’s still this emotion, jealousy or something else, that just … blegh.”

The doe snorted once.

“Exactly,” I replied. I was sort of getting into this. “I think if I had an afternoon free to do it, I might be able to go into my soul or spirit and just tear out everything that was causing problems, but that might mean giving up my humanity, and I find it offensive on a personal identity level, not to mention the utilitarian objections given that I don’t have a degree in psychosurgery.” I did wonder how easy it would be, with both of them pushed to max, but momentarily pushing skills up came with high costs.

“I’m already not acting on those feelings, because I know they’re in that middle area of the Venn diagram of stupid and abhorrent. I maybe have the excuse of being in love with Amaryllis, and maybe that relationship would even make the both of us happy, but with Valencia?” I shook my head. “It sucks, because I know she still sees right through me, and she knows that I know she knows, and I don’t talk about it, even though she said that we should. I just don’t see what it helps, to bring all that shit into the open. I mean, I’m doing it now, but to confirm the things she already knows would just be painful and awkward.” I thought about that for a moment. “It’s not how I was raised. You’re allowed to think things, so long as you don’t say them or act on them.”

I looked over at the doe again. We’d reached the edge of the bottle, where the path turned to match the curve of the glass. The bottle only held about a square mile of land, but the paths wound around within that mile, through a variety of terrain. If we followed the loop, eventually we would come back to the house, but it would take some time. I continued on; I didn’t know what I was doing here, but this didn’t seem to be hurting, and in some ways it felt good to be able to say these things out loud. That was probably why Valencia had wanted to talk about it.
“That’s where Fel Seed comes from,” I said. “When I was drawing up this great and terrible villain, he was every dark thought I’d ever had. I would think about the times that I wanted to hurt people, and I would think, ‘What if I felt like that all the time? What if I could enact that pain with impunity, with no one to challenge me?’ And it just sort of went from there. The City of a Thousand Brides was a crystallization of the same kinds of feelings I have about Jorge and Valencia.” Stupid, stupid, nonsense feelings.

“And when I think about Amaryllis and Pallida … I don’t know. They’re both women, so it doesn’t trip the sensors as much. I don’t think that they would be happy together, and I know that they weren’t too happy in the doomed timeline, but I don’t know if saying that to Amaryllis would just be in service of killing that relationship in the crib or what. And if I was going to propose that she start loving me again, maybe I should have done it already.” I looked out at the grass. It really was beautiful in the bottle.

“It really is beautiful in here,” I said. “This landscape, confined within a mile-tall glass bottle, is everything that I could want in a place.” I glanced over at the doe, wondering if that was insensitive. “There used to be a thing called a demiplane. If I had to guess why they were excluded, I would say that someone found a way to proliferate them too much, or nest them, and if you could stick everyone into custom demiplanes, you have to imagine that everyone in the world would do it, which would change the nature of everything. But demiplanes were always my favorite. They were cozy little places. This bottle is probably from or inspired by my microworlds campaign. I loved the microworlds, the tightly packed, highly detailed places where you would know everyone and see everything. I know it’s not what you want to hear, I know you want to be big and sprawling, but these contained worlds, with everything organic but all still in its place, they hew close to my ideal.”

**Loyalty Increased: Six-Eyed Doe lvl 8!**

I had just been rambling, not really thinking about what I was saying, and the message took me by surprise.

“Um,” I said. “I just got a loyalty message, which typically seems to mean that something has changed in how you view me, or something like that, but I have no idea what I just said that would have resonated with you. Surely I’ve called this place beautiful before? Or, was it that I expressed my own form of beauty?”

The doe let out an unhelpful bleat. On instinct, I reached forward and patted her on the flank. She was softer than a real deer; I’d always thought deer were a little bit bristly, but all of my experiences with touching them had come shortly after having killed them.

“Amaryllis has some theories about companions,” I said as I resumed walking. The sun was starting to set, which added some color to the surroundings, given that it was one of the few clear days on the Isle of Poran. “The big central axiom is that companions aren’t random, and that they’re related to me on some axis, which is about as broad a statement as you could make. If Fel Seed is everything evil and wrong about me, then it’s pretty clear that Bethel is some of those same instincts, but much more aligned with our goals.” I scratched my head, then ran my fingers through my hair. I needed a haircut. The last one I’d had, Fenn had given me, against my better judgment. “Valencia is obviously Joonbait, and Raven is an idealized version of Maddie. Grak is meant to help me confront the fact that I attempted suicide, maybe? Or maybe it’s about growing up in a rural area and knowing that the rural life isn’t enough. Probably both.” I looked over at the locus. “You have to understand that I don’t actually think of people this way, I’m trying to get myself in the mindset of the Dungeon Master and what it is that he might have been thinking, if anything.”

The doe nodded her head once and blinked at me, with her six eyes out of sync with each other.
“Amaryllis is maybe meant to teach me a lesson about how it’s okay to just be friends?” I scratched my head again. “No real clue there. Similar for Fenn, though in her case I guess that maybe the lesson, or the point would be that people, or women, or women that I love, are capable of being imperfect, and deserve no less love for it. Or maybe that I should value people for who they are, not for what I want them to be. So many of these lessons I know though, which makes it frustrating, like I’m being told to be a good person in all the ways I already know I should be. It’s one of the reasons that I’m inclined toward saying ‘fuck the narrative’.”

I could see Grak and Solace in the distance. We hadn’t talked about it in front of him, but Grak was on an informal suicide watch, and had been for a while. I wasn’t too worried, but I didn’t want him to be left alone. Solace was calm and gentle, and I hoped that she would provide what he needed.

“That brings us to you,” I said to the doe. “If we accept that companions are some form of communication by the Dungeon Master, or maybe just purposeful, or can be meaningfully read as such, then what would your existence as a companion be trying to say? Thoughts?”

The locus raised her head high into the sky and let out another loud bleat. In the distance, I saw Solace and Grak stop what they were doing and turn toward us for a moment, before resuming their gardening.

“My own thinking is that it’s about the ineffable,” I said. “I mean, that’s obvious enough. Maybe it’s about beauty and art. Maybe it’s whimsy. I was always bad at that kind of thing. I would get pictures in my mind’s eye and then when I went to put them down on the page, they would come out too sensible, with none of the magic that I’d wanted to pour into them. From what I understand of it, that’s druidism in a nutshell, wrestling with manufacturing whimsy. But I don’t know how knowing any of that helps you, except that these stupid loyalty meters give rewards, and maybe one of them will get you out somehow.”

The locus bleated again, twice, then lowered its head and nudged me. I patted her on the head.

“My other theory, as far as ‘loyalty’ goes, is that some points I get just by being myself,” I said. “Some might be from changing, or recognizing that I’m wrong, but others are just because I was able to express something core to myself, something that you didn’t know before.” I found that I enjoyed talking out loud to the locus. I was used to keeping all my thoughts internal, but it felt good to verbalize them, even if it was to someone who wasn’t quite equipped to respond.

I began talking about the act of creation, not the simulationist part of it that was so often the result of trying to pin things down, but the truly artistic side. I rambled a bit, because I didn’t think that it mattered if I drove directly to my thesis, whatever it was. I described the times when things had seemed to simply come to me from the aether, connections that my mind had made without me, or details that had been added for the sole reason that they seemed right, not because there was necessarily any logic underpinning it.

I tried not to break my flow when the notification came.

Loyalty Increased: Six-Eyed Doe lvl 9!

“The Zorish Isles,” I said, continuing on. “They were one of those things that would have needed a lot of backfilling. I was sitting in my bathtub and imagining the tips of my fingers as islands jutting up from the water, and when I had it in my mind’s eye, my fingers blown up to ludicrous scale, and the people and life on the islands ignorant of the reality, it seemed so perfect and right. I tried to write up backstory for them, but everything I wrote seemed to diminish them, save for those explanations that raised more questions than they answered.” I stopped for a moment and thought about that. “Maybe that’s what it is for me, the sense of seeking as an elemental part of creation. Eventually I
turn to filling things out, but that never gives the same satisfaction, it’s just going through a checklist of plate tectonics and biomes. Satisfying, maybe, but not as satisfying. I want the floating islands to drift over the land, and they’ve got to have some explanation, but sometimes it seems better to just say, ‘it’s magic, I don’t have to explain shit’.”

**Loyalty Increased: Six-Eyed Doe lvl 10!**

**Companion Passive Unlocked: Six-Eyed (Six-Eyed Doe)!**

I immediately closed my eyes to look at the virtue.

**Six-Eyed:** Any attempt to use any system in a non-standard way will be considered one degree more reasonable than it otherwise would be. Any existing virtues, entads, or effects that specify a degree of reasonableness are increased by one degree of reasonableness in your favor (calculated after all other effects). The Layman will look more favorably on your attempts to argue definition.

I looked at that for a while. I was going to have to write all that down for Amaryllis. Given that the game didn’t actually have a manual, the text of the virtues was one of the only things that exposed any of the game to me. ‘The Layman’ was mentioned once, and ‘degrees of reasonableness’ were mentioned twice. *In theory,* Six-Eyed meant that my Monkey Grip ability would let me wield even more unreasonably large swords than before, and I suspected that if I still had the Anyblade, it would be a little more lax about what counted as a blade, not that it had been an exceptionally strict item to begin with. I assumed that ‘the Layman’ was a conceptualization of DM-as-adjudicator, but I didn’t really see how that fit in with the rules system of the game as I understood it, not if most things had abilities that were set in stone. Boundary conditions, perhaps?

“Okay, so what counts as a chair?” asked Reimer.

“A chair is a chair,” I said.

“That’s meaningless,” said Reimer. “I’m asking for the purposes of the spell, what’s a chair? You said that it can make chairs valued under 25 gp, so what’s a chair?”

“Alright,” I said. I’d been prepared for this, after one too many arguments. “So there are a couple of different directions we can go with this. One, we do the porn test, I-know-it-when-I-see-it, but that requires me to see it, so every time you ask whether or not something is a chair, I say yes or no. That’s probably what we’re going to do, but there are other options, for the sake of a diegetic explanation.”

“A what?” asked Maddie.

“It’s Juniper’s favorite word,” said Tom.

“No,” said Craig. “His favorite word is egregious. It was on the bingo sheet.”

“I have a lot of favorite words,” I said. “But to go back to what I mean, and Maddie, hopefully to help you understand, we can say that in game terms Reimer-the-player is asking me-the-DM whether or not something is a chair and I’m replying to him, but that doesn’t actually explain what Karbon is experiencing in-game. A wizard attempts to cast the spell, but does he hear a voice in his head that says ‘hey, that’s not a chair’? Probably not, though that is one of the options. Instead, maybe there’s something like memetic space —”
“From Long Stairs,” Tiff said to Maddie.

“It’s basically a conception of collective memetic strength,” I said. “So if you took all the ideas about what a chair is in all the heads of all the people, then you could make an average weighted by confidence or strength or whatever, and you’d end up with something that wasn’t really a definition, but which mapped to various real-world objects with a given strength, and then you could have a cut-off as far as how far away from the meme is too far. Similarly, you could have a Platonic realm where all objects exist in their ideals, and you could see how close to the p-space ideal the target of the spell was.”

“Or you could give a literal definition,” grumbled Reimer. “You could say that a chair has got to have four legs, a place for a humanoid to sit, et cetera.”

“Doesn’t a chair have a minimum of three legs?” asked Tiff. “Or two, if they’re curved, like a rocking chair.”

“That’s exactly the sort of the argument that you’d get into literally all the time,” I said. “It’s the stupid ‘is a hot dog a sandwich’ thing again.”

“A hot dog is totally a sandwich,” said Craig. “Meat between bread, how is that not a sandwich?”

I let out a long, low sigh.

“Alright,” said Arthur as he sidled back into the room and took his place. “What did I miss?”

“Chairs,” said Reimer.

“Great,” replied Arthur with a smile. “Are we still standing in front of the count?”

I breathed a sigh of relief. I could usually count on him to get us back on track. Unfortunately, this new ability didn’t seem help the locus in any meaningful way. More than that, it was a passive that applied to me, not to her, which made it unique among the loyalty bonuses. Weren’t they supposed to act on the person who received them, with only tangential or symmetric effects for me? That had been the rule thus far. I was glad that I’d been able to get two loyalty ups in fairly quick succession, though it was a sign that I really hadn’t been putting in the work as far as the locus was concerned.

I tried more, naturally, but there was only so much that I could say about artistry and creation, especially since it had been such a long time since I’d done any of it. I was having the itch to do it again, especially as I talked about it with the Six-Eyed Doe, but they were muscles that I hadn’t been using, and if I was going to do it, it would be strictly recreational. I was also forcing it, which was (maybe) a bit easier with higher social stats, but still grated on me.

“How are things?” I asked Grak and Solace as I approached with the doe stalking along beside me.

“Good,” said Grak. He gave me a tentative smile.

“Good,” Solace agreed with a nod. “I understand that the house has its own priorities, but it’s nice for someone other than Amaryllis and Valencia to come down here.”

“Yeah,” I said. “I’ll try to make more of an effort. It’s just … easy to get caught up with what’s happening on the surface, and then I was away at the Library for a week and a half. I’m sure you appreciate those excuses a lot.”
Solace laughed. “It’s fine,” she said. “We’ve enjoyed the company we’ve had. Valencia really is a lovely girl, you should give her more of a chance.”

“I already am,” I said. A frown crossed my face. I didn’t really think that it was any of Solace’s business.

“Oh, allow an old woman her opinions,” said Solace with a little laugh. She gave me her best child’s smile. I had never really been around children that age, since I was an only child and the youngest of my flock of cousins. I felt awkward and uncomfortable.

“If you wanted to be regarded as an adult woman, you could have picked a body that suited it,” I said.

“Bodies are bodies,” said Solace. “I’ve had my share, and appearing as a child when I still have something of a child’s mentality and development seems apropos.” She touched her antlers. “You didn’t say whether you liked the embellishment.”

“If you can change your form at will,” I began. The doe poked me in the back with her head. “Okay, okay, fine, you can’t mimic a doppelganger, that was too much to ask.”

(We could already kind of do that, if we had access to the body we needed. Essentialism in the thirties wasn’t quite enough to reach into the anima exa in a timely manner, which was a problem given that the anima exa dissipated pretty rapidly when out in the open, but I could still do body swaps and take on a novel identity, so long as the person I was swapping with had the same number of bones. There wasn’t much reason to take on a different physical appearance though.)

“Grak and I have been gathering up things for dinner,” said Solace. “Does roast smeerp and root vegetables sound good to you?”

“Smeerp,” I said.

“It’s like rabbit,” replied Solace.

“Yeah, I know,” I said. “It’s … roast smeerp is fine.”

“Good,” said Solace with a nod. “Grak, would you do me the honor of being my sous chef? Juniper needs to be a dedicated pupil and tend to his plants.”

We ate dinner together, then I helped clean up, helped start a fire, and finally got some time to relax when Solace was already heading for bed. She claimed that rest did the mind good when you were still growing up, but I thought that was only about half true, and she’d really been giving me space to talk alone with Grak.

Grak and I set about doing what we normally did together, if we had time to kill: we played Ranks against each other, using ‘variants’ taken from a thick book.

“Solace has offered to be my krinrael,” said Grak, after some time had passed. (We spoke Groglir, per custom.)

“Oh?” I asked. “That’s, um. Nice?”

“She’s like you,” said Grak. “She offers out of concern, as a way of fulfilling a friend’s need.”

“Can I be meg with you?” I asked. [meg, mëgi: forthright, blunt, and true to one’s self, especially to
“Yes,” said Grak. We were talking as we played, which was taboo in dwarven culture; Grak didn’t seem to care so much.

“Okay,” I said. I took a breath and steeled myself. “Do you have feelings for me?”

“That is not the nature of megi,” said Grak. He was moving pieces around his board, trying to find the optimal set-up. He was good enough at Ranks to do it all in his head, which was a good sign that he was doing this just to relax, not to compete. “You do not ask questions.”

“Right,” I said. “Let me rephrase.” And hope that you’re telling the truth about what you prefer. “I don’t have any romantic or sexual feelings toward you. I can give physical contact, if you feel a need to be touched, and we can cuddle, but not much more.”

“I know all this,” said Grak as he moved his pieces.

“Okay,” I said. “I just didn’t want to lead you on.”

“I know,” replied Grak. “I appreciate it. That was megi as it should be.”

I returned to the game board in front of me, moving around the carrot, wolf, and rabbit tokens, but my mind wasn’t even remotely on the game. I glanced over at Grak, who was giving his game board a vacant stare.

“Dwarves are responsive,” said Grak. He cleared his throat. “We do not naturally feel much lust. We do not get ‘horny.’” (This was an English loan word.) “There are exceptions, especially among the agkrioglian, but I am not an exception.” [agkrioglian, ɑɡkriɔɡlɪɑn: a dwarf who makes their home ‘outside’, typically used to refer to those raised with imperial customs, cultures, and values.] Grak paused. “When I was at Barriers I had many krin and krinrael. Most of them were species that felt that sexual need in one way or another. I was happy to oblige them, if they would understand what I wanted in return.”

“To be touched and held?” I asked.

Grak nodded once. “I developed my responsiveness over time,” he said. “I would see that need, and feel the reaction before being touched. I came to enjoy it, that sense of being needed.” He hesitated. “I don’t want you to think that I left Darili Irid for that preference alone.”

“No,” I said. “I wouldn’t think that. And even if you had --”

“No,” said Grak. “I believed that about myself for a long time. No, I left for many reasons.”

“Okay,” I said. “I didn’t mean to imply anything.”

Grak waved that away. “What I feel for you is not love or longing. It is rilirin.” [rilirin, ɹɪlɪrɪn: wistfulness for something that never was, nostalgia for times and places not lived-in]

“Is there anything that I can do about it?” I asked. My throat felt thick. “If it’s an unpleasant feeling?”

“You don’t understand,” said Grak, shaking his head. “Rilirin, it’s a feeling of … I see how you are with Amaryllis, how you were with Fenn, and I wish that it were me instead. Physically, you’re of the sort I’ve most liked to be with, tall, muscular, able to wrap me in your touch. I saw how you were with Fenn, kind and considerate, at least as far as the physical went. I know that’s not an option between us.” He shrugged. “Rilirin.”
“Yeah,” I said. “Sorry.”

“Don’t be,” said Grak. “I am not Amaryllis, that I feel the need to excise it. I don’t want you to think that I’m suffering. Only rilirin.”

“Okay,” I said. “Is there anything that I can do?”

“You asked already,” said Grak. “I will find someone, I’m sure. In the meantime, I can sleep with Solace. It is enough that you made yourself uncomfortable while trying to help me.”

That didn’t make me feel great, but it was more or less true. I did feel uncomfortable, mostly because of the male coding and the cultural conditioning I’d gotten growing up in small town Kansas. Grak could see some of that, if maybe not all of it.

We finished up Ranks (his solution was far, far better than mine was) and he went to the nook where Solace was already sleeping.

I stayed up, trying to work things out in my head, and having no real luck.
One of the first orders of business, once I got back, was following Bethel’s soul line. I’d been mildly
derelict in not doing it earlier, as it was the traditional unlock for Loyalty 10, but I’d had too many
plates spinning at once, and in my defense, I hadn’t thought that Bethel would get one, given that she
(like Valencia) didn’t actually have a soul. Mostly, I just hadn’t been thinking about it, given the
minor crisis and wildly expanded abilities that had overshadowed that particular aspect of Loyalty
10. I’d noticed the line in the Library, while I was in the middle of routine soul maintenance and
inspection, but it was completely locked off to me.

When I followed it, I found myself standing in a white room. It wasn’t the featureless plain that I’d
met the Dungeon Master on, but an actual room, with the edges where the walls met the floor clearly
visible. My guess was that it was about ten by ten by ten, a perfect cube, with no visible doors or
windows. The lighting wasn’t quite ambient. When I looked closely, I could see that it was just
recessed, with strips of light to provide the illusion that there wasn’t a singular source.

Just as I finally found the seam where the door was, it swung open. Tiff was standing there in her
‘Kansas Swim’ t-shirt, staring at me. It didn’t take my brain long to catch on to the fact that she was
not, in fact, my ex.

“What are you doing here?” she asked.

“Uh,” I said. “I followed a line in my soul.” I looked around the room, then beyond Bethel, into the
hallway behind her. “Where am I?”

“This is my memory palace,” Bethel replied with a sniff. She looked me over, and my eyes drifted
down to see what she was seeing. I wasn’t wearing what I was wearing in the real world. Instead, it
was a t-shirt and jeans, with sneakers of the kind that they didn’t really have on Aerb. It was as close
to being my Earth uniform as could be. It took me a moment to realize that I had lost muscle too, not
so much that I was back to how I’d been on Earth, but still less than I had on Aerb. “You can’t come
in.”

“I wasn’t asking to,” I replied. “I just wanted to see what your soul equivalent was. It’s useful to
have a sense of someone else’s soul for diagnostic purposes. Though, actually, I probably shouldn’t
peep yours too deeply anyway, because I think you’re immune to a variety of memetic threats, and
my soul is off limits to others because of the particularly shitty one that Raven hit me with.”
Similarly, I wasn’t going to look in Raven’s soul anytime soon.

“Hrm,” said Bethel. “I’ll have to talk with Raven about which of her books have those threats within
them. I indiscriminately copied everything she had, though I didn’t look terribly closely at any of
them. Is that usual, do you know, for sentient entads to have such an immunity?”

“I don’t know,” I replied. “I would think that if the so-called memes are acting on the stuff of the
soul, then being without a soul would allow you something in the way of immunity, but -- it’s the
sort of thing that the Second Empire probably did research on.”

“Lovely chaps, those,” said Bethel with Tiff’s smile.

“I’ll be going,” I said. “I didn’t want to disturb you.” I paused for a moment. A palace with a
memory palace. “I do have to note that whatever entad gave you this ability, it’s not on the list of
entads you gave us.”
“No?” asked Bethel, staring at me. “I could have sworn I included them all.”

“I kind of assumed you had left some off and would either tell me when you were ready, or when you revealed them through necessity,” I said with a shrug. “I’m kind of a fan of people being allowed to keep a few secrets here and there.”

“So you’ve said, a few times,” replied Bethel. She was still looking at me. “Would you like to see this place?”

“Sure,” I said. “Just … hide anything you think might kill me?”

“I can’t actually do that, but I will steer you away from the things that are suspect,” said Bethel. She looked down the hallway and squinted slightly before turning back to me. “Come along.” She left the doorway and began walking, and I kept pace with her.

“It’s interesting that you’re her,” I said. “That you took Tiff’s form.”

“It’s not my choice,” said Bethel. Her tone was mild. “Here, and with the Dagger of Dreamspeech, I’m rather less amorphous. I believe it has something to do with the way the entads function. Perhaps I simply wore your girlfriend’s form for so long that it became a part of me.”

I thought on that for a moment. “These aren’t the clothes that I’m wearing in the real world,” I said. “They’re … I don’t know. The soul has a conception of the body, but my guess is that this,” I gestured to myself, “is maybe something else, my mind’s conception of myself? An intellectual view? So far as I’ve seen, the spirit doesn’t duplicate that aspect of the soul, but maybe it’s just not obvious. I’ll have to look at it. None of that really explains you, except that you probably have a pseudo-soul and pseudo-spirit for the purposes of interacting with entads.” I paused. “Tiff is my ex-girlfriend, by the way. Not girlfriend.”

“You broke up with her?” asked Bethel.

“I … no,” I said. “But I don’t think that either of us thought that we were a couple, so.”

“Certainly not after you fucked Maddie,” said Bethel. She stopped in front of a room. The walls of the hallway were large wood panels, and there were no doors to the rooms, only wooden archways. It reminded me of a boarding school, or at least how they were presented in television shows and movies. “This is the Boundless Pit, if you’d like to see it.”

Inside was a long tube of gray rock, which took up almost the entirety of the square room. I could see inside it, as though the section nearest to me had been removed, but there was no obvious discontinuity. It was a bit like clipping through the wall in a video game, in that I could see the far wall but not the near one. Bethel gestured with one hand, and the tube spun around, displaying different parts. Then, with another gesture, the tube shot down past us, lowering through the floor, with more of it coming down from the ceiling.

“You’re meant to view it from the inside,” said Bethel, stepping into it. I followed her, so that the tube surrounded us.

“What happens when it gets wider or narrower?” I asked.

“The view compensates to keep it as wide as the room,” said Bethel. “I didn’t build this place, incidentally. The memory palace was created from whole cloth the moment the entad was put into my closet. So far as I’ve been able to tell, it changes in response to new memories, and occasionally reorganizes itself, but nothing else.”
With a gesture, the upward scrolling came to a stop, just as the lip of the Boundless Pit was shown to us. It wasn’t as I’d known it, with the city of Headwater displaying the view of the mile-wide pit. It was mostly lichen-covered rocks and green fields, and everything wet from the waterfall. Bethel twisted her hand, and the view focused in on the house, on her, as it must have been just after construction had been completed.

“Moving me wouldn’t have been difficult,” said Bethel as she gazed at the image. “Uther had the right entads. I think he knew that I was unruly though. Give a house legs, and watch it scuttle away from you.” She turned to look at me. “That’s the word that I imagine him using, ’scuttle’. Dehumanizing, don’t you think that would be his style?”

“You’re not human,” I said. I hoped pointing that out wasn’t offensive.

“No,” said Bethel, turning back. “No, I’m not. Yet sometimes I like to be seen as one. It makes things a bit easier, when dealing with mortals. If I don’t present as a person, in a person’s form, how are they to read emotion and meaning?”

“I always thought you could, in a house,” I said. “When I would go over to a friend’s house, there was always a story there, partly the story of the family who lived there, but also the story of the house itself, like whether it was happy or anxious. It’s anthropomorphizing, I guess, but it was still something that I thought about.”

*Loyalty increased: Bethel lvl 13!*

Whatever thoughts were going through her head, she said nothing.

“There are some ways that you’re not a home to us,” I said. “I’ve kind of been wondering about that. Privacy violations are one, but that’s pretty well-trod at this point. It’s more that you move things around, I guess, and make things unfamiliar. There are rooms that we’ve seen once and then never again, and you keep redesigning interiors. One time I came back to my room after lunch and I thought I’d wound up in the wrong place.”

“Yes?” asked Bethel. She looked over at me. “And?”

“At first I thought that it was just you doing what you wanted,” I said. “Then my alternate explanation was that you were trying lots of things because you were trying to give us what we wanted. But I was thinking back to watching Amaryllis cook in the kitchen, and the way that she had to keep looking for things, and I decided that it was more likely that you were just making things uncomfortable on purpose, so we wouldn’t ever get properly settled.”

“And why would I do that?” asked Bethel, narrowing her eyes.

“I don’t know,” I said. *But I have guesses. Pushing people away even when you want them close to you wouldn’t exactly be novel for someone in this group. Fenn did it, I’ve done it, and Grak made a point of it.* “Maybe you could tell me?”

“Let me show you more of the palace,” said Bethel. She stepped through the border of the Boundless Pit, leaving it behind, and I followed after, to the next room.

This one had what looked like dioramas, all on plinths at regular intervals, each of Bethel. When I looked closely, I could see them cut away to show people inside, moving figures of exquisite detail. It was the same view that Bethel had used to show me Narcissus, the first person she’d killed, as he’d tried to make it to her closet.

“These are some of the people I’ve killed,” said Bethel. “They’re divided by groups. If you look at
the plinths, you can see the dates.”

(It probably went without saying that this wasn’t, at all, the way the actual memory palace technique worked.)

“Gruesome,” I said. In the diorama nearest me, a man clutched his throat and fell to his knees as his companions tried to stanch the flow of blood.

“I spent a long time doing this,” said Bethel. “In terms of lives taken, it’s nothing compared to what I did to the tuung, whether that was under orders or not, but this was more personal, with greater intensity and intent. Anyone can fire a cannonball into a populated city, but this … it was my grand work.”

“You do have a cruel streak,” I said. There had to be a few dozen of the dioramas. I was sure that I would start to get queasy if I looked at them more closely, or if their stories were played out in full, especially with dialogue, the kind that would let me get to know the people. Based on what she’d said in the past, some of these tortures went on for days if not weeks. “Did it get boring?” I asked.

“Sometimes,” nodded Bethel. “Especially in the beginning, when I was less skilled. I would break them too fast, or reveal myself too quickly, and then they would drop to their knees, praying to me.” She shook her head. “I didn’t want that. I just wanted them to feel pain and terror. The prayer was a manifestation of the terror, certainly, but it was an appeal to me, not something animal.”

“You liked seeing people be animals,” I said.

“Yes,” said Bethel. “Not because I hated them, though I often did, but because I liked the feeling of seeing them lose control of themselves.”

I looked down at one of the dioramas, which showed, in cut-away view, a man limping down a hallway, trailing blood. “And you liked the feeling of control you had over them,” I said.

“You make it sound so vulgar,” said Bethel with a sigh.

“Vulgar?” I asked.

“So base,” said Bethel. “So … explicable.”

“Ah,” I replied. “Right. A psychiatrist might say that you went so long without control, a slave to your masters, that when you finally got free, you felt the compulsion to exercise control.”

“Would you say that?” Bethel asked, narrowing her eyebrows.

“It’s hard to say why anyone does anything,” I said. “Sometimes I look back on the things that I’ve done and I think, ‘that was just my brain fucking with me’. I mean, yes, I think everything is explicable, there’s no real ‘mystery’ to people, in the theological sense of the word. But still, sometimes it’s just absolutely opaque.” This was a point where the term ‘black box’ would have been useful, but I didn’t feel like explaining it. I shrugged. “Seems like the sort of conversation I should be having with the locus, actually. She values that opacity, that lack of understanding.”

“And you think I feel no need to be mysterious?” asked Bethel, looking at me with an arched eyebrow.

Only in the sense that mystery means you’re in control. “Do you?” I asked.

“It can be nice,” replied Bethel. She looked to one of the doors, and there was something in the curve
of her neck that hit my nostalgia just right. It made her look, just for a moment, like she was truly Tiff. “Come,” she said, turning back to me. “One more room.”

The next room was roughly the same size, though it contained far more inside it. Rather than the plinths that the diorama houses sat on, everything was arranged in a semicircle, sitting on platforms that touched each other and rotated slowly, sometimes coming forward and other times going away. On each was an object of some kind, and it didn’t take me long to recognize them as entads. There were a lot of them. There had been thirty-four on the manifest that Bethel had given us, but this room included more, some that were simply inside Bethel at the moment, and others that I knew for a fact were outside. Some I didn’t recognize at all. Each of the platforms had a colored band around the edge in muted colors, and there was some kind of scheme.

“Interesting catalog,” I said.

“Not a catalog,” replied Bethel. She was particularly brusque, even for her. “These are me.”

“Is it how you see yourself?” I asked. I was somewhat surprised. “As parts?”

“It’s how you see yourself, isn’t it?” asked Bethel. “I often hear you say that there’s a part of you that wants something, or a part of you that thinks.”

“Ah,” I said. “But for me it’s more of a mess. It’s more like two views on the same subject, competing values or models of reality.”

“For me too,” said Bethel. “Sometimes I can tell where those values and impulses come from.” She looked at the array of items. “That’s the difference, it seems.”

“And that’s what you’re hoping to gain with a ‘marriage’ to the Eternal Golden Braid?” I asked. The quotes around marriage were clear enough from my voice.

“It is,” said Bethel. “He’ll help me become more.”

“Will he be the last?” I asked.

“No,” replied Bethel. She laughed. “No, likely not. I am well aware you have your reservations.”

“I don’t want to harp too much,” I said. It smacked of personality modification, to say nothing of the fact that Ropey would cease to exist as an entity. I really did believe in the right to self-terminate though, and if he was doing it out of a sense of love, if they both were, well … it was hard to argue against their alien desires.

“Come,” said Bethel. “There’s one last room I’ve decided I’ll show you.”

I followed behind her as I left the room of entads, taking one last glance back. The biggest of them were shrunk down to size, so they would fit on the platforms, which was how I had almost failed to notice that Kuum Doona, the house, was there too, seeming small among all the others.

The last room was an auditorium, filled with people. We were on the stage, looking out on the people.

“What is this?” I asked.

“They’re all the people I killed,” said Bethel. “The vast majority of them deserved it, in case you were wondering. I don’t just mean because they came inside me, looking for loot. No, the sort of person who decides on that as a good career move is rarely the most morally upstanding.” She
looked out over the faces. “And the tuung, of course. Fuck the tuung.”

I followed her gaze. “Ah,” I said. I thought I understood this. “That one entad you had? The one that let you see the spirit -- er, the essence, I guess, of the people you killed?”

“Seer’s Sword,” replied Bethel.

“And my guess is that it’s more powerful than you let on?” I asked. “Can you talk to these people?”

“I couldn’t,” said Bethel. “They were just apparitions, vaguely visible both here and in the real world. However, your friend Mary has an amulet that allows her to speak with her dearly departed great-grandfather, and with the two abilities working with each other, I can have something resembling conversation.”

“Oh,” I said. “That’s … kind of horrifying?”

“Is it?” asked Bethel, looking over at me. “I thought you might think it was.”

“If I could talk to all of the people that I killed, I probably wouldn’t,” I said. “Fallatehr, maybe, if I hadn’t scraped the Essentialism out of his soul.” I did wish that I could talk to Fenn though. Here, at least, was proof that something remained of people after they died, hells aside. “Do you?”

“Do I what?” asked Bethel.

“Do you talk to any of them?” I asked. I looked out at the sea of faces, all sitting there passively, and at least not directly conscious, so far as I could see. There were a lot of tuung in their ranks, though most were toward the back, for no clear reason. It was hard to grapple with the size of the theater, not because it was big, but because it wasn’t really a place, it was a visualization.

“I interrogate them,” said Bethel. “I’ve been trying to find something useful, tuckled away inside their brains, something that could be used to find Uther, or something that could help you grow more powerful. They’re not real people, if that’s what concerns you, only shadows.”

I wasn’t sure that was philosophically sound reasoning, but I let it slide.

“Thank you for showing me all this,” I said. “I think it’s helped me understand you a bit better.”

Bethel shrugged. “I will say that I’m curious what boon I’ll get in another ten levels.”

I was curious too, but that seemed like a long way off. The wedding was the next day, and I was pretty sure we were going to have an argument. There wasn’t really any sense in putting it off, but as the game had reminded me a few times, I sometimes had a cowardly streak.

“I just don’t understand why the wedding has to be so soon,” I said. “I understand that you’re in love, but what you’re talking about is a process that we have no way to reverse. It’s as permanent as can be.”

“That is entirely the point,” said Bethel. “I’m not taking it lightly. When he’s inside of me, I have access to almost all of him, do you understand that? He’s a part of me already.”

“Then … why do you need to merge?” I asked.

“Because it’s not the same for him,” replied Bethel.

She was standing next to me in her wedding dress, nine feet tall, which was as tall as she could get
without running into the limits of her illusion. The wedding dress itself was a flight of fancy, the kind that made me think that she would get along with the locus, if they ever talked. It was mostly knotted lace, in honor of Ropey, with a ridiculously high collar and a train that swept out behind her, again at the limits of how large she could make an illusion. She had a veil too, but she wasn’t wearing it.

“I can see much of his memories,” said Bethel. “I can taste the flavor of his emotion. I can come close to reading his mind. I have a part of him, so long as he’s in me, but not the whole, and he has nothing in exchange.”

“I’m not arguing this to be difficult,” I said. “I’m not even arguing it out of utility. I just think that effectively removing a coherent entity from the world is maybe something that we should consider for longer.”

“He won’t be removed, he’ll be merged,” said Bethel. “I’ve taken in sentient entads in the past, I know the process well. I’m hoping that it goes more smoothly this time, with the additions I’ve made and the practice I’ve had.”

“Okay,” I said. “Can I talk to him first?”

“Certainly,” said Bethel. “Though you must know you won’t convince him, if that’s what you mean to do, and you must also know that neither of us need your permission. I am more powerful than you.”

“I’m well aware,” I replied, holding up a hand.

It took some time for Ropey to come over to me. When he did, Bethel disappeared without another word.

“Hey,” I said. He was coiled in front of me, with one end raised up and wavering slightly, which I thought was his way of showing intent. “I just wanted to … I don’t know. Not change your mind, but understand.”

Ropey began spelling out letters, moving swiftly. He was extremely fast and left pauses so small that it was hard to tell where one letter stopped and another started.

I—L-O-V-E—H-E-R

“I know,” I said. At least, I thought I did. “But you won’t be.”

W-E—W-I-L-L—B-E

I clenched my teeth for a moment. I wanted to object, but it wasn’t like I had that solid of a thesis of what personal identity meant. I knew objecting wouldn’t do much good either, and I thought I already had as much of a sense of what they were doing and why as I was going to get. They wanted to be a new person together, more than the sum of their parts. I’d made species that did that, mostly
to keep culture weird, so it wasn’t exactly a foreign concept to me. I just didn’t particularly like it.

I did feel a bit better about it though, hearing it come from his ‘mouth’.

“It was almost as much as Ropey had ever said to me. I wasn’t entirely sure that I had even caught all of it, but the single letter spelling was still slow, and I caught enough that I wasn’t missing anything.

“All right,” I said. “I guess we’re doing this.”

As I walked into the chapel, I had to wonder why they were having a ‘wedding’ at all. It was a tradition of the mortal species, not one that sentient entads should necessarily follow, or want to follow. I also didn’t know whether it was Bethel’s idea or Ropey’s. The purpose of it might have been the same as for humans though: I could understand how you might want to pledge yourself in front of your friends and peers and make a public declaration of what you were doing and the commitment that you were making. Maybe the point was to have us as witnesses. If they’d just gone and ‘merged’ together, I could definitely see some of us getting upset about it. At least with a run-up to it, we weren’t wholly caught off-guard, and in some sense, by attending the wedding, we were complicit.

The chapel was as big as an aircraft hangar, arching up higher than a moderately-sized skyscraper, with windows that let in light from the Isle of Poran. Marble flagstones covered the entire area, enough that it would have taken a dedicated quarry to have filled this place, if it had been made using human hands and mundane methods. It might have looked empty, but the lines of the architecture were angled to draw attention to one particular focal point, which was an altar surrounded by chairs.

We had a small handful of guests. Jorge was Valencia’s date, and Figaro Finch had come too, meaning we had both of the representatives from Uniquities. Aside from them, Esuen and her mate, Souno, were sitting together, with a mister tank shared between the two of them. The first of the tuung had been born and were in the process of being educated, in a different wing of Bethel, which meant that the first crop of Miununian citizens were in the process of being raised via trips through the time chamber and as many teachers as Amaryllis could vet and train. There were going to be growing pains there, I was sure, and probably of the sort that would require more of Amaryllis’ attention.

Those four guests were it though; they were, at least to some extent, in the know. It seemed painfully small to me, by the standards of the weddings I was used to. If we’d been more willing to violate OPSEC, we could have added on another half dozen people, some of whom would have to teleport in at great expense, but even then, many of those would be acquaintances rather than actual friends. I didn’t think that Bethel cared one way or another, but it made our existence seem a little lonely to me.

(In the village down the hill there would have been a few hundred people who would have been very eager to get inside the Big House, no matter what the reason was. The fact that the house was
magical was nearly impossible to disguise when Bethel insisted on making externally visible modifications every few days, but the nature of that magic was up in the air, and no one had enough information to say that Bethel, sitting member of the Council of Arches and Advisor on Home Affairs, was actually an entad, let alone one of the fabled meta-entads.

I took my seat next to Grak and Solace. Everyone was wearing their best, though ‘best’ was subjective, and I didn’t think that Solace’s hand-stitched dress of flower petals would have been recognized as formal wear where I was from, as much as it suited her. I was wearing one of my three bespoke suits that I’d bought before my first proper date with Fenn; it was the first time I’d actually had a reason to wear one. I waited patiently, not feeling the need to make conversation, as pleasant orchestral music played around us. Bethel was standing at the altar with her hands clasped and the veil covering her face. When the music swelled, Bethel turned to face the chapel’s entrance, and everyone went silent.

I thought that we were maybe waiting for Ropey to come slithering in, but to my surprise, I saw a man walking toward us. He wasn’t anyone that I’d met before, but as he kept walking, I realized that he was meant to be Ropey. He wore a suit, but was wrapped in ropes with knotwork making a pattern across his chest. His hair was the same color as the rope, and his eyes matched that as well, an unnatural color for a human. But as he came closer, I realized that he couldn’t have been human at all, because he was nearly nine feet tall, the same as Bethel has made herself.

I looked back and forth between the two of them, not really understanding how it had been done. Bethel couldn’t project an illusion greater than a ten foot cube, but they were definitely more than ten feet apart from each other. I wouldn’t have been terribly surprised to see her develop a new ability, or pull together a few different abilities in order to produce some effect, but as I looked more closely at Bethel, I realized the trick. She wasn’t projecting an illusion for herself, she had made a ‘real’ dress that was sitting on some kind of frame. It moved, from time to time, but that she could have done with telekinesis. The veil hid her face for a reason. I felt a little bit guilty for piercing the illusion and tried to just pretend I hadn’t made my saving throw.

When humanform Ropey went to stand beside Bethel, I caught the split-second transition, as the dress, scaffold, gloves, and veil were whisked away (the Sable’s ability, I thought), and replaced with an illusion. Bethel and Ropey, or at least the illusion of them, could both fit within the bounding box of her illusory power.

“This isn’t who we are,” said Bethel. They were both turned to face the ‘crowd’, if you can call twelve people a crowd. “It’s artifice, but the point of art is to illuminate, to speak in metaphor so the meaning is clear.” Bethel gestured down to herself. “I am not of the mortal species, and I have no flesh. I’m not a woman.” She turned to Ropey. “But I hope that in its way, this might help you understand the love we feel for one another, and the commitment that we’re undertaking today.”

I glanced at Amaryllis. She was wearing a pink and white dress, which was the girliest thing I’d ever seen her wear. She was wearing makeup, either more than what she put on for business meetings, or maybe just different. Her red hair, too, was long and elaborately styled. I think it was the first time that I’d seen Amaryllis putting real effort into her appearance, unless I counted when she dressed like the Aerbian equivalent of a businesswoman. And yes, she did look pretty, but it was a different sort of pretty. I was used to her being more functional, which was pretty in its own way, one that I preferred (though obviously what I thought was pretty was probably the last thing on her mind). She turned back to look at me, and gave me a faint smile before returning her attention to the proceedings.

“I don’t speak much,” said Ropey. There was a twinkle in his eyes, like he was smiling without using his mouth. “I’ve always felt better when I was in action, and it’s been rare that I have anything
to add when the people around me are talking. Part of that is because it’s difficult for me to communicate, but another part is that I simply don’t feel the need. In my time I’ve known a few other entads, ones who could express themselves, and it’s common among our kind to want little but to be put to use.” He turned to Bethel. “In Bethel, I’ve found someone who understands me. The companionship is something that I’ve felt before, though never so keenly. More than that, Bethel and I have much to offer each other. She’s had a difficult life, one that I hope to brighten.” He gave her hand a squeeze.

It was all theater, intended for us. Ropey wasn’t actually squeezing Bethel’s hand, that was an illusion that Bethel was producing. He wasn’t speaking, that was illusion too, as was the twinkle in his eye and the warmth in his voice. Perhaps it mapped to some thought or gesture on his part, as a rope, wherever he was, or perhaps not, but the display of it was entirely deliberate. I tried my best not to focus on that. When presented with an act of art like this, it seemed best to suspend disbelief and try to understand what was meant to be conveyed.

“I did have a difficult life,” said Bethel. “I was born half-formed, like a child, in some ways, if not others. I had masters rather than parents, and not a one of them was a proper custodian. I was turned to war, and then, once I was alone, I decided on violence. Part of me, a lesser part, was a sword, suited to torture and killing. I murdered thousands in distant, impersonal ways, with cannonfire and lightning strikes. I killed hundreds in more personal ways, taking my time with it.” She took a steadying breath. “I wasn’t in a good place. If I’m being honest, I’m still not.” She looked over at Ropey and smiled at him, a smile that he returned with an acknowledging nod. “We’ve found love in each other. It’s an unconventional love, I’ll give it that, but it’s a true love. He helps to calm me when I grow angry, to give me patience when I’m racing too far ahead. Without him here to speak with, I’m not sure that I would ever have made it to the Isle of Poran. I wouldn’t be the house I am today. He’s helped me, in ways that might be frightening for all of you to contemplate, if you knew the full extent.”

Good old Bethel. Wouldn’t be a marriage without a veiled reference to grevious violence against the guests.

“Together, we’ll be better,” said Ropey. “Together, we’ll be the best that we can be.”

That was apparently the entirety of what they had to say, because they stood together, facing each other, and kissed. It was a slow, languorous kiss, with Ropey wrapping Bethel in his arms, and there was a brief hint of body horror as they melted into each other, lips pressing into lips and skin merging with skin. It all faded away in a wash of light though, so bright I had to close my eyes. When I opened them, a single figure was standing at the altar, androgynous in physical form, with a wedding dress that had rope wrapped around it.

*Loyalty increased: Bethel lvl 17!*

“It’s done,” she said. Her voice was deeper than it had been, more smooth and calm.

Solace stood up from her chair and began enthusiastically clapping, and though there was a bit more reservation (or confusion) from everyone else, we all followed suit. Bethel had been smiling at us, but at the applause, she began beaming.

“Now,” she said, “Refreshments and music. We celebrate!” She clapped her hands twice, a booming sound that seemed to come from everywhere at once, and the chapel began to change, with tables rising up around us to make a clear space in the center, and garlands of flowers strung from rapidly rising pillars. On one of the tables, food began to appear, all of our favorites from Earth and Aerb.

“That was lovely,” said Solace as the music came on. “I do so enjoy a wedding. This is the first I’ve
attended in near a hundred years.” She turned to look at me. “Don’t tell the bride I said so, but it was a bit on the conventional side, for my tastes.” She laughed at the incredulous look I gave her, then took Grak by the hand to dance on the dance floor.

Amaryllis wandered over to me. It was my first time seeing her in heels, and it threw me off a bit. I’d gotten too much taller with the increases in PHY; with heels on, our height difference was about what it had been when we first met.

“Well, that’s done with,” said Amaryllis. “I suppose the actual consummation was done in a separate room somewhere.”

“That’s pretty common on Earth,” I said. “Not consummation, though, yeah, that too, but separate services. There’s a civil service and a religious one, done in different places.”

“It was quite restrained, for her,” said Amaryllis. “I think I might have liked it.”

She looked over to where people were dancing to the music. There were four couples, Esuen and Souno, Bethel and Ropey (split once more), Valencia and Jorge, and Solace with Grak. The music was sedate, in 3/4 time, suitable for a waltz. That was unearned musical knowledge coming into my head, courtesy of the Symbiosis with Amaryllis.

“Care to dance?” I asked.

“Do you know how?” asked Amaryllis with a raised eyebrow.

“I have half your skill,” I replied. There was a Dancing skill, which so far as I knew was worthless for anything besides actual dancing. It probably gave a set bonus with some other skills, or some amazing perks at high levels, but without knowing what actual utility it had, it wasn’t a serious consideration.

“OPSEC,” said Amaryllis, but she took my hand anyhow. “You know, it’s harder to lead than to follow.”

“I’ll manage, I hope,” I replied.

My hands found the frame easily enough, one hand on her back, the other holding hers. I straightened my spine and squared my shoulders. When she was ready, I began to move, stepping in time to the beat, making a little square with my feet. I was just testing that I actually did know how to dance. Once the preliminaries were out of the way, I began to glide us across the dance floor that Bethel had made for us, throwing in spins and twirls that saw Amaryllis moving beneath me, or going away for a moment at the edge of my reach only to fall back into frame as she returned.

Dancing wasn’t really how I had imagined it. For one thing, I had a surprising amount of control. Being the lead meant that I was using my frame to guide Amaryllis, and she moved more because my positioning gave her no other option than because she recognized the moves. I had always thought that both partners memorized what they were doing, but apparently being ‘lead’ meant that I could literally lead her, confident that she could follow along from the way that I moved my body. The frame had to be steady for her, and she had to hold a frame of her own, but she moved where I wanted her to, under my control.

“Are you just really good at dancing?” I asked as I brought her in close for a more sedate, more stationary waltz.

“It’s taught at Quills and Blood,” replied Amaryllis. “Part of blood magic is timing your magic to the pulse of your heart, and music and dance both help with it. I wouldn’t call myself good, but I’m a fair
“Ah,” I said. I smiled at her. <OPSEC.>

<Yes, OPSEC.> she replied. <Too many people here for my liking, with too many secrets floating in the air.>

<Perhaps we shouldn’t disturb the bride and groom?> I asked.

<I’d rather the two of you talk in relative confidence.> replied Bethel. I caught her eye from the other end of the dance floor, where she was twirling about with … well, herself. <Just don’t be dull about it. We can save the world tomorrow, today we celebrate.>

“I think I like dancing,” I said, moving away from the shop talk. “It’s pleasant.” <Do you have any other hidden talents?>

<You’ve seen my character sheet,> replied Amaryllis as she spun beneath me. She was smiling, not a wide smile, but a content one. I didn’t know whether that was just for show, but I thought it probably was.

<Not everything is on the character sheet,> I said. <Hells, dungeon mastering isn’t there, and before I came to Aerb, I probably would have said that was my only skill.>

<There’s very little you don’t know about me, Juniper,> replied Amaryllis as we danced. There was something about the way that she thought my name that sent a thrill through me.

<Tell me about your first crush,> I said. <If you had one.>

<Tell me yours first,> said Amaryllis. I had slowed us down some, so I could focus more on what she was thinking to me, still in time with the music, but more sedate. I didn’t know how long this song was going to go, but it wasn’t one that I recognized, and my guess was that we would stop when Bethel wanted us to stop.

<Hermione Granger,> I replied. <From the movies, not the books, mostly because I didn’t read the books until later.>

<A fictional girl?> asked Amaryllis. I was hoping for faint amusement, but when I saw her face it was skeptical. <That seems impersonal.>

<It’s deeply personal,> I replied, trying not to be affronted. <But if you want my first non-fictitious crush, it was a girl in second or third grade, Karen Dowler. She moved away in fourth grade, but I was over her by then. She’d been replaced by Pippi Longstocking, who was the strongest girl in the world.>

We danced on for a bit.

<Also fictional?> Amaryllis finally asked.

<Yes,> I replied. <It’s a book series. Why, is there some ancient magic I just stepped in again? Because I would hate to break up this wedding reception.>

<No,> replied Amaryllis. <I was just thinking. It’s interesting.>

<You were going to tell me about yours,> I replied. <Also, if you read the books, keep in mind that I
was nine or ten.>

We danced in silence some more. The song had shifted, but kept to 3/4 time, so we kept on waltzing
to it. Finch had taken Grak’s place and was dancing with Solace, and Pallida had taken Heshnel onto
the dance floor (though I caught her looking at me with Amaryllis).

<Still thinking?> I asked.

<My crush,> said Amaryllis. <Her name was an anagram. Lena Kordrew.>

<What’s that an anagram for?> I asked after a moment’s thought.

<Karen Dowler,> replied Amaryllis.

<Ah,> I replied after a pause. <I was assuming that it was a ‘c’, not a ‘k’. Just the DM fucking with us?>

<With me, yes,> replied Amaryllis. <You were a real person. I was made for you. My entire life is
just one big cosmic joke.> She didn’t sound particularly bitter, though maybe that was Bethel
modulating the thoughtspeech.

<I wish it weren’t so,> I said. The smile she’d been keeping on her face had fallen, leaving it
carefully blank. <Can you tell me about her anyway?>

<I suppose,> said Amaryllis. Our waltzing had some of the life taken out of it. I didn’t want to do the
more complicated moves if she was upset. <Most of the Lost King’s Court don’t go to school until
we attend an athenaeum. We have dedicated tutors instead, and a carefully selected cohort of
commoner friends we grow up with who are meant to become trusted staff. Lena was one of them.
After my mother died, my aunt had rather different ideas about who my friends should be. I never
saw Lena again.>

The music began to die down, and our waltz drew to a close. I dropped my frame, and Amaryllis’
hand seemed to linger in my own.

“Get some refreshments with me?” asked Amaryllis with a glance over at the table. “I see that Bethel
has laid out a full spread. I have a fondness for whipped eggs.”

We walked over to the table together. Amaryllis moved flawlessly in heels, which was pretty much a
given.

“Do you want to find her?” I asked. “Lena? Or any of the others that were part of your retinue?”

“Most of them are dead or in jail,” replied Amaryllis. “Of those that aren’t, they’ve likely been pulled
into the services of my manifold cousins, and certainly couldn’t be trusted to be loyal to me, not with
the level of operations we’re working on. I would like to see my aunt Rosemallow so we can have a
pointed discussion about how she prematurely cut her losses where I was concerned, but that can
wait until it’s common knowledge that I’m here. The intelligence services are a little bit slower than I
thought they would be, or perhaps they don’t leak as much as I thought.”

Bethel came up from behind us, in her androgynous hybrid form. “I do so hope that we have
intruders someday,” she said with a wistful sigh. “A ten person combined-arms strike force would be
just lovely. Per the law, you’re allowed to do whatever you’d like to someone who tries to invade
your home.” She beamed at Amaryllis. “I appreciated that you thought of me when you were
drafting the legal framework.”
“I see marriage hasn’t blunted you,” I said with a smile.

“Oh, a bit,” replied Bethel. There was a twinkle in her eyes. “The imagined thrill of violently
dismembering an Anglecynn death squad is a bit less, now. He wasn’t some naive waif who had
never known violence. He’d killed his own share of people, strangled or hanged, sometimes held in
place so someone else could do it. The marriage is, so far, everything that I imagined.”

“Even though you can’t talk with him?” asked Amaryllis.

Bethel nodded. “He’s a part of me. When I speak with myself, I am speaking with him. Every word
that I say is laced with him.”

“And … what should we call you?” I asked.

“Still Bethel,” she replied. She gestured to her face. “I doubt that I’ll keep this form for longer than a
day. I still like looking like a woman, I think.” She looked to me and held out a hand. “Care to
dance?”

I danced with Bethel for a bit, a foxtrot instead of a waltz. I was mildly surprised when the world
pushed out away from us, so that everyone around us seemed to be a half mile away. It was one of
her space-warping powers, one that wasn’t really that useful because you needed the target or targets
to be isolated.

“Privacy?” I asked. “We could have used thoughtspeak.”

“This is far more intimate, don’t you think?” asked Bethel. We were still doing the foxtrot. I
wondered where the force was coming from, since it felt like more than five pounds where our
frames met.

“Very intimate,” I nodded as we danced. We hadn’t been lacking for room before, but now we had
as much space as we could want, so I stepped it up a bit. “Was there something you wanted to talk
about?”

“I see and hear everything,” said Bethel. “More than that, I’m privy to the internals of all you
mortals, the beating of your hearts, the sweat on your skin, things that you haven’t directly chosen to
share with anyone.”

“If I’m going to be principled about it, then the fact that we don’t have Val talking about everything
she intuits with a devil’s insights probably means that we also shouldn’t have you revealing things
that are presumably confidential,” I said.

“Yes, yes, very principled,” replied Bethel with a smile as she twirled away from me and then back
in. The frame was a bit awkward, given our height difference. Her hand was low, mine was high,
and the hand I had placed on her back was really more on her lower back. “Of course, if I were to
say something, you couldn’t stop me.”

“True,” I said. “I suppose I’ll just have to hope that you respect my wishes.”

Bethel laughed. “Yes, of course. But even with the principled stance, you might be happy to know
what I know?”

“Depends,” I said. “But you’d be skirting a line. I don’t want things to be difficult because I know
things that I shouldn’t.”

“Very well,” said Bethel with a nod.
I waited for a moment. “That’s it?” I asked.

“Do you want my secrets or not?” she asked.

“No,” I replied. “I’m just used to you not listening to what I have to say.”

“I’m a married woman now,” said Bethel with a laugh. “You have my better half to thank.”

The room snapped back down to normal size, and we finished our dance as the music came to an end. We got some looks, naturally, but then Bethel split back into her double form, and another dance started up again. Pallida slipped her hand into mine and I started in on another waltz without even thinking about it, though with her, there was considerably less conversation to be had.

It was a few hours later that Jorge found me sitting at one of the tables. I’d done more than my fair share of dancing, partly because I enjoyed using the skill, and partly because our gender ratios were skewed enough that I was in demand. I had been taking a break, drinking water to rehydrate and snacking on a plate of food I’d gotten for myself. I didn’t know how long this was all meant to last, because there was no set schedule, but I was willing to see it through for as long as Bethel wanted to go. I’d chosen to take a table for myself mostly so that I could have a break from so much people time.

“Hello Juniper,” said Jorge as he grasped the back of a chair. “Do you mind?”

“Not at all,” I said, though that wasn’t really the truth. “Having a good time?” I asked.

“Always,” said Jorge. “There’s little in life that I love more than a wedding.”

“That’s -- weird,” I said. “Sorry, that’s not tactful, it’s just … where I come from, weddings are more, ah, things that you sit through.”

“Oh?” asked Jorge, raising an eyebrow. “Not expressions of partnership or love?”

“They are,” I said. “I guess. I don’t know, most of the ones that I went to were family friends or distant relatives, not actually anyone that I knew very well.”

“Ah,” said Jorge. “Perhaps I felt the same, when I was your age.” I didn’t like being talked down to like that, and I think he saw that on my face. “I’m not making some argument that I’m wiser just because I’m older,” he clarified. “I just had a particular mindset because of the time and place I was in, when I was seventeen.”

“I’m eighteen,” I said. Immediately after I said it, I realized how petty it was.

“Sorry,” said Jorge. He was silent for a bit. “I came over here trying to be friendly, and I’m worried that I’ve made a mess of it.”

“No,” I said. “It’s fine.” I tried to think of how Amaryllis would salvage this. “What changed your mind?” I asked. “When did you start liking weddings?”

“I started rising up the ranks in Uniquities,” said Jorge. “Valencia probably told you that I didn’t go to an athenaeum?”

*Probably,* I thought to myself. “Yeah,” I replied.

“Well, I’ve always been a bit of a people person,” said Jorge. “Since that’s where my skills were, that’s what I got tasked with. I met with a lot of people, asking questions, in part, but sometimes just
establishing a relationship so that I would have contacts for later. Sometimes, though less often than I
would have liked, I would get to help someone in the course of my job. I got my first wedding
invitation the year after I made first responder, and it was like a whole new world had opened up.
Across the Empire, people are more similar than they are different, at least in the cities, but weddings,
or wedding-like celebrations, are one of those cultural touchstones that haven’t really been worn
away into uniformity. Even when it’s mixed-species, it’s a reflection of all the different places that
we come from, and for all that, there’s a strain of commonality. I just like seeing how everyone
reflects on partnership in their own way.”

I could sort of see that. I imagined my Loyalty to Jorge going up by a point. “There are species that
don’t pair bond,” I said. “But I suppose there are few that don’t have partnerships, or that don’t
celebrate those partnerships?” It felt like a bit of a prickly question, given that I did empathize with
what he was saying, but I really did wonder how the vast differentiation among the mortal species fit
within that worldview.

“It’s not universal, certainly,” said Jorge. “Nothing could ever be so simple as that. I’ve done a fair
amount of reading on the subject -- I’m a reader -- and interestingly, it’s not the ones that you would
expect. The rhannu don’t have sexual reproduction, instead, they have mitosis, so you would think
that they would never have something like pair-bonding.” I knew all about the rhannu, having
created them one afternoon in study hall, but didn’t interject. “Well, as it turns out, pairing is
incredibly common, usually between two rhannu of a pronounced age difference, and they have a
ceremony much like a wedding, though it’s really more like adoption than anything romantic, if you
wanted to put it into human terms.”

“And the ‘true’ exceptions?” I asked.

“Oh, there are even some among the humans,” said Jorge. He smiled at me. “There are cultures,
toward the fringe of the traditional human lands, where they barely acknowledge partnerships at all.
Children are raised by the villages and rarely know or care who their father is, and any romance is
assumed to be fleeting and personal. No marriages there, nor anything that comes close.” He
shrugged. “Sorry if I’m taking up too much of the conversation.”

“No, it’s fine,” I said. “I do like comparative anthropology, it’s just that marriages have never really
been my area of interest. Holidays either, I suppose because … well, because they’re rare.” Rare in
my tabletop games, because setting things during a festival or holiday needed planning, unless I was
going to retroactively create the calendar for a session.

“Holidays are only rare if you’re looking at the level of the individual culture,” said Jorge. “I know
you’re,” he paused and looked around. “I know you’re dream-skewered, but if you lived in one of
the big cities of the Empire, you’d see that we never really stop having holidays. There’s always
something going on somewhere, whether it’s celebrated by half the human population across the city
or a cluster of households from some wave of immigration.”

“Everyone here knows that I’m dream-skewered,” I said. Uniquities had been none too pleased by
what had happened at Speculation and Scrutiny, and my status as earthling had come out in the
 debriefing that Amaryllis had given to Figaro Finch.

“Boring,” I said. “Everything on Aerb is an exaggerated version of my home.” Literally. “Earth has
one species, humans, and a few hundred cultures, though some of them have kind of fine-grained
distinctions between them. Here, it’s just so expanded, not just physically bigger, but so much more,
even if a lot of the fundamentals remain the same, and the underlying patterns are largely familiar.” I
paused. “I can imagine what it would be like to want to go back, but for me, Aerb is everything that I
dreamed of.” I worried that skirted too close to the truth, but Jorge only nodded along.

“There’s a certain look that tourists get,” he said. “Or maybe not a look, but a way of seeing the world. They come from somewhere else, and wherever they’re going has become strange and new, so everything has to be looked at and experienced. I’ve always tried to think and live like a tourist, even when I’m in familiar places. There’s a lot to see and love, and always a risk that we’ll let it all fade back into the background.”

I looked at him for a moment. “I can see why she likes you,” I said.

“I’ll take that as a compliment,” he replied with a smile. “I know that you and Amaryllis have some reservations about our relationship.” He faltered a bit. “I’d be lying if I said that I didn’t have my own reservations, especially with how quickly she keeps trying to push things. When I went into that hotel, I’d thought that I would be talking to the tuung handmaid, not to --” he looked out on the dance floor and met Valencia’s eyes, “-- her.”

There were things that I wanted to say, but I held my tongue. Valencia didn’t need someone giving her boyfriend a stern warning, nor did she need me injecting my own opinions into her relationship.

“I’m happy she found someone who can see her for what she is,” I said.
The day after the wedding, Figaro Finch (no relation) came into the house for a meeting. He did this every once in a while, mostly to see what wheels he could grease. He didn’t seem terribly happy with his assignment, especially in comparison to Jorge. So far as I could tell, he’d prided himself as something of a detective, and this particular role, which mostly involved calling in favors and wrestling with international bureaucracy on our behalf, wasn’t one that he liked too much. I don’t know if he couldn’t transfer out or if he just didn’t want to, but he stuck with us, living down in the village and making daily pilgrimages up to see Amaryllis. It was rare that I was part of these meetings, but Amaryllis had requested me.

“Interesting wedding,” he said as I came in. “Odd wedding. That’s an odd wedding and an odd birth I’ve seen from your little Council. New members too, all of them odd. And I couldn’t help but notice that your half-elf was missing.”

He didn’t know about Fenn. Our funeral hadn’t been public, and it wasn’t like Amaryllis was going to send out a newsletter on the matter. We weren’t hiding her death, not exactly, but we also weren’t telling anyone. It still made me a little bit angry to have him bring it up, even though it wasn’t his fault, and he couldn’t have known.

“What did you come here for?” asked Amaryllis. She was back into business casual, a blouse and skirt that were trying to be as unassuming as possible, and doing a good job of it. The room we sat in was her office, with books lining the walls and light streaming in through huge windows.

“The Athenaeum of Sound and Silence finally got back to me,” he said. “You’re approved for a double, one week at the Li’o’te Temple, one tap from the Rod of Whispers.”

“Oh,” said Amaryllis. She straightened up. “Well, that’s very good news.”

“It’s not free,” said Finch. “You’re up to something here, I know you are, and our support isn’t unconditional, especially not after how your last two visits to athenaeums turned out. So far as I know, you’ve got the last living locus, you’ve got a variant non-anima, and you’re starting some kind of technological revolution, with unknown origins, using a newly minted kingdom of tuung, who are being aged up at ludicrous rates, through unknown means. There’s a bigger picture, and I want to know it. You asked for, quote, critical training, unquote, and I’ve done my best to provide it, but as a condition, I want to know the bigger picture, whatever it is.”

Some of what he knew we’d told him, and some he had figured out himself, mostly from information that it hadn’t been possible to keep secret. We’d hired on a lot of teachers and engineers, and the fact that we were burning through years was pretty damned obvious, even if the mechanism was not.

Amaryllis steepled her fingers. “I’m not sure that I like this negotiation,” she said. “If we give you a part of the picture, you could always argue it’s not enough.”

“You could give me the whole picture,” said Finch. “We’re talking about opening up one of your members, ideally one that’s trusted, to restricted magics. Sound and Silence has always played a little faster and looser with the rules than the others, because if someone goes rogue they can’t induct more rogue members, but still, this is me sticking my neck out for someone I really don’t have to stick my neck out for.”

“It’s complicated,” said Amaryllis. “We have a time chamber, a powerful one, and an entad that allows us to use it more than the normal amount. Our plan is to have one of our members granted
access to both still and vibrational magic, then undergo the requisite training to use the magic under compressed time.” This was all technically true.

“You’re calling it a time chamber?” asked Finch. “From what I’ve heard down in the village, because you people tell me practically nothing, it must be the biggest time chamber in the world, and you’re chugging through years like there’s no tomorrow.”

“Yes,” said Amaryllis.

“Any particular reason you need a mage of many talents?” asked Finch. “Some project you’re planning? The great return to Anglecynn, perhaps?”

“Perhaps,” replied Amaryllis with a smile.

“You tell me first this time, alright?” asked Finch. “What happened at Speculation and Scrutiny --”

“Won’t happen again,” replied Amaryllis. “The circumstances were particularly unique.”

“If I send one of you to Sound and Silence, I’m not going to have you come pleading to me and hoping I’ll make some novel problem go away?” asked Finch.

“That’s not how I would characterize what happened last time,” said Amaryllis. Her lips were thin. “And no, it’s my hope that we can send Juniper to Sound and Silence for a week without any major problems. If there are unforeseen problems and unique circumstances, can I count on your aid?”

Finch glared at her. “Depends on the circumstances,” he said. “You’re very fortunate that no one involved wanted anything to do with the authorities. Speculator Masters seemed to want to sweep it under the rug.” Finch didn’t know about the illusion magic exclusion zone, because we hadn’t told him.

“All our crimes were victimless,” said Amaryllis, folding her arms.

“If your victimless crimes keep requiring me to spend Uniquities resources, I’m going to have to start charging,” he said with a huff.

Amaryllis actually laughed at that. “As though a non-member polity could funnel money into Uniquities without a whole army of accountants and lawyers descending on us?”

“Point taken,” said Finch with a grimace. “I wasn’t serious. What I am serious about is having some cooperation between the Council of Arches and Uniquities, more than we’ve had in the past. You’ve captured Jorge in the world’s most obvious honeypot, but he reports to me, and we can still pull out at a moment’s notice.”

“You have what you wanted from the outset, pressure on the tuung,” said Amaryllis. “As for the other thing you wanted, a lever on Anglecynn, that’s not something that we can rush with a time chamber.”

“We both know you’ve got more plates spinning than just that,” said Finch. “The locus isn’t with you for no reason. Neither is the non-anima. Jorge is talking my ear off about waging war against the hells --”

“Something that you’re discussing under heavy wards?” asked Amaryllis, suddenly taut.

“No,” said Finch. “We have an entad that removes the need for one.”
"You understand that the infernals can’t know about Valencia,” said Amaryllis. “Ideally, no one would. She’s the best weapon that anyone has ever had against the hells. It could provoke infernal unification.”

“I have more faith in tight lips on my side than on yours,” said Finch. “That’s one of the reasons that I want to know more. There are secrets you’re keeping, and they’re bound to come out. You want Juniper to be a still mage and a vibrational mage, on top of his other skills, which I’m sure I’ve seen only a fraction of.” Finch glanced at me. “He’s going to spend years of his life in a time chamber to do it. Why?”

“He’s one of the few people I can trust,” said Amaryllis. “He’s also extraordinarily intelligent and with a demonstrably enormous aptitude for magic.”

“For unregistered magic,” said Finch. That was true. I didn’t have any certification or license to practice blood magic, bone magic, tattoo magic, flower magic, or, most seriously, soul magic.

“I could have attended the athenaeums under an alias,” I said, giving him a bit of a smile. “In the interests of making your job a bit easier though, no, I’m not registered, and I have no papers. I’m also not intending to ply a trade.”

“Well, you’ll have papers at Sound and Silence,” said Finch. He looked me over. “You’re just going so you can become stronger?”

“Yes,” I replied. “That’s about it. I can be there in a few hours.”

Finch frowned at me. “And if you get in trouble?” he asked. “What will you do this time?”

“I’ll wait for the authorities,” I said. “I’ll explain to them what happened, give them your name, and wait quietly in a cell for you to fix everything.” I didn’t want to lie to the man, but I didn’t think he would be happy if I added on ‘if circumstances permit’. I kept my caveats to myself, and felt bad about it.

“Fine,” said Finch. “I suppose I’ve already arranged it.”

**Quest Accepted: The Sound of Silence - Uniquities has pulled some levers to get you to the front of the line for access to two major magics. Go to the Athenaeum of Sound and Silence and speak with the Bursar.**

It seemed simple enough, which made me leery.

Before we left, there was one lingering issue to take care of: Masters.

Our original plan had been to go into Boastre Vino and send word up to him, so that we wouldn’t have to risk getting within range of the illusion exclusion, and so that we could set up a defensible location with an easy exit. Instead, Raven had declared that she would bring her father to us, along with the entads that seemed like they were intended for us. (I was particularly looking forward to getting a new suit of armor, since my old one had been left behind at the Library, an unfortunate casualty of our rapid exit.)

Raven had her own way around the world, an entad that only worked outdoors and by all
appearances, flung her straight up into the air. It worked once a day, and she could bring a single person with her; she’d left shortly after the wedding had finished, and now she was back with her father in tow.

“You’re going off with him,” said Masters as they climbed the hill to Bethel. “You’re going to put your life on the line again.”

“I’m an adult,” replied Raven. She had a wooden box in her hands. It was sized for jewelry, with aesthetically pleasing hinges and silver detailing on the top. “For gods’ sake, it makes more sense now than it did when I was young. You have to understand that this is important work, don’t you? Now be quiet, please, we’re probably close enough that they can listen in.”

“Do you think I care about that?” asked Masters as he climbed the hill. “Let them listen. I’m stepping into the sanctum sanctorum of a dream-skewered warrior already, throwing myself at his mercy, and I will not waste my time worrying about what he thinks of something so small as my pleas to you.”

He huffed. “Raven, you put too much of the weight of the world on your shoulders, far too young, and for what?”

“To save it,” replied Raven. She wore a frown.

(It probably goes without saying that we were watching in, courtesy of Bethel-vision.)

“And that’s what you’ll do for the remaining millenia of your life?” asked Masters. “You’ll push on ahead, working yourself to the bone, all in pursuit of some ideal? Or because you’re still chasing him?”

“Enough,” said Raven. “I don’t want them listening to this.”

“I’ll tell them to their faces then,” said Masters. “Raven, my little bird, you’ve been through enough. You’ve done enough. Do you understand what it was like for me, as a father? Every week hearing some new thing that Uther and his Knights had done, some adventure they’d made it through by the skin of their teeth? And I know that I never heard the half of it.”

“I came through,” said Raven. “We all did. The world is teetering on the brink, it’s always been teetering on the brink, whether we knew it or not, and it needs strong hands to keep it from falling over the edge. I can’t leave, I can’t quit. Not until we’ve secured the future.”

They continued trudging up in silence.

“Do you think about him, when you say things like that?” asked Masters.

Raven gave no response, even though she would have had just enough time to get the last word in before they reached the door.

The image cut out when they reached the room where we were waiting. I was with Amaryllis, but it was just the two of us. Valencia didn’t want to be in the same room with Masters, and Solace had politely said that she had better things to do with her time. Of the core group, that left Grak, who had little interest in the meeting, and whose expertise was already mostly covered by Bethel. (Pallida and Raven kept their distance from one another, as much as possible, and while Pallida occasionally made private comments, Raven didn’t seem to feel that there was a story that needed to be set straight.)

“I apologize, profusely,” said Masters when he came into the room. He bowed to us, so low that it was embarrassing. Amaryllis was staring at him with hard, calculating eyes.
“You brought the entads?” I asked.

“Here,” said Raven. She set the box on the desk.

“We’ll be having these looked over by warders first, naturally,” I said.

“I have descriptions of their functions,” said Masters as he finally rose from his bow. “If there are any elements of subterfuge, they were placed there by Uther for his own arcane purposes.”

“Why would he poison one of his caches?” asked Raven, looking at her father.

“We could ask why he did many things,” said Amaryllis. “Regardless, we’ll have our warders look over them carefully before they’re put to use. We will, naturally, take the descriptions as well.”

“They’re already in the box,” said Raven.

“I am sorry,” said Masters. “It was five hundred years at Speculation and Scrutiny, you have to understand that, and so many unsolved mysteries left behind in the wake of Uther’s disappearance, so many questions about my only daughter’s role in it all that -- it’s not an excuse, I can’t excuse myself, but I only wanted the truth of the matter.”

“What have you told him?” I asked Raven.

“Nothing,” she replied. “Only that I’ll be traveling with you, for the time being.”

“I’m not inclined to spread our secrets far and wide,” said Amaryllis.

“Please,” said Masters. He looked to Raven.

“Sure,” I said. “I’ll tell you what I know.”

“Juniper,” sighed Amaryllis.

<He’s an illusion mage,> I replied to her, by way of Bethel. <His magic is confined to the zone, but he’s still a useful ally.>

<Fine,> she replied back, but in a way that really made it seem like it wasn’t fine.

So I talked for a bit, about things that I was getting a little bit tired of talking about. Unfortunately, I couldn’t answer all of Masters’ questions, because a lot of them had answers that I didn’t know.

“But why did he win so consistently?” he asked.

“He didn’t,” said Raven. “Everyone always says that, but there were times that he lost.”

“Definitively lost?” asked Masters, glaring at his daughter. “Not as a prelude to some greater victory, not as the inciting incident for one of his cycles, but a true loss?”

“His wife lost everything below her ribcage in the Blight,” said Raven, gesturing to her own body with her hand. “I don’t care how you want to reframe that so it doesn’t count, but it was a loss, a true one.”

“To answer the question,” I said. “The Dungeon Master entity is, presumably, powerful enough that he can ensure a close win every single time, no matter what the odds seem like they should be on the face of it. Why he would choose to do that, I don’t really know, especially since it seems from where I’m standing that it was nothing more than an unusual form of extended torture.”
“But why was he so secretive about it?” asked Masters. “Why would he set me to my task at Speculation and Scrutiny without *telling* me this?” He was insistent, but that insistence was a little easier to handle now that he wasn’t using magic against us.

“I don’t know,” I replied. “It would have weakened him politically, if people had known that he was dream-skewered, and even more if they had known that he was receiving supernatural aid of some sort. That still doesn’t explain why he didn’t tell his Knights, but,” I shrugged. “Maybe he couldn’t. Maybe he had his reasons. I’ll ask him, if I ever have the opportunity.”

Masters glanced at his daughter. “Don’t let him take advantage of her.”

“Take advantage?” I asked. I looked at her with a raised eyebrow.

“Not like that,” said Raven with a tight frown. “He means -- he thinks that I’m more impressionable than I am.” She turned to Masters. “I *am* one of the most renowned Ell to have ever lived and a central figure in the history of the world. I can handle myself. I know there’s nothing that I can say or do that will make you believe that, but I can.”

I’d fought her; I believed it. Of course, if I had been thinking properly at the time, I probably could have caught her off-guard and murdered her before she had a chance to react, defensive entads be damned. Beyond that, Bethel had cut all of Raven’s fingers off two weeks ago, which also wasn’t the sort of thing that Masters would have wanted to hear.

I answered more of Masters’ questions, which took quite a while, but there was only so much that I could say, and he didn’t seem to find all of my answers that satisfactory. I told him about Maddie, in brief, leaving a few choice things out. It raised more questions, a lot of which I still couldn’t answer. Some of those questions were ones that I was curious about myself, questions about Uther, questions about the Dungeon Master, and questions about what it was all for and what it all meant.

He left soon after, declaring that he had taken leave of Speculation and Scrutiny for a time and would be staying down in the village, which Raven seemed distinctly displeased to hear.

“It’s always the same arguments,” said Raven, shortly after he was out the door. “They say that’s how it is among the Ell, that we’re slow to change our minds, but he goes beyond that. He never listens, not to me, not where Uther is concerned.” She turned to the box. “It’s irrelevant. This is the reason it was worth talking to him at all.”

“That’s a harsh way to speak of your father,” said Amaryllis.

“Perhaps,” said Raven, looking over at her. “I would think that you would understand how paternalism could be grating.”

“My father died when I was two years old,” said Amaryllis.

“Ah,” said Raven.

“I’ve always thought it better to have allies who disagree on what’s best for you than to not have allies at all,” said Amaryllis. “I might empathize more if he had the capacity to stop you in any meaningful way, but he’s helpless and burdened by forces completely out of his control.”

“I won’t complain more, if it bothers you,” said Raven.

“I didn’t say that,” replied Amaryllis.

“Can we get to the loot?” I asked. “I’m itching to be armored again, and the sword that I’m currently
“I’ve already looked them over,” said Bethel, appearing beside me. “I’ll take Grak’s second opinion though. He’s a more capable warder than I am, and might see something that I’ve missed. I wouldn’t want to take in something toxic to me, if Uther planned for this.”

“You understand that we’re just exercising due caution, right?” I asked Raven. “I wouldn’t want you to think that we don’t trust you.”

“I understand,” said Raven. “To be honest, it’s refreshing.”

It took some time for Grak to look over the box before he was willing to declare it safe. Once he did, Raven opened the lid and took out a pair of tweezers that was held in place with a set of tiny pegs in the lid. She picked up a number of miniature entads and set them out, then tapped each of them twice, which caused them to grow back to their normal size.

It was the entirety of the armory that Pallida and I had found at Speculation and Scrutiny: five suits of armor, two dozen weapons, and two full display cabinets full of miscellaneous trinkets.

I couldn’t help myself; I got giddy.

While none of it was completely worthless, some of it was niche, and not really worth talking about. The other stuff? Pretty good.

- **Space Plate:** Airtight, watertight, pressurized, and with two days air supply, this one had been lifted from the Fantasy in Spaaaaaace part of one of my campaigns. It was impact resistant, but you’d still be taking the hit, meaning that the armor did what mundane armor did and spread out the force of impact into something that the body could handle better. Good for deep sea diving and hostile environments (potentially including Fel Seed’s, given it could block spores). As a bonus, the helm was completely transparent, allowing full field of view.

- **Gardner’s Plate:** It had twelve small holes at various points around it, from which vines could be projected while it was worn, though they only worked for a few minutes before retreating. The vines were fully prehensile and under the control of the wearer, though they were difficult to use for everyone but me. My guess was that it was because of the Ambidexterity virtue, but the game didn’t give me any feedback on the matter.

- **Alvion’s Vambrace:** The reason that so many suits of armor were a consideration was this little beauty, a tube of metal worn around the forearm with an opal set into it. With a twist, the opal allowed an instant change of clothes, where ‘clothes’ was fairly permissively defined and could include both weapons, armor, and things carried up to two hundred pounds (though our attempts at lassoing another person and swapping them into the extradimensional space failed). It was innocuous enough, for an entad, and could even be hidden beneath a long-sleeved shirt, which would help it avoid a cursory examination by a warder. There were three notches, meaning two ‘outfits’ stored and one worn.

- **The Probability Blade:** My new primary weapon. It was a gray blur of metal when held, but when you went to cut something with it, or parry a blade, it became whatever sword was best suited to the occasion. Imagine Schrödinger’s cat, but it’s a sword.
• **Needler:** My new secondary weapon. It was a throwing dagger with a blade of crystal, and whenever a blade was thrown, a new copy would appear in my hand. Twisting the handle caused the copies to blow up. Any of the copies would disappear if they were more than a hundred feet from me, which limited it somewhat, though with some obvious exploits.

• **Ring of Upward Bliss:** Tapping the ring three times would teleport me up a mile up into the air. Without an accompanying entad to slow my fall or otherwise survive the drop, it was of limited use, but we were still planning to get Prince’s Invulnerability to me, something that we’d meant to get a long time ago (we hadn’t been able to find a qualified tattooist), and I was going to get the slow-fall tattoo that I’d first had when I’d been dropped out of the plane. It went better with the Immobility Plate, in my opinion, but Amaryllis insisted that it was an easy entad to switch over in a hurry, and that if someone were to survive or get out of a jam in a hurry, it would be me.

• **Ring of the Broken World:** Despite the weird title, it was really just a limited form of teleportation. Instead of having a set distance, it could teleport me such that I was still touching the place that I had originally been standing in, preserving my momentum. I could teleport up so that my feet were where my head had been, or I could teleport to the side so that my left hand was where my right hand had been. In other words, the maximum distance was pitifully short, but it was activated by thought, and could be used many times in rapid succession, which meant that it had combat utility.

• **Pedant’s Pendant:** Worn around the neck, it gave the ability to precisely recall rules, facts, pronunciation and other miscellanea. In effect, it was a limited form of eidetic memory with a rather narrow focus. Amaryllis took that one.

• **Choker of Concordance:** Warders needed a pool of concordance to draw on, which could be tapped dry, leaving them able to manipulate wards but not actually make them. The choker, black with an inset crystal, could be used to triple the pool, though it would still take some time to refill. Grak and Bethel had a minor fight about who would get it, until eventually settling on a compromise whereby Bethel would use it first to reinforce her wards, and then after that, Grak would use it in the field.

It was a huge haul, no doubt about it. Solace finally got some armor, which instantly resized to fit her and could be dialed in to protect against different elemental threats at short notice, though she complained that the metal clashed with her aesthetic. Bethel became more powerful in a lot of ways, not that she needed to be, though the biggest get for her was a suit of armor with telekinetic effect, one that effectively gave an increase to the functional synthesis force she could project with her other telekinetic effect and the momentum exchanger. Solace even got a staff to replace the one that had been voided, a gnarled wooden one that gave her partial control of plants, an ability that mixed well with her druid powers (or so she claimed).

“How much loot is there?” asked Tiff.

“Shhh, no complaining,” said Reimer. “We’ve been behind on loot since level four.”

“When it rains, it pours,” said Arthur.

“Now, I’m not going to suggest that Juniper forgot,” said Craig. “But is it possible that Juniper forgot? Just asking questions.”
“He always forgets,” said Reimer.

“I don’t forget,” I said. “It just doesn’t make sense for the enemies to have loot sometimes, especially level appropriate loot. If you go by the guides, the enemies have treasure parcels, but there are only certain situations in which that actually works without breaking the reality of the world. So instead, yeah, treasure gets a little uneven and the Skinner box of loot distribution isn’t working at maximum capacity.”

“What Joon is saying is that adventuring is supposed to be its own reward, rather than just numbers-go-up,” said Arthur.

“But I like numbers-go-up,” said Reimer. “Who doesn’t like numbers-go-up?”

“We all like numbers-go-up,” said Tiff. “But the question is just whether this is the right way for numbers to go up? I mean, in theory, it’s better if we’re getting loot at regular intervals, right? Both for balance, enjoyment, and whatnot.”

“Joon has been DMing too long,” said Arthur with a laugh. “That’s how he used to do it, until we got in this big argument about why this necromancer was leaving magic items on his zombies for no good reason.”

“Was that it?” asked Reimer. He looked over at me. “I remember that, is that the moment you decided that you weren’t going to give us loot like a sensible DM?”

“Arthur is trying to tell a story,” I said with a shake of my head. “If you wanted to make a narrative about it, then sure, I was a mild-mannered DM until one fateful day we had an hour-long digression about how a smart necromancer strips the magic items from his zombies and puts everything of value in the most secure, hidden place he can think of, and that argument changed me forever. That’s not really accurate though. It was more like … I don’t know, there are elements of unreality to the D&D experience, and I’ve always kind of hated them, because you bring in these game elements and that undercuts both the world and the narrative.” I shrugged. “Realistically, sometimes you’re fighting enemies that don’t have loot. Sometimes you get front-loaded on loot because someone wants you to succeed at the task they gave you. Sometimes accomplishing your goals doesn’t actually earn you anything material. So yeah, it’s a bit uneven, and yeah, that’s not the best thing for balance, though I think I’m doing a pretty good job of adjusting for that, but it at least doesn’t spit in the face of realism.”

“You can just admit that you forgot to give loot,” said Craig.

I let out a beleaguered sigh.

In my ideal world, we would have gotten to play with the entads a bit, figure them out, then spend some time divvying them up. Doing that with Fenn and Grak was still one of my fondest memories on Aerb. Instead, they were just handed to us, already figured out by Uther and his people and stored away for later use. I’m not going to lie, I sort of resented it, as childish as that might have been, given what a gift it was. Still, when I went to Sound and Silence, I finally felt like we had level appropriate gear.

At noon the next day, Bethel lifted up into the sky and minutes later, landed in an empty field ten miles away from Sound and Silence.

I was, at least for a week, going to college.
Sound and Silence, a Brief History, by Juniper Smith

The original discoverers of the Li’o’te Temple were never recorded, but the tradition of still magic dates back at least ten thousand years, making it one of the earliest ‘formal’ magics. While control of the temple has changed hands innumerable times, the temple itself is inviolable, and has survived everything from explosion to a complete burial that left it hidden for the better part of a decade until it was retaken. Through its history, the Li’o’te Temple has seen countless students engaged in meditation in order to reveal the first, base perception of still magic that allows it to finally be used.

The current history of the Athenaeum of Sound and Silence began in 143 BE, when a cabal of still mages seized control of the Li’o’te Temple from the Independent Province of Hong-shin. The area immediately around the temple, a moderately sized city that largely existed in support of temple activities, was declared a fully independent city-state following the ousting of the city’s mayor. The city was renamed as Li’o, a name it’s held since then. Strict control over the creation and training of still mages made the city-state into a fearsome local power, especially in an era where void weapons were virtually unknown. After some decades had passed, the cabal was restructured into a representative democracy of still mages, and shortly after, Li’o joined the Mage’s Agreement, the predecessor to what’s now the athenaeum system.

In 13 FE, Uther Penndraig arrived in Li’o during the height of an internal conflict between two factions of still mages, a conflict which was largely about the Mage’s Agreement and had been sparked by a blood mage ‘defector’ who had come to Li’o seeking asylum. This was only a spark; the role of still mages within the international community was a topic that had been provided a great deal of fuel and tinder over the years.

Uther sided with those in favor of cooperation, which effectively pitted him against the people keeping the blood mage under their protection. It had been Uther who had reformed Quills and Blood essentially from the ground up, making it into a juggernaut of power within a few short years, and so his role in the conflict was set from the beginning. When all was said and done, the inner circle of opposition had been either killed or subdued, and the rogue blood mage was turned back over to Quills and Blood, where he was summarily executed (those being somewhat uncivilized days by modern standards). Li’o went through a number of growing pains as a result of that debacle, and Uther Penndraig’s genius left its mark on the institution, which formally became a part of the First Empire, one of the first city-states to join.

A decade later, Uther returned, this time carrying the Rod of Whispers. It was one of the more powerful entads on record, capable of permanently granting access to vibration magic, though actually learning enough to use it took several weeks on top of that, and mastery was a years-long process. Uther had taken the Rod of Whispers from an infernal cult he’d rooted out, and was looking for a good home for it. Because the Li’o’te Temple was deep underground, because the academy already dealt with controlled distribution of magic, and because they already had security measures in place, Uther had decided that it was the perfect place for the Rod of Whispers to be placed. That still magic and vibrational magic were, in some ways, opposite from each other, yet with conceptual overlap, was all the more reason for the first generation of vibration mages to be trained in the P’emp’té Valley. Five years later, the Li’o Academy became the Athenaeum of Sound and Silence.

By the time the First Empire had begun its collapse, the Athenaeum of Sound and Silence, like its brethren, was a force to be reckoned with. The scope of the exclusionary principle and possible causes of outbreaks were widely known, resulting in research being moved to a remote sister site, a
practice common for athenaeums, but Sound and Silence itself was firm and resolute in those trying times, backed, in part, by a renewed Mage’s Agreement between all the athenaeums, this one more conspiratorial than Uther had likely intended.

During the First Interimperium, the athenaeum continued about its business, training and educating students, inducting them, and then sending them out into the world under a variety of different schemes to ensure their cooperation with the athenaeum. Absolute loyalty was less of a concern for Sound and Silence, given that a rogue student couldn’t teach others, but the Mage’s Agreement had certain provisions in it which could make matters decidedly unpleasant for rogue mages, and like the other athenaeums, Sound and Silence made use of those provisions from time to time.

When the Second Empire was formed, the athenaeums by and large capitulated, mostly because there was surprisingly little cost in doing so. The early Second Empire had recognized the strength and power of the athenaeum system as a problem, and had worked hard to ensure that there would be as few sources of conflict as possible. In fact, the Second Empire never fully took control of the athenaeums, as it didn’t need to; many of them were perfectly happy to have increased funding from the Department of Education or the Department of Advancement, and so what if there were some ethical concerns with what the Second Empire was doing, or moral arguments against some of the actions it was taking? Most of the athenaeums already had blood on their hands anyway, and Sound and Silence was no exception.

After the Second Empire fell and the Second Interimperium began, Sound and Silence once again assumed a defensive posture with regards to the outside world after it had weathered the purges of its leadership (those who had been aggressively persuaded by the Second Empire’s soul mages, or whose complicity in crimes was too great to ignore). When the counter-imperialists failed to seize power for themselves, as everyone thought they would, Sound and Silence continued on its way, a place of learning for two of the magical arts, much as it had when the First Empire fell. The teleportation key network and hexal railway system caused Li’o to become more multicultural than it had been before, and encouraged students to come from further afield, so that by the time the Empire of Common Cause had finally begun promoting open borders and cooperation between polities, Li’o was already in their camp.

When Bethel landed in the field ten miles outside of Sound and Silence, we were, technically, trespassing, and also, technically, in violation of the city-state of Li’o’s sovereign airspace, as well as the Draconic Confederacy’s rules regarding air travel. Thankfully, the *Egress* was so fast and smooth that virtually nothing could catch up to us, and with a reflective coating on her, Bethel was nothing more than a streak through the sky while in flight. On the inside, we felt absolutely nothing, just as we’d felt nothing the first time we’d rode on the *Egress*.

Bethel reorganized into her staff form, with all the rooms inside her remaining their full sizes. Our agreement was that she would be our house wherever we decided to go, but she wouldn’t be brought into combat to be wielded like a weapon, nor would she have to take a human form. With all of the entads inside of her from so many different sources, it was technically feasible to have her entire physical form be a reasonably-sized humanoid, but she’d flatly refused that. It was an imperfect compromise, but it meant that we would have a home base wherever we went, rather than a home base back on the Isle of Poran, which might potentially be thousands of miles away from where we were conducting operations.

It took us the better part of a day to first get near the athenaeum, then find a plot of land where we could stick Bethel. The P’emp’té Valley was famed for its large, domed buildings, but domed buildings were somewhat expensive to build and didn’t pack together well, so a lot of the more modern parts of the city had simple city streets with sardine-packed rectangular houses, just like most
other places on Aerb. Samey houses like that just didn’t make it onto the postcards in the same way that huge domes did. It was on one of these side streets, away from the primary hub of activity, that we found an empty lot for sale, which we bought for half again the asking price, on the condition that we could pay cash and take residence that same day.

This was all in service to getting Bethel on the ground and as a full, functional house again, albeit one that was bigger on the inside. It was a condition for her coming with. The plus side was that the comms tattoos, Parson’s Voice, would work on the scale of miles, meaning that so long as Bethel always contained one person with a tattoo, she could be called in at a moment’s notice, descending from the sky like a murderous angel to get me out of whatever jam I was in. (Parson’s Voice was ridiculously expensive for what it did; Amaryllis had the foresight to grab what she could from Everett after his death, in the brief window where they would still retain some scrap of their magic. Pallida and Heshnel each had one too, and Pallida had given hers up to Amaryllis, meaning that we had three in the group.)

It probably went without saying that it was wildly, flagrantly illegal to simply erect a building on a plot of land in the middle of a city, even if you happened to own that land. You needed permits, inspections, more inspections, more permits, and the gentle caress of a dozen bureaucratic tentacles. We weren’t going to be in Li’o for long enough for that whole process to even get started, let alone be completed. We were mostly hoping that by the time the authorities caught on, we could be long gone, or failing that, we would just pay whatever fine was levied against us, but it was a somewhat fraught thing. Again, it was all in service of keeping Bethel placated and close at hand, ready to come down like the hammer of god the moment things got heated, which I highly suspected they would. As a compromise, I didn’t fully like it, but Bethel was obstinate about her role within the party; she was a house.

Once that was all squared away, we left Bethel as a group of six, leaving Valencia and Heshnel behind, the former because of the unacceptable risk that someone or something would out her, the latter because someone besides Bethel herself needed to be able to deal with any problems that might arise back at base, a job that he had volunteered for.

“Testing,” I said, placing my fingers to the tattoo on my throat and talking as we walked. The tattoo had two basic functions, the first being push-to-talk, and second being always-on. All you had to do to switch between the two was place your fingers in a different spot. The always-on mode was, unfortunately, extremely annoying to everyone on the other end, and the tattoo was indiscriminate in sending things out to everyone on your local network.

[I hear you,] replied Heshnel. It was like he was speaking directly against my skull, bone conductivity rather than thoughtspeech. It was remarkably clear.

“Works so far,” I replied with a nod to the others. “We’ll see you in a bit.” I let my fingers drop down. Most of the time, we’d be keeping it off. “I’m really hoping that we don’t have to call in the cavalry.”

“Hrm,” replied Amaryllis. She was without her armor, though she still had her flickerblade, and against Bethel’s wishes, had taken the extradimensional glove with her as well.

“You’re thinking of narrative,” I said.

“She’s always thinking of narrative,” said Pallida with a laugh. “I think you were right to put an end to it, but that’s only made her more vocal when she’s not with you.”

“The theory holds weight,” said Raven. “Uther talked about it extensively, he wrote about it right up until he went missing, and every analysis we have points to narrative theory being essentially
“Probably a conversation better held under wards,” said Grak with a grunt. He was walking beside Solace. They were both slower than the rest of us, owing to their stature, which meant that we had to accommodate them.

“Probably,” I replied. “I actually don’t know who the potential enemy listening in would be, or what they would gain from hearing any of this, but yes, probably best not to talk about it out loud on a public street.” I looked over at Raven. “Do you have any grand insights on Li’o or Sound and Silence that you’ve been keeping quiet about?”

“No,” replied Raven. “I’ve been here only three times since the First Empire disbanded, always on business with the Library.”

“That seems like a lot,” I said. “Three times in a little more than one hundred thirty years? What were you visiting about?”

“Classified,” said Raven. She looked around a bit. “It’s very nice to be able to say things like that and not have to worry that I’m going to have my fingers cut off.”

“She’s harmless,” said Pallida, waving her hand.

“She cut my fingers off,” replied Raven with a scowl.

“I would agree she’s not harmless,” I said. “However, I’m hopeful that’s all in the past.”

“She was talking about what a bad neighborhood we were in,” said Amaryllis. “She mentioned that perhaps someone would try to break in. She seemed pretty excited at the prospect.”

“Yes, well,” I said. “Someone should probably familiarize themselves with the legal code of Li’o. Or maybe we should get a lawyer on retainer.”

“We already have one,” said Amaryllis. “We have a lawyer on retainer in the top ten cities on Aerb by population, as well as all the cities with an Athenaeum in them. I set it all up by mail shortly after Solace was born.”

“What does retainer mean, exactly?” I asked. “We have lawyers in twenty-three cities?” I stopped to think about geography for a moment. “Er, lower. Eighteen?”

“We’ve prepaid for legal services,” replied Amaryllis. “And yes, eighteen cities.”

“That’s not horrifically expensive?” I asked.

“In the scheme of things, no,” replied Amaryllis. “The retainers aren’t large, and the lawyers aren’t world class, but we need to be able to not shoot ourselves in the foot if we need to navigate the courts, especially given how different some of the legal traditions are from each other. In Li’o, our lawyers are Comb and Bācaṇīge. Commit the name to memory, in case we get separated. They’re authorized to do work for the entire Council of Arches.” She glanced at Pallida. “You would likely need to find your own representation.”

“You wound me so, princess,” said Pallida with a laugh. “I wasn’t planning on getting into trouble. I’m probably not even going into the athenaeum. I tried to steal the Rod of Whispers once, and while I don’t think they’ll remember me, best not to risk it.”

“Sorry,” I said. “You tried to steal the Rod of Whispers? The source of vibration magic?”
“That’s the one,” said Pallida. “Good security around it though, I do have to say that. I probably could have gotten it, if I’d been willing to kill someone, but, eh.”

“I don’t understand,” I said. “What would you have done with it?”

“Not sure,” replied Pallida. “Ransomed it off, maybe, but that’s always partnered with its own problems, because naturally, people don’t want to give you money, they want you dead and their stuff back.”

“Typical,” replied Raven with a snort.

“Oh?” asked Pallida, looking back at her. “Typical?”

“Yes,” replied Raven.

“Then tell me how it’s ‘typical’,” said Pallida.

“We’re not doing this now,” I said, before things could get heated. “It’s my first day at college, and I’m not going to have it ruined because you’re bringing up stupid bullshit from the past.”

“Don’t call the athenaeum a college,” said Amaryllis. “Otherwise, I agree.”

“I was making a joke,” I said.

“Make better jokes,” said Amaryllis.

Pallida shot one last, angry glance at Raven, but that was the end of it. Maybe it had been a mistake to take both of them with, but in terms of firepower, I wanted as much as I could get. That’s why we were bending for Bethel as much as we could to get her to meet us halfway. I was nervous about what going to college would bring.

I pooh-poohed Amaryllis’ narrative theory a lot, but it was an interesting question whether the challenges we faced would assume that we were at full strength, or whether they would be altered to match us (or, possibly, that we would be altered to match them). Even with narrative theory aside, I did assume that the Dungeon Master was setting things up for us, at least in part. It just didn’t have to be because he had any particular outcome in mind; maybe he wanted to see what I would do, how I would respond, or whether I would pass the test. I wasn’t going to twist myself into a knot trying to guess what he had in store for me, especially since I would have to go down however many meta-levels he was playing at, but the thought that I couldn’t just approach this quest on its merits had me a bit on edge.

Li’o sat within a wide valley with steep hills on either side. The Athenaeum of Sound and Silence was set in the side of one of those hills, with its campus sprawling out, a chunk of relatively homogeneous buildings in that one little patch of city. We made our way up steep roads, passing by a wide variety of businesses and the midday push of people. We were armed and armored, legal in Li’o but a bit conspicuous. In theory, being conspicuous wouldn’t matter, because we were only very technically criminals, and for crimes that it would be difficult to prove we committed (that of illegal entry into the city-state of Li’o, plus the probable airspace violation charge from the local air authority).

The city was one of the prettier ones, though the temperature was much higher than on the Isle of Poran, and it was somehow more humid too, even though we were pretty far from any body of water. Weather on Aerb was incredibly weird, the more I had looked into it, and Li’o had apparently been saddled with a tropical climate by the atmoplanar (yes, they called it that) projection layer, the wide-scale magic that created functional jet streams, and the shape of the land.
True to her word, Pallida left us behind when we got to the campus proper, insisting that she was going to ‘do her own thing’ and would meet up with us later, despite not having any way to keep in touch with where we were and what we were doing. She gave Amaryllis a hug before she left, which Amaryllis seemed a bit embarrassed by, then went on her merry way, carrying her magical trident like it was no big deal.

We found our way to the bursar’s office with only a modicum of trouble; it was located within one of those big domed buildings we’d seen, along one of the outer curved walls. Once we knew where we were going, I dialed my vambrace to give myself ‘normal’ clothes, consisting of my more understated bespoke suit, and left the others behind (though close by, and given our tattoo comms, easily summoned at a moment’s notice).

The bursar had a gnomish secretary who paled slightly on hearing the name ‘Figaro Finch’. I wasn’t quite so racist (specist?) that I thought all gnomes knew each other, but that gear did make half a rotation in my head before I caught myself. More likely, she was just dreading the upcoming meeting. Finch had said to press the bursar, if it came to that, but not to threaten or hurt him.

The bursar himself was a fat man, which was unusual for one of the he’lesh. The Book of Blood went into great detail about their apparently prodigious members (thanks, Syfriend), but in terms of outward appearance, he had orange skin, three thick, mutually opposable fingers on each hand, and a way of walking that kept his long legs tucked in and his feet close to his butt. Standing tall didn’t come naturally to the he’lesh, which was probably a good thing, since he’d have been nine feet tall if he unfolded himself. After doing me the brief courtesy of opening the door and ushering me in, he did a little waddling walk so that he could sit behind his desk, on a cushion rather than a proper chair. I took the chair in front of the desk, adjusting it to human proportions, then watched his dark orange eyes look over a hookah that was sat on his desk. He pressed a lever, then took a hit from the hookah and looked at me.

“Helps me think,” he said, frowning at me.

“I know,” I replied. I designed the he’lesh. “It’s my understanding that it’s not considered rude to ask which you just took?”

“Indignation,” replied the bursar, narrowing his eyes at me. “You want to skip not one line, but two.”

“Finch said that all of this was already handled,” I replied.

“You need to take classes,” said the bursar. “I told Finch that you’d be in under the Special Returning rule, not the donation rule. To be paid off would be one thing, but money wasn’t on offer. It was the best that I could do, I told him that, and he wanted more. To think I call the man friend!”

“He said that it was handled,” I replied. “Finch is stationed in a place pretty far from a touchstone, otherwise he would have come here himself. I would have brought him, if I thought that this was going to be a problem. If you’re going to go back on what you told him, then --”

“No,” said the bursar, shaking his head. He reached down and took another hit from the hookah. I peered in at the internals of the machine. It was set up so that different herbs could be burned on demand, each only enough for a single hit. It was no doubt expensive and ingenious, especially given how many options it had. “No,” he repeated, letting out a puff of smoke that smelled like incense. The whole room reeked of different herbs laid over top of each other. “No, no, I told him that I could arrange it, but I never said that it would be completely without caveats, and because there’s no money changing hands, my hands, are, eh, tied. You must take classes, at least for long enough that you can have four instructors sign off.”
“I was meant to be here a week,” I said. “After that, I was going to step into a time chamber and teach myself as much as is possible in as short an amount of time as possible. I’m legitimately not sure that I can take classes for a week, not under the time constraints I have.”

“There are procedures for skipping ahead,” grumbled the bursar. “Sufficient donation is enough, but even then we don’t do it on so little time.”

“You agreed to this,” I said. “That’s why I’m here. If it can’t be done, then I came here, at great expense, for no reason. I don’t want to have to tell Finch that I went through all this trouble and then walked away empty-handed.”

The bursar grumbled again, then took another hit of his hookah. “I’m telling you, a week of classes, then a number of magi to sign you off, that’s the way it must be done. It will look, from the outside, as close to proper as possible, and I said as much to Finch in my letter.”

And then he expected me to argue you down? “If I’m understanding this right, I just need a rubber stamp? I don’t actually have to attend classes?”

“Are you trying to make this difficult?” asked the bursar. “If you want to feel the touch of the rod, if you want to meditate in the temple with the others, then yes, yes, you need to attend classes. It’s a sham, obviously, but one that must appear proper.”

“And if I just pay the fees instead to skip all that?” I asked.

“At least a month,” said the bursar, shaking his head.

I was being stonewalled. The person to blame was probably Finch, not the bursar himself, or on a meta level, I could obviously blame the Dungeon Master. And really, I was only getting upset about it because Finch had said it would only be the week needed to meditate; if he’d said from the outset that I would need to take a week of classes, I would still probably have taken that deal.

“Fine,” I said. “One week of classes, some paperwork on your end, then I’ll get access to the magic.”

The bursar startled slightly, then looked over at his hookah, pressed a different button on it, and took a hit. “Excellent,” he said as a scent like pine needles filled the air. “Yes, excellent, I’ll fill in the papers and you’ll be on your way. I assume you have no need of accommodations?”

“I have a house in Li’o,” I said. As of this morning.

“It’s extremely important that you don’t mention this arrangement with anyone else,” said the bursar. “It’s irregular, and might create some problems if the exact nature of this shortcut were revealed. The magi might ask, and if they do, tell them the truth.”

I nodded. I had figured as much.

I was relatively surprised by how little paperwork there was, given how much paperwork I got at the start of every school year in high school, but I supposed that made sense, given that Aerb didn’t have computers and laser printers, meaning that paper documents had to either be made with spirit duplicators or mimeographs or some even more exotic technology. Instead, my schedule was written on a piece of paper for me, with quick directions to the various classrooms written there too.

I read the paperwork the secretary handed me very carefully before I signed anything. The bureaucratic procedure that the bursar was taking me through was, apparently, a loophole that had been set up for extraordinary circumstances where an existing student of Sound and Silence had matriculated and then once again needed access to either the Temple or the Rod.
“Renacim are one of the reasons this rule exists,” said the secretary, looking displeased at my question. “Forcing them to go through material that they already know would be absurd, and forcing them to pay would be, well, profitable in the short term but not in the long term. There are other species who face similar problems, and must be re-evaluated to see whether it would be appropriate for them to be re-anointed, either so they could make use of their existing education, or so that they could take continued education.”

“And what am I?” I asked. “For the purposes of, uh, this paperwork?”

“It’s unspecified,” replied the secretary, frowning at me. “There’s technically no need to specify, since it’s at his discretion. I would be cautious of who you speak to of this arrangement. It’s all perfectly by the books, but it would be better to not have it come to light that the bursar was using his discretion in such a manner.”

“I won’t say anything,” I replied. I hesitated for a moment. I really did want to ask her whether she knew Figaro Finch, but every social instinct I had was warning me not to. If Finch and the bursar were friends, then it stood to reason that he might have met this woman, or that she might have been a connection. I held my tongue.

“How did it go?” asked Amaryllis. Solace and Grak were gone, leaving just her and Raven.

“Fine,” I said. “There’s a minor hiccup. They want me to attend classes, just for a week.”

Amaryllis sighed. “That’s going to make Bethel’s position more problematic.”

“Still worth it though, do you think?” I asked. “I thought it would be.”

“It’s a spanner in the works,” said Amaryllis. She tapped her throat. “Wasn’t safe to talk?”

“I didn’t want to break it out if I didn’t have to,” I said. “How much does this interfere with things?”

“I’ll work it out,” she replied. “Classes, starting tomorrow?”

“Semester starts in three days,” I said. “So, it’s really more like two and a half weeks.”

“I’ll have to speak with Bethel,” said Amaryllis. “I don’t think it will be a problem, as such. I’m still waiting for the catch.”

“Is there always one?” asked Raven. It was just the three of us, for some reason.

“No,” I said. “But when things seem like they might be easy? Then yeah, more often than not, I would say. Though it might be that the times it actually was easy don’t stick out as well.”

“Regardless, we have three days free?” asked Amaryllis. “Do you have any advice on how to speak with Bethel?”

“About what?” I asked. “Also, where are Grak and Solace?”

“There’s a dwarfhold close by,” said Raven. “Grak wanted to go visit, and Solace said she would accompany them.” I had been asking Amaryllis, not her, but she seemed to want to be a part of the conversation, rather than a third wheel.

“Well, okay, but how are we going to find each other?” I asked.

“We’ll meet back at Bethel,” said Amaryllis. “You’re carrying too much over from your old home.”
“I am?” I asked.

“He is?” asked Raven, perking up with curiosity.

“Smart phones,” said Amaryllis, turning slightly to face Raven. “Small, handheld technological devices that transmit information back and forth via radio. Where Juniper is from, everyone has one, and everyone knows where everyone else is at all times.”

“That’s … not quite true,” I said. “But in a general sense, yes, you can just send someone a text and ask them where they are, or whether they want to meet up.”

“A text is a short message,” Amaryllis supplied. I didn’t particularly think that was necessary, or I would have translated on my own.

“Ah,” said Raven. “And he’s still so unfamiliar with norms, after roughly five months on Aerb?”

“Half that time was spent in a quite small time chamber,” replied Amaryllis. “The other half has seen him on the run from various forces or factions, wandering through exclusion zones, or ensconced within our group. I could count the number of people outside the group that he’s had meaningful interactions with on one hand.”

I looked at her, seeing the look on her face as she explained things. “Mary, are you … offering exposition about me?”

Amaryllis caught herself. “Ah,” she said. She glanced at Raven. “Sorry.”

“It’s fine,” said Raven. She looked between the two of us. “That was always my role, in our group.” She looked a little bit sad. “We would come to some new place, and I would set out to read all the books as quickly as I could so that I could offer him as much information as he needed.”

“I’m sorry if that wasn’t what you wanted,” I said.

“Oh,” said Raven, looking at me. “No, it was. I loved to read. I loved having someone to talk to about what I had read. The way he would look at me with this intent expression, listening closely to every word I said …” She looked to me and her demeanor changed. “It’s not clear on what my role in this group is, as yet.”

“I don’t know either,” I said. “I would consider you a heavy hitter though.”

“That speaks poorly of your power, no offense,” said Raven.

“It’s why we’re here,” I replied with a shrug. “I’m not expected to match Uther at the height of his power so quickly, right?” I was trying not to be, but I felt mildly defensive.

“We don’t know,” said Amaryllis. That was more or less true. Power scaling, if it existed at all, was a mystery. I was pretty sure that attempting to go into Fel Seed’s exclusion zone would get me killed though, at least as I currently was, which was the primary reason I wasn’t doing it.

I looked out on the campus, with its many paths wending between the buildings, and more greenery than you might naively expect in a city. There were no trees, but the bigger buildings had vines cascading down the sides of buildings here and there, which somehow gave the impression of not being manicured, though they undoubtedly were. There was a care and thought that had gone into this place which I found myself appreciating. It was something that I would probably talk about with the locus; she seemed like she would appreciate that.
My gaze shifted to the people walking the campus. All of the athenaeums ran all year round, without the three-month gap we had for Earth universities, a consequence of how far away the average student came from and the burden it would have been for most of them to sit around for the summer season or go back home. The start of semester was a few days away, but there were still plenty of people around, the various races of Aerb that I’d grown more and more familiar with, though the majority were human. I looked at a small group of humans on one of the sidewalks, talking to each other, and I could almost imagine that they were part of a transplanted slice of Earth.

One of them looked over at me and did a double-take. My eyes widened as I recognized him. He said something inaudible to the people he was with, then came over to us at a half-jog. I was watching him, unable to look away.

Logically, it wasn’t Reimer. I’d met two doppelgangers so far, Bethel-as-Tiff and Raven-as-Maddie, and this person was probably Reimer in looks only, on the taller side, with a blonde crew cut and glasses, a smarmy grin even as he was coming over. Not Reimer, just meant to look like him, for the Dungeon Master’s ineffable reasons.

“Juniper?” he asked. “Holy fucking shit, Juniper?”
“I -- yeah,” I said. My mind went briefly to my vambrace, which would switch me into full combat gear. I was on edge, obviously, and while Reimer (or whoever he was) didn’t look like a threat, there was a chance that could change in a hurry. I could feel Amaryllis tense up beside me.

“What the fuck man,” he said, smiling at me. “What the actual fuck, what are you doing here?” He looked me up and down. “When did you get jacked?” His eyes went over to Raven, then to Amaryllis, who he stopped and stared at for a little bit too long.

“Yes?” she asked.

“Are you,” he said, then stopped. He turned to me. “You are Juniper, right? Juniper Smith?”

“I am,” I said. “And you’re …” I waited for a moment, so that he could fill in the blank. “Arthur Reimer?”

He nodded, seeming confused by the question. “How the hells did you end up here, Joon?”

_Hells?_ The word tripped me up. If you were listening to spoken dialogue and trying to determine whether it was from Aerb or Earth, there were a few common shibboleths, and the two biggest were ‘hells’ and ‘gods’. I had mostly switched to using ‘hells’ and ‘gods’, the better to fit in, while Amaryllis had switched the opposite way, maybe because she’d gone too deep on Bible study, or maybe because it felt like it had more impact. If I’d gone native, then maybe Reimer had too … but maybe it was a sign that he wasn’t who I thought he was.

“It’s a long story,” I said. I cast my glance over to the people he’d been walking with. They had stopped to wait for him, still talking amongst themselves. “Do you have time to talk?”

Reimer looked back. “Yeah,” he said, waving them off. He turned back to me as they started going on their way. “Seriously though, what gives?”

“What’s the last thing you remember hearing about me?” I asked.

Reimer glanced at Raven, then at Amaryllis. Again, he held the look for a little too long. “You were arrested,” he said. “Expedited sentencing or something like that. I thought you were in prison.” I could see the confusion on his face.

Things started clicking into place. “I was,” I said. I shrugged. “Trial by adversity.”

Reimer’s eyes widened. “You survived that?” he asked. “So you’re, what, part of the Host?”

“It’s a special arrangement,” said Amaryllis.

Reimer stared at her. “Amaryllis Penndraig,” he said, with only a slight upward inflection.

Amaryllis frowned at him. “No,” she said. “Tamra Constance. I work for the government.”

“You look just like her,” said Reimer, openly staring at Amaryllis. He glanced at me. “Joon had a poster of you in his room.”

“Future Leaders of Anglecynn?” asked Amaryllis with a raised eyebrow.

“Yeah,” said Reimer with a laugh. He looked back at me. “It’s good to see you,” he said. “I’m sorry,
I didn’t want to hold anything up. Are you -- will you be around? Catch up, maybe? It’s been, what, half a year?"

“Sure,” I said, not feeling it. “I’ve, uh, got a house off-campus.” I gave him the address, and noted a slight frown on Amaryllis’ face. “I’ll be there for the next week and a half. Stop by any time.”

“Can I ask what you’re doing here?” asked Reimer. “I mean, I’m starting classes in a few days, is this just coincidence, or … ?”

“Just coincidence,” I said, though that wasn’t at all the truth. “I’d like to sit down and talk for a bit, but … not here.”

“Are you okay?” he asked. “Joon, I know you weren’t doing well, but … hells, trial by adversity? And now you’re here somehow, thousands of miles from home?”

“I’ll explain everything,” I said. “Not out in the open though.”

Reimer nodded once, cast a second look at Amaryllis, and then hurried off to wherever it was he’d been going. We watched him leave, silent.

“Oh, that was something.”

“I’m not sure that we should have let him go,” said Amaryllis with a frown.

“Who is he?” asked Raven.

“It’s complicated,” I said. I was internally groaning. “I have an outstanding quest to return to the place that this body is originally from. My guess is that he’s from that same place, and thinks that I was his childhood friend, because there are proxies for everyone I know there.”

**Quest Updated: They Say You Can’t Go Home Again -** He had a life, before you came, one with parallels to your own. The man you met is not Reimer. The girl you will meet is not Tiff. But they’re close enough, for our purposes.

I let out a sigh. **Fuuuuuuuuuuck.**

“Are you so certain that you should be going to a dwarfhold?” asked Solace.

“It’s a test,” said Grak, grumbling beneath his beard. He’d been thinking of shaving it off. He’d done that, once or twice, when he was at Barriers. It had felt odd, like being naked, and repeated shaving had irritated his skin, so he’d grown it back out again. To cut it might be a nice change though. Juniper had offered advice along those lines. He had said that cleanliness was foundational, that incremental progress toward building a new version of himself had been invaluable. Small changes. Small steps.

“You went into a dwarfhold in Boastre Vino, if I recall correctly,” said Solace. She had a pleasant voice, high, as fit her child’s body, but still with the tones and cadence of a wise old woman.

“Yes,” said Grak.

“Also a test?” asked Solace.

“Of sorts,” replied Grak. He was being taciturn again, for no good reason. “I thought it was part of my penance to be with dwarves. To be a true dwarf.” **Megimaka,** it would be in Grogglir. There was
probably a cleaner, more evocative way to say it in Anglish. “I worried I would drift.”

“And now?” asked Solace.

“Now I want to see how I feel,” said Grak.

She slipped her hand into his, a casual thing that buoyed his heart. They were unalike, in so many ways, but she had a real and honest affection for him, and wasn’t at all shy about touching him. The first night they had slept together, he had been hesitant, but she had removed his clothes with deft fingers and pressed her skin against his own. She was odd, a four-hundred-year-old woman who had been reborn a dozen times, now voluntarily choosing to inhabit the body of a child. They barely knew each other, but she had treated him as a longtime friend from the very beginning. She was good at being krin.

“I’m glad you’re doing better,” said Solace. “Are you sure you wouldn’t have preferred different company?”

“Juniper?” asked Grak.

Solace nodded once, bobbing her antlers. “I know he means something to you.”

“He does,” replied Grak. He bit the inside of his cheek, a nervous habit. “He cannot be what I pin my life on, whatever else he is.”

They walked hand-in-hand for a while, winding their way through the city. They got a few looks, even in a cosmopolitan area such as this, in part because of the entads they had on clear display, in part because of the fact that she presented as a child, and in part because of her antlers. There were odder couples in Li’o though, people who were actively trying to be strange. Grak liked that.

Grak’s father had held a low opinion of the dwarfholds that could commonly be found next to the major cities of the world. There were a variety of names for those dwarfholds, but none were particularly flattering. “Shadow cities” was what Grak had grown up hearing, and he had never been able to think of them as anything else, dwarfholds that formed as a shadow cast by imperial cities.

When he’d gone to Lalon Dohore, the shadow city beneath Boastre Vino, he had been thinking about leaving the group. No one had questioned the pretext, and they had barely asked him about what he’d done when he was there. All that was to be expected, and more to the point, as he’d wanted it. He didn’t want to have to explain the alienation he’d felt among the dwarves there, the way their culture had seemed strange and unfamiliar, the same unsettling medley of dialects and traditions that had marked his year spent with the dwarves at Barriers. With Lalon Dohore, he had been trying to prove to himself that there was no place in the world for him, that even a larger dwarfhold, a proper city, one steeped in imperial culture, couldn’t be a place for him. He had been wavering in his dedication to his penance then, tempted by the thought of simply taking the gold from Aumann’s and making a life for himself. It would have been a slap in the face to everyone who died in Darili Irid, not only living on without them, but spending accursed gold as well, after everything the gold mages had done to his people, but he had still thought about it, and hated himself for it.

He was going to Raho Lenheg for a different reason. He was going to see if he could gain a new perspective on the dwarves.

They walked together to the entrance, which had a similar trolley system to the one that connected Boastre Vino with Speculation and Scrutiny. This was a system designed for much greater throughput though, with thicker trolleys running at more regular intervals, capable of carrying a
hundred people each. Grak had always been glad that Junah, the city that housed Barriers, didn’t have a shadow city of dwarves, as otherwise he might have been expected to live there, rather than in Junah itself. He might have commuted in every day and been otherwise sequestered, at his father’s insistence, in with other dwarves, even if they weren’t the right kind of dwarf.

Even going down the tunnel in the trolley, there was something obvious that marked Raho Lenheg as different from Darili Irid. The seats were shaped for dwarves, it was true, but they could easily be raised for other, larger species, and the roof of the trolley was higher, allowing humans and others to ride in comfort, which several were doing. The shadow cities differed in how they dealt with accessibility; some considered themselves dwarven cities first and foremost, and if their accommodations locked them off to some other species, all the better. Raho Lenheg had put in some work, likely some expensive work.

The entrance to Raho Lenheg was expansive, with a vaulted ceiling that was held in place almost entirely with wards. Grak stared at it with his warder’s sight, not liking the look of it. There wasn’t necessarily anything wrong with relying on wards for structural support, but wards could fail if they weren’t made properly. The roof was currently failing to collapse. It was probably fine. He knew pitifully little about engineering, save what he’d learned in the relevant class at Barriers. Most likely he was seeing the same kinds of tolerances used in more mundane versions of construction. It still called to mind the idea of the wards failing, which called to mind Darili Irid, an old wound that had reopened so many times that it was a mass of scar tissue.

Solace squeezed his hand, and brought him back to the world.

They went off together, quickly getting lost in the shadow city. The main thoroughfares were brightly lit, two stories tall, which expanded the view and gave long sight lines, with exterior stairs going up to the second level, allowing twice as many businesses. It didn’t take long to find a tavern; their goal was, ostensibly, to gather information, in the hopes that they might avoid being blindsided.

“Would you like to split up, or stay together?” asked Solace. She let go of his hand as they took a seat. Again, the tavern had the same arrangement as the trolley, with seats and tables that could be adjusted upward if needed, and too-tall ceilings which almost no one was making full use of.

“Stay together,” said Grak. They sat down to order food and drink.

The gold hadn’t ended up staying in Darili Irid, though Juniper had made plenty of offers to let it stay there, either because he thought he needed to, or because he believed that the gold was, ultimately, immaterial. Juniper had said, repeatedly, that in his games the “loot” didn’t matter much, that he would adjust the challenges to the party as they gained abilities and could spend more money. It was hard to tell with Juniper how much of what he said was hollow words, how much was simply motivated by the game, and how much he really meant. In this case, he was saying that it was no true hardship, because money would come to them all the same. ‘Gold sinks’, he kept saying. It was slightly uncomfortable, to hear that the money didn’t matter either way. Grak had deferred to Amaryllis; the money wouldn’t bring anyone back. It wouldn’t actually provide absolution. He had always known that.

Grak still thought about the prices as he ordered. He had spent a long time thinking that it was necessary to devote himself to the pursuit of penance. To be frivolous with money was as good as to declare that he didn’t really care about the penance at all, that the lives lost because of him had been meaningless.

That wasn’t how he was going to live his life any longer.

“There,” said Solace, nodding to another table. “Guards. The patch on their shoulder is the same as
the one on the trolley. I’d wager they hear a lot.”

Grak nodded once, then walked over to the table. He had done this sort of thing a few times, and it was always painfully awkward. At Barriers, it had always been in pursuit of knowing others, whether they were classmates or simply people he’d seen out in public. Here, he wanted to know whether they had heard about the sorts of problems that only the Chosen One could solve.

“Hello,” said Grak, feeling awkward. “I’m new in town. I was wondering if you’d like drinks in exchange for some gossip.”

The dwarves looked between each other, exchanging some wordless conversation.

“So long as it’s not the ferment,” said one of them. “Something bubbly.”

Grak ordered from the bar, trying his best to affect the mannerisms of a dwarf from far outside the big city, which wasn’t terribly much of a stretch. He was, largely by technicality, the Advisor on Defense for the Republic of Miunun, but if asked what he was doing, the truth would probably be that he was simply following Juniper, at least for the time being. (And again, there was the familiar flash of rilirin, nostalgia for a world that never was and never would be. It was easier to dismiss, now.)

“Now,” said one of the policemen, “Tell us what sort of gossip you’re looking for. You want a mate?”

“No,” said Grak, shifting uncomfortably at the suggestion. “General information. Things that people might talk about up there.” He was self-conscious about his dialect, a cadet branch of the many-pronged Groglir family tree.

“Goings on with S&S,” said one of the policemen with a nod. “There’s new construction in their underground bunker. They hired on a few dwarves for it.” His moustache was slicked so that the tips of it were pointed up, and they bounced as he spoke.

“Some problems they’ve been having down there,” said one of the other policemen. “Problems at S&S always ripple out, they say. That’s how it is at Li’o. Council of mages still runs the city, on top of employing a fair number of people, directly or not.”

“There was a death,” said the first, the one who had asked for drinks. “Three months ago, down in the temple.”

“No one is talking about that anymore,” said the dwarf with the pointed moustache, shaking his head.

“It’s the reason for all the construction,” replied the other. “It’s relevant.”

“We’re off track,” said the third, who had been mostly silent up to this point. He turned to Grak. “You want to ‘gossip’ so you can speak to people, to know what’s going on? Or to make conversation?”

“Both,” said Grak, furrowing his eyebrows.

“The Demonblooded Festival is coming up, a week from now,” the other dwarf replied. “That’s what will draw attention. Maybe the wrong kind, if you’re talking to a prospective employer and didn’t want to take a side.”

“Only side is against the devils, isn’t it?” asked one of the others.
“But they’re not devils,” replied the other policeman.

The conversation continued in that vein for some time, with a fair bit of back and forth that delved into arcana Grak wasn’t familiar with. He wouldn’t have assumed that either of them were either, and as he listened to them talk, he could see the seams of their knowledge showing; neither knew quite what they were talking about.

“The death,” said Grak, when there was the slightest room for him to speak. “Can you tell me more?”

“When they go down to the temple, they meditate,” said the third policeman, who seemed eager for a respite from the demonblooded conversation. “They do five hundred at a time, packing the temple full, with entads so they don’t need food and water. They said it was a reaction to one of those, the magic not sitting right in a young girl’s system.” He shook his head. “Smells of negligence.”

Grak nodded at that. Whatever it was, it was probably not negligence; more likely, it was something that only the Chosen One would be able to deal with. Grak was pleased with himself; he’d been useful.

Valencia didn’t like being part of the home team. It was just her, the locus, Heshnel, and Bethel. There were also all the teachers and aides for the young tuung, and the tuung themselves, but they were in a different ‘wing’ of Bethel, and didn’t count. Valencia could see the logic in raising tuung from birth, totally isolated from the world and cared for by people who had been paid a tidy sum to undergo the time dilation … but it all reminded her too much of her own childhood, locked in a cage and muffled so that a devil’s words wouldn’t get out.

Worse, Jorge was several continents away, left behind on the Isle of Poran. Valencia had wanted him to come with, but someone had to stay back and deal with the hangers-on in the village, and Finch hadn’t wanted to do it alone. She missed him, in part because she knew that she would probably be confined to Bethel until she was needed, if she ever was. The armor would conceal her, but there was too much of a risk that she would be outed anyway, as she had been twice now, first with the illusion mage, and next with a complex ward. The armor didn’t have a good track record of keeping her secret safe.

Instead of reading *Harry Potter* again for the third time, she went to bother Heshnel, who was in his room, half of which was a makeshift garden. It was a pretty place, with light streaming in through the windows, more light than could possibly be hitting Bethel. The plants there were all small: Bethel had asked him whether he’d like accelerated time, and he had informed her that under no circumstances was she to do anything like that. Off to one side, he had a lofted bed and a desk beneath it, along with a trunk that he was, for the time, living out of. The traditional home of the dark elves was the Gelid Depths, in homes carved from the seafloor ice, but Heshnel was an oddity, as an elf would have to be to join them.

“I’m surprised that you’re planting them,” Valencia said. He had let her in without seeming surprised that she had come. “Do you expect to be here long?”

(This was small talk, which was one of the things that Valencia knew she needed to work on. It would be easier, with a devil, but she was trying her best not to use them, both because she thought it would be good for her, and because killing too many devils might stir up the rat’s nest that was the hells. She’d grown more powerful when Juniper returned, with more tendrils, which moved more swiftly through the hells and sought out targets more eagerly, but she held them at bay for the time being, with her targets pre-selected. There would be a time to strike and wipe the hells clean, but it was not yet, not before she was powerful enough to actually do it.)
"I don’t know how long I’ll stay," said Heshnel as he tended to his plants. “Flower mages thrive on connection. To go without building that connection is anathema. Yet it’s difficult, in cases such as this, when there’s uncertainty in the air.” He looked over at her. “The seeds contain some of the connection of the plant, fading slowly over time. I plant in the hopes that these might flourish and their connection strengthen. If this garden is demolished, then I still have the seeds whose connection is slowly fading.” He sighed. “I’ve lost many plants and many seeds, over the years. When hard choices have to be made, it’s often the flowers that are sacrificed.” He turned to look at Valencia. “We were Uther’s flowers. He cultivated his connections, and when the time came, he spent us for higher purposes, vast and opaque ones.”

Valencia didn’t know which one of them was being bad at small talk. “Tell me about my father,” she said.

“Fallatehr Whiteshell,” he said, after a long pause. “I don’t know who he was in prison, or who he became. The things that Juniper says are, I have to admit, disturbing.”

Valencia reached out and killed a devil, a minor one, picked at near-random. She, Jorge, and Amaryllis had all sat down to make a map of her kills across the nine thousand hells, then established a protocol for future kills. It was undoubtedly the case that the demons and devils were making their own map of deaths, and while there was nothing to be done about those early deaths, their working group (Mary’s term) had done their best to ensure that future deaths wouldn’t give anything away. At least some of Valencia’s ability would be put toward continuing the old patterns, making them look more random than they had been, or if not random, then at least part of a complex phenomenon that had no real relation to the real world or the Council of Arches.

With the devil in her, Heshnel snapped into focus once more. He felt as though he bore the weight of the world on his shoulders, one of the only people left alive who was in the know, especially with so many allies fallen, either in the Grand Finale after Uther had left, taken by old age, or killed when the Second Empire fell from power. Then more, in the last two weeks. He was adrift, uncertain, not willing to follow Juniper whole-heartedly, yet with no real idea what he was going to do if not that. He had a stubborn pride for what he’d accomplished as part of the Second Empire, though he was keenly aware of its missteps and faults, as well as those events and programs which would later be labeled atrocities. He’d been a soul mage, and seen hundreds of years of practice and dedication to that magic stripped away in an instant. He blamed himself for that; it was one of the things that drove him, the idea that he was meant to do something with his life. It haunted him that he had wasted enormous amounts of time and effort on a grand project that had borne only rotten fruit. Like other soul mages, he had altered himself, slowly and carefully, in order to become better at the tasks he laid before himself, more driven, more focused, more cutthroat. Little of that had been undone.

Valencia knew him, deeply and intimately, as she knew everyone she looked at with her augmented thoughts, so long as she’d had time to make concrete observations. She kept her face the same, not changing her outward appearance in the slightest. She had gotten better at that.

“Who was he, when you knew him?” asked Valencia. She put calm and understanding into her voice, with a touch of force, to show that she was trying. “He thought of me as a thing, not a person,” she said. “As a father …” She momentarily paused, unable to spit out the devil’s words. “He came up short. But I still want to know him, from someone who knew what he was like before the prison.” It was true, after a fashion, which meant that she could say it without running afoul of the instructions that Mary and Juniper had given her.

“He was a researcher,” said Heshnel, after he’d paused to think. “He was eccentric, even by the standards of Second Empire researchers, and especially for an elf. He spoke Anglish with a lisp, rather than avoiding the difficult sounds, as most elves do, or some clever bit of magic, as is
common. The most eccentric thing about him, though, was his purity of focus. He dedicated himself to knowledge of the soul, without concern for politics, or even the core principles of what we were attempting to accomplish."

Valencia took note of how he said these things, that obstinate pride in the purpose of the Second Empire. Heshnel would apologize for specific aspects, or even, sometimes, say that it had all been a calamity, but much of it would be empty words, said to pacify or further his aims, rather than because he actually believed it to be true.

He and Solace could be set at each other’s throats with a single sentence, if need be. Someone might even do it on accident.

“What did he work on?” asked Valencia.

“Everything,” replied Heshnel. “Comparative studies to catalog the differences between species, studies with other mages to see how the soul interacted with their domain, studies with entads to see what parts of the soul they were touching, and how, … and yes, the more problematic aspects of the soul.” He hesitated, unsure of how to phrase it so that Fallatehr would come out best. He knew that some of the things he had to say would sound reprehensible to her, but he wanted her to see Fallatehr as he saw Fallatehr. He wanted to imprint his mindstate on her own.

There was a distant part of Heshnel that had gotten used to freely adjusting the internals of other people, and longed for that power once again.

“He studied non-anima. He studied the hells. He studied Animalia, renacim, the loci, all manner of things, sometimes at a remove, through commenting on studies done by others, and sometimes on his own, attempting to solve the open questions, or to check what he saw as sloppy work.” Heshnel paused, watching Valencia, seeing how she was reacting. She could have kept her face blank and allowed him to assume that she was concealing her opinion from him, but instead she affected confusion and doubt.

“That’s why he made me,” said Valencia. “He wanted to know more about the soul.” She couldn’t pretend to come to an epiphany, that would be too obvious, but she could pretend that she was slotting the fact of her existence into the broader picture that Heshnel was trying to paint.

“He thought the soul was elemental, a basic fact of reality and consciousness,” said Heshnel. “And yet the existence of the non-anima showed otherwise.” He paused. “I am sorry, for what you went through. People may claim that you are not a person, but it’s only because it’s easier for them to justify what they have done to you.”

“He knew I was a person,” said Valencia. “That doesn’t make it better. It makes it worse.” It wasn’t what she should have said, if she were trying her best to manipulate him.

“It makes it worse,” nodded Heshnel. He only seemed to come to the understanding as he said it. He was still searching for some way to make himself the better person, to justify the things that he and the others had done. Valencia watched his mind as revealed through his mannerisms as he came up short. “Forgive me,” he said. “I need some time to think.”

“You held out hope that he was alive,” said Valencia. “You hoped that it might one day be possible to rescue him from prison, and you knew that he’d escaped having his education stripped from him.” And you had hope, until a few weeks ago, that he could teach you once more, so that you could regain what you had to give up.

“Yes,” said Heshnel. He was hesitant. He’d gained some skill at deflecting away from his past, but
that skill was useless here. “I know he wasn’t kind to you. I wish that I could say that was because he had his reasons.”

The unspoken, ‘but I can’t’, hung in the air.

Valencia could see the good in everyone. With her augmentations (Jorge’s word), that came with the territory, but she was very careful to seek out the good parts, just so she would know where the light shone brightest within them. For Heshnel Elec, it was the way he wore his guilt, bone deep, so deep that she would never have seen it. He knew that things had gone wrong, even though he still believed in the ideals, even as he still wanted to defend his compatriots. He was incapable of self-directed change, incapable of doing better the next time, he’d already proven that by bringing together a band of murderers to kill Uther, but he wore his guilt well, and ruminated on it in a way that Valencia found pleasing.

She felt the itch to change him, to craft him into a better version of himself. It would take time and careful speech, especially if she didn’t want to reveal the devils she was using, but she thought she could probably do it.

She had thought she could manipulate people before.

“I have some books,” Valencia said instead, releasing the devil’s skills from her reservoir. “They’re about a young orphan who becomes a wizard. Would you like to read them?” Heshnel stared at her. “They might help us understand one another a bit better.”

Heshnel looked to the plants in his garden, the ones that he was planning to pluck or reap. He was thinking, and Valencia no longer knew what it was he was thinking about.

“Yes,” said Heshnel, slowly, turning back to look at her. “It’s been a long time since I’ve read for pleasure.”
“Did this ever happen to Uther?” I asked Raven. “Did he ever meet people from Earth? Not the
dream-skewered, but, um --”

“No one matching the names on the list my father was holding at Speculation and Scrutiny,” said
Raven. We were still standing around on campus, having not moved too much, even after Reimer
had left. “As for appearances … ?” She gestured at her own face.

“Right,” I said. “Right.”

“Juniper, it’s going to be okay,” said Amaryllis. She reached up and placed a hand on my shoulder,
and weirdly, it did make me feel better.

I took a breath. “If Reimer is here, and thinks that he knows me, that means that the person whose
body this is, is me, or an Aerb-equivalent, and the quest text --”

“Quest text?” asked Amaryllis.

“Sorry,” I said. I closed my eyes and repeated it back for them, fast as I could. “That implies there are
Aerb equivalents for everyone that I knew on Earth. Different, because they’d have to be, given how
different our cultures are, but … probably all there just to fuck with me.”

“He didn’t recognize me,” said Raven.

“No,” I said. “I noticed that.”

“If you didn’t want to interact with this quest, you shouldn’t have given him your address,” said
Amaryllis. “This campus is big enough that you would never have had to meet him again.”

“I shouldn’t have met him this time,” I said. “It’s coincidence, which means that it’s really the
Dungeon Master.” I screwed my eyes shut. “Urgh, all I want to do is just complete the quests, how
hard is that? How hard is it to just go take a week of classes and then meditate for a bit without stupid
doppelgangers showing up all the time?” I opened my eyes and looked at Raven. “No offense.”

“What’s a doppelganger?” asked Raven.

“Oh,” I said. “Changeling?”

“That’s not what I am,” said Raven with a frown. “You mean people who look like those you knew
on Earth?”

“Yes,” I said. “I’m sorry. It’s just, with you, Bethel taking on Tiff’s form, and now Reimer showing
up, I just wanted a normal college adventure. I didn’t think that was asking too much.”

“Who is Tiff?” asked Raven.

“It’s a long story,” I said.

“It’s not,” said Amaryllis. “She was Juniper’s girlfriend on Earth. They dated. You’ve seen her,
incidentally. She’s the form that Bethel first took, when she went by Kuum Doona. That appearance
was taken from drawings by Uther, and honed by his instruction.” A lesser person might have
paused, to let the gravity of ‘instruction’ sink in.
“I see,” replied Raven. “And some version of her, and all your other friends, are here on Aerb? Simulacra of the players who played in your games?”

“Maybe,” I said. “I don’t know.”

“It was the most likely scenario for that quest,” said Amaryllis. She turned to Raven. “I have long lists of guesses for each of them.”

“You predicted this?” I asked.

“No, I wracked my brain thinking about all the things that it could be, ordered them from least likely to most likely, and this one, counterparts from Earth, was the most likely,” said Amaryllis. “I did think that it was more likely to be your mother and father though, rather than your friends.”

“Shit,” I said. “They’re probably there too.” I groaned. “I know I’m being a big baby about this, but I really don’t want to talk to my mom and dad if I can at all help it.”

“Even if there’s easy experience in it for you?” asked Amaryllis.

“We don’t even know if there is experience,” I said. “Though …”

“What?” asked Amaryllis.

I sighed. “Though, if I think about it, our Aerb equivalents didn’t play D&D, because it doesn’t exist on Aerb, which means that they had their own ruleset.”

Amaryllis paused. “Meaning?” she finally asked. “Meaning what, that they might have been playing a, a game that maps to the system?” She didn’t have to say which system. It was the system that we’d spent a fair chunk of our time together looking over and trying to infer the rules of.

“I don’t know,” I shrugged. “Stranger things have happened.”

“No,” said Amaryllis. “No, they have not. That would literally be the strangest thing to have ever happened. It would require truly obscene levels of manipulation by the Dungeon Master, beyond anything that he’s done before, and … and there are things on your character sheet that aren’t public knowledge, aren’t there? Things that your alternate wouldn’t possibly have been able to know or deduce?”

“It’s just a theory,” I said. “Not even a theory, just … what came to mind. If they’re Aerb equivalents, then what did they play? Aerb doesn’t have tabletop gaming, at least so far as I’ve been told. If you wanted to translate those people, my friends, then you would have to give them something else to do, and different things to talk about.”

“Meaning that we might finally get a manual,” said Amaryllis. There was a gleam in her eyes.

When we returned to Bethel, Pallida was waiting by the door, leaned up against it and in a different outfit than she’d been wearing when we’d initially seen her. I wondered whether she had stolen those clothes. There would be no reason for her to, given how rich she was, and how much it might jeopardize what we were doing here, but she’d spoken fondly of thievery in the past, and seemed to have no compunctions about stealing.

“You’re down some members,” she said as we approached.

“Grak and Solace went their own way,” I said. “You haven’t seen them?”
Pallida shook her head. “You’re a student now, I take it?”

“Yes,” I said. “It will take more time than planned. You’re settling in?”

“I am,” nodded Pallida. “Just wanted to hold off on going in until the rest of you were back. There are a lot of strange and dangerous things in that house, no offense.”

“At this range, she can hear you,” I said with a raised eyebrow.

“Can she?” asked Pallida. She glanced back at the door to Bethel. “I thought you said that she extended some kind of thing beneath us, back on Poran?”

“Well, you’re a fool if you think she hasn’t spread herself as far and wide as she can,” I replied. “My guess would be that she’s got tendrils laced through the block as far as she possibly can, allowing her to monitor everyone around us.” I looked around, hoping that we weren’t drawing attention. “We should go inside.”

When we went through the door, Bethel was waiting for us. “It’s a fifth of a mile, actually,” she said with a grin. “Or a tenth of a mile in any direction, if I want to go all ways, but I thought it most prudent to spread myself along the street, as that’s the avenue of most likely approach. It’s all my domain, and I’m graciously allowing the houses and shops around us to continue existing.”

“Good,” I said. “You should talk with Grak about security. That’s his forte.”

“You really think that this house needs more security?” asked Pallida as she flopped down into a chair. The room we were in was a decoy of sorts, a bog standard living room of the kind that you would expect from a magical house that had sprung up on an empty lot. Somewhat quaintly, it fit within the confines of the exterior spatial reality.

Bethel had made it grudgingly, as it eschewed her normal aesthetic, and it was obvious to me that she had deliberately gone over-the-top to make a parody of a coziness, with overstuffed chairs, tassels on the furniture and rugs, useless knick-knacks taking up too much shelf space, pictures covering one wall, and a crackling fireplace that screamed ‘home’ almost as loudly as the knit afghans did. It was clearly meant to be twee and oozing saccharine sentimentality, but I kind of loved it.

“I don’t want laziness or complacency to undercut us,” I said. “Grak’s a better warder than Bethel, and if he hasn’t given his input yet, then he should as soon as possible.” I turned to Bethel. “No offense, obviously.”

“None taken,” she shrugged.

“One other thing,” I said, sitting down in one of the big, comfy chairs. “We might have a guest in the next day or two. Reimer.”

“Your friend?” asked Bethel, arching an eyebrow.

“Yes,” I said. “Or something that goes by the same name. Presumed non-hostile, so don’t get any ideas. I’m sure that you read the description in Amaryllis’ files, but --”

Bethel held out her hand, palm up, and showed me a miniature illusion of Reimer. She reached up with delicate hands and pulled on his arms, like she was going to rip him apart, but instead, more bodies accordioned out, maybe a dozen in all, holding hands and hanging down in a chain. It was almost everyone from Earth who held any importance to me.

“How?” I asked.
“She has the Dagger of Dreamspeech,” said Amaryllis. “She can look into our dreams.” She said it like it was obvious. I’d seen that item in the manifest, but I hadn’t realized the implication that she would be pulling information out of our dreams with it. “It’s good,” said Amaryllis. “If you can show these to the others, it will help us to make positive identification and prevent miscommunication.”

“Is she out there too?” asked Bethel. “Tiff?”

“Yes,” I replied.

“Hrm,” said Bethel. “Then I suppose I’d like a chat with her, when she’s available.”

Solace and Grak were slow to come back, but when they did, they had information.

“There was a death at Sound and Silence,” said Grak. “It happened in the temple during meditation three months ago. Many meditate there at once, but the circumstances are shrouded in mystery.”

“You would assume deaths,” said Amaryllis. “Five hundred people each week, that’s twenty-six thousand over the course of a year. Sure, they’re likely to be healthier than average, and they’re probably screened, with medical staff on standby, but embolisms happen.”

“You wouldn’t expect it to be shrouded in mystery,” I said. I frowned at Grak, thinking it through. “You also wouldn’t expect that if a single death were notable, it would happen so close to me arriving. And … it was around the time that I came to Aerb, so maybe it was setup for that.”

“Maybe,” nodded Amaryllis. “Or maybe it’s meaningless noise.” She gave a hollow little laugh. “There’s a trap in trying to see the narrative in everything, because there are red herrings, and even beyond red herrings, there are some things that are just scenery. ‘Not everything is a clue’.”

“I don’t really care about narrative,” I said. “What happens, happens. I do want to know what’s happening in Li’o though, so that we’re not blind-sided and having to play catch-up with all of the things we could have read up on in our free time.”

“There’s something else,” said Grak.

“Lots of somethings, actually,” said Solace.

“Something important,” said Grak, glancing at Solace for a moment with a frown. “The Demonblooded Festival, a week from now.”

“They throw a festival for the Demonblooded?” I asked, momentarily confused.

“Public effigies,” said Grak. “Then a public execution.”

“Really?” I asked. I was taken aback. “Here?”

“They’re not a protected class,” said Amaryllis with a frown. “It’s not uncommon for there to be some differences of agreement in how they should be treated.”

“But they’re not actually infernals,” I said. “You can’t just execute someone because of how they were born.”

“You can,” said Valencia.

“Well, you shouldn’t,” I replied.
“The demonblooded is a criminal,” said Grak. “Or so I was told.”

“Really?” I asked. “The demonblooded are rare, do they really have so many of them here that they regularly get charged with capital crimes? This small city-state we’re in just naturally executes that many demonblooded that they happen to have one on hand? Even without looking at them, I’m pretty sure that the demographics don’t work out.” I paused. “Or the demongraphics, if you prefer.”

“I do not prefer,” said Bethel.

“It has nothing to do with us,” said Amaryllis. “We can’t go around fixing every injustice we pass by.”

“Uther would have,” said Raven.

“Uther was insane,” said Pallida.

“He wasn’t insane,” I replied. “He believed that there was a narrative, and he was probably right.”

“That’s not why he wanted to help the downtrodden,” said Raven, folding her arms. “He wasn’t trying to do good just for, for points, because he thought there would be a reward at the end.”

“That would be the best interpretation of him,” said Pallida. “If there was actually a point to it, instead of just the universe rewarding him for what was sometimes objectively terrible decision making? If he was actually playing the game?” She snorted. “That might actually make me like the man.”

“We don’t know,” I said. I fucking hated playing peacemaker. It reminded me too much of when my parents would fight. “If we find him and can talk to him, then he can tell us what the reality of his situation was. I don’t want to judge him before then, not if it means making assumptions about what circumstances he was facing.”

“Yes,” said Bethel. She had set up a spike and was impaling the small figures of my Earth friends on it with a scowl on her face. They gave inaudible screams and writhed as she punctured their guts, one by one. “Yes, Uther might have had reasons for what he did, reasons which would make it all perfectly acceptable.” The last of the figures was Tiff, Bethel held her up by the wrist, pinching it between thumb and forefinger. Bethel looked at the illusion, for a moment, then looked past it, to me. “Speak like that inside me again, and I’ll kill you all.” She began ripping Tiff apart, limb by limb, moving with furious calm.

“I’m sorry,” I began.

Bethel disappeared, leaving the miniature corpses behind. She was using her illusion power to do it, just to send a message.

“Well,” said Pallida. She pursed her lips. “That was something.”

“She can hear everything you say,” said Raven.

“Like you would shed a tear if she killed me,” replied Pallida.

“You have valuable skills,” said Amaryllis. “No one wants you dead.”

Pallida put her hand to her chest in mock outrage. “You wound me, princess.” She looked over at the bodies, which were still slowly sliding down the spike that Bethel had made. “Is that just going to stay there then?”
“Yes,” I said. It made my stomach churn. “I probably deserve that.”

“Would she actually kill all of us?” asked Raven.

“Yes,” I replied. “I think so. She’s not in the habit of issuing idle threats.” I chewed my lip for a moment. “I agree with her though. There’s no conceivable reason that he should have done what he did to her. There’s nothing that logically paints him in a good light there.” There were things that weren’t logical, scenarios that were possible but so highly improbable that they had to be immediately discarded. Maybe the Dungeon Master had given Uther instructions of some kind, maybe there was a prophecy that had to be fulfilled … maybe. It was possible. I wasn’t about to say that out loud though.

Reimer arrived late at night, just when I’d started to think that he was going to wait for the next day. He was standing around in the cozy living room when I reached him, looking nervous.

“Hey man,” he said. “Do you just want to talk here?”

“Sure,” I said. I glanced at where the miniature version of him had taken a spike to the gut, making sure that it was all completely gone.

“You’ve dressed down,” he said, looking me over like he was trying to verify that I existed.

I was wearing jeans and a t-shirt, my usual back on Earth, though it was all of Aerbian provenance, plus the vambrace that would let me move into combat mode at a moment’s notice. Reimer was wearing practically the same thing as back on Earth, though he had the Aerb equivalent of sneakers, with hard rubber on the soles. He even had a baseball cap on, the kind that he’d always worn back on Earth. Setting aside the minor differences, it was like we were sitting down together back in Bumblefuck.

“Tell me about home,” I said.

“Nah,” replied Reimer, sitting back. “How about you tell me about whatever crazy shit you’ve been up to in the last five months, and then maybe I’ll tell you.”

I sighed, and mentally tucked away ‘five months’ for later. “I went to jail,” I said.

“Prison,” replied Reimer. “Jail is for the shire, prison is for the kingdom.”

“Right,” I said. “Prison. I spent some time there, tried to keep my head down, and then got put up for trial by adversity. We were dropped over the Risen Lands.”

“Shit,” said Riemer. “How the fuck did you make it out of that?”

“I made a friend,” I said. “She helped me to fix up a soulcycle and we rode to the wall. From there …” I paused. Whoever he really was, however much the differences between him and the real Reimer, I hated lying to him.

“That’s a bunch of bullshit,” said Reimer. “No way you made a friend.”

“And the girl?” asked Reimer. “Because I’m not going to outright say that’s Amaryllis Penndraig, but I know for a fact that she was dropped around the same time you were, and she looks almost
exactly like she did on the poster.”

(The poster, according to Amaryllis, had been for a group called the Future Leaders of Anglecynn. While there were a whole host of princes and princesses in Anglecynn, occupying the top level of decision-making for almost everything in their kingdom, there was a distinct and perpetual shortage of subordinate managers, maybe because of the lack of upward mobility. The FLA was a sponsored school club with chapters all over Anglecynn. It had a bunch of benefits for the kids who could qualify to join, including a yearly trip to Caledwich to see the seat of government and talk to some of the princes and princesses. Amaryllis had been the face of the program, because she was the right combination of young, high-ranking, and pretty.)

“I think you have an inflated idea of what I’ve been up to,” I said. “She’s a high ranking government official. That’s all I’m going to say about her. Now, can you tell me about what’s been going on at home?”

“Not much,” said Reimer. “You know, you could have written a letter once you were safe.”

“Reimer, you’ve gotta give me more than that,” I said. “I’m sorry I didn’t write.”

“Yeah, well, tell that to Tiff,” he said. “She’s worried sick about you.”

“Is she,” I hesitated. “Here?”

“Here?” asked Reimer. “Fuck no.” He gave me a concerned look. “You know she had her heart set on Claw and Clocks.”

“Oh,” I said. “I just … I wanted to see her.”

“Yeah, sounds about right, you bumped into me, and you wanted to see Tiff,” said Reimer. “Send her a fucking letter, if you care so much. She knows about you and Maddie, by the way.”

_Fuck you, alternate Juniper, why couldn’t you have been a better person?_ “How’s Maddie?” I asked.

“Dropped out of high school,” said Reimer. He said it with a casual air. “Not that you actually give a shit.”

I scowled at him. “Don’t talk to me like that.”

“Yeah?” asked Reimer. “Joon, I’m happy to see you, I’m glad you’re not dead, but everything that happened to you was your own fucking fault. If you didn’t want me to be mean, then you should have been a better person.”

“I’m trying,” I said. “I’m really, really, trying.”

“So send Tiff a fucking letter then, asshole!” asked Reimer. “Does it really take me bumping into you and telling you that to make you see that you should have done it ages ago? Bad enough you ghosted her, bad enough you fucked Maddie, but for you to just sit there like you’re totally oblivious to what she needs?” He shook his head. “Come on, man.”

“Sorry,” I said. “You’re right.”

“Okay,” I said. I closed my eyes and let out a breath. “You really piss me off, you know that?”

“That’s why we were such good friends,” said Reimer. He gave me a sardonic smile. “When you weren’t being such a whiny little shit about everything, or a backstabbing cunt.”

<Amaryllis would like you to ask about the games,> Bethel said into my head. It was the first thing I’d heard her say since she’d threatened to kill me. She could have just relayed the message in Mary’s own voice, but she’d chosen this as an olive branch.

“Did you bring any of your game stuff with to S&S?” I asked. It was an open-ended question, one that he would hopefully help me fill in the blanks on.

Reimer shook his head. “Your mom wouldn’t let me have any of it,” he said. “I’m not sure what she did with it. I was tempted to break in, but Tom talked me out of it.” He laughed. “You always argued that you could and should rewrite the system from the ground up. I guess we’re going to see how accurate that is, unless you’re planning on going home anytime soon.”

“No,” I said.

<I’m not sure that I’m going to be able to get away with telling him nothing,> I thought.

<Was that for me or her?> asked Bethel’s voice.

<Either,> I replied. <Both.>

<Amaryllis says to give him a minimal version of the truth, but try other things first,> said Bethel.

<She’s eager to hear what he knows.>

“I have a question,” I said.

“About Tom?” asked Reimer. “Or Craig?”

“Well,” I said. “I guess I want to know what they’re both up to.”

“Tom’s doing an apprenticeship, something to do with machine tools,” said Reimer. “Craig got himself recruited into the Host, just like he’d always talked about.” He shrugged. “It’s a cushy job, if you can get it, and assuming that a war doesn’t break out, and assuming you don’t end up doing wetwork for one of the princes. He probably won’t get court-martialed.”

“Thanks,” I said, and I meant it. I wondered how that compared to their post-graduation fates on Earth. “My question was … I don’t know if there’s a good way to ask this. How do you describe our games, to other people?”

Reimer frowned at me. “That’s your question?” he asked.

“Yeah,” I said. “Humor me.”

“Well, first off, I don’t,” said Reimer. “It’s never come up in conversation, because why would it? But if it did, I would probably talk about the minis, I guess. More tactile, easier to put into words. Otherwise you have to start talking about the character ledgers, and it makes it sound weird. Why?”

I grimaced. “I … I’ve been through some shit,” I said. “I don’t … I don’t remember it all.”

“What do you mean?” he asked, narrowing his eyes. “You forgot the rules?”

“Most of them, yeah,” I said. “It’s bits and pieces. And what’s left are just, I don’t know, jumbled.
Even the campaigns, it doesn’t fit together like it should. I just know that it was important to me. It was such a big chunk of my life.” That was a guess. I was hoping that it was a good one.

“How can you just forget two hundred pages of rules?” asked Reimer. “You’re just going to go ‘blah, blah, blah, and then I was out of the Risen Lands with a secret job and a brain like Swiss cheese’?”

“Swiss?” I asked.

“You really forgot?” asked Reimer. “You really just … you don’t remember any of the jokes either?”

“I’m sorry,” I said. “There’s an entad that eats memories, and I got hit pretty bad. I just … I want to know, mechanically, how the system functioned.”

Reimer stared at me. “Ten attributes,” he finally said. “Three physical, three mental, three social, and luck, based on, I think, something you read about bone mages. Does that ring a bell?”

“Yeah,” I said. “And … skills?”

Reimer was still staring at me. He nodded. “Two hundred and fifty-six,” he said. “Most of them worthless, mind you.”

“Woodworking?” I asked.

Reimer laughed. “What the fuck is up with you?” he asked. “What is this bullshit about not remembering any of it? Like, I knew you’d gone off your nut, but man, it’s not like you to screw with me. Not like this, anyway.”

“Can you just -- can you tell me what you mean?” I asked.

“Woodworking 100,” he said. “It was … you fucked up the system, like you always fucked up the system -- I, I don’t mean that as a dig, but you just added all this shit in because you were reading something, or you thought it was cool, and so the system had a lot of crap grafted onto it. You remember that much, right?”

“I guess,” I replied. “And … Woodworking 100?”

“It was … you remember virtues?” he asked.

“Yeah,” replied Reimer. He kept looking at me like I was crazy, which would have been less crazy than the truth. “Yeah,” he repeated. “I always said we should just call them something else, because you had all this crazy shit lumped in under virtues, even if it was just mechanical garbage, not actual virtues.”

“Woodworking 100,” I repeated.

“So … there are skills, which have caps from the attributes, and skills have numerical levels of their own,” said Reimer. He had apparently switched gears, wanting to explain things to me rather than question what I did or didn’t know. “Skills get skill-specific virtues at either level 10 or 20, then every twenty levels beyond that, with the final one coming at level 100. They got better as they went, usually, except for a few times you misjudged what was good and what was objectively terrible. For Woodworking, they were all about being able to be a better woodworker, or carpenter, or whatever, and the capstone virtue was that you could make anything out of wood.” He raised an eyebrow. “
“Ah,” I said. “That … seems dumb of me.”

“Yes,” said Reimer, sitting back with a smile. “So we got in this huge fight about it, and I quit playing until … until Arthur came to talk to me about it.” His satisfaction faded away as he said that.

“Amaryllis wants more,” said Bethel.

“I have a lot of money,” I said. “Can I convince you to write down every single thing you can remember about the system?”

Reimer’s eyes widened. “Joon, I’m just starting at the Athenaeum, I have classes in two days, I can’t just --”

A pile of cash appeared in mid-air between us and fell to the ground in bundles. Reimer stared at it, then looked up at me.

“One quarter million obols,” said Bethel.

“That’s a quarter million obols,” I said.

“The fuck,” said Reimer, looking down at the cash. “How’d you do that?”

“Entad,” I said.

“You have entads?” he asked. He pointed at the vambrace. “More than just whatever that one is?”

“A few,” I replied.

Reimer looked down at the money. “That’s … yeah. Sure. I’ll write down what I know.” He looked back up at me. “You’re not going to tell me more?”

“It’s classified,” I replied.

“It’s classified, and you’re going to pay me the cost of a house to write down the rules of a game that you mostly invented?” asked Reimer. “That’s nuts. That’s insane. And I don’t know if you know this, but I never knew the full rules, because you split the system in two. There were rules you never shared with us.”

“That’s fine,” I said. “Whatever you can remember.”

Reimer kept staring at me. “So I could just write down whatever I wanted, and you’d have no way of knowing?”

_Fucking Reimer_ “Are you seriously trying to munchkin this?”

“Munchkin?” he asked.

“Look, it’s money in exchange for the ruleset,” I said. “I’m friends with some very powerful people these days, so just write down the fucking rules, and if I get a chance to compare them to what’s back home and it looks like you were just fucking with me, I’ll … I’ll be pretty pissed off.”

Reimer looked like he was about to laugh, then looked down at the money. “Send a letter to Tiff,” he said. He met my eyes. “Tom too. Then I’ll do it.”
I wanted to object that I was giving him a pile of cash for writing down a partial set of rules for the system that I had apparently created, but I held my tongue and nodded. When I did, a yellow legal pad and a mechanical pencil dropped into his lap, startling him.

“I need to take a breather,” I said. “If you want coffee or water or anything to eat, just say it loudly and clearly into the air.”

“A bar of gold,” Reimer said, in the direction of the ceiling.

A bar of gold dropped from the ceiling onto the ground between his feet, narrowly missing his feet and denting the hardwood floor. Reimer stared at it, then looked at me.

“I wasn’t actually expecting that to work,” he said. He looked back down at the gold bar.

“You can’t take it with you,” I said with a sigh. “Please don’t ask for anything dangerous, because you’re likely to get it.”

Reimer looked at me for a moment, then opened his mouth again. “A naked woman with --”

“Pretend it’s a genie,” I said. “Pretend that it’s a horribly malicious genie that will answer the letter of the request but not the spirit, if you try to ask it for anything besides, I don’t know, chocolate and tea. Actually, pretend that it doesn’t even care that much about the letter of the request and is perfectly capable, willing, and eager to cut off all your fingers if you’re being inconvenient. Okay?”

Reimer hesitated. “Why are you no fun?” he asked, but he had no conviction in his voice.

“I’m going to step into the other room,” I said. “Write, please, I’ll be back when you’re done.”

“How will you know?” asked Reimer.

“I’ll know,” I replied.

I went through the door to the next room, where everyone was waiting.

“There are a lot of implications,” said Amaryllis. “We have two days until the start of term. I’m of the opinion that we should go to the Sporsan, which is where Juniper’s body is if the worldline was interpreted right, and get the manual tonight.”

“You’d have to do it without me,” I said. “I don’t want to go there, I don’t want to see it, I don’t want to have anything to do with any of it.”

“There’s a manual,” said Amaryllis. “Even if half of it is incorrect, it would still be invaluable. We would get to know how outcomes are determined within the system, what the virtues for higher levels of skills are, we’d --”

“It’s the Dungeon Master fucking with me again,” I said. “I don’t want to go back to Earth, and I really don’t want to go see a playhouse Aerb version of my hometown with all the familiar faces twisted and warped by being transplanted here. I’m not doing it. You can do it. Take Bethel, take the Egress, take the key, I don’t actually care, just leave me out of it.”

“He didn’t recognize me,” said Raven. “But he mentioned Maddie.”

“Yeah,” I said. “I meant to talk to you about that, before, but --”

“It’s fine,” said Raven.
“I’ll volunteer for the team that’s going to Juniper’s hometown,” said Solace.

“It’s not actually my hometown,” I replied. “It’s a mockery of it.”

“I’ll go too,” said Grak. “You’ll want a warder.”

Amaryllis nodded. “We can’t use the key without a worldline close by,” she said. “We’ll take the Egress. I plan to leave tonight.”

“Reimer recognized you,” I said.

“I’ll be in full plate,” Amaryllis replied. “Someone else can do the sweet talking.” She glanced at Valencia.

“I’ll come,” she said. She paused, then looked at me. “Though … with your parents, do you want me to refrain from seeing them?”

“Do whatever you want,” I said. “Accomplish the mission. Just please don’t tell me about it. I know too much about those people anyway.” I tried to get myself to calm down. I wasn’t particularly happy with this turn of events. “Sorry,” I said. “I’m just … a bit emotional right now, and if I don’t have to go back home, or whatever it is that’s standing in for home, then I’m not going to. End of story.”

“It’s a quest, Juniper,” said Amaryllis. “I don’t know if we can actually complete a quest without you.” She pursed her lips. “We’ll try. But if we get held captive by forces of unimaginable power, I’ll consider it within my rights to say that I told you so.”

I turned to Bethel, then realized that while we were standing inside her, she hadn’t given herself a material form.

“Bethel?” I asked the air. “Is he writing?”

<Yes,> she replied, into my mind.

“Okay,” I replied. I looked to Amaryllis. “Be careful, when you go.”

“We’d benefit from someone who knew the layout,” said Amaryllis. “Someone who was, if not a local, then something close to one.”

I sighed. “There’s nothing for me there,” I said. “You’ll be bringing an extreme amount of firepower into a town of ten thousand people, where the local weapons are likely incapable of hurting you.”

We’d figured out the town from the teleportation key awhile ago, because there wasn’t a good reason not to. My internal name for it was Fumblebuck.

“We’ll be going into Anglecynn,” said Amaryllis.

“We’ve been in Anglecynn before,” I said. “It was a stopover when we were going to Sulid Isle.”

“I’m no longer asking you to come with,” said Amaryllis. “I just want to clarify that there’s a strong possibility that it is, in fact, dangerous. The Egress is extremely fast and hard to detect, but if we trip a rapid-response team, there might be trouble.”

“We should talk to Jorge and Finch,” said Valencia.

Amaryllis winced. “I’d rather that Uniquities doesn’t know where we’re going. If our existence becomes more public than it already is, then someone might try to use these people against Juniper.”
“We’re trying to stay in Finch’s good graces, right?” I asked. “I figure we can only count on him to bail us out of international incidents another five or six times.”

Amaryllis sighed. “Point taken,” she said. “We’ll land the *Egress* on the Isle of Poran and give him a talk, but so far as I’m concerned, these need to be spheres that overlap as little as possible, at least to anyone on the outside. Juniper, you would put Tiff in danger if you talked to her, do you understand that?”

“I don’t want to talk to her,” I said.

“Really?” asked Amaryllis. She raised an eyebrow.

“I want to talk to the real her, not the Aerb-equivalent version of her,” I said. “Right now, all I want to do is get through a week’s worth of classes, a week’s worth of meditation, and then plow through the next thing. Mixing quests together doesn’t appeal to me. The whole idea that there are almost-but-not-quite copies of everyone I cared about is … well, existentially terrifying, obviously, but I’m not going to have them be used as a tool against me, and I don’t care about them any more than I care about some randos off the street.”

There was an awkward silence after I’d said that.

“I think that was a lie,” said Valencia.

“Of course it was a lie,” said Grak.

“I assumed it was a lie, and I barely even know him,” said Pallida.

Valencia frowned. “Well I didn’t want anyone to think I was using --”

“Alright,” I said, throwing up my hands. “Fine. I care, a bit. But what does it even do for me to meet with any of them and tell them that their friend is effectively dead, replaced by a close-enough clone, and that I’m sorry for whatever it was he did, because I did something similar to *their* close-enough clones? How does that help anything?”

“It might make you feel better,” said Grak, grumbling slightly, as though he was taking pains to point out the obvious.

“Maybe later,” I said. “Mary, you can go off and do the quest on your own, or just grab the manual, or whatever you want.”

“That’s what I’ll do,” she said with a nod. “Anyone else?” she asked, looking around. “Heshnel, Pallida? There’s a strong chance that we’ll be back before the night is over.”

“I have a garden to tend,” said Heshnel.

“I’d love to,” said Pallida. “I’ve got plans tonight though.”

“Plans?” asked Raven.

“Yes, *plans*, young one,” Pallida stifled a sigh. “I’m an adult woman, and I have plans.”

“That’s fine,” said Amaryllis. She turned back to me. For a moment, it looked like she was going to ask me one last time whether I was sure that I didn’t want to go, but instead she only said, “Wish us luck. Keep an eye on Reimer.”

“Okay,” I said, nodding slowly. “Good luck.”
She filed out, with the others, and Heshnel left at the same time, leaving me alone with Pallida and Raven.

<Still writing?> I asked Bethel.

<He took a break to summon a variety of drinks and snacks,> replied Bethel. <Now he’s writing again.>

<Thank you,> I replied.

<You’re welcome,> she said. I was surprised by that. I hadn’t actually expected a response to basic politeness.

“Okay,” I said, turning to Pallida and Raven. “Can we hash this out, somehow? The two of you together are bordering on causing some actual problems within this team, and I’d like to address it now, while it’s convenient, rather than have it go on.”

“Nope,” said Pallida. She let her ink-black armor surround her, slipping over her skin and shaping to fit her. “I’ve got stuff to do. Besides, you seem like you would suck at this kind of thing, and Maddie’s not too happy with you right now.” She went out the door with a saunter, leaving me alone with Raven (and, obviously, Bethel, who was always assumed to be listening in).

“I meant to tell you about the Maddie thing,” I said.

“Did you?” she asked. She was sitting down in one of the conference room’s chairs, and was watching me impassively.

“I did,” I said. “Didn’t seem appropriate when we first met though.”

“How old was she?” asked Raven.

“Fifteen,” I replied. “I was seventeen.” I didn’t want to say anything that felt like a defense.

“Oh,” she said. “When I met Uther … I was twelve, in human terms. I thought, maybe, she was … I thought maybe that’s how old she was.”

“No,” I said. “I don’t know why there’s an age difference. Though he was how old when you met him, in his early twenties? If I had to guess at intent, then maybe it was for you to always be a child in his eyes.”

Raven held herself still. “I see.”

<That’s not what she wanted to hear,> said Bethel.

<You’re whispering advice now?> I asked.

<You need it,> said Bethel.

“Can I ask,” said Raven. “Can you, um, tell me about her?”

“Not much to tell,” I said. “She had an older brother, Craig, they were raised by their mother, absent father … there was a thing called the ‘internet’, which I’d have to get into the weeds on to really help you understand her. I think it was sort of like, uh, the Republic of Letters, if you ever had an equivalent? A group of people writing letters back and forth?”

(The Republic of Letters was a 17th and 18th century international clique that almost all of the
greatest thinkers of the time were in. They talked to each other by letter, and when they were co-
located, met in salons, creating an intellectual movement that in theory transcended their borders and
cross-pollinated ideas and theories far and wide. In practice, there were some bitter feuds and
rivalries, which made good fodder for D&D adventures. I assumed that they either existed on Aerb,
or had in the past.)

“The Society of Letters?” asked Raven. “I was a member.”

“At twelve?” I asked. “Or, twelve equivalent?”

“I was precocious,” said Raven, without a trace of humor in her voice. “I used a pseudonym. When
you’re as old as I am, people just see you as a fixture.”

Okay,” I said. “Well, the internet is like the Society of Letters, but there’s no barrier to entry,
communication is instant, and it’s completely anonymous if you want it to be,” I said. “There are
very few checks and balances. So, that was the Society of Letters that Maddie was a part of, and a lot
of it was just … insane, by Aerb’s standards. And she was in the thick of it, spent most of her time
neck-deep in it, and it sometimes made her a bit hard to understand, or to deal with, because it was
like she was from this other culture, and it was one that we didn’t share with her.”

Raven looked away from me. “I can relate,” she said, staring at the wall. She finally looked back.
“The Society of Letters was one of my assets,” she said. “It was one of the things that made me
valuable to Uther. And it was one of the reasons that I wanted to go with him, to see the world.
There were so many people that I talked with only through written words, people that I felt like I
knew, but had never seen in the flesh.”

“Must have been a shock to them,” I said. “To see that you were, to all appearances, a child.”

“Yes,” said Raven. “I thought it would be fun. It wasn’t always pleasant. Eventually word got out.”

“And then what?” I asked.

“And then … Uther was in the middle of making his mark. He knew things that no one else did. He
had ideas that didn’t occur to anyone else. He was, it’s obvious in retrospect, from the future, or
something like it, from a society that had already done all the hard work of figuring things out.” She
sighed. “I was his go-between with the Society of Letters. I was valuable, because I knew people,
and I knew what they knew, and I could help to connect him. I was valuable because I was the
person that they had to talk to in order to get Uther’s ear.”

“Sorry,” I said. “None of this stuff is mentioned in your biographies.”

“No,” said Raven. “It was a sad, personal struggle, trying to be taken seriously, wanting to fit in, and
finally getting it, only for it to all be about Uther. Eventually I came to accept it, to accept that he was
this titan, and I was … not.”

“You kicked my ass,” I said. “So you have that going for you, which is nice.”

“You’re weak,” Raven replied. “You were also impaired, but beyond that, you were weak. I’m not
at the peak of my power anymore, and even then, the fight we had, it was like you were one of the
enemies I sometimes had to deal with on my own, not trivial, but not strong. The kind that Uther
could kill by the handful as a prelude to the real battle. The kind of enemy that I would fight one-on-
one while the real battle was happening elsewhere.”

“I’m trying,” I said. “He had thirty years to get that strong. I’ve had low single digit months.”
“I know,” said Raven. “I’m just trying to help you understand what’s coming. I spent a century reading the signs and seeing the end of the world. What I’ve seen, since you’ve been here? It seems like we don’t have much time.”

“I’m trying,” I said again. “It’s the reason that we’re here. I’ve just … I’ve had this level up thing hanging over my head, and now that’s maybe, hopefully dealt with, and I’ve had to use time in the chamber just to help me deal with it all. I -- I’m sorry, for how it went with Maddie. I wish that I could take it back, or do things differently, but --”

“It’s okay,” said Raven. “Uther wasn’t perfect either.”

“He had women,” I said. “At least, everyone says so. I’d wanted to ask about that.”

“None until after his wife, Zona, made it very clear that was what she wanted,” said Raven.

“That’s how it happened?” I asked. “I thought that was … farce, I guess. A cover for him.”

“No,” she replied. “He loved her. I think it’s important that you know that. After the Wandering Blight took half her body, physical affection wasn’t much of an option. Even if … if they could have managed something, she was weak and frail, intellectually capable, but physically …” Raven trailed off, then looked at me. “Most of what you’ve heard was true. She only wanted him to be happy. She was Queen of the Zorish Isles before they married, a noble’s noble, and she’d always expected that whoever her husband might end up being, he would be a philanderer. It was expected.”

“But he didn’t?” I asked. “Not until later?”

“Their marriage was a political one,” said Raven. “But he wasn’t a noble. He wasn’t even from Aerb. He had different ideas about what a husband should be to his wife.” She pursed her lips. “A lot of it was shielded from me, in those days.”

“Shielded how?” I asked.

“Some of it appeals to prurient interest,” said Raven. “The marriage wasn’t for love, it was for politics. Zona expected him to consummate it on their wedding night. Uther didn’t want to.”

I raised an eyebrow at that.

“He was conflicted,” said Raven. “She was beautiful, but for her it would have been duty, not an act of love, and he found the idea of that unwelcome, because he was enamored with her from the start. He stayed chaste, which she found irritating. Eventually, she started to really see him, not as the upstart king who vanquished the evil and took their reins of the kingdom, but as he really was, thoughtful and intelligent, with a meditative calm that gave way to decisive action. He was the Poet King, by that point, and eventually, she realized that it wasn’t just a moniker. And then they were in love,” she said, her breath catching a bit, “perfect for each other.”

“Until the blight got to her,” I replied.

Raven hesitated, then nodded. “Maybe. I still think --” she let out a sigh. “A part of me still wants him to have resisted. To have stood stoic and declared that she was the only one for him, the physical be damned. Maybe he would have, if she hadn’t tried so hard to force women on him.”

“Maybe,” I said. I was a bit skeptical.

“You don’t believe me?” she asked.
“It sounds noble,” I replied. “I just … I’m having trouble mapping that to the Arthur that I knew.” I wasn’t actually sure that it was noble, but it sure sounded noble. Arthur playing that aspect up for the purposes of his self-imposed character? Or the legitimate moral stance of someone who felt strongly about monogamy? I couldn’t actually say.

Raven shrugged. “It was who he was. When he believed in something, it was hard to shake him of it. He would adapt to new information, but he thought faster and harder than anyone else, both sides of the argument. He would answer objections before anyone had even thought to raise them.”

“But not that time?” I asked. “Not with his wife?”

“I don’t know,” said Raven. “I wasn’t privy to their discussions. There was so much that I didn’t know about him, even after thirty years together. You’ve heard that they died?”

“The women?” I asked. “Yeah.”

“That was exaggerated, with time,” said Raven. “Some of those women had no relationship with him. And there were others, who he took as lovers, that no one ever knew about. But it did happen, with regularity.” She hesitated again. “He insisted that it didn’t, that they were women in dangerous situations, that danger followed him, or that he went where the danger was, but … it was like there was something protecting him, and us, a magical effect that couldn’t be quantified or measured which allowed us to escape by the skin of our teeth, and that effect simply didn’t extend to them.”

“But why did he keep doing it then?” I asked.

“Carrying on the relationships?” she asked. I nodded. “It didn’t seem to matter, or that was what he said. If he rebuffed their advances, if he tried to manipulate things to push them out of the picture, it only seemed to end up worse. There was a woman who was smitten with him the moment we showed up, shortly after the theory was first being floated, five years after Zona had been brought back from the brink. She was bright and sunny, almost irresistibly so, and Uther pushed her away, worried that there was some curse, something placed by an ineffable power of the kind we had only just begun dealing with. He paid for her way out of town, and watched her leave on horseback.”

Raven swallowed. “We found her body three days later. There was something off about the wine we were drinking, and when we opened the keg … I still have trouble with wine sometimes.”

“Shit,” I said.

“Yes,” replied Raven. “Your friend, or whoever he is to you, Reimer, I would be careful about sending him away. I’ve been trying to put our adventures in the context of this Dungeon Master, and the games you played, and it might have been that a woman soaked in wine was a warning not to deviate from what was planned.”

She turned and walked from the room, without another word.

I sat down at the conference table and rested my head against the tall chair, cursing silently to myself. I closed my eyes and dismissed the character sheet that popped up, so that I could have some time to think. It wasn’t that late, but it felt late, maybe because I hadn’t synced up chamber use with Aerb’s day-night cycle, or maybe because too much shit had been going on lately. I didn’t blame Amaryllis for going off to Fumblebuck, not when a manual would be useful, but I really didn’t want to deal with any of it. I just wanted to go to college and have adventures, was that so wrong? If there was a narrative, why did it have to be this narrative?

“Can we talk?” asked Bethel. I opened my eyes and looked at her. It was the first time she’d made an appearance since driving the dolls through their spikes.
“I’m sorry,” I said. “I was trying to make peace between Raven and Pallida, and I didn’t think about how the words would sound to you. I was tunnel-visioned on the one problem and not thinking about you. I hope talking with Raven about Uther, how she viewed him, wasn’t too bad for you.”

“She’s blinded,” said Bethel. She paused, measuring what she wanted to say to me, changing tracks. She took a seat beside me, more tentative than she’d ever moved before. “I’ve killed a lot of people.”

“I know,” I replied.

“I didn’t always want to,” said Bethel, and only then did I recognize a sort of hollowness in her voice. “I was forced to, naturally, first by Narcissus, who would have hurt me otherwise, later by others who wanted me for a weapon. But some of those people I killed, I killed of my own volition, and even then, I didn’t always want to.”

She leaned forward slightly. “There was a couple who came to raid me, back before the tuung had such heavy restrictions on travel. They walked my halls, looking for magic, or at least something that they could sell. When they split up, I appeared before the woman, and told her to be quiet, or I would slit her throat. I had questions I wanted answered about the outside world. She started screaming, almost at once, and I thought to myself, well, I gave her an ultimatum, hadn’t I? And if she defies me, what choice do I have but to end her and keep true to my word?”

“But you didn’t want to,” I said with a nod.

“I didn’t,” said Bethel. “I did it anyway. It did nothing to help me accomplish my goals, it was just … without any true purpose. It didn’t set a precedent for anyone else, it didn’t get me the information I needed, I just killed her because I had said that I would, and I felt it important to follow through.”

“Yes,” said Bethel. She sat there at the table next to me and drummed her fingers on the table for a moment. “I’m not going to kill you,” she said. “I’m not going to hurt the people that you love. I was only saying that to lash out at you.”

“It is,” said Bethel. “I understand being a child.”

“Can I say again that I’m sorry?” I asked. “About earlier?”

“You can say it,” replied Bethel. “I already heard it the first time.” She cocked her head to the side. “He’s done, incidentally.”

I took me a moment to realize that she was talking about Reimer, who had been toiling away in the other room. I got up, took one last look at Bethel’s impassive face, then went to go join him.

Reimer was sitting in the same chair that I’d left him in, but his immediate surroundings had changed. He had a table beside him with eleven different drinks on it, some of them steaming and others frozen. A second table held six different plates with a variety of snacks on them, a few half-eaten.

“Hey Joon,” he said when he came in. He glanced at the drinks and snacks. “Genie’s pretty friendly,
Reimer laughed that off, then saw the set of my face. “Seriously?” he asked.

“Yup,” I said. “You’re done writing?”

“Yeah,” he said. He shook his hand. “I tried to go fast. There’s still some orientation stuff tonight I didn’t want to miss.” He stood up and passed the legal pad to me.

Written in big, bold, capital letters were the words “SUCK A DICK”.

Reimer smiled at me.

On the next page were his actual notes, and I could tell just from the way the paper had crinkled that it went on for several pages in the hasty writing that I’d once known so well (I’d looked over his character sheets trying to make heads or tails of them more than once).

Skills have primary and secondary attributes and are capped at three times primary or five times secondary, whichever is lower. There were a few ways to raise skills above that, whether by virtues/afflictions, entads, spells, or special circumstances. When a skill is checked, roll two ten sided dice, one for ones and one for tens, and add your skill, multiplied by either the average of the primary and secondary attributes, the primary attribute, or the secondary attribute, depending on what the GM feels like, then add in special circumstances or multipliers depending on virtues/afflictions, conditions, GM whims, and other factors. Check that against another, target number.

Usually we’d have all three numbers written down on the sheet for each of our skills, and any in-the-moment multiplication followed the “first digit” rule, where you only multiply the first digit of the number, which made things a little less gross to work with. There were just a fuckton of corner cases for everything we wanted to do, part of it crap from before I joined, and part of it shit you made in response to me. The section on grappling was four pages. I hope you remember that.

Rolls were always against the GM, who set arbitrary but “realistic” numbers, sometimes with some principled backing for opposing characters. Some of the time this was just bullshit, but it was hard to tell exactly when. You slapped write-ups down on the table more than once, so I don’t know. Rolling against players mostly didn’t happen, and the rules for it were constantly in flux, more than other pieces.

Should probably mention that a lot of this system wasn’t unique, it was descended from a game called Fullplate that focused more on wargaming instead of adventures/theater. Your innovation was hacking on a whole bunch of garbage and including some talky bits, though at least some of the work was done by Arthur’s brother, not sure how much.

I kept reading for a bit. Some of it was new information (yes, attributes actually did affect skills), but a lot of it was confirmation of things that I already knew from the game, or which had been hinted at by the virtues. A d100 system was fairly standard, as systems went, but I wasn’t sure that was actually accurate to my situation. Critical hits were apparently level-dependent, on the theory that luck played more of a role than skill at lower levels. The system was big on categories of effect, levels of success, and results tables, which probably accounted for the sheer length of it (though I didn’t know whether “two hundred pages” was hyperbole or not).

The biggest get was probably the skill synergies, which were explicitly listed, though it was just a
sketch of the groups, not what virtues you actually got from them. That one I asked Reimer about.

“There are either five or six virtues per skill,” said Reimer. “Five point five, call it. There were two hundred and fifty-six skills. That’s what, one thousand four hundred and eight before getting into all the combo virtues? Not to mention that you never told us them unless we got there, which we mostly didn’t. So if you don’t know, then I don’t know what to tell you, they’re either in the big book, or you never wrote them down because you didn’t think that anyone was actually going to take Accounting.”

“Okay,” I said. “You didn’t write any virtues down though. You don’t remember any?”

“Do you remember any?” asked Reimer.

“Thaumic Dodger,” I said. “Eliminates the penalty for dodging magic.”

“No, it was more than that,” said Reimer. “Magic, magical effect, entads, entad effects, and then the Layman clause.”

According to the notes that Reimer had given, the Layman was more of a concept than a person, one which could be ‘instantiated’ in different ways, either through DM fiat, through agreement by the players, or by asking a third party who had no or little stake in the outcome. What that would mean on a system implemented in full with more rules, on what was probably a simulation was anyone’s guess.

“I want more,” I said. “Everything that you can remember. Everything.”

“I’d be here all night,” Reimer complained.

I gestured at the pile of cash on the floor.

Reimer narrowed his eyes. “Point taken. Not sure on the wording though. I used to use a notes system, but all that got burned.”

“Burned?” I asked.

“I was pissed off,” said Reimer with a shrug. “Sort of a, I don’t know. Effigy, I guess.”

“Of me?” I asked.

Reimer nodded, then shrugged again. “You’re a dick. You’re a garbage dump of a person. You’re obscenely rich and hobnobbing with your high school crush, with some kind of military deal worked out, if any of that was true, but … fuck if you didn’t do your best to piss everyone off, and that always made it easier to be pissed off at you.” He looked down at the cash. “I don’t really want to rehash any of this right now.” He looked back up at me. “I’ll mail you whatever else I can remember, but it’s hard to reconstruct from memory, given how long it’s been since we played. I cursed the game more than once, after you were gone. Said I would never play it again, not like there was any threat of that.”

“For what it’s worth,” I said, “I’ve been trying to not be a dick.” I struggled to put it into words. “I’ve been trying my best not to hurt people, to be honest with them, to make up for mistakes, or if not make up, then at least live my life better than I did back in Anglecynn.”

“How’s that going?” asked Reimer.

“It’s complicated,” I said. “Depends on who you ask. I’d give myself a C-.”
“A what?” asked Reimer.

“Oh,” I said. “Letter grades. It’s a new thing, A is highest, F is lowest.”

“Why is Z not the lowest?” he asked.

“The point is,” I said, “I’m trying. It’s going okay. I think I catch a fair number of mistakes before I make them, and I’m getting better at recognizing and acknowledging mistakes after they’ve been made. But I am trying.”

“Okay,” shrugged Reimer. “You have anyone to call you out on your bullshit?”

“A couple people, yeah,” I said. “I don’t need you to believe me. I don’t need you to forgive me either. I just … I’m trying, that’s all, and I’d hoped that maybe it would help you to know that.”

“You owe Tiff and Tom a letter each,” said Reimer. “I’ll check up on that. Maybe I’ll actually believe you, if you follow through.”

*That’s going to be pretty fucking hard when I’m not the person that they remember.*

“Okay,” I said. “The money is yours. Leave the bar of gold. You can send the virtues by mail, as best you can remember. Maybe mark down how confident you are in each of them?”

“Fine,” said Reimer. He seemed unsure of himself. “What’s the deal with all this?” he asked. “I don’t actually believe that you’re paying me all this money for something so trivial.”

“It’s complicated,” I said. “Need to know. Classified.”

“Infohazard protocols?” asked Reimer with a roll of his eyes.

“Yeah,” I said. I hesitated. I hadn’t thought that the existence of infohazards was well-known. Unless … “Which campaign was that?”

“Long Stairs,” answered Reimer. He looked me over. “Shit, what happened to you?”

“There’s an entad,” I said. “The Memory Blade. It’s a use-in-emergency-only sort of thing, since it gets sharper the more memories it takes from you, and, well, I was in an emergency. I lost a fair bit.”

“Since when do you know how to use a sword?” asked Reimer.

“Since I was forced to learn,” I replied. I tapped the legal pad with a finger. “I’d like a list of campaigns too, as many as you can remember, with as many events, entads, magic, worlds, et cetera as possible.”

“I’ll mail it,” said Reimer. “I’m not going to stay here all night.” He shifted his stance. “I should actually probably get going.” He shook his head. “It’s been weird seeing you.”

“Yeah,” I said. “Yeah, I don’t want to keep you, if you have things to do, but do send me more. Virtues, campaigns, anything else you can remember.”

“Because your memory has been shot through?” asked Reimer.

“Yeah,” I said. “And … it was important to me.”

Reimer shrugged. “You know that there’s not a lot I wouldn’t do for money. I’m serious about you writing to Tiff and Tom though.”
“I will,” I said.

“Okay,” replied Reimer. “Good.” He stood there awkwardly for a moment, then began gathering up the money from the floor and sticking it in a bag that materialized beside him. When he was finished, he slung it over his back. “Alright,” he said. He glanced at the door. “If you’re in some shit, don’t involve me.”

“I’ll try not to,” I said.

I was pretty sure that it was entirely out of my control.
I sweated over it a fair bit, but Amaryllis and the others came back safe and sound at around four in the morning, but without the manual. They had met my double’s dad, who was close enough to being my dad, a helicopter pilot for the Anglecynn military who had left after a decade of service to work in the private sector flying helicopters for farmers (aerial applications and photo survey, mostly). That was more or less what had happened with my real dad, though replace the Anglecynn military with Gulf War I, and probably less negotiating with draconic bureaucracies.

He’d been reticent to let them in, but Valencia had taken the reins, and from there, it hadn’t taken her too much to get him to open up. My dad, the real one back on Earth, never opened up, except a few times when he was drunk. I asked that they go light on the details, and they had obliged, giving me only what seemed like it would actually matter. First, my parents on Aerb were divorced, and had been for seven years. Second, my mom had left Fumblebuck after I was put in prison, going to parts unknown. Third, the manual, if it still existed, wasn’t anywhere in my dad’s house, and he had no idea where it might have gone off to.

After a search of his house, which he’d for some reason consented to, they had gone to my mom’s house, which had produced nothing worthwhile, then over to speak with a few of the fake versions of my friends, none of which produced any fruit. Fake Maddie looked different from real Maddie, for unknown reasons, and that was as much as I wanted to hear about it. So far as they could piece things together, the fake Juniper had followed nearly the same trajectory that I had, and most of the differences could be accounted for by what had to change, if it was all playing out on Aerb instead of Earth. I was apparently Aerb’s version of Gary Gygax, unrealistically prolific given that I was building a lot of it from the ground up, creating rules from whole cloth that just so happened to have parallels to game systems I had played on Earth, and then putting in all of the same effort toward campaign creation that I had in the real world on top of that. All, somehow, without the internet for fast research and easy inspiration.

The whole cast was there in Fumblebuck. Fake Arthur had died in a car accident, I had dated fake Tiff, and later fake Maddie, still ill-advised but a little more acceptable on Aerb, and fake Craig had still been really upset about it. The real Craig had been talking about joining the Navy, and the fake Craig had joined the Host, which I thought was likely another way for the Dungeon Master to scatter them all to the four winds, the better that I would eventually run into one or another, no matter what paths I took.

None of it was actually useful though. The quest stayed incomplete. Amaryllis found it frustrating, but I was adamant that I wanted nothing to do with it. Besides, what was the Dungeon Master going to do? Cheat so that only I could figure things out, so that only my presence would accomplish whatever the quest was supposed to accomplish? No, fuck that, I wasn’t going back home.

I was in college, at least for a week, and I was determined to enjoy it.

My first class at the Athenaeum of Sound and Silence was listed as “A Still Magic Primer”. I actually had a passing understanding of my instructor; she was the woman who had written The Commoner’s Guide to Still Magic, one of the most singularly useless texts in all of known existence, though it had fierce competition from the other titles in that series. I did read the whole thing though, against my better judgment, so I thought that I had a bit of a handle on the magus, Genna Ermaretor. She was much more concerned with people than with the actual study and practice of still magic, and while some of that might just have been to fill pages of a rather slender book with nothing of real
importance, I thought I saw some passion for the individual stories in the book, rather than the science or practice of magic. It was hard to tell though, and I was trying to go into the class without preconceptions.

Magus Ermaretor stood before the class behind a podium, with a bored student standing next to her for unknown reasons. The student’s arms were in a cramped pose though, so I assumed that she was some kind of mage as well. Magus Ermaretor was a penumbral, a species that could only tolerate about four hours of sunlight a day and fed on shadows in a form of reverse photosynthesis (which was entirely magical rather than using real physics). She had jet black hair done up in a bun, and gray skin, like she’d been rendered in monochrome, an effect which was offset by the garishly bright colors of her dress, reds, blues, and purples in a pattern that instantly drew my eye away from her face.

“Welcome to a Still Magic Primer!” she called to the class with a cheerful smile. There were maybe a hundred people in our lecture hall, and I was near the back, largely because the plan was for her to give me a rubber stamp. The sound was still crystal clear though, like she was standing right next to me, despite the fact that there were no speakers. The student beside her was frowning and concentrating, which clued me in that this was probably the sound component of vibration magic at play.

“In this course, we will discuss the history of still magic, the craft as it’s practiced today, what to expect when you’re down in the temple for meditation, and various other topics that will help prepare you for a life as a still mage.” She cleared her throat. “This is not a difficult course, nor is it one oriented toward practical applications. It is, instead, a required course intended to give you the background necessary to become a part of the common culture of still mages, who will be, after all, your peers and colleagues once you’ve matriculated.”

She spent some time on history, most of which I already knew from The Commoner’s Guide and other supplemental reading, and the parts that were new seemed extremely unimportant. I perked up when she talked about Uther.

“The Penndraig reforms were extensive,” said Ermaretor. “An expansion of the campus was one of the most obvious ones, done to accommodate a great deal more students than had been seen in years past. The temple was changed, with entads from Uther’s vast stores added to allow a much greater density of meditating still mages, less time in the temple for each of them, and a solution to the logistical problems associated with moving people in and out of the temple. He meditated in the temple himself, and picked up an understanding of the art over the years, some of which he used, in his fashion, to revolutionize the field. It was Uther who extended still magic to the domain of cold, Uther who showed that we could produce silence, and Uther who pioneered the deep meditation of the soul.”

I started paying more attention at that one. I hadn’t heard of such a thing, but here it was, being casually tossed off in a freshman level class (not that they followed the year naming convention at Sound and Silence). Unfortunately, her primer on history went on to other, less interesting things, and worse, she was skipping over a lot. It was only because I was familiar with the timeline that I realized she was going through the period of time when the Second Empire had been dominant, without so much as a sly wink about what had happened during that period, or what role Sound and Silence had played in it. I looked over at the other students in the class, wondering if anyone had caught that, or whether there was anyone here old enough to have lived it. Mostly it was humans, and other of the mortal species who weren’t of the especially long-lived. Ermaretor was just blithely white-washing history, it seemed.

“And that brings us to today,” said Ermaretor. “Sound and Silence is a firm and proud member of the
That must have been a well-rehearsed lecture, because a bell started ringing very shortly after she was done. As first classes went, it was a little underwhelming, but normal students didn’t get their time in the temple until two years at the athenaeum, so I supposed some amount of filler was necessary.

“Juniper Smith, if you could stay a moment?” asked Magus Ermaretor. The student who’d been standing beside her had left, and she had to strain to be heard about the din of a hundred students filing out of the lecture hall. I made my way down to her.

“I have another class in about fifteen minutes,” I said. I knew where the building was, but I was still a little anxious about missing the lecture, even if it was going to be something like this.

“You’re the bursar’s man,” said Ermaretor. It was halfway between a question and an accusation. She looked me over. “Human?”

“Yes,” I replied. The paperwork said as much. I glanced at the door.

“I’d like to speak with you in private, when you have more time,” said Ermaretor. “My office is in Dinai Hall, on the third floor, and I’m there from the end of classes until just after sundown.”

“Okay,” I said. “What are we talking about?”

“I’ll explain then,” said Ermaretor. “It would suffice to say that my signature on your papers is contingent upon a private meeting.”

I gave an inward groan. “Alright,” I said. “I’ll see you after my last class today.” I glanced at the door again.

“Go ahead, get to your next class,” said Magus Ermaretor. “I’ll see you tonight.”

I rushed off with my bookbag over my shoulder. When I was out the door, I moved my comms tattoo up and touched it.

“Minor hiccup,” I said. “Professor wants a meeting.”

[They’re instructors, not professors.] replied Amaryllis. [But noted. We’ll provide backup in case there’s an attack. Otherwise went well?]

“Sure,” I said. “A bit boring.”

[Keep an open mind.] replied Amaryllis. [Private instruction gets skill levels higher, faster, unless you’re intent on skilling up through combat after the soft cap.]

The abortive attempt at getting something from Fumblebuck was a source of conflict between the two of us. Amaryllis had been poring over the notes that Reimer had left, along with the supplemental stuff he’d mailed later on. She wanted him back in for a sitdown, but I was a little leery of that, especially since it wasn’t clear how much the two systems might have diverged from each other. Reimer’s notes indicated that the system got constant updates and revisions, sometimes without any actual notice. I was trying my best not to worry about it, as Amaryllis put effort into redoing her ‘best possible’ character sheet. In theory, if the game was correct that I could change skills once
every 100 / Essentialism levels, then I should theoretically be capable of changing skills again, if I hadn’t been before. (I had not tested it, as it was an incredibly valuable resource that I didn’t want to waste.)

My mind wasn’t really on that as I moved on to the next class. Instead, I was thinking that all roads led to Rome. It was a common DM tactic, where three or four different threads could all be pulled on, all of which would tie back to whatever main event the DM had planned. In the context of Reimer? It was one of three visible threads leading back to Fumblebuck, the first being the teleportation key and what it had revealed about the body’s past (which was when the text had been generated), and the other threads being people from Fumblebuck that had spread to the winds. Going to Sound and Silence had led me to Reimer, whose part in all this I hoped was over. If we’d gone to the Athenaeum of Claw and Clocks, I would have bumped into Tiff. There were probably other paths leading back to Fumblebuck, whether it was high school friends sent by happenstance to the locations I was most likely to visit, or some other kind of bullshit.

The further in I’d gotten, the more these parallel paths had become a running theme. In one sense, it was comforting, because it was weak evidence that I had some degree of free will within the DM’s schemes, and the world had simply been set up or manipulated into such a state that there were many mechanisms by which the same beats could happen. In most other senses, it was kind of terrifying, because I was surrounded by threads to be pulled on and clearly visible backup plans intended to manipulate me.

The whole reason that we’d gone to Fallatehr in the first place had been Cyclamine, Amaryllis’ great-grandfather, whose entad-poltergeist had remarked that he was one of the most gifted soul mages still alive following the decapitation of the Second Empire, and that he should, despite the odds and common sense, still have some measure of his power in prison. Later on, we’d found Heshnel Elec, who was one of Fallatehr’s proteges long ago, and he had basically delivered us a quest prompt for a quest we’d already handled. Who knew how many other paths led back to Fallatehr? Would we have found a book that pointed in his direction in our hour of need, if those two other prompts had misfired?

More concerning, what was everything at Sound and Silence pointed toward? What were the disparate threads all pulling on?

I ran out of thinking time when I got to my next class. It was a similar room to the first one, with tiered seating and peculiar adjustable desks, with a section in front similar to handicapped seating on Earth, a place where students who were unusually large or with particular needs could sit and take up more room. There weren’t many there though, just mezin, broshe, and a criios girl hooked up to a tank, presumably to keep her temperature down.

I didn’t know the rules for taking up special seating, so I headed up to the very back of the classroom, where there were two empty seats. The class was “Fundamentals of Vibration Magic”, a basic prerequisite for actually getting authorized to become a vibrational mage. When I sat down, the instructor (never professor, apparently) was already clearing his throat.

To my surprise, I saw a red-haired girl moving from her seat in one of the lower rows, pushing past people and apologizing profusely as she did so. She looked vaguely familiar to me, though I couldn’t place her; her hair went down to the small of her back in ringlets, she wore a vest, a blouse, and a skirt, all of which looked expensive (if I was any judge), and she had rectangular-frame glasses. I caught her looking at me as she moved through the chairs, and I was startled when she went up the stairs and took a seat beside me. She made enough glances at me that I started wondering what was up with her.
Our instructor was a human, which was a bit disappointing, because I liked seeing the different species of Aerb. He had a smooth voice though, and opened the class by asking everyone to signal to him if they would like the volume higher or lower. It was, so far as I could tell, a party trick for an experienced vibration mage, but it was still pretty impressive, given that he was adjusting volume independently for more than a hundred people, while also giving a lecture on the subject.

“So, now that everyone is settled, let me introduce myself. I’m Magus Bertram Leister, second order, and I’ll be introducing you to the wonderful world of vibration magic.” He beamed at us. “My particular specialty is in the middle ranges, which, if you don’t already know, refers largely to sound, hence the calibration. I teach a number of classes at the higher levels, most notably Sonic Offense, Signals Interference, and Destructive Collision. Through our time in this class, I’ll be bringing in a number of my colleagues for demonstrations, lectures, and some question and answer sessions, as I don’t want to focus too specifically on this narrow field.”

The girl sitting next to me leaned over. “Indecisive or ambitious?” she asked.

“Excuse me?” I asked.

“You were in M. Ermaretor’s class,” she replied.

Ah. “Ambitious,” I replied. It wasn’t usual for someone to take both kinds of classes, and apparently it had been noticed that I was on both tracks.

“Me too,” replied the girl with a curt nod in my direction. She was keeping her eyes on our instructor, but she held out a dainty hand, and I shook it. “Is this your first?” she asked.

“First?” I asked. I was trying to keep my voice low. Vibrational mages could have super-hearing, if they wanted to and had the mental bandwidth for focus, but I couldn’t imagine that our instructor was carrying on with a general history of vibrational magic, amplifying his voice at individualized levels, and eavesdropping on students. (Or rather, I could imagine it, but it seemed like a bit much.)

“Do you have other magics?” she asked. She looked around briefly, cupped her finger in a hand, and then with a slight frown of concentration, lit her finger on fire. I diverted my attention from the lecture briefly and looked at it. Aarde’s Touch, the spell was called, the first real bit of magic that I had learned on Aerb.

I looked at her and tried to quietly re-evaluate her. Maybe it was the glasses, but I had marked her as a bookish nerd, probably not too much younger or older than I was, and almost certainly human. But if she was a blood mage … well, Aarde’s Touch wasn’t all that special, Amaryllis had been able to do it when we met, but that was the product of maybe three years at Quills and Blood, a lot of it focused on other things, with her time cut short.

“You’re a multimage,” I said.

She shook her head, seeming annoyed. “Not yet,” she said. “I’m going to be.”

There were a few reasons that wasn’t common on Aerb. The first was political: mages owed some allegiance to their athenaeum, both implicit and explicit, and you could be denied learning on the basis that you were already a mage in another discipline. The second problem was practical: if you spent ten years learning to become a warder, you probably had some bills to pay down, or if you didn’t, then you at least had a trade that you could practice and make some good money on. If you went on to master another magic, what did that really get you, in practical terms? Higher pay? Maybe, depending on cross-applicability and economic considerations. Generally speaking though, it wasn’t done, because a multimage took far too much schooling for not enough benefit, not when you
had to stay sharp in both at once. A multimagus was even more rare, because to become a magus in pretty much any discipline took a decade or more, though the title ‘magus’ was defined differently by the different athenaeums.

I wasn’t sure what, precisely, that might say about this girl sitting next to me. She’d asked me whether I was ambitious, on the assumption that I was angling to become a multimage. Did that imply that she had ambitions? With the red hair … well, not every remotely attractive girl with red hair had to be a Penndraig, but unless my ear for accents was failing me, she did sound like she was from Anglecynn.

“Juniper,” I said, extending a hand to her.

She looked me up and down. “Like the flower?”

“It’s a tree,” I said.

“A tree with flowers,” she replied as she took my hand and shook it. “Lisi,” she said. Her hand was limp and a bit cold. “Are you?” she asked.

“Am I what?” I asked, bewildered.

“Anglecynn royalty?” she asked. Again, she seemed annoyed that I was confused.

“No,” I replied. “You?”

“Are you my shadow?” she asked, ignoring my question, or maybe implicitly answering it.

I was mostly ignoring our instructor by this point, as interested as I was in what he was doing. He had pulled tuning forks out from under the table, and was giving a brief lesson in the difference between amplitude and frequency of a wave, which wasn’t new to me, but was at least more practical grounding than I’d been given in Ermaretor’s class.

“I’m nobody,” I said.

Lisi gave a brief huff at that, and immediately began tuning me out. If she was another of Anglecynn’s many princesses, then she was shockingly rude. Hells, she was even rude by dwarven standards; dwarves were blunt, but they were at least making an attempt at communication, rather than barreling on ahead with their own unrelated trains of thought (this was, naturally, painting a whole species with the same brush, and dwarves were as much products of their environments as humans were).

The demonstration of amplitude and frequency was accompanied with drawings on the chalkboard by our instructor, Magus Leister. All vibration, he explained, was about regular change between one state and the other, from the fastest (light) to the slowest (the tides).

(Can I talk, for a moment, about how fucking dumb it was that Aerb had tides? Both the Sun, Celestar, and the stars were in the same apparent position no matter where you were on Aerb, so even if there were gravitation from those sources, it wouldn’t have caused anything that was much like tides on Earth (in theory, the sun’s gravity should have pulled everything to the east at dawn, then everything to the west at dusk), and anyhow, the tides were hexal, meaning low tide happened at the same time no matter where you were on Aerb. So then where the fuck was all that water going or coming from? There were even spring tides and neap tides, caused, on Earth, by whether the sun and moon were working in concert or in opposition, but on Aerb … who fucking knew. Every day, $10^{20}$ liters of water were displaced, and there were a whole bunch of complex theories about how it
was happening or why, but the tides went in and the tides went out, and no one could explain it.)

A lot of the lecture was about waves, it seemed, but it seemed to mostly be about waves in terms of how they interacted with the specifics of vibrational magic. M. Leister joked that he wasn’t going to bombard us with a whole bunch of equations and terms we’d have to memorize on our first day, but it felt like that was what he was doing anyway. Vibrational magic had a lot of scope, mostly because it was permissive in what was defined as ‘vibration’, extending to almost anything that oscillated to some degree, even if it wasn’t ‘vibrating’ in the sense that I understood it. Still, sound was by far the easiest thing for a vibration mage to deal with, and it was their stock-in-trade. The discovery that light could be produced and manipulated with vibration magic was a relatively recent one, but it took so much skill that only the grandmasters were capable of doing it reliably, and they were gunshy, given the fact that exclusions sometimes happened when people pressed the boundaries too far.

The last thing we went over was the actual source of a vibration mages power, a well of internal energy that could be slowly expanded through rigorous, monotonous mental exercise. We (or rather, the other people in the class who weren’t on fast-track like me) were required to prove that this was something we were capable of by learning an instrument and achieving technical proficiency with it, something that would also come in handy when we were tuning to specific tones. I was really hoping that I would just get a mana bar. At any rate, the major complication for vibration mages was that this internal well of power, called ‘breath’ instead of just ‘mana’, was governed by trade-offs between what was modulated, so that frequency increase at the expense of amplitude decrease (or vice versa) was far less draining than increasing both, and decreasing either was practically free, a convenient way of silencing your footfalls.

I liked M. Leister. He was an engaging speaker, and he moved fast enough to keep my attention, with none of the pauses or drawn out elaboration that I’d always hated in my teachers. He finished his lecture just as the bell rang, which was apparently a skill he had in common with M. Ermaretor. I braced myself to be called down by him, but he was just looking at his notes, not at me.

“We should walk together,” said Lisi. I had practically forgotten about her, except to briefly glance at the meticulous notes she was keeping.

“Okay,” I said. “My next class is in the Canis Building, I’m not sure if we’re going in the same --”

“We are,” replied Lisi. “Fundamentals of Combat Magic?”

“We are,” I said. “That’s the one.”

We headed out together, with her leading the way on sure feet. I moved my comms tattoo up and touched it once, as stealthily as I could, so that it would broadcast everything I said to the others.

“So, are you one of the Penndraigs?” I asked.

“Lisianthus?” I asked, mostly for the benefit of Amaryllis. “Sorry, I don’t know the royal family that well.”

[Don’t mention me,] said Amaryllis, across the comm. I couldn’t answer her without speaking to Lisi.

“I’m from a minor house,” she replied. “One of the gavelkinds.”

“Ah,” I said. “So are you part of the Lost King’s Court? I mean, in an official capacity?”
“I’m the Second Under-Princess of Defense,” she replied with a frown. “Understudy to the understudy. If there were any actual roles or responsibilities I wouldn’t be here. If there were any risk that I would ascend to Princess of Defense, I would be replaced in short order. It’s honorary.” She glanced at me. “You?”

“Not a princess at all,” I replied with a smile.

“I want to know who you are,” said Lisi. If she saw any humor in what I was saying, she didn’t show it.

I tried not to wince. “Juniper Smith,” I said. “Originally from Anglecynn, but I’ve been in a somewhat unique situation for the past few months, which is how this opportunity came up. I’m … not sure how much I should share with you.”

“Hrmph,” said Lisi.

[You can tell her,] said Amaryllis. [You’re Advisor on Culture in the Republic of Miunun.]

“I’m the Advisor on Culture in the Republic of Miunun,” I said. “It’s a new nation of tuung, recently founded and not recognized by the Empire of Common Cause yet.”

“You’re not tuung,” said Lisi.

We entered into the Canis Building, which had a weird front door whose door frame was two legs of a giant brass dog, and Lisi kept walking with purpose. It occurred to me that we were probably going to be sitting next to each other again, and I wasn’t sure that was what I wanted.

“I’m there in an advisory capacity,” I said.

“But you’re here,” replied Lisi. She was still frowning, and not really looking at me, like she was doing some complicated math in her head.

“Yes,” I said.

“Why?” she asked. She still had that characteristic bluntness. Now that I knew they were related, I could see a little bit of Amaryllis in the way she talked, but I might have just been reading into things.

“It’s complicated,” I said.

[It’s quite frustrating to only be able to hear half this conversation,] said Amaryllis.

The lecture hall was much like the others, though a bit smaller, sized for forty instead of a hundred. It also had a wider area in the front, with pads placed down and a circle painted on them. They looked like wrestling mats; Colin had been in wrestling, and I’d gone to see his matches a few times.

Lisi found a seat, and looked back to make sure that I was following. Somewhat reluctantly, I took the seat beside her, a slave to my social impulses.

“Complicated how?” asked Lisi.

“The Council of Arches is a seven person body,” I replied. “My role isn’t exactly honorary, but the council can make most of its decisions without me if need be, and I’m not a lynchpin. I --”

My voice caught in my throat as I saw Reimer walk into the lecture hall. He saw me at once, given that it was still mostly empty, and he frowned at me for a moment before coming up the stairs to where we were sitting. That fucker was going to take a seat right behind me.
“You?” asked Lisi, prompting me to pick my train of thought back up.

“I have an entad that allows for extremely fast travel,” I said. “My plan is to commute for the duration of my education. I have a place in Li’o, but once I’m home it’s not much effort to make the transition, and the council is willing to accommodate me.” I resisted the urge to look back at Reimer.

“For how long?” asked Lisi.

“For as long as it takes for me to gain access to the magic,” I replied. “Until then, I’m just a normal student, like you.”

“I take offense at that,” said Lisi. She narrowed her eyes at me. “I’m six standard deviations from the norm.”

“Okay,” I said.

“Hi, I’m Reimer,” said Reimer, leaning down between the two of us and sticking his hand out toward Lisi. “Juniper and I went to high school together.”

“Reimer,” I said. “Please, just butt out?”

Lisi shook his hand, though she seemed skeptical.

[Why is Reimer there?] asked Amaryllis. I didn’t have a real answer to that question, except that he had probably independently signed up for the class.

Before we really had time to say anything more, our instructor walked in. He was intimidating from the first moment I laid eyes on him, that wiry muscle that old men sometimes had, and a face that was lined with tension. He wasn’t human, because he had four arms, but I wasn’t sure what species he was, only that he looked like he was about half a second away from shouting someone down. His head was shaved, with just enough stubble that I could tell, and his shirt was form-fitting, showing the muscles beneath it.

The rest of the class had trickled in, and the chatter around us settled into silence.

“This is Fundamentals of Combat Magic,” he said. He crossed both pairs of arms over his chest. “I’m Magus Oberlin. If you’re wondering about my species, I’m an endling, last of my kind. That’s as much as I want to say on the subject. This is a mixed-track, all-years course, but my specialty is vibration magic, with a sub-specialty in resonant frequency.” His voice was sharp and loud, and didn’t seem to be carried by any sort of magic. It was a smaller room, but still, that was a little bit intimidating.

He walked over to the desk and pulled out a handgun from one of the drawers and set it on the desk with a loud clunk.

“This is a handgun. It will kill most people just fine and takes far less time to train.” He was scanning the classroom, looking at us, and his eyes paused for a moment as he looked at me. I was tall and muscular, and I hoped that was what had caught his eye. “There are things that a handgun won’t work on. The majority of entad armor will stop a small-caliber round, and a minority will stop larger calibers. There are also a wide variety of mages who are immune or resistant to gunfire, including pseudo-mages like the bladebound. There are species who will shrug off a bullet and monsters who will only gain power from them. Wards will also stop bullets dead in their tracks, if your target is bunkered down. It’s by no means a perfect solution, but it’s the first one you should reach for.”

He reached into the desk and pulled out a second handgun, this one of a slightly different make. He
set it down next to the other handgun. “This is a void gun,” he said. “It’s considerably more difficult for potential targets to deal with, and is brutally effective at making holes in things. It’s also banned for personal use by the Third Empire, with no exceptions.” He strode forward, leaving the guns behind him. “These are two of the three low hanging fruit, if you have interest in being more lethal. They will make you deadly with little time, effort, or cost. The last of the three best tools is the right mindset, the ability and will to act with extreme violence at a moment’s notice. I won’t be teaching that here, but I can give recommendations, if it’s a skill you still need to learn.”

He drummed the fingers of one hand on the table. “There are two essential varieties of combat magic. The first is a tool added to the toolkit, existing magic turned toward violence because it’s one of those weapons we’re never without. Mages might be called upon to use when other tools,” he gestured to the guns on the table, “are not available to us. Based on my past experience, that’s why most of you are in this class. You will be learning magic here, at this athenaeum, or have already, and you want to know how to effectively use it against others, so that in a time of need you’re not trying to do something novel.”

He drummed his fingers on the table again. “If that’s your purpose in coming here, there will still be things for you to learn, but it’s not the focus of this class. Fundamentals of Combat Magic is a course aimed squarely at the other type of combat magic, the one focused entirely on incapacitating the enemy, not as a petty bonus of the magical arts, but as the sole aim of magical education and practice. Raise your hand if you intend to be a combat mage.”

I very slowly raised my hand. To my surprise, Lisi raised her hand too, not casually, but like she was straining to make sure it was noticed. I looked around the room a bit. We were in the minority. Seven people had raised their hands, and that was including me, in a class of maybe forty. I found myself wishing that I hadn’t raised my hand.

“You,” Magus Oberlin said, pointing at me. “Name.” His fingers were thicker than a human’s, and I stared for a moment before answering.

“Juniper Smith,” I said.

“Why do you want to be a combat mage?” he asked.

“I don’t currently have much of a choice about whether I’ll be in combat or not,” I replied. “Given that it’s a certainty, I would rather have as many possible options for how to kill.” In truth, I was already a combat mage, or at least as close to a combat mage as you could get with skills piped directly into your brain and no formal education.

“Have you killed before?” he asked.

“Yes,” I replied. I braced for more questions, but mercifully, he moved on to the others, asking the same things of them. He saved Lisi for last.

“Why do you want to be a combat mage?” he asked.

“With respect,” she said. “I’m already a combat mage. I was trained at Quills and Blood.” Her cheeks were flushed.

“Bare augmentation?” he asked.

“No,” replied Lisi. “I can form the Claret Spear.”

“I see,” frowned Magus Oberlin. “And why do you want to be a combat mage?”
“Comparative advantage,” replied Lisi. Her lips were thin. “I’m predisposed towards violence and lacking in empathy. I will make a better combat mage than anyone else.”

Magus Oberlin nodded. “Good,” he said. He returned to behind the desk. “Those of you who raised your hands, it’s you who this class is for. If you’re here because you’d like to know and practice the combat applications of your magic, as a secondary aspect of your education, you’ll get something out of this class, but that’s not my primary aim.”

He looked out over the class. “The first lesson, and the focus of the rest of our time, is lethality. In a normal combat situation, it will be assumed that you are attempting to kill your opponent, and that they are attempting to kill you. Unfortunately, there is no perfect, idealized combat scenario. If you are a combat mage, you will likely be working for either the Third Empire or one of its member polities at the behest of Sound and Silence. That employment often comes with political and mission constraints, which might limit lethality. To give one example, hostage taking has been an effective aspect of warfare since the dawn of time. More insidiously, sometimes the powers-that-be wish to limit casualties because of how it would appear to the public, even if that requires risking a mage’s life.”

“Still mages in particular are often called in for the purposes of capture, rather than strict lethality. There aren’t many on this campus who will say a word about it, but during the time of the Second Empire, still mages were routinely employed to bring in subjects of interest alive so that their souls could be altered and they could first divulge every secret they knew before being volunteered into the ranks of expendable soldiers.” He grunted slightly. “It was not a policy that was as singularly effective as it might seem on first glance. In fact, if you read any number of texts on the era, or take Atrocity Studies, many writers will intimate that it was horrifying because it was an effective tactic. This was not the case. Dissidents who would otherwise have quietly gone to prison adopted high lethality means of defense, turning every arrest into a fully lethal fight. Sometimes support staff died. Sometimes void weapons, poisons, or other means were used, and still mages died, despite the best efforts of those involved. In other cases, when there was no hope to inflict damage, the potential targets, useful sources of information about their resistance networks, would simply kill themselves, condemning themselves to the hells as a price to be paid in the war waged against the Second Empire.”

Magus Oberlin looked around at us. “There are three primary takeaways here. The first is that in practical terms, a combat mage will be asked to refrain from lethality for reasons that may or may not be sensible, and if you are a soldier, you won’t always be privy to that decision-making. The second is that lethality is a consequence of escalation, something that happens when lesser means fail, or would guarantee defeat. And the third, naturally, is that there are prospects worse than death. By some measures, there are prospects worse than eternal torture at the hands of the hells.”

I could only barely fathom wanting something so badly that I was willing to suffer an eternity in the hells for it. Most of the worlds where I made that trade, it would be naked utilitarian logic, given that I knew when faced with eternal torture I would be so unable to comprehend the actuality of it that I’d just be running the numbers. I was a lot more likely than pretty much anyone else to run into the sort of situation where I had to choose between my own personal concerns and those of the wider world, and I’d already committed myself to the wider world, for sufficiently large quantities of ‘wider world’, but I had trouble mapping that to what members of the Second Empire resistance would have been feeling.

(Were it possible, I might have liked to spend time at the athenaeum just to learn more about this sort of thing. The books I had read about Aerb were broad spectrum, some of them suggested by a bookseller or marked as worthwhile by Amaryllis, but that was a far cry from being able to talk to people who had devoted a significant part of their life to learning about these things. I had no idea
how the resistance would have operated, given that people could turn into snitches once captured, and even the anima exa could have memories pulled from it, even if that took a staggering amount of time and expertise.)

“This course will be broken down into individual case studies,” said Magus Oberlin. “We will discuss the lethal means available to every school of magic, starting with vibration and still magics, as well as the most common methods of defense against them. This is not to teach you how to attack and defend against every school of magic, which would take a lifetime, but to give us the fundamentals of combat magic through practical examples. Mixed in with that will be mock battles, carried on under Marquise Chamberset’s rules. Grades will be given following an individual question and response session with me at the end of term. That’s all for today’s class. If history is any guide, at least five of you will put in petitions to drop, and I see no reason not to give you adequate time before the next bell. Juniper Smith, a word.”

I sighed under my breath, and got up from my seat to go down and talk with him. I had one more class left, and at this rate, I was going to end the day with a whole host of small quests.

“You’re Finch’s man,” he said as he looked me over. “The multimage.”

I looked around us, where the rest of the students were still filing out. Many of them were looking our way. “That’s not public information,” I said, keeping my voice carefully controlled.

“Our conversation is private,” he said. He punctuated the final word by raising the volume, without any apparent effort on his part.

“To my office then,” he replied with a raised eyebrow.

I nodded and followed behind him as he left. Ermareror had called me the bursar’s man. I didn’t quite know what kind of strings Finch had pulled behind the scenes, but I had hoped that the bursar and his secretary were the only ones who had a clear picture of what was going on. Unfortunately, that didn’t seem to be the case.

Magus Oberlin had a nice office. I would have expected, I don’t know, swords and guns up on the wall, but instead there were just lots and lots of books and a broad desk. He sat down behind the desk, then steepled his fingers with one set of hands while he gestured for me to sit opposite him with the other set. I wondered, idly, where he got his shirts from.

“Are we warded in here?” I asked.

“Against vibrational magic, yes,” he said. “Against entads? No. I could call in a warder and take up the rest of the day for both of us, if you’re that worried.”

“No,” I said. “It should be fine.” We try not to let Finch know anything that we don’t want the general public to know. “What did you want to talk about?”

“You’re a multimage,” he said. “Bone, blood, skin, and gems, according to Finch, all unregistered and unlicensed, without any trace of formal education.”

I frowned at that. I wasn’t actually sure how Finch knew that, but if he’d kept talking to eyewitnesses after we’d first met … I would have to do an inventory of everything I had done, and in front of whom, cross-referenced against what Finch could be presumed to have found out. It was good to know that I’d hidden at least some of my abilities.
“That’s all true,” I said. “I assume that Finch has some reason to trust you?”

“I trained him,” said Magus Oberlin with a smug smile.

“He’s … a mage?” I asked.

He shook his head. “He’s Uniquities. He worked under me for five years.”

“Sorry,” I said. “You worked in Uniquities with him?” I was trying to wrap my head around that and reshape the model I had of Oberlin.

Oberlin nodded. “I still ply my trade for them, when there’s cause.”

“Oh,” I replied. “That’s … good news, I guess. The bursar said that I needed signatures.”

“You’ll have mine,” replied Oberlin. “No real point in you coming to my class, unless you need to keep up the charade for some other reason. But Finch thinks that you’re the kind of person who trouble follows like a stink follows fish, and he asked for my help to make sure that if you get into shit here, you have someone to help bail you out.”

“I’m doing fine so far,” I replied, feeling just a touch defensive. “If you have intensive lessons to offer, I’m all ears. I also have access to a time chamber, if you want to spend a month or two training me. I have a lot in the way of liquid assets at the moment. I could pay you.”

Oberlin frowned at me, and finally looked momentarily nonplussed. “Tell me how you came by your magics.”

“What does Finch think?” I asked.

“Finch and I were talking by mail,” replied Oberlin. “Securely, in case you were wondering. We didn’t have room on our one-time pads for idle speculation. If you want my guesses, which are probably better than his, I’d say that you’re not the real Juniper Smith. There are dozens of ways to fake an identity, and most places aren’t too serious about stopping it from happening. That still makes you an impressive example of a multimage, but it’s less impressive if you’re a few hundred years old.”

“Wrong,” I said. “But it’s more believable than the truth.”

“Which is?” asked Oberlin.

I hesitated. “I can learn incredibly fast, under the right circumstances,” I said. “So far as I know, I’m a bog standard human, but I was introduced to blood magic from a neophyte student four months ago, and now I’m capable of doing bare augmentation.” I shrugged. “Not much more to it than that.”

“What other magics do you have?” he asked.

“Soul magic,” said Oberlin.

“That would be pretty dumb of me, given the anolia,” I said. “The next time one looked at my soul, I’d be revealed as a soul mage, and then … I don’t know what the penalty is here, but in Anglecynn it would probably come with the penalty of death.”

“If you were good enough, you could carve it out before the anolia stopped you,” said Oberlin. “Finch told me that he floated the idea of one coming to the Isle of Poran for the sake of security and
the idea was immediately shot down.”

Carving out Essentialism was my plan, if it came to that, though I would be loathe to lose it. Anolia couldn’t see into the soul instantly, and I was pretty fast with my Essentialism so high.

“Question,” I said. “Why in the hell are you telling me this?”

“I want your trust,” said Magus Oberlin. “According to Finch, you’re one of the more lethal people he’s met, with a great number of skills under your belt and a stockpile of entads. And here, at Sound and Silence, things have started to go rotten.”

“Rotten how?” I asked. Here comes the quest.

“There have been deaths and disappearances,” replied Oberlin. “Most of them linked to the temple in one way or another.”

“I heard of one death,” I said with a frown. “Dehydration or something. Or some entad interaction.”

“Five deaths,” replied Oberlin. “Four disappearances.”

“But … no one knows about it?” I asked. “How is that possible?”

“That’s what I need your help in finding out,” replied Oberlin. “The one death you probably heard about was a scandal, but that was because it happened inside the Li’o’te Temple itself. The others have either been in the city, or in the case of the disappearances, somewhere unknown. I suspect that it’s a coverup of some kind, though by who and for what purpose is a mystery. At best, institutional malfeasance.”

“And I’m, what, some unconnected person who you know is clean?” I asked. Gods, how many times had I used that line as a DM?

“You also have skills, and Finch has pulled some strings to get you down into the temple itself,” nodded Oberlin. “To hear him tell it, you were itching to go for your own reasons.”

“Who can I trust?” I asked.

Oberlin smiled. It was the first real smile I’d seen from him. “Finch said that you would dive right in.”

“Yeah, he knows me well enough to know that,” I replied. “Give me a week and I’ll destroy the conspiracy or cult or whatever it is, but first I need to know what you know, and I need to know who it would be dangerous to talk to.”

Oberlin raised an eyebrow. “I didn’t take you for the cocky type,” he said.

“I have a good team,” I replied. “Some people with centuries of experience, some with skills that are utterly unique to them.”

“Good,” nodded Oberlin. He opened up his desk and took a folder from inside it, which he slid across to me. “Do you have somewhere safe to put this?” he asked.

“Yes,” I said. “Give me a second.”

I stood up and pulled back the sleeve that concealed my vambrace, then turned it so that I was in my panic/survival set, Space Plate, Ring of Upward Bliss, Ring of Partial Incorporeality, Bracelet of Panacea, a pair of unicorn bones in a bandolier, dead fairies, and the Needler with twenty copies
dangling off my belt. Oberlin moved back a step, probably reflexively trying to put some distance between us given that I was fully armed and armored with unknown entads, but I just folded the folder up, slipped it into a loop in my bandolier, and then switched Alvion’s Vambrace back to mundane mode, safely hiding the envelope away in extradimensional space.

“Interesting,” said Magus Oberlin. “You’re better equipped than Finch suggested you would be.”

“Finch isn’t the only one hiding things,” I said. “Take that reveal as a token gesture of goodwill.”

Oberlin nodded. “Let me know before you make a move. If you’re just learning things, better for both of us to have some deniability about what’s going on. Maybe that’s paranoia, but I’ve spent too much time thinking about the risks a soul mage poses.”

“Were you … alive during the Second Empire?” I asked.

Oberlin gave me a skeptical look. “No,” he said. “Are you the kind of idealist that thinks soul mages aren’t out there, manipulating things as best they can from beneath the screenings that the Third Empire does? Do you think the Third Empire doesn’t have tame soul mages of its own to rip their way through captured prisoners?”

“You know that for a fact?” I asked.

Oberlin shrugged. “Could be.” I’ll take that as a yes. “You should get going, if you have another class for today.”

“Okay,” I replied. “What are your thoughts on teaching me in the time chamber?”

“I’d have to get an anolia to check you over,” Oberlin replied. “The athenaeum keeps a cluster on staff, and I’m friends with a few.” He was eyeing me as he said it.

I’d have to junk my skill in Essentialism back down to zero in order to pass that particular test. I was loathe to do it, in part because it had taken a long time to get so high, because it would be harder to raise up again given what had happened in the past, and because it was a really useful skill I didn’t want to be without.

“I’ll pass on that inspection for now,” I said. It was a tacit admission that I was, in fact, a soul mage, or if not that, that I was hiding something in my soul that I didn’t want anyone to see. Anolia were invasive, that was true, but I wasn’t particularly convinced that I could sell indignation about that test.

“Suit yourself,” said Oberlin with a nod. “If you prove yourself, maybe I’d be willing to relax that requirement.”

I left his office shortly afterward, and was surprised to find Lisi and Reimer leaning up against the far wall. They were close enough that I thought they’d probably been carrying on a conversation with each other. They both looked at me like they expected something from me.

“I don’t have time for this,” I said. “I have to get across campus for Ethics.”

“We have it too,” said Lisi with a short nod.

“Okay,” I said. I took off without waiting for them, even though I only had a vague understanding of where to go.

“What did you talk about with him?” asked Reimer as he fell into step behind me.
“Classified,” I replied.

“By what authority?” asked Lisi. “If it’s by a classifying authority of Anglecynn, there’s a good chance that I have clearance. Do you have a codephrase?”

“Not Anglecynn,” I replied.

“You implied that you were working with Anglecynn,” said Reimer.

“Yeah, I did,” I said as I pushed out a set of double doors and into the midday light. “Didn’t I say you’d be better off not getting involved in any of this?”

“Like I was ever going to listen,” said Reimer. “You’re trying to push me out of this like I’m some NPC.”

“NPC?” asked Lisi.

“Non-player character,” said Reimer. “It’s a whole thing. Like a bit part in a play.”

“Oh,” said Lisi. She turned her attention back to me. “What business does the Republic of Miunun have here?” she asked.

“Classified,” I said.

“Wait,” said Reimer. “What’s the Republic of Miunun?”

“It’s the government he claims to be on the advisory council of,” said Lisi.

“How in the fuck did that happen?” asked Reimer. “And how … why would that girl you were with be a part of it?”

“ Classified,” I said again.

“Are you classifying things as we speak because you don’t want to talk about them?” asked Lisi with a frown. “That’s bad practice.” She turned to Reimer. “What girl?”

“Uh,” said Reimer. “Classified?”

We mercifully reached the lecture hall and went about finding our seats, but Lisi apparently wasn’t the sort to simply let things go just because we’d walked into a classroom. Unfortunately, there were three seats in a row, and we all ended up sitting together, mostly because I was worried about what would come from Lisi and Reimer sitting together (and what might already have come from them talking to each other outside Oberlin’s office).

The course, Ethics, was a mainstay of the modern athenaeum system, and it was one that Amaryllis had taken at Quills and Blood, so I had some idea about what to expect. What had happened was, essentially, that someone at some point had pointed out that the athenaeums were complicit in a lot of the crimes of the Second Empire, whether that was by furnishing the Empire with trained personnel, or more directly using their considerable sway to make things worse (for given values of worse). Obviously this was a serious structural problem that no one wanted to have repeated a second time. Less obviously, the solution was to teach people to be ethical, which was to be done early in the education process for people who were going to find themselves in a fair bit of power. I couldn’t tell whether this was laughably idealistic thinking, or simple virtue signaling, but I was leaning toward the latter. I was expecting it to be the most boring thing in the world, so I was mildly surprised to find myself paying attention.
“It’s important to note that the Second Empire did not see themselves as doing anything wrong,” said our teacher. “It’s a trite Utherian observation that everyone is the hero of their own story, but the Second Empire was more than simply a lack of perspective, of the inside view being different than the outside view, it was an ideology with a great many thinkers, thinkers who weren’t justifying their actions to themselves as so many people do, but who were operating according to that ideology. We don’t talk too much about that ideology these days, which is a shame, because it increases the chance that if you see it in the wild, you’ll find it attractive, and be unequipped to deal with the imperial memeplex.”

She grinned at us. “So let’s dive right in and talk about trolls. Through the course of the Second Empire’s one hundred and seventy-one year history, there were two consistent, opposing, and complementary trains of thought, held by two overlapping groups. The first group was progressive, concerned primarily with the betterment of people, and saw itself as the heir to Uther Penndraig, who brought so many well-loved reforms and technologies into the world that he was regarded as something of a saint by those people, someone touched by a higher power, which he might well have been. The second group was a group of abject pessimists, who thought that it was only a matter of time before either civilization or life itself would be wiped from the face of the universe. They also saw themselves as the heirs to Uther Penndraig’s empire. From the marriage of these two broad groups comes the imperial motto, ‘Ever onward, against the dark’.”

She took a sip from a glass of water. She was looking over everyone in the lecture hall, more than a hundred of us, her bright eyes looking for signs of engagement. “The trolls were perceived as a problem by both groups. They were a tall, brutishly strong species, with low impulse control, fast breeding, and fast regeneration. The trolls were barely intelligent enough to form rudimentary kingdoms, even with social and cultural technology imported from elsewhere, and those kingdoms were, on the whole, violent toward their neighbors and nearly incapable of engaging in trade. The Second Empire didn’t particularly want any of the troll lands, but its member countries found themselves constantly defending against the troll kingdoms. Even when such defense was relatively assured, it was still a drain on resources, one that the Second Empire found to be wholly unacceptable. They were, after all, pressing forward and trying to make the world a better place, trying to secure a future against a hostile world, twin tasks so monumentally important that problems like the trolls needed to be looked at with a clean and clinical eye.”

She looked out at the class. “This, I think, is the Second Empire as it should be taught. Yes, the end result was xenocide, but from the inside that wasn’t how it looked. If we’re to keep ourselves from repeating their mistakes, we need to familiarize ourselves with that inside view, the better to see the errors in their ways. I’ll go through the remaining history of the trolls very briefly, for those whose schooling skipped it. The first concrete action that the Second Empire took was to topple the troll kings and institute leadership of their own, administrators who would oversee what was only barely a government and institute the particular type of planned economy that was in vogue at the time. They dealt with the inevitable problems that follow from that sort of thing, which the Second Empire would become well-acquainted with over the years, dissident populations, asymmetric warfare, worker strikes, and the general problems that come with governance by force rather than governance by consent. The trolls remained a problem for the Second Empire, but now one that was entirely their own burden to bear, and an early test of the second imperial experiment. Cultural programs were employed to help bring the trolls into the fold, but their low impulse control and low intelligence wasn’t something that could be entirely cured through such means. Many of the trolls who were brought into the developing cosmopolitan society would wind up committing crimes that got them sent to prison, which was a further burden on the empire.”

“At some point, someone began thinking that it would be better if there were fewer trolls in the world, or more likely, people had thought that all along and a shift in social mores happened which allowed them to speak previously unspoken thoughts. The Second Empire started with relatively
innocuous measures in that direction, as compared with what they would do later on. They called it voluntary sterilization, a measure done chemically, magically, and virally, all in service of reducing the birth rates of the troll kingdoms down to virtually nothing, usually implemented by the imperial governors and their staff, none of them trolls themselves. When there were few takers for voluntary sterilization, incentives began to be offered, and the trolls, lacking impulse control, began to comply en masse. Populations began to drop dramatically, and it was accounted as one of the early successes of the Second Empire.”

Maybe I should have mentioned this before, but our instructor was demonblooded. She had two small horns, light purple-red skin, and black hair that was carefully plaited. It was hard to think that people were going to be participating in the Demonblooded Festival in a few short days and putting someone that looked like her to death almost purely for the misfortune of how they were born. It was something that I was keeping in mind within the context of what she was saying.

“They saw what they did as humane,” our instructor continued. “They erased a culture from the world, extinguished a language, wiped away a species, and removed what they saw as a somewhat significant problem. The ‘voluntary’ sterilization program was seen as an unmitigated success, and those who worked on it turned their sights to other populations that the collective might be better off without, largely r-selected species of lower intelligence. By that point they had done the majority of the groundwork and knew how to do such things simply, easily, and with cost efficiency. They had gotten good at arguing their case to others.” Her smile had become subdued. “Most of you aren’t here because you really want to be. You probably think that of course you’re not evil, and you don’t need a course to tell you how best to not commit atrocities. This course is required for anyone going into combat or biological tracks, and for many, it will seem like a burden. It’s a difficult course to teach, I’ll say that outright, because what we really desire here is not that you will all memorize some key set of facts, or attain a particular mode of thinking, but that you will be transformed such that the ethical mode of thought is your default.”

The bell rang not long after that, and I was left kind of stunned, not because anything she’d said had been all that novel to me, but because she hadn’t seemed to deliver the punchline. I got up from my seat and went down to speak with her.

“Hi,” I said. “I’m Juniper Smith, I’m hoping that the bursar spoke with you?”

“Oh,” she replied with a faint frown. “Yes. There’s no need for you to attend this class.”

“Okay,” I said. “I just wanted to make sure that there was no issue.”

“No,” she replied. She gave me a skeptical look. “Why would there be?”

*Because you’re an ethics professor?* “No reason,” I said. “Some of the other instructors have wanted to speak with me.”

“I don’t see a need for that,” she replied. She had been putting papers into a messenger bag, notes that she’d been consulting, or spare mimeographed copies of the syllabus. “I can finish the paperwork on my side tonight and get them to the bursar as soon as possible.”

I didn’t like that response. “Can I ask … what should the Second Empire have done about the trolls?” I took note of Lisi and Reimer standing by the door as the rest of the class continued filing out. They were clearly waiting for me, which I didn’t enjoy, and they were talking, which I also didn’t enjoy.

The instructor froze at the question. “Are you asking because of actual interest?” she asked. “Curious.”
“It’s curious?” I asked. “Wasn’t that the point of the lesson? Thinking about ethics?”

“It just doesn’t happen often,” she replied. “I could count the number of times someone had approached me outside of class to talk about the lesson on a single hand.”

“Really?” I asked.

“The class is mandatory, as I mentioned,” she replied with a shake of her head. “There are some significant pressures in place for instructors not to outright fail someone, and the class sizes are large enough that what I’m attempting to do, which is to shape minds, can’t really be done effectively.” She finished packing up her things. “If you’d like, I can give you some outside instruction, though I wasn’t under the impression that you were going to be here long, or that your attendance was anything more than a formality.”

“I was honestly just curious,” I replied. “I mean, as you described it, the Second Empire was facing an outside threat, an expensive one, and one that they didn’t really have much of a way to deal with without spending an enormous amount of money on either administration or defense. I’m right in thinking that the troll kingdoms were warlike?”

“They were,” replied the instructor with a nod. “The glib answer is that the Second Empire’s first mistake was in committing xenocide, but I think that ignores how they viewed themselves.” She glanced at the door. “Do you have a fifth class today?”

“No,” I said.

“Well, so long as I’m not keeping you,” she said with a nod. “Do you think that the lesson would have been better with some contemplation of things that the Second Empire could have done instead?”

“I don’t know,” I replied. “I guess … I guess I just expected it. You present a problem, you show how they dealt with it, and then there’s no alternative solution. Right? The trolls were always going to be nipping at the Second Empire, presumably. I’m not really a student of history, but that’s how you laid it out.”

“I did,” she replied. “We risk getting too bogged down in the specifics, but the troll ‘problem’ was debatably not a problem at all. The trolls could barely cobble together an army on their best days, and the real problem was that trolls would simply wander in over national borders, something their kings generally did not do anything about. It took trained personnel to deal with a troll, which was a cost to the Second Empire, but it wasn’t a cost that couldn’t be borne. They just felt no need to bear that cost in the long term, or considered that cost too high.”

“Because of their ideals?” I asked. “Because they were looking forward and trying to make progress, or worried about the end of the world?”

“Yes,” she nodded. “And if you believed that the world was going to end, then perhaps you would look at the numbers in your ledger, see the cost incurred by suffering the trolls to live, and make a judgment call.” She shrugged. “It’s difficult, to seek the nobility in the Second Empire, but I think it’s vital, because it explains how and why they did what they did. I should note that what happened with the trolls was very early on in their history, before anyone can start laying blame at the feet of the Guild of the Essential Soul.”

[Juniper, status?] asked Amaryllis.

I swallowed once. There was no point in this conversation, not really, but it was bugging me. I still
needed to meet with Magus Ermaretor, then hopefully figure out what the hells was happening down in the temple, who was involved in this presumed shadowy conspiracy, and find some way to shake both Reimer and Lisi, hopefully permanently.

I wanted to see the numbers though. Surely the Second Empire must have run them, right? Someone, somewhere, had to have seen that the trolls were a cost incurred by the Second Empire, and then … well, it would make so much more sense if they had been placing too low a value on the trolls, or if they had just been genocidal monsters, or whatever. Voluntary sterilization seemed so harmless, the equivalent to handing out condoms, and if someone on Earth had done that … well, if someone on Earth had done that and specifically targeted human races that they didn’t want to exist anymore, well, there we might have some fundamental problems with actual racism, not that it would be terribly better if it were classism instead. But it was different with the trolls, because even from someone who was arguing against the Second Empire, the trolls were regarded as stupid and impulsive, and they were that way even if you changed their socioeconomic context. Was any of that trustworthy or true?

It was all irrelevant. I wasn’t there to debate ethics, I was there to get a rubber stamp so I could gain power and move on to the next thing.

“I might have some more questions,” I said. “Tomorrow, though.”

She gave me a skeptical nod. “I’ll send the paperwork over to the bursar tonight.”

I left the classroom, and almost immediately had Lisi and Reimer in tow, which was not my preferred state of affairs.

“Reimer said that you were with a woman who looked like a Penndraig,” said Lisi.

I cast a murderous look at Reimer.

“In my defense,” said Reimer. “Lisi’s actually kind of threatening.”

“Thank you,” said Lisi. “I am a blood mage.” She turned to me. “So who was she?”

“Classified,” I said. “Just a moment.” I moved Parson’s Voice up and pressed against it. It was really difficult to use it discreetly, especially sending messages intended for both ends, so I’d decided that I just wasn’t going to bother, not around these two, not when Reimer had probably already told Lisi everything that he knew. “I’m out, sorry that took longer than expected. I have a meeting with Ermaretor, then I’d like an escort home. Lisi and Reimer are with me.”

[Noted,] replied Amaryllis.

“We were going to get something to eat,” said Lisi. “The campus cafeteria is surprisingly good.”

My stomach was rumbling. There wasn’t all that much time between classes, and I hadn’t brought a snack.

“Who were you talking to, if it’s not classified?” asked Lisi.

“It’s definitely classified,” said Reimer.

I tapped Parson’s Voice again. “Any particular reason to keep this secret?” I asked. “Point of contention number two?”

[Lisianthus is not the ideal entry point,] replied Amaryllis. [How much did Reimer tell her?]
“Probably everything,” I replied.

[We’re not situated well for this,] said Amaryllis. [We’re a country whose entire citizenry, bureaucracy, and army is currently located within a foreign city, and will be for the next two weeks.]

“You could go back,” I said. “Split the party again.” I didn’t actually know where Amaryllis was, but I assumed that she was close by, ready to come running in case there was any danger.

“You know that it’s rude to talk to other people with us next to you, right?” asked Reimer.

[My plan was that the curious members of the Lost King’s Court would come to me on the Isle of Poran and step into Bethel,] said Amaryllis. [That would have given me significant leverage for rejoining Anglecynn, to the extent that it’s going to be possible for me to do that. If they go to the Isle of Poran now, they’ll find it nearly abandoned.]

“Lisi,” I said, still touching Parson’s Voice. “How much back channeling do you do with the kingdom of Anglecynn?”

[It wouldn’t be back channeling, it would be channeling,] said Amaryllis.

“It would be channeling, not back channeling,” said Lisi. “And the answer is practically none. I was supposed to have a shadow, but I haven’t found him yet. I may not rate one.”

“Okay, well, my superior says that it’s still classified,” I replied. I made sure that Parson’s Voice was still pressed when I said that, so Amaryllis could hear. We both knew that she wasn’t my superior, but I thought she would probably catch the humor in my voice.

“Do you want to eat with us?” asked Lisi.

“I have a meeting with one of the magi,” I said. I hesitated. “Tomorrow, maybe.”

“What kind of shit have you gotten into, Joon?” asked Reimer.

“Classified,” said Lisi, rolling her eyes at me. “Dinner together then?” she asked Reimer.

“Uh, yeah, sure,” he replied.

They split off, together, which was worrisome, and I continued on to Ermaretor’s office.

“Oh, Juniper!” she said when I came in. “Lovely that you made time to come. Close the door behind you.”

There were blackout curtains in her office, covering the large windows. I wondered why in the world she’d been given an office with such big windows if they were going to be permanently closed to the outside world, but maybe it was a status game of some kind. Her office was nearly as colorful as her clothes, which highlighted the monochrome greys, blacks, and whites of her hair and skin. It was stark, in its own way, and a little bit disorienting.

“How was your first day?” she asked.

“But you’re not staying here for long,” she replied with a nod of her head.

“No,” I replied.
“And tell me,” she continued, “Are you a traveller on the path made by others?”

“The … what?” I asked.

“Nothing,” she replied, shaking her head. “You would know it, if you were.”

“Can I ask what this meeting is about?” I asked. “The bursar said that there shouldn’t be any trouble, so long as I could make it through a week of classes.”

“The bursar says many things,” Magus Ermaretor replied. “Can I ask, do you meditate?”

“It’s important for the temple,” she said. “It’s not mandatory that people take classes on meditation prior to going into the temple, because the environment there is conducive to it, but many take one or two supplemental practice sessions. Free of charge, naturally, since it helps to ensure we make the most of a scarce resource.”

“Okay,” I said. “I’ll look into it.”

“One class, mandatory,” she replied, staring me down. “That’s one of my requirements.”

“One of?” I asked.

“You have to understand that what the bursar is asking is irregular,” she replied. “If something were to go wrong, questions might be asked, and while the bursar is the one sticking his neck out, it’s those of us he’s roped into this that will be splashed by his blood when the board of directors beheads him.”

I hoped that was figurative.

“What are the other requirements?” I asked.

“I’d like to know who you are and where you come from,” she replied. “Not the full truth, mind you, but at least the story that you’ve been telling people who have asked, with enough details that I can know if you’re an unsavory element, at least you’re one that’s done his homework. It wouldn’t do to have your threadbare backstory exposed with a gentle wind. There’s no one investigating you now, presumably, but if they do in the future … well, I have a future here, one that I’m looking to protect.”

“I’m the Advisor on Culture for the Republic of Miunun,” I said. “We’re a fledgling nation with very little in the way of magical power. The plan is for me to be rushed through initiation, then study independently in a time chamber for as many years as it takes.”

“A time chamber?” she asked.

“Sand magic,” I replied. “It allows years to pass in the space of a day.”

“With private instructors?” she asked. Her black eyebrows drew down as she looked at me.

“No,” I said. “The plan was to learn mostly from books.”

“That would be a long, arduous process,” replied Ermaretor with a twitch of her lips. “You would be spending years of your life just to get a thing done quickly. Why not hire a proper still mage?”

“With respect, we’re in a precarious position. Outsourcing magical abilities doesn’t seem like it would be too smart, at least not at the present moment.” I shrugged. “It was decided that I could wear
another few hats to better serve our interests. Advisor on Culture, chief still mage, and chief vibrational mage.”

“They’re worried about spies?” asked Ermaretor. Her frown had deepened.

“As I’ve said,” I replied. “We’re a fledgling nation. In another few years, we’re probably going to be pretty important, given a number of advantages we’re going to leverage. People already seem to know that, but our intelligence services are, frankly, rather poor because they’re still being built, and we don’t have the necessary expertise to properly vet outside hires.” A lot of this was completely true; Amaryllis thought it was fairly likely that one or two of the teachers she’d hired for the tuung were agents for either foreign nations or other agencies who answered to the Empire.

“Interesting,” said Ermaretor. “The bursar appears to be playing with fire. You understand that once you’ve undergone the initiation, you’ll be beholden to Sound and Silence?”

“Yes,” I nodded. “You get a portion of my salary for services rendered, and some other binding stuff.”

“A week isn’t long enough to teach you our culture,” said Ermaretor. “I’m skeptical that you could become a mage of either flavor just from an extended period studying books, but if you did, you wouldn’t be one of the right stripes.”

“I’m completely fine operating under the framework that everyone else does,” I said. “It’s very important that I don’t spend the next several years at this athenaeum though. I’ll divert a portion of my salary and do whatever else is asked of me, so long as I can learn the art in my own way.”

Ermaretor leaned back. “Very well then. I believe I’ve done my due diligence. A single session of meditation though, that’s the remainder of your obligation to me.”

“Plus classes?” I asked.

Ermaretor looked aghast. “Of course I expect you to attend. How would that look if you didn’t?”

“Just checking,” I replied. I wasn’t sure that I was going to skip out on Ethics, and I definitely wasn’t skipping Combat Magic, but not forcing me to attend seemed entirely sensible. “I’ll attend the meditation class you recommended and do my best to make sure that you’re in the clear as far as potential problems go. We want this to be as smooth as you do.”

That, at last, seemed to unruffle some feathers, and I left her office shortly afterward.

“It went fine,” I said to Parson’s Voice. “No attempt on my life or anything, just some political stuff, plus a cryptic question at the start, something about a path.”

[Do you have more than that?] asked Amaryllis. [I’m around the corner, coming to meet you.]

“Hold up,” I said. Four people in robes were approaching me. Two were likely human, a man with a neatly trimmed beard and woman with a mask, both older, but the other two were more exotic species, tywood (a sand-dwelling species), and rhannu (who reproduced via mitosis). They were all looking at me, and not looking happy.

“You’re human,” said the rhannu. She was on the small side, five feet tall, with purple streaks in her hair that I was pretty sure were from dye, and purple streaks on her skin that were part of the coloration her species had. I was pretty used to the wide variety of species on Aerub, and I’d read The Book of Blood more or less cover to cover, but I still took a moment to look for the other distinctive features relative to the human baseline. Larger eyes, smaller forehead, a large set of ears and a small
one beneath it, and an extra finger. Nothing you couldn’t do with a little CGI. They hadn’t been from one of my more exotic phases, their interesting breeding aside.

“Can I help you?” I asked, looking between the four of them. All older, I thought, though it was tough to say how much. Thirties? Forties?

“You’re human,” the rhannu repeated, jabbing a finger my direction.

“I have no idea who any of you are,” I replied. “So, I’m just going to leave.”

“We’re the Student Council,” said the tywood (seven feet tall, lizard-like, with knees that bent backward).

“Okay,” I said. I was bewildered. “I don’t actually know what the student council does here, or what your powers are, but I haven’t had dinner yet.”

“You’re human,” repeated the rhannu for the third time. “You’re here under provisions that were put in place in order to help and protect special cases. They’re not for humans, they’re for rhannu and renacim, among others.”

The rhannu reproduced via mitosis, like cells did. When that happened, each would get a portion of the skills and memories of the original, and my guess was that this worked via the soul somehow. They would die if they didn’t split every thirty or forty years, and each half had to spend some time building back up into a whole person again, mostly mentally rather than physically. Now that she mentioned it, I could clearly see how Sound and Silence might have to have some kind of provision for her species.

“Is it the link between the Li’o Temple or the Rod of Whispers that doesn’t transfer when you split?” I asked.

“Both,” she said, crossing her arms. I’d thought there was an outside chance that me knowing a bit about her rather rare species might help, but if anything, it had the opposite effect. “My ancestor was the one who helped get the Special Returning rule created.”

“Alright,” I said.

“What are your special circumstances?” she asked.

I looked between the four of them, trying to figure out what was going on, other than that the rhannu was upset, which was obvious enough. “I don’t think I’m required to say,” I replied. “And like I said, I haven’t had dinner yet, so.”

“The SSSC has broad authorities,” said the human man. He was gray at the temples, but a bit baby-faced despite that. “We might not be able to expel you, but we can censure instructors. After we talk to them, it’s doubtful that they’ll want to sign off on the form.” There was no passion in his voice whatsoever, but his speech was quite cold.

“What do you want from me?” I asked.

“You’re cheating the system,” said the rhannu. “Two years, would that be so hard, to be just like everyone else? You’re using a rule that’s not for you.”

This was going sideways in a hurry. If I had things right, the bursar had been the one to have me follow this ‘Special Returning’ rule, because he had the authority to do so, but per the rules, I needed a week of classes and a sign-off from the instructors, which was now under threat. I didn’t think
Oberlin would give a fuck, but this was exactly the sort of thing that Ermaretor had been worried about.

“‘You’re right,’” I said. “‘We’re using the rule in a way that it wasn’t intended to be used.’ I probably can’t get away with just saying that it’s classified. ‘I’m here on behalf of the Empire. I’m investigating the recent deaths. It’s vital that I be allowed to operate as a normal student, and unfortunately, this was the only way that we were able to accomplish that.’”

That shook them out of their subroutines. “‘You’re … a spy?’” asked the tywood, who hadn’t yet spoken. His voice was surprisingly mellifluous.

“Spy is a strong word,” I replied. “Undercover though? Yes, that would fit.” I looked between the four of them. “‘We don’t know who’s involved, and that’s what I’m trying to find out. Going in with guns blazing wouldn’t suit that approach.’ I was really hoping that none of them were reporting to the enemy, whoever that was, but I didn’t think that I had much of a choice here, given that they were capable (and presumably willing) to sink my shot at two of the most difficult to attain magics.

“We’ll be checking up on this,” said the rhannu. She folded her arms across her chest. “‘You understand that.’”

“I do,” I replied. “‘Send a certified letter to Uniquities. I’ll have them confirm.’ And if they don’t want to, then I’m sunk and I’ll disappear from this place like I was never here, but hell if this isn’t a problem. ‘I need to know who informed you that I was here under the Special Returning rule.’”

“We don’t need to tell you,” replied the rhannu. “‘We were told in confidence.’”

“But,” said the man, stroking his chin, “‘If there really is something nefarious going on, then it’s possible we’re being manipulated.’”

The rhannu turned on him. “‘How?’” she asked. “‘Manipulated by actually following procedure?’”

“Yes,” replied the man with a nod. “‘Historically speaking, that’s a common tool of people with nefarious intent, and one of the primary failure modes of anonymous or pseudonymous reporting.’”

The tywood let out a sigh. “‘Later. We’ll send out a certified letter and go from there, before we take any action.’”

“Even if it is clandestine imperial business, isn’t that worse?” asked the rhannu. “‘The empire can’t come in and do whatever they please here, and they’re weakening institutional trust.’”

“Assuming anyone finds out,” replied the bearded man. “‘And given that he must have sanction from someone at the top, that implies that the matter has already passed some level of institutional review.’”

“Perhaps storming across campus to confront him was a mistake,” replied the masked woman with a monotone that I couldn’t help but think was a little sarcastic.

The rhannu seemed to realize that she’d lost much of her support in a few short minutes. “‘Fine,’” she said. She turned back to me. “‘When you find something, let us know. That’s our condition.’”

“‘Our’ is a strong word, Jiph,” said the masked woman.

“It’s my condition,” said the rhannu.

“Okay,” I said, having no actual intent to do so. “‘I’m working toward the best interests of S&S. Hopefully this will all be resolved soon.’”
The rhannu, Jiph, stormed off, and the other members of the student council followed after her. I mentally added that to the list of things that I had to worry about, which was growing fairly long at this point. Had they all stepped out of a meeting together to come find me? It seemed bizarre.

Amaryllis came up next to me a few minutes later, wearing her full plate with the helmet firmly in place, a necessary precaution given that there was a greater risk of her being recognized than previously thought.

“How are we doing?” she asked.

“Good,” I replied. “One day down, four to go, about half a dozen sub-plots to keep track of. No homework though.”
True to his word, Reimer had mailed us (actual physical mail with stamps and everything!) more notes on the system, including more of the virtues he knew, and notes on the campaigns that he’d played in, the ones created by the Aerb version of myself. I read through them, naturally, and even with the Reimer filter on things, I felt like I got a sense of that alternate Juniper. It filled me with a profound sense of loss.

One of the campaigns took place on a giant bird, where each feather was as large as a mountain, and generations passed while the bird was in flight. Mites were serious threats to the miniscule playable races, though it wasn’t clear whether or not the characters were small or the bird was simply enormous, and the whole thing was tied together with magic to make it work on even the high concept level. The great cities of the world were built into the hollow quills of the bird’s feathers, with an ecosystem that was partially based on the real ecosystem of a bird’s skin, and partly derived from a consequence of the binding magic that made the setting work. I could see the knock-on effects just from Reimer’s sparse descriptions of how it all worked, little details that betrayed magnitudes of worldbuilding.

Another campaign was set in an endless desert, with water and food supplied entirely by extremely expensive wells that had been created by a long-gone elder race. The wells were slowly deteriorating, on the scale of centuries, and no one had any idea what they were going to do when the wells (each of which supported a city) finally failed. The party were cast into the roles of elite desert wayfarers, one part scholars delving into the ancient ruins to uncover the mysteries of the elder race, the other part emissaries who traveled from lush city to lush city, spreading knowledge and solving problems. I couldn’t help but draw some global warming parallels to that campaign, though if the other Juniper was native to Aerb, the feeling that he would have been drawing on would have been either the Void Beast, or the exclusions, or something like that. Reimer described most of the desert cities as being more concerned with the here-and-now than a hundred years hence, even among the long-lived races.

Aerb left its prints everywhere on these campaigns, naturally. If I’d grown up on Aerb, my influences would be far different, not just because I didn’t have any actual tabletop RPGs to work from, but because Aerb was absolutely stacked with wildly different magics, intelligent species, cultures, and all the stuff that had been cribbed from my worldbuilding. If you were a teenager in Anglecynn, faced with all that, you probably wouldn’t do it like I did it, especially without Wikipedia to turn to. So the other Juniper had gone simple, paring things down to where they were manageable for a single person to make campaigns in. Per fake Reimer (a tenuously trustworthy source) they had usually picked characters first, then had the world constructed afterward, with exactly as many intelligent species as needed, and as much magic as required for the characters, with everything else made up to suit that.

They’d played their own version of a campaign inspired by Arthurian legend, though theirs was inspired by Uther, and was thus twice removed. The details were sparse on that one, which I thought was understandable, given that it was still a bit sensitive for me, and probably would be for this Reimer. I had thought that maybe I would see some reflection there, with their campaign resulting in the Arthurian legend of Earth, but instead they were just a mutation of Utherian legend, Othyr Bendrak and his Knights of the Star Table.

I wanted to meet other Juniper. I wanted to talk to him about what his life had been like. Reading Reimer’s notes … well, Reimer didn’t focus on the things that I wanted him to focus on, but I could still get some sense of the other Juniper peeking through. Kindred spirits. I wondered if the Dungeon
Master looked at me in the same way that I looked at the other Juniper. Probably not, given the torture.

I talked about this with the others, the night of my first day as a student.

“I’d just like to meet him and see what he was like,” I said. “I know that sounds incredibly narcissistic, but … I almost feel nostalgic for him.”

“Rilirin,” replied Grak with a nod. He was sitting on the couch in the common room, with Solace leaning up against his legs. She was knitting, which was entirely unnecessary in at least three different ways, but I supposed that everyone needed a hobby.

“Yeah,” I said.

“I don’t think it’s narcissism,” said Amaryllis. “You find him compelling, or at least his ideas. You’d have to be a pretty boring person not to find mirrors of your own ideas compelling. I would have liked to meet Cypress, or failing that, to have read her books.” Amaryllis sat at the table with Raven, where they were both going over notes together. They had colored index cards with places, names, and subplots written on them, as they worked to try to figure out the narrative.

“Sorry,” said Raven. “But it’s important that the Library continue to function.”

“I’m aware,” replied Amaryllis, looking slightly annoyed. “I’m only stating my preference.”

“For my part, I would like to speak with Maddie,” said Raven, looking briefly at me before returning to the notes. “We should get string, I think,” said Raven. “It might help us visualize the potential connections.” This aside was directed at Amaryllis. “There should be no problem with me going to speak with her, should there?” she asked, turning back to me.

“I don’t know,” I said. “The way things have been going, there could be booby-traps everywhere, the kind that we could never see coming. Like, if it were me, and I wanted to create drama … you have binary explosives on Aerb, right?”

“No,” said Amaryllis. “Or rather, we could easily make them, but it’s not an entrenched concept like it is on Earth.”

“Well, I was thinking that if I were a total bastard, what I might do would be to create a binary meme, consisting of two memes that are safe when separated, but deadly when mixed together,” but even as I was saying it, I was frowning to myself. “Seems inelegant though, at least as a way of artificially creating drama, and raises some questions about where each of the half memes came from, and how they got their properties.” I noticed that Amaryllis was rapidly writing something down. When she was finished, she looked up at me with a scowl.

“Could you not?” she asked.

“Not what?” I asked, momentarily bewildered. “Oh come on, do you really think that me saying things will retroactively change the world so that we have to face those things? That all of history is actually changing because I say something like, ‘hey, they’ve probably got binary memetic weapons’?”

“It’s possible,” said Amaryllis. “Possible enough that it might be better to keep those thoughts to yourself, or maybe not think them in the first place.”

“You want me to not think about how things could go wrong?” I asked. “But isn’t that what we’re all supposed to be doing? And, again, I don’t think that retroactively changing history should really
be on the table, because if it is, there’s nothing we can really do but go through the motions.”

“It wouldn’t need to be a retroactive change to history,” said Raven. “There was once a cabal of mages capable of predicting the future with incredible accuracy, the pathists.”

“Oh,” I said, stopping for a moment. “Yeah, I remember them.”

“You remember creating them?” asked Raven. Something had changed in her demeanor. “Was Uther aware?”

“Uh, yeah,” I said. “It was the Patchwork Republic campaign, the one loosely based on Soviet balkanization.”

“You realize that description isn’t helpful for anyone, right?” asked Pallida from her end of the table. She’d seemingly checked out of the conversation an hour ago, in preference for reading Earth books (she was making her way through the collected works of Roald Dahl at the moment).

“Is this a thing that I need to worry about?” I asked. “There are pathists on Aerb?”

“Not anymore,” said Raven. “Uther killed them to the last.”

I rolled my eyes at that. “Mary, if you’re going to tell me off for thinking up new weapons that might possibly be used against us, can you please also tell Raven off for loudly and firmly declaring that all the pathists to have ever lived on Aerb were slain to the last? That’s narrative bait if I’ve ever heard it.”

“Raven,” said Amaryllis, looking exasperated. “Please never declare that Uther and his Knights successfully dealt with a problem that will surely never rear its head again. Also, explain what a pathist is, in case we have to fight one.”

“Juniper?” asked Raven, raising an eyebrow.

“They could chart a path through the future,” I said. “But there was a hierarchy: they couldn’t make a path through the future where it would be altered by pathists above them.” I got some blank looks at that. “So, pathist C gets in a fight with a random schlub, then charts his destination as being, basically, winning the fight. He follows the path, not really knowing what he’s doing and why, and at the end of it, he’s somehow won. Paths were simple declaratives, a single phrase without caveats or qualifiers.”

“In what language?” asked Amaryllis.

“I have never in my life fallen for the old ‘make up new words’ or ‘speak in a different language’ trick,” I said, waving away the implied attempt at munchkinry. “Anyway, if pathist C fights pathist B, then pathist C can’t chart a path whatsoever, because pathist B is superior to him, and when their paths would end up in this iterative alteration pattern, instead path B just wins out. And way at the top is pathist A, and nothing stops him, ever, unless he makes a mistake in what kind of path he decides to be on.”

“That was how Uther defeated them,” said Raven.

“Well, it’s also how they defeated them in Patchwork Republic,” I said. “Though they also had the option to just use overwhelming firepower, because some paths just weren’t possible.” I looked at Amaryllis. “I doubt that this is going to come up though.”

“I didn’t bring it up because I thought it would,” said Raven. “I just … he knew, before it all
happened? He knew that they existed, how they worked, and how to defeat them?”

“Maybe,” I shrugged. “I mean, yes, Arthur was there for those sessions, but that was when he was maybe fifteen, so it would have been a long time, probably, with a lot of shit having gone on in the meantime.”

“He never said a word,” said Raven. She slumped in her chair and looked at the notes in front of her. Here, already, she had some measure of authority and input, and Amaryllis had eagerly welcomed both the help and the knowledge. With Uther, Raven had never even been allowed at the table, not really. No one had. He was a king who commanded his knights, a solitary leader. Raven had been someone he brought along for the ride.

“The reason you brought it up was that history didn’t need to be rewritten?” asked Amaryllis, gently prompting her.

“Oh,” said Raven. “Well, yes, the higher pathists often did things in response to events that hadn’t happened yet, to plans that hadn’t been made, to things that people would say only weeks later.” She shook her head. “If you have good enough precognition, which the pathists effectively had, you don’t need to rewrite history. You can alter the past when it’s still the present.”

“And these pathists are all dead?” asked Amaryllis. “Their magic is excluded?”

“Not excluded,” said Raven. “Not to my knowledge. But the magic was tightly constrained, available only through access to a device that has long since been destroyed by the pathists themselves.”

“An entad?” I asked. “Or the kind of device that could be rebuilt?”

“There was an elder race, some twenty thousand years ago,” said Raven. “They were frighteningly clever, until they ceased to exist. There were things they left behind, rare items that no one was ever able to duplicate.”

Forerunner trope. It had never been one of my favorites. I refrained from saying that though, for fear that it would trivialize what she was talking about. I had a problem with that, I knew, and I was trying to get better about it.

(But really, the whole ‘ancient forerunner species that disappeared after making a bunch of neat stuff’ was, in my opinion, some lazy worldbuilding. It was great from an adventure perspective, because it gave the opportunity to put down a lot of places where a party of adventurers could go spelunking with a lot of convenient treasures to snag, but it raised a whole lot of questions, most of which were never going to be answered. There were obvious reasons that worldbuilders leaned on it, and I wasn’t at all surprised to see it in Aerb, but I hoped that the Dungeon Master had done something clever with it. The alternate Joon’s desert world had wells and other technologies constructed by ancients, but it was implied, at least in the notes I had, that the mortal species of that world could have attained the majestic works of the ancients, if only they could have gotten their shit together for a year or so. Nothing the ancients had done there was so supernaturally beyond anyone alive that it was essentially a miracle.

Not that I had never used the stock ancients, because sometimes I was a lazy worldbuilder who wanted some cheap mystery and wonder in his game, or artifacts without the consequence of someone living being able to produce those artifacts. I would at least call it out as lazy though.)

“Juniper?” asked Amaryllis.
“Yeah?” I asked.

“You zoned out,” she replied.

“Just thinking about worldbuilding,” I said. “Probably not germane to the conversation.”

“Out with it,” she said.

“I was just thinking about the ancients,” I said. “How I don’t really like them, how they usually don’t make sense, and if they do make sense, they need to fit in with whatever the themes you’re working on are. Like, Patchwork Republic was about balkanization in the wake of imperial collapse, and there were a lot of the ancient-artifacts-no-one-can-build floating around, but they were recent artifacts, things that had been built within living memory, or if not built, then at least maintained within living memory. The game was implicitly about how sometimes things collapse, so the ancient lost secrets things was more poignant.” I looked over at Raven. “Do you know what killed the ancients?”

“Which ones?” she asked.

“Of course there are multiple,” I said with a sigh.

“The ones that pathists are descended from, then,” I replied. Five was actually lower than I had expected, given how nuts Aerb got about packing stuff into it.

“For those ones, it was a proto-exclusion,” said Raven. “Not quite an exclusion as we know them today, but with many of the same features. In that particular case, it caused the sudden malfunction of a mental augmentation their kind used, killing them all instantly, and so far as we’ve been able to determine, none of what they made can be recreated or repaired once broken.”

“Wait,” said Pallida, “Are you talking about the Gomerons? Is that what happened to them?”

“How do you not know this?” asked Raven. “You lived through it.”

“Like I had any idea?” asked Pallida. “I was in Gomera at the time, and all I saw was everyone around me drop dead, all at once, for no discernable reason. It was a little horrifying, now that I think about it.” She kept her face expressionless, but I thought that had to be a joke.

“They weren’t prepared for the magic to fail,” said Grak with a grunt.

“No, they weren’t,” said Raven. “It was an unknown threat at the time.”

(The Empire of Common Cause was barely prepared for a major exclusion, in spite of a lot of legislation that had been passed on the subject. I had asked Amaryllis about disaster preparedness as it pertained to the exclusionary principle, and she had spent a half hour in what I can only describe as full-on rant mode, covering a wide range of topics: regulatory capture, coordination failures, motivated optimism, toothless legislation, and pandering politicians. It was a somewhat harrowing experience for me, and she didn’t peter out until I tried to get through the thicket of acronyms that she’d used and tease apart some of the underlying assumptions. The long and short of it was that there were a few different magics which, if fully excluded, would end up with a lot of people dying avoidable deaths, and a lot of other people dying unavoidable deaths. As it turned out, getting people to plan for disasters that had never happened, and might not happen in the next lifetime, was actually pretty difficult.)
“And the other ancients?” asked Amaryllis. “I suppose you must have had access to their books.”

“How, Pithescenes were turned into obdurite by a still-unknown entity or phenomenon,” said Raven. “Anlasians were hit with a memetic disease that wiped them out within a fortnight, Reshnik vanished without a trace for unknown reasons, and the Frumions, as near as we can tell, simply suffered from supply chain failures and became a feral version of themselves.” Raven shrugged. “The names are probably unfamiliar to you.”

“Uh,” I said. “I know three of them. Reshnik made White Spires, and probably drowned, if they were like in my campaign, Anlasians made the hand whose fingertips are the Zorish Isles, and the Frumions were responsible for the Underhalls. Incidentally, are you sure it was supply chain failures and not the Jubjub bird?”

“Wait,” said Raven. “The Jubjub bird is real?”

“I have no idea,” I replied. “But it was something that I thought up, and canonically, that was what took down the Frumions. Maybe on Aerb it was just a kink in some complex supply chains.”

“I think I was on the other side of the hex when the Frumions went away,” said Pallida. “What’s a Jubjub bird?”

I thought about that for a moment. “Uh, big bird creature, four wings, six feet with talons, sinuous neck like a snake, but I think if you saw one you would probably focus in on the fact that it was fifty stories tall.” I shrugged. “It’s virtually indestructible, pecks people to death, calls people to it from the corners of their attention, invades dreams and appears in the twilight of consciousness … I’m not sure that I can remember much else. It was never something the party faced, it was just a background detail.”

“I’m pretty sure I would have remembered hearing about a five hundred foot bird,” said Pallida with a raised eyebrow. “Not doubting your, uh, expertise, but it really does seem like something that would stand out.”

“It wasn’t in your notes,” said Amaryllis, frowning at me. “Manxome Foe?”

“Yes,” I replied. “And sorry, like I said, it was a background detail, one of those horrible things that was roaming around and making life impossible in the long-term, not something that players were supposed to actually fight or really interact with.”

“So why was it there?” asked Pallida.

“Flavor and scene setting,” answered Amaryllis. “It would be the sort of thing that Juniper would include in order to sell the players on what the world is like, introduced by way of character backstory or plain exposition in order to make them feel a certain way.” She turned to Raven. “How did you know about it?” she asked.

“I read about it in a book,” said Raven. She frowned in concentration, then popped the book out of her entad and leafed through it for a moment. “Terrors of the Black Age, written four years after Uther disappeared, nearly at the same time Fel Seed happened. The author names and describes Fel Seed, along with some others. It stuck out to us as being prophetic, given that there are things described in this book that wouldn’t appear until later, but the exact nature of this foreknowledge has eluded us.”

“Author?” asked Amaryllis.

“Anonymous,” replied Raven. “Here, ‘The Jubjub bird is a great and powerful creature of sixteen
wings, six feet, and an elongated neck that sways and undulates as it seeks its prey. The bird is so massive that it dwarfs the largest buildings, standing high above the minarets. When the Jubjub bird wakes, the world will tremble.”

“Again,” said Pallida. “I’m pretty sure that a five hundred foot tall bird would stick out like a sore thumb.”

“I’m not saying that it ever existed,” I said. “I don’t think Raven is either. It’s just something that was in my games, which means there’s a chance that it’s here, especially given that it appeared in a book.”

“In a book that offers a glimpse of the future,” said Raven. The book disappeared from her hand. “If you’re confirming it, then it almost definitely exists.”

Amaryllis held out her hand in concentration for a moment, after which a sheet of paper appeared in it (likely some private communication with Bethel). She handed it over to Raven. “Here, this is the poem ‘Jabberwocky’, by Lewis Carroll.”

“A poem?” asked Pallida.

Raven read it wordlessly, her eyes rapidly scanning it. It wasn’t a terribly long poem. As soon as she was done, she read it again, going a bit slower. Her face had grown still and pale. She reached for a pen, then turned to Amaryllis. “Can I mark this?”

“Go ahead,” replied Amaryllis. “I have copies.”

Raven started writing, marking particular lines and circling things, though I couldn’t see what from where I was sitting. “All from one poem?” she asked, not looking up. “Juniper, what happened?”

“I wasn’t in a great place,” I said.

She finally stopped writing and stared at me. “By my count there are a dozen of the worst things on Aerb here. The mimsies, those were from this? The borogroves?”

“Yeah,” I said. “Fel Seed was, ah, from there too. He’s the manxome foe. Incidentally, it’s ‘borogoves’, not ‘borogroves’.”

“I saw that,” said Raven, looking down at the poem. “But they’re a group of trees.”

“It’s a pun,” I said. “Not a hugely clever one, I guess. It’s ‘groves’, here?”

Raven nodded. “There’s an island where the trees grow,” she replied. She looked back down at the poem, then up at me. “What’s Mome Rath?”

“No idea,” I said. “It was on the list that Uther had your father read to me. It sounded familiar, but I don’t know if I was just thinking of the poem, or if it’s extrapolation from the other stuff, or whether I thought up something and then forgot it. So far as I know, it never made it into a game, so maybe it just never stuck. But it might be a novel creation of the Dungeon Master.” I shrugged. “I’m kind of curious how Arthur knew about it.”

“I am too,” said Raven. “I have people and concepts to map to everything on that list.” She frowned. “That backpack Bethel fused with, have you tried pulling game notes from it?”
“Yeah, I tried,” I said. “I got a note back that said ‘this test is not open book’. I can pull other stuff, like my birth certificate, my parents’ tax information, and other personal items, but not any notes, character sheets, or game materials, aside from the books. Nothing personally touched by the campaigns, if I had to generalize a rule.” I was able to get my favorite hat, so that was something.

“So we’re left with what you remember?” asked Raven, sinking slightly in her chair.

“Yes,” I replied. “You have to understand that Aerb draws on everything, nearly a decade of work, a lot of it throwaway stuff, some hasty or poorly thought out, especially the earlier things,” like the Ell, “and I remember more than I think I probably should, which I’ll attribute to KNO, but I don’t remember every little detail, not without something to jog my memory or use as a springboard. Sorry.”

“It’s fine,” said Raven. “It’s just another mystery. I think, at this point, more is being resolved than created.”

“Not for me,” Amaryllis grumbled.

“We can take some time together,” said Raven. “Would the time chamber be available, do you think?”

“I had some things that I’d like to discuss in private with Juniper,” said Amaryllis. “I was planning to spend tonight in the bottle. The chamber is difficult, because it interferes with regular scheduling unless you want to spend the entire day in there. Can we block out a time?”

“Certainly,” Raven replied, but I thought I saw a moment of hesitation when Amaryllis said she was planning to spend the night with me.

(Would I have caught that before bumping my social stats up? It was hard to say. Insight had always been the highest of them, and in theory that was the governing stat for realizing that Maddie -- actually Raven, but Maddie in my head, a mistake I kept making -- found the idea of Amaryllis spending private time with me to be slightly troubling for reasons that probably didn’t have anything to do with the idea that we shared secrets. Amaryllis had tried to brush past it with the question about scheduling, and I wasn’t sure whether or not the old me would have noticed that she was intentionally pivoting. It was hard to tell, and there was always a chance that my so-called insights were all in my head.)

“I was actually going to go to bed soon,” I said. “Today has been a really long day. I had wanted to talk to Heshnel about the trolls some, but I guess I don’t want to get into that right now.” I wasn’t quite rubbing my eyes and yawning, but I was close, and it took some time to get down into the bottle, say hello to the locus, and get myself situated. I wasn’t terribly happy that I was going to spend the week having two commutes, one from campus to Bethel, the other from Bethel to inside the bottle, but there wasn’t much to be done about it.

“Amaryllis can take you down in the immobility plate,” said Solace. She was still in the middle of knitting. “Grakhuil and I will be staying here for a while, and I wanted to pick Pallida’s mind for a moment.”

“My mind?” asked Pallida. “What for?”

“You’re as old as creation,” said Solace with a grin. “I was hoping that you had some stories about the loci as they once existed.”

“Oh, I do take offense though,” said Solace, setting her knitting aside. ‘‘Perversion’ is an application of outsider mores.”

“Come,” said Amaryllis under her breath as she stood from the table. I followed after her, waving good night to everyone. Heshnel and Valencia were at their own table away from everyone else, and had been talking about the Harry Potter books, which was … something, I guess, a conversation that I didn’t really want to have, because I had enough Harry Potter in my life, but which I kind of wanted to listen in on. The last bit of conversation I caught was Pallida seeming to get ready to defend her claim of perversion. The last sight I caught was Raven watching us go.

“I need to grab the immobility plate,” said Amaryllis.

“Bethel could probably handle that,” I replied.

“I’ve been sitting too long,” said Amaryllis. “It won’t take long to get to my room, and it will do good to stretch my legs.” She stretched her arms behind her, seemingly for effect. “Besides, I wanted to talk.”

“Okay,” I said, waving for her to lead the way. “Lead the way.”

(Bethel was listening. Bethel was always listening. I tried not to mind, but in the back of my head I was wishing that we had some real, honest privacy. Maybe part of me was wishing that we could be alone together.)

It took Amaryllis some time to speak her mind, either because she was gathering her thoughts, or because she needed to switch gears from the intensive narrative stuff that she’d been working on with Raven to some new topic.

“Two things,” she said. “First, I want you to expose me to the meme you have, then excise it like you did on yourself. There are a lot of subplots here, and I’m worried that you might level up, even though it hasn’t been very long. If your spirit modifications fail, you’ll need someone to patch you up, and when I compare the risks against each other, I think it’s better to risk the meme reduction procedure now than to risk meme exposure in the heat of the moment for something that could literally end the world.”

“Okay,” I said. “I’m not happy about it, but you’re probably right about the balance of risks.”

“The second thing … I wanted to talk about Lisi.” She took a breath. “We actually went to the Quills and Blood together.”

“I figured,” I said. “Or rather, the timeline had me wondering. Did you know each other?”

“Yes,” replied Amaryllis. “In the parlance of the Lost King’s Court, we would be cousins, but our actual relationship is that I’m her great-great-great-great-great-great-great-aunt twice removed.”

“That’s great,” I said.

Amaryllis smiled at me. “Yes, hence why everyone is a cousin, uncle, or aunt. You are expected to know proper relationships though.” Her smile faded a bit. “Outside Anglecynn, it’s fairly common for Penndraigs to have regular social meet-ups, little weekly dinners together, just to keep on familiar terms, even if you’re in opposition to one another.”

“Sounds like a good way to get poisoned,” I replied. I was only half joking.

“I don’t think you understand how many entads I had,” said Amaryllis. “Poison wasn’t really a
concern.” She took a breath. “Anyway, I saw Lisi at those dinners. We were close enough in age, reasonably ambitious, reasonably talented, and we’d both come to the attention of our aunt Rosemallow.”

“The same Rosemallow who gave you instructions on gritting your teeth through your wedding night?” I asked. I tried not to feel visceral disgust at that, and failed.

“The very same,” replied Amaryllis. “We were on opposite sides of the power scale though, Lisi one of the gavelkinds, myself … well, you know.”

“Rich as fuck,” I said.

“Yes,” replied Amaryllis with a nod.

It had taken me a pretty long time to understand the scope and breadth of power and money in the Lost King’s Court, partly because it was all about as foreign as it could have been to me without being inhuman, and partly because I hadn’t really taken the time to look into it (or to listen to what Amaryllis was actually saying). To start with, entads were money, both because some of them could consistently produce things of value, and because the ones that allowed for investiture could be rented out at hefty price. Back when Amaryllis had been a proper princess, she’d had people on staff whose entire job was to find buyers for entad-produced goods and services, and to secure contracts for the wealth of entads that could be invested in other people. Even if all of her investments were wiped out (which they were) and her properties seized (also mostly true), Amaryllis would never have to work a day in her life, because the entads would make her money hand over fist.

Gavelkind was a succession law where possessions were divided among children. The entad inheritance implementation of that was that when a person died, all their gavelkind entads would go into a conceptual ‘pool’, which was then divided up among the children. From the perspective of one of those children, it was a total crapshoot whether it rounded up or down and which ones you would end up getting. The enormous Penndraig family had a whole wing of ‘gavelkinds’, who barely inherited anything in the way of entads. These weren’t poor people by any measure, but they definitely hadn’t been favored by the rules that were at play.

“One of the things that I’ve always had to deal with, up until meeting you, was the motivations of the people approaching me with offers for friendship,” said Amaryllis. “Lisi … she was unimportant, and she knew that she was unimportant, so she went seeking out someone who could help her with that problem.”

“Ah,” I said. “Motivated friendship.”

Amaryllis nodded. “Not the first time,” she said. “And it probably won’t be the last.” She came to a stop, and I realized that we’d come to her room. “I’ll change into the armor, give me a second.” She went inside and closed the door behind her.

Bethel took that as her cue to appear next to me.

“I could give you a peek,” she said with a lascivious grin.

“No thanks,” I said. “How are you?”

“Good enough,” she replied with a shrug.

“What have you been up to?” I asked. “Watching the mortals?”

Bethel nodded once. “As always. Are you sure that you don’t want a peek?”
“Yes,” I replied. “The thought of spying on her … I find it kind of sickening.”

“Such a moral little human,” said Bethel with a cluck of her tongue.

“No,” I replied. “I mean, yes, I try to be, but the way it makes me uncomfortable isn’t really related to morality, it’s cultural programming. I didn’t decide to be sickened because I’m super moral, I just am sickened. It’s like the opposite of a fetish. Though I do also think that it’s immoral.” I paused. “How are you?”

“Fine,” replied Bethel. “You already asked. You want to talk about me, rather than her?”

“Either is okay,” I said. “But she’s going to be spending the night in the tree with me, so we’ll have more time to talk. You … I was gone most of today, and I’ll be gone most of the rest of the week too, so I wanted to make sure that your needs were being met, to the extent that I could actually meet them.”

“It’s not your forte,” said Bethel. She arched an eyebrow as she watched me.

“No,” I said. “But especially for you, I know you have your issues with Amaryllis, and she’s usually the one that helps to smooth things out with the others, so it’s down to me. And I think I understand you better than she does, though I can’t claim to understand you that well. I think I also probably like you better as a friend than she does.”

“Hrm,” said Bethel. She sighed and looked away from me. “I was watching the two of them, Amaryllis and Raven. Peas in a pod, it seems.”

“Maybe,” I replied. “I can see the similarities.” I hesitated. “It might just be my memories of Earth clouding things. I’ve been trying really hard not to see Raven as Maddie, and I think that I’m mostly there, but sometimes it’s like a little echo of Maddie, a place where you can see that they have the same DNA.”

“DNA?” asked Bethel.

“Uh,” I said. “Deoxyribonucleic acid, part of our cells, it’s what allows for heritability in humans. Or it does on Earth. For all I know, the mechanism is completely different on Aerb. Blood types don’t work the same, that’s for sure. Anyway, yes, there are places where Raven evokes Maddie, just, a grown up version of her, one with such a lifetime of experience that I could never hope to match it. Our roles are kind of reversed. But if you’re talking about her like she’s the same as Amaryllis, then I could probably go on for quite a bit about what makes them seem so different to me.”

“Amaryllis is almost done,” said Bethel.

“Sorry,” I said. “I got off topic. I really do want to talk to you about your own stuff.”

“Perhaps another time,” said Bethel. “I believe I’ve gotten something from this conversation, more than I was seeking, in fact. I may go speak with Raven.”

“Don’t cut her fingers off,” I warned.

“I would never be so dull as to repeat myself like that,” said Bethel. “But it appears that she and Pallida are having a spat at the moment, and I’d like to devote my attention to that.” She disappeared with a pop.

Shortly afterward, Amaryllis emerged from her room, clad in the immobility plate. “Ready?” she asked.
“Yeah,” I said. “You were talking about Lisi, and how it was a case of motivated friendship?”

“You remembered,” said Amaryllis. She cocked her head to the side. “Do you care? I won’t be offended if you say you don’t.”

And just like that, I was struck by the fact that maybe Amaryllis wasn’t giving me a debrief for the purposes of fulfilling my quests, maybe she just wanted to talk about something that was on her mind.

“You don’t talk about your past that much,” I said.

“It’s a confusing morass of names,” said Amaryllis. “And you know everything that’s actually important. If I talked about people like Lisi, it would just be a barrage of them, servants, staff, cousins, instructors, so many that even I have trouble keeping track of them so long after the fact.”

“Well, go on,” I said, gesturing for her to lead the way. “Tell me about Lisi.”

“Motivated friendship,” said Amaryllis as she started walking. “It wasn’t the first time, but it was definitely the least subtle. I don’t know what she thought I would get from her company, but she was abrasive in a way that I never found entirely appealing. We Penndraigs are destined for politics and governance from birth, but not all of us are suited to it, and Lisi … there’s a reason that she’s studying to be a combat mage instead of doing something a bit more prestigious. In another ten years, she’ll be a multimagus, but she’ll still be sitting outside of the traditional spheres of power within Anglecynn.”

“She’s the Second Under-Princess of Defense,” I said. “Does that really not count for anything?”

“She’s at the athenaeum, a world away from the seat of power,” said Amaryllis. “That should tell you everything that you need to know about how much influence and utility she actually wields. It’s typical to give younger members marginal roles to give them experience with governance, but she’s not even doing that.”

“Except that you got to be Special Liaison on Existential Emergencies,” I said. “Which seems, from what you said, like it actually did have some power attached to it.”

“I don’t want to be immodest, but I’m special,” said Amaryllis. “And even then, if I were a different person, I could have coasted through the position, putting in very little work, or offloading that work onto my staff. As it happened, I was putting an enormous amount of effort into the position, meeting with leaders and functionaries from other nations, working hard to get clearance on relevant issues, talking to imperial delegates -- this is boring you.”

“No,” I said. I didn’t think that I looked bored, and I certainly didn’t feel it.

“There was a joke you used to make with Fenn,” said Amaryllis. Her voice caught slightly on the name. “’Blah, blah, blah, politics’.”

“That was Reimer’s joke,” I said. “Not really a joke, just a way of dismissing things he didn’t care about. Fenn liked it.” I shrugged. “I have, in the past, maybe been a little bit dismissive of things that seem very remotely connected and not otherwise that interesting. Politics … I like politics, in the sense of knowing the groups and how they’re in opposition to each other, but if you’re talking about the process of deal-making and whipping votes, then it’s not really my cup of tea.”

“That’s fair,” said Amaryllis. “It can be frustrating, sometimes.”

“I want to clarify that this time I wasn’t feeling particularly bored,” I said. “If I had that far-off look,
then it was because I was trying to think about you doing all that stuff at fifteen or sixteen years old. When I was fifteen …”

“What?” asked Amaryllis.

Amaryllis rolled her eyes, but she smiled all the same. “You spent your time working on flesh.txt?” she asked.

I blushed. You write one erotic worldbuilding file, and this is what happens. “Might have,” I said. “Gods, it’s so weird that all my secrets are out in the open. Not just out in the open, but there are entire living, breathing civilizations built out of my literal masturbatory fantasies.”

“Yes, well, I suppose that’s one advantage of not being interested in that sort of thing,” said Amaryllis. “I don’t have those secrets to spread.” She pursed her lips. “Sorry.”

“I feel like if I had another few points in my social abilities, I would have some idea what you were sorry for,” I said.

“Sorry for bringing it up,” she said. “I know you’re sensitive about it.”

“Meh,” I said. “Pretty much all my dirty laundry is out in public now anyway, I live in a house that gives me a level of privacy below what was even possible on Earth, and of course, there’s the Dungeon Master, so … whatever.”

“You haven’t told us about the Fel Seed Incident,” said Amaryllis. ”The mechanics, yes, the personal stuff, no.”

“No, I haven’t,” I said.

“I wasn’t saying that you should do it now, just pointing out that you’re still leaving us in the dark,” she replied. “It might feel good to talk about it.”

“It might,” I said. “Or it might feel better to talk about happy things, or irrelevant things, instead of the nightmare monster that we’re going to be meeting at the end of the road.”

“Agreed,” said Amaryllis with a sigh.

We arrived at the room where Bethel kept the bottle. Whatever space warping was making it happen, there was a full night sky above us, though Li’o had all the light pollution that one would expect of a city with electricity, and the only celestial body I could see was Celestar, whose lined face was shining down on us. The bottle room, as I thought of it, was probably my favorite room in Bethel, mostly because it always had a wide open feeling to it, lots of greenery, and the statuesque hand that held the bottle seemed entirely mythical to me.

I held my breath and went into the glove, to save Amaryllis the awkwardness and embarrassment of having me ride her down. It had been a while since I had taken a trip in the glove, and it didn’t provoke even a little bit of nostalgia, though my mind did wander to Fenn, and how she had disliked those trips.

When Amaryllis pushed me back out of the glove, the doe was waiting for us.

“Hi,” I said. “Doing well?”
The doe gave me a nod.

“You’ve been doing better with it?” asked Amaryllis.

“I’m coming close to a week of spending my nights here,” I said. “I’m … starting to get used to it, I guess. Maybe I’m starting to understand it.”

“You should be careful about that,” said Amaryllis. She was already starting to take off pieces of the immobility plate and store them in the glove, but the bigger parts would need more dedicated maneuvering.

“I don’t think understanding is anathema to the locus,” I said. “Or at least, not understanding in the way that I’m talking about it. It’s just a different kind of understanding.”

“Feeling, not thinking?” asked Amaryllis. There was some curiosity in her voice.

“Maybe,” I said. “But … no, not really. I don’t think that breaking it down into an emotion and thought dichotomy actually works. It’s easier to describe what I’m feeling in terms of emotion, but it’s not actually emotion itself, not, uh, qualia. It’s not a distinction between what’s qualitative and quantitative.” I was pretty sure that I wasn’t articulating my position very well.

“Perhaps it’s better that we don’t have this conversation,” said Amaryllis. “If what you’ve been doing is working for you, then I don’t need to know exactly how.”

I walked over to the doe and patted its flank. I had lately been trying to curb away from calling it ‘her’, not because the gender was inaccurate, but because it seemed far too much like fitting the doe into a box. If my intent had been to increase empathy for the doe, I thought that the change in gender had mostly worked, but it was a bit of a crutch. The doe was its own thing.

Eventually we have to boil it down to something, ” said Reimer.

“You’re wrong,” said Tiff. “Sorry, but you are.”

“Guys, why are we even talking about this if Arthur isn’t here?” asked Craig. “Seems like something that you’d want to save for him.”

“Are you kidding?” asked Reimer. “Neither of us would be able to get a word in edgewise.”

“All I said was that so far as magic goes, the sword will glow in the hand of a woman,” I said. “A statement which you’re making me deeply regret.”

“Because there are edge cases,” said Reimer. “Like, big, obvious edge cases that we should all be familiar with.”

Tom gave a somewhat guilty look.

“That’s not what I’m saying,” replied Tiff. “You’re ignoring the actual meat of the argument.”

“You’re saying, basically, that it doesn’t boil down to the edge cases?” asked Reimer.

“I’m saying … you’re taking things like Klinefelter’s or androgen insensitivity and just making them into new categories,” said Tiff. “Or you’re making these different frameworks for them and pretending, I don’t know, that there’s a master framework, or that we’re stuck using frameworks at all.”
“Again,” said Craig, “Really seems like an Arthur kind of thing. Because we’re going to have to go through all this again when he comes back and hears about it.”

“Solemn pact not to tell him?” I asked, only partially joking.

“Question,” said Tom. “What is Klinefelter and what is the annerogen one?”

“Women have two X chromosomes, men have an X and a Y, someone with Klinefelter syndrome is XXY,” I said. “Androgen insensitivity is, I think, the one where you have XY chromosomes but something goes wrong with how your body handles hormones and you wind up outwardly presenting as a woman.”

“‘Goes wrong’ is a value judgement,” said Tiff with a frown. She was in a bit of a mood, which happened occasionally when she was having to defend her position. Usually it was better when Arthur was gone, but in this particular case, Reimer was pressing her buttons, or she had just had enough of us (not that I, specifically, was to blame).

“I’m wrong in the sense that it anthropomorphizes evolutionary processes and assumes that chemical, hormonal, and biological processes have intent,” I said, after a moment in which no one leapt to my defense.

“No,” said Tiff. “‘Wrong’ implies ‘right’, and that’s all just a construct. A useful one, sure, but you and Reimer are both talking about these things like they’re, I don’t know. More options that you would add to a drop-down, I guess.”

“My actual point,” said Reimer. “Was that the sword must have some way to know whether or not someone is a woman, right?” He looked at me. “Right?”

“Well,” I said. “Right.”

“Wrong,” said Tiff, frowning at me. “I mean, right, in the sense that yes, there’s some rubric that the sword might be able to apply to the question, but wrong, because the sword doesn’t ‘know’ and there’s no privileged frame there.”

I sighed. “We’re really not having an argument.”

“Could have fooled me,” said Craig.

“Wait, let me jot this down,” said Tom. “‘Not an argument’, there, got it.” He grinned at me. “Always good to keep track.”

“All I’m saying is that when the sword is presented with someone who’s intersex or transgender, it just makes a determination whether or not they’re a woman,” I said. “Eventually the rubber has to hit the road at some point, and the magic has to either work or not work. Right?”

Tiff crossed her arms and frowned. I wasn’t as good at the debating thing as Arthur was, but I thought that I had laid out the best argument that I could. I couldn’t even really remember how the argument began, except that I had offered up a sword that had special bonuses if you were a woman. I was pretty sure that Tiff had made an innocuous reply to some innocuous comment from Reimer, and it had snowballed from there, but it was the kind of thing that was hard to pinpoint after the fact.

“I understand wanting to put everything into little boxes,” said Tiff. “Or even wanting to firmly declare some things outside boxes and some things inside boxes. Most of the time, including this time, it’s fine. Can I just somehow get you to understand that it’s not real? It’s convention, it’s a sloppy fit because it’s always going to be a sloppy fit, it’s just … it’s frustrating that I can’t get you to
understand what I’m saying. Arthur would probably disagree, just for the sake of it, but he would at least understand.”

“Just to be clear, Joon,” said Craig, “You already made your ruling about who qualifies for the sword?”

I let out a sigh. “Yeah,” I said. “Though in the future, I probably won’t make a magic item like that.”

Tiff apologized afterward, more for disrupting the game and getting upset than for anything she actually said. It was one of those apologies with a lot of caveats, I think because she didn’t want to back down from her position, or claim full culpability for the fact that the argument got heated, but she did think an apology was warranted.

After I’d finished with the doe, something that I was trying to get less regimented about, I went inside the tree house, where Amaryllis was waiting for me. She’d shed her immobility plate and put on pajamas, which for her meant flannel pajama pants and a tank top, both probably from Earth.

“Have fun?” asked Amaryllis.

“Kind of,” I replied.

“Any … progress?” she asked.

“I’d rather not say,” I replied. “It’s … well, the loyalty system has always worked to undermine pretty much every interaction I have with my companions. It’s this metric sitting there, debatably not doing anything except providing bonuses, and focusing on it, trying to make it go up -- we were just talking about motivated friendship, weren’t we?”

“It’s different,” said Amaryllis. “Loyalty bonuses are symbiotic. Positive sum, mutually beneficial. The way it would have been with Lisi, I’d have to treat her like an investment, and she would always be getting more from the relationship than I would.”

“But you would be getting something,” I replied. “You would elevate her, and in exchange, you would get her loyalty, her service, and some say in how she lived her life, unless I’m horribly misreading how things were done among nobles.”

“Yes, and I would be paying out in various ways until she was actually worth something,” said Amaryllis.

“Harsh,” I said.

“Non-literally,” I said.

Amaryllis laughed. “Well, the elves were purged from the bloodlines long ago.”

“Uh,” I said, stopping for a moment. “Really?”

Amaryllis smiled and nodded. “It’s not funny, really, because it’s a reflection of a xenophobia that’s still present in Anglecynn, but still. It’s funny to think that the best that can be said about my relatives is that they don’t literally eat each other alive … anymore.” She laughed again.
“Well, at least you can laugh about it?” I asked.

“Yes,” nodded Amaryllis. “Do you know what Lisi showing up means?”

“That we’re going to be neck-deep in Anglecynn death squads within the fortnight?” I asked.

“I wish,” said Amaryllis. “Bethel would … well, it’s probably in bad taste to wish that on relatives, or worse, people hired by relatives, but yes, it means that we’re likely due for the Anglecynn subplot to return to the fore.”

“Which means, if current theories are correct, that we should shortly be getting another dozen reasons to go there,” I said with a sigh. I caught a brief and small sour look on Amaryllis’ face before her expression went still and controlled. “Amaryllis, if the opportunity presents itself to make you Queen of all Anglecynn, I will put full and honest effort into it, it just really seems more like your thing than mine. Fenn and I,” my voice caught, even though I’d tried to steel myself, “We always talked about what it would be like for us to go to society balls with you, how much we would like stomping all over everything, and all the nobles would have to hold their noses, because we had superior firepower. That was the fantasy of what going to Anglecynn would be like, and I always knew that the real thing would be its own special kind of hell, designed just for me.”

“I know,” said Amaryllis. “It’s just frustrating to me, especially when you seem so willing to shirk your own plotlines. You have no particular desire to go to Anglecynn with me, save for the desire one friend has to help another, and yet you also have no desire to go to Anglecynn to complete quests that might get us closer to your self-professed goal of killing Fel Seed and reuniting with Arthur.”

“Reuniting isn’t how I would put it,” I said. “And finding him, or at least finding out what happened to him, is also a step toward godhood, at which point I can do whatever I want, including installing you as grand monarch of Aerb, if that’s what you want.” I shook my head. “We’re retreading arguments. I hate that. Happened all the time with the group.”

“Sorry,” said Amaryllis. She looked over at the beds. “We should do the meme inoculation now. That would be more productive.”

“I assume you talked to Raven about it?” I asked.

“No,” said Amaryllis. “Why would I? She doesn’t actually know much about spirit, and her expertise in memetics doesn’t seem like it would apply, because I’m more concerned with using soul surgery on a self-inflicted infection.”

“Maybe we should talk to her before we do something irreversible,” I said.

“Perhaps,” said Amaryllis. She went to sit down on the bed, the bunk that had once been hers back when we’d all lived here together. “Narratively --”

“Okay, okay, I’ll just do it,” I said. I sat down on the bed next to her. “How do you want to do this?”

“I’ll look at your soul first,” said Amaryllis. “Either it will infect me or it won’t. If it doesn’t, then there’s less need to worry, but if it does, you’ll have to make the same alterations to me that you did to yourself.”

“Alright,” I said, taking a breath. “I’ll watch over you, if you’re out.”

*Loyalty Increased: Amaryllis lvl 24!*
(How did that change anything? How was that enough to push her over the edge? Didn’t she already know that I would protect her? Was it just that I had said it out loud?)

Amaryllis placed her hand on my shoulder, with her thumb touching the base of my throat. She closed her eyes, and began frowning in concentration. She should have been at Essentialism 15, which for me had made the process far from automatic, but still doable in short order with some effort. I wasn’t sure how long it would take her to make her survey, nor whether I would know if she were infected, so I was left to wait, and with nothing to do but look at her.

We weren’t usually so close to each other. We were almost never touching. If she was paying attention to my heart rate as she tried to find the pathway to my soul, it was possible that she would feel my pulse speeding up, just from our proximity. Back near the beginning, when we weren’t so close, I’d had some fantasies about Amaryllis, fantasies that I’d done my best to squash, and fantasies that were returning, unbidden. She was too pretty, like every line of her had been made by an artist’s hand, and if I let my guard drop for even a moment, it was easy to be mesmerized.

I found myself wondering what I was waiting for. Why hadn’t I tried to make a better case for myself? Why wasn’t I trying harder to be the person that she wanted me to be, especially if it was the person that I wanted to be too? Uther was my point of comparison, and while I didn’t want to be him, the things that he’d accomplished before leaving were so far beyond what I had managed to do that they seemed more like myth than reality. Amaryllis … left to her own devices in a parallel timeline, she had conquered as much of the world as she possibly could have, with only a slight bit of cheating. I wanted to be with her, whether as a friend or not, and I knew that if we were going to keep things copacetic between us, I would have to be more like her, more driven, more ambitious. I knew that I should be anyway, even if she wasn’t around.

I should have gone home and faced whatever terrible thing the Dungeon Master had planned for me there.

Amaryllis’ hand fell from my shoulder and the light pressure on my neck was released. She opened her eyes, but they were half-lidded and unfocused.

“So I guess that didn’t work, huh?” I asked. There was no response. I felt a cold sweat break out as I looked at her. I could fix her, I was pretty sure, I could fix myself, we’d tested my ability to use Spirit on other people, the meme no longer looked like anything in particular to me, and it was all going to be fine … but I still felt a sense of dread.

(We should have tested this on D-class personnel first, that was what we should have done. From a utilitarian perspective, it made perfect sense. I wondered why Amaryllis hadn’t brought it up. Because she knew that I wouldn’t go for it, or because she thought it was abhorrent? There was something she’d written as Cypress, about indulging in petty morality, which really stuck with me.)

I took a moment to grab a pen from the dining table and draw a mustache on her. It made me feel better, though I immediately had second thoughts about whether or not she’d find it funny. Fenn would have found it hilarious, I was pretty sure.

Getting to her spirit from her soul was simple enough, and the meme thread was easy enough to find too. I shrunk it down and squeezed it tight, until it was nothing more than a thin line, then traced it back down into the soul, where it was lodged in her memories. There, it was easy to see, given that almost everything linked to it. I cut the links, as I had in my own soul, which (so far as I understood) would dissociate the image from all my memories, then took a moment to make a very cursory glance at the rest of her soul before leaving.

A better person than I was probably wouldn’t have been tempted to peek at her values or social
It would have been easy to see whether those had changed recently, whether how much she valued me was higher or lower, and whether she was once again romantically attracted to me or not. But as tempting as it was, it was her decision whether or not to do it, and her decision what she was going to tell me. (Again, I’ll acknowledge that a better person would have had no temptation there.)

When I came out, she was staring at me. “Fixed then, I suppose,” she said. I had forgotten that I’d drawn a mustache on her, and was laughing a little. “Are you okay?”

“Fine,” I said, still giggling. She just looked so serious, and then had that ridiculous mustache on. It was a little crooked, which just made the whole thing funnier. Fenn would have loved it, and for a moment, that thought wasn’t accompanied by regret and loss.

“Juniper,” said Amaryllis. “Explain.” Her voice was very stern, which only made the crooked mustache I’d drawn on funnier.

“Just laughing at my own joke,” I said. “Really immature.” Trying not to laugh made everything funnier. It was dumb, super dumb, but still funny. “There’s a mirror in Sable,” I said, which I wasn’t sure was true, but between Fenn’s kleptomania, Amaryllis’ paranoid preparation, and the fact that we’d used it with the Earth backpack as general storage while in the time chamber, I was pretty sure that the glove contained almost everything a person could ever want.

Amaryllis held the glove out and a hand mirror popped into existence. She stared at her reflection for a moment, then looked back up at me with a raised eyebrow. “Really?” she asked. For a brief moment, she seemed disappointed in me, but then her eyes went down to the mirror again, and she cracked a smile. “You’re ridiculous,” she said. She gave me a skeptical look, then her eyes returned to the mirror again. “You didn’t even draw it right!”

“I didn’t want to spend a bunch of time on it,” I explained.

Amaryllis set the mirror down. “You know that this means retribution, don’t you? A Penndraig is not to be trifled with.”

“Wouldn’t be the first mistake I’ve made,” I said, smiling at her.

“She would have loved this, you know,” said Amaryllis.

“Yeah,” I said, and then I started laughing again, because she still had a mustache on her face.
The phrase “full English breakfast” apparently didn’t have an analog on Aerb, but the idea had apparently tickled Bethel’s fancy. She had started with the traditional full English breakfast, then moved on to other Earth nationalities (apparently other countries had their own take on it), and once she’d exhausted those, she had moved to making full breakfast versions of Aerbian nationalities. I was pretty sure that no one had asked her to do that.

On the morning of my second day at Speculation and Scrutiny, it was a full Grebellian breakfast, and I couldn’t identify literally any of the ingredients. There were some crispy, greasy things that looked like they had once been the skin of a reptile, and were close enough to bacon, some blue-colored slime that looked like Jello but had the consistency and mouthfeel of eggs, a pile of fruit with a variety of greens, and six other sides that looked almost, but not quite, completely unlike normal breakfast foods.

“Can I make a polite comment without having my fingers cut off?” asked Pallida as she looked over at Bethel.

“Of course,” replied Bethel.

“And nothing else chopped off either,” Pallida clarified.

“Oh,” said Bethel. “Well, then it depends on what you were going to say.”

“This isn’t quite what they eat in Grebells,” said Pallida. She picked at an orange blob with her fork. “Or at least, it wasn’t when I was there.”

“Your criticism is duly noted,” said Bethel.

“Where did you get this stuff, anyway?” asked Amaryllis, picking up a crispy piece of skin. “Your backpack gives you access to Earth foods, but none of this seems like it should be possible with your combination of abilities, because there are base ingredients that wouldn’t be available on Earth.”

“I paid for the ingredients,” said Bethel with her arms crossed. “A young neighbor boy was walking by, and I offered him a sum of money if he would run to the specialty market and get a few things for me.”

“Ah, that’s the problem,” said Pallida. “Most of what you got probably came by bulk teleport, with not enough demand that it would be fresh.”

“Again, your criticism is duly noted,” replied Bethel. Her voice was a bit more frosty than it had been.

“Alright, fine, don’t mind me, I’ll be eating,” said Pallida. “If you want tips though, I have tips.”

We ate in silence for a bit, but I finally made eye contact with Valencia, and she took that as her cue to speak. She gave me the impression that she had been waiting with bated breath for me to notice her.

“Do you want to hear my Hogwarts theory?” she asked.

“Uh,” I said. “Hogwarts theory?”
“Not this again,” muttered Pallida.

“Well,” said Valencia, “I was thinking that everything happens for a reason, and so I was thinking about Harry Potter, and that there must have been a reason that I was given those books.”

“Okay,” I said slowly. “And that reason extends beyond just me wanting you to get started on reading a relatively inoffensive children’s series as a form of socialization?”

“Yes,” said Valencia.

“There were parts that I found offensive,” said Heshnel with a frown.

Valencia waved him off. “Not important,” she said. “What I was thinking was that since you’re at a magical school --”

“Please just call it an athenaeum,” said Amaryllis.

“-- I was thinking that there might be similarities, and that Hogwarts was placed as an important clue,” said Valencia. She smiled at me. “I’ve started breaking things down into houses.”

“I’m not sure that’s going to be helpful,” I said. I turned to Heshnel. “What was offensive? The house elves?” In Harry Potter, they were a knobbly little slave race that had been mind-fucked into being perfectly subservient, which had some definite Implications, and which I was pretty sure no Aerbian elf in their right mind would find a flattering depiction. I was fully ready to leap to Rowling’s defense with a discussion of the origins of Earth elves and the ways that Aerb elves had been drawing on a different tradition.

“The Death Eaters,” said Heshnel. “They’re a caricature of the Second Empire.”

“It’s not important,” said Valencia with a frown. They had been sitting together the night before, and I thought this was probably a continuation of that conversation.

“By all means,” said Heshnel with a wave of his hand. “Go ahead.”

“Anyway,” began Valencia.

“The Death Eaters are the bad ones, aren’t they?” asked Solace.

“As depicted in the book, yes,” said Heshnel, frowning slightly. “Their stated aims, however, are noble, and their means are given a blanket condemnation without any consideration of nuance or the fact that those means were used by bad actors. There are a number of fallacies.”

“The young one would like to talk, Hesh,” said Pallida.

“It’s rude to call people young,” I said.

“Most people take it as a compliment,” said Pallida with a raised eyebrow.

“I believe he meant within this context,” said Amaryllis. “In which case I would agree, it’s unnecessarily demeaning for no good reason.”

“We’ll see if you say the same once you’re thirty thousand years old,” replied Pallida.

“Would you like to hear my findings or not?” asked Valencia, looking at me.

“Of course I would,” I said. “Sorry, we have too many people at this table.”
“I didn’t say anything,” said Grak.

“Well, yes, you’re much more considerate,” I replied. “Valencia, you have the floor, I’ll register my objections when you’re done.”

“Okay,” said Valencia, looking pleased. Everyone else listened to me, which was a bit of a shock. “To start with, I tried to split the houses between the two schools of magic in Sound and Silence, but that didn’t seem like it worked. Instead, I realized that you have four professors, one for each house. Then the question was which house each of them belonged to. I want to talk about it a bit more, but I think Ermaretor is Slytherin, Oberlin is Gryffindor, Leister is Hufflepuff, and Malus is Ravenclaw.”

“This is all gobbledygook to me,” said Pallida.

“Then you’re welcome to read the books,” replied Valencia. “Juniper, what do you think?”

“I don’t have enough information,” I said. “And the house system is just a typology, and typologies are always a case of square pegs and round holes. Just because you can take four people and fit them into four houses, that doesn’t mean anything more than that the numbers line up and the system is flexible. It’s a magic eye test. You might as well do the same thing with the four humors, or get creative about how you’re counting people and do enneagrams or horoscopes or Myers-Briggs or … whatever.”

“More gobbledygook, but I think a different flavor,” said Pallida.

“So you don’t think it’s worth anything?” asked Valencia. She looked a little hurt.

“I’m saying … okay, why did you put Ermaretor in Slytherin?” I asked.

“She’s ambitious, cunning, focuses on power, and she’s evil,” said Valencia.

“She’s likely evil,” said Amaryllis, who had finished her food. “There’s a difference.”

“The code phrase she gave you might have been a red herring,” said Raven. “We’ll see what happens at this meditation class.”

“The penumbral are literally shadow people,” I said. “It’s in the name. If she were evil, it would be too on the nose.” I turned back to Valencia. “I can see your reasoning, but I could also make an argument for Hufflepuff, because in her lesson she put a lot of focus on the people who had come before, the importance of loyalty to the athenaeum, and stuff like that, and in private conversation with me, a lot of what she was talking about turned out to be fair play, even if it was, I’ll admit, a little bit of a Slytherin way of talking about fair play.”

“What houses would you put them in then?” asked Valencia, frowning at me.

“I’m just saying that they probably don’t go in houses, and just because we can make arguments for which houses … it’s asking the wrong question, I guess,” I said, scratching my chin. “You’re presupposing that houses are a sensible way of looking at a collection of four people. You might as well slot all of us into houses.”

Valencia gave me a very guilty look.

“Okay,” I replied. “I guess I should have seen that coming. What I’m trying to say is that unless I get a lot more evidence, I’m going to assume that the Hogwarts houses aren’t going to map onto my instructors, the other students I meet, or anything else.” I hesitated. “Keep working on it though, and if you think you have something that’s more of a match than you’d get just by random chance, let me
know, okay? It’s wouldn’t be the strangest thing that had happened this week.”

“I would like to hear more about these ‘Death Eaters’,” said Solace.

“The abolition of death is not, in and of itself, immoral,” Heshnel began, but I was already wofling down my food again, and the ensuing fight between everyone who was more than four hundred years old (and a bemused, immortal Bethel interjecting occasionally) didn’t really capture my attention in the same way. I was hoping that they could keep from each other’s throats too much while I was off learning things.

On my second day of college athenaeum, Lisi was waiting for me in “A Still Magic Primer”. She had already found her seat, and as soon as I came in, she began waving her hand frantically, as though she was incapable of registering that we had made eye contact with each other. I resigned myself to my fate and climbed the stairs to sit down beside her.

“How was your meeting with Ermaretor?” she asked.

“How was dinner with Reimer?” I asked.

“Informative,” said Lisi with a slight sniff. *He sang like a canary.* “What did you discuss with Ermaretor?”

“Politics,” I said. “Nothing really important.”

“She called you ‘the bursar’s man’,” said Lisi. “What did she mean by that?”

“Uh,” I replied. “Not really sure that I’m at liberty to -- oh for fuck’s sake.”

The day before, there had been a student standing up there with Ermaretor, moving her hands in a way that was apparently typical of the less-trained vibrational mages, and which was likely used in place of a speaker system for some reason (practice for the mages, I was guessing, or maybe just because student labor was cheap). The student that had been there the day before had looked pretty bored with the lecture, but the audio quality had been clear, so it was easy enough to forget that she was even there. Unfortunately, the student who had replaced her was a rhannu, and unless there was some other compelling reason for a rhannu to be staring daggers at me, I was pretty sure that it was the same rhannu that I’d met the night before. Being on the student council apparently meant that you were able to swap work study. At least we’d been able to put a name to the face the night before; she was Jiph, no last name, a graduate student, vibrational mage, and ‘activist’ of local renown.

“What did you do?” asked Lisi, watching me with a skeptical look.

“Nothing,” I said. “She’s, ah, a member of the student council.”

“I know that,” said Lisi. “Why does she hate you?”

“She’s probably listening to what we’re saying,” I replied.

“Does she know why she hates you?” asked Lisi. “Even if you were worried about eavesdropping you should be able to clearly state information already known to her.”

“It’s complicated,” I said.

“Reimer was talking about some of your complications,” said Lisi.

*Fuck.* “Look, Reimer and I haven’t seen each other in four or five months, and we were never really
that close to each other even when we saw each other every day.”

“He said you were like a brother,” said Lisi.

“That doesn’t sound like him,” I replied with a frown. *It sounds like something he’d say to impress a girl who wanted information, maybe.*

“He said the black sheep of the family,” said Lisi.

“Ah,” I replied. “That sounds more like him.” I was trying not to look at Jiph, who was still staring at me, and whose anger hadn’t abated much. I wondered whether she would be able to keep up the same intensity for the whole class.

“He said that you were with a girl who looked like Amaryllis Penndraig,” said Lisi.

“He did?” I asked. *Traitor.*

“Yes,” said Lisi. “He also said that you went to prison.”

“You could probably have found that out just by calling up one of your relatives,” I said.

“Probably,” said Lisi. She was looking at me with an uncomfortable amount of intensity. “I knew Amaryllis Penndraig.”

“I had her poster up in my room,” I said. “Future Leaders of Anglecynn.”

“Reimer said,” replied Lisi. “He thinks that the girl he saw is Amaryllis. I’d like to meet with her.”

“I’ll ask,” I said.

“Now?” asked Lisi.

“Class is about to start,” I replied, which was thankfully true. They were doing some setup down at the front that they hadn’t done the day before, and a couple of people were involved. When I looked more closely at the armor, I saw that it was shimmerplate, a signature of imperial agents, which started raising alarm bells. I was still waiting for the other shoe to drop, the point at which this would all explode into mayhem and carnage. I rested my hand next to my vambrace, readying myself for GTFO mode.

One of the visitors setting things up had a storage entad, and deposited on the front stage area a giant flat stone that was at least ten feet across. Following that, he put down all kinds of papers circling the stone. When he was finished, he touched the stone with a very specific motion, which caused the center of it to change shape into a concave surface. This quickly filled with murky black water that came from nowhere. Staring at it, I was uncomfortable, because it certainly seemed like a summoning ritual of some variety.

“Welcome class!” called Ermaretor as she surveyed the room. She was wearing another colorful dress, which I still thought was an odd fashion choice given her grayscale biology. “As you can see, we have a special treat for you today. Behind me is the Urquhart Stone, on loan to S&S from the Penndraig Museum of Curiosities for the next few weeks. I was planning for today’s lesson to go over foundational still magic theory, as it was known to the ancients, but I made a few calls, and it turned out that I was able to secure the use of the Stone. It’s an entad with a very specific power; when given the notes, correspondence, memoranda, and other writing of a person, the Stone is able to bring a simulacrum to life, one of some limited intelligence which can answer questions.” She beamed at us. “Class, I would like you to give a welcome to a shade of one of the most prominent
thinkers on still magic, a man who revolutionized the magic, in addition to his many other accomplishments in diverse fields.” She swept a hand behind her, and the man tending to the Stone pressed his hand against it. “Uther Penndraig!”

I went still. Of fucking course it was Uther Penndraig. But if I was hoping to see Arthur again, even the older version of him I’d seen in Masters’ mirror, I was disappointed. Instead, the water stirred, and from it rose a miniature version of the Loch Ness monster. I’m not saying that to be glib about it, it was to the exact proportions of that famous photograph, though obviously not as big, given that it fit within the dark waters. Why, exactly, the entad would work like that, I had no idea, and I had no clever ideas (though it was entirely possible that I’d have been able to make a correct guess using a dumb idea instead).

“King Uther, what are the fundamental differences between magic?” asked Ermaretor, in what was clearly a rehearsed question.

The sea monster didn’t speak with Arthur’s voice. Instead, it was a timeless, androgynous voice.

“The magics of Aerb can be divided into four distinct categories,” said the sea monster, “The first is phenomenological, magics founded on simple, understandable, base principles. Of these, gem magic, feng shui, and conjoinery are the most prototypical examples. The second category is metaphorical, where there is no one binding truth to the magic, merely reflections of humanoid interaction with the base subject. Blood magic, dibbling, and water magic are the most prototypical examples. The third –

The sea creature’s voice cut out, but its toothless mouth kept moving. I stared at it for a moment, not understanding what had happened. It didn’t become clear until I looked around the room and saw that everyone else was still listening in. I felt a surge of adrenaline as my hand went to my wrist to twist the vambrace into panic mode, and I stopped myself just barely in time as a different thought occurred to me.

Jiph was the one providing us all with adequate sound. There wasn’t some new threat that had revealed itself, it was just a member of the student council specifically excluding me from the lesson. I locked eyes with her, and she gave me a very curt nod before looking away. Unlike the other student, she didn’t seem to use her hands when using vibration magic; she kept them tucked away, with her arms crossed.

The sea monster continued talking. He was apparently having a dialogue with Ermaretor, but I couldn’t hear either of them, and I hadn’t yet learned how to read lips, if it was even possible to read the sea monster’s lips in the first place.

On the one hand, it was really doubtful that there was anything of value to be learned from this lecture, at least on the face of it. If the entad worked like Ermaretor had said it did, then it was just a fantasy spin on the old ‘reconstructed from his social media’ trope. I had no specific cause to question that, and it did seem like my style. So they had a fake Uther, the one revealed by his writings, and not even a full collection of his writings either, given that Degenerate Cycles wasn’t there. There would be nothing in the books, notes, and letters that surrounded the entad about Earth (except for the fiction Uther had stolen from there), the dream-skewered, or his life as Arthur, because someone would certainly have noticed (that someone likely being Raven, who I could readily assume had read every scrap of writing that Uther had ever produced). So there wasn’t much that I was going to get from this lesson, unless I was particularly interested in hearing an introduction to still magic as it had been practiced five hundred years ago. There probably wasn’t going to be a test, and at the end of the week, I was going into the temple to become a still mage, skipping to the front of the line, before leaving the athenaeum forever. Not being able to hear was no big loss.
On the other hand, I really did want to hear what Arthur had to say. Back in high school, he always had some hot take on almost everything, sometimes cobbled together from nothing in the space of a few minutes, other times the result of some actual deep thought on his part. Part of the fun, at least for me, was trying to tell which was which, and where I could, I tried to undercut his arguments entirely. Arthur was smarter than I was, better at rhetoric and debate, but he spoke off the cuff with some regularity, and the few times I’d been able to catch him out had been golden.

(I still missed him. Maybe he was a monster, and maybe the memories were a bit tainted, but I still missed him.)

It was just so petty to use magical powers to deprive me of that. Even just to deprive me of the lesson on its own was petty, mean and spiteful in a way that I would hope she’d be above.

As the lesson went on, I wondered what Jiph’s plan was if I lodged a complaint with Ermaretor. I wasn’t going to do that, because I was going to be a good little protagonist and keep my eyes on the prize, nevermind this idiocy. Still. That didn’t stop me from wondering what the game was, what she would say if I went to Ermaretor after class.

And up a level, it was possible that some bullshit was going on. There shouldn’t have been anything to learn from the entad recreation of Uther, but I could think of a dozen unlikely mechanisms by which he might have something valuable to say. Maybe there was some correspondence that Raven had never got a hold of which would shed light on some possible future plot, or maybe there were a lot of small, innocuous things which the entad could add up together to have some relevance to us. I was sure that the Dungeon Master could engineer it somehow. And if I was meant to hear something here, then it was possible Jiph was screwing all that up.

Or more likely, the Dungeon Master had put her here in order to leave me blind to whatever entad-Uther would say. Or, no, even more likely, this was a challenge, not meant to stop me from learning something, but a barrier I was expected to get past on my own. If I failed, there would be consequences of some kind, and maybe a second chance, but there had to be some stakes to the challenge. That was what I would have done, as a DM.

I started going through my options. I couldn’t read lips, and so far as I knew, Languages didn’t allow me that ability. I was, nevertheless, trying to read lips, so in theory, it might unlock at any point, but I couldn’t depend on that. I had a lot of different magics, but none of them seemed to help me either. Bone magic let me have some sense of my bones, but it wasn’t a physical sense, and bone magic was almost entirely concerned with the bone’s connection to the soul, rather than the bone as it existed in the body, meaning that I couldn’t do something like moving my hand over onto Lisi’s desk and listening in via bone conduction.

Spirit seemed like it might be an option. The spirit/soul system logically had inputs and outputs, because if you saw an image, it had to have some way of moving into storage and spinning up a thread (e.g. how an image in a book could logically operate as a memetic attack), but I hadn’t yet found the input or output threads of the spirit, and futzing around with the mechanism of my consciousness in the middle of class in order to get information that might be completely irrelevant seemed like a really bad idea.

I burned through a few bones, one by one. I didn’t actually have any idea what stat would govern hearing, since in theory it was both physical (the eardrum) and mental (the ability to distinguish between sounds). The game rules that Reimer had given didn’t seem to specify anything about vision or hearing, which was weird, since that was part of D&D’s core rules, but I didn’t know whether those were rules hidden from the players, rules he’d forgotten to include, or if it was DM fiat every time.
Eventually I thought I was able to hear something from MEN, and though it was difficult with the split focus of listening and keeping up a burn at the same time, it was at least better than sitting there in silence. I’d missed maybe fifteen minutes of the lecture.

“...phenomenological,” finished Uther, the start of the sentence completely unintelligible. “In this case, the school of magic is extended, not through metaphor, but by deeper understanding of the phenomenological nature. Stillness, defined, is not the absence of kinetic motion, but the absence of change in any form. Now, I will grant that many forms of change are reducible to the kinetic movement of elemental particles, whether we consider heat, chemical reactions, or indeed, light.”

Ermaretor waved a hand, which she’d done a few times before, and Uther-the-sea-monster stopped talking. “Among the circle of scholars, Uther is seen as a remarkable figure, not just because of everything that he did, but his uncanny ability to make predictions about the world, even when evidence was thin on the ground. The idea that light had a speed was foreign in Uther’s day, but he declared, with some conviction, that not only did light have a speed, it was composed of ‘elementary particles’ and, paradoxically, also waves. In the battle of Alheim, against the Dread Radiance, Uther was able to use still magic to completely nullify the offense of the Dread Spears and bring an end to the reign of the Hallowed Shards, in a feat that was then thought impossible, and only now fits easily within the modern frameworks.”

Typical Utherian bullshit then, Still Magic 100 or something like it. Maybe a virtue, maybe just raw skill, but Uther was like me, and could easily go beyond what was possible for everyone else.

Uther continued on. “If still magic, then, is the stopping of things, the halting of change, there are further applications outside the realm of traditional study. When we take the iconic view of the still mage, we think of a speeding cart barrelling down the winding roads of Chisholm, stopped in its tracks with no damage to the passengers or goods, but there are other forms of change as well, beyond the mere physical. Still magic might stop a certain class of connections between an entad and its user, or at least those aspects which are dependent on change, rather than static in their nature. It might stop a chronomancer’s clock, or a dibbler’s spell. And though I have not yet found practical applications of it, a still mage can stop mental processes.”

Ermaretor waved a hand, which stopped Uther. I wondered whether he was on a script. That hadn’t been a part of how she’d described the entad. “It’s a difficult technique,” she said. “But yes, a grandmaster magus of still magic can invoke the stillness of the soul and make themselves immune to soul magic, if they have the time and attention to mount such a defense. Similar defenses can be mounted against all manner of phenomena that would seek to change you against your wishes, so long as you have conscious effort to still that change. For most of you, this will remain a bit of useless arcana. For others, I hope that this will be something you take to heart. There are future classes that deal more specifically with defense against esoteric threats.”

I stopped burning bones, and the silence became nearly complete again. I was running low on useable bones, the ones that I could replace through the mirroring trick, and besides that, it was too difficult to split my focus between listening, burning bones, trying to connect the things that were being said to what I knew to be true, and how I thought about Aerb’s magic. None of it seemed objectively useful though, and the sound quality with the boost was low; I thought I was probably hearing what they were saying through the inevitable echoes around me, which wasn’t the ideal way to take in a lecture.

The upper reaches of still magic were a bit dizzying, but that was no great surprise. Short of another sacrifice, I wasn’t going to get there for another twenty levels or so, but in a pinch … well, there were a lot of things that I would probably try in a pinch, different methods of flensing myself away, but still magic seemed like it would be one of the go-to ones, since it offered a form of countermagic.
I’d read about Uther stopping lightning bolts and lasers in their tracks against the Dread Radiance, but I hadn’t actually known that it was advanced still magic. I tucked that away for later analysis.

As for Uther’s thoughts on how to divide magic, he was the expert, not me, but it really sounded like the same kind of bullshit that he’d spouted in high school, if maybe marginally more refined. To my knowledge, the system that the simulacrum was espousing here in class wasn’t one that Uther had presented in the books he’d published, and I could sort of see why, because it wasn’t all that convincing. The only reason that you would see four clear categories of magic system is if there were four underlying mechanisms of design, or if they were all the result of four underlying rulesets. To start with, that wasn’t how I designed magic systems, but even with that set to one side, it really didn’t seem like you could chunk all the magic systems (some of which I knew more familiarly than others) into broad groups, especially not if you had to fit druidic magic in there somewhere. I really wanted to quibble over the definition of ‘distinct’, because if it were four categories that were overlapping, I might be a lot more willing to accept that he was describing something that was real and/or useful.

(To my way of thinking, you would be better off with different axes, though even there you would probably run into problems, and I wasn’t sure that it would be that useful. You could put magic systems on scales according to how firm their rules were, what resources they used, where progression came from, which attributes they focused on, and so on, which would give you different quadrants or octants or whatever, but even if you did that, what would it actually show?)

I closed my eyes, fixed my bones, and then sat out the rest of the lecture, occasionally glancing at Lisi’s notes in order to see if there was anything that I really wanted to listen in on, something about a conspiracy at S&S, or deep and previously unheard lore. I saw Lisi write down ‘still mages limited by range and power not internal well’, and I wondered to myself why this was being taught in class, why Uther would have felt the need to say that, and why Lisi felt the need to write it. Why would anyone ever come into this class without knowing that? Who would that come as a surprise to? Based on Lisi’s notes, a lot of the remainder of the lecture was on the implications of those base limitations, and again, it seemed like the brain dead sort of observations that I would doodle in my notes at school, rather than any deep insight. It was an intro class, and I was reading it instead of experiencing it, but I still wanted there to be more somehow, some vital secret revealed instead of just stuff that I could easily have learned from a book.

(The higher levels of still magic were well outside the day-to-day of the average still mage, who worked primarily in either industry or disaster response. There were lots of applications for bringing things to a halt, and most of the people in the class with me would presumably be going into prestigious but mundane occupations of that nature. I was almost past the point of being amazed by Aerb as I walked through its cities, but I had still been gobsmacked to see still mages casually holding girders in place at a construction site.)

“What did you think?” I asked Lisi, once the lecture had come to a close.

“I’m still waiting for the classes to begin,” she replied with a frown. “Ermaretor hasn’t seen fit to delve into the force equations yet.” She looked down at Jiph, then over at me. “You have Parson’s Voice. Ask the girl you were with whether I can meet her.”

I sighed. That wasn’t the sort of thing that I wanted Jiph to overhear.

“When we’re outside,” I said.

“Parson’s Voice can be used indoors,” said Lisi as she gathered up her materials.

“I know that,” I said. “Security concerns, which I have to imagine you’re very aware of.”
“Eavesdropping,” said Lisi with a nod. She got out of her seat and I followed her down the stairs. “You still haven’t explained who you are.”

“It’s complicated,” I said. Really fucking complicated. “Do you really not get this whole diplomacy thing?”

Lisi whirled around and looked at me. The family resemblance was particularly strong when she narrowed her eyes at me. “Why do you say that?”

“Keep moving, I don’t want to be late,” I said. Surprisingly, she did as I asked. I tried not to watch Jiph as we walked past her; her petty attempt at disrupting the lesson had been largely successful, and I was hoping that if I just ignored her, she would think that I didn’t care.

“Oh, okay,” said Lisi, once we were outside the building and on our way to the next. “Speak with her.”

I raised my hand to the tattoo and pressed against it. Unfortunately, if I wanted to keep my status as a tattoo mage secret, I was going to have to pretend that I couldn’t move the tattoo, which left it sticking out slightly. The collar I was wearing was high enough to partially hide it, but it was still conspicuous, though not as conspicuous as moving the tattoo would be.

“Lisianthus Penndraig would like to speak with you,” I said. “I told her that I would ask. My old friend Reimer seems to have had an extended conversation with her.” I was hoping that I could phrase things oddly in order to avoid giving too much away.

[Fine,] said Amaryllis.

“Wait, really?” I asked.

[I think that we should tell them both,] replied Amaryllis. [Not the full truth, but something substantially correct. They’ll have made guesses, and those guesses may get back to Anglecynn. We need control.]

“Well, we could have talked about this before now,” I said.

[Yes,] said Amaryllis. [I assumed you asked because she’s pressing the issue?]

I nodded, then remembered I was on comms. “Yes,” I said. “And I do see your point, but Reimer --”

[Minimal information only,] said Amaryllis. [There’s more we might be able to get from him, but he’ll need more of the truth.]

“Will do then,” I said. I let my fingers fall from the tattoo and looked at Lisi. “I guess you’re going to get to meet her.”

“When?” asked Lisi.

“Tonight,” I said. “Dinner at my place.” I gave her the address, and she quickly took her notebook out to write it down, repeating it back to me. “Reimer will be there.”

“Good,” said Lisi.

“Good?” I asked. “I’m surprised you’d want him around.”

“We’re friends,” said Lisi, frowning at me. We had made our way into the classroom and found seats together. The chalkboard in front of us was filled with equations and diagrams over its full ten-meter span.
“Friends, after a single day?” I asked.

“It’s easy to make friends if you know how,” replied Lisi. She turned to me. “There’s some discussion among the cousins about what Amaryllis Penndraig’s status is, if she’s not dead.”

“We can talk about it over dinner,” I said.

“So she is Amaryllis?” she asked.

“Classified,” I replied. She didn’t laugh or even smile, but the class started shortly after that.

“Alright, settle in everyone, does anyone need recalibration before we start?” Our instructor, Leister (magus, second order) stood before the class, smiling. No one raised their hands, and his smile widened by a fraction. “I see that some of you have moved, I hope not in an effort to trip me up.” He laughed at that. “At any rate, I have the first bit of bad news today, which is that you’ll have the first spot of homework for this class today. It will be given at the end of session, so please be sure not to miss it. With that said, I’ll introduce the topic at hand, which is all about frequency and amplitude, how they’re defined, and the fun stuff that you can do with them, whether you’re an engineer or a vibration mage.”

As it turned out, there really was a ton of stuff to know. Some of it was very basic, which I didn’t mind, and some of it seemed incredibly complex, particularly the math side of things. Leister demonstrated in a variety of ways, partially through drawing on the chalkboard, partially with his (beautiful) voice, and partly with pieces of string. My increased KNO was definitely helping with the trigonometric identities and math part of it, which I had never been particularly stellar at back on Earth, and I found myself taking a lot of notes. The fun thing about Leister as a professor was that he always related things back to what we were actually studying, which was vibration magic. A vibration mage’s ‘breath’ was of primary focus, namely in terms of how much needed to be accomplished certain effects, and how the fundamental properties of vibration (and waves) played into those applications.

There were, thankfully, no particular upsets, no long-dead friends coming back from the grave to give lectures, and no new personalities. Lisi didn’t even interrupt me or try to talk over the instructor. Score another point for the class, I supposed. We were given homework right at the end, written up on the chalkboard, all of which would take supplemental reading and some amount of math.

“It’s all a method of slowing us down,” said Lisi as we walked to our next class. (I had literally all my classes with her, which I wasn’t too thrilled with.)

“Is it?” I asked. “You don’t think any of that was useful?”

“Some,” replied Lisi. “It’s a base for future learning and might be helpful in that respect. But two years of groundwork is far too much, and the primary purpose of it is to deter people from classes, or worse, as Ermaretor explicitly stated, to instill a culture in graduates.”

“Ah,” I said. “You’d prefer that they just taught you the things that were most directly useful to your pursuit of choice and didn’t make you take anything else to round it out. Like a trade school.”

“Of course,” said Lisi, looking affronted. “Anglecynn trade schools are focused entirely on training people to be productive workers with as little time, effort, and cost expended on that training as possible. That’s the model the athenaeums should be following.”

“But they don’t, because they have other considerations, like tuition, politics, culture, et cetera,” I said. “Makes sense to me.”
“It’s inefficient,” Lisi scowled, as we went and took our seats in the next classroom. I was looking forward to Oberlin.

“It’s inefficient, but that’s the kind of thing that happens,” I said. “Especially in a place like this, where there’s a rate limit on both types of magic and no competition.” A monopoly on magic was, in essence, what the athenaeums were, with all the negative impacts that inevitably had. I was mildly surprised that neither Uther nor the Second Empire had managed to do some trust-busting, but not that surprised, given that the athenaeums worked together and represented a vast amount of power.

“What’s inefficient?” asked Reimer as he climbed the stairs to come sit with us.

“Sound and Silence,” replied Lisi. “Good to see you.”

“You too,” said Reimer. He looked between us for a moment, then sat next to Lisi, putting her between the two of us. “How’s it going, Joon?”

“Fine,” I said.

“We’re invited to dinner at his house,” said Lisi. “I thought we could go together.”

“Oh,” said Reimer. He glanced at me. “Sure.”

“It’s fine,” I said. “Just … be careful what you say about the house.”

“Why?” asked Lisi, her eyes widening slightly. Either I hadn’t used the right tone with that warning, or I had. I hadn’t meant to spook her.

Oberlin came into the room shortly after the last of the students had, carrying something that looked like a mannequin, which he set down on top of the mats. It wasn’t quite a department store mannequin that I was used to though, since it had clockwork contraptions at the joints, and far better workmanship, but it wasn’t that far off. Given that there was no clockwork magic (at least, that I knew of), I suspected that it was an entad. That hypothesis was mostly confirmed when Oberlin touched the mannequin on its chest and glowing blue goop flowed out of it, surrounding its head, torso, and limbs, then becoming firm and opaque, changing color and adding features all the while. Eventually, it looked human, so real that I would have struggled to tell it apart from a real person. It was also fully nude, and quite clearly male. I cast a glance at Lisi, who didn’t seem perturbed in the slightest.

“This is an entad,” said Oberlin. “It can take the form of any humanoid, and while transformed, has fully realistic anatomy. What I’m going to show you today will be gruesome, by almost any reasonable standard. If you would like, you have a few minutes to leave while I give a practical overview of the combat applications of vibration magic. You have until the week’s end to change classes. For anyone else, the school provides counseling if you have difficulty with what you see here today. Knowing what it looks like to see a person die is vital to the practice of combat magic, and an important part of this class.”

There were fewer people in the class than there had been the day before, five or six missing students, and I was surprised that two more left as Oberlin continued to talk. That was nearly a quarter of the class gone in two days, leaving us at nearly thirty people, the smallest of my classes. Oberlin was pushing people out of the class, seemingly for ideological reasons, and it was working. I wondered how the athenaeum felt about that.

“The mortal species have some resistance to magic in many of its forms,” said Oberlin. “This resistance is weak; it will give you a fraction of a second when under assault. Unfortunately for
vibration mages, extended contact with the subject is necessary for all our most precise attacks, meaning that in a full combat situation, you will either need impeccable control, overwhelming power, or some form of assistance. It is nevertheless the case that a skilled combat mage is capable of producing death at a distance, within line of sight for most intents and purposes, though there are a few caveats. I will now demonstrate the three most common methods of attack for a vibration mage on this entad."

Oberlin went over to the small desk beside the stage and pulled a small knife from the desk. He began to hum, an unearthly sound that I was pretty sure was the result of either unique vocal chords or vibration magic. He paused for a moment and looked at us, still humming, and then turned his attention on the mannequin.

The more I looked at the mannequin, the more real it seemed. It was breathing, or at least giving the impression that it was breathing. And when Oberlin directed his attention at it, it started clutching its ears and screaming in pain. Oberlin rushed it and stabbed it in the throat with his knife, which caused the screaming to become a gurgle as blood rushed out of the wound. It fell to the floor, now gripping its throat, and Oberlin stopped his humming.

“That’s the first method,” said Oberlin. His shirt had been sprayed with blood. “It doesn’t take much skill to generate a pitch that’s loud enough and painful enough that you can find an opening. Debatably, you might say that I killed him with a knife rather than the magic, and I might grant that. This isn’t a person, it’s an entad, capable of only basic responses to stimuli, but you’ll have to take my word for it that it would work on a person more often than not. Those of you who are going to become vibrational mages, you can take lessons that will teach you proper control for this specific technique, but this class exists largely to give you the practical basis. Obviously, you might also want to take a course that will give you the skills and experience necessary to kill with a weapon of some kind.”

Oberlin bent down to the body, which was now a corpse, and removed the knife. I looked over at Lisi and Reimer. She was listening with rapt attention, making notes while her eyes never left Oberlin. Reimer looked a little bit ill. When I looked back at Oberlin, all of the blood was gone, and the entad was back to looking like a mannequin. He touched it again, and the goop came out of it as it reformed itself, human again, but this time female. I didn’t see why it had to be so realistic, or if it had to be, why it couldn’t wear clothes. She didn’t look like anyone I knew, thankfully.

“I will give you some caveats about distraction,” said Oberlin. “First, it can be difficult to use when you have allies around, given that the essence of the technique is sound generation, and sound is notoriously hard to keep contained. Possible, but hard. Second, the distraction technique is largely about sensory overload and pain response, neither of which are present in all the mortal species, and not to the same degree among those who have them. There are a number of books that catalog specific responses to both sound and pain; in particular, I recommend Thurston’s *Aural Weakness.* Third, it should be fairly obvious that this requires a secondary method of either incapacitation or murder. If you have a gun, use it, otherwise, depend on other tools in your toolkit. And fourth, this method is non-lethal on its own. That might make it tempting to some of you without the proper disposition toward combat magic, but it’s vital that you see that as a weakness of the method, not a strength.”

Oberlin turned toward the woman and held out his hand. “I would advise everyone to cover their ears.”

I did as he said as soon as he said it, because whatever else I was thinking about Oberlin at the moment, I was pretty sure that he wasn’t fucking around.
He began humming again, with the same tone as before, like a singer giving a pitch before the performance began. Then there was a loud bang, a rush of air that ruffled my hair, and the entad-woman fell to the ground. It was strangely bloodless. I slowly uncovered my ears. It had been considerably louder than a gunshot, but I didn’t think quite loud enough that it would have caused damage.

“Not like it is in the illustrations and stories, is it?” asked Oberlin as he looked out at us. “That was a directed pressure wave, raw force applied through vibration magic. Most of the damage comes from the boundary areas within the body, places where the differences in density cause different parts of the body to press against each other or shear rather than moving as one. In particular, the lungs will be harmed more than almost any other part of the body, enough to kill. To do it like in the stories and tear the head from the body would take the full breath of a skilled vibration mage. To vaporize flesh would take even more power, power that’s not realistically available to us. A pressure wave is enough though, at least for the majority of the mortal species.”

He went to the corpse, which was leaking fluids, and set it back up again, transforming it first into its clockwork form, then into another human woman, this one different than the first. Still naked, which still bothered me.

“Pressure waves are deadly,” said Oberlin, “But they take a significant amount of power to accomplish what they do. It does benefit from being the fastest lethal method in the vibration mage’s arsenal, but the requirements make it difficult to use at a distance with any efficacy. In addition to that, I’ve never found it that much more powerful than a firearm, and because the pressure wave is kinetic, most things that stop one will stop the other. Defenses against firearms are extremely common, at least in combat scenarios. A pressure wave is flashy, especially when you use it with power well in excess of what should be lethal, but I would liken it to a gun with three or four bullets, one that you need to spend years of study to master. It’s rarely worth it.”

I was pretty sure that the woman standing behind him wasn’t going to be ‘alive’ for long. Somehow it was much harder to take than when it was male. I wondered whether the entad picked at random, or whether Oberlin was trying to make a point about latent prejudice and how we needed to be ready to kill someone no matter what their gender was. It hadn’t actually felt any different to kill women, but there was still a part of my Midwestern upbringing that instinctively recoiled at the thought. Tiff would probably have called that bigotry. Maybe the Aerb version of her would call me out on it, if and when we met, if and when she got the full story. All I could say in my defense was that I had killed a few women, which I thought probably counted for something, but that was a gallows humor way of making that argument.

“The last method is resonance, and as I said in our first class, that’s my specialty,” said Oberlin. He looked over at the naked woman standing there. “The resonant frequency of a human being is between five and ten hertz, dependent upon magnitude of vibration, but ‘resonant frequency’ as a concept is difficult to apply to a mass of different materials. For the purposes of killing, the heart and the skull are the easiest targets, though given how many of the mortal species have more than one heart, the skull has become the de facto method. The technique for resonance is a difficult one, because it has to be uniquely tuned, and because it takes a fair amount of time and observation, relative to a combat scenario where every second can be vital.” He turned to the woman. “Starting now,” he said.

For a half second, nothing happened, then the woman began clutching her head. She fell to the ground and rolled slightly, before she had what looked like a seizure, and finally went still. It didn’t take more than four seconds or so.

“I try my best to be humble, but this is beyond what can normally be expected of a vibration mage,
should you face one in combat,” said Oberlin. “The primary benefit of the technique is its range, and
the fact that it requires no line of sight, so long as you can feel the vibration at a distance, which any
sufficiently skilled vibration mage should be able to do. On a clear, dry day, it takes me half a minute
to kill someone a half mile away. With a proper vibration sense, it can be done around corners,
attacking someone behind cover, though in that case, range is more limited.” He walked over to the
corpse and it reverted back to being a mannequin once more. “There are limits and countermeasures
to this, naturally, as there are for all three primary modes of attack available to a vibration mage,
which is what we’ll be covering in the next half of the class. Before we go on, are there any
questions?”

To my surprise, Reimer’s hand went up. I was considerably less surprised that Lisi had a question;
her hand was up with much more urgency.

“Arthur,” said Oberlin, pointing at Reimer.

Reimer blinked for a second, but didn’t correct the instructor. Not that Arthur wasn’t his name, but
that wasn’t how he introduced himself, and no one back in Bumblefuck had called him that (and I
was guessing that the same was true for Fumblebuck Reimer). “Vibrational mages can create and
manipulate light,” said Reimer. “Is it possible to create harmful radiation using vibration magic, and if
so, is it possible to do so in a combat scenario?”

Oberlin frowned. “There are a few hundred people who have attained the knowledge and power
necessary to create light,” he said. “To my knowledge, it’s never been used in an offensive capacity.
Given that intensive research efforts are often implicated in the exclusionary principle, research is
tightly controlled, and carried on at a satellite site well outside Li’o. I can’t speak to the efficacy of
radiation as an offensive weapon, given that it’s entirely untested in combat situations, but perhaps in
another few years you’ll be able to get an authoritative answer.” Oberlin paused. “You’re not one of
those planning to be a combat mage.”

“No, sir,” said Reimer. “Just curious.” He’d looked pale before, but some of the color had come back
into his cheeks.

Oberlin nodded, then pointed to Lisi. “Lisianthus?”

Lisi quickly lowered her hand, which she had kept up through the whole exchange with Reimer.
“What about multimages?” she asked.

“A rare breed,” said Oberlin. “Cross-applicability varies widely. We’ll have an entire unit on
combined forces and how they’re typically handled, and I’ll save discussion of multimages until then,
because there’s a good deal of overlap between the two subjects. If you have any specific lines of
inquiry, let me know after class, and I’ll try my best to work them into the lesson plan. I also have
extended office hours for anyone intending to become a combat mage.”

Lisi gave a curt nod.

I found my own hand going up.

“Juniper,” said Oberlin with a nod.

“Are we going to discuss utility aspects of magic with regard to combat?” I asked. “Things like
eavesdropping on communications, echolocation, signals intelligence, illusions, that kind of thing?”

“We’ll cover it in brief,” said Oberlin with a nod. “There are other classes that better cover some of
those subjects; once you’ve gone through initiation, Disambiguation is one of the more important
classes you can take, as is Sensory Adaptation, both of which will serve to expand your capabilities. Neither, however, will cover the combat applications, which I’ll go over, likely as part of tomorrow’s course. You’re right that there’s more to combat engagement than simply killing people.”

He took another three questions, none of them terribly illuminating, before moving on to the second half of the class, which was all about the typical defenses against vibration magic, with a lot of attention paid to how common they were in comparison to how effective they were. The primary opponents of a vibration mage were those brands of magic that could apply a counterforce of some kind, which could act to nullify either the sound, pressure wave, or resonance in some way.

- Warders were a definite problem, but they were largely immobile, so only a problem if you were attempting an assault, and apparently not worth much mention outside of that.
- Still mages could stop both sound and pressure waves dead in their tracks, but attempting to still their head from vibrating was too difficult to be practical, because the human head didn’t take kindly to having all motion in it stopped. Even if they did it, they’d be left with their head stuck in place.
- Velocity mages could produce a counterforce, and they were hard to target if moving at speed, but counterforce of any kind didn’t come naturally to them, they needed to be prepared, and they had little in the way of control.
- Gold mages could use their tactile telekinesis in a similar way to still mages, and had a great deal of built-in instinctual defense against kinetic attacks in general, but they were more or less defenseless against the resonance attack, especially because applying telekinetic force to their own head was liable to result in injury.
- Revision mages could revert the damage, and the experienced ones could do so automatically, for which vibration mages had no real counter. That would lock a revision mage in place, but eventually the vibration mage would run out of ‘breath’, and the revision mage was unlikely to run up against any of their own fundamental limits.
- Passion mages under the influence of anger could tank the pressure waves and partially negate the resonance, but only a skilled one under the effects of some emotional influence, and not in a way that was sustainable.
- Rune mages could create wearable runes that absorbed both vibration and kinetic energy, but for that to protect them, they would have to position the runes at the proper points on their custom armor, which most wouldn’t unless it was part of their modular kit or they were specifically preparing for an encounter with a combat vibration mage.
- Vibration mages could counter each other, but there wasn’t a perfect symmetry between offense and defense, because defense against any of the three attacks cost much less than the associated offense, and tended to be quite effective. The one sticking point there was the pressure wave, because if it was a single enormous wave-front, it was much harder to counter than something like a tone or vibration, and harder to detect as well.

That was hardly exhaustive, but it covered the bases well enough. There were bloodline magics and specic magics to get into, as well as entads, but it was already a lot to keep in mind, even if I could have worked out some of it from base principles or my own experiences. I accumulated a page full of notes, then another, and finally a third. From what I could see of Lisi’s notes, she was making at least twice as many as I was. I wasn’t sure how much of this we were actually supposed to learn or remember; my impression was that the barrage of scenarios and information was Oberlin’s way of weeding out more students, or maybe just getting us accustomed to a particular way of thinking in which there were manifold threats to consider, more than any one person could really be an expert in. If you went into an encounter not knowing what you were facing, or with the possibility that your intel wasn’t correct, you would need to think on the fly. I could see where that would be vital to a combat mage, even one that was part of a national or international organization.

“We’ll be on this topic for the rest of the week,” said Oberlin. “Your homework for tonight is thirty
inches on the three primary forms of combat for a vibration mage, with arguments for when to use each of them. We’ll talk more in depth tomorrow. Your assignments are due at the start of class and will be graded by the week’s end with notes.”

Oberlin picked up the mannequin and left, though the bell hadn’t rung yet.

“Thirty inches?” asked Reimer. “Is he insane?”

“You can’t do thirty inches?” asked Lisi.

“I can,” said Reimer, defensively. “But I have other homework to do, and if I have to go through Li’o to get to Joon’s, then a dinner of some kind there, it’s going to be tight.”

“I can help, if you’re having trouble,” said Lisi. She hesitated. “Did you read about using light generation for radiation somewhere?”

“No,” said Reimer. “Came up with it on my own.”

“It’s moderately clever,” said Lisi. Reimer beamed at her, and raised an eyebrow at me when he caught my eye. “I’m sure that someone else has already considered it,” she continued, which deflated him somewhat.

“Do you know any cross-compatibility with other schools of magic?” I asked Lisi.

“There’s a reason that I’m taking blood, still, and vibration together, aside from just convenience,” said Lisi. The bell rang, and she sat up as though she already had a Pavlovian response to it. I hadn’t even put my stuff away, and I hurried to fill my backpack back up as I followed after her. “Still magic is the second most powerful defensive magic after warding, which makes it invaluable as part of a larger package. Unfortunately, it’s touch or near-touch, which limits it, a limit which can be overcome by spraying blood onto opponents in the course of battle, or delivered with extensors in at a distance.”

“Extensors?” asked Reimer, and I was glad he did, so I didn’t have to expose my ignorance (especially since I didn’t know whether my ignorance would be hard to explain or not).

“The blood contains the power of the soul,” replied Lisi. “An extensor is any of a variety of additives that allow that connection to last longer.”

“Oh,” said Reimer. “It’s also the same name of a particular type of muscle.”

“Yes, I know that,” replied Lisi, frowning slightly. She continued on as we walked. “Blood magic allows the application of still magic at a distance. It’s technically possible even without blood magic, but for someone who has no natural connection to their blood, the connection is so fleeting and difficult to use that it’s practically worthless. Aside from that, vibrational magic helps with pulse timing attacks, and allows for overclocking the heart.” Lisi looked at me, because I was laughing. “What?” she asked, clearly annoyed.

“You really call it that?” I asked. “Overclocking?”

“That’s the technical term,” said Lisi, still frowning at me.

“So you pump your blood faster?” asked Reimer. “Does that … I mean, is there a benefit to that?”

“There are clear benefits to greater internal control of the body’s natural cycles,” said Lisi. “The ability to manually control my heart rate will have a number of applications. I already control the
flow of blood, which is itself useful, especially in a fight."

When we reached our next class, there was a note on the door, and a number of other people in our ethics class gathered around the door. Lisi pushed past them and read from the note.

“Ethics class is canceled until the end of this week, when it will recommence with a new instructor,” she said out loud. She looked to one of our other classmates. “Will this affect our grades?”

“How should I know?” he asked her.

She made her way back to us without deigning to reply. “Did you hear me?” she asked.

“Sounds like we have some free time, I guess,” replied Reimer. “Your place?” he asked me.

I ignored him and pressed my fingers to my throat. “Ethics professor is missing under mysterious circumstances, do you know anything?”

[She was arrested three hours ago,] replied Amaryllis. [Are you safe?]

“Yes,” I said. Lisi and Reimer were both looking at me. “Do you know why?”

[Unclear,] replied Amaryllis. [As soon as we’re done here I’m probably going to find my way to the lawyers we have on retainer and find out whether they can get more information. This feels like it might be important.]

“Yes, it does,” I replied. “Keep me posted, even if it means interrupting.”

[You have meditation next,] replied Amaryllis. [Do you want me speaking into your ear during that?]

“I guess not,” I replied. “Let me know if it’s urgent. Stay safe.”

[You too,] replied Amaryllis.

Reimer and Lisi were watching me as I brought my fingers down from my throat. “Well?” asked Lisi.

“My people don’t know much,” I said. “The rumor is that she was arrested, but what for is a mystery.”

“Demonblooded,” said Reimer. I shot him a dirty look. “Oh, come on Joon, we’ve done that whole circus enough times that you have to understand what I mean. Regardless of what you think of the demonblooded, they get arrested more than normal people, for reasons that, yeah, probably have more to do with prejudice than anything else, but they do get arrested more often.”

“Fine,” I said. I let out a sigh. “Well, I have to stay on campus for the meditation course, so I have an hour to kill.”

“We can start work on our assignments,” said Lisi. She turned to Reimer. “If you’re worried about the inches for Oberlin, I can help you.”

We ended up going into a study room and working through our assignments. Most of the conversation was between Lisi and Reimer, since I was keeping my thoughts to myself, and also because I didn’t want to be found out by some awkward slip of the tongue. I knew a fair bit about Aerb by now, enough not to make a total ass of myself most of the time, but being covered for all the major things still meant that there was room for me to be wrong about a lot of minor things.
I wrote the essay for Oberlin first. I didn’t know the traditional style that they used at S&S, but I was a new student, and Oberlin already knew the score, more or less, so I stuck with the five paragraph style that I was used to, after first doing some estimation to see how long it would need to be to make thirty inches.

“Can I see?” asked Lisi when I was finished. I shrugged and slid it over. She read it silently, staring at the words like she was going to bore a hole into the paper. “Hrm,” she said as she set it down. “Trivial observations.”

“Oh?” I asked. “In what sense?”

“In that they’re trivial,” replied Lisi. “They’re the first things that anyone would consider.”

“Oh,” I said. “Isn’t that sensible though? Those are the things most likely to be correct.”

“Here,” said Lisi, grabbing Reimer’s essay from his hands. “Reimer has the opposite problem, he’s trying too hard to be clever.”

“True though,” I replied.

“Fuck off,” said Reimer.

“Here,” said Lisi, looking over Reimer’s essay. “‘Superior range allows for removal of support personnel prior to engagement with heavy attackers.’ How would you know which ones were support personnel? And which kind?”

“I don’t know,” said Reimer. “I was assuming that I had proper intel.”

“Magus Oberlin pointed out that was a poor assumption on the first day,” said Lisi. “And ‘support personnel’ are unclearly defined. Revision mages, by most ways to parse that, would count as support personnel, and attacking one of them first would be a bad idea, because they’re resistant to attack and you would give away whatever advantage you had.”

“I only meant --” began Reimer.

“You meant ‘support personnel contingent on that actually being a good idea’,” replied Lisi, “Which isn’t a good guiding principle and doesn’t demonstrate an understanding of the complexity of vibration mage warfare.”

“I was under the impression that Oberlin wanted us to show him how we thought so he could tailor his lessons to us?” I asked. “I’m not sure that it does anyone any good for you to rewrite our essays.”

“I wasn’t planning to rewrite them,” said Lisi.

“She just wanted to tell us how wrong we were,” said Reimer, casting a smile in my direction.

I wasn’t sure how he was able to do that. He would laugh and joke like we were friends sometimes, like nothing was fucked. I didn’t think much of the fact that he was doing it here on Aerb; he’d done it on Earth too, before I’d taken my leave. And then after he’d played nice, he would turn around and tell me that I was a piece of shit who more or less deserved to wallow in my self-pity. Craig had told me to fuck off and then cut all contact with me, which I at least got, and Tom seemed to think I was still a good person and a worthwhile friend, despite the evidence, but I just didn’t really understand what it was that Reimer got from being something like a friend to me.
“Well, I should get going,” I said, grabbing my perfectly serviceable essay back. “Ermaretor is having me take a meditation class, and I’d rather get it out of the way sooner than later.”

“Why are you taking a meditation class?” asked Reimer.

“Why does she want you to?” asked Lisi.

“Politics,” I said, which wasn’t quite a lie. “That, and she’s covering her ass, since I’m not really a conventional student.” I felt a twinge of worry about whether or not ‘covering her ass’ was appropriate language around a princess, but I had already said worse, so that ship had sailed. Amaryllis had a mouth like a sailor, when she felt like it (albeit a pretty sailor).

“You never explained why she called you the bursar’s man,” said Lisi.

“We’ll talk about it over dinner, I promise,” I said. “I’ll meet you both there.” Leister’s problems would have to wait until later.

I left the two of them behind, glad to have some time by myself, and checked in with Amaryllis.

“Update?” I asked.

[Nothing yet,] said Amaryllis. [I’m not looking forward to another few days of this. The Immobility Plate breathes and bends better than it should, but it’s not perfect.]

“Well, I appreciate you playing shadow,” I said. I was making my way to the building where the meditation class would be held, and felt my foot drag as I had a thought. “Was it so bad, the last time?”

There was a brief bit of silence from the other end. The last time she’d played shadow, Fenn and I had been going on our one and only proper date. We hadn’t ended up needing her as backup, but she’d been there, just out of sight, in the same plate armor, less concerned with hiding her identity, but still suffering through it, just to play bodyguard for us as Fenn and I played at being two normal people on a normal date.

[Heshnel can hear what you say,] replied Amaryllis.

[I can,] confirmed Heshnel. [I apologize, but that is a limitation of the tattoo.]

“We can talk about it in private, if there’s something you’d like to say,” I replied. “We could even say it outside of Bethel, if you want true privacy, though it seems likely to me that she snoops around in our dreams at night, so who knows.”

[You’re going to meditation class now?] asked Amaryllis.

“I guess so,” I replied. “I hope you know what you’re doing with Lisi and Reimer.”

[Me too,] said Amaryllis, which wasn’t at all reassuring.

I didn’t want Reimer to be a part of my life anymore. We’d been friends for ages and spent enormous amounts of time together, and we didn’t really get along that well. And this wasn’t even the Reimer that I could spend hours talking/arguing about movies, games, and random internet crap with. It was some other Reimer, essentially the same but from a completely different culture, and with none of the shared history. I wouldn’t have wanted the real Reimer, let alone this imposter. But if Lisi had sensed weakness and latched onto him, then he was a liability, and if he knew things about the previous version of me, then he was an asset. The only logical thing to do was to keep him close, as
much as I didn’t like it.

I wasn’t particularly looking forward to meditation class, but I was hoping that I would get some kind of bonus from Library Magic, if not on a game-mechanical level, then at least from all the meditation that I’d done. There were other meditation-like aspects of other skills too, ways of shedding attention on other things in order to settle into a particular mindset, which I hoped would be helpful. All that aside, it wasn’t like they could *tell* that I wasn’t meditating right, so it would mostly just be a time sink.

And naturally, there had to be a twist, because as soon as I walked into the small classroom, I saw Jiph sitting there with the others. She didn’t seem to see me, and I froze for a moment, not wanting any part of this. She would notice me, and then I would have to suffer through her making this ‘class’ miserable as well, probably by having a high pitched whine in my ear for the duration, or something equally petty. I decided to go up to her and see if I could (somehow) head this off at the pass.

“Hi,” I said. “Can we talk?”

She turned to face me with a quizzical look. “Yes?” she asked. None of the hatred or anger was displayed on her face. I wondered if that was a performance for other people, or if something else was going on.

“Uh,” I said. “I think that we got off on the wrong foot, and --”

“You met Jiph,” she replied. She placed a hand on her chest. “Sonee.”

“Oh,” I said. “Sorry, I --”

She waved a hand. “We get it a lot. In human terms, we’d be twin sisters. She gestured to her dress. “We *try* to dress differently, but I have no idea what she was wearing today.”

Now that she’d said it, I could see that. Sonee was wearing a light blue dress, while Jiph had been wearing something closer to a pantsuit. If my mind had registered the difference, I must have immediately discarded it. People could change clothes, after all.

“Nice to meet you,” I said, holding out my hand. “Sorry for not realizing.” That was a better recovery than I had ever made in my life (which was damning it with faint praise).

“You too, and it’s fine,” replied Sonee. “So you had some trouble with my sister?”

“Sure,” said Sonee. Her lips quirked up in a smile.

“If I understand *rhannu* right, you were split apart from the same individual?” I asked. She nodded once, seeming slightly amused. “Is it common for you to be so … different?”

“It varies,” replied Sonee with a shrug. “Assuming it’s not a misfire, then no, usually we end up pretty similar. We each get half, and on average, two halves of any person will be somewhat similar.” She shrugged again. “It happens. It’s rarely pleasant.”

“A misfire?” I asked, as the woman I took to be our instructor came in.

“One half lives, the other dies,” replied Sonee, speaking quickly and quietly.
“Welcome, welcome everyone,” called the woman wearing flowing clothes who had entered the room. It was a small class, not more than a dozen people, which wasn’t surprising given that it was an extracurricular that was supposed to teach people how to meditate, something that apparently wasn’t required to be let into the temple. The room was smaller than a lecture hall, but much larger than it needed to be for the dozen of us. “This is ‘Meditations on Meditation’,” she seemed entirely too pleased by that. “My name is Henneta, and I’ll be your instructor. We’re here to learn how to meditate. Officially, this course is recommended for those who have cause to think that they might have difficulty in the temple, though anyone is welcome to join.”

When I looked around, I realized that Henneta and I were the only two (presumed) humans. I thought maybe the reason for that was because of the variations in biology and psychology, which might lead to either more difficulty with meditation, or at least the perception that it might be more difficult. Henneta herself was only probably human, given that there were species like the Ell who were visually indistinguishable from human. If we were on Earth, I probably would have called her Asian (dark hair, epicanthal folds, short, darker skin), but there wasn’t a clear counterpart to Asia on Aerb. I had always been terrible at guessing race with any specificity.

“This is not a class,” she continued, forcing a smile, “And provides no credit, just so we’re entirely clear. Instead, we are here to better ourselves. To start, I’d like everyone to grab a mat and find a place you’ll feel comfortable.”

I took one of the mats leaning up against the wall and went over by the window. It wasn’t one of those foam yoga mats, since I didn’t think that those had been invented on Aerb yet. Instead it was something similar to tatami, though I had no idea what it was made of, aside from some kind of plant.

“The first thing that I’d like you to do is relax your muscles and control your breathing,” said Henneta. “We’ll get to the meditation in just a bit, but for now, we need to speak about what meditation is, at its heart. Meditation is the letting go of thoughts, of allowing your mind a time where it does not think. In the modern world, we spend all of our time so focused, even on those things which aren’t drawing our attention, which can interfere with our ability to step back from the world and see it for what it is.”

Coming from an Aerbian, this was hilarious. I still kind of missed the sheer connectedness of Earth sometime, the way that I was never more than ten seconds away from being able to read something new on the internet, or look up the answer to a question. It was a terrible thing to feel nostalgia for, but I still had buried bits of muscle memory that saw me reaching into my pocket when I got bored. There were books to read, more than I could ever finish, but it wasn’t the same, because there was nothing that gave me the quick burst of dopamine that checking reddit did.

“Settle yourself,” said Henneta. “Relax the muscles of your hands and feet, then your limbs, get into a position where there’s as little tension and thought given to the position of your body as you can. This will vary from species to species, so do what works best for you. Relax the muscles in your face. Let everything go slack. Now, close your eyes.”

I did as instructed, though I was a bit skeptical.

“Now, focus on your breathing,” she continued. “Make sure that it’s happening without effort. Sometimes it helps to breathe in through your nose and out through your mouth, if you have a nose. Either way, make sure that your breathing is done without tension, completed without thought.”

I settled into my position and tried to let my mind be free, which I thought was probably the next step. Meditating for library magic felt kind of like trying to induce a sensory deprivation experience without actually going anywhere, enough that I could focus on the books and let random thoughts drift through my head, like I was in a rowboat with the oars pulled in, letting myself drift, paying
only enough attention to dip a hand in the water and make small corrections to where I was drifting.

“Imagine woodland,” said Henneta. “Dappled light, green leaves, a soft breeze, small animal sounds, the call of a bird.” Her voice was soft and slow, lulling me into a deeper relaxation. “There’s a man in the woods, clad in armor, his face obscured. He’s engulfed in flames.”

My eyes went open, and I stared at Henneta. I hadn’t been paying enough attention to her. She had her eyes closed and sat in the lotus position, with her feet resting on top of her thighs. I had abandoned meditation entirely. I was intent on figuring this out, and steeling myself for whatever was going to come next. If Parson’s Voice could be used silently, or with subvocalization, I would have been screaming at Amaryllis to get over to me, and maybe even telling Heshnel to get Bethel ready for a drop.

“This is a method called kalatet, a technique of juxtaposition,” she continued, eyes still closed. “The woods are calm and peaceful, but there’s a man, on fire, walking between the trees. Take that man in your mind’s eye, watch him. He’s unconcerned by the flames that engulf him, calm and serene. The flames don’t burn the plants, the fire doesn’t spread. He’s approaching you, stepping through the underbrush. He means you no harm.”

What the actual fuck. I had no idea what to do. A part of me wanted to scream at the others, to tell them not to think about the flaming man, but I had no real basis for saying that, no proof that it was anything nefarious, just a gut feeling that things tended to go wrong around me, and that threats never stayed hidden for long. That instinct had been misfiring lately, raising my hackles when things were fine, causing me to reach for my sword when it wasn’t needed, but …

Maybe there was such a technique as kalatet. Maybe it was a dumb idea I’d had while waiting at my bus stop a few years ago that made it into Aerb despite the fact that I’d forgotten about it, or maybe it was the natural consequence of a Juniperesque civilization I’d designed, one that explored the inherent tension between creation and destruction.

The image seemed too clear to me, too focused, and it was a man, an entity, the kind that could invade thoughts and dreams if given half the chance.

Henneta continued talking. I was making an active attempt to hold onto my senses, to stay as focused and tense as I could. Needless to say, I wasn’t even remotely attempting to meditate anymore.

“Kalatet is about the imperfection of the world,” said Henneta. “The woodlands are peaceful, serene, and your mind might feel them marred by the presence of the man, on fire, coming toward you. Know that this is part of the world, come to accept that this, too, is the same as the woodland, that there are things we cannot change, problems we cannot solve.” Her voice was calm and sedate. “There is a tension, and we are embracing it, holding it, letting it soak into our understanding of what it means to live and to be. Meditation is not a retreat from the world, to a place where no thoughts exist, it is a way to reorient ourselves into a better place. Watch the man on fire among the tree, see how he is not harmed by the fire, how he knows not to react to it. Accept him as part of this world.”

The more she talked, the more unsure I became. If things were really going wrong, wouldn’t I see some sign of it? Wouldn’t there be, I don’t know, bloody noses from the people meditating around me, seizures, something like that? All I saw around me were calm faces. All I heard was measured breathing.

I closed my eyes and slowed my breathing. It was a weird form of meditation, one foreign to my concept of the practice, but that didn’t mean that it was a threat, or supernatural, or anything to be worried about. More than that, if it was a threat, then I knew virtually nothing about it, and the fastest way to find out would be to get as minimal exposure as possible. I tried to weigh my options there,
whether it made more sense to do the same meditation while surrounded by friends and allies, or wait to do research on the practice later, and decided to err on the side of action.

I let Henneta’s words wash over me, trying my best to ignore them, and put myself in the place she’d outlined, tranquil woods with as many of my own touches as I could think of, enough to let go of some tension. Birch and ash trees, small yellow butterflies, enough clouds to obscure the sun and let in shafts of light, soft moss and miniature mushrooms.

And there, in front of me, a man on fire, his features obscured by flame. I was thinking too hard for it to be anything like meditation, keeping the picture in my mind and looking for signs of malefassance. I controlled my breathing and tried to relax, to picture the wrongness of the man on fire as something apart from me, a manifestation of the terrible things I couldn’t change. He was Arthur’s death, Fenn’s death, the nine thousand hells, everything that I wished I could change. He walked closer to me, and it was hard to tell whether I had made him do that, or whether my mind was just following what it had been told on its own. I added to the scene, cladding myself in armor, giving myself the Anyblade laid across my lap, all as much without exiting the scene as possible. Henneta droned on in the background.

The flaming man took a step closer to me, and this time I was sure that I hadn’t intentionally imagined it. There was a solidity to the scene now, and I wasn’t just ignoring Henneta, her voice had become indistinct. It had shifted to being dream-like, with a sense of unreality that went beyond the fact that it wasn’t reality. It felt like being in a soul trance, the way that my mind kept turning away from other thoughts, focused on the burning man that was walking ever closer.

Fortunately, I had some experience with the soul trance, and pushed back against it, opening my eyes into the real world, which flooded back into focus. Magic of some kind then, and from the looks of it, not a pleasant one.

Henneta was still sitting there, still droning on, repeating herself more than she had been. Her eyes were closed, and she sitting in the lotus position, carrying on as calmly as she had been. I had no idea what was happening to the others, but it didn’t seem like it could possibly be good. Deaths, disappearances, and now this. How long had this been going on? Who was implicated? Ermaretor was the one who had sent me here.

I stopped to think about my priorities here. The reason that I was at S&S was to unlock the two magics, but the secondary reason, which seemed like it might become the primary reason, was that something fucky was going on with some unknown number of students and staff. I had a strong urge to go around screaming and trying to snap everyone out of their trances, or call in Amaryllis from wherever she was, but I had no idea whether that was actually a sound course of action. The problem at S&S, whatever it was, had been going on for months, which meant that this particular edge of it was just part of a larger pattern. If I reacted now, I’d be kicking the hornet’s nest without actually knowing a single damned thing about the hornets, where they were, and what they were trying to do.

I stayed where I was. It was possible that the people around me were going through something that they couldn’t get out of, and that I was simply failing to help them, but I hoped that it was nothing that couldn’t be undone. Sonee had seemed nice enough, and if the man-on-fire had come for her … well, they couldn’t be killing people here, someone would have noticed that, and I was both a skilled soul mage and the only living spirit mage, so if something had gone wrong, I had some amount of confidence that I would be able to set it right.

Henneta stopped speaking for a moment, allowing us to sit in silence.

“Alright,” she said. “I want you to come up from the surface, return to the room, retether yourself to your worldly concerns. Touch those emotions that you left behind. Connect to that focus that we
keep inside us. Open your eyes, and see.”

I did as instructed. I looked at the people around me, trying to get some kind of clue that something had gone wrong with them, that they were possessed or controlled. There was nothing, not even someone who looked like they were puzzled by our instructor talking about a man on fire.

“How’d you do?” I asked Sonee, trying my best to be chipper (but not suspiciously chipper).

“Fine,” she replied with a shrug. “Different technique than I remembered, but it seemed fine. Weird, but fine.”

“Did he … walk toward you?” I asked.

“Huh?” she asked, staring at me. “What are you on about?”

“It was part of the instructions,” I replied. “Imagine that he’s walking toward you.”

“Oh,” replied Sonee. She relaxed slightly and shrugged. “Must have missed that part.”

I wasn’t sure how that was possible, given that Henneta must have said it a half dozen times. I said my goodbye, disengaging as quickly as possible, and left the building, walking until I thought I could talk to Amaryllis in peace. Meditation class had given me the willies. To my surprise, she walked up beside me, wearing her Immobility Plate, before I could use Parson’s Voice.

“Let’s get home,” she said. “I’m itching to get out of this armor.”

“Yeah,” I said. “One sec, I’m going to change into mine.” I went for the vambrace and dialed it to ‘oh crap get away’ mode.

“Anything that I should know about?” she asked.

“Oh, you know, someone was going to attack me in my mind, there’s a probable infohazard involved, and I once again have no idea who to trust or how to help,” I said with a sigh. “The usual.”
Sing For Your Supper

We sat around the big table together, with everyone assembled. Dinner was coming, and I was stressing about that, but we had a few hours to kill until Lisi and Reimer showed up, and that meant that it was time to debrief. Hopefully, I would get some information out of our elders.

“I have nothing,” said Raven. “I have a lot of guesses, but none of them are good.”

“Let’s hear them,” I said.

“All of them?” asked Raven.

“In descending order of how stupid they are,” I replied.

“Should be ascending order,” said Amaryllis with a frown.

“No?” I asked. “I want the smartest first. So as we go, it would be … wait, shit, I think you’re right.” Amaryllis gave me a nod. “Fine, in ascending order of stupidity.”

“First, and just to get it out of the way, it could be an entad,” said Raven. “The powers of entads vary wildly, and they can sometimes be used in combination, so whatever it was you saw when the flaming man was invited into your meditation … it’s possible that was accomplished partly or mostly through entads. It’s hard to say how likely that is, but it’s possible.”

“It explains nothing,” said Heshnel, frowning at her.

“Yes,” replied Raven. “Uther always hated entads as an explanation, but it was always one that had to be considered.” Heshnel waved a hand. “It was never entads, incidentally.”

“Never?” I asked.

“Not once,” said Raven. “Unless something was kept from me.”

“What a fascinating historical detail,” said Pallida with a roll of her eyes.

“It has relevance,” replied Amaryllis. “It changes the probabilities.”

“We must assume it’s not an entad,” said Grak.

“Yes, agreed,” replied Raven. “I just wanted to put that forward first, along with the obvious note about unknown unknowns like an entirely new variety of magic, because every other explanation I can think of has significant problems.” She cleared her throat. “To start with, the Lord of Dreams. He shut down the usual pathways five hundred years ago, and it’s possible that he’s chosen now to open them back up. Obviously meditation is distinct from dreaming, but at least one of his Aspects was able to enter into the twilight realm of daydreaming, and maybe that would be close enough. The second issue is that Juniper’s description of what he saw doesn’t match with the Lord of Dreams, nor any of his Aspects known to me, and it really doesn’t seem like their modus operandi either. It’s possible that the Lord of Dreams was usurped, or got new Aspects, in the five hundred years since our misadventure there, but it’s very difficult to say. As a precaution, it would be good for Bethel to watch over us in our sleep.”

“Done,” replied Bethel.

“Does anyone have more to add on that?” I asked. No one said anything. I was pretty sure that
Raven was the only one of us with any experience in the realm of dreams.

“Okay,” Raven said, taking a breath. “Well, the third thing I was thinking was expansion of some currently known magic. It would be helpful if that was the case, because it would give us clues as to who or what is behind it, but there aren’t any likely candidates. We also don’t know what specifically caused the aberration, whether it’s constrained to instruction from a practicing cultist, or a memetic effect caused by that specific imagery, prompting, or intonation. There might be geographic constraints, a practitioner on the other end … there’s no real place to start research.”

“I could do it again,” I said. “See if I could get another visit.” I got some skeptical looks from around the table. “And yeah, that might be feeding information to the presumed enemy. Alternately, we could convince one of the other students to get in a position where I can examine their soul or spirit, which might give us something useable.”

Amaryllis gave a polite cough, so perfectly poised and respectful about it that I assumed she’d been tutored on it at some point in her life. “I want to state, for the record, that attempting the meditation in class was a bad idea. It ended up helping us, but it was unreasonably dangerous.”

“Is there a record?” asked Pallida, raising an eyebrow.

“I keep transcriptions, yes,” replied Bethel with a serene smile. I was happy that she was sitting at the table with us like a normal person, instead of leaving an empty seat like she sometimes did. “Along with some notes on body language.”

“Make sure there are never copies,” said Raven. “I don’t believe the Infinite Library would --”

“Assume that I’m not a moron,” said Bethel, cutting her off (figuratively, not literally).

“Well,” said Raven. “Okay.” She turned to me. “Do you want to hear the other theories?”

“There are more?” I asked.

“Eighteen,” replied Raven.

“Jesus,” I said. “Alright, go on.”

This consumed almost all of our time, with a heavy amount of crosstalk. I decided that I was going to have to pull Grak aside later that night and thank him for being circumspect in what he contributed, because there were too many fucking people in our house, and too many of them had disagreements with each other for too many different reasons. Grak spoke up when he had something productive to contribute to the conversation, and otherwise kept his own feelings on matters silent, which I wished everyone else would do too.

Raven tried her best to go through the list quickly, and some of them were real dumb, so dumb that I would almost have faulted her for including them, except that we really did have to be looking at outside possibilities, and it helped me to learn something about the thirty years she’d spent with Uther.

Uther and his Knights once had to deal with a cult whose members would meditate in order to devote their brainpower to an eldritch creature, who, in turn, operated primarily by possessing a single cult member as his avatar. All that would probably have been weird but fine, but this creature, the High Onism, had both a strong desire to subsume the world, and some unsavory appetites of the flesh. The High Onism played Moriarty to Uther’s Sherlock for three years or so until Uthur pinned it down so it couldn’t flee for another host, then fed it a deadly meme. It had the meditation link, and the puppetry link, but aside from being as confirmed dead as it could be, all the people that meditated
to give it power did so willingly, and there was nothing about a man on fire.

Uther had tangled with the he’lesh, who smoked their emotions. More specifically, the he’lesh kingdom had been overtaken by a novel herb that induced an altered state, one where they would see things that they would later forget. It was a shared delusion, a link between the smokers, which might not have been so bad, except that there were things within that shared delusion that had gone feral and could make some impact on the lives of the smokers. Uther had gone in and killed the hallucinatory beasts, then exterminated trade in the herb with extreme prejudice. It was notable in part because the bursar was he’lesh, but other than that, there weren’t many similarities.

Late during Uther’s time on Aerb, there started to be disappearances. Raven became one of the missing: she was having a daydream of a shining palace on top of a cliff, and ended up there, leaving the prime material plane behind. As it turned out, one of the other planes, Xoltle, had been brought into collision with the material plane. Anyone who daydreamed about the place on Xoltle that was co-located with the dreamer’s physical location on Aerb would wind up on Xoltle, where they would be picked up by the insane hierarch who had set his sights on conquest. Uther had defeated the hierarch (naturally), then untangled the planes with star magic beyond anything anyone had seen before or since.

Raven had eighteen of these. She wasn’t trying to tell us stories, just give us facts, but it was astonishing to me, even knowing what I did, that she could be given a prompt like, ‘I saw a guy on fire in the woods while I was meditating’ and she could spit back so many possibilities related to flames, dreams, meditation, altered states, subverted will, memory erasure, and dissonance of effects. There were enemies that might come out of the woodwork, enemies whose defeat had been less than total, and it seemed like Raven was slowly coming to grips with the fact that some of these plots could have sequels to them.

(I was thankful that I didn’t get a barrage of quest prompts, though it would have been helpful to be pointed in some particular direction, or get guidance from on high.)

“Some of those are real dumb,” said Pallida, once Raven finished.

“I did say that going in,” replied Raven with a frown.

“As much fun as you two are,” interjected Bethel. “Our guests are walking down the street as we speak. I’ve begun preparing a traditional Anglish dinner.”

“And what are you going to tell them?” Raven asked me.

“Amaryllis and I were talking on the way back from the athenaeum,” I said. She’d wanted to stop by the lawyers, which gave us more time to talk. “The plan is to tell them both that Amaryllis is Amaryllis, and then deal with whatever complications come from that. The game system stuff … it might potentially be helpful to have Reimer in the loop, but he doesn’t seem to have much loyalty to me, and the truth is, well, absurd. We’ll see how some of the rest of it goes. We’d both rather not have Lisi and Reimer have all the same information, but it’s not clear how avoidable that will be in practice.” I didn’t really want to tell Reimer everything, for a whole host of reasons.

“They’re at the door,” said Bethel.

“There’s the matter of who’s going to be present for this dinner,” I said. “Me and Amaryllis, naturally, but … well, some of you have physical appearances that raise questions.”

“The young are ever persecuted,” said Solace with a sigh. She was still holding onto her little green girl form, which I still found just a bit irritating, as much as she protested that she was still
undergoing development and there were some benefits to it.

“How much are we bringing them in?” asked Grak.

“Honestly, I’m partial to just laying it all out at once, for the fun of it,” I began.

“They’re here,” said Bethel, “And their argument appears to have reached its conclusion. I’m going to answer the door.” She disappeared with a pop.

“Alright,” I said. “I’m going to go meet with them. Executive decision, it’ll be me, Amaryllis, Grak, Valencia, and Bethel.”

Bethel had shrunk down to a reasonable size, enough that she could pass for being a person, and when I came to meet them, she was standing next to Lisi and Reimer with a smile on her face. Bethel had changed her clothes too, to something resembling a serving outfit: it was a far cry from a French maid’s uniform, instead being more about functionality and layers, blues and whites with rolled up sleeves and thick boots on her feet.

“Hey Joon,” said Reimer with a wave. He was dressed up a bit, with slacks instead of jeans, and a button-down shirt. He must have gone back to his room to change. I wondered whether the change in clothes was for Amaryllis or Lisi, though it was possible it was for both.

“Juniper,” said Lisi with a nod. She looked around the place. “You asked for no comments on the house?”

“You did?” asked Bethel with one raised eyebrow. “Why, whatever for?”

“Reimer, Lisi, this is Bethel,” I said. “She’s my companion.” I almost said that she was my house and caught myself in mid-stream. There had been a time when I would have stumbled and flubbed it, but those moments of sheer awkwardness were behind me, and whatever idiotic thoughts my brain was churning through, I managed to keep my composure.

“Charmed,” said Bethel, taking her hand lightly. “It’s just Bethel, only one name. Always a pleasure to meet a Penndraig.” Her smile was feral.

“Arthur Reimer,” said Reimer. He shook Bethel’s hand too. “Everyone just calls me Reimer though.”

“Pleasant to meet you,” said Bethel. “Now tell me, honestly, what do you think of the house?”

I didn’t think that Bethel was going to do anything to either of them. She was just fucking with them, and really, fucking with me by proxy. Despite myself, I felt my heart rate rise. There wasn’t a lot that I could do about Bethel going rogue, so I tried my best to keep calm.

“Is it special in some way?” asked Lisi, looking around. “Is there a trick?”

“Yes and yes,” I replied.

“Then what’s the trick?” asked Lisi.

“Here,” said Reimer with a smile. He held out his hand. “A glass of water.”
Nothing happened.

“Quite impressive,” said Bethel. “Can you do other drinks as well?”

“Juniper,” said Reimer, as he frowned at me. He lowered his hand, then turned to Lisi. “It was working last time I came here.” He looked back to me. “Did you tell the genie not to give me things anymore?”

“No,” I said. “And it’s not a genie, I just said it’s like a genie, in that you shouldn’t use it because maybe you would annoy it and wind up poisoned.”

“So the house is an entad?” asked Lisi. “Or it has an entad inside it?”

“Something like that,” said Bethel with a raised eyebrow. “Entads are common among the Penndraigs, aren’t they?”

“I have four,” said Lisi. She turned to me. “I’ll have more available to me as a combat mage, invested by members of the family.”

“What do they do?” asked Reimer.

“That’s an impolite question,” said Lisi, folding her arms. She looked at me. “I would like to meet with Amaryllis now.”

“Sure,” I said. “Last I heard, dinner was being prepared.”

“Still true,” said Bethel with a nod.

We went through the cozy little sitting room and into a dining room that was cramped by Bethel’s standards, not too much larger than it needed to be to hold the table, chairs, and an extra bit of walking space. It was done in the same style as the sitting room had been, with an overly done, kitschy aesthetic to it, dozens of small paintings on the walls, floral wallpaper, a chandelier of cut glass made to look like diamonds, doilies and flower arrangements, all kinds of visual clutter. It was less charming than the sitting room, but I still kind of liked it. It reminded me of my grandparents’ house, but without the smell.

Amaryllis was standing behind one of the chairs with a set look on her face. I went around to stand next to her.

“Reimer, this is Amaryllis Penndraig,” I said. “Lisi, I’m given to understand that you two know each other.”

“Yes,” said Lisi. She pursed her lips. “It’s good to see you again, cousin. You’ll have to tell me how you survived the trial by adversity.”

“Inconsequential,” said Amaryllis. “I need to say some random words. Give me a few minutes.”

“Words of what nature?” asked Lisi.

“To see what you know,” replied Amaryllis. “It’s part of our threat assessment. Reimer, you too.”

“Uh,” he said. “Sure.”

The list went on like that for quite some time. Lisi sat there, stone-faced, while Reimer just looked bewildered. Running alongside the long list Amaryllis was going through, Bethel was thinking into our heads.

This particular plan had been my idea, one made long ago. We’d stolen the change-colors-if-you-know ball from Masters, and Bethel’s virtue allowed her to temporarily take on the powers of any entad inside her. In the case of the memory ball, that meant the ability to sense which of the four (now notional) colors would be created when anyone anywhere in the house heard any noun phrase. Bethel opted not to use it most of the time, because the information it provided was virtually worthless and it was a strain on her sensorium, but for a short test like this, it could help us to magically note a couple of things.

The list had been Amaryllis’ work. It had the names of almost everyone we’d ever worked with or fought against, plus a handful of decoys. It had the names of future threats that might be connected to one or both of Lisi and Reimer, and a long list of names from Earth. Because the memory ball was capable of disambiguating between two identical noun phrases that referred to different things (‘Chinatown’ the place and ‘Chinatown’ the movie was the ur-example), there were some repeats.

“Project Garden Stake,” said Amaryllis. “Aubergine Stake, Snow Pea Stake, Cauliflower Stake.”

<Gray, gray, gray, gray, gray,> replied Bethel.

“Alright,” said Amaryllis. “That’s the list.”

“Those weren’t random,” said Reimer. “They were names.”

“Not all of them,” said Lisi, narrowing her eyes. “An entad?”

“Yes,” said Amaryllis. “One that, among other things, confirms that you’re both who you say you are.” As well as confirming that you know what we expect you to know ... “With that, I think we can start.”

Amaryllis was wearing a purple dress, nothing terribly fancy. She was wearing makeup to match, light pink for the lips and a touch of eyeshadow, plus probably a bit more that was too subtle for me to notice. On her hand, though, was Sable, the pitch black glove. She tapped a finger against the table, and she must have practiced it, because a stack of papers instantly appeared there.

“This is a contract,” said Amaryllis. “It’s legally binding in Li’o, Anglecynn, and Miuun. It doesn’t have terribly much weight to it insofar as enforcement, but you signing it is a precondition of further conversation. I’ll allow you to read it, but it would suffice to say that there are stiff penalties for disclosing anything that we speak about here today, whether the nature of that disclosure is intentional or otherwise.” She slid the paper across to Lisi, then produced a second copy, and slid it across to Reimer.

Lisi began reading it with furrowed eyebrows. “I already know you’re here,” she said. “I know you’re connected to the Republic of Miuun in some capacity, that you’re connected to Juniper, and the location of this house. I could walk out this door and leverage that.”

“Yes,” said Amaryllis.

“What are you offering us?” asked Lisi. She glanced over at Reimer, who was already signing. “What are you offering me, then?”
“Power,” I said. “Influence, material support, connections, and resources. We have a lot. We’re planning to bring you in.” Part way, anyway. “But to hear the offer, to know more, you have to sign.”

Lisi finished reading through the document while Reimer sat idly next to her.

“Can I ask a question?” he asked.

“Sure,” I replied.

“What the hells does any of this have to do with me?” he asked.

“I’ll tell you when she’s either signed or left,” I said, nodding at Lisi.

Lisi looked up, glared at me, then looked back down and kept reading.

<Getting anything?> I asked Bethel.

<She has an entad dagger,> replied Bethel. <It allows crossing a distance of a few miles. She has two tattoos, both the Surface Sheath, containing survival or emergency equipment, from what I can tell. Heart rate, pupil dilation, and perspiration are all consistent with excitement and nervousness. I’m feeding information to Valencia. She thinks that Lisi is approximately what she says she is. She’d like your permission to use a devil while in the room with you.>

<Granted,> I replied. <Hard to avoid it.>

<Nothing you don’t want her seeing?> asked Bethel.

<Lots,> I said. <I’ve got an ugly soul.>

“Okay,” said Lisi, as she signed the paper with a flourish and slid the papers back across to Amaryllis. “Explain.”

“I did make dinner,” said Bethel.

“And there are others I’d like to introduce you to,” said Amaryllis.

“Fine,” said Lisi.

On what was presumably Bethel’s cue, Valencia and Grak came in. Grak gave a stiff bow, and Valencia a sweeping curtsey.

“This is Grakhuil Leadbraids and Valencia the Red,” I said. “They’re our warder and combat specialist, respectively.”

“‘The Red’?” asked Reimer.

“Yes,” replied Valencia, nodding once. “It’s a name to let my enemies know they should run away.”

“And now, food,” said Bethel.

Plates appeared in front of each of us, a small salad of bright greens with tiny, colorful flowers mixed in, and a miniature cruet on the side.

“I want to know how you escaped trial by adversity,” said Lisi.
Amaryllis took a slow, delicate bite of her salad, then used the cruet to distribute a thin vinaigrette onto the salad. “There was an entad in Silmar City,” said Amaryllis. “Rather than going for the walls, where the Host would be waiting for us, and where I would presumably have an attempt made on my life, we headed toward the center of the exclusion, found the entad, and escaped.”

“Together,” said Lisi, looking at me.

“No,” said Reimer. “Bullshit.” He was looking back and forth between me and Amaryllis. “That’s … that doesn’t parse. You, Juniper Smith, went through a trial by adversity, met the girl you had a crush on for years, somehow got jacked as fuck while also growing a few inches, and now you’re here, at S&S, getting not one but two schools of magic, all without Anglecynn knowing about it? And you’re also part of some fish person island?” He sat back in his chair. “And that’s aside from you paying absurd amounts of money for the rules to a game system that you designed, and the oh-so-convenient way you claim to have lost your memory. No. Whatever you’re selling, I’m not buying.”

I was eating my salad while he talked, and calmly put down my fork.

“You’re right,” I replied. “I’m not Juniper Smith. Are you familiar with the phenomena called the dream-skewered?”

Reimer frowned at me. “I guess you’re forgetting the group project we worked on?” I nodded once. “Well, that’s what it was, a presentation about the dream-skewered. It was a glorified book report of a not very great book.” He narrowed his eyes. “And that’s what you’re going with? The real Juniper Smith was dream-skewered shortly after or before what usually serves as an execution, and you’re just the poor, deluded fool that lives in his body? Except, somehow, you know enough to talk and act like him.”

“I’m from Earth,” I said. “But there was a Juniper Smith that lived on Earth, who was essentially the same person as the one you knew, just with all the details changed around.”

Reimer stared at me.

“Yeah, I know,” I said. “It sounds far-fetched.”

“When presented with extraordinary claims,” said Lisi, “It’s always better to seek mundane explanations. To wit, it’s more likely that you’re lying about who or what you are for some unknown reason. An elaborate, pointless prank, for example.”

“Okay,” I said, spreading my hands. “I’m pretty sure that with some time together, Reimer would see that I was telling the truth about who I am, or at least, he would be able to figure out what I believe to be true. He has the capacity to test me. We can even lend some entads that might help with that, though I’ve been living on Aerb for quite some time now, and I know a lot of things that a native would know.”

“Your claim has no proof but your word,” said Lisi.

“Wait,” said Reimer. “Why were you paying so much for the game system?”

I sighed. “Because it’s real.”

Reimer thought about that for a moment. “No?”
“Yes,” I said. “It’s real, and it, or something like it, is affecting me.”

“Prove it,” said Reimer.

“I can’t,” I replied. “All I can do is show you some of my abilities, but they’re nothing that you couldn’t replicate with either sufficient training or entads. You don’t have a trusted warder to make sure that I’m not using any magic anyway.”

“It wouldn’t be proof,” said Lisi. “But it would give some bounds to the problem.” She frowned. “For the record, I don’t think this is a particularly important point.”

“You’re wrong,” said Amaryllis. “It’s the most important part of all of this.”

“How about this,” I said. “I’m a blood mage, bone mage, and skin mage.” I moved my tattoos around to briefly cross my face and hands, then stabbed myself in the wrist with my fork and caused the blood to arc under my concentration, before burning a bone to heal it back up. I wiped the remaining blood away with a napkin.

“You’re a multimage,” said Lisi, staring at me. “If you were Juniper Smith, then you would be young enough that you went to Quills and Blood at the same time we did.”

“He didn’t have to,” said Amaryllis.

“Wait,” said Reimer. “The game doesn’t actually work, it’s held together with sticky tape and reliant on house rules half the time, with the other half just being fiat.”

“Yeah,” I said.

“But … who’s the arbiter?” he asked. “Who’s the Dungeon Master?”

“I don’t know,” I replied.

“You don’t know, but one exists?” asked Reimer.

“Yeah,” I said. “I met him, actually, he just wasn’t someone that I knew.”

“You’re talking about this wargame you played?” Lisi asked Reimer. Her face was set in a serious expression that was very close to a scowl.

“If he called it a wargame, he didn’t explain it right,” I said.

“It’s descended from a wargame,” said Reimer, folding his arms. “It’s not not a wargame.”

“There’s no war,” I said. “It’s small groups.”

“Fireteams are an element of war,” said Reimer.

“Semantics,” said Amaryllis with a wave of her hand, as though she didn’t love semantic debates.

“Right,” I said. “What I’m saying, essentially, is that I have a large amount of power, and our ultimate goal is to use that power to do the most good.”

“In what sense?” asked Lisi.

“I second that question,” said Reimer. “That could mean a lot of things, some of them evil.”
“In the short term, we’re solving whatever unambiguous problems we can,” I said. “In the medium term, we’re working on a technological revolution. In the long term …” I paused, because it was audacious. “The plan is to solve problems that exist on the planar scale.”

“How?” asked Lisi. “This power of yours is that good?”

“Wait,” said Reimer. “Are you … are you leveling up? You have skills? That’s why you wanted to know all the rules?”

“Yes,” I said.

“But who’s the Dungeon Master then?” he asked.

“I already said,” I replied.

“But that’s -- it all depends on who the Dungeon Master is, that’s what it all hinges on, because the arbiter has all the power, and they can just say no if they don’t like whatever it is you’re doing. You can’t rely on a sensible interpretation of the rules.”

“Is that what you’d call it?” I asked. “Sensible?”

“What’s the mechanism this all works by?” asked Lisi. She turned to Grak. “How does it map?”

“It doesn’t,” Grak replied. “It’s invisible to warder’s sight. All his magics appear as they would for anyone else. There’s no trace of his unique ability.”

Lisi raised an eyebrow.

“Wait,” said Reimer. “Then why the hells did you come to S&S? Like, let’s say that I believe you became a skilled multimage in the space of five months courtesy of some magical not-magic bullshit that happened to you, why come here, where you’re going to have to wait two years anyhow? Unless you can learn without getting inducted? But that would raise all kinds of questions.”

“I’m fast-tracked,” I replied. “One week of classes, then I get to go down.”

“Are you fucking kidding me?” asked Lisi, slamming her fist against the table.

“There’s a special procedure in place,” I replied.

“For someone with game powers?” asked Reimer, in his most smartass tone.

“No,” said Lisi. “For special circumstances, rhannu or renacim or something like that.” She stared at me. “But you’re human.”

“And that’s why the student council is a little displeased with me,” I said.

“You’re going to pick up two magics inside a week,” said Lisi, staring at me. “At what proficiency?”

“Probably four to eight years of study,” I replied.

“Intensive study or regular study?” asked Lisi.

“Uh,” I replied. “It varies, I think, but regular study?”

“Meaning with all of the normal classes that we’re forced to take for no reason other than desire by the athenaeums to make people take their time learning things?” she asked.
“Yes,” I said.

“Wait,” said Reimer. “What level are you? How high are your skills?”

“Level 14,” I said. “Most skills in the 30s.”

Nothing happened.

“Joon, get it to do the thing,” said Reimer.

“Manners might help,” said Bethel with the kind of smile a person usually had before engaging in cannibalism.

“Papers, please,” said Reimer with a huff.

“Oh, I meant sincere manners, not the pretense of them,” said Bethel.

“Oh mighty magical thing, could I please have some paper?” asked Reimer.

A sheet of paper appeared in front of him, to the side of his neglected salad. He stared at it for a moment. “Pen too.”

A pen fell from the air above him and hit him in the head.

“Be more considerate next time,” said Bethel. “And eat your salad.”

Reimer picked up the pen and rubbed his head, then began scribbling on the paper.

“What are you doing?” asked Lisi.

“Math,” said Reimer. “Okay, level 14, per the rules we played under, you should have 31 points. By the discounting rules, that’s 17 total in the abilities, which would mean above 50 in all your skills.” He looked up at me. “Right?”

“Juniper’s points weren’t all put into a single category,” said Amaryllis.

Reimer looked at me in disbelief. “But … why?”

I really didn’t want to re-litigate this. “Is that really your question?” I asked. “Of all the things that you could be asking right now, that’s what you want to focus on?”

“I mean,” said Reimer, looking a little helpless. “Yeah?”

“Multiple ability dependence is bad,” I said. “I’m fully aware of that. But when I came to Aerb, it was in the Risen Lands, with undead all around me, and Physical was the only thing that was going to keep me intact. Even after we got our asses out of there, I had to deal with problems that really couldn’t be solved by Mental or Social.” I resisted the urge to glance at Amaryllis, because I knew that point was debatable. “So yes, I changed course, I multiclassed, sue me.”

“What does that mean, ‘multiclassed’?” asked Reimer.

“Nevermind,” I replied. “The build is suboptimal at present, yes, and it’s a generalist build in a system that doesn’t seem to give a lot of preference to those. I’m a multimage, and I’ll probably be one of the best in the world in another month or two, and we’re going to have to hope that’s
enough.”

“I’m in,” said Lisi. She was staring at me. “Whatever you want from me, I’m fully committed.”

“You figured it out,” said Amaryllis.

Lisi nodded.

“Sorry,” said Reimer, looking between us. “Figured what out?”

“He’s Uther Penndraig,” said Lisi, gesturing at me. “Or something similar.”

“What?” asked Reimer, looking me over. “No, that’s insane.” He looked at Amaryllis, then back at me, and I suppose it must have dawned on him that we weren’t denying it. “That’s … of all the fucking people in the world?”

“Yes,” I said. And it’s worse, because I was the one to create a large portion of this world. “Sorry.”
Dinner went … okay. There were questions and answers, but we avoided talking about some of the bigger stuff, like the narrative, and the exact nature of Uther Penndraig. How Reimer hadn’t made the connection to Arthur … well, he’d grown up his whole life knowing about Uther Penndraig, the mythical figure who had done so much that a lot of people were willing to believe was mostly mere legend, and this Reimer had also grown up knowing his own Arthur Blum, and the idea that his now-passed friend was, in some sense, the reincarnation of Uther Penndraig wouldn’t have been promoted to consideration, not without some details that I had left out of the conversation.

I wasn’t lying, per se.

The main course was duck, stuffed with herbs and seasoning, then crisped to perfection, and the dessert was a chocolate cake. It had none of the usual experimentation that Bethel had been showing recently, which I hoped wasn’t the result of Pallida being critical (even though it was a marked improvement over the Full Grebellian Breakfast).

“So,” said Reimer. “Are you guys going to do some kind of loyalty pledge?” He moved his fork between Amaryllis and Lisi.

“Those aren’t real,” said Amaryllis.

“Yes, they are,” said Lisi.

Amaryllis stared at her.

“I didn’t mean anything by it,” said Reimer, holding up a hand.

“They’re propaganda,” said Amaryllis. “Part of the deliberate mythology.”

“They’re grounded in second century practice,” said Lisi. “That doesn’t mean that they aren’t real.”

“From a practical standpoint,” Amaryllis began.

“Concede that you were technically incorrect,” said Lisi.

Amaryllis glared at Lisi’s set face. I wondered whether this was just what it was like in the Lost King’s Court sometimes. I watched the muscle in Amaryllis’ jaw briefly clench and unclench.

“I don’t want to get into an argument about semantics,” said Amaryllis. “I concede that I was using imprecise but colloquially correct language.”

“Colloquially incorrect language,” said Lisi.

<‘I’m enjoying this immensely,’ Bethel said into my head.

“No, the meaning of colloquially,” Amaryllis began, before shaking her head a bit. “It doesn’t matter, and I just said that I don’t want to get into a debate about language or semantics.”

“Do you want my loyalty pledge or not?” asked Lisi.

“Good,” said Lisi. “Amaryllis Penndraig, tenth of her name, I, Lissianthus Penndraig, fourth of my
name, do pledge my everlasting loyalty to you, let my soul be condemned to the hells for eternal torture at the hands of vile devils should I ever betray you.” She gave a curt nod.

“Er,” said Reimer. “That’s not how it is in the books.”

“It’s historically accurate,” said Lisi. “The actual punishment was only used on three occasions.”

“Right,” said Reimer. “Just so we’re clear, I’m not pledging loyalty to anyone.”

“No one expected you to,” I replied.

“I’m actually not sure what it is you need from me,” said Reimer. He gave me a little grin. “Other than help with optimizing your character, naturally.”

“Yes,” said Amaryllis. “That’s what we’d like.”

“That … that was a joke,” said Reimer, staring at her.

“Mary is bad at jokes,” said Valencia.

“Mary?” asked Lisi.

“It’s what we all call her,” said Valencia.

“A nickname, given to me by a friend,” said Amaryllis.

“Sorry,” said Reimer. “You want me to manage the magical character sheet?”

“It doesn’t make sense as a nickname,” said Lisi. “A-muh-rill-us, Mary isn’t a diminutive.”

“She was that kind of friend,” replied Amaryllis with a nod.

“Reimer, think of yourself as a consultant,” I said. “A very confidential consultant, sworn to secrecy, and hopefully not in any actual danger.”

Reimer’s mouth opened and then closed for a bit as he looked at me. “Can we talk in private for just a bit?” He held up his thumb and forefinger, half an inch apart.

“Sure,” I said. But *not really*. “We can go into the next room.”

I pushed back from the table and went ahead of Reimer, just to make sure that Bethel wasn’t going to try to pull anything. She seemed to have a problem with him, which was her own damned fault, because she’d been the one giving him a dozen different drinks and an assortment of snacks the first night he’d come over (not to mention the bar of gold).

“Okay,” I said, once we were alone. The room was, thankfully, normal, just a plain sitting room with some books on the shelves and minimal adornment, though I was fairly sure that it didn’t fit in with the previously established geometry of the house.

“This is all so fucked,” said Reimer. “You know, I didn’t come to the athenaeum for this? I thought it would be years or longer before I saw anyone from Sporsan, least of all you, and you’ve changed so much, and there’s apparently some serious magic floating around, and you’re not you, and …” He shook his head. “You just plopped a quarter million obols in my lap like it was nothing, and I have no idea what role Lisi is playing in all of it, but I’m with a princess, just like we’d always joked about, and it’s all just way, way too much, way too fast.”
“So you’re bowing out?” I asked.

“No,” said Reimer. “No, I didn’t say that, I just wanted to talk to you, or whatever of you is left, even if you’re some weird alternate version of yourself.” He shrugged. “Too much cross-talk going on in there, and Lisi … she’s great, nuts, but great, and …” He let out a breath. “Pretend it’s one of our games,” he said. “Pretend that we all got off-track somehow, talking about Animalia rights or accessibility or gender politics, like we always did, and you’re there trying to pull everyone back into the session, kicking and screaming. That’s all I want.”

“O-kay,” I said. “Not my forte.”

“No shit,” replied Reimer. He was fidgeting and looking around.

“It’s hard to think about things that won’t blow your mind,” I said. “Or things that would be far enough off topic that they wouldn’t just loop back to how crazy everything really is.” I paused. “Hang on a second. Okay, how about this: there’s this world made up of islands that float through the sky, gentle places that have no predators, no harmful magics, no exclusions, nothing like that, just people farming.”

“Always with the floating islands,” said Reimer. “Fine, so how does it go shitty?”

“It … it doesn’t,” I replied, narrowing my eyes.

“It always goes shitty, that’s just how you think,” said Reimer. “They’re, what, facing resource scarcity, their livestock have died and they can’t replace them, the islands have another ten years of fuel left before they crash into the monster-covered lands below?”

Those all did sound like things that I would have used in the past. “It’s not a setting for D&D,” I said. “It’s just a scenario to think about.”

“Then how do they keep everything balanced then?” asked Reimer.

“I don’t know,” I said. “They’ve got some kind of biomanipulation going on, and they’re capable of creating their own custom species to make more food than they need, which means that labor is what’s limiting them more than anything else, in terms of what’s expensive and what’s cheap. Custom plants that they can weave the fibers of, custom homunculi for simple, unskilled labor, biomanipulation on people in order to cure diseases and prevent most aspects of senescence … that kind of thing. So, what’s your character like?” That was a classic DM tactic; people loved to talk about their own characters, and if I needed Reimer to get his head on straight, I was hoping this helped.

“What kind of institutions of learning do they have?” asked Reimer. He moved over to the couch and sat down, and I took a seat opposite him.

“Groundseers and windseers,” I said. “I’ll grant that it’s not a big community, so there are relatively few people involved, not anything like S&S, or even our old high school. Groundseers are focused on the ground and the islands, the different species, the biomanipulation, that kind of thing, and the windseers are focused on the skies, birds and weather.”

“Okay,” said Reimer, taking a breath. “But the groundseers are the more important of the two, right?” he asked. “Like, the bioengineering is how they keep everyone fed, how they grow trees to make wood for houses, how they make whatever flying mounts they have, --”

“No flying mounts,” I replied. “They’ve been trying for decades, but you can’t just scale up a bird --”
“Because of the square-cube law, yeah,” nodded Reimer. “Should still be possible to ride a flying creature of some kind though, there are like, four primary species of flying mount, and I don’t think all of them use magic to do it.”

He caught me slightly off-guard with that. “Right,” I said. “ Doesn’t mean that it’s trivial. So if you’d like, you can be between the two institutions, someone hoping to synthesize their disparate fields of knowledge. The windseers train the birds that fly between the islands, and at least a fraction of them are veterinary experts. So maybe that could work for you.”

Reimer frowned. “Except this isn’t a game that we’re ever going to play, is it?” he asked. “Because you’re some kind of warrior mage now, in service to a princess, just like you always wanted.”

“I can’t speak for the other Juniper, but I never wanted to be a warrior mage,” I said.

“Oh, I meant more the ‘service to a princess’ thing, less the warrior mage part,” said Reimer with a smile. “Tiff used to call it monarch fetishism.” I winced at that. “Yeah, out of all of this, I keep thinking back to that poster, and how you’re just casually standing next to Amaryllis Penndraig now, and it’s just … let’s say you’re right about everything you’ve said. Well, then it’s like some malevolent genie came in and granted you your dreams, at this absurd cost.”

You’re more right than you know. “He was obsessed with her?” I asked. “The other Juniper?”

“Eh,” said Reimer with a shrug. “We didn’t really talk about that kind of thing much. I mean, both Tiff and Maddie, I found out after the fact.” He was watching me. “You think you’re from Earth, yeah? Same thing over there?”

I nodded. “I’m sure there’s some universe where Juniper Smith isn’t a shit.”

“At least you know it,” shrugged Reimer. “I’ll give myself a point for that.”

“You really shouldn’t,” I replied with a sigh. “You’re feeling better though? Calmed your nerves?”

“Yeah,” said Reimer. He rubbed his neck for a moment. “Thanks.”

“Sure,” I said. “You’re … a friend. I guess.”

Reimer laughed. “Yeah, I know what you mean. That’s what I tell people.” He looked over at the door back to the dining room. “Say, however you cock things up, can you somehow manage to not fuck with what Lisi and I have going on?”

“Which is?” I asked. You telling her everything she wants to know, presumably because she pressed you hard enough?

“I have no idea,” said Reimer. “I just don’t want you to fuck it up, alright? You can do that for me?”

“I … sure,” I said. “I can try. Seems really foolish to me, from what little I know of you, and if you have some kind of idiot crush on her, --”

“She uh,” Reimer swallowed. “She gave me a hand job.”

“Fucking what,” I said.

He grinned at me. “Yeah, I don’t know, it was … it was a thing that happened.”

<That’s hilarious.> said Bethel.
“I just …” I squeezed the bridge of my nose. “Why?”

“Like I know?” asked Reimer. “And come on, it’s not like you’re the handjob police.” He paused. “Wait, is that what this is all about? You went to join the handjob police?”

“Reimer,” I said. “Jesus Christ just,” I shook my head, because I had so many questions, and I was picturing it, despite the fact that it really wasn’t something that I wanted to picture. “Let’s shove all this shit into some cupboard that we never speak of, okay?”

“Yeah,” said Reimer. “Sorry, it’s just … you’re the only person I know at S&S, and this is part of the confusing shit that’s been going on in my life in the last handful of days.”

“Right,” I said. “The realm of things that I’m equipped to deal with has been growing lately, but that —”

“Yeah,” said Reimer, sitting up a bit. “Got it.” He paused for a moment. “Are you and Amaryllis …?”

“Are we what?” I asked.

Reimer made a handjob motion.

<I’m back to liking him,> said Bethel.

“I think I’ve had enough of you,” I said. “Amaryllis will want your opinion on the best possible builds, given what’s been done in the past and what our options are for the future, but I frankly think that tonight has gone on for long enough. We’ve got class tomorrow.”

“Seriously?” asked Reimer. “You’re still going to class? And you think I’m going to class?”

“I have to go,” I said. “I’m at S&S for a reason. I need to attend classes in order to have the instructors sign off on the special form. Once all that’s done, I’ll get to level 30 in both Still Magic and Vibrational Magic in short order.”

“Yeah, but why would I go back to class?” asked Reimer. “Isn’t this going to be, like, my job now?”

“We’re not hiring,” I said. “I mean, I should actually double-check with Amaryllis about it, but … Reimer, I don’t want you to freak out —”

“Too late,” he replied.

“I’ve killed a lot of people since I came to Aerb, probably in the double digits, more if you include all the people my companions have killed. A lot of people have tried to kill me. One of my closest friends died a few weeks ago.” I swallowed. “There’s a good chance that this is what your life has been building up to, and I don’t think that I can dissuade you, but if I were you, I would continue on with classes while spending my nights hoping and praying that I never had to deal with the shit that’s plaguing my good friend Juniper.”

“My mediocre friend Juniper,” said Reimer, but his grin faltered. “How bad is it?”

“It’s escalating,” I said. “What kind of shit did I throw at you when you were level 14?”

“Oh,” said Reimer. “But … the world isn’t like that, there aren’t just arbitrarily powerful threats, and there are governments to deal with that shit, the empire, you were always bending over backward to explain why these were problems that only four or five people were working on instead of dozens or
I don’t want to tell you more,” I said. “I want you to be able to walk away. I’m hoping … I’m hoping that maybe it will work if I let you know enough, so you can make your own choice.”

Reimer stared at me. “Shit.” He let out a breath. “Let me think on it.” He looked at the door. “Do you think Lisi will want me to walk her back to the dorms?”

“I have no idea,” I replied. “Try not to complicate things. We have a lot of moving parts.”

For Pallida Sade, being with the Council of Arches had taken a turn for the worse, in the past few days. Really, if she had to trace it back to one thing, it would be that she didn’t have her hat anymore. The hat allowed her to change her appearance, replacing pink skin with that lovely creamy color humans sometimes had, which would allow her to blend in. Pallida liked being renacim, but they were a damnedably conspicuous and staggering rare species. Her armor could cover her well enough, but the armor was conspicuous too. The hat would have solved her problems quite handily, but it was, unfortunately, somewhere at the bottom of the Bryllyg Sea. The ship she’d been traveling on had capsized and sank in a hurry, and while she was a strong swimmer, it was a stronger storm. Everyone else aboard had died and been whisked away to an eternity of torment in the hells, but Pallida had been reborn, as she always was.

It had been three hundred years, and she still missed that damned hat.

This whole life had been just a little bit off. The life before, she’d lived to the age of eighty and taken a controlled death, right next to a woman who’d gotten pregnant specifically for the purpose of bearing Pallida to term. It was a truly, horrifically soft way of both leaving the world and coming back into it. Not that Pallida could remember anything of what she’d been like at eighty one life ago, and not like she could remember the first few years of her life, but she was a strong believer that infancy set you up for everything else, and up until she was able to secure a release from the guardianship of the Renacim League at the age of ten, she’d had a coddled little life.

There had been a few times when Pallida had considered herself the greatest thief in the world. She was close enough in age to remember a few of them, breaking into the most secure places in the world, stealing from the rich and famous, and dabbling in related arts like forgery or assassination. There’d been two times she’d been so successful in her criminal enterprises that she’d ended up becoming a de facto government, and thankfully both those times were well in the past, because there was no one around who remembered what a wretched ruler she’d made.

This life? She had no great deeds to her name, as yet. She’d barely done any training either, meaning nothing much that would be carried on to the next lives. Sometimes there were nothing lives, ones where nothing much happened, nothing was gained for the future, nothing learned or experienced, and Pallida had made peace with that, but this life seemed to be at a critical juncture, the stars aligning just so, Uther (or someone like him) emerging back into the world, all the old threats rearing their heads. It wasn’t a great time to be feeling off.

Pallida walked through the streets of Li’o, with her inky black armor engulfing her up to her throat and down to her fingers, but with her weapons left back in Bethel. The armor certainly made a statement, though for those who knew what a renacim was, the pink skin said quite a bit more. She caught a few looks, and a handful of stares, but not as much as she might have in the past. Li’o was a cosmopolitan city in a cosmopolitan area, and there were so many species floating around that people just accepted the fact that not everyone looked alike. There were two hundred mortal species, give or take, and some variations among them, enough that it took actual work to memorize them all. Most people didn’t like doing actual work, and for everything that set Pallida apart, she didn’t like doing...
work either.

The trick for finding the underworld, so far as Pallida thought there was one, was that you had to work your way up from the absolute scum. There were bad neighborhoods, even in a magocratic city-state like Li’o, and even bad neighborhoods had places where people gathered, usually for drink, drugs, or something similar. It was one of those places that Pallida slipped into, knowing that it was going to be rough going for someone as clearly upper crust as she was.

Officially speaking, Amaryllis hadn’t given Pallida a task. Instead, what Amaryllis had said was that Bethel was one of their strongest members, and one that benefited greatly from entads, including those entads that were normally nearly worthless because of the restrictions on who could use them. Amaryllis hadn’t told Pallida to go out and steal anything, but the subtext was there.

And Amaryllis herself … Dahlia had left her mark on Pallida, that was certain. Pallida was old, not just as old as the hills, but older than them, as old as the world itself, by certain accountings, and Dahlia had been, simply, the best, the perfect complement, the perfect friend, the perfect lover, second to none. Or, at least, that was how it felt to Pallida in her 20s; her 30s were indistinct, and she couldn’t remember any of her 40s yet, from any of those lives, nor anything beyond that, but she also couldn’t remember being young and reading about some great love in those past lives, which she surely would have recorded for posterity.

Amaryllis wasn’t Dahlia. Physically, they were nearly identical, and there was some overlap in their personalities, some of which was, maybe, because they were both Anglecynn princesses. They had that same drive to them, that same ferociousness, the sense that if the end of the world was coming, they would be there with sword in hand … but there were also a lot of differences. Amaryllis was cold, sometimes in a teasing, mocking way that was really quite fetching, and sometimes simply in how she didn’t respond to the things that she should have. Pallida was no stranger to seduction, she had lifetimes of experience to draw on, but with Amaryllis it all fell flat, and not in the ways that it typically did. Maybe it was that Pallida was trying to force it, or maybe it was complications with Juniper, but it all felt just a little bit off.

And Raven was around too, which wasn’t what Pallida would have preferred, even though they’d been friends once-upon-a-time. She could remember the falling out more than the friendship.

Not to mention that steadfast allies had died in the very recent past, Everett, O’kald, and Gur Dehla, not all close friends, as such, but people that could be depended upon from one life to the next.

There was the whole ‘end of the world’ thing happening again too. That wasn’t great. It was just a whole lot of not great things going on, frankly, and she was in a slightly-off life.

At least no one had called her ‘palisade’, so she had that going for her.

The bar was called the ‘Errant Shaft’, presumably for bawdy reasons, and Pallida Sade was better than anyone in it. She had more skills, more connections, more material wealth, more knowledge, more training, and she was, certainly, older. It was a mixed-species bar, the kind that people had stopped calling mixed-species bars, and now just called bars, because that was the way of the Third Empire. People still segregated themselves though, that was only natural.

Pallida sat down at a table near the back, interrupting a conversation going on between four human men. They looked her up and down, taking in the entad armor, the pink skin, and the cheerful smile on her face.

“A round of drinks, to start us off?” asked Pallida, grinning at them.
“Sure,” said one of the men with a nod.

Pallida whistled for the bartender, a loud, sharp whistle she’d mastered thousands of years ago, and had cause to dredge up more often than might have been expected. She ordered the drinks with a gesture, and hoped that the bartender wasn’t going to serve up the lowest quality, highest priced drinks available.

“I’d like to do some buying and selling,” said Pallida, still holding her slightly predatory smile. She wished that she’d brought her trident, for a prop.

“There’s a market,” said one of the men. Pallida liked to judge books by their covers, and he seemed like the most guarded of the lot, not the kind of man she was looking for.

“The kind of market I’m looking for?” she asked.

“Depends on what you’re buying and selling,” he replied.

“Oh, sundry things,” said Pallida. “Hard to find things. I’m new in town, you see, so perhaps someone in the know, someone who can procure things that are hard to come by.”

“Lorentz,” said one of the men. The others looked at him as though they didn’t think highly of him sharing that information.

“An address?” asked Pallida.

The man hesitated, then gave one, which drew more looks from his fellows.

And with that, Pallida popped up from where she’d been sitting, paid the bartender, and was on her way. With luck, she would be in touch with someone of real power in another two or three stops.

After Lisi and Reimer had gone, we had a meeting about it. I was tired, and not really all that interested in a recap of everything that had just happened, but Amaryllis was a little bit worked up.

“She’s as difficult as I remembered her being,” she said. She turned to Valencia. “Can we trust her?”

“Mostly,” replied Valencia. “She thinks that this is a chance for more power than she would ever have had inside the Lost King’s Court. The biggest risk of defection will be if she starts to view herself as subordinate to you. She took the loyalty pledge seriously, though it was more in the sense that she was making a precommitment than that she so fully intends to be loyal. It was calculated.”

“Naturally,” said Amaryllis. “And Reimer?”

“He’s in over his head,” I said.

Amaryllis cleared her throat and looked over at Valencia.

“Oh, Juniper is definitely right,” said Valencia. “He’s in over his head. Lisianthus manipulated him easily enough, and anyone else he meets with more social skills will probably be able to do the same, though perhaps with a bit more effort, after tonight.”

“I assume you’re against moving him here?” Amaryllis asked me.

“The only reason we’d do that is to keep him safe,” I said. “And while Bethel is likely one of the most secure places in existence right now, that would also mean keeping him with us indefinitely.”
“Until the end of our time at S&S then?” asked Amaryllis.

“Maybe,” I said. I shifted in my seat, then turned to Valencia. “Am I just pushing him away because of stupid reasons?”

She blinked at me.

_Loyalty Increased: Valencia the Red, lvl 28!

“Oh,” she said. “Yes and no. You’re trying.”

“Not terribly comforting,” I replied with a frown. “I suppose I’ll defer to the Council.”

“I’d prefer him away,” said Grak. “What he offers can be extracted from him.”

“Mercenary,” said Amaryllis with a raised eyebrow. “But I suppose I concur.”

“You don’t think the same of Lisianthus?” I asked.

“With respect,” Amaryllis began. “Aside from the game he played and potential narrative revelations he might provide, Reimer is no more special than any other high schooler. By comparison, Lisianthus, for all her problems, was given the same intensive education and opportunities that I was. She was groomed for power and importance.”

“She’s a mediocre blood mage,” said Bethel, tapping her fingers on the table.

“Yes, well, we have some significant problems with hiring people, don’t we?” asked Amaryllis. “Valencia can do screening, but to put someone at the core of our team raises a lot of risks.”

“What would she even do here?” asked Bethel.

“I don’t know,” replied Amaryllis. “But she is, at the least, someone that we can find a use for. Reimer, by comparison, becomes useless after we’ve had a week or two in the time chamber to fully debrief him.”

I frowned slightly at that. “Assuming he’d consent to that … I’m not willing to call him _valueless_, given the impossibility of a full debrief. There would be years upon years of my campaigns in his head, and even if those didn’t directly map to Aerb, then he’d at least be another person who knows how I think as a DM.”

“He’s a security risk,” said Grak, shaking his head. “He’s already proven that.”

“We did what we could about that,” said Amaryllis. “He knows some of what’s presumably going to be public when Uniquities inevitably leaks, or what an outsider might observe from putting the pieces together on their own.”

“Yeah,” I said. “The bigger risk right now isn’t that he says the wrong thing to the wrong people, it’s that someone kidnaps him and tries to use him against me somehow.”

“I’m willing to do a weeks long debrief in the time chamber,” said Amaryllis. “Ideally we would get some form of communication entad that would allow us to remotely bring him in for conversation when needed.”

“Do we have one of those?” I asked. Parson’s Voice was short range, and wouldn’t work outside of (roughly) the same large city, not that we’d want to outfit him with a tattoo, given how expensive they were, and the fact that he would be privy to conversations we’d want to keep private.
“We don’t have an entad,” said Bethel. “Lisi has one, a quill linked to its duplicate, though there’s a day’s delay on use. I don’t know where the pair is.”

“They’ll probably be together,” I said. “Assuming that we don’t bring her with us when we leave.”

“Why would they be together?” asked Amaryllis.

Valencia narrowed her eyes at me. “She seduced him?”

“Is that a question?” I asked.

“I think it’s what you think, but it’s not what I think, so I’m confused,” said Valencia.

“Here,” said Bethel. She held out a hand and replayed the conversation I’d had with Reimer about the hand job.

“How accurate is that playback?” asked Valencia.

“Extremely,” replied Bethel.

“Then I don’t think he’s lying,” replied Valencia.

“I don’t think we need to get into this,” I said. “I also think that Reimer told me that in confidence.”

“More fool him,” said Bethel.

“It’s important to know what their exact relationship is,” said Amaryllis.

“Well,” said Valencia, touching her finger to her chin. “She’s Hermione, and he’s Ron, so --”

“No,” said Amaryllis. “Just, no.”

“I’m interested,” said Bethel with a smile.

Valencia had to have known that Bethel was just humoring her for the sake of exasperating Amaryllis, but she continued on all the same. “Well, Juniper is Harry, because he’s the protagonist, and Lisi is Hermione, because she’s a girl, she has an overbearing personality, and she focuses on intellectual endeavors. Reimer matches Ron’s strategic genius, the way he’s overshadowed by his family, --”

“Sorry,” I said. “Reimer’s an only child.”

“His metaphorical family,” said Valencia. “Anyway, what Lisi sees in Reimer is likely the same as what Hermione sees in Ron, which is that he’s got this spark of intelligence he applies only to certain things that capture his imagination, like Quidditch or wizard’s chess. Plus his courage, naturally.”

“I’m sorry,” I said. “But you tried to do this with the houses too, and it’s just --”

“It’s the same thing that Mary does,” frowned Valencia.

“It is not,” replied Amaryllis.

“I read the books very quickly, and might have missed something,” said Bethel, “Did Hermione give Ron a handjob?”
“This is too vulgar,” said Amaryllis. “And no, she didn’t.”

“It’s implied in the text,” began Valencia.

“Is it?” asked Amaryllis in disbelief.

Valencia huffed. “Well, you have to understand that the books were written for children, but given that sexual curiosity is completely normal in the early and late teens, their close proximity with one another, their history of dating others, then yes,” said Valencia. She folded her hands. “The lack of explicit sexual activity probably has more to do with the marketing of the books and the social mores of both the author and audience.”

“How does any of this help us?” asked Amaryllis.

“You were asking what’s going on between Lisi and Reimer, and Valencia was interpreting, like you asked her to,” I said. I looked at Valencia. “You were saying, essentially, that they were attracted to each other?”

“Yes,” nodded Valencia. “Though specifically with regards to manual release, I think it’s also likely that she either had some existing fetish, pattern of behavior, or commitment to that course of action. Say, for example, she had wanted to get some experience with boys following a relatively cloistered existence at Quills and Blood, as I think is common there, sapphic experiences excepted.”

Amaryllis cleared her throat. “Well, good to know,” she said. “If he’s not lying, then I suppose it’s good that it’s not base seduction.”

“She knows herself well enough to know that seduction isn’t likely to work,” said Valencia.

“Noted,” said Amaryllis, her voice firm.

Valencia looked like she wanted to say more, but she held her tongue.

<We should do handjob inquisitions more often,> Bethel thought in my direction.

<Har har,> I replied.

<You’re just jealous of him,> said Bethel, with a mental ‘tch’.

<Lisi’s not my type,> I replied.

<My experience has been that you have lots of types,> said Bethel. <More than a few around here who would give you a handjob, if you wanted.>

<Har har,> I replied again, as I used blood magic to slow my heart rate and suppress my blush.

<I can tell when you do that,> said Bethel. Her tone was teasing, with something in the mental connection beyond just the change to how the voice appeared in my mind.

<Not for your benefit, and I figured as much, since you’re constantly staring at my internal organs,> I said.

<Are you turning me down then?> asked Bethel.

Slowing down the flow of blood through my body was harder than it sounded, because I had control of my blood, not my heart. My heart was still getting its own hormones and electrical signals and whatever else, and it was kicking into overdrive, half because of the inherent danger at the prospect
of turning Bethel down, half because there was a portion of my brain that was devoted to thinking about sex.

<Can we talk about this privately?> I asked. Valencia and Grak were talking about death of the author, and I wasn’t at all listening to them.

There was a flicker of black and I was transported from the dining room, where we’d been sitting there talking, to my bedroom. My position hadn’t changed at all. This came as a surprise, but it was part of a technique that we’d developed a week ago. Sable could take in any object that it was touching (so long as you were touching it for more than ten seconds), Bethel had enough effects going that she counted as touching everything inside of her, and there was nothing to say that Sable had to spit things out from the same place as it took them in. Normally that last bit didn’t matter, since Sable was a glove, and it was a difference of a few inches. When Sable was inside Bethel, however, it meant instantly moving objects through the house.

“There,” said Bethel, “Private.” She was standing in front of me, still human-sized, as she’d been in the dining room, though in her more traditional gossamer dress.

“I don’t know if you’re just needling me,” I said. “And if it’s not just that, not only that, then I don’t know what you would get out of it.”

“Because I can’t feel physical pleasure?” asked Bethel.

“For a start, yes,” I said. “So far as you’ve said, you have nothing like sexual need, sexual pleasure isn’t part of your sensorium, and you can already feel … well, damned near everything else, whether the other party consents or not. So I just don’t.” I squeezed my hands. “I don’t know what’s in it for you, other than to make fun of me for things outside of my control.”

“Perhaps I want to make you happy?” asked Bethel. “Or perhaps I’m just curious.” She sat down on the bed beside me and used a hand to smooth down the bedsheets, the combination of illusion and physical force immaculate, as though she were really there. It was easy to forget how deliberate she was. “Do you think that was what it was for Lisi? She wanted to see what it was like?”

“No clue,” I said. “I barely know her.”

“And what is it about me that doesn’t appeal to you?” asked Bethel, looking me over. “I can provide nearly any sensation you would like. I can take any form that you think would please you.”

“Yeah,” I said. “I mean, on the surface, that’s a pretty good deal.” I fidgeted. “Leaving aside some of the more complicated feelings on the matter, like the feeling that I would be following in Uther’s footsteps,” I swallowed at that, and avoided looking at her face, because she must have thought of that, “It’s not what I’m into.” I paused. “I wrote this campaign setting, flesh.txt, sort of a … well, pornographic worldbuilding, this fantasy world just made for … not sex, exactly, but for my own lewd interests. I assume you’ve snooped enough to hear about it.”

Bethel nodded.

“Anyway, there were magic items there, not entads, since they weren’t singular, but something close, and they could amp up sexual desire. Rings, usually, or chokers, things that could be worn while naked.” I stopped and sighed. “If we found something like that, and you consumed it, then maybe it would be more appealing to me, if that makes sense? If you got something from it, rather than just making me happy? I don’t know. The idea that you’d be touching me, and that it would be no more pleasurable for you than touching a piece of wet cardboard …” I trailed off. “I guess for me that would be worse than nothing, even if there was a physical response.”
“You understand that’s what it would be like for her, don’t you?” asked Bethel.

I sat in silence for a moment. “Yeah,” I said. “Maybe. To be determined.”

“And then?” asked Bethel. “If you love her, and she loves you, but there’s still no spark of sexual love between the two of you?”

“Come on,” I said. “What is this? You’re going to go from propositioning me to relationship counseling?”

“Just curious,” said Bethel. “It might be my imagination, but part of the reason you’ve turned me down is that your moral code dictates that you would, one day, have to explain it to her, if we had sex? And you imagine that she wouldn’t take kindly to that.”

I shrugged. “The thought crossed my mind. It’s not a secret that I would want to keep, and it’s not one that I would want to tell. That’s not the primary thing stopping me though.”

“It’s the idea that I would get nothing but an experience I’m curious about?” asked Bethel.

“Yeah,” I said. “I don’t know. There was a time when I would have jumped at the chance.” I frowned slightly. “Don’t tell him, but same probably goes for Grak.” Two, three years ago? Maybe less. Maybe a lot less. I’d slept with Maddie, after all, and that was equally ill-advised, the pursuit of sex because hey, it was just sex. Even without the depression and the listlessness, I’d have tried it, with both Bethel and Grak, even if it wasn’t my thing.

“And if I do tell him?” asked Bethel.

“Then we would talk about it, and that would be fine,” I said. “Maybe he would learn about me, and I would learn about him, and it would be … whatever. I just thought that it would illuminate things for you to know that. Maybe ‘jumped at the chance’ is the wrong phrasing for Grak, but I would have, maybe, I don’t know, been really careless about it. Even though it’s not,” I shook my head, then looked over at her. “If you want, I can help you pick someone. Man or woman. I wouldn’t think that trust would be a big deal, given your virtual inability to be hurt and massive firepower, but --”

“You’d be mistaken,” said Bethel. “Trust goes beyond what can be physically inflicted upon a person. If you allowed me the opportunity to pleasure you, and I was terrible at it, then I trust that you would do your best to be honest with me, and to soften the blow, to tell me what I was doing wrong, how I could improve, that you would take my feelings on the matter into consideration. You would be nice.”

“I’m not really that nice,” I said.

“You would still be nice to me,” said Bethel. “Careful and considerate, not because you were afraid that I would tear you limb from limb if you said the wrong thing, but because you have a core decency to you.”

“I think you’re really overselling me,” I said. “Like, a lot.”

“Perhaps,” nodded Bethel. “Oh well.” She sniffed slightly, more performance, for my benefit, nothing more. “Remember the offer, if you’re ever in the mood. Would you like to return? Amaryllis would like to speak to you.”

“Sure,” I said. “Thanks for the pep talk.”

“Anytime, kiddo.” Bethel smiled at me, and there was a blink of darkness that saw me sitting back in
the chair I’d been in when I left the dining room.

Everyone else had left and the dishes had been cleared away, leaving just Amaryllis, who was sitting beside me, just as she had been. She gave a stifled sigh of relief, and pulled away the paper that had been sitting in front of me. I reached for it first though, and she let me take it.

_Took J for a private talk -- Bethel_

_Bring him back when you’re finished -- Amaryllis_

_In one piece_

_Please_

“You shouldn’t have worried,” I said.

“No, I should have,” said Amaryllis. “Verbalizing that worry was probably unwise though, or at least meaningless. You’re fine?”

“Yeah,” I said.

“Are you going to tell me what that was about?” she asked.

“Oh,” I said. “Just … stuff.” I swallowed briefly. “Juniper and Bethel stuff. I can tell you, if you’d like, but it’s kind of personal, and I don’t think anything good would come of us talking about it.”

“How are you feeling?” asked Amaryllis.

“Eh,” I said. “Yesterday was a long day, and today was too, and I have a feeling that it’s just going to be a series of long days until we’re out of here.”

“Time chamber,” said Amaryllis.

“Yeah,” I said. “I might have to use it to stretch the days out. Get some homework done, get some more sleep in.”

“I did your homework already,” said Amaryllis.

“Oh,” I said.

“I won’t be offended if you throw it out and do it on your own,” said Amaryllis. “I know you had some preconceptions about what this would be. If running through the equations on your own is what will make you happy …”

“It’s a fantasy,” I sighed. “I know it is. Not even one of my top fantasies, to be honest, it’s just, growing up, reading about wizarding schools, going to the College of Winterhold, I thought maybe this was going to be more of a lull. I wish that Valencia was right, that it was, in some way, Hogwarts.”

Amaryllis nodded. “Sorry.”

“S’okay,” I said. “Where are the others?”

“Getting rest,” said Amaryllis.

“Well, we should gather them up,” I replied. “It’s late, but the jail doesn’t have set visiting hours, so
… time to go visit my ethics professor, I guess.”
The sun had gone down while we ate dinner, but Li’o seemed no less busy, and the temperature hadn’t seemed to move all that much, thanks to a warm wind that was blowing through the streets. Amaryllis and I had talked to the lawyers earlier in the day, enough to get a sense of what was happening with the ethics professor.

Li’o was a city-state, one of the member polities of the Empire of Common Cause, and sharing some but not all of the common legal framework that the Empire had managed to put in place. A lot of that common framework was grafted onto the existing system though, and that system was, in essence, a magocracy, controlled by and for the mages, with some lip service paid to equality and due process of law. That foundation could still prove a bit problematic, if you caught the ire of the mages in question.

Malus Lartin was not, as it happened, a mage of any stripe. I’m not sure why I had assumed she was, other than that she was teaching at S&S, but there wasn’t any need for someone teaching ethics to be a vibrational or still mage, or any other sort of mage, and Malus decidedly wasn’t. She’d been educated at a bog-standard college, one of the lower institutions of learning that could never hope to match the prestige of the athenaeums, then gotten the job at S&S mostly because there were legal prohibitions that mandated that ethics instructors had to be hired from outside the athenaeum that they taught at, presumably to prevent a corrupt institution from teaching corruption (not that I thought such a policy would do much good).

All that was relevant mostly because it put Malus into a fairly precarious position. Non-mages (and non-students) were subject to expedited sentencing, which could move frighteningly quickly if conditions were right. Given the upcoming Demonblooded Festival, plus all the things that she’d been charged with, conditions seemed very right.

“There are imperial anti-discrimination laws,” said Amaryllis as we waited in the police station. She had opted to keep out of her armor; in theory, she was only a public figure in Anglecynn, and while both Lisi and Reimer could give a positive identification, the risk of running into someone else from Anglecynn seemed fairly low. It was also pretty unlikely that she’d be able to be part of the conversation here if she kept fully armored. “Unfortunately, there are a number of loopholes in those discrimination laws so large that you could drive a truck through them. Discrimination on the basis of merit is legal, for example, and widely used to extend into other matters, because there are certain things that certain species are incapable of, and merit then becomes a proxy for species. Monarchy is another one, naturally, as you might have guessed by Anglecynn’s unique situation. Most of the problem is actually the imperial legislature being unwilling to do anything about flagrant abuses of the exceptions.”

“Similar thing in America,” I said. “Except we mostly got our shit together. Mostly.”

“Here in Li’o, there’s a power imbalance, both because of the literal power the mages wield, and the vast resources they control, both explicitly and implicitly. This city is built around the athenaeum, with funds coming in from all over the world. No chance for an uprising, not a real one, not one that would work.” She sighed.

“That’s probably part of the reason they hold the Demonblooded Festival,” I replied. “Five minutes hate.”

“It technically lasts four days,” said Amaryllis.
“Sure,” I said. “Just, it gives the people who might otherwise feel disenfranchised somewhere to direct their hate and frustration.”

“For the dwarves that’s everyone else,” said Grak. “We direct hate at anyone not a dwarf, and a fair few dwarves as well.”

“That’s probably not the situation that we’re here to solve,” I said. “Societal change isn’t really in our wheelhouse.”

“I’m not sure that we should be here at all,” said Amaryllis. She looked around the waiting room. “No quest.”

“Some things are worth doing even if they’re not quests,” said Raven.

It was the four of us, because Solace had wanted time with the locus, Heshnel wanted to guard the house, Valencia was non-anima, and Pallida had gone off to do Pallida stuff sometime after Reimer and Lisi had shown up. Heshnel I could take or leave, especially since he wasn’t fully “in” as part of the team, by his own accounting. Pallida would have been helpful though, in the event that we found ourselves urgently needing to stage a prison break; getting into and out of places she wasn’t supposed to be was kind of her thing. I really didn’t want to do a prison break in this kind of situation, but it seemed within the realm of possibility.

“Visitors for Lartin,” said the orc guard as he ambled into the room. We stood up and I gave him a small wave, which didn’t seem to impress him. “Two at a time.”

I looked at Amaryllis, raising an eyebrow, and she gave me a slight nod. I did want Grak with me, because he could take a look at the magic the jail was using, but Amaryllis was better at talking, and so far, I didn’t know whether or not anything would actually be required of me.

(Before we’d left, Valencia had helpfully pointed out that *Harry Potter and the Prisoner of Azkaban* was about a wrongfully imprisoned person in magical jail. I had held my tongue, but I really didn’t think that was a clue.)

We walked down a hallway, following the guard, until he brought us to an archway with red and yellow markings all around it, and more signage than I could read in short order. For the most part, it was a set of rules and warnings.

“No entads during prisoner visits,” the guard said. He tapped a bin. “Everything you have, into this bin, you’ll get it back when you return.”

I don’t think that we gave any outward signs of displeasure, but I had an instant knot of anxiety. Alvion’s Vambrace was my get-out-of-jail card, as well as the place my full combat kit was stored. I wasn’t defenseless with my entads removed, but they were a big part of my arsenal, and worth a lot of money. It was hard to tell what was a normal precaution any sane jail would take, and what was a narrative trick to get me at my weakest.

I took off the vambrace, while Amaryllis took off Sable and the amulet that contained the soul of her great-grandfather. I still had a gem and the smallest of the unicorn bones in my pocket, but it felt awkward to be without everything else at my beck and call. I was certain that went double for Amaryllis, especially since the incredibly valuable teleportation key was currently within Sable.

Nothing happened when we walked through the archway, which from the signage I assumed was a flat ward against entads. Full coverage from all entads was so expensive that it was almost never done, but doing it this way, where it was a single doorway’s worth of protection, was just expensive.
enough that it was more or less practical for a large city. Entads would still work beyond the archway, they just couldn’t pass through it, not unless they were wardproof. That was another place where Pallida could come in handy; her armor was wardproof, and could cloak anything that she was wearing from the wards.

We were led to a closed room with a thick metal door, then led inside after some curt orders were issued.

“More visitors,” said the guard. “Thirty minutes. You know the rules.” He looked at the two of us. “No magic.”

Then he closed the door and left us alone.

“Juniper, was it?” asked Malus. “I’m surprised to see you here.” She gave Amaryllis an appraising look.

“Just a friend,” said Amaryllis. “But one that might be willing to hire legal counsel for you, depending on the specifics of the case.”

“Hrm,” said Malus. She looked back at me. “You’re in luck. I sent the paperwork to the bursar yesterday. I don’t know whether or not it will be considered valid, given that my employment at the Athenaeum of Sound and Silence might be coming to a swift end, but I believe the bursar is the one making the consideration.” Her voice was calm. I had expected some signs that she was crying, but she was taking her incarceration and presumed execution pretty well, at least so far as I could see.

“That’s not really why I came,” I said. “I wanted to see -- you’ve been charged with some crimes that you’re really unlikely to have committed, all things considered, crimes where it’s not clear what your motive would even have been.”

“You think I’m innocent,” replied Malus. She sounded skeptical.

“Probably,” I said. “If you want to confess guilt, then sure, I would believe you, but all else being equal, the timing here with the Festival is too neat. If you tell me you’re innocent, then there might be ways for me to help.”

“On what basis?” asked Malus.

“Did you do it?” asked Amaryllis.

“No,” sighed Malus. She looked between the two of us. “I’d heard about the death down in the temple, but I didn’t have the motive, means, or opportunity. I’m not a mage. I work for S&S, but I was installed here by the Empire, which means that I have relatively less access, political power, and ability to call in favors than anyone else among the staff. The other deaths I’m being charged with, I wasn’t even aware of before today. I live a solitary life, and some of the events were quite a while ago, so I don’t expect that I’ll have a useful alibi for any of them, but from what was discussed in the preliminary hearing, it seems that the method was a time delayed poison of some kind.”

“Meaning that it could have been administered at almost any point,” I said. I frowned. “It seems like a really obvious set up to me.”

“Yes,” nodded Malus. “ Apparently my predecessor didn’t do a good enough job of teaching ethics.”

“You seem very calm about this,” said Amaryllis.
Malus shrugged. “Demonblooded are often brought in for crimes they didn’t commit,” she said. “Li’o is a particularly bad place for us, so far as that’s concerned. I knew when I moved here to teach that it was within the realm of possibility.”

“But you’re just going to accept it?” I asked.

“‘Accept’ is a strong word,” said Malus. “I won’t go to my death with a wailing and gnashing of teeth, if that’s what you’re asking. I won’t uselessly debase myself just so that I can say that I did.”

“Martyrdom,” said Amaryllis.

“Perhaps,” replied Malus. She looked to me. “Is there anything else?”

“We can provide money for legal counsel,” I said. “Failing that,” I glanced at Amaryllis. “There are extralegal methods of saving you.”

“Your lack of concern for your own life is becoming a little irritating,” said Amaryllis.

“I would understand if you were crusaders for a cause, ideologues always looking for the next fight,” said Malus, looking back and forth between us. “But that’s not what this is.”

“It kind of is,” I said. I shrugged. “Maybe you had some preconceptions about me because of how we met.”

She turned away from me. “Let me think on it,” she said. “If you give me a phone number, I can call you tomorrow. So far as I know, I’ll still have some semblance of rights then. Unless this is now or never?”

“No,” I said. “We’ll pay for the best legal representation for you, unless you’re planning to refuse it. We’ll leave funds with you, and you can contact us. Beyond that … it would be helpful to have some information about what you’re being charged with, and why you think that the athenaeum would be so willing to throw you under the bus. I don’t know a single thing about the demographics of Li’o, but even with the Festival, you’re probably not the low-hanging fruit, so far as demonblooded go. Right?” That was about as delicately as I could phrase the question.

“You’re wondering what I did to provoke them?” she asked.

“No,” I said.

“Yes,” said Amaryllis. “There were easier, less contentious targets, if they were going to frame someone. So why you?”

“I don’t know,” replied Malus.

“You’re lying,” said Amaryllis, which seemed uncharacteristically aggressive to me.

“Yes,” said Malus. Okay, so I missed something. “I’m sorry, whatever you’re here for, I can’t offer it to you.”

There was a knock on the door, and a muffled voice from the other side shouted, “Three minutes!”

“We’re still willing to work with you,” I said. “Whatever lies you’re telling, whatever you’re hiding, this is part of something bigger --”
“It is,” replied Malus. “Juniper, I’m sorry, you showed actual interest in the lesson, and that’s rare among the students I’ve had. I wish that I could have been a better instructor to you. But we don’t know each other, and this doesn’t concern you. Try your best to be good.”

“That’s that then,” said Amaryllis. There was something hard in her eyes. “Have a nice rest of your life.”

We left shortly afterward, and if she’d been holding back before, Amaryllis let the scowl form in full on her face.

“I don’t know what this is,” she said.

“Psychology, maybe?” I asked. “Sometimes people act against their own best interests. Maybe it’s martyrdom, like you said, maybe it’s fatalism, maybe, I don’t know, obstinate refusal to accept help from a society that wasn’t offering help before.” It reminded me of Fenn for some reason, maybe because Fenn was often unpragmatic.

“Do you think she’s guilty?” asked Amaryllis.

“If she was, why would she refuse help?” I asked. “I mean, if she’s been killing people secretly over the past six to eight months, then why would she have compunctions about taking our help?”

“It doesn’t make sense,” said Amaryllis. “Or rather, it doesn’t make sense without some pieces of information that we’re currently lacking.” She raised her hand to her mouth and bit at her thumbnail for a moment. “I wish Bethel were more cooperative.”

I looked at the back of the guard, who was probably listening to us. “We might help with investigation, to the extent we can do that as private citizens.”

We collected our entads, and it was frankly a relief that we were back up to maximum lethality again. Maybe there was something wrong with that mindset, but I wasn’t going to try to change it just yet.

“Anything?” Grak asked when we came back out into the waiting room.

“More questions than answers,” I said. “And not many ways to get answers to those questions. We’d need to know who’s in charge of the investigation, and even that might not help us that much, because we have no standing here.”

“Not even as advocates of the accused,” said Amaryllis with a sour look.

“We should get home,” I said. “I could go for some sleep in the chamber, a day off, maybe.”

“It seems like a very frustrating dead end from someone unwilling to cooperate,” said Amaryllis.

“Maybe,” I said. “Or maybe it’s just set up for something else.”

Raven and Grak had been left alone in the waiting room of the local jail. Grak had come along partly to be sociable, partly to get out from the house, and partly in order to be kept in the loop about what was going on. It had been easy, in the past, to think of himself as a mercenary, someone following orders for his weekly pound of gold, but the past was the past, and now, he was demanding something more of himself. His training and expertise were in wards, and as an outgrowth of that, security systems and points of failure. There was, for the moment, little need for that expertise, but the moment might one day come. In the meantime, he was watching, soaking things in, becoming more and better simply by taking in the world around him instead of pushing it away. The others
talked *so much*, some, like Amaryllis, because they were putting in their full effort at all times, and others, like Pallida, simply to fill a silent room with their thoughts.

“I’ve known a fair number of dwarves in my time,” said Raven. It was only a mild surprise that she spoke Groglir; the woman was one of Uther’s Knights, after all, and aside from perhaps Vervain, the most academically inclined among them. Her accent was odd, the dialect either long fallen out of favor or a result of how the language had blended with the others she knew.

“I’ve known a fair number of dwarves too,” said Grak. *Most now dead.*

“You’re atypical,” said Raven. She put a little bit too much force into the declarative, borrowing dwarven bluntness, in a way that was peculiar to non-native speakers. Juniper had never done it, not before his transition into being a perfect native speaker, and not after, for which Grak was grateful. There was something grating about non-dwarves trying to sound like they were culturally dwarven.

“We are all atypical,” said Grak. “Atypical Ell, atypical elf, atypical renacim, atypical crantek, atypical humans. An extremely atypical non-anima. We wouldn’t be in this group if we were typical.”

“True,” said Raven. She folded her hands in her lap. When Grak cared to look with warder’s sight, she gleamed with magic, every item she wore an entad. “It’s alienating in three ways. First, we are separated from our species. Second, we are separated from our culture. Third, we are all different in our own ways, bonded by being unalike, but not by our own peculiarities.”

“Yes,” said Grak. He felt the instinctive urge to leave it at that, to shut down any conversation that would delve deeper, or reveal something about himself. Historically, that way lay pain. “I am less a dwarf and more a citizen of the Empire. It is a different category, bigger in some ways and smaller in others. There is less depth.”

“I’m a citizen of no country,” said Raven. “The last of Uther’s Knights. And now, the last of the Knights to join Juniper.”

“We are not Knights, not subordinate,” said Grak. “He is insistent.”

“Is the word ‘companion’ accurate?” asked Raven. “It was given by his power, wasn’t it?”

“It is a mild word,” said Grak. “We journey with him. Nothing more is implied by it. Whether you want to be his friend is your choice.” *Or more, if his appetites would stir for you.*

“There is less that binds you,” said Raven. “With Uther … he united us. He was our king.”

“There’s still time for Juniper to become a king,” said Grak. “He could marry into royalty.” He was likely to, even. “Sorry. That was not your point.”

“I don’t know my point,” said Raven. She adjusted her magical cloak, though it could move on its own. “I would like that higher purpose again. I don’t know that I’ll find it here, though there’s nowhere else for me to be. Uther knew what he was doing.” Again, that characteristic dwarven bluntness, borrowed by the Ell in a way that didn’t suit her.

“I never met Uther and have read less than the others,” said Grak. In Anglish, this was where one might put a ‘but’, as a way of negating whatever was prefaced. In Groglir, it was more about flow from one subject to another, bare facts juxtaposed with one another. “Sometimes he was making it up as he went along, inventing his own mythology and deciding without enough information.”

Raven was silent at that. “It was easy to get swept along by him,” she said. “You might be right.”
“I say that because of what Juniper has said of Arthur,” replied Grak. “I did not know Uther.”

“I don’t think I did either,” said Raven. Her voice was soft. It seemed that whatever she’d hoped to get from this conversation, she hadn’t gotten it.

“We can be friends,” said Grak. He held out his hand to her, and she took it, her small hand in his large one, shaking briefly. “You said that you had known dwarves.”

“Yes,” said Raven. “I didn’t mean … I only thought maybe it would interest you. I’m seventeen hundred years old. I’ve seen things. I met Godo the Everliving, ten miles beneath the surface of Aerb. There was a different time when Esclin Tearheart threatened to destroy the whole of dwarvenkind through a bloodline attack, a long but largely unsung adventure that led us to the home of the first dwarves.”

“Bloodline attack?” asked Grak. “I’m unfamiliar.”

“Excluded magic,” said Raven with a shrug. “So many magics gone, more than the Empire counts. That was one of the nastier ones, silently excluded to an unknown place. It was once possible to kill a man by weaving a spell and punching his father hard enough.”

“I wonder what Aerb will be like, once the last magic has been excluded from the world,” said Grak. “Like Earth, I suppose.”

“Let’s pray that we never find out,” replied Raven.
Arthur had always been a fan of pointing out time compression in media, wherever he saw it. There was a part in *The Dark Knight Rises*, Batman escapes from this big pit somewhere in either India or Morocco, and then has to travel back to Gotham City. He probably has enough time to do this, so it’s not a plot hole per se, but the way that it’s cut just compresses all that down to maintain a sense of urgency, so we don’t have to sit around watching Batman steal, lie, and sneak his way across the world to get back, which would completely ruin the pacing of the film and destroy the tension that was being built up. Arthur loved pointing that out; it was his go-to example. The other one he brought up a lot was (sigh) Harry Potter, where the first book takes more than a hundred pages to cover roughly a week, then finishes out the year in the last half of the book. Per Arthur, there was a time warp in effect whenever a character was doing something that was going to continue on for some time, uninterrupted.

By the third day at S&S, I was hoping that I could somehow skip ahead to all the bullshit that was undoubtedly waiting for me at the end. There were too many people, too many things that I was probably never going to need to know, and far too much that was unpleasant. Any fantasies that I’d had about this place being a “college experience” were in the past.

I double-checked with the bursar that the paperwork Malus had put forward would still be valid, and he confirmed that there wouldn’t be a problem on that count, which meant that my day was down to three classes.

Jiph, the rhannu girl from student council who had been on my case, was gone from Ermaretor’s class, replaced by yet another student aide. The lesson was nothing special, other than the fact that it was the first one that taught anything practical about still magic, and it was grounded more in a discussion of the definition of ‘change’ as it applied to the magic than it was actual practical examples of the magic as used by mages.

Leister was his usual chipper self, though there was even more math, and while he went over it all, as well as why it was important, it felt like I was never going to use any of it in combat, which was the primary place that I expected to use vibration magic. Further, mathematics didn’t have that much to do with how vibration magic was actually practiced, given that vibration mages weren’t running equations. The fundamental relationships between oscillators were important, sure, but the actual math … well, not so much. Also, I didn’t take the Mathematics skill, which left me just bog-standard Juniper on the subject. Still, if you were going to prohibit any actual practice for two years, I could see where this would be one of the things you’d teach.

For his part, Oberlin continued on with combat lessons, still deep in vibration magic, this time going into what defenses were available to a vibration mage. The short version was “none”, but the longer version was that there were some slender fraction of attacks which a vibration mage could no-sell, and another small handful that they could partially defend against, but for the kinds of attacks that you were likely to run into in the real world … well, most of them were kinetic or energy based, bullets, swords, arrows, lightning bolts, nothing that a vibration mage could really do a damned thing about by virtue of being a vibration mage. That was Oberlin’s opportunity to segue into “mundane combat”, which covered a number of diverse topics, including the trade-offs in armor, how to find cover in a hurry, how to flee from close quarters combat, and a few other things.

He stopped me for a talk after class.

“How goes it?” he asked.
“Fine,” I replied. “Ready to be done here.”

“Getting close?” he asked.

“Two days after today,” I replied.

“I meant the investigation,” he said, narrowing his eyes. “Leads?”

“Fuck all,” I replied. “We can talk in your office.”

A short trip later, we were sitting together, still more exposed than I would have liked, but with at least a little privacy.

“Alright,” I said. “I’ll start with what you probably know. The single death was initially ruled an anomaly, supposedly an unforeseen interaction between the heavy wards down there, the area-of-effect entads, and her personal history. As of yesterday, they’ve revised that diagnosis to having been a variable time-delayed poison that didn’t come up on their, ah, post-mortem tests.” Aerb didn’t actually have toxicology screenings, which was where my mind had been going. “There are also the disappearances, some of which have now been ruled to be deaths using the same variable time-delay poison. Demographically, the disappearances are all over the place, one instructor, a handful of upperclassmen, and a handful of staff. They tend to be more important than not, but their actual role at S&S runs the gamut, so no help there. No obvious trends with regard to species.” We’d spent a good deal of time trying to solve those cases, and come up short, mostly because they were extremely cold.

“They’re pinning it on my ethics instructor,” I said. “I can’t tell whether or not that’s because it’s someone at the top wanting to find a scapegoat, or whether she really is involved somehow. It’s at least a tacit admission that something greater than a single death has been going on here. Beyond that, I’m pretty sure that the meditation class is compromised in some way, though how, exactly, is really unclear. I was planning to attend again.”

“Meditation class?” asked Oberlin.

“It’s extracurricular,” I replied. “Ermaretor asked that I attend, which means that she’s probably in on it.”

Oberlin swore and leaned back in his chair, crossing his four arms across his chest. “You’re going to have to pull at threads,” he said. “Sooner than later. If they’ve got a scapegoat, that might mean that they’re cleaning up after the fact. Anything else?”

“Very little that I could find,” I replied. “Given that they’re pinned on someone now, I would guess that the local police have information I don’t, even if it’s entirely fabricated, but that doesn’t help too much.” I paused, not sure how much to trust Oberlin. “In your time at Uniquities, did you ever encounter a flaming man who could be seen during meditation?”

“A very specific question,” he replied with a raised eyebrow. “Memetic?”

“I don’t know,” I replied. “I was hoping that you did.”

“Explain,” said Oberlin.

I told him, in brief, about the meditation class and what I’d experienced, leaving off most of the speculation that had come from Raven on the matter. As I was speaking, he closed his eyes, and when I was finished, he let out a long, low sigh.
“Fuck,” he said. “It’s Herald.”

“You’re familiar with this entity?” I asked. “It’s … a known quantity?”

“Yes and no,” replied Oberlin. “First contact was ninety years ago, a small cult outside Terrenar. They were trying to bring about the end of creation. Their emblem was a burning man.”

“Why were they trying to do that?” I asked.

Oberlin waved a hand. “Not important.”

“ Seems important,” I replied with a frown.

“You’re familiar with oblivion doctrine?” he asked. “It holds that oblivion is better than eternal torment in the hells?”

“Sure,” I said. That was pretty much standard around the Empire.

“There are people who take it a step too far,” said Oberlin. “They stare into the infernoscope and decide that it would be better if all creation were destroyed, rather than have the hells continue existing. They crop up at different times, with different names. The cult was one of those, and their method of choice was to try to bring forth the biggest, baddest thing they could find. There was never much risk of them actually succeeding, mind, but you don’t let babies play with guns, even if you know they’re not loaded. Satisfied?”

“Sure,” I said. “Just thought it might be relevant.”

“It’s not,” said Oberlin. “The second time we encountered the symbol of the man on fire, he was part of a demonic cult. They were out of Five Spires, urban, with a cluster of star mages creating a planar depression that facilitated possessions. Nothing world ending, we don’t think, though they were making an honest effort there at the end. There was discussion of the man on fire in their notebooks, and a handful of drawings. That time there were survivors we were able to talk to. They talked about him showing up in their dreams.”

“Okay,” I said. “So … how many examples are we dealing with?”

“I haven’t been with Uniquites for a while,” said Oberlin. “It was around twenty times, when I left. Always associated with something unsavory, never actually appears on the ground that we can tell. Likely geographically confined, but it’s hard to say how big the range is. We’d call it memetic, but it doesn’t seem to spread like that, and we’d call it some class of infohazard, but that’s not clear either. He shows up when bad things are going to happen, sometimes, not always.”

“He’s a leading indicator, not a trailing one?” I asked. “And the memory thing?”

“Leading indicator, sure,” replied Oberlin. “The memory thing … if this entity was responsible for altering memories or personalities, or if it does anything other than just showing up, then we don’t know about it. If it had an ability like that, it might explain how little information we have about it.”

“Crap,” I said. “So you’re saying that’s a dead end? And if this is a leading indicator, why isn’t it known, like … on the most wanted?”

“You think we should have plastered the empire with information about a suspected infohazard?” asked Oberlin with a raised eyebrow.

“I … no,” I said. “But if my group of very well informed people have never heard anything, that’s a
problem.”

“So far as Figaro Finch has told me, you’re operating well outside the law, even more than Uniquities normally does,” said Oberlin. “But at least we know it’s something. So far, the phenomena related to the man on fire have been dealt with, sometimes with casualties, sometimes with mass casualties, but always dealt with. If it’s part of the same pattern, then there are limits on how bad it can be.”

I had been trying my best to rein in Amaryllis’ obsession with narrative, instead electing to live my life on Aerb in the ways in which I would prefer to live it, narrative be damned. Tabletop games weren’t governed by narrative, at least not how I played them, they were governed by a DM adapting to the player’s choices, making things fun and engaging for them depending on what they decided to do. The Dungeon Master wasn’t all sunshine and rainbows, and clearly there were things that he had planned, but the seams were showing, and they reinforced my belief in how he was running the game. Narrative, schmarrative.

Still, hearing someone unironically say “How bad could it be?” had me wincing.

“I’m really worried that we’re not going to find anything until it blows up in our face,” I said. “It really seems like something is going on down in the temple, between the construction there and the disappearances. I’ve got one chance to go down there, three days from now, and going in blind seems like it’s not the greatest idea.”

“Steel yourself, because it might be necessary,” replied Oberlin.

“I’d like private training,” I said. “I know we talked about it before, but –”

“A suspected, if not completely confirmed soul mage wants me on his home turf, subjected to magics under his control,” said Oberlin. “I didn’t get where I did in life by taking that kind of risk.”

“Okay,” I said. “I had to try.” I wasn’t sure how much help Oberlin would actually be, given that I was at or near the cap for most of my skills. I still thought that there were techniques or ideas that he could add in somehow though, and some of the stuff he’d been talking about in class did seem helpful. “If I go down into the temple, which I’m still planning to, you’re on call.”

“You’re not allowed equipment or entads down there,” said Oberlin. “There are wards against skin magic. They take it very seriously. You won’t have a way to contact me.”

“I’ll try to figure something out,” I replied. “And if I’m alone … well, I might be able to handle myself, hopefully not against the unknown power of the Herald.”

“The … the name of the flaming man in armor is Harold?” I asked.

“Yes,” nodded Oberlin. “Uniquities used to use a naming scheme designed to reduce exposure to memetic and infohazardous effects.”

“And this threat is named Harold?” I asked.

Oberlin nodded, watching me.

“Okay,” I said. “Harold.”

“It’s better protocol than using whatever name an entity gives itself, trust me on that,” said Oberlin.
“Be careful.”

“I will,” I replied.

When I got to the meditation class, there was no one there, and not even a sign explaining where it had gone. I stayed there, thinking maybe I’d gotten the time wrong, until Sonee showed up.

“What’s up?” she asked, looking around the empty room.

“No idea,” I said. “Did I miss a memo?”

“If you did, then I missed it too,” she replied. She undid her hair tie and looked around the room as she redid it. “But I can’t see any reason that no one else would show up. This was supposed to be every day, right?”

“Supposed to be,” I said, frowning.

“Can I ask why you were here in the first place?” asked Sonee.

“Magus Ermaretor suggested that I might like it,” I said. “That’s pretty much it.”

“Ah,” she replied. “I’d wondered. Most of the people in class I could look at them and kind of get it. Some species are worse at certain kinds of thinking.”

“But … not rhannu, I didn’t think,” I said. (I kept thinking about how I would be able to get her alone for long enough. It was only slightly less creepy with context.)

“No,” replied Sonee. She finished with her bun. “I just thought that meditation might help me. I’m rod track, not temple track, and I’ve already got my bop on the head years ago. Well, years ago, and then years before that, and before that.”

“And you come here with each new life?” I asked.

“They’re not really new lives,” said Sonee. “I mean, that’s as close to the right language as Anglish has for it, but we usually talk about splits and treat it like one big continuous life, even though it’s not. It’s more like, I don’t know, you have half the memories of your mother, and a quarter of the memories of your grandmother, and an eighth and so on.” She looked me over for a moment, then looked around the room. “Weird that no one else is showing up,” she said. “I can understand the teacher being a no-show, but then where’s everyone else?” She turned back to me. “If we give this five more minutes and we’re still the only ones, do you want to go some place?”

This was either serendipitous, or I was being set up in some way.

“Sure,” I said. “Maybe go look for someone who knows what’s going on?”

“I was thinking coffee and baked goods, personally,” replied Sonee. “Wait, do humans like coffee or tea? Or something else?”

“Both,” I said. I laughed a little at that. “I’m still not used to people asking me what humans are like.”

“Oh?” asked Sonee. “Are you from a human ethnostate?”

“No,” I replied. “Just Anglecynn. Not Caledwich though, just a small town out in the middle of nowhere, with only a handful of other species.”
“And you’re liking the big city?” asked Sonee.

“Well enough,” I replied with a nod. I looked at the door. No one had come in. “Has that been five minutes?”

“Close enough for me,” Sonee said with a shrug.

We walked together and did some idle chattering, and I sent off a surreptitious message to Amaryllis to keep her in the loop. The fact that the meditation class had seemingly evaporated had me on edge, and I was trying to find some undercurrent to the things she said, or some indication that she was intentionally lying. We went to one of the eateries that were near Canis Hall, then found a small table together (buttered coffee for me, thistle tea for her).

“So, yeah, it’s about three years, on average, to get back to basics, not all that much different than a human going from infant to toddler,” Sonee was saying. “But we’re the same size, which can make it tough to handle us, especially if we’re missing something big. Like, Jiph got pretty much all the impulse control, and I got the biggest chunk of language, so after the split she was a calm, patient near-mute, and I was this wild motormouth.”

“What about meditating?” I asked.

“Kind of,” replied Sonee. “We -- rhannu -- we have our own ways of thinking about the split, you know? Like, there are things that are foundational, which maintain through the split, and there are things that you learned, which you don’t get. And I think our prime form, before the split, she was this woman who worked really hard at the impulse control thing, trying her best to rein in her appetites, to be in control of herself, or whatever. And so you might say that we had naturally bad impulse control, but a really highly learned management of it. And you might also say that Jiph got the management aspect, leaving me with nothing. But that’s the thing, because she’s the one that’s constantly upset with me, like I’m not the one that got the short end of the stick.”

“Sounds tough,” I said. “I have a dwarven friend, clonal, who had a pretty bad experience with his father, for what sound like similar reasons. The whole ‘why can’t you be like me’ part of it, anyway.”

“Oooo, interesting,” said Sonee, eyes lighting up. “An old dwarf friend from back in Anglecynn, or a new one from S&S?”

“Old one,” I said. “Agkrioglian, if that means anything to you.”

“Nope,” she replied. “I knew Groglir a few splits ago, but never really kept up with it. Not many dwarves around here, in case you hadn’t noticed, mostly because S&S doesn’t teach the kind of magic that’s too useful when you’re living underground. There’s a dwarfhold in Li’o, actually, but a lot of what they do is just help with the temple, I think, mining and building. I mean, it’s a whole city, so it does a lot of city things, probably, I’m just saying as it relates to S&S.”

“Sure,” I said.

“Juniper!” called a familiar voice from nearby.

I looked over and gave a wave to Valencia, who was grinning from ear to ear. She was wearing jeans and a t-shirt, not her usual fare, with a bookbag slung over one shoulder. Her contacts were in place, ensuring that her red eyes were purple. Bringing her out into the open like this was a risk, one that we were partly taking because no one liked the idea of her being cooped up in the house for two weeks. As soon as she’d shown up, I felt a bit better, because her social skills were amazing, but a
different tension took hold of me, as I worried that a passing warder with warder’s sight would see her, or some other invisible tell would mark her as non-anima. That was what contingencies were for, I supposed.

“Sonee, this is my friend Valencia,” I said, gesturing to her. “Valencia, this is Sonee.”

“Ah, but not your friend Sonee,” said Valencia, shaking Sonee’s hand. “Or does it just need more time?”

“Acquaintance Sonee’ sounded weird in my head,” I said.

“Do you mind if I sit?” asked Valencia, pointing to a chair and looking at Sonee. “It’s been a long day.”

“Of course,” nodded Sonee. “Are you two old friends or new?”

“New,” said Valencia. “We actually met on the train over, hence me ribbing him about us being friends.” She looked over at me. “Though I’ve always thought that when you come to new places you have to declare your friends early.”

Sonee nodded at that. If she was put off by Valencia’s joining us, she wasn’t showing it. “Which track are you on? Juniper mentioned that he was dual-tracked.”

“Juniper’s an overachiever,” said Valencia with a little laugh. “Or he will be, if he achieves the things he’s set out to do. Me, I’m planning to be a vibration mage: higher demand, and it pays better.”

“Tsk,” said Sonee. “Not in it for the love of the craft?”

“I have my crafts that I love,” said Valencia. “But unfortunately, the things you love aren’t always good career choices. If I had my way, I would be a dancer.”

“Oh, you could definitely make a career at that,” said Sonee. “But it’s one of those things where you’d run yourself ragged trying to be in the top one percent that actually get paid something, and you’d end up working jobs on the side, and it would be a mess. Trust me, I speak from experience.”

“You were a dancer?” asked Valencia, sitting back and widening her eyes.

“In a former life,” nodded Sonee. “Ribbon dancing, specifically, though I was never the best.”

“I love ribbon dancing,” said Valencia. “Can you still?”

“I’m rusty,” replied Sonee, looking a little abashed. “I’m rhannu, I don’t know if you know our species?”

Valencia shook her head, frowning, and Sonee glanced at me. “Well, we split off instead of doing the baby thing, and I was a dancer two splits ago, so I have a fourth of my skills, and the way I have them, it’s worse than being a novice. I’d pick it up again, but as I was saying, there are a lot of downsides to taking it as a career.”

“Well, I’d love to pick your brain sometime,” said Valencia. “Are you busy tonight? Juniper and I were going to have dinner back at our place.”

“You have a place together?” asked Sonee, looking between the two of us.

“Temporarily,” Valencia said. “We both suffered from a mix-up in getting campus housing, so we’re
in a little place. It’s a bad neighborhood, and it’s small, and I saw a mouse yesterday -- I’m really selling it, aren’t I? -- but it’s the first place on our own for either of us. And Juniper is an amazing cook.”

“I’m okay,” I said.

“Well,” said Sonee, swirling her tea. “In that case, I have one request. I’d like to do some meditation before we eat.”

Valencia grinned. “Sounds like a plan.”

Sonee took a single step into Bethel and collapsed, caught before she hit the floor by an invisible force. The room we came into was no longer the cozy chairs around the warm fireplace, but clearly student housing, bereft of much decoration, with hand-me-down couches, tables, and chairs, and a few boxes to suggest that we hadn’t yet finished unpacking. All for show, obviously.

“Not how I wanted to handle this,” I said with a sigh.

“Oh?” asked Bethel as she appeared beside me. “You said that you wanted to look at her soul.”

“I do,” I said. “But I was hoping that we could figure out a way of doing it without knocking her out. It was done safely?”

Bethel looked affronted and waved a hand to lift Sonee up off the floor and over to the couch. Somewhere in the vast house, a weight was falling down, with the momentum transferred perfectly to Sonee’s body in such a way to prevent damage.

“I blocked her carotid artery,” said Bethel. “It’s the fastest, easiest way to knock someone out. I’m doing bioregulation right now to keep her under. You’re welcome.”

“Thank you,” I said.

“She was compromised,” said Valencia, shrugging off her bookbag and walking over to stare at Sonee. “Not consciously though, at least that I could see. She wasn’t an actor playing a part, she was behaving within her own set parameters. The difference was that those parameters kept changing.”

“Changing?” I asked. “Meaning what, that she was a different person every few minutes?”

“I don’t know,” said Valencia. “It’s outside the realm of infernal experience. Whatever the explanation is, I think the closest analogy would be to soul magic. It was like something was clicking inside of her to change her internal states. The most obvious was when I first arrived. She was annoyed by my being there, because she was having fun flirting with you, and then there was a sudden, jarring change in her disposition.”

“That’s explainable,” I said. “I mean, maybe she just realized she was being -- wait, flirting?”

“Are you seriously going to second guess me when you couldn’t even see that she was interested?” asked Valencia. “Do you think that I don’t know the difference between a person realizing that she was being unreasonable, and a completely unexplained change in her outlook? It wasn’t a change of mind, it was something else, something changing her mind for her, with none of the internal signals of natural change visible to me.”

“That’s a big clue,” said Amaryllis, who had been shadowing us and had just stepped in. She took off her helmet and lifted her head slightly. “Bethel, can you help with this?”
Ten seconds passed, and the armor was removed all at once, vanished into the glove’s extradimensional compartment, leaving Amaryllis in a tank top and panties, a slight sheen of sweat on her. She looked down for a moment. “I was wearing pants,” she said, keeping her voice mild.

“Were you?” asked Bethel. “My mistake.” She smiled at Amaryllis and made no move to rectify the error.

Amaryllis sighed and pulled a blanket from off the back of the couch, wrapping it around her as a makeshift skirt. “If whatever force we’re dealing with can reach into her head and change memories, it might be able to accomplish the same thing to make changes to her disposition.”

“I was spending the walk back here exploring the phenomenon,” said Valencia. “It only happened a few times, but always consistent with getting us to engage in meditation with her.”

I hadn’t noticed any of that. “Well, okay,” I said. “If it can reach into her head and monkey around without her knowing, that’s … well, horrifying and bad for us, in that order, especially if it’s got eyes on her in some way. And depending on how many people it can do the same thing for, and which of those people it has, and how strong it is -- I’m stalling, it’s bad, that’s all, and it’s time for me to look into her soul.”

“Nothing with warder’s sight, incidentally,” said Bethel. “I’ll have Grakhuil consult when he gets here. He and Solace are current indisposed. Shall I call in the others as well?”

“Sure,” I said. “I’m hoping that I find something in her soul or spirit that won’t kill me outright. Hopefully we can find some kind of answer or antidote.” I sat down beside Sonee, placed my hand on her forearm, and felt the blood flowing beneath her skin, which I’d found to be the easiest entry point into a person’s soul.

The naked floating image of her body greeted me, which made the whole thing feel more exploitative than it already did, and I moved away to look at other things, starting with her values. There was nothing even remotely suspect there, just a list of names and concepts. Pleasure and Continuity were at the top of the list, nearly tied with one another, and just below those, Expression and Jiph. It all painted a picture, but it was none of my damned business, so I continued on, looking for something else.

Her relationships looked normal (and confirmed some attraction to me). Her skills looked normal (Vibrational Magic and Dancing being the highest, at 16 and 21, respectively). I felt more and more terrible the more I looked, because I really did think it was an invasion of privacy against someone who was, by all appearances, an unwitting puppet and innocent bystander. I was worried that I wasn’t going to be able to fix whatever was wrong with her, but I was also worried that even if we did fix her, she’d go home having a vague uneasiness about having fainted in the home of a stranger and lost time, during which gods-know-what had happened.

I found nothing out of the ordinary. Her family tree looked weird, but that was a result of being rhannu, not anything having to do with Harold. Other than the things I thought must have been related to her species, she seemed like a perfectly normal college student to me.

When I moved up to her spirit, I saw it, hundreds of bright orange lines looping and swirling, descending down from on high, where they gathered together in a thick bundle that faded out into nowhere. It was a representation of *something*, though it was impossible to say what. When I looked down at the places the orange threads were connected to the more normal parts of her spirit, I saw that the connections were perpendicular, which would indicate … well, I didn’t know. In the threading metaphor, it seemed like it might be process injection, or man-in-the-middle, or something like that, a way of capturing information from those threads and replacing it as need be, all in a way
that was beyond my current abilities with Spirit (and, frankly, my understanding of the spirit).

I had no idea what to do. I could strangle all of the bright orange threads, like I had strangled my own threads to deal with both the memes and the level up stuff, but if changes had been made to Sonee by someone or something at a remove, then all I would be doing would be making those changes permanent, if the counterforce couldn’t just revert what I had done.

“She’s infected,” I said, pulling out of her spirit and back into the real world. The room had filled with people while I was looking around; Raven, Pallida, Heshnel, Solace, and Grak had all joined. “Which means that it’s likely everyone in the meditation class is infected, and probably dozens if not hundreds of others. I can maybe lock her into the state she’s in now, but whatever changes have happened … I don’t know.”

“There’s another person who knows spirit?” asked Solace, frowning. She was standing close by Grak, and I brushed aside the thought that had been planted in my head when Bethel had said ‘indisposed’, because she still looked like she was five years old, and krin didn’t necessarily mean anything beyond cuddling.

“It wouldn’t have to be another person who knows spirit,” said Raven. “In the same way that phenomena affect the soul without being soul magic, there are phenomena that affect the spirit without being spiritual magic. As the only living practitioner of spirit that we know of, Juniper would be the only one capable of fixing it.”

“Oh,” I said. “I have other news. I spoke with Oberlin. Apparently the entity is known to them, though there’s not all that much that binds separate appearances, other than tangential connection to world-ending threats and altered states.”

“I’d have heard of it,” said Raven with a frown. “I know all the extant threats, at least those that have active history.”

“Not if it never actually ended the world,” I replied. “If Uniquities just quietly dealt with it, or the entity’s plans fell through for other reasons, it wouldn’t necessarily reach the Library’s attention. How common is book circumvention?”

“Meaning?” asked Raven, furrowing her eyebrows.

“Meaning … how common is it for organizations to bind their materials such that they don’t count as books and can’t be spied on by the Infinite Library?” I asked.

“Uncommon,” said Raven, frowning. “But not unknown. The Second Empire was a government of factions. There were those in the know about the Library who wanted to keep things from their nominal colleagues. Politics.”

“So this man on fire never showed up in a vision of the future and never needed to be stopped?” asked Pallida. “Wouldn’t that be a good thing for us? He’s so inept at ending the world that he was stopped by Uniquities?”

“His name is Harold, by the way,” I said.

“The herald of what?” asked Raven.

“No, Harold,” I said. “Like, just the name Harold. At least, that’s the name that Uniquities gave him. I’m partial to it.”

“Because it’s dumb?” asked Pallida.
“Yeah,” I nodded. “Easier to face.” I looked down at Sonee. “If I’m not going to try an intervention, which I don’t think I am because of the unknowns involved, then you should all clear out and we should wake her up. The less lost time, the better.”

“Could you tell whether Harold has eyes and ears here?” asked Amaryllis. I glanced down and realized that she was still wearing her blanket skirt, completely unselfconsciously.

“I couldn’t,” I said. “But what Valencia said about the way that Sonee’s mind changed implies that someone or something was changing it in response to stimulus, and there didn’t seem to be a mechanism for doing that internally. My guess is that the entity has at least some access, but I don’t know how complete it is.”

“We’ll assume that he does, then,” said Amaryllis.

“We still don’t have a plan,” said Raven.

“We don’t have a grasp on the threat,” said Grak. “There can be no plan without that.”

“Call in Uniquities,” said Valencia. “They have the expertise.”

“Except that I’m getting the feeling that we’re the feet on the ground for Uniquities,” I said. “Figaro Finch knew that something was going on here, and he set me up to deal with it. I’ll send him a letter, express, but if this extends to the ruling council of mages in Li’o, then I’m not sure what the Empire could actually do about it, legally speaking, since this is a sovereign city-state.”

“There are provisions in place for the event that a member polity is compromised in some way,” said Amaryllis. “That said, Article 86 has never been invoked, and invocation would almost certainly be catastrophic for imperial cohesion, though I don’t know whether it would cause disintegration, economic collapse, or outright civil war.”

“Meaning that any aid from Uniquities will be covert aid,” said Valencia.

“And from a narrative perspective, it seems unlikely that our role here is to call in the cavalry and then leave,” said Amaryllis.

“While I agree that the Dungeon Master probably has some bullshit planned,” I replied, “I’m not going to throw up my hands and just say that it’s probably pointless to do the smart thing.”

“That wasn’t what I was saying,” replied Amaryllis. “I can be the one to draft the letter, if you’d like.”

“Good, thank you,” I replied. “And as I was saying, we should probably wake Sonee up and then escort her home, to minimize how much the adversary knows, and minimize what trauma this is causing her.”

“She’s perfectly safe,” said Bethel.

“I meant more on the mental end of things,” I said. “It’s a violation.”

Bethel frowned at that. <Are you pressing my buttons?> she asked.

<No,> I said. <I’m expressing my reservations at this whole thing, that’s all. If you see some parallels to what was done to you, maybe that’s something that you should think more deeply about.>

<Watch your tongue,> replied Bethel.
“Alright, let’s clear out,” said Amaryllis. “Val, you’re good to go back out? No troubles?”

“None,” replied Valencia with a sigh. “It was so wonderful to see the city and the school. Someday.” She didn’t finish the thought or say what she hoped would happen someday. Maybe she was just hoping that she wouldn’t have to worry so much that someone’s magic would tag her as a threat.

Everyone left, leaving me and Valencia alone with Sonee.

“She’s been out for twenty minutes, but we’ll say less,” Valencia said to me. “She doesn’t have a watch and there isn’t one in the room, and if it’s too much time, which it frankly was, then it raises questions about why we didn’t go for help or do something about the fact that she mysteriously passed out.”

“She’s still going to want us to meditate though, right?” I asked.

“We can fake that, if we have to,” replied Valencia. “Harold would know, but there’s not much that can be done about that.”

“Sure,” I said. I looked over to Bethel. “Now, please.”

It took Sonee some time to wake up. She stirred slowly, then blinked a few times, glazed-over eyes looking around the room.

“Oh, thank the gods you’re awake,” said Valencia, kneeling down beside Sonee and looking every inch the concerned host. There were traces of panic in the way that she looked Sonee over.

“Wha’ happened?” she asked. She sat up in the couch and stretched out.

“We don’t know,” said Valencia. She ran her fingers through her hair. “You were walking in and just collapsed. Joon caught you before you fell, but I was so worried, is this like a medical thing? Or something to do with rhannu?”

“I don’t think it’s a rhannu thing,” I said.

“No,” said Sonee. She rubbed her head. “I feel fine. Maybe a little groggy. How long was I out?”

“Ten minutes,” said Valencia.

“Val’s been freaking out,” I said. “We checked your pulse, and everything was fine, you were still breathing. You should probably go see a doctor though. I was looking for some smelling salts. My mom packed me a first aid kit, but I couldn’t find it, sorry.”

“It’s okay,” replied Sonee. “I feel completely fine. Better than fine, actually, maybe I just needed a nap.” She laughed a little at that, then looked at our concerned faces. “Really, I am fine.”

“We’re taking you home,” said Valencia, voice firm. “We would have called an ambulance, but we don’t have phone service hooked up yet, and it’s kind of not that great a neighborhood, so I didn’t want to go knocking on any doors, and --”

“It’s fine,” said Sonee. “Really, it is. Thanks for looking after me. I could stay, if --”

“No,” said Valencia. “No, we’re going to get you home, no more walking either, we’ll figure out a way to get a cab here, then send you home. Juniper can pay for it, and he’ll go with you.”

“Are you sure?” asked Sonee, looking at me.
“I have money,” I said. “You wouldn’t think it to look at this place, but yes, it’s no trouble, and after that scare, we want to get you home safe and sound.”

Sonee let out a breath. “Okay,” she said. “Walk me to the corner and we can hail a cab. I feel fine, but if I fall, I want you to be there to catch me.”

We went out together, the three of us, and eventually found a cab on next street over. I thought that the chivalrous thing to do would be to go with her, then walk back home, but I wanted to put distance between us, given what I had seen in her spirit and how little I really knew about it.

“I think that went well,” said Valencia as we watched the cab leave. “She began to shift toward leaving, rather than shifting toward capturing us.”

“But … why?” I asked. “The entity was cutting its losses?”

“I don’t know,” said Valencia. “I’m having a hard time modeling Harold. The infernals I’ve plucked have no useful information on the subject, and without knowing the general class of entity it is, their expertise is useless, not that they’re particularly strong with creatures who aren’t of the mortal species.”

“Are you doing okay?” I asked. “Sometimes when you don’t talk like yourself, I wonder if you’re okay.”

“I’m fine,” said Valencia. She closed her eyes. “There, danger has passed, devil is gone. Let’s head back and speak to the others.”

“We’re going to have to talk about whether or not I’m going down into the temple, if things remain the same,” I said. “If we can’t make headway, if we don’t know what we’re working against … either the temple is the key to it all, or it’s the key to me gaining power, but either way I’ll probably want to be down there.”

Bethel watched.

The bottle remained opaque to her. It wasn’t the entad itself, nor the huge and impressive wards that had been anchored to the inside of it with the entity Thargox’s help. No, it was the locus, which was doing something to stop her sensorium. The block was baffling, and seemed as though it was never the same twice. It took all of Bethel’s restraint not to see this as an act of war that would require retaliation. Thankfully, no one had asked her whether she could see into the bottle, nor had they requested her assistance going into or out of the bottle, which meant that she could let this stand and still keep face, rather than make a big deal about it. The locus shouldn’t have been able to block her. It shouldn’t even have known what it was blocking. But then again, it was a locus, and they were known for very casually not making much sense. The bottle, at least, was Grak, Solace, and Juniper accounted for, though it was well possible that Solace could use the magic of the locus to leave the bottle undetected. The only method of tracking that Bethel had any luck with was the entads, which still provided her their powers, even if she couldn’t sense them through other means.

The tuung were studying under the tutelage of the teachers that Amaryllis had hired. It was daytime, so far as that wing was concerned. Everyone there was ignorant of what was going on outside the wing, to the extent that they had no idea they were even in Li’o. So far as the teachers knew, they were still on the Isle of Poran, undergoing compressed time. Bethel had agreed to wait on putting everyone in that wing under the effects of the chamber, so that they could essentially be stored without much worry or need for interventions. She’d been mildly surprised that the whole enterprise hadn’t collapsed in the first fortnight, but the tuung children were coming along nicely, with
relatively few problems. Whether they would be the dedicated workforce that Amaryllis wanted … well, they had been in the future as portrayed by *A Cypress Waits*, which was something.

Most of the rest of Bethel’s inhabitants were asleep, with two exceptions.

Raven never slept. Because she didn’t sleep, she didn’t dream, which produced another blind spot for Bethel, though not a serious one. Raven was reading, as she often did when she was alone, with cats blinking in and out of existence thanks to that unruly part of Bethel. Her subject of choice this time was Uther Penndraig, as it had been the last few nights, and her reading was as seemingly disorganized as it had been then, a few paragraphs from one book, then a few paragraphs from another, without much rhyme or reason. Bethel had read over Raven’s shoulder for a bit, but it was boring, because the really interesting things must have been going on exclusively in Raven’s head. So far as Bethel could determine, Raven was trying to reconcile her image of Uther with the one that was being revealed to her, but it was hard to say which direction her thoughts were going. Seeing her dreams would have been helpful.

The other exception was Amaryllis, who lay awake in her room, staring at the ceiling. Bethel had added some flourishes to the ceiling, little stars made from moulded glass, which would cast off light from a fireplace. There was no fire going in Amaryllis’ room at the moment, so the stars were nearly invisible, but it was easy enough for Bethel to pretend that her work was being appreciated.

<Why did you take my pants?> asked Amaryllis.

<Is that what you’re thinking of, little one?> asked Bethel. <All the day’s events and your brief moment of near-nudity is what occupies you?>

<I’m trying to understand you,> said Amaryllis.

<I thought it would be amusing,> replied Bethel. <It’s my understanding that Fenn did something similar? You still wear that ‘Princess!’ shirt.> It was sitting in Sable’s storage, which Bethel could access, more faded than it had been when Bethel had first seen it.

<It’s not the same,> said Amaryllis. She sounded melancholy. <Did you do it because of Juniper?>

Bethel considered not responding. Sometimes she did that, when conversations bored her, or when she didn’t like the direction that they were going. It was so easy to stop talking to someone, and left them with so little recourse, so little understanding of what she was thinking, and that could be entertaining in its own right. Amaryllis was too patient though, too unflappable, and there was little to be gained from subjecting her to silence.

<I enjoy seeing his reactions,> replied Bethel. <Like an insect, trapped in a bottle, prodded with a stick.>

<What a performative answer,> replied Amaryllis. <You like him.>

The real problem, so far as Bethel was concerned, was that Raven was the only one in the house who was exhibiting proper fear. Oh, certainly Bethel would rather be loved than feared, but fear came easily, and love did not. There had been a time when Amaryllis felt fear, even if she was good at hiding the outward signs, but perhaps because she had seen that it had worked for Juniper, she was becoming more and more flippant, more casual in her disregard.

<I like him,> said Bethel. <You, I could do without.> She wasn’t entirely sure that was true. With Amaryllis gone, the tuung could be flushed out in the wilderness somewhere, but the group would be left lurching, and it wasn’t clear what Juniper would do. He would survive, and he would still need a
house … but maybe it would feel a little less like a home.

<And was his reaction to your liking?> asked Amaryllis.

<Very much so,> replied Bethel. <Did you know he refused me?>

<Refused you?> asked Amaryllis. Her heart began to beat faster, and she did the same trick that Juniper sometimes used, stilling the motion of her blood with blood magic. There was no point to it; it would have been obvious just from watching the flow of their blood, even if Bethel didn’t have a warder’s sight to look at the magic of the blood in active use.

“Do you mind if I sit?” asked Bethel as she created an image of a woman next to Amaryllis. She relished the way that Amaryllis flinched at the sudden presence, but of course being startled was fleeting, and Amaryllis handled it with her usual aplomb.

“Not at all,” said Amaryllis, sitting up in her bed and looking over the form that Bethel had chosen.

Bethel was projecting her default, changed in a few ways to suit the circumstances. She’d chosen a height similar to Amaryllis, and a build similar too, with clothes the same as what Amaryllis was wearing, a tanktop and underwear, hopefully just similar enough to be unsettling. Bethel kept her usual face though, with cedar skin and ropey hair, though there were tweaks there too. It was just enough to remind Amaryllis that Bethel was perfectly -- perfectly -- capable of making a duplicate.

“So?” asked Amaryllis, after a moment of silence.

“So what?” asked Bethel. She was paying attention to the illusion, the breathing that she had to mimic, the slight movements of the eyes, minor shifts in position, all so it would look just right. She exerted force onto the sheets she was projecting the illusion above, to keep them pressed down as though someone were sitting on them. Elsewhere within her, a weight on a chain was steadily dropping, deprived of its momentum to transfer more than the simple five pounds of force.

“He refused you,” said Amaryllis. “What was the offer? And what context?”

Bethel altered the illusion, so that it was examining its perfect nails. Amaryllis was on edge, and it felt good to let her sweat. “He’s been experiencing some sexual frustration,” said Bethel. She looked up at Amaryllis. “Well, you can understand, can’t you? It’s been some time since Fenn’s unfortunate passing, and men have their needs. His appetites have been returning to him. You’ve noticed that he’s eating his fill again, haven’t you? Taking better care of himself?”

“What did you do?” asked Amaryllis.

Bethel projected a laugh. “Nothing,” she said. “I asked him whether or not he would like me to sate him.”

“As me,” said Amaryllis.

“How utterly narcissistic of you,” replied Bethel. “I went as myself. And as I’ve said, he declined me, very sweetly.”

Amaryllis shook her head. “Why are you telling me this?” she asked.

“For the fun of it, I suppose,” said Bethel. “I’ve grown fond of him, I think, and I would like to see him happy.”

“This is all in pursuit of that?” asked Amaryllis. “How does it help to make him happy to see me
“Debased?” laughed Bethel.

“The removal of my clothes,” said Amaryllis.

“He’s seen you naked,” said Bethel. “He saw you give birth.” *Humans.*

“It was a deprivation of autonomy,” said Amaryllis. “Whether he enjoyed it or not, and I suspect that he didn’t, or if he did, it was with an appropriate amount of guilt -- that’s immaterial, because you were taking a choice away from me, humiliating me, because hurting me like that brought you enjoyment.”

Bethel sat back. She could kill Amaryllis so easily. There might legitimately be half a hundred ways to end the small human’s life. It would depend on how you counted, but there were at least six methods involving wards, ten or so involving five pounds of force applied to her in various ways (easy enough to pad out the list with more there, if need be), innumerable poisons from either Earth or the Everflask or her miasma, space warping, time warping, suffocation, drowning, or any number of items pulled from Sable’s space. She would spend some time, later, making a complete list, a full book that she could give to someone who had drawn her ire, just to let them know.

“Do you not find it fun to hurt people?” asked Bethel.

Amaryllis softened slightly, her hackles lowering. “I have,” she said. “It’s not part of my temperament, but … when we had to use the crown, we each had afflictions. Mine was aggression, or something similar, and the idea that anyone lives their whole life like that, a ball of anger, taking so much pleasure from even the thought of hurting someone, I had some cause to re-evaluate what I believe about people.” She sighed. “I attacked Juniper. At the time, it felt so good, so justified, and he had agreed to it, I had consent, and he could heal without spending any of our resources, but now, looking back, I have to think of it as the actions of another person.”

“Amaryllis Penndraig, not being able to imagine hurting someone?” asked Bethel.

“I didn’t have a reason,” said Amaryllis, casting a dark look at Bethel. “I’ve killed people, but it came with a sense of duty, or the satisfaction of a job well done, or a battle finished, a war won. With Juniper, I didn’t hurt him because there was a purpose to it, I just wanted to hurt someone, and he was there to be hurt. When you ask me whether I’ve ever found it fun to hurt people, that’s what I think about, that moment. And if that’s how you feel toward me, toward any of us, then I don’t know what there is to do. If it were something else, I could reason with you, I could try to be your friend, I could show you love and affection, see your good points, like he does, but if you want to hurt me in the ways that you’ve been doing it, the jump scares and invasions, then I just don’t know how we’re ever going to reconcile any of it.”

Bethel focused her sensorium on Amaryllis, looking her over with all her manifold senses.

“Perhaps we won’t,” said Bethel. “Perhaps this will be how things are, until the end of your life, however near or far that might be.”

Amaryllis drew her legs to her chest and hugged her knees, one of the positions that humans took when they were feeling hopeless. Bethel felt a small twinge of sympathy, though she also assumed that Amaryllis was carrying on with some plot, rather than actually feeling downtrodden. Bethel was very good at telling when people were lying, simply by tracking their vitals in real time, but it was an imperfect art. Perhaps this was a false negative.
“I’d like to be left alone,” said Amaryllis.

“Well,” said Bethel. “I would like to stay.”

Amaryllis nodded slightly, then crawled across the bed and got under the covers.

“I’m sorry,” said Bethel. That was her second apology in as many weeks, not a habit that she wanted to get into.

Amaryllis let out a breath. “It’s not enough to mean it,” she said.

“It’s not?” asked Bethel. She forced her illusion into a confused frown.

“When I have disagreements with Juniper, it’s often like he knows exactly what a good person would do, and he simply fails to do it,” said Amaryllis. “Sometimes he comes to the realization later, sometimes it’s in the moment, but it’s inconsistent, and -- it’s not enough to say sorry, and it’s not enough to mean it, you have to stop doing the thing that you’re apologizing for. You have to figure yourself out, and then you need to change whatever is causing the problem. Juniper says that he made a mistake, that he should have come with us, that he should have owned his past. If he does eventually go to Sporsan and resolves that quest, fine, but it doesn’t mean that we’re not going to run into the exact same problem again down the line.”

“It’s so hard to trust a Penndraig,” said Bethel. “Especially you, manipulative little girl. You say these things, and I’m left to wonder whether this is an honest outpouring of emotion and thought, whether these are lies you wish me to propagate to others, or whether you mean to manipulate me with your weakness and struggles.”

Amaryllis closed her eyes and laid her bed, staying still for so long that Bethel might have thought she’d simply gone to sleep, save for the fact that her heart rate hadn’t slowed.

“Narratively, this is all pointless,” said Amaryllis. “I can’t change your mind. I can’t help you to change and grow. This is all to stage left while Juniper talks to the locus, or plays Ranks with Grak. Or maybe this is the intermission, with the curtains drawn, while Juniper sleeps.”

“You don’t really see the world that way,” said Bethel.

“No,” said Amaryllis. “No, I don’t, but when I run straight into metaphorical walls, or come up against intractable problems like this, a part of me just thinks, oh, well, he’s the protagonist, maybe the Dungeon Master set this up for him, maybe nothing that I do will actually matter unless it’s done where it furthers his plot.”

“Would it cheer you up if I told you that you had helped to make a marginal change in my way of thinking?” asked Bethel.

Amaryllis opened her eyes, then sat up so she could look at the illusion in the gloom. Eye contact was important for most of the mortal species, as was a sense of presence. It was so handy to have a notional body when speaking with them.

“Is that true?” asked Amaryllis.

“It’s hard to tell,” said Bethel. “Juniper has said to me that he hardly ever knows why he does the things that he does, and any examination of his actions after the fact will always reek of bias and revised history. I don’t think that I’m so different from him in that regard.”

“Well, at any rate, thank you for trying to cheer me up,” said Amaryllis.
“It was only a hypothetical,” sniffed Bethel, but she altered the illusion to convey that it wasn’t merely that, and in return, Amaryllis gave the illusion a small, gratified smile. “You should rest. There are games afoot, and enemies in the shadows.”

“As always,” said Amaryllis.

Bethel added to the illusion, billowing smoke from it, and deconstructed the whole thing in an artful way that she was sure wouldn’t be wholly appreciated for its complexity and nuance. But she stayed, for a time, and kept her attention on Amaryllis, until the little Penndraig was finally asleep.

And then, of course, it was time to spy on her dreams.
There was a hiccup in the Demon-Blooded Festival, right at the last second: apparently the prisoner that they were going to execute escaped from custody shortly after what I can only assume was an absolute farce of a trial. The committee decided to instead use an entad, helpfully donated by Oberlin, but everyone was well aware that it was an effigy, and no one was really happy with the outcome.

“But … we had nothing to do with it,” said Amaryllis, when we heard the news.

“Maybe she had a plan, and that was why she refused our help,” I said. “Or maybe it was some other group that wasn’t going to take no for an answer like we were. At any rate, I’m glad that she got out.”

Amaryllis fidgeted.

“She’s thinking about narrative implications,” said Valencia.

“No,” said Valencia, looking quite proud. “That was all me.”

“It was fairly obvious,” replied Pallida.

“It’s just,” began Amaryllis. “How does it fit in with everything else? She’s a loose thread now, until she shows up again, but then what’s the resolution?”

“Can we just carry on without worrying about how it all fits together?” asked Pallida. “It’s so exhausting, trying to put everything into that frame.” She looked to me. “Juniper, you said that you dropped threads all the time in your campaigns.”

“I did,” I replied. “Sometimes I just forgot, which I don’t think can happen in this case … unless things are a lot less steady than they seem. I suppose if the Dungeon Master controls everything, maybe he could forget, it would just run its course because it was no longer under his supervision.” I paused to think about that. In the simulation framework, the Dungeon Master couldn’t forget, but I had to remind myself that Aerb-as-simulation was only a dominant theory, not something that I could accept as material fact. Maybe the Dungeon Master could forget, and if it did, then things would continue on apace without whatever had escaped his notice. “Other times, it was clear that the players didn’t have any interest, so I would slowly and quietly write the plot thread out and hope that the thing they weren’t having fun with would be forgotten by them, if not by me. And hells, sometimes the dice just didn’t end up agreeing with me, and a plot thread would die in its crib. No plan survives contact with the players.”

Amaryllis folded her arms.

“Yes?” I asked.

“I just want to make sense of it,” said Amaryllis. “I want to see how it fits in the puzzle.”

“I don’t actually know that there is a puzzle,” I said. “And I’ve said as much many, many times. This could actually be two or three completely unrelated things. Maybe Harold is just the big one, and the other ones are side quests, or they’re meant to point at Harold, but,” I shrugged. “The meta-analysis doesn’t seem like it’s bearing fruit, so why don’t we go focus on the non-meta analysis? Namely,
what I’m going to do about the fact that classes are over, and I’m expected to go down into the temple, alone, with practically all of my neat toys taken away from me?”

“You’re going to have to go down there on your own,” said Raven.

“On what grounds?” asked Amaryllis. “We could walk away.”

“On the grounds that Uther was forced to go alone more times than I could count,” said Raven.

“More meta-analysis,” I said, shaking my head. “On the concrete, object level, should I or should I not go down into the temple in order to unlock still and vibrational magic?”

“You should,” said Grak. “The risk is that you will be alone among bad actors. There is no evidence to suggest that they will attack you down there.”

“There’s some evidence,” said Amaryllis. “A single, mysterious death, likely connected to a cover-up from on high, a handful of disappearances, and a collection of entads to aid in meditation, during a ritual that’s centered around meditation, when the entity in question appears to have some access to people in altered states.”

“Juniper has seen Harold before,” said Grak. “If it happens in the temple, he can stop meditating.”

“I can probably stop,” I said. “Unfortunately, we don’t have any information on what specific entads are in use down there, nor do we know how they interact with Harold.”

“About that,” coughed Pallida. “I might have obtained both a detailed schematic of the temple and a list of entads used there.”

“Stole?” I asked.

“Such a strong word,” said Pallida. “I would prefer to say that I acquired them, and I would rather that no one asked me the specifics of how that was done.”

“It’s important to know provenance,” said Raven.

“Fine,” said Pallida, pouting at losing a bit of her mystique. “Then yes, stolen from inside the offices of the dwarven construction crew that was being brought in for the underground expansion. The entad list was apparently something their magic specialists demanded, since some of them have significant range. Bethel?”

“Here,” said Bethel, placing papers in front of us.

I looked over the list, curious what would be there. The map was easy enough; it showed the temple itself, the barracks next to it that housed the staff during their shifts, the adjoining rooms, the Spelunker’s Stroll that students went down for initiation, and the far more practical elevator that was used for the transport of both staff and the newly-minted mages. Beside the temple was the room that contained the Rod of Whispers, and all the floorspace necessary for supporting the safe and efficient initiation of new vibration mages. It was all fairly simple; the list of entads was much more interesting.

There was a spoon that took care of food for everyone in the temple, its effect extending out to cover the entire underground complex. There was a cup that had to be tipped upside down every four hours to keep everyone hydrated, which was done by an attendant in a room beside the temple. For sleep, there was an orb that kept everyone wide awake, though after they left its effects, they would need to pay back an extra hour of sleep every night for each hour they were under the effect
(approximating to half a year of extra sleeping after initiation, something that I’d been warned about by S&S). An entad censer kept the air pure and clean, despite how cramped the temple was and how many people were breathing, and an entad chest handled waste elimination. An entad sand timer took care of bed sores. Lastly, there was a small entad fountain whose water helped to calm, center, and open the mind; the magical waters it produced were converted into vapor and circulated through the room.

“So it’s only this last one that we need to worry about,” I said. “And it sounds like the kind of thing that might just be assisting Harold in, I don’t know, doing whatever it is he’s doing to these people. But that doesn’t mean that it’s a direct risk to me.”

“Except for the risk of being surrounded by hundreds of converts who know that you’re opposed to them and not converted, without your weapons, tools, or most importantly, backup,” said Amaryllis.

“It is my understanding that initiates are hot-swapped,” said Grak. “There would be converted and unconverted in the same room.”

“They might still go for him,” said Amaryllis, crossing her arms. “It wouldn’t be hard to separate him from the herd and take him to a back room where they could put a void gun against his head.”

“He would kill them all,” replied Raven. “I say that on the basis of having seen him fight.”

“Against a still mage?” asked Amaryllis with a raised eyebrow. “Against unknown entads, magics, wards?”

“Yes,” nodded Raven.

“I’ll implant some unicorn bones beneath my skin,” I said. “They don’t help against an instantly decapitating strike, but if I get into the thick of it, they should help me survive, in the event I’m outside of a ward against active bone magic.”

“Which there will almost certainly be,” said Grak. “I would assume they are following perfection protocols.”

(‘Perfection’ was a loaded term for a warder, when it came to security, because spaces needed to be usable. The perfection suite was a set of wards that would guard a place against every conceivable form of attack, and in practice it was never used, mostly because it was expensive and impractical. Still, there were ‘theoretically optimal for these circumstances’ wards, which shared a lot of similarities with the theoretically optimal solutions that you could arrive at in a game of Ranks.)

Amaryllis rubbed her forehead. “This is above our pay grade.”

“No response from Finch,” I said with a shrug. “He should be back on the Isle of Poran, if we wanted to go visit him. He’s almost certainly gotten our letter by now.”

“He should have got it days ago,” said Amaryllis with a frown.

“I mean, I can opt out, if you really think that’s wise, but the whole point of us even coming here was so that I could unlock those two magics, and if we need to resolve all this other flaming garbage first, I don’t see how we’re going to do that from where we’re sitting,” I said. I breathed out, letting some of my frustration show.

“I’m just worried about you,” said Amaryllis. “It bothers me to have you so far away with no possibility that I can reach you.”
“I can tunnel through rock,” said Bethel. “It’s courtesy of an entad I was merged with for moving around the Boundless Pit. If needed, I can move all of us close to the temple.”

Amaryllis looked at her. “You would do that?”

“I would,” replied Bethel. “It isn’t particularly house-like, but if needs must.”

“Thank you,” I said. “That should alleviate all concerns?”

“Most of them,” nodded Amaryllis.

“There are underground structures,” said Grak. “We will have much to avoid, moving adjacent to the temple. There is also some risk of detection.”

“Doable, given how small I can get,” said Bethel with a nod. “In theory, I might be able to extend myself to encompass the entirety of the temple, as well as the room which contains the Rod of Whispers, which would save us quite a bit of headache.”

“Do you think it’s doable?” I asked.

“Full entad wards,” said Grak. “They’re ruinously expensive. I would expect the livelihood of the athenaeum to be protected with them, though.”

“Possibly,” said Bethel. “The schematics don’t mention wards.”

“Good security,” said Grak with a slight nod. “Entads need disclosure more than wards.”

“Could the two of you power past them?” I asked.

“No,” said Grak. “It would be possible to bend them, if they are poorly constructed. I would be surprised if they were.”

“Better,” said Bethel. “So long as Pallida is here with that armor, I can become wardproof.”

“No,” said Grak, shaking his head. “Full entad wards would counter a wardproof entad.”

Bethel frowned at him. “Really? That makes no sense.”

“I can explain the arcana later if you do not believe me,” said Grak, face impassive.

“He’s right, for what it’s worth,” said Pallida. “I’ve run into that problem once or twice, had to hire a warder good enough to poke an exception into the ward.”

“Either way, good enough,” I said. “And if I need to contact you, then I can contact Bethel through the soul link, which, in theory, can’t be warded against. That should be good enough, shouldn’t it? Plus I think, with enough time, we might be able to prepare a few other tricks.”

There was some broad agreement among the assembled.

Amaryllis frowned, but said nothing.

“Alright,” said Lisi, staring me down like I was going to run. “The Claret Spear is simple in theory and difficult in execution. Before we start, I need to know that we have magical healing on hand, and that you’re capable of blood hardening and blood bypass.”
“Magical healing we have plenty of, but the blood stuff, I don’t know what those are,” I said.

“But you might still be able to do them?” asked Lisi.

“Maybe,” I said.

She folded her arms and frowned, then glanced over at Reimer, who was sitting with Amaryllis to one side of the dojo. “It’s technically a violation of my agreement with Quills and Blood to teach you blood magic. I could be killed for the transgression.”

“You already agreed,” I said. “Besides, teaching me the Claret Spear in the space of an afternoon should be impossible, so you’re probably in the clear.”

“You said you have a time chamber,” said Lisi. “That would be one possible mechanism, and more likely than the apparent truth, so far as a disciplinary tribunal would be concerned.”

“I know,” I said. “But you already agreed, and I might need the Claret Spear soon.”

Lisi glared at me, then gave a fractional nod. “Blood bypass means altering the flow of blood such that it doesn’t exit the body from a wound, or, more difficult, altering the flow of blood to prevent internal bleeding. Can you do that?”

“Oh,” I said. “Yeah, that’s easy.”

“Good,” she nodded. “Blood hardening is altering the blood and harnessing its force in order to prevent injuries. Can you do that?”

“Uh,” I said. “I haven’t, but probably?”

“Amaryllis!” called Lisi.

Amaryllis got up from where she was observing and walked over. “Yes?” she asked.

“You didn’t teach him blood hardening?” asked Lisi.

“It wasn’t covered in my studies,” Amaryllis huffed. “I was focused primarily on the topics that would make me a better administrator. Is that all?”

“How far did you get in blood magic?” asked Lisi.

“I could perform Aarde’s Touch and the Crimson Fist,” said Amaryllis. “I’ll also note that Rosemallow cut my education short so that I could get more hands-on experience in Anglecynn.”

“Hrm,” said Lisi. “That’s all.”

Amaryllis didn’t quite stomp back over to Reimer, but it was clear that she was restraining herself.

“Blood hardening is a necessary prerequisite to the Claret Spear,” said Lisi. “Do you have a stick that I could hit you with?” A stick materialized out of thin air, landing right beside her. “Oh.” She looked up slightly, at the place in the air where the stick had dropped from. “Thank you.”

“I’m pretty sure I can do it,” I said. “I have 30 in Blood Magic, and even if you’re a savant, you should have less than that.”

“Then let’s prove it,” said Lisi, picking up the stick.
“Not sure why you need a stick for this,” I said, getting to my feet.

“Economy of motion,” said Lisi. “I don’t want to get tired. Now, when I hit you, I want you to use your blood for a counterforce. It’s likely and expected that the skin might break. Ready?”

“Sure,” I said. The ‘stick’ was more of a quarterstaff than a proper stick. I wasn’t particularly worried though. Unfortunately, I had forgotten two things. First, Lisi wasn’t the kind of person to pull her punches, and second, she was a trained blood mage with all the force of her blood behind her strike.

She hit me across the chest, and I nearly fell over, because it hurt worse than anything had hurt me in the past two weeks, the kind of pain that didn’t really compare to, say, having my hand sliced off, or literally dying to Raven, but also wasn’t something that I could get used to.

Spell discovered: Blood Hardening!

**Blood Hardening:** Channels the force of your blood to minimize damage from attacks. Bludgeoning attacks are reduced by three orders of magnitude. Piercing and slashing attacks are reduced by one order of magnitude. Only applies to parts of your body that have sufficient blood flow. Consumes 5 drops of blood.

I had to close my eyes to see the spell description, and when I opened them, Lisi was watching me.

“Well?” she asked.

“I guess I didn’t know it until just now,” I said. “Can we move on?”

Lisi frowned. “I’m going to hit you again, to make sure you have it.”

“No,” I said. “I have it.” She didn’t put down the stick. “Lisi, you can try to hit me, but you’re not going to land the hit, because I’m bigger, stronger, faster, and more skilled than you are. I know you like violence, but this isn’t the time.” It was the place though, realistically speaking; Bethel’s sparring room was state-of-the-art. “If you want to spar later, I’m sure that either Valencia or Amaryllis would love to take you up on it, though I have to warn you that you’re not going to beat either of them if they’re trying their hardest.”

“Fine,” said Lisi, dropping the staff. She pulled a small dagger from within her dress. “The Claret Spear is a delicate weapon, one shaped by both your raw will and the paths of your blood as it flows along.” She moved the dagger across her wrist, making a bloodless cut. “A true blood magus would be able to draw blood from their body without any actual wound, but I’m not at that point yet. The first step is blood bypass, to ensure that you don’t bleed to death, and after that, it’s a matter of visualizing the pathways in order to get the blood to take shape. A blood spear is a frozen-in-motion point, with concentration put toward the very tip, which does the bulk of the damage.”

Blood shot from her wrist, faster than should have been possible from blood pressure alone, and froze in place in midair as she concentrated on it. With each additional spurt, the spear began to take shape, until there was what looked like a pint of blood, suspended by nothing and gripped in her hand. She took a steadying breath.

“There are four difficult aspects to the technique,” said Lisi. “The first is operating while light on blood, though there are techniques to increase the blood volume of the body and magically compress blood to have a greater natural store. The second is that concentration must be maintained on the Claret Spear at all times, even in the heat of combat. The third is that the spear must be retracted back into the body, unless you want to spend an enormous quantity of blood with every use, and the blood outside the body will have contact with foreign particulates, air, and germs, which means techniques...
have to first be mastered to purify blood, either inside the body or outside it. Fourth, you have to
come to the counter-intuitive understanding that the spear is maintained in its shape by pure will, and
does not obey the laws of physics as such.”

She moved her hand in a slicing motion, and the spear stayed in its position relative to her hand, not
curving through the air like I had expected it to.

“Why a haft?” I asked, pointing down at the rod of blood.

“It’s defensive,” replied Lisi. “As with a mundane spear. Do you understand what I mean about
physics?”

“Meaning, if you swing the spear, then the tip doesn’t necessarily change position, because in a
spear, it would be a result of the tip being connected to the shaft, and here, it’s all just your control,” I
said. “So if you want the tip to move, you can’t take advantage of rotation differentials or whatever,
because making the spear do that would just be using more of your concentration or will or
whatever.”

“Yes,” replied Lisi. She retracted the spear back into her body, then tossed her dagger to me,
seeming unconcerned about whether I would cut myself on it. I didn’t, because I had the reflexes of a
cat, but still. “You try.”

I swapped the dagger to my left hand, then stared down at my wrist for a moment before making the
incision. I had practiced dealing with wounds before, and took a moment to make sure that the cut
wasn’t producing blood. Then, with a short, silent countdown, I let the blood flow out, trying to
shape it as I did.

*Spell discovered: Claret Spear!*

I found it to be simplicity itself, and moved the spear around as I watched it. Holding it in place
wasn’t really hard, just an annoyance that tickled at the back of my mind, less so than burning bones
did. The word ‘spear’ was a really, really poor approximation of what it actually was, and the only
way that I could think anyone would ever find it accurate was if they’d seen a blood mage thrusting
with it and knew nothing about the underpinnings or practical advantages and limitations. The only
thing that was stopping me from growing the spear longer was that I could feel my control of the
construct getting worse with distance. I could see other possibilities with it too, ways that it hooked in
with my existing knowledge of blood magic.

“Neat,” I said, before retracting it back into my wound, then eating a marzipan fairy to heal myself.

“That’s it?” asked Lisi, staring at me. “Just like that?”

“Yeah,” I said. “There are other advantages with it, aren’t there? If I can force my blood into
someone --”

“Yes,” said Lisi. “We call it the bloodline.”

I had already learned that aspect, back when I had given Fenn a quick and sloppy transfusion, this
was just a fast, easy, and effective way to do it against an opponent. All I would need to do was stab
them once, push my blood into them, and then use it against them.

“And it can be launched?” I asked. “If I wanted it to be ranged?”

“Yes,” said Lisi. “At the cost of a fair amount of blood. Easier, with more blood to provide pressure.
You learned the technique in the span of a moment?”
“Well,” said Reimer, coming up to us. “It looks like the ‘learning’ variant is in effect. Joon got tired of us leveling up in the middle of a dungeon, and he said that a new rule was that mages don’t learn new techniques from nothing, they have to have some kind of teacher or read it in a book, something it was assumed we were doing during downtime. Otherwise, we were just pulling new powers we shouldn’t logically have had out of a hat.”

“But that’s in addition to the restrictions on skill caps?” asked Amaryllis. “Why both?”

Reimer shrugged. “It wasn’t the best game in the world. I mean, a lot of the design decisions were just based on what bugged Juniper or what came up in the middle of play.”

“But why though?” asked Amaryllis. “Surely there were predicate conditions?”

“Sure,” said Reimer with a shrug. “I mean, it’s easier to graft on a new system than to make modifications to the old ones. So skill rolls are modified by abilities, and then they go up on the basis of use, but you run into problems where skills are just going up way too fast for it to be sustainable, so you say that actually, skills are going to be a logarithmic curve, and then people start dicking around boosting skills, so you say that you need a teacher or better training, if it’s not going to be actual, ‘legitimate’ use, and then we have a big argument about what ‘legitimate’ means, and how that’s a completely nonsensical term and doesn’t map to how skills improve in the real world, and … you get the idea.”

Amaryllis sighed, then looked at me. “I do,” she said.

“I actually remember that conversation,” I said. “Doesn’t apply to D&D.”

“How many of these systems were there?” asked Reimer, raising an eyebrow.

“Uh,” I said. “Lots? Maybe not hundreds, but probably close. Of the ones that we actually played, for at least one session, I’d say maybe twenty.”

“Twenty?” asked Reimer. “Why would you ever need that many?”

“Different strokes for different folks,” I said.

Reimer actually laughed. “Did you come up with that? Different strokes?”

“Sure,” I replied with a smile. “But seriously, different game systems have different natural outcomes, so depending on what outcomes you’re looking for, you have to have a different system. And sure, part of it was just people making iterative improvements, or wanting to sell a complete system that wasn’t piggybacking on someone else’s work, but that’s partly to do with how fluff and crunch are intertwined with each other.”

“Are you going to explain fluff and crunch?” asked Reimer, once again betraying an astounding ignorance of the norms and terminology of tabletop role-playing games. It was weird, because he was otherwise so much like the Reimer I’d known.

“Is any of this relevant?” asked Lisi.

“No,” I replied. “Not really. It’s just fluff. We’ve already dealt with the crunch.”

“Ah, I get it,” said Reimer, snapping his fingers. He glanced at Lisi. “Well, we should get going then?”

“I suppose,” said Lisi with a sniff. “I doubt that I have anything more to teach you.”
“It was very welcome,” I said, with a small bow.

Amaryllis saw them out, while I looked at my character sheet to see what the spell had to say about the new ability.

**Claret Spear:** Channels the force of your blood into a pointed weapon. Damage and attack are dependent upon your Blood Magic level. Blood cost is dependent upon blood loss and your roll on the blood recovery chart. Complex variant shapes require higher Blood Magic.

It was more or less what I had expected, with another random table I couldn’t see or test thrown in there for good measure. The principles seemed more promising than the ‘spear’ itself; if I had sufficient multitasking or control, I could make myself into a blood porcupine, and even if that was currently beyond me, I was pretty sure that projecting the spear from the wrist to be gripped in the hand was all just a matter of convention and ease. If I were grappled and had a deep enough cut, I could probably just thrust the spear out from my back and into my attacker, which was a handy thing to keep in mind.

“You did well,” said Amaryllis, coming back in to speak with me.

“Well in what sense?” I asked.

“Handling her,” said Amaryllis. “You didn’t put your foot in your mouth.”

“Damning with faint praise, that’s an idiom on Aerb, yes?” I asked.

She smiled at me. “I just mean that you’ve sometimes been a bit insensitive to people about the game.” She held up her thumb and forefinger, a quarter of an inch apart. Just a tiny bit.

“Point taken,” I said with a stifled sigh. “How was Reimer?”

Amaryllis shrugged, but her face had fallen somewhat. “A bit of a know-it-all,” she said. “Our discussion on theoretically optimal character builds was of mixed success.”

“Oh?” I asked.

“He had a lot of assumptions about what it is we do, along with the resources at our disposal,” said Amaryllis. “We got into an argument about runeforges, and he just,” I saw her squeeze her hand into a fist. “It was often the case, in my short-lived career in politics, that I would come across someone who didn’t know the first thing about what they’re talking about. Some of them would fold and defer as soon as they saw that they were talking to someone that knew more than them, and others would try to just continue on, as though their ignorance was a match for my knowledge. Reimer was the second kind of person.”

“Oh,” I said. “That … doesn’t really sound like him, I don’t think. But sorry. He was probably just flustered. This hasn’t been the easiest thing for him, and even if it had been, you’re …”

“Yes?” asked Amaryllis.

“Imposing and beautiful,” I said. “If he was pretending to know about runeforges, it might have been because he was trying to impress you.”

“Well,” said Amaryllis, turning away from me slightly. “It did him no favors. There are five runeforges in the world, and I’ve visited two of them in person. They’re tightly controlled, and even if they weren’t, runic magic is labor and time intensive in a way that no other magic is. I said all that, and he made a retreat to a weaker position, still holding fast to his ignorance, and it made me want to
throttle him.”

I shrugged. “Not sure what to tell you, except that he would probably benefit from a little slack.”

“You’re being understanding,” said Amaryllis, almost like an accusation.

“Yeah,” I said. “I’ve just known him a long time. He always liked facts and figures. Arthur was more about ideas, but Reimer was more about all the kinds of things you could pin down. Hard to imagine him without the internet, really. On Aer… well, I can’t say, because I didn’t grow up here, but you have, what, encyclopedias?”

“And libraries,” said Amaryllis. “And yes, that’s probably where the tiny sliver of things he knew came from, plus whatever you made up for your game.” She shook her head. “Sorry, you’re right. Part of it is Lisi. She puts me on edge.”

“S’fine,” I said. I had a thought, and hesitated as I debated whether to voice it. “Sorry about earlier, if it was weird that I called you beautiful.”

“No,” said Amaryllis, “I know who I am, physically speaking. I’m likely in the top ten percent of women by attractiveness. It was a political consideration.” She shrugged. “I took it as a statement of fact.”

“Top ten percent?” I asked. “That’s … specific.”

“It’s just a guess,” she said. “Part of it is nutrition and healthcare afforded to me by my upbringing, and some of it is surely the eugenic effects of nobles selecting attractive partners. You’re right though, it’s something that might have been affecting Reimer, which is annoying, especially if he and Lisi are, apparently, a thing.”

“I mean,” I said. “For what it’s worth, you’re … I might as well just come right out and say it, but my first thought on seeing you was that you were literal, physical perfection.”

Amaryllis raised an eyebrow. “Look,” she began.

“I’m not kidding,” I said. “I’m not trying to be poetic or to pay you a compliment. I mean that you are as beautiful to me as I think a person could possibly be, and there’s nothing that I can imagine that would improve you.”

“Very strong words,” said Amaryllis. She tapped her foot. “I didn’t think it was that overwhelming.”

“Well,” I said. “We’re friends and colleagues. Ideally, I’m not letting aesthetic preferences get in the way too much.” Ideally, I’m not letting the hammering of my heart and the adrenaline of being next to you do me in, I’m not acting on the errant thoughts of touching you, I’m not having private fantasies at night when I can’t sleep before I inevitably give in and use the sleep spell. “I think I did let looks get in the way, with Grak, the opposite direction, for … well, up until recently. And even now, I worry that Grak and I spend our time together playing games, not talking about our feelings or whatever, and I don’t know whether deep down he’s the kind of person who’s content to stay silent, or whether I need to be the one to initiate, or what.” I had asked, and he’d said that he didn’t like to talk unless he had something to say, but it was hard to tell if him not having something to say was what I should worry about. It was off-topic. I was rambling.

“Can I ask, if you find me so beautiful, why you ended up with Fenn?” asked Amaryllis.

“Ah,” I said. I chewed on my lip. “Do we really want to be having this conversation now?”
“Yes,” said Amaryllis. “I don’t mind that you were with her, I’m not jealous of what was, I just want to fit this into the context of my supposedly overwhelming beauty.”

“Well,” I said. “Half initiation, half personality, I guess. Fenn was always flirting, always, partly because she liked to tease, partly because she wanted me to reject her advances as some kind of screwed up inferiority complex, partly because she liked me. And some of the flirting was really blatant, basically an invitation for sex, and that helped me build up this image in my head of what it would be like, if we were a couple.”

(Whenever I talked about Fenn, I tried to keep an internal gauge of how much it was hurting, a technique that I had practiced for a time with Arthur. Thinking of Fenn still hurt, but a lot of the memories were more on the sweet side of bittersweet. I missed her, and wished that we had some plausible mechanism to return her to life, but none of the conversations I’d had with Pallida, Raven, or Heshnel had provided me with anything resembling hope. Uther had never returned anyone from the dead. For as weird and wild as magic got on Aerb, return from death was apparently not in the cards, not even if you were Uther.)

“Has your opinion of my personality improved?” asked Amaryllis, pressing on.

“You know, you were just complimenting my social skills,” I said.

“I don’t take offense,” said Amaryllis. She had look of gentle understanding, which I appreciated. “It was tactful.”

“I think compassion and conscientiousness combined with pragmatism and a long view can look like coldness,” I said. “You’re always trying to look a step ahead, which means sacrificing the present for the future, and … I like you, I do, but -- am I making a mess of this?”

“No,” said Amaryllis. She turned away from me. “Now’s not the time for this.”

“Okay,” I said. Not what you just said a minute ago. “When is?”

She turned back. “I know I have my deficiencies as a potential partner, I’m painfully aware of that, but right now, I’d like for us to focus on what’s ahead of us. This interpersonal stuff, it’s not going to make the difference down in the temple, it’s going to be a distraction.”

“I don’t want you to come away from this thinking that I think you’re deficient,” I said. “Dammit, I was trying my best to just explain my feelings, and I feel like it came off as insulting. I didn’t mean for it to.”

“No,” said Amaryllis with a nod. “It’s good to clear the air.”

“You know that I didn’t mean that I thought you would be deficient, if we,” I said, faltering. My heart was breaking, just a bit. I really did care about her, and maybe I was even in love with her, but I had my reservations, and not just because of the ghost of Fenn sitting on my shoulder.

“I know,” said Amaryllis. She looked over to the door. “If. Come on, we should get some food, then some sleep. There’s work to be done.”
Long ago, the Li'ote Temple had been buried by people who had wanted to put an end to still magic and couldn’t get around the temple’s inviolability. When the still mages had recovered the temple, they had left it where it was, deep underground, and done little more than excavating down to it, largely because it was far more defensible deep underground than it was on the surface. The path to get down to the Temple of Li’o was known as the Spelunker’s Stroll, a long, winding path that was part and parcel of the intentional mysticallity of the place, and a keystone of the culture of Sound and Silence.

Before I could go take the Stroll, there was a rather paranoid amount of security to get through.

“You’ll have been warned that there are wards against entads,” said the attendant, giving me a dispassionate and imperious look. “Do you have any on you?”

“No,” I said.

“Strip, please,” said the attendant.

I removed my clothes, until I was standing naked in front of her. I’d been asked if I’d had any preference on what my security would be like, and said that I didn’t. The halfling in front of me, wearing a white coat, was apparently what I got as the default. She had a little stepstool that she was standing on, and I tried not to apply the mental model that was loudly declaring her to be a child (she was, at best guess, in her forties).

“You have tattoos,” she said, looking me over. “Passive and active skin magic is warded against within the complex, taking effect prior to when you’ll exit the Spelunker’s Stroll. Do you anticipate any problems with that?”

“No,” I said. Though, yeah.

“Nothing in those tattoos is necessary for your continued function?” she asked.

“No,” I said. I was pretty sure that she knew what all the tattoos did, as I had a number that were very expensive, but very few that were uncommon.

“The complex is fully warded against active and passive blood magic,” she said. “Do you anticipate that to be a problem?”

“No,” I said, which wasn’t actually true, but I’d taken care of it before I’d come in. Apparently the Hypertension virtue counted as passive magic rather than latent magic, and having magically compressed blood lose its magic was catastrophic to the human body. I’d thankfully done a consult with my favorite warder so as not to be surprised by it, and solved the problem by bleeding out approximately half of my blood supply into plastic bags that we could later use for a transfusion.

“The complex is fully warded against active and passive bone magic,” she said. “Do you anticipate that to be a problem?”

“No,” I said. But actually, yes, because I had cut open my stomach and inserted the three smallest unicorn vertebrae there as a weapon of last resort. I would effectively be worthless as a bone mage down in the temple, but as soon as I was to safety, I would be able to unleash.

“Do you have any other sources of magic available to you, whether latent, active, or passive?” she
“No,” I said. I was really thankful that lie-detecting entads were so incredibly rare, because otherwise I would probably be in a lot of trouble. So far as we’d been able to tell, there was only one thing that would be a real problem.

“We’re going to do anolia inspection now,” said the attendant.

“I have an exemption,” I said.

The attendant looked down at her paperwork, leafing through a few pages. “So you do,” she said, still frowning. She looked up at me. “Why?”

“My soul has a feature which I believe would be harmful to any anolia that looked at it,” I said. “I was exposed to an infohazardous threat which makes my soul toxic to anyone who views it. This provides a natural defense against soul mages, but is equally harmful to anolia. They would instantly be placed into a catatonic state.”

The attendant looked down at the paperwork again, still frowning. “That’s quite novel,” she finally said.

“I had the paperwork checked over twice,” I said. Thanks, Oberlin.

“Very well,” said the attendant, still frowning. “It’s the first time I’ve seen something like this.”

“If there are anolia down in the temple, you should probably warn them,” I said. “I should also say that it’s likely to be infectious, meaning that if anyone does look at my soul and go catatonic, then no one can look at their soul either.”

The attendant narrowed her eyes at me. “And how did you survive this?”

“It’s complicated and classified,” I said.

She tapped her pen against the clipboard several times, thinking this through. In the end, I think it was probably the fact that Oberlin had walked me through the paperwork that did it; she relented, and I was made to put on a robe, with my clothes taken away from me.

Following that, I was passed through some wards, very similar to the ones that we’d gone through in the jail when we’d visited Malus. I felt nothing as I went through, because I was more or less following the rules, smuggled unicorn bones and tattoos aside. Two of the tattoos were for storage, and held the probability blade and the vambrace, which in turn held all my other stuff. I hadn’t tested the probability blade in combat yet, aside from a few skirmishes with Amaryllis and Grak. I was really hoping that I would have the blade if I needed it, and also that I wouldn’t need it.

From there, I was on my way, effectively bereft of the nice and shiny things I’d accumulated, and walking down the Spelunker’s Stroll.

I was to go alone. That much was tradition. There was a small waiting room for initiates, and a stern-looking man who told us when it was our time to go, with nothing for us to do while we patiently waited for him to signal us. So far as I could tell, it was about fifteen minutes between initiates. I had some time to think about how things could (would) go wrong, some time for misgivings, and then, because it was an old habit in times of stress, uncertainty, and boredom, some time to think about worldbuilding.

(It was hard to think about stuff that hadn’t been done on Aerb, simply because Aerb had so much of
what I had done before, and so many things that seemed like they had been made in anticipation of what I would do in the future, grown in a vat from the same DNA, if not actually made by me.)

(My waiting room worldbuilding project was a legal system that revolved around armed combat, which was a nice, meaty question that needed a lot of consideration and effectively distracted me from the tension I was feeling. There were a huge variety of legal systems on Aerb, but I contented myself in being mostly ignorant of them, mostly because I didn’t have the time, motive, or inclination to learn about them in depth.)

Eventually, my name was called, and I headed down the Spelunker’s Stroll.

A lot of it was theatrical mysticism, mixed with a lack of OSHA compliance. I walked down rocky steps that had been worn smooth by the footsteps of thousands of others making their descent, and watched as the lights occasionally changed, allowing less and less visibility, until I was making my way from one point of illumination to the other. There were a zillion ways to light a tunnel on Aerb, from glowing glyphs to shining orbs to regular old incandescents, and as the tunnel continued on, eventually I was walking beneath what very much appeared to be bioluminescent anemones, stuck to the ceiling and giving me a friendly wave as I went past.

It was all painfully sculpted, though maybe you wouldn’t get that from it if you had never been to Disneyland. An underground river trickled by, winding on its own course that gave me just a glimpse of it, and I saw it three times as I made the descent, in steadily worsening light. All I could think about was that someone must have had a hell of a time carving it out so that it would be visible to me without actually getting water on the stairs, and they surely had to have some kind of mechanical pump system to keep the flow steady, and there was no way that it was actually connected to the watershed, because this tunnel would flood during heavy rain.

I went through several caverns, which had been placed at strategic intervals, each of them with their own unique theme. One had stalactites hanging down, smeared with luminous green gunk. Another was filled with water, and had all the light coming up from the bottom, illuminating the fish that swam around as I crossed over the wooden bridge. A third was filled with mushrooms of all kinds, some as big as dinner plates. It was all awe-inspiring, in its own way, but I couldn’t suspend disbelief as I looked at it, not for very long. It reminded me of some of the early dungeons I’d designed, when I’d tended to string together a series of set pieces rather than have something holistically created to tell a unique story of a real place.

When I got to the end, two large double doors were waiting for me, rising up fifteen feet. They might have been impressive, if I hadn’t been inside the Infinite Library. I pulled on the handles and opened them up, which led me into a room with columns on either side, and another attendant waiting for me.

“Welcome to the temple complex,” he said, smiling gently. He was ha-lunde, I was pretty sure, judging by his size. “How was your stroll?”

“Good,” I said.

“To the rod first, then,” he said, gesturing to one side of the room.

I ended up in another waiting room, where I was given a pamphlet, and the whole thing started to remind me of Disneyland again, namely the tedium of waiting in line. I saw one of the people that I’d been in the other waiting room with, and wondered whether Spelunker’s Stroll had been meaningful for them. This was, in some sense, the equivalent of a graduation ceremony, a lot of pomp and circumstance to celebrate the fact that we were going to be joining the ranks of the mages, but I sure didn’t feel like I was getting anything out of it.
Eventually my name was called, and I was guided down a hallway, then to another room, which was accessible only through heavy doors, arranged in an airlock configuration that needed authorization from both sides. Two men in full-plate with wicked looking weapons stood in the room, watching me carefully, and I had every reason to think that they were some flavor of mage as well, though which would hopefully remain a mystery. It would be an awful place to fight in, if Harold had compromised them. The third man wore vestments, and held the Rod of Whispers in one hand.

It was a thick rod, about two feet long, tapered toward the ends. It was brightly colored in reds and blues, with a criss-crossing pattern that you might have thought was the work of a master artisan, unless you knew that it was an entad. There was really no reason that it had to be ornate, but the forge frenzy drove people to make entads in very specific ways, and the Rod of Whispers was no different.

I walked forward, with my feet making the only sound in the room, and received my tap on the head.

**Skill unlocked: Vibrational Magic!**

**Achievement unlocked: Oscillancy**

And with that, I was a vibration mage. I left the room, went through the airlock again, and let out a breath that I’d been holding. When I felt the attendant touch me on my arm, I nearly jumped; that room had been the perfect place to jump me, at least in my estimation, because two hulking guards draped in entads would probably have been a real problem for me.

I was led back through the room with columns, and into a second waiting room. There really was a lot of waiting to be done, presumably because that allowed for an optimization of throughput at some point further down the way.

While I sat in the waiting room, I tried vibration magic on for size. The temple complex had heavy wards, expensive, permanent, and virtually unbreakable ones, but it wasn’t clear whether or not vibration magic was included in them. I got the answer pretty quickly when I began listening to the sounds around me.

**Skill increased: Vibrational Magic lvl 1!**

It ranked up pretty quickly, and I mostly ignored the messages after that as I played with my new toy. The oddest thing about it, at least as far as sounds went, was that it was easy to ‘feel’ vibrations going past me, except that I basically only felt them when they were already continuing on. In some ways it was like playing a videogame and realizing that the joystick was set to inverted, so that up was down and down was up: it was a very unintuitive way of conceptualizing sound, such that I was sensing where sounds were going, rather than where they were coming from. It made a little bit of sense, since obviously I had a lot of channels with which to feel vibration, and most of them required that the wave actually hit me, but it was a little disorienting. That disorientation rapidly faded as my skill increased.

I had a new gauge as part of my HUD, labeled ‘Breath’, sitting between my mental exhaustion meter and my blood meter. So that was neat. My first, very minor attempt at altering a vibration caused the meter to tick down just a sliver, and based on what Reimer had said, the bar would grow as I increased in level.

I pushed hard to get to level 10, where, thanks to Reimer, I knew what was waiting for me..

**Skill increased: Vibrational Magic lvl 10!**
New Virtue: Biorhythms!

Biorhythms: You are in tune with the natural cycles of your body and capable of altering them at the expense of breath, either temporarily or on a permanent basis. This virtue does not prevent any ill effects from e.g. loss of breath or loss of sleep.

As virtues went, it was a level 10 virtue, meaning nothing to write home about, and not really more than a minor superpower. It was still nice to have, especially for altering circadian rhythms, which was a bit of a headache to get back on track given how often we used the time chamber. There were also (per Reimer) some less obvious things that you could do with it, like altering REM cycles in order to get in more dreaming, but I wasn’t sure about the “ill effects”. One of the bigger benefits was being able to control my heartbeat, which seemed like it would be useful in both combat and social situations.

I got up to level 13 by the time they called me over to the temple, meaning approximately equivalent to four years of study in the time it might have taken someone to eat lunch. The levels had gone quickly, maybe because my mental stats were so high, or maybe because I’d had a week of prep work and a pretty good foundation from my instructor.

I was taken to the temple itself, which caused me to go on edge again, because this was another perfect time for an attendant to take me into a room where I would be instantly killed by something nasty. That threat failed to materialize though, and I was led into the large room that the temple was contained within, which was in one sense a relief, but in another sense, was cause for concern, because it meant that I was still waiting for the other shoe to drop.

The Li’o Temple was inviolable, which was a special term that described a whole host of items and structures on Aerb that couldn’t be destroyed, with a big, fat asterisk for void tools and void weapons. The underwater hand whose fingertips made the Zorish Isles was inviolable, and it was a property of a fair few entads too. Inviolability was both a curse and a boon, because it meant that there was little risk of damage, but also little possibility of modification or change.

The Li’o Temple was small. When I thought of temples, I thought of big, open places, the kind with arched roofs and lots of open air, the Acropolis, maybe, or a cathedral. The Li’o Temple wasn’t too much bigger than the average living room. And if you’re wondering to yourself how you fit five hundred people inside a space the size of a living room, then the answer is ‘very carefully, and in a way that would make the fire marshall wince’.

Because of the temple’s inviolability, the doorway was a severe bottleneck, and if you wanted to maximize the number of people inside the temple, that was something to contend with, especially since the decision had been made to do swapping instead of having simple batches of roughly five hundred. The solution that they’d come up with was a more extreme version of the Japanese capsule hotels, with people put into something that very closely resembled a coffin with a porthole window on top, picked from a variety of sizes that ran the gamut of the mortal species. These were then moved in by attendants and stacked into place, with as little room between initiates as possible, and no possibility of getting out without the help of the attendants. It wasn’t the most horrifyingly claustrophobic thing that I could imagine, because I had a good imagination, but it was definitely optimization taken to an unpleasant extreme. This was a part of the Penndraig reforms; before he’d come along, people had been meditating in better conditions, their time in the temple broken up by breaks, in part because they didn’t have the entad support that he provided to make the “packed like sardines” thing workable.

(The first thing that I’d asked about, on hearing this arrangement, was why they didn’t use space-warping entads, miniaturization entads, or something similar. Amaryllis hadn’t known the answer,
but she seemed to think that it was so obvious that they had to have tried it, and my idea was dumb, and that I should feel bad for so much as suggesting it, though I might have been reading between the lines a bit when she shot me down.

Even if other magics were off the table, it should have been possible for soul manipulation and healing to (temporarily) replace peoples’ bodies with smaller forms, like turning a human into a halfling, which would have increased potential occupancy by a factor of eight, but the only answer I’d ever gotten was that it hadn’t been done during the time of the Second Empire, and so had probably failed to pass some early test. There was some anti-munchkinry going on, but the exact flavor wasn’t clear, especially since this stacked coffin monstrosity was an abomination of flavor yet also somehow permissible.)

I was nervous. How would I not be? A week stuck in the temple, with no way out except hoping that my bare fists could break through the wood, against people who were better equipped, which was to say, equipped at all, within wards that could have been explicitly keyed against me in ways that were completely sensible for even a non-adversarial power to have done? Yeah, I was having second thoughts. I climbed into the coffin all the same, and was carried into the temple.

Some of the effects I’d felt right away, like the unnatural purity of the air, and the way that every last trace of thirst was eliminated at once. To keep people in a coffin for a week, you needed to take care of basically all of the messy people stuff, the thirst, hunger, heat, air, and waste. But to get them into a coffin and into the proper mindset for seven straight days of meditation, you needed something to assist with that.

It was a dissociative episode. I’d had them once or twice, enough to recognize the sensation. I could still sense things, but the signals were getting confused somewhere along the way, my fingertips touching the cloth bottom of the box that they’d put me in, but the concepts of ‘cloth’ and ‘box’ and ‘fingertip’ not quite connecting to each other, or anything that was going on in my brain. It was like looking down on myself, from within myself, as though everything was happening to someone who wasn’t me, and it might have been unpleasant or scary, if I could properly connect those sensations to anything coherent. Instead, I was drifting, floating free.

I could feel the thing that I was meant to feel, that I was warned I would feel, a conceptual tether sitting in my mind, linked to an obelisk, an idea that was as inviolable as the temple I sat in, waiting there for me to draw closer, to inspect it, to know it.

Except that standing next to the pillar was a man, his armored form wreathed in flames, watching me.

I had enough presence of mind to shut the image out, to focus somewhere else, as much as the tether attached me to the pillar. I was still deep within the dissociative state, my body nearly immaterial to me for all that I could make sense of what I was feeling and seeing, but I could keep my distance from that pillar, and from that man, if I put effort into it. I was swimming in a sea of thoughts, all seeming like they weren’t my own, my control over myself only barely there, but I did have some control, and there was an island of stability in the sea of confusion.

I was trapped, for the duration of a week. The entads that they were using to make meditation in the temple surefire and fast had also made some kind of a place for Harold to do his thing, whatever that happened to be, whatever purpose he was currently driving toward. Harold had probably already done his thing with everyone who was currently in the temple, some unknown number of the staff, and some unknown number of people who had already passed through, thousands of them, it seemed like, with the ability to convert others.

I moved my arm, which didn’t feel like my arm, but instead, like someone else’s arm that I was watching at a remove. My mind could barely make sense of the movement, since the proprioception
was shot, but it was movement, which meant that the body in the coffin could possibly escape. The tether was closer to me though, like something that I had a memory of imagining, but still more real and solid than my sense of self.

It was like losing the plot in a movie, or staring at the words in a book and seeing them as separate entities rather than parts of a sentence, let alone a coherent train of thought. When I was in eighth grade, I had trained myself in unhearing English, to force the words to disassemble into their component sounds, unintelligible to my higher brain, which I could manage for a few seconds at a time. It was the first time I’d ever tried anything remotely like meditation, all because I hated listening to my parents fighting, and wanted to unhear it, to transform the thoughts and ideas they were expressing into pure phonemes. Sitting in the box, it was the opposite problem, nothing coming together, nothing connecting, just a bare shred of me in there somewhere, watching it at a remove.

I had no idea what to do, except that I had to do something. Ignoring Harold could only work for so long, given how much mental effort it took. The temple was designed such that meditation couldn’t fail, the overlapping entads being at least somewhat equivalent to a sensory deprivation tank, only more extreme in some respects. And even if I could somehow go a full week, Harold would know, in the same way he’d sent Sonee to try to convert me. If I’d been allowed into this coffin by his confederates or puppets, then it seemed unlikely that I would be let out by them, and for all that Raven seemed to have faith in me to pull some Utherian stunt to get out of trouble, I was thinking that I was kind of fucked.

And when it seems like you’re fucked, that’s the best time to try to change tactics.

I let myself follow the tether toward the conceptual pillar, where Harold was waiting for me. It was hard to make out an expression behind the flames, but it seemed something like stoic determination.

“What do you want?” I asked, sending the thought at him rather than physically speaking (a process that seemed like it would have involved mechanically moving my mouth flaps). I was trying my best to keep my distance from him. I had no idea what would happen if we got into a fight here, or if he ‘touched’ me, or anything like that. I was at a loss for what the rules were. I didn’t know if Harold could speak, or how he was capable of hurting me, or whether I would be able to fight off his attack somehow.

“The End,” said Harold. He had a voice like the crackling of coals, with the timber of a furnace being stoked.

“The end of what?” I asked.

“How?” I asked.

“The Calling Forth of A World Lord,” Harold answered. He held out one flaming hand to me. “You Will Join.”

Somewhere out there in the real, my body’s throat swallowed. It might have been my imagination, but the dissociation seemed like it was getting a little less oppressive.

“Nah, I’m good, thanks,” I replied. It was a flippancy that I wasn’t really feeling.

He drew his flaming sword. I had no idea what he was going to do with it, given that he was only in
my mind, but I wasn’t really eager to find out. I forced my attention away from the pillar, and Harold with it, until I was back thinking about my body, and how it didn’t seem to be mine anymore.

The dissociation was definitely getting better, or maybe I was getting used to it, but there was an ‘I’ there, firmly in place, even if it was dissociated from other things. Maybe that was the skill check that I needed to get past, reconstructing a mental model of selfhood from the nothing, all so that I could spend a whole week without Harold putting his sword through me, whatever that would do. I had no idea how much time had passed. It felt like ten minutes, or maybe twenty, but I wouldn’t have been surprised to have them pull me out and tell me that a week had gone by.

I dipped down into my soul, and almost immediately, the pressure and tension was relieved. The soul trance, it seemed, had something of a protective effect, for which I was grateful, but that wasn’t the reason that I was there. Instead, I followed one of the lines from my soul, along a channel that no known wards were capable of blocking. When I reached its terminus, I was standing in a small white room.

Bethel (as Tiff) opened the door and looked me over. “I take it things haven’t gone well?” she asked.

“No,” I said. “Harold was waiting for me. How long has it been?”

“A few hours since you went in,” said Bethel.

“Well, most of that time was spent waiting,” I said. “So waiting out the week is going to be … I might have to do it in here, with you.”

“Which I assume would mean that you wouldn’t acquire still magic?” asked Bethel.

“Seems likely,” I said. “I did already get vibrational though.”

“What a waste that would be, to spend so much time and come so far just to bow to the enemy,” said Bethel.

“Yeah,” I said. “So your advice is to just rush headlong into combat against an enemy with unknown capabilities on an unstable and novel-to-me battlefield?”

“For all his faults, it’s what Uther would do,” said Bethel, raising an eyebrow.

“To be frank, he’s not really someone whose footsteps I want to follow, except in the literal sense,” I said.

“What I’m saying is that he took what he wanted and plowed on ahead,” said Bethel. “It was monstrous, but it was part of his strength as a monster. You would do well to take that lesson.”

“Well, pass it along to the others,” I said. “If you don’t see me again, it’s probably because I died horribly.”

“We’re close by,” said Bethel. “There were a few problems with our descent, but nothing that I couldn’t handle.”

“No one dead?” I asked.

“No,” sniffed Bethel. “Not even mildly injured. But all that preparation and firepower is worth nothing if you’re not willing to press forward.”

I tried to give that some due consideration. One out of two … well, so far as I was concerned, still
magic was the prize that was most worth having, because it offered an overwhelming amount of defense, some of which was going to be absolutely necessary against Fel Seed. In contrast, vibrational magic was mostly another weapon, and not one that had any real lasting power. Unfortunately, that meant that Bethel was right; staying in a soul trance to avoid the forced meditation would, at best, mean that I would spend a week in the temple for nothing. That was better than dying or being mind controlled, obviously, but it reeked of cowardice.

“Alright,” I said. “I guess I’m going to go fight Harold.”

“Excellent,” said Bethel. “Give him some scars to remember you by.”

With that talk done, I steeled myself and left what passed for Bethel’s soul. The sense of dissociation returned, just as strong as it had been, and I allowed myself to follow the tether once more. Harold was still standing there, still on fire, still staring at me.

“You Will Die,” he said, with the kind of conviction I wished I had about anything.

Harold was real, but he wasn’t physical. That made the prospect of attacking him somewhat troublesome, but so far as non-physical attacks went, I did have a few. I was probably one of the better soul mages left on Aerb, and so far as I knew, the only living spirit mage. With that in mind, I reached out to touch him.

The tether was real, but it wasn’t physical, and the same could probably be said about the pillar I was supposed to be meditating at. As for Harold, he wasn’t physically standing next to a mostly conceptual pillar, he was just conceptually or representationally standing next to the conceptual pillar, in the same way that he’d been in my mind when I was meditating. To do what he’d done to Sonee required that he somehow touch her spirit, and I was hoping that it was a bidirectional link.

From a distance, I could feel nothing from him, but as I tried to feel something from him, he drew closer, and the distance between us shortened considerably. I suppressed the urge to run, or to think of something else, and pushed on ahead, trying to get a thread of him somehow, something that I could pull on, in the same way that the magic of a person’s skin was often an effective pathway to their soul. When he was five feet away from me, I finally felt it, a minor disturbance that I could just barely latch myself onto, like trying to pull a penny from a crack in the sidewalk with just my nails. Once I had my grip though, it was simple enough to push forward and see where it led.

It was a mass of red, orange, and brown threads, so numerous that it would have been impossible to count them all, their numbers dwarfing what I had seen in my own spirit, speaking to something more complex than I would ever be. If my spirit was a small town with light but constant traffic going down the streets, then this was a planet-sized city, Coruscant or Ravnica, stretching nearly to the horizons of my disembodied viewpoint. And if the disorganized threads were a vast mess below me, then above me were throbbing lines, wrapped into thick bundles, just like the one that I had seen going into Sonee’s spirit. There were thousands of them, if not tens of thousands, each almost certainly connected to a person.

I dove down into the mass and began changing things, going for the bigger threads first, hoping that they were somehow vital to Harold’s continued functioning. Doing that was dangerous, given how many people he was connected to, and how uncertain it was that I wouldn’t accidentally help him, but I plugged on all the same, strangling threads that looked important, ripping out connections wholesale where I could find them. The architecture of Harold was different, with more connections between the threads, in addition to simply how much more of those connections there were. I had no idea whether or not I was actually doing anything, because I had no outside reference.

After five minutes, I felt a surge of pressure on me, one that lifted me up and pushed my viewpoint
away from the damage that I was hopefully doing, spinning me into the notional sky and flinging me backward, until eventually I landed in my own spirit, with its more comforting colors. So far as I could tell, everything looked more or less how it should, which came as a relief, until I realized that the counterattack had only just begun.

Orange threads were descending down toward the threads that made up my spirit. They were going surprisingly slowly, but there were hundreds of them, all twisted together, braided further the more they went up.

I raced between them, closing them off, and for a time, it seemed like I was going fast enough that I would be able to outrace the assault. When one of those threads attached to one of the threads that made up my spirit, that was liable to be a problem, because I was actively using my spirit to fend off the attack, and my spirit was far from being the warren of threads that made up Harold’s. I wasn’t sure which places were most in need of defense, except by trying to track usage patterns as I was in the middle of closing off the orange threads, which was more attention than I thought I could spare.

It slowly became clear that I was, in fact, losing. I hadn’t seen it happen, but whatever Harold was doing to push these threads down toward me, he must have put it into overdrive, because there were four times as many as when I’d begun the defense. They were slow enough that I might have been able to handle the initial batch, but with so many more, some of them would be able to get in an alteration to my spirit, which had a pretty good chance of fucking me up enough that I couldn’t mitigate the damage.

I decided to try a different strategy. Instead of closing off the hostile invaders, I tried feeding them. My spirit was, after all, already marked by a rather different invader, the virulent meme that Raven had exposed me to, and which I had shut down as completely as I could. The lacework that made it up had been left behind though, and that was what I began dragging up to the hungry orange threads. At first it did nothing, but then I thought to expand the meme’s thread slightly, giving it more bandwidth, and when I did, the result was immediate; the orange twisted and writhed, until finally shooting backward.

I did it with another, then another, hoping that the meme was infecting Harold. The assault continued though, too many threads to deal with, and this method far more labor-intensive for what seemed like it wasn’t all that much better of a result. I kept on with it though, hoping that the backchannels would get to him, that there would be damage, or that eventually I would simply prove myself to be poisonous enough that I wasn’t worth the effort.

Twenty applications later, the assault suddenly stopped, with the lines Harold had been sending not so much retreating as disappearing entirely. I watched them, cautiously, unsure whether this was only temporary. Unfortunately, there were different fronts in this battle, and I couldn’t watch them all at once. With a push, I returned to my body and faced the wave of dissociation that came from being within the area of effect of the entad that was meant for forcing meditation. I checked over the body, as best I could, just to make sure that I hadn’t been moved, then followed along the conceptual tether to the pillar.

Harold was nowhere to be seen.

I went back into my soul to look it over, then to my spirit, and finally stepped into Bethel’s soul, where she was waiting for me.

“Well?” she asked.

“I put up a fight,” I said. “Scared him off, maybe, or at least proved that I wasn’t an easy target. I’m hoping I’m not ten minutes away from being taken out of the temple and put to death.”
“Good,” she said with a nod. “I always believed in you, and I can give you the names of those who didn’t.”

“Not really necessary,” I said. “I’m worried he’ll come back, and I’m worried about part two, but for now, the name of the game is still magic.”
“Assume people know what they’re doing” is often a pretty poor heuristic, but I didn’t really have much of a choice as far as meditation went. The instructions I’d been given were vague, describing the pillar and saying that I should keep it in mind for the duration. Because that was all I’d been instructed on, it was logical to assume that the people running the temple knew what they were doing, and that it was hard if not impossible to fail the week-long ordeal. Yet as the time passed, I kept going back to worrying that maybe I was too much of an outlier, or maybe they were wrong.

I stared at the conceptual pillar from all different directions, and spent all my time doing that. All my needs were taken care of, and it wasn’t like there was much else to do. I tried to keep on edge, waiting for either Harold’s return or some shenanigans related to my body. Nothing came though, and it was hard to stay on my toes, even with the alertness entad that I knew was affecting me.

Instead, I ended up meditating on the pillar, just like everyone else was doing.

**Skill unlocked: Still Magic!**

**Achievement unlocked: Holdfast**

It took five and a half days instead of seven. I wasn’t sure where the discrepancy came from, whether it was my unique ability to do things faster, my experience with meditation, or whether the game system broke things into discrete chunks that allowed it to happen faster, or possibly if there was just some buffer built into the procedures that they followed in the temple. I couldn’t find it in me to care though, given that I had a new power to play with, one that might come in handy in the very near future.

“I could do an extract,” said Bethel, when I went to visit her.

“Could you?” I asked.

She nodded. “The anti-entad ward is too powerful for Grak or I to break, even working together, but it’s anchored relative to Aerb, rather than relative to the temple, an oversight that we could exploit by hollowing out the ground beneath the temple and dropping it. From there, it would only take ten seconds to bring you out.”

“That’s a last resort,” I said. “They would know it was me, since I’m in the register, and I would be the only one missing.”

“I could turn everyone into a thin red mist,” Bethel mused. “Or, more gently, I could abduct everyone, put them into cells, and then randomly distribute them around the countryside, so that no one would have any idea who was the real target.”

“That -- yes,” I said. “That’s a possibility. It’s still a last resort.”

“I thought that you wanted me in the field?” asked Bethel, narrowing her eyes.

“I did and I do,” I said. “I’m just concerned with fallout. Things haven’t come to a head here yet, and I might be able to get out without causing hundreds of thousands of obols worth of damage and making what’s effectively an attack on one of the stronger world powers.”

Bethel sighed. “Fine, fine, we’ll keep being nice to our enemies.”
“Can you see into the temple?” I asked.

“Not the temple, nor the immediate environs,” said Bethel. “The anti-entad wards are ludicrously extensive and well-made. I’ve been working with Grak, but he expects us to fail.”

“Meaning that if things go south, I have to come here to call on you?” I asked. “Which might not be possible. Time-to-entry for my own soul is down to half a minute, maybe less, but that’s not feasible in an emergency. I’ll keep you updated, when I can.”

“Good luck,” nodded Bethel.

I backed out again, stared at the pillar for half a second until I realized that it was pointless, then tried focusing on my new skill. All I had access to was the small coffin I was stuck in, but that contained my body, and that was enough. My first act of still magic was attempting to stop my chest from rising and falling with every breath that I took, which turned out to be a lot more painful than I had expected it to be. I was still extremely thankful that no one had warded against still magic.

**Skill increased: Still Magic lvl 20! (Skill can no longer be increased by amateur training.)**

**New Virtue: Proportional Halting!**

**Proportional Halting:** If the change you are attempting to still exceeds your current maximum capacity, the object/force/concept will be stilled proportional to your Still Magic level or to your current maximum capacity, whichever is greater, over the common stilling interval.

I hit the soft cap on Still Magic and Vibrational Magic without too much trouble, focusing entirely on the things that I could affect, which basically meant my body. I wasn’t paralyzed, though lord knows they probably would have done it if they had an entad that could do it safely and effectively, and the only real trouble was the fact that I was still suffering from mild dissociation, apparently beyond my ability to adapt to it.

And after all that, I waited, and then waited some more. The meditation had been boring, in some sense, but also easy, in another, a kind of nothingness of the mind. More than that, there had been a purpose to it, which made it easy to clear my mind and go on ahead with it. Now that the magic was unlocked though, there was no point to the pillar, and the thought of losing myself staring at the pillar some more seemed like such a waste that I actively pushed myself away from it.

It was when I was checking over my character sheet that I saw something out of place: a glowing +2 was floating in the upper right corner of the screen. I stared at it for a long moment, trying to make sense of it. I got two points for every level, plus an extra five for level 10, and I was absolutely certain that I had distributed everything. Yet here were two more, waiting to be spent. The game layer didn’t give me a log to look at, which was incredibly annoying and meant that I could miss things like quest updates or skill increases, especially if I was in soul or spirit trance, as I’d been when I was fighting back against Harold.

The logical conclusion was that I had leveled up without realizing it.

That was exactly what I wanted, but it left me feeling a little bit hollow, because there was none of the ceremony that was supposed to accompany the level, to say nothing of the pleasure that usually came with it. It was only satisfying in a numbers-go-up sense, and not even really that much, because it wasn’t like there were any decisions to be made about where the points were going to go, because the revised character sheet was more or less set in stone, and the only question was when I would pull the trigger on changing out new skills. I put the two extra points into MEN, though a part of me
wanted SOC instead.

And then I waited to be let out.

Eventually, my coffin was moved, taken out of its place on the rack by the attendants and transported out into the room that surrounded the temple proper. I felt a wave of relief when I was out of range of the dissociation entad, as my fingers finally felt like fingers, both connected to the concept of fingerness, and under my subconscious control without me really having to think about it. I flexed and stretched, relishing the fact that my body was more or less mine again, the way it had always been.

When I’d gotten into the coffin, I had been in a side area, one where people were fitted to different containers (with a wide enough variety for all the mortal species). When I was taken out, it was to elsewhere. I could see the men above me through the glass lid of the coffin, stone-faced as they carried me. It seemed to me that there was no reason not to let me out as soon as I was out of the temple, but I didn’t know what their protocols would be like, nor their logic. Optimistically, they were taking me to some place where a medical team looked over initiates and made sure that the week of laying still in the coffins hadn’t given any lasting injury or otherwise had a negative impact.

Pessimistically, they were taking me somewhere to kill me without any witnesses.

It was hard to see from within the coffin, given that the sides were opaque and the glass at the top only let me see directly up. I was watching as I was moved, and started to get a bad feeling when I saw that I had been moved through a doorway. Based on the schematics of the complex that Pallida had stolen, I was in one of the small rooms to the side of the temple proper, out of the bigger room that contained the temple itself. If they were going to do it, this was the time.

As soon as they set me down, I pushed up on the lid, hard, prepared to give an apology if I was in the wrong, prepared to fight if they so much as hinted at training a gun on me. The lid went up without any trouble at all, and I was up and rolling right after it, moving out of the place that I’d been in. I heard the telltale *thwip* of a void weapon and tried to get my bearings to see who had fired it.

There were three people in the room with me. One of them was a woman, by the small room’s door, vitric, blue hands already crackling with electricity. The other two were men, one humanish, the other a tall mezin. He was the one holding the void pistol, a somewhat crude affair, but still capable of putting holes in things.

I jumped to my feet and grabbed for the pistol, trying to bring myself in closer to the mezin in the hopes that it would make the vitric less likely to shoot me full of lightning. As I tried to wrest the pistol from him before it could cycle, I felt every muscle in my body spasm as the room flashed a bright blue. Half the charge must have gone to the mezin, because he was shaking too, and as soon as I had control of my body again, I pulled him in close to me, taking his weight and tripping him so that he would go down, putting more space between me and the vitric. Unfortunately, the human had moved around the table they’d set the coffin on, and I learned, to my chagrin, that he wasn’t actually human.

His fingernails extended into three-inch claws and his muscles bulged within his shirt, shifting and warping him, and showing a fraction of his true power. It was an awkward fight in a small room, and while I hadn’t forgotten that the human -- actually parovartako -- was there, I wasn’t really ready for him. His claws sliced cleanly through my face as I backed away, causing a jolt of pain and significant amounts of blood to start gushing out of my body. On instinct, I tried to use blood magic, only to find that within the wards it wasn’t working. Less on instinct and more on a prayer, I tried using bone magic to heal the wound, but that wasn’t working either. I was blind in one eye, and he
was still coming.

I made nearly impossible dodges, twice, ducking beneath his claws. I was trying to do it while forcing my good eye open and trying to ignore the searing pain of the cut I’d taken to the face. After another failed swipe from him, I grabbed his wrist, trying to gain control and maybe force him into a lock, but he brought his other claws down with startling speed. I yanked on his wrist and he ended up cutting deep into his arm, far less superficially than the cut he’d given me on my face. He howled in pain, but on sheer instinct, I turned away from him, just in time to dodge out of the way of another lightning bolt, which struck him square in the chest.

The mezin had recovered the void pistol and was clicking at the trigger, trying to get it to fire as soon as possible. It fired with a *thwip*, but I was ready for it, and had my hand up just in time for me to parry the void effect. “Parry” in this case was probably a little generous, since it made a line straight through the meat of my palm, but that was better than getting shot in the head, and the remainder of the void effect didn’t seem to have penetrated my skull, at least on first blush.

I kicked the mezin squarely in his stomach, then punched him in his head as he doubled over, which sent him sprawling to the floor, hopefully unconscious. A glance backwards at the parovartako showed that he was still writhing in pain, so I ran straight at the vitric, who was backing up in alarm, hands raised. I had no idea how much charge she had left in her, but it didn’t really change the calculus much, because lightning aside, I was far stronger than her. A solid strike to her throat was enough to double her over, and I stomped on her head with the sole of my foot, three times in quick succession, as soon as I got her on the ground. A big **defeated** message showed up.

I picked up the void pistol and shot the parovartako in the head before he could rise to his feet, then carefully watched the other two as a silence settled over the room. I wasn’t sure whether or not I had killed the mezin or the vitric, but both of them were staying down. We had made a considerable amount of noise, and I stayed ducked behind the table, waiting for someone to come. No one did.

I checked the vitric and the mezin. She was dead, but he was still breathing. My right hand hurt like it was on fire and I couldn’t move the fingers with or without pain. My face was still bleeding too, enough that it was a fairly steady flow of blood rolling down my chin and soaking into the robe that I was wearing. If I had any thoughts about escaping the complex by being inconspicuous, they were completely gone. A brief, tentative touch to my forehead was enough for me to feel a hole there, one that was worryingly deep and bleeding profusely, but not actually all that painful.

Harold had compromised some of the temple staff, maybe even most of them, but he hadn’t compromised **all** of them, or they would have made an attempt on my life in another way. So far as I could tell, that was the only good news. I was wounded and losing blood, and still in a place where the wards were stopping pretty much all of my magic from working, with very few exceptions. Worse, whoever Harold had compromised would probably be showing up shortly to finish the job, or worse, actual site security would get involved, at which point I would probably be fucked.

Using my good hand, I dragged one of the bodies over to block the door, then spent precious seconds being vulnerable to deliver a message to Bethel.

“Things are fucked,” I said. “I was attacked, no extraction options at the moment. Pull the trigger.”

“Wait,” she said, a moment before I was going to go. “Something is happening. Storm overhead.”

“Storm?” I asked.

“Shit,” I said. “Okay, get me out.”

“Might be a problem with that,” said Bethel. “The excavation is taking too long. Rock is substantially reinforced. You might be on your own.”

“Fuck,” I said, then stepped back from the soul just in time to see someone trying to force the door open. I snatched up the void pistol as I got to my feet and sighted it at the door, hoping that no one was going to throw a grenade in.

I heard a key slide into the lock, then watched as the door pushed up against the mezin’s body (Claude’s body, given what the game layer had told me, a ‘feature’ that I continued to hate). I held myself still, glancing briefly at the meter that showed my blood loss, which was getting worrisome.

The door opened wide enough for someone to stick their face through, and the only thing that kept me from shooting them was that the very last thing you’d do, if you were making a breach into a hostile environment, was to stick your head through the door and look around. It was a younger man, whose eyes went wide as he took in the bodies on the floor and copious amounts of blood, most of it mine. I was crouched, so it took him some time to see me, but when he did, he pulled his head back with a scream, banging his ear against the door as he stumbled back. I heard the sound of footsteps shortly after that, and sprang forward.

I had no idea why Harold wasn’t taking the opportunity. Was I wrong about how much he could see, or how much control he had? I kicked the body out of the way and nudged the door open further with my shoulder, stepping out into the hallways that I’d only seen the ceiling of. I was still dripping blood, but I had a weapon now, one that was impossible to ward against. All I needed to do was to get to someplace that I could access my storage tattoos, or at the least, somewhere that I could heal myself.

I crept through the hallways on my bare feet, holding the void pistol in my left hand and cradling my right against my stomach, trying to keep it from being jostled as much as possible. The game pinged me a message about blood loss, which I ignored, because there was nothing that I could do about it.

I tensed up when I heard the droning. It wasn’t quite singing, because it was a solid tone, but it definitely sounded like it was made by people. What had Harold said? ‘The chorus is ripe,’ and a ‘world lord’. I started going faster, less worried about being silent or being seen, and put my energy into trying to find the source of the noise. Eventually I reached the room that contained the temple and slowed down, leading with my pistol, ready to shoot.

When I peered into the room, I saw a chaotic scene.

Half of the temple attendants were standing stock still, feet shoulder width apart, heads tilted slightly upward, mouths open, each emitting their own tone, which was creating the unholy racket that I had been hearing.

The other half were standing around, mostly looking confused. I saw a woman trying to shake a man out of his weird behavior, and a man huddling next to the wall with his hands on his ears. The sound wasn’t that loud, not like someone shouting, but I could instantly see the comparison to a choir, especially in the way their subtly different takes on the same tone mingled together.

One of the attendants saw me and rushed over, looking me up and down, her eyes finally landing on my void pistol.

“What the hells happened to you?” she asked. She was human, with a bit of a punk look, brightly colored hair, an undercut, and a handful of piercings. “Do you know what’s going on, why they’re
I was attacked,” I said, pointing to the hole in my head. “Why are they doing that?” I asked, looking at the people ‘singing’. I doubted that she knew, but it was worth a shot. I was also pretty sure that I wouldn’t like the answer.

“We need to get you medical attention,” she said. “Medic!” she called, out toward the others. “Shit, I think both our medics are caught up in whatever’s happening.” She bit her nail for a moment, then looked back at me, taking in the claw marks on my face, the hole in my forehead, then the hand I was cradling.

“I can heal myself,” I said. “But there are wards stopping me. Get me to the place set aside for healing?”

“Sure,” she said. She looked around at the people who were stuck in place, droning on. “Gods I hope this isn’t an exclusion.”

The thought hadn’t even occurred to me; I was too focused on Harold and whatever his plans were. A storm overhead, powerful magic … usually the exclusions were spoken of in the abstract, without firsthand accounts of what it had been like. Maybe I had just been avoiding the oral histories or firsthand reports as worth less for my time than a dry accounting. Now though, I really could see it; this might be an exclusion in the making.

At least, if it was something big, dangerous, and viral, we had better hope that it got excluded instead of spreading over the whole world.

The attendant led me down another corridor of the complex, and I kept on testing my magic, trying to move the tattoos around, trying to pull healing from the bones, trying to control my blood. None of it worked until we got to a small medical office, which had most of the paraphernalia that you’d expect to see with both a blood mage and a bone mage. I immediately took hold of my magic and stopped the bleeding, then grabbed a bone off the wall and began an application of PHY-based healing.

“You’re a bone mage?” asked the attendant.

“Multimage,” I said. “When did they start with the yelling?”

“It’s not really yelling,” she began.

“One sec,” I said. “Does skin magic work in here?” But I already knew that it did, because I could feel my tattoos on me once more.

“It should,” she said.

I tapped Parson’s Voice to finally get back in touch with Amaryllis. “I’m alive,” I said. “Safe, for the time being. Harold has done something. About half the people here are standing still and just making a low, continuous tone.”

[Something is happening,] said Amaryllis. [Something bad. Heshnel stayed on the surface, and he’s saying the same thing. Fewer than half though. And there’s a storm that came out of nowhere, which has Raven worried. She thinks that it might be a summoning.]

“A summoning?” I asked. “Of what?”

[Good question.] Amaryllis replied. [Any idea how to stop it?]
Kill everyone making the tone ... but I couldn’t bring myself to verbalize the thought, and even if that would have worked, there were logistical issues, given how many converts there were. Had Harold given up on killing me? Had he pulled the trigger on his master plan? Was it already too late?

“I’ll think of something,” I said. “Leaving the comms on, but I’ll be out of range soon.”

“Well?” asked the attendant who had taken me to the medical room. “How are we going to help them?”

“I’m going to try some magic,” I said.

“Bring them in here?” asked the attendant, looking around.

“No,” I said, grabbing another few bones off the wall and draining them as quickly as possible, just so I would be topped off. “It’s a different kind of magic.”

We hustled back down the hallway and I grabbed the first person I saw that was continuing on with the droning, a humanoid with pointed ears that might have been a half-elf, except that those were so rare it would have been weird. I glanced at the attendant, trying to read her.

“Juniper Smith,” I said, holding out a hand.

“Polly Haines,” she said. “You can fix him? Somehow?”

“Maybe,” I replied. “I’m going to be sensory deprived. I’ll need you to watch my back.” I handed her the void pistol. “Shoot anyone who looks like they’re dangerous.”

She handed me the void pistol back. “I’m not going to kill anyone,” she said.

“Fair enough,” I replied, holstering the pistol in the cinch of my robes. “Shake me then, if it looks like I’m going to be killed.”

“Okay,” said Polly. “Good luck.”

I laid my hands on the half-elf and got my bearings, feeling the tendrils of magic coming off him, all manifestations or connections to the soul in one way or another, then dove down in, rising into the spirit as soon as I could, trying not to count the seconds impatiently.

It was the same as with Sonee, the orange lines descending down from above and connecting in to the machinery of his spirit, touching it at hundreds of different places. The difference here was that all the orange lines were completely taut, pulling straight ‘up’ and tugging at the threads they were attached to. I had no idea what that image might be a metaphor for, but it seemed like it was probably bad.

I pushed hard, trying to move myself along the orange lines, pretending that they were a track, or some kind of analog to the connection my own soul had to the souls of my companions. For a moment, there was no particular effect, but then I was set forward in a rush, back toward Harold’s core.

Everything was strained, pulled into a state of absolute tension. The fields of lines were all pulling on an ineffable something, taut and stretched, and every single one of the anchors he had in all the people he’d compromised were the same, pulling, or doing whatever the pulling was a metaphor for. I dove down into the morass of orange lines and began wreaking havoc again, as I’d done before, but there was so much of it to hurt, and my efforts seemed to be making barely more than a dent. After a few minutes of doing that to no obvious effect, I tried to push myself to a different conceptual
level, so that I could see what was happening to Harold’s soul, if he had one. If he had a soul though, it was locked off to me.

I pushed myself back out into the real world. More people had arrived, and they were standing around us. The droning on was continuing.

“Well?” asked Polly.

“He’s enraptured,” I said. “Connected to some outside entity that’s trying to do something terrible, possibly world-ending.”

“An exclusion would stop it,” said one of the people standing around. He didn’t seem to be comforted by that theory.

“At the cost of Li’o and the surrounding valley,” I said. “It would put a permanent end to the athenaeum. Come on, we need to get out of here.”

“No,” said Polly. “There are five hundred people inside that temple. Most of them would be trapped if we left.”

“Most of them are singing,” said one of the other attendants. “You can hear it if you go in there.”

“It’s not singing,” said Polly. “It’s … something else.”

“Droning,” I said. “Look, I know there’s an elevator, and I need to go up, as quickly as possible. It’s happening on the surface too.”

“Follow me,” said Polly, moving with purpose, and leaving the other attendants behind.

We turned quickly through the hallways, until we reached a large set of doors. Standing in front of it were two men, both of them droning on. I really had a feeling that I should be doing something about them, but there were so many, both in the temple complex and above it, that all my efforts seemed like they would be futile. How many people had Harold been able to grab from within the temple as they went through initiation? He’d been at this for months, so he probably had what, a few thousand of them just from the temple itself, not even counting however many he’d picked up through things like the meditation classes or kidnapping people to drug them into an altered state?

I had no idea how I was going to stop it.

“You and your people had better work to save them,” said Polly. She poked her head into the elevator and pointed at a thick lever. “Flip that, then wait, the gates will open back up when you’re at the top.” She backed away. “Good luck, mystery man.”

“Thanks,” I said. “Just as a note, you might want to tie up the droners. Whatever they’re doing right now, there’s a risk that they’re not going to be safe to be around when they’re finished.”

“Well,” said Polly. “Good to know.”

With that, I closed the door to the elevator and flipped the lever. It lurched in a way that I would have assumed was unsafe if I hadn’t had some exposure to Aerb’s elevators, and I anxiously waited for my magic to come back online so that I could be in fighting shape once more. Everything came back online all at once, with Amaryllis already talking.

[Repeat, Juniper, when you get this message, do not go to the surface,] said Amaryllis.
“Why?” I asked.

[Oh thank fuck,] she said. [And there’s an entity up there. We’re bailing as soon as you get out.]

“I’m taking the elevator up now,” I said. “Should be a while.”

[We’ll have Bethel go through the rock,] said Amaryllis. [Stop the elevator.]

“What’s up there?” I asked. I moved a storage tattoo over and pulled the vambrace from it, locked that around my arm, then turned the dial to the combat position.

[Something huge,] she replied. [Juniper, I know you might want to, but we can’t fight it. It’s hundreds of feet tall, dropping down from the clouds then going back up. There are dozens of legs and eyes that must be the size of human heads to be visible from street level. Joon, please, I’m telling you now that if there was ever a chance to stop this thing from being called down, we failed at it, and we can’t even begin to think about fighting it. This is bigger than us. The Empire is going to get called in. They’ve got thousands of mages and magic beyond anything that we do.]

“I want to see it,” I said. Something was tickling at the back of my mind, a thought that I couldn’t name, something on the tip of my tongue. I was worried that was a sign of compulsion or compromise, and while I waited for the elevator to reach the top, I dipped into my soul and spirit to give them another glance. There was nothing out of the ordinary there though, and I felt like myself.

When I reached the top, I came out into a security area, which was completely, ominously empty. I had my probability blade drawn and throwing dagger in my left hand, and moved cautiously through the checkpoint. Eventually I reached a more populated area, but it was only filled with people whose droning noise had let me know they were there. They were like the ones down in the temple, fewer of them, certainly, but displaying the same symptoms. I moved around them, cautiously, and went outside, where people were gathered around, looking up at the storm clouds up above.

It was tornado weather, the sky bruised and angry, no rain, but a whistling breeze. It was go-hide-in-the-cellar weather, the kind that always made me think about kneeling in the hallways at school. The clouds were roiling and low to the ground, not like I had ever seen them before, close enough that they were probably covering the tops of the hills that surrounded the valley.

As I was watching, a giant leg came down from the sky, knotted and gnarled, ending in claws as big as cars that dug deep into the earth. A second leg joined it, seeming to come from the clouds themselves, this one piercing straight through Canis Building some distance away. The creature descended slowly, but with the slowness of immense weight, other legs coming down to join the first two, until finally its bulk descended down from the cloud cover. People around me were screaming and running, and all I could do was stare. It had hundreds of eyes, long legs like a water strider, and a coating of short hair that moved without regard for the wind. Its head swept from side to side, and its many-jawed mouth let out inhuman screams in a handful of different pitches.

I looked at it with a distant horror. “Oh, that Mome Rath.”
“Alright,” said Arthur as we sat in the theater, waiting for the movie to start. “Dumbest possible cinematic universes, go go go.”

It was his third time seeing Captain America: Civil War, and my second. I had been feeling weird about our friendship, mostly because I was seeing Tiff behind his back. Every time it was just me and Arthur, I felt like I was utterly transparent, like he would just somehow figure it out and stop me, or confront me. I had gone over the conversation what felt like a hundred times, mounting imagined defenses to his imagined objections, preparing for the gamut of emotions he might possibly display.

“What does that mean?” I asked.

“I mean,” Arthur continued, then stopped. “Which part of it is giving you trouble?”

“‘Possible’, I guess?” I asked. “Like, I could easily imagine a cinematic universe where, say, Failure to Launch crosses over with Ghostbusters and, uh, Night Court or something. And that wouldn’t even be that bad.”

“Alright, fine, fine,” said Arthur. “Assume that they have to all be connected to each other somehow, either by genre, theme, plot, characters, or something like that.”

“Fast food,” I said. “Burger King, Ronald McDonald, Wendy, uh, the Colonel -- why is it that so many fast food places have human mascots?”

“That’s not even that dumb though,” said Arthur. “Like, I would watch the shit out of that. Did you ever see that anime cosplay version of the Colonel facing down Ronald McDonald?”

“Yeah, probably,” I said. I leaned back in my seat. The local movie theater in Bumblefuck had terrible seats, but at least we had a theater. “I think we have different definitions of dumb, if you think that’s not dumb.”

“Okay, so Alan Moore did the League of Extraordinary Gentlemen, right?”

“With Sean Connery?” asked Arthur with a frown.

“Ah, no,” I said. “I mean, yes, but Alan Moore does comic books, not movies. The comic books were actually, you know, good.”

“Ah,” said Arthur. “Wish they were easier to get my hands on.”

(It was always mildly surprising to me when I had read or watched something that Arthur hadn’t. He had an annoying way of playing it off sometimes, either putting me down for wasting my time on something that was objectively garbage, or making some excuse for himself, which was never wanted or needed.)

“Point being, that was an attempt to fit together a lot of the Victorian canon. Jekyll and Hyde, the Invisible Man, Dracula, stuff like that. So like, that, but for the worst possible time period. Needs research though. Of the top of my head, there aren’t many eras that have a distinctly terrible yet identifiable set of people or creatures to put into a cinematic universe.”
“So where steampunk, cyberpunk, et cetera borrow from an era’s aesthetic, you would borrow from their fictional characters?” asked Arthur. “I guess I can dig it. Seems like it would mostly end up lame rather than dumb.”

“Sure,” I said. “Or, hey, maybe we could do an author’s works? Like, Harry Potter meets up with Cormoran Strike, meets … whatever else she did?” I was starting to get into the groove of it. Arthur, being Arthur, surely had something in his back pocket, some incredibly dumb potential cinematic universe, which was the whole reason that he’d brought the subject up.

“I think that’s it,” said Arthur. “Hrm, you know, Stephen King is almost there, all on his own, that’s part of the conceit. Doesn’t really flow as well into movies that have a big team up at the end.”

“Discworld?” I asked. “But there was never really a crossover, they just existed in the same universe.”

“There were crossovers,” said Arthur. “But yeah, minor ones. And those aren’t dumb cinematic universes. I like where your head is at, with authors.”

“C.S. Lewis?” I asked. “Mix up Perelandra with Narnia and The Screwtape Letters somehow? That’s almost not insane.” (The Chronicles of Narnia were the only bit of fantasy that my mother had ever read, unless you counted the Left Behind series or a few dozen paranormal romance books that she kept hidden in her bedside table. C.S. Lewis had been my first fantasy author, and I’d always had a soft spot for him, more than Tolkien.)

“You’d need more,” said Arthur. “And I agree, it would probably work best to pick someone who’s got a lot of different works, if you’re going dumb. Hard to think of though, because so many of them just get into a rut writing the same thing over and over. Oh, Sanderson is another who’s basically done all the work for himself. We’re pretty much never getting movies though.”

“Alright,” I said. “You want dumb? How about a cinematic universe from a single poem?”

He grinned at me. “And how does that work?”

When we’d come into the theater, we’d been pretty much the only ones, but it had begun to fill, and I suddenly felt self-conscious about who could hear us and what they would think. “Nevermind, it’s dumb.”

“Joon,” he said.

“The Jabberwocky cinematic universe,” I said, trying to keep my voice low.

Arthur laughed at that. “For real?”

“Right,” I said. “So, vorpal sword is obviously our version of the infinity stone, right? And from there, we just need monsters that get their heads cut off. Like, horrible villains that are set up in their own movies, or monster protagonists.”

Arthur took some time to think about that. He seemed off his game, and a part of me instantly wondered whether he’d found out about me and Tiff, whether his hesitation and slowness was because he was putting up a front. It was probably paranoia, the kind that had been fucking with our friendship for months. “Alright,” he said. “Sell me on them.”

“Them?” I asked, not tracking. “Like, you want my Feigian outline of a dozen movies in phase one?”
“Jabberwocky is nonsense,” said Arthur. “Not nonsense, but, you know. So what does it look like, in your head?”

“Okay,” I said. “Here’s my pitch. Movie one is all about the vorpal sword, basically as it is in D&D, a thing that cuts off heads, which is more terrifying than I think the game or the community gives it credit for. Maybe first third is seeking the vorpal sword and then killing some monstrosity with it, and the back two thirds are about in-fighting among the initial band of adventurers?”

“That sounds terrible,” said Arthur. “Undercutting narrative for the sake of it.”

“Reservoir Dogs,” I said. “A heist movie that’s mostly about things falling apart after the heist. Anyway, movie two is -- give me a name from the poem?”

“Mome Rath,” said Arthur. “Though I guess it’s unclear whether ‘mome’ is an adjective or not.”

“Sure,” I said. “So movie two is all about the Mome Rath, this giant, skyscraper-sized beast, one that no one can think of unless he’s there.”

“Wait, memetic?” asked Arthur.

“Antimemetic,” I said. “Totally different. He’s got hair like fingers, he’s got --”

“What the fuck are you even on about with hair like fingers?” asked Arthur with a laugh. He could be loud. Previews hadn’t started yet, and some people looked at us. “Prehensile hair?”

“No,” I said. I held up a finger. “Okay, picture this finger as three links of a chain. Extrapolate that out for like, ten yards, then multiply it by a thousand. He’s got a full head of hair, like fingers.” I stopped for a moment as a thought caught up to me. “But like, randomly rotating the angle of each knuckle in his finger-hair, I guess, so that it doesn’t all go one direction.”

“Gross,” said Arthur. “Is this for a game? Is this spoilers?”

“Nah,” I said. “At least, probably not. If I use it, try to act excited.”

“I always do,” said Arthur.

“Anyway, the antimeme stuff is the best part, because that’s what the movie is built around. People remember their cities being destroyed, but they’ve got no idea what happened, no one knows what did it, or has any explanation, there’s nothing on the video cameras or whatever they’ve got to record things, it scrubs itself from reality unless you’re less than, say, a mile from it, and so on.” I paused as I tried to think through this. I was using my improv brain, a subset of my brain that had been finely honed by panicked attempts at keeping marginally ahead of the players when I was out of material for the night. “So the first third of the movie is about investigating these phenomena, and in the last two thirds, they have to fight it, but they have to make do with what they have, because if they get too far away, they’ll simply forget that the threat exists, not just forget, but they won’t be able to puzzle it out from the evidence that’s sitting in their notebooks.”

“Too much SCP for you,” said Arthur, shaking his head.

“Maybe,” I said. “But think about the stakes there, a giant kaiju, and the twist is that if you leave, you’ll forget about it, and you just have to depend on everyone else in its field to figure something out? Can’t direct resources to fight it, can’t call in help, can’t go grab your special whats-it that might do the job?”

“And you have like six more of those, right?’” asked Arthur.
“Oh, sure,” I lied, planning to think on my feet, not really worrying about being called out, because after years of gaming, Arthur would never do that to me. “Previews are about to start though. Don’t you want to give your pitch for worst cinematic universe?”

“Nah,” said Arthur. “After. Yours was already so ridiculous and disconnected from the base material that I think you might have me beat.”

But after the movie was over, we’d both forgotten about the subject, or maybe Arthur had just wanted to talk about something else. I sketched out a bit more of Mome Rath when I got home, along with some of the other giant beasts that might inhabit a Jabberwocky world, after I’d read through the poem a few more times and read some of the flavor text around the vorpal sword. It was idle worldbuilding for the sake of it, mostly because I didn’t have any real D&D prep that needed to be done. And yeah, maybe the dismissive way that Arthur had been talking about it had me feeling upset with him, and maybe I just wanted to show that I could do something with the idea. Not Jabberwocky like the poem was, but a world that was to the poem what the vorpal blade had been in D&D, an extension of the concept. I was hopeful that Tiff would get it, if no one else.

Five days after we’d been talking in the movie theater, Arthur got in his car accident.

I never did end up using Mome Rath though. He hadn’t made it into the worldbuilding doc, and so he was just sort of forgotten, like a little joke to myself, the antimeme that didn’t even show up in god’s description of all reality.

And maybe I did forget about him for real when I came to Aerb, but it was hard to say whether that was some latent antimemetic effect, or whether he just didn’t end up sticking right. All that he’d ever existed as was that one conversation with Arthur. I’d remembered the conversation, just not Mome Rath, a detail that had escaped me. It was hard to tell how much I should have expected myself to remember it, nine months after the fact. But in either case, as soon as I saw Mome Rath, the memory had come flooding back.

“Antimeme,” I said to Amaryllis as I ran toward it. “If we leave the area, we’ll forget about it, and we won’t be able to tell anyone. Phones and entads won’t work.”

[Juniper,] she began.

“We can’t call in the cavalry,” I said. “This is one of mine, and basically the only interesting thing about it is that it’s anti-call-in-the-cavalry, at least how I drew it up. It’s Mome Rath.”

There was silence from the other end for a moment as I kept running. Running toward the big scary thing, or at least one leg of it, the leg that had crashed down into the Canis building. Mome Rath wasn’t just forgotten, it was an incomplete creation, never fully fleshed out beyond a few physical details I’d given it. Would I just leave him at being a big antimeme? Probably not, but I would have to figure out what its weaknesses were on the fly.

[Where are you?] asked Amaryllis. Her voice was calm and steady.

“It’s got a leg in the Canis Building,” I said. “I’m going to climb. Almost there.” Its leg was as thick as a redwood, but because of the proportions, it still looked like a creature on stilts.

[Juniper, we should leave,] said Amaryllis. [Or you should wait for us.]

“No one will be able to stop it,” I said. “There should be uncompromised people left in Li’o, mages with some fight left in them. We need Grak up here for analysis and to make some wards. Might be able to ward against the memory effect?”
[I’ll check,] she said. [We’re on our way up. Don’t do anything rash.]

I had reached the leg that was sticking through the building and was staring straight up. Mome Rath was enormous, maybe the biggest thing that I had ever seen in person, and I was just going to, what, stab it in the face until it died?

Yeah, that seemed like what I was going to do.

(It was what Uther would have done. It was what Raven would expect me to do. Hells, it was probably what the fucking narrative wanted, a test that the Dungeon Master had set for me, for all that I gave a damn about that. But it wasn’t any of that pushing me forward, it was the fact that thousands of people were going to die if this thing wasn’t stopped, and the very real possibility that I was the only one capable of stopping it. It was the same uncomfortable feeling that I’d had when we’d almost left Valencia behind at Speculation and Scrutiny, but here, I hoped, more founded.)

(And I could see a path where I would wait around until Bethel got to the surface, then ensconce myself in a war council, where we would have endless debates and debriefs while people died by the thousands. Maybe it was seven agonizing days down in the temple that had me wanting to get moving sooner than later, or maybe it was just the knowledge that if the forthcoming climb was worthless, little would be lost.)

I ducked into the Canis Building, whose edifice had been smashed and whose doors were hanging open, and darted forward toward the leg, blades at the ready. I had to clamber over rocks and broken beams of wood to do it, then across one of the claws that was dug into the basement of the building. My heart was thumping in my chest. Mome Rath had lots of legs, which meant that if he was moving at a sedate pace, each would stay in place for a little while, but I wasn’t sure how long that would be. I rushed up to the face of the leg, which was covered in what looked like ultra thick slabs of bark, and sank my blade in, wiggling it slightly to make sure that it would hold. What I really needed, for a climb like this, was hooks and spikes, particularly to give my feet something to hold onto, but all I had was my Gardner’s Plate, and then, only in an emergency. With my left hand, I used the Needler to stab in, though it had a more difficult time sinking into the foot-bark.

I began my climb. The probability blade made me wish that I still had the Anyblade, which could have been used to hook and grip, wedging itself into a hole that it made. The probability blade, by contrast, was constrained in its purpose, with something of a mind of its own, that mind being primarily driven by conventional swordsmanship, cutting, stabbing, disarming, and parrying. Climbing? Not so much.

I made it five feet up, using only the strength of my arms and awkward footholds where I could find them, before I realized that I wasn’t using the Needler to its full power. I leaned back slightly, holding onto the sword for support, and began throwing the Needler upward. Each time I did, a copy of it stuck into the side of the leg, ready to be blown up with a twist of the handle. Instead, they made for handholds and footholds, awkwardly placed and not stuck in that tightly, but good enough to make the climb significantly easier, ready for me to plunge in deeper when I got to them.

(On a game-mechanical level, there was a Climbing skill, which Mary had, and I didn’t. I had half her skill, which left me in the low 30s, because Climbing was apparently one of the things that was canonically part of her character by whatever metric the game was using to decide what it meant for my companions to ‘keep up’ with me. Per Reimer, there were a few cases where skills overlapped, with the less relevant ones getting a percentage penalty to their roll, but adding to the main skill if both were present as a kind of synergy bonus. It seemed like a horrifying pain in the ass from a bookkeeping perspective, but apparently the bonuses were only invoked in special situations where life was on the line. The upshot was that my effective climbing skill was masterclass, better than
maybe any other skill I possessed, on top of some of the fundamentals of climbing that Amaryllis had taught me in the time chamber, when we’d done bouldering together.)

When I was a hundred feet up, the leg moved. It was dizzying to look down, and dizzying to look up, and blades weren’t the best handholds and footholds, which meant that I nearly fell. But the acceleration was slow, befitting the sheer amount of mass being moved, and I clung to the weapons I’d sunk into him, bracing myself. I had left a lot of Needler copies in him, but detonating them all seemed like it was unlikely to do anything.

The leg stopped moving much more suddenly than it had started, with the claws below me bashing straight through one of the campus buildings that I had never been in, housing for freshmen, if my memory of the map could be trusted. I was nearly thrown free from the sudden stop, but managed to shoot the vines out from my Gardner’s Plate in time to give me some extra support. I retracted the many vines back in as quickly as I could once I’d regained my handholds, because vine-time was a precious resource. After a handful of minutes of being out, they needed time to rest, and I didn’t have the ten minutes it would take.

(How many people had died in the last ten minutes? How many would die in the next ten? Hanging on the side of an enormous kaiju wasn’t the time to be thinking about that, but goddamn it this all needed to be stopped, as soon as possible, and holy shit recovering the bodies of the dead was incredibly important, lest hundreds be cast down into the hells, and I wasn’t even thinking about it, but those two I killed down in the temple were probably going to be tortured forever because I didn’t tell anyone they were there.)

My stomach churning, I continued on my way, stopping every once in a while to throw more copies of the Needler for desperately needed holds on the swaying leg. I finally reached the first of three knees and took a moment to catch my breath at a place with far easier holds; Mome Rath was fucking tall.

[We’re on the surface,] said Amaryllis. [Where are you?]

“On one of the legs,” I said. “A hundred fifty feet up, maybe two hundred, not sure.” I looked down at the ground, and my Range Finder virtue pinged. “Two hundred and twenty three feet,” I said.

[What’s your plan?] she asked.

“Keep moving,” I said. “Hit its weak points for massive damage. It should be just like Shadow of the Colossus.” A game that I’ve never played, mind you. “It would be nice if Bethel could, you know, fly up here and cut through it like a scythe.”

I continued on up, not waiting for a response, depending mostly on my superior climbing skill to carry me along. I had no real clue what I was going to do when I got to the top. How much would it actually matter if I destroyed his eyes? Did he even have a brain? Was he physical in name only? I was pretty sure that I could feel some amount of skin magic where I touched him, not that I had the ability to do anything with that magic. A brief attempt at accessing whatever passed for his soul had proved fruitless, without so much as a whiff of progress.

[Do you have a quest?] asked Amaryllis as I continued my climb.

“No,” I replied back. “Busy right now.”

[We’re flying up to you,] said Amaryllis.

I stopped climbing and looked out at the ground below me, trying to spot them. Eventually I saw a
speck that was pitifully small by the standards of Mome Rath, but growing with every passing second, not because it was getting closer, but because Bethel was reconfiguring herself. She was increasing in size, spreading out, until she was a sharp and pointed thing, more similar to an oversized fighter jet than to a house. At her maximum size, she was as big as the Palace of Versailles, though I could think of no immediate reason why she would want to be that large.

She moved on Mome Rath, firing lightning and cannonballs at him, getting closer and aiming directly for his face. He roared in pain and anger, rearing back slightly, such that he was only supported by a small handful of his legs. Despite that reaction, he didn’t seem to be overly affected by the assault.

I had been thinking of Mome Rath as a large, lumbering beast, slow but heavily armored, incapable of proving much of a threat to anyone fast enough to get out of his way, a destroyer of cities and creator of refugees, all in fitting with how I had designed him. That notion was laid to rest when he used his triple-jointed, reared-back legs to strike out. The scale of things, given how large Bethel had chosen to go, must have made it seem slower than it actually was, but it still seemed lightning fast, as claws went through the air so quickly I heard the crack of a sonic boom, too fast for even the raw speed of the Egress to dodge.

Instead, the claws went through Bethel, passing through her immaterial bulk, thanks to one of a few dozen entads that she contained within her. There was a thirty minute per day limit on that one, I was pretty sure, time that couldn’t be sliced into smaller chunks, and the clock had started ticking, which put even more pressure on us to get this thing done.

I continued on with my climb, pushing ahead, trusting to Bethel that she was going to work things out, slightly heartened by the fact that she was apparently suppressing her drives to wreak havoc.

Our whole group was in there, all of our entadic power, all of it focused into Bethel. I halfway wished that I were getting more from their end, but I had my own climb to focus on.

[We were hoping that we could get this done while immaterial,] said Amaryllis. Her voice was tight. [Seems not. All of the best options require ramming. In combination, they might be enough. We’re having a disagreement over whether to get you. Are you okay?]

“Yes,” I said. “Do it,” though she certainly didn’t need for me to make the call, and my guess was that it was Bethel who was running the show.

Raven had a sword that was made of frozen time, a sword which was inside of Bethel at the moment. Amaryllis had the flickerblade, whose entire blade could disappear and then remove matter from existence when it reappeared, and that sword, too, was in Bethel. And on top of that, Pallida’s trident. It was no mistake that Bethel had taken a shape that was at least vaguely like the point of a spear.

Bethel zipped forward at full speed, straight toward the center of Mome Rath’s immense mass above his dozens of legs. He shot his claws forward, toward her, and where they struck, they were cut, huge pieces falling down toward the city below. Before they could land, she struck center mass, and Mome Rath was split open at what passed for his belly, with Bethel partially wedged inside of him. His weight came down onto his legs again, from the raised up position he’d been in, crushing more buildings beneath him, and as he settled down, a black liquid dropped from the wound, whole Olympic swimming pools of the stuff. Bethel was clearly trying to push in harder, to open up the wound, and I saw a whole section of her blink out of existence, then blink back in, just like the flickerblade did, simply removing chunks of Mome Rath from existence.

Half of his legs folded up and inward, sharp claws pointed toward Bethel. They all struck at once, with the built up power I’d seen before, and the rumbling crack of multiple sonic booms reached my
ears. Bethel was strong, incredibly strong, but I was worried about how much damage she could actually take.

[Retreating,] came Amaryllis’ voice. [She had to use one of her wishes.]

It took me a moment to realize what she was talking about. One of Bethel’s entads, on the list that we’d gotten, allowed her three wishes each day, with the caveat that they could only be used to undo the effects of an attack on her just after it was launched. It was a get out of jail free card, one that had just been used. I watched as Bethel flew out from the wound she’d made, dodging attacks so quick I could barely see them in motion.

[Second wish used,] said Amaryllis as Bethel got clear. She was shrinking as she went, back down to a smaller size, with less of a surface to attack. [We don’t have a clear picture of what defenses are on top, but we might be able to avoid the legs if we attack there. Per Bethel’s report, that first attack left us at ninety percent casualties before she wished it undone.] Her words were clipped, her tone terse. [Thoughts?]

[I’m leaving the city,] said Heshnel. [I will regroup with you in Karatern, if you survive. This isn’t my fight.] I had nearly forgotten that he was on comms with us.

“I’m going to keep climbing,” I said. “There’s got to be a way to stop this thing.”

[Let me know,] said Amaryllis, again speaking so quickly and efficiently that it was impossible to read emotion from her.

“Start on search and rescue,” I said.

[On it,] replied Amaryllis. [We’ll leave killing Mome Rath to you.] It was hard not to read that as bitterly sarcastic.

Amaryllis tried to keep herself calm.

“I might be able to kill it,” said Bethel. “It doesn’t appear to be immortal. Flesh and blood, to a warder’s sight.”

She was standing in front of a dais, in a room that she’d apparently created for this express purpose. In front of her, within the bounding box of her illusion, was a recreation of what was going on outside, Mome Rath a huge, dominating figure above the city of Li’o, dozens of knobbly legs stretching downward.

Amaryllis was deep in consideration. Simply taking things on their base merits, they should all run. Mome Rath was too big, with no obvious way to kill it, with unknown capabilities that appeared to include striking out with claws that could move arbitrarily fast. But on the design level, Juniper was correct, Mome Rath likely had been designed to be beaten by a small group of people, in accordance with tabletop design principles. And on the narrative level, Juniper was the one to do it; the Dungeon Master would have conspired to make the entire thing about Juniper, in some fashion, because this was Juniper’s story, above and beyond anyone else’s.

So on balance, as she had thought from the first moment Heshnel had made his report, the answer was that they should fight it, even if they could simply run away. Of course, that answer wasn’t the same as the answer to the question of what her outward facing opinion should be. Juniper had asked her to think more on the level of base reality, hadn’t he? And putting forward a conservative position had, in the past, tended to spur him toward recklessness in a way that could be infuriating. In this particular case, setting herself on the object-level course seemed as though it would pay narrative-
level dividends.

“No,” said Amaryllis. “You took two lethal hits when you cut him.”

“And I can take another, before the wishes give out,” said Bethel.

“You took two last time,” said Amaryllis, trying to keep her voice even.

“And I suppose that void artillery would pose too much of a risk to Juniper?” asked Bethel. “Fenn’s bow has seven charges.”

“This isn’t the sort of situation where void is good,” said Amaryllis. “You could make a hole, but it wouldn’t be all that big. You’d be better off with raw kinetics, if you want to use the bow charges.” She turned to Grak, who had just returned from what Bethel had called the observation deck.

“Status?”

“Novel magic, from the dark end of the spectrum,” he said. “Wardable.”

“It would be a bad time to bunker down,” said Raven. “What did Juniper say?”

“He wanted us on search and rescue,” said Amaryllis. “Picking up the wounded, or even the still living.”

“I want to kill it,” said Bethel, staring down at her display as though there was nothing else in the world that mattered. “This creature has affronted me.”

“Juniper will kill it on his own,” said Raven.

“Juniper isn’t playing by Arthur’s rules,” said Pallida. She put an emphasis on the A in Arthur, and I saw the faintest hint of a reaction from Raven. “We all agree on that, don’t we?”

“No,” said Raven, jaw set.

“Not the time,” said Amaryllis. “Bethel, you know that I can’t stop you from attacking, but I want you to reconsider, because if you take a real hit, one like the ones that you wished away, we could all die.”

“I would survive,” said Bethel, still staring at the display. “Do you think it would be prudent to cut off its legs? Or to direct an attack at the top of it?” The display showed Bethel rising higher, twisting up into the sky, to just below the cloud cover. For all her movement, there was no sign of it from within her, one of the secondary powers of the *Egress*, which was currently sitting inside of a garage within Bethel.

“We don’t know what defenses it has on top,” said Amaryllis. “Do you think it’s just armor? Or something more?” The sheer speed of the claws was absolutely mind-boggling, well faster than sound, so much mass moving so quickly that it should have torn the creature apart. The fact that it could endure stresses like that, even if it was with its innate magic, spoke to how ungodly powerful it was. “I know how Juniper thinks, and I sure as hell know how he DMs. There will be complications of some kind if we try to hit it from an angle.”

“Meta-narrative,” Bethel began.

“No,” said Amaryllis, taking the risk of interrupting. “It’s nothing to do with narrative, it’s design speculation based on what we know of the designer. Juniper and I have talked for hundreds of hours about what went into making these things.” She pressed her fingers to the tattoo on her throat before
“Anyone could interrupt. “Juniper, when does Mome Rath date to?”

[Five days before Arthur’s death,] he eventually replied.

Amaryllis neatly slotted that into her mental timeline. It was incredibly worrying, because it implied that antimemetic threats had been retroactively wiped from Juniper’s memory the moment he’d arrived on Aerb. Juniper had never shared the memetic threats he’d created, for fear that they were dormant in his mind, and if the antimemetic nature of Mome Rath was any indication, there was the equivalent of several tons of undetonated ordnance in his mind (one of the many reasons that she’d kept every trip into his soul as brief and constrained as possible).

“Search and rescue,” said Amaryllis, speaking to Bethel. “I don’t want to risk all our lives just to find out what surprises the creature has. Target the destroyed buildings farthest from the creature, use ropes as tendrils to touch people, transfer them inside, I’ll be down in whatever medical bay you create, providing healing to the wounded and extracting the souls of the dead.”

For a moment, Bethel looked like she would object, and Amaryllis steeled herself for either an argument or for diplomatically backing down, depending on her displayed mood. Instead, Bethel nodded once.

“I’ll participate in the healing,” said Solace, and before she could say more, she completely disappeared. Amaryllis followed soon after her, a slice of blackness separating her time in the command room from her time in the med bay.

“She’s becoming more confident,” said Solace as she looked over the medical supplies in clear disdain. The place was enormous, in Bethel’s usual style, with hundreds of beds laid out and ready for intensive triage, nevermind that they didn’t have the workforce to staff it all. There were hundreds of bones ready for Amaryllis to use, most of their stockpile that they’d bought in bulk.

“We’re going to have to call in the tuung,” said Amaryllis. “The oldest of them will be capable of helping. It will be good field experience for them.”

<On it,> replied Bethel.

There was another slice of matte black, and then Amaryllis was standing in the wing that housed the tuung, in the entrance. Bethel could alter her shape and warp space at her leisure, which meant that banking years was much more easily accomplished, but the years weren’t free, not so much so that the tuung wing could be as large as Amaryllis would like it to be. The tuung and their teachers weren’t actually in time dilation, but it had been decided that they would be kept in the dark, in part because there had been no particular reason to inform them, not when it would all hopefully be a singular blip in their young lives.

“Aurora Protocol!” she shouted, trusting her voice to carry across the place. In an ideal world, there would be sound wards to keep some semblance of silence, but Bethel moved around with some frequency, and wards anchored to some particular moving thing (rather than the default reference frame of Aerb) were incredibly difficult, beyond Grak’s ability, at least at scale and for the desired durations. Amaryllis tried her best to have a royal bearing, and removed her helmet, tucking it beneath one arm. There was a fine mist in the air, mimicking the tuung’s natural environment. She hoped she looked the part of their leader; she checked in every year, always with attention paid both to her appearance and to the impression she was making.

The tuung came forward, with the teachers and staff behind them. Aurora Protocol was one of the general ones, only really signalling that there was going to be a non-combat deployment. Amaryllis took a moment to look out on the tuung, trying to make an evaluation of them. They were halfway
through their physical development, and so far as she had been able to tell, maybe a third of the way through their social development. If compared to humans, they weren’t quite teenagers, but tuung matured much faster. The group was mixed male and female, and thankfully, the females hadn’t yet developed the ability to infect the males with their scent (which was bound to happen, and would need to be treated as the highest crime that a tuung could commit).

They had never set foot outside of Bethel. The small, cramped quarters had been their home for their entire lives. Amaryllis had provided them with conditions as good as possible, with free time and entertainment, gourmet food, and every other luxury that could reasonably be fit into the complex, but it was still a small world, and for all that they could read about the real world or ask their teachers about it, they had been looking at Aerb through a pinhole.

“We’re facing an emergency for which we need manpower,” said Amaryllis. “We’re expecting hundreds or possibly thousands of casualties from a wide range of species. You’ll be working triage, carrying out simple orders but often acting under your own recognizance, especially in terms of setting up ad hoc command structures.” She hoped that the vocabulary would be intelligible to them; it should have been, by the standards that she’d set for their age. “The threat we’re responding to is ongoing. There’s a danger out there.” And in here, even if you stay. “Do I have any volunteers?”

Amaryllis felt a keen delight as every single tuung raised their hand.

Moments later, they had been placed into the medical bay, which was already filling with screaming, moaning people. Every trace of joy was washed away from her in a single cold moment, and she moved into action, giving instructions to the tuung, making things up as she went along, recruiting people who didn’t seem too badly hurt, trying to build some kind of structure to the proceedings with only vague outlines, made months ago, to go off of.

She didn’t have time to wonder what was going to happen with Mome Rath.
When the bats showed up, my first thought was, “Oh, of course there are bats.” We had never done a giant, multi-legged kaiju in my games, but if we had, I would have included mooks like that, because you have to have mooks. Because Mome Rath was so tall, and probably wouldn’t be taken down by someone cutting off all his legs (though you never know), he needed other active defenses. Besides that, mooks were always great if you wanted to tie the players up with something that they knew was meaningless, so that they had to make a choice between taking care of the mooks or striking at the heart of the real enemy.

(The bats probably weren’t mooks in the proper sense of the word. More likely, Mome Rath had some kind of ecology to him, and he would be covered with creatures that lived their own lives within that ecology, either symbiotic with Mome Rath and serving some vital function, or part of the food chain. Mome Rath probably wasn’t sending bats at me, the bats just lived on him, and had come with when he was summoned from wherever.)

I was past the third of his knees, to a place where the bark was gone completely, replaced with a bumpy, matte gray surface. There were numerous red welts the size of dinner plates. I touched one, briefly, and it felt firm and taut, like a zit that was ready to pop. I was pretty sure that something was going to happen if one of them burst, but it hadn’t happened yet. When I made a periodic stop to throw more daggers, I did my best to avoid the red welts. It was during one of those relative lulls that the bats showed up.

I say ‘bats’, but that probably doesn’t do them justice. Each was the size of a house cat, with long, whipping tails and sharp fangs. I was probably five hundred feet up the leg, with another hundred feet left to go, and I wasn’t really in a position to be fighting, not when I couldn’t effectively move, not when I had to keep one hand gripped on the blades that were plunged into Mome Rath. Maybe if it had just been one, I would have been able to deal with it, but there were thirty. I hadn’t seen where they’d come from, but I prayed that there weren’t more.

I was an untested still mage. I had the levels in it, but no practical experience, and while the game took care of a lot (a whole lot), it was sort of like having to consciously think about the controls when playing a new game. In comparison to what everyone else got, I wasn’t about to start complaining, but there was a little bit of lag at the beginning, and this really didn’t seem to be the time for the inaugural run. Unfortunately, I didn’t have much of a choice.

I leaned backward as they flew in, brandishing the probability blade in their general direction. When it was out in the open like this, it was a gray blur in the air, vaguely cone-shaped. As soon as the first of the bats came within range, the probability blade picked a form, that of a wickedly sharp kopesh, which sliced through the bat-thing at the perfect angle, cleaving halfway through his skull until I flicked the sword to the side to get the corpse loose.

Mome Bat defeated!

I killed more of them as they came, trying to hold off on the next part for as long as possible, but once the first handful were dead, they were too densely packed for me to be able to kill them all. That was when I began burning one of my three internal unicorn bones.

I was killed pretty quickly. Holding onto the side of the leg on dagger handholds, my probability blade to the side, and my mind focused on the burn, it was too much at once, and one of the bats slipped past my blade as one of his brothers was dying to it. He bit me with an unhinged jaw, driving his upper fangs down into my skull and his lower fangs up through my mouth, piercing my palate,
and then crunched down, breaking bone with what had to have been magically enhanced strength.

The second time around, I was more prepared, and the burn of the bones had faded in my consciousness to one of a handful of things I was juggling. With my focus properly split, I used still magic to stop his bite, causing the point of his fangs to make contact with my skin and no more. I stabbed at him with the probability blade, and was rewarded with a gush of hot blood across my face as he died.

**Skill increased: Still Magic lvl 21!**

**Mome Bat defeated!**

After that, they swarmed me, grappling me with tiny claws that weren’t much more serious than a cat’s, biting me with teeth and jaws that would have put a shark to shame. Where my Gardner’s Plate covered me, it offered some protection, but I felt a piercing pain in my thigh, and as I wildly swung my probability blade around, I looked down to briefly see that one of the bats had managed to get his teeth through the magical steel. The surge of blood was enough for me to know that he’d hit the femoral artery, and as I directed my attention to the flow of blood, another two of the bats managed to work their teeth through my armor as well.

I reset again. The unicorn’s magic wasn’t going to last forever, and I was constrained by that, but I was getting repeated messages about skill increases and bats defeated, and still magic was getting noticeably easier to apply, both because I was settling into it and because it was increasing in power.

Unfortunately, I still hadn’t found the winning path.

The more of them died, the easier it was, but I was gripping onto the side of a leg fifty stories up, barely able to dodge and parry, restricted in how I could twist and turn. One of the bats clamped his mouth down on my arm, and I headbutted him back, but the probability blade was the only weapon that seemed to be doing enough damage to kill them. Mostly, there were just too many. I extruded the vines from my Gardner’s Plate, wrapping them around the bats, and squeezing them tight, or having them hold me so that I could use both hands to slash away. I used the incorporeality ring to let the bats fly through me, but that was of limited use. I got down to the last five when one of them came at me from behind, using its fangs like a lance rather than to bite me. I felt teeth enter my skull, and used still magic to stop them from going further, but my brain wasn’t working quite right.

I reset without really meaning to, which probably had something to do with how the unicorn magic worked. I hadn’t died, I didn’t think, but something vital in my brain had definitely been hit. I went through the fight again, now marginally more familiar with where the bats were going, more in the groove of using all my abilities and entads at once, striking out with blood magic, bone magic, vines, blades, and a single shot of gem magic that I knew I was going to regret, even if it killed ten of the things at once.

I was vaguely surprised when I shook another bat off my blade and looked around for the next target, only to find that there were none. Below me, dead bats were still falling down, tumbling through the winds, bouncing off the leg that I’d climbed so far up. The battle had been short, and I hoped that there wouldn’t be another like it, but I wasn’t confident that Mome Rath didn’t have more where that came from. I healed the wounds I’d been given, including one place where a bat had punctured my upper arm, and the scratches on my face, then looked down at the destruction below for one dizzying moment before continuing my climb.

I was waiting for more bats, and trying to look out for them from my awkward position on the side of the leg. I was increasingly certain that there would be more of them, because given Mome Rath’s incredible size, there almost had to be. Too much of my attention was focused on more potential bats.
though, and not on the red welts. I didn’t notice them swelling until it was almost too late.

I had a split second to make a decision between burning another unicorn bone and trying to hunker down. Instead, I felt the slight tug of LUK 1 and let it carry me away. I kicked off from the leg, pushing myself backward and out into the open air, then began to fall. The welts began to explode soon after, spraying some kind of red mist through the air, just far enough away from me that none of it so much as touched me.

I fell, picking up speed, until the last little bit, when my tattoo began to burn away and slow my descent down to practically nothing. I landed, nearly feather-light, and grimaced at the lost progress.

“Back on the ground,” I said. “Died a few times up there, until it got too hot to handle.”

I looked over Mome Rath as I waited for Amaryllis’ reply. He was towering over me, and striding away. The climb hadn’t taken me that long, all things considered, since throwing the daggers had been the most time consuming part. My muscles weren’t even aching, thanks to repeated applications of PHY. There was absolutely nothing to show for it though. Mome Rath had visible injuries, missing legs that were very slowly regrowing, and a belly wound that was still dripping, but it had been Bethel that had done all that.

What am I even doing here?

My best, the answer finally came. Trying to kill this fucking thing so that it won’t keep destroying this city.

[We have four hundred wounded, with more on the way,] Amaryllis finally replied. [Give me a rough location and I can send Bethel to come get you. Then we’ll leave and let someone else deal with this.]

“No,” I said, tightening my grip on my weapons. “This is my partial design. I don’t know its weakness, but I know that any true method of finishing it would have some way that it could be defeated by, at minimum, a group of five mixed-class adventurers.”

[If you want to be dropped on top, Bethel might be able to do that,] said Amaryllis. [Unknown defenses though.]

“Likely significant,” I said. “Nothing can ever be easy. I still think small groups are the way to go, unless Bethel can deliver a very fast deathblow.”

[No,] said Amaryllis. [I’ve seen her map of the thing’s internals. It has bones and flesh, but the organs are nothing she can make sense of, and there’s no brain to plunge through, no hearts or obvious points where it could actually be killed.]

“Yeah,” I said. “Okay. I think maybe I can set things up for the killing blow.”

[How?] asked Amaryllis.

“I’m a multimage,” I replied. I gave one last look around me, then began running toward Mome Rath, using the Sanguine Surge to gather speed. I was nervous about what I was about to do, given how potentially dumb it was, and given that if it didn’t work, I might quickly end up dead.

[Juniper, how?] asked Amaryllis.

As I got myself beneath Mome Rath, I gave her a brief description of what I had planned, and she swore, then agreed to divert from their rescue efforts.
Before I could change my mind, I activated the Ring of Upward Bliss and teleported myself a mile up into the air.

I was up in the low clouds that were swirling around Li’o, the ones that had either brought or were a part of Mome Rath. I began falling at once, and used still magic to slow my descent to something more reasonable. I had a single copy of Prince’s Invulnerability which I could have used to slam into Mome Rath at speed, but without a proper target I was worried that all I would give it was a flesh wound, and Prince’s Invulnerability represented a significant expense, even given how large our war chest was.

When I saw Mome Rath from above, I knew that there were going to be problems. He had hair like fingers, covering his back, but sticking out from the finger-hair were large brown lumps that seemed to be moving all on their own, independent of the slow, swaying walk that Mome Rath was doing, more of the implied ecology of the gargantuan creature. I tried my best to angle for one of them, but this was only my second experience with anything like skydiving, and instead, I awkwardly landed in the finger-hair. The strands of finger-hair, consisting of thousands of knuckles each, were thick enough that I could stand on them without sinking in, which was good, because I didn’t know how deep they went.

I began hacking away at the finger-hair, slicing the probability blade through knuckle bone with abandon while trying to keep my eyes open for whatever countermeasures were roaming the top of Mome Rath. So far, I had seen nothing. I kept hacking away, trying to get down to the flesh below, which was my ultimate goal. I was blade-bound to the probability blade, and it cut quickly, but something was tickling at the back of my mind. There should be defenses on his back, big ones like the claws had been against Bethel, and small ones, like the bats and welts had been against me, death traps and mooks and things like that.

I was struck in the side of the temple so hard that the world momentarily went black. When I regained my senses, I had lost three quarters of my HP, and was bleeding from a heavy wound. My head felt lopsided and misshapen, like a potato, and I woozily spun around trying to figure out what had hit me. There was still nothing. I hadn’t seen anything when I fell, either.

“Shit,” I muttered. If I had less experience with these sorts of things, I might have chalked it up to something flying through the air, but I knew better. An attack from nowhere was a good indication of an invisible enemy, or in this case, a more thematically appropriate antimemetic one.

[Status?] asked Amaryllis.

I began swinging my sword through the air, Needler sheathed, probability blade held as an oversize, two-handed, monkey-gripped weapon, which extended its field by a good margin. “Enemies,” I said. “On Mome’s back.”

I watched the probability blade become material for a moment, its gray blur suddenly replaced by a steel cutting edge. It only lasted a moment though, before it was back to normal. Had I felt a pull from the weapon as it cut through something? I wasn’t sure. There was no blood on the blade either. I kept swinging though, going for the spot where the probability blade had struck before, and was rewarded with another change as it became a solid sword.

Mome Rat defeated!

It appeared in front of me like it had been there all along, a thing of claws and jet-black fur, the size of a man, with a thick, hairless tail swirling and twitching behind it. It was on par with the bats then, as far as what it took to kill it.
I was hit again, before I could revel in the victory. The hit struck the armor on my back, tearing some of it away, though I could tell the magic still held. There was a second rat, because of course there was, and as soon as I got to my feet, stumbling among the broken and bloody finger-hair, I began burning one of my precious unicorn bones.

I died not long after, from a hit that I couldn’t see coming, a rat that I could only assume was there. The unicorn’s power brought me back, as it had many times before.

I cut through the rats, one by one, looping through a handful of times so that I could find them, or so that I could dodge them. Each time I was hit, their location was revealed, even if I was killed, and the probability blade’s ability to take the perfect cutting angle made up for when my attacks were a little bit off. I got notifications from the game about skills hitting their caps, and tried my best to stay in the moment, burning through bones to keep myself alive, bones to keep my speed up, and bones to loop through a small window of time.

Eventually the unicorn bone lost integrity, and I allowed the loop to close, with another six of the rats dead in the space of a handful of seconds. I had no idea whether there were more or not, and I kept my sword in front of me, swinging it around like a lunatic, trying to nick one so that I could find it.

(The game notifications had been coming thick and fast, but they were a distraction, not worth the eyeballs they were printed on except to tell me when I’d killed a thing.)

[Coming down,] said Amaryllis.

I watched as Bethel flew overhead, her form about as small as it could be. Amaryllis appeared outside it and began dropping, slowing herself as she went, which answered the question about whether my companions would be able to use still magic through symbiosis. Raven and Pallida were next, with Valencia following quickly after, and then Bethel swung away, darting off through the sky at great speed.

“These rats are antimemetic,” I called to them as I burned END to heal myself. “You can’t perceive them, except indirectly, and not that much.” My sword, which I was still swinging, momentarily turned material, and I bounded forward, slicing through the air where it appeared to have hit. I was extraordinarily thankful that the effect was weak, and that I was still able to make inferences.

“We need to dig, now,” said Amaryllis. “Last wish was used. Bethel is to the winds.”

“Explosive stare,” said Raven. “If it gets desperate, it might use it on its own flesh.”

“Where’s Solace?” I asked. “Grak?”

“Solace is busy with triage,” said Amaryllis. “Grak is working on a ward weapon.”

“Fine,” I said. “Start digging. We need to get close enough to a bone.”

“I’ll be on killing the invisible rats,” said Pallida, randomly poking her trident through the air.

“Not invisible,” said Raven. “Unseeable. There’s a difference.”

“I can see them,” said Valencia. Her face was hidden by her red armor. “Must be magic, not information. They’re staying back.”

“Sure,” said Pallida, still poking her trident around, then swinging it in wide circles. “Just tell me where to poke.”
Clearing away the finger-hair was easy enough, if gruesome work. The ‘strands’ were just like fingers in almost every way, filled with bones and ligaments, with blood flowing through them. It wasn’t long before I was knee-deep in blood, in a pit that was four feet deep. I stabbed down with my probability blade and hit something hard as stone, and an experimental poke at it (the iron smell of very human blood making me very slightly nauseous as I stooped down) showed that I hadn’t made much more than a scratch.

“Raven,” I said. “Orb.”

The three seafoam green orbs appeared around her head, and with a thought, she set one of them straight down, through the pooled blood and into Mome Rath. I stood well back until she signaled that I was clear.

Mome Rath didn’t have a soul, not that I had been able to access, but he did have skin, blood, and per Bethel’s report, bones. I handed my probability blade to Amaryllis, then formed the Claret Spear, hesitating for only a moment before driving it straight down into Mome Rath.

I could feel my blood mingle with Mome Rath’s, and began applying the Bloodline effect immediately, reducing his PHY and my own at the same time. Five factor modifiers improved the bonus I could apply when our blood types were similar, and improved the malus when blood types were different. Mome Rath’s blood was barely blood, or maybe only blood because of the Six-Eyed virtue allowing me some leeway with definitions, but the upshot was that Mome Rath lurched beneath us.

“It’s working,” I said, though I was sure they didn’t need me to say it. “Guard me.”

I pushed my blood down deeper, trying to keep it directed, trying not to let it diffuse. I could feel myself getting lightheaded, and wished that I’d had the time to give myself a transfusion from the bags of my blood that were sitting back in Bethel. I could feel Mome Rath’s blood too, in with my own, distinct from it, pushing against me, and yet somehow I was still unable to feel his soul, if he even had one. Eventually the tendril of blood I had within him found what I had been searching for: his bones.

They were something like ribs, massive things that helped to hold his incredibly large structure together, even though he was an impossible creature of unbelievable proportions. I pushed my blood down rope-thick capillaries until I had latched firmly to the bone, then began to burn it for PHY as hard as I could.

**Achievement Unlocked: Stronk**

**Achievement Unlocked: Sanic the Hegehog**

**Achievement Unlocked: Unbreakable**

Burning someone’s bones didn’t directly hurt them. Maybe in another few months, Mome Rath would start feeling a bit ill, or if he was healing back, it would heal in wrong, but a burnt through bone was entirely survivable, if it was just one. The real point wasn’t that though, it was what I got from it, which was an absolutely enormous amount of PHY. I could feel myself become stronger, tougher, faster, and my perception of time became so warped that I was actually able to see the counterattack coming.

Mome Rath’s head rose up, his many eyes and mouths swinging around on a sinuous, snakelike neck, the only thing moving in a world that was, to my eyes, standing still. Raven must have seen my eyes widen, because she turned too: her entad allowed her to be boosted by the enormous power that
I was burning from Mome Rath’s bone. I pushed the extra PHY I’d boosted off the bone down the bloodline, attacking Mome Rath with its own power, then pushed still magic after, trying to stop him. He slowed, but not enough.

I activated Prince’s Invulnerability as quickly as I could, which shot golden spears of light at Pallida, Amaryllis, and Raven. I had tried to include Valencia too, but she wasn’t what the spell considered a person, and the magic didn’t even make an abortive attempt. I began burning my last unicorn bone at once, dividing my focus again.

Mome Rath’s eyes lit up, all of them, all at once, and the world exploded around us.

Prince’s Invulnerability made us and our equipment inviolable, just like the Li’o Temple was, immune to any damage whatsoever for the entirety of its six seconds. It was expensive, military-grade stuff, the kind of spell that a tattoo mage usually kept in his back pocket and never used because it was too hard to replace. There were entads that offered varying levels of protection to their bearers, but almost all of them had limits, limits which didn’t apply to Prince’s Invulnerability. It could even stop void, though the mechanism was unclear.

Unfortunately, it didn’t stop movement. I was blown from Mome Rath’s back, my body twisted by the blast just to the point of being mildly uncomfortable and no more. I was twirling so quickly that my brain would probably have been smeared around the inside of my skull, had Prince’s Invulnerability not protected against that. I couldn’t see anything but blinding white until I was well clear of Mome Rath, and even then, everything was whipping around so fast that I couldn’t make sense of it until I’d applied still magic to stop my rapid rotation.

Mome Rath had blown a hole in his own back, leaving a crater whose ejecta was still flying through the air, myself included. Maybe the damage was worse because I’d been feeding his own END back to him as a malus, reducing his ability to take the hit, but it was a terrible, ugly wound that had left him reeling and wobbling on dozens of unsteady legs. Enormous bones were fully exposed and blood was dripping down by the barrel, sloshing out of him. He had some kind of healing power, I knew that much, but I honestly wasn’t sure that he would be able to come back from what he’d done.

I let myself be pulled back by the unicorn magic, back to that frozen moment when I temporarily had the stats of a demigod. I moved to Valencia and grabbed her by the arm, but I had no idea how I was going to save her. The explosion hit again, and I was wrenched away, but I had been been gripping her tightly, tightly enough that I managed to hold onto her arm, but it was just her arm, the only part of her that Prince’s Invulnerability seemed to consider part of my equipment. The rest of her had been vaporized, the overwhelming power of the explosion obliterating the Red Armor of Arramor and Valencia along with it.

I reset again and ran at her, this time trying to use the Ring of Upward Bliss, but trying to tap it three times as I darted toward her at speed simply wasn’t doable, not with how comparatively slow the ring was to respond, not even with how insanely high my SPD was, and she was vaporized before I finished.

I tried using the Ring of Partial Incorporeality on her, but it wouldn’t extend that far beyond me, and when I was blown free of Mome Rath and got my bearings, I saw that I was holding just her upper half, the rest of her vaporized from the waist down.

I was running out of options.

I went into my soul and began making sacrifices. I had no idea whether they would hold through the small loop or not, but my memories did, and I hoped that was a good sign.
I dumped all 30 points of Library Magic, 21 points in Improvised Weapons, 21 points in Dual Wield, and another 9 from Debate. All 81 got funneled into Still Magic. When I opened my eyes I was spinning, and I didn’t bother to stop myself, I just reset, hoping that the changes to my soul would carry through, because if they didn’t, then it was very likely that Valencia was done for. The unicorn bone was degrading, and I didn’t know how many attempts I would get.

I rushed over to her, putting my full speed into it, and wrapped my arms around her, holding her tight and desperately stilling both of us with all my might. The explosion wasn’t blinding this time: I could feel the light and heat hitting us, stilled before they could do anything. I was low on blood, having lost the Claret Spear, and feeling faint, but as the force of the explosion died down around us, I felt a wave of relief. Valencia was still in my arms, still whole.

“Are you okay?” I asked, as soon as I’d let up on the stilling. I had worried that I would accidentally stop her heart, or the electrical activity in her brain, but she hadn’t gone limp. I kept us stilled in midair, just above the crater of flesh, as Mome Rath swayed beneath us.

“Yes,” she replied. “What happened?”

“Explosion,” I said. “Unicorn powers. You died a few times.” I paused, looking beneath us for a moment, then allowing us to drop. “You need to leave.” I looked up for a moment. “Amaryllis?”

There was no response.

I was standing with Valencia in the crater of flesh and bone, looking around me. Mome Rath’s head was nowhere to be seen, not beyond the crater wall. I had no idea how often he could use that explosive vision, but given that he hadn’t used it against Bethel the first time they fought, and wasn’t using it against the populace, I was hopeful that I had a minute.

I climbed over the torn flesh, which was already knitting itself, until I could get to a place where I was touching two of the bones at once.

“Steel yourself,” I said to Valencia.

I was feeling woozy, but I made another Claret Spear and jammed it down, not having to go terribly far to mingle my blood with Mome Rath’s. Then I reached out with both hands and began to pull on the bones, hard, draining them of PHY, funneling all of that power into the bloodline, using Mome Rath’s own monstrous strength against him. I was surely sending him into the negatives, which, per Reimer, should have meant that he would be trivial to kill, or possibly dead as a result.

I was about to ask Valencia to start stabbing at Mome Rath, given that he should have been pitifully weak, but before I could, I saw Bethel rising into the air, close by us, the shockwave of her passage through Mome Rath felt only afterward.

*Mome Rath, the Forgotten, defeated!*

*Achivement Unlocked: More like Wuss Lord, amiright?*

*Level Up!*

*Quest Complete: Mome Rath, the Forgotten - Mome Rath has fallen, his corpse evermore a record of his existence. (This quest cannot be repeated if another Mome Rath is summoned from beyond space and time.)*

*Level Up!*
I felt nothing from the level ups.

Mome Rath lurched beneath us and began to fall in slow motion, his bulk surely destroying buildings and killing people below him. I grabbed onto Valencia and stilled our motion, which wasn’t necessary for long, as Bethel scooped us up shortly afterward.

Ten seconds after the ropes had grabbed us, we were inside of Bethel, in her command room. Grak was there, but Solace was missing.

“Amaryllis?” I asked. “It’s dead. I’m going radio silence, talk to me if you have a location. Hopefully you made it out okay. Bethel can come grab you.”

There was no immediate response from her. Prince’s Invulnerability or no, the explosion had blasted us all apart from each other, and six seconds wasn’t enough to fall to the ground even without any upward force from the explosion. Amaryllis had the immobility plate, which meant that she was the best able to survive something like that. Whatever she was dealing with, I hoped that she was fine.

“Scan for Pallida and Raven,” I said. “I’m hoping that they survived.”

“They might not have?” asked Valencia, looking at me with wide eyes. She’d taken her helmet off, revealing a sweaty face, with hair stuck to it.

“I don’t know,” I said. “The physics isn’t strongly in their favor. Raven has her cloak, which might help her break her fall, but Pallida … I don’t know.”

I looked around the room, until my eyes fell on Grak, who was sitting down and looking off into the distance. I went over to him. “Are you okay?” I asked. “Where’s Solace?”

“She’s tending to the wounded,” said Grak. He swallowed. “I failed you.”

“You did?” I asked.

“I was preparing a warded weapon,” he said. “I wasn’t fast enough.”

“It worked out,” I said. I paused briefly. “You can do that? A ward anchored to some object? I mean, I knew that it was possible in theory, but I hadn’t realized that your warding had gotten good enough.”

“It’s not,” said Grak. “Clearly.”

I sat down beside him and patted him on the shoulder. “It’s fine,” I said. “Our work is far from done, and your expertise has been invaluable. I also got three level ups today, so if you weren’t able to do it ten minutes ago, that might have changed.”

“One for Harold, two for Mome Rath,” I said. “Probably because they were both threats far beyond my level.” I shrugged, though I was still wired from the feeling of victory. “It worked out. Should make things easier in the future. Actually, wait.”

I closed my eyes for three seconds and then went looking at my virtues. I had been busy, but as soon as I had defeated Mome Rath, I should have gone looking for them. I had overloaded Still Magic in order to save Valencia, which would let me know what the remaining virtues were, as well as confirm that Reimer was right about what lay ahead.
**Instinctive Halting:** So long as you’re not stilling beyond your capacity, still magic will be applied automatically to any and all effects when it would be beneficial to you. For more information on intent and volition, see LUK rules. This effect applies only when you are conscious.

That one Reimer had known, and normal still mages got something like it, which allowed them to stop incoming bullets even if they didn’t know what direction they were coming from (for example). In their games, still mages were mostly tanks, though they didn’t have any way of taking aggro.

**Partial Stilling:** Removes the penalty for attempting to still a single part of an object. Doubles the damage dealt to objects by stopping or slowing only half of them.

And that was what I would mostly consider a whiff, especially since it seemed to be the virtue for level 60. It had a handful of immediately obvious combat applications, so long as my target was moving, but still magic already excelled at close-quarters combat, and the additional bonus seemed minimal. If this was what the Aerb version of Juniper had come up with, well … Reimer seemed to have a dim view of how the game was balanced, and I was in at least partial agreement.

**Still Soul:** You can still any changes to your soul, including natural ones. When contesting an entad, roll against its i-level with a multiplier for reasonableness. When contesting a skill use, follow normal contest rules. For other cases, consult your Dungeon Master.

This was the one that I had highly expected to be the capstone. It was a known ability of a few best-in-their-generation still mages, and allowed not only an effective halt to aging, but immunity from all but the most powerful of soul mages. It was really, really good, but it was apparently available at level 80, not level 100.

**Meta Stilling:** You can still any game effect with a duration.

And there it was, the capstone of still magic. There were very few game effects with durations, at least so far as the revealed text went, and I would have to touch base with Reimer to see whether there was anything he’d failed to mention, but there were at least three that I was currently under: the Skilled Trade, Overcapped, and Double Overcapped afflictions were gradually reducing my bonus to Still Magic.

Or rather, they would have been, except that Instinctive Halting apparently worked with Meta Stilling, and was already holding Still Magic steady. So far as I could tell, I would have Still Magic maxed out for as long as I stayed conscious, which meant that the sacrifice I’d done to save Valencia would keep paying dividends for the rest of the day, or maybe longer, if I could get a copy of Kenner’s Eye.

“I’m getting a message,” said Bethel, frowning slightly.

“Amaryllis?” I asked again. I still hadn’t heard anything over Parson’s Voice, and I was trying not to get myself worked up over it. Bethel was looking, and there was very little that I could do. She had the means to survive. Raven did too. Pallida … we would cross that bridge when we came to it. I had been a bit put out by Heshnel fleeing, but now I was grateful that he’d been spared the danger.

“No,” said Bethel. “There’s an entad that I was forced to synthesize with, the sending slate. It was a paired entad, for communication. The other half was supposedly broken, but now it appears that’s not the case.”

“Oh,” I said. “Who has the other end? What’s the message?”

“Figaro Finch,” said Bethel. “He wants to talk.”
“Alright,” I said. “Can you, uh, project the messages or something?”

“He wants to talk in person,” said Bethel. “One moment, he just gave me an address.”

“He’s here?” I asked. “In Li’o?”

“Five hundred feet away,” said Bethel. “Now, zero.”

“The hells?” I asked.

Ten seconds later, Figaro Finch was standing in the command room with us, presumably snatched up by a rope and deposited there by Bethel. He seemed unperturbed by the sudden change in scenery. He came with friends, or at least people who Bethel had snatched up, all of them wearing Imperial-standard shimmerplate. Four of them were gimmals, a one-armed race with no mouth, eyes, ears, or nose (they sensed, ate, and manipulated gravity). The other was a woman with two small horns and light purple-red skin. I was shocked to realize that I knew her; it was Malus Lartin, my erstwhile ethics professor.

“What in the holy fuck are you doing here?” I asked.

“It’s business, not pleasure,” said Figaro Finch. I’d forgotten how short gnomes were. He was the only one of them in a suit rather than armor, which seemed like a terrible idea to me. “Now that the big guy has been taken down, we need to talk next steps. Harold is still here, in this city, and this time, he’s not running. We need your help.”
Raven felt an overwhelming rush of sheer physicality as Juniper began to burn through the giant monster’s bone, a sensation doubtlessly provided by the Anklet of Reactive Radiance. It was raw physical power, an immense amount of it, whose like she’d only felt perhaps a dozen times before (Uther’s many adventures being what they were). She saw Juniper darting forward, to Valencia, the only one of them not covered in Prince’s Invulnerability, and knew that disaster was incoming. With a fine instinct honed by decades of adventuring, Raven moved without thinking, toward Pallida, who was standing stock-still.

Raven grabbed Pallida’s arm, then took a stretched-out, glacially slow moment to look around and see what it was that Juniper was responding to. Her eyes found the enormous head of Mome Rath, his hundreds of eyes, his serpentine neck, and a look she dimly recognized as anger. The eyes lit up, the world exploded around her.

She kept her tight grip on Pallida, helped, perhaps, by the bone that Juniper was burning, or by the fact that Prince’s Invulnerability wouldn’t allow a tight grip to be undone if it would require such wrenching force that the protected individual might be hurt. The two of them went flying through the air, and Raven tried to keep her eyes open, alert to the world around her. In her experience, it was far too easy to go into pure reaction at a time like this, which was normally fine, if you were in a situation that you were trained for. When in the great wild worlds of adventure though, instincts couldn’t always be trusted, because sometimes they would lead down the wrong path. It meant balancing on a knife’s edge sometimes, trusting instinct because that was the only way you’d be able to respond fast enough, and keeping alert enough that instinct could be overridden.

They arced through the air and then began to fall. Raven felt it when Prince’s Invulnerability wore off, as the winds suddenly began to buffet them hard enough to hurt, and bits of detritus pinged against her armor. They had been spinning, but her cape had stretched itself out to put an end to that, because her Shadow’s Cloak was a good, loyal entad, one that often acted on its own when there were threats against Raven.

“We’re falling,” said Pallida, quite uselessly. She was shouting to be heard over the wind of their descent. “Don’t let go.”

“I won’t,” replied Raven. The thought hadn’t even crossed her mind. She looked behind her, at her cloak, which was doing its best to slow their fall. “Landing will be hard.” It was unlikely that they were going to die, but it wasn’t going to be the cushioned landing that a tattoo could have provided.

Uther had Thoughts about falling as a method of injury or death, as Uther had Thoughts about almost everything. Uther had thrown one of his early enemies from the top of a castle, back in the era of the Dark King, only to have learned later that same day that there existed a simple but expensive spell that might have been tattooed on him. Uther hadn’t quite flown into a rage, but he had castigated a young Everett for not knowing about it, and when the ensuing manhunt produced nothing, it had meant a long chain of events that eventually ended with the villain getting his head stomped in by a giant. After that whole affair had reached its conclusion, Uther had declared that anyone worth their salt would survive a fall, no matter how fatal and unrecoverable it seemed to be. It wasn’t quite the first instance of narrative thinking, but it was a rather stark one.

And then, much later on, when the normally circumspect and secretive Uther had progressed to becoming nearly impossible to talk to, after Vervain had died (or been killed, whichever way one chose to phrase it), it was then that Uther changed his tune. When heinous individuals came to his attention, the kind that he could kill with a snap of his fingers, he became more elaborate about their
deaths, less direct. The practice of trial by adversity dated to long before Uther, but he had brought it back, a tradition used in place of an execution. He sometimes said that he liked for someone to be able to prove themselves worthwhile, but it was a twisted form of worthiness. Half the time, he would sit them down for a talk afterward about how they had survived, and what they might accomplish. Memorably, Uther had thrown a thief from the top of a tower and declared it a trial by adversity after the fact.

In retrospect, perhaps that was his views on narrative taking hold. He had gone from being irate that a villain had escaped, to actively encouraging escape, knowing that there was some margin for error in these methods, a way of creating plot threads from nothing. Raven had read through *Degenerate Cycles*, his last real book, but she hadn’t fully put the pieces together until she was falling through the air.

Midway down, Raven had a rush of memories, all brief, all recent, all laid on top of each other, with Juniper the only variable. He had used a unicorn bone, it seemed, attempting to save Valencia from the might of Mome Rath.

They hit the ground one after the other, Pallida first, Raven second, both rolling to redirect their momentum, both standing up and stretching out to make sure that they weren’t too injured.

“Just like the good old days, isn’t it?” asked Pallida, looking up at the colossal body of Mome Rath, still standing, but swaying slightly. “Probably too much to hope that’s a lethal hit.”

“It wouldn’t have killed itself,” said Raven, staring up, trying futilely to get some understanding of what had happened.

“Healed back most of what Bethel did,” said Pallida with a nod. “Prince’s saved us?”

“Yes,” said Raven.

“Acceptable use of my funds, I suppose,” said Pallida with a sniff.

They watched as Bethel zipped through the sky, fully enlarged. Another counterattack from Mome Rath was a possibility, and she was all out of wishes. How many thousands were inside of her now? How many of them civilians?

After Uther had gone, Raven had gotten used to casualties, to hard choices, to operating without a safety net: that was what being the Head Librarix had entailed. It was tempting, now that she knew who Juniper was, to fall back into the old habit she’d had, the one where she consoled herself that Uther would fix things, that he would win, as he always did … but that was Uther’s unique brand of magic, and if it was ever to be true for Juniper, Raven couldn’t see it just yet. With Juniper, there was a chance he could fail.

Bethel sliced through Mome Rath, moving as fast as she could, the anticipated counterattack never coming. When she came out the other side, the spray of flesh and blood was visible from the ground.

“He was burning its bones,” said Raven. “I think that might have been --”

Mome Rath lurched as its many knees gave out beneath it. The creature was so big it appeared to be falling in slow motion, the alarming kind of way that very large things sometimes moved, so full of energy that a shockwave was surely coming, or if not that, then at least death and destruction for people close by. Raven had seen mountains lurch, oceans briefly rise into the sky, and in one case, watched a floating island drop to the ground. Mome Rath falling down wasn’t so serious a problem as those, but it was nonetheless breathtaking in the way those things had been. It crashed to the
ground and sent a fierce wind their way, one strong enough that Raven had to strain against the wind.

“The deathblow, yeah,” said Pallida. “Good on our boy.”

Raven stayed silent, waiting for the creature to rise. When it failed to, she let out the breath she’d been holding in. “Without our help.”

“More or less,” said Pallida with a nod. “That’s always how it was in the old days, wasn’t it?”

Raven looked at her. “I don’t want to talk about the old days.”

“Don’t you?” asked Pallida. “I’ll grant that I wasn’t there for as much of them as you were, nor do I remember them as well, given a lot of my involvement was when I was younger or older, but my recollection was that you loved to talk about the old days, back when the adventures were fresh. And even now, when we have the big meetings, it’s practically the only thing out of your mouth."

“I don’t want to fight,” said Raven.

“Who’s looking to fight?” asked Pallida. She swung her trident around for a moment, gazing at the tip, then planted the butt of it in the soft earth. They were standing in what was probably a small park, with bits of flesh and gore around them.

“You’re always looking to fight,” said Raven. “Always on the defensive, always looking to get your jabs in. You weren’t always like this.”

“Eh,” said Pallida. She looked around. “Do you think they’ll pick us up?”

“I don’t know,” said Raven.

They sat in awkward silence for a moment. Raven’s cloak fluttered behind her, in a wind of its own, patiently waiting to be useful.

“It’s always easier to be nice and good when things are going your way,” Pallida finally said. “Maybe I’m not, in this lifetime, but there were times when I was the best thief in the world, the best of anyone at infiltration, exfiltration, recovery of goods, I was an explorer of forbidden places, a spy, a saboteur … and the thing was, when that was who I was, it was always easy to just be cock of the walk, to let my deeds speak for themselves, but when I’ve got a life like this, and people ask me what I’ve done lately, and all I have to answer with is that I haven’t, I’ve just been sitting around waiting for various things, living off the largesse of past lives … I don’t expect you to understand.”

“You feel worthless,” said Raven. “Worthless and small, like you don’t stack up to others.” She looked at the corpse of Mome Rath. There had been creatures on it. It was probably too hopeful to think that they were all dead. Maybe mopping up would be her role in this. She grimaced.

“Yeah,” said Pallida.

“What was your excuse, five hundred years ago?” asked Raven. “You had deeds to your name, at fifteen. Uther had sent you on a half dozen missions that he couldn’t have accomplished by himself, the three of us,” she choked up slightly. “We had our own adventures, separate from him. We had done things. Maybe not so much as Uther had, but in any other age, we’d have been legends, we were legends in our own right. You didn’t have an excuse.”

“We were in love, Raven,” said Pallida. She’d been keeping her inky armor down, so that her pink skin was visible, face clear, but she turned away and let the armor cover her fully. “Seventeen
hundred years and you’ve never been in love? Never felt that pull toward another person? It’s not
some *excuse*, it’s -- how could you deny it, if you’d felt what I felt? How could you fault someone
for rushing headlong into a bad decision?”

Raven stayed silent. It was the season for old wounds, it seemed. In more than a hundred years at the
Infinite Library, she had eventually come to think of Uther only once or twice a day, and then
usually when he was relevant to their ongoing work. Granted, that was often, but nothing like it was
now among the Council of Arches, with people who had known Uther personally. And there was
Arthur, and old stories from Juniper, with new context brought to his adventures, new tidbits that
were either mentioned in Amaryllis’ notes or brought up directly by Juniper. If Uther *was* Arthur,
then so many of the things that Uther had seen on Aerb were echoes of the games he’d played.

There had been one too many unpleasant trips down memory lane.

“The worst part,” began Raven. “The worst part about your relationship with Dahlia was that it left
me out in the cold. I had kept wondering why the two of you were doing things without me, why we
had lost that sisterly solidarity. I would come back to camp needing someone to talk to about the
horrors I’d seen, or if not that, then at least someone to be there for me, someone to distract me, or
take my mind off what I’d seen. And you weren’t, neither of you, because you had cut me out of
your lives.”

Pallida looked off at the horizon and twirled her trident for a moment. “Yeah,” she said.

“Yeah?” asked Raven.

“What do you want me to say?” asked Pallida. “We were shitty friends. I should have told you that I
had a thing for Helio, I should have told you when we first kissed, I should have let all the petty
drama of it wash over you so that you could forget about the stench of death or the feel of someone
dying in your arms, I just … I wanted something for myself, something that I didn’t have to share.
And look, it’s lifetimes ago, barely remembered. I have a policy of not apologizing for things that
happened in past lives, because if I was going to do that, I would have to apologize for, I don’t
know, everything under the sun. I’m sorry. It’s a mealy-mouthed apology, because I’m not even
saying that I wouldn’t do it again, but maybe I would try harder to puzzle out a way through that
mess, if -- incoming.”

Giant bats were flying toward them, with razor sharp fangs, not quite so many of them as to
constitute a cloud, but enough that they were an identifiable mass.

At least that was a problem that would be easier to deal with than the personal.

“What the fuck, Finch?” I asked. “You came here ahead of Mome Rath?”

“Who?” asked Finch, raising an eyebrow.

“Mome Rath,” I said. “The big thing with a hundred legs that I just put down?”

“We don’t have time for this,” said Finch. He looked past me, to where Bethel was standing.
“Bethel, are we going to be stationary for a while?”

“We can be,” said Bethel with a nod. “There are still dead and wounded all over the place, including
lying under the enormous corpse. Better that you make things quick. You’re thinking of employing
the time out?”
“I am,” nodded Finch. He signaled to one of the gimmals standing behind him, using a quick gestural language that only used one hand. I watched closely, hoping to acquire it, but had no immediate luck. “Who’s going to be in it?” he asked.

“You, myself, Valencia, Malus, if that’s her name,” I said. “The gimmals too, if they have something to contribute. Bethel will be part of it, if she’s able, but I’m doubtful.”

Finch nodded, then signed more to one of the gimmal, which still didn’t trigger a ping for me, despite my active will. A one-handed sign language would be handy, even if the gimmal language was sure to have some peculiarities to it given their gravity sense and the fact they only had one arm. The gimmal responded to Finch’s signs by holding his hand forward, then moving himself around in a small circle, roughly ten feet wide. As he went, his hand began glowing blue, building in intensity and covering more of his arm, until it was glowing through the seams in the shimmerplate. I stepped inside it without being asked to; I had seen the spell used once before, back in Silmar City, under extremely different circumstances. When the spell was completed, we were cast into darkness.

“Alright,” I said as I lit my hand up. “Now we should have time.”

(I should note that at this point, I had been awake for something like a hundred and seventy hours, which included the Spelunker’s Stroll, two fights with Harold, dissociative meditation, another fight against three people who’d been sent to kill me, and all the business with Mome Rath. I had leveled up, which was a convenient cure for almost everything that ailed me, but it was still a very long time to be awake, and I was starting to feel the drag of it. I’d opted not to get Kenner’s Eye when we’d been tattoo shopping, something that I was deeply regretting now, given that Still Magic was sitting stock still at just above 100 points until the next time I slept. I wasn’t tired, but I was wanting for sleep.)

“Tell me what the fuck is going on,” said Finch.

“Fucking you first,” I said with an exasperated sigh.

“May I?” asked Valencia. She looked intimidating in the torchlight of my hand, spiked red armor and crown of thorns giving her a particularly savage look.

“Sure,” I said.

“Malus Lartin was a deep cover operative placed as a teacher at Sound and Silence by the Empire of Common Cause under the direction of Uniquities.” That much, at least, I had figured out, but I doubted that I would get any credit for catching on after she’d shown up in shimmerplate. “Her role was to write covert reports on what was happening here, as well as to be a first responder in the event of some emergency that the magocracy couldn’t or wouldn’t handle. That’s all in addition to other, less defensible covert missions that Uniquities would sometimes send her on as part of their attempts at wrangling power across Aerb.”

“She cheats,” Finch said to Malus, who was looking at Valencia with alarm.

“Be that as it may,” said Valencia. “At some point in the past six months, Malus -- that is her real name, by the way -- realized that something was happening, and sent back a report -- a series of reports -- which eventually found their way to Finch. Based on what I know of how Uniquities operates, Finch was read in on Malus and they began trying to gain more information about what was happening. Threat level would have been low enough at that point that it would be handled through cryptographically secure express mail. Eventually, the threat level was raised, at which point Finch decided that he needed -- wait, no.”
She had been watching Finch in the dim light of my flaming hand. “Got something?” I asked.

“Finch knows more than the last time I looked at him,” said Valencia. She turned to me. “Or maybe I just wasn’t looking closely enough.”

“It’s fine,” I said. “What does he know?”

“Uther was unique,” said Valencia. “Maybe the most unique individual in the entire history of Aerb. Our recent friends weren’t the only ones who noticed that. They weren’t the only ones who made plans, in the event that someone else like him came along.” She looked back at Finch. “I’m … not sure exactly when Juniper got flagged.”

“He’s confirmed now,” said Finch. “Or as close to confirmed as we think we’re going to get.”

“And that’s why you sent me in,” I said. “Without so much as a whiff of information or support.”

“No support?” asked Finch. “You had a seasoned veteran of Uniquities and one of the deadliest vibration mages on the plane, and in theory, you’d have had Malus too. You had your own team. And besides all that, you weren’t even supposed to be doing anything, you were deniable backup in case things went pear-shaped, off accomplishing your own goals that I’d fervently hoped wouldn’t intersect with those of Uniquities.”

“Yeah?” I asked. “And how did that turn out?”

“We don’t know,” said Finch. “Because like I said, Harold is still out there, and I’ve got a newflash for you, we still need to get him.”

“Harold, an entity that you told me fucking nothing about,” I said.

“Harold, who I didn’t know about until you went to that meditation class,” said Finch. “So there was no way I could have told you, even if I’d wanted to. And once you were exposed, you and yours were suspect, because there’s no way to tell whether or not Harold’s got to someone.”

“Tell me what you know,” I said. “If you want my help going after him, I need more than that stale report that Oberlin gave me. Finch, we sent you an emergency letter and you stonewalled us.”

Finch stared at me. “We don’t know how Harold works,” he said. “It’s something like soul magic, but the anolia can’t pick up on it, and there are no other methods we know of to detect it. Harold changes people. So far as we can tell, he can do small, subtle changes to one of them at a time, or big, ham-fisted changes to all of them at once. Did you happen to catch the makeshift choir out there?”

“Yeah,” I said.

“Big, ham-fisted changes,” said Finch. “But now that the big guy was summoned, you might have noticed that the choir has stopped, and all the people singing their little one-note song have returned to whatever it was they were doing.”

“I hadn’t noticed,” I said. “I was dealing with bigger things.”

“I don’t doubt it,” said Finch. “But the people Harold has his hooks into are to the winds now, capable of being steered by him at any moment, so long as both he and they stay in Li’o. And given that Harold is who he is, he’s going to use them again, more aggressively this time, and my best guess right now is that he’s going to summon another one of those things that you’re so proud of having killed.”
I almost, almost said something boastful and dumb like ‘well then I’ll just kill the second, and the third’, but I wasn’t so awash in my victory that I could forget the sheer destruction that Mome Rath had brought down on Li’o and the athenaeum. When his body had come down, it had flattened buildings, and before that, he had been doing targeted destruction. Li’o might recover, eventually, but I had no idea what the death toll was sitting at. More worryingly, the hells toll was also probably pretty high, given how total the destruction was, and how difficult it would be to get to some of the bodies.

“And who is he?” I asked. “What does Harold actually want? I’ve heard what he had to say, but it was, frankly, nonsense.”

“You talked to him through one of his puppets?” asked Finch.

“No,” I said. “I talked to him when he tried to get in my head. It didn’t take.”

“Then you know a thousand hells more than I do,” said Finch. “I spoke with him once, shortly before he was ported out. Seemed like a snot to me, typical end-of-the-world cultist but with a heap more power behind him, grabbing onto someone’s head to force out words. Tried to recruit me.”

“Yeah,” I said. “Me too. He talked about the World Lords, which Mome Rath seemed to be one of, and told me that he was trying to bring about the end of the world. Not sure how he thought Mome Rath was going to do that.”

“What’s a World Lord?” asked Valencia, staring hard at Finch. I briefly looked at Malus, who had her eyes fixed on Finch.

“Really starting to not like you very much,” said Finch, frowning at Valencia. “Fine. One of Uniquities’ many duties is containing the World Lords. If three of them get out at any given time, it’s supposedly game over for Aerb and every plane with even a remote attachment to it, hells included. No real details on the mechanism, and obviously no proof that’s true. The identity and nature of the World Lords is classified beyond belief, and most of it is guesswork, but there’s already one of them, living in an exclusion zone.”

“Fel Seed,” I said.

Finch stared at me. “Not a lucky guess?” he asked.

“Why?” asked Finch, raising an eyebrow.

“If you go more than a mile from him, you forget about him,” I said. “Can’t think about him, can’t remember him, probably some other stuff, none of it confirmed too well, but I’m pretty confident in it. I’m pretty sure we’ll be able to remember the corpse, but maybe not even that if another is summoned. He seemed intent on destroying the city, but if you’re right, then maybe the worst case would be that he went off into the countryside where everyone would forget about him. And then we would be one World Lord away from total destruction. If you’re right.”

“So you’ll help?” asked Finch.

“I was always going to help,” I said.

Finch had some stories about Harold, told as quickly as they could be, before our limited supply of
oxygen ran out. Valencia interjected a few times, when he was being loose with the truth, and sometimes he would correct himself, while other times he would mutter something about classifications or information hygiene, then continue on.

Harold had been a thorn in Uniquities’ side for a long time, and building information on him had been difficult. It had been as Oberlin said, little hints and clues here and there, the motif of the flaming man appearing incidentally in various, seemingly unconnected places. Every time there was some evidence of Harold, it was more information added to the pile, more information about how he operated, who he was, what he wanted, and what his limits were.

In brief, Harold operated like a more powerful soul mage, one that anolia couldn’t detect, and one that could operate without needing touch. His modus operandi appeared to be infiltrating or co-opting cults of various persuasions until they were working towards his goals, which very much appeared to be the end of the world, though the justifications for it by cult adherents varied, leaving Harold himself somewhat opaque. Like many soul mages, Harold had a solid core of carefully cultivated and meticulously sculpted supporters, people who moved around with him when he inevitably fled from one failed attempt at ending the world to the other.

There were a few scary things about Harold, from Finch’s perspective. The first was that he left virtually no trace of himself. When he bugged out, he bugged out hard, completely ditching whatever project had been in the works. Since his normal mode of operation was to not have anyone actually know that he was there, there was very little sign when he left. Second, his geographic range appeared to be pretty damned big, all things considered, which meant that he could potentially settle in with a cult that was on the other side of the city from the place where he was physically present, which in turn meant even less sign of him. And third, maybe most importantly, Harold never stopped. There was no gap in his activity whatsoever: as soon as he’d fled from one failed plan, he was on to the next, starting the same day, if that was feasible. He didn’t take breaks, and he didn’t seem to have needs, or at least not anything that would slow him down. He was just incredibly bloody-minded about the whole world ending thing.

Fortunately, Harold didn’t seem to be very smart. He didn’t tend to iterate on plans that were inches away from working, and he very rarely aimed at local destruction of any kind, nor did he put much effort into weakening the institutions or people that were constantly trying to stop him. That wasn’t to say that he lacked a faculty for long-term planning, but there were ways in which his various plots to destroy the world could have been enormously improved by having a human advisor.

“He used to run at the first sign of trouble,” said Finch. “That he’s not doing that now should be incredibly concerning to everyone. Maybe he knows that he’s blown, maybe he’s reached some critical mass of people, maybe he’s finally taking the advice of someone smarter than him, I have no idea, but if thousands of singers were enough to summon the big guy, what’s to say that he can’t do it again?”

“Nothing,” I said. “Or, maybe just the total number of people he’s got available.”

“And if I were Harold, I would be building back up to full strength,” said Finch. “He can work on anyone with a sufficient disconnect from reality, and if he does have a mortal advisor, they probably would have told him to do some things that he should have done years ago. Putting drugs into the tap water, kidnapping people and forcing them into altered states, all kinds of things. We’re pretty sure that he’s rate limited in what he’s able to do, but --”

“How do you know?” asked Valencia.

“What do you mean?” asked Finch.
“You’re uncertain that it’s true,” said Valencia. “I wanted to know what led you to that conclusion.”

“We fought him,” said Finch. “Last time he tried some shit like this, he got close, close enough that we were breaking down doors in order to stop the ritual-in-progress. It wasn’t the singing, it was some other attack on the world, rune magic, near the Lexian forge. As we went in, we were facing down singular threats, one after the other, low-tier mages, sometimes twos and threes, but usually not. The clairvoyance team assigned to the operation said it was a sudden change, individuals called to action. Could be something else, but yes, our after-action analysis was that he was turning them into soldiers, one by one, as quickly as he could.”

“All shit you could have told me before I went to S&S,” I said.

“Again,” huffed Finch. “I didn’t know that it was Harold until you found out that it was. And there was no way that I was bringing you in on this, not when it’s so far outside of your demonstrated training and abilities.”

“It’s also against protocol,” said Valencia. She turned to me. “If they thought you were the next Uther, they would keep you at arm’s length, because institutions rarely survived contact with Uther untouched.”

“Yeah, if he were here, he would tear Uniquities to the ground, no doubt,” I said. “Deep cover agents working against the athenaeum, ill-considered nation-building projects, subverting international diplomacy and the rule of law, operating outside the purview of the consent of the governed? Doesn’t seem like the kind of thing that he’d let stand.”

“Uther was no saint,” said Finch.

“I know,” I said. “But I’m probably more familiar with his biography than you are.”

Finch snorted. “I very much doubt that,” he replied.

It wasn’t really the time for retorts, so I let it drop. “Point being, if we’re going to be working together on this Harold thing, I need to know that you’re not keeping anything from me.”

“There are things that I know that would literally melt your brain,” said Finch. He tapped the side of his head. “There are things in this mind that would make the very world scream in agony. You literally can’t know everything that I know.”

“Fine,” I said. “Infohazards and other memetic threats aside then. We’re on the level?”

“As much as we need to be,” nodded Finch, which seemed like about as much assurance as I was going to get from him.

“He doesn’t trust you,” said Valencia. “But he trusts you enough that you should be able to accomplish this together.” She looked at me. “He’s on the side of good.”

“Good,” I said. “Then we should get out of this bubble and go track him down. I assume you have a way to do that?”

Finch shifted uncomfortably. “Yes,” he said.

“He’s consulting with Doris Finch,” said Valencia.

“How in the hells did you know that?” asked Finch, staring at her. “I can buy that you have powers, incredible powers, but I’m not that transparent, your special ability doesn’t make you that good at
connecting the dots.”

“Special ability?” asked Malus, looking between us.

“Long story,” I said. “Finch, you’re using Doris’ probabilistic vision thing?”

Finch grit his teeth, then nodded.

“And it can help us to find Harold?” I asked.

Finch nodded again.

“One of his cultivated associates, actually,” said Valencia. Finch gave her a nasty look. “In the interests of disclosure.”

“Fine,” I said. “We can have a long conversation about all that at a later date, so long as Doris is willing to play ball.”

Finch grunted once, then gave a quick gesture to the gimmal who had cast the spell. The blackness around us dropped, and I was back in the command room again.

“Need me to kill him?” asked Bethel.

“No,” I said. “Finch, do you have coordinates?”

“I have a spread,” said Finch. “One second.”

“Oh, allow me,” said Bethel. She splayed out a hand to her left, and just within the bounding box of her illusion, a map of the city of Li’o appeared, with a section of it colored in like a heatmap, red in one particular building, with orange surrounding it, the whole block in yellow, and everything else in blue. “I can have you there in twenty seconds.”

“The people Harold has are his captives,” I said. “I’d really prefer to keep them all alive, if possible.”

Bethel gave me a slight frown. <Can you do this without me?>

<Yes,> I said, hesitating only slightly. <If we have to. Not feeling up to it?>

<Are you trying to goad me?> asked Bethel, her tone quizzical.

<No,> I replied. <Just wondering. I know you’ve been operating outside your normal parameters.>

<I’m not a robot, Juniper,> replied Bethel. <But yes, I have thousands of strangers inside of me at the moment. I’m trying to track and watch them all. It’s unpleasant.>

“Everything okay?” asked Finch as Bethel and I carried on our silent conversation.

“Perfectly fine,” I said. “Just having a chat.”

“They do that sometimes,” said Valencia. “I wouldn’t worry about it.”

<I understand,> I said. <You’ve been doing good work. I’m pretty sure that you got the killing blow on Mome Rath. And as for Harold, I’ve got more power right now than I’ve ever had. Any word on the others? Pallida, Raven? Amaryllis?>

<Pallida and Raven, yes,> replied Bethel. <I’ll fetch them shortly. Amaryllis, no.>
I went down into my soul and was relieved to see that the thread was still there. I raced down along it and looked at her soul for a moment, then down into her spirit to make sure that it was okay. So far as I could see, she was just as she’d been when I had tamped down on the paralyzing meme. All that was comforting, in a way, but it didn’t explain why she wasn’t responding to Parson’s Voice.

“Alright,” I said, coming to. “Amaryllis is presumed alive. As soon as Raven and Pallida come in, we’ll hit Harold’s compound hard and fast.” I looked to Bethel. “You’re grabbing them soon?”

“Hrm,” Bethel replied. “It would appear they’ve run into trouble with the remains of Mome Rath.”

“Remains?” I asked.

“The creatures that inhabited it,” said Bethel. “They’re strangers in a strange land, one they might adapt to.”

I closed my eyes for a moment. “Fuck.”

“Creatures?” asked Finch.

“Mome Rath wasn’t just a giant beast,” I said. “He was an ecosystem all his own, and some of the things living on him are tough enough to tear through shimmerplate, if that gives you any idea what kind of problem Li’o is going to be dealing with.”

“How contagious?” asked Finch, narrowing his eyes. “Li’o is pretty much toast, but could these creatures spread? Breed?”

“No idea,” I said.

Pallida fought with her trident, and Raven with her sword. They were both world-class fighters, both with top-of-the-line entads. There were, unfortunately, a lot of the bats, and they moved rather fast.

The bats weren’t coordinated, which was a relief, and they didn’t seem to have the force necessary to bite through Raven’s banded armor, though she could feel it flex (worrying, given what forces it was capable of withstanding). Unfortunately, there were too many of them, and their bite gripped tightly, which meant that Raven soon had bats clamping down onto her arms and legs, beating their wings, pulling at her and putting her off-balance, even as her sword cut its way through more of them. Her amulet protected her head and face, her cloak whipped around and strangled any that tried to get behind her, but her hands were unprotected, and eventually one of the bats sank its teeth in, piercing straight through her palm.

Pallida was there in an instant, stabbing through the bat with her trident, heedless of the danger to herself. They fought back to back for a moment, clearing each other, slicing and stabbing in a coordinated way, inches from injuring each other. In truth, that was how they had always been best, when they were working together with purpose, instead of talking. They probably would never have become friends if not for the fact that they were permanently beset on all sides by enemies that needed to be dealt with, but those had been their circumstances.

After two dozen of the bats were dead, no more seemed to be coming, and Pallida speared through the last of those that were hanging onto Raven.

“Just like the old days, eh?” asked Pallida, panting slightly and allowing her armor to come down and show her face. “You took a hit there -- here, I’ve got a fairy.” She reached into the inky black
armor and pulled forward a dead marzipan fairy, from the jar that Uther had used once upon a time until it was superseded by better entads and more powerful magics. Raven ate it down, swallowing as few times as possible: marzipan healing had some bad associations.

Not long after, before their breathing had returned to normal, Bethel descended down from the sky, extending long ropes that wrapped around them, and, ten seconds later, put them inside.
I was worried about Amaryllis, though I was pretty sure she wasn’t dead, at least based on the line to her soul. There wasn’t much to be done though, so instead, I focused on my new powers, their implications, and the ways that I could use them.

Meta Stilling was the capstone, and by implication, the best of the Still Magic virtues. The text was simple and short, at least as far as virtues went: “You can still any game effect with a duration.” As far as munchkinry, there were two big concerns. The first was sleep, or rather, a loss of consciousness, which was what allowed Meta Stilling to continually function via the Instinctive Halting virtue. As soon as I went to sleep, all the penalties that the sacrifice had given me would resume their function, which would lose me my current Still Magic. I was good on sleep, but kicking myself for not taking Kenner’s Eye from Amaryllis; it had been one of the tattoos that she’d managed to recover from Everett’s body before his skin had completely lost its magic. There were other, more permanent solutions to the question of sleep, including training with the Elon Gar, but all that would have to wait until later, when it was a point of actual concern. It was possible that I could get Kenner’s Eye from someone, or have it tattooed on me, but I would have time for that after the Harold thing was taken care of.

As for the effects with a duration, I would have to consult with both Amaryllis and Reimer on it, but a quick look through the game interface found only a few examples of explicit durations. The Icy Devil spell, which I always wore a copy of, could allow me to chill things indefinitely, which seemed neat. But as I looked at it, it dawned on me that there was a different tattoo with a very definite duration, one that I had used while Meta Stilling should have been in effect.

Bethel, is Prince’s Invulnerability still active on me?> I asked, careful not to verbalize it with Finch still in the room with us.

<Yes,> said Bethel. <Intriguing.>

<Probably not permanent,> I said. <But it’s much more permanent than it normally is.>

The more I thought about it, the more I began to get worried.

“Cleregore,” I said, looking down at my note. “After you spend the short rest testing the abilities of your spear, you find that it allows you to teleport to it with a thought. Mechanically, you can do it as a reaction so long as you’re attuned. In addition to that, it can be collapsed to the size of a pencil, then expanded at will. Uh, expanded at will back to its original size, not as big as you want. Oh, and it’s got the returning property.” Giving out loot was one of my favorite parts of being a DM, mostly because it was the one thing that was guaranteed to actually make them happy, in a way that monsters or NPCs rarely did.

“That’s busted,” said Craig with a smile.

“At this level?” asked Tiff. “Seems like it. I thought that teleportation didn’t come until later on.”

“It doesn’t matter,” said Reimer. “I think you took that discussion about power level too much to heart. Joon doesn’t give a fuck.”

“It’s true,” said Arthur. “We once got flying surfboards at third level.”

“In retrospect, it was kind of a nightmare,” I said.
“A nightmare for the one guy who fought in melee,” said Reimer. “Still pissed about it. Point being, it’s Mario Kart rules: if you get a bunch of neat stuff, you get maybe one encounter where you get to stompe face, and then the enemies start adapting to your tricks, or you start running into weird circumstances where your neat stuff doesn’t work, and you’re back at baseline.”

“I’m not really understanding the Mario Kart reference,” said Tiff.

“Motion to adjourn so we can play Mario Kart,” said Craig, raising his hand.

“Overruled,” I said. “Or denied, whichever.”

“That week of mock trial you did is really showing its worth,” said Arthur with a snort.

“The AI in Mario Kart is designed to adapt to how well you’re doing,” said Reimer, picking the thread back up. “You get in first, they’ll all speed up and be right on your tail, or zooming past you. You fall behind to the back of the pack, the leaders will slow down. Pretty simple to notice, if you’re looking for it. You can still win or lose, but the game does a bunch of stuff to keep it close no matter how you’re doing.”

“And Juniper does that?” asked Tiff, giving me a skeptical look.

“Worse than that,” said Craig. “Sometimes he breaks things if you abuse them.”

“I don’t,” I said.

“Coin of Fates,” said Reimer. I was pretty sure he’d been waiting to spring that one on me.

“Oh,” I said. “Fine, there have been one -- or two, or three, I don’t want to get into it again -- times when I’ve made some serious mistakes in either house rules, items, monsters, or whatever else, and I’ve had to take some corrective measures, and I usually do that in-game instead of just pulling you all aside and saying that I made a balancing mistake, because I tried that once, and it went terribly.”

“It’s better in-game,” said Arthur. “No need to break the suspension of disbelief if you can help it.”

“Sure,” I said. “And I tend to agree.”

“Sorry,” said Tiff. “Can someone regale me with the story of the Coins of Fate?”

“Just one coin,” said Reimer. “Coin of Fates. You could ask a question when you flipped it, and it would tell you weal or woe with 62.5% accuracy.”

“Oooookay,” said Tiff. “So you used it for everything? Or, uh, just flipped it a bunch of times and tried to do some math?”

“Joon wouldn’t let us use it on repeat,” said Reimer. “Though I’m 62.5% confident that he didn’t think of it beforehand. There were a bunch of rules.”

“It was annoying,” I said. “Literally every corridor they were going down, every NPC they met, every potential encounter --”

“So Joon made up this whole angelic superstructure that was getting really annoyed by us hogging their bandwidth,” said Reimer, which wasn’t actually the flavor I’d been going for, except that it was meant to be a tragedy of the commons. “They came down, told us off, and they didn’t take the coin, but it was throttled from then on.”

“It made sense in context,” I said.
“Kind of,” said Arthur.

“Point being, if Craig’s new spear looks overpowered, then either we get some situations that really challenge it, situations that make it worthless, or it gets stolen, lost, destroyed, confiscated, whatever,” said Reimer.

“So … why munchkin?” asked Tiff. “If it’s just all going to get you into hot water or worse situations?”

“Because that’s the fun of it,” said Reimer. “It’s, I don’t know, punching above your weight class, challenging the gods —”

“Literally, in some cases,” said Arthur.

“It’s pulling out the unexpected and seeing Juniper’s face fall,” said Reimer, grinning at me.

I turned to Tiff. “I think for me, a lot of the fun of the worldbuilding stuff is just setting up systems and seeing where they go, like, if you have a society who can’t have a person born without one dying, what does that look like, right? To me, that’s super interesting. Well, for the Reimers of the world, it’s probably sort of the same thing, looking at the extremes of the system through certain hypotheticals, it’s just more directed than anything I do. Honestly, the focus on optimization sometimes seems like it’s secondary to the whole thing, because sometimes he’s not even optimizing for being good.”

“Am too,” said Reimer.

“You had that whole build where you were trying to throw as many daggers in a round as possible,” I said. “Are you really going to say that was about being good, rather than just because you could?”

“Meh,” said Reimer.

“Anyway,” I said. “Cleregore, that’s your spear. For the record, I think it’s good but not overpowered. And if it leads to bigger, better challenges, or unique circumstances,” I shrugged. “That’s just how the game is played.”

I was terrified of the exclusionary principle, which seemed like it had been sitting in the background waiting to thwack me upside the head from basically the first moment I’d heard of it. The exclusions came in enough forms that I couldn’t know which one I would get smacked with, but at best, I would get some fraction of still magic excluded, with my new shiny toy taken away, and at worst, I would be trapped within a very small geographical region, unable to leave. Somewhere in the middle ground were outcomes like, for example, all of skin magic being excluded from Aerb, or all of still magic, or something insanely wide-reaching like that.

And if an exclusion didn’t happen, then what kind of things would I be facing down? Amaryllis and I got into narrative arguments with some frequency, but a lot of that was simply that I thought she was using the wrong standards, namely, the standards of prose, plays, and movies, rather than the standards of tabletop roleplaying games. For the most part, TTRPGs worked like real life, at least as I had played them, and if you ran toward danger because you thought that you were the invincible protagonist who couldn’t get hurt, you would probably get smacked down hard, because that was stupid.

Having so much power, even if it was only momentary, scared me simply because it meant that any reasonable DM would start throwing all kinds of terrible shit at me, things to test my new powers, then after that, things to circumvent them. So long as I had Still Magic 100 and Prince’s
Invulnerability active, the number of things that could possibly hurt me was very, very small, but my mind was already racing ahead to expand that sliver of the pie chart and think about the kinds of things I would invent if I had to deal with a player with my current powerset.

- Still soul seemed like it would make me functionally immune to most memetic agents, but it was a complication, because I could still be infected, which would mean that the whole not-going-unconscious thing would simply kill me, rather than just leave me depowered.
- Still magic was, by its nature, hard to ward against, but it was still possible, and any enemy that knew my capabilities and had a capable warden would do that immediately. Grak was able to see wards, but I wasn’t, not yet, which meant that it would be vital to keep him by my side.
- Debatably, poisons might work on me. I had given the Bracelet of Panacea over to Amaryllis before going down into the temple, on the theory that Bethel could use it for anyone in the house in a pinch, but we had other backups. It wasn’t clear whether Prince’s Invulnerability worked on poisons or not, given that the timescale was normally in the six second range; we were deep into uncharted territory.
- I was really good at not being hurt, as well as stopping any attack that touched me, which meant that various forms of immobility were still entirely in play. Neither still magic nor Prince’s would help me get out from under a net, which was kind of hilarious to think about, given how godly powerful the combination otherwise was. More seriously, anything that could freeze me in place could potentially make me as good as dead, a time-tested method of dealing with otherwise immortal people (encased in a concrete block and thrown into the ocean was the standard, and I saw no reason that it wouldn’t work on me).
- I still needed to breathe. Apparently, Prince’s didn’t handle that, which I’d tested by simply holding my breath until I came close to passing out. Someone could probably still drown me, or shove something down my throat, or replace the breathable air with helium, or something like that. Air mages were normally among the weakest magic users, but they were at the top of my threat list.
- I could still run into problems where personal protection wasn’t really the name of the game. All the best Superman stories weren’t about whether or not Superman could punch a problem hard enough, they were about difficult choices and intellectual or philosophical issues. On a less pretentious level, it was very possible that either civilians or the people I knew and loved would be put in harm’s way.

As soon as that last thought occurred to me, I thought about two salient facts. First, Harold had somewhere in the neighborhood of thousands of civilians under his control, and there were millions of (relatively) innocent people in Li’o just trying to live their lives, something that a combination of Harold, Mome Rath, and all the various creatures that had been living on him probably weren’t going to allow.

Second, I still hadn’t heard back from Amaryllis.

“Mary,” I said, pressing my fingers against the tattoo. “We’re about to go make an assault on Harold, I’d really like to hear back from you. Not sure what kind of circumstances you’re in right now.”

It hadn’t been long since the explosion had knocked everyone apart, but I was getting increasingly antsy, and checked the soul line again, just to be sure. I did a quick check of her soul itself, then her spirit, making sure that nothing looked out of place. Wherever she was, at least she was internally fine, and physical damage was something that could be healed. The specific circumstances that would have either knocked her out or kept her from using Parson’s Voice … well, speculation wasn’t useful at this point. It hadn’t been long, not more than ten minutes, and I tried to tell myself that it was too soon to panic.

We had some time, and I used it. Grak was wearing his temporal plate, on loan from Pallida, which
allowed him to manipulate time and give himself a weaker, localized version of the time chamber, but without the restriction of needing to be inside a room. Because the temporal plate was inside of Bethel, she could slow time down for us absent the time chamber, giving us three minutes for every one on the outside. Because that effect stacked with the time chamber, that meant we were looking at only five minutes on the outside for spin up and spin down, plus twenty seconds for a full day in the chamber. We weren’t going to do a full day, not before I’d solved the sleep problem, but a handful of hours would help tremendously.

“Is this how you people live?” asked Finch, when we were all (sans Bethel and Solace) inside the chamber.

“Pretty much,” I said. “I figured that you knew that, given that you seem to know everything else.”

“I knew about Bethel, more or less,” said Finch. “I got the slate by tracking the history of Kuum Doona. But from everything I’d read, she wasn’t so strong as she seems to be now. She seems like she’s teetering on the edge of exclusion and loaded up with a Penndraig’s vault worth of entads.”

“Well,” I said. “We’re keeping it to six hours here, in order to plan, nothing more.”

We kept to that, more or less. Bethel had made us a lavishly spacious room, by the standards of a designated time chamber, and I went to work doing the first thing I thought was necessary, which was combat testing still magic with Raven as my sparring partner. Finch watched distantly while in quiet conversation with Malus, who had knelt to get down to his level, and I took an opportunity to eavesdrop with vibrational magic.

“We’re way off the map,” said Malus. “I’m not sure what kind of paperwork is waiting for us when this is over, but we might be facing disavowal.”

“We’re doing what needs to be done,” said Finch.

“You know what they’ll say,” replied Malus. “A whole athenaeum taken out, with people on the ground who could have stopped it? Foul play isn’t so crazy to think about.”

“You’re letting your recent incarceration get to you,” said Finch.

“People like scapegoats,” said Malus.

“You know you weren’t just that,” said Finch. “You were clocked. That’s why they took you in. It’s just a matter of how much they know. Did any revision mage pay you a visit?”

“If they did, they could have wiped it from my mind,” said Malus. “I was keeping my eyes open for discontinuities, but you know the ways around that same as I do. I was kept in the dark anyway, right where you wanted me.”

“It’s going to be bad times if this is pinned on us,” said Finch.

“Agreed,” said Malus. Her tone was impassive. “And all this is your circus too? You brought a lot of power into Li’o.”

“Not power I control,” said Finch. “These people … they’re a cannon that you could vaguely aim in the right direction, if you had a deft enough touch. I’m fifty-fifty on whether or not they’ll turn on us.”

Raven clocked me upside the head, which instinctive stilling caught, but she gave me a look that let me know that she was well aware I wasn’t paying my full attention to her.
“You’re fighting sloppy,” said Raven.

“Sorry,” I said. “A lot on my mind right now.”

“Amaryllis?” asked Raven, raising an eyebrow.

“That too,” I replied.

“I was captured by enemies on twenty-six different occasions,” said Raven. She brandished her sword at me, its mirrored finish impeccably sharp. “Once a year, more or less.”

“If that’s what happened, it would be her third time,” I said, after thinking about it for a moment. Aumann, Fallatehr, and now Harold. “Four, if you count the pregnancy. Five, if you count the rat rot.”

Raven struck out at me, moving with unsurprising speed. I couldn’t burn bones to match her, because that only made her stronger, which left us fighting against each other on more or less even footing. Of course, with still magic being as high as it was, there was little chance of her actually hurting me, but she was still landing hits that I thought I should have been able to dodge or deflect.

“Alright,” said Raven, after she’d touched her blade to the side of my head again. “I want you to try stilling me.”

“Are you going to be okay?” I asked. “I mean, if I stop your heart …”

“Brain activity,” said Raven. “It should be faster. Uther could do it without hurting anyone.”

“Live fire exercises on your allies are idiotic,” said Pallida, stepping in from the side. “You know that, Raven.” Raven frowned at her. “I get it, it’s about keeping civilians safe, and not the kind of thing you want to do for the first time in the middle of heated combat, but you should leave martyrdom to those of us who can come back to life.”

“You’re volunteering?” I asked.

“Hells no,” said Pallida with a laugh. “But as I recall, there was an entad that was useful for combat testing, one that was helpfully donated to the Demonblooded Festival by a magus Oberlin. And after that, well, if it was stolen, ah, who could know where it ended up?”

“That would have been nice to know before we came in here,” I said. “Given the spin up and spin down time.”

“You’re not the only one who can do the teletalk with Bethel,” said Pallida with a smile. She went over to one of the cabinets that I’d assumed were just dressing and pulled out the mannequin. “Ta da!”

“Oberlin won’t see the humor in it,” said Finch, calling out to us. “That entad was hard won.”

“Yeah, well,” said Pallida. “Looks like Juniper is going to kill it a few times, and maybe if he’s still alive, Oberlin can complain about it later.”

“I’d bet on him,” said Finch. “He’s a tough old bastard.”

I was less sure. Not about the tough bastard part, which seemed true, but about his survival. Mome Rath had focused much of his efforts on the campus, and there was no particular reason that Oberlin’s skill as a vibration mage would allow him to survive an enormous claw to the face. Oberlin
himself had said that vibrational magic was much more about offense than defense.

We set up the dummy, and after some fiddling, finally got it to mold itself into a person.

“Does it even have brain activity?” I asked, looking skeptically at the woman it had created.

“Yes,” said Finch. “It’s lifelike in every way, up until the moment it’s killed. Might even be able to fool your house.”

“I really doubt there’s an entad that can fool Bethel,” I said.

“She’s not a god,” said Pallida. “Please don’t let her know that I said that.”

I approached the entad-person. It was going through all the motions of being a person, breathing, blinking every once in a while. When I touched its neck, I could feel its pulse, though there was no trace of latent blood or skin magic, like there would have been in a real person.

(It was tempting, when faced with an entad like this, to try puzzling out what it was for, but conventional wisdom on entads was simply that they came from nothing, with no intent on the part of their forge-frenzied creator, instead originating from somewhere else, or through some other process. A part of me wondered what this entad was, from the perspective of the Dungeon Master, and another part of me wondered what I would have made such a thing for, aside from the obvious joy of creation.)

I could feel the motion in her body, and dimly, yes, electrical signals, the kind necessary to keep a person standing upright, to keep them breathing, to go through the motions. It occurred to me that it was entirely possible that the person here was a ‘real’ person, for some given value of ‘real’. Oberlin had been cavalier about killing them, but … well, the story of Captain Blue-in-the-Bottle was one that tended to stick with people, myself included.

In brief, Captain Blue-in-the-Bottle was a powerful necromancer during the Second Empire, one who reached heights that no other necromancer ever had before, not even in Uther’s time. His particular brand of necromancy got excluded, leaving him as the sole practitioner, but as far as enpersoned exclusion zones went, he was pretty calm and relaxed, capable of making deals with those outside his realm. At the time, that included the Second Empire, and they invested money into the Captain’s lands, putting up factories which were staffed by zombies, the name given to special creations that would slowly decay over time, but could be directed toward simple work until that point, the pinnacle of mindless labor. The Captain’s realm took in raw goods and sent out finished ones, at a fraction of the price that anyone else could do the same work for, and he did it with branding and public relations, little stamps that said ‘zombie-made’ on plates, hammers, all kinds of things. The zombies were, per the Captain, ethically sourced, only taken from people who died naturally in his realm, which had a fair population of the living as well.

The only problem was, Captain Blue-in-the-Bottle had been lying, and the zombies weren’t fully dead at all. Instead, the person who died was locked into their body, fully able to feel everything that happened to them, but unable to take any action on their own. The ‘zombies’ would sit there doing assembly work, watching as their bodies slowly and inevitably decayed, unable to speak, unable to stop, watching their own demise at a remove.

Eventually, the truth came out, thanks to some investigative reporting and a few very specific entads that allowed the zombies to have a voice. It was a big, complicated mess, an atrocity committed almost entirely by one man, and it got tangled up in the burgeoning world economy and the complicated ethical positions of the Second Empire. The upshot was that ‘zombie’ became a dirty word, especially after Captain Blue-in-the-Bottle published a long screed about how people knew in
their hearts, and didn’t care, and would continue to buy the products from his factories anyway. ‘Zombie’ had always been his word, with slightly cutesy connotations, pictured in his propaganda as dim-witted but loveable creatures. It was a lot less cute when you knew there were people trapped inside those bodies, forced into permanent labor as they watched their bodies degrade, feeling every single bit of their slow death. Captain Blue-in-the-Bottle had been wrong about people: they’d stopped buying his stuff, mostly through coordinated action and a stringent ban by the Empire of Common Cause, and he’d been stuck in his exclusion zone for quite some time, increasingly unhinged and severely unhappy.

(I had a quest to kill him.)

Now, you’d think that the whole zombie thing would make people think twice about declaring that someone or something wasn’t a person, but there were so damned many rights and identity issues on Aerb, a lot of which were deeply ingrained or more complicated than they appeared on first blush. Entads and non-anima were notable (and obvious-to-me) holes in how most people defined personhood.

So I was left looking at this woman, the creation of an entad, and thinking that maybe she had some moral worth, or that maybe I shouldn’t be so cavalier about inflicting harm on her until Bethel had a chance to check it out.

And then I forced myself to realize that I was too much in my own head, and maybe just worried about all the puppets I was about to be fighting in relatively little time, some of which I might end up killing.

I backed up for a moment and then reached forward with one hand, applying still magic the moment that my fingertips touched her skin, focused entirely on the task. She dropped to the ground and laid there, motionless. After a few seconds, she reverted back to the mannequin.

“Huh,” said Pallida. “So, we’re saying that’s lethal?”

“Yeah,” I said.

“Fast though,” she continued.

“Yeah,” I said. “Last resort, rather than first.”

“Not sure I agree with that,” said Pallida, “Given that my life will be on the line.”

Raven gave her a look.

“Uther would have saved everyone?” I guessed.

“Sorry,” said Finch, cutting over. “We haven’t been introduced.” He held his hand out to Raven. “Figaro Finch. I saw you at the wedding, but you left right after it finished. Figured we should at least know each other’s name, if we’re going to be working together.”

Raven raised an eyebrow at him, then slowly shook his hand. “Raven Masters.”

Finch stopped shaking her hand and just stared at her. “Bullshit,” he finally said.

“I don’t have much in the way of proof,” said Raven, not seeming apologetic at all.

“It wouldn’t be the weirdest thing to happen,” I told him. “And you know it.”
“But where’s she been?” asked Finch, looking over at me.

“Cleaning up your messes,” said Raven, scowling at him.

“Pardon?” asked Finch.

“We’ve crossed paths before,” said Raven. “Four times, by my count.”

“You have?” I asked.

“Yes,” said Raven, staring down Finch. “521 FE, Litergo Province. There was a small portal that was increasing in size. Uniquities got called in, and they took control of the site. You ran the numbers and extrapolated the growth rate, and came to the conclusion that it was a threat to all of Aerb. Except instead of sounding the alarms far and wide, someone decided that Uniquities would handle it.”

Finch frowned. “It winked out after two weeks.”

“Yes,” said Raven. She pointed to herself. “That was me.”

“How?” asked Finch. He didn’t really look like he believed it.

“I used an entad to deal with it,” said Raven. “It had to be done early, because otherwise the portal would have grown out of control, beyond the ability to be contained. Tell me, was there someone on your end of things arguing that taking down a bigger threat might pull in more funding? Or someone arguing for exploitation?”

“Sorry,” said Finch, looking her over. “Who the hells are you again?”

“Raven Masters,” she replied. “The last of Uther’s Knights. My job was saving the world when you people fell flat on your faces.”

“Where?” asked Finch. I have to admit, it was satisfying to see him thrown off his feet. “How?”

“Raven, Finch, you have an hour to hash this out,” I said, making a decision. “We have things we need to do before we resume the fight. I’m going to be practicing on this entad, then pulling in more power if it’s warranted.”

“More power?” asked Raven.

“We’ll talk about it later,” I said. “Privately.”

There was one big trick left, one that I was hesitant to use. Soul Scaphism was the level 80 virtue for Essentialism, and the penalty for that had a duration, which I was pretty sure would be stilled by Meta Stilling. That meant that if I sacrificed enough skill points to get to 80, I would be able to scaph out some souls in order to boost all my other skills, which would then persist under the same conditions that Still Magic would. We had an inventory of souls, including all of the people that had died in the battle just outside Boastre Vino, and it was a certainty that they had skills that I could use to replace whatever I sacrificed, in addition to boosting me to higher heights, given that Soul Scaphism appeared to stack with itself. And if that power boost could effectively be made permanent by getting a foolproof method of dodging sleep … well, souls weren’t exactly valuable for anyone but me, even if the souls we’d be interested in were the souls of people who were reasonably competent at different things, rather than the natal souls used as a power source. We had a huge opportunity there.
I had no idea what the Dungeon Master would think about that, if anything. Having straight 100s in all 40 skills seemed like it was realistically possible from where I was standing (unlocks aside), but all the arguments I was having with myself about what the Dungeon Master might do were amplified the more I began breaking the system wide open. If I had straight 100s, or even higher, then what kind of ridiculous crap would come out of the woodwork against me? What kind of horrors were lurking out there, in a ‘break glass in emergency’ kind of way? It was scary shit, frankly.

After a half hour experimenting with the mannequin entad, I had finally settled on something I thought had a good balance between speed and non-lethality, which mostly involved partial stilling of bloodflow. It was difficult and precise work, but after only a small amount of practice I could do it quickly and reliably. Ideally, the upcoming fight would be one that was mostly about keeping collateral damage low, rather than truly fighting for my life. I had enough tricks up my sleeve that I was really hoping that I could save everyone and still manage to get Harold while also avoiding a second Mome Rath.

When I noticed Grak in conversation with one of the gimmal, I went over to them, because Grak was talking using one hand, which wasn’t a skill he’d had the last time I’d talked to him.

**Skill increased: Language lvl 4!**

“-- civilian casualties?” The language was a fluid one, cheremes running into and altering each other, much more than phonemes did in any of the languages I had exposure to. I could retroactively understand some of what Finch had said, but it was hard to do that and keep track of the conversation at the same time. “Total obliteration?” They weren’t questions, more like inflected statements, typical of how the Gimb was spoken (the name appeared in my head as soon as I reached for it).

“I should be able to isolate it?” said Grak. “Calibrate for feedback, isolate spectral position, then apply against it?”

“Too slow?” replied the gimmal. “Too costly?”

“No,” said Grak.

“Are you magus?” asked the gimmal.

Grak hesitated for a moment. “Yes,” he replied. “Entad support as well.”

“What are you two talking about?” I asked/signed. “And how?”

“Translation tattoo,” said Grak, raising his non-wooden hand to show me a tattoo on the back of it. He didn’t question my own understanding of Gimb. “The gimmal only speak their own language. We are discussing Harold’s method of extraction.”

“Huh,” I said. “And it’s an entad?”

“Yes,” replied Grak with a nod. “This is their warder. He is unskilled. He does not have a signature of the entad used.”

“Then how do they know it’s an entad?” I asked.

“It is a guess,” said Grak.

“Yes,” nodded Grak. “I may be able to find it though.”

“By cycling through the entire spectrum of possibilities?” I asked, switching back to finger language and raising an eyebrow. I didn’t know much about warding, but I thought I had caught that much. I cast a look at the gimmal. No eyes and no mouth made it very hard to read expression. “I hadn’t heard of that technique.”

“It may be novel,” said Grak. “Niche, but novel.”

“I guess,” I said. I looked over at the gimmal. “Or is he selling himself short?”

“If it is accomplished it will mark him as a greater magus,” replied the gimmal.

“I see,” I replied.

“If it is accomplished,” replied Grak.

“I have faith in you,” I replied. “If you need more time in here, let me know. Chasing Harold away from his base of power in Li’o would be good, but catching him would be better.”

Grak gave me a brief nod, then returned to signing with the gimmal, going into technical detail of the scan he’d be doing that I was pretty sure was meant to signal to me that I wasn’t needed there. I was hopeful that his plan would work, both because it would mean that Harold wouldn’t get away at the last second, and because I wanted Grak to feel better about his annihilation weapon plan not having a chance to come to fruition.

Raven was talking to Finch, and from the way his arms were folded, I had a feeling that she was castigating him for failing to stop the end of the world. Pallida and Malus were in conversation too, though it was less clear about what, and from the playful expression on Pallida’s face, it seemed like she might be flirting. That left the rest of the gimmals, who were resting, and Valencia.

“Are you okay?” I asked her.

“Making the rounds?” she asked. Her helmet was off to one side, but she was still in the Red Armor of Arramor, sitting down with her head resting against the wall. She didn’t have the crown either, which was probably for the best, because that thing could be sharp.

“Kind of,” I said. “I also wanted to know if you were okay.”

“I am,” said Valencia. “You know, I can still feel down into the hells like this?”

“I wasn’t aware,” I replied. “I didn’t think that much of anything got past the border of the time chamber.”

“A few things do,” said Valencia. “Your soul link does, doesn’t it?”

“Yeah,” I said. “Amaryllis still has a soul, so that’s good.”

“Hrm,” said Valencia. “You know, we’ve talked about using this time chamber as a way of helping to kill all the infernals.”

“Yeah?” I asked. “How are those calculations going?”

“Okay,” said Valencia with a shrug. “You leveled a few times. I have more tendrils now. I’m not great at math without a devil, but we’ll have to run the numbers again.”
“I’m not eager to fight the hells,” I said. “But I’m pretty sure that we’re going to, at some point.”

“Probably,” said Valencia. “They’re worried.”

“The infernals?” I asked.

“Yes,” said Valencia. She was being more quiet and withdrawn than I was used to.

“So I hate to ask a third time, but are you okay?” I asked.

“You saved my life,” she said. “You used a unicorn bone to do it?”

“Yeah,” I said. “I’m hoping that you didn’t get the memories from it?”

“No,” said Valencia. “It was bad?”

“Yeah,” I said.

“How many attempts?” she asked.

“I don’t know,” I said. “Five or six.”

“I’m sorry that I was a burden,” replied Valencia. “I went down onto that monster’s back and didn’t accomplish anything.”

I frowned. “It’s not really like that,” I said. “I mean, I know that it wasn’t exactly a group effort, but - -”

“It’s fine,” said Valencia. She let out a sigh. “That’s just what’s on my mind. You don’t need to spend time working through it with me.”

“Val,” I began.

“It’s fine,” Valencia repeated. “I have weaknesses. Even with the gifts that I’ve been given, there will be times when I’m a liability.”

“If it’s edge cases like not being affected by Prince’s,” I started.

“It’s not,” said Valencia. “That’s part of it, but it’s … I stayed in the house while you were at school. I sat here doing nothing because if the wrong person spotted me or I tripped up an entad there might be a manhunt for me. I left once, and then only helped a little.”

“Alright,” I said with a sigh. “I see it. You know you’re not the only one?”

“I know,” said Valencia. “When you rescue Amaryllis, I’ll talk to her about it.”

“I was thinking Grak,” I replied. “But Amaryllis too.”

“And Fenn, when she was alive,” said Valencia.

I made no response, but I could definitely see that too. I missed Fenn, but if she’d made it through to this point, I was pretty sure that she wouldn’t be happy. She would probably be complaining about how there was no way that she was going to be able to do a damned thing using just her bow and arrow, no matter how good she was. It made me feel terrible just thinking about it. I was sure that she would have said something to let me off the hook, but that was just how she was, most of the time, self-deprecating and ready to sacrifice a bit of herself so as not to be a bother.
The Dome Away From Home

After I was done talking to Val, the only bit of business left was to go over our plans, which we did around a simulacrum of the targeted building and its environs, which Bethel had helpfully provided for us before locking us in. Finch seemed impressed, but I was certain that if Bethel were with us to give commentary, she would point out how crude it really was, given how limited her sensorium was out past a hundred feet. Still, it was enough for rough planning, and we decided to go with a rooftop landing where Grak could try his scanning technique.

And a short five hours after we’d gone in, we were ready to go back out again.

“This is the sort of entad that would go for billions of obols to a wealthy nation,” said Finch as we waited for the chamber to spin back down. That waiting period was awkward in the best of times.

“She’s a person,” I said.

“Unconventional politics you have there,” said Finch.

“She would kill anyone who tried to sell her,” said Pallida. “And that’s whether they had standing to sell her or not.”

“And I doubt that I’ve seen the full depths of her power,” said Finch, nodding slightly. “Only a fraction is being used by or for your little republic.”

“She’s not really interested in being worth billions of obols to the right person,” I said. “There aren’t many things she wants that she could buy with money.”

“Entads?” asked Finch.

“Easier and cheaper to steal them,” said Pallida with a smile.

“You realize that I’m law enforcement, of a sort?” asked Finch, looking her up and down.

“Oh, I wouldn’t have said it otherwise,” replied Pallida. “You think that in thirty thousand years of life I’ve never worn a badge?” She snorted. “Believe me, there have been times I’ve been on the straight and narrow, way more than you seem to be.”

“No stealing,” said Finch.

“I think technically it would be looting, given the circumstances,” said Pallida.

“No looting,” said Finch.

“But maybe just a little bit of looting,” said Pallida, nodding toward him. She smiled at me. “This is fun, we should have the police over more often.”

For once, I was happy to have Pallida with us, because she was helping to distract me, and so long as she wasn’t trying to seduce Amaryllis or fight with Raven, she could be fun. I was anxious about the fight ahead of us, both because I was worried it would be scaled to my power or working to subvert it in some way, and because there were a lot of innocents involved.

“Alright, we’re ready to go,” I said once we were out. “You’ll stay close by? And keep an eye out for Amaryllis?”
“Yes,” nodded Bethel. “There are also people I should be helping. I may do that.”

“As opposed to what?” asked Finch, frowning at her. “Sitting by while they die?”

“Don’t antagonize her, Finch,” I said. “I’d thought if you knew her nature you would understand that.”

Finch had a sour look on his face, but said nothing. I wasn’t sure whether or not he’d made the connection between Mome Rath’s death and Bethel, or how much he’d seen of her capabilities, but he’d gotten the other half of the sending slate from somewhere, and it was clear to me that he knew more about Bethel than we generally preferred people to know. He had been at the wedding, but I had no idea what he’d made of it.

“Bethel,” I said. “We’re ready. Rooftop entrance, if you can do it clean and fast.”

She didn’t need to be told twice. With how fast she could move, and her ability to effectively teleport us using Sable, there wasn’t much more than half a minute between me asking and us being placed on the roof.

The building was one of the big domed ones that sat around Li’o, most of them historic landmarks, with a few built in the modern era in the old style. The one that had been so helpfully marked for us by Doris Finch was one of the newer ones, built fifty years ago rather than a few hundred. There was no one sitting there, and hopefully no one that had seen Bethel’s small form come in. Grak got to work at once, moving his wand using careful, precise motions as the gimmal warder looked on.

(I wondered about the gimmal. Clearly they were athenaeum trained, which would probably have required some rather significant accommodations, but from my experience at S&S that wasn’t too unusual. But why they had all been trained up as operatives was a bit of a question, since it obviously represented a coordinated effort and a serious investment of time and capital. The gravity manipulation that was unique to the gimmals was a fairly good one, as was their gravity sense, but I got the feeling that it was their lack of other senses that had led to them being drafted by Uniquities. That alone would make them immune to a pretty wide range of infohazards, though in the present situation it seemed a bit worthless.)

“Sixteen entads in the building,” said Grak, after a moment.

“Really?” asked Finch.

“He is a master,” the gimmal signed.

“Which is their teleportation one?” asked Finch.

“I don’t know,” said Grak, pursing his lips. He was still moving his wand. “This method is untested. Extracting information is hard.”

“Well, we need to isolate and ward against it,” said Finch, crossing his arms. “A singular entad ward shouldn’t be too difficult, I don’t --”

“I can set up wards against all of them,” said Grak. “Mixed with a velocity ward around the structure so that they can’t be moved outside it. I’ve gotten good at expansion warding, so I shouldn’t need to circle the building.” He looked at Finch. “It will give us away.”

“That’s fine,” said Finch.

“It won’t be foolproof,” Grak began.
“I’ve spoken with warders enough to know that you’ll be wasting my time saying more,” said Finch.

“I cannot ward against every possibility,” said Grak.

“We don’t expect you to,” I replied. “Can you use your technique to monitor the building?” I asked. “Give us some rough numbers?”

“It would take time,” said Grak, frowning. “It would cost concordance. Presence or absence of specific magic would give very little information. I could cycle through species specific magic though.”

“Do,” I replied with a nod. “Let us know.”

“Not sure we have the time,” said Finch, looking grim. “We don’t know how much longer the clock is going to run until the singing starts up again.”

“My hunch is not long,” I replied. I looked around at the small team we had. I didn’t know how many people were in the building below us, but it was possible that it was in the hundreds. I turned to Grak. “Set up the entad wards,” I said. “We’ll move in as you’re finishing, because suddenly stopping the effects of all the entads might tip them off, and I really don’t want to see what plans and contingencies they have in place.”

“I should follow after?” asked Grak, raising a thick eyebrow in my direction.

“Yes,” I said. “Maybe. Your expertise is invaluable, and I don’t want to put you in harm’s way.”

“I can handle myself,” said Grak. “You will need me if they have wards of their own.”

“I know,” I said. “I don’t doubt that. I just want you to be safe.”

“We’ll keep him toward the back,” said Raven. “That’s where I always was, in situations like this.”

*And how often did you get injured or kidnapped?*

We went to the roof access door, leaving Grak to weave his wards. Wards only activated the moment you completed them, and we wanted as much time as possible before they were alerted. The tactics of it were Finch’s show more than mine, given that he had years of experience taking down cults, and even though we were facing something distinct from a cult, it was at least a little similar. His suggestion was that we go in fast and hard, taking as many of them out before they had time to raise an alarm or get into better defensive positioning, and that seemed smart enough to me.

Pallida unlocked the door and then I went first, moving fast. The warder gimmal was right after me, and I kept glancing back at him; his gravitational sense was good enough that he could effectively see through walls, and his warder’s sight would allow him to see any wards before I ran smack into them. I wasn’t concerned with annihilation wards, since Prince’s would leave me intact, but a ward against skin magic would stop Prince’s, and I had no way to get it back, not in a hurry.

(The gimmal all had names and identities, but they were all dressed virtually identically, and they looked the same to my eyes, because I didn’t share their ability to sense gravity, which was their primary form of differentiation. I’d made an effort to talk to them when I was, as Valencia said, ‘making the rounds’, but it was mostly just smalltalk about the upcoming mission, because I didn’t want to ask a bunch of probing questions about their upbringing, education, and employment. They took it in stride that I spoke their language, and they seemed nice enough, for being part of a Uniquities anti-meme fireteam. Note: “anti-meme” meant that they were trained to fight memes, not that they were trained to fight antimemes. They called themselves the Meme Squad, which was so
cringeworthy that I wished I hadn’t heard it; their motto was ‘ignorance is strength’.

We first encountered resistance two floors down, when I opened up a door into a big room with a dozen people in it, which the gimmal had warned me about beforehand. Most of them were armed, but it didn’t seem like they were expecting anyone from my direction, so I raced forward to get in the middle of them, burning SPD. I grabbed two of them, putting into practice the brief training I’d done on using still magic to knock people out, and they were both down by the time weapons were being pointed at me. They had rifles and pistols for the most part, but one was carrying a sword, and he had a stance that let me know he was proficient. Blade-bound were relatively common, and his sword had the look of an entad, and my mind went to my sword, wanting to draw it so that I would have something to defend myself. Instead, I let him hit me in the neck and used still magic to stop it in place, then reached down to grab his hand and still the flow of his blood until he lost consciousness.

There was nothing that they could do against me. They shot me, of course, but I had still magic on my side, and even if I hadn’t, Prince’s would have protected me. They cottoned on to the fact that I was bulletproof fairly quickly, but by that time I had positioned myself at the other exit to the large room, and it was just a matter of grabbing them one by one, just long enough to still them into unconsciousness.

The last one turned his gun on himself, holding the rifle in an awkward way so that the tip of it was positioned under his chin.

“You, have, seeeeeeeerrrrrr, a, World, Lord,” said the man. The words were coming just a bit wrong. For all that Harold seemed capable of fine manipulation, speaking directly through one of the people he’d captured didn’t appear to be a smooth process.

“I killed a World Lord,” I said. I wasn’t fully listening to Harold; I was thinking about how to save the man in front of me. I didn’t know how much of a hair trigger Harold would use, how many pounds of force were already on the trigger, but I had to assume that an individual life meant nothing to him. I thought that maybe I could slice off the man’s hand with a thrown dagger, fast and hard enough that he wouldn’t be able to get the shot off, but it would be a hell of a trick, and it wasn’t one that I was in a position to do.

“The, Second, Calling, Will, Be, More, Powerful,” said Harold through his puppet.

“It’s not going to happen,” I replied. “If you could do it, you’d have done it by now, and --”

A shot came in from the side of the room, and the man crumpled over with blood pouring from the side of his head. I turned and looked in time to see Figaro Finch holstering his pistol.

“It was a diversion,” he said. “Classic stalling behavior. Let’s go.”

I looked at the body. I wondered who that man had been, whether he was a student who had been grabbed in the temple, or someone taken through other means. Finch was right though; I had known that we might run into this kind of situation, and I had been more sentimental than planned. It was a stalling tactic.

We continued on. The gunfire had alerted the rest of the building, which made subsequent floors more difficult. When I went into the next room, down a flight of stairs, there were four people with their guns already drawn. It was a concerning number of rifles, one which implied heavier
armaments through the building. One of them took a few shots at me as I came in through the door, and the bullets were stopped before they could smash themselves against my invulnerable skin. The others had turned their guns on themselves.

I reached into my bandolier and pulled out a scroll that Bethel had made for me. I wasn’t sure that now was the time to use it, but it didn’t seem like something that I could keep saving. With a fast motion I unfurled it and pointed it toward the people who were standing there. In theory, the image that Raven had used on me back in the Library, the one that was inert inside my mind even now, should have put them all into a quick and safe coma that I would eventually be able to bring them out of.

In practice, there was no change.

“You, Have, Exposed, That, Scripture, To, Me, Already,” said Harold, through the tall man. “Such, Divine, Horrors, Of, This, World.”

“Joon!” called Finch. “Stalling.”

“Right,” I said, quickly lowering the scroll and folding it up so that no one could see it. “Harold, you absolute fuck.”

I moved on the people he had in the firing circle, and they all shot in quick sequence (and accompanying defeated messages). I rushed to the nearest one and began burning a bone to try to heal her, but she’d been shot in the brain with a large caliber round, and the level of healing magic you could get from a huge boost to END wasn’t enough to make the difference.

“Time,” said Finch as he came in, pushing past me. “We’re working against time. Stop chatting.”

I gave a soft growl, then got to my feet, trying to get the images out of my brain, or at least not let them get imprinted there. It was stomach-churning, but I’d been desensitized to death, and in the context of everything else that had happened today, all the people who had died from Mome Rath’s assault, watching Valencia be vaporized so many times, I was pretty sure that I wasn’t even going to have nightmares, not unless I saw something much worse. Maybe I would get out of having nightmares by simply never sleeping again.

We went down another flight of stairs and went down a long hallway, trying to move fast, because Finch was right, it wasn’t the time for talking to Harold, and it wasn’t the time for maudlin sentimentality for people that I had never known. The game gave them names, but they were just mooks. That wasn’t the way that I wanted to think about it, but it was probably saner, or at least might result in better outcomes.

As I moved to open the next door, I felt a hand on my shoulder and came to an abrupt stop. When I turned back to look at him, the warder gimmal began a rapid series of signs that bled together so quickly I was pretty sure that I wouldn’t have understood anything if I weren’t as proficient as a native speaker.

“Large room ahead. Many people. Area is warded,” he signed.

“Grak?” I asked, looking back at the train of people that was following behind me.

“Yes,” Grak replied, pushing forward. “If he’s just said that it’s warded, he’s right. Sloppy work.”

“Which wards?” I asked.
“Several,” said Grak, narrowing his eyes. “Non-lethal. Active and passive skin magic, yes. I can subvert it.”

I saw the gimmal make a quick sign, “Incoming”, and I just barely had time to get in front of Grak to still the force of the explosion and keep him intact with a hand placed on him and my still magic protecting him. I sapped the explosion of the brunt of its force, but it still carried through, down the hallway, bouncing off shimmerplate and knocking people off balance. I stayed back from where the wards were, but as the dust settled I could see the room in front of us was a large one, the inner part of the domed building where the dome was on full display overhead. There were, by my estimation, thirty or forty people in there, most of them hunkered down and waiting for us. Some of them had guns, but there were mages among them too, some identifiable by their implements, others by their appearance. The door had been blown open by a pustule mage, who was readying another of his growths to pop.

“Down!” I shouted to the others, but when I looked back at them I realized they were undergoing a different kind of attack. Malus was on the ground, gripping her head in her hands, and the others members of Uniquities didn’t seem to be in much better shape. I had seen this before, in Oberlin’s class: it was a resonance attack by one or more vibration mages. Pallida, Raven, and Grak were all fine; I had soul-linked them, out of sight of Finch, and the transference effect was apparently solid enough to stop the vibration. Valencia had no soul, but the Red Armor of Arramor seemed to hold, which I was thankful of given that I hadn’t known beforehand whether or not it would stop her from being vibrated to death.

I did my best to still the air around me, to deprive the vibration mages in the room ahead of us of the ability to affect the members of my team. Still magic was touch ranged though, and “touch” wasn’t such a fuzzy concept that the Layman would allow me leeway to freeze entire sections of solid air. The best I could do was about a foot out from me, which was more than any other still mage could manage. (If the vibration mages were targeting me, I hadn’t noticed.)

The second fireball came in hot after the first once, and I wasn’t able to stop it all, not with still magic, and not with my weaker vibration magic attempting to collapse the pressure wave as it went by me.

“Grak!” I shouted. I was sure that my ears would have been ringing if Prince’s Invulnerability hadn’t dealt with that. “Get that ward down!”

He didn’t need to be told twice, and moved forward with his wand out, attempting the world’s fastest subversion of an active ward. I kept a hand on him so that I could defensively still him, just in case there was a niche attack that got past all my defenses, and he used his temporal plate to speed himself up. I wasn’t willing to give up Prince’s Invulnerability, not to the ward ahead of us.

I heard Grak grunt, but he kept his wand steady, and I thought nothing of it, given that I had him completely stilled, and I was in front of him, guarding him as best I could while still allowing him access to the ward. The assembled army in the next room were taking potshots at me from behind cover, and I was letting the bullets strike me, because there was little reason not to. As soon as Grak gave me the word --

“Done,” he said. I looked back at him and the strange raspiness of his voice, and saw that he was bleeding from a hole just above his left eye. I wasn’t sure when or how he had been hit, but it was the telltale mark of a void weapon.

I left him behind and raced forward, into the big domed room, rushing past the blown-open door. It was four stories tall, with balconies all around looking down into the central area, and I ran, heedless of any danger, toward the nearest group. They were hiding behind pillars that supported the upper
floors, and I tore through them with my blade in hand, no longer trying to go gently and delicately. The pustule mage was among them, a woman, now that I was close enough to look, covered in boils and growths. As she brought her hand up to manipulate one of them, I sliced with the probability blade, and the gray blur became a thin line of solid steel for the brief moment it took to pass through her body.

*Jessica Pendle defeated!*

When the six people I’d gotten in the middle of were dead or incapacitated, I moved back into the domed room and made a blood-boosted leap up to the next story, landing next to a man with a void rifle. I swept my probability blade at him before he could aim at me.

*Oliver Leister defeated!*

“He’s on the second floor!” I heard someone call from above.

The voice shocked me out of what I was doing. Why were they talking to each other? Surely everyone here was under Harold’s influence. But from what Finch had said, and what I had seen, Harold could only do one at a time, which meant that they weren’t a hivemind, they were just people, not even people who had their values changed like a soul mage might have, but people who had some different idea about what was going on and why they had to be fighting me.

I had no time to stop though, not when these people would do their best to kill us all, not when Harold was threatening another summoning. Besides that, more people were coming at me. I brandished my sword and let them come; they had probably seen that I was soaking up gunfire like it was nothing, and decided on different tactics.

A man and a woman came at me, lunging for me in a way that seemed like pure suicide until my sword connected with the man’s midsection and was instantly stilled, leaving him unharmed. The woman touched me, and stopped me in place, and the man came soon after, gripping me by the neck. One of the traditional methods for a still mage was to stop a person in place, then stop their heart, something that the body would naturally fight against. Being a still mage didn’t give any defense against this: we were good at stopping things, not preventing them from being stopped.

Unfortunately for those two, Prince’s Invulnerability was the last word in invulnerability, and it *meant it* in a way that other spells or effects might not have. And also unfortunately for them, I was at least temporarily one of the best still mages in the world, and they didn’t have my same defenses. I stopped the man’s brain, then the woman’s, and both fell to the ground as twin messages popped up at the bottom of my vision to confirm them as defeated. In the meantime, there were more people on the second floor balcony with me, people who I had distantly heard thundering down the stairs. I wasn’t sure whether or not I could take them all, but so far it didn’t seem like anyone was stopping me.

They circled me as I held my sword out in front of me. I was waiting for the next trick. Harold was surely watching, he had to be building a profile of me, and even if these people were autonomous, he could pick one of them to act through, if he wanted to directly use their hands.

“We don’t want to hurt you,” said a woman with gray hair and her lips drawn into a thin frown. She was of a humanoid race, with bird claws for hands, maybe a harpy, not that it was important.

“Sure doesn’t seem that way,” I replied. More stalling, I was sure, but she wasn’t speaking with Harold’s voice, not in that same inhuman boldness.

“He can talk,” said one of the men standing next to her. He had his rifle drawn and pointed at me,
which seemed pretty useless.

“Look,” I said, “You’re all infected by an agent, compromised, I don’t want to hurt you and you
don’t want to hurt me, if we could just --”

Someone was coming toward me with a metal net, the links of it clearly from some high quality
source. Li’o was a city full of still mages, and short of a void gun, a net was the next best weapon
against them. I should have figured that they would have one on hand, as the kind of tool that could
level the playing field against that particular kind of magic.

“You can come quietly,” she said.

Except that they still presumably had a warder somewhere, maybe even more than one, and a ward
against skin magic would lose me Prince’s Invulnerability, which would mean that they could just
shoot me with a void rifle.

I burned a bone and spun into motion, moving straight toward the circle of people. To my surprise, I
saw a stutter as everyone seemed to change places around me, the telltale sign of a revision mage at
work, and the discontinuity happened again, this time with more shifting around. I had no good
defenses against a revision mage, not even the probability blade would work to kill them, and a brief
jump cut later, the net was down on top of me. I couldn’t even tell which one of them was the
revision mage, not that it would have helped that much unless I could overload their capacity for
revision. I fought against the net, but there was another discontinuity as the revision mage must have
undone my efforts, a sign that I might have been successful.

It was after that last discontinuity that I saw Finch, creeping up the same stairs everyone else had
come thundering down. He was still unarmored, with nothing but a gun in hand. I had no idea what
he thought he was going to do when faced with those kind of forces, but when he pulled two
grenades from his inside his vest, my eyes went wide. He pulled the pin from the grenade, then
waited quietly, his lips moving slightly as he counted down. He threw them at the last possible
second, one just after the other, and the frag grenades exploded in mid-air, right in the middle of the
group of people. One of those people moved preternaturally quickly, without even looking at the
grenades, but he was caught in the blast all the same, as was I, and as was Finch. The fragments
sliced through everyone there and stopped dead when they hit my armor. I threw the net off as fast as
I could, trying to get myself untangled before any other complication could descend down on me.

I ignored it and cast the net free. I had no idea what kind of high-powered grenades Figaro Finch had
used, but the killing power had been immense. A still mage could have withstood it, but apparently
the two that had tried to grab me were the only ones that they had on hand. As for the revision mage,
I assumed he must have been overloaded, undoing his death and the explosion too many times as he
tried to avoid them. I glanced over at the stairs, where Finch had been standing when the grenade
had gone off, and saw blood there, but no gnome. There were more adversaries in this building, ones
on the upper floors, but we needed Finch, or at least the entad that he was using to get information.
The goal wasn’t to take out everyone here, that was a distraction and a moral hazard, we needed to
get Harold himself.

I jumped from the balcony and went back to the door we’d come in through. The others were there,
sans Finch, recovering. Raven looked a bit worse for the wear.

“Got them?” she asked.

“Some,” I said. “Whoever is left didn’t make themselves known. Finch came to the rescue, but I’m
not sure he made it. Grak?” He was halfway through a room off to the side, laying on the ground, but he sat up when he heard me.

“Fine,” he said. “Fairies.”

“He’s not fine,” said Pallida. “He got shot in the face. There’s a hole in his skull and I think it voided some brain.”

“I am fine,” said Grak.

“Good,” I said. “I was worried.”

“You need me to find the entad,” said Grak, slowly getting to his feet. “I can scan for it.”

“He lost brain, Juniper,” said Pallida. “Not so great for a person. Healing that is always a crapshoot.”

“How many hostiles are left?” asked a voice from the door. I turned around to see Figaro Finch, standing there with his pistol in hand, not only unharmed, but without any blood or trace of damage to his clothes.

“How did you survive?” I asked.

“You’re welcome, by the way,” said Finch. “Not that you couldn’t have gotten yourself out of a bind, from what I know of you.”

“How?” I asked again, looking him over carefully. “You’re keeping something from us.”

“Top secret,” replied Finch. “Grak, you said you can sweep for the entad?”

“Possibly,” said Grak, nodding slightly. He was swaying, just a bit, even after having eaten a few fairies, which was a very bad sign. Healing magic should have cured him, given that there was nothing magical about the brain, but it was possible that the injury had lingered for long enough, or been serious enough, that it had made a mark on the soul. I was going to have to go in and check him, but we simply didn’t have the time for it. Grak saw me looking and straightened. “Single entad wards are simple. I already have active wards against all of the presumed hostile ones. It will take time. I can make the time.”

He pulled out his wand and began using the temporal plate to warp time around him, his unsteady movements made more obvious as I watched him move at triple speed.

“Finch, does your contact have something more specific?” I asked.

“Down,” said Finch. “Probably this place has a basement. Unusual, in this city, but possible.”

I watched Grak for a moment. “Harold knows we’re here. He knows that we’re coming for him. He probably knows that we’re stronger than him. What’s his next play?”

“If the ward keeps his entad here, then he’s trapped,” said Finch. “Maybe he tries to leave without it, but we can track him, and so long as he doesn’t have a backup waiting for him, he’s smoked.” There was a slight gleam in his eyes as he said that.

“Then the gimmals can do mapping and Grak will lead us where we need to go, in conjunction with your source,” I said.

“Should do,” said Finch.
“I have it,” said Grak, coming out of his temporal plate enhanced scanning. “Two floors down, beneath the floor of the room we were just in.”

From the corner of my eye I saw the warder gimmal signing to the others. “He is a grandmaster.”

I didn’t know warding well enough to know how impossible what Grak had done was, but my guess was that it was at the upper edges of what a warder could possibly do, or maybe just a bit beyond that. Grak was a dwarf of many talents, from axe-throwing to being a midwife, and the few times I’d looked into his soul had confirmed that he had an extremely wide skillset, but warding had always been far and away his specialty. With another three level ups, I imagined that he was in the high 90s, if not completely capped out. When he was in better shape, and we had time, I was going to have to compliment him on the work he was doing, which I only had the barest understanding of. I was sure it would be like one of the unwashed masses telling a violin virtuoso that they played well.

“All right, Finch, you’re invincible, you lead the way,” I said.

I expected him to object, but he said nothing, and after he spent a moment peeking out the doorway with his gun raised, he began walking with purpose. I didn’t think that he was invincible, that would have been insane, and surely whatever magic was accomplishing it could be picked up by Bethel, but he wasn’t wearing any armor, and I’d seen him survive a grenade that he should never have been able to survive.

We made our way through the hallways, turning where Finch told us to turn, down first one flight of stairs, then a second. The big room, the one directly below the dome, had been ornate, the centerpiece of the building, with pillars and tiered balconies. The basement floors, by contrast, were much more utilitarian. Whatever this place had been before it was taken over, it was dark and foreboding now, with very little light along the way. I was frankly pretty shocked that there was still power to the building, since back on Earth, power was one of the first things to go in an emergency. On Aerb, that didn’t appear to be the case.

Eventually we came to a door, and Finch gave me a nod. I signed to him in the gimmal language.

“Is this the place?”

“Yes?” he said, with a mild inflection to the movement of his fingers.

“Three people there,” one of the gimmal replied.

“Finch, you first,” I signed to him.

Again, I waited for him to object, but he hesitated for only a fraction of a second and placed his hand on the door, looking at me for confirmation. I readied myself, then nodded once, and followed quickly after Finch as he rushed inside.

One of the three people was holding a shotgun, aimed and ready, and he fired on Finch as we breached. I had no idea what to expect, but Finch grunted and collapsed, his face and chest marred and bloody. I went on ahead, stepping over him, and grabbed the shotgun just as the second blast struck me harmlessly in the chest. I used my stilling technique, stopping the flow of blood, and let the man drop to the ground.

“Let me do the talking,” said a woman who was watching me impassively. She spoke loudly, which I thought was probably because she was trying to talk over some hearing damage of a gun going off in a small room, as much as I’d tried to use magic to make it quiet. The words were so incongruous and so nonchalantly delivered that I hesitated for a moment, the kind of hesitation that might have
cost me my life, if I weren’t currently invincible.

Neither of the other two were armed. The woman had thick-rimmed glasses and wore her hair tied back in a neat ponytail, with a few piercings that I vaguely recognized as being culturally significant rather than fashionable, though I couldn’t remember anything beyond that. She wore a semi-formal dress, but it was nothing special, and overall she struck me as being incredibly plain.

The man beside her was tall, also human, or at least close enough. He had on a boiler suit that was worn and stained with grease or dirt. He was a thick man, bald but with stubble showing, and he was gazing at me with a dumb look on his face, like he wasn’t entirely sure what was going on.

“Juniper, Smith,” he intoned as I looked at him.

“I said let me do the talking,” said the woman. She looked me over. “You’re in the wrong place.”

“Wrong place?” I asked, momentarily befuddled.

“You want him,” she said, pointing a finger at the large man that Harold had spoken through. “But you’re in the wrong place. You were tracking me?”

“Sorry,” I said. “Who are you?”

“You don’t know?” she asked, looking only mildly surprised. Her voice had lowered back down to normal volume, whatever after effects of the gunfire had faded enough that she wasn’t so troubled.

“I was --” I looked back at where Finch had been hit, where he’d been lying on the ground, and saw that he had disappeared. The door was partway open, and Pallida was standing there looking in but not moving to follow, which was pretty much my preference. “I wasn’t the one in charge. Who are you?” I repeated.

“Darri,” she said. “And you’re Juniper, aren’t you?”

“He, Is,” said Harold, from the body next to her. I wondered whether he was even his own person, or whether Harold had used his pithing needle. I didn’t particularly like either answer.

“I said let me do the talking,” said Darri. Her voice was mild, but I could tell she was strained. There was tension in her muscles and a slight bit of visible sweat, even though the room was fairly cool.

“You’re one of Harold’s people,” I said.

“We call him Quee Shepak,” said Darri. “Harold is the name that Uniquities gave him.”

“Why?” I asked. “No, forget it, I don’t care. Tell me where he is.”

“No, I’ll answer the why,” she replied. “There are a trillion people in the hells, maybe more. If we can end the world, we should. There’s nothing that can change the fundamental reality of eternal torture, not when the exclusionary principle has cut off so many promising avenues of research. Maybe you only care about yourself, but there are thousands of people sent to the hells every single day, because people just don’t care about them, not like they should. I’m sure that what you want right now isn’t someone telling you things that you’ve been hearing your entire life, fringe opinions that you can easily dismiss, but this world shouldn’t exist, not if there’s no way for us to fix it.” She forced all that out quickly, her voice slightly shaky.

“Where is he?” I asked.
“I don’t know,” she replied.

“I think that’s the first time you’ve lied to me,” I said.

She shrugged, again with the nonchalance seeming incredibly forced. “We were tracked before,” she said. “I’ve been off-site. When this one was coming to fruition, it was important that most of the main players weren’t around.”

I looked back toward the door. She was making me uneasy. “Grak, Val, I need you.”

Valencia strode in, looking around the room, and Grak followed after.

“She has a weapon,” said Valencia, looking Darri up and down. “She’s afraid to use it.”

“Grak, analysis?” I asked.

“Nothing to warder’s sight,” he said, frowning. “Still no trace of Harold.”

“Juniper,” said Valencia, looking at me. “Do you remember the swordsman from *Raiders of the Lost Ark*?”

I looked at her with a raised eyebrow. *Just shoot her?*

“Yes,” said Valencia. “Now.”

“I’d rather hear what she has to say,” I replied, utterly confused by the exchange. Valencia wanted me to kill this woman, that was clear, but if she was a link to Harold, someone with information -- and what could she do?

“She’s stalling,” said Finch. I looked back to see the source of his voice, and saw him coming into the room with a look of consternation on his face. He was apparently unharmed, even as he stepped past what was clearly his blood on the floor. He raised his pistol and pointed it at Darri. “Where is he?”

“No here,” said Darri. She was trembling slightly, looking between us.

“She knows something,” I replied. “Probably a lot.” I looked at Grak. “Put up wards, to be on the safe side.”

I really had no idea what Valencia thought this woman was going to do. I believed her judge of character, really, I did, but it would be strange for this woman to have a weapon that I couldn’t respond to in some way.

“Tell me about him,” I said. I looked over at the large man that Harold was using. He was still standing there, docile. “He doesn’t speak like a person.”

“He’s not,” said Darri. “He’s not a person. He’s something else. But he can bring about the end of the world, and wants it with every fiber of his being. That’s the only thing that anyone really needs to know about him.”

“But you’re working for him,” I said.

“She’s *stalling*,” said Finch. “That means it’s a matter of minutes, not hours. She’s keeping us here because Harold is going to try again, or try something different.”
“This is dangerous,” said Valencia. “I don’t know how, but it is. Some exotic weapon. Be ready to kill her.”

“Why are you working for him?” I asked. I was hoping that she would let something slip, because as it stood, Finch was right, we were getting nothing.

“Because he wants to end the world,” she replied. “Have you looked through an infernoscope? Have you seen what they’re like? Have you thought about a trillion people down there, being tortured forever?” She raised a hand and wiped the sweat from her brow, and as she did, I watched the others around me react by raising their weapons.

“We’re less than a year away from fixing it all,” I said. “We have a method of depopulating the hells of infernals. We’ll rescue everyone down there.”

“Look,” I said. “Listen to me. We’re not from Uniquities, we’re -- Val, can you explain?”

“There are things you don’t know,” said Valencia. She was less convincing, with the armor covering her face, but she was gentle and imploring. “There’s a way to erase all suffering from the world, to save everyone from harm for all time, to undo millenia of torture. We have the key to it all, we just need more time, months, not years. The forces of the universe are conspiring against us, and this, right here, right now, is part of it. Quee Shepak is part and parcel with the exclusionary principle, it’s not the only thing holding mortals back.”

Darri faltered.

“False, Hope,” spoke the man standing next to her. I stepped to him and touched him on the chest, stilling him so that he would drop unconscious. Raven helped me lower him to the floor, not that I needed it, then she began putting on handcuffs.

“He’s not principled,” said Valencia. “He doesn’t care about suffering. He just wants it to end, for his own ineffable reasons. You’ve been with him long enough to know that. I know you’re skeptical, because we’re promising the thing that you always wanted to be true, but I swear that it’s the truth.”

The corners of Darri’s mouth turned down. Valencia had told me that a pure cold read against an unknown quantity was incredibly difficult, and based on my understanding of the rules and what Reimer had said, Valencia was getting the skill levels of the infernals, not their actual attributes, which meant that she was more fallible than she should have been. I was still hoping that she would find some success here, that she had said the right words to unlock this woman’s mind.

She opened her mouth, then closed it, and looked at Harold’s avatar again.

“The temple,” she said, and then crumpled to the ground.

I stooped down and touched her, aiming for her soul as quickly as I could, but before I could get in, I felt her go cold and dead, her skin no longer connected to her soul, her blood no longer pumping with vitality.

“He killed her,” I said, frowning.

“Why would he do that?” asked Finch.

“Because I can disconnect them, and he knows that,” I replied. “Shit, the temple?”
“This was all a distraction,” said Finch. “All stalling. A decoy.”

I felt my heart sink, because I knew that he was right.

“Okay,” I said, as we made our way back outside. “Tell me how you survived.”

“Classified,” replied Finch.

“Finch, I don’t know what you know about Bethel, but she would happily kill you as many times as it took to figure out how your power works,” I replied. “All I know is that it’s probably not magic, because otherwise our warders would have picked up on it.”

“Seven years ago there was an incident,” said Finch. He was almost running to keep pace with me, given that his little gnome legs weren’t quite up to the task of being fast. I thought about asking him whether he wanted to be picked up in the name of expediency, but that seemed like it would be insulting to him. “I interrupted a ritual, one that was meant to summon something terrible. The thing they brought through only came halfway. Wrong place, wrong time, and it stuck to me, made me a part of it. Only it wasn’t so much a thing as a bit of information, and I co-opted it, made myself a part of it.”

“What are you saying?” I asked.

“I’m not Figaro Finch,” he replied. “I’m the idea of Figaro Finch. Flesh and blood, to all appearance, but really something more.”

“You’re saying that you’re a meme?” I asked. “And … that somehow makes you immortal?”

He cast a quick look at me. “You can’t kill an idea.”
Six seconds was an eternity in any kind of combat scenario, but it still wasn’t long enough. She hadn’t seen Prince’s Invulnerability happen, and she hadn’t seen the explosion coming, and it was only while she was in the air that she was able to put the pieces of the simple puzzle together. She was spinning, rapidly, the result of the explosion’s wavefront hitting her unequally, but the solution to that certainly wasn’t instinctual, because all of her training in the immobility plate had been in their training gym, either with aerial maneuvers five feet off the ground, or turning it on and off as a part of sparring. So by the time it occurred to her to stop both her fall and the spinning, Prince’s Invulnerability was no longer providing its protection, and her inner ear was basically fucked, the centripetal force acting on her in viscerally unpleasant ways.

The immobility plate had some protections built into it so that coming to a complete stop from full speed wouldn’t kill the wearer or turn them into a chunky paste inside of a suit. These protections weren’t all-encompassing though, and rotation was one of the things that they were particularly bad at. When Amaryllis used the immobility plate to bring her to a stop, her brain slapped itself against the inside of her skull, and she blacked out a thousand feet up in the air, suspended there by the plate as pieces of Mome Rath rained down around Li’o, so high that she was in the low-hanging clouds.

She was confused and disoriented when she woke up, and fell without meaning to as she groped her way back to consciousness. Her head felt full of fog. She’d only been hungover once in her life, after a night of too much drinking with Fenn, and this was like a worse version of that. She hoped that she didn’t have permanent damage; the brain was a notoriously difficult thing to fix, and affected the soul more quickly than any other injury.

She fell through the air in fits and starts, turning the immobility plate on and then off again, unfocused and knowing that this was dangerous, but seeing no other clear option.

“Juniper?” she asked through Parson’s Voice, speaking with a tongue that felt swollen and uncoordinated. Pumping END didn’t seem to help much. “Juniper?” she asked again. There was no response.

People saw her slow, awkward fall, and came to greet her.

“What are you okay?” one of them asked, a tall, handsome man whose features suggested he was a quarter-elf. He had a small badge secured around his neck that marked him as ‘Emergency Operations’. A few of the others did as well.

“No,” said Amaryllis. She had no idea how long she had been hanging in the cloud, suspended there, and she suspected that she had at least some mild brain damage that bone magic wasn’t doing enough for.

“Come on,” said the man. “We’re going to get you to shelter.”

“I have friends,” said Amaryllis. She was in no position for elaborate lies, so she left it at that. Had Bethel not been able to find her? Was Bethel even still alive? She’d seen the corpse of Mome Rath laying across the ground, covering large parts of Li’o, crushing so many things beneath it. The finger-hair was still writhing, somehow, with unpleasant and barely visible undulations.

“We’ll get you to shelter,” repeated the man. “We have plans in place for something like this.”

“For something like this?” Amaryllis asked.
“Disasters,” he clarified. “Exclusions. The temple is the safest place for a hundred miles around.”

Amaryllis nodded, slowly, and regretted it, because her head hurt, more than it had ever hurt before. She tried to think. It was strictly untrue that the temple was the safest place around, the safest place was Bethel, but if Juniper wasn’t responding, then there was no way to meet back up. Hadn’t they looked for her? Hadn’t they wondered where she was? They had beaten Mome Rath, without her, and then what had happened? She wanted to meet back up with them, to spend a week in the chamber recuperating, but maybe the temple really was the best place for her to be. The hair on Mome Rath was still moving, that couldn’t be a good sign, but what could one person do about it, even one like Amaryllis?

“Okay,” she finally said. “Take me there.” She tried one more time to reach Juniper, sotto voce, but there was no response.

(((As it would turn out, both the time out and the time chamber interfered with Parson’s Voice. That was expected, but also really, really unfortunate for us, and partly just down to unfortunate timing.)))

Amaryllis walked with one of the people wearing a badge, toward a nondescript building that had lots of people buzzing around it.

“We’re going down?” asked Amaryllis. She was starting to feel a little bit better. She couldn’t remember what the symptoms of concussion were, and wasn’t sure whether or not she had ever known. It felt like something she should have read about. “Standard protocol for something of this magnitude is evacuation.”

“It’s not an exclusion,” replied the girl. “Not that we can tell, anyway. And the thing is dead.”

“There are creatures on it,” said Amaryllis.

“They’re being handled,” replied the girl. She pointed out at the campus, where mages were gathered, forming a defensive perimeter. “People are being taken care of.” She kept up her brisk walk, but gave a noticeable pause in her speech. “You’re a soldier?”

“Yes,” replied Amaryllis. “Here by chance, not deployed.”

“You fell from the sky,” said the girl. She had to have been fairly young. Athenaeums often offered spots to younger students, especially those with money or connections, but this girl didn’t look like she was too far into her teens.

“I tried fighting,” replied Amaryllis. “It didn’t work out so well.”

“We’re here,” said the girl. “The elevator is constantly running, but it has a few cars, you’ll just have to wait.” She hesitated. “Do you need medical attention?”

“No,” replied Amaryllis, which was a lie. “I’ll be fine.” She was low on trust at the moment, and someone laying hands on her was the last thing she wanted, not unless it was Juniper.

The girl left her, and then Amaryllis got into line. She tried her best to listen to the conversations around her, to see what other people were saying. Some of them were surprised by the underground shelters, which was entirely fair, given that the secondary facility definitely hadn’t been marked as that on the floor plans they had, and from what Bethel could tell from the outside, it was much more of an expansion to the temple than anything else. It was a mystery that they didn’t know the answer to, one that had been lingering since Grak had first reported back on the construction. There was a thin corridor between the two, but it was heavily guarded with a surfeit of wards. Confusion, that was what Amaryllis was feeling, and what she heard in the conversations around her. Was confusion
a symptom of concussion? Amaryllis felt like it was, but it was hard to tell whether that was just
because it sounded reasonable.

It had already occurred to her that going down into the ground wasn’t a good idea. Mome Rath was
apparently dead, and Juniper was who-knew-where doing who-knew-what with everyone else, if
their party wasn’t simply scattered to the winds. Even if that hadn’t been true, going to a secure
location wasn’t common practice for something like this, because extraction was so expensive and
unlikely that it was rare that it would ever happen, not when there were so many people who needed
to be saved. When the cavalry came in, if it did, you wanted to be as close to the surface as you
could be. You didn’t want to be sequestered somewhere far away, not unless there was a compelling
reason.

From the perspective of the narrative? If she was meant to be a damsel in distress, it seemed that was
likely to happen no matter what. But if that wasn’t what this was, then it was a chance to do more
work behind the scenes, to produce real, concrete results that would provide measurable benefits
without having narrative impact. In the last twenty-four hours, Amaryllis had seen the fruits of similar
efforts, both with Bethel fighting on their side for once, and with the tuung finally coming out
from their long sequestration to help save lives. She wasn’t going to take full credit for either of
those, but she had been putting in work while Juniper had been gone, especially with Bethel, and it
was hard not to see recent events as the culmination of that. What did it matter if it was mostly in the
background? It wasn’t like she cared about credit.

She had no idea what she might find once she went down the elevator. An attack was certainly
possible, and a death … well, not off-screen, that seemed unlikely, simply on the face of it, but that
was still possible. Raven had told that horrible story about drinking from a cask only to find out that a
woman had been killed and placed inside it. That had been a punishment directed at Arthur though,
hadn’t it? A missive penned by an angry god who didn’t want his hero subverting the love interests
so thoroughly? It was hard to say. In theory, the Dungeon Master’s disposition would be different in
this scenario. Amaryllis had done a few things that might have raised the Dungeon Master’s ire, from
what they knew of him, but nothing that should warrant her death.

Still, it was always risky to do things because the narrative demanded them. Juniper had been clear
on that point. Do things because of narrative immunity, and the Dungeon Master will come down
with sword in hand, cleanly slit your throat, and retreat to his mountaintop palace to watch the rest of
the show in peace. But it did seem that the Dungeon Master was directing her downward, into the
shelter with all the others, for some purpose of his own. Going down was, in some sense, narratively
motivated, but skepticism toward going down was also narratively motivated, so it was difficult to
make sense of.

Either way, she was going down into the temple to see what was there.

The elevator ride was jam packed and uneventful. Many of the people around Amaryllis were
students, and most of them were repeating rumors about what had happened. Her head was starting
to feel better, and she listened closely, trying to file some of it away for later. No one knew that the
Council of Arches was involved, naturally. If they had seen anything, it was an enormous skyship
going toe-to-toe with a beast who could have straddled most small towns. That same ‘skyship’ had
apparently gotten the killing blow. There was no mention of Juniper, not that she expected there to
be. No mention of people being taken in by that same ship either, though most of Bethel’s work had
been in the worst affected areas. Mostly, there was talk of the destruction, of buildings that simply
weren’t there anymore, and people who might not have made it. There was also talk of what came
after, how or whether classes would start up again, what would happen to the campus, and whether
the things coming off the enormous creature’s body would turn the whole valley unlivable. No one
liked the way the hair was moving. Amaryllis supposed they would like it even less if they knew it
was made of fingers.

After the elevator ride was over, they were all guided to a holding area. Amaryllis drew some looks, but that was hard to help given the obvious entad armor. There was nothing particularly suspicious about anyone, or anything that they were doing, save for the fact that they were deep underground, not at all where they should have been given that evacuation should have been of paramount importance. The elevator in particular was suspect, given how fallible those things were, how limited their capacity, and how little robustness they displayed.

Amaryllis was waiting for the other shoe to drop. She kept her helmet on, even though the armor had grown moderately uncomfortable, and all its magical breathability couldn’t disguise the fact that she’d been through hell. Very few of the others around her looked like they had been in battle, or anything other than simply displaced. A woman had her arm in a makeshift sling, and a boy had blood on his brow, but it was nothing more than that. Amaryllis had been at ground-zero for a massive explosion that had rained blood and gore down on the whole city.

“We’ll be bringing everyone here into the next room,” said one of the attendants. “There are entads used within the temple that will be relocated so that everyone is provided with food and water for the duration.”

“How big is this place?” one of a group of girls near Amaryllis whispered.

“Dimensional reinforcement,” replied another in a knowing voice.

(Amaryllis suspected that he didn’t know what the hells he was talking about. A skilled star mage could make a room that was bigger on the inside than the outside, but it was hellishly expensive, and the failure modes weren’t pretty. Nothing in the schematics had indicated the kind of reinforcement that you would expect, if there really were extradimensional spaces in play.)

Amaryllis followed the group, still waiting for whatever was yet to reveal itself. She didn’t have her flickerblade: it had been out when the explosion happened, and had no native ability to return to her hand. Perhaps it would find its way back to her, but it was entirely possible that it was buried in the rubble somewhere, never to be found, which would be a terrible loss. She was armed only with her martial skills (and her magics, though most of those were under active suppression at the moment). A quick test let her know the immobility plate was still working, as the full entad ward was only for the temple proper, not the annex, likely due to the cost, or maybe because the annex was obviously unfinished. Her tattoos weren’t moving though, which was a good indicator that Parson’s Voice was out of commission. Come to think of it, it was entirely possible that Juniper was within these same wards, which was why he hadn’t responded.

The new room was larger than the old one, with tall ceilings and better ventilation. It wasn’t clear how many people this space was designed to hold. There was nowhere to sit, but some people found spots on the floor. Amaryllis found herself frowning at the arrangement. They hadn’t been told why they were being moved, but maybe that was because there were lots of people, and the reasons for the logistical decisions wouldn’t be clear to anyone at the end of the chain of command, that wasn’t how you ran an evacuation program, nor how you fought a war. Still.

Amaryllis was the first to see the gas coming through the vents. It was subtle, off-white and thin, but it was there, and she could smell it a moment later. She was wearing the Bracelet of Panacea, which had been given to her back when they’d been getting ready to send Juniper down into the temple for meditation, and prayed that it would work.

The effects were slow and more subtle than Amaryllis would have expected. It wasn’t a gas meant to kill people, or at least not one meant to kill them quickly. The conversations grew louder, more
intense, and with more people involved. A few of the people were slurring their words slightly. Amaryllis wasn’t talking, and wasn’t feeling the effects.

People began to droop and slump, and Amaryllis drooped and slumped with them, doing her best to copy them and not stand out.

*Altered states.*

Harold had been using the temple, which had an entad that could induce a forced meditative state, one which he could presumably exploit. It was a reliable five hundred captive people every week, and given that he’d shown up at the meditation classes, his capacity was greater than that. Other means were being employed, to gather up more people. From everything they knew of Harold, as filtered through Oberlin, there were a somewhat wide variety of altered states that could be taken advantage of, and drugs were likely one of them.

Eventually almost everyone was laying on the ground, some of them sprawled out. Most were still talking though, the words barely coherent as words, all trains of thought horribly derailed. Amaryllis chose to be one of the silent ones.

Harold would know.

Harold *might* know, but if this were an operation to get as many people converted and ready for the choir as quickly as possible, then perhaps he would miss one person sitting in the middle, immune. Perhaps he was most aware of those he had access to, and could see through the eyes of the people he’d snagged in the way a human would, one at a time, rather than like an insect with a thousand facets to his eye. It was possible that Amaryllis would get lucky, or that Harold would be sloppy.

After ten minutes had passed, the far door opened up, and more attendants began to move in, these ones wearing thick gas masks with rubber hoses leading to heavy tanks. They were big and strong, members of the mortal species who were strongest, aboria, broshe, and Ha-lunde. They picked up the people that were laying there, no one dead or even asleep, but all completely out of it, unable to resist as they were lifted up and carried out. It wasn’t a terribly fast process, but it was done with efficiency.

Eventually they got to Amaryllis and removed her too. She made herself dead weight and watched with half-lidded eyes through the helm of her armor. The immobility plate didn’t restrict vision as much as it seemed like it should have, but as she was unable to move her head without giving herself away, there was little she could see.

The room they brought her to was packed with tall pews, so tall that a person could rest their head against the back. It was a massive room, and filling up fast, with most of the people packed in together so tightly you could barely tell how many of them were slumped there. Amaryllis was carried past row after row, more and more people who must have come down as part of the disaster response, then been drugged out of their minds so that Harold could get to them. What was his conversion rate like, that he could do this? Or, no, he had been covering his tracks back then, this was just a field of people who were obviously compromised, something that he wouldn’t be able to hide for longer than a day. Maybe he could go faster this way.

Mome Rath was dead, but for how long?

The attendants pushed her into place in one of the pews, then more attendants came with another person, and another, pushed in like sacks of meat. Amaryllis kept playing dead.

This was what she had come down here to find, but her tattoo was still shorted out, and getting back
up was … well, daunting to say the least, especially when there were only three ways of getting back to the surface that didn’t involve magic (not that she had magic that could cross the distance). The Spelunker’s Stroll and the primary elevator were both past what the floorplans had indicated was a secured passage, and the secondary elevator she’d come down was teeming with people, many of whom were compromised agents of Harold.

A different person might have been a ball of anxiety at the thought of being down there, surrounded by enemies who clearly had a plan, with help decidedly not on the way. Instead, Amaryllis felt exhilarated.

Oh, it was certainly a nightmare, that much was true, but there were plans to be made and then executed, a concrete direction, and that much she was good at. If she had simply gone down into the makeshift shelter and then stayed there until someone had given the all-clear, meeting up with the others hours or days later, that would have been a blow to her very being.

She stood up from the pew and moved past the insensate people laying there, edging her way to the end of the row. When more attendants went by, carrying more bodies, she stayed stock still, not wanting to make any movements that would catch their eyes, not even to duck down out of sight. They were, fortunately, carrying a body, and not paying attention to anything but the work they had apparently been carrying out for the last half hour.

Once they had gone by, there was nothing for it but to exit the pews and start walking. Someone would surely notice her, but walking with purpose was a skill that a person could learn, and as a princess, you simply couldn’t walk around like you were lost and confused, even when you were. Amaryllis prayed to a higher power that whatever Harold had done to make these attendants, he hadn’t given them the intelligence to question her presence, nor the wherewithal to raise an alarm.

As she walked, she saw two more attendants carrying a body between the pews. One of them looked at her briefly, then continued on, as though she were nothing.

Amaryllis didn’t know the layout of the secondary temple well enough. She had seen the floorplans, which they had stolen a week ago, but there was no guarantee that those told the whole story, and she had gotten twisted around between coming down from the secondary elevator, being led into the gassing room, and being carried into the room with the pews. Obviously going back through the gassing room was infeasible for a number of reasons, but that meant trying to work out a safe path back to the elevator that would route around it.

How long had this plan been in place? Months, at the least, maybe since even before the first death that had begun to bring heat down on the administration. Was this what Harold had planned all along? And with Mome Rath summoned … well, more bodies for the choir seemed to imply that Harold was going to try again. There were limits to how many people you could pack into a large room like that, but even after it was entirely filled, the rest of the complex could be filled as well. How many could Harold need?

Perhaps the original plan had been to do this once there was a critical mass of people converted, rather than in a time of crisis. That made a bit more sense, at least to Amaryllis’ eyes. The summoning of Mome Rath had something to do with the choir he’d assembled, people singing out a layered tone, but it hadn’t just included people in the temple complex, there were people on the surface too, and if someone had been prepared to take that step, or if it had been general information, then the singers could have been killed before they finished their contribution. Who knew whether or not that would have worked, but it might have been worth a try. Mass conversion underground, under some believable pretense (like an expansion of temple capacity) would allow a final push to a choir that couldn’t be stopped.
It wasn’t entirely academic. Figuring out Harold’s plan was the first step to stopping it. Amaryllis had frustratingly little information about what had happened with Juniper down in the temple, but it was entirely possible that Harold had acted early, in response to his encounter with Juniper, and now that Mome Rath was laying dead, the original plan was being quickly adapted into a different form.

Amaryllis passed a few people as she walked out of the hallway, but if any of them recognized her as being out of place, they showed no indication of it. She took a left, then a right, which should have gotten her into a room that was on an alternate path to the elevator. Instead, she had her first encounter with someone who recognized her as not belonging.

“You’re not supposed to be here,” said the woman with a frown. She was wearing an outfit that showed a lot of skin, but she wasn’t a tattoo mage, because there was nothing visible on her dark skin. It was the beads circling one wrist and the small box she was clutching that gave her away; Aumann had something similar, a collection of projectiles that marked her as a gold mage. The room was small, with just a table and a few chairs, a place that might have been a break room if the cabinets had been finished.

“No, I’m not,” replied Amaryllis. “I was trying to get back to the surface.” Lying was one of the things that she was good at, and she’d gotten better over the months with Juniper.

The woman nonetheless stood up from where she was sitting. Amaryllis had been holding out hope that gold magic was warded against in the annex, as she knew it was in the main temple, but she saw the beads rotate around the woman’s wrist with no outside force.

“On whose orders?” the woman asked.

The problem was, there just wasn’t enough information to bluff. Amaryllis didn’t even know Harold’s actual name, if people around here knew of him at all.

“No one’s orders,” said Amaryllis. “I’m not in the chain of command.”

“I see,” said the woman with a slight frown. She moved her hand slightly, to a more combat-ready stance. “Stay here for a moment.”

Amaryllis moved as fast as she could. Blood was still working, but bone wasn’t. Conventional wisdom, when facing down a gold mage, was that you needed to create as much distance as possible, then assault them with non-kinetics. Unfortunately, that wasn’t an option here, and the non-kinetics that Amaryllis had on hand were extremely limited, especially without the flickerblade at her disposal. She rushed forward instead. It was a tactic that was, at least, a surprise to a gold mage, in part because it would normally be suicidal.

Amaryllis ducked down and slipped under the gold mage’s arm, then spun and came around from behind, wrapping her in a hug. As soon as that was done, she activated the immobility plate. Then she began focusing on the kill.

Gold magic and still magic were mirrors of each other in some respects, in terms of physical power, not their sources. A gold mage’s tactile telekinesis had no limitations aside from power output, which was tied to their marked gold, while a still mage had no limitations aside from their stilling ability, which was normally limited by how intensively they had trained and how deep their ability ran. In the game mechanical terms as laid out by Reimer, it would probably be a contested roll, skill check against skill check, and nothing more. In physical reality, it was force applied against counterforce, which in a way was even simpler.

(A small but significant difference was that a gold mage could act only on things that were within a
fraction of an inch of their skin, while a still mage could act through sufficiently close or linked objects. It was one of those tidbits that you read about in a book and then filed away for later, then suddenly needed to take into consideration in a crucial moment.)

The gold mage was pushing back against the immobility plate, budging it, but not by much. Amaryllis held the gold mage in a hug that didn’t do enough to restrict her arms. Gold mages could turn anything that they touched into a projectile, one that could be as powerful as a bullet, and that was exactly what the gold mage was trying to do, pushing hard against the armor in short jabs, without the need for any projectiles. The immobility plate was a good armor, and it didn’t succumb to the force, but as Amaryllis tried to still the gold mage’s heart, the fear was starting to run through her. Catching the enemy off-guard was one thing, but if the woman wasn’t fighting at a blind panic, she might try other, more effective strategies.

Amaryllis almost had it when the woman tried to scream. Vibration magic, even so weak as it was, was enough to silence the scream before it even left the woman’s throat, helped in part by the way Amaryllis’ extra senses extended beyond her. The gold mage’s heart was weakened, almost giving out against the force tamping down on it and forcing it not to pump blood.

That was when Amaryllis felt, through still magic, the beads from the bracelet rolling over the woman’s skin. The immobility plate was full plate, with gloves, gauntlets, and a full helm, completely encasing its wearer. Amaryllis had been hoping that the second tactic the woman would try was going for the head or hands, traditional weak spots of entad armor, weak points that the immobility plate decidedly lacked. Instead, the woman began flinging the beads at the wall, puncturing them through with small holes as she kept trying to scream. She got six of them out, traveling almost fast enough to be bullets, a dangerous and indiscriminate attempt at getting any help.

And then the gold mage tried something else, something that might not have been tried in the history of Aerb; she tried to use her tactile telekinesis to pump blood through her own body. Amaryllis could feel it, and first tried to still it, then allowed it through. Gold mages could put an enormous amount of power into pushing things around, but it wasn’t fine-grained, and as soon as Amaryllis was no longer stilling the blood, the gold mage was slamming blood through her own body, bursting arteries and veins, and popping her heart at the seams of the muscle.

After she’d gone limp, Amaryllis spent an extra second, just to be sure, then stopped the immobility and dropped the gold mage to the floor. Amaryllis grabbed the woman’s head and jerked it upward, hoping to sever the spinal cord, just in case, a move she added the pulse of blood magic to for extra power. There was a cracking sound, but not much else, and Amaryllis hoped the woman was dead for good.

It was pathetic, to spend so much effort to kill so minor a foe. How many mages did Harold have at his disposal? Still mages and vibration mages in abundance, that much was clear, but if he was willing to drug people with abandon, then he could have captured so many more, and exotic species too, ones with their own bespoke magics and abilities. There were mages that Amaryllis would have no chance at beating, entads that would stop her dead in her tracks.

And if the holes the gold mage had poked in the wall had done any good, Amaryllis was likely going to have to face them, with her tattoos non-functional, her bones blocked, and her strongest available magic, still magic, one that she’d had precious little time to train with. She didn’t have her flickerblade either, nor any other useful weapon.

She needed Juniper. She shouldn’t have come down here without him. If it took waiting outside and waving her arms, she should have done that instead, rather than trying to go off on her own and getting stuck.
When no one immediately burst into the room, Amaryllis checked the body. The woman was confirmed dead, and Amaryllis had no method of saving her soul within the next thirty minutes, not when she was surrounded by hostiles. She winced at that, then stole the woman’s dagger, which was either an entad or made to look like one (too stylized to be utilitarian), though three quick slashes through the air revealed nothing in particular, and it was entirely possible that if it was an entad, it had either been invested by someone else, or was hereditary rather than unbound. Amaryllis took it anyway, finally securing herself a weapon, even if it wasn’t what she would have asked for. There was nothing else of value in the room.

Amaryllis hefted the knife, looking it over one last time, then opened the door to the next room. She had cause to use her new weapon almost immediately, as soon as she saw the barrel of a rifle pointed her way.

It was a good time to find out that she was bulletproof. In testing back inside Bethel, before Juniper had gotten out of the temple, before Mome Rath had shown up, and before the biggest explosion Amaryllis ever hoped to experience, Juniper’s skill with Still Magic hadn’t been high enough that Amaryllis could actually bring a small caliber round to a dead stop. Now, the rifle’s bullet stopped against her skin with no more than the briefest of warnings to direct stilling power that way.

She stabbed the man holding the rifle in the hand, and he screamed, dropping it. Amaryllis snatched it up with her left hand before it could hit the floor.

There were others behind him though, and they wrenched the door open. Amaryllis threw the dagger at one of them, whipping it around as quickly as she could.

The dagger lit up brighter than the sun for a brief moment, etching itself in her vision before she could screw her eyes shut. When she opened her eyes again, after she could only see the dagger as an afterimage rather than visible through her eyelids, she saw her three assailants clutching their faces -- or, no, one of them had a vertical hole through his chest, singed on both sides, a hole almost exactly as wide as the dagger. On top of that, the dagger was back in Amaryllis’ hand.

She went after the two men while they were stunned, slicing cleanly through their throats before they even had their eyes uncovered, then she stepped out into the hallway and flung the dagger as hard as she could at one of them, whipping it around as quickly as she could.

The dagger lit up brighter than the sun for a brief moment, etching itself in her vision before she could screw her eyes shut. When she opened her eyes again, after she could only see the dagger as an afterimage rather than visible through her eyelids, she saw her three assailants clutching their faces -- or, no, one of them had a vertical hole through his chest, singed on both sides, a hole almost exactly as wide as the dagger. On top of that, the dagger was back in Amaryllis’ hand.

She went after the two men while they were stunned, slicing cleanly through their throats before they even had their eyes uncovered, then she stepped out into the hallway and flung the dagger as hard as she could at the first people she saw. She had preparation this time though, and turned away with her eyes closed just after the dagger had left her hand, spinning back into the room for whatever protection it might provide her from the incoming firepower of the people bearing down on her. When the dagger returned to her hand, blinking into existence there, Amaryllis stabbed it into the wall and raised her rifle instead, then leaned out of the room just enough to see down the hallway. On one end, two people were dead, but on another, seen through a quick change in angle, there were two men walking forward, one behind the other. Amaryllis recognized the one in back, but it would have been hard not to: he had four arms, constrained in a tight shirt and with a set look on his face.

Amaryllis fired off a shot, aiming for Oberlin, but didn’t wait to hear whether or not it connected before ducking back into the room. She pulled the knife from the wall and took a steadying breath, then threw it hard toward Oberlin and the other man, screwing her eyes shut so that they wouldn’t be seared by the light it was putting out, and once again ducking behind the doorframe.

Her head started to vibrate just after that, slow and subtle at first, and then faster, as Oberlin locked in on the resonant frequency and began to vibrate her to death. It almost instantly became harder to think, harder to do anything, and Amaryllis knew that she was about to die, was probably seconds away from it. She turned the immobility plate on, locking herself in place, but that did nothing for the vibration. She used still magic on her own head, holding her skull in place against the vibration, but that was a stopgap measure, and even more than the immobility plate, she was pinning herself down.
The worst part was that Oberlin didn’t have to come closer at all, this power was something that he could use around a corner, which meant that her ability to fight back with the meager tools at her disposal was gone. Vibration mages were limited by what they held in reserve, if she could just hold out --

The vibration let up, all at once, and Amaryllis stood up, shouldering her stolen rifle. Whatever had happened to the dagger, it hadn’t returned to her hand. She waited, listening to silent footsteps, aiming at the doorway. She was a mediocre vibration mage, barely able to do anything with the power, with a pitifully small pool of breath, but she tried to enhance her hearing anyway, which only made the footsteps sound more like death.

At the first small hint of something moving past the door frame, she fired her rifle.

The bullet struck Juniper in the head, stopping instantly and then falling. He caught it and looked it over for a moment before looking up at her.

“Nice to see you too,” he said with a widening smile.

“Harold is building up a choir,” said Amaryllis. “Gassing people into an altered state, then taking them over. He’s going to try again.”

“I thought you might be dead,” said Juniper. He was still smiling.

“Focus, Juniper,” said a familiar voice, and Figaro Finch stepped into view. He glanced into the room. “Oh, good, you found Amaryllis. Let’s go.”

“What the fuck is Finch doing here?” asked Amaryllis, staring at the gnome.

“Saving the world,” said Finch as he kept moving down the hallway.

“That’s actually not Figaro Finch,” said Juniper. “It’s the idea of Figaro Finch.”

Amaryllis gave him a bewildered look that the helmet hid and stepped out of the room.

“Sorry,” said Juniper. “I’m just really, really happy to see you.”

“It’s fine,” said Amaryllis, though she was finally feeling warmth and relief flowing through her. He was like a giddy puppy sometimes. “What’s the plan?”

“Find Harold,” said Juniper. “Kill or subdue him. Get to work fixing everyone left alive.” He looked backward, to where Oberlin was laid out. “I think he’ll be fine. There are others that won’t.”

“We think Harold is here?” asked Amaryllis. “Physically present?”

“Might be,” said Juniper. He hesitated for a moment and looked like he was going to go for a hug, or to offer her his hand. “Come on, Finch is right, time is wasting.”

Amaryllis came out into the hallway and saw the others, Raven and Pallida, Grak and Valencia, and for whatever reason, Juniper’s ethics professor, who was in imperial-standard shimmerplate. There were others too, one-armed humanoids that took her a moment: gimmals. Valencia was divesting the bodies of their souls, moving quickly and efficiently, and Amaryllis let out a sigh of relief.

They went through the facility together, with Juniper at the front, and Finch just behind him. Amaryllis had the rifle, one that was useless against the still mages that surely made up the bulk of Harold’s rank and file, but she held onto it tightly, because it was as much offense as she had
available to her. The situation was new and confusing, the reunion fast and missing too much catharsis, because the threat was still out there, and they were still on the enemy’s home ground.

“He’s strong,” said Pallida, walking alongside Amaryllis and speaking under her breath. “Really strong right now.”

“Leveled up?” asked Amaryllis.

“Three times,” said Pallida.

“Three?” asked Amaryllis, eyes widening.

“Three,” said Grak.

But before Amaryllis could ask questions, they were into the next room, and Juniper was moving so fast that he was practically a blur of motion, and he wasn’t even a velocity mage, not yet. The sound of gunfire echoed through the halls, loud and imposing, and Juniper didn’t so much as shrug it off. This was what still magic had promised, it was why Sound and Silence had been one of their goals from early on, but it was still startling to see in action. Amaryllis had only a foggy understanding of the annex, but it seemed as though they were moving toward the center of it, if her reckoning of where they were was correct.

There were certainly more mages of many varieties stationed here, for all the good it did them. Rapid identification of magic was part and parcel of training for fighting in all conditions, and as Juniper tore through the room, she could barely decide which school his opponents belonged to before he struck them down. A rune mage in glowing runic armor had a powerhouse punch stopped instantly, and Juniper brought him down in seconds. A flower mage unleashed an arsenal of racing branches, perhaps hoping to capture or ensnare, and Juniper whipped his probability blade around, neatly severing it all before it could get close to him, then advanced on the woman.

It was a one-man massacre, and all Amaryllis could do was stand there with her rifle raised, hoping that she would be able to help, or at least to take a clean shot. After half a minute, it was over, and Juniper was looking over the bodies.

“Still magic one hundred,” said Grak from beside Amaryllis.

“Oh,” she said. “Sacrifice?”

“To save me,” said Valencia.

“He doesn’t have much time left then,” said Amaryllis. Given the rate of decay, not much time left at all.

“The capstone allows any effect with a duration to be stilled,” said Grak.

“Oh,” Amaryllis said again. “Wait, Prince’s --”

“He’s under the effect,” said Grak. “Until the next time he sleeps.”

Amaryllis was stunned by that, and then the gears started turning as fast as they ever had before, her earlier head trauma making it slightly hard to think. Anything with a duration? Bone magic was unfortunately out, because it relied on transfers of quantities and expenditure of resources rather than being timed, and if that had worked, then Juniper would still be charged with all the manifold powers of Mome Rath, and that didn’t seem like it was the case, because he wasn’t that fast. Everything else though? There were options, so many options that it was nearly dizzying, a whole world of entads,
various spells available to tattoo mages, nothing that would match the heights of Prince’s Invulnerability, but --

“Wait,” said Amaryllis, turning to Grak. “The wards --”

“Subverted for him,” replied Grak. “This can wait.”

But Amaryllis was getting fidgety, because something else had occurred to her, which was that from a narrative perspective, this meant there was sure to be a rapid escalation of threats. Worse, they would be threats that only Juniper could face, not threats that his family, his team, would be able to help him with. The way Raven had described it, that was what it had been like living with Uther, most of the time. There were specialties for each of them, little areas that they had carved out, but there were many threats that Uther simply handled on his own, without help or consultation. Even before he disappeared for good, there had been times that he would simply vanish for a week or two, sometimes giving brief notice, sometimes just disappearing and pretending that it wasn’t cause for alarm when he returned. It had been like that at the Boundless Pit, but that was only one of many.

Fenn had complained about it often, before it had really been a problem, or even a glimmer of one. She had been their archer and self-professed slink-thief, but there was very little call for that most of the time, and after she and Juniper had started their courtship, she had sometimes felt relegated to the role of love interest, especially because there were times when she was trying to give input, in her own way, input which was ignored more often than not. Hells, even from the very start, Fenn had been worried about being locked out of power, an outsider in their little group of three, and then she had become so marginalized as to be practically a footnote in their story, the death that no one talked about anymore.

Amaryllis put herself toward the rear of the party, moving so as to provide support against any attempt to pin them in or attack from behind, but there was nothing. Juniper had cut through the annex like a scythe.

They came into a large room, this one even less finished than the rest, with only glowing glyphs for lighting, the kind that were often used around Aerb but here cast a sinister pall over everything. A man sat in a simple chair at the other end of the large room and beside him, the only other thing in this hollow, hidden place at the heart of the annex, was a jar with something that gave a suggestion of flesh.

“On your guard,” said Juniper, which might as well have gone without saying. “Grak?”

“Give me a moment,” said Grak. He held out his wand with his good hand, and spread the fingers of his wooden hand wide. “I think that is Harold.”

“Sitting, or in the jar?” asked Juniper.

“In the jar,” replied Grak. “I can ward.”

“Do that,” replied Juniper. “Clear of wards here?”

“Yes,” replied Grak, frown visible in the darkness.

“It’s over!” called the man who was sitting beside the jar. “We lost! You won!”

“Careful,” murmured Amaryllis.

“Four entads,” said Grak. “All of them warded against since we left the elevator.”
Juniper began walking forward, crossing the distance, and Amaryllis fell into step behind him. He looked back at her briefly, as if surprised to see that she was following, then continued on. The only other person to approach was Finch, or rather, the idea of Figaro Finch, whatever that meant.

“Hi,” said the man on the seat. “Sorry, give me a moment, just coming down off the high. For a moment, I really thought that we would pull it out there.” He looked a little bit sick, and confirmed that impression a moment later. “I feel like I might throw up, just because of the nerves.”

“That’s Harold,” said Finch, pointing at the bottle of flesh. “I’d bet my ass. You trust your warder?”

“Yes,” said Juniper, without so much as a look backward at Grak. “I’d lay my life in his hands without a second thought.”

“Well, you have,” said Finch.

“Harold?” asked the man who was sitting. He was sweating slightly, and clutching his pants where they covered his knees. “That’s the name Uniquities gave him. You’re them?”

Finch raised his pistol and Juniper, moving fast, blocked the shot with his hand. The shot rang out through the small room, and Amaryllis was thankful that she had just enough skill with vibration magic that she’d been able to keep her ears from ringing.

“Useless to talk to him,” said Finch. “Dangerous too.”

“There are threats he could deploy,” said Amaryllis. “He’s not harmless, sitting there, warding or no. Juniper, some of those threats are known to you.” The Cannibal was one, though Amaryllis didn’t even want to say that much, because it would give information away to the enemy.

“I know,” said Juniper. He raised his sword and advanced, slowly. “This isn’t how this battle ends though, not with me killing these two and then being done with it.”

“How this battle ends?” asked Finch. “There’s no romance here, no climax, just kill the fucking guy and hack through the mass of flesh there, then let’s start in on the paperwork.”

“I want answers,” said Juniper, his voice surprisingly firm. “Harold came from somewhere. He has a goal. There might be more of him, or more of his kind.” Some of this was directed to Finch, but some was also, obviously, directed to the man sitting in front of them. “What’s your name?”

“Ellio,” he said, looking up at Juniper. “And you’re Juniper Smith.”

(Amaryllis was tensed and ready, ready to slit the man’s throat as soon as the wrong syllables came out. The risk wasn’t really the Cannibal, she could kill him before there was any real danger that he could complete the sequence of phonemes, the danger was something else, the great unknown, not something that was in a foreign language or required the twisting of a tongue, because they would expect that, and so the weapon that Juniper would have designed would be different, more subtle. An innocuous phrase that called down hellfire? Nothing someone could say by accident. Maybe two or three words, spoken within minutes of each other, so rare that it could be a trigger to something, unknown to the world.)

“Harold told you my name,” said Juniper. “Who are you to him?”

“I’m his advisor,” said Ellio. “One of them.”

“One of many,” said Juniper.
Ellio nodded. He was still fidgeting. “You have to see the world,” said Ellio. “Not the world how it pretends to be, how you want it to be, how you think you can reshape it, but the world how it is. The world is shit.”

“Garden variety cultist,” said Finch.

“No,” said Ellio. He didn’t take his eyes from Juniper. “There are sixty-two exclusion zones, places of unimaginable horrors, places that are, at best, inhospitable to life. Those exclusion zones come at the expense of useful magics, and every effort put forward to stop the exclusions from happening has failed. The world is getting worse, everyone knows it and no one talks about it, the world is hostile to our very existence just as a matter of course, and grows more hostile every year. We’re getting ground down, and no one is doing anything about it, because there’s nothing to be done.”

“That’s your premise?” asked Juniper, raising an eyebrow. “That the world is getting worse? And that justifies,” he tightened his grip on his sword, “the end of the world?”

“No,” said Ellio, shaking his head. “No, I should have started with the hells, but everyone knows about the hells, they’ve grown up knowing about the hells, and if you start talking about infinite torture then they tune you out, so you talk about the world and how it’s getting worse.” He took a breath. “Our society strives for oblivion, we makes laws encouraging it, mandating it, but we manufacture souls by the thousands, knowing there’s a chance they’ll wind up in the hells, gestating there under infernal control until they’re capable of feeling the same infinite pain that every other resident is subject to. You speak out against it and people don’t care, they content themselves with delusions and ignore the cold reality, the same as they do when they walk past a homeless man on the way to work, the way they justify their sins to themselves, it’s … it’s pain and suffering, as far as the eye can see, and Aerb, the world as we know it, is just the tip of it.”

“Are you getting anything from this?” asked Finch.

“Maybe,” said Juniper. He nodded to Ellio. “Go on, finish your rant.”

“I realized it all when I was a teenager,” said Ellio, seeming grateful that he would get to talk. “I realized how cold and cruel it all was, how people would delude themselves into thinking that it wasn’t. I was afraid of dying then, afraid of the hells after I saw what was there, and when I looked around me, other people weren’t, they didn’t act like they should have if eternity were on the line. They did stupid, risky things like leaving their house without a bottle and a spike hanging from their hip. They slept without someone watching over them, or worse, alone. They didn’t act like eternal torture was on the line. They acted like it would sort itself out. Do you know what the enbottling rate is?”

“Through the Empire it’s ninety-two percent,” said Amaryllis. “Though only one study was commissioned, so far as I know.”

“Yes,” said Ellio, finally looking at her. “Eight percent of the population winds up in the hells, and that’s without even accounting for the fact that the Empire would never admit how often nascent souls go there.” He was fidgeting again, and directed his attention back to Juniper. “It took me a long time to understand that people live in the now, that they put on blinders to the cruelty and horror of the world. And after that, I --”

“You decided that you were going to end the world,” said Juniper.

“No,” said Ellio. “No, I tried to improve it, I tried to open eyes, I joined the Anti-Natal League, I went on marches, but it was lonely, and progress was slow, and all around me, people kept going to the hells, they kept dying. We prepared reports on known incidents, tried to force hospitals into
compliance, lobbied for changes to the laws … and it slowly became obvious that none of this effort was really doing anything.”

“And it was then that you decided to destroy the world,” said Juniper. He sounded flippant, Amaryllis noted with relief. This sort of talk could be seductive, she knew.

“I decided that I would destroy the hells,” said Ellio. “An impossible task for a single person, but the world is large, and eventually I found others, people that I could work with. Not people who wanted to destroy the world, no, people who wanted to destroy the hells, as impossible as that might have seemed. But you don’t care about me, I know that, you’re content to kill me if I don’t tell you what you want to know, I’m just --” He balled up his hands into fists. “Our minds rebel against it, they reduce trillions down to nothing, worse than nothing, abstraction, but any rational person would see that the hells are of paramount importance, their destruction should be the one and only driving goal of mortals,” he began shaking his head. “There ought to be a horrible weight of responsibility felt by every person in this whole world.”

“Harold doesn’t care about that,” said Juniper. “He’s using you, like he’s used others before.”

“Of course he’s using us!” shouted Ellio. “He uses everyone, it’s what he does. But his goal aligned with our own, and -- he was going to end it. He was going to bring an end to the pain.”

Juniper frowned at that, then glanced at Amaryllis. “Thoughts?” he asked.

Amaryllis gave a small laugh. “It’s insanity.” That felt like the proper amount of flippancy to treat the subject with, the right level of dismissal.

“You don’t really believe that,” said Juniper.

Amaryllis felt her face fall. Had something happened within the game mechanics somewhere that had allowed him to notice, two opposed dice rolls that had been extremely unlucky for her? Or was it simply that he knew her too well for such deceptions to work?

“I think it’s something we all think, once in a while,” said Amaryllis. “Not the whole world, but … that urge, to raze it all down and leave nothing but ash in its place. And if the only tool you have is ending the world, if you have to look at whether the world is worth it, then it’s possible to do your sums and decide that if you can’t fix everything that’s broken, maybe it would be better that nothing existed at all.” That was as close as she was going to get to saying what she really felt, at least in the here and now.

“Hrm,” replied Juniper, frowning for a moment and then looking away from her, back to Ellio, and briefly to the jar of flesh.

“You feel it too,” said Ellio, staring down Juniper. “He saw you, he got the measure of you, he knew that you felt it, the need to do something about the world, to erase it all.”

“That assumes that it’s immutable,” said Juniper. “It’s not.” He pointed at the jar. “Are there others like him, do you know?”

“Not immutable?” asked Ellio, ignoring the question. “You’d have me believe there’s some way to deal with the hells? Some way to save everyone from torment? Some way to fix all our terrestrial problems, to halt the inevitable spiral toward collapse?”

“I don’t really care what you believe,” replied Juniper. “But yes, I have it on good authority that there’s a way.”
“How much faith do you have?” asked Ellio. The muscles of his neck were straining. “How much more likely is it that you listened to a deception, that it was a pretty lie?”

Juniper hesitated and seemed to think about that. “Even if it were,” he replied. “If it were a grand and elaborate lie with fabricated evidence, or some delusion on my part, even then, I would still want to strive for better, instead of just giving up. If --”

“Giving up?” asked Ellio, incredulous. “Is that what you think --”

Juniper moved forward, so fast he must have been using magic for it, and touched Ellio on his throat. The man froze in place.

“I don’t want you to make a mistake here,” said Juniper. “I’ve been suffering you to speak. Maybe you were some normal person who decided that the rational thing to do was to blow up the world, and you were enabled and used by Harold and whoever else was part of your cult. Or maybe Harold grabbed a hold of you and decided that he needed someone to serve as his mouthpiece, which would mean that none of this is your fault. I’ve been trying to be nice and pleasant, because I thought that it would make things easier. The thing is, Mome Rath killed thousands, maybe more, and what I need from you now is information about contingencies, information about whether there are other threats, or booby-traps, or anything else that you wouldn’t want me to know.”

“He won’t talk,” said Finch.

Juniper didn’t respond, and only stood there, gripping Ellio’s throat, likely using still magic, engaging in some kind of intimidation tactic. It lasted for a long moment, so long that the silence grew uncomfortable. It took longer than she would have liked to admit to realize what Juniper was doing.

“Oh,” said Ellio. His eyes went slightly wide.

“Tell us everything,” said Juniper.

“I,” said Ellio, looking momentarily confused. “Yes.” He looked over at the jar of flesh. “He’ll kill me.”

“Can he?” asked Juniper.

“No,” replied Ellio. He let out a breath. “We always knew that warding would work. It was one of the things that we tried our best to prepare against. No warder could be allowed to see him unless he had his teeth in them, we were meant to post up in places that a warder couldn’t encompass, and we were always prepared to leave without a trace.”

“So what made this time different?” asked Juniper.

“He thought he was close,” said Ellio. “Closer than ever before. He had a bigger base in Li'o, more people collected, and it was changing him.”

“You can’t trust these answers,” said Finch.

“I’m an unregistered soul mage,” said Juniper, as though that were a casual thing. His voice was slightly clipped; he knew the gravity of revealing that, but he’d made his choice, and sometimes when he did that, he would add this air of false nonchalance.

“What’s going to happen to me?” asked Ellio, true concern on his face for the first time, replacing anxiety.
“I have no idea,” replied Juniper. He glanced at Finch. “Probably not a trial. Probably just confirmation that you weren’t a pawn, then execution.”

“Oh,” said Ellio.

“Where does he come from?” asked Amaryllis, stepping closer to Ellio. “Are there more of him? What was your plan here, once you knew we were coming?”

(The soul magic was frightening, and she was trying to ignore that fear, but it was a watershed moment, the first time their group had forcibly converted someone, the first time they’d breached that particular moral boundary. Logically, it was better than killing the man, and on balance it was probably the right thing to do, but a decade of indoctrination had primed her to think that it was something that was Not Done, and that was hard to shake.)

“We never knew where he came from,” said Ellio. “We had theories, but he never said. Maybe he didn’t know. The plan was to have me here, to talk with you, and maybe convince you, if you tore through everyone else. It was a long shot. If that failed, I was meant to kill you. There’s a word I was supposed to say, one that would kill me too.” He shook his head. “It was likely to kill him too, but if you were going to kill him anyway, we thought it was better to use it than let this all crumble.”

“So that’s it then?” asked Finch. “It’s over?”

“Looks like,” said Juniper, nodding. “Just got confirmation.”

“What does that mean?” asked Finch.

“Nothing,” replied Juniper. He glanced at Amaryllis. “Can we talk privately?”

Amaryllis gave him a nod.

Grak made a ward for us, one that would make it difficult for us to be overheard. I had knocked out Ellio, and it seemed like the threat of Harold had passed without a final showdown. I’d even gotten a quest completion notice for it.

“Okay,” I said. “I’m feeling dumb. I don’t get it.”

“Get what?” asked Amaryllis. She had removed her helmet so we could speak a little more clearly, which I appreciated.

“The showdown with Mome Rath made sense,” I replied. “It’s a big giant kaiju, and it’s one that I designed. This though, was a fight trivialized by the recent upgrades, and at the end of it was a man making the strongest possible argument for ending the world, which in my opinion wasn’t all that strong, not knowing what I know, anyway. So what’s going on here?”

Amaryllis cleared her throat. “I think that it might have been meant for me.”

“You want to destroy the world?” asked Juniper, raising an eyebrow.

“No,” said Amaryllis. “Not really.” She took a breath. “I used to have fantasies about ending the Lost King’s Court, just wiping everything out.”

“And installing yourself as dictator?” I asked, giving her a grin that she didn’t return.

“No,” she replied. “I was twelve, and I hated them all. I just wanted it all burnt to the ground, and I didn’t care what, if anything would take its place. They killed my father and poisoned my mother,
Juniper. Allegedly. Nothing proved, but I’ve never really doubted it. And I just thought … it would be better if all this was gone. I wasn’t angry, I was just … it made sense to end it all, because I didn’t then have the ambition to save whatever was worth saving.”

“Huh,” I replied. “I get the impulse, I do, but without the component of putting something better in its place, it feels so alien.”

Amaryllis paused. “Where did you think you would go when you killed yourself?” she asked.

“Ah,” I replied. “Oblivion.” I took a moment to try to see things through that lens. “Okay, I am dumb, this was all a suicide metaphor.”

“I don’t think it was just that,” said Amaryllis. “It was that, but not just that. Harold was his own entity, a malevolent one that only wanted death and pain to the people of Aerb, but the people like Ellio that he surrounded himself with, people that are still, unfortunately, out there, they were following him because they sought a way to end it all. Maybe for some it’s a manifestation of depression and anger at the world, like suicide was for you, but for others, it’s just basic logic. If Uther is on one end, standing fast against incredible odds with a sword in his hand to protect a single innocent, then these people are on the other, taking the measure of the world and finding it so lacking that it’s better the world doesn’t exist.”

“They think Aerb was a mistake,” I replied. “Which I guess I’d argue is correct, given that it was the creation of an amoral monster who decided that sixty odd years of life and then eternal torture was a balance he was willing to strike in order to … I guess to give me something to fight against. And if I didn’t think that there was a way forward, if I thought that it was all going to end in tears and despair, I guess I would try my best to find a way to fix everything — no, sorry, I don’t know who I’m kidding, I would probably just ignore it all and pretend that it didn’t matter, just like all the people that Ellio was complaining about. Or I would opt out for myself without caring about anyone else, which I guess on Aerb means killing yourself in a way that allows you to ensure your soul will be recovered and stored until it decays. Taking everyone with you, that’s a level of dedication that I would never have.”

“I would,” said Amaryllis. “There was a time when I thought about it. Never to the point where I put anything into motion, but I did think about it.”

“Huh,” I replied. “But just the Lost King’s Court? Not the whole world.”

“The whole world … for a bit,” replied Amaryllis. “After I first looked in an infernoscope, when I saw the magnitude of the hells, I did have those same thoughts. That if there was a way to end the hells, I would give my life to do it, and I would give the lives of others too, whether they were willing or not, and when I sat down to do the math, a trillion souls, give or take, measured against five billion alive, it couldn’t possibly be the case that a single person’s life was worth two hundred people rotting in the hells for eternity. And if you factored in that some of those people would wind up in the hells themselves … I would never have done what these people did, but there was a time when, if you’d put a button in front of me and laid out the consequences, I would have pressed the button that erased everyone from existence.”

“I really wouldn’t have seen you as the type,” I said, after a moment had passed. “I’d have thought that you would just reject the math, when the numbers came out like that, or you would make a new formula.”

“It doesn’t matter,” said Amaryllis. “If I’m being honest, I was worried that he would sway you, but it seems like I was more susceptible to the attack than you were.” She fidgeted with her armor. “You know, he did raise a good point about the Dungeon Master. I believe that he exists, and that you
spoke to him, but there are good odds that the game is rigged against you, or that even if it’s not, that you have low odds of success.”

“Wait, are you thinking of ending it?” I asked. “Of just releasing Harold and going along with this World Lord plan?”

“No,” said Amaryllis. “But I’m scared to run the numbers. I think if I was faced with following through on what my beliefs about the world said to be true, I would become a coward, just like you.”

“Ouch,” I replied.

“Coward, in this context, means not going down the path of darkness,” said Amaryllis. “You don’t think it was cowardice that saved you from killing yourself?”

“I’d rather not talk about it so bluntly,” I replied. “It’s awkward.” I cleared my throat. “But, maybe. I don’t know.” I tried to think for a moment. “I think it was more, when faced with the reality, I just didn’t want to do it. There was some primal part of me that wanted life, and I’d just been ignoring it. Or maybe it makes less sense than that, because human psychology is weird, especially when we’re talking about the failure states.”

Amaryllis frowned slightly. “And it’s all over?” she asked. “There was never a risk that you would be a convert? After Fenn died, you were in a bad place.”

“If someone had given me that talk then, instead of now,” I replied. “Probably still not. But it becomes a probably.” I looked down at my armor, which needed cleaning. The quest completion message had been heartening, but I mostly wasn’t feeling it. Taking out Mome Rath had felt good, but Harold … not so much. I had torn through his forces like paper, and only put myself in any actual danger once or twice. At the end of it, there was just a pathetic minion trying to convince me to join their side and a jar of flesh.

“I’m sorry that college didn’t work out,” said Amaryllis.

“It’s an athenaeum,” I replied, giving her a weak smile.

“Do you think the theme is future?” asked Amaryllis. “Reflections of your future on Earth?”

“I think that’s overfitting,” I replied. “Maybe not so much of an overfit as Hogwarts is, but still an overfit.”

“I’m worried Anglecynn is next,” said Amaryllis. “Lisi showing up is a flag that it’s going to come back. And like it or not, this is probably going to be a major international incident, especially if you’re going to be reversing all of the damage that Harold did to those people.”

“I am,” I replied. “And yes, it would be hard to disguise our involvement, though maybe we could scale back on the scope of it. I don’t want to be seen as the next Uther.”

Amaryllis looked out, beyond the bounds of the ward we were in. There was work to be done, obviously, but I had wanted this break, and I was apparently at the point now where if I thought my time was best spent talking to Amaryllis, then I got what time I needed.

“People are probably dying out there,” I said. “People we could be saving. And after that, clean up. Lots and lots of clean up.”

“Yes,” said Amaryllis, standing up. “Thank you for saving me, by the way.”
“Anytime,” I replied.
All the best conversations happened around the game table. Maybe it was just the idea that everyone was supposed to be doing something else, that these were digressions rather than the main topic, or maybe it was just that Juniper was terrible about reining things in. Sometimes the game would go on pause for a half hour or more as they went back and forth about whatever bullshit got brought up. Arthur instigated a lot of it, naturally, because he was Arthur, but part of it was Juniper, whose games were always about bugfuck weird shit that seemed like it was calculated to draw people into grand, sprawling arguments about all kinds of different topics.

“The problem is multiculturalism,” said Arthur, waving a hand. “Look, it’s really great to be able to go into a big city and get foods from all over the world, to see all kinds of crazy art, to have all these canons to draw from and translated text and all that. The flip side is that it represents a complete and total breakdown in the useful parts of those cultures. We’re talking about cultures and customs that have been around for dozens of generations, things that are tried and tested, and now they’re all torn apart and being used in ways that they were never meant to be used, different parts of them cast off from each other, recombined, and who’s to say that the end result, which is going to be the result of survival of the fittest and memetic strategies, will be something that’s actually good for people?”

That was classic Arthur.

“You’re talking about foods?” asked Tom.

That was classic Tom.

“No,” said Tiffany. “He’s talking about foods as a segue into talking about other things. It’s -- what’s the name for it?”

“Motte and bailey,” replied Juniper. “Named after an old style of castle. But I’m not even sure it’s that, he’s probably just talking to talk. And really, the cultural conflicts that we’re talking about in this city aren’t like that, they don’t arise from synthesis, they arrive from differences.”

“Sure,” replied Arthur, blowing right past that objection. He turned to Tiffany. “You disagree with the premise?”

Reimer watched carefully. This wasn’t quite flirting, but it was something close to it. There was a knowing way that Arthur talked to Tiffany, like they were close friends, and they were close friends, but part of being close friends was that you never let on how close you were, because it could get really awkward, really fast. Tom was given to those moments of sentimentality, maybe because his dad had died when he was little, and it gave Reimer the creeps, even if Tom was debatably his best friend.

“Look,” said Tiffany, which was often what she said when she was about to try cutting through Arthur’s shit. “Just last week you were talking about how it might be possible to build a culture that’s the best of all worlds, or a morality that starts from base principles, and I was sitting here arguing that maybe it would be possible, but the reality was going to be malicious actors and market forces fucking things up.”

Reimer sat and watched. There was a lot to like about Tiffany. There was a lot to hate, too, if you wanted to, things like the way she said ‘malicious actors’ and ‘market forces’ when there had to have been a simpler way of phrasing it, or how she didn’t take naturally to swearing but did it anyway because that was what everyone else did.
“Let’s step back,” said Arthur. “The Ha-lunde are a valued part of the international community.”

“Which ones are they?” asked Craig.

“Corpse fuckers,” Reimer replied. “Though they use something like a cow now, instead of the bodies of their enemies.”

“Gross,” said Tom.

“Which isn’t an example of multiculturalism,” said Tiffany. “They changed because they had to, because they were probably going to be wiped out if they didn’t adopt the sane solution to how they were made.”

“Right,” said Arthur. “But to the Ha-lunde, it wasn’t the sane solution, we erased a part of their culture, or, arguably, they voluntarily erased a part of their own culture. But even then, it wasn’t a one-way street, the Ha-lunde have helped to shape imperial law, so there are a lot of places now, even outside traditional Ha-lunde lands, where you’re allowed to kill a guy and then fuck his corpse to have your baby, so long as you have enough witnesses sign off and proper consent forms filled out so everyone knows it’s on the up-and-up. And because people are oh-so-worried about discrimination, you get a lot of places where having sex with a corpse is legal even if you’re not Ha-lunde.”

“And that’s a problem in your moral framework?” asked Tiffany, folding her arms and raising an eyebrow.

“I never said it was a problem,” replied Arthur. “It’s just what it is. You look at things like sexuality and gender, and obviously what humans end up having is going to be influenced by what goes on in the cities, and the cities have all kinds of species getting together, some of them all women, some all men, and yes, I know, those are terms that we’re applying where we really mean human-centric descriptions of what we can visibly see, but so far as I know, that’s an open problem, unless you want to learn the vocabulary, grammar, and syntax for hundreds of species and thousands of cultures.”

“It’s not hundreds,” said Juniper. “Two hundred.”

“Two is hundreds,” said Arthur. “One hundred, two hundreds.”

“Right, but you’re making it seem like more than it is,” said Juniper. “And we all know the number, so why be imprecise? It makes your point look weak. Also, I think thousands of cultures is probably wrong too, because for that to be true, you’d have to have an average of ten cultures per species, which I think you’d only get to if you were really liberal in your counting.”

“Even if it were ten cultures,” said Arthur. “The point stands that when you meld them all together, you get this confusing mish-mash, one that hasn’t been time-tested, one that’s probably just a collection of thoughts and ideas that don’t form a cohesive whole except to the extent that people try to shove it all into being one thing, which it’s not.”

“Oh, so now you’re going to talk to us about overfitting?” asked Reimer. “I’m going to make a note so I can remember this day, and refer back to it later the next time you have some insane theory that you’re marshalling a ridiculous amount of selectively picked evidence for.”

Arthur waved him away. “I mean, you’re still planning on going to an athenaeum, right?” asked Arthur. “I think that this is something that we should all be thinking about. It’s a different world out there.”
“But, again,” said Juniper. “Some of that, like the city that you’re making your base right now, is just cultures clashing with one another, rather than cultures integrating in some kind of blended ur-culture.”

“It’s a natural consequence of two cultures living together,” said Arthur. “Unless you’re telling me that the people of this city are completely segregated?”

“Mostly they are,” replied Juniper. “There’s no idea that people can pick and choose what they want, that’s modern imperial thinking. When there’s a holiday for the Urush, it’s only for the Urush, they don’t have Telleki people coming to partake in it, going through the streets with streamers, eating the holy food, et cetera. And yeah, sure, there are maybe a small fraction of people who are mixed-species, or who fall in love with someone of another culture and start a blended family, but that’s not the norm, and it’s not really what I’ve been talking about. If you guys come back here in another twenty or fifty years, then sure, it’ll be germane.”

“Sorry,” said Arthur, in a rare apology. “It’s just, I’m hopefully a year and a half out from going to the athenaeum, and it’s going to be so different from Sporsan. I’ve been to Caledwich twice, and that’s at least still Anglecynn, but it’s crazy how many species there are walking around, how much there is to consider, how people take it all in stride, how frickin’ weird it all is.” He sighed. “That’s all, tangent over, I’m sorry.”

And Juniper, being Juniper, would bring all that conversation into the next campaign they played, where this time the world was as cosmopolitan as the athenaeum cities were, with every effort on Juniper’s part to make them as blended and bizarre as possible, pushing his worldbuilding as hard as he could and trying to drive the plot from a place of multiculturalism.

Reimer had already put in his own application to study at Sound and Silence. Arthur was almost guaranteed, he was the head of the local Future Leaders of Anglecynn, plus his father had a little bit of pull with the capital, and of course Arthur was brilliant, even if he was a chode sometimes. Reimer had only hesitantly mentioned that he’d applied, only after he’d quietly sent the application in. When he’d learned that Tiffany had applied to an athenaeum too, it seemed like it probably wasn’t going to happen for Reimer, because she was whip-smart too, and three people being athenaeum-bound from their little podunk town seemed unlikely, just on the face of it. It was far too early to be worrying about how strange and alien Li’o might be, when the future was uncertain.

And indeed, the summer came, and Reimer finally got his letter, which was a firm but polite rejection. That was a kick in the teeth, and Arthur began to grate even more, because of course he’d gotten in, and Tiffany had too, different athenaeums (Clocks for her, the Vervainium for him), but still. It was a real kick in the teeth.

Then Arthur had gotten in a car accident, and died in the hospital weeks later, and not long after that, Reimer had gotten a letter saying that he had gotten into Sound and Silence after all. It was hard not to think that Arthur had died so that Reimer could go. Maybe someone high up in the Lost King’s Court had been informed of Arthur’s death and seen that there was an empty spot in their quotas, then gone through the other applications and seen that there was another application from that same small town. It was possible. Probable, even. The vagaries of the Mage’s Agreement, and the interface between the kingdoms, the empire, and the athenaeums, were all kind of a mystery from down on the ground in Sporsan.

So Reimer was wracked with guilt, and his group of friends was imploding, and he was trying to get his life in order for living in a foreign country and becoming a mage, all of which meant that he didn’t have that much time to prepare himself for the extreme culture shock, not that there was a whole lot that he could have done to prepare, other than taking the train into Caledwich a few times.
Set aside all the stuff about Juniper being replaced by a dream-skewered version of himself, and the stuff about the game system that he’d made getting grafted onto his soul, and the fact that Juniper very much appeared to be a repeat of Uther Penndraig, and how manifestly unfair that was, how bugfuck insane it was, how weird and alien and unsettling it made the entire world. Set aside how much Reimer’s future was in question, how much money he’d made, the fact that Juniper’s version of the ideal woman was something between his girlfriend and his assistant, or all the other weird shit that went on in that weird house that they just happened to have in Li’o. Take all that weird, barely comprehensible junk, and toss it off into a corner for later examination.

Reimer had a girlfriend!

Kind of.

Reimer’s dad had always been one to comparison shop before buying anything, combing through the options that were laid out in the catalogs, talking to people who owned various makes and models. It had taken months to get a new refrigerator, because Reimer’s dad must have looked at a dozen of them; it was always a running joke that whenever they went over to talk to another family, Reimer’s dad would go have a look at their fridge. It was an approach that Reimer took up.

So when Reimer was twelve, and he wanted a new bike, he went into it very prepared, with a budget and a plan. He was going to talk to people about what kind of bike he wanted, he was going to look through catalogs, and he was going to get his dad’s help. Only what ended up happening instead was that they went to a community picnic, and Reimer’s dad got to talking with someone from his work, and later that day he brought a secondhand bike home.

The thing was, it was a fine bike, it was basically everything that Reimer had wanted, but there was something that offended him about the way he’d gotten it, because there was no real element of choice involved, it was just handed to him without any real struggle or effort, no comparisons, nothing like that. It was just so lazy, so unconsidered, even if it was a perfectly fine bike.

Reimer’s worry was that he was Lisi’s bike. She had been looking for a boyfriend, or if not a boyfriend, then something, and he had been there, and apparently through no effort on his part, he’d met whatever her mysterious criteria were.

They were spending enormous amounts of time together, though a lot of that was intensive studying time, which Lisi would spend reading through thick books that were outside of their normal coursework, and which Reimer would largely spend on things that were more frivolous, though writing as much as he could about past campaigns and character builds was its own variety of work, even if that well was definitely running dry. When that wasn’t doing it for him, he would read the broadsheets, read the latest obol book, or listen to a radio play, sometimes just waiting for her to be done.

They talked a lot, through meals, between classes, and after she was done with her reading. He never really got the sense that she cared, but they traded stories all the same, hers always more interesting than his, stories about Quills and Blood, which she’d started training at when he was still wandering through the woods poking at snakes with his friends. He enjoyed hearing about Sanguine through her eyes, a place that was as alien to him as Li’o, but in completely different ways, rigid and hierarchical in spite of how many different species made their home there, firm and controlled, as though the vampires that had once made their home at the Sanguinary Estate had left an imprint so deep that it could never be erased. When Reimer talked about Sporsan, and what it was like on the agrarian ass-end of Anglecynn, Lisi nodded along, asked her pointed questions, and never seemed like it was making all that much of an impression on her, which was fine, because there was no reason that it should.
It was, however, one of the reasons that Reimer felt like he was Lisi’s carelessly chosen bike.

After the handjob, Reimer had thought a lot about culture shock. He and Lisi were both human, both from Anglecynn, even, but they came from radically different backgrounds. His father worked in a factory that made aluminum boats, and his mother worked part-time for the town. For Lisi, it was a completely different story, one marked by big cities and a fair amount of independence, all in the backdrop of imperial cosmopolitan social mores.

It made it impossible to understand the context of the handjob, or what Lisi thought about it, or what it meant. Reimer didn’t know whether they should talk about it, but Lisi didn’t bring it up. It really seemed like you should be able to talk about something that you had done together, but if there were rules out there, Reimer didn’t know them.

Some days, when they were sitting together in her room, after she’d finished her intensive reading and note-taking, she would come up to him and give him deep, passionate, aggressive kisses, and he had no idea how he should respond to that, except to enjoy it. He would touch her, and she seemed responsive to it, but there was never any repeat performance from her, nothing like that first time, when it had all happened without any real effort or awareness on his part, some strange alchemy that he hoped he would someday understand, a thing that had happened to him. Logically, he thought that he could probably take the initiative, remove her shirt while they were kissing, or bring her over to her bed, or something like that, but there was a persistent fear that she would be affronted. That first time she had done everything without so much as asking him his opinion or waiting for him to stop being shocked by the turn of events. So if she actually wanted him to go further, why wouldn’t she do it on her own?

He had tried, once, when she was straddling him and kissing him, running her hands over his body, wearing a dress that allowed her bare legs to touch his. He’d touched her, first her knees and then her thighs, working his way up as they kissed, completely unsure of himself, because he hadn’t gotten that far with any of the girls back home. His fingertips touched her underwear … and then she grabbed his wrists and firmly moved his hands away, back to her thighs, only slowing down slightly with her kisses. He had taken the message and hadn’t worked up the courage to try again.

Reimer waffled on whether or not he was being a coward.

On the one hand, he had seen Arthur and Tiffany go through the same thing, not that they had ever even kissed. Most of it, Reimer only learned after the fact, but it was the kind of thing that you learned about and suddenly the world made a lot more sense. Arthur had plotted, planned, and dithered, and eventually Tiffany had lost interest. It was something that Reimer had talked to Tiffany a lot about, in those waning days of their final year in Sporsan, after Arthur and Juniper were both gone, when she was trying to reinvent herself and prepare for the athenaeum in her own way, no longer Tiff, now Tiffany, a name that Reimer tried to adjust to but often failed at. Maybe, if he sent her a letter asking for advice (which would take an awful lot of explanation to even get to the question) she would say that he should go for it, or that he should just wait a few days, or something equally encouraging.

On the other hand, Reimer didn’t know the rules, and this was one of those situations where there could be rules about not asking about the rules, which you couldn’t find out until you had transgressed. Reimer was, by his nature, a plotter and a planner, but how could you plot and plan if you had no idea what was going on, and you weren’t even sure whether you were allowed to ask?

This went on for a week and a half, with not terribly much changing. They spent huge chunks of time together, ate their meals together, talked enough that he started to think he actually knew who she was, and made out on the small couch in her room almost every night (once on her bed, which
felt like it was leading somewhere but didn’t). Reimer had always heard it said that when you were in love, you would know it for certain, and he didn’t know it for certain, but he wasn’t sure whether that meant he wasn’t in love, or if people who said you would know it when it happened were just full of shit. He was definitely infatuated though, despite how weird and intense Lisi could be, or maybe because of it.

And yes, there were daydreams of being a prince in the Lost King’s Court, though he had very little conception of what that would actually be like, and placed very low odds on it ever happening.

It wasn’t all about Lisi, but in the context of her, it all seemed like footnotes, aside from all the Juniper stuff, which was too big and too strange to grapple with.

Reimer went looking for people to play games with, not that he thought he’d ever find a group like he’d had in Sporsan. The system that Juniper had cobbled together (which was an insult to cobblers everywhere) seemed like it was lost to the sands of time, or more likely, living on only in reconstructed form from what Reimer could remember, but it wasn’t a great system anyway. There was a whole world of other games out there though, and Reimer found a group advertised on a bulletin board, one which explicitly said ‘newcomers welcome’.

When he got there, a dozen people were playing card games, eight of the antlered ahu, two dwarves, a bear animalia, and a ghill, which made Reimer the only human. It was the first time in his life that he’d been the only human in a room, and he almost left, not because of any xenophobia, but because he thought that it would be awkward. His inner Tiffany said, ‘but that’s probably how they feel all the time’, so he went in and sat down, at which point the bear animalia came to join him and immediately began asking him questions. When she (probably she, it was hard to tell) confirmed that he was a complete newbie, she placed a deck in front of him and began explaining the game, which was apparently a card game where you were in charge of constructing your own deck. It was extremely popular with the ahu, but hadn’t really spread beyond them, something that the club was trying to change.

So Reimer was given a ‘starter deck’ and a bunch of other cards to build something with, and he got stomped a few times before realizing that this was just another form of character optimization, and he hadn’t spent nearly enough time trying to break the game. Half of it seemed to just be planning and theorycrafting, which he felt like he’d spent a lifetime preparing for.

It was weird, talking to a bear. Not unpleasant, no, but still a bit weird. Reimer wasn’t a xenophobe, not by any stretch of the imagination, but Sporsan was about ninety-nine percent human, and the remaining one in a hundred people were split into their own unique enclaves, not more than three or maybe four of them, depending on how you counted, refugee groups that had been assigned by Anglecynn (the trotters, with distinctly red-hued skin, banned from school sports because they were about twice as strong as humans) or a single family that had moved a few generations ago and expanded (the Mo’quell family were tention, small and rodent-like, and there were enough of them in Sporsan that most places had special seating). This, this was just a bear animalia, Piper, with her own culture and history, and that, too, brought to mind the conversations they’d had at the gaming table about what it meant to live in a place that was such a strong mix of cultures and societies, because Piper came from a whole family of bears, with their own experience of the world.

After Reimer had rebuilt his deck, with Piper keeping him company, he played it a few times against one of the dwarves and got thoroughly crushed. As it turned out, there were a lot of meta-rules to learn, governing principles of deck construction that he hadn’t known until he’d actually tried it for himself, some of which tied into higher order emergent properties of the internal systems the rules set up.
He was in the middle of remaking his deck when a loud, layered tone filled the room. He looked around, coming back up from his deep thoughts on the game, and saw that four of the ahu were sitting there with their mouths open, all holding a note, not all that loud, but not really quiet either.

“What’s going on?” asked Reimer.

“Not sure,” said Piper. “I’ve never seen anything like it.”

There were some attempts at jostling the singers, or trying to get their attention by clapping next to their ears, but none of the group’s crude diagnostic efforts bore fruit (the card games momentarily on pause), and the ahu kept sitting there, doing nothing but making that noise, without any sign that they were aware of the world around them.

“I’ll go get help,” said Reimer.

He’d been a part of the Young Drakes, a youth group that put a focus on disaster preparedness, which involved about one third mundane problems (earthquakes, flash volcanos, tornados, sinkholes, blizzards), one third exotic problems (rogue gold mages, dragons, wars, all manner of magical creatures), and one third total batshit stuff that had never happened in the entire history of Aerb (planning for unknown exclusions, basically). It wasn’t clear, at this point, what kind of emergency it was.

Step one was to go get help, someone with medical training if possible, a mage if you could find one. Back in Sporsan, there had been plans in place, and activating those contingencies as quickly as possible was supposed to be one of the key things to do, especially because a rapid response from Caledwich could solve a whole hell of a lot of problems.

Unfortunately, Reimer didn’t get much past step one, because as soon as he was out of the room and running through the halls, he could see that this wasn’t localized at all, it was *everywhere,* afflicting scattered people all through the building. He quickly ducked into one of the rooms and looked out the window, which allowed him to confirm that it wasn’t even local to this building, because there were people outside, only a few, standing stock still with their mouths open as others looked on nervously.

Reimer had been moving quickly, but after he saw that, he started running, trying to pace himself so that he wouldn’t get winded. There were two good options of where to go, if something strange like this was happening, the first being Juniper and his merry band, the second being Lisi, and Lisi was far, far closer. Reimer was still running for help, it was just a higher order of help, because this was the kind of outside context problem that Uther had always been dealing with.

By the time he got outside, storm clouds were forming in the sky, sickly green, tornado weather, just like he’d seen once or twice back home, except there were never hundreds of people sitting around letting out a weird noise with their jaws slackened and faces blank. Reimer was mildly surprised that he was the only one running, but everyone else seemed like they were stuck in the confusion and panic phase of things. Reimer focused on running and breathing, trying his best not to tire himself out, because in the back of his mind, he was thinking about the off-the-wall stuff they’d prepared for in the Young Drakes, like new exclusions, which by their nature were nothing like anything before. Rule one for that? Leave the presumed zone, as fast as you possibly could.

Reimer wasn’t at that point just yet. It wasn’t even necessarily trouble, just a weird storm and some people zonking out while singing the same not-song, and as he went over that in his mind, that made it seem worse, not better. He kept up his running though, trying not to worry that he was overreacting, and trying to think about all the planning they’d done in the Young Drakes for all kinds of crazy shit. It was generally accepted that there was no such thing as stealing if you were trying to...
escape an exclusion zone. Reimer knew how to do an ignition bypass on a car and drive it without keys, if need be. Unfortunately, he had practically nothing of any value on him, not from a material wealth standpoint, and not from a survival standpoint. There were things back in his room, but that was on the other end of campus.

He dashed past the Canis Building and went into Lisi’s dorm, and said his thanks that the man at the front desk was one of the slack-jawed not-singers, because he’d been stopped a few too many times in the past two weeks. Reimer took the stairs up three at a time, still trying to conserve energy, because who knew how long he was going to have to run for. He was going to need water, and in a disaster, plumbing was often the first thing to go.

When he burst into Lisi’s room, she was sitting there, as he’d hoped she would be, on her bed, reading a book, wearing a light green dress that stopped just below her knee. She looked up at him without any of the annoyance he was worried she would be feeling.

“How was --” she began.

“Something’s happening,” said Reimer. He was breathing hard. “People screaming for no clear reason, a big storm overhead, I don’t know what it is, but it’s not good. We should think about leaving Li’o, at least for the rest of the weekend, until we know what’s happening. We have to move now. Maybe talk to Joon and Mary.”

Lisi tossed her book to the side, slipped down off the bed, and crouched down in front of it, facing away from Reimer. She slid a long, heavy leather suitcase from underneath it, and before Reimer could protest that it really would be better for them to move, Lisi had opened the suitcase, giving Reimer a view of what was inside.

She handed him a pistol in a hip holster, then put on one of her own, and after that pulled a sword from the suitcase as well.

“You said you had experience?” she asked, handing it to him.

“Uh,” said Reimer, trying to think back to what he’d said. He’d mostly used a sword during games period at school, and that was much more choreography and forms than it was actually knowing how to hit and kill things, and the swords they used were simple, kludgy things that were made by the hundreds and blunt as a watermelon. Aside from that, he’d had a little training with his father, which was really just playing around, and more about the tradition of it than because he would ever be expected to use one. “Some,” he said. He hoped that he hadn’t lied to her, or exaggerated too much, but it was very possible he had. The sword she’d given him was a masterwork, at least going by the sheath and grip.

“Good,” she replied. “It’s an entad that charges you up when it hits, you’ll be faster, stronger, make that first strike count if we have to fight.” She pulled a second sword from the suitcase and buckled it to her hip. “When did this start?”

“Ten minutes ago,” replied Reimer. He buckled his own sword on. He was a little skeptical of the utility of it, given that they needed to be on the move, and while he’d always found swords to be surprisingly light, he also knew from experience that adding a few extra pounds could make a person miserable while on the move. “Maybe a little less than ten minutes. I came as fast as I could.”

The second-to-last thing that Lisi pulled from the suitcase was a small pipe that looked like it was carved of bone, which she inspected briefly before sliding it into a backpack, which was the last thing she brought out. “Food and water for three days,” she replied. “Bottles and spikes. You’re carrying it.”
He should have figured that Lisi would be more prepared than he was. She put on thick, sensible shoes as he strapped down the backpack, and as soon as that was done, they were out the door, moving at speed down the steps together. Maybe he hadn’t been as focused on it, but the singing, if you could call it that, seemed like it was getting louder, and when they passed through the front doors of the dormitory, the clouds overhead were thick and low to the ground, their color unnatural. It was **definitely** tornado weather, the green that you sometimes got with a fading bruise, but the clouds were too low.

“We need to get to safety,” said Lisi. “Do you know where Juniper is?”

“No,” replied Reimer. He looked back up at the sky and saw a claw descend from it, only briefly, one that must have been the size of a car. The clouds swirled in its wake, but didn’t lift. “Kaiju,” he said, voice barely above a whisper.

“What?” asked Lisi, who hadn’t seen it, and was still moving, apparently away from campus, toward Juniper’s house.

“Kaiju,” said Reimer as he followed after her. He hadn’t attached the sword quite right, because it was banging against the top of his thigh as they moved. “Juniper had this world, these giant things, monsters, with people living in their shadows. Each was as big as a small town. And it was a low magic setting, only about a dozen kinds, all at the lower ends, no athenaeums, so people hid underground, except some of the kaiju were burrowers, so the mortal species were reduced to being scavengers or worse.”

“I don’t follow,” replied Lisi.

“I saw something,” said Reimer. “Something bigger than the biggest dragon.”

“Lead with that next time,” replied Lisi. They had gotten out of campus and were walking down the street. There was practically no one letting out the tone now, though there were a lot of people outside, looking up at the sky and talking in low voices.

“I don’t think it’s anything that we can fight,” said Reimer. “They weren’t, in the game.”

“We’ll see what they say when we get there,” replied Lisi.

“We’re stealing a car,” said Reimer. “It’ll be faster.”

He took out the wires behind the steering wheel and connected them to each other to create a short that would cause the soul energy to be harnessed again. Reimer was quickly trying to recollect everything that he could remember about the kaiju. He’d been doing ‘work’ like that for Amaryllis for almost two weeks now, writing down everything that he could think of. She had gotten the broad strokes first, then wanted to move on to the deeper lore, the minor characters, the off-hand things that Juniper (the other Juniper, the Aerb one) had thought up. Reimer understood the desire for the game system rules, given that this alternate-but-still-the-same Juniper somehow had game stuff grafted onto him, but all of the campaign stuff … that was a little more confusing, and it was confusing in a way that Amaryllis hadn’t been able or willing to help with.

It was after he’d gotten the car going, on the way over, that Reimer saw the claw descend from the sky again, this time with others following it. Lisi saw too, and stopped for a moment to watch as five claws of enormous size sliced through the air together before returning to the cloud cover. One of them touched down on the ground, somewhere in the city.

“That’s not good,” said Lisi.
It was the first time that Reimer got the sense that she was anything less than completely prepared for what seemed like it might be the end of this little section of the world. In a way, it was comforting to know that she wasn’t superhuman, and that she could say stupid things like ‘that’s not good’ when claws began descending from a greenish sky.

When they got to the house that Juniper was staying at, it was closed up tight with no lights on. Reimer banged on the front door, yelled for them, and then finally tried to force the lock. The windows were frosted, which he was pretty sure they hadn’t been the last time he’d been over.

“I’m breaking in,” said Reimer, glancing only briefly at Lisi.

“If they’re not here, we should go,” said Lisi. “Out, away from what’s happening here. We should be fine if we can make it to one of the major roads with a car.”

“I’m worried it’s too late,” said Reimer. “Other people will be evacuating. That will clog the streets.” He cupped his hands and tried to look through the frosted glass, to no avail. In the distance, he saw the claws touch down again, this time a little more firmly before retracting. “I’m going to break the window.”

“There might be wards,” said Lisi.

Reimer hesitated, then smashed through the window. Wards that stopped a person weren’t really a problem, it was the annihilation wards that would absolutely fuck you up, and in most places their use was prohibited or at least tightly controlled. He didn’t know whether that applied to this place, given that what Juniper and his new friends were doing didn’t seem like it was entirely legal to begin with, and if it was all legal, then they were so far up the power scale that little things like laws could be swept away with a politely worded letter.

That the window actually broke was a good sign. Reimer stuck his hand, careful not to touch the glass, moving slowly so that he could feel with his extended fingertip if there was an annihilation ward. Instead, there was nothing. Looking inside, he saw only darkness, none of what he remembered being in the sitting room, though he didn’t have a good internal map of the place, which had been built in a confusing way that made him feel like rooms were different the second time he went through them. Or maybe it was magic, who knew.

Lisi unzipped the backpack on Reimer’s back and pulled out a shielded dawnrod, which provided illumination as bright as daylight. When she shined it into the house, it was completely empty, not just with all the furniture taken out of the room, but all the walls too, nothing but bare ground, the walls of the houses it abutted, and skeletal rafters holding up the roof. It was like there had never been a house there at all, and only the facade remained.

“Well, that’s a neat trick,” said Reimer.

“We should get back into the car,” said Lisi. “Drive out of town, and stay there until we know more. We wouldn’t even need to miss classes.”

“Agreed,” replied Reimer. “I’m glad that I went to you first.” That just sort of slipped out, but she didn’t seem to take it the wrong way.

“Me too,” she replied. “Let’s go.”

They hopped back into the car, which took more wrangling to get going, then took off as fast as traffic allowed. Unfortunately, that wasn’t terribly fast, because by this point, other people had the same idea. There were still one or two people singing mixed in with all the others, standing stock still
as everyone moved around them. Reimer tapped on the wheel as he tried and failed to maneuver around the person in front of him. Something was blocking traffic, and they just didn’t have the time to deal with any of this, not if that thing whose claws were coming down from the sky did something that was more than just menacing.

It was when they were stopped that the back door of the car opened up and a man slipped into the back seat. Lisi immediately drew her pistol and aimed it squarely at him, but he had both his hands up, and she didn’t shoot, which Reimer was thankful for, given how close the gun was to his head and how loud it would be. The man was, Reimer belatedly realized, a dark elf, but before he could let that sink in, the traffic began its sluggish motion again, and Reimer stepped on the gas.

“Out,” said Lisi.

Lisi didn’t lower her gun. “Who sent you?”

“No one,” he replied. “But I travel alongside Amaryllis Penndraig and Juniper Smith. My name is Heshnel Elec.”

“Nice,” said Reimer with a sigh of relief. “Good to have you.” But he was an elf, even if he was a dark elf, who didn’t even really practice cannibalism, not like the other variants did.

“You were watching the house,” said Lisi, slowly lowering her gun.

“I was in the house,” replied Heshnel. “You just couldn’t see me. Given the choice of staying where I was and following, I elected to see you to safety.”

Reimer glanced at the dark elf in the rearview mirror again. Heshnel had something on his lapel that Reimer eventually realized were flower buds. “You’re a flower mage?” he asked, returning his attention to the road, and the traffic that was still going too slowly for his tastes.

“I am,” replied Heshnel.

“Anything that would let us get away from whatever is coming down?” asked Reimer.

“Not far enough, and we wouldn’t be able to take the vehicle with us,” said Heshnel.

“Are you a proficient flower mage?” asked Lisi, still turned around in her seat.

“I studied under Vervain,” replied Heshnel. “My flower strains date back five hundred years.”

“Good,” replied Lisi, finally turning back to face the road.

“Any reason you’re not with the others, fighting that thing?” asked Reimer.

“I’ve fought too many battles in my life,” said Heshnel. “Juniper will prevail, or he won’t, but I will do my best to be far away.”

“Well, we should have taken fucking bikes or something,” said Reimer. “Because this is absolutely ridiculous.” Nevermind the fact that Reimer basically didn’t know the streets of Li’o at all, it was taking forever to get anywhere, and he would have suggested that they just run, but if they could ever get out on the open road, they would be going so much faster that they might actually stand a chance of escaping the worst of it.

The sky darkened, and Reimer instinctively looked up, trying to see what was happening above.
“Fuck,” he said, as he saw the claws descending, this time with the rest of the leg wholly visible. The thing, the kaiju, touched down with an almost gentle grace, its long hair and many-mouths looking vaguely peaceful. It wasn’t quite on top of them, but it was very, very close, and the thunderous sound of the claws crashing down was loud, even over the sound of the city. There were screams of terror and minor popping sounds, either distant gunfire or explosions. A few of the claws had come down in front of them.

Traffic had stopped. Maybe too many people were looking up instead of going forward.

“We need to get out,” said Reimer. “We’re not moving fast enough, we can get back in a car or hitch a ride when we get to a place where the roads are clear.” He opened the door without waiting for a response. If those claws had come down on the streets, then traffic would be even worse, or blocked entirely, and it was already terrible.

“Where are we going?” asked Heshnel, exiting the car on his own.

“Wherever will have us,” replied Lisi. “We have enough supplies for a few days, enough money to pay our way.”

“We’re going away from that fucking thing,” replied Reimer. He looked back at it, its size beggaring belief, and old questions about the square-cube law came bubbling up to the surface of his mind.

They abandoned the car and took off, not quite running, because the sheer size of the kaiju was mind-boggling enough that a dead sprint would probably wind them before they even got to the furthest claws ahead of them. Reimer paid special attention to Lisi, worried that he would look back and she would be gone, but she kept pace with a grim determination. She was a blood mage, with what seemed like a fair amount of combat training and aptitude, and he shouldn’t have worried, but he did.

Ahead of them, Reimer saw the claws begin to move, ponderously slow because they were so big, but incredibly fast given how much was being moved. It wasn’t going the same direction they were, not quite, but it wasn’t moving away either. Stopping wasn’t an option either way, and Reimer tried to focus on navigating his way down the street, past all the cars that were now virtually stopped. The three of them weren’t the only ones who had decided to flee and to try to go on foot, but there was enough room to move.

When he glanced back, he saw something in the air, a flying ship of some kind, large enough that it would have been shocking, if his mind weren’t getting used to the size of the enormous creature it was battling. There had always been a lot of talk about what kind of defenses the nations of the world were packing, what powerful entads and obscure magics they would bring to bear on a powerful attacker. Most of that stuff was completely secret, but this was apparently what the city-state of Li’o, one of the more powerful, could whip out to face down a threat.

“Keep moving,” said Lisi, pushing him along with a shove so hard he nearly lost his balance.

They kept up their half-jog, moving just a little bit faster than before. Reimer was getting tired; he had been pretty active in Sporsan, but there wasn’t much to do for physical activity at S&S, and three weeks of doing little but walking had worn away at his endurance a shocking amount. He was also carrying the pistol, and the sword, and a full backpack.

“I’m leaving the city,” said Heshnel. “I will regroup with you in Karatern, if you survive. This isn’t my fight.” His voice was smooth and calm, with none of the hard breathing that Lisi and Reimer were doing.
“You’re talking to them?” asked Lisi.

“Parson’s Voice,” he replied, which meant nothing to Reimer.

“Tell them we’re okay,” replied Lisi.

“No,” said Heshnel. “Their work is more important. Knowing we’re together would be a distraction.”

That conversation might have gone on for longer, but one of the enormous claws came down from the sky and smashed straight through a building just in front of them. Heshnel moved quickly and used a bud taken from his lapel, which exploded outward with twisted branches, stopping the falling debris from coming down on everyone. He didn’t stop to savor the moment though, or even to acknowledge the people he’d saved, Reimer among them.

“Keep moving,” said Heshnel.

Reimer followed after. The pistol and sword at his hip felt useless against a thing that size, and he might have dropped them, except there was a chance that he would be forced to use them against people at some point in the near future, something that made his stomach churn just thinking about. People could get feral in situations like that, he had read a few unflinching survivor’s accounts from those who had been in exclusions when they happened.

They kept moving, and the kaiju kept moving too, almost as fast. They were following the street, and the kaiju was following his own path, but he had so many legs, and was moving so fast, that it was hard to be sure that they were staying out of his way. People were in a panic now, and the streets were so clogged that hardly anyone was using their cars, at least in part because the kaiju’s many footfalls had been demolishing buildings and tearing up the roads.

It seemed like their paths had finally diverged when there was an explosion high overhead. The flash of light got to them first, bright enough that Reimer winced, and the shockwave came afterward, rumbling across the city like thunder from a hundred feet away. It rattled windows and kicked up dust. Reimer blinked a few times until he could see properly again, then looked up at the kaiju just in time for the rain of blood and gore to start.

The blood came down in droplets, and the smallest of the pieces came down like hail. As soon as the first of them fell, Reimer grabbed onto Lisi’s arm and pulled her inside the doorway of a building. The first of the bigger pieces, one the size of a small car, slammed down into the road, splattering on impact and hitting hard enough to kill a man. Heshnel hadn’t come with them: the dark elf was staying out there, trying to help others, using his flowers to do it in displays of pink petals or a flash of lightning. He took a hit, then another, not even seeming to feel them (and, unbelievably, it seemed like he was taking the hits because he chose to, so that he could save more people). More and more meat was landing in the streets, the bigger pieces the true hazards, but everything else as completely disgusting as Reimer could imagine it being. He was terrified that something would hit the building and crush them, but it was the only shelter available. When he looked at the ground, he saw pieces of finger, long pieces of finger with too many joints, and worse, they were moving, twisting and curling as if in agony.

Eventually less in the way of flesh was coming down, though the rain of blood continued, and Reimer stepped out of the alcove he’d found for them to look up at the kaiju. He hoped that this was, somehow, a good sign, but when he tried to take in the immense beast and saw its knees buckling, he felt his face fall. It was massive, big enough to cover a few city blocks, and it was coming down, probably close to them.
“Run!” he shouted to Lisi, and he took off without looking back to see whether or not she was coming. He got his answer a second later, when she went bounding past, moving so quickly that she had to have been using blood magic. Reimer focused on his own running, but the ground was slick with blood, flesh, and those weird pieces of fingers that seemed to be everywhere. He wanted to look behind him to see whether the kaiju was still tipping down in his direction, but he didn't want to take his eyes off of the treacherous street ahead of him. He nearly stumbled when he saw a corpse, someone who had been hit by something hard falling down on them, or maybe taken out when a building collapsed.

When a shockwave lifted up the earth, Reimer slipped and fell down into the blood-slick pieces of flesh that dotted the street. A firm hand on his arm lifted him back up to his feet.

“Are you injured?” Heshnel asked.

“No,” said Reimer, looking instinctively to where the shockwave came from. It was a horrifying wall of flesh, nearly as tall as a skyscraper, with giant tears down the side of it and blood gushing from its wounds. The legs were folded up or crunched under it, and the entire mass of it, so fucking large that you might have been able to fit every building in Sporsan inside it, lifted up for just a moment and then slapped back down.

“Juniper killed it,” said Heshnel.

Reimer turned and stared at the dark elf. “No,” he said.

“We lived,” sighed Heshnel. “I had thought it would take longer, a siege instead of an onslaught.”

“Are we safe?” asked Reimer.

“I don’t know,” replied Heshnel. “Nothing like this has ever happened before, not even to Uther.”

Reimer heard running, and turned to see Lisi coming back to him, albeit at a much slower pace than when she’d left. “Why are you stopped?” she asked.

“It’s dead,” replied Reimer.

“We should keep moving,” said Lisi. “The last place we want to be is Li’o. We’ll get to some place where we can teleport back to Anglecynn.” She said that offhandedly, a reminder of the resources she commanded.

“There’s something there,” said Heshnel, looking up at the top of the wall of flesh. Reimer tried to follow his eyes, and did in fact spot something, a black figure, just one at first and then others, hard to make out, the shape nearly humanoid. “Back.”

Reimer backed up, putting Heshnel between himself and the things, which, who knew, could have possibly been a peaceful society living on the kaiju’s back, but were probably terrifying beasts constructed of pure hunger, if the day so far was any indication. Reimer watched the first one drop, and as it fell, something clicked in his brain, and he was staring at an empty spot in mid-air, not sure why he was looking there instead of further up. More dropped down, and the same effect happened again, a momentary confusion about what he was seeing, followed by his eyes tracking back up to where these black shapes were dropping down, until they were all gone, and it was like they had never been there at all.

“What am I supposed be looking at?” asked Reimer.

“I’m not sure,” replied Heshnel. “It must have been nothing.” He relaxed slightly.
“We were all just intently looking up at the top of the wall of flesh, combat ready, for no reason?” asked Lisi. She was still tensed, and Reimer tried to put himself into the combat pose he’d learned for using a sword, feeling awkward and trying to get his feet and shoulders positioned correctly. He drew the sword for the first time, and was greeted by a crackle of electricity and the smell of ozone, both of which quickly faded. The sword was, no surprise, perfectly balanced. He slipped the backpack to the ground, hoping that he would fight better with it off.

Heshnel toppled to the side and was on his feet in an instant, seemingly unharmed. He hand went to his lapel and pulled forth another of his buds, which exploded outward in crimson petals that filled the area, hanging in the air, motionless except where they were disturbed by movement.

As swordsmen went, Reimer was a rank novice. As far as fighters went, he was even worse, having never been in a serious fight in his life aside from when he’d gotten in the middle of other people fighting. But this, flower petals in the air, disturbed by an unseen force, this was something that he’d played out a dozen times at the table, these were the kinds of scenarios that he had dedicated roughly half his life to. He gave a shout that came out more like a scream, with his voice cracking, and swung his sword through the air where the petals were moving.

He might have wondered whether he had connected at all, but the sword lit up with electricity, and shortly after that, his body did too. Lisi had said that he would be charged up, but he’d had no real idea what it would be like. The lightning crackled through him, like it did the vitrics, and he could feel his heart hammering in his chest, faster than it had ever gone before. The strike must have killed whatever invisible beast had been moving in front of him, because it fell to the ground, deep black fur and long, snake-like tail, neither of which fully distracted from how long its claws were. It wasn’t like it had become visible. Rather, it was like realizing that you could see the bridge of your nose all along, your brain had just chosen to filter it out as pointless.

Heshnel was pulling more buds out, using them with abandon. He was taking hits too, not the deliberate hits that he’d been taking when he was saving people from the rubble, but hard and awkward ones that saw him momentarily off-balance. He had a dirk in his left hand and was swinging with it, but he was going based on the movements of the flower petals suspended in the air, and his elf luck was either weak or not working on whatever these things were. The hits, which seemed like they should have been grievous based on the way Heshnel recoiled back from them, didn’t seem to be doing any damage.

The suspended flower petals moved in front of Reimer, and he swung his sword again, this time feeling it connect, but with no associated beast dropping out of the air, and further, no extra charge from the sword, no rush of power except what was still inside him. He swung the sword again, this time putting the full power of the electric charge in his body into it, and sliced through something in the air, where the petals were disturbed. This time a monster did materialize, his brain suddenly deciding to show it after all, collapsing to the ground with a deep cut through its torso.

It was about that time that a clump of hair fell from the kaiju and landed in a pile on the ground not too far from the wall of flesh. Reimer probably wouldn’t have noticed, had it not been directly in his view. The gross thing about it was the color, which was a flesh tone, peachy pink like … like the pieces of finger that were still littering the ground. Reimer tried to focus back on the petals, to see if any were moving near him, or if there was a single one of the creatures that he could kill without too much danger, but his attention was drawn back to the hair, which had split off into individual strands that were slithering like snakes across the ground.

“Hair!” shouted Reimer, mostly because of the adrenaline.

For whatever reason, Heshnel was taking more of the brunt of the attack than Reimer was, maybe
because he was closer, or maybe because he was by far the bigger threat. Despite the times an attack came from seemingly nowhere and threw him off-balance, he was holding his own, an analysis of the situation that held right up until the thin snakes came slithering across the ground en masse. They were whip fast, and though they didn’t seem strong, they wrapped their way around him, and around spots in the air where they petals were disturbed. They came for Reimer as well, in from the sides, and he swung his sword at them as fast as he could, hacking like he was trying to get through the underbrush. His sword caught on something in the air, another of the invisible things, and he reeled backward, using his electricity-boosted speed to get out of the way of claws or other things that might be in the air.

Lisi came up behind him, firing her pistol with a look of grim determination on her face. Her arms were coated in blood, and her green dress was stained with it, but there were three of the rat things laying on the ground where she must have been standing. Reimer was grateful, and tried to find his stance again, but really, he was just swinging his sword through the air and hoping that the lightning inside him would last.

He hadn’t been looking when Heshnel fell, but he saw the dark elf on the ground, unmoving, and felt his breath catch when he saw the elf’s head rolling backward, away from his body, which was being ripped apart.

“We have to go!” shouted Reimer, but he wasn’t sure that he could outrun these things that his brain refused to see. A few of the snake-things, which were made of fucking fingers were dead around him, and he knew that he couldn’t outrun them. He ran all the same, grabbing the backpack for some idiot reason, leaving the dark elf behind them. Reimer felt a wetness on his back as they fled, with the pain coming only later, but there was nothing beyond that, just the feeling of blood coming out from his back and soaking his clothes.

One of the finger-snakes latched onto Reimer and wrapped around his leg, pulling him off balance, and though he cut through it with his sword, he fell enough to bang his knee on the ground. Lisi pulled him sideways and he half-hobbled with her, through a nearby open doorway, which she slammed shut behind her and leaned back against.

“Leg,” she said, breathing heavily.

Reimer, shaking, extended his leg to her, where the finger-snake was wrapped around him. Up close, it really was just a series of knuckles, complete with small hairs, like someone had been trying to figure out what horrible monstrosity they could make with a truckload of surplus human fingers. Lisi quickly unwrapped it from around his leg until she got to the end, where it had apparently bitten him. She pulled once, and he winced at the pain.

“Not sure what removing it will do,” she said. “It’s pretty firm.”

“I got clawed up on my back,” said Reimer. “Probably bleeding out anyway.” It finally occurred to him that this might actually be the point where he died. “You should kill me and bottle my soul.”

“I can heal you,” said Lisi. “I can give you some of my blood. Platelet forcing.”

“You don’t know platelet forcing,” said Reimer. He was feeling a little woozy.

“I know it can be done,” she replied. She looked down at the finger-snake and the junction where its teeth, or whatever they were, had attached it to his leg. “I’m going to pull.”

“Okay,” replied Reimer.
When she pulled, she must have used blood magic for extra strength, because the finger-snake’s teeth (many, many teeth, in concentric circles) ripped out flesh too, and didn’t go quickly. It had been damned near placid with its teeth sunk in, even though it was missing its back half, but once detached it writhed and squirmed like a cornered animal. Lisi dispatched it calmly, ripping it apart into small pieces.

“Bleeding,” said Reimer, looking at his leg. It was shaking, all on its own, and he hoped that this wasn’t how he died, but he knew that this was how people died sometimes, when terrible things came out of left field and all your preparations came to nothing because you were in the wrong place at the wrong time.

Lisi grabbed his leg at the site of the wound, and a moment later Reimer felt warmth flow through his body from the site. He wanted to protest that she should go, should save herself, that she should kill him first and bottle his soul to spare him the hells, but he was selfish, and wanted her here. He was selfish, and wanted to live.

“I love you,” he said. His voice cracked again.

“Hush,” she replied.

He fell silent. Her blood was doing its work. He wasn’t sure whether she’d figured out platelet forcing on the fly, or whether it was just her ability to control blood. They were compatible blood types: she’d done a test a few days before, which he supposed he was thankful for. He didn’t seem to be losing blood either, at least so far as he could tell. It occurred to him that he might live, if the empire brought its full powers to bear, if that huge ship could do effective clean up operations, or if some miracle happened. Then it occurred to him that he might have to live, having told Lisi that he loved her, which he wasn’t even sure was true.

“Why did you move my hands away?” he asked.

“What?” she asked back. She looked slightly annoyed that he was talking, but she often looked like that, and every time he’d asked in the past, she’d said that she was just annoyed that she didn’t understand, or that was how she looked when she was thinking.

“We were kissing,” he said. “And I was touching your legs. And I slid them up and … you moved them away.” This was the most trivial of trivial things, but he’d already told her that he loved her, and if he had screwed things up, then screwing them up a little more in exchange for some answers seemed like it might be a worthwhile trade, not that he’d actually been thinking that deeply when he’d posed the question.

“Ah,” said Lisi. She kept her hand gripped around his leg and shifted slightly. “I was on my period.”

“Oh,” said Reimer.

They sat in silence as she continued trying to heal him using blood magic. Eventually, after that seemed like it wasn’t really working, she dug into the backpack with her free hand and got out medical supplies. She had him flip over and began looking at his back while still holding his leg to connect their circulatory systems together. All of this was done with barely any words exchanged between them. Having Lisi clean his wounds was painful, as was the material she put down on top of them, but eventually it began to have a cooling effect, and at least took away some of the pain.

“I think you’re going to be fine,” said Lisi.

“So long as nothing comes through that door,” replied Reimer. He shifted uncomfortably, feeling the
material on his back itch slightly, which was far preferable to the slicing pain that had been there before. “Clock is ticking on that dark elf out there.”

“I know,” replied Lisi. “Twenty minutes, give or take. Less, if we wanted leeway.”

“Others too,” replied Reimer. “Civilians.”

“You’re a civilian,” said Lisi, frowning at him like she was annoyed again.

“So are you,” replied Reimer. “At least, here you are, I’m not sure what you’d be under Anglecynn law.”

“I have a duty,” said Lisi. “No one would fault me though.” She grabbed a length of gauze from the backpack and began wrapping his leg with it.

“You’re going, though,” he said.

“Yes,” she replied. “If I can save two people from eternal damnation at the expense of myself, that’s pretty simple math.” She finished the binding and stood up. “I’m hoping for more than two, obviously.” Lisi unholstered her gun and took a breath. “You have a fair bit of my blood. Try not to waste it by doing something heroic. Stay here until help arrives.”

“Lisi,” said Reimer, but he didn’t know what to follow it with.

“You’re infatuated with me, not in love,” she said. “That’s okay. I’m infatuated with you too. It’s probably just hormones.”

Lisi opened the door, pistol raised. Beyond it was the cracked and ruined city, and standing above the drying blood and gore were froglike creatures of some unfamiliar species. They had small tanks on their backs and bottles of souls, but more alarmingly, one of them held Heshnel’s head.

Reimer thought that Lisi would shoot, but she hesitated for a moment, either assessing this new situation or thinking before discharging her weapon.

“They’re friends,” said Heshnel’s head, which was, impossibly, still animated. “I’ve been assured that we’ll be picked up shortly.”

Ropes had come down from the giant ship and touched them for long enough that Reimer wondered what was supposed to happen. Once ten seconds or so had passed, there was a flash of black, and Reimer found himself laying on a bed in a cavernous room with Lisi beside him.

“Powerful magic,” she breathed. She looked at their surroundings and Reimer’s eyes followed her. There were hundreds of beds like his, arrayed in rows, and the same frog people were moving around inside, tending to the injured. The sound was surprisingly muted, given how many people there were, but it didn’t disguise the screams of pain. “And tuung.”

“Tuung?” asked Reimer. The name rang a bell. “Wait, you mean those people Juniper was working with? The Republic of Miunun?”

“Yes,” replied Lisi. “I think this is their doing. The Council of Arches.”

“You think that Juniper has a giant flying ship and a few hundred frog people on retainer?” he asked. The odd thing was, that wasn’t actually out of the question.

“I think so,” replied Lisi.
One of the frog people came over to them with a clipboard in hand. It wore one of those tanks at its side and carried a small satchel with it. “Injuries?” it -- she -- asked.

“His back and right leg,” replied Lisi. “The back injury was caused by claw from some black rat creature, with etcher-grass applied a few minutes ago. The leg injury was the bite of a smaller finger snake, removed and bandaged. I also gave him a transfusion -- we’re compatible -- and attempted platelet forcing, which I believe was unsuccessful.”

“Your own injuries?” asked the tuung.

“Minimal,” replied Lisi. “Bumps and scrapes. Self-inflicted cuts that I have under control. Slight blood loss, but I have experience managing it.”

“Good,” replied the tuung. “Healing will be along shortly.”

“Thank you,” said Lisi with a short nod. At that, the tuung left them alone again, though they were close enough to all the other beds that it was easy to overhear other conversations, and there was nothing like privacy.

“Are you alright?” asked Lisi.

“Mostly,” replied Reimer. “I’ve only had magical healing twice in my life.” He paused. “Do you think it will be magical?”

“I don’t think that they would have this much infrastructure in place without having stockpiled large quantities of magical healing,” replied Lisi.

“Actually,” replied Juniper, appearing out of thin air right next to them, causing both of them to jump. “This place was constructed just shortly after midday, and the tuung that are doing most of the work treating everyone were hatched a month ago, depending on your reference frame.” He reached into his bandolier and pulled out a piece of wax paper that was wrapped around a small plug of something squishy. “We do have healing though.” He handed it over. “Eat this.”

“What is it?” asked Reimer, cautiously taking it and unrolling the wax paper. He skipped over the obvious questions like ‘where did you come from’ and ‘how do you have all this stuff’ and ‘were you listening to us’.

Reimer ate it down and immediately began to feel better. A quick check of his wounds showed that they had sealed entirely, leaving small, barely visible pink flesh where minor scars had formed, the kind that would hopefully be gone in a week or two.

“Better?” asked Juniper, watching them closely.

“Yeah,” said Reimer.

“Okay,” replied Juniper with a nod. He was wearing his full plate, minus the helm, standing taller than he really was and looking utterly imposing. He’d put points into PHY, that was what it was, it was all cheating … but he was still impressive, and probably more impressive without armor covering him. “Now, I would like your consent to check you over on a deeper level.”

“A deeper level?” asked Reimer. “Excuse me?”

Juniper looked up slightly, toward the ceiling.
There was a flash of black, and the cavernous hospital ward they’d been in was gone. Instead, they were all in a small white room with minimal lighting and no windows or doors, the kind of prison that you read about in books, one that you could only get into or out of with an entad. It was immediately claustrophobic and frightening.

“I need to look at your soul,” said Juniper. “Did you hear the people singing?”

“Yeah,” replied Reimer. “Just before the big thing came down.”

“They were compromised,” said Juniper. “I need to make sure that you’re not compromised, both of you,” he nodded to Lisi. “We’ve taken care of the thing that compromised everyone, but it might still have sleeper agents out there.”

“You’re a fucking soul mage,” replied Reimer. “I knew it.” There had been a lot of discussions about that when they’d been going over the character sheet. Amaryllis had been cagey.

“You said that you would ‘like’ our consent,” said Lisi. “What if we don’t give it?”

“That would be a problem,” said Juniper. “Depending on how hard of a no it is, I might just forcibly check you.”

“And if you found something, you would do soul surgery?” asked Lisi. “Unauthorized, unapproved, without consent, by an amateur?”

“Yes,” replied Juniper.

“Good,” replied Lisi. “You have my consent.”

“Uh,” said Reimer. He turned to Juniper. “Do you remember that conversation we had?”

“I’m not from Aerb, I’m from Earth,” replied Juniper. “If I had the same conversation there with your counterpart, I don't remember it.”

“We were talking about if we were soul mages,” said Reimer. “We were talking about what we would change about each other.” It had been a transgressive conversation, one that should have stuck out in Juniper’s mind. You weren’t supposed to say that maybe soul mages mucking about in a person’s soul was okay, even though there were supposedly some ethical uses that the Empire of Common Cause sanctioned with long audit trails and cross-checking.

“Oh,” replied Juniper. “Right, I remember. Circumstances were a little bit different. I said that I would make you less annoying, if I recall, and you said that you liked being annoying, because it wasn’t being annoying, it was being right. I’m not going to change anything but what I’d need to in order to get you out from under the entity’s potential latent orders. We’re actually not even sure that he’s got sleeper agents at all. Most of his work has been pretty crude, from what I’ve seen.”

“How many of these have you done?” asked Lisi.

“A dozen,” replied Juniper. “Many, many more in the future though. Ideally we can find and clear the leadership of Li’o, and they can invoke emergency measures to avoid Article 86. Looks like it’s going to be triggered by dawn tomorrow if we don’t get things wrapped up.”

“You killed that fucking kaiju?” asked Reimer, sitting up slightly. The teleportation, or whatever it was, had taken the table with them too, and he was still sitting on it, even though there was no need. “It was you and your people?”
“Yeah,” replied Juniper. “I’d like to be modest, but mostly me.”

“Shit,” said Reimer. “That’s … that’s a lot to take in.”

“I’m on a clock here,” said Juniper. “Yes or no?”

“Yes,” said Reimer. “Just … don’t touch anything. Don’t look around.”

“I wouldn’t have the time to, even if I wanted,” replied Juniper. He placed his hand on Reimer’s arm and closed his eyes.

“This is so fucking creepy,” said Reimer as he watched his friend, the alien, look through his very being.

“He’s more powerful than I thought,” said Lisi.

“I’m not sure that I can do this,” said Reimer.

“It’ll be over soon,” said Lisi. She moved closer to him and placed her hand on his shoulder.

“No,” said Reimer. “This, I mean, being a part of this, being a cog in the machine, part of Juniper’s entourage, wrapped up in all this. Lisi, we almost died today.”

“We didn’t die,” Lisi replied. There was a coldness in her eyes, there always was, but it seemed a little more apparent, more present. “Sound and Silence is going to stay closed for months, maybe years. There’s almost certainly been an enormous loss of institutional knowledge.”

“Sorry,” said Reimer. “What?”

“Do you think we’re students?” asked Lisi. “How many of our instructors are still alive?”

“I,” began Reimer.

“You’re clean,” said Juniper. He looked over at Lisi. “Ready?”

She gave him a curt nod. Reimer tried to see whether he felt any differently, but if Juniper had made any changes, Reimer couldn’t feel them. He didn’t think that Juniper would sink that low, but they’d had their fights, and Juniper could sometimes be a rat bastard when he was in a foul mood. Juniper touched Lisi’s arm, and Reimer felt a spike of jealousy that he tried to suppress.

“Fighting for my life made me realize that I really don’t want to be in fights for my life,” said Reimer. “Did you honestly like it?”

“It was different from what I thought it would be,” replied Lisi. “But I had always expected that I would be going up against people.”

“Did you like it though?” asked Reimer. He had no idea what her answer would be.

“No,” said Lisi. “I didn’t like it. It was necessary though. And I have the skillset for it.”

“Well, I don’t,” said Reimer. “Not the skillset, not the mindset, nothing, I made it through by the skin of my teeth, and I don’t ever want to do that again.”

“What are you planning to do instead?” asked Lisi. “Li’o is in ruins. It’s going to take an incredible amount of work to get it functional again. The most likely outcome is that the Rod of Whispers and the Temple will get moved somewhere else and all the students and teachers will live on a campus
created by the fastest, cheapest possible steel magic. There’s not a guarantee that the athenaeum even exists anymore. It might be that the Empire takes over.”

“Sure,” said Reimer. “I’m not saying what I want to do, just that I don’t want to be a part of this.”

“I don’t want you to be either,” said Juniper. He looked Reimer up and down. There was no clue to how long he’d been listening in. “So far as I’m concerned, every single one of the alternates should stay away. I’m just not sure how feasible that is.”

“I’ll still help,” said Reimer. “I just … I don’t want to be a part of it, aside from telling you what little I know that might be able to help.”

“Deal,” said Juniper. “We’ll post you as far away from the front as we possibly can, pay you a salary to do whatever it is you want to do.”

“How safe is the world?” asked Lisi. “How much risk are we talking about?”

“Skin of our teeth,” said Juniper. “If we live, it will be by inches.”

“Manufactured inches?” asked Reimer.

“What does that mean?” asked Lisi, scowling slightly.

“Do you know the word kaiju?” Reimer asked Juniper.

“Yeah,” he said, raising an eyebrow. “How do you know the word kaiju?”

“It was from one of your games,” replied Reimer, feeling slightly confused.

“It’s actually Japanese,” said Juniper. “Means, uh, ‘weird beast’ or something like that.” He must have seen their confused looks. “Japan is a nation of Earth, Japanese is their language. Look, nevermind.”

“The rat things that killed your friend Heshnel,” said Reimer. “They were antimemetic, weren’t they?”

“Got it in one,” replied Juniper.

“Fucking hells, is this all stuff that you made up?” asked Reimer.

“‘Fraid so,” replied Juniper with a shrug.

“Define ‘all’,” said Lisi.

“Half the mortal species, seventy percent of the magical creatures, twenty percent of the magic, and about eighty percent of the entads,” replied Juniper. “But all the stuff that I didn’t make is still at least something that I probably would have, given time.”

“Shit,” said Reimer. “Shit. Even the Long Stairs stuff? Is that all out there somewhere?”

“From what we’ve been able to find, the Aerb Juniper’s stuff doesn’t show up on Aerb,” said Juniper. “Look, some of this is a bit sensitive, I probably shouldn’t be telling you more. The upshot is that yes, the world is probably in danger, more so today than it was yesterday. We’re doing everything in our power to stop it. But Reimer, we don’t need you, and I don’t want you to get hurt. I want you to go off somewhere you’ve always wanted to go, live the life you wanted to live, with,” he paused and glanced at Lisi, “A stable life, good friends, all that jazz.” the word was unfamiliar,
“And ideally you can just forget about what I’m doing.”

“Shit,” said Reimer, again. He looked over at Lisi.

“Am I cleared?” she asked Juniper.

“Yes,” he replied. “Sorry, should have mentioned that. Are you in or out?”

“In,” she replied. She looked at Reimer.

“We have transportation,” said Juniper. “You can still visit each other, if you’d like. No need to pay the teleportation costs.”

Reimer thought he was probably blushing. “Thanks for the offer.”

“Look, I should be going,” said Juniper. “I’ll have Mary set something up for the both of you, or maybe just do it myself if I can find the time. I have hundreds of people to clear. Maybe thousands, though we’re trying to do it in priority order. Good luck.”

And with that, he disappeared.

Reimer looked down at his hands. They were shaking. His mind was going back to the battle, to running through the streets, to seeing that enormous thing fall down and not knowing whether or not he’d be crushed.

Lisi turned his head toward hers and kissed him. They had both been getting better at kissing, in the past two weeks, more natural, more confident, less awkwardly aggressive (on her part). Reimer let his stress and worry melt away a bit, and felt his nerves calm down. Lisi pulled away slightly and rested her forehead against his.

“This isn’t goodbye,” she said.

“You have to promise to stay safe,” he replied.

“I will.”
There were three major priorities. The first was finding a cure for sleep, which would allow Instinctive Halting to be active indefinitely, and Meta Stilling to keep Prince’s Invulnerability active, as well as the boost from stilling all the debuffs. The second was rescuing people, both the living and the dead, which was being accomplished by Bethel and the tuung, and had been since I’d descended into the domed building. And the third priority was calling in help from the Empire, which couldn’t be done without authorization from the ruling council of Li’o, who were all presumed compromised. That last was especially important, because while the Empire could act through something called Article 86, doing so would cause major political problems for the Empire which might result in either civil war or imperial collapse, for complicated (and not so complicated) political reasons. It was an open question whether I actually cared about the continued health of the Empire of Common Cause, but until I had a strong opinion otherwise, maintaining the status quo seemed wise.

Another big thing to do, which only Amaryllis and I were capable of, was trying to root out any plans that Harold had left. The newly compliant Ellio had been clear that they’d advised Harold to create sleeper agents in the case of Harold’s death or incapacitation, but Harold was inconsistent in actually following their directives, which was good for us, because a non-alien intelligence with Harold’s power and goals would probably have succeeded where Harold had repeatedly failed. So far as we could tell, it was the mortal advisors that had gotten him so far this time, within spitting distance of completing his goals.

I didn’t like going into anyone’s soul. First off, the default starting view was of them naked, which in most cases was just awkward for me. Second, there was a temptation to look around and snoop, which I never did insofar as it could be helped, but it always made me feel bad about my moral character. Third, after the first dozen people, it was pretty tedious work. And fourth, there were a lot of people who were understandably justified in not wanting someone to touch their soul, especially someone like me who had no credentials or license. That was an issue that we solved by having Valencia be the one to talk with them, but it still made me feel a bit queasy, for all the obvious ethical reasons.

(I had killed perhaps two dozen people over the course of the day, and I wasn’t sure that I could justify all of them as being for the greater good, or wholly necessary. Sometimes, it had just been easier, or because I was angry, and it was effectively a warzone. Those sounded like excuses to me, but I was terrible at figuring out why I had done things at the moment I had done them. I was trying not to think about it.)

While I was traipsing through the souls and spirits of others, removing Harold’s hooks where I found them and trying to undo any obvious alterations, hoping to not hit a memetic minefield, the other members of our team were working on the other issues. Healing the living and extracting the souls of the dead was a top priority, and we had everyone there who could be of any help. We’d tasked others with the time-critical task of getting me a cure for sleep.

People on Aerb could get brain damaged. You’d think, given that the soul seemed to store a fuckton of information in it, that this wouldn’t be the case, but the brain and the soul were a complicated two-way street, and there were lots of ways that the street could get broken. It was with that in mind that I looked Grak over with every tool at my disposal. Solace had already taken a look at him and declared him fine, but I wasn’t willing to take any chances.

“You did really stellar work,” I said as I touched his forehead. He was still missing bone there.
Solace could fix it, but had declined to, because she didn’t think that it would particularly bother him, and it wasn’t really a health hazard given that it was covered with skin.

“Thank you,” said Grak. “It was unearned.”

“Unearned?” I asked, sitting back slightly to look at him.

“I have not studied enough to know the things I do,” said Grak. “I am not a magus. It all comes to me with fluidity and ease.”

“I suppose you’d be a hypocrite if you were super happy about your jumps in skill, given how much it bothered you that all my power was unearned,” I said. “But I think there’s a pretty solid place between ‘taking it for granted’ and ‘thinking less of yourself’. That’s the middle ground that we should both be striving for. And I wanted to let you know that you did really stellar work.”

“I might be the most powerful warder in the world,” said Grak. His voice sounded a little funny as he said it, with an inflection that he didn’t normally have when speaking Anglish (we had started in Groglir and then switched for Juniper-doesn’t-know-what-he’s-doing diagnostic purposes).

“You might be,” I replied. “Though you are only at eighty-four.”

“That low?” asked Grak, looking at me.

“That’s what your soul says,” I replied.

“I thought it would be higher,” Grak replied. He gave me a sheepish look, one that I wouldn’t have identified as such a few months ago. “Not because I think I’m that good.”

“But you are?” I asked. “And you’re wondering what’s left at the top?”

“Uther was a warder,” said Grak. “The bulk of his wards still stand. There are places he warded that no one can enter. There are wards he broke that were thought unbreakable. He has many feats to his name, some of which have left warders scratching their heads for five hundred years. The real answer is simply that he cheated.”

“We don’t actually know that,” I said. I didn’t really consider the game powers I had to be cheating, just playing a different game with different rules, but I could see how it would look from the outside.

“We suspect,” said Grak. “You should talk to Raven more.”

“Yeah,” I admitted. “She looks just like Maddie. And we had a week together in the Infinite Library, and it was just … business, I guess, very few hints that it was going to go in any direction I really didn’t want it to go in. Then when we were out, I wanted it to stay business, I guess.”

“You can talk to her about business,” said Grak, raising an eyebrow.

“Yeah,” I replied. “It’s just … there’s been a lot on my plate lately, and I feel like I have to carve out time to spend with people if I ever want to spend time with them. Valencia accused me of ‘making the rounds’.”

“She told me,” said Grak. “She regretted it.”

“Well, she didn’t tell me that she regretted it,” I replied. It had been one of those little comments that had stayed with me enough that I had a vague paranoid worry that it had been thought up by a devil.

“She was waiting to tell you when she made the rounds again,” said Grak. He smiled slightly.
“Well, I guess I know what we’ll be talking about then,” I said with a sigh. I looked Grak up and down. “I’m unsure on the brain damage, by the way. You seem lucid enough. If it’s there, it’s probably beyond my current abilities. Or maybe it was there and it healed on its own, or with the magics we applied to you. I don’t know.”

“I appreciate you worrying,” said Grak. He fidgeted slightly. “You probably have other things to do.”

“I do,” I replied, but I didn’t move from where I was sitting. “You’ve heard of imposter syndrome, right?”

“No,” said Grak.

“Basically,” I said, hoping that I wasn’t just talking out of my ass. “Basically, it’s this internal feeling of being a fraud, worrying that you’re going to be found out, or that you’re not good enough. It’s self-doubt. And the funny thing is that a lot of people feel this, maybe even most people,” which was probably overstating it, “but it’s just something that you have to work through.”

“I’m not sure that’s what I’m feeling,” said Grak. He frowned at me. “You understand we have done little to deserve these powers?”

“I do,” I said with a nod. “But … I don’t know, there’s a difference between knowing that we don’t deserve them, and discounting everything we’ve done as being, basically, worthless. You’ve had help, sure, there’s a thumb on the scale, but it’s still you that’s doing it. It doesn’t invalidate the fact that you saved thousands of people, maybe more than thousands. You don’t need to feel like you’re solely responsible for your successes to feel good about what you’ve accomplished.”

“I would never have said I was solely responsible,” replied Grak, looking at me with an intensity that made me a little uncomfortable. I had seen into his soul, I’d had to in order to check him over, and I had seen how high I ranked. I thought it was probably too high, but maybe that was just my own imposter syndrome talking.

“How are things with Solace?” I asked. “Has she been keeping you company while I was gone?” It wasn’t the most subtle of transitions, but dwarves were supposed to be blunt, even dwarves like Grak who had some amount of imperial sensibilities.

Grak turned away slightly. There was a barely visible blush, hidden as it was by his beard. “Good,” he said. “She has been very … accommodating.”

“Huh,” I said. “That’s … do I want to know more?”

“Likely not,” replied Grak.

I sat in silence for a moment. I really did need to get on with doing other things, but I didn’t want to leave on that, not if it would make him feel like I disapproved, or like I was thinking the wrong things. I wished that I hadn’t asked about Solace and made things awkward, but that ship had sailed.

“I’m happy you have a krinrael,” I said. “Solace always seemed … well, interesting, I guess. And we all need somebody.”

“Even you?” asked Grak.

“I’m comfortable being solitary,” I said.

“Hrm,” replied Grak.
“Don’t ‘hrm’ me,” I told him. “You’re a dwarf, you’re supposed to be blunt.”

“I’m only as much dwarf as I want to be,” replied Grak. “Bethel had mentioned some sexual frustration on your part.”

I closed my eyes and sighed. “Of course she has. Look, it’s really not anything for anyone to concern themselves with.” I paused. “Can I ask what, exactly, she said?”

“Only that,” replied Grak. “She enjoys being cryptic.”

<do>, said Bethel, and from Grak’s expression, I could tell she was speaking into his mind too. <Juniper, I’m going to patch you to Feldspar, he’s one of Mary’s tuung. Apparently something happened to Heshnel.>

“What happened?” I asked, staring at Heshnel’s head shortly after he’d been brought in. I had already gotten the gist of it from the tuung, speaking through Bethel.

“I was killed,” replied Heshnel. His head was sitting on a table in a tastefully decorated room which Bethel had either made for us or hastily appropriated. She was copying the Baroque style, with gilded floral patterns and ostentatious wallpaper, none of which went all that well with a dark elf’s head sitting in the center of a table. I wasn’t sure there was any interior decorating that could have made it less creepy. “The entad has now fused with my soul, a condition that will last until it is removed from my neck, at which point I will face oblivion.”

“Oh,” I said. “I’m sorry.”

“Through the ages, people have come to see death as an inevitability,” said Heshnel. “I spent much of my life hoping that wasn’t true, and fighting to conquer death, but here I am.”

“Is there anything I can do?” I asked. “Any way I can get you a body back, or some mobility, or something like that? I don’t want you to be beholden to Bethel or anyone else. I still consider you a part of the team.”

“I’m not,” said Heshnel. “I never was.”

“If that’s true,” I said. “Then that’s only because you wanted to keep yourself at arm’s length.”

“I still don’t have the measure of your place in this universe,” said Heshnel, frowning slightly. He was either taking the whole beheading thing very well, or his new outlook was being magically assisted in some way. “You killed the great, towering, terrible beast, but what does that mean in the context of the world? Is it a sign of how things have escalated, and how much further they have yet to escalate? Or a real and true triumph over something that your Dungeon Master set up for you to defeat, a thing that needed to be felled before your eventual apotheosis?”

“Yeah,” I said. “I don’t have any idea either. Obviously I’m hoping that there’s a finite limit to what the Dungeon Master has on hand, and that he’ll stick to the world as he made it and not spin up new shit when or if everything is beaten, but I wouldn’t count on that. And in the meantime, I don’t really have any option except to respond to the incentives in front of me.”

“You could kill yourself,” said Heshnel, raising an eyebrow. “Just as we were planning to kill you.”

“I could,” I said. “Or I could do like Mary thinks, and try to follow the narrative.”

“That was what I tried,” said Heshnel. He still sounded like he had before, and a touch of sadness
had crept into his tone.

“You … you did?” I asked.

“When your friends, Reimer and Lisi, came to the house, I stayed in the shadows, watching them. I had seen the claws descend from the sky and strike the earth. I knew that it was bad.” Heshnel took a
breath, despite not having lungs anymore. “I followed them. I joined with them. I didn’t want them to die, but I had not wanted people to die before, and accepted that it was necessary in spite of my wishes. I have killed before, because it was the right thing to do, not because it was deserved, not because I wanted it, but because it was the burden of necessity. Your friends, I followed, and them I did my best to save.”

“But not because of any nobility or valor on your part?” I asked. “It was because of … narrative?”

“That’s not quite right,” replied Heshnel. “I don’t understand this universe anymore. I thought that I did, when we came to the conclusion that Uther was the magnet drawing in all these threats, but when you arrived, it seemed possible, probable that this narrative theory was actually correct. I thought about what would happen to those two children if they didn’t have me there to protect them, what import it might be that they arrived, what part I might be meant to play. But to say that it wasn’t nobility, that it wasn’t valor, is to ignore that I have been fighting against those instincts for my entire life.”

I frowned and thought about that. I really did need to get back out there, but Heshnel’s head had been brought to me, and he seemed like he wanted to talk. Over the weeks since his group had ambushed me, I’d begun to feel like maybe I owed him something. He hadn’t been a part of it, he had come to my defense against his friends and allies, and I hadn’t given him much but scorn in return.

“You thought, just this once, that you would do like heroes do in the stories,” I said. “You would do the noble and valorous thing that your heart had been telling you to do all along.”

“It isn’t the heart,” replied Heshnel. “It’s the animal wiring of the brain, the cadence of the soul, the imprint of early lessons. I have cut away much of that, where I was able, where it was possible while leaving me mostly the person I was before. I had friends experienced in essentialism to help shape me, friends I would shape in turn. But some of it remains. That was what I followed. It seemed magical, to give in to those impulses, to save lives in that way, to use my resources for small, concrete goods instead of chipping away in an indirect manner at large, overwhelming ones.”

“I saved other lives,” said Heshnel. “A dozen, perhaps, maybe more. I let the feeling of righteousness get to me. My soul isn’t what it once was. It’s drifted, over the years, grown wild and free where it was once restrained. I expended resources to help people whose lives mattered less than my own, and I died for it.”

“You regret it?” I asked.

“I spent my life for the lives of, perhaps, two dozen others,” said Heshnel. “It’s perhaps the unbridled pride that my species are known for, but I don’t believe my life was worth so little.”

“But you might have died anyway,” I said. “Your life is worth more than the lives of two dozen people, sure, I’d buy that, but it wasn’t a one-to-one trade, it was more like trading a few percent chance better possibility of survival for a large percent chance that the people you helped would stay saved and not die shortly afterward.”
“True,” replied Heshnel. He paused. “Have I ever told you how unlike him you are?” I didn’t have to ask who ‘him’ was. With pretty much anyone who had met the man, Uther Penndraig simply became ‘him’, a vast and ineffable figure.

“Probably,” I said.

“Uther would have answered with a riddle, or proclamation, or something of that nature, rather than a quick check of my mathematical assumptions,” said Heshnel.

“Well, I hope it’s helpful for you to know that we’re not the same person,” I said with a shrug. “I have the feeling you’re not the last person I’m going to have to convince of that.” I looked to the ceiling for a moment, debating whether or not I wanted to call Bethel in and end this so that I could move on to more time-critical things.

“I won’t be staying with you,” said Heshnel.

“When not?” I asked. There had been something about the way he’d been talking that dulled my surprise at hearing that.

“You don’t need me,” Heshnel said. “Solace is an accomplished flower mage, though her style is unorthodox, her strains are weak, and she’s in a period of rebuilding. Essentialism was stripped from me at the end of the Second Empire, leaving me unable to teach it, even if it would only be in those very few areas you might still be lacking. I have little purpose on your councils, save as a lightning rod for old grievances with the Second Empire, a subject on which I have taken my lashes more times than I could count. Nor am I the elder that I might have served as, not when you have Raven and Pallida to tell you about the old days and the reign of Uther Penndraig.” He looked down at the table. “I don’t even have a body.”

“None of that means --” I began.

“Do you want me here?” asked Heshnel. “Is there some reason that my presence is helpful to you?”

I hesitated. “I value having many voices. I value dissent. The Second Empire stuff in particular makes you valuable, and as much as the others might not like me to admit it, as much as I don’t want to admit it, I think that you and I have a pretty strong ideological alignment.”

“And so my dissent is even less valued,” said Heshnel with what I think might have been him trying to nod.

“If you want to go, I won’t stop you,” I said to the head on the table.

“Then I will go,” said Heshnel. “I had always promised myself that death would be the end of my burdens.”

“I mean, there’s a question of how you’re going to do pretty much anything,” I said.

“Did you think that I wore this necklace for three hundred years without having a plan for that?” asked Heshnel.

“No,” I replied. “I guess not. Give it a day or two, when things have hopefully settled down, and we’ll get you wherever you need to go. In the meantime, there are a lot of things demanding my time, Reimer and Lisi being one of them.”

“Go,” replied Heshnel. “Thank you for taking the time to speak.”
“How are you doing?” I asked Bethel, while I took a break from combing through souls.

“How poorly,” she replied. “Too many people, too many obligations, too much like a hospital, a ship, or an institution. I detest it.”

“Okay,” I said. “We appreciate it.”

“I’m well aware that you appreciate it,” replied Bethel, frowning at me.

“Sometimes humans make mouth sounds because we know a situation sucks and there’s really not anything that we can do about it.” I said. “We could set up a makeshift hospital using the tuung and some staff that we’ve cleared for work, and take the Egress as a shuttle, but … well, if you’re at your breaking point, let’s do that. Or, before you’re at your breaking point, because I don’t want you to be pushing past discomfort for too long.”

“I will be fine,” said Bethel. “This will last no more than a day. Two at most.”

“This Article 86 business had better fucking get sorted out,” I said. “Either way, the empire isn’t going to sit by forever while a city crumbles. I’d say that I’m surprised that it’s gone on for so long, but there was this thing called Hurricane Katrina, back on Earth, and the upshot --”

“Yes, I’m well familiar,” said Bethel with a sigh. “You forget so easily that you’re not the only one who knows of Earth.”

“Sorry,” I said. “I’m going to have to make some new friends who I can impress with my obscure references.”

“Hurricane Katrina was not obscure,” said Bethel.

“You’re in a bad mood,” I said. “I get that. Let me know if there’s anything we can do to make it better?”

“I will, if I think of anything,” said Bethel. “I would like to make it clear that you owe me, dearly. And the longer this goes on, the deeper that debt grows.”

“When we get back to the Isle of Poran, we’ll set you in place, kick out the tuung, and have a solid week of you just being a house for our little extended family,” I said. “Deal?”

“You won’t sleep in the bottle?” asked Bethel.

“That,” I said, snapping my finger. “That’s a little more sticky.” I saw her eyes darken. “But yes, it sounds like an acceptable compromise to me.”

“Very well,” said Bethel. “Valencia continues to line people up faster than Amaryllis alone can clear them.”

“Back to it then,” I said. “Any word from Pallida or Raven?”

“Not yet,” said Bethel. “I will, among my many duties, keep you informed.”

“The locus is tapped out,” said Solace. I had been pulled into the bottle room between clearing people, a place that hadn’t changed at all, which was pretty atypical for Bethel. The bottle was still held by an upright stone hand, and the room was still full of plant life, though the sky overhead was still a sickly green color, even with Mome Rath dead.
“Okay,” I said. “You’ve been doing a lot of good work. We’ll have this room made into the time chamber, set up some grow lights so that it won’t be complete darkness, possibly on a timer, and give it a few days.”

“No,” replied Solace, frowning at me. She was wearing her leaf cloak and resting up against her staff. She was wearing clothes, which I was thankful for, loose slacks and a loose shirt. Her hair was a bit longer than it had been, and it might have been my imagination, but she looked older too, seven or eight instead of five (though I was terrible at guessing ages).

“No?” I asked.

“The locus is not some device that you give inputs in order to have outputs,” said Solace. “It is not a machine that needs oil and water to run.”

I frowned a bit, then relaxed and allowed myself to get into what I thought of as druid mode, even though druid mode didn’t like being called druid mode. Some of getting into the headspace was just breathing and letting myself calm down, which felt a bit hard in the current circumstances.

The first thing out of my mouth was very nearly, “I hear your concerns, loud and clear,” which felt way too much like the opening to a PR-massaged apology from a major corporation. “I understand,” I said instead. “People are going to die because they didn’t have healing. Our stockpiled fairies have already run dry, and we don’t have limitless bones, nor do we have enough bone mages, even with the ones we’ve gotten from the collected survivors. And that’s just the stuff that those methods of healing are capable of fixing, because Lord knows there are gaps. Bethel and the tuung are, at the moment, pretty much the entirety of search and rescue, and the hospitals of Li’o -- Christ, we’re pretty much out-competing them, which is pathetic on their end and means that we have an obligation to do as much as we can.” I paused and took a breath. “And yes, I know that this doesn’t actually change things from your perspective, and it doesn’t magically mean that the locus will be charged up from grow lights and a couple days in the chamber. Even if that should work, it just … won’t. I trust you on that.”

“You find it frustrating,” said Solace. She had her arms folded.

“I do,” I replied. “And yes, I know, that’s reflective of the worst impulses of the Second Empire, the desire to put everything in a nicely labeled box, especially in the name of doing the right thing. But I can’t just deny how I feel, that wouldn’t be what the locus would want of me. It would want me to feel those things, to acknowledge them, internalize my understanding of them, and then change. I have the first part, but I don’t know how I get to the last part from where I stand now. How do you not find it frustrating, knowing that people are dying?”

“I find it frustrating that people are dying,” said Solace. “I don’t place the blame on that which holds no blame. The locus is finished with its help, likely for the next few days, not because it has particular desires, but because of its intrinsic character. Do you get frustrated at inanimate objects when they do things that you dislike?”

“Well,” I said. “Yeah.”

Solace furrowed her brows. “That’s silly.”

“Sure,” I said. “But also very human, and I assume that the same holds true for the other mortal species. And in point of fact, the locus isn’t inanimate, it’s got a … well, I don’t want to say mind, and I don’t want to say soul, but it’s got a something, a spark of life, a will, and it’s very hard to distinguish whether or not individual things that happen are because the locus is willing them to happen, or because it’s struggling against them.”
“Do you have time for this talk?” asked Solace. Her voice had gone gentle, which I thought was probably intentional on her part, given how quickly it had happened, and her previous near-hostility.

“Not really, no,” I replied.

“Then it can wait for another time,” said Solace. “It’s not a conversation that you should be having with me. Your sessions with the locus have been going well, and it would be good for you to continue with them. This seems like something that the two of you could talk about.”

“Sure,” I said. The locus didn’t actually talk during our sessions, it just nodded or looked at me or made facial expression that were nearly unreadable given that it was a six-eyed deer. “Thank you for understanding.”

“Thank you for at least attempting to understand,” said Solace.

“Anytime,” I said. I tried to keep the sarcasm from my voice, but I wasn’t sure that I was successful. <Ready for whatever is lined up for me.,> I sent to Bethel.

<Of course, my liege.,> replied Bethel. <Words cannot describe how much you owe me.>

“And Juniper?” asked Solace.

“Yes?” I asked.

“We still need to find a solution to our problem,” said Solace.

It was a reminder that I didn’t need, an old point that had been brought up so many times before that I was nearly deaf to it. I hear you, loud and clear, your concerns have been noted and in the coming days I will be doing everything in my power yadda yadda. I had nothing to say on the subject, nothing to add, I wasn’t quite doing everything that I could, but we had already sacrificed a lot of time and effort for the locus, and we’d gotten pretty much nothing but the status quo and some bad news from the Second Empire in return. Thankfully, I was saved from having to make a response by Bethel yanking me away.

“You know,” I said to Pallida. “You would think that saving the city would get you a little bit of rest and relaxation.”

“City wasn’t saved,” said Pallida with a raised eyebrow. She was sitting next to Raven in our common room, the large one that held chairs, couches, and a large fireplace with a discreetly rolled up screen for when we brought out the projector. Aesthetically, it was like an inverted Fabergé egg. “That might be a part of it.”

“Okay, sure,” I replied. “The city is pretty much in ruins, and there were a whole lot of monsters running around, and this probably represents a failure on my part in some unknowable way, if it’s not just chalked up to outright malice. But still.”

“Dealing with the aftermath is rarely pretty,” said Raven. “Uther always hated it. It was often possible to kill everyone involved, common that we fought enemies that were truly beyond reform or redemption, but every once in a blue moon we were mired in complicated moral situations, or places where there were no easy solutions.”

“I’m really looking forward to the empire coming in, no matter how that happens,” I said. “This isn’t something that we should really have to be doing at all, not when we have comparatively few resources at our disposal.”
“The world’s most amazing flying house with a literal mile of hospital inside it is comparatively few?” asked Pallida. “Plus a platoon of frogs, which don’t count for nothing.”

“Maybe I’m overestimating the empire,” I said with a shrug. “Anyway.”

“The bad news is, we haven’t been able to find anything novel for your sleep problem,” said Pallida. “The good news is, our looting did pay dividends.” Pallida rolled up a sleeve and showed a tattoo to me. The larger shape was that of an eye, but the pupil was like a goat’s, squished in the middle, almost reminiscent of an hourglass. “Kenner’s Eye. It took us a surprisingly long time to find a tattooist, even accounting for the general bedlam.”

“I’m actually fairly surprised that Bethel didn’t get one,” I said. “You’d think with all the people passing through, there would have been one with Kenner’s Eye.” It was a disappointment, frankly. Amaryllis had her own copy of it, but there was a problem with that, which was that she had incurred a debt. Taking it from her while that debt was active would put her out like a light. It was a fallback solution, to be sure, especially since we could rush through her sleep with the time chamber, but we’d held off, hoping that we could find something better, so that Amaryllis could pay down the debt at her leisure.

“Not so useful, for what it is,” said Raven. “When it was a cheap spell, it was used by guards, firemen, physicians, and anyone who might have to work long shifts, the better to stave off sleep. As the price rose, fewer had it.”

“We actually found an abandoned tattoo shop before finding a different tattooist, and the owner didn’t even have it in his book,” said Pallida. “A book we brought, by the way.”

“Good,” I said. I reached over and touched her arm. “I was thinking that I would probably respec to a more ideal build in the near future. Maybe it’s time to bring Art back into the mix so that I can tattoo myself instead of using spells that others put on me.”

I slid the tattoo from her to myself, bridging our skin and settling the magical inks into place.

**Achievement Unlocked: Exclusive**

“Fuck,” I said, staring at the text. “Fuck fuck fuck.”

“What is it?” asked Raven, going tense.

“Bethel, bring everyone in, group meeting, as quickly as is reasonable,” I said. I looked up at Raven and Pallida’s alarmed expressions. “I got an achievement, ‘Exclusive’, I said. “I’m really hoping that it doesn’t mean what I think it means.”

Our group appeared one by one, put into place around the table.

“What is it?” asked Amaryllis. She must have taken a moment to freshen up, because she was out of her immobility plate and wearing a t-shirt and jeans again. I had switched the vambrace to plain clothes, which was considerably less of a hassle.

“I think there might have been an exclusion,” I said.

Everyone stared at me.

“Come on,” I said. “Get seated. If it’s happened, then we have at least a little bit of time to figure things out. I don’t think that it’s catastrophic.”
We sat around the table together, some of us more cautiously than others. Heshnel wasn’t there, though I didn’t know whether that was because Bethel hadn’t grabbed him, or because he hadn’t wanted to come. To the rest, I explained, in brief, what had happened, which didn’t take very much time at all.

“But what would have been excluded?” asked Amaryllis. “Just Kenner’s Eye? Just Prince’s Invulnerability? Or … something more?” Her face was set into a scowl. “Obviously we’re going to have to test it.”

“You take the Egress, go a few miles out, test your tattoos,” I said. “For what it’s worth, all mine appear to still be functional, though I can’t really test Kenner’s Eye.”

“If it’s all of skin magic,” Amaryllis began. She was a bundle of tension.

“I know,” I said. “There would be implications. Take the Egress and figure out if that’s what it is.”

“It may be still magic,” said Grak. “If the Dungeon Master wanted to place limits.” Midway through his sentence, Amaryllis disappeared from her place at the table, presumably to the garage where the Egress was kept. Bethel would be stationary until it returned, but I was hoping that wouldn’t affect our operations too much.

“Wait,” I said. “She had Kenner’s Eye with a debt on it.”

“Paid off as of three minutes before this meeting,” said Bethel. “She wanted to be prepared to hand it over.”

“Okay,” I said, relaxing just slightly.

“There’s no way of second guessing the Dungeon Master,” said Raven, picking that thread of conversation back up.

“Smart girl,” replied the Dungeon Master.

“You,” I said, locking eyes with him. He had appeared without warning, though it was impossible for me to say how or when. He wasn’t even in anyone’s chair; it appeared as though the table had expanded to allow him a seat. When I looked over at Valencia, who was sitting next to him, I saw that she was stock still, unmoving and unblinking, and a quick look around the table confirmed that the same was true for everyone else.

“Time for a chat,” said the Dungeon Master with a genial smile. He was wearing a dark gray hoodie again, but this one said, ‘Of Dice and Men’ with an emblem of a little mouse holding a sword next to a large d20. In front of him was a monstrously thick book, which would probably have been the largest that I’d ever seen had I not done my stint in the Infinite Library. It was thick and bound in red leather. The spine, which was visible to me, said, ‘Worth the Candle, by Juniper Smith’.

“Amaryllis had a list of questions prepared,” I said.

“Yes, yes, no, yes, maybe, it depends on my mood, yes, no, and I’d have to look it up,” replied the Dungeon Master.

“Literally none of the questions were yes or no questions,” I replied. “They weren’t even ambiguous.”

“Well, I tried,” said the Dungeon Master. “Or at least, I pretended to, and isn’t that what matters?”
“Why are you here?” I asked. I was already getting tired of him.

“Ah,” he said. “I’m here because you’re here, and I thought maybe now would be a good time to talk.”

I stayed silent, waiting for him to go on. Amaryllis had a long conversation with me about how to comport yourself in front of a god, and I was trying to take her advice, even if I wasn’t sure that it actually applied.

“The first reason, of course, is that to fulfill the rule of three, we need to meet an extra time before we meet at the end,” said the Dungeon Master. “That’s assuming that you get there, anyway. Given that we’re about halfway through what I had prepared—”

“Half?” I asked. “That’s … there are only five months left?”

“I’m not giving you a clock, lord no,” replied the Dungeon Master. “You don’t need a Sword of Damocles hanging over your head.”

“There’s a whole fucking armory of Damocles,” I said.

“Don’t be a drama queen,” sighed the Dungeon Master. “The point being, no, it’s not a clock, it’s not even really a statement on anything that’s going to happen, it’s just that this is halfway through what I had planned from the outset. You can take your digressions, if you choose, rack up your wins and losses, wander the hex or settle down to have a family, do as you please, stretch this tome even further than it’s already been stretched,” he patted the book, “But I would still maintain that this is the halfway point, more or less.”

“Okay,” I said. I clenched my teeth for just a moment. “Fine. Halfway to godhood. You said first reason, what’s the second?”

“Ah,” he replied. “Well, there we come to the crux of it. There was a sequence of events that I never intended to happen, and here at the end of it, there’s you, in your current form, invincible except to a select few attacks, most of them ones that people won’t know or think to try, given that your particular form of defense should, by all rights, be impossible.”

“I’m too powerful, so you’re cutting me down to size,” I replied.

“Oh, I let you have your fun,” he said with a wave of his hand. “You stomped your way through the annex, you did things that should have resulted in your death a hundred times over, and it was all enjoyable enough, I suppose. You always used to let Reimer do that, didn’t you?”

“Sometimes,” I replied. “I tried my best not to take his toys away.”

“I was always going to exclude it,” said the Dungeon Master. “Tricky thing, excluding something that’s not degenerate on its own, only in combination with something else. I decided on cutting skin magic, to save you the suspense.”

“You excluded all of skin magic?” I asked. “Scars and tattoos?”

“There were a few subfields that no one discovered,” he replied. “I always try to include little secrets like that, ways to expand things. I’d always wanted to do something with prehensile hair. But yes, all of it.”

“That’s,” I said. “That’s overkill.”
“Oh, yes,” he replied. “It’s very much overkill. But there’s no kill like overkill, is there?”

“Fuck,” I said. “The knock-on effects of that … you’re taking away one of the primary advantages of being an elf. You’re taking away translation tattoos and Parson’s Voice.”

“Yes,” nodded the Dungeon Master. “With relatively little fanfare, it’s a shame to say. Normally I prefer the exclusions to be big, grotesque, snarling things, but sometimes a magic goes out with a whimper instead of a bang. You’ve been to the illusion exclusion, obviously. Not a site of any great tragedies.”

“How did Uther know it was there?” I asked.

“Well, that would be telling,” said the Dungeon Master with a smile. “Look, this kind of thing happened to him all the time, albeit not with a little chat like this.”

“Were you Vervain?” I asked.

The Dungeon Master laughed and thumped his fingers against the book. “This,” he said, tapping the book in front of him, “This chronicles your adventures thus far. Uther has been on Aerb and its associated planes for a long fucking time. His story, told in full, would fill a very large bookshelf.”

“‘Has been,’” I said. “He’s actually on Aerb? Alive?”

“Aerb or its associated planes,” replied the Dungeon Master with a nod. “Though I didn’t say alive, or dead, or somewhere in between. And you already have a clue that you need to follow up on. I don’t even consider this meta knowledge.”

“I’m not sure how I’m going to beat Fel Seed if you keep throwing up exclusions when I gain a scrap of power,” I said. I was trying to stay calm. It was one thing to hear from Raven that Uther had last gone missing in what became the Fel Seed exclusion zone, it was another to hear the Dungeon Master talk about it, even if he was using veiled reference.

“A scrap of power, he says,” the Dungeon Master chuckled. “If I were being mean, if this were retribution, then you would lose still magic and we’d be done with it. As it stands, you still have the strong synergy between Essentialism and Still Magic.”

“And if I find another way to dodge sleep?” I asked. “You’ll knock that out too? There’s an entad sitting in the temple right now, it would be child’s play for us to take it.”

“The way I see it, there have to be limits, and if not limits, then costs or consequences,” replied the Dungeon Master with a shrug. “I won’t say, one way or another, what will happen if you track down some other method. But Kenner’s Eye was always lame, and tattoo magic had always been for Everett anyway, nothing really intended for you, not that you used it, so here we are. It’s gone, wiped away except for in this city. It will probably be good for Li’o in the long run, actually.”

“You don’t even know? That’s the kind of world you’re running?” I felt my voice strain.

“I could know, if I wanted to,” said the Dungeon Master with a shrug. “But I like surprises.” He tapped the book again. “I was debating giving this to you, but I suppose it can wait until you’re done. Offer not valid if you die, obviously.” He tapped the book a final time, and it popped out of existence. “I should get going, things to do, places to see, you know the drill.”

(It did occur to me to ask about the book, especially given the supposed author. The byline could have just been metaphorical, or it could have been a joke, or it could have been literal in some fashion, written by me after it was all over, or when I was asleep, or simply by yanking me out of
time to write a chapter whenever anything important happened then scrubbing my mind afterward. But the number of possibilities, and the untrustworthiness of the Dungeon Master, made it sort of pointless to ask about. Besides, I didn’t really care about the poor schlub who was writing that book, even if it was, in some way, me.)

“Why did you fuck with Amaryllis?” I asked, since it seemed like I wasn’t going to get a better question answered.

“Did I?” he asked, raising an eyebrow.

“You made her childhood crush be an anagram of my childhood crush,” I said. “I get why you’d fuck with me, you don’t like me, hell, most days I don’t like me, and we obviously have some kind of connection, even if it’s just being kindred spirits, whatever the hell that means, but come on, why her? Why make her life into this joke?”

“It’s a single anagram,” said the Dungeon Master. “I really don’t think you appreciate how hard those are to set up. They take an extraordinary amount of planning, because you have to get both the family and given name right, if those apply in the culture, and that’s really a lot to handle, even before considering that the person who gets the name has to be perfectly suited to the task. Do you understand how much work is involved for an Alek Syfriend or a Lena Kordrew?”

“Why do the Infinite Library timelines look like they do?” I asked.

“You’re cheating and using one of Amaryllis’ questions,” said the Dungeon Master with a frown. “You thought that you could just get me talking and I would prattle on, reveal all my secrets, disclose some hidden vulnerability? I’m the Dungeon Master, Juniper, I’m not your adversary, and if I am, the only way you can beat me is refusing to play, and you’ve made it abundantly clear that you’re going to keep playing, even if you don’t think the game is, well,” he moved his hand as if to tap at the book again, then looked down. “Dammit.” He looked back up at me. “How would you feel about wiping this conversation from your mind and doing it over?”

“Are you just fucking with me?” I asked.

“Not just, I wouldn’t say, no,” replied the Dungeon Master, smiling at me. “There is a point, though I’m sure you won’t like it when you find out what it is. Where were we? Oh, right, the same offer is still on the table, don’t think that a little exclusion between kindred spirits changes anything. You have it within you to win, if you want it bad enough, if you act with courage, and if the dice roll your way.”

He vanished at that, and I swore, which caused everyone to look my direction in confusion.
“Something else the matter?” asked Raven.

I really didn’t want to get into it. What I wanted was to ignore the entire conversation and continue on as I’d been before, and I knew that if I said something, there would be an endless analysis of the specific phrasing the Dungeon Master had used, as well as its implications for our future. It wasn’t irrelevant, per se, but I could see the guessing and second-guessing coming, how everything might look like a clue, and I just really didn’t care. I’d suspected that the Dungeon Master wouldn’t let virtual invulnerability stand, and I was right, and I would rather have just dealt with it without having to have a huge thing about it. Unfortunately, there was no way that I could keep it from the others, as agonizing as I was sure it would be.

“I just got a visit from the Dungeon Master,” I said. I turned to Bethel. “Did you sense anything?” She shook her head. “Also, can I have a pen and paper? I want to write down what I can remember.”

To my surprise, there was silence around the room as I wrote down what I could pull out of my brain. It was quiet enough that I looked up just to make sure that everyone hadn’t gone still again. I was a little surprised to find that people were waiting for me to be done.

“Okay,” I said. “The upshot is that he excluded skin magic because he thought it wouldn’t be interesting going forward. There was something about me going off the rails, but I had no idea where the rails even were, which I guess, when I think about it, was usually the fastest way for any campaign of mine to go off the rails. Supposedly Kenner’s Eye was too easy for his tastes, or I didn’t do enough to earn it, but I don’t think it would have escaped his notice that Prince’s Invulnerability is also a tattoo, and also a source of power.”

“Seems a bit of a hammer to take to the world,” said Pallida. “Skin magic was one of the big ones.”

“There will be repercussions,” said Raven.

“And benefits,” said Valencia.

I turned to look at her. She was out of the Red Armor of Arramor, instead wearing a tasteful cream-colored dress that screamed professionalism. She’d been talking to people nearly non-stop since we’d gotten Harold from the annex, convincing them to let me touch them for long enough that I could check over their spirit.

“Grak?” I asked, looking over to him. He was already staring at Valencia.

“It’s hard to say,” he replied. “It is true that skin magic was always what gave her away. Without that, only blood would be visible, but the skin blocks it to my sight. She would still be vulnerable to entads and other magics.”

“But she could go out without having to worry as much about a warder?” I asked. “And with a bit more magic gone from the world, there’s one fewer method of checking her.”

“Yes,” said Grak.

“Which is a boon for any other of the non-anima,” said Pallida. “Pretty slim upside, if you ask me.”

“I didn’t,” I replied. I looked around the room. “Nothing much from the Dungeon Master, really, just hints at things I already knew, some explanation, threats that he was totally serious about killing me,
which I’m not sure is actually true but I’m never going to deliberately test, and -- Raven, he had a
book called *Worth the Candle*, which had Juniper Smith listed as the author. Any ideas on that?"

“None,” she replied. “We scoured the library for books with that author.” I raised an eyebrow.
“Twice, actually. Once when I read the list that Uther gave to my father, the second time when you
were in the Library with me. Sorry. Neither time got any results.”

“And the title?” I asked.

“I could make a list of very tangential connections,” said Raven. She shrugged. “I will, I suppose,
but I don’t think there’s anything that will bear fruit.”

“It’s an expression, back on Earth,” I said.

“Here too,” replied Raven.

“I actually think that I might have said it to him, before, in a prayer,” I said with a frown. “Might be
nothing, but he was tapping the book like it was important.”

“Back,” said Amaryllis, appearing next to her chair. “The exclusion is for skin magic, though it
might be localized to tattoo magic, since I don’t have the proper scars to test on. At a best
approximation the radius is one hundred miles from the center of Li’o, though I only tested in three
directions. It’s the subtype suppressive, not deadening or annihilation.”

“Annihilation?” I asked. “You were worried that all skin outside the zone would be removed from
existence?” I was a little incredulous, given that she must have moved through the boundary going
incredibly fast.

“More likely all magical tattoos,” said Amaryllis. “There’s no precedent for an exclusion killing
everything on Aerb.” That was dry humor on her part, the kind I’d grown to appreciate from her.
“But tattoos that are brought into Li’o should still function: they won’t be directly rendered non-
functional, which is good, because that means that translation tattoos still have somewhere to
function. I don’t think I can overstate how important they are for the international community.”

“Juniper spoke to the Dungeon Master,” said Solace. Her tone was flat.

“What?” asked Amaryllis, freezing in place. “When I was gone?”

“He stopped time,” I said. “I was going to ask him your questions, but he gave me nonsense in
return.”

“Do you remember what his response was, exactly?” asked Amaryllis.

“Yes, yes, no, yes, maybe, it depends on my mood, yes, no, and I’d have to look it up’,” I replied,
looking down at my notes. That one I had made sure to commit to memory.

“That doesn’t make any sense,” said Amaryllis with a frown.

“He rattled it off in a string, I think he just wanted to make a bad joke,” I replied. “I’ve been writing
down everything that I could remember, you’re welcome to pore over it.” I stood up from my seat.
“In the meantime, I’m not actually sure that anything has changed. Prince’s Invulnerability will fail
as soon as I leave Li’o and its environs, Kenner’s Eye will keep me awake for the next month or until I
leave, though I’d obviously prefer not to pay it down, and I’m going to need some other method of
staying awake in the long-term. Still magic *isn’t* excluded, and I really do think that I would like to
keep it at a hundred for as long as I possibly can. But all that can come later, because there are still
people to save, and still people to check over, though if we haven’t found a sleeper agent by now, I’m skeptical that our current methods are going to do it.”

“You’re going to brush off a visit from the Dungeon Master and a new exclusion?” asked Amaryllis.

“No,” I replied. “But time is short right now, and these are problems and conversations that seem to me like they’ll keep. There are implications to skin magic being lost, shifts in global power, if it took scar magic too, the elves are losing a lot of power, and you talked about the translation problems already. What else are we losing?”

“Or gaining?” asked Valencia.

Amaryllis looked at her for a moment. “It’s a serious blow to Steel and Sweat, the kind of thing that every athenaeum dreads. I don’t think there’s any way to leverage that though, not in the near term. And it’s going to be harder to get into a person’s soul, which is a more immediate problem.”

“Not so long as we’re in Li’o,” I said. “And there’s still blood magic, which I’ve always found to be a little easier, personally. And anyway, I’m off to clear more people, or maybe take the first crack at some of the people who are stuck in a coma state, because I’m becoming convinced that there weren’t any sleeper agents set up at all.”

I spent a long time doing things that needed to be done. I had been finding people Harold had touched, but none of them looked like I would have expected a sleeper to look, and as I cut through all the slack lines that connected them to him, I couldn’t see anything that looked like it was a time bomb waiting to explode, and I didn’t wager that Harold really had the planning capacity necessary to both rig up a sleeper unit, and that he would have made it invisible to a lost art that I was the foremost practitioner of (the other being Amaryllis).

Eventually I moved on to the people who we’d found sitting in their pews, waiting for an activation that would never come. They were all comatose, or something like it, not responding in any way more complicated than having their pupils contract when I shone a bright light on their face. When I went inside the spirit of the first of them, my heart sank; it was an utter wasteland, threads snipped all over the place, and some new structure built in their place, Harold’s lines leading off from it. I still had no real clue what the summoning was, and Ellio hadn’t known much, which was a good indication that I should use another sacrifice in order to boost Spirit up to its max level. That was a lot more palatable, given that I would probably have it available for a much longer time, and with the level ups and Reimer’s work, a respec was coming soon, meaning that the sacrifice and the way it slowed future skill ups wouldn’t sting so much.

**New Virtue: Multithreading**

Multithreading: Your thread utilization capacity is twice as high, though this cannot act as a flat increase on thread speed. Thread allocation works as before and is automatic.

It took me a little bit to puzzle this out, but it seemed to be saying that I could focus on multiple things at once, but that it didn’t actually give me any extra ability to think about things more quickly. A little more thinking and I realized that this was actually really, really good, given how many damned things I had to think about in combat, including pulse timing for blood magic and burning abilities with bone magic. More than that, it allowed me to do something that I had been wanting to do for a long time: burning MEN abilities from bone while still carrying on a conversation, something that hadn’t really worked well in the past. For a level 30 virtue, it was pretty fantastic, especially since it wasn’t a buff to Spirit itself, which I wasn’t planning on using too much. Initial testing showed that I couldn’t really cross the streams, so to speak, which was a bit wonky if I was
trying to think about two related things at once, rather than something like singing the alphabet while doing sums.

**New Virtue: Thread Priority**

**Thread Priority:** You may designate certain threads as high priority threads, which will be utilized first, taking precedence over competing threads. Rampant threads will automatically be set to low priority. Thread allocation otherwise works as before and is automatic.

It seemed like the second half of the level 50 virtue related to memetic or antimemetic threats, or possibly also to runaway emotional things, since those were a part of Spirit’s domain. The first part though … I wondered whether it could be used as a concentration aid, if you isolated the thread that was going during study or something like that, but I didn’t have enough actual legitimate experience with Spirit to know if that could be done.

**New Virtue: Spirituality**

**Spirituality:** You gain supernatural control of your spirit, giving you a number of benefits to a wide variety of magic. Emotions can be initiated and stopped at-will for the purposes of passion magic with no associated qualia. Amount of mental strain is divided by your skill in Gem Magic for the purposes of gem magic. Branches receive a bonus to their Wilson score prior to rank calculation for the purposes of Tree Magic. When doing Accounting, you can hold any number of numbers in your head simultaneously (though you are still limited as usual for the purposes of calculation). Connections (Horticulture, Pustule Magic, etc.) have their decay halved and gains doubled. More benefits apply in specific exclusion zones: consult the manual for more detail.

The only thing that interested me was the benefit for Gem Magic, which seemed like it might suddenly make the whole thing usable, or like Gem Magic in its entirety had been balanced around me eventually getting it. Everything else was a smorgasbord of minor or possibly major benefits, none of which was entirely appealing given how little I knew of the actual rules. I would look over Reimer’s notes with Amaryllis, and maybe bring him in on it, but I wasn’t thinking that anything in there was a game-changer except for, again, gem magic.

**New Virtue: Spiritual Amplification**

**Spiritual Amplification:** When using any skill, treat your effective skill as being ten percent higher, rounded down, before any other modifiers. This applies only to raw skill, not including environmental modifiers, circumstance bonuses, entad bonuses, magical or pseudo-magical enhancement, or other bonuses or modifiers.

Knowing now that this system was in whole or in part designed by the Aerb version of myself, a lot of the idiosyncrasies of the wording and systems made a bit more sense. Some of the clarifications in the virtues I could see as being proactive defenses against munchkinry, or in some cases, at least according to Reimer, reactive defenses after he’d broken something. The rules-as-intended were clear enough, and a bonus to all skills was amazing, even if it was a rich-get-richer type of bonus, one that I felt would probably have been better off as a lower virtue. But one of the other things this understanding of the system allowed me was that a lot of these virtues seemed like something that I would come up with, some of them surely spat out because one was needed in the moment, others deeply considered as cool evolutions of what was core to the skill.

**New Virtue: The Loom**

**The Loom:** You have a full understanding of the history of any and all spirits you view, including
historic changes to those spirits. You may alter a person’s spirit to any state its has been in before. You are completely immune to memes and antimemes that only affect the spirit, and are immune to the spirit effects of memes and antimemes that affect multiple aspects of your being.

With all that, fixing the people in their pews was nearly trivial, especially because I didn’t have to worry about undoing anything beneficial. Mucking about with spirit couldn’t affect memories, except insofar as the spirit interfaced with memories, but the spirit affected itself, threads weaving into each other, and at least some of those effects were beneficial, representing how people had changed and grown over time. Still, hacking away a few months of spiritual growth was worth it, if it could remove all traces of what Harold had done to the more compromised of the people he’d touched.

We found the ruling council of Li’o at around four in the morning, hidden in a secret bunker whose wards Grak had only been able to overcome by spending four weeks in the time chamber to build up concordance, and even then it was apparently a close thing.

The ruling council was all dead, to the last, along with many of their closest advisors, killed in what looked like it must have been a ritual suicide. Ellio helpfully explained to me that this had been one of his ideas, not just that the ruling council should be the first targets (even if that carried some risks), but that they should all die as soon as the summoning was in motion. He hadn’t actually known whether Harold had been able to get them, given that the entity didn’t like to reveal much of his plans, but after what Ellio had said, I wasn’t at all surprised to find that Harold had followed the advice, at least in this circumstance. The fact that the ruling council was dead had left Li’o in the lurch as far as imperial support, and it meant that unless Article 86 was invoked, it would probably be weeks or months before the empire could come in.

But as we’d already established with Finch, Article 86 was going to be invoked by daybreak, only a few hours in the future, which would cause the biggest political shitfest that the Empire of Common Cause had seen in its entire history. The empire’s forces would come in, onto a member polity’s sovereign land, without so much as a token request from their ruler, and effectively take the place over. Worse, it was an athenaeum city-state. The thinking of everyone who opposed this was pretty clear to me: this set precedent for the empire to come in and act against a member polity. The thinking of everyone in favor was that this was one of the larger humanitarian problems since the Risen Lands exclusion, and the ruling council had been completely subverted and then killed, though it would be hard to say that definitively. These people were hypothetical, obviously. The imperial mail system was fast, which meant that news went around the empire pretty quickly, but it would take time for things to get untangled, especially because the biggest presence on the ground, the Council of Arches, didn’t have a proper PR department.

I was on the side of intervention. Hells, I was on the side of a single world government, so long as I could pick and choose who was sitting at the top. The Empire of Common Cause had worked to shrink down the world. It was pretty far from a monoculture, but cross-pollination had happened so far and wide that the polities had a lot more commonalities than differences. Pretending that there weren’t enormous economies of scale to harvest, and a lot of pretty horrible human rights abuses by the worst members, seemed like it was dumb. It would all work better if it was more closely knit. Then again, I wasn’t from Aerb, and I had formed most of my opinions by listening to how Amaryllis described things.

“What are you going to do with Ellio?” asked Amaryllis, breaking me out of my thoughts.

“Finch thinks I should kill him,” I said. We were standing just outside the bunker. We probably didn’t have to come in person, but I had wanted to be there for Grak as he cycled in and out of the time chamber, one week at a time to build up and then expend his concordance.
“I concur,” replied Amaryllis. “Kill him, then never let anyone find out what you did.”

“It was necessary,” I said, frowning at her.

“I know it was,” said Amaryllis. She softened slightly. “I’m not arguing that at all. I’m arguing that it would be better if your existence as an unregistered soul mage were something that we could pretend was more innocuous than it really is.”

“Finch thinks that he can backdate authorization,” I said.

“He told me that too,” said Amaryllis. “But ‘thinks’ is the operative word here, and we’re already operating in extremely murky waters. We’re an independent republic making a sojourn into a member polity of the Empire of Common Cause, in what will soon be declared an exclusion zone, with nothing even approaching approval by anyone who matters.”

“Pretty sure we’re heroes in all this,” I replied.

“Of course we are,” Amaryllis said. She gave me a little laugh. “Do you think that being a hero actually stops people from being pilloried? From sanctions, from broken alliances, from every horrible thing that our opponents will want to bring down on our heads?”

“I’d think that it would be at least a little bit of a shield,” I said. “Not a big one, but … in the court of public opinion, which seems like it would have some impact on what the politicians are willing to spend in terms of political capital.”

Amaryllis looked me over. “You put all those points into MEN?”

“I said I did,” I replied. “I don’t even think that was a particularly SOC worthy observation, if that’s what you’re thinking.”

“I’m just surprised,” replied Amaryllis. “But the point stands that we can’t keep Ellio around, not when he’s proof that you’re willing to soulfuck anyone when it’s convenient.”

“That’s unfair,” I said. I held up a hand. “And yes, yes, I know you’re making a point, that’s how it’s going to be framed. But killing a man just like that, in cold blood, when you have him dead to rights, when you could do all the reforms you wanted to him … it doesn’t sit well with me.”

“That was what the Second Empire did,” said Amaryllis, giving me a dark look. “It’s what Fallatehr did. You have a raw ingredient, there’s no victim because he’s a self-confessed accomplice to mass murder and no one will miss him, and you want to turn him into something useful.”

“Isn’t the fact that no one would miss him exactly why it doesn’t really matter?” I asked. “Or … wait, are you arguing from a strict utility standpoint, or are you just creeped out by it? Or you just think that it’s wrong, regardless of utility?”

That stopped Amaryllis dead in her tracks. “I’m thinking,” she finally said. “I might have biases because of what happened with Fallatehr.”

“Okay,” I said. “Or it’s a slippery slope thing?”

“We’d have to establish that the slope is, in fact, slippery,” said Amaryllis. “I do think that if you continued altering Ellio, you might wear away some of your instinctive revulsion at the idea, which might make you more likely to create a problem in the future, even on a strict utility level.”

“Maybe,” I said. “I don’t intend to ever do it again unless I have to.” I added the ‘unless I have to’ on
reflex, because I didn’t want to make myself a liar, but as I said it I could hear how flimsy it sounded. “Anyway, killing him just because he might deserve it, or because he might be a personal problem for me reeks of the kind of thinking that I’d also not want to get comfortable with.” I sighed. “I missed you, but this part, I’m not so sure that I missed.”

“I didn’t either, for what it’s worth,” said Amaryllis. “And you know I missed you too.”

“I think I might surrender him to Finch,” I said, after a moment has passed. “Kick the can down the road, pretend that I don’t know Finch’s opinion, pretend that the man who gives the order doesn’t have to swing the sword.” I paused, weighing that. “Or, shit, I might have to give it a day to see what I think.”

“That might be best,” replied Amaryllis. “Talk to me though, before you do anything rash.”

“I always do,” I replied.

“You climbed up the leg of an enormous creature from beyond time and space,” said Amaryllis.

“True,” I said. “I’ll count that as a point against myself.”

“At any rate, it looks like Article 86 is going to get invoked, unless Finch thinks that he should do something insane like forging a distress call and the requisite authorization,” said Amaryllis. She covered her mouth with her hand and gave out a long yawn. “You know, I really liked having Kenner’s Eye. It was good insurance. If you’d gotten it when you should have, we wouldn’t be in this mess.” She had sworn off the tattoo, because it would almost certainly knock her out if she tried to leave the exclusion zone. (The search for a cure for sleep was ongoing; the entad within the temple was an obvious one, but I would have to keep it on me at all times, and we would also have to steal it, which was a non-starter given how delicate things already were.)

“Depends on which mess you’re talking about,” I said. I looked her over. It was nearly daybreak. “Maybe you should take a half day in the chamber? My guess is that Article 86 is going to mean all hell breaking loose. Not that we need to be around for it.”

“We do,” said Amaryllis. “There’s no possible way to deny that we were here. Most people won’t have ever seen a tuung before, so maybe it would be hours before anyone figured it out and made the connection to the Republic of Miunun, but it would happen eventually, especially because our tuung speak perfect Anglish. We haven’t been telling the civilians much, but I think it’s probably time to start. We can claim credit for all the good we’ve done, and hope that helps when the reckoning comes.”

I nodded. “Go get some sleep. I’ll keep watch and you’ll be back out before anything of significance has happened. Maybe spend an hour or two preparing, but I know you tend to overplan, and who the hell knows what the empire coming in will actually be like.”

“Finch has some idea,” said Amaryllis. “I’ll talk more with him, but I think he’s getting ready to pull out and pretend that he was never here, because Uniquities sure as hell looks suspicious, and my guess is that his department doesn’t shield him from criticism as much as he might have wished it did.”

“Go on then,” I said. “I’ll be helping as much as I can.”

Article 86 was invoked for the first time in history just after daybreak, when the sun began shining over the P’emp’té Valley. Bethel was stationary, the better not to spook anyone, but she’d included a spire in her design, and was giving us a bird’s eye view of the proceedings through the telescopes.
that she’d placed on the spire’s tips.

I should probably point out that she had access to a smorgasbord of entads, because people tended to take their entads with them, especially in emergencies. I was a bit worried about that, both because the Dungeon Master had recently shown himself willing to fire off the exclusion gun, and because the right entad or combination of entads might have made her more powerful than was probably good. I liked Bethel, I did, but she was scary sometimes, and probably as close to chaotic evil as someone could get and still be my friend. In the meantime, I was trying to be happy with her incredible powers.

A portal opened up in a small park not far from where Mome Rath had fallen, as wide as a four-lane highway, and immediately began to disgorge hundreds of people, all of them moving quickly. They multiplied as they came out, as extradimensional entads allowed even more people to exit from being temporarily carried. A few vehicles came too, large, ruggedized ones, a few with treads instead of tires, all of them carrying more people. A beachhead was quickly being established by the first people who had made it through, and that included a handful of buildings springing into existence wherever they could be fit, most of them with the bespoke look of entad buildings. Almost everyone I could see was wearing shimmerplate or something better, decked out in the kinds of magic items that people liked to complain about their taxes paying for.

From the bird’s eye view it was impressive, an operation carried out like clockwork, albeit one that would have been a lot more useful if it had come about sixteen hours before it did.

We got a knock on our door about half an hour later. I hated that Bethel was sitting still, but it wasn’t just that we didn’t want her to spook the imperials, it was also that she needed a break from being the most important entity in a thousand mile radius, especially when that was butting heads with both her personality and her core values. We were going to get as many people out of her as quickly as possible, once the imperials had a field hospital set up that could take them all, but who knew how long that would take. My initial estimate of a day, maybe more, had been really, really optimistic. A lot of the people that Bethel had inside of her were perfectly fine, either injured people that had been healed and couldn’t in good conscience be put back out on the street, or people who had never been injured at all.

“It’s like I imagine holding in feces,” Bethel had said to me. “Or eating a food you find repulsive. Or biting off a leg that’s stuck in a trap.”

“It’ll be over soon,” I said. “You can shit out all the people, you can vomit up the food, and you can limp away from the trap.”

Loyalty Increased: Bethel lvl 18!

“Thank you for understanding,” said Bethel. “I’m supposing that we’ll make an attempt at getting things back to normal? Rather than just allowing this to be interminable?”

“We’re trying,” I said. “We’ll see how this all shakes out.” That was about as much as I could give her.

Maybe it’s best that I talk for a bit about the Office of Imperial Disaster Relief. Part of the impetus for the Empire of Common Cause was to get everyone on the same page as much as possible, especially with regards to trade and disputes between nations. A standing army was not, at all, on the table; member polities would have their own standing armies, thank you very much, and while mutual defense had become a core part of the Empire, it was still mutual defense on an individual basis, polities going to help each other out within a framework provided by the Empire, rather than the Empire doing anything on its own. There had been a time when disaster response had been handled
in the same way, with a member polity making a plea to the other member polities of the Empire, and individual members responding with what they could, sometimes headed by an ad hoc subcommittee.

This was, naturally, horrifically inefficient and generally unjust, with disaster response being provided on the basis of how politically appealing it was. A great number of backdoor deals happened in the days or week following a disaster, and the general outcome was the rich getting richer and the poor getting poorer. It was with that sorry state of things in mind that legislation was drafted to create an imperial organization that would be funded by the member polities in relation to their ability to pay, constituting a standing response force for rapid assistance in times of disaster. The Office of Imperial Disaster Relief, the OIDR, got its inaugural call from the Kingdom of Perelanth when a star fell from the skies and caused severe destruction to one of their major cities.

(It probably comes as no surprise that the multi-colored stars that dotted Aerb’s night sky worked differently than stars did back on Earth. Aerbian stars weren’t stars at all, they were enormous balls with skins as thin as a Christmas ornaments which drifted around very, very slowly out past Celestar. Every once in a while one would pop, and more rarely, one would plummet down to Aerb, through the complicated dimensional fuckery that allowed a static sky to be overhead a tessellating Aerb, and usually it would cause a humanitarian disaster of some kind, if it was unfortunate enough to land anywhere near where people lived. The starstuff was harvested for a few specialty uses, and everyone else tried to pick up the more metaphorical pieces.)

OIDR (usually pronounced Oy-der) had been a controversial organization at the time it was founded, but a few decades had been enough to allow it to prove itself. There were still detractors, obviously, people who thought that they shouldn’t have to pay for disaster relief that went to far-off areas, or people who saw it as imperial overreach, but they were the typical anti-imperial crowd whose opinions the Empire tried their best to work around. OIDR only moved in at the behest of a member polity, only when a standing imperial committee had found that there was cause, and they placed a heavy focus on doing as much as it could within its budget, which many of its detractors said had been bloated when it was first created and had become a corpulent monster in the time since then.

Someone, somewhere, or more likely a big group of people, had decided that OIDR was going to be the face of the Article 86 invocation, most likely because there were a lot of people who thought well of the organization, and because it put a humanitarian spin on what was, effectively, the Empire ignoring the sovereignty of a member polity.

Captain Elias Satyr had been chosen as the face of the face. He was half-Animalia, half-human, a literal satyr, though for all the Aerb seemed to have every single fucking fantasy race and monster in existence, they didn’t have satyrs, and the name was just a “coincidence” of the sort that the Dungeon Master was fond of (and which brought to mind what he’d said about how difficult it was to set up anagrams). Satyr had been on the frontlines of OIDR when it had helped deal with the aftermath of the starfall in Perelanth and shot up the ranks through what mostly seemed to be a powerful natural charisma. He was also a musician of note: people were often surprised to hear his songs on the radio and learn that not only was he a very rare half-Animalia, half-human, he was also pretty highly ranked within the Empire.

Physically, he was almost exactly my mental image of a satyr, with curled horns like a goat, hooves, and the weird back-and-forth joints on his legs. He was wearing entad armor of some kind, adorned with curled blue waves and shifting whenever you weren’t looking straight at it, and a helm that left his slightly-animal face exposed except at the place where a strip of metal protected his nose.

<It’s not him,> said Bethel. <Some kind of shell of him, Grak confirms, likely entad, though I don’t have a handle on the exact nature of the power. He’s visibly wearing entads, but they’re not showing
Smart, if you have a tool like that, I replied. Best not to walk into the unknown if you can help it. I’d have done the same, if I were going up against Bethel and I knew even a tenth of what she was capable of.

Shows a lack of trust, said Amaryllis. I hadn’t realized that Bethel had put us on the equivalent of a group call, but that made sense. It was just a little jarring, given that I’d thought we were speaking in confidence.

I wouldn’t trust us either, I said.

The issue is that he’s openly displaying that lack of trust, said Amaryllis. He had to have known that we had a warder.

Calm yourself, said Bethel.

Amaryllis had no response to that, other than to look slightly chagrined.

“Captain Elias Satyr of the Office of Imperial Disaster Relief,” he said, introducing himself as we came through the doors. Bethel had made a grand entryway for us to have this little meeting in, with no chairs or tables that would serve as an invitation for an extended talk. “I’m to understand that you’re independent citizens conducting disaster relief?”

“No,” said Amaryllis. She was standing beside me, as were Grak and Valencia. “We’re not citizens of Li’o, we’re citizens of the Republic of Miunun, which isn’t a member polity of the Empire. We were here in Li’o because a member of our government was undergoing training at the Athenaeum of Sound and Silence. When the monster came down from the clouds, we engaged with it using every tool at our disposal, and when it was dead, we conducted as much disaster relief as possible.”

“I see,” replied Satyr with a frown. Maybe he was trying to parse how that was different from independent citizens. “Your presence was authorized by the government of Li’o?”

“No,” replied Amaryllis. “We acted independently.”

“I see. Article 86 of the Imperial Charter was activated forty minutes ago,” said Satyr. “Disaster relief operations will be handled by OIDR from here on out. Given your status as a non-member polity, operating under unclear jurisdiction to put it extremely favorably, you will immediately stand down and vacate as quickly as possible, along evacuation routes that are being established as we speak.”

“There are monsters around here,” I said. “Six varieties we’ve encountered so far.” More things had been fleeing from Mome Rath’s corpse, all of them dangerous. I was pretty sure if that I killed any of them, they would have equally stupid names to the Mome Bats and Mome Rats, but I had been busy with the bigger picture and hadn’t actually defeated any of them. “We also have fairly powerful entads and a number of trained personnel.”

“I appreciate that,” said Satyr. “And candidly, the work that you’ve done here, if it’s even a tenth as impressive as I’ve been led to believe, should be enough to have you branded heroes throughout the Empire. But from a legal standpoint, you had no business being here. If you’re lucky, there will be no one to hold you accountable, but I doubt that you can remain that lucky for long, not when we’re dealing with a new exclusion.”

“A new exclusion?” I asked. Enough time had passed for him to know about that, but this was something that Amaryllis had said we should probably play dumb on. If it came out that I was solely responsible for getting skin magic excluded … well, who knew, but it probably wouldn’t be good,
even if it wasn’t really that much my fault.

“Skin magic,” replied Satyr. “You’re standing in the hex’s newest exclusion zone. We don’t know what might have caused it, but the end result is fairly clear. We don’t know whether it’s repeatable or not, but from prior experience, it’s better to assume that it is. All the more reason for you to leave.”

“Candidly,” said Valencia. “What are they saying about us, up the chain of command?”

Satyr looked her over, trying to get the measure of her. She was radiating calm collectedness, and just a touch of innocence. It helped that she wasn’t wearing the Red Armor of Arramar.

“Information came through backchannels,” said Satyr. “That means that you already had the ear of someone with at least a little power within the Empire, maybe a lot. You’re a new polity supported by staunch imperialists with one or more of the highest tier entads, operating on foreign soil and achieving a frankly astonishing success.”

“They’re suspicious,” said Valencia. “The term ‘false flag’ has been floated.”

“You didn’t hear it from me,” said Satyr, nodding at her. “It’s above my pay grade, frankly. And I can’t say that my own sphere of contacts reflects what popular opinion will land on.”

“Thank you,” said Amaryllis. “We’ll leave then. We do have a number of people we’ve provided healing and rescue to, as well as a large number of corpses and souls that we’d like you to take possession of, if we’re leaving the area.”

“The souls can be sent to our forward operating base,” said Satyr. “The people can leave here with me. Some of my men are outside to give us defensive support and transportation.”

“I’ll take you to them,” said Amaryllis. I might have imagined it, but I thought I saw a slight gleam in her eye.

We walked as a group toward a set of doors at the back wall, not a terribly far walk, but enough to build anticipation. My opinion of Satyr had risen as we’d spoken to him, but this little bit of theater was something that we’d planned out just in case whoever we’d spoken to ended up being belligerent.

I opened the doors for him, and led him out to the balcony that Bethel had created. He set a foot on the balcony, then stopped in place, looking out at the room Bethel had made to serve as a field hospital. It had started big and then grown bigger over hours of search and rescue, until it was near the limits of her ability to stretch internal space. There were four thousand beds, enough for everyone that we’d picked up, some of them still awaiting treatment, but the bulk of them cured and awaiting an all clear signal from outside that I didn’t think Satyr would realistically be able to provide for weeks or even months. The really mind-boggling thing about seeing it like this, aside from the dimensions of the room, was how much stuff there was in there, how many beds, blankets, pillows, how much food was being eaten, how many people were reading books, how many children were playing with toys, all of it clearly provided by us.

<We should have done branding.> said Amaryllis. <Many of these people have lost their homes and will have only the things we’ve given them.>

<Couldn’t be too gauche.> I replied. I was watching Satyr, who was taking it all in.

<No, of course not.> replied Amaryllis. <Something tasteful, a logo or a monogram, nothing more.>

“I,” he said. “I hadn’t realized how many people you had.”
“You don’t have room for them all,” said Valencia.

“We’re mobile,” I said. “If you have a refugee center, we can let them all out there. And I do mean mobile: we could land outside Caledwich within the hour. But we don’t have to, if you want them to remain in Li’o. Some have lost their homes, but some haven’t, and if it’s going to be possible to rebuild Li’o, then taking people far away isn’t advised.”

“I’m going to have to make some phone calls,” said Satyr. “I’m going to have to … I’d thought dozens. The death count is probably a fraction of what we’d been predicting.”

“We can stay as long as we need to,” I said. “We’re not members of the Empire, but we do want to help.”

Satyr stared out at the masses. “Give me time to find a place for all these people,” he said.

“I’ll try to give you as much time as you need,” I replied.
In the House of God

I was laying in my bed, staring up at the ceiling. Kenner’s Eye was pushing off sleep, and would continue to do so for another week before it started to wear on me, and another month before I would be forced into sleep, by which time we would hopefully have something to replace it with which could eliminate sleep entirely. The Lord of Dreams could do it, as could the Elon Gar, but those were the only two methods that we knew of that would last forever without drawbacks, and both presented pretty serious problems. I wasn’t in my room, lying on my bed, to sleep. I was just there because I had been through a lot and wanted some time to recuperate.

I spent most of it wishing that Fenn was there with us. She had always been easy to talk to, easier than any of my current companions, simple and uncomplicated, or at least that way on the surface, able to brush away worries and concerns so that we could settle into a friendly banter with each other. It hadn’t really been all that healthy, because she wasn’t as simple and uncomplicated as she pretended to be, but I still missed it.

It was the first time I really, honestly thought about shoving every part of Fenn’s soul I could into someone else’s body, so that I could have a facsimile of her, just for a moment.

It was hard, sometimes, when I had thoughts like that, to know whether or not they were just the intrusive thoughts that everyone had from time to time, or whether it was because I really was sliding down a slippery slope toward becoming the vile kind of soul mage that everyone always worried about. Part of the complication here was that a few of my former barriers had been outright stripped away: we had a body that seemed destined for the oubliette in the person of Ellio. All I would have to do was excise his memories and values, then replace them with Fenn’s, plus everything else I could grab and remap. It wouldn’t be Fenn, because try as I might, I couldn’t access a person’s spirit from their anima exa (and I suspected that it was simply unavailable), but it would be close to her, a way to talk to someone with her exact memories and values.

I was mulling this over when I got a knock on my door.

“Enter,” I said.

“Hello, Juniper,” said Bethel, slipping inside.

I sat up on the bed and looked at her. She changed form often, which I thought was fair given how easy that was for her. This was what I thought of as her human form, one that was our size instead of nine feet tall, more normal looking, for lack of a better description. She was wearing human clothes, too: instead of the gossamer dress she favored, she had on a simple dress with a green earth tone. The more I looked at her, the more dressed-down she seemed; she normally kept a bit of wood grain as a part of her cedar-colored skin, and her hair was typically in ropelike braids. Both those features were gone, bringing her close enough to human that if I didn’t know better, I might not have been able to tell.

“You came in through the door,” I said. “I’m not sure what I’ve done to deserve that level of politeness, but thank you.”

She was looking me over.

“What’s up?” I asked. “I assume from the fact you’re not using the mental link, this is a more social visit?” I was worried that she was going to harangue me about how long it was taking to get everything in order.
“Do you mind?” she asked.

“No,” I said. “I was pretty much done with the decompression. Not really ready to get back out into the trenches just yet.”

“Well,” said Bethel, smiling at me. “The way I figure it, you owe me a favor.”

“Yes,” I said. “Many. Unfortunately, my ability to do you favors is pretty lacking.”

“Somewhat, yes,” replied Bethel. “Do you remember our earlier conversation?”

I stopped, then frowned. “Which one?”

“Sexual pleasure,” she replied.

“Oh,” I said. I straightened up. The near-human appearance seemed like it had more of a point now. “Look, I know that’s something that you expressed an interest in, but as I’ve said --”

“What you said, precisely, was that if I found an entad that allowed me to experience sexual pleasure, you would find the prospect of having sex with me appealing,” said Bethel. She gestured to her body. “Consider that accomplished.”

I looked her over. “What am I looking at?” I asked.

“It’s a body,” said Bethel. “The entad that belonged to Oberlin. I have a physical body now. I have to say, it’s a lot less work than projecting one.”

“You’re aroused,” said Bethel.

I tried to let the tension out of my body. “Yes,” I said. There was really no use in denying that. I’d spent too long looking at her curves. She was pretty, she had always been pretty, sometimes with a bit of alienness to her, but usually just pretty in an exotic way, instantly remarkable. Also, she had boobs, and who doesn’t love boobs? “Let me think for a moment.”

“I’m not sure what there is to think about,” said Bethel, smiling at me. “Amaryllis?”

“Amaryllis,” I said. “That’s definitely part of it.”

“So far as I’m aware, nothing has happened between the two of you?” asked Bethel. “You were really much better at flirting with Fenn than you are with her. So much attraction, wrapped up in polite conversation and businesslike demeanor.” She was looking at me. “Ah, and there goes the arousal, such a pity.”

“Give me a minute to think,” I said. “Pros and cons.”

“You can think out loud,” she said. I might have been imagining it, but it seemed like there was a huskiness to her voice.

“Yeah,” I replied. “But then I would have to voice my thoughts, and there are some thoughts that I’m worried might hurt various people, myself included, if I had to live with having spoken them.”

Bethel sat down next to me on the bed, leaving barely an inch of space between us. “I’ll wait while you think.”
It’s hard to think, when someone is sitting there waiting for you to think, especially when that someone is a house who you are a little attracted to, one that could kill you even when no one else could, but I tried my best.

Look, I was eighteen, and at pretty close to peak human physicality. As a natural consequence of that, I got horny on a regular basis, and while I did my very best not to let that interfere with executive function, it wasn’t something that felt natural to rein in. Some of that was compounded by the lack of privacy, which made masturbating to clear my head a little bit awkward, because if I was inside Bethel, then I knew that she could choose to watch me. That hadn’t historically stopped me much, and Bethel had thankfully never commented on it, though I was pretty sure she might, in the coming conversation. It would have been great if I had been a sexless robot that could just ignore my hormones without the need for self-pleasure, but I wasn’t. Given that, I certainly hadn’t compounded all my other problems by starting on the NoFap challenge for a month when I first got to Aerb. And if you think that I went two months in the time chamber with Amaryllis, the most beautiful woman conceivable, and didn’t masturbate once, then I don’t have any idea what your mental model of me must look like.

And the appeal of having sex with Bethel wasn’t just because of sexual frustration or high libido, the usual attraction of a warm and willing body. At least some of it was Bethel herself, an entity that I was pretty sure had been designed for me by the Dungeon Master, or at least manipulated into existence in the same way that all my other companions seemed like they had been, made for me, in some sense, not that I had asked. Bethel had a mean streak that appealed to me, one that was likely a reflection of my own mean streak, my worst impulses. She had killed hundreds of people, maybe even thousands, and somehow that usually ended up triggering my empathy for her.

If I imagined, for a moment, that Amaryllis were out of the picture, not dead, obviously, because that would be a whole thing, but just some alternate scenario where it was me and the house, or some kind of antimemetic effect that made me forget about Amaryllis … it was fucking terrifying to think about, but if that happened, then I could see Bethel and I getting closer, closer than we already were. Never in love, no, probably not, but there could probably be something between us, at least on my end. Loyalty was a bad and confusing metric, but hers was eighteen, and that probably wasn’t meaningless, you know? She was a house, and she wanted me to live in her, and that was … something.

That just about covered the pros.

Cons? Well, as it happened, Amaryllis hadn’t been erased from my brain, and I was getting to be pretty confident that if it were possible for us to be together, I would want that, even if the whole sex thing didn’t end up working out. I could have sung her praises to the high heavens, if Aerb had heavens, but it was really just a matter of the way that I felt. And to go and have sex with Bethel, or even just have her give me a handjob, felt like it would be a betrayal of a relationship that hadn’t even started. I didn’t think that Amaryllis would actually care that much, given what she’d had to say on the subject. What was important was how I would feel, which would be unclean, like I was a betrayer, and yeah, that was probably guilt about other things tainting how I thought.

And the other downsides were mostly centered around Bethel, who --

“Time is up,” said Bethel. “Are we going to do this or not?” She was giving me a very patient look, the kind of placid that lets people know that they’re being waited on.

“No,” I said. I let out a breath.

“I talked to her, while you were taking time to think,” said Bethel. She was still sitting very close to me, and it might have been my imagination, but I thought I could feel the heat coming off her body.
“She said that she hoped you would say yes.”

“I’m really hesitant to call you a liar,” I said. “But that seems very convenient.”

She leaned over and kissed me. I was taken by surprise, and put up a token struggle before I kissed her back. She smelled faintly of wood shavings and campfire, a pleasant smell. Her lips were soft, so convincing that I wouldn’t have known she wasn’t human. Maybe in that body, she was human. It didn’t really matter, that was just where my brain was going.

“Bethel, no,” I tried to say, but she moved forward when I moved back, still kissing me, and I wasn’t quite not kissing her in return.

<Bethel, no,> I tried again. It felt good to kiss her, and I was fully erect, there was no doubt of that, but I hadn’t actually decided that this was something that I wanted to do, and I felt a knot of fear forming, because she was more powerful than me, and if I said no, well, that was what I had been in the middle of thinking about when she’d interrupted me. I had Prince’s Invulnerability, and she could strip it away like it was nothing.

<I want you, Juniper,> she replied into my head while still kissing me with her bodily mouth. I tried to move backward again, and she pushed against me, so that my back was resting on the bed. It didn’t take her long to maneuver around so that she was on top of me, straddling me, the weight of her pushing down on my erection. <I can feel the arousal in us both.>

She was kissing me hard, firm yet still soft, and moved down to kiss my neck as her hands worked at the buttons of the shirt I was wearing.

I wanted to say that I couldn’t, that I didn’t want to, that I cared about her but that it was still a bad idea for a fair number of reasons. And then I thought that we’d already gone so far, so fast, this would already need to be explained, or could be exploited by her if she really wanted to, and if I pushed her off and told her no, then if she really wanted to, she could overpower me, or kill me in a thousand gruesome ways, or just hurt me, even if I could heal back.

And I liked it. On so many levels, I liked it, not just the purely physical, but the sense of the forbidden, the bad idea that I knew I would regret, giving in to basal impulses, the roughness and intimacy of it, the power she held over me, the fear and adrenaline, being her first, showing her what it was like … the more it was happening, the less I was thinking, the list of pros and cons got washed away into a confusing river of emotion and sensation, all moving toward the same destination.

Afterward, I lay there, staring up at the ceiling, like I had been before Bethel had knocked on my door. The difference was that I was naked, slightly sticky, and feeling out of sorts. Bethel’s new body lay beside me, staring up at the ceiling, same as I was.

“I can see why people like it,” said Bethel, into the silence.

I didn’t respond.

“I always thought it was fumbling,” said Bethel. “Two creatures who can barely see each other, barely feel each other, who have to guess what certain physiological responses must mean, groping and grappling while they seek their own pleasure. It always seemed so inefficient. But I think I can see it better, how the mutuality of it works.”

I still didn’t respond. I was thinking about what we had said to each other, before it had happened, the specific words we had used with each other. I knew that what I should really be thinking about was what my next steps were going to be, or failing that, how I could best support and encourage
Bethel, which my life might depend on. Instead, I was thinking about what I had said to her, and not just that, the tone that I had used, the context of my words. And I was thinking that I hadn’t actually fought back very hard.

“I stimulated my own clitoris, at the end,” said Bethel.

“A lot of women do,” I replied. My voice sounded hollow to my ears, despite my best efforts. “It’s like you said, bumbling animals who hardly know each other.”

“Well, I enjoyed it all the same,” said Bethel. “More than I thought I would. It was at the upper edge of my predictions for how well I thought it might go.”

“Good,” I said. “I hope … I hope that I was as gentle and understanding as, as you thought that I would be.”

I wondered if the game was giving me some penalties to my skills for whatever esoteric reasons it might be doing that. Everything out of my mouth felt like I was watching it at a remove, like there was some lingering dissociation from that entad that I’d been under at the temple. Through every conversation I’d had on Aerb, nothing had ever felt so much like picking dialogue options from a menu, knowing that it wasn’t what you’d actually say in that situation.

(I’d gotten achievement progress on *A Key for Seven Locks*, my least favorite achievement. There had been a time when I had worried that the game would set things up, or contrive ridiculous scenarios, just to make all seven happen, convoluted plots lasting decades in service of incrementing that progress tracker. I hadn’t imagined that it would simply be forced on me.)

“Are you okay?” she asked. Her voice was soft and gentle. She sat up slightly, rolling her naked body so she was on her side.

“But that’s something that you humans like, isn’t it?” asked Bethel. “Spontaneity?”

“Yeah,” I said.

“You’re worried about what Amaryllis will think,” said Bethel with a nod.

I hadn’t been, not until Bethel had said that. My brain was still catching itself up to speed. “I don’t know what I’m going to tell her.”

“She doesn’t need to know,” said Bethel. She reached over and laid her hand against my chest, trailing her fingers, clearly experimenting with what it was like to have senses like a human. “I won’t tell.”

“You said you talked to her,” I replied. I felt a chill go down my spine.

“I lied,” said Bethel, dropping that casually, effortlessly.

“Oh,” I replied, because I didn’t know what else to say. I felt a coldness in the pit of my stomach. “It should probably come from me, if it comes from anyone.”

“You don’t owe it to her to tell her,” said Bethel. “You clearly enjoyed yourself, that’s all it has to be. I don’t see myself doing this again. Or if I do, then not with someone so …”

“So what?” I asked, because it felt like she wanted me to ask.
“Conflicted,” said Bethel. “You’re a very moral person, in your own way, even as you stumble and fall. You have these ideas of who you should be, what you should do, it’s sometimes attractive and sometimes not. Even now I can see you trying to find ways to hate yourself over this.”

I felt my stomach churn. I’d thought that I was keeping my feelings from her, but she could still see through me as well as before, it was just that she was misinterpreting the signs. “I’m sorry,” I said. “You deserved someone less conflicted, someone who was fully committed to you, heart and soul.”

“Ropey,” said Bethel. She removed her hand from my chest and sat up on the bed, hugging her knees. She looked down at her arms. “You know, this didn’t really make me feel better. I’d always wondered.”

“Might be learned,” I said. “You’ve got a body, but I doubt it’s got all the things that come with a body, all the stuff that gets packed into a mortal’s brain.” I could feel myself coming back down to terra firma. I was going to have to deal with this reality, with this shitty hand I’d been dealt, all the baggage that I hadn’t wanted and then some. That seemed like the path forward.

Bethel moved over to me and placed her hand on my chest. Her fingers were thin, like I imagined a violinist’s, and she touched the sparse hair on my chest. It took me a moment to realize that she wasn’t being affectionate, she was testing the motions that she’d seen before. A fair number of people had lived in her, through the years, first squatters after Uther had left her alone, and later the mayors of Headwater, followed by the Penndraigs and their help, and later, the armies. I had no real clue how many people had lived in her over the years, and no way to guess how many people had sex in her, but it was probably a lot.

She was touching me because she was curious about the human experience, about the things that these people did inside of her, the aspects of their lives that she had seen but never experienced. Maybe it was like a chef that never ate their own food, tasting one of their dishes for the very first time, just to see what it was like.

I reached for her hand and pulled it up to my mouth, then kissed her fingers, letting myself feel the taste of her, slightly salty. There was a part of me that had liked it, and I tried to bring that to the surface, to think of the pros instead of the cons, and when that didn’t work, I tried to instead think warm thoughts. Bethel had been mistreated, by many people, for a long period of time, and she was trying to come into her own, trying to be a better person, or a person-equivalent. If this, what we’d done together, was the result of that, it didn’t speak well to how she was adjusting, but I couldn’t just give her the cold shoulder, not when she was this huge, terrifying, alien house with anger issues, privacy issues, consent issues, weird values, and damn that cons list would have been long, if she’d given me time to finish it.

But while I was thinking that, I was also kissing her fingers and pulling her closer to me, pretending that we were lovers, that any intimacy between us hadn’t been rent to shreds.

“It would be a bad idea for you to fall in love with me,” said Bethel. She was watching me kiss her fingers, her stare intent.

“Oh?” I asked.

My mind was running on two tracks at once, multithreading, one part caught in a loop and wholly silent, insisting that she’d betrayed me, that she’d gone a step too far, then second-guessing my complicity and replaying what I had said and done for the umpteenth time. The other part of me was slowly relaxing, trying to come to terms with the idea of it, accepting Bethel as she was, because she needed someone to care for her, because I did care for her. I was sure that any objective outside view would say that my mind was a mess, but it seemed to be working, at least so far as Bethel was
revealing anything to me through her human form.

“I don’t think that I can love like a human,” said Bethel. “I’ve seen many lovers before.”

I stopped kissing her hand and let it drop to my chest, and she moved closer to me, curling up in the crook of my shoulder so that she could use me as a pillow. I tried to believe that it felt nice, that it was a comfort, and I think I succeeded in convincing myself.

“Arrogant of you to think I would fall in love with you,” I said. I kept my voice to a murmur. It was something that I would have said to Fenn, a playful little joke that she would have appreciated.

“Humans don’t make sense,” said Bethel. “More than any other species, you don’t have proper brains. It’s not your fault.”

“Well, I’ll try my best,” I replied. And in the thread that was thinking like her lover, or at least like a Juniper that was trying to show her love, a thought occurred, one which might have been warm and pleasant if things had been different, but one which I couldn’t help but speak, even with the roiling conflict inside of me. “Would it be so bad, to do this again?”

“We’ll see,” replied Bethel. There was no mistaking the warmth in her voice. She was practically purring like a kitten.

I went back to my rounds, helping out where I could, until eventually there was an excuse to leave Bethel and have some time to myself when I wasn’t trying to doublethink, wasn’t trying to push down the discomfort, unease, and downright dread I was feeling. Once I was gone from Bethel, so far away there was no possibility she was spying on me, I took a few deep breaths and tried to figure out what I was going to do.
Politics, blah, blah, blah

We spent our days (yes, multiple days) being a support organ for OIDR’s rapidly expanding efforts to get something resembling a workable government. They also took our assistance in hunting down and killing all the random crap that was coming out of (or falling off) Mome Rath’s corpse. I took point on a lot of it, in part because I was somewhat immune to the memes, in part because I was virtually invincible, and in part because without sleep, I had to do something with my time.

And, in part, because I didn’t want to be in the house. I hadn’t told anyone what had happened between Bethel and I. Amaryllis didn’t know, and I was sure that she would be angry once she found out, but I didn’t want to complicate things, I just wanted them to go back to the way they were. It was making me feel slightly sick all the time, except for those moments when I could zone out and forget, more than the lingering problems my burnt out bones had caused me, more than the danger of leveling up. It was just this gut-deep tension that didn’t really make sense to me, because Amaryllis wouldn’t actually be that angry, she would be more angry that I had kept it from her, and whatever drama came of it would probably be nothing in comparison to what I was feeling. But I kept silent, because I didn’t want to talk about it, and I didn’t want to have to explain, and so long as I kept quiet, I wouldn’t have to let Bethel stop believing her own version of events.

There were a few dangling threads in Li’o. The biggest was who would be in control of Li’o once OIDR finished up their work there. The ruling council were dead to the last, and the rules of succession weren’t as firm as anyone would have liked, nor did they have a strong continuity of governance. For anyone who was more concerned with the imperial side of things, this was especially troubling, because they were inevitably going to be a part of the conversation, not to mention that fact that if they were malfeasant, it would be entirely possible to install imperial-aligned interests on the new ruling council, if there was even going to be one. For the empire to violate a member city-state’s sovereignty was one thing, but it was another entirely for the empire to perform what was, from some angles, a coup.

Eventually, it came down to a giant meeting of thirty-odd people at the forward operating base OIDR had set up. The optics of this had been cause for some criticism by Amaryllis, who thought that they should have chosen more neutral ground, but we hadn’t exterminated all the monsters in the city, and it was the safest place for all the most important people to be, aside from Bethel.

I had only barely heard of most of the people involved. The dwarven shadow-city was there, represented by three dwarves, though they weren’t vying for control, only there as stakeholders. Unsurprisingly, the dwarves had come off pretty well from the whole thing, given that they lived pretty deep underground. They’d had a few collapses from what went on above, and a handful dead in those collapses, but that was about it. Aside from them, there were business collectives, the remnants of the security apparatus of Li’o, lower level functionaries who hadn’t been outright killed by Harold, and finally, the student council.

Jiph settled into a scowl when she saw me. She was flanked by the tywood and the masked woman (SSSC Secretary L’osh and SSSC Treasurer Midahl, I now knew). The man with grey at his temples (SSSC President Daven) was absent, which, given how things had been, meant there was a pretty good chance that he was dead. I wondered what she had heard about me in the interim, and whether she had made the connection that I was a master still mage shortly after I had been down in the temple, a place that I’d exited the same day that Mome Rath had come down. It was also somewhat common knowledge that I was a registered soul mage, given how many people I’d had to go through aboard Bethel. The paperwork would, Finch assured me, be backdated, as ironclad as he could make it, with a lot of strings pulled in the background.
Jiph didn’t approach me, which I was thankful for. Amaryllis and I had a seat at the table, as did OIDR, but we were only there in an advisory capacity. Amaryllis was pretty sure that the real reason we were there was because it was impossible to hide Bethel’s involvement in things, both because she’d had an extended sortie and gotten the killing blow, and because there were thousands of witnesses who could speak to having been picked up. That made us heroes, sure, but it was in Satyr’s interests to parade us around so that he could assure everyone that the empire had only acted when all other options had been exhausted, and in fact, had erred on the side of extreme caution before taking the final step of invoking Article 86.

There was a lot of crosstalk, especially at the beginning. Amaryllis had thought there would be. She’d had a lot of experience with meetings, and to hear her tell it, meetings were held together by strict procedure, clear hierarchies, and clear purpose. Amaryllis had argued that we should follow Pennraig’s Rules of Order, the first and last word in procedural conduct, but Satyr had declined. Hierarchies? That was at least in part what was being decided on, and the man with the highest, clearest position here, Captain Satyr, was duty-bound not to actually exercise any of that power, given how contentious this whole thing was among the imperial constituents. And as for purpose, that was up in the air too, because while the nominal goal of the meeting was to decide on rulership of Li’o, the subtext was that we were deciding on the fate of the city-state, the athenaeum, and roughly a tenth of Aerb’s remaining magics.

“The biggest single driver of income to Li’o is the athenaeum,” said Jiph. Her voice was strained. She’d been introduced as acting Sound and Silence Student Council President, which confirmed my suspicions. I wanted to know what had happened to Sonee, but there was no way for me to ask.

“The athenaeum is, in a very real sense, the focal point of Li’o, from a cultural, economic, political, and social standpoint. The ruling council of Li’o was made up entirely of students who had been through S&S.”

“If that argument were persuasive, then it wouldn’t be persuasive in favor of you,” said a member of one of the business collectives. One of the things that vibration mages did, when they weren’t off exploding heads somewhere, was factory work, primarily in materials analysis and ensuring precision, thanks to both their heightened senses and their ability to manipulate vibration. Orcaz, one of the few orcs I had ever seen, owned one of a few factories in Li’o. “The argument would instead be that someone of importance from the athenaeum be appointed, someone with administrative experience.”

“We have administrative experience,” said Jiph. “And we’re here having spoken to as many of the surviving staff and faculty as we could find.”

“Backroom deals then,” said Orcaz with a shake of his head. He looked over at Satyr. “We can’t elect a new council when half of the candidates have been excluded from the running before it’s even begun.”

“I couldn’t force people to come to this meeting,” replied Satyr. “I did, as it happens, extend invitations to a number of likely surviving faculty and staff. Some don’t plan to stay in Li’o, others deferred to the decisions of the student council.”

Orcaz didn’t seem happy about that, but being shot down on that point seemed to take the wind out of his sails. I glanced over at Amaryllis, who had nudged me, and looked down at her rapidly moving hand beneath the table.

“He should point out that the majority of people in Li’o don’t attend the athenaeum, even if it is the most important place,” said Amaryllis, using Gimb. Symbiosis gave her half my effective level in Language, which was apparently rounded down. She’d gotten Gimb, rather than Grogliir or Kindeh,
presumably because that was the first of them she interacted with, though we didn’t have enough data to determine the rule.

“He’s a businessman, not a politician,” I replied. “At least, that’s my read.”

“I concur,” replied Amaryllis, signing rapidly. “But he would be a good check on the power of the athenaeum. Historically they end up dominating almost any region they’re in. This is the first time in living memory that one of them has had a near-total reset. It might be the only opportunity.” (The phrase ‘in living memory’ meant something different on Aerb, as you might imagine. Here, I was pretty sure that it was exaggeration for effect, rather than precision. Lisi would have called her on it, but I stayed silent.)

“The weakness of his play might be because of how powerful the athenaeum is,” I replied. Gimb didn’t really have a way of marking emphasis on a word, so I tried to draw the cheremes out, which I wasn’t sure was entirely effective communication.

My increased Spirit was mostly a boon as far as helping people went, but the Multithreading virtue was amazing in general practice, because it meant that I could pay attention to talking to Amaryllis and the conversation around the table at the same time without actually having the feeling of split attention. My experience with fighting the monsters that roamed Li’o had shown it was equally valuable in combat, if not more so. And thankfully, it was something that I got at level 30, which, after mucking with the spirits of hundreds of people, I had already passed, and wouldn’t go back down below.

Unfortunately, the meeting itself was irritating, mostly because there wasn’t much we could say. We weren’t citizens of Li’o; even if you were a student, you needed a year of residence, and some paperwork that I obviously hadn’t and couldn’t have filed nor faked. I didn’t even think that being a student would really count in my favor either, given that Jiph thought I was a cheater. I wondered whether she thought I was under the employ of the empire.

“Jiph has this,” Amaryllis signed. “She has no opposition. I’m surprised that Ermaretor isn’t here. She was always politically minded.”

“She’s dead,” I replied. “I found out this morning. Not dead in the attack, dead in her office, bottled suicide. She had a husband and two children, all of them crushed. Souls unretrieved.”

“Unfortunate,” replied Amaryllis. Her sign was terse, but she seemed genuinely saddened to hear it, and I spent a bit too much time looking over at her.

“There has been too much death and destruction,” said Jiph. “We need to clean up, clear out, and rebuild. The only question that anyone should be concerned with is what shape that rebuilding will take. There are people who will argue that Li’o should become a ghost town, that the temple and rod should be moved somewhere else. Mortality has been extremely high. Infrastructure is in a sorry state. There is a corpse sitting in the middle of the city, smelling more every day.”

“The empire is attempting to pass legislation that will bring a group of star mages in to take care of it,” said Satyr. “That is beyond the scope of this meeting.”

“Thank you,” said Jiph, nodding at him. “But my point is that things are stacked against us, and I can perfectly well understand why people might want to flee from this place, but the athenaeum is the beating heart of this city, and so long as I have a say, it will stay right where it is.”

“It’s in the best interests of everyone who is staying to have others stay as well,” said one of the dwarves, speaking up for the first time since we’d made introductions. I was used to Grak’s slightly
stilted way of speaking, and it was weird to hear one of them speaking perfect Anglish with no trace of an accent. “The question is whether we can shoulder the burden of staying, and whether we can stay, should enough others leave. The site is, I should remind, an active exclusion zone.”

“We don’t understand the connection between the enormous creature and skin magic,” said Satyr. “Until we understand that connection, there’s an inherent risk in staying here.”

“The fact that it’s an exclusion zone could be a boon,” said Amaryllis. “This is the only place on all of Aerb where tattoo magic still works. There are relatively few tattoos that are still worth anything, given the circumstances, but”

“It was my understanding that you were only at this meeting in an advisory capacity,” said Jiph.

“She is,” said Satyr, giving Amaryllis a displeased look.

“Have you interfaced with the Athenaeum of Steel and Sweat?” asked Amaryllis. She was firm and unflappable, with the kind of stoic determination that I’d come to expect of her. I was pretty sure that she knew the answer to that question: otherwise, she wouldn’t have asked it.

“Speaking to Steel and Sweat seemed inadvisable,” said Satyr.

“Why?” asked Amaryllis, pressing him. “There are hundreds of thousands of tattoo mages who have lost their primary form of employment. There are hundreds if not thousands of scholars whose expertise is only useful within this city and the surrounding areas. Worse, tattoos completed outside the exclusion zone will not be active within the zone,” that was per our experimentation, “which means that this is the only place that a person can have a tattoo added to them.”

“Be that as it may,” replied Satyr. “It is imperial policy to allow governance of exclusion zones to fall under the purview of the original governmental authority, and while it is entirely the case that Steel and Sweat might have an interest in the exclusion zone, that interest is completely subordinate to determinations of sovereignty.”

Amaryllis looked around the table. I suppose she was hoping that someone else would object, but there were no takers.

Satyr cleared his throat and moved the meeting onward, but it was pretty clear that Jiph had taken the reins on the matter, both because she was being quite forceful about it, and because she’d clearly done a fair amount of work in the lead-up to this meeting. It wasn’t really a surprise when there was general agreement that the SSSC would have provisional control over the city-state of Li’o, subject to further discussion once things had settled. That, I viewed as a formality; once someone had power, it was pretty damned unlikely that it would be stripped from them, especially not when the empire was in a precarious spot.

“It’s fucking bullshit,” Amaryllis signed to me as we left the meeting. “She’s going to take over without any of the other stakeholders having their say.”

“We were in a room full of stakeholders,” I replied. I was listening in on other conversations, though there was nothing terribly important. We got a few looks, but we weren’t dumb enough to say anything incriminating in Gimb, on the off-chance that someone knew it. “And she might be least worst.” One of the remaining low-level governmental functionaries had spoken up and made a fool of himself, which had made Jiph look better.

“It doesn’t put us in a good position,” signed Amaryllis.

“No,” I agreed, “It doesn’t. But I’m not sure how important any of it will be going forward. Jiph
hates me, but it’s pretty clear that the athenaeum is going to be on the back foot for a long time, and the time scales we’re dealing with are pretty damned short, in the scheme of things.”

(This is all heavily translated, by the way. Gimb was a weird as fuck language without a lot of the features that I took for granted in English/Anglish. It was supposed to be signed by a species with gravity senses that could effectively do 3D mapping of the fingers, which meant that we were doing a bastard version of it that was slightly more calibrated to our regular old human eyes.)

“What,” replied Amaryllis, which I think was as much as she wanted to say on the matter. I wasn’t actually sure which she meant; we had two that were likely measured in years, the one to stop the Void Beast, and the one to make the Republic of Minun a member in good standing of the Empire of Common Cause. Jiph could potentially fuck us there, not through an overt use of power if she did end up becoming the top of the pyramid of power at S&S, but by poisoning the well if she was in conversation with other imperial members.

“Point taken,” I replied. “Not much we can do about it.”

Amaryllis was silent at that, but she didn’t seem very happy about it.

We headed back to Bethel, and when I saw the house looming, I wasn’t very happy either.

On the fourth day, Anglecynn showed up.

With the matter of Li’o’s governance at least partially settled, there was an entity that could send out requests for aid. OIDR had been established as a collective disaster response force, but that hadn’t fully eliminated the backroom deals, and it was often the case that a member polity could lend additional support, expertise, or magic. I was vaguely reminded of the way that intelligence services in the United States had historically squabbled with each other and duplicated work, or the way that developing a standard meant that there was one more standard to comply with. It was almost funny to see it here on Aerb.

Officially, Anglecynn was lending additional troops from their Host to assist with final extermination of the remaining monsters that had come down off Mome Rath. Some of those creatures were incredibly resilient to our efforts: hard to spot, hard to kill, and worst of all, fast breeders. The arachnid Mom Raths could burrow into any humanoid that they had killed and lay a half hundred eggs, during which time she would be antimetically hidden, the corpse nest only visible to me or through an expansive ward that Grak developed. It remained to be seen whether or not they could actually be contained, but we were doing our best. One of the big risks, long-term, was that Li’o would become ground zero for a number of invasive species. The saving grace was that most of them were incredibly, unthinkingly hostile; if the Mome Rats had the wherewithal, they could have fucked off without anyone being any the wiser. There was a possibility that this had happened: we couldn’t be confident that it hadn’t.

That Anglecynn was showing up was certainly not coincidence, though it was hard to tell whether this was the work of the Dungeon Master or the work of our enemies, not that those were mutually exclusive. I had always thought that if I were the Dungeon Master, Anglecynn would come back into play, not just because of Amaryllis’ history there, but because we’d left a few dangling plot threads behind. Of course, I would have been paying attention to what my players found most interesting, engaging, and fun, which would have ruled Anglecynn out almost completely.

One of those dangling plot threads came to Bethel’s door on the morning of the seventh day. She was wearing different clothes from the ones she’d been wearing when I’d seen her in Boastre Vino, black mourning clothes rather than the frilly red dress she’d been in before, though she was still
wearing the circlet with gemstones on it, an open display of both opulence and power. She had four guards with her, all of them in entad armor, with entad weapons, and almost certainly mages of one kind or another.

“I should kill them all,” said Bethel. “Penndraigs,” she spat. She was wearing her human body, which she’d been doing a lot of lately. Seeing her still set me on edge as emotions came racing back, some of them good, some bad.

I had finally broken down and made a few changes in my spirit, which had helped immensely. Isolating the specific thread was difficult, and knowing how much of a change I should make was impossible, but I had tamped down on my fear and my sense of violation, which were both, in my opinion, greater than they should logically have been. One sign of that was that I was going in to muck with my internals in the first place. I didn’t remove the feelings, not entirely, but I swung the balance a bit, so that it was a thing I hadn’t wanted to happen, not something more and worse. Bethel hadn’t meant anything by it, I was sure of that, she’d only thought that my reluctance was petty morality, or that I was too much inside my own head. If she realized that I was more spooked than I was letting on, or that my anxiety and discomfort was more about the act than my worry about Amaryllis, she hadn’t said anything. She also didn’t appear to have said anything to anyone else, so far as I could tell.

So my feelings toward her were maybe, on balance, more good than bad, but it wasn’t a calm neutral, it was the good and bad smacking up against each other like two warring armies, the memory of her borrowed body moving against mine, the look in her eyes when she came, matched against the sickness I felt in the pit of my stomach, and the fear of something like, say, penile degloving.

“Don’t kill them,” replied Amaryllis. “Public assassination would put us at war with not just Anglecynn, but the entire empire.”

“But private assassination?” asked Bethel, arching an eyebrow.

“If it couldn’t be traced back to us in any way,” said Amaryllis. She looked over at me. “It likely wouldn’t be worth the risk, given that there would be no way to guarantee that there was no evidence, not with the wide range of entads available.” I could tell that she didn’t want to so much as invoke the term ‘remote viewing’, which was a real problem. “Come on, let’s get this over with.”

“Who do you need for this?” I asked.

“You, Valencia,” said Amaryllis. She gave Grak a guilty look.

“It’s fine,” said Grak. “I have found myself not caring for Penndraigs. I exclude present company.” I couldn’t help but see that as a slight against Lisi, which I made a note to ask him about later.

“And I suppose Raven and I will stay behind, as is our custom,” said Pallida with a sigh. “You know, I really wish that I had that hat. It could give me any disguise, really was a thing of beauty, I could be by your side without anyone the wiser.” It wasn’t fair to leave them, really, but Pallida was renacim, and her kind were recognizable, easy to place. Raven was a bit less suspect, but she was a figure of myth, and the longer we could go without revealing her, the better.

“You’ve said,” I replied. “If we find a way, we’ll search for it.” We didn’t have a quest, obviously.

“I’ve heard that Doris Finch can find things,” said Pallida, raising an eyebrow.

“Yes, well, let’s take our adversaries one at a time;” I said.
We went out into the main entryway, which Bethel had kept more or less static since Satyr had paid us a visit. It was far too grand, but at least it made an impression, one that I hoped might give us a tiny bit of leverage in the coming negotiations.

“Amaryllis Penndraig,” said Hyacinth as we walked forward. “I had heard rumors, but I hadn’t thought that they’d actually be true.”

Hyacinth Prentiss had heard more than rumors. The unfortunate thing about running a combination field hospital and refugee camp was that there were a ton of people, and at least a fraction of them were coming and going at any given time, a necessity because we couldn’t in good conscience keep family members from each other, nor could we really keep anyone from leaving if they really wanted to. That meant that anyone who really wanted to could throw on a disguise and get inside with relative ease, and short of killing them and then hiding their corpse in extradimensional space, there was virtually nothing that we could do about it. Of course, one of the fortunate things about having both Valencia, Bethel, and Grak working together was that there was virtually no way that a spy could get onto Bethel without us knowing about it. Grak in particular could use the Penndraig line against them; if anyone with Uther Penndraig as a direct ancestor passed through one of the inner wards, Grak would immediately be notified.

We were pretty sure that the four spies we’d clocked coming in ahead of Hyacinth’s visit were the extent of what she’d sent, because they’d have to be very, very good for us to have missed them.

“Cousin Hyacinth,” said Amaryllis with a curtsy. “I was sorry to hear about your husband. I don’t know if you knew this, but he and I were once quite close.”

“It is the risk that we take in service to the Kingdom of Anglecynn,” said Hyacinth, seeming unbothered. “The price of duty. Of course, the fact that you’re here will serve as further proof that you’re derelict in your duty. A perennial fault of yours, it would seem.”

“I don’t even know what my legal status in Anglecynn is,” said Amaryllis. “I think we can agree that I survived the trial by adversity.”

“You are, technically, a deserter from the Host,” said Hyacinth, smiling at Amaryllis. She looked over at me. “As are you, Juniper Smith.” I wasn’t too surprised that she knew my name, but I was a little surprised that she deigned to speak to me.

“And the Kingdom of Anglecynn intends to enforce that?” I asked.

“No,” said Hyacinth, laughing softly, with an absolute lack of warmth. “We could, obviously, attempt to extradite you from Li’o, but as soon as we tried, you would fly off in this marvelous entad. When the common folk talk about the accountability of the Lost King’s Court, it’s people like you they think of. People who perceive themselves as being beyond the rule of law.”

“So you say,” replied Amaryllis. “From where I’m standing, we saved thousands of lives and rescued thousands more from an eternity of torture in the hells.”

“And you just so happened to be in Li’o at the time?” asked Hyacinth. “You happened to have all the tools at your disposal to kill a beast the like of which has never been seen on Aerb?”

“If you want to make an accusation, make it,” said Amaryllis. “If you had the evidence, you would already have presented it, but you don’t have the evidence, because we had nothing to do with any of it.”

She was convincing. I believed her, and I knew that she was lying.
“Tell me,” said Hyacinth. “How did you arrange for Juniper to be granted the Special Returning status at the athenaeum?”

Hyacinth once again gave us her soft little laugh. “Oh, well, you have to understand that Anglecynn is, as always, the heart of the Empire. What would it look like if we turned our back on a member in times of need, especially one of the athenaeums? We’re here to help. To that end, we have travel arranged for those who don’t wish to stay in Li’o, and housing has been secured for anyone that wants to take up residence in Caledwich or one of the other cities. We need to talk to the people you have here, to let them know of our generous offer. Obviously having you act as intermediaries would be unacceptable for a whole host of reasons.”

“If that was all you wanted, then go right ahead,” said Amaryllis. “This is the single most secure place in all of Li’o right now. Your people can move freely.”

Hyacinth seemed nonplussed. I suppose she had expected us to refuse, or at least to quibble. “I’ll have a detachment over soon,” she replied. She briefly touched her collar. “I do have to ask, in case you might give me a straight answer, what your endgame is. You should know that foreign control of an ethnostate rarely works out, even when compliant species are involved.” She’d shifted topics to the tuung, and the Republic of Miunun. The tuung were of considerable interest to the people inside Bethel, in part because their species was so rarely seen outside of their hidden-away enclaves. I wasn’t surprised that Hyacinth would look at them and wonder what the hells Amaryllis was planning.

“A student of history wouldn’t look at the failures of the past and conclude that nothing could be done about them,” replied Amaryllis. “They would instead learn lessons from those failures and correct for them.” One of the big things was that they weren’t culturally tuung at all, they were Amaryllis’ own custom blend of culture, plus what she called ‘drift’, an inevitability given that she wasn’t spending a decade of her life in the chamber.

“You understand, of course, that the Republic of Miunun is put in a delicate position by having two of its most prominent members be citizens from Anglecynn and wanted criminals on top of that,” said Hyacinth. “The Republic will be unable to fulfill its aims, if the will of the empire is against it.”

Amaryllis pursed her lips. “The empire would be much more effective than it is, if it could be said to have a will at all.” Amaryllis had, on more than one occasion, described the empire as a sack of ornery cats.

Hyacinth laughed. “Very true.” She took a moment to look around the room. “Of course, it doesn’t have to be that way.”

“You’re offering a deal,” said Amaryllis, nodding slightly.

“Give up your lands, drop any wards, surrender your entads, and undergo sterilization,” said Hyacinth. “The matter of your desertion will be put behind you, and your Republic will rise or fall on the merits of your rule, rather than the circumstances of your birth.”

“I’ll consider it,” said Amaryllis with a slight nod, and I could see from Hyacinth’s expression that she definitely didn’t see that coming. “My lands are held in trust for the time being, forfeit to the kingdom in the event of a trial in absentia?”

Hyacinth nodded. She seemed slightly off-balance, which made me feel a little better about how things were going.
“And if I were to forfeit everything that rightfully belongs to me, it would go to you?” asked Amaryllis.

“It would have gone to Larkspur,” said Hyacinth. “But as the Foreign Security Director was murdered by parties unknown, your lands would pass to his widow instead.” She placed her hand on her chest.

There was a bit that I didn’t understand, and was forced to figure things out on the fly. Maybe Amaryllis hadn’t told me, or maybe I had simply forgotten, but from what they were saying:

1. Legally speaking, Amaryllis was supposed to have completed the trial by adversity in the Risen Lands and then report to the Host, where she would spend a mandatory minimum of two years in service to Anglecynn.
2. Because she had completed the trial by adversity, she was cleared of her crimes, but because she hadn’t reported to the Host, she was guilty of desertion.
3. If she didn’t report back to Anglecynn, there was a possibility that they would just hold a trial without her there, which would probably not go well for her.
4. Amaryllis had a bunch of stuff in Anglecynn, because while there were potentially recoverable caches of stuff, a few of which we’d already hit, those hadn’t made up the bulk of her material possessions back when she was a princess in good standing. All her stuff was being held onto, for the time being, by parties unknown to me, probably many of them because all that stuff was spread out across a few different countries.
5. Hyacinth was Amaryllis’ next of kin, in some manner, and would get all of Amaryllis’ stuff, in the event that Amaryllis died. Some of that was legal, some was just the nature of magic, because Hyacinth (despite being older) was next-most-direct female descendant behind Amaryllis.
6. For whatever reason, even though it had been a few months by this point, there hadn’t been a trial, and Amaryllis and I weren’t convicted deserters.

To me this meant that there was a glimmer of hope, even though I had the political savvy of a wet sponge. The fact that it had been months without trial in absentia meant that there was some reason for them not to, either an ally working for Amaryllis, or some kind of leverage that we could use. All the stuff that rightfully belonged to Amaryllis was part of it, but I wondered whether that was the whole story. I knew jack shit about how the law worked in Anglecynn, except that it was different if you were a part of the Lost King’s Court, so I didn’t really have a good grip on what was going on there.

“I need time to think, but we have time,” said Amaryllis. “We’ll be here until you can help these people to clear out. We can also deliver them for you.”

“Deliver them how?” asked Hyacinth. “Not in this ship, I hope?” The word ‘ship’ caught in her throat, which I thought was probably Bethel being petty. She really didn’t like being called a ship, and had worse and worse reactions to it as the days went on.

“That was our plan,” replied Amaryllis.

“You risk raising the ire of the Draconic Confederacy,” said Hyacinth. “To do so on your own would, naturally, be your own prerogative, but to risk the lives of others would be unconscionable.”

“Per the 501 FE Sky Treaty, the dragon’s domain over air doesn’t begin until three hundred feet,” said Amaryllis. “We can keep below that for the entire trip, though it will make us significantly slower. Even if that weren’t the case, we could file priority paperwork with the DDACN. It’s a non-issue.”
“Is it?” asked Hyacinth. “Surely you’re aware that the Sky Treaties are forged between the Empire of Common Cause and the Draconic Confederacy? If you claim to be of the Republic of Miunun, which you certainly seem to, you have no standing so far as the Sky Treaty is concerned.”

“Imperial non-members are afforded a blanket protection by the Sky Treaty even if they’re not signatories, so long as they comply with the terms as outlined,” said Amaryllis. Her face was set. I was pretty sure that she could have done this without the Pedant’s Pendant, but that probably made it a lot easier.

“And, in point of fact, you did not comply,” said Hyacinth. “Which means any protection under the Sky Treaty is null and void.”

“You have proof of this supposed non-compliance?” asked Amaryllis, but I could see something in her face change as she said it. This whole conversation with Hyacinth didn’t really matter, it was fact-finding, but you still didn’t want to ask questions that you didn’t know the answers to, and you definitely didn’t want to fall into traps.

“You’ve been crowing about it since it happened,” said Hyacinth. “There are thousands of witnesses.”

That was when it clicked for me. With the Egress inside of her, Bethel was incredibly fast, and with a combination of a reflective coating and all that speed, plus a few other tricks, there was pretty much no way to catch her violating the Draconic Confederacy’s rules about air travel, and it wasn’t like a dragon (fast as they could be) would be able to catch us. In point of fact, we had violated those rules when we’d come to Li’o, and a few other times before and since, mostly in the name of not having to spend an inordinate amount of time waiting for paperwork to be completed, along with a desire to keep our capabilities secret. I had no idea what kind of caveats were involved in the three hundred feet rule, which surely had to have exceptions and regulations that ran for several pages, nor did I have any idea whether Amaryllis had been giving instructions to Bethel in order to stay within the letter of the law.

But there was one clear time when Bethel had definitely gone above three hundred feet: when she was fighting Mome Rath.

“There were exigent circumstances,” said Amaryllis. Her lips were thin.

“Certainly,” said Hyacinth. “And you are, of course, heroes. But I don’t know that the Draconic Confederacy will see it that way. Given that you don’t have the formal protection of the Empire of Common Cause, and given that you clearly did violate the Sky Treaty, even if it was under exigent circumstances, as you point out, you are entirely open to a retaliatory dragon attack. The refugees will be taken to Anglecynn by other means.”

“Very well,” said Amaryllis. “I don’t think there’s anything else we need to discuss, but I’m sure we’ll talk more in the coming days.”

<You only have to say the word and she’ll die a horrible death,> said Bethel, presumably into both our ears. The words sent a shiver down my spine. I was certain that she meant it.

<No,> said Amaryllis. <We have no deniability right now.>

“It was a pleasure to see you again,” said Hyacinth, unknowingly speaking over the telepathic conversation. “It’s my hope that you’ll carefully consider what I’ve said here today.”

“I cannot believe that she would tattle to the dragons,” said Amaryllis. She had her arms folded and
looked like she was planning to murder someone, which was probably an accurate reflection of how she actually felt.

“You know what we should do,” said Bethel. “Have Juniper soulfuck her.”

Amaryllis gave her a dirty look. “Anolia would find it.”

“Even with spirit manipulation?” asked Raven. I took the question as academic.

“Possibly,” I replied. “I think that I might be able to set the two components up so that her thoughts about me were amplified in a positive direction, without changing anything about the underlying soul. The soul contains values, which the threads use as part of, or maybe the entirety of, thought, so if you alter the threads, you can effectively bypass the values, at least to an extent. Ideally I would, I guess, hardcode something into the thread, but I don’t think that’s actually possible the way that things are set up, even if that would be the computing metaphor. The real trick would be making sure that there’s no thread updating that changes what’s in the soul. And obviously, I don’t have an in-depth understanding of how the anolia’s soul sight works, plus it’s possible that she has other methods of detecting changes, which we wouldn’t find out about after she’d already been soulfucked.”

“Possibly not even then,” said Amaryllis. “She wouldn’t necessarily know about every security check in place. We could be found out, which would be a disaster.”

“It’s disturbing to me that we’re talking about this at all,” said Raven, looking between the three of us.

“I agree,” said Solace. She was frowning at me.

“I’m not saying that we will, or even that we should, just examining what the immediate problems with it would be,” I replied. “It seems like it’s not even a question of whether it’s morally acceptable, because it’s not strategically viable.”

“Probably not strategically viable,” said Amaryllis, biting her lip for a moment. “We have no intelligence network in place, no information coming from inside of Anglecynn.”

“We have Lisi,” I said. “And … it might be time for you to speak with your Aunt Rosemallow.”

“Do we not have more important things we should be doing?” asked Solace. She asked it as though it was an innocent question.

Amaryllis shot her a frown. “A dragon descending on the Isle of Poran with claws and teeth, which is at least an outside possibility, would be an unmitigated disaster.”

“Would it?” asked Solace, again using that same tone, one that seemed curious, rather than accusatory.

“I know you want to help the locus,” I said. “We just don’t have any real way of doing that. We don’t have threads to pull on. We don’t have promising leads, or any leads. The only thing that gives me any hope is a loyalty increase, which can’t really be forced because the motivating factors have adverse effects.”

“You don’t know that,” said Solace. “It wasn’t in the notes that Reimer gave to you.”

That was true, though I didn’t know how she knew it, unless she’d delved into the game’s guts herself. The companion system was a mystery to Reimer, with no real analog in the game he’d
played, since the other Juniper had never allowed companion characters or anything like them. Naturally we hadn’t revealed everything to him, given how many secrets we had, but we’d shown him enough of what the game had been revealing to me that he’d been able to identify it as anomalous. (I had asked Reimer about the ‘degrees of reasonableness’, and he’d said that it was all pretty much bullshit, and had been the source of a few fights between us, because the other Juniper has usually been the one determining what was or was not ‘reasonable’ on the seven-point scale.)

“My offer to eat the bottle stands,” said Bethel.

“We don’t know the outcome,” said Solace, glancing over at her only briefly.

“Based on what we know of the loci,” I began.

“You cannot trust what you’ve read from the Second Empire,” said Solace, shaking her head. “You cannot establish rules for what does and does not work.”

“Regardless of that,” I replied. “The books we took from the Infinite Library very much appeared to indicate that even if we were able to disgorge the locus’ entire domain from the bottle without killing it, that still wouldn’t allow it to grow and thrive, nor to induct new druids.”

“Based on experimentation carried out by the Second Empire,” said Solace. She said ‘experimentation’ like it was a slur, which I could understand given what the Second Empire had done.

“I want to help,” I said. “If we had a path we could follow, or a path we could forge, if … I don’t know, if there were something, I would drop other obligations.” I was pretty sure that sounded convincing, but I wasn’t actually sure that I was being honest. I more or less liked the locus, even if I was missing a lot of the cultural baggage, even if, as an entity, it might have been created in order to challenge me. And I did want to save it.

It was just that it was very easy to say that you would do anything when you didn’t actually have to do a single thing, because there was nothing to be done.

“Did you ask the Dungeon Master?” asked Solace. “When you spoke to the god above all gods, did you ask about the locus?”

“There were a lot of things that I didn’t ask him,” I replied. I was trying to stay calm in the face of hostility. Solace wasn’t normally like this. I had cleared everyone in our inner circle save for Raven, who had warned me against it on the basis of how many dangerous things I might see there. Solace still had the locus splattered on her soul where parts of her had been reconstructed by an alien intelligence with no regards for data structures. “But it was part of Amaryllis’ questions, and he blew all those off.”

“Very well,” she said. She stood, letting her cloak flow out from behind her. “I will tend to the locus. I’m sure that it would be eager to see you, should you have the time.” She blinked out right after that, leaving me no time to say anything in response.

“Nice of you to facilitate a flair for the dramatic,” I said to Bethel, frowning at her.

“That was her, not me,” said Bethel, looking me over.

“Sorry,” I said. I leaned back. “Not really where I was hoping this conversation would go.”

“You should give her a break,” said Pallida. “She’s only nine years old, still learning and growing.”
“She’s been frustrated for a long time,” said Grak. Solace had been sitting next to him, and he readjusted himself, looking uncomfortable. “This is her life’s purpose, before all else.”

I wanted to say that it was clearly insane to devote yourself to one person so much, especially when there were other things at stake, and it was only then that I saw a parallel between how I’d been in the wake of Arthur’s death and how Solace was acting about the locus. It was different, wildly different, but I finally saw the thread of similarity that seemed like it had been in the corner of my vision this entire time.

But that didn’t actually help me, because what had I learned about Arthur? That he’d cracked under the pressure of saving the world a few hundred times? Or that he’d been twisted and warped into something unsavory by Aerb? That he hadn’t been as pristine and perfect as he’d always been in my mind’s eye, in the time following his death? None of that would help Solace. I couldn’t tell her to take off the rose-tinted glasses, even if it were true that the locus wasn’t everything that it was cracked up to be. It wouldn’t actually help anything.

Most likely I was just jumping at shadows, in the same way that Amaryllis jumped at the idea of narrative, and Valencia jumped at anything that looked vaguely like Harry Potter.

But it did occur to me to think about whether or not the locus quest might actually be impossible, whether this was all an extended metaphor for letting go of things that were gone. I couldn’t see it, not really, I didn’t think that the Dungeon Master would do me dirty like that, and if he was going to, he would have placed in little hints about it, little nudges in the direction, more ambiguous wordings on the quest descriptions.

The conversation moved on, as it had to, because there were other things to discuss, things like the plan to get me out of having to sleep once we left the exclusion zone, things like Rosemallow and the internal politics of Anglecynn, but my mind was stuck on the locus, and the idea that there might not be a way to save it.
Brownian Motion

The Isle of Poran was a grim and grey place. Most of the time it was completely overcast, with a chilly wind even when the sun was shining. When we got back though, the water mage we’d hired a month ago had arrived, and she’d taken matters into her own hands, leaving us with the first bit of nice weather I’d ever seen on the isle. Amaryllis was eager for me to unlock water magic, mostly so that we could get it leveled and see how it measured up against the others before the big respec, but I begged off, and I guess there must have been something in my eyes, because she relented and said that maybe we should just take a day to relax. I’d wanted more, but I didn’t press it.

Because my life had become an endless series of obligations, there was something that I had to do first.

“It’s been a while, I know,” I said as I walked beside the doe. “Sorry. I had the whole week in the temple, then I wasn’t really sleeping, and … I don’t know.” I still wasn’t sleeping, and I touched the ring on my finger, which would let me transfer sleep debt to another person. It was usable for a thousand hours, roughly a hundred days of not sleeping, and would be worthless to me after that, but it was what we’d scrounged up, a stopgap measure that punted the problem down the road. I kind of wanted to talk about that, how a vital human function had been stripped from me, but it was a distraction from other matters.

“I’ve been thinking about Brownian motion, and how that was maybe something that would help us relate,” I said. “You see, way back in time, on Earth, scientists noticed that little bits of pollen or whatever would have these random movements through the water. In computer programming terms, it was what we call a random walk, just a step in one direction, then a step in another direction, completely random, which gives a little characteristic squiggle if you map it out. Nothing to say that it couldn’t be a straight line, but statistically, that doesn’t happen.” I was silent for a bit. “Of course, knowing that rule doesn’t mean that it’s any less random, it just gives some context to what’s happening. It’s a meta rule. Anyway, they had noticed this about pollen, how it did these random motions that were similar to a random walk, and they had no idea what was causing it, because the pollen or whatever didn’t have moving parts. Eventually some scientist figured out that what might be happening was that brownian motion was the result of that pollen being bombarded by tiny bits of water. It was actually one of the first pieces of evidence that molecules existed. Anyway, I was thinking about that, about the scientist coming up with that theory, and how that feeling of wonder was a little diminished by moving a little step closer to understanding the truth. It was this move from this thing that was unknowable and weird, to this thing that was knowable but still weird. I kind of, I don’t know, get it? Solved games aren’t any fun.”

The doe seemed entirely disinterested in this monologue, which was fair, because my heart wasn’t in it. Sometimes talking to the doe was like this, with an hour or two of me talking about things I was interested in, or that I thought would help us relate, or that I imagined the doe would appreciate, with nothing to even remotely indicate that I was doing anything but wasting our time together. I tried not to be demotivated about it, and I tried not to think about the loyalty ups, but it was difficult, and sometimes, as now, I failed.

“That scientist’s name?” I asked. “Albert Einstein.”

The doe gave no impression that she’d heard me aside from a flick of the ear. Almost none of my jokes or references landed with the doe, which I was used to, but maybe I was just in a mood where everything was more disheartening than it actually should be.

“I had a thought, which was that maybe it was impossible to save you after all.” I didn’t mean it in a
rude way, as though she wasn’t doing her part, but maybe it came out like that. I was despondent, that was all, and most of it didn’t even have anything to do with the doe.

The doe looked at me for a moment, flicked one ear again, and then nodded.

“What?” I asked. “Yes, as in, yes, it’s impossible to save you?”

She just gave me a blank look.

“I mean, I don’t know what the hells we would do then,” I replied. “Cherish the time we have, I guess? I don’t know what lesson there would be from that, what moral would be hidden in -- I mean, not everything is a moral, not everything is commentary, but if it were true that there was nothing that could be done, if Solace is the last druid that will ever live and our ability to keep you going is basically tied to her lifespan, because I’m not sure that we can do the rebirth ritual thing again,” I was rambling. “I’m not going to accept that as the correct interpretation, for the time being.”

The doe gave another little nod in my direction, then ate some more grass. That was a lot more input than I normally got from her.

“Shit,” I said. “Well, Solace is kind of pissed, as you probably know, and if there is no solution, if this bottle is just effectively hospice, then I have no fucking clue how to break that to her, and I don’t think that she would accept it, not that she should. I mean, there’s a quest, isn’t there?”

The doe kept eating a particular type of purple grass that she seemed to favor, and I stopped and waited for a moment, because that seemed polite, like when you ask someone a question but they’ve just put a forkful of food in their mouth.

“So anyway,” I said. “Not giving up on that, obviously, just thinking about the possibility that there’s no winning move. I do like thinking about possibilities, you know that about me. It actually fits with the druidic mindset a little bit, not being constrained by what you think to be true about the world.” That seemed like another point in favor of the hypothesis.

I looked out at the lands inside the bottle, at the trees, the animals, the grasses, and the places where invisible wards were helping keep the ecosystem together. We had better instructions on how to take care of the bottle now; when Solace had died the first time, she hadn’t seen it coming, and neither had we, but there were preparations in place, contingency plans in case things went sideways in some way for a second time. It wasn’t clear that we could use Yaxukasu a second time, not when the first time had been such a tenuous thing, not when the locus was involved, and not given how much permanent damage it had done to Solace.

We were still thinking about those things though, imagining the worst case scenarios, so that we would have a skeleton of a plan in place when we needed to hit the ground running. Amaryllis and Grak were both big on worst case scenarios, trying to see the possible failure modes and then pick the low-hanging fruits of preparation.

See the problem coming, be a little prepared, and then things won’t spiral out of control when it happens.

“I had sex with Bethel,” I said. It was the first time I’d said it out loud.

The locus looked at me with its doe eyes, all six of them, then bent her head back down to continue eating grass. As confidants went, at least there was little chance that she would spill my secrets.

“Look,” I said. “I know that druids have a bit of sex magic, so maybe we have wildly different ideas
about what sex actually is, and how it should be done, and with whom, but I thought maybe I could talk about it, and we could see where it takes us.” I always pretended that the locus was contributing something, even though the most she ever did was give me little looks that I interpreted however I pleased. That wasn’t nothing, strictly speaking, but it was a lot less than I normally got when I talked to people. In this particular case, I was okay with it.

“I hope you don’t mind,” I said. The doe gave no response and kept walking along beside me. “I know it’s not relevant, you know, the whole,” I waved my hand in the direction of Loyalty as gained through understanding and companionship. “But I don’t really have anyone to talk to. No one that I want to talk to. I have lots of people that I could talk to, and at least a few of them that wouldn’t make me feel like shit about it.”

We were outside of Bethel, obviously. I’d taken the bottle to the far side of the Isle of Poran, away from the little town full of diplomats and spies, to a place where we could be truly alone for a few hours. It had actually been a huge logistical problem, since Bethel had reconfigured herself using the bottle’s power and had to not just change all her interior dimensions back to normal, but also find places for all the things that she’d accumulated in the meantime. Solace had been pretty gung ho about the plan once I’d suggested it though, and Amaryllis had thought it was probably preferable to have Bethel pare things down anyway. Bethel had grumbled a little bit, but once it was in full swing, she had started to see it as spring cleaning and been much more on board with it. She had given me a questioning look about moving the bottle, but she hadn’t actually said anything. I was asking for privacy from her, but I didn’t know whether the context was clear. Maybe she just thought I was working through some things, which was, at least, true.

“I keep coming back to three things,” I said. “First, she lied to me. Second, she didn’t listen to me when I said no. And third, it was … good. Physically, I mean.” I bit my lip for a moment. “I had always thought that sex was mostly in the head, rather than the body. That was how it was for me, my experience of it. But my head wasn’t in it, and it was just … She was reading me, I think. She made this comment about how people were these fumbling creatures trying to view each other with our limited senses, and for her, that wouldn’t have really been a problem, because so many of the entads have some sensory component to them. The thought of her scanning my entire body all at once, paying her full attention to how I was moving, what I was doing, augmenting the sensations she was producing with her false flesh, it … I can see how someone would like it, on a psychological level. But after we’d finished, I was just swimming in this sensation, this unpleasantness, like I had been reduced down to a machine made of meat. My uncle liked to tickle me, not in a gross way or anything, but I hated it, because he would always say that I needed to cheer up before he did it, and I just had no control over it, there was this spot on my body that tickled, and no one gave a shit that I told him to stop, not until I bit him. And I still fucking hate that uncle, because I think about being reduced down to this stimulus and response without any control of what happened.”

*Loyalty Increased: Six-Eyed Doe lvl 19!*

I glanced over at the doe. She was looking at me in a way I chose to interpret as sympathetic.

“When I killed Mome Rath, I felt like I was on top of the world,” I said. “And then there was the business with Harold, first at the fake location, then at the real one, but those were at least, if not easy, then something I felt like I had well in hand. I felt competent. But then it was just one thing after another, first the city being terrorized by the creatures Mome Rath brought with him, then the ruling council being dead, then the exclusion zone, and all this garbage with Article 86 … one problem solved, a dozen more created, like some horrible hydra.” I couldn’t remember what the Aerb version of a hydra was, if there was one. Maybe something with dissociative identity disorder? That seemed like a direction I might go.
“It sucks. It just sucks. All I want is phenomenal cosmic powers with no downsides and all my dreams to come true, is that so much to ask?” I laughed, but it was hollow, and I had to remind myself that was okay here, because Bethel wasn’t watching. “I keep asking myself if this was how I DMed, just making everything shittier and shittier, undercutting every triumph with two complications until it’s just this vast, grimdark stew.”

To my surprise, the doe began to use her magic. That wasn’t something that she did often, only a handful of times that I had seen, and usually for pretty minor effects. Of course, the doe was magic, was nearly the incarnation of magic, but when I was walking alongside her, it was possible to forget that. In this case, the magic was on the more extreme end of what I had seen, with plants bursting up around her and flowering instantly, a wild, colorful display of life. Most of the effect was centered around me.

I took a moment to look at the flowers, and then at the doe, and then more, at the bottle around me. My eyes caught on the giant tree in the middle, which had been behind me. It had gone into full bloom, pink and white petals on each of its huge branches, glorious from a distance. As I was looking at it, a wind swept through the bottle, and I caught a delightful fragrance.

“Alright,” I said. “I get it. There’s beauty in this world, it’s not all doom and gloom.” I took a breath and made sure to inhale more of the smell of flowers. “There are things worth protecting. I don’t think I ever disputed that.”

I took a breath and tried to calm myself. That sick feeling had returned a bit while talking to the doe. I could go into my spirit and tamp it down a bit more than I already had, but for a moment I just wanted to experience it, so that I would know what it was that I would be editing away. It had always been strange to me how much the body could be impacted by whatever the brain was doing. Here, the sickness in the stomach felt like it was located at the bottom of the ribs. Maybe I was just unconsciously clenching muscles there.

“So my plan, if you could call it that, was to just go on like nothing happened,” I said. “I would tell Amaryllis at some point, when I had some distance from it, but not the others, because it’s not really any of their business. Keep calm and carry on.” I was still for a moment. “I’m not sure that I can do that. I’m not sure that I should. I was always Bethel’s biggest apologist, when she was scaring people, when she was hurting people, when she was showing us murders or making threats, I was always the one saying, ‘oh, no, you guys don’t understand, she’s just scared and confused, lashing out because that’s easier, because that’s what she knows’.”

I wasn’t going to advocate for Bethel’s destruction, not on the basis of this, but if it ever became necessary, I wasn’t really sure how we would accomplish it. The obvious method was putting up a ward around her. Anti-entad wards were cheap, so long as they targeted one specific entad, so it would just be a matter of having Grak put a ward around her without her knowing about it. That itself would be no mean feat, given that she didn’t need sleep and had a huge sensorium that could grow larger without us knowing, and she was easily capable of hiding her abilities, which she’d done in the past. I was pretty sure that Amaryllis had some kind of plan in place, and had since we’d met Bethel, but I was suddenly quite curious to know the specifics. (And given that Bethel could and did spy on our dreams, I wasn’t sure that even a plan confined to our own skulls was safe from her knowledge. I was thankful that I wasn’t sleeping at the moment, if only for that.)

“I keep trying to see it from her perspective,” I said. Sometimes I went silent when I was with the doe, and thought instead of speaking, letting myself pick back up where it seemed appropriate. “I keep thinking about whether I would have been capable of it, in her shoes. I don’t think I would have. But I come from such a different culture than her, and if I’d been born in different circumstances, I might have turned out differently, still a Juniper, just a different one. A worse one.
Back on Earth, there was this time Tiff and I had been having sex,” I felt myself grow awkward just talking about it, even though I was talking to the deer, “And she said, ‘stop’, and I just backed away from her almost at once, you know, uh, disengaged completely, because I had this paralyzing fear that I’d done something I shouldn’t have, that I hadn’t been reading her right, or that this expression of love had gotten deeply and horribly twisted somehow. That was just sort of how I’d grown up, I guess. Maybe the lessons that they taught on the subject were meant for people who weren’t me, because they were these big giant hammers being swung at us, and I think all I needed was a light tap. Anyway. Turned out that she’d said ‘stop’ because we were on her bed and she had forgotten to move her laptop, which she was worried she was crushing.” It was one of those things that we’d thought would be funny in retrospect, but never actually was. “And I think, if I had heard someone say no twice, or three times, or whatever it was, I would have taken a fucking hint.”

We sat in silence for a bit. I tried to relax, but I was thinking about Bethel, then Maddie, then Raven, then Amaryllis, then Tiff, and finally Arthur, or Uther, or whoever he actually was.

“People are complicated.” I finally said.

The doe snorted in response.

“I don’t really understand why you work through them,” I said to her. “I mean, I understand from an outside perspective that there are druids in D&D and this is one possible version of them, with power channeled through a genius locus, which happens to be moveable thanks to shenanigans, but from the internal perspective, I don’t think that I get it. You’re you. What do the humans give you in return? Wait, that’s probably the wrong question, because it’s not actually transactional, and I’m just a filthy capitalist pig. I guess more … why give them that gift?”

I’m not sure what I expected. If the doe could talk, she never had in my presence, and while that was a rule, and a commonality of loci was that they hated rules, it also felt like it was a spiritual rule, one that was core to her, one that made sense outside the frame of frames, as I was starting to think of it.

The doe just stared at me, chewing grass. Maybe she didn’t even know why she had druids. That was certainly possible. I really wanted to make a bunch of rapid-fire guesses, but that somehow felt like a betrayal of the locus, who was, after all, a creature of mysteries.

“I should tell Amaryllis about the Bethel thing,” I said to the locus. “Sorry, my mind keeps going back to it, and I doubt this is anything that you want to hear. Or maybe it is. I know you had a community around you, and maybe they sometimes had to deal with --” I paused and decided that I couldn’t succinctly finish the thought, not to my satisfaction. I was in need of a big, complex word that covered everything that had happened, a word of nuance and subtlety that could convey a hundred things at once, rather than simplifying it all down, but such a word didn’t exist, and I didn’t want to go through it all. “The choice is between Valencia, Grak, and Amaryllis. Maybe all of them eventually, but only one first. Valencia can keep a secret, but I don’t know whether she would get it, because she spent the majority of her life until we met being violated to her very core, and without a devil’s help I don’t know how much she understands, even if she’s been learning fast. With a devil’s help, I don’t really want to think about what would be going through her mind. And we’re not on the outs, not really, but I’m worried I haven’t been a good friend lately, and there was that whole poisonous thing with Fenn.” I shrugged.

“And between Grak and Amaryllis … Grak would probably understand, maybe, where I was coming from, since he ran away from an arranged marriage, and this is kind of, sort of, maybe a little similar.” I took a breath. “But he’s got his own problems, and I’ve been trying to let him lean on me as much as I can. And I don’t know that he’s that good at comforting people, even if he might understand.”
I took another breath and tried to slow my heart down. “My worry with Amaryllis is … it’s worries, actually, just a big ol’ heap of them. I’m worried she won’t believe me. I’m worried she’ll side with Bethel. I’m worried that she’ll ask questions that I have shitty answers to, or that she’ll make me play it out again. Fuck, she might even see it as the problem it is, but decide that I should just make the best of it because we need Bethel, and fighting her is, if not impossible, then really, really difficult. And, I guess, not something that I want to do. I do still think there’s good in her.”

It was shocking to me how quickly my opinion on Bethel had changed.

“I wish I were angrier,” I said. “I wish it were rage instead of this horrible gross feeling. I wish it had been clear cut. I mean, it was, but I wish … I wish I’d fought back more, that there hadn’t been an element of pleasure, that I found her truly repulsive, that there was no question that -- I don’t know.” I let out a shaky breath. “I’m so worried that Amaryllis won’t believe me. Or that she’ll have a different interpretation.” I stopped and sat down in the grass, then lay back so I was looking up at the neck of the bottle. “Fuck.”

The doe lay down beside me, and rested her head up against my side. I reached over and patted her, softly. The doe’s hair was fine and soft; the texture varied from day to day.

“I could just edit it all away,” I said. “It’s tempting to just become a different sort of person who isn’t bothered by any of it. Or even someone who … I don’t know. If I could do it over again and be more willing, be the kind of person who could have enjoyed it or wanted it and had it be fulfillment instead of violation, maybe. But I’m not that person. I, you know, I weighed what I thought about it and decided against it, and then that decision was just,” I was clenching my fists, “Just stripped away from me. And Bethel is just flatly stronger than me.”

I let out a breath and tried to relax, and the doe nuzzled me, so I resumed patting her. For all that she wasn’t a great conversationalist, I was taking a fair bit of comfort from her, and from being able to talk without being judged. This wasn’t even remotely helping the cause, I was sure of that, but it was helping me to feel better. We lay there in silence, as I tried to keep my thoughts from racing.

The Isle of Poran was bathed in sunlight, which warmed it up quite a bit. The winds had died down too, so that heat wasn’t stripped from our bodies the moment we stepped outside. I’d come to view the Isle as a nice place, just one where you wanted to go out wearing a sweater, ready to retreat back into the safety and comfort of indoors after a walk. With how much Bethel was feeling like she was unsafe to be in, even when she wasn’t physically present, I was incredibly thankful that going outside for long stretches was a little more palatable.

Most of the Isle of Poran was made up of rocks and crags, all of them pretty smooth thanks to some unknown force of erosion. Between the rocks, there were a few fields of short, hardy grasses. And at one end of the isle, pretty far from both the town and Bethel, out of sight of either, there was a beach.

I wasn’t really sure that it was deserving of the name ‘beach’. It didn’t have proper sand, it just had a bunch of small, irregular rocks, each of them maybe half the size of a pea, most of them black or gray, technically gravel or something like that. When you walked on them, it approximated sand, but it definitely wasn’t actually sand, not in my book. More than that, the whole area with those little rocks accounted for maybe two hundred feet of the coastline of our isle, which was small enough that it was barely worth talking about. Still, it was what we had, so it was what we used.

Honestly, I thought a lot of us going to the beach was just Amaryllis wanting to play at being American for a day. She was, naturally, the one who organized things, and as I helped her set up, I saw more and more things that didn’t really belong on Aerb, culminating in a cooler (popped out of Sable) that I was pretty sure was exactly the same one that my parents had owned. Inside were
different pops, wine coolers, and beers, all of them from Earth, and more than that, all familiar brands. For food, we had hot dogs and bags of chips.

“How do you like it?” asked Amaryllis. She was watching me with a slight smile on her face.

“Was this … for me?” I asked.

“I know you don’t want to go home,” said Amaryllis. “But I thought that it might be nice to have some reminders of it, if we’re taking a day off anyway.” She beamed me a smile.

Honestly, as gestures went, I was kind of on the fence about it, but Amaryllis seemed very pleased with herself, and seeing her happy made me happy, so I smiled back at her, and tried to get into the mood.

“You’ll have to let me know the thousand little details that I got wrong,” said Amaryllis. “I was really going for authenticity.”

“No, you nailed it,” I said. I pointed at the cooler. “Though drinking age in the United States is 21.”

“Well, that’s insane,” said Amaryllis. She was still grinning at me, and seemed to be in an uncharacteristically chipper mood, maybe because we were home. “I’m having a wine cooler.”

(A day at the beach was, obviously, a security issue, especially given that we had a few fresh targets painted on our backs. Grak had warded the entire stretch of beach, including what he’d called a shimmer ward to obscure us from sight, which was thankfully one way. No one was wearing armor, but I wore the vambrace that would let me slip into ready mode in short order, and we did bring a lot of our entads, which were close at hand, just in case.)

I think I finally started to relax when people began going in the water. Grak went first, in swim trunks, and made a ward against water that made it look like a hole had been taken out of the sea. I didn’t know how much experience Grak had with water, given that he’d lived underground for so much of his life, but he seemed to take to it, and changed the shape of his wards to make a little bit of a pool set into the sea, one without waves. When he was finished, Solace came to join him, fully nude, and they sat in two feet of water together, looking at rocks.

“Sorry I couldn’t get Solace to wear something appropriate,” said Amaryllis. She’d shown up beside me while I wasn’t paying attention. “Everyone else was amenable.”

I looked around and realized that she was right. It hadn’t even occurred to me that Aerb’s lax nudity taboos probably meant that swimsuits weren’t the norm. All the girls were wearing one kind or another: Pallida was wearing a black bikini that showed off her pink skin; Raven had acquired or requested something much more modest and single piece, which was still as much skin as she’d ever shown; Valencia was wearing a red bikini with thorns embroidered on the butt, which I thought must have been a custom job.

“How do you like it?” asked Amaryllis.

I glanced over at her. She was wearing a skirt and some sandals, with a slightly oversized t-shirt that was revealing a pink strap. That had to have been deliberate, given that our unlimited access to clothing meant you didn’t have oversized clothes unless that was what you felt like.

“You’re very chipper today,” I said, rather than answering her question.

She gave a happy little shrug. “Some good news on a few fronts,” she said. “I promised I wouldn’t talk shop for this outing though. And we’re home, after nearly a month away, back on our own land.
“Juniper, I know the legal code backward and forward, it’s not a crime to be happy.”

“No, you’re right,” I said. “You’re just usually more reserved.”

“I’m not reserved, I’m focused,” said Amaryllis. “And right now I’m focused on having a good time, because that’s what you said you wanted to do today. There’s no point sitting around on the beach being dour. If we wanted to be depressed about our circumstances and the myriad threats we’re facing, as well as the unpleasant personal aspects of the current trials, we could do that at home, and we could be productive while doing it.”

It took me a moment to realize that when she said ‘unpleasant personal aspects’ she meant Anglecynn and her family, rather than anything that was going on with me.

I let out a breath. “Okay,” I said. “If you’re making a focused effort on being happy, I guess I will too.” I looked at everyone in their swimsuits again. “Just to be clear, is this meant to be enticing to me?”

Amaryllis looked me up and down. “Is it enticing?” she asked. “This is standard fare in America, so far as I know. Are you telling me that this is more sexually enticing than just seeing someone naked? Because that was the other option.”

“It’s hard to explain,” I said. “I don’t think that you would understand. There’s -- it’s an element of dress-up, of presentation. I was just asking about intent.”

“Oh,” said Amaryllis. “Well, no. I didn’t think -- is it bad?”

“Bad in what sense?” I asked. I looked away from the others and over to her. She was frowning slightly. “I wouldn’t say that it was bad in any sense, I guess, I was just … overthinking things. Misjudging you.”

“There’s some prurient interest,” said Amaryllis, nodding slightly. She was looking intently at the scene in front of us. “You know, I got that from when we went to the bathhouse. I expected it here, at least a little, I just … thought this would fit in better with your mores, not worse.”

“It’s not worse,” I said. “It’s just, when we went to the bathhouse in Barren Jewel, I found that pretty shocking, but I’ve tried my best to understand that it’s Aerb and that’s just how things are done for the most part. But here, it’s … it’s unnatural. And it is for me. It just makes me feel weird.”

“ Weird good or weird bad?” she asked, looking me up and down.

“A complex weirdness,” I said. I shook my head. “Sorry, if we’re trying to maximize happiness I don’t think we should be standing around talking about this. Let’s just go for a swim and I’ll forget all about it. I’m in my own head, that’s part of my problem.”

“Okay, a swim, good,” said Amaryllis, returning to her smiling state. She looked down at her outfit, the t-shirt and skirt, and her smile faltered. “Well, whatever.”

She took off her shirt first, then slipped out of her skirt, and finally stepped out of her flip-flops, leaving her in a pink bikini. My breath caught in my throat. She was utterly perfect, from head to toe, with an unmatched grace and power, muscular and feminine, flawless skin, full lips --

The thing about Amaryllis was that I was more or less used to her. You know how you can sit in a room with a weird smell and after about half an hour you don’t notice it anymore? Or how eventually words lose their meanings if they’re said enough, instead becoming this little token linked to a bigger concept? It was like that with Amaryllis. She was beautiful, always, perfectly suited to my
ideals, and yet it hadn’t taken too long for my brain to start tamping down on those thoughts. Maybe it was something to do with how the brain was constantly rewiring itself, or maybe it was just that neurotransmitting chemicals were in short enough supply that you couldn’t be in a constant state of shock at the beauty of someone you were rarely far from, but it was relatively easy to forget that Amaryllis was the most attractive person I had ever met.

There were always little moments though, times when something would slip past the giant filter that my brain had been maintaining. My guess was that the brain was just a big neural network, and it had little false positives or false negatives sometimes, so whatever internal mechanism was dulling the impact of her failed, and that led to those flashes. Sometimes it was just that she was wearing something different, or had her hair a different way, or put on makeup, or the light would catch her in a certain way, or she would briefly be in a different position I hadn’t seen her in before, or … a million things really. I always viewed it as the filter getting caught and having to update itself with new data, briefly reconfiguring and giving me a glimpse of what the brain had been trying to hide. It had nonetheless become easier for me to deal with over time, because I could calm myself down quickly by thinking, ‘It’s just Amaryllis, you know this feeling’.

This was something different, not a temporary chink in the filter but a great and gaping hole, a whole class of unconsidered stimuli. I had tried my best to refrain from fantasizing about Amaryllis, both because of how unclear things were between us, because I knew that even if she felt some romantic feelings toward me, it wasn’t sexual, and because I didn’t want to feel like a creep, not when she was my closest friend. For her part, Amaryllis had begun taking pains to not make things worse for me starting as soon as Barren Jewel, a week into us becoming companions. She would change behind curtains or when I wasn’t around, taking pains to keep concealed (to within her understanding of Midwestern customs of concealment). She wasn’t a nun about it, and she wasn’t actively dressing to be unattractive, but it was something she was pretty clearly aware of, and especially after I’d gotten together with Fenn, the physical attraction was something that Amaryllis had silently tried to make easier for me.

The result of that was that I wasn’t prepared. I had no built up tolerance, not for this.

So I stared at her, slack-jawed, eyes moving up and down her body. My heart was hammering in my chest and I could feel a heat rising in me.

(And, because I had multi-threading, I was thinking other thoughts as well, disconnected from the sheer grace and perfection in front of me, but parallel all the same, thoughts about whether Amaryllis had really not known it would have this effect on me, whether the Dungeon Master’s thumb was on the scale again, whether this was an invitation of some sort, deeply coded, or whether I was just making things up in my mind, thoughts about how I had been an idiot for not actually seeing her as she was, then more thoughts about the filters that my brain had been working on so that it could continue to function around her.)

And it took a moment for these feelings and thoughts to have a head on collision with the gutsick feeling I’d had after being with Bethel. They met like a warm front and a cold front colliding into each other, and the result was a rolling storm, unpleasant and fast, and in the aftermath, guilt and shame tainting everything that I had been feeling. I felt like a predator and a hypocrite, unworthy, dirty, unloyal.

“Sorry,” I said, once I had regained some composure.

Amaryllis was watching me. “I can change into something more modest.”

“No,” I replied. “I’m just … awestruck.” That wasn’t the whole of it.
“Well,” said Amaryllis, tucking a strand of hair behind her ear in a way that was heart-stoppingly attractive. “I have activities planned. We’ll go swimming first.” She looked down at herself, then back up at me. “I *can* change. I don’t mind if you … find me attractive, but if this is going to be --”

“I’ll be fine,” I said, trying my best to mean it. She’d been pretty, she would always be pretty, I wasn’t going to be incapacitated by it, and I would deal with it the same as I’d dealt with it a hundred times before. I had seen her naked, a few times, I had seen her give birth for fuck’s sake, I could tamp down on what I was feeling just fine.

Amaryllis went down into the water, and I stripped off my t-shirt and followed her, trying to feel good, trying not to let the bad thoughts in.
If it were anyone else, I would have felt pretty safe in assuming that Amaryllis was flirting with me.

She was touching me more than normal, being closer, more familiar. She had said that she was trying her hardest to have our day on the beach be a happy day, and I didn’t know if she was doing all that consciously, in an effort to please me, or consciously, in an effort to please herself, or whether it was just something that she was doing because that’s how she thought she would act if she were more carefree. She wasn’t acting, not really, but she was making an effort, trying to be chipper, and it wasn’t poisoning the well in the way that it might have.

We played a game of chicken fight in the water, with Amaryllis on my shoulders and Valencia on Pallida’s. If you’ve never played, the goal of the game is to separate or knock over the other team, which is done with a combination of shoving and wrestling by the attackers, while the vehicles below attempt to maneuver and hold their attackers steady. Amaryllis had apparently found the game when doing her research, and thought that it would be fun, so after we’d done some swimming, and she explained the rules, we were ready to go.

So she climbed up onto my shoulders, and I held onto her legs, and I kept second guessing myself about whether this meant something or not. My brain was still struggling with seeing Amaryllis in a bikini, and added on top of that, she was on top of me. Carrying someone on my shoulders wasn’t exactly the most intimate of positions, but Amaryllis had deliberately put us on a team, and she wasn’t naive, she had to have known that such a thing, back in Kansas, would have been at least a little flirty.

Maybe I was worried about it, or overthinking it, because multi-threading allowed me to follow these trains of thought while some other part of my consciousness was fully invested in maneuvering Amaryllis. Or maybe it was because of all the crap with Bethel, and how I was feeling about it, the way that any hint of sex was drawing my mind in that direction so that I could relive and reanalyze it all over again.

After the third round of chicken fights, we had to stop, mostly because it was getting far too aggressive, more like a sparring match than a game. We hadn’t made a rule that Valencia couldn’t use her powers, but I was pretty sure that was what decided the third match, because she caught Amaryllis by the wrist and twisted so hard that Amaryllis yelped, which led to escalation with still magic, which likewise had been held back by unwritten rules. From there, we went on to other games.

When Amaryllis had said that she had activities planned, she hadn’t been kidding. She had pool noodles, super soakers, beachballs, snorkels, and toys, along with a few games for the beach, including corn hole. It was, frankly, more than I thought anyone would ever take to a day at the lake back in Kansas, but other than that, it was surprisingly authentic.

“I used the backpack to look through a Walmart catalog,” said Amaryllis. We had gone for another swim, which ended in a race, and left both of us sitting on the beach, catching our breath.

“I … wasn’t even aware they had a physical catalog,” I said.

“Well, not as such,” replied Amaryllis. “But they do have binders filled with PLUs and brief descriptions, and that was enough for me to comb through and find what I wanted. Plus I was able to get a lot of adverts that depicted what a typical summer was like, and that let me know what to bring. How’d I do?”
“Not all this stuff is from Walmart,” I said.

“Well, Walmart, Target. I looked at a few places,” Amaryllis replied. “All as close to your hometown as I could get. The brats are from Ash Creek Meats. I got a phonebook and looked up the businesses, which was enough to let me specify something that close.”

“Wow,” I said. “Stalker.”

Amaryllis smiled and gave me a playful swat. “I think that I’ve done a lot of very general research on America, but little that was specific to the American Midwest, and almost none that was hyperlocal, at least not in terms of microculture, which was a real oversight on my part. I got to kill two birds with one stone, which was nice.”

“Yeah,” I said. I looked out at the others playing in the sea.

“Well,” said Amaryllis. She was looking out at the water, same as me. “Either you’re not having fun because there were certain aspects I couldn’t change, like the grains of sand being too large, or the water being seawater instead of fresh water, or there’s something that’s been weighing you down. Usually you’re good at shrugging off the big picture things, no offense, and if there’s something personal, I don’t think I know what it is.”

“Eh,” I said. I didn’t want to talk about it, but if I was going to, now was the perfect opportunity. We were outside of Bethel, away from her constant surveillance. The longer I waited, the worse it would be, and it was pretty typical of how I worked that I would put hard things off for another time, but I had really been trying to be better about it. “Bethel kind of … got handsy with me.”

I hadn’t meant to use a euphemism, and I didn’t realize where I had picked up the expression from, not until it was out of my mouth. It was an expression that Fenn had struck through in her letter to me.

“I see,” said Amaryllis. “How so?” She had always been good at hiding how she felt, when she really wanted to. If I was just listening to the tone of her voice, I would have thought we were having a pleasant conversation about inconsequentialities.

“She propositioned me,” I said. “Back in Li’o, around when I first started classes. She said she wanted to help me with some sexual frustration, and I declined.” I was being overly clinical, I could feel that, but it made it easier to talk about. “Then she came back with that entad of Oberlin’s, and it gave her a physical body, which -- I’d said part of the reason I wasn’t interested was that she wouldn’t really be able to feel anything, or get anything from it, so I guess she thought -- well, anyway, she propositioned me a second time, and I said no, and she kissed me anyway, and I tried to push her off, but,” I really didn’t like talking about it, “I don’t know. I didn’t escalate to violence. She’s stronger than me, and I don’t think she would have hurt me, not in a permanent way,” or maybe I’m just saying that, “but I also thought she would have taken the second or third no as my answer, so.”

So, we had sex, and I pretended that I was fine with it, and I’ve been stepping on eggshells and edited my spirit, and I’ve been feeling like shit about it, and that’s why I’m not as happy as I should be about you trying to make this themed beach outing a success, and it’s why seeing you in a bikini is making me a little bit anxious instead of just horny, not that you would want that, unless for some reason you do.

“Alright,” said Amaryllis. She still sounded completely normal, but I heard a sound and looked down to see her hands, which were gripping the sand. Her knuckles were white.
“I’m sorry,” I said. “I just, I don’t want this to change things between us, I know that’s dumb to say, but I really care about you, and if you think less of me, then I --”

“When was this?” asked Amaryllis.

“Three days ago,” I replied.

“How do you feel about her now?” asked Amaryllis.

“Afraid, mostly,” I said. “Hurt, confused, sick. Ashamed. I’m worried she’ll … I don’t know.”

Amaryllis was staring out at the sea. “When I’m finished with her there won’t be a piece bigger than a splinter.”

“Thank you,” I said. It was strange how much I found warmth in the cold violence. “I was worried that you would think …” I didn’t have a way to finish the sentence. None of my worst thoughts had seemed all that realistic, even as I was thinking them. “We can’t actually destroy her.”

“Like hell we can’t,” said Amaryllis. Her hands were still clutching the small rocks. “I’ve had plans in place for killing her since we first met her.”

“I,” the word caught, “I don’t think she understands. I don’t think that she even knows how I feel about it.” I hadn’t really been prepared for this. I felt relieved that she didn’t blame me, but --

“And if you tell her, so what?” asked Amaryllis. “You think that’s going to solve anything? You think that she’s going to agree, to understand that she hurt you? You think that this is going to help her grow and change as a person? Even if it did, Christ Juniper, she broke trust, and you’ve been miserable for the last three days, I can only imagine, are you -- do you think that you can keep living inside of her, knowing how much she can see, knowing that she might break trust again just because she likes to pull our strings?”

“I don’t know,” I said.

“Shit,” said Amaryllis. She pulled back slightly and allowed her furrowed brow to relax. “I’m doing this wrong, I’m not -- Juniper, I love you and care about you, and I want to support you in whatever way helps you get through this. Let’s get that clear, before anything else. I’m in your corner.”

“I know,” I said, but it still felt good to hear.

“Good,” she replied. “I don’t want you to forget that.” She let out a breath. “You feel responsible, I understand that. But it’s on her, not on you.”

“It’s a little bit on me,” I said. I could see the places where I was soft when I should have been firm, where I might have led her on, the way my no had been a weak one, the fact that there were pros and cons, not just cons. I should have been stronger.

“You said no,” replied Amaryllis. “She didn’t listen. So far as I’m concerned, that’s where the conversation on culpability ends.”

“That’s a hard line,” I said.

Amaryllis nodded. “I don’t think that we should be talking about criminal justice right now. How are you doing?”

“I’ve always hated that question,” I replied. “I got asked that a lot, after Arthur died.”
“Sorry,” said Amaryllis. “I just … I care about you. You’re my best friend. I thought that today was going to lift your spirits, and I didn’t realize that it wasn’t just malaise.”

“Sorry,” I said.

“Don’t be sorry,” said Amaryllis. “It’s not your fault.” She paused. “Do you also hate when people ask you if there’s anything they can do?”

“A bit,” I admitted. “Only because there’s so rarely anything that they can do.”

“You’ll let me know?” asked Amaryllis.

“Can you … just lay with me for a bit?” I asked. I felt embarrassed asking. “I don’t want to talk, I just want to feel, I don’t know, like someone is there for me.”

“Okay,” nodded Amaryllis, answering with no hesitation.

I laid down on the hard sand, moving slowly, and realized only after that this was how it had happened with Bethel. I’d been on my back, pushed there by her, and the memory of it came flooding back. But then Amaryllis lay next to me, and I was able to push the feeling away. Her skin was still slightly wet from the sea, as was mine, and I tasted salt in the air. Amaryllis felt soft and warm, and I did my best to relax into her being there.

“Like this?” asked Amaryllis. She wrapped her arm around me, so that she was holding me close, and I had my arm around her.

“Yeah,” I said.

The brain was a connection machine, linking memories, sensations, and thoughts together, and when something big and important happened, or something that it thought was big and important, it made a bunch of links, strong ones, all at once. It was something that I was struggling with, the way that certain small things brought vivid memories back to me, little incidental things, minor notes that had been threaded into this big tangled mass of what being with Bethel had been like. When Amaryllis laid with me, there was some of that, a sympathy between events that shouldn’t have existed, not if the brain had been doing its proper job, but I had some experience with coping by this point, with trying to teach my brain that no, not everything was about Arthur, not everything was about Fenn, and now, here, not everything was about a single, unwanted night with Bethel.

So after a minute or two, I was able to relax a little more than I had been, and I let the warmth of the sun dry me out while the warmth of Amaryllis soothed me.

“We’re going to have to tell the others,” said Amaryllis, after a long time had passed.

I let out a long, slow breath. “Yeah.”

“I mean, they can see us laying together on the beach,” said Amaryllis. “That alone will probably raise some questions.”

“Yeah,” I said. “It’s … embarrassing.”

“Well,” she said. “If any of them give you less than their full, unadulterated support, I’ll deal with them, okay?” Her head was resting against my chest, and I could feel the movement of her mouth when she spoke.

“I was most worried about you,” I said. “I thought … Bethel is important. Without her, without the
time chamber ... I never thought we should destroy her, but I did think things might get dicey, and it might jeopardize, you know.” *Your dreams. The Republic of Miunun. The future that Cypress had built.*

“Those are problems we’ll have to deal with,” said Amaryllis. “They’re not inconsequential.” She was still for a little bit, trying to find words. “Sometimes what’s dictated by strict utility and what you want in your heart of hearts aren’t always in alignment. It’s a relief when you don’t have to make that trade-off. I want to keep you as far away from Bethel as possible, to keep you safe, to help you work things out, and I’m very thankful that we live in a world where that’s possible, where you wouldn’t be forced to --” she stopped, as her brain caught up with her mouth.

“Endure it?” I asked.

“That was what I was going to say, yes,” said Amaryllis. “But you don’t. There’s nothing that requires it, nothing that even suggests to me that it would be a good idea.”

“I don’t want to kill her,” I said.

“I know,” replied Amaryllis. “Is it okay if I get up?”

“Sure,” I replied. When she moved, it felt cold where she had been.

“Are you ready to talk about next steps?” asked Amaryllis. “Because I know you don’t want to, but if we’re taking action, which I think we are, now is the best time. The tuung are cleared out and in their secondary school, so she can’t use them as leverage. There aren’t people inside her to hurt. Even the bottle is outside her now.”

“I need to tell the others,” I said with a sigh. “I can’t just unilaterally decide.”

“You can,” said Amaryllis. “That’s in your power now.”

“Okay,” I said. “But I would rather get some perspective.” I took a breath and tried to clear my mind, then sat up. The others were still in the water, but I could tell from the way they kept looking over that they were wondering what was going on. I really didn’t want to do this, and I could feel myself shirking back from it.

Amaryllis stood up and waved them over.

“What’s up?” asked Pallida. She had come bounding through the water, splashing noisily to reach us. “I kept asking Valencia, but she refused to tell us.”

“Because I didn’t know,” said Valencia, still making her way forward. She sounded irritated. “I promised that I wouldn’t look at Juniper with a devil’s insight.” She was looking me over though, as though she might still be able to figure it out with her unenhanced mind.

“Is something wrong?” asked Raven. “Should we get battle-ready?”

“Juniper, do you want me to say?” asked Amaryllis. “If you’re uncomfortable --”

“I’d like that, yeah,” I said. It felt like a weight was lifted off my chest. Amaryllis would find the words, and all I would have to do was sit there.

Grak and Solace were the last to arrive, with him carrying her on his shoulders, and he set her down gently on the sand. Rather than standing next to him, she went to go look at the bottle while the rest of us gathered, close enough to hear, but not really a part of the conversation.
“Alright,” said Amaryllis. “Three days ago, Bethel --” she glanced at me, “Forced sex on Juniper. He’s been having some trouble dealing with it, and so far as I’m concerned, she’s crossed a line that demands an immediate and overwhelming response on our part.”

“You’re talking about a war against the house,” said Raven. If she had any personal reaction, she was choosing to focus on the practical instead. Most likely that was a habit she’d learned with Uther.

“Can she hear us right now?” asked Pallida.

“The question is probabilistic,” said Grak. He was looking at me and giving a concerned frown. His words came out like it was a distraction he was trying to deal with, rather than the meat of it. “I ran a test when we got here and found no entad effects save those that were expected. That does not mean she couldn’t have means I wouldn’t be able to detect. Pinhole portals could be anywhere. Long distance viewing would also be undetectable, though the shimmer ward would stop her unless the apparatus were within the ward. There are also more exotic detection methods that might let her discern wards. She would have to have captured an entad for it, then kept it secret from us. How likely is that?”

“Unknown,” said Amaryllis. “She’s definitely hidden capabilities from us before. She had a lot of entads in her during the evacuation, and she might have taken any of them, though I don’t believe we had any entad thefts reported.”

“So she could be listening in on this conversation,” said Pallida. “She could essentially be standing in the room with us.” She looked up at the sky. “I’m not a part of this!” she called. “I agreed to nothing!”

“If you’re not going to be with us, stand to the side,” said Amaryllis.

“I want to hear what you’re planning,” said Pallida. “I’m just saying that I’m not making commitments, not when we’re talking about the house that’s killed a few hundred people for fun and once told me that I had a nice tasting pancreas. She’s monstrously strong.” She gave me a belated guilty look. “Sorry.”

“We’re not planning on going head to head,” said Amaryllis. “Grak, you can ward against her?”

“It’s complicated,” said Grak. “I have said as much in the past.”

“She’ll see any ward against her as an act of aggression,” said Valencia. “She escalates, by her nature.” I’d seen a reaction from her to the news of what happened, and uneasiness, but Valencia had routinely had her body taken over by infernals for the vast majority of her life, and I didn’t know how much sympathy she would have for me.

“Can I request a devil?” asked Amaryllis.

“It’s going to be hard for me, knowing what I know, to doublethink around Juniper,” said Valencia. “I would rather not have to try. It was already hard not to pick up anything, before. I knew that something was wrong, really wrong, I just …” she squeezed her fists. “I didn’t want to betray trust.”

Amaryllis bit her lip. “I understand,” she said.

“It’s okay,” I said. “Maybe you could, I don’t know. Hit me with the full blast, just this once. No therapy though, not yet. Understanding, not alteration.”

Valencia’s eyes widened slightly, then she gave me a quick little nod. There was no visible change in her expression or demeanor when she ate the devil, not that I thought there would be, not unless she
“Okay,” said Valencia, letting out a breath. “Juniper, I could get a little bit more if we talked privately about what, exactly, happened, because I can’t fully reconstruct the circumstances just from what’s been said and from your body language alone, especially because -- I’m sorry, I have to tell the others.”

“I made some minor alterations to my spirit,” I said, before Valencia could. “Mostly so that I wouldn’t have such a strong reaction around Bethel, so she would keep thinking that … that it wasn’t as bad as I found it to be.”

“Juniper,” said Amaryllis, communicating through tone alone that she wished that I had been more forthright, that I had leaned on her more right from the start, that she felt betrayed by it, and saddened.

“He just toned things down,” said Valencia. “He didn’t remove any feelings. I doubt that he would have told you what had happened if he had done a full alteration. Most likely he wouldn’t have said anything if he hadn’t done any alteration at all.”

“I was worried about her reaction,” I said. “Valencia, we can talk now?”

“Yes,” she nodded. “I think that would be best for everyone. Mary, you can talk with the others about next steps? A plan for how we would remove her as a threat, if we decide it’s come to that?”

Amaryllis gave a nod, and Valencia walked over to me, slipping her arm into mine and then guiding me across the beach with her, away from the others.

“I don’t really want to talk about it,” I said. “It’s embarrassing.”

“I know,” said Valencia. “But if you want my help in resolving this in the way that’s best for you, I need to know more. I can operate on body language and implication, but it makes everything more difficult. I understand that you don’t completely trust me, and that I haven’t done enough to regain your full faith, but if I talk to Amaryllis about what you said, I have to filter through too many people. I don’t want room for error, and I know you don’t want that either.”

I was fully aware that she was using a devil to argue against me, and that applied even if she was attempting to ignore the full breadth of what her enhanced social abilities were telling her to say. I imagined that it was like having a solver open while you were playing Scrabble, one telling you all the best words you could make. Even if you resolved to ignore it, it would still show you things that couldn’t be unseen, lines of play you couldn’t be sure you wouldn’t have chosen on your own.

I tried not to care.

I explained everything, reliving it again. It took a surprising amount of time, because I had to go back and explain everything leading up to it, all the minor consent violations that had preceded it, my complicated feelings toward Bethel, the ways I imagined us to be aligned and misaligned. Valencia was patient and asked simple questions with easy answers, having me clarify things for her where it was necessary. She had a pleasant demeanor, understanding and without any judgment.

“I’m pretty sure I’m overreacting,” I said. “She wasn’t … I’m pretty sure that for her, it wasn’t actually, you know.”

“Rape,” said Valencia.

“Yeah,” I said, letting out a breath. “I’m not even sure that’s what I would call it.” I hadn’t, thus far.
I’d kept the word out of my own head.

“You would call it that, if it were someone else,” said Valencia. “The word has baggage that makes it harder for you to deal with it, not easier, so we can refrain from that word if you’d like. It’s my belief that applying a particular word isn’t all that helpful, because we’re not trying to place this incident in a class of other incidents, we’re trying to deal with it in isolation. The semantic arguments that I know you’re tempted to make aren’t actually important or helpful. But if you were looking at a situation that had happened to someone else, especially a woman, you would call it rape. I think we need to be clear on that, just so that you won’t be in such a mindset of denial.”

“Okay,” I said. I didn’t like that little bit she’d thrown in there, about how I would have looked on the situation differently if the genders were flipped, but she was probably right that this was how I saw the world, even if that was just baked-in Midwestern values, not what I would say if I had a moment of deliberation. “Was that enough?”

“Yes,” said Valencia. “More than enough. It was easier to talk about it the second time, wasn’t it?”

“It was,” I said. “Was that … aversion therapy?”

“I don’t know the term,” said Valencia. “But generally it helps people to talk about things in a safe, secure environment with someone who loves them and who won’t judge them in any way. I hope you don’t see that as manipulation.”

“No,” I said. “I think it was helpful.” If the brain was a bundle of connections, then thinking about what happened could either build those connections up or tear them down. Maybe I was a bit muddled on what therapy was and wasn’t, but what I’d really been fearing was that Valencia would say the perfect words to manipulate me into a different state without me knowing it. Maybe it was therapeutic to talk to her, to hear her soft, gentle, understanding voice, but if that was therapy, then I couldn’t fault her for it.

“When I explain things to the others, it will only be about Bethel, not about you,” said Valencia. “But I might say some things that won’t make it easier for you. Would you prefer to stay here while I talk to them?”

“No,” I said. That was barely even a question. “I think I’m doing well.”

“More denial,” said Valencia with a sad sigh. “But I would accept that you’re doing better than you were a few hours ago.”

We walked back to rejoin the others, and once again, Valencia slipped her arm into mine as we walked. I found it far more comforting than I thought I would, but if it was manipulation, or a calculated action with infernal help, I found that I didn’t care too much. Valencia was there for me too. There wasn’t even a whiff of comparison from her, about how she had been literally possessed for most of her life, deprived of any autonomy for even the smallest thing.

“We’ve been talking,” said Amaryllis. She was looking me over, but not asking questions. “Grak thinks that he can accomplish the ward, but there are risks involved in trapping her, and it’s more complicated than it would seem.”

“A ward against a single entad is easy,” said Grak. “But she’s not just a single entad. She takes on the signatures of the entads that she ingests or uses. I would need to ward against all entads, but I do not have all signatures. She may also be holding entads in reserve. Further, size is an issue. And she is a warder.”
“It’s a bad idea anyway,” said Valencia. “I only said that you should think about it so that you would have something to discuss that wouldn’t lead to a conflict.”

“A conflict?” asked Amaryllis with a frown.

“There are differing views on the personal matter which might have led down a bad path,” said Valencia. “If we’re going to have to have that discussion, then I want myself and Juniper to be a part of it, but I don’t think that we want that discussion.”

“What discussion?” I asked. Even the veiled way she was talking was leaving me on edge.

“I think I get what she’s talking about,” said Pallida. “I’m thirty thousand years old, I’ve got my own opinions on things, but I’m fine deferring to the morals and ideas of the moment. And frankly, the house scares the shit out of me anyway.”

“Oh,” I said.

“Hey, look, I’ve got sympathy,” said Pallida. “But --”

“You making your case isn’t going to have good results,” said Valencia.

“Fine,” said Pallida. She shrugged. “Not really a hill that I would want to die on anyway, just had some personal experiences, that was all.”

Pallida had been alive for roughly thirty thousand years, across thousands of lifetimes. She had pretty clearly seen and done some shit, in all kinds of different cultures, among all kinds of species. What, exactly, she thought on the matter of what had happened between Bethel and myself was left up to my imagination, but we continued on before I could imagine the worst.

“So if you don’t suggest that we trap her, or kill her, what do you suggest?” asked Amaryllis.

“We talk to her,” said Valencia. “We engineer a situation in which someone, preferably not Juniper, can communicate clearly and fully with her, to explain to her what she’s done, and to get her to change. It needs to be done in such a way that she can’t simply lash out, but I also think that it needs to be approached in such a way that she doesn’t feel ambushed, conspired against, threatened, or attacked.”

“And how do you suggest that happens?” I asked. “How am I going to go up to her and tell her that she did something wrong in a way that doesn’t make her flip out?”

“Let me handle it,” said Valencia.

“Val, she could kill you,” I said. “And we know that you’re not as good against her, she’s not mortal, and she only shows what she wants to show.”

“I’m aware,” said Valencia. “But so far as I can see, I’m the best candidate. She can’t heal me if she hurts me, and I won’t wind up in the hells.”

“Is that a realistic possibility for someone else?” asked Raven.

“Yes,” said Valencia. Her answer was simple and to the point. “Again, it’s vitally important that we manage how we approach this, unless you really do plan to kill her outright.”

“I don’t,” I said, before anyone else could say anything.

“And I don’t think that it’s good or fair for Juniper to be in a position where he has to defend his
assaulter, so that will be the last word on that,” said Valencia. “He’s emotionally compromised right
now, but even if he weren’t, that would be what he would decide on. Trust me on that.”

“Fine,” said Amaryllis, crossing her arms. “Then what’s the plan you would pick, if it were entirely
up to you?”

“I would approach her alone,” said Valencia. “I would explain how things had happened, from
Juniper’s perspective, and in such a way that she would be most likely to understand the
implications, with a goal of getting her to acknowledge wrongdoing and culpability, both of which
are probably sticking points at the moment.”

“And then what?” asked Amaryllis. She still had her arms folded.

“Juniper and Bethel need to be separated,” said Valencia. “I don’t think there’s any way around that.
I’m fairly confident that if she doesn’t kill me, I’ll be able to convince her to relocate. From there, we
can keep a line of communication open through a number of means, the easiest being Finch’s half of
the sending slate.”

“You think that she’ll handle being put into exile?” asked Amaryllis.

“She will if I frame it right,” said Valencia. “It’s going to be complicated, but I think I’m the only one
who would be capable of doing it.” She was firm and resolute, undercut only slightly by the fact that
she was a short girl in a red bikini.

“You shouldn’t have to risk your life for me,” I replied. “I should be the one to handle it.”

“I don’t have to risk my life for you,” said Valencia. “I choose to risk my life because it’s my life to
do with as I please. If it could be me or someone else, I would still volunteer. That there’s no other
option only simplifies things.”

“I’m worried about you,” said Grak.

“Worry won’t help,” said Amaryllis. “We’re going to erect a ward against Bethel, as firm and secure
as we can, and then be ready to teleport out of here at the first sign of things going south.”
Hollow

Chapter Notes

See the end of the chapter for notes.

Valencia walked across the Isle of Poran in her red bikini, holding a devil in her maw, thinking through the conversation ahead and all the twists and turns it might take. The first step had been to convince everyone that she was fit to go, which had gone off without any real problems, and only very minor omissions and lies to get there. If they had known how high Valencia thought the risks were, they might have tried to stop her from going. It was, admittedly, unfair to prejudice the group’s decision with fabrications and by concealing the truth, but she had a good enough read on the assembled party that she thought they would probably have sided with her anyway, it would just have taken more time to get to that same point. Spending that time would have been worse for everyone involved, especially Juniper.

Juniper had warned Valencia, early on, that having someone like her on the team would mean that various problems would crop up to stop her most powerful abilities from functioning. On the physical side, that meant magics and techniques that could no-sell physical combat ability, or exotic ways of fighting that would make her demonic aptitude less worthwhile, or methods that would stop a non-anima with frightening efficiency. On the social side, that meant people who had extensively trained with the Elon Gar, entads that could conceal thoughts and emotions, or species whose physiology and thought patterns were rare enough or opaque enough that a devil would still have trouble. Over the course of their time together, they’d run into each of those problems, one by one. Bethel seemed like she would be the hardest.

Bethel was unique. She wasn’t just a sapient entad, she was a meta-entad, one who could be influenced by the intelligence and pseudo-intelligence of the entads she consumed or borrowed. Bethel prior to her marriage with Ropey was different from Bethel after the marriage, and during the ‘borrowings’ era, she had been pulling from various entads at various times, some of them with small intelligences of their own, picking entads up for brief commingling and then putting them down again. Valencia knew plenty about that, how a different perspective could suffuse your own, how augments could change the core without it seeming like that was what had happened.

Beyond that, Bethel wasn’t mortal. Nothing like her had ever reached the hells. No devil had worked to torture a Bethel, and the closest analogs weren’t all that close. There were species on Aerb that merged and split in various ways, and certainly there were unique biologies and values that mimicked something similar to Bethel, but nothing that was all of her, all at once. There were demons and devils that had dealt with sapient entads while possessing a mortal, but that was of very limited value given that infernals weren’t interested in them as a general rule, and reliably finding an infernal with that experience was impossible (or rather, very very difficult when access to anything like an infernal directory resided only in the memories of the infernals she captured).

Even if there hadn’t been basic differences like that, Bethel would give away only what she chose to. She assumed human form for reasons of her own, some of which appeared to be practical, e.g. communicating effectively with the mortals inside her, and some which appeared to be affectations, e.g. appearing with a body because she wanted a body. The latter was confusing to Valencia and it undoubtedly represented some unknown aspect of Bethel’s psychology, which was troublesome given that it would bring a greater context to the picture. The best guess Valencia had was that Bethel did want to be a house, but also desired to take part in the act of living within herself, in a way that seemed vaguely incestuous. It was only a guess though.
If she hadn’t had a devil in her, Valencia might have swallowed before crossing the threshold into Bethel’s vision, or steeled herself for what was to come, or done any of a number of things that regular people did when they were about to do something irrevocable and important. Instead, she just passed through the barrier like it was nothing, and then kept going through the other barriers after that without so much giving a sign that she knew they were there. At this point Bethel could kill with lightning, and at that point she could kill with cannonfire, and here she could slice through brain with ease. Eventually Valencia was in through the front doorway.

“Bethel?” asked Valencia.

“Yes?” asked Bethel, appearing right in front of Valencia. “Ah, my little one has an infernal,” she said, when Valencia didn’t flinch back.

“I do,” said Valencia with a nod. Better to get that out of the way now, since the lie wouldn’t be believed later on.

“Any special occasion?” asked Bethel, arching an eyebrow. She was in her human form, the one she’d taken to lately, with proper proportions, though it was the illusion rather than the false body. The illusion was always off in certain ways that others found imperceptible, but which were clear enough to Valencia. Most of it was just peculiarities from Bethel, small little details that were there because she liked them, rather than because she expected anyone to notice. The folds of the fabric in her dress were all decoratively done, with a cosmetic flair that you would never find naturally. Her hair was laying perfectly without being tied down, sprayed, or otherwise secured, in accordance with physics, but not in accordance with probability.

“There was some drama at the beach,” said Valencia. “Devils help me keep my composure and work through things.”

“I thought you weren’t supposed to do that,” said Bethel. She was smiling, as she often did around Valencia. They had a relationship, of sorts, one which was founded on their mutual exclusion from society, though Bethel was a joyful (if mean-spirited) nonconformist, while Valencia would have taken a hypothetical pill to become human with only minor regrets. In some sense they were opposites, Bethel holding significant amounts of hate in her heart, and Valencia the target of hate, but it had given them something to talk about, on those rare occasions when they spoke to each other. There was also some natural distance between them, given that more than a few of Bethel’s magics didn’t work on Valencia: there was no thought-speech, and no spying on dreams.

“I don’t take in devils often,” said Valencia. “Mary doesn’t think that it’s good for my development. I try to just be me, when I can, but it’s not always so easy.”

“And the nature of this drama?” asked Bethel, arching an eyebrow.

“I wish I could pretend to be eager to tell you,” said Valencia. “Can I take a seat?”

“I wish I could pretend to be eager to tell you,” said Valencia. “Can I take a seat?”

“Certainly,” said Bethel. “It feels very good to be empty. Juniper had promised that I would be, once we got back to the isle, but I’d somehow imagined that it was an empty promise. And I have to admit that this spring cleaning has been good. Is the sitting room good for you?”

“Actually, if it’s alright with you, I’d prefer the solarium,” Valencia replied. “I’m not feeling particularly communal. And some clothes, if you could. Your choice. Transport when ready.”

“Ah,” said Bethel, frowning somewhat. “Amaryllis took Sable with her, for all of the Earth frippery. It looks like you’ll have to walk.”
“That’s fine,” said Valencia. “Walking helps me think. I’ll stop by my room, change clothes, then we can talk.”

“Allow me to speed things up,” said Bethel. The door to the entryway opened up in front of Valencia, and she found herself in the room that had been hers since they’d taken Bethel from the pit.

It was, naturally, closely patterned on the dormitories of Hogwarts. Valencia had been very exacting in what she’d asked of Bethel, back when the offer had first been made, and they had gone through a dozen iterations together, with minor tweaks here and there to make it conform more closely to the picture that Valencia saw in her head. The room was dominated by a four-poster bed with curtains that could be drawn closed, and there were souvenirs on the walls, some of them from Hogwarts, the others from their travels and adventures thus far, including postcards from Parsmont and Headwater, along with a dried rose that symbolized the prison Valencia had been taken from (not authentic, sadly). In a case above the mantle, there was a single arrow, one of Fenn’s, in memoriam.

The hardest part had been choosing the house colors. Valencia always thought of the houses as being about their best qualities rather than their worst, and choosing house colors was, in a sense, like making a declaration about who she was as a person, or rather, who she wanted to be. She had finally settled on Gryffindor, which was a safe and easy choice, but also the one that felt most resonant. Valencia wanted to be brave and courageous, a champion for those who had no champion. (In the hypothetical scenario where there were a pill to become human, this would have been the source of Valencia’s regrets, because she was powerful as she was now, and would be powerless as a human.)

Valencia changed quickly, casting aside the bikini and selecting one of the outfits she’d created for speaking to people about letting Juniper touch them. She settled on a beige dress with a knit sweater on top, a casual outfit that would put a person at ease. Valencia had no idea what it was Bethel would think of the ensemble, if anything, but it didn’t hurt to try, and if Bethel was paying attention, it might serve as another signal about what kind of conversation they were about to have. It was better that Bethel was prepared for it, eased into it as much as possible, so it wouldn’t feel like it had come from nowhere.

When Valencia opened up the door to her room, she was greeted not with the entryway, nor a hallway, but the solarium. Bethel was there, in human form, laying across a chaise-lounge. A chair had been arranged next to her, with a small table, on which was set a pencil and notepad.

“This is about me, isn’t it?” asked Bethel. She was looking up at the ceiling, which was painted with all the constellations of Aerb’s multicolored night sky. The top of the solarium was the only part of it without windows, and it could be opened up at will if the weather was nice and whoever was inside wanted a view of the actual night sky.

“Yes, it’s about you,” said Valencia.

“Come, sit,” said Bethel. She wasn’t looking at Valencia, but that meant nothing, because Bethel could see everything inside of her.

Valencia walked into the room, not displaying any of the fear she was feeling. She was as perfectly in control of her physiology as any of the Elon Gar, but even they weren’t necessarily so perfect that they could fool someone who could literally see right through them. Some of it might show through, and Valencia had to accept that. She sat down on the proffered chair, leaving the pencil and pad untouched.

“Now,” said Bethel. “The first question I have is whether you were sent by the group, or whether you snuck off by yourself so that you could get time alone with me.”
“I think we should set that aside for a moment,” said Valencia.

“Of course you do,” said Bethel. “The second question I have is whether Juniper told you, or Amaryllis, or someone else, or whether you simply looked at him and saw the truth.”

“He told Amaryllis,” said Valencia.

“I thought he might have,” replied Bethel. “Hence the mention of drama.”

Valencia sat in silence, waiting Bethel out. So far there was no trace of malice, but the body was an illusion. If Bethel showed malice, it was because she had made a conscious decision to show malice. It was difficult to know whether her current disposition was good or bad, whether the weariness she was displaying was an act.

“I wish that I could undo it,” said Bethel. “If I had known he would be so weird about it, I would never have fucked him.”

“What did you think was going to happen?” asked Valencia. A part of her wanted to make that an accusation, but the infernal part wouldn’t allow that, not for a delicate operation, one with stakes, one with a purpose. The question came out calm and curious, a search for understanding.

Bethel reached up with her hands and created an illusion, adding to the illusion of a body on the chaise. This one was of Juniper, halfway naked, genitals not a part of the picture, laying in bed.

“I needed that,” he said with a happy sigh.

The illusion popped like a soap bubble. Beneath it, Bethel stayed silent.

“And why do you think that it went wrong?” asked Valencia.

“I didn’t understand him well enough,” said Bethel. “I didn’t understand how much his personal history would inform his reaction.”

“He said no,” said Valencia. Again, she had to reign back the venom and the accusation that would have colored the statement if she were reading from a script. “Did you think that you understood him better than he understood himself?”

“I don’t know,” said Bethel. “I supposed that he would have displayed reluctance no matter what, because to him it would be a commitment, rather than something transient. But once I was past his defenses, once we were in motion, I thought that he would appreciate it. I had seen it dozens of times before, the way that humans in particular will pair bond, how the act will bring them closer together.”

“Yes, that does sometimes happen,” said Valencia. “You knew that Jorge and I had sex?”

“You made no effort to hide it,” said Bethel. (This wasn’t strictly true. Valencia had made an effort to hide it from the others, who would have said she was moving too fast, or that she was too immature, or any other objections. Valencia had simply accepted that there was no level of scrubbing and scouring that would hide it from Bethel.)

“I appreciate you not discussing it with anyone,” said Valencia. This line was a test: Valencia had no special knowledge on that score, especially since she had, for the most part, made an attempt to stop using her powers of insight against her teammates (following the Fenn debacle).

“I say very little of what I know,” said Bethel. “Of course, in this instance, it wasn’t very interesting to me. Have you told the others?”
“No,” said Valencia. “Their reaction when I told them I was going on a date was enough to tell me what their reactions would be like when I told them more.” This was a diversion, one that Valencia had embarked on to allow Bethel some room to breathe. The less this felt like it was drilling down to the specifics of what happened with Juniper, the better.

“And what were the reactions of the assembled, when Juniper told them we had sex?” asked Bethel. She was bringing it back to the matter at hand, which was a bad sign.

“We have to talk about how Juniper understood the encounter,” said Valencia.

“Where you and Jorge grew closer, Juniper and I did not,” said Bethel. “Why were things different with your boyfriend?”

That left the most fraught part of the conversation simmering in the background. It wasn’t ideal, but switching back to the previous subject quickly would require aggression, and at any rate, the groundwork hadn’t been laid yet. It would have been better that Bethel got distracted, but so far as Valencia knew, that had only happened a limited number of times in the past, under exceptional circumstances. The vagaries of Bethel’s mind were unknown; it was entirely possible that she was capable of tracking far, far more than a mortal mind could.

“Jorge had reservations,” said Valencia. “He’s always had reservations, about everything. I’m non-anima, raised in an abusive environment, and I’m more powerful than him in several respects. From an outside view, it’s a recipe for disaster. Jorge was smart enough to see that. The firsts, with him, had to be done carefully, tentatively, and with as much of his will and investment as possible.”

Valencia didn’t like looking at her own relationship like this, but here, it was necessary. Her life might depend on the comparison, and she understood Bethel poorly enough that she needed to tell the truth.

“You’re saying that Juniper had no will, no investment,” said Bethel. “And that’s why he’s been acting so oddly.”

“If you want to catch an animal, a trap will do,” said Valencia. “Pit traps, loop traps, these things will catch the animal, and from there you can use superior strength and cunning to keep the animal where you’d like it. Eventually, it will break, depending on the animal, and understand you as dominant, but some element of fear will always be there.” This was a mild lie. A person could be broken and rebuilt more completely than most people knew, but that was infernal business, rather than the mortal world.

“The analogy doesn’t hold,” said Bethel, frowning, but it was a frown of confusion, and while that was projected, it was still a good sign. “I didn’t trap him.”

“Imagine instead that you do things by steps,” said Valencia. “You allow the animal to lead the way. You give it food and shelter, you give it space when it needs some, you allow it to initiate, you respond as if you are as tentative about the arrangement as it is.”

“And that’s what I should have done?” asked Bethel. “You’re saying … Juniper was afraid of me?”

“He said no,” replied Valencia. “You pushed on, because ‘no’ wasn’t the answer that you wanted, and because you thought that it was a false no, one that was a product of his prudish upbringing and nonsensical moral stances, or his ill-fated pining after Amaryllis, or his sorrowful longing for Fenn. You pushed on because you had a human body for the first time, and you were experiencing sexual desire and sexual pleasure for the first time, and it would have been better if he had said yes, rather than no.” This was dangerous guesswork.
“I would never hurt him,” said Bethel. “He knows that I never would.” There was no doubt in her voice. It was pure conviction, an unnatural iron defense that would never naturally come out of a person except about the most obvious and plain facts. This was, of course, a projection, what Bethel wanted to be heard. Valencia was banking on it being false confidence.

“He doesn’t know you wouldn’t hurt him,” said Valencia. “When you pushed him back onto the bed, he was thinking about what escalation would be like, if he fought harder, if he brought his powers into the mix. If he used still magic, you could have countered it, if he struggled, you could overpower him, if he screamed, you might cut his vocal cords. He had Prince’s Invulnerability, but you could have wiped it away in an instant. If you had wanted to, you could have unmade the door to his room and locked him in there, never to see the light of day again unless you willed it, unless he did as you told him to.” Valencia’s cadence was carefully calculated to have a sense of urgency, which might help Bethel find some empathy.

Bethel was silent. She simply stared at the ceiling. The illusion was still ‘alive’, still simulating breathing, blinking, and doing the small movements that people couldn’t help. As illusions went, it was very, very good. Valencia simply waited, hoping that she hadn’t made a miscalculation. She could have gone longer or shorter, and some of what she’d said had been a fabrication, things that Juniper hadn’t said, but might have felt.

“Like I had yanked a rabbit up by the scruff of his neck and placed him in a cage,” Bethel finally said. The verbalization was slow and deliberate, an attempted framing of the facts. “But he enjoyed himself.”

“He did,” said Valencia. “But for a human, and most of the other mortal species, physical pleasure is sometimes distinct from psychological pleasure. The fear response and arousal response follow many of the same pathways, using the same internal mechanics. It’s unclear to me, from what he’s said, whether this was a feeling that grew with time and had been steadily polluting everything, or whether it was true dissociation. The matter is also complicated by his newfound ability to think through two things at once.”

“Fuck,” Bethel swore. She sat up from the chair she’d been reclining in. “He should be the one here, telling me this.”

“He’s afraid of you now,” said Valencia. “Over the last few days he’s been thinking of every threat you’ve ever made against him, every description of murder and torture you’ve regaled him with, and it’s steadily been poisoning his opinion of you even more than it was right after you had sex.” Valencia elected not to call it a rape. That would inevitably bring about a semantic conversation which she didn’t want to have, one which wouldn’t prove fruitful.

“How do I fix it?” asked Bethel. “What words do I need to say in order to make things right? Or I’ll have you do it. You say the words to him.”

“There are no words,” Valencia lied. “It’s going to be a process, and by necessity, it’s going to be a long one. I’m going to help, that’s why I’m here, but for it to work properly, you’ll need to build up trust, which is never easily done. Worse, you will have to place yourself in a position of submission.”

“I didn’t exercise power against him,” said Bethel. The word ‘submission’ had been a gamble, one that Bethel was obviously reacting against. “I didn’t hurt him in the slightest, he had Prince’s on, I couldn’t have hurt him without deliberate intent. I never suggested that I would, and I never said that I would.”

“When people exercised power against you, was it always with a threat?” asked Valencia. “Sometimes they would tell you to do things, and you wouldn’t know how they would react if you
said no, even if you said no in a deferential way, even if you had your own good reasons, even if you were perfectly compliant in all other ways."

“I am not like them,” Bethel growled. Again, it was with an unnatural force and a completeness of confidence that was too perfect.

“Power is the same across the face of the hex,” said Valencia. “Coercion, consent, these are complicated subjects, and I would never suggest that any two situations were exactly equivalent, but the structures of interaction often have recurrent notes, unpleasant melodies that echo each other.”

“You were sent here to manipulate me,” said Bethel, eyes narrowing.

“I sent myself here,” said Valencia. “The others urged me not to go.” This was a dangerous point, it was always dangerous, a consequence of people knowing who and what she was. A lie would have served her well here, or a deflection, but Valencia was attempting the long play, not the short one, not the one that would let her leave to safety.

“And what course of action did they propose instead?” asked Bethel.

“It was between destroying you, capturing you, or fleeing entirely,” said Valencia.

“For this one thing?” asked Bethel. “After all that I’ve done for them?” She stood up and began to pace, another affectation, another projection, but that was a good sign, because it meant she wanted to portray her mood. She wasn’t shutting down. The moment of danger would be if or when there was no open line of communication. “It was Amaryllis, wasn’t it?”

“Primarily, yes,” said Valencia. “You’ve done a very good job of putting her on edge. For her, this is the watershed, the moment that distinguished between being able to live within you, and not. She could put up with threats, so long as those were idle threats, and violence, so long as it was directed against the right targets. I wouldn’t frame it as her waiting for a reason to act against you, I would frame it as an eventuality that she had hoped would never come.”

“And yet you’re here,” said Bethel. Her voice was tight. “They’re not going through with their initial plans. Amaryllis wouldn’t have sent a hostage.”

“No, she wouldn’t have,” said Valencia. “I’m here to talk. I want to explain things to you, in the hopes that with time, we can mend things.”

“Is there a trump card?” asked Bethel. “Is there some weapon that they plan to use against me, some method of killing me that I wouldn’t have thought of?”

“You shouldn’t ask me questions that you don’t expect an honest answer to,” said Valencia. “I don’t think that’s fair to either of us. But the answer is no, they don’t have a weapon. Grak can ward against you, with difficulty and uncertainty, but you knew that.”

“I want to talk to Juniper,” said Bethel. “I want to speak with him.”

“It will take some time before he’s ready,” said Valencia. “Imagine him as a mouse you caught in a cage. He might come back, once he’s been let out, but he’s afraid for the time being, and will be for quite a while, especially if you’re in a position of power over him, which you are just by being yourself. And because he’s a person, not a mouse, he’s feeling other unpleasant things as well, betrayal, shame, guilt, embarrassment, none of which will be helped by talking to him, not now.”

“You’re speaking of separation,” said Bethel. “You’re talking about long timescales.”
“Weeks,” said Valencia. “Maybe months.” She was hoping she wouldn’t regret that in two months time. “I don’t think it was severe enough that reintroduction is impossible. I even think that you could be friends again, but the path forward takes time and care. It can’t be rushed, not if we want a good outcome.”

“You’re suggesting that he lives somewhere else,” said Bethel, crossing her arms.

“I am,” replied Valencia. “More to the point, I’m suggesting that you leave the Isle of Poran.”

“And this was the plan all along,” said Bethel. “This spring cleaning, the promise that the tuung would have a place to go for a week, even this time away on the beach, even the locus being removed from me.”

“No,” said Valencia. “Juniper wanted a private conversation with the locus. I suspect that he told it first, before he spoke with anyone else. The tuung were temporarily removed for your benefit, at your request. And everything else was simply kismet.”

Only that last part was a lie. Valencia had known something was wrong with Juniper, and suspected that it had to do with Bethel, and she was the one who had arranged everything else, acting as deftly and silently as she could to poke and prod Amaryllis in the right ways. It was just shy of being a violation.

“Did you think that I would do well, away on my own?” asked Bethel. “Did you think that I would accept that punishment, even if I accepted that I’m responsible for what Juniper is feeling from moment to moment?”

“You won’t be alone,” said Valencia. “I’m planning to go with you.”

Bethel stopped her pacing and turned to Valencia. She was suspicious, or choosing to display suspicion. “Why?” she asked.

“Because I consider you a friend,” said Valencia. “And I consider this a tragedy. It would have been preventable if I had been watching closely, and more easily mitigated if I had caught it right after it happened, so I share some portion of responsibility. I want to help, and I want you to be my home, even if you can’t be a proper home to the others for a while.”

Bethel was still for a moment, her face displaying no emotion, and Valencia carefully kept her features controlled as well. Death could come at any moment, and if it weren’t death, then it would likely be torture or maiming. Bethel was less likely to be violent to someone who couldn’t heal back from it, but she was a killer as part of her self-identity.

“He thinks that I hurt him,” said Bethel, after some time had passed. “They all think that I hurt him. It was his choice to be hurt.” Some uncertainty had finally crept into her voice. More importantly, it was displayed uncertainty, an uncertainty felt internally and shown to a second party.

“No one chooses to be hurt,” said Valencia, and though that wasn’t even remotely true, it was true enough that she didn’t think Bethel would argue. “The question is whether that hurt could be foreseen or not.”

“And you think that I’m culpable,” said Bethel. Something in the illusion had changed, subtle little differences that together created an impression of malice. Bethel’s eyes were more sunken, the shadows around her darker and deeper, and the incidental folds of her clothing created points, almost spikes, rather than the aesthetic curves they’d been before. Her fists weren’t quite clenched, but she was showing strain in the muscles of her hands. More than that, the atmosphere of the room had
changed, the lighting lower, the atmosphere colder. If you didn’t know better, you might attribute that to a passing cloud.

“He said no,” replied Valencia. “Your culpability began when you decided that you knew better.”

For a moment, Bethel seemed as though she would snap, but that moment passed, and she relaxed. “You can undo it,” she said. “Repair it, rebuild it.”

“I can,” said Valencia. “It will be different from before, and it will take time.”

“Then tell me what needs to be done,” said Bethel.

Valencia nodded. She had to pretend that she knew more than she did, that the path forward was clear instead of muddy, but she’d muddled through this much, half-blind and afraid, and if she could do that, she could make it through the rest. That was the Gryffindor spirit, after all. “We leave now,” said Valencia. She finally picked up the pencil and paper from the little table. “All I need to do is say my goodbyes.”
