“That is Caviw!” he stated surprised, as he recognized the female voice that sounded rather angry.

“Caviw?” Wesley repeated curiously. Jim’s eyes became wide as saucers.

“What is she doing here?” He glanced at Bob. “She belongs to The Shadow.”

“One way to find out what the lady wants,” Wesley commented wryly and left the room. In the main part of sickbay stood a Caitian woman with fire-red hair. She planted her fists on her slender hips and glared at McCoy.

“If I say I have a stomach ache, then…”

“Miss, my little machine here shows that you are in perfect health! You told me you were aboard the space station we dragged away. Maybe you took in a bit too much smoke, but my instruments don't see it. You're healthy, end of story!” the CMO said sternly before addressing a Redshirt. “Please escort the lady back to the Engineering and…”

“But my stomach hurts!” Caviw hissed, ignoring the curious and baffled gazes of the other patients who lay around her in the beds.

“Perhaps your upset stomach is the result of your concern for Mr. Sunrise and Captain Kirk?” Wesley offered. He watched the catlike woman whirl around to face him, and he offered her one of his winning smiles. Closing the distance between them, he offered the lady his hand and winked at McCoy. “May I introduce myself, young lady?” Bob began, but before he could continue, he fell victim to a full load of Caitian charm.

“Commodore Wesley!” Caviw called; she took the baffled officer’s hand in long fingers with nails
sharp as claws, and looked up at him like a lost little girl. “I’m so glad you’re here. Finally a gentleman. I want…”

“Miss, may I ask what you’re doing on this ship and how you got here in the first place?” Wesley interrupted her; his cheeks flushed as the Caitian's tail wound around his left arm. She stood far too close.

“I accompanied Mr. de la Vega-Martinez, who is in the Engineering. I negotiate the terms of Mr. de la Vega-Martinez's agreements to make sure he is fairly compensated for his sales. During our walk through Engineering, I felt nauseous. Mr. Scott offered the service of this sickbay, and I took him up on it. This nice gentleman there,” she pointed at the Redshirt, “brought me here, but the doctor…”

“Can’t find anything because she is fit as a fiddle,” Bones cut in. “I agree, Commodore, her abdominal pain is certainly due to the two troublemakers next room. So is mine!”

“What?” Caviw snarled. “I made no pretense. Just ask Galven! He helped me before Mr. Scott…”

“Do I understand you correctly, Miss? Mr. Galven is aboard, too?” Wesley asked. The Caitian nodded hesitantly. He smiled. “Now that’s a spot of luck I wasn't expecting. I was just about to contact him.” He stepped away to the intercom and hailed Engineering.

“Engineering, Allistor here,” a voice answered.

“Engineering, this is Commodore Wesley. Mr. Allistor, does Mr. Scott have visitors?”

“Affirmative. Mr. de la Vega-Martinez and Mr. Galven are here, Commodore,” Spock’s voice came through the intercom as the Vulcan replaced the young technician. “They asked for permission to come aboard to speak with Mr. Scott about some needed equipment. I have accompanied them since their arrival.”

“Excellent, Mr. Spock. Please inform Mr. Galven that I need him in med-bay as soon as he is available.”

“Is this about Miss Caviw?” the first officer wanted to know and Bob smirked.
“No, it’s about two other troublemakers. Please tell Mr. Galven that his presence is needed. Wesley out.” He turned around, saw McCoy studying a readout of a med-bed’s monitor, and then he realized that the Caitian woman crept away. “Miss Caviw?”

The catlike female stiffened at the Commodore's voice.

“Please give me your communicator before you visit Mr. Sunrise,” Bob said walking towards her. With big, innocent eyes she looked at him.

“But sir, I didn’t want to…”

“Lady, my hair may be grey, but I’m not senile. You’re here to ‘help’ Mr. Sunrise by giving him a communicator so that he can be beamed away the moment a signal is sent.” As Caviw opened her mouth to protest, he added, “Shall I contact the bridge to see if there is a ship near us that belongs to your little group – or maybe I won't see it. Our mutual friend is quite the genius, isn't he?”

Caviw gave up her little act and glared angrily at him. Everything had run smoothly until now. Diego had managed to get her and Galven aboard the Enterprise telling the cautious first officer that he had hired the two former members of The Shadow to help him with the extra work Starfleet had brought him since the war held the Federation in its grip. Meeting Mr. Scott in Engineering, just minutes later, the Caitian feigned stomach pain, whereupon she had been brought to sickbay. She planned to find out where Khan was being held so that she could send a signal to the _Flash_. Ritek would then beam the Augment away. The whole, clever plan had been fouled by Commodore Wesley. The man was sharp, yet she knew that she couldn’t let ‘Léo’ down.

“I will not let you arrest him!” she hissed, and McCoy grimaced. Why, for the love of God, were so many people hell-bent on keeping the enhanced bastard out of harm’s way? This man was trouble incarnate – something he and Kirk had in common!

“Who says I'm going to arrest Mr. Sunrise?” Bob asked; he watched as confusion marred the pretty face in front of him.

“You won’t?” Caviw gasped, and Wesley shrugged.

“No, I won’t.” He nodded towards the storeroom. “If you want to visit him, I have no problem with that – the doctor on the other hand... I'd only ask that you be sure to keep it short. Both men need their rest. They've had it rough of late.”
Staring just a second longer at the older Terran, Caviw chewed at her bottom lip with her sharp teeth and finally stepped around him. A warm hand caught her arm. “Your communicator, please!” the commodore said once again, and with a furious growl the Caitian pressed the little device into his free hand. “Thank you, Miss, I’ll return it to you when you’re done with your visit,” he said politely.

“So he isn’t free!” she snarled and Bob sighed.

“He is free. He is choosing to stay, and the captain will have him. It’s important that he remain aboard the Enterprise. So, please no rescue attempts! It would do him more harm than good.”

Giving him another glare, Caviw strode gracefully away and several moments later stepped into the storeroom where the men she sought were held. Shocked, she looked at Kirk and Khan. Both men were still pale; damaged capillaries etched into their features made them look sicker than they were. “Oh holy tree!” she whispered. “How are you gentlemen doing?”

“Better. Thank you, Caviw,” Nien said quickly. He continued. “Thank you not only for your concern but also for your willingness to rescue me.” He saw her blush and added, “I am grateful for such good friends, but Wesley told you the truth. I’m in no danger here.”

The Caitian’s tail twitched. “You heard? Of course, you did,” she answered her own question. “Your hearing is as good as that of my people, maybe even better.” She saw his relaxed features tense and decided to tell him the truth. “I… We know,” she said softly.

Those blue-green eyes pierced her, and she stepped back just a bit. “You know what, Caviw?”

She took a deep breath. “We know what you are and who you are, Khan Noonien Singh.” She dipped her head in respect and to show that she brought no malice with her. “We have known for several days now. That’s the reason Galven and I are here. We thought that Wesley would recognize and arrest you, and so we wanted to help you escape.”

The Augment stared at her bewildered. “You… You know? And you came for me anyway?”

Promptly, Caviw recovered herself. She planted her hands on her hips and shot back, “Of course we want to help you. You’re one of us now – our friend! And we don’t let our friends down! It doesn’t matter what you are. Look at us – you’re one of us.”
Jim smiled at those words and looked at an utterly baffled Augment. He blinked quickly then answered, “If you know my real name, then you must know my past. You…”

“Ritek was an unwilling witness to Kirk and McCoy’s conversation; he figured out that you’re an Augment – ‘Khan’. There are no Augments, so I did some research and found out about you. We know that you are the result of mans’ attempts to create super-humans, that you became a ruler in your time. Man came to fear their own creation and that fear resulted in a war on Earth. You and some of your kind escaped in a sleeper ship.” She looked firmly at him. “And it doesn’t matter to us! We know you as a trustworthy, honorable, and loyal comrade-in-arms, now even a friend. You are dangerous, this much is clear, but so it goes with the warrior. You listen to your heart, as the Terrans say. You never gave us a reason to mistrust you; you rather impressed us with your fiercely loyalty, and your sincere love for our young hero here.” She nodded in the direction of a blushing Kirk. “That is far from evil. So we came for you.”

“Nien is not a prisoner here; he is free to go. He is choosing to stay,” Jim said touched by the regard The Shadow had for his beloved.

Khan nodded in affirmation at Jim’s statement. He still had trouble, though, comprehending the fact that his comrades knew who he was; they never let on but remained loyal to him; continued to treat him as they had from the beginning – with tolerance, respect, and friendship. He moistened his lips. “Caviw, you do not know Earth history. We are accused of…”

“Jeff is familiar with your planet’s history, as is Ritek. Both agreed that your genetics and your past make no difference in our regard for you. You are our friend; that’s that!” She bounced on the balls of her feet.

Jim beamed at those words while he looked at his mate. “Times have changed, don’t you think so?”

“Quite,” the former dictator whispered, still astonished at the turn of events.

That moment, the door opened again revealing Galven and Wesley. The Tellarit had glanced at the two men and Caviw before stepping into the room; the commodore followed him.

“Right,” Wesley said businesslike. “Well, everyone in the boat, seems to be – In the same boat. Excellent.” He smiled at his poor pun, and then pointed to the empty chair still between the two beds. “Please, Miss Caviw, have a seat. We have important matters to discuss.”
An hour later, everything was settled. Galven agreed to work with Khan. He would be the public face until it was safe for Khan to be so. Wesley learned that the leaders of The Shadow did discover their friend's background; none turned away from Khan. They continued to regard him as a friend and told the commodore as much, and that he made the right decision. This man had earned his second chance.

Wesley looked around at the unlikely alliance. Mostly at its two newest members; he was taken with their fidelity toward one another. He knew that Jim Kirk would do everything in his power to drag the super-human’s neck out of the noose he was caught in, and if Wesley didn’t want to lose one of the most promising Starfleet captains (and he damn well didn’t), he would have to help his protégée. Besides, having the Augment as an ally was hundred times better than having him as an enemy!

As their discussion neared its end, the door slid open revealing a rather irritated CMO, who stood at the threshold before entering the crowded space. “I’m sorry to disturb the coffee klatch, but there are patients here who need rest! So if the lady and the gentlemen could conclude this panel discussion, I'd appreciate it!”

Jim smirked inwardly as he caught Bob Wesley’s astonished expression; Galven laughed, sounding a little bit like a pig with hiccup, and Caviw snickered.

“I beg your pardon, Doctor,” the commodore found his voice.

McCoy sighed. “I know that our ‘friend’s’ presence here gives us reason enough to talk, but this is a sickbay, and both Captain Kirk and Mr. ‘Sunrise’ are still far from peak health. So unless the fate of the Federation depends on this little chat, I must insist you leave the patients alone now.”

Bob looked at Jim. “Is he always like this?”

“When it comes down to the well-being of his patients, Bones goes from ‘simple country doctor’ into some combination of hyena, a warrigul and a le-matya. Or – yes, he is.”

Wesley shook his head, half amused, half irritated. “And there I thought my CMO was bad.”
“Oh no, Bones set that bar,” Kirk deadpanned; he caught another dark glare from McCoy.

“Be careful, Jim, you’re still healing. I can always help it along with a few hypos.”

Kirk’s eyes widened. He hated hypo-sprays! “You wouldn’t dare!”

“Try me!”

“I’m the captain here!”

“And I’m the CMO treating the captain!” Bones replied wryly.

Wesley chuckled quietly. “Before he makes good on his threats, we should conclude.” He looked at Kirk and Khan. “You two will hear from me as soon as possible. Mr. Galven, we will remain in contact. I’ll give you my private frequency, so if something is off, even by a little, you can hail me.”

His gaze found the Caitian woman. “Miss Caviw, I don’t think I have to remind you how important it is to keep silent about.”

“Of course, Commodore,” Caviw answered giving him a bright smile. She was glad – relieved even that the staff officer chose to protect ‘Léo’. Neither Galven, nor she had the slightest idea what had gone on between Khan and Starfleet or this Section 31. Kirk, Wesley and even Khan chose to avoid the topic for now. “Get better, white tiger,” she smiled at Nien, who frowned at this new nick-name.

“White tiger?” he asked confused and earned another blinding grin.

“Bright white, deep black and blue-green eyes, combined with grace and strength,” the Caitian answered. “You understand?” Winking at him, she the Tellarit left it. Yet Caviw knew that as much was said as went unsaid; a gut feeling told her that the Augment would need them again.

Bidding their farewell, Galven and Caviw finally left the room followed by Wesley, who wished the two patients well before ordering security to escort the visitors back to the Engineering; returning the communicator back to Caviw. Afterwards, he made a few more sick-bed visits, asked about the injured’s well-being, and offered comfort and thanks for a job well-done. Usually, that was Kirk’s duty, but seeing as the young captain was still bed-ridden and Spock was in Engineering, Wesley took it upon himself to acknowledge and encourage the injured crew members of the Enterprise as well as those rescued from the space station.

As McCoy finally returned from the next room, Wesley stepped to him and murmured, “I have to
Bones nodded and led the commodore into his office; he locked the door behind them, and then hailed Engineering. Upon hearing that de la Vega-Martinez-Martinez and the two other civilians had been accompanied to the transporter room, the two men waited only a few minutes before the first officer stepped into the office. He was tense; his normally impassive face held a hint of uncharacteristic uncertainty.

Wesley pointed to one of the visitor chairs. “Please have a seat, Mr. Spock. You too, Doctor.” As soon as the two men obeyed, he took a deep breath. “Gentlemen, what I have to tell you now must be kept secret – a secret between us three, Jim Kirk and Mr. Singh.” He looked from one to another. “I’ve learned much surrounding the circumstances that led to the disaster last year with Khan; as such he is under my protection.” He watched the Vulcan raise both his brows as McCoy gasped. “I know that you have your own history with Mr. Singh, but justice must be done for him as well as his victims. And that is exactly what is going to happen.”

“Khan will never agree to go to trial,” Spock said. “He is trying to trick you, sir, and…”

“Spock; Jim, Mr. Singh and I came to an agreement – an agreement that serves all sides well. I don’t want to go into details. It’s up to your captain to explain. Still, you should know how we plan on proceeding in the near future so that you can support your friend and captain. Jim's career and freedom are at stake as is my own – and Mr. Singh’s life and future.” He sat down on the second visitor chair. “Listen…”

TBC…

Chapter End Notes

Well, Bob Wesley certainly is a man of honor – and of compassion. He understands that cruelty can lead to another cruelty, and that justice has to go both sides. Otherwise he wouldn’t have taken Khan under his wing, too. Of course Bones and Spock will have to accept the unpalatable compromises, which have been made, and it will be hard for them.

In the next chapter Jim and Khan will be alone together for the first time after the incidents in the space station, you’ll meet Barnet again (and also Kor), and the senior officers are worrying still their heads off for Kirk’s newest friend (except for Scotty, who is still marvelous unaware of ‘Sunrise’s’ identity, what will change later).

As always I hope you liked the new chapter and I’m dying to learn of your thoughts.
about it.

Have a nice start in the week.

Love

Yours Starflight
Anger and confusion

Chapter Notes

Hi my dear readers!

Sorry once again for the delay, but in the moment spared time is a rare thing. I hope it will be better in the future, because there is still a lot to come yet within the story.

Thank you for the comments and kudos. I’m always happy to realize how many people are reading my story.

After Bob listened more to his mind and heart than to the rules, Jim and Khan are temporary off the hook, but only concerning the authorities. Jim is going to have a lot to explain to his friends and members of his crew, while our Augment must find his place within the little world of the Enterprise.

And there is still the war. In this chapter you meet Kor again, but also Barnett – and two other admirals, who are following their own plans.

Have fun,

Yours Starflight

See the end of the chapter for more notes

Chapter 36 – Anger and confusions

Wesley, Caviw, Galven and McCoy left; Kirk and Khan were finally alone for the first time since the life threatening events aboard the space station – alone and relieved for the Commodore’s support. And Jim’s. Nien trusted Jim as he did his own family, but he had been uncertain how Wesley would react. Instead of prison, the Augment was shown the path to justice, and for that he was grateful.

Kirk was happy because of the turn of event. A significant burden fell from his shoulders, though he knew that the road was tenuous.

But roads, trials and patents were not all that occupied the mind of the young captain in the moment.

He hurt. He felt nauseous; his head felt ready to split as did his throat. Residual chills lingered in every bone and cell of his body, and he was unable to rest. And if he could, his mind wouldn’t let him. There was so much to say to the man in the second bed – to the man who saved him again, who
held him, who loved him! Jim didn’t speak Hindi; still he had caught the word pyāra. Nien had whispered it to him just before the Klingons opened fire at the orbital station. There was no doubt what the Augment had voiced. It echoed Kirk’s own words.

I love you…

These words were surely most important to the one intended, but Jim Kirk was unprepared for how they would affect him. He lacked experience and was unprepared for the depth in which they would reach down into him. Those words had never been directed at him before; not like this. He'd heard it from his mother none too often, and he knew that his friends loved him as well. But it was quite different from what he and Nien shared. Hidden in its meaning was the sentiment that life held as a new purpose. Before, Nien lived so that others might live. Now he lived that he might have life with him – Jim.

This made the young captain almost tremble. Love like this made him want to weep and laugh. He wanted nothing more than to walk to the other bed and take his mate in his arms. The desire for nearness grew until resistance became impossible. He looked to Khan who lay in the opposite bed. He was tense; his eyes were closed. Kirk sat up and pulled the blanket away.

Instantly chills quaked through his body, but he was willing to endure it; warmth in the proximity of his lover called him like a siren’s song.

The quiet rustle of the bedclothes and the clacking of the captain's teeth were enough to wake the Augment’s attention. Frowning, Khan lifted his head as he watched Jim carefully swing his legs over the bed’s edge. “What are you doing?” he asked; his voice strained painfully around the words. He should have healed by now. Apparently the toll exacted on his body had finally exhausted his abilities.

“You are much too far away,” Jim replied roughly. The former dictator sat up.

“Your hip was dislocated. You can’t take a single step without pain, so do not walk,” he said. The lines furrowed his brow as he saw Kirk make no move to stop.

“Then I’ll hop on the good leg.”

Nien groaned and slipped out of bed. “You’re the most stubborn, unreasonable, and reckless human in the whole of the universe!”
“Love you too, Tiger!” Kirk grinned; mirth sparkled in his gaze.

Rolling his eyes, the super-human walked slowly to the other bed. The bio-scanner on his med bed sent an alarm without Khan there to monitor, yet the former dictator ignored it. Carefully, he sat down beside Jim who took one of his hands in his own. The simple gesture was enough to soothe the young officer’s heart and mind, but soft tremors continued to rock his body. Kirk felt as though he were locked in a freezer. It didn’t slip Nien’s attention.

Gritting his teeth against the pain in his arms and shoulders, he drew up the blanket with his free hand and wrapped it around them both. Their bare feet stuck out from under their gowns exposed to the warm, dry air; yet it wasn’t enough to soothe the coldness in their bodies.

Jim could tell that his mate tried to mask the discomfort he felt. He asked worriedly, “Still in pain?” Khan murmured something Jim couldn’t understand, so he added, “I don’t speak Hindi, love; English, right?”

The blue-green eyes looked at him, and a hint of a smile played around the Augment's bowed lips. “Do you have the slightest idea how much your concern means to me?” he whispered.

Jim’s own sky-blue pools shined. “I am always concerned about you. I'll stop, maybe, when you’re healthy and out of danger,” he answered tenderly.

“Then you know how I feel, when you’re jump head-first into the dangers of space,” Khan replied softly; he gently squeezed the younger man’s fingers. Jim caught the reference to their flight toward the Vengeance. Khan's gaze became somber. “I almost lost you – again!” He felt his mouth going dry. “On the space station as the hull began to split apart, I felt your heartbeat slow.” Fighting the burn in his shoulder, he pulled his hand from Jim’s fingers and wrapped his arm around his beloved. Resting his forehead against Kirk’s, he whispered. “You were dying – and there was nothing I could do to save you this time. I held you close, tried to warm you, but…” He closed his eyes for a moment, and as he opened them again, Jim saw the tears that didn’t fall, but they did give away the Augment’s inner turmoil. “I can’t lose you, James Kirk! Ever! And one thing more. If we should face a no-win situation again as we did on Turkana, never – never ask me to end your life. Not after I’ve held it in my hands and begged for it to stay with me.”

Jim’s eyes widened as he realized how his desperate plea made not so long ago still troubled his lover. But before he could say something, Nien added, “You’re my mate; a part of me now. Not just in blood, but so much deeper than that. Your soul is in mine, and I am yours. Killing you would shred the remains of me. A suicide of sorts.” He pulled Kirk closer to him. “Those moments that I felt you dying in my arms were the most horrible of my life. I have lost enough people close to me –
brothers and sisters. I will never stop hurting because of it, but time has drawn out most of the venom. Your demise would rip me open – bleed me of my very life. I felt a sword pierce me through as life stole out of you. I never want to feel it again. If death ever comes to take you from me, I will follow you. My body might continue to function, but existence would be just that; life – _living_ would cease.”

He took a deep breath as continued to reveal himself to the younger man; he knew the outpouring of his heart was safe with Jim. “I was more broken than thought when I came to your apartment that night in San Francisco. I realize now how shattered I was – now after you mended me. You healed my soul; you made it whole and gave it new life.” His gaze intensified. “So promise me – _promise_! Promise you will temper your recklessness. I have lived for my people, but I want to live for myself now – for the joy of it, loved by you.”

Jim gulped, but he couldn't swallow the lump that threatened to spill in a sob from his throat. Never before had anyone poured themselves into him; never had he meant so much to one person – been the center of another one’s life. And never has another meant so much. Kirk realized the moments aboard the orbital station had traumatized his beloved in a way that not even Marcus had. He saw the pleading in Nien’s eyes – the ocean now a storm of emotion. Jim closed his eyes and breathed the ever-familiar, sweet scent of his mate and felt Nien’s thumb draw circles on his waist. He understood now with the greatest of severity Khan’s biggest fear. He feared losing love – being left unmoored in this time after he had just found his anchor.

Kirk and Nien had much in common, but one thing in particular stood out – certainly not a pleasant thing. They had both been left behind by those they loved more often than they cared to recall. Whether by death or desertion, they had mourned for those closest – those gone. The fear that the future would strike one or the other down hung over them like the sword of Damocles.

And after all the Augment had done for him, and all that he meant, there was only one possible response. “I promise,” he said softly, knowing that Khan needed the reassurance as he did. “I promise. I promise to take care, that I may take care of you.” He brushed his mouth over Nien’s lips. “I promise that I will never leave you – not of my own free will. Only Death now, can separate us, and we've given him a run for his money. We don't come easy and we don't come cheap.”

The former dictator took a deep breath and relief washed over his features; Kirk’s heart beat faster with affection.

“The same goes for you, Mr. Super-strong; you keep me – I keep you,” Jim murmured and cupped Nien’s cheeks in his hand, feeling the first traces of stubble beneath his palm. “If you want to beat the shit out of someone threatening me, you, or anyone – no problem. But please don’t try to play ‘catch me if you can’ with a phaser or disarm a bomb by tearing out the detonator.” He saw the beginnings of a grin on Khan’s face and snaked both arms around the other man’s middle. “You are my other half – my mate! It hurts every time I see you hurt. Losing this thing – you, when I just found it... I
can't imagine that pain. I know that you're faster and stronger; still, the chance that just once you're not fast enough is too high, and then I'd be left behind. Left only to exist rather than live.” He placed another tender kiss on his mate’s lips. “I love you, Nien! I never thought that I could feel like this. So – so endless and whole, but here I am – helplessly and utterly pulled to you forever. I promised you I’d never to turn my back on you, but I need you to do the same – please, don’t leave.” He voiced his deepest fears that were so similar to that of the other man. “I love you,” he whispered again before he captured Khan’s lips with his own – properly this time.

Instantly, Nien’s mouth opened and their kiss deepened – not in heated passion, but in tender devotion. Everything their admission had set free rose and poured out in the gentle play of their tongues and the soft caresses of their hands along each other’s body. With every breath they took, they breathed in each other – their very essence.

Pulling the super-human with him, Jim let himself sink back on the mattress, not caring that he was in sickbay. However, something else reminded him that it wasn’t the best idea to get intimate here and now. Lying down sent a sharp pain through his right hip and leg, and he hissed just as Khan stiffened and grimaced. The gash in the Augment’s shoulder and his sore muscles made themselves known, too.

Groaning, the former dictator lifted his head and ended the kiss. The lovers looked at each other, almost pouting, before Jim suddenly smirked. “I can’t walk and you can’t use your arms. Good Lord, what a couple we are!”

Khan chuckled. “Well, if it becomes necessary, you lend me your arms, and I will give you my legs.”

“That'd be a sight,” Kirk grinned. “You standing behind me and telling me what to do with my arms, or I can climb on your back and you do the running.”

The Augment’s eyes widened, then he began to laugh, as he imagined the description. He lay down beside Jim. “I think your doctor-friend would order a complete psychological evaluation on us both.”

“He'll do it anyways when he figures out we're a bit more than friends.” Kirk sighed. “I'm so not looking forward to that talk.” He turned onto his left side to face Khan, raised a hand, and carded his fingers through his beloved’s hair. “But he's got to know the truth – I just don’t know how to tell him that you, of all the people in the universe, are the love of my life.”

The last words sent another wave of warmth through the Augment. “Perhaps he already assumes as much,” he suggested, relishing in the tender gesture of his lover.
“You think so?”

Nien had pursed his lips before he spoke. “He is a very good doctor, highly intelligent. He figured out my identity by himself, and after he found us asleep in one bed he likely put two and two together.” He frowned. “How did it come that you were in my bed?”

Jim blinked in surprise. “As far as I understood this morning, you came to my bed – sleepwalking.”

“Sleepwalking?” The Augment’s eyes widened in bewilderment as he stared at Kirk. “Impossible!”

“Bones said so. He told me that you walked to my bed while you slept, ergo… He also told me that when they beamed us aboard, they couldn't separate us; they put us in the infrared chamber together to warm us up.”

Thoughtfully Nien’s gaze roamed over the younger man’s soft features. “I… remember,” he said slowly. “I remember that all of the sudden we were somewhere else; there were voices… And there was a face, McCoy’s. Then I woke in a warm, small room with you in my arms.” Carefully he reached out and wrapped one arm around Jim’s waist. “I remember that I felt cold – colder than now – and I held you close.” He wrinkled his nose. “If McCoy saw this, then he certainly knows about us.”

“Spock saw us too,” Jim murmured. “But knowing him, he probably didn’t come to any sort of sordid conclusions. Vulcans may be brilliant, but when it comes to emotions, they’re lost.”

“Yet he has a girlfriend from Earth.” Khan chuckled. “Your Lieutenant Uhura must be quite tolerant if she puts up with him.”

“Oh, they have their issues. The last time there was trouble in paradise, I had the honor of mediating. It was while flying to Qo’noS to catch you. They argued; I sat in the middle trying to stay neutral, but they sucked me in anyways.”

Khan had looked cautiously at him before he smirked. “Huh, why do I get the feeling that you couldn't stay out of a conflict, even a verbal one, if your life depended on it.”
“Me?” Jim’s face was pure innocence.

“You,” Nien nodded. “You always must have the final word; Qo’noS was certainly no exception.”

“Hey!” Kirk huffed; it amused the Augment enough to bend forwards and to kiss his beloved, ignoring the pain the movement caused. Still, Jim sensed it. He continued to comb his fingers gently through the dark, thick hair. “I’m sorry Korax got you,” he whispered as Khan’s mouth gave him free. “It should have been me.”

“Don’t say that,” Khan interrupted him; his deep voice was a soft purr. “It will heal by tomorrow at the latest. You would have suffered for a week or more had it been you.”

“Still…” Jim shook his head. Nien would never admit it, but Kirk recognized the exhaustion in his mate’s eyes. “How are you doing?” he whispered, and the Augment sighed.

“I could be better,” he said carefully and returned Kirk’s soft smile. “And you?”

“Well, how can I describe it? Punched, knocked-out, minced; I generally feel like I’ve been put through a grinder – in that order,” the young captain moaned; closing his eyes for a moment.

“You feel as though put through a grinder? Mmm! If that be an enticement to your tender flesh, I will gladly partake when we are well again. I shall eat you raw, ferine – warmed only by my own heat surrounding you.” Nien answered, wriggling suggestively his brows.

Kirk’s jaw dropped and heat pooled in his stomach. “Dear Jesus, I would love that,” he said softly. “Among other things. I wanna show you exactly how much you mean to me by cherishing every inch of you until you collapse in pleasure.”

“Is this a promise?” Khan purred, and Jim nodded slowly.

“You can bet your life on it!”

They continued to look at each other; unfulfilled longing flushed their skin, warming them. The monitor above Kirk’s med-bed showed the racing of their hearts. Both men ignored the alert – at
least until a certain CMO came in, carrying a tray with two glasses of water.

“I think the gentlemen should have…” He stopped dead in his tracks as he saw the two men lying together on one bed with their bare legs dangling, looking at each other with hungry eyes. “Oh, for God’s sake! Can’t I leave you two alone for ten minutes?” Bones groused feeling a headache coming on. He placed the tray with the glasses on the small table beside the entrance. “What part of the order to stay in bed and rest did you not understand?”

Jim was clever enough to put on a sheepish face while Khan glared at the outraged CMO. “I don’t know why you’re so upset, Doctor. We are in bed, and we are resting,” he sneered.

“You call this resting?” Bones demanded. “That has to be uncomfortable. And the monitor shows that you two were anything but resting!” He had pointed at the bio-scanner before planting his hands on his hips. He addressed the Augment now. “And what is it with you that you are constantly slipping into Jim’s bed? Haven’t you…”

“Simple logic, Doctor. Maybe you should take some lessons from Mr. Spock,” Khan drawled, hiding his amusement as he watched the other man’s cheeks reddening in anger.

“I’m just a country doc, but I’m no idiot; I can make leaps of logic every once in a while. But your behavior defies logic. Care to explain the logic of leaving your bed and…”

“Jim can’t walk, so I went to him,” Khan replied; giving Leonard a smug smile.

“And you two have to stick so close together why?” Before one of his both patients could answer, he added a mockingly, “Should I replace the med-beds with a king-size bed so that you can snuggle together more comfortably?”

“Not a bad idea,” Jim commented and ducked his head, as Bones exploded.

“I knew that you’d say that, but this is still a med bay, and you two are here to heal! Running around ain’t gonna help…”

“I didn’t run around!” Kirk protested.
“Only because I came to you, otherwise you would have hopped over, as you have stated,” Nien clarified.

“Tattletale!” the younger man complained.

“You wanted to hop…?” McCoy stopped himself and pinched his nose. “For crying out loud, Jim, how old are you? Twenty-seven or two?”

“Hey!”

“Why on Earth were you going to hop around? You…”

“Ever heard of shared body heat, Bones?” Kirk cut in, and the CMO went rigid for a moment before he threw his hands up.

“That is the lamest excuse I ever heard!” He took a deep breath, glared at Khan and pointed to the other med bed. “You – in your bed! Jim, you stay in yours! Pronto, gentlemen!”

“But I’m cold!” Kirk pouted.

“If you would have just stayed under your blanked, you’d be fine!” McCoy snapped.

“But it wasn’t enou…”

“One word more and I hypo you into the next week!” Bones threatened.

He ended up with a dose of territorial and protective Augment. “Do you really think you could get close enough to carry out that threat?” Khan asked icily; his expression and glare served as warning.

But McCoy didn’t buy the Augment’s dangerous pretense – not this time. He wasn’t just a great doctor – he was intuitive as well; and perhaps that made him a great doctor. He could read people. That ability allowed him to look past Jim’s playboy persona – allowed him to see what others overlooked. It gained him his greatest friend and advocate. As such, he was as protective of Jim as
Khan. And he could see that Khan was utterly taken with Jim. He wouldn't hurt a friend of Kirk's—certainly not his caretaker. “Oh, don't give me your ‘no-one comes near Jim’ bluster,” he growled. “I might be a lowly human, but I'm smart enough to see that you regard Jim as one of your own now—especially after you gave him another hit of your super-blood. But even that won't be enough to fix him if he doesn't get any rest so...!”

Khan interrupted him by rising, aware of the fact that the Enterprise’s CMO wasn’t one to shy away out of fear, nor was he fooled easily. Nien wouldn’t hurt someone who was close to his mate, so he decided to confront McCoy with the fact that Noonien Singh was not accustomed to taking orders. “Very well, Doctor, I’ll take care that Jim rests.” He turned around to Kirk and facing him said, “Scoot over, Pyära.”

Thunderstruck, the young captain, looked up at him. “What?”

“You heard the good doctor. We must remain in bed and rest. We will be most fruitful if we ‘share body heat’ and relax.” He glanced over his shoulder at a shocked McCoy, who gaped at them. “Isn’t that right, Doctor?” He addressed Bones with feigned kindness before he slipped beneath the blanket.

Leonard found his speech again. “This is an Augment thing, right?”

The pale blue-green eyes challenged him. “You could say that,” Khan confirmed with an undertone mock derision in his voice.

Disbelieving, McCoy watched how the former dictator make himself comfortable beside Kirk, but at least they didn’t snuggle up together. Still...

With a groan, his head drooped “Ungh, if this is what I have to look forward to in the coming days, I'm putting in for leave!” he grumbled and turned to go.

“Bones?” Jim held him back one last time, and as Leonard glanced back the young captain said, “I'm a little bit hungry. Maybe…”

“Oh, of course, Jim, no problem. I’ll bring you a bowl of oatmeal. It’s light – very healthy.”

Kirk lifted his head. “Awww come on. Synthesized oatmeal is gross. It tastes like baby food!” he
“Yeah! Well, you're acting like one!” He exited with a “Don’t run away, you two!”

“I don’t believe it,” Jim whispered. “I’m the captain here and he…” He glanced at Khan. “What’s gotten into him?”

Amused the Augment smiled at him. “He knows.”

Kirk gulped. “You think so?”

“Yes!”

“Oh God!” Jim moaned and closed his eyes, only to open them again and to beam, “If he knows, then there is no reason to hide. It’s difficult to keep up the mask – not look at you, smile at you.” He shifted closer to Nien and pulled him softly into an embrace. “I think this is exactly what you would do now if you could move your arms without hurting yourself,” he whispered, gently petting the dark, silken dark hair of the super-human.

Khan began to chuckle. “So this is how you would lend me your arms?”

“Yes.”

“You could not have made a better decision!” the former dictator murmured and indeed relaxed; his head pillowed on Kirk’s shoulder. It wasn't long before both were asleep again.

ST***ST***ST

Richard Barnett, Chief of Command, leaned back in the chair at his desk and closed his eyes for a moment; he was worn, and a headache loomed over him like a storm.

During the last two days and nights, after Robert Wesley informed him of an approaching Klingon strike group near Aldebaran, he, the other admirals and Harhan Robertson, the president of the UFP,
had sat in one of the conference rooms and waited for word. The outcome of the battle was far from
their influence. The news yesterday that they gained victory had been a relief, but the good mood
was quickly tamped by the information of the assaults of Aldebaran III and the orbital station above
the planet. Hearing that five Klingons and a traitor from their own ranks had been responsible for the
attacks led to new discussions about the validity of offered peace talks. Still, Robertson insisted on
them. A wise move, perhaps, but Barnett understood why others would be against them.

The Klingon attack reeked of desperation as if they were reaching the limits of their abilities – or
maybe it was logistics, who knew. If that were the case, Starfleet could invade Empire territory –
annex a part of it. But that wasn't the Federation's way. Membership wasn’t forced but offered, and a
refusal was, of course, accepted. It had never been Starfleet’s purpose to expand its territory through
the use of force or preemptive defense, as some admirals called it.

Robert Barnett opened his eyes again and glanced at his terminal. He read Wesley’s latest report
concerning the status of the ships that had been involved in the battle again. Some of them were
severely damaged; others were still functional and only needed minor repairs to return to their
respective missions – among them, the Enterprise.

The Enterprise…

Of course it had to be Kirk who found out about the Klingon's planned attack. And of course, it had
to be Kirk who prevented the worst on Aldebaran. This ship and its crew had a tendency to get
involved in the most dreadful messes.

Wesley’s statement and Commander Capricio’s report read like an adventure novel portraying a
dangerous game that Kirk and the civilians won. Capricio also sent information about a particular
group of civilians – a Caitian woman, several Terrans, a Tellarit, a Rigelian… Barnett didn’t need
Wesley to point out the obvious, namely that these ‘civilians’ were members of The Shadow. They
had recovered Kirk, and so he was with them and as such, in the middle of the chaos. Jim Kirk
seemed to attract trouble’s attention like moths to a flame. It was a miracle he made it out alive –
again.

Wesley didn’t tell much about Kirk’s operation aboard the space harbor in his report. Only that the
Enterprise had been able to save him and others at the very last moment, but Barnett didn’t need the
details. He knew that it had been a close call for Kirk – again! And he didn’t want to ask how and
why the flagship had arrived in time while the battle still waged on. He had a certain feeling that
answers would lead to trouble for the Enterprise’s senior officers, but as long as Wesley didn’t
accuse them of insubordination, Barnett didn’t need to take any measures of his own.

Sighing, he closed the reports and rubbed his neck. It had been pure luck that The Shadow had been
on Aldebaran as the Klingon spies struck. And it was even luckier that Kirk had stumbled over them,
recognized two, and took action. He and The Shadow – and among them that man who called himself Sunrise. Wesley didn’t mention this mysterious man in his report, but the Chief of Command would bet not only his last shirt, but also a whole month’s salary that all those miracles he had only skimmed over in the report, had to do with this man.

He’d become a folk-hero of sorts, but avoided any official contact and vanished before anyone could see or hear him, only to return in secret when necessary.

“Who are you?” Barnett whispered. “And why are you hiding?” Shaking his head he stood to fetch himself a cup of coffee. It was almost evening and normally he was off duty by this time, but there was so much to do – so much to think over that he decided to stay a little bit longer.

His limbs creaked as he rose. Moving around a bit would clear his mind after all the hours of worry and tension – and maybe he would get some more answers with Wesley’s final report still to come.

Crossing his office, he went to the replicator for a strong coffee; his secretary was gone. He sent her home an hour ago. Sipping at the bitter hot drink, he went to one of the large windows and looked out over the glistening surface of San Francisco Bay and the Golden Gate Bridge; they shimmered deep red in the setting sun. Everything seemed so peaceful, but peace was an illusion. As long as the war continued, there wouldn’t be any peace for mind or soul.

Taking another sip of the coffee, Barnett sighed. Hopefully the lost battle would make the Klingon Council rethink the Federation’s offer of peace talks. Robert knew how proud this race was; practically it would be a white flag of surrender if they accepted the notion of peace talks at all. Still, the admiral hoped that reason would win over the aggressive nature of the Klingons.

Kor sat at his desk in his quarters while his ship continued to orbit Turkana. Silently, he read the last reports of the commanders who had returned from their attempt to annex Aldebaran and then the neighboring star systems. Koloth’s was among those reports. He tried to make his statements seem as though the operation was a success with florid language and subterfuge before divulging that his team had not been able to complete the task because of their human contact.

Well, Kor believed his old friend when he asserted that this Terran, McFurthon, had a hand in the partially failed mission, but the real reason wore the name ‘James T. Kirk’. Again!
If the Klingon lord believed in bad luck, he would have so named this situation. It was as though Kahless had turned his face away from his people. It was a nasty joke of the fates that Kirk, of all Terrans, had to be on Aldebaran and run into Koloth. True, the Starfleet officer had done what Kor would have also done in his place. He tried to stop the enemy; he fought with everything he had. And this ‘everything’ was the warrior at his side who made it impossible to get to Kirk. Koloth and Korax had reported their encounters with the two Earthlings in their reports. All doubt about the Qli-jagh’s heritage had vanished now. This man was an Augment and had, again, fought like a demon to keep Kirk out of harm’s way. The two made a far too good a team for Kor’s taste.

The two men and their little band – this militia he has heard about often enough now. He first remembered hearing about them during a conversation with the Orion ‘commodore’ who complained about a gang that drove them from the outpost. Later, Kor received information about them during the Tammeron crisis. A small ship invisible to sensors appeared out of nothing to beam Kirk and the Augment aboard at the last minute. Kor had heard the short transmission between the ship and the enhanced man; the commander aboard was obviously a Tellarit. And now, as Korax reported, he had been chased by the Augment through the space station above Aberdeen and was caught by a Tellarit. The Tellarit called the engineered warrior ‘buddy’ just like the Tellarit who had recovered Kirk and his rescuer from Turkana.

So, Kirk had help from this ‘militia’ again. Perhaps he had been with them since his flight from Turkana. Everything that could go wrong had gone wrong!

Kahless, if he only had killed Kirk when he had the chance – information be damned; the young captain was not worth the trouble. But no, he had to go through with the original sentence of the council – execution by torture in hopes of learning Starfleet plans. If he had simply shot Kirk, the Augment would have never had the chance to free the officer and both wouldn’t be giving him trouble now.

And trouble he had in spades!

His order had been to cause a distraction by damaging the space port in the capital city of Aldebaran and destroying Starfleet headquarters. Koloth had changed these plans after he stumbled onto Kirk. It was only logical to change the mission, especially after Korax found out that Kirk and the Augment were tracking them. Still, the order had been clear. Kor didn’t want to think about the planetary catastrophe that would have happened if the orbital station had crashed down on Aldebaran – directly on the city.

Kor was a proud Klingon warrior; he didn’t shrink from violence, and there was blood on his hands. But that blood was the blood of warriors, not civilians – not innocents. Not, if there were other ways. Kreth fired at the space station, knowing what that would mean for the planet. The action infuriated the Klingon emperor. Yes, Koloth had told the other commander that Kirk and the Augment were in the station, but did this justify bringing doom a town full of people?
Acting on their own authority changed the battle. Even if some of the generals would see it otherwise, Kor wasn’t that ignorant as to accept that their fleet had avoided another defeat. The reports spoke volumes, and only Starfleet's ships raced to Aldebaran to save the heavily damaged space station had prevented the destruction of the Klingon strike fleet. Only five had made it back to the former Neutral Zone, chased by the Starfleet vessels that had spared them.

The attempt to extend the Empire had been a disaster; no Klingon had foreseen the failure. Not even Kor, one of the few high-ranking Klingons who weighed pro and con before acting – knowing that more than might and bravery was required for success. It had been bad luck that Kirk and the Augment had been on Aldebaran, but this didn’t change the fact that the Klingon fleet was weakened. First the catastrophe at Tammeron, and now at Aldebaran. And around Borderland and along the former Neutral Zone, Starfleet had increased her presence. Those ships that had been damaged during the Tammeron-conflict were repaired, and Kor didn’t need to be a genius to figure out that the Starfleet vessels involved in the ‘Battle of Aldebaran’ would soon be operational.

The Federation's resources were nearly inexhaustible where the Klingon Empire requires weeks to repair its ships and months to build new ones. Starfleet would be back to her full strengths within days!

‘Maybe the Federation’s offer of peace talks is not an attempt to humiliate us, but to spare us losses that would take years to recover,’ Kor thought. He knew though, these thoughts would mark him a traitor if anyone learned of them. Still ‘thoughts are free’, Bob Wesley said during a break at the conference on Organia.

Wesley…

He had led the striking group that had stopped the Klingon fleet – and reading the reports Kor couldn’t help himself but admire the used strategies of the Terran commodore. He really wished he could meet that man again, before he would – maybe – sent to the Black Fleet during the next battles.

If there were any more battles. When logically considering the situation, he knew the Empire would have to accept the offer of peace talks. Still there were so many thick-headed council members and generals that the talks to have the talks could last months before they reached an agreement to meet the Federation at the table. And until then…

“Milord?”
Kor’s adjutant’s appearance at the door distracted him. He looked up, irritated at the younger warrior. “Yes?”

“Milord, the technicians with the enhanced cloaking device have arrived. Their chief gave me this to give you.” He offered Kor the Klingon equivalent of a PADD, and the Klingon lord quickly read over the specifications for the new equipment. Schooling his features, he glanced at his subordinate. “We have the honor of testing the new cloaking device on two of our ships. Chief Kh’il has our complete support, Lieutenant. Please lead him to my personal guest quarters. And then return. I’ll honor two of my commanders with engineers’ newest development for testing!”

The younger Klingon pressed his fist against his chest in salute and left. Kor glanced thoughtfully at the closed door but his mind was elsewhere. Improvements on the standard cloaking device had come too late. They could have used it during the attempt to cut off the neighboring sector by annexing Tammeron and the nearby star systems. Now it would only prolong the war – a war that was, in Kor’s opinion, lost.

Lost because of a genial Starfleet commodore and the interventions of this boy-captain and his Augment friend… Lover perhaps? Whatever the enhanced man was to Kirk!

ST***ST***ST

He couldn’t know the Enterprise’s CMO was thinking the same thing as he was busied with the whole afternoon, long after Wesley had gone and returned to the Lexington.

Bones returned with two light lunches for the men who were currently acting like little boys in his opinion. He found the ‘cherubs’ asleep and entangled as if it was the most normal thing in the world to snuggle with your former mortal enemy in the middle of a sickbay. Well, not in the middle, after all the storeroom offered some privacy, yet the fact that both didn’t care what others may thought about their childish behavior irritated McCoy.

Jim was an adult – the captain of Starfleet’s flagship! But he acted like a love-sick schoolboy! And while McCoy watched the two men sleep, he realized how comfortable they seemed to be with each other. They were used to sleep side-by-side, this much was evident. But that made Leonard even more apprehensive as he left the storeroom. He prayed that it was only sex connecting Jim and Khan and not something more serious, deeper. He knew he was fooling himself.

He had to speak to Jim as soon as possible. Knowing his friend as he did, he was aware that he wouldn’t stand a chance against Kirk’s stubbornness, yet he hoped he could talk some sense into the ‘Iowa-kid’. It was one thing if Jim was attracted to the Augment, but if they planned on divulging the
relationship, even Wesley’s tolerance would find its end.

Bones was still baffled by the commodore’s willingness to support Khan. Wesley hadn’t explained much; only given the necessary information to Spock and McCoy. That Khan was not only victim but victimized – dehumanized by Marcus and Section 31. The Augment had all the right in the universe to press charges against Starfleet – and he would. Wesley also added for consideration, Khan’s role in the war during these last weeks. Millions of people owed their lives to the former dictator – including Jim Kirk.

Both Spock and McCoy didn’t know what to make of the commodore’s decision to protect Khan. Often the Vulcan and the Commodore agreed on logical plans of action. This time they didn’t. But Wesley’s orders were just that, and as Jim was safe aboard now, Spock would honor them despite logic dictating a criminal’s place is in the brig. The Vulcan was sure that his T’hy’la would not allow it and instead he would offer Khan guest quarters as soon as the two were able to leave med bay.

While McCoy looked after his two unique patients and oversaw his sickbay, Spock returned to the bridge and signed Engineering requisitions for parts. He looked over Wesley’s permission to test non-Starfleet technology aboard and went on with the daily routine.

Over and over again he caught the asking glances of Sulu and Chekov. They were busy with station repairs but obviously distracted as they peeked out from underneath, looking as though they wanted to say something then thinking the better of it.

Finally, Spock had enough. “Mr. Sulu, Mr. Chekov?” He addressed the helmsman and the navigator as he made his way toward their console; both were still working beneath it.

The men pushed themselves out from under the console. “Sir?” Hikaru answered as his rank allowed him such privilege.

“It did not slip my attention that you two have your minds elsewhere. What is it you will not say?”

Sulu and Pavel exchanged a puzzled look. Vulcans weren’t known for their grasp of body language or emotional intelligence. Still, Spock was not an ordinary Vulcan; nevertheless, the men were taken by surprise.

The helmsman pursed his lips for a moment, before he began quietly so as not to be overheard, “Sir, Chekov and I learned yesterday, who this Sunrise guy is – and he was beamed aboard with the captain. As far as we know both are still in med bay, recovering from their injuries. And today Commodore Wesley talked with them. He has to know who Sunrise is and… Well… Pavel and I are
“Ze keptin has covered for Khan,” Chekov murmured; concern lay on his boyish face and in his large eyes. “Wesley must be outraged and we… We’re worrying what will happen now to ze keptin.”

Spock lifted a brow. The two officers’ anxiety had nothing to do with typical human curiosity, but was born out of concern for their commander that they regarded as a friend. Still, the Vulcan was aware of the danger in revealing too much information. He did not fear that one of the two would report Khan’s presence to Starfleet Command, but he was not ready to tell them about the sudden ‘friendship’ between Jim and the Augment either. He, himself, could neither understand nor explain the captain’s new relationship or his unusual decisions and behavior towards the former dictator.”

He knelt between Sulu and Chekov, and answered calmly, “Commodore Wesley spoke with the captain and Khan. He will not turn the captain over to Starfleet authorities for concealing his knowledge of Khan's whereabouts, nor will he turn Khan over.”

Pavel gaped at him, and Hikaru frowned. “I’m glad that he is not taking measures to relieve the captain, but have I understood you correctly, sir? He didn’t arrest Khan?”

“No, they have agreed that for now, Khan will remain aboard the Enterprise until – certain inquiries are made. I am not allowed to give details, but I can assure you that he will take no action against the ship or the crew.”

“Well, if he stays in the brig, then…”

The Vulcan shook his head. “You misunderstood me, Mr. Sulu. Mr. Singh remains free. Commodore Wesley and Captain Kirk are convinced that he will not be a danger to us.”

Pavel glanced at the floor lost in thought. “He – he did save ze keptin and ze Lexington. And he saved all zose people on Tammeron and Aldebaran. Maybe he… changed?”

“A leopard can't change its spots, Pavel,” Sulu reminded him.

The young Russian shrugged, “Anyzing is possible.”
Spock looked from one man to the other. “Do either of you gentlemen have any further questions or are you able to return to duty now?”

Sulu knew that the Vulcan was not irritated by their curiosity, but because of the situation as a whole. So he replied neutrally, “How is the captain doing? Dr. McCoy doesn’t do much more than grunt at me when I ask.”

“The captain is still recovering but will be able to leave med bay tomorrow or the day after, at the latest,” the first officer informed him. Then Spock rose. “Now, back to work, please!”

“Aye, sir!” Sulu nodded and Pavel smile quickly before slipping back beneath his console. He cursed in Russian as, a moment later, sparks flew and three alert lights blinked on.

Spock sighed inwardly and turned away. His eyes met those of Uhura and with hers, she tried to convey understanding, reassurance and affection. He nodded slowly and his face softened for a second before the expressionless Vulcan mask was back in place. Even though he assured Sulu and Chekov only a minute ago that the Augment was not a threat to the ship, he was far from convinced.

ST***ST

Jim and Khan awoke during the evening; both felt better if a bit hungry. Not pressing the CMO’s nerves more than he already had, the Augment returned to his own bed and eat two plates full of vegetables, fruits and protein in front of McCoy’s wide, disbelieving eyes. Jim ate even more, devouring the food in no time. He asked for a third plate and nearly cleaned it before he was full.

As McCoy finally collected the dishes, he couldn’t help but comment. “Don’t get me wrong, Jim, but where do you put it? Jesus, you ate more than my Uncle George, and that's saying something.”

Kirk shrugged. “I was hungry. The last thing I ate was some spareribs yesterday around midday. A lot's happened since then.”

Pursing his lips, Leonard analyzed the readouts on Jim’s monitor. “Your healing process is accelerated,” he murmured before noting the similar readings over Khan’s med bed. “Just like yours.” He cocked his head. “You need food – energy – to maintain the healing process, correct?” he addressed the super-human in a business-like manner who nodded slowly.
“It’s a very simple process, Doctor. The body needs more strength to regenerate at the accelerated rate and therefore has greater nutrient requirements.”

“And because of our increased cellular metabolism, your body needs more food than a human would normally take in for the same job,” McCoy thought aloud. “Logical.” He turned his attention back to Kirk. “Your cellular regeneration is slower and isn’t increasing as quickly after a meal.”

“Jim’s cells bear some augmented mitochondrion now and his lysosomes are affected as well,” Khan told him calmly.

“The nutrients gained from food are consumed quicker thus speeding the healing process, and he is immune to disease then because of the engineered lysosomes now,” the CMO mused.

“That’s a good thing, don’t you think?” Kirk beamed, remembering his biology class at the academy which allowed him to follow the conversation.

“It only tells me that you’ll probably be even more reckless because you think you’re invincible; I’m not convinced you didn’t think that before,” Bones growled.

Jim shook his head. “No, I will be more careful from now on. I gave Nien my word.”

McCoy rolled his eyes. “We’ll see,” he sighed, “Does this side effect of your little doping serum last?” he asked Khan.

“I do not know,” the Augment admitted. “Your treatment with my blood plasma to revive Jim last year left a lingering effect on his body so I think the injection I gave him would act as a booster and continued to help him to heal faster and more completely.”

“Hm, an advantage for you to be sure – even if I don’t know what to make of it.” Bones looked back at Kirk. “Right. Well, since you’ve managed to heal miraculously, I think it’s safe to discharge you tomorrow afternoon.” He lifted a hand quickly as Jim sat up and opened his mouth. “Stop, Jim, you’re not allowed back to duty for another day! You still need rest, and that leg needs more time before it bears your weight fulltime. If you’re a good boy, you can start getting on your officers’ nerves in two days.”
Kirk gave him his time-tested puppy dog face; McCoy groaned loudly.

“No, under no circumstances, Jim! You're lucky to be alive. Other people would be out for days. And, by the way, you don’t want to frighten your crew with your appearance.”

“It’s not that bad,” the young captain replied.

Leonard snorted. “No, for Halloween it would be the perfect mask.” He smirked, forgetting for a moment his irritation with his friend. Kirk stuck his tongue out to him and laid back into the pillows. Then, all of sudden, the lights dimmed before coming back to full power.

“What?” Jim began.

Bones sighed. “Scotty is still busy patching up his baby’. He asked for you this afternoon via intercom. As far as I heard he hasn’t slept since yesterday – just ghosting through the Engineering.”

Jim smiled. That was his crew – and he was damn proud of them! “Maybe if I could get a report then I could…”

“I said you’re not allowed back on duty until the day after tomorrow!” Leonard said sternly, glaring at Kirk.

“I’m not talking about running straight to the bridge or the Engineering. I want a report of my ship’s status. I’m certainly not too weak to hold a PADD or to speak with Scotty!” Jim’s voice became more serious.

McCoy groaned. “You won't give it a rest, will you?”

“No,” Kirk replied firmly; he was all captain now, and McCoy knew when it was time to obey. “No, I won’t, Bones. This is my ship, and it was in a battle. Of course I need a report on its status, and you know it!”

“Right,” Leonard sighed. “I’ll contact Scotty and tell him to make sure you have a status report tomorrow morning.” As Jim went to protest, he added, “I only agree to this to prevent you from
breaking the CMO’s order; even a captain has to obey to.” He took the trays and walked to the door. “Good night, gentlemen – and stay in your own beds!”

With those words he left. Darkness filled the room illuminated only by the soft glow of the monitors.

“Your doctor-friend can be quite grumpy,” Khan’s deep voice murmured, and Jim snorted.

“Yeah, you should see him early in the morning. We shared a room at the academy; I could write songs about it.” He suppressed a shiver as the cold in his bones racked his body once more. “He was always up first but didn’t talk much until that first cup of coffee.” Trembling, he continued, “But on Sunday morning, it was almost suicide to wake him up before ten o’clock.” Kirk rolled himself into a ball, then, ignoring his protesting hip.

Suddenly a warm hand was on his cheek, and Khan’s familiar scent seized and comforted him. A moment later the blankets were lifted and the Augment slipped beneath them, pulling Jim into a warming embrace the second he lay beside him.

“Your arms…” Kirk whispered a protest, but he snuggled against Nien Nonetheless.

The super-human smiled. “They do not hurt as they did a few hours ago, and the wound is as good as closed. Don’t forget, Pyāra, my body was designed to heal quickly.” He hissed as Jim instinctively pushed his feet between Khan’s legs. “Those are ice-blocks, not feet!”

“Sorry, baby, I think Bones was right; I think I’m going to be shivering for a while,” the captain murmured, and Nien rolled his eyes.

“Obviously!” He brushed his lips over Jim’s forehead; his mate’s hair tickled his jaw, and their hearts, once again, beat in unison. Peace washed over him, and he relaxed under the blanket to Jim’s steady, lulling breath. Still, his mind busied itself with another topic. He pondered the irresistible pull he felt into another’s orbit.

This urge to touch was new. True, they had slept together for more than a week, literally as well as figuratively, yet this need to be close was unusual – even before the long sleep. But he had never claimed or felt so claimed before. And Kirk still had to leave his own mark. The prospect of being further bound to another was a thrill and frightening at the same time. It was uncharted territory for both of them.
The former dictator would have loved to ask Otto about it. His ‘brother’ was the only Augment alive with experience in this department. But Otto was, like all the others, hidden away from him in cryo-sleep.

Khan listened to the quiet noises of the ship and the soft huffs of breath from his mate. Soothing as it was, it woke in him the terrible yearning for his family. Jim was the only one now to which he felt the love of family. But the loneliness for those kept from him was sharp. Made sharper by the knowledge that he was only allowed here because of the commodore’s order and Jim’s protection. Otherwise, he was still an intruder, perhaps still the enemy. Released from the med bay, he knew he’d get the full measure of those feelings.

He had before. Fear and hate were expected from humans. He hoped that at least some of them would come to accept him. Not that he voiced this hope – not even to Jim. His beloved had enough problems because of him without him complaining about something he should be used to by now. Still he hoped – there was little else to do at the moment.

And perhaps hope wasn’t as far-fetched as he thought. The evidence lay in his arms in the form of this fierce, compassionate, lovingly, beautiful man. And again Jim’s nearness worked miracles because Khan did not notice when sleep pulled him under.

In the CMO’s office, McCoy closed the medical files of three crew members and rose to go to bed. Looking one last time at the readouts of his two most troublesome patients, he had a feeling of déjà-vu. One med-bed was no longer sending a signal to his monitor and the second one transmitted two.

Bones threw his hands up. “I give up!”

The Enterprise’s doctor wasn’t the only one who was frustrated by a certain young captain. Hundreds of light-years away in San Francisco, two admirals had their own reasons for their frustration. The Enterprise was synchronized to Pacific Time in keeping with Starfleet’s Headquarters in California where it was also late evening. Once again, Luengo and Norton walked through the quiet Golden Gate Park.

They too had been part of the very long conference. Nothing more than an endless waiting for news coming from the battle zone near the Aldebaran system. Both men had been relieved as had all in attendance, when word of the victory reached them. They felt vindicated in their point of view that Starfleet should increase its military might - the Federation should hold a more aggressive stance toward non-Federation races or races that refused to join. A victory light-years away meant the war
was still far from Earth.

It was irritating. Again the *Enterprise* played a central role in the victory. Even without the insolent farm boy in the captain’s seat, the starship’s crew was always good for a surprise. Not that this was a bad thing. Both staff officers agreed that the Federation owed its victor to the watchfulness of the first officer. He revealed the Klingon invasion. The flagship’s name was once again on the lips of all Starfleet.

And so was Kirk’s!

The media fell all over themselves to tell the story of how a young Starfleet captain and a handful of civilians stopped a Klingon assault in the planet’s capitol and prevented the orbital station from crashing down onto the town. They printed unverified stories of three men aboard the space station who freed a cargo ship in danger of exploding and the pursued the villains. In interviews, people told how a young blond man took control of the dire situation as the last remaining Klingon tried to flee. Others spoke of another man – dark haired – who ‘quick as a flash’ saved a woman from falling over a catwalk. There were also the tales of a Tellarit and a Caitian woman who caught the Klingon. Then again, others spoke a Klingon bird-of-prey that opened fire at the dying space station, when suddenly, a constitution class ship appeared and chased the hostile vessel away and beamed the survivors out at the very last minute.

For Luengo and Norton, the whole thing was clear as a California summer day. Kirk and The Shadow saved the day again – and the Augment had to be with them. ‘*The man with the dark hair and quick as a flash*’ fit the Augment’s description. But even if Kirk was working with Khan – something both admirals were convinced of – no one would take notice of this little detail.

“Kirk did it again – pulling a stunt that put him on the top of the popularity scale,” Albert Norton murmured. “He’s the public’s ‘knight-in-shining armor’. It will be difficult to silence him and those who think Starfleet is some sort of moral code.”

José Luengo snorted quietly. “Yeah, Kirk stuck his neck out all right. Our leading officer on Aldebaran, Carpricio, reported that Kirk, a civilian technician who has a shipyard on Aldebaran, and one of Kirk’s officers, Commander Lavi, beamed aboard the space station and tried to prevent the catastrophe.” He glanced over the black surface of the lake. “I checked the files. There is no one in Starfleet by that name, Lavi. But the choice of name is interesting. It’s Hebrew - means ‘lion’.”

Norton stared at him and chuckled for a moment. “The impertinence of this – thing is unbelievable. He’s taunting us.” He took a deep breath of the cool air. In the late autumn, it was almost cold in San Francisco. “Where is Khan now?”
“Kirk and other survivors were beamed aboard the Enterprise. It was in Commodore Wesley's report. Kirk's suffering from space exposure. Most didn’t make it; others are still healing. I’m sure that Khan is among the latter – and aboard the Enterprise.”

This time Albert gasped. “If that's the case, then the senior officers have to know about him, and they're staying silent?”

“Jesus Christ! If that's the case...” José threw in for consideration. “If Khan is aboard, then at the very least Spock and the CMO – what was his name?”

“McCoy. Leonard McCoy.”

“Yeah, Spock and McCoy have to know that Khan is on that ship. I don’t think that Wesley is involved. Kirk certainly has hidden Khan from him, but the Augment is there. And it would give us just the possibility to throw the lever. We could kill two birds with one stone. We can eliminate Kirk and his officers – one less problem – and we get the Augment back.” He looked back at the lake. “Of course first we have to make certain that the subject is aboard.”

Norton cocked his head. “Barnett mentioned that the Enterprise will head to Starbase 6-S for repair. And she lost crew members – losses that will need to be replaced.” He glanced intensely at Luengo who looked back at him; the ghost of a smile played around his lips and made his mustache twitch.

“Indeed!” was all he had said, before he changed the topic. “And while we wait for Kirk to stumble over his own arrogance, maybe the Klingons will tell us they’re ready to come to the table, what will be their downfall. This latest victory has hopefully made them see reason and accept the Federation’s offer. Barnett and the others will be on their way to the meeting with the Klingon council.” His eyes showed no emotions. “What about young Styles?”

“He’s ready to act in Starfleet’s best interest,” Albert stated. “He wants to see the Federation broaden its territory – and see his academy rival, Kirk, fall.”

TBC…

Chapter End Notes
Yes, the noose is slowly tightening on Jim, his friends and Khan. Luengo and Norton are opponents worse than the Klingons, as you all will learn soon.

In the next chapter Khan will be confronted with another friend of Jim, who hadn’t the slightest clue until now who ‘Sunrise’ is, and I can promise some funny scenes. And you’ll meet Diego again, while Bones and Spock still try to cope with their friend’s newest escapades.

I hope you liked the new chapter and that I not overdid it with the romance, but it was about time that both are admitting fully their love for each other – without shyness and with the heart on the sleeve.

And - as always - I'm sooooo curious what you think of the newest installment, so please some comments?

Until next time,

Love

Your Starflight
Hi, my dear readers,

Yeah, my beta and I managed to make the next chapter ready to publish very much faster than the last ones. I’m sorry that the distance between the installments grew so much, but sometimes time is even a bigger enemy than those within my story are for Jim, Khan and the others.

I really hope that the lack of comments for the last chapter has the same reason (shortage of time), and not in some dislike for it. I know everyone waits for ‘The Talk’, but Bones and Spock would never – under any circumstances – put Jim under stress when he suffers from injuries. Therefore he has to heal a little bit more, before they can ask those questions which almost suffocate them.

But do not fear, ‘The Talk’ has its harbinger in this chapter and it will happen in the next one. Yet I do hope you’re going to like the new update. Scotty will learn of ‘Sunrise’s’ true identity and Diego will be back.

So, enjoy,

Yours Starflight

Chapter 37 – We’re amigos, you and I

The night went by without any interruptions and morning announced itself with the arrival of a certain CMO, who seemed to be in a worse mood than the evening before.

“Lights, one hundred percent!” was the morning greeting, followed by bang and rattle of dishes as a tray was placed firmly on the small table.

Khan was awake in a second, while Jim mumbled something unintelligible against the Augment’s throat, pressing himself closer to Nien.

“Good morning, Doctor,” the former dictator said coolly; he met the McCoy's irritated glare. His voice was back to its usual deep rich baritone. The hoarse voice due to smoke inhalation had vanished completely.
“Morning!” Leonard replied flatly and stared at the pair on the bed. “Would it be too much to ask if you two could at least eat in separate beds, or do you want to feed each other?”

Something like, “I’m not a child anymore,” was heard from the lump beneath the blankets, and Leonard snorted mockingly. “Really? I couldn't tell!” He stood with his hands on his hips. “Well?” he demanded, glaring a challenge at the former dictator. “Are you ready to get back to your bed and get breakfast, or not? I don’t have all day.”

“We don’t want to steal too much of your precious time, Doctor. As soon as Jim is awake, I’ll serve us breakfast.” Before McCoy could protest, Khan added with smoothness in his voice, “This would not be the first time. Who do you think took care of Jim’s needs as he recovered from the events on Turkana?”

“Ungh – I don’t want to know what ‘needs’ you’re talking about!” Bones growled and left without another word.

Kirk’s tousled shock of hair appeared, and a pair of groggy, sky-blue eyes glanced at the closed door. “Something crawled up his ass!”

“Yes, this ‘something’ is knowledge!” Nien nodded; he gave Jim a peck on the lips and slipped out of bed to fetch the tray.

An hour later, both men had eaten, managed a decent shower with real water in the hygiene stall beside the restrooms, shaved, and were back in their beds resting – as much as the two men could. Being left alone gave them the chance to talk about the events on Aldebaran and the space station. Khan told him just how he found Diego in Dock 12 as it burned. At that moment, the doors opened, and Spock stepped in.

“Good morning, Captain,” he greeted, “Mr. Singh,” he added neutrally.

Kirk smiled at him. “Morning, Spock! Sleep well?”

Confused, the Vulcan lifted a brow. The question was not one Jim usually asked at the beginning of a shift. “Thank you, the night was quiet. Yours?”
“The same,” Jim sighed. “But if I don’t leave this damn bed soon, I’ll go crazy!”

“You complained about exactly the same thing in the cottage; a good thing that I insisted on your rest,” Khan commented wryly.

Kirk rolled his eyes and looked at his Vulcan friend again. “What’s up, Spock? This isn’t just a sick bed visit. You’ve got that special gleam in your eye that tells me you want to talk.”

The first officer did not show his surprise at how well his human friend knew him. “Dr. McCoy informed me that you want a full report of the ship’s status.” He offered Kirk a PADD. “I recorded everything for you including an interim report from Mr. Scott. The equipment and parts from Mr. de la Vega-Martinez’s shipyard will be delivered midday ship’s time. Once they are installed, we will leave for Starbase 6-S.”

Jim had begun to read the reports and pressed his lips in a thin line, before he murmured, “Two blasts hit where she is most vulnerable. Even with the shields functioning suffered severe damage.”

“As Mr. Scott pointed it out, it could have been worse. I agree with him. The Enterprise was in charge of the strike group until the Lexington arrived. Several times, the Klingons targeted the ship in well-planned attacks. It seems her destruction was the goal – a logical strategy since she is the newest and strongest ship of the fleet. The Klingons would have gained a tactical advantage had the attack been successful.”

Jim nodded grimly. “I knew that those bastards would have her weak spots analyzed before we even left the dock. Spock, continue, please…” He shook his head. “You and the others were in the middle of the action?”

“From the beginning of the engagement until your rescue,” the Vulcan affirmed and Kirk cocked his head.

“Considering that you were in the middle of the fray, I suppose we could have had it much worse.”

The first officer crossed his arms behind him; his face showed a hint of hostility. “We did not make an easy target thanks to Mr. Singh’s device. It not only blocks the aggressor's sensors, but it also confuses the target lock.”
Jim instantly made the right conclusion. “So, by not being able to scan the Enterprise, the enemy couldn’t take aim. They were shooting blind?”

“Exactly,” Spock nodded, and Jim beamed at Khan. “Your device kills two birds with one stone. They can only fire manually decreasing their accuracy because…”

“…Because the automatic target lock is dependent on the input to the sensors, which deliver nonsense because of the sensor-disturbing device,” the Augment finished Jim’s thought. “A nice addition.”

“But the device's function wavered when our shields dropped to thirty-two percent,” Spock stated neutrally.

“Of course. The SDD is linked to the shields,” Khan replied calmly. He caught the two confused stares and added, “As Commodore Wesley and you pointed out, Jim, I should apply a patent for my development. I can give it an acronym if I so choose.”

“SDD – sensor-disturbing device,” Jim grinned. “I like it!” He saw amusement sparkle in his beloved’s eyes; then the former dictator turned serious again as he addressed Spock in a businesslike manner.

“So, the SDD’s function faltered when the shields destabilized during the battle. To prevent this from happening again, the SDD should have an independent power source.”

Fixing the super-human with an expressionless stare, the Vulcan replied carefully, “To link it to…” He didn’t get further because suddenly the lights went out. Light returned quickly though, and the alert sounded. The first officer pulled out his communicator since the storeroom didn’t have an intercom. “Spock to Engineering. Mr. Scott, what happened?”

He had to wait for an answer; then the Scotsman’s voice called, “We’d an energy short in the warp drive like yesterday evenin’ and durin’ the night, sir. Ye know the reason for it.”

“What’s the actual status, Scotty?” Jim raised his voice and waited with quick beating heart.

“Capt’n, is that ye?” the chief engineer asked and Kirk had to smile.
“Yeah, Scotty, it’s me.”

A loud sigh was heard through the communicator, “I’m glad ter hear yer voice, Jim. How are ye?”

“Could be better, could be worse – but I’ll live either way,” Kirk replied, touched by the obvious relief and joy in the Scotsman’s voice.

“In other words, Ye’re carryin’ yer head beneath the arm, but ye’re up for work. Typical!” He chuckled to himself. “Well, regardin’ the status, I sent Mr. Spock a report. Ye probably have it by now. But we’ve new problems with the shields. We had to cut off the sensor disturbing device. We’ll re-mount it as soon as the deflectors are workin’ again. It'll take a day or so, but I really dunna want ta race through space without deflectors and this little wonder that Sunrise gave us. If we could put it to work separately, then…”

“If you link the device to an independent power source, it will work regardless of the state of the deflector shields are down,” Khan threw in, not caring that he would compromise his presence to the engineer. It was only a matter of time before Scott would learn it anyway. “Can you connect it to the auxiliary power, for example?”

There was a short hesitation; then Montgomery’s baffled tone came back. “I know that voice!”

“Yeah, you know the voice, Scotty,” Jim sighed. “Please, just answer the question.”

Again there was no reply; then Scott shouted, “Don’t tell me that Sunrise is…” He interrupted himself. “I’m on my way!” Then the link was cut off.

Spock closed the communicator. “It seems you will be getting another sick-bed visit, Captain,” he commented dryly. Jim groaned before he looked at a smirking Augment.

“You love to shock my crew, don’t you?”

“Your Mr. Scott is a hot-tempered man. I admire him. And I admired his mind long before this. I’m sorry, Jim, but I couldn’t resist.”
“And here I thought I was the only one with a devil on my shoulder,” the young captain grumbled.

Khan ‘comforted’ him. “Mine is bigger.”

“I believe you!” Jim snorted, rolling his eyes again.

A minute later the doors opened, revealing a breathless Montgomery Scott; he stepped in and stopped dead in his tracks. His eyes widened; his jaw dropped when he caught sight of the man in the bed. “Oh, holy moly…” His gaze snapped to Jim. “What the hell is he doin’ here aboard? Why isn't he in the brig?” the engineer blurted out.

‘A very good question,’ Spock thought.

“You wanted to meet the engineer who developed the sensor-disturbing device?” Jim smiled at Montgomery. “Well, here he is.” He gestured between the two men. “Sunrise – Scotty; Scotty – Sunrise!”

Scott opened his mouth again, but nothing came out; He just looked like a fish out of water. Khan couldn’t help it but chuckled at the memory of Jim's first introduction of the two men in the hanger of the Vengeance. Giving the engineer one of his lazy, arrogant smiles, he greeted Scott just as Scotty did him one year ago. “Hello.”

Montgomery had stared at him, then at Kirk, before he looked back at the Augment. “Holy shit! Ye’re Dryth…?” He interrupted himself and slapped his forehead. “I’m an idiot!” he moaned not noticing Khan’s smile grow into a full smirk. “I even translated yer name and didn’t get the hint! Drythen is king, and king in Asia is…” He shook his head.

“Maybe your beloved scotch clouded your thoughts,” the super-human suggested with an echo of mockery.

“I'd like to address my captain,” Scotty growled through gritted teeth and looked at Kirk. “Ye’re off duty?”

“Yes.”
“So I can speak freely without fearin’ trouble?”

Jim already knew what would come, and so he sighed, “Scotty, it never stopped you before. Go ahead.”

“Right.” Scott had taken a deep breath before becoming – loud. And red. “Have ye lost yer bloody mind, Jim? Or is this one of those jokes a simple Scotsman like me doesn’t get? This man…”

“… Saved our all lives – including yours, Scotty,” Kirk cut in and the engineer looked with before working himself up into a frenzy again.

“If ye speak of him pullin’ yer reckless neck out of a Klingon noose, Jim, ye’re right. If ye’re talkin’ about him givin’ us this device that got us out of Orion territory, ye’re right there too. If ye refer to his warnin’ concerning Tammeron, ye’re more than right. But perhaps there is the possibility that ye forgot he shot at the Enterprise last year?” He stared furiously at Khan. “Engineerin’ – this ship was a graveyard and…”

“It’s not now and it might have been without him!” Jim threw in. “I read in the report; you have a lot to do before the Enterprise is back to herself. You'd have a lot more if not for him.”

“That was the Klingons’ fault!” Scott snarled, before he pointed at Khan again. “He fired at us. He killed you!”

“Marcus fired at us, Scotty,” Kirk stated calmly. “He sabotaged and shot our ship to pieces. Nien only…”

“‘Nien’?” Montgomery blinked several times, before turning around to a fascinated Spock, who watched Jim as if he was observing a rare species. “Has McCoy checked his head?” Scotty asked, flipping a thump at Kirk.

“Hey, just because I changed my opinion of the man after gathering all the facts, doesn't mean you have to get vicious,” Jim protested. “You don’t know one-tenth of what I know.”

“Enlighten me! We're friends, aren't we? You can do that much, can't you?” the engineer said
harshly, turning back to Kirk adding quickly, “Sir!”

Jim rubbed his face. “Scotty, it's a long story and not for right now.”

“He fired at the Enterprise!” Scott groused outraged.

“Nien had…”

“And I saw ye die behind a bloody door, Jim! It killed me that I couldn’t stop ye from enterin' the damn warp core, and I couldn't follow you in there! I tried to calm down a sobbin’ Uhura and saw Spock lose his treasured control because of him.” Montgomery yelled indignantly; he didn't see the Vulcan wince at the mention of what he regarded as one of his biggest failures. “And now…”

“And now I know what really happened. I know why it happened, and I'm asking you to trust me, Scotty.” Jim cut into Scott’s tirade softly. “And to trust Khan.”

“’To trust Khan’?” Montgomery echoed disbelieving. He blinked and asked himself again if his friend and captain had been hit over the head during his last mission. That was the only explanation for such an insane requirement. “No!” He said sternly; he planted his fists firmly on his hips and glared darkly at Jim – only to feel his resolve melting as he saw the gentle, pleading expression in those blue, puppy dog eyes. Biting his lip, he growled again, “No!”

Jim’s smile became even softer and more endearing; it could have melted stone.

“No!” Scott persisted defiantly.

These ever-so-blue eyes implored him now and spoke to the deep trust the Scotsman felt for his captain.

“No, for God’s sake!” Scotty snapped and crossed his arms in front of his chest returning Jim’s gaze for several seconds before he let his arms sink in submission. “Oh… For the love of… Do ye know how often ye manage to sway me with that look?”

Jim laughed quietly; the relief was written all over his face. “No, but I know that I can count on you,
The engineer snorted. “Aye, of course! One little-boy-look and ye’ve me wrapped around yer finger! Ye know that isn’t fair?!”

“I know, what you mean,” Khan commented and as Scott glanced irritated at him, he added, “Your captain can win even the hardest of men.”

“Aye, he can – and the worst is he knows it and uses the skill without remorse!” the engineer confirmed heartily, forgetting for a moment his anger for the Augment.

Jim didn’t mind that he was the target of the ribbing because it meant that Scotty got along with Khan if only for a few seconds. More moments like these would come; Kirk was sure of it. Both were technicians, both loved challenges, both were fiercely loyal to those closest to them. Those things they shared would lead to an understanding. Kirk knew it.

In the same moment, the lights wavered again, and Scott went rigid. “By Nessie’s giant flippers, what’s happenin’ now?” He looked around at the walls and frowned. “Is here no intercom?”

“Please feel free to use my communicator, Mr. Scott,” Spock said; he offered Montgomery his device.

“Thanks!” Scotty grumbled and called the Engineering. “Ye had ter switch off the main power to re-start it? And ye don’t think it wise ter call me first?” he groused to Allistor.

“I made a ship-wide hail for you, but you didn’t answer, Gomery,” Allistor replied irritated.

“Aye – there’s no intercom in here; I couldn’t hear ye,” the engineer grumbled. “Right, keep at it, Scott out!” He glanced at Spock. “Why is there no intercom in here?”

“Because it’s a storeroom, Mr. Scott,” the Vulcan answered calmly.

“A storeroom?” Montgomery looked at Kirk. “McCoy put ye in a storeroom? What have ye done to piss him off?”
“I would tell you if I knew,” Jim sighed before he gestured towards the communicator. “What’s going on, Scotty? And please don’t sugarcoat it. I can handle bad news.”

The Scotsman sighed. “One of the hits damaged our warp-drive and draggin’ the space station overloaded the warp core. We’ll be able to reach warp 3 as soon as we have the new parts, but until the shipyard owner brings them, we are going to have some energy fluctuations. We could use the auxiliary power but that’s keeping the life support workin’. The med bay and the impulse drive are also takin’ up much of the usable power.”

“No chance to stabilize the warp core?” Jim wanted to know, and the chief engineer shrugged.

“The fluctuations are from a small slit in the dilithium crystal and a malfunction in one of the transformers. Both happened when the main-drive was overloaded. I tried to mitigate the damage by reducin’ the energy production of the damaged crystal, but the failin’ transformer still can't keep up with the ship's power needs. So, I have to shut down and re-start the system from time to time.”

“Don’t we have two or three new dilithium crystals stored aboard?” Jim asked baffled. “I signed the delivery documents for them myself.”

“We HAD – that is until one of the damn Klingons hit the section and we lost the equipment and the three dilithium crystals to space. Thank the Lord, this section was secured by safety bulkheads, otherwise we’d a lost crew members along with those crystals.” He rubbed through his already tousled hair. “Ten of my men are busy closin’ the leakage, but it’s more improvisin’ than a real repair. That can only be done at the starbase.”

Jim moaned and rubbed his face. “Dammit!” He looked up again. “Does Diego have dilithium crystals to replace the damaged one?”

Scott shook his head. “Yes and no. The ones that he has are too small. I already contacted Starbase 6-S. They have the dilithium crystals for Starfleet's ships, but until we get there, we'll have to hobble through space.”

“Can’t you override the power loss from the transformer by modifying the energy output from the other ones?” Khan cut in; his eyes shone with interest as the engineer in him awoke.

Scotty frowned and looked at him. “Are ye wantin’ to do me job too, Mister?”
Instantly, Jim tensed, ready to intervene, but Khan remained surprisingly relaxed. “Of course not, but there is not harm exchanging ideas for the good of the ship. She has a problem that may grow worse on the way to Starbase 6-S. Sometimes an outside eye is needed to find a solution.”

Crossing his arms in front of his chest, Scotty glared at him. “We tried to adjust the transformers so that we could shut down the damaged one completely, but they overloaded. Besides that, the damaged crystal makes it impossible achieve a constant energy level even if we didn't have the load problem.” He bounced on the balls of his feet. “Any suggestions?” he challenged.

Pursing his lips, the Augment cocked his head. “If you let the other transformers take on most of the work and drop most of the load from the damaged one – only giving it the minimum amount of load that allows it to function at a consistent level, the others shouldn't overload unless the damaged one completely shuts down.”

Scrutinizing the former dictator, Montgomery pondered the man's proposal. He was an enemy just a few minutes ago – what was he to make of the suggestion? “Are ye really an engineer or is your device just somethin' out of yer super brain?”

Jim nerves were frayed from the conversation. It was awkward listening to Scotty talk to Nien in such a manner, but the super-human remained perfectly composed. No longer was he like an angry, defensive caged animal ready to strike at a moment's provocation. He was easy, deferent even – ready to concede ground to win this man over. Jim smiled despite himself, happy for him.

“I am an engineer, Mr. Scott. It was I who developed the transwarp drive for the Vengeance and the long-range torpedoes that Marcus wanted to use to start a war with the Klingons.”

Impressed, Scotty looked him up and down, then he nodded. “That was a fine work ye did,” he said slowly before he came back to the topic. “So, how would ye modify the other transformers, or rather their generators?”

“By increasing their input and, in turn, their output,” Khan answered immediately.

“Ye would modify the input?” Montgomery thought about this for a moment. “Right, increase the input and the level of the output is reduced that same amount in the generator of the damaged transformer. But that would lead to an overloading of the linked systems.”
“Is the generator of the damaged transformer failing, too or is the problem elsewhere?” Nien asked. Scotty shook his head.

“No. When the dilithium crystal was overloaded and cracked it backfired and took out the input unit of the transformer. The generator would run perfectly if we could get those levels stabilized.”

Khan nodded slowly; an idea formed in his mind. “So, why not transfer directly the increased input of the other transformers to the working generator of the damaged one? It could do its work without the involvement of the damaged input unit. The output would be consistent – stable.”

“Transferring the energy from the other transformers to the generator of the damaged unit holds the risk of overloading them all,” Spock threw in. “The ship would be without its main power supply.”

“If we run some simulations first, they should reduce the risk and we’ll have an idea of what to expect,” Scotty mused, not seeing the icy glare Khan gave the Vulcan. “And if we first…” He went over the details – half in his mind and half out loud. Khan had turned his attention back to the Scotsman following his train of though. Within minutes, the two men were discussing different solutions for the transformer problem, using words Kirk hadn't heard since the academy – and he sure didn't remember what they were. Thanks God for Scotty.

Jim leaned back into the pillows, smiling happily from ear to ear. Sure, he was concerned about the problems in Engineering, but he knew that Scotty and Nien would find a way together. Seeing Khan and the Scotsman talking as if they'd known each other for years was a relief for the young captain. He heard the engineer’s voice go from tense to easy as he lost himself in the technical discussion, clearly glad to be able to exchange knowledge with someone on his level and with his passion; the Augment sounded likewise. Even Spock lost a bit of his frosty layer as he joined the discussion, adding his own welcomed advice and opinions.

Not able to follow most of the conversation, Jim turned his attention to the PADD and read reports submitted.

Scotty’s, “Rrright!” distracted him.

“This could be the solution to the problem,” Montgomery said excitedly. “I’ll run some simulations in the computer. Perhaps ye could work out an independent energy supply for the SDD, Mr. Singh? It would save us some time so that we can leave for Starbase 6-S a wee bit earlier than we thought we could have. We’re already late with regard to the original schedule.”
Jim grinned as he realized that Scotty was using the name Khan had given his development. He was even casual, now, with the Augment – polite even.

“Permission granted,” the captain beamed, realizing that Khan was about to work hand-in-hand with one of his friends – his crew.

Returning Kirk’s shining smile with a softer one of his own, the former dictator addressed the chief engineer again. “I need a layout of the system and…”

“No problem!” Scott stepped to Kirk, “Excuse me, Jim!” He took the PADD from the surprised captain and checked its files. “Nope, that won’t do,” he murmured and pushed the PADD back into Kirk’s hands before heading for the door. “Back in a minute!”

“Thanks for let me keeping the reports,” Jim called after him, but Scotty’s answer was cut off by the closing door. “Crazy Scot,” Kirk chuckled before he looked at Khan. “It seems you won him.”

“He is a very skilled technician and highly intelligent. It’s refreshing to speak with someone whose mental abilities on the subject meet my own,” Nien answered with a hint of a smile at the corner of his mouth.

“I’m glad,” Jim replied; a soft shimmer lit his gaze.

Spock watched Khan carefully. The Augment’s willingness to help them may be a result of his obvious affection for Jim Kirk; it could also be part of a larger plan to deceive them all. Of the latter, the Vulcan was convinced. But before he could voice his concern, Scott returned with McCoy on his heels.

“You gonna tell me why you need my spare PADD and usurped my terminal for data you could get from your own se…” Bones stopped as Scotty offered Khan the little device.

“Here, I copied the needed layouts to this PADD from our data banks as well as the layouts of our auxiliary energy network because the SDD should be linked ter them too.”
“I agree,” Nien nodded. He switched on the PADD and checked the files.

In the background, an astonished CMO asked Spock in a hushed tone, “What the hell is going on?”

“Very good, I can work with this,” Khan said, ignorant of the conversation in the background, and Montgomery grinned at him; having completely forgotten his grudge against the Augment for the time being.

“Right. And as soon as our good doctor lets ye out of his clutches, ye should have a look at the transformer problem and the new mounting for the SDD. I’ll ask ye ter come ter Engineering.” He ignored Spock’s imminent protest and glanced at Kirk. “Would that be all right, Jim?”

The young captain had nodded, positively gleeful before he turned towards the Augment. “That is, if you want to.”

“To see my development in action, and tinker with it? You know, I have not yet had the pleasure?” The blue-green eyes began to shine. “And so, I would – yes.”

“Then it’s settled.”

McCoy frowned, and Spock lifted a brow. “Captain, I must protest. Mr. Singh is not a member of this crew and allowing a civilian to experiment with our engines, could…”

“He’s the inventor of the SDD and I need his help to make it as effective as possible for our safety. So I really don’t care if he is a civilian or not,” Scott argued.

“Maybe you should remember that Mr. Singh is not only a civilian but also a wanted man, who is free only due to the commodore’s actions. To allow someone…”

“Spock,” Jim was all captain here and immediately Spock knew the tone brokered no argument, “the Enterprise has a problem in Engineering and this SDD is needed to keep us out of view of the Klingons. Your opinion is noted.” The Vulcan reluctantly nodded, and Kirk continued, “If Nien can help us to solve the problem and Scotty is requesting his assistance, then I will accept his support. He has just as much interest in not getting captured by the Klingons as the rest of us.”
“Aye!” the chief engineer nodded before he stopped within the movement and gave Khan a very stern glare while he pointed a finger at him like a father lecturing his son. “But if ye ever shoot at my girl again, ye’ll learn what kind of hell a Scotsman can bring down on ye!”

Nien’s lips twitched in amusement. “The fierce temper of your people is well-known, Mr. Scott. But that’s not why I endeavor now to protect this ship and its captain.”

‘And that's probably the only thing I'll believe, you seducing son-of-a-bitch! You'd rather share Jim’s bed instead of atomizing it!’ McCoy thought indigantly.

Spock’s face held an expression of barely hidden consternation while he stared at the former dictator. Again something prickled in the depths of his subconscious he couldn’t grasp.

“Okay,” Bones said firmly. “If you all think Scottish temperament is fierce I suggest you refrain from trying a Southerner.” He caught the confused gazes of the other four men and pointed at the door. “Spock, Scotty, time to go – Now! It'll be a while longer before I consider discharging these troublemakers.” He waited. When both officers didn’t react, he tapped impatiently his right foot. “Well, what are you waiting for? You have nothing better to do than loiter in my sickbay, gentlemen?”

The engineer sighed. “He’s as bad as I am when it comes to his territory.” Waving at no one particular, he left the room followed by Spock, who gave McCoy one of his infamous stares before the doors swished closed behind him.

Bones sighed. “Finally!” His attention returned to his two patients who looked back at him with interest.

“The good doctor is very determined, isn’t he?” Nien asked quietly, and Jim took a deep breath.

“He's always like that.”

“Really? How did you put up with him?”

“I wouldn't want him any other way. I don't have patience for wishy-washy and indecision. He’s the
best doctor in the sky, and despite his foul moods, he's a damn good friend,” Jim stated softly, smiling carefully at McCoy.

“Yes, I suppose that explains it,” Khan commented with a hint of wistfulness in his voice; then he concentrated on the PADD; excited to address the challenge in front of him.

Bob Wesley hadn’t slept well. Not one bit. His mind roiled with more questions than answers and wouldn’t let him rest. The war. The state of Starfleet's squadrons. Kirk and the Augment.

The Commodore was no fool. He knew the risk he took on himself when he put Khan Noonien Singh under his protection and made the decision to keep quiet about the guest on the Enterprise for the good of its captain and crew. If Jim was right and Section 31 was still in the game, then the risk to Khan was doubly increased. Its members would stop at nothing to silence the Augment and the crew of the Enterprise. Bob knew now that they would deem Kirk as knowing too much and thus a danger to the Section. And now he knew what Kirk knew. Which painted a target on Bob, too. Luckily, the Council and Command were still in the dark. If word got back to them about the Augment and James Kirk – well, the Klingons would be the least of their problems. The danger was from within now.

Pondering the different options on getting Kirk, his officers, Khan and himself out of the mess they all were in, Wesley finally drifted off to sleep. He woke late. That never happened! Shocked, Bob stared at the chronometer at his nightstand. It was 1000 ship time; his shift started two hours ago. Apparently, someone had switched off the alert to grant him some rest – a touching gesture. Still, Wesley was irritated as he raced minutes later to the bridge.

He found a mixture of well-controlled chaos and the determined work of his crew they enacted the necessary repairs on the bridge; none of his officers noticed his arrival until he raised his voice. “Whoever switched off the alarm on my chronometer this morning – I appreciate the sentiment. But do it again and there will be consequences. Understood?”

Several sheepish smiles were aimed in his direction accompanied by nods and yes sirs.

“Right,” he grumbled. “Status report!” he addressed his first officer.

“Repairs are thirty-two percent complete. Warp drive will be ready in approximately seven hours.
Leakage repair are sixty percent complete with med bay being among the first completed. The governor of Aldebaran wants to honor Captain Kirk and the two men with him. I let him know that you will contact him. The Chi-Zo is on her way to Starbase 132; the Enterprise will leave as soon as she receives her final equipment delivery. Oh, and that police officer – desk jockey – O’Donner, insists on getting the results of your research concerning the bar-fight in New Aberdeen.”

Wesley groaned and cursed quietly. “Tell him that the fight was, indeed, between the Klingon spies and Captain Kirk. Starfleet will pay for the damages. He can send the documents to Capricio.” He glanced at his subordinate. “And if that wanna-be-soldier still insists on a traffic ticket for Jim then I will inform the governor that O’Donner can’t tell the difference between moving violation and a military action that saved his ass!” He let himself sink into his captain’s chair. “And now someone could make me really happy by bringing me some tea and a sandwich.”

ST***ST***ST

Five hours later, Jim didn’t know if he should hug Bones or limp away as quickly as possible when McCoy discharged him and Khan – not without stern orders on how to behave few the next days. Then he provided the pair with clothes and pointedly accompanied Kirk to his quarters. That could mean one thing. ‘The talk’

Handing Jim a walker, McCoy led his two most troublesome patients out of their 'private' room. The crew members they passed moved to the side for their captain, but stared wide-eyed at him and his companion. He was dressed in the casual black Starfleet clothing and hobbled between the med-beds and bio-beds. He greeted and was greeted by the crewmen and woman who weren't agape. One injured redshirt gasped when he recognized Khan. Kirk told him kindly that everything was all right, that there was very good reason why this man was aboard and NOT in handcuffs and that he would explain everything later.

Jim sighed in relief when he finally made it out of med bay. He walked between Bones and Khan along Deck 5 where med bay, the transporter room, some briefing rooms and the impulse drive were located as well as crew quarters. His crew greeted him with joy and stepped aside, asked how he was doing, and smiled at Khan. It was an open secret that Kirk had been recovered by a man belonging to The Shadow. This stranger (and he was to most of them) had to be the man that freed their captain from the Klingons and fought at his side during the Aldebaran crisis.

After all of the well-wishes, they finally made it to the captain's quarters. Before the Enterprise’s retrofitting, the captain’s quarters was on Deck 12, but Jim had used the opportunity last year to take a space nearer to the bridge located on Deck 1.

Spock strode towards them. “Captain, it is good to see you up,” he greeted his T’hy’la, before he and Khan exchanged an icy glance.
“Yeah, I feel like new – a hurt new, but it sure beats how I have been,” Jim sighed, happy to be out of bed even if is hip was giving him hell. But the talk with Bones was at the back of his mind and he wasn't looking forward to that.

“You can say that again! What you’ve been through would have sent others to their maker - twice over.” McCoy grumbled. “So don't overdo it right out of the gate.”

Jim grimaced and muttered something about a mother-hen beneath his breath; then he turned back to the Vulcan. “When is the last equipment delivery? And how far has Scotty gotten with the busted transformer?”

“Mr. Scott is still busy programming the main computer to run the simulations. Mr. de la Vega-Martinez came onboard an hour ago and remains in Engineering.” The first officer fell into slow step beside Jim, ignoring Khan’s glare. “He asks if he could visit you, Captain – and you too, Mr. Singh,” Spock added with another quick look at the super-human. “He said he brought your 'stuff'. He carried two duffels with him when he beamed aboard. Security cleared the bags.”

Jim grinned and glanced over his shoulder at Nien. “I think he cleaned out the cottage.” His eyes widened. “Dammit, the red wine spot on the floor… We didn't have chance to clean it.”

“I'm certain he will be all right with the souvenir,” Khan retorted dryly.

Spock addressed Kirk again. “So you agree to the visit, Captain?”

“Of course. Nien and I didn't have a chance to say adios on the space station. We owe him that and then some more. Please send him up when he finishes in Engineering.” They passed a few turns when the Vulcan stopped in front of a door. “Mr. Singh, this is your room,” he said neutrally. Jim smiled.

“You put Nien in officer’s quarters?” He looked with barely hidden joy at his beloved. “Mine is only four doors down!” he said, pointing ahead.

‘Jesus, they'll be sneaking down the hall like horny teenagers,’ McCoy groused to himself. He pictured his friend creeping down the hallway and vanishing into the Augment’s quarters – or the other way around.
Khan’s face showed no emotion – just a simple ‘thank you’, he replied. Then his glance found Jim’s enthusiastic one and his features softened; he nodded at his beloved and stepped in range of the door sensors.

Despite McCoy’s protest, Jim followed Nien and looked around. A sideboard parted the sleeping area from the small living room that held a desk with a terminal, a sofa and table, and an arm chair. On the other side, a door led to the hygiene cell. The furniture was functional – cozy even. The carpets and a holophoto showed a beautiful alien landscape gave the room a homey atmosphere.

“Is this standard on board your ship?” Khan asked, a bit surprised, and Kirk grinned at him.

“Yes – at least for the officers.” He pointed at the device built into the wall beside the door that led to the bathroom. “The replicator is over there; the terminal is connected to a computer bank that stores – whatever for food, I don’t really know how it works – it just does. And there's an entertainment program from the recreation deck. If you link the PADD Scotty gave you…”

“My spare PADD,” Bones grumbled but was ignored.

“… to the terminal you can download literature. We have quite a selection of books from Earth from of the time periods, but also some from other planets, as well as records from the Federation’s members. So feel free to read them.”

Khan looked at him. Marcus voiced a similar sentiment after he had woken him from cryosleep. But trust of the innocent is the liar's most useful tool. And Marcus wielded that tool fiercely. Khan was no innocent to this time any more, but Jim proved himself no liar. For a second, Khan allowed himself to wish this was the face he first woke to.

“Thank you, Pyāra,” he said quietly; warmth shone in his blue-green eyes. “Thank you for everything.”

“You’re welcome, hon… Nien!” Jim replied, catching himself quickly. He knew that Bones and Spock stood behind him with far too keen ears, and he wasn't ready to out their relationship before ‘the talk’. Well, if Khan was right, and he normally was, Leonard already knew. But Jim didn’t want to give Spock a shock in front of Nien. “’kay. Make yourself comfortable and enjoy the quiet. After Scotty gets a hold of you, you’ll be busy for a while.”
“That’s quite a warning,” Nien chuckled. “But I’m looking forward to the task. This sitting idle is maddening.”

“Who’re you telling,” the young captain sighed and grimaced as McCoy cleared his throat. “Yeah, I know, Bones. Rest!” He shook his head; his attention lay still on Khan. “You’ll come to my quarters for dinner? I would visit you, but…”

“Dr. McCoy is right, Jim, you still have to rest your leg. Call me and I will come to you. Four doors, you said?”

“Yes, 3F 121 on the left.” He waved at Khan. “Bye. See you later.” He hobbled away, Leonard at his side, while Spock gave the Augment one last warning glance before he left, too.

Khan brushed his hair back from his forehead. He knew that the next hours would be anything but easy for his mate. Jim’s two closest friends would demand answers, the nature of which would be very delicate.

ST***ST

Jim limped down the hallway between McCoy and Spock and sighed as he reached his quarters. Entering his room, he looked around. Everything was familiar – but somehow strange. He had been away approximately ten days but with everything that happened in that time, it was too much to ask of him – to feel at home again.

With a groan, he sank onto his the sofa in the living area. The room was similar to that of Spock’s and Uhura’s quarters albeit a bit smaller since they were in quarters designed for two.

“Tired?” McCoy asked; Jim smiled sheepishly.

“Not tired like in ‘tired’, but relieved to sit down.” He rubbed his hip carefully. “Dammit, it still hurts even with all the hypos you pumped into me.”

Leonard nodded. “Yeah, back in Khan’s time, you’d be out of commission for six to eight weeks.”
Jim sighed and looked up at his two friends who stood side-by-side like angels heralding Judgment. “So…,” he began slowly. The intercom sounded. Grace from judgment – for now.

“Bridge to Mr. Spock!”

The Vulcan went to Kirk’s desk and activated the terminal. “Spock here, Lieutenant.”

Uhura’s face appeared on the screen – professional as always. “Sir, Mr. Scott requests you meet him in Engineering.”

Spock lifted a brow. “Has Mr. Scott told you why he requests my presence in the Engineering?”

Nyota suppressed a smile. “No, he only stated that he – maybe – needs equipment for the solution that’s been worked out to address the ship’s power supply.”

Sighing inwardly, the Vulcan nodded. “I’m on my way.” He closed the link and straightened himself. “Captain, Doctor, please excuse me. I’ll be back as soon as I can.” He nodded shortly to the two humans and left.

Jim watched him go and then looked back to Bones. So it was just them now. But Kirk knew one less man would make this no easier. And more than likely, the opposite. Spock, he could parry with – his brother. But Bones... He didn't want to disappoint him – didn't want the doctor to think less of him.

ST***ST

Khan made himself comfortable on the sofa as Kirk suggested, took the PADD and began to work at the different problems presented to him by the Engineering chief. Well, he tried to apply himself to the problems presented, but his usually impeccable concentration wavered. There was an unrest in him like something was scratching – shifting uncomfortably at the edge of his subconscious.

Finally giving up, he let the PADD sink to his lap; he closed his eyes and tried to analyze what distracted him. There was an echo in his mind, but the echo wasn't his; the echo was outside of him – sorrow, fear, frustration. But there was more there – a lightness like a private smile felt, yet it was uncertain.
And then it hit him: He sensed his mate’s inner turmoil. The discussion with McCoy and Spock proved more difficult than they’d thought, and the protective instincts of the Augment flared up like a jet of flames. But there was that private smile in his mind – he felt the things that gave Jim a sense of ease.

But it did nothing to dull the urge to go to Jim’s aid; it would do more harm than good, though. Firstly, his Pyāra could capably defend himself – fight his own battles and win. He had long before Khan – and he beat even him once upon a time. Perhaps twice. Secondly, it was important to Jim that he made his friend understand the situation presented to him. Khan was neither blind nor arrogant – he understood the perception that surrounded him, the enemy. He was responsible for it. Finally, he would not make Jim choose between him and his friends. That’s what would happen if he interfered. His beloved must fight this battle alone even if every fiber of the super-human pulled him toward the door.

To distract himself from his own (and Jim’s) uneasy mind, he decided to try the terminal at the desk. He switched it on, checked a few links. The access allowed surprised him – the entire ship’s library, the Augment couldn’t resist roaming through it.

The distraction was short-lived. His thoughts drifted. He felt him. He and Jim shared a bond that seemed to enable him to sense Jim’s deeper emotions, and he wondered if it went both ways. He remembered once, a long time ago, the feeling as something for Joaquin was about to go wrong. And that niggling at the edge of his mind proved to be correct. His ‘little brother’ had maneuvered himself into deep water – literally. Joaquin was caught with some Augments and a handful of villagers outside of town in the middle of a monsoon. It was only at the last minute that Khan, Rodriguez, and Kabir had been able to save Joaquin and the others. It was Khan’s first real taste of the bond between him and his people.

And so it was too, with Jim Kirk – as impossible as it seemed. True, the captain’s body was altered, right down to his cells. Still his beloved was only human. But the bond, the impression of his lover so far away, was as strong as any he felt with his kin.

And then it would surpass the bonds of his family when Jim finally marked him as his own. Of that he was sure. If one mark did this, then two would...He shivered with the thought in anticipation.

The door buzzer interrupted the super-human’s musings, snapping him back to the present. “Enter!” he called and the door slipped open, revealing a large, familiar shadow and an almost equally tall one, but more slender.

“Please, Mr. de la Vega-Martinez, Mr. ‘Sunrise’s’ quarters,” the Vulcan’s deep voice sounded. “Mr.
Scott will inform you as soon as your companion beams over the last of the requisition. I am told it will be one half hour."

“Gracias, Commander,” Diego answered and stepped in; Spock was gone before the doors closed.

In the guest quarters, the Chilean turned around to its current occupier and smiled. “I brought yours and Jim’s belongings,” he said and let the two sea bags he carried over his right shoulder slide to the ground.

The former dictator rose to meet his friend. “Thank you, Diego,” he replied as calm as ever, but the voice did not match the tense body. The Chilean knew who he was, and it did not sit well with Khan – not yet. “Please, have a seat,” he said, pointing at the living room group.

“Gracias,” Diego replied and sat down, watching the super-human. Khan stepped to the replicator and ordered two glasses of red wine.

“Mr. Scott said you and Kirk ended up with capillary damage and some bruising from being trapped in the room where the bird-of-prey took its shots; you were exposed to open space.” The large man shook his head. “You’re damn lucky to be alive – almost healed too. You skin should be covered spider-webs, but you’re white as marble. I suppose it's not a surprise.”

Khan returned with the two glasses and placed one on the table for the Chilean. “I beg your pardon?”

“You’re an Augment, aren’t you? That explains a lot,” Diego murmured; blue-green eyes looked cautiously at him.

“Jim confirmed Korax’s and McFurthon’s statement,” Nien said flatly; he took a seat and confirmed the statement. “Yes, I’m an Augment.”

Diego frowned. “How…?”

“Oh please!” Khan sneered. “You must have heard of genetic engineering at some point in your life.”
“I’m not talking about – how, Drythen,” the Chilean interrupted him softly, feeling the anger's first spark light the Augment. Obviously the super-human did not like to speak about his circumstance. “I meant, how is that anyone messed with you in the first place? Jim told me you were born like this. That means genetic engineering was going on thirty years ago, except, it wasn't. Genetic experimentation is illegal.”

“I am very much older, Diego,” the former dictator answered quickly, sounding suddenly tired; he placed his own glass on the table.

And Khan did indeed feel tired – tired of explaining his heritage, its circumstances – how he was here at all. But it seemed explanation was once again inevitable. “I – I come from the time of the first Augments.” He watched the nearly black eyes of the South American widen in disbelief. “I was ‘born’ 1964 in a lab in New Delhi,” he continued. “I am one of eighty-five Augments who tried to bring peace to the world. There were more – others who looked on the human race with loathing, regarded them as unworthy of existence. You must have learned how it ended some time in your schooling.”

Diego stared at him in shock. “The Eugenic Wars,” he whispered. “You’re from…?” He shook his head. “How is that possible?” He didn’t doubt ‘Drythen’s’ words for one moment. The words rather explained riddles that surrounded the strange man – they cleared the cobwebs.

“Cryosleep,” Khan deadpanned. “I am an engineer and developed the equipment needed to enable my family to leave our world – go far away and live. It saved them – my family and me.”

Diego cocked his head. “I heard sometime in school about a legend – a sleeper ship with Augments that fled Earth.”

Khan looked him straight in the eye. “The legend is true,” he said slowly. “Those Augments are my family – brother, sisters, friends… Some a bit older than I; most are younger – one practically a child.” He took a deep breath.

Diego examined the other male; his bowed lips were drawn tight, and those normally bright, expressive eyes were so far away now. But everything about this man was different – stronger, expressive, outstanding, even beautiful – beautiful in a strange way, but all the more remarkable for it. “So, you’re not thirty but three hundred years old? Congratulations! You’re certainly the most youthful looking old Terran in the whole galaxy.” He smiled teasingly. “At least I don’t have to worry about fangs or a thirst for blood. I prefer the reality of Augments to vampires. You had me worried for a bit.”
Khan stared at him thunderstruck; then he saw the humor light the other man’s face. “You’re okay with it,” he stated and Diego shrugged.

“Hey, I’m living in a universe full of people who would have driven the most religious to panic just three hundred years ago. So your abilities aren’t the results of environment or adaptations. We’re in the twenty-third century now, multiculturalism isn’t a pipedream; it’s reality. And I think Augments have their own strengths and weaknesses just like any other race in the universe. The galaxy is full of people who are far stranger than you and your family. A few of you overdid back then, but this goes for the whole history of mankind – the ancient Egyptians, Babylonian, Greeks and Romans, Napoleon and Hitler. Not that I’m saying you’re them – sorry.” He pursed his lips shortly. “You’re not after the presidency, are you?”

Khan couldn’t help himself: He had to laugh. “Certainly not! I doubt I could name all of the alien races that I’ve met thus far, and I have no desire to rule.” He felt a wave of relief when Diego laughed with him and allowed himself to smirk at the Chilean. “I must admit, you surprised me. I was certain you would turn away or worse yet, fear me.”

“Why? You were a friend of my friend. You are an engineer, as I am. And then I came to know that you are a loyal man – a man who thinks nothing of using his strength for the protection of those in need. You risked your life for your man, and the men and women of New Aberdeen. Hell, Galven told me about your stunt to buy time for Starfleet during the Tammeron crisis. I think right now, this universe would be in a much darker place if you weren’t in it. So long as I am on your side, and you won me over a long time ago, I have nothing to fear.”

“People always feared us,” Khan threw in and the Chilean shrugged again.

“People were afraid of thunder, so-called witches and wizards, the Northern Lights, lunar eclipses… Humans always fear what they don’t understand, but I like to think we’ve made a little progress in the last two hundred years. Our eyes and our minds cracked open just a little more after the first contact with aliens – Vulcans, to be precise. And then we met more and more people from other planets. We had two choices really – tolerance and charity or hide away in fear. We rightly chose the first path.”

“Obviously!” Khan replied dryly; then he felt another hue of Jim’s distress. ‘Tolerance is something his friends should show him’ he thought before he returned his attention back to Diego. “To tolerance, charity, and the progress of humankind,” he toasted and raised his glass while Diego did the same.

“To tolerance and charity!” Their glasses clinked against each other; then both men took a deep sip.
“Ah, a Chilean one. So you liked the wine I left for you?”

“Yes, it was an excellent wine,” the former dictator nodded. “Jim and I have to apologize for the wine stain on your carpet. It was an accident. We wanted to take care of it and intended to when we returned from New Aberdeen, but then…”

“Then some Klingons showed up; all hell broke loose,” Diego grinned. “Santa Maria, that was a hell of a ride the day before yesterday. I certainly will never forget my encounter with Starfleet’s newest hero and you, Dryth…” He hesitated. “What is your real name? Somehow I doubt that it is ‘Drythen’.”

‘Clever!’ the Augment thought before he sighed. “Drythen is my true name – only in another language. Translated in my mother tongue it is Khan. And HŹdgere Léo is old English for Noonien Singh.”

Diego bit his lips. “I think... I've heard that name; I've heard of you.”

“Certainly,” Khan nodded, before he carefully added, “I was not unimportant in Asia where I ruled. I tried to help my people forge a life worth living – the humans and my brothers and sisters, together.” He snorted bitterly. “It wasn’t meant to be.”

“Good intentions are for naught if people refuse to see the good in the intention,” the Chilean murmured, and took another sip of his wine. “Jim asked me if my opinion of you would change now that I know what you are. My answer was and is ‘no’; it changes nothing! You’ve proven yourself a loyal and honorable friend over and over again.” He bent forwards and offered Khan, his hand. “We’re amigos, you and I.”

What would his family think of him now – the great Khan Noonien Singh, grateful – modest even. But the former dictator knew the darkness – had been through dark times alone. And if he were honest with himself (and he was) he had no desire face it alone again. He wasn’t scared of the dark, but now he truly knew the comfort of friends – brave friends who would face anything by his side and a lover to light his every step. And he would fight for every one of them, and to keep every one of them as they had fought for him.

“Gracias,” he said quietly and accepted the offered hand. “I only have one request.”

“To stay silent about your true identity?” de la Vega-Martinez guessed. “No problem. I think I know
now why you've avoided Starfleet. You had already a run-in with them and…” He went rigid. “You said, your family accompanied you to space – and you also told Galven you had to avoid the authorities because they took your family from you. Does this mean that your brothers and sisters are… held hostage somewhere?”

Khan’s jaw tensed. “Yes.”

“By Starfleet?”

“They’re locked away at a high-security facility so far as I can surmise. Few know the location. They are still in cryosleep, and if the admirals have anything to say about, they will remain so indefinitely – until their tubes…” He shook his head, and Diego cursed.

“Dammit – to escape the hellfires of war with your dear ones only to be separated is cruel, not to mention that those damn uniform-wearers are intentionally drawing out the decision to wake them; it could kill them and they know it!” He frowned. “And now you’re aboard Starfleet’s flagship. Galven said you safe here, still…”

“Commodore Wesley learned much about me that has been kept secret. He has vowed to keep me safe here – not to notify Starfleet. He, Jim and I came up with an idea on how to proceed legally for my and my people's freedom. We will beat our opponents with their own laws in their own arena.”

Diego nodded slowly before he straightened his up and fixed the other man. “If you ever need help, you or your family, let me know. You are not only my friend but I also owe you my life. If there is anything I can do, just tell me.”

A warm wave affection for the big man filled Nien. This was the second time in two days that someone had offered to help him despite who he was – an Augment – a deposed ruler. Times had changed! If he had ever doubted it, he could look to Jim, Wesley, and Diego. “Thank you, Diego!” he said truthfully. “If I ever need your help, I will let you know.”

“All right!”

“And one thing more,” Khan continued. “Caviw found out about me. She heard the story of the Augments and then hacked into some library databases.” He snorted. “I underestimated the pussy cat.” He heard Diego chuckling and added, “She, Galven, Ritek and Jeff know about me, so you are free to speak around them, but only them.”
“No problem,” the Chilean answered. “I knew they had it figured out when they came to see me in the hospital; we were worried about you when we heard you were on a Starfleet ship. They didn’t tell me your name, though.” He cocked his head. “They’re okay with it – you, as I am.”

“Yes, they are,” the super-human murmured. “I never thought I would have this – friends. Even Jim was a surprise. And when we became – more... I thought perhaps I was lucky enough to have one friend. I am thankful for you all.”

“Well, friends don’t judge the man, but the deeds of the man. Yours are laudable. You’re a fine man, Noonien Singh. I don’t give a shit what anyone else says. Wait, I do give a shit – and if they say anything against you, they say it me – to all of us. And they'll be sorry they did.” He lifted his glass again. “To friendship.”

“To friendship,” Khan replied, grateful to have found another ally. He hoped that would not come that he really would need Diego’s and The Shadow’s help.

Fate would have other ideas…

TBC…
Chapter 38 – Necessary conversation

As Spock left Kirk’s quarters to go to the Engineering, Jim knew his moment had arrived. He glanced at Bones; he was the eye of a hurricane – the calm before the storm. ‘Here we go!’ he thought. “I think it’s time I explained things to you,” he began slowly. “Please sit, Bones.” He motioned to the chairs.

The CMO walked towards the sofa and the two arm chairs, but remained standing; his eyes were unusually hard. He looked angrier now than when he had found out about ‘Drythen’s’ true identity. Sighing, Kirk repeated quietly, “Please, Bones, sit down.”

“If you don’t mind, I think I’m gonna stand, Jim,” McCoy answered. Kirk’s face reddened as if slapped and he looked like a hurt puppy. Leonard inwardly winced, but would not back down from this; he took a deep breath and attacked the topic. “Before we get to ‘Khan’ I only want one answer from you: Did you lie to me – to all of us – just for a good fuck!? Or is there another reason you covered for a murderer who killed your mentor? Pike was like a father to you!”

“What?” Jim couldn't believe his ears. The vehemence in Bones’ voice – it was so wrong.

“Don’t. You. Dare!” Leonard snarled. “Don’t you dare deny it, Jim! Don’t insult my intelligence and
do NOT doubt my competence as a doctor! I read your bio-scans – inside and out – ass and all. And
I really want to kick it right now. It showed ALL the signs of being thoroughly fucked. For days,
Jim! And Khan was the only one around.” He stepped closer to Jim, looming over the red-faced
captain. He leaned down and pulled the collar of Jim's shirt down roughly. “And this is the mother of
all hickeys. He hit this spot a few times – and those aren't the only bruises you 'lover' left. Almost
forgot how strong he was – bet you didn't though! But you... Even Khan’s enhanced body couldn’t
hide your romp in the sack!”

Jim gulped. Nien had been right. Bones knew – had known for two days. Kirk moaned inwardly. He
didn't want his friend to find out like this, but the horse was out of the barn – and this one wasn't
going back. “It just sort of... happened,” he began sheepishly.

McCoy exploded. “‘It sort of happened?’ He watched Kirk lowering his head and hissed, “Have
you finally completely lost it, Jim? Not only did you lie to us – and that might, MIGHT hurt the
most. You covered for him. You fucked him! Pike would turn in his grave, if he knew…”

“He would understand if he knew what I know,” Jim interrupted him softly and rubbed his forehead.
He realized how shallow he had sounded up until now. It was about time to give the whole truth –
without any embellishment. “Bones, before you pass judgment, please hear me out.”

“So, you don’t deny that you and Khan slept together?” McCoy growled and Kirk threw his hands
up.

“You asked me not to deny it – not to lie. I'm not going to blow smoke. You'd see through it. You're
a good doctor.”

“Don’t compliment me, Jim!” Leonard snapped. “I’m really not in the mood for it! And you'd have
to be a blind man or a Vulcan not to see what you two are together – that you sleep with each other!”
He turned around and walked away as if he couldn’t bear to be near Kirk. He stayed silent, before he
quietly asked, “Why!? He turned back to his younger friend and stared fiercely at him. “Tell me
why him, Jim!”

“Bones…”

“I got nothing against two men together – we're long past that now. But why Khan of all people?
Because he saved you? Is this your way of rewarding him for a job well-done?”
“That's too far, Bones!” Jim’s voice turned suddenly sharp. “I love a good lay same as anyone, but I’m not a whore!”

“I didn't say that!” Leonard answered equally hard. “But excuse me if I have problems imagining you professing your undying love to anyone – never mind him!”

Kirk groaned. If Bones only knew that he had hit the nail on the head. Not at first – it wasn't like that in the beginning. Khan’s seduction wasn't exactly what you would call consenting. But later… Dear God, he wouldn’t give up that first night for all Credits in the world. And that didn’t include the nights and days that followed. Pinching his nose, he closed his eyes. “Bones, you told me to explain, so let me!”

For some seconds, the CMO glared at him; then he stiffly took a seat. “Fine – explain!” he demanded, not caring the slightest that he was ordering his captain around. They weren’t captain and chief medical officer now, but two friends. And one of them was hurt – betrayed when you got down to it!

Taking McCoy’s sitting as a good sign, Jim sat down too and braced his forearms on his knees. He knew that he had to tell Bones the complete truth, not the masked one he gave Wesley. “You're right. I knew from the beginning, who ‘Sunrise’ was,” he began.

“How?”

“Because he chose a cover name he knew I'd recognize. And I recognized his writing; I knew it was him who warned us of the Klingon’s planned attack.”

“And how do you know his handwriting?” McCoy pressed.

“I’ll get to that,” Jim replied carefully. He knew it would be better to make Bones see the real Nien before he admitted how the Augment and he met back in San Francisco. “I recognized his handwriting when Caviw told us about the Klingons’ next move. We knew that we were talking to the militia that fought the Orions and Klingons – the one from the outpost that the Orions attacked. So we trusted the information. It was a calculated risk.”

“So Khan only sent you the note to let you know that he was with this militia? Why?”
“To make it clear how important the transmission was. I learned later that he only wanted to contact the Enterprise – me – because he knew that I would believe the message’s content if I realized that it was him offering the information.”

“And now you lost me,” McCoy stated. “You two already trusted each other? Why, for God’s sake? You knew he escaped those labs and was out for revenge. How is it you are all ‘Hi there, nice to hear from you!’ instead of ‘Find and arrest him!’” He shook his head. “He wanted to kill us, Jim! He hacked in yours, Spock’s and my file to get our private addresses. You know what he wanted! Command was up-in-arms over it. Hell, they even sent us away early for our safety and still you trusted him enough to give unconfirmed information about a Klingon attack to Command, just because he told you so?” He bent forwards. “You even vouched for him in front of Bob Wesley, Jim! What if this had been a trap to play into his hand?”

“It wasn’t a trap, Bones, as you well know.”

“I know that now, but back then it could have been a trap. Why were you so damn sure about it? I can respect that you can’t hate him after he rescued you from Klingon hell, but back then, he was still the enemy!”

Jim sighed. It seemed he would have to tell the whole story from the beginning, otherwise they’d be talking in circles. “He wasn’t my enemy, Bones. Not by then.”

The CMO frowned in confusion. “You told me a minute ago that he informed you he was with The Shadow. So you couldn’t know where he was before that – no one did after his escape. That transmission had to be your first contact, but you already believed him; that makes no…” McCoy interrupted himself, as another thought grasped him.

He remembered the minutes in Barnett’s office – Jim’s outrage as the two scientists talked about Khan as if he were a specimen in a petri dish. McCoy had been disgusted, too. The Augment was a human after all! But Kirk had defended the former dictator like a lion would its mate. He defended Khan’s human rights as well as his right to be treated as a member of the Federation – starting with rescinding the order to kill the Augment on sight. Jim had stood up for Khan, then he trusted him, vouched for him, and later was saved by the super-human who risked his own life for Jim.

Kirk’s one-eighty must have begun before Khan became ‘Sunrise’! It had started back in San Francisco and…

Bones leapt on his feet, his eyes wide.
San Francisco…

The mysterious missing communicator and phaser…

Jim’s cleaning up…

Jim’s ‘rough’ night…

Jim’s hickey – identical to the one that adorned his neck now, and in the same place…

Jim’s admission that he had slept with a man…

“Don’t tell me that you met him back in San Francisco!” he whispered. He stared down at his friend whose cheeks began to burn a bright red – a confession all its own. “No!” McCoy closed his eyes. “Jim, please don’t tell me that you met the bastard and let him go. That you lied to me back then, when I was scared to death that I’d find you torn in fucking half.” McCoy was shouting by the end.

For a long moment, Kirk didn’t respond. Finally, in a soft voice, he began, “It was the evening after the memorial speech I gave. I got out of the shower and he was there – in my apartment.”

Bones opened his eyes again and glared at the younger man, who continued,

“He came to kill me, there was no doubt about it. I tried to call for help – get to my phaser, but he crushed the communicator and kicked my phaser away. We fought and…” He took a deep breath. “I didn’t have a chance against him, Bones. I’m good in a fight; you know that. I have a lot of tricks up my sleeve, Academy training, even Spock has taught me, but it was nothing compared to what I faced then. Khan is too strong. He had me down in a second and then he was just toying with me.”

McCoy had turned pale and sat down again. “The bruises you got…”

Jim nodded. “They came from him. He wanted to kill me with his bare hands.” He moistened his lips. It was as if he was describing events from another life – reciting facts out of a book. "But it
never came to that. We’d made a lot of noise, and Mr. Arnheim heard us. You know him, the old guy, who…”

“Story, Jim, I know who he is,” the CMO cut in and Kirk sighed.

“Right! He told us to keep it down. I was afraid Khan would kill him too, so I told him everything was fine and apologized. Mr. Arnheim went away. When the fighting stopped, just for that moment – it was like Khan focused – on me. He smelled his blood in me, and everything changed.” He rubbed his neck. “Everything…” he murmured, getting lost in the memory.

Leonard watched him closely. He could only imagine the raw fear Jim must have felt in those minutes. And then his heart broke for his friend. “Jim,” he said, his voice turning softer, “I don’t want to pry here if you don’t want me to, but if Khan did something that you didn’t want, then it isn’t your fault. And you don’t have to rationalize what he did.”

Kirk glanced dumbfounded at him. “What?”

A quiet sigh escaped Bones; he was uncertain, but he was a doctor first and foremost, and he loved his friend. “I know victims don’t want to talk about it; they’ll blame themselves. Especially strong ones – men and women alike. It happens. They think they should have been able to defend themselves. Or they cooperate in hopes that it will end quickly. That's not consent. You don't have to build a relationship around the event.”

“What do you implying, Bones?" Kirk interrupted him with a low growl.

The CMO took another deep breath. “Okay, let me shoot straight. Jim, did he rape you?”

Aghast, the young captain, stared at him. “What? NO! No, of course not!”

McCoy looked at him for a long moment. Jim's reaction was an all too typical response. Carefully he replied, “Jim, you don’t have to deny i…”

“He didn’t rape me. He wouldn't do that – not to anyone!” Kirk cut in harshly; he was angry that someone could think that of his Nien. He didn’t even realize that for the first time, he thought of Khan as ‘his’.
“You know that he has a… an odd sense of right or wrong and…” McCoy began carefully.

But it wasn't careful enough – it was the straw that broke the captain.

Jim jumped up, ignoring the sharp pain in his hip and Leonard instantly protested, telling him to sit down – for naught. A new fire burned in Kirk’s eyes – the fire of someone who would defend is love to his last breath. “He has the same sense of right or wrong as you and me, Bones – perhaps more because he is not afraid to do right no matter the cost. Back then? He snapped. He was falsely accused, trapped, abused, violated, and treated as less than… an animal. That he can love anything is fucking amazing and a testament to the kind of man he is. Why is that so hard to see?”

“You don’t have to defend him, Jim,” the CMO tried to calm his friend; his efforts had the opposite effect. They seemed fuel for Kirk’s fire.

“If I don't, who would, Bones? You? Spock? Starfleet Command? Who is going to defend the man that no one thinks deserves defense!? Who even wants to give him a chance – to see his life from his point of view? Who even gives a shit that he is in pain? I'll tell you! No one except for Bob and me. Because it's a hell of a lot easier to condemn someone – remove them and forget them forever, than to look hard at someone, even the unlovable and figure out why age-old scars still bleed.”

“Jim…” McCoy tried to reason with the younger man, but again for naught. Kirk's fired roared.

“Of course it's easy to accuse him of the worst. He has killed – like any other soldier must do at some point. But his genetics make him different. He must be some sort of cruel rapist monster! Makes no difference that he's suffered that humiliation and cruelty himself. After all he is an Augment – evil incarnate – and would do it, himself.”

Jim stopped when he saw the shocked expression of his friend. He realized what he'd blurted out in his anger and haste. Groaning, he covered his face with his hands. Guilt gutted him. “Oh God!” he whispered. “I… I promised him…”

He felt a hand on his shoulder and as he looked up, Bones stood beside him – pale, appalled. But he was strong and composed as ever. He'd always been like a stone in a raging sea to Kirk. “Is this true, Jim? Was Khan raped?” he asked softly.

Like a puppet cut from its strings, Kirk’s usually proud and erect frame slumped. “I promised him…”
he whispered. McCoy wrapped one arm around his friend, his anger forgotten for the moment. He was not only a doctor, but also a compassionate man. The mere thought of rape made his stomach turn. Even if Khan was a criminal, a former tyrant, no one should be subjected to the basest of all violence.

His gaze stayed on his friend and as he saw the burning guilt in those sky-blue eyes, he sighed soundlessly. This talk went every way but the one he expected. He felt sympathy for the superhuman – who wouldn’t? And he felt like an idiot now, assuming Khan had perpetrated the horrible act. After all, he had witnessed the intense protectiveness and obvious affection the former dictator had displayed toward the young captain. But only now was Bones convinced that this unbelievable friendship between the two men wasn’t born out of violence. Still, he was concerned for Jim.

“What you told me is absolutely confidential, Jim. And you know that, not just because I'm a doctor, but because I'm your friend – remember that. If Khan was violated, I'm certainly not going to blab it around. The violation is humiliation enough; I'm not going to add insult to injury. Hard enough for someone to admit it once. A man as strong as him, likely will not admit it twice. If Khan entrusted you; that's saying a lot about – whatever it is you two have.” He pursed his lips. “So... This frankly shitty, despicable act... Was it more than once?” he asked softly, and Kirk nodded slowly.

“As a teen – back then. And later, under Marcus’ ‘care’.”

A gasp escaped McCoy; he went rigid with shock and disgust. “As a kid and... And under Marcus!?”

The two friends looked at each other, and Jim sighed deeply. He had revealed already more than he wanted to, so he wouldn’t spoil too much anymore by telling Bones everything. Maybe this would make him regard Khan in a different way.

“He told me about his so-called ‘childhood’. He was raised in labs and one of the guards...” He had made a short gesture with his hand before he continued. “And Marcus – his tests, if you can call them that, were designed to see how much damage and disease his body could take. He was injected with viruses, starved, you name it. One of the scientists decided to show Khan an Augment isn't always – superior.”

Any color had left Leonard’s face. “Do you know who it was?”

Jim nodded; hate began to burn in his narrowed eyes. “You know him too. It was Connelly...”
“WHAT?”

“… the same man we met in Barnett’s office. The one who described Nien as a ‘subject’ with no rights!”

McCoy stepped back, shocked to the core. Then his cheeks reddened in fury. “This rotten bastard! Treating another man like a petri dish, stripping him of his rights, abnegating him his humanity. And then sexually abusing him! This is sick – insane! This guy has to be locked up and throw away the fucking key!” He met Jim’s burning gaze and tried to calm down. “I won’t ask for details, Jim. But – but I’m sorry I accused Khan of doing that with you. It was a rash judgment. After I realized the nature of your relationship and saw how possessive he was when you held onto him, I thought I had it all figured out.” He sighed. “I was wrong.”

Jim gulped; he felt nausea as he remembered Nien’s quiet confession. “Do you understand now, Bones, how much his past hurts him? He didn't ask to be born the way he is, and he has to live with the knowledge that he is and will forever be a monster in the eyes of others – in the eyes of those who made him what he is in the first place! Do you think he liked being locked away as a child? Tested on over and over again? Treated like an emotionless creature? When he wanted nothing more than some comfort and understanding – same as any child? Same as I did once.”

“Jim…,” McCoy began gently, realizing the parallels between Kirk and Khan, but the young captain didn't let him interrupt – didn't want to hear the pity in McCoy’s voice.

“Do you think he wanted to be hunted like an animal, while he had to take care of his ‘siblings’ – make sure that they would survive!?”

Jim was practically telling his own story from his time on Tarsus IV and McCoy knew it.

"He didn't ask for the war – either of them – this one or the Eugenic Wars. He watched the so-called ‘Liberators’ slaughter whole villages because the habitants loved ‘their Khan’ – the man who made their lives better, who protected their women from the atrocities he’d already faced. He gave them hope of a better future. He saw one of his closest friends sacrifice himself so that he and the others could flee. None of them, not even he, knew for certain that the Botany Bay would make it or that they would ever wake up again. And once they slept – he was the one who had to make the decision for them all. Not knowing if one decision or the other would kill those he loved most in the world.”

“That's the responsibility of a leader – you know that better than anyone, Jim. And you know I do too,” McCoy murmured. Both men made hard decisions that meant life or death to others.
But what Bones missed before, was right in front of him now. Jim and Khan shared a story, shared a
history, and shared the most intimate parts of their lives. Listening to Khan's story was like listening
to Jim – the first time he talked about being despised by his step-father, abandoned by his mother,
and then Tarsus IV. Jim couldn't talk about it sober, and Bones sure didn't hear it sober. He hoped
these two men at least had something to take the edge off during those conversations.

Kirk smiled sadly. “You’re right. In this case you, Spock, Nien and I – we know what it's like.” He
swallowed. “When Marcus found Nien’s ship…” He stopped; the doorbell buzzed. Jim knew that it
was his Vulcan friend requiring entrance. Oh, for the love of God… “Enter!” he called, and the first
officer stepped in; his gaze roamed over the two men.

“Captain, we've placed the last order for parts, and Mr. de la Vega is visiting Mr. Singh. He'll stay
until his people make the final delivery.” He came nearer and looked back and forth between Kirk
and McCoy.

Jim sighed inwardly. “Please sit down, Spock. We just got started.”

Spock lifted a brow. ‘Just’? Certainly not. He had been away for almost twenty minutes and his
T’hy’la and the CMO seemed to be on edge already. The discussion must have been none too
pleasant thus far as Kirk was standing despite his injury.

Taking the seat opposite Jim, he straightened his posture and looked to his captain and friend who
finally sat down with McCoy’s help. McCoy remained beside him.

“Jim was about to tell me what happened to Khan, after Section 31 found him,” Bones steered the
conversation right to the point and made it easy for Kirk to continue.

“Am I right that you received this information from Khan?” the Vulcan asked, and Jim nodded.

“Yeah – and before you doubt him – he told the truth.” He took another deep breath. “Marcus,
himself, found the Botany Bay adrift during a security patrol after the incident with Nero. Eight
cryotubes had already failed, but the others were still functioning – still are so far as I know. Marcus
must have known what he found. He woke Khan and let him believe he was the kind, benevolent
leader of the union protecting Earth and its allies against nasty aliens out to kill us all. Marcus knew
exactly which buttons to push. He played on Khan’s protective streak – defend your home – your
planet. Only later did Nien figured out Marcus' game. He tried to pull out – he was created for peace,
not war. That's when it all fell apart for him – a Marcus-style hell.”
“Marcus tried to force him into his service,” Spock assumed and Kirk nodded grimly.

“Yes – the torture Nien was subjected to following that... It was too much, even for him.” In those next minutes, the Enterprise’s commanding officer told his two friends everything he learned from his forbidden lover. He told about the inhumane tests, the starvation, the cold-cell torture, how Khan had been pushed to his limits over and over again. He told them how Marcus finally killed four Augments, four of Nien's family, in front of him, finally bringing the proud super-human to his knees.

“Marcus would have killed them all. Nien realized it and gave in. That was the beginning of all that happened afterward,” he said quietly. He saw the shock written on Bone’s face and even Spock usually expressionless features showed something close to revulsion.

CMO and first officer continued to listen as Jim spoke of Khan’s plotting to save his people, how his plan was discovered and how Marcus made him believe that he had killed the other Augments – murdered them in their sleep. “He snapped,” Kirk came to the end. “He lost it and tried for Marcus using the Daystrom gathering. This rest is history.”

“This history cost many lives, Jim,” Spock said after several seconds of silence. “I accept that Marcus pushed him past a 'breaking point' as you call it. Yet he declared over and over again that he is superior to ‘mere humans’. As such, he should have been able to control himself.”

Jim looked his soul-brother straight in the eye. “Spock, I don’t want to offend you, but you of all people should understand Khan the best.”

The Vulcan’s frame became rigid. “If you’re talking about the loss of my people then…”

“No, Spock, I'm not referring to Vulcan. I'm talking about you.” He saw how his friend tensed and added gently, “Nien told me that you did not hunt him down to arrest him, but to avenge me.” He held Spock’s flickering gaze. “And Scotty said this morning that you lost it after… After I died. You chased Nien through half San Francisco, fought him bare-handed, broke his arm and punched him unconscious. That is hardly the Vulcan way. You, my T’hy’la, found your breaking point, and ran amok right over it.”

It was the first time Jim addressed his friend by the Vulcan word for the bond they shared. It took the sting out of the addressing of Spock’s indecorous actions.
For a very long moment, the first officer stared at the younger Terran, fighting the unbidden shame that still lingered deep in him. He recognized the truth in Jim’s words and nodded slowly. It was almost a relief to suddenly discover an explanation for the actions he had struggled to cope with this past year. His actions a year ago – it was like an overload of a circuit that backed up into the main system and sparked it to fire. But he was no mere human – and neither was Khan. But both, it seemed, found their breaking point, regardless.

“You are right. My… My reaction cannot be described otherwise. It was illogical and inexcusable to my people,” Spock said quietly.

“See,” Kirk continued softly. “You were broken. You've lost so many, Spock. First your Mom, then the most of your people, finally me – your friend, your brother. It was too much. Everything that had bottled up in you needed a release – and it did. Same goes for Nien.”

His Vulcan friend blinked before he accepted this statement. But not without question, “How so?”

“His past was... It was a lot like ours, Spock. So. Much. Loss. For all of us. It's no wonder you and he reacted as you did.”

"You didn't," Spock said quickly. "You said ‘ours’, but you did not ‘break’ as you say. You lost your people. Your mother left you, your brother left you, your friends – the children you watched over and fed on Tarsus IV. You did not break."

"You didn't see me then – but anyway later I had Pike, then Bones. Then you, T'hy'la.” He bowed his head to his bonded brother to show the gravity of his statement.

“You are not a 'mere human', Jim!”

“No. Mere humans don't have what I have, brother.” Kirk smiled, before he continued, “Since Nien was a teen, he had only one concern: that his brothers and sisters, those like him would survive. He did everything toward that purpose. He knew only how to fight for their lives – until they were finally taken from him – or so he thought. And the pain, fear and sorrow he experienced pushed him over the precipice.”

“The moment he thought Marcus had killed his crew,” Spock assumed, and Jim made an affirming gesture.
“He woke alone – without them in the 23rd century and faced all the strange, the new – *alone*. He knew that his family was near; he felt them. It gave him the strength to take all Marcus doled out to him. And then even this last assurance was taken from him. He didn't even have the comfort of their safety in sleep. He was utterly alone in a strange world full of strange creatures and a military union that had showed him only cruelty. They killed his family, or so he thought, after all he endured and sacrificed to keep them safe. If I had been in his place, with no one to keep me sane, I might've done the same. If I would have been forced to watch you two, Uhura, Scotty, Sulu, Chekov or Carol die just to force my hand... You – you all keep me right. I'd go mad without you all. He did. And we helped to push him.” He lowered his head.

Leonard watched Jim closely. He saw the hurt in Jim's eyes for his lover, friend... oh God, whatever Khan was for Kirk now. And Bones’ kind heart hurt with him, for the super-human. It must have been a serious culture shock to wake up almost three centuries later, to face real aliens but also the same old hatred and abuse. But that had been Marcus’ way, not Jim's, so why... “What do you mean we pushed him? What did we do?”

Blue eyes were clouded with pain. “We made him believe that we killed the people most dear to him.” Jim’s glance wandered back to Spock. The Vulcan looked calmly back at him, yet there was a gleam in his gaze that Jim couldn’t place. “No one told him that his family was still alive. No one informed him that they weren't killed when the torpedoes detonated. They let him suffocate in his grief for them. He was condemned and forced back into cryosleep, thinking everyone he ever loved was dead; that he failed his family.”

Spock lifted a brow silently, recognizing the unbearable pressure the Augment had been under for months – years if adding the previous lives and previous centuries; previous wars. Though enhanced – engineered, Khan still was human. Engineered and enhanced control meant enhanced emotions if unbridled. The first officer began to understand what moved the Augment’s hands.

Bones took a deep breath, too. Anyone with a hint of compassion in his heart would be moved by the mere thought of Khan's agonizing, twisted path. “No one told him the truth? No one told him it was a ruse Spock thought up?”

“That ruse pushed Nien over the edge – again,” Jim whispered, his eyes moistening. “To think you’ve lost everyone you love with all your heart is the cruelest pain imaginable – and he didn’t face this agony once, but twice! He didn’t defend himself during his so-called trial, a trial without a defense, because he had nothing to live for anymore.”

“What? He didn't have a lawyer?” McCoy stared at him. “But that's – like against the law!”
“As Admiral Barnett pointed out, Mr. Singh is not considered a human being and so he was granted none of the rights, Doctor,” Spock reminded him.

Jim nodded. “Nien was condemned and frozen – discarded like a piece of trash. No one told him the family he loved and lived for was alive. He died in that cryotube only to be reawakened to another kind of torture – those fucking tests.” He felt a lump rising in his throat. “Most times he was semi-conscious; he knew what they were doing. They infected him with diseases to harvest the antibodies he produced. They tested poisons on him. No one cared how much he suffered or how much pain he was in as his body struggled to heal over and over again.” Jim watched as Leonard turned white, and Spock flushed yellow-green with shock. “One of the scientists slipped; he was finally able to escape. All that was left for him was revenge. I can’t blame him for that.”

Bones chewed at his lips; his mind, heart and soul were in turmoil over the man, made harder and harder to hate. “Well shit, Jim. After all that, I suppose I don’t have it in me to damn him – doesn’t mean I have to like him, though” he confessed finally. “I know everyone breaks – you know better ‘n anyone I come damn close to mine. Concerning his abuse at the hands of those – scientists…” He rubbed his forehead as a headache was beginning to form behind his eyes. “I’ll never call them doctors. I’d love to put my fist through all of ’em. I only hope Barnett put them on ice like he said he would.” He took a deep breath. “And Khan… I get it – I get the revenge. I just wish it was different for him – for all of us.”

Spock cocked his head. “I, too, understand revenge. What I do not understand, Jim, is how Mr. Singh has come to change his attitude about you so much that he would risk his own life in defense of yours?”

Kirk felt his mouth go dry. Telling Bones was one thing. Spock – it was another. Not the sex. It was Pike. Spock regarded Pike as Jim had. Not like a father, but a great mentor. His loss hit Sarek’s son hard. The mind-meld made it harder. Telling Spock that he was intimate – that he loved the man responsible for Chris’ death was going to be very difficult.

“Things changed – between us,” he began lamely, and Spock lifted both brows at that.

“Obviously,” he stated wryly. “The questions remain: why and how?”

Jim felt heat rising to his cheeks – and McCoy rolled his eyes. “For God’s sake, Jim, tell him!” As he caught the half uncertain, half irritated gaze of his younger friend, he added firmly. “Spock risked his career and his freedom to save your ass. Never mind how much we all worried about you – he worried about you. The least you can do is to tell him the whole truth – him, your brother!”
This little speech brought more blood to Kirk’s face, and shame lurked in the background of his conscious. Then he sobered. He would not be ashamed of the love Nien and he shared! Quite the opposite. If love was that needed hiding, then truly the end of humankind had begun!

Jim steeled himself, took a very, very deep breath and moistened his lips before he said in a low voice, “He came to me – that night in San Francisco. I told him his family was alive. Things happened – that night. He – we changed. Nien and I... We're together.”

There! He said it plain and clear.

Spock blinked for several seconds not comprehending what his friend was trying to tell him. “Of course you and Mr. Singh are – were – together, Jim. He got you out of Klingon prison, fought at your side…”

Apparently, not as clear as he thought.

“Spock!” Jim groaned; his head dropped to his chest. His eyes closed. Damn the Vulcan taking everything literally! “I… I mean, Nien and I are together!”

Still the Vulcan didn’t get the hint – or, as McCoy assumed, he was in denial. He threw Jim a glare. ‘Thank you for letting me explain your dirty secret to Spock of all people!’ Then he addressed the first officer. “What Jim means is that he and Khan are together, like you and Uhura.”

Again, Spock looked blankly at the two other males, as he turned the information over in his mind. Was this terran ‘humor’? Both men did not seem to be in a jovial mood. Jim’s face was a frightening shade of red now. He was trying to avoid the Vulcan’s gaze. McCoy crossed his arms in front of his chest and glanced sternly at Kirk, daring him to continue.

And then the pieces of information slid into place, freeing the Vulcan’s understanding.

Were…

Were Jim and Khan really…
Utterly disbelief seized Spock, and for several seconds his Vulcan mask slipped. “You… You and Mr. Singh are – a pair?” he asked, astonished.

Under other circumstances, Bones would have loved to tease Spock mercilessly for his display of emotion, but at the moment he was not in the mood.

“Yes,” Jim confirmed quietly; he finally met his T’hy’la’s eyes. “Nien and I are together.”

Still thunderstruck the Vulcan raised both brows. “But… I was under the impression that you favored female partners.”

“Surprise, surprise, Jim Kirk is a bi!” McCoy scoffed. “And of course he decides to save his fidelity for a man.” He sighed dramatically. “You know what this means if it becomes public? The whole female population of the Federation will break down in tears; half in relief, finally safe from your flirting, and the other half in sorrow.”

Jim frowned at his older friend. “Hey, I’m not that bad!”

“You? You’re worse – were worse, to be precise,” Leonard replied wryly, then he cocked his head. “Tell me, is this relationship with Khan serious or is it just a lust thing?”

Lowering his head to hide the warmth that instantly welled up and showed in his cheeks, Jim answered, “It’s serious. It's – it's it.”

Bones nodded slowly. “Do you love him?” He ignored Spock’s sharp intake of breath at this question and let his attention rest on Kirk.

“Yes,” came the equally quiet, but firm reply.

“And does he? Return it, I mean?” McCoy asked further but gave himself the answer, “He has to. Sleepwalking to your bed when you had a nightmare, the cuddling, his decision to come get you – Jesus!” He sighed. “I always wanted to see the day when you, of all people, finally fell in love. But does it have to be a wanted man – the one the Federation and the entire Klingon Empire is after?”
Jim smiled sheepishly. “I never do easy – and you can’t decide who your gonna love, Bones.”

“Yeah, I know,” the CMO grumbled; then he looked back at the first officer. Concerned, he frowned. “Spock, you’re a little bit green in the face. Is that a blush or are you not feeling well?”

The Vulcan ignored him and stared at Kirk. “Have I understood you correctly, Jim? You are in love with Khan?”

“No,” the young man said softly. “I’m not in love; I love him!”

Confusion appeared in his friend’s dark eyes, but it was Bones who explained the difference to Spock, “In love is the beginning of love. In love wants the person. Love needs the person. In love cares for the person; love cares for the person more than your own life. It is a fullness rather than a development.” He shook his head and glared back at Jim. “You know that this is risky – not just because your sweetheart is a wanted criminal. You do realize the responsibility you both have taken for each other?”

Jim nodded. “If I let him down – if I left him, it would break him.”

McCoy sighed. “Yeah – and it's gonna work the other way round, too.” He sighed. “I know you, Jim. I know that you don’t trust easily, and when you do, you go whole hog. This wasn't an overnight thing.” He stopped, as Kirk grinned ambivalently and groaned, “Yeah, I get it, it was ‘overnight’ – literally!”

He heard Spock clearing his throat. He glanced back at the Vulcan, who rose to speak in an oddly flat and neutral tone – more so than his usual. “As far as I understand human love begins with attraction before the relationship can take place.”

“Remember how it started with you and Uhura?” McCoy commented.

“My memories are quite clear, Doctor, and I can assure you that it did not begin with an attempt to kill each other.” Spock’s gaze fixed on Jim. “Did it with you and Khan?” Spock was angry and belligerent unlike him. The tone remained flat, but his words stung. “I saw many love-affairs burgeon at the Academy, aboard, everywhere. Not one of them began with crime and murder. Odd.”

“Spock…” Jim murmured, but this time the Vulcan didn’t give him the chance to speak.
“Khan Noonien Singh has been cruelly abused. This is a shameful fact I will not deny. But he has in turn – killed. And when he escaped, he intended to do so again as an act of revenge on you, Dr. McCoy, me, perhaps even Nyota. You met him, again, and… And I fail to understand T’hyl’a, and it is...distressing.”

Kirk bit his lips. He felt Bones nudging him; he sighed. “Turkana wasn’t the first time I saw him after… after what happened last year.” Spock's eyes bore into him. He gulped and continued. “He came to my apartment the night before we left Earth. He wanted to kill me, we fought. It was brief – I would've lost. Then he smelled my blood – his in mine to be precise. Then everything changed.”

Spock drew himself taut as a bowstring and arrows shone in his eyes ready to fly. “What did he do?” There was a certain, seldom heard growl in the first officer’s voice. Vulcan warriors of old were reflected in his gaze and sounded in his voice.

“He… seduced me,” Jim admitted; he was a little bit relieved that Spock didn’t accuse Nien of a certain violation as Bones had. Well – if he did, he didn’t voice it.

Spock’s mouth pulled down at the corners. “He – seduced you?”

Jim grimaced. “He wasn’t – umm – gentle about it. I think he was angry at himself for feeling the way he did, angry at me for making him feel that way – for the blood. And then it happened. I was furious and scared as hell. Then, well, you know…” He made a floppy gesture with one hand and sighed quietly.

“Hm, sounds like a kind of Stockholm Syndrome if it weren't so short a time together.” Bones pondered, “On the other hand, you must have felt something for him too, somewhere down the line. Otherwise, your feelings couldn’t have changed that quickly and drastically.” He saw the slightest hue of a blush rising in the younger man’s cheeks and groaned. “Don’t tell me… Fine! He is attractive. Hell, he’s handsome. I’m straight through and through, but I know what looks good. Still… um… You're Starfleet’s number one playboy…”

“HEY!”

“… and you undress every good-looking female you see with your eyes. I never thought I see the day you did that with a guy. Jesus, never mind Khan.”
Jim shrugged. “I told you during a physical that I found some guys – you know. I just never acted on it. And then came Nien and…” He sighed. I sounded so stupidly love-struck that Bones rolled his eyes and Spock nearly winced. “He’s so friggin’ strong; and I know that he’s dangerous, but he is also so… tender and careful,” Kirk continued. “I feel safe with him – protected. But still – I can be at ease – with him. No pretense or impressing a girl. As strong as I want to be – am. But at the same secure with someone even stronger. Everything about him just – caught me. What he's done for others since – then. What he's done – what he's been for me. The way he took care of me even then…” Jim moistened his lips. “Yeah – so at first it was against my will, I have to admit that, but he didn’t force himself on me.”

The CMO shook his head. “I can understand that you see him differently after hearing his sob story, but seducing someone against his will is definitely a violating act – even if you wanted it by the end. I guess you did.”

“No, he wasn't” Kirk murmured, thinking of a way to make his two friends understand. “He was – like I said, gentle about it – took his time to be careful. He realized I'd never done it, and he made sure to make me… want it – want him.” He bit his lips. “He knew every trick in the book and I think he added a few pages of his own.”

McCoy made a face. “Better at everything,” he commented wryly and Jim smiled for a second.

“Yeah, he is!” Kirk rubbed his neck again. “He knew exactly which buttons to press to make me want him.”

Snorting, the CMO commented, “And you don't call that a violation? He forced you to do something you didn’t want to – maybe to humiliate you before he was going to kill you!”

“He wouldn’t have killed me, Bones – not anymore.”

“You could not know that T’hy’la,” Spock threw in; his whole posture betrayed his state of suppressed anger. He would never admit it openly, but he had been afraid for his captain’s life when he got the call from Command about Khan’s escape. Learning now that Kirk had been intimate with Khan that whole night and Jim did not tell him… It woken a deep irritation in the Vulcan. He masked it now as he did the other emotions that seethed deep in him – coiling around his warrior nature. “Khan thought you to be one of those responsible for his family’s death.”

“Show me a murderer who takes care of his soon-to-be-victim like he did!” Jim interrupted him. “He – ugh! He did all the lover aftercare stuff. Wiped us down, took me to shower, washed me, helped me to…”
“Jim, shut up! Too much information,” Bones spoke up. “Not just for Spock's tender, pointy-eared sake, but mine too.”

Kirk gave his friends another sheepish smile. “Sorry!” He had sighed before he continued. “But after all that, I knew he wasn't going to kill me. Not after he made sure I enjoyed it as much as he did. He still thought that I was responsible for his family’s death – along with Spock. But he was still – good. The world may see a monster in him, but he isn’t one – not by a longshot.” He glanced at the wall straight ahead. “Anyway, I didn't know that – that he didn't know. When I got out of the shower, he was watching TV. We talked, and that's when I knew he didn't know they were still alive.” His voice became quiet. “You should have seen him when I told him the truth. At first he didn’t believe it; he thought I were taunting him, but then…” He gulped. His mind clearly conjured Khan's reaction down to the most painful detail as if it were yesterday.

“He wept. He absolutely broke down and sobbed. I'd never seen anything like it and I never thought I would from him. It was relief and anguish. All the grieving he did was taken away from him. It was all in vain!” Kirk went on. "You two are going to ask me if I didn't have a chance to get to my phaser or get out, aren't you? The answer is ‘yes’. I had a chance to get to my phaser. I couldn’t do it. I simply couldn’t kill him – he was so miserable. All I saw was a man who had endured so much and was falling apart.” He closed his eyes for a moment; he hurt with the memory – with the man he loved now with every fiber of his being.

“I did what you woulda done, Bones. I walked into the kitchen, fetched two glasses and the scotch Scotty gave me as a birthday gift. We drank and then we talked. I learned a few things about what happened to him after he was taken in. No one, not even the guards, exchanged one single word with him. The judge told him the verdict and sentenced him. There was a man grieving deeply for his family and no one cared. No one even conceded him his emotions. They brought him to some facility, sedated him – without much success – and put him back into his cryotube.” He glanced back at McCoy. “Did you know that he felt everything? How his cells froze, his heartbeat slowed down, the panic as his respirations slowed, and he clung to the last sane thoughts he could muster before the darkness closed in around him.”

Taken aback, Leonard blinked. “He felt it all?” He shook his head. “Dammit, he shouldn't have.”

“Yeah! After he and I nearly went to the void, I know how it feels. I asked him if it was like that – cryosleep. He confirmed it – that it was hell. The first time it was of his own free will – for his people and their future and freedom. The second time he was forced without any chance to defend himself and believing he’d lost everything he ever loved.”

McCoy pressed his lips shut and pondered all he had heard for a long moment. ‘I ain't denyin' that what happened to him was wrong! I'm a doctor not a sadist. But he’s still a criminal and now a
fugitive. If Command ever learns that he was in your apartment, and you didn’t alert them as soon as he left... Jim, you know what could happen!”

“I know – still I wouldn’t change a moment of it even if I could.” He leaned back; the tension was leaving him bit by bit. “After we talked, he... we both did. It was – quite consensual by that point. He was good – I wanted him, and I wanted him to want me back – and he did. I don't know if it was just me or if I was just a respite, a way to forget, the outpouring of relief that they were alive. All of it maybe. I know I'd never been so tired in my life afterward.” He heard McCoy clearing his throat again, while Spock frowned. He chuckled softly. “Sorry, guys.” He pursed his lips. “Bones, you asked me how I knew that he was Sunrise – how I knew his handwriting. When Nien ambushed me in my apartment, he said he hoped that I had enjoyed my last sunrise because I wouldn't live to see another one. I woke up the morning after; the sun was shining through my window – I was never so happy to have it wake me up. Anyway, I found a handwritten note on my pillow. It was from him, saying that he ‘gave’ me another sunrise as a gift.” He smiled again. “When Uhura showed me the hidden message The Shadow sent along with their first transmission, I instantly realized that ‘Sunrise’ had to be Nien – I recognized his script. And there was something else I understood; he trusted me enough to reveal himself – practically telling me where he was.”

“It was a test to determine whether he could trust you,” Spock assumed a businesslike manner now and Kirk shrugged.

“I think so, yes. I think he knew that I would take The Shadow’s warning seriously because he wouldn’t risk getting caught for information that wasn't important – it had to be crucial.”

“So, he trusted you first and you him, then.” McCoy cocked his head. “You really have a way with people.” He pursed his lips. “What I don’t get is why Khan wanted you in the first place. Oh don't look at me like that, you know what I mean. I can understand, almost, that he sensed something familial. But lust wouldn't be a result – shouldn't be a result. So why…”

“He told me that he was attracted to me the moment he first laid eyes on me,” Jim said shyly through a smile. “At Daystrom, when I knocked out his ship... He was impressed. And later, on Qo’noS, he recognized me – what I said about Chris. He saw we both knew loss. Then I tried to beat him into the ground; he understood that – said he would have done it too being in my place. When I put him in the brig rather than kill him – thank you, Spock – he knew I was different.” He moistened his lips. “That's when he felt something more. I remember – man my stomach dropped – when my helmet cracked, and I lost my display. He came up beside me. I looked over. He didn't look smug like I thought he would. It was more like ‘Did you think I would let you down?’ or ‘We're together in this – I have you!’ And then he even smiled the tiniest bit. Christ, I was never so grateful. He saved my ass out there, just like he did on Qo’noS.”

Bones nodded slowly. “So he helped you. Guess that made you a bit less pissed. And he was attracted to you from the beginning. That didn't stop him from taking you hostage and attacking us.”
“Yeah, well I ordered Scotty to stun him. I backstabbed him, Bones so I can't blame him for being angry. I betrayed him – might as well have been Marcus as far as he was concerned. He was following my lead, waited for my orders, and I didn’t see it.” He shook his head. “It was my fault. I woke up the warrior in him again. You know how it turned out.” He snorted. “I think he still felt something for me – if only some sort of kinship in loss. He easily could have broken every bone in my body when he punched me on the Vengeance, but he didn’t. He didn’t need me as a hostage. He spared me despite my deceit.”

“He beat you pretty bad. You looked about as bad as when we saw you at your apartment. Trying to kill someone with bare hands is seriously personal, though. The victim is obviously valuable to the killer – not in the way you want obviously, but you know what I mean. You told me how Khan killed Marcus. That's as good an example as they come. He could have just shot him. Instead, he squeezed the life out of him. Not unlike what Marcus did to him over a longer period.”

Impressed at McCoy's insight, Kirk bent forwards. “And what does it tell you?” he asked, genuinely interested. Bones was not only a damn good doctor, he also had a natural talent for psychology. He could read Jim like an open book, and there were only a few who could claim that. So, maybe Leonard had developed other hypotheses that explained Nien’s actions.

“He doesn’t attack first,” McCoy answered slowly, trying each word. He knew how important that was for what lay ahead for Jim and them all. “He only attacks when provoked or in defense of himself or loved ones. But there is more. There's the outpost and Tammeron; he will defend the weak. I think that sense of purpose – that leader in him provides the groundwork for his sense of morality. I also think deep down he's desperate to be understood. You said he began to trust you during ‘Mission Vengeance’ as I like to call it. He saved you; followed you, and only snapped after you ordered Scotty to stun him. He not only ‘snapped’, he lost it. So he wants to trust someone – longs for it, even. You're right, Jim, he is lonely. He’s absolutely and utterly alone in a world that’s not his anymore. I think it scared the hell out of him – scares him even now – not as bad with you, but I'd hate to see it if he lost you. He's stubborn and proud so he'll deny it.”

“Still bothers me that I fucked it up back then,” the young officer murmured, sounding miserable.

“You made the right choice in that situation and you know it. It was a classic risk assessment scenario. You didn't know Khan, then, like you do now. And Marcus used the both of you, throwing in another variable.”

“He forged a world for Nien – around him – a false one. Nien was convinced that Section 31 was an authorized part of Starfleet’s Secret Service; that the admiralty knew about him and his people and condoned Marcus’ methods. That’s why he attacked Daystrom. All he knew was that Marcus had killed his crew, and the staff officers were aware and acceptant of the actions. He purposely spared
the first officers – Spock and me. He could have taken us out with a blast charge in that conference room and killed everyone, but he didn’t.” Kirk swallowed. “Nien told me that twice he had me in his sights, but he didn’t pull the trigger because he recognized the commander's uniform.”

Spock lifted a brow again. That detail had slipped his observation as he was busy with helping the injured to safety and then all of his attention was focused on Pike.

Bones had turned pale at Jim’s words umpteenth time. He came so close to losing Jim – and Spock that day. It made him sick. He felt grateful - and guilty for being grateful that the Augment took aim only at the senior officers, sparing the men he held most dear. “Can't ever be simple with you Jim. You boys either dance to Death's fiddle or you sleep together. Can't you just do friends?”

Kirk smiled again. “Ha! Told you I don't do easy. I wanted to tear him apart after Chris died. Spock talked me down – made me do the right thing per regulations, of course. I – I wasn’t myself, and I don't think anyone but Spock could have made me change my mind.”

“I know.”

Spock nodded his head in deference at the compliment.

“Yeah, and the move played right into Marcus' hand!” Kirk shook his head. “But fate had other plans for Nien and me. That time I listened to my first officer; I followed regulation. Pike in my heart and Spock next to me – that's what got us here! Because of that, I was able to listen to Nien’s story in the brig; hear him out in my apartment. He trusted me with everything – his childhood, his struggles in the 20th century, everything he’s been through since he woke up – and he did it because I listened to you, Spock, and Pike – finally. Anyway, he knows his mistakes; he owns them, but he shouldn't bear full responsibility for them. A long time ago Pike gave me a second chance. I don't even think I deserved it, but he did anyway. Khan is more than deserving true justice and I'll see to it that he gets his second chance.”

“And he wants one?” Spock cut in flatly.

“Who wouldn’t? It's funny – without Chris' belief in me, I would've never been on the in the first place. After Nibiru, I was slated to go back to the Academy. Chris made me his first officer instead. God, I hate that Marcus used that. Chris was right; Nibiru – I endangered my crew, you, Spock. I didn't respect the chair. But Chris took me back anyway; gave me that second chance when I fucked my first one away. It woke me up – made me see just a bit clearer. His death made me see what I was damn lucky to have – you both. I won't take it for granted and I'll never forget the lesson.”
Spock nodded slowly. “Hence Khan’s second chance,” he stated quietly.

A gentle smile spread over the young captain’s softened features. “After all I know now – all I’ve seen; his loyalty to those he deems worthy – The Shadow – this ship. His determination to fight for peace – for me. And how...How he loves me. I do know it’s the right thing to help him. In his heart, he’s good. Chris would do it. He and Wesley are cut from the same cloth; I’m sure about that.”

“Yeah, Pike had a weak spot for hopeless cases!” Bones deadpanned, giving Kirk a pointing look and his friend laughed shortly. Then McCoy shook his head before turning serious again. “You know that you’re in some deep water if Command ever figures out you're in a relationship with Khan?”

The look of Jim’s eyes became firm. “I don’t care! I'm not letting him fall – not for this or anything else. I've saved worlds – we have, so I'm not afraid to go up against the world for this. I'd do it for any of you, and I'll do it for him!”

The Vulcan bent forwards. “It could cost you more than your command, Jim. I could cost you your freedom – allying yourself with a fugitive.”

“And that's gotta change! He shouldn't be a fugitive. The trial was a farce!” Kirk stated. “He’s a person, a victim, and he was denied due process! Wesley thinks so too, – and it's a good thing. He's on our side; he offered his help. I’m sure he already told you about it.”

“Commodore Wesley informed us that Mr. Singh is ready to face a real trial. He will countersue Starfleet. And he will remain on board under the commodore’s protection until everything is settled. After learning about Mr. Singh’s fate in the hands of Marcus, the commodore’s decision to support him is... understandable,” Spock stated reluctantly.

Jim beamed at him. “There, you said it yourself. Nien deserves justice for himself and his family. And justice should be served against his tormentors.”

Groaning McCoy leant back. “I know that look, Jim,” he grumbled. “You’re hell-bent on getting Khan out of trouble and getting us into a no-win situation.” As Kirk simply nodded, Bones looked to the ceiling; moaning “Sweet Lord, have mercy.” He glanced back at his younger friend, who wore his famous boyish grin and rubbed his forehead. “Do you have some brandy here?”
“Something far better,” Kirk chuckled. “I’ve got Scotty’s scotch!” He pointed at the cupboard. “Grab two glasses and…”

“Three!” Spock corrected him, taking the two other men utterly by surprise.

“My mother had a special proverb for times such as this: Extraordinary times demand extraordinary measures.”

Jim smirked. “Right, three please, Bones.”

“I’m a doctor, not a bartender,” the CMO grumbled, but did as Kirk asked.

Spock watched McCoy bring the glasses and the bottle. Normally, he saw absolutely no reason to drink – to inhibit his logic and intellect. But just right now he understood, maybe for the first time, why humans took ‘a drink’ when they were troubled. Not that he would ever admit to being troubled. But he had much information to sort through, categorize and store in his mind.

And he would speak with Nyota. After she had returned from med bay this morning, she had told him gently but sternly that she had an idea concerning Khan’s sleepwalking – why he sought out Jim. She also stated that he, Spock, had to figure it out by himself or wait until Kirk explained for himself.

The Vulcan was convinced that his lover instantly realized the affair, and her respect for her captain and friendship silenced her. Spock would not confront. Uhura’s loyalty to Jim was appreciated by the first officer, but he would ask her other questions regarding attraction and human emotion.

He was confused – completely baffled was more apt. Jim had mourned for Christopher Pike – he had wept for him. He wanted to kill the man who had murdered the admiral. Now Jim and said man were… a pair. Jim had all but pledged that their destinies be yoked. And how is it that Spock had overlooked his T’hy’la’s romantic preference? Romance – so human, and wrongly discounted by the Vulcan. And so Spock was shocked that Jim had developed feelings for Khan at all. Even given the injustice done to the Augment during the last two years, Spock couldn’t grasp how Jim was able to feel anything more than compassion toward the former dictator. Perhaps Uhura could explain to him the complexity of combined feelings that formed the foundation of the ‘love’ Kirk felt for the super-human.
“Spo-ock!”

Startled, the Vulcan glanced up at the two amused faces. Obviously Kirk and McCoy had been addressing him for a while now. “I apologize, gentlemen, I was lost in thought.”

“Well, well, first he shows an emotion other than apathy and then he wants a drink. Now he's daydreaming. Should I be worried, Spock?” Bones taunted; the first officer sighed soundlessly.

“Not more or less then is your baseline for such an emotion, Doctor,” he replied and lifted his glass as the other two men did.

Just down the passageway, the main topic of the trio's conversation and his Chilean friend were having their own discussion about what the future might hold…

TBC…

Chapter End Notes

There – it’s done. ‘The Talk’ – and Jim’s head is still attached to his shoulders (*snicker*). It really was super to write this chapter and the whole thing came easily to me, yet some details were hard to mention because it showed the cruelty Khan went through what led to so much chaos and blood share. It’s a good thing that he now found someone he can count on.

Of course the whole ‘love-relationship’ was a blow for Spock. There he thought he was finally able to understand humans and then came the next shock. Poor Vulcan, he really must think that all humans are crazy (*laugh*).

In the next chapter the waves will be moor calmed down for our love-birds, still there are hurdles they have to overcome. Spock will talk with Uhura about his ‘discovery’, Diego will meet Jim again, aaaand our boys will have a little go with each other.

I hope the chapter was like you wanted it to go and I’m really, REALLY curious what you think of it.

Have a nice rest of the week and a nice weekend,

Your Starflight
Hi my dear readers!

Sorry for the delay, but this damn summer-heat really slowed down everything – even the hobbies. But now my dear beta and I are done with the next chapter, and I hope you’re going to enjoy it. As promised there will be a hot scene between our boys again (so be warned), but also some serious things.

Thank you so very, very much for all the comments and kudos; I’m glad that you liked so much the last outcome, yet there is still a lot to come.

Have fun with the new chapter,

Love

Yours Starflight

Chapter 39 – First step to acceptance

Just minutes later, Scotty reported that the last of the equipment shipment had arrived. Spock contacted Diego in Khan’s quarters. They didn’t have to wait very long before the doorbell buzzed, and the tall Chilean stepped into the room. Grinning from ear to ear, he offered Kirk a paw-like hand; he made no secret of his delight at seeing the young captain again. He blustered cheerfully, “Hey, *amigo*! It’s good to see you up and around – well, almost. You look a bit like the ghost stories we use to keep disobedient children in line, but at least you’re alive!” He pumped Jim's hand hard, and then let go and greeted McCoy likewise.

“Ah, the great medicine man with the magical hands. Nice to meet you, *amigo!*”

Bones checked his hand for damage after de la Vega-Martinez finally freed him. He returned the greeting with a careful, “Hello.”

Diego didn't notice; he let a seabag slide from his shoulders. “I brought your stuff, Jim. Khan's got his, but I wasn’t sure who had which PADD or whose clothes were whose – nice though. Indian, I guess? I figured you two would divvy it up right.”
Jim cocked his head in surprise. “He told you his name?”

“*Si*, he did. Guess he trusts me enough to share his secret. Well, after our clever Caviw figured him out, and he found out that I knew too, he saw no reason to keep me in the dark.” He lifted the seabag to the sofa. “He’s careful, but I can’t blame him.”

Kirk, who had risen as the Chilean entered his quarters, opened the bag and looked in, smiling widely. “Thanks, Diego. I appreciate it. This all… holds memories.”

Diego roared with laughter. “I bet I know what you’re talking about, *chico*. I was surprised to find all the sheets and blankets washed, and all soap, shampoo and lubrication gone, but…” He stopped and glanced over his shoulder at the CMO as McCoy demonstratively cleared his throat. “Do they know?”

“They do now,” Jim said with a wicked gleam in his eye. Diego's eyes had widened before Jim allayed his fear. “Kidding, friend. For a bit now, yeah,” Kirk sighed. “Bo… Dr. McCoy knew after we came aboard – examination while we were out,” he answered sheepishly.

The Chilean turned towards the other officers, who didn’t look too happy, and smiled broadly at them. “They can tell that? Ah, come on, guys, don’t give your captain a hard time. He’s been through a lot – both have. The ability to find solace, comfort and love in another one’s arms, is a fortune not all of us will have the luck to experience. Mark my words.”

“We don’t have a problem with Jim finding love; we are concerned whether he has found someone trustworthy to love,” Bones grumbled and Diego’s eyes widened.

“You're afraid our superman is not being honest with Jim?” He laughed. “Guys, those two are so completely in love with each other, you don’t need any sugar in the house to sweeten things up. Just watching them is enough.” He grinned broadly. “It's cute seeing them fret over each other every time they were about run headlong into trouble.”

McCoy stared at Kirk. “You were fretting over Khan?” he asked in disbelief.

“Hey, the Aldebaran mission was dangerous. He's not indestructible – and he got hurt. Of course, I was worried about him,” Jim defended himself.
To his utter astonishment and Spock’s evident confusion, Leonard burst out laughing, clapping his hands. “FINALLY!!” he rejoiced. “Finally you get a taste of the same medicine, Spock, Uhura, Scotty, I and all the others have to swallow every time you throw yourself head first into trouble!” He rubbed his hands in glee. “Maybe now you can understand what you put us through, kid!”

Jim rolled his eyes. “There, you see what I have to put up with,” he complained to Diego, who chuckled in amusement.

“You're all crazy – and this is Starfleet’s finest, eh?” He caught Spock’s indignant gaze and corrected himself. “Well, at least one of you can still manage a bit of decorum.”

Kirk snickered, then he went rigid. “Oh, Jesus, I almost forgot.” He took his walker and hobbled to his desk, ignoring McCoy’s protest that he should sit down and spare his hip. “Give me your account data, Diego. I'll transfer the Credits to you,” he said; he switched on his terminal and sat down carefully.

“If you think I'm taking anything, amigo, then…”

“You bought Nien and me new clothes; you provided food, wine, and God knows what else, including lunch out. Of course…”

“You two are my friends, and you were my guests. I don’t take money from either on principle!” the Chilean said sternly.

Sighing, Jim turned towards him. “Diego, I would have paid for myself, but the Klingons took my wallet, and Nien doesn't even have one. As much as we are grateful to you, you shouldn't have to foot the whole bill.”

De la Vega-Martinez grinned. “Are you kidding? I've never had so much fun. I always walked the fine line between legal and illegal in my businesses. Frankly, it's exhausting. Then Galven showed up with this technical genius in his wake, and my whole world turned upside-down. I've learned so much, flew into an annexed area to drag the Federation’s newest hero’s ass out of wherever the hell he was in – with his new man, got into a bar fight – God, that's been ages, smuggled you boys into a spaceport and got the chance to save the day.” He shook his head. “Don’t you dare to pay me for that, Jim. Giving you and Khan a timeout was the least I could do. And, by the way, Galven already pointed out that I’m a hopeless romantic. When I saw how you two handle each other and how much you’re in love, I had to help that out.”
For a long moment Jim looked at Diego, ignoring the indignant gazes of his two friends when Diego talked of his 'romance'. “You’re serious about that,” he stated and the Chilean nodded firmly.

“You can bet your shirt on it, amigo. Don’t you dare to send me any money. I’ll get enough from your club, anyway.”

Kirk sighed. “Starfleet pays pretty quickly, but if it should come out that you were involved in the brawl at ‘The Stars’…”

“It already came out; I was in custody, and the kind Commodore Wesley posted my bail and so I’m free now. He made it clear that I was a part of a Starfleet-mission so they can’t prosecute me.” Smiling in triumph, Diego bounced on the balls of his feet.

“Wesley paid…” Jim cut off himself and groaned.

McCoy commented wryly, “The wings Wesley covers you with, Jim, are bigger than a Klingon battlecruiser's!”

“I know,” the young captain sighed, then he rose carefully. Extending his hand, he smiled at the Chilean. “Gracias, Diego. Thank you so much for your help and your understanding, not to mention your courage and loyalty. I’m glad to have met you, and I’m lucky that I can count you among my friends.”

Touched, de la Vega-Martinez accepted the offered hand. “You’re welcome, Jim. I told Khan and I'm telling you, too. If you ever need my help, just contact me, and I’ll come. Deal?”

Jim chuckled. “Deal!” he said. “Good luck dealing with Starfleet, and be careful who you deal with – especially if the equipment is going on me ship.” Kirk winked at him.

Spock’s brows shot up. That man… fenced? Well, what could he expect from a man who was friendly with the new militia? On the other hand, this Terran aided his T'hy'la, risked his life to protect Aldebaran and now used his resources to lend his support to Starfleet. As Kirk and McCoy would put it, Diego de la Vega-Martinez was ‘a good man’ though Starfleet's eventual victory was in the interest of all.
“Thanks,” the Chilean replied. “And be careful the next time you attempt to kick some Klingons ass. Keep your man close by.” He turned to leave but stopped one last time. “Oh, and keep quiet about the Tribbles. I think it made that Koloth see red.”

“You did what?” Bones’ nearly screeched.

“I asked him how the Tribble business was working for him,” Kirk answered innocently. “We hadn’t seen each other in a while and I figured I’d be polite. Couldn’t hurt, right?” he teased.

McCoy let his head sink and groaned. “I really should check your head!”

“A good idea, Doctor,” Spock deadpanned, showing just enough humor to make Leonard suspicious.

“A joke – from you? Again? Right, that’s two appointments I’m gonna make.”

Chuckling again, Diego waved good-bye. Spock followed him. “I will accompany you to the transporter room, Mr. de la Vega-Martinez.”

“Thanks, Commander. I’d probably lose my way otherwise,” the Chilean smiled, and then the door closed behind the two men. Kirk and McCoy were alone again.

Staying silent for several seconds, Leonard finally rose to speak. “You do know that you’re not off the hook, Jim?” As he met his friend’s asking glance, he added, “I can forgive a lot; I have. But the lies. I didn't think we did that.”

“I had to keep Nien’s identity a secret, Bones,” Kirk interrupted him softly. “Don’t you understand?”

“I'm not talking about that. You confirmed who he was when we talked over the transmission. I'm talking about yesterday when I asked you about Khan’s need to be so close to you, and you gave me some shit explanation.” He saw how the younger man’s face flushed. “Do you trust me that little, Jim?” he asked quietly.

Kirk shook his head slowly. “No, Bones! That's not it at all. If there's anyone I trust implicitly, it's
you.” He took a deep breath. “I – I was afraid of your reaction – your disappointment. I know that
you don’t go along with my lifestyle. I find fun wherever I can, you know that – and you've always
taken me as I am. But… Nien is something different. We got close, very close. It doesn't mean I don't
remember last year; I do. By all rights, he should be my enemy, and I understand that you and Spock
will still think of him that way. And because of that, I was afraid that I failed you somehow – maybe
irrevocably damaged us.”

Bones watched his friend, took in his misery, and shook his head slowly. “You’re a corn-fed idiot
sometimes, you know that?” he said with a low voice, but not without fondness. “The only thing that
hurt me was you lying to me, not the fact that you somehow got the hots for an enemy. Not even if
you share his bed. Though I really didn't see that one coming.” He closed the distance to Kirk; his
tone and gaze became intense. “Listen, Jim, and listen very closely. I know that you were under
more stress than any man should endure in a lifetime. This relationship is at best, a bomb ready to
detonate, and at worst, it’s gonna take us all out with it. So keep your finger off the goddam
detonator. But I would never judge you for who you fall in love with. I can give you my advice and
voice my concern – not like I ever held that back. But it’s not my place to condemn you because you
love someone. But if you ever – ever! – lie to me again, then you see our friendship as less a priority
than I do. And that hurts like hell to say.”

“You are my best friend,” Jim interrupted him; his voice sounded tight from the lump in his throat.
He was afraid that he was about to lose Bones. “You are more a big brother to me than Sam. I love
you like a brother. I was afraid of your disappointment – I didn't want to be the cause of it – I don't
ever,” he confessed quietly.

There! There was it again. Kirk's deepest fear. To be left alone – abandoned. Bones knew how
deeply it was rooted in his friend. It was a trauma Jim had never really overcome.

Sighing, the older man pulled Kirk in a hug. “Silly kid,” he whispered. “You could never disappoint
me that way. I always hoped that you'd find someone one day who could be your other half. Not like
Spock and the whole tila-thing…”

“T'hy'la,” Jim mumbled, and the CMO rolled his eyes.

“Whatever!” He gently clapped Kirk on the back. “As I said, I never gave up hope that you’d find
the love of your life one day – and if I understand you correctly, Khan is it.” As he felt Jim nodding,
he moaned. “I only ask – and I know I won't get an answer – why the love of your life has to be the
better, dangerous, wanton, brilliant superman wanted by half the galaxy?” As he felt the younger
man tightening his arms around him, he had to chuckle. “It’s never easy with you?”

“I can’t help it,” Kirk whispered and McCoy pulled a face.
“I know. Believe me. I know!” Then he stepped back and looked at his friend’s. He saw the aftermath of the emotional storm in those tired blue eyes, but also relief. He gently push Jim's chin with his fist and grumbled, “You take years off my life, kid!” He nodded towards the bed. “And now lie down and rest. You need it.”

To his surprise, Jim didn’t protest, but turned around and hobbled, with the help of the walker, towards his bed. The move spoke volumes. After helping Jim out of his clothes, he looked around for something comfortable to wear. Kirk pointed at the bag on the couch. “The kurta's over there and the shalwar pants must be in the seabag.”

Bones frowned. “That sounds foreign.”

“It is,” Kirk nodded. “They're loose fitting cotton pants. And ridiculously comfortable.”

Bones pulled out two odd looking trousers from within the bag, lifting them with a questioning look. “Which one?”

“It doesn’t matter; they're the same size.”

Nodding, Leonard handed Jim a shalwar and tunic. “Khan gave them to you?” he asked already knowing the answer.

“Yes. After Turkana, I – well – didn't have much to wear. Nien programmed the replicator for these, in an effort to make me as comfortable as possible.” He slipped it over his head. “I'm really starting to like them.”

‘Khan's every move since that first transmission has been for Jim, right down to the clothes on his back,’ Bones thought. ‘The enhanced bastard does care.’

After helping Kirk get comfortable in bed, he spread a blanket over him; then he hesitated. He saw restlessness in his friend’s eyes. Bones drew his lips in a tight line as he made up his mind. He would test the Augment in his own way. He saw the Augment's delight at the challenge Scott had given. If he would put that aside and make his way to Jim's room then…
‘Who am I kidding? This man sleepwalked right into Jim's bed. There's not a thing in the world that will keep him away from Captain Trouble.’

Still his decision was made. “Try to get some sleep,” he told his friend; then he turned to leave, but Jim held him back one last time.

“Bones?”

“Yeah?” The CMO looked back at his friend.

“We lost nine crewmen, right?” As McCoy nodded, the young captain continued, “Please send me the report so I can inform their families.”

“Spock already started down the list,” Leonard said gently, but Jim wouldn't have it; no matter what, he was the captain; this was his duty.

“They died because they fought aboard my ship. The least I can do to is send a personal message to their families.”

A sad smile tugged at McCoy’s mouth. Typical Jim Kirk. He always took it personally when he lost crew members – like any good captain should but less didn’t these days. “I'll give them to you tomorrow – promise.”

“Thanks,” Kirk mumbled and he closed his eyes, too tired even for feigned irritation in his weakened state.

Bones left the captain’s quarters and walked four doors down the corridor. Half a minute later he touched the door-buzzer and heard the dark voice call sharply, “Enter!”

Stepping into the quarters, McCoy saw the super-human sitting at the dining table. Two empty glasses were in front of him; he had his PADD in his hands but it was switched off. ‘So, no working on Scotty's problems. That's interesting!’ the CMO thought. He caught and held Khan's angry, piercing glare.
“Are you two done picking your captain apart?” the Augment growled.

Leonard sighed; it was becoming too commonplace. “We didn’t pick him apart; we needed answers and explanations from our friend who we are concerned about. We got’em.”

“I'm sure you did. Jim is too gracious and too good a man not to concede, but as a doctor you should know the danger emotional stress poses to one still healing from life-threatening injury!” Khan snarled; his eyes flashed dangerously even if his face remained nearly expressionless – nearly. Yet it was the super-human’s statement that caught McCoy’s attention.

“How do you know that Jim was stressed?”

“You do not have to be a genius to figure that out,” the former dictator spat; in one fluid movement he stood – once again a predator through and through.

Bones didn’t flinch. “Granted,” he said slowly. “But you sensed it, didn't you? Just like you did his nightmare.”

That woke Khan’s awareness. “What do you mean?”

McCoy rolled his eyes. “Oh, come on, Genius! We both know that with your level of brain activity, the likelihood of some empathic ability is high and your unconscious actions support that hypothesis as far as Jim is concerned. I surmise, without the benefit of being a genius, that you share an empathic bond with Jim. It explains how you sensed Jim’s nightmare and your actions following the event.” That got Khan; the CMO could plainly see it.

The Augment's features pinched as he regarded the doctor, “You are right concerning our connection. It is not unlike that which I share with my people, but it is... more. I am still not sure as to its breadth and boundaries. Jim and I… We believe its origin was…”

“That damn hickey!” McCoy mused when the super-human didn’t finish the sentence. “It’s a mark, isn’t it?” As Khan nodded very carefully, Leonard continued, “I gave him your blood and you claimed him – in every sense of the word. You can sense intense emotion. With Spock, it is more emotion spiked with adrenalin – fight or flight response, fear. The only regs Spock ever broke were for Jim's sake.” He rubbed his neck while the former dictator watched him, silent and tense. “Rrrrrright,” Bones grumbled finally. “Is he your...,” he swallowed. “Other empathic or telepathic species use the term mate – do you? Is that what Jim is to you?”
Khan cocked his head at the clipped tone. “Any objections, Doctor?”

McCoy snorted. “I could list a dozen objections why this relationship is crazy at best, but it’s not up to me is it? I can warn Jim, I can advise him, and I can be there for him, but that is all I can do for him. I will love him nevertheless – he is my friend. And I will follow him – he is my captain.” He straightened his posture and walked to the Augment. Stopping mere inches away from the engineered man, Leonard McCoy looked him directly in the eyes. “I never saw Jim fall for someone like he did you; he still is, you know. He never trusted anyone enough to let them in – not like you. As far as I can tell, you’ve entrusted experiences and secrets to on another that no one else will ever hear. I can’t and won’t stand in the way of whatever it is you got going. For Jim, this is very serious. Seems to be for you too. Now, all that being said, I will make your life hell if you hurt him. I may be just simple country doctor, and physically you’re stronger than me. No doubt. But if you hurt the man I consider the greatest of men, friend, and brother, then even your super-enhanced abilities won’t save you.”

He saw Khan’s eyes widen in surprise, and then something close to admiration appeared in those ocean-colored depths.

“Spoken like a man,” Nien said calmly; a hint of a real smile curled his lips. “And you have my regard as well as my respect, Doctor. I can assure you that I would rather lose a limb before I knowingly hurt Jim or allow him to be harmed.” He sighed quietly. “The latter, however, is easier said than done. You know his tendency toward recklessness.”

For another long moment, McCoy stared, stunned at the common ground he’d just found with the Augment; then he nodded slowly. “Yeah, it drives us all crazy. Welcome to the club.”

“I see,” Khan commented dryly. The irritation in his voice earned him a low chuckle.

Leonard observed as he was trained to do, now – trying to see him as Jim did. This man certainly held a strange beauty that men normally lacked. He was a vision of danger thrumming like electricity – emitting it from every unseen pore in that creamy skin. Combine danger with grace, strength, unabashed bravado, loyalty, and love – it was no wonder that Jim had fallen for him.

Bones stepped back – out of Khan’s personal space. There was no reason to continue in that bubble; his point made clear enough. “If you’re not too busy with Scotty, you might consider keeping Jim company.”
Baffled the Augment cocked his head. “Not complaining that I am too close to him, Doctor?” His velvet voice hinted sarcasm and McCoy shrugged.

“I know I can’t stop you, and I can be sure that Jim stays in bed. He’s tired now, but knowing how he gets ants in his pants, he’ll be up again in an hour. So you going to him'll work in both our favor. Besides, I also can tell just by looking at you that you want to go to him after we mixed it up.”

A sparkle of amusement danced in Khan’s eyes. “Believe me, Doctor, if you really had ‘mixed it up’ with Jim in the sense as I know it, we wouldn’t be standing here and speaking right now, and you'd be enjoying the decor of your sickbay.” The calm intonation took the edge out of the statement. Bending down, Khan grabbed his PADD. “Excuse me, Doctor, my mate needs me.”

With those words, he left McCoy standing there, staring wide-eyed at the door. “He doesn’t even deny that he is about to… to bond with Jim – however, that's supposed to go down!” He frowned. “What does that even mean? They gonna be married or something?” He scratched his head. “Answers! I need answers! And the only one who understands the mental shit has the emotional intelligence of an ox!” He massaged his temples and groaned, “Why me!”

ST***ST

Jim lay in the semi-dark of his quarters – tired, unable to sleep, and cold again. The latter made the second impossible despite the first. “Computer, raise temperature to 27 degrees,” he ordered; hoping to find some warmth then.

“Confirmed!” the synthetic female voice answered and warm air blew into the room.

Still it was cold – too cold.

The door slid open, and Jim sensed the familiar presence he had missed. Carefully turning over, his eyes fell on the tall, slender figure, illuminated by the corridor light. Khan crossed the threshold, and the entrance closed.

“Still alive?” Nien’s deep voice held a hint of a smile, and Jim sighed.

“Yeah, they didn’t tear my head off. Came damn close to, but still I’m among the living.” He sat up, grimacing as his hip protested. “How’d you get access to my quarters? I didn’t hear you buzz me to
let you in."

The Augment had closed the distance to the bed; he didn't need more light to clearly see his surroundings. He was curious about Jim’s quarters. What personal items would his beloved keep with him on his journeys? But the super-human’s attention remained only on the younger man. “I cracked the code,” he simply said.

“You… You cracked my door code?” Kirk asked thunderstruck. “Just like that?”

“Yes, I am proficient at bypassing security to get what I want,” Nien shrugged and the young captain didn’t know if he should laugh or be irritated.

“Tell me what you’re not good at,” he mumbled. His beloved smiled tenderly.

“Thanks for the compliment.” Then Khan rounded Kirk’s bed and sat down on the edge; he bent forwards. The hand not holding the PADD reached out to stroke through Kirk’s tousled shock of hair. “Feeling better now that everything is out in the open and your friends can begin to make sense of your choices?”

For a while, Jim simply relished in the tender gesture; then he looked curiously at his soul-mate. “How do you know about Bones?”

“Because the good doctor was in my quarters only a minute ago. He gave an impressive speech intoning that he would have my head if I dare hurt you.” He chuckled as he watched Jim’s eyes widen. “Then he welcomed me to the club.”

“Which club?” Kirk asked, completely baffled.

“To the club of those to whom you add a gray hair every time you plunge into danger.” He smiled. “You doctor friend is gruff and perhaps a bit surly. I believe it is a façade, masking a more caring and gentle nature – the one that makes him the great doctor you see. He loves you like a brother and he has earned my trust and my assurance, if ever he needs, by threatening me if I ever betrayed your trust.”

Jim could only stare at him; gaining credence through threats. Well, McCoy was nothing if not brave. He shook his head and began to laugh. “Bones! That’s… so typical.” He reached out and cupped Nien’s cheek with one hand. “And you get him. Not many people bother to look past his rough...
exterior.” His thumb circled softly over the Augment’s silken skin. “What do you mean with ‘he earned your assurance’?”

“Simple,” Nien replied, “those close to you, are my concern. If something should happen and they are in need, I will be there. Not because I have developed a sudden liking for them, but because they are your family. That is reason enough.”

Deeply touched, Jim bent towards him. “Just like when you gave Scotty the SDD?”

“Just like that,” Khan nodded; he met Jim where he was and captured the young captain’s mouth with his own. Letting the PADD fall and sliding down to lay beside his mate, he gathered Kirk in his arms never breaking the kiss, knowing that this was the only thing to soothe them both. So much happened in the past few hours – reliving and retelling of old nightmares, escapes, and escapades. It was an exhausting purge for both of them. No matter how tenderly Jim treated the subject, Khan sensed that the events drained his beloved more than he would let on.

That Jim had feared the reaction of his friends was obvious. That Jim's fear was unfounded, was apparent to his lover, now. McCoy’s words told Nien that the CMO would soon come to terms with his friend’s relationship. The revelation was important to Jim, not because he sought his friend's approval and fretted over his disappointment, though he did. But the CMO was a respected man on the ship. He would serve as an example of acceptance and loyalty toward the captain.

Breathing in the familiar, sweet and uniquely male scent of his beloved, Khan nuzzled Jim’s forehead and whispered, “By the way, thank you!”

Confused the young officer frowned. “For what?”

“For standing up for me – for defending me against your friends’ understandable anger. I know that was not easy for you, but you did admirably and perhaps successfully.” His mouth touched Jim’s for another long, sweet moment. “Thank you.”

Kirk smiled again. “I told you; I’ll move heaven and Earth to make the whole world see you as I see you. And my friends are a good start.” He buried his face in the crook of Khan’s neck, grateful for the Augment’s words and his consideration. He was stretched out toward Jim's good side making these tender moments as pleasurable as possible. “They’re going to accept you, and they’ll like you, too, once they know you better,” Jim said. One of his arms snaked around the super-human’s slender waist. “Trust me,” he murmured into his beloved’s skin, closing his eyes.
“With my life, Jim Kirk,” Nien replied softly. “With my life!” Lying there, Khan listened to the steady breaths and heartbeat of his beloved; then he felt Kirk relax in his arms. The younger man had fallen asleep. Smiling, the super-human stretched out an arm to the floor and reached for the PADD. Picking it up he switched it on, bent one knee until he could lean the little device against his thigh and began working on Scotty's challenges. He felt a contentment that perhaps he never had before. Almost domestic as he tapped and clicked and thought while holding his slumbering mate secure in his other arm.

ST***ST***ST

“Milord, Commander Koval of the BortaS and Commander Noy from the MeQ’lw have arrived!” The Klingon stepped back to let the two captains enter Kor’s quarters. Pressing their fists against their chests, they greeted him with the traditional “Kaplaah!” (victory) then they spread their legs and stood still and proud.

“Koval, Noy,” the Klingon lord nodded curtly at the pair. “As you have heard, the attempted annexing of the Aldebaran system and other inhabited planets in this sector has been arrested by our enemies. We suffered great loss, but so has Starfleet. As far as we know, over half of her vessels stationed in this sector are damaged. While the honorable councilors discuss a political solution for the gridlocked situation, new military options will be tested. And the weakened Federation Starfleet gives us plenty of opportunities to do so.”

He rose. “Gentlemen, I chose you as the first to test the enhanced cloaking device technology.” The cousins looked quickly at each other; their eyes burned with the fervor befitting the warriors they were.

“This is indeed a great honor, Milord,” Koval spoke up as the older of the two.

Kor sighed soundlessly. “Yes, it is, and it was my decision to choose you. After you lost your first officers to the deeds of a single Federation assassin, I’m certain you are eager to test our enemies’ technical limitations. Our scientists state that their enhanced cloaking device is undetectable to Starfleet’s sensors because it also cloaks the neutron emissions of the warp core. It’s your job to prove this to be true – or not.” He bent over his terminal and turned the screen, beckoning the two commanders closer.

“Here is the schematic of the new cloaking device and how it works.” He touched the screen and started the demonstration video. “The BortaS and the MeQ’lw will be equipped with it in two days’ time; then the testing will begin. You must familiarize yourselves with the technical innovation and support our fleet’s scientists in every way possible. If politics fail, we will face new battles, and be ready.”
Noy frowned; the ridges on his forehead twitched slightly. “There are rumors that the Federation offered peace talks,” he said slowly, his voice deep and rough.

“The rumors are true,” Kor nodded. “And after we lost the second battle, not to speak of some more lost little combats, our counselor chose to give politics a try.”

Koval looked over to him. “The Federation managed two larger victories, and they are offering peace talks? This makes no sense. Only the defeated beg for mercy at the table of diplomacy!”

“The Federations thinks differently,” the last member of the emperor’s family said calmly. “She sees no honor in destroying a weakened enemy, rather she finds honor in the preservation of life through diplomacy.” He looked at the confused warriors and allowed himself an audible sigh. “Other races, other ways – or however the saying goes. The Federation regards tolerance as the backbone of continued civilization.”

“Weaklings!” Noy scoffed, and Kor lifted both bushy brows.

“Sometimes tolerance demands strength. Tolerance requires one deny himself his point of view. Fighting oneself is more difficult than fighting the enemy.”

“Each warrior must master himself!” Koval growled, and Kor nodded.

“I agree! And until the High Council determines its next steps, we must make certain that we prepared for anything the counselor decides – especially should the war continue.” He pointed at the screen. “It is our duty to strengthen the Empire against its enemies. Starfleet experiments with technology designed to disturb our sensors. We will make your ships completely invisible. Lastly, as you are entrusted with the Empire's newest technology, you must protect it as such.”

Both commanders slapped their fists again over the center of their chests and stood at attention; each hoped that they would have the chance to test under aggravated conditions – battle.

*ST***ST***ST*

The door closed behind the first officer; comfortable silence and dim light of their shared quarters
enveloped him. The young Bantu woman was still in her uniform; she placed a pot of fresh Rooibos tea on the table beside two empty, waiting cups. The homely atmosphere pacified the Vulcan's inner turbulence, yet he knew he would need to meditate before he could find his way back to inner balance.

He met Uhura’s dark, warm eyes and took a deep breath, to stay calm but the urge to blurt his thoughts was too strong. “They are together,” stiffening as the words left his mouth. His usual control had slipped away. He failed to greet his partner, the woman who held his deepest respects – his ‘love’, his mother would tell him. And he spoke without thinking, like a human schoolboy. On the other hand, if he was right (and he usually was), then Nyota already knew the truth of Kirk and Khan.

The communications officer cocked her head; her hair that lay loose fell over her shoulder like a curtain of black silk. “I thought so,” she nodded.

Spock lifted a brow, went to the dining area, and sat down; Uhura took her place opposite. He looked at her, using her calm countenance as an anchor to moor himself – and his raging thoughts. “Nyota, you told me this morning that you had a certain suspicion regarding the instincts which drove Khan to comfort Jim even in sleep, yet you did not give me any details. I think you did it out of respect for the captain because you realized something I did not until this afternoon.”

Nyota groaned inwardly. Spock dove headlong into the subject matter when he was least comfortable. Knowing her lover as she did, she asked a question to his question, in order to allow him to work toward the answer on his own, “So, Kirk did tell you about him and Khan?”

Spock, still tense, slowly replied, “Yes, Jim confessed his close relationship with Khan.”

Nodding, the young Bantu-woman watched him. “I recognized it the moment I saw them lying together. They looked so peaceful lying there wrapped around each other. That kind of contentment is only found in family and lovers. And that hickey! But it wasn’t my place to tell you about it. Jim is your T’hy’la. Telling you is his place, alone.” She cocked her head. “It surprised you,” she stated slowly and Spock nodded.

“It… confuses me;” he admitted.

Nyota drew her lips into a thin line in thought as she filled the cups with steaming tea. “Of all crazy things Jim Kirk ever did, this may be the craziest one. Not only because out of the blue, he's with a guy. But leave it to Kirk to find the most dangerous man in the universe to attach himself to – the one who tried to kill him.”
“And that is what I do not understand,” Spock said quietly. “I know now that there was initial attraction…”

“Kirk was attracted to him last year?” Uhura blinked baffled. “Uh, weirdness, I name thee ‘James Kirk’.” She snorted. “Right, Khan is attractive – handsome even. And he has this dark aura of power and danger. Kirk is nothing if not addicted to danger. Yet…” She rubbed her neck. “I think it’s the perfect mix of difference and similarities that put them together.”

“I do understand the nature of human attraction,” the Vulcan murmured. “What I don’t understand is how Jim was able to forgive Khan, Pike’s death.”

Uhura’s eyes widened. “He told you so?”

“In his own pedestrian way, as well as an explanation of what Khan has been through at the hands of Section 31 and the LSH labs. Jim’s compassion is… understandable. He is a man of deep feelings. But how compassion evolved into love for his former enemy, is beyond my comprehension.”

“Love?” Uhura pressed, then she nodded slowly. “Yes, that makes sense! You told me that Khan sleepwalked when Jim had a nightmare. And you asked me about my reaction as you came to bed when I didn’t wake. Our actions are based on the same principle. We both reacted to our loved ones’ presence – our affection and love for them.” She put some honey in her tea. “Did Jim tell you that he loves Khan?”

“Yes, he confessed to McCoy and me – and he said that Khan returned the sentiment.”

“I believe him – I believe them both,” the young Bantu woman said thoughtfully. “Khan not only risked his life when he rescued Kirk from the Klingons; he was ready to give up his life for him – I think then, and in that space station.”

Lifting a brow again, the Vulcan looked at her. “What do you mean with ‘he was ready to give up his life’ for Jim?”

A sigh escaped Nyota. “It would have been easy for Khan to escape – to run to one of the rescue vessels and to leave the station and Jim to find his family. But he stayed – even when the Klingon bird-of-prey opened fire at the station. It meant certain death; both of them knew it, and Khan stayed at his side anyway – held him when the hull cracked, accepted death so long as it was with Jim. And
this from a man created to survive at all costs. What he feels for Kirk is stronger than his genetics.” She smiled. “This is love in its purest form.” She grimaced. “Although I’m confident there's a good deal of passion involved.”

Spock moved uncomfortably in his seat. “And you think this is enough for Jim to forgive Khan…”

“Put it together, love,” Uhura interrupted him softly. “The hidden attraction and the passion was enough to turn them from enemies into lovers, but love... You said that Khan was abused by Marcus and Section 31. Kirk is driven by his sense of adventure and guided by his sense of justice. We know that – and he has you partly to thank for it. This got them talking. He learned more about him…”

“Jim holds the view that Khan was driven past his emotional breaking point once too often,” Spock cut in and Uhura’s eyes widened.

“One time too often? Isn't once enough?” She bit her lips as she saw the Vulcan nodding. “That's more than a human can bear – even an enhanced one,” she whispered.

Taking a deep breath, the first officer made a decision. “What I tell you now, my dear, has to remain a secret between us, McCoy, and of course Jim and Khan. After learning the facts of Khan's confinement by Starfleet, it appears that Section 31 and therefore Command is guilty of slavery, unlawful detention, blackmailing, abuse, torture, murder and possibly more.”

Uhura felt a knot form in her stomach. “Nothing you say will leave this room, love,” she said slowly like an oath. “Go on.”

ST***ST

Jim drifted through dreamland from afternoon to early evening. And Khan never left him. He thought and figured and worked on the challenges presented by Scotty and the SDD. At one time, he felt a soft vibration. The Enterprise had activated her warp-drive. They were leaving Aldebaran, and Nien felt a tinge of regret. Aldebaran was the first place he had felt at home since leaving New Delhi and Earth. Perhaps that feeling was due to his relationship with Jim that finally bloomed on the shores of the Silver Bayou. No – that's not it – not all of it. The planet had reminded him at Earth – an Earth before the wars. An inner voice whispered that he could find a new home there.

But it was nothing more than a dream. He had no home anymore. He never did. New Delhi and the summer palace were never his real home – never truly his choice.
‘Home is where your heart beats’, wasn't that the old saying? His heart beat with – no! Now for his mate beside him. Where Jim was, he wanted to be too. And even if Kirk’s determination to get him off the hook didn’t work...

Khan caught himself – he needed to cling to hope, as irrational as it was. Life and centuries-long experience had shown him that there was no real justice, and faith destroyed was worse than none at all. There was a part of him that wanted so badly – savored the idea of a happy ending. Naïve? Maybe! Foolish? Certainly! Yet it felt too good to push it away. The first hurdle was cleared – he had the protection of a high-ranking officer who knew the true meaning of honor, and Kirk’s friends would come to accept him. McCoy and Scott were a beginning – not an end, Nien was sure of it. Maybe there was the chance that other hurdles could be cleared, too.

Pondering the chances he had been given and those still to come, Khan lost track of time – that was until the door swished open; this time by a priority override, revealing McCoy.

The CMO stood at the threshold for a moment; Khan whispered quietly “Light on 25 percent.” The light was enough that the doctor could see two men on the bed.

“Jim still asleep?” he whispered, and the Augment nodded.

“Sound as an infant,” he replied, and even if his expression remained neutral, Leonard could see the warmth in the super-human’s eyes.

“Very good. Sleep’s the best thing now.” He offered Khan a hypo-spray. “I know he hates them. Can I ask you to give these to him when he wakes up? It’s a muscle relaxant, and’ll strengthen the weakened ligaments.”

The engineered man nodded slowly and took the hypo-spray – a little bit surprised that the CMO trusted him enough to let him treat Jim again. His face must have given him away because McCoy murmured, “It’s all right. If I trusted you to do it after Turkana, no reason I shouldn’t trust you now.”

The hint of a smile curved the Augment’s bowed lips. “Yes, that was quite the primer you gave me – including permission to do anything I thought useful to keep Jim in bed.”

Bones’ eyes widened, then he grimaced. “Yeah, well, I didn't know your methods, then did I? Otherwise, I probably would have said something very different.” He saw the beginning smile on
Khan’s face widen, and he snorted in amusement. “At least Jim wasn’t in any condition to do much more than snuggling.”

“Oh, believe me, Doctor, Jim Kirk will push through pain if the reward merits it.”

Leonard sighed; he knew what he meant. “Then I’m glad that you’ve got brains enough to stop before Jim injured himself any more than he already had.”

Cocking his head, the super-human chuckled. “I have to admit that didn’t help after a while. Jim is … persuasive.”

“I’m well aware – he always was, and he obviously hasn’t lost his touch, seeing that he even got Wesley on his – your side.” He activated his bio-scanner and checked Kirk quickly. “Right, a few more days rest and he’ll be as good as new.” He gave the Augment a pointing look. “That means that you both have to behave!”

Knowing that it made McCoy uncomfortable, Khan smiled lazily at him. “There are other methods to satisfy our needs without threatening Jim’s recovery.”

Leonard immediately blushed. “Not a lick of modesty, do you?”

“Modesty is for the meek, Doctor. Those too cowardly to stay – to keep hold of what they most want in the world. Of course, even I can maintain a decent sense of propriety. Jim is the captain of this ship; I will not cause him embarrassment.” He lifted his chin slightly. “Not that much,” he added with a suggestive undertone in his deep voice.

“Should I be concerned?” Bones asked, deactivating the bio-scanner.

“Rather the contrary, Doctor. It should be a relief to know that even I can play by the rules.”

Rolling his eyes, Bones turned to leave. “Now why does that worry me even more?”

“Because you’re a wise man,” Khan replied wryly, making Leonard’s alert bells ring. “Good night, Doctor,” the former dictator said politely; and only as McCoy stepped back into the corridor did he
realize that the Augment had dismissed him like a servant.

“I’ll get you for that, you arrogant bastard! And if you think you can play your games with me, you got the wrong guy.” He stopped as he met the confused gaze of a passer-by. “Great!” Bones moaned. “Now the gossip factory’ll spread word about the crazy CMO talking to himself!”

“Who are you talking to, Doctor?” Sulu, sweaty and clad in his gym clothes, came down the hallway, heading toward the turbolift.

“Myself, since no one else listens to me,” McCoy growled. The helmsman looked baffled before replying, “Well, if you need someone to talk to, we can go to the recreation deck, have a coffee and – well, whatever's bothering you, I'm all ears.”

Leonard had to smile. Typical Hikaru – brilliant helmsman, fighter, and officer, yet compassionate and caring to those he regarded as close comrades and friends. For a moment Bone hesitated, then he nodded. “Why not?” He clapped the shorter man on the back. “Lead the way.”

Mirroring the smile, Hikaru continued his way but turned left at the next corner; heading for the recreation deck. McCoy followed him, ready for another Saurian Brandy – the last he promised himself.

ST***ST

Jim slept until late evening and when he woke, he looked far better than he had in days. There were no nightmares; his defender stood sentry over his sleep. Until he was a hypospray wielding nightmare. Of course, the super-human didn’t accept any excuse from Kirk, “I’m feeling better”, “there is really no need for that, I’m not in pain” or “your super-blood is better than this stuff”. Even Jim’s time-tested puppy eyes found no purchase. Nien insisted on injecting him finally. Pouting and grumbling, Kirk acquiesced.

“Really, Captain, so much complaining about a little sting!” the former dictator taunted; amusement shone in his eyes as he sat on the edge of the bed to shove the shalwar from his beloved’s hips.

“I hate hypo-sprays!” Jim huffed. “Have I ever told you how Bones smuggled me aboard the Enterprise when I was still a cadet? He infected me with some little disease and told the Officer Of the Deck that patients with certain illnesses have to be treated by their own doctor, meaning I had to accompany him. This ‘little harmless disease’ is one of the rare things I’m allergic to and what did
Bones do? He gave me a hypo and then another, and another, until I was slurring like a drunk and my hands had swelled up to twice their normal size – ouch!

Nien looked up from his task and put the empty hypo-spray aside. “There, all done – and you are still alive.”

Jim rolled his eyes. “Stop mocking me. I have all reason in the world to hate hypos until the end of my days!”

“Oh, poor boy,” the Augment teased, gently massaging the area. “Challenging Klingons, racing through a burning space station to catch a villain, and hurtling himself headlong into every fight possible, but panicking because of a little needle! That does not fit the image of the Federation’s newest hero.”

Kirk stuck his tongue out at Khan, grinning as the super-human simply lifted both brows in a manner that was anything but serious. Nien continued to gently massage the tense muscles, and Jim got another, far better idea of what Nien could be doing right there. “It hurts more to the left,” he said quietly; heat and want rushed south as those pale, clever fingers kneaded Jim's hip and thigh.

The Augment didn't miss his proximity to Jim's sex, and a fire lit in his eyes as he looked at the younger man. “Let me guess; it aches!” he said; his voice turned into a dark, velvet purr.

Jim's mouth dried; that tone went straight through him, right down to his loins and stoked the fire. “Yes,” he croaked. “Maybe… you know how to relieve it?”

A quiet chuckle escaped Khan. “Of course, Pyāra, but it would not do your hip any good. We both know how passionate you are – untamed even.”

Moistening his lips, Kirk suggested, “And if I keep still?”

A short burst of laughter escaped the super-human. “Jim, you only keep still when you've lost consciousness – and you likely would after I have finished with you.” He gave him a pointed look, and his desired flared despite his better judgment.

And Jim saw it in his eyes – sensed it right down to his bones.
Reaching out, he stroked through his lover’s midnight-dark hair, before his fingertips ghosted over Nien’s lips. He watched his mate shudder in pleasure; then he bent forwards and caught the other man’s mouth with his own. Playfully, yet determined, his tongue danced over Khan’s soft bottom lip before it attacked and plundered the damp cavern. Jim groaned as he relished in the unique exotic taste that was so familiar to him now, yet he couldn’t get enough of it.

Nien closed his eyes. Only two days ago he had felt the life leaving his mate – thought to die with him; dooming his family along with himself. Now he and Jim were saved and sheltered on the Enterprise in the captain’s quarters, protected by a commodore’s honor, bruised but alive and healing. And very, very hungry for each other! Jim’s breath danced over his face; the surprisingly strong arms held him close, their hearts beat in unison like so often – even as their pulse increased.

Wrapping his free arm around the younger man, he replied to the kiss in the only way possible: by returning it with all the fire Jim was able to wake him with a few touches. It was unbelievable – laughable even – that he, who ruled almost a quarter of Earth and whose mind and body were superior to all others, would fall that hard for an inferior simple country-boy, whose cockiness was only beaten by his bravery. But here he was – loving said ‘country-boy’ with every fiber of his being, caught by his mate’s inner and outer beauty that shone in so many facets it almost blinded him.

Who was he to deny this special man and himself the pleasure they both needed to overcome the horrors they had been through? Yes, McCoy was right to order Kirk rest and to spare his hip any undue effort until the muscles, tendons, and ligament were completely healed, yet Khan knew a way to make it work.

Gently, he pushed Jim down and followed him – careful not to rest his weight on Kirk’s right side. Deepening the kiss, his hand that had massaged the captain’s hip, wandered to the younger man’s pointed bulk.

Kirk moaned as Khan’s fingers closed around his hard shaft, pulsing with anticipation. Instinctively he lifted his hips, and the Augment broke the kiss and pushed himself up, supporting himself on his free arm.

“Listen, James!” he said hoarsely; his eyes bright with lust and determination. “You lay still – no wild movements, no physical urging! Otherwise, I will stop.”

Jim gulped; the need to be undone by his beloved was stronger than his pride. “Promise,” he breathed. “Please, Nien, I…” The sentence went down in another groan as those talented fingers began to stroke. Closing his eyes, the young captain concentrated on the pleasure that sent waves of
bliss through his body and soul; his mind tried to focus on the task of keeping still. He gasped as his mouth was attacked with more searing kisses, robbing him of breath. Clinging to the man above him, he kissed him back; their tongues fought their own erotic battle.

Far too quickly, heat rose; it seeped from the clever hand around his shaft to his loins, spread through his veins, licked beneath the skin and pooled in his gut. He was close. And still completely dressed – like a teenager. Touched and desperate for more where it counted, he kissed like it all could end in the next moment. Jim felt the beginning tension of orgasm. He tried to tear his mouth away from these scorching lips to warn his lover, but Khan would not have it. He wanted what his mate would give, and pumped him harder, quicker.

Jim’s breath came in short gasps; the fiery snake of passion curled in his loins ready to strike, and then the lust exploded in him. His body moved of its own accord as he pushed himself into the warm fist that shattered his world into a thousand blissful pieces.

Still Nien didn’t stop; he milked him through the last drop, smiling into the kiss that swallowed the younger man’s shouts of pleasure. Only when his beloved calmed down and finally relaxed did the Augment lift his head and looked down at the masculine face now boyish and shining. His blue eyes were glassy slits, Jim’s cheeks, now red, made the capillary damage almost nonexistent, and his swollen lips seemed to beg for him.

“Did I not instruct you to stop moving?” Khan murmured; his hand, sticky with the proof of Kirk’s carnal peak, quickly examined his beloved’s right hip. No damage done – good!

“Couldn’t help it,” Jim was finally able to talk, but he was still floating and seeing stars. Forcing his eyes fully open, he looked up at the man who held his heart; then he lifted a hand and cupped a pale cheek. “Thank you,” he whispered. The soft smile that Khan gave him sent a wave of tenderness through him. He looked at the Augments milky striped and now ruined shirt. “Oops,” Kirk murmured; his gaze raked down his lover’s body. “I think, you need a little help down there,” he said slowly before he glanced back in Nien’s eyes. “May I?”

Until now Khan had been able to control – almost ignoring his own need. Feeling his mate soar to the heights of a full blown climax, hearing his moans swallowed into kisses, and feeling his hands claw him – cling to him in desperate need had given him pleasure – had been enough to restrain his own urges, but not enough to douse his desire. Quite the opposite. The black Starfleet-trousers were uncomfortably tight, his loins throbbed, and he could feel himself grow hot with desire.

Still he found the strength to tease his lover. “You are right – the shirt is done for, as are these trousers. Perhaps you can help me undress so that I might slip into something new?”
Jim grinned. “The only thing you can ‘slip in’ is into me, sweetheart!” He gripped the shirt and began to lift it. “And yes, those clothes have got to go.”

“As do yours,” Khan murmured, allowing Kirk to remove the shirt from him. “Yet I fear that I must reject your offer, seeing that your hip is still…” He gasped as Jim gripped him gently through the material of his trousers and began to massage him. Closing his eyes, he could do nothing but enjoy the sensations that wracked his body.

“You were saying, baby?” the young captain whispered and squeezed softly his mate’s rock-hard cock; then he bent forwards and closed his lips around one of Nien’s nipples.

Khan gritted his teeth, fighting for control. “Do you have to be so… unreasonable every time you want something that is counter to good judgment?”

Jim’s quiet chuckle was felt rather than heard, and it made the Augment tremble in excitement.

Swirling his tongue one last time around the hard little knob of flesh, Kirk lifted his head again. “You still don’t know the answer to that?” A hint of laughter echoed in his voice. As Nien opened his eyes again he, caught the glance full of mischief, longing and love. With still flushed cheeks, swollen lips and tousled hair, smelling heavily of musk and them together, bathed in the dimmed light, James Kirk was pure seduction. Skillfully, the younger man gently twisted the already reddened nipple between his fingers; he smiled as Khan took another sharp intake of breath. “After Aldebaran, I can't believe you'd ask that. You really should…,” he kissed Nien’s collarbone, “… give me…,” he softly bit in the other nipple, “… a try!” His talented hand worked its way under the trouser material and covered Khan's pulsing, silken cock.

That was all it took. Khan’s resolve crumbled like a wall bombarded to rubble.

“You!” the Augment growled before he pushed down all his good intention and brilliance to make room for whatever Jim had for him. In less than a minute, the men were sans clothes. They lay forgotten, sweat-soaked and stained, on the floor.

Jim mewled in delight when he finally felt his beloved from head to toe without anything between them. His own lust had grown so that he could care less if his damn leg fell off at this point. But Khan could see through him and took care for his comfort. He had pushed a cushion beneath the younger man’s head before he straddled Jim’s shoulders; his shaft glistened with pre-cum when he offered it to Kirk.
“An appetizer,” Jim whispered, and looked beneath lowered lashes up to the man above him whose gaze seemed to burn him. “May I taste it?”

“Stop talking and put your mouth to better use,” Khan hissed; his whole body tensed with need that had switched off his normally superior intelligence.

Kirk chuckled and gave the long, thick shaft a slow lick. He heard Nien moan and repeated it. “I could get used to this,” he chuffed, ignoring his own clenching inguen – the seat of his desire which sprang back to life at the view. “Maybe…”

“Kirk! Dammit! Do not make me plead for you!” Khan almost snarled; his chest heaved. Sweat broke out on his forehead with the anticipation of it all. Alas, he had always loathed men driven by their dicks rather than their brains, and yet he had fallen prey to the same. He would beg if it meant the pleasure his mind and body craved.

Gripping his beloved’s hips, Kirk closed his lips around the spit-slick glans, stroked it with his tongue and let it pop out again. “Fuck, that's delicious,” he said; then he caught the half fierce, half desperate expression on the face above him, and took as much of his lover in his mouth as he could. The loud moan that was torn from the super-human’s throat was repayment enough, and Jim was grateful that the walls were soundproof. He refocused on the task in front – in him and licked and sucked, alternating quick and slow, slow and quick.

Nien was in paradise. The hot, wet cavern of Jim's mouth around his shaft, the eager tongue on the most sensitive part of his body, the warm breath on his skin that rustled the dark curls – it made him almost dizzy with lust. Throwing his head back and pressing his lids shut, he concentrated on the intense pleasure he was receiving. Hands stroked his buttocks, along his spine, and back again. Khan felt free as a bird, yet caught in this shining web of love he never wanted to untangle from. His hands reached down to hold Jim’s head; his fingers spread through the damp, golden locks. And then he looked down.

His cock vanished and reappeared over and over again through the circle of the young captain’s lips. Sky blue pools gazed up at him, full of adoration; it was his undoing. Normally, he could go on for a small eternity before he allowed himself the release of orgasm, but not this time. The events of the past days had driven his soul to the edge of what it could bear. Only his beloved, now, could pull him from the brink – and he would. In the most intimate way possible, his mate would pull him back from the edge and set him free.

His loins tightened; somehow he managed to gasp a warning, but the words that left his lips were in Hindi – proof that his brain function was reduced to only feeling. And then it was too late to repeat the warning in English; his self-control failed him.
With a roar that would have driven away lions, Nien came – long and hard, unable to hold anything back. His knees buckled, his frame trembled and only his will, and Jim’s strong hands, prevented his crumbling into a heap. He braced himself with both hands on the headboard and then let himself sink to Jim's side. Laying sprawled on the mattress, he fought to catch his breath and to calm his trembling limbs.

Only as the soft tremors left him, he was he able to open his eyes and to look at Jim. There wasn’t much to see of his spending and his mate licked his lips, smiling at him. When his brain came back online, he realized that Kirk must have swallowed; the evidence was missing and Jim looked like the cat that got the cream (and he did).

“Best appetizer ever,” Jim purred; loving the taste in his mouth that held so much of his Nien.

“You never cease to amaze me, James,” Khan whispered and he sighed in contentment as Kirk’s hands reached out to gently stroke over his side and down his hip. Then his gaze found ‘little Jim’ – angry, red and begging for attention again. “I think I have to help you out again, Pyāra,” he murmured and shifted around so he could kiss and mouth at the soft skin of Jim's balls before working back up to envelope the hard shaft. Jim’s moan was loud enough that security would've come running if they could only hear their captain now.

Khan smiled, pleasuring his mate in return for what he had been gifted with only minutes ago. Yes, he definitely liked this part of their love-making – the give and take combined with power over each other – the trust it inferred. Jim wriggled and arched beneath him, and Nien quickly put both hands around his beloved’s hips and stilled him, while showing Kirk exactly how much he loved to drive him mad with desire.

Though he'd already climaxed, it didn’t take long before Jim came a second time, feeding his mate with himself until he was utterly spent. Floating beneath the warm waves of bliss, he lay there not caring that his right hip already began to protest the evening's affair.

“I have to agree – best appetizer ever; perhaps it will be enough to tide you over until the main course,” Nien’s velvet voice breathed in his ear before wet lips closed over his and gave him a taste of himself. Lazily, wrapping both arms around the love of his life, Jim returned the kiss so full of devotion – vowing to himself that he would claim his mate eternally as soon as he was well.

TBC…
Yeah, this scene was just an appetizer, yet it will last two chapters more until Jim will claim his Nien completely – and I just know you’re going to love the whole thing. But first Jim and Khan has to face a little bit more trouble, but also funny things. In the next chapter Khan will keep his promise to Scotty and is going to help in the Engineering, Scott notes for the first time that there is something strange between the Augment and Kirk going on – and then there is also the matter that a certain former admiral’s daughter is aboard. And you will read more of the eventually upcoming peace-talks with the Klingons.

I hope you liked the last chapter and – like always – I’m dying with curiosity what you think of it.

Have a nice rest of the week,

Yours Starflight
"Admiral?" Barnett looked up at the voice sounding from intercom.

“Yes, Yeoman?” he answered.

“Sir, I’ve got the president on the line for you.”

“Thank you. Please put him through,” Richard answered and he looked at his screen. For a moment, the image of the president flickered; then the picture steadied. It showed the pale, tired face of Harhan Robertson.

“Good morning, Richard.” He greeted the admiral who returned the pleasantries before the president continued. “We received a message from the Klingon High Council two hours ago. Counselor M’Rek informed us via visual transmission that diplomacy may be considered. It seems the last defeat has opened his eyes to the fact that he can’t win against the Federation. They need another way to solve their problems and long-standing grudges.”

Barnett didn’t know if he should feel relieved or worried. “M’Rek already gave in? Only three days after the offensive against the Aldebaran system?” He cocked his head. “Usually, Klingons are not
that quick with their decisions, especially when it comes to battle and pride.”

“You are right, Richard. I rather think this is a kind of character assessment to determine how far we will bend and what they can expect from further negotiation. They still have some tricks up their sleeve, but two battles lost in such a small timeframe made them aware that this is a war they can’t win. Not with violence.”

“So they have to try something else without losing face,” Barnet mused and Robertson nodded.

“Yes, we have to be very careful.” He took a deep breath. “This is our first chance at peace. Starfleet’s lost enough good women and men to the damn war, not to mention the thousands of civilians along the former Neutral Zone who live in a permanent state of fear or whose planets are already annexed, like Sherman’s Planet. We are going to need all the diplomatic skill and experience we have at our disposal.”

Richard pursed his lips; new hope woke in him that the war could be over sooner than thought. “So you’ll send the full delegation to this meeting?”

Again the president made an affirming gesture. “Yes, as soon as the Klingons agree to our condition that every combat operation be stopped immediately until the conference is over. The Council is shaping a statement at the moment to that effect.” He took a deep breath. “When we get a positive answer, we can send the delegation. Mrs. Whitman and the ambassadors are on standby. One word and they are on their way. It’s up to you now. You and your staff will take them to the rendezvous point to pick up Lady Morganth of Betazed first and then accompany them to the conference.”

“I talked to Captain Helrom yesterday. The *Excalibur* is ready to leave tomorrow, Mr. President,” Richard stated and Robertson smiled curtly.

“Excellent. We need more communication with the Klingon council before we start, though. I think departure in six days at 1200 standard time will be the plan. Mrs. Whitman will contact Lady Morganth so that she can come to the rendezvous point in four days. From there the journey will continue directly to the conference.”

“And where is this conference set?” Barnett asked. “There is no real Neutral Zone anymore and…”

“This is the part you are not going to like, Richard. It’s ‘neutral’ in its own; it doesn’t belong to the Federation or the Klingon Empire.”
The Chief of Command frowned again. “I can’t imagine that the Romulans will welcome us, the same goes for the Tholians, and the Cardassians. So, the only one area left that fits your description is the Borderland.” As Robertson lifted both brows, Barnett allowed himself a groan. “Mr. President, we would be in an area that is controlled by the Klingons, more or less, whose allies are slavers and pirates. I don’t think this is a wise idea.”

“M’Rek suggested that the conference should take place on Celendi I, a small planet with a breathable atmosphere at the edge of the Celendi nebula. The Klingons are going to install a transport station, but the planet doesn’t belong to their empire, and the Orions have no interest in the area. It’s in the triangle of the Federation, the Klingon Empire, and Borderland…”

“And near the Romulan Empire, which…” Barnett’s eyes widened. “Now I understand. M’Rek wants to demonstrate Klingon strength to the Romulans. They have business dealings with each other, but the relationship is tense. Maybe M’Rek fears that the Romulans are going to exploit a weakened Klingon Empire and try to gain more territory. A demonstration of good-will between Federation and Klingons – maybe agreeing to a peace contract – will keep the Romulans at bay. And M’Rek can retreat quickly should the conference not end to his liking.”

Robertson nodded. “Yes, that’s what I think, too. SBI report increased activity near the Romulan Neutral Zone, and history taught us that our ‘dear neighbors’ are always good for a surprise. Klingon intelligence must see the activity as we do, and M’Rek wants to preempt any Romulan aggression by presenting an alliance between his people and the Federation. This should be a good starting point for the peace talks and serve as a way to urge the Klingons to end the war without hurting their pride.” He bent forwards so that his face almost seemed to touch the inside of Barnett’s terminal. “This is a unique chance, Richard. I’m almost disappointed that I can’t join the delegation because their journey will be historic. Can you guarantee that the Excalibur will be ready to leave within two days after I got M’Rek’s agreement to our conditions? I don’t want to give the Klingon counselor the time of our arrival, just that we are late.”

“The Excalibur will be ready when you need her, Mr. President,” Barnett assured him. “I’ll contact Captain Helrom immediately, sir. Boarding will be in six days at 0800 unless the Klingons change their mind about the talks.”

“Very good; I will inform Mr. Whitman and the ambassadors. Thank you, Richard.” He was about to cut the link, but Barnett stopped him at the very last moment.

“Sir, what if this is a trap to get a hold of the most important diplomats and admirals of the Federation?”
Robertson hesitated. “Taking hostages isn’t the Klingon style, – and weakening the enemy by luring its leaders into a trap is dishonorable. We don’t understand much of their culture, but we do understand their concept of honor.” He sighed. “We have to give it a try or the bloodshed and the killing on both sides will go on indefinitely. We owe it the people of the Federation of Planets and our allies to do all we can to end the war. Still, I am not blind to the risk of sending our deputy president, high-ranking diplomats and staff-officers to such a conference. But we all were aware that we will face death eventually. Our vocation is a risky one. This goes for you just as it does Sarek of Vulcan, Galven of Tellar or Mrs. Whitman – or Lady Morganth whose planet even isn’t a member of the Federation.”

“I know, sir. I am concerned for the safety of the delegation members, not just for them but what their loss would mean to the Federation and her relationships. Their loss would weaken the Federation's position at any bargaining table.” He breathed in deeply. “At the same time, I’m aware that this maybe the only chance to end the war before more harm is done – especially if the Romulans become a player. You know what the say, ‘when two quarrel, a third rejoices’. Their involvement is the last thing we should allow, especially at the risk of giving them the wrong idea of a weakened Federation or Klingon Empire.”

“Mr. President!”

The link was cut, and the Chief of Command looked at the blank screen for several long seconds; then he leaned back in his chair and sighed. The day was young, but it felt like he'd been here for hours.

Several levels down, in the main office of the SBI, José Luengo leaned back in his own chair and crossed his arms satisfied with the results of the 'rerouting' of Barnett's desk-intercom. One of his men inside had made the adjustment during a routine inventory of office electronics. Learning what Barnett and the president had talked about was very important for the plan he would soon set into motion.

ST***ST***ST

Jim stretched and yawned heartily, feeling refreshed and rested. His right hip ached some, but not enough to irritate him. Looking up at the dark ceiling illuminated only by the light of the alarm clock beside his bed, he enjoyed the familiar soft noises of his ship in warp; he was home again. Then he heard the steady breath beside him and smiled. He turned his head and his gaze fell on the man who lay on his front, snuggled into the pillows. The blanket had slipped to his waist revealing a strong, pale back – like a marble statue of a Greek god in one of the museums back on Earth.
Kirk couldn’t resist; he supported himself on one elbow and bent over the sleeping Augment, pressing a soft, wet kiss to the middle of his back. The gesture was answered in a sigh that morphed into a low purr before ebbing away as the enhanced man slipped back to sleep. Khan’s senses were usually on alert, but right now they were resting – here, in Jim’s presence where he felt safe. It seemed that his healing abilities demanded some payment from him as well.

Jim’s eyes shone with love. The short but intense pleasure they shared last night had been good for both of them. After all the danger, the tension, and the stress, intimacy – cherishing each other – had been a salve. Kirk tried to simply lie back and sleep a little bit longer; after all he wasn’t released from McCoy as fit for duty, but Jim knew that he had a lot to do this morning.

While Bones, Spock, and he had sat in the dining area yesterday afternoon drinking whisky together, Kirk had asked his Vulcan friend to make a list of those crew members who might hold a personal grudge against Khan. The first officer had promised to get the list onto his desk in the morning. Jim would have to check every file, prepare himself for when he talked with women and men of his crew.

Women – Carol Marcus! Only now did Kirk realize the one particular crew member who had a very good reason to hold a grudge – to hate Khan. Carol had been forced to watch the Augment kill the admiral. And even if Alexander Marcus had become a cold-blooded monster who sacrificed anyone standing between him and his mad goals, he had still been Carol’s father. Jim knew that he would have to talk to her first before he could face any others.

This was not his only duty today. There was the sad matter of writing condolences to the families of those who hadn’t survived the Battle of Aldebaran. Jim loathed this duty but took it very seriously. Even if he hadn’t been aboard during the battle, he felt responsible for the losses and would try to learn more of the personalities of the fallen crew members to send their dear ones the right words of sympathy and honor.

And then there was still the problem in Engineering. Nien had accepted Scotty’s invitation to work together even though the Augment would do better to keep his head down in his quarters. Kirk would accompany him and make certain that everything went smoothly. Nien's backing from the captain would go a long way. Most of the crew would likely behave, but it was inevitable that Khan would meet someone with a long enough memory and a penchant for revenge. Jim was aware that only his sense combined with his authority could prevent a small catastrophe. He wanted to help both sides and would have to find the right words to make this situation work. Understanding was always the first step to soothing anger and resentment. He was hell-bent on championing his beloved that the crew might see the Augment in another – in the right light!

Sighing, the young captain made certain that Nien was covered, and he left the bed. “Lights, fifteen
percent," he ordered quietly and was glad that his whisper didn’t wake Khan. The super-human would have denied it vehemently, but Jim knew that Nien needed rest. Walking as silently as possible, the young officer snuck to the bathroom for a shower. When he returned shaved, clean, with hair still damp, Khan slowly raised himself with the grace of a cat, nude and as beautiful as Adam on his first day.

“Good morning, Pyāra,” he said; he smiled and stretched himself. His muscles danced beneath his alabaster skin.

Jim felt an all too familiar stirring in his gut. Khan’s dark hair was in disarray, and some strands fell on his high forehead, shadowing his sea-colored eyes. “Is the shower free?” the Augment asked. Kirk gulped and nodded. Khan strolled to the bathroom, giving Jim’s butt a sharp slap as he passed.

“Hey!” the captain protested and caught another smirk from his beloved who saw straight through him.

“Stop your dirty thoughts, James, or you will never make it to the bridge!” With those words, he vanished into the bathroom, and Kirk sighed.

“Bridge! That would be great if Bones allowed it!”

Half an hour later, showered, shaved and clad in matching Starfleet black, both men sat at the table and had a quick breakfast. The clothes and ruined sheets were on their way to the cleaning service several decks below. Afterwards, Kirk checked his terminal. Spock had already sent the required list of the crew members Jim would have to talk to before the former dictator could walk through the Enterprise safely. The list wasn’t as long as the young officer had feared. Only thirty-six women and men had been aboard last year during the ‘Marcus-crisis’, as the captain called it; seven more had lost friends or family members during the debacle.

Sending the intended short message that he expected those personnel at 1100 ship’s time in briefing room 2 on deck 3, Kirk turned around; Khan sat at the dining table working on his PADD. A deep frown marred his forehead, and he murmured something in Hindi, clearly irritated.

“What’s wrong?” Jim wanted to know. He had to wait a short time before the super-human sighed and finally looked up.

“It is not working as I theorized it would. The Enterprise’s technology differs from the Vengeance,
and even if Marcus gave me near complete access to the construction plans of several starship classes I didn’t busy myself too much with its details.” He glanced back at the PADD. “But I think we can configure the warp drive to its full potential and deliver more energy to the deflectors, the auxiliary power, and the SDD.” He pressed his lips tight in thought; his eyes hung on the data the little display showed him. “I should speak with Mr. Scott about this. Maybe after the main repairs in 6-S are done we can try this out.” He tapped the screen.

Kirk smiled. Khan and Scott were becoming a team; it filled Jim with pure joy. First, Scotty released his bitterness toward the Augment and filled the space with acknowledgment of their shared love for technology. Then Bones gave the former dictator a speech about trust, only to find he trusted Khan with Jim's heart. And then...

As if on clue the door buzzer sounded; a moment later said CMO stepped in. “Morning, you two!” he greeted without his usual grumbling. He glanced at Kirk at the desk and then at Khan in the dining area where still two dishes remained and frowned. “Don’t tell me you were here the whole night!”

“You asked me to keep an eye on Jim before the ‘ants in his pants’ got the better of him. I didn’t want to disappoint you or fail in your task – not when you are just coming to trust me, Doctor,” the super-human returned lazily.

Jim glared at Leonard. “I have what in my pants? Are you nuts?”

McCoy rolled his eyes at the Augment, gave Kirk a short smile, and took the med-scanner out of his med kit. “Ya got ants in your pants, Jim, don’t deny it. Getting you to sit still is almost impossible.” He walked over to his friend.

Seeing his mate pout, Khan watched attentively as the CMO exanimated Jim before he asked, “How is his condition, Doctor?”

“Oh, today he has the pleasure of rest and relaxation; tomorrow he can go back to ticking off his bridge crew.” Bones closed his med kit, “Did you give him the hypospray?”

“Of course,” the super-human confirmed before smiling at Kirk with a gleam in his eyes. “It turns out that our dear captain only needs a little reward to incite good behavior. He was placent as a kitten.”

Leonard rolled his eyes. “Do I want to know what this ‘reward’ was?”
“No,” sounded from the other two males in one breath, and Leonard groaned but kept his mouth shut to his thoughts. Instead of making one of his typical snarky comments, the CMO changed the topic. “I got the test results back, Jim. It’s like Khan said, your immune system is more or less enhanced. Muscle cell regeneration as well as muscle recovery post exertion is also enhanced.” He saw the beginnings of a grin on his younger friend’s face and added sternly, “We need to keep it quiet for now, Jim. Spock and M’Benga know, but Geoffrey is subject to doctor-patient confidentiality, and Spock won’t say anything to anybody. People could become wary of you and your loyalties if they find out, even if it’s only temporary.”

Jim frowned. “I don’t care what people…”

“You should care; they are your crew, and you are the highest authority on this ship,” Khan interrupted him. “Man may have made improvements – become better, still some things never change. But even in a century of alien civilizations, man will recoil in the face of a synthetic human. Believe me. I’ve been called ‘freak’ far too often to expect anything different in this time.”

“Idiots!” Kirk murmured. “They don’t know anything about you.”

“This does not temper their judgment. It is merely a human characteristic – likely one that will remain as long as humans do.” The former dictator smiled slightly. “You are one of the few exceptions I have met in my life; you have treated me like a human from the beginning.”

“Wouldn’t that offend you?” McCoy wanted to know – not to provoke but to gain knowledge the Augment mindset. “After all you said you were better at everything.”

“I am better at the most things, but I am not offended if I am termed ‘human,’” Khan answered slowly. “The same goes for my crew. But there were others of us who thought they were above ‘mere humans’ and treated them thus – I did not tolerate it under my rule. I rather consider the Indian saying: ‘There is nothing noble in being superior to some other man. The true nobility is being superior to your previous self’. Regrettably there were, and there will always be men who think otherwise. Those were responsible for the Eugenic Wars. Several times I tried to reason with them, but for naught. Rather, I was thought weak because I protected the people within my borders against the Augments.” He shook his head. “Scientists engineered our bodies to an almost perfect result, including increased brain activity and therefore greater intelligence. But one thing they forgot to eliminate: human vanity and arrogance. Absolute power corrupts us both. Some of us went so far as to view themselves as demi-gods of a sort though we have no belief in a higher power.”

Thoughtfully McCoy listened. It was the first time that he exchanged more than a few sentences with the super-human. Khan had a calm and steady way about him; he was able to make someone
listening without raising his voice. His velvet voice had a capturing nuance that made someone want to listen, and his choice of words was easy but intelligent. Against his will, Bones felt some fascination awaking in him.

“So, you are not religious?”

“No, I’m not, but I respect its importance and usefulness. Religions were important for the human race’s growing up; it united them, gave them laws and a set standard of behavior toward one another. Some religious precepts set forth commands for living in hostile territory even addressed cleanliness before its importance was known.”

“I never considered religions use from that point of view,” Kirk murmured, interested.

McCoy smiled. “I’ve read articles about it during my college days. I don’t like to use Spock’s favorite word, but I have to admit that it is fascinating how religion influenced the evolution of human thought and history.”

Khan nodded approvingly. “The belief in higher beings explained natural events ancient humans couldn’t understand. It assuaged many fears – important for a growing young race.” He sighed quietly. “I accept those truths. I hardly believe in a bearded old man sitting on a cloud, watching his creation, or for that matter, a man hurling lightning through the air. And there are certainly not three men who represent creation, preservation, and destruction, nor a demon-king with ten heads and ten arms on either side.”

“A demon with ten heads?” Jim looked at him with surprise. “He must have had a hell of a big throat.”

Nien chuckled. “Our demons, half-gods and messengers of gods are scarier than a figure in a white gown with wings, strumming a golden instrument.”

Bones grinned despite himself. “Well, at least our Michael had a flaming sword.”

“A water sprinkler could help, in that case,” the Augment replied wryly, making Jim snicker and McCoy laugh quietly. Then the CMO turned serious again. “Are there many parallels between religions? I’m religious to some extent, though of course where science prevails...”
“Understandable, Doctor. You are a man of science,” Khan replied almost kindly. “There are a lot of parallels in almost all religions on Earth. The parallels illustrate that mankind has varied little in their thought. You would be surprised what the research reveals.”

Bones nodded. “Yes, I'm sure I would. But I wouldn’t be surprised if some moron thought Jim a ‘freak’ if they learned exactly how he survived the radioactivity and now he's got your super-healing because of what we've both pumped into him. So stay quiet about it, Jim!” He looked firmly at his friend who made an affirming gesture.

“Don’t worry, I'll keep it quiet,” he promised, realizing that his friend and his mate were right in this matter.

McCoy eyed him; then he realized that Kirk was serious and smiled, satisfied with the outcome. “Right, problem solved.” He lifted his med-kit. “Okay, you two, I have a lot to do. Have a good day.” He turned to leave. “Ungh, Jim, I'll send you the reports of the crew members we've lost in an hour or so. Had a lot to do this morning.” He glanced back at his friend. “You’re not the only one who tried to get out of sick bay early.”

“Perhaps it’s your Southern charm; your patients are trying to remove themselves from you gentlemanly hospitality as quickly as possible.” Khan suggested with a hint of mockery. He narrowed his eyes and drew his lips together when McCoy shot him one of his special looks.

“Oh, I can be very charming. Only I don’t waste it on folks who don’t value it.” He nodded and left.

The two men looked at each other. “Well, alpha shift is on deck, gamma shift is in bed and beta shift is probably just waking up. So it's not crowded out there. Ready for a trip to Engineering?” Jim asked, eager to stroll through the Enterprise again.

“I believe the doctor ordered you to rest today?” the Augment replied; brows raised.

“Yes and I listened. I'm not on duty; I just want to take a little walk. Gotta get my muscles used to hauling me around again, and I need to get out of here for a while. After all the body heals quicker when the mind is happy, don’t you agree?”

Quiet laughter escaped Khan. “You always find an excuse to get your way, don’t you?”
“Yeah, that’s me,” Jim beamed; he gripped his cane and rose. “Ready?”

Taking his PADD, the Augment rose, too. “Always!”

Jim used his cane; the few crew members he met on the way, greeted him with concern and relief. Two of them stared at Khan, frowning, and Kirk recognized them as those who knew of the superhuman and had reason for a grudge against the former dictator. None of them dared acknowledge the Augment’s presence aboard and simply nodded as their captain, clearly still off duty, told them that he would answer any questions at 1100 in briefing room 2.

Ten minutes later, the captain and Augment stepped into the ‘ship’s beating heart’, as Scott deemed his domain, and took a good look around. They faced the special hell that is controlled chaos, nearly the same as the first repairs Kirk saw three weeks ago. Technicians and computer specialists hurried back and forth, bent over consoles, or worked in shafts or at terminals. Pods were removed, cables hung loose, terminals were dismounted. In other words, Engineering looked like a tornado had raged through it.

Holding a young ensign back, Jim asked for Scott’s location; the young woman pointed towards the warp core and the transformers with a smile. “Mr. Scott is over there, sir,” she said, adding shyly, “It’s good to have you back, Captain. I hope, you’re doing better.”

Jim returned the smile. “Thank you, Ensign, if it wasn’t for our over-protective CMO, I’d be back on the bridge.”

She chuckled, saluted and walked away.

Khan had watched the short interaction and, not for the first time, he realized that the crew not only respected Kirk, but really liked him. They all were one team. For a long moment, Nien thought back on his own crew – his family. Melancholic longing woke in him; he was distracted as Jim hobbled deeper into the Engineering toward the warp core. They bypassed a security door and suddenly Nien sensed distress from his mate before Jim regained his composure.

It hit him almost immediately.

This was the door Jim had used to enter the warp core chamber to save his friends, his crew, and his ship. Behind this door, his James had died – alone, in pain, deeply afraid, and cut off from any comfort. Scott’s angry words concerning this hurtful experience that he, the female communication
officer and even the Vulcan had still rang in the Augment’s ears.

And it had been his attack against the Enterprise that crippled and finally robbed her of power, rendering her helpless as Earth’s gravity caught her. Sure, Jim had backstabbed him. Noonien Singh had thought he would fight another enemy – one who would hunt him and his family until they died. He couldn’t have been more wrong. More than a year back, Jim and he had been nemesis – and even three months back. Now, merely the image of his beloved dying on the other side of this security door ran like ice through his veins.

Without thinking, he gripped for Kirk’s hand and squeezed it gently as if his heart and soul wanted to make sure that Jim was indeed alive and here with him. Surprised, those sky-blue eyes looked at him and Jim saw the reason for Khan’s sudden urge for his touch. “Yes, it was over there,” he said quietly and the Augment took a deep breath.

“I made grave mistakes last year,” he whispered, “yet I didn’t regard them as such back then.” He moistened his lips. “I… changed the target coordinates Marcus’ weapon officer had programmed to destroy your ship. I wanted to avoid the bridge and the most vulnerable parts of the Enterprise because your crew wasn’t to blame for what happened between us. Still, I knew that the ship’s chances of survival were low; I took the shot anyhow.” He took a deep breath. “I never thought that we could become so close one day.” He shook his head; his thumb circled gently over the back of Jim’s hand. “I’m sorry.”

Those three words, this simple but somber apology meant the world to Jim. It meant that Jim saved one more man; he saved the man who saved him. “There is more than enough blame to spread it around. You can’t only blame yourself, Nien. You were under a hell of a lot of stress, and I had a big part in you snapping the second time.” He smiled softly. “Remember what I told you on the shore at Silver Bayou? If you learn from your mistakes, at least they were good for one thing.”

“You died because of me,” the super-human murmured, his gaze full of guilty anguish. “Yet you forgive me even that?”

"Firstly, I lived because of you; the only reason I'm still alive is because of you.” Kirk pursed his lips tightly before he gently replied, “Yes, I have forgiven you even before you came to my rescue on Turkana. When I found out what happened to you. When I began to understand you – see things as you saw them, as you helped me to see them. That's when I did it. Forgiveness came with understanding.” He sighed as his glance wandered back to the security door. “Looking down the barrel at death is an experience I never want to repeat – not until I'm ancient, wrinkly and white-haired. However, it had one advantage. I grew up.”

Khan lifted both brows, resembling Spock for just a moment. “Are you really calling yourself an adult?” he asked teasingly, trying to lift the mood.
“Of course!” Jim nodded. “Compared to the academy or before Qo’noS, I’m a very reasonable, responsible grown man now.”

Promptly, the former dictator chuckled. “Yes, you are – and still you are a mischievous, over-sized boy. Brahma, what an unbelievable human you have managed to create!”

“Brahma?” Jim echoed. “Isn’t that one of the Indian gods?”

With eyes widened, Khan looked at him. “Did I address Brahma?” As Jim nodded, he snorted. “There you go. I need to use the long-range scanners. Maybe they will find my mind. I must have lost it somewhere along the way.”

Kirk laughed, squeezed his beloved’s fingers one time more, turned around, and stopped dead in his tracks. “Scotty!” he yelped, startled.

The Scotsman stood just three meters away, fists on his hips, and his head cocked to the side. His gaze slipped from the two men’s joined hands to their faces; both pinked quickly. Clearing his throat, he smiled innocuously. “Captain, Mr. Singh, it’s good to see you.” He stepped closer; out of the corner of his eye, he saw them release one another's fingers. “You came just in time for the last tests, Mr. Singh.” He flipped his thumb back over his shoulder towards a row of consoles lines with viewing screens. “Care to have a look at the readouts?”

“It would be my pleasure, Mr. Scott,” the Augment answered, asking himself how much the engineer had seen and heard. He had been too distracted by his mate and was surprisingly unaware of the other man’s presence. But there was no malice in the Scott’s eyes, only confusion. Nodding politely at the curious looking Allistor who sat at one of the terminals, Khan took a position beside the chief engineer, studying the screens.

“That’s interesting,” he murmured after several seconds, and Scotty nodded.

“Very interesting. The simulations show that we could increase the power output when we adjust the generators.”

“Yes, that is what I discovered, too.” He offered the chief engineer his PADD. Scotty switched it on and began to study Khan’s work.
“Any progress regarding our current problems?” Kirk asked and closed the distance to them.

“Aye, the simulations we ran on the onboard computer are positive. Next two times, we’ll have ter interrupt warp ter restart the systems. I’ll try ter adjust the generators an’ get a steady energy level. Afterwards, I can take care of the deflectors. Cross ye fingers that we don’t have contact with the enemy before then.”

The Enterprise’s captain shifted his weight. Khan noticed. “You should sit down, Jim. Do not stress that hip,” he said.

Allistor glanced up at his captain and instantly rose. “Please, sir, take my seat,” he said. And then his eyes widened as the strange dark-haired man closed the short distance to Kirk and helped him to sit down.

Scotty watched the two men, too. Even if his mind was occupied with the technical problems of the hour, this didn’t slip his attention – how gently the Augment handled Kirk. How the younger man accepted the support without any protest. The Scotsman had never thought it possible given the pride and the fierce independence that drove his captain. There was a familiarity between the men; he saw them holding hands only a minute ago. And the same familiarity – tenderness even – underlined their behavior. From the corner of his eye, he watched his friend and captain, before he bend forward to observe the data on the terminal’s screen. The Augment put a hand on Kirk’s shoulder, remaining at his side as if to shield him. Montgomery pursed his lips. ‘Shut mae geggy; there be somthin’ here. I just dinnae know what.’

“So, you built simulations that show the effect of change to the generator inputs,” Kirk mumbled and took in the data. “This looks good. When can you give it a try?” he asked Scotty.

The engineer answered immediately. “As soon as we can be certain that the process will not leave us powerless and driftin’. The best time is durin’ an interruptin’ of the warp transfer when we have ter restart.”

“What’s our speed?” Jim wanted to know. “When did we leave Aldebaran?”

“Yesteday afternoon, 1700.” Scott smiled when he saw the surprised expression on the younger man’s face. “After Mr. de la Vega-Martinez delivered the last of the parts, Keenser, Allistor and I were able ter patch the babies up a bit. Spock set the Enterprise on a course to Starbase 6-S. We’re at warp 3; after the generator problem is solved, we’ll be able to hit warp 4, 5 at best.”
Kirk nodded slowly. Of course, there was no logical reason to delay the departure. Still, Jim was used to directing and approving his Gray Lady's heading and destination. And he would have liked to bid Ritek and Jeff farewell, too. He only hoped that he would meet them again. He'd come to admire them all – each member of The Shadow. They reminded him so much of his own crew – his family.

“What's our ETA to Starbase 6-S? Anyone accompanying us?” he wanted to know.

“ETA depends on the progress we make with the warp drive in the next eighteen hours. If we keep at warp 3, we should reach Starbase in forty-three hours. If all goes well, nineteen hours. Hood II will reach us in two days.” Montgomery smiled. “We’ll have more or less the full attention of the repair teams when we arrive.”

“Good,” Jim nodded. “What do you think, Scotty? How long will it take to get the Enterprise back to one hundred percent?”

The Scotsman had pondered this for a longer moment, before he answered, “Given her condition, it would usually take about eight or nine days, Captain.”

“Usually, huh?” Kirk cocked his head. “And how about unusually?”

Montgomery began to grin. “Well, seein’ that ye’ve the incredible luck of havin’ not one but two technical geniuses aboard –,” he pointed at Khan and himself “– and also our little, brilliant height-lovin’ oyster on two short legs, not to mention our Russian whiz-kid, and friend Allistor here, I think we're gonna leave Starbase six to seven days after arrival.”

Jim saw Nien’s baffled expression at Scotty’s little speech had to snicker. “I knew I could count on my Scottish Merlin,” he smiled. He addressed Khan, “And on you.” His eyes shined warmly, and Scott pursed his lips as he watched the intense gaze exchanged between the two men. Aye, here was something happening – something very big! The engineer only wasn’t sure exactly what.

He checked the readouts of the computer again. “If the count-down is correct, we’ll be out of warp in twenty-four minutes.” He glanced at Khan. “Do ye wanna stay for the next re-start and the simulations? Of course, only if ye feel fit enough fer it. I really donna want an angry McCoy at me throat fer tirin’ ye out.”
Khan lifted his brows. “Mr. Scott, I appreciate your concern, but be assured that I am fully recovered and able to work on the simulations and the SDD.”

Montgomery chuckled. “Aye, I thought so; ye know our doctor though.” He turned his attention fully to the screens, reading the generator reports. “We should…”

“Jim?” a female voice called in surprise and Kirk turned around in his chair, looking to the young woman with shoulder-length blond hair and the blue uniform dress. Carol Marcus.

It had been three hard days for Carol. First the preparation for battle, then the battle itself, and finally bringing order back to the weapons bay again. One serious hit had affected torpedoes shafts and a phaser-bank; they failed. The young woman had only allowed herself three or four hours sleep during the last few nights. Then she was back at her station. Thanks to the efforts of her and her staff, the ship was now able to defend itself again. She went to Engineering to speak with Scotty. And then she saw her captain.

Carol had barely found time to ask about Jim Kirk’s well-being after she heard that Kirk and his mysterious rescuer ‘Sunrise’ had been beamed out of the damaged space station. Rumor had it that the captain and the other man had nearly been exposed to space and were stuck in med bay, so she was surprised to see him here and out of uniform. He was obviously still injured given the cane. Yet here he was, out of sickbay and bed.

“Jim?” she asked baffled. She didn't use his title, noting his dress. He must be off-duty. And they were on a first name basis.

He turned around in the technician’s chair, and Carol saw the fading net of damaged capillaries covering his face and throat, but his eyes shone brightly as he looked at her.

“Carol?” he asked, obviously pleased to see her, then he tensed.

“Hello, Jim,” Carol replied and headed towards him, relieved that he seemed to be in better condition than she thought. “How are you?”

To her astonishment, he looked increasingly uncomfortable. “Ungh… better,” he said.

A quiet laughter escaped her, as she thought she knew the reason for his tension. “Don’t fret over
your looks, Jim. It'll get better. You’ll see, in a few days, you'll be back to your handsome self, right? Don’t worry.” She winked at him; then her gaze wandered to Allistor, Scott and –

And her eyes widened in shock; she recognized the man between Kirk and Scott instantly. She would never – never! – forget that face, those high cheekbones, and those piercing blue-green eyes! But she never thought she’d see him again, let alone here, aboard the Enterprise sans handcuffs, and in the middle of the Engineering.

“You…” she whispered.

Khan, who had recognized her instantly, knew that there was no chance of avoiding a confrontation, and so he replied with calm politeness, “Good morning, Dr. Marcus.”

Carol thought that she would lose the ground beneath her feet, as she heard the deep, cool voice. Her father's killer, the mass-murderer and terrorist who attacked the Kelvin Archive, Starfleet’s HQ, and the Enterprise, was here in the Engineering, chit-chatting with Kirk, Scott and the third engineer, as if he belonged to the staff.

Jim groaned inwardly, as he saw, first, the shock and then the rising anger on the young woman’s face. Oh God, out of all of them, it had to be her who met Khan before he could talk to the group! Nien had suffered inhumanly in her father’s hands, yet she had lost her father because of the Augment’s desire for revenge. If the situation with Bones and the others had been fucked-up, then this here was going to be a catastrophe!

Kirk watched Carol fighting for air; her cheeks reddened. Before he could utter a word, she whirled around and fled. Jim sprang into action. Without wasting another thought, he took the cane and followed her; cursing the hip that slowed him down despite the cane. “Carol, WAIT!”

He hobbled along the main deck and gritted his teeth against the pain in his thigh while trying to close the distance to the young woman who raced towards the exit.

“Carol, stop!” he called, but the daughter of the former admiral ignored him. Jim had a bad feeling that everything would turn into a disaster as soon as the weapons officer went through this door. She would report Khan to Starfleet Command, no doubt about it.

“DR. MARCUS! Stop this instant! That’s an order!” he thundered; his voice held all the authority of the commanding officer he was. Around him, crewmembers stopped their work. Large eyes stared
half shocked, half curious at him and Marcus. Supporting himself on the cane, Kirk’s fierce gaze remained on Carol. She turned around towards him; betrayal was written all over her features.

“You are still off duty, so…” she began but was cut off by Kirk sharply.

“Injured or not, I’m still the captain of this ship! And when I give an order, I expect my officers to obey.”

“Jim?” Scotty had closed the distance to his friend and captain while most other men and women glanced around more or less bewildered. Confused and worried, Scotty looked at an outraged Jim Kirk and a furious and also hurt Carol Marcus. Behind him, Khan’s slender figure remained at the console, wisely staying in the background.

“And what are your orders, Captain?” Carol asked harshly, trembling in anger. “To keep the presence of a…”

“We’ll continue this in Mr. Scott’s office!” Kirk interrupted her firmly. He turned towards the Scotsman. “I need your office for a few minutes!” He saw the chief engineer hesitate, he added, “Is that a problem, Scotty?”

“No, of course not, sir,” Montgomery sighed.

Kirk began to limp towards the office, not taking his eyes off Carol. “You coming, Dr. Marcus?”

Exchanging a short glance with Scott, Marcus followed Jim. The door of the office closed behind them – locking out the confused crew members, their chief, and a rightfully concerned Augment.

You couldn’t tell if the atmosphere in Scott’s office was hot or icy. Somehow both were present and radiated off the two people in the room. They sat down at the engineer’s desk and visitor chair, glaring at each other.

Then Jim’s face softened. He could understand the confusion and anger of the young woman in front of him, and if he wanted to soothe the situation and to keep Nien safe, he would have to make her understand.
Carol,” began gently. “I know that this is a shock for you and believe me when I say that I do understand you, but Khan is…”

“How dare you!” she whispered. Wet, furious eyes bore into those of the Enterprise’s captain.

“Carol,” Jim began anew. “Khan is Sunrise. He is the one, who…”

“He is Sunrise?” She interrupted him, only to continue with a shaking voice, “How dare you cover for him!”

“Carol, you don’t know what he…”

“How dare you even shelter him!” she gritted out; turning her face away. “Him, the murderer of my father and hundreds of innocent people!”

“And the savior of millions of people.” Kirk pointed out before his tone softened again. “Carol, look at me, please!” The moment she looked at him again, he continued, “As I tried to tell you a moment ago, Khan is Sunrise – the very same man who warned us of the planned Klingon strike against Tammeron. He and his group kept the Klingons engaged long enough for Starfleet to arrive to defend the planet. He even saved the Lexington.”

“Is that why Wesley is okay with his presence aboard this ship? He was in sickbay yesterday to visit you – and him! He must know who ‘Sunrise’ is then, yet this murdering bastard is still free!” Bitterness lay on her face. “Did Wesley let him go because Khan saved him?”

“Khan not only saved Bob and his crew, but he also saved the whole Tammeron population,” Jim corrected her gently. “He recovered me from Turkana. It was him who broke into the Klingon HQ in Turkana City and got me outta there. He fought with me during the Klingon assault on Aldebaran, preventing the space harbor from exploding three seconds before detonating near tanks of liquid plastic. If he had not risked his life, then there'd be a crater where the space harbor and the town had been.” He bent slightly forwards. “He was the one who broke a cargo ship’s anchor containing the other tanks of fluid plastic aboard. Can you imagine what would have happened if the flames reached the vessel? The space station would have exploded and dropped down on Aldebaran – directly onto the capital! You’re a weapons specialist. Tell me, what percent of the inhabitants would have survived that crash. And that doesn't include the planetary catastrophe the impact would have had.”
Carol stared at him and bit her lips. If the Augment was really the mysterious Sunrise, then he had, indeed, saved uncountable lives from certain death, including Jim’s. Still…

“But he is also the man who blew up an archive in London, who attacked a conference of Starfleet officers, and who…”

“He lost it, Carol,” Jim interrupted her quietly. “After all he was forced to endure, he…”

“He killed my father! I had my differences with Dad, and I was ashamed of what he had done and was about to do, but he was still my father! Khan murdered him, attacked you – attacked the Enterprise! You died because of him!”

“I died because your father crippled my ship!” Jim corrected her firmly. “It was your father who gave the order to sabotage our warp core – to strand us in Klingon space. He was going to sacrifice us for his plans! It was your father who attacked us and shot us out of warp. After he beamed you aboard he told me and the whole bridge crew that it was never his intention to spare us. He ordered his weapons officer to destroy the Enterprise! He was ready to kill approx. twelve hundred people, including Khan’s sleeping crew! Hell, he would have tried to silence even you because you could have given him away!”

Carol took a deep breath. Jim’s words held the unpleasant weight of truth. Yet… “I know that my father… I know he lost his way – had lost it somehow, but that’s no reason to murder him! There is a civil way to deal with criminals, like courts!”

“A court? Like that one, Khan faced?” Jim challenged.

“He was sentenced and…”

“Khan never faced trial – not in the way you and I understand it,” Kirk explained; new, hot anger stirred in him at the mere thought what had been done to the man he loved. “He was brought before a military judge, heard his so-called sentence – doom, not justice, and was forced back into cryosleep. All this without a lawyer. He never got the chance to defend himself or press charges against Starfleet after all he had been through because of your father.”

Crossing her arms in front of her chest, the young woman stared at Kirk. To hear Jim standing up for the man who murdered Kirk’s own mentor, who killed her father and was responsible for many deaths was almost… surreal!
“Dad woke him up and tried to use his intelligence for his own plans. I admit that this wasn’t right, but…”

“He not only woke him up, Carol! He abused him – in every way you can think of. He lied to Khan from the beginning, and when Nien found out the truth about the intended first strike your father planned, he refused to capitulate. Your father tried to force him back into service by running biological tests on him until Khan was no more than a barely alive shell of a man.” He saw her pale and added, “And when even this was unsuccessful, he chose the ultimate blackmail. He threatened the lives of Khan’s crew. Well, he…”

Carol gasped and rose abruptly. “That’s a lie! Dad wouldn’t have…”

“He killed four of Khan’s people in their sleep – in cold blood and without hesitation. Just as he ordered the death of my crew and me – without any regret!” Jim said mercilessly, and as he saw her flush in shame at her father's actions, he knew that this was the angle to take to make her understand. “The wish to gain an upper hand above an enemy, who even wasn’t an enemy at that time, the Klingons, and the hunger for power, turned your father in a murderer, Carol. Four of Khan’s people and more than hundred people of my crew died because of him – because he ordered their deaths without scruples. They all – we all – were only tools to him, and nothing more. Human life didn’t count to him. All that mattered was his own personal gain. And for that he was ready to break the oaths he took, and deceive anyone, including the High Council, the Federation’s most important laws, and even you, his daughter.” His voice softened. “Maybe you should consider all that before you damn Khan as a ‘cold-blooded’ murderer. He was one of your father’s many victims – only he struck back.”

For the second time in several minutes, Marcus had the feeling the ground beneath her feet was about to swallow her whole. Her dad, the man she had loved her whole life, had killed needlessly? Yes, he had ordered to destroy the Enterprise, yet she had avoided thinking about it too much. Now she was forced to face the truth about her father. He had changed drastically; his loyalty to Starfleet and the Federation had led him to a wrong way – a way full of blood and death. And for his goal, he wouldn’t have stopped for anything. She had realized this even as she had been brought to the Vengeance’s bridge. She had felt utterly betrayed; that's why she slapped him in front of his officers. She had barely recognized him in those minutes. But his brutal demise had made her close her eyes before the bitter truth: that her father had become a monster.

Sitting down again, she bit her lips. Jim was right. Both men – Khan and her father – had killed. It was what soldiers were forced to do if the situation demanded it of them. Still…

“So you are okay with the fact that Khan murdered my father?” she asked quietly.
“No, I am not. Vengeance isn’t an answer, but I can understand it. Nien had suffered unimaginably under your fa…”

“’Nien’?” she cut in, hearing this name for the first time now.

“Shit. Sorry. Short for his given name,” Jim answered calmly, then he continued, “Your father not only tortured him, quite literally, but he also made him believe that he had killed all the other Augments – the people who are brothers and sisters to Khan – his whole family that he loves dearly. It was too much for him; he finally broke. And this was the beginning of everything that came afterwards – everything that happened to us last year.”

Carol swallowed; her mouth was dry. The cruelty her father had displayed shocked her to the core. “Dad… drove Khan to do that?”

“Yes,” Jim sighed. “And I was so stupid. Backstabbing him on the bridge of the *Vengeance* after he was starting to trust me was not one of my most brilliant actions. And he’d saved me twice by that time – no wonder he lost it then and there again.”

“Yeah – by breaking my leg!” the young woman growled.

Jim rubbed his neck. “Carol, I know it was brutal, and I am sorry you went through that – that any of my crew were hurt, but think. You are the daughter of the man who tormented Khan – brought him to his breaking-point and beyond. The simplest way to get his revenge on your father would have been to kill you, but he didn’t. He checked you, and it hurt like hell – I know it, but he didn’t kill you. He saved that for the man who put him through physical and psychological torment, who would threaten his brothers and sisters again. Your father offered to let me and my ship go if I delivered Khan to him. He tried it once and then again aboard the *Vengeance*. Khan felt cornered by it – who wouldn’t? So he attacked again – for his family’s and his own survival.”

Looking down at her crossed arms, Carol was quiet for a long time before she whispered, “And that’s the reason Wesley didn’t arrest him yesterday and why he’s still… out of prison? Because you and Khan told him the whole truth?”

“Yes,” Kirk nodded. “Nien has agreed that everything will come out in court. And he will press charges against Starfleet in return. That’s the only way real justice is going to happen. And either justice is the backbone of our Federation, or there is no Federation.”
The weapon officer cocked her head. “And you think Khan will sit here, discusses tech with Scotty and wait for his trial? Why you are so certain that he won’t try anything else, like…”

“Because I have his word; because he agreed to Wesley’s suggestion in the first place. And there's no place safer than this ship. Bob's watching out for him; that'll protect him to a certain degree unless he does something very stupid which will not be the case. Nien will not throw his second chance away; he's far too intelligent for that. Do you think Wesley would have chosen to help him if there was any risk that Khan would backstab us?”

“You… You trust Khan enough to put him not in custody,” the young woman murmured. It wasn’t a question but a statement.

“Yes, I trust him with my life, Carol. Nien's risked his neck to rescue me from the Klingons…”

“Maybe he wanted to earn your trust so that he can…”

“No!” Jim shook his head, groaning inwardly. Did everyone think Khan’s motive for saving his ass was for the purposes of betraying him in the end? How stupid did they think Kirk was that he could be to get lured in such a simple trap? “When he got me off Turkana and when we were aboard the space station – both times he was ready to go out with me. We both knew we had next to no chance of coming out of any of it alive. Tell me, Carol, what advantage would he have gained if the outcome meant his death. Would've really put a damper on his final plans, wouldn’t it?”

Cocking her head, the young woman studied the captain. “Alright. Why was he ready to throw his life away? Why was he ready to die for you? As far as I understand his main concern is his crew who are presumably locked away still in cryosleep. His death would have sealed their fate, too. Why would he sacrifice not only himself but his people, too?”

This was a question that Jim had asked himself too. Well, until Nien told him that his death would rip him apart – that his soul would shatter beyond repair. They were together, mated now – the bond near complete and whole. But even before that, the young captain knew their burgeoning relationship had a big part in Khan’s decision to fight death at Jim’s side till their last breath.

Without realizing, Kirk touched Khan’s claiming mark through the high collar of his shirt while he tried to find an explanation to Carol’s question without giving away the real nature of Nien’s and his relationship. “His family is still alive, and times have changed. The world is bigger than the one he knew,” he began slowly. “He hoped... hopes that one day they can be released and…”
“This makes no sense, Jim!” Carol cut in; her bright mind wasn’t easily fooled. “If the entirety, the scope of his life is his crew, why would he place you above them? Because that’s what he did when he rushed to your rescue and when he stayed by your side in that doomed space station. His strength wouldn’t have been enough to save him if the Klingons had gotten to you or if the Enterprise had been too late.” She bent slightly forwards and fixed him in a piercing stare. “You're important to him – very important! Important enough to value your life over his own and his so-called family.” She wasn’t sure if his ears turned pink; his pallor mid-healing made it hard to tell. But he was most certainly blushing. “So, why are you, all of sudden, so important to him?”

“I – I guess Khan understands that I’ve got his back this time. I’m certainly not going to stun him now. But I’m in a position to help him so it’s worth it to him to save my ass, I suppose.”

“I don’t believe that for a minute. He has the mind to find his family on his own and with The Shadow, he has the means,” the young woman frowned.

“I’ve promised him, I’d help him,” Jim sighed; realizing that Carol was far too smart to be fooled. He had to be careful now, because to reveal the truth would be dangerous. She would think his reason to support the super-human lay within some sexual adventures – something she wouldn’t accept. “He deserves it. As far as I’m concerned he deserves anything I can give him – the rest is private. We’ve – we’ve been through a lot together,” Kirk replied slowly.

“Private?” she echoed and blinked at him, baffled; he nodded silently. She snorted. “If Khan were a woman, I could at least guess what you mean, but he’s not so I’m a little bit lost here about what his ‘private reason’ could be.”

Jim smiled engagingly. “That’s the reason it’s called ‘private’, Carol. It's not a topic for this conversation.”

The young woman threw her hands up and shook her head. Then she took another deep breath. “So, he'll remain free until the trial happens – several weeks, I'd guess?”

“I think so. At the moment, the admiralty and the council have a few other problems to resolve. Until then, Khan will remain on the Enterprise. I’m going to talk to those that were around or affected by the events last year. They deserve a heads-up and an explanation.” He hesitated. “I'm going to ask you to stay silent about Khan’s presence aboard. The turmoil, should Command hear, isn’t something Starfleet needs right now. Neither she nor her flagship has the luxury of being divisive – after all we are still at war.”

“And it would keep you both out of prison,” Carol sighed; then she closed her eyes and pinched her
nose. “I… I can understand that you're trying to help Khan. From what he's told you, you can put yourself in his shoes; that changes things, and it's your strength as a captain. I get that. I regret that he suffered so much because of my father. But I'm not you. I can't forgive him Dad’s death easily. I can accept that he broke beneath the pressure he had to endure, still…” She sighed and looked back at Jim. “If you want him aboard, I've no right to say otherwise, but please note my protest.”

Kirk nodded. “Of course, Carol. You’re one of my crew and my weapons officer, and I respect you and your opinion as a person and a friend. Your protest is noted. That being said, he will stay.”

“I knew you would say that,” she replied. “There are other people aboard who have reasons to hate him. What about them? They could be a risk for your – your new friend.”

“I sent orders to all of 'em to meet in briefing-room 2 at 1100. I also sent a transmission to your terminal to meet me half an hour earlier. I wanted to talk to you in private before everyone else. Didn’t you get it?”

Carol sighed. “I haven’t checked my terminal in the last two hours. I was too busy with phaser bank 4's repair.” She rubbed her temples. “Well, we talked. Am I dismissed?”

“Yes,” Jim answered and rose; Marcus did the same. “Carol,” he said gently, stopping her one last time. He understood her agitation; he really did! “I know that this is hard for you. After all that has happened – all that your father did, he was still your father and you lost him twice. Once when he betrayed everything he taught you to believe in and then again when he died. But all the suffering, all the pain and the loss on both sides – it shouldn't be in vain. The dust'll only finally settle for all of us when justice is truly served. So, please, keep Khan’s presence aboard to yourself; don’t contact Command. I have reason to believe that Section 31 still exists. They delivered Khan to the LSH labs in Nevada after they put him back into cryosleep. You can imagine what would happen to him if they got him back.”

Carol stared astonished at him. “Khan… He was in the LSH labs all last year?”

“Almost.” With a clear, concise explanation, he told her what happened to Khan after he had been returned to cryosleep. How he fell into the scientists' hands. The inhumane testing they subjected him to. “Section 31 would try to silence Bones, Spock, Wesley, me and anyone else who knows about Nien because they have reason to fear a real trial,” he came to the end. “So…” He made a gesture with his left hand and Carol nodded.

“I understand,” she murmured, clearly shocked again. “I won't contact Command. It's up to you when you think the time is right for it.” She turned to leave, but looked back one more time. “But
please make certain that Khan keeps his distance. I... I don't want him anywhere near me. Not because I think he will attack me, but... I truly can't stand the sight of him – not now – not yet.”

He watched her take another deep breath knowing that he couldn’t push the topic any further. “All right. Good day, Carol – and thank you,” he said softly.

She nodded slightly at him. “See you later, Jim,” she replied and left.

Sighing in relief, Kirk let himself sink back into the chair. The last two days had been emotionally exhausting and once again he realized that the hours in Klingon captivity still lurked deep in his soul. For a long moment, he felt depressed, as hopeless as he had felt then.

Suddenly the door opened and, Scott stepped in followed by Khan. Both men looked at him with concern. “How are you doing?” the Augment asked right away, sensing his mate’s distress.

“And what’s about Dr. Marcus?” Scotty wanted to know. “The lass was outraged and she looked even more confused and crestfallen then she had when she went in there with you.”

Jim rubbed his neck, “She keeps quiet about Khan’s presence aboard. She isn’t happy with the situation, but she's coping.”

“Aye, but not very well by the looks of it.” Montgomery thought aloud and Kirk threw his hands up.

“I didn’t want to re-open old wounds where it concerned Admiral Marcus, but I had to stop her before she could do something stupid like alerting Command. It would have only lead to trouble and end not just with my and Nien’s arrest, but also Spock’s, Bones’, and yours. And Wesley's career would have been in jeopardy.” He pinched his nose. “Jesus, I really need...”

The lights began to flicker and Scott cleared his throat. “Ungh, we’ll have the re-start in two minutes, so...”

“Thanks for the warning,” Jim grumbled and rose, smiling as Khan supported him. “I’ll stay here
until the re-start is finished, then I’m off to meet with the group before the rumors fly – well, not rumors, I suppose.” He saw a hint of concern flicker in his mate’s eyes and he smiled, “It’ll be a test my influence – whether I can get people to see you in another light and give you a chance. After all, in some weeks, I'll be speaking for you in court, and will accept nothing less than you leaving the courtroom with me. No manacles or handcuffs. No rehab colony!”

“I’m grateful for your help, Jim, but please don’t push too hard. I don’t want to be the reason for trouble between you and your crew,” the former dictator said quietly, but Kirk only shrugged.

“Problems are there to be solved,” Jim shrugged.

“Still Captain, you should talk to Sulu and Chekov in private, too,” Montgomery suggested. “And I have also some questions regarding our newest addition aboard, Jim.” He looked at Khan. “Don’t get me wrong, Mr. Singh, but last time we met ye were about ter kill the capt’n, now ye risk body and soul to keep him safe. Aside from that, I see ye working as if this be yer war to win. I'd like some answers myself.”

The former dictator nodded. He trusted Jim's (mostly) good sense to say what must be said and no more. “I do understand you, Mr. Scott. I will first leave questions to Jim's efforts as he is the captain. If you have any other questions for me after Jim has said his peace, I am willing to continue the conversation with Jim's blessing.”

“SCOTTY? WE’RE READY!” Allistor shouted across the space, effectively closing the conversation between the three men. A minute later, the Enterprise dropped out of warp and lights went out. She was back on and on her way in a few minutes – off to a destiny no one aboard knew...

TBC…

Chapter End Notes

Well, we knew that the situation would become strained as soon as Carol learned about. And Jim would try anything to keep his beloved safe was also a surety. I also imagine a longer the scene in which Khan actually sees the place Jim died, and how he would react to it since they’ve become lovers and more. I also loved writing the first real talk between Bones and Nien, and how Khan, afterwards, begins to work with Scotty hand-in-hand. The two are going to build a great team, just wait.
In the next chapter Jim will be back where the other half of his heart beats: the bridge. A new quarrel between Bones and Spock is in order, but this time someone is eavesdropping, and I can promise much humor. Then there is a confrontation concerning Carol (after all Bones IS a Southern gentleman through and through) and Khan will meet Keenser…

I hope you liked the new update and as always, I’m dying to read your comments.

I’ll go on holiday, Friday and I’ll back on the 2nd August – hopefully with the next chapter I already sent my dear beta, Rhiannon.

Have a nice week,

Love and Yours Always,

Starflight
Darkness sneaks up

Chapter Notes

Hi, my dear readers!

After I’m just back from my vacation you already get the next chapter. Sorry for the lack of response to your lovely comments, I’ll answer them during that day (some time during cleaning my shop, doing laundry and shopping to end the emptiness of my fridge). But I didn’t want to let you wait any longer for the next installment, so here it is.

Have fun,

Love

Yours Starflight

See the end of the chapter for more notes

Chapter 41 – Darkness sneaks up

Khan stayed in the Engineering, assisting Scotty and Allistor. There were no further incidents concerning the super-human’s presence aboard, and to Nien’s surprise, the chief engineer even opened up to him a little bit more after they bonded over ship tech. Allistor joined them and together they finally worked out a solution to the problem of the damaged generator allowing the Enterprise to reach warp five by the time the final tests were complete.

Jim had left the Engineering and returned to his quarters to fulfill the sad duty of informing the families of the fallen crew members. Afterward, he went to briefing room 2 and spent two hours explaining and answering questions. Carol was present as well, and as it turned out, her acceptance (begrudging as it was) influenced the other crew members positively. She had lost her father because of the Augment; if she could put that aside as a show of respect for her captain's unusual request concerning the super-human, then so too would the others.

Feeling pleased with the results, the young captain headed straight to his heart's second home: the bridge. He entered the control center; no one took notice, but he wasn't expected today so he wouldn't fault them. For a long moment, Jim stood at the threshold of the turbo-lift and relished in the familiar scent, sounds, and view; then Uhura looked up, and her eyes widened. “Captain!” she exclaimed. A radiant smile lit her features.
“Keptin on ze bridge!” the young Russian quickly remembered his protocol despite his surprise and he called out the notice with a large smile plastered on his boyish face. Sulu quickly stood up beside him. Kirk grinned and raised his hand to wave.

Spock heard them and rose from the captain’s chair.

“As you were, please. I’m not back on duty – thanks to a certain CMO. I just wanted to visit.”

The statement elicited soft chuckles and amused glances. Spock stood at a loose parade rest and raised a brow. A gleam shone in his almost black eyes, and his stoic face showed a hint of something that could be the beginnings of a smile. “It is good to see you on the bridge, Captain,” he said.

“It’s good to be back here again,” Jim said, limping down the two steps to the lower section of the bridge. He caught Sulu’s asking glance that was directed toward his cane and sighed. “Yeah, I stayed relatively unhurt despite a bit of hand-to-hand combat with Klingons and a space station on fire. Slipped at a bird-of-prey’s first shot and managed to dislocate my thigh and pull anything that could be pulled.” He shook his head; his eyes shone as the others made noises of comfort and amusement.

Spock made an inviting gesture to the captain’s chair. “Please take your seat, Captain. The chair belongs to you whether or not you are on duty.”

Kirk hesitated the tiniest bit; after all Spock had the con. But he couldn’t resist and sat down.

Home!

He was home again! It was almost surreal, being back where he belonged after all the torment, despair and mortal fear he went through.

But the last two weeks weren't filled only with horrors. Rather the opposite. Despite the hours in Klingon captivity and the assault on and above Aldebaran, most of the time had been among the most pleasurable times of his life. When he had left the bridge to beam down to Turkana, he’d had nothing more than a few shared transmissions with Khan – God, that seemed so long ago. Now Nien was more than a forbidden lover – he was the love of his life.

Funny where you find love when you're not looking. Sometimes with the one you never imagined
(because he's aiming a full phaser-blast at your ship). And that's the one your soul wants – that's the one that becomes your other half, the half you cannot live without. So much has changed, but the things that remained the same are an anchor – the bridge of his ship. And as Jim Kirk looked around and saw the barely hidden smiles of his bridge crew and smiled back while he felt in the minutest vibrations, as his ship race through space.

Just then, Engineering called the bridge to inform Spock that the problem with the damaged generator was fixed and that they would be able to reach warp five after the next system restart.

‘And there I thought my presence was the reason for her steady grace. Really, Jim, Nien is right. Sometimes you think and act like a kid!’ Kirk thought amusedly while his Vulcan friend confirmed the information.

“Understood, Mr. Scott. How long until the next restart?”

In the background, Jim and Spock heard the quiet, deep baritone of Khan and Allistor's light tenor before Montgomery answered, “Ten minutes, sir. Another question, is the capt’n with you, Mr. Spock?”

“I’m here, Scotty,” Kirk answered; several snickers sounded from the speakers.

“It seems, Mr. Singh and I won the bet, Allistor,” the Scotsman said; his grin was plainly heard in his voice. “Ye owe us a drink.”

“Gentlemen, do I understand you correctly that you took a bet out on this ship’s captain?” Jim tried to sound stern and indignant, but he failed miserably due to the wide smirk plastered on his face; it echoed in his voice. Scott and Khan were wagering on his actions? That spoke volumes!

“Na, sir, I’d never dare. Only a friendly bet betrayin' how well I know me friends, that’s all.”

At that moment the turbo-lift doors opened and an irritated voice called, “I knew it!” McCoy ignored the surprised gazes of those on the bridge. Frowning deeply, he strolled down to the captain’s chair. “I knew you’d be here when I couldn't get you in your quarters!” Bones groused. “Didn’t I tell you that you are NOT released fit for duty until tomorrow and…”

“I’m not on duty, Bones,” an innocent, smiling Jim Kirk interrupted him. “Spock still has the con. He
only offered me the chair so that I can sit down – sparing my hip, you know.”

Leonard’s eyes flashed while he closed the distance to the command post. “How many excuses have you tried since we’ve known each other and how often were you successful with them?” he asked in a low, growling voice. Even off duty, Kirk was still the captain; lecturing him officially wasn’t the cleverest move, but McCoy’s status as CMO gave him that right.

“Not often, but it’s not an excuse, Bones. I’m here of my own accord, just to visit,” Jim said charmingly.

“To visit? Do you actually believe what you’re saying? I gotta wade through it, it’s so deep.” Bones almost snapped.

“The captain is right, Doctor, I am, indeed, still responsible for the Enterprise. Jim simply wanted to make a cordial visit, that is all,” the first officer cut in; his own voice was quiet, too – but not so as to be missed by the silent listener on the other end of the open link to the Engineering.

The CMO threw his hands up. “Of course you'd take his side. You two are thick as thieves!”

“So, why you are surprised, Doctor?” Spock replied, lifting a brow; forgetting for a moment the still activated intercom to Scott’s space. “Though your statement that I ‘always take the captain’s side’ is not correct, I must admit that I agree far more often with his opinion than with yours.”

McCoy grimaced. “Tell me something new – and I still assume that you only disagree with me because it's fun!”

“Fun, Doctor, is a subjective precursor to an excited state or emotion – neither of which I care to indulge in. However, that you see conspiracy in such an activity solely for your spite is indeed nothing ‘new’.” Spock's description of the doctor was never so eloquently stated, and the Vulcan’s wit was lost on no one. In the background, a cough was heard, and Uhura suppressed a giggle; her keen hearing caught every word. “Vulcans do not function on the basis of an action being 'fun' as you put it,” the first officer’s continued. His face remained expressionless, yet he managed to look almost disgusted at the mention of the last word.

“Maybe that’s your problem, Spock!” Bones taunted. “You would be far more relaxed if you let yourself have some fun here and there.”
“Relaxing on duty could be a very grave mistake, Doctor, and I’m surprised that you would suggest such a thing. Perhaps this is the explanation for the discomfort of your patients and why they attempt to leave sickbay as soon as possible. A ‘relaxed’ CMO can do more harm than no CMO at all.”

Leonard’s face turned red. “You know exactly what I'm talking about, Spock. And you can bet your pointy ears that I'm not slacking on duty!” He spread his arms. “I meant if you wound so damn tight all time – if you had a little fun from time to time. It’d go a long way toward giving you an actual personality, you know! But what should I expect from…” He stopped as he heard suppressed laughter through the intercom, interrupted by a perplexed question spoken from a deep baritone, “Are they always like this?”

“This is nothing. Ye should hear them other times,” Scott answered, clearly amused. And McCoy realized that his little tiff with Spock had been more public than he’d intended. Not only was he heard by those officers present, they were used to such scenes, but he was heard by Engineering.

“Is that…” Bones stopped and made a fleeting gesture, while Jim chuckled.

“Yeah, we were talking with Scotty and Khan when you huffed in here ready to unleash your tirade,” Kirk nodded. He almost rubbed his hands as Leonard flushed. Then McCoy frowned. “Khan is in Engineering?”

“I invited him yesterday ter check out the tests we had prepared, as I’m sure ye remember, Doc,” Scotty said. “And before ye pull out a sword and attack me for lettin’ an ‘ill man’ work, Mr. Singh convinced me that he’s fine – doin’ well now. So some hours here are nothin’ ter be concerned about!”

While Sulu and Chekov exchanged a quick look (was Scotty indeed okay with the Augment’s presence?), McCoy groaned and rubbed his forehead. “Their bodies are still healing. Why does no one ever listen to me?” he complained.

“Perhaps you say so much that you are tuned out like white noise,” Spock deadpanned; his face was still stony, yet there was a certain sparkling deep in his eyes that betrayed him. In his own special way he was amused – as far as a Vulcan could be amused.

Jim was laughing openly now. Jesus, it was so good to be back in his chair, listening to the endless verbal volleying of his two closest friends. Everything was as it should be, and Kirk felt like a great weight had lifted itself away from his heart. He saw Sulu’s und Chekov’s shoulders shaking with silent laughter and behind him Uhura had pressed a hand to her mouth to muffle the giggles threatening to escape. Scotty could care less about stifling himself; his guffaws echoed through the
bridge while Khan’s baritone voice could be heard chuckling in the background.

Spock and McCoy looked at each other. The Vulcan looked almost bored at McCoy, and the clearly irritated CMO glared daggers back at the science officer. Then Bones glanced down at the still snickering Kirk and snapped, “Don’t think that you’re off the hook, Jim, even if your first officer is trying every trick in the book to distract me. Nice attempt, but absolutely useless, because despite what ’Ol Pointy-Ear says, I am very strict when it comes to my patients. So –” He pointed at the turbo-lift. “– in you go.”

“Sorry, Bones, but my hip aches and I think it’s better not to move too much. I don’t want to risk a relapse. Don’t you agree?”

“Let me guess, this ache’s gonna last until the end of the alpha shift,” Leonard growled and Jim shook his head.

“No, I hope not. I have to rest so that I can be back on duty tomorrow.” He was all innocence again.

“And what are you doing now?” McCoy challenged.

“I’m not on duty – I’m just observing.”

“So nothing different than what you already do,” the CMO taunted.

“As much as I hate to interrupt this fascinating discussion on the challenges of leadership, I must notify the bridge of a system restart in approximately three minutes,” Khan’s voice sounded from Engineering through the open link; his voice held a hint of irritation now and Jim spoke up instantly.

“Thanks for the warning, Nien. Scotty, we’re losing gravity with this one, yes?”

“Yes, sir. We want to shut down everything to restart the generator and completely reset all systems,” Montgomery answered. “We’ll be without gravity for about 5 seconds.”
“Very well. Yellow alert! Uhura, ship-wide broadcast.” A quick look confirmed that he was on air. “Attention, crew, this is Captain Kirk on the bridge. There will be a ship-wide shut-down of all systems in two and a half minutes. Shut down will include gravity. Loss of gravity will last for five seconds. All personnel stow and secure all loose items for zero gravity and then secure yourself at your general quarters station. Repeat – stow for zero gravity and secure yourself at your general quarters station.” He nodded at Spock, who returned to his own station while the junior tech officer signaled that the science and the engineering terminals were synchronized. With a strong voice, the Vulcan began the countdown; safety-belts automatically out secured the bridge crew to their seats.

Hopefully the test would go off without a hitch and without any damage to his ship. All hands had been instructed to ready their quarters and their stations for the zero gravity occurrence during the final restart. All departments reported their stations ready.

McCoy clung to Jim’s chair, whispering, “So, you're not on duty then?”

Kirk smiled sheepishly. “This is an emergency, Bones!”

The CMO shook his head. “I give up!” he sighed, and he walked to one of the empty chairs and sat down, too, grimacing as the safety belts wrapped themselves around his shoulders the moment his weight activated the automatic safety device Spock had switched on for all bridge chairs.

“Three… two… one!” the Vulcan ended the count-down and all the lights went out. Jim and the others felt a wave of nausea as the gravity disappeared.

As soon as gravity came back online, the crew became aware of the own weight again. The lights flickered back on and the hum of the life support systems and ship’s drives sounded again.

“Status?” Jim demanded and the first officer looked up from his station.

“All systems normal, Captain.”

“Rerouting of power from the defective generator was successful, Capt’n,” Scott reported through the intercom.
“Power output ninety-eight percent,” Khan’s voice informed, too. “Ready for warp 5.”

Jim grinned. “Well done, everyone!” He glanced at the helmsman. “Mr. Sulu, warp 4. If everything goes the way it should, increase speed up to warp 5.”

“Aye, aye, sir!” Hikaru nodded, clearly pleased.

“Mr. Chekov, ETA for Starbase 6-S?”

“If we continue at warp 5, Keptin, ETA twelve hours and seventeen minutes,” the young Russian answered.

Kirk felt how the Enterprise seemed to collect herself before she returned to warp. “Very good,” he smiled. “Uhura? Send a message to the Lexington. Inform Commodore Wesley that the emergency repair to our warp drive was successful and give him our ETA to 6-S. Then go ahead and hail 6-S. Give them our ETA, too. I expect full support when we arrive.”

“Aye, aye, sir!”

“Increasing speed to warp 5, Captain,” Sulu said; the bridge crew held its collective breath as the helmsman demanded more from the drives.

“Engineering!” Kirk hailed the ship’s ‘beating heart’ again. “How are my engines doing, Scotty?”

“Your engines, Sir!? Well, our lady is purring with a groan here and there, but she’ll hold well for the trip, Capt’n.”

“Purring like a tiger, perhaps,” Khan commented wryly from somewhere near the intercom, and Jim snickered.

“Understood. Good work, you two!”

“Any time again, Capt’n,” Scotty replied; the former dictator murmured a “My pleasure, Jim.” Then
the link was cut and Kirk leaned back in his chair. The safety belts were deactivated. Yes, he definitely was home again!

Luengo sat at his desk and studied the files of the Excalibur’s senior officers. It wasn’t unusual that the SBI periodically reviewed the officers involved in important missions. The Federation’s well-trained men and women changed, grew, and found new niches over their careers; the personnel files gave some indications about their current abilities and updated skill sets. So no one gave it a second thought when they delivered the files to Luengo as he required them. In truth, he wanted to learn more about Captain Helrom’s officer staff. Would any of them pose a threat to his plans? When Styles took Heldrom’s place, he didn’t need curious and distrustful officers – he didn’t want ones who would question their orders. A green group of young officers would be best for this task.

To José’s irritation, he realized that the first officer, the comms officer, and the navigator were from old school; they served under Heldrom for ten years, and the files testified to distinctions and commendations. In two words: Good officers – people Starfleet needed. Too dangerous for The Plan as José had begun to call it. Other might refer to it as a coup.

Somehow he needed to get three officers to Earth that were expendable – that Starfleet could do without. It was bad enough that Heldrom would be the first to sacrifice himself unknowingly for Luengo’s plan.

While the Chief of the SBI checked the other files, his secretary informed him that the daily reports and incoming messages from the outposts had arrived. For security purposes, every incoming report was automatically fed through the SBI to search for hidden signals, viruses, and malware. He was informed of any suspect reporting before the outposts were informed of the irregularity. Sometimes the odd report slipped through though. This was one of those times.

A report from Commander Capricio of Aldebaran III. It was a police report cataloging damages made by a Starfleet officer during a secret mission. The aggrieved party demanded payment. He rolled his eyes at the civilian demand.

Remembering that Kirk fought with the Klingon Koloth on Aldebaran, Luengo quickly opened the report to read.

Yes, it referred to the bar fight in New Aberdeen in which Kirk was involved. Thanks to the farm boy, the little restaurant needed extensive repairs. Starfleet officers were encouraged to avoid damaging any property but particularly civilian property. It happened from time-to-time though. So
the collateral damage caused by Kirk during his mission was irritating but not a surprise – perhaps even inevitable. And, as the report informed, the Klingon had started the fight.

Luengo didn't care who had started the quarrel and if some restaurant owner demanded recovery for the damages of a Starfleet mission. No, what interested him was the reporting of a ‘Commander Lavi’, the second officer involved in the fight – very interesting indeed.

Activating the intercom, José called his secretary. “Lieutenant Zh’zilok?” He asked, and the Andorian woman answered instantly, “Yes, sir?”

“Send a message to Commander Capricio on Aldebaran. I want him to transfer all reports concerning Captain Kirk’s clash with the Klingons that led to the bar fight Starfleet has to pay for. I want to check the reporting on the entire incident.”

“Aye, aye, sir,” his secretary confirmed and cut the link.

Luengo leaned back in his chair. “Maybe the bar had a security camera, and if it does, I’m absolutely certain that the recordings will prove ‘Commander Lavi’ is our fugitive Augment!” Then he cocked his head and activated the intercom again. “Lieutenant Zh’zilok, I also need the list of the women and men who will be assigned to the Enterprise replacing the ones they lost.”

“Thirty percent of them are new recruits, second year at the Academy,” the Andorian pointed out and Luengo nodded. “So I heard, Lieutenant. The list please.”

“Aye, aye, sir!”

ST***ST***ST

Jim didn’t press his luck with a very irritated McCoy, and he left the bridge half an hour before the alpha shift ended. Bones had returned to med-bay some minutes after the Enterprise went to warp 5, but not without a warning to Kirk that he would make an entry in his file if he didn’t obey the CMO’s orders in the near immediate term. Well, in Jim’s opinion, four hours was nearly immediate. He asked Sulu and Chekov to meet him tomorrow at 0900 in the officer’s lounge. Though they are on the alpha shift, they would be off duty. Each shift only provided a skeleton crew for watches while ships are docked. Both officers agreed, knowing that their captain would explain the matter of Khan aboard.
Then Kirk returned to his quarters, tired but happy. It was empty and dark, but this time Jim didn’t mind. He would never admit it, but he felt a bit exhausted. Pulling off his boots, he lay down on his bed still fully clothed. When he woke up he was still alone; the clock showed that he had slept for more than three hours.

The buzzing of his door must've woken him. “Come in!” he called and sat up; it had to be Nien, Spock or Bones. The man at the door may not have been exactly what he wanted, but it was what he needed. The CMO examined him carefully then grumbled, “Sleep well?”

“Yeah,” Kirk nodded with a smile before he sighed. “Is it normal that I still feel like hell?”

Bones scanned his friend and nodded. “Yes, it is. Healing takes time. You have super-healing now, but it’s exacting a toll on your body you're not used to. So it’s no surprise you're tired.” He put the scanner aside. “How long did you stay on the bridge?”

“I left before alpha shift ended. You can ask Spock.”

McCoy snorted. “As if the hobgoblin would tell me the truth concerning you, kid.” He cocked his head. “Seriously, Jim, do you think you're ready for duty tomorrow?”

A sigh escaped the young captain. “Bones, we’ll reach 6-S tonight. My only duty tomorrow will be signing a mountain of documents for the repairs. And I need to check over the duty rosters since half the crew is taking leave while we're on 6-S. What do you think? How much action could I possibly see in the next couple of days?”

“Yeah, paper pushing better be the only ‘action’,” Leonard grumbled and rolled his eyes when Kirk smirked at him. Shaking his head, Bones sighed, “Right, you can return to duty tomorrow, but call me if you feel unusually tired or if your hip and thigh give you any trouble.” He hesitated and bit his lips; it woke Jim’s attention.

“What is it, Bones?”

His friend had taken a very deep breath, before he sat down on the bed’s edge, getting straight to the point. “I met Carol in the officer’s lounge for dinner. She was wrung out, Jim. When I asked her about it, she only said that she saw Khan in Engineering and that you told her what happened to him. Why he's all of sudden under your and Wesley’s protection.”
“She understood, Bones,” Jim cut in, rising from the bed and getting restless. “She even supported me when I had the meeting with everyone who was part of the crew last year – that mess.”

“Yes, she did because she likes you and she trusts you as a captain and as a fair man. But taking Khan’s side – it shocked her to say the least. You made sense to her, but she’s not coping well. I don’t like to see her like this. I know Khan’s saved your life more than a few times, but nothing is bringing back Carol’s father. Even if Marcus was a bastard, and I would have liked to see his ass dragged to trial, stripped of his rank and God-willing his pride, she hasn’t come to terms with all that’s happened, and it’s going to be harder for her with Khan onboard. I’d appreciate it if you would consider her feelings where your new friend is involved.”

Jim sighed. It hadn’t slipped his attention that Bones was drawn to the dead admiral’s daughter. Bones flirting was epic as they say, and on full force that day they were on the planetoid together to open the torpedo containing one of Khan’s people. Though the events last year and the war through everyone for a loop, Leonard made no secret of his fondness for the young woman. Of course, he was worried about her. And Kirk refused to make Bones choose between his friendship and her affection. He trusted his friend whom he loved like a brother, and he knew that Leonard would choose him every time. And because of that he would tread carefully.

“I know what you’re talking about, Bones, and I truly didn’t want to open fresh wounds. That wasn't my intention at all, but I couldn't hide the truth from her. Not about her father. She deserved to know – not believe a lie about him or Khan. And it was also the only way I could get her not to call Command. It would’ve only gotten you, me, Nien, and Spock arrested, and threatened Bob’s career. I didn't want to hurt her, but I had to make her see.”

McCoy crossed his arms in front of his chest; a deep frown creased his face. “You’re playing some high stakes poker; I don't want you to ante with more than you're willing to lose.”

Jim groaned. bones and his metaphors! “You know I always keep an ace up my sleeve. This time it's the commodore’s guarantee and my friends’ loyalty.”

“The ace doesn't do you a lick of good if you got nothin’ in your hand – even if we can tolerate your relationship with Khan.” He caught his friend’s indignant expression and added, “Be careful, Jim. This isn't a game I want you to lose – and I'm scared you're gonna.”

The young captain rubbed his temples. “I know. But I can't change it. I'm not folding, and I'm not walking away. Nien is more than…”

“I know, Jim. And you being obviously in love with him is the only reason I’m willing to accept the
“Nien not only saved me and this ship, but he's near single-handedly won battles in support of Starfleet for the Federation. They can’t close their eyes to that fact.”

McCoy nodded slowly. “Given that Barnett is the Chief in Command and for some ungodly reason is fond of you – that and you're stupidly lucky – it all might add up to working in your favor. But we both know that even Barnett has his limits. I'm just asking you to be aware of the risks, and be sensitive where Carol is concerned.”

This time Jim couldn’t hide a smile anymore. “You like her, don’t you?”

A hint of a flush pinked the CMO’s cheeks. “Infant,” he huffed. “I really should know better than to fall for a woman again after the mess I went through with Jocelyn, but I really can’t get it for a guy. And Carol… She's special – special enough to throw my own convictions out the window and risk getting burned again.”

Laughing quietly, Kirk slapped him on the shoulder. “As long as you don’t take the metaphor literally and open a window out here, everything might just be okay.”

“Hopefully,” Bones sighed; then he cocked his head. “Does she know about you and Khan?”

Jim shook his head. “No. I thought it wise to stay silent about that for now. It’s enough that you and Spock know about it. Some people could get the wrong idea about why I’m helping Nien.”

“Is it that far off the mark?” Bones cut in; almost teasingly. “Don’t tell me what you two have together isn’t a part of it.”

“Our relationship… Maybe it was the reason I was able to open my eyes and my ears to what he was telling me, but that’s not all of it. You know I seeing the big guy win just because he’s bigger – in this case the big guy is Starfleet. When he told me what happened – Bones, I've never been so angry. It burned. It's Tarsus again, the ones in power treating the ones in their charge as expendable. You get that? Cuz I sure do.”
The CMO’s clear eyes shone. “You’re a compassionate man, Jim. You can see past any mask and draw the hardest of the hard into your orbit. You always could. You did me. I'll never forget it. I had a hangover, hated world after the divorce and had lost all faith in people. I thought that no one would hear me – see what I wanted them to see. And then I sat down next to a veritable teenager telling me I had signed up for the wrong club because I get space-sick because Starfleet works in space, you said.” He chuckled. “So I talked to you – God knows what possessed me. But you heard me, and then I saw sympathy when I told you about Jocelyn. Not just that – it was compassion. I knew you'd seen as much as I had – maybe more.” He shook his head. “Damn good thing that we both ended up in the same room at the Academy. I never had such a friend as you.”

“Some friend. You tell me I give you gray on a regular basis,” Jim chuckled, and Leonard began to laugh.

“Don't even joke about that. You keep me on my toes, and I wouldn't have it or you any other way. Except for when you die, and I have to bring your ass back. Then I'm cursing you into the next century – and I'll pull your ass back to do it again.”

They looked at each other; smiling. Then the door buzzer sounded again. Jim's voice released it and Khan stepped in. He was still in Starfleet black and his hair was a little bit tousled, but his eyes shone brightly and he was relaxed even when he saw McCoy. “Good evening, Jim. Doctor,” he greeted and Kirk instantly noticed the lack of tension in his beloved’s voice. He seemed to be content – satisfied even.

“Evening, Khan,” Leonard returned the greeting, but remained seated. “All done in Engineering?”

“Not quite, majority of the work has to be done during and after the repairs. But the warp drive is quite good given what we have to work with, and we hope to solve the problem of the deflectors soon,” the Augment answered.

Jim and Bones both noted that the Augment said ‘we’ when he spoke of Scott, Allistor, and himself. Kirk felt joy rising in him. Scotty had accepted Khan; there was no doubt about it. Nevertheless, he would send the chief engineer a short invitation to the private meeting tomorrow. After that, the young captain was sure the Scotsman, as well as Sulu and Chekov, would see the matter of Khan in a whole new light.

Nien’s eyes wandered critically over Kirk’s body and took in his tired face. But Jim was delighted as well; he could tell. “You are all right?”
“I’m good, honey,” Kirk winked back.

Bones grimaced. “Okay, that's even too sweet for me.” He rose. “Night you two. See ya tomorrow.” He stopped at the door one last time. “And behave for once! The sooner that troublemaker over there is all better –,” he pointed at Kirk, “ – the sooner you both can do whatever it is you do!”

Surprised, Khan looked after him, then he chuckled. “He seems to be getting used to us together.”

“It’s always like that with Bones,” Jim smiled and slipped from the bed. “First he grouses, complains, taunts, and then he mothers.” He took his cane. “Care to join me for dinner?”

Khan nodded instantly. “I would like that, Pyāra!” He placed his PADD on the table. “Your stay on the bridge was pleasant?”

Promptly Kirk grinned. “Yeah, it was. Bones finally gave in and I stayed 'til nearly the end of shift.” His eyes roamed over Nien’s face and took in the relaxed features once again. “You liked it in Engineering, didn't you?”

The Augment nodded slowly. “Mr. Scott is a skilled and able engineer, I must admit. The way he thinks surprises me. He can envision what he wants and create it. He is a technician through and through, yet he has a profound depth of emotion. He… He opened up to me after we made this bet whether you'd be on the bridge despite McCoy’s orders.” He smiled shortly. “I did not think I would be treated so well by your people so soon. Well, as far as Mr. Scott and his staff are concerned.”

A happy sigh escaped the younger man. “Scotty is not easy to win, but if you do manage to win his friendship – and it is a prize – it sticks no matter what. That's just how he is. Even if you don't agree on the heavy stuff. Last year he didn’t want to sign the delivery documents for your torpedoes. Starfleet wouldn't give him the energy or propulsion source, so he wouldn't accept them. I was hard-headed, angry still.” He lowered his head. “I had no clue that there were people hidden in them -”

“I know, Jim,” Nien interrupted him softly and reached out to the young captain. “You found out from me.” He entwined his fingers with Kirk’s right hand. “Go on, please.”

Jim moistened his lips. “I insisted they stay. Scotty insisted no. I didn’t listen. I forced his hand and he resigned. He left. Just like that. And I let him. But not only did he leave – Keenser, too. It turned out to be a blessing, because if Scotty hadn't of stayed behind on Earth, there wouldn’t have been anyone to check the coordinates you gave me. And then no one would have been aboard the
Vengeance to stop Marcus from shooting at us. There'd be no one to get us aboard that ship.”

Khan nodded slowly. “Little details are the strings of fate woven in our fabric,” he said slowly. “It’s an old Greek saying, but it fits.” His keen eyes fixed on Jim’s face. “And there is another saying, healing requires strength. Dinner now.”

Another smirk played around Kirk’s lips. “And what about you? You can tell Scotty about your perfection all you want, but I know that you’re not one hundred percent yet. You need something to eat, too.”

Chuckling, Khan shook his head. “Who or what gave you the idea that I wouldn’t eat, Pyāra?” he asked teasingly.

“But, I thought you were only talking about me. You said -” He was silenced by a warm, tender kiss stolen by his beloved before Nien walked over to the replicator. But before he could order something, Kirk called, “Pizza with cheese, tomato, ham, zucchini, and paprika.”

A firm gaze was thrown in his direction. “You think that’s healthy?”

“Aww, come on, baby. I’ll eat healthy tomorrow. Promise! But right now I’m really up for some…”

“Fast food!” Khan grimaced.

“Hey, pizza traditional Italian cuisine and…”

“Wrong, Love. Pizza originally comes from the country known now as Turkey. The Romans incorporated the idea via cultural diffusion as they made their way west. Something they did every chance they got. They brought it home and only then did it become a ‘typical Italian dinner’.” He turned towards the replicator and to Jim’s delight, he ordered the pizza. For himself, he chose sweet and sour chicken, steamed fruits, and rice. He brought both to the table, went back for two glasses of wine, and took a seat beside Kirk.

“Have you meet Keenser yet?” Jim asked, unfolding his napkin.
“No. I heard a lot about him, but I have not met him yet. Mr. Scott told me he assigned him to gamma shift to replace an injured crewman.” He took his own napkin. “Can you tell me why everyone smiled as though it were a private joke when Mr. Scott said I would recognize Mr. Keenser when I saw him?”

Kirk laughed quietly. “Because he is really… unique looking. Don’t pout, but I won’t spoil the surprise. You’ll have to wait until you meet him.” He took a slice and bit into his pizza and sighed in delight. “That’s fantastic! You’re spoiling me, baby,” he said, chewing blissfully.

“As I said at Silver Bayou, don’t get used to it,” Khan replied dryly, but the gleam in his eyes told Kirk that the Augment loved this – doting on him when time and place allowed for it.

“Hm,” the young captain mused; he swallowed and cocked his head. “Maybe we’ll have a special dessert afterward?”

Khan stopped his movement; his fork hung on the half way between his plate and his mouth. “We will share a proper, special dessert as soon as your hip is healed. We will not go back to your doctor-friend because you need treatment for not being careful.”

Jim batted his eyes. “Please?”

“When you are well! Do not try to seduce me again, you insatiable man. I will resist this time!” the super-human said sternly before continuing his meal. And, to Jim’s dismay, he made a lude show of placing the fork in his mouth, closing his lips around it and holding it there while looking heatedly at his lover.

“You know that's mean, right?” Kirk asked; his voice was hoarse and want flared in his gut.

Again, the former dictator laughed quietly. “And you, ‘honey’, are having dirty thoughts again.”

“Whose fault is that?” Jim complained, but he continued to eat. He could get used to this – this mix of private life and duty as it had been today. Is this what it was like to serve with your significant other? He glanced at Khan again, and for the first time he thought that the Augment might fit in this little world of the Enterprise.

Yes, Jim could get used to this – Quite!
The *Enterprise* arrived at Space Station 6-S shortly after midnight. Scotty had taken a nap after his shift. He’d be back on duty when the ship docked. Spock would be on the bridge taking care of the formalities that would get the repair work off the ground. Jim woke the next morning beside Khan, already working with his PADD. Spock’s report of the repairs was waiting for him at his terminal as well as the list of crewmembers on leave. Everything was signed and in order.

Feeling grateful for his Vulcan friend’s show of thoughtfulness (again), Kirk slipped into his uniform, grinning as Nien did the same – back into his Starfleet black. But this time it was because he wanted to. They had breakfast and then went their separate ways. Khan went down to Engineering where a tired Scotty introduced him as a civilian technician who was working on a new device for Starfleet. It was a necessary half-truth to explain the Augment’s presence in the belly of Starfleet’s flagship.

Jim walked to the bridge where he took the con from Spock, did the routine duties, and the delegated the con to a junior officer who was more than a little surprised (and glad) to be trusted with such a task. Kirk smiled inwardly while he walked to the officer’s lounge. The ensign had only been aboard two months, but he was a promising young man, and Kirk was easily reached. It never hurt to show young officers faith in their abilities. It strengthened them.

Sulu, Chekov, and a very tired looking Scott were already there as Jim reached the officer’s mess. As expected they were alone, and so the four men could sit down and talk. It didn’t last more than half an hour. The chief engineer, the helmsman and the navigator understood why Kirk had taken the Augment under his protective wing. Even if they didn’t trust the former dictator – too much had happened last year – they agreed to give him a chance to prove himself. And they all shared Kirk’s opinion that Khan should have a shot at real justice. Jim’s explanation about what had happened to the enhanced man while under Marcus’ ‘care’ outraged them, and they saw Khan’s reactions in a new light – exactly as the young captain had expected.

Glad that his other friends accepted Nien’s presence aboard, Kirk returned to his duties – few as they were while docked at a space station with dozens of workers aboard crawling through every service shaft possible. He invited the space station’s commander, Major H’nahil, a Deltan, to lunch aboard the ship and spent the majority of the afternoon in Engineering.

Curious, Kirk paid close attention to the action around him. He listened to Khan’s and Allistor’s discussion regarding the boosting of the auxiliary power, and finally got an explanation of the SDD’s workings. Eventually, Jim had sent Scott to his quarters to get some rest, but the Scotsman appeared back in Engineering in beta shift’s first half-hour of duty. And he wasn’t alone.
Scotty was talking with the Augment when suddenly a banging noise clanged above them and Montgomery looked up. “By kelpie’s nasty teeth, how often do I tell ye not ter climb up so high? Come down from there!” he yelled.

Khan followed the Scotsman’s irritated gaze, and then his eyes widened; he saw a small figure, no larger than a child, sitting on one of the struts that stabilized the warp core’s sheathing. Astonished, he looked straight into a green-grey face that… that resembled an oyster, only it had a nose, a mouth, and two pitch-black eyes. Perplexed, he watched the little alien climb down with speed and skill that could outdo even an Augment – maybe.

“Is this Keenser?” he whispered, already knowing the answer, and Jim began to smirk.

“Yeah, this is Scotty’s ‘oyster on two legs’.” He watched his beloved as the super-human stared wide-eyed at the little alien. “I told you, you’d recognize him immediately, didn’t I?”

“You did,” the former dictator whispered astonished; his gaze hung on the strange, child-sized creature. “What is he?” he murmured, fascinated.

“He’s a Roylan. The only one in Starfleet,” the younger man smiled. “My father belonged to the landing party that visited Royla and made the first contact. Keenser is…Well, he's extraordinarily tall for his kind and was kind of a target for bullies. But he saved the day for my father – gave him incredible tech advice for the USS Kelvin, the ship my father served on. He accompanied my father to the Federation and remained by his side ‘til the end. He only left him after Dad asked him to watch over my mother who was about have me when Nero attacked the Kelvin.” He sighed. “Keenser became a member of Starfleet; he worked on an outpost together with Scotty, as Spo...”

He stopped himself, remembering clearly the old Vulcan’s warning not to mention his identity – that he was the older self of the Enterprise’s first officer. The time line had been damaged enough because of Nero. Jim didn’t want to add to it, and so he sighed, “Well, I was in trouble on said outpost; an old Vulcan helped me and so I met Scotty and Keenser. Scotty went with me to the Enterprise to help me to fight Nero, later Keenser followed.” His gaze found the little alien who reached them just then. “And now I only have to listen for Scotty’s ever present ‘come down from there’ to know where I can find both of them.” He winked at Keenser, who glanced unblinkingly back, before answering, “Yes.”

Scott had listened to the shortened version of the story half smiling, and then turned his attention back to the Roylan. “Ye’re assigned ter gamma-shift. Why are ye here?”

“Must.”
“Ye must? Why?”

“Much work.”

Scotty rolled his eyes. “I know we’ve a lot ter do, but ye need your breaks too.” He frowned suddenly. “And what the hell did ye do up there?” He pointed at the ceiling.

“Repair.”

“What repair?”

“Cooling pipe.”

“The coolin’ pipe needed ter be repaired? Why?”

“Leak.”

“There was a leak?” Scott shook his head. “Impossible! The computer would’ve said…”

“Switched off.”

“What’s switched off? The computer’s monitoring?” Montgomery pressed and as Keenser simply nodded, he threw his hands up. “There, I’m away three hours and already it’s all haywire!” He shook his head. “Is the leak fixed?”

“Aye,” Keenser replied.

“How did ye find out about it at all?”
“Smell,” the Roylan answered, and again Khan addressed Jim quietly, “Does he always say so little?”

“Yep, that’s our Keenser. Not very talkative, but he understands the tech at a level higher than even Starfleet’s best.” He smiled at the little alien whose shell-like features remained expressionless, yet there seemed to be a soft shimmer in his black eyes.

Keenser surveyed his captain and took in the fading network of capillaries that Terrans and other soft-skinned humanoids had so close beneath their derma. He saw his captain’s trademark playfulness reflected in his blue eyes before the severity of a commanding officer returned. Very good! He had learned over the years it was a sign of well-being when humans smiled through an injury. He was glad that the young man, who was the son of the officer he had admired, was doing better now.

Then the Roylan’s gaze found the man beside his captain. His keen senses instantly detected the differences between him and the other human males, though he was clearly a Terran. He felt curiosity radiate from the man, yet he had also caught waves of warmth as the stranger looked to his captain. With a unique vantage point from above the small group, Keenser had been able to watch not only with his eyes, but also with his senses. He knew that the stranger was the mysterious man who rescued Kirk from the Klingons. And he was the very same man who was involved in the debacle with Section 31 last year. But Keenser felt no hostility from him. Rather the opposite as the pale eyes of the Terran were fixed on Kirk. Again, Keenser thought he sensed affection, and he cocked his head. There was something about the pair – they were that, no doubt. He’d keep silent about it, though, as was his way.

Several minutes later, Jim and Nien returned to their respective quarters. For the first time since he was aboard, Khan excused himself and used his own private rooms to refresh himself while Jim did the same. Afterwards, they met again; Jim saw no reason why the Augment shouldn’t accompany him to the recreation deck.

The large room with its partitioned areas was less crowded than it usually was at this time of evening. Almost the half of the crew was aboard the space station – those on leave or not on duty.

Khan took a deep breath when he looked out and saw the giant silver hull of the station. Other than that, there were only stars as far as the eye could see and a nearby nebula shining in shades of pink, rose, white and gold. “Space holds so much beauty; it’s so endless and wide - so infinite. Is there not room enough for all?” he whispered. Jim knew that wasn’t just speaking about alien races – Klingons and humans, but of his own people too – himself. Once again Kirk realized how strange this all must be for his mate, and he gently squeezed his hand.

“There’s enough room for all as long as the neighbors can tolerate the people next door – no matter who they are. Take the Klingons for example. They are belligerent, their way of life is not always
understood by us. Their pride is only outdone by their strange sense of honor. But they value life, love their families, and forge long-lasting friendships. I can respect that and I would have nothing against a peaceful coexistence with them. But still, we are at war with them because they feel threatened by us. Why is beyond me. Yet…”

“They can’t imagine a federation of diverse races that doesn’t want to expand its territory,” the former dictator mused. “They believe all people think as they do.”

Jim nodded. “And they are anything but rich. As far as Starfleet Intelligence knows, the Klingon planets are rather poor in mineral deposits, and agriculture is only possible in a few of their colonies. If we worked together, both sides could profit, but they rather raise their weapons and spend money on war rather than caring for their people.” He shook his head, then he pointed at a table. “You want to sit down?”

Nien smiled ever so slightly. “Is this a date?” he asked teasingly.

Jim grinned. “If you want it to be then it is.”

“Hm, you should have told me sooner. I would have brought flowers.”

Promptly the younger man’s eyes widened. “Don’t you dare!” he gasped, before he snickered, “The only flowers aboard are in the botany lab, and if you touched one of Sulu’s beloved flowers, you’d have a not to pleasant meeting with the end of his sword.”

The Augment chuckled softly. “That is a risk I would not take – even for you.” A hint of mockery was laced in his tone, but it was good-natured.

Laughing, Jim pulled his beloved with him, and they sat down at a table near one of the windows facing toward space. Drinking red wine and talking together – eyes only for one another. They didn’t notice the crew members glancing over in their direction. The onlookers were curious, amused or, in the case of those Kirk had talked to the day before, cautious.

The evening flew by and even though the ship was docked, Kirk knew that he had to be on duty the next morning. Giving the storekeeper his credit card, he paid for their drinks. The cantina and the galley were free, but not in the bar on the recreation deck. Then the pair departed.
It wasn’t an option for Khan to go to his own quarters. He needed his mate, and so he followed Jim wordlessly. Half an hour later they lay in bed wrapped around each other and savoring the proximity and feel of one another. Sleep found them easily.

Crowds milled around the cafe despite the late hour. People readying for their shift or just getting off work came and went. Some simply wanted to enjoy an evening off; they filled the rooms, talking, laughing, and drinking…

At a table in one of the more private corners sat a lone man; his appearance gave him away as southern European or perhaps Middle or South American. He wore a simple suit in the newest fashion, and had a PADD beside him on the table. He was sipping his coffee.

Suddenly, two men headed for him. One was a middle-aged man with silver-blond hair and icy gray eyes. The second man must have been in his early twenties with an unremarkable face, short dark hair, and brown eyes.

The man at the table looked up. “You’re late, Albert.”

“Sorry, José but you know – damn traffic.” He pointed to his companion. “May I introduce Lieutenant Philippe Nureaux – one of our brightest graduates from the Academy last year.”

“Lieutenant,” Luengo greeted him; the young man suppressed the urge to salute.

“Sir, it’s a great honor to meet you,” he replied.

As the chief of the SBI lifted one dark brow, Norton said, “I explained to Lieutenant Nureaux that this is an unofficial meeting of the utmost secrecy. Hence the unusual location.”

Luengo nodded, “Very well, Lieutenant, please take a seat. Albert, you too.” He waved to the waitress, placed an order, and then lowered his voice, “Lieutenant, I studied your files and I have to admit your marks at the Academy were impressive. You also received praise from Major DueValle on your first mission three months ago, and your superiors at the SBI are quite satisfied with your progress. They say you'll make agent quickly.”
“Thank you, sir,” Nureaux replied, nodding politely at the admiral.

“I have another kind of mission for you, young man,” José continued. “The SBI and I have a lot more work since the war started, not just because of the Klingons, but also because of enemies in our own ranks.” He saw the younger man’s eyes widening and continued, “To my regret, I sometimes learn things that I wish could be ignored, but they can't be. The security of Starfleet and, as such, the entire Federation is at stake. Something like this is happening right now while we’re talking.” He bent slightly forwards. “I understand you lost a friend and a cousin last year during the incident with one of our agents who went rogue.”

“Yes, sir. Both were among the victims in San Francisco where the Vengeance came down. The media reported it as a tragic accident.”

“An accident – yes that was the official statement. But there are two sides to the coin, Lieutenant,” Luengo interrupted him; then he glanced up and saw the waitress coming to their table. He waited until she had served three cups of coffee and left. He lowered his voice and continued. “What I’m telling you now – no one is to hear about it. Not your coworkers, your superiors, not even your family. This ‘accident’ wasn’t an accident at all. Someone steered the Vengeance into downtown on purpose.”

“What?” Phillipe Nureaux frowned.

“Yes, that’s the bitter truth. The man who was responsible for it was an agent of ours.”

Again, the lieutenant stared at Starfleet's highest ranking officer of the SBI. “They said no one onboard the Vengeance survived. Why – why am I here, sir?”

“No one survived the attack. The attacker, our agent, isn't so easy to kill. This man – he is an Augment,” José let the cat out of the bag and watched the younger man very closely.

“An Augment?” Philippe was still in control of his reactions – he kept his voice low, but there was a hint of disbelief in his voice.

“Yes, a man from the 20th century, who escaped with other Augments in an old-fashioned sleeper-ship. Admiral Marcus found it. He made the mistake of waking the Augment, hoping to win his knowledge in defense of his home and ours, Earth. It turned into a mess. The Augment deceived
Marcus, blew the London Archives, attacked HQ, and then he fled. Marcus sent the *Enterprise* after him. Kirk received clear orders, and he disobeyed them. Instead of killing the Augment, he took him prisoner and then it really got out of hand, to say the least, ultimately resulting in the *Vengeance*’s crash into San Francisco. The Augment was taken captive again and was locked away – placed back in cryosleep with his crew. But several months ago he escaped again. And now for the bad news.”

He made a short pause and took in the shocked face of Nuraux. “Our information indicates that the Augment is hiding aboard the *Enterprise*.”

“Aboard…” Philippe paled. “And Kirk knows?”

“Yes, he does,” Norton cut in. “We have incriminating evidence that Kirk is working with the Augment. Maybe he has been since as early as last year. That would explain why he disobeyed the kill order.”

“The difficulty is that Kirk has become a kind of hero after he saved Earth two years ago; he's won several battles for us recently, and just a few days ago, he even stopped a Klingon assault against Aldebaran III. The public loves him. We need an airtight reason to arrest him and get him on trial. And here's where you come in, son,” Luengo headed for the crux of the matter. “The *Enterprise* lost approximately sixty crew members in these last weeks and Admiral Barnett ordered support for our flagship. Twenty, second-year cadets and forty more experienced personnel will leave tomorrow to become members of the *Enterprise*’s crew. And you will go with them.”

“We need proof that the Augment is aboard the *Enterprise*, Lieutenant. We need a man on the scene to be our ‘eyes and ears’ so to speak,” Norton added. “We have to make absolutely certain that Kirk is hiding the madman before we can take action.”

“What’s about Kirk’s other officers?” Nuraux asked quietly. “They would have to know about the Augment. Why don’t they…”

“Kirk wields great influence over his command, and he is personal friends with many of his officers,” Luengo explained, wrinkling his nose in disgust. “They’ll cover for him even if it means having an insane murderer with inhuman strength in their midst. So be careful, Lieutenant. Don’t do anything to attract Kirk’s or his officer’s attention – especially the bridge crew and especially the Vulcan who has developed a deep and quite illogical, if I may add, loyalty towards Kirk. Perhaps because of what they both experienced during the Nero incident.”

“But why would Kirk protect the Augment at all?” Philippe was at loss.

“We are not sure, but we think Kirk has his own designs – something he needs the Augment for. In
repayment, it's possible he promised him to help him free his crew. With Kirk, anything is possible,” Albert scoffed.

“It wouldn't be the first time that success and fame made someone believe they were untouchable. Kirk isn't the first nor will he be the last,” Luengo sighed before he bent forwards. “We have to know if the Augment is on that ship – the very man who steered the Vengeance into San Francisco and killed your friend and your cousin in the process. Do you think you are ready for your first important mission for the SBI?”

Nureaux's maintained a facade of calm, but inside a flame burned. “Yes, sir, I am! How do I identify the Augment?”

José pushed the PADD towards him. “Here's all the information you need – holophotos, a voice recording from his time with Marcus as John Harrison. He is actually Khan Noonien Singh, a leader of his people during the Eugenics Wars, so be very careful. He has no scruples and will kill in the blink of an eye. He's brutal – a cold-blooded killing machine without an ounce of humanity, compassion, or mercy. He looks like a human, but he is not. He’s a synthetically bred creature without a soul. Don't be taken in by him. He is a psychopath, charming when he needs to be. Or he'll feign any other emotion – sorrow even. None of it's real; it's all one big act to gain the upper hand.”

Nureaux nodded slowly and took the PADD. “I will not disappoint you, sir. How do I contact you?”

Luengo reached into the jacket pocket and pulled out a little box he offered the lieutenant. “Only open it when you’re aboard the ship that will take you and the others to Space Station 6-S where the Enterprise docked for repair. It’s a high functioning, long-range transmitter cloaked against internal ship sensors and programmed with the newest code that even most senior staff don’t use yet. It’s set to transmit only to my terminal. We have to work in absolute secrecy. Kirk has many benefactors and we don't need their interference.”

“Understood,” Nureaux said a firm voice. “I also know that this conversation never happened.”

Luengo smiled. “Good job, son. I see that you'll fit in well!”

TBC…
Well, the dark shadows are indeed beginning to rise – not only for Command, but also for our friends and especially for our two ‘boys’. And it will peak in the final clash you all are waiting for.

But I also know that you all are waiting for our love-birds to become one again and for Jim to claim his Nien in the ancient, yet new way the Augments are bonding each other. This will come in the next chapter and I can already promise very hot – HOT – scenes.

I hope the last update was to your liking, even if not too much happened. Yet all details are coming together in the end and are responsible for the danger, Kirk, Khan and the others will have to face.

I wish you a nice week,

Please, please leave some comments (as always I’m curious of your thoughts),

Yours Starflight.
Hallo, my dear readers!

As I already promised the next chapter comes at the weekend – and for those, who have the displeasure to face rainy and cold weather, be sure that you will feel very much warmer after you read the next chapter.

Just for good measure: The new chapter contains really, REALLY adult-stuff (means strong sex-scenes). Please make sure to have some cold juice, water (or wine) with you before you start to read, because this installment holds strong stuff – after all we’re speaking of out two love-birds, who are going to mark and to claim each other for all eternity.

Thank you so much for the comments you left on the last chapter; I hope you all had wonderful holidays.

Love from Germany to everyone,

Yours Starflight

See the end of the chapter for more notes

Chapter 42 – Mark of claim

The next day went by, same as the one before. Only this time Jim was bored. There really was nothing for him to do aside from reading and signing reports. Khan stayed in Engineering for the duration of Scotty's shifts. Spock was away with Uhura on the station as were Chekov and Sulu. The only one who remained aboard was Bones. He still had patients, and M'Benga had taken shore leave. At least the spider-web of broken capillaries had vanished almost completely, and his hip wasn't giving him hell. McCoy was more than satisfied with the results of Jim’s last examination, declaring him ‘as good as healed’, but reminded him to take things slowly.

Slowly…

How the young captain loathed that word! Nevertheless, he followed the CMO’s advice and started to train his muscles 'slowly'. He started by swimming and then moved to working out on the sports deck. That occupied only three hours, though; then he was alone with himself again.
For a long moment, he pondered his options – go down to the Engineering and to join Khan, perhaps. But he stopped himself. Nien should not be disturbed while working with the SDD, drafting its technical data for the patent offices of the UFP and Command. And, Jim didn’t trust himself around the Augment.

Even if the absolutely delicious go two nights previous had satisfied his desire a little bit, desire was always present in his mind and body. It had been six days since they had properly been together, but after all the intense love-making prior, even a passionate man like Jim Kirk should be content, but he wasn’t. He felt thrust into a desert.

It had started yesterday evening with Khan on the recreation deck, and it only grew through the night. In the morning, Jim had been ready to jump his beloved’s bones; only duty had prevented from doing so. He had thought (hoped really) that during the day, when they were apart, the yearning would ease itself. It did not. Even the workout hadn’t helped. He hungered for his lover – for his mate – with unnerving intensity.

His mate…

Eight days ago, Khan had bonded to him, explaining later that the bond wasn’t complete until he claimed the Augment for himself. Maybe this was what he was feeling now. Whatever it was – why ever it was, desire licked beneath his skin – burned him from the outside in, rendering his soul nothing but ashes. This was the result of the bond unfinished. One-half lay open – fresh, raw, exposed. The procedure needing finishing, suturing – the result of which would bind him – bond him truly to his mate.

Jim rubbed his temples and felt a headache approaching. For a second, he considered getting something from Bones for it, but decided against it. ‘Let sleeping dogs lie!’ he warned himself. ‘Bones will get all mothery again and that’s the last thing I need right now. I need Nien naked, in my bed and… Ungh, Jim, get a grip!’ Scolding himself, he walked down the Enterprise’s corridors; without realizing it, his feet carried him to the officer’s lounge. It was the early afternoon. He hadn’t had any lunch; maybe something sweet to eat would sooth his nerves enough to endure this horrible, endless day until the evening came – until he had Khan back.

Kirk stepped into the comfortable area with the large viewing windows, covered at the moment. Then he saw two technicians at the replicator, discussing something.

“Is there a problem, gentlemen?” he addressed them and the men whirled around.

“Captain!” one of them almost yelped, before he had himself under control again. “Sorry, sir, we
didn't see you come in.”

Jim smiled. “No problem at all, Gar… Garrol, right?”

The man nodded, pleased that his commanding officer remembered his name. “Yes, sir, John Garrol, at your service.”

Kirk looked at the replicator. “Is something wrong with it?” he wanted to know, and the second technician sighed.

“The main unit of the replicator is about to be replaced. We're disconnecting it from the terminal.”

Jim stopped; alarm bells rang. “Do I understand you correctly, crewman? The main replicator is being shut down?”

Garrol nodded. “Yes, sir – until tomorrow midday. The galley’s informed and they're busy preparing food for the remaining crew – all 200 of ‘em.”

‘Now that's a challenge for the galley. At least fresh cooked meal is better than the replicated once,’ Kirk thought. ‘And tomorrow, the mess crew's gonna sleep like a rock.’

It was at that moment, an idea struck him.

There was still a bet to be won – a bet with a prize of a massage that could and would lead to so much more!

He wasn’t aware of the triumphant and quite conspiratorial smile that spread over his face as he waved a hand, “As you were!” Then he walked through the officer’s mess and headed towards the double doors. A wave of pleasant smells, heat, voices and clattering greeted him as he crossed the threshold and found himself in one of the three galleys aboard. He quietly watched four culinary specialists working hard at the ovens, stovetops, and around the counters. His gaze fell on the fifth man, who wore traditional chef's whites with a Starfleet insignia and epaulettes – Hank Briston, the Chief Culinary Specialist aboard.
He wasn't noticed in the busy kitchen so Kirk raised his voice, “Good afternoon, ladies and gentlemen!” He chuckled inwardly as five figures whirled around.

“Attention on deck!” Brinston called. A young crewman snapped to attention so quickly he forgot to put down the spoon he'd been stirring a sauce with; he flung the sauce onto his uniform as the hand holding the spoon whipped to his side.

Kirk had to laugh. The man blushed fiercely, and Jim patted him on the shoulder as he passed by. “Relax, Crewman. Attention always catches you by surprise in the beginning.” Then he addressed the group, “As you were.”

He stepped towards the chief who greeted him heartily, “Captain, this is a surprise.”

Jim nodded. “I know. Maybe I should stop by more often – after all, the mood aboard is practically dictated right here – no matter how bad or good a day anyone has – you guys always have a knack for making it better. Even with the war. A large part of the morale is born right here. And I do appreciate that.” He looked around. “You got yourselves quite the job with the replicators shut down.”

“Nothing my crew and I can't handle, Captain, but thank you for your kind words,” Hank answered, pleased that his and his crews’ work was appreciated.

Kirk took a deep breath. “Mr. Briston, as far as I understood our technicians, the replicator won't be functioning until tomorrow afternoon. What's your schedule like after that?”

“It will be only me and an assistant cook when the replicator is back online. The junior officers will eat in the cantina and the only staff-officers aboard are Commander Scott, Doctor McCoy and you, sir – Mr. Scott hasn't been in the officer’s mess for four days.”

“Hm – And I don't think he'll be down until the repairs are done the way he wants them,” Jim murmured; then he remembered what Bones told him about his plans to invite Carol to dinner at the space station the next day. That bit of information all of sudden became important. “Dr. McCoy will be away tomorrow, so you don’t have to take care of him, either. And for me – I’m going to need your help, but not with the cooking – which, by the way, is excellent. I need information.”

Briston blinked in confusion. “How can I be of service, Captain?”
Kirk rubbed his neck. “Well, I need to know where I can get the best steaks. You know what's on the station. And I need a few ingredients and…”

“You want to cook for yourself, sir?” The cook stared wide-eyed at him. In all his experience, he's never had an officer – certainly not a captain – ask to prepare his own meal.

A kind smile widened on Jim's face. “I lost a bet, and now I have to cook dinner,” he twisted the truth a little bit. “And I want to surprise the winner with a special steak I used to do back in San Francisco.”

Briston nodded slowly. “Understood, sir!” He definitely did not!

“So I need the steaks and ingredients for my sauce; you know brown sugar, red onions, tomatoes, cumin…” He went on with a list.

The cook listened and lifted his brows. “Barbeque sauce, sir?”

“Correct,” Jim smirked, and Briston pursed his lips; still astonished of his captain’s request.

“Well, I definitely think you should go to ‘Star-Store’ on deck 12. They sell goods imported from Earth. They've got a butcher – the steaks are the best. Make sure you buy the darkest cut you can find. Only the darkest meat has been hung long enough. You'll find corn on the cob or potatoes if you prefer. The ingredients you need for the barbeque sauce are all aboard, sir. If you want, I'll put them aside for you in a bag with your name on it. I'll put it in that fridge.” He gestured to his left. “Pots and pans are over there, and the dishes are in there!” He pointed to a large hutch near the entrance. “I can set up a table for you if you like and…”

Kirk shook his head. “Thanks, but this is something I have to do myself - terms of the bet.” He clapped the cook on the shoulder. “Thank you for the advice. You and your crew take liberty after lunch tomorrow.”

“Thank you, sir,” Briston smiled at him. “And don’t worry about to do the dishes. We'll take care of them so you can, you know, enjoy the evening without the interruption of housework.”

“I'll definitely take you up on that,” Jim replied. “Thanks!”
Briston had chuckled quietly, before he added, “Shall I introduce you to the stove and oven, sir? It works differently than your common household model.”

“That'd be great.” Jim glanced at the next herd. “Well, let’s begin.”

The evening came quickly, and Jim hummed joyfully as he made his way back to his quarters. Learning how to operate the ship's oven and stoves didn't take too long and the chief had time to show Kirk a few tricks. Briston wouldn’t say it, but he was impressed that his captain seemed to know a thing or two about preparing a decent meal – a near lost art in the age of replicators. He had no idea about Kirk's time in Silver Bayou with Khan. Jim had watched the Augment, and his quick mind had memorized everything. The young man was convinced that his lover would love the dinner he would cook for him the next day.

But this evening would hold its own surprises. Jim stunned Khan with an invitation to the officer’s lounge where they enjoyed a good meal and even more the company. McCoy and four junior officers joined them; Kirk didn’t mind the pleasant interruption. Time with the captain was good for morale, and he never berated or looked down the junior officers serving and learning the ropes under him. Hell, he was still learning every day. Besides, he'd be depriving them of the mess tomorrow for his 'private' purpose.

At first, the super-human was stiff and reluctant with the group, but Leonard wouldn't have it. He involved Khan in the conversation he was having with two of the junior officers. After Nien had caught an encouraging smile from his mate, the former dictator began to relax a little bit. As the evening wore on, he became more comfortable. It didn't slip Jim’s or Bones’ attention that Khan's new self – or maybe this was the one that realized former defense mechanisms were no longer required – was less arrogant, more charming. And it wasn’t a mask. With fascination, McCoy realized that the enhanced man had somehow softened his sharp edges. There was no other way to describe it. The CMO didn’t doubt that Khan would be back to his icy superiority and fierce behavior if circumstances demanded it of him, but here beside Jim in a non-threatening atmosphere, the Augment was almost at peace in his surroundings.

‘Incredible what love can do,’ Bones thought while Jim poured Khan and himself another glass of wine. He smiled as he saw the gazes exchanged by the two love-birds. ‘Look at ’em so damn content. Never seen Jim like this. And Khan… Well, our hobgoblin is usually right – but not here. Khan ain't about to do anything to Jim beyond nailing him into a mattress I suppose. Maybe I shouldn't have cleared him for duty just yet. It would have given them some extra time for themselves.’
The evening faded to night; McCoy watched his younger friend and the former dictator stroll down the corridor – Kirk finally without his cane. Bones had a clear image what would come in the next few hours.

But Leonard guessed wrong. Jim caught Khan’s asking glance as they prepared themselves for bed; he gave him an innocent smile and slipped beneath the covers. Nien joined him shortly afterward. “I’ve got another surprise for you – tomorrow.”

His beloved turned towards him. “Another surprise? What is it?”

Kirk snickered. “If I tell you, genius, it wouldn’t be a surprise. Would it?” He grinned as Khan fixed him with a gentle gaze that was close to pleading. ‘Genetically enhanced and curiosity is his weakness; he can’t stand surprises!’ He stretched out a hand and let his fingertips graze over his beloved’s smooth cheeks. “We still have a bet, baby, and we have the officer’s mess all to ourselves tomorrow evening.”

Nien’s eyes widened ever so slightly. “You want to cook – here, aboard the Enterprise?”

Jim chuckled. “Why not? It’s my ship. And the food service guys need a rest after the double-shifts they’re going to pull with that replicators shut-down. I gave them off tomorrow evening, and I got the address of a place that has everything I need.”

For a long moment, Khan only looked at him; his sea-colored eyes shimmered in the semi-darkness. “Do you know what sort of impression we will give, if this comes out?”

Inching his head forward, Jim caught Nien’s lips with his own for a sweet, long moment. “They are free to think as they pleased. I don’t pry in my crews’ private life; they will return the favor. And officially, I lost a bet. Unofficially, we’ll have to wait and see what you think of my barbecue steak.”

The warmth that lay in Nien’s gaze took Jim’s breath away, then the Augment pulled him gently into an embrace; his arms and legs were a protective cocoon around the younger man. Never – never! – he thought for the thousandth time in just a few weeks, did he ever deign to believe a ‘mere human’ would see more in him than just a tyrant and a monster. He knew he was handsome – he was bred so, but inside his own genome more resembled Frankenstein’s monster. Did people still read that? He wasn't conceived – he was built. Yet here he was – aboard a starship whose captain, once an enemy, had opened his heart and soul to him. Everything James did these last weeks and everything he was about to do spoke only of love. Deep, unconditional love. It was like being born again. Now, when he reached out for love, his arms and his starving soul were filled, and his hurts had begun to heal.
Cupping one of Jim’s cheeks with his long, slender hand, he whispered, “I love you!” Then their mouths found each other. The next minutes were spent holding, cherishing and kissing one another. They weren’t up for more; the sheer tenderness and the feeling of belonging to each other was enough for them – this time.

Sleep overwhelmed them benevolently, without their noticing.

ST***ST

The next day went by like the last one – with one exception. While half of the crew was on leave and the other half fulfilling whatever duties it was they had, Kirk left the Enterprise with his shopping list; he left Scotty the bridge.

The last two days, Jim had been present aboard when junior staff had stood watch on the bridge. With him gone, he entrusted his ship only to his chief engineer who might love the Grey Lady as much as Kirk, himself. Scotty stayed in Engineering for most of the watch. The deflectors were as good as repaired, but the generators were giving him trouble – they were still offline. The same went for the new dilithium crystal; that was a bigger problem than originally thought. Khan put the SDD project off to the side and offered Scott his assistance; the engineer gladly accepted. Both men had come to terms with each other, not least because of the respect they held for one another. They were a good team – a well-oiled machine together with Keenser whose calm presence utterly fascinated the Augment.

The sensitive Roylan perceived the strange Terran’s roil of emotions. He was used to the fact that most soft-skinned humanoids regarded him either as something to protect because of his diminutive stature (by the moons, he was one of the tallest of his race – silly humans!) or as someone not to be taken seriously – often both. It was different with the created man. Keenser was met with true geniality coupled with respect for his knowledge. And the Terran did not hide his curiosity; he was honest with it. In turn, Keenser admired the man’s abilities, and together with Scotty they worked miracles in the Engineering.

The moment Keenser crawled into a repair shaft, Scotty complained about his ‘too broad shoulders’ – otherwise he would have done the repair by himself. Khan let his simulations run at a nearby terminal; smiling to himself about the two friend’s bickering.

ST***ST
Jim Kirk wandered through the corridors of 6-S and finally found the ‘Star Shop’ Briston told him about.

An hour later and many credits less, he left the shop with bags full of items he'd never intended on. He had spent his money on two steaks a five-star chef would drool over, as well as three bottles of an expensive year (God knows what) California Merlot. But that wasn't all. There was a bottle of Indian arrack, a silver candelabra, real wax candles, and ingredients for Gulab Jamun, an Indian dessert he had read about in the ship’s library. It would be the ‘first course dessert’, as he liked to call it. The second course would be made with fire, devotion and ecstasy – in spades.

He also bought two bottles of champagne – real champagne from Champagne, France. The purchases devoured his credits. Jim didn't really want to think about it. A larger bottle of expensive massage oil also had found its way in his shopping cart, and the young captain intended its use for much more than a back massage. Oh, he was convinced that Nien was going to like the dinner, but Kirk wasn't going to allow his beloved to pay the house for this bet – even though the house felt like the winner here. He would cherish and worship his man until he opened up to him completely – until he willingly gave himself over to Jim to be claimed.

Tonight, their bonding would be complete. Jim felt his mouth go dry and his heartbeat quicken at the thought. There was no going back now – there wasn’t then, for that matter. They both had crossed the point of no return at Silver Bayou. And Jim wouldn't apologize to anyone for any of it, not for anything they've done or will do – or will become. He'd embrace every moment from here on out.

Walking through the shopping area of the space station, he passed by a shop that sold leather goods. And another idea struck the young captain. Ten minutes later and several credits poorer, he had a small wrapped package in one of his shopping bags. It was a wallet made of fine black leather, similar to the one in his trouser pocket – a gift to the both of them since the Klingons took his. Practical and elegant – and not flowers.

Nien didn’t have official papers or even credits – money of any sort, but this would change soon. It already had. This Federation shop was run by a Terran – he had a tray of odd coins available. Jim didn’t know if this little good-luck tradition was done in India, in Khan’s time; it didn’t matter. He asked the clerk if he had any Earth coins – maybe some from India. He did, and three Indian rupees were placed in the new wallet before it was gift-wrapped. It wasn’t a large or extravagant gift, but it would remind Nien of their earliest times together when neither had a dime or a credit between them, but they'd been richer than all Aldebaran. Kirk slipped his new wallet into his pocket, and then left the leather store and continued shopping. He bought himself and Nien a couple of shirts, swim trunks, and work-out clothing. No matter what anyone says, store bought is much better quality than replicator clothing. More credits. If he kept going, he'd leave a paycheck at 6-S. But, on the other hand, captains were well-paid, and what else was there to spend money on, really.

“Keptin?” a young voice called from behind. Turning around, he saw Sulu and Chekov loaded
down with shopping-bags.

“Jesus, did you two leave anything for the rest of the station or did you close the place down?” he teased, and Hikaru began to laugh.

“No, sir. We left a little for you.” He nodded at the shopping bags in his commanding officer’s hands, and Kirk had to grin.

“You caught me, Mr. Sulu.” He cocked his head. “You guys still on leave?”

“Yes, sir, ’til the day after tomorrow,” the helmsman nodded and Jim’s face brightened.

“Right. You two have time for a coffee? Come on – captain’s treat.” He nodded towards a coffee and ice cream shop, and the two younger men agreed, pleased.

Spending an hour in pleasant company and drinking unreplicated, actual brewed coffee, Jim returned to the Enterprise in the early afternoon pleased with the world. A quick check in with Scotty confirmed nothing out of the ordinary – even better. Then the young captain prepped his quarters for the night. Before he and Khan parted that morning, Kirk had asked him to use his own quarters to freshen up; he had another surprise. Making certain that everything was tidy, Jim flipped back the covers, requested another pillow and blanket from ship’s service. Then he programmed the computer to play music he thought Nien would like.

The champagne was a problem. Of course he had a bar in his quarters, but no champagne flutes – or a cooler. He left his quarters and went to the officer’s lounge. It was closed. He used his personal code and crossed the mess to the galley. Ten minutes and many opened cabinets later, Kirk strode back to his stateroom, triumphantly holding two champagne glasses and a cooler in his arms. Putting one of the two champagne bottles into his mini-fridge, he placed the other one in the cooler and activated the cooling system to chill the alcohol for when he and Khan returned to the captain’s quarters.

Satisfied with the results, Kirk glanced at the clock – Alpha shift was over. He quickly changed out of his uniform and into civilian clothes – a pair of navy-blue cotton trousers, a light-blue silk shirt, and a matching jacket. He gathered his purchases – the wine, an apron (not ruining this shirt until after dinner), and table cloth and retrieved the steaks from the mini-fridge where he had stored them. Then he made his way down to the galley not noticing or not caring for the odd looks he got along the way.
Kirk slipped into the room, sealed the door and unpacked everything he brought with him. He had invited Nien to dinner at 1900. That gave him three hours to prepare.

Checking the fridge in the kitchen, he found the bag with his name on it, just as Briston promised – 'good man'. Shrugging off his jacket, he put on the apron and requested some up-beat tunes from the computer. Then he went to work. Half an hour later the barbecue sauce was done, and the steaks were washed, salted and left to marinate in the pan. That'd take just over an hour. Jim might not have learned much from his mother, but barbecue was in a midwestern man's blood and his grandfather made sure that the tradition was passed down as it ought be. Preparing the Gulab Jamun, made from Khoa (a special Indian crème), Ghee (Indian clarified butter), cardamom and saffron brought a sweat to Jim’s forehead, but he managed – he was a genius in his own right, after all.

Once everything was in an oven, he left to set up a table in one of the comfortable niches. He used the candelabra he found in the shop, and the officer's china he'd found, normally used for receptions or holidays. Smiling, he placed the little gift beside Khan’s plate, hoping the object of tonight's affections would enjoy the gift. Then he ordered the computer to retract the protective bulkheads in front of the picture windows revealing the soft shimmer of stars and the star nebular. Its light filled the dim room.

Returning to the kitchen, Kirk took care of the potatoes, sliced them evenly, spiced them and added fresh onions. So as not to offend his mate's delicate senses, he used lemon to remove the unpleasant scent from his skin. Khan had done it at the cottage. Using the fresh pressed juice of a lemon, he washed his hands with it and like magic, the smell vanished. Afterward, he sliced bacon that would be added to the roast potatoes. Then he turned his attention to the shucked corn; he coated them with butter and sugar and placed them into a pan, adding more butter.

Finally, he removed the steaks from the marinade, he basted them with some of the sauce and put them into a fourth pan to cook. Thank God, Briston promised him, he'd take care of the dishes. Jim was determined to repay the man for the favor. The rest of the sauce would be warmed up again and served with the steaks.

The time flew by, and before he knew it, there was just a few minutes left until Khan was due for his date – umm, bet. Knowing the Augment, he would enter the officer’s mess at the stroke 1900, so Jim unlocked the door, removed his apron, slipped back into his jacket, and lit the candles. Then he opened the wine bottle to give it a chance to breathe. He learned that from the good doctor.

“Computer, stop music. Play Kirk 4!” The computer played the music he had selected and saved that morning, hoping it would be to Nien’s liking. As the first soft sounds filled the air, the doors opened, revealing the tall, slender figure of the man Jim longed to see.

Thanks to the clothing replicators, Khan had been able to order new clothes. He wore dark-grey
trousers, a silver, silk turtleneck, and a dove grey jacket. The color made his eyes all the more vibrant. His hair was sleeked back, and a soft smile played around his bowed lips. He stepped in with the grace of a large cat; every movement made with a fluid elegance that would make a ballet dancer jealous.

“Good evening, Jim!”

Kirk felt his mouth go dry; his body trembled at the sound of the deep, velvet baritone purring his name.

“Good evening, Nien,” he replied, and his voice sounded hoarse, shaky in his own ears.

The smile on Khan’s lips widened and amusement was added to the warmth in his gaze – a gaze that travelled over his beloved’s body. Blue was definitely James’ color. It gave his eyes more depth – brilliant and endless like the skies of Earth on a clear summer day. And the classy, timeless style he had chosen for his jacket hugged his broad shoulders and slender frame in a way that would make even the most pious man weak – and Khan was anything but pious. He was unashamedly hungry. Dinner would not be able to suppress it even if the smells promised a delicious meal. The longing to be one with his mate again – to be claimed; it made his pulse race, yet he kept control. Jim had made significant efforts for this date – to make it happen, and Nien was determined to enjoy it exceedingly. He couldn’t remember the last time someone had done something like this for him – Noonien Singh, and not Khan, the ruler of a quarter of Earth.

“May I show you to your table, sir?” Jim addressed him like a concierge of an expensive restaurant.

A soft chuckle escaped the Augment. “You may,” he answered in his haughtiest voice and the men chuckled at themselves.

Following Kirk, Khan’s eyes widened as he reached the table. His gaze wandered over the flickering candles, the crystal wine glasses and the fine china – all of it bathed in the dim light provided by the room and the shimmering stars outside. Jim spared no effort or expense to make this special. And Nien surmised that this was not only about the bet – this was more. He was being wooed in the most romantic and traditional of ways. Focusing his attention for a moment on his beloved, he took in the healed capillaries, the way Jim walked without any trace of discomfort, and he sensed the longing and the determination.

The Augment gulped. There was absolutely no doubt how this night would proceed; his James was ready to make the last step. When morning came, he – Khan Noonien Singh – would be bound to another one; he would be claimed in body, heart, and soul by the only person in the whole universe
he could imagine as his one and only mate.

Pleasure zinged through his gut and lightly flushed him as he took the seat Jim offered. “An appetizer, my dear?” Kirk asked, and Nien’s brows shot up when he recognized the smell coming from the bottle the younger man lifted.

“Aarrack?” Astonishment echoed in his voice, and Jim smiled.

“I thought you would like to have something from your country.” He poured some of the dark gold fluid in the smaller glasses for Khan and himself. “May this evening be something we both will remember with happiness!” he toasted, and a wave of warm sentiments enveloped Nien.

“To us,” he replied in a whisper; then they clinked their glasses to the toast.

The taste that filled Jim’s mouth was strange, but not unpleasant. After the second sip, he found he enjoyed the unusual drink. He watched how Khan’s gaze fell on the little wrapped package, and then met his baffled look.

“A gift?” the Augment asked, and Jim chuckled softly.

“Nothing big. Just something I figured you’d need and... And maybe help you remember those first days together on Aldebaran.”

Surprised and touched, Nien placed the glass back on the table and took the little package in his long fingers. There had been times when a pair of stolen jeans or shirt had been a great gift given to him by one of his siblings courtesy of a stroll through New Delhi after they escaped the labs. Then there had been the years he was bestowed with gifts to garner his favor. But real presents given out of love had been a rare thing. Joaquin had given him small gifts, as had Katie, Otto, Pedro and Rodriguez. They had been precious to him, but they were long lost now – destroyed in the madness of the Eugenics War or stolen by Marcus after he seized the *Botany Bay*.

This was the first time someone besides his closest family members had given him a gift simply out of love.

For a moment his throat became tight; then he unwrapped the little package. His eyes widened. “A wallet?” he asked, taken aback.
Jim grinned. “Well, I realized you didn't have one when we were on Aldebaran. You’re going to need a wallet very soon. So I thought it was a first step in giving you some sense of normalcy in this time.”

Khan’s keen ears heard a gentle tinkling as he took it out of the box, and opened it. “Indian rupees!” he gasped, staring from the three coins to Kirk and back. “But I thought... We don't use money anymore.”

“You can still find coins here and there – collectors and things like that. The leather store I visited had them for the whole ‘good fortune thing’. I thought it would be a nice way to remember your time and connect you to the present.”

Nien looked at him with large eyes – eyes that moistened suddenly. Then the Augment rose and a moment later Jim found himself caught in a tight embrace. It was almost unbelievable that someone who was the leader of a whole race – one of the mightiest men on Earth – was overwhelmed with joy because of such a little gift. It was the gesture that touched Khan so; the thought his beloved had spent on the matter to make his day. No one other than Joaquín and his closest family had ever done something like this for him.

“Thank you,” he whispered, pressing a kiss on Jim’s temple. Kirk’s arm snaked around his waist and held him close, squeezing him gently.

“You’re welcome, Nien,” he murmured back, happy that his little surprise pleased his lover that much. Then the smell from the kitchen became more intense, and clapping Nien on the back Jim disentangled himself from his mate, stole a kiss, and raced to the kitchen. “Back in a minute!” he called over the shoulder. “Sit. I gotta check the potatoes!”

Still deeply touched, the Augment sat down again and poured Kirk and himself a glass of the wine, wanting to take some pressure off his beloved.

The ‘one minute’ became five – a short period of time that the former dictator used to enjoy the soft music, the view of the star nebula, the sparkling diamonds shining out in space, and the peacefulness around him. Jim came back carrying two plates with the dinner and beaming from ear to ear. He was happy with the result of his culinary skills, and as he placed the plates on the table, he eagerly awaited Nien’s opinion.

Khan’s gaze wandered over the thick steak, the dark-red sauce that smelled sweet and smoky, corn
on the cob – shining with melted butter – and the roast potatoes with onions and bacon. If it tasted half as delicious as it looked, then he was certainly in for a treat – and on the losing end of this bet.

“Enjoy your meal,” Jim said and watched the other man as he took the first bites.

Letting the taste slide over his taste buds, Nien analyzed the food. A mixture of surprise and pleasure spread over his features. “Excellent,” he beamed when his mouth was empty again. “Absolutely excellent, Jim! Congratulations – and don’t expect me to prepare dinner ever again. You did a fantastic job.”

Kirk began to laugh. “Well, from time to time, I’m gonna want some Indian food again – especially your mango-curry. I can do a lot, but cooking is definitely your domain.”

Joining his mate’s laughter, Nien raised his glass. “I’ve never lost a bet without disappointment, but right now I am glad for it. Thank you for all the trouble you must have gone through to make this real.”

Sheer, almost boyish happiness danced in the younger man’s eyes, as he lowered his head. “It was more than my pleasure. To us!” They toasted, then they began to eat.

It really was a superb dinner, and when their plates were finally empty, both men thought they might explode.

“Not one more bite,” Khan sighed as he laid his napkin beside the dishes and reached for his wine.

“Oh – come on, honey. I even attempted an Indian dessert.”

Dessert… There it was again. Cocking his head, Nien’s glance rested on his beloved. “Do you mean a dessert or ‘dessert’?” The last word was expelled on one deep, suggestive purring breath.

Kirk gulped. Yeah, they both longed for the ‘special dessert’, but that would come later. “First the dessert for a fine palette, then… Well, the night is young.” Giving his mate a mischievous smile, Jim rose, took the plates and vanished back into the kitchen. Khan moistened his lips. Oh yes, he was definitely ready for what would come as soon as they left the officers mess, yet he was curious which Indian dessert his beloved had given a try. The smell that wafted from the kitchen was familiar – very familiar, though it had been years ago since he last smelled it. Could it be that Jim had made some…
At that moment, the Enterprise’s captain reappeared, carrying two dessert plates. Khan’s eyes became wide as saucers as he that saw his assumption was true. “Gulab Jamun,” he whispered while his gaze hung on the little balls fried in oil and soaked in rose-water with cardamom and saffron. Now it was covered in a delicate dusting of sugar. They were still lukewarm and spread an alluring scent through the air.

“I hope I did it right,” Jim sighed while he served the dessert. “I found the recipe in the computer library this morning and hoped that the ‘Star Shop’ would have some Khoa and Ghee. They had an Asian section, and I found ‘em. Their exotics section was pretty cool, too – even had stuff from other planets.”

He sat down and smiled as he saw Khan’s perplexed face. “You prepared Gulab Jamun!” the former dictator murmured; his augmented side winced at the childish joy that rushed through him. Happy because of a sweet dessert – and magnified when he realized it wasn’t the first time his superior mind and behavior left him completely where this incredible boy-captain was involved. Jim Kirk had the tendency to wake the human side of him. One he forgot existed but was never forgotten by Kirk. “Thank you,” he said quietly – for the uncounted time this evening. He had expected that his mate would try to please him with some surprises, but he never had anticipated this.

“You’re most welcome,” Kirk answered, then both began to eat again, telling their protesting stomachs to shut up and enjoy it. Jim was proud as Khan confirmed that the Gulab Jamun was perfect – not in a way of compliment, but in telling the plain truth. After the last bite had found its way into their mouths, Jim poured two brandies to help their full bellies – even if a glass of water would have done a better job. And they sat there for a long time; talking or simply enjoying each other’s company.

The atmosphere was cozy and warm, but the fire that warmed them was inside, lurking but hidden. It began to flow hot through their veins – first stoked by their shared laughter and then light touches. It found its way to their eyes in heated looks then thrummed softly in their loins and finally began to affect their breathing – getting heavier. Emptying their glasses, they simply looked at each other – watching, waiting, anticipating.

“I declare you the winner of our bet,” Nien said, his voice a deep, hoarse growl. “You have won yourself a back massage.”

“Sounds fantastic,” Jim answered; his voice betrayed his state. He wouldn’t reveal to his lover that he intended to change the outcome of the bet to Nien’s advantage, knowing the Augment would have protested. So Kirk would simply wait until the last minute – a minute that would only come if they could just get to his quarters. He rose. “Ready to get a bit more comfortable?” he asked, and the other man was on his feet.
“With pleasure!” He looked around. “What about the dishes?” he asked and Jim made a waving gesture.

“I have an agreement with the mess chief. He offered to take care of everything, and I accepted. I'll give him a day of liberty.” He stepped to his lover and took his hand, pulling him gently towards the door. “Computer, music and lights out!” he ordered as they reached the exit; then they left.

The corridors were as good as empty. They met only four people on their way to Jim’s quarters and returned their greetings before reaching their destiny. Unlocking his door, Kirk stepped in first and ordered the lights to fifty percent and the music on. And then he welcomed the object of his efforts; he needed only one quick look to see that the efforts were well worth their while. The dinner served as opening for the night that would change their lives for once and all.

The inviting folded back covers, the cooled champagne, the music, the light… In his way, Jim showed a romantic streak no one aside from Khan would have expected of the young, usually cocky captain.

That cockiness was a mask Nien had seen through for some time now. He knew that beneath it lays a very sensitive and damaged man, though no more than he was. The Augment turned around, and their eyes met; longing, tenderness, fire and devotion brimmed in their depths.

“Nien,” Jim whispered, a hint of uncertainty washed over his face quickly. It passed as quickly as it came before he cleared his throat and continued, “you told me that we share a bond, but that... That I had to complete it – the bond – when I’m ready.” He moistened his lips. “Well, I’m more than ready, but… This is up to you to, if...” He searched for the right words.

Words that Khan found for him, “If you want to know, whether I wish for you to bond with me – to claim me – then the answer is ‘Yes’!” he said with an intensity in his voice and a fire in his eyes that took Jim’s breath away. The former dictator reached out for Kirk, saying words he’d never imagined passing his lips, “Take me – make me yours, just as I have you and will do again!”

There wasn’t anything left to say. With a fluid movement, Jim closed the small distance between them the moment Nien stepped towards him. They met half way, their hands sought out one another's body; their mouths clashed together.

And the hunger that had lingered deep in them for days now, roared up – demanded sating in the only way possible.
Closing his eyes, Jim wrapped his arms around his beloved’s body; his fingers glided over the fine cotton of Khan’s jacket and found their way into his midnight dark, silken strands. Kirk felt Nien’s tongue slipping over his lower lip, and he allowed access – stroking and dueling with the warm intruder. The Augment’s hot breath danced over his cheek and then Khan’s hands tugged on Jim’s jacket – pushing it from his shoulders, forcing the younger man to let go of him, if only for the short moment it took for the garment slide down his arms to the floor. Returning the favor, Jim made a short work of stripping his lover of his own jacket while Khan gave no thought to Kirk’s silken shirt (and neither did Kirk); he simple tore it apart.

A gasp escaped the young captain; the eagerness of his soon-to-be bonded mate turned him on more than he could put to words. His loins throbbed demandingly; heat flushed his skin, and his heartbeat quickened, finding an echo in Khan’s.

Jim had planned to make this slow and romantic, but his and Nien’s desire foiled it. The sheer knowledge that they were about to become one again, and this time not only in body but also in soul – that they were about to entwine their entire selves forever – drowned out everything else.

Neither cared about their clothes, which soon lay spread and ruined on the floor. Groaning in pleasure as they were finally skin to skin, they stumbled towards the bed, kissing, fondling and half mad with passion.

“*I love you,*” Jim whispered before he slammed their mouths together once more.

The Augment responded quickly, opening his mouth to Jim. Pulling Kirk even closer to him, he let his arms drop so that his hands cupped the younger male’s behind. He squeezed, causing Jim to gasp; then he dropped his hands further and lifted his mate. Never wasting a chance to get what he wanted, Jim wrapped his legs around the super-human, kissing him as if every kiss could be his last.

They stayed like that for a time, never feeling time pass, just holding and being held, kissing and savoring each other’s nearness. Then Khan brought them to the bed and lay Kirk down beneath him, worshipping the lithe, muscled, golden body with his hands and lips, until Jim writhed in pleasure.

“*Turn over,*” Nien murmured into the plush, swollen lips of his beloved who glanced uncomprehending and glassy-eyed at him.

“What?” Jim whispered hoarsely, and Khan gave him one of his half-smirks; his usually pale face flushed with lust while he picked up the bottle of massage oil from the night stand. “*Your prize, James – the back massage.*”
Jim blinked – a back massage? Now? Really? No! He was too far gone to enjoy something like that right now. And – hadn’t he intended to give Nien the massage? Yes, he had – but this was hardly the time.

Shaking his head, he tightened his arms around Khan. “Not now, baby, please,” he answered; his voice hitched with headless desire. “How about another kind of massage. One, we both will enjoy?”

The answer was another deep, scorching kiss. Jim heard the snick of the cap, and then those delicious long fingers traveled over abdominals, pubis, tickled down his cock, over his balls, past his perineum to the cleft of his buttocks and straight to the opening that hummed – clenched – longed to be filled. Jim sighed into Khan’s mouth while the Augment prepared him. Each added finger pulled another moan from Kirk as his hole fluttered around the invading digits, drawing the fingers into him. The younger man’s countenance alternated between pained, needy, and loving as he looked at his lover. Nien got the hint and set a tortuous pace for them both – maddeningly slow. Fucking his fingers in and out of the gasping body beneath him.

Craving the pleasure only his beloved could give him, Jim tore his lips away from Khan’s. “Nien, please… I need...”

But Khan only smiled and focused solely on pleasure for them both – savored pleasure – long, drawn out pleasure. As the young captain nearly sobbed with desire, the Augment buried his face in Kirk's neck and entered him.

A loud, wanton moan escaped Jim and for a moment he could do nothing. He was flying – lost in the sensation – joined with his true soul mate again. Nien’s quick breath at his throat grounded him and he slid his fingers into Khan’s hair.

“I want to see you, baby.” Not giving his lover the chance to protest, he brought Khan's face up to meet his and kissed him deeply and full of devotion.

Khan groaned as the intense pleasure of being reunited with his James rippled through his body and soul. Not able to hold himself back anymore, he began to move. The thrusts between the two lovers were unhurried at first; each man met the other, but it wasn’t enough for either of them. The super-human’s desperation grew – the desperation of a longing not fulfilled – just beyond his reach. He needed to be buried in his mate’s body – needed to bury himself deeper – impossible in this position.

He slipped out, ignored Jim’s protests, and flipped him over. Staying on his knees he pulled the younger man up so that chest and back met and impaled him with one firm, swift stroke. He claimed Kirk's warm, inviting body like he had claimed Kirk’s own soul. His arms snaked around Jim’s chest
and waist, pulling the captain closer and pressing him down to thrust into him, seeking depth. The angle had his cock slide over Jim’s prostate with every push powered by tireless thighs. Bending his head, Nien’s mouth found the faded mark on Jim’s neck and a shout of pleasure erupted from the young man’s lips as Khan bit down – hard, bruising, almost painful. And then the bite turned into sucking, licking and kissing. Finger bruises bloomed on Kirk’s chest with the pressure of the Augment’s arms and hands, holding him tight. The thrusts came stronger and faster now.

Jim let his head fell back onto Nien’s right shoulder. His eyes closed and he was completely supported – helpless – caught within those arms that delivered him to the merciless burning, smooth as silk-over-steel that hammered into him and brought him agonizing pleasure like he’d never felt before. Moans and hoarse cries tumbled from his lips, mixed with half-sobs and meaningless babble. His loins tightened, his cock threatened to burst at the hammering his prostate took, and its own needs. Jim wrapped his right hand around himself and felt the sticky precum.

Khan never missed a trick – or anything as important as the wellness of someone dear to him. Being a selfish man at times, but not a selfish lover, the arm around Kirk dropped down, and his hand gently peeled Jim’s fingers away. Getting the hint, Kirk let go and hissed in pleasure as his lover began to stroke him just. Right. There!

Smiling into the younger man’s neck, Khan grasped and smeared the pearlescent precum around the smooth, velvet glans and down to the root of Jim’s shaft before dragging the foreskin back up again to cover the head. Not willing to deny himself the pleasure, Nien looked over his beloved’s shoulder as the glans disappeared and reappeared shiny and hot from the foreskin – an erotic sight that spurred on his own desire. Finally, with purpose, he worked Kirk and cored him more violently, eliciting more moans from his lover until Jim used Khan’s hard thrusts to push himself into the super-human’s skilled long fingers. Each man was now chasing his ecstasy, lost in the sensation.

The prickle. Kirk could feel it on the back of his neck now, where Khan’s lips and mouth and breath danced over the freshly mottled mark. Again Nien’s teeth grazed that spot. Jim leaned into it and bared his neck further. Those teeth – more pressure now, almost breaking skin. Kirk hissed, but continued fucking forward into the fist that clenched around him and back on the cock that stabbed into him.

The former dictator was pulled to the younger man, drawn to his neck. It was magnetic, attractive, and impulsive, already wearing his mark, but not enough – not red enough. Losing all control, his teeth sank into the taut flesh – straight into the emblem of his claim. Sweet, sweat, and copper filled his mouth; Jim’s scream of pain, pleasure and ecstasy echoed in his ears and in his senses like the song of a siren. And then they came together, the flavor and the men, with a roar that reverberated through the room; the proof of their desire’s fulfillment shot in hot, white streams. Both men shook with tears and aftershocks as they fell down onto the mattress – still entwined and amazed at the intensity of what they found with each other.
Finally able to catch his breath, Khan smelled the copper of Jim’s blood and lifting his head he looked down on the bite that marred Kirk’s neck, branding the younger man forever with the mark of claim – even slightly visible for all times. He tilted his face towards the result of his slipped control, and gently closed his lips over the injury; his saliva slid off of his tongue and onto the wound. He hoped the enhanced cells contained there might have another miracle.

Kirk's neck throbbed, but the pain dissipated quickly. God knows how that worked – and who the hell cared! The discomfort was nothing in comparison to the all-consuming ecstasy that had brought him to new heights. Still soaring in the star-filled, velvet aftermath and held by his mate, Jim didn't think – he was only feeling now.

It was some time before even the Augment came around again. Finding himself drifting back to the present, he slipped out of the young man. He regarded the angry bite, his mark, on James – no longer bleeding now – and ran his hands over his beloved's wet chest and hips down to his thighs and back again. Then one of his hands slipped between his buttocks. Putting a bit of distance between them, he spread the captain wide; exposing him.

Jim sighed. The air over his hole was chilly with oil and cum. Still high, Jim didn't move but allowed Nien to do as he wished. Khan swiped a finger through the cum, leaking from his lover’s red, glistening opening and offered it to him – an offer the younger man accepted, as he took the finger into his mouth to taste his lover. Smiling, Nien rubbed his finger around his mate’s palette, his tongue. Then he shimmied down and dipped his head to the captain's shimmering entrance. The possessiveness Khan suddenly felt was overwhelming – the need to mark his mate inside and out again. With the flat of his tongue, the former dictator licked Jim firmly from balls to sacrum, and he placed a light kiss on his back.

“Nien…” Jim was breathless, nearly listless, but Khan spread him once more and brought his mouth to kiss Kirk’s still open, dripping hole – fuck-red, puffy – gleaming and beautiful. He let his tongue dance in alternating circles around the pucker, kissing on each pass, and it quivered under his ministrations. The younger man whimpered at the stimulation, but the Augment showed no mercy. He would take what he needed. Following ancient instincts. He closed his lips around the hole and sucked as a child would draw nourishment from its mother’s breast – bringing his seed to the entrance. His tongue darted from his lips to spear inside of Kirk; the stiffened muscle fucked into his lover far enough to stroke the velvet walls inside. He used his tongue to bring himself out of Jim and into his mouth, holding it there. When he finally drew back, his nose, mouth and chin were shiny with spit and cum. Determined, Khan crawled up beside his devoted and turned him over to press their open, hungry mouths together to share the bounty.

The younger man was still blissed out and pliant, near sleep but not quite. Yet Nien was far from finished. He was an Augment, and he has more – wanted more – wanted to give more. Khan moved forward to bracket his beloved with his knees. Kneeling above Jim and gazing down at those swollen lips, he stroked himself back to hardness. Realizing what his lover was about to do, Jim looked at him and opened his mouth. Khan smiled down at his man, held himself and slowly fed him his cock, keeping his thrusts gentle and shallow – just as he had three nights ago. Using his hand to
stroke the base of himself, he began to soar towards another eruption of ecstasy.

Without hesitation, Jim flattened his tongue to provide friction and tongued from slit to frenulum and back again, as far down the shaft as Khan allowed. This was not about the solo chase to orgasm or marking one another now. This act was about taking one another into themselves. Kirk understood his mate’s need and Nien took what Jim freely offered – so different from the first time the men came together.

Feeling passion overwhelming him again, Khan spilled himself, soundlessly this time, into Jim’s mouth, and his lover held it for him, waiting for him to come and share it between their lips. He did, and it was wet and hot, and it was glorious. Out of breath, Nien crawled down to lap up the remains of the younger man’s cum, now mingled with the salty sweat that marred his body and then kissed him again, making sure Kirk tasted himself on Nien’s tongue as the enhanced man had done for him.

Finally sated, they spent time kissing and stroking each other, learning each other’s bodies anew – trying to imprint each other by sight, touch, taste, smell, and sound. They listened to each hitch of breath and tried to recreate the effect for one another. Teeth dragged over jawlines, over tendons, biting, sucking, and marking. They turned each other over to run noses up and down spines to feel other others planes and curves as if they were a drug for each other. They tasted sweet and sweat and musk – and it was nectar.

Holding Nien close, Jim knew he was far from done. The time to give back – to claim his mate forever – had come.

He reached back over to the discarded bottle of oil and handed it to Khan. Taking the bottle from his lover, Nien coated Jim’s fingers, stroking each one, massaging them – never taking his gaze away from those sky-blue eyes which looked at him with love and longing. Taking the bottle away from the super-human, Jim pushed him gently down and crawled over him. He braced himself on his left arm and tangled his fingers into Khan’s hair. Jim let his other hand glide slowly down the alabaster white chest beneath him, over the half-hard cock and stroked firmly over Nien’s perineum. Then ever so slowly moved he his index finger down and placed it directly over his beloved’s hole – hesitating for his mate’s sake.

“Tell me you’re alright, Nien,” he whispered, ready to retreat if the enhanced man would become uncomfortable with what lie ahead.

He feared for nothing. Khan moaned and nodded. “Yes, Pyāra, I… I’m more than alright.”

Relieved, Kirk circled his beloved’s tight pucker lightly, then stilled and inserted his finger, keeping a
steady stroking pressure on his perineum with his thumb. Nien was so tight, his body responded to
the invasion by tensing, but the young captain was patient, waiting until Khan willed his body to
relax and accept. Kirk thrust gently with his finger, stroking inside of him with every outward drag
until he heard Khan breathe, “More, James!” And the captain happily obliged him, adding a finger –
stroking and scissoring. Above, the men dotted each other with kisses and nips and dragged hands
and lips across any bit of skin they could find.

“More, Jim – please!” The low sigh was music to Kirk’s ears, who fed a third finger inside the
Augment’s body. This time he sat up a bit so he could watch those three fingers disappear into the
willing body beneath him. Khan had the presence of mind to bear down a bit, and the fingers
disappeared to the last knuckle. A loud moan escaped the former ruler while a mixture of intense
pleasure and pain spread over his flushed features.

Kirk angled his fingers upward and sought the small lump. He brushed over it gently and continued
pressure outside with his thumb – an exquisite sweet torture that made the Augment beneath him
keen and thrust into the air seeking relief. The pain was gone. And Jim kept on, enthralled. He bent
down to lick the dewy precum now leaking from Khan’s prick, but didn’t move his hands – didn’t
give him the friction he so obviously needed. That would come later. Stroking the velvet heat inside,
he ran his palm over the velvet cock outside – not nearly enough for relief. When Kirk felt he’d
loosened Nien enough, and the Augment was pliant from his two previous orgasms, he went to pull
his fingers out.

In a flash, Khan grabbed his wrist, stilling it. Jim looked up. The man was wrecked. His chest
heaved, and he was nearly luminescent with the sheet of sweat covering his face and chest. “More,
James,” he rasped, feeling the claiming he yearned for closing in.

“Nien, are you sure?” Jim asked – knowing exactly what had been done to his mate before. He never
– never – would demand more from the man who held his heart and soul than the man could give.

Hazy blue-green eyes met his, and as Khan nodded, Kirk withdrew his hand just a bit and
generously added more lube to his fingers, his thumb and his hand; then he added more to Nien’s
open hole – circling around the shining, pink orifice and dipping inside with his thumb. He leaned
over the Augment and kissed him in a feeble attempt to pour his feelings into him through use of lips
and tongue, trying to show Nien that he understood the gift he was given. Then he trailed that
beautiful body with kisses until he reached the head of Khan’s cock. He took him into his mouth and
simultaneously pressed two fingers in; crooking them in search of his mate’s prostate.

The enhanced man hitched his breath and arched, making Jim back off just a bit – he wasn’t ready to
tip him over the edge just yet. He got Khan used to the stroking again before kissing off a bead of
precum leaking onto the super-human’s belly. Then he added a third, and then a fourth finger slowly.
All the while bobbing his head up and down his lover’s dick; stroking the underside vein with his
tongue and flicking the frenulum on each upsweep. Khan was a writhing, fucking mess of sweat and
fisted sheets, moaning and arching.

Kirk came off with a vulgar pop. “Are you okay?”

The former leader of almost a quarter of Earth didn’t care about pleading anymore. His pride had gone and left him utterly exposed to this all-consuming desire that ruled his whole being now. “M-mm-more, Jim. Oh fuck, please!”

Kirk placed a calming hand on his chest and pressed a kiss to the Augment’s hip. Slowly, ever so slowly, the young captain pushed his thumb in atop his four fingers. He sat back to look at the beautiful, debauched, open, needy creature laid out before him. Khan’s hands gripped the sheets; his needy mewling and undulating hips begged Jim to end what he had begun. He took Khan’s cock in his hand again, leaned over and let the saliva pooled in his mouth drop over the head. He soaked that beautiful cock in precum and spit and worked it gently, twisting his wrist and sliding over his thumb over the slit.

“I want you to be mine,” Jim whispered and met the glassy eyes which resembled a stormy sea.

“I’m yours – for now – always,” Nien breathed, not trusting his own voice anymore. The moment had come – he knew it. He would be claimed – bonded to this golden man forever.

“I’d open you up and write my name inside of you….” That’s what Khan told him. So slowly, Jim didn’t want his lover taken over the edge yet, he moved his index finger against and around the soft almond-shaped nerve bundle and traced ‘J’. Jim didn’t know if his lover’s augmented body would allow him to feel his intention…

A loud yelp escaped the Augment. “Ahhh, Kirk, please!” He begged; he pleaded for…for this, for him, for time, for release.

‘A’. It was so tight he could hardly move his fingers. He could feel Khan’s heartbeat inside of him – around his fingers.

Khan grabbed for Kirk’s wrist and thrashed his head in the pillow.

‘M’. Fresh beads of sweat broke out on his forehead and upper lip. He thrust his hips up, trying to force the younger man to tighten the hold on his cock; to finish him.
Then his sanity returned for a moment and it clicked; he felt it now. “You’re… You’re writing… your…” The shaky voice couldn’t continue. The sentiment – how his *Pyāra* intended mark him – was too overwhelming.

Jim smiled. The genius got it. “Shhh. I have you. I have you. Oh fuck, baby, I have you.” Kirk continued his endearments as he began to work the foreskin with his free hand in earnest, watching the precum pool in Khan’s cockslit before sliding down onto his fist.

‘E’. Jim traced the next letter.

‘S’. He exaggerated the last curl as much as the tight space allowed, finishing his mark deep in his mate’s body.

“Jim. I…I…Ahhh!” It was too much – the memory of his own words said to his beloved rang in his head. The knowledge that Jim’s name was now branded inside of him, made his mental chains broke apart.

Their eyes met, and it wasn’t sweat pouring down the Augments face now. His glazed and wet eyes squeezed closed; a sob escaped him. His hips began thrusting his cock feverishly into Kirk’s fist, needing the release as he did air to breathe. Jim pushed his hand and watched as Nien’s hole opened to allow him entry, and then devour him up to his wrist. The superhuman screamed; the sound reverberated off of the walls and rang in Kirk’s ears. Cum erupted from Khan’s prick to paint his chin, his chest, his stomach. It was the most beautiful thing Kirk had ever seen. He continued pushing and pulling, fucking his lover with his closed hand and watched the streams erupt, drop, pool, and slide down his torso in time to his movement. Finally, his prick drooled its last, weak release over the captain’s hand.

Jim didn’t withdraw his hand completely. He stoked and hummed and whispered and kissed the man below through the aftershocks and waited. He knew what Khan wanted, and it wasn’t emptiness.

When Nien’s breath evened out just a bit, Jim withdrew his hand slowly, just enough to leave three fingers in the gaping, twitching orifice. There was just enough room to lay himself into his hand. He retrieved the lubricant once more and liberally coated his member. Then he placed his dick onto his palm and pressed himself into the willing body atop his fingers. Watching his mushroom head disappear inside the other man left him agape – in awe and most wonderfully in love. He relished the feeling of his body inside the slick heat of his mate. Their gazes met, and with a nod from Nien, Jim finally withdrew his hand and pressed in to the root. He let both of them adjust to the sensation – Kirk mostly, after the intensity before, he didn’t want to spend himself too soon. This was to savor. He stroked his hand down Khan’s right leg and lifted it to his shoulder. He kissed the inside of the
knee, smiled down at the exquisite creature below him, and moved.

The sensation was almost too much again. Both men groaned. Nien was tightening around him, his enhanced body already setting itself back to right. It was wonderful and maddening all at the same time. Jim slowly dragged out to corona and pushed back in, savoring the tightening channel that caught his foreskin anddragged it over his cockhead and back down again. He kept his thrusts slow and deliberate, thankful they’d already come tonight. He found himself staring. He couldn’t take his eyes from that beautiful face with the high cheekbones and the swollen, bowed, sinful lips. He pumped into Nien a few more times, making sure to rub his lover’s prostate from within before lowering the leg and then bent down for a kiss. It was hungry and shaky and breathy. Nothing short of glorious.

After the grandeur of the last flight to the stars and the fulfillment of their bonding, Khan needed his beloved’s proximity more than ever before. His arms wrapped around Kirk’s shoulders, holding him close.

When Jim’s abdomen lowered over Nien’s prick, the super-human’s breath hitched. Kirk felt that lovely cock once again filling out beneath him – wonderful Augment refractory period. He pulled away and gave his lover a wicked grin, dragging his rippled, muscular stomach down over his mate’s hardening prick, then back up again. Oh, his shoulders stung. Khan’s nails dug in, and God only knew if he drew blood; the sweat falling into those marks hurt, but it didn’t bother the younger man. It was fantastic, adding anticipation to the already building sensation pooling in his gut.

Both men were pulling in heaving breaths now. Their sweat dripped and mingled together before rolling onto the sheets tangled under their bodies. Time had long left Kirk; he had no idea how long they had stretched on – how long they could.

Bending down, his lips sought out the other mark he left all those nights ago – back in San Francisco, not knowing at the time that he had branded Khan then. His mouth found the spot on Nien’s neck and closed over it – sucking, licking, kissing. And another wave of far too intense sensation overwhelmed the former dictator, and Khan’s orgasm gave way first. He roared again and clutched at Kirk’s shoulders, pelvis pumping beneath Jim, his shuddering walls pulling the younger man in him deeper as if trying to swallow him whole. The tightening of Nien’s muscles around Jim’s cock pulled his ecstasy from him and spurt after spurt of hot cum coated his beloved’s insides. James painted himself over his name as he yelled into the Augment’s neck. And he bit into the salty, exotic tasting flesh again – renewing the mark.

The circuit closed – invisible chords of a bond that only death could tear apart now laced together - chained their souls to one.

Each man now had marked the other – imprinted himself on the other inside and out – to last.
When Kirk came back to himself he kissed Nien’s mouth, let himself slip from his body, and then kissed down the super-human’s lean frame. He gently licked and sucked his lover's cock clean, careful not to overstimulate. He sat back on his heels, lifted and spread his bondmate’s legs. Cum slid from Nien, over the plump of his ass onto the sheets below. Jim gathered it onto his fingers and added it to the creamy liquid that striped his lover’s stomach and chest. He swirled it together, gathered it back onto his fingers and brought them to Khan’s parted lips who took them into his mouth, licking and sucking the digits clean. Jim repeated the action, using mouth and hand – kissing Nien – stroking his mouth with his tongue until they'd consumed the last of the viscous liquid. Not a drop wasted between them.

Finally each man lay sated, side-by-side facing one another, their lips found each other again – sweetly now – gently. Their hands roamed each other’s face and tangled in hair. Their bodies pressed against one another and legs twined beneath covers. When they took a moment for breath, Kirk pressed his forehead to Khan’s. He swallowed, looked into the still wet pools of his mate’s eyes and saw the emotion brimming in them. “I love you,” he whispered. “I love you so much!” He wrapped one arm even more firmly around Nien’s waist. “You have saved me, so many times, in so many ways. You are a great man, but more so, you are a good one. And you are…” Kirk swallowed again, hard. He had to get this right, for them, “…my mate. You are my man, my brother. You are my crew, Noonien – my family.”

Khan finally met his eyes. He knew the implications of Kirk’s words, what they meant for both of them – the history of those words.

“I am – and you are mine.” Nien whispered before he kissed Jim one last time. Then he pulled the younger man into him, dragged Jim’s leg over his own and closed his eyes.

They were one. They could feel their souls interwoven – a constant soft presence at the edge of their subconscious. Neither of them would ever be alone again as long as they lived.

A tear he’d never admit to, slipped out of Jim’s eye and over the bridge of his nose, down his cheek onto his pillow. He stroked Khan’s hair and face and neck. Finally, Jim wrapped himself around his Augment as best he could and closed his eyes in utter happiness and peace, allowing sleep to pull him under.

TBC…
Rrrright, everyone still there – or have you all already sought out your cold showers? Yeah, I know, it was really strong, hot sex but still it also branded our boys to each other. And Nien’s whispers that he wanted to open Jim to print his name into him to have him close all time had to find some sweet consequences. I also wanted to start the whole thing in a completely romantically and gentle way, and which way would have been better than to begin with a good dinner? We say in Germany ‘Love finds its way through the stomach’ – means, a good meal relaxes and opens up everyone’s soul and heart. Therefore I thought it a good start for our two boys to begin the evening with this sweet-silly bet Jim definitely won.

In the next chapter our two boys are still in heaven, Bones gets a hint what happened, Spock’s mental sensibility kicks in – and there will be important changes concerning the war; changes which should mean peace but they are the start for Luengo and Norton to go through with their plans.

I hope you liked the new chapter and I’m really, really curious what you think of it.

Love you all,

Have a nice Sunday,

Yours Starflight
New hope

Chapter Notes

Hi, my dear readers,

I don’t know if your all summer holidays are already over of if someone still have or looking forward to their vacation, yet I hope you all found some time to relax and to enjoy recreation.

Thank you once again for your reviews; I knew would love the last chapter. And the ‘aftermath’ concerning Jim’s friends when they are going to learn of the ‘last step’ will certainly make you smirk. In the new chapter there will be also news about the Klingons and the war, you’ll read about Carol’s thoughts concerning Khan, and… Well, just read the update.

Enjoy,

Love

Yours Starflight

See the end of the chapter for more notes

Chapter 43 – New hope

“Mr. President, sir!”

Robertson’s secretary’s voice pulled him from sleep. Groggily lifting his head from the pillow, he glanced at the alarm clock beside him on the nightstand and frowned. It was half-past two in the morning. Rubbing his face he sat up; At that moment, his secretary called again via intercom.

“Mr. President, I’m sorry to disturb you, but it’s urgent!”

Asking himself if the woman ever slept, he activated the link but without visual transfer. It wasn’t necessary that see him sleep-tousled in his pajamas. “Robertson here, Julie. What’s up?”

“Mr. President, I apologize for waking you, but we got a message from the Klingon Empire – from Chancellor M’Rek. It’s for your eyes only, sir.”
The mightiest man of the Federation felt a mix of anticipation and dread; he threw his blanket away. “Put it through to my desk terminal! I'll be there in a minute!” he ordered. He reached for his dressing gown and left the bedroom. With long strides, he crossed the hallway, nodded at two guards, stepped into his private office and went to his desk. A moment later, he saw the stylized triangle overlaying a circle – the Klingon emblem. Then the face of a very old Klingon appeared; his silver mane fell over his broad shoulders, and the scar on his left cheek seemed to glow in the twilight surrounding him. The sharp gaze of his dark eyes pierced Robertson even over the distance and despite the fact that this was a recorded transmission sent away more than eight hours ago.

“To the President of the United Federation of Planets. Mr. Robertson, I have received your suggestion of a temporary ceasefire to ensure the safety of the delegations. Though no member of our delegation fears death, it would be a disadvantage to lose our diplomats to the ‘Grim Ripper’, as you call death. As such, I agree to the ceasefire for the duration of the peace-talks. I have instructed our fleet to halt all military actions beginning in twenty-four of your hours and demand that the same order be given by you to Starfleet. I advise you not to abuse our good will. Otherwise, any further talks will be forfeit. M'Rek out!”

The screen became dark again, and Robertson sighed in relief. Finally, there was a chance to make peace! Then he shook his head and chuckled. “You can’t be anything other than what you are, can you? Making it sound as if we would be the ones to burn that bridge, and not you.” He rose. “Klingon pride – I sometimes ask myself if there is anything bigger in the whole universe.”

He activated the link to his office, knowing that Julie would be there. This time he didn’t care that the woman would see him in his sleep clothes, and so he met her curious gaze as the connection was made.

“Julie, the Klingons accepted the temporary ceasefire,” he said; he smiled as his secretary showed all the signs of the relief he felt himself. “Contact Admiral Barnett. He has to call off his commodores and captains. As long as the peace talks go one, there will not be bloodshed.”

ST***ST***ST

Soft music played in the dimly illuminated captain’s quarters of the USS Enterprise. Both men, now bonded together for all time, lay on the bed, sipping at their champagne and relishing in the peacefulness that filled their joined heart and soul.

It had become a ritual for them to take a shower together after they lived out their scorching passion, washing and caressing each other under the water spray. This time had been no exception. After several hours of well-earned sleep, they had showered, washed each other with care and tenderness,
and dried each other off. Then they changed the sheets and covers; neither of them wanted to sleep in the sticky mess their coupling had left. Restarting the music and opening the bottle of champagne, Jim had returned to bed where Khan already waited for him. And contrary to most times when they snuggled together, Kirk now lay beneath, and the Augment cuddled into him. Sprawled on his back Jim opened his legs to allow his soulmate to place himself between them. Nien’s back rested on the younger man’s chest; his head was pillowed on the captain’s shoulder, and one of Jim’s arms was wrapped protecting and lovingly around the super-human’s waist. Their free hands they held their glasses.

They were silent; words weren’t necessary at the moment. It was true familiarity that silence could be as comfortable as talking. Even Jim, who always had something to say, enjoyed the comfortable quiet, the music, and relished in the warm weight of his beloved on his body and Khan’s unique scent in his nose. Leaning his cheek against the Augment’s head, Kirk closed his eyes and felt his lover's long, strong fingers stroking over his arm.

Khan took a deep breath and concentrated on the new feelings washing through his mind and soul. He had felt Jim’s presence before – his emotions whenever they were in turmoil, but not like this. It was like a part of the younger man was in him – a soft, warm breeze that mingled with his own breath. He tried to grasp this sensation, to deepen it – and promptly Jim stirred.

“Something wrong, baby?” he whispered.

Nien began to smile. “No – rather the opposite,” he murmured before he fixed his full attention on the link between them. He heard and felt Jim’s sharp intake of air and knew that his mate felt it, too. With all the tenderness and love he held for the young captain, he looked up over his shoulder as Kirk’s asked surprised, “What are you doing?”

Ocean blue-green eyes met the sky. “Can you feel it, Pyāra?” Khan whispered. “Can you feel me – not in your body, but in your soul?”

Jim moistened his lips and closed his eyes. There! There it was again. A gentle fondling at the edge of his consciousness – a constant whisper deep in his soul. The feeling of not being alone – of being whole for the first time in his life.

He had experienced something akin to this in his first mind meld with the old Spock from the other timeline. Then, a year later, ‘his’ Spock shared his own strength with him and kept him alive in the hospital during that grave time while Khan’s blood repaired his damaged cells.

Since then they have been connected to each other – brothers, but greater than. But he’d never felt
anything like this from his Vulcan friend. He knew that Spock shielded himself – not from him in particular, but from all of his human companions to protect himself from their emotions. It was rare that Kirk felt an impulse of his first officer at all. Rare, but not unheard of. During the first-year mission, when Spock had been in danger, he felt him. And, weeks later, Jim had learned that the link worked the other way around too; as he had faced great risk, suddenly the Vulcan had been there despite all logic just as he had when the Enterprise raced to Aldebaran to save Kirk and Khan. Spock could tell him whatever he wanted, Jim simply knew that his fear as the Klingon ship appeared at the space station had been sensed by the Vulcan and had made him act. Their link worked somehow, even if Kirk had none of the telepathic ability of a Vulcan. The increased brain activity wouldn't do much to change that.

But the bond with Khan was different. The link with Spock was thin but strong – a thread of tritanium. His connection with Nien was so much more; deeper, more powerful, but gentle. He could feel the presence of his mate like the caress of the sun at a summer day – bright and warm. It filled the parts of him that had been empty until now. It chased away the loneliness that had always followed him like a shadow.

They were one now – two men with shared souls; both still individuals, yet their beings were woven together with the strongest of stuff.

“I feel you,” he said quietly, kissing Nien’s temple. “I can feel you like... It's so much more than before. How do I explain it? It's like a soft touch in my very being and always there - it's not going anywhere, no matter what.” He looked in awe at the Augment. “Is this the bond?” he asked though he already knew the answer.

Khan nodded slowly. “Yes, it is.” He took a deep breath, tasted Jim’s sweet, masculine scent on his tongue. “It is exactly as Otto and Katie explained. They are never without the other, even when apart.” He frowned. “I am unsure about effect due to the distances of space, but I hope that we will always sense each other’s presence in our souls.”

“We will, baby,” Jim murmured, bent down and caught his mate’s lips with his own, giving him a tender kiss. “So,” he said, barely pulling away, “does this mean that we are… umm… kind of married now?”

A sparkle of amusement danced in the former dictator’s eyes. “We vowed to belong to each other forever and we bonded. If you would like to call it ‘marriage’ I have no objection. I know it does not resemble the ceremony humans are accustomed too, but it is one nonetheless.”

Jim began to smile. “So I can call you husband from now on?” He saw the astonished expression of his beloved and began to snicker. “You are my husband now, and I’m yours, right?”
“Yes,” Khan nodded before he added with mischief in his gaze, “but please don’t refer to me as such in front of your Vulcan without me. I really – really! – want to see his face when he hears it.”

Kirk began to laugh and tightened his embrace around his mate, who in rare accusations, was almost boyish. “I already know what it'll look like. Eyebrows up to his hair, indignance, disbelief. But if you blink you'll miss it. Then he'll put his hands behind him and lecture me on how illogical it is in our position.”

“As if his relationship with your comms officer were any more logical,” Khan taunted, yet the chuckle took out the sharpness of his mockery. Emptying his glass, he let it dangle over the bed's edge and dropped it. The soft thud told him it didn't shatter. Then he leaned his head back on Jim’s shoulder and closed his eyes – content and utterly relaxed. Here, with Jim, he didn't need to wear the mask of the strong leader or be on constant alert. They both didn’t need to hide their real selves – they could simply be.

Another gentle sound told Khan that Kirk dropped his own glass. Then Jim wrapped his arm around him, holding him close.

Closing his eyes, Nien smiled. The soft music, the cozy atmosphere, the still lingering warm aftermath of their bonding, Jim’s heartbeat at his back, the feeling of being sheltered for once – he could lay like this for all eternity. And for once, he pushed all concerns and worries for his family, Jim and himself far away. For once he chose the bliss of forgetting – if only for a few hours.

Jim rubbed his cheek on the still drying, midnight dark strands of the man who was a part of him now. Closing his own eyes, he took in a deep breath. Sleep began to envelop them both with its own warm blanket.

ST***ST

Several decks below a crew member couldn’t find sleep despite the late hour and eventful past few days.

Carol Marcus lay beneath her thin blanket and stared into nothing – tired, yet too troubled to relax. The reason was not the lovely evening with Len McCoy. Quite the opposite. ‘Bones’ was not only a gentleman in private, but he was also humorous in his own wry way and a fantastic conversationalist. He was truly brilliant – not just as a doctor, but he was well-read in a variety of topics. His flirting was sweet, and she loved how the tiny wrinkles around his clear eyes danced when he laughed. He
had his own rough charm, and she enjoyed his company very much.

Len had invited her to the best restaurant in the starbase and then for drinks at a classy bar. When they returned to the ship, he had walked her to her quarters. His chivalry was a little old-fashioned, but Carol had been raised in England where it was still taught and passed down. It was pleasant, being accompanied by a gentleman and being treated like a lady for a change.

They had taken their time saying good night; neither party wanted to end the evening, but both agreed without a word that their budding relationship was too fresh for more at the moment. So she gave into a smaller impulse and kissed Len. It surprised them both. But before McCoy had been able to do anything, she had rushed into her quarters, heart beating wildly and excitement brimming in her chest.

The latter had remained deep in her heart until she slipped into bed and ordered the lights out.

Then the shadows came back – the ghosts of what happened over a year ago – the things she had pushed firmly out of her mind during the evening.

The alienation from her father had been the beginning of the catastrophe she had been forced to watch unfold. The admiral had used lame excuses to reject her help and became angrier whenever she asked questions about his intentions. She became determined to find out what was going on. Then her father dismissed her from all of his projects – understandable today since she's learned what he was really up to.

Still, she had never thought that he would go as far as he did. But the proof was right before her eyes – exploding all around her during the Vengeance's attack. She had believed that she could stop her father from killing over a thousand people, but this was an illusion. She should have known him better. Jim Kirk saw through him. Hell, even Khan had known the admiral well enough to know that Marcus would stop at nothing. The Augment had warned them – her, to be precise, by suggesting that none of them was safe; he knew the extent of the Vengeance's power. Of course he did, after all he had his own part in the Dreadnaught Class ship's completion.

At the beginning of the 'project', she had seen Khan only twice. The admiral explained that the stranger in civilian clothes was an agent of Starfleet Intelligence; she hadn't asked any further questions. After all nothing was more secret than the identity of SBI operative.

She had no idea who the man was for real, and only later as she flew down to the asteroid together with McCoy and opened one of the long-distance torpedoes, did she learn the whole truth. Almost instantly, she had realized how dangerous Khan and those people, hidden in the weapons he
constructed, were. Still, the scientist in the young woman admired the man from three centuries ago; he learned quickly and grasped modern technology's intricacies in order to support and develop complicated projects within Starfleet’s most secret departments.

And then she witnessed the other side of him – the side her father talked about during the transmission between the *Vengeance* and the *Enterprise*. As cultivated as Khan seemed to be, deep in him was a deadly savage who used his intelligence to reach his goals no matter the cost. In a twisted way, they resembled each other – the former Chief in Command of Starfleet and the former Augment-leader. The way Khan killed her father in his fury the moment he gained control over the *Vengeance’s* bridge showed Carol that this man couldn’t be tamed. He was a wolf in Starfleet's clothing – handsome, polite, charming and brilliant on the outside, deadly in the inside.

Or so she thought until Jim Kirk told her the story of Khan’s past and what the super-human had been through because of her father. The young woman had to admit that she felt sorry for the enhanced man. No one should go through such torment. But he was still a murderer who had to face the consequences of his deeds. And surprisingly, he seemed to be ready for that. Seemed. She doubted the sincerity of his promise to Kirk.

The man had been created to survive – at any cost. His behavior and his responses were rooted in his genes. It was his nature to win. Nothing and no one would ever be able to stop him if he set his mind to something. She had learned that the hard way. His purpose had been to take revenge on her father, and revenge he got. But even after all her Dad did, even after his attempt to sacrifice the entire crew of the *Enterprise* (and the sleeping Augments), Carol hadn't wanted to lose him like that – or at all. Her father had lost his way, no doubt about it, but that was no reason to kill him. But there was no stopping Khan from snuffing out her father’s life like a candle.

The mere thought that the Augment-leader was here aboard, free and even protected, left a bitter taste in her mouth. On the other hand, the same determination that had driven Khan to make the man pay who brought pain and anguish to him, had forced the super-human’s hand and his decisions as he raced to Jim’s rescue on Turkana. The very same mind decided to stay at Kirk’s side as the Klingon vessel attacked the space dock. And maybe this same incomprehensible loyalty Khan developed for the young captain would drive him to face his trial in fulfilment of his promise to Kirk.

Carol bit her lips. This whole thing made no sense. Not the slightest bit!

Jim told her that Khan regarded his crew as his family – as his brothers and sisters. The catastrophe had begun after her father killed four of his people and made him believe that the other Augments were killed, too. Carol could understand the horrible pain the Augment must have endured when he thought his whole ‘family’ was dead. She had ‘only’ lost her father – the man who raised her. If she had understood Jim correctly, than Khan's relationship with many of the Augments was similarly close. Yet Khan had been ready to die along with Kirk, leaving his people to an unknown fate.
‘It’s private,’ Jim had said.

Private...

Well, Carol belonged to the small circle of people who knew that it had been Khan’s blood that brought the young captain back to the land of the living – that healed him.

Maybe it had to do with the blood? Did Khan regard Kirk as one of his own now? Did the blood change more in Jim than was anticipated? Was he even still himself?

For a moment, she doubted it. Jim's defense and protection of the man who killed his mentor didn’t fit the captain's personality at all. Those changes seemed too great to be rooted only in sympathy and Kirk’s firm belief in right and wrong. On the other hand, if Jim had changed too much, Len and Spock wouldn’t trust him – but they did.

So maybe Kirk's reasons for backing up the Augment were different than what she originally thought them to be. But then, what were they?

Carol rolled over, ordered lights on and rose to fetch a glass of water.

Besides all the questions of ‘why’ and ‘how’, there was still the main reason for her unrest. Her father's killer was aboard – and she had promised to keep his presence a secret. For Jim. For Jim and the other senior officers, who would be in deep trouble if the truth came out too early. She could accept that. She didn’t want to see Len, Jim, Spock, Uhura, or the others arrested. She had found a home aboard the Enterprise, and her friends were her family now. Not so unlike Khan and his crew – she couldn't deny that.

She would keep silent – she gave her word. But as she took the glass of water from the replicator and sipped it, she hoped that she wasn’t about to make a big mistake – maybe the biggest one in her life.

And with this thought, her doubts returned.
The morning came far too early. His internal clock woke Kirk before his alarm clock and ordered the lights to twenty percent. He watched Nien in the dimmed light

Nien…

Now and forever his soulmate – his husband!

For a moment, the mere sound of the word frightened him. He – married! Well, sort of. But this was forever – their bond stronger than any spoken vow.

And with this knowledge, utter calm and peace filled the young captain.

He wasn’t alone anymore. He was with someone who would stay by his side, no matter what. And he had someone now whose side he’d never leave – someone to fight for. Sure they’d have periods of disagreement, maybe even fights, but one thing was certain. Khan would never abandon him no matter the circumstance!

Finally, he never had to fear being left behind again. Someone would share the good and the bad, the joy and the sadness – his whole life. He’d stay for it all.

The thought brought tears to Jim’s eyes. He braced himself on one arm, glanced down on Nien’s relaxed face, and kissed him gently.

A small sound escaped the Augment, and he stiffened for just a moment – like Kirk he was always wary; ready to fight. Then he sighed contentedly and sleepily wrapped both arms around Jim, his subconscious recognizing his mate instantly.

Hovering over Nien, the young captain took his time softly kissing his beloved awake. He smiled as the former dictator replied with tenderness of his own.
That was until the alarm clock went off. With a groan, Kirk lifted his head, ordered the device to, "Shut the hell up," and snuggled back into the warm cocoon of Khan’s arms.

For several long minutes, they lay there pressed together and enjoying the warm energy brimming along their bond. But minutes ticked away mercilessly. Having nothing to do that couldn't be put off, Jim didn’t want to leave bed so soon, but duty called. Most of the senior officers were still enjoying liberty. He'd check the ship's status, leave the con to a junior officer standing watch and then find something to kill the boredom.

“You first, or me?” he mumbled.

Khan, who, of course, knew what his mate meant, took a deep breath. “You. A captain must be ready at all times – for anything.”

“Yeah – even if the ship is stuck in space dock,” Jim grumbled, reluctantly untangling himself from his beloved. He rose, pouting.

Coming out of the bathroom half an hour later, he was greeted with a very, very strange view – at least in his opinion. In the still dim light, he could see two shalwar-covered legs protrude from the other side of the empty bed.

'Is Nien doing a headstand? Why?’ Jim thought perplexed. He closed the distance between them and looked at his lover, who supported himself in a perfect triangle of head and hands. His face reddened due to the position. “Is that comfortable?” the young captain asked jokingly, and Khan threw him a wide grin.

“It’s good for the circulation and refreshes the brain.” With the elegance of a cat, the super-human first put the right and then the left foot back on the floor before rising. “And, it’s a good start to Tai Chi.”

“Tai Chi?” Jim pursed his lips. He had heard of it, but he'd never actually seen it in action. “Doesn't that have something to do with stretching?”

Khan chuckled quietly. “That’s a part of it, yes, but it’s far more. If you like I’ll show you if you can find the time in all that you have to do.” His tone teased, and Kirk began to snicker.
“I’m dying of boredom these days, and you know it.” He cocked his head. “I think I can leave bridge late in the morning. Care to join me on the sports deck? Or is the SDD project keeping you busy all day?”

A smile played around the Augment’s lips. “I still have a lot to do, but today I am not in the mood to spend my time making technical drawings and instructions for something I have already built. The sports deck sounds like a fine idea.”

Jim beamed at him. “Right! Get ready, honey, we’re having that breakfast.”

While Khan was in the bathroom, Jim put things back in order, but he was keeping the champagne cooler and the glasses. He knew that there would be more opportunities for their use, so he put them into one of the sideboards.

Kirk thought Nien had ‘hidden’ enough; it was about time to integrate him beyond just Engineering. Half an hour later, the two men entered the officer’s mess for breakfast.

McCoy and – oh wonder of wonders! – Scotty appeared. They were about to get their food when they saw Kirk and Khan. Waving at him, Bones gestured towards a table with two sets of dishes and room for three more. A young man served coffee and smiled as he recognized his commanding officer.

“Good morning, Captain!” he said, dipping his head before addressing Khan, “Sir!”

“Good morning, Mr. Howard,” Jim replied and sat down. “An Assam for Mr. Singh and a coffee for me, please. Oh, and two orange juices.”

“Aye, sir!” Howard confirmed and returned with two more sets of dishes the moment the two other officers returned to their table; trays in their hands.

“Morning, you two,” Bones greeted.

Scotty beamed at them. “Mornin’ Jim – Mr. Singh!”
The goofy smile McCoy wore didn’t slip Kirk’s attention. It seemed the evening with Carol Marcus had been a complete success for his friend who placed his tray beside his.

And Jim was right. Bones was walking on clouds, and just from a kiss good night at the threshold of Carol's quarters. They had a very pleasant evening aboard the space station, a delicious dinner in one of the best restaurants whose viewing window showed the nebula, and afterwards they had taken a walk, window-shopping. It had been later, when they returned to the Enterprise, that Carol had kissed him.

For almost a minute, Leonard had stood in front of her door after that kiss, showing all the signs of a love-struck boy, before he had gone to his own quarters lost in a daydream and happy.

And this delight still lingered in him; the CMO was indeed in a bright, sunny mood. “You, my dear friend, are in a unique position. Your doctor'll bring you breakfast,” he said to Jim. “So, what do you have in mind? Ham, eggs, Chicago hard roll, or…”

“Really! Yeah, and some fruit, please,” Kirk grinned.

McCoy’s eyes made like they would pop out of their sockets. “You're gonna eat fruit of your own free will?” he gasped, clearly shocked. Scott blinked in surprise, then his glance found the Augment and as he saw the hidden smirk on the narrow face, he instantly knew who was responsible for Kirk’s sudden appreciation for healthy food.

Bones figured the same because he stared at Khan; astonishment was thick in his voice as he said, “You have to tell me how you managed to talk some sense into the kid. He'll eat stuff I can't even identify.”

The super-human chuckled quietly. “Jim is always reasonable when the argument is convincing. The only challenge is explaining its necessity.”

“Hey!” the young captain protested while Bones went to the buffet to get Jim’s breakfast.

Kirk didn’t notice Scotty closely watching him and Khan. Once again, the Scotsman discerned how easily the two men handled each other. They sat close together, unaware of how they almost leaned into each other, and the shimmer in their gazes spoke a language of… The chief engineer pursed his lips. If he didn't know better he would assume they were a couple. But Kirk’s reputation... Scotty'd witnessed and wingman'd enough to know that no attractive female was safe from his flirting. To
think that the young captain could be attracted to a man was almost crazy, but…

“Good morning, Captain!” Briston stepped up to the table clad in the brightest chef’s whites Kirk had ever seen. He looked so much in his element surrounded by real food. He smiled at Kirk who returned the grin with one of his own.

“Mr. Briston! Thank you once again for your help yesterday. I hope I didn’t make too much of a mess in your kitchen.”

The chief chuckled. “No, sir, don’t worry. You were kind enough to soak the pans, so cleaning them quickly was no problem.”

Kirk shrugged. “Well, my mother had a fit on regular basis if I didn’t soak our pots or pans whenever I helped her in the kitchen, so it became second nature.” He interrupted himself as McCoy returned and placed a plate in front of him. “Thanks, Bones!”

Leonard smiled. “You’re welcome!”

Jim’s attention returned to Briston. “By the way, let me know when you want that 24-hour liberty; just send me a message and it’s done.”

Briston’s eyes widened, then he smirked. “Sir, as much as I appreciate your offer, may I ask for a different favor?” As Kirk made an asking gesture with his left hand, he said, “Please give me the recipe to your barbecue sauce.” Jim’s baffled expression was enough to make him add, “You had left some of it in a sauce boat and I couldn’t resist testing it. I have to admit that your sauce is better than mine, so if you’ll allow it, I’d like to use your recipe.”

A soft laughter escaped the Enterprise’s captain. “No problem, Briston. I learned it from my grandfather. But I have to confess that there isn’t a real recipe. I wing it like he did, but I can type it out and send it to you.”

The cook’s eyes shined at that. “That would be very nice, sir. I’ll name it ‘Captain’s Barbeque Sauce’, if you don’t mind.”

To his surprise, Kirk felt heat rising in his cheeks. “I am honored, Mr. Briston, thank you.”
“I’m the one who should say thank you, Captain.” He nodded at the Kirk’s breakfast. “Can I bring you a fried egg with some ham?”

“Love some,” Jim beamed and looked at Khan. “You too?” he asked and as the Augment only nodded, clearly amused, Kirk ordered two fried eggs, before the chef vanished.

McCoy and Scott had listened to the conversation and stared in astonishment at their friend and commanding officer. “Did I hear that right?” Bones asked astonished. “You cooked?”

“Why not?” he answered.

“Here, in the officer’s mess – alone, for yourself?” Without realizing, Bones imitated Spock as he lifted both brows.

“Of course not. It was a bet – and I won,” Jim grinned; his face was pure innocence.

“A bet?” The CMO cocked his head, glanced quickly at Khan, and as he saw the smug expression on the pale, slender face and it all clicked. “Ah, I understand. You and Khan wagered on your… sauce?”

“No, my honor in regards to my cooking abilities was at stake. I bet that he would like my barbecue steak.” He put sweetener in his coffee. “I won.”

“And what did you win?” Leonard pressed as his friend fell silent, sipping his coffee.

“I don’t think you want details,” Kirk replied wryly, wriggling his eyebrows.

McCoy choked at his coffee, almost spitting it out. Scotty clapped him several times on the back, chuckling. “Easy, Doc. It canna be that bad.”

“You’ve no idea,” Bones wheezed, fighting for air.
“Bridge to Captain Kirk!” a female voice sounded through the speakers. It wasn’t Uhura but the young junior officer she had taken under her wing. Jim knew the ensign’s voice well enough by now to hear the urgency in it. In a second, he changed from a mischievous, oversized youngster back into the firm, confident commanding officer he was.

Quickly he rose and went to the intercom, activating it. “Kirk here.”

“Captain, we received a message from Starfleet Command, priority one. It’s from Admiral Barnett, himself.”

Throwing a glance at Nien, Bones and Scotty he answered, “Is it encrypted or…”

“No sir, it came without any code.”

Bones stared first at Scott then at Khan. A priority one message from Command without a code, therefore easily understood by the enemy. That could only mean one of two things: The war was at some sort of impasse or the war was over. Starfleet wanted the enemy to hear the message.

Jim had similar thoughts, as he ordered, “Patch it to the terminal in the officer’s mess, Ensign.”

“Aye, aye, sir!”

Kirk walked to the terminal with long strides. It was situated in a niche and normally used for emergencies. Activating it, the screen sprang to life and showed the firmly set, dark features of the Chief in Command. “To all fleet commanders and captains of the fleet, this is Admiral Richard Barnett. I have the pleasure of informing you that a temporary ceasefire has been declared between the Klingons and the United Federation of Planets beginning stardate 2259.1106, at 1200. Peace talks will begin in five days. For this period, all aggressive actions are prohibited for both sides! I should not have to emphasize how important it is that all combat operations are ceased! Any infraction will result in hostilities worse than before. Any infraction, therefore, will be punished. All commodores and admirals, report your squadron’s status. Keep your channels open and on standby to receive further instructions. Admiral Barnett out!”

Jim looked with surprise at the screen; then a large grin broadened his face while the around him voices grew louder. Obviously, everyone had listened to the message, and as he glanced up, he saw relief on most faces and caution on some. He couldn’t blame the latter. Klingons agreeing to peace-talks – that was a surprise.
Returning to his table, he was greeted with Scotty’s, “I just canna believe it!” And Bones smiled, “At least it's good news!”

Khan pursed shortly his lips. “Do you think the Klingons are honestly pursuing diplomacy as a strategy?”

Kirk shrugged. “Say what you will about Klingons, the concept of bluffing or lying – it's just not what they do. They fight with the ventail open. Maybe the defeat at Aldebaran opened their eyes, or maybe they're reaching the end of their resources. Perhaps both are the reason they're willing to put some effort into ending the war without losing face, of course.” He took a deep breath. “But I really don’t care why they're all of sudden ready to talk, I’m just glad they are. And I think most of the crew share my opinion. I'm going to the bridge to make a proper ship-wide transmission. See you!”

He was about to turn when McCoy’s hand shot forward and held his wrist. “Your breakfast, Jim!” he said sternly, throwing a pointed glance at the steaming egg.

Kirk rolled his eyes. “Bones, this may be the end of the goddamn war. Breakfast can wait.” He met the firm gaze of his friend and CMO, and groaned. “Two months ago you complained about me gaining weight and now…”

“Two months ago you weren’t held captive, tortured, suffering from the effects of smoke inhalation, and nearly exposed to the vacuum of space. Just take a bite, man.”

Kirk sighed and took his cup of coffee. The movement caused his collar to slip a little bit, revealing the renewed hickey now clearly a bite mark healing. McCoy’s eyes widened. “What the hell…” he began in a hushed voice, and it didn’t calm him any when Jim only grinned at him.

“Everything is perfectly fine, Bones,” he said, smiled innocently; he put his cup back and practically raced out of the room as McCoy had barely let go of his wrist.

“Jim, wait!” Leonard called, but the doors already closed behind the captain. “Oh, for the love of God, there I thought the kid would have a decent breakfast for once, and then…”

“Do not fret, Doctor, I will take care of him,” Khan interrupted him and leaned back, sipping his Assam.
The CMO frowned darkly at him. “Like you did last night? Don’t think I didn't see that... That thing!”

Beside him, Scotty blinked in confusion; McCoy’s body had shielded Kirk’s mark from his view. He didn’t know what had irritated McCoy so much, but it had to do with Khan, that was for sure. Curious, he looked at the other man.

The former dictator smirked arrogantly at the CMO. “What you saw is only on the surface, Doctor. What is inside is far greater and stronger – for eternity.”

“What do you mean?” Leonard demanded, but the Augment stayed perfectly calm – casual even.

“I already told you what began; it is completed now.” He watched McCoy frown, and then he obviously understood what Khan had been hinting at. He stared at him absolutely agape. Nien chuckled, rising to get his own breakfast, leaving behind a profoundly alarmed CMO and a very confused chief engineer.

ST***ST

Jim reached the bridge and went straight to his chair. He signaled the junior officer at Uhura’s station to open an internal channel for a ship-wide broadcast, and then he informed the crew of the new situation. Finally, he demanded reports from all stations; they would be transmitted to Bob Wesley later. Command needed reports to ascertain fleet readiness so that preparations could be made in the event diplomacy became – undiplomatic.

He had barely finished when the lift doors opened again and he felt a familiar presence. Not that of Nien, but of…

“Spock!?” Surprised the young captain stared at his first office still clad in his civilian attire; Uhura was at his side. “Don’t you two have a day left before you’re back on duty?” He rose and watched the quick smile wash over Nyota’s face while the Vulcan lifted a brow.

“Rumors are running through the space station. We heard that the Klingons want to talk to the Federation?” the young Bantu woman said with the question written on her face. Kirk began to grin.

“Well, it seems rumors are still the fastest thing in the universe.” He smiled at the couple. “This one's true. Barnett sent a transmission saying that the Klingons accepted our offer for peace-talks. There's a ceasefire in place starting now and it’ll last as long as the talks last.”
Uhura took a deep breath and relief reflected itself on her beautiful face; Spock allowed himself the hint of something close to pleasure slip into his expression before he murmured, “A positive step toward ending the war.”

Jim nodded, strolling over to his two friends. “And how's liberty?”

“Peaceful,” Uhura sighed. “Very peaceful. I know every store, including the relaxation deck, the wellness deck and the best place for nails and a massage.” She looked at her station almost longingly. And as the junior officer threw her an asking glance, she walked away with a quick “Excuse me, Captain,” to her usual seat, bending over the ensign to check her station.

Jim chuckled. “We’re all workaholics, I guess.” He turned his attention back to Spock. He had Jim trapped in a very intense gaze. “Is something wrong?” Kirk asked confused. For a long moment, he got no answer.

The first officer stared at his friend. Something was… different about him – in him. The Vulcan shut out everything around him – the soft hum of the ventilation, the low voices in the background.

Something happened – deep within his T’hy’la. Spock was sure of it. He concentrated harder, fumbled toward the mental link of brotherhood that bound him to the young Terran. The Vulcan thought he could sense an addition to the bond – as if he wasn't the only one sharing a bond with Jim anymore; there was another. Spock knew with absolute certainty that something fundamental had changed.

“Jim, what has happened to you?” he asked quietly so that no one else could hear.

Kirk blinked, surprised. “What do you mean?” he wanted to know. His life hadn't been threatened in the last twenty-four hours so he wasn't sure what might concern Spock.

The dark eyes in front of him became even sharper, before he suddenly said, “May I have a word with you, Captain?”

That confused the younger man even more. “Sure. What’s bothering you?”
Lifting a brow, the Vulcan fixed him in his stare. “Not here, sir. The topic must be addressed privately.”

Well, this was a little bit alarming, but trusting his friend unconditionally, he turned around to the junior officer at the communications station. “Ensign, you have the con. If you need us, we’re in briefing room 2 on deck 6” he said, before he gestured to the lift doors. “After you, Mr. Spock.”

Two minutes later, both men stepped in the smaller briefing room where Jim ordered the lights to seventy percent. He faced his first officer. “All right, what is it Spock?”

The Vulcan watched him closely before he said slowly, “Our bond has changed. Something or someone has intruded!”

Again Jim was at a loss; then it hit him. His bond with Nien – did Spock sense it, too? He lifted a hand as a calming gesture. “There is nothing to be worried about, Spock,” he said softly.

A black brow was raised. “Your pardon, Jim, but I consider this matter my concern. Your mind is… invaded. I can sense another presence like…”

Kirk’s deep sigh interrupted him, and with something akin to worry he looked at his T’hy’la, waiting. Obviously the young Terran already knew exactly what had changed.

Jim rubbed his neck. “What you sense, Spock, is Nien.” He looked at the Vulcan and realized that Spock didn’t understand. He went on to explain, “Augments also have the ability to bond as pairs – couples – more empath than telepath, though, he explained. There is a married couple among his crew – they’re bonded. That’s – that’s what we did. Some of it happened weeks ago, but we – we completed it last night.”

For a very long moment Spock only stared at him, before he carefully replied, “Are you trying to tell me, Jim, that you have bonded with Khan?” As the younger man nodded, Sarek’s son took a deep breath. Shock coursed through him. Was Kirk compromised that he would give himself to the Augment in such a manner? Wasn’t it enough that he was intimate with him? Must Khan have access to Kirk’s innermost being, also? The enhanced man had tricked Jim into trusting him before. Had Kirk not learned from this experience? That could not be possible – Kirk was brilliant by human standards. Compromised emotionally, then. Khan had saved Jim – risked his life and had been ready to die along with him. It did not matter – it did matter, but the first officer saw motive behind the action – personal gain and was wary when it came to the former dictator.
A bond between two beings – a bond of mind and soul meant more than a simple promise as humans made when they married. A mental link couldn’t be undone except through death. And it was power. Surely, Kirk knew this by virtue of their bond. What, if Khan abused the power of the bond to influence Kirk?

As the silence lengthened, Jim shifted his weight from one foot to the other and cocked his head. “Spock, please say something.”

Again the Vulcan took a deep breath, steeling himself before he murmured, “Are you aware of the consequences your bond with Khan will bring – already brings?”

“Apart from our feeling for each other, sensing each other's emotions whether we are apart or not? Our souls are operate together now, and only our death will separate them. I understand that, Spock, you know I do. It's the same with us, brother, albeit with the addition of – of intimate love. Nien set that bond – its groundwork, I guess – without realizing it. Eventually, he figured out what had happened. And that I needed to complete the bond – for his and my own sake. We both wanted it. It was like being hungry for something.” He moistened his lips. “You remember when Nien sleepwalked to get to me when I had that nightmare?” As Spock only nodded, Kirk continued, “Nien thinks that was the start of it – a result of the bond's beginning. He felt my fear and acted on it – just like you do when I’m in trouble or the other way around.”

Crossing his arms on his back, the Spock’s gaze roamed over Jim’s youthful face. “What we share is a link of brotherhood, Jim. But what you and Khan have done would be regarded as a kind of… marriage on Vulcan… New Vulcan.” He had corrected himself, before he watched his friend blushing, and allowed himself to sigh. “You knew this, too, didn’t you? Despite an already existing bond, you knowingly chose a second.”

“Well, you can’t compare Nien’s and my bonding with an exchange of vows and a big party afterward, but I think in a certain way it has the same meaning. And I didn’t know that I needed permission.”

“Please do not be flippant, Captain. I only mean that based on probability I projected that when you took a spouse, it would be a psi-null species, most likely human. I did not consider the possibility of another being bonding with my T’hy’la. That has never occurred with my people.” “I’m not being flippant. This is new to me Spock. Very new! You are my friend and my brother, I know that – I understand that. Nien is my – my spouse. I know that and understand that, too. I truly didn’t know that this would affect us both like this. Still – I wouldn’t change everything if I had the chance to do it.”

Spock allowed himself a sigh; realizing that this was far more sensible than thought. “It affects my perception of you – your bond. It is different. My mind must relearn aspects of you and I must share. The new development requires meditation.”
“Will it hurt us, Spock – what we are?” Jim whispered; concerned that he had traded one familiarity to another one.

“Captain…”

“Jim, come on Spock,” Kirk groaned. Sometimes he really wanted to curse his Vulcan friend’s stiffness when it came to topics like that one.

Sarek’s son got the hint – and what his T’hy’la needed now. “Jim, if you are asking whether I am experiencing jealously, I can honestly say that I do not know. I do know that I am and always will be your friend and your brother. I merely need time to meditate on this new development.”

“Of course, take all the time you need,” Kirk murmured; relieved that Spock didn’t turn his back on him like feared. Heck, he really should get used to the fact that his friends would be there for him no matter what. Still he would have to talk to Bones and…

“And here I thought I’d be your best man,” McCoy’s voice sounded from behind, and Jim whirled around, startled.

“Bones!” he gasped. “You almost gave me a heart attack.”

“Do I look like I have a death wish, Jim? Your boyfriend would have my head,” the CMO deadpanned.

“How did you know that I… we were here?” Jim asked; he wasn’t surprised at all as Leonard replied dryly, “Uhura!” McCoy stepped closer; his gaze was piercing. “Did I hear that right, Jim? You and Khan did your version of getting hitched last night?” The good doctor pointedly ignored the rest of the conversation.

“I would call it a mental bond, Doctor,” Spock threw in. “The captain and Khan are bonded partners now.”

“That ain’t what I’d call it, looking at that bite Jim got,” Leonard growled.
“Bite?” This time Spock was at a loss.

In three strides, McCoy was in front of Jim and pulled his collar down. “What would you call this?”

Spock lifted a brow while Kirk grabbed the CMO’s wrist and pushed it away. “That's Nien’s and my business, Bones! Don’t push it!” he said firmly; he was anything but amused.

“He bit you, for God’s sake!” McCoy snapped.

“Ever heard of the word ‘love-bite’? Or is that too savage for a Southern gentleman like you?” Jim taunted.

McCoy frowned. “You don't have to get nasty, Jim! I thought Augments were above animal behaviors. Looks like they fell back into the Stone Ages when it comes to – that.”

The captain’s eyes narrowed. “So he’s a little – passionate. I don’t think it’s any of your business.”

“If it leaves a mark, bleeds, coughs or any of that – it sure is my concern, both as your friend and your CMO.” He spread fingers through his hair, exasperated. “Hell, Jim, a human bite is dangerous! It can easily become infected and…”

“Nien took care of that, Bones. It’s already getting better.”

“Yeah, thanks to your suddenly super healing and I'd suppose your lover’s super spit. Mate? Whatever you two are now.”

“The word you’re searching for, Doctor, is ‘husband’!” The deep baritone sounded from the door, and this time all three officers jumped in surprise – well, Spock lifted both brows, and his eyes widened. The Vulcan equivalent.

Khan stood at the entrance, posture straight, jaw firmly set; his bright eyes glittered dangerously. Then he closed the distance between him and the three men; his strides were determined – strong and
graceful as an approaching tiger – and every bit as intimidating. Each perceptible movement controlled, but beneath the surface his temper had risen to boiling.

He had been on his way to the Engineering with Scott when he felt Jim's rising irritation through their bond. Even more, he sensed it had nothing to do with his duties as captain, but something more private. Already assuming the reason for his beloved’s inner turmoil – after all McCoy saw the mark on Jim’s throat – Khan had ordered the turbo lift to stop on the 6th deck; sensing where to search for his mate.

“What’s the matter?” Scotty asked with surprise.

“I will be in Engineering momentarily, Mr. Scott” then he had strode to the briefing room, where he found his beloved and his friends.

Glaring at McCoy and Spock, Khan stepped beside Jim. He watched the shock written on the CMO’s expression while the Vulcan looked a little bit green around the nose. He began to relax as satisfaction replaced anger. Ah, those faces – he had longed to see them when this special word was spoken for the first time.

Wrapping an arm around Kirk’s shoulder, he said with a clear, hard voice, “You both are right when you assume that Jim’s and my bonding is comparable to marriage. I am certain, Mr. Spock understands the implications better than you, Doctor, after all, Vulcans bond in body, mind, and soul as we do.” He cocked his head, relishing in the perplexed glances of Spock and McCoy. “That leaves you with only two choices, gentlemen. You can deny our bond and all of its implications – or you can congratulate us.”

Jim felt his irritation fade as he watched his closest friends exchange thunderstruck looks mingled with utter confusion; then a breath of warmth washed over him as Nien’s hand on his shoulder squeezed him – not in comfort but with a bit of conspiratorial joy and comradeship. Beaming at his two friends, he snaked an arm around Khan’s waist and leaned into him – a clear signal to his friends.

“I would offer you some champagne, guys, but since we’re on duty, and Spock isn’t fond of alcohol, I think we should postpone the little party until after shift, agree?” he asked cheerfully.

Bones finally found his ability to speak again. “Are you telling me, seriously, that you and Khan are married now?”
“As far as his people do it, yeah! And it's a hell of a lot more permanent than the way we do it.”

“If you want to have a proper wedding, Pyāra, we can do that later,” Nien offered, winking at Kirk. And then it hit Jim. Khan had fun shocking the two other officers, but it was not his intention to irritate them too much. This was a game. Going along with the mischievous former dictator, the young captain replied, “That would be wonderful, honey.”

Bones choked for the second time this morning. “Please stop, or I'll need to pump myself full of insulin.” Then he saw the hidden mirth in Jim's and the Augment’s eyes, and he realized to what the two were doing. They were teasing him and Spock. And – they looked so damn comfortable with each other. The way their bodies fit so well against each other – looked so good together – sun's gold and night black. Yin and Yang. There was no doubt how much they belonged together.

Letting his head sink, Leonard groaned. “For the love of God, I don’t believe it: Jim Kirk is married – to a guy. Angels may have mercy on us all.”

“I do not think the goodwill of mystical creatures will be able to help, Doctor,” Spock commented wryly; he studied his T'hy'la and the super-human in front of him. He could sense the power of their shared bond; it brimmed with energy and emotion, and he knew that he had to be careful from now on not to invade the bond by accident. He would have to shield himself to grant his brother's privacy – and Khan’s. As much as he still distrusted the Augment, Spock also respected the other man’s right as mated. And, this much he could tell; Jim was happy. No, ‘happy’ was the wrong word. The word only captured one emotion. Jim was content; he seemed fulfilled – whole. He had found his place in the world, on this ship. But now he found the rest of himself, and it was in the man at his side. The Augment was rock solid – strong, confident, unwavering and loyal.

It was difficult for the Vulcan to admit the latter, but moreso it was illogical to deny. And the fact in the face of the evidence presented. The Augment had been nothing but completely loyal to Jim as his bonded partner and as captain of this vessel. He only intervened when he thought it necessary to defend or protect the captain.

Like now. The super-human had come when he felt Jim’s anger at McCoy through their shared bond, had confronted the CMO – and Spock, himself – with the truth about their relationship. He then lightened the mood by teasing his mate, affecting comfort through the bond.

Humans’ reactions were still sometimes a riddle for the Vulcan, but this time Spock understood the Augment’s behavior. Khan had made it very clear that he and Jim were together, despite anything the others may say; still he didn’t want to drive a wedge between Kirk’s friendship with his officers. The super-human knew that Kirk’s friends were family to the young man. And if there was one thing the former dictator respected unconditionally, it was the importance of family.
The Vulcans dark eyes and the blue-green’s of the Augment met, and a momentary acceptance passed between them; then Spock gave the other man a short nod, signifying his respect for the new situation. There was nothing to be done about it though he would have appreciated it if Jim had sought his counsel as was the place of the first officer and T’hy’la. But truly this decision was solely up to Jim who had earned Spock’s love and undying fidelity a long time ago.

For most, Spock was a closed book, but Khan knew what went through the Vulcans head. The first officer respected the bond. Nodding at Spock in return, the former dictator drew his attention back to the CMO, who pinched his nose.

“Still, were going to need support from heaven when Command learns about this,” McCoy used Spock’s comment to voice his concern. “And how you’re gonna explain your ‘marriage’ to Wesley is beyond me, Jim. But I figure you’ll manage the truth without pissing him off entirely.”

Jim grinned. “Don’t worry, Bob will understand. He’s been happily married for more than twenty years now.”

“Yes, but not to a wanted criminal – sorry, Khan, no offense,” McCoy added, and the Augment shrugged.

“At the moment, I am a criminal in the eyes of the authorities, so no damage done, Doctor.”

Bones nodded, then he glanced back to his younger friend. “One thing I have to admit, Jim. You manage to surprise us over and over again! Doesn’t seem to matter how many years we’ve been doing this.”

A chuckle escaped Kirk. “I don’t know why you’re so surprised. I already told you two about my feelings for Nien. I figured you’d expect this since I always jump in head first.”

“Yes, but not so soon – not this,” Bones grumbled. “I would have at least thrown you a party.”

“Things change, and you still can,” the captain snickered. “The bonding was not exactly for public consumption, but a party...”
He didn’t get any further, as Khan laughed sardonically. “Our ‘bonding ceremony’ would have shocked the guests, and our good doctor would have had a full medbay,” he stated with amusement.

Jim blushed and nudged his mate, who simply grinned. Then it ‘clicked’. Khan had called Bones ‘our doctor’, just as he had referred to his and Scotty’s work as ‘us’ two days ago. This could only mean Nien was settling in as part of the crew.

Relief and joy spread through Jim, while McCoy moaned, “Please, no details, boys! I don’t want to have nightmares!”

Spock pursed his lips and watched the three Terrans with the interest of a doctor studying a new species in a petri dish. It always astonished him how easily humans spoke of intimate things. Among Vulcans, this was taboo, but the freedom with which Jim, Nyota and McCoy spoke of them seemed – positive. And Khan too seemed to be comfortable with this kind of topic.

Cocking his head and sighing inwardly, the first officer tried to embrace the fact that his T’hy’la had chosen a bond mate – one of the most dangerous men in the whole galaxy. Yet one thing the Vulcan could sense. There was no deceit in the Augment. His love for Jim Kirk was true – and that concerned Spock even more than if the super-human had been playing them all along…

TBC…

Chapter End Notes

Well, our boys are really bonded now, the ‘cat is out of the bag’ so to say, and there is new hope for peace. What no-one even assume is the fact that there will be always people who use the chaos of combat and even war for their benefit.

In the next chapter things will be set for the new course – and I think you all are going to curse at Luengo and Section 31 (snicker). And further more Khan will learn of Jim’s past concerning Tarsus IV because of a new crew-member who will come aboard.

I do hope you loved this new chapter, and I’m sorry that it took so long to publish it.

As always I’m hungry for reviews, so please leave some comments.

Have a nice rest of the week and a beautiful weekend,

Yours Starflight
The ghosts of Tarsus IV

Chapter Notes

Hi, my dear readers!

Sorry for the delay but my dear beta-reader was sick and she only got back to work several days ago. I’m glad that she’s doing better now and I do know that you understand the late update.

Thanks a lot for the recent comments and kudos. I’m always thrilled to read reviews (snicker).

In the following chapter something takes place that was overdue – Tarsus. After all, it had a big part in Jim’s developing of character and strengths. You also will meet Luengo again, who finds something out that isn’t for the best concerning our love-birds, and Wesley is in his own way very busy.

Have fun

Love

Yours Starflight

See the end of the chapter for more notes.

Chapter 44 – The ghosts of Tarsus IV

Luengo’s eyes focused on the file that showed the schedule of the delegation’s departure. The Excalibur would be ready in two days; most of the ambassadors would begin arriving tomorrow afternoon and continue arriving through the evening. Helrom and his staff monitored the last of the preparations before going home for the evening. Luengo would use their absence to set The Plan in motion.

Pursing his lips, he reached for his cup of coffee when the voice of his secretary sounded through the speaker at his desk. “Admiral, I have the files you requested from Aldebaran,” she stated, and José felt anticipation tightening in his gut.

“Transfer them to my terminal,” he ordered and switched off the intercom, waiting for the data.

The first was a police report concerning the brawl at ‘The Stars’ and the arrest of one of the
instigators, Diego-whatever - de la Vega-Martinez, the very same man contracted to repair Starfleet vessels on Aldebaran. The second file showed a recording from the security camera at the bar where the chaos started.

He watched Kirk head toward the entrance. A slender man with dark hair dressed in black clothes was on the captain’s heels. Then Kirk and ran into another male – Koloth. Luengo recognized him instantly. Seconds later the fight broke out when the Klingon struck out at the Enterprise’s commanding officer. He was frustrated by the stranger at Kirk’s side – Khan. Of course. With growing fascination, the admiral again witnessed the incredible strength of the Augment as the former dictator protected Kirk fiercely. Another male – tall, South American perhaps, certainly this Diego joined the quarrel until Koloth, and his men fled the bar. Kirk followed them. Khan and the third man went after the young captain, leaving the restaurant.

“Interesting,” the Chief of the SBI murmured. “You defend Kirk as if your life depends on it – and Kirk, too. You are more than allies.”

Pressing his lips together, he opened the third file – the traffic report. Luengo’s dark eyes roamed over the holophoto taken of the two men on a hyperbike, driving far too fast. It was clearly Kirk – the rushing air wind blew his blond hair away from his face; his parka billowed. Behind him sat Khan. Both of his arms wrapped around the younger man; his chin almost touched Kirk’s shoulder. It was intimate – familiar. Both males’ expressions were grim and determined. They were hunting.

They were successful and saved thousands of people.

‘You two are a team now – friends even. And I would bet my last shirt that your new friend is on your ship, Kirk! You’re hiding him? Protecting him?’ José thought and leaned back in his chair. ‘This’ll ruin you, farm-boy! Aiding and abetting is still a crime. I’ll have your head and your ship for it! I’ll bring you and your friends down. You’re not going to interfere again, Kirk – you or that Augment. All I need is proof that Khan is aboard your ship, and I’ll have you and your little club rotting in a prison for the rest of your lives – if you survive!’

Then his thoughts returned to another problem at hand – a problem that had to do with The Plan, but didn’t involve Kirk or his Augment pet. He activated a shielded frequency on his communicator and asked, “Any answer from D’nyrrs?”

He had to wait a moment for the reply, “He and his partner agree. The Syndicate is unaware of their cooperation.”

Luengo smiled quickly. So far, everything was going just the way he wanted.
Many light years away, Spock and McCoy had just heard about the 'wedding' and were still coming to terms with the news when Uhura’s familiar voice was heard.

“Bridge to Captain Kirk!”

Jim shook his head, chuckling. “Can't stay away, can she?” Activating the intercom, he answered the hail. Bob Wesley was on the line.

“Speak of the devil…” Bones murmured. It earned him a grimace from Jim and a risen brow from Spock.

“Put him through, Uhura,” Kirk ordered, went to the table and switched on the prism screen that instantly showed the familiar face of the Commodore, who seemed to be in his quarters.

“Good morning, Bob!” Jim greeted.

Wesley smiled shortly. “Good morning, Jim – Mr. Spock, Doctor, Mr. Singh! I hope I didn't interrupt anything important?”

“Nope, just an update on the Enterprise’s status,” Kirk lied; Spock crossed his arms behind his back and put on his, McCoy loved to call it his ‘poker-face’.

“That's what I called about,” Bob replied. “You got the message about the upcoming peace talks with the Klingons?”

The young captain nodded. “Yeah, we all did. We were all relieved. News spread so fast through S-6 that even a few of my officers came back from their liberty early.”

“That'll come in handy, Jim. How fast can the Enterprise be ready?”
Kirk frowned. “Do we have a new mission?”

Bob sighed. “Despite the agreed upon ceasefire, Command will take no risks; heavy cruisers are ordered on patrol. The Enterprise will patrol between the Cardassian Realm and Borderland. We scanned Klingon ships in the area. I don’t trust them. Patrol that sector, Jim. If you are contacted by Klingons, be cordial but not weak – you know how to do it. Don’t let them goad you into anything; don’t get involved in anything the Klingons could try. The SBI discovered that a number of Klingon generals are unsatisfied with M’Rek’s decision. Some of them may try to provoke a reaction from Starfleet to sabotage the peace talks.”

Jim took a deep breath. “So the Klingon chancellor agreed to the offer? That gives us some hope. But you’re right, there are plenty of warmongers in the Imperial Fleet who would love to end the talks before they even get started. The Enterprise won’t be provoked, you’ve got my word, Bob!”

“Right. What’s the ship’s current status?”

Khan stepped forwards. “The new dilithium crystal was installed yesterday; we have to run more tests to determine the warp drive’s status. The defective power generator and electrical circuits have all had their repairs completed. The deflector shields are almost fully functional, and the SDD is linked to the auxiliary power so it’ll be fine should the shields fail.”

Wesley stared perplex at him. “Are you Mr. Scott’s new right hand man?”

“Nien was kind enough to assist Scotty, Keenser and Allistor while he also worked on the SDD,” Kirk explained.

“SDD? I assume that's the name for the sensor disturbing device?” Bob concluded correctly; the three officers and the Augment simply nodded. “Right. I’ve also some good news for you, Mr. Singh. The law allows the use of pseudonyms in applying for patents. A lot of technicians and scientists already do it to maintain anonymity and protect their privacy.”

Jim beamed. “Perfect!” He turned towards Khan. “All you have to do is to finish the tech manual and construction plans, send them to Galven, and then he can apply for you.”

With a spark of amusement, Bob watched the enthusiasm of his protégée and how the Augment returned the smile of the younger man with one of his own. Affection washed over the super-human’s face. ‘Hell, if I didn't know about Kirk’s reputation as Starfleet’s playboy, I'd guess those
two were lovebirds!" Wesley thought. He quickly shook off the thought and continued. “I’m also still gathering information on potential lawyers, but I think we should wait until the patent is applied for, and Command agrees to buy the SDD before we contact any. It would let the cat out of the bag and put you in jeopardy before we can even think of mounting a defense.”

“Sounds good to me,” Kirk replied and looked at Khan. “You?”

“I agree,” the former dictator nodded; then his attention turned back to Wesley. “Commodore, have you found anything with regards to – to my family?”

Sympathy appeared in Bob’s brown eyes. “I’m trying to find information, but everything that has to do with the events last year are top secret with limited access. As far as I learned only a few people have that access – I don’t. I’m not giving up yet, though. There are a few high-security facilities in Federation space and there’s been rumors and chatter about the Augments in connection with them. I'll find out more. Just give me time.”

Khan hid his disappointment well. He had known that the place where his crew was hold captive was top secret, yet he had hoped that Wesley as a Commodore would have access to the files. On the other hand, he was aware of how Starfleet Command worked. They'd pretend he – they never happened. They’d rather lock the Augments away and be done with them. Bastards!

He felt Jim’s warm fingers slip into his and squeezed them in a gesture of comfort. He sighed soundlessly. He had been always proud of his patience, but somehow it had begun to run out.

Wesley seemed to understand his silence because he said softly, “I know that you hoped for better news, but I can’t rush ahead here. I don’t want to be the focus of Command’s attention and have it lead to you. That’s what they’d suspect if they see I’m suddenly interested in high-security facilities or the whereabouts of your people. I don’t want them to make that leap. There’s too much at stake to risk this – your and Jim’s freedom, Kirk’s senior officers and mine.”

Khan nodded slowly. “I do understand, Commodore, and I agree that we have to be very careful.”

“That’s why I told Aldebaran’s governor that you two are back on an important mission and that he has to wait to honor you, Jim, and ‘Commander Lavi’. Mr. de la Vega-Martinez already received a medal and a nice sum of a reward that he promptly donated several schools on Aldebaran. Anyway, we need Mr. Singh to contact The Shadow to tell them to stand down for now. I know they’re successfully frustrating the Orion’s slave trade, but for now the Orions are officially allied with the Empire. An attack on the Orions could destabilize the ceasefire giving the Klingons an excuse to restart hostilities and blame it on us.”
The former dictator lifted both brows. “I’ll try to contact Galven and let you know about the outcome afterwards.”

“Regarding the Orions, Bob. Does the ceasefire apply to them too?” Jim asked, and Wesley sighed.

“I think they’ll abide by it. They’re involved indirectly.”

Kirk frowned. “How so? They are slavers and pirates. We don’t …”

“And the Klingons’ official allies at the moment. And there's more. The Excílibur leaves in two days to pick up Lady Morganth, a Betazoid, who will be a part of the delegation. Then she’ll go to Celendi I, where the conference will be held.”

Jim gaped. “Celendi I? Isn’t that in the Borderland?” Out of the corner of his eye, he saw Nien and Bones tense while Spock lifted a brow.

“Yes, it is – in the triangle between the Klingon, the Romulan Empire, and Federation near the Celendi Nebula,” the commodore confirmed. “President Robertson thinks the Klingons want to demonstrate their strength to the Romulans. No one wants them to see a weak Federation or Empire. We have enough on our plate without them jumping into the fray. Celendi I is indeed neutral, but I have to admit that I’m personally not that happy with the location. The president has the final say, though.” Bob bent forwards in his desk chair; his face seemed to press against the prism screen. “And that’s the reason The Shadow needs to stand fast. The Excílibur has to cross Borderland, and the Orions would not honor the ceasefire if the militia attacked. Likely the Klingons would get involved and then the shit'll hit the fan.”

Khan knew that Wesley was addressing him indirectly, and he nodded. “I understand. I will contact Galven and inform him.”

“Thanks,” Bob smiled. “When will you be able to leave 6-S?”

“One moment, sir,” the young captain answered, and pushed button on the conference table to hail Engineering.
“If everythin’ keeps runnin' as smoothly as it is now, our grey lady can be on her way again in three days,” Scotty answered. Jim thanked him, switched off the line and looked at Wesley. “You heard him?”

“Yes, I did. Three days is good. By that time, your new crew members will have arrived at 6-S.”

“My new… what?” Baffled Kirk raised both brows.

“Your new crew members. As far as I know the Enterprise lost around seventy people over the last few weeks thanks to the war. Command decided to send you some replacements – men and women, eager to serve on Starfleet’s flagship.”

Jim didn’t know if he should be pleased or not. “Let me guess. Not all of them are 'experienced', as in never seen the inside of a starship.”

Bob chuckled. “Aw, come on. Everyone's had a tour of one. Sorry, son, but if the devil can't get a soul, he'll take almost anything. About half of them are second-year cadets.” He smiled in sympathy as Kirk almost winced. “Come on, Jim, you were a cadet yourself, and you kicked Nero’s ass – saved the world if I remember correctly. Give the youth a little credit. I got the list from Barnett, who emphasized that they the best of their year. I'll send you the list and the files after we’re done here.”

“Right,” Jim sighed. “And the flagship of the fleet is patrolling, not escorting.” He cocked his head and changed the topic. “So, when will this conference start?”

“The Excalibur will need three days to reach the outpost near Betazed and then four days to the conference.”

“In the middle of nowhere, one step away from the Klingon border and a stone’s throw away from the Romulan Empire. That’s not a comforting thought.”

Wesley shrugged. “I know, Jim, I feel the same way, but obviously our president is willing to take the risk rather than to let a chance at peace pass us by. And Captain Helrom from the Excalibur is a very experienced and patient man. If anything goes wrong, he'll know what to do.” He bent forwards and reached for the standby-button on his desk. “I’ll send you the orders and the list in a few minutes. Good day, gentlemen!” With those words, the transmission was shut off and the screen went dark.
“A patrol mission along the Borderland, while our delegation is enroute screams ‘trap’.” Kirk crossed his arms in front of his chest. “I don’t like this! Not. One. Bit!”

“Sometimes the attempt at peace demands more courage than even battle requires and perhaps some good faith,” Khan said quietly, then he looked straight at Jim. “We have to talk with Galven and Ritek. I think it’s the best, if your talented Asante queen tried to reach them.”

“‘Scuse Me?”

“Asante queen, a fierce warrior queen from the continent of Africa – western Africa to be more precise,” Khan explained shortly.

At this name for Uhura, Jim had to chuckle. Yes, the young Bantu woman was a fierce warrior when necessary, and Kirk knew that Nien had his own experiences with Nyota – not good ones, yet he respected her. This much was obvious. After all Uhura had attacked him to protect her lover and to save him – Jim Kirk. Family – it came always back to this when the Augment was involved!

Still grinning, Kirk hailed the bridge and sure as he was standing there, Uhura was still at her station. Cocking her head, she listened to his orders and confirmed them, but before she could switch off the link, Khan bent slightly forward. “Lieutenant?” he asked politely and Nyota returned his gaze firmly.

“Mr. Singh,” she simply replied,

“Please use frequency 183.69,” he said. “Galven gave me the frequency before we parted.”

She nodded. “Understood. I’ll contact you as soon as I have them on the line.”

Now there was nothing else for the four men to do but wait…

ST***ST

The talk with The Shadow went well. Of course Galven, Ritek, Caviw, Jeff and the others couldn’t believe that the Klingons had accepted the offer of diplomacy and that a ceasefire had been arranged, but they didn’t doubt Kirk’s word. The chance that the war might be at an end lifted the mood of the militia who was still on Aldebaran, helping where they could. They weren’t too happy to learn that the Orions were off limits for the moment; with little grumbling, they agreed to lie low. No one wanted to be the reason for failed diplomacy before the diplomacy had even begun.
Galven, who was working with Diego in his shop, was relieved to hear from Nien that he could apply for the patent with a pseudonym as soon as the test result documentation was complete. A quick discussion with Scotty affirmed that the chief engineer would write the report concerning the SDD test results. The fact that those tests had been run on a Starfleet ship would have the benefit of Starfleet encouraging the patent office personnel to push the paperwork through quickly.

Khan could pay for the patent first and later to receive the money from Command. Galven agreed to help him out by opening a second bank account by proxy to manage the transfers.

After all these things had been settled, Jim sent a private message to Bob confirming that The Shadow had been relayed the necessary information and that they agreed to stand down. Only then did the men leave the conference room. Spock returned to Uhura’s and his quarters to change into his uniform. McCoy headed for the med bay. There was much to be done before a new mission. Khan helped Scott and then went to his own quarters to work on the SDD documentation. Jim didn’t disturb him, knowing that Nien wanted to finish his task before the Enterprise was off on her next mission. He had a feeling, as he told Kirk, that his spare time would be limited then.

He couldn’t know how right he was. The dark, looming danger in the background had already begun to weave the web that would catch them all.

Sitting at his desk, Jim checked the list of the new crew members Wesley had sent him. Suddenly he jerked as if bitten. Kirk’s eyes widened and his gaze fixed on one name: Kevin Thomas Riley.

Thunderstruck, he blinked several times but the name didn’t change. Kevin Riley, seven years younger than Kirk – and his file held a detail Jim remembered all too well. The young man of Irish descent had been on Tarsus IV – just like him. He was one of the nine children who survived the massacre ordered by the dictator Kodos.

Jim’s hands shook as he opened the personnel file; he looked at the results from the Academy and saw a holophoto of the boy whom he had protected and comforted during their fight for survival. He was a man now - twenty years old. They lost track of each other after Starfleet came to Tarsus IV. Riley remained in San Francisco with relatives while Jim returned to Iowa with his mother who interrupted her mission when she learned of the danger her son had lived through.

Jim was still staring at the screen when someone used his private code to open the door. The young officer didn’t need to turn around to know Khan had arrived. The warmth that brimmed over the bond spoke volumes.
“What happened?” The deep baritone was gentle and sounded more statement than a question belying the super-human’s worry.

Kirk took a deep breath. “I got the list of the new crew members,” he murmured before he finally turned his chair around; blue eyes found ocean-colored. “One of them… He’s an old friend. Someone I haven’t seen in a long time.”

Lifting both brows, Nien questioned him. “Is this good or bad?” he asked quietly, and his mate snorted. “Both!” As he caught Khan’s confused gaze, Jim rubbed his forehead with one hand. “We were children and… Well, he is seven years younger than me, and he needed help.” He lowered his gaze. “We all did.”

Memories stirred in the Augment’s mind, something Kirk mentioned during their time at the Silver Bayou. He had been forced to kill as a child on a planet… “Tarsus?” Khan took a shot into the dark and hit home.

Jim nodded quietly, moistening his lips. The super-human could feel pain, fear, and anger rising in his bond mate. Following his instincts, he crossed the room and knelt down in front of the younger man – a gesture that once would have been silly given the fact that he was made greater. Now it came naturally to him. Lifting a hand, he stroked a golden strand way from Jim’s forehead in comfort and affection. “Do you want to talk about it?”

For a long moment, the young captain didn’t answer, and then he sighed deeply. “…I don’t talk about it much – ever really. Bones knows – and Spock. Well… it’s mentioned in my file, of course, but it doesn’t matter to Command.” He rubbed his neck. “It mattered to Chris Pike though. I think it was one of the reasons why he persuaded me to join Starfleet. I had a history with the fleet aside from what my father did.”

Khan watched him carefully. “You do not have to talk about it, if it pains you too much, Pyāra. But know that I am here to listen if ever you are ready to talk about what happened to you on this planet.”

A low snort escaped Jim. “The phantoms will come with Kevin, I’m sure.” He reached out and cupped one of Nien’s cheeks. “Your past holds so much sorrow. Do you really want to deal with the horrors of someone else’s?”

This time the enhanced man lifted both brows. “This ‘someone else’ is my bonded. Your sorrows are mine – the ones that were, and those yet to come. If you feel safe with me – enough to share that which still troubles you after so long, then I am here for you.”
A smile played around Kirk’s lips. His thumb traced soft circles on Nien’s cheeks. “If I feel safe with you? I never felt safer with anyone in my life.” He took another deep breath before he rose, entwined his fingers with Khan’s and pulled the Augment to his feet. Together they went to the living room. Jim ordered two brandies. Khan knew that what he would hear would very likely shake even him!

The men sat down on the sofa side-by-side. Jim began to tell him the tale of Kodos the Executioner. Of the man who first rallied the people’s hope when a fungus nearly destroyed the colony’s entire food supply. It was clear that the legally elected governor was helpless and didn’t know what to do after he made the emergency calls. A rebellion broke out led by Kodos. He usurped the governor.

“The rebellion cost more than hundred lives; to be on the streets – it was dangerous. My host parents forbade Michael, their son, and me to leave the house during that time,” Jim said quietly. “It calmed down though, and we heard that the rebellion was over. The next day, we were called to the market. When we got there, we noticed only certain families or even only parts of families were there. And lots of old people. Leaders of the rebellion, Kodos’ people were on the perimeter. It made me suspicious. And others too. People were asking questions. See, we hadn’t ever seen Kodos – no one had. He appeared on a balcony.” He lowered his head. “Even today I remember his words exactly: ‘The revolution is successful. But survival depends on drastic measures. Your continued existence represents a threat to the well-being of society. Your lives mean slow death to the more valued members of the colony. Therefore, I have no alternative but to sentence you to death. Your execution is ordered!’”

Jim closed his eyes for a moment; his memories replayed the event and showed the man who sentenced him to death.

“He… He saw in you and the others, a less valued people. He wanted to execute you in order to increase another’s survival?” Khan asked, shocked. “By which criteria did he make that determination?”

“Eugenics and social standing – those with the most promising genes and means should live; the others had to die,” Kirk answered pressed.

Nien paled, he seemed to look through the captain. “History repeats itself,” he whispered.

The young captain snorted. “Yeah, it sounds familiar, doesn’t it?”

The former dictator swallowed. “Obviously the criteria for his selection was wrong, seeing that he
sentenced the boy who grew into one of the most brilliant of Starfleet’s captains to death.”

Jim gave him a quick smile. “Thanks for the compliment.” He took a deep breath. “I think Kodos also wanted to eliminate people he thought would be a threat to his rule. There were many people upset about the way he became governor, and he was definitely afraid of another revolution not realizing that he was going to get one anyway.” He moistened his lips. “Kodos barely finished his speech when the first shots were fired into the crowd. My host mother pushed Michael towards me and told us to run and not look back. She and her husband attacked the so-called ‘soldiers’.”

Taking a sip of his brandy, Kirk continued, “I’ve had my run-ins with the authorities…”

“Yes, after driving you father’s car over a cliff,” Khan cut in, and Jim grimaced.

“Exactly. And that wasn’t the last time I got in trouble with the law. I knew and still know a trick or two for evading the authorities. But I couldn’t get Michael to come; he struggled. He wanted to stay with his parents. Even when I promised we’d meet his parents at a ‘secret place’, I couldn’t change his mind. He tore his hand from mine and ran back to his parents – and died along with them. I watched, helpless, as long as I could before I ran.”

Kirk revealed more of this traumatic past in a low, monotone voice, “I stayed underground those first days. Stayed in the sewers for shelter. Hunger and thirst drove me back topside. It was like another world. The colony was silent, depressed. Kodos’s soldiers were out looking for any of the ‘condemned’ who had escaped. Sneaking back to my house, I realized that the family was dead; the building was abandoned. Then I heard light, quick steps and saw a boy I knew from the neighborhood. Kevin Riley. He was running hard down the street; two soldiers were chasing him. It was obvious what they were going to do.

“I don’t know exactly what happened. I snapped – I was impulsive. I found myself throwing rocks at the soldier as hard as I could. I landed a few on their head – I could see the blood. I ran for Kevin, snatched him and pulled him away – got him underground. Kevin was only one of the nine other children including me who escaped the massacre at the market that day, shielded by their dying parents or other family members. They all found Kevin and me, and we stuck together. I was one of the oldest kids, and somehow it was always me they turned to for the next move, so I made decisions and took the lead.”

“As it is in your nature,” Nien nodded, laying a comforting hand on his beloved’s back.

“For a longer time, we could sneak out into the streets, steal a little food and water. Sometimes we had help from those allowed to live. Then Kodos’ captain realized there were more of us alive than
just me and Kevin,” Jim murmured. “Two days later some soldiers almost caught Ralph, one of us kids, when he ‘organized’ an outing to get food. Good thing that he was careful. He knew he was being watched and hid in abandoned houses overnight, switching the places over and over again, until he could get back to us. I was crazy with worry, but he did good. Because of what he did, we stayed safe then. But it didn't last; they found us.”

Lowering his gaze, Jim took another breath; the memories as strong as if the events had been only yesterday. “The weather was changing, winter was coming, and it was bitter cold. That night – the first time, it was a close call. We heard boots stomping through the tunnels, so we ran to another part of the sewer system. I knew that it was only a matter of time before they found us; we had only a finite number of places to go. So we built barricades with all we could get from the surface, and Ralph and I explored some more tunnels that could be used as an escape. I was right. Two days later they came back.”

He felt Khan wrapping an arm around him, and the warmth of his body chased away the chills that ran down Jim’s back – if only for a moment.

“Ralph and I chased the younger ones away and stayed behind to give them a head-start. I didn’t realize that Kevin stayed behind with us. I only saw him when he threw rocks at the men hunting us.” Kirk bit his lips before he murmured, “Then it came to a head. The soldiers shot at us; the barricades saved us from getting hit. Then they attacked; ten soldiers against three boys; one only seven years old. The outcome... we knew how it would turn out. Then I snapped – again I guess. One of the guys aimed his gun at Kevin. I hurled myself at him and took him by surprise. Obviously the bastard didn't expect that from a kid. We fell, and I was able to get hold of his phaser. The next thing I knew, the weapon fired and the soldier stopped moving.”

Khan nodded slowly. “You killed him,” he said quietly, and Jim gulped, his conscience niggling him after all these years.

“Yes. At first I didn’t know – I didn’t realize I'd shot him. I thought he was just unconscious. But I took the phaser and shot down three others to protect Kevin and Ralph. I thought it was on stun.” He moistened his lips. “It wasn't. They had been ready to murder nine children. Kodos had ordered ‘no exceptions’, and they followed it without question.” He shook his head. “Ralph and I managed to drive them away; then we went back to the other kids. Kevin was in shock. For more than two days and nights, he wouldn't leave my side. After that came the nightmares; we all had 'em, but I think they affected him the most. He'd get real close and cry. He was so quiet about it. I guess he didn't want to wake anyone or was afraid the soldiers would hear. I wasn't used to comforting anything, but Kevin was different. I guess I was his Sam. My brother did the same for me once.”

This time Nien sighed. The story, especially that last part, reminded him far too much of his own past – of Joaquin. The first time Khan had killed was to protect the little boy threatened by his creator. The Augment never forgot the feeling of dread that spread through him when he first took another's
life. It wasn't the last time, but it never got easier – the sadness that his hand had been forced. He could very well understand what Jim had been through; he understood that nightmares that continued to haunt.

“I know the moment you kill someone to defend yourself or someone you love, your soul fractures just a bit. A special kind of innocence that most people maintain throughout their life is lost. Guilt, albeit misplaced, fills in the cracks,” he said softly, pulling Jim closer to him. “You had no choice. It was them or you and your children – and they were yours. You protected a small child that didn't stand a chance against the monsters. You were responsible for those children’s' lives and your own. You did the only thing possible to ensure the survival of those who counted on you.”

A bitter smiled washed over Kirk’s face. “Yeah – I try. I don't look for it, but I won't turn away either. I'd do it for them again, and I'd do it for my crew again.” He felt a breeze of guilt and realized that it wasn’t his own emotion he was sensing, but Khan’s. “That wasn’t your fault, Nien,” he whispered quickly, brushing his lips over his mate's pale cheek. “We already talked about that, didn’t we?” When the super-human didn’t answer, he went back to the original topic.

“Kodos heard about us – of me. His soldiers told him about gang of boys and girls who had escaped. That one of the boys shot three of his men. Up 'til then, he didn't see us as a threat, but now... Much of the colony was still in shock, but after that we were seen as kind of heroes I guess. Those that were allowed to live gave us shelter at their own risk. Doing that was punishable by death. But they really were our only hope of survival. Kodos’ soldiers were using sensors to try to find us, but they really didn't know what we looked like, and the census records weren't that good after the mass execution. We could openly hide among other families.”

He took a sip of his brandy, before he continued, “Pretty soon after, Kodos lost control. The survivors snapped out of their reverie and rose up. Another revolution started. Kodos’ people quite violently tried to stamp it out. Somehow we managed to stay alive, hiding in sewers again; then it happened. One of the soldiers I had fought before recognized me, and then they were after us. Two dozen armed soldiers determined to finish us off – not because of the food shortage, but because we were the cause of the rebellion. We'd seen Kodos for what he really was. A murdering coward.”

Another shiver ran down Kirk’s spine. “We had to split up. Kevin and I stayed together and hid in an abandoned building, but we couldn't hide forever, we ran from the building when the soldiers found us. And then it happened so fast. All of sudden, there were people beaming down, wearing real uniforms. When they saw the men aiming at two children they stunned them and then they came over to us. Kevin and I were more starved than hurt, but man we looked a sight.”

Again a smile curled Kirk’s lips, this time a melancholy one. “Two crewmen instantly stripped off their parkas and wrapped them around us, a female officer picked up Riley, and I spoke with another officer. It turned out that the emergency call had reached Starfleet and then it was relayed to the ships on mission in deep space. That's apparently why it took so long. Anyway, I told the officer about
Kodos' massacre. The officer was shocked, but he took care of us. An hour later Kevin and I were in the care of a Starfleet doctor aboard a ship, they treated us and fed us. Ralph and the others were brought to us too. They were a mess – injured, sick. But they were all alive. A day later the Commodore of the squadron asked us about what happened on the planet. He told us that the surviving colonists were all in Starfleet’s care. The med bays were crowded, and they sent counselors to help the people, the families work through the trauma. Everyone had lost someone. Someone said that for every drop of blood shed, a tear was shed to match it.” His voice trailed off; the pain he relived radiated in his eyes and through the bond.

Nien held Jim close, shocked and furious. His James had lived as a fugitive, hunted by soldiers, forced to kill, and was nearly starved to death. Alas, it sounded too much like his own childhood after his escape. He wouldn't wish it on even his worst enemies, let alone his mate – his beloved! This was another experience they shared, and it pained Khan that this beautiful, bright, compassionate young man had been through such childhood trauma – because of one man's cruelty.

“What happened to Kodos?” he asked quietly, pressing a kiss on the tousled golden hair of his bonding-partner.

“He was killed at the end of the rebellion around the time Starfleet showed up. Starfleet’s Security gave the people new hope and courage. The tables were turned. This time it was Kodos’ soldiers who were hunted. As far as I know no one really tried to find out what happened to most of Kodos’ bloodhounds. Kodos’ body was found in his quarters, burnt. He stoked the fire of hate that burned him in the end.” Jim laid his head on Nien’s shoulder. “Kevin and I stayed in the med bay for about a week; then the ship’s captain told me he got a message from my mother, who was on her way back to Earth. The ship brought us back to the Headquarters in San Francisco, where my mother, Kevin’s relatives, and other family members waited.” He snorted. “My little gang was pronounced heroes – nine children ousted a tyrant. The media ate it up.”

“But they overlooked the trauma,” Khan mused, but Jim shook his head.

"That part doesn't make such a good story. But Starfleet did try. The CMO and the First Nurse were there around the clock for us; the captain himself showed us around and even invited us to the sports deck and the officer’s lounge. The trip to Earth was long, and the crew and the psychologists supported us in any way they could. We were offered counseling on Earth too, but the memories don't disappear. The pain became less over time, but it's never really gone, ya know?"

Oh, Khan knew exactly and all too well; it brought tears to his eyes. Kissing Jim’s forehead, he simply held him – safe and sheltered in his arms. For a long moment, neither man spoke for a long while. Then Nien whispered, “And this boy, Kevin, he'll be part of the new crew?”

“Yeah,” the young officer mumbled. “We tried to stay in contact, but then we lost track of each
other. He was so sad when our families came to take us. He saw a kind of older brother in me, and I have to admit that he had become a little brother to me. I missed him terribly in the beginning.” He had blinked dry tears away before he chuckled. “I’m curious to know what happened to him – how his life was after that. I hope it was good. He’s twenty now, and he’s second-year at the Academy. His results are very promising, and he already got a commendation in his file. He specializes in navigation and communication.” He snorted, amused. “It fits. Kevin had a very good memory when it came to direction - the sewers and tunnels and street layouts. And communication – well, he had an Irish temper back then. I don’t think those go away.”

Khan felt a smile tug at his mouth as he sensed his beloved’s calm. Still holding Jim in a tender embrace, he tried to send warmth and comfort through their mental link, soothing still tense nerves. Finally, the young captain sighed and raised his head. His eyes found Nien’s. “Thank you for listening – and for being here,” he whispered. The super-human’s heart beat faster. The fondness Jim showed him never ceased to surprise him.

“You’re welcome, Pyāra,” he murmured; he bent forward – their lips met half way in a kiss full of affection and comfort. For a longer time neither man spoke. They simply sat together and their proximity chased away the dark phantoms of the past.

Neither knew the ghosts yet to come.

ST***ST***ST

The rest of that day and the next went by without incident. Khan finished the documentation for the SDD and sent it together with the test results from Scotty over to Galven, who promised to forward it along for patenting as they had discussed. Afterward, the Augment helped Scotty in Engineering while Jim did his own research of Starfleet’s high-security facilities. There were five of them, and any could hold Khan’s crew – his family. Jim knew that it was too dangerous to request further information about the facilities. He’d have to check them out in person as soon as it was possible. That would likely have to wait for the end of the war.

And maybe that wasn’t so far off. The media was quickly spreading the news of the upcoming peace talks with the Klingons, and the mood aboard the ship had improved considerably in the face of possible peace. Suspicion, however, was still quite prevalent – the Enterprise was not alone in that sentiment.

Captain Helrom shared the sentiment. He left his apartment in Sausalito at five o’clock in the morning, his hands full of luggage. If everything ran smoothly, he would be back in two or three weeks, but the length of the mission depended on the peace talks. Slipping into the seat of his hyper-car, he drove to pick-up his first officer, Commander Stephen Bleach. They’d been friends for a long time now, and Helrom would appreciate the company.
Bleach expected him and met the hypercar. Helrom helped him get his luggage into the trunk.

Suddenly, another car appeared and sped toward the men. Captain and Commander turned around, shaking their heads at the oddity. It happened so fast. The hyper-car seemed to lose control; breaks screamed, the vessel swung wide, and its rear-end hit the two officers. They didn't have a chance. As the car sped away, Helrom was barely conscious; his first officer lay beside him moaning in pain before he lost consciousness.

Two minutes later, a communicator buzzed in an apartment on the other side of the bay in San Francisco. Luengo opened it and heard the message he had been waiting for: “It’s done.”

ST***ST***ST

A quick, hectic search for the missing officers that did not arrive at their destination had begun in San Francisco. Far away aboard the Enterprise, Kirk and Khan began their morning routine and went to the officer’s mess for breakfast. They met McCoy and Sulu there – that latter watched the Augment curiously; his caution had decreased of late regarding the enhanced man. If the captain and the CMO were relaxed in the super-human’s presence, then there must be nothing to.

Breakfast was nearly over when Uhura’s voice sounded, “Bridge to Mr. Singh.”

Surprised, Khan wiped his hands with a napkin then rose; a frown lined his forehead. This was the first time he was called in a ship-wide broadcast. He headed for the intercom and activated it.

“Khan here,” he answered.

“Mr. Singh, I have Mr. Galven in the line for you,” Uhura said businesslike. “Do you want to take the call where you are or in your quarters?”

“In my quarters please, Lieutenant. I will be quick,” he replied. He switched off the line and walked with long strides toward the door. Jim gave him an asking glance, and as the Augment nodded, the captain rose and accompanied him. Sulu and McCoy watched them leave, and then the helmsman frowned.
“They always stick together,” he murmured, and the CMO sighed.

“Yes, they have become… good friends,” he grumbled, and as he caught the surprised gaze of the younger man, he shrugged. “They have their history with each other – beyond trying to kill each other at this point. It's bonded them.”

Hikaru snorted and sipped his tea. “Still… It’s weird to see them like that.”

“You have no idea, how ‘weird’ it really is,” Bones thought, returning his attention back to his breakfast. Hopefully, Jim would find time to actually finish a meal – after all, the captain was, despite his good condition, still recovering.

A minute later, the strange friends reached Nien’s quarters, and Uhura patched the Tellarit through.

“Good evening, Buddy – Jim!” Galven oinked cheerfully the moment his little eyes met the former dictator and the captain. “How are things with you two lovebirds?”

“Very well, thank you for asking,” Khan retorted. “I must correct you, though. It’s ‘good morning’.”

The Tellarit blinked several times then squealed his laugh. “Aldebaran has more hours per day than you have aboard there, lad, so here it is still evening while you two face a new day all fresh and rested… Ah, forget that. You were too busy to sleep, I'd guess.” He winked at them.

Khan only sighed and changed the topic tactfully. “How can I be of service?”

Galven smirked knowingly, but let the topic drop. “It’s rather the other way around, lad. I was very busy today – got the patent for you.”

The Augment was surprised by the wave of relief that washed over him. “Well done, Galven. Thank you.” He gave the Tellarit a real smile.

Galven began to chuckle. “Well, it cost me three dozen credits and my nerves; the technicians at the patent office are slow.” He poked himself at the forehead – a gesture he copied from his human friends. “But when they understood the device's use and saw the Enterprise’s chief engineer's
reports, they issued the patent without another question.” He grinned broadly. “Now it’s up to you and the Commodore to set things in motion.”

“I am in your debt, my friend,” Khan answered seriously, but Galven simply waved his hoof-like hand.

“Don’t mention it. What are friends for? I also opened an account for you. I’ll send you the data. At least you’ll get some money as soon as the uniform-wearers buy your ‘baby’.”

Jim grinned widely at Khan. Finally, his mate would get remuneration for his invention; he’d be able to hire the best lawyers. Kirk’s hand found the long elegant fingers of the Augment and squeezed them, earning a smile in return before Nien’s attention returned to Galven. “Commodore Wesley will contact you as soon as he has spoken with his superiors. As my agent, you have free hand to negotiate, but please keep me updated of the progress and the sum Command is ready to pay before you agree to the contract.”

Galven chuckled. “Of course. Starfleet will be out of their mind with glee to get their hands on a piece of tech that its scientists couldn’t manage to build – even if the war with the Klingons ends.” He cocked his head. “Do you really trust those dragonheads to make peace with the Federation?” This time he addressed Jim who grimaced.

“There are so many variables; I really can’t answer this question fairly. Still, hope dies last. We’ll be on patrol during that time in case the Klingons decide not to play fair.”

The Tellarit nodded quickly. “Yeah, we’ll keep our eyes and ears open, too.” He winked at Jim before he turned back to Khan. “I’ll send you the account data and wait for Wesley to contact me, boss.”

Nien almost choked as he heard the last word, staring half amused, half confused at his stout friend. “’Boss’?” he replied, and an oinking laughter sounded.

“Yes – in this case, you’re the boss, lad, but don’t get used to it.” He waved. “Be well, you two – and don’t be late to duty, m’boy, just because you can’t leave your lover alone in bed,” he added, grinning broadly at Jim, who rolled his eyes.

“Don’t worry – I’ve always got Spock to make sure I don’t miss duty.”
“Yeah, Vulcans are particular about those things,” Galven chuckled. “Bye, you two.” The link was cut, and the screen went black.

Kirk took a deep breath before he faced Khan, smiling widely at him. “The next step is finished. You’ll see, soon you’ll have the money to get the lawyers you need for a fair trial and defense for your people.” He cupped Nien’s cheek with one hand. “It'll turn out; I know it will.”

Khan smiled melancholy. “You are ever the optimist, James,” he whispered. “Still, I know that the path I have chosen is the only one that will bring me peace. So I will finish what I have started.” He brushed his mouth over Jim’s and murmured, “And now we only can only hope that Wesley convinces Command to buy the SDD.” The Augment rubbed his neck. “Still I cannot rid myself of the feeling that the other shoe will drop soon, as illogical as the feeling is.”

“Nothing worth it is easy,” Jim nodded and wrapped an arm around his beloved’s shoulders. “This is worth it, but chin up; we’ll make it.”

The warmth in the super-human’s eyes was worth more than any words of gratitude or encouragement, and sighing contentedly, Jim laid his head on Nien’s shoulder. They held each other in comfortable silence.

ST***ST***ST

“Captain Helrom is where?” Barnett stared, shocked, at Lieutenant Chuan Li, the comms officer of the Excalibur. The Chinese man was pale beneath his tanned skin.

“We received a message several minutes ago from the University Hospital in Sausalito. Captain Helrom and Commander Bleach had an accident early in the morning outside Bleach’s apartment building. Neighbors reported a crash and investigated. They found the men bleeding on the street behind their hypercar that was smashed too. Looks like a hit-and-run. When the ambulance arrived, both men were unconscious. Thankfully the officer on-scene got their identification and took the time to call Starfleet. Apparently, it took him a while to find the right people, but that’s how we found out.” He swallowed; clearly upset.

Barnett rubbed his neck and turned around; his gaze wandered through the stateroom that would be his home for the duration of the journey. He had moved in late last night only to be woken up at 0630 by a call from the bridge stating that Captain Helrom and Commander Bleach hadn’t come aboard when they were expected, and neither could be reached.
The search had started immediately, but only now they learned of what happened to the two officers – one of them the commander of the starship that had to leave now!

Dammit!

“What's their condition?” Richard asked.

Li took a deep breath. “They're not out of danger yet. Bleach is worse off than Helrom, though. He has a broken rib that pierced a lung and he lost a lot of blood before doctors got their hands on him.”

Barnett bit his lips. “In other words, they're out, and the *Excalibur* is without her captain and first officer.” He cursed inwardly. “Commander Handers is the next in line, right?”

“Yes, sir, but he's our Chief of Security. Of course he can take command of the *Excalibur*, but…”

“But his first duty is the safety of the delegation; he can’t do both effectively.” Barnett finished Li’s statement. “Dammit!” He went to his desk and activated the intercom and view screen. “Barnett to Komack!” he hailed his colleague.

“Komack here,” came the reply instantly.

Barnett sat down on the chair. “James, we have a problem. Helrom and Bleach were involved in a car accident this morning – a hit and run. They're both in the hospital. Commander Handers will have all hands full ensuring the delegation’s safety. We need a replacement for Helrom. Who's available to take command of the *Excalibur*?”

Komack cursed quietly under his breath, too; his round face flushed in irritation, and then he thought for a longer moment before he answered, “All available captains are deployed. Maybe…”

“Bridge to Admiral Barnett,” the conversation was interrupted. “Sir, I have Admiral Luengo on the line for you,” the second comms officer reported, and Richard made a face.

“Patch him through,” he ordered.
The picture on the split screen showed José Luengo.

“Richard, I just heard about Helrom and his first officer’s accident. The police report says the driver hasn’t been found yet. We hope there are witnesses that will come forward with information.”

“Witnesses – at that time of morning in Sausalito? Good luck!” Barnett growled. “What worries me more is the fact that we have no captain now, and any officer with command experience is out in space.”

“What’s about one of the commanders?” Luengo suggested and earned a disbelieving look from Richard.

“You can’t be serious, José! Now is not the time to give someone their first command!”

“There are some very promising commanders who are ready for their first commands,” Komack cut in, not knowing he was playing right into Luengo’s hand. “And what would be better to a newly promoted captain than to have half the Admiralty watching his back?”

Barnett stared at the screen. “I don’t like this!” he said quietly. “This mission is too important for someone so green.”

“Excuse me, Richard, but Kirk was pretty green once, too – and look at the successes he's already had over the challenges he's been presented with,” Luengo pointed neutrally out. “Give a young man a chance to prove himself; while you are aboard and interfere should a crisis happen.”

“José is right,” Komack cut in again. “There are a few experienced senior officers aboard the Excalibur, who would help a young acting captain. And you, Harry, Heihachiro, Thomas and I - we're here, too. That should be enough help if he needs it.”

The Chief in Command sighed heavily. “It seems we have no other choice. Do you have someone in mind, James?” he asked Komack, who pressed his lips together in thought.

“Well, there is Joe Hudson, Alice Summer, Lawrence Robert Styles…”
“Styles?” Barnett blinked shortly. “Archibald’s son, right?” As both men on the screen nodded, Richard thought about it.

Luengo dipped his head and was obviously busy reading before he said, “Hudson and Summer are both in space. Styles just got back from a mission ten days ago. Looks like he's ready to go out again with the Bradbury in two days. One word from you and he can be promoted to captain. As far as I can tell, his promotion is overdue.”

Komack cocked his head. “He comes from a well-known English family with a long history in the fleet and the Royal Navy before that. He is ambitious, knows protocols to a tee, and has an overall calm demeanor about him. If any of 'em could succeed, it’s him.”

Barnett allowed this thought a few more seconds before he nodded. “Right. When can he get there?”

“If you want, I'll contact him,” Luengo offered. “I’ve requested his file while we were talking, and I have his data. My secretary can call him. He’ll be aboard in less than an hour.”

Something in Richard stirred – a deep, nagging gut-feeling. He had enough experience to know that he trusted those. ‘You’re nervous because the mission is a powder keg,’ he thought, and then he straightened up. He had to make a decision fast. “Right,” he said. “Contact Styles and give him the orders to report to the Excalibur in one hour.”

“Of course,” José nodded. “I’ll let you know as soon as I get a reply from him.” The screen blinked again as Luengo interrupted the link; only Komack’s face was visible now.

“I'll inform Morrow, Shepard and Nogura,” Barnett said. “We're meeting in briefing room 1 to promote the young man, and then we'll be off. We can’t permit any more delays.”

James nodded. “I agree. I also hope this surprise isn’t a bad omen for the mission.”

He couldn’t know how right he was.

TBC…
Chapter End Notes

Yeah, we are nearing the next big, big action that will take place, before they come together to build the groundwork for events to come. And I’m certain that many of my readers will be infuriated even more with Luengo and Section 31 soon.

In the next chapter Jim will meet Kevin again, while the events of Luengo’s plan unfold. I don’t want to reveal too much, yet I know the next chapters will keep you on the edge of your seat.

I hope you liked the last installment –Tarsus had to be on the table at one time, after all it mirrors Khan’s own youth in some ways. I’m looking forward your feedback.

Have a nice weekend

Yours Starflight
Hi, my dear Readers!

I really have to apologize that the new update needed so long to be published, but after summer-holidays everything is really quite busy, and – to my regret – the hobby has to stand back. Nevertheless my Beta and I use every spared minute to proceed with the story what begins to head to the next action just right NOW. I’m sure that many of you are going to curse me within the next chapters (*snicker*).

Thank you so much for the comments and kudos; I know the story runs a long way and still isn’t finished, but I promise that the next turns will keep you smitten with it – even if everything becomes now darker and sinister.

So, enough of this little prologue,

Have fun

Yours Starflight

See the end of the chapter for more notes

Chapter 45 – Old friends, new threats

The same time Lawrence Robert Styles reached the Excalibur to make his way to the briefing room, the new crew members of the Enterprise arrived at space station 6-S. The moment Styles took his command as the newly promoted captain – carry out his duties as commander and as a secret agent of Section 31 – Jim Kirk, Spock and Quartermaster Sylvia McLally with nine members of her staff watched the doors of the recreation deck (that offered enough room for so many people) slide open to reveal more than 60 men and women, who would support his decimated crew.

A man in his mid-twenties stepped forward and saluted, “Lieutenant Philippe Nureaux, 42 crewmen, and 23 cadets are ready for duty, sir.” He nodded at Spock. “Sir!” He addressed him, too.

Kirk returned the salute. “Thank you, Lieutenant. Welcome aboard the Enterprise, ladies and gentlemen. I know that it comes as a surprise for most cadets – to be called on duty aboard Starfleet’s flagship in the middle of a mission, but in times of war we must be flexible. And, believe me, when you return to the Academy, that lesson will put you head and shoulders above your peers.” The last sentence was spoken with a conspiratorial undertone; it earned him some chuckles before the young men and women regained their composure.
Jim’s eyes wandered over the still unknown faces until his eyes found what he was searching for. His heart leapt in his chest. There he stood. A young man – almost a boy, really – with short dark hair. He had grown, of course, but it was the same face and the same green-brown eyes that locked him in his gaze. For a moment, they lit, and Kevin Riley allowed himself a quick smile – one Kirk couldn’t help but returned, then the captain’s attention snapped back to the other new arrived crew members.

“As you all have heard, a ceasefire has been declared between the Klingons and the Federation, and will last for the duration of the upcoming peace conference that will take place in five days. We have orders to patrol the sector between here and Borderland and to avoid any confrontation with the Klingons and the Orions; so your first trip into deep space should be uneventful. Still, and this goes especially for the cadets, do not forget that we’re here on our own and that anything you say and do can leave a trail endangering the security of this ship. So if you’re uncertain about something, have questions or problems, your superior officers, my first officer Mr. Spock and even I are there for you and will offer our advice and our guidance. The same goes for our CMO, Dr. McCoy. And speaking of the good Doctor, please don’t forget to report to medbay for you the physical. Don't worry, his bark is worse than his bite.”

Again, the group chuckled, and Kirk saw the most cadets try to hide their relief. He could understand it. They were still youths – at the threshold of adulthood, and they were far away from home. Each had his or her own dreams of exploration, not war. Knowing they had the support of the senior staff meant much to the group. He remembered his first real mission in space two years ago more clearly than he sometimes wished for.

Jim gestured to his companions. “Quartermaster McLally and her staff will show you your quarters; Mr. Spock will transfer the duty schedules to your desks. Report to your departments and stations at the beginning of your shift. Those who are on beta or gamma have a bit of spare time. Use it to get familiar with the Enterprise – she's a big girl.” Here and there, Jim saw a smile and he relaxed a bit.

“Well, then I have nothing else except ‘welcome aboard’. I hope you all and I expect you all to integrate yourselves beyond just crewmembers. You are part of the team. Dismissed!”

McLally stepped forward, looked at her PADD and called the names of the new crew members and announced their quarters. Her staff summoned gathered them into small groups.

Spock watched them closely. He had, of course, read their files, too and as his gaze wandered to Jim. He saw that his friend was looking at a young man. The Vulcan identified him as Kevin Riley – a boy who had shared the captain’s horrors on Tarsus IV. Spock knew his T’hy’la well enough to know that Kirk would take the young ensign under his protective wing. Despite his bad experiences with family, Jim was at heart family-man. He understood as Spock had come to learn that family was
more than blood – extends beyond blood. Jim spread his affection and protection to those he regarded as his own. That young Riley was family to Jim, was as clear Earth's sky on a bright summer day.

Half an hour later, all were settled in. Kevin Riley shared his quarters with another ensign from the navigation department – a Rigelian, who went by the name Dunit and on duty now as he had been informed by the second quartermaster. The young Irishman looked around the small room and felt the excitement running through his veins that hadn’t left him since he learned that he had orders to the Enterprise. Of course he knew who her captain was – half the Federation knew it. Since James Kirk had saved Earth two years back, his name was well-known. After he had won two important battles during the war and successfully saved the space harbor and space station of Aldebaran, he was even practically infamous.

Kevin smiled to himself as he unpacked his luggage. Of course it had to be Jim Kirk in line to save the Federation. It seemed to be his fate – always there where the danger was the greatest; always there to make it right. Just like he did on Tarsus IV. Just like he did during the Nero-incident. And now was no different. Riley couldn’t help himself; he grinned goofily when he thought back to their meeting. As soon as his eyes met the captain's in the briefing room, the warm, soft expression on the face of his former savior told him everything. It destroyed the small doubts he harbored at the back of his mind. Jim hadn’t forgotten about him; he seemed genuinely glad to see him again.

And so was Kevin. He had thought about contacting Kirk after his name was first mentioned in the news two years ago. He thought the better of it when he learned some days later that Jim had been promoted to captain and his first command – Starfleet’s flagship. That was three days before Kevin stepped through the Academy doors for the first time. His secret goal had been to be the best of his class and to maybe get a chance to join Jim’s crew. He wouldn’t have dared to dream that just two years later his dream would come to fruition, but here he was on the same ship that was captained by the man who protected him – very likely saved his life and allowed him to become the man he was now.

And what a fine man James Kirk had become.

He had changed from a young teen into a tall, strong, handsome young man – proud, yet kind. His little speech had proved what was rumored throughout the Academy: The captain of the Enterprise had a command-style based on comradeship, yet his persona left no doubt of who and what he was. He was someone you could look up to – as he had been since they were children.

Whistling an Irish song, Kevin was about to put his toiletries stuff into the small bathroom when the door buzzer sounded. Surprised, he turned around. “Enter!” he called
The door slid open to reveal the broad-shouldered shape of Jim Kirk, who crossed the threshold; the door closed behind him.

For a long moment, both men didn’t move. Then they grinned at each other. Protocol out the proverbial window, Kevin flung everything he had in his arms onto his bunk and walked towards Kirk, who simply spread his arms. The men embraced, laughing.

“It’s really you! I couldn’t believe it at first when I read the names of the crew,” Jim said, beaming from one ear to the other one.

Clapping each other on the back, Kevin stepped back and smiled at Kirk. “It’s a pleasure to see you again, Captain.”

The superior officer rolled his eyes. “Hey, off duty you still call me ‘Jim,’ right?”

The young Irishman chuckled. “Thanks – Jim.” He took a deep breath; his gaze roamed over the familiar face that had changed but was still the same. “I can’t get it. Us again after all those years.”

“I tried to stay in contact,” Kirk apologized, “but then you moved to Rigel with your relatives and…”

“We only stayed there six months. When I got back to Earth, there was no one at your address. I found out that your mom sold the farm, but that was as far as I could get.”

Jim grimaced. “Yeah, we moved into an apartment in a town not far from the farm. And – well – after my mother signed on for another mission, I stayed in college for a while and then…” He shrugged and shook his head, smiling. “Never thought that I would end up in space – that we’d both end up on the same ship.”

“Aye – but I’m still a student, and you are the Federation’s newest hero,” Riley snickered and burst out laughing, as Jim groaned, “Don’t start with that! I hate the whole ‘he’s so great’ media shit.”

“I knew it! You were never one to stand in the limelight for the sake of it.” Kevin turned serious. “Not then and not now either.”
The captain rubbed his neck. “Well, I have to admit there was a time when I did things just to say I could, even when I knew I was being goaded into it. I accepted Pike’s challenge to join Starfleet – to be better than my dad. And if someone says it'll take me four years then I . . .”

“Ha! I'll do it in three', I think you said.” Kevin smirked again. “Believe me, they still talk about that – and the professors have nothing better to do than rub our faces in that comment.”

Jim’s eyes widened. “And here I thought they would only talk about me as 'the biggest troublemaker that ever graced the Academy'.”

“Why? Because you cheated on the Kobayashi Maru?” Riley snickered again. “That alone made you a hero, and I'm certain a few instructors are still impressed, too. They just don't admit it to us.”

At this moment, the intercom sprang to life. “Bridge to Captain Kirk!” sounded the deep voice of Spock and Jim sighed, went to the small desk and answered the hail.

“Kirk here. What’s up, Spock?”

“We’re about to depart, sir. Mr. Scott reports Engineering is ready; all stations manned, sir.”

“Thanks, Spock, I'll be on the bridge in two minutes. Kirk out.” He turned around. “Sorry, Kevin, duty calls. When do you start your shift?”

“I'm on beta shift on the auxiliary bridge.”

Kirk pursed his lips. “Right. Let us see how much you've learned at the Academy. I intend to give the most promising cadets the chance work on the main bridge within the next few days. Rotate you in and out of the position. I hope to see you there then.”

Kevin stared surprised at him. “That would be . . . highly unusual for cadets.”

Shrugging, the captain answered. “Theory is one thing, putting it into practice is another. If the senior
officers want to know exactly how far the cadets are in their training, they have to test them. There may be a ceasefire now, but the situation could quickly escalate back to a full-blown war. I want my ship to be prepared if that happens. I need all of my officers and all of their reliefs in the event something happens. I read your results. They're impressive. I'm sure I'll see you on the bridge soon.” He chuckled as he saw Kevin blushing and turned to leave. “See you later, Kevin.”

“See you, Jim!”

The door closed behind the captain and Riley sighed. They only talked for a few minutes, but one thing was certain. The old friendship hadn't aged – the familiarity they developed on Tarsus hadn't left either of them.

ST***ST

The departure from 6-S went off without a hitch, and the Enterprise began her patrol. The mission, routine as it was, still needed the full attention of the bridge crew. Should the Klingons be bluffing, this would be the best opportunity for another strike. Spock and Sulu’s sensors were scanning their full range, and despite the calm, there was tension on the bridge.

At the end of the alpha-shift, Jim went down to Engineering as he had each day since Khan had begun working with Scotty. Because of the new crew members and to avoid unnecessary questions, Khan wore the red coveralls of a technician. None of the newcomers in Engineering paid attention to him and only noticed that he always worked with the chief engineer.

Just like now. Jim found both at one of the main control station of the warp core, discussing technical details while Keenser listened carefully. His pitch dark eyes looked clear and even warm at the enhanced man, who glanced towards Jim as the young captain strode around the corner.

Instantly, Jim felt the tension of the last hours drain from him the moment Nien’s and his eyes locked. He had felt his bond partner this whole day deep in him, but there was a restlessness niggling him that melted away as he closed the distance to the Augment.

“Hi there,” he greeted, nodding at Scotty and Keenser before he stopped beside Khan. He stood too close to allow for the normal amount of personal space, yet the former dictator only smiled at Kirk.

Montgomery pursed his lips in thought. An inner voice whispered an answer that he just couldn't hear, and he was still unable to grasp all the hints and put them together to get a picture of what was
going on right in front of him.

“Mr. Scott and I were discussing the possibility of extracting a higher output from the warp core. We also thought about connecting the SDD to the main power with a link to the auxiliary power should the warp core fail.”

“Aye, but then if we ask her to put more out, we have to get it from somewhere. Mr. Singh thinks he can draw more. We'll run some simulations and then test it once he's finished. It's a good time to do so with us on patrol and no one shootin' at us.”

“Sounds good to me,” Jim beamed before he addressed Khan. “Are you done here or do you still have work to do?”

Nien shook his head. “I’m done for today.” He glanced back at the Scotsman. “I will work something out for the sockets – what we need for them.”

“Right, and I'll run some simulations. See ya tomorrow?”

“Of course,” Khan nodded.

“Well, then – have a good day, gentlemen,” Scotty greeted and walked away; the Roylan like a small shadow on his heels.

“Inseparable,” Jim chuckled, then he turned towards the exit. “You coming?”

“With pleasure.” Remaining at the captain’s side Khan left the Engineering. “Do you have something in mind for us?” he asked, and Kirk smiled.

“Yes. Care to join me on the sports deck and to show me this relaxing, stretching thing you did a couple of days ago?”

For a moment Nien’s eyes widened, then he laughed – quiet, warm and deep. The sound washed over Jim’s heart and soul like soft velvet. “The ‘relaxing, stretching thing’ is called Tai Chi – and I would love to teach you.”
They headed for the next turbo lift.

“You really like working in Engineering, don’t you?” Jim asked.

A hint of a smile curved the Augment’s bowed lips. “I can finally do what I was truly made for. I can build and create – technology that is.” He chuckled. “It is the same with the short, oyster-looking man. He told me that the males of his family were engineers. It is part of what makes them who they are as, say, leadership is part of what makes you, you.”

“Keenser talked to you about his family?” Jim stopped mid-step and stared at his beloved, baffled. “How long did this talk last, seeing that he only uses a word or two at a time?”

Khan laughed again; this time mirth danced in his eyes. “Oh, I made a few guesses; he confirmed them.” He snorted. “He is an odd sort but has a brilliant mind, and he is loyal to the death. He and Scott are close – like brothers.”

“They are. They’ve definitely found kindred spirits in each other,” Kirk nodded and started walking again. “Not in the way we did, but they are close.”

They reached the turbo lift and stepped in when it arrived. Jim smiled at Khan. “I’m just happy that you’re getting in with people here besides me.”

“I am – thanks to you. Funny way to tell Mr. Scott, Sunrise’s identity. It broke the ice – or started a small fire. He does have a temper.”

“No wonder you two work so well together,” Jim smiled, closed the small distance to his soul-mate and gave him a tender kiss that the super-human returned. For a long moment, Khan felt at peace again. A tiny voice in his mind whispered that he would love to have this is every day – challenges, duty, acceptance and his mate by his side. Then the tiny voice was interrupted. A female cleared her throat.

Jim and Khan broke apart, startled; they turned and looked straight at a very stern-looking Uhura, who stood at the threshold of the open lift.

Nyota watched both men, one of whom one seemed to be a bit irritated (Khan) and the other almost humiliated (Kirk). It had been a bit awkward to catch the two kissing. Even if she knew about them, it was strange to see Jim Kirk, of all people, with a man. Stepping into the lift, she ordered “Deck 7!” and the cabin began to move again.

For a long moment, an uncomfortable silence hung in the air while Uhura fixed the Augment in her sites. He'd driven her and lover over the edge last year. And this was the first time she faced him since she and Spock had taken him down. Making up her mind she resolutely activated the emergency break before she addressed the former dictator without hesitation.

“I know what you've done – in the war, for our side. I know you helped those who needed it, and I know that you risked your life for the captain, more than once."

“Lieutenant…,” Jim began with a certain warning undertone in his voice but shut up as Nyota simply put one hand on his chest. He knew better than to stop her when she was in this mood.

“Sorry, but this has to be said, Captain!” Her gaze didn’t waver as she looked straight into Khan’s pale eyes. “Do you really love him?” she asked bluntly; taking the Augment by surprise for a moment before he caught himself.

“You are very direct, Lieutenant,” he said, and she nodded.

“Yes, I am! I always am when it comes to what is most important to me. My duty, my friends – family, so to speak. So, please, answer my question.”

Nien’s instincts told him that it would be better to swallow down the rising irritation and to suppress his natural arrogance. This petite woman had a key role aboard this ship and in Kirk's life. Her impertinence was based on her worry for her friend and he could accept that. She was Jim’s family. He would make peace with her as he had with the doctor.

“Yes, I do,” he said clearly. “With all that I have to love him with.”

Uhura searched sea-colored eyes for a hint of a lie; she found only sincerity. She nodded shortly.
“Right,” she said slowly. “As long as you are serious, I can live with it.” She closed the distance to him and lifted her head. “But if you ever hurt him, I’ll claw your eyes out!” There was no heat in her voice, only a cold, stern tone. “That’s your only warning!”

Kirk wanted to interrupt. Dear God, he didn’t need another mother-hen! But Khan was quicker. A smirk curled around his lips as he replied. “You would get very well along with Katie,” he said, amused with the young woman’s behavior. “She would have said something similar – she did when it came to her family.” His gaze flickered to a half shocked, half sure looking Kirk. “And you see in Jim a brother, do you not?”

“Sometimes he’s a bit of a terror like any brother,” Nyota answered without any hesitation.

Khan made an affirming gesture. “Very well, Lieutenant. If I ever do anything that would bring harm to my mate, I will be sure to inflict the consequences, you need not to worry.”

Uhura stared at the two. ‘I knew it. They REALLY are together!’ it echoed through her mind. “Mates?” She glanced from one to the other and then shook her head – not in denial but as if she wanted to clear her thoughts. “I knew it!” she grumbled. “That sleepwalking; the fact that you two are inseparable, your voices when you talk to each other.” She snorted, half amused.

This time it was Jim, who cleared his throat. “Uhh… Uhura, Spock and Bones know, but I’d appreciate it if it didn’t get around.”

Indignantly, the woman planted her fists on her waist; her eyes flashed at him. “Is that what you think of me, Captain? I would never, and you know it! A comms officer hears more than they ever wanted to every day. We’d never get any work done if we took the time to tell all that we know!”

Quickly Kirk lifted both hands. “Lower you weapon, Nyota. I'm sorry, I said it. I know you wouldn't.”

“Bridge to turbo lift cabin 12F. Are you in need of assistance?” the first officer’s voice suddenly sounded through the speaker. Quickly, Uhura activated the link. “No, Spock, everything is fine.”

For a moment there was silence; then the Vulcan asked, “Why did you use the emergency stop and fail to restart the lift in the requisite two minutes, Nyota? The bridge was alerted.”
Khan chuckled, as he saw how the chocolate-brown skin of the woman turned even darker. “Sorry, we…,” Uhura began but was interrupted by Kirk.

“We got a little bit carried away in our conversation, Spock. We forgot that the emergency stop was still on.”

“Captain?”

“Yeah, it’s me, Spock. Uhura, Khan and I were talking; we got distracted is all.” He reached beside Nyota and punched a button. “We’re on our way now.”

“Thank you, Captain; your cabin blocked four others.”

Jim blushed. “Sorry.” Then he cocked his head. “Why are you still on duty, Spock? Your shift ended.”

“I’m modifying our scanners, sir. The process will take time.”

Jim sighed. Workaholics – that’s what they are. “Fine, but get your downtime, Spock. Your girl could get the wrong idea.”

Uhura shot him a glare. “Captain!”

“Captain?” Spock sounded confused, and Jim chuckled.

“It was a joke; calm down you two. Kirk out!”

“I am a Vulcan. I do not experience excitement from which I must find calm,” came the indignant reply before the intercom was shut off.

“And I thought Vulcans could not lie,” Khan commented wryly.
“A myth!” Uhura deadpanned while the cabin moved through the shafts. It stopped on deck 5 where Kirk and Khan exited the lift. Uhura nodded her good-byes to her captain and his mate. The doors slid closed, and she disappeared.

“Phew, that went better than I thought it would. She can be tough,” Jim said and met Nien’s amused gaze.

“She is very fond of you,” he stated, and Kirk snorted.

“I remember the first time I met her.” He shook his head, and as he caught Khan’s curious gaze, he sighed. “She was in a bar in Iowa with some Starfleet cadets. I flirted with her; she resisted my charms, so I tried harder. The cadets around didn't like me hitting on her. It ended… well, you can figure that out.”

“It ended in a good old bar brawl, I imagine,” the super-human assumed, and Jim snickered while they walked down the corridor.

“Yes – and it was a good fight, even if I lost that one – well, I probably was going to lose. And then Pike came in. I can still hear that whistle ringing in my ears.” His smile was melancholic at the memory. “He handed me a napkin to shove into my nose, bought me a drink and told me he knew who I was. He was good friends with my dad. Told me I should join Starfleet. He was convinced that I had what my father did – dared me to do better than my father, which was a tall order. At first I didn’t want to hear any of it; then I thought about it. I made up my mind the moment I saw a ship being built in the shipyard; it was the Enterprise.” Something akin to love shone in his eyes, and he stopped walking. “When I saw her – her shape, her power – I vowed to myself that I'd command her one day. I got to the shuttle at the last minute, gave my hyperbike to a yard worker, and told Pike I'd finish the Academy in three years. I got on board, met Bones and the rest, as they say, is history.”

Khan's gaze roamed his beloved’s face. “A brawl and a man's first love was all it took to make a hero who doesn't believe in defeat, defends the weak, and remains true to himself and those he calls family.” He lifted a hand and cupped the young captain’s cheek. “James Kirk, I am honored to know a man like you. It is no wonder that I fell so hard.” He leaned forwards, his intention clear. At that moment, voices drew nearer, and quickly both men retreated a step.

“So… uh… You think the output of the warp core can be increased?” Kirk asked lamely as a few crew members came down the hallway, greeting him respectfully.

Khan chuckled soundlessly. “Clever!” he whispered as soon as the crew members had passed them by.
“What else could I do?” Jim murmured. For a long moment, they only looked at each other, and then Kirk cocked his head.

“Sports deck or… my quarters?”

New fire burned in those pale green-blue eyes – a fire that instantly stoked the Captain's own.

“Quarters!” was the only answer Khan gave; his voice deep and purring.

It was a good thing that no one saw the two race down the corridor and vanish into the captain’s quarters.

ST***ST***ST

The air was smoky and reeked of cheap ale, much liquor, and food. The air was filled with voices all talking in different languages, but one stood out. A rough, guttural language – Orion. In the corner of a bar situated in the planet's capital (if you could call it a capital at all; Orion culture lacked the structure of Federation planets) sat seven men of varying races. Three Klingons, two Orions and two Terran men, though not of Earth, sat together. The noises around them prevented any eavesdropping on the little group. Nevertheless, they spoke in hushed voices. No one wanted to risk revealing his intentions.

“So, you have finally a plan to make the whole thing work?” One of the human men asked and the three Klingons only grunted with a short nod, before one of them rumpled,

“So, you have finally a plan to make the whole thing work?” One of the human men asked and the three Klingons only grunted with a short nod, before one of them rumpled,

“Still, I don’t get it.” He looked at the leader of the three Orions at the other side of the table. “Why, exactly, should I name my ship J’Ethl after Lord Kor’s flagship?”

D’nyrrs rolled his eyes in an almost human manner. He was larger than the most Orions; his tunic stretched taut across his shoulders and his ice-blue eyes shimmered ominously in his round face. The twilight in the bar made his green skin appear darker, but it couldn’t hide a scar that split his upper lip. “It’s simple, Klokh. Play them for the fools they are. The Federation will the Klingons have broken the ceasefire and the Empire will believe it is Kor’s fault.”
The human who had spoken first frowned. “Why Kor?” Interest lay in Commander Grader’s voice while he sipped his wine — wine that was far too sweet for his taste, but he didn’t mention it. It was a common drink in Borderland, and he wouldn’t offend his partners by complaining about a simple wine. He was too well-trained. All members of Section 31 were trained in Xeno courtesies before they were entrusted with missions.

The Orion snorted at Grader’s question. “Kor is a peace-maker. Neither Klokh nor I need such a thing around our business. Business has been good since the war began, don’t you agree?” He lifted a glass of Romulan Ale towards his Klingon partner and took a drought. Banned liquor was only one of many things outlaws could buy in Borderland and on Orion.

The pirates traded anything of value — a value that didn’t conform to the Federation's legal system. Slaves were sold as well as dilithium crystals, stolen ships, and drugs. D’nyrrs headed a group employed an outlaws. The Orion culture was all but lawless; he had free hand to do as he wished so long as he did not endanger the operations of the Syndicate, a group of the most influential Orions, who had the final say when it came to smuggler and pirate disputes. They meted out punishment - sometimes harshly if the crime endangered the existence of the Syndicate.

And he would certainly get in trouble with the Syndicate if it would D'nyrrs' plans were revealed. But the offer of money and the promise of becoming a very well-paid Starfleet spy was enough that he put cautions aside. The Orion Syndicate had agreed to abide by the declared ceasefire between the Klingon Empire and the Federation, but D’nyrrs learned just days ago that not all admirals were happy with the developments. And if those admirals wanted to continue the war with the Klingons, then he would not stop them. Quite the opposite in fact, Klokh and he had never earned so much money as he had since the war started. They had no interest in peace.

The opportunity to eliminate the delegation and to make it look like one of the most important Klingon warlords was responsible for the act was something D’nyrrs was going to love. The Syndicate came to an agreement with the Klingons several weeks ago. They requested Klingon protection. The slavers and pirates had thought that this would work to their advantage. They would be wrong. The Klingon warlord responsible for Borderland, Kor, held to an oddly more Federation-like morality. He informed the Syndicate that the seizure of ships and taking captives for the slave-market was a punishable crime. The Orions furiously protested, but they were bound to obey Kor’s commands. And if this man was removed from his guard because the talks failed before they began, then D’nyrrs was more than happy to have a hand in it. ‘Killing two birds with one stone’, like the Terran proverb went.

His eyes remained on Klokh’s face, typically ridged as most Klingon's were. His long hair was tousled as was his beard, yet he maintained an aura of strength and power. It was beyond D’nyrrs that a warrior of this Klingon's caliber had been forced out of the Imperial Fleet because of a battle lost against a renegade Klingon colony. Well, the Empire would pay for this mistake, this much the Orion could tell. Klokh and his two most loyal officers had fled with his commandeered bird-of-prey. Since then, they had stolen two more D4-cruisers and have been in the Borderland in their own private enterprise with D’nyrrs’ help which was rewarded with Klokh’s support when needed.
As it was now, D’nyrrs didn’t have to persuade his Klingon partner to join him in the mission, especially when Klokh learned that he would be able to exact revenge on his former home.

Klokh bared his teeth when his Orion partner mentioned Kor, and growled, “He is a traitor! A traitor to the Klingon way. I have heard that he has sympathized with a Federation staff officer, and now this nonsense. As I have told you, if I get the opportunity to best him in battle, I will not hesitate nor will I show mercy.” He looked back at the human. “So, in three days the Excalibur will enter Borderland?” As the man nodded, he sneered. “My ship will wear the J’Ethl for all to see. The J’Ethl will be the last thing the Excalibur sees.”

“As the soon-to-be Chief in Command stated, The Excalibur must return to Federation space in order that she tell the tale, so you cannot destroy her!” Grader said sternly. “The captain of the ship is among the Chief's confidantes, and he will do anything in his power to get the delegation onto a shuttle and off that ship. That’s your chance then to shoot the shuttle or shuttles into pieces. The whole thing will be recorded by the Excalibur. As soon as she is back in Federation space, she’ll contact the admiralty and the ceasefire will come to an end.” He passed the Klingon and the Orion two envelopes. “Here is the course and heading of the Excalibur and the first half of the agreed upon payment. Two credit cards with one hundred thousand Credits for each of you. You will get the rest when the job is done. Know that the Chief knows how to show his gratitude for a job well-done. We are going to need some trustworthy men in the Borderland if we want to win the war. And when that happens, it would mean that the Klingons retreat from your territory and you are free to go about your business unhindered.”

The two partners grinned at each other; their companions looked satisfied.

“Right, my friend, then a toast to our victory!” D’nyrrs said, and he lifted his glass. The others followed his example, looking forward to sealing the delegation’s fate.

ST***ST***ST

The next day went by uneventfully for the most part. While the Excalibur raced to the rendezvous point to meet Lady Ania Morganth of the Third House of Betazed, the Enterprise patrolled her assigned sector. There was not a Klingon in sight, but everyone aboard remained cautious.

As were members of The Shadow, who were about to leave Aldebaran to have a closer look at the Borderland. Galven hoped that the declared ceasefire would give him the chance to find something out about the fate of his brother, yet he doubted it. Too much time had passed since his brother and the others had been kidnapped. The chance of finding them was very small. Still there was hope…
But first Galven contacted Wesley shortly after his talk with Khan and Kirk, telling the Commodore about the good news. But he had to make an official offer for Starfleet concerning the SDD, meaning he had to iron out the details with Khan, which took several calls and many hours. Afterwards, Galven sent the offer to the Lexington, including the analysis of the tests done aboard the Enterprise, a copy of the patent document and a well a hammered-out deal Wesley could present the admiralty. Bob promised to deal with the rest and that he would keep Galven update.

Wesley was well aware of the risk he took by helping a wanted criminal do business with Command by using a pseudonym, but Bob was determined to repay the man for saving his life and that of his crew. He believed in right and wrong. And he believed in Khan's promise. But if was going to get a fair trial, he needed money, and Wesley would support him. He owed the super-human that much. As well, Khan’s fierce protectiveness of Kirk touched Bob. There was something between his protégée, and the Augment that Wesley couldn’t name, but he felt that he had to help the two personal unhappiness; they'd both been through so much.

So he pondered very carefully which admiral he should contact concerning the SDD. The sudden appearance of the device would lead to questions – not the least of which how it came that the technology had been already tested aboard the Enterprise when Command had no knowledge of it.

Wesley knew that the half of the admiralty was on its way to the conference. Normally he would have contacted the Chief of Starfleet Advanced Technology (StAT), Rear Admiral Cartwright, at the Headquarters, but something stopped him from doing so. Jim’s thought that Section 31 still existed made him wary, and he never did completely trust Cartwright. Something was about this man made Wesley approach him with the caution of an unarmed man approaching a le-matya.

When the admiralty and the council discovered the truth about Section 31, Cartwright had been the first to fall under suspicion as a chief operative or a sympathizer, yet there was no proof to back up an accusation.

Still Wesley distrusted Cartwright, and if Section 31 was still operating in secret with Cartwright as a supporter, then the wrong people would find out about the SDD. Maybe they would find out about the man behind the device and those who hid and helped him. They would be not only in trouble; they’d be in danger. Wesley felt sick all over again when he remembered what Section 31 had done to the Augment and how the shadowy department had been ready to start a war just to establish its power. And he felt even worse with the thought that they might still be active.

No, he had to contact someone he knew who loathed Section 31 as he did and whom he could trust. That circle was few, and all were aboard the Excalibur at the moment. Harry Morrow, James Komack, Heihachiro Nogura, Thomas Shepard and Richard Barnett were old school; they valued honor and were true to their oaths. He could trust them never to have sympathized with Section 31 or
Wesley pondered his options – who to contact first. Then he made up his mind. Never go to the middle man when you have access to the boss, as the old saying went. That was exactly what Bob was going to do. Sitting in his quarters after alpha-shift, he contacted the bridge and requested a direct link with Barnett aboard the Excalibur. Being the commanding staff-officer had its perks. He could speak with the Chief in Command directly, sans protocols.

He didn't wait long; the screen on his desk came to life and showed the kind, open face of Richard Barnett, who seemed to be a little bit surprised. After Bob’s report, he'd be no less baffled, that was for sure.

“Good afternoon, Richard,” Wesley greeted.

“The same to you, Bob. Is there trouble out there, or is this of a more sensitive nature that you'd contact me directly?”

Wesley kept his expression calm and kindly before he answered, “Everything is fine here, and your assumption is correct. This is more of a private call though the topic is very important for Starfleet.”

That got him Barnett’s full attention. “You’re talking in riddles, my friend,” he said confused, and Bob chuckled warmly.

“I know but when I’ve explained everything to you, you'll understand why I had to talk to you first.” He bent forwards slightly. “What would you say if we had a device that could make the warp signature of a ship invisible to any sensor?”

He couldn’t help himself; he felt some amusement as Barnett’s eyes widened. The man was speechless for just a moment before a “What?” escaped his mouth.

The commodore nodded. “You heard me right, Richard. Something our technicians have been working on for months, years – has been built by a civilian. And it's already been successfully tested.”

For several seconds, Barnett stared at him, and then he frowned. “Where did you get this information? Who's the technician and who's tested it? You know that civilian tests have to be
repeated by Starfleet…”

“The man’s patent comes from Aldebaran and the tests have been done by Starfleet already – on board the Enterprise, to be precise.” He held a neutral expression when Richard’s jaw dropped.

“What?”

Bob made an affirming gesture. “Commander Scott, chief engineer of the Enterprise, informed me that he got the instructions for building the device from a civilian technician. He wanted to test the SDD – the Sensor Disturbing Device they call it. After I had learned how it worked, I gave my permission even though I doubted it would work. It did Richard! It worked during the Battle of Aldebaran. Neither our ships’ sensors nor the Klingons’ were able to detect the Enterprise. They only fired when she was in view. She also used it to patrol along the new border of the former Neutral Zone and was able to observe the enemy’s fleet when it intruded on Federation space and headed for Aldebaran.” He took a deep breath. “The device works – no sensors can track the Enterprise when the SDD is on. And I think this is exactly what we need, even if we end up with some semblance of a peace deal. A ship that can’t be tracked is always an advantage. After all, we’ll have to deal with the Romulans sooner or later, as well as others who are neutral at best.”

Barnett looked at his long-time friend thunderstruck, and then Bob’s words sunk in. “Are you telling me that a civilian tech was able to construct something all our engineers couldn’t?”

Wesley smiled. “I don’t know how we didn't know, but you know how civilians just don’t have the constraints we do. Or maybe a fresh pair of eyes was needed to see the problem without the preconceived notions we have.” He bent forwards slightly. “I’ve got the test results from the Enterprise and Commander Scott’s records. I also put together a summary of the sensor’s operations in connection with the visual records of the battle. You’re going to see the Enterprise come into view, but the sensors can’t see her. And she was hit fewer times than the other ships even though she had tactical command of the battle and was squarely in the middle of the volleys. The automatic phaser target locks and photon torpedoes require sensor data, but when the sensors don’t see anything, you have to fire manually. That’s why the Enterprise got away with proportionally less damage than the other ships in the battle space.”

A mixture of a snort and a chuckle came from Barnett. “I don’t believe it,” he whispered. “There we press our engineers, give incentives and then…” He shook his head. “Who is this man? How did he get the Enterprise to do the testing?” He frowned again. “And why was Command not informed sooner?”

Bob knew Richard would ask these questions, and he was well prepared. “The man is a friend of Mr. Galven – the head of The Shadow. We made contact when the militia aided in Captain Kirk’s rescue. Mr. Scott was first very doubtful and did a few tests before committing to something more
official. After I had reviewed the information, I gave my permission which resulted in the Enterprise’s successful patrol and her coming out of the battle relatively unscathed, we all were convinced.”

This time, Barnett rolled his eyes. “Why is it always the Enterprise?” he asked himself more than Bob. Then he addressed the Commodore again. “Have you seen the device?”

Wesley nodded. “Yes, during my inspection after the battle; Commander Spock and Commander Scott showed me the SDD. They had trouble with it because of its link to the deflector shields that were inoperable for a bit, but they fixed that problem. It went online two days ago. It’s connected to the auxiliary power now and runs flawlessly.”

Richard watched him closely, before he slowly replied, “If this SDD is as good as it sounds, then it’s exactly what we need. Not only if the Klingons insist on war, but also for our patrols along the Neutral Zone and the Romulan border. It could also prove useful in exploration. Many civilizations have the technical know-how to scan space around their home planet, and if our ships are invisible to their sensors, then we can observe them without being revealed. It will be a very useful tool as far as the Prime Directive is concerned.” He grimaced. “Even for Jim Kirk as long as he remembers to turn the damn thing on and manages to stay off of the planet's surface.”

Bob chuckled. “He was young – still is – and his best friend and first officer's life was at stake. I know the protocols don't make allowances when it comes to the Prime Directive, but I can understand Kirk's position. Our humanity should not be left out in the cold because of rules. It would have further damaged the recovering population of the Vulcans and surely hurt our relationship with them. He and the Enterprise’s senior officers stopped Nero. And without that team, her accomplishments these last two years would not have been possible.” He leaned back in his chair and brought the conversation back to the topic at hand. “Concerning the SDD, I’ve got a copy of the patent as well Mr. Scott’s analysis, and a short presentation. I’ll send them to you for a look.”

Barnett nodded. “I'd appreciate it. Like I said, if it's as good as it sounds, then we should make an official offer to… What was the man’s name?”

“I haven’t given you his name yet. Evan Brendon.” Wesley revealed, using the name Khan had used when he got the documentation to leave Earth shortly after his escape from the SBI lab. The Augment didn’t tell the commodore how he got the documents, and Bob thought it better to leave it that way. He had a feeling that he shouldn’t know every detail of the super-human’s doings.

The name meant nothing to Richard. “I've never heard of him before. You said he was a friend of this Galven, the head of The Shadow. Does he belong to the militia?”
“Not anymore,” Bob answered truthfully. “As far as I know he's stepped away from the group to put his efforts into the SDD.”

“Right,” the Chief in Command grumbled. “As much as we all owe The Shadow, they still operate outside of Federation law. Doing business with them could give some people the wrong idea.”

“Richard, in times of war ‘legal’ is a term that loses its value,” Bob reasoned. “Thanks to this man’s development, we were able to prevent the Klingons from annexing not only Aldebaran but also every planet system between K7 and Betazed. It's probably the only reason the Klingons decided to come to the table. And, by the way, the owner of the shipyard at Aldebaran, Mr. de la Vega-Martinez, has his little run-ins with the authorities, but we continue to do business with him. I see no reason why Command shouldn’t consider business with a civilian technician who had a part in the rescue of one of our captains and who managed to lay the foundation for a successful defense against enemies of the Federation.”

Barnett sighed. “You are right – of course.” He rubbed his jaw. “Still you should have informed me sooner. That the Enterprise’s engineer wanted to run the tests first is understandable, and then Aldebaran happened, but it's been over a week, now. Why…”

“Mr. Scott first wanted to make sure that the SDD could work on auxiliary power. That way he'd be sure that the shields' operability would not affect the operability of the SDD. They could only run the simulations and test after the Enterprise’s repairs. Oh yes, that reminds me, Mr. Brendon also had to complete the technical manuals and documentation.” As he caught Richard’s baffled expression, he chuckled. “As far as I understand the man is a tinkerer – first work then the necessary paperwork.”

Barnett rolled his eyes. Civilians! It was always the same with them. “Well, send me the reports and the presentation. I'll check them and then contact Cartwright.”

Bob held his neutral expression. “Sir, with all due respect, I think protocol should be - umm - abridged in this cast. If the StAT gets involved, it'll take weeks to get the device past the red tape and anywhere near a ship. You know Cartwright. He needs time, and he takes his time – especially if it has anything to do with civilian technology. Forgive me, but you are going to be unavailable for almost three weeks, and the purchase has to be authorized by you in person. With the looming threat of a break-down in diplomacy, I recommend that the ok be given, and I'll inform Cartwright afterwards. After all, the purchase comes out of his budget.”

A sigh escaped Richard. “You know that I don’t like going over my colleagues' head. It's the fastest way to burn a bridge. But I get your point, and I agree. If anything goes wrong with the peace talks, we'll be trading phaser blasts in a matter of hours. We need that device.”
“Exactly,” the commodore affirmed.

Barnet pursed his lips. “I agree that we should be prepared for the worst, which does mean we bypass official channels. Cartwright will be angry, though.” He sighed. “Any idea how much Brendon wants for his bit of magic?”

“He’s named a price. It includes instructions for installation on a Constitution-class ship, the tech manual, and the prototype currently on board the *Enterprise*. Permission for mass production is extra, and his terms include continued rights to work on the device enhancements.”

“What?” The Chief in Command bent forwards. “He wants to have a say in what we do with it – after he’s sold it to us?”

Bob knew that this was one of the critical details he would have to make work. It was one of the few things that would make Command think twice before they sentenced the Augment to some God-forsaken colony. If Khan were needed to further develop the SDD’s capabilities, then Command would bargain for his freedom in exchange for his services.

“It’s only logical,” he said carefully. “He constructed it. He’s the one who knows its capabilities and its potential best. We’d be crazy to turn down his offer.”

“Yeah – and it ensures he keeps collecting a paycheck,” Barnett grumbled.

Bob laughed quietly. “He wouldn’t be the first, and he won’t be the last.”

Richard murmured something under his breath. “Send me what you have and I’ll discuss it with Nogura and Morrow. Komack and Shepard too. Nogura knows a thing or two about tech. If he is O.K. with it, I see no reason we shouldn’t take the man up on his offer. I’ll keep you updated.”

“Thank you, Richard,” Wesley smiled. “I’ll send you everything in the next few minutes.”

“Okay, but don’t expect my answer before tomorrow. We’re nearing the rendezvous with the Betazed ship, and I’ve got the honor of welcoming Lady Morganath in the name of Starfleet.”
The Commodore grinned. "Well, it could be worse. I’ve seen pictures of her. She is beautiful."

"Yeah – most of them are; I also know they make overtures on anyone they find attractive. I'm just not that kind of guy."

"Yeah, but it would mean that you still got it," Bob teased, earning him a glare from the Chief in Command that wasn’t as serious as it seemed as he tried to make it.

"Thanks for the compliment,” Barnett grumbled sarcastically. “Send me your reports and you’ll hear from me. Have a nice day.”

“Same to you, Richard. Wesley out!”

Satisfied with the outcome of the conversation, Bob smiled to himself as he transferred the information to Barnett. He knew that the admirals would be ecstatic after they read them, and eager to get their hands on the device. Then he chuckled to himself. ‘Dear God, Bob, you're getting crazy in your old age. You're helping a wanted man fight your good ol' boys' club. But it's the right thing to do, I suppose – like Jim said.’ He shook his head. ‘Really, Kirk, as young as you are, you're showing us old guys what's important in life. Make it right no matter the cost. I hope everything turns out the way you want it to. You're playing a dangerous game, my friend, and I don't want to see you hurt again.’

ST***ST***ST

Wesley didn't know how dangerous the ‘game’ was that Kirk had been playing. The crew knew a civilian technician was aboard testing new device with the chief engineer. The new crew members were told about the civilian, and they didn’t ask any questions. It wasn’t unheard of for civilians to be aboard a ship working with new technology they might have developed, or as scientists.

It piqued Philippe Nureaux’s interest. Luengo hadn’t mentioned a civilian aboard the Enterprise and after all the data the admiral gave him, Nureaux would have expected this little detail. After all, the Augment was a ‘civilian’. So could this be a clue as to the Augment's whereabouts?

Very carefully, Nureaux attempted to gather more information about this ominous ‘civilian’ and found an excuse to visit Engineering the next day, but he didn't see anyone that was not in a uniform. Several hours later, after shift’s end, he asked a junior engineer about the civilian only to find that the mysterious man was not in Engineering. He was in his quarters going over reports. The lieutenant
didn’t give up. No one could stay hidden forever, even on a ship as large as the Enterprise.

Nureaux was assigned to the alpha shift, and so his schedule was the same as the captain. If the captain were hiding a criminal aboard his ship, then he’d be more likely to find him when Kirk was off duty. Perhaps Kirk was spending time with the enhanced man.

Following Kirk wouldn’t be easy; he could be found out any number of ways, but after two days Nureaux realized that he had no other choice. Philippe gave himself a difficult task. The following day after the alpha-shift, Kirk didn’t go to the deck where his quarters was located. When Nureaux lingered near the turbo lift a bit too long, he received a few odd looks and had to leave.

Frustrated he went to work out his stress on the recreation deck. This time, Lady Luck showed her face; he met the captain.

At the same time as Wesley was speaking with Barnett, Kirk came down the corridor and was headed straight towards the lieutenant. Stopping to salute, Nureaux was the picture of the dutiful officer. “Captain!” he greeted with feigned respect, and Kirk looked at him before stopping.

“Lieutenant Nureaux, still on duty as I see.”

“Yes, sir, shift ended, but I have a few things to finish up.”

The captain, who was about his age, smiled openly. “I won't stop my crew from doing their duty, but free time is important. Don’t deny yourself down time, Lieutenant.” Kirk cocked his head. “You’ve only been here two days. Is everything all right? Do you have some questions?”

Surprised, Philippe looked at him. He’d never heard of a commanding officer asking a subordinate how he was doing. Comradery… Luengo and Norton had told him that this was Kirk’s leadership style, but only now did he grasp their meaning. He couldn’t say that he disliked it. Kirk may be friendly towards his crew, but he demanded respect and obedience like any other captain. The only difference was that Kirk seemed to care for his crew. Why would he risk it all for a veritable demon in human form? ‘I don’t believe it! He’s such a good captain; his crew loves him. Hell, the whole Federation loves him. And he goes and conspires with a wanted criminal! What a waste – what a shame!’ He answered aloud, “Thank you very much for your concern, sir, but everything’s all right. I can’t speak for all of us, but as far as I’ve heard everyone’s content with their duties and the welcome aboard we got.”
Kirk’s smile widened. “That’s good to hear. If you have any problems, please don’t hesitate to let me or the first officer know. We’ll make time. Take care,” he said.

“Same to you, Captain,” Nureaux answered, swearing under his breath as he watched Kirk leave. He glanced around. ‘Where did this corridor lead? Ah yes, crew quarters, the ship’s laundry, Recreation Deck 6 and... auxiliary control.’

‘So, what had been the captain’s business on this deck? Was the Augment hidden here?’

Striding determinedly down the hallway, he passed the open door to the auxiliary control room where one of the cadets, Riley he recognized, and the Russian, Chekov were examining a station. They were talking about something quite interesting.

ST***ST

“So, you know ze keptin from earlier times?” The Russian accent was easy to place. He must be training some of the cadets in his off-time. Now he was showing the helm and nav station in the auxiliary control room which was offline at the moment.

“How... How do you know?” Kevin stared wide-eyed at the other ensign.

“Ze way he spoke to you a minute ago, he was relaxed and zere was zis twinkle in his eye zat he has just for his friends.” Pavel straightened up. “I've only known him for two years, but it is long enough to recognize zose signs. And you had zis smile on your face as he came in. So – you know him not just as our keptin.”

Riley sighed. “Jim was right – you are a whiz-kid!”

Promptly Chekov rolled his eyes. “Nyet – I simply put two and two togezer.” Expectantly, he glanced at the other young man who just a little older than himself.

“We were kids. He was fourteen; I was seven when we met,” the Irishman began carefully. “He... He helped me during a very hard time – saved me, really.” Riley went silent, not ready to reveal their shared history on Tarsus IV.
Pavel grinned at him. “Zat’s just what he does – helping. And he demands only what he is willing to do himself.” He chuckled. “No wonder zat ze whole crew is behind him.”

Kevin nodded. “Yeah, I know what you mean.”

Pointing at the navigation console, Chekov suggested, “Ready for ze next lesson?”

“Definitely. It’s a thousand times better than reading computer records.”

Both laughed; unaware of the silent listener outside.

Philippe had heard enough and quickly walked away lost in thought. So, the Irish boy was a childhood friend of Kirk. The captain obviously trusted him. Maybe Riley was the route to the Augment. He only had to find a clever way to get the information he needed. Perhaps he could gain the cadet’s trust.

TBC…

Chapter End Notes

Sooo, the trap is about to spring – Section 31 is a step ahead of everyone else. Spies in Borderland, aboard the Enterprise and at the Excalibur. And even if Jim and the others are cautious they can’t know how close they are to find themselves in deep water.

In the next chapter Styles is going to begin and to end his given mission – means, the Excalibur will find herself within a battle none of the origin officers could have foreseen. But not only the Excalibur is about to face trouble. There are still the Klingon cousins out and they have not only the new cloaking device, but they also want only one thing on Kirk and his friends: Revenge. And fate seems to be on their side for once.

I hope you liked the new chapter, and – again – I’m sorry that it took so long for the update.

I would be very, very happy to get some more reviews to know what you think of the story’s progress.

Have a nice rest of the week,

Love
Yours Starflight
Chapter Notes

Hi, my dear Readers!

And once again I can only say how happy I am that you still love the story so much. Thank you for all the comments and kudos. And if you thought the rollercoaster is already moving then wait what happens within the next chapters. I think at the end of the newest installment there will be a big uproar from you all (snicker). Cliffi-warning here – and you know, if I warn of a cliffhanger it really is one.

Therefore no-more words anymore,

Have fun,

Yours Starflight

See the end of the chapter for more notes

Chapter 46 – A mission to be fulfilled

The next day, Admiral Richard Barnett felt more uncomfortable in his own skin than he had even as a cadet. No, it had nothing to do with the arrival of Lady Ania Morganth of the Third House of Betazed yesterday, who was beautiful in every sense of the word with her honey-dark hair, midnight-colored eyes, warm voice. It also had nothing to do with Gav mocking and provoking Sarek of Vulcan at every opportunity so that Barnett finally felt it necessary to interfere; sending the angry, spitting Tellarit away. It earned him a glance of relief (almost) from the Vulcan ambassador. Richard’s unrest was also not due to the growing tension within the delegation as the Excalibur headed for Borderland.

No, it was a deep, nagging gut feeling that kept the Chief in Command on edge. And he realized the other staff officers felt the same.

Despite that feeling, Shepward, Komack, Morrow and Nogura were speechless when he presented them with news of the SDD and its documentation. And then they were ecstatic. Nogura, who understood technology best in the group, went over the documentation several times, read the reports over and over again, and even discussed it with the Excalibur’s chief engineer.

And thus it went, Nogura and Komack insisted that the documents should be sent do Cartwright for further examination. Barnett knew that they were right, and he contacted his colleague at
Headquarters via subspace transmission, transferring everything directly to Cartwright’s terminal together with the message that the deal had to be made before they reached the conference. The transmission needed four hours to reach Earth. And when it got there, it took Cartwright by surprise.

The staff officer, whose family came from Africa to England several generations ago, had been back from lunch no more than ten minutes before a message came Priority One. After taking it all in, he sat there with his mouth hanging open. The device – SDD – was simple as it was brilliant. This much he could tell.

Quickly, he called his technical staff together which included several engineers, and they all confirmed one thing. The device would work. And it would serve Starfleet very well should the peace talks fail and the war continue.

Wesley was right. Admiral Jonathan Cartwright was not an impulsive man, yet he had to admit that the Chief in Command was right. There were only two or three weeks left to until Starfleet might need that SDD to win the war. The process had to be completed quickly.

Seven hours later, an answer was transmitted back to Barnett’s terminal aboard the Excalibur. The sound from the terminal ripped the Chief from his much-needed sleep. The message was short. ‘Tech staff confirms device should work for us. I recommend purchase of prototype and further testing. Upon positive review of device, arrange contact with developer for further negotiation. Required sum of credits is awaiting transfer. Have reported information to Council. Signed, J. Cartwright, Rear Admiral.’

Nodding to himself, Barnett sent a short message to the Lexington, and another one to his four colleagues, summoning them to a short meeting before breakfast, and then he returned to bed.

The next morning, as the Excalibur neared Borderland, five admirals sat together in Barnett’s quarters. Richard told the group about Cartwright’s decision. The four staff officers were pleasantly surprised that their colleague had acted so quickly.

“So, Jonathan agreed to circumvent the usual route and got the two million?” Morrow wanted to know before he shook his head. “If someone would have told me that we could make such a big move in two days, I would have called them crazy and had them committed. Nothing is slower than Federation bureaucracy, but here we are, buying a device for two million credits easy as if I were walking into a store for a D’Baren suit.”

Nogura looked at him; amused. “You’re wearing suits from D’Baren?” he asked teasingly.
“Do I look like I make a million a year? A shirt costs a months salary, at least,” Harry grumbled while the others chuckled. D’Baren was one of the most famous and expensive fashion designers in the Federation. An admiral couldn't afford his clothing.

“Yes, we bought a device for two million. To be honest, we would have paid more, but don't tell Brendon. He wants more for serial production of the device.”

“As far as I understood, he's demanding not only credits for the serial production, but he wants to be the principal lead on any further developments,” Shepard murmured.

Barnett nipped at his coffee. “Nothing unusual if you ask me. Whoever this man is, he seems to be able to bargain.”

“I checked our data banks for a man named Evan Brendon. He isn’t there,” Komack informed no one in particular. “Not even traffic tickets.”

“In other words, a decent citizen of the Federation,” Morrow sighed.

“Geniuses stay hidden until they have something to share with the world. That’s nothing new,” the Chief in Command shrugged. “Bob is convinced that this SDD is exactly what our engineers are searching – have tried to perfect for years. Even Cartwright seems to think so. This Brendon found the solution, and we need it with or without the war.”

Nogura nodded slowly before he looked up from the screen holding his attention. His dark, almond eyes shone with excitement. “I watched the Lexington’s recordings and read her data from the battle near Aldebaran. If it weren't for that, I wouldn’t believe it, but here it is. A device that shields our ships from sensors! And this man has a patent for it. Two million credits isn't too much for it. As for his other demands – well, I can understand.”

“How can we contact this Brendon?” Komack asked, and Barnett grimaced.

“At the moment, the only contact is between Wesley and Brendon’s assistant on Aldebaran. Brendon is staying in the background – unusual but not unheard of.”

Morrow pursed his lips. “Still… I want to meet this man before we have any further business dealings with him.”
“He’ll have to show up in person sooner or later when he wants to have his say in upcoming projects over the next years,” Nogura mused. “We shouldn’t press him. If he wants to stay in the background, let him. He’ll come to us when he’s ready. Starfleet’s honor has suffered enough after the mess with Section 31 last year. Compelling a civilian into something we can’t legally compel him to do – well, there is no way in hell the media won’t get wind of it.” He leaned back in his chair. “And, by the way, whoever this guy is: He did us a big favor by developing and…” He stopped as the door buzzer sounded.

“Enter!”

The door slid open revealing the newly promoted captain of the Excalibur. “Admiral,” Styles greeted before stepping in. He stopped in surprise at seeing the group of admirals in the room. “I apologize. Am I interrupting something important?”

Barnett smiled and shook his head. He wasn’t too fond of the young man. He had an air of arrogance that Richard disliked on principle – yet he had to admit that Styles had performed well over the past days. “Not at all, Captain. This is just an informal chat before breakfast with our guests.”

Styles nodded and offered Barnett his PADD. “You asked me to give you a full report on all stations’ status, sir.” He clasped his hands on his back. “I’d like to further report that Ambassador Gav has stayed away from Ambassador Sarek since he was counseled on diplomatic behavior.”

“So that’s why it’s so quiet on board,” Komack almost mocked. “Gav is louder than a pack of Tellarits!”

Barnett quickly checked the reports and handed the PADD back. “Very good, Captain! You’ve got everything under control. And congratulations. The accomplishment of such a promotion is something to be proud of. You’re doing very well.”

The young Englishman lifted his chin. “Some things are just in the blood, sir. My family has been linked to the service for centuries.”

There was it again – the undercurrent of conceit. Barnett simply ignored it. “Right. Well, I see it’s time for breakfast. Will you be accompanying us to the officer’s mess before your shift begins?”

“With pleasure, Admiral,” Lawrence answered. He let the five staff officers pass and followed them
out of the room.

Captain Styles’ curiosity woke. He had interrupted something important; this much he could tell. Something was going on between the five admirals who had weakened Starfleet. They certainly were planning something now. Why else would they all be together? He had to find out what they were up to and soon, because, by midday, it would be too late; they’d all be gone.

He listened to the steps of the admirals and for a moment something stirred in him – a mix of hesitation and guilt. An unwilling accomplice – he felt he was accompanying them to what may be the last meal for the delegation.

ST***ST***ST

“You have to let go of your active thoughts, Jim. Tune out the noises around you – the hum of the engine. Feel the air on your skin; feel the beating of your heart. Feel the ground beneath your feet; breathe deeply, and then listen only to me and your own body.”

Khan’s velvet baritone washed over Jim Kirk like a warm wave. It was an hour before the start of alpha shift, and the young captain stood in the middle of a small room on the sports deck, dressed in his workout clothes. His eyes were closed, and he tried to think of nothing – difficult for a high-energy man like him. He tried to master his busy thoughts.

On his left, the Augment watched him, smiling to himself as he saw the younger man relax. Replacing one’s thoughts with only what was going on inside is difficult, especially the first time. But the practice was necessary for Tai Chi – awareness of the internal rather than the external. A meditation in and of itself. After he was certain that Jim was completely relaxed – well, as relaxed as the spirited captain could be – Khan gently ordered, “Lift your arms slowly as you breathe in deeply and let them widen; be cognizant of your lungs expanding as you inhale. Hold the breath, hold it, hold it – now breathe out and let your hands come back to center.”

Kirk did as he was instructed and sensed a soft prickling deep in him.

“Repeat once more, and then you will slowly, slowly and deliberately push your arms out and pull them back in as if rolling them over a ball, in time with your breath.”

Again the young captain followed the commands. Nien had told him about the ancient Chinese belief in qi – energy flow through the body traversing energy points along the body. Tai Chi practitioners
sought to support and improve the flow of energy in order for health and wellness. It calmed, refreshed and rejuvenated. All things Kirk needed after last night and these last months.

The intercom beeped, interrupting Jim's concentration. “Bridge to Captain Kirk!”

Groaning, Jim went to the next terminal to answer the call. “Kirk here!”

“Sir, I’ve got Commodore Wesley for you in the line.”

The both lovers exchanged a glance, frowning. “Put him through, Ensign,” Kirk instructed; a moment later they heard Bob’s warm voice.

“Jim?”

“Yeah, it’s me.”

“Is Mr. Singh with you?”

Khan stepped beside his mate. “Good morning, Commodore,” he said calmly. “How can I be of service?”

“It’s rather the other way around, Mr. Singh. I got a message from Admiral Barnett last night. Starfleet will accept your offer. They want to buy the prototype and all associated tech manuals.”

Jim and Nien looked at each other; relieved. Kirk even looked joyful at the news.

“That is good news, Commodore,” the Augment answered; his voice betrayed a hint of joy. “I’ll inform Galven. When do you think they will transfer the credits?”

“Barnett said that the StAT, the office responsible for the purchase, agreed to the deal. Their chief already requested the money be sent. You can expect payment in the next two days.”
A real smile broadened over Khan’s face. “Very good. As soon as the funds are released to the account, Galven will send you the documentation via subspace-transmission, as well as the documents naming Starfleet as the new owner of the SDD prototype. And my other demands?”

Wesley chuckled. “Well, Barnett wasn’t too happy, but that’s to be expected since he is dependent on you now, Mr. Brendon. I don’t think it will be a problem though as soon as he is convinced of the SDDs place in Starfleet. And the Council will be happy with the enhanced technology.”

A snort escaped the Commodore. “You’re welcome – both of you. I do wish the whole thing was history already. Our necks are too close to the noose for my liking.”

“Everything will turn out just fine,” Kirk said cheerfully. “I have to believe in a year we’ll all be together having a drink and reminiscing about this.”

“Your word to God’s ear, Jim,” Bob sighed. “Well, have a nice day you two.”

“The same to you, Commodore,” Khan answered. “My deepest thanks for your support.”

“No problem, Mr. Singh. Wesley out.”

As Kirk switched off the intercom and looked at his beloved, he saw the relief written plainly on Nien’s face. Without hesitation, he pulled him into his arms and hugged him tightly – a gesture that was instantly mirrored by the Augment.

Neither Wesley nor the two love-birds could know that the next days would be another in a long line of trials past and to come.

And it would start soon!
Captain Lawrence Robert Styles sat in the captain’s chair and watched the screen. They had crossed the border into Borderland five hours ago and had passed Orion two hours later. They were deep in dangerous territory only made safe by the current ceasefire. Not for long. Styles’ tension grew; the show was about to start. He’d and his ship would be there when the curtain fell, but not the delegation.

But his conscience pricked him. He admired Vice President Batari Whitman, and Lady Ania Morganth was every man’s dream. He’d like to get to know her better, yet her hours were numbered – something he regretted.

He also knew that she regarded him with suspicion. Knowing the race were empaths, he didn’t hide his nervousness too much. He was young; this was his first command. They were deep in enemy space, of course, he was nervous about the potential challenges ahead. During the banquet the evening before yesterday, he realized that she took his unrest as just that and nothing more.

And challenges were what he would face in the next few minutes. His ship would be seriously damaged, and he could only hope that Luengo’s allies would stay true to the agreement and spare the Excalibur at the last moment.

His adrenalin raised as his science officer turned around in his chair. “Captain, our sensors are picking up movement in subspace – warp-signatures.”

Styles braced himself. ‘Here we go!’ he thought and turned his chair towards the upper bridge section. “Class?”

“I’m not certain, sir. It could be…” He adjusted his sensors again and frowned. “Klingon, sir. Three ships, to be precise. They're not cloaked.”

“They’re getting closer,” the helmsman Martin Wilson reported, watching his display. “Heading straight towards us.”

Styles nodded. “Well, let's see if this ceasefire is as good as the padd it's written on, Mr. Wilson,” he addressed the helmsman, “Impulse drive. Lieutenant Li, open a frequency and hail them.”

The comms officer nodded. “Excalibur to approaching Klingon ships, come in, please.”
No answer. Li tried again, but the result was the same. The Klingons didn’t return the hail.

“That’s odd,” Styles murmured, exchanging a glance with his first officer Brain Thammerson, who replaced the *Excalibur*’s usual first officer. “Put me on, Mr. Li!”

Li adjusted something at his console and nodded towards his captain, who raised his voice, “Klingon ship, this is Captain Styles of the USS *Excalibur*. Greetings. We’re on a diplomatic mission and have the permission of your High Council and the Orion Syndicate to pass through Borderland. Please, respond!”

At that moment the lift doors opened, and Barnett stepped on the bridge. He looked tired; the gut-feeling of foreboding that hadn’t left him for the last three days kept him awake most nights. That same instinct made him head to the bridge when he felt the *Excalibur* slow down.

“What’s the ma…?” Barnett stopped himself when his was signaled to be quiet. Li signaled that the frequency was open.

Styles looked back at the turbo-lift and tensed when he saw his superior standing there; then he relaxed. This could play into his hand if the Chief in Command witnessed what was about to unfold.

“Klingon vessels, this is the USS *Excalibur* under the command of Captain Styles. Answer our hail, please!” he repeated. Again, no answer. He signaled Li to kill the transmission.

“Klingons?” Barnett asked as soon as he could speak openly again. He stepped down the stairs and headed straight towards Styles.

“Three vessels, Admiral. They’ve been approaching us – closing the gap between us for some minutes. They’re not answering our transmissions. They…”

“There they are!” Wilson reported; tension mired his voice.

A bird-of-prey and two older D4-cruisers materialized not far away as they dropped out of warp.
“They have their deflector shields up and – Captain, they are aiming at us!” the science officer shouted.

“Shields up; ready to return fire!” Styles said. “But hold until they fire at us first. It's still a ceasefire; they could be postu-”

The bird-of-prey on the screen shot two torpedoes in their direction. The *Excalibur* shook with the impact; the shields prevented serious damage.

“God dammit, what're they doing?” Barnett growled and turned towards the comms station. “Li, try to hail them again and demand an explanation. Why are they firing at us? We've got the fucking diplomats for Christ's sake!”

“Captain, Admiral, I've identified one of the ships,” the science officer called. “It’s the *J’Ethl*, Lord Kor’s ship.”

“The computer's identified it as the *J’Ethl*, sir!”

Barnett grew pale beneath his dark skin. “Has Kor lost his mind?”

“Incoming again, sir!” the helmsman reported. Quite redundantly as torpedo shaft at the front of the vessel glowed when it spit its deadly load again. The *Excalibur* shuddered again; while the comms officer reported, “Automatic system's reporting damage.”

“Shields down to eighty-nine percent,” the navigator, Lieutenant Joe Kramer, added.

“Return fire!” Barnett ordered. “Lieutenant Li, send message to Command. Tell them that we are under attack in the middle of Borderland – that it's Lord Kor. We need to warn the fleet that the ceasefire's a trap. But they gotta wait for orders before firing on any Klingons. We don't know if he's acting alone.”

“Aye, sir!” Li turned around to prepare the message, then frowned. “Sir, they're jamming all the
frequencies. And there's interference. The bandwidth is – unavailable.”

Instantly, Thammerson was at his side, and he checked the comms console, too, before he nodded grimly. “No way to send a message via sub-space transmission, Captain!”

The *Excalibur* continued to return fire, but the Klingons broke formation to mount an attack on all three sides. It was only a matter of time before the shields would give.

ST***ST

Five decks below, Sarek of Vulcan caught himself on the wall as another hit shook the ship. They were under attack; this much was certain.

“A Klingon’s word is to be regarded with caution,” his assistant Sokel said; he cited the Head of the Vulcan Council, T’Pau, after she learned about the ceasefire and contacted Sarek.

Spock’s father nodded. “The Lady T’Pau is correct – again. Yet we do not yet know who our attacker is. It may be the Orions attacking us. In that case, it would mean that the Klingons did not betray the…”

Again the ground shook hard enough to bring the two Vulcans to their knees. It felt as though a knife went into Sarek’s right side and he frowned. ‘*No, not now!*’ he thought, knowing the signals far too well. Without his assistant’s noticing, he pressed one hand to his side against his heart. The pain faded, and he took a deep breath before rising to his feet. Sokel was already up and watched him, ready to offer his help, but the older man stood gracefully as the events were the most mundane in the world.

“Ought we remain in our quarters or should we…”

Sarek interrupted his assistant calmly. “We would only be in the way. Let the crew handle these matters. If we are needed, the crew will let us know,” he said quietly while he concentrated on his inner shields and his body, willing the lingering pain around his heart to retreat. Months ago the healers revealed that this pain would become a medical concern requiring treatment. At this moment, he felt that day was coming sooner rather than later.
“That’s our biggest problem!” Scotty pointed to the connection between the SDD, and the main and the auxiliary power. “We can only link it ter one of the two energy sources. Together, they overload her, and she crumbles.”

Khan, who had been called to engineering five minutes ago, frowned. Bending forwards, he looked around the chaos of cables only an engineer could follow. “I think we should install another overload fuse between the ship’s main power and the SDD. And then we could reroute the excess power to one of the generators.”

“Hm!” Scott cocked his head. “That means we'd have to remove the SDD completely, install the fuse and mount her again.” They looked at each other, and Montgomery sighed. “Ter tell ya the truth, I donna want ter let the Enterprise be seen out here anymore than she has ter. Aye, there is that ceasefire, but I don’t trust it.”

“You have more experience with Klingons than I, yet I’ve come to understand that a Klingon warrior does not go back on his word. He would rather die than lose face so to speak. I believe a lack of honor in such matters is a fate worse than death,” the former dictator mused; he looked at the chief engineer in question.

Scott nodded. “Aye, that’s true, but I’ll eat my hat if there are not some Klingons unhappy about their council’s decision. Heck, Klingons rose up in rank after they murdered their superior. I wouldn’t put it past anyone ter sabotage the conference by breakin’ the ceasefire agreement. And there are enough Klingon commanders who would love ter tear our ship apart.”

Khan lifted both brows. “In that you are correct, Mr. Scott. But we solve the problem now before we face hostilities.” He activated the intercom at the terminal nearby. “Engineering to bridge.”

“Kirk here,” Jim replied. Warmth breathed over Nien at the sound of Kirk's voice. These fluffy feelings would be laughable for an Augment, but he was mated now. He was not his own and as such, these things they calmed and satisfied him – made him more content.

“Jim, we have to dismount the SDD for an hour to add some fuses. The Enterprise will be vulnerable during this time. Is that alright with you?”
“Hold one,” Kirk’s clear tenor answered, “Spock, what's out there?”

Another second of silence, then the Vulcan’s baritone sounded, “The long-range sensors show nothing within a radius of one parsec, Captain, except the Briar Patch and asteroid field nearby.”

“Right,” Jim answered, before he replied to Khan, “Engineering, go ahead but have her back online in an hour.”

“Yes, captain. Engineering out,” the Augment replied and switched off the intercom before he looked at Scott. “Well?”

The Scotsman sighed and took some tools. “Aye, let's do it!”

ST***ST***ST

Commander Koval of the BortaS looked at his science officer and his chief engineer. The men on the bridge were calm as they reported to their captain. The enhanced cloaking device worked flawlessly; they had snuck through Federation space right under the nose of two Starfleet scout vessels.

“Commander Noy from the MeQ’lw has added to our success; he met the Excalibur on her way into Borderland without being detected,” the science officer said. “Our ship was invisible to the Starfleet ship. It continued on its way towards the conference oblivious to the company.”

The conference – Koval didn’t know what to think of it, and the same went for Noy. He and his cousin were warriors. Each was of the opinion that the Federation, especially Starfleet, deserved death. Both lost family during Kirk’s assault on Qo’noS. Add to the list of victims the captain and his Augment friend, the deaths of their first officers and others they left in their wake. Both of them knew if given the chance for revenge on Kirk and the Qli-jagh, they would gladly take it.

In secret, Koval hoped that they would meet the Enterprise and its Captain Kirk. He had heard of Koloth’s veritable failure at Aldebaran and that Kirk and the Augment had been saved by Starfleet’s flagship as such the Empire’s greatest enemies were still alive. He wouldn’t hesitate to attack and show the High Council (and Starfleet) that the Klingons were stronger than ever; it would be the Federation to crawl and cry for peace in the end. He knew his cousin felt the same.
Dismissing his subordinates, he leaned back in his command chair and looked at the screen. The red light from his console reflected in a shimmer on his metallic sash and his harness.

All of sudden his science officer looked up. “Sir, we've detected a warp signature half parsec away between Elora and Tandar, near the asteroid field.”

Koval bent forwards. “Can you identify it?”

For a moment, he felt irritation rise in him as his inferior bared his teeth in a grin, but any anger at this behavior vanished when the man said, “It’s the Enterprise!”

ST***ST***ST

“Shields at twenty-eight percent, phaser bank 2, 5 and 7 are down, torpedo shafts 1 and 5 are useless, main power's at thirty-seven percent, auxiliary power is still functioning, but the output is fluctuating. Hull breach on decks 12 and 13, fire on deck 8 and 9.” Li looked at Barnett. He was sweating and bled from a gash on his temple. Harry Morrow arrived on the bridge looking ragged.

The Excalibur was hit again; her outer hull groaned as if in pain. “Losses, injuries?” Harry demanded.

“Medbay reports eighteen losses. The injured are too many to count, and they are still coming in. Four ambassadors are hurt too, but not badly,” Thammerson replied standing beside Li.

Styles knew that this was the moment he could end this cruel game. He didn’t want to have more loss – more death, more injury. Every woman and man aboard were fine Starfleet members; their death was necessary now, but he wanted their sacrifice to be as small as possible. “Commander!” he addressed the science officer. “Is there a planet or a planetoid nearby that we can at least breathe on?”

The man checked his sensors. “Only the moon Yaska at Yaraka, class L. Distance 0.8 light years.”

“Any information about the surface?” Styles asked.
“Not much, sir. The stratosphere has a strong magnetic field, yet the information in the data bank states that the surface is made up of solid rock, water, and the temperature is low but acceptable.”

The captain nodded. “Get us as close as you can, Mr. Wilson!” he ordered before he looked at Barnett and Morrow. The Excalibur shook with the force of another hit. “There is only one option. We have to evacuate the delegation, the admirals and you two.” Before the staff officers could protest, he added, “The ceasefire was a trap – a trap to get the most important diplomats and admirals out into the open to eliminate them. What would be left of Starfleet if you were all dead? Starfleet – the Federation – will be weak. And that’s what the Klingons want.”

“He’s right, Admiral!” Martin Wilson braved the comment but under the circumstances, he was right. After receiving an approving glance from his captain, he added, “The Klingons will use the opportunity of a Starfleet decimated of its leadership to overrun the Federation. You two and the other admirals have to survive, not to mention the vice president and the diplomats!”

Inwardly, Styles applauded Wilson. He knew that the helmsman was a part of Section 31, too, who had been transferred to the Excalibur two weeks ago. And, like Luengo, promised he’d get the man’s support when it counted the most.

Barnett balled his fists. Styles and Wilson were right. But he hated running away. Yet the lives of his colleagues and the delegation were more important than his pride. But they couldn’t leave the ship in the middle of the fight. The Klingons would destroy the escape shuttles in seconds.

That same moment the comms officer turned around. “Sir, the Klingons are hailing us,” he said.

“On screen!” Styles growled. He didn’t need to pretend to be outraged. He was. Luengo said that the Excalibur would come out of this in one piece. Although one piece wouldn't be without some damage.

“It’s a voice transmission only, sir. Should I patch it through?”

“Yes – and record everything. We're gonna need it.”

A moment later a rough, hard voice sounded from the speakers. “Excalibur, this is the J’Ethl, under the command of Lord Kor. Our sensors show that you can’t hold up much longer. Lower your shields and prepare for boarding!”
The officers stared at each other – a boarding party of Klingons on the *Excalibur*? That's insane!

Admiral Barnett took a step forwards. “Lord Kor, this is Admiral Richard Barnett, Chief in Command of Starfleet. The Federation and the Klingon High Council agreed on a ceasefire for the duration of the peace conference. You attacked without provocation. Explain yourself!”

“You do not have the latest information, Admiral. There will be no meeting…”

“But…”

“And there is no ceasefire. Surrender or we destroy your ship! You have five of your minutes to decide! *J’Ethl* out!” The transmission was ended, and a deadly silence filled the bridge.

Then Barnett balled his fists. “Lieutenant Li, try to send the message to Headquarters again. Maybe…”

“All frequencies are blocked again, Admiral,” the comms officer said quietly, clearly furious.

Styles took a deep breath – he was ready for the next step. He looked up at the two admirals. “Sir, this is your only – your *last* chance to leave the ship. Take two shuttles and split up as soon as you leave the hangar, head straight for Yaska. We’ll try for a surprise attack against the Klingons and lure them away. It’s the only way to ensure that at least one of you make it. We are going to try to reach Federation space to send the HQ a transmission and get reinforcements into Borderland again to pick you up.”

He met first Barnett’s and then Morrow’s eyes. His conscience would not let him feel good about any of this.

“I will not run like a scared rabbit from those bastards!” Richard gritted out.

“This has nothing to do with cowardice, sir. ‘The Chief in Command and his staff has to be kept secure in times of war at any price’. You know that’s the protocol. Sir, Starfleet needs you; the Federation needs you!” He saw the hesitation on both men's faces and addressed Li, knowing exactly what to do. “Ship-wide hail. Inform the delegation and the other admirals to gather in the shuttle-bay. Whoever isn't there in three minutes will have to remain aboard. It’s up to them!”
Li nodded while Morrow shook his head. “This is madness at best,” He whispered. “One of us should stay here with you, Captain. You don't have the experience and…”

“No two fights are alike. We learned that at the Academy. And I’ve got Commander Thammerson who is very experienced.” He glanced at his second in command, who also belonged to Section 31 as far as Styles knew. Brian nodded encouragement, and so Lawrence continued, “Only the outcome counts, especially in situations like this one. My crew and I will fight the Klingons to the last breath, maybe take one or two ships with us, but the most important thing is that you all have a better chance of surviving if you leave.” He rose. “Admirals,” he said quietly, “it was an honor being chosen to take you to the conference – the first chance for peace. It shouldn’t be the only one. Please don’t waste the chance of survival. The people of the Federation – they need you.”

Morrow took a deep breath. The bridge smelled of burning plastic, too much smoke, and sweat. “You’re a brave young man, Styles. You are a credit to your family. I hope with all my heart that you and your crew make it.” He offered his hand. “Kick ass and come back to get us, m’boy.”

“It would be my greatest pleasure, sir” Robert lied; then he shook Barnett’s hand. “Sir, if you get the chance, force the damn Klingons to their knees. They have no honor!”

Richard nodded. “Be careful, son! With any luck, we'll be in my office on Earth celebrating with a whiskey!”

“I hope so, sir!” Styles saluted, and the two staff officers left the command center.

Harry shook his hand, too. “We’ll see you soon, son!” he said quietly.

Styles nodded, and then he activated the intercom on the chair. “Bridge to shuttle bay. Is everything ready?” he demanded.

Commander Handers, the second officer and Chief of Security answered, “The delegation members are all here, including the injured, Admirals Komack, Nogura, and Shepard.”

Styles sighed inwardly in relief. The plan may have some rough edges, but it worked. “Right! Accompany them, Commander! If you make it to that moon, the delegation will need professional support and leadership to survive.”
Handers hesitated. “But sir…”

“That's an order, Commander!” Styles said sharply. Handers was loyal to Heldrom; he was an officer from the old school. He didn't need that guy aboard.

“Affirmative, Captain,” the other man replied, clearly reluctant.

“Right. Good luck, Commander!”

“The same to you, Captain!” Handers answered; then the link was cut.

“Mr. Wilson, prepare for evasive maneuvers. Mr. Kramer, I want a concentrated blast at the Klingons. I want the Excalibur firing with everything she has on my command.” He glanced at the screen – Yaska filled a quarter of it. He activated the intercom again. “Shuttle bay, ready for shuttle launch!”

“Aye, sir!” the chief engineer replied. “The men and women are all aboard!”

“Right.”

“Sir, shuttle-bay doors are open,” Wilson reported. “Shuttles are launching now.”

Styles took a deep breath. “Kramer, fire phaser bank 5.”

“Sir? Phaser bank 5 is not fully functional.” He looked over his shoulder at his captain and Styles nodded. Kramer couldn’t know his captain's true intention. The shot would be a sign to the Klingons. The shuttles were launched.

“That’s right, Mr. Kramer. The Klingons will think us done for, and when make to follow the shuttles, we open fire with all we have. It'll take them by surprise.” He sat down in the captain’s chair and leaned back. If everything turned out the way he imagined, then the shuttles would be destroyed in a minute, and they would be on their way back to Federation space with news of the Klingon
“Betrayal.”

“Sir, the shuttles are gone,” Li reported.

“Right!” Styles said, his voice low with tension. “Mr. Kramer, now!”

“Fuses installed,” Keenser reported and waited for Khan’s approval as the Augment quickly checked the little alien’s work.

“Very good,” he said calmly. “Mr. Scott, what about the connection to the bridge?”

The Scotsman looked inside the supply shaft between the SDD and its anchoring. “Seems ter be okay, but we’ll have ter check it.” He opened his communicator, and it chirped. “Scott ter bridge. Allistor? Do ya’ve contact with the SDD?”

A moment silence, then, “No, the switches aren’t working, Scotty.”

“Blast it!” Montgomery groused. “Why not?”

“I’ll have to dismantle the console or change out the switch we use.”

“Do ya need a hand?” Scott asked. “I dunna think the Cap’n will be too happy if we can’t getter ta work.”

“Correct, Scotty!” Kirk’s voice sounded. “We are stopping here instead of being on patrol. Send someone up to help Mr. Allistor.”

“Aye, sir!” Montgomery affirmed and closed the communicator. He began to wriggle backward. “I’ll go myself.”
Khan lifted both brows. “You are already in place for the test, Mr. Scott. With your permission, I will go to the bridge to lend Mr. Allistor a hand.”

The wriggling stopped, and Khan heard a relieved “Aye!”

Nodding at Keenser, the former dictator left Engineering and took the turbolift to the bridge.

A minute later Khan entered the bridge – the ‘brain’ of the Enterprise – for the first time. He had seen the bridge from the Vengeance, but he was surprised that the two control centers were nearly identical in size, even if the Dreadnought class ship was twice the size of the Enterprise. The Vengeance had been built to be manned by a minimal crew, and that included the bridge-staff. So there wasn't the need to increase the size of the bridge in proportion to the size of the ship overall.

The first observation that struck the Augment was the lighting – silver and blue. Well-lit and friendly. The atmosphere was warm due in large part to the care of the commanding officer for his crew. His depth of affection for them set the tone in that space. The large window display showed the depths and beauty of the galaxy – and, at the moment, a large field of asteroids. On their starboard side a stellar nebula, the Briar Patch, shimmered in a kaleidoscope of rose, pink and earthen reds – a sight to behold.

Khan met Uhura’s surprised gaze; Jim turned his chair around the moment he felt his mate’s presence, interrupting his conversation with Spock, who stood beside Kirk. Instantly, a smile spread over the captain’s face; Nien returned it. “Permission to enter the bridge, Captain?” he asked.

Jim tried to hide the affection he felt, yet the warmth in his eyes remained. “Permission granted, Mr. Singh,” he said lightly; their gazes stayed locked until the Augment lowered his head. He looked around and found Allistor at the engineer's station and headed towards him.

The second engineer grinned. “Thanks,” he said as Khan bent over the console.

“You are welcome,” Nien answered almost pleasantly.

Spock watched the two men at the console; his mouth turned down before he quickly steeled his expression.

“So, this asteroid field out there is interesting to you?” Jim came back to the topic his Vulcan friend
and he had been discussing; Spock nodded.

“I’ve checked the records against the read-out of our sensors, Captain. The asteroids are moving due to the effect of the Briar Patch rather than the gravity of a larger body.” He pointed at the flickering stellar nebula behind the asteroid field that no one had dared to explore before now. Every attempt to enter it via warp ended in a disaster. Transmissions were impossible and impulse drive seemed the only option in the strong magnetic fields, but the asteroids made an attempt far too dangerous. “It would be interesting to see the rate of change of the asteroids' relative positions from the last stellar chart created four years and three months ago.”

Jim shrugged. “We’re sitting here until our resident engineers over there are done with the SDD connection. Feel free to use the time as you see fit until we can resume the patrol.”

“Thank you, sir!” Spock nodded and returned to his station; watching Khan out of the corner of his eye; his wariness towards the super-human was still firmly in place.

The Augment’s hands flew, nearly invisible and with perfect precision as he made the new connections. Allistor assisted him while a junior engineer stood beside them, clearly astonished.

Finally, after several minutes, Jim’s curiosity got the better of him, and he joined the little group of technicians. “So, how’s she doing?” he asked.

Khan rose from his crouch beneath the console with cat-like grace. “Well,” he answered. “We will be ready in the next…” He stopped, and a deep frown appeared on his forehead; his eyes locked on something behind his mate. “Do we have a problem with the screen?” he asked, not realizing that he referred to the Enterprise’s matters as in terms of them – theirs.

Kirk turned around, as did Spock. For several seconds, Jim watched the large screen. It showed nothing unusual. “What do you mean?” he asked confused.

“Seven o’clock position,” the super-human replied, pointing to the area of concern. Now Kirk recognized to what Nien was referring. There was a distortion on the screen so slight that even the Vulcan missed it.

“Spock?” Jim addressed his first officer, who checked the computer as Sulu did.
“There is no error in the system, Captain,” Hikaru said.

“Sir,” the Vulcan added. “According to systems check, the screen is functioning correctly.”

“So the visual is showing something outside of the Enterprise,” Khan mused. “The question is, what?”

“Any reads from the sensors; emissions?” Jim walked to the science station where Spock watched intently his display.

“Negative, Captain.”

The super-human nodded. “Jim, when we distracted the Klingon fleet at Tammeron, they were able to follow our warp emissions despite the fact that we were invisible so to speak. That gave me the idea to work something out to hide that emission. The result was the SDD that does not hide the trail, but confuses the sensors. Still a vessel is visible, unless…”

“… unless it’s cloaked,” Kirk finished the sentence. He exchanged a glance first with Khan, then with Spock, who looked up from his sensors. “Is there a cloaked ship out there?” Jim addressed his Vulcan friend.

The science officer lifted one elegant brow. “If there is, as Mr. Singh is implying, it is a new one – one that not only tricks the eyes by breaking the reflection of light, but also hides its emission signature.”

Khan nodded. “That is similar to the SDD with the addition of Klingon cloaking technology.”

Jim bit his lips; he became tense. A deep, nagging gut-feeling told him that something was very – VERY – off. “Spock, do we have any intel about a new Klingon cloaking device?”

His first officer shook his head. “Reporting indicates Klingons are working on new technology that may be related to cloaking technology, but nothing indicates a readiness for deployment.”

Jim took a deep breath; his eyes focused on the swimming distortion on the screen. “Evasive
"Maneuvers, Mr. Sulu! 30 degrees starboard!" he ordered. "Let us see if this thing, whatever it is, follows us or not."

"Aye, sir!" Hikaru nodded.

STS***STS***STS

"They're not following us!" Nogura said, watching the shuttle's scanners intendedly. Beside him, Barnett sat at the small helm, steering their vessel toward the moon filling screen. Komack and Morrow had taken their seats behind them, followed by Gav and Sarek, as well the Andorian and the Risan ambassador; every diplomat with his assistant. In the middle sat Batari Whitman and Lady Morganth. Both women personified impressive calm, even if their minds were in turmoil.

Ania Morganth had braced her mental shields against the fears of her companions. Her empathy for her companions made maintaining those shields a trial. Even the four admirals doubted a successful escape and despite their training, their survival instincts screamed at them. The only calm poles in the ocean of stormy emotions around her were the two Vulcans. Their content presence gave her strength – strength to endure the feelings of the others which bombarded her from all sides.

Suddenly she met the Vulcan ambassador's gaze. His dark eyes caught hers and understanding reflected in Sarek's gaze – as if he knew exactly what she was going through. Maybe he did. Even touch telepaths were not immune to such a torrential a tide of emotion.

The shuttle shook, and instantly Ania's and Batari's attention turned to the pilot seat. They heard Barnett curse under his breath. They shuttle neared the stratosphere of Yaska. Hope went through each passenger that perhaps they'd make it to the surface alive, but the moon's magnetic fields made the vessel tremble a leaf.

The CMO of the Excalibur, Dr. Christopher Kojewski, frowned. He accompanied them to tend to the injured Deltan and Andorian diplomats. And if they were on the moon longer than expected, they'd likely need his medical expertise.

He gazed out the window. To their right, the second shuttle raced through space away from the battle that took place as soon as the Excalibur opened fire to distract the enemies from the fleeing delegation. Shepard was at the helm assisted by Commander Handers, who looked at the rest of the ambassadors from time to time over his shoulder, making certain that they were secure.
Barnett’s face was grim. “So far Styles’ plan is working.”

Those words did not assure Sarek of Vulcan that they would make it. Something Amanda called a ‘gut-feeling’ roiled in him and settled. And it had nothing to do with his ever-quickening pulse.

Suddenly Nogura hissed in his native tongue; a second later Barnett cursed, “Shit!”

“What is wrong?” Gav demanded; his little eyes glittered in fury and fear.

“Kor’s ship is heading toward us,” Komack answered quickly.

ST***ST

Aboard the *Excalibur*, the science officer turned to his commanding officer. “Captain, the J’Ethl is going after the shuttles.”

Styles cursed, his acting in place and laced feigned concern. “Mr. Kramer, fire with everything we have! Mr. Wilson, ready to turn the ship. We have to protect the shuttles.”

As though they heard him, the two D4-cruisers sent another volley. On the bridge of the *Excalibur*, the lights flickered and went out. For a moment everything was pitch black; then auxiliary power kicked in.

“Shields at nine percent; the phaser banks are empty. Torpedo shaft 4 is the only one functioning, and we've got more hull breaches!” Lieutenant Li reported. “Sir, there is also…”

Styles lifted a hand, interrupting his comms officer. “Were you able to send the message to HQ?”

Li shook his head. “They're still blocking the frequencies.”

“Right. Commander,” he addressed the science officer. “Ready to deploy message buoy. Course, Earth. All energy to the starboard deflectors, Mr. Wilson. Get under the Klingons and bank hard to starboard; then head for the shuttles. Maybe we can prevent…”
“Captain, they're firing on the shuttles!” Wilson interrupted him; watching his scanners.

“Can we see it?” Lawrence demanded.

“Yes, sir,” came Wilson’s replay; he switched on the visuals. They could see bright stripes in the darkness, and they knew they couldn't get there in time to help.

ST***ST

Barnett pressed several buttons. “Shields at one-hundred percent; the phasers are ready. ETA to Yaska’s atmosphere 2.2934 minutes – a long time given our circumstances.” He exchanged a glance with Nogura, who contacted the other shuttle.

“Thomas, Kor is hot on our heels. We…”

“I saw it. Defense systems ready,” Shepard replied; his voice didn’t betray his rising fright. “If they want to fight, they'll learn that even our shuttles can ‘bite’!”

They raced towards the moon and the first phaser blasts hit them. The shields stayed up, but after the third hit they were terribly weakened. Pressing his lips into a thin line, Barnett returned fire, shooting with the two small phaser banks installed in the long distance shuttles he and Shepard had chosen.

It was no use. The bird-of-prey was three times larger than the shuttles, had more weapon capacity, and its commander was experienced. The shields went down with the fourth phaser hit. Fire broke out in the back of the shuttle. Morrow, Sarek, and Sokel tried to extinguish it.

Then it happened. The shuttle shook as if an invisible fist had knocked it off its course; shocked outcries sounded from the other passengers.

Barnett shouted, “THOMAS!” That plea – that cry told Sarek all he needed. The other shuttle was destroyed and the blast wave from its exploding warp core had hit their shuttle.
“Reaching magnetic field; entering atmosphere in twelve seconds. Everyone hold tight!” Nogura’s voice was calm given the circumstances.

Sarek gave Sokel a signal and pulled Morrow with him, who at first tried to refuse. Then he obeyed the necessity to return to his seat and use the seatbelt.

That same moment, the engines failed; the vessel was rendered helpless. The shuttle broke through the atmosphere and spiraled downwards. Barnett had been always proud of his piloting abilities, but it was impossible to steer the shuttle even for him. Without power, the helm controls were useless.

Sarek sat beside Sokel; his hands closed around the ends of the armrests. He quickly calculated their chance of surviving the impending crash. Given the altitude, the speed, and lack of power, their chances were zero. He watched Richard Barnett trying to bring the shuttle into a position where it could glide to the ground, and the Vulcan admired the stubborn, iron will of the human. But he knew it was for naught.

“It was an honor to serve with you, Ambassador,” Sokel said quietly beside him, and Sarek looked at him.

“It was a pleasure having you as my assistant, Sokel,” he replied; then he closed his eyes. He saw Amanda’s face in his mind first; her large brown eyes were gentle – soft and loving. Then the face changed – became younger and more like his own, but the eyes stayed the same. Spock, his son. After the terrible day when Vulcan was destroyed, he and his son came to terms with each other for the sake of their race and the woman they both loved so much. They never talked about Spock’s decision ten years ago that led to the distance between them. Now it was too late to tell his son that he had been always proud of him – that he, his son, held his heart as only a child could. Of all the things he might regret, this was the greatest.

The silence that had spread through the cabin broke and the passengers screamed. The next second, hell broke loose as the shuttle crashed down onto the moon’s surface, tumbled over, went airborne, and crashed down again.

Sarek still clung to his seat and his eyes found the front windows, which shattered as the shuttle was thrown against a large rock.

Then everything went black.
“One of the shuttles is destroyed!” the science officer of the *Excalibur* yelled; his usually calm demeanor failed him.

“Incoming!” Wilson alerted his captain, making sure that the screen showed the two approaching Klingon vessels.

Styles cursed while Thammerson addressed him. “Sir, we don’t stand a chance against them – not in the condition the ship’s in.”

“The second shuttle,” Lawrence protested, adding some fury for good measure into his voice.

“They are as good as dead. If we go back, the two D4-cruisers will follow us and that will be the end of the shuttle – and us, when the Klingons have three vessels again. If we don’t go back, the second shuttle will be lost. Sir, as much as it pains me, we’ve got to run – return to the Federation and to inform Headquarters about what happened here. We…”

“Sir, the last shuttle reached Yaska and…” The science officer gasped. “I lost the signal, sir.” He looked up, pale and shocked. “Captain, it's destroyed. It has to be. I'm sorry, sir.”

Aboard the *J’Ethl* that was not, Klokh stared at the man who had served under him as his science officer while they were in the Imperial Fleet. Most of his former crew had accompanied him, choosing life over suicide when they fell from grace.

“The second shuttle?” he barked, and the man watched his sensors.

“The stratosphere's magnetic field makes it impossible to get any data, but the shuttle was heavily damaged when it entered the atmosphere.” He looked up. “I don't know that there is a Providence that can save them.”

Klokh bared his teeth. “The *Excalibur*?”
“Is still on the run, sir. Should we…”

The Klingon commander made a harsh gesture that silenced the other man. He addressed his comms officer. “Call D’nyrrs! He will take care of the survivors – if there are some survivors at all.” His attention turned back to the main screen. “We’ve to make this look real; pursue the Excalibur, but don’t shoot – at least, not to kill. This admiral whoever-he-is needs his toy back to present the UFP with a reason continue the war!”

ST***ST

The Excalibur took more blasts, and the computer reported damage too serious to do anything other than flee – flee or die. Styles sat in his captain’s chair, seat belt firmly around his torso. “Wilson, set course for the Federation,” he growled. “Quickest way out of Borderland, maximum warp.”

“Aye, sir!” the helmsman affirmed.

“Lieutenant Li, record for the ship’s log: Evacuation shuttle destroyed, star-date 2059.11.23-1340.5. Lost signal of second evacuation shuttle. Mission canceled to return to Federation space.” He turned back to the helm and navigation consoles when the ship shivered, moaned, and groaned as it was thrown into sub-space and accelerated to Warp 4. The engines could give no more. “Are they following us?” he asked. Wilson nodded quickly. “Yeah, but we’re not being targeted. Obviously they can’t while they’re at warp. The D4’s are old. The tech just wasn’t there yet.”

“Well, at least we have that,” Styles hissed, and he looked to the science station. “Is there a signal from the second shuttle?”

The man shook his head. “No, sir, we last heard from them over two minutes ago as they were entering Yaska’s atmosphere. The sensors aren’t reading her now.”

The bridge officers looked at each other in disbelief, fury, and shock. Then an audible signal from the helm startled them. “They’re – they’re not chasing us anymore, sir!” Wilson reported. He glanced back at his captain. The men locked eyes for several seconds; a wordless message passed between them. Mission accomplished!

TBC…
All right, I think I don’t have to comment anything. I simply know that you’re all shocked, furious, disbelieving… And the next chapter will be equally bad, if not worse (so be warned!).

In the next update Jim, Khan, Spock and the others are going to face the two Klingon cousins. As I already told you many chapters ago, the two will re-appear to bring a lot of trouble to our friends, and exactly this will happen in the upcoming chapter.

I hope you liked the last update, even with this unforeseen turn of events (and I know you dislike Styles now even more).

Like always I’m dying in curiosity to learn of your thoughts and feeling concerning the new chapter.

Have a nice rest of the week and an even better weekend,

Love

Yours Starflight
Chapter Notes

Hi, my dear readers!

I don’t know about the holidays in the US, but here in Europe we’ve autumn holidays, and I really hope our American friends relish in the same time-out. Right, the weather here is cold and rainy, yet the autumn plays with any of its colours you can think of and I really love this time of the year.

In my story it’s late autumn too, but I don’t think that Jim, Khan, Spock, Bones and all the others are happy with the present happenings. And during and after this chapter they certainly will not change their minds about it. WARNING: Next cliff-hanger!!!

Thank you so much for your left comments and I hope you’re going to like the new chapter even more.

Have fun

Yours Starflight

See the end of the chapter for more notes

Chapter 47 – Revenge is a dish best served cold

Unaware of the drama that unfolded just parsecs away, the Enterprise’s bridge crew watched the main screen as the ship altered its course. The distortion held its position on the screen. Almost! If it weren’t for Khan’s enhanced vision, they all would have missed the moment the distortion on the screen moved before it was back in the former place.

Alarms rang in the Augment. “There’s a delay so whatever we are seeing is outside of the ship!” he called; his posture did nothing to hide his trepidation. “And its movement is intended!”

Jim knew what that meant; he didn't waste a moment. “Red alert, Mr. Sulu!” he yelled. “Shields up! Battle stations!”

Instantly the bright light dimmed red, and the alert howled through the ship. With determined strides, Kirk returned to his chair while Uhura announced that this battle stations call was not a drill.
“All phaser banks and torpedos are ready, Keptin!” Pavel Chekov reported and looked over his shoulder at his commanding officer.

From above, Khan stared at the navigator with widened eyes. He hadn’t paid much attention to the other bridge officers since he arrived ten minutes ago to help Allistor. He noticed the ensign now, for the first time. That was no man – he was a child. A bridge officer, really? Wasn’t there a minimum age for commission? The young Russian must have been a boy at the Academy, of that Khan had no doubt.

Then the super-human’s attention turned back to the problem at hand. The distortion on the screen wavered, and Khan braced his hands on the rail of the bridge's upper section; he was the warrior now he had been made for. “If it is Klingon, they cannot shoot while cloaked,” he stated forcefully. His gaze flicked to the screen and back to his mate. “You have three seconds at most to fire. I suggest at their front torpedo shaft! It would have a disastrous effect.”

“Yeah, I know – and I’ve got the strict orders not to fire first!” Kirk gritted out. “Uhura, record all camera and sensor data for the ship's logs!”

That moment, the distortion quivered violently then melted away to reveal a bird-of-prey; its torpedo shaft glowed portentously.

“They’re aiming at us!” Sulu called, and Jim made a quick decision. To hell with the order! This was an act of war. The Klingons were about to shoot at his ship! “Chekov, left wing – fire!”

The Enterprise’s phasers cut through the darkness of space with a bright flash and hit the bird-of-prey where Kirk had ordered. The impact threw the hostile vessel around and the torpedo that left the enemy’s space-craft at that moment missed the Enterprise by a mere few hundred meters.

Jim smiled grimly. “Got you first, you lying bastards!” he growled. “What do the sensors say, Spock?”

The Vulcan was already scanning the hostile vessel. “D6 cruiser, launched one year ago, shields twenty-five percent, helm control failure, but they should have it back soon as the damage appears minimal.”

“Right!” Jim hissed. “Uhura, hail them. Ask them why they fired on us. It's supposed to be a
ceasefire, dammit!"

“Aye, sir!” Nyota confirmed. Her slender hands raced over the buttons at her station.

“Engineering ter bridge. Cap’n, what the hell is happenin’ up there?”

“Klingons, Scotty! I need full power!” Jim called back, not waiting for an answer.

“Captain,” Spock addressed him. “The computer has identified the vessel. It is the BortaS. Database maintains limited information. It is…” He stopped as he saw Jim pale.

“Koval,” Kirk whispered, remembering the instruction Kor had given his two executioners. The shock quickly left him and his fighting spirit made its way to the surface again. “Look aft! They're always in pairs!” he shouted, bolting from his chair towards the helms console.

The moment Sulu switched the cameras, Spock called, “Klingon vessel decloaking behind us. They’re…” He didn’t get further, as strong flashes of lights were to see on the screen, and then the Enterprise shook. Impact. Again the MeQ’lw shot several more torpedoes at her. Jim was hurled to the ground along with two junior officers. Only Khan remained on his feet.

“The BortaS is taking aim again, Captain!” Spock’s calm voice drowned out the noise.

“Increase forward shields!” Jim called from his position on the floor as he tried to rise. His order came too late. The BortaS regained control and was firing at the heavy Federation cruiser. The Enterprise was caught in the crossfire; the two ships hit her with everything they had.

"Chekov, return fire now!" Kirk ordered, standing back up.

He didn’t need to tell the young Russian twice. The Enterprise’s phasers and torpedoes raced through space and hit their intended targets. But the Enterprise was hit again as well. The shields' power wavered then steadied. However, the ships' power dipped. The safety belts didn't deploy.

Sulu heard a low hiss at his station. He didn’t have enough time to react, as a part of the helm exploded in front of him. He was thrown back several meters and landed beside the captain’s chair
like a broken doll – limbs spread, eyes closed, burns on his left cheek, shoulder, and arm.

“SULU!” Jim shouted in alarm, but his helmsman and friend didn’t move and blood pooled beneath him.

That moment, the ships’ gravity increased without warning, pinning the officers on deck in place, and the Enterprise started to drift towards the asteroid field. Another hit pushed her forward and the collision alert sounded. Jim tried to get to the remains of the helm, but the gravity held him firmly there where he kneeled. Spock managed with his Vulcan strength to rise and pushed himself against the gravity. Then a movement in the corner of his eyes got his attention.

Khan clung to the handrail as the ship bucked like a wild horse beneath his feet. His mind took in several things at once. The Enterprise was rudderless, she moved with alarming speed straight toward a mighty asteroid and no one on the bridge could reach the helm to steer her manually.

The Augment used one hand on the handrail to brace himself. Against gravity he leaped over it; his strong legs caught the brunt of the impact. Racing forward, he jumped over the unconscious, bloody form of the young Japanese on the floor and reached the helm. Not wasting a second he took a seat in the ruined chair, looked over the controls, saw the damage to the automatic systems and switched on the manual control.

The same moment, gravity was restored, and Kirk rose. His eyes widened in horror as he saw how close the asteroid was. In the background the female computer voice coldly counted the seconds to the impact that would smash the Enterprise as though it were delicate glass.

“Nien, hard to starboard!” he shouted. “Uhura, take care of Sulu!” He was back in his chair in two steps, and Nyota ran to Hikaru; one of the junior officers took her place at the comms station and called med bay.

“Kirk to Engineering. Scotty, reverse thrusters! Everything we have!” Jim yelled into the intercom set in his armrest; a hint of fear tinged his voice.

It hadn’t been necessary to tell Khan what to do. The Augment gritted his teeth as he tried to steer the heavy cruiser away from the threat, forcing his mate’s Grey Lady to obey his will by holding to the manual helm with all his might. As if in slow motion, the starship altered its course, still the asteroid was close – damn close. It filled two-thirds of the screen. The super-human felt Kirk reach his side.
Jim steadied himself at the wrecked remains of the console; his blue eyes stayed glued the screen, and his fingers clawed the metal as if he could make the ship turn by his will alone. “Chekov, aim our phasers at the asteroid, dial down to fifty percent. I don’t want to destroy it; I want to MOVE it!” Kirk said; his heart beat hard in his chest and he could feel the adrenalin pumping through his system.

“Aye, Keptin!” Pavel affirmed, then four bright blue beams left the starship and hit the solid rock. The asteroid began to move and the Enterprise’s speed slowed, but it was a close-call. A hand’s breadth separated her discus segment from the asteroid’s surface as she finally was able to heave by, but it was enough. One of the warp nacelles grazed the rock as the starship swayed aside like an injured eagle, and the noise seemed to echo through the entire vessel, but the outer hull remained intact.

“Zey’re aiming again, Keptin!” Chekov called.

“Target their torpedo shafts, Pavel. Fire!” Kirk all but snarled.

The two birds-of-prey flew an evasive maneuver, and then they vanished.

“They have cloaked,” Spock told them unnecessarily. “We are unable to see what they are doing.”

Jim bit his lips; his whole body was tense as a bow ready to send an arrow. “What do we got to hit ‘em with, Ensign?”

Chekov’s answer came instantly. “We hev eighteen torpedoes left and only 27.38 percent power in ze phaser banks, Keptin.”

“I want a three-sixty visual onscreen, now!” Kirk ordered. “If the sensors are lying to us we have to trust our eyes.”

Behind him, the turbolift doors opened, and McCoy entered the bridge quickly. The sight in front of him stopped him in his tracks. Smoke, a half destroyed console and… Was that Khan at the helm? Dear God, it was!

Khan Noonien Sing was steering the Enterprise!
Leonard didn’t know if what he saw was a dream or a nightmare. Then his gaze fell on Jim, who stood beside the former dictator. Beside the captain’s chair, Uhura crouched down and cradled Sulu in her lap.

Swearing beneath his breath, Bones ran down the two steps to the lower part of the bridge and knelt beside the unconscious helmsman. He didn’t need to ask what happened; it was obvious. Opening his med kit, he took out the med-scanner to examine Sulu while Uhura returned to her station. With one ear listening to the conversation around him, McCoy gave Hikaru hypos to raise his blood pressure.

“Zey could be anywhere,” Chekov said quietly. “Zey could be zere where we looked only second before.”

“Uhura, distress call to all Starfleet ships available,” Jim ordered. “Tell them we're being attacked by two Klingon ships using some kinda new cloaking device. We need reinforcements.”

“Aye, Captain!”

“Fluctuations 12.8 degrees starboard!” Spock called, who bent over his sensors. “Emission output…”

“Target their position, Chekov. Phaser bank 5 and 6 fire – NOW!” Jim ordered grimly; not letting his first officer finish. “Nien, visual…”

Khan had already pulled the view that Jim needed onto the main screen, and it showed a bird-of-prey decloaking. That moment the phaser blasts struck. The resulting explosion was terrific. The spacecraft was hurled around on its axis and tumbled away like a wing-clipped bird, and it drifted away.

“What the hell…” Kirk whispered; astonished. “How'd the hit have that kind of impact? Are their shields down?”

Spock continued to hover over his sensors. “Their deflector shields were down as they de-cloaked.” He looked over at Jim with one brow arched. “There are two to three seconds between the time the cloaking device is powered off and the time they can raise their shields.”
“And we managed to get them in their only Achille's heel?” the young captain grinned with utter satisfaction. “Which one was it?”

“The BortaS, Captain,” the Vulcan answered. “Your reactions when I first mentioned the name seemed to imply that you know the two ships.”

“Not the BortaS and the MeQ'lw, but their commanders Koval and Noy,” Kirk growled. “Cousins, and they were made my executioners!”

He saw Spock's understanding and the flash of something akin to fury in the Vulcan’s eyes as they looked at each other.

“Jim!” He turned quickly back to the screen. “Over there!” The former king called to his captain and pointed to the right side of the screen. In the last frame, Kirk saw the bird-shaped distortion vanish behind the asteroids.

“They're hiding – waiting for a chance to attack us again. That's what happened to the BortaS. They know they can't underestimate us,” Jim murmured.

“Captain,” Uhura addressed him; the strain was etched on her face. “I can’t override the Patch's magnetic field to send a distress call.”

“Can we transmit at all?”

“Our range is limited, Captain. Sub-space transmission is impossible. I’m sorry.” Her eyes betrayed her irritation – not with him, but with the situation plaguing them.

Jim growled deep in his throat. He was afraid of something like this. He knew that he didn’t need to ask Nyota to try her magic. She aleady had. Taking a deep breath, he tried not to grimace. They were on their own now!

He cocked his head. “Status of the BortaS?”
Spock took one quick look at the screen. “Energy levels fourteen percent; warp drive destroyed, and a hull breach at the left wing. Life support system function is minimal.” He looked expectantly at Jim. The hostile vessel’s status left them only one option. They must provide asylum to the survivors. Anything less would be a criminal, though no law demanded such an act of mercy. Some things didn't need writing in deep space.

Kirk balled his fists; a toxic desire for revenge vexed him, but he was a better man than that. His fierce gaze found Uhura. “Lieutenant, open a frequency.” At her nod, he raised his voice. “BortaS, this is the USS Enterprise under the command of Captain James T. Kirk. Our sensors show that you’re losing power and your life-support along with it. Prepare to be beamed aboard!”

ST***ST

Aboard the BortaS, Koval rose to his feet. The heavy impact had hurled him out of his chair and across the bridge. His right arm hung uselessly at his side; pink-tinged blood dripped onto the floor from the large gash in his flesh.

“Hull breach, warp drive is down, only one torpedo shaft is functional. We don't have a weapon to load in there anyway. Life support systems are down!” his new first officer called over the chaos.

Koval knew what that meant. They were lost. “Message to the MeQ’lw. Noy, it was an honor to call you family and a great honor to serve with you. May we see each other again in the Black Fleet!”

His comms officer, strong, but injured and fading, nodded and sent the message. Koval stared at the flickering screen. He saw the Enterprise mere kellicams away. She had suffered, no doubt, yet she had beaten him. Kirk had beaten him. That cursed boy-captain had more luck than any man Koval had ever met.

“Sir, the Enterprise is hailing us,” his comms officer said in a rasping voice; his breath hitched as his lungs began to fail him.

Koval stepped beside him and opened the frequency himself. His subordinate's eyes dimmed. A moment later, he heard the clear tenor of the Terran he had vowed to kill. Gritting his teeth, he listened to Kirk's offer – Kirk's humiliation!

ST***ST
Jim waited for Koval’s answer. His body tensed; his nerves grated – shivering under his skin. He hoped he’d never meet or hear from this Klingon again. But fate was a finicky mistress, and she had other plans. She usually did.

“Kirk, I would rather meet the Black Fleet today than accept help from an accursed terrorist like you!” the vaguely familiar voice barked over the speakers. That voice still pierced Jim’s nightmares. No more, he vowed to himself. No longer. When he was done with Koval, he would move on – leave the past and all its ghosts behind him.

Kirk took a deep breath. “A captain can’t be led by his desires – selfish ambition. His crew is everything to him, Koval!” he replied with strong, icy voice. “Everything else is self-serving. It's ego, and it has no place on a ship!”

A harsh, quick noise was the answer – the parody of laughter. “I saw you weak, Kirk, hanging from the ceiling, ready to beg for mercy. You would have given in to our demands, too, if it had not been for your Augment saving your sorry ass. He killed my first officer! We want nothing from you or the Dark Warrior!”

At the engineer’s station, Allistor turned around and glanced at Singh – the Klingon's dark warrior. And now he was the captain’s rescuer? This guy called ‘Sunrise’? And Singh was... Singh was an Augment? That explained the inhuman strength Singh had displayed when the gravity overcame them all. He was able to reach the helm in time to prevent the Enterprise from crashing into an asteroid many times her size! And he managed to get Kirk out of Klingon prison – alone! Many crew members aboard had asked themselves how this single man had succeeded in recover their captain without further help. That Singh was an Augment explained everything.

Jim didn’t react to the Klingon’s revelation concerning Khan’s nature. Most on the bridge already knew the truth and the rest... He would deal with them later. At the moment, his concentration was fixed on the conversation at hand. “At least we're not cowards feigning diplomacy to murder the innocent. That, Koval, is contrary to Klingon honor. You have no honor!”

“If a true warrior had spoken those words I would be offended. Those words coming from you? They mean nothing to me. Today is a good day to die. A warrior of your kind said that once a long time ago. And it will be for us. I will have my revenge on you and your Augment friend. Koval out!”

The transmission ended.

Spock called with a sudden urgency. “They’ve activated the self-destruct, Captain.”
“Shit!” Jim yelled, and switched on the intercom. “Scotty, ready for warp 4 and…”

“We’ve no warp drive, Capt’n!” the Scotsman’s voice called from somewhere afar. “I had to cut it off. She was overloadin’.”

“Damn, full impulse, now!” He looked at Khan. “Nien, course…” His gaze landed on the helm's manual controls, and he stopped himself when he saw that his mate had already set a course away from the drifting Klingon ship.

Slowly, far too slowly, the Enterprise moved away from the BortaS.

“The MeQ’lw is decloaking!” Spock said; his voice was tense.

“Ready the torpedoes!” Kirk gritted out. “Pavel, kick their asses!”

“Wiz pleasure, Keptin!”

Two torpedoes left the starship and headed for the second bird-of-prey that moved away and cloaking again. Dammit! They were unable to fire now. “They have headed to port most likely, out of the asteroid field before the sensors could locate them,” the Vulcan reported, and Kirk nodded.

“In other words, they are somewhere out there – waiting for us! Dammit!” His eyes stayed glued to the screen that showed the drifting BortaS before he activated the intercom again. “Attention, crew, brace for shockwave impact!” He switched off the ship's internal transmission circuit and looked back to Spock. “Estimated time to self-destr…”

His words stuck in his throat when all of the sudden Khan wrapped one long, strong arm around his waist and pulled him onto his lap, securing him in the same moment when an unbearable bright light flashed on the screen. The Enterprise shook like she had hit solid wall at full speed. This time even the Augment couldn’t keep his balance, and he landed on the ground still holding Jim, turning himself over before he hit the ground so that the younger man was on top of him.

Then all hell broke loose. Sparks flew from the consoles; smoke filled the air, crew-members screamed in shock or pain or both. The hull moaned like an injured animal. The overhead cracked
and cables fell; the lights flickered.

Bones held Sulu tightly, curled himself around the young Japanese man, shielding him with his own body. His terrified gaze wandered over to the other pair on the ground. Despite his fear, a wave of relief filled him as he watched Khan roll Jim beneath him, covering him completely to protect him.

Behind the CMO, on the upper part of the bridge, Spock pressed Uhura to himself with one arm, while he clung to his console with his free hand. But the bucking of the starship was too powerful, and the Vulcan lost his balance. Falling to the floor, he took care that Nyota didn’t hit the console or the handrail. His care resulted in him hitting his head painfully on his own station. He gritted his teeth until his Vulcan control was firmly back in place, yet he felt the illogical urge to curse.

The moment the noise stopped and the Enterprise quit shaking like a leaf in a storm, the former dictator was on his feet again and raced to the helm. Not without surprise, he realized that the young ensign had remained in his seat clinging to the armrests. ‘Extraordinary in every sense!’ he thought before he brought his attention back to the helm.

“Engines full stop!” Jim called hoarsely; he rose carefully, grimacing as his right hip felt as though a dagger twisted inside. ‘Please, not again’!

“Full stop!” Khan affirmed while he tried to steady the Enterprise.

“Damage report!” Kirk demanded, and he hobbled to his seat. “How’s Sulu, Bones?” he asked as Uhura returned to her station to gather the incoming damage reports.

“Skull fracture, three broken ribs, I’m hoping he didn’t puncture a lung, internal bleeding, and third-degree burns,” Leonard stated; the tremble in his voice betrayed his not so professional state at the moment. “I stabilized him; an anti-grav carrier is on the way.”

Jim nodded; dread filled him as his gaze hung on the pale and bloody face of his friend. “Take good care of him, Bones,” he whispered before Uhura called for his attention. She listed the worst of it, and Kirk cursed. Dammit, and here his Grey Lady just came from the shop. He really – really! – hated this fucking war!

“Any trace of the MeQ’lw, Spock?” he asked, and the Vulcan shook his head slowly; his gaze fixed on his sensors. It didn’t slip Kirk’s attention that his first officer was injured. Green droplets rolled down his temple. “You’re hurt!” Jim blurted out in worry; ready to bolt from his seat to get to his
“The injury is not serious, Captain,” Spock tried to reassure him and a concerned looking Uhura.

Bones appeared beside him, med-scanner in hand. “Nothing serious’ my ass! You have a concussion and that laceration.”

“I assure you, Doctor, I am fully functional.”

“You’re a living being, not a damn computer, Spock, even if your brain works like one of those electronic buckets. So stop talking about being ‘functional’,” McCoy groused while he took disinfectant spray and a pressure bandage from the med kit. Ignoring the Vulcan’s protest, he began to treat him. Spock tried to avoid Leonard’s attempt to wrap the bandage around his head, but Bones had enough. “Hold still or I’ll take you with me to med bay. Your choice!” he snapped.

“Those are hardly choices, Doctor; I find it closer to blackmail.”

“Call it what you want, I’m the CMO aboard; crewmembers will obey my orders when it comes to their well-being!” The lift doors opened, and two medical assistants appeared with a carrier between them. “Bring him to surgery!” he called, pointing at Sulu. “Be careful, he's got a skull fracture and broken ribs. I’ll be down in a minute.”

The two men nodded and hastened to the still unconscious helmsman just as the intercom signal sounded.

“Engineering ter bridge! Capt’n, we have a serious problem with the main power,” Scott reported, clearly stressed. “The impact caused several circuits to short as well as the auxiliary power!”

“Energy level's at twenty-eight percent,” Allistor added.

“And out there is another bird-of-prey waiting to finish us off,” Jim growled. “Dammit, I knew I should have stayed in bed this morning!”

“You absence on the bridge would not have prevented the events, Captain,” Spock couldn’t help but
comment and ignored McCoy's exasperated sigh of frustration as he searched for something in his med kit, after he finished taping the Vulcan.

“It's just an expression, Spock! For God’s sake, I thought a human girlfriend would have taught you a thing or two about those!”

Kirk decided to ignore the two. “Nien, set a course for those asteroids. They'll give us at least a bit of shelter.”

Khan nodded. He had been about to make the same suggestion when Jim gave the order. It really shouldn’t surprise him anymore that he and his mate were of one mind so often.

“Captain, image distortion; six o'clock!” the first officer called and switched the view on the screen to aft of the ship.

“There they are again,” the super-human growled, pointing at the distortion on the screen.

“Chekov, take aim and fire!” Kirk’s voice could have cut through stone.

The young Russian obeyed instantly, and one of the torpedoes hit home. For a moment there was a wavering silhouette of the MeQ’lw, and then it vanished again. “They’re heading for the asteroids as well,” Spock said, looking back at Jim. “The situation seems to be what you humans would call a game of cat and mouse.”

“Ha, I knew it! Can't tell us you don't know what me mean, now, Spock. Your secret’s out. You speak human” McCoy grumbled. He raised his arm and quickly pressed a hypo against the Vulcan’s neck who flinched and glared icily at him.

“I would have appreciated a little warning, Doctor!”

“Don’t tell me that you’re afraid of hypos too, Spock!” He closed his med kit. “I'll be in med bay. No house calls from me for the next few hours, so watch yourselves, gentlemen – milady!” He vanished into the lift and called out, “I’ll keep you updated with Sulu’s condition, Jim,” before the doors closed.
“Thanks,” Kirk murmured; his gaze fixed on the screen as the Enterprise slid between the first solid objects. “Any idea, where they could be?” he asked no one in particular.

“Not an idea, but we have information that lead us to a probable conclusion as to their location, Captain,” Spock said. “Their cloaking device is experiencing fluctuations in its power supply or perhaps there is a malfunction. I cannot be sure. Sensors located the resulting distortion. There are energy fluctuations at zero-six-zero.”

“They are using the asteroids to shield themselves same as us,” Jim thought aloud. “Full stop!”

“Engines full stop, sir,” Khan affirmed, drawing down on impulse power. He accepted his mate’s commanding position without hesitation. This was Jim’s ship and, at this moment, he was crew.

“Captain, the sensors read the energy fluctuation bearing zero-six-five, mark seven-five,” Spock stated.

“The MeQ’lw?”

“I cannot say with a one hundred percent degree of certainty, but given the course of the MeQ’lw before she vanished and the data we received from her weakened cloaking device, the likelihood that this is our enemy is 89.537 percent.”

“A simple ‘yes’ would have been enough,” Khan murmured, rolling his eyes. He asked himself how his mate could put up with the Vulcan.

“That response would have been incorrect, Mr. Singh,” Spock replied wryly; proving that Khan wasn’t the only one with keen ears on the bridge.

“Given the percentage of likelihood that you have calculated, ‘yes’ would have been the correct term!”

“Stop it, you two!” Jim interrupted them, frowning. Then his attention turned back to the screen. Somewhere between those asteroids, just a fraction of a unit away, Noy and his ship were waiting for them – for him! The first to make a mistake would be the one to suffer the most (if not total) loss. There was no doubt about it. And Kirk was hell-bent on his ship – his crew being the survivors.
“What do you think, Spock, how much energy do they have until they have to decloak in order to run the engines and life support systems?”

“Unknown, Captain. I cannot ascertain the power expended because this seems to be a new generation of cloaking device. However, the device with which we are familiar and most likely serves as a foundation for this model may be our guide. We have seen its power fluctuate already. I presume we only have a short time before they must switch off the cloaking device in order to retain the power needed to return to Klingon territory.”

Jim turned his chair towards his Vulcan friend. The bandage around his head and his tousled hair gave Spock the appearance of a character in one of those karate movies that Sulu had subjected him to on more than one occasion. But the impression that Spock made was not camp. His first officer was a warrior – a fighter beneath all of his layers of logic and self-control. “How ‘short’ do you think it is? Any idea?”

Spock shrugged with one shoulder. “Two hours at most,” he replied carefully.

Rubbing his jaw, Kirk looked back at the screen. “Hours! We don't have that kind of time.”

“What do you mean?” the Vulcan asked, and Jim sighed.

“There are two possibilities. Koval and Noy attacked us on their own, no orders, in order to hide their actions from their fleet commander. That would mean that the ceasefire is still officially active. They went rogue. Or they are a kind of advance sent to keep us stuck here while they wait for the fleet to arrive. If their accepting diplomacy and the ceasefire was a trap to weaken us, then they want to make sure that an attack hits Starfleet there where it hurts the most – namely her most advanced ship and flagship. If that's the case, then we can expect at least a dozen birds-of-prey soon. I'm not looking forward to that prospect. We have to act – now! ‘And if they really want to destroy diplomacy they’ll go after the diplomats and our most important admirals – Fuck!’

Khan had listened to Jim’s thoughts, and once again, he admired the clear and simple, brilliant logical conclusions his mate was able come up with. And a part of him was also impressed at the utterly perfect way Jim and his Vulcan friend’s thoughts and actions complimented each other. They were a good team; it was no wonder they could come up with solutions for the most dreaded situations. And in Jim’s case, those ‘solutions’ were usually absolutely crazy, like the moment Jim simply pushed the asteroid out of his ship’s path and…
Khan frowned. An idea was forming in his mind – an idea he had to perfect in theory if it was to work at all.

Jim crossed his arms in front of his chest and pursed his lips while he rolled around his own ideas in his head. Then he saw his mate tense; he turned to look where Kirk looked. “Do we have an accurate layout out of the asteroids nearby in our data bank?”

Kirk lifted both brows and glanced at his science officer. “Spock?”

“The data I had collected before we were attacked, are no longer time-relevant. The shock wave caused by the BortaS’s explosion has altered the relative positions of the nearest asteroids. I must make a new scan. Altering the scans into a tactical layout requires two minutes.”

Jim exchanged a quick look with Khan, who nodded. “Do it. Put it on screen as soon as you finish.” He rose from his chair and walked to the navigation console. “What’s your plan, Nien?” he asked quietly.

“We are running out of options,” the Augment began quietly, “and if there really is the possibility that a Klingon strike group is coming for us, we have to act quickly, as you already rightfully suggested. We need to speed up the inevitable confrontation.” He lifted both brows. “My plan may be crazy, but…”

“… but the craziest plans are mostly the best ones,” the young captain finished, grinning. “Right, I trust you, you know that. Now tell me what you need.”

Khan’s attention slipped to the boy-ensign beside him. “Mr. Chekov, right?”

Pavel, who had listened closely to his superior and the Augment, nodded. “Aye, sir.”

“Mr. Chekov, how many torpedoes do we have left?”

“Thirteen, sir.” Pavel looked at his display. “Phaser banks are down to nineteen perzent, but can be reloaded as soon as ze warp core is back online.”
“Very good! I need two phaser blasts, the first one weaker than the second. I still have to calculate the exactly intensity after I get information about that asteroid over there.” He pointed at a large soaring rock floating just right of the screen. “And then I will need two torpedoes, perhaps three.”

Confused, Kirk stared at him; then Spock called from behind, “The tactical scheme is ready, Captain. Onscreen, computer.”

The image on the screen changed. It showed no longer the view outside, but schematics of the asteroid field around them.

“Mark the point where we think the MeQ’lw is located,” Khan said neutrally; without hesitation Spock did as he was asked.

Jim frowned and stared at the screen. “The MeQ’lw was there,” he pointed at the screen, hidden behind the asteroid Khan pointed out. Behind the D6-cruiser, there was another asteroid just a little smaller than his ‘brother’ in front of the Klingon vessel. There’s no way to hit it directly…

And then his mate’s intention hit Kirk with the force of a hyper-truck “You… You want to use the asteroid in front of them to…”

“… to shove them against the rock behind them.” Khan finished Jim’s sentence. He smiled. “The Klingons are invisible, but physically present. And while cloaked they are without their shields. Contact with a solid object will damage them just as it would us. They'll lose control, lose power, and drift. Their deflectors will be weakened. And when they can't hide behind that asteroid any longer but have to escape from it, our torpedos will have an easy target.”

Silence spread over the bridge. The plan was shockingly simple, and could work, as Spock affirmed a moment later, “Plan success is 79.5398 percent, Captain.”

Jim chuckled; Uhura shook her head in astonishment, and the bridge officers snickered. “Well, I'll call that a damn good chance of success,” Kirk said, while placing a hand on Khan’s shoulder. Then he addressed Chekov. “All right, Pavel, you heard Mr. Singh. Ready three torpedoes and phaser banks 4 and 5. Wait for my order.”

Khan raised his voice; his tone neutral again. “Mr. Spock, I need material make-up and weight of the asteroid to calculate the appropriate phaser strength.”
“Iron core, fifty-eight percent; carbon matter, thirty-six percent. The remaining six percent are a mix of base elements. Weight 928.5349 tons,” Spock answered without delay. “The computer has calculated the required phaser power required. Adjust first blast to 43.2935 percent of maximum capacity. Deviation above will destroy the asteroid and cause collateral damage – us. Deviation below will not move the asteroid at all. The second blast must be increased to sixty-eight capacity thus increasing asteroid speed. It is my hope that the Klingons will not be able to act fast enough to avoid our weapons.”

The Augment nodded. “Understood!” He glanced at Chekov. “Switch the phaser control to my terminal, Ensign. I will fire manually.”

The navigator raised his brows and looked at his captain.

“Just do it, Pavel,” Jim said. “He's a good shot, Ensign, don't worry.” He turned to Khan. "Nien, send the torpedoes home as soon as we see those Klingons!”

“Aye, Keptin!”

“Yes, Captain.”

Silence spread through the bridge; tension hung so thick in the air a phaser blast could make it bleed. Uhura looked at Spock knowing that the next seconds would decide their fate – their survival. The Vulcan mask slipped. She gazed into brown eyes full of warmth and love, and she gave him one of her special smiles reserved only for him. Khan’s voice shook them out of their reverie.

“Ready to fire, Captain.”

“Rrrright!” Jim took a deep breath, looked a question at Chekov, who nodded back and straightened up. “Good, give them a taste of their own medicine!” he growled; his gaze went back to the crosshairs on the screen over the asteroid.

Khan took this for Kirk’s permission to act. “Be ready to send the Klingons our greeting cards, Mr. Chekov,” he said and then he punched the phaser trigger. Two glowing, blue blasts raced towards the asteroid and pushed it out of its orbit. The Augment sent another phaser blast at the solid rock, and it floated away. That same moment something flashed. A green metal wing came into view. As it turned toward the Enterprise, the crew could see damaged hull of the MeQ’lw.
Jim bared his teeth in a mixture of triumph and fury. “Pavel, fire our torpedoes!”

Chekov didn’t waste any time with a verbal affirmation. He let loose three torpedoes at the bird-of-prey. She spun on her right wing. The MeQ’hw was caught between the two asteroids. Then the three missiles hit home. One pierced the right wing; the two more found their targets. Explosions shot fireworks from the vessels fuselage and rocked the peace of space. A piece of the ship's wing splintered off and floated away while flames licked along the open ripped vessels; doused by the space’s merciless vacuum and coldness.

“The MeQ’hw has lost all power, Captain. The ship is, for all intents and purposes, dead,” Spock reported.

“Uhura, hail them!” Kirk ordered.

Nyota, thoroughly relieved that this crazy plan worked, punched the comms console. “Go ahead sir!” she said.

“Attention MeQ’hw! This is Captain James Kirk speaking. Commander Noy, I know you’re there. I need your permission to beam you and your crew over. Your ship is lost, Commander, but you don't have to sacrifice yourself like your cousin did! Come on!” Kirk knew what it was to face death and he wouldn't needlessly wish it on his worst enemy.

Static and interference sounded from the speakers, then an unfamiliar voice called, “This is Commander K’Hreff, second in command. Captain Noy is dead – killed during your last attack. We will not surrender to Starfleet or you, Kirk. We…”

“I'm not talking about surrender, Commander K’Hreff. I'm talking about your survival. I guarantee fair treatment of you and your people…”

“I don’t believe you, human!” the rough voice growled. “It was my commander’s last order before he died that you and your kind do not get your blood-stained hands on this vessel.”

“If you're talking about that new cloaking device you’re using, we've got enough data on it now that we know how it works and how to neutralize its effects. I repeat, there is no need to sacrifice yourself and your crew! You’ll get fair treatment, and if it means peace between us, I will campaign for you to go home.”
For a moment there was silence, and then the Klingon answered, “I have heard that you lack honor, Captain, yet I am beginning to doubt the assertion. You offered Commander Koval the safety of your ship as you do us even after the torture you suffered at the hand of my captain and his relates. In your own way, I suppose you have honor of a sort. And so you must know the path we will take. We have made a decision. There are only two viable options, Kirk. Victory or death. There is no middle path. May your death be an honorable one – in the not too distant future!”

The connection was cut off, and Jim groaned. “Klingons and their stupid pride.” He glanced at Spock. “Please, don’t tell me that they activated the self-destruct, too.”

The Vulcan lifted a brow. “I assure you, Captain, they cannot use the device anymore. Energy levels, two point six percent and…” He nodded towards the screen and Kirk followed his eyes. He watched as the lights aboard the crippled D6-cruiser blinked out, knowing what it meant for the inhabitants inside.

“God dammit!” he hissed. “Their deaths are unnecessary and a waste!” He addressed his first officer again. “Any life signs?”

“Positive, sir; seven life signs to be exact, but their bio signals are weakening. Life support systems have failed, the temperature is dropping rapidly and…”

Jim activated the intercom. “Transporter room 2, locate seven Klingon life forms. Mr. Spock is transferring their coordinates to your terminal now.” He nodded at the Vulcan, who simply lifted a brow and did as Kirk ordered. “Kyle, beam them out of there and straight to the brig! But have medical personnel on stand-by” Jim commanded.

“Aye, sir!” the transporter chief answered. Several seconds later he said, “Captain, they are in brig 4. Security reports that all are injured and unconscious.”

“Good. Medical can treat them while they're sleeping. We'd never be able to help them otherwise.”

“Affirmative, Captain.”

Jim grimaced as he switched off the intercom, meeting Nien’s and then Spock’s piercing gaze. “What?” he demanded. “Since when do I have to listen to what a Klingon tells me to do? There's been enough blood shed already. It'll make us look good as far as the peace talks are concerned and we might learn more about why they attacked us. I want to know if the ceasefire was a fake or if…”
Spock’s station gave an alarm, and the Vulcan quickly turned around.

“Captain!” he said; his voice betrayed fear and urgency for the first time since the battle had begun. “The long distance sensors are registering twelve vessels. They've just dropped out of warp; distance 0.36493 parsecs from our position. It appears they've come from the direction of the Borderland.”

Jim felt his stomach drop. “Alright, what are they?”

His friend’s dark eyes revealed the inner storm that was about to break loose in him. “Klingon, sir.”

The color left Kirk’s face, and then he bent over the intercom again, hailing Engineering. “Scotty!” he shouted. “We need warp speed in five minutes or we’re all dead!”

“What’s happening now?” the chief yelled back from somewhere in the background.

“A Klingon squadron is approaching! ETA?” He looked at Spock, who answered, “9 minutes, 14.381 seconds.”

“Mother Mary, we’ve not enough energy to restart the warp core!” Montgomery’ sounded furious and scared.

“Is the warp core even ready for a restart?” Khan demanded.

“Not now, but in four or five minutes I could make it. We just don’t have the energy to do it tough…”

Nien didn’t let him finish. “How many torpedoes remain?” he asked Chekov.

“Ten, sir,” the young ensign answered, and the Augment nodded.

“Right! Mr. Scott, the torpedoes have their own propulsion fuel. If you use the power from two or
three torpedoes, you can load the generators to initiate a restart of the warp core.”

Silence! You could've heard a pin drop, but they couldn't spare the time to listen for it. Then Scotty spoke, “You want me to use the torpedoes’ propulsion for the generators?” His voice nearly squeaked.

“Yes – like a kind of an old-fashioned voltaic cell!” Khan nodded.

“That’s a good idea, lad; there is only one problem: the phases. If we feed our generators with the power from the torpedoes propulsion system, they’ll explode. And having torpedoes in Engineerin’ – the Enterprise will go up like a firework.”

“Not if we remove ze warhead and adjust ze phases so zat we can control ze speed of energy transfer into ze core!” Chekov hastily chirped in. He found himself the center of attention rather quickly, caught in the sights of his captain and the super-human. “Wiz a phase modulator, we can transfer ze output of ze torpedo drives generators and…”

“He’s right!” Scotty interrupted him, both astonished and excited. “This might work!”

“Okay!” Jim decided. “Chekov, go down and help Scotty! I’ll take your chair,” he ordered, and the young Russian bolted from his station.

“Sir, we’re needin’ anyone who knows a thing or two about torpedoes and…” Montgomery Scott didn't need to say any more. Kirk looked at his mate.

“Nien?”

Khan had already risen and switched the helm to the navigation console. “I’m on my way to the weapons bay, Mr. Scott,” he called. “Send someone our way with the modulator!” With quick strides, he raced to the lift doors where Chekov waited. Scott called his affirmation. A quick look passed between the bondmates. Neither man knew whether this was a permenant good-bye or a short parting; then the super-human and Pavel vanished.

With rising dread, Jim called the weapons bay and ordered Carol Marcus to make ready the torpedoes. They were going to remove the warheads. Then he sat down at the navigation console. Behind him, Uhura called for the helm and navigation reliefs. She swore under her breath as she
addressed Kirk. “Lieutenant Frowln and Ensign N’roll are both in med bay, Captain. Should I…”

“Call Ensign Riley. He probably imagined his first day on the bridge would be different, but that’s life! I’ll take the helm!”

Two minutes later, Kevin appeared out of breath and bruised, but otherwise unharmed. Jim turned around and rose. “Take the navigation, Ensign!” he ordered and went to the helm. “What happened?” he asked quietly as Riley sat at navigation control.

“I was helping to evacuate a section on deck 7 and 8, sir. S’not bad, sir.”

“Hope not,” Jim agreed, glancing once again at his young friend – his younger ‘brother’. He wanted to get to know him again. He had looked forward to the day Kevin would be on the main bridge for the first time. Now it could be that his first day would also be his last. A wave of dread and sorrow rose in Kirk; then he chided himself. Wasn’t it well-known, even in the Academy, that he didn’t believe in no-win-scenarios? Hadn’t he kicked death off his ship enough times? The one time that the Reaper had won him, his friends wouldn’t allow him to keep their captain, and they pulled him back. Somehow together, they always found a way to survive. And Nien, who kept them out of death's dark grip this time, had made an art out of staying alive.

No, he wouldn’t allow the fear to take hold – take him over. As illogical as it sounded, he simply knew that they would make it again. Hurt and damaged, but they would make it – somehow. And Kevin would be safe, too!

Taking a deep breath, Jim finally had a chance to take a proper look at the damaged console. He winced at how she was laid bare. That was going to be a hell of a lot of work – if they had the chance to do it. ‘We will.’ “ETA?” he asked Spock.

“Six minutes, nine seconds, Captain.”

Despite his wish to banish the fear, Jim felt sweat break out on his forehead. There was not enough time! ‘Come on, Nien – Scotty! Just bring the damn warp core up again!’ he spurred them on inwardly. Just sitting, waiting, was eating him alive, but there was little else to be done.
Down in weapons bay, Carol Marcus and her staff were unloading three torpedos. They placed them on carriers for transport to Engineering and quickly removed the warheads. Accompanying the torpedoes, she headed to Engineering ready to assist Scott any way she could. At the halfway point, two people raced around the corner, and the young woman stiffened when she recognized Khan besides Chekov.

Both men carried a phase modulator. The Augment opened the cover of the first torpedo the moment he reached it. “Keep moving!” he ordered the young man controlling the carrier. He started remodulating the torpedo’s drive as they hurried through the corridors. Chekov did the same to the second missile.

Carol tried to ignore the super-human’s presence as they entered the Engineering’s main room. Scott was at the warp core controls, waving hectically at them. “Quick, quick!” he shouted. The carriers had barely stopped when the Scotsman began connecting the torpedo drives to the generators. “Read-out!” he demanded.

“Phase 1 and 2 are configured; energy levels near normal for generator input,” Khan answered; his eyes were fixed on the display of the phase modulator.

Scott nodded. “Carol?”

“Same here,” she replied.

“Right! Pavel, check the generator!” He connected the second torpedo to the generators while Chekov stepped beside Keenser standing at the warp controls. “I need read-outs during energy transfer from both torpedoes and the generators!” Scott ordered.

“Affirmative!” the former dictator called out, but there was no reply from Carol Marcus. Lifting his gaze, he glanced at her. “Dr. Marcus?”

Scott looked over his shoulder at the young woman, who stared at Khan. Frustrated he snapped, “Lass, this is no time for grudges! Just forget everything for a moment, or we’re history!”

Carol knew that Scotty was right, and so was Khan! There were more pressing problems in front of them. Banishing the memories to the back of her mind, she bent over the second torpedo – all her resolve focused now on her job. “Ready, Gomery,” she said.
“Right! Let’s begin! If there is the slightest fluctuation, tell me immediately. I don’t want the Klingons to come and find that we’ve done their work for them!”

Khan only nodded, ignoring his mate’s inner turmoil that he felt through their shared bond. He realized should the Klingons attack the moment they arrived, there would be no opportunity to say good-bye to his beloved, or die by his side.

No, if all was lost, he would return to the bridge. If death finally caught him here, then it would not catch him alone. He would have the comforting presence of his other half – his Jim!

But now was no time to think of death. It was time to fight. Except now his enemy was time, and that could only be fought with his mind and his speed. If Scott and he were able to get damn warp core to work in time, he would have the chance to live another day – and to find warmth, passion and love in Jim’s arms again.

ST***ST

“ETA?” It felt like an eternity had gone by since he had asked that question, yet Spock informed him that only a minute and a half had passed. Good God, the dread was nearly unbearable – his positive attitude was about to let him down. But this was about to become a no-win and no-run situation if the warp drive didn’t come online in the next few minutes.

Jim had hoped that the Klingon cousins schemed on their own to attack the Enterprise and disrupted the ceasefire. But there was no doubt now that the conference was a trap to lull the Federation into a false sense of security. The arrival of an entire Klingon squadron told Kirk all he needed to know.

“Captain, the long range sensors have identified the nearest vessels. One of them is the J’Ethl.” Spock looked straight at Kirk. “Kor’s ship.”

Kirk snorted. “The fleet commander of the Borderland in the flesh. There. We have our answer as to whether the ceasefire was a trap.” He shook his head. “Dammit!” He hailed Engineering. “Scotty, I need you to tell me that we’ll be ready for warp in one minute!”

“I’m sorry, sir; the energy transfer’s still in process, and we still need two minutes ter initiate the warp core.”
“We’re running out of time, Scotty!” Kirk tried not to raise his voice in frustration and failed.

“I'm goin’ as fast as I can, Jim! I’m no wizard!” That Scotty called him by his given name on duty was a sure sign of the stress he was under.

Jim only nodded and cut off the link. Sorrow overwhelmed him for an instant; he remembered that Nien and he parted without saying good-bye. Now it was too late. If this were the day they both would die, they would die without the comfort of each other. And Kirk didn’t know what scared him more. The prospect of dying again or dying alone…

TBC…

Chapter End Notes

Aaaaal rrright – I already warned you that you’ll get a nasty cliffhanger at this chapter’s end again. Sorry, but I love to be evil in this way (*snicker*).

To give you some hints what you can expect within the next chapter would rob you of all thrills, therefore I’ll keep my mouth sealed. You really have to wait what will come next.

Despite this evil ‘cliffy’ I hope you liked the new chapter – including Khan becoming a part of the bridge crew, Carol being confronted with him again and getting another proof how well Jim, Nien and Spock can work together if given a chance.

I know that many of you are maybe off for a vacation or are simply very busy, but I really would love to learn about your thoughts and your reactions to this turn of events. Therefore: Please review.

Have a nice rest of the week

Love

Yours Starflight
Chapter Notes

Hi, my dear readers!

I’m terribly sorry that the new update needed so long, but my beta had a lot to do during Halloween and she finds the most spare-time during the weekend. But I think the outcome worth the waiting, because you’re going to face another rollercoaster.

Thank you so very much for all the kudos in comments; I’m utterly happy that this story keeps your interest like this.

And now off to the universe in the 23rd century.

Have fun,

Yours Starflight

See the end of the chapter for more notes

Chapter 48 – Shocking news

The *Excalibur* headed quickly towards Federation space. Styles received the reports of the damage and losses with a stoic face; inwardly he was furious. That had been far too close. Yes, the staged attack needed to appear as authentic as possible, yet the dead and injured crew members and the ship’s damage was real!

“Captain, our frequencies are open again,” Li called. “I’ve sent the prepared message to Headquarters to inform Command.”

Lawrence nodded. Time for the next show. “Good, Lieutenant. Put me - all frequencies!” he ordered, and he took a deep breath from the still stinking air, as the comms office signaled him to speak.

“To all Federation ships around Borderland. Attention, this is Captain Styles of the *Excalibur* speaking. Our mission to bring the delegation to the conference with the Klingons for peace talks failed. We were attacked in the Borderland by three Klingon birds-of-prey and forced to fight. Ship’s condition is critical, the delegation was killed is dead. We need help. Leaving Borderland. Will pass checkpoint Midriran in 4.826 hours. Anyone in range of this transmission, please answer.”
He didn’t need to wait for long, as the warm but obviously shocked voice of Commodore Wesley sounded from the speakers. “Excalibur, this is the Lexington under the command of Robert Wesley. Captain Styles, say again; use this frequency! It’s secure.”

Li didn’t need an invitation from his captain to adjust the transmission. A moment later, a very concerned Commodore was on the screen. For a moment, he simply took in the Excalibur’s bridge and the disheveled appearance of its officers, and then he set his jaw. “Captain Styles, did I understand you correctly? You were attacked by Klingons in Borderland? Renegades or…”

“I’m sorry, Commodore. They were not renegades, and they weren’t acting alone.” He swallowed. “The J’Ethl belongs to a strike group, and…”

“KOR?!” Bob’s voice betrayed his complete bewilderment.

Styles nodded grimly. “In person – he even spoke with Admiral Barnett, before…” He gulped. “The admirals and the delegation were evacuated after Kor gave us an ultimatum for surrender. They… They didn’t make it.”

Silence. With wide eyes, Wesley stared at the freshly promoted captain in horror, before he whispered, “They are all dead?” After Styles only nodded, Bob needed a few seconds to regain control, and then his hands balled into fists. “Tell me exactly what happened!”

ST***ST***ST

Aboard the Enterprise, Jim watched the tactical layout of the approaching Klingon fleet. Less than three minutes separated the enemy from his ship.

“Captain, they are hailing us,” Uhura reported suddenly. “The transmission isn't great, but we can get them.”

“Understood,” Jim said quietly, assuming what lay ahead. Kor would demand their surrender, Jim wouldn’t give in, and the Enterprise would be destroyed. Or Kor would demand that he and Spock deliver themselves to him in exchange for the crew’s survival like he had at Turkana. If the second option happened, Kirk would go. He’d spare Khan and Spock’s that much if he could. If there was a sacrifice to be made it would be him and only him. Not his bonded and not his brother! Still, imagining them in the Klingons’ hands sent a wave of terror through him that he quickly suppressed.
He needed to have a cool head. Everyone – his crew, his friends, his family! They all depended on him now.

Bracing himself, he left the helm and walked the center of the bridge. “Put them on the screen, Lieutenant,” he ordered; his voice was firm.

The view changed to a flickering image of none other than Kor, son of Rynar. The Klingon lord’s dark eyes instantly fixed the young captain; his expression was neutral.

“Captain Kirk, I see you made it back to your ship.”

“Lord Kor,” Jim replied, before coming straight to the point. “The attack of your ships on mine is an act against the declared ceasefire. We demand an explanation. And then you will leave Federation space immediately or…”

“I must interrupt you, Captain,” Kor said; an odd kind of satisfaction flashed on his face. “First, you are in no position to demand anything. Our scanners say that your ship is without warp; your phaser banks are nearly empty, and your shields are useless. And even if your ship were capable of a fight, we outnumber you and so do not see you as a threat.” He bent forwards; his gaze intensified. “You are helpless, Kirk.”

Jim allowed himself a cold smile. “You thought so on Turkana, and you had the tables turned on you, didn’t you?”

Kor’s nostrils flared. “Yes – thanks to your special friend. By the way, where is he?”

“Where you can’t reach him,” Kirk stated hard; having no problem lying. But it really wasn’t a lie, was it? No one was getting to Nien without going through Kirk first, and he’d be damned if a Klingon hand got near him.

“I doubt that,” the Klingon answered; interference from the nearby magnetic field made the transmission flicker. “Our scanners were able to follow that little deception you worked on the MeQ’Lw. It was simple, effective, brutal – the handwriting of the Qli-jagh.”

“You underestimate us humans, Kor. Corner us and we just fight harder.”
The fleet-commander nodded. “I know. You won the contest. Two of our vessels against your starship, yet you won. The battle was worthy of your reputation, Kirk. You never give up; you fight ‘til the bitter end. We have this in common.”

Jim gritted his teeth. “Thanks for the compliment, I think, Commander. But I want an explanation for the attacks and I want to know what you are doing here!”

Kor smiled. It was a real smile that even reached his eyes. “Cocky as the king of spades. Is that how the saying goes on your planet?”

“You are surprisingly familiar with our sayings,” Jim replied. Time! He had to buy Khan and Scotty time! Maybe they wouldn't have to lose anything – anyone if they could reactivate the warp drive at the last second. His hope – their hope – lay with the two very different yet similar men.

“Commodore Wesley told me a thing or two about your culture during our peace talks at Organia,” Kor stated, and Jim scoffed.

“Peace talks!? Like the one your Council accepted? All you wanted to do was throw dirt in our eyes. I just experienced the Klingon version of ‘peace talks’!”

The Klingon lord had frowned and cocked his head. “The attack against your ship was…a misunderstanding.”

“A misunderstanding?” Jim had gasped before he narrowed his eyes. “Tell that to the injured and dead!” he snarled.

Kor remained surprisingly calm. “Koval and Noy attacked you without my permission or the support of the Admiralty,” he said slowly. “That is the reason for our presence here.”

“Is it? Or did you come to finish us off after we destroyed your ships and took those new cloaking devices with it?” Kirk challenged.

Again Kor didn’t react as expected. Where other Klingons certainly would have given into their short-fused temper, the fleet commander stayed rational. “Calm down, Kirk. We have not come for
your destruction though I have wished for an opportunity to bring you to your doom. Your successful escape from Turkana gave me trouble.” He rubbed his beard. “Yet the declared ceasefire and the upcoming conference forbade me my revenge. I would lose face as you say, and this price I’m not willing to pay. Maybe there will be a time later when we two can have our match.”

Jim was smart enough not to find comfort in those words. He knew that this particular Klingon had tricks up his sleeve, but his intuition told him that Kor was telling the truth. If he had learned one thing during his captivity, it was that the last descendant of the Klingon Emperor had real honor. “So your presence in Federation space is not an act of aggression – so what is it?” Kirk asked; the venom had left his voice, but his eyes narrowed in suspicion. That moment, he felt his mate’s presence as the lift doors open. Calm spread through him, but he didn’t turn from the Klingon on the screen.

A bushy brow quirked up, and then Kor said slowly, “I was on patrol with my squadron. They did not show at our appointed time and place. I tried to contact them – without success. Then we intercepted their transmissions between one another. It was the last we heard from them. I realized that… That Koval and Noy must have been carried away by their desire for revenge. Under any other circumstances, I would not have moved one finger to your aid, but the orders of the High Council and the Admiralty are clear. The promise of a Klingon is difficult to procure and devastating to break. The ceasefire was declared for the duration of the conference, and we will abide. If we wish to end that ceasefire and continue this war, we will inform you of such!”

Jim took a deep breath slowly, not daring to get his hopes up that this all wasn’t part of a bigger ruse. “So, you’re saying that their attack…”

“They went rogue, Captain – as your special friend did when he came for you on Turkana!” Kor’s glance became piercing.

“Freeing a prisoner, a Starfleet officer, from enemy forces is hardly going rogue,” Jim deadpanned. “Besides, if he had with no care for the outcome, you can be sure your ‘headquarters’ on Turkana wouldn’t be standing, and there’d be a lot more dead.”

Kor scoffed, and then he pursed his lips thoughtfully for a moment, before he continued, “I read Koloth and Korax’s reports about your actions on Aldebaran and the space station and that of your – savior, is he? Perhaps justice is your motivation, but your friend’s motivation seems to be only you, Kirk. I ask myself how far he would go for you – and why.”

“As you have pointed out twice now, Commander: He and I are friends!” A smirk appeared on Kirk’s face. “In our culture friendship is loyalty and a willingness to risk your life for another. I don’t worry about a knife in my back when I wake up or when I walk through a dark corridor. I hear that’s how Klingons climb the ranks.”
Kor bared his teeth in a wolf-like grin. “A myth, Kirk.”

“I bet,” Jim replied with a hint of sarcasm.

Kor was approached from behind; another Klingon whispered in his ear.

“They have reached us, Captain,” murmured Spock.

“Warp drive ready on your command, Captain,” Kevin Riley added beneath his breath. His eyes were fixed on the display, firmly refusing to be distracted by what he'd just heard. Did he catch that right? This man, ‘Nien’, had freed Jim from a Klingon prison, and killed Klingons by himself to do it? How? You don't just walk into a Klingon building and break someone out! And why did the Klingon commander call him Jim’s ‘special friend’? What did that mean?

Kirk nodded at Kevin’s quiet words; he knew he could trust his Scottish Merlin and Nien to work one more miracle. He continued to watch Kor, who frowned. “Kirk, my science officer informed me that he has scanned seven Klingon life forms on your ship.”

“Yes, the survivors of the MeQ’Lw we beamed aboard.”

This time, Kor’s face darkened. “They surrendered?”

The young captain shook his head. “No, they wanted to go down with their ship, however, I considered that sacrifice a waste and brought them onboard. They’re in our brig being treated as we speak.

The Klingon's face turned thoughtful. “I know that Terrans regard the matter of death differently. In other words, you saved them despite the fact that they attacked and tried to kill you.” He snorted. “You are a riddle, Kirk!”

“Yeah, the admirals say the same thing,” Jim deadpanned.
Kor leaned back in his chair; his shoulders straightened. “I demand their surrender to my ship.”

Jim shrugged. “They are your people. And despite myself, I believe you. Know that this has been recorded. I'll turn it over to the admiralty, but I'm sure they'll see that Koval and Noy acted alone, and our cameras and microphones have recorded everything. It should be enough for our admiralty. We shouldn't need a statement from the survivors. You can have them.”

The fleet commander nodded. “Do not concern yourself with lowering what little remains of your shields, Kirk, our transport signal is strong enough to beam our people over. Inform your medical team to retreat so that we do not catch them by accident.” Mockery laced his tone, and Jim gave him one of his feigned, polite smiles that meant ‘fuck off’.

“I’m sure your transporter chief has learned at thing or two after my friend and I took leave of your hospitality back on Turkana - since he wasn't able to catch us. But thank you for the warning. I'll order the medical staff’s departure from the brig. Give us a minute.” He walked to his chair, threw Khan a brief glance, and gave the necessary commands.

The Augment watched Kor’s face darken again, yet he would have bet that the Klingon held some admiration for Jim. The way he glanced at the young captain spoke of respect. Of course, Jim had gained victory over Klingon assaults three times now and managed to escape a Klingon prison. In a twisted way, this was enough to gain Kor’s appreciation.

“You can beam your people over,” Jim said calmly to Kor, and several seconds later Security reported that the seven Klingons were no longer in the brig, while the Klingon lord received his own message that his people had arrived.

“Good Kirk, and now you should retreat because we are going to destroy the remains of the MeQ'Lw!” Kor lifted both bushy brows. “Shall I help you by putting some distance between the MeQ'Lw and you? Tow you with a tractor beam, or...?”

“We are completely operational, Kor,” Jim cut in with a sharp voice; a clear signal that the Klingon was about to cross a line that Kirk would not tolerate.

On the upper section of the bridge, Khan was torn between the urge to smirk and the urge to scowl at the Klingon, though he was out of the camera’s range. He felt Jim’s offense over their shared bond as he had Jim’s terror minutes ago. He ran to the bridge when he felt it, knowing there were few things that could elicit such anxiety within Jim Kirk. A mortal enemy – Klingons. And Nien feared that his beloved was about to do something very foolish like offering himself in exchange for the life of his crew. Hearing that the Klingons weren’t there for an attack filled him with relief, but it did
nothing to dissipate his anger as the older warrior taunted Jim. The strong protectiveness nearly all Augments possessed ate away at him. But he was forced to stand aside and to watch, knowing that he could be caught by the cameras if he intervened. Sooner or later the records would be out in the open, and he would be better off not seen in them. It would bring Jim trouble – big trouble! So the former dictator held himself back, even though his instincts wished he'd do otherwise.

Kor grinned again as he realized that he was rubbing off his opponent. “Compliments to your chief engineer, Kirk. He must be gifted in his field.” He bent forwards. “Ten minutes enough for you to retreat?”

“This is Starfleet’s flagship, Kor, not a wing-clipped bird!” Jim growled. “Ensign Riley, full impulse astern. Give Lord Kor room for target practice.” He glanced back at the screen. “And you have twenty minutes to leave Federation space, Fleet-Commander, otherwise I’m reporting an invasion to Starfleet Command.”

Another grin bared the Klingon’s teeth. “Spoken like a Klingon, Kirk. I’m looking forward to meeting you in battle one day. You and perhaps your ‘special friend’, too. You make a fierce pair to be reckoned with. Kor out!”

The image vanished, showing the asteroid field and the twelve birds-of-prey around the Enterprise. Even knowing that the fleet wasn’t a threat to his ship, Jim felt uncomfortable in this position.

Silently he and the others watched as two D5-cruisers pulverized the remains of the MeQ ’Lw; then, without any further transmission, the squadron heaved to and turned away. Seconds, they activated warp and disappeared, heading back to Borderland.

Only now did Jim allow himself to breathe in relief, before addressing Kevin. “Ensign Riley, set course to Risa, full speed – whatever that is at the moment!” He looked over at Khan, whose eyes looked over the cadet at the navigation station, before he felt his mate’s glance. Quirking an eyebrow at Khan, the captain nodded. Yes, this was the boy he once regarded – and maybe still did – as a little brother. Then Kirk became all captain again. “Nien, are you still needed in Engineering or could you…”

“… Take the helm for the remainder of shift? No problem, Jim. I think Mr. Scott and his staff can manage the rest.” The almost demure smile and the mirth in his voice took the arrogance out of his words.

Kirk grinned. “Right, Mr. Singh, to your station then.”
Spock lifted a brow. “Captain, I am obliged to inform you that despite Mr. Singh’s piloting skills, he is not a member of Starfleet, and only Starfleet personnel are allowed to man the bridge stations.”

Jim groaned. “Spock, Sulu is surgery; his reliefs are in med-bay, too, and gamma-shift is…”

“I understand that the pool of qualified personnel has been drastically reduced, yet…”

“Ha!” Kirk turned around to him, snapping his fingers. “I have a solution.” He was the only one who saw fleeting concern in the Vulcan’s eyes, and he smirked. “Starfleet regular 58b: ‘In times of emergency, a commanding officer or acting commanding officer may recruit civilian members possessing a required skillset to ensure continued function of the ship.’ Well, I think this qualifies, and Nien has proved several times that he is a damn good pilot, don’t you agree?”

His grin broadened as Spock suppressed a sigh. “Of all regulations, you remember that one,” he murmured under his breath – too quiet for Jim to hear, but Khan did and chuckled.

“Didn’t you know that human brains can recall information on an as needed basis? Saves space and processing time. Brain’s more efficient that way,” he taunted, looking at the first officer.

Spock glared back, but decided to ignore the Augment. He addressed Kirk instead, “Do I understand you correctly, Captain? You want to recruit Mr. Singh?” Before Jim could answer, the Vulcan continued. “I am sure that I need not remind you of Mr. Singh’s status.”

Jim still smirked. “Nien is still a free man, Spock, thanks to Bob. And we need him, and I’m the commanding officer.” His attention drew back to Khan. “You built the Vengeance, and you were a kind of general in your own time, right?” As Nien nodded, Jim’s grin widened. “Well, as far as I’m concerned, you’re qualified so I can recruit you.” He nodded at the helm. “Petty Officer Singh, please man your station. And visit the uniform shop after your shift. I’ll instruct them to outfit you with what you need.”

Spock’s eyes widened, yet he knew that he couldn’t change his captain’s mind. Jim’s decision was logical, but the Vulcan didn’t like it. Not because he still distrusted Khan; he knew now that the Augment would never again do anything that would cause Kirk pain. But he knew Jim was inviting trouble for himself with this unusual solution.

Khan looked to his mate, astonished. Had Jim just made him an official part of the crew? Yes! And
Nien vowed to himself he would not disappoint his beloved, his captain. “Aye, Captain,” he said; the words came surprisingly easy to him. Then he turned around to man the helm. He was well aware of Riley’s confused gazed and gave him a quick smile before turning to the half destroyed console. There was much to do to repair the mess!

That moment the intercom buzzed. “Engineerin’ ter bridge. Capt’n, we can give ya warp 1, but I would prefer we use impulse drive first until we’ve brought more order to the chaos down here. Is Mr. Singh still with ye?”

“Yes, Scotty, Petty Officer Singh just took up his new post at the helm,” Jim answered. He heard a gasp, followed by, “As the helmsman? What happened to Sulu?”

Kirk grimaced. “Sulu is in surgery. His station exploded in front of him and… Well, I’m still waiting for news from Bones.”

Montgomery cursed and said sadly, “Poor lad! Please keep me updated about him, Capt’n.”

“Of course, Scotty,” Jim sighed. As if he had nothing better to do than play messenger! But it was Sulu, and he was well loved by many including his captain.

“What about the helm?” the chief engineer wanted to know.

“Manual steering right now. All other automatic functions are running via the navigation station at the moment,” Khan called loud enough to be heard through the intercom.

“Can ye start the repairs, Mr. Singh?” Scotty replied loudly.

“I can. And I will list the tools and parts I require as soon as I do a complete assessment of the work required.”

“Right, ye can send it ter me and I will make sure ye get what ye need!” Then Scott’s voice softened. “Capt’n, any chance that ye can lend me Chekov for a while? The damn Klingons really messed up me girl and…”
“Ensign Chekov can lend you a hand, Scotty. His station is manned. How long do you think we’ll need to stay on impulse drive?”

A deep sigh came through the intercom. “Capt’n, if ye can live with us creepin’ through space fer two or three hours, ye’ll make me the happiest engineer alive.”

Jim had to laugh – a clear sign of his relief. “I didn’t know such a small thing would make you so happy, Scotty. You’ll have your two or three hours, but then we have to move. I believe Kor when he says this wasn’t another attempt to annex part of the Federation and that he’ll go back to Borderland, but I still want to inform Commodore Wesley as soon as possible about the incident – and as long as we’re stuck in this damn magnetic field, we can’t make any sub-space transmissions.”

“I understand, sir, and we’ll hurry, but I can't offer ye more just yet.”

“I know, Scotty,” Kirk reassured him. “You and your people pulled off another miracle bringing warp drive back online in time, even if we didn't need it. My compliments to the wizard, Scotty. Bridge out.” He looked at the two men in front of him. “Petty Officer Singh, full impulse. Ensign Riley, ETA to Risa space docks?”

Kevin had already calculated the time they would need and answered, “On impulse, sir?”

“No,” Jim grinned. “I don’t need to know how many years it will take. ETA at warp 1 and gimme one for warp 3. Scotty underestimates himself,” he winked.

Kevin suppressed a snicker and remained professional, even if his over-wrought nerves needed a work out. But now on the bridge was not the time. “At warp 1, we’ll reach Risa in 63 hours and 28 minutes, Captain – if we start now.”

Jim sighed and sat down. “Very well, then let us creep bit by bit.” Turning his chair, Kirk addressed his comms officer. “Uhura, as soon as we’re out of the Briar Patch’s magnetic field try to reach the Lexington. Even if Kor only came to help, I want to report the incident in person to Commodore Wesley.”

Nyota nodded. “Understood, Captain!”

“And I need a full report of the ship’s status.”
Bob Wesley sat in his chair; his arms were crossed in front of his chest. He felt cold and one look around him confirmed that his officers were in the same condition as him – shock. Wesley had listened to the full report of young Styles. He ordered the Hood II, nearest to them, to support the Excalibur as soon as she left Borderland. Then he made a sub-space transmission to the other ships of his squadron to inform them of the events. He got confirmation that they received information about the events and that they had not had similar experiences with one exception. The Enterprise didn’t answer. Losing them, losing Kirk scared Bob more than meeting the Klingons alone.

What if the Excalibur wasn’t the only ship that was attacked? What if other Klingon strike groups were hiding somewhere out there waiting to attack? But if so, why hadn’t Jim sent a distress call? Kirk could be reckless, but he wasn’t a fool. He never would face a hostile squadron alone! That would be suicide. But why wasn’t he answering?

Two and a half hour later, he received the message that the Excalibur had made it back to Federation space, leaving Borderland between Yridia and Midrian.

Minutes later Palmer’s called out, “Commodore, I have the Enterprise for you!”

A sigh of relief escaped Bob’s lips. “Finally! On the screen, Lieutenant!”

A moment later, the stars outside vanished and were replaced with the picture of a tousled Jim Kirk. Wesley stared at him and the surroundings behind the younger man. The Enterprise’s bridge was in disarray as if he'd been in a battle; they looked eerily like the Excalibur during the last transmission. Before Kirk could say anything, Wesley bent forwards.

“Jim, what happened?!” he demanded. “Why didn’t you answer our calls?”

Starfleet’s youngest captain sighed. “Well, we were in the Briar Patch and were only able to leave the area just now. The magnetic field hampers communication. But honestly, I'm glad we couldn't. It would have been the misunderstanding of the century and likely a restart of the hostilities.”
Bob frowned. “What misunderstanding?” He gestured towards the screen. “Your bridge looks like a tornado went through it, and you don’t look much better.”

Aboard the *Enterprise*, Jim was seated in his own chair and looked at a very pale Bob Wesley. The bags beneath his eyes made it look as though he hadn’t slept in days. Something was troubling the commodore, no doubt about it, and Kirk hated to add to what was surely bad news.

He took a deep breath. “We were attacked by two Klingon vessels…”

“You too?” Bob almost yelled.

“Yeah. It turned out that it was the same two commanders from Turkana. But I found out they were acting on their own – I am sure it wasn’t an effort to restart the war by the Klingon admiralty. I need you to know that first, before…” Jim interrupted himself as Wesley’s words sunk in. “Wait. What do you mean ‘you too’?” he asked in alarm.

Wesley visibly fought for control. “You haven’t heard?”

Kirk frowned. “What should I have heard? We were cut off from any sub-space transmissions, so I’m a bit clueless at the moment. What are you talking about.”

With rising dread he watched his mentor take a deep, calming breath; Bob’s face became hard. “Jim, the whole fleet is on red alert. There was an attack on the *Excalibur*, inside Borderland.”

Kirk went rigid. “What? Who was it? Orion pirates?”

Bob shook his head. “No, Jim. Klingons!” Gasps sounded through the bridge; everyone knew what that meant. “Three birds-of-prey attacked the *Excalibur*. She made it out, barely. I sent a message to every ship to warn them that the ceasefire was a trap. A sub-space transfer will inform Command within the hour.”

Jim was white as a sheet. “The peace talks… They’re not happening, then?”

“After that murderous stunt?” Wesley answered bitterly. “We suffered serious losses, Jim. Styles did

Bob looked calmly at him. “Lawrence Robert Styles – I’m sure you know him.”

“Yeah, I do,” Jim groaned. “Pompous, arrogant asshole with…”

“Jim!” The commodore’s voice became very firm. “I know you’ve been rivals since the Academy, but you’re talking about another commanding officer, so contain yourself!”

“Sorry,” the young captain grumbled with little sincerity. “So, what about Styles; what’s he doing there? I thought Captain Heldrom…”

“Captain Heldrom and his first officer were involved in a traffic accident on Earth the morning the Excalibur departed. Both are gravely injured and a replacement was needed. Styles’ promotion as a captain was overdue and so Barnett decided to put him in charge of the mission.” He pursed his lips. “Styles is young, only three years older than you Jim, and he was confronted with a situation no one could foresee. He did the only thing possible in that situation. He evacuated the delegation and the admirals to a nearby moon with breathable atmosphere.” He took a deep breath. “They didn’t make it.”

Frozen, Kirk could only stare. “They’re all…?”

“Dead – yes.” Bob confirmed aboard the Lexington, feeling bile rise in his throat. “Styles tried to distract the attackers from the evac shuttle, but one of the birds separated and attacked the shuttles. One was destroyed before it could reach the moon, the second one was too damaged to pass safely through the atmosphere. The whole delegation and…” He stopped as another realization hit him. If the Enterprise had been unaware of the disaster, then… Oh God, he didn’t want to do what was now his duty, but it was unavoidable.

Bracing himself, he asked quietly, “Jim, is Commander Spock on duty?”

From the Enterprise’s bridge, Jim watched his superior’s face turn even more serious, yet there was another expression – sorrow.
Before Kirk could answer, his first officer replied, “I am here, Commodore.” The Vulcan left his station and stepped beside the captain’s chair.

Wesley saw the bandage around the young Vulcan’s head and his tousled appearance. He’d been through so much already. He hated adding psychological pain to Spock’s already physical pain. Bob swallowed; then his voice became soft – almost gentle. “Mr. Spock, I… I regret to inform you that… Ambassador Sarek belonged to that delegation.”

This time, the gasps in the control center were even louder; the bridge officers stared wide-eyed at the Vulcan.

“I’m so very sorry,” Bob murmured, and clearly he was!

Uhura was out of her chair in an instant. Stifling a cry, she clapped a hand over her lips. Sarek – dead! The father of the man she loved more than life was gone. Again fate had struck and ripped another pain of loss in Spock. First his mother, then his people, and now his father. Nyota felt tears welling; they blurred her sight, and Spock's image wavered.

Jim looked up at his T’hy’la, horror written all over his face and in his eyes. And then he comprehended the full meaning of what it meant for Spock. It hit him with the force of a ship at warp. Spock – his best friend, his soul’s brother – had not only lost his people, but also both parents in just two years! He never had real parents, even with Winona Kirk still alive. But Jim knew in his bones what it meant to belong to someone in flesh and blood like a child to its parents. Anguish, compassion, and the fierce urge to protect roiled and fought with each other inside him. Without thinking, he reached out and closed one hand around the long, warm fingers of the Vulcan, trying to project many thoughts at once as his mind went out to his friend. ‘I hurt with you, Spock!’ his soul cried out. ‘I am so, so sorry for your loss. If I could change it – God, I would go through hell to spare you this pain. I’m here, T’hy’la, I’m here – you’re not alone. I’m with you in this…’

Spock stared, unblinking at the screen, trying to understand what Commodore Wesley had just told him. Sarek, his father, had been a part of the delegation? The same delegation that had been killed? Killed because the peace negotiation had been a trap to weaken the Federation? Sarek, son of Skon, kin to the matriarch T’Pau. His skill as a diplomat brought so many planets to peace, and now he was gone. Ripped from his life as his wife had been. What of the universe without him? What of Spock? He was an orphan now. Torn from his family – his planet.

The first officer had always tried to control his emotions – emotions that all Vulcan had, just suppressed. Several times he had failed to stay his emotions – as his mother fell to her death in front of his eyes, as Jim challenged him, and as Jim died behind the security door of the warp chamber. He
also had been overwhelmed by his emotions, but in a way that he could view that as positive where Nyota and Jim were concerned. Even McCoy, whose sparring kept him on his toes – he enjoyed it though he would never admit it.

Spock allowed himself to go back to the moment the light in Jim’s eyes dimmed and his T’hy’la took his last breath. He thought of missed chances then, and he did now too. Sure, his father and he had been on good terms when they parted two years ago, yet there were topics left unspoken between them. And now it was too late. His father, the man he always respected and loved, had been taken away from him forever. There was not even the possibility of saving his soul and mind, his katra, as all Vulcan katras had once been saved. All who went before were saved in the Hall of Eternity in Mount Seleya. That place perished along with Vulcan.

There would be no eternal remains of Sarek of Vulcan. His soul, everything he was, was lost forever! And perhaps it would be of all Vulcans for a long time to come. They were homeless with no Hall of Eternity now...

A sharp sword pierced Spock’s inner being; it glided hot through his veins and…

And a cool hand was wrapped around his fingers, soothing the flames of loss and anger in him. Comfort and understanding, compassion and fraternity broke through his mental shields and calmed the torrent of unwelcome emotions that threatened to suffocate him, though his face didn’t show it. He didn’t need to look down to know whose touch brought him relief and the strength he needed to maintain his composure.

Jim!

He remembered the last time he was confronted with such a personal loss. Back then he and Kirk had been rivals – nearly enemies, before they were forced together to stop Nero. Now that same man was by his side – loyal and strong as a rock in a stormy sea. Now Jim Kirk was his anchor – his closest friend, his T’hy’la. And Kirk’s presence inside of him and beside him allowed him to ride out his storm until the waters calmed.

Still, he avoided looking at Jim. He knew that the depth of feeling in those eyes would have undone him, and he would not compromise himself by displaying his feelings now. Not in front of the commodore and the eyes of the crew. He owed that much his father, who had witnessed the last time Spock’s all too human rage had taken control. He would honor his father and his Vulcan heritage by staying calm, even if his soul longed to weep.

The reaction of the bridge at Wesley’s words had surprised Khan. He was repairing the helm with
the tools and parts Scotty had sent up a little more than an hour ago. He was crouched beneath the console, but he heard the gasps and sat up. Half curious, half confused, his gaze fell on a very shocked Jim who looked with pain in his eyes at his first officer. Spock's face had become alarmingly pale. Behind the command team, Uhura had bolted up from her chair – one slender hand pressed to her mouth; her eyes shined. What was…?

Bob’s voice strained with emotion, and the Augment turned to the main screen. “My sincerest condolences, Mr. Spock. I grieve with thee,” He used the traditional words.

Spock was about to clasp his hands on his back, but Jim’s fingers around his own prevented it. And he didn’t have the strength to unmoor from the rock that steadied him. So he straightened his shoulders and looked straight into Wesley’s eyes. “Thank you, Commodore,” he said – his own voice hoarse.

Jim squeezed the Vulcan’s hand again and held on as he looked back at the screen, pushing aside the confusion he felt from Khan through their bond for the moment. “When did it happen?” he asked quietly, and Bob took another deep breath.

“Twenty minutes ago, Styles arrived in Federation space, but we already had his message. The attack was about three hours ago. Klingons blocked their transmissions and only after he escaped could he send a distress call.” He shook his head. “That the Excalibur still exists is a miracle. Styles sent me a full report – the ship is a mess.”

Cocking his head, Kirk frowned. “So the attack was three hours ago? That was about the same time we were attacked.” He pressed his lips in a thin line, before he murmured. “And here I really believed they were working on their own. That the Klingons – not that they wanted them, but accepted the notion of the peace talks were true. And they go and…” He shook his head.

Bob snorted bitterly. “Yeah, I know what you mean. I never thought that Kor, of all Klingon warlords, would pull this.”

Jim sat up in his chair. “Kor?” he asked perplexed. Khan rose and sat down at the helm’s chair. His bewilderment mirrored Kirk's own. Something was strange – wrong here!

With a grimace Wesley nodded. “Yes, Kor! I thought I knew him. Now it appears I was mistaken; that doesn’t happen often. Anyway, he led the attack against the Excalibur then…”
“Kor attacked Styles three hours ago?” Jim’s voice broke.

The reaction of his superior spoke for itself. “I think that’s what I just said. What’s the matter, Jim?” His asking glance wandered to Spock, who seemed to come out of the shock he’d been trying unsuccessfully to hide. The Vulcan stared down at his captain and then back at the screen with both brows raised.

Jim bent forwards. “Bob, where exactly took the assault against the Excalibur place?”

Wesley blinked. “Near Yaraka. Its moon, Yaska, was where Styles evacuated the delegation for and…”

Waving both hands in the air, Kirk cut him off. “Wait, wait, wait! Lemme get this straight? Three hours ago Lord Kor attacked the Excalibur near Yaraka? That can’t be!”

This time the commodore frowned, irritated. “That's exactly what happened, Jim. Why do you doubt it?”

Kirk’s voice became stern. “Because three hours ago he showed up at the Briar Patch when he found out two of his commanders went rogue. He came to try to prevent an incident that would stop diplomacy before it even started.” He saw astonishment appear on his superior officer’s face and added, “That means Kor was able to travel within, say, ten – fifteen minutes to get from Yaraka to the Briar Patch to help us against his own!” He snorted. “Klingon technology may have made a few advancements, but that's a bit much, isn't it? And his actions with me and with Styles – they don't match up. That doesn't make sense, don't you agree?”

This time Wesley bent forwards in his chair, fixing his protégée. “Are you trying to tell me that Kor was with you – came to help you, while…”

“While Styles is reporting that Kor killed our delegation that same minute two parsecs away. Impossible, right?”

Bob blinked again, trying to comprehend what Kirk told him. “Then one of you two have to be mistaken.”

“My thoughts exactly. But I and my bridge crew recognized Kor during the visual transmission.
They all saw him four weeks ago – at Turkana. And I've had the pleasure of facing him three times as I ‘enjoyed’ his hospitality.”

Very slowly Wesley nodded. “Tell me exactly what happened,” he ordered; remembering that he said these words just hours ago to Styles.

Jim sighed. “We were on the other side of the Briar Patch when we were attacked. The Klingons, cousins, who tortured me on Turkana, commanded the assault. We were able to fight and to finish them off, then Kor and his squadron arrived. Conveniently twenty minutes after the battle started. I spoke with him, I saw him, and he saw me. He said he had intercepted transmissions between the cousins and that's how he found out they were going to attack the *Enterprise*. He has his orders – to keep the ceasefire – and so he said he entered Federation space to come to our aid; very much against his desires, but he expressed that he was bound by Klingon honor. I suppose I should be thankful. Anyway, he destroyed the remnants of the last bird-of-prey and flew back to Borderland. And according to Styles, he did all this while attacking the *Excalibur* hours away from us!”

Bob swallowed. “But Jim, I saw the *Excalibur*’s read-outs. I got Styles’ report. There's not much room for doubt that Kor led the attack against them. Hell, Richard Barnett talked to Kor during the attack, and we can clearly see the ship's markings; it's the *J'Ethl*!”

“Then one of us is either mistaken, or one of us is lying,” the young captain concluded. “Barnett talked to Kor but didn’t see him, right?”

“Perhaps, but you watch your accusations.” As Wesley made an affirming gesture for Jim to continue, Spock rose to speak.

“Even if the true identity of the Klingon, who was involved in the assault on the *Excalibur*, is in question, the chances that we met the real Kor are much higher. Altering a voice is far less difficult and falsifying a visual transmission when the individual well-known.” His voice sounded calm and strong. Only Jim and Nyota (who both knew Spock all too well) and Khan’s enhanced hearing recognized the slight tremble. “I was on the bridge when acting Captain Sulu spoke with the Fleet Commander on Turkana; I studied Kor’s file in our data banks after he took Captain Kirk captive. Given the events past and the data available, I am certain that we talked to the real Kor three hours and forty-eight minutes ago.”

“In other words, Styles was misled – he and all the others.” Bob rubbed his neck. “But why? Who were those bastards? Renegades? Traitors? Maybe there is a revolt or some kind of coup going on in the Klingon Empire because of the peace talks. That’s the only explanation I can think of for why the Klingons in question tried to pass himself off as Kor.”

“Let him be the one to take the fall – lose his honor,” Jim nodded slowly. “I agree although I suppose
there’s the chance that someone has a personal vendetta against Kor too. The attack would derail the talks and depose Kor.”

Kirk went silent as he thought hard about everything he'd learned. Something wasn’t quite right here. Kor told him that Klingons didn’t give their word lightly, but when they did, keeping it was a matter of honor. “He didn’t want to lose face, that's why he came to our aid,” he murmured. Only as he heard Wesley’s “What are you going on about?” he realized that he had spoken aloud.

“Well, Kor said that he usually wouldn’t have lifted a finger to help, but the Empire made a promise; breaking it would dishonor them. That was the reason Kor acted at all. We know how much the Klingons value their pride. Whoever tried to stop the upcoming negations brought dishonor to the Empire and disgrace upon himself. This… It just isn't the Klingon way.”

“Apparently those two commanders didn’t give a damn about their honor, judging from the state of your ship,” the commodore deadpanned. “And that goes for the squadron that attacked the Excalibur. Otherwise, our most important admirals and the delegation would still be alive.”

“True!” Jim announced; his thoughts were in turmoil. None of it made sense. A Klingon fleet commander rescues the Enterprise as another Federation ship is attacked two parsecs threatening the ceasefire and killing the most important diplomats and admirals of the Federation. It was a ruse, but whose? Something was very, very wrong here – and he couldn’t put a finger on it. The assault, the evacuation that led to so many deaths, a Klingon possibly faking Kor's identity… The young captain frowned as another thought struck him. “Bob, when the Excalibur was in the middle of an attack, why would Styles order and evacuation of the delegation and the admirals?” he asked slowly.

“Kirk, you gotta know the regulation!” Wesley groaned. “It’s standard protocol that during war time the highest ranking staff officers have to be taken to safety no matter the cost. The same goes for a delegation. Styles did what the rules demand and…”

“Bullshit – don’t accuse me of not knowing regulation! I know what they say and I know he values every damn paragraph of those regulations more than life itself, but to start an evacuation during a battle is… crazy! Insane! He and his ship are still flying, and the admirals and the delegation are dead! They didn't have... They weren't protected! They weren't kept safe! They were shot out into space to die!”

“Stand down, Captain! He ordered the evacuation during a lull in the fire. I have the bridge records, Jim. Barnett and Morrow didn’t want Styles facing the action alone because it's his first command. He insisted that they try to get to safety. They gave in, and evac’d with the diplomats. The rest you know.”
“So, the Klingons weren’t even distracted when he launched the shuttles? They had plenty of time to watch the hangar open and the shuttles depart?” Jim stared wide-eyed at Wesley. “No wonder it all went to hell! How could Styles send them out without distracting the Klingons first?”

“He did, as I already told you, Jim. He fired at the Klingons as the shuttles launched, but the Klingons – they were more experienced and were able to pull one over on him.” He shook his head. “He blames himself, but I don’t think he should and I told him as much. He did nothing technically wrong, and I’m certain the admiralty will see that after they review the records.” He sighed. “I spoke with Styles, and he was upset. We all are, believe me. We are all mourning.” He watched the Vulcan lift a brow and winced in sympathy. “Yeah, I know, it’s not comparable to your grief, after all you lost your father.”

At the commodore’s words, Khan looked at the first officer again; comprehension flooded him. This Ambassador Sarek had been Spock’s father! No wonder. Sadness and protective feelings poured from Jim, and Uhura strained to comfort even as she fought against tears. The Vulcan’s hurt struck them hard because he was dear to them.

Nien had neither a father nor a father figure. It had always been his brothers and sisters who had taken care of him, and one guard who treated him as a human when he was a child. It did not last when the child became a young man. In the end, even this man tried to kill him. Khan knew then with whom his loyalty would lie – his own. But he also understood, in a theoretical sense, what the parent-child bond ought to be. It was displayed in the eyes of the Vulcan who now mourned his own parent. Spock was indeed grieving, though he tried to wear a mask over his grief, but the mask couldn't cover his eyes. They spoke volumes.

Jim rose and stepped beside Spock. His instincts to support his friend with his presence were too strong to ignore them. Going straight to the next topic, he tried to distract the Vulcan. “Bob, have the Klingons been contacted since the assault?”

Wesley shrugged. “I haven't made the attempt yet and with the distance between here and Earth, I figure Command’s just hearing about it now. It'll be up to the President to contact the Empire. Until I get further orders, all ships near the former Neutral Zone are on red alert. Seeing that you’re on your way to Risa and far enough away from any hot spots, you stay on yellow alert. I’ll contact you as soon as I hear more.”

Kirk nodded, glad that they were only on yellow. It meant their shifts would remain as normal, and his crew could get the off-time and rest they needed. They needed it to recover, to grieve, and to repair and move on again. McCoy had called him two hours ago and told him that Sulu was out of surgery. He would make it, but nine crew members hadn’t been so lucky. More condolences. Jim would have to write to the families soon – and he really, really hated it.
“Right,” he murmured. “I send you my full report within the next hour.”

“Alright – be quick about it, I have to report the incident to Command, but I want to have details first. Especially concerning Kor!”

Kirk sighed, and then he frowned. “Bob, we both agree that something is very wrong here. We need to find out which one of us actually faced Kor and what happened before Command is informed of anything. May I make a suggestion?” As Wesley nodded, the younger man continued, “Send me the records from the *Excalibur* – the actual attack and the conversation between Barnett and Kor. We’ll compare it with our voice records. That way we can…”

The commodore rolled his eyes. “Do you think my comms officer so incapable?”

“Of course not. Palmer's a good man, but Uhura has the best hearing when it comes to intonation and accents – nuances someone else would miss. If someone altered their voice to sound like Kor, they still wouldn’t be able to copy those things exactly. Uhura could review it faster than any computer can assess the data.”

Bob looked at him long and hard. Jim didn’t waver and returned the stare. Finally, Wesley sighed and made an affirming gesture. “Sure, what's one more set of ears. I'll send you the report – for your eyes and Lieutenant Uhura’s only so to speak! The *Excalibur*’s records are top secret. If Command finds out that I gave you a copy, we’re both are in trouble. You know how they are.”

“Right, sorry. Of course it is,” Jim said surprised.

“Our most important admirals and ambassadors were killed along with the vice president of the Federation. Of course it's top secret!” Wesley chided. “So keep it to yourself.”

“Aye, sir! I'll send you my report as quickly as possible and inform you with whatever he finds on those *Excalibur* records.”

The commodore nodded. “Very well, I’ll wait for the results before I inform Command. Take care, Jim.” His gaze found the Vulcan again. “Mr. Spock,” he greeted softly again, and the *Enterprise’s* first officer dipped his head. “Commodore,” he answered. The screen flicked off, then returned to its normal visage of space and the sparkling light of the stars.
For several seconds no one moved, then Jim pushed all thoughts of duty aside for a moment to turn towards his Vulcan friend. “Spock,” he said quietly. “I… I can’t tell you, how sorry I am. I…” He was at a loss for words as he met those deep brown eyes; he saw poorly veiled anguish in them. By instinct to comfort his soul-brother, he reached out and put a comforting hand on Spock’s stiff. “If you want to be alone – take some time.”

“I’m still on duty, Captain,” Spock interrupted him. His voice was hoarse.

Kirk shook his head. “You haven’t had a break all shift, and until Bob sends whatever he decides to share, you’re... Just take some time for yourself, right?”

He saw the Vulcan hesitate, and so he gently turned him towards the turbolift. Then he saw Uhura, who looked pleadingly at him, and nodded at her. Words weren’t necessary; Nyota knew that she was dismissed to be with Spock, and as the first officer headed to the lift, she wordlessly followed him.

Pressing his lips together, Jim planted his fists on his hips and lowered his head; his heart and soul went out to his friend who had to grieve another painful loss. If only there was even the slightest survival. Maybe Sarek made it. Vulcans were strong – tenacious! Yet these thoughts were wishes, not logic. He knew this! And he knew Spock’s voice in his head when he heard hit. At least that gave him reason to smile.

Taking a deep breath, he looked at the junior officer at the comms. “Shipside transmission, Ensign!” he ordered, and as the young man nodded Jim raised his voice, “Attention, crew, this is the Captain speaking. We just learned there has been another Klingon assault, this time in Borderland. The Excalibur is mourning her losses, and we mourn along with her. Among her casualties are some of our admirals and the delegation. The fleet is on red alert. Per Commodore Wesley's orders, we are on yellow alert while in-transit to the next space-dock. Shifts will remain as normal, but remain on stand-by.” He locked eyes with Khan, in whose eyes he read understanding. He sucked in a deep breath. “That is all. Kirk out!”

He nodded at the comms station and was about to sit down when Bones’ voice came through the speakers at his armrest.

“McCoy to bridge. Jim, what the hell happened out there? Is the ceasefire over?”

Kirk pulled a face. “I don’t know, Bones. Even Bob can’t answer that. That depends on the decision of the Council and the president. We’ll have to have patience for the next twenty hours or so – and we have to keep our eyes and ears wide open. How is Sulu?”
“I put him in an induced coma after surgery; he'll recover. Neil Rowlen and Antony Taylor will make it, too, like all the others I got into my medbay alive. Oh, by the way, if you ready to let your first officer outta here for half an hour, then send him down to me. He…”

Kirk couldn’t help himself, and he flinched. “Spock isn’t here,” he interrupted Leonard. “And don’t bother to trying to hail him. He…”

“Jim, in case you haven’t noticed, the man's been injured and he has a concussion. He really should…”

“Bones, I think a cut and a concussion are the least of his problems now,” Jim interrupted the grumpy CMO again, whose mood was worse than usual after the injuries and death he'd tended to these last hours. Before McCoy could ask, the young captain added quietly, “Sarek is dead.”

A sharp intake of breath and silence was the only response Jim got from Bones for nearly a minute. Then he whispered, “Spock’s father… He's dead?”

“Yes,” Jim nodded, even if Leonard couldn’t see him. “I gave Spock and Uhura a break. Spock needs time for himself now after this new blow. That's more important than…”

“Yeah, I understand,” McCoy murmured. “His thick skull's taken some punches. But I suppose his meditating thing's as good as a hypo for now.” He sighed, before quietly cursing under his breath. “Damn, our hobgoblin's been on the receiving end of the worst this universe has to offer. I wonder how he's kept it together at all.”

“He isn’t alone, Bones, that's how he's keeping to together. He has Nyota, you, me – and the rest of this crew. Just play nice for a few days…”

“What do you think I am, Jim?!” McCoy groused. “I know damn well what it's like to lose a father, Spock is still raw from his mother's death. I'll have the kid gloves on.” Then he calmed down. “What happened to Sarek? How did he…?”

“He belonged to the delegation that… That was killed in the attack on the Excalibur,” Jim told him quietly.
“Jesus!”

Kirk didn’t need to see his friend's face to know that the CMO closed his eyes in respect and sadness. Sighing he ordered, “Stand-by until you hear from me. I’ll come down later and tell you everything. Kirk out!” He switched off the intercom and rubbed his face tiredly. Then he felt eyes on him – Allistor, the two junior officers at the comms and science stations, Kevin and, of course, Khan.

“Seems our hopes for peace were a bit premature,” he said to no one in particular, before rubbing his eyes. “Right, I'll be in my quarters writing Commodore Wesley's report. Chekov…” He hesitated when he remembered that Pavel was in Engineering and looked around. Junior officers in any direction he looked. He couldn’t leave the bridge to one of them while on yellow alert. His gaze found Allistor, who was busy with communicating with Scotty – cursing beneath his breath. Allistor was a good engineer, but he wasn't qualified. Spock was out. Scotty was needed in Engineering with their young Russian wiz. Fourth in command was McCoy, but his presence was very much necessary in medbay. And Uhura and Sulu first choices after Spock and Scotty; they weren’t available now.

He ought to be able to give Nien the con. The man had been a general in his time and had gathered all the knowledge and experience 23rd-century technology had to offer. He ought to be able to give Nien the con. He's earned that level of trust. But Jim knew it wasn't the time – not the time to be impulsive. Not when it would lead him to jail and leave his mate exposed to Starfleet and the Federation. So he was stuck on the bridge for now.

Sighing, he went to the science station where the junior officer quickly made room for him. Sitting down on the chair that usually Spock occupied, he began with his work, hoping that it would lead to some results…

TBC…

Chapter End Notes

Well, I know this was sad with Sarek, and Spock will grieve in silence, yet Jim and the others will not let him down. He’s not alone like he was as a child; his lover and his soul-brother are there for him. And which way is the best to find some emotional distance after such a shock? Yeah, distraction and work.

In the next chapter our heroes will pick Styles’ report to pieces and will find out some very interesting things. Parallel the president of the UFP will learn about the incident in Borderland and makes a fatal decision regarding the new interims Chief of Command.
I hope you loved the new chapter and I’m so looking forward to get your comments. (I’ll answer them sooner, promised, but my Dad’s accident put me off the line for a few days – therefore sorry for the late replies).

Have a nice rest of Sunday and good start into the next week,

Love

Yours Starflight
Hi, my dear readers!

Thank you once again for all the comments and kudos, and especially another big ‘thanks’ for all your well-wishes concerning my dad. He is doing better by now, yet headache and some problems to move whenever the back-muscles are needed remain. We hope he will be fully okay around Christmas.

You are certainly curious what comes now after the two attacks and how Spock will doing after learning of Sarek’s death. Well, here you go – and you certainly will face another, little rollercoaster.

Have fun,

Love

Yours Starflight

See the end of the chapter for more notes

Chapter 49 – Something is very wrong here

This time, Uhura controlled herself as the lift doors closed, and she rode at Spock’s side down to deck 5, unhappily recalling the time two years ago when she accompanied the man she loved on the same lift down to their quarters. He had just lost his mother and his entire home world. She had wrapped him in her arms to offer comfort then; now she knew that he preferred such gestures only in the isolation of their quarters. Nevertheless, she could feel the pain in his soul and heart like a piercing dagger; the utter anguish that tore at his self-control that he tried to stay was palpable to her. She looked up at him. His face was a stoic mask; his lips were pressed into a thin line, and his eyes stared ahead as if boring a hole through the wall in front of him. He was holding onto his composure, but only barely. And she didn’t dare say anything that could break the thin veneer shielding him.

As the lift reached deck 5, Jim Kirk’s firm voice sounded through the intercoms ship wide, explaining what happened and that the fleet was back on red alert. On the way to their quarters, the two officers met several crew members. Some addressed Spock, asking him what was going on. Most never got the chance. They were either stopped by Uhura’s fierce look or even fiercer voice as she ordered them to ‘shut up’.

Finally, the door of their quarters closed behind them, and Nyota quietly ordered the lights down to sixty percent; she raised the temperature. Their cabin was always warmer than the rest of the crews'
cabins; it was comfortable for her and Spock. But it wasn't enough now. Nyota knew that her lover was freezing inside; he needed the warmth of former Vulcan and now New Vulcan.

Then she turned around and looked at him. Their eyes met, and as she saw the sorrow beginning to break his expression – darkening his eyes – she reached out to him.

He couldn't hold his control any longer – not with her. He closed the small distance to Uhura and let himself be wrapped in her slender, yet surprisingly strong arms. His forehead rested on one of her small shoulders. His eyes burned; his throat was too tight, and his breath was uneven. And then he wept.

Nyota felt his tears soak through her uniform, and her heart went out to the man she loved. This was only the third time she'd seen him cry. The first time was in the quiet of their quarters following his mother’s death. The second time she could only watch him; then she stood by him as he gathered himself and went after the man whose actions took Jim Kirk's life. And she also remembered holding him those nights after – the nightmares. And his personal isolation as he assessed his perceived failures. Even his meditations were affected. She could only pray that this time wouldn’t be as bad as the last one.

Pressing Spock close, she drew soothing circles on his back. It was all she could do. Just hold him and wait out his storm.

The first thing he became aware of was cold – icy, merciless – cold and dark. He shivered when he felt it. He trembled badly enough that his teeth chattered. And then it came – the pain. Hot searing pain in his left side and arm – burning and sharp like a glowing, red knife had torn through flesh and bone.

A moan sounded in his ears, and moments later he realized that it was his own. Disoriented, he glanced around, his usually keen eyes tried to pierce the darkness around him, but the only thing he could make out were the shining specks far above him. Then he realized something more. Wind. It tore at his clothes and whipped through his hair for some seconds only to calm itself again, but it was enough to clear the cobwebs from his mind.

He remembered the journey to the conference, the Klingon attack, the evacuation, the assault on their shuttle, the crash…
Sarek of Vulcan blinked several times and tried to remember where he was – what had happened. A painful groan from his left distracted him. Lifting his head was an effort he only mastered with sheer will power, yet master it he did. The first thing he recognized in the dark was the fact that their vessel had been nearly eviscerated. He sat on a seat nearly torn completely from the floor, yet the safety belt held him firmly in place. Above him, the ceiling was gone; the small pricks of the light he saw belonged to the night sky.

He heard a tormented moan, and Sarek saw the golden uniform with broad stripes, streaked dark and wet. Then something brushed his mind. Not something, but someone. Someone obviously in pain and scared. His eyes found another pair of eyes – large and dark, set in a heart shaped beautiful, but bruised face.

“Lady Morganth?” he asked – well, he wanted to ask, but all that came from his lips was a croak.

The Betazoid replied with her mind – able to understand his inquiry. He felt her fearful response and at once tried to transmit comfort and calm to her, knowing that the young woman was in shock and needed help.

Then a quiet curse sounded from somewhere in front of him; he recognized the voice. Trying again to formulate an intelligible word, he attempted to speak. “Admiral Nogura?” More a whisper than anything else, yet the staff officer must have heard him.

He groaned in response, “Sarek?”

“Yes,” the Vulcan answered before he reached for the safety belt, gritting his teeth against the searing pain that shot through his left side. Forcing his self-control into place, he was finally able to loosen the seatbelt. His fingers brushed against something soft – Sokal’s robe. Carefully he lifted his right hand and felt for his assistant’s pulse. Relief flooded him as he felt a faint but regular pulse – the indication of life as blood pumped through the younger man’s body. He was alive!

“Are you hurt, Ambassador?” Nogura sounded hoarse. And cold – his teeth chattered as he spoke.

“I am not sure,” Sarek replied. “You?”

“I feel like the morning after my 50th birthday – in other words, terrible, but I’ll live.”
Nogura heard the rustle of clothes nearby. “Richard, do you hear me?” Nogura tried to wake his friend and colleague with a slap. “Richard!”

Sarek tried to move and suppressed a shout; his left side felt as if it were on fire.

“Don’t move, Ambassador Sarek!” The warm, female voice belonged to Ania Morganth, who had recovered from her shock. “You have a nasty wound in your side.”

“Dammit!” Nogura spat as he hit something solid. “The comms are out, and the drive is out, too. If those damn Klingon traitors destroyed the Excalibur, we’re stranded here!”

“You mean, we…”

Ania was interrupted by Sarek, who suddenly ordered a quiet but strong “Silence!”

Nogura knew Sarek enough to realize that the Vulcan must have heard something that he and the Betazoid obviously did not. He kept his mouth shut. There was, indeed, a buzzing, getting louder. An engine. Whatever it was powering, was getting closer.

“Thank the Lord, a shuttle!” the admiral sighed. “Styles made it, and he’s coming to pick us up.”

Sarek pursed his lips as he tried to breathe as slowly and carefully as possible. Several ribs were broken; there was no doubt about that. And even his Vulcan meditation techniques would not be able to shield him from the pain the injury caused. “Why would they not beam us up?” he queried.

Nogura, caught between the ruined navigation console and his seat, snorted. “They probably don’t have the power. They probably had to send a shut…” He stopped. “That isn’t one of our shuttles. The engines are too loud – too big…”

Sarek forced his legs to obey his will and rose – carefully so as not to step on Harry Morrow, who lay beside his seat. Bending down, he took a deep breath and felt for Morrow’s pulse. Still alive. “If this is not one of Starfleet’s shuttles there are two most likely possibilities: Klingons or Orions.”

“Don’t paint the devil on the wall just yet,” Nogura murmured.
Outside of the destroyed shuttle, the noise of the engine became louder, swirling up dust and dirt into a storm that found its way into the vessel. Nogura and Sarek coughed; the Betazoid ambassador pressed one of her sleeves in front of her nose and mouth. Then the engines were cut and replaced by the sound of hydraulics.

“Whoever they are – I have a bad feeling,” Nogura said softly. And as illogical as it sounded, Sarek shared the sentiment.

Voices drew nearer, speaking a strange, guttural language. “Those are not Klingons,” the Vulcan stated quietly, and Nogura nodded with a grim expression on his bruised face.

“I know – Orions!” He glanced around. “Can you reach one of the weapon drawers, Ambassador?”

“No – and even if I could reach our weapons, it would be unwise to attack the Orions.”

“What? We’re as good as dead and…”

“I do not think so,” Sarek interrupted him. “If they wanted us dead, all they would have to do was to send a torpedo or a phaser blast in our direction, but they decided to land and to come to us. Logical deduction – they want us alive.”

Somehow Nogura was able to turn his head in the Vulcan’s direction. “Alive? Why, for God’s sa…” He stopped as someone began to climb along the hull from the outside. Seconds later, four large shapes appeared at the edge of the overhead that had been ripped open in the crash. Their hand-held lights illuminated their green faces; they pointed their phasers directly at the incapacitated occupants.

“Still a few alive, I see,” one of them rasped. “You made the right conclusion regarding the sensor information, N’thalag,” he continued to someone at his side. “You found the shuttle and survivors.”

Nogura cleared his throat. “Good day, gentlemen. It’s a relief to see you. We’ve had an accident and are in need of assistance.”

“Are you?” the voices growled.
The staff officer lifted a brow. “Obviously. Would you please be so kind as to…”

Harsh laughter stopped him. “How polite these admirals can be – even to us. Especially when they are knee-deep in rising water with no way out.” The light of one lamp wandered through the shuttle. “Ha, the Vulcan is up too. Practically invincible, these guys! And what a shining beauty we have here?” The light blinded Ania, who had to turn her face away. “And a second beauty beside her – hopefully alive, too. Women always fetch a good price.”

Nogura stared wide-eyed at the Orion. “You have no idea with whom you’re dealing here. We are…”

“… Goods, nothing more. I’m certain the Romulans will pay a lot to get their hands on not one but a few Starfleet admirals, and I know a few men who will pay even more for the beauties here. Or maybe they want a Vulcan to play with.” He turned around. “J’akkha, make ready to bring our guests aboard. And tell that far too expensive shaman he’s needed. Some of the ladies and gentlemen here are injured, and we need them well before we can sell them.”

The Orion looked at his superior. “D’nyrrs, didn’t Klokh called us to finish them off if we found survivors?”

Nogura frowned. He couldn’t see any of the Orions clearly because despite their hand-held lights their faces were barely recognizable in the semi-darkness. Yet the admiral had heard this name before. D’nyrrs – slaver and dealer for everything that was declared as illegal. Sweet Lord, he knew exactly what that meant for his companions and him. And who was this Klokh the other Orion referred to? Why did this Klokh called D’nyrrs to kill eventually survivals? Klokh sounded Klingon. Was he an inferior of Kor – or did he work alone? Was the assault of the Excalibur in the end not a betrayal of the Klingon Empire, but the deed of some renegades?

His thoughts were interrupted, as D’nyrrs’ voice growled, “He asked me to finish off the problem if we found any live ones, yes.” He chuckled. “And that is exactly what I am about to do. Why kill them when we can sell them?” The pirate looked down at the people in the shuttle again. “It isn’t like anyone is going to hear from them ever again!”

“WHAT?” Robertson stared in horror at Admiral Luengo, who had just contacted him – and tore him away from his dinner. He wasn't thinking of that now, and he would not for the rest of the
evening

“Yes, Mr. President, it’s true,” he said quietly; his face showed the perfect mixture of shock and anger. “We just received a transmission from the *Excalibur*. They were attacked by Klingons in Borderland. She took heavy damage. An evacuation of the delegation including Mrs. Whitman failed; the Klingons destroyed the shuttles. There were no survivors. Same goes for the admirals that accompanied them.”

Robertson, who had stood at his desk, sat heavily down; he was pale as a sheet. “Sweet Lord!” he whispered. “Have all the admirals…”

“Yes, as protocol demands, they were evacuated, and that led… That’s what killed them. Admirals Barnett, Nogura, Shepard, Komack, and Morrow have been killed, sir, as was every member of the delegation.” He gulped. “That leaves us in a terrible position! If the Klingons decide to strike now, we’re not able to… We can’t counter the way we need to.” He moistened his lips. “I’ve informed Admirals Cartwright, Shelton, Anderson, and Norton. A meeting between the Council and you is inevitable – you’re the Chief now.”

“I know,” Robertson murmured. Traditionally, the president of the United Federation of Planets was also the highest ranking member of Starfleet. The duties were delegated to those with appropriate experience. But right now he was in charge, and there was no one to fall back on. The deaths of the diplomats ripped holes in the Federation that he would have to close. So many decisions. He knew that he would have to choose one of the remaining admirals to be the interim Chief in Command until a more permanent selection could be made.

“Order all available admirals to the conference,” Robertson ordered. “We have to choose an interim Chief in Command so that we can act.”

Luengo nodded. “I already sent messages to all staff officers.” He lowered his head. “Mr. President, I’m sorry that my department didn’t see this coming. None of my agents reported any suspicious activities in Borderland, or along the former Neutral Zone. We should have learned about this trap in time to plan. I take responsibility, sir, and will resign my post. I…”

“Nonsense, Admiral! We need all of our staff officers – especially now. No one believed that the Klingons would be that… deceptive.”

Luengo took a deep breath. “Sir, when I think of those we lost… Mrs. Whitman, the ambassadors, my colleagues…” He shook his head and looked up again; pain shone in his eyes. At least Robertson took the expression reflected as such.
He felt his throat tightening. “There will be time to mourn, Admiral, but right now we have to act. What about the *Excalibur*?”

“She was enroute when the comms officer sent the message, and I also got a short report from Commodore Wesley. I don’t have any further information, and the distance between Earth and Borderland prevent a direct sub-space transmission. But if she made it, we'll know soon.” He took another deep breath. “Orders, Mr. President?”

“Yes, I want a copy of the message, and please inform all staff officers that they will be meeting with the Council and me in five hours. Who is in charge of Starfleet at the moment – besides me, that is?”

“Richard didn’t promote anyone to the position, Mr. President. We all thought that he would be available if needed, and…”

“Then you’re in charge ‘til the conference,José. I know about the accusations against you; they’re secondary as far as I'm concerned. We have more important things to worry about.”

Luengo looked at him with feigned gratitude. “Thank you for your trust, Mr. President. I won’t disappoint you. I'll send you the *Excalibur’s* message and any information I have.”

“Yes, please – and keep me updated. Robertson out!” He cut the link, and for a long moment he allowed himself to hide his face in his hands; shock and sorrow rose in him hot and blinding. Batari, Richard, Harry, James, Sarek… They all were gone; killed by the double-tongued bastards who so proudly spoke of honor, but didn't have a spark of it in them. Then he forced himself to push the pain aside. Their enemies had weakened them with their betrayal, and if he wanted to keep the Federation safe, he had to concentrate on his duties and only his duties.

He commed his other secretary. “Judie? Defense Alert! Inform all available ministers and Council members, Federation Code 1. Meeting in five hours!” He waited until his secretary responded in the affirmative, albeit with bewilderment in her voice, then he cut the line. He rose and looked out of the window. It was dark and stormy in Paris; the Eiffel Tower a dim light in the distance. He prayed that it wasn’t an omen of things to come – that the light was not so far away.

But it was – the dark would be with them for longer.
Aboard the **Enterprise**, the crew members still standing were busy repairing the ship or helping to bring order to the chaos the battle had left behind. Down in Engineering, Scotty, Chekov, Allistor and Keenser did one miracle after the other. “Like the pixies of his Scottish homeland,” one of the junior officers had joked as he watched his superior repair a console, race to another station to lend a hand, and return several seconds later only to head off to another emergency.

Scotty wished he could fly like one of those pixies. He had his eyes and ears everywhere, inwardly cursing the Klingons into the next century. The **Enterprise** had been whole only three days and already she was hurt again. He loathed this.

“Singh to Mr. Scott!” The velvet baritone interrupted Montgomery’s musings.

Sighing, he activated the intercom. “Scott here!”

“Mr. Scott, I need another phaser cutter, three meters of cable, and five diodes,” the Augment said, and the Scotsman rolled his eyes. “I’ll tell yer wish to Santa Claus the next time I see him,” he grumbled.

“Though Christmas is only six weeks away, I don’t think Jim wants to wait that long before his Grey Lady gets her steering back,” Khan deadpanned with his own dry wit, and Scott had to chuckle.

“Aye! I’ll send the items up ter ye.”

“Thank you, Mr. Scott. Singh out!”

Montgomery snorted and shook his head. “From accused space terrorist ter a hero and a petty officer on Starfleet’s flagship bridge in a few weeks. Now that’s a career!” He turned around to order the needed parts and tools, only to see that everyone in reach was busy. Groaning, he selected the required items himself, put them into a box and waved to one of the technicians. “Sam! Bring this ter the bridge ter Mr. Singh!” he said, handing the box over.

“Mr. Singh?” The man was at a loss as to who his superior meant.

Montgomery rolled his eyes again. “Petty-officer Singh, our helmsman at the moment. Ye know him
Sam could have slapped his own forehead. “Sorry sir, of course I know him. I’m on my way.” In truth he wasn’t too delighted with the chore. He had his own job to do, but an order was order. He watched Scotty go, turned around, and almost collided with another man in dressed in a security uniform.

“Lieutenant, sorry!” he said, but the officer held him back.

“Did I hear you right, crewman? This box is meant for the bridge?”

Sam nodded. “Yes, sir – for Mr. Singh.”

Lieutenant Nureaux smiled quickly. “Give me the box. I’m on my way to the bridge to give the captain my report. I’ll deliver it for you.”

Sam beamed at him. “Thank you, sir; that’s very kind.”

“No problem. You have better things to do than play delivery boy!” He winked at him, took the box and left Engineering.

Two minutes later, Nureaux stepped on the bridge; his heart pounded with anticipation. The civilian he’d been searching for, for days went by the name Singh; he was on the bridge. Singh – Khan Noonien Singh. This was no coincidence; he was sure of it. He found the half open helm console and the man who bent over it; he took a sharp breath. Was this the escaped Augment?

His eyes flicked over the scene quickly. He saw Kirk sitting at the science station, concentrating on something on his PADD.

Nureaux walked down the few steps to the lower part of the bridge, schooling his features. “Mr. Singh?” he asked calmly, and suppressed any reaction as the man in question turned around. He looked straight into green-blue eyes slender, chiseled face. ‘It’s him!’ he thought. ‘It’s really him! He’s here, on the Enterprise, on the bridge of all places! Kirk, this will end you!’ “Sir, Mr. Scott sends this with his regards.” He said out loud. He offered the super-human the box. The augment took it with in his elegant hands.
“Thank you, Lieutenant,” he said, his voice deep and accented as Nureaux had heard it in the recording he received from Luengo.

“My pleasure, sir,” the Frenchman replied politely, forcing a smile at Riley. He turned away to leave the bridge only to find himself the focus of a pair of stern, blue eyes. “Captain,” he greeted and nodded.

Jim frowned a little bit. “Lieutenant Nureaux? Something the matter? What are you doing up here?” he asked.

Philip shook his head. “No, sir. I went to Engineering to lend a hand. Since it looks like the technicians are needed there, I offered myself as delivery boy to bring your parts.”

Kirk lifted his brow and then nodded. “That's team spirit. Very good, Lieutenant. As you were! And thank you.”

“Thank you, sir!” With a quick salute, Philip left the bridge and headed down to his quarters. He had to inform Luengo and then plan phase two of his mission. He needed to determine how many crew members were involved in hiding the wanted man in their midst. He also needed to learn more about Kirk’s intentions regarding the Augment. If Luengo was right and Kirk wanted to use the creature for his own purposes, he needed to know Kirk’s plans.

Two minutes later he stepped into his quarters, locked the door, and went straight to the place where he hid the small transmitter, ciphered with the new code that was unknown to all but the SBI. His message was short, but its impact would be great. “Just met the Augment aboard, phase two of the mission begins now!”

ST***ST

While the fateful message made its way to Earth, Jim sat still at Spock’s station. He had sent his report to Bob ten minutes ago and was now checking the list of the injured and the fallen crew members. Every name hurt him – showed him that he hadn’t been able to keep the women and men in his care safe. God, sometimes he hated his job! He hated losing people in his charge; he hated seeing a dear friend grieve and another fight for his life in medbay. Above all, he hated this war!

All of suddenly he felt a warm breath waft gently through his soul, and as he glanced over his shoulder
he met Nien’s understanding eyes. The realization of just how close they had become these last weeks – that he, indeed, had linked souls with his lover – was comforting, but also strange. He would never be alone again; the time of his solitude had come to an end, finally, for both of them. Khan wasn’t a lonely stranger in a strange land anymore, stranded in a time that wasn’t his. Khan had found his other half, an anchor that bound him to a world he could make his own. And to know that his man was so strong, but vulnerable – willing to have him; it filled the young captain with pride and gratitude as well as a good measure of tenderness.

He smiled softly at his Augment, whose hair was in disarray – barely tamed since the former dictator had combed his fingers through it countless times during the last hours. Khan looked wilder like this, but more human too. Jim loved this look on him as much as he did the put together one – just like he loved everything about this man. A steady rock in the churning waters that Jim had been treading since he was a boy.

The moment of warm comfort was interrupted as the junior officer at the comms station looked at his captain. “Sir, I'm receiving a transmission from Commodore Wesley.”

Kirk nodded. “Finally. Put it through, Ensign.”

Several seconds later the terminal he occupied showed the newest message, and Kirk took a headset to listen to the audio records from the Excalibur’s bridge. He took Wesley’s order concerning the records seriously. Opening the file, Jim watched and listened to records, then re-played it – and again, and again.

Something was wrong here, and not only with the Klingon who pretended to be Kor. Frowning, Kirk watched and listened to the recording a fourth time, and then it hit him.

“Oh God!” he whispered. “Either Styles is the biggest idiot in all of Starfleet, or this was intentional!” Copying the recording onto a holodrive, he activated the intercom again. “Kirk to Engineering. Mr. Scott?”

“Scott here, Capt’n.”

“Scotty, please be in Mr. Spock’s quarters in ten minutes. Oh, and send Chekov to the bridge to take the con.”

“Aye, aye, sir!” Scott affirmed, sounding none too happy.
Jim was about to cut the connection when another thought struck him. “Oh, and Scotty? I don’t think you heard. Sarek was among the victims in the Borderland assault.”

“Spock’s father?” Montgomery asked. When he heard Kirk’s affirming grunt, he exploded. A rush of wild curses sounded through the intercom, “If I get the bloody bastard who’s responsible for the ambassador’s death, I’ll kick his ass into the ground and send him ter his maker! As if the lad hasn’t suffered enough, losin’ his planet and his mother! No, now he has to grieve his father, too. God damned, cursed Klingons! I’d feed them ter Nessie if I could!” Another rush of Scotch Gaelic obscenities followed, and then the line went dead.

Jim sighed. On the one hand it touched him how much Spock’s personal loss affected his comrades and friends; on the other hand, Kirk would have been happier if the other officers didn’t have a reason for their compassion.

He turned around. “Nien?” he addressed the Augment, not caring for formalities just now. “Would you please come down to Spock’s quarters in ten minutes? I need your opinion in a matter that I need to discuss with our specialists. I just don’t want too many visitors to drop in unexpectedly before he’s ready for it.”

Khan lifted both brows, understanding his mate’s need to protect the Vulcan. “Of course. Just tell me the location of his quarters and I’ll be there.”

Jim gave him the deck and quarter number, and then he looked at Kevin. “Ensign Riley, you’ve got the bridge until Ensign Chekov shows up to…”

“I am here, Keptin!” Pavel strolled out of the lift, looking to the entire world as if he had just crawled straight out of an engine. His uniform was dotted with spots of whatever fluids he’d encountered; a long, dark stripe smeared over his left cheek, and his hair looked like it was combed by a tornado.

Kirk smiled at the sight but kept his mouth shut. His crew was giving their all to put the Enterprise right again. “Chekov – two jobs. Take the helm from Mr. Singh in ten minutes and you’ve got the con.”

Promptly, the young Russian’s stood straight and chirped proudly. “Aye, aye, Keptin!”

Nodding at Khan and the two ensigns, Jim left the bridge, rode the lift down to deck 5, and walked
down the corridors. Then he rang Spock and Uhura’s door and waited.

More than half a minute had passed before the door slipped open to reveal Uhura – still in uniform, her eyes puffy, her nose sniffling. Jim quickly put a reassuring hand on her shoulder and winced inwardly as he felt the wetness there. Spock’s tears; no doubt.

“I’m sorry to disturb you two,” he said quietly, “but I think there’s something wrong with Styles’ report. I need your help sorting things out. Both of you.”

He saw movement in the attached, dimly lit room Spock used to meditate, and then his gaze found his friend. The Vulcan wore Starfleet black now. He had dark green rings around his eyes, and he was so pale, but he seemed to be perfectly calm – a mask. Jim knew him well enough. He sensed the turmoil and anguish in his Vulcan friend. He’d seen it before, but he’d never felt it – not like this and he hoped he wouldn’t again. He’d much rather the comfortable feeling of his brother in the back of his mind. He remembered that he had felt Spock’s arrival at 6-S several days ago even before the Vulcan stepped on the bridge and he remembered the comfort he felt knowing those he loved most were nearby. He gave little thought to the fact that he felt Spock so far away – before they were even in the same room. He was snapped from his thoughts as he felt his T’hy’la fight for control when he saw Kirk. Kirk grieved for him and felt grief. It was a peculiar dichotomy. His mind drifted again. Why was Spock felt so acutely now – was it the degree of the Vulcan’s pain? Was it his new bond with Khan? He would ask Nien later about it.

“Spock,” he said gently, slipping behind Uhura. Instantly, the heat of the room hit him with force, but he didn’t show it. It was obvious why the temperature was so high. The grieving Vulcan needed the comfort of his lost home. Stepping close to his first officer but just outside of his personal space, Jim took a deep breath. “I’m really sorry that I have to be here, but…”

“There is no need to apologize, Jim,” Spock said; he clasped his hands behind his back looking at his captain and friend. “The fleet is on red alert, and the ship has been badly damaged. Usually, my place at this time is on the bridge. That you have allowed me time to meditate during my shift is generous of you.”

Kirk shook his head. “Your shift's been over for two hours, and there are so many volunteers working outside of their hours, I think they’re stepping on each other’s feet. So there is no need for you to be anywhere but right here, especially now.” He suppressed his impulse to touch the Vulcan with a comforting gesture he would have given a human friend. And he also swallowed the urge to ask Spock how he was doing. That his T’hy’la was mourning was obvious despite his stoic features. “I need your help.” He looked over his shoulders. “And yours, Uhura.” He watched the young woman nod and continued, “I got the records of the Excalibur, and there are a few details that make me suspicious. I asked Scotty and Nien to join us in a few minutes. I need Scotty for the tech stuff, and I need yours and Nien's mind. You both are logical and have perceptions and experience that I don't. I need it now, and I've never been so grateful for that – at least, I've never told you so. I hope
you know that I am.”

Spock lifted a brow while Uhura sighed something that sounded very much like ‘Prince Charming’. Then Nyota turned around. “I’ll make some tea,” she said, giving the two friends time alone.

Kirk looked to the Vulcan, but before he could speak, Spock murmured quietly, “I am well enough, Jim; do not be concerned.”

“Bullshit!” the young captain deadpanned. “I don’t have to be a telepath to know you are definitely not ‘well enough’, and that’s a good thing.”

The first officer cocked his head. “How so?”

“Because a wound has to bleed to heal properly. If you ignore it or suppress something this big for too long, it'll burn you up. I know, I've been there – and so have you. All the frustration, the fear, the sorrow – it becomes anger, and it makes you reckless. I would seek out physical pain to block the mental pain back before I attended the Academy. I didn't know what it was then. But after I let it out, after I shared it with someone who cared – Bones, then with you and now with Nien, I was able to make peace with myself – all of it, and understand what was going on.” This time, he reached out and stroked Spock's arm to comfort his soul-brother. “Accept that you’re grieving, give into it – alone or with Nyota; then you can heal.”

Spock had listened intently. He knew that Jim meant well, yet his friend wasn’t familiar with Vulcan ways.

Something must have given his thoughts away because Jim added under his breath, “And don’t try to hide behind your Vulcan wall of logic, Spock. Grief is logical when losing someone dear. Grief allows processing. I thought that’s what meditation was about too. And, you’re half human. Give this half the chance to do what it must.”

Lowering his gaze, Spock nodded slowly, realizing the truth in his friend’s comforting words. “I understand your perspective, Jim, and... And I appreciate your concern. I am still not used to receiving so much compassion and concern, yet... I am grateful that humans take the time to express the sentiment.”

Jim smiled. “There you go.” He put one hand on Spock’s shoulder. “Just don’t forget, you’re not alone! You have Uhura, but you also have me. You are my brother. You mean the world to us and
we’re here for you, not matter what. The same goes for Bones and Scotty. They're a bit like you, I
think.” He grinned as he received an almost offended glare from his T’hy’la, and he explained,
“They hide their sympathy and friendship behind a lot of grumbling, and in Bone’s case even
taxunting, but both had a fit when they heard about your loss. They’re with you, too – ready to get the
bastards who killed… Well, who…” Kirk didn’t want to say it, but Spock understood.

Feeling something stir in his chest and mind, he mirrored Jim’s gesture by placing a hand on the

Then the buzzer sounded, and the two friends stepped away from each other. “Enter!” Spock called,
and the door slipped open to reveal Scott and Khan. Both stepped in; Spock, Jim, and Uhura noticed
the curious glances both men threw around. The furniture was of officers’ standard with Vulcan and
African touches. Artifacts and instruments had their place in here and together, like the pair
themselves, they held a unique yet undeniable beauty.

Then Montgomery headed straight to the Vulcan; his clear eyes shone with compassion. “Mr. Spock,
Jim told me what happened ter yer father. I’m very sorry ter hear! My condolences. If there is
somethin’ I can do fer ye, just let me know, aye?”

The first officer lowered his head. “Thank you, Mr. Scott. Your condolences are welcome.”

Khan glanced at the alien man who had been an enemy once. But the men have forced themselves to
come to terms with each other for the benefit of the young man that was both their brother and
beloved. And the three have shown themselves to be a remarkable team in times of recent crisis.
Sympathy was not only a question of civility; it was necessary to overcome the last of the distrust
between Spock and Khan.

Following the chief engineer, the Augment walked to the Vulcan, too. “Mr. Spock,” he said calmly
and returned the firm glance of the first officer. It didn’t slip his attentions that the whites of Spock’s
eyes were bloodshot – faintly tinted green, Khan realized. Vulcans had emotions that ran very deep,
yet they not only controlled those emotions, they hid them! He questioned the logic of it as he
remembered the vicious intensity of Spock’s anger a year ago. Has it only been a year? For a man
who had slept three hundred years, last year seemed a lifetime ago.

Khan chose his words carefully; the former dictator reaching for his diplomacy. “I never had parents
in the common sense, yet I know what it is to lose family. The highest walls we built around
ourselves to shield us from harm cannot prevent the pain comes with such a blow. And so I
understand what your father’s death means to you – especially in the face of your recent losses.
Please accept my sincere condolences.”
For several seconds, Spock only stared at him, and then he realized that the super-human’s statement was honest, and he bowed his head. “Thank you, Mr. Singh,” he replied. He rose his head and their eyes locked. Their expression lacked its usual stoniness toward one another, and Nien felt a wave of relief from his mate. He knew that Jim had acknowledged this small peace offering the Augment had made.

“Right,” Kirk said softly. “As much as I hate to bring up business, time is against us.” He looked at Spock. “May I use your terminal?”

“Of course, Captain,” the Vulcan nodded, gesturing towards his desk.

Jim sat down, and the others gathered around him. “I’m sure I don’t have to point out that this little meeting never happened. Only Uhura and I have any knowledge of the contents of what I’m about to show you. If I’m right about this… That’s why I’m here, for a sanity check – then Uhura and I need to contact Bob, but in private.”

He put the media into the slot and activated it. Silently, they watched the footage of the Excalibur’s recordings. They saw the Klingons appear. Jim ordered, “Computer stop! Back ten seconds – stop!”

The screen showed a bird-of-prey, J’Ethl clearly seen on the throat of the bird. But the vessel was… wrong! “That’s is a D4 bird-of-prey!” Jim said. “And Kor’s ship is a D6! I checked myself!” Quickly, he obtained the records they had made several hours ago which showed the Klingon flagship.

“A D6!” Scott confirmed while Kirk ordered the records from Turkana from the data banks showing the same ship.

“There is the proof!” Jim’s fist landed on the desk top. “We spoke with the real Kor; that other bastard was a fake! But that’s not all. I compared the launching of the shuttles to the timing of Styles’ distraction maneuver. He tried occupying the Klingons after the hangar opened and after the shuttles launched. Look here!”

He fast-forwarded the records and turned the image, then started the voce data recording. They heard the conversation of the Excalibur’s bridge crew was to hear and simultaneously watched the hanger open for shuttle departure. The video counter showed that Kirk was right.

“Mr. Wilson, prepare for evasive maneuvers. Mr. Kramer, I want a concentrated blast at the
“Klingons. I want the Excalibur firing with everything she has on my command.” Styles said. “Shuttle bay, ready the shuttles for launch!”

“Aye, sir!” another voice confirmed. “The men and women are all aboard!”

“Right.” A short pause.

“Sir, shuttle-bay doors are open,” they heard. “Shuttles are launching now.”

“Kramer, fire phaser bank 5.” Styles shouted.

“Sir? Phaser bank 5 is not fully functional.”

Again, a short silence, then, “That’s right, Mr. Kramer. The Klingons will think us done for, and when they make to follow the shuttles, we open fire with all we have. It'll take them by surprise.”

“Sir, the shuttles are gone,” someone informed Styles, who answered, “Right! Mr. Kramer, now!”

Jim paused the records and looked up at his friends. “There! That's what I mean. Styles reported to Bob that he sent the shuttles out the same moment he opened fire on the Klingons to distract them.” He pointed at the other part of the screen that showed the shuttle bay. “There! The hangar was already wide open. The shuttles had already launched and were outside of the Excalibur when Styles fired on the Klingons.” He glanced up at Scotty. “How long do the hangar doors need to open completely?”

The Scotsman frowned. “Well, the Excalibur and the Enterprise are Constitution class ships, but the Excalibur is older and so is her technology. We need one minute and fourteen seconds at most to release the air pressure and switch off the gravity field; then the doors can open. The doors take fifty-eight seconds to open completely, and then guiding her out takes anywhere from fifteen to thirty seconds depending on the pilot. Double that last part for two shuttles so...”

“Three minutes and twelve seconds to complete the process, at best, Captain.”

“Thank ye, Spock, I coulda managed that bit a math,” Scott groaned.
“Alright gentlemen. What matters is the Klingons likely had a minute to watch the doors open and thirty seconds to a minute as the shuttles departed.” Jim looked from one to another. “Fuck – the Klingons had enough time to grab a coffee while they waited. What was he thinking?”

“So, Styles should have started the diversion away from the shuttles sooner,” Uhura mused. “And because he delayed it, the Klingons saw through it for what it was – an evacuation, and they attacked.”

“What I don’t get is the fact that Styles ordered an open fire from a depleted phaser bank,” Scotty murmured. “I know one of the bridge crew asked him about it and he said he wanted ter give the Klingons a false impression – pretend the Excalibur was weaker than she was, but it makes no sense.”

Khan nodded. “I know what you mean. If I want to mislead an enemy with a surprise attack, then I would hit him with all the capabilities at my disposal.” He pointed at the screen. “This Styles even said that, but he started the attack with his least effective weapon.”

“I have to agree with Mr. Singh,” Spock cut in. “This proceeding was highly illogical.”

“And this isn’t the only ‘illogical’ decision Styles’ made,” Kirk growled. “He made cadet mistakes, but he’s been out of the Academy for five years for crying out loud. And he’s got three years in space under his belt – as bridge officer! He’s knows strategy; he should’ve been – different! I’ll show you what I mean!”

He fast-forwarded the records again and stopped. “Here's the audio record from the bridge during the battle. Just listen!”

“Captain, the J’Ethl chases the shuttles,” a voice said.

“Mr. Kramer, fire with everything we have! Mr. Wilson, ready for turning the ship. We have to protect the shuttles.”

“Shields at nine percent; the phaser banks are empty. Torpedo shaft 4 is the only one functioning, and we've got more hull breaches!” Lieutenant Li reported. “Sir, there is also…”
“Were you able to send the message to HQ?”

“They're still blocking the frequencies.”

“Right, Commander,” he addressed the science officer. “Ready to deploy message buoy. Course, Earth. All energy to the starboard deflectors, Mr. Wilson. Get under the Klingons and bank hard to starboard; then head for the shuttles. Maybe we can prevent…”

“Captain, they're firing on the shuttles!”

“Can we see it?”

“Yes, sir.”

“One of the shuttles has been destroyed!” someone yelled.

“Incoming!” another officer warned.

Jim stopped the audio again and looked up. “Styles received information that the fake Kor was after the shuttles, but he asked if the message to Command had been sent. This message, regarding the assault, is more important to him than the survival of the evacuees. And another thing, one of his officers reported that they were out of munitions. At the beginning of the diversion, just two minutes ago, they had still four fully operational phaser banks and torpedoes left. In other words, he's saying they shot all they had in that short amount of time. It must have been a serious light show out there. And yet the three Klingon vessels were not destroyed – hell, they got out with barely a scratch. Otherwise they wouldn't have been able to chase Excalibur. They were hit, right, but not seriously despite the fire power that a Constitution class ship has. A first-year cadet couldn't screw it up that badly!”

“You think they missed the target on purpose,” Khan brought Jim’s train of thought to a point, and the young captain nodded.

“There is no other explanation! If I had to distract three hostile vessels from chasing down two of our shuttles, I not only would have opened fire before the shuttles left the ship, I would have ordered my helmsman and navigator to target the enemy before I even opened the damn shuttle bay doors. I would have hit one or two ships so that they wouldn't have a chance at the shuttles. Styles did no
such thing."

“You assume that he attacked the Klingons, but did so with the intent to cause minimal damage,” Spock said slowly, crossing his arms in front of his chest. “I take it you know what you are implying, Jim!?”

Kirk nodded grimly. “Yeah, I do. I don’t want to accuse Styles too quickly, but this all… It’s more than weird; it’s too much to be a coincidence!”

“And why didn’t he send torpedoes after the Klingon?” Scott wondered. “If you can see ’em you can target ’em. Even if you couldn't, he could’ve set the torpedoes on a course to follow ’em or their emissions signature. That would’ve kept the Klingons busy enough so that the shuttle could make it to the moon.”

Jim stared at him wide-eyed. “You’re right, Scotty. I didn't see that before.” He shook his head. “But I found something else, too. See if you see what I see.” He ordered the computer to continue the records.

“Sir, we don't stand a chance against them – not in the condition the ship's in.”

“The second shuttle!” Fury sounded in Styles’ voice.

“They are as good as dead. If we go back, the two D4-cruisers will follow us and that will be the end of the shuttle – and us, when the Klingons have three vessels again. If we don't go back, the second shuttle will be lost. Sir, as much as it pains me, we’ve got to run – return to the Federation and to inform Headquarters about what happened here. We…”

“Sir, the last shuttle reached Yaska and…” Kirk heard an audible gasp. “I lost the signal, sir. Captain, it’s destroyed. It has to be. I’m sorry, sir.”

“Wilson, set course for the Federation. Quickest way out of Borderland, maximum warp.”

“Aye, sir!”
“Lieutenant Li, record for the ship’s log: Evacuation shuttle destroyed, star-date 2059.11.23-1340.5. Lost signal of second evacuation shuttle. Mission canceled to return to Federation space.”

The engines in the background howled, clearly indicating the amount of damage that the *Excalibur* had sustained.

“Are they following us?” Styles voice again.

“Yeah, but we’re not being targeted. Obviously they can’t while they’re at warp. The D4’s are old. The tech just wasn’t there yet.”

“Well, at least we have that! Is there a signal from the second shuttle?”

“No, sir, we last heard from them over two minutes ago as they were entering Yaska’s atmosphere. The sensors aren’t reading her now.”

“Klingon vessels that old can’t fire during warp, so why did they follow the *Excalibur* at all?” Scott asked no one in particular.

“Yes, and why did Styles wait so long to ask about a signal from the second shuttle? They warped two minutes before he asked. Of course there’d be no signal. They were too far away from Yaska. Even if the second shuttle made it, they’d never know that way. Besides, Yaska’s atmosphere causes static interference because of its magnet field!” Uhura said. She chewed her lip in thought.

“It’s as if he wanted ter make sure that everyone knew how concerned he was about the shuttle and that he tried everythin’ he could ter save the evacuees,” Scotty pondered.

Jim nodded slowly, liking this less and less with each passing second. If he thought something was off before – his crew convinced him of it now.

Khan frowned; he rose to speak his mind on the matter. “As far as I understood, the *Excalibur* was
running out of power. Her shields were depleted; she was without missiles, and without the required energy in the phaser banks, yet she was still able to leave the area at warp?” He looked at Scott. “You have excellent hearing when it comes to those engines. What do you think she was doing?”

Montgomery tilted his head. “I could be mistaken but her engines sound like she was up ter warp 3 or 4.”

“At that speed it would have taken three or four hours to get back to Federation space.” Jim nodded. “For a near crippled ship, not bad, huh?”

“It seems the facts you were told and what we see here do not fit,” Nien summed up.

“My thoughts exactly,” Jim agreed.

“I think there's more,” Nyota thought aloud and bent over Kirk’s shoulder. “Captain, re-play the part where one of his officers told him that the second shuttle was destroyed.”

Doing as he was asked, Jim backed up the recording and again he and the others listened to the conversation on the bridge. Carefully they took in every exchange, and then Nyota looked up at her lover. “Do you see what's missing?”

Spock had lifted both brows. “The shuttle was still in sensor range when its signal was lost, yet Styles did not order a scan of the area where it likely impacted the moon.”

“Further,” the Augment mused. “This officer said ‘it had to be destroyed’, not ‘it has been destroyed’. Past perfect verb form, not present perfect. Its use seems to indicate the speaker is unsure of the certainty of his statement.”

“You think perhaps the second shuttle wasn't destroyed?” Scott asked aghast. “But – that would mean that Styles let them down – delivered them to the Klingons.”

“On the other hand, the third Klingon ship went after the Excalibur with the two others. If the Klingons wanted the evacuees dead, which is most likely, then they would have gone to the surface to finish off any survivors,” Khan suggested.
“Or they wanted the Excalibur out of the area. If there were survivors, the Klingons would have plenty of time to finish them off as you said – or take hostages. Maybe that was their intention from the beginning,” Scotty mused.

“Well they did destroy one of the shuttles, so I don’t think they wanted hostages,” Uhura murmured.

“The first shuttle was destroyed; we know that,” Jim began to voice his own thoughts. “The second one was damaged – perhaps too badly to make it through the atmosphere. But shuttle shields are strong, and its power can be boosted as needed in certain sections. Admiral Barnett started his carrier as a pilot. Admiral Nogura was an engineer; they both would’ve known that. Barnett might’ve been able to put that shuttle safely down. So what are the chances that he did and that there are survivors?” He looked at the Vulcan. “Spock?”

“18.5294 percent, Captain.” came the instantly reply.

Scotty glanced at him, his expression soft. “Spock,” he addressed the Vulcan as a friend, “I know that hope is the last thing we want to leave us, but…”

“This has nothing to do with hope, Mr. Scott. We do not know which shuttle transported my father which places his chance of survival at 4.8367 percent. That is not hope – an illogical emotion; it is fact. My assumption that perhaps the second shuttle wasn’t destroyed in the atmosphere results in the lack of Captain Style’s examination and his science officer’s uncertain statement regarding the shuttle’s status.”

The chief engineer sighed. “Even if there was the slightest, tiniest, chance that the shuttle made it through the atmosphere, she certainly wasn’t maneuverable anymore. The crash that would have followed…” He didn’t finish the sentence and made a vague gesture with his hand; his gaze filled with regret as he looked at Spock.

Jim pursed his lips, pondering everything he heard within the last minutes. Spock was right; there was no real proof that the vessel had been destroyed.

Jim propped his chin in his hand. ‘Still some hope is left!’ he thought; the infamous Kirk stubborn streak was alive and well. If there was any chance at all that those passengers survived and the Klingons decided not to check, then he would move heaven and earth – he’d walk through hell and smile to find and recover them. Maybe, if fate wasn’t too cruel, Sarek would be there; he'd be okay. More wishes – not logic. Logic said four percent; Spock said four percent. But Spock and Jim worked because they were different – complements. And Jim lived in that four percent – the improbable. He wanted it now – prayed for it and for his T’hy’la, who was always loyal; always by his side. He's suffered more than his share in this life. Jim was not about to allow the universe and fate inflict more anguish on his friend! Not if he could prevent it.
He knew that he couldn’t enter Borderland without Command’s permission, and they would never allow such a suicidal mission – even with evidence that the admirals and delegation were still alive. Jim would do it, but ignoring orders based on speculation and four percent would certainly cost him his command this time. On the other hand, if Sarek…

Jim’s thoughts were interrupted when he felt a gentle pull on the bond he shared with Nien, and he looked up in those pale green-blue eyes. His beloved was up to something; he could tell. “What?” he asked.

“Mr. Spock said that there is a chance that there are survivors from the second shuttle.”

Jim snorted bitterly. “Yeah, but at the moment I can’t see a way of getting to them without having, not only the Klingons and the Orions, but also Command calling for my head. You know how it goes – no order for a mission, no mission.”

Khan cocked his head. “Who says that the Enterprise has to go? A Starfleet vessel – her flagship – would draw far too much attention. But a neutral vessel – a private one might have success.”

Jim leaned back, frowning. “What do you mean?”

His piercing gaze was still fixed on the former dictator who lifted both brows in a wordless suggestion. Kirk got the hint. “The Shadow?” he blurted out. Khan nodded with a smile.

“The last time we talked, Galven told me that he wants to use the ceasefire to gather information about his brother; he was abducted. I am almost certain that he and the others are roaming through Borderland right now with the help of the SDD. Perhaps they could be persuaded to make a side trip to Yaraka’s moon to search for the shuttle – or its remains.”

For several seconds, the captain could only stare at his lover; then a smile broadened on his face. “Nien, you’re a genius!”

“I know,” came the wry answer. The response made the others chuckle – except for Spock. For a moment the mood lifted, and then the melancholy settled in again.
“Can you reach Galven?” the Augment addressed Uhura. “We changed the frequency last time we spoke; I will give it to you.”

The young Bantu woman looked at him for the first time without suspicion. Quite the opposite. She almost beamed at him, happy at even the slim chance that might not have mourn at all. And if The Shadow could get there, perhaps his chances would increase. “With pleasure!” she answered.

At her side, Spock was the picture of calm, but Kirk thought he could see something – determination and hope. He shot a grin at the Vulcan.

“And what about the mess in front of us, Jim? Ye certainly canna contact the commodore and throw this at 'im as it is,” Scott said.

“No, I know that,” the captain confirmed. “We need to be careful now because I don’t think that Styles acted alone. This will be investigated by the admirals that are left. Oh God that sucks to say – and they're smart. But if Styles has help from one of them, and I'm not counting that out – I don't think he would've done it otherwise – we're in a bad way. Maybe he had orders.”

“Orders?” Uhura glanced with big eyes at him. “You mean he had orders to get rid of the delegation and the admirals? Why? How? Klingons attacked the Excalibur! Show me a Klingon who would accept orders from Starfleet!”

Jim lifted both hands. “I know, I know it sounds crazy. Styles may be an arrogant bastard, but I don't think he's – well, stupid. And I don't think he'd pull something like this on his own. The question is, why would he do it? Or better yet – who or what does he think is worth risking his career and his freedom for. What is worth killing for?"

“I know what you think – Section 31,” Nyota said and fixed her captain and friend with a firm glance. “You’re obsessed with them still, Jim, don’t you see that?”

“Yeah, well who else would want this? This attack is poised to end the peace talks before they even start. Who wanted the war in the first place?”

“Marcus wanted the war to strengthen his position and turn Starfleet into a military organization. But Marcus is dead and…”
“And Section 31 still has its sympathizers. What happened to Nien this year is proof as are those two assholes who allowed the abuse at the lab – a lab that doesn’t officially exist!”

“Alright, I understand. But Scotty's right, you need more than we have here when you go to Wesley,” Uhura replied, showing once more her brilliance. “You need ironclad evidence if you want Wesley to listen and then do anything about it. If – and this is a really big ‘if’ – we’re dealing with Section 31 here, then you’re going up against an organization that has infiltrated Command, politicians, maybe even the Federation Council. If Section 31 still exists and is powerful enough to do something like this –“ her finger pointed at the screen “– then you're going to need all the help you can get. You need irrefutable evidence get Wesley on your side – our side. Without him – without that – if it is Section 31 and they find out, he and we are in danger.”

Silence spread through the quarters; Jim looked thoughtfully at his comms officer and friend. It was Khan who broke the quiet.

“She is right!” he said calmly and met his mate’s asking glance. “I agree with you that Styles cannot be working alone. If his actions were a ruse, then must be in league with others. And if it is Section 31 then we must be on our guard. If they have the slightest suspicion that it's you who figured them out, then you and your crew are in danger. Wesley and his crew too. If you are going public with this, you need more than conjecture. What we have is good, but it is not conclusive, and it could be altered. Consider London and my so-called mass murder. You will need protection. And you are going to need powerful people who will listen to you and believe you. We need evidence before we act or your ship and your crew – their lives will be put in jeopardy by their own people.” He took a deep breath. “I believe, though, it would not be the first time, correct?”

Jim had listened very closely – to Uhura and Nien. And he didn’t need to look at Spock or Scotty to know that they shared the opinion. And he did too. They needed evidence before they could act. And they needed Wesley’s support – again. That much was certain.

“Right!” he said slowly. “You two have a point, I’m not denying that. We have to do something, and we have to do it fast. We’re running out of time. If the ceasefire is called off by the Federation when the official Klingon government isn’t at fault… Well, they’ll be offended for the next two centuries, and we’ll be at war with them for at least that long. I don’t want to take this risk.”

Spock lifted a brow. “When the commodore informs Command that Styles has been misled by his Klingon attacker – that Commander Kor came to our aid during that time. The discrepancies will have to be investigated before the Council can come to a decision. Such things need time, yet given the importance of the circumstances and the urgency regarding the upcoming peace talks… I calculate that it will take approximately three days. In this time, we must find the actors in the background and reveal them.” His dark eyes found Kirk’s bright ones. “Do you think this is feasible, Captain?”
Jim grinned. “Bet on it, Spock!”

TBC…

Chapter End Notes

Yeah, of course Jim, Nien, Spock and Co. had to realize that something was very wrong with Styles' first mission – at least from the point of view of the ‘good guys’. And once again they all built a brilliant team – Section 31 be careful, they are on your heels! And who thought that I really would let Sarek die has been thoroughly wrong. Of course I couldn’t let one of the most important secondary characters of the ST-universe die (and give Spock more anguish, even if his heartache gave me a good possibility to add some sentiments into the story). But he and the others aren’t out of danger and this whole situation will lead to a lot of more trouble.

In the next chapter you’ll learn more of the spy aboard, while Riley gets another good scene. And there will be new more trouble.

I hope you liked the new chapter and I’m really looking forward to get some reactions from you.

Have a nice rest of the Sunday and a good start into the next week,

Love

Yours Starflight
Spies

Chapter Notes

Hi, my dear readers!

And again I can only say how sorry I am that the next update needed even more time than before. By dear beta-reader Rhiannon was sick for more than two weeks and runs out of time now before Christmas. But, at least, there is the next chapter now. I can promise you some sweet scenes, some things that may elicit your anger (with Section 31, not with me), some action – and in the end another mean cliff-hanger.

Thank you so much for still keeping up with this story, for the comments and the kudos.

Have fun,

Yours Starflight

See the end of the chapter for more notes

Chapter 50 – Spies

Wesley looked at Jim from the screen at Spock’s terminal and rubbed his face. “I’d say that’s pretty ironclad evidence that it was Kor who saved your ass, and with it the ceasefire. So the bastard who hit the Excalibur is some kind of renegade most likely. The question is why did the unknown Klingon pretend to be Kor? Why attack this particular ship obviously transitting peacefully?”

Jim, who had hailed Bob just minutes ago, told him as much as he dared to for now, and he pondered Wesley’s’ question. “When Kor took Turkana, he didn't kill; he wasn't cruel – no more so than usual. Kept his promises so far as I could see. Maybe he's made some enemies. They don't all think the Klingon Council is doing the right thing coming to the table. He is responsible for Borderland – and therefore also for the Excalibur. If he went against his Admiralty and the Klingon Council – he'd be done for; it would end him. Whoever attacked the Excalibur wanted to kill two birds with one stone. It takes out Kor, and it effectively ends the ceasefire.”

Bob frowned. “You think there's going to be a coup attempt in the Empire, and whoever is masterminding that is trying to bring us into it?” He groaned. “Superb! What are we, pawns?”

“Only if we allow it,” Kirk said firmly. “Bob, inform Command and the Federation Council that the
assault wasn't sanctioned by the Klingons. It's internal, and we will continue to honor the ceasefire while they investigate. That will buy us time to do some investigating of our own.”

This time, the Commodore lifted both brows. “Investigate what exactly, Jim? Styles was duped, and some coward asshole used Kor’s name keep the war going. This is…”

“Bob, I don’t think this Klingon, whoever he is, is working on his own. This is the start of something very big. And the way it all went – with the Excalibur and the Klingons… It was just - odd.”

That got Wesley’s full attention. “What do you mean, Jim? If we're on the subject of 'odd', there are some ‘odd’, details in your report. The Enterprise was able to restore a part of her main power using the torpedo drives? And the play with the asteroids to take out the second Klingon ship? Jim, this sounds a lot like someone we both know. You left him out of your report even though he was involved.”

Kirk’s face was pure innocence. “You saying you don't think I could pull that off, Bob?”

“Dammit, Jim, do I have to say it or are you going to admit that he was part of the fight?”

Jim flushed, and Bob threw his hands up. “So much for keeping him on the down low! Don’t tell me he was on the bridge too.”

“He was – to help Allistor install the new connections with the SDD. He saw the flickering on the screen so that we could ready battle stations just before those bastards attacked us. Sulu was injured, almost died when his side of the helm exploded. Nien took his place and steered us away from near collision with an asteroid.”

“Don't tell me anymore, Jim!” Bob interrupted him and rubbed his tired eyes. “Hell, Jim, your report has a few holes, but the important stuff is there. As soon as Command investigates the incident more closely, though, you'll be under pressure to offer some explanation for them.” He sighed deeply. “So, ‘Nien’ saved the day again?”

“Well, we built a damn good team,” Jim admitted with a smile and Bob groaned. “And a team is what we need to bring light in this darkness the assault on the Excalibur left behind,” Kirk added, bending forward. “There is something going on here – something that involves the Klingons partly, but us too, I think,” he said quietly, coming back to the topic.
Wesley frowned again. “What do you mean with ‘us’?”

Jim crossed his arms in front of his chest. “First Captain Heldrom and his first officer have a traffic accident that prevents them from taking command of their ship, and a new captain is rushed into the chair. Then they were attacked in Borderland by someone who isn’t who he pretended to be. Styles evacs the delegation and the admirals at the worst possible time and that led to their death. Don’t get me wrong here, I'm not accusing Styles of anything, yet, but this mess is leaving a bad taste in my mouth.”

“Meaning?” the staff officer prompted carefully.

Again Kirk pursed his lips. He wanted to say what he was thinking – that maybe Section 31 had its dirty hands in the game again – yet he knew better than to voice his assumption or anything else he and the others had found out. “Well, I don’t know. The chain of events is weird, that’s all.” He looked pointedly at his superior, who only frowned harder. Wesley couldn’t or didn’t want to understand him. And it was too risky to voice his thoughts via transmission. What was the old saying? The enemy is always listening?

Jim sighed. “But I think if someone can figure out what’s going on here, it’s you – and Command.” He caught the baffled expression on Wesley’s face and for a moment he pondered if he really should go for it – ask for a meeting. It could backfire, but Jim Kirk was not known for avoiding risk. And so he made up his mind. “Bob, how far away you are?”

Again Wesley didn’t know what to make of his protégés, and so he slowly replied, “We are between Risa and Rigel. Why?”

Kirk put on his time-tested look of contrite innocence. “Well, we took some serious hits; we need help. The shipyard at Risa informed us that they didn't have all the parts we needed since they did that work for us after the battle at Aldebaran. Maybe you can help us out?”

Instinctively Bob realized that this was a half-truth. Why did Jim need an excuse to talk privately? What was going on here? One look at his protégé told him that he was right. Kirk had something to say, and a sub-space transmission wasn't secure enough. What, for God’s sake, was the boy up this time? On the other hand, Wesley knew that Jim didn't get worked up for nothing. For Jim to want a private meeting that would take over a day to get to was serious. But one thing about the younger man was true – he always knew when something wasn’t right.

“I could alter our course to rendezvous with you. If the ceasefire is over, we need every ship ready – especially our flagship. So it’s important that you're battle-ready as soon as possible.”
Jim smiled gratefully. “Thanks, Bob. When can we meet?”

“One moment!” Bob turned to the side and activated his intercom; Jim saw that he was in his quarters. He talked quickly with his first officer, then turned his attention to the screen again. “Rendezvous in approximately fifty-three hours.”

“Great!” Kirk beamed at him. “I’ll have my navigator contact yours to set a course.”

“All right,” Bob nodded; then he cocked his head again. “Jim,” he began slowly. “Is there something you want to tell me?”

“No, not... You have my report, and I gave you the real Kor. Everything else has to be investigated.” And Wesley saw that look that told him Jim was, indeed, up to more, but he couldn’t speak openly now.

“Right. I’ll inform Command about the discrepancies and that our delegation and the admirals may have been killed by renegades rather than a Klingon conspiracy. President Robertson is a reasonable man. He will consider this new information before he makes his next move. You could learn a thing or two from him.” Now it was Bob who eyed Kirk, who was wise to just nod.

“Okay. Good night, Bob.”

“Ha, as if I could get any sleep with this mess! Night, Jim!” With a final nod, he cut the link, and Jim let out his held breath.

Nyota glared at him. “So, the space dock at Risa ran out of parts? I somehow managed to miss that message.”

Jim grinned at her. “Uhura, I’m sure you can get a hold of them and confirm that.” He batted his eyes at her, and the young Bantu woman threw up her hands.

“You’re impossible, Jim, do you know that?”
“Yes,” he answered with the wide-eyed, almost sweet expression of a little boy begging for candy. Growling in frustration, she turned around, saw Khan’s amused face, and flipped a thumb over her shoulder. “How do you put up with him?” she asked bluntly.

“Since I am – better, I am able to tolerate and resolve nearly any challenge presented in the manner of my choosing,” he added wryly, “Nearly. The captain challenges me where I fall short. At one time I thought that area a weakness. Jim has taught me otherwise, I find I no longer wish to ‘fall short’ as it were. There is more to me, and he knows how to find it, and so I put up with him. And will continue to do so as long as he will have me. In turn I believe I am of benefit to him which benefits you, does it not?”

“I suppose it does,” she said thoughtfully, impressed with his answer.

Jim rolled his eyes. “Love you too, honey!” he commented dryly.

An equally dry, “I know!” followed.

Spock felt the highly illogical and very human urge to grimace, yet he controlled himself, while beside him, Scott stared at his captain and the Augment, before he chuckled. “Just look. Teasing each other like love-birds do – and this after their rough start.” He shook his head. “Universe and its mysteries – they never cease to amaze me.”

“And this from someone who wants to feed the Klingons to an old legend lake monster,” Jim snickered, then he turned serious again. “Right, we’ve got fifty hours to get real proof that Styles is playing a seriously dirty game, and that there is even more of Starfleet involved!”

“Or the Klingons have rebels in their own lines,” Uhura said, looking firmly at him. “Don’t fixate too much on Section 31, Jim! You need to stay neutral. That'll get results, but you have to be open to all possibilities.”

“Yes, Mom,” Jim sighed, and he hailed the bridge. Ensign Miller was at the comms station; he quickly connected the captain with the commander of the space docks at Risa. Jim managed to talk the poor Commander in circles until he confirmed that the many repairs done on Starfleet vessels after the battle for Aldebaran had depleted the stores of repair parts.

“That went better than I thought it would,” Kirk smiled. “And now we need to reach Galven.”

Uhura groaned and walked to the door. “I’ll inform you as soon as I have him or one of his people on
the line.” She vanished and Jim took a seat together with Nien, Spock and Scotty in the living area; all four men discussed how they would continue.

It wasn’t long before Uhura hailed them and patched Galven through. To their surprise, the gang was not in Borderland. Or they had been, but then they met some Orions by accident and the pirates attacked them. The militia ships were well-known among the outlaws and their Klingon allies. Galven and Ritek barely made it into Federation space before the two pirate vessels and three birds-of-prey could atomize them. Now they were heading back to Aldebaran. Diego would have his work cut out for him when they arrived.

Galven promised to keep his ears open and he’d borrow one of Diego’s ships to check on Yaska as soon as possible. If they could install the SDD aboard one of the Chilean’s vessels, they would return to Borderland and look for the downed shuttle. Galven and Ritek promised them – after both groused and cursed the ‘two-faced Klingons’, accompanied by ‘we told you so.’

It wasn’t much – but it could mean everything. The Shadow would need two days likely to get to Yaska. By then any rescue might only serve to recover the dead. At least Jim would have the feeling that he had done something, and a miracle wasn’t so out there. He was due one – so was Spock. On the other hand, Kirk was, despite his optimism, a realist. He knew that the chances were low. Yet one look at the normally expressionless face of his Vulcan friend and he knew that wouldn’t stop until he knew for sure. He would do everything to help Spock find his father – alive or not.

Afterwards, Jim and Khan left Spock’s and Uhura’s quarters to go to their own – Jim’s. They met a few crew members in the corridor; Jim tried to lift the mood, offering comfort. He sighed in relief as the door of his quarters closed behind him and Nien.

Without hesitation, the Augment went to the replicator and ordered a light meal for each of them, cutting off Jim’s protest with a firm “You have to eat to regain your strength. And before you deny it, you are exhausted – bodily and mentally. Do not try to tell me otherwise.”

Kirk rolled his eyes. “You’re worse than Bones!”

“This I’m taking as a compliment.” He placed the first tray in front of Jim at the table and got his own, before he sat down. For a short while, they ate in silence, and then Kirk couldn’t help but return to the most important topic at hand.

“What do you think about all this?” he asked quietly, and the Augment took a very deep breath.
“The truth? Someone is indeed playing most foul, but we do not yet know the game. We still need to know that much before you confront your superiors. You’re going to have a hard time convincing Wesley of your theories, not to mention Starfleet Command. And that bears its own risk, because if you are correct, and Section 31 is involved, your life is in danger – yours and your friends.” He watched Jim nod slowly and cocked his head. “How well do you know this Styles?”

Kirk scoffed. “We shared some classes, but not many, because he was two years ahead of me. Some command officer training lectures. I saw him in the auditorium when I was promoted to captain of the Enterprise, and he was still only a lieutenant commander. First of all, he is an arrogant asshole who thinks the whole world’s been waiting for him, and that Starfleet and the Federation would fall apart if it weren’t for him. Second, when I got the Enterprise, I thought the anger was going to rip him apart. I heard from some classmates who were on Enterprise – after Nero, that Styles had hoped to get her.” He shrugged.

“In other words, Wesley was right when he said you two are rivals.”

Jim sighed. “Not really. I mean we have nothing to do with each other. The dislike is mutual, but it’s not so much a rivalry. He comes from a pretty renowned family – long military history and all that, and …”

“And you are a farm boy from Iowa…”

“Hey!”

“… who dared to save the day over and again, while he tries to garner a modicum of respect, climbing the ladder behind you – in your shadow.” Khan chuckled quietly. “It rather sounds like envy to me.”

“Maybe,” Jim admitted. “But I don’t think it has anything to do with the attack on the Excalibur.” He stopped as the doorbell chimed, and frowning he called, “Enter!”

Bones stepped in, carrying a bottle of brandy. “If Muhammad doesn’t come to the mountain, the mountain must come to Muhammad – if you don’t come to medbay, then I’m comin’ to you.” He glanced at the two lovers. “Bon appetite, gentlemen, don’t worry about me.” He put the bottle on the table. “Don’t get up, Jim, I know where the glasses are.”

Kirk continued to eat. “What’s up, Bones?” he wanted to know, as McCoy returned with three
“Funny, that's exactly what I wanted to ask you. The corridors are rife with rumors about what happened to the *Excalibur* – Klingons, the whole bit. And you told me two hours ago that Sarek is dead. You said you'd come and explain everything. Did I just happen to miss your visit?”

Kirk folded his napkin. “No. It's gonna take a while, Bones.”

The CMO shrugged. “I've got time now. Geoffrey's in charge. All my patients are well-cared for and can do without me for a while.” He poured three fingers in each of the glasses and offered one to Kirk and one to Khan. “So, go on!”

“Fine,” Jim grumbled. “But you’re not going to like this!” he warned his friend, who lifted both brows.

“I had a feeling you'd say that,” he deadpanned; he sat down and crossed his arms in front of his chest.

His eyes widened, as Jim filled him in.

---

Suppressing a yawn, Kevin Riley strolled down the corridor towards his quarters. He felt tired – exhausted even. His first time on the main bridge – and it had to be in the middle of a battle. What a start! He had always known that he'd chosen a job that could be dangerous – and more so since Nero, but he didn't hesitate to join. Still war up close – no one got over that very quickly, especially someone with Riley’s past. Kevin wondered how Jim put up with it all. His captain and friend seemed so strong – was so strong, so self-confident during the crisis; it made the young Irishman admire his superior even more.

And he was proud of himself – that Jim had trusted him with the *Enterprise*. It had been the first time that he navigated a starship – the flagship! Yet Kevin had reacted and worked as if he was born to it. Maybe because he didn't have time to think linearly, analytically. He was thrown into the deep end of the pool, and forced to react as though his life depended on it – it did. And he did exactly as he had been trained to do. Despite the danger and the horror around him, it had felt good to steer a spacecraft as large as the *Enterprise* through it all. Even damaged, she reacted to his touch – perhaps a bit sluggish due to her state. He felt the effort she made when the helm controls were switched to
his station, and the man at Mr. Sulu's station worked to repair her.

Kevin was interested in the man. He'd never really noticed him. Only after he met the dark haired male on the bridge did he become curious. He had to be a member of the engineering staff red coveralls and genius and all, yet Commander Spock’s protest as Jim wanted the other man as an official helmsman confused Kevin. That the man had been made a petty officer proved that he was a civilian – therefore the mysterious civilian who was working on the new tech. But why was the first officer so wary of the additional crewmember? This man, Nien Singh, was obviously well-known by the bridge crew and even familiar with Jim. So, why Spock’s protest? To recruit Singh was only logical.

Kevin stopped in the middle of the next step. Jim had said that Singh had been a ‘general’ in his time and that he had been made a commander under Marcus, the former Chief in Command who fell from grace, as far as Riley knew. What was the meaning of all this?

For a moment he pondered going to Jim to ask him, then he remembered that thought they were still friends, Jim was also his commanding officer. No one went to the captain unannounced, disturbing him late in the evening because of mere curiosity over something the captain ordered.

“Good evening, Kevin!”

Startled Riley whirled around and came face to face with Philip Nureaux.

“Lieutenant!” he gasped. “Jesus, you almost gave me a heart attack!”

Nureaux laughed quietly. “I’m sorry. Today – that sort of thing stays with you, doesn’t it?”

Kevin shrugged. “Well, I knew what I was getting into when I signed up. But a battle this soon... That was something!”

Philip nodded. “I know what you mean. The first time will haunt you for a while; I’m glad that we’ve got Captain Kirk for a CO. His reputation speaks for itself, and after seeing him in action today – I think we’ll be okay no matter what we come up against.” They continued their way. “And I heard you did a damn good job yourself. Congratulations! First time on the bridge and with that! Not easy, especially with the more experienced officers out of commission. I heard Lieutenant Sulu was injured?”

The young Irishman nodded. “Yeah, unfortunate to say the least. I didn't work much with him, but I
did with Ensign Chekov and he told me about Sulu. They are good friends and Sulu seems to be a
real nice guy.” He shook his head. “He was hurt when his console exploded.”

Nureaux sighed. “And right in the middle of the action. Good thing Mr. Singh was able to jump in.”

Kevin chuckled. “Yeah, he had the idea to divert energy from the available torpedo drives to get the
warp drive working again. And I heard he came up with the plan to use the asteroids like billiard
balls to damage the second Klingon ship.” He snorted in amusement, but also admiration. “And then
he got the helm console working again. The man is a genius, no doubt about it.”

‘You have no idea what kind of ‘genius’ this creature is,’ Philip thought, while he answered casually,
“Well, as far as I heard he’s a civilian working on some new tech here.” He looked with an
expression of youthful curiosity at Kevin. “Do you know what he’s tinkering with?”

“No, but there are some rumors that it was him who built the device that makes it impossible for a
ship to pick up a warp signature. It saved the ship during the Battle of Aldebaran, as I heard.”

“Oh yeah!” Nureaux agreed. “I’d love to talk to him about it. My specialty at the Academy was
Enhanced Sensor Technology. Maybe he can give me some advice for post-Academy work.”

“Why not? He seems pretty aloof, but not rude. Maybe if you ask him, he'd agree to help you with
your work.”

“Do you know where his quarters are?”

Kevin shook his head. “No, no clue. I only just met him today. But he seems to be a close friend of
the captain. They’re on a first-name basis, even on the bridge. Maybe he can tell you where it is.”

Philip beamed at him. “Good idea.” He stopped at the turn. “Have a good night, Kevin.”

“Thanks – the same to you, sir!” Riley smiled and watched the lieutenant walk towards his quarters.
Then Kevin continued his way; the short meeting with Nureaux confused him. As they traveled from
Earth to 6-S, the lieutenant had been distant and seemed to dislike any private conversations; now he
talked to him as if they had known each other for years and were good buddies.
'Odd guy – maybe he has moods,' the young Irishman shrugged inwardly before he stepped into his quarters, more than ready for a sonic-shower, dinner and then a long, decent sleep.

José Luengo stared at the message from the Lexington. It was late at night, and he and the other staff officers based on Earth were still at the hastily convened conference. During the much-needed break, they gathered their thoughts and chased exhaustion away with far too much coffee when the transmission from Commodore Wesley appeared on their terminals.

The cup of coffee nearly fell from Luengo's hand onto the desk; his widened eyes stared at the message in disbelief – a report from Commodore Wesley of the Lexington. And it wasn’t only Command that received the message, no, it was transferred and patched through to the desk of everyone in attendance. Unthinkable – the Commodore should not have a direct line to the president of the Federation. There were protocols for such things. For a moment Luengo didn’t know if the commodore had gone mad or just given to display the impropriety of a man playing above his station. Unfortunately, his anger didn't change the fact that beside him Robertson stared wide-eyed at the message; and now most of the Council was aware of it.

Luengo needed to change his plans; the decision to call off the ceasefire would be reversed. This much the admiral could tell.

Again, he listened closely to Wesley’s voice in his head-set. He took the news far less enthusiastically than the other ladies and gentlemen present around him – except for Norton.

The Excalibur hadn’t been attacked by Klingon Fleet Commander Kor, well-known to the admiralty and the Federation Council. The ship was attacked by unknown Klingons who only pretended to be led by the last descendant of the Klingon Emperor. The real Kor had been involved in a separate assault of a Starfleet ship, not as the aggressor but as benevolent aid! Kor had come to a Starfleet ship's aid to stop two rogue Klingon commanders.

And which ship had the honor of being saved by Kor more than two parsecs away from the place where the Excalibur was attacked? Of course the Enterprise! Who else would interfere with Luengo’s carefully considered plan, even if the whole thing was a coincidence? Kirk! Of all the captains to get mixed up in this!

Damn this boy-captain to hell and back! Not only did it have to be Kor who showed up in the middle of the fight between the Enterprise and the renegade Klingons. No, of course Kirk had to muddy up the waters and involve Wesley, who sounded far too relieved that the Klingons might have actually
kept their word and the ceasefire! One look around the room proved that most of the Council still at their terminals shared Wesley’s opinion; they must talk to the Klingons about the incident before Starfleet could take action.

The links in the chain of Luengo’s plan were about to come apart – because of Kirk! Because of the unbelievable luck of this infuriating farm boy!

It was time to get rid him once and for all!

His gaze found Norton, who hid his anger behind a tight expression, yet as they exchanged a glance, Albert pressed his lips together.

Other council members who had left the large conference table were called back for more discussions from their colleagues and the officers present. The president looked at Luengo. “Do I understand the commodore correctly? The *Excalibur* was attacked by another Klingon pretending to be Fleet Commander Kor?”

“Impossible! He's got to be mistaken. We all listened to Captain Styles’ report!” one of the council members called.

“But Kor came to the aid of the *Enterprise* more than two parsecs away! You heard Commodore Wesley! They compared the voice records, and Kirk identified the Klingon’s ship as a D6 – Kor’s ship. The one that attacked the *Excalibur* was a bird-of-prey and two old D4s. Not that I could tell them apart, but it’s obvious that the real Kor was in contact with the *Enterprise* while the assault on our delegation and admirals took place.”

“Or the whole thing is one big pretense make us think we’re safe,” the first man replied.

“And what about this new cloaking device the *Enterprise* was confronted with? It somehow cloaks the emissions of the Klingon vessels! Bad enough they are invisible!” The female Council members looked at the others. “This is a new level of danger for us.”

“Yes, however, we have a new defense – the SDD.” Cartwright threw in, earning him a confused glance from Luengo.

With that, the topic of the SDD came to the table, and staff officers and Council members were
relieved that Starfleet would have the new technology to protect her ships. This was the first time Luengo and Norton had heard of the sensor disturbing device, and both were baffled – especially José. Who of his employees had been sleeping on the job that the SBI missed this? He should have known about this device before it came to Cartwright’s attention, yet Jonathan was familiar with the thing long before the SBI and had already transferred the payment for the prototype and technical manuals to the unknown constructor.

Unbelievable – offensive even! He would have a whole staff researching the project as soon as he was back at HQ, and he would find out something about this mysterious designer who came up with the simple but brilliant idea to make Federation ships invisible to sensors.

Then the discussion of how to proceed continued. Most were of the opinion that diplomacy should continue. Luengo joined the discussion, and moved to counter-strike. He pointed out that both assaults gave the Federation every right to declare the ceasefire null and void. The Federation, he said, must protect herself before the Klingons struck again. The death of the most important admirals left them vulnerable, and the Klingons could take advantage – especially if the most powerful of them were calling for blood.

Yet the discrepancies in the two reports made the Council members wary. None wanted to be the one to wrongly accuse the Klingon Empire. The chance for peace would be forfeit for decades, and no one wanted to be responsible for that.

In the end diplomacy won.

Robertson would send his counterpart in the Empire a personal message demanding answers, while Starfleet was ordered to remain on stand-by. Every ship near the Klingon Empire should be on yellow alert, and all captains would be ordered to avoid any confrontation – no engagement of hostilities.

The last point on the agenda concerned the interim Chief in Command. Luengo's time in service as a staff officer exceeded his peers. He was resourceful and trusted for the most part. Sixty-eight percent of the Council agreed to give him the enormous responsibility. However, his involvement with Section 31 wasn’t forgotten by all members, and they accounted for the missing votes. Though he received the promotion, many voices made it very clear that he was still under scrutiny and they expected a hearing when the crisis was over.

‘Fools – the lot of ’em!’ José thought, as he rose from his chair. The conference was over, and it was almost morning. Everyone was tired – many were quite irritated.
None more than Luengo and Norton.

They had been seconds away from setting the next step of the plan into motion. Then Wesley's report appeared. It would prevent Luengo from taking his preferred action. But now he was named interim Chief in Command. So Luengo would take the lead with Robertson in planning the Federation’s next moves. It allowed Luengo free rein in many matters and gave him more power – power he would use.

As he and the other admirals left the briefing room, José and Norton bid their colleagues good night. Truly a mockery, none of them could go home for sleep. The men walked to one of the building’s cafeterias.

“Ugh, he'll drive me to drink,” Luengo growled beneath his breath. “We were one step away from success and then this!” He shook his head. “The Enterprise! Of course, it had to be Kirk to screw it all up!”

Albert sighed. “In this case, it isn’t his fault. The incident with the Klingon assault on the Enterprise and Kor was bad luck.”

“Si – but it was lucky for that hillbilly!” He grimaced and checked his PADD as he stepped with Norton into the next lift to ride to the cafeteria on the third floor. He frowned. His secretary had sent him four messages; they seemed important, but one message was an automatically patched through to his personal terminal. It was from Nureaux. Feeling anticipation, Luengo quickly read the message and then deleted it. A grin spread across his face as they left the lift a short time later.

“What’s up?” Norton asked, seeing the almost joyful face of his colleague.

“Nureaux sent a message,” José answered quietly, while they walked down the hallway. “Khan is aboard the Enterprise.”

Albert stopped within his next step. “He is?”

Luengo nodded. “Yes – and Nureaux is about to make the next move in our little game. All he needs is access to Kirk’s stateroom to install the little gifts I gave him, and then we’ll learn what that hayseed is really up to – he and the creature.”
Norton pressed his lips into a frown, “Isn’t it time to stop Kirk finally? We know the Augment is with him.”

“I want to know what Kirk's plans are, and I’ve only got two or three days to find them out.”

Albert blinked in confusion. “Why two or three days?”

A chuckle escaped Luengo. “Because Kirk will get an order soon that will the beginning of the end for him. We need a reason to arrest him – one even Robertson, and the Council will be forced to accept. Insubordination and knowingly endangering the Federation are reasons enough.” They reached the empty cafeteria and headed for a table, not waiting for the tired looking waitress to show them to one. “What are you planning?” Albert asked curiously; José chuckled quietly while his eyes wandered over the slowly waking city.

“If the Augment means anything to Kirk, he won't be able to carry it out. He'll be forced into insubordination – and then we’ll have him. Just wait. In a few days Kirk, his officers, and the creature will be in our hands!”

ST***ST***ST

Aboard the Enterprise, the alpha and beta shift were fast asleep when the conference in Paris ended. The men and women aboard had worked hard to get the ship functioning again, and everyone was exhausted. Well, almost everyone. Spock and Khan rested, but neither man was tired – they could have gone on, yet they stayed with their lovers to give and to seek comfort – even if the Vulcan would never admit such a thing.

The same would have gone for Nien at one time if he allowed himself a lover at all. Now he could not deny that he felt solace having Jim so close. He would simply listen to his breath and heartbeat. He knew that he had been close to losing his beloved yesterday – again! The danger of the battle in which Jim could have been mortally injured; the threat of losing him to the Klingons if they had demanded Kirk in exchange for the crew’s survival. None of it came to pass – Kor had made no such demand, but it had been a close call. Khan loathed it. He hated that his mate’s life bared itself to so much risk. He yearned for the war’s end because then a good measure of the continuous danger his beloved exposed himself to would be over.

Kirk didn’t know that Nien was awake after nearly an entire night of fierce, almost desperate love-making as soon as they hit the bed. Each needed to feel each other in the most intimate way. Afterward, Khan was unable to sleep, yet he didn’t move a muscle for fear of disturbing the much-needed rest of his mate (though the captain's nightmares were not so kind). Khan had anticipated
them. Confronted with his two tormentors again would affect the strong, sensitive captain. Concentrating on their shared bond, the Augment managed to calm his mate with his presence, gentle murmurs, and feather-light strokes. Kirk never woke. He settled back into a peaceful slumber, nestling closer to the enhanced man who held him in a protective embrace.

The alarm clock finally tore Jim out of his sleep, but the captain had no desire to leave the warm shelter of his mate’s arms and the coziness of their shared bed. Neither man had a choice in the matter. Now a petty officer, the former dictator was scheduled for regular duty, and because it would be easier for all the bridge officers, Kirk had put Nien on alpha shift with him.

This time the young captain sent his lover to the shower and then gave him directions to the uniform store. There was no way around the fact that Nien would have to wear a uniform while at the helm of the Enterprise. None too happy, Khan obeyed to his beloved’s requirement and left the captain’s quarters while Jim hopped under the sonic shower.

After finishing his morning routine, he checked his terminal for reports and waited for the Augment to return. They’d walk together to the officer’s mess for breakfast. He didn’t have to wait for long. He heard a noise from the door that slipped open; Khan entered. Jim’s eyes widened he saw his mate in command gold – with striped sleeves and insignia of a petty officer.

Kirk had to grin. “Definitely your color,” he said, and the super-human rolled his eyes.

“I never thought that I would wear a Starfleet uniform again – and by my own free will.” He shook his head and stepped closer. “The things I am willing to do for you…”

Jim smiled lovingly and reached out. He felt the tender possessiveness emanate from the strong, warm fingers laced in his. “And not only for me but the whole ship – even for Spock.” He squeezed Nien’s hand. “I don't think I've said it yet,” he mused quietly. “Thank you for your help yesterday on the bridge, and in Engineering.”

The former dictator shrugged. “You and those dear to you were in danger. I told you that I will stand up for your family because they belong to you.”

Cocking his head, Kirk’s gaze roamed over the slender face of his beloved. “That’s not the only reason. I saw sympathy in your eyes when you heard about Spock; I heard the understanding in your condolences.”
Khan sighed. “I know very well the pain the loss of a family member inflicts. Mr. Spock and I may have our differences, but it would be deliberately ignorant of me to be blind to the anguish he has been through.” He pursed his lips. “Perhaps I understand his sorrow better than most because we have both lost our people; we are – endangered, I suppose you could say.”

Jim nodded. “Yeah – I guess you do have that in common, and neither of you deserve it.” His thumb circled gently over the back of Khan's hand. “But there's hope that Sarek is alive.”

“If there are survivors from that second shuttle, Galven will find them,” Khan stated calmly. “He is an expert at slipping through the tightest net toward his gain – just like someone I know, too,” he teased; he stole a kiss from his mate and turned to leave.

Smirking widely, Jim followed him.

Neither man was aware of the pair of eyes that peeked around from the next corner and saw them leaving the captain’s quarters.

Biting his lips, Nureaux watched the two men walking away – side by side, chatting as if it were the most normal thing in the world for a Starfleet captain to hide a fugitive, a synthetically produced creature.

Philip pursed his lips, thinking. He hadn’t discovered the Augment's quarters, but obviously he visited Kirk regularly. This could be a chance to kill two birds with one stone. He needed access to Kirk’s quarters and silently thanked Luengo for the little ‘souvenirs’ he was gifted along with the high-tech transmitter.

Several minutes later he took a PADD out of a hidden compartment in his quarters. The PADD was smaller yet far more capable than civilians could buy or that Starfleet issued its personnel. Sitting down at his desk, he used the code Luengo gave him and connected the PADD with the Enterprise’s databanks.

Spock sat at his station, lost in thought. He had excused himself from Uhura after she woke and had gone to the bridge, even though there was more than an hour before his shift would start. He didn’t visit the officer’s mess for breakfast because he was not hungry. His mind was far too occupied with the many problems at hand, and those thoughts roiled his guts. Illogical, he knew, but his humanity
took center-stage now.

Reaching the bridge, Spock had nodded politely at the members of gamma shift. He signaled Lieutenant de Rose to remain in the captain’s chair, and had used the quiet of the early hour and the familiar noises around him to think over all they had discovered about the ‘Excalibur affair’, as Mr. Scott now referred to it.

He knew that Jim was convinced of Section 31’s involvement. Even if the Vulcan kept his thoughts about it to himself, he secretly agreed with Kirk.

Styles had made mistakes that beginners would make. Never would they be found in a well-trained commanding officer. The discrepancies between the other captain’s report and reality minimal, but Jim had recognized them – Jim, Scott, Uhura, Khan and himself. Betrayal by Styles was unclear, but the Vulcan had his own theory. The victims were the most important diplomats – a loss for the Federation, but not essential for the maintenance of her. They were replaceable, should the peace talks stop before they even begun. A weak Starfleet could cause the Federation to fall apart. Members would lose confidence and begin pulling away. Killing the fleet’s most important admirals would be suicide, yet that is exactly what had been done. Why? Who would garner the advantage?

The Klingons, of course; but Spock could not imagine a Starfleet officer conspiring against the fleet. Yet there had been the traitor on Aldebaran; his motive had been revenge. Styles had no reason for a vendetta. He had been promoted to captain and had gotten his first command on a Constitution class cruiser. That command that could have resulted in peace between the Federation and the Klingons, but it went wrong – or perhaps not?

Spock stared at the databank display while his thoughts followed a hypothetical chain of events. So, who would gain something from the admirals’ death besides the Klingons, and what must be done now? Starfleet needed a new Chief in Command as soon as possible. Morrow and Nogura were in line after Barnett. Next in line would have been Shepard and Komack. They all had been declared dead.

So, who had the experience the he or she might become the Chief in Command? Who was powerful enough to buy a young captain for their own interests, and who could pull enough strings to make all those things happen to lead to the assault on the Excalibur now commanded by a newly promoted, inexperienced captain?

If this was truly the outcome of a carefully considered plan, then was Styles’ presence aboard a part of it? Captain Heldrom and his first officer’s accident the morning of their departure had indeed left a bad taste, as Jim described it, because there hadn’t been time enough to choose a suitable replacement for the captain. Barnett had been forced to take what he could get, and in this case, Styles was the conveniently available choice.
The pieces fit neatly – Heldrom’s accident, the sudden promotion of a young officer who was hungry for his own command. Perhaps that officer's failure may have been intended to continue the war.

To manage all these details, you would have to know a lot of people. The right people for such a task were required for this kind of treachery (if there was a treachery).

There was only one department that could do it all: The SBI.

The SBI had its spies, and its people in the background who did jobs others would be thrown to jail for. The SBI frequently flaunted the law though always maintained plausible deniability as intelligence gathering had done for a thousand years. And pushing someone into power for a goal? Plausible. Sacrificing the most important admirals in Starfleet to lead the organization toward the goal of a continuation of war – the chief of SBI would be the best candidate for such a task.

And who was this man? José Luengo – the very same man who did nothing to help a Starfleet Captain, Jim, when he had been taken prisoner by the Klingons. A sympathizer of Section 31. And the man who allowed Norton to deliver Khan to the labs, where the Augment had suffered illegal tests for months.

Luengo and Norton had been in custody and were about to face the Council for what they did, this much Spock knew. But the war had preserved them from a hearing thus far. Luengo was now on duty under observation as was standard protocol in such cases, however he still had plenty of leeway to act freely.

The Vulcan was far from accusing the Chief of SBI of conspiracy, murder, and perhaps more, but something his T'hy'la called a ‘gut-feeling’ latched onto him.

If he wanted to investigate and obtain a satisfactory result, he had to start at the beginning. And what event preceded the delegation’s death? Heldrom’s traffic accident.

‘Early in the morning…’ Wesley had said, and given the scheduled launch of the *Excalibur* that morning, Heldrom and his first officer must have been on their way very early – the perfect time if you didn't want witnesses. Wesley also mentioned that both men lived in Sausalito on the other side of the San Francisco Bay. The town was – even after all its centuries of existence and its proximity to the large city – calm and little, and therefore the chance that someone was in the streets at this early hour had been small.
But the information about Heldrom’s living place was not available – it was found in the captain’s files, and no one had access to those except for staff officers and the personnel office. Spock was not a ‘no one’. He played a computer like a violin in the hands of a virtuoso. If Khan had managed to get access to Starfleet’s best-secured databanks, then Spock could do it, too.

Activating his terminal, he quickly altered the identification codes to prevent anyone in HQ from following his trail. Before he could go further something caught his attention. Users – he couldn't see them, but he could see data usage levels – someone gained access to the databank. About a third of the crew, if not more, used the databanks regularly, so that was not unusual. But Spock thought he had seen an indication of a login trying to access data – not in the library, but to the ship’s base functioning systems.

The hint of a frown creased his forehead as he tried to follow the trail of ship’s logins and code to determine who tried to hack into the Enterprise’s system. He didn’t find a trace – absolutely nothing – and that made him suspicious.

Shutting everything out around him, he concentrated on the task. He didn't even hear alpha shift arrive. Only when he felt a familiar presence beside him – two, to be precise – did he look up and into the inquisitive faces of Jim Kirk and Nyota Uhura.

“And here I thought Vulcans could hear grass grow,” his captain teased. “Guess I was wrong. So once again, good morning, Spock.”

“Good morning, sir. I interpret your choice of words to mean that you have greeted me already?”

“He did,” Nyota nodded, clearly amused. “That must be a hell of an interesting problem you’re working on.”

“Indeed,” the Vulcan nodded before he addressed Kirk in his business-like manner. “Captain, there has been unauthorized access to the databanks; the ship’s systems seem to have been compromised.”

Jim was in captain’s mode. “Source?”

“Unidentified, sir. It seems someone is quite skilled in computer code.”
“Better than you? Never!” Jim shook his head. “Try to find out who it was, Spock, and what data they actually got their hands on.”

“Yes, sir!” The first officer nodded and turned his attention back to his task.

Kirk and Uhura exchanged a quick, cautious glance, and then Jim went to his seat. He greeted a tired looking Pavel Chekov and watched Nien, who took the helm again, checking the coordinates. Then he began to tinker with the wrecked helm console.

ST***ST

The morning went by uneventfully. Spock tried to find out more about the unauthorized access to the databanks; Scott and his staff were still busy with repairs, and McCoy reported via intercom that Sulu was out of the coma. A wave of relief went through the bridge crew. Jim was busy with brooding about the ‘Excalibur affair’.

Several decks below, Philip Nureaux waited for the perfect moment to initiate the next step of his mission; his superior, though, kept him busy the whole morning. During a short lunch in the mess, he learned that Kirk had called a meeting of the department chiefs in briefing room 3 at 1400. This would be the best chance he would ever get.

While his own superior went to deck 8 to join the meeting, Nureaux took action. After biding his time for half an hour, he finally muttered to a colleague that he was bringing a report down to the weapons bay. He rode the turbolift to deck 5 and walked down the corridor toward the captain’s quarters.

Looking around, he saw no one much to his relief. Then he fixed his attention on the lock. Slipping on a pair of gloves, he quickly punched the medical over-ride code into the panel, and the door opened. He took a calming breath. It worked! Luengo had provided him with a device that made it possible to override the security of the databanks so that he could gather any data he needed for his mission without getting caught. Learning the CMO’s emergency code had been no problem after he hacked successfully into the ship’s systems, and he was quite proud that he came up with the simple plan.

The emergency override code allowed him instant access to any room even if it was locked. Now it gave him the chance to bug the captain’s quarters. It was a passive receiver and any noise in the stateroom would be recorded. The transmitter was shielded so that it could send a signal out undetected. Nureaux was certain that he would soon learn Kirk’s and the creature’s true intentions; he’d soon have information for Luengo.
Cautiously he stepped in and listened to the door close before he ordered the lights to 25 percent and looked around.

The captain’s quarters were larger than his own, but not much. Kirk could have had a larger stateroom, yet he seemed to be satisfied with this smaller one. To his left Nureaux saw Kirk’s desk – a desk that spoke of a heavy workload. Straight ahead was the living area, and to his right was the sleeping area with a wardrobe, shelves, nightstand and the usual bed that…

There was something odd about the bed, and Nureaux only recognized after the second glance. There were two pillows. Frowning, Philip went closer and examined the bed. Yes, it was definitely made for two persons, and both pillows showed use. So, Kirk at the very least had someone spend the night – or did he share his quarters with someone else? Was he in a relationship? A relationship between the commanding officer and another officer wasn’t so long as favoritism was avoided – though it was far from encouraged. Knowing Kirk, he could give a damn about what Command thought. But who could it be?

Out of curiosity, Nureaux stepped into the bathroom, and there he saw further evidence that Kirk was intimate with someone on the ship. Two towels, two toothbrushes, two shavers, and two…

Shaver?

Philip stared at the men’s’ little devices. A woman's electric razor was different; this was definitely not one.

‘He’s in a relationship with a man!’ he thought bewildered. ‘But Kirk is a playboy! Hell, even I know how he flirted and fucked around in the Academy! And now he is with a male? Who?’

A grin spread over his face. He would learn soon enough who shared Kirk’s bed; the bug would give him all the answers he needed.

Looking around, he tried to select the best places to hide them.
Uhura had given her status report to Kirk via PADD transmission and remained in charge on the bridge, as the senior officers left for the briefing. It was only her, two junior officers, Pavel Chekov and Khan on the bridge with her. She realized she wasn't uncomfortable around the Augment anymore – even with Kirk unable to keep an eye on him – well, both eyes and hands as it were!

She smiled inwardly. Even if she was still irritated with the former dictator for all that happened last year, she had come to understand him – what drove him to do what he did. Her compassionate heart had given up the hatred she had felt for him then. And it was so damn cute to watch the usually stern and cold super-human get all soft and mushy where Jim Kirk was involved. The two were made for each other. She caught herself hoping that everything would turn out alright for the Augment because she didn’t want to see a heartbroken Jim Kirk. If anyone deserved happiness, her friend – that impossible captain did. And, if she was honest with herself, she also wanted Khan to be happy finally too.

She watched the former dictator and Chekov quietly discussing repairs while deep in thought.

“Lieutenant?” someone asked. She was interrupted by the junior science officer, and she looked over her shoulder at him.

“Yes, Ensign Jefferson?”

“Ma’am, the computer’s reporting a medical code override,” he said, glancing from the science station to her.

Uhura pressed her lips together. “Well, M’Benga must have been called for an emergency.”

“I apologize for interrupting you, Ma’am, but it’s Dr. McCoy’s personal emergency code, and it’s from the captain’s quarters.”

That got her full attention. Quickly leaving the center chair, she walked to him and looked at the display where he pointed. “That's odd!” she murmured. “The captain and Dr. McCoy are both in the meeting. Even if the captain didn't feel well, why would he go to his quarters when he knows the doctor would override the lock and drag him to medbay anyway?”

“What about the unauthorized access to the databanks this morning?” Khan threw in; his eyes fixed hers for a moment.
She nodded as she made the connection immediately. “Bridge to briefing room 3. Captain, are you there?”

A second later, Kirk’s tenor sounded through the speakers. “Of course, I’m here, Lieutenant? What’s the matter?”

Uhura’s frown deepened. “Is Dr. McCoy with you, too, sir?”

“I’m here, Uhura,” Bones called. “What’s up?”

Before Nyota could answer she heard Khan say to Chekov, “Take the helm!” Then the Augment stormed to the lift and vanished before she could utter another word. The young Bantu woman groaned inwardly. It seemed remaining at his post on shift was something the ‘General’ hadn’t acclimated to yet.

Nyota felt her adrenalin level rising. “Captain, someone just entered your quarters using Dr. McCoy’s override code.”

“WHAT?” Kirk sounded shocked and enraged.

“Captain, the hacker this morning…” Spock’s voice was cut off by Jim shouting,

“Uhura, alert Security! But not ship wide, please. Whoever’s in my stateroom shouldn’t know that we know.”

Nyota’s glance found the abandoned helm. “Sir, I don’t think that's an option. Mr. Singh is already on his way down to your quarters.”

She heard Kirk cursing, and then the connection was cut.

ST*##ST

Nine decks below, Jim Kirk ran to the door of briefing-room 3; Spock, McCoy, Giotto and even Scotty were hot on his heels. They went to the next lift and rode it up to deck 5 where the race began
anew. Kirk’s thoughts were in turmoil. Whoever entered his quarters was up to something –
something illegal – maybe authorized by someone who had their own motives. Section 31. And if
they were after Khan, then his beloved was in danger the second he walked through captain’s door.

Spock stayed beside Jim as they stormed down the corridor and rounded the corner leading to Jim’s
room. They saw the open door; Spock sped up, using his Vulcan strength to close the distance to the
door far quicker than his human companions.

Then Jim heard something that made his blood run cold. The unmistakably sound of a phaser blast,
followed by an outcry - the cry of his mate!

TBC…

Chapter End Notes

Yeah, an evil – evil! – cliffhanger again. And this just before Christmas. I know I can be
very mean (laugh).

Yes, even aboard his own ship Jim isn’t safe from the investigations of Section 31. He
and his friends are stepping more and more into deep water – as will Bob.

In the next chapter you will learn what’s going on with Nureaux and the aftermaths of it.
More I don’t want to tell you. I hope that I can publish the next chapter before New
Year, but I can’t promise anything.

Please leave some comments, and once again I’m sorry that the new update lasted this
long.

I wish you all now a Merry Christmas,

Hopefully Santa is nice to you and leaves some gifts,

Love you all

Yours Starflight
Hi, my dear readers!

I hope you had a beautiful Christmas-time and that those, who live in the flooded areas like in North-England, Scotland or Paraguay (and neighbor countries) are well. The news about the heavy rains is really troublesome and I pray to the Lord that this mess will come to an end soon.

As promised you get now the next chapter of the story. A big thank-you to Nurse Darry, who picked up the slack concerning beta-reading, because Rhiannon is very, very busy in the moment. The last update ended with a cliff-hanger and I’m certain that a lot of you burns to know what happens next.

Have fun with the update. Thank you so very, very much for all the comments and the kudos,

Have a nice New Year’s Eve – and hopefully not such a big hangover a day later (*snicker*),

Love

Yours Starflight

Chapter 51 – A puzzle almost solved

Philip Nureaux stood on the seat of a chair while he stretched himself to reach the cover of the room’s environmental systems. The little bugging device was a high-tech device that would catch every sound even when placed behind a ventilation louver. At the same moment, he heard the door open and startled, looked to the entrance expecting to face Kirk, who had come back earlier than anticipated from the meeting.

The man who entered wore command gold, yes, but it wasn’t Kirk. Nureaux took a sharp breath as he recognized the Augment, who halted abruptly. The pale, unholy bright eyes fixed on Nureaux’s left hand in which he held the bug – and then the creature strode towards him.

Acting on pure instinct, Philip let fall the screwdriver with which he’d been using to open the cover
of the ventilator, jumped off the chair, and kicked it with all his strength in the super-human’s direction. It stopped the creature for a second, which was enough for the well-trained security officer to grip the standard phaser any Redshirt wore aboard and to pull it out.

Khan had gone rigid for a second as he recognized the young lieutenant from yesterday who’d brought him the required spare parts from Mr. Scott. His behavior had been – tense, strange. And to see him now, here in Jim’s quarters where he certainly had no right to be, he knew with utterly certainty that the man was dangerous. And then Khan saw what he held in his left hand: something that really looked like a little wiretap. And with this observation, the last clue fell into place with brilliant clarity. ‘A spy from Section 31’ shot through Nien’s mind and with a mixture of fury and icy calmness as he approached the enemy.

The younger man reacted quickly. In the next moment he was off the chair and said furniture flew in Khan’s direction. The Augment all but punched the chair out the air with a balled fist – a movement he didn’t need more than a second for, but this was exactly the time his opponent needed to gain the advantage.

He saw the phaser in the lieutenant’s hand and the soft blue light of a stunning blast hit him before he could dodge out of the way. It didn’t paralyze him like it would have done to any other human – or even Vulcan – but it slowed him down.

Nureaux knew that he had been discovered – that the creature had realized what was going on. Fear and hate made him act, and without thought, he fired at the super-human. The Augment was quick, but not quick enough. The blast hit him squarely in the chest and with a shout, he stumbled backwards – only to catch himself.

Philip raged. This animal was really a demon in human form if he could resist a phaser blast – a demon whose action had killed members of his family. Nureaux might be going down, but he would take the creature with him! Again he shot, and again, and again rapidly, yet the Augment remained on his feet. But his knees buckled and he stumbled back against one of the armchairs. At the fifth shot, his legs gave out – but he remained conscious. And then Nureaux realized why. Per protocol, all phasers aboard were set to stun, not to kill. Without hesitation Philip fumbled for the switch on his weapon and set it to kill.

Khan fought against the effects the stunning blasts which although mild, had incapacitated him despite his augmented nature. As with the last time he’d been shot repeatedly by a phaser on stun – on the garbage transporter when Uhura had fired at him – his body could compensate for a great part of the energy which might have paralyzed his nerves, yet he needed time – and even his resistance knew limits.

He felt his legs giving out and found himself on the floor; his nerves vibrating with pain, his muscles
arching with the strain of staying functional. Baring his teeth, he looked up at his opponent, asking himself how it happened that he now found himself in such a humiliating position, then saw how the younger man had hastily tried to re-set his phaser. Khan knew that he was seconds away from death. He tensed his muscles, which screamed in protest, ready to jump up and to attack – and then saw sudden movement and black and blue in front of him, blocking his sight.

Spock had reached the captain’s quarters and needed no more than a second to understand what was happening – Khan on the ground, stunned, and one of the new lieutenants fumbling with a phaser, his intentions clear. Not wasting precious time, the Vulcan jumped over the Augment and in a blink of an eye was facing the young Terran, who stared wide-eyed at him before he raised his weapon – pointing it directly at the first officer. Spock acted without another thought. Knocking the weapon forcefully away with his right hand, his left hand found and pinched the bundle of nerves in the man’s shoulder. For a moment the human’s face became a grimace of pain, then he fell to the ground in a heap; unmoving.

Still fighting against the effect of the stuns, Khan looked up at the Vulcan, who smoothed down his shirt before he turned around and glanced down at him. There was it again – for the tiniest moment, Nien could see the ancient fierceness in the Vulcan’s eyes before the self-control was perfectly back in place. And then it dawned on Khan that Spock had saved his life! As much as it hurt his pride, the Augment was very much aware of the fact that he wouldn’t have come out of this situation alive if it hadn’t been for the Vulcan.

“Are you all right, Mr. Singh?” the first officer asked, but before the former dictator could answer, a frightful “NIEN!” drove his attention away. A second later Kirk knelt down beside him, the familiar scent of his mate washed over the Augment. He could sense the dread and the shock in Jim through their shared bond and saw it in his wide eyes, which were dark with fear. Kirk’s hands gripped his shoulders, then one arm slipped around Khan’s waist – both supporting and hugging him.

“I’m all right, Jim,” Nien said hoarsely, straining to be understood as his throat muscles still refused to work properly; every movement hurt. “Calm down, Pyära, I’m okay.” That wasn’t completely true, but he’d felt a tremor of worry course through Kirk’s body.

Jim heard the words, felt Nien’s breath and heartbeat against his own chest – his beloved was okay! Yet he needed several moments to regain some control. His own heart beat frantically, coldness crept through his veins, fear tightened his throat. As he heard the phaser blasts and Khan’s cry from within the cabin, he’d thought he’d come too late to save his soul-mate, his bonding-partner. Yet here they were, both crouching on the floor and alive.

Spock watched his friend for a moment, heard the others entering the quarters and stepped forwards to shield his T’hy’la and Khan from prying eyes. McCoy knew of the two, the others did not, and the Vulcan understood that Jim wanted to keep it that way.
“Mr. Singh is unhurt,” he said, an observation that might have stopped Scotty and Giotto, but not Leonard McCoy.

“I’ll be the judge of that, if you don’t mind,” he groused, slipped past the Vulcan, and crouched down beside the two lovebirds. Carefully he laid a hand on Kirk’s back and murmured, “Jim, let me have a look at Khan, please.”

Slowly the young captain moved away slightly from the Augment, yet one of his hands remained on Nien’s arm, almost clinging to the material of Khan’s sleeve. His blue eyes brimmed with overcome fright and worry, while their gaze roamed over the slender face of the super-human who appeared even paler than usual.

“He tried to stun me,” Khan rasped. “Obviously he didn’t know I’m immune to it.”

Giotto frowned. This man was immune to phaser stuns? Impossible – yet there the petty officer sat, very much awake despite the shots he’d sustained.

“’Immune’ my ass,” Bones grumbled, checking Khan’s pulse in the old fashioned way by putting two fingers at his wrist. “Your pulse is far too slow and your eyes are glassy. Are you in pain?”

Bones nodded – and groaned as Jim was instantly all over Nien again. “Calm down, kid, these side effects are more than normal, so stop freaking out!” He met the wide eyes of his friend and recognized the old fear in the blue depths – the fear of being left behind. Softly he placed a comforting hand on Kirk’s shoulder. “Don’t fret, Jim, Khan goes nowhere without you.”

Giotto – professionally ignoring Kirk’s emotional outburst – had rounded the captain, the petty officer and the CMO, and stared down at his unconscious inferior. Wrath darkened his usual calm and friendly open face. “Philip Nureaux!” he said as he caught Spock’s asking glance. Spock remembered the name. At the same moment several Redshirts arrived, but Giotto ordered them to wait outside while the first officer bent over Nureaux and took the phaser from the lieutenant’s hand.

One look at its adjustment was enough to make Spock realize how close Khan and he had come to facing death, then he showed the weapon to Giotto, who gasped. “Sweet Lord, it’s set to kill!”
“He was adjusting the phaser as I arrived here,” the Vulcan nodded.

Jim looked over at them and paled even more. If Spock had come only one second later, then...

He felt the long, strong fingers of his mate cupping one of his cheeks and forcing his face to turn around towards him. “Your Vulcan brother came just in time, Jim,” Nien said quietly. “Nothing happened – I’m all right.”

Kirk didn’t know if it was the carefully-chosen words or the calm tone Khan used, but suddenly he snapped back to his usual far more controlled and stronger self. “Just in time?” he echoed; fury began to cloud his eyes. “A second or two later and I would have lost you!” He squeezed Khan’s fingers and rose – slowly, powerful, like a predator ready to strike. He straightened his frame to its full height, while his blazing gaze found the unmoving lieutenant. “He was about to kill you, Nien! And I’ll be damned if I let something like this go unpunished!”

Giotto had bent over Nureaux, too, and took something from his left hand. Arching both grey brows, he cursed and offered it to Spock, whose reaction was more controlled but similar (except for the swearing).

“A bugging device, Captain,” he reported, as he held the little device in his own hand, inspecting it. “And certainly not a standard one – rather a high-tech piece of equipment with a wide range transmitter, adjusted to a special frequency. And I am certain that Uhura will find that the frequency is jammed too.”

Kirk stepped over to them and glared down at the bug like it was the cause of all trauma of the last hours, which effectively, it was. “Heritage?” he asked briskly, and Spock lifted a brow.

“Unknown, sir, but given the circumstances we have already discussed, I would say that is a logical assumption.”

“You’re not alone in this assumption,” Jim growled. “Can you find out more by examining it?”

“I think so, sir,” the Vulcan nodded. “It hasn’t been activated until now, but I’m certain as soon as I switch it on, it will be possible to find its counterpart in the lieutenant’s quarters.”
“Right!” Jim glanced at Giotto, who was a little bit at loss, yet still felt ashamed he’d not caught this sooner.

“Captain, he is one of my men. I… I hadn’t the slightest clue that he… I don’t know what…”

Jim laid a calming hand on his security chief’s shoulder. “This isn’t your fault, Giotto. We had a cuckoo’s egg in the middle of our nest without recognizing it, that’s all.” His fierce gaze found the unconscious form of Nureaux again. “I think I know who he works for, but first we have to find out as much about him and if he’s working alone or not. Gather all new crew members together who arrived with him. Turn his quarters upside-down, but be careful. If you find something suspicious, don’t remove it, call Mr. Spock or me. We could unknowingly alert his superiors if we tamper with something.” He saw the confusion in Giotto’s face but didn’t explain further.

Kirk turned to his chief engineer. “Scotty, is it technically possible to shield Nureaux’ quarters from any kind of transmissions?”

“You mean in the event he has his own coded and activated transmitter activated?” Montgomery already knew to what Kirk was up to – and what it all meant. Section 31 was on their heels. The damned shadow department really did still exist and was still spying on them! “I think I can come up with something, Captain.”

“Good!” Jim looked back at Khan. “Did Nureaux say anything when you got here?”

The former dictator shook his head. “No. He was…shocked. Then before I could do anything more than move in his direction, he’d already attacked me.” Khan rubbed his temples to calm the pounding in his skull – he hated headaches!

“Anything else?” Jim wanted to know, his voice utterly professional, yet there was a soft tone to it.

“Hatred,” Khan answered before looking up again and he let his hands fall. “There was naked hatred in his gaze as he fired at me – the kind of fury that is meant personally.”

Kirk frowned and glanced at Spock, who understood him before Jim could give his order. “I will check Lieutenant Nureaux’s file for any connections between him, family members, and the events of last year.” He clasped his hands behind his back. “It also seems expedient to search your quarters for more bugging devices.” His eyes took on that intense expression without actually showing any emotion. “If you will allow, I will do it myself.”
And again there was no necessity for the two friends to use words to make each other understand. Jim knew why Spock had offered to search in person for further bugs inside the rooms. Khan practically lived here, and there were dozens of clues that Kirk was sharing his quarters with him in the most intimate way. There was no need for any outsider to learn of the true nature of the captain’s relationship with the Augment.

“Thank you, Mr. Spock, I appreciate your service,” he answered, before he addressed Giotto.
“Security shall also check all briefing rooms. It’s possible that Nureaux left more little ears there.”

The Chief of Security frowned. “You’ve a suspicion as to why he tried to spy on you, and that this is not only limited to your quarters, sir?”

Kirk nodded grimly. “Yes, I have. But it’s too early to know for sure. Just begin with the checks, start with briefing room four and five. Mr. Spock and I will interview all new crew members about Nureaux, and I really don’t want to have anyone who is really responsible for this shit eavesdropping on us.”

“Aye, Captain.” Giotto instructed several of his team while Scotty looked confusedly at Kirk. Why would Spock volunteer to search Kirk’s private rooms for any further wiretaps? Giotto’s men were experts in that area, so why was Jim almost relieved that the Vulcan had offered his services? Curiously he watched his captain, who turned around towards Khan and McCoy.

“Bones, take Nien to med bay and check him.” He lifted a hand as the Augment began to protest.
“You got hit with half a dozen stuns, you’re in pain, and you look like today’s lunch is about to leave you the wrong way. Let Bones help you, Nien – please.”

The last word worked. “If it calms you, by all my means, I go with the good doctor,” the superhuman sighed; smiling the tiniest bit as he saw relief on his beloved’s face.

Scotty frowned. Yes, Kirk always worried over his crew and especially for his friends, yet his concern seemed…extreme. Rubbing his neck, Montgomery shoved this all to the back of his head to think later and looked around. Where could further bugs be hidden? In the sleeping area? His gaze fell to the bed, roamed over the pillows and bedclothes, and then to the nightstand. Maybe there, or…

He was distracted as McCoy rose. “Right, I’ll escort our Mr. Superman to med bay.” He smirked down at Khan, who frowned in disapproval at the nickname. “Just stay where you are,” Bones said
kindly, then walked to Nureaux and began to examine him. A dark blue shadow had begun to appear on the lieutenant’s right arm where Spock had hit him, and Leonard didn’t need a med scanner to know the cause: a broken bone, if not two. Looking up at Spock, he whistled. “Just have a look, you went berserk again. I knew you had it in you.”

Consternated, the Vulcan lifted a brow. “I did not ‘go berserk’, Doctor. I merely tried to stay alive as Lieutenant Nureaux pointed the newly adjusted phaser at me.” He heard Kirk’s sharp intake of breath and looked at him. Spock’s dark eyes shone softly. “Do not worry, Captain, the lieutenant was not aware of Vulcan speed.”

Jim felt his stomach turning. He had been a moment away from losing both his bond-mate and his soul-brother. “God, I could kill that bastard,” he whispered.

“Understandable, yet I advise you not to act in your current emotional state, Captain. Questioning Nureaux is possibly the only of learning more about our enemies – and who is really behind this.”

“You still have doubts?” Kirk scoffed. “Of course this all goes back to Section 31!”

“I agree, Captain, yet we have no knowledge of the new leaders’ identities, only assumptions. Nureaux’s knowledge is perhaps our only source of proof – proof we are going the need if we want to counter this threat at all.”

Jim snorted in frustration. Of course he couldn’t – and wouldn’t – kill Nureaux. Yet he was glad that the bastard had received one of Spock’s really hard blows.

“Giotto, take Nureaux to the brig –”

“He has to be treated first, Jim,” McCoy interrupted him, and as he caught the still furious gaze of his friend, he added, “I’ve got to set his broken arm – when he’s awake, of course.”

Jim couldn’t help himself, he had to chuckle. “I always knew that you had a sadistic side, Bones.” He’d lost count of all the times the doctor had hypo’d him.

“I agree again,” Spock said wryly. He clasped his hands behind his back again, as McCoy shot him one of his typical glares.
“Just wait for your next checkup, Spock. Then you’re going to regret that comment!”

“I always regret depending on your medical abilities, Doctor. I am almost excepting that one day you will attempt to heal someone by dancing around the med-bed in a fur, swinging a wand, and howling unrecognizable ancient shaman songs.”

Giotto stared with large eyes at the two eternal opponents, while Scotty snickered to himself. Clearly Khan felt less in control than usual, as he began to laugh quietly – feeling the tension leaving him. The sight of an outraged, flushing CMO lost for words and who looked murderously at the stoic Vulcan, whose face was far too innocent, was too much fun to ignore.

At Nien’s obvious amusement, Jim felt himself begin to relax as well. Then his gaze found Spock. For a second he saw something close to a wink in the Vulcan’s eye, and realized that his friend had used a very old trick to lift the dark mood: humor. Even though Spock would swear Vulcans didn’t understand humor.

Closing the short distance to his first officer, Jim smiled at him. “Thank you, Spock,” he whispered, and the Vulcan bowed his head slightly, knowing what his T’yl’la really meant – his way of lifting the mood and more importantly, saving the super-human. “You are welcome, Captain.”

Khan felt the pain leaving his body and carefully tried to rise. An instant later Jim was at his side to help him, yet it was Spock who pulled him easily to his feet. Augment and Vulcan looked at each other for a long moment, then Nien straightened his shoulders. “I owe you my life, Mr. Spock. Thank you! I hope I can repay you the favor one day.”

The words were simple, but serious, that much was obvious. And to Jim’s surprise, as he’d just done with Jim, Spock didn’t reject Khan’s gratitude with his typical stoicism, pointing out that it was illogical to thank someone for doing his duty. Instead of giving this expected, yet frustrating response, the Vulcan only nodded slowly and answered in a hushed voice, too quiet to be heard by Scott or Giotto, “Repayment is not necessary. You are Jim’s mate. Your fates are tied to each other. If you die I would lose my soul-brother and the Enterprise would lose her captain. Both would be unacceptable.”

Khan curtly bowed his head, respecting the Vulcan’s point of view. If he’d been in Spock’s place, he wouldn’t have reacted any differently. And this thought was…a little bit unnerving!

McCoy walked by them and stomped to the intercom, calling med bay to order an anti-grav stretcher
for Nureaux, while Giotto called for his squad to come in. Bones finished his call to med bay and moved to Khan. “I don’t care if you do feel better, you’re coming with me – for Jim’s sake.”

Suppressing the urge to roll his eyes, Nien nodded. And if he were honest with himself, he’d admit that McCoy’s support as the CMO took his arm was indeed welcome. He still felt a little wobbly on his feet – something he loathed.

“Please excuse us,” Bones said. “I have to return to my hut to mix up a new potion. And hopefully my fur is dry after I had to wash it following yesterday’s fire dance, otherwise I won’t be able to use my witchcraft and voodoo!”

Spock looked at him unmoving before he addressed Khan. “If you are in need of another rescue, please just inform the captain or me.”

With a “Hrumpf!” McCoy left his friend’s quarters with deeply amused Augment at his side.

ST***ST

Uhura faced a real challenge half an hour later as Spock gave her the only bugging device that had been in Kirk’s quarters with the order to discover how it had been manufactured, its frequencies and operating systems. It was a completely new technology she’d never seen before and it was even difficult to open, yet it would eventually succumb because when Nyota set her mind to something, she didn’t quit.

While Giotto and one of his men began to rummage through Nureaux’s quarters, other members of Security checked briefing rooms 4 and 5, but found nothing. In the meantime, the order for every new crew member to come to the two briefing rooms spread through the ship, while Jim went to med bay to learn of Nien’s condition. “I told you I’m fine now,” was Khan’s only comment after McCoy declared him fit for duty. Kirk rolled his eyes and took the Augment into his arms the moment Bones left the examination room to give them some privacy.

Wrapping each other in a tight embrace they stood there, surrounded by medical instruments, medbeds and CTC equipment, and neither of them gave a damn that they were in med bay.

“I thought I’d lost you,” Jim whispered; feeling a tremor running through his body. “As I heard the phaser and your shout…” He tightened his arms around his mate, who nuzzled the side of his head with his nose.
“Don’t worry, Pyāra. You know how quick I am – and I have to admit that your Vulcan friend has his advantages. He didn’t doubt me for one second but defended me against an official member of Starfleet.” He kissed Jim’s golden shock of hair. “I think he’s opening up to me.”

“Yes,” Kirk mumbled, pressing his face against the Augment’s throat. “He knows how much you mean to me, and he’s trying his best to come to terms with us together.”

In the past, Khan would have snorted at that. He didn’t need someone to ‘come to terms’. He was superior, maybe even to the Vulcan. But this was now. Now there were only a few things which were important to Khan: Jim, and therefore Jim’s family, his own family – his brothers and sisters. And, Khan realized, he was content with his life aboard this ship. If his crew had been free, he could relish in this new life – a life that eventually even allowed for a place for a stoic, infuriating Vulcan.

Nien sighed and tightened his hold around Kirk for a moment, then released him. He saw the love in his mate’s eyes, felt the devotion in Jim, but also the tingling remains of the shock, bent forwards and their lips met in a first soft, then fiery kiss they had to end far too soon. Duty called, even if they both wanted nothing more than to vanish for an hour or two and give in to the rising passion in them.

Leaning forehead against forehead, they looked deeply into each other’s eyes, until Jim whispered, “This evening, 2000 hours, my quarters – dinner, and then BED.”

Khan chuckled. “Always so impatient.”

“Says the even more impatient one,” Jim grinned. “Last time you groped me through my trousers before I was even able to strip out of them.”

“And it turned you on even more,” the Augment growled seductively.

Jim felt a certain part of his anatomy hardening and quickly stepped back. “Yes – and you can do it again. But right now I have to interview the new crew members. Maybe you…”

“…can offer our brilliant communication’s expert some help in finding out more about Nureaux’s toys?” Nien smirked. “My pleasure.”
Side by side they left the examination room and Jim made – like the day before – a short visit to Sulu’s bedside. The helmsman was still in a coma but, as Dr. M’Benga pointed out, they would wake him within the next 24 hours. Jim sighed sadly as he saw the scars on his friend’s face. Yes, they would fade within a few weeks, as soon as the synthetic skin was completely incorporated by the body, and would melded with the natural skin. Yet to see Hikaru like this made Jim wince.

“He’ll come through it,” Nien’s deep voice rumpled beside him offering comfort once more. “He is strong, and thanks to today’s medical technologies, he’ll be back to his handsome self too.”

Kirk took a deep breath of the air that smelled far too much like disinfection. “I know – but it hurts to see him lying here like this. He’s my friend – he was the one who was with me on the drill Nero used to help destroy Vulcan. We’d met earlier at the Academy and had a few classed together, but I didn’t really know him very well then. After the Nero incident, during our first year-mission we became friends – we all did, the whole alpha shift. We…” Jim searched for the right words, then he said the only thing that described what they were to each other. “We became family.”

Khan nodded and laid one hand on his beloved’s shoulder, blue eyes looking back at him. “I know, Pyāra,” he whispered. “I know.”

They left the intensive care area of med bay and returned to the main room. They passed by Bones, who was bent over one of the injured crew members that still crowded the medical department. “About time,” he grumbled. “I was going to alert a search party for you two.”

Jim rolled his eyes. “We were visiting…”

“This is a med bay, not a cheap hotel room,” McCoy interrupted him grumpily, still thinking the two had just been making out in the examination room since he’d left them.

Kirk flushed at these blunt words, looked hastily down on the patient – who was out cold – and shot Bones a glare. “For the record, Doc, we were with Sulu. That’s all!”

Leonard lifted both brows. “Sure thing, Jim. That’s the reason why your hair is even more tousled than usual and your both lips are looking like Uhura’s lent you some lip gloss.”

This time Kirk groaned. “Sometimes you’re worse than Spock in pointing out the obvious.”
“I’ll take that as a compliment of my observational skills then, Jim”

Jim only grimaced and left med bay together with Nien, who only chuckled quietly to himself. Jim Kirk and his staff were all brilliant in their own ways – geniuses even – and yet they often behaved like overgrown children. And the craziest thing was that Nien had begun to cherish that.

ST***ST

As soon as Kirk was informed that the two briefing rooms were clear of devices, Jim and Spock started the crew interviews. Khan returned to the bridge and offered his help to Uhura, who accepted it.

At least calmed that his mate hadn’t suffered any after-effects of the attack, and that Nureaux hadn’t left more ‘bugs’ around the ship, Jim concentrated on the interviews. An hour later, he and Spock had met with nearly all new crew members and their reports all suggested similar points – like the fact that Nureaux had mostly kept himself away from them during their transfer to the Enterprise and that he seemed quite introverted. Some also said that they’d known him from the Academy, but that since the Vengeance disaster, he’d changed a lot. Yet others remembered that he’d always had a rather high opinion of himself while at the Academy, and that he’d wanted to work for the SBI one day.

The SBI…

Spock decided to stay silent about his earlier assumptions, which now became more and more a reality. He would speak about all this later with Jim. They’d interviewed cadets and the other new crew in two different rooms, and therefore Jim faced Riley alone.

“Captain!” Riley saluted as he stepped into the room, and Kirk returned the greeting, before he gestured to one of the empty chairs. “Have a seat, please,” he said. “By now, I’m certain the news has already made the rounds about why I’m questioning the new crew members.” He opened the discussion casually, knowing that he could use a far more familiar tone with the young Irishman.

“Aye, Nureaux broke into your quarters and attacked two officers,” Kevin nodded. “And now you and Mr. Spock are investigating. Or rather, you’re trying to find out the reasons why.”

Jim nodded and took a deep breath. “What do you know of Nureaux?”
“Not much,” Riley shrugged. “During most of our travelling, he stayed away from us cadets and even from the older Starfleet members. It was only when we go here that he started acting like the highest-ranking officer of our group, which is indeed what he was.”

“Did you ever talk with him?”

Again Kevin shook his head. “Not more than was necessary.” Then he frowned. “Except for yesterday.”

Riley pursed shortly his lips. “When I was on the bridge and he brought Mr. Singh the spare parts he needed, he winked at me. Well, and later – after shift finished – we met in the hallway of the crew quarters. He almost chatted with me, something he’d never done before – like we were buddies or something. He even called me by my first name.”

Kirk tensed. “Why yesterday?”

Riley pursed shortly his lips. “When I was on the bridge and he brought Mr. Singh the spare parts he needed, he winked at me. Well, and later – after shift finished – we met in the hallway of the crew quarters. He almost chatted with me, something he’d never done before – like we were buddies or something. He even called me by my first name.”

Jim felt his anticipation rising. “What did you talk about?”

“Of the battle, of course, and then about Lieutenant Sulu – and how lucky it was that Mr. Singh was on the bridge to take the helm.” He hesitated and thought more closely about the short talk. “Then he asked me what I knew about the project Mr. Singh is working on and where his quarters are.”

Kirk’s tension shot up with a stab in his stomach. “Did he tell you why he wanted that information?”

Kevin grimaced. “He said he wanted to ask Mr. Singh’s advice about some kind of technical work on sensors.”

Now really on alert, the captain bent forwards. “Sensors? How did he come up with that?”

Riley scratched his head. “During our talk I mentioned how Mr. Singh had come up with something that helped fix the failing warp drive, and I heard something about a piece of equipment that disturbs sensors.”

Jim narrowed his eyes. “And you didn’t think it odd that he – a security officer – with an education
placement is so concerned about sensors?"

The ensign shook his head. “No, not really. Pavel likes studying transporter technology, and he’s a navigator. I’m interested in communications. So, why not a security officer who’s interested in engineering?”

For a moment Kirk lowered his head, resigned. “You’re right,” he murmured. “You wouldn’t be suspicious, but now you are, aren’t you?” He looked up again. “As far as I understood, Nureaux avoided any private contact with other cadets. He only opened up to you?”

Kevin thought about it for a moment. “Yeah, that’s weird. Maybe he got wind that you and I know each other and tried to get information about you by talking with me?”

“That could be the case…maybe it is the case!” Jim nodded, his mind quickly assimilating all he had learned.

Kevin sighed. “Seeing what Nureaux did today, this odd buddy-talk makes sense now. I should have been more suspicious, but we all were wrung out after the battle. It had been the first battle for us, you know.”

Jim sighed. “Yeah. And, by the way, you did a damned fine job up there.” He flipped a thumb to the ceiling, referring to the bridge.

“Thanks!” Riley bit his lips. He had many questions, and now seemed to be a good time to ask them. “Permission to speak openly, sir?”

“Off the record?” Jim asked, and as Kevin nodded, Kirk leant back. “Permission granted. What’s up, Kevin?”

“It’s about Mr. Singh…and you,” he said slowly, not wavering as his older friend’s gaze became cautious. “Mr. Singh is obviously the civilian crewman that many of the other crew members are talking about. He’s brilliant, and as far as I understand, saved the ship as the gravity went crazy, and we were about to crash against that bloody asteroid during the Klingons’ attack yesterday. Pavel told me about it. Yet Mr. Spock seems to be very…tense when it comes to Mr. Singh, and he said that Mr. Singh’s ‘status’ made it impossible for you to recruit him, so you named him a petty officer.”
Jim figured that wasn’t everything, and although he became anxious about where Kevin was going with this. But for once, he wisely kept quiet and let Kevin voice his thoughts. The young man took a deep breath before continuing. “You call Mr. Singh by his given name and are...protection of him. There’s a rumor going around that you were pretty freaked out about Mr. Singh catching Nureaux in your quarters and that Nureaux threatened him.” His dark eyes fixed his friend. “And there is also a rumor that Nureaux shot him – with a phaser set on stun, yet Mr. Singh wasn’t knocked out. That’s...extraordinary, to say the least. But something’s not right here, Jim.” He took another deep breath as he watched his old friend tense up more and more as he went on. “Don’t get me wrong. I don’t want to pry, but...I can’t help but wonder...”

For several moments Kirk held the younger man’s gaze, then he took a very deep breath. “Kevin, the whole topic is...complicated. Too much knowledge about all this could be dangerous for you.”

It was the wrong thing to say. Immediately the young Irishman cocked his head and replied carefully, “We have both faced danger in the past, Jim, yet neither of us backed down, even when we just kids. This assault of your quarters, your obvious urge to keep Mr. Singh’s presence aboard a secret to anyone outside of the Enterprise, and most even inside her... That’s going to be impossible now that Security is searching for bugs in the ship. This all is connected, isn’t it?” When Kirk didn’t answer, Kevin bent forwards. “Jim, if you’re in trouble, just tell me. I’ll never let you down, I swear! If you need help – support...I’m there for you.”

Kirk nibbled at his bottom lip and finally made up his mind. He knew that he could trust Riley, that the young man belonged to the select group of whom he could be certain not to betray him. “Kev, only a few people know the whole truth and it needs to remain that way. Not because I’m worried about my safety, but for others’, yours.”

Riley lifted both brows. “So you are in trouble!” he stated. “Because of Mr. Singh and his presence aboard?”

“More or less. But mainly because there are those within the Federation who would violate the true purpose of Starfleet; who have no scruples about killing their own people, and who remain in the shadows until the time is right for them to come out of their rat holes to take over the command. I know them; they’ve done it before. And they’d do it again.” He fixed the young Irishman. “Don’t you understand, Kev? If I would tell you everything, you’ll become a liability for them, too. Staying aboard this ship during the war is dangerous enough. There’s no need to add more danger to your life by sharing something with you that would put you in the line of fire, just for the sake of ship’s gossip. It’s already enough that the senior officers risk their necks for all the shit going on.”

Nodding slowly, Riley accepted Jim’s decision. “All right. I know I can’t change your mind. But if you need help, if there’s anything I can do for you, please let me know. Yeah, I’m only a cadet in my second year, and you’ve had experiences others can barely imagine, yet I know how easy it is for you to find yourself in serious trouble!” he said with a teasing smirk that was returned with one of
Kirk’s most innocent smiles. “So, if there’s anything I can do to support you, just let me know,” Kevin added.

Jim felt touched. They hadn’t seen each other in more than twelve years, yet several things hadn’t changed: like the trust and the loyalty they held for the other one. Grinning at the younger man, Kirk replied, “Maybe there will come a time when I’ll need to come back on that offer. And then I’ll tell you everything. But right now, I need to try to keep you away from the danger that I and Mr. Singh are already in.”

Kevin raised his eyebrows.

Kirk knew he’d already said too much and that he should keep quiet, yet the words left his mouth without his doing. “Nien is on the run until he can face a fair trial, something he’s been denied until now. Almost all of these traitors within Starfleet and the Federation want him eliminated because he knows everything about them. So they’ll stop at nothing to keep him silent, especially since he’s no further use to them.”

“And Nureaux works for these guys? Are we talking a big conspiracy here, like what happened last year? This all about that odd shadow department everyone knows about but no one talks about, isn’t it?” Kevin concluded correctly, then whistled as Kirk only lifted both brows. “Wow, you’re in deep shit, Jim. And I don’t even know the whole story.” He hesitated. “But maybe you can answer me one more thing. Something private.”

“Shoot.”

“Mr. Singh and you are close friends, aren’t you?” As Kirk only nodded, mirth appeared in Kevin’s eyes. “Just how close is ‘close’?” Fascinated, he saw a faint blush rising in his older friend’s cheeks. “Ah, I get it, although I never imagined you went for the same gender,” he snickered. “Well, why not?” He cocked his head again. “And the crew doesn’t know about you two.” It was a statement, not a question, yet Jim felt bound to answer.

“Of course they don’t know. It’s probably not a good idea for them to know that their captain is in a relationship with someone who isn’t even officially aboard, and who roams the ship as a petty officer who never gets mentioned in the logs.”

Promptly Kevin began to laugh. “That’s so you!” he teased, then he winked at Kirk. “Your secret is safe with me, Jim. This talk never happened.”
"Thanks, Kev. I would really appreciate if you didn’t let on about our relationship in front of anyone. Spock, Dr. McCoy and Lieutenant Uhura know, no one else, so…” He flipped his hand.

"Sure thing, Jim," Riley smirked, then he shook his head. "You do realize that this is something for my romantic Irish soul, don’t you?"

Kirk began to chuckle again. "Yeah, I know. Do you still believe in fairies?"

Kevin shrugged. "Well, not exactly, yet it would kill one of them if I ever speak those fatal words out aloud."

This time Jim burst out laughing. "You stopped believing in them, yet you’re afraid to ‘kill’ one of them? You know that’s crazy, right?"

"I’m Irish, what do you expect?" Riley grinned, spreading his arms.

Before Jim could give a reply to that statement, one that would most likely have caused Spock to lecture him about illogic, the intercom buzzed. "Kirk here," Jim answered.

"Giotto here, sir. We’ve found something interesting in Nureaux’s quarters. I think you and Commander Spock should have a look at it."

"I’m on my way," Kirk said, cut off the connection, and rose. "Sorry, Kev, duty calls."

"No problem, Jim, I’m back on duty too." He followed his captain and friend out of the small briefing room.

"Expect to be transferred to the main bridge schedule tomorrow," Jim advised him. "I’ll talk with Chekov and make sure he familiarizes you with the full duties of an ensign." He caught Riley’s perplexed gaze and added, "As I said, you did a good job and stayed absolutely professional in the moments of highest stress. I need officers like that I can rely on – and whom I can trust." He snickered as the younger man stared with gaping at him. "Don’t catch flies, Kev. Until later!" He walked away and ran into Spock at the next corner, who Giotto had also informed. Together they strode down the hallway to the next lift, both curious as to what the Chief of Security had found.
The icy blue eyes in the green face stared at the nine shapes held against their will in the little room. D’nyrrs pursed his lips as his attention first fixed on the two Vulcans, of whom the older seemed to be suffering more than the younger one, even if his injuries weren’t fatal. His breath heaved from time to time, and even his stoic façade couldn’t completely hide the pain he clearly felt. Then the Orion’s gaze wandered to the two women, both bruised and tousled, yet still beauties who remained surprisingly calm. D’nyrrs smiled. He would get a very good price for them. Maybe even more, as for the four admirals who never tired of demanding to speak to the Syndicate whenever they were provided with food.

D’nyrrs knew that the elder one of the two dark-skinned Terrans was very valuable – especially to the Romulans. To have the head of Starfleet in their hands would certainly be a welcome surprise for the Romulans, and D’nyrrs expected their offer within the next two or three days. His contact had already spoken with his Romulan counterpart, and although the decision was up to the Romulan Senate, the Orion knew that they wouldn’t pass up such a chance.

Beside the head of Starfleet there were the three other admirals, of which one – who went by the name of Komack – was seriously injured, yet he still lived; last but not least because of the doctor D’nyrrs had forced to work for him. If everything went as he thought it would, there would be an auction in a few days – one the Syndicate wasn’t aware of which would bring him enough money to live for the rest of his life in the lap of luxury. He’d even get Credits – or Dilithium – for the Tellarit who had survived, and the young Andorian they had recovered from beneath his superior’s dead body.

Yes, life was good for D’nyrrs at the moment. And as his second in command stepped to his side and D’nyrrs ordered him to inform all ‘businessmen’ with an interest in buying the ‘goods’, the Orion even smiled. Soon he would be rich – very rich! And he certainly wouldn’t share anything with Klokh! If he had done what that idiot had demanded, the captives would have been dead now – absolutely useless to him. But because he was cleverer than the Klingon, he’d make the deal of his life soon! Very soon! Yes – life was good!

“We found the receiver and the transmitter just here, sir,” Giotto said and pointed to the bottom of Nureaux’s night stand which had been loosened and could be removed with two easy movements. “Our scanner showed absolutely nothing, just as Lieutenant Uhura was able to activate the bugging device we discovered in your quarters, sir. The receiver and recorder are completely offline, therefore we needed some time to find it – and latter only by accident because of Jack’s wariness.” He nodded to one of the Redshirts. “He removed the books off the nightstand and saw the bottom moving a little bit. It had been dismantled and laid loosely over the socket – a really perfect hiding place, if you ask me.”
Jim glared at the two small devices. “Why didn’t our scanners find them? At least they would have reacted to the metal.”

“I think they have their own shield, sir.” He lifted his scanner and let it hover over the open bottom of the nightstand. “See, no read-outs.”

“May I, Mr. Giotto?” Spock asked and took the scanner from the other man, adjusting it. And all of sudden the read-out reacted. “I already assumed something like this. They have their own power source which provides them with the needed energy for the transmissions and the shields. It produces a very high frequency that is far above the limit of human hearing.”

“But you heard it?” Jim asked, baffled and received a ‘Vulcan brow’ for it.

“I felt a slight pressure in my ears which indicated the use of a power source atypical for everything else aboard.” Spock adjusted the scanner anew. “Fascinating. The transmitter is switched off and it appears that this can be used for sending subspace messages to Lieutenant Nureaux’s…handler,” he said for lack of a better word. “The other one is a receiver with a small recorder, certainly made to record anything the bugging device in your quarters would have caught if Nureaux had successfully installed it.”

A deep frown appeared on Jim’s forehead, while he desperately tried not to think of what Nureaux and Section 31 would have heard regarding his private life with Nien! The mere thought that there could have been traitors to the Federation sitting at a table and listening to the pillow talk (and more!) emanating from his quarters made Kirk blush, despite his attempt to suppress his imagination.

Spock seemed to realize what he – Jim – was thinking and quickly continued, “Captain, I do not believe there is sufficient risk in removing the devices to examine them.”

“Do it,” Kirk nodded. “I want to be informed of the results as soon as you get any.”

“Of course, sir. Uhura contacted me a few minutes ago. She and Mr. Singh have successfully opened the bugging device and are almost done with the analysis. We should have the results shortly.”

“Very good,” Jim acknowledged.
“There is more, sirs,” Giotto addressed his two superiors. “We also found Mr. Nureaux’s PADD and another one that isn’t Starfleet issue. We tried to access it, but it’s encrypted with a code I’ve never seen before.” He looked at Spock. “Maybe you, Commander…”

“Of course, I shall attempt to gain entry,” the Vulcan interrupted him calmly, accepting the electronic device.

At the same moment the intercom whistled again. “McCoy to Kirk.”

Turning to the intercom panel Jim accepted the hail. “Kirk here.”

“Jim, I’ve been told that Nureaux just woke up. I’m on my way to treat him. Do you want to join me for a little talk?”

“With pleasure,” the young captain growled. “We’ll meet in the brig, Kirk out.” He glanced at Spock. “Do you want to come with me?”

“That won’t be necessary, Captain. I have a hypothesis about this whole matter, and I am certain that you will be able to provide me with the rest of the evidence afterwards. In the meantime, I shall begin with the examination of Mr. Nureaux’s other devices here. Time is of the essence now, and I suggest we act quickly to all the facts available when Commodore Wesley meets with us.”

Jim nodded. “Right, Mr. Spock, I’ll see you later.” He looked at Giotto and Jack Allison. “Good work, gentlemen. At ease.”

He left and headed for the brig, where he met Bones three minutes later. The CMO stood beside the guard at the safety console, ignored the furious glare of Nureaux and talked to the officer on duty. “Ah, Jim!” he acknowledged his friend’s arrival. “If looks could kill, no doctor – or shaman to use Spock’s thoughts on highly-specialized medical personnel – would be able to save me. Or you, because he looks like he wants to tear your throat out.” He nodded towards the lieutenant, in whose eyes loathing and contempt burned.

“I’ll survive,” Kirk stated coldly, trying to tame his wrath as he remembered that the captive had tried to murder his best friend and his mate! “Let us in, Ensign, and switch off the speakers. Privacy is still granted on this ship, even if this bastard violated mine,” he ordered the duty officer, and several seconds later, the two senior officers entered the cell. The force field was immediately raised again and the red light on a panel showed that no word that would be spoken inside could be heard.
Nureaux sat on the small cot and glared at McCoy. “I don’t need your help, Doctor.”

“You’ve got a broken arm that has to be treated, so you do need my help,” Bones answered sharply. “And your pride will not prevent me from doing my duty, even if I would prefer treating a Klingon!”

“Yes, treating an official enemy of the Federation with utter care and giving them shelter seems to be a habit aboard this ship.” Nureaux’ gaze wandered to Kirk. “Isn’t that right, Captain?”

“I don’t think you’re in any position to make jokes, Lieutenant,” Kirk answered with a calmness he didn’t feel. “You’re accused of the attempted murder of First Officer Commander Spock and Petty Officer Singh. Furthermore you’ll be charged with burglary, espionage, and…”

“I would rather call it acquiring evidence of your obvious treachery, Captain: offering shelter to a wanted terrorist, concealing him from the authorities, and using him for your own purposes is enough to send you to jail for the next eighty years!”

“My own purposes? What’s that supposed to mean? I certainly would never force a man into stasis or use him as a lab rat, until –”

“No, you’d rather use him for your own plans, Captain. What did you offer this creature to keep it in check? Maybe your –”

“STOP calling him a ‘creature’!” Jim shouted. “He is more of a man than you’ll ever be, because –”

“Because he warms your bed?” Nureaux sneered, and chuckled as Kirk’s eyes widened. Smiling in triumph, Philip rose from the cot. “Your reaction just proves what I’d already suspected when I saw the two pillows and bedclothes and found the two razors – clearly both used by men.” He shook his head in disgust. “You should be ashamed – you, the Federation’s newest hero, fucking an inhuman being who killed thousands of innocent people as it steered Starfleet’s newest ship into San Francisco!”

Jim felt fury rising in him like he’d seldom felt before – a deadly, icy fury that laid a red hue over his vision. The very same kind of fury that had befallen him last year after Pike’s death.
McCoy saw the utter rage sparkling in his friend’s eyes and quickly cut in. “You shouldn’t talk about things you know nothing about, Lieutenant!” he said firmly. “The Vengeance’s whole guidance system was down and Khan managed to steer her away from the Academy’s buildings, which would have suffered the full impact otherwise. As tragic as the crash into San Francisco’s financial district and the death of many victims is, this accident wasn’t Khan’s fault – he saved thousands of children and students!”

“A lie!” Nureaux hissed. “You really belie that this monster –”

Mr. Singh may have been born in a lab as a result of DNA experiments to perfect the human race, but that is hardly his fault!” McCoy interrupted him sharply. “You don’t have to have been born from a test tube to be a monster, Lieutenant. In my short time out in space I’ve seen and met enough monsters to tell the difference! They come in different shapes – as enemies who enjoy torturing captives, as hitmen who did their best to blow a whole space station out of orbit down on a city, or in the shape of a fleet that wanted to eliminate a planet’s whole population because they have business with us. And I’d certainly call a fleet admiral who attacked and sacrificed his own people to further a personal purpose a ‘monster’!”

“Are you really comparing the Augment with Admiral Marcus?” Nureaux challenged, ignoring McCoy’s previous tirade.

“No, I wouldn’t, not even in my worst dreams – because Khan defended himself, while Marcus didn’t shrink from blackmail, murder, torture, and utter cruelty; things I hope you’ll never consider no matter what the reason. Your treachery is bad enough!”

“Cruelty? What this beast did –”

“Mr. Singh only tried to protect his crew – like any good captain should,” McCoy snapped, only realizing now how much he was standing up for the former dictator. Good God, if somebody had told him he’d be saying something like that last year he’d have called them insane.

Nureaux snorted mockingly. “A good captain like Kirk, who certainly puts his Augment-pet’s welfare above his crew’s?”

“‘Kirk’ is here!” Jim snarled, holding his composure barely in check. “And to say it bluntly, I don’t give a shit what you think of Mr. Singh, because he – the savior of Tammeron and New Aberdeen – demands far more respect than little wannabe-Judases like you.” Before Nureaux could respond,
Kirk continued, “That you tried to spy on me is perhaps something I could personally forgive, but that you tried to murder not only Mr. Singh but also Commander Spock, the first officer of this ship, is something that will land you to jail.”

Nureaux frowned. “I didn’t attempt to kill Commander Spock, even if he deserves the death penalty for conspiring together with you and –”

“You aimed a phaser at him that was set to kill!” Jim almost roared. “And you would have shot him he’d hadn’t have been quicker than you!”

“I wanted to shoot this Frankenstein’s monster, not –”

“So you admit attempting to murder Mr. Singh?” Kirk hissed. “And you also would have killed Spock!”

“I certainly admit nothing to someone low enough to ally himself with that creature against Starfleet and the Federation. I’m not –”

“Conspiracy against Starfleet and the Federation?” Jim thought he’d misheard Nureaux, then a flush of pure anger colored his face. “That’s saying something coming from you – a chess piece in the dirty game Section 31 is playing at the moment.”

“Section 31?” Nureaux stared at him, baffled.

“Yeah, the bunch of traitors who were responsible for that whole disaster last year and who tried to provoke a war between us and the Klingons – which was very successful in the end, now that we’ve lost so many people in this ‘war’!” Kirk growled. “Don’t tell me that you haven’t heard of Section 31. I believe that even less than –”

“I don’t get my orders from Section 31!” Philip protested, and something in his voice told Jim that the lieutenant was telling the truth.

“I believe Mr. Nureaux’ statement, Captain.” Spock seemed to come from nowhere as he stepped into the cell, the moment the force-field had lowered again briefly. “He received his instructions from the SBI – the only department that has access to any information concerning the former Section 31, including Mr. Singh, both his actions in the past and present.” He lifted his right hand which held the
‘You broke the code?’ Jim asked, feeling a part of his rage leaving him at the calming presence of his T’hy’la.

‘Yes, it was not difficult; it is based on Code 9 – an enhancement, no doubt, yet not a problem for Lieutenant Uhura and me. The files are very interesting, Captain.’ He switched on the PADD and showed Kirk what he had meant.

There were pictures of Khan, obviously aboard the secret space station Scotty had found last year. But there was more – things Jim had feared and now found confirmed: he and Khan fighting Kor and his comrades in the bar on Aldebaren; he and Khan on the hyper-bike, being caught in a speed-trap; he and Khan with his cap on at the space harbor, crossing the hangar to reach the transporter room to beam aboard the space station…

‘Holy shit,’ Jim whispered.

Spock nodded. ‘Not exactly the words I would have used, but I agree as to their meaning. I also was able to identify the user who copied these pictures and videos onto the PADD: The SBI.’ He switched off the device. ‘With that information, Uhura and Khan found the classification of the bugging device and the transmitter we confiscated. I researched its specifications and found that they are only produced and used by one department within the whole of Starfleet.’

‘The SBI,’ Jim concluded; feeling sick. ‘So, does this mean that the SBI is working together with Section 31 – or that they are…one and the same?’

‘Not affirmed, Captain, yet there is an 89.6 percent chance that at least some high-ranking officer within the SBI has a separate agenda within Starfleet, or even may have begun the process of building another shadow department – maybe indeed another Section 31.’

‘And Barnett, Nogura, and the others would’ve been in their way,’ Jim whispered; feeling horror rising as his assumptions became more and more a harsh reality.

A loud ‘Ouch!’ followed by curses drew the command team’s attention back to Nureaux, who was rubbing his right arm, while he glared daggers at McCoy. ‘Is that how you treat injured personnel?’ he hissed.
“I set your broken bones, boy. That’s usually painful,” Leonard answered clipped.

“Ever heard of anesthesia?” Philip snapped, and gasped as the CMO nonchalantly gave him anything-but-gentle hypo.

“I need all my painkillers to treat the real crew after yesterday’s attack. Thank your traitor-buddies for that. After all they wanted this blasted war!” He roughly gripped Nureaux’ right wrist, ignored the outcry, and stabilized his arm with a firm fixed dressing.

“You should lose any doctor’s accreditation you might have! If you had any to start with,” Philip groused.

“Be glad that I treated you using modern-day techniques, and not trying to remember my voodoo-shaman training,” McCoy deadpanned – giving Spock ‘the look’.

Jim watched the lieutenant and felt deep loathing rising in him once more. “So, you let yourself be taken in by a group the Federation Council has declared an underground criminal organization and –”

“And you’re fucking a wanted terrorist and harboring him on your ship. We’re not so far apart from each other, Kirk!” Nureaux taunted.

Jim moved forwards, shaking Spock’s hand away as the Vulcan tried to hold him back. In a second, Kirk had the lieutenant by the front of his shirt and pushed him hard against the next wall, lifting Nureaux off his feet in the process.

“You and I are farther apart from each other than one end of the galaxy to the other because I would never break the oath I gave to serve and to protect the Federation! And I certainly would never lower myself to work for a bunch of murderers, traitors, and power-hungry people who subvert Starfleet and try to change her into an army with just one purpose: growth through violence! You and your friends are everything any man and woman in Starfleet should despise, because you’re about to destroy the essence of the Federation. Peace, legality, democracy! I’d rather ram the Enterprise into the next moon before I’d watch everything we’ve built in the last two hundred years fall apart because of some bastards mistake responsibility with might!”

The lieutenant’s face was red by now, while he struggled and finally kicked out, but Kirk’s grip on him didn’t waver for a second.
“They’ll still get you, Kirk!” he wheezed. “They warned me about you, your Vulcan puppet, and the crazy officers who follow you no matter what order you give. You’ll all pay and –”

Jim had had enough and threw Nureaux through the cell, where he crashed into the force field. An electric shock passed through him and he cried out before rolling himself away, staring dizzily at Kirk. The man possessed strength which was – inhuman. He met the blazing eyes of the captain and braced himself for a further attack.

“Jim!” McCoy’s warning and stern voice cut through the fury that coursed through Kirk’s whole being, but it was the strong, warm hand on his upper arm that stopped him from approaching Nureaux again. A calm steadiness breathed through him as Spock lowered his mental shields and allowed his mind to brush against Jim’s – soothing the enraged human like nothing could have done except for Nien.

“Jim,” Spock said quietly. “Stop! He is not worth even your rage.”

The deep, quiet voice of his friend had the expected effect on the young captain. Taking a deep breath, he let go of the anger while he glanced at his T’hy’la. The dark eyes shone with understanding, but also with a silent warning. To mistreat a captive was a crime – one Jim would have to face consequences for if he continued like this.

Pressing his lips into a thin line, Kirk straightened himself, which Spock took as the signal that it was safe to let him go; Jim was in control again.

Nureaux rose – slowly and clearly shaken by his commanding officer’s outburst, yet he couldn’t stop himself from sneering, “What has this creature offered you beside sex, Captain? Some of his supercells so that you have the strength of –”

“Rage can have profound effects on someone. Just look in the next mirror,” Kirk replied sharply. “And if you think I’ll touch you again, you’re seriously mistaken because I won’t dirty my hands with trash like you!”

“You’re the only one who touches trash, Kirk, every time you give yourself to that synthetic beast!”

Again the captain’s eyes began to almost glow, and Spock found it necessary to intervene anew. “Lieutenant Nureaux lost family because of the Vengeance’s crash,” he told Kirk. “His file was
locked, but I found my way into Command’s database and found the original file. He lost a cousin in Starfleet, Ensign Louis Nureaux.” His gaze found the man who almost murdered him. “I am certain that revenge was his motivation in accepting the job with the SBI – or the one the conspirators gave him.”

“Revenge,” Jim spat. “An eye for and eye, a tooth for a tooth – I’ve enough of that bullshit! To fight violence with more violence is the beginning of the end.”

“And the reason you choked me?” Nureaux taunted

Kirk only scoffed. “That was for threatening my friends – a warning. So do yourself a favor and stay down until I can hand you over to the court.”

He strode forwards and gave the duty ensign a signal to lower the force field.

Nureaux began to laugh. “That’s it? No questions about my orders, my superiors? No demands of –”

Jim stopped and turned around. “Don’t think I’m ready to play your little games, Nureaux. Would you really give me the names of those who are behind this?” As Philip only glared back at him, Kirk nodded. “I thought so.” He left the cell, Spock and McCoy on his heels. “Ensign, standard treatment, but no visitors. If someone wants to see him, inform me immediately.”

The man saluted. “Aye, sir!”

The three friends left the brig, knowing that they had scraped away a little bit more from the conspiracy-laden iceberg that drifted alongside them. The SBI was behind the whole thing – the only question was exactly who and where they were.

And there was one other thing nagging on Jim’s subconscious. Nureaux’s threat that the Enterprise’s officers would soon ‘pay’ for everything. The SBI – or Section 31 – was up to something involving him, Nien, his friends, and his ship. And he hadn’t the slightest clue what that was.

He would learn it soon enough…
Chapter End Notes

Yeah, Spock can scare you when he really becomes angry the way he was in the two re-boot films, yet Jim is scarier when he’s utterly pissed off. The universe has to learn not to threat his friends or he becomes quite the madman (in a positive way).

At least our friends found some proofs for their assumptions concerning the SBI and Section 31, the spy is out of the way and Kevin learned a little bit of Jim’s love-secret. Latter will be important soon.

I hope you liked the new chapter, including the action and the humor – and, like always, I’m looking so forward to your comments.

In the next update Luengo closes up the trap for Jim and his friends, not knowing that he provokes a storm with his plan that can backfire. I don’t want to reveal too much, only one detail: Jim and Khan learn of the whereabouts of the other Augments – and both as well as Spock and the others realize that now the real fight for survival will begin.

Have a nice rest of the week,

Until next week,

Love

Yours Starflight
Chapter Notes

Hi, my dear readers!

Happy New Year to all of you and I hope you got a good start into the first week of work. Thank you so much for all the comments you left and I’m happy that you loved the last chapter so much.

Well, the new one will hold some surprises for our heroes and you. As already revealed in the epilogue of the last installment, Luengo & Co are laying out the trap for Jim, Nien and the others, what will lead to another part of the adventure and is going to peak in the big show-down. You also will learn more about the captive’s planned fate and you’ll meet M'Rek, the Klingon Chancellor again.

Have fun

Love

Yours Starflight

See the end of the chapter for more notes

Chapter 52 – There is no choice given

After their visit to the brig, Spock led Kirk and McCoy to his that he shared with Uhura, which was also safe from any bugs, as the Vulcan and she had personally checked it over. Only then did he tell them of his own thoughts concerning Section 31 – that he had already anticipated that the SBI was behind everything. Last but not least, Admiral Luengo’s involvement in Khan’s forced stay in the secret labs and Luengo’s resistance to offering any help as Jim had been taken prisoner by the Klingons had given Spock the idea.

The three friends discussed the whole situation, yet they knew that they were running out of time. They would meet Wesley tomorrow and until then, they had to find ironclad proof of what was going on. Even if the commodore believed their assumptions without it, his hands would be tied.

And there was still the threat that Section 31 would take action against Kirk and the others soon, and that manifest itself in many ways – from an open attack to a deadly trap.

As the friends finally separated, it was already evening and Jim felt tired out. Checking in one last
time with the bridge, he went to his quarters, ready to fall into bed, even though he doubted that he’d be able to sleep.

He stepped into his quarters – trying to suppress the memory that this bastard of Nureaux had gone through his personal things – and stopped dead in his tracks. The light was at seventy-five percent, soft music played, the table was set for two including a candle, and the pleasant smell of lemongrass lay in the air. Nien waited for him, clad in his Indic clothes and bare feet.

“I heard you had a rough day.”

Jim snorted gently. “And yours wasn’t any better – after all, it was you who was threatened with a phaser.”

“Yes, but you were threatened by your own emotions.” Nien closed the distance between them and cupped his beloved’s face with both hands. “I sensed your fury, your loathing – your utter rage while you were down in the brig. I know that there are only a few things which can elicit such an outraged reaction from you, among them an offense and threat towards one of your family – or me.”

Kirk looked up in those fathomless blue-green eyes, full of understanding and soothing comfort, and let himself sink against the Augment. He felt those long strong arms wrap around him and sighed with the first peace in what felt like hours. Had been hours. Leaning his head in the crook of Nien’s neck, he closed his eyes and let the physical and mental warmth wash over him before he murmured, “That goddamned bastard talked as if you were…a thing. And there was so much hatred. He lost a cousin in the Vengeance’s crash and…” He took another deep breath and Khan’s scent calmed him even more. “Spock checked his file. It was altered, the real one was in Command’s database and he hacked in. Spock thinks that the SBI is behind everything – that it’s about to re-build Section 31. Only they have access to all the data they need, have their own people which officially don’t even exist, and are strong enough to pull the strings they need to succeed.”

Khan pursed his lips, ignoring the short sting deep inside as he realized that once again, a stranger directed murderous attention towards him because of what happened last year – even if he was innocent in the matter of the crash. “It makes sense; I have to agree with Mr. Spock,” he said slowly. “Intelligence, secret services, agents – they always work in the shadows, steering events, people, and even whole governments. And the devices and transmitters are used by the SBI, as Lieutenant Uhura affirmed. All evidence points at the SBI, yet we’ve no proof.”

Jim groaned and stepped back. “I’m almost sure that Bob is going to believe me, but you’re right.
Without any proof, he can’t act. And how should he act without giving himself and us away? If the SBI is behind this whole mess, then how should we proceed without giving ourselves away?”

Khan cocked his head. “Section 31 – or whatever it’s called now – already knows that it’s about to be revealed, otherwise Nureaux wouldn’t have gotten the order to spy on you and –”

“And on you, too!” Jim rubbed his neck. “Spock broke the code of Nureaux’s PADD. There are very clear photos and records of us on Aldebaran – in the bar, in the space port, on the hyperbike…” He shook his head. “Command – or at least the SBI – knows that we two are working together and assumes correctly that you’re aboard.”

“Then it’s only a matter of time until they try to get us,” the former dictator mused, before he added, “Lieutenant Uhura found out that Nureaux had already sent a subspace message via the high-tech transmitter that was found in his quarters. She tried to reconstruct it to learn its content.”

A snort escaped Kirk. “I think I already know what it says: that you’re on the Enterprise. Nureaux was on the bridge yesterday and saw you – recognized you. Of course he informed his superiors of his first little success by finding you here.” He shook his head. “Dammit! If Barnett was still alive and in charge, I would bring him in on this. He’s one of those men you can trust, but now we’re going to need a miracle.” He rubbed his eyes. God, he was sick of this all!

“A miracle? Well, I don’t believe in miracles but I believe it’s about time you have something to eat and to relax afterwards,” the super-human said sternly and gestured towards the table. “Sit down; I’ve already programed the replicator.”

Without protest, Jim did as he was told. He was too tired and still too stirred up to refuse. “What’s on the menu?” he asked and caught a mischievous smile from his mate, while Nien stood at the device.

“One of your favorites,” Khan answered. “Unhealthy with far too much fat, yet after the unpleasant events of the last two days, an exception is in order.” He took the tray the replicator delivered, returned to the table – and Jim’s eyes widened in utter surprise, as he caught sight of a double-cheeseburger, tomatoes, pickles, onions, a lot of mayonnaise and ketchup, and a portion of French fries.

“Bones would hypo me into the next week if he saw this,” he said with the happiness of a child at Christmas.
“Then we should keep this our secret,” Khan chuckled and sat down, too. He had ordered the same for himself, yet he wasn’t too thrilled about it. Still, sharing the same meal symbolized closeness, and he was willing to give the ‘American finger-food’ (as he called it), a try. After the first bite he had to admit that it wasn’t all bad. By the third bite, he realized why so many people might love this stuff. Spicy, sour, yet a little bit sweet, salty because of the fried potatoes... Yes, he had eaten worse!

“You should try it, big bro. I know you’re going to love it!” Joaquin’s cheerful voice sounded in his memories, while the young Israeli beamed at him – mouth smeared with ketchup and mayonnaise. They had been in New Delhi at the time, shortly before Khan had become ruler of India, and later of the whole of Asia. Joaquin had been only thirteen and...

“You like it?”

The gentle tenor was different from his little brother’s voice, and the eyes which looked at him expectantly were blue and not hazel, yet the excitement and the grin were the same. And just like all those years – no, centuries! – ago, Khan couldn’t resist the cheerfulness.

“Yes, it’s…unexpected-tasting.”

Jim began to laugh. “Oh my god, you sound like Spock!”

Khan grimaced. “I really can’t imagine him eating something like this – too unhealthy and far too much flesh.”

Kirk still snickered. “Yeah, he would raise both brows and glare at me with that expression that tells me I’m absolutely nuts.”

“Sometimes his assumptions concerning his crew mates are correct,” Khan teased and scowled as a napkin came flying his way. He caught it a second before it collided with his face.

Jim grinned broadly at him and pointed at the napkin. “Don’t be shocked, honey. I’m ‘nuts’, as you stated a second ago.”

He ducked as the napkin was thrown back at him and burst out laughing as a second cloth came flying towards him immediately afterwards. Catching it, he lifted his hand with it as if he wanted to send it back, then he smirked and placed it in his lap. “Is that correct behavior for a king?” he
snickered, and Nien’s eyes widened.

“You started this childish game,” he said, and Kirk chuckled even more.

“I’m only a mere human and ‘nuts’, but you’re supposed to be the superior here, so…”

He didn’t get further as the Augment rose and was in front of the captain in the blink of an eye, pulling him to his feet. Before Jim could even begin to protest, he was lifted up and thrown over one strong shoulder, carried away like a sack of potatoes.

“Hey, this is manhandling your commanding officer!” Jim called, feeling lightheaded from dangling upside down – and getting a very good view of Khan’s slender backside.

“Those who behave like a child shall be handled like a child,” Nien stated with a low drawl. A second before he could dump Kirk onto the bed the younger man’s hands gripped his ass and began to knead it. Nien groaned as long-suppressed desire instantly flared up. Alas, this crazy boy-man would be his doom one day. Growling something in his native tongue, he all but hurled Kirk onto the bunk. Jim began to laugh, barely catching his breath. The Augment was over him in an instant, and before Jim could react, Khan stripped him of the golden uniform tunic.

“So impatient?” Kirk teased again – and gasped as those long strong fingers grasped his black undershirt material and ripped it apart.

If Jim was aroused before, he now felt pure fire raging through his whole being as he met Nien’s fierce gaze, and saw the naked hunger on the slender, pale face. The sudden animalistic side of his mate made him almost come right there and then. Without thinking, he reached for Khan and pulled him towards him; their mouths came together in a wild battle of teeth and tongues.

Dinner was forgotten – the whole mess of the last two days was forgotten. Nothing else mattered more except the sheer need to feel and to become one once more.

For one sane moment, Jim thought that maybe fate did mean well and that it was lucky Nureaux had been stopped before he installed the bug. The noises escaping Nien and him would have made any listener blush. Then all clear thought left the young captain completely as he gave in to his burning passion and to the man who was able to elicit it…
The little spacecraft flew at Warp 3 through the area called the Borderland between Tarlac and Turkana, heading towards Yaraka. Aboard it was early afternoon, by ship’s time and in concert with New Aberdeen on Aldebaran, yet the Rigelian at the comms station yawed as if it were late at night.

Ritek rubbed his neck to stay awake, though he had good reason to be as tired as he was. Diego, Galven, and he had dismantled the SDD from the Shadow and reinstalled it in the Santo Domingo – a small spacecraft Diego de la Vega-Martinez had repaired in his workshop four years ago but which had never been collected. Only several months later Diego had learned that the owner had died in an accident and as no-one had claimed the Santo Domingo, Diego had kept it as repayment for his work. But he rarely used it. It was small, could hold no more than eight humans, and maximum speed was Warp 4. In addition, the replicator could only produce food for a week. It was a short-distance shuttle, nothing special – and therefore perfect for the gang’s new mission.

The Shadow and her sister ship were too well-known by the Orions and the Klingons by now, and the same went for Diego’s larger ship. After the stunt they pulled at Turkana it would have been suicide to use one of them in the Borderland again. The previous days had proved that, after Galven, Ritek, and the others barely escaped the Klingon patrol. Yet they’d have to go deep into hostile territory if they wanted to have the tiniest chance of discovering if any of the delegation or the admirals had survived. And, also, Galven hadn’t given up hope of find out something about his brother.

But the success of the mission also depended on their ability to stay hidden, hence they needed the SDD – and to dismount and re-install it had taken time. Time they didn’t have, and therefore the three men had worked through the night to attach Khan’s ‘baby’ to the Santo Domingo.

Now Ritek sat at the comms station and listened to the transmissions coming through the commonly-used frequencies, eavesdropping on smugglers, pirates, dealers, and even some Klingons, yet there was no mention of the missing officers and diplomats.

Galven rose from his command chair and walked towards him. “Anything?” he asked for what felt like the tenth time within the last hour.

“Nothing – just like three minutes ago when you asked me,” Ritek groaned. “I’ve learned all about forbidden love affairs, smuggled drugs, black market prices, but nothing about stranded Starfleet personnel and diplomats.” He looked up at the Tellarit. “I think we’ve no other choice than to visit Yaraka’s moon in person.”
Galven nodded. He’d already assumed as much. “Right, let us have a closer look there – even if I really don’t like it. We should also –”

“Wait a moment!” Ritek interrupted him and adjusted the receiver of the comms station. “I caught something. There is someone inviting others to a ‘special auction’.”

Frowning, the Tellarit braced himself with a hoof-like hand on the console. “What kind of ‘special auction’?”

Again Ritek listened closely before he shook his head. “There is no elaboration, but those who are being contacted seem to understand what this guy is talking about.” He lowered his head-set. “Aren’t there rumors about the Klingon commander of the Borderland forbidding a slave-trade?”

Galven nodded slowly. “You mean this guy is calling for a slave auction and is avoiding being explicit because he fears the Klingons would interference?”

“Maybe,” the Rigelian replied slowly. “I’ll try to get some information off those who are interested in the auction and use one of their identities to ask the vendor some questions.”

“A good idea!” the Tellarit oinked. “Just don’t get caught.”

“I’m a bloody beginner?”

“Sometimes!”

At the helm Jeff rolled his eyes as a new verbal battle between the two unlike beings broke out.

ST***ST***ST

M’Rek, Chancellor of the Klingon High Council, stared with narrowed eyes at the screen of his terminal, the image of the Federation President Robertson frozen after the Klingon had ordered the computer to stop the message he’d just received.
Disbelieving, he stared into the semi-darkness of his private quarters, trying to digest what he’d just heard and learned. The Federation delegation had been killed within the Borderland by three Klingon vessels who were commanded by someone impersonating Kor, son of R’yan. And, at the same time, another Kor had gone after two commanders who’d gone rogue and attacked the Enterprise?

What in Kahless’ name was going on here? Was this a Federation trick so they could cancel the upcoming conference without losing face – a conference they themselves had requested? And if so, why was the Federation no longer interested in peace talks? Had it found a new kind of super-weapon with which it thought to force the Klingons to their knees? Or did Robertson speak the truth and there were ‘two’ Kors out there – one hunting a vessel that travelled under a white flag, while the other one tried to support Kirk, of all people!? It didn’t matter – what mattered was the fact that someone had humiliated the whole Empire by violating the ceasefire and attacking a Starfleet ship that carried diplomats and several admirals. What mattered was that there were obviously people within his own circles who’d thought his word didn’t hold any valuable anymore!

He knew that several members of the High Council didn’t agree with his decision to accept the offer of peace talks, yet it was unthinkable that some of them would rebel against his order and dishonor the Empire in this way. It was almost laughable that particularly Kor should be this one of them!

But an inner voice told him that the Federation president wasn’t lying in his message, and that there had been several incidents which forced Robertson to contact him with this news.

M’Rek cursed. Ten members of the Council were already at Azure Nebular, their subordinates preparing everything for the conference. The Federation’s delegation had been expected within the next few hours. But instead of a meeting, there would be nothing – only new riddles to be solved. Against his will, the Klingon chancellor came to understand why his Federation counterpart demanded answers. If the situation were the other way around, he would do the same – by the Black Fleet; he would demand satisfaction by attacking instantly, yet the Federation avoided violence again. Robertson was clearly outraged, but remained polite in his transmission – polite but stern. Again understandable!

Robertson had also given him an ultimatum. Within five days, the Klingons had to give some plausible explanation or the war would continue. And according to the president’s remarks, the Federation already knew of the new cloaking device, and had their own way to make its ships invisible. If the aggression continued, it would reach new levels, this much M’Rek knew. Even his Klingon pride didn’t blind him to the prospect of upcoming bloodshed that would outdo anything in recorded history.

He didn’t like the latter option. Yes, to fight and die in battle was honorable, yet there wouldn’t be much honor in governing if the Federation and the Klingons battled against each other until there was nothing left to fight for.
M'Rek needed answers – as quickly as possible.

Bending forwards, he hailed his assistant and demanded a full report of Kor’s last activities.

“Of all his activities, Milord?” Kless’H asked carefully after hearing his superior’s order.

“Yes, all activities!” M'Rek barked. “When he left Turkana, where he went, when and if he flew into Federation territory, with whom he spoke to on and off his ship, when he woke up – Kahless, even when he went to bed! I need a full report – preferable yesterday! And then I want information about those two commanders who obviously belonged to his fleet, and clearly went insane! And then get me Lord K’Ral from Intelligence. I want to know who the idiot was who pretended to be Kor. And quickly, Kless’H!”

His assistant nodded hastily. “As you wish, Milord!” The screen went dark again and M'Rek leant back in his chair. Someone was fooling around here – not only with the Federation, but also with the honor of the Klingon Empire! He would learn the truth, and those who were responsible for bringing disgrace to the High Council and to him would pay dearly!

ST***ST***ST

“Admiral, Admiral Norton is here for you,” Luengo’s secretary reported. It was early morning in San Francisco, and despite the late time of year, the skies were blue and the sun promised a day without the fog this town was famous for.

“Thank you,” Luengo answered, and watched Albert enter his office.

“You wanted to talk to me?” he asked, and José nodded.

“Yes, please have a seat.” He pointed at one of the two visitor’s chairs on the other side of his desk – his new desk in Barnett’s former office! He waited until Norton had made himself comfortable, then he began to speak.

“I may have to alter my position, and the same goes for you. The fact that the assault on the Excalibur didn’t bring about the results we wanted has disrupted our plan immensely. It really is
irritating that our Klingon allies pretended to be someone who’d supported the Enterprise at the same time somewhere else…but this could play directly in our hands. I’ve already said that the Klingons seem to have internal differences that would make another attempted conference far too dangerous for us.”

He motioned for Norton to come around the desk and to step beside him. “I obtained a copy of Robertson’s message to the Klingons.” He opened the transmission and let Albert watch it before he switched the terminal off and looked up at him. “We’ve five days to sort everything to our favor.”

“How?” Albert prompted and sat down again.

“We’ll have to intercept the transmission of the Klingon chancellor so that the ultimatum will pass without a result. Then the Council will have no other choice than to believe that the Klingons are indeed gearing up for another strike and that the ceasefire was nothing more than a trap. Then they’ll have to agree that we have to strengthen Starfleet to protect our borders. Command will finally be taking the military path.” He took a deep breath. “And because of the lack of staff officers, they’ll name me Chief in Command permanently. Then I – we – will have a free hand to do anything that is necessary to keep the Federation safe, to reconquer our annexed areas, and to enlarge our territory.”

Norton nodded slowly. “For the latter we need the biological weapon and…”

“I know!” José interrupted him. “We have to tighten the schedule and make the needed arrangements sooner than intended – meaning, we have to lay out our trap for Kirk and the Augment now!”

“What’s about Nureaux?”

“I don’t know. I got his last and only message more than thirty hours ago. It could mean that he wasn’t able to install the bugs in Kirk’s quarters, or that he hasn’t found out anything useful to us until now. Nevertheless, I’ll initiate the next step of the plan. The Enterprise will be given a new mission – the one that will force Kirk to reveal where his true loyalties lie, and which will end him. And which will give the Augment back to your scientists.”

“It’s about time. Dashwood and Conelly are about to panic because the last experiments weren’t nearly as satisfying like the former ones. They need the Augment’s blood soon – especially if we want to be ready for the next level of battle within a few days.”

Luengo sighed. “Scientists are always impatient and in a panic as soon as something is off schedule.
As far as I understood what Dashwood was saying, the biological weapon is as good as finished, and Khan’s blood cells are only needed to start the serial production.” He smoothed his moustache. “And in case something’s happened to him that prevents Dashwood from getting more of his blood on a regular basis, you should select some of Khan’s fellow Augments to do the job.” He lifted a hand as Norton began to protest. “I know, I know, Khan’s blood has the perfect cells that Dashwood and Conelly need, yet should he not survive, their using another Augment is better than nothing. When Kirk has been arrested and the creature is back in stasis, Styles will deliver further five or six Augments to Dashwood.”

Norton sighed. “Dashwood could have had those Augments much sooner, if…”

“If I hadn’t have been under close observation during the last few weeks which tied my hands, as you certainly know. I couldn’t smuggle any of them away from Gamma 12 without arousing any more suspicion than I already have. I know we lost several weeks in the process, but this time we had to play it safe, or someone would have got wind of everything. Now’s the best chance to get some of Khan’s people and him. Dashwood will have enough time afterwards to finish the project. The new sensor disturbing device in combination with the biological agents will force the Klingons’ surrender in no time.”

“The SDD – did you find out who invented it?” Albert asked, and Luengo grimaced.

“No. There are three men who go by the name on the patent. One is a farmer on one of our colonies who’s happily growing whatever he’s growing in his fields; he’s no engineer. The second is almost a hundred years old and lives in a nursing home on Risa, and the third one is not a man but a boy, only seven years old.” He shook his head. “It’s as if our tinkerer didn’t exist until a few weeks ago.”

“Maybe it’s a pseudonym?” Albert suggested, and José snorted.

“I’d bet my shirt on it, but sooner or later he’ll have to reveal his true identity – at least when he wants to sell the thing for mass production.” He took a deep breath. “You’ll see, with the SDD and the biological agent, we’ll quickly achieve a victory over the Klingons.”

Norton nodded slowly, then he frowned. “You want to send Styles to arrest Kirk?”

“Styles has proven to be trustworthy. He did a damn good job out there, and even kept the losses as small as possible. I have great hopes for him that he’ll turn out to be one of our best captains, who really deserves command of the Enterprise. What sweeter victory can I offer him than arresting Kirk and his team, and sitting down afterwards in the center chair of our flag ship?”
This time Albert had to chuckle. “Little gifts keep friends – is that how the old saying goes?” He cocked his head. “Is the Excalibur even able to manage the confrontation you’ve in mind?”

“There will be no confrontation. Kirk and his staff will be locked away before they know what’s hit them, and the same goes for Khan. Styles will have not much trouble fulfilling his order. You’ll see.”

The alpha shift aboard the Enterprise started at 08:00 like it did every day, and like every morning since Jim and Nien had become bond-mates, both really had trouble getting out of bed – especially after the intense lovemaking they’d indulged in the evening before. They had fallen asleep afterwards – tangled in the messy sheets, enveloping each other, heartbeats thumping in union.

The morning came far too quickly, and after the chronometer reminded them that only half an hour remained until the shift began, they left the bed, had a quick breakfast from the replicator, cleaned up some of the mess, and went then to the bridge, where Kirk quickly fell into the daily routine. He first got a status report of the ship in general and from the different departments, then took care of any problem that needed his attention which occurred overnight, and afterwards worked on his own reports, using the PADD while sitting in the center seat.

The morning went by like this uneventfully, but half an hour after lunch, all that changed. Suddenly the ship began to vibrate and the engines became louder. Jim was about to call Engineering as Scotty had already hailed him and told him that he had to reduce speed to warp 3 because the damaged engines were ‘about ter become cranky’.

The reduced speed would delay their rendezvous with the Lexington for more than five hours – 5.26 hours to be exact, as Spock pointed out – and knowing that there was nothing else he could do, Kirk asked Uhura to inform Wesley that the Enterprise would be late.

Nyota did as instructed, received a response from her colleague Palmer from the Lexington and turned around to Kirk. “Captain, Commodore Wesley wants to speak with you.”

Jim sighed. ‘I hope he doesn’t want to cancel the meeting now. I have to speak in private with him, no matter what.’ Aloud he said, “On the screen, Lieutenant.”

A moment later the familiar face of Bob Wesley appeared on the large screen – a face that was still
pale, and the bags beneath his tired eyes were even darker than last time Kirk had seen him. “Hello Jim,” he greeted and Kirk answered in the same friendly way.

“You must be psychic, Jim, I was about to hail you,” Bob began. “I’ve got new orders from Command concerning several of our outposts and research facilities near the Borderland and the new Neutral Zone. It seems Command is very worried that the broken ceasefire within the Borderland is indeed a signal that the Klingons are preparing for another strike – now, when Starfleet is weakened with most of its important admirals gone. They fear that the enemy could conquer more territory now and that they’ll also annex these facilities. Therefore we have to evacuate the researching stations and bring the personnel and their experiments to safety.”

Kirk frowned. “Is there any evidence of increased Klingon activity that would require such extreme measures?”

The commodore shrugged. “Not to my knowledge, but who knows what Intelligence has discovered. The SBI is very active, as you know.”

Jim felt a certain tingle in the back of his consciousness as the name of Starfleet’s Intelligence was mentioned. “So, we’re ordered to play the evacuee vessel again?” he asked, and Bob nodded with a grimace.

“Yeah, you are. I was given strict orders about which ships would take care of which facility. In my squadron only three vessels are involved: The Hood II, the Potemkin II, and the Enterprise. I already acknowledged the orders and sent a message that the Lexington would rendezvous with you in one hour to support you with spare parts and other supplies after your battle in the Briar Patch.” He cocked his head. “Lieutenant Uhura informed me that you’re going to be late?”

The young captain nodded. “Yeah, we had to reduce the speed, otherwise the engines would have gone. We’ll be at the meeting point around 20:10. Sorry, Bob, I can’t risk a complete malfunction of the warp drive.”

“I understand.” Bob said. “I don’t think that will affect the safety of the facility you’re supposed to be evacuating. Personally, I think Command is overreacting, but on the other hand, I really can’t blame them. We’re still in the dark about the Klingon’s real intentions, and caution now is certainly wise. Yet destroying our research stations is a something I’d have expected when the Klingons had already begun an attack. But maybe this kind of strategy is typical for someone who led the SBI until now. You’d have to think like that if you spy on other people for a living.”

Jim went rigid. “What do you mean? The order came from the SBI?” From the corner of his eyes he
saw Spock tensing up as well.

Wesley’s eyes widened. “You don’t know?”

The tiny voice in Jim’s head began to become louder. “What should I know?”

“José Luengo has been named Interim Chief in Command for now.”

“What?” Kirk bent forwards, clearly not believing his own ears.

“I’m right here, Jim,” Wesley said darkly and before his protégée could voice something that could condemn him should those words somehow reach the wrong people, Bob quickly added, “He is the most experienced staff officer left at the moment, so the Council had no other choice than to promote him.” He fixed Kirk with a very firm gaze, willing the younger man to keep his mouth shut – and Jim got the hint. They could talk about this later when they met in person.

“Right – logic,” Jim only said, then he forced himself to relax and to lean back. “So, about this order…”

“I’ll send it to you. Please ready a status report when we meet, because I have to let Command know of our schedule, and when you and the two other ships should be done with the evacuation.”

“Well,” Bob nodded, “until later, Jim.” The connection was closed and Jim looked up to Spock, who remained unmoved externally, like always, but there was a short flicker in his eyes that told Kirk that his Vulcan friend was as alarmed as he was. Luengo of all people was now in charge of the whole of Starfleet – this was not a mess, this was a nightmare! And it would greatly reduce the chances of getting a fair trial for Nien and for himself too, because as sure as the sun rose in the east (on Earth), Command would accuse him of aiding and abetting Khan.

“Captain, I’ve got the order from Command for you,” Uhura reported.

“On screen,” the young captain answered. Bob hadn’t said that the whole thing was top secret so he
would receive the order openly on the bridge.

The screen now showed a lieutenant in the grey uniform of ground staff, his insignia defining him as one of the higher-ranking desk-jockeys.

The man began with a general explanation for the upcoming mission and finished with explicit orders for the captains. The Enterprise was the last ship to be addressed, and the lieutenant’s words changed the tiny warning voice in the back of Jim’s head into a full-on alert.

“To James T. Kirk, Captain of the USS Enterprise. You’re ordered to evacuate Gamma 12, near Celes, coordinates will follow. Staff number twenty-five, and their accompanying material is classified Priority One, Top Secret. Afterwards, facilitate the complete destruction of Gamma 12, including eight containers with closed experimental material, twelve high security boxes containing dangerous chemical residue, and seventy-two tubes with biological test objects.”

Khan, still at the helm, whirled around in his chair – face paling rapidly at the mention of that certain number in connection with the word ‘tubes’.

Unaffected by this reaction the transmission continued, “The cargo marked for demolition is stacked in a high security area, and will be sealed after the station’s personnel has checked it, so your involvement in its preparation isn’t necessary. I repeat: destroy the whole station, including all tubes! The evacuees will be expected on Earth 1.5 days later. Order given by Admiral José Luengo, Interim Chief in Command.”

The transmission ended and the screen once again showed the endless depths of the galaxy. For a long moment, Jim stared at the velvet darkness of the universe, while he felt his own dread mingling with his mate’s rising shock and fear.

Seventy-two tubes…

Biological test objects…

That could only mean one thing. They had finally found Nien’s crew – and he, Jim Kirk, had been ordered to *kill* them.

He felt sick. Yes, he would never – never! – do such a thing. The fact that Command had truly given
him such an order gave him insight into which direction Starfleet would sink if Luengo – if Section 31 – weren’t stopped. Marcus had made it clear that a life didn’t count much, and could be sacrificed without hesitation if it served a ‘higher’ purpose. Luengo seemed to follow the same ideology, if one could call such an inhuman thought ‘ideology’ at all.

“I consulted the computer after we were given the coordinates of the station’s location,” Spock’s calm voice interrupted Jim’s whirling thoughts. “Officially it is declared an unmanned outpost with strong transmitters for sub-space communication. But, as it seems in truth it is…

“A high security facility,” Kirk ended the Vulcan’s sentence with a flat voice. “A facility that holds stuff the Council or Command have declared as ‘very dangerous’ – among this all, seventy-two tubes.” His glance fell on Nien again. The Augment’s face was ashen, something close to panic and despair brimmed in his eyes.

Khan began to tremble without realizing it. Again, he had been forced to listen to an order that would mean the death of his brothers and sisters – just like fifteen months ago at the secret station near Jupiter. For a moment a sharp stab of pain pierced his chest, while his stomach was turning.

No!

Not again!

They couldn’t order his people’s death! Not now – not after he’d finally learned where they were! They couldn’t… They couldn’t kill them!

For a moment he saw torpedoes racing through the deadly silent and dark space, hitting buildings on an asteroid. Flames raging through the facility, reaching the high security area… The cryotubes burning, his brothers and sisters screaming…

Joaquin, Otto, Katie, Rodriguez, Pablo… They perished, their minds calling for him before there was nothing left of them except for ashes that soared through the merciless nothingness of space.

Khan shuddered and forced his mind – his superior mind – away from those images. Jim would never allow something like this to happen! He wouldn’t permit it to happen or even have a part in it! Yet the sheer prospect that his family could still die in the flames and explosions made his stomach turn and sent ice water through his veins.
Alas, he had witnessed the very same thing aboard the Vengeance, thinking his crew had died with the detonations of the torpedoes. And now exactly this kind of death had been ordered.

He felt nausea, while cold sweat broke out on his forehead and ran down his back. All his augmented brilliance, all the clear logic within his brain couldn’t stop this reaction – he was, after all, human.

Jim saw Khan’s chest heaving and how his hands closed around the repaired arm rests of the helm’s chair until the material almost cracked. To see his beloved like this – and to feel his growing panic and anguish –felt like a sword that had plunged into his soul.

He would put a stop on it – now!

Straightening his shoulders, he rose. His gaze found Uhura, who looked at him with large searching eyes – clearly startled but also angry, exactly like Chekov. Both realized what those tubes had to contain. Then Kirk’s eyes met Spock’s and a wordless understanding passed between the two soul-brothers, before Jim took a very, very deep breath. His decision could – and certainly would – cost him his command, but he had no other choice. Luengo gave him no other choice!

“Uhura, confirm receipt of the order to Starfleet Command,” he said slowly, watching his beloved go rigid. He slowly lifted one reassuring hand, signalizing Khan to remain calm. “And then ask Dr. McCoy and Mr. Scott to meet me in briefing room two in the next three minutes.” His gaze became intense as it was fixed on Khan. “Nien, you and Spock are with me. Please switch the helm to navigation.” He turned and strode towards the lift; the Augment was instantly at his heels while Spock walked with large steps towards them. “Uhura, you’ve got the bridge,” Kirk said and stepped into the lift, his friend and bond-mate following him.

The doors had barely closed as Nien started to speak. “My people are there! There is no doubt! I…”

Jim reached out and placed his right index finger on Khan’s lips, while his other hand rested gently on the Augment’s right shoulder. “Ssssh, calm down, Nien. I agree that these tubes are holding your crew. But now we know where they are and can finally act!” He let his finger slip away and cupped his beloved’s cheek – trying to soothe him as he felt how cold the Augment’s skin had become, the clear proof of deep fright. “Don’t worry, nothing will happen to them. I swear.” Kirk whispered.

“And what are you going to do, Captain?” Spock asked quietly, feeling slightly uncomfortable with the open display of tenderness of his friend towards the Augment.
Jim looked over his shoulder at him, fierce determination burning in his eyes. “I’ll get them out!” he stated forcefully. Then the lift stopped and the doors slid open. With brisk steps Kirk walked out, Khan and Spock framed him while he strode through the hallway. Half a minute later they entered briefing room two and Jim, who felt the dread rolling in strong waves from his soul-mate, gestured to one of the chairs. “Take a seat, Nien, and for God’s sake, calm down! I will not allow any harm to come to your brothers and sisters. I’ll protect them like you protect my family – ‘til my dying breath.”

He nodded to Spock who sat down beside the Augment, ready to use his own link with Jim to mentally reach out to Khan to prevent him from losing control if necessary. One didn’t have to be a touch-telepath to realize the stress the super-human was experiencing at the moment. And given the experiences of the past, the Vulcan was aware that the traumatized Augment might simply snap again.

Jim walked to the replicator and ordered an Indic chai tea, a Vulcan mint tea, black tea, and two coffees. As he returned with the tray, the door opened, and McCoy and Scotty stepped in.

“What’s up, Jim?” Bones asked while he sat down, accepting the offered coffee from his friend. His gaze found Khan and he frowned as he saw the emotional turmoil plainly written on the Augment’s face.

Placing the other cups on the table, Kirk took a deep breath before he began. “We got a new order - to evacuate Gamma 12 and destroy it afterwards. Officially, Gamma 12 is an unmanned outpost, in truth it’s a high security lab facility that holds, among other things seventy-two tubes with ‘biological test objects’, as Command calls them.”

McCoy’s eyes widened, while Scotty frowned.

“Seventy-two tubes, sir? That sounds familiar!”

“Correct, Mr. Scott,” Spock answered instead of Jim. “We have every reason to believe that these tubes are the cryotubes containing Mr. Singh’s crew.”

Bones gasped. “They want us to collect Khan’s crew and…”

“No, Bones, you misunderstood! Command wants us to evacuate the twenty-five people who are serving on the facility at the moment, and then to destroy everything else.” His gaze wandered again to the Augment. “Including Nien’s family.”
Silence.

For several seconds the CMO and the chief engineer could only gape at Kirk, then Leonard exploded. “That’s impossible! They can’t… Dammit, Jim, they want us to murder seventy-two people in their sleep? Are they insane?”

“That sounds familiar too, doesn’t it?” Kirk gritted out bitterly. “And it’s no wonder that this is familiar, because behind this order stands none other than Admiral Luengo – former Chief of the SBI, certainly re-founder of Section 31, and now even Interim Chief in Command.”

“They made this bastard Chief in Command?” Bones groused outraged. “Is the Council out of its mind? This guy was in custody – hell, he should have faced trial by now, and then…”

“Due to the deaths of the most senior admirals, the selection of experienced staff officers was reduced drastically, Doctor. With the threat of the ceasefire’s ending, the Council’s uppermost concern was to ensure the safety of the Federation and Starfleet is needed – a functional Starfleet, which means that the murdered admirals have to be replaced as soon as possible,” Spock explained.

“That’s still no reason to promote someone accused of conspiracy and who has no moral problem handing a man over to a bunch of crazy scientists to abuse as a lab rat!” Leonard gritted out, then tried to control himself. His gaze found Kirk. “This whole thing might be a trap,” he said. “They’ve already sent a spy aboard, and I’d bet my last hypo that they know about Khan’s presence here. Not least of all because of the damn recordings they’ve got of you two from Aldebaran. This blasted order is a trap, and nothing else!”

The young captain grimaced. “I know, Bones. Luengo knows about Nien and me working together, and now he’s found a way to lure Nien to a place where he and Section 31 can finally get a hold of him. And where they can arrest me because for insubordination and harboring a wanted criminal.” He looked at Khan, whose eyes betrayed how miserable he felt.

“Then we have to be cleverer than they are,” Leonard hissed. “There has to be a way to stop the murder of seventy-two men and women, and…”

“You forget, Doctor, that the former Interim Chief in Command, Admiral Allistor, denied Mr. Singh and his people human status,” the first officer pointed out. “Therefore Luengo has not technically ordered ‘murder’.”
“Allistor?” Khan asked alarmed, his voice hoarse.

“Our Allistor doesn’t resemble the dead admiral,” Scotty explained. “Not one bit – and, by the way, our Allistor would rather rip off an arm than order harm anyone.” He bent forwards. “So, what are you going to do, Jim – concerning this order, I mean?”

Kirk rose. “I’ll refuse to obey it – at least one detail of it.”

Spock crossed his arms in front of his chest, already knowing what his T’hy’la planned. “You want to bring the cryotubes aboard,” he stated and the young captain nodded.

“Yes, I will. And only then will I blow that damned facility to pieces.”

“And afterwards, Jim?” Bones spoke up again. “We can’t just wake them up and hide them among the crew. This will go wrong, and you know it.” He looked at Khan. “You both know it.”

“We could bring the whole thing to court,” Montgomery cut in. “Mr. Singh and his people have a right to…”

“Didn’t you hear, Scotty?” Kirk snapped, before he began to pace along the conference table. “Nien and his people have been stripped off any human rights because Allistor declared them to be non-human.”

“I’ve never heard such a bullshit before!” the Scotsman ranted. “Of course Mr. Singh is human. What else should he be?” He looked at the stiff Augment. “Just because some idiots messed with your genes before you were born doesn’t change the fact that you’re a person!”

“Ethics are not the issue here, Mr. Scott,” Spock said calmly.

“That’s a completely new one from you!” McCoy was worked up now. “Especially since you Vulcans are always pointing out ‘how much every life counts’ and go on about ethics, but now…”
“Doctor, in this case a discussion about ethics would be a waste of time, as at the moment Mr. Singh’s status – and that of his people – cannot be changed.”

“And what are the Augments then? Their own race? Maybe not human, but a separate species?”

Jim, who had listened to the verbal combat, stopped his pacing and looked down at McCoy. “What did you just say, Bones?”

The CMO blinked irritated. “What do you mean? That in Command’s eyes the Augments are their own race, or…” He stopped, as Jim’s face began to change from deep worry to beaming revelation.

“Bones, you’re a genius!” Jim whooped, was at Leonard’s chair in two quick steps, grabbed his face, and bent down towards his forehead, but McCoy jerked back.

“Don’t you dare, Jim!”

Kirk only laughed. “That’s the solution, Bones! That’s the way out I was searching for!” He let go of McCoy, smiled at a very confused Khan, and looked finally at Spock, who lifted a brow.

“Fascinating, Captain, yet I’m curious how you want to make this work.”

Jim promptly grinned. “You know what I’m planning?”

“Of course – it is the only logical possibility left.”

“Rrrright,” McCoy grumbled. “And after you two finish displaying another incredible show of non-verbal understanding maybe one of you would be so kind as to enlighten those of us who aren’t a part of your little brotherhood. As I sure as hell am not able to get with this Vulcan mojo-mental thing, even if a certain Vulcan accused me of being an ancient druid! In other words, I can’t read your minds, and am utterly lost here!”

Despite everything, Khan felt amusement rising in him as Spock looked at the CMO though the other man was a fascinating example of an unknown chemical compound. “Doctor, if your rambling was meant to demonstrate the obviousness of the captain’s plan, then why did you just ask? We all
know that you are sometimes slow to grasp something clearly spelled out, yet even you should be able to realize the solution to which Jim is referring.”

McCoy flushed in irritation. “Why, you damn hobgoblin, can’t you just…”

“Bones, Spock, STOP it!” Jim cut in impatiently, and rolled his eyes. “Heavens, sometimes I wonder how old you two are!” This earned him indignant glares from both men, and he shook his head.

“I’m certainly not ‘slow’, Jim, but even I don’t know what you’re up to,” Khan said quietly, and Kirk looked gently at him.

“That Command stripped you and your people of human status made you into your own race, your own species, even, just as Bones said. And there are no other Augments left other than you and your crew. Since Luengo has ordered you all to be killed, he’s condoning…” He didn’t end the sentence but looked expectantly at his mate, yet it was Scotty, who completed the thought.

“Genocide!”

Jim nodded. “Exactly.”

Khan frowned. “But in Command’s eyes we are not even people – persons, as Mr. Scott pointed out. Therefore…”

“Spock, what’s the definition of an intelligent race?”

“Any sentient life form that can think distinctly, uses a method or methods of communication, and a culture, independent of base molecular elements, appearance, and heritage,” the Vulcan replied. “That counts for pre-warp cultures as well as cultures with advanced technical knowledge.” He looked at Khan. “This definition fits very well to you and your people.”

“Therefore you’re your own race – and Luengo ordered genocide by killing you all,” Jim addressed the Augment. “And this fact gives you the right to ask for asylum on any planet that belongs to the Federation.”
Thunderstruck Khan looked at him, while McCoy scratched his head.

“Jim, isn’t there a Starfleet order that legalized such a destructive process and…”

“You’re referring to Starfleet General Order number 24. ‘If a commanding officer deems that a planet has been culturally contaminated to a point where correction is no longer viable and said culture now poses a direct threat to Starfleet personnel or Federation civilians, he may order the destruction of a planet’s surface to occur with a time limit set upon invocation.’ That’s hardly the case here, Bones. Seventy-two sleeping men and women are barely a threat to the Federation, and their heritage is no reason to order genocide.”

“So, you’re saying that Luengo over-stepped his authority,” Bones mused and Kirk nodded while beginning to pace again.

“Luengo is violating fundamental rights and the Charter of the Federation’s Foundation Document stating ‘We, the lifeforms of the United Federation of Planets determined to save succeeding generations from the scourge of war, and to reaffirm faith in the fundamental rights of sentient beings, in the dignity and worth of all lifeforms, in the equal rights of members of planetary systems large and small, and to establish conditions under which justice and respect for the obligations arising from treaties and other sources of interstellar law can be maintained, and to promote social progress and better standards of living on all worlds’.”

Jim stopped and glanced at his friends and his mate. “Do you understand? Luengo broke the law concerning that statement the Federation and her authorities have ordained to avoid war – yet Section 31 provoked one and prevented peace talks by killing the own delegation.” He lifted a hand as Spock tried to interrupt. “I know, Spock, for latter we’ve still no proof of, but it’s only a question of time until we find those who are truly responsible for this mess.”

He continued to pace. “Second, the Charter guarantees ‘fundamental rights for sentient being in the dignity and worth of all lifeforms’. Well, you can say what you want about Augments, but you can’t deny that they are sentient living beings with a culture – just look at the whole bonding-thing – and who are clearly, highly intelligent. And, by the way, no-one can deny that they’re rooted in the Terran race, therefore Allistor had no right to strip them of any humanity that’s resulted in the situation we’re in now. And one more thing – if Nien and his crew are the only survivors of their race, then they belong to an endangered species, which means they warrant special protection and support. This is also supported in law – a law Luengo broke to by giving this order.”

His blue eyes found the ocean-colored ones of his mate. “You, Nien, have every right in the world to ask for asylum for yourself and your people because you’ve been threatened with torture and death by a recognized authority that oversteps its boundaries. And that you never faced a proper trial, but were sentenced nonetheless, is just another reason in the long list for why you and you people need
to find safety in the refuge of another planet.”

For a long moment utter silence hung in the air, then Bones pursed his lips. “Absolutely logical, Jim.”

Kirk smirked at him.

“I have to agree, Captain. You argument allows for no other course of action – from your point of view. Luengo will argue otherwise.”

“Yes, but the law speak for itself, Spock, and is clearly on Nien’s side.” He looked at the Augment in whose eyes new hope had begun to sparkle. “I know that this will not let you off the hook from what happened last year, yet that trial would concern only you, not your people. They’ve done nothing to be walked all over like they are being now, and above all, there is absolutely no reason to sentence them to death – something that has been virtually outlawed within the Federation. Yet Luengo knowingly did just that by giving this particular order. If your people don’t have cause to claim asylum, then I don’t know who else would.”

Khan gulped. For several minutes everything had seemed to fall apart – that the chance to get his family back and them being able to live a life of freedom had been lost. Now the golden light of new hope shimmered on the dark horizon – golden like the first rays of sun in Jim’s apartment on that fateful morning all those weeks ago; golden like the young captain’s appearance, and his heart. “You think this is indeed a way to give my people the possibility of living in peace?” he whispered, and Jim nodded, a tender smile curling his lips.

“Yes, I do.”

“That sounds like a really good idea,” Scott cut in. “But first we have to recover Khan’s people and bring them to safety.”

“Yes, and concerning that first step I’ve a plan,” Kirk confirmed.

“You want to beam them out,” Spock stated simply, and Jim nodded.

“As far as I understood they’re in a high security hold which will probably also be shielded. Therefore we’ll need to switch off those shields before we can beam them aboard.” He looked at
Scotty. “And for that, I’ll need you. But please think this through before answering. If you do this, you’ll certainly have to face a court martial – as Spock and I already are.”

Montgomery frowned, irritated. “Ya don’t think I’ll abandon you now, Jim, do ya? I’ve learned my lesson with ye, and I’ll never let me friends down, certainly not when they need me most! Of course I’ll have a look at the generators and bring down the shields!” He glanced at Khan. “We Scots know exactly how it is to be hunted like we’re no more than animals, and been forced to watch our families dyin’ because some people think they’ve a right ter kill us. And I dunno let that happen ter yer sleepin’ people.” He cocked his head and fixed the Augment with a stare. ‘Don’t get me wrong, lad, at first I really wanted to kick yer ass after the mess you made last year, but everythin’ has changed now. And, above all, ye’re part of the crew – part of this ship. Ter hell with Luengo and his daft orders, I’m with ya and Jim!”

Khan felt a hint of the tension leaving him that had held him in its icy grip. “Thank you, Mr. Scott,” he said quietly, gratitude mirrored in his eyes. Then new dread returned, as Spock addressed his friend.

“And to where would you bring Mr. Singh and his people, Captain? Which planet would grant them asylum?”

Jimgroaned. “That’s one of the details I’m still working on.”

“Admit it, these details you’re ‘still working on’ are ninety percent of the whole plan,” Bones grumbled, and Kirk sighed.

“Just give me some time, Bones! I just learned I’m supposed to be used as a tool for genocide fifteen minutes ago, so don’t expect me to come up with something thoroughly planned through just now! And since when have I ever had a full plan sorted out before acting?”

“Mr. Spock is right, Jim,” Khan said quietly, feeling hope dying away again. Theory and practice were two very different things. “As soon as the government of any planet learns about our history, they will be more than wary – especially after the incident a century ago you told me of. And they don’t want to get on the wrong side of the Federation Council or Starfleet in this case. Whether you like it or not, Luengo has a lot of power now, and he’s already pulled enough strings to make changes to his liking. The chance that another planet is willing to pick a fight with the Chief in Command is really low.”

The first officer bent forwards and folded his hands on the table. “I agree with Mr. Singh, Captain. Most planets’ governments will not take the risk – not during a war. And many cultures are quick to
form prejudices, especially if Luengo coaches them. To follow the UMK-principle as we Vulcans do is, for many other cultures, barely an option when it holds an unknown factor they cannot calculate. And it is a fact that we cannot say how the other Augments will react after they wake up – and how they want to integrate into any Federation culture. If at all.”

Khan took a deep breath. “We fled Earth to find peace. If peace is offered we will happily accept.” He moistened his lips. “I admit that several of us are going to have problems coping with things in the beginning, but all of us are open to honesty and logic. If my people are treated well they will give no one trouble. Rather the opposite, because they all – we all – were tired of battle and hate. That is why we boarded the Botany Bay, hoping for a better future.”

Jim looked at him, full of understanding – and then it hit him again. His eyes widened anew, which didn’t slip McCoy’s attention.

“What you’re up to now, Jim? And don’t give me that innocent look, kid. I know that expression far too well by now,” he said, pointing nonchalantly at Kirk.

“Guilty as charged, Bones,” the young captain smiled, before he bent towards the terminal at the desk and activated the intercom. “Kirk to bridge. Uhura?”

“Yes, Captain?” came the instant reply.

“Could we reach New Vulcan with a direct transmission from our current position?”

For a moment there was no answer, while Spock, McCoy and Scotty reacted in their own way as they realized what Jim’s intentions were. The Vulcan lifted both brows, McCoy’s eyes were about to pop out of their sockets, and Scott shook his head, speechless.

“I think so, Captain,” Nyota said carefully.

Kirk grinned. “Good, please try to hail them. I need to urgently speak to someone we know very well.”

“Captain, I just checked the time. It’s night in New ShiKar and…”
“Trust me, Lieutenant, he won’t mind. He told me once that he’d always have an open ear for me, so I’m sure he’ll forgive me for catching him in dreamland.”

“Vulcans don’t dream,” Bones commented wryly.

Spock allowed himself to look at the ceiling in a sudden gesture of exasperation, while Uhura’s voice deadpanned, “If you honestly believe that, Doctor, then you also must think that the stork still delivers babies.”

“Well, that would fit your boyfriend’s opinion that I’m a shaman!” McCoy called.

“Okay, enough,” Kirk almost sighed. “Uhura, please try to get him on the line and patch him through to briefing room three.”

“Aye, aye, Captain.” The link went dead and McCoy glared at Jim.

“Why don’t you want to call him from here?”

Kirk only snorted, “Because I want to talk with him without any silly interruptions or comments!” He rubbed his neck, while Spock looked at him.

“Do you believe he will agree to your plan? You know that he has had his own history with –”

“Spock,” Jim cut in softly. “You’ve learned all that really happened to Nien and what is planned for his people. Would you deny him a chance for justice and his people a chance for survival?”

The first officer again crossed his arms in front of his chest and it was obvious that it wasn’t easy for him to answer. Nevertheless, he simply said, “No, I wouldn’t.”

“There you go,” Jim smiled.

Khan stared at him – disbelieving and nervous. “Do I understand you correctly, Pyāra? You want the Vulcans to give us asylum?” When Kirk only nodded, he was speechless for a moment, before
whispering, “And why would they do that?”

“Because it’s the right thing to do,” Jim replied calmly. “And I know someone who can help us – someone who has a lot of influence on the Vulcan High Council. And, he’s a very old friend of mine.”

TBC…

Chapter End Notes

Surprise, surprise! I bet you haven’t seen this one coming. Of course you know who Jim is calling and therefore I don’t reveal a secret that you’re going to meet ‘Prime Spock’ within the following chapters. And, believe me, this is going to be a lot of fun, but also refers to very emotional stuff.

And for all who want to beat Luengo into the next week for his cruel plan: Be my guest (laugh).

I hope you liked who the story proceeds now, including the new twists and Jim’s thoughts how to get the Augments to safety (and how the law will work for them).

In the next chapter, as already said, you’ll meet Prime Spock, and Jim will need all his wits to convince him of agreeing to Kirk’s hell of a plan.

I’m looking forward to your feedbacks,

Have a nice rest of the week

Love

Yours Starflight
Hi, my dear readers,

And once again sorry for the delayed update but at the beginning of a year there is always a lot to do besides the ordinary work and time runs short.

Thank you so much for the many feedbacks and I'm glad that you still like this story so much.

As the most of you already assumed, in this chapter a beloved ‘old’ character will appear – Prime Spock. I planned to have him in this story from the beginning, and I so looked forward to have him eventually in the third movie, too, yet Leonard Nimoy’s passing took this possibility from us all forever.

The following chapter – and Prime Spock’s whole appearances in the rest of the story – is not only a necessity for the story-line, but is also a payment of homage to Leonard Nimoy and his immortal portrait of Mr. Spock. I hope that I caught his characteristic correct, because the old Spock differs a little bit from the man we met first within the first three seasons almost fifty years ago. Yet there are several things which haven’t and will never change – for example his deep friendship with Jim and his affections for him which always influenced his decisions (*smile*).

I hope you’re going to enjoy the new chapter.

Love

Yours Starflight

Chapter 53 – A hell of plan, part 1

The nights on the planet that was now charted as New Vulcan were equally as long and cold as the nights on the former homeworld of the Vulcans. Additionally, temperatures climbed almost to the same levels as in the deserts of their now-destroyed planet during the day. From a distance, New Vulcan even looked similar to its predecessor – russet red with a beautiful play of sand and grey colors, yet there were a few though important differences.

One of those differences was the lack of the sister-planet T’Rukh. Having the same rotation as Vulcan, she’d always been on the same side of the planet; bathing the landscape in bright silver light.
every night. But instead of the mighty neighbor, only two small moons circled New Vulcan.

The first and foremost difference on the planet itself was the existence of larger bodies of water – two oceans and several lakes twice the size of the Aral Sea in Russia, partly connected by rivers. The coasts and riversides were rife with vegetation, while the rest of the planet’s surface was covered with sand and tall rocky mountains, all in every-sand colored hue possible. The whole planet resembled a large desert with several oases; giving a glimpse how the original Vulcan must have appeared thousands of years before its destruction.

The second difference was the lack of settlements. There was only one until now – a town that had been constructed in a new record time within a year, and was situated on the shores of the largest fresh-water lake. The city – New Shi’Kahr – was home for the fewer-than-ten thousand Vulcans who had survived their homeworld’s destruction, as well as for the more-than-six thousand Vulcans who had returned from the colonies to help rebuild their species.

Sky scrapers were in the center of the town and where most of the population lived, but lower buildings occupied the waterfront and at the other edges of the city – built in the functional yet aesthetically pleasing style typical of the Vulcans. The New Academy of Science, as well as the hospital was near the space harbor, while the High Vulcan council and other government buildings could be found on the other side of the town, not far from the rising mountains. Streets and bridges connected the homes, yards, with trees offered as places to find rest. Several restaurants had opened, as well as a library that was attached to the primary school and college.

The town was young, there was no doubt the moment you laid eyes on it, yet it would grow. It would never be able to replace the original Shi’Kahr – the capital of Vulcan – yet it was a new start. With Vulcan many ancient and important places had been destroyed: Mount Seleya, the holy mountain were once Surak himself founded the new culture of logic and peace, and where the immortal katras (souls) of thousands of Vulcans had been held – utterly lost with the holocaust. The ancient part of the Vulcan Academy of Science, which housed documents written by Surak himself, lost too, just like the cloisters in which the Kolinahr was taught – the removal of all remaining emotions.

So many things had perished that many Vulcans barely coped with the losses – despite all rationality and logic. Those who lost their bond-mates suffered the most, not a few had even died because from the mental shock. Others mourned their children, their parents, their uncles and aunts. And the knowledge that the loss of the katras of their ancestors had torn open wounds none of the survivors had ever anticipated. The remaining population had been in shock for months, and never before had so many physicians been needed to attend one race. Yet, Vulcans were strong – both in body and spirit. Those who didn’t die after the holocaust regained their mental stability with a lot of meditation and mind-melds with their closest relatives.

But the man who laid wide awake in the darkened bedroom of the small townhouse near the
government buildings had no relative who could help him to overcome the losses. Well, fact was not completely accurate, as his father had survived the catastrophe, and even the chief of his clan could offer support, yet he refused it. Not because of pride or lack of trust, but because of completely different circumstances. It simply was not right that his own father was younger than this son, and that said son was only a little younger than the matriarch – his own grandmother. Furthermore he could not turn to his younger self who followed more-or-less the same path he had all those decades ago, as he himself was still young, still stubborn as hell; his place among people who meant the world to him.

Time travel…

Whether intended or not, it always bore the risk of changing the past – and exactly that had happened in the most terrible way with his appearance in this timeline. Not exactly due to his entry into this alternative past; it had been Nero who had destroyed Vulcan and had been about to do the same to Earth, but Nero had done it seeking revenge – revenge taken on him, Spock.

This vengeance had set off a completely different timeline, yet the universe always tried to recover itself. Several things were inevitable – just like the man’s younger self finding himself aboard a certain starship where he got together with his captain. A few events were inevitable, like their close friendship – like the tight comradeship of the whole bridge crew.

Spock of Vulcan rolled onto his other side and briefly looked at the chronometer on his nightstand even if he didn’t need it to tell him what time was. Like all Vulcans, his time sense was extraordinary.

“I don’t need a chronometer when you’re with me,” his T’hy’la had once said, with a large amused smile on his face, hazel eyes shining with fondness. Jim had always found the right words and the right tone of voice with which to tease without any mockery – showing him the special way the deep friendship and even love he had held for him.

Jim Kirk…

His Jim Kirk, not the younger self of this timeline. Yet they were one and the same, even with the different eye color, because here James Kirk’s eyes were bluer than Terran skies – the result of being born in space near a worm whole, and its strong magnetism. And this Jim Kirk had been even younger than Spock’s soul-brother when he had taken command of the Enterprise, yet this was the first step in the repair of the timeline.

It had been joy and anguish in one to meet again the younger vision of his long-dead T’hy’la on
Delta Vega – to see Jim after all the lost years, and to touch his mind. A mind that was similarly vivid, strong, and warm, yet it had suffered differently. His Jim had had a protected childhood and was raised in Iowa with his parents and his brother – this Jim had lost his father the moment he’d been born and his mother had never coped with it; handling her sons (and especially Jim) in a way that had to have hurt the little boy beyond imagining. Spock hadn’t seen many memories during his meld with the young Jim; he had been in rather a hurry to make the human understand what was happening, yet he had caught glimpses of Kirk’s childhood, and it had pained the old Vulcan. This Jim would have a longer way to rise to become the man he ought to be, but he was about to take that first step in becoming that great individual. He was already a hero, but his true way had not started until then.

From the outside, Spock heard a night bird through the open window, and its call echoed through the dark bedroom.

Spock sighed. He was used to having less sleep since becoming a diplomat, and especially after his unwanted travel from the future back into a past he thought he was long done with, but this night seemed to find no end. He was…restless, something very rare for a Vulcan. Something had been nagging him for days now and he couldn’t put a finger on its source. Jim would have called it a ‘gut-feeling’, but Vulcans didn’t have them – well, they shouldn’t have them, yet Spock was half-human and he simply knew that his unrest was a result of his Terran roots. He had long ago come to terms with both sides of his being; he even embraced both parts of his heritage – something Jim had taught him.

The sudden buzzing of his terminal in the attached room almost startled him and he quickly sat up. “Lights, fifty percent,” he ordered the computer, and slipped out of bed. His bare feet made no sound as he walked over the equally bare floor into the next room, and saw the signal indicating an incoming message. Who would call him at this time? It had to be something very important, otherwise the Interstellar Communication Center, whose emblem he could see on the screen, wouldn’t have contacted him this late.

Age could wear down even Vulcans, and he stiffly sat down at his desk and activated the screen. “Selek here,” Spock said, using the pseudonym under which he was known on New Vulcan. No, Vulcans couldn’t lie – at most times – yet this had been one of the few necessities, to use a twisted truth to hide the real truth. Only a handful of people knew who he really was – Spock, son of Sarek and Amanda Grayson.

It would have led to too many questions and confusion – even to turmoil – if the public were aware of his true identity. He knew too much of the future; his presence had changed this present, and therefore the future that should have been. And even the logical Vulcans weren’t free of prejudice when it came to future actions. He had experienced it as a child, yet his decision to stay anonymous then hadn’t resulted in upheaval. In his opinion, he deserved nothing less than obscurity after his arrival in the year 2258 led to the destruction of Vulcan. No, his agreement to T’Pau’s and Sarek’s suggestion to give himself a new name resulted from pure logic.
His technical knowledge was that of many decades yet to come. This know-how could, and was supporting to build a new home for the survival of Vulcan, and Spock threw himself into this challenge like he had rarely done before. Guilt was illogical so long as there was no intent, yet Spock was – after all – half-human, and the agonizing guilt he had felt the first weeks after the holocaust had almost eaten him alive. That was, until he forgot about it briefly, turning his attention to his surroundings in the area near San Francisco where the last of the living Vulcans had taken refuge for some months, and had come face to face with Sarek.

To see his father alive and healthy – as healthy as a Vulcan suffering from a severed bond could be – had been another shock for Spock. He hadn’t been near Vulcan when his father had died in his timeline. Jean-Luc Picard, captain of another Enterprise, had brought him the sad message of Sarek’s passing. Picard had even risked being taken captive by the Romulans to bring Spock the news, because the Vulcan had stayed on Romulus when his father had died. Spock had mourned his father, even though he had had his differences with him. Meeting him now again had further torn open old wounds.

Sarek was no one to be fooled easily and within seconds he had realized that the other older Vulcan was his own son. Maybe Spock’s presence had given his father the strength to carry on – the human part of him hoped it was. Even though Amanda had not been a telepath, her bond with her husband had been strong, and Sarek suffered immensely from the sudden loss. Helping Spock might have been the reason the ambassador had been able to overcome the continuing aftermath from the shock.

Many days later, Spock had helped direct where to search for a new planet, one that could offer their drastically reduced race shelter, and what was needed to build a new colony. And Sarek had suggested that Spock should take the lead on the project. At first the former Starfleet officer and ambassador had refused, but Sarek could be very convincing when he had set his mind to something. Contacting one of the few surviving Elders – T’Pau – had sealed the deal.

The old matriarch had looked at Spock for several seconds before the truth hit her with a force that almost sent her reeling. She all but ordered a mind-meld and learned of everything. In her own way she gave him absolution, almost soothing his inner torment by telling him gently that everything that happened wasn’t his fault – that there had been nothing he could have done. Afterwards she agreed that Spock would be the best candidate to master the giant challenge that lay ahead for them all. His double-sided heritage was an advantage now, because he saw solutions and ways to find answers pure Vulcans could not because their strict logic hindered them.

His pseudonym was that of a son of faraway relatives which all had been killed in the catastrophe. So the old Spock became Selek, High Minister of New Vulcan – of which T’Pau and Sarek were also responsible. His enhanced knowledge would and had helped to build the colony in a surprisingly short time, and he founded the Confederation of Surak made up all Vulcan colonies and the new homeworld. The half-Vulcan who faced rejection and even mockery when he was still nothing more than a mere boy was now one of the mightiest men within the Federation – something
he never wanted to be.

“Life goes sometimes weird ways,” Jim Kirk had said several days after he’d got back the Enterprise after V’Ger, and never before had Spock agreed more with him than the day the surviving members of the High Council and the Elders chose him as the new High Minister.

This all had given him a soft aura of peace, yet his soul would never be free of the turmoil and horror he’d faced as he was forced to watch his homeworld torn into pieces. Even over the long distance to Delta Vega he’d thought he heard the death-screams of the other Vulcans; their katras reaching out for help and comfort in the second of death. He had experienced something likewise during the first five-year-mission of the Enterprise as the Intrepid – a Starfleet cruiser manned by Vulcans – had been destroyed. But this time the mental cries had been a thousand times stronger; bringing him almost to his knees. And he still dreamed of it.

All this was contributed to the aging Vulcan’s insomnia. Sometimes even meditations didn’t help – as it had in the last days. Something held him on the tip of his toes. That someone wanted to contact him in the middle of the night was only another piece of the puzzle that lay in front of him.

As the screen came to life, he looked at the aesthetically pleasing, even beautiful face of T’Nay, a young Vulcan female from one of the outer colonies. She had also mourned losses within her own family, yet her bonding-partner and her children were still alive and lived now on New Vulcan – a blessing for the threatened race.

“High Minister Selek, I apologize for disturbing you so late, but we were hailed by the USS Enterprise requesting an immediate and direct transmission to you. Captain Kirk would like to speak with you, code Priority One.” Usually not even a senior staff officer would have dared disturb the High Minister at this time of night, but the Federation was at war. And after all, Kirk’s role in the mess with Nero and the fact that his actions had saved the Vulcan survivors warranted him some advantages. Most Vulcans knew his name and who he was – the savior of their race’s remains – and therefore Jim had several privileges within New Vulcan’s new High Council that Federation diplomats and politicians could only dream of.

Spock lifted an ice-grey brow. If Jim – this time-line’s Jim – tried to reach him with such urgency something had to be truly out of order. Spock had promised himself that he wouldn’t interfere with his younger self and the other officers on the Enterprise. He wished for them to find their own way, and he made certain that they knew that he stood by this decision. Yet he could not and never would deny Jim support if he really needed it. He may be an altered younger version of his T’hy’la, yet the comfortable fondness still remained and had bloomed anew after he’d met his lost soul-brother again.

“Please put him through,” he answered, feeling his heartbeat quickening and anticipation running through his whole being – illogical but undeniable.
A moment later the picture on the screen changed and he looked directly at the Terran. The eye color was still wrong, but it was the same face he was so familiar with, only younger. And something else, something new that Spock realized instantly: Jim looked tired, worn down but nonetheless alert. He was pale and almost thin and his gaze held a desperate determination Spock knew all too well.

Maybe this was another reason for Spock’s inability to find rest and sleep within the last few days. Maybe he had felt that something was wrong with Jim – which would mean that despite the twist in the time-line, there was still a bond between himself and the young captain. The link between them had always been strong after it had been forged. It even had reached his mind during his last test of the Kolinahr, and called him back to the Enterprise when the ship was the Federation’s last hope to stop the strange cloud that had destroyed so many planets and vessels on its way to Earth. The entity that was later known as V’Ger. So this same link still existed here. Maybe he wasn’t that alone in this time as he’d thought to be.

“Hello, my old friend,” he said softly, and a gentle wave of joy he would have denied to feel decades ago breathed over him, as he watched those youthful, well-known features relaxing with relief.

“Hello, Spock.”

As soon as Uhura called him into briefing room 2 and told him that she had a weak but functional connection with the Interstellar Communication Center on New Vulcan, Kirk strode to the door. Calling “Behave while I’m away, guys!” over his shoulder he left the conference room, and heard something that sounded very much like “Yes, Mom,” from McCoy. Rolling his eyes, Jim almost ran to briefing room 3, where he had to wait for more than two minutes until the screen finally came to life. His heart missed a beat as he looked at the Vulcan who appeared.

His hair and eye-brows were ice-grey and white, numerous deep wrinkles were etched into his face, yet Jim would have recognized these features and those warm brown eyes anywhere. Like always during the few times he had been in contact with the older self of his first officer and friend, Jim felt a wave of protectiveness and fondness, coupled with wonder and joy. The mind meld hadn’t been that pleasurable – to be honest, it had shaken him deeply – yet during the mental connection he had felt so much warmth, and even love, that out of nowhere he trusted the old Spock within seconds and without any hesitation.

This hadn’t changed, and as he heard the Vulcan’s familiar voice, rough from age, he couldn’t help but smile.
“Hello, Spock.” Kirk returned the gentle greeting and took a moment to let his gaze roam over the other man’s form. He saw the dark, casual tunic and remembered what Uhura had told him about the time in New Shi’Kahr. “I’m sorry to disturb you at night,” he said a little bit sheepishly.

“There is no need to apologize, Jim. As far as I understand your reason to hail me is urgent.”

Kirk nodded. “Yeah, it is.” He gulped. Now that he had the old Spock – Prime Spock, as he called him in secret – on the line, he didn’t know how to begin. “Well, I… Uh… I need your help.”

The typical gesture in which the Vulcan cocked his head took away a part of Jim’s uncertainty. “If it is within my power to help you, I will of course give you my support, Jim. Never doubt this.” The voice held even more warmth, and Kirk moistened his lips.

“You see… it’s not really me who needs help but… a friend and his family.” He felt his mouth going dry; the speech he had prepared somehow lost in the suddenly almost-black hole where his mind used to be. “Spock… The other Spock, told me of his brief contact with you last year during the crisis with Section 31 and Khan.” He rubbed his neck. “Well, I’m calling you because of Khan.”

He saw the weathered face become more firm. “Jim,” the old Vulcan answered softly. “As I told you and my younger counterpart, I will never reveal anything of the future to give you a chance to have your own one.”

“Yet you gave Spock advice regarding Khan,” Kirk pointed out and was baffled to hear the older vision of his friend sigh; the sound utterly human.

“You were in danger and…I do have some vulnerabilities. You are one of them,” Spock confessed and Jim felt heat rising to his cheeks.

“Uh… thank you, I think.”

“Are you in danger now, Jim? And if so, what has Khan to do with it? As far as I know he is in cryosleep and…”

“How do you know that?” The young captain looked at him with large eyes. “Even most Council
members don’t know about his existence.” He caught a short curling of Spock’s lips and rolled his
eyes again. “Yeah, I know, you’ve got your sources and can certainly hack into every computer
system we use at the moment, after all you’re familiar with the systems decades to come. Our
computers must be like a trip to a museum for you.”

The edges of the Vulcan’s eyes crinkled ever so slightly. “During my voyages with ‘my’ Jim I saw a
computer that really would belong in a museum today – large enough to take up and entire wall, with
magnetic tapes and sounds you would not believe. These systems today are…nostalgic, that is all.”

Jim chuckled. “I bet they are.” He pushed back the lock of hair that had begun to grow and often fell
over his forehead now. “Well, regarding my call… This is about Khan, yes, but…certainly in a
complete different way than you can imagine.”

Spock allowed himself a little frown. “What do you mean, Jim? Did he escape?”

Kirk took a deep breath. “Yes, but not from cryosleep as you think. He escaped from a secret lab
where he was kept and abused.”

That took Spock by surprise. “I do not understand,” he said, as astonished as a Vulcan could be.

Jim nodded slowly. “I’m certain that’s confusing to you. I was bowled over when I learned the truth.
They put Khan back into cryosleep, yes, but then smuggled him to a secret lab in Nevada, held him
in stasis most of the time and… They used him for experiments and tests, Spock. A few times he was
even awake enough to know what was happening to him and to feel… how his body tried to adjust
to the maladies they injected him with to regain antidotes, not caring for the agony he had to put up
with during these tests.”

Disbelief and something close to loath shimmered in Spock’s eyes. “That is…illegal and utterly
inhuman,” he said slowly. “No one, not even Khan, deserves that. Who were ‘they’ – and how did
you gain this knowledge?”

Jim bent forwards. “Spock, is your terminal secure?”

The Vulcan High Minister watched him warily, already assuming that his old friend had stumbled
once again into one of those dreadful adventures which would accompany him his entire life. “Yes it
is. I programmed it myself.”
Kirk was relieved to hear that he could speak freely with Spock. “Riiight. ’They’ are Section 31 which still exists – hidden and only regrouping now. I learned from everything from Nien himself and got proof later from some of the admirals and scientists who’d thought it to be a good idea to use Nien’s enhanced biology for their own purposes.”

“Nien’?” Spock echoed in alarm, almost knowing to whom Jim was referring.

“Nien – as in Noonien, a shortened vision,” the young captain explained carefully, eyeing the older self of his friend, whose eyes widened. “It is what I call him. Now, at least.”

Then one brow lifted. “Do I understand you correctly? You and Khan…have reached a sort of consensus?”

“Yes,” Jim confirmed. “I know it sounds crazy – insane even, but after you know about everything that’s happened, you certainly will understand.” He smiled ruefully. “But I’ve got to warn you: this’ll take a little while.”

Spock leant back in his chair, his stiff frame betraying his inner alertness. “I have time, old friend,” was all he said, and then he began to listen – and even if he had thought that was nothing that could shock him anymore, he had been wrong…

ST***ST***ST

Caviw listened to the strong, hard and very clear-sounding language that came from the speakers. She did know several languages, but Romulan wasn’t one of them.

Ritek, who sat at the comm station, balled his fists and shook his head after the discussion they had intercepted came to an end. Switching off the frequency they’d been able to establish, he took a deep breath before turning around and glancing up at the Caitian. “There is no doubt,” he said slowly. “Orion slave traders have offered four Starfleet staff officers to the Romulans.” Caviw gasped, while he continued. “The offer was made two days ago and this was confirmation that the Romulans will send two of their own officers as well as some guys from their secret service to ‘test the goods’, as they put it.” He pressed his lips together into a thin line, before he added, “There was also talk about some more ‘interesting’ slaves, among them two Vulcans, and it seems the Romulans are ready to buy them too.”

“There is talk of the Romulans experimenting with Vulcans because of their stronger telepathic
abilities, but that’s just rumor, nothing more,” one of the bridge crew murmured. “Maybe it’s true.”

“Two Vulcans…” Caviw placed her fists against slender hips and cocked her head. “Didn’t Jim tell us that the father of his first officer had been among the diplomats who’d been killed?”

“Ambassador Sarek, yes,” Ritek nodded. “One of the most important and finest diplomats the Federation has. I saw a report about him last year. His successes are countless. If he is one of those two Vulcans caught by the Orions, then the Romulans would get their hands on a very important man indeed.”

“They won’t!” the Caitian growled. “We shall prevent it!” She bent over Ritek and opened another frequency. “Santo Domingo to landing party. Galven?”

“Galven here,” came the reply several moments later; the Tellarit was slightly out of breath. Caviw looked at the screen, where the surface of Yaska shimmered where they had landed half an hour ago. Galven, Jeff, and four other members of The Shadow had been out there since then, examining the shuttle debris the Santo Domingo’s sensors had found when they reached the moon. The destroyed vessel could be seen at the right edge of the screen, illuminated by Yaraka’s sun that hung like a large disk at the dark sky.

“Ritek intercepted a transmission between Orion traders and the Romulans. Guess what they offered the pointy ears?” She didn’t wait for Galven to answer this and continued, “Four Starfleet staff officers and two Vulcans. Does that ring a bell?”

A tirade of snorting and squeaking noises came over the speaker, followed by words in Standard. “That fits with what we found here. The shuttle is a mess, and missing its roof. We found four bodies, but nothing more. Jeff found copper-based blood – Vulcan – and human blood, yet there is no trace of any passengers who’d have it in their veins. And we found something more: footprints in the dust and sand around the shuttle, and the traces of another vessel that must have landed nearby and launched again. I’d bet my last shirt that those Orions took the survivors and are now trying to sell them.”

“So, there are indeed survivors, exactly as Khan and Jim assumed,” Ritek murmured, sighing. “I think it’s about time to contact the Enterprise.”

“Do it,” Galven ordered. “We’re on our way back to you – and then we should leave this icy place as soon as possible. I really don’t want to get caught by the green-skins as well!”
It was silent in briefing room 3. Jim had ended his tale, leaving out only a few delicate details, such as Khan and he being bond-mates now, let alone “a couple” – or the fact that Nien had visited him in his San Francisco apartment. Jim also skipped telling the old Vulcan that Khan had not only been abused as a lab rat, but had also been violated in the most intimate way. But everything else concerning the Augment and Section 31 he’d laid open. If Kirk wanted Spock’s support in this whole matter, he had to reveal everything.

The wrinkled face of the High Minister was now paler than usual; his gaze was lost somewhere between the desktop and the screen and a frown was edged into his mouth and forehead. For more than a minute the old Vulcan didn’t say anything, yet Jim could see the turmoil deep in those familiar dark eyes. Even though Kirk didn’t know how the encounter with Khan had ended in the other reality, he felt it must have been bad – or at least worse than in this reality. Which was saying a lot, considering how things had played out here. His Spock had told him that his older self had mentioned something about how that to gain victory over Khan, the highest price had been paid, and Jim could only assume what this price had been. Yet, although that had come to pass in this time line, too, everything was different – and the nature of his relationship with Nien during all the recent events had changed to the opposite of enmity.

Finally, after a small eternity, Spock took a very deep breath and looked up; their eyes met over the distance of many parsecs. “I had not known what happened to Khan in this universe,” he said quietly. “I only learned that he had been woken by the head of Starfleet, Admiral Marcus, who founded a secret department and that its purpose had backfired. I believed Khan to be a part of it – the actions of Section 31 displayed spoke of his influence. As it seems, I was misinformed.”

“As we all were,” Jim nodded. “Yes, Khan went too far – he snapped under the pressure – but that wasn’t his fault. Not really. Watching four of his crew being killed almost broke him, then the torture, and then finally witnessing Marcus ordering the Augments killed. Nien had no reason to doubt that his family was dead, murdered in their sleep. Or worse. It was too much for him.” He lowered his head. “I can understand him. If someone killed you… I mean both of you, or Bones, or Scotty – Uhura, Pavel, Hikaru…” He shuddered. “I would lose it, too.”

The High Minister sighed again. “You and Khan are very similar, yet where you are the light, he is the darkness – at least in my timeline. In yours, you have managed to win him over, and to gain a very strong, brilliant, and fiercely loyal ally as it seems.” He glanced away. “In my universe he was all of those, too, but he was never your ally, and finally your mortal enemy. He…lost his mind in seeking revenge against you. He even…sacrificed his crew in attempting to kill you.”

Jim’s eyes widened. “He sacrificed…” He shook his head. “Nien would never willingly sacrifice one of his family to fulfill his own wishes.”
“And yet he was ready to die along with you, leaving his ‘family’, as you call them, to their fate,” Spock pointed out.

“That’s… is different,” the young captain murmured. “I’m family to him too.”

The Vulcan cocked his head again. “Because Dr. McCoy used some of Khan’s blood to revive you – to bring you back from the dead?”

“That… In the beginning, yes,” Jim admitted. “And then…we grew closer.”

“’Closer’?” Confusion began to shimmer in Spock’s eyes again. “Please explain.”

Kirk needed all his self-control to prevent himself from blushing. “As you already assumed at the start of our talk, we’re friends now. He’s saved my life several times, he’s protected my ship and my crew when he shared the SDD, and he saved us all only two days ago during the battle. He trusts me with his own life, with the lives of his family, and he sought out comfort from me after I learned more about his past – his whole past. He’s becoming adjusted to my crew, and he and Scotty already make bets on things, and he and Bones are trying to out-best each other to mother-hen me. Not unlike your younger self does,” he added with a teasing tone to his voice before becoming serious again. “And he is ready to face a real court, a real Federation trial, yet all he wants is his crew to be safe. That Luengo ordered their death is…”

“Barbaric. It would be genocide, as you have already correctly noted,” the High Minister nodded, then took another deep breath. “Jim,” began quietly. “I do understand that you want to help the Augments. In this timeline they have done nothing to deserve being held captive in cryosleep or even to be sentenced to death. I also can respect that you supported Khan and shielded him, yet I have to warn you. Khan is still Khan – a former king of a large area of Earth. He is someone who was created to be superior and to win, no matter the cost. As long as he gets what he wants he might cooperate, but if not, then he will use other methods – and would not hesitate to walk over any number of dead bodies to achieve his goals.”

Jim shook his head. “No, Spock, he wouldn’t, not anymore. He’s changed – a lot. Even Spock – the other Spock – admitted this. And believe me, the two of them had a very rough start, yet they have managed to come to terms with one another. Nien knows that Spock, Bones, and the others in my crew are my family, and that was and still is reason enough for him to support them, because for him is nothing more important than family.” He rubbed his neck. “All he wants is for his own to live somewhere in peace – to know that they’re safe and sheltered. He loves them dearly, and after that order came… Spock, he is desperate. Desperate enough to forget his sometimes-silly pride and to ask for asylum – to beg anybody ready to listen to give his people a chance. They are people, Spock.
Although designed, they are still human – with feelings, longings, loves, and dreams. They have souls which suffer or soar. I see it every time Nien laughs, listens, talks, or fights. There is so much depth in his heart, I really can’t understand how others can’t realize it. For Luengo, Norton, and Section 31 – especially for those scientists – he’s nothing more than a piece of flesh they can use for experiments. For them he isn’t even a person but a creature, a prisoner with a number, yet he is more human than many others I know. And his people are no different.

“He told me about them, of the newly married couple, Katie and Otto, of his little brother Joaquin – he’s only 20, for god’s sake – of Rodriguez, Pablo, Chang and all the others. He told me of his best friend Kabir who’d sacrificed himself to give Nien and the others a chance to escape from New Delhi. He told me of a maid he tried to save together with other servants, but had to watch how she was killed and literally butchered by his enemies because she dared to be loyal to him. He told me of the days in the labs when he was a child, of the freedom he experienced after he and the others had fled… There is so much to him, I don’t know where to start and where to end. It is utterly wrong to deny him and his people the simplest basic needs like a place to live – to live at all!

“And there’s more. Today Section 31 fears the Augments, tomorrow it could be the Vulcans, or the Rigelians because they are telepaths – or other races who are stronger at some things we Terrans aren’t. The Federation was founded as a harbor for a peaceful co-existence of different races despite their appearances, their special abilities, and their strengths and weaknesses. What Section 31 began now will lead to the destruction of the Federation. You fear someone, strip him of any basic rights and lock him away – maybe he can serve as a blood donor or something. We want to show strength? Just let us start a war. We are explorers? Just let us build a fleet of war ships in secret and change the explorers into soldiers. This all had begun under Marcus. And Luengo is trying to carry it on, walking indeed over dead bodies. Literally. I’ve got every reason to believe that the Excalibur wasn’t attacked from average Klingons but that this whole thing was a farce to get rid of those admirals who would never allow the return of Section 31. The death of the diplomats was a sacrifice they simply couldn’t prevent, that’s all.”

Spock had listened to the passionate and almost imploring speech Jim had given – revealing more between the lines than he had thought. The way the young Terran spoke about the man who had been his deadliest enemy in another timeline indicated to Spock that Jim Kirk and Khan Noonien Singh had grown indeed into close friends. The fury as Kirk told him of the violence Khan had endured, the compassion as he spoke of the Augments Marcus killed, the warmth as Jim mentioned the way Khan had saved and protected him… The Vulcan sensed that there was more than the words spoken, yet he wasn’t ready to assume more in this relationship. A relationship that brought Jim Kirk to him, Spock, as a spokesman, and even a representative. Jim had effectively begged him to take action – to offer the Augments shelter and to grant them asylum – something High Minister Selek would have to discuss first with the Vulcan High Council before he could say ‘yes’ or ‘no’. But given his position and influence, the council members would decide as he indicated.

But before he could relate this to Jim, Kirk spoke of an assumption that was more than daring. Section 31 could have had a hand in the incident in Borderland? Of course Spock knew of the attack and the resulting deaths of the whole delegation, including the admirals and further officers from the Excalibur. This bad news had been delivered to the three Vulcan members of the Federation council
within an hour after President Robertson had received it.

Spock had needed a moment to stomach this information, because he was very aware of the fact that Sarek belonged to that delegation! And if the delegation had been killed, then so had his father…

A sharp stab of pain had gone through his whole being. He had mourned the loss of his father only several years ago, and he had tried to become less attached to Sarek in this time-line, knowing it would be wrong to pursue a relationship. Yet he could not deny that his human side had been glad to have a second chance to be and to work with Sarek, even if their relationship was odd; after all, he was older than his father. Nonetheless, he had hoped to have some years to enjoy his father’s company whenever Sarek stayed on New Vulcan. To learn that not only his mother, but his father now had found death long before their time should have come, pained him.

“I know of the demise of the admirals and the diplomats, Jim. After all I am personally effected because of Sarek’s death.” He cocked his head. “And you have proof that Section 31 is responsible for them perishing?” he asked quietly, and watched those blue eyes widening.

Jim realized that not only his Spock, but also the old Vulcan had lost his father. Officially. In secret Kirk hadn’t give up faith that there were some survivors and that Sarek was perhaps among them. But this didn’t change the fact that just now Sarek of Vulcan had been declared dead, and as he saw a flicker of pain in those dark eyes on the screen, he felt bad all over again. To see his own Spock mourning had been heart-wrenching, to watch the old Vulcan now suffering too made Jim cringe. And he felt like an asshole for having not shown more tact as he mentioned the Excalibur.

“Shit – that came out the wrong way,” Kirk murmured. “I’m… I’m sorry, Spock. I should have referred to this topic more sensitively, seeing as Sarek was part of the delegation.” He gulped. “I’m sorry, my friend,” he repeated; compassion and own sorrow was plainly written on his face. “I mourn with you – yet I hope that there maybe are some survivors. As I tried to explain, I’ve every reason to believe that Styles – the captain of the Excalibur – played a dirty game. There are discrepancies in his report, and in the audio records from the Excalibur’s bridge, which also hint that maybe the second of the two shuttles wasn’t destroyed.”

A slow frown appeared on the wrinkled forehead of the old Vulcan. “You are saying that there is still the possibility that some members of the delegation survived – and Starfleet has done nothing to recover them?”

“Starfleet is now in the hands of Luengo – the man I assume to be the new head of Section 31. The death of the admirals paved the way for him to become the Chief in Command. At the moment he’s only the acting head, yet when he succeeds in winning this war – and he will ensure that that happens no matter what the cost – the Council will certainly promote him permanently to the position. Therefore, he really can’t have even one of the survivors found.”
“Why do you believe that Luengo is the new head of Section 31?” Spock asked. “If this organization really still exists, then –”

“There are so many reasons I barely know where to start.” Jim took a deep breath, before he revealed the next part of what he was convinced of being the deed of Section 31. Spock listened very closely, interrupted here and there to obtain more details and also filed all the information as the young captain explained his own assumptions, as well as those of the other Spock, Khan, Dr. McCoy, and Mr. Scott.

As Kirk came to the end, the High Minister nodded slowly. “These are very serious charges, Jim. Without proof you will be fighting a battle you can’t win.”

“Yeah, I know – yet I don’t believe in no-win-scenarios. Everything depends on the chance that some of the delegation survived…”

Jim felt his Spock’s presence just a second before his friend’s deep voice said from behind, “There are survivors.”

Kirk turned around. The door closed behind the first officer, who quickly closed the distance to the conference table. Looking at his older counterpart, the younger one bowed his head politely. “Mr. Spock,” he greeted.

“Mr. Spock,” the other Vulcan replied and Jim groaned,

“Jesus, you do know how creepy this is?” Two identical lifted brows and the same confused look were directed at him and he sighed, before he simply chuckled and shook his head. “That’s crazy,” he whispered, and both Vulcans thought it better to skip an answer. Then Kirk became serious again. “So, what’s up, Spock? You said there were survivors? Has Galven…”

“Mr. Ritek contacted us several minutes ago and as you were occupied with another transmission, I answered The Shadow’s hail. They found the second shuttle that crashed on Yaska, just as you anticipated. Mr. Galven also found four dead bodies, no more, but also blood traces, among them Vulcan and Terran.”

“Were they taken captive?” ‘Selek’ concluded and his younger self nodded.
“Obviously. There were not only traces of another spacecraft nearby and footprints leading to the destroyed shuttle and back again. Mr. Ritek also intercepted a transmission between an Orion slave trader and the Romulans.”

“The Romulans?” Jim’s voice was pitched as high as a dog whistle, while his eyes widened. “Let me guess, the Orions offered them our Federation citizens.”

“Your assumption is correct, Captain,” his first officer affirmed. “They spoke of four staff officers and two Vulcans, in which the Romulans also have an interest.”

“The telepathy tests,” the older Spock murmured. “But those took place approximately twelve years later.”

“So the Romulans experimented with Vulcans in your timeline, too?” Jim asked, and as ‘Selek’ nodded, he groaned again. “Great! Not only they will get their hands on four of our admirals, but also one of our most important diplomats who just happens to be your father!” He rubbed his face. “God dammit, we’ve to stop this insanity – now!”

“If circumstances were different I would suggest that you contact Command and update them on the survivors, but given the possibility that the interim Chief in Command himself instigated the current situation, it seems to be up to us to ‘deal with this’, as you would say,” the younger Spock addressed his captain.

“And I can’t act on it, because I’ve got this damned order concerning Gamma 12. I wouldn’t give a shit about this order if Nien’s people weren’t depending on me. If I don’t destroy Gamma 12, another captain will and he wouldn’t beam them out first, but would kill them. No doubt about it.” Jim’s hands balled into fists. “This is so fucked up!”

The younger Spock looked at the older Spock. “Has Jim already asked for your support concerning the Augments?”

“Yes, he has, even if he had not become as…explicit until now.” ‘Selek’ glanced at Kirk. “You want to pave the way for Khan to find a home for his people here on New Vulcan and for this you need my support.”

Jim smiled sheepishly. “Yeah,” he confirmed. “As soon as I have the other Augments on board and
Luengo learns that I...took his order to evacuate the facility too seriously, he’ll try to hunt us down. There is no doubt about it. Marcus had been ready to sacrifice the Enterprise for his plans, his assumed successor has certainly even fewer scruples if he really is the one responsible for the Excalibur’s assault. We need to get Nien and his family to a planet that grants them asylum as quickly as possible. We have a few days at best for that, and New Vulcan is four and half days away from Gamma 12. With the SDD activated, Starfleet will not be able to locate us, but Luengo is clever. He’ll assume that I’ll race to New Vulcan because he knows your true identity and that I will certainly turn to you for help. We have to be very, very quick – and at the same time, we have to recover the survivors of the delegation. I can be counted on to achieve a lot, but to be in two places at the same time is something even I can’t manage.” He shook his head.

“You told me about this civilian crew who aided first Khan and now you as well,” ‘Selek’ mused. “And they are already in Borderland. Maybe they can be of further help.”

“The Orion pirates know of them. They know that a Tellarit, a Caitian, a Rigelian, and several humans belong to the little militia. But Galven and the others would put themselves at enormous risk if they try to recover the survivors.”

“And, additionally Mr. Ritek informed me that they are not aware of the location of this slave ‘market’.”

“Market?” Jim echoed and the Vulcan at his side nodded.

“There will be an auction. Apparently there are other survivors which are to be sold into slavery.”

Kirk closed his eyes. “Dammit to hell!” he whispered, then he took a deep breath. “We have to act! Maybe Bob carry off this rescue, while we continue to obey the orders we were given.”

Jim had already told ‘Selek’ that Bob Wesley knew of Khan’s presence aboard, and that the commodore even supported the Augment by making arrangements for a patent of the new device, while simultaneously ensuring that Command learned of this new technology and bought it. That Bob Wesley had decided to help Khan was not unimportant to the High Minister. He knew the commodore from his own timeline and had always held a high regard for him. If Wesley was ready to protect Khan then – indeed – several fundamental things had changed.

Therefore the old Vulcan nodded slowly. “If someone is able to recover the survivors besides yourself, it could be Bob Wesley. You will have to involve him in this particular matter too, Jim.”
Kirk sighed. “I know. And I also have to trust him with my plan to rescue Nien’s people and take them to safety.” He looked the older Spock in the eye. “Please, don’t deny them a chance to live,” he said softly. “You are the only one I can think of to turn to. Life is sacred to Vulcans – the life of every life form, genetically altered or not. Your people and the Augments share an almost similar fate. You and they have much in common, and not only the demise of the most of your peoples. The Augments are highly intelligent, logical, controlled and utterly loyal to their family members and their friends – and to those who help them.

“Nien told me that there are two architects among his people, and nine engineers, including himself. There are also three doctors. I’m certain that they will repay your hospitality by helping you to extend New Shi’Kahr – by supporting your colony. But this is not the only reason why I think New Vulcan would be the perfect place for them to settle. They are utterly new to this century. They will certainly be confused at first and the calm demeanor of the Vulcans could help them to come to terms with everything. Augments are proud, yes, but they respect equal intelligence, and even enjoy it. Nien does and some of his stories tell me that his is a typical attribute of his people – to learn and to grow. Both sides could benefit with such an arrangement.”

‘Selek’ lifted again one brow; something close to amusement sparkled in his eyes. “You thought this through thoroughly while discussing it with me,” he stated, knowing Jim Kirk too well to even think that the young man had wasted a thought on his arguments before he hailed him.

“Yes,” Jim nodded. He was aware that he couldn’t fool Spock – either Spock, actually.

“What will become of you?” the High Minister asked. “Even if Commodore Wesley can recover the survivors of the delegation and you can prove Luengo’s guilt, you still will face court for sheltering Khan and for insubordination.”

“I know,” the young captain sighed. “And I’ll state for the record that my officers were only following my orders.” He ignored that the younger Spock grew stiff at his side. “There is still General Order 26 that states that Starfleet personnel can’t be held responsible for the actions of their superiors, and that they won’t share any disciplinary measures because of it. Therefore…”

“You forgot the part in which said persons can be called responsible if they had an active part in such an infringement,” his first officer interrupted him. “And in this endeavor, that is indeed the case.” He lifted a hand as Kirk wanted to protest. “We are all in this too, Jim – Dr. McCoy, Mr. Scott and I. If you take the General Order literally, the whole bridge crew would face trial, not to mention those who identified Khan and did not alert Command.”

Jim looked unhappily at him. “I really didn’t want to get you all in trouble, Spock. I…”
“I know, Jim. It was our own choice to support you and your ‘friendship’ with Mr. Singh, particularly after learning of everything that happened to him, and how he saved you, repeatedly, under the most deadly circumstances. In my experience, most Starfleet members I have encountered have a strong sense of justice and this sense simply encouraged us to decide as we did. It is not your fault that we are at this point now.” Spock’s voice was gentle and reassuring – almost comforting. And ‘Selek’ smiled inwardly to himself as he realized how close his counterpart and young Jim Kirk had become. The universe tried to mend the rip of the timeline manipulation – at least in this matter.

“Thanks,” Kirk murmured, grateful for the utter loyalty his T’hy’la displayed once again. Then his attention returned to the old Vulcan. For a long moment they only looked at one another – Jim pleadingly, ‘Selek’ thoughtfully. And like to many times before in another universe, Spock was not able to refuse his soul-brother anything – especially when the topic was so important to him. Sighing, he gave in.

“Very well, against my better judgment I will speak with the other members of the High Council,” he said – and was rewarded with a wide, brilliant smile, full of relief and joy.

“Thank you, Spock,” Jim said and all of his heart echoed in his voice. “Thank you so very, very much.”

“I can’t promise you anything, Jim, but I will try my best,” ‘Selek’ tried to calm Kirk, but for naught. Jim beamed at him with such shining eyes that the old Vulcan couldn’t find it in himself to douse this joy by stating facts such as the possibility that the Council wouldn’t give its permission for the Augments to set a foot on New Vulcan.

“Be careful, old friend. If this order is indeed a trap for you – and all evidence points to this – then they’ll be waiting for you at Gamma 12.”

“Yes, I have to outsmart them – not an easy task but nothing I haven’t done before with Marcus.”

“And note how well that turned out,” his Spock murmured, clasping his hands behind his back and looking very innocent. Kirk glared at him.

“Rrrright,” Jim grumbled. “Leave it to you to remind me.”

On the screen, ‘Selek’ was the living example of an amused Vulcan. Alas, how much this all reminded him of the thousands of times and more he and his Jim had teased each other.
The Enterprise’s captain pouted for a second longer, then turned his attention back to the High Minister. “As I said, I’ll take complete responsibility, maybe facing trial with Nien together. There is no way on Earth that they can make a case in separate courts because both our cases are completely tied together. I’ll try to keep my friends and the rest of the crew out of the whole mess, but maybe they could stay on New Vulcan until any trial is finished. Starfleet has no authority on your planet, not even a star base. So no one could arrest them.”

“Captain, do you really think Dr. McCoy, Mr. Scott, Nyota, nor I would hide on New Vulcan while you faced trial?” Spock sounded as baffled as a Vulcan could be.

“It would be the only logical thing to do,” Jim answered, and saw irritation glittering in his friend’s eyes.

“The logical thing for a coward to do,” the first officer said with a low growl in his voice. “None of us is going to let you down.”

“First you have to make it safely to New Vulcan and ensure that the survivors are recovered – the admirals could vouch for you, Jim. Above all, you must gain proof of Luengo’s treason,” ‘Selek’ interrupted the quarrel. “And if I understood you correctly, you have only four or five days to do so.” He bent forwards again. “Maybe I can be of further help. Whatever Luengo intend concerning you, he needs active support, meaning he has to stay in contact with his fellow conspirators for his plan to work. I may have a way to ‘overhear’ some of these conversations. If I find anything important or damning, I will contact you.”

“Spock!” Jim cried, mock-scandalized. “Are you about to spy on the Chief in Command?” He shook his head. “Tsk, tsk, and that from a former officer, ambassador, and now leader of a whole planet.” His eyes sparkled with mischief and warmth.

“You were the only one who could bring out the worst of me – and still can,” ‘Selek’ almost sighed; the fondness in his tone took away the harshness of his words.

“I know what you mean,” his younger counterpart deadpanned, keeping his face absolutely expressionless, yet Jim saw straight through him.

“I’ll get you for this, Mister!” he threatened playfully, then turned serious again.
“You asked me to be careful,” he addressed the old Vulcan. “But the same goes for you. If Luengo or one of his henchmen catches you spying on them, they’ll find a way to eliminate the threat either politically, or literally. Please promise me you’ll be careful. I’m very grateful for your help but I don’t want to endanger you more than I already have when I asked for your support concerning Nien and his people.”

The younger Spock shifted uncomfortably as he saw the open affection on his older counterpart’s face at those words. “Do not worry, old friend. I did my share of spying during my active years in Starfleet and, as you have already pointed out, the computer security systems of this time are ‘old hat’ to me. As soon as I obtain some answers I will contact you.” He lifted his right hand and his fingers parted in the Vulcan greeting. “Long life and peace, my friend.”

Jim mirrored the gesture, less elegantly, but he managed. “The same for you, my friend. Take care of yourself.”

Then the two Vulcans greeted each other in a similar way, before the transmission was ended. Jim took a deep breath and rubbed his eyes. “Another hurdle overcome,” he murmured, “but I have this bad feeling that we will all be pushed to our limits before everything is over.”

Spock didn’t answer, not because of his ‘gut-feeling’ but because his logical mind told him the same.

A minute later they entered briefing room 2 where Khan, McCoy, and Scotty had been discussing the recovery of the delegation’s survivors, when Spock had answered Ritek’s hail. All three stopped as the commanding team stepped in, yet Jim only had eyes for the Augment who looked with a mixture of fear and hope at him.

“He supports us,” Jim said, and watched how Khan closed his eyes for a moment. He not only saw, but also felt his mate’s relief, and had to control himself not to go to him and to gather him in his arms.

McCoy shook his head and snorted. “Of course he does – after all it’s you who asked for his help.” His gaze wandered to Spock. “And our hobgoblin never ceases to hurl your ass out of the hot water you maneuver yourself into over and over again.”

The first officer simply lifted a brow and gave the CMO one of those glares which were indignant but simultaneously expressionless.
“Who is ‘he’?” Nien asked, looking up again and straight at Jim. “Neither Mr. Spock nor the others would give me an answer, but I think I should know who’s going to help my family to safety.”

Kirk nodded. “Of course you should know. ‘He’ is High Minister Selek. Besides the Elda T’Pau, the most important person on New Vulcan. I told him everything, and even though he’s not exactly thrilled with my request, he promised his help. He’ll speak with the members of the Vulcan High Council, and if they agree to harbor you and your people, you can apply for asylum. I think we can expect an answer within a day. Selek knows that we’re running out of time, and he’ll help facilitate a speedy decision.” He sat down. “In the meantime, we need to work out details of this plan for saving Nien’s people, to avoid the trap Command set up for us, and also have to find a way to prevent Sarek, another Vulcan, and four of our admirals to fall into Romulan hands. Not forgetting the other survivors who are about to be sold in the slavery market.” He looked around while Spock took his seat beside him. “So, gentlemen, any suggestions?”

ST***ST

One strong index finger punched the button that closed the connection with enough violence to almost break it. A tirade of guttural words echoed through the room, before a chair was pushed back, a solid shape rose, and a fist landed on the desktop with enough force to make the terminal shake.

Kor, son of Rynar needed to remember every technique for self-control to force back his rage.

How dare they?!

How dare they accuse him of disobedience and dishonorable behavior – because that’s what this was, an accusation! It was a demand for an exact report to the Klingon Council, and M’Rek wanted it in person immediately! He had kept the Empire’s word concerning the ceasefire, and had been ready to kill the renegade commanders and their crews in defense of the Enterprise – Kirk’s ship of all ships! He’d been itching to open the fire on the heavy cruiser himself, but never, under any circumstances, would he bring shame on his people by breaking a promise – a promise that had been made between the two highest men of the Empire and the Federation!

Just think! Asking him if he really had attacked the Excalibur – a vessel that traveled under a white flag, as the Earther’s saying went – had been like a slap in the face. As if he would launch an assault on a diplomatic spacecraft and destroy evacuation shuttles with the whole delegation aboard! Whoever had done this wasn’t even worth dying in battle and gaining a place among the Black Fleet. Whoever this traitor was, who even dared to use his name to commit this shameful crime, would die painfully and without honor. He was going to take care of that, personally.
The transmission from K’Thar, one of the ministers, had caught Kor by surprise and had awoken his upmost fury. For several moments he even thought the Federation might have come up with this nonsense in order to cancel the conference in a very cowardly way. Or maybe it was some of the generals who weren’t content with the agreed ceasefire and tried to lure him into a trap. But after K’Thar, who had been a friend of Kor’s father, had shown him Robertson’s message, there was no doubt that this wasn’t all a very bad joke. Someone had killed the Federation’s delegation – someone who’d pretended to be him.

It was really an odd twist of fate that he – Kor – had been away from Borderland to support another Starfleet vessel when the attack against the Excalibur occurred. Otherwise they’d be back at war already. Not that he would mind. He was a warrior, and if there was a war to win, he would battle to the bitter end. But to be back in combat just because the opponent had been led to believe the Klingon Empire had broken a ceasefire was something Kor would loathe. The thought made him tremble with wrath.

He bent forwards and contacted the officer of duty on the bridge. “Klasz!” he barked, and his hail was immediately answered.

“Yes, M’lord?”

“Set course to Yaska, moon of Yaraka, maximum speed! Calculate ETA!”

“Twelve hours and thirty two minutes, M’lord,” came the information only seconds later.

“Right, maximum warp! Kor out!” He cut off the link and took a seat behind his desk again. He would have to make the report now and he would tell the Council exactly what he’d done within the last three days! And afterwards he would be on the hunt – on the hunt for this imposter who had attacked and insulted his honor!

TBC…

Chapter End Notes

So, my dear readers, the way is settled for our friends – a way full of danger. And I can
promise that there will be a lot of action and hurt until the big show-down comes to an end.

I really love to write ‘Prime’ Spock into this story; his experiences, his acceptance of his two sides and his affection for Jim that had grown during a whole life-time, will be of important matter soon. It also is fun to have the ‘old’ Spock back during writing. The Spock of the new time-line is different; more emotional if you could say this about a Vulcan, more twisted inwardly but also more open towards risks in personal ways. Right, he is younger than his counterpart during the first five-year-mission and he suffered great losses what changed him a lot, therefore I have two different characters I can ‘play’ with.

There are many authors who also chose ‘Selek’ for Spock’s new identity in the new time-line; a pseudonym he also used in the old time-line as he met his younger self at Vulcan. It sounds logical that he uses this name again in a like-wise situation and I had this idea from the beginning, too, so please don’t flame me.

In the next chapter Wesley will learn of everything and he has to act – acting in a way he never dreamed of (*snicker*). You also will meet Barnett and the others again, our boys have a cuddle-session and dear Wesley will face an old acquaintance again.

I hope you liked the new installment as well as the explanations around Prime Spock’s new position and his talk with Jim and his younger self. As always I’m really curious what you think about it.

Until soon,

Love

Yours Starflight
Chapter Notes

Hi, my dear readers!

Once again I can only apologize for the late update, but I had to edit the chapter several times and then my dear beta-reader was away in family-business. Yet I hope that the waiting worth it and that you’re going to love the new chapter.

Thank you so very, very much for all the kudos and reviews; I love you, guys.

Have fun with the new installment,

Love

Yours Starflight

Chapter 54 – A hell of a plan, part 2

The Enterprise and the Lexington met at the agreed coordinates at 19:58 ship’s time, and Wesley instantly ordered the spare parts and medical supplies needed should be beamed over using the cargo transporter. He himself arrived at the Enterprise several minutes later, using transporter room 1. He wasn’t surprised to find Jim already waiting for him but he was surprised to meet Dr. McCoy in briefing room 2 and also Khan, who wore…command gold.

Wesley’s widened eyes hung for a moment at the rank on the Augment’s tunic, while he returned the respectful greetings, only then turning back to Kirk. “Don’t tell me you’ve promoted Mr. Singh to petty officer,” he said, before quickly addressing the former dictator. “No offense meant, Mr. Singh.”

“None taken, Commodore,” Khan answered.

“Well, I’m running out of helmsmen and Nien is an excellent pilot. Yet I can’t fill the post with a civilian, especially on the main bridge, so I used Starfleet regulation 58b to…” Kirk stopped himself as Wesley groaned loudly and closed his eyes.
Taking a deep breath Bob opened his eyes again a few seconds later, took the offered seat, and glared at his protégée. “One day you will be the death of me,” he growled. “How am I going to explain that you promoted a wanted man to a petty officer, only because…”

“I followed the regulations, Bob, you can’t deny it.”

“No, you bent them – again!” Wesley shook his head. “And I have a feeling that the space-dock at Rigel would have been able to repair your ship if I’d ask them.”

Jim smiled sheepishly and sat down opposite him. “I’ve got to speak to you in private, Bob – concerning this whole mess with the Excalibur and…other things.”

Warily, Wesley cocked his head. “What other things? You already told me about the discrepancies in Styles’ report and…”

“I didn’t tell you everything because I’m afraid that we were overheard. I caught a spy on my ship, and I can’t be sure that there aren’t more of them.”

“Spy?” Wesley thought he hadn’t understood his young friend correctly. “What spy?”

“A spy from Section 31 –”

Bob opened his mouth to interrupt, but Jim continued firmly.

“– who got his orders from the SBI to install a bug in my quarters, and who tried to kill Nien and Spock when they caught him!”

“To kill…?” The commodore was shocked, from his face that was plain to see, while he stared at the Augment, asking himself in the same moment where the Vulcan was. Usually Spock never left Kirk’s side, especially on an occasion like this one.

“Yes, out of revenge because he lost a cousin and a friend in the crash of the Vengeance,” Jim explained. “He wanted to kill the man he was told was responsible for the catastrophe. And he was about to shoot Spock because he intervened and protected Nien.”
Wesley’s mouth was hanging open now, before he closed it with an audible snap, and looked at Khan. “You caught this man in Jim’s quarters?”

“Yes. I was on the bridge when Lieutenant Uhura received the message that someone used Dr. McCoy’s override code to enter the captain’s private rooms. I knew that Dr. McCoy was in a briefing with Jim and Mr. Spock at the time, and therefore couldn’t be the person who forced his way into Jim’s quarters. I got there in time, caught the man installing a listening device, and challenged him, but he attacked me instantly, trying to stun me first but soon switched the phaser’s settings. I have Mr. Spock to thank that I wasn’t shot.”

Bob blinked several times. “He tried to stun you?”

“Nien is immune to phaser stuns – well, sort of. He felt nausea afterwards,” Jim explained, and Wesley nodded. “I understand.” He obviously did not, but gave this detail a rest and moved on to the next topic. “And why do you think Section 31 is behind all this? If the SBI ordered –”

“Because I have every reason to believe that Luengo is the new head of the Section 31 that still exists.” Kirk fixed his gaze at a thunderstruck Bob Wesley. “And I also think that he is responsible for the assault on the Excalibur.”

This time Wesley gasped. “Are you crazy?” he blurted out. “You accuse the interim Chief in Command to…”

“He’s only been promoted to that because all the other admirals who would have come before him in the chain of command are dead – or so Luengo thinks.”

For another ten seconds Bob stared at him, before he whispered, “Do you know what you’re saying here?”

“Yes,” Kirk replied calmly. “I’m speaking of conspiracy – a very big one. One we’ve to stop.”

Bob combed his fingers through his grey hair. “Jim, I do understand that this whole incident smells fishy, but…” He stopped himself as the door opened and Spock entered.
The Vulcan bowed slightly his head. “Commodore Wesley,” he greeted, before he said to Kirk, “Most of the supplies have been brought aboard, Captain.”

“Thanks, Spock.”

Bob used the little pause to collect himself before he addressed the first officer. He rose politely. “Mr. Spock, I already gave you my condolences, but please allow me to personally tell you how sorry I’m for your loss.”

A dark eyebrow was lifted. “Thank you for your sympathy, Commodore, but that isn’t necessary. My father is alive.”

Again Wesley’s jaw almost hit the floor.

“And so are his assistant and several other survivors, among them four of our admirals,” Spock added.

The Commodore stared at him, then at Jim – and finally at McCoy. “Please tell me they’ve got space sickness!” He said, pointing nonchalant at the Enterprise’s command-team.

“I can assure you, sir, that both are enjoying good health,” the CMO answered with a sigh.

“This is no joke, Commodore,” Khan cut in. “We received a message from The Shadow. They checked the surface of Yaska and found the second shuttle – destroyed but intact enough to protect its passengers. Four are dead, the rest had vanished, yet Galven found evidence of another space craft that landed nearby, and footprints which led back and forth between the two vessels.”

“There were also traces of blood in the shuttle – Terran, Vulcan, Andorian, Tellarit, Risean, and Betazoid.” Spock informed the speechless Wesley, who sank back into his chair.

“And Ritek intercepted a transmission between some Orion slave traders and the Romulans, who want to buy four Federation staff officers and two Vulcans,” Jim added. “There was also the mention of more ‘interesting slaves’. Given the Betazoids’ sexuality, I think I know what those bastards were talking about!” He straightened his shoulders. “There is no doubt that some members of the delegation survived and are now in the hands of Orion salvers.” He pursed his lips briefly. “I would go after them by myself, but I’ve got an order from Luengo to evacuate the personnel on Gamma 12
“WHAT?” Bob’s eyes were about to pop out his head. “Mr. Singh’s people are there?”

“I got a manifest of the facility, including the top secret stuff – among it all ‘seventy-two tubes with biological test subjects’. Seventy-two tubes, Bob – and there are seventy-two remaining cryotubes with Khan’s family inside them. Gamma 12 is listed as an unmanned transmissions post; in truth it’s a high security facility, two and a half days away from Earth on a godforsaken little moon – the perfect place to lock the Augments away!”

“Luengo knows about my presence aboard,” Khan threw in. “Mr. Spock was able to decode the spy’s PADD which holds pictures and records of Jim and me during our mission on Aldebaran.”

“And Lieutenant Uhura has reconstructed the message Lieutenant Nureaux – the spy – sent in secret. It refers to Mr. Singh’s presence here. The receiver was somewhere in Headquarters, a private terminal with no official ID number, as far as I could determine,” Spock explained. “Incidentally, the lieutenant’s PADD is not standard, but an innovative device used by the SBI – exactly like the listening device and the secret transmitter Security found in Nureaux’ quarters.”

Bob felt a headache coming on and glanced back at Kirk. “So they have you their sights. Shit, Jim, you are a hell of a lot of trouble! Even if the SBI has nothing to do with Section 31, they can get you because you covered for Mr. Singh.”

“I know, Bob. I knew the risk, yet I wouldn’t change one thing given the chance.” Kirk’s jaw was set, firm determination burnt in his eyes. “And I’m convinced that the SBI – Luengo – is responsible for the current situation! Not only the mess with the Excalibur, but also by planting the spy on my ship. Nureaux’ statements and reactions at the hearing leave no doubt about it.”

Wesley frowned. “So, because the SBI found out that you hid Khan on the Enterprise and sent someone to check it out, you think that Luengo is behind the assault of the…”

“There are only a few people who know about Mr. Singh’s existence at all,” Spock cut in. “Admirals Barnett and Komack, the President of the UFP, Admirals Luengo and Norton, and a handful of Council members. Barnett and Komack have been officially declared dead, and, incidentally, if they had known of Captain Kirk harboring Mr. Singh, they would have acted completely differently than the SBI. The President and the Council members cannot have sent Lieutenant Nureaux or could have provided him with the information I found on his PADD. All evidence leads to someone with power who works at the legal limit – Admiral Luengo. A Vulcan does not make wagers, but if I were human, I would put money that the personal computer in HQ Nureaux sent his message to belongs to
Before Wesley could reply, Jim followed on from Spock’s speech.

“Think, Bob! Luengo had knowledge of Nien’s transfer to the secret labs and did nothing to stop it, which is effectively illegal. He supported the scientists and Norton, who are obviously part of or work for Section 31. One of the scientists even worked for Marcus at the secret Jupiter station; Nien recognized him.”

Khan simply nodded as Wesley looked questioningly at him, glad that Jim chose not to mention the other circumstances in which he knew of this ‘scientist’, his rapist.

“Barnett put Luengo into custody for it, but Luengo went free as the war started,” the young captain continued. “He has power to pull enough strings to reap the advantages of the last days’ events. Those admirals who’d accused him and took him into custody are officially dead, and he is now the Chief of Command – interim, yes, but the only remaining step to promote him permanently is just a question of time. And then Section 31 will once again rise with all its power, and once again making its own laws.”

“You are accusing Luengo of murder,” Wesley stated carefully, and Jim made another affirming gesture.

“Yes, but the executioner was someone else.” He bent forwards and activated the terminal. “We found out several very interesting things in Styles’ report – things, which prove that he had absolutely no interest in saving the evacuees, even sending them to their deaths. This is the reason why I wanted to speak with you in private – because I really didn’t want to discuss this stuff via subspace!”

For the next quarter hour, Bob listened to Styles’ report which he’d already heard three or four times. But previously, he hadn’t been aware of the little but important discrepancies within the newly-promoted captain’s words and actions. Without Spock or Jim pointing out those details, he wouldn’t have recognized them for what they were. Next he watched the recorded transmission between Ritek and Spock that had taken place several hours ago, and he didn’t know if he should be relieved or even more horrified that there were indeed survivors, which were as good as lost now. And at last he listened to the theory that the order given concerning Gamma 12 was a trap for Jim and his crew – a trap that had been set by the SBI.

Wesley felt cold, even if the cup of hot coffee McCoy had fetched for them all – aside for Spock – warmed his fingers. “If you’re right with all these assumptions and accusations, then why doesn’t
Luengo simply arrest you, Jim?” he asked quietly. “Mr. Singh’s presence aboard is reason enough to…”

“This is one of the things I have no real answer for. All I can think of is that Luengo’s scientists-henchmen want Nien back, too, and so they’re luring us both into a trap. They know Nien will come to Gamma 12 knowing his family is there, and he will put up no resistance if the lives of his crew are at stake. I’m sure they’ll wait to see what we’ll do before acting. If I don’t follow the order to the letter, they can not only get me for harboring a fugitive, but also for insubordination. I and my senior officers would be stripped of our command and rank, the Enterprise would be given to someone else loyal to Luengo, and our flag ship will go down as a casualty of battle in the ‘glorious war’ Section 31 wants in order to control the power they’ll need to win.”

Bob rubbed his forehead. “Still Luengo could send two ships and arrest you. So why –”

“Jim brought Section 31 down once – and he would do it again, given the chance,” Bones thought aloud. “At any trial, he’d tell the truth. And even if Luengo denies everything, there would certainly be council members who would investigate on their own. Luengo knows this. And he knows that Jim is Barnett’s man – that he loathed Section 31’s methods, and will fight them till the end. I personally think that they don’t even want to arrest Jim, but kill him. They’d have that chance when he reaches Gamma 12 and doesn’t obey the order. Fight – and then BANG.”

Kirk rolled his eyes. “Bones, don’t you think you’re being a little melodramatic?”

“And don’t you think you’re not taking this whole thing seriously enough?” the CMO shot back. For a moment they glared at each other, before Leonard continued, “Right, let’s pretend for a moment they’ll play nice. Luring you into a trap which will send you to prison for ages is a very good solution to their problem, but they’ll need an official reason for it. The Federation loves you and public wouldn’t take it well if Command takes your rank and your ship away. They won’t be able to explain to the media that you’re going to court because of Khan, because he doesn’t even exist officially. And Luengo can’t show his true colors in public; his plans have to stay secret, as well as the existence of Section 31. Therefore they’ll need to be another reason to arrest you they can give the media – insubordination.”

Spock lifted both brows this time. “That is a remarkable deduction, Doctor. I am surprised in a positive manner that you were able to deduce that.”

“Thanks,” McCoy replied sarcastically. “That coming from you is a compliment.”

“I do not make compliments, Doctor, I simply state facts. Yet I ask myself why you do not follow a
Bones rolled his eyes. “Because you’re the living computer on board!”

“Guys,” Jim warned them sternly. “We don’t have time for this.”

Bob Wesley had used the short quarrel between the first officer and CMO to ruminate on his own thoughts. From Kirk’s point of view everything made sense – more sense than he liked to admit.

The chief of the SBI – a traitor? Luengo had arranged everything to become the head of Starfleet? And this all to bring back Section 31? As unbelievable as this sounded – as horrible as this would be – it made sense! In fact, it was the only way everything that had happened in the last days made any sense.

“We need proof, Jim,” he murmured, not realizing that he was ready to believe and to support his protégée. “You know this. If we show up with this wild theory before the Council and –”

“The surviving delegates could certainly give enough evidence to finish Luengo and the others,” the young captain interrupted him. “And if Luengo ordered genocide that would be the final nail in his coffin. That’s something the Council would not tolerate. Or even believe to begin with; there’s absolutely no reason for him to order the Augments’ death – the death of a whole race.”

“A whole race?” Wesley asked; confused.

“Allistor stripped Nien and his people of all human rights and declared them ‘non-human’. Therefore they are their own race – and to order all their deaths is genocide,” Jim explained, his tone hard. “Luengo isn’t going to take any risks with the Augments escaping, and I’m sure his scientists would be satisfied with getting Khan back in their hands. So, he gave the command to destroy several high security facilities in order to lay a trail – the wrong trail – for anyone who might investigate such an unusual order – an order the Council is certainly not informed about.”

“What do you want to do concerning Mr. Singh’s people?” Bob asked, and Jim took a deep breath.

“I’ll beam them out before I destroy Gamma 12, and take them to New Vulcan, where Nien will ask for asylum until he can face a real trial. Luengo’s order of genocide gives Nien and his crew a right to asylum on every planet in the Federation. They’ll be safe there until we can get their case heard in
Wesley frowned. “And the Vulcans agreed to this?”

Jim nodded. “I spoke with High Minister Selek and was able to convince him to support my request. I expect a positive answer from the Vulcan High Council within the next few hours.”

“You spoke with Selek? Just like that?” Again, the commodore stared at his protégée, baffled.

“Yeah – we’re…uh…old friends.” Jim nodded with a grin.

“‘Old friends’, Bob echoed, shaking his head, while Spock looked at the ceiling and McCoy only grimaced. Khan frowned. What was it about New Vulcan’s leading minister that had the senior officers reacting like this every time Jim mentioned him and their friendship?

Bob had caught himself again. “Right, you fly to Gamma 12, avoid the trap – I don’t know how you’re going to do it, but you’ll find a way, I guess. Then you’ll give the Augments a ride to New Vulcan and place them under Selek’s protection. I assume you’ll use the SDD to speed through Federation space without being noticed, because – believe me, son – half of Starfleet will be at your heels as soon as you leave Gamma 12 with the augments aboard, without being arrested.” He put the cup back on the table and crossed his under arms on the table surface. “And what shall I do in the meantime?” He pointed a finger nonchalantly at the younger man. “You’ve something in store for me, don’t tell me otherwise!”

“I thought that would be obvious?” Jim was all surprised innocence. “You save the admirals and the diplomats.”

Wesley only glared at him. “Of course – how could I have not known?” He narrowed his eyes. “Pray tell me how the Lexington is supposed to travel through the Borderland without being caught by the Orions or those Klingon renegades, find the location of this slave market of which even the Syndicate has no knowledge, and recover the captives and make it back to the Federation alive?”

“Maybe the Lexington distracts them and you fly with The Shadow to the rescue,” Jim suggested. “I’m certain Galven will support you.”

“Of course, it’s so simple.” Bob’s voice dripped with sarcasm. “Me, this little militia-gang made up
of civilians, and you against Starfleet Command and the rest of the world – sounds easy!”

“We are not fighting Starfleet Command, we’re taking on the traitors who have no scruples about killing his own staff officers and any diplomat that gets in his way,” Jim said hard. “They’re about to destroy everything that makes up the essence of the fleet – of the whole Federation. We’ve got to stop them before it’s too late!” He cocked his head. “Or don’t you believe me that we’re facing a conspiracy here and –”

“I DO believe you – that’s the whole point,” Bob groused. “Everything makes sense – and to tell you the truth, it scares the hell out of me!” He made a gesture towards the wall and therefore to space. “How do you want to avoid the trap they set for you? You haven’t the slightest clue what this trap even looks like, what they’ve planned! How –”

“I’ll think of something. The SDD will help us a lot. I don’t think that they’ll be waiting for us at the facility, but nearby, because they don’t want to risk an open battle. The Enterprise is the strongest ship in the fleet and I’m well-known for my…unorthodox strategies. They won’t take any risks and will wait somewhere out of sight. If they think I play by the rules and am happy to obey the order they’ll have to wait for new instructions, and that gives me time – time for you and me.” He bent forwards. “Bob, it’s very important that you recover our people. Not only to convict Section 31, but the mere thought of four of our admirals and Spock’s father being in Romulan hands makes me sick thinking about what might lay ahead for them.”

“I can give you the private frequency of Galven,” Khan said. “You can contact him directly and speak with him. Ritek promised during the last transmission that they’ll try to find out, where this market shall take place. They intercepted even the Romulans, they certainly will be successful with eavesdropping the slave traders, too.”

“And then?” Wesley threw his hands up. “The Orions may be nothing more than pirates and rascals, but they have damn good tech. Hell, we needed their permission to cross the Borderland as the Enterprise was off to Turkana to take the evacuees aboard. There is no way in hell that they fail to notice the Lexington.”

Khan bent forward. “Their sensors will not be able to locate you if I give you the exact instructions on how to build another SDD.” He met the widening eyes of the commodore and continued, “I know that officially only one proto-type exists – that aboard the Enterprise – and Command bought it. There are certainly dozens of regulations which forbid you to install a further device before it’s licensed by Command, but this is an emergency. And I don’t think your admirals would mind that you…misinterpreted orders if you could save their necks this way.”

Wesley stared at him, then at Jim and Spock and back, before he shook his head. “The air aboard this ship must be responsible for the fact that everyone who stays here for any length of time thinks he
“But this is the only chance, Bob,” Jim said with determination. “Nien is right! You’re travelling deep into enemy territory. Without the SDD, the risk that they’ll get you is—”

“Eighty-nine point three four nine two eight percent, considering the Orion’s technical standards, not to mention the official Klingons stationed there.” Spock said helpfully. “With the support of the SDD, the possibility of success lies at 67.68391 percent.”

“A cakewalk then!” Wesley taunted, massaging his temples.

His oath and his honor forced him to do anything to recover the survivors of the delegation and to ward off any harm that could potentially befall Starfleet and the Federation. Kirk’s, Spock’s, and Khan’s thoughts about the reasons for Section 31 acting like it had were logical. Marcus had tried to provoke a war with the Klingons to increase his own power and because he was convinced that only a strong military-based Federation had a future. Luengo must think likewise if he broke the ceasefire; making it look like the Klingons were the ones who went against the agreement. If it hadn’t been for the discrepancy over the attacking Klingon commander, they’d already be back at war. There was no doubt about it.

“You know the risks we’re taking here, don’t you, Jim? Not only could we both stripped of our ranks and commands, we could be accused of treason, which would land us in prison for the next eight decades, or incur the death penalty!”

“I know – but we’ve got no other choice,” Jim said softly, fixing a stare at the older man. “We are at the point where we have to make a decision – to blindly follow any order given by someone who rails against everything the Federation stands for, or to do what’s right.” He held Bob’s gaze and asked gently, “Are you with me?”

“Do I have another choice?” Wesley murmured almost bitterly. “To deny you my support would mean the death of the survivors and possibly Mr. Singh’s people too. It would mean that in the end, the Federation as it stands would be dying.” He shook his head. “I only hope a few of the survivors have realized that they were tricked and realized they’d be led to almost certain death by one of our own, otherwise the tables could be turned very quickly and it will be us who are counting the nails of our coffins.”

“Styles’ report is full of mistakes, which speaks for itself. And I’m certain that one or another of the admirals has understood by now that they’re victims of this treachery. They’re held captive, but they’re not stupid. Hopefully, they’ve managed to learn a thing or two from their captors.”
“All evidence points to a connection between the Klingon renegades and the Orion slave traders,” Spock added. “The Orions had to have known of the Excalibur’s assault, otherwise they would not have been in the vicinity. They could not have learned any other way about the shuttle crash and that had an opportunity to take the survivors captive.”

Wesley nodded slowly. “Logical,” he commented, then he lowered his head. He knew that he had reached the point where he had to make a decision that could lead to scenario he’d never dreamed of even in his worst nightmares. Sweet Lord, this whole mess was a nightmare!

“Right,” he said slowly. “I’ll try to recover our people and talk to the surviving admirals. I don’t know if they’ll believe me or not – or if they’ve learned of the dark truth behind the Excalibur being attacked at all. Dammit, I can barely believe it, even with the clear evidence of Styles’ report. Contacting the Council with these accusations could be for naught, if Luengo really is behind everything. He’ll learn of it faster than I could give the Council a full report. He controls everything and his people are trained to be the best Intelligence members in the whole Federation. I only hope Luengo didn’t learn of your talk with Selek and –”

“He didn’t. Selek coded the line and there’s no better computer specialist in this quadrant or the next.”

Bob glanced at Jim and rolled his eyes. “I’ve heard that he is damned good with computers, but you put him on a pedestal, son!”

“He deserves it,” Kirk smiled, before he turned serious again. “So, when will you start and –”

“The moment we part and I obtain the instructions on how to build the SDD, I’ll be off to the rescue, as they say. I have to come up with an idea about what to tell Command if they contact me within the next days – or what I’m doing in the Borderland should Intelligence learn of the Lexington’s presence there.”

“You’ll think of something, I’m sure,” Jim smirked.

Bob rolled his eyes and rose and the others followed his example, at least as far as the standing was concerned. Extending his hand to Kirk he said, “I would suggest that we stay in contact, but in this case, silence would be the better part of valor. Only hail me if something goes wrong; I’ll do the same. If Luengo learns of my mission, and I really can recover the delegation, it will be in his best interest to hinder our return to the Federation.”
“I understand.” Jim said and shook his mentor’s hand. “Please be careful, Bob. The Orions are sneaky and spiteful.”

“Don’t remind me! I haven’t the slightest clue how to proceed, but I have to do something.” He looked at Khan. “You’ll send all relevant information to my chief engineer?”

“Yes, including a report of the modifications Mr. Scott made. I’ll have everything available within the next half hour.”

“Thank you,” Bob said and took a deep breath; he felt miserable. “What is Mr. Galven’s private frequency?”

The former dictator gave him the information and shook the commodore’s hand afterwards. “Once again, thank you for your support,” he said, and Bob grimaced.

“I’m already too far gone to step back now. Either we all come out of this unscathed, or we’ll go down, but at least in a blaze of glory.” He also shook McCoy’s hand before his fingers parted into the Vulcan greeting. “I’ll do everything in my power to recover Ambassador Sarek, Mr. Spock. You have my word.”

The first officer bowed. “I am honored to have your support, Commodore. Our clan will be grateful for your endeavor, even if it should be end without success. Long life and safety, Commodore.”

“The same goes for you, Mr. Spock.” He turned to leave. “Jim, please accompany me to the transporter room. I have to exchange a few words in private with you.”

“Of course.” Kirk hurried to say and left the briefing room with Bob.

McCoy rubbed his neck. “I don’t know how you see this whole thing, but for my part I have to admit that we’re in really – really – deep water!”

“I am certain that like most Terrans, you have learned to swim,” Spock deadpanned – and Khan felt the urge to chuckle. How could someone say that Vulcans had no sense of humor? This one did! With an “Excuse me, gentlemen,” he also left the room to return to his quarters and to prepare the
documents for the Lexington’s chief engineer. He knew that he had thrown away part of his plans for a further deal with Starfleet Command, but he had no other choice.

Wesley was right; they were in this together now. They had to combine their entire strike power and strategic abilities in order to place their enemies in checkmate. And if he had to contribute his share, so be it.

Barnett awoke to loud voices – both male and both obviously very enraged. Raising himself up on his right elbow and ignoring the protest of three broken ribs, he listened to the two men in verbal combat, recognizing one as the Orion leader who had taken him captive along with Batari Whitman, Ania Morganth, Sarek, and his assistant Sokal, Gav, and the Risan ambassador. He couldn’t understand what they were talking about – their voices were muffled by the closed door of the primitive prison the surviving delegation members were held in – yet Richard knew that he and the others were the reason for the verbal fight on the other side of the door.

Pulling the thin blanket higher, the admiral suppressed a shiver. It was very cold here and he doubted that none of them would be back to a healthy appearance by the time the slave market took place.

Thinking of the whole turn of events, he almost laughed at the irony of their fate. They had survived an attack by the Klingons and a shuttle-crash, only to soon be sold at a slavery market. Most Orions lived from selling illegal goods, and D’nyrrs was no exception. He belonged to a group of one of the most wanted Orion pirates and slavers, and he was well-known for his greed, and all attempts to talk to him had been for naught. Even Barnett’s assurances that the Federation would certainly pay ransom didn’t catch the pirate’s attention – as if their capture wasn’t just a matter of money. And regarding the fact that D’nyrrs valued money like others worshiped gods, the Orion’s refusal gave the admirals a lot to think about.

After they had recovered a little from their ordeal, not least of all thanks to the treatment of an Andorian doctor who seemed to be an unwilling part of the gang – the admirals had discussed recent events. It was more than obvious that D’nyrrs had captured them against some agreement with a man names Klokh – a Klingon name, no doubt. Said Klingon had sent the Orion to kill the survivors, yet D’nyrrs didn’t do as he was told – something the still-living delegation members should be grateful for, but for the most part weren’t. The four staff officers knew that the slavers were about to sell them to the Romulans, and none of the admirals could suppress the dread that flooded them at the mere thought. And, as it seemed, the Romulans were also interested in Sarek and his assistant.

Starfleet Intelligence assumed for a while now that the Romulans were running illegal tests on captured Vulcans with regards to their telepathy, yet there hadn’t been any proof, only thin leads. Yet those rumors seemed to be true, and Barnett shuddered at the thought what would lay ahead for
Sarek and Sokal, should they fell into Romulan hands.

Barnett sat up carefully as the voices grew louder and all of a sudden he realized that the strong accent of the second male was the typical guttural vocals of a Klingon speaking Federation Standard. Maybe it was this Klokh the Orion spoke of. Tensed he listened, tried to understand what the two men were speaking about.

Beside him Nogura stirred. “What’s wrong, Richard?” he whispered, but before Barnett could answer, Sarek’s quiet baritone murmured from the neighbor cell, “I would appreciate if the two gentlemen would be silent. I have been following this ‘discussion’ for quite some time now and I want to learn as much as possible of our captors.”

Instantly both admirals shut up. After all, the Vulcan’s hearing was several times more acute than theirs.

And then the voices drew nearer and the two staff officers were able to understand the spoken – rather, hollered – words.

“We had an agreement, D’nyrrs! An agreement with this Starfleet-human! No survivors! I told you to finish off any possible living weaklings, not to take captives and to sell them to satisfy your inner greedy pig. What this Starfleet admiral will pay us is several times more than you can ever earn with them!”

“Don’t you get it? No one knows that they are alive! The Romulans are paying a good price for the officers and the two Vulcans. And I’ve other customers who are very interested in the two females. We get the money from this Starfleet traitor and from my customers. Double the money – even for you, Klokh!”

“The man in the bar said –”

“He said that this admiral will reward us with more afterwards, because he needs allies in the Borderland – yes, yes, I know. But I tell you this – when this business is over, I don’t think we’ll hear much more from this guy – especially not when the war comes to an end someday.” Steps were heard as someone began to pace. “I insist on this business with the Romulans and –”

“And I hope you’ve got everything under control!” the Klingon voice snarled. “If only one of them – only one – gets a chance to tell this tale, we’re done for! They’ll be after us – the Federation and the
Empire.

The Orion snorted. “They will be busy with each other soon – after all, we given them a reason to end the ceasefire and –”

“Don’t expect the Federation to be aggressive enough to end the ceasefire – if they haven’t done it until now, they will not within the next days. Talking – that’s what they do with the Empire. Yet the Empire will try to find out what really happened,” the Klingon growled.

“See – and if you have to run, you’ll need money – money I got for us both because I look farther, as my nose is large. This deal will reward us with enough money to last us for the rest of our lives!” The Orion calmed down a little. “Look, the auction will be in two days, then everything will be over. I suggest you and your warriors stay here.”

“Why?”

“Because you Klingons are excellent guards –”

“Don’t compliment me, D’nyrrs. This will not assuage my anger that you went against our plan!”

“– and if something goes wrong during the auction, you guys can take care of it,” the Orion continued as if he hadn’t heard Klokh.

“Where are the prisoners?”

“Down there – unconscious most of the time. The crash must have injured them more than I thought. I got a doctor to examine them and give them first aid, the rest is up to the them.”

The steps came nearer, and quickly Barnett lay back, closing his eyes as did Nogura. They heard someone entering the small hallway that led to the cells they’d been held captive in since the first day, and now the steps stopped. A suppressed curse in Klingon echoed through the cold air, followed by, “The Vulcan doesn’t look good. If you really want the Romulans to buy him, you should take care that he and the younger one are kept warmer. These pointy ears are very sensitive when it comes to low temperatures.” Again the Klingon walked a few paces, stopping at another cell. For a moment there was silence, then, “They are really beauties. You’ll get a high price for them, no doubt.” Then the Klingon drew nearer to the cell where the four admirals lay, and a harsh
chuckle escaped him. “Only several months ago I would have given everything to have some high-ranking Starfleet officer like this at my mercy, bringing them to the High Council as trophies. But now…” He walked away again.

“So, you’ll stay until…” began the Orion and the Klingon hissed, “Do I have another choice, you fool? I’ll make certain that our deal with this admiral will not fail because of your greed!” They left the hallway. “And the next time we agree to something like this, you’d better keep your word. Otherwise I don’t see any reason to continue our…”

The voice faded away, and Barnett dared to open his eyes. Beside him Nogura sat up; in the pale glow of the small light outside his usually almond-shaped eyes were large as saucers.

“Did I get that right?” he whispered. “One of our admirals hired these pirates and renegades to kill the delegation? Who? Why, for God’s sake?”

“And they want to sell us to the Romulans,” Komack murmured, his voice tense with pain. He had suffered the most of all of them, but was more conscious now, and had also listened to the conversation. “I have to admit that the prospect scares me.”

“Obviously someone in the admiralty wants us out of the way – for whatever reason – and these pirates got the order to kill us, but one of them decided to get greedy and took us captive to sell us,” Richard whispered. “The attack against the Excalibur was well-planned. Styles is inexperienced. Someone in Starfleet must have given this information to the pirates and –”

“You are right,” Sarek’s low voice drifted over to them. “As I said, gentlemen, I eavesdropped on D’nyrrs and Klokh for quite a time before you became aware of their presence. They knew indeed that the Excalibur was under the command of a young captain who had taken command for the first time.”

“Sweet lord, why?” Richard groaned, fury and shock going through him. “Who of us wants us dead – us four, and the whole delegation? Who would gain an advantage from it? The Federation would be weakened beyond imagination. Until our positions are filled and Starfleet recovers from this blow, the Klingons could overrun us.”

“Maybe that’s the whole plan,” Komack murmured. “And, don’t forget, Richard, Thomas is already dead. Five admirals are already out of the way, and whoever this other ‘admiral’ is that the pirate spoke of, now has a free hand to act as he or she wants. While we are lying here waiting to be sold into slavery – or, in our case, to be tortured for information – the Klingons may launch a major strike against the Federation because some bastard we all know and trust betrayed us to the enemy!” He
coughed and closed his eyes as coldness and pain spread through him again.

“The Klingons hadn’t begun another attack against the Federation until now. They are still talking to each other, which is a good sign,” Nogura murmured.

“Yes, but the question is, for how long?” Barnett rubbed his stubbly jaw. “We have to find a way to escape. Maybe we all can’t escape, but if one of us manages to leave this godforsaken place and informs Robertson, then maybe not all is lost.”

“And how do we make that happen?” Morrow whispered from the other side of the cell, his injured vocal cords made it difficult to understand him. “It’s thought that no one has been able to escape from an Orion slave trader until now.”

“For everything there is a first time,” Sarek whispered just over his breath. “I have always thought hope to be illogical. Maybe now is a good time to alter that opinion, because that is all that is left for us: hope.”

Barnett lowered his head. “That coming from a Vulcan tells me that we’re at a dead end.”

ST***ST***ST

“And how do you hope to find them in time?” Bob Wesley sat in his quarters having contacted The Shadow. He looked at Galven on the screen, who cocked his head while his snout twitched.

“There are not many routes the Romulans can take to enter Borderland without being caught by Federation or Klingon scouts. They have either to cross a whole parsec of Federation territory or detour through the Klingon area. Both sides won’t be too delighted if they have Romulan visitors, therefore our ‘dear neighbors’ have to be very careful. Given the fact that Klingon technology isn’t as highly developed as that of the Federation, I think the Romulans would rather take the risk with them than with any Starfleet vessels on patrol. And, by the way, during their last contact, the Orion trader agreed for the meeting with the Romulans to take place between the Celendi Nebula and Verix. I think he’ll take his guests aboard and bring them to the secret place where the auction will happen. If we intercept them and watch them, we can follow and learn the exact location of the ‘market’.”

Bob pursed his lips. “You can move through the Borderland without being caught. I take it you have an SDD too?”
“Yes, Khan’s first prototype of that nice little device. Neither the Orions nor the Romulans will know that we’re nearby watching them.”

“Verix has been annexed by the Klingons. They will watch out and –”

“Commodore, be both know that the Romulans first bought and then stole Klingon technology and ships. They only have to use a Klingon spacecraft and none of those dragonheads will be any wiser.”

Galven bent forwards. “This is the only chance to find out of the whereabouts of your officer colleagues and the delegation. If this chance passes by without being taken, they are lost.”

“I know. I’ll try to reach you within the next ten hours. We’ll skirt the Borderland and enter it near Midrian, flying a direct course to Verix. As soon as you have any new information, please contact me. I’ll give you my private frequency.”

The Tellarit oinked something in his language before he grumbled, “To cross two thirds of the Borderland in your big shiny white ship is a risk – even with the SDD Khan gave you.”

“I know, but if we want to free the captives we’ll need to strike with a full force. Orions are not known for letting go of their slaves easily, but a Constitution class cruiser in their orbit should encourage them to stay put. Do you know if the Syndicate knows what really happened?”

“No. As far as I can calculate, this slaver is acting on his own – operating outside the Syndicate, but I’ve no proof of that. Maybe we’ll find out more, then you can demand support from the Syndicate.”

“Yes, support from the Orion Syndicate – and Easter and Christmas will be celebrated on the same day from now on!” Bob scoffed and sighed inwardly, as the Tellarit looked really confused at him.

“I beg your pardon?” Galven asked, and Wesley shrugged.

“An old Earth saying, never mind.” He reached for the button to cut off the connection. “We’ll see you in less than sixteen hours, Galven. Wesley out!” He let himself fall against the back of his chair and groaned. He had told his officers that they were off on a secret mission about which he was bound to secrecy, and only his senior officers – Palmer, Sonik, Carry, the chief engineer, and Marceaux, his first officer – knew the truth. He had talked with them after his return from the Enterprise, before Carry had begun to build and install the SDD. At first they were disbelieving, but after he had laid bare certain facts, they had to accept that there was someone at HQ who had tried to
use the war to climb up the career ladder, and to re-activate a forbidden department which had little
to do with the ideals of the Federation.

Bob would need their support during the mission, this much he knew for certain, and after the four
gave their word to stand with him, he felt relieved. ‘Not only Jim has friends he can rely on, I’ve got
them too,’ he thought while he looked into nothingness.

He couldn’t know that he would not only need the support of his friends soon, but also that of
someone who was officially an enemy of the Federation.

ST***ST***ST

After Bob left the Enterprise – not without giving Jim a final word of advice and to demand his
promise to ‘not overdo it at Gamma 12’ – he met with Scotty and Spock again. They discussed how
they would deal with the facility; went through the different scenarios they could face and which
technical obstacles they could expect. Khan joined them an hour later after making sure that the
Lexington’s chief engineer was able to rebuild and install the SDD. Jim had asked for his presence
and Nien’s old-fashioned, yet mostly novel strategies from three hundred years ago helped them
think up the most unorthodox ways to bring the mission to a successful end.

It had been almost midnight when Kirk and Khan bid the others good night and returned to the
captain’s quarters.

Jim fell into bed like a stone, groaning as his back muscles protested against the many hours he’d
spent sitting at conference tables that day. He listened to the sonic shower in the hygiene cell and
smiled with half-closed eyes as Nien stepped into the main room only several minutes later, wearing
nothing but a pair sleeping pants. Outwardly the Augment appeared calm and casual, yet Kirk felt
the tension in his mate’s mind and soul.

It wasn’t surprising – not really. The day after tomorrow they would arrive at the place where the
other super-humans were being held, and their lives depended on Jim’s plan. There were so many
things that could go wrong. One little slip, one moment of negligence, one second of carelessness
and Nien’s family could die. And what if Scotty couldn’t switch off the security field that certainly
surrounded the place? What if they were already expected at Gamma 12, facing several Starfleet
vessels? What if they couldn’t escape? What if Nien’s crew wasn’t even at Gamma 12 and the
evidence of them there was just another part of the trap? As much as Jim was an optimist, he simply
knew that the risk of losing this time was high.

Yet he wasn’t ready to show any of the worries which moved him. Nien needed him strong now,
and he would be dammed if he added more concern to the Augment by being nervous.
“Everything all right?” he asked quietly as Khan crawled under the sheets beside him.

“No,” the former dictator said softly. “But there is nothing you or I can do about it at the moment. I’m…” He searched for the right words and Jim smiled,

“You’re anxious about the upcoming rescue of your family.” He lifted his arm and offered Khan his shoulder as a pillow – offering comfort and shelter. And, forgetting his pride for once, the Augment rolled over and snuggled into him, almost sighing as Jim’s arms wrapped around him.

“Yes,” Nien admitted. “But as I said, there is absolutely nothing we can change about it.”

Kirk nodded. As much as he loved the passionate nights they’d recently shared, he knew the next hours weren’t meant to be spent making love. They were both too tense, and simple proximity to one another offered the best comfort they both needed.

“We’ll make it,” he murmured, pressing a kiss to Nien’s forehead, before he rubbed his nose against the midnight-dark hair which had grown within the last weeks. The warmth of the Augment’s body slipped into his own, made him relax just a little bit. “You’ll see, in two days we’ll have your family aboard and on our way to New Vulcan. They’ll be finally safe.”

“Hope leaves us last,” Khan whispered.

“Yes, and sometimes its light is the only thing that pushes us to succeed in the end,” Jim murmured, tightening his hold around his mate in a comforting manner.

“I know,” came the quiet reply. “The light of hope can take many forms. For several weeks now it’s worn your face.” He reached out and cupped Jim’s cheek with one hand, his thumb drawing gentle circles on the captain’s smooth skin. “This is new for me. In early times the only hope I could cling to was the determination to win and to keep my brothers and sisters safe – or to rescue them.”

Kirk ordered the lights down to twenty percent, before his attention became utterly fixed on his mate. “You fear failure, don’t you?”

Khan untangled himself from Jim and rose into a sitting position. It wasn’t easy for him to admit
something like that, yet he nodded slowly. “Yes,” he murmured. “I think I was too often confronted with the prospect of losing them forever, and Gamma 12 will be no different.” He lowered his head. “And even more, this time I also could lose the only light I have really ever had in my life.” His gaze found Jim’s. “You.”

Deeply touched, the young captain rose into a sitting position as well and wrapped an arm around his mate. He realized that Khan had tried to shield his turmoil from him, but without success. Their bond was too strong for it. Concentrating on the shimmering mental link between them, Jim tried to project comfort, strength, and love towards the man at his side, while he laid his chin on Nien’s bare shoulder. “You will neither lose me, nor your family,” he whispered. “We’ll free them and I will not rest until they have found a safe place to live in peace and freedom. And I certainly will move heaven and Earth to see that you leave any trial as a free man.” He snaked his other arm around the Augment, holding him gently and securely. “Don’t give up hope, baby. And don’t doubt yourself about your abilities to keep them safe. You are as stubborn as I am.”

“At least you can admit it, you mule,” Khan murmured, trying to lift the mood. And, to his relief, Jim took the bait.

“One of us has to have a little self-awareness,” he teased, before he let himself sink back onto the mattress and pulled Khan with him. “Come here, honey. Try to sleep at least a little bit.”

The super-human sighed again, accepted Kirk’s request, and pillowed his head once again on Jim’s shoulder. Yet sleep didn’t find them easily.

ST***ST***ST

At 01:32 ship’s time, the *Lexington* left Federation territory and entered the Borderland. Bob Wesley had slept a few hours so as to be on the bridge when they arrived. Marceaux, Palmer, and Sonik stood with him, looking out the viewscreen. Bob was tired, because the little nap he’d taken had been anything but restful. Yes, the SDD was working flawlessly – the *Enterprise* had a good engineer, as he’d said himself – and all sensors were adjusted to maximum range, yet the commodore felt unease. Who wouldn’t, given the fact that he was racing deep into a territory in which he was unsure still belonged to the part of the agreed ceasefire, and also that his mission was unofficial, and Command hadn’t the slightest clue about it. And finally, he was about to take on slave traders, renegade Klingons, and Romulans without any backup. It was really no surprise that Bob hadn’t found the rest his body and mind required.

Half an hour after he returned to the bridge, he faced a situation that proved his gut feelings could be relied upon. They were heading straight towards Verix, and passed by the Yaraka system. Not wasting the opportunity, Wesley ordered impulse speed, and to make a long range scan of Yaska. The scanners reported just the metallic items at the coordinates Galven had given him. And then it
happened. From one second to the next, five Birds-of-Prey materialized and surrounded him, their weapons ready to fire.

Wesley felt the blood leaving his face, while sirens blared red alert through the Lexington. Battle stations were manned by the gamma shift while alpha shift jumped out of beds and got ready instantly. Bob cursed. They had been caught!

“Commodore, the sensors identified the J’Ethl among the vessels,” the science officer reported, and Wesley didn’t know if he should be relieved or not.

The J’Ethl – Kor’s ship!

“Well,” Bob growled. “Now we’ll learn firsthand if Kor is really the aggressor, or if Jim Kirk is right and our Klingon friend is still supporting the Empire’s declaration of a ceasefire.” He cleared his throat. “Scan the weaponry and why, for God’s sake, did we not register any ion trails before they switched off their cloaking devices.” He pursed his lips. *Maybe we just saw an example for this damned modified cloaking technique Jim spoke of.*

Bob took a deep breath as his mind calculated the chances of escaping the Klingon squadron and to bring the mission to a successful end. Even without consulting Sonik, he knew the result was zero. Yes, they had the SDD, but their presence in the Borderland had been noted, and if the Klingons didn’t finish them off, the Orions would. He had no right to be here, let alone starting a fight.

He couldn’t open fire at the Klingons. It would have meant instant war – the ceasefire would come to an end and the Federation and the Empire were back to battling; exactly what Section 31 wanted. But he, Bob Wesley, wouldn’t give them that.

Yet he needed to find a way to continue his journey and to save the surviving members of the delegation. But seeing the five Klingon ships surrounding the, he knew that the mission was about to come to an end before it had even begun.

And there was more. If he were forced to battle Kor, this incident would be reported to the Empire and to the Federation. Command. Luengo! – Luengo would learn of his mission. They would ask questions. Command knew that Wesley had met with the Enterprise only several hours ago, and then went ‘rogue’ and flew to the Borderland – to the Yaraka system, or so it seemed. Luengo was no fool. He would put two and two together quickly and would figure out why Wesley was here – because of Jim Kirk; because Kirk had put him up to the whole thing. Then Luengo would ask himself why Kirk wanted Wesley to enter the Borderland at all. Which would certainly lead to the conclusion that there were several clues left from the faked assault by the Excalibur. They would not
arrest Kirk, they would kill him.

And what about the peace talks? They’d also suffer as a result if this were all discovered. The Federation Council demanded answers from the Klingons concerning the attack by the *Excalibur*, therefore the Empire already knew what had happened here in the Borderland. They certainly had already asked Kor for details. His presence here at Yaraka showed Wesley that the Klingon lord had tried to investigate on his own – attempting to save his honor as a warrior, and protect the status of his whole clan.

Maybe Bob could use this unexpected meeting to his advantage.

Kor was responsible for overseeing the Borderland. The Orions had allied themselves with the Klingons and used them for ‘protection’, which meant they were under Klingon control now. Kor could visit any planet within the Borderland without being bothered by the Orions; hell, he could demand answers from the Syndicate and intervene wherever he wanted. If Wesley could convince Kor that they had one and the same goal concerning the *Excalibur* incident and that they would have the best chance of success by working together, he would have the Klingon fleet commander’s support while being here.

It was risky, Bob knew this. Yet Kor was the only Klingon he had come near to trusting. They may be on different sides, but they were both honorable warriors who respected each other. They had come to terms during the conferences on Organia. Kor had even shown some understanding and even sympathy as he, Bob, had asked for mercy on Kirk’s behalf. Kor was one of those men who thought first and acted afterwards. If Kor was still this kind of man – a rare Klingon – he would be interested in revealing the truth. He would accept cooperation with Wesley – maybe only to show Starfleet that a Klingon could stand loyal to his word, but this little detail didn’t matter. With Kor’s help, Wesley could move freely through the Borderland and could free the captives. Hell, Kor could maybe even lend him a hand, only to prove that the Klingons hadn’t anything to do with the cowardly attack!

The question was how to win over Kor? How to convince him that they needed to rely on each other here and now? And how could he manage to speak with him privately? It was impossible to talk to him openly from bridge to bridge. Bob trusted his officers, but there were other members of the bridge crew on duty at the moment. And even if he didn’t want to believe it, the chances that one or two of them belonged to Section 31 was high. Good God, what had become of Starfleet!?

“Commodore, they’re hailing us.” Palmer interrupted the thoughts which raced through his mind at warp speed.

Wesley took a deep breath. He knew that the next few minutes would make or break this opportunity.
“On screen.”

The stars and vessels disappeared and made room for the dark features of Fleet Commander Kor. Their eyes locked instantly, both watching each other for a moment. The last time they had talked, it was about Jim Kirk, as Bob tried asked Kor to show mercy to the young man. Now they were eye to eye again – despite the fact that there were several hundred kilometers between them.

“Commodore Wesley,” Kor began, his voice dark and rough with the Klingon accent. “It’s a surprise to see you here in the middle of this nothingness. Have your instruments malfunctioned or does the Federation require some information it doesn’t want to outright ask us?”

This was a very polite way of saying ‘are you spying?’, and as Bob saw the open mockery in Kor’s gaze, he knew that the Klingon was up to one of his favorite games: challenging and being challenged.

“Our instruments are working flawlessly, thank you for asking,” he answered dryly. “And regarding the information you refer to, I simply want to know what actual business you’re running. That of Boy Scout coming out to meet our ship, or that of a pirate, commandeering our delegation’s vessel?”

The Klingon lord frowned. “Boy Scout?” he asked with a growl.

“A title of honor that usually belonged to people who don’t fear to go into unknown territory to explore, and they’ve also sworn to end every day with a good deed,” Bob explained casually. “That would be you protecting the Enterprise.” He bent forwards. “Or have you become a pirate who attacks our diplomatic ship and kills our delegation?”

For a moment Kor’s mouth hung open, then his face flushed darkly with even more fury. In an instant he was out of his chair. “HOW DARE YOU to think I was responsible for the crimes of this imposter! HOW DARE YOU accuse me of breaking the ceasefire, forgetting my honor!” He pointed one strong index finger at him. “But you, Wesley, you came here…”

“That is the official version in the report by the Excalibur’s captain, Lord Kor. That’s what the records show, which were made during your attack. The J’Ethl was involved – we’ve clear proof of it.”

The Klingon was obviously rendered speechless, then a deep frown appeared on his forehead; his
eyes burnt with fire. “A lie!” he pressed out finally, gritting his teeth. “That is a dirty, spiteful lie! Tell me how I could be parsecs away to save this boy-captain’s ass while attacking one of your other vessels here!”

“Well, it still remains to be proved which one of the commanding officers at the two incidents was the real you. I guess your Council has already demand answers from you?” As Kor only stared at him, he continued, “That explains your presence here. The suspect always returns to the scene of his crime.”

“I’m not a criminal, Wesley. I have not invaded a territory that doesn’t belong to the Empire!”

Bob knew that what Kor was referring to was the Lexington’s presence, but nonetheless he turned the tables. This was a good opportunity to steer the conversation in the direction he wanted. “You didn’t?” he asked. “So you admit that it wasn’t you who came to the Enterprise’s aid?”

“WHAT?” The Klingon went rigid.

Wesley smiled at him. “You said yourself that you haven’t ‘invaded’ non-Klingon territory – which belongs to the area around the Briar Patch. Yet, if you’ve really had come to the Enterprise’s aid, you had to enter Federation space, which means travelling into non-Klingon territory you just stated you didn’t do. So, which one of these stories is the truth?”

Kor pressed his fists into his hips and bent forwards. “Don’t split hairs, Wesley! You’re trying to mask the fact that you’re here without permission of our allies, sneaking in like a thief in the night, testing new sensor techniques and hoping you don’t get caught – invading an area we’ve been asked to protect. So…”

He stopped as the commodore began to laugh. “’To protect’? I know what this ‘protection’ really is. You’ve taken over here, Kor. The Orions are barely the masters of their own house anymore.”

“You’re going too far, Wesley! We’ve not annexed the Borderland, we’re here on the Orion’s behest – to protect them against you weaklings from Starfleet! This is my duty and I will fulfill it!”

Bob leant back in his chair, appearing utterly relaxed. “So, you are responsible for the safety of the Borderland – to ensure that everything runs smoothly here.” As Kor didn’t answer, he added, “Well, that makes you also responsible for the assault by the Excalibur. And if you tell me you weren’t involved in said incident, then someone else was – and you failed to carry out your duty!”
“Do you try to offend me, Wesley?” Kor snarled, his face fire-red by now. “If so, you’re doing a damned good job, as you Earthers say! I was off saving your boy –”

“Captain Kirk didn’t need any help. He fought off your ships all on his own, yet you entered Federation space without being called.” He straightened again. “That I’m calling invasion!”

“And your visit here is the same,” the Klingon lord hissed.

“We have the right to investigate the deaths of our delegates!” Wesley said fervently.

“And we have the right to protect our allies,” replied equal sternly.

Bob smiled inwardly. He had Kor right where he needed him. “Look,” he began in a more diplomatic tone. “We’re accusing each other without having any real proof. I would like to invite you aboard the Lexington and –”

This time it was he who stopped, because Kor laughed without any trace of humor. “Do you think me a fool, Wesley? It was you who invaded our ally’s space without permission. This could be considered an act of war, but for the fact that obviously someone is trying to play us off against each other, I’ll refrain from destroying your ship. Whoever is responsible for this shall not be victorious – we are better than that!” He bent forwards even, his face seemed to press at the screen.

“You’ll beam over to my ship – alone and unarmed. And you will bring documentation with you: this alleged record that purports to show my ship attacking the Excalibur, and Kirk’s report that he’s certainly given you concerning the incident in the Briar Patch.”

Wesley chuckled. “If you think I’ll give you Starfleet data delivered on a silver platter, then –”

“The records and you, Wesley – in three minutes, or the Lexington is history!” He cocked his head. “And don’t try anything foolish, Commodore, like going into warp. We’ve you on our screens and in our sights, and even this new technique that makes your ship unreadable to our sensors will not save you. Kor out!”

The view on the screen changed, showing only stars and the five Klingon vessels.
Commander Marceaux looked uncomfortably at his superior. “What now, sir?”

Wesley turned to him. “I don’t think I have any choice than to accept the invitation. Summon the visual records of the Excalibur’s assault and of the incident with the Enterprise in the Briar Patch. But no more. I won’t give Kor free access to Starfleet reports.”

His first officer nodded, while Bob rose. “Right, ladies and gentlemen, I’m going to accept Lord Kor’s nice invitation. You’ll stay here and do nothing until you hear from me. If something goes wrong, state that Command doesn’t know anything about our presence here, and that the investigation was initiated by me alone. It’s of the highest priority that the Klingons don’t think that Starfleet tried to provoke them by sending us here. These peace talks need to start, no matter the cost.”

He climbed the two steps to the upper part of the bridge. “Lieutenant Palmer, prepare a message for Command. In case I don’t return, inform them of what happened here.” He looked sternly at his comms officer, who nodded. They had agreed to tell Command, and therefore Luengo, a half-truth if the Lexington faced trouble within the Borderland, or had been caught in another conflict. As long as Jim Kirk was free to make the attempt to reach New Vulcan in one piece, there was still hope that Section 31 could get torn down. But this would only be possible if Luengo didn’t learn that Kirk was on to him.

“Sir,” Jean Marceaux stepped beside him and offered him a data chip. “The records.”

“Thanks,” Bob smiled and pocketed it. “So, all, until later.”

Jean held him back one last time. “Bob, what if this goes wrong?” he whispered and Wesley took a deep breath. “I guess then you’re to make an attempt to flee – and tell my wife and daughter that I love them.” He squeezed his friend’s arm and left without looking back.

TBC…
Yeah, you knew that I would bring Kor back into the game – and I already promised you that he will have a bigger part in the outcome. In the original time-line it was always Jim vs. Kor – two men who were warriors but also honorable individuals who would love to battle against each other. Bob resembles Jim in many ways and therefore I thought that Kor and Wesley would make a good ‘pair’. What really comes out of those two sitting together is something you’re going to learn within the next chapter.

And there will be more, because Kor already knows/guesses something about our two boys, Wesley has no cue of. And Prime Spock will learn something similar concerning Jim and Khan by pure accident…

I hope you loved the new chapter and – like always – I’m very curious what you think of it. Once again sorry for the delayed update and the next chapter will come sooner. Promised!

Have a nice start into the next week.

Love

Yours Starflight
Hi, my dear readers.

Yes, again it lasted a little bit longer until you’re able to read now the next chapter, and for this I’m sorry, but – as you certainly know – very often time is something you need desperately but it slips through your fingers. But I think you’re going to love the next chapter.

Thank you so much for the feedbacks; I’ll answer them soon.

Have fun

Love

Yours Starflight

See the end of the chapter for more notes

Chapter 55 – Two lovebirds revealed

Aboard the Enterprise no one could know that their sister ship was in deep trouble. But even without this knowledge, the night was abruptly interrupted for Kirk and Khan around the same time Wesley beamed aboard the Klingon flag ship. Jim was convinced that he hadn’t been in dreamland for more than an hour when the terminal at his desk sprang alive and the hailing signal sounded, “Bridge to Captain Kirk.”

“Good God, what now?” the young man groaned, sitting up and ordering the light to fifty percent. The chronometer on his nightstand told him that he had managed to sleep two hours. Great! He’d appear on the bridge the next morning with smaller, more bloodshot eyes than a Rigelian mouse.

Beside him Khan was wide awake within seconds and lifted his head. “If the bridge calls you at this time it must be urgent,” he simply said and Jim rolled his eyes.

“No shit, Sherlock; I’d never have realized that without you.” He received a short mockingly grin from his mate as he slipped out of bed and padded to his desk. Not activating the screen, he answered the call, “Kirk here.”
“I’m sorry to disturb you, Captain, but I’ve High Minister Selek of New Vulcan on the line for you. He says it’s very important.” The ensign’s voice couldn’t hide the curiosity the man obviously felt.

“Thanks, Ensign, please patch him through,” Jim said and activated the screen, forgetting the fact he’d slept without a shirt.

The screen brightened and showed the aged face of the Vulcan whose younger self was his first officer and dear friend. One icy brow was lifted, as ‘Selek’ took in Jim’s appearance before saying, “I am sorry to wake you in the middle of the night, Jim, but I promised to inform you as soon as I had spoken to the Vulcan High Council.”

In the bed, Khan went rigid. The voice he heard had spoken slowly and was laced with the roughness of age, yet his keen hearing recognized the almost-familiar baritone nonetheless. Disbelieving, he sat up. With large eyes, he stared at his soul-mate, who sat at the desk and talked with the so-called Vulcan ‘high minister’. With one smooth movement, Khan was out of the bed.

“No problem, old friend,” Kirk answered at that moment. “You certainly know from experience that commanding officers call themselves lucky if they get a full night of fitful sleep.”

“Indeed, I remember those nights well,” Old Spock answered. His dark eyes were warm. “Yet I know that humans require sleep on a regular basis, but given the current situation, I did not consider the time before contacting you. I have spoken with the Council members and…” His gaze wandered to something behind Jim, and his face became utterly neutral. “Good evening, Mr. Singh.”

Kirk turned around and saw his beloved standing behind him – eyes wide, mouth open, face slack in shock.

Khan stared at the Vulcan on the screen. The hair was grey and white, time had etched deep wrinkles into his features, and his voice was laced with age, yet the Augment had no doubt at whom he was looking. “Mr. Spock…” he whispered.

‘Selek’ took a deep long breath and nodded slowly. “Indeed, Mr. Singh,” he affirmed. “I am Spock.”

Khan suddenly had the very human wish to sit down while he tried to comprehend what he was seeing. “How… How is this possible?” As he got no answer – the Vulcan on the screen only cocked his head – Khan’s brilliant mind went through all possible answers before he murmured, “Time travel.”
“Yes – but not intended. It occurred as a result of a worm hole,” Jim answered quietly, looking up at his lover. He knew that he had to tell him the truth now. “Spock is stranded here – well, his older self is.”

Nien forced himself to tear his gaze away from the screen and directed it straight at Kirk. “Selek – an old friend,” he almost accused, and Jim smiled sheepishly.

“Yeah,” he said softly.

Khan snorted. “I suppose he really is an ‘old friend’.”

Jim sighed, feeling a tiny wave of irritation coming from his beloved. “Sorry that I couldn’t tell you about him sooner. It’s complicated and… Well, Spock and other Vulcan Elders decided that it would be for the best to hide his true identity. Too many questions, too much risk that someone gets the stupid idea to use his knowledge of the future.”

The former dictator nodded, yet he still needed a moment to come to terms with that news.

The High Minister watched the two humans carefully. He had been patched through to Jim’s quarters in the middle of the night, and Kirk sat at his desk bare-chested. Khan was clad only in pants. Sleeping pants! Spock took in the way the two stood close together, how Jim glanced at the Augment with gentleness and trust, and how Khan looked back at him, before the superhuman’s face grew soft in a way Spock had never seen it before.

The Augment was different from the enhanced man he had met those many decades ago. Despite the short hair, there were other changes – not least in his behavior. Fascinated, ‘Selek’ watched how Khan placed a hand gently on Kirk’s shoulder, squeezing it in silent understanding, before Jim covered those long pale fingers with his own.

Spock couldn’t hide a frown as he took in the obvious familiarity between the two, their proximity to one another, and the way they’d locked eyes with each other. Both were half-naked, clad only in sleeping pants (at least Khan was). Plus, the super-human was in Jim’s quarters, at night! Should it be that…?

Impossible! Jim had only had eyes for women – well, his Jim had, even if none of his love affairs had lasted long enough to be considered a true relationship. Maybe his Jim had missed something
this Jim had got a taste of with Khan? Spock felt an all-too-human surge of curiosity, which he decided to indulge.

“Jim.” He addressed the young captain carefully. “Is there something you want to tell me?” He met those sky blue eyes again, full of an innocence he knew the owner did not possess; Spock knew him well enough to easily see through the façade. “Forgive me, but is there something you forgot to mention when you told me about Mr. Singh and your…‘friendship’?”

This time Jim wasn’t able to control his reaction and blushed fiercely red, while Khan bent slightly forwards and placed himself the tiniest bit in front of Kirk; protective instincts kicking in.

Spock didn’t need more proof than those reactions. The rare display of surprise spread almost unguarded over his aged face. “You two are…lovers.” he simply stated, and as Jim’s cheeks burnt and the Augment lifted both brows in a challenging manner, the old Vulcan sighed. “This is why I constantly ask myself how many things have changed because of my failure in the future.”

Jim gulped. He felt caught – just like a schoolboy when his teacher found him playing with a PADD instead of following the lesson. “Spock,” he began almost shyly. “I… I didn’t want you to find out about us like this.”

Promptly a stern Vulcan brow was lifted. “So you did intend to inform me about this relationship at all?”

Kirk’s eyes became large. “Of course I would have told you…sooner or later. I simply didn’t want you to believe I had asked for your support only because Nien and I…well…”

“Share a bed?” Spock helped him out wryly.

“You would have thought I was just being emotional and…”

“And what is new about that fact, Jim?” ‘Selek’ deadpanned. “‘A man full of emotions’ I once said. You have almost always followed your heart, Jim, and that made you the man you were – what makes you the man you are. You do what you think is right – and the determination to protect others is a large part of you. Yet I confess that I’m surprised to find you and Mr. Singh being a couple.”

“Because we’re both men?” Kirk asked baffled, which earned him an almost exasperated glare.
“No, because you two were ought to be mortal enemies.”

Jim shrugged. “Well, we didn’t get off to a very good start, but what is the saying? ‘It’s a thin line between love and hate.’”

This statement seemed to shock ‘Selek’ even more. “Love, Jim?”

Kirk took a deep breath and laced his fingers with Nien’s again. “Yes, love,” he stated quietly but firmly.

The older Spock watched them for a moment longer, before nodding slowly. “I understand – and that tells me that I have made the right decision in these last hours.” His eyes moved up and fixed to those of the Augment. “I called to inform you that the Vulcan High Council has given permission for you and your people to come to New Vulcan. Even given Terran history, there is no doubt about the fact that your race is at risk of genocide in the current political climate, and so we offer you temporary refuge. We will, however, demand statements from you before we can grant your people true permanent asylum.”

Carefully Khan cocked his head. “But we would be safe on New Vulcan during that time?”

“Yes, the moment you reach New Vulcan, no harm will befall you or your people, nor will we allow Starfleet or any other authority to take you or your crew captive. You will be protected until such time the Council has ruled on your requirements for asylum. There is a chance that they may decide that your people can stay but that you would need to answer to Federation authorities for any outstanding crimes. Yet, regarding yourself, the Council will first hear you out – after all, you were first a victim before becoming a criminal. It is not in Vulcan nature to pre-judge, so you will have an opportunity to recount these activities as you see fit. Is this acceptable?”

Khan felt a strong wave of relief wash over him. His people would be safe – for now. Neither Section 31 nor anyone else would be a threat to them so long as they remained on New Vulcan. He didn’t care what happened to him. If the Vulcans decided that he – as a wanted man – should leave, he would. As long as his family were safe, he would face the music. “That is indeed acceptable, Mr. Spock. Thank you,” he said, gratitude plainly reflected in his eyes.

Jim moistened his lips. “Spock, Nien is ready to face a real court, but this will only be possible if –”
“If Section 31 is eliminated once and for all, yes.” ‘Selek’ interrupted him. “I updated the Council on what was happening at the moment, but not all of it. I will need more proof before I can alert our Council and the Federation. Yet, regarding Mr. Singh – as long as the possibility remains that he will not be treated correctly and continues to be stripped of his human rights despite the fact that he is a human, we would insist he leaves the colony, so long as he obeys the law of the land. Life is sacred to us. We will not send someone to his death – or worse – because an illegal organization demands it.”

“Thanks, Spock,” Jim breathed, happy and relieved.

The old Vulcan nodded again, before suddenly bending forwards and fixing the Augment with an intense glance that was both calm, yet hard. “I will ask, demand, one thing of you, Mr. Singh. After your arrival we will talk. I met you in alternative timeline and found you to be a man who would do whatever necessary to reach his goal without any scruples. Jim says that he loves you and your actions show me that you have feelings for him in return. Yet I would like complete reassurance that your intentions towards him are trustworthy and honorable.”

Khan’s eyes widened, while Jim groaned. “Good God, Spock, what are you, my father?” He pointed at Nien. “Should he ask you for my hand in marriage?” It was meant as a joke, but Spock being Spock took it seriously.

“Does he want to marry you?”

Jim almost choked while the Augment glared at the old Vulcan challengingly. “Sir,” he began facetiously. “I would have informed you sooner had I known about you and your obvious protectiveness of Jim that appears to supersede even that of your younger self. You are too late, Mr. Spock; Jim and I are already mated.”

“‘Mated’?” the High Minister echoed. “Please explain.”

A loud groan escaped Kirk, before he shot the super-human a glare. “Thank you very much, Nien. I really wanted to tell him this in person and not via subspace!”

“I thought it better to reveal everything so that your soul-‘father’ doesn’t think we’ve held back anything this serious on purpose.” He shot ‘Selek’ a glance, who simply ignored it, but asked,

“What do you mean by ‘mated’? I presume you refer to more than just…bedroom activities.”
Jim would have chuckled at the tight face the old Vulcan made, but he was anything but amused. Sighing, he rubbed his neck. “Spock, what Nien means by being mated is that our souls are linked, as is usual between his people when they bond. And before you ask, no, Nien hasn’t and doesn’t influence me in any way; I’m all myself – just ask Spock – ungh, the other Spock, I mean.” He began to smile his boyish grin. “And if you like, you can check my mind when we arrive at New Vulcan, too. I won’t complain.”

‘Selek’ fixed him with one of those glances that probably made cadets run. “This I will do, Jim, be certain of it.” His gaze found Khan’s. “Will you allow me to do the same with you?”

The former dictator tensed. The memories of the mind-meld the younger Spock had tried to force upon him during their struggle in San Francisco were still fresh, and anything but pleasant. Yet he knew that this was one of those choices he couldn’t avoid. He not only needed the old Vulcan to trust him in order to make things easier concerning asylum, but also knew that ‘Selek’ meant a lot to Jim. Maybe the High Minister was now the second father to Jim since Admiral Pike’s death. Even if the prospect of a mind-meld made the Augment shudder, there could be no way around it. “If you wish,” he said coolly.

Jim shook his head, grimacing at the High Minister. “See, you are a bigger mother-hen than my Spock.”

‘Selek’ moved his attention away from the super-human to the young captain. “He will learn to ‘mother-hen’ you even more and due to these reckless adventures you constantly throw yourself into,” he stated dryly.

“Yeah, I got it. I should be more careful – but tell that to universe or fate or whatever for all the situations I seem to find myself in. You of all people should know I can’t just stand by and watch disaster unfold.” He smirked. “And, by the way, Nien has also signed up for the job of a body guard, so don’t worry.”

This time both grey brows were lifted. “I do hope you speak of Mr. Singh’s abilities to protect you from harm, rather than his ‘guarding’ your body in…” He fell silent but his gaze shifted to what little he could see of the room behind the two men.

Perplexed, Kirk stared at him while Khan couldn’t help himself: he had to laugh. “And there’s the proof of what I’ve always suspected.” He looked first at Spock and then to Jim. “He does have a sense of humor.”
‘Selek’ nodded slowly at the Augment through the view screen. “Sometimes humor is the better part of courage, as an old friend once told me.” His gaze switched shortly to Jim and then back again. “It is settled. Your people shall find refuge here. After a fair Federation hearing, we will decide about official asylum.” He took another deep breath and turned his attention back to Kirk.

“Jim, I’ve already begun to investigate Command’s database and have set up a program that will delete any evidence I was there during such research. But it needs time to be installed in Headquarters’ main computer. If the process continues at the current speed, I shall be able to search their databanks for the required records and files in 7.83 standard hours. Given your current situation, and seeing the risk you will be taking when you arrive at Gamma 12, I suggest that you send me Styles’ report and the data concerning the spy’s PADD which Lieutenant Uhura was able to obtain. Should your mission at Gamma 12 fail, at least I will have all the data you have already collected and can use it and any I gather to inform the Council – and to aid you and Mr. Singh.”

“You’re offering to be our back-up?” Khan asked, and ‘Selek’ nodded.

“Of course. Intelligence is usually an underhanded game, and Section 31 will, as you say, play all its cards. Keeping proof against its methods in a secure place will be important for our success, and indeed, survival.”

Jim smiled at him. “Thank you, Spock. Your help is priceless.”

For a moment the old Vulcan’s expression became gentle. “You are welcome, Jim. Please send me all data you have via this link. It is secure.” He cocked his head. “And then I would suggest that you two gentlemen return to sleep. I have come to understand that humans can increase their potential after a good night’s sleep.”

This time Kirk had to laugh, while Khan grimaced. “Yes, Dad,” Jim joked, and he could have sworn that the lips of ‘Selek’ curved up ever so slightly.

“Good night, Jim, Mr. Singh,” he said simply.

“Good night, old friend,” Jim replied, followed by Khan’s “Good night, High Minister.”

Then Kirk began to gather all the data he had acquired from the database, including Styles’ reports and readied it for transmission to New Vulcan. But even with Spock Prime’s support, he remained nervous, knowing that everything depended on the successful end of the tomorrow’s mission.
Nien assisted him, pointing out details they had discussed in the last two days had slipped the
captain’s mind already. Augments, it seemed, had the same eidetic memory as Vulcans. Then they
transmitted everything to ‘Selek’’s private terminal.

Afterwards, both men returned to bed, but even lying in each other’s arms they wasn’t enough to
enable them to relax enough to rest. Khan was especially tense and Jim didn’t need to prod their
bond to feel his mate’s confusion and worry, which obviously wasn’t just connected to the upcoming
recovery of the other super-humans.

“What’s up?” Jim finally asked, as the minutes ticked by and after they had both spent some time
staring into the darkness.

The former dictator hesitated a moment before he murmured, “I’m…confused about the older version
of Mr. Spock. He said he ‘knew’ me only as an enemy, but I’m positive that I’ve never met ‘Selek’
before. He comes from the future, so he only can be referring to the incidents which occurred last
year. I’m not your enemy anymore but your soul-mate, yet he was utterly surprised about this fact,
and even wants to mind-meld with me to learn if I still harbor any ‘ill-will’ towards you like ‘I’ did in
his timeline. This makes no sense, unless there’s a possibility that we’re living in another present,
another timeline, in which many things have changed – such as us changing from ‘mortal enemies’
into lovers.”

Jim sighed. Nien and his brilliant mind! On the other hand, Kirk was almost proud of how easily his
beloved had come to the right conclusions. And Khan had a right to know the truth – after all, he had
to place his trust, and therefore the life of his crew, in Spock Prime’s hands.

“Spock – the older one – comes from the future, more than a century ahead. A supernova destroyed
Romulus before Spock could take action to prevent it. He was on his way to Romulus with a new
scientific means to prevent the catastrophe, but he arrived too late. A Romulan miner who survived
the catastrophe, held Spock responsible for the loss of Romulus, and hunted him – seeking revenge.
But both were pulled into a worm-whole that the supernova had become. The Romulan ship was
pulled through first and was spat out the other end around our time.”

Khan frowned, his mind already connecting everything he had learned during his unwilling stay with
Section 31. “Nero!”

Jim took a deep breath. “Yeah, Nero. He arrived here in the year 2233 – on the exact day I was born,
and exactly at the point where the USS *Kelvin* was on patrol. The captain of the Kelvin scanned the
ship and made some very interesting technical discoveries which the evacuees of the ship took away
with them, after the Romulan vessel attacked the *Kelvin*. During this attack, the captain and his senior
officers were killed, and my father remained aboard to keep the Romulans busy while the crew escaped. During all this, I was born. My father steered the Kelvin into the Romulan vessel, saving the crew – among them my mom, me, and Keenser. Mom told me later that she was able to tell Dad about me just a minute before he died.” He moistened his lips. “When I was growing up, I think I was the only child on Earth who hated his own birthday.” He felt Khan pulling him closer and snuggled up to the warm inviting body beside him.

“Spock was pulled into the worm-hole a little later than Nero had been, and arrived years later.”

“Twenty-two fifty-seven.” The former dictator nodded slowly. “And Nero’s arrival had already changed everything, as he had destroyed the Kelvin, and killed your father in the process.” This time it was Kirk who nodded. “Which left you without him, and gave Starfleet a hint of the future technology, which, as you know, changed even more of this time line.”

“Exactly,” Kirk sighed. “Nero hid all those years until Spock arrived, took him captive, marooned him on Delta Vega, which was near enough to Vulcan for a front-row seat to its destruction, and forcing Spock to watch. Nero wanted him to suffer the same way he had – with the big difference that the supernova had been a natural disaster, while the destruction of Vulcan was an act of war and unspeakable cruelty. Only around ten thousand Vulcans survived, and a few more already living in the outer colonies.” Jim shook his head. “During our hunt for Nero, Spock and I had a fight that ended with me being marooned on Delta Vega for mutiny. He’d become acting-captain of the Enterprise after Nero took Pike captive.”

“What?” Khan stiffened, and Kirk couldn’t suppress a smirk.

“Yeah, one thing you and I both learned the hard way about dealing with Spock: never piss him off. Believe me, I know a thing or two about it. After I returned to the Enterprise with Spock Prime’s help, I...emotionally compromised him – a fancy way of saying I pissed him off – and found myself half chocked to death because he lost it. Can’t blame him for it, I really did say some nasty things I deeply regret, but his older self gave me instructions to do it, and to take over command. ‘Selek’ was convinced that we only stood a chance against Nero if I were captain of the Enterprise. And when ‘my’ Spock and I worked together. We did, and we’re a damn good team – still are.”

He rubbed his thinly-stubbled cheek on Khan’s bare shoulder. “On Delta Vega, Spock Prime saved me from a very big, scary lobster-monster that wanted me for a snack. He recognized me, mind-melded with me, and I learned a lot about the other timeline – and got the proof that the old Vulcan hadn’t lost his mind, but spoke the truth when he told me who he was and where he came from.” He glanced up into the darkness, feeling Nien’s breath dancing over his face. “By the way, you can thank him for being able to hop from Earth to Qo’noS using transwarp beaming. Scotty and Keenser had been stationed at the outpost on Delta Vega. Scotty had been experimenting with the device – which is what I think landed him there in the first place. Spock gave him the final formula for it so he could beam Scotty and me back to the Enterprise. Keenser followed later.”
“And this ‘Old Spock’ became Selek.” Khan nodded slowly. Then he took a deep breath. “I wonder what happened to us both in his time-line – how we met and why I remained your enemy, despite my attraction and my desire for you. I felt it the moment I laid eyes on you.”

Jim lifted his head and pressed a kiss to the warm shoulder beneath him. “I don’t know – and I’m not sure I want to know. Sometimes knowledge isn’t…” He stopped. “Am I making sense at all?”

He heard the soft chuckle from his soul-mate. “Yes and no – like always when you’re tired.” Nien’s warm hand cupped Kirk’s cheek and pressed his head back to his shoulder. “Try to sleep, Pyāra. There’s still four hours left until you need to be duty and you need to rest.”

“You’re telling me I need my beauty sleep?” Jim grumbled, and the former dictator sighed.

“You are always handsome – even tired, grumpy, and full of sarcasm,” he teased.

“Look, who’s talking,” Jim mumbled, then snuggled even closer and closed his eyes. Sleep found him more easily now, but Khan remained awake the rest of the night thinking of what he’d learned about the alternate time-line, and ignoring the unpleasant prospect of the mind-meld ‘Selek’ had demanded of him. He wasn’t worried about failing this test; his love for Jim was true and shone brightly like nothing else in his mind. Yet he’d already had experience with this kind of Vulcan telepathy and wasn’t excited to face it again. But if this was the price he had to pay to gain his family’s safety and to convince the old Vulcan that he was no threat to Jim and to the Enterprise, he was willing to pay it.

He couldn’t know that the price would be far higher – for himself and others…

ST***ST***ST

At the same time Jim and Khan were speaking with the older vision of Spock, Bob Wesley was beamed aboard the J’Ethl. Everything was a little bit larger than human standard, he noticed. The light was dimmer and contained a red-orange hue, and the smell… Well, Bob knew that the smell from the Klingons’ perspiration made many humans uncomfortable, and being aboard one of their ships increased the smell many times.

Yet this wasn’t all that made the commodore wary. Four Klingon guards stood at the transporter console and aimed disruptors at him – a very unpleasant welcome. But Bob knew how to deal with
this race. Placing his fists at his waist, he cocked his head. “Very impressive – four Klingon
disruptors against one unarmed human. You fear us more than I thought,” he mocked, which earned
him scowls – and a snide remark from the door,

“This is our way to honor your arrival, Commodore. The danger an enemy represents, dictates the
number of necessary guards!” Kor left the shadows and stepped into the light.

Wesley lifted his right fist and hit it against his own chest. “N’unqneH, Lord Kor, qaleghqa’neS,” he
said, and his throat hurt after uttering the harsh Klingon words. Saying ‘Hello, I’m honored to see
you again.’ is really much easier to voice than speaking this ridiculous language,’ he thought.

Kor pursed his lips and returned the gesture with the words, “Yl’el (welcome), Commodore.” He was
obviously pleased. “It seems you haven’t forgotten simple civility. After your accusation moments
ago, I thought the war has clouded your mind.”

“We’re both warriors, and as such, we follow not only the basic rules of etiquette, but also of honor,”
Bob replied, leaving the transporter pad. “Accusations only exist to be investigated. I shall act
afterwards as honor demands.”

The fleet commander nodded. “Truly spoken, yet I demand explanations, Wesley – many
explanations!” The dark eyes of the Klingon were hard as granite.

“As I require explanations from you,” Wesley answered, before his gaze became very intense.
“Perhaps we should speak somewhere more private?” he suggested, his tone strong.

“Private?” Kor echoed, confused.

“Under only four eyes, so to speak,” Bob said. “Just you and I; what I have to tell you is for your
ears only.”

“Do you try to trick us, Human?” one of the guards spat, whose insignia indicated he was a higher-
ranking officer – maybe Kor’s first officer as far as Bob could tell. “Do you think we would leave
you alone with Lord Kor so that you could have the chance –”

“I don’t think Lord Kor needs any help in dealing with an unarmed human,” Bob interrupted him
icily. “Your suggestion is an offence of your superior’s skills!”
He saw the Klingon officer tense and returned his gaze to the fleet commander, who looked almost amused. “You know us very well, Wesley,” he commented under his breath, before he turned to one of the younger guards. “Examine him, and then accompany us to my quarters.”

Bob spread his arms and let the young Klingon fulfill his duty, not putting up any resistance. Of course the guard found the data chip and as he showed to Kor, Wesley explained calmly, “You wanted records – they are on this chip. Yet I would prefer that we look at them together. Maybe we can both learn about the truth then.”

Kor eyed the data chip and nodded finally. “I agree.” He made a gesture and the guard gave back the little chip to Bob. “Follow me,” the fleet commander ordered, and left the transporter room; Wesley and the young guard were on his heels.

They went down a hallway, rode a lift for two decks, and stepped out only seconds later into a large but spartan quarters. Kor gave the younger man an order, and the guard remained outside; the fleet commander and Wesley were alone.

Kor rounded on him and stopped in front of him, his eyes scanned the commodore’s face. “Why do I have the feeling that you are just exactly where you want to be from the beginning?” he asked, and Bob allowed himself a half-smile.

“Because you are right. I have to speak with you – alone, without your crew or mine overhearing.” He caught the Klingon’s confused frown and gestured towards the wall. “Is this room bug-proofed?”

“Do I look like a beginner?” Kor grumbled and Bob shook his head.

“No, but treachery often comes in the form those we thought we could trust.”

“Treachery – in the noble Federation?” Kor mocked, and Wesley took a deep breath – something he regretted a moment later. Klingons’ odor was really anything but pleasant for human noses! Yet this was the least of his concerns at the moment. He had reached a crossroads that could mean life or death, victory or defeat – not only for himself and his crew, but for the whole Federation too. And yet he had no other choice than to seek out support from the supposed enemy – an enemy who were more honorable it seemed than the own commanding staff.

Shortly, Bob pressed his lips in a thin line, then he straightened his shoulders. He had already made
his decision and there was no going back now. After this talk, he would be on his way to rescue the rest of the delegation which would save Starfleet and the Federation in the end, or the Klingons would take the chance to forget their honor and overrun a weakened UFP – and the outcome depended solely on the man in front of him. If he was wrong about Kor, then everything would be lost – if he was right about this particular Klingon, there would be another chance for peace.

“What I’m telling you now is more than…dangerous,” he said slowly. “Command may regard me as a traitor afterwards, and in that case I am going to face death penalty – or I could save my planet and maybe yours, too.”

_That_ caught Kor’s attention utterly. Frowning, he observed his guest but saw nothing else than plain earnestness in the human’s face. He made an inviting gesture towards his desk. “Sit,” he said, and took his own chair on the other side, folding his strong hands on the desk’s surface.

Bob sat down too, and for a long moment he tried to find the right words. How to begin? How much did he have to reveal to win Kor over and to make him understand that not only the Federation, but also the Klingon Empire was at stake? How to open a talk that could mean the downfall of his home but also could turn out to be the Federation’s rescue?

“I accused you of being responsible for the attack on the _Excalibur_ in one way or another, and therefore the deaths of our delegation, including some important admirals.” He fixed his gaze on Kor. “I know now that these accusations are wrong. Yes, Klingon vessels attacked, yet they have to be renegades, because no Empire-loyal Klingon, let alone the descendant of the last Klingon emperor, would accept _orders_ from a Starfleet officer.”

The frown on Kor’s smooth forehead deepened even more. “Explain!” he ordered curtly, and Wesley took another deep breath.

“There are…officers and other Starfleet members who don’t agree with the way of peace – or even with the reason for Starfleet’s original foundation: to explore space and to protect our borders, but not to be aggressors. Those people see in everyone, even in the own allies, potential enemies, and even don’t trust their own shadows, so to speak.”

“Sounds a lot like how we think – or the Romulans,” Kor commented wryly, and Wesley grimaced.

“Yeah, but I don’t think that neither the Imperial Klingon Fleet nor the Romulans would tolerate any of their officers founding their own little club, using resources for their own war games, and infiltrate their own fleet, Intelligence, and even their own government to prepare a coup.”
The frown on Kor’s forehead deepened. “A coup?” he asked, not trusting his ears. “Within the Federation?”

Bob nodded. “Yes – not a violent one; a so-called ‘soft revolution’. It would mean they could create new terms which would force the government to change politics to their liking. For this reason, they staged the attack on the *Excalibur*, hiring outlaws to do it – maybe even Klingon renegades who disagree with their own Council’s decision concerning the peace talks. This would also explain why one of the attackers painted your ship’s name on the hull of his own spacecraft and pretended to be you during an audio transmission.”

Kor visibly paled beneath his dark skin. “You are saying –”

“You’ve traitors in your own ranks, Kor – just as I have. The records the *Excalibur* made from the attack show three Klingon Birds-of-Prey, and one of them wore your ship’s name – bright and plain to see for the cameras. I admit, I was tricked at the beginning after I received the records, but thank the Lord there’s another captain within my ranks who had the ‘pleasure’ of meeting you several weeks ago, and he realized the tiny differences between your ship and the attacking vessel.”

“Aye, Jim Kirk recognized the details which were incorrect, not only concerning the attacking ships, but also the discrepancies in the records of the *Excalibur’s log.*” He bent forwards. “Our delegation was evacuated in a break in battle for one reason only – to get the higher ranks off the ship and kill them, because they were about to discover the conspiracy, and would have taken action within the next days. And that the diplomats were among the victims played straight into the conspirators’ hands. They’d kill two birds with one stone, literally. Their elimination of the admirals and the deaths of the diplomats brought uproar to the Federation. Everyone assumes the Klingons are responsible for the incident, and that will force the president and the Council to act, which is exactly what the conspirators want.”

Blinking in outrage and confusion, the fleet commander demanded, “And you’ve proof of this?”

Wesley sighed. “I don’t think the proof I have currently is enough to convict the Council, but I’m working on changing that.” He gestured to the data disk. “The first of the evidence is in those records.”

Kor picked up the item and put it into the slot of an external terminal which was connected to his
own. As the Klingon caught the confused expression of the human, he grumbled. “Your computers are not compatible with ours, so I need a medium in which to reformat it.”

Bob couldn’t help himself; he smirked. “Clever!”

Switching on the terminal, Kor waved Wesley around the desk to join him. In the next minutes they watched the two reports. Kor stopped them here and there to ask questions Bob answered willingly. After a quarter of an hour, the fleet commander leant back in his chair and Wesley took his own seat. Fixing his gaze on the commodore, Kor finally said, “You have a big problem in Starfleet.”

“You can say that again,” Wesley grimaced. “If everything goes as the conspirators would want them to, the alpha and beta quadrants will be wallowing in blood for years to come.”

“War is no crime to us Klingons; it’s a chance to protect our borders and increase our territory,” Kor mused, and the commodore cocked his head.

“But to be provoked into war with false motives only to be a pawn in someone else’s power-play is a violation of any true warrior’s honor.”

The Klingon bared his teeth thoughtfully. “You are right. We are not pieces in your traitors’ chess game. Yet here we are. I to find the imposter who pretended to be me while committing crimes against the Empire, and you…to investigate in the same direction?” The sentence ended in a question, while Kor’s eyes bore into those of Wesley.

Bob sighed. “Yes and no.” He watched his ‘host’ frowning and knew that he couldn’t delay the real reason for his presence any longer. “I have every reason to believe that some of the members of the delegation survived the attack and the subsequent crash of their shuttle. And I’m here to recover them.”

Kor nodded slowly. “Without Starfleet Command’s permission, or even its knowledge, because otherwise the conspirators would try to stop you –”

“– or would send assassins to finish the job the hired killer didn’t,” Wesley affirmed.

Again the Klingon watched him warily before he cocked his head. “And you know of the survivors how?” he asked.
“We’ve ears even here,” Bob replied carefully, but Kor interrupted him.

“To use Terran slang: bullshit! If Starfleet Command had spies here they would have known about the survivors and would have tried to kill them in secret, just as you already assumed. Therefore, you have ‘ears’ here, Bob Wesley, not Starfleet Command, and you were on your way to meet with your so-called ‘ears’, maybe to get support. So I ask again: who told you about the survivors?”

For several seconds the Commodore didn’t answer, then realized that he to tell Kor the truth if he wanted him on side. If he succeeded, Kor would learn about The Shadow sooner or later. Better to lay all the cards on the table; Klingons hated being left in the dark. They felt betrayed very easily.

“The Shadow intercepted –”

Kor bared his teeth. “This handful of civilians who give us so much trouble here and there?” As Wesley made an affirming gesture, the Klingon growled before scoffing, “Why am I not surprised? These troublemakers show up whenever you don’t count on them to.” He made a noise deep in his throat that sounded almost like a human sigh before he continued, “And this gang of outlaws discovered that some of the members of the delegation survived?”

“Yes. One of the two shuttles with the evacuees wasn’t destroyed but –”

“ – but crashed on Yaska. I know. I found the remains of it – with several dead bodies.” As he caught Wesley’s surprised gaze, he grumbled. “It was my duty to investigate the incident, as you already pointed out.”

“Let me guess, you found blood traces of races whose bodies weren’t in the shuttle.”

Kor nodded hesitantly. “Yes – human, Vulcan, Andorian, Tellarit…” He pursed his lips. “So, you think they were taken captive?”

“Yes. The Shadow intercepted transmissions between the slavers who kidnapped our people and the Romulans,” he said, and Kor went rigid.

“Romulans?”
“Yes,” Wesley growled. “The Shadow overheard the discussion between the slavers and the Romulans in which they offered our surviving admirals and two Vulcans to the Romulans. They also spoke of other ‘new and interesting slaves’ who will be sold at a market whose location is still unknown – certainly the other survivors from our delegation.”

Kor’s sharp teeth bit into his bottom lip while his mind was already busy with planning his next action. He had forbidden slavery in the Borderland, yet the Orions didn’t obey him. This demanded his attention, even if the ‘goods’ were damned Starfleet admirals! Then his thoughts returned to his guest, and for the first time he realized how tense yet incredibly calm Bob Wesley was. The commodore was on a hostile ship, telling the enemy about a conspiracy within his own fleet – and was as casual as if he were speaking with a close friend.

And then it hit Kor – Wesley was indeed exactly where he wanted to be – here, on Kor’s ship, because…

“You are here because you want my support,” he stated, astonished.

Bob allowed himself a small smile. “To tell you the truth, I was almost relieved when I recognized your ship. We both have the same goal – to identify and get the imposter who pretended to be you, and who attacked our ship. I have information that can help you, and –”

“And in my company you could move freely through the Borderland which would be impossible, even with this new technique you’re using, because sensors may not locate you, but you would be visible – that’s how we saw and surrounded the Excalibur.” He bent forwards. “Speaking of that technique, how –”

“Kor, I will not tell you anything about that, just as you’d certainly not want to explain how it is that our sensors didn’t catch the ion trails of your drives before your ships rematerialized – a phenomena that Kirk witnessed too, by the way, when your two commanders assaulted the Enterprise.” He also bent forwards, fixing his eyes on the fleet-commodore. “Let me make a suggestion. We both don’t talk about the technical enhancements our science and engineering departments have obviously made, and rather concentrate on finding the pirates who acted in your name, and on recovering our survivors.”

“We two – together?” Kor pressed and Wesley nodded sternly.

“It’s logical, don’t you agree? We are still under a ceasefire and more-or-less in neutral territory. We
both have the same goal; we are both bound by oaths and duty to prevent harm befalling our homes. So why not support each other?”

The fleet commander took a deep breath. “You are aware that with the information you just gave me, I could inform our fleet and the Federation would be ours within a few days?”

Bob had expected such words and was ready for them. “Yes, but I’m also aware of the fact that I’m speaking to a true warrior, a warrior with honor, otherwise I would have never told you anything of this, Kor. And, by the way, if the Empire wanted to overrun the Federation, the major strike would be already in process. Our president demanded explanations for the deaths of our diplomats and admirals, therefore the Klingon High Council knows that Starfleet is weakened because of the losses of her most important staff officers, yet your people stand true to their word and are even trying to discover what really happened.” He cocked his head again. “I don’t want to say it, but your Council has more honor than I gave it credit for – an honor the conspirators should take as an example but they won’t.”

Kor stared at him, before he threw his head back and began to laugh. “I know what you’re doing, Wesley. You’re trying to compliment me, yet your words contain an almost uncomfortable truth. We’ve both been thrown into the same mess because of our oaths and honor, yet we are still on opposite sides. But that still didn’t keep you from asking me for support.” He laid both strong hands on the desktop, looking for all the world like the cat that had got the cream. “Tell me, Bob Wesley, why should I care what is happening within Starfleet? Why should I care if the Federation is on the way to destroy herself? Why should I waste my time to save a few of her officers and diplomats? Because we were played? If anything, we could take the opportunity to get revenge for it now.”

“And yet you won’t because you’ve been personally compromised by the traitors and by the imposter who’s trying to destroy your credibility and name in the Council.” Bob laid his hands on the desktop, too. “We need each other to avert further danger to our homes and our families – something we vowed to do.”

The Klingon lord examined the human in front of him before he slowly replied, “I’ve learned that humans use so-called ‘white lies’ to trick opponents to gain advantages. I have also faced a behavior you Terrans call ‘bluffing’ before, yet my gut tells me that you’re speaking the truth – that you’re convinced of this all.”

Bob nodded sternly. “I am,” he said firmly, before he gestured towards the data disk. “These reports tell another story than what’s seen at first glance. And there is more evidence. Spies on our ships, cra –”

“Spies? Is this why you wrangled your way onto my ship by offending me first-hand?” Kor demanded and as Wesley smiled sheepishly and murmured a “sorry about that.” The Klingon began
to laugh again. “You trust me more than your own people?”

“I do trust most of my crew and my senior officers, mind you, but I can’t be certain that the conspirators didn’t place anyone on my ship before this whole mess even began.”

The fleet commander leant back again and took a deep breath, nodding slowly in understanding. “To take care is not the way of the coward but that of a wise man,” he said. “And I’m almost willing to believe you.”

“Could be faked,” Kor interrupted him, but as he saw the real anger in the human’s dark eyes, he lifted a calming hand – a gesture he had seen many times during the conferences on Organia. “I’m not accusing you that you try to lure me into a trap. Yet I need a proof that I can really believe, even trust you.”

Wesley groaned. “If you ask me now about fleet activities, new engineering protocols, or…”

“No, nothing like that, Wesley. I would not demand you betray your own oath as proof of your honesty. That would be highly counterproductive.” He glanced hard at the commodore. “Tell me about the Augment.”

That caught Bob by surprise. “‘Augment’?” he echoed, before his mind began to reel. He couldn’t tell Kor about Khan. That would be too dangerous. “There are no Augments, as you certainly know, and –”

“Don’t play dumb with me!” Kor interrupted him. “If you want me to believe anything of this conspiracy you’re telling me about, then you should stick to the truth! The Qli-jagh, the dark warrior, who was on Qo’noS last year is no normal human and no Vulcan either! He slipped unnoticed into my headquarters on Turkana to recover Kirk, instantly killed seven Klingon warriors, ran through the jungle like a tarte, hurled a Klingon warrior through the air like he weighed no more than a feather, seems to know the enemy’s next move before it even begins, and reacts quicker than the eye is able to follow. This man is an Augment!” He brought his index finger directly under Bob’s nose. “Don’t deny it. This man is genetically enhanced and after all I’ve just learned about these conspirators in Starfleet, the Qli-jagh is certainly one of many, many enhanced warriors they breed to fight against us and to –”
“You’re wrong,” the commodore interrupted him. “This man wasn’t bred from this shadow department the conspirators founded.”

“Of course not,” Kor snapped. “This shadow department, if I recall your tale correctly, has existed for only a short period of time, yet this man is an adult. Unless the Federation found a way to speed up human maturation, he must have been bred about three of your decades ago.” Enraged he glared at Wesley. “So much to the Federation’s assurances that there would never be another Augment program and –”

“We haven’t experimented with human genetic enhancement for more than two hundred and sixty years, Kor. The incident in the last century –”

“– was maybe the first stage of new tests?” The fleet commander bent forwards. “And the Qli-jagh is the perfect outcome of it!”

Wesley groaned. Was he really going to be forced to tell Kor about Khan and his history? As it seemed, there was no other way to gain the fleet commander’s trust, and therefore his support to prevent the whole mess becoming an interstellar catastrophe.

“The dark warrior, as you call him, is no product of new genetic experiments – not from the last century and certainly not from this one.”

“So, where does he come from?” Kor probed and Wesley sighed, sounding suddenly very tired. God, would he really have to reveal Khan’s true heritage? One look into those dark, piercing eyes in which the sparks of real anger shimmered, and he knew he didn’t have another choice.

“The ‘dark warrior’, is indeed…enhanced.”

Kor snorted, which meant nothing more than ‘told you so’.

“He was the perfect outcome of those tests – three centuries ago on my planet,” Bob gritted out, cursing inwardly before taking a deep breath. “In the middle of the 20th century scientists experimented with genetics, trying to contain illness. Then they got the idea to breed super-humans; people with extremely high intelligence, quicker, stronger… They could bring peace to our planet which was about to be torn into pieces. Not literary, mind you, but within the continents. Two world wars had shaken up all countries, the aftermaths of which displaced many people.”
“I know a little bit of Earther history. There were three wars within one century, as I recall,” Kor thought aloud and Wesley nodded curtly.

“Yes, two world wars and later the Eugenics Wars, which I’ll come to now. The super-humans were supposed to put an end to all the crises – and they did, but differently than planned. Many of them tried to gain supreme power – some of them succeeded. And a few of them kept the peace within their borders, and did what they were created to do. But there were other Augments, and their reigns were not so peaceful. Some of them even killed normal humans because they regarded them as inferior – animals which had to be eliminated. The human race rebelled, and thus came the Eugenic Wars. And as a result, it quickly didn’t matter to many humans who those Augments were who had their welfare at heart and those who tried to destroy them. They attacked all Augments and their loyal fellows, killing everyone in the process. It was pure butchery.”

Kor listened intensely. “I’ve heard about this third war, too. Though fewer in number, you humans put us Klingons almost to shame with your cruelness in the wars during those decades,” he grumbled. “But what has this to do with the Qli-jagh? Those Augments were created three of your centuries ago and –”

“And he is one of them,” Bob let the cat out of the bag. He saw Kor’s eyes widen and explained, “He fled, together with his family in a crude sleeper ship, using tubes with a kind of stasis field that kept them alive. I think he’d anticipated that the computer would wake them a few decades later, but something went wrong. Three centuries later, a Starfleet ship found his vessel by accident. The highest-ranking officer aboard realized who these people were and woke their leader.” He pressed his lips into a short line. “Learning that he faced one of the Augments with a more peaceful past, he decided to use the super-human’s intelligence for his own purposes, and forced him into service. That…went very wrong, too.”

Kor crossed his long arms in front of his broad chest. “Let me guess: The whole mess last year on Qo’noS is the outcome of that.”

Wesley pinched the bridge of his nose. “Yes,” he breathed, before he moistened his lips. “This conspiracy I told you about had already been expanded last year by other staff officers. The Council and we all thought that we’d eliminated the problem, but now it turns out that several traitors remained undiscovered and free. This has been a new attempt to continue where last year the others failed.”

Kor snorted. “I’m not surprised. Such a conspiracy that you spoke of would need to be planned carefully and needs time – years even.” He bared his teeth again. “And the Qli-jagh became a part of the conspirators’ plan?”
Again the commodore couldn’t do anything else than nod. “Yeah, but not of his own free will. When he realized what the officer in charge was up to, he denied support, but was forced to obey as said officer threatened his family – even killed some of them. Finally, the Augment-leader was able to flee and hide. Nonetheless, the officer continued with his plans. He…wanted war between the Empire and us, and he did everything he could to initiate it.”

Kor’s face betrayed his bafflement. “He wanted war? Why? You humans avoid war at any cost.”

Again Wesley sighed. “He wanted to establish his supremacy and that of his fellows by being needed during a time of war. He had the point of view that the Federation had to discard her history of peace because the ‘bad neighbor’ – the Klingon Empire – would attack sooner or later. To prove himself to be right, he planned to strike first to provoke you. But his involvement should never become public knowledge or even come to the knowledge of the Council. Like this, your expected counter-offensive would have made it look as though you had begun the battle and war would have resulted.”

He watched Kor scowl, while fury glistened in the Klingon’s eyes – something Bob could understand too. “What a…devious, cowardly trick!” he hissed, and Wesley made an affirming gesture.

“I agree. But it never came to that in the end. One of his agents went rogue and fled to Qo’noS. This was the chance for him to go ahead with his plan. He sent the Enterprise to your planet to –”

“– to catch a criminal who was a threat to us, as Kirk pointed out during his stay on Turkana,” Kor growled. “The outcome of which is well known: three ship’s crews dead –”

“– instead of an open attack against Qo’noS, as Kirk was ordered to carry out,” Bob cut in, rendering Kor speechless before the Klingon’s face flushed red with rage.

“Kirk was ordered –”

“To kill the criminal by firing torpedoes at the abandoned area of your homeworld where the fugitive was hiding. Kirk didn’t obey this order as he became aware what he was really ought to do – attack an unsuspecting planet – not with one, but with over seventy torpedoes.”

Kor paled. “More than seventy torpedoes? It… It would have torn Qo’noS apart!” he gasped, eyes widening in shock.
Wesley nodded slowly. “Yes, a planetary catastrophe would have occurred. And there would have been no doubt who had attacked you, because the conspirators had sabotaged the Enterprise’s warp core which stranded her in Klingon territory. You would have every right to regard this as an act of war, and no doubt would have attacked the Federation, exactly as the conspirators had intended. The traitors would have made it look as though everything were Kirk’s fault – a young captain who’d broken under the pressure of command, and because the criminal had killed his mentor before he’d fled. Yet war would have broken out. And the conspirators would have appeared as the saviors of the Federation; prepared for everything already. The head of them would have been lauded as the great hero in the end – an end that would have meant thousands, tens of thousands of dead Federation citizens – and Klingons, decimated planets, and a shift of the power balance in the Alpha and Beta quadrants.”

Kor’s hands were balled into fists, strong enough to turn his knuckles to a sick pale yellow. “We would have been nothing more than pieces in a chess game these traitors set up,” he hissed, furious. “Is this the usual human way to battle?”

“No, as you certainly know by now,” Bob said firmly, though gently. “These people are scum, not worth the paper their names are written on. Yet they did and do again have their collective finger poised on the proverbial trigger, and they’ll play anyone – our admiralty, and captains, the Federation Council, your council, you, me… Just as they tried to do last year.”

“But their attempt failed,” the fleet commander reminded him harshly, and Wesley smiled without humor.

“Yes, because the young captain who’d been chosen to be their instrument of destruction listened to his conscience and tried to capture the criminal himself. He smuggled himself onto Qo’noS to arrest him. The man defended himself, then your squadron showed up and challenged Kirk to a battle.”

“And then the Qli-jagh, who had come to hide, appeared to support Kirk – just as he has since then,” Kor stated with another growl. “Kirk told me that said criminal and the dark warrior were two different people, yet the dark warrior is well-trained and skilled as an assassin – a perfect agent for such a shadow department. Maybe they are indeed one and the same person? You said he was forced into the traitors’ service, but fled successfully. Maybe it was he who turned against his superiors because he didn’t want to play their game any longer?”

Wesley knew that he had to be very careful now. Khan should never be connected to events last year – neither in public nor in secret. Even – especially – not here and now. Therefore, Bob knew he had to use the same white lie Jim had told him and which would confirm Kor’s comments. “The dark warrior fled, true, but his escape and the agent’s flight didn’t happen at the same time. The agent turned rogue later and perhaps followed the Augment to team up with him, yet it never came to that,”
he said – using the fact that several days spanned Khan’s attack against the London archive and his escape. “The Augment fled to Qo’noS, hoping that his tormentors wouldn’t follow him. He hid on your homeworld in an abandoned area where he met later Jim Kirk, who was hunting the criminal. The Augment didn’t know that Kirk and his companions belonged to Starfleet, because they wore civilian clothes and didn’t use a Starfleet spacecraft. All he saw were a few young human people who were attacked by your squadron. Blood is thicker than water, so he intervened to their advantage. When he learned that they were indeed Starfleet personnel, he fled again and vanished.”

Kor watched him, eyes glistening. “And he didn’t know who he helped? And vanished?” He snorted. “Well, that covers what Kirk told me about this ominous stranger who came to his aid on Qo’noS, only to disappear and not be seen again until four weeks ago on Turkana. Yet there is one small, maybe unimportant detail I simply cannot grasp.” Pure irony dripped from his voice before he almost snarled. “How, if this Augment and Kirk didn’t know each other, and Kirk hadn’t seen him since the bloodshed on Qo’noS, as he told me, was it possible for them to have become lovers in the meantime? Because that’s the real reason the Augment has risked his neck ever since to recover Kirk and protect him with the fierceness of a warrigul-mother shielding her whelps!”

Bob stared at him thunderstruck. Had he understood Kor correctly? Lovers? Kirk and Khan were lovers? That was – crazy! Insane even! He cleared his throat and forced his vocal cords to work. “I beg your pardon?” he asked, tone obviously disbelieving.

Something close to curiosity began to shimmer in the Klingon’s dark eyes. “They are lovers,” he repeated, taking in the human’s astonished face.

Wesley continued to look at him – utterly confused. “No,” he finally said.

Kor lifted both brows. “Yes, they are.”

“Never!” Bob shook his head. “Impossible!”

Kor felt amusement rising in him at the human’s clear denial, and his lips curled into a smirk. “You didn’t know what your ‘boy’ was up to?” he asked with a mocking tone in his voice.

Finally Wesley realized that Kor wasn’t pulling his leg and began to laugh. “Jim Kirk and Khan – lovers?” He tried to control himself, but couldn’t stop the chuckles which escaped him. “Kor, you’re very much mistaken. Kirk and another man sharing a bed?” Again he had to stifle a guffaw. “You really don’t know much about Jim Kirk. He’s Starfleet’s biggest Casanova – a ladies’ man, through and through. There isn’t a woman safe from his flirting and charm attacks. I think he’d even bat his eyes at the Vice President, given half the chance. But take Khan to his bed? Never!”
Kor leant back and his strong fingers drummed on his arm rests – not in irritation but in a sort of triumph. And a moment later it was clear why. “And here, Wesley, you are mistaken. Kirk and… Khan is his name?” He watched the commodore sobering up and grinned wolfishly. “Nice to learn his true name finally.” He cocked his head, enjoying the next words. “Those two are very close – lovers! I’ve got proof on visual recordings. And Koloth told me before he was called back to the Empire that the Qli-jagh – Khan – had only one goal on Aldebaran: to keep Kirk safe. He was always near him – too near – and stopped his fight when Kirk’s life was at stake, telling Korax he’d let him go if he spared Kirk.” He watched the dumfounded expression on Wesley’s face and continued after a short dramatic pause, “Kirk is his weakness; he’s even ready to sacrifice himself for him. And I’m almost certain that the dark warrior was also aboard the Enterprise when I came to your boy’s aid in the Briar Patch. The way the Enterprise fought off our two renegades bore Khan’s stamp.”

“So much for keeping quiet about Khan’s presence aboard Kirk’s ship,” Wesley thought, frustrated. On the outside he remained casual. “They’d become friends; that much I knew, but to think that they’re lovers is…”

“The truth!”

“Kor,” Wesley began anew. “Kirk is, as I’ve already said, a Casano – well, someone who –”

“I know who this Casanova of yours was, and what it means to be called that, Wesley. After all, it was you who gave me some of that classical Terran literature files when we left Organia. I do understand that Kirk had been after every pretty female – maybe that’s why he’s found true love with a man in the end.” He bent forwards. “I have proof. Here, look for yourself!” He activated his terminal and barked some orders before he turned the screen around, giving them both a chance to watch the scene unfold.

The record, Wesley noted, was taken from a bird’s eye view and showed two figures running over a dark field. Strong spotlights caught their flight, voices demanded their surrender, wind and engine noise told of other space crafts’ arrival. Kor zoomed the screen and half-anxious, half-curious Bob realized that he saw Jim’s and Khan’s attempt to escape their Klingon pursuers. Both stopped and looked around; Kirk was barely holding himself upright, the Augment strong and in utterly-protective mode – ready to battle to the last breathe anyone who would try to approach. With dread, Wesley watched Jim’s shoulders sagging in defeat; the young captain clearly realized that there was no way out. And then it happened. Both men looked at each other before they closed the distance between themselves in wordless agreement. Khan pulled the younger man into an embrace – a gesture Kirk responded to instantly. The beginning of anguish showed upon the super-human’s face as he leant his head against Jim’s, and as his lips moved, it became obvious that Kirk tightened his arms around him. Both clung to each other like a lifeline – as if it were the last time, and that pained them both beyond imagination.
Kor stopped the recording and leant back, looking half-satisfied, half-amused. Shock was plainly written across his ‘guest’s’ face. “You really didn’t know,” he mused, and Bob dumbly shook his head. “But you must agree now that they are not just simple allies – or friends,” the Klingon pressed and met Wesley’s gaze finally. For several moments they only looked at each other, then groaning, the commodore let himself fall against the backrest of the chair.

There was no denying it. That embrace had nothing to do with friendship. Jim and Khan were – indeed – lovers! It all made sense now – Kirk’s incredible protective instincts regarding the Augment, his pain as Bob suggested that Khan should leave the Enterprise and hide until everything had settled; Khan’s willingness to support and shield Kirk whenever necessary. Hell, it even explained why the super-human had been ready to die along with Jim. They were lovers – and given the latest incident and how far Kirk was ready to go for the Augment, it became clear that this was more than one of Jim’s fleeting affairs. He was ready to sacrifice his career and his command for the Augment – and Khan was ready to face court, risking a life sentence, only to have a very small chance to live a life of freedom, maybe beside Jim.

God, this was exactly what Wesley did not right now – a big, heart-wrenching love story between his best captain and protégée, and a wanted man who had to be brought to trial, hoping for leniency after running amok a year ago.

Kor examined Wesley’s reaction and his lips curled in even deeper amusement. “Sorry if I’ve added more problems to your already fully-laden shoulders!”

Bob glared at him. “I’d believe your sympathy was more sincere if you’d stop grinning!” he groused – and the Klingon laughed quietly.

“You said Kirk is a kind of son to you. You should give him a proper dressing down; maybe he’d behave afterwards.”

“Too late for that. He’s already grown up – well, at least on the outside,” Bob grumbled. Oh, he would give Jim an earful as soon as he saw him again. Jesus, it wasn’t as if he didn’t approve of relationships of the same gender. He’d even thank the Lord that Jim Kirk, of all the playboys, finally found a match and settled down with her (or him, in this case). But this was the stupidest thing Kirk could have done – falling in love with a criminal. And, above all, not telling him about it. Did Jim really think something like this could stay hidden for long?

Kor cocked his head. “He’s put you into a nasty position, your ‘boy’, hasn’t he?”
“Not really,” Wesley murmured. “It only changes some…private matters.” He sighed and straightened his posture. “So, they’re lovers – all right. Does this influence our topic at all?”

“No,” Kor admitted, “it only affirms what I’d guessed, and that’s always satisfying.” He switched off the terminal. “And I expect you’ll keep this affair a secret to protect your boy and his lover.” He cocked his head. “You love to play dangerous games, don’t you? Your presence aboard my ship proves it.”

“I’ve no other choice,” Bob said uncomfortably.

“No, you really have no other choice, seeing that you’re desperate enough to ask me for support.”

Wesley took another deep breath. “Do I have it?”

Kor pursed his lips thoughtfully. “Is there the tiniest chance that you may learn about this secret location where the slavery market will take place? Otherwise our cooperation would not make any sense.”

This choice of words gave Bob new hope. “Yes, I have a plan – but its success will depend on your readiness to help.”

Again the Klingon watched him for a longer time, then he made up his mind. “I know that this can lead to a lot of trouble – not only for you, but also for me and my inferiors, but danger is the spice of life.” He straightened his shoulders. “Count me in – if only to proof to our councils that there are still honorable warriors left who do not need to play foul to gain victory.”

Bob allowed himself to breathe through – and as he caught Kor’s smirking expression he rolled his eyes. What had he gotten himself into…?

TBC…
Yes, this is a very good question: What had Bob gotten himself into? Well, at least in a lot of trouble, chaos and craziness. But the same goes for our boys.

In the next chapter the cooperation between Bob and Kor will start – with a few surprises. Spock Prime finds out something very interesting and, of course, can’t stop himself from supporting Jim with everything possible. Then the Enterprise will reach Gamma 12, where Jim comes face to face with someone he knows from the Academy – trouble is inevitable.

I hope you loved the new installment and I’m very – very – curios what you think of this whole progress.

Obstacles

Chapter Notes

Hallo, my dear readers!

Thank you so very much for all the feedback. I’m glad that you love the two storylines so much – Bob and Kor, and Jim/Nien/Prime Spock. Especially latter holds a lot of explosive potential and I’m already looking forward to let every one of them (including today’s Spock) go through a lot until… Well, you’ve to wait if there will be a happy ending or not.

The new chapter starts exactly there where the old one stopped – with Wesley and Kor figuring out of their ‘alliance’ and a plan how to proceed. Prime Spock will be in this chapter, too, and then the Enterprise approaches the high security facility…

I hope you’ll have some fun.

Love

Chapter 56 – Obstacles

Wesley coughed as the sharp Romulan Ale burned in his throat. Kor sat at the other side of his desk and grinned, while he sipped at his glass of blue spirit. “Nothing for soft tongues,” he mocked and Bob shot him a glare.

“After speaking Klingon an hour ago, my throat is sore, that’s all,” he rejoined and the fleet commander chuckled.

“You mean, after your attempt at speaking my language!” He leant back. “So, let me repeat your plan: we’re heading towards Verix to meet with this mud-digger and his friends, hoping that the Romulans have shown up and lead us to the secret location of the slave market. There you want to recover your people, while I hope to catch the imposter. Afterwards, you leave the Borderland and speed back to the Federation to bring the traitors to justice – hopefully with the help of your rescued admirals who will eventually believe your accusations against the conspirators.” He pursed his lips. “So much ‘hope’ – it’s incredible what you’re up for it. Humans are crazy. This I’ve known for quite a time, yet you’re certainly the most daring person I’ve ever met – besides Kirk.”
Bob smirked. “Thanks for the compliment,” he replied, before he turned serious again. “Kor, it’s really very easy. Five of your ships and the *Lexington* have enough force to –”

“Wesley, we can’t arrive at this damn market, beam down with a whole fighting team, and get your people out. The Orions may be nothing more than damned pirates, but they’re clever and careful. If there are more than two ships – above all a Federation ship, together with Klingon vessels – nearing this secret place, the whole sale will be cancelled. I don’t like to admit this, but their sensing techniques are brilliant. We will not be able to come near the place without alerting them.”

“The *Lexington* can’t be located and –”

“But she can be seen,” the Klingon interrupted him sternly. “That’s how I found you – and so will the Orions.” He set the glass on the desk top. “We’ll have a chance if we can smuggle ourselves into their lines, strike out and then in the erupting chaos, call my ships for support.” He bent forwards. “I not only want to catch the imposter and his accomplices, I also want to arrest the Orion slavers who caught your people and, if possible, also the Romulans who invaded the Borderland.”

Bob cocked his head. “Take one of your ships. You have the cloaking device and this new technology which covers your ion trails. With that, we could –”

“Only the newest Imperial ships have this equipment, which would give the Orions an indication that a Bird-of-Prey in their orbit can’t belong to a renegade. And, by the way, my ships are all well-known. As soon as we switch off the cloaking device to beam down to the planet – or asteroid or wherever the market takes place – they’ll know who is coming and everything will be lost.” He leant back again. “No, we have to come up with a better plan.”

Wesley stared at him, while two ideas flitted through mind. There was a chance to sneak up on the market in secret, yet it would mean that he had to give Kor back something the Klingons certainly had already surrendered and what was now booty for the Federation. On the other hand, it hadn’t been Starfleet who took said ‘item’, and therefore he wouldn’t break any Starfleet rules if he took this step.

Sighing, he ended his inner dilemma by following his gut feeling. “I think I have a solution to our problem.” He returned Kor’s asking glance and took another sip before he continued. “If an older Klingon spacecraft – a small one – nears this secret place, we could pretend to be slavers or traders. The Orions wouldn’t be alerted and –”

“Of what ‘older, smaller vessel’ do you speak?” the Klingon lord interrupted him, and Wesley fixed him with a stare.
“The D’Ghor.” He saw Kor’s eyes widening and added, “I know where she is and she is unmanned. We could use her to follow the Romulans and slavers, striking back with the imposter’s own weapons by masking our true identities with a false one.”

“The D’Ghor?” Kor stared at him. “She was lost to this blasted militia and attacked our fleet at Tammeron. Not that I’d agreed with that strike. To attack a neutral planet and attempting to destroy it wholesale is not the way of an honorable warrior, yet the D’Ghor had a part in it, and is officially lost to us. Even moreso, she belongs now to the enemy.”

Sighing, Bob straightened his shoulders. “Well, maybe it would give you bonus points with your Council if you could retake her. She won’t be a threat anymore to you – after all a Trojan horse is always a threat.”

“A what?” The fleet-commander was lost here and Wesley quickly explained what this reference meant and why. Afterwards, Kor grinned. “A clever plan, no doubt. And you’ll try to do something similar by smuggling us behind enemy lines and attack from within.” He smiled. “I like this idea.” Then he sobered up. “And afterwards? I will not allow you to keep her and –”

“You don’t have to,” Wesley groaned. “The Shadow and I use her to get at the market, then we inform you, and you can strike with full force as soon as we’ve taken care of the chaos within the market. We free our people, you arrest whomever you like to make an example, and afterwards you can keep the D’Ghor.” He reached out, offering Kor his hand. “Do we have a deal?”

For a tiny moment the fleet commander hesitated, then he accepted Bob’s hand. “Deal!” he used Terran slang. Both shook each other’s hand, before Kor rose. “Where is she?”

The commodore leant back in his chair; barely able to hide his glee. “She is only a kilometer or so away from your headquarters on Turkana – southern area near the high plateau where Turkana City lies.” He saw Kor’s jaw almost hitting the floor and schooled his own features to stop the grin that was about to break across on his face. Ah, sometimes spitefulness was really sweet.

“She – she is on Turkana? She’s been there…since when??” the Klingon burst out, disbelieving.

It became really difficult to hide his smirk now, as Wesley answered, “Khan arrived with her to recover Jim Kirk. Only he didn’t make it back to the D’Ghor and had to leave her behind. She is cloaked.”
Kor took a very, very deep breath. “Cloaked! Without the engines running, only auxiliary power therefore – there will be no chance of finding her without the correct location before the auxiliary power runs out of energy.”

Wesley couldn’t help himself anymore. He grinned. “Well, I think I can make a call or two and find out her exact coordinates and how to override the security Khan certainly will have installed. In the meantime we should leave for Turkana to get the D’Ghor as soon as possible. We could be at Turkana in six hours, take her and leave for Verix. The Romulans might not arrive until then and The Shadow might know the location of the market by now. Otherwise we’re playing ‘dead man’ nearby and follow the slavers as soon as they show up.”

Kor crossed his arms in front of his chest. “You’ve thought it all out, haven’t you?”

“Like every good commander should – but to whom am I’m telling this? After all, you think everything thoroughly through before you act, too.”

The Klingon lord snored. “Yes, but Kahless should have warned me about you crazy humans – he should have sent me a dream to warn me of you and Kirk.” An amused glistening in his eyes took away some of the harshness in these words.

“Well, I’m taking that as a compliment,” Bob said, bowing politely his head.

Promptly Kor laughed. “Klingons only compliment enemies when they’re strong – this much you know already. You’ve learned a lot about us!”

Wesley pursed shortly his lips. “I’m still your enemy?”

Kor didn’t answer for a moment longer, before slowly saying, “This will determined in the next days – yet I daresay you in person are not my enemy.” He pressed his fist against his chest – the Klingon salute. “Return to your ship and contact the dark warrior. But I warn you, only this one time. No tricks! I would hate to be forced to destroy your ship and to kill you.”

Bob nodded. “The same goes for you. I respect you and I hope that we will part as allies, not as enemies in a few days.”
The talk was over now and several minutes later Wesley stepped onto the bridge of the *Lexington*; his officers greeted him with relieved smiles. Taking a deep breath, he decided to tell them a kind of half-truth for now, his most trusted senior officers and friends would learn of the whole plan later.

“It seems the assault on the *Excalibur* was carried out by Klingon renegades together with Orion pirates. Lord Kor was on to something. He had an idea who the aggressors were and where to find them. As a signal that the Klingon High Council is interested in investigating the incident and that they stay true to the agreed ceasefire, Lord Kor has asked if we’d like to accompany him in catching those who killed our diplomats and admirals. They’re hiding, but Kor has every reason to learn of their whereabouts within the next few hours. Until then, we’ll travel with him deeper into the Borderland and meet with The Shadow, who have agreed to share some information with us.” He looked from one to another. “Understand this people – this mission is top secret!” His gaze flickered quickly “There is evidence that the Romulans have a hand in this whole thing, too, so no transmissions to anyone. The risk that we’re intercepted is too high.” He glanced at his comms officer, who understood the real meaning of the next order. “Palmer, absolute observation of all frequencies and shield all transmissions Priority One – in case someone in our crew thinks he or she has to make a call home to tell their family happy holidays or something equally non-urgent at the moment.”

There came snickers of laughter from the bridge crew, but Palmer knew exactly what Wesley was telling him: make sure that any spy from Section 31 – should there be one – sequestered aboard the ship couldn’t send a message to Command. This mission was out of the ordinary, and if they really wanted to have a chance to convict the traitors with the help of the survivors, no one should know of their little private trip.

“Aye, sir!” Palmer nodded and smiled and Bob, who stood beside him, quickly clasped his upper arm. As Wesley let go and turned his attention to Sonik, Palmer felt something fall into his lap from the spot where a moment ago the commodore’s hand had lingered. It was a small piece of paper that said only one thing: ‘After I leave bridge, contact the *Enterprise* in secret and patch Kirk through my quarters; make sure the frequency is secure.’

Palmer cleared his throat – a signal to Wesley that he’d got the message – then he returned to do his job of giving orders to other departments, while Sonik programmed the course.

A minute later something happened which no one within the Klingon Empire or the Federation would have thought possible. A heavy Starfleet cruiser and five Birds-of-Prey flew side-by-side through space without deflector shields raised or weapons at the ready – just as if they were on a friendly Sunday stroll together through the park…

---

ST***ST***ST
Of course Jim Kirk wasn’t exactly thrilled to be torn out of sleep only an hour after his and Khan’s talk with Prime Spock had ended. And he was even less thrilled to learn that Bob and Kor had agreed for work together. Yes, there was no denying that Wesley would need all the help he could get to recover the survivors of the delegation and to make it safely back to Federation territory, but to rely on a Klingon – even an honorable one – was in Kirk’s eyes, nothing but insanity. Yes, Kor had proved that he took the ceasefire seriously enough to even aid Kirk and the Enterprise, and that the fleet commander had investigated the incident with the Excalibur showed to Jim that Kor was indeed interested in the truth. Yet the warlord was and would remain a Klingon. As long as the ceasefire lasted, Bob would be safe with Kor, but what if the Klingon Empire decided to go back to its belligerent ways? To seize the Lexington and take Bob as a captive – maybe also the surviving admirals and diplomats – to bring them to the High Council? It would increase Kor’s reputation exponentially. Jim doubted that the Klingon would let them go.

But all those arguments hadn’t changed Bob’s mind to work with Kor – couldn’t change it. The deal was made and the Lexington was already on her way to Turkana, accompanied by a part of Kor’s squadron, and the Klingon lord in person.

Afterwards, Bob needed to speak with Khan – and it gave him the idea about how to proof of Kor’s assumption concerning the two men. Innocently Wesley asked his protégée to patch him through to Khan’s quarters. But he heard the Augment’s voice in the background saying that there was no need to; he was already present in Kirk’s quarters, the commodore used all his acting skills to appear unaware of the intimate relationship between the two men. It was the dead of night and Kirk and Khan had been pulled from sleep – obviously sharing not only one quarters, but also one and the same bed. Great! The two really were having an affair (and maybe even something deeper) and Bob would give both an earful in person later. Not because they had developed romantic feelings for each other – there was no power in the universe that could stop love – but that he had to learn about the whole thing from Kor! That had been the height of…weirdness.

Jim, who had thrown on a shirt before he accepted the hail, was glad that Nien had chosen to put on a tunic, too. The Augment stepped beside him and reluctantly told the commodore where exactly to find the D’Ghor, and how to override the security measures he’d programmed and activated before leaving the spacecraft to recover Jim nearly four weeks ago. After all, an SDD was installed aboard, and if the Klingons got their hands on it, the technology would no longer interest Starfleet Command.

Wesley understood the super-human’s reluctance to divulge this information and assured him that Kor wouldn’t get the SDD. Bob had insisted that he and Sonik would fly the D’Ghor from Turkana to Vendix, and then to the secret place the slavery market was taking place. Only after the successful recover of the hostages Kor would get the scout ship back – a little detail the Klingon lord hadn’t liked but had agreed to. Otherwise he would have had to wait weeks before the power unit had been completely depleted and the cloaking device finally faltered. Kor didn’t indicate that he assumed something was aboard he shouldn’t see; he simply agreed to the terms and gave his permission for Wesley’s to board the D’Ghor after they’d located her.
This turn of events didn’t sit well with Khan, but he knew that neither Wesley nor he himself had any other choice. Giving the commodore the required information, he only could hope that Wesley was clever enough to buy some time and to uninstall the SDD before the Klingons again took possession of their vessel – and he also hoped Kor would stay true to his word, not tricking Wesley by seizing the D’Ghor during the mission.

Exchanging a few more words of worry and wishes for good luck, they finally ended the transmission, and Jim looked at the darkened screen. There wouldn’t be any more chances to speak with Bob until the Lexington was back in Federation space and at Earth. They were on their own from now on, and would only meet again after the Enterprise reached New Vulcan and if they – and Bob – were successful. If they met again at all!

Tiredly Jim rose and looked longingly at his bed. “What do you think? Are we going to get any rest at all tonight?”

Khan snorted. “Maybe it’ll be some comfort to you that Wesley won’t be able to sleep, either. Not only because his ship has a Klingon escort, but also because your mentor certainly will now have a lot to think about – last but not least, about us.”

Red eyes, puffy from tiredness, looked up at him. “’Us’?” Jim repeated and the Augment sighed.

“He called us in the middle of the night and we’re both in your quarters, clearly having been sleeping.” He motioned to their clothing and ran a hand through Jim’s tousled hair. “What, do you think, will he conclude from that?”

Kirk stared at him, at Khan’s soft hair falling around his face, free from its normal more severe and secured style. He remembered their recent conversation with Spock Prime. Then it dawned on him. “Oh…” he whispered and the former dictator nodded with an amused expression. “Yes, ‘oh!’” He teased. “The good commodore certainly will put one and one together correctly. He is anything but stupid.” He returned to the bed. “You coming?”

Anxiously Jim rose from his desk chair. “You think, he knows now…?” He met Nien’s amused gaze and let his head sink. “Shit.”

The Augment chuckled. “Calm down, James. Wesley is a caring man. He won’t tear your head off because you couldn’t resist such an attractive and alluring creature as I.”
Jim sobered instantly and his eyes widened. “Vain bastard!”

Khan grinned and wriggled his eye brows suggestively. “And you love it, don’t y –”

He didn’t get any further as Jim raced towards the bed and hurled himself onto him, attacking Khan’s mouth with fierce, hot kisses. Sighing, the super-human wrapped long arms around his mate and let himself fall back onto the bed, pulling Kirk along with him. And for the next half hour all thoughts of the upcoming rescue mission, battles, and too-knowing commodores were forgotten.

ST***ST***ST

“Your companion will be who?” Tellarites normally had high voices – at least to human ears – but Galven’s squeaking would be able to call dogs. His little eyes were wide open, his snout twitched, and the thick hair that covered his head and jaw seemed to puff out as though he’d touched a live wire.

On the main screen was the reason for his shocked outburst – a very tired-looking Commodore Robert Wesley, who just had told him that he would not come alone to their meeting point, but with Klingons in tow. And no mere Klingons, no, it was the commander responsible for the whole Borderland sector, Lord Kor.

“Mr. Galven, there is no need to get excited. Lord Kor and I have an agreement. He’s helping us recover our survivors, and in exchange he gets back the D’Ghor, and clears his name. Yet we still need your help to begin the mission. I called you to assure you that you and your friends will be safe; Lord Kor guarantees your freedom. After we’ve rescued our survivors, you can accompany us back to the Federation – without any reprisals.”

“And you believe him?” Ritek demanded, who stood beside Galven’s captain chair, not caring for once that they almost disagreed on simply everything.

“I have his word of honor,” Wesley replied calmly. “I know Kor – he can be trusted when he makes a promise. You will not have to fear any deceitfulness, or even revenge from either him or his warriors. We are all in the same boat now. He wants to catch the imposter who used his name while attacking the Excalibur, and we want our people back. Both our goals are tied together, so it’s only logical to work together.”

Galven scratched his snout. “I don’t like this,” he oinked. “I don’t like that the tiniest bit!”
Wesley suppressed a sigh. “Sometimes you have to howl with the wolves – and sometimes those wolves can only succeed when hunting together. You are one of those wolves now, Mr. Galven. We need to rescue our people. Not only because there are some important diplomats and admirals among them, but mostly because of the barbaric fate that awaits them, should we fail.” He bent forwards slightly. “By the way, there were two Tellarites aboard the shuttle, one survived. You certainly want to help one of your own people, don’t you?”

A mixture of snort and grumble escaped Galven, while behind him Caviw cleared her throat. “Commodore, we’ll stay and help you.” She ignored Galven’s aborted protest about the fact that he was in charge on the ship, and continued firmly, “We promised Khan and Jim that we’d help them, and when the admirals are back in Federation territory, they can quickly clean up the mess this Section 31 has made – and they’ll be grateful enough to be forgiving, and maybe even grateful to our two lovebirds. So –”

“'Our two lovebirds?’ Bob echoed. ‘Don’t tell me you knew about them, too!’

Caviw cocked her head, while her tail straightened and laid itself upon her right shoulder. “Of course I knew about them. They are mates! Khan wears the mark of claim Jim left upon him, and the other way around.” She giggled, which was more of a hissing sound than anything else when she saw the blush that crept into the commodore’s cheeks. “They are so cute together,” she added. “I could cuddle them just for the sweet love they hold for each other.”

Jeff, who had ridden himself of the bandages two days ago saw how the Starfleet officer suddenly wore an almost painful expression and realized why. “You weren’t told about them,” he stated and Bob rolled his eyes.

“No, I wasn’t! I had to hear from Kor to learn that my own protégée has been having a secret love affair with a wanted man!”

“Not an ‘affair’,” Caviw corrected with a purr. “They are mates – properly and undeniably mates. They have claimed each other, and their souls are bonded.” She sighed longingly. “Isn’t that romantic?”

Bob looked as if he had bitten into a lemon. “Yes, very,” he deadpanned, voice laden with sarcasm. “But I’m sure they’re not ‘soul-mates’, like you imply. That’s only possible between Vulcans or –”

“Oh, it’s pretty much the same principle,” Caviw smiled, showing pointed teeth. “Augments appear
to bond the same way. You should have seen them when Khan recovered Jim and how he took care of him – or how they much they fretted over each other whenever they think the other was hurt or in danger. It’s so sweet!”

By now, all the males glared at her, of which she finally took notice, and pouting, stepped back. “You non-Caitians are so unromantic!” she muttered, and Galven oinked something in his native tongue before addressing Wesley again.

“So, we’re to work together with this Kor – after all that has happened. I see only one explanation for this: either you or I is crazy.”

“Well, Fortuna favors the fools – meaning sometime only the crazy plans succeed. Are you still in?”

Galven glared at him, then he looked up at the others, who all nodded. Moaning, he replied, “Yes, we are still in. We expect you at the agreed rendezvous point and make sure to listen for the Romulans!”

Bob grinned at him. “That’s is the spirit!”

The Tellarite grimaced. “Yes, a crazy one!” Galven shook his head. “When will you be here with your new friends?”

“We’re half an hour away from Turkana. From there we’ll retrieve the D’Ghor, and set course for Verix afterwards. If everything goes to plan, we’ll catch up with you in approximately five hours.”

“Right – at least I’ve enough time to write out my will,” the Tellarite grunted. “See ya. Shadow out!” Leaning back in his chair, Galven glared at the main screen which now showed the stars again. “This is insane! Absolutely and utterly insane!”

ST***ST***ST

Dark eyes framed by deep wrinkles, took in the many and incredibly quick-changing symbols and imagines on the screen – a tempo a human wouldn’t have been able to follow. Yet for a Vulcan, even an old one, the speed was not a problem. Fully concentrating on what the screen showed him,
‘Selek’ did not allow any distractions from his surroundings. He knew that one of his assistants was busy in the next room and prepared a light lunch for them both, but Spock had no time to eat or to drink anything, even if his aged body demanded nourishment far more regularly than it had in his early years all those decades ago. And just as when aboard his Enterprise, Spock did not rest or even give himself a break when there was a danger at hand – especially if said danger concerned his T’hy’la. There had been many occasions in which the Vulcan had pushed himself to his limits, and even over them, never thinking of himself for one moment until Jim and the ship were safe again.

Exactly like the case was now – even in this different timeline. But several things were still destined to happen – Jim Kirk would always do what he thought to be right, never quit, and tried to do the impossible, which had usually put his own Jim, as well as his young counterpart, at great risk. The old Vulcan knew exactly how those Terrans like Luengo and his fellows operated. They would stop at nothing to reach their goal. And between them and their well-thought out plan there stood only a young captain and his loyal friends, an Augment-turned-lover, and a commodore whose plan seemed to be to trust said young captain, and to act on his strategies.

The odds of Jim’s plan being successful were low, to say the least. Spock did not even want to calculate them. ‘Sometimes it’s better to not be informed about everything. Only then you can act freely without fear what something could go wrong,” *his* Jim had once said, and ‘Selek’ had to admit that this was exactly such a situation to which Kirk had referred.

Three hours ago Spock’s computer had informed him about the successful installation of the spying program within Starfleet Headquarters. Since then, the old Vulcan freely roamed through a database which should have been one of the most protected in the Federation. For the era, the technical knowledge of security systems was extremely good, but still didn’t match the standard of the time Spock came from. Yet he was very careful as he hacked into the SBI terminal, checked sent and received transmissions, copied files, and deleted any trails he might have left. In addition, he tried to find out to whose terminal the spy aboard the *Enterprise* had sent his message concerning Khan. There was no ID from said computer, no evidences except for Jim’s and young Spock’s assumption that it had to be Luengo’s private one. And finally ‘Selek’ found the evidence that proved Kirk’s gut-feeling had been right once again: there was no doubt that the terminal belonged Luengo. He quickly copied all data he thought important before he withdrawing.

He read and listened to the transmissions between HQ and the ships in space, concentrating only on those which concerned the vessels near the former Neutral Zone, and specifically to Wesley’s squadron to which the *Enterprise* belonged. And then he found it – proof that Jim had been right about Gamma 12 and that the whole thing was a trap. And he also learned who was waiting for the *Enterprise* there!

Spock knew that he had still several hours until the *Enterprise* would reach Gamma 12, so he continued to gather as much information as possible. He found links which led him from the SBI to the science departments, and to the terminal of Admiral Barnett, where fate intervened once again. More-or-less by accident, the Vulcan stumbled on the protocol of the conference which had been held shortly after the Battle for Tammeron. One thing caught his eye: biological weapons of the
Klingons. Spock knew that Klingon scientists were developing biological or chemical agents, yet the Empire’s intelligence regarding the science was not that good. More curious than anything else, Spock studied the protocol, then both brows vanished beneath his hair-line as he saw the ‘biological agent’ Admirals Luengo and Norton were so nervous about. The Vulcan recognized it was based on Rigelian Fever, and even realized the augmented structures within the cells. But the structure he was studying would never – could never – be a biological agent! The augmented part came from blood (certainly without consent), the source of which Spock had a very good idea, and the pathogen of the Rigelian Fever was correct too. But, the connection and the whole structure were inefficient. The cell would not able to do more than knock out a child for less than half a minute – yet, it was declared as a highly toxic biological weapon the Klingons were almost ready to use.

Spock leant back in his chair and stared at the screen. The whole charade was cleverly done. Someone who was not completely familiar and even more experienced with this kind of science could easily be fooled into thinking this was a real threat. Norton belonged to the science departments of Starfleet and it certainly would have been easy for him to create such a phony agent. But from the surface, the science was flawless. The fact that they had obviously used Khan’s blood plasma or cells to tinker with the Rigelian Fever pathogen gave the Vulcan the chills. If someone with more skill and intelligence were seriously working on the best way to create an incurable deadly disease, then there could be millions of victims. And it was not the Klingons who were about to develop such a devastating weapon, but those scientists under the command of Norton and Luengo. Spock suddenly realized that not only was Jim Kirk in danger of being killed in the next few hours, but also that the war could take a terrible – horrible! – turn if those scientists got Khan back into their clutches.

Determined, the High Minister copied that file too and withdrew completely from HQ’s database, deleting all traces, and also the spying program. Only then did he shut off his own terminal and contact the communication center, demanding an immediate connection with the Enterprise.

He didn’t have to wait long. It was midday aboard the starship, and Kirk (who had taken the beta-shift today after the long night), was in his quarters doing some hated paperwork. Spock remembered all too well how much Jim loathed any desk job, and felt a hint of amusement as the screen showed the young captain, hair tousled from combing his fingers through it far too often and with visible relief on the still-boyish face.

“Spock! You’re saving me from all these records which are about to kill me!” he sighed, which made the old Vulcan lift a brow in even more amusement.

“If you turned down the energy output of your terminal, the risk of deadly electric shock would be zero,” he replied wryly. That got him the expected reaction: Kirk laughed, his blue eyes sparkling with mirth.

“What can I do for you, old friend?” he asked.
“Turn the Enterprise around and get away from Gamma 12,” ‘Selek’ instructed, before becoming serious again. “Jim, I was able to gather some very interesting data from within Starfleet Headquarters. The Excalibur is waiting for you near Gamma 12, playing ‘dead’ out of sight, behind several asteroids. She is on her way to the facility on silent running, and she is not alone. Two other ships are on an intercept course and will reach the facility 3.293 hours before the Enterprise arrives. They all are instructed to wait to see what you are going to do before they surround you. Captain Styles has been ordered to arrest you, my younger counterpart, Dr. McCoy, and Mr. Singh the moment you trying to obtain the tubes labeled ‘biological test products’, accusing you of insubordination, theft and mutiny. You will be convicted of such following a very short and very contrived tribunal.”

Jim stared with wide eyes at him. “‘Mutiny’?” Kirk asked disbelieving. “Whoever gave them that crazy idea?”

“It is logical, Jim. You are about to free seventy-two enhanced warriors –”

“They are not –”

“– and Luengo will use this as a reason to accuse you of planning a strike against Command with the help of the Augments,” Spock finished, fixing Kirk with a stern gaze. The captain stared flabbergasted at him. “Jim, if you do not have a plan that will work absolutely flawlessly and which guarantees your escape before Luengo’s men catch you, then –”

The young captain lifted a hand. “How much earlier will the team travelling to Gamma 12 arrive before us?”

“Three point two nine hours – excuse me, two nine one hours now,” ‘Selek’ answered.

Jim nodded grimly, bent forwards and activated the intercom. “Kirk to Engineering. Scotty?”

A moment later Montgomery’s voice sounded, “Scott here, Cap’n.”

“Scotty, you need to add some more coals to the fire to speed up our Grey Lady. We have to reach Gamma 12 five hours sooner than planned.”
“What?” The Scotsman sounded almost shocked. “Jim, I’m happy that we’re able to travel at warp 3.5. We shouldn’t –”

“We have to, or we’ll face three of our own ships with crazy captains who think Luengo is the new center of the universe and following his insane orders like little puppies. Warp 6, Scotty! Somehow you have to manage it!”

A painful groan was heard. “Jim, the best I can offer now would be warp 5, maybe 5.5 when all the spare parts are installed. Any more won’t be possible or the Enterprise will be shred into pieces.”

“Warp 5.5 then, Scotty – and I’ll count on you to increase that as soon as we have Nien’s people on board and are off to New Vulcan.”

Silence, then, “Ye like ter call me yer ‘Miracle Worker’ but I’m not a wizard! Warp 6 or 7 for almost four days will ruin the engines after all they suffered till now.”

“They will hold, Scotty. Our Grey Lady won’t let us down. And at New Vulcan you’ll have all the time in the world to repair her.” He rubbed his temple. “Just try, Scotty, or we all land in prison.”

“Aye, I got that! I’ll do what I can – Keenser too. And if you’d allow Khan to give the helm to someone else and come down to lend a hand, that would be even better.”

“Permission granted, Scotty. Spock has the conn at the moment. I have a transmission coming through, so please call him and tell him that he needs to call one of the older cadets to try his or her hand at piloting the ship. Nien will report to Engineering.”

“Aye, Cap’n.” Before the intercom switched off, the captain and the Vulcan on the screen heard something that sounded “That man is absolutely crazy!”, then the link went dead.

The High Minister lifted a brow in amusement yet again before he turned his attention back to Kirk. “There is more, Jim.”

“Isn’t there always?” the young captain groaned, and braced his under arms on the desk. “I’m listening.”
“I was able to… read some transcripts of earlier meetings when Admiral Barnett was still in charge.”

“You hacked into them, you mean,” Jim corrected with a big grin on his face.

The old Vulcan almost sighed. “Usually it was Dr. McCoy’s job to point out the obvious.” He saw Kirk’s smirk widen and continued, “I have every reason to believe that Admiral Norton and his science department are experimenting with a lethal pathogen, based on Rigelian Fever.” He watched Kirk sober up and grew pale. “They used a faked sample to convince the other admirals that the Klingons are up to such a thing, but I believe in truth they are the ones who are experimenting and testing this weapon.”

Jim gulped. “What makes you think that?” he asked quietly.

“Because I found traces of Mr. Singh’s enhanced cells in the counterfeit pathogen, and the way his DNA was inserted into the pathogen’s core was perfect – meaning this was a result of a successful experiment.” He watched Kirk becoming white as a sheet and continued softly, “You told me that Mr. Singh was held captive in a lab in Nevada, the whereabouts of which are not publically known – a secret institution. If I remember correctly in my timeline, it was a high-security laboratory in which deadly diseases were studied and attempts at neutralization made. I do not think this has changed in this timeline, though the lab is not only used for its original purpose, but that these scientists are doing more – illegal experiments in the development of biological weapons. That would also explain why they held Mr. Singh in stasis and injected him with viruses – not only to manufacture antidotes using his enhanced immune system, but also to test how much his cells are able to fight off. They are using Mr. Singh’s DNA to breed a pathogen that is immune to the antidotes.”

“They’ve turned the tables,” Jim whispered. “They haven’t been trying to heal people but to kill them by using a disease enhanced by Nien’s cells.” He closed his eyes. “God, what monsters they are! And we call the Klingons ‘beasts’.”

‘Selek’ nodded slowly. “I need to gather further information, but I am certain that I will have enough data soon. Should the worst happen – that you don’t escape from Gamma 12 – I shall personally report everything to the president and only his most-trusted Councilors. But it would prove easier if you and Commodore Wesley were successful within the next days.”

“Yeah, I really want to live a few days more,” Kirk grumbled, before he reached for the switch to cut off the transmission. He hesitated. “Spock? Please be careful. If Section 31 has no scruples about developing deadly diseases with no cure, and the will to use it against the Klingons, they could kill the whole race in the process, and they will not stop at murdering you, too. Be careful, okay?”
“I am always careful, Jim,” the Vulcan High Minister said, and Kirk grimaced.

“Yeah, sure. If you were only half as daring as ‘my’ Spock is, then your Jim Kirk must have gotten grey hairs very early!”

Two ice-colored Vulcan brows were raised. “Jim, I assure you that my own behavior and that of my younger counterpart follows strict tenets of logic and –”

“Spock, in six weeks it’ll be Christmas, and that’s the time for fairy tales,” Kirk interrupted him with short-lived humor. “Admit it, you two would forget how to spell ‘careful’ if you were up to something.”

The old Vulcan sighed. “Maybe your influence is strong enough to affect even Vulcans.”

“You’d better believe it!” Jim grinned, before the seriousness of the situation kicked in again. “Be careful, okay? I don’t want to lose you.”

Warmth shone in Spock’s eyes – a warmth he reserved only for his T’hy’la; his own Jim Kirk, and now for his friend’s younger counterpart, who had become more and more the man he ought to be. “Nevertheless, nature will take its toll one day, Jim,” he said gently.

“Yes, but you’ve still got a few decades to go I’m sure, and I really want to dance at your two-hundredth birthday party – even if you Vulcans don’t celebrate birthdays,” he added quickly, remembering something Uhura told him half a year ago when Spock was astonished that Jim had brought him a gift on the day of his birth.

“Knowing you, you will simply ignore that fact and ‘throw a party’ anyway, as the human saying goes.”

Kirk laughed quietly. “You can bet on that. Until later, my friend. I’ll contact you as soon as we’re on our way to New Vulcan.”

‘Selek’ nodded slowly. “I look forward to getting that message from you, Jim. And to repeat your request: please be careful.”
The connection was broken as the High Minister switched off the screen and Kirk needed a minute to stomach the information he’d got. Then he stood – his stance and his expression firm with grim determination.

Section 31 abused Nien to get the enhanced structure for a new biological weapon? Luengo wanted to fight dirty? This he could do – but he would have to deal with Jim first. And Kirk wasn’t above playing dirty, too. He had grown up like this – fighting with everything he had, giving his all, right or wrong. And concerning Norton and his scientists… Should they ever cross paths in person, Bones would have a hell of a job patching them up. There were a few things Jim Kirk would never tolerate and what Section 31 was doing topped even everything he had fought against until now.

Contacting Spock on the bridge, Jim called him down to his quarters. He not only had to inform his first officer of the new plans, but they also had to come up with new ideas with regards to the upcoming recovery of Nien’s crew, and their escape before engaging in combat with their own ships.

ST***ST***ST

At the same time the Vulcan High Minister contacted Jim, the unusual allies reached Turkana. Bob, Sonik, and four red-shirts beamed down to the planet’s surface near to Turkana City as Kor and five of his men materialized a few meters away from them.

Looking at the mighty ridge on which Turkana City was placed, Bob pursed his lips. He knew the D’Ghor being nearby meant that Khan had climbed up the crag to reach the town, and later had hurled himself down into the abyss, using a parachute and holding an injured and weakened Jim Kirk. Wesley recognized the spot at which the two men had been surrounded by their Klingon pursuers, and for a moment felt searing rage as he realized the horror his protégée must have experienced during those minutes – freedom, in reach after hours of torture, but now facing a much worse fate.

A movement beside him tore the commodore from his morbid thoughts. Kor stepped beside him and his dark eyes followed the Terran’s gaze. “I never imagined that a human could be so strong – that Kirk would make it so far,” he said slowly. “The warriors I sent after him and his rescuer told me later that he ran through the jungle, fought with warriguls and pursuers, and even once protected the Augment.” He looked at Bob. “He is strong, your scion.”

Wesley pressed his lips into a thin line before he finally said with badly hidden anger, “If you have only the tiniest chance to escape a living hell, your strength increases exponentially. You’ve only got two choices: life or death. In face of such a choice, you outdo yourself.”
The fleet commander nodded slowly. “He certainly did – and not only during his flight.” He took a deep breath. “I was ready to show him mercy. He was strong and brave during his captivity, and as I was informed that he didn’t break under Noy’s and Koval’s threats, I went to the cellars to deliver him from pain by giving him a quick death. I was also ready to send his dead body back to the Federation so that his family had a grave to visit. I know that humans have different rites than we have.”

Wesley looked with widening eyes at him. “You wanted to…?” he began, baffled.

Kor nodded curtly. “Yes, I was ready to follow your request – for the sake of our times together at Organia. And because the boy had… What was that word? Guts?”

Wesley had to smile. “Yes, we say ‘he has guts’ when someone is very brave.” His eyes were fixed on the strong Klingon. “You showed some compassion, and for that I’m grateful. Even if it would have meant Jim’s death, it would have been merciful, therefore – thank you.”

The Klingon lord grumbled something in his own tongue before he said in Standard, “You risked a lot by contacting me in private despite that our realms are at war – were even in active battle at the time. I know you as a courageous man, and that you were ready to beg me, an enemy, for mercy for your protégée’s life showed me how much he means to you. We Klingons are proud warriors and we never plead for mercy – at least not for ourselves. But also we have very tight family bonds, and every family member is important to us. So I could understand what you were going through. Warriors should respect each other, whether enemy or friend, because we all are linked by pride and honor. Therefore, I was ready to accept your request – from one warlord to another.” He snorted. “Only your boy had already fled, rescued by his Augment lover. This I didn’t see coming.” He smirked, a wolfish grin. “Just as I didn’t see we two becoming allies to stop these dishonorable bastards trying to use the war to their own private agenda and benefit, pulling valuable warriors into the dirt.” He chuckled. “The galaxy is a crazy place, no doubt about it.”

Bob returned the smile. “I agree. While yours and my council are worrying how to formulate any kind of meaningful discussion, we two are standing here and are about to kick some pirate and Romulan ass, doing the real job.” He glanced back at the large gorge. “This guy who betrayed Kirk to you…”

“He’d been in our service for a few days, then, after the first…‘trade ships’ reached Turkana, he again vanished.” Kor made a grimaced. “Saved his sorry ass, because I’d already let my inferiors know that I wouldn’t mourn him if something unexpected should happen to him. I loathe traitors!”

“Then we are again on the same page,” Wesley nodded, before he turned his attention away from the town and towards the edge of the jungle.
A minute later they reached to location of which Khan had informed Bob. One of the Klingons even strode into the cloaked spacecraft as he walked too far, earning himself guffaws from his comrades, an irritated glare from his superior, and barely hidden amusement of the Starfleet members. Wesley had no difficulty in overriding the security code with the help of his tricorder, using the data Khan had given him, and then they boarded the D’Ghor. Kor came with them and made a quick check of the spacecraft before leaving them to return to his own ship.

Fifteen minutes later they were on their way to Verix, and three hours after launching, they were already hiding near the planet among the other Klingon ships based there in orbit. The Klingon commander of the ‘colony’ had been informed that Kor would arrive with a few ships and a Starfleet cruiser – none of them readable by any sensors. Here they would stay until the Romulans made their presence known by contacting the traders near Verix, yet they still had an eight-hour wait until Palmer – and Ritek – caught the expected transmission. The sensors located an old D2-Klingon ship that was cloaked, but was given away by its ion trails. It was listed as a neutral trading ship from a legal Klingon colony, yet the words which were spoken during the transmission weren’t in Klingon, but in a higher Romulan standard.

Bob had used the time to lie down and to sleep awhile – not knowing that the quarters he’d chosen were the same Khan had used during his stay aboard. But he was awake in a second as he got the call from the bridge that The Shadow had overheard the expected transmission. A minute later, Wesley was in the command center and took the captain’s chair, ordering Sonik to pick up the ion trails of the fake ‘Klingon’ ship, and to follow it. On the main view screen, he saw Kor’s ships and the Lexington spring to life, too. And then they were on their way to the unknown hideout of the Orion pirates where the survivors of the delegation were to be sold into slavery – five cloaked D6 Birds-of-Prey, The Shadow’s Santa Dominica, the Lexington, and the scout – all ships unreadable by sensors because of their different, yet useful enhanced technology.

“Let’s begin this crazy dance,” Wesley whispered while his hands tightened around the armrests, grim determination on his face.

ST***ST***ST

“This is absolutely and utterly crazy!” Leonard McCoy balanced himself on his toes while he stood beside the center seat on the bridge, staring at the main screen which showed the asteroid on which Gamma 12 was built.

Scotty had worked one more miracle – last but not least with Khan’s and Keenser’s help. During the latter part of the shift, they had been able to increase the warp core’s output to enable the Enterprise to speed up to Warp 4.8, even if all control lamps were ‘blinkin’ like a damn Christmas-tree’, as Scotty had put it.
It was later now, and Jim had been in medbay when he got the report that they were about to reach the station. Kirk had been happy to learn that Sulu had woken up, and the captain had visited him as soon as was possible. The helmsman was still weak and had trouble remembering what had happened when part of his console had exploded during the battle a few days ago, but McCoy assured everyone that Hikaru would recover soon and even would be back to his handsome appearance after a further surgery. As Kirk reported the news about Sulu’s improved condition to the command crew, he had seen broad smiles everywhere – except for on Spock, of course. But the Vulcan’s gaze had turned softer and his comment of “This is very satisfying news” was a kind of ‘whoop’ for a Vulcan.

Jim smiled, too, and not only because of Sulu’s good news. He was grateful that all of his friends had decided to deny themselves some well-earned sleep and supported him in this not-so-legal mission. Chekov was at the navigation station, but was ready to go to the transporter room to use his incredible skills and knowledge of transporter techniques to steal the Augments right out from under Styles’ nose. Bones had readied bio-scanners and med-scanners to locate and later to check on the Augments and their condition; his staff had declared its support too. Spock was still at the science station, but he and Scott would beam to the facility together with Kirk and Khan as soon as the way was free for them.

Most of the senior officers had no reason to risk their careers let alone their lives for the former dictator, yet they would do it – because it was the right thing to do. And for the man in command gold who had already given his life once for them and would do it again if necessary. And they did it for the Augment, too, who had faced pain and terror beyond imagination.

Even Spock, who would deny till he was green in the face that he was able to feel something like compassion, wanted to spare the super-human any more anguish. And of course this had nothing to do about feeling guilty for his trick of last year which had contributed to that anguish. After all, ‘guilty’ was an emotion, yet Spock knew all too well the agony someone went through while watching his family – his entire race – being killed. Khan had been through that experience not once, but two times, and Spock wanted to prevent the enhanced man having to endure that a third time. Even he, a Vulcan, would break at such a thing. Therefore, the first officer would do anything in his power to aid in the recovery of the other Augments.

Several hours ago, Jim had urged Khan to get some sleep, or to eat something at least, but to no avail. Nien hadn’t been able to lie down or eat more than one bite, and Jim completely understood what drove his beloved: fear, worry, joy, and so much uncertainty. How often had Khan thought he’d finally got his family to safety, only to lose them again? Twice he even believed them dead. How often had he hoped to be able to finally offer them some peace and a chance to live a life in safety? Jim knew that these hopes hadn’t just begun with the launch of the Botany Bay more than two hundred and sixty years ago, but with the day as the barely-grown Noonien Singh had fled from the labs and vanished with his brothers and sisters in the turbulent world of Asia. Jim was very aware of the fact that it would shatter Nien utterly if something went wrong now – and therefore was tense like never before.
While the uncommon allies in the Borderland secretly followed the slaver and the Romulans, the *Enterprise* was about to reach the facility 5.2 hours earlier than scheduled, which meant that the *Excalibur* and the force Luengo had sent were still more than two hours away.

The tension on the bridge had grown thick within the last few minutes. The CMO turned his glance away from the screen and looked down at his friend and captain. “You really think you can simply waltz in there, send the scientists and security up to the base, and search for Khan’s crew while Scotty overrides their security measures?”

“Yes, something like that,” Jim nodded.

“Crazy – I already said it!” Leonard grumbled.

Kirk groaned. “Bones, the *Excalibur* and the two other ships are still out there! We’ve got more than two hours to finish this mission. That’s enough time –”

“Do I have to tell how many things could go wrong?”

Jim looked at the overly-straight posture of his mate, who had taken the helm again, and shot McCoy a glare. “No, you don’t have to, but we’re in a better position at the moment than we’d thought we’d be, so enough of your pessimism.” His look pointed at Khan and then back to the CMO, who finally got the message and snapped his mouth shut. At the same moment the Augment went rigid and gasped quietly.

Khan felt something – a soft tugging at the edge of his consciousness, familiar and so terribly missed for over a year now. He turned his perception inward, heard the faint wordless whispers deep in his soul, the soft brushes of other beings – so dear, so loved! A lump rose in his throat as he felt the presence of his brothers and sisters becoming stronger and stronger as the distance between them and he melted with every second the *Enterprise* raced nearer to Gamma 12.

“Nien?” Jim’s soft voice brought him back to the present, yet Khan couldn’t prevent the shiver that slid beneath his skin.

“They are here,” he said hoarsely, before he turned his chair around. He looked straight at his mate, trembling without realizing it. “They are here – I can sense them,” he whispered in awe, while his pulse sped up. For a moment, his sight became blurry and he hastily blinked the moisture from his
eyes; not only had his heart and soul felt it, but his whole body reacted to the growing proximity to
his family.

Jim’s gaze was fixed on Nien and took in the Augment’s widened damp eyes, which spoke of the
wild emotions which had flared up within Khan. It washed over their mental link and hit Kirk with
shocking strength: joy, relief, and hope. So much hope! It was overwhelming in its intensity, and Jim
found himself shiver with the sheer power of it.

“We’ll get them,” he said quietly, happy that at least this was part of the trap that would succeed.
Nien’s family was here and Jim wouldn’t rest until he had the men and women aboard. He smiled at
Khan, who nodded while gulping. Then Jim turned and addressed Uhura, who had taken over the
gamma shift, too. “Hail Gamma 12, Lieutenant and tell them that they should be ready to be beamed
over.”

“Aye, Captain,” Nyota replied professionally, yet she smiled a little bit. You didn’t need to be soul-
bonded to the enhanced man to recognize the storm of joy and relief that coursed within him.
“Captain, I have the commander of Gamma 12 on the line. He wants to speak with you,” she
reported a moment later, and Kirk suppressed a sigh.

“On the screen, Lieutenant.”

The picture of the asteroid vanished and was replaced by the face of a man about the same age as
Kirk. He was broader than the captain, had bright green eyes, short ash-blond hair, and a cynical
expression around a hard mouth. He wore the grey uniform of ground personnel; the red stripe at his
collar revealed him as a member of the Elite Security Unit that was answerable only to Starfleet
Command.

Yet what shocked Kirk wasn’t the fact that the commander of a high-security scientific facility
belonged to the top unit of the red-shirts, but rather the identity of said commander. “Sean
Finnegan?” he burst out, not trusting his eyes.

The man on the screen gave him a slow grin full of mockery. “In flesh and person, Captain Kirk.”
He shook his head. “You, and your being a captain – the universe never fails to surprise me. I never
thought that we would meet again under these circumstances.” He bent forwards and looked into the
camera with a piercing glare. “I still owe you one for the last little incident in the Academy’s
commissary, Jimmy-boy. What was it you put into my coffee? Chili?”

Kirk had caught himself and schooled his features, masking his shock of seeing the face an old
schoolmate who’d been the worst bully of the whole Academy, and who had turned the lives of the
students – and especially Jim’s – into a living hell. “Among other things – a small payback for your cowardly ambush on the campus the prior evening which gave my doctor a lot of patching up to do. Again,” he replied coolly.

“Oh, come on, Jimmy-boy.” The commander feigned sympathy. “You always loved a good old bar-brawl. And after starting one only three days before and leaving me to be caught by the authorities, you should have anticipated a little revenge.”

“A bar-brawl you started by hitting on a girl you didn’t even care about who was with her fiancé.” Jim pretended to think about it for a second, before he continued, “Oh, wait, that wasn’t it. Sorry, my mistake. Of course, you took care of the poor lad by knocking him out and by trying to carry the young lady away like a sack of potatoes.” He leant back in his chair. “I may have grown up on a farm, but at least I have enough manners to leave an engaged woman alone – or to defend her against a bastard like you!”

“Tsk, tsk, Captain, such words are improper for a man in your position. To offend another officer is –”

“I’m only stating facts, Commander, nothing more!” Jim interrupted him icily. “I don’t understand how someone could promote you into this corps, but then again, the task they’ve given you speaks for itself. How exciting is it to sit on a rock in deep space and watch over some old documents and tubes?”

Finnegan’s face hardened. “You have no clue what I really watch over – or maybe you do?” There was something furtive in his eyes which made the young captain wary. ‘He’s been informed and instructed by Section 31!’ shot through his mind. ‘He knows what I’m really up to.’ He smiled inwardly. ‘Right, let the games begin!’

Aloud he replied, “Of course I know what you have the honor of watching over. I got a list from Command, and as it seems there are only a few things Command regards as important enough to save, while everything else is to be sent into the abyss.” He bent forwards again. “So, get the scientists, your crew, and yourself ready to be beamed up and –”

“Jimmy, you’re five hours early, so we aren’t –”

“We are 5.1493 hours ahead of the estimated schedule, Commander,” Spock cut in while he rose and stepped to the other side of the command chair. “And regarding Command’s thoughtfulness, you were certainly informed that our time of arrival might possibly be earlier, dependent on our drives’ repair status.” Spock’s face was always (more or less) expressionless, and his deep voice was always
calm, and words well-enunciated. But just now, the Vulcan tone was stony and his voice icy enough to rival the temperature at the North Pole. His eyes – usually a warm dark brown – were black and hard as obsidian, while he stood tall beside the captain’s chair.

On the other side, McCoy had straightened his own posture, expression and glance firm. Both men resembled two bodyguards, flanking their captain and friend with a mute message: don’t come near him!

Nien sensed the tension and the deep dislike Jim held for the man on the screen, and after their first exchange, the Augment realized that the two younger men were rivals – old school rivals. That wouldn’t make this endeavor any easier, rather the opposite.

Finnegan looked at the Vulcan and snorted, “Commander Spock – from a junior tutor to a first officer. Nice career,” he taunted, before he returned his attention to Jim. “As I tried to tell you before your second in command forgot protocol and interrupted me, we expected you later and are not finished packing up the base. Therefore –”

“I’ll send some people down to help you pack the bigger equipment you seemed to have brought with you. Understandable that you might need a lot of suitcases and packing crates. Security uniforms – even those of the elite unit – aren’t as stylish as a tux given the high society parties which are thrown every week on this little outpost here,” Kirk mocked. Inwardly he knew exactly what Finnegan was up to – he was trying to buy time. Oh yes, the old bully was an executive toy of Section 31, no doubt about it.

Deep frown lines appeared on Finnegan’s forehead. “You’ve become cynical, Jimmy-boy. Maybe that’s all that’s left after –” He stopped and turned around, while in the background another voice sounded. Sean rolled his eyes. “Yes, Doctor, it’s the Enterprise. They’re earlier than expected –” He stopped as someone stepped beside him and bent down into the range of the cameras. It was a man in his fifties, with red-brown hair that showed the first hints of silver, a small moustache, and clear, challenging eyes.

“Captain Kirk? I’m Doctor Anthony Green, Chief Scientist on Gamma 12. We were informed that you’d up our staff, valuable documents and test objects, and would destroy the station afterwards. May I voice my open protest against these measures? Gamma 12 is –”

“Doctor, I’m sorry to interrupt you,” Jim cut in, quickly lifting a hand. “But the decision to evacuate and to destroy Gamma 12 was made by Starfleet Command, not by me. I’m only following orders.”

“Those orders are foolish and would spell disaster, Captain. We are not just here keeping an eye on
scientific waste or scrap paper, we’re also guarding experimental results, testing them for important outcomes which could be valuable someday to the Federation. To destroy it all –”

Jim felt the rising tension and rage in Khan, and felt himself becoming sick at the awareness that maybe these Dr. Frankensteins were experimenting on the unconscious Augments. To prevent any outburst from his mate and taking no risk of showing his own deep disgust, Kirk interrupted the doctor again – sternly and harshly. “You are free to voice your protest to the Council in due time, Doctor, but right now I must insist that you and your colleagues prepare to be beamed over. I have no time to waste, Doctor, and need to return you to Earth before I can travel back to where my ship is really needed. We are still at war, the ceasefire could end at any minute. Therefore Starfleet’s flagship will be needed on the line, not as a passenger cruiser.” He straightened his shape. “Please lower your shields. I’ll come down with my science officer, a technician and a security detail to ensure that everything is in order, then we’ll return to the ship – preferable within the next half hour, so please hurry up.”

Green was anything than satisfied with Jim’s cold statements and even commanding tone he used, but he knew that he couldn’t change the situation. “I’ll give you the coordinates where to beam to, and give order to lower the shields. Gamma 12 out.”

A second later the screen showed the asteroid and the stars again. Jim didn’t realize that his hands had balled into tight fists before he rose and looked at Uhura. “Transfer the coordinates to the transporter room.” He glanced at Khan. “Nien, it’s time to change your shirt,” he said and the Augment nodded.

Bending down, Khan retrieved a security department uniform top from under the console, pulled off the gold one he wore, and slipped into the red one. He and Jim had come up with the idea during the morning. It would have raised too much suspicion if someone in command gold besides Kirk appeared on the station, whereas a security officer would be expected on such a mission.

Jim smiled, satisfied, before he smoothed down his own shirt. “Spock, Bones, Nien – with me. Uhura? You’ve got the conn. Chekov, call someone to cover navigation. I want you in charge of Transporter Room 1. As soon as we’ve found Nien’s people, we need to get them out as quickly as possible – and I trust you the most for this job.”

The young Russian blushed and threw a quick uncertain glance at Spock, who returned the gaze calmly and lifted a brow. “Your skill at enhanced transporter technics are excellent, Ensign,” he said quietly. “I’ve no doubt that you will fulfill the task with brilliance.”

Something close to relief washed over Pavel’s face. He still felt guilty that he hadn’t been able to beam Spock’s mother aboard in time before Vulcan was destroyed. The Vulcan had told him not one, but three times that these feelings of guilt were illogical and that he held not the slightest grudge
against the young human. Yet Chekov knew that he could have done better. He had beamed up Kirk
and Sulu when they were in free-fall, and caught them in time, just before they were smashed against
the planet’s surface. He wished that he could have done the same for Lady Amanda.

Quickly, he contacted Riley and saw from the corner of his eye how the captain tensed up, and
looked at him with widening eyes. “Mr. Chekov, did you just call Kevin Riley?”

“Yes, Keptin,” Pavel nodded. “He had ze day off and told me zat he would be glad to help if I’d
need him zis evening.”

Jim frowned. “Did you tell him why we’re here?”

“Of course, Keptin. I told him zat we have to evacuate a security facility and zat you might need me
in ze transporter room. So he offered to –”

Kirk made curt gesture, half-snorting, half-grinning. Of course Pavel Chekov had already assumed
that he would be needed for his transporter skills, and of course would choose someone to take his
station during those minutes off-schedule. All this – the changed shifts, the privately chosen
substitutes, the whole mission – broke so much protocol and so many general orders that every staff
officer in Starfleet Command would probably faint if it ever came to light, but Jim was grateful for
the fierce loyalty his friends showed once more in their actions.

“Well done, Whizzy,” he said, inadvertently creating a new nickname for Chekov, who snickered.
Then Jim headed for the turbolift, where Spock, Bones, and Nien already waited for Pavel and him.
A moment later they were on their way to the transporter room. None of them knew what the next
two hours would bring…

TBC…

Chapter End Notes

Well, who had anticipated that the one Jim knew from his time at the Academy could be
Finnegan? I absolutely loved the episode in which this really mean guy with the manner
of a spoiled child challenges our Jim over and over again, until Kirk simply surrenders
to the long-time desire for a pay-back (and both are combating that even Spock can only
shake his head – lol). I had to bring this character in the story, and as you certainly
assume: He’ll be trouble. A hell of trouble!

I also loved to write the scenes between Bob and Kor, and – of course – of Prime Spock. He is an excellent computer-expert and has the knowledge of future programming. It’s no wonder that he’s able to even hack into today’s Starfleet data-bank (and that Spock not always played by the rules is well-known, *snicker*).

In the next chapter the recovery of the Augments begins – and it’s another kind of battle Jim and Nien are used to until now. I don’t want to reveal too much, but they’re going to face a bundle of hindrances while they’re running out of time.

I hope you loved the new chapter and – as always – I’m absolutely curios what you think of it.

Have a nice rest of the weekend,

Love

Yours Starflight
The Set Up

Chapter Notes

Hi, my dear readers!

Yes, this is already a new installment. Nurse Darry is outdoing herself with beta-reading (thank you so much, Darry!) and therefore you can already read the next chapter.

Finally our friends have found the other Augments, but nothing goes ever as planned. More I didn’t want to reveal.

Thank you for all the feedback,

Have fun with the new chapter

Love

Yours Starflight

See the end of the chapter for more notes

Chapter 57 – The Set Up

The Enterprise team, consisting of Kirk, Spock, McCoy, Khan, Scott, Giotto, and six further security personnel, had barely materialized on Gamma 12 before they faced a sour-looking Dr. Green, two other scientists (given their white clothing), and a sneering Sean Finnegan, wearing the dark Elite Security uniform, accompanied by six of his own people.

Kirk straightened his posture and, ignoring Finnegan completely, offered his hand to Anthony Green. “James Kirk,” he said, introducing himself before gesturing towards his companions. “Commander Spock, my science and first officer, Dr. McCoy, my CMO, Commander Scott, my chief engineer and Lieutenant Commander Giotto with a few of his staff.”

Green nodded shortly. “Gentlemen, welcome to Gamma 12 – even if the pleasure will be short-lived. In two or three hours, this asteroid will not exist anymore.”

Jim gave him one of his ‘diplomatic smiles’, as McCoy called this polite and pleasing expression on his friend’s face that didn’t reach his eyes. “I’m certain that we’ll make it sooner, Doctor. As I already explained, I’m in hurry.”
“And why is this so, Jimmy-boy?” Finnegan cut in. “Do you have your own businesses to attend to?”

“If you mean Starfleet business, yes,” Kirk replied icily. “And as for you, Commander, it’s Captain Kirk, and nothing else. Have I made myself clear?”

Sean stared at him and was taken aback at the icy glare of the younger man, then realized he had no other choice than to obey. “Aye, sir.”

Jim nodded. “At ease, Commander.” With that, he turned away, but Finnegan stopped him one more time. “Sir, one question. Why do you have your CMO with you? None of us is ill and –”

Kirk turned around sharply. “‘Every person who has lived for more than ten days in isolation has to be medically checked before he or she is allowed to board a Starfleet vessel’ – Order 68b, Commander. First year stuff at the Academy. But maybe you were too distracted with planning new pranks than listening to the instructor.” He briskly turned away, giving Finnegan the cold shoulder.

McCoy stepped forwards, addressing Green. “Where can I run a short medical check on you and all the other people aboard?” Yes, regulations suggested such a measurement but it wasn’t absolutely necessary. Yet this procedure gave Bones the best chance to scan for the Augments in secret and to check them before they were beamed aboard.

The scientist sighed. “Would the mess hall be all right? It’s not that large but nearby and we all fit into it.”

Bones nodded. “This would be perfect. Please inform your colleagues that they need to gather there in five minutes.”

Green nodded and went to the intercom.

Kirk had listened to the short exchange before addressing Scotty now. “Commander, please check where best we can target three or four of detonators which will ensure the destruction begins in the inner station. Then our ship’s phasers will not have so much work to take care of the rest. I think one in Engineering and one in the lab would be a good start.” He glared shortly at Finnegan. “I’m certain that Commander Finnegan will show you around. And, by the way, make certain that the shields are all down so that I don’t have to waste valuable phaser-energy to blow the station to bits.”
Sean went rigid. “The shields have to stay up until all specified items are safely aboard your ship and –”

“And how shall I beam them up and the explosives down with the shields in place?” Jim snapped. “We scanned the sector before we arrived. No Klingons in sensor range, so don’t fret about someone trying to rob your valuable stuff. The shields will remain down so that we can do our work. End of discussion!”

He looked at the Vulcan, missing how Finnegan’s hand touched a small switch on his belt. “Mr. Spock, as soon as Dr. McCoy is done with Dr. Green, ask him to accompany you to the science area so that he can show you what I’m about to take on board my ship. I won’t take any –” He didn’t get further as suddenly an alert blared.

“What the hell?!” Kirk gasped, while Finnegan’s communicator chirped.

“Yes?” Sean snapped the moment he opened the little device.

“Commander, we have an emergency in Engineering. It seems generator 2 is giving us new trouble.”

Jim exchanged a quick glance with Spock and Scotty, while Green asked, “One of our generators isn’t working perfectly?” He stared at Finnegan. “I wasn’t informed about that.”

Sean inwardly rolled his eyes. “We thought we had everything under control and didn’t want to worry you. After all, those problems first occurred only two days ago and the station will be evacuated soon. But now –”

“Commander!” the voice from the communicator called. “The emergency program was automatically activated. All shields are up.”

At the same moment Kirk’s own communicator signaled an incoming call. “Kirk here!”

“Chekov here. Keptin, our sensors tell zat ze shields are up again. I cannot beam anyone or anyzing aboard!”
Jim’s gaze hung at Finnegan – a bad feeling awoke in him. “We’re working on the problem, Mr. Chekov. Remain on stand-by!”

“Aye, Keptin!”

Kirk let his communicator sink to his side and stared hard at Finnegan. First the scientists weren’t finished packing their stuff – and they had had more than three days to do so. And now there was a malfunction with one of the generators that prevented Kirk from evacuating the station in the next few hours – hours during which the *Excalibur* would come nearer and eventually arrive before Kirk was done at Gamma 12. There was a certain gleam in Finnegan’s eyes. Jim had no doubt now. This delay – both delays – had been caused by his old school-rival. And that could mean only one thing. Finnegan knew Kirk’s true intentions. And how did Finnegan know? Luengo and Section 31. Sean had been instructed by them to hold Kirk at bay until the *Excalibur* arrived and Styles could arrest the Enterprise’s senior officers. And Finnegan would *love* watching the whole procedure.

Well, Jim wasn’t one to give in quietly – he *never* quit!

“As it seems, you have a problem here, Commander,” he said almost casually. “It’s really fortunate that I brought along one of the best engineers in the whole fleet.” He turned around towards his officers. “Scotty, please be so kind as to help the boys with this generator. I’m certain that a real engineer will have the problem solved in a very short time.”

The Scotsman nodded, but Finnegan raised his voice. “I’m not allowed to let anyone into the control room of the facility. Therefore –”

“Lad, this station will be shred ter pieces in one or two hours,” Montgomery interrupted him kindly. “There’s really no reason ter play Fort Knox here.”

“’Fort Knox’?” Green asked confused, and Kirk rolled his eyes. “The former gold depository of the United States before the Federation was founded,” he informed the scientist, while he listened with one ear to the rising discussion between his chief engineer and Finnegan.

“I have my orders, Commander Scott, and you will not lead me into insubordination. My men will sort the problem and –”

“I think ye didn’t understand the capt’n,” Scotty interrupted him impatiently. “We’ve absolute no
time ter waste because we’re needed at the Neutral Zone. But first we have ter give ye a ride ter Earth, so we’re in hurry! I’ll look at what I can do fer yer generator and then –”

“I’ll not allow you to –”

“Stop!” Jim had had enough! “I’m not only the highest ranking officer here, but also responsible for the evacuation. Therefore, I’m in charge and I order you, Commander Finnegan, to show Mr. Scott to Engineering and let him fix the problem you obviously weren’t able to within the last two days!” He raised his voice as Finnegan was about to protest. “That’s an order!”

For a long moment both men stared at each other, and while Jim’s eyes were most piercing, those of Sean could barely hide the hate. “If you insist,” the Irishman growled.

Sean seemed to be ready to explode. “Yes, sir!” he saluted, face flushed, and walked stiffly out of the room, Scotty on his heels.

Jim took a deep breath. God, how much did he loathe this guy! Feeling a soothing emotional wave radiating from Nien, he calmed down and gave his mate a short smile. He sensed the incredible tension within the Augment, yet Khan had found some time and strength to comfort him. ‘He’s a miracle,’ Jim thought, with a wave of love directed back, before he addressed his CMO.

“Doctor, please check Dr. Green first so that he can accompany Mr. Spock to the hold with the cargo we’ve to take aboard. I want to learn exactly what we’re bringing on board my ship.”

Green cleared his throat. “Captain, I can assure you that there is nothing dangerous within the containers, but –”

Kirk turned towards him. “This is a high-security facility for God’s sake! You’re officially declared as an unmanned transmission station, yet you stock stuff obviously dangerous enough that Command would rather see everything destroyed than taking the risk that it could fall into Klingon hands. So don’t tell me there’s ‘nothing dangerous’, because that’s a load of bullshit. You will inform me in detail what you’re transporting to the Enterprise’s cargo bay, or you and the others will be evacuated without the damned stuff! Your choice!” Kirk said sharply; his blue eyes narrowed to dangerous gleaming slits.
Green frowned. “You are certainly familiar enough with General Orders that no staff officer has the right to demand data about top secret in –”

“I’m the captain of the Enterprise, and as such I have every right to decide what concerns the safety of my ship,” Jim interrupted him with a hard tone. “Even the president wouldn’t have a say in it – and you’re not even a politician. So show my science officer what we’re beaming up.” His voice could have cut stone. “That’s an order!”

The scientist was clearly irritated, but nodded hesitantly.

Spock bowed his head towards a very angry Kirk. “I will escort Dr. McCoy and Dr. Green to the mess hall, then check the containers, Captain,” he said and looked at the scientist. “Please show us the way, Doctor.”

The man nodded. “Follow me, Commander, Doctor.” The three men left.

Jim caught his Vulcan friend’s gaze before the door closed behind him, and knew that Spock would use the opportunity to search for the high security wing and the Augments – despite Finnegan and his elite troop. Well, Jim and his friends would thwart Finnegan’s and Section 31’s plans!

Determined, Kirk turned around. “Giotto, take your men and make certain that all personnel are ready to be beamed over within the next thirty minutes. I’m certain that Scotty will have solved the problem by then. And if someone forgot to pack his undies, then it’s his problem!”

His security chief grinned. “Aye, sir!”

Jim nodded. “Officer Singh, you stay with me.” he said and addressed one of the last four remaining Securities of the station. “I want to have a quick general view of the rooms – collecting information on where best to fire. Please show us around, Ensign!”

The young man hesitated, but one quick look in Kirk’s icy eyes and he gulped before nodding. He was only twenty three and the hero of the Federation stood in front of him. Of course he would show the captain around. With a “Please follow me, sir,” he headed out of the room. Kirk and Khan followed him.
A quarter of an hour later most of the scientists were summoned to the mess hall where McCoy
cHECKED them using his med-scanner, not only to examine them but also to scan the area for reduced
life-signs. He had had the Augments aboard last year and had gathered a lot of data about them – for
example, their bio-signals were reduced to a level no ordinary scanner would be able to locate. But if
one knew what to search for, they could be located. Bones had adjusted his med-scanner in this
manner, yet he found nothing. Wherever Khan’s crew was being held the room had to be shielded,
because that was the only explanation for why the CMO hadn’t received the expected signals.

Smiling at one of the Security guards, he hailed Kirk ten minutes later. “Jim? I’ve checked them all.
My med-scanner is satisfied with all the data on the scientists and the security personnel,” he drawled
causally – meaning ‘the people are healthy, but my instruments don’t register the Augments’. And
Jim knew exactly the reason for it: the cryotubes were indeed in a shielded section of the facility –
shaids which were still raised because of the emergency program kicking in after the ‘malfunction’
of one of the generators. Kirk had to admit Finnegan was clever.

“Understood, Doc. I’m still on my tour of the place with Officer Singh. Please report to Mr. Spock
so that he knows the evacuation can begin as soon as Mr. Scott has found the problem with the
generator.”

Bones smiled inwardly. Kirk’s answer meant ‘Nien and I are continuing our search, Spock will be
on standby’.

“Aye, Captain,” Leonard replied, and changed the frequency of his communicator. “McCoy to
Spock.”

“Spock here,” came the instant reply.

“The captain says you should begin the evacuation after Mr. Scott is done with his work. The people
are all okay.”

“Where is the captain?”

“Still looking through the station, checking the layout for the planned destruction.”

He could just imagine how the Vulcan lifted a brow as he analyzed the coded message that meant
‘The Augments haven’t been found yet’. 
“Affirmative, Doctor. Spock out.”

What had sounded like a usual exchange of reports and orders was, in truth, the beginning of Step Two of the plan.

In the meantime, Scott was busy in Engineering. The station’s power was fed by two generators, of which one was responsible for the power supply to the cargo holds and deflector shields. And it was this one which was giving the Scotsman trouble, as Spock called him and told him that McCoy was done with checking the scientists and the security personnel, and that they were ready to beam them aboard the Enterprise as soon as the shields were down. In other words, the CMO hadn’t been able to locate the Augments by scanner. The logical deduction was that the hold containing them was indeed shielded, just as Jim and Khan had thought. And that meant if Scotty wasn’t able to solve the problem soon, they’d be caught by the Excalibur. Also, the Augments would be unable to be located, and therefore couldn’t be rescued – something the Scotsman wouldn’t accept. Despite anything Khan had done (in anger or desperation or not), his people were innocent. Scotty wouldn’t watch seventy-two men and women die, no matter what! His humanity and his Scottish soul wouldn’t allow it.

In other words, it was about time to take drastic measures.

Montgomery looked over his shoulder at the generator on which two technicians were working, while Finnegan leaned against a wall, arms crossed in front of his chest, and glaring daggers at the chief engineer. Scotty gave him one of his sunny smiles and rose from his seat.

He had checked everything through on the computer and the control units at the console. It was as if the generator had been robbed of its switch-off function – as if that part of the program had never existed. And for Scotty that stunk of sabotage.

‘Ye want ter keep us here ‘til Section 31’s lackey – Styles – is here? Not with me here, ye don’t, lad. Ye’ve ter rise earlier in the mornin’ to outsmart me!’ he thought and neared the generator, feeling Finnegan’s gaze on his back. Standing in front of the device, he planted his fists against his waist and cocked his head.

“Ye want ter keep us here ‘til Section 31’s lackey – Styles – is here? Not with me here, ye don’t, lad. Ye’ve ter rise earlier in the mornin’ to outsmart me!’ he thought and neared the generator, feeling Finnegan’s gaze on his back. Standing in front of the device, he planted his fists against his waist and cocked his head.

“Ye want ter keep us here ‘til Section 31’s lackey – Styles – is here? Not with me here, ye don’t, lad. Ye’ve ter rise earlier in the mornin’ to outsmart me!’ he thought and neared the generator, feeling Finnegan’s gaze on his back. Standing in front of the device, he planted his fists against his waist and cocked his head.

“The blasted thing simply doesn’t understand our orders,” one of the technicians said, confused. Scotty was convinced that the young man hadn’t a clue what was going on. He wasn’t the type of man who would work for a shadow department which worked on the wrong side of legal.
“Yes, that detail has been deleted from the program. The self-diagnostic the security system runs every hour found the malfunction and activated the emergency program that is in operation now and canna be stopped ‘til the error has been removed. The problem is that ter re-program the generator, you’ve ter shut it down which is impossible because of the active emergency program. The cat bites its own tail, so ter say.”

The other technician looked at him. “What should we do?”

Scott’s gaze wandered over the cable connections between this generator, the second one, and the main power unit that supplied the stored energy to the station and the shield functions. An absolutely crazy idea formed in his head. He glanced back at Finnegan, who still stared at him as if he wished a hole would open in the ground to swallow Scott whole, and smiled. “I’ve ter check somethin’ first,” Montgomery answered, giving a half-truth to make the security chief believe that the problem was still quite a big one – which wasn’t the case. In truth, the solution was very simple.

Scotty pressed himself between the two generators and slipped behind the one which was giving them trouble. Murmuring about an irrelevant connection to mask his true intentions, he crouched down, opened a part of the cover, and smiled inwardly. He could see many cables, relays, and valves but one connection was the only important one, and Scott searched for it for half a minute before he found it. Bingo! This would be easier than he’d thought.

Reaching into the device, his right hand closed around the thick cable and he pulled with all his might. At first it didn’t move, but Scotty could be stubborn as a mule – just like his friend and captain – and not giving in ‘ter a damn buzzin’ bucket’ he pulled and dragged until the cable gave way. Sparks flew through the air, energy overloads and shorts popped and hissed – and Montgomery jumped back at the very last second, as a small flame shot from the interrupted connection. Then the generator made a sound like an angry lion before its control lamps died. The lights in the station at the other side of the wall began to light up like a Christmas tree and alerts blared through the room. Yet Scott only grinned in triumph as he left the small space and returned to join the other technicians.

One of them was already at the console, the other waited for Scott, while Finnegan snarled, “What have you done!?” It was more of a demand than a question.

Casually Scotty picked away a bit of broken plastic from his sleeve, and brushed over his uniform top, while he shrugged, “I pulled the plug!”

“You did what?” Sean raged and Montgomery gave him another sunny, very innocent smile.

“I pulled the plug out of the socket – or rather, I cut the connection between the generator and the
dispenser unit that feeds power ter the shields.” He pulled out his communicator and really – really! – wished Kirk could see the guy’s face right now. Scotty knew that Jim would love the dumfounded, shocked, and stupid expression on his old school rival’s visage!

“Scott ter Kirk!” he hailed is captain and a few seconds later received a response.

“Kirk here!”

“Cap’n, the problem’s solved; the shields are down.”

“Bravo, Scotty! What was the malfunction?”

“An error in the program. I shortened the repair by cuttin’ the connection between the generator and the dispenser unit. Brutal, but an easy fix.”

He heard Kirk chuckling while in the background, an amused snort from a deep baritone voice could be heard. Of course Khan would go with Kirk. Those two were really inseparable now!

“Good job, Mr. Scott. Please accompany the technicians to the agreed meeting point for beaming. Kirk out!”

Scott pocketed the communicator and headed for the door. “Gentlemen, ye heard the captain. Off ye go.”

Finnegan still stared at the chief engineer. He had anticipated that Scott would find a solution to the problem, but not that quickly! Dammit, this turn of events left him in a bad situation. One look at his chronometer showed that he had bought only 35 minutes time for the Excalibur – too little. Far too little! Swearing inwardly, he followed the others, damming the Scotsman into the next year.

With Generator 2 being down, all security shields were offline now – and therefore also the shields around the whole area where the cryotubes with the human test subjects were placed. It was just as well that the hall which held the tubes was encased with a scan-proof material. No tricorder would be able to locate the tubes, and Sean was certain that Kirk would try that first.
For a moment Finnegan recalled the personal message he received three days prior from none other than Admiral Luengo, interim Chief in Command:

‘Kirk has gone rogue; success has gone to his head. He plans to ally himself with the Augments in your hold, and will try to free them, but we need to catch him red-handed to have proof of his intentions for the Council and the court material. I’ve already taken measures. The Excalibur is on her way for your enforcement, and shall be arrive earlier than the Enterprise. If not, it’s your duty to buy time until Captain Styles arrives there to arrest Kirk. Commander, it’s on you if more than seventy Augments end up roaming freely through the galaxy, trying to take over the Federation with Kirk as their supporter. If Kirk arrives before Styles can reach you, do anything in your power to hinder him from freeing the Augments. You have my permission to use all necessary force to stop him. I repeat: all necessary force. Whatever the outcome, you don’t have to fear any penalty, but you’ve to understand that this message has to stay to secret. Luengo out.’

Well, Kirk had arrived earlier than Styles – approximately two hours earlier, to be precise. More than a half hour had gone by now, yet the whole evacuation couldn’t last more than another half hour, then everything would be too late. The Excalibur would find only the destroyed remains of the asteroid and the facility after her arrival, and Kirk would have escaped.

No! Not with him – Sean Finnegan! He had gotten a task from the highest-ranking officer of Command and of the organization that would save the Federation in the end.

He had to find another way to keep the Enterprise – and especially Kirk – busy here until reinforcements arrived. And he would need help. Two of his men were utterly loyal; this much he knew. He had to inform them of what was really going on, and then they would act!

ST***ST

While Scotty, McCoy, and Spock were busy, Kirk and Khan roamed the facility, led by two members of the station’s security team. Jim pretended to only be interested in the locations which would lead to the most effective destruction when a torpedo detonated there, but in truth, his concentration was fixed on the super-human.

Nien walked beside him, acting as if his only concern was his captain’s safety, but his whole being – his mind, his heart, and soul– reached out for his family. He could sense them, could hear the mental whispers inside his mind, yet he was unsure where they were. The energetic waves of the facility’s many interior shields tickled his skin, wriggled along his nerves, and confused his usually-infallible instincts.
As the two security officers were about to open another airlock which led to one of the labs, Jim bent towards his mate. “Do you still feel them?” he whispered. “Can you sense where they are?”

“I am aware of their presence, yet the energy fluctuations of the shields are –”

He stopped suddenly as the uncomfortable prickle along his nerves faded away, and he was overwhelmed with the strong presence of his family. Even before Kirk’s communicator signaled an incoming hail, and Scott told them about the successful lowering of the shields, the Augment knew the reason for the lack of irritating tickling. Joy spread through his whole being, yet he needed to remain level-headed. Usually this would have been no problem for him, but after the last two years during which he’d desperately tried to free his brothers and sisters, his calmness melted away as he felt his people for the first time in more than fifteen months.

“They are nearby,” he murmured after Jim ended the quick talk with Scott. Closing his eyes Khan concentrated on the quiet whispers at the edge of his consciousness. “They are somewhere in that direction.” He pointed to the right and Jim smiled at him.

“Okay, just let’s start the evacuation, and while everyone is busy, we’ll go get your crew.” He cleared his throat and called to security team, “Gentlemen, I’ve seen enough. Let’s regroup with the others. The generator has been fixed, and the evacuation can begin now.”

“Aye, Captain!” one of his companions acknowledged, before the man added. “Sir, there is also the hangar with the two long-distance shuttles. I don’t know what Command exactly ordered, but maybe they can be saved?”

Jim cocked his head and nodded after a moment. “You’re right. There is absolutely no reason to destroy them. That would be a waste of resources. Where’s the hangar?”

The man pointed to the left. “Down this corridor, second right, then you reach the shuttle bay. Its doors are in the ceiling.”

“Okay,” Jim affirmed, an idea already formed in his head. “Ensign,” he turned his attention to the youngest man in the little team, “Go to the hangar and prepare anything there to leave. I’ll send some men over to fly the shuttles out. Head for the Enterprise, and park them in our hangar. My second engineer will pilot you.”

While the man started down the hallway to obey the order, the others began to return to the mess.
hall. Jim contacted the ship and informed Allistor of the new situation concerning the shuttles. Kirk had free hand in this matter. Command hadn’t given him any clue as what to do with the crafts, and as he thought more carefully about them, he got a very good idea of how they could benefit him.

Only three minutes later they met the others. Kirk clapped a grinning Scotty on the shoulder and hid a smirk as he saw Finnegan’s sour face. ‘Gotcha, you damned bastard!’ he thought; feeling childish satisfaction in triumphing once again over his old school rival.

Spock had already ordered the Enterprise to beam up the first two containers, and with them four of the scientists left the facility too. Green bounced between the remaining containers and luggage like a hobgoblin, demanding an affirmation that the cargo had arrived safely after its transportation – and was driving Kyle, who was serving as the cargo transporter engineer, up the wall.

Jim watched the chaos for a short time, before he addressed Finnegan. “Commander, I was informed that Gamma 12 has two long distance shuttles.”

Sean glared warily at him. “That is correct.”

“Okay. To save Command any more cost, they can be evacuated too. One of your men is already preparing the hangar. Please take four of your subordinates to the bay and fly the shuttles to the Enterprise. Commander Allistor, my second engineer, is already informed, and expects you at our hangar. Please follow his instructions concerning the landing and storing of the shuttles.”

Finnegan stared at him. He had found no opportunity yet to speak with the two most trusted men he would need to stop Kirk. And now this! Preempted! Kirk had blocked him! With this duty Finnegan would be away from the station and unable to cause further delay in order to benefit the Excalibur.

Well, perhaps not everything was lost! Another plan was already forming in the Irishman’s wicked mind. ‘You think you’re so clever, Jimmbo, but you aren’t!’ he thought. Outside, he remained calm while he saluted. “Aye, Captain. I trust that your team will take responsibility for the safety of the scientists?”

“Aye, sir?”
“You’re in charge of the security department here. Commander Finnegan is leaving us to take the station’s two shuttles to the _Enterprise._”

Giotto nodded. “Affirmative, Captain.” He saluted towards Finnegan, who returned the politeness with a casual gesture, then returned to his duty.

Sean looked at Kirk. “See you,” he said, and Jim spared himself another next round of gut-wrenching anger as he simply ignored that improper salute. He watched Finnegan and some of his men leaving the mess and breathed a long sigh. Thank the Lord he’d got that pest out of the way.

His glance found Spock’s, who lifted one of his brows in question, and nodded. That was the signal Khan had waited for. He walked over to the Vulcan, and together with McCoy, they left the mess hall. The doors closed and shut out the chaotic noise of the evacuation, and the nervous demands of Dr. Green.

Kirk watched his two friends and his mate leave, and crossed his fingers that they would gain access to the high security area without too much trouble, then returned his attention to the evacuation. During the next ten minutes ten more people and the half of the cargo beamed aboard the _Enterprise._ But the other half of the cargo, all the personal effects, nine securities personnel, eight scientists, two Red Shirts, Giotto and Mr. Scott were still within the facility. Jim’s communicator beeped.

Kirk was about to groan, knowing instinctively that this meant nothing good. “Kirk here,” he answered the hail after putting some distance between himself and the remaining men.

“Jim, there’s a little problem,” Bones’ voice whispered. “We’ve found the area, but the door that lead to it is coded. There’s no emergency handle to open it manually, no outer lock to remove – Spock’s already checked it. The display for the code is completely integrated with the bulkhead, and attempting to remove it by force – with a phaser or something like that – a failsafe will flood the whole area with gas which would render us unconscious, or even dead within seconds – even Khan. At least that’s the warning that flashes on the display when you try to destroy the damn thing.”

Kirk cursed. They had thought about everything, but not of this. Turning around to hide his anger, Jim murmured, “Can Spock or Khan decode it?”

“They’re already working on it, but can you imagine how many combinations there are to check before stumbling on the correct code?”
Now a real groan escaped Kirk. No, he didn’t need Spock’s exactly calculated odds for a success to become depressed… Yet he still wasn’t going to give up.

“The shields are all lowered. Can’t we just beam the cryotubes up?”

This time it was Spock who answered with a hushed voice, “Negative, Jim. Mr. Chekov has already tried that. The bay that holds Mr. Singh’s crew is encased with a material that does not allow for any transporter signal or scan of the area. We must open the lock and to bring every single cryotube outside the room so that they can be beamed up.”

Jim felt a headache approaching. “I’m coming to you,” he said quietly. “Where’s the bay located?”

Spock quickly gave directions and Kirk ended the communication. He turned around to Scotty. “Message from the Enterprise. Transporter Rooms 2 and 3 are functional again.”

Montgomery nodded, understanding the true message: problems with beaming up the cryotubes. Dammit! As it seemed luck just wasn’t with them today!

“Thanks for the information, Cap’n.” he said, and Jim nodded.

“I’ll just check that things are running smoothly in the hangar, Commander. Please make certain that everything is beamed up without further delay.”

Scotty made an affirming gesture and watched Kirk leave the room, while behind him, several more people were beamed away. He really, really hoped that Jim and the others would be successful. He didn’t want to think about what would happen in general – and especially with Khan – if the Excalibur arrived before the Augments were safely aboard the Enterprise.

Jim ran down several hallways, his mind busy with trying to find solutions to this new problem. He rounded a corner and saw his mate, Spock, and McCoy in front of a large two-door entranceway. Khan stood in front of the display while Spock glanced over his shoulder. Bones looked nervously at Kirk and walked over to him.

“Whatever they used to construct it, the stuff is scan-proof. I can’t receive any signals from Khan’s crew, yet our superman is absolutely certain that his people are behind this damned door!” Bones informed Kirk.
Jim took a deep breath. “Then he’ll be right. I told you about the mental connections between Augments. If he senses their presence on the other side of that door, they’re in there.”

McCoy pursed his lips. “So… I’m asking myself why Khan couldn’t recognize that the torpedoes Spock sent to the Vengeance didn’t hold the other Augments.”

“Because I sensed their presence from aboard your ship,” Nien said over his shoulder. “The Enterprise was in close proximity to the Vengeance, and I had no chance to differentiate. As the weapons exploded, both ships were hurled away. The growing distance and the pain from the injuries I’d sustained, prevented me from sensing their still-living spirits.” His ocean-colored eyes were hooded at the memories. Then they cleared. “The code is made up of six numbers, do you agree, Mr. Spock?” he asked, driving his full attention back towards the actual problem.

“Affirmative,” the Vulcan nodded. He linked two tricorders to the lock and tested both for their function, before saying, “I suggest that you try the first half of combination and I shall attempt to discover the code among the second half of possibilities.”

“Agreed,” Khan murmured and then both – Jim and Bones – watched with rising tension, how the two other men started a program that would scroll through every possible combination, testing any code that fit.

McCoy took Kirk’s arm. “Do you have the slightest clue how long it will take to find the damned code?”

Jim shook his head. “No, not really – but it could be too late by then.”

Khan didn’t listen to the quite discussion between his mate and the CMO. He even ignored the Vulcan at his side while his quick fingers worked the tricorder. This wasn’t the first time that he had needed to hack a code in order to save his people. For a moment, he became distracted as he remembered the first (and last) time the lives of other Augments depended on his ability to juggle numbers. It had been back in his time, in a locked area of the labs in New Delhi, after he and his friends had been victorious over the soldiers who had held them at their base to train them to be killers. The men had returned to the labs to recover the younger super-humans – some of whom had been mere children, yet the chief of the labs ordered their deaths after he’s learned that the Augment-teenagers had escaped and was about to storm the place they had been tormented all those years. It had been Khan who finally hacked the code that had locked the door leading to the area where the children were held – and were dying. He and the others had been able to save only four of them; one was Joaquin.
And exactly like all those decades – centuries! – ago, his little brother’s life was at risk again, and dependent on his ability to crack a code and to open a bloody door!

Jim stood near him, loathing that he was damned to do nothing other than watch and hope. Suddenly, he and the others heard a soft roar from afar and a gentle tremor ran through the floor. The two shuttles had started, and if he analyzed the remaining noises, the hangar doors were closing again. Well, at least Finnegan had taken the orders seriously. Even if the rest of the station was protected by air-locks it always was a risk when a hangar was open. Only one thing made Jim frown. Why had it taken so long for the shuttles to be prepped? Still, it didn’t pay to rush anything when preparing a craft for the vacuum of space when separated from the usual Starfleet protocols on the station.

Jim’s attention returned to his two friends and his mate. Khan’s fingers almost flew over the keys, his concentration had returned to the job at hand and had shut out everything else. He didn’t even notice when Jim hailed Scott and asked the engineer about the evacuation’s progress. Half of the station’s inhabitants and all of the cargo were now aboard the ship, yet the other half and personal effects still had to be beamed up. Kirk thanked Montgomery and closed his communicator just as Khan burst out, “I GOT IT!”

Surprised, Jim and Bones turned around towards the Augment. Several lights were blinking on the door, and a hissing sound proved that the hydraulic doors were opening. Spock lifted a brow.

“My respects, Mr. Singh. This was formidable."

At any other time, Khan would have loved to give a fitting response to this comment, but not now! For a moment he thought his heart would stop for real as the doors slid apart and he could see with the help of the automatically-activated lights the many shapes of the human-length tubes. Then his heartbeat quickened to the pace of a galloping horse, while an intense mixture of joy, relief, and something close to redemption rose in him.

There they were! His brothers and sister – his family! Finally he’d found them. Finally they were in reach. Finally he would be re-united with them. Finally he could take them to safety.

He didn’t even realize that his sight blurred for several seconds as his body functions reacted to his overwhelming emotions in an all-too-human way. Tears rose in his eyes and his throat tightened – not in anguish, but in awe. And then Jim was beside him and wrapped an arm around him, pulling him close for a moment.
“We made it! You made it!” Kirk whispered and was unable to hold himself back. In his mind he saw Nien in the apartment back in San Francisco – the moment as the Augment had learned from him that his family wasn’t dead, that they were still alive, and hidden somewhere in their endless sleep. In his mind’s eye Jim watched how the strong and proud super-human had been on his knees, his shoulders trembling, tears of relief and overwhelming agony streaking down his far-too-hollow and pale cheeks. But only now, in these seconds, as he first laid eyes on the cryotubes again, Kirk could sense how Khan now began to feel a bit of the peace he had missed, even when the two of them were together. His mate’s feelings sang over the bond like a siren’s call, and even the presence of the whole admiralty wouldn’t have stopped him from pressing a kiss to his beloved’s cheek. For a blink of an eye, Khan gave in, leaning into Jim and relaxing. Then he straightened his frame as the fighter within him awoke once more.

His family was here, yes, but far from being safe. They had to act quickly to take them away, up to the Enterprise and out of harm’s reach.

Tightening his hold on Kirk one last time, he let go of the younger man, and hurried into the large room; McCoy on his heels in an instant, med-scanner in hand. Khan stopped at the first cryotube and looked into the viewport. “Juan,” he murmured, a smile gracing his handsome face. Bones made a quick scan and nodded.

“He’s all right,” he said and saw how the former dictator visibly relaxed. “I suggest that we beam them all over to the Enterprise as quickly as possible and I’ll check on them afterwards.”

Khan nodded. “I agree.” His gaze wandered over the tube for one moment more. He was overwhelmed with the knowledge that he was re-united with his crew.

Leonard realized that Khan – enhanced or not – had become numb with relief, and so took over command.

“Okay, guys,” he called and pointed at Spock and Kirk. “There’re several ladies and gentlemen here who have booked a cruise on our ship. Let’s help them prepare for boarding.” He maneuvered around the first cryotube, loosened the brake of its carrier, and began to roll it out of the hold. “What’s the matter with you boys?” he asked, looking at Kirk and a blinking Spock. “We’re in hurry, aren’t we? So don’t expect me to write you an invitation. Get the damned job done! And Jim? Inform Chekov we’re ready to beaming them up,” McCoy added over his shoulder, as he bypassed them.

Kirk gaped at him for a second longer before rolling his eyes and grumbling, “Aye, aye, Captain McCoy.”
Bones grinned while Khan pushed the second cryotube outside of the hall. Kirk and Spock had walked into the large room hall and gathered the next two tubes, which Nien quickly peeked into to learn who lay within. He drank in any sight of another beloved face. His heart-rate would have alerted McCoy – or maybe not, after all, joy and fear could have the same effect on anyone, genetically engineered or not.

Watching Khan hurrying back into the hall, Leonard cocked his head while a thought struck him. These people had to be checked through, yes, and as soon as possible. But how long had these cryotubes been in use now? How often had they been moved? Where they still working perfectly? Were their inhabitants actually safe?

As Kirk reached him with the next tube, Bones held him back. “Jim, I think it’s the best that I store them all in the facility next to Medbay. If some of the tubes should fail, I can quickly put its occupant in stasis that way.”

Jim thought about that for a moment, and nodded. “A good idea.”

The CMO smiled, went to the corner of the opposite wall to make room for the next tubes and hailed Chekov. Quietly, he ordered him to stop the transport for a moment, before he called M’Benga, who’d been informed the mission too – after all, he did know who Khan really was. Quickly, McCoy told is colleague to switch the quarantine area from the hold the Augments were originally going to be beamed into to the new location, then talked with Pavel again, who would beam the tubes directly into the room next to Medbay. Satisfied, Leonard grinned at Kirk as the younger man pushed the next cryotube out.

From then on, the four men were busy with bringing Khan’s sleeping crew out of the scan-proof area, while Chekov beamed them in pairs up to the Enterprise and directly into the room adjoining Medbay. Yet it was a battle against time – and time was running out…

ST***ST***ST

“ETA to Gamma 12?” Styles’ voice sounded sharp. He usually spoke in a firm, almost arrogant tone, but now his tension was plain to see and to hear. Except for his two supporters on the bridge, no one knew details about the new mission they’d got. Those senior officers who had served for longer under Captain Heldron assumed it was nothing good. Since Styles had taken command of the Excalibur, something had been amiss. And after the death of the delegation, the older crew members couldn’t help but have a feeling that they had missed something very important. Yet the young man in the center seat was the captain and his orders were law.
“Forty-five minutes, sir,” the navigator Kramer answered. “Leaving warp in forty-four minutes.”

Styles only nodded and turned around to the science station. “Any sign of the Enterprise?” he asked, and the man looked surprised at him.

“The Enterprise, sir? Has she been ordered to Gamma 12 too?” He recognized how other officers on the bridge looked in surprised at their captain, too – well, most of them did.

Styles raised both brows. “I wouldn’t have asked, otherwise, Commander.” He caught a piercing glance from First Officer Thammerson and added, “I think it’s about time to fill you in our true mission.” He took a deep breath and said, “I had a message from the interim Chief in Command that Kirk has gone rogue. Intelligence has found out that he’s been using the Enterprise for his own purposes for quite some time now, but has masked it by obeying orders, up until several days ago. Intelligence has also revealed that Kirk is about to get hold of some dangerous material stored on Gamma 12, and intends to use it. Our orders are to stop him, take him and his senior officers into custody, and to return to Earth.”

He saw, how Li and Kramer looked with at each other with disbelieving expressions. “Kirk…went rogue?” the comms officer asked, dumbstruck. “I’m sorry, sir, but I just can’t imagine something like that. He –”

“His fame has gone to his head. He’d always thought himself to be the best and that rules were not made for him, but this time he’s overdone it. He also has a fugitive aboard and has given him refuge – an individual who is a wanted terrorist who has been on the run from the authorities for weeks now. Kirk is hiding him; Intelligence has proof of this. This terrorist is genetically enhanced – bred to be a fighter, and who now serves Kirk. Letting them roam free is considered a danger to the Federation. Therefore, we’re authorized to capture them – dead or alive, alive if possible. In addition, I expect reinforcement from two further ships.”

He ignored the shocked faces of the other officers and addressed his helmsman, “Wilson, leave warp at the very last moment. Commander!” he looked back at his science officer. “Scan the whole area around Gamma 12 for evidence of the Enterprise – and I want to be informed immediately as soon as you find something!”

At his station, Lieutenant Li stared at one of the displays, lost in thought. Kirk had gone rogue? The Federation’s newest hero – the man who saved Earth, won battles others would have lost, escaped Klingons and prevented that whole space station crash into a planet’s capitol city? That was as unlikely as the whole mess over the dead delegation. Li was no novice or fool. He had realized that his inexperienced captain had made mistakes during the battle within the Borderland – giving commands in the wrong order. But this was Styles’ first command, and mistakes were expected.
And it hadn’t slipped his attention that Thammerson and Wilson hadn’t been surprised at Styles’ demands about the Enterprise’s status, or his revelation concerning Kirk. They clearly already knew about these orders. Yes, it wasn’t unusual for a first officer to be informed about secret orders, but a helmsman? Wilson was only a lieutenant and new aboard, and…

And that was when it hit Li. Both men, Thammerson and Wilson, were aboard the Excalibur for the first time, exactly like Styles. Captain and first officer replaced the usual command team, Wilson had been ordered aboard after Darrison, the previous helmsman, had been transferred – the latter not at his own request.

Li watched them and saw how Wilson threw a quick glance over his shoulder at Styles. ‘As if they were communicating with each other – as if they know more but were keeping quiet about it. What the hell is going on here?’

The comms officer turned away to ensure Styles and Thammerson were unaware of his musings, yet his mind continued to race. The three acted like a well-synchronized team – but still, a team that worked outside the rest of the crew.

Something was wrong here. Li simply felt it. Something was very wrong here!

ST***ST***ST

The four men on Gamma 12 had worked for almost a quarter of an hour now, and while Jim was getting out of breath, Bones sweated like a horse after a race, Spock and Khan didn’t show any signs of tiredness. Jim returned into the cargo hall and saw Bones leaning against one of the remaining tubes, wiping his forehead and rolling his shoulders. As he caught Kirk’s questioning glance, he growled, “I’m older than you, kid, and also don’t have super-cells in me, so don’t give me that look!”

Kirk rolled his eyes. “You should go to the gym more often, Bones. It helps to build muscles and –”

“I’m a doctor, not an Olympic champion.”

Kirk loosened the brake of the next holder and began to push the cryotube. “Isn’t it you who’s always saying that sports are healthy?” he teased in McCoy’s direction, and snickered as he caught the CMO’s grimace. “It’s always the same with the doctors – ordering the patient to drink water, and drinking brandy all alone by themselves!”
“Don’t think I’ll offer you any during your next visit!” Leonard threatened. “You’ll get a hypo instead!”

Spock stepped to another tube and lifted both brows. “I suggest that both you gentlemen skip this illogical discussion and concentrate your strength on steady breathing. It helps the body functions to keep level during physical efforts.”

McCoy glared at him. “As you say, Doctor Spock!” he taunted.

Khan shook his head in quiet amusement. Those three! His gaze wandered over the remaining tubes. Fifty-eight members of his crew were already aboard – among them Katie, Otto, and Paolo – yet he still hadn’t found Joaquin. Everything in him urged him to go from tube to tube to look for his younger brother, but they were running out of time and –

“Nien, is this Joaquin?” Jim’s call distracted him.

Spock lifted a brow as he got another look at how quickly the super-human could move. In a blur of red and black, the former dictator vanished deeper into the hall, and looked down at the tube Jim was pointing at.

Khan felt how his heart almost missed a beat before another wave of utter relief and joy flooded him. There, beneath the widow in the middle of the icy mist he recognized the boyish face of the youth who was his ‘little brother’. Reaching out a tentative hand, he touched the window; a soft tremor ran through his body. “Yes,” he whispered, “this is Joaquin.”

McCoy had followed him, pulled out his med-scanner and checked the bio-signals. “He’s okay,” he said, smiling quickly at Khan before looking down at the young man – and went rigid. He knew this face. He recognized it from fifteen months ago, when he removed one of the Augments from his cryotube and put him into a stasis-chamber to make room for Jim’s dead body. He had hoped that Spock would be able to catch Khan and that the Augment’s super-blood would work its miracle on the captain as it had on the Tribble. He really didn’t want to think about how it had been Khan’s ‘younger brother’ he’d removed from the cryotube, risking the boy’s life in doing so. He hadn’t had another choice at that moment, though; he’d chosen this one because he was young and strong. Even if McCoy had known the special connection between the two super-humans, he couldn’t have cared less at this time. Jim’s life was more important than that of the genetically enhanced being.

Now everything was different. He not only had come to respect Khan, he was starting to take a
liking to the Augment. To think that the man had been a breath away from losing someone he held most dear pained Bones, and he was glad that the young super-human had weathered everything quite well.

Spock stepped to them. “Do you wish to move this cryotube next?” he asked.

Nien’s gaze still hung on the beloved face before he visibly forced his eyes away, and he nodded. “Yes.” His voice was unusual hoarse. Finally! Finally he could take the boy – barely a man – to safety; this one, who was his closest family member aside from Jim now. He couldn’t wait for the moment the cryotube would be beamed aboard and he would be notified of its safe arrival.

With utter care Khan pushed it outside, followed by Spock with another tube, while Jim and McCoy used the moment to give themselves a little break. The second Nien reached for the communicator to give Chekov the next signal, his keen ears heard something. A soft creaking noise, as though someone was tiptoeing. He concentrated, then became aware of heartbeats – quicker than usual, yet steady. And they came from around the next corner…

Khan’s gaze searched the shadows and then he saw movement. Two shapes raised their right arms. Acting on pure instinct, the former dictator gripped Spock’s tunic and dragged the Vulcan along with himself to the floor. In the same moment, a phaser blast raced above them and vanished into the hold.

Then several things happened at once. Khan heard Jim’s and McCoy’s shocked outcry, while he rolled himself away from the Vulcan, who slid with the speed and the grace of a cat behind one of the two cryotubes, reaching for his phaser. The Augment felt along the bond for Jim and sensed his mate’s surprise and anger, but no harm. At the same moment, Nien saw how one of the attackers had aimed again – this time straight at one of the cryotubes, and terrified, Khan recognized that it was Joaquin’s. With shout of horror he hurled himself against the cryotube and shoved it aside, exposing himself to the phaser fire.

Long fingers too strong to be human encircled his ankle and Khan toppled over. He landed hard on the floor but the shot missed him by an inch, grazed the tube and vanished into the hold. For a blink of an eye, Vulcan and Augment looked at each other – one owed the other one his life; and in Khan’s case he had been saved by Spock for the second time now. A moment later, Spock’s phaser sang out and sent stunning blasts at the attackers, keeping them busy so that Khan was able to find new cover.

In the hold, Jim was anything but idle. Hailing the Enterprise, he demanded the bridge, tensing as Uhura told him she would have a look at the scanners herself. Of course she didn’t trust a junior science officer to look out for her captain, her lover, and the others. And with Chekov – who could eventually replace the Vulcan when he’d finished his duties in Transporter Room 1, she was the only senior officer left who had a clue about scanners and their readouts.
“There are three bio-signs in the hallway straight ahead of you,” she said, while she stood at the science station. “They’re moving down the corridor.”

Jim growled. How was it possible that they missed not one, but three people? “Tell Chekov or Kyle to beam them up and straight into the brig!”

“Aye, Captain!”

Pulling out his phaser Kirk raced towards the door, ready to support Khan and Spock, but as he reached them the crossfire had already stopped.

“They’re running away!” Khan hissed; his eyes were narrowed into small glittering slits, his whole stance belying his being in complete warrior-mode now, ready to attack anyone who dared to come near his little brother and the other Augment – or Jim.

Bones had closed the distance to them, bio-scanner in hand. “They’re off to the right and –”

At the same moment, Chekov’s voice sounded through Jim’s communicator. “Keptin, I scanned ze area, but ze bastards vanished before I could locate zem.”

“They vanished?” Kirk asked in disbelief, while he saw from the corner of his eye how Nien bent over the cryotube that held Joaquin and checked the high-tech sleeping-coffin thoroughly. The super-human’s elegant fingers were trembling and betrayed his anxiety over something bad happening to the tube and endangering his little brother.

“Da – as if zey walked zrough a door. Zhey’re zree and –”

“There are several areas on this base which are scan-proofed,” Spock reminding them, rising. “They may have retreated to one of those.”

“In other words they know the station better than we do and we can’t afford to become trapped.” Jim himself felt a wave of anxiety. “Pavel,” he spoke urgently into his communicator. “Check how many men were aboard the shuttles which arrived from Gamma 12. I have a feeling that three people may be missing – including Finnegan.”
“Aye, Keptin!”

Jim looked at the others. “You continue to bring the tubes out here. I’ll go after these cowards and –”

“Captain, I must protest,” Spock said insistently and Jim groaned.

“However you want to shield me from harm, Spock, we don’t have time for that. I’m going on my own, end of story! I’m certain that one of the bastards is Finnegan – and the two of us have an old score to settle. So –”

“There’re three of them, Jim and you’ll be alone!” Khan interrupted him, tension, fury, and fear giving his voice a sharp note. “Spock is right. You –”

“Keep on with the rescue. If I need help, I let you know.” He raced down the corridor, not caring that Spock and Khan called after him.

The Vulcan lifted both brows and his lips pressed into a thin line for a moment, while Khan cursed.

“God dammit!” Bones groused. “We can’t let him go alone. Finnegan is a sadistic bastard and he hates Jim to the core. If he gets a chance to hurt him, then –”

“It will not come to that, Doctor,” Spock interrupted him sternly, while he took out his communicator and hailed Giotto. Quickly he filled in the Chief of Security and demanded reinforcements for Kirk, before looking at Khan and McCoy. “I’ll back up the captain,” he declared, and the Augment nodded in approval.

“Go! Dr. McCoy and I will take care of the remaining tubes. There are only fourteen left and we’ll bring them out in no time.”

The first officer didn’t bother with a reply but raced down the hallway. Something Jim would call a gut-feeling told him that his T’hy’la would need him.
Jim hastened down the corridor, phaser in hand and tense as a bow ready to send an arrow flying. He knew that it had to be Finnegan. He had underestimated the bastard! He knew it even before Chekov called him seconds ago and told him that the shuttles had arrived with two men in one and three men in the second. Therefore three people were missing – and Kirk knew exactly who was among them.

He cursed. He didn’t doubt that Finnegan would try everything he could to stop him and to buy time for Styles. The cowardly attack was proof enough of that.

Suddenly, he heard quiet footsteps behind him and whirling around, he raised his weapon – only to let his arm sink to his side. Frowning, he stared at his Vulcan friend. “Spock,” he whispered harshly. “Didn’t I order you to –”

“You did not give me a direct order, Captain – and, additionally, may I turn your attention to the fact that we are on a private mission? Insubordination would hardly be a crime in this instance.”

Kirk glared at him. “Don’t give me that shit, Spock. Every hand is needed back there.” He pointed with one finger into the direction the Vulcan had come from. “We –”

He didn’t get further as Spock suddenly gripped him and pushed him into the wall, shielding him with his body. Two phaser blasts hissed behind the first officer’s back, but before the Vulcan could react, other phasers answered.

Jim turned his head as far as possible and recognized Giotto and some of his men running down the corridor and shooting at those who had dared to attack their superiors. Kirk didn’t need to ask who had alerted the Red Shirts. It was far too obvious Spock’s doing.

“Spread out!” Giotto called. “Get those bastards!”

He stopped beside the command team that had stepped back from the wall. “Captain, Commander, are you all right?”

Jim gave Spock a quick glance. “Thanks for pushing me out of harm’s way,” he said quietly, “but we two are not done yet!” Then he looked at Giotto. He didn’t know if he should be angry or not. He didn’t want to involve his crew in this private rescue mission and the whole mess that would
follow, but he wasn’t a fool. He alone against three well-trained elite security personnel was a crazy notion at best, if not suicidal. He was very aware of the risk that Finnegan presented. If the Irishman got the chance to kill him, he would do it. “Thanks, Lieutenant Commander, we’re all right,” he answered.

“What’s going on, sir? Mr. Spock told me that some of the station’s security have decided to put up a fight and –”

“Exactly. Try to arrest them and get them to the Enterprise’s brig. We –”

New phaser fire was heard and Kirk, Spock and Giotto followed the sound instantly. As they rounded a corner they saw that the Enterprise’s Red Shirts were involved in a shootout with the others who hid behind some containers in a smaller cargo hold.

Jim contacted his ship again and Uhura’s quick scan of the area confirmed his assumption. The room ahead of them was one of those which were scan-proof, just like the one Nien’s family had been held in. In other words, there was no way to beam Finnegan and his men out. They’d have to be subdued in the old-fashioned way.

Giotto turned towards him. “Captain, we’ll get these guys. Please, sir, stay back.” Worry was written all over his features. He held his captain in high regard and liked the young man very much. He wouldn’t allow anything untoward to befall him if he could prevent it.

Spock nodded. “I agree with Mr. Giotto, sir.” He lowered his voice. “We have cornered them, so they can’t escape. May I suggest that you return to Mr. Singh and help him remove the last of the cryotubes from the hall?”

Jim hesitated. Spock was right. Three phaser blasts were shot from the inside of the room, Finnegan and his men were trapped. It wasn’t necessary for Kirk to continue the hunt – the hunt was over. Still…

“Giotto and the others have no clue what this all is about. I should –”

“Giotto is loyal and discreet. He did not ask any questions during your emotional outburst after Mr. Singh was attacked in your quarters. He will follow your orders and get Mr. Finnegan and the others to the brig, no matter what they tell him.”
“Hmm, at last one of my officers obeys me,” Kirk grumbled and Spock allowed himself a little sigh. Both friends looked at each other and then Jim gave in. Everything in him urged him back to Nien, and after one last glance around, Kirk nodded, momentarily brushing Spock’s upper arm in silent gratitude, then hurried down the corridor – back to Khan and McCoy.

He rounded the corner – and something hard as steel punched him straight in the belly. Stars exploded in front of his eyes and whirled around him, while darkness began to surround him…

TBC…

Chapter End Notes

Well, I told you that nothing goes ever like it is planned – and that Finnegan would have another trump up his sleeve was to be expected. I know, another cliffy of the bad sort isn’t very nice, but I can cheer you up. Before I go on holiday at Good Friday next week the next chapter will be posted, so you don’t have to wait too long until you learn what’s going to happens now.

I hope you liked the last chapter and I really, really curious what you think of it, so… (looking at the comment-button, *snicker*).

Have a nice weekend

Recklessness, thy name is Jim Kirk

Chapter Notes

Hi, my dear readers!

Just as promised you’ll already get now the next chapter as a kind of ‘Easter-Egg’. I know that the last cliffhanger was evil, and I just didn’t want you let ‘hang’ on the cliff any longer (*smile*).

Well, because of said ‘cliffy’ I don’t want to reveal too much what’s happening now, and I hope you’re going to enjoy the next chapter. There will be – besides a lot of action – a lot of fun, too (fitting for Eastern and the beginning of spring).

I wish you all “Happy Eastern”,

Thanks for the feedback,

Love

Yours Starflight

See the end of the chapter for more notes

Chapter 58 – Recklessness, thy name is Jim Kirk

Jim fought for breath, while he clung to his belly and fought against the black shadows which loomed around him, ready to take his conscious away, something he couldn’t allow. He realized that he’d been attacked, and before he could react, someone kicked him against the shoulder, sending him a meter away.

Acting on pure instinct, Kirk rolled himself into a ball and forced himself to move. The slithering stopped; his phaser skidded over the floor out of reach. Raising his head he saw two polished boots step into his range of his blurred vision, and wasn’t surprised to find, as his gaze wandered upwards, the tall, bull-like shape of Finnegan grinning down on him.

“Surprised, Jimmy-boy?” Finnegan taunted. “Thought your lap-dogs had surrounded me with the others? Three phaser blasts, three people, that’s that?” He laughed. “My boys are well trained. They can fire with both hands, which tricked those poor excuses for security into believing they cornered us all.” He shook his head with a mockingly sneer. “And my boys are hiding in a scan-proof room, so no one will be able to get any information from a tricorder, so won’t know how may are really hiding there. It really wasn’t difficult to fool your Red Shirts.”
Jim had used the few seconds to regain some strength and sat slowly up. “Clever, Sean – like always,” he said, rubbing his belly.

“I was always the cleverer one of us, Jimbo,” Sean taunted, using the pet name he’d given Kirk three years ago. It was the one Jim loathed the most. “You thought you could roam around here, freeing the Augments and flying away with them?” He smirked. “We got you, Jimbo! We’re quicker and better than you, and if you’re really as smart as everyone says you are, then you should surrender before I have to hurt you and your friends.”

Jim felt like a cadet again, being taken by surprise like this. Dammit! Finnegan always had some nasty tricks up his sleeve. Kirk had known that. He should have anticipated something like this, yet he stumbled straight into the trap. Stupid idiot! And above all, Finnegan had the nerve to demand his surrender?

**Surrender?**

This word didn’t belong in Jim’s lexicon! Nope!

“You got me good,” he mumbled and tried to rise to his feet, but swayed badly enough to fall back, letting out a painful yelp.

Finnegan began to laugh. “The great captain and gets weak at the knees after only one little punch. You’ve become soft, Jimbo. Three years ago you could take a lot more.” He bent down to pull him on his feet.

Jim had always been quick, but since he’d been brought back from death by Khan’s blood and the recent booster injection he’d had from his mate, his speed was beyond anything Finnegan could imagine. The moment the Irishman bent down, Kirk’s left hand shot up and his fingers closed around Sean’s right wrist like an iron handcuff. At the same time, the captain’s right foot flew up and hit the man’s left side.

Finnegan shouted in surprise and he tried to wriggle out of Kirk’s grip, but to no avail. Jim’s fingers closed merciless around his wrist while Kirk forced Finnegan’s arm away. At the same time, his right hand clawed into Sean’s uniform top, and using his right foot, he hurled the larger man over himself.

Sean landed with a grunt on the floor, belly first. Jim threw himself onto his back, pushed his elbow
into Finnegan’s shoulder and reached out for his opponent’s hair – only to find himself being pushed away, as the taller Irishman bucked upwards.

In the next moment the combat turned harsher, brutal even, as Finnegan kicked with all his might at Kirk’s hip and sent the younger man flying. Ignoring the pain, Jim raised himself up; both grabbed at each other – eyes shone with fury, teeth bared, fists ready to strike…

“Just try it, Jimbo!” Finnegan snarled. “When I’m done with you, I’ll take down your friends. They’re traitors too, and –”

Kirk attacked. Using a series of kicks and punches that he’d learned from Spock when the Vulcan had taught him *ashumi* (a Vulcan fighting sport), he managed to get onto Finnegan’s back, and landed a hard blow there. But the Irishman rebounded surprisingly well. Okay, so the guy had always had more muscles than brains! The latter was Jim’s specialty. Quickly strategizing while being confronted with something else pushed him to his highest limits – a situation he pretty much loved. He was at best when he was challenged like this.

Realizing that he had to stop Finnegan from knocking him out – a risk that truly existed – and assaulting Nien, Spock, and Bones, there was only one thing Kirk could do in the moment. He whirled around and ran away.

Finnegan, quickly recovering from the attack, stared perplexedly after him. “What…?” he began and Jim looked back over his shoulder, stopped and challenged,

“Already tired, Finnegan? Or did that little demonstration of real fighting hurt you? Poor boy, shall I call your Mommy and –”

That was enough. The Irishman’s face flushed deep red, and with a roar, he raced forwards. Jim began to run, leading the furious man away from his friends.

ST***ST

In the other area Scott had joined Khan and McCoy. The evacuation was finished, all former habitants were aboard as was their personal effects. Hearing a phaser fire from afar as he hastened down the hallways, Scott had been tempted to come to Kirk’s aid, but he knew that Jim, Spock, and Giotto were more than capable of handling the situation. Instead, he went straight to the CMO and the Augment. During the next three minutes, the engineer was busy bringing the last of the cryotubes
out of the cargo bay. Only five remained, as all of sudden, Khan stopped dead in his tracks.

The super-human went rigid and blinked, as if he were listening to something only he could hear, while he paled dramatically. Bones got a bad feeling – this time twice as strong as usual. “What’s up?” he asked in alarm.

“Jim!” Khan whispered hoarsely and fingered the side of his neck where the invisible the mark still remained and now itched. Jim was in danger. Nien felt it with every fiber of his being. Acting reflexively, he raced forwards, only to stop several steps later.

He balled his fists. He sensed fury, dread, and pain from Jim, and its intensity almost robbed him of breath, while the mark itched even more. He wanted to run to his mate as quickly as possible, knowing that Kirk’s life could be at stake – again! Yet two souls were fighting in him. One part urged him to come to his beloved’s aid and to stop at nothing, the other part longed to stay with his remaining family members. Torn between the two choices – and hearing Jim’s angry and also painful mental cries – he gulped. His gaze found McCoy and he made a decision. One he had thought he would never be able to make, yet here he was. His heart won the fight he never thought possible at all.

“Jim needs my help. I… I entrust you with the lives of my brothers and sisters here.” He pointed at the remaining tubes; a touching mixture of anguish, fury, and despair lay in his eyes. “Please, protect them!” It was the first time he’d ever entrusted anyone outside of his family with the safety of his crew – the first time he’d trusted a mere human like this besides Jim.

Bones realized what it had to cost Khan to ask this of him – how desperate the Augment must be to see no other way than to almost beg for his help. Leonard knew how it feel inside of Khan, how two hearts beat in his chest. He nodded – grimly and firmly. “I’ll protect them with my life if it comes to that.”

Scotty didn’t know what was happening, all he knew was that Kirk seemed to be in trouble (again), and Khan had obviously ‘felt’ it somehow, and wanted to go to the young man. Glancing at the distressed Augment, he said, “I’ll protect them too, lad. Just go!”

Khan nodded, and after a last glance at the remaining cryotubes and a short prayer to any higher beings he’d never believed in till now, he raced down the hallway; all his senses reaching out for his mate.

He didn’t need a tricorder to locate Jim. The feeling of his beloved’s presence grew in intensity the nearer he drew to him. Rounding a corner, he ran down the corridor and then into the next – and the
next. The whole time he was sensing emotional turmoil and pain. Jim was being attacked and he was hurt – something that filled Khan with utter rage, while his protective instincts flared like a fire out of control.

Another movement to his right caught his attention, and he saw Spock storming towards him. One look in those far-too-human brown eyes and the former dictator knew that the ancient Vulcan element had been awakened in the first officer – a part that was as deadly as a le-matya of his destroyed homeworld.

Both men shared only a quick glance; words weren’t necessary. Without hesitation, they teamed up, despite the old grudge that hadn’t completely dissipated, even though saving each other’s lives had made it easier for each of them to respect the other. Now they had no problem working hand in hand – as it was for Jim. For the boy-captain, who wore responsibility on his strong but human shoulders, something a young man his age shouldn’t always have to do. They both sensed Jim’s distress and would come to the rescue. Later, Khan would consider the fact that the Vulcan had felt Kirk’s emotions clearly enough to make him act on them.

They ran side by side through a door that was actually an airlock, and stopped dead in their tracks. They were in the shuttle-bay Jim had spoken of, and said captain was wrestling with a large, bull-like figure on a staircase that led to the hangar control room on a higher level. Both men were locked in a fierce fight, yet Khan and Spock identified Kirk’s opponent instantly: Finnegan.

Both saw how a brutal blow was delivered to Jim’s head, but the young captain ducked at the very last moment, and Finnegan’s fist only grazed him, yet Kirk swayed. And Khan knew it was only the famous stubbornness that held his mate on his feet. In the next second, Jim countered the attack and both fighters tumbled down the stairs, still fighting.

Spock raised his phaser. “Commander Finnegan, cease this altercation and surrender!” He didn’t really shout, yet his voice was a loud thunderclap that distracted the Irishman for a brief moment when he looked over at the two newcomers.

Jim used the lull and landed a punch to Finnegan’s jaw which made the commander lose his balance, but he gripped for Kirk’s tunic and pulled him down with him. Both men fell hard onto the stairs, and – never stopping – rose again and struggled their way up the stairs to the small platform in front of the control room.

“You always need a back-up, Jimmy-boy, don’t you?” Finnegan taunted. “How is it that you won this up-tight asshole of a Vulcan for yourself?”
Jim gave him a grim smirk; ignoring his sore belly, hip, and temple. “Spock prefers the company of intelligent people, no musclemen with a pea-brain!”

Finnegan feinted with his fist, and as Kirk bent to avoid the pretend-blow, Sean raced up the stairs, Jim hard on his heels.

“Commander Finnegan, STOP THIS INSTANT!” Spock all but shouted now with iciness in his voice that would have frozen over even Hell.

Khan wasn’t ready to watch his mate being mistreated for a second more. The combination of rage and protective instincts made him race towards the staircase, while in the background he heard the Spock’s loud voice that betrayed the officer’s rising fury. A very – very! – pissed-off Vulcan could be really eerie; this much Nien had learned.

Spock lifted his phaser and aimed at Finnegan again, but Kirk blocked the shot as he reached his opponent, shoved him, and both men landed on the platform. The Vulcan began to run towards the staircase, too, while his gaze found the super-human who’d just reached the stairway.

Not wasting any precious time, the Augment tensed his muscles and hurled himself into the air. His right hand shot forwards and clasped one of the support struts that held the staircase to the platform. Quick and graceful as a feline, he pulled himself upwards, climbing at a ridiculous speed towards the platform where both opponents were exchanging blows and kicks.

If Finnegan had spared only one glance at the approaching man, he might have stopped all hostility and would surrendered. Khan’s pale blue-green eyes shone with an unholy fire and full of promise of death; his lips were curled into a dangerous snarl which transformed his usually-handsome face into an almost ugly grimace of fury and hate. No one laid hand on his mate!

Spock watched the Augment’s efforts to reach Kirk and Finnegan for a brief moment and realized that – with three men in the fray, the chances of stunning the Irishman without harming one of them were practically zero. Feeling a very un-Vulcan flare of irritation, he fingered for his communicator to hail the Enterprise. At the same moment, Khan pulled himself over the railing and Finnegan got the first glimpse of the ‘Red Shirt’.

“Cavalry arrives, Jimbo,” he taunted, not realizing the murderous expression on the approaching man’s face.
Kirk felt Nien’s presence and turned his head in surprise, only to find himself gripped and shoved brutally against the super-human. Khan caught Jim around the waist and steadied him, before placing himself between the captain and his opponent.

Finnegan lifted both fists, thinking he would have no problem with the smaller man. “Come on, buddy, show me what you learned at the Academy. Try to help your little captain before I send him to where he belongs: To his maker –”

He didn’t get further. Khan lunged at the elite soldier, and Finnegan barely had time to raise his arms in defense as several blows rained down on him, forcing the air out of his lungs and making him stumble backwards. A rib cracked and Finnegan howled in pain and rage.

“Spock to Enterprise!” the first officer called into the communicator, while he hurried towards the platform. He held no sympathy for Finnegan, but he assumed that Khan would tear the man apart if he couldn’t be stopped. The Vulcan had seen the expression the Augment now wore a year ago – during their near-deadly battle on the trash transporter. And Spock knew the former dictator well enough to realize that Khan would make absolutely certain that Finnegan wouldn’t get another chance to harm Jim Kirk – meaning, if it came down to it, Khan would kill the Elite Security officer.

Sean had never received such blows. The other man had the strengths of a Vulcan, if not more, and the quickness with which his opponent moved was simply inhuman!

He fell to the floor and kicked out, hitting the ‘Red Shirt’ in the belly and pushing him away, but his enemy landed on his feet like a cat and started a counter-attack. That was…impossible. And while Finnegan managed to rise before his opponent was above him again, he began to understand just who – or what – he faced: an Augment. Kirk hadn’t come alone to get the other Augments but had brought one of the creatures with him who had obviously slipped the SBI’s clutches. It had to be this enhanced warrior Luengo talked of in his transmission.

Avoiding the next attack, Sean whirled around and put two steps’ distance between himself and the engineered man. “Just look,” he sneered, “Frankenstein’s monster tries to protect the little boy. Isn’t that swee –?”

Blazing light raced towards him and out of instinct, he ducked, escaping the stun of Spock’s phaser by a hair’s breadth. “You should have had some target practice, Vulcan, instead of boring your students to death with –”

Again, he wasn’t able to finish his sentence because Khan was on him for the second time, gripping him, lifted him into the air as if he weighed nothing, and hurled him away. Finnegan screamed as he
crashed against the rail and fell onto the metallic floor, but using his training, he was able to make a grab for his phaser, even while falling. Landing hard on his left side, he lifted the weapon, switched its adjustment, and pointed it at the Augment.

Khan had the nasty feeling of déjà vu, only now the Vulcan had no chance to save him. And even as Nien tensed his muscles, he knew he’d be too slow this time.

What happened next was like watching a scene in slow motion.

Jim, who hadn’t found a chance to intervene in the fight between Khan and Finnegan for the last moments, had used the time to take a few much-needed deep breaths. But in doing so, he realized that his former school rival was capable of doing more than just fight dirty. He saw how Finnegan brought his phaser to bear, set the adjustment to kill, and aimed at Nien. The whole universe seemed to stop.

Just like the moment two days ago when he had heard the phaser fire sounding from his quarters, and Khan’s outcry…

For a second that felt like an eternity, utter horror and helplessness gripped the young captain in the face of losing the other half of his heart, his soul – of losing the very essence of what had changed his life into something warmer and brighter than the sun. Then he acted without a thought. Like an automaton, he threw himself straight into the line of fire; Khan’s pet name on his lips. He saw the widening eyes of his soul-mate, read the rising terror in Nien’s eyes, heard Spock yelling his name from afar, but the Vulcan’s voice was drowned out in the buzzing of the phaser blast – he reached Khan and pushed him down, while incredible heat spread across his back.

Everything vanished into a blur. The walls, the floor, the hangar, even Khan’s shocked and desperate face beneath him melted into nothingness…

ST***ST

In the other area, Scotty and Bones were done with bringing the remaining tubes out of the scan-proof room. Giving Chekov a signal, both men beamed aboard along with the tubes, and left the transporter pads, before Pavel beamed the two cryotubes directly to the room next to Medbay.

“Is everyzing all right?” he asked worried, and Scotty walked to him with a grim face.
“I’ve nae clue, laddie. There’s trouble with some guys from the station and Jim’s in the middle of it! Khan went mad suddenly, and hurried ter the cap’n’s rescue, but I’ve nae idea what’s goin’ on, and –.”

“Spock to Enterprise.” the Vulcan’s somehow troubled-sounding voice came from the speaker on the transporter controls.

“Chekov here, sir!” Pavel answered, while Scott stepped beside him.

“Ensign, in front of me, approximately ten meters away and seven meters above, the captain and Mr. Singh are fighting with Commander Finnegan,” Spock said, and Scotty quickly scanned the area. He found three life signs, which moved in a far too short of range and far too quickly to beam up. Yet this was exactly what Spock went on to order, “Locate them and beam them up. Take care as Commander Finnegan may – JIM, NO!” To hear the Vulcan’s sudden cry almost freeze the blood of the three officers. But before Bones – who suddenly felt as if the rug had been pulled away from beneath his feet – could demand information, Pavel had already found a solution for the problem and had started the beaming process. Three figures appeared within a cloud of silver and golden light on the transporter platform.

McCoy recognized with absolute certainness that one of the men had raised an arm and held a weapon. Following instinct, Montgomery pulled out his own phaser, aimed at the figure which had transformed into Finnegan, and pulled the trigger. Hit by full stun, the Irishman fell to the floor with a loud thud, the phaser slipping from his hand.

Then silence spread through the transporter room, interrupted only by the sharp gasp that escaped Bones as he realized the two men who lay beside Finnegan hadn’t moved. Kirk lay atop Khan as if he was pinning the Augment to the ground, while Khan had wrapped an arm around the younger man’s lower half, the other arm raised as though trying to block someone or something. But it wasn’t the fact that the two must have been on the ground during what was obviously a fight that had arrested the doctor’s attention, but Khan’s terrified expression.

McCoy took a moment to realize that Jim was breathing. Actually, both men were panting and tousled. Jim’s shirt was torn and showed traces of grit; a black stripe marred the material at his back. As it appeared, Spock hadn’t underestimated the urgency in which he’d wanted Scotty to beam them up.

“Enterprise!” Spock’s concerned voice sounded again. “Do you have the captain and –”

Scott interrupted the first officer. “I got all three, sir. Finnegan is stunned.”
Scotty was certain that Spock’s voice betrayed even more worry, as he asked “Is the captain all ri –?”

The Vulcan’s question was interrupted by an angry outburst by the Augment, who suddenly sat up, which forced Jim into an upright position, literally straddling the super-human. “HAVE YOU LOST YOUR BLOODY MIND?” Khan’s furious tone gave Scotty new chills while beside him, Chekov, and even Bones, gaped dumbstruck at the pair on the transporter pad. “CARE TO TELL ME WHAT THAT NONESENSE WAS ALL ABOUT?” Nien shouted, enraged.

As Khan had been forced to watch how Jim jumped into the line of fire and saw the phaser blast flash behind the younger man’s back, his last sane thought had been that he had lost his soul-mate – had lost the one who had transformed him from a creature bred in a lab into a human with a real soul. The shock – the utter anguish – in those few seconds had rendered him helpless until he’d suddenly realized that they had been transported somewhere else, and that the dead weight of Kirk on top of him was anything but ‘dead’. He could sense Jim’s presence in his mind, could feel the human’s heartbeat, and his quick breath. For a moment, Khan was dizzy with relief; relief that needed a valve to blow off the pent-up dread in a most typical way: it morphed into fury.

So, so reckless!!!

This damned, reckless, stupid, crazy CHILD had almost killed himself to protect him. To protect Khan, who didn’t need protection, but needed this blasted KID at his side like he needed air to breathe!

There were no words that could describe the swirl of emotions that ricocheted around the Augment’s soul just now.

Jim, overcoming his shock, began to realize that he was still alive, and looked confusedly at the face of a very angry Khan. Then it dawned at him what his lover was talking about and snapped, “That ‘nonsense’ was ME shoving YOU out of HARM’S WAY!”

“You hurled yourself in the way of a phaser that was SET TO KILL!” Khan all but roared, his usually pale face turning red with ire. “HAVE YOU GOT A DEATH WISH?”

“Mr. Scott, what is happening up there?” Spock sounded as confused and irritated as a Vulcan was capable of.
“Well, I donna know exactly,” the engineer answered, a little baffled, staring with wide eyes at the two men. “It seems the cap’n and Khan are havin’ an argume –”

“THAT SHOT COULD HAVE KILLED YOU, JIM! DO YOU NOT UNDERSTAND? What are they teaching at this DAMNED ACADEMY?” The Augment continued his furious tirade, not caring that he was – technically – yelling at his commanding officer.

“Thanks for pointing out the obvious, Mr. Super-Brain. And for the record, in case you’d forgotten, A PHASER SET TO KILL CAN KILL YOU TOO!” Jim wasn’t any quieter than Khan now. His cheeks had flushed with the effort of shouting while crouching on the floor.

“What the hell happened down there?” McCoy had overcome his surprise and he balled his fists. Hands on hips, he asked himself if he’d fallen asleep and if this was all some sort of crazy dream.

“That is NO reason to RISK YOUR LIFE!” Khan raged, ignoring the CMO completely.

Jim bent forwards, fixing the super-human with a heated gaze. “Who I risk my life for is MY DECISION!”

“That was no decision; that was ONE OF YOUR DAMNED MINDLESS IMPULSES which you should be able TO CONTROL!”

“Oh, look who’s talking!” Kirk snarled. “You are all instinct and impulses whenever –”

“I can take RISKS because I AM QUICKER AND STRONGER. If you –”

“WELL, IN CASE YOU HADN’T NOTICED, MISTER, THIS TIME YOU WOULD HAVE BEEN TOO SLOW!”

Scott folded his arms in front of his chest. He knew that under different circumstances, Khan would have landed in the brig for behavior towards a superior like this, but if there was one thing Montgomery had learned, it was that there was nothing ‘usual’ about Jim Kirk, especially where Khan was concerned. And, as this whole part of the mission had not been part of the plan, he wasn’t witnessing insubordination between a captain and his crewman, but a quarrel between two…friends?
Amused, he looked back at McCoy. “I canna help myself, but they sound t’me like an old married couple, donna ye think, Doctor?” he asked with a smirk, not realizing he’d made nearly the same joke as Diego had weeks ago.

“I HAD EVERYTHING UNDER CONTROL, JAMES, AND –”

“NO, you DIDN’T! Finnegan wanted to KILL you and –”

“He wanted you dead, too, or why – do you think – he was about TO BEAT YOU INTO A BLOODY PULP SO THAT I WAS FORCED TO INTERVENE!?”

Bones, who took from the shouting that Jim had – again – faced a deadly situation he’d only survived due to incredible luck, also crossed his arms in front of his chest and watched his friend and the super-human with a mixture of irritation and amusement. Yes, he had felt icy fear when Spock all but screamed Jim’s name, but now, seeing Kirk alive (and being lectured) in front of him, calmed his nerves enough to wake some of the black humor in him – his own kind of ‘valve’. He turned with a nod towards the engineer. “I have to agree, Scotty. Had their silver wedding anniversary ten years back and –”

The shouting had quieted, and McCoy stopped his mocking reply as he saw Scotty’s jaw drop. As McCoy looked back at Kirk and the Augment, he rolled his eyes. Meanwhile, Scotty’s looked as though they would pop out of their sockets.

It wasn’t clear who’d made the first move, but both men were now locked in a fierce embrace and kissing the daylights out of each other – and not caring that they weren’t alone.

“Oh for God’s sake… Jim…” McCoy groaned, asking himself if the younger man would ever learn some decency.

Scott stared agog at the two ex-nemeses, still crouched on the transporter pad and kissing each other like there was no tomorrow. Ahaaa, so that’s what’s been going on! He should have known! There had been so many signs… And then he remembered Chekov’s presence and looked at the young ensign, whose face was comparable to a fully-ripe tomato. “Um, boys – not in front of the kid!” he called, and quickly slapped a hand over Pavel’s eyes.

It was impossible to know if the two lovers really hadn’t heard anything, or only if they just ignored him, because neither of them made a move to break the kiss. Jim had cupped Khan’s head with one
hand, while his other arm was firmly locked around the older man’s strong shoulder, melting against him like butter in the sun. The effects of the adrenalin from his fight with Finnegan and the fear he’d felt as his former classmate had lifted a phaser aimed straight at the Augment’s chest, were still circling through him. He hadn’t been thinking at all as he shoved Khan out of the blast’s way. Only now, as his lover held him close and let his hands wander over his body and through his hair, some relief was setting in.

He felt a burning sensation coming from his back that – for once – had nothing to do with the flames of passion Nien was able to stoke in him with a single touch, but Jim didn’t mind. It was impossible for him to stop now. He needed to feel the super-human’s warmth, the beating of his heart against his own, the dance of his hot breath on his face, while the wicked tongue challenged him to one of their duels. That was more important than the pain.

Khan was the first to break the kiss – if only for a few seconds. “Don’t you dare risk your life for me again,” he whispered sharply, while the echoes of the shock still whispered in his soul. He had almost lost Jim – again!

“I can’t promise you that, baby,” Kirk murmured tenderly, and let his fingers glide through Khan’s tousled but silky strands. “Because I already made you another promise: to always have your back…” He smiled, acknowledging the irony. “Even at the expense of my own.” Jim captured the sinful mouth with his own again, earning a longing groan from the Augment, whose anger vanished into thin air – mostly.

McCoy sighed when it became obvious that neither of the two men was about to stop anytime in the near future. “Jim… Khan! For God’s sake, you are in public!” He massaged his temples to soothe an approaching headache as both lovers continued to be ignore the world around them.

Jim sensed the almost desperate urge of the older man to hold and touch him, and realized at the edge of his mind that Khan must have been terribly afraid for him – afraid to lose him! If Nien had felt only the half the terror Jim had at the moment Finnegan had aimed his weapon, Khan had been through hell. They both simply had to be with each other now; they needed proof that the other was still alive, that they weren’t badly injured, that they’d escaped a deadly situation only seconds ago. It was overwhelming, and…

“JAMES TIBERIUS KIRK!”

The young captain went rigid. Yup, he was really in deep trouble if he was being called by his full name, and Bones’ voice promised nothing good. For a second he could feel Khan’s soft lips beneath his own, then he opened his eyes – and reality crashed down on him.
Lighted walls, grey polished floor, transporter pads, steps with blue light, a gentle buzz in the background…

Oh…

Turning his head, his gaze found a stern-looking McCoy. A baffled Scotty stood behind the glass wall of the transporter control with a hand clapped over Chekov’s eyes. The young ensign was struggling to remove it.

“Mr. Scott, I am of age so please remove zat hand!” Pavel was clearly irritated now; he yanked the Scotsman’s hand away, glaring at him.

Bones wore the most irritated expression Jim had seen in a long time, before the ship’s doctor snapped, “Jesus Christ, you two, get a grip! And not just on each other! Get a room!” He stopped his tirade and looked around. “But not the damned transporter room! And, for your information, there are still people on the station waiting to beam up, so get off that platform!” Like the super-human, he didn’t care that he was lecturing his captain.

Jim had the modesty to blush while Khan only smirked – something that angered the CMO even more. “Oh, wipe this smug expression off your face! You’re not a whit better than Jim!” He received a raised eyebrow from the Augment and added, “And don’t give me that shit about ‘better at everything’. Right now you’re both being ridiculous! The captain of Starfleet’s flagship and a man who ruled a quarter of Earth, snogging in public like horny teenagers! Ugh!”

At that moment the door to the transporter room opened and an alarmed Spock stormed in. His night-dark eyes widened ever so slightly as he caught sight of his captain straddling the Augment, who seemed to be torn between anger and amusement. To his left, an outraged McCoy stood, while at the transporter control, a very red-faced Pavel Chekov and grinning Montgomery Scott stared at the platform. What was going on here?

Bones glanced at the Vulcan. “Are you a magician? How did you get aboard while these two idiots were blocking the transporter?”

“Mr. Kyle beamed me up using the cargo transporter,” the first officer answered, not taking his eyes off his T’hy’la. Jim was alive. Finnegan, who lay unconscious nearby, hadn’t killed him. Spock had sensed Jim’s presence in his mind even after Kirk, Khan, and Finnegan had been beamed away, yet not all the tension had left the Vulcan, even when he heard his captain and the Augment shouting at each other through the open communicator. The risk that Jim had been injured by the phaser blast still existed, and only now, as Spock saw his friend in front of him, did relief flood his whole being.
Vulcan or not, there were things they still could be overwhelmed by, and relief belonged to those emotions which even two thousand years of tight control couldn’t stop from being experienced. Spock hadn’t noticed that he’d closed his eyes for a moment, but snapped them open again as he heard Jim’s cheerful call, “Ah, Spock, just in time, as always!”

Kirk untangled himself from the super-human, batting the slender, strong hand away as it lingered a moment too long and far too obviously at his hip. Rising he continued, “I think we should beam up Giotto and the others, and… Ouch!” He reached around to grab at his back and heard Khan growling something in his mother tongue, before the Augment was on his feet in one quick movement. A deep frown marred his features. Without bothering to ask, he turned Jim around and eyed his back. “Oh – for Shiva’s sake! I KNEW IT!” he snarled.

“Don’t tell me…” Bones didn’t even finish the sentence as he saw the former dictator’s dark expression. He took the several steps up to the transporter platform and to Jim’s side. “Sweet Lord, KID! You did it again!” he gasped, which made Spock race to Kirk’s side, while the two other officers moved closer too.

“Nothing serious, Bones, only… OUCH! Be careful, dammit!”

McCoy had pulled the torn shirt on Jim’s back aside to have a closer look at the damage. “You ‘only’ have a burn that went straight through your clothes! Don’t tell me that you didn’t notice that sooner!” he groused. “For God’s sake, Jim, and here you promised be to be more careful from now on – or did I misunderstand you the last time you were in Medbay healing from space exposure?”

“I AM careful, Bones, but don’t ask me to step back and to watch if a member of my crew – one of my friends, or my mate – is in mortal danger!”

Pavel and Scott gasped. Mate?

Bones only growled in annoyance before he turned Kirk around again and took his jaw carefully between thumb and index-finger, looking carefully at the younger man’s temple. “And a nice lump is growing on here too. No wonder you’re acting crazy.”

“This man – Finnegan – punched and kicked him several times,” Khan reported with a stern calmness he didn’t feel, looking expectantly at the CMO. “Jim needs your professional help.”

“You’re not helping here!” Kirk hissed.
The Augment simply replied, “Yes, I am! And if you knew what’s good for you, you wouldn’t argue with me this time! I heard your promise too, you know! You even **vowed** to me to be less reckless, and now look at the mess you’ve gotten yourself into. Again, as I have to point out!” Khan’s anger was born out of very deep worry. Jim realized this, which was maybe the only reason why he indeed, did shut up for once. He glanced at Spock for support, but his *T’hy’la* only pressed his lips into a thin line and arched one brow. Jim knew enough about his first officer to understand that this was the Vulcan equivalent of a very serious rebuke. The human version would have needed a whole lot more words, but this was just as effective.

Apparently, McCoy and Khan weren’t done yet with their old-fashioned scolding.

Leonard rubbed his forehead, obviously exasperated. “How is it that I **always** have to patch you up when you come back from an away mission?”

“He tries to escape trouble, but trouble is faster,” Nien explained with an exquisite mixture of anger and black humor. Jim was very tempted to stick his tongue out at him, but after what they had done only a minute earlier, he bit back this urge.

“Well, this time, it even outran you!” he replied charmingly instead, and went for the door. “All right, Chekov, beam our boys and Finnegan’s sidekicks up – the latter maybe directly into the brig! Scotty, lock Finnegan away too. No visitors. The charges are attacking commanding officers, and attempted murder. Spock, how much time do we have left until the *Excalibur* arrives?”

“According to Minister Selek’s data and the time taken between our arrival and now, the *Excalibur* will be in sensor range within the next twelve minutes.”

“You forgot to mention the seconds,” McCoy taunted, and the Vulcan did roll his eyes at this comment.

“Because I lack exact data, Doctor,” he answered, almost indignantly.

Khan shook his head – how did Jim put up with those two combatants? He glanced at his beloved, who only sighed, before he said, “Nien, you’re with me. Spock, Bones, you too – and stop that eternal bickering. I swear, you two are about to drive me nuts!”

“No chance, Jim, you are already n –” McCoy stopped himself at the last moment as he received a warning glance from his friend. Yeah, they were mostly in private and Scotty and Chekov were
friends, but there were things you just don’t say to your superior officer in public. That Jim had accepted Bones’ outburst – and Khan’s – minutes ago was more than any other captain certainly would have tolerated. Yet, as already stated, Jim Kirk never did ‘usual’.

Smiling innocently at Kirk, McCoy followed his friend to the door, Spock and Khan at their heels.

Scott grinned broadly, his eyes never leaving his captain and the super-human. As far as he understood it, Kirk had once again risked his neck and came away victorious. But that wasn’t the only reason why the Scotsman chuckled inwardly, despite the worry he had felt for his friend only minutes ago. So, Kirk and Khan were a couple? Well, he should have known – at least when the super-human almost exploded with anger, born of concern for Kirk’s health; even his life. That reaction should have been the last notation in a long list of evidence, and Scotty could slap himself for not having recognized the whole thing sooner.

It was so obvious to him now – the way the two always stayed close to one another, how they interacted, the looks they exchanged, the tone of their voices when they spoke, the way they took care of each other… Or, as he’d caught them in Engineering, holding hands. This all had practically screamed ‘love-birds’, and Scotty had racked his brain over what was going on between the two. Even worse, his subconscious had already suggested the answer over and over again, but he had ignored it, thinking that his captain was just a lady’s man. That was obviously not the case. Well, once again, in a universe with Jim Kirk in it, nothing was impossible! He should have learned that two years ago!

Smirking, Scotty beamed Finnegan directly into the brig, and headed for the door of the transporter room, while Chekov called Giotto who had, indeed, overpowered the two other elite soldiers and was ready to return to the ship with his Red Shirts.

Outside of the transporter room Kirk had strolled towards the turbo lift but was stopped by McCoy, who called, “Where do you think you’re going?”

Bewildered the young captain turned around. “To the bridge. We have to –”

“Oh no, my friend. First you have a rendezvous with a bio-bed and some medical attention.”

“But –”

“No ‘buts’!” Leonard was serious now; there was no doubt about it.
Jim sighed. “Bones, look, a few bruises and a scratch on the back are really no –”

“Captain, I have to agree with Doctor McCoy. Some of those bruises are indeed in need of treatment,” Spock interrupted him almost softly, examining his friend from his tousled hair to the toes of his boots and back. Jim really looked beaten up.

“Spock, you know I find it eerie when you agree with me,” Bones murmured, and Kirk rolled his eyes. Rather the universe stop to exist than these two quit their verbal banter.

“As much as I am touched by your concern, guys –” He was cut off by Khan’s hand on his forearm.

“Jim, your first officer and Doctor McCoy are right. You have been scorched by a full phaser blast and this man beat and kicked you mercilessly. You should get yourself checked out.”

Kirk groaned and threw him a scowl. “Oh no, not you too!” He looked at his lover, who only gave him one of his piercing glares.

Scott, who’d left the Transporter Room and caught the final words, thought it a very good idea to voice his own worry regarding his captain and friend’s state. “Ye really should let the doctor have a closer look at ye, Jim. This Finnegan guy got ye good.”

Kirk couldn’t believe his ears, while he stared from one man to the other. “Whoa, whoa, hold on a minute! Do I get this right? You four all agree on something?” As he only received unwavering stares, he threw up both hands. “Hallelujah! I declare today a holiday!”

With those words he continued his way to the turbo lift. Or rather, he tried. But a strong arm wrapped around his waist and stopped him, while he heard McCoy’s voice several meters away, “Jim, Medbay is in the opposite direction!”

Looking over his shoulder, he saw the stern face of Khan directly behind him. The super-human held him in an iron grip, while Bones pointed a thumb over his shoulder towards the other end of the hallway. “This… This is mutiny!” Jim accused, to which McCoy only smiled.

“No, it’s doctor’s orders. Don’t make me turn this into an official medical command as the ship’s
Jim growled – a sound that would even have made a tiger wary – but McCoy didn’t yield. “I hate it when you do this!” Kirk snarled, turned around, and pushed Khan’s arm away – a little more roughly than necessary – and stomped towards Leonard.

“Spock, target that damned station and blast it into pieces. I wanted to do it by myself, but sadly this witch-doctor is using some heavy measurement to force me into his stupid hut!”

The Vulcan lifted a brow. “Aye, sir.” It was really not clear what the first officer affirmed – the order or Jim’s attempt at cursing Bones.

‘*If looks could kill...,*’ McCoy thought with some amusement, as Kirk’s heated glare hit him. Then he couldn’t help himself, and patted him on the shoulder as soon as Jim passed him, and teased, “Good boy!”

“Don’t you dare,” Jim gritted out, scowling angrily at the doctor, who only smiled before he glanced at Khan.

“The same goes for you, Mr. Singh!”

Khan lifted both brows, surprised. “I wasn’t almost shot, Doctor, and –”

“Medical checkups for all crew members after they’re involved combat – that’s in the manual. And as far as I know, Jim recruited you, *Petty Officer* Singh. And maybe, just maybe, your other half will be less of an infant about receiving treatment if you’re there, so follow me.”

For a moment Khan was lost for words, then he caught Spock’s expression. The Augment knew that Vulcans were incapable of something like malicious joy – at least they claimed to be – but for just a moment, he thought he’d seen just that in Spock’s eyes.

Kirk grinned, suddenly in a very much better mood as he wasn’t going to be the only one McCoy would manhandle with damn check-ups and possibly even hypos! “Well, Nien, ‘cling together, swing together’! That hasn’t changed in the last three centuries!”
Khan lifted both brows. “I know, Jim – after all, we’ve been doing exactly that for quite some time now,” he all but purred with an ambiguous undertone in his voice.

Promptly, Scotty started to cough and McCoy let his head sink with a groan. Both men had obviously understood that the Augment had taken the idiom literally, and had changed it into a sexual innuendo. Of course Jim had understood that too, and turned several shades of red.

It was now Spock’s turn to lift a brow. These reactions were…not comprehensible. As far as he understood the phrase Jim had used, it referred to a situation in which comrades were caught and faced a punishment together. So, if (rightly) perceiving the doctor’s check-ups as ‘punishment’, the captain’s use of the idiom was accurate. However Khan’s retort wasn’t understandable in this context, nor was the reactions of the others. He decided to ask Nyota about it. Maybe she could explain to him any alternative meaning.

In the meantime, Leonard rubbed his face in frustration. “Sweet Lord, you’re both…impossible!” He glared at Khan with his best ‘doctor-stare’ and pointed nonchalantly at him, then down the corridor. “You – Medbay! Jim – you too!” He turned to leave, but hesitated as the Augment made no move to follow him. Bones decided to use an old trick. The lure. “And here I thought you wouldn’t waste a second to rush to the Medbay,” he said, shaking his head in mock-bafflement.

“Pray tell me why I should do such a thing, when my crew is…”

“…In the Medbay!” Bones cut in, taking the super-human by surprise, if only for a second.

“They were beamed to Medbay?”

McCoy shrugged. “Of course. I want to check if they’re all right, before…” He stopped as Khan took two large steps towards him, graceful and determined, like a lion on the prowl.

“Why didn’t you tell me sooner?” he all but hissed.

“You didn’t ask,” Bones shrugged, unimpressed. He had learned to look through Khan’s sometimes-unusual behavior, knowing that it was nothing more than a masquerade to hide his true emotions, or the fact that, under certain circumstances, he was just a big softy.

Nien passed Jim, gripped him firmly but gently by the upper arm, and pulled him along with him.
“Come on! We wasted enough time with this senseless bickering. You need a check-up and I need to see my family.”

“Hey!” Kirk protested, and tried to wriggle free, which was – of course – impossible. “Who’s the captain here? Who gives the orders?”

“Just now? Commander Spock is, as long as you’re off-duty due to medical reasons. So hurry up! The sooner McCoy is convinced that your newest course of recklessness didn’t push you even closer to an early grave, the sooner you can take back the conn.”

Scott looked after them, grinning from ear to ear. “A’the risk of havin’ an outraged cap’n and’n infuriated Augment a’my throat, I have t’say, I think those two are ‘dorable.” He received a bug-eyed stare (McCoy) and a bewildered glance (Spock). Chuckling he shook his head.

“Adorable’?” Leonard echoed, and Montgomery laughed quietly.

“Aye! I musta bea blind not t’realize it sooner. They’r smitten wi’ each other. Ya were wise t’tell them them t’get a room, Doctor, or th’sparks flyin’ between them will set th’ whole ship aflame.”

At that moment Chekov, Giotto, his men, and the two captured security personnel left the Transporter Room. Finnegan’s men glared daggers at the senior officers, and one called, “You will pay for this. Command has accused you of treason and theft – as it seems they’re right. You all will face court material for this and rot in prison!”

Spock lifted a brow again. “I would advise you to stay silent, Lieutenant, because anything you say now can and will be used against you. Commander Finnegan is accused of attempted murder. You, on the other hand, only followed his orders. At the moment, you are not yet charged with anything further. This could change if you continue to threaten and to offend the captain and the senior officers of the Enterprise.” He nodded at Giotto. “Take them to the brig, but put them in a separate cell from either Commander Finnegan or Lieutenant Nureaux. No visitors.”

The Chief of Security nodded. “Aye, sir!” He didn’t ask what was going on – after all, these two guys said their superior had received orders from Starfleet Command to arrest Captain Kirk, something Giotto couldn’t believe. He knew that something odd was going on and was very aware of the fact that it had to do with Petty Officer Singh. This man was involved with everything that had happened within the last few days, if not longer. That Singh was the mysterious Sunrise was another detail he’d recently realized, and that the man was immune to phaser stuns was a fact he still had to get his head around. And now, as the command team, the CMO, and the Petty Officer separated themselves from the evacuation process only to be caught in an attack by Starfleet’s Elite Security.
Giotto was anything but stupid. And there had been many interesting, and even inexplicable events occurring recently: the spy aboard and his intent to install a bug in the captain’s quarters, the strange behavior of the command team on Gamma 12, the quarrel between Kirk and Finnegan, Security’s accusations against Kirk and his senior officers, the inhuman strength and quick mind of Singh…

Deep down Giotto knew the answer to all this. He simply knew that there was a rift between Command and Captain Kirk. He believed the two Elite Security members were convinced of what they had accused Kirk of, and that he and the others should be put into custody by the order of command. It fitted very well with having a spy aboard, discounting the fact that the man had been caught.

And Giotto simply knew that Singh wasn’t a casual human. If it wouldn’t sound crazy he’d say that the man was enhanced – maybe an Augment. But even if Singh was a super-human, he wasn’t a threat to the ship; otherwise Kirk would have intervened.

And there were other things the Chief of Security didn’t scrutinize too closely and just followed orders without second thoughts: He trusted his captain – and the Vulcan first officer. If Spock, whose ‘love’ for regulations was well known, was okay with everything that had happened, then Giotto wouldn’t doubt it, would support his superiors with everything he was and had.

Without hesitation, he instructed his men to bring the captives to the brig. Scotty watched them leave, winked at Spock, and led a still-baffled Chekov along with him.

The Vulcan saw how Chekov bent his head towards Scott and whispered something too quiet for even Spock’s keen hearing to catch. Montgomery began to laugh. “Laddie, aren’t ye a little too young for those kinds a’ questions?” Whistling, and clearly in a sunny mood, the Scotsman walked towards the turbo lift and pulled Pavel with him.

Spock followed them, utterly confused about the last two minutes. Humans. He assumed that he would never come to understand them completely.

ST***ST***ST

“Leaving warp in sixty seconds,” Kramer, the navigator of the Excalibur reported.

Styles sat in the center seat, had placed his arms casually on the armrests, and had put one leg over
the other. His whole stance showed victory with a hue of arrogance. “Any sign of the Enterprise?” he asked his science officer, who watched the sensors.

“None, sir.”

Styles smiled. ‘We got here first – and we’ll wait for you when you arrive, Kirk. And then we’ll catch you red-handed, trying to take the Augments for your own purposes. You, your friends, and this creature at your side will have no chance. We…”

“Sir!” The science-officer whirled around. “Sir, our sensors are scanning a huge explosion.”

The captain went rigid and turned his chair. “Coordinates?”

The man held his face expressionless. “Gamma 12, Captain.” He ran another scan and said, “A lot of debris consisting of different materials – stone, metal, plastic, glass…” He straightened his shape as he looked back at his commanding officer. “Gamma 12 has been destroyed, sir.”

Rising to his feet, Styles stared at the main screen, just as Kramer reported, “Leaving warp, Captain. Gamma 12 ahead!”

The Excalibur dropped into impulse drive, engines more slowly propelling her forwards now.

“Maximum magnification!” Styles ordered, while his mouth became dry. Had Kirk been quicker or had the station been under attack by the Klingons? “Any warp signatures?” he asked his science officer, who shook his head.

“None, Captain.”

“Maximum manification, Captain,” Wilson reported from the helm.

The whole bridge crew looked with widening eyes at the floating debris which had, up until a short time ago, been one of Starfleet’s highest security facilities. And nearby was…
The *Enterprise*!

Styles whirled around towards the science station. “You said there weren’t any traces…”

“There aren’t, Captain! Just have a look!”

Right, you didn’t have to tell this Lawrence a second time. With large, angry steps he closed the distance to the station, almost pushing the officer out of his way, and looked at the readouts. Checking the scanners, he saw that they ran smoothly, yet they didn’t catch the other ship.

“Captain, I’ve intercepted a message from the *Enterprise*!” Li caught his attention.

“On speakers!” Styles all but barked.

He listened to the melodious female voice of the *Enterprise*’s comms officer, who said, “*Starfleet Command, this is the USS Enterprise. Given order fulfilled, Gamma 12 has been destroyed. Bringing the evacuees to safety. Enterprise out.*”

Styles felt his jaw drop and quickly closed his mouth, before he gritted out, “Li, hail them!”

The comms officer nodded. “*Excalibur to Enterprise, please come in!*”

No answer.

“Try again,” Styles all but growled, his usually-pale face flushed with anger. His gaze wandered back to the main screen.

Li sighed inwardly and repeated the hail. This time they got an answer – one that rendered the captain speechless for a moment. “*Excalibur, this is Enterprise. As you can see, we have completed our mission; there is no need for aid. However, we do appreciate your offer of help. Enterprise out.*”

Styles saw the ship’s nacelles begin to glow – the ship was about to go into warp.
Hitting the comms button on his chair’s armrest he barked, “Kirk, this is Styles! Don’t you dare go into warp now! I’m here to arrest you, and if you don’t surrender now, you certainly will never breathe fresh air again, not to mention sitting in the center chair…”

He was interrupted by a deep, calm, yet cold baritone voice that came from the speakers. “Captain Styles, this is Commander Spock, acting-captain of the USS Enterprise. I regret to inform you that Captain Kirk has been injured and is presently in Medbay. Therefore, he cannot answer whatever private joke this comment has to be. But I will pass him your greetings. Good day, Captain Styles. Enterprise out.”

In the same moment, the flagship seemed to collect itself, then leapt into warp – vanishing from the screen.

Styles stared with an open mouth at the field of debris and the empty spot the Enterprise had been only seconds before. Then he whirled around towards the science station. “What’s their course, Commander?” he snarled.

“I’m sorry, Captain, but the sensors didn’t catch anything from the Enterprise – no signature, no movement, no emissions – nothing!”

Turning around again Styles balled his hands into fists.

Escaped!

Kirk had escaped – certainly with the Augments aboard. And they had no clue to where it was off to…

“Captain, sensors have picked up two other vessels approaching – certainly the enforcement you were expecting?” the science officer interrupted Styles’ outraged musings.

“Shall I contact them, sir?” Li asked, and Styles closed his eyes in frustration.

“I don’t think that is necessary anymore!” he growled. “Standard greeting, that’s all, Lieutenant,” he ordered, and Li nodded.
With an expressionless face, the comms officer followed the order, yet inwardly he was deeply amused by Commander Spock’s clever move to protect his own captain. If anyone ever again told him that Vulcans had no sense of humor, he had the proof to dispute the assumption. This Vulcan had a sense of humor – no doubt about it!

ST***ST

Aboard the Enterprise, Uhura looked over her shoulder at her lover after she’d cut the link to the Excalibur; fighting against the wide grin that was about to break across her face. At navigation, Riley chuckled soundless. Beside him, this time at the helm, Chekov smirked enough that the edges of his mouth were about to touch his ears.

Spock’s way of interrupting and stopping Styles’ accusations had been very effectual – and funny. To call the other captain’s commands a ‘private joke’ had been a smart move, but to tell Styles politely that he, Spock, would pass greetings to Jim on his behalf was almost cheeky – something none of them would have given the Vulcan credit for.

Peeking over his shoulder, Pavel couldn’t help but chuckle as he saw the stoic, almost-bored expression of the first officer, who sat in the captain’s chair and watched the screen. For a moment, their eyes met, and Spock lifted a brow, Chekov smirked even more and winked at him – a daring thing given the large difference in their ranks. But for once, Spock understood this human reaction, and for a moment, he allowed the left edge of his mouth to wrinkle, while a satisfied spark shone in his eyes. Then the emotionless Vulcan mask fell back in place.

And Pavel Chekov knew that despite all other generalizations about Vulcans, at least this one liked challenges. And may had a sense of humor after all.

TBC…

Chapter End Notes

Yes, we all know that Spock does possess a hidden, sweet little kind of humor. Everyone who remembers Leonard Nimoy on this role and his way to ‘not-smile’ while he did smile (sort of) knows to what I refer. Spock is really a very special kind of person and I bet my last shirt that his human heritage-part has a big saying in his even bigger soft heart (and Zach does a very good job in giving this role a new twist).
Well, our friends made it, but they’re not out of danger. Far from it. And everything depends on Wesley now.

In the next chapters Bob and Kor are starting their big show of alliance. Both men are super in their own way and together they’re a kind of natural force, yet the Orion pirates are anything but stupid.

I hope you loved the new chapter and, as always, I’m dying to read your reactions to it.

I wish you all “Happy Eastern”.

Love

Yours Starflight
Chapter Notes

Hi, my dear readers!

I hope you had beautiful Easter-holidays and that you could enjoy the first breath of spring. I’m back from my vacation and even if it was still cold at sea, I relished in every calm day and could even enjoy a lot of sunshine.

Thank you so very much for all the comments concerning the last chapter. I hope the next one will be to your satisfaction too.

Have fun
Love
Yours Starflight

See the end of the chapter for more notes

Chapter 59 – Into the lion’s den

Keeping themselves outside of viewing range of the Lexington, the D’Ghor and Kor’s ships had to trust their scanners to follow the pirates and the old-fashioned Klingon vessel that carried the Romulans. They had passed Trialas and were heading towards some small planetoids now.

Bob still sat at the D’Ghor’s helm, and you wouldn’t have recognized him as a Starfleet officer if you saw him now. He wore weathered civilian clothes, had skipped shaving since the day, and his hair was in disarray. Palmer occupied the seat beside him, looking equally mussed. Wesley had decided that Palmer should accompany him because slavers would be suspicious of Sonik. There could not and would never be Vulcan customers for slaves; therefore, Sonik’s presence would have given them away – something Sonik pointed out to Wesley. Therefore, Palmer was the only senior officer of the Lexington aboard the D’Ghor. Ten Redshirts, also clad in civilian attitudes, as well as Jake Silverhawk, the Chief of Security, were the acting crew, yet there were more.

Kor was with them, together with four of his warriors. And the Klingons looked even more feral than the humans. Without their armor, their hair undone, soiled faces and hands, they appeared as though they came right off a pirating job – Kor’s intention. Whoever dared use his name for the attack against the Excalibur had to know him, and if he wanted to catch this traitor, he had to be indistinguishable from any other Klingon.
The Klingon’s dark eyes settled on the third man in the seat beside the captain – Ritek, the Rigelian. He had offered his service because he spoke not only Standard, Vulcan, and the two most prevalent Klingon dialects, but also Orion and Romulan. Understanding the latter languages was necessary if he was going to be their ticket to the market. Because as soon as they contacted the slavers, they had to play their roles perfectly – including voicing their feigned intentions in the correct tongue with the correct vernacular.

Galven had been against Ritek’s little trip. As much as they quarreled with each other, they respected and even liked one another. The Tellarit feared for his friend’s life, but Ritek could be stubborn as a mule if he wanted to do something. And in this case, he wanted to help – not only the captives but also Kirk, Khan and the others, whose freedom depended on the rescue of the admirals. He promised Galven he’d take a look all of the captives for a Tellarit among them other than the ambassador. He would free them, knowing that his friend hadn’t given up hope of finding his brother.

Even if Kor had agreed to let the militia slip away, he suggested to Galven that they leave the Borderland. But the gang had refused. The *Santo Domingo* stayed with the *Lexington* and waited for Ritek to return; only then they would exit the area.

“What a small asteroid belt,” Palmer reported, and Wesley bent over the scanners. Asteroids don’t have an atmosphere able to sustain life, yet the sensors were receiving just that – life signs. And that there were ships – warp-drives deactivated, but life support systems online. The D’Ghor’s scanners caught all of it.

“A secret station?” Wesley questioned, and Kor stepped beside him, watching the read-outs for a moment.

“It seems so,” he murmured. “Yet there is no proof. Maybe they are using shields to hide.”

Bob nodded. “This would explain why neither of us was able to find this station before now.” He programmed the sensors again. “I’ll scan the area again and let the computer calculate if the signals could be a sign of a station. And don’t forget the ships nearby. I think we found the market.” He glanced at Palmer. “How far away is our fleet?”

The lieutenant looked at his superior. “One-half parsec, sir.”

“The fleet?” Kor had echoed before he smirked. “If you want to integrate the *Lexington* into my squadron, be my guest.”
Wesley rolled his eyes and grumbled something the Klingon couldn’t understand; Kor just grinned more. Shaking his head, Bob reduced speed as the sensors scanned the area again. “There is an energy fluctuation on asteroid 15F-23-J-38,” he murmured. “It’s powerful enough to be a shield-generator. And our Romulan friend is heading this way.” He looked up at Kor. “That’s the market! I’m certain of it.”

The Klingon bared his teeth, bent over Ritek and activated a frequency. His harsh language sounded through the bridge as he directed his commanders. Then he nodded at Wesley, who also hailed his own ship; using a secure frequency. “Commander Marceaux, the dance is about to begin!” he said and heard the chuckle of his first officer.

“Understood, sir. Oh, by the way, we received a message from the Enterprise. They've completed the first part of the mission. They are on their way to the evacuee off-load point now.”

Bob sighed silently in relief, realizing instantly what Jim meant in his choice of words. He made it! Kirk had the sleeping Augments aboard and was on his way to New Vulcan.

The first part of this crazy plan had worked!

ST***ST***ST

“Thanks, Doc,” Jim smiled at M’Benga and hopped off the bio-bed reaching for his ruined shirt. He had sent McCoy with Khan to the adjacent room to check on the Augments while M’Benga treated his bruises and the burn on his back. Thanks to some hypos. Kirk discovered that they didn’t have to sting. After Geoffrey’s delicate touch, he was almost pain-free, and he felt refreshed. Slipping into a new shirt, he smiled quickly at M’Benga and was about to leave the examination room when the intercom whistled, and Spock’s voice called his name. Jim stepped up to the nearest intercom in the medbay and listened to his Vulcan friend’s report concerning Gamma 12’s destruction.

“No sign of the Excalibur?” he asked, and he could almost see Spock lifting a brow, as the first officer answered,

“She contacted us three minutes ago, sir, but I informed Captain Styles that his support isn’t necessary.” There was a second of hesitation, before he continued, “I also let him know that you were unable to respond to his jest regarding your arrest because you are in medbay. I also assured him I would give you his regards – though I am not convinced of its authenticity. I am not certain, but I believe he was irritated though I did not have the time to investigate that possibility. We are on course to New Vulcan.”
Kirk stared at the intercom as if the device could explain to him how a Vulcan developed a sense of humor; then Jim began to laugh. “Mr. Spock, it’s always a pleasure and a load off my mind when you’re in charge. You handle the most unsettling situations with logic and grace.”

“Thank you, sir. May I ask how you are?”

“M’Benga gave me some hypos and treated the burn with synthetic skin. I’m fit for duty, but first, I want to check on our… guests.”

Spock knew that Jim and Khan needed a moment to themselves after the successful rescue of the other Augments. Even if the Vulcan pretended to misunderstand feelings, he could imagine the emotional state of the former dictator. For more than two years, the enhanced man had searched for his crew, his family as he called them, and tried to recover them. To have them now, safe with him – as safe as possible anyhow – had to affect the super-human significantly. As impulsive Jim Kirk was, at the moment, he was an anchor for Khan (as he had been before). Spock was even satisfied that his captain and friend would stay with the super-human for now. It would calm down the emotional turmoil that Khan was susceptible to.

Jim had a soothing effect on anxious people. He could quickly sympathize and comfort them – a characteristic that had many advantages. Spock had been on the receiving end of Kirk’s compassion several times, and even if he would never admit it, he had found peace and strength in his T’hy’la’s behavior. Khan would be no exception because of his bond with Jim.

And there was one more thing. Kirk had escaped death by a hair's breadth again! Spock was confident that Khan’s furious outburst in the transporter room was due to this fact – anger was born from concern. Spock also had found this harder to control lately. He felt the same relief after finding Jim alive. Having his bond-mate with him now would soothe the unsettled Augment as Spock’s knowledge of Kirk’s safety calmed him. And a calm Augment was easier to handle than a riled one.

“Take your time, Captain; everything is in order.”

“Right – Kirk out,” Jim replied before he switched off the intercom and smoothed his ruined shirt. Nodding at M’Benga, who was disinfecting the bio-bed, Jim left the room and walked quietly to the central area only dimly illuminated because aboard it was still ‘night’. He took a quick look at Sulu, who still was in intensive care, and smiled as he saw his friend sleeping peacefully while the scars began to vanish. Satisfied he’d have Hikaru back in a few days, Kirk headed for the attached room that held Nien’s people.
At first, he couldn’t see anything besides the cryotubes. They were everywhere, side-by-side like sardines in a can. Then he saw Bones coming towards him, smiling. “Every one of them is all right,” he said. “All bio signals are within normal parameters for people in cryosleep.” He closed his medical tricorder and whispered after he reached Kirk, “Thank the Lord. I don’t want to think about what would happen if one of the cryotubes had failed and your sweetheart were forced to grieve another loss.”

Jim nodded and looked at the dark figure standing between two tubes. Nien had removed the red shirt and wore only the black Starfleet undershirt that seemed to melt into the black trousers. Their eyes met. Of course, Khan had heard the CMO’s words. Kirk gave him a reassuring smile before he addressed Bones. “I’m glad to hear it. Spock reported that we missed the *Excalibur* by a few seconds. He had chatted with Styles before the *Enterprise* was off. We’re on our way to New Vulcan now.”

McCoy grinned. “You made it – again!” He shook his head, chuckling. “I want to have a closer look at the contract you made with Lady Luck. It’s unbelievable how often you jump head-first into the fray and end up on top.” He clapped a hand on Jim’s shoulder. “What did Geoffrey have to say about your intimate meeting with a phaser?”

Kirk shrugged. “He treated me; that’s all.” An evil smile played suddenly around his lips. “But his treatment enlightened me, my dear friend.” As he caught Bones’ asking glance, he explained, “Hypos don’t have to hurt, you know! And I would really appreciate it if you would give me the next one as nicely as M’Benga did!”

Promptly Leonard snorted. “Don’t count on it, Jim. Your fear of hypos might be the only ace I got to remind you not to jump head-first into the nearest disaster!” He saw the mischievous spark in Kirk’s eyes and groaned, “I know, the prospect of being hypoed wouldn't stop you from doing what you think you have to do.”

“So, you also can be gentler the next time,” Kirk triumphed; he winked at McCoy and headed towards Khan, who only had one ear to the banter. Bones watched his friend wrap his arms around the Augment from behind. He turned away from them to give them some privacy, and tactfully left the room.

Jim felt how tense Nien was, and his hands moved in soothing circles over the superhuman’s taut abdomen. Laying his chin on Khan’s left shoulder, he looked down on the inhabitant of the cryotube in front of them. Beneath the icy mist that clung in crystals to the little observation window, Kirk saw a young and beautiful female with dark hair fanned out just to her shoulders. Her expression was utterly peaceful. Her delicate features looked innocent as a child’s; her appearance was more alluring, however. ‘Sleeping Beauty!’ it shot through his mind. ‘*Never has this title fit anyone so well, though unlike the fairy-tale, she’s been asleep nearly three centuries.’"
Nien had told him so much about the other Augments; Jim instantly knew who he was looking at. And he was right.

“This is Katie,” Nien murmured before he gestured towards the next cryotube. “Otto is in that one. Dr. McCoy assures me that both are in good health – just like Pablo, Rodriguez, Chang, Paolo, Janine, and Joaquin.” He took a deep breath. “I love all of them – every single person that found shelter on your ship. They are all my brothers and sisters, dear to me as no one else could be, except for you. But…” He was for loss at words, but Jim knew what Khan wanted to say.

“But those – the one's you named. They hold a special place in your heart. A place no one else can go,” he voiced this little secret gently.

Khan laid his head against Jim’s temple. “You are right. They are special to me. Very special. But there is only one who is in this 'place in my heart’, as you say.” He turned in Jim’s embrace and snaked his arms around the younger man. “You!” He took another deep breath, coming to the topic that burned on his tongue since they left Gamma 12. “Time stopped as I saw you throw yourself in the path of the phaser’s blast – when I felt you fall against me.” He cupped one of Jim’s cheeks with a long slender hand. “I must repeat what Dr. McCoy and I referred to in the transporter room. You promised me you would be more careful, yet…”

“Nien, you said the world seemed to stop for you at that moment,” Kirk interrupted him softly and waited until the Augment nodded slowly. Only then did he continue, “The same happened to me when Finnegan aimed at your chest, phaser set to ‘kill’. Time stopped, the world around me vanished. The only thing I could hear was my heart pounding. And I felt only one thing – fear. Deep all-consuming fear of losing you. You told me once that your life would be nothing more than a numb existence without me. I know what you mean by that because your death would leave me – empty. A shell until death which would probably come sooner without you. That’s why I threw myself at you. I knew that shot could hit me. You think I was about to sacrifice myself for you? I was, but not for the reason you think. I did it out of selfishness because I know I couldn’t handle your death. Love does, I suppose – I mean I’m learning. Love is selfish in a way.” He smiled gently. “Anyway, I've lost count how often you put yourself between me and something dangerous, bad, whatever. And I’m sure it's for the same reason.”

Khan lowered his head and bit his lips. It was uncertainty, Jim had rarely seen in his lover. For a long moment the super-human didn’t reply, then he lifted his gaze again and nodded slowly. “I understand,” he said quietly. “It is something we both have to do – to act when the other one is at risk. It’s what makes us leaders – taking responsibility for others to the very last breath.” He chuckled ruefully. “Joaquin once shouted at me that it was selfish of me to risk my life as I came to his aid after an earthquake. He accused me of being mad to give my life for him and letting our people down, because they needed me, too.” He snorted. “I was angry at that time; angry with a fourteen year old boy who didn’t care who I was and only let off some steam because he feared for me. Yet he spoke with wisdom – a wisdom I only begin to grasp now. Love is selfish, you are right, but without it we
wouldn’t do the half of what we are ready to do for those we hold most dear.”

Jim pursed his lips. “And so we’re back at the beginning. We both will not stop from protecting each other, and we will face anything. And afterwards we’ll be angry about it. Though I would appreciate it if you wouldn’t shout at me in front of my officers the next time I have to hurl your ass out of danger.” He glared pointing at Khan. “Right, Scotty is my friend just like Bones and Spock, and Pavel…”

“I apologize for my behavior in the transporter room, James,” the super-human cut in very seriously. “Even if chastising you was called for, I should have controlled myself until we were in private. It is not my intention to undermine your authority, or to embarrass you in front of your officers. My horses bolted off, as we say in India, and for this I am sorry.”

Grimacing Kirk cocked his head. “The horses bolted off – nice idiom. In your case it was a herd.”

Khan didn’t reply this time and only looked with a mixture of calm innocence and slight amusement at him. Jim rolled his eyes. “Right, forget it.” He chuckled again. “At least Scotty knows about us now – and Pavel. Heavens, I think we gave the kid a little heart attack.”

Nien began to smile. “Young Chekov is far smarter as you give him credit for, Jim. He is not only highly intelligent, but he also has the heart in the right place. And, I don’t think we could have masked our relationship in front of your other friends much longer. Everyone can see how you ogle me, even on the bridge, and…”

“I don’t ogle!” Jim protested and this time, Khan had to laugh.

“So, gazing and batong your eyelashes at me isn’t ogling?” He smirked. “But it’s all right. I caught myself several times doing the same.” He rested his forehead against Kirk’s; their eyes locked and they seemed to drown in the other one’s love and warmth that shone there. For a long moment, both were silent, and the mood shifted from playfulness to gentle seriousness before Nien murmured, “I never believed in kismet, yet it can only be fate that brought us two together. I love you with everything I am. And now, with you and my people here – near me again – I can taste a piece of happiness. Genuine and real happiness.” His eyes became damp; gratefulness and redemption mirrored in his ocean-colored depths. “I have them back,” he whispered barely under his breath.

Finally, he was reunited with his people. Finally, they were safe! Finally, he could feel their presence in his mind, faintly – more a shadow than anything else, but he heard the familiar whisper of their souls again. He didn’t have to fear for their lives anymore. Yes, they still had to reach New Vulcan where they really would be safe, yet the next three days offered no problems like they had already
faced. No one could locate the Enterprise; no one knew where she was going. Of course, there was still the chance that Section 31 would make the right conclusions, but Old Spock was watching Luengo from afar and would warn Jim and the others if Section 31 was up to something. The chance that the Enterprise would reach New Vulcan was high, and Khan allowed himself to relax for the first time since he learned of his people’s whereabouts.

And for all this he had to thank Jim Kirk – the young captain who had risked everything to help him and who would have to pay the price for it too. Even if the other admirals and the surviving diplomats could be recovered, Nien knew that Jim would face court martial, which could strip him off his rank and his command. And yet this crazy, glorious boy-captain had supported him. There were no words to describe what Khan was feeling now.

“I don’t know how to thank you for what you have done for my family and me,” he whispered. “I’m no dreamer. I know that your career will end as soon as we reach New Vulcan, and the authorities get a hold of you. You’re going to lose everything you worked so hard for, yet you didn’t hesitate to throw this all away for me.” He moistened his lips. “I know, I should have stopped you, but I couldn’t. Accepting your help was certainly the most selfish thing I ever did because I knew where it would lead for you, yet I found myself unable to turn down your offer. You were the only hope of survival for my people, and therefore, I had to accept your sacrifice.” He tightened his hold around Jim’s frame. “You have no idea how grateful I am.”

Jim gulped; his throat had tightened during the little speech. Letting one hand wander over Nien’s slender back upwards to the Augment’s dark hair, he tenderly combed through the midnight-colored strands, while he replied, “This shouldn’t be on your conscience, Nien. There is no need for it. I always do what I think is right, and if this means to go against the so-called authorities – Section 31 in this case – then I’ll do it. Don’t think I helped you recover your people only because we are bonded – together. I would have done it anyway because it’s the right thing to do!

“And don’t think about me ending my career. I told you aboard the space station as the Klingon ship fired at us – given the choice of living in space or staying with you I would choose you – I still would choose you! Yes, I love my ship, and I love to travel through space, but that’s not all there is to life. As beautiful as the Enterprise is, she is ‘only’ a ship – strong, mighty, a shining grey lady in the never ending night of space. She is made of steel. She offers me shelter and a home, but she is lifeless. The life comes with her crew – life comes with you, Nien!” He moved his head slowly and gave his bond-mate a soft kiss, before he added, “Looking back at the past weeks I wouldn’t change one detail. Not one single thing.” He pursed his lips and mischief began to shimmer in his eyes. “Well, maybe I would try to prevent the bacon from being burned in the pan back in our little cabin, or to save the red wine we spilled on the floor, but…”

Khan laughed quietly and pulled him into a strong embrace, knowing that Jim tried to change the melancholy mood into something more cheerfully. “You are impossible, James!” he chuckled and sighed in contentment as Kirk tightened his hold on him.
For a long moment, both remained like this – locked in each other’s arms and relishing in the proximity, then they relaxed. Jim rather felt than heard Khan’s deep sigh, telling him more than anything else. Happiness didn’t need words.

“It’s starting,” Barnett murmured, as he heard the rising activity from afar. Even though he and the others were held in an area that seemed to be beneath the main rooms, the noises were apparent. And all captives knew what that meant: The slave market would start soon.

Batari Whitman and Ania Morganth looked at each other; dread filled them despite the brave mask they had put on these last days. Both women had been only threatened, their bruises healed, yet they were very aware of the fact that this wasn’t an act of humanity but calculation. Healthy slaves earned more money; that was all.

One cell beside them, Sarek only lifted a brow while Sokal’s hands twitched. The ambassador couldn’t blame the younger man for this slip of control. They both knew what lay ahead for them and that they were going to face mental torture – a prospect that even filled a Vulcan with anxiety. Yes, there was still the possibility that both of them could stop their heartbeat and choose suicide, yet Sarek wasn’t ready to give up. Ending life was the very last choice he would make – there must be another.

After Amanda’s death he had thought that there was nothing worth living for, then he had realized that despite Spock’s chosen way – joining Starfleet, his son would need him. Of course Spock would deny such a thing, yet Sarek was foremost a father and therefore knew his son far too well. Yes, the ambassador was aware of the fact that his son likely received the message of his supposed death and it distressed him that Spock was facing another loss, but on the other hand there was still a small link between them. Maybe his son sensed that he wasn’t dead as the official statement surely said, and would come to his and the others rescue.

Hope – a very illogical hope, as Sarek had to admit, but if there was one thing he had learned in the last two years concerning his son and the far too young and impulsive, headstrong and genuine captain of the Enterprise, then it was that those two weren’t easily fooled and didn’t shrink back from challenge if there was something that had to be done. If Spock sensed his father’s presence in his mind, he would inform his captain, and then Sarek would bet ‘his last shirt’ that the Enterprise would come to set things right. If Kirk saw the tiniest chance to save some of the delegation, he would do it – hopefully without informing Starfleet Command. Whoever was responsible for the betrayal the admirals and the diplomats had fallen prey to, belonged to Command. And this one would not like to hear that members of the delegation could be still alive. This much Sarek had concluded from the words their captors had exchanged two nights ago.
His gaze wandered to Sokal whose face was the expressionless mask Vulcans were famous for, but Sarek knew that deep inside his assistant was as worried as they all were. The time in which help could arrive was counting down. If Sarek had been human, he would admit that the tightening of his stomach hadn’t anything to do with being hungry.

In another cell, Gav was pacing, grousing and grumbling under his breath. The Andorian ambassador watched him, but it was evident that he wasn’t about to give up hope.

And so was the feeling among the admirals; Barnett and Nogura clung to hope with stubbornness. Maybe they could negotiate with the Romulans, but the officers knew that option was likely nonexistent. They were declared dead by now, this much was certain, and so the Romulans had no reason to fear any consequences from the Federation if they got some admirals in their hands and pressed them for information. Rather the opposite. The Romulans must be happy to have such an opportunity.

All of sudden the door at the end of the hallways opened and heavy steps came nearer. The dim light revealed D’nyrrs in the company of four other Orions and five Vulcanoids wearing civilian clothes. Their posture and their arrogance gave them away – Romulan officers. And as their glances fell on the four Starfleet officers that D’nyrrs pointed to, Barnett knew that he was looking death in the face.

Ritek’s voice sounded harsh and strange while he talked in the Orion tongue to the man who had hailed them just a minute ago. Wesley didn’t speak this language, yet he tried to understand what was going on by listening to the Rigelian’s tones – impossible because Orion accentuated syllables differently than English or Federation Standard. The commodore’s gaze flickered back to the main screen that showed a giant asteroid among smaller ones – and around it four spacecraft. The old Klingon ship they followed was there, too, as well as vessels of different origins yet all heavily armed as the scanners had told them.

Kor stood between Wesley and Palmer, both long arms crossed over his broad chest. That he didn’t like the situation was plain to see on his tanned face decorated with a sneer that bared his teeth.

Ritek looked over his shoulder at Wesley and nodded with a wink, contrasting with his sudden roars and shouts. All on the small bridge stared wide-eyed at him as he growled and snarled at his at the man beside him, listened again and hissed something. Then his voice returned to normal and sounded almost kindly all of sudden. After several more words he cut off the transmission and turned around with a very satisfied expression on his face.
“Well?” Bob demanded as the Regulian made no move to speak.

Chuckling Ritek only said, “We have permission to beam down. They’ll lift their shields in the next four minutes, so be ready to go to the transporter room.”

Kor frowned deeply. “And what is this outburst about?” he asked; astonished.

Again Ritek grinned. “How should I say it? They were irritated that they didn’t know about Franklyn Lancaster’s arrival.” He nodded at a confused Wesley.

“I'm who?” Bob asked, but it was Palmer, who answered him,

“Franklyn Lancaster, a successful ‘businessman’ in the Borderland and several other areas that have a crime problem. He deals in anything you can think of – from stolen uniforms to torpedoes. Intel assumes that he also has a hand in slavery, so his appearance here is logical.”

“And I should be this guy?” Wesley was thunderstruck.

“Knew, you would have it in you,” Kor grumbled.

Ritek began to snicker. “I once saw a picture of him on the news. He does resemble you a little bit. Just try to be an arrogant, icy bastard for once and the guys down there will be fooled for sure.”

Palmer hid a grin as he saw the baffled expression of his superior. Then he caught Kor’s wide smirk and quickly turned around; otherwise, he would have betrayed his amusement.

Wesley glared at the wide smiling Ritek. “In other words, you gave us the identity of an illegal dealer who has taken interest in the offered captives and…”

“And after I convinced them that you’ll be angry and will talk with some influential people at the Syndicate if you don’t get the permission for the transporter, they agreed. It seems the guy who is responsible for this market fears the Syndicate – maybe he’s dealing without their knowledge. As far as I’m informed, the Syndicate gets a kind of tax from every deal that is made within the Borderland and can become quite irritated if they discover a business that isn't cutting them in.” He leaned back
in his chair. “I think our friends down there are afraid that we are about to spill their little secret market to the Syndicate. Well, shall we inform the Syndicate afterwards?”

Bob was tempted to close his eyes and to groan. Civilians! Sometimes he asked himself if they all were crazy.

Kor snorted. “When we’re done with them, the Syndicate will not find anyone to punish,” he growled, bent over Ritek, and opened a frequency to contact his ships.

Afterwards, Wesley did the same said one sentence, “Marceaux, let the dance begin!”

**ST***ST***ST**

Mercilessly, the sun beat down on New ShiKhar and drove even the most heat-adapted Vulcans into buildings and shadows which offered some shelter. The construction work at the city’s edge had stopped, and a lot of energy was needed to cool the computer centers and the hospital rooms. But there were enough inhabitants who endured the searing heat and walked the streets because they had duties which didn’t allow for delay. Yet ‘Selek’ was surprised as one of his secretaries, Stymm, called for his attention and told him about a rare visitor. Yes, Vulcans were used to heat, but age did demand a toll, and his visitor was old in every sense of the word.

Rising, Spock lifted his hand in the Vulcan greeting as his visitor stepped into his office and lowered his head in deep respect. “T’Pau, thy visit honors me,” he used the traditional words towards his clan’s Old Mother and uncrowned matriarch of Vulcan and New Vulcan now.

“Thy greetings are welcome, Grandson,” T’Pau replied and walked towards his desk. Her hair was still black, despite her age, but the deep wrinkles in her face betrayed her many years. The long robe rustled softly as she sat down on the offered chair. She leaned a long stick, the symbol of her status, against the desk. Behind her, two of her assistants greeted ‘Selek’, too, before they closed the doors and remained outside.

Offering the old Vulcaness a cool tea, Spock waited patiently for her to refer to the reason for her appearance, even if he already knew why she was here. He was right.

“I read your message and talked to some members of the High Council,” T’Pau began without any prologue. “I’m familiar with Earth history and therefore, know several things about these so-called ‘Augments’.” Her dark eyes bore into his. “Do you think it wise to offer them shelter?” Before
Spock could reply something, she lifted a hand to stop him and added, “I do understand that there are only a few left and that they are in distress, but you cannot deny that there is a certain risk in welcoming them in our colony.”

Spock chose his next words with absolute care; knowing that he had to win his grandmother – who was only a few years older than himself now – if the Augments should get a chance at asylum on New Vulcan. “The Augments bear only a little risk for us compared to what will happen to the whole Federation and so us as well, should the recent Interim Chief of Command of Starfleet succeed in his plan. He needs the Augments, and especially their leader, for tools.”

That got T’Pau’s interest. Lifting a brow, she watched the face of her grandson, who was as weathered as she – a very interesting yet strange experience every time they met. “You gave evidence in your message that something is ‘amiss’ within Starfleet Command, and that not only the Augment leader but also your younger counterpart and James Kirk are in danger. Now you talk about a ‘great risk’ for the whole Federation. Explain!”

The High Minister took a deep breath – a human gesture he allowed himself, even in T’Pau’s presence. He wasn’t the uncertain young man from decades ago anymore. He had made his inner peace with his two halves – one thing that didn’t give him trouble in this new timeline.

“Grandmother,” he addressed her, choosing this private title with the full intent of showing her that the next minutes should remain private. “I have specific information that Admiral Luengo plans a holocaust of the Klingon Empire using biological weapons – weapons he needs augmented cells for. He has already taken them from Khan, the Augment leader.” He watched with fascination as T’Pau’s face paled – the strongest reaction he ever saw from her. “And he needs more of them. But this is not all. James Kirk found evidence that members of the delegation that were declared dead are still alive. I believe it is more than evidence – it is proof.”

The old Vulcaness tensed. “Sarek?” she asked, feeling a stirring deep in her soul as the mother in her began to reach for something she thought she had lost over the years – hope.

Spock nodded. “Vulcan blood was found in an evacuation shuttle, but no bodies. Sarek and his assistant Sokal are still alive. There would be no reason to move bodies, and if they have been taken alive, it is for a reason.”

For a moment, T’Pau closed her eyes and her face relaxed in relief that washed over her conscious; then she was in control again. “Knowing you, this is not all you have to reveal,” she said. ‘Selek’ felt a hint of amusement.
“You are correct,” he replied. “The attack on the Excalibur was not a betrayal by the Klingons, but was initiated by Section 31 – and all indications point to Luengo as the new leader of Section 31.”

For a Vulcan, T’Pau showed much shock on her face. Her eyes widened, and she took a sharp breath and her posture stiffened. “This would mean that Luengo murdered the delegation and the admirals.” She bent forwards slightly. “Do you have any proof, Grandson?” she asked; her voice was not more than a whisper.

Spock nodded and turned the screen on his desk around. “I have the records from the Enterprise and the Excalibur. I have saved copies from Luengo’s private terminal and much more. Please, convince yourself.” He opened the files and T’Pau began to watch and listen…

ST***ST***ST

When Spock’s affirmation that the mission had been completed reached Headquarters, it elicited a few very different reactions. Luengo was in a meeting with Norton, Cartwright, and four Council members when the message reached his terminal. He didn’t even feel his jaw drop as he read the transmission – a transmission the Vulcan shouldn’t have made at all. He, Kirk and the others should be stuck in the Excalibur’s brig by now, but this was not the case. Obviously, Styles hadn’t been able to arrest Kirk and his sidekicks – or retrieve the Augment.

Norton, who sat across the table, bit his lips in anger as he too made the right conclusion. The Enterprise’s command team, the other senior officers, and the genetically enhanced creature were still free, and…

“What does that mean, Gamma 12 was destroyed?” Alan Hudson, a middle-aged Terran from one of the Earth colonies, asked thunderstruck. His colleagues, who were also members of the Council, looked expectantly at Luengo, too.

José felt caught. The destruction of some high-security facilities hadn’t been balloted with the Council, and Luengo knew how sensitively these politicians reacted to military operations of greater consequences without being consulted first.

Taking a deep breath, he answered, “According to the newest intelligence developments, we have reason to suspect the Klingons will attack soon. They will use a weakened Starfleet to gain more Federation territory. Gamma 12 along with three other high-security facilities were in the area which could be captured by our enemies next. Therefore, I ordered its evacuation and destruction – an unpleasant but necessary step.”
“And when did you plan to inform us about this ‘step’, Admiral?” Hudson asked. “You just blew millions of tax credits into space – a cost I don’t dare calculate. At least, you could have informed us before…”

“There was no time, as you are certainly aware,” Luengo interrupted him. “We expect the attack in the next days and…”

“Days? This hasn’t been reported to us, either.”

Both men stared at each other, before Luengo slowly and icily replied, “The President was informed of a possible strike. He decided it was not important enough to make a broadcast of the current situation only to stroke the ego of some politicians!”

Hudson went rigid. “The Council is the government of the Federation, Admiral, and…”

“And consent of delegates of the Federation’s members – politicians, who are no strategically trained soldiers and therefore not able to act quickly or correctly to protect the Federation. This part is up to Starfleet – to me in this case! And I will not waste any more time with this discussion. The high-security facilities were destroyed so that they would not fall into enemy’s hand which could have led to a catastrophe! The inhabitants are evacuated and with them the most sensitive and important materials. Facilities, as expensive as they are to build, can be replaced, but material from tests, developments and science can be a weapon in the enemy’s hand. You’d agree with me that the safety of the Federation is our highest concern, not money – not that the war already consumed millions of credits, as we all know.” He fixed Hudson for a second before addressing the other admirals. “Okay, Ladies and Gentlemen, let us proceed with the agenda!”

Alan Hudson pressed his lips into a thin line. This wasn’t over for him – far from it. Luengo had overstepped his bounds, and the man knew it, for God’s sake! The admiral knew that he had no right to make such a decision, yet he bent the rules. And, as Hudson admitted, he wasn’t convinced that the president was informed about the destruction of those facilities. He would ask him at the next opportunity – hopefully soon.

ST***ST***ST

Bob looked around and had to gather every bit of his usually tight control not to show the disgust that shook him the moment the transporter beam let him free. The station in which the market would take place was, to say the least, the perfect mixture of chaos, bad hygiene, overcrowding, bad air,
and suffering. His gaze instantly fell on some captives being pushed into a hallway at the end of the large room he had been beamed into. Many of them were unable to move. Voices sounded from everywhere, and the atmosphere reeked with the smell of dirt, sweat, cheap perfume and alcohol.

Beside him, Palmer materialized together with Jake Silverhawk and two Redshirts, Kor, and four Klingon warriors who also belonged to those who ‘suffered’ the appearances of the gene-experiments a century ago.

They were expected by none other than else than D’nyrrs and four large Orions armed to the teeth – his bodyguards, no doubt about it.

“Franklyn Lancaster?” the pirate asked, and Bob stared icily at him.

“Do you greet all of your potential customers as you did my ship a minute ago?” he asked coolly.

D’nyrrs pursed his lips – the Orion way of showing embarrassment. “I have to apologize for my security officer, Mr. Lancaster. The man got strict orders concerning this… market. He was overzealous. It’s an honor to bid you welcome. For some time we tried to gain your interest but you always refused. We were a little bit surprised by your sudden arrival.”

Wesley lifted both brows and put on an arrogant face. “I’m not used to asking for permission to contact potential business partners, Mister…?”

“D’nyrrs, sir, at your service!” The Orion even bowed. It would have looked comical if the situation weren’t so somber.

D’nrrys! Of course Wesley had heard about him and he knew that there was a big bounty on the man’s head. All the better if this particular individual were arrested – or eliminated otherwise at the end of the mission. Yet Bob had to be careful. If D’nyrrs tried to win Lancaster as a customer, the Terran dealer had to know about the Orion.

He drawled, “I’m aware of your name, but I get tongue-tied trying to say it.” Bob casually flipped a hand. “Now I know how it is pronounced, Mr. Dnirs, and…”

“D’nyrrs,” the slaver corrected but closed his mouth as ‘Lancaster’ gave him a hard glare.
“Well, Mr. Dnirrrrs,” Bob accentuated the name throatily, “I’m interested in some people who are professional looking – able to take on hospitality tasks.”

The Orion began to beam. “I’m happy to hear this, sir. We have excellent goods to sell this time – including two female beauties and…”

“Do I look like an ordinary slaver, Dnaarrr?” Wesley interrupted him, pronouncing the name incorrectly on purpose. “I could buy beauties around the galaxy without risking the authorities’ intervention. Most women would come to me by their own free will, won’t they?” he asked Palmer over his shoulder, who struggled to keep a straight face.

“Sure thing, boss!” he nodded and bit his lips to prevent the smirk that threatened to betray his amusement as he caught the baffled gaze of his superior.

Kor rolled his eyes inwardly. ‘Boss’ – what a cliché! Humans! Sometimes they were so simple-minded! Clearing his throat, he stepped beside Wesley. “You speak of ‘us’. To whom do you refer?” he asked and found himself in the center of D’nyrrs’ interest.

“And you are…?” the Orion asked, irritated that his talk with ‘Lancaster’ was interrupted.

“Ibrahim – my partner in this particular business!” Wesley answered instead of Kor. “And who is your partner you apparently refer to when you say ‘us’? I heard rumors of you working together with a Klingon and…”

“Klokh is my partner, yes. It’s sometimes advantageous to have a Klingon on your side.”

Wesley smiled without any humor. “I know what you mean,” he said; watching D’nyrrs, as the Orion looked Kor up and down once more. To his relief, the slaver didn’t seem to realize that it wasn’t a human he faced.

“Which slaves are you interested in?” the Orion addressed the Klingon lord, who stayed calm. “There is rumor that you caught a Vulcan,” he replied. “I’ve need of him!”

“Is that so?” D’nyrrs shook his head. “Then I’m sorry to tell you that the two Vulcans unavailable.”
“Really?” Wesley cut in. “So you run a secret market within the secret market? You sell the most illicit goods before you offer the rest?” He shook his head. “My friend, this is against the rule – a rule of the Syndicate. I may have to report you.”

D’nyrrs face became dark – not with shame, but with anger. “Mr. Lancaster, as much as I appreciate counting you among my customers…”

“You don’t yet, Dneers. You aren’t able to offer what you promised – interesting slaves. Well, I’m beginning to regret making this trip at all and…”

The Orion quickly made a step into his direction. “There are a few items more attractive to a buyer than the two Vulcans or the two female beauties. A Tellarit, an Andorian, a…”

“Interesting, but I also need some experienced males who’ll be able to serve my house,” Wesley said, knowing now that at least some of the ambassadors had survived – and, hopefully, among them the Vice-president and maybe the Betazoid woman as well.

D’nyrrs nodded eagerly. “No problem, sir, I have about fifty slaves, among them some men who certainly will be to your satisfaction.”

Fifty slaves – fifty captives! Good God, Wesley had calculated recovering a dozen survivors of the delegation, not four times that amount. However, he knew he couldn’t leave those poor souls to their fate. He had to recover them, too – as soon as the Lexington and the other ships arrived, of course. Until then he had to learn the station’s layout and the location of the captives.

“I see we understand each other,” he drawled and nodded down the hallway. “Just let me have a look at them.”

“The auction has already begun,” D’nyrrs said, “but I assure you that you’ll find some slaves to your liking. Please follow me.” He turned around and walked away, his four bodyguards at his side.

Wesley and Kor exchanged a quick gaze; both grim, both hiding their loathing, yet Bob felt anxiety. If Sarek and the other Vulcan – maybe his assistant – were already sold, then the Romulans had them in their power and likely the admirals, too. And this also meant that they were out of reach for them as soon as the Romulans beamed the captives to their ship.
Kor seemed to think the same, because he fell behind the little group as they headed down the hallway, took his communicator and contacted the D’Ghor, murmuring some orders and listening to the answers, before he snapped the device close and closed the distance to Wesley again. “No one has been beamed on or off the other ship,” he whispered under his breath to the commodore. “That means your admirals and the Vulcans must be down on this station.”

Wesley allowed himself a sigh of relief, before he murmured, “We have to find them, and take action. If everything is about to go to hell, we need to act before our ships are here.” He glanced at Kor. “This could be a suicide mission. Are you ready for this?”

“Are you trying to offend? I have a traitor to catch!” Kor grumbled and bared his teeth in a grin. He loved challenges!

“How could this happen?!” Luengo’s face was dark, revealing his barely controlled fury. On the screen of his office terminal, a very contrite Styles looked back at him.

“I am sorry, Admiral, but the Enterprise had already completed the evacuation and destroyed Gamma 12 by the time we arrived. I…”

“The Enterprise was not operating at full capacity according to Commodore Wesley’s last report! Hell, he had to rendezvous with them to transfer parts before Kirk could continue. His engineer may be a good technician, but he’s no wizard! The Enterprise couldn’t fly full speed, but you were still too late. Did you stop for shore leave before you traveled to Gamma 12?” The last sentence was accompanied by a sneer, and Styles’ face flushed.

“Sir, I can assure you that we traveled at maximum speed – as fast as we could after the battle in the Borderland – warp six. You told me the Enterprise could only get up to warp three. We should’ve gotten there first. I don’t know what tricks Kirk pulled out of his sleeve. The fact is that the Enterprise is on her way to Earth – with the evacuees.”

“The question is how many evacuees?” José growled. “I doubt that Kirk blew the station into pieces with the Augments still in it. Sure as hell he has them aboard.” He leaned backward in his chair. “Are you confident that he’s headed towards Earth? He may be nothing more than a reckless farmboy, but I don’t take him to be a complete fool. He has to know what awaits him if he nears Headquarters. There is no way he’d risk arrest or captivity of his Augment friend.”
The young captain on the screen took a deep breath. “Sir, we weren’t able to ascertain the Enterprise’s exact heading, in fact, we were unable to locate her until we had a visual. Our sensors didn’t read her.”

“Which is no miracle, because she has this prototype of sensor disturbing device linked to her systems. There is no way to find her now.” He balled one hand into a fist. “Couldn’t you have tried to stop her?”

Shaking his head, Styles replied, “She went to warp before I could take action.”

Luengo gritted his teeth. “Did you speak with Kirk?”

Styles snorted. “I hailed the Enterprise, thinking I would speak with Kirk, but his Vulcan officer was on the line. Told me that he didn’t need our ‘support’ and when I informed him that I was there to arrest Kirk he told me off – said that Kirk was in med-bay and couldn’t respond to my ‘joke’, as he called it.” He shook his head. “I swear this guy was pulling my leg!”

This time, the admiral frowned. “Kirk was in the medbay? So he was injured while evacuating Gamma 12?” He pursed his lips and looked at the wall without really seeing it. “This is the last bit of evidence I needed. Finnegan was instructed to stop Kirk if he should try to recover the cryotubes with the Augments – my backup plan if you failed.” He snorted. “I accounted for trouble. Kirk is smart, I have to give him that, but I hoped that elite security team would be enough to get him, but Finnegan failed, too. A shame! I trusted in his abilities – as I did in yours, Captain!” he addressed Styles again.

Lawrence took a deep breath, as an idea struck him. “Sir, the message Spock sent said that they would bring the evacuees to ‘safety’. Vulcans cannot lie, but maybe he avoided the truth by choosing his words. What if the Enterprise doesn’t head towards Earth but to another destination – perhaps to bring the Augments to another planet where they'd be ‘safe’?”

Luengo stared at him. “There is some truth to your considerations,” he murmured. “Kirk would be crazy to return to Earth, but where can he go? No member of the Federation would offer shelter to a mutinying Starfleet captain who has dangerous super-humans and a terrorist onboard.”

Styles nodded. “You are right, sir, yet Kirk must have a plan. The question is, what is it?”
“This is, indeed, the question,” the admiral nodded. “Try to intercept all transmissions from the *Enterprise*. Kirk has to contact this someone. I know he will use secure frequencies, but even then we might get a clue. Inform me when you find something. Luengo out!” He cut off the connection before he cursed vehemently. How often would he be getting run-around by this damn Iowa boy? How often would Kirk be a step ahead? He should’ve been ages ago? How was it possible that he outdid the well-chosen people who were instructed to capture him at any cost – him, and this blasted, enhanced creature Kirk seemed to call a friend now? Maybe the latter was the answer. Khan was brilliant, and there was no doubt that he supported Kirk. Of course, he did, after all, he wanted to free his crew – something that apparently just happened. Together those two could – and already had – managed a lot.

But they had no place to go to – no place to hide. There wasn’t a place anywhere in the whole galaxy Section 31 wouldn’t find and catch them! And no Federation member would help them. So, what was Kirk up now? Knowing the cowboy, he had some plans in his crazy head, but what? Where was the *Enterprise* going in now?

“Dammit, if I had known that she was able to travel so quickly, I would have sent other ships to intercept her! And Wesley told me to…” He stopped.

Wesley!

He was the last who had spoken with Kirk in person!

Kirk was Wesley’s protégée and…

Why did this leave a bad taste in his mouth?

What if the commodore knew about Kirk’s intentions and covered for him? Wesley had known about the SDD and had kept quiet until it was working aboard the *Enterprise*! Wesley had been on the *Enterprise* after the Battle for Aldebaran – maybe he knew about Khan!

‘A conspiracy!’ Luengo thought. ‘What if *they're conspireing together against Command – against me? What if…’ He stopped his own thoughts, bent forwards hastily, and activated the intercom. “Lieutenant!” he barked at his secretary. “Hail the *Lexington*. I want to talk with Commodore Wesley in person now!”

“Aye, sir!” came the reply and then Luengo couldn’t do anything other than wait. Several minutes
later his secretary reported, “Admiral, the _Lexington_ isn't answering. She is too far out of range for a direct transmission.”

Feeling his blood pressure increasing, José stayed as controlled as possible, “Then send a subspace transmission. Wesley will report to me personally regarding his rendezvous with the _Enterprise_ and her status as well as his meeting with Kirk. Make it a priority one!”

If his secretary was confused about a simple priority one report, she didn’t show it. She only affirmed his order and cut the link.

Luengo took a deep breath to calm himself, but this time his anger got the better of him. Rising he went to the large sideboard and poured himself a brandy, cursing Kirk to hell.

_**ST***ST***ST*

The auction-room was large – and loud. There were more than forty customers and their companions who talked and sometimes shouted at each other or the auctioneer whenever he presented a so-called slave. Bob watched two teenagers being sold to a creature with far more tentacles he could to count, saw a family torn apart and sold to different ‘masters’, and he saw captives forced to work for the slavers – never looking up – just miserable – reduced to barely living beings – broken and despained.

It demanded all of Wesley’s self-control to remain uncaring on the outside; inwardly his blood boiled.

Kor stayed beside him and one quick look showed Wesley that the Klingon was as disgusted as he was. Klingons may be brutal in battle, but they lived up to a strict code of honor. What was happening here, went against anything a Klingon could tolerate. In this case, the Federation and the Klingons had the same opinion.

“Sir,” Palmer whispered, “I got Romulan and Vulcan life signs.” He looked shortly at his tricorder he hid in a bag cinched to his waist. “Fifty-five meters from here to our right. They’re moving towards a corridor – likely to be beamed up. There are also six human bio signals and four Orions.”

Bob nodded and silenced Palmer. “We have to act – now! How long before our ships arrive?”

The lieutenant looked at his chronometer. “Twenty minutes at best, sir.”
Wesley bit his lips. Their allied fleet could arrive too late, but he had no other choice. If they didn’t interfere now the admirals and the two Vulcans would be lost.

Determined he turned towards his Klingon ally, who was still beside him. “Kor, we have to…” He stopped as he realized that the fleet commander wasn’t listening but was glaring daggers at something or someone to his right. Wesley followed his gaze and saw other Klingons near the selling stage. One of them was a tall man with long, filthy hair, typical Klingon ridges on his forehead. He wore an older version of the Klingon commander uniform and stood proudly among the others, long arms folded in front of his chest.

“Klokh?” Wesley mused; Kor growled his affirmation deep in his throat.

“I never met him, but I recognize his visage from holophotos. He was forced out of the Imperial Fleet because of dishonor and failure. And this creature dared to use my name and my reputation to break the Empire’s given word. I’ll have his head before the next hour passes. I swear this on the honor of my ancestors!”

The commodore took this threat very seriously. When a Klingon made a vow on the behalf of his ancestors, then he had to fulfill it, or he wouldn’t get his place in the Black Fleet after death. This much Wesley knew.

“Right,” he muttered. “As soon as we have freed the captives, he’s all yours!”

Kor turned his head sharply towards him. “I don’t need your permission, Wesley!” he hissed. For a moment, both men stared at each other before the fleet commander continued harshly, “You want to take action now? Even before our ships are here? Well, let’s go!” He stepped forward the moment a young woman was brought to the stage – a real beauty with honey-blond, long hair, impossibly dark eyes, and a heart-shaped face any male would love to cradle between his hands. Kor hesitated a moment – he was not immune to beauty despite the race. His gaze wandered over her barely hidden form, hung for seconds at the creamy smooth skin that flashed through the torn clothes she wore, and he felt a certain stirring deep in him – hunger and anger.

He wasn’t someone who melted with compassion at any moment, but to think that this incredible, dashing creature would end with some loathsome master to fulfill his sexual lust woke his fury.

Then an idea struck him. They needed a distraction, and he wanted to spare this lovely female from slavery. There was a way to reach both goals.
“A Hundred Credits!” he called, pointing at the woman.

Wesley groaned as he realized that Kor was about to create a distraction he hadn’t coordinated. Then he glanced at the woman and gasped. He had never met her, but he knew her face from the holophotos he got from the delegation members. The poor thing that was about to be sold into slavery was none other than Lady Ania Morganth of the Third House of Betazed!

“One hundred and fifty!” a guy with a long beard called, and Kor upped the bid fifty Credits more, adding an insult towards the customer.

“What did you just call me?” the man shouted back.

Kor repeated with a sneer, “A pervert boy that cannot get his dick up. That lass over there needs a real man!” He looked at Wesley, who had stepped beside him. “Were those the correct terms?” he whispered, a little bit uncertain whether he chose the right words for the profanity he had intended. Federation Standard was so complicated, especially the Terran idioms!

Bob sighed. Hearing a Klingon using such language was weird. “Yeah, you got it right,” he murmured.

The man had begun to push through the crowd. “I’ll show you who the real man is, you vagabond! Have you looked in a mirror lately? You…”

Kor turned around towards Palmer. “Did you just call me a jerk?” he yelled.

The comms officer stared wide-eyed at him. “I wouldn’t…” he began quietly, but the Klingon didn’t let him finish. “I am stupid as a sack of beans? Boy, I will mop the ground with you!”

“Hey, he didn’t say anything!” another customer cut in; he received a punch from Kor that brought him to his knees. “Stay out of it!” the Klingon roared and found himself confronted with two of the man’s companions.

Within seconds, a brawl began exactly as Kor had intended. “Try to find your admirals and the Vulcans, I will give them something to do here,” he hissed to Wesley, before he and his warriors
hurled themselves into the fight.

For just a second, Bob hesitated, 'crazy Klingon!' he thought. Then he ordered, “Palmer, try to get Lady Morganth over there!” He took the bag with the tricorder from the lieutenant and continued, “She can tell you where the others are. Mr. Silverhawk, his men and I will recover our admirals!” He was off before his officer could reply.

TBC…

Chapter End Notes

Well, now we’re in the middle of Bob’s rescue-mission – and it will be a ride through hell for all of them. And that’s not all. Within the next chapter Jim realizes that he needs more than luck to reach New Vulcan – after all his enemies are anything but stupid. In the meantime Bob, Kor and the others are trying to gain victory, but they’ve to learn that the slavers and their allies are more dangerous than thought. In other words: The action will continue.

I hope you liked the last chapter and, as always, I’m curious what you’re going to say about it (*snicker*).

Have a good start into the next week,

Until later

Love

Yours Starflight
**Chapter Notes**

Hi, my dear readers!

Thank you so much for all your feedback. It never quits to amaze me how much you all are still taken with the story. Sorry, if it lasted a little bit longer until the next update, but my dear beta-readers have a lot to do with my long chapters (*smile*).

The last chapter ended in the middle of big action and so the new one will begin exactly with the same.

Have fun

Love

Yours Starflight

See the end of the chapter for more notes

---

**Chapter 60 – Breadcrumbs**

The brawl in the auction room got out of control within seconds. Everyone seemed to be against everyone else, insults and fists were thrown, fights turned dirty; the turmoil appeared to be everywhere.

Shoving people out of his way, punching, kicking and snarling, Wesley fought his way through the madness erupting around him. From all around them shouts sounded, fists flew, furniture was used as weapons. How he and the others made it out of the chaos was beyond him, but all of sudden they were in an abandoned hallway. They watched local security race towards the auction room and took off. Looking at the tricorder, he ran down the corridor, his men at his side while he reached for his communicator.

“Wesley to Ritek. Beam our men down to our coordinates!”

“Yes, sir!” the Rigelian answered. “I just have to convince the idiot in comm central again to lower the shields.”

“Hurry up!” Wesley growled, and he closed the communicator. Again he looked at the tricorder. The
read-out showed him that the Romulans and their captives had stopped – likely distracted by the noise of the fight. “Phasers!” Bob ordered and rounded a corner. “Hide them until we’re close enough so that our friends over there don’t get wary!”

They passed a crossway and turned down another corridor when they came eye to eye with four Orions, two humans – not from Earth it looked like, and the five Romulans. And between them…

Wesley stopped and rage burned in his chest as he took in the bloodied and exhausted men in front of him instantly recognizing Barnett, Nogura, Morrow and a more severely injured Komack, as well as a very pale Sarek and another Vulcan male.

One of the Romulans went for his weapon and stepped forwards. “What’s going on?” he demanded in gruffly accented but fluent Standard.

“Some of the guys back there went crazy,” Bob answered and flipped a thumb over his shoulder and closing the distance to the other group. He saw Barnett’s head snapped up as he heard his voice, and continued with a drawl, “They’re fighting about some insults – We don't need that. We're leaving!”

One of the Orions raised his voice and Wesley realized that it was one of D’nyrrs’ bodyguards. “You’re leaving already, Mr. Lancaster – because of a fight?”

“Lancaster?” one of the two humanoids asked thunderstruck. Then he gestured towards Wesley. “This guy is supposed to be Franklyn Lancaster? I know Lancaster – and this man isn’t him!”

Before anyone could react, Wesley raised his hidden phaser and shot the moment the Romulans took out their weapons. Phaser blasts raced through the air – Wesley's mens' were set to stun, the enemy, pointedly, was not. They shot with deadly energy. One of the Lexington’s Redshirts was hit, another shot almost grazed Wesley, then chaos erupted as the captives ended with their passive role and attacked their captors.

Barnett had no idea from where Bob Wesley came from – or how. All he knew was the fact that the commodore was here – that help had arrived at the very last minute. He would be damned if he were going to stand aside and watched others fight for him and his companions. With a shout of fury, he threw himself against one of the Romulans, taking him by surprise. He succeeded in making him fall. Beside him, Morrow and Nogura took action, too. So did Sokal, while Sarek tried to shield Komack using his knowledge of Ashumi to battle a dumbfounded Romulan. This was their very last chance for escape, and none of them would waste it.
The Romulans were very well trained soldiers and the four Orions and two humans could fight too, but Wesley and his companions, as well as the captives, battled with the rage of righteousness, and even the peaceful Vulcan was not immune.

With cold calculation, Sokal attacked one of the Romulans and despite his weakened condition, he was able to break his enemy’s grip and rendered him helpless with a nerve pinch. Beside him, he heard bones splitter and saw Sarek break one of the other Romulan’s arms; changing *Ashumi* into something brutal and protecting Komack like this. The hostile soldier screamed in pain but was cut off by a stun blast. Sarek turned around and ducked at the last moment as one of the Orions tried to strike him. In the next moment, a dark-skinned hand clamped around the pirate’s wrist while one arm wound around the Orion’s throat.

Barnett avoided the elbow; the green-skinned man pushed backwards to fight him off before he rammed one knee into the Orion’s lower back. The next moment, Wesley was at his side and shot the slaver directly in the chest not caring if the stun blast proved fatal at that range.

That same second, lights flickered all around – the Redshirts had arrived. Wesley and the others had the battle under control, but with the added help of Security, the fight was over quickly. The Redshirts did their job as they were trained – quick, efficient, cool, and merciless. Silverhawk fought with the last remaining Orion and overpowered him; the ancient blood of his Indian ancestors ran hot through his veins, showing the enemy exactly what he thought of them. In the meantime, Wesley tried to protect the admirals and the two Vulcans who held their ground very well, but they were at their physical limits.

Finally, the Romulans, the Orions, and the others lay unconscious on the floor – some hurt, others only knocked out by the stun blasts.

Adrenaline continued to race through Wesley as he turned towards the freed captives. Silverhawk supported Komack, who seemed ready to pass out, and Bob cursed quietly under his breath. He hadn’t thought of bringing his CMO with him.

“Admirals, Ambassador Sarek, Mr. Sokal” Bob wheezed, “are you all right?”

“Yes and no,” Richard answered. “Some of us are in urgent need of medical attention.” He straightened his posture, grimacing as the nights spent on a hard floor, the lack of nutritious food and the bruises he received during the shuttle’s crash made themselves known.

Sarek tried to control his erratic heartbeat, while he felt the threatening pressure in his side grow. The last days of deprivation, the cold in the prison and the injuries were about to demand their toll –
especially with his particular problems regarding his heart. He forced the demands of his body once more to submit to the will of his mind and took a deep breath while his gaze was fixed on the human male with the grey hair who seemed to be in his late forties or early fifties. He had seen this face before, but couldn’t put a name to it at the moment; it was unimportant. The man was a Starfleet captain and had arrived with his crew for the rescue at the last minute. For just a second, the Vulcan felt a hint of disappointment that it wasn’t Spock – or Kirk – who had shown up, yet Sarek was confident that the recovery mission was initiated by the pair.

Then the question of the man’s identity was answered as Morrow panted, “Sweet Lord, Wesley, I have no clue how you found us, but you came right on time.”

“Yeah, I had to gather some support first.” He let his eyes roam once more about the admirals and two Vulcans. All were dirty, beard-stubbled and pale. Their legs seem ready to quit, yet all six stood there with a fighting spirit and a great measure of stubbornness.

“Where are they?” Wesley interrupted him. “We have to find them, but first we beam you up and…”

Sirens began to blare, and all of the sudden several Orions stormed around the corner; weapons drawn, led by D’nyrrs. Obviously their cover had been blown.

“SHIT! They found out about us!” Wesley cursed. “Take cover!” he shouted and pushed the others backwards. The slavers opened fire instantly and three security men fell before the others returned the phaser blasts, stopping the approaching enemies. But this wouldn’t hold them for long.

Fleeing down the hallway, trying to keep their pursuers at bay with as many phaser shots as possible, the Lexington personnel and the freed captives finally reached a large compartment that held boxes, containers and tubes – smuggled goods – no doubt about it. Using the cargo as shield, they took cover there and continued their attempts to hold D’nyrrs and the others at distance.

“Silverhawk, contact Ritek. He has to beam up the admirals and…”

“We’re fighting with you!” Barnett growled, pulling the trigger again as he saw an Orion daring to leave his cover. He hit home, and the pirate crumbled to the floor unconscious.
Wesley pressed his lips together. “Right, but I suggest that Admiral Komack, Ambassador Sarek, and Mr. Sokal be beamed up. The admiral is in no condition…”

“Sir, I’ve got Ritek on the line, but he can’t beam anyone. The shields are raised again after Orion scouts hit the -” Silverhawk interrupted him, and Bob cursed before he returned to support the others holding off their pursuers. They all knew that their capture was only a matter of time.

ST***ST

The quarrel in the auction room continued with raging force. Kor and his four warriors had fought their way to the stage while chaos exploded around them. With some respect, the Klingon lord realized that Wesley’s comm officer, Palmer, held his ground near them, delivering punches and kicks with quick and precise movements. Who had thought that a man whose job was talking could fight like this?

Kor’s keen hearing caught a furious female voice and looking up to the stage he saw the blond beauty kicking the auctioneer where it hurt most before she head-butted him and clawed her nails into his face. ‘What a wildcat! She is fiercer than a warrigul-mother!’ the fleet commander thought and grinned. If one of these half-broken creatures he saw in the cages behind the stage had earned freedom, then it was this warrior-lady.

He avoided a fist, delivered a powerful blow to his attacker’s jaw. And then he saw how the woman gained victory over her captor, running towards the stage’s edge. Without wasting a moment, he waved at her and shouted, “Lady, come down here!”

The bottomless, dark eyes found his and for a second she hesitated, then he opened one arm to offer her a safe place to land in if she would dare jump down from the stage – and he smirked as she hurled herself directly towards him. He caught her easily; her slender frame seemed to weigh nothing. For a moment she was pressed to his body from head to toe, then she tried to wriggle free.

“At ease, vlghro’oy (kitten), I’ll protect you,” he said.

“Don’t think I don’t recognize you as the swine who bid on me!” she snarled – and Kor couldn’t help himself faced by so much temper in such a demure figure. He had to laugh.

“Only to get you out here and…”
“And straight into your bed!” she hissed.

Someone slammed into Kor’s back and he whirled around shoving the woman behind him in the process to shield her. The fight with the man who dared to attack him was short – very short – yet it was enough for the female to make an attempt to flee. His hand shot out and caught her wrist. With a yell of fury and fear, she lifted her free hand and balled it into a fist. He avoided it by catching it, too. “Listen, little one, I’m not up for any games!” he said, pulling her to the side of the stage away from the activity. Bringing some distance between himself and the melee, he finally stopped, before he addressed her again. “I’m here to free you and the other captives. It would speed the mission if you quit this nonsense and tell me where to find them.”

Again caught in a steel-like grip of merciless, strong fingers – Ania glared at the man who first bid for her. Then she saw as he threw insults of sexual nature towards another bidder. Now he claimed to be her rescuer? She looked closer at him, took in his tanned skin, almond-shaped eyes, the mustache that looked wild but was clean and then she caught the slightly sharp smell of the man. And then strength – two or three times that of a human.

‘Klingon!’ it shot through her mind. ‘He’s a Klingon!’ Her sixth sense reached out to him. She felt the fire of the battle deep in him, some controlled desire towards her and above all she sensed the truth of his statements. He was indeed here to rescue the captives.

Whatever possessed this Klingon to help, she didn’t mind. The admirals and the two Vulcans had been taken away already. Batari would be next and then the other ambassadors as well as other women, teens, and the captured crew of a seized business vessel. Support from outside was needed now!

“A few of them are in a cage behind the stage, among them a friend of mine. The others are held in cells two levels below.”

Kor nodded. “Thanks, vlghro’oy.” He saw two of his warriors moving closer, hesitated a moment – and made up his mind. Pulling her close, he quickly bent down and pressed his lips against those soft ones of the young woman. He always had a thing for this human gesture of affection and passion, this sharing of each other’s breath – the essence of life. He felt his blood heat with something more than battle-spirit, then he lifted his head again. Regrettably, there was no time for more.

“How DARE you!?” Ania gasped when he broke the kiss.

“A little thank you for helping you,” he answered with a broad grin. “Don’t worry, little one, you will not be left behind. I’ll take you to safety when this is all over.” He turned her around and pushed
her towards K’Nas, one of the warriors. “Take care that nothing happens to her. The others come with me!”

He made a high, shrill noise with his lips that was instantly answered by the two warriors embroiled in the brawl. Within seconds, they reached his side, but they weren’t the only ones who had heard the tell-tale Klingon whistle that called out to warriors when no other communication was possible.

Kor and his three men had barely turned around when a large figure stepped into their path accompanied by seven other males. The fleet commander bared his teeth in rising hate as his gaze found Klokh, who stared back at him. The pirate shouted in surprise, “It’s you!”

A predatory smile appeared on Kor’s face. “Yes, it’s me – your reflection – or perhaps you are mine. How else could it mean that you are me?” He stepped towards the renegade and reached for the dagger he wore hidden beneath his civilian jacket. “You violated my name using it for your deeds. You betrayed the Empire, breaking its word by pretending to be a soldier of our fleet and committed crimes! You fled instead of choosing death. You are a coward – not worthy to be called a Klingon. I could shoot you where you stand, yet this is personal. I demand satisfaction!”

Klokh only sneered. “You are done for, Kor! The Empire thinks you’ve gone mad, breaking a standing order and attacking a delegation vessel. You’re as good as dead, literally, because D’nyrrs found out about you and your human friends, and there is no doubt why you’re here! They are already surrounded, and your little ship above our station will be blown to pieces in a few minutes. It’s over Kor. You should have thought twice before…”

He didn’t get any further, as the last descendant of the Klingon Emperor attacked. Klokh’s comrades tried to intervene, but Kor’s warriors drew their disruptors and aimed at them; hindering their actions at gunpoint.

Palmer finally reached the Klingons and the Betazoid, addressing her instantly, “Lady Morganth, are you all right?” Ania stared at him, confused, angry and afraid. It was plainly written on her face, and he laid a calming hand on her shoulder. “Starfleet, Lieutenant Andrew Palmer from the USS Lexington,” he introduced himself. “We are here to free you and the others.”

Ania’s eyes widened, before the noise of the two battling Klingons distracted her. “But…” she began, pointing at Kor and the lieutenant sighed, “My captain, Commodore Wesley, teamed up with Fleet Commander Kor to catch the slavers and to recover you.” He nodded at the Klingon, who still watched over the young woman, and pulled her aside. “Milady, we have to get to the other captives now, or…”
At that moment, Klokh made a gurgling sound and fell on his knees. Kor jumped back; his dagger was buried deep into the renegade’s chest, piercing one of his three hearts – a fatal wound. He wouldn’t survive.

Klokh’s companions roared in fury and raced forwards to attack, but found their end as Kor’s warriors opened fire at them – disruptors set to ‘kill’. Within seconds, there was nothing left of them.

Ania stared horrified at the scene. Of course, she had heard of the Klingon weapons’ effect, yet she had never seen the disastrous outcome of a disruptor shot. She felt sick, and she had needed all control to strengthen her inner shields as the terror of the dying renegades pounded her empathic sensibilities.

Kor turned around, not caring what happened to the traitors. “Quick now! If Klokh knew about us, I’m certain D’nyrrs knows of our masquerade too.” He looked at Palmer. “Try to reach Wesley and warn him. Then come with us. We must free the other captives.” He glanced at Ania. “Can you handle a weapon?” he asked.

The young Betazoid gulped. “I think so.”

“Right, vlghro’oy.” He bent down and took Klokh’s disruptor from the dead Klingon’s belt and offered it to Lady Morganth. ”Here, but don’t play with it. You could burn your tender fingers!”

He grinned as she scoffed at him, then he whirled around and ran backstage; turning his back to the still continuing brawl behind him. His warriors followed him as did Palmer, who hastily spoke via communicator with Wesley, learning of the trap the others found themselves in.

Behind the stage, several guards stood nervously near the cages and had drawn their weapons – ready to fire at any moment. Kor slowed and lifted both hands as he found himself instantly in the snipers crosshairs as soon as he turned the corner.

“At ease, my friends, we’re here on D’nyrrs’ orders as reinforcement,” he lied easily, and one of the guards frowned, “I don’t know you! Who are you?”

“You don’t know me?” Kor faked shock. “Really? Well, maybe you’re right!” He raised his disruptor and fired; his warriors followed his example. Three of the guards were dead instantly, one was injured, two was stunned by Ania and Palmer. The rest took off, running for dear life. But not all. Several of the enslaved servants stared wide-eyed at the little group, lifted their hands and simply
sat down.

“Don’t move or you’ll die!” Kor barked, and the four men and two women nodded hastily in obedience.

“Fleet Commander, Commodore Wesley, and the others are trapped in a cargo hold. They can’t beam up because the shields are up again after the D’Ghor was attacked and…” Palmer didn’t get further as the Klingon spat some words that needed no translation and pressed his lips tightly together while he waved towards his subordinates to open the cage.

“Then we should hurry before Wesley’s ass is fried,” he grumbled. “Blasted humans, always in hot water and waiting for someone to save the day! Wesley is no better than Kirk in this matter!”

He watched one of the warriors destroy the lock of the cage, and the captives stormed out as soon as the door was open. Then he frowned as the blond beauty practically hurled herself against a younger Terran woman with tanned skin, long dark hair, and handsome features; embracing each other as if they feared the other one would vanish into the air. ‘She spoke of a friend – well, that’s obviously this woman,’ he thought, before he snapped, “Quick, ladies! I would be loath to leave you behind!”

Palmer and the other Klingons picked up the weapons from the fallen guards and handed them to the freed captives. Everyone, even those who were injured, accepted the phasers instantly; grim determination spread over their faces. Suddenly one of the slaves, who sat on the ground, raised his voice and addressed Kor, “Sir, we don’t want to stay in captivity any longer. We will fight with you if you permit.”

The fleet commander turned towards them. “You’ve supported those bastards here and…”

“Sir, they enslaved us. We've been here for more than four years now, beaten and punished for any disobedience. But they’ve not broken us. We want to be free again.”

Palmer stepped forwards. “Can one of you show us the way to the other captives?”

The man nodded. “Yes, sir, but we need to hurry. The alert was given which means that the guards will be increased and…”

All of sudden the ground began to shake, and the light flickered. From somewhere explosions
sounded, followed by more shaking. Several of the freed captives and even Palmer fell, the Klingons remained on their feet but swore loudly.

Kor grinned; his teeth flashed in the lights returning to life, his eyes gleamed with the excitement of battle. “I think, our people can take the guards here!” he grinned and tried to hail his ship. His assumption was right – the little allied fleet had arrived, and the fight had broken out the moment the alerted Orion vessels had emerged from behind the asteroids. The Orion scouts were small, but they were well-armed and quick – a challenge for the larger ships. And Kor felt torn between the wish to be aboard his ship to lead the battle and to stay here and to get revenge on the slavers for the mess he found himself in.

ST***ST***ST

Jim had returned to the bridge and shrugged as he caught Uhura’s and Kevin’s startled gazes because of his appearance. His hair was in utter disarray, his golden tunic still showed traces of the fight, his left eye began to color as did the bump on his temple, and he limped a little bit. He beamed at them.

“Don’t freak; I’m all right.”

Uhura only snorted and gave him one of her special glares meaning ‘You can tell this to anyone, but you won’t fool me!’

Kevin only lifted both brows and looked him up and down while Chekov, who was back at the helm, shook his head slowly in disbelief. “Beamed up while a phaser blast grazed him and beaten up by elite security, but he is ‘fine’.”

“You said something, Ensign Chekov?” Jim asked, and Pavel shook his head quickly, “No, sir!”

“I thought so,” Kirk smiled; he walked down to the center chair Spock instantly vacated and sat down. The Vulcan didn’t return to his station but remained beside him, looking at him critically. Jim rolled his eyes. “Please, stop before you start, Spock. I’ve been mother-henned enough just in the last hour!”

“I didn’t say anything, Captain,” the Vulcan replied almost indignant.

“Yeah, but your thoughts were so loud I could hear them in Engineering,” Jim grumbled. Promptly, one elegant brow was lifted while Spock gave him the glance, and Kirk chuckled quietly to himself. “So, status?” Jim went back to duty and his first officer clasped his hands behind his back.
“We’re travelling at warp 5, but Mr. Scott advised the bridge to reduce speed as soon as possible to warp 4.5 until the next necessary repairs are done. He asked for support from Mr. Singh in this matter. The Excalibur didn’t follow us, and I made certain that we headed in another direction the moment we fell into warp and then corrected our course once I was certain we couldn't be tracked. I remember Lawrence Styles from some classes I instructed. He is very clever and…” Spock watched Kirk grimace, and chided softly beneath his breath, “Just because you despise him, Jim, doesn’t mean that he is stupid.”

“Yeah, yeah, I know,” Kirk muttered. “So, you set another course in case he puts two and two together and looks in the direction we took before we vanished. Good job, Spock – as always!” He smiled up at his T’hy’la, who bowed his head in acceptance of his friend’s praise.

“Yet it could be that this was not enough to stall Command,” the Vulcan continued, and murmured quietly enough only for Jim to hear, “We have to continue to buy time. We will arrive at New Vulcan in four days, eight hours and seventeen minutes if continue at warp 4.5. In three days, twenty-two hours and thirty-nine minutes if Mr. Scott and Mr. Singh can repair the engines to a satisfactory status what would allow us to travel at warp 5.5 or warp 6. That may be all the time Luengo needs to take action, especially if he correctly determines our destination.”

Jim nodded slowly, biting his lips. “We’ve got the keep them off our trail – but how? The SDD prevents us from being scanned, but if something happened to it, it would mean that anyone looking for us could locate us and determine our heading.” He bit his lips and glanced at the main screen without actually seeing it. “Breadcrumbs,” he suddenly murmured, what made Spock raising both brows this time.

“Sir?” he asked confused.

“Breadcrumbs,” Jim repeated, grinning up at him. “We’re setting up a fabricated course – misleading them so that they continue to head in the wrong direction using breadcrumbs.”

His friend gave him an uneasy glance – as uneasy as a Vulcan could. “Captain, has Dr. McCoy declared you fit for duty?” he asked quietly and with some concern.

Kirk only chuckled while Kevin Riley snickered to himself as he realized what his captain and friend were up. “Maybe this Styles will end up at a witch's house. Would serve him right if he got his ass cooked!”
Spock was clearly at a loss now. “I fail to see how some bread and a mystical building can…”

“Ever heard of the fairytale ‘Hansel and Gretel’, Mr. Spock?” Jim smirked.

“An old Russian fairytale,” Chekov chirped in, earning him a stifled groan from Uhura, a disbelieving look from Kevin, and a grimace from Kirk.

“The story is a classic fairytale written by the Grimm brothers at the beginning of Earth's 19th century,” Spock began to correct the navigator's words. “I recall they started in 1806 writing down folk stories they sampled during…”

Jim lifted a hand. “Yes, that's what I mean. The story's about a brother and a sister abandoned in a forest by their father because of the step-mother. The boy, Hansel, overheard them and prepared. The first time they found home again because the boy left little stones on the path they walked. The second time he had no chance to collect the stones and used breadcrumbs from his food to mark the path they walked, but after they were abandoned again, they only could follow the breadcrumbs for a little while because birds had eaten the rest. So, the two children got lost, found a cottage where an old woman lived, who was a witch. Long story short, Gretel outsmarted the witch; she and Hansel escaped. Eventually, they found out that the stepmother was dead, and their father welcomed them back with open arms.”

“A rather cruel and unsettling story to tell little children,” Spock deadpanned and Jim thought he saw a hint of revulsion in his friend's far too human eyes.

“Yeah. The thing is these stories are supposed to teach kids to obey their parents and learn right and wrong – consequences – that kind of stuff. But that's beside the point. What I had in mind when I mentioned the breadcrumbs is that we should lead Styles and Section 31 in the wrong direction and let them find nothing. It'll buy us time.”

“And what will those ‘breadcrumbs’ be, sir?” Chekov dared to ask over his shoulder, but it wasn’t Kirk who answered him.

“Telemetry probes fed with the Enterprise’s warp signature,” Spock said, grasping the meaning of the metaphor and changing it into engineering lexicon.

Jim beamed at him. “I knew you'd get me. We send two or three of them into another direction and program them to transmit the signals with a timed delay. I'm certain Styles'll scan the whole parsec to
find us, and when he gets the read-outs he’ll follow us – or the probe in this case.”

Spock cocked his head. “You will only be able to fool him only once, Captain.”

“Not when we send another probe with another signal – a faked transmission for example.”

Uhura had left her station and leaned against the handrail; a mischievous smile played around her soft lips. “I can program them with a recording you make, Captain. For example, you can call, I don't know, make someone up. Tell them you're on your way; drop a random planet in and give Section 31 the wrong idea about our destination. I also can program the computer with a recorded voice to be the other ‘person’ on the line. Styles and Section 31 will think we’re heading in a complete different direction.”

Kirk lifted a thumb. “You got me too, Uhura! The first probe will lure Styles into one direction only for him to find that we tricked him. The transmission from the next probe comes from a completely different distance and bearing, and so he'll believe he got us. He’ll fly in that direction and buy us even more time. At the same time – it'll keep Luengo and Section 31 busy trying to figure out where we actually are. By then we should be at New Vulcan. Khan and his people will find safe haven and…” He stopped as he caught Spock’s intense glare that moved towards Riley – the only officer on the bridge who didn’t know about the ‘private’ mission they effected at Gamma 12. Because of the ship’s late hour, the bridge wasn’t fully staffed and only Uhura, Spock, Chekov and Kirk were in the command center along with Riley.

Kevin knew why Jim suddenly stopped and turned around. Knowing only part of the truth, he said quietly, “Permission to speak openly, Captain?”

Kirk nodded slowly, realizing that it was too late to keep Riley out of it.

“You told me about Mr. Singh and Section 31 two days ago. You also mentioned that there’d be trouble because you back Mr. Singh, and after all I've seen these last days – and last hours – I conclude that the real problem starts now because of what happened on Gamma 12 that led to an emergency transport of you and Mr. Singh. Hell, you almost got shot down there – by Starfleet’s own elite security. And you beamed up a lot with the cargo transporter after the scientists were brought aboard. My console monitored the energy use. And now you're talking about Mr. Singh’s people. Let me guess; they were aboard the station, but not as staff members. The onboard computer isn't recording another other bio-signals besides those of the few evacuees from the station, but his people are here. That means they have to be in a kind of stasis. And so they must've been prisoners in this high-security facility. Why? If you hadn't have evacuated them – I'm guessing without permission – they would be dead now. Ergo, Command wants them dead. Starfleet doesn’t kill people – not like that anyhow. And again mentioned Section 31, not ‘Command’. I've heard of them – lots of us have. I think I've pretty well figured out on my own what they are capable of, sir.”
Jim stared at his younger friend; baffled and a little bit alarmed. Did Kevin just put all that together on his own?

Riley took a deep breath and continued, “And now the actual situation we’re in – the reason we are going to New Vulcan for safe haven is because you recovered those people; something those guys in the 31 don’t want to happen. We’re not running from Styles and the Excalibur, but from Section 31 who can suddenly give orders. Maybe because there is no one checking them? Our most important admirals have been declared dead, so this Section 31 has free reign. And the first thing they did was order you to practically murder Mr. Singh’s people. Why? Murder is a crime, even in uniform.”

He cocked his head and fixed his captain’s eyes with his own. “And why do you call them ‘Mr. Singh’s people’? I’m not sure if you’re aware that you do it, but if I’m reading between the lines correctly, it’s because they are different like Mr. Singh is different. The rumor is that Nureaux tried to stun him but failed despite hitting him several times. I know it could’ve been exaggerated, but even one should’ve put him down. And the gravity increase in the nebula, saving the ship by getting to the helm in time and steering the Enterprise away. Pavel told me about it after it become the number one topic talked about around the ship.”

Chekov ducked his head as he received a quick glare from his commanding officer. Unaffected by the small display, Kevin said, “All the things Mr. Singh did – they are things no normal human could do. So the implication is clear: He’s enhanced, isn’t he? And that’s the reason why Section 31 is after him – after him and keeping his people – because they are like him – enhanced – augmented.”

Silence filled the bridge, only interrupted by the soft noises of the computers and monitors. Jim looked for several long seconds at his younger friend, then he sighed and rubbed his neck. Dammit! He should have known that Kevin would see through everything. The young Irishman was smart – and he had already learned a lot about what was going on aboard that didn’t exactly meet with standard protocol. Honestly, it wasn’t really a question of if Riley would figure it all out, but when! And Jim realized that it would be better now to tell Riley everything.

“You are right,” he said softly. “Nien is an Augment – so are his people that we just saved from being murdered in their sleep.”

Kevin blinked. To have a theory and getting that theory confirmed were two different things. “How is it possible?” he asked confused. “There aren’t any Augments left.”

“And here is where you wrong, Mr. Riley,” Spock cut in. “Mr. Singh is an Augment; he comes from Earth’s past.”
Riley’s brown eyes widened and in the next minutes Jim revealed the story of Khan in the shortest form possible. He spared the young man the details, yet he chose his words carefully to make his point – and to win Kevin over.

He shouldn’t have feared his younger friend’s sense of justice and compassion. After he finished the tale, Kevin was pale as a sheet; he stared at him for a long moment and whispered, “My God, why did no one help him in the first place?”

“Because humans often fear their own creations,” Spock answered quietly. “And in their fear they forget what is right and wrong, thinking the end will justify any means.”

“You’re talking about Section 31,” Riley mused, and Jim took a deep breath.

“They’re back, Kev – Section 31 is already back at work; still hidden yet somehow out in the open too – we haven't figured it all out yet. You were right too when you mentioned that there is no one who can stop them, because our most admirals have been declared dead – but they aren’t.” Kirk had made up his mind. He would have to share this particular secret with Riley, too. It was not only logical to reveal the whole truth in this matter, but he also followed his gut-feeling. An inner voice whispered that he was going to need all the help he could get – even a twenty years old cadet in his second year at the Academy.

Clearly and concisely he told Kevin of the delegation’s real fate and that Wesley was in Borderland to save the survivors; they were Jim and the Enterprise's only hope of being saved from Section 31’s pursuit.

Kevin listened with wide eyes, and Kirk had barely finished when the young Irishman blurted out, “Shit, Jim, you’re really in hot water!” For a second, it had slipped his mind that he was still on the bridge, still on duty, and that it wasn’t prudent to call your commanding officer by his first name (except when you are a certain CMO). He didn't worry about that, though. His friend and his friend’s lover were threatened by a shadow department that would murder, for God’s sake. Proper titles paled compared to the circumstances. And that's why Jim let it slide.

He nodded slowly. “And so are you if it comes out that you’re involved. Do you understand now why I wanted to keep you out of this?”

Kevin made an affirming gesture, and he straightened his posture. “I understand your motivation – not only towards me but also towards Mr. Singh and his people.” His voice turned surprisingly stern
for a mere cadet, yet in this moments, Riley was more. He was not only a student, but he was also Jim Kirk’s friend. “I already told you that you’ll have my support if you need it – you still have it. I’m by your side, Jim, no matter what. And not just because you saved my life back on Tarsus IV.”

Spock was aware of this part of Jim’s childhood, but Uhura and Chekov were not. They gasped in shock. They hadn’t known about this particular facet of their friend and captain's past. Both pairs of eyes were set on the blond figure in the center seat. Tarsus IV! Everyone knew what happened there, but no one thought that Jim Kirk had been in the colony during that dark time young Riley was apparently referring to. And given the ensign’s words, it was clear that Jim had belonged to those who fought back against the terror and genocide that had taken place on the planet. And they realized something else. This horror had happened more thirteen years ago – Jim Kirk had been a mere boy at this time.

Kevin ignored the reaction of his two officer-colleagues, while he continued, “I don’t look up to you because of your selfless deeds during those weeks, but because you did then what you’re doing now – the right thing! You did and still do what is right, no matter what. And it is right to protect those sleeping people, Augments or not. You are about to save a race, one that is even threatened even worse than the Vulcans – my apologies, Commander Spock,” he added towards the Vulcan, who bowed his head in acceptance; after all Riley’s statement was correct.

“You fight for those who cannot fight back – who need help and who would have no chance if it weren’t for you,” Riley continued. “It’s this courage I was drawn to even as a little boy all those years ago. Some things never change in the universe and this is one of those things. I’m with you, Jim. And if Starfleet thinks it can mess with people because they they're afraid of a particular race, then I’ve signed up for the wrong club. Different races are the essence of the Federation!” He offered a smile towards the older man. “So let's do it – let's set up the deception for Captain Styles. I may be nothing more than a second-year cadet, but I’ll do everything in my power and knowledge to assist you and the others, Captain!”

Jim felt his throat tightening and his vision blurring for just a second. He knew that his friends were loyal to him, and he had known the same quality in Kevin, but to hear it – to see the grim determination of the younger man’s face sent a wave of warmth and gratitude through him. There were no other words possible, “Thank you, Kev! I’ll try to keep you out of it when I face court martial, but…”

“I’m already in it, Jim, and I’m ready to give the judges a piece of my mind.” He smirked. “Don’t forget the Irish temper…”

“And the Irish stubbornness,” Kirk added with a chuckle.

“Ain't that the pot calling the kettle black,” Riley grinned. “Don’t forget, Jim, you ancestors were
Irish or Scottish too – Kirk.” He began to laugh. “Even if your name means ‘church’ I don’t’ think those guys in Section 31 think of you as very holy right about now.”

“They never have,” Jim mirrored the laughter; his eyes sparkled. Then he became serious again. “I appreciate your loyalty, Kev, but think it through before you make your decision. I gave the same chance to the others; there is no reason I shouldn’t give it you, too.”

The young man smiled. “I already made my decision, Jim. I’m with you – and Mr. Singh. What he did last year – it wasn’t his fault. Not really. We both know you can be pushed beyond your limits, and we know the outcome when that happens. He deserves a second chance, and so do his people who are innocent. Perhaps they didn’t always do right back then, but that is the past. And after all, we all make mistakes. There is no reason to hold them accountable now, because they didn’t know better and had no one to turn to for advice. As far as I understood they belonged to the peaceful Augments – those, who tried to help the world and not to take it over. I’m with them, too. I signed up in Starfleet because I wanted to have a chance to help make this universe a safe place to live. I didn’t know about the sinister things which went and still are going on, but this only encourages me. It’s up to people like you to make the world a better place, and I’m honored to belong to your crew.”

Uhura watched the young, passionate man and her captain. She saw Jim gulp, obviously deeply touched. She smiled. This was the incredible thing with James Kirk. He always managed to get through to people, to pull them to his side and to change a catastrophe into a victory. Even if she wasn’t sure that the outcome of this mess they all were in would be good this time, she would stay with him – like Spock and McCoy, like the other senior officers, like this young Irishman over there.

Spock watched his T’hy’la and the young cadet, too. Kevin Riley was a promising student, able to think logically and imbued with great intelligence, but also with compassion and a strong sense of justice – just the kind of man Starfleet needed to become what it was in earlier times. And, if he dared to admit it, Riley’s loyalty towards Jim woke a warmth deep in him. It was illogical to favor someone because he was a friend of a friend, but in this case, Spock became aware of the rising protectiveness he developed for the young man – just like he felt towards Chekov. Both were still so young, and already wise beyond their years. It was very satisfying to work with such humans at the threshold of adulthood.

Now that Mr. Riley can be added as one of our supporters, I suggest that we prepare the probes, Captain,” he came back to the most important topic. “The sooner they are on their way to misdirect Mr. Styles, the better the chances of a positive outcome.

Jim nodded. “You’re right, Spock. Please begin the preparations.” He glanced over his shoulder at Uhura. “Lieutenant, you mentioned a falsified conversation between an unknown and me?” As he saw her beginning smirk, he raised, “Well, I’m at your service for your little radio show.”
Nyota began to chuckle. “It will be my pleasure, Captain.”

The moment the ground began to shake with the loud explosions, Wesley felt a wave of relief knowing that the *Lexington* and Kor’s ships had arrived. Their opponents became uncertain for a short time, some of them running away; the others remained and opened fire again more fiercely than before. They faced well-trained Starfleet staff officers weakened as they were because of the last days experiences; the admirals fought with grim determination too stubborn to give in.

Again the ground shook, and the lights flickered; screams were heard. All of the sudden, swirling columns of light appeared behind the Orions. Wesley couldn’t stifle a shout of triumph as he recognized three dozen Redshirts from his ship instantly attacking the pirates.

Silverhawk left his cover and barked commands, making sure that at least ten of his men secured and protected the admirals and the two Vulcans.

Bob pulled out his communicator and contacted the *Lexington*. Yes, there was a battle going on above their heads, but Sonik maneuvered the ship between the birds-of-preys so that the Starfleet cruiser was able to lower its shields for a few seconds. Without hesitation, Wesley ordered Komack, Sarek and Sokal beamed directly to medbay. The Vulcan Ambassador wanted to protest, but he and the two other men found themselves caught in a transporter beam and materialized seconds later aboard the *Lexington* where they were taken into the care of the CMO while the ship continued combat.

In the meantime, down on the asteroid, D’nyrrs and his companions stood no chance against Starfleet’s Redshirts. Most of them were dead or stunned within a minute, and only Wesley’s strict order to get D’nyrrs alive prevented the pirate from falling prey to the security team's fury as they saw their commanding officer in danger.

Two minutes later the whole thing was over, and those Orions who were still alive were arrested. D’nyrrs, who was one of the three Orions who was still conscious, was held by two tall security personnel, and spitting brimstone and gall. His yellow eyes glared with hatred at Bob, who closed the distance towards him, while the other redshirts secured the area.

“Franklyn Lancaster – my ass!” D’nyrrs growled, and the *Lexington*’s captain straightened his posture.
“May I introduce myself? Commodore Robert Wesley from Starfleet. You’re arrested and accused of kidnapping, piracy, slave-dealing, murder and conspiracy against the United Federation of Planets and Starfleet.”

“Murder?” the giant Orion snarled. “I didn’t kill anyone! Klokh killed your other officers and the diplomats as he was ordered to do!”

Barnett, who bled from a cut on his temple, limped towards the little group and stared enraged at D’nyrrs. “Who gave you the order to open fire at a diplomatic vessel and…”

“As far as I know the man has been promoted within Starfleet – maybe even took the chief’s place. Ask him, human! I think he can give you the better answer!” the slaver spat.

Barnett froze and stared questioningly at Wesley, who ignored his superior for a moment. “Get him to the brig!” he ordered the Redshirts. “He’s a witness for the court martial!”

The Orion captives and some of the Redshirts had just beamed up when Richard addressed Bob while Morrow and Nogura closed the distance to them. “Bob, what is going on here? Did I hear that right? My successor is responsible for…”

New explosions were heard as well as steps coming their way. Wesley didn’t need to read a tricorder to know that potential customers of this ‘market’ were trying to flee. “Line up, prepare for stun! No one leaves!” he shouted, reaching for his phaser. “Admirals, find cover!” he said over his shoulder, bracing himself for the next fight to come.

Against his request, the three staff officers took the offered weapons from the Redshirts and prepared to get involved in the upcoming battle. “We have to be quick,” Morrow murmured. “There are still a lot of captives we need to release and…”

D’nyrrs’s customers rounded the corner and stopped dead in their tracks as they came face to face with two lines of Starfleet security officers and personnel with weapons drawn. Those behind them crashed in those who had stopped, and many tumbled to the ground.

“Fire!” Bob barked, and stun blasts were shot at the ‘businessmen’ and their companions. Most fell unconscious; others turned around and tried to escape.
“Follow them!” Wesley screamed. “We have to take down this market once and for all!”

ST***ST

Galven spit furious curses while he tried to hold the *Santo Domingo* on its course. He watched the *Lexington* on the screen as it seemed to seek shelter among the Klingon vessels for a very short time only to return moments later to the battle, taking out two Orion scouts.

“They lowered their shields for a moment,” Jeff called, who sat at the navigation and also watched the scanners. “I think they beamed the captives up – or at least some of them.”

“Hopefully, those admirals and the Vulcans are among them,” Galven gritted out. “Without the brass, our two lover-boys will be in a lot of hot water!”

“Two Orions vessels off the starboard bow!” Jeff called. A second later the small vessel shook under the impact of a blast.

“Ayomatic control system damage report!” Caviw hissed. “Dammit, life support at fifteen percent shields down to thirty-two percent, containment field at…”

“I don’t want to hear it!” the Tellarit oinked furiously. “Diego is going to kill us if we lose his ship and…”

“If they continue to fire at us like this, it won't be Diego that kills us!” one of the other members shouted and pointed to the screen to the right.

“Avoid that!” Caviw screamed as she saw a torpedo nearing their ship. Galven may be a brave fighter, but his reflexes weren’t that good – not like Khan, who certainly would have reacted in time. Again the ship shook, and something exploded in the stern. The automatic control system blared warnings, but one was most alarming. The containment field of the warp core was about to fail.

“Goddammit, we have to give up the ship and to evacuate!” Jeff groused.

Caviw was already hailing the *Lexington*, telling them what was about to happen. Hearing the calm
voice of the Starfleet cruiser’s first officer Marceaux was somehow soothing, his words were not.

“Right, how long until your warp core is going to say ‘good-bye’?”

“Four minutes, fifty-five seconds,” Caviw answered, watching the station read-outs.

“Right, fly near the asteroid and beam down. We’ve damaged their shields enough so that a transporter’ll work. Before you go, set a course right through to the middle of the Orions... Maybe the collapse of your warp core and the explosion will get rid of the Orions once and for all.”

“In other words, the *Santo Domingo* becomes a weapon – and our friend will fry our asses for losing his ship! Superb plan!” Galven squeaked.

“Well, you have the slavers to thank for it,” Marceaux answered. “We’ll distract the Orions so that you can lower your shields and beam down before they realize what’s going on. And don’t forget to set the course! We’ll warn the Klingons and the *D’Ghor* of what is going to happen. How long will you need for the evacuation?”

“Two minutes,” Galven oinked.

“Understood. We’ll busy the pirates for three minutes; then everything has to happen. Keep your heads up, guys, and hopefully, we’ll see you soon!”

The transmission was cut off, and the Tellarit rose with a mixture of anger and determination. “All right, Jeff, bring us as close to the asteroid as possible and program the new course.” He glanced around. “Lady, gentlemen, let us leave the ship before it becomes unpleasant.”

They raced to the small transporter room, while a computer voice in the background began to count down the time until the warp core would collapse. There was the possibility of getting rid of the warp core by sending it through the emergency path into space and away from the ship, but the *Santo Domingo* was unable to do that. All The Shadow could do was abandon the ship and to beam to safety – if you could call it ‘safety’. They were about to materialize in the middle of a slave market that was being taken down by Starfleet and Klingons.

Jeff was the last who reached the transporter room and nodded at Galven, “The course is set. We have thirty seconds to beam down.”
The Tellarit had already programmed the transporter and had sent the first group down on the asteroid – among them Caviw. Now it was up to them to follow their friends. Jumping on the pads together with the last remaining members, they felt the beam capture them. The transporter room vanished and moments later they found themselves in a larger hall that held an empty cage and several dead Orions, while nearby they heard the ruckus of battle.

“Over there!” Caviw pointed to their left and Galven saw several Klingons and freed captives vanish through a door.

“After them!” he decided. “Maybe we can protect the freed slaves. I don’t trust Klingons to play bodyguard!”

ST***ST

Palmer and Kor followed the few freed captives and the servants down the flights of stairs, weapons drawn, and bodies tense. Finally, they reached the lower level and came face to face with the Orions, who were quick to open fire the second they saw the strangers and captives – captives that should have been sold by now.

Kor pulled Ania behind him and backed around the corner, hailing his ship in the process demanding reinforcements only to learn that his squadron, the D’Gor, and the Lexington had withdrawn because The Shadow’s ship had lost its containment field and was about to explode – in the middle of the Orion scouts!

If everything went smoothly, they would gain victory over their enemies within minutes – and even if the Orions realized what was about to hit them, Kor didn’t doubt that his warriors and Wesley’s ship would overpower them shortly. His second-in-command was a very skilled officer, and the same could be said about the Starfleet commander who had now the conn aboard the Lexington.

He trusted his second-in-command to do what was necessary to gain victory in both battles – the one in space and down in the station. He wouldn't be disappointed. His ship was in the middle of the other birds-of-prey's while they retreated to gain some distance between themselves and coming explosion. The acting captain used this break to lower the shields and to beam down more warriors. A minute later they re-materialized in shimmering columns behind the Orion’s, attacking them instantly.

But the arriving Klingons weren’t the only reinforcements to strengthen Kor and Palmer. For a long
moment, the fleet commander stood staring agape at the short Tellarit and the other warriors – all different races, who came down the stairs firing at the Orion guards.

‘They sent their doomed ship into the Orion squadron and beamed down. They came firing. They are smart; I have to give them that!’ he thought.

K’tar, his Chief of Security, walked towards him, fighting off more Orion guards. “Milord, report from our ships. The vessel of The Shadow exploded and took nine Orion scouts with it as well as two ‘customers’ ships. Now we and the Lexington are about to finish off the rest.”

“Well done!” Kor nodded and shot a blast towards another Orion; he was dead even before he vanished into air. The fight was short; it ended with seven dead Orions and victorious Klingons.

It was obvious that the Klingons could handle the few remaining guards. Jeff, Galven, Caviw and several members of their militia used the time to open the prisoner cells, helping those who were too weak to walk on their own. The leader of The Shadow oinked in surprise as he was addressed in his language from one of the cells. He faced another Tellarit, who stood behind the energized barrier shuffling his feet impatiently.

“Quick!” Gav oinked impatiently. “In the name of the Holy Mud, stop staring like a fool and get me out!”

Galven’s snout twitched. “A nice way to greet your rescuer!”

Gav growled in his throat. “Do you think we have time for pleasantries? There are Klingons down the hall and…”

“Really? I haven’t realized that – especially since I came with them!” Galven snapped, rolling his eyes in an almost human way.

The ambassador shrank back. “You came…” His little eyes widened. “Traitor, scallywag, blackguard, mud-despiser! How dare you to ally yourself with…”

“STOP SQUEALING, you piglet,” Caviw hissed, “or we let you rot in there!”
Gav shied back for a moment, looking with widened eyes at the enraged catlike woman.

The fight had come to an end, and Kor jogged down the corridor. “Why the delay?” he demanded. “Get the captives out and then return to the chamber behind the stage. As soon as the battle in space has stopped, you’ll be beamed up to the *Lexington* or my ships!”

He stopped beside Galven, who glared furiously at another Tellarit in one of the cells. The prisoner straightened his posture so that he nearly reached the Klingon lord’s shoulder and oinked, “I’m Gav, ambassador of Tellar! I have the assurance from your government of safe travel, and therefore, I demand that you release us instantly!”

“SHUT UP!” Galven exploded, and a tirade of squealing and oinking noises followed rapidly until the diplomat just gaped at him; then he snapped his mouth shut and turned demonstratively around, giving Galven the cold shoulder.

“Well, at least he is silent!” Galven grumbled.

Kor didn’t know if he should be furious, offended, or amused by the display, so he decided on none. “Let him out and take care that he is beamed up to the *Lexington*. I don’t want to have an ungrateful oinking dwarf with no manners aboard my ship!” he growled and moved the others to hurry!

It took barely any more to release the remaining diplomats that it did to think about it. And then they made for the rest of the captives held in two other corridors. It turned out that it was an advantage to have the formerly enslaved servant as a guide. Without him, they would have wasted more time trying to find all of the captives.

Galven and Caviw accompanied them, as well as Jeff and four other humans. To see them among the Klingons was a relief to the slaves who didn’t know if they were about to jump out of frying pan into the fire as their tiny chambers were unlocked. The Klingons shooed them out.

Galven helped two women, and Caviw was about to take care of them when all of sudden a hoarse oink was heard, “Galven?”

The fighter turned around. He knew this voice, even hoarse and broken as it sounded. “Galtan?” he asked, not daring to hope.
One of the Klingon officers led another Tellarit into the hallway, pushing him carefully forward as he saw how thin and weak the slave was. Yet those little eyes lit up when they found the stout frame of Galven, whose jaw dropped.

“Galtan?” he repeated, taking in the sight in front of him. There, beside a tall Klingon, swaying on his feet with weathered hair and a scar over his snout stood his brother – weak, dirty and tired, but it was HIM!

With an oinking shout of pure joy, Galven raced forwards, not caring that another Klingon had to jump out of his way, or he would have been run into the ground. He ignored Caviw’s questions and everything else around him. He only saw his brother that he had never given up on. Then he was in front of him; he pulled him into a strong embrace.

It was as though strings had been cut from a puppet. Galtan lost his balance and practically fell into the arms of his younger brother; and then both could only cling to each other.

Caviw raced to them; her own eyes moistened. Then she caught the baffled face of the Klingon who had led Galtan out of his prison and explained, “They are brothers. Galtan was kidnapped half a year ago by Orion pirates. Galven never quit searching for him.”

Klingons proudly boast that they only care for honor and a good battle. But truly they shared a common trait with nearly all encountered races – a sense of family. No Klingon would let down one member of their own clan, and so the warrior almost smiled as he answered, “He fought for the impossible as he searched for is brother in Borderland and the nearby parsecs. He didn’t shrink back from a fight for him. Your friend is an honorable man, and I hope he and his brother have many years before them.” He pressed one fist against his chest and walked away.

Caviw grinned. It seemed Klingons were hard on the outside, but perhaps a few were soft inside.

She stepped to the Tellarit brothers and laid a hand on Galven’s shoulder. “I hate to interrupt you two, but we’re not safe yet.”

Galven looked up at her, and so did Galtan. “I know you,” the older of the two brothers squealed, and the Caitian woman nodded. “Yes, you met me at your brother’s workshop a year ago. I’m Caviw and belong to your brother’s little club called ‘The Shadow’.”

“The Shadow?” Galtan was at lost.
“A long story,” Galven said. “And I think we’ll have a lot of time to talk when this is over.” He wrapped one arm around his brother and led him down the hallway; Caviw placed herself in front of them, ready to protect them, but her she had nothing to fear. The Klingons took their job very seriously, and for once the Caitian was grateful for the stern execution of Klingon duty.

They climbed the stairs back to the upper levels and finally reached the hall behind the stage. The fight in the auction room was still going on, but things had changed. They all could hear the phaser blasts; commands were shouted in Standard and Klingon, and Caviw was relieved to hear Wesley’s voice.

The fight wasn’t over yet, and the Caitian hoped that in the end Starfleet and Kor would win…

TBC…

Chapter End Notes

Well, as a few of you guessed Galven did indeed find his brother (I’ve a soft spot for happy endings; smile). Yet the whole mission isn’t over or won – for all of them, including Jim and his friends. Yes, he got a good idea with the ‘breadcrumbs’ is about to leave for Styles to pick up, but will it work?

In the next chapter the admirals will learn who is supporting Wesley (and I can promise you some funny moments when Barnett & Co. see Kor for the first time, *snicker*). There will be also a little bit more flirting of our Klingon with Ania and you maybe can already imagine the shock when he learns, who she is for real (*laugh*). And then comes the moment in which the admirals will learn about the reason for the whole mess they and the other diplomats found themselves in – and who Sunrise is.

In other words: The whole action still isn’t over.

I hope you liked the new chapter and, as always, I’m curious what you think of it.

Have a nice Sunday

Love

Yours Starflight
Many surprises

Chapter Notes

Hi, my dear readers!

Thank you so very, very much for all the comments and kudos. I’m really happy that you love the parallel part of the story – Wesley’s attempt to save the survivals of the delegation – so much. Concerning this event you’ll read the utterly showdown within this chapter, what also shows how smoothly an alliance can run when it’s made by the right men. Kor and Wesley are really a self-explanatory fighting-team. And the dear admirals will learn things which will shake their foundations.

Have fun with the new chapter,

Love

Yours Starflight

See the end of the chapter for more notes.

Chapter 61 – Many surprises

After Kor was confident that his third-in-command had the last part of the recovery mission – freeing the enslaved servants – under control, he and Palmer returned with two dozen warriors to the auction room. It was about time to save the commodore’s ass. They had to cross the auction room and to get at Wesley’s opponents’ rear line, but as they reached the room behind the stage, they realized that the combat had changed. Phaser blasts sang through the air, and Kor recognized Wesley’s voice from the other side of the hall.

‘Escaped trouble by himself only to run into more – typical humans!’ he thought, not without amusement. Then the grim warrior in him returned. Giving his warriors a signal, he took his disruptor and raced towards the stage. He didn’t spare one glance at Klokh’s dead body as he passed him and made himself ready to join the battle again.

ST***ST

The Starfleet members pursued the dealers and their companions down the hallways. The dealers weren’t afraid to open fire. Other ‘business partners’ of D’nyrrs tried to contact their vessels, but most of them were not successful because their ships were either destroyed or too damaged to respond. So they did the only thing they could; they ran.
Down the corridor, Wesley, the admirals, and the Red-Shirts met the unconscious Romulans again which were still sprawled on the floor. Without wasting a second, Bob hailed the Lexington and ordered Marceaux to beam the Romulans to the brig as soon as the battle in space was over and it was safe to lower the deflector shields. Then he ordered two Red-Shirts to secure the Romulans with manacles and shackles and watched them before he raced down the hallway again, asking for a report of ship’s status.

Marceaux told Bob calmly that most of the vessels, which had started from the asteroid’s surface, had been destroyed. There were still some Orion spacecrafts which had drawn nearer from their original positions, but the explosion of The Shadow’s vessel had decimated them. Kor’s ships were taking care of the rest now.

“What about Galven and the others?” Bob asked worriedly.

“They beamed down on the asteroid after they set a course right into the middle of the enemy. Our sensors read that they are with you somewhere in the station.”

“Good,” Bob sighed while still following the Red-Shirts “So the surprise attack was successful?”

“Yes, sir. They didn’t know what hit them as the Fleet Commander's cloaked ships materialized, and we reached this place without being scanned first. It seems, sir, your plan worked well.”

Bob grinned. “Well, no risk, no fun. Try to eliminate as many opponents as possible, but spare this station the hits if you can so this thing burst into pieces or worse yet – we damage something we need like life support. We still have to free the other captives, so we’ll need some more time down here. Keep me updated. Wesley out!”

He closed his communicator and saw that the Red-Shirts had come to a halt, ducking and aiming at something in front of them. Silverhawk didn’t waste any time talking and pulled Wesley and Barnett backward. Two other Red-Shirts were busy pushing Nogura and Morrow to safety.

And then Wesley realized why Silverhawk and his men acted as they were. They were about to re-enter the auction room. Chaos erupted completely just then. Orion slavers, their customers, and others barricaded themselves behind toppled tables, firing at the Red-Shirts with stolen phasers and disruptors. The Starfleet officers and Starfleet security were forced to withdraw back into the hallway for cover. Otherwise, they would have run into enemy fire.
“Blast it!” Harry Morrow barked. “We’ve got to cross this compartment to reach the stairs to the lower levels, where the other captives are held. Some of them are in a cage behind the stage, among them Lady Morganth and Mrs. Whitman. Ambassador Gav and the others were still in the cells when we were forced out.”

“GOD DAMMIT! From where did they come!?” Nogura’s outburst drowned out Morrow and the noises of the fight in front of them. He pointed ahead to the stage, where…

…Where approx. two dozen Klingons appeared; heavily armored and armed with disruptors.

“Dear Lord, it's the end!” Richard whispered and looked at Wesley, who… Who began to grin and gave a shout of delight. “Yes, the end of these damn slavers!” he laughed.

Before Barnett could ask him if he had lost his mind, the Klingons opened fire – on the slavers and dealers. Some of the warriors parted and made room for the stout, vigorous yet tall figure that still wore civilian clothes but couldn’t be mistaken for anyone else.

Barnett’s eyes were about to pop out of his head as he recognized the man in the middle of the Klingon fighters. “KOR!” he gasped and whirled around to a smirking Wesley. “This is Fleet Commander Kor!” he repeated; pointing at the warlord. “What is HE doing here?”

“Helping us,” Bob answered and turned towards the three astonished admirals. “Kor and I built an alliance to get you and the others out – and to stop the imposter who attacked the Excalibur.”

“You teamed up with…?” Nogura couldn’t even finish the sentence; he was too thunderstruck.

“Kor didn’t attack the Excalibur. Someone, in essence, stole his identity. Kor is as interested in the truth as we are, so we decided to work together,” Bob told them quickly. “But the story is rather long, Admirals, so I suggest that we save the tale for later when we’re back aboard the Lexington, and concentrate on freeing the rest of the captives – and staying alive!” His attention turned towards his Chief of Security. “Lieutenant Silverhawk, line up again. We and the Klingons will trap those bastards in the cross-fire!”

“Aye, sir!”
What followed now was a scene worthy of an old Western movie, in which the bandits entrenched themselves in a saloon while the sheriff’s brave men battled them from the outside. Later, Wesley would describe it with the words, “The mobsters were surrounded. They shot like mad without much success while we and our allies, the Klingons, overpowered them with strategy and skill.”

Kor ordered his men down from the stage and rushed the enemy, driving them towards Starfleet’s Red-Shirts. A few Klingons broke through the hostile line and joined the Lexington’s security personnel, accepting Silverhawk’s orders as if they were given by Kor himself. Well, Kor had ordered them to obey the ‘Starfleet man’s’ commands.

In this manner, they caused their opponents to retreat; many of the slavers and dealers lay stunned or dead on the ground. Moans and shouts filled the air mixed with the thick smell of sweat and blood. Some of D’nyrrs’ men and potential customers were able to withdraw, and they headed towards another hallway, firing at the Starfleet members and their allies with their weapons switched to kill.

Bob saw a flash from the corner of his eye. At the same moment, strong, tanned fingers gripped his jacket and pulled him aside; a phaser blast hit the wall behind him and left a glowing trail of ashes in the metal. Wesley looked up and saw the dark, grinning face of Kor, to whom he obviously owed his life.

“You have to be quicker on your feet, Wesley,” Kor taunted. “I cannot always save your neck.”

“Well, if you ever get tired of serving in the Imperial Fleet, I can offer you a job in Starfleet Security,” Bob replied dryly.

The Fleet Commander had chuckled before they both, Nogura and a very surprised Barnett, ducked back into the corridor to avoid further phaser blasts. Morrow cursed from behind of them, ducking too.

“Did you find the other captives, Kor?” Wesley raised his voice to be heard amidst the loud tumult several meters away.

Feeling the Admirals’ eyes upon him, he answered, “Yes, they are behind the stage, waiting to be beamed up. But our ships up there –” He pointed with one thumb to the roof, “– are still busy with the Orions and their ‘business partners’ and can’t lower their shields at the moment. Otherwise, I would have already beamed the ladies and gentlemen up.” He peeked around the corner and stiffened. “Wesley,” he said with a growl in his voice that woke Bob’s attention.
“Yes?”

“ Didn’t you say you wanted to repay the man who betrayed Kirk to us?”

Wesley felt the sharp sting of fury. “Is he here?” he demanded, closing the short distance to Kor.

The Klingon narrowed his eyes and pointed out a human male in his late thirties. “There he is! As I told you, he vanished from Turkana the moment the first cargo vessels were permitted. It seemed he got a new job. If you want to avenge your boy, your opportunity is now.”

Even if taking revenge was a big ‘no-no’ in Starfleet, Wesley felt adrenalin coursing through his body. Wrath unfurled in his belly. Gripping his phaser, Bob turned towards the three Red-Shirts near him. “Follow me!” he snarled. “We’ve got some arresting to do!”

Without hesitation, the Commodore and the three Security personnel left their cover and headed towards the fleeing man, who was accompanied by two Orions and a Regulian. The man and the Orions quickly discovered that they were hunted and shot at the four Starfleet members, but to no avail. While Red-Shirts and five Klingons covered Wesley’s back, the staff officer and his companions returned fire. One of the Orions went down, as did the Regulian. Then the man who was responsible for so much pain Jim Kirk had been exposed to, tried to run away again – and Wesley hurled himself at him.

Matthew Armstrong realized that he was in hot water. Not only because Starfleet had arrived together with Klingons – weren’t they still at war with each other? But as he tried to flee he became aware of a man in his late forties or early fifties who was obviously the commanding officer of the Starfleet troop. This officer was hunting him! Brimstone and gall rose as he became angrier. Did this guy have nothing better to do than pursue him?

All of sudden someone crashed into him, and he was tackled to the floor. Armstrong turned around, recognizing the officer who punched him with such force. He saw the utter fury in his opponent’s dark eyes as he received another blow; then he began to fight back.

For a short time, both men struggled – Armstrong with the unscrupulousness of someone stripped of his humanity and sense of right and wrong, Wesley with the righteous wrath of someone about to avenge someone dear. Revenge was a taboo in Starfleet, yet Wesley wanted to arrest the man, but if his opponent fought back, he had to defend himself. And who could accuse him of abuse if he only attempted to overpower the man and so used a bit more force than strictly necessary? This was nothing more than a bid to capture a traitor – officially. Unofficially, Wesley felt great satisfaction every time a blow hit home.
Then two Red-Shirts were with him; they grabbed for Armstrong’s arms and secured him while a third offered his commanding officer a supporting hand to rise. Wesley practically skipped to beat the shit out of the man who betrayed Kirk to the Klingons; the Red-Shirts pulled his opponent to his feet.

Bob couldn’t hide a grim grin as he saw blood trickle from the man’s nose down over his jaw while the bruises began to blossom around his eye. Well, no one could take back the thrashing this guy received – a little payback for what Jim had been put through!

“You are accused of conspiracy against the United Federation of Planets and betrayal of Starfleet personnel to a hostile military force during wartime! You are also accused of illegal slave trade, procurement, and working for a criminal organization.”

Armstrong spat on the floor and gasped when one of the Red-Shirts pulled his arms back until they ached. “I don’t know what you’re talking about, man! I never met you before and…”

“No, you’ve never met me – but you’ve met one of my captains, and you had nothing better to do than tipping off the enemy as to his whereabouts for revenge because he protected your wife – more than you were willing to do!” Wesley snapped.

Armstrong threw his head back and laughed. “That boy intervened when he should have stayed away. As the Klingons arrived, he was captured – not my problem. If he is foolish enough to…”

“You walked to the Klingon governor of Turkana and betrayed James Kirk – his presence planet-side and his hideout! Don’t deny it! Lord Kor himself told me – the very same Klingon you informed about Kirk.”

Matthew glared at him and sneered, “You can arrest me all you want, but it won’t bring Kirk back from the dead. So…”

“Second error, my friend,” Wesley growled. “Captain Kirk is alive and safe aboard his ship – no thanks to you! But your little speech implicates you.” He glanced at the Security. “Arrest him and beam him to our brig! I’m sure court martial will teach him a lesson or two!”

He turned around and left, fearing his control would slip again – that he might do something to the guy that he would regret later.
The scene had become quieter in the meantime. Bob saw that the fighting had come to an end. The slavers and pirates putting up any resistance were mercilessly killed by the Klingons, and those who surrendered or were too injured to do anything were taken prisoner.

The Admirals headed towards Wesley; Kor followed them – apparently content with the outcome. Barnett watched a human male as he was handcuffed by two Red-Shirts. He looked back at a tousled Wesley and frowned, “I appreciate the personal touch there, Bob, but pray to tell, why did you beat that man into the ground?”

“He was the one who betrayed Kirk to us,” Kor answered in Wesley's stead. He found himself the new object of the Admiral's attention.

“You betrayed a traitor?”

Kor smiled a dangerous, crocodile grin. “You always love the betrayal, but never the betrayer! Kirk showed a lot of courage and was as strong as one of us. That man over there is a coward – and cowards have no place among warriors.” He smirked at Wesley. “You avenged your chosen son.”

“I arrested a guy who resisted arrest. That’s all.”

Barnett rolled his eyes and dropped the topic. They all knew the real reason for Wesley beating the crap out of the man. ‘Chosen son’ – an interesting interpretation of Bob's relationship with his protégée. Perhaps it was worth some considering, but not now. There were far more important matters at hand.

He looked Wesley up and down for a moment before he softly said. “You saved us. I can hardly wait to hear the whole story from you.”

The commodore smiled tiredly and wiped his sweaty forehead. “You’ll be shocked to hear it, sir.” He turned his attention to the Klingon. “Thank you, Kor. We succeeded only because of your support.”

“You didn't fight to badly yourself, Wesley – for a human,” he added with a smirk. Then he turned towards Barnett, who also turned his full attention finally to the unexpected assistance.
“Fleet Commander Kor, son of Ryan,” the Klingon introduced himself, pressing one balled fist against his chest.

“Admiral Richard Barnett, Chief in Command of Starfleet,” the admiral replied respectfully before he offered his hand to Kor. “I don’t know how it happened that you and Commodore Wesley teamed up or why you risked your men and yourself to come to our aid, but I want to voice my sincerest gratitude.”

Kor, familiar with the human gesture of greeting, took the offered hand. “Commodore Wesley and I shared a common interest: To find out the truth about the attack against the Excalibur. You lost lives; I lost my reputation. To use a Vulcan phrase – teaming up was logical.” He let go of the hand and added sharply, “And it was also a necessity to prove to the Federation that Klingons keep their word. We did not violate the ceasefire, and it will remain that way until the conference takes place or our governments jointly decide another course of action.”

Nogura and Morrow reached them, and Richard introduced them to Kor, too, before he said, “We overheard a discussion between our captors and learned that you weren’t responsible for the attack. And Commodore Wesley confirmed it. I’m glad that…”

“Kor came to the aid of the Enterprise when the imposter attacked the Excalibur using his identity,” Wesley cut in. He met the, again, astonished looks of his three superiors and added, “This had been proved, yet his government demands an explanation of the incident – the reason we met by accident at Yaska, the moon you were stranded on. We talked, realized that our goals were much the same, and built an alliance.” He looked at Kor. “We arrested D’nyrrs. What about Klokh?”

“He’s dead,” Kor growled, “killed by my dagger. My honor has been restored.” His glance found Barnett’s again. “I hoped that we two would meet under different circumstances. Battling the highest ranking officer of a hostile force is always an honor, but I must admit that the prospect of speaking with you outside of an offensive does pique my curiosity. I have met several fine officers among Starfleet, including Commodore Wesley here. He displayed courage, choosing to beam aboard my ship to win me over, only to save you and the survivors of the delegation. You should honor him, Admiral Barnett. If all commanding officers in your fleet were like Wesley – or even Kirk, who is as well, honorable and brave – the war might have been prevented.”

Barnett tried to hide his surprise at this little speech but failed – not least due to his exhaustion. It was Morrow who quipped, “Speaking of our fellow prisoners. Have they been all freed?”

Kor nodded and pointed towards the stage, but let his arm sink as he realized that a few of the former captives were heading his way. “No new injuries, and regarding the servants who had been enslaved, it’s up to you if you take them or not. I have no interest in them.”
“Oh my God!” Wesley burst out suddenly; his eyes widened. Following his gaze, the three admirals and Kor turned around and saw a Tellarit supporting another dressed in the shabby clothes of the enslaved servants. He was alarmingly thin, but beamed like a human child on Christmas morning. He was surrounded by a Caitian woman and humans.

Nogura lifted both brows. “What the hell…”

They watched as the Caitian woman pulled both Tellarits in her arms quickly followed by some Terrans in civilian clothing who carried weapons. And it made loud and clear ‘click’ in Barnett’s mind.

“Is this The Shadow?” he asked flabbergasted.

Bob nodded with a smile. “Yes, it was The Shadow who found your trail, Admiral; we have to thank them for that and so much more.” He beamed and nodded in the direction of the two Tellarits. “And it seems Galven has found his lost brother. Another story with a happy end.” The members of the militia made a lot of noise now, laughing and whooping. Every one of them shared Galven’s joy.

“Sweet!” Ania had reached the staff officers with Batari at her side.

Kor turned towards her and grinned, “Not as sweet as you, Beauty!”

The Betazoid woman stared at him and sensed that the adrenalin – if that’s what Klingons had – was still circulating in him after the battle fight, but also his growing lust as he stared at her. “Awww look – a Klingon with a thing for poetry,” she taunted with an extra sweet smile.

Chuckling Kor stepped beside her and wrapped one arm around her petite frame. “You bring the best out of me, vlghro’oy!” he said. Then he glanced at Batari. “And with another beauty nearby, any warrior would feel satisfied, especially after a great battle that led to their rescue.”

Morrow gaped at him. Was the fleet commander flirting with Lady Morganth and Mrs. Whitman? Wesley groaned and decided to take the wind out of the Klingon lord’s sails. “Kor, may I introduce Lady Ania Morganth to you, First Daughter of the Third House and Ambassador of Betazed.”
Kor froze, then his eyes widened as he looked down at the small woman who looked challengingly back at him. “This is…”

“The ambassador of Betazoid, yes,” Wesley nodded. “And the ‘other beauty’ is Mrs. Batari Whitman, Vice President of the United Federation of Planets.”

The Malaysian woman smiled at the Klingon who gaped at her. “It’s a pleasure to meet you, Milord,” she said charmingly and felt – despite her exhaustion and the fear she endured these last days – amusement rising in her as she watched the blood flow into the fleet commander’s cheeks.

Morrow and Nogura chuckled quietly while Barnett couldn’t help but grin at the view. A blushing Klingon! The universe never ceased to surprise him…

Jim smiled tiredly as he all but stumbled into his quarters after the most important work was done. Spock had offered to take the conn for the rest of the gamma shift – an offer Jim accepted gladly. He was tired, but happy as a cuddled and well-fed puppy. Well, he hadn’t been cuddled, nor had he eaten much in the last thirty-six hours, but he was very satisfied with the current situation. Spock and Chekov had programmed a probe that was already on its way on an entirely different course than the Enterprise. In three hours, it would begin sending the Enterprise’s regular warp signatures, and then the transmission would switch to the ion trail of a ship at impulse speed to emulate a ship suddenly unable to travel at warp speed. It would lure Styles to the probe, no doubt about it.

As soon as the probe was launched, Jim and Uhura sent a message to New Vulcan telling ‘Selek’ about the successful recovery. They also had prepared the records which would be transmitted by the second probe that would be launched in eighteen hours toward the Tholian Area that also lay in a different direction than their current heading toward New Vulcan. It wouldn’t fool Section 31 for long, but it would give Jim and the others the head start they needed to reach New Vulcan before Luengo figured it out. The crew was sure Luengo would move heaven and Earth to catch them.

And because Jim feared that Luengo would be on their trail far too soon, he ordered Uhura to send the elder Spock a message about their successful mission in secret. He thought of something to say that only elder Spock would understand. It wasn’t hard considering their strange relationship. When he was satisfied with the transmission, he left the bridge.

Yawning and stretching his body, Kirk got rid of his clothes and hit the shower. Nien was still in the room attached to medbay, watching his family closely. Jim had spoken with him several minutes ago, and even if Khan had offered to accompany him to their quarters – you couldn’t call Kirk’s private
room anything but now – Jim had seen that the Augment’s heart wasn’t in it. And he sympathized with his bond mate. Nien had been separated from his loved ones for more than two years, and asleep beside them hundreds of years longer. He had thought them twice to be dead, had seen their helpless forms in danger far too often. If he didn’t want to leave them now, even if they were safe, Jim could understand. But he missed Nien’s presence as he slipped under the covers several minutes later. He was used to feeling Khan’s warm, strong body beside him and sleeping alone now was unsettling.

Nevertheless, Kirk fell into dreamland almost as soon as his head hit the pillow, and he didn’t even wake when half an hour later Khan entered the quarters and prepared himself for bed. He wasn’t tired – an Augment required less sleep than a usual human – but he had felt Jim’s longing for his presence over their shared bond. After he had made certain that his family was safe, he had headed for Engineering to talk with a tired looking Scott. They discussed some enhancements with Keenser, who was surprisingly talkative. Then he finally walked to Jim’s and his quarters. Stripping, he joined his beloved under the sheets and gathered his bonded carefully in his arms, earning himself a grumble before Jim snuggled closer to him and continued to sleep.

Listening to the deep, slow breathes, Khan felt himself relax – content and at peace with his mate as he sensed the presence of his family in his mind. The hole left weeping in his subconscious for so long was finally filled.

Without realizing it, Khan dozed off, hoping that their luck would continue.

ST***ST***ST

On the asteroid in the Borderland, the Orion slave market had been cleared out. The pirates were dead or arrested; only a few of them and their customers had been able to flee.

It was a little longer before all the enslaved people who hid around the station were found and taken care of. While Jim Kirk was sleeping in his lover's arms, the freed captives were already in the care of the Lexington’s CMO, Dr. Daniela Albereth. And her staff had their hands full. There were the injuries from the delegation members. Traumatic injuries and poorly healed wounds that other prisoners endured for months and sometimes even years without proper, or any treatment. And there were the bruises and injuries the crew members had sustained during the battle to free them. The medbay was crowded as were the adjoining rooms, and it would remain like that for quite some time.

Despite their bruises, Barnett, Nogura, and Morrow stayed with Wesley in the station on the asteroid, as did Mrs. Whitman and Lady Morganth. They wanted to oversee the arrests. Several medical staff members had beamed down to treat those in urgent need of care before they could be transported. Wesley and Kor were satisfied as the Terran and Klingon staff worked hand-in-hand and treated members of the other one’s crew. ‘Allies ′til the last moment of parting,’ Barnett thought, still
shocked to see one of his staff officers and a Klingon fleet commander standing together and talking as though they were friends. Well, maybe this was the best way to end this war once and for all.

Finally, all survivors had been beamed up – the freed captives and former slaves to the *Lexington*, and the captured Orions and Romulans to Kor’s ships. Kor intended to bring them to the Empire because the Orions had violated the alliance contract and the Romulans had passed through Klingon territory without permission. Depending on the Chancellor’s mood, the Romulans would be handled as spies – not a very good prospect for them, but Wesley could care less. What Romulan Intelligence would have done to the admirals and the two Vulcans were far worse.

“All prisoners are in our brig, Milord,” K’tar reported, pressing his fist to his chest. Kor returned the greeting and exchanged a few words with his underling before he turned his attention back to Wesley, who listened to his own Chief of Security’s report. Afterward, the two men faced each other.

“I think the time for good-bye has finally come,” Bob said quietly.

Kor nodded. “Yes. I’ll return to the Empire and will give M’Rek a full report.”

Wesley frowned. “A full report?”

The Klingon lord understood what Bob was referring to and shrugged. “Well, it could be that the details will slip my mind – the Dark Warrior’s actual name or his heritage. But I think it would be wise to explain what happened within Starfleet Command. The concept of conspiracy isn’t foreign to us. There were several similar attempts in our Empire during the last decades. Maybe this shows the responsible politicians that we’re not so different as we thought – and that there are still officers within Starfleet who value truth and honor as we do.”

Wesley smiled at him. “I’m confident that you’ll find the right words. If you weren't such a damn good officer, I would suggest you begin a career as a diplomat.”

Kor gasped. “The Black Fleet take me first! As much as I enjoy a good verbal joust, the use of my mind and my fists are my primary nature.” He turned around as he heard steps nearing and looked calmly at the three admirals and the two women.

“Fleet Commander Kor, it was a pleasure and an honor to meet you in person,” Barnett said with a firm, but soft voice. “I must admit, I was shocked aboard the *Excalibur* when it appeared that the
attack was orchestrated by you. I began to doubt my knowledge of Klingon ways. I must say, I’m relieved to learn now that I wasn’t mistaken concerning you and Klingon integrity.” He offered his hand again. “My colleagues and the survivors of the delegation are in your debt, Milord, and would be pleased to meet you again – maybe during the conference.”

Kor closed his strong fingers around the more fragile human ones. “I’m looking forward to meet you again too, Admiral. Though it’s better if the chiefs discuss the important matters rather than a bunch of warriors.” He let go of the hand and glanced at Batari and Ania. With his commander's decorum intact and free of the battle's adrenalin rush, he reached for Whitman’s hand and gave it a kiss; perfectly aware of human politeness. “I hope you’ll join the next meeting. I’m confident that our Chancellor would love to discuss terms with you.”

Lady Morganth almost rolled her eyes but felt amusement as well when Kor dropped Batari’s hand and reached for hers. “The same goes for you, Milady,” he said. “I’d hoped that you would bring some radiance in the dim light of my ship. I pray I have the pleasure of seeing you again – hopefully soon.”

Wesley closed his eyes while Barnett tried to stay serious, but the edges of his mouth twitched. Both were aware of the flirtatious nature of Kor’s statement.

Ania smiled up at Kor; mischief sparkled in her eyes. “And I will not hesitate to tell of Klingon gallantry and charm. This is a side of your people we somehow missed until now.”

“In every fierce warrior resides a longing and appreciation for the true, beautiful, and good, Milady. Farewell until we meet again,” Kor replied, feeling, to his horror, heat rising in his cheeks. Thank Kahless none of his crew was nearby.

Bob realized that the Betazoid watched Kor from beneath her long lashes; interest shone in her eyes. Perhaps she wasn’t so reluctant to meet the Klingon lord again. Wesley almost coughed as he tried to stifle his laughter. If the two continued to dance around each other like this, the conference would take a fascinating turn – if the meeting took place at all now. The commodore figured it would if their current string of successes held out.

Kor heard the strange noises Wesley made and turned swiftly around to him. “My dear Wesley,” he said, and alarms began to ring in Bob's head. “Before we depart, there is a little thing we both must do,” the Klingon continued, and as he caught the confused expression on the human’s face, he added, “The D’Ghor!”

“Ah yes,” Wesley nodded. “Of course.” He raised his voice and shouted through the corridor
towards the members of The Shadow, “MR. GALVEN?”

Galven, who hadn’t separated himself from the other Tellarit for more than a minute, looked up, said something to his friends, and jogged with short, hard steps towards the little group. His eyes roamed over the three admirals and the two ladies. He bowed towards them and glanced up to Wesley. “Yes, Commodore?”

“Mr. Galven, it’s about time that we give the D’Ghor back to Fleet Commander Kor. As far as I know, Mr. Ritek was the only one who remained aboard. Is everything ready for delivery?”

The Tellarit grinned at him. “Yes, everything is ready.” He looked at Kor. “I never thought I would say this to a Klingon, but you guys are handy when it comes to combat, and you’re on our side for a change. The way your warriors handled the Orions was remarkable!”

Kor lifted both bushy brows. “And I never thought I would congratulate the leader of the gang that gave us trouble. You didn’t fight too badly – for non-Klingons.” He pressed his fist against his chest. “May your way be an honorable one.” He turned to leave but hesitated one little moment. “Oh, and by the way: I granted you free leave of the Borderland. That doesn’t mean that I’ll show you the same mercy if you ever return. At least as long as we’re officially allies of the Orions.”

Galven shrugged. “I found my brother – that’s all I wanted. And at the moment, you have none of my people captive, so there is no reason for us to return. There is a little problem though.”

Kor turned back towards him. “What problem?”

“The Santa Domingo is only atoms if you remember. If the good Commodore here doesn’t give us a ride, we’re stranded here.”

Bob rolled his eyes. “Be my guest. But I have to inform you that we can’t drop you on an outpost or planet in Federation area. We have to hurry now, as you well know.”

Galven nodded slowly. “You think the White Tiger will be in trouble?” he asked. Wesley needed a moment to realize whom the Tellarit was talking about.

“Yes, I think so – he and the others.”
Promptly, Galven straightened his stout frame. “Then we have even more reason to accompany you. I promised the lad to be there for him if he needs help, and I always keep my word!”

This time, Bob sighed deeply. “I knew you would say that.”

Barnett frowned in confusion. “Bob, care to explain what’s going on here?”

Wesley smiled almost sheepishly. “It's a long story that I have to tell you and the others. But first, I have to give Fleet Commander Kor his ship back. I suggest you beam to the Lexington now. The main work down here is done, and the Klingons will do the rest. After all, this so-called market is in their ally's territory.” He bowed his head politely. “Please excuse me for a moment.” He walked with Kor several meters away, before he pulled out his communicator and contacted Ritek. Eight more Klingons stepped beside them, and seconds later they vanished in the transporter beam.

Morrow closed the short distance to Barnett. “What the hell is going on here?”

“This, my friend, is a question I want answered!” He signaled Silverhawk to come closer and asked him to hail the Lexington. Wesley was right about one thing. It was about time to beam up.

Kor looked around. The D’Ghor was damaged from the battle, yet she was intact, and the Rigelian, Ritek had used the time between the end of the fight and now to clean up. A Klingon would never do this, yet Kor appreciated the respect this action showed.

“Everything to your satisfaction?” Wesley asked, and Kor nodded.

“Everything is fine,” he replied. “We have our ship back and you, your admirals, and delegation members.” He turned towards Bob and offered him his hand. “I hope to meet you again, Wesley – then maybe we can share a few drinks. I don’t want to face you in battle as I would regret killing you.”

“Well, then don’t – and besides, I'm not so easily killed,” Bob replied jokingly and accepted the hand before he became serious again. “Yet I think the time of our standing on opposite sides ought to
come to an end. In several days, this nightmare will come to an end, and Starfleet Command will be back in the capable hands of Admiral Barnett.”

“It is good you can still hope, yet much hangs in the balance.” He hesitated a moment, then he added, “Tell Kirk I’m still angry that he managed to escape, yet I’ve come to know him as an honorable warrior. Maybe we can compete in the future.”

Bob knew of the Klingon culture enough to realize that Kor was complimenting Jim, and smiled. “I will pass him your message.” He opened his communicator and hailed the Lexington. “Transporter room, has everyone been beamed back?”

The answer came instantly. “Aye, sir, all crew members, survivors of the delegation and freed captives. Also the members of The Shadow are aboard. I await your instruction.”

“Remain on stand-by. Wait for my signal to beam Mr. Ritek and me aboard!” Wesley ordered; he got the affirmation and looked at Kor one last time. “Honor and success, Milord!”

“Honor and success, Commodore!” the fleet commander replied; he nodded at Ritek and then Bob gave the signal to beam them away. They vanished in the golden, sparkling light of the transporter.

Kor took a deep breath – it smelled strange here. It was about time that the good Klingon scent was restored in the spacecraft. But first, there was something more important to see about.

“Kerth, come with me!” he ordered. He left the bridge and headed to Engineering. The D’Ghor had this new sensor disturbing mechanism attached to her systems. Kor had seen this device in action, had gotten the read-outs on the bridge as they neared the asteroid – and he was eager to have a closer look at it! He was almost disappointed that Wesley hadn’t thought about this detail – a detail that was a critical and about to be analyzed and neutralized.

He stepped into Engineering, headed into the direction where he had seen the device during his inspection after they retrieved the scout from Turkana, and stopped dead in his tracks. There, where the strange device had been mounted – there was only hanging wires and exposed mounts.

“WESLEEEEEY!” he roared, then his flaring anger changed into amusement! Of course the human had thought about this little detail. He should have known that. Underestimating Robert Wesley was a mistake.
Kor pressed his fists into his waist and glared at the empty spot, then the voice of one of his officers sounded from the bridge, informing him that the *Lexington* had passed by and increased to warp speed.

And once again Kor gave into his amusement, this time, mingled with respect. Bending his head, he roared with laughter. “Wesley, you clever… This time you got me, but we’ll see each other again!” He caught the confused glance of his companion, shook his head and left Engineering. ‘Til next time, Commodore!’

---

Barnett waited for Wesley in the transporter room. A Red-Shirt accompanied Ritek, who suffered from several bruises and a burn, to medbay. Bob headed to the bridge; he learned from the admiral that the others and the two women were in medbay, too.

They reached command central, and Bob instantly ordered their course to Earth, maximum warp. Sonik nodded and set the controls for warp six, having set that course already hours ago.

Barnett took a deep breath making his chest ache where three ribs were broken, but he couldn’t go to medbay to be treated just yet. There were too many important things he had to do first. “We’ll go home,” he said, but there was no relief in his eyes; only wariness. He knew what lay ahead for him and the others. They had to arrest the traitor who wanted them dead, and to do this they had to arrive on Earth without alerting him or her, or they’d risk the traitor vanishing or worse – the traitor may try to destroy the *Lexington*. If this man or woman – maybe alien – had been able to hire pirates to assault the *Excalibur*, he or she could do something similar again to eliminate the *Lexington* and everyone aboard.

Bob nodded in silence understanding; then Commander Marceaux stepped towards them. After greeting the admiral respectfully, he reported, “Sir, we've received a message from the *Enterprise* to Starfleet Command, but Lieutenant Uhura transmitted it to us for our information.”

Wesley felt tension rising. “And?” he prompted, inwardly praying the young officer had made it!

“It says, ‘Starfleet Command, this is the USS Enterprise. Given order fulfilled, Gamma 12 has been destroyed. Bringing the evacuees to safety. Enterprise out.’

Barnett’s eyes widened. “Gamma 12 was destroyed – by the *Enterprise*?” His voice was a little too
Bob nodded again. “Yes, Command gave the order to destroy four of our high security facilities – a precaution, because the SBI fears that a Klingon attack is imminent.”

“But… Kor is responsible for this area here – and he helped us!” the Chief in Command stated utterly thunderstruck. “And to destroy four of our high-security facilities… That’s insane! The amount of data, material, and equipment lost…” He stopped, as something gnawed at the edges of his mind. He was one of the very few people who knew that the Augments were held in Gamma 12 and…

He felt his face pale. They may be genetically engineered, but these people were *humans!* And whoever gave the order had practically *murdered* them. Did Kirk know? Who gave the order? Who was responsible for all of this? How was it that Bob was here? How was it that The Shadow had searched for them? Why had Wesley come alone, needing to ally himself with Kor to end the rescue mission successfully instead of bringing half of Starfleet with him? Was Command in the hands of a madman, or what?

Barnett looked sternly at Wesley. “Bob, as much as I appreciate the efforts of you and the others in saving our lives, I want answers – now!”

Bob sighed. “I understand, sir. Please accompany me to my quarters. Commander Marceaux, you’ve the conn. Look out for slavers, but with the SDD functioning, we should be invisible to their sensors. Hail me if our scanners pick anything up out of the ordinary.”

“Aye, sir!” Marceaux nodded, then Wesley made an inviting gesture to the turbo lift. “After you, Admiral!” He looked over his shoulder. “Lieutenant, hail the other admirals in medbay, as well as Mrs. Whitman and ask them to join us, if their health allows it.”

The comms officer nodded. “Aye, aye, sir!”

The lift doors had barely closed, when Barnett blurted out, “You have the SDD installed onboard?”

“Yes, Mr. Brendon gave the plans to me when he learned about the upcoming recovery mission.”

“So he knows what’s going on here? That there is – a conspiracy within Starfleet? A civilian?”
Richard was startled – and it wouldn’t be the last time in the next hour.

Wesley sighed. “Yes, he knows. To tell you the truth, he is one of the bright minds who figured out the conspiracy by identifying the implicating details of the attack against the *Excalibur*.”

The turbo lift came to halt and they stepped out on deck five. Barnett stared almost horrified at Bob. “You are telling me that a civilian not employed or contracted by Starfleet has access not only to internal Starfleet information but details? Top secret information?”

“No, he has no access – he was there and was able to connect the dots faster than we could and without the bias. He got the signs right leading us to the only conclusion that truly makes sense. But I think we should discuss this with the Morrow and Nogura, and of course with Mrs. Whitman.” They entered the captain’s quarters, and Wesley added quietly. “Sir, you and the others may be here – rescued, but you’re not safe yet. None of us are, because of one fact – Section 31 has picked up where they left off – and now the head of 31 is in charge of Starfleet Command.”

The color left Barnett’s face. “You’re saying that Command is now tainted by Section 31 up to the top officers?”

Bob nodded as he offered the admiral a chair in the living room. “Yes, sir – and the man in charge is more clever than Marcus was and more dangerous. He planned everything to ensure his position in the fleet.”

Wesley ordered three cups of hot, steaming coffee from the replicator and two green teas. Seconds later, Batari Whitman, Nogura, and Morrow arrived. Komack had to remain in medbay. He was out cold and being prepped for surgery.

Barnett told them quickly what he had learned from Wesley up to now, and Morrow whispered astonished, “So it’s true, what we heard between one of the pirates and their Klingon ally. One of our own was responsible for the attack against the *Excalibur*, and... And he wants all of us dead.” He swallowed. “Do you know who this man is, Bob?”

The Commodore took a deep breath. “All evidence points to the Interim Chief of Command – José Luengo.”

Batari made an odd sound in her throat; Morrow’s jaw hit almost the floor, and Nogura’s eyes widened. Barnett gasped before he blurted out, “Interim Chief of... But Luengo was under
investigation! He's accused of….”

“Sorry, sir, but all accusations against him are on ice for now,” Wesley interrupted him softly. “After our most important admirals, you, were declared dead, Starfleet was impaired, and Federation territory was in danger of being annexed by the Klingons because Starfleet was too incompetent to carry out her duty without her leading staff officers. Luengo is the head of the SBI, and he's got the most time in Starfleet service. He was the logical choice. Being the chief of Starfleet Intelligence gave him all the advantage he needed to reshuffle the deck to his advantage. The traffic accident that Captain Heldron and his first officer were involved in just hours before the Excalibur’s launch bears the hallmarks of Section 31 from a year ago – and it was most certainly initiated by Luengo. He is the only one with enough power within and out of Starfleet to pull the strings needed to make certain that a captain of his choice would command the Excalibur and did as he ordered.”

The three staff officers were frighteningly pale; Nogura sipped at his tea, trying to hide his shock. Whitman whispered, “Do you know what you’re saying, Commodore?”

Wesley nodded and looked at her. She was ashen beneath her tanned skin; wrinkles had buried themselves around her tired eyes and her usually soft lips. “I asked Kirk the same question,” he murmured, “And he said conspiracy – a big one. One we have to stop.” He watched the other three men and added, “Styles is part of it too.”

“Styles?” Nogura whispered. “He belongs to…? Good god!”

“Kirk?” Whitman asked. “James Kirk of the Enterprise? What does this have to do with him?”

“He was one of a small group of people who found out about the conspiracy,” Bob informed her and the others. “Kor came to his aid near Briar Patch at the same time the Excalibur was attacked by a Klingon, pretending to be Kor. Pure coincidence, no doubt, one Luengo couldn’t calculate, yet this little detail thwarted Luengo’s plans. The fact that Kor obviously couldn’t be in two places at once made the Council suspicious, and they demanded an investigation before a decision could be made concerning the cease-fire. The president ordered a red alert for the fleet but kept the ceasefire in place. He demanded answers from M'Rek which led to Kor and I meeting at Yaska – coincidence, too.”

“And what does Kirk have to do with it – I’ll ask again?”

“Kirk reported that Kor came to his assistance about the time Kor had attacked the Excalibur. I knew both reports couldn't be true,” Bob answered Nogura’s question. “I sent the records from the Excalibur’s bridge to Kirk, and his investigation showed the grave errors Styles made during the battle – errors not even a novice would make, never mind a well-trained officer ready for his first command.”
Barnett frowned. “An unusual move – passing off the investigation to Captain Kirk.”

“Kirk has an incredible staff. Lieutenant Uhura is a xeno-linguist specialist – the best in the fleet. She identified the accents of ‘Kor’ who spoke with you – this Klokh that Kor killed – and the real Kor. Mr. Scott is an engineer, unlike the world has ever seen. It was him who found out that a ship as crippled as the Excalibur purported, can’t travel at warp three for an extended period of time, yet this was exactly what she did after you were left behind and Styles fled – straight to Federation territory. And even more confusing is the fact that the Klingons damaged the Excalibur, yes, but they didn’t destroy her or even make the attempt to. Another unbelievable fact is that the Excalibur wasted nearly all of her phaser energy and most of her torpedoes without destroying one bird-of-prey. All three Klingon ships were still fully functional as the Excalibur ran down her weapon stores. Pretty impossible, don’t you agree?”

“Styles missed on purpose – or his helmsman, I mean?” Nogura asked baffled.

“Yes, apparently,” Wesley affirmed.

Barnett blinked. “What do you mean exactly with this all, Bob? Styles is…”

“Styles acted on Luengo’s command. All you witnessed on the Excalibur’s bridge during the battle, Admiral Barnett, Styles’ concern for your safety, his surprise at meeting the Klingons in Borderland despite the declared cease fire, his orders – it was all one big show! Styles is Luengo’s man – young and inexperienced but eager to climb the ladder – and without scruples. He was the perfect candidate to execute Luengo’s plan to get rid of the admirals who’d never allow Section 31 the comeback he envisions.” Wesley glanced from one admiral to the next. “Styles played a dirty game. He knew about the attack, and he sent you and the others out to certain death.”

“He followed protocol,” Morrow murmured and sounded almost helpless in his troubled state. “To evacuate…”

“Yes, sir, I know the protocol, but to send the shuttles out without distracting the enemy is a death sentence for the people in the shuttles. He did everything protocol demanded, but he did it either too late or in the wrong order – little details which led to his success. Well, almost, seeing that at least you and some of the ambassadors have survived. The way Styles acted was carefully calculated – brilliant even. I would congratulate him for his cleverness if it weren’t so sad that he is ruthless enough to kill his superiors and those who were under his protection just to gain position.”
Morrow moistened his lips. “Do you have proof of all this? Please don’t get me wrong. I believe you that you’re convinced of what you’re telling us, but…”

“The records from the Excalibur’s bridge gave Styles away. It wasn’t just Kirk and his officers that came to this conclusion; I realized it after I saw the details too. I’ll show you; please follow me.” He stood and walked to his desk, the three admirals and the vice-president on his heels. Opening the files, Wesley showed them exactly what he had explained, stopping the records here and there to point out Styles’ deliberate errors.

As they returned to the living room, the three admirals and Whitman were silent for a little while – too shocked to say anything. Finally, Barnett collected himself and murmured, “I have to admit that I concur with yours and Kirk’s theory, Bob. Styles betrayed us – tried everything to get us killed.” He gulped. “This shakes me to the core. We had breakfast with Styles only a few hours earlier and…” He shook his head. “If Kirk hadn’t figured out what was going on, we’d be in Romulan hands and…” He made a fleeting gesture with his left hand.

“My God, what is it all for?” Morrow whispered. “Why… why the attempt to kill us?” He looked at Richard. “If Luengo is really the one behind this – and I agree with Bob that all evidence points to Luengo – then why? And the ambassadors and…”

“Because it was the only way to kill the ceasefire. Starfleet was weakened because of our demise and agreeable replacements for us had to be found and promoted as quickly as possible – in this case, Luengo,” Barnett grasped the idea. “The war would have continued – more fiercely than before if it weren’t for the incredible coincidence of Kor coming to the aid of the Enterprise while the Excalibur was under attack by the imposter. Starfleet needed to be strong, and the only way it seemed is with Section 31 to return to the forefront, this time as the savior. Remember, Marcus was of the same opinion that Starfleet should be a military organization rather than dedicated to exploration. He lived for this idea and formed Section 31 with that in mind. He still has fellows – and Luengo is among them. I realized that possibility when he allowed the Augment, Khan, to be handed over to the labs.” He glanced back at Wesley. “And how you ended up with Kor as your ally – and with another SDD installed aboard the Lexington?”

“What?” Nogura gasped. “You have the SDD aboard?”

“What is a SDD?” Batari cut in, and it was Nogura, who filled her in before the commodore answered the admiral’s question with a little smile.

“Yes, we have a SDD aboard. Mr. Brendon gave the plans to me when he learned of my upcoming mission to recover you,” he said calmly. And then he began to explain how he met Kor and how they teamed up to fulfill their missions which were intricately connected. He also told about the deal concerning the D’Ghor and that he pulled the SDD out before he returned the scout to the Klingons.
His listeners’ expressions changed from mortified to surprised, from shock to confusion, from relief to tension again. Bob knew that it was hard for them to hear all of the surrounding circumstances – to realize that not only their lives but also the life of Starfleet depended on two enemies becoming allies – overcoming hostility and prejudice. They built a team that prevented the war from starting again.

And then he finally came to the end. The three staff officers were silent again, and Batari shook her head slowly. “You have to think this through, gentlemen. The war is only at a standstill now because leaders from opposed sides worked together. I know the Council will throw up their hands just hearing that one of our Commodores was chatting with a Klingon warlord aboard his ship – making an ally out of an enemy. But perhaps you have to be a little crazy to overcome the insanity around you.” She glanced at Wesley. “What you did, Commodore, was great politicking at the highest level possible with an excellent outcome. Congratulations. I think the president will be very pleased as soon as he learns about this.”

“What I don’t get is why the D’Ghor was hidden on Turkana and how she got the SDD at all,” Morrow murmured, again confused. “I read your report, Bob, that she was seized by The Shadow and bought our fleet time to reach Tammeron before the Klingons could destroy the planet. How did she end up on Turkana?”

“The Shadow had an active part in recovering Kirk when he was held captive by Kor,” Barnett thought aloud. “Really, it was this guy, Sunrise, who saved Kirk, and of course he needed the SDD to reach Turkana without being caught. So he…” He stopped, and his eyes widened, as the thought made almost audible ‘click’ in his mind. “Sunrise… Don’t tell me – Evan Brendon is Sunrise!”

“Sunrise – this mysterious man who played a part in the rescue of Kirk, Tammeron, and Aldebaran?” Batari asked. Morrow nodded curtly as Wesley smiled sheepishly. “Yes, sir, Sunrise is the designer of the SDD,” he admitted. “And he is indeed aboard the Enterprise.”

Barnett let his head sink. “I should have known! This Sunrise is a dare devil and a brilliant strategist. Otherwise, he wouldn’t be able to do what he did. It only fits that he is the one who developed the SDD.” He looked back at Wesley. “You could have told me that when you introduced the concept of the SDD to me.”

“I apologize, sir, but Sunrise is very strict when it comes to his identity. The name Evan Brendon is a pseudonym, too.”

“Why I’m not surprised?” Richard groaned, shaking his head.

“Right, Sunrise is still Mr. Unknown, but what I want to know is how we’re going to proceed when
we reach Earth,” Nogura mused. “We have to stop Luengo before he causes even more damage, although I don’t think he’ll let us just walk in and arrest him.”

“I agree!” Whitman said. “We have to inform the President and the Council in advance. Luengo has to be stopped and if President Robertson knows about it he can…”

“Ma’am, Luengo has ears everywhere,” Bob interrupted her gently. “His department has the best in Intelligence. There is truly nothing he will miss. He will learn too soon that his plan has failed – that you and the admirals are still alive. It will force him to act. And regarding his ruthlessness, I fear that the attempt to arrest him would end in blood. We must to operate in secret, and we have to protect Kirk and his crew because he and Sunrise have all the necessary evidence that a tribunal will need to lock Luengo and his associates away for the rest of the lives.”

Barnett tensed. “Does Luengo know that Kirk is hot on his heels?”

Again Bob nodded. “Yes, Luengo is very aware of the fact that Kirk saw through him. And he has to stop him before Kirk can tell everything to the Council.”

“Where is Kirk now?” Nogura asked, apparently concerned.

“He is on his way to New Vulcan. The Vulcans have accepted his request for assistance. I mean they’re giving Sunrise and… other people asylum. Selek of Vulcan knows everything and promised to back us.”

“Selek gave Sunrise asylum?” Barnett asked. “Why?” He bent forwards. “What is it that this guy has to hide behind phony names and requests asylum from the Vulcans? Did he kidnap the Queen of England, or what?”

Wesley couldn’t help himself; he had to smile at this suggestion. “No, sir, not the Queen of England – and not even her crown jewels as a certain Vulcan we all know has assured me, as I asked him something similar.” He collected himself for the revelation that lay ahead of him. “Sunrise is a wanted man,” he admitted, “one, who hadn’t gotten a fair trial and is therefore on the run. But this is not the reason why Section 31 wants him. Luengo knows who Sunrise is and that he is aboard the Enterprise. Sunrise is a threat to Section 31, but together with Kirk, the two are Luengo’s worst nightmare. The order to destroy the high-security facilities was a trap to catch them both – only Jim was too clever and escaped.”
Four very puzzled faces looked at him. “Why does Luengo want to capture this Sunrise? Hell, if this man is a criminal then that’s a matter for the police, not SBI – or whatever’s left of the SBI now. What’s so important about him besides the fact that he not only saved Kirk, and the whole population of Tammeron, and helped during the Aldebaran crisis? What does all that have to do with the authorities? And why try to capture Kirk and Sunrise by ordering the destruction of four of our high-security facilities – especially Gamma 12?”

“Because Gamma 12 held something Kirk would never destroy knowingly – or better said, he’d never kill knowingly.” He looked straight into Barnett’s eyes, which widened.

“You know what Gamma 12 had inside?” Richard whispered, flabbergasted.

“Yes – and I’m more than relieved that Kirk was able to recover them before he dutifully destroyed the facility.”

“May I ask what you two are talking about?” Nogura cut in.

Richard sighed. “You and the others don’t know about it because it’s top secret. And that you, Bob, have it all figured out – it almost gives me a headache, but on the other hand it seems that your and Kirk’s knowledge saved seventy-two people who would have been murdered otherwise.” He shook his head. “I don’t want to think what Khan would have done if the Enterprise had atomized the facility with his people still inside. They are Augments, sure, but they are still sensitive, living beings!”

“One moment, please!” Morrow cut in. “What do you mean with ‘Augments’? And who is Khan?”

“Yes, I want to know about this, too!” Batari said while Noruga frowned, clearly puzzled.

Barnett sighed quietly. “Ma’am, Heihachiro, Harry, I know that you weren’t informed of the true backgrounds that led to the attack against the London archive and Daystrom.” They stared at him and he continued, “Commander John Harrison – the rogue agent responsible for Daystrom – never existed. And he also wasn’t killed during the incident either. It was a cover name Marcus came up with. In truth, this man was Khan Noonien Singh, an Augment from the twentieth century. Marcus found in an old sleeper ship from that time. He pressed Khan into service – into Section 31’s service! – and eventually all hell broke loose.”

The Malaysian woman stared at him. “Khan… Noonien Singh?” she asked, baffled.
“Yes,” Richard said. “You’ve heard of him?”

“O…of course. I’m very interested in the history of Asia. He – he was incredible.”

Wesley smiled inwardly. ‘That description fits!’ he thought, realizing that he maybe had found an ally in the vice-president concerning Khan.

“One moment,” Nogura said, horrified. “You are telling us that Alexander found sleeping, three hundred-year-old Augments and used one of them for his purpose? He pressed one of them into service? How?”

“By threatening his crew’s – his family’s lives. Marcus blackmailed him – ran tests on him which were nothing less than torture. Khan snapped – and ran amok,” Wesley said. He explained in the next minutes what happened to the former dictator while he was held by Section 31. Barnett, who was the only one except for Bob, who knew about Khan and his people, listened carefully and felt sick to his stomach as he learned the details regarding the enhanced man. The three other shell-shocked listeners were silent during the commodore’s tale.

After Wesley had finished, they stared at him, paled, horrified, enraged. But it was Barnett, who finally murmured, “There are details I had no knowledge of, and I ask myself how it is it you know them.” He glanced quickly at Harry and Heihachiro, as he said, “By the way, Khan fled four months ago. He wasn’t brought to Gamma 12 like the rest of his crew, but to the LSH lab in Nevada – without my knowledge. Norton was responsible for it, and Luengo ignored the Council’s decision concerning Khan, allowing the LSH to use him as a lab-rat.” He glanced back at Wesley. “As you see, not even the admirals or even the vice-president was informed about this – but you know more about Khan than I ever will. How?”

“And why was Kirk ordered to kill the other Augments?” Nogura asked the next logical question.

Wesley took another, much needed deep breath. “Ma’am, Gentlemen, what I’m going to tell you now will certainly startle, maybe even outrage you, but please hear me out. Only then will you be able to understand everything completely.”

The Chief in Command exchanged a quick glance with the two other admirals. “Why do I have this feeling that this is another thing we’re not going to like?”
“Because life experience has taught you well, Richard,” Wesley replied.

“And this little compliment has me on alert, Bob,” Barnett deadpanned while Nogura and Morrow bent forwards in an instinctive reaction to a secret about to be spilled.

The commodore steeled himself. “Well, to say it plainly, I met Khan several days ago.” He saw the alarmed expression on each face. “And I know where he is and what he has done since his escape…”

ST###ST

Outside the captain’s quarters a yeoman passed by carrying a tray with refreshments for the two ambassadors who had been dismissed from medbay and were resting in their guest quarters. The young woman nearly jumped two feet as she heard a shrill shout loud enough to pierce even the sound proof bulkheads.

“Sunrise is KHAN?”

TBC…

Chapter End Notes

Poor admirals. Frist they were attacked, stranded, kidnapped, sold, rescued in the last minute and now they’ve to learn that one of the most wanted men within the Federation is the secret hero at Jim Kirk’s side. Laugh, this had to shatter any officer’s control. And they don’t even know the whole story, what will begin to make them doubt their minds – or their belief of right and wrong.

Sorry that there was only a small part concerning Jim and Khan, but the rescue of the surviving delegation members is very important for our boys and their friends.

In the next chapter the admirals will learn of the rest, and Batari Whitman will go to The Shadow to learn more about the man who once ruled her homeland three centuries ago. The trap Jim set up for Styles begins to work, you’ll meet Sulu again and then… Well, then one of Khan’s crew will be endangered. More I don’t want to reveal.
I hope you liked the new chapter, including Wesley’s and Kor’s interacting, the ‘blushing Klingon’, and the talk at the end.

Have a nice weekend,

Love

Brothers in arms

Chapter Notes

Hi, my dear Readers!

I’m so, so happy to have gotten all those lovely reviews and kudos. Thank you so much; I’m going to answer them during the evening (German time), but just right now I’m off to my shop and afterwards we (my family and I) still have to fix the garden. The weather is warm and beautiful in the moment, and we’ve to take the given chances to change this green jungle into something more civilian (laugh).

But I didn’t want you to wait longer for the next chapter dear Rhiannon went through to smooth out my errors. Be warned, the second part of the chapter will be the beginning of a next round of ‘biting fingernails in anxiety’.

Have fun,

Love

Yours Starflight

See the end of the chapter for more notes

Chapter 62 – Brothers in arms

“Sir, the long range sensors are picking up the warp signature of the Enterprise,” the Excalibur’s science officer Commander Ben Taylor reported. His eyes stared at the readouts of the sensors he had adjusted to scan for the Enterprise’s warp signature since the flagship disappeared.

Styles had first asked the course the cruiser could have taken given the direction that the discus segment had pointed to before the ship went into warp, but without any results. Taylor knew that his captain was pressed to find Kirk as soon as possible. Command wanted to get hold of the Enterprise and her officers for whatever reason. Taylor, as most other senior officers, didn’t believe that Kirk, of all people, went rogue, yet none of them dared to voice these thoughts. The mood aboard the Excalibur had drastically changed since the assault within Borderland and especially since they received the order to seize the Enterprise.

Styles hadn’t said much after he went to his quarters to contact Command; he returned a quarter hour later to the bridge tense, pale and furious. You didn’t have to be a genius to figure out that Styles was taking this turn of events personally, and Taylor asked himself what had happened between his new captain and Kirk that Styles was so intent on catching him.
The order to scan for any warp signature hadn’t made sense to Taylor, after all, the Enterprise had a new testing device aboard that prevented any sensor from reading her. Styles had informed him and his first officer of it of only reluctantly, but it had been necessary to fulfill the mission. Now it seemed his commander had been right to adjust the scanners. The readouts were clear. The Enterprise was running at warp 3 only a parsec away from them, almost out of the long range scanners. Apparently, this new device had been switched off or had a malfunction. Whichever it was, in the end, it didn’t matter. The Excalibur had found the trail of her sister ship and Ben knew that Styles would be after Kirk like a bloodhound.

“Send the coordinates to the navigation stations!” Styles ordered sharply. “Kramer set course for interception! ETA?”

“Given our current capable speed of warp 6, we’ll reach her in 8 hours and 52 minutes, sir,” Kramer answered.

‘That long!’ it shot through Lawrence mind. ‘Dammit!’

He pressed the button in his armrest. “Bridge to Engineering. We need more speed!”

“Sir, you know the status of our engines. Warp 6 is the max I can provide you with.”

Lawrence gritted his teeth. He was aware of the engines’ condition. That they were able to travel at warp 6 at all was almost a miracle. The Klingons had done a good job getting the big show going – almost too good given the ship’s current status. “Right. Do whatever you can to get more from the engines. Bridge out.” He turned around to Li. “Lieutenant, report to Command, Admiral Luengo in person: Enterprise warp signature indicated by scanners; commencing pursuit; will rendezvous nine hours.”

Li nodded and made the transmission ready, asking himself once again what the hell was going on here.

Styles leaned back in his chair. ‘Whatever went wrong on your ship, Kirk, you’re no longer invisible. I’ll get you! And then even your Augment friend will not be able to protect you – or himself!’

ST***ST***ST
Jim stirred as the intercom sounded and Spock’s deep voice called for him. Groaning, the young captain tried to open his eyes – an immense and futile effort. Moving was almost impossible. There were simply too many places in and on his body where it hurt, and he felt as if he had slept only a few minutes. Again the Vulcan hailed him, and Kirk blinked into the darkness only to sense a movement beside him and a comfortable warmth that he was only now aware of – because it was gone. Several moments later he heard another familiar voice – a similar baritone but with a rich overtones.

“Khan here. Mr. Spock, the captain is not available at the moment. REM sleep prevents him from waking.”

On the bridge, the first officer lifted a brow. He knew that humans required periods of deep sleep to restore energy and that they sometimes were unable to wake fully when they were in the REM phase. The human in Spock also felt something else – understanding and sympathy. Jim had not slept in over thirty hours, had been under a lot of stress, and his body sustained injury from the hand-to-hand combat with Finnegan. It was logical to let him rest, even if Kirk had ordered that he be informed the moment the probe began its transmission.

He answered, “Mr. Singh, please notify the captain after he wakes that the first probe began transmitting the Enterprise’s warp signature fifteen minutes and forty-three seconds ago. We have already intercepted a transmission from the Excalibur to Headquarters. The captain’s plan worked, Captain Styles is on his way after the probe.”

Khan smiled. Jim had explained the plan of laying out a misleading trail when he came to the compartment where the other Augments lay sleeping before he went to bed. Nien had approved the bright idea – an idea so typical for his bond-mate. Hearing that the plan had been successfully enacted and meant safety for the Enterprise while they raced to New Vulcan was calming.

“I’m glad that the mouse is going after the cheese. I’ll tell Jim after he wakes up, Mr. Spock. Khan out.” The Augment switched off the intercom and returned to Jim’s side. For a moment, his gaze lingered on the golden figure he could see only because of his enhanced sight. Then he slipped back under the blankets. “Did you understand what Spock said?” he asked, already knowing the answer.

An unintelligible murmur was heard, and Nien wasn’t aware of the tender smile that spread over his features. Pressing a kiss on Jim’s bare shoulder he settled back into a comfortable position beside his beloved and wrapped an arm around him while his mind was already busy calculating their new options as well as thinking about how to increase the ship’s speed.
At the same time, Wesley sipped at his second cup of coffee while Barnett had poured himself a Saurian Brandy. Morrow and Nogura nursed their own glasses of alcohol — not exactly typical behavior for men in their position, but technically they were no longer officers of the fleet since they had been declared dead. They were in no shape for duty anyhow so no one could blame them. Even Batari Whitman had accepted a glass of whiskey, feeling a particular need for a drink.

Richard stared into the dark, golden fluid in his glass as Bob’s words rung in his mind. All that happened last year and the month before the disaster with Section 31 sounded like some sort of half spy, half horror book.

He had always known that Alexander Marcus was more ambitious than was good for him — that he would to do anything to reach his goals — at the expense of anyone. Barnett never thought that Marcus would stoop to torture and murder though. Marcus proved that when he opened fire on the Enterprise in an attempt to murder her crew, but what he had done to Khan and his people was beyond imagination. Despite everything the Augment had done afterward, Barnett could not deny that he felt sympathy, maybe even empathy for the engineered man. He could understand why Kirk had decided to help the superhuman, yet the command team of the Enterprise, the most senior officers, and even Bob Wesley had not only bent but completely decimated dozens of laws to a degree that made him dizzy.

Batari Whitman’s thoughts went into an entirely different direction. She hadn’t known the real reason for the attack against the London Archive and Daystrom last year. She didn’t know about the Augment’s existence until today. She assumed that the files concerning Khan were locked away and belonged to those documents she only would gain access to if she were to take the president’s place. Hearing that a real Augment from nearly three hundred years ago was partly responsible for the mess — and a victim of it — had rendered her speechless while Commodore Wesley revealed everything to her and the three admirals.

And above all, it wasn’t a casual Augment — if you could call a superhuman ‘casual’ at all. No, she had read about him in books. She always had a thing for history and therefore she had, of course, stumbled over this man’s actions before and during the Eugenic Wars.

Whitman pursed her lips the murmured, “Khan Noonien Singh – incredible that this man not only still lives, but has become one of today’s war’s heroes.” She found herself in the focus of the four men and added, “In Earth’s history his role is a positive one. He closed the gap between wealthy and poor and he stopped the crimes in Asia. Murder and rape had been a daily occurrence in these countries, and he put a stop to it. He built schools for children, enacted fair pay systems, and protected his borders when other Augments rebelled.” She took a deep breath. “Out of all the Augments, he and his allies were among the most peaceful ones, though most stories from that time were lost in the chaos of the Eugenic Wars and later in World War III.” She smiled. “I must admit that I’m looking forward to meeting him in person.”
Barnett’s jaw dropped for the uncounted time within the last two hours. “You… you admire him!” he blurted out; forgetting to whom he was speaking.

Batari lifted one elegant brow. “This surprises you? He was a colorful character that Asia loved. At least this is what the literature says; how history has captured him. And now he’s steering the outcome of the war in our favor, trying to help and to protect those who are in need – just like he did back in his first time.” She looked from one man to another. “Don’t you see, Gentlemen? If it weren’t for Khan, Tammeron would have been destroyed, and the Aldebaran system would have been annexed. The Klingons would have never agreed to a ceasefire and a peace conference if they had gained victory in those two battles – battles whose outcome were steered by Khan and The Shadow.” She glanced at Wesley. “And without him, one of our finest and most promising captains would be dead now – tortured to death by the Klingons. Kirk is still very young, yes, but he's done things in his two years of command that other captains take a lifetime to achieve. The Federation – Starfleet! – needs a man like him.”

“Yes, this boy must have a deal with lady luck herself for him to come out alive from the situations he gets himself into. And Khan did fight alongside with us, even from the shadows, yet he is one of the most wanted men in the whole Federation. And Kirk hid him! That… that is beyond believable!” Barnett murmured.

“Yes, and if Kirk hadn’t gone above and beyond and worked with Khan, the Federation would be one step away from complete failure and all-out war,” Whiteman said sternly. “None of you, gentlemen, can deny that Kirk and Khan have played a significant part in the bringing this conflict to, perhaps its end. And I mean that we all are still among the living and free because of them and Commodore Wesley here. Last but not least, we all owe them our lives – and if we stop Luengo soon, Starfleet and the whole Federation can thank those two for standing up to Section 31 and saving the fundamental rights of all members of the Federation.” She cocked her head. “I don’t know how you Admirals regard this, but in my opinion, those two and the rest of the Enterprise crew, as well as Commodore Wesley, deserve a medal, not court martial.” She looked down at her lap. “Yet I know that it may be unavoidable.”

Richard nodded slowly; regret shone in his eyes. “I understand what you mean, Mrs. Whitman. I have no other choice than to suspend Kirk from duty – at least until his and Khan’s cases are settled,” he murmured. “Khan did kill several people last year; that has been brought before the court. Yes, I agree that we all owe him – and Kirk – a lot. Without them, we would be still at war with the Klingons. But they bent and even broke laws. Khan by his deeds last year, Kirk by covering for him these last weeks. I hate to say this, but they’re in hot water.” His gaze found Wesley. “As are you, Bob.”

The commodore made an affirming gesture. “I know, Richard. Believe me, I know, but after I learned the truth about Khan – how much and how horribly he was wronged and then denied a just and fair trial, I had to act. Not only because my crew and I owe him our lives, but because the fundamental principle of the Federation requires it. We…”
“Still you didn't report a fugitive to Command, Bob. You said you learned Sunrise’s identity after the Battle of Aldebaran when you met him in the Enterprise’s medbay. The order was clear. Immediately arrest Khan Noonien Singh. But what did you do? You let him stay aboard the Enterprise and even kept his presence a secret. You covered for him, just like Kirk did.” Richard bent forwards. “Bob, this is crazy at best. You not only disobeyed an order but…”

“But I followed protocol, just like Kirk,” Wesley cut in. He saw the others frowning and explained, “Order 9, Gentlemen. I followed Order 9. ‘A commander of a Starfleet vessel or installation, military or auxiliary, may grant political asylum to any individual without first being given express permission to do so by a representative of the Federation government. However, that decision can be overturned by a superior officer or representative of the Federation pending a review of circumstances.’” He looked in gaping faces while Batari hid a smirk. Wesley shrugged, “Well, Kirk followed Order 9 and I, as his ‘superior officer’ did the same after I learned all the facts. Khan is under my personal protection, I have that right, and we all know it. And I’m certain, Gentlemen, that you agree with me here. Khan needs political asylum because he was stripped of his rights, abused, and is right now being hunted by our people for it to start all over again – or worse. And this time without the kangaroo court.”

“Bob, I am not Marcus – or Allistor,” Barnett said slowly. “I wouldn't deny this man a fair trial.”

Wesley lifted both brows. “Yes, I’m aware of this – as Kirk is. And that's the only reason why Khan is willing to deliver himself to the authorities after this mess is over. He trusts Jim, and he trusts me thanks to Jim. That's the only reason he agreed to this. He's giving you a second chance to prove that the Federation and Starfleet is not led by a mass of power hungry beings who don't care about the dignity that ought to be afforded all lives. In return, he deserves a second chance at a real trial and the ability to bring charges against those who hurt him and his people.”

“The charges he is going to press against Starfleet are dead serious,” Whitman murmured. “Slavery, torture, unlawful experimentation on sentient beings, blackmail, murder of four of his crew members…” She shook her head. “It’s shocking that mankind is still that barbaric!”

Wesley nodded. “Yes, as barbaric as they always have been, apparently. And the motives are still the same – fear of the unknown and greed. There is a man tortured, stripped off his human rights – even the rights we afford every civilization with which we have contact. He's endured more suffering from humans than any being ought to because he's different – he's human, but different. So what! He has the same feelings, the same longings, the same yearning for love and peace as any of us. This century has done nothing else but abuse Mr. Singh for something that isn’t even his fault – his genetics. The least I, or any other man with a little sense of honor, could do was to give him the opportunity for real justice. And for this, he needed and still needs my protection – something I found unable to deny him. Not after he saved millions of lives on Tammeron and Aldebaran.”
Barnett sighed deeply and leaned back in his chair; rubbing his neck. “I understand this all, Bob,” he whispered. “God, I know. And this puts me between a rock and a hard place.”

The commodore couldn’t help himself. He had to chuckle at that. “Yeah, I know what you mean.”

Nogura, always one to think technically and practically, grimaced, “Your protection also had us pay him a significant sum for his development.”

Bob looked firmly at the Asian admiral. “Yes, and he delivered the device to us – not one but two of them. The one that saved you and the others.” He cocked his head. “And, by the way, how can he retain decent lawyers without one Credit in the pocket?”

“You do realize that you are financially supporting a criminal so that he can press charges against your own people?” Morrow asked slowly, and Wesley lifted both brows.

“He’ll press charges against Section 31 and those people who did all those cruel things to him and his people. You, Richard, Heihachiro – all those men and women who serve Starfleet legally don’t have to fear anything. Not from Khan or the law. And the man doesn’t own more than the dirt under his fingernails. How is he supposed to find good lawyers without a bank account? Public defenders are not known for being the best lawyers around. To help him sell his invention – an invention that is imperative to the safety of the fleet in these times – was the least I could do.”

“Even given all the good he did these past few weeks, he is still a criminal. I was at Daystrom, Bob,” Morrow murmured. “I saw him in action. He is…”

“He is a fighter, yes; we all are. We all were forced to kill once to fulfill our duties. I don’t want to support what he did, but please remember that he is a general who fought against a hostile army that held his family hostage – killed them, or so he was forced to believe. Yes, he has to face justice for this, and he even wants to – but with all the rights that belong to any human facing court martial. Luengo’s order to kill the other Augments turns the tables. Khan and his people were declared as non-human, yet they are emotional beings – people! And these two facts put together means that they are their own species now. And Starfleet Command ordered genocide without any reason citing the falsehood that seventy-two sleeping men and women a ‘deadly threat’ for the Federation. This puts them in a position to…”

“…To lobby for political asylum – on New Vulcan!” Barnett summed up the situation. He stared at Wesley. “Let me guess; this was Kirk’s idea.”
Bob only shrugged, smiling slightly. “Yes, he realized the way out of Luengo's order to kill Khan’s people. And it was also him who came up with the idea to ask for help from New Vulcan.”

“Oh course!” Barnett groaned. “Of course, Kirk would think of New Vulcan first, and of course, Selek didn’t turn his request down!” He rubbed his temples. “What I fear is that Luengo will get the same idea. Kirk needs someone he can trust unconditionally. He has nowhere else to turn except to Selek.”

Wesley pursed his lips shortly. “I have to admit; I am still surprised that High Minister Selek puts up with this at all. Jim told me he ‘called’ Selek and asked him for help – just like he would call a buddy. I have no clue how he managed to win Selek, but…”

“You don’t know who Selek is, do you?” Richard asked, and caught the puzzled gaze; he decided that it was about time to get Wesley on the same page. Obviously, this was the hour of revealing deep secrets. “Bob, Nero wasn’t the only one who was sucked into a black hole and catapulted into the past. Two years ago another little ship arrived in our time, piloted by someone Nero had waited for to carry out his revenge. A certain Vulcan, who wasn’t – and isn’t! – unknown to us. He had to change his identity to prevent curious minds from trying to coerce him into giving up the secrets of the future. And he felt a call to help the surviving Vulcans with his advanced skills without giving away too much.” He took a deep breath as he revealed, “High Minister Selek is none other than Spock of Vulcan, son of Sarek.”

The commodore’s jaw almost hit the floor. “Selek is…” He stared thunderstruck at his friend and superior officer, before he blurted out, “Selek is SPOCK?”

Barnett had to chuckle. Bob’s expression was priceless. “More or less,” Richard answered. “Selek is about a hundred and fifty years older, but he had served as first officer and science officer on the Enterprise in his timeline too. And he was a very close friend of James Kirk’s – and still is.” Richard grimaced. “He would never refuse to help Kirk if he needs it – just like the Vulcan’s younger counterpart. Every time I read the logs and reports from the Enterprise, I figure that these two have only succeeded and survived because one of them looked out, fought for, or gambled for the other one’s safety. Maybe I read too many adventure novels.” He chuckled for a moment. “These two are like brothers – in both timelines. It’s no wonder that ‘Selek’ was ready to help Kirk.”

Wesley let himself sink back into his chair, clearly baffled. His gaze found Whitman, who explained softly, “Only the president, a few council members, and some admirals are informed, Commodore. And those who know Mr. Selek’s true identity were ordered to keep silent.”

“Unbelievable!” Bob whispered. “And I was at a loss how Jim was able to get Selek’s help. Selek is Spock.” He snorted. “No, it’s no wonder that Kirk is going to New Vulcan. If there is one man in the whole universe who would move heaven and earth to keep Kirk safe, then it’s Spock. And Khan!”
“Yes, this much I understood in the chaos,” Richard nodded, “even if I still don’t understand how it came that the Augment is hell bent on protecting Kirk – the reason why he raced to Turkana and fought at Kirk’s side. These two were enemies, mortal enemies given their history, and now Kirk is risking his career and decades of prison – even his life to helping the superhuman. I mean, after I heard what happened to Khan, I agree that he should have a fair shot at a real trial, but…” He stopped and frowned. “Wait a sec! After Khan had fled and Kirk and his two friends were in my office Jim sort of freaked out as he learned that Khan had been used as a lab rat. I begin to ask myself what this extreme reaction caused.”

Bob had his own speculations concerning the beginning of this odd friendship – lover relationship, to be precise – but he didn’t want to get Jim into even more trouble by revealing the intimate circumstances surrounding them. So he said carefully, “Jim has an unyielding sense of justice. When I learned of Khan’s fate I was shocked and outraged – and I had only met the man a few minutes earlier for the first time. I’m not surprised that Kirk acted as he did.”

“Yeah, his temper is fierce as an unbroken stallion,” Barnett sighed. “I realized it the moment he first stepped into my office after he got in some trouble at the Academy – four days after his arrival.” He shook his head. “I always knew that he would be one of the most troublesome, but also most promising officers Starfleet would have. It’s his tendency to do whatever he wants, whenever he wants, and his interpretation of our rules that drive me to despair.” He glared at Wesley. “It seems he learned about that from you!”

Bob shrugged one shoulder. “Rules were made by the people for the people, and not by one dictator to control the masses. We know not everyone or everything fits into the purview of our laws. This is a whole new case. If we clung only to rules and never changed, humans would still be screaming ‘demon’ every time we had contact with an alien, or we’d still have laws against intermarriage between the races. Humankind grows, Richard, with every new turn, discovery, and with every new experience – and the laws and rules have to adjust. Khan’s case shows us that we are still far from being perfect – that greed and cruelty are still a part of us, despite all our attempts to delete them. If we stick to protocols and deny this man and his people a fair chance, we’ll lose a bit of the humanity that we’ve fought so hard to gain.”

Nogura and Barnett nodded slowly, realizing that this was a new crossroad. Their choices would not only decide the Augments’ fate, but also the fate of Starfleet and the Federation's future.

Bob sensed that he was winning this little pre-trial and bent forwards, looking intently from one to another. ‘Give him the chance to answer your questions, to speak his mind and tell you everything from his point of view. And give Jim Kirk and his senior staff the same opportunity. Starfleet captains are not just chosen because they are book smart and can cite protocols and rule of law. They are also chosen for their ability to make the right decisions for the given situation far away from
home – and by their ability to act on their conscience. Aboard the Enterprise, there are many men and women who were involved in the mess last year. Not one of them reported Khan to Command, not even Carol Marcus, who had a very personal reason to do so and see Khan arrested – she kept silent, too. The whole crew is ready to give him a chance – over thousand men and women! The Shadow – an illegal militia – illegal if they are found out that is, calls him ‘their friend’ and fights for him. They decided to stay aboard the Lexington to help him if he needed them – and they know exactly who he is. This says a lot and has to count for something.”

Barnett pursed his lips and glanced at Batari. “Ma’am, what is your opinion on this case? I may be the highest ranking admiral in the fleet, but President Robertson, Vice President – you – are my superiors. What do you suggest I do now?”

Whitman took a deep breath. “With all I learned in the last hour, I agree with Commodore Wesley. Mankind has moved on – we outgrew prejudice and also fear the unknown. If Starfleet furloughs Captain Kirk and his staff until his hearing, then I have to obey, but I don’t think he and his officers should be taken into custody. If he gives you his word not to flee, he will remain free. The same goes for Mr. Singh. The man has shown honor and sincerity, and we do owe him. To show him the regard he deserves by trusting him now is perhaps the beginning of a new start.”

Richard seemed relieved that this decision had been made for him. There were two hearts beating in his chest – the one of the officer who had to obey protocol and the one that was pure human – compassionate. “All right,” he agreed, “but everything depends on the next days. We have to stop Luengo and…”

“Have you informed Kirk about our successful recovery?” Nogura asked, and Bob shook his head.

“No. He’s out of range for a direct subspace transmission by now, and sending him a time delayed message is too risky. Luengo is likely listening in on all frequencies. We don’t want him to discover our own little mission here before it’s too late for him to do anything about it. I came to an agreement with Kirk; I’ll contact him as soon as we’ve reached Earth and you, sir, are in charge again.”

“He spoke with High Minister Selek, as you said,” Morrow mused. “This too could have been intercepted and…”

“Jim said that the frequency Selek used is secure. He’d know, I suppose, since he knows the tech of the future and has used it before to speak with Kirk without being intercepted.”

“So, Kirk does not know that you’ve succeeded in freeing us?” Barnett was obviously uncomfortable with this fact.
“No, he doesn't. He's heading for New Vulcan to bring Khan and his people to safety, and is awaiting your orders – under Selek’s protection.”

Richard pursed his lips. “I’m not so sure if the ‘safe harbor’ is really that safe if Luengo figures out the Enterprise’s whereabouts. We should find a way to let Kirk know…”

The doorbell chimed and interrupted him.

“Come in!” Wesley called and gave the order for the computer to open the door.

Marceaux stepped in and bowed his head politely. “Vice President, Admirals, Commodore – I’m sorry to interrupt the meeting, but we’ve received a transmission from Command – from Admiral Luengo directly. He wants a detailed report from you about your meeting aboard the Enterprise and what you and Captain Kirk spoke about. He also wants to know why we’re out of range for a direct subspace transmission and why you haven’t reported that the Lexington is outside of her patrol area.”

Bob glanced towards the living area; the other four had tensed up. Barnett rose and stared wide-eyed at the two men near the door. He cursed, “Dammit! He knows that you’re up to something, Bob – you and Kirk!”

Wesley nodded; groaning inwardly. That would make it even harder to arrive on Earth unnoticed to surprise Luengo and his fellows.

“Sir,” Marceaux cut in, “may I make a suggestion?” As Wesley made an encouraging gesture, he went on, “You said we should be prepared in case Section 31 gets wind of the fact that we’re no longer on our patrol. And I think I have a solution.” He took a deep breath. “That we’re out of range for a direct hailing is because of a malfunction in the warp drive – something we discovered too late. Regrettably, you were badly hurt by the explosion in Engineering and can’t, therefore, answer. We only now have restored navigation ability and warp 1, but we didn’t send a distress signal or a report sooner because we realized that we’d drifted into the Borderland and feared that Orion pirates would intercept it and attack us.”

Barnett lifted both brows with a hint of amusement. “You suggest lying to the Chief in Command, Commander Marceaux?”

“I propose that, yes, and I'm not afraid to fake report to the man who seized his title by attempted
murder. The false transmission will give us time, sir. We need approximately four days to reach Earth – four days of radio silence that Command will not accept if we don’t give them a plausible explanation. And it lets the Commodore off the hook as far as answering Luengo at all.”

Bob began to chuckle. “I’m always glad that you are on our side!”

Barnett frowned thoughtfully. “Luengo is no fool. He’ll realize that something isn’t right with your report.”

“I think not, sir. I plan to attach falsified log entries to the transmission which will mention our near catastrophe yesterday. Luengo can’t do anything without checking the story first. And in the meantime, we can take action, hopefully before Luengo realizes where Kirk is heading. Oh, and I sent a copy to all admirals to prevent Luengo from taking any unilateral action concerning us.” He cocked his head. “Do you find this acceptable, Admiral?”

Barnett exchanged a look with Whitman and the other two admirals before he made a decision. “Right, Commander, send this transmission. Again we have to fight a battle with a foe we cannot hope to beat – time.” Then his eyes widened, before a little smile appeared on his face. “Oh, and you should send it on several frequencies and add a line to your message – one Kirk can intercept and figure out that the first part of his crazy plan has worked. For example, that the Lexington was able to escape Borderland and that the crew is safe. Knowing Kirk, he will understand the meaning!”

ST***ST***ST

“Mr. Spock, a transmission from the Lexington on all frequencies,” Lieutenant Albers, third comms officer, reported and turned around to the Vulcan, who was still in the center seat. Beta shift had already begun, but Kirk hadn’t shown up – something Spock almost anticipated. Jim had been alarmingly exhausted when he left bridge six hours ago. Even if the first officer would vehemently deny allowing emotions to show, he felt glad that his T’hy’la found the rest he needed. So Spock didn’t wake him to take over for beta shift but continued to command the Enterprise as acting captain.

He rose and stepped to the comms station, where he listened with a headset to the transmission and read the attached log-book parts which spoke of a terrible incident aboard the Lexington. For just a second, the Vulcan believed that everything had gone wrong in Borderland, that his father and the others were doomed now. Then he heard a sentence that told him otherwise; he could read between the lines. ‘We escaped some Orion slavers at the last minute, and the crew aboard is safe again.’

Such a simple line in a report to Starfleet Command – but it told something Spock had hoped for. ‘…”
escaped approaching Orion slavers... ‘That meant that they were already on their way back to the Federation area, and ‘... the crew aboard is safe again...’ referred to the recovered delegation. Spock was sure of it, and a wave of relief washed over him even his Vulcan control couldn’t suppress. They made it! His father was rescued – and with him several diplomats as well as some of the admirals. He only hoped, as illogical as ‘hope’ was, that Barnett belonged to the survivors. The only one who could order the whole fleet to oppose the Interim Chief of Command was the legal Chief of Command. Any officer, any crewman and any cadet who didn’t belong to Section 31 wouldn’t question Barnett’s orders. If the Lexington reached Earth intact with Barnett alive, Luengo and Section 31 would be done for!

“Please copy this transmission to the captain’s desk, Lieutenant.” With that, he gave the headset back and contacted Scott, who had been on duty for two hours only to learn that Khan was also back in Engineering, tinkering with the engines to improve their output. The Vulcan lifted a brow at this. He knew that Scott had asked Jim to release Khan from bridge duty to support him in Engineering. That obviously happened without Kirk’s order and while Jim was asleep. The Augment had gone to Engineering alone, knowing that his skills were needed there most. Well, even if it bothered Spock, he had to admit that the superhuman was a good addition to the ship.

After asking Scott to the bridge, Spock left the conn to the chief engineer and headed straight for the captain’s quarters, not daring to give Jim the good news via intercom. Ninety-four percent of the crew still believed the delegation and the admirals were dead, and it had to remain like this until Section 31 was eliminated.

He waited a bit and was about to activate the door buzzer a second time when the doors opened revealing a very sleepy and tousled Jim Kirk. He had dressed in haste, seeing that his clothes clung crookedly to his slim hips.

“Spock? Is somethin' wrong with our ship?” he slurred before he hid a huge yawn behind one hand.

Spock was surprised to feel a hint of fondness and protectiveness rising in him. In his current state, Jim Kirk resembled a grown boy rather than the fine Starfleet captain he was. It showed, again, how young Kirk still was.

“No, sir, the ship is running flawlessly. I apologize for waking you, but I have something important to tell you.”

Jim got the hint and stepped aside. “Come in,” he murmured and waited until his friend was inside and the doors closed. Then his glance fell back on the bed and he frowned. He could have sworn that Khan had been sleeping beside him these last hours, but there was no trace of the Augment. Confused, Jim scratched his head bringing his short, golden strands into an even bigger mess.
Spock had followed Kirk’s asking look towards the sleeping area and figured out instantly what confused his friend. “If you are wondering where Mr. Singh is located, he is in Engineering and helping Mr. Scott and Mr. Keenser in their attempt to improve our speed.”

Jim smiled. “Yeah, that sounds like him. I just thought he was here a little while ago.”

“He was, Captain, I spoke with him after the probe began sending the Enterprise’s warp signature. Did Mr. Singh inform you about the success of your plan? The Excalibur is on her way to intercept the probe.”

Kirk frowned. “Yeah, there was something he told me, but…” He shook his head and yawned again. “Sorry, Spock, I’m still tired.”

“Understandable, Jim,” the Vulcan replied softly. “And I apologize again for waking you, but I thought you wanted to be informed as soon as we received a message from the Lexington.”

That captured Kirk’s full attention, and then he was awake. “And?” he prompted, tension rising in him.

“It was a transmission to the Headquarters. The Lexington reported a malfunction in their warp core that resulted in many injuries among the crew, including Commodore Wesley, who was hurt so badly that he was unable to answer Admiral Luengo’s questions – whatever they were.” He saw Jim paling and lifted a reassuring hand quickly. “There was also another line that leads me to believe the transmission was a fake to prevent the commodore from reporting anything untoward. As well, I believe his mission was a success. All surviving members of the delegation were recovered and the Lexington will leave the Borderland.”

“You think so?” Jim asked; hope mirrored in his eyes.

Spock nodded. “Yes. A copy of the message has been sent to your terminal.”

Kirk all but raced to his desk, switched on his terminal and listened to the transmission. A big, large grin spread over his features, while he balled a fist in triumph. “Yeah! I knew Wesley would make it! Thank you, Lady Luck!”
“And Commodore Wesley’s skills,” Spock deadpanned, finding himself the focus of a very happy Jim Kirk.

“So, everything is running smoothly now,” Jim grinned. “The probe is still transmitting our warp signature?”

“Yes, and given the sensor read-outs, the _Excalibur_ is still following it. Your plan is working.”

Kirk rubbed his hands. “Well, I'll call this a good start to my day.” His gaze found the chronometer on the nightstand. “Ugh, whatever. It’s already 1800! I never oversleep!” He frowned and glanced slowly up to his friend. “Spock, don’t tell me that you’re still on duty!”

“I am, sir, and…”

“Give me ten minutes and then I’m on the bridge. And I don’t want to see you until beta shift tomorrow, understand? You need to rest, too.” He lifted a hand as the Vulcan opened his mouth to protest. “Don’t tell me about Vulcan superiority and that they need less sleep. I know that you’re tired Spock, and you have all right in the world to have a break.”

The first officer almost sighed. “Jim, as much as I appreciate your concern, it is for naught. I will meditate later which refreshes me more than ten hours of sleep. With your permission, I’ll return to alpha shift tomorrow. Even with the SDD we are not ‘off the hook’, as you humans say. And as unsettling as it is to say, our transit through Federation space is now dangerous for us. At least as long as Section 31 is in charge of Starfleet. I prefer to be the most time on duty till we reach New Vulcan and you, Mr. Singh, and his people are safe.”

Jim watched him a moment and realized that it would take more effort to convince Spock to leave the bridge than to give in and allow him to remain awake a little bit longer. “Don’t you trust your own staff?” he teased, and this time the Vulcan did sigh.

“I am very aware of the satisfactory abilities of my department, and I have no doubt that Mr. Scott can take my place as your first officer for the length of a shift, yet I would appreciate it if I were assigned watch for the majority of the trip to New Vulcan.”

Without a second thought, Jim reached out and laid a hand on Spock’s shoulder, squeezing it gently. He knew that Vulcans didn’t like to be touched, but he had realized over a year ago that Spock didn’t mind being touched by him. They were _T’hyl’las_ – brothers in soul – and had melded several
times. Physical closeness wasn’t uncomfortable for them anymore.

“Thanks, Spock. I’m grateful to have you at my side during these difficult times.” He stepped away. “Just give me a few minutes and then I’ll be on the bridge.”

“Do not forget to eat!” the Vulcan reminded him and Kirk rolled his eyes.

“Yes, Father!” he called over his shoulder before he vanished into the bathroom. He wouldn't see the edges of Spock’s mouth curl upwards ever so slightly. For a second, amusement sparkled in the dark eyes of the Vulcan.

ST***ST***ST

Galven swallowed the last bite and washed it down with a large sip of wine. Beside him, his brother, Ritek, Caviw, Jeff and the others sat comfortably on chairs and the small sofa in the guest quarters that the two Tellarits inhabited during their travel aboard the Lexington. Jeff still looked like hell; Ritek returned an hour ago from medbay, and even Caviw wore some traces of the fight they all had been through. But the mood was light – almost happy.

They made it! They had recovered the survivors of the delegation, and they were on their way to Earth to help Khan should it be necessary. They saved Galtan, too! Galven had almost lost all hope of finding his brother, and now he sat beside him. Galtan was far too thin with a haunted look in his eyes; he was uncharacteristically quiet but alive! Galven could have embraced the whole world, happy as he was.

Suddenly the door buzzer sounded and as he oinked “Come in!” the doors slipped open to reveal one of the female captives they had recovered.

“I hope I am not disturbing you,” she said with a warm, pleasant voice, as she stepped in.

Instantly, the males rose. “Of course not, Ma’am. Please have a seat!” Ritek said while Jeff stared at her and gasped, “You are Batari Whitman, the vice president.”

The woman bowed her head with a smile. “Yes, I am, but please don’t be unsettled because of my political position. I’m here for a private matter.” She took a seat and smiled at the colorful group of people to whom she owed so much. “First, I want to thank you all for what you did for my
colleagues and me. I’m just coming from a briefing with Commodore Wesley, and I know the big part you had in our recovery. I’m in your debt, and I’ll take care that the president is informed of your heroism.”

“You’re welcome,” Jeff said politely.

“We couldn’t let you down,” Ritek grumbled. “You and the admirals are needed in the Federation, yes, but even if you and the others weren’t, we would have tried to help you. No one should be subjected to slavery.”

Batari nodded. “Yes, even if a secret department of Starfleet has no problem with slavery, as I’m sure you know.”

Caviw cocked her head. “You’re talking about what happened to Khan, right?”

Whitman sighed. “Yes, I am.” She felt the tension rise in the room, and added, “And before you go all defiant, please calm down. Khan belongs to the history of the area where I was born. In his time, he did a lot of good – as he has done here, after the destruction he caused last year.”

The Caitian woman watched her; her tail twitched. She smelled no fear or aggression from the other female, and so she concluded, “You are here to learn more of him – of his person and why he did what he did over these last months.”

With another smile, Batari bent forwards. “Yes, you are right. Khan will face court martial soon, and I think he is going to need support. Tell me about him, what moved and still moves him so that I can draw a picture of him.”

The others exchanged gazes with each other, but it was Galtan who rose to speak. “I heard only wild stories from you, but you lost me somehow between you, Galven, leaving Tellar and then coming to my rescue. I have heard of this Terran man, Khan; of the Federation’s new hero, Kirk, and the strikes against the Klingons only to team up with them later…” He shook his head. “I do want to learn what really happened – in the right order, please.”

Ritek stepped to the replicator. “Ma’am, this will take a while. May I offer you a drink?”

The vice president gave him one of her calm smiles. “Chai would be nice.” She waited until the
Rigelian served her the cup with steaming tea, then she leaned back, ready to listen to another long story.

Galven cleared his throat. “Well, everything began with the Orion attack against that outpost…” he began to tell how he and the others met the man they had come to know as ‘Drythen’. In reality a kind of king from Earth’s earlier epoch…

Leonard McCoy patted Sulu’s left arm in comfort. “Cheer up, Lieutenant. As soon as the last injuries have healed, we can talk about cosmetic surgery. These scars you got don’t have to stay like that – in fact I can make them completely disappear.”

It was 2100 ship time, and Bones had made one last round through medbay before he headed to his quarters. He only had found sleep later in the morning and had rested for six hours – not much given that he had stayed awake the whole night before, trying to help his crazy best friend recover Khan’s people. He had realized that Sulu had woken up completely and had removed the last bandages from his face. The synthetic skin that covered the left cheek and temple had grafted with the flesh beneath, yet there were traces of what the young man had been through – something McCoy planned to change soon.

Hikaru smiled tiredly up to him. “I’m not vain, Doctor, but if you could do some magic with my face, I wouldn’t mind.” He gestured towards the mirror Leonard had given him on his request, and Sulu couldn’t deny that he had been shocked to see himself. A good part of his hair was gone – burnt off, but McCoy already assured him that it would grow back soon. Then there were the scars along and even beneath the synthetic skin which deformed his normally smooth face. The same went for his throat and his left arm. He knew that he should call himself lucky that he was still alive, yet to think that he would look like this for the rest of his life made his stomach sink.

Bones skipped his usually grumpy behavior. He knew exactly when one of his patients needed understanding and comfort, and so he sat down on the bed’s edge and said gently, “I think I can fix the scars on your face and the rest of your body in the next two weeks. Afterward, you will be still a little bit sore, but painkillers will help you to cope with it. The chance that you'll be back to your old self is about hundred percent – and I’m telling you because of my experience, and not because I let Spock calculate it.”

Sulu had to chuckle at this. “I miss duty – I miss being on the bridge,” he murmured. “I slept most of the time since the battle, and I heard from Pavel that it was Khan who saved the ship by taking over the helm and steering the Enterprise away from some big asteroid, but I’ve got no clue what happened the rest of the time. Pavel wants to spare me any concern; the same goes for the captain. Hell, even Khan, who visited me with Kirk, didn’t say anything – and as far as I understand, that guy
played one of his Augment tricks again to save our necks.”

“Yes, he has become very attached to the ship and even to the senior officers. Heck, even Keenser talks to him – really talks, I mean,” Bones joked. Then he turned serious again. “You missed a lot, Hikaru, but Jim and Chekov are right not to tell you too much. You need to rest. You can’t worry about all we went through and will or you’ll delay your recovery.” He rose again. “So enjoy your vacation and…”

“Vacation? In medbay?” Sulu lifted his head carefully. “You’re not serious, are you?”

Leonard began to smirk. “Well, a lot of time to rest, no unsettling events, quiet, healthy food – it sounds like a vacation.”

“Yeah – for old men, but certainly not for me!”

“As far as I know, your idea of a vacation means sports, hand-to-hand combat, and tiring yourself out training for marathons,” a female voice from the door of the room said teasingly.

Both men looked around and saw Carol Marcus standing in the entrance.

“Hi, Dr. Marcus,” Sulu beamed at her. “I’m happy to have any visitor who can tear him or herself away from duty long enough to see me.”

“Oh, you’re already that much better?” the young woman laughed and stepped beside McCoy. “I’m off duty, and so are you, given your schedule. May I ask for your company at the mess hall for dinner?”

Leonard felt warmth rising in him, and as he looked in her large eyes, his heart beat quickened. “Y-y-y-yes, of course!” he stuttered, and Sulu began to smirk.

‘Just have a look! The doc and our weapons lady! Who’d thought that?’ Aloud, he said, “Don’t waste any time with a poor bloke who can’t enjoy the company of a beautiful lady until he looks human again.” He sounded very dramatic, and promptly the CMO and weapon officer began to laugh.
“Don’t be sad, Hikaru. Knowing Len, he’ll make you look good soon.” She linked her arm in McCoy’s. “You’re coming?”

“Of course,” Bones smiled. “This is the first nice evening since we left…” He didn’t get any further; all of sudden an alert sounded through medbay – medical alert.

“Oh, for God’s sake!” the Leonard snarled; he untangled his arm from Carol’s and raced to his office. “What is it now? Can’t a man have a nice dinner for once?” He had rounded his desk and looked at his terminal – and then all color left his face.

“Sweet Lord – NO!” He gripped his med kit and stormed out of his office, down the main hall of medbay, and stopped at the door that led to the attached room where the cryotubes were located. He punched in the code; the sealed entrance opened and he rushed into the room, not realizing that Carol had followed him.

The young woman stopped dead in her tracks as she saw the dozens of tubes, recognizing them instantly. “What…?” she whispered, shocked.

Bones looked hectically around him, saw the alarm light at one of the cryotubes flashing, and closed the distance to it in no time. ‘A malfunction! That damn box is about to quit working?’ he thought with anxiety.

His heart hammered in his chest as he glanced down on the sleeping Augment whose life was at stake should the cryotube fail. He gasped as he saw the very young face, then he swore loudly.

Joaquin – Khan’s little brother!

Frantically, McCoy checked the main function panel of the cryotubes as best he could, but he couldn’t find the error. He saw the ice within the tube condense into droplets, and the young Augment began to shiver slightly.

“Doctor, what happened?” Nurse Barbara hastened into the room, not surprised at all to see the tubes – after all she had helped store and link them to the med system to monitor their function.

“Prepare a stasis chamber!” he called over his shoulder. “Quick!” His attention returned to the problem at hand. He knew how to open that cryotube. He had done it last year as he moved a young
superhuman to the stasis chamber so he could get Jim Kirk into the tube, but as he activated the opening mechanism, it didn’t work. He tried again, but the only result he got was some beeping noises.

“God dammit!” he shouted.

Carol closed the distance to him. Her deep frown showed her confusion and irritation. “Those are Khan’s people!” she said flatly, and McCoy nodded.

“Yes, they were hidden on Gamma 12 – the same facility Jim was ordered to destroy. With the Augments still in the facility’s hold! We got them out and…” He punched the cryotube in frustration. “Holy shit, it’s not opening, and the boy is trapped in there – dying!”

He left the tube and stormed to the next intercom. “Mr. Singh to medbay! Emergency!” he hailed ship wide; his voice betrayed his stress. Of all the Augments, it had to be that boy who was about to die from a tube malfunction – now, three days away from safety! “Mr. Singh to medbay, please! Urgent!” He had shouted before he raced back to his office, activating his terminal. “Computer, priority one for all turbo lift cabins for Petty Officer Singh, approved by Dr. Leonard McCoy, CMO, code red 5287!”

“Affirmative,” answered the female computer voice.

“Bones, what the hell is going on?” Jim Kirk’s unsettled tenor sounded through the speaker, but McCoy had no time to answer him properly.

“One of the cryotubes is about to fail. Get Khan down here this instant!” he yelled back. He left his office again, ran to one of the stationary fire extinguishers, and took the hammer that hung beside it.

“He’ll come from Engineering,” Kirk answered. “I’m on my way, too!” The link was cut off, but Bones could care less. He had a far bigger task at hand. He returned to the hold and strode with large, determined steps back to the tube. Carol bent over it. “I can’t open it, either. Even the emergency button is blocked – melted, to be precise.”

“Yeah, down on Gamma 12 one of Finnegan’s assholes shot at Spock and Khan, grazing that tube in the process with a phaser blast.” He pulled Carol aside and lifted the emergency hammer; ready to punch it down on the observation window. “Let us pray that the boy will survive, or Khan’ll go crazy!”
The young woman glanced at him. “I know that he regards his crew as his fam-…”

“That boy is more than just a member of Khan’s beloved crew. He’s his younger brother!” McCoy growled, and he slammed the hammer down. But the glass held. “And I don’t want to think what will happen if the boy dies!”

ST***ST

“Warp 6!” Scott beamed from ear to ear. “We made it! Our lady is the best!”

Khan rolled his eyes. Yes, he was an engineer too, and he loved to tinker, explore, and develop new ways to improve tech, but he would never regard a ship as sentient. This is what he had witnessed with this crazy Scot – and with Jim, it was the same. In earlier times, he had frowned at such a childish behavior; now he thought it cute.

“At least it shortens our travel time, so…” Khan stopped.

Something was wrong.

Something was very, very wrong!

He felt it with every fiber of his being. There was something tugging at his conscious – an urgent attempt to reach him. Alarmed, he listened to the inner bond he shared with Jim, but the link was bright and warm, without anything that could explain this rising feeling of fear and…

“Mr. Singh to medbay! Emergency!” McCoy’s voice sounded from all speakers in Engineering – and Nien felt his knees go weak as he recognized the desperate cry deep in his mind – recognizing who was calling for him.

“Joaquin!” he croaked, and he wasn’t aware that Scott had wrapped a supporting arm around his waist.
“Lad, what’s up?” Montgomery asked worriedly.

“Mr. Singh to medbay please! Urgent!” the CMO repeated, even louder this time.

It was all Khan needed to come back to his senses. He almost shoved Scott aside and began to run in a whirl of black and gold. He reached the next turbo lift and stepped in. “Medbay!” he almost screamed and even in his near panic state he became aware of the fact that the cabin moved quicker than usual. And the whole way up to deck 5, it didn’t slow down for once, as was often the case if cabins were about to cross paths. He couldn’t know that all cabins had come to a halt or had moved out of his own cabin’s way as soon as he had stated his destiny – the system granted him the priority one ride McCoy had ordered.

He reached medbay in forty-four seconds, left the lift, sprinted the short way down the hallway, and headed straight to the attached room where he knew his people were. He didn’t care that he almost ran over a nurse. His attention was fixed on the CMO, who hammered against one of the cryotubes – obviously trying to shatter the window. He didn’t even recognize the other person with McCoy. With several large steps, he reached the doctor, who just reached back to repeat his attempt to destroy the observation window – a waste of strength because the double-armored glass wasn’t to shatter by mere human strength.

Khan’s right hand reached out quick as a flash, caught the startled CMO’s wrist in his hand, and pushed McCoy aside.

“The tube is failing,” the CMO informed him sharply, thinking that Khan was about to hinder him from opening the cryotube forcefully, but the superhuman had already seen the alert lights and knew what they meant. Hastily, he took the hammer from McCoy. One look through the small window affirmed what he was feeling – Joaquin was dying. His lips were already blue and his whole frame, as far as it was visible, was convulsing.

With all his might, Khan rained down a blow; the hammer left a net of cracks in the window. Again he struck, even more powerfully than before. With a crashing sound, the window shattered open – clean, fresh air began to fill the vacuum of the cryotube. But still the young Israeli was shaking and gagging.

The former dictator’s glance found the buttons and security levers which should allow him to open the tube manually. New fear gripped him as he saw that they were not functioning. Hurling the hammer away, he gripped the frame of the observation window he just had destroyed with both hands; sharp edges and splinters bit into his palm and fingers, broke the skin, and made his blood flow, yet he didn’t stop. The pain didn’t even reach his brain. His whole being was fixed on the task to save his beloved little brother.
His muscles, his sinews, his ligaments – everything screamed in protest as he tried to remove the cover. Metal groaned, hinges creaked, but he didn’t give in. He had to get Joaquin out of this damn tube, or it would be his coffin. And the thought of that was agony…

ST***ST

The moment Jim heard Bones’ ship wide hail for Nien, he knew that something had gone wrong.

Terribly wrong!

In the same second, he felt it – cold dread from his mate, growing with every second. Pushing the button on his armrest, he called medbay and the short answer he was able to elicit from Bones told him everything. One of Nien’s family was at risk. One of the cryotubes was about to fail – just like those twelve before Marcus found the Botany Bay.

Kirk sensed the rising fear and despair of his beloved, and he knew that Nien indeed felt that one of his family was about to die. If this was an indication of what Khan had been through when Marcus killed four of the Augments in Nien’s presence, then any question about why the superhuman had snapped was unnecessary. Jim thought he would suffocate with the anguish that spread through his mate, and without wasting precious time, he was on his feet and racing to the turbolift.

“Lieutenant Albers, you got the conn!” he called just before the doors of the cabin closed behind him, and then he counted every second until the turbolift reached its destination.

His legs carried him quickly to the compartment with the cryotubes, only to see Nien hammering down on one of them while a wave of panic seemed to wash from him to Kirk. A splintering noise told Jim that Khan had successfully destroyed a part of the cover, but he instinctively knew that it wasn’t enough.

The young captain didn’t know how he closed the distance to his beloved in just a blink of an eye; then he looked down on the superhuman in the cryotube. He recognized him instantly – Joaquin. And the boyish Augment, even unconscious, fought for his life while trapped in a tube designed to save him.

Kirk saw how Nien’s fingers closed around the shattered frame, and pulled. Blood seeped from his hands, and dripped down onto the far too young and innocent face of Khan’s ‘little brother’. Jim didn’t think; he acted. Reaching out, he closed his hands around the observation window’s frame to
pull at the cover of the tube. He wouldn’t allow Joaquin to die! He wouldn’t allow his bond-mate would go through the anguish of another loss! Without caring for his own safety, he began to pull.

Khan moaned as his shoulders and neck, recently healed from their injuries aboard the space harbor of Aldebaran, began to burn, yet he would never – ever! – let Joaquin down. He pulled and dragged, even more powerfully than at the anchor of the trapped ship in the space harbor. This was not about saving those he didn’t know; this was about his family – his beloved younger brother. And his fear of losing him turned him frantic in his attempts to save him.

All of sudden, he felt a familiar presence at his side, and then two warm hands brushed his, before they were placed beside his fingers – pulling the cover along with him.

Sweat broke from every pore of his body; he heard a shout of frustration beside him – and then the locks couldn’t withstand the combined strength of an Augment and a human whose cells had been enhanced, as well.

The cover nearly flew open; bits were hurled around, and Bones grabbed for Carol – shielding her with his body. Beside him Khan and Jim stumbled for a moment, then the former dictator regained his footing, dove into the open cryotube despite the escaping icy cold and gathered the still trembling form of the young man into his arms.

Bones was back in doctor mode in a second. “Barbara!” he yelled. “Is the stasis chamber ready?”

The nurse only nodded. “Yes!” she shouted back; she looked at Khan and gestured to him, “Follow me!”

You didn’t have to tell him twice. He seemed to fly over the floor, pressing his little brother’s far too cold and shuddering body to his chest; not caring that he was, again, praying to anyone who could hear him to spare Joaquin. McCoy was on his heels, shouting orders to his staff. Seconds later, the young Augment was lowered into the stasis chamber, and Khan stepped back – his face paler than usual, his eyes wide and dark with fear.

Bones hit the button to start the stasis sequence and watched the sensors, monitoring the young man’s state.
Jim stepped beside Nien and for a long moment, his gaze fixed on the slender, boyish form he could see through the observation chamber, still stasis blue. Then he felt pain in his hands and glanced down. His fingers and palms were bleeding, but so were Khan’s he realized a moment later. He knew there was no power in the universe that would make the Augment care for himself – and Jim had no urge to worry about his own wounds. Nien’s fright came in thick, cold waves over their bond and had progressed since the moment Kirk felt them only two minutes ago on the bridge.

He closed the small distance to Khan and wrapped his arms around him; he couldn't give a damn if someone from Bones’ staff saw them now. “He’ll make it,” he whispered, praying to the Lord that everything would be all right with Joaquin Weiss. “He’s strong – as you are. And he is not alone. He’ll make it!”

Khan didn’t answer. His mouth was dry, and he had ice in his veins. “What’s your opinion, doctor?” he asked, his voice hoarse.

Leonard didn’t know how to tell him. This was one of those situations he hated the most – telling someone bad news. “I don’t know,” he said honestly. “If he were an average human, he'd already be dead. The shock of coming out of cryosleep so quickly should kill any of us.” He gulped. “But he is strong – and young. There’s still hope…” He didn’t end the sentence, but it told Khan enough.

Nien’s throat tightened; his heart beat in merciless, cruel punches in his chest. “What are his chances?” he whispered, and McCoy’s answer made him want to scream, “I’m not Spock. I can’t calculate it accurately but… But I think – I’m sorry – one in ten.”

Bones watched how those bright piercing eyes became dull and moist. Following an impulse, he reached out and squeezed Khan’s shoulder. “I don't have that much experience with Augments. Maybe his chances are better.” He let his hand sink while his gaze returned to the boy in the stasis chamber. “If he survives tonight night, he might live.” He lowered his head. “Only the morning will tell…”

TBC…

Chapter End Notes

Ha, who had thought that the ‘Augment in trouble’ could be Joaquin – or had guessed what kind of trouble said Augment could be in? Yes, several story-lines are converging
now, even those details which happened during STiD (McCoy ordering one of the Augments to be put into stasis to have a cryotube free for Jim). And, of course, our dear Bones feels guilty now, even if he hadn’t another chance.

Guilt is something neither Wesley, nor Luengo are feeling, but both out of different reasons. Why Bob is convinced that it was right was he did concerning Khan giving a second chance and putting him into his protection. Luengo soon will do what so many true dictators are up to if they find themselves tightened into a corner: They lash out. And Luengo will be up to the same within the next chapters.

Referring to the upcoming chapters: The next one will be a dark one and a real rollercoaster, so be beware (smile).

I hope the new update was to your liking, and for all who likes that one of our heroes has to suffer here and there: Jim, his friends and Nien have just stepped at the threshold of Hell’s Kitchen.

Nevertheless have a nice weekend,

Love

Your Starflight
Joaquin

Chapter Notes

Hi, my dear readers!

Like always I want to thank you for all the feedback. I know that the new chapter ended at a very nasty point, and I have to admit that there will be many cliff-hangers in the future (he-he-he).

Who always wondered how Khan and Joaquin met and why these two have such a strong connection will get my answer/explanation/fantasy within this new chapter. And there is more – for example how much Jim and Spock have grown closer as T’hy’li.

A little warning – this chapter is very sensitive but also contains very hard stuff, yet I do hope that you are going to like it.

Love

Yours Starflight

See the end of the chapter for more notes

Chapter 63 – Joaquin

Carol leaned against the door frame and watched Leonard treat Jim Kirk’s hands. The medbay had become quiet again, except for the soft sounds of the electronic devices, the gentle buzz of the stasis chamber, and McCoy’s fussing.

“You two were lucky. What'd you think? Shards of glass make good for good leverage? You could have cut an artery, you know!” His glare moved from Khan, whose hands still required treatment, to Jim and back again.

Kirk glared up at him. “How can you say that? The kid was dying in there! Joaquin would be dead now if we hadn’t gotten him out in time. Hell, he might still not make it!” He glanced at Nien. The words had barely left his lips before he cursed himself for pointing out something so painful for his mate should it come true. “Sorry,” he whispered, and Khan nodded, knowing what Jim meant. Then the Augment looked back at the stasis chamber and didn’t even react as the CMO cleaned the cuts on his fingers and palms, removed splinters, and bandaged his hands finally.

“Captain? What happened?” On silent feet, Spock had entered medbay without anyone hearing him
the superhuman was not even aware of the Vulcan’s approach.

Startled, Jim and Carol turned around while McCoy looked up from his task, realizing that Khan was watching the first officer out of the corner of his eye.

Kirk’s eyes widened as he took in his friend’s appearance. It was rare that Spock wore something other than his uniform and only a few times had Jim seen him in his black meditation robe that he wore now. Beneath it, the first officer wore a pair of simple black pants and light shoes. He must had come directly from his and Uhura’s quarters, alerted by Bones’ ship-wide hail for Khan.

Before the captain could answer the question, the Vulcan’s gaze fell upon the activated stasis chamber; he stepped closer. One look through the observation window told him enough. “Joaquin,” he whispered and turned his attention to Khan. “His cryotube failed.” he stated the obvious, and Nien took a deep breath before he nodded.

“Good thing I monitor every cryotube,” Leonard grumbled. “The medical observation system alerted me when the kid’s tube readings went haywire.” He straightened his shoulders and rolled them to release some of the tension. “The emergency button was melted and…”

“During the gun battle at the facility this cryotube was grazed by a phaser blast,” Spock said; his gaze was still fixed on Khan, who pressed his lips together before he added to the Vulcan’s explanation,

“I pushed the tube out of the way, still…” He made a quick movement with his bandaged hand and became silent again.

McCoy returned to the monitor and watched the readouts. “His condition had been stable up until now. We’re working to get him back to that point. BPM, 5 per minute…”

“The wake cycle wasn’t started properly,” the Augment cut in. “Usually, the procedure lasts several hours in which the body is slowly warmed, and the metabolism restarts. That was not the case and Joaquin… He is in shock right now.” He had to force out the next words. “There is no way to tell if he will survive or not.” He swallowed. “I can still feel his presence, but it is weak.”

Jim bent forwards and laid a hand on his back, ignoring the sting in his fingers and palm. “Don’t give up hope, Love. As long as his heart is beating, death hasn’t won.”
Carol stared at them. ‘Love’? Did she hear that right? Disbelieving, she watched how the superhuman looked at the young captain with a mixture of gratitude and warmth that was far too intense for mere friends. ‘Did this mean...? Were those two...? No! Not Jim Kirk – Starfleet’s number one Casanova! What had he said when he explained Khan’s presence aboard days ago? That they had become close?’ The idea of them as a couple occurred to her then, but only for a second. Then she pushed that thought away, thinking it too strange. But the display in front of her told her she was right. Still, it seemed so far-fetched.

Bones saw her widening eyes, took in the way Jim and Khan stood together, and cleared his throat to distract them. “You’re more familiar with the cryosleep technology, Mr. Singh. Can you explain to me exactly how the waking process is initiated and what it does to the body? Maybe we can reproduce it with the stasis chamber and Joaquin will wake up as he should.”

It was a small chance, but Khan clutched at it like a drowning man. “Yes, I can tell you that, Doctor.” He began to tell McCoy everything he knew about the process. It was a process he had developed himself when he constructed the cryotubes.

In the meantime, Carol closed the distance to Kirk and Spock, who looked at her as she drew nearer. Her glance flicked for a second to the superhuman, and she was about to question her captain about what was going on between him and Khan, but decided against it when she saw the worry in the Augment’s face, “He's concerned about the young man.”

Jim nodded. “Yes,” he replied softly. “Joaquin is his younger brother.”

“Len said something like that,” Carol stated in a small voice. “But Khan would worry for any one of them.”

Kirk cocked his head. “Yes, everyone is dear to him, but he told me that he practically raised Joaquin. There is a special connection between them – a deeper link, I guess, than with the rest.” He lowered his head. “God, I don’t want to imagine what it would do to him if that kid doesn’t survive.”

Carol nodded slowly, not in affirmation of Kirk’s statement, but in recognition of the grave concern and hidden love she could read in his tone and his eyes. Moistening her lips, she glanced over her shoulder back toward the door that led to the attached room and finally dared to voice a few of her thoughts. “Len told me that Khan’s crew was hidden on Gamma 12 and that you recovered them before you destroyed the facility.”

Kirk only looked at her tensely. He knew that the topic was a problem for Carol. “Yes,” he simply stated.
“Command knew that the Augments were there, still they ordered you to…?” She shook her head disbelievingly. “But that would be murder. I don’t understand…”

“Carol,” Jim interrupted her softly. “Please don’t get me wrong, but the less you know, the less danger for you. So please don’t ask me anymore.”

That got her full attention. “‘Danger’, Jim? In danger from whom? From Command?”

“Not from Command, Doctor – at least not from the Starfleet Command you know. Several changes occurred which were enough to give to alter our current mission,” Spock explained without revealing too much.

Still Marcus was a very smart woman and read between the lines. “What do you mean with ‘the Starfleet Command I know’? I know our most prominent admirals are dead, and so new men and women have to replace them, but this is still…”

“Carol, Section 31 is back, and is in charge of Command now,” Kirk interrupted her. “The order to kill Nien’s crew came from them – and it was meant as a trap to catch him and me, but we were quicker than them.”

Shocked, Carol looked at him, then at Spock, who only lifted a brow, and finally to Khan and Leonard, who were still talking with hushed voices, and then back at Jim. “You recovered them without Command’s knowing,” she mused, and her bright mind made the next conclusion. “You have to bring them somewhere where they are out of Command’s reach – or Section 31, I guess, if they really are in power.” She crossed her arms in front of her chest. “We’re not on our way to Earth!” she confidently stated, and Kirk groaned.

“As I already told you, Carol, it is better for you not to know too much. I’ll have to face consequences for what I’m doing now, and I don’t want to pull you into this mess, too. If you have no clue what is going on here, you can’t be charged with anything. After all, you are only obeying your captain’s orders. As long as it stays that way, they can’t press any charges against you.”

Her expression became stern. “You forget one little detail, Jim. I know Khan face-to-face, and I know he’s here aboard, and I didn’t tell Command about it. I am already in that ‘mess’. ” She took a deep breath and stole a sideway glance at the Augment leader. “Are you sure that you know what you’re doing here, Jim? Don’t get me wrong; I don’t doubt you as captain. You’ve already proved several times that you a damn good commanding officer, but are you aware of what you’re about to
set free? The Augments…”

“They’re people like you and me, Carol,” Kirk cut in before she could voice any prejudice based on Khan's actions a year ago. “And they did nothing to deserve cryosleep forever or, even worse, murder. A few more stripes on the sleeves don’t make that crime okay – and it was a crime when Luengo ordered their death without any reason. As a Starfleet captain, I carry responsibility not only for my crew but also for the fundamental rights and ideology of the Federation – That's what's at stake now. As Section 31, Allistor and now Luengo stripped the Augments off their rights and declared them non-human; they de facto made them a separate race. And Luengo ordered their genocide – one of the worst crimes possible. If I don’t intervene now, I not only betray my humanity but also the ideals of the real Starfleet and the Federation – something I vowed to protect with my life.”

For a long moment, Carol looked him into his eyes, then she nodded slowly. “I understand,” she murmured. “Do I assume correctly that we’re going to a place that will offer Khan and his people asylum?” Kirk remained silent, so she continued, “I appreciate that you want to protect me, Jim, but I’m already in one hundred percent. The crew is. I only hope that the authorities are going to see this the way you do, or you’re going to lose everything you've worked for so hard.”

“If that's the price for maintaining the Federation’s ideals and the Augments’ safety, then it’s a price I’m willing to pay. I don’t belong to those men and women who put their careers above everything – above their humanity.” Jim’s expression revealed his determination; his voice was hard.

Again, she eyed him carefully before replying, “Your reasons are sound, Jim. I just hope a court martial doesn’t figure out your other motive for helping Khan. I don’t think they’d think much of your noble reasons if they knew your connection to him.” Her glance shifted back to the former dictator for a second, and she murmured. “Maybe you and your ‘Love’ should keep your hands off each other once the authority steps in.” She saw the shock spreading over Kirk’s features and nodded politely at her superior officers. “Captain, Commander, good night.” She turned and left before Jim could regain his composure.

Then he turned to Spock, “How does she know…?”

“Obviously, your emotional reaction towards Khan these past days, and especially in the last few minutes, told Dr. Marcus everything she needed to know to come to the correct conclusion, Captain,” the Vulcan replied wryly. Then his attention fixed on the bandaged hands of his T'hy'la. “Are you in pain, Jim?” he wanted to know; his voice turned gentle.

With another sigh, Kirk shrugged. “A little bit, maybe. It’s nothing serious. Bones treated it and gave me a shot. I'll be able to use my hands again in a few days.” He began to smirk. “Well, maybe sooner given the shot of super-blood, Nien gave me during our escape from Turkana.”
“Don’t count on it,” Spock advised him, before his eyes moved quickly to the still very tense form of the former dictator, before he murmured, “You should stay with him here, Jim. He needs you, maybe even more than before.”

Surprised Kirk lifted both brows. “How do you know?” He frowned. “How did you know in the first place that something wasn’t right here? Because of Bones’ ship-wide hail?”

The Vulcan didn’t reply at first, and Jim thought he wouldn’t get an answer to his questions, but then Spock murmured, “I was meditating as Dr. McCoy hailed Mr. Singh. It was your increasing… tension and trepidation that reached me in meditation. I thought that my presence might be required and went to medbay where I…I sensed you were. The rest you know.”

Jim pursed his lips. “But I don’t get it. I mean, we both know when one of us was in trouble, and we reacted on it, but for a while now I've simply… felt your presence, often before you step into a room. Okay, earlier I didn’t – and you startled me, but that was an exception.”

Spock looked thoughtfully at him. “I know what you mean. Our link has… deepened for some reason. And I think that reason is Mr. Singh.” He crossed his arms on his back. “Since you bonded with him the link between us two has… amplified. It could be that the mental abilities of Mr. Singh has opened your mind – increased your capacity to experience our bond. You are more sensitive to our connection.”

Jim blinked dumbfounded. “You mean, Nien’s and my bond is like a catalyst for telepathy?”

“No, your telepathic abilities are about zero…”

“Thanks!” Kirk grumbled.

But he was ignored by the Vulcan, who continued, “… But you do have a brilliant mind and a burning soul. This makes you a prime candidate for the ability to forge and maintain mental links. You reflect everything.”

“'Reflect'?“ Jim was a little bit alarmed. “Does it mean that you feel what I feel? Like when Nien and I… I mean, when we two… well…Dammit, sex Spock! That?” The young captain’s face had flushed, and he was stuttering. It apparently amused Spock despite his Vulcan ancestry.
“Don’t worry, Jim, I’ve strengthened my mental shields and block out everything, unless you are trying to reach me, consciously or subconsciously. I’m safe from any feelings you and Mr. Singh experience in your intimacies.”

To Jim’s fascination, he watched the pointy tips ears and the high cheekbones of his friend flush green, and he knew that Spock was indeed blushing. ‘Dear God, could he be more innocent? I bet my last shirt that he and Uhura don’t even hold hands in bed, yet he flushes like a maiden by the mention of sex!’

He cleared his throat and for a moment, an awkward silence hung in the air between them. Then Spock spoke again. “I will return to my quarters and change for duty. Afterward…”

“Whoa, whoa, stop Spock! You’re off duty for the rest of beta and gamma shift.”

“Jim!” The Vulcan sounded as if he were chastising a child for the same infraction he’d heard about often. “You’re injured and…”

“I command this ship with my mind and my voice, Spock, not with my hands!”

“Yes, but you’re still in pain – and you are needed here.” His voice softened. “Khan is your bonding-partner. Your presence gives him strength and a safe place to regain composure. I may not understand much regarding human emotion, but I do know that Mr. Singh is about to be pushed to his mental limits, and the distance to this limit is shorter given recent events. Your place is with him at the moment, not on the bridge.”

Jim took a deep breath. Spock was not only speaking with his logical, Vulcan mind but also from his heart – a heart full of warmth and gentleness. And Spock was right. Kirk wanted nothing more than to remain at Nien’s side for the rest of the night, watching over the boy with him, but he was on duty. “Spock, you’ve worked more than three shifts in a row. You need to rest.”

“As I already told you many times, Jim, I do not require so much sleep – or ‘rest’ – as humans. I’m perfectly fine; do not concern yourself in this matter.” This time, it was him who reached out to make physical contact. Placing a reassuring hand on Kirk’s shoulder, he added softly, “If we Vulcans understand one thing about emotion, then it is the urge of a bonded partner to be with his mate in trying times. We are not free from the need to protect and a craving to offer mental shelter. Stay with Khan here; I’ll take the conn.”
He let his arm sink and turned to go.

“Spock!”

Jim’s voice stopped him one last time, and as he glanced over his shoulder, he met the warm and grateful gaze of his soul-brother.

“Thank you!” Kirk whispered, and for the tiniest moment, the Vulcan’s lips seemed to curl.

“You’re welcome, Jim.”

Then he was gone, and only now did Kirk realize that Bones and Nien had ended their discussion. Feeling their eyes upon him, he turned around, met their very thoughtful expressions, and spread both arms. “What?”

“I’ll be damned, but if there is still anybody in the universe who doesn’t realize how much that hobgoblin cares for you, then that ignoramus should have his head checked!”

Jim felt warmth rising in him. “Spock is a good friend – just like you, Bones.”

“Yeah, I'll remind you of that the next time you’re cursing like a sailor when I give you a hypo – which is, by the way, mostly your fault!” He added with an accusing finger pointing at Jim.

The young captain rolled his eyes; then he became serious again. “And?” he wanted to know, nodding at the stasis chamber. “Any ideas?”

McCoy slipped back into CMO mode. “Khan and I agree that we have to keep the boy in stasis for several hours so that his body can stabilize before we can initiate the wake procedure.” He looked at the Augment, whose pale features looked almost hollow. “If Joaquin stabilizes in the next hours he’ll make it. Otherwise…” He fell silent again, and Jim bit his lips. Then he closed the distance to Nien and wrapped an arm around him.
“I’m certain he somehow feels your proximity just like I did when I was asleep on Aldebaran. Your presence will help him in this fight; he’s not fighting on his own now. He’s fighting with his brother.” He tightened his hold on Khan. “And I’ll stay with you – we both will watch over him. I’m sure that this will give him strength.”

The former dictator looked at him, and Jim felt a pang deep in his chest as he saw the lingering fear deep in those ocean-colored eyes. Pulling Khan closer to him, he pressed a kiss to his temple, felt the cold skin beneath his lips and tried to send warmth and comfort over their shared bond.

Bones watched them while dread pulsed through him. He had a certain feeling it wasn't just the phaser blast that was responsible for the cryotube’s malfunction. Maybe it was just the straw that broke the camel's back. The tube wasn't supposed to function for so long and maybe it wasn't supposed to work twice – this was the tube that McCoy opened last year to place Jim’s dead body into it while he had put the young Augment into stasis. Maybe the tube couldn't work correctly because of that, and it was pure luck that the boy was still alive. If this was the case, Leonard knew that he would blame himself for the rest of his life if anything happened to Joaquin – a very unpleasant and nasty prospect.

And so he had another reason, a secret one, to pray that Joaquin Weiss would survive this night. Leaving the two love birds, he quickly stopped by Sulu’s sick bed, and because Hikaru was still awake and curious about the turmoil this last half hour, he quickly told him about everything that happened, giving the helmsman a lot to think about. Finally, Bones walked to his office and began to read every report concerning stasis that he could find in the data bank.

ST***ST***ST

The screen on Luengo’s desk at home sprang to life when it pinged and alerted him to an incoming message. It was almost midnight, and he had arrived at his apartment three hours ago. They hadn’t heard anything from the Lexington or from the Excalibur until now, and José was more than impatient.

So it was no wonder that he was up from his sofa and at his desk in no time. He saw the SBI emblem on the screen and knew that his office was calling. “Luengo here!” he answered, and the screen showed one of his secretaries.

“I apologize for disturbing you this late at night, Admiral, but we received the expected reply from the Lexington, sir, priority one.”

“Put it through, Lieutenant, and remain on stand-by!”
“Aye, aye, sir!” The face of the young man vanished and was replaced with the face of the Lexington’s first officer, who looked tousled – like a man who hadn’t slept in some time. Something was wrong out there; this much was evident. Baffled, surprised, but also wary, Luengo listened to Commander Marceaux's report, and his jaw nearly dropped to the desktop as he learned about the malfunction in the warp core and the explosion.

“Oh, that comes in handy, doesn’t it?” he growled, and he opened the attached files sure that this was an attempt by Wesley to get out of answering in person. His eyes flew over the log book, and he took a deep breath. The records were impeccable. The times and locations were correct; the reports of the different departments, including the medical records, left no room for doubt. There had been an accident aboard the Lexington, and as far as the report was concerned, Wesley was lucky to be alive – if he survived the next days that is.

“Dammit!” Luengo cursed. ‘He could have given me what I needed. He could have told me what Kirk is up to – where he’s going! I’m confident that this infuriating farm boy slipped up during his talk with Wesley – or that those two are in on it together!’ José thought angrily. ‘Now I can only wait to see if Styles does find the Enterprise. Otherwise, this cursed cowboy will be harder to find than a needle in a haystack!’

Calming down, he hailed his secretary again. “Lieutenant, send copies of the report to the other admirals. It seems we need to promote an interim commodore for the squadron near Borderland.”

“Sir, the report was already sent to every desk and PADD of command staff. They are all informed now.”

Luengo stared wide-eyed at the young man. “What?” he gasped.

His secretary looked almost apologizing at him. “They all got the transmission. Commander Marceaux made certain everyone was included.”

The admiral’s thoughts raced at this knowledge. Marceaux had sent his report to all staff officers? Why for God’s sake? That was not protocol and… And maybe this was the man’s way of telling them that he needed help. Luengo didn’t know much about Marceaux, only that he has served on the Lexington for several years and that his record was flawless, but he was only a commander. He was not prepared to command a whole squadron – least of all a squadron near enemy territory in the middle of a ceasefire that hung by a thread.
“Lieutenant, inform the staff. Briefing – 0800 – my office! Luengo out!” He switched off the connection even before his secretary could confirm his order, and leaned back in his chair. So, gathering information from Wesley about the whereabouts of Kirk was out of the question now. Everything depended on Styles, and an inner voice told him that he wouldn’t get the report from the Excalibur in a manner he ought to expect.

He would be right…

ST***ST***ST

Aboard the Enterprise, gamma shift was on duty, and the ship’s clock said it was 0135. The corridors were empty, and beta-shift was in bed now. This didn’t apply to an exhausted CMO and the two men who sat side-by-side near the stasis-chamber on visitor chairs.

Scott had stopped by after his shift ended, anticipating what had happened and worrying for Khan. His visit had been good for Nien; it showed that the Scotsman cared for him, and once again he couldn’t suppress the small wonder he felt being so welcome in Jim’s inner circle – that other humans besides his beloved regarded him as human; as one of them now.

Silence had settled once again over medbay, and the night went on slowly for the two men. Every minute that ticked by seemed a lifetime. They couldn’t do anything other than wait. Wait for Joaquin to stabilize, wait for the moment in which it would be safe to initiate the waking process. If that moment would came at all.

‘… The morning will tell,’ McCoy had said. The morning… Not so long ago a morning had shown Khan a new way – back there in San Francisco in Jim’s apartment. That morning had brought the first rays of hope. Now the coming morning could so quickly hurl him back into the darkness he had thought he escaped.

Joaquin – his little brother…

His pale face was even more ashen in the blue light of the stasis. He looked dead, not asleep with his body functions in near stasis as the monitor reported. If it weren’t the faint whisper deep in Nien’s soul, he wouldn’t have believed the medical readouts at all. While Khan hoped with everything he had that Joaquin would stabilize, part of him expected to hear the scream of the med scanner indicating the young Augment’s final and forever death.
McCoy was right. Only the next hours would tell if Joaquin would live or die. And so Nien sat beside the stasis chamber – for hours now, unaware of anything else going on around him except for Jim’s presence at his side – a warm, strong, steady anchor to his troubled mind. His whole being was fixed on the enhanced boy, calling to him, pleading with him. ‘Don’t give up! Don’t die! I cannot lose you too! Please be strong! I’m here! I’m not going anywhere! I’m with you – always!’

This was not the first time he feared for his younger brother’s life, and it was not even the first time that he sat beside Joaquin’s sickbed, hoping – yes, and even praying that the boy would make it. Back in India all those years – no, centuries ago! – they had faced situations even an Augment was threatened by. Not only in the months before the Eugenic Wars, but also during monsoons and earthquakes. One time Joaquin had gone missing after an earthquake. Another time, he and some other Augments had been caught in a tidal wave after an unrelenting monsoon. That moment Khan felt, for the first time, how strong his bond was with Joaquin. The memories of searching for him and finding him finally – half drown, injured, barely alive – were seared in his memories.

It was their first meeting that had linked him forever to the boy who haunted every hour spent awake and asleep. Seeing him like this now was nearly more than he could bear.

Khan shivered. It wasn’t because of the temperature that was set to a comfortable level. The chills that ran through him came from his soul. Maybe this situation that he found himself in again was one time too many that he feared for the life of one of his most dear ones.

An arm wrapped around him; it interrupted the sinister spiral his mind was following without even realizing it. Warmth and comfort seeped through the cold darkness that had gripped him – the golden light of understanding and love.

“He’ll make it,” Jim whispered for the thousandth time. He had sensed the abyss his bond-mate was drifting toward. “He is as strong as you are. And he feels you here, just like I feel you even before I see you. You’ll see; he’ll make it.”

Khan tore himself away from the dark shadows which had begun to surround him, shuddering as he became aware of how close he had been losing himself in dread, fury, and sorrow once again. He was so tired of this; so unbelievably tired of fearing for his family. Since he had been no more than a boy, a teen, he has fought for them in one way or another. Even with the end in sight now, he felt his strength slipping away from him.

“This isn’t the first time I have seen him fight for his life, but now there is nothing I can do except wait,” he murmured; his usually deep baritone was nothing more than a hoarse whisper. “He was injured before, but I was able to treat him. Now…” He shook his head. “Now I can only hope that the tech I once developed to give us all a chance of survival will not be responsible for his death and that the technology of today will be able to save him.” He lowered his head. “I cannot even reach out and touch him – and he is a touchy one, just like you,” he added with a sad smile.
And Jim began to understand how deep Nien’s love for his younger brother ran. Joaquin was indeed precious to Khan – someone he had taken care of for many years. Kirk knew that at least Nien, and his friends too, were bred with genes designed to guard and protect, serve one. And he also knew that Nien not only was able to love so deeply, but he needed someone to love. There was hunger in him for human intimacy many people wouldn’t be able to grasp, but Jim understood it. He had craved real love – the intimacy of family all his life. He had yearned for it since he was able to lace his shoes, and that hole – that need had only begun to dissipate when he found friendship, first with Bones and then with Spock, but something had always been missing. Until now, until he and Nien had grown close – bonded.

Khan loved Joaquin in a wholly different way than he loved Jim. This much Kirk could tell, yet the super-human’s feelings were equally as profound and intense. To watch Nien suffer from the all-consuming fear of losing the boy who held a father's heart, hurt Jim more than he had thought possible.

“Even if you can’t touch him,” the young captain murmured, “he knows that you’re here and will fight death for you because he doesn’t want you to mourn. It’s what that gave me strength after came back from dying – after I became aware that I didn't die and that my friends were with me. Several times I wanted it – the peace that came with dyin’, yet I knew I had to battle the dark from getting me because I wanted to spare my friends that pain again. And when I think about Joaquin’s connection to you that is so much older than mine and Spock's, older than my friendship with Bones... I’m confident that he’ll kick death in the ass and wake up just to make you smile.”

Nien turned his gaze away from the light shimmer of the observation window and looked at Jim. Once again he was surprised how much Jim understood him and his people. For a moment, he couldn’t believe that there was someone like Kirk in his life. Someone, who was truly his, accepted and even appreciated the differences between the humans and the Augments.

Gratitude filled him like so often as soon when this young man acted on his behalf; then he lowered his gaze again. His glance wandered to the observation window of the stasis chamber, and his heart sank as he watched the deathly pale features of his younger brother. What he would not give to see Joaquin smiling at him!

That smile – it had captured him from the beginning because it had meant that the little boy trusted him and was about to overcome the horrors he had faced in the labs.

“I raised him, you know,” he told Kirk quietly. “We were able to save a few children of the ‘new generation’, as they were called, and they all were taken care of, but it was different with Joaquin. Even young as he was, he realized that I saved his life, and he clung to me after our escape from the labs. And I couldn’t find it in my heart to push him away or to separate from him. I was only
seventeen, yet I found the parental role easy after it became clear that neither of us two wanted to leave the other. I was father and older brother for him, and I was repaid with the unconditional love of a toddler, who was convinced that nothing could happen to him as long as I was near.”

Jim watched the many emotions flash across Nien’s eyes as the Augment looked into nothing – caught in his memories.

“You told me that you and your friends escaped the labs in New Delhi and took younger Augments with you – Joaquin. I didn’t understand how threatened they were.”

A bitter frown played around Khan’s lips. “They wanted to kill us all – not only us, the teens, but also the youngest ones.” He shook his head. “It was the day I was forced to kill for the first time.”

Jim’s gaze roamed over him. “You told me a lot about your past, but almost nothing about that day you and the others were able to escape. I think it’s still traumatic for you, isn’t it?” As he caught Khan’s pained expression, he squeezed his beloved’s shoulders, ignoring again the sting of the injuries he got while opening Joaquin’s cryotube. “Do you want to share those memories?” he asked, and he met the haunted gaze of those sea-colored eyes he loved so much. “Don’t get me wrong. I don’t want to cross a line. After all, this has to be very personal for you. But you already shared a part of your past, and I said I will listen whenever you want to talk about the time before you became the leader of your territory. And I have a gut feeling that the fear of losing Joaquin is tormenting you so bad that it's all coming back.” He pressed a kiss to Nien’s unusually cold cheek. “So if it helps you, you have me. You always have me.”

The Augment looked at him; his gaze hung on the soft, masculine features of the young commanding officer while he felt the compassion, the warmth, and the fierce will of his mate. No one who looked at Jim Kirk only once would assume the young man’s sensitivity or brilliance, or the empathy that Jim had proved he was capable of over and over again.

Sighing, the superhuman began quietly, “I told you already about my family – about their appearance, heritage, and relationships. Some of them are ‘only’ good friends. With few others, I share a familial bond because they are a part of my past – my childhood.” He moistened his lips. “This past… is not a happy one. It… It would change your conception of the world – of Earth’s history. Are you sure you still want to hear it?”

Jim shoved his chair even closer to Khan’s without rising and pulled him into an embrace. “I don’t care if it contradicts the books. History books are written by history’s victors, but there is always another side to the story. I’ve learned a lot about the last decades of the twentieth century, thanks to you, and I know that the so-called ‘liberators’ were criminals in their own right. The same goes for the scientists experimenting with genetics without scruple or care for the hundreds of men and women who had to live their lives in survival mode without freedom. It formed an abyss between
them and the rest of the human race that peeked in the Eugenic Wars.” He raised his free hand and cupped Nien’s cheek in it for a moment, missing the feel of smooth skin under his fingers now bandaged. “Tell me what happened, baby. I’ll be the last one to judge you for trying to stay alive and free.”

Once again the display of tolerance and trust touched Khan; then he made up his mind. The haunting memories had become more present in the last hours – almost as if they had only happened yesterday. It was suffocating him. Maybe the old saying ‘a shared sorrow is halved’ was indeed true.

And, to his astonishment, he heard himself speak.

“We had been taken under the wing of a special military section. I was seventeen, Paolo nineteen. We two, along with several other augmented males and females were trained to be elite soldiers whose purpose would be to end the fighting in Afghanistan. Others of us were prepared to end the battles in distant parts of the world by bringing down those who supported area wars.” He pressed his lips together before he continued. “We were created to bring peace – and peace didn’t mean murder. Paolo, Otto, Katie, Kabir, Johanna, Francoise, I… we all found ourselves facing a dilemma. We were forced to fight, but even if savagery was – is in our DNA, we prefer peace. Then we realized that our creators and the dictators of the countries where our labs had been built only wanted to use us to fight their battles to regain leadership and increase their territory. And they were already combating with each other who should be the dictator of dictators.” Khan chuckled at himself as he said it. Without realizing it, he bent nearer towards Jim, leaning into him now.

“We recognized that we were nothing more than tools to them, with no rights. They would kill us as soon as they didn’t need us anymore. We decided to rebel. We plotted in secret, used every given chance to contact other Augment groups in other countries, and we planned to rise up together so that our tormentors wouldn’t be able to warn each other. From the beginning, it was also clear that we had to free our brothers and sisters still in the labs – most of them younger than we.” He shook his head. “It worked – somehow.”

He lowered his head and felt Jim tighten his arm around his shoulder again – a gesture of comfort that soothed a little bit of the tumult of Khan’s emotions.

“We knew that there were ‘new’ children – their DNA made less aggressive, but we had not seen much of them. Our creators said they didn’t want our ‘influence’. They were the ‘new generation’, more malleable. But it did not stop the bastards from threatening them when we rebelled and broke free. One of those children, they wanted to kill too, was Joaquin.”

He felt Jim’s other hand stroking his arm in a calming manner and as he looked at his mate, he realized the image wavered. But this time, he didn’t care that tears threatened to fall. “We had planned everything. We had observed our watcher’s habits, their schedules, and their weak points at
the secret military bases and in the labs. We reconed all escape routes and planned our distraction maneuvers and emergency plans. And of course, we wanted to take the ‘new generation’ with us. Leaving them in the labs was not an option, even if they were not meant to be all that we were.” He bit his lips. “But despite all our planning, it did not go as well as we had hoped.”

Jim faced him, and his heart hurt for his lover as he saw the anguish in those green-blue depths. He didn’t want Nien to suffer these bad memories, but he knew sometimes it was better to talk through the pain. And maybe it would help Khan to overcome his fear concerning Joaquin if they talked. “They figured you out,” he assumed, and the superhuman nodded.

“Not really. Our first strike on the base was successful, but some soldiers were able to alert the scientists in the lab in New Delhi, and when we arrived there they were well prepared. They only let us get as far as they did because they wanted to know who led the Augments – us. They assumed Paolo and me, but they lacked proof.” He snorted. “They got it soon enough. And that was their cue to cut down not only us but the youngest of the children.” A shiver ran down his spine as the images, voices, and the smell of antiseptic and blood fought toward the forefront of his mind…

The alert rang in their ears as the two boys on the cusp of manhood raced down the corridor, glad that they had successfully barricaded the door that held their pursuers at bay. They had tricked many of the guards and simply locked them in. The other teen Augments used every escape route they had mapped to leave the labs behind them – the only ‘home’ the most of them had ever known.

The seventeen-year-old boy, who would later be known as ‘Khan’, and his older compatriot, Paolo, had stayed behind to distract the rest of guards and to give a few other teen Augments a helping hand as they attempted to save the few toddlers and young children of the ‘new generation’. Noonien knew that the chance of success for him and Paolo was minute at best. When they had gotten free of the military facility that was burning now, they realized that they had lost almost the half of their friends – shot down like wild animals by their coaches and the security staff. Nevertheless, they gained victory, but freeing those who were still in the lab was a risk now because their plan demanded all the Augments, and their numbers had been severely depleted. Still Noonien, Paolo, and the others had decided to save the younger Augments. They would not let them suffer any longer!

“Noo, behind you!”

It was only because of the older teen’s shout that Noonien reacted in time and let himself drop to the floor. The bullet that was fired missed him by a hair’s breadth.

With his heart beating wildly, Noonien looked up at the man who had stepped out of the side
corridor and tried to shoot him. He was shocked to see Jay Krishna, one of the guards he had known since he could think – one of the men who he had thought of as having sympathy for the children that the scientists had bred in their labs. “Jay...” he whispered, and as he realized the determination in the man’s eyes, a sharp pain stabbed his chest. No physical wound was inflicted, but a mental one. Krishna was not a friend, but someone who meant him harm – just like the others.

“Don’t think I didn’t know that you were behind this,” the man yelled, referring to the other escaped Augments kicking off their little revolution half an hour ago. “I always knew that you were a rebel, Singh, and now you're going to die like one!”

Still not ready to face the truth, it hurt too much, the Indian boy rose slowly so as not to provoke the man. “Jay, we don’t want to hurt anyone. We only want to be free like all the other humans...”

“You and the others are not humans; you're abortions. Letting you roam free would mean the end of the human race!” He lifted his rifle Paolo stepped between them.

Raising both hands in a calming gesture, the nineteen year old boy said gently, “Jay, you’ve known Noo for seventeen years now. You’ve watched him grow up, helped him when the tests went bad. How can you say something like that after all you’ve witnessed over these past years? You know that we are no monsters – that we have feelings like you. Noo has never done anything to you that would explain your backstabbing him now.” “Don’t give me that shit, kid! We all know what you freaks are up to. You want to infest the world - rule it. It’s in your DNA.”

“And that’s our fault?” Paolo snapped, hoping that the most of his friends had escaped by now. “The likes of you made us what we are – not because you engineered DNA, but because you treated us like lab rats – animals – with no right even to our own lives. Since I was sent from Rome to New Delhi three years ago, all I ever got was distrust, loathing, and humiliating tests. And when I tried to protect the younger ones from you sadists, I was punished – just like Noo. We did the only decent thing there was to do – what any real human would do.” He shook his head. “Our creators ran tests on children, shot them, hurt them, even abused them, trained them to kill and accept that they would face violent death as well. Tell, me who are the monsters here from your moral, human point of view?”

There was a wavering in Krishna’s eyes, quick as it was, it gave the two boys new hope that they might have reached something in the man. In the same moment, shots sounded from nearby followed by screams and shouts torn from far too young throats – adults.

Noonien and Paolo whirled around, gasping while behind them Jay cursed. “It should never have gotten this far,” he murmured, looking at the younger of the two teens – hesitating to execute his order to kill the ringleaders. The young Italian Augment was right. He had watched Noonien grow up and had offered comfort from time to time. It is hard to continually remember that these ‘kids’
weren’t humans – not really. Still, they were children.

Again shots rang out; then the barricaded door banged with a metallic echo against the wall and heavy steps drew nearer. The other guards were coming!

Krishna met the incredible blue-green eyes of the slender, raven-haired boy he’d known for more than a decade.

“Jay?” It wasn’t the first time Noonien was ready to beg, but until now he only had done it for the others – for his friends. But at this moment, he pleaded for Paolo and himself. His enhanced hearing told him that their pursuers were not more than a few seconds away from beating down the door, and with them would come death.

Slow – almost too slow – Krishna let his rifle drop; his heart hurt. “Go,” he whispered with defeat in his eyes. “Run, Singh! From now on there will be nothing else for you – only running. Maybe it would have been more merciful if I had shot you.” With those words, he vanished back into the side corridor, and Noonien felt a wave of relief wash over him. Not only was he was still alive, but he hadn’t been wrong about Jay at all. The man had compassion left in him.

“Come on; we have to hurry!” Paolo didn’t wait for a reply. He grabbed the younger boy’s wrist and began to run. Noonien stayed at his side. Together they stormed down the hallway, and Paolo punched the security code into the keyboard on the door that would lead them to freedom.

They locked the door behind them, and Noonien quickly changed the code. He had watched guards doing this from afar. It was easier than he thought, and on the other side, the guards collided with the door. They were trying to break it down. The two boys grinned at each other.

Then they heard more footsteps, light ones, and as they turned around Sina, an Indian Augment girl, hastened towards them; Kabir, one of Noonien’s closest friends, was at her side.

“Noo, Salim and Imran escaped with their groups, but we cannot get to the new generation. The guards have closed all security doors, and the codes were changed!” she called even before she reached him.

“And I don’t think they did it to protect the toddlers,” Kabir nodded; his dark eyes burnt with fury. “They called Doctor Hakim, and we saw him with two assistants walking to the main cells – Kiron among them. And they carried the kit with them.”
Noonien had gone rigid. Kiron. The man had forced himself upon him several times, using his weakness after medical tests to strip him down for his perverted pleasure. Augments were stronger than humans and even as a teenager Noonien’s strength surpassed those of mere adult humans by two or three times. But even he was unable to escape iron handcuffs – a fact that had shown him that there existed cruelties in the world which were even more twisted and sick than what he endured in the labs or during the survival tests.

Paolo, who had his encounters with the assistant Kiron too, balled his fists. But his attention was directed at something else. “Hakim had his kit with him? Why? If you weren’t able to reach the youngest ones, they couldn’t have been harmed in the rescue.”

“Noo, Paolo!” Otto, a German Augment brought to the New Delhi labs for special tests only five weeks ago, stormed towards them. His English was strongly accented indicating his distress. “Richard and I eavesdropped on the communications between the labs and Hakim. They’ve been ordered to kill all of us if we are found – including the new generation.”

“What?” Horror rose in Noonien. “They… they are only five or six years old.”

“We’ll get them!” Paolo snarled. “We’ll get them if we have to tear down the walls! We need weapons and... Noo, where are you going?”

The Indian boy was already on his way. “There is no time to obtain weapons and blow the doors. There are some poisons left, deadly even for us, and I think I know exactly, how Hakim will follow the order!”

“Didn’t you hear me?” Sina shouted. “They. Changed. The. Codes! We...”

“I can crack it!” he yelled back and raced down the next hallway. From somewhere smoke began to pervade the air and fire alarms added to the blaring sirens. The others followed him, but they only made it to the next edge, then five guards barred their way – weapons ready to fire.

What came then, young Noonien would never forget. It was the third time this night that he took a life – and he was shocked that he didn’t care. One second the man aimed at him; the next moment his neck snapped beneath Noonien’s fingers, and his cold eyes had turned lifeless. Taking the automatic rifle, the boy shot the other guards, ignoring the burning pain in his left shoulder as one bullet hit him. The fight was short, and half a minute later they continued on their way to the area where the ‘new generation’ was held.
Twice they had to face the enemy again – the guards couldn’t be called anything else now. Both times the few teen Augments garnered the victory. But they knew that they had to hurry. It was only a matter of minutes now until it would be too late for the toddlers. Military from outside of New Delhi would arrive – using weapons even an Augment wouldn’t be able to withstand.

Securing their surroundings, Paolo, Kabir and the others built a circle Noonien, as he concentrated on the keyboard to crack the code. The lives of the small children hung over his head like the sword of Damocles; still he remained calm – almost cold. Panicking would do no good.

With dizzying speed, he tested the combinations, stored the already tried ones in his mind, and attempted the next ones. He needed scarcely more than a minute before he found the code; the door unlocked. From somewhere an explosion was heard. Their pursuers had blown up the door that Noonien had locked with a new code just a few minutes ago.

“Be careful, I can hear more guards on the other side!” Paolo had warned before he grabbed his rifle, aimed at the door, and kicked the entry open. Instantly a volley of bullets rang out from the corridor, but the teens were out of harm’s way and acted when the shots stopped. With the grace and strength of predator cats, they jumped into the hallway, rolled over and opened fire as soon as they were on their feet. The battle training finally paid off. The fact that children of their own ‘race’ were in danger made the young Augments merciless.

The fight began again, and Noonien heard Sina scream in pain. One look over his shoulder showed him that she was hit in the left thigh before she doubled over. One of the guards aimed at her and Noonien shot without a thought, hitting the man square in the chest. “Kabir, stay with her and patch her up!” he ordered. “The others are coming with me. Otto, secure the door and follow us then.” His gaze found Kabir’s again. “We will return with the children soon!” he promised and strode down the hallway. Without realizing it, he had taken command and even Paolo, who was older than him, obeyed.

Noonien had never been in this section of the labs. Several doors led to the small ward divided into cells in which the toddler.

Gesturing to his friends, they rushed forwards. Only two remaining security men tried to stop them, but without success. Within seconds, they lay dead on the floor. None of the teen Augments cared for the lives of their tormentors anymore.

One door opened, and a shocked Doctor Hakim stared at them; then he lifted a hand. “Boys, just calm down!” he said kindly – a tone they all knew very well. It was the calm before the storm. “I know that you are angry, and maybe we should discuss more freedoms for you, but...”
“Too late, Hakim, we are already free!” Noonien interrupted him; his blue-green eyes flashed with loathing, hate and determination. “And the children will grow up free too!” He went for the scientist. “Lead us to them!”

Hakim fixed him in his sights. “There is no way that you’ll be able to raise children, Singh. You can barely take care of yourself, never-mind children. It’s better for them to die in peace instead of…” He closed his mouth as Noonien punched the muzzle of the rifle hard against the man’s ribcage.

“Where. Are. The. Children?” he gritted out; his voice a snarl that a tiger would run from.

The same moment he heard the high-pitched voices of children – terrified children. Without wasting another second, he lifted the weapon and walloped the scientist in the temple, rendering him unconscious. Paolo, Otto, and Richard were already running towards the noises in the adjacent room, and moments later a new fight broke out. Noonien closed the distance to them and felt Katie’s presence in his back.

He stopped dead in his tracks as he saw the reason for the turmoil. Five children, not older than four or five, lay on the ground – their unseeing eyes wide open and gray with death’s shadow. A sixth child convulsed in pain on one of the beds, clutching its stomach and throat, but its movements were slowing down. Katie pushed him aside and ran to the little girl who curled into a ball, shaking in pain. Noonien simply knew that the child was lost – and rage exploded deep in his being.

These bastards called him and his friends ‘monsters’ but they had no scruples about poisoning and killing six little children. A red haze of wrath veiled his sight and with a roar, he hurled himself into the fight. He grabbed for the next scientist who just avoided an attack by Paolo and lifted the man into the air. Snarling in hate, he shook the man before he hurled him against the wall with enough force to break dozens of bones – including his skull. Noonien was above the scientist in one quick movement and snapped his neck being driven by the need for vengeance.

Behind him, the three other teens fought with the rest of the scientists and guards, and Noonien was about to join them when he heard a noise from the next room. He looked up and saw a movement behind the security door made of bullet-proof, frosted glass. He recognized the shape – Kiron! And then he heard something else – wrestling and the high, fearful voice of another child.

There was still one of the younger ones alive! And Kiron was about to kill that little one, too.

What went then through Noonien’s soul and heart wasn’t comparable to anything he’d experienced
before. He didn’t know how he managed to shatter the thick armored glass. The only thing he
realized was that he was in the next room and that Kiron looked at him, sneering. He held an
injector in his right hand while he bent over an empty examination table, but now he straightened up
and grinned. “What’s up, Singh? Ready for one last go?” he asked, wriggling his eyes brows.

Glass crunched beneath the young man’s shoes as he walked with slow, predatory steps towards his
cruelst tormentor – the man who had added even more pain to the hell he had lived in for so long.
The same man who robbed him of his innocence in the most brutal way possible. The same man
who most certainly was responsible for the dead Augment children in this section, and who was
about to kill another toddler.

“Come here, pretty boy!” Kiron taunted. “I’ve got something for you!” He lifted the injector and
Noonien knew exactly that its content was deadly – even for him. It didn’t matter. Nothing mattered
anymore, only the deep searing fury fed by too many nights full of pain and humiliation. Growling
deep in his throat, he made a step towards Kiron, not even thinking of raising the rifle. He
remembered this man’s rough, dirty hands upon him and how these cruel fingers clutched his most
sensitive parts with careless glee. Those hands which had throttled him, touched him, forced him...

And then something else pierced the red fog of rage that had wrapped him in a cocoon – the quiet,
fearful whimper of a tiny voice.

The child...

There was still a child in this room.

Kiron began to laugh. “Always trying to be the strong one – the hero, aren’t you, Singh? Always
thinking you have to protect the other creatures, but you never were in a position to succeed; you
aren’t in any position to change what lies ahead for you and the others. When I’m done with you, the
little shit-arse and the other little freak next door will share your fate.” He gestured with his head to
the other side of the examination table. “And afterward, your other friends will find their end. A
shame, we had a good time and...”

He didn’t get any further; something in the Indian boy snapped. Without hesitation, Noonien flung
the weapon away and was on Kiron, who raised the injector. The needle never got closer to
Noonien; he grabbed his enemy’s wrist and twisted it. The sickening crack of breaking bones and
tearing flesh was only drowned out by the man’s scream as the injector fell to the floor. And then the
boy’s hands were around his throat crushing the man's trachea. He didn’t feel Kiron’s weak
attempts to get free or beat him. The last thing the man saw were the pale eyes of the young
Augment which burned with the flames of hate; his young voice went deep with a snarl. “You should
have left me alone!”
Then Kiron’s frame went limp and with loathing, Noonien dropped the dead body to the floor.

Silence…

Around him was silence, only from afar sirens were still howling, and here and there shots cut through the air. He heard his friends’ voices next door, yet he couldn’t join them. There was still the child in here – somewhere hiding. He could hear the little heart beating like the hooves of a galloping horse and the quick, harsh breaths which betrayed more of the fear that still lingered in the room. The barely hidden sounds of misery tore the teen Augment out of the red haze still holding him in a fiery grip.

Wiping his bloody hands on Kiron’s clothes, he straightened up again and listened carefully to the suppressed sobs. “Where are you?” he called quietly; his voice still rough from the powerful affect that ruled him until seconds ago. For a moment, the breaths stopped then sped up again. They showed Noonien the way. Rounding the examination table, he looked around and finally saw a small bundle hiding between a shelf, the wall, and the table. Dark hair, little drawn up knees, and a shaking frame clad in white-blue lab coveralls was all he could see.

“Hey,” Noonien murmured, while he watched the child. “Are you hurt?”

Slowly the little head raised, and Noonien looked straight into large, dark eyes wet with tears. Beneath the fear lay an unusual mix of confusion and hope. Tiny lips were trembling, and barely controlled sobs wracked the small body, yet the child didn’t make any further sounds. Something in his gaze caught Noonien; something tugged at him like a moth to a flame. Without a thought, he crouched down in front of the toddler, not caring that he and the others were running out of time.

“Are you hurt?” he asked again. He reached out and pulled the small, bare arms away from the knees, searching them frantically for any prick that would tell him that this child would die, too. But to his immense relief, he saw nothing. Holding one small wrist in his hand, he carefully reached out with the other hand and stroked over the boy’s tousled, dark hair. “Are you okay?” he whispered this time in English, realizing that the child didn’t understand him. Apparently, he was born outside of India.

That got him a reaction as the child nodded his head in a tiny, barely recognizable gesture.

“Right!” Noonien breathed and felt a wave of relief as he continued to pat the lad. At least there was one good sign. Then he remembered where he was and that they all were far from safe. “We have to
go,” he continued in English and put both hands on the small boy’s waist to lift him, but the child shrank back. “You do not have to be afraid,” the teen Augment murmured; his voice now turning its deep baritone was gentle and comforting. “I am here to help you. No one will harm you, I promise.” He bent forwards again and, to his surprise, the boy allowed him to lift him without further protest. For a long moment, large dark eyes watched him warily and with flickering fear. Noonien pulled the toddler closer to him. The child went stiff, but only for a second; then his tiny fingers buried themselves in the teen’s sleeves, still watching him warily but curious. As Noonien walked towards the door, the boy turned his head, and a whimper escaped him as he looked down at Kiron. He pressed himself closer to Noonien, clinging to him like a lifeline while he pressed his face against the teen’s throat.

“Do not be afraid,” the young Augment murmured, realizing that the child, so young as he was, had been aware of what the man was up to; that he was about to be killed. “He cannot hurt you – never again. You are safe now,” Noonien crooned, drawing soothing circles with one hand on the boy’s back.

Paolo appeared on the doorstep, his face grim. “Jenny found a little Asian girl, maybe five or six and Richard recovered four more from the room next door, but the other children are…” He couldn’t finish the sentence; grief and fury mirrored in his eyes.

Noonien felt another storm of rage flaring up in him, but controlled himself instantly as the toddler in his arms made a sound of misery. The child calmed down the moment Noonien did, which confused the Indian boy before he pushed everything to the back of his mind. There would be time to think about this later.

Glancing around one last time, he saw a file on the examination table and stepped closer. The name ‘Joaquin Weiss’ was written on it, and holding the boy only with one arm, Noonien quickly opened the documents, realizing that the file was about his little protégée. Immediately he took the record, and he pressed the child close to himself. Then he gestured towards Paolo to take his rifle. He walked with large, brisk steps back into the hallway leaving the two rooms of death and blood behind. Jenny, a young American Augment, stood there holding a trembling little Asian girl in her arms. Richard had gathered another little girl and three small boys around him.

“They’re all that is left,” Jenny whispered; fury and pain were liquid in her large blue eyes.

“Noo, Paolo, Otto – hurry up!” Kabir screamed from the entrance, and the other teen Augments picked up the children before they ran. Their keen ears had caught the roar of the approaching helicopters and from somewhere voices barked instructions.

Circling those who carried the children and around Kabir, who held Sina in his arms, the young Augments raced towards the last remaining escape. Later none of them would be able to tell, in
detail, how they managed to flee before the soldiers stormed the labs – or how they were able to leave without a trace, vanishing in the crowded city of New Delhi. Hours after those fateful events, they all found shelter in an empty flat in the middle of downtown – injured, shocked, traumatized, but alive…

“I studied the file that I had taken with me, learning a few things about the little boy who wouldn't let me go – even hours later. Even in sleep, he clung to me, and I allowed it. Somehow, his presence soothed me and helped me to sort out the events of the day.”

Khan’s gaze fell on the observation window and the ashen gray form of Joaquin. “He came from the labs of Jerusalem and was chosen to be part of the aggression study that tested the effects of drugs on aggression levels. They wanted to learn if he and the other children of the ‘next generation’ could tame their emotions.” He shook his head while his fingers twitched. “He was traumatized and didn’t speak for weeks. He understood English perfectly well, but he didn’t use it. And he became my little shadow. The Chinese girl, Lin, overcame her trauma within a few days, but Joaquin refused to cooperate.” A smile tugged at Nien’s mouth. “Every night he came to my makeshift bed and climbed into it. There was no way to make him stay in his own; he always came to me. And I allowed it. A week later, I took him with me and tucked him in before I lay down to sleep, too. He only ate when I ate, and he followed me around like a puppy – always there, always silent. But I saw the beginnings of change in his eyes. Where during the first days only fear and awareness was in his eyes, finally I saw curiosity – and calmness. He didn’t speak for seven weeks. I remember distinctly the day he finally did, and how happy I was. The others already teased us – called us Siamese twins, but I didn’t care. Joaquin had wriggled himself into my heart, and there he has remained.”

“And so you raised him,” Jim whispered, and the former dictator nodded.

“Yes, I did – first in our shelter, and later in my palace. There were months when I couldn’t take care for him, but we had gained the respect of the inhabitants that we helped against criminals and area despots. An older woman, Shani, had lost all her six of children in a mine accident. She took Lin and Joaquin in; other older couples adopted the four other children. We supported them where they needed it, and they took care of the younger ones. But Shani was more than just help to us. She was a very loving woman and did not care that scientists had experimented with us – make us what and how we are. That's how we explained ourselves to her. She didn't even have the education to understand DNA's function.” He sighed. “She was like a mother to Joaquin and Lin, and later to other younger ones that we saved from a lab in London.” At the last word, a cloud darkened his features for a moment. The English metropolis held some bad memories not only from the twenty-third century, but the twentieth as well. “The children loved her, and as they grew, they continued to hold her in high regard, despite the fact that she wasn’t as intelligent as they. But she was warm-hearted and kind – something wholly new to the children. And for us, too.” His gaze became distant, and Jim guessed how the story would end.

“What happened to her?”
“She fell victim to one of the first assaults in… One year before we fled Earth,” Nien murmured; sorrow showed on his pallid face. “Joaquin and the others missed her terribly, but soon their grief was overshadowed by the brutality of the Eugenic Wars.” His features softened again, as he looked at his younger ‘brother’. “He was so relieved when we reached the Botany Bay without being caught and killed. Like all the others, he knew the risk we were about to take. Two of my people offered themselves for the testing phase of cryosleep. It worked; they woke after four weeks. This gave us hope to try the impossible. Joaquin was the last I put to sleep. He knew that I feared for us all, and his last words were ‘Until later, big bro’.”

Khan closed his eyes when they began to burn again. “There was still the significant risk that none of us would wake up ever again, but Joaquin was always the cheerful one – after he overcame the horrors of the labs. His complete trust calmed me as I programmed my cryotube, climbed in, and closed it after the successful start of the Botany Bay and her start away from Earth – it was empowering.” He swallowed. “We made it – except for the twelve whose cryotubes failed and the four Marcus killed. And now I may lose another one of my family – my little Joaquin.” He shook his head; his voice was about to fail him. “I… I cannot, Jim!” he whispered. “I cannot lose him!”

“You won’t,” Kirk murmured, wrapping his other arm around his shivering mate; he held him close. His hands stroked soothingly through raven-colored strands, and he rubbed his hands calmly over the powerful, lean back. Without hesitating, he pressed a kiss on Nien’s tousled hair before he leaned his head against it. “He’ll wake up again, honey! He will not leave you. We both will not leave you – ever!”

His gaze wandered once again to the stasis chamber and the boyish face bathed in blue light. ‘Wake up, Joaquin. Your ‘big bro’ needs you. He needs you to live, to join this life with him, to become part of this new century, too. Don’t give up, child. A whole new world awaits you!’ he thought, hoping his silent words would somehow reach the young Augment.

Hidden from Jim and Khan, two other men had listened to the whole story and watched them now.

ST***ST

Hikaru Sulu had somehow managed to rise when he woke up and heard his captain’s hushed voice nearby. It was night on the ship, yet Kirk was up and obviously at Khan’s side – not a good sign given the little information Sulu received from McCoy. It seemed that one of Khan’s crew, now aboard the Enterprise, was in danger. And the helmsman had a good idea what would happen if the other Augment died.

On quiet feet, weak-kneed, and a little bit dizzy, Sulu walked into the main compartment of medbay; curiosity, but also concern prompted him. As he drew nearer, he recognized Khan’s deep voice, and he stopped as he realized that the Augment was speaking of his past – of the day he and the others
escaped the science labs where they had been bred.

With mounting dread and compassion, but also with shock and outrage, he listened to the tale, barely believing the events of three centuries ago. It was almost unfathomable that people would play with the fire as they did, messing with human DNA. And then they feared and hated the results, laying all the blame for the events on the Augments. Murder was the nastiest of crimes, but killing little children was another level of despicable. Was it any wonder that so many Augments had snapped and tried to gain the upper hand over their former tormentors and the rest of humankind? Not one of the enhanced men and women had experienced anything but cruelty from those who bred them. It was rather a miracle that Augments were able to show compassion and love at all.

Sulu continued to listen. He felt himself caught in the tale Khan told, and only when he felt a hand on his shoulder, stopping him, did he realize that he was about to walk straight into the room where Khan and Kirk sat. He turned his head to see McCoy beside him – pale, with eyes red from exhaustion, but he was tense. To his surprise, the CMO spared him any embarrassment and didn’t order him back to bed. With shocked fascination, McCoy followed Khan’s story, too; both officers began to understand the superhuman a little better than they did before.

As the former dictator came to the end of his tale, his voice caught as he expressed his fear of losing his ‘little brother’. Sulu couldn’t help himself and stepped nearer. His gaze found his captain and the Augment sitting side-by-side – and more. Kirk had wrapped Khan in a tight embrace and… kissed his hair? Then Hikaru heard Jim call the Augment ‘honey’. He watched the enhanced man not only accept the tender comfort, but he clung to Kirk who held him even closer.

An audible ‘click’ sounded in Sulu’s mind. He turned his attention away from the two men and looked at McCoy, who only nodded, shrugged, and finally made an inviting gesture towards the separate room where Hikaru was staying, signaling that he ought to return to bed.

Sulu obeyed – confusion churning and full of questions that he wouldn’t get answers to this night…

TBC…

Chapter End Notes

I often thought about the idea, how the Augments escaped their ‘watchers’ – their guards, their coaches, their tormentors. That they would plan the whole thing was out of question and that it hadn’t happened without violence is understandable too, yet there had to be certain events that ‘formed’ them for what came later: Hate or protectiveness, peace or war. I imagined how Khan met Joaquin for the first time and why they got so
close to each other – why Khan is Joaquin’s ‘older brother’. I know that the prospect of these scientists killing the ‘new generation’ of Augments sounds horrible and behind comprehension, but then I became aware of the cruel fact that the Augments were nothing else than lab-rats in the eyes of their creators – non-human creatures and therefore without any rights (even without the rights of being alive after they fulfilled their services or could become a danger).

When you look in labs today there are still experiments on living beings and there are over and over again reports of illegal experiments even on humans – reports which vanish within a few days to be never be read-able ever again. Gene Roddenberry knew or thought about those things long before we were able to de-code the human DNA, yet he created with his ‘Augments’ the brutal outcome of what happens when scientists are playing God in a role that doesn’t fit.

In my story Khan is more a victim than everything else and he went a long way from being a caged youth in labs to the superhuman warrior with a new-found heard and soul like he is now. You all got glimpses or short episodes from his past, but never the key-experience that transformed the enhanced teen into the fighter we all know. I hope that you, despite all the violence and cruelty, are liking my vision of the day he and the others escaped their tormentors and how he and Joaquin met for the first time.

The next chapter will bring the decision about Joaquin’s fate, Luengo and Norton are going to realize that they are about to be in deep water if they don’t act soon, and then… Well, you’ll have to wait ‘til the next update.

Love

Yours Starflight
Hi, my dear readers!

Thank you so much for the feedback. I can imagine what the background-story of Khan and the others during their escape from the labs as teens has done to you – or how he and Joaquin met for the first time. I think, the way the scientists and guards from those labs acted and never saw humans in the Augments, was a kind of self-defense, because otherwise they would have been never able to breed, rise and tested them like they had to. I know, that’s no excuse; rather a proof to what humans are capable of. And those men and women’s point of view and regards concerning the Augments hasn’t come to an end in the 23rd century, as you will learn in the new chapter.

I’m sure you’ll be outraged again in the end, but I also can promise some sweet and loveable scenes, combined with some humor and compassion.

Therefore I didn’t want to waste any more words.

Have fun

Yours Starflight

Chapter 64 – Anxious hours

Carol Marcus lay awake in her quarters; staring at the dark ceiling like she had done so very often within the last two weeks. She simply couldn’t believe what she had witnessed this evening: Jim and Khan were a couple! There was no doubt about it. Hell, Kirk had more or less admitted it as he didn’t protest at her suggestion, which had been unmistakable.

She had known that Jim Kirk was a man with a strong sexuality, yet he had the reputation of being a lady’s man. Sweet Lord, she knew four girls who had had the pleasure to share his bed once or twice, and she had watched him flirting a lot, but to think now that he was together with a man was simply unbelieving.

And not with a casual man. No, of course not. Jim Kirk did never ‘casual’. No, he was together with Khan of all people. The two were a couple – more even, Carol was certain that both were in love with each other. The way they acted while the younger Augment’s life was at stake spoke volumes. Kirk had called Khan ‘baby’ and ‘honey’, and the superhuman had not broken his neck for being titled like this. Rather the opposite. Khan had leant into Kirk, seeking comfort – displaying a
weakness like this that was so out of place it had to be real, because even Khan couldn’t put on a
show like that, even with his actor abilities. The two were so familiar with each other that it would
have been cute to watch them, if not one of them would be a wanted man on the run. And even
more, Leonard seemed to know about them and was obviously okay with this insanity!

How could he? Jim Kirk was not only risking his career, but also his freedom for the Augment-
leader – and this not only because he wanted real justice for the tormented man, but also because
they were lovers.

Carol rubbed her face.

And as if this whole mess wasn’t fucked-up enough, no, Kirk had taken Khan’s crew aboard. Right,
she understood that their lives had been at stake – that Luengo had given the order to kill them what
wasn’t right in her opinion – yet to take them away to some unknown planet where they would be
re-awakened was crazy at best. 72 superhumans – 73 with Khan – would roaming the galaxy could
only end in a catastrophe! How could Jim be so careless? Yes, love makes blind – the old saying was
right – but Kirk was a damn Starfleet captain! He wore one of the greatest responsibilities on his
shoulders, not only for his crew and his ship, but also for the whole Federation. How could he risk
the inner stability and peace like this by setting so many Augments free? Augments, which were
party certainly condemned on Earth for crimes during the Eugenic Wars!

“You’ve lost your mind, Jim Kirk,” she whispered. “Khan realized and caught you at your biggest
weakness and lulled you in. He tricked you into believing him – into helping him to recover his
crew. And with this boy maybe surviving we’ve not one but two Augments walking free around
aboard.” She closed her eyes. “God, we’ll all regret this sooner or later!”

Sleep didn’t find her easily in this night.

ST***ST***ST

“Captain, we’re closing the distance to the Enterprise within the next ten minutes!” The voice of
Commander Ben Taylor tore Lawrence Styles out of his sleep. With a groan he sat up; realizing that
he had fallen asleep at his desk. An unpleasant tugging and burning in his shoulders and back
punished him for the unusual place to take a nap.

He had gone to his quarter at 2300 board-time; instructing to call him as soon as they would be close
to the Enterprise what was expected to be around 0300 – later than originally thought, because Kirk
seemed to have ordered a zigzag-course that was not easy to follow. The bastard knows that without
a working SDD he is readable and tries an old trick to escape any purchasers. Wrong thought,
farm-boy, I’ll get you!” had been Lawrence’s reaction to this all.

But as he glanced now on the chronometer at his nightstand he saw that it was already 0425. And only now they were closing up at the Enterprise? Dammit! He had hoped to have Kirk, his senior officers and that creature in his brig by now!

“I’m on my way,” he said and cursed after he shut off the link and rose; feeling every bone of his body, while his neck and back gave him hell. To sleep at the desk wasn’t really the best you can do. “Shall the devil take you, Kirk! All this because of you!”

Five minutes later he appeared on the bridge. Only Taylor and Wilson, the helmsman, were present from the alpha-shift, following Styles’ earlier order. He wanted to have the chief of the science department on the sensors and one of Luengo’s men at the helm when the Excalibur would reach the Enterprise. Kirk was famous for his tricks and Styles didn’t want to take any risk with the treacherous other captain.

“Distance?” he demanded without and greeting.

“Eighty thousand three hundred kilometer, sir,” Taylor reported from his science station; feeling uncomfortable. He and Li agreed in their awareness that something was absolutely wrong here!

“Right! Tortinio?” Lawrence snapped at the young comms officer. “Prepare to call the alpha-shift to bridge on my command.” The he returned his attention back to the main screen. “Maximum zoom!” he demanded and stemmed his fists in the hips; waiting for the sight of the Enterprise.

Nothing!

There was nothing except for the depths of space and the shimmer of the surrounding star systems.

Styles frowned and turned toward the science station. “Do our scanners still read them?”

“Yes, Captain, the source of the warp signature is straight ahead,” Ben affirmed.

Confused Lawrence glared at Wilson. “Are the camera correct adjusted, Lieutenant?”
“Aye, sir, view straight ahead.”

“And are we on the correct course?”

“Again affirmative, sir!”

Even if it changed nothing Styles walked closer to the main screen; his eyes roamed over the picture. “Where is he?” he whispered “Where is Kirk?”

Taylor bent again over his scanner and watched the readouts. “Sir, the warp signature is absolutely identical with that of the Enterprise – and we’ve closed distance to her to thirty two thousand kilometer. We have to see her.”

“Yes,” Styles growled. “And pray to tell where she is?”

“Captain, my sensors are catching something – an object where the Enterprise should be,” Wilson reported; watching his own scanners which were programmed for the shapes of other vessels or objects they came along.

“What is it?”

Wilson frowned and turned slowly around. “I don’t know, sir, but it isn’t a starship of the size of a Constitution cruiser.”

“I have it my viewer now, Captain,” Taylor called.

“On the screen!” Styles demanded; a very bad gut-feeling awoke in him.

The view on the screen changed and showed – a small, longish metallic object that raced with warp 3 through space.
“A… a telemetry-probe?” Styles gasped; recognizing the object instantly. He whirled around to Taylor. “What the heck…” he began, baffled and outraged.

“I scan it through, sir,” Ben said. “It’s a standard telemetry-probe and given its identity-number it belongs… to the Enterprise.” He straightened his shape and glanced down at Styles. “It’s the source of the warp-signature – programmed to send it.”

“What?” Lawrence’s voice was far too high, while he looked with wide eyes at his science officer, before he sharply turned back towards the screen. “We followed a probe the whole time?”

“Captain,” Ensign Tortinio called from his communication station. “I receive an audio signal from the probe. It was activated as Commander Taylor made the full-scan of it.”

“On the speakers!” Lawrence snapped.

“Hi Lawrence,” the cheerful tenor of James Kirk sounded through the bridge. “Hope you don’t mind the little April-joke. I know, it’s too early for that, but – hey – I always was quicker than you. Don’t take your anger out at your crew; that would be bad form. Merry Christmas and till next time. Kirk out.”

The transmission ended and there was nothing to hear on the bridge except for the static from the speakers, the soft noises of the stations’ computers and the ragged breath of Styles. His face was deep red and his whole frame trembled with shame and fury.

Tricked!

James Kirk had tricked him again – and he stood here now like a fool.

“Shot this damn probe into pieces!” he gritted out between clenched teeth, before he slowly turned towards Tortinio. “And then try to get Admiral Luengo in the line. Patch him through to my quarters, scrambled line!”

Without another glance he left the command center; his whole being burnt with humiliation. He even thought he would feel the mocking glances of the other officers on his back as he stepped into the turbo-lift. He made it to his quarters before his control slipped. The door had barely closed as he balled his fists, threw his head back into the neck and then his scream echoed from the walls.
“KIIIIIIIRK!”

ST***ST***ST

“Oh – God dammit!” Bones had the certain feeling that his back muscles were tearing apart, while his neck thought it would be a good idea to change into a broom-stick – a very thick broom-stick with no chance of bending it. The same time his shoulders joined the little rebellion and sent little flashed straight through his forehead and temples.

Jesus, he of all people should know it better than to fall asleep at the desk – a desk covered with data chips, print outs and several sheets of hand-written notes he had worked on for it seemed an eternity. His tired gaze found the chronometer at the wall. It showed 0418 ship’s time.

Dammit again! He should have watched the boy’s bio-signals instead of falling asleep! Nervous he glanced at the screen that showed the readouts of the stasis chamber and sighed in relief as he saw that Joaquin’s state had stabilized. The chances for the boy’s survival were good.

Groaning like his own grandfather McCoy raised – also with the grace of his father’s old man – and tapped out of his office down the main area and into the room where the stasis chamber was. His gaze immediately found the two figures hunched on the chairs – Jim with his head on Khan’s shoulder and obviously asleep, the superhuman looked with an unreadable expression at the figure behind the observation glass, but turned around as he heard McCoy’s quiet footsteps.

Leonard hesitated for a second as he took in the ashen-grey, small face and saw the barely hidden fright in the Augment’s eyes. He could understand to what Khan had been through within the last hours. Uncertainty was always worse than anything else and to fear permanently for someone dear was pure hell. McCoy knew of what he thought. He had been through this in the two weeks he fought for Jim’s life after their first encounter with the genetically engineered man.

Nodding at Khan he stifled a yawn, while he closed the distance to the screen and took a long critical look at the newest readouts – they showed the same like the records at his terminal. Feeling Khan’s glance almost burning at his back he drove his attention back to the Augment and grinned, “His state has stabilized. His biosignals are within the standard parameter of someone being in stasis, heartbeat at 8 per minute, pulse and breath are regular.” He saw the superhuman’s eyes widening with something that was more than hope, and smiled, “I think he’ll make it.”

For a long moment Khan didn’t react at all. How often had he sat at the bed of one of his family
members, not knowing if the enhanced healing process of their race would be enough to save his brother or sister? And this wasn’t the first time he watched over Joaquin when the boy was injured. Yet every time was one too much; every time he had blamed himself – asking himself if there hadn’t been anything he could have done to prevent this. He would never get used to the fear that roamed through him when one of his own was sick or at mortal risk.

After sitting here for hours, McCoy’s words were like a balm for him – a redemption for his troubled soul. A sigh escaped him that sounded far too much like a suppressed sob, before the former dictator closed his eyes in nameless relief.

Reacting on pure instinct and driven by the deep rooted sympathy he held for almost anyone, Bones reached out and placed a hand on the strong shoulder and squeezed it; a gesture of understanding and comfort.

Jim stirred, mumbled something and began to blink, even if Khan hadn’t moved much at all. Fascinated Leonard heard his friend mumbling a “Whatisis?” and realized that Kirk must have felt his lover’s emotions which woke him up. And not for the first time the CMO asked himself how strong this mental bond really was – and how it would feel to be linked to someone like this.

He met Jim’s glassy, tired eyes and explained, “As it seems the boy is over the worst.”

That was enough to chase the rests of dreamland away and Kirk straightened his shape. “Really? He… OUCH!” With a grown he gripped for his neck, only to moan again as his arms began to protest, while his back told him in its own unmistakable way what it meant to sleep like this.

McCoy chuckled. “Well, I think it’s about time to stand a few hypos and…”

“Not for me!” Jim growled instantly and lifted a defiant hand.

Bones rolled his eyes. “Infant!” Then he watched Khan rising and stepping to the stasis chamber, and for a long moment both officers fell silent – not wanting to disturb the Augment.

Nien’s gaze didn’t waver one second away from the boyish features in front of him.

Safe!
Joaquin was about to survive the incident!

His little brother wouldn’t die – not now! And not in the near future!

From one to the other second he felt exhaust – exhaust like rarely before. His bright, calculating mind realized immediately that the sudden tiredness was resulting from the enormous tension within the last hours, yet his soul and heart didn’t care.

An arm was wrapped around him and a yaw was placed on his left shoulder, while warm breath danced over his cheek. “Knew he would kick the Grim Reaper in the ass to remain with you,” Jim whispered and pressed a lovingly kiss against Nien’s still cold cheek.

Khan nodded slowly, barely trusting his own voice as he murmured, “Yes.”

McCoy stepped beside them and also watched the young Augment, illuminated by the blue stasis-field. “I think we should give his body an hour more to get used to the heightening functions before we initiate the wakening-process.” He glanced at Khan. “What’s your opinion?”

“I agree,” the Augment answered hoarsely; fighting down the impulse to demand an earlier beginning of the process. He longed to see those big brown eyes opening again and to hear the cheerful voice that always had been able to lift his sometimes dark moods. He had waited so long for this to happen, a few hours more wouldn’t hurt, yet it would require all his control.

Jim looked at him as he felt and even saw the battle of eagerness and logic Nien was going through. ‘So much like Spock, yet they are so different,’ he thought; rubbing his mate’s back with his still bandaged hand.

The wakening process began an hour later. McCoy had called Dr. N’Halloo to assist him. The Andorian physician was a specialist for stasis-procedures and also knew about Khan’s true heritage and of his crew’s presence aboard. Together they initiated the process, watched by Khan with hawk-eyes. Even tired as he was Jim remained with them; not even thinking of leaving his mate to face the next hours alone. Kirk was no doctor, but even he knew about the critical phases within the whole procedure. Like a solid rock in a stormy sea he stood beside Nien; his sheer presence was enough to give the Augment again the hold he needed – enhanced genes or not.

McCoy had calculated five or six hours until Joaquin’s body would be adjusted to the standard
functions of his body – if everything ran smooth, that’s it. And the CMO and Dr. N’Halro were more than perplex as after three hours and fifty two minutes the readouts told them that the young Augment’s body functions worked flawless and in the usual parameters.

Watching the screen at the stasis chamber’s terminal Bones pursed his lips, while Khan stepped beside him. “How long has it lasted for you as Marcus woke you up?” Leonard asked quietly and the superhuman took a deep breath.

“I’m not sure. I regained conscious, found Marcus and two other men looking down at me, reassuring me that I was ‘safe’ and the next time I woke up with my mind in place but with still arching muscles, it was eight or nine hours later – given what Marcus said, but who can tell if he stuck to the truth?” He rubbed his neck. “I’ve to admit that I have no real experiences given the period of time we need to regain full function. Two of my friends agreed to some tests I did, but they remained only for two weeks in cryosleep before I re-woke them. Joaquin was about 264 years in cryosleep. I lack of data to tell you how long he will need to regain full conscious and body functions.”

Bones grimaced. “You sound like Spock.”

“Mr. Singh prefers to speak in rational ways, Doctor. Of course you’ve problems with understanding that!” the deep voice of the first officer sounded from the door.

Jim, who had dozen off again on his chair, lifted his head and looked sleepily at his Vulcan friend. “Spock, s’everything right?” he mumbled, and found himself in the focus of the brown eyes, which softened.

“Yes, Captain. Alpha-shift has begun and Mr. Scott has the conn.” Then he turned towards McCoy. “Do you think it’s safe for Mr. Weiss to be removed from the stasis chamber?”

Bones nodded. “Yeah, I think so. BARBARA!” he yelled, what startled Kirk enough to become fully awake, while Spock winced.

“Doctor! That was unnecessary!” the Vulcan stated with a hint of irritation in his voice; his sensible hearing still ringed from the CMO’s shout.

A Rigelian nurse stepped at the threshold. “Barbara is still off duty, Doctor. May I assist you?” she asked kindly and Leonard sighed. “Yes, Chayrha, is the second private room prepared?”
The nurse nodded. “Yes, sir. The bio-bed is connected with your terminal, thermo blankets are ready and I also placed two chairs in the room.” She gave her captain a knowing glance, who simply smiled at her – too tired to care for professional behavior.

“Thanks,” McCoy murmured, then he turned towards Khan. “I think you prefer that it will be you, who carries the boy into his new life?”

Nien nodded. “Thanks,” he whispered, his whole being was filled with wariness but also joy.

Bones took a deep breath too. “Right, now it counts!” he murmured and began to lower the stasis field, while the chamber was filled with more fresh air.

“Body temperature at 36.5, heart rate at 58,” N’Halro reported the readouts. “Breath normal.”

Bones nodded. “Initiate the stasis’ shut-off now,” he said; his fingers rushed over the touch screen that controlled the stasis-system. “Ready for opening in 60 seconds.”

It was the longest minute of Khan’s life – or so he thought. He barely dared to breath, his whole body was tensed like bow ready to let an arrow fly. New fear flowed his heart and soul; knowing that this was the most critical part now.

The countdown seemed to be madding slowly. Every time the Augment looked at the display he thought at least a minute must have gone by, in truth the countdown had lessened only by a few seconds. Then his gaze stayed fixed on his little brother, willing him to hold on.

“Countdown zero, ready to open stasis chamber,” McCoy said and with a small hiss the large tube’s hatch opened.

“Body function still normal,” the Andorian told them, then he smiled. “You did it, Len.”

“Let us better say that the boy did it by not giving up.” He made an inviting gesture towards Khan. “Mr. Singh, if you want.”
For a long moment the superhuman didn’t move; almost paralyzed with the knowledge that Joaquin was well and would wake up soon. Heck, he didn’t even dared to reach out and to touch him like he had longed to do for so long, then his mind began to work properly again, and stepping beside the chamber he bent down and lifted the boy on his arms despite his bandaged hands. He still felt a little bit too cold and only now Khan saw that Joaquin’s hair had grown by an inch or two, otherwise he was like he perfectly remembered him.

Pressing the young man to his chest and relishing in feeling Joaquin’s weight he couldn’t do anything else than leaning his face against the pale, cool cheek and to take a deep breath of the familiar, painful missed scent, before he looked up again at McCoy. “Thank you,” he whispered, and the Augment in him winced at the croaking sound that was his voice all of sudden.

Leonard smiled at him; understanding fully what the superhuman had to feel now. “You’re welcome,” he said; feeling almost lightheaded that the young man was still alive, what made him aware of the immense guilt that had plagued him since the moment Joaquin’s cryotube failed. There was no proof if the malfunction really resulted in his opening the tube last year. It also could be basing on the phaser blast that grazed the cryotube during the incident on Gamma 12, yet McCoy simply had this gut-feeling that the whole mess within the last hours was partly his fault – a fault that could have easily cost the boy’s life.

He cleared his throat and gestured towards the door. “Come on, I’ll show you where you can tug him in.” He was about to leave but as he heard no footsteps behind him, he turned around again – and felt deeply touched, as he watched Khan stopping in front of Kirk and heard him whispering, “Jim, may I introduce my little brother to you?”

The CMO wasn’t the only one, who was moved by this gesture. Kirk felt the same as he reached out and let his wrapped fingers glide through the brown, shoulder long hair of the boy who was at the threshold of manhood. “Hi there,” he murmured to the sleeping young superhuman. “You have no clue what your big bro went through to get you back. And there I thought I was trouble at your age,” he added with a soft chuckle. Then he lifted his gaze and the two men looked at each other – relieved, happy and even with a little bit wonder in their eyes.

Then Jim stepped aside and made room for the former dictator, who quickly strode to the door and followed McCoy into the main area; Kirk and Spock were instantly at their heels.

A minute later Khan lowered Joaquin to the bio-bed in a small private room that was usually reserved for the senior officers or important guests should something happening to them. Feeling like the seventeen old teen from all those years again, Nien gripped for the thermo blanket and spread it over his little brother; tugging him in like he did after their flight from the labs in New Delhi. Reaching out, he stroked through the thick brown hair lovingly; swallowing a rising lump in his throat as he listened to the even breath of the younger one.
McCoy watched the monitor above the bed and smiled reassuringly at the Augment. “He is still stable, but deeply asleep. That’s good. His body has come to terms with the changes now.” He turned around to give Khan some privacy, who had sat down on the bed’s edge and was still stroking the boy’s head and cheeks. ‘Shall somebody tell me ever again Augments are unfeeling creatures! This man is so full of love I wonder that he doesn’t simply explode with it.’

His gaze found his two friends, of whom one looked like he was ready to drop to the floor to snore like a bear in winter-rest, while the other one watched the two superhumans with mere fascination.

“Rrrright,” Bones stated and fixed Kirk was his best doctor-stare. “Two possibilities, Captain. You go to your quarters and will sleep for the next ten hours…”

“Beta-shift starts in less than eight hours and…”

“Or,” McCoy continued like he hadn’t heard Jim at all, “I ask Spock to nerve-pin you and put you in bed somewhere in medbay, keeping you asleep until I’m satisfied that you’re rested enough.”

Kirk gaped at him. “Do you think it wise to threaten your commanding officer?”

“Do you think it wise to command a starship in a serious crisis with barely open eyes and a mump mind that is one step away to get lost in Morpheus’ Realm?” Leonard countered; lifting both brows.

Jim stemmed his hands in his waist – and cursed a moment later as his fingers and palms promptly began to sting. Glaring daggers at McCoy he replied arrogantly, “Spock would never do such a thing!”

“If your health depends on it, he would,” Bones retorted dryly. “Alternative I can also hypo you, but…”

“None of this will be necessary, Doctor,” Spock cut in; feeling obliged to step into that little discussion. “The captain knows that his ship needs him refreshed and will not be unreasonable.”

Kirk stared wide eyed at him. “You know that this is a mean trick?”
“I fail to see the reason for that statement, Captain. You are a reasonable man, aren’t you?”

“Yeah – and I’m the queen of England,” Bones snorted, but shut up as he received even three glares this time.

“Jim,” Khan said softly, before the discussion could continue. “Dr. McCoy and Mr. Spock are right. Lie down and find some sleep. Joaquin will not wake within the next hours and the Enterprise needs her captain.” He nodded towards the chairs. “And to sleep on one of them again will do your back and neck no good. Not that I mind to give you a massage, but it’s better when there is no healing reason to spoil you.” He winked at him, what made Jim smile, Bones groan and Spock sighing soundlessly.

“’kay,” Kirk murmured and glanced at McCoy. “You wake me if something changes here, Bones. And this not a requirement, but an order!” he added firmly.

“Aye, Captain,” the CMO answered like a good officer should – and Jim couldn’t help but felt a little bit teased. Then he glanced at Spock. “The same goes for you, my friend. Off to your quarters and find some rest. And this is an order, too!”

The Vulcan only lifted his two brows now and clasped his hands on his back. “You don’t have to worry for me, Captain. As I already told you several times by now Vulcans don’t…”

“Oh, but I’m only a simple human, Mr. Spock, and I do worry for you – and for me, too, because I think Uhura is going to scratch my eyes out if I don’t insist of you finding some rest and to share some spare time with her.”

For a moment Spock only glanced at him, before Jim got another dose of Vulcan, officially not existing yet very present humor. “Even if I witnessed some tendency of battle-will in Lieutenant Uhura I don’t think she would be furious enough to inflict any harm on you, Captain.”

In the background Khan laughed quietly; feeling the heavy weight lifting more and more from his shoulders. McCoy shook his head in amusement. “Don’t underestimate our language-genius, Spock!” he teased. “The lioness always fights for her mate, despite the strengths of the opponent.”

“A very colorful metaphor, Doctor McCoy, but to speak in the same way: There are already two lions aboard – one even wears this feline’s name – and they have all hands full with keeping each
other out of harm’s way. I don’t think that Lieutenant Uhura dares to come between them only to protect a le-matya.”

“A le-matya?” Bones asked perplex. “Don’t tell me she calls you that in private!”

Spock was far above an answer, but Kirk burst out laughing, while he winked at a very amused Khan, whose face began to lose some of its ashen color.

“That was really too much information,” Leonard grumbled. “Jim, I need you sign my requirement for a shore leave. I’ve some schooling in veterinarian medicine to do. As a CMO I’ve to be fit to treat all crew-members, even lions and Vulcan predators.”

“I suggest against such a step, Doctor;” Spock prepared his comeback. “Given your usual way of handling patients you wouldn’t survive the treatment of a lion – or a le-matya – longer than a half minute.”

McCoy’s yaw almost hit the floor and for once he was speechless.

“Good day Doctor,” the Vulcan said with a hint of arrogance and before the CMO could regain his composure, the first officer vanished after a greeting nod at Jim and Khan.

Kirk laughed even more. “God may prevent you two from bickering,” he snickered after he regained some control.

McCoy only glared at him, before he firmly pointed towards the door. “Good night, Jim, and I don’t want to see your ass in medbay within the next ten hours!”

“Unless something changes with Joaquin’s state!” Kirk reminded him; feeling a rush of protectiveness concerning the young Augment.

“I call you if something happens,” Khan said quietly, before he hesitated. “I’m in beta-shift, too, Jim, but…”

“Your place is here beside your little brother, Nien. I don’t want that the boy gets a whole culture
shock when he wakes up without anyone familiar near him. You’re off duty until Joaquin has adjusted towards his surrounding at least a little bit.” He looked to Leonard. “Good work, Bones. Thank you! I’m really glad that you were able to save the boy. Night.”

He turned to leave, but Nien’s voice held him back for one more moment. “Jim?” As he met the sky-blue eyes of his mate, he smiled gently, “Thank you for staying. You cannot grasp what that meant for me.”

A glance full of tender love and an “I think I do, honey. Good night,” was the gentle reply, then Kirk left medbay, only to realize that Spock had waited outside for him. Together they strolled down the hallway.

“Given my calculations the Excalibur must have reached the probe by now,” the Vulcan said, and Jim began to grin.

“Yeah, I would love to see Styles’ face when he gets my message as soon as the Excalibur’s sensors have scanned the probe thoroughly.” He smirked broadly. “I guess he felt his leg pulled.”

“I agree,” Spock nodded. He had been present as Jim recorded the message that was programmed along with the altering course and the transmission of the Enterprise’s warp signature in the probe. “I think the chance to count him to your friends has even lessened.”

Kirk laughed out again. He really loved the dry humor Spock displayed from time to time. “I would give a whole month salary if I could witness his reaction – or that of Luengo as soon as he learns of the little trick.” He looked at his first officer. “Is the second probe ready?”

“Yes, it’s ready to be sent out at your command.”

Pursing his lips Jim mused, “I think we should let them stuck in the dark a little bit longer, before we give them the next track. Do you think sending the probe out tomorrow at alpha-shift beginning would be good?”

“I lack of exact data to calculate the best outcome of the next step, but given Luengo’s reactions until now, I think we shouldn’t let him think too much about our destiny. His is very intelligent as you know.”
Jim nodded. “Hm, then this evening – at 2000?”

“There is nothing that speaks against it, Captain,” the Vulcan replied, before both men stopped at the crossway where their paths would separate. Kirk smiled affectionate at his T’hy’la. “Thank you for taking my shift, Spock,” Jim said quietly. “I appreciate this gesture very much. You were right; Nien needed me there with him during these difficult hours.”

The brown eyes betrayed once more that the Vulcan had more emotions he was ready to admit. “You both needed this,” he voiced the unspoken truth. Then he bowed his head. “Good night, Jim.”

“Good night, Spock,” Kirk replied, squeezed the Vulcan’s arm for a moment and continued his way to his quarters; stifling a yawn. Several minutes later he fell into bed like a stone; hoping that Joaquin would wake up soon.

ST***ST***ST

“Kirk did WHAT?” Norton stared disbelieving at Luengo, who sat at his desk in the Headquarters and nodded grimly.

“He sent out a probe that faked the Enterprise’s warp-signature and Styles promptly tumbled in his trap. Not that I can blame him. No-one could have anticipated the truth. I read the report and had a look at the scanner readouts Styles transferred to me. There was no way in hell to tell a difference between the telemetry-probe’s transmission and a real warp-signature.” He gripped for his cup of coffee. “Kirk is clever, I have to give him that!” He took a sip before he added, “I tried to hail him, but the Enterprise doesn’t answer. Kirk knows that he’s being hunted and will not break the silence until he is there where he heads for – wherever this may be.”

Albert leant back on the visitor chair. “In other words, we have absolutely no clue where Kirk is now.”

José nipped at his coffee. “Exactly! I’ve sent a new code to every ship in the fleet and ordered them to look out for the Enterprise and to scan the sub-space for any transmissions which could be sent from her. Kirk must have a destiny – a place he races to and where he can hide Khan and his crew; maybe even himself and his senior officers.”

Frowning Norton cocked his head. “How was the reaction? I mean, Kirk is popular and he made a lot of friends among the fleet within the last year.”
“I told them that Kirk has gone rough – that he snapped after all he has been through within the last weeks. I don’t care if they buy it or not. They have to follow my order, end of story. At least the Council is very worried concerning our flag-ship being in the hand of a man who turned mad after his captivity in Klingon hands and the incidents on Aldebaran. They have no reason to distrust me.”

Albert pursed shortly his lips. “Are you sure?”

The Chief in Command sighed. No, he wasn’t sure, but he would never admit it. “There are everywhere critical people, even among the Council. I told them that I want to get Kirk to help him – to make certain that he gets the medical treatment he needs to overcome the traumata he fell prey to.” He bent forwards. “And maybe he really has turned crazy to support this creature – to befriend it even. And his senior officers even support him. Well, they had a choice: Kirk or Starfleet. They chose Kirk, so their fate is sealed.” He placed the cup back on the desk. “As much as I regret to take this step, but as soon as we learn about the Enterprise’s whereabouts Starfleet is going to be in need for a new flagship.”

Norton took a deep breath. “You want to destroy her,” he stated and Luengo grimaced.

“Not the solution I had originally in mind, but I see no other way anymore. We can’t take the risk that Kirk really escapes and stirs up the Council against me – us! Maybe we get the chance to size the Enterprise so that your scientists have the chance to get Khan back, but if not they have to deal with the fact that they have to re-produce his cells synthetically, because he will die along with his new friend Kirk and all the others.”

Albert sighed heavily, before he murmured, “To destroy the Enterprise, you first have to find her.”

Luengo rolled his eyes. “I know – and I’m working on it!” He rose from his chair. “Starfleet Intelligence is the best equipped and technical most enhanced intelligence in the alpha- and beta-quadrant. Not even the Romulans are better, and that tells something given their excellent spies. The devil himself would have his way with us, if there isn’t a possibility to find our own flagship!”

ST***ST***ST

He felt cold, even if he realized that he was tugged into something warm and comforting. He smelled air – not fresh one but climatic cleaned air. The next he became aware of were silent sounds of devices, some beeping nearby, soft steps in another room and quite murmurs, muffled by walls.
Where was he? What happened? Where was…

His confused mind stopped to rattle those questions as he felt a familiar, strong presence.

He tried to open his eyes but, as he realized, his body didn’t obey him like he was used to. Only after the third attempt his lids fluttered and he groaned as light bombarded his sensible optic nerves.

In the next moment two warm, slender hands caught his in an all too known way, while a deep baritone whispered his name.

Joaquin…

Yes, this was his name. And the man who called him was…

“Noo?” he croaked out, his mouth too dry and his vocal chords too unused for a long time to bring out something clear.

Khan felt a wave of overjoyed relief as he saw how his little brother’s eyelids moved, while he heard this silly nick-name his closest brothers and sisters had never skipped to use in private. His eyes began to burn with unshed tears as he bent over Joaquin, cupped the boy’s cheek with one, still bandaged hand and gave into the impulse to press a kiss on the still cool forehead. He sensed the family-link between them brimming with new life, felt the confusion but blind trust of the younger Augment and gulped down another lump in his throat.

And then, finally, Joaquin opened his eyes – glassy, bewildered, teary because of the brightness around him.

“Computer, reduce light on 30 percent!” the former dictator ordered and the lights were immediately dimmed.

“Better?” he murmured; not stopping to stroke Joaquin’s cheek.
A slow nod was the answer, accompanied by more confusion – a perfect normal reaction, as Khan knew all too well. “Take your time,” he said softly. “You’ve slept very long and your body has to adjust to its normal functions.”

Again Joaquin could only nod. Questions lurked at the edge of his mind, but he was too groggy to even formulate them, let alone to voice them. He saw the beloved face of his older brother above him. He also realized that Noo looked different a little bit, but he couldn’t put a finger on it.

Sleep was calling him, luring him, whispered with seducing comfort at him, and he gave into it; simply knowing that as long as Noonien was with him he was safe.

Khan watched how the boy’s eyes closed again, before Joaquin snuggled deeper into the blankets – his face utterly relaxed and peaceful. This was a healthy sleep, this much Nien could tell, even without having a further look at the readouts at the monitor above the biobed.

Smiling and thanking inwardly everyone who maybe was indeed there, he watched his little brother, before he rose to tell McCoy about the short time Joaquin had been awake.

ST***ST

The day went on quickly. At the late midday McCoy had removed the bandages from Khan’s hand which were as good as healed by now. Afterwards he had convinced the superhuman to get something to eat in the next close mess hall, and afterwards the former dictator had begun to examine the failed cryotube – worrying that the same mistake that initiated the malfunction could repeat itself at one of the other tubes.

Scotty offered his help, as he checked the state of an ensign of his department, who had tumbled down a ladder from a Jeffrey tube and was treated in medbay. Khan accepted the Scotsman’s offer, not only because he didn’t want to irritate the man he had come to respect, but also because four eyes always saw more than two. That went even for Augments, and even if he was the constructor of the cryotubes, Scott’s knowledge of today’s technics was a welcome support.

McCoy felt nervous while the two men disassembled the cryotube; expecting every minute to face an enraged superhuman, but nothing like this happened. Rather the opposite. Scotty took some parts with him to investigate them more and Khan returned to Joaquin’s bed, waiting for the boy to wake up.

Jim, who had taken the conn in time as beta-shift begun, checked in with medbay shortly to learn how Joaquin was doing. In the meantime Bones removed the bandages from his hands and realized
to his astonishment that the healing process was in full progress. As it seems Khan’s doping-cocktail was still working little miracles at the captain.

Kirk was glad to learn that the boy had already woken up once, even if he fell asleep within a minute again. This first waking up was a very good signal and Jim looked forward to receive the expected call, telling him that the young Augment was responsive.

Afterwards he had a little run-in with Dr. Green, who demanded explanations for the arresting of Finnegan and three other Elite Securities. As it seemed the scientist had tried three times to visit Finnegan, but any access to the brig had been denied. Jim told him with some flat words that those four men were accused of attempt murder of three Enterprise-officers and that he would hand them over to the authorities.

Jim really intended latter, but it wouldn’t be Starfleet Command he would deliver his prisoners to, but the Vulcan Authorities. Nurreaux was still in custody like Finnegan and the others, and every one of them had tried to murder Kirk, Spock or Khan. Kirk had a very good assumption how ‘Selek’ would react to that. Knowing ‘Prime Spock’ he would switch into full protective-mood and would take care that none of the four men would come near Jim and his friends ever again. Not for the first time Jim asked himself how anyone could believe that Vulcans were without feelings. Both Spocks controlled their emotions very well, but they existed! And, God alone knew why, he – Jim Kirk – was on the receiving end of both Vulcans’ affection.

After having a rather heated discussion with Green, Kirk finally made it to the bridge, glad that at least Chekov was still in beta-shift. He did trust the other officers too, but the main-bridge crew was built by his friends, and regarding the given situation Jim felt saver with at least one of them on the bridge during every shift.

The afternoon went by without any difficulties. The junior comms officer told him that there were a lot of transmissions on the regular Starfleet frequencies, but everyone was scrambled – obviously with a new code. Jim ordered him to record the transmissions and to pipe them down to Uhura’s terminal. He was certain that Nyota would be able to crack the new code sooner or later. Yet the whole thing made him wary. He knew that Command was on his heels and he assumed that his little trick with the probe had angered Luengo even more. They had to be even more careful now, because protocol gave some serious orders in the case of a renegade-captain and his crew. If Luengo ticked like Marcus did, it was only a question of time until every vessel of the fleet would be instructed to stop them at any price – not a pleasant prospect. Jim really didn’t want to battle with one of the own ships and he prayed that it wouldn’t come to that.

“Are you sure?” Khan stared at Scott; horrified.
The engineer looked down at the cryotube he just examined, and nodded grimly. “Aye! It’s the same like with the others. The tubes have been opened several times – and ye dunno need ter be a genius ter figure out, why.” He pointed at Joaquin’s cryotube. “His was opened only once – a year ago or so – but with the exception of four others every tube-program has been interrupted several times.” He lifted his tricorder. “I linked it to the tubes’ program and let it check every single record of them. There’s no doubt. These bastards opened them, and I dunno want ter think of the reasons.” He pressed his lips shortly into a thin line; waiting for Khan’s reaction.

He hadn’t to wait very long. Turning white in fury and with glistening eyes the Augment whirled around and headed for the exit; snarling a “Come with me!” over his shoulder.

These monsters!

These blasted, dammed monsters!

They had experimented with his crew – with his family!

They had abused his sleeping brothers and sisters for their own purpose!

He had to know what had been done to them. And there was only one way to find out. “Doctor McCoy!” he almost thundered through the medbay, storming towards the CMO’s office.

Bones sat at his desk and looked up; having all of sudden a sinking feeling in his stomach as he heard Khan’s enraged shout. ‘Here we go!’ he thought; gulping.

The same moment the former dictator stepped into his office; a not lesser enraged Scotty on his heels.

“Doctor, I ask you to make a complete check on every one of my crew!” the superhuman demanded; his eyes burned with wrath; his long hands were balled into tight fists; his breath heaved.

Bones frowned. The whole crew? But he only opened…
“I checked the whole program of the cryotube,” Scotty explained. “The phaser blast is responsible for an overloadin’ of the tube’s system in which the boy slept, and so it shut down. If ye two and the cap’n hadn’t interference in time the boy wouldn’t have made it. But there is more. The program recorded the function of the tube and it was interrupted once – approx. a year ago. And the same happened to all the other tubes, most of them were opened many times.” He watched a very tensed McCoy. “Maybe ye should check the boy through again, Doctor. He was, like the others, in the hands of Section 31 within the last two years and I really fear that these bastards ran some tests on him and the others. That would be the only explanation why his tube and the other’s tubes were opened at all.”

Nien trembled with rage; his eyes shot daggers while he addressed Leonard. “Please check Joaquin utterly through – especially his immune system. They used me to gather new antidotes by injecting me with maladies. I fear they did the same to Joaquin and the others.”

McCoy knew that he couldn’t delay the truth any longer. Taking a deep breath he looked at Scott. “Have all tubes been opened?”

“Yes,” Montgomery nodded. “A few of them only once – like that of the boy last year. The others…”

Bones lifted a hand and interrupted the engineer, before he looked straight at Khan. “I’ll check all of your people through and I require your assistance, because you know the best how the cryotubes work. I don’t want to cause any further problems.” He watched the superhuman nodding shortly, and braced himself for what would have to be said now. “Concerning Joaquin: Don’t fear that one of the scientists laid hand at him,” he continued quietly. “This wasn’t the case.” He looked from one man to the other; one blinked in confusion, the other one seemed ready to snap any moment. He took another deep breath, straightened his shoulders and revealed, “I opened Mr. Weiss’ cryotube.”

Scott looked with big eyes at him. “Ye did…? Why?”

Khan didn’t say anything, but McCoy had the uncomfortable feeling to face an angry tiger ready to strike – a very angry tiger!

“As they brought Jim’s dead body into medbay a few minutes later the dead Tribble I gave Mr. Singh’s blood came back to life. There I knew that we maybe had a chance to retrieve Jim, but for that his brain functions had to be kept stable. Stasis alone wouldn’t have done it, because stasis only works on living beings. But cryosleep means the body is frozen and so…” He took another deep breath. “And so I opened one of the cryotubes, put its habitant into stasis and replaced him with Jim’s body. It was the only way to keep his body fit for a revival until Spock would return, hopefully with you, Mr. Singh.” He moistened his lips. “I hadn’t much time to choose whom I would put into stasis. I saw that there was a young, strong man, knew that he had the best chance and so… my choice was
made.” He looked Khan straight into the eyes. “I’m sorry that you came close to lose your brother yesterday, but…”

Nien lifted a hand and stopped McCoy’s words. He had the very illogical urge to sit down and so he did – using the visitor chair. For several long seconds he didn’t say anything; the prospect of almost losing Joaquin even a year ago made him sick, but it also gave him the chills out of another reason. If the CMO hadn’t reacted like he did, he – Khan – would have never experienced the deep love of Jim Kirk. He had never come to know the young man like he did now; had never been cherished like he was within the last weeks.

“The life of one dear to me in wager with the life of another man who holds my heart,” he whispered, and closed his eyes. “Why I’m not surprised!? As if I could get anything from life without paying a high price for it!”

“Joaquin lives,” Bones pointed out. “And he is healthy and will be on his feet soon.”

“Yes,” Nien murmured and looked up at McCoy. “And thanks to you I’ve not only my little brother back, but can also call a young man with the most compassionate, warmest and biggest heart possible my mate. Yet I almost lost both – and it would have been my fault, because I got into froth.”

Scotty sympathetically reached out and laid a hand on the Augment’s shoulder. “That wasn’t yer fault, lad. Not really. Yeah, ye should work at yer control sometimes, but given the circumstances at this time everythin’ had ter go down the river. Jim’s alive and happy ter have ye in his life, yer little brother will awake soon and I’m sure that he’ll fit into that world easily. And, by the way, the good doctor wouldn’t have risked the boy’s life if he wasn’t convinced that the stasis worked for him. So, everytin’ turned out well in the end and only that counts.”

“Thanks, Scotty, yet I’ve a damn bad conscious,” Leonard murmured. “A doctor should never treat one life for another, or risk one life to save another’s. It’s contradict with a doctor’s ethic to prefer a patient, yet as I realized that there was a tiny chance to recover Jim I simply followed my instincts.” He glanced back at Khan, who watched him calmly. “You’ve any right in the world to be cross with me, yet…”

“Yet if you hadn’t acted on your friendship with Jim I would be still a lonely fighter against the whole galaxy; maybe even worse than before. It was Jim who gave me back my humanity – my soul – and for this I’ll be entirely grateful.” He rose. “I should be angry with you – not only for risking Joaquin’s life, but also not saying anything about it, yet I find myself unable to be really irritated with you, and that says something.” He shook his head and snorted, “Jim made me soft, but… it feels somehow right.” His glance found McCoy again. “At least you answered my question from more than a year ago in your own way.”
“Which question?” Bones asked quietly.

“If there is anything you wouldn’t do for your family,” Khan repeated those fateful words from the time he had been in custody aboard the Enterprise. “Jim is a kind of younger brother for you – family. And there is nothing you wouldn’t do for him, Mr. Spock or the others.”

Leonard flushed. “Well, I understand now what you meant all those months ago.” He took a deep breath. “Yet my personal feelings almost elicited another sorrowful situation.” His eyes looked straight at the Augment. “I didn’t know until two days ago that the young man I replaced Jim with was your little brother you talked of so much. I only recognized him on Gamma 12 – and it gave me quite the shock. I double-checked him but as I saw that everything ran smoothly I saw no reason to alert you. I linked every Augment to the control system and monitored them, only to be shocked as I realized that it was no-one else tube than Joaquin’s that began to fail.” He rubbed his neck. “I’m damn glad that he made it. I would have never forgiven myself, but…”

“The malfunction of the boy’s cryotube wasn’t yer fault, Leonard,” Scotty said softly. “It was the damn phaser blast, and nothin’ else. I simply informed Mr. Singh of what I found out because I thought Section 31 had used the boy as a lab-rat, too, and feared for his health. But until the cryotube quit its work the boy was never in danger.”

“At least something!” McCoy sighed, then he hesitated. His gaze found Khan. “If it is all right with you I think it would be the best if we open every tube for a minute and check everyone through with a med-tricorder – searching for injection-tracks and take a skin example. It isn’t possible to draw blood in their frozen state, but the skin cells will tell me everything I need to know about their condition. This is the easiest way to find out what exactly has been done to them. You give me their names and I compile patient files for them, recording everything I find or not find. If some of them are going to have problems after waking up I can prepare a treatment before they regain conscious, and hopefully they won’t face any malaise. You’ve my full support in this matter.”

Khan nodded slowly. “Thank you, Doctor,” he said; calming finally down a little bit.

“I also suggest that Spock should assist us, too. He may be no physician, but he’s a damn good scientist and very well-trained in recognizing pathogens of every kind. To check 72 cell-examples needs time – and we’ll reach New Vulcan in three days. So…”

“Ye mean, if the engines didn’t crap out,” Scott grumbled. “I swear, they’re howlin’ louder and louder by every hour.”
“I could offer you some patches, but I don’t think that will do the trick,” Bones dared to joke; relieved that the superhuman hadn’t snapped. As much as Khan seemed to be distant, controlled and superior, McCoy simply knew how hot the Augment’s temper boiled beneath the cool mask.

Scott had to laugh at that suggestion and felt how the tension in the room began to melt away. He glanced at Khan, who watched the CMO with a knowing look.

“If you have a bad conscious, Doctor, I can understand it, but calm down. I know you did the only thing possible at that time – and Joaquin is doing well so far, as does Jim.” Khan heard himself stating; confused that he indeed felt not real anger towards the CMO. Maybe because everything that happened saved Jim’s life, maybe because he – Khan – wouldn’t have reacted differently if would have been in McCoy’s position. How could he condemn someone who simply acted likewise?

“Okay,” Scotty nodded. “I suggest that we first have a nice dinner and afterwards we’ve a new task! You two with the sleeping beauties over there -” He shoved his thump over his shoulder, pointing at the attached room. “-and I with my babies.”

The same moment Khan felt a stirring deep in his mind and turned around. His instincts recognized what happened: Joaquin was waking up…

TBC…

Chapter End Notes

So, at least one good thing – Joaquin is okay so far, yet he will face some real shocks (okay; just imagine waking up 264 in the future…). And I thought that it would be ‘logical’ for the scientists and Section 31 to run tests on the Augments as long as those were in the bastards’ hands. I know, this is another hard thing to imagine, but people who tick like Green or Dashwood don’t see any wrong in their deeds.

I always asked myself after STiD, whom Bones took out of cryosleep into stasis to replace Jim’s body with the guy. And really is dramatic that it could be Khan’s ‘little brother’ – a step that risked him, but on the other hand lay the foundation for the great love Nien found in Jim.

Well, and Luengo is about to realize to where Jim is off… I can promise you a lot of suspense within the next chapter, but in the following one everything will be about Joaquin and the discovery of Green running experiments on the other Augments. But
this will not be all. We also switch back to the Lexington, where something takes place you also know from the original time-line, only that this here occurred earlier because of the horrible stress the certain person, I don’t want to reveal to you just now, went through.

I hope you liked the new chapter.

Have a nice week,

Love

Yours Starflight
Hi, my dear readers!

Thank you so very much for the feedback and to those, who are new to the story: Welcome! The story nears the utterly showdown and I can already promise a terrible rollercoaster you all have to endure soon (*evil smile*). A little taste of it comes within the new chapter, yet I hope you will enjoy it.

Have fun

Love

Yours Starflight

See the end of the chapter for more notes

Chapter 65 – Horrible truth

Khan reached the little private room the moment Joaquin sighed and opened his eyes. He sped to the bed’s side and sat down, bending over his little brother. McCoy, who had followed him, stopped beside him and watched the monitor, but stayed out of the younger Augment’s field of vision. He wanted to give the two superhumans some privacy first before he made himself known.

For several moments, Joaquin looked uncomprehendingly at Khan, apparently as confused as the first time he saw him; then recognition appeared in his eyes. Moistening his lips, he needed two attempts before he was able to whisper, “Hi there, big bro.”

Khan only realized now how tense he was as another immense wave of relief washed over him. There had been the risk that the long cryosleep had damaged Joaquin’s brain or even his mind, but Nien’s fright had been for naught. The younger Augment was disoriented and would need some time before he was back to full strength, but there was no doubt that he endured the long, icy sleep without harm.

Reaching out, he combed his fingers through the thick, brown hair. “Hello, little brother,” he murmured back; wonder and joy squeezed his heart as he was able to speak again with Joaquin after all this time – after all the fear, despair and fighting he had been through to save him along with the rest of his family.
Joaquin watched the older man hovering above him, took in the familiar features, warm, loving, sea-colored eyes, the dark hair and…

“You cut your hair,” he frowned, and Khan had to chuckle. The first real sentence the boy was able to manage was about his hair. Typical Joaquin!

“Yes, it fits today’s hairstyle,” he commented dryly.

Joaquin rolled his eyes; becoming more awake with every passing second. “That hairstyle was in back in ancient Rome,” he teased, and Khan felt real amusement beginning that he’d missed over the last twenty-four hours - far too long for him.

“We are anywhere but ancient times,” he said and saw the expected curiosity sparkling in the dark eyes of his little brother while McCoy suppressed a chuckle nearby.

“The cryotubes worked,” Joaquin whispered. “You woke me, so yours worked. Are we really in the year 2020 like you wanted?”

Nien took a deep breath. “Joaquin, there are many things I have to tell you.” He saw and felt the rising anxiety in the younger Augment and continued quickly. “The automatic systems set to activate the waking process of my cryotube failed. We slept far longer than we planned to. We…”

The boy lifted his head carefully. “The others?” he asked worriedly while he took his first glance over his surroundings. He saw metallic walls, lighted devices, and heard a distant, soft buzzing like that of a machine. “Where are we?” he whispered, realizing that this looked far too strange for a room constructed by humans just twenty-four years after the Botany Bay’s start. Even if humankind had advanced, this couldn’t be their development. Then his eyes found the figure near his bed.

It was a man approximately the same age as Noo, wearing black trousers and boots with a light blue, short-sleeve tunic. His short, thick hair was a mixture of brown hues; his eyes were the same, and a kind smile played around his lips.

“Who are you?” Joaquin asked, feeling caution surging in him. This was not one of his brothers!
The strange male stepped nearer; his posture and expression communicated kindness. “Good evening, young man,” he greeted. “Nice to see you finally awake. Your big brother nearly drove me up the wall these last hours.”

Joaquin stared wide-eyed at him. The man was an unmodified human, this much he could tell, but the way he spoke about Khan was unbelievable. No one dared talk to him like that apart from his brothers and sisters. He quickly glanced at his leader and brother, and to his astonishment saw only a mixture of amusement and exasperation on his face.

The man extended his hand. “And for your question, I’m Leonard McCoy, Chief Medical Officer of the Enterprise. Welcome aboard and to the living, Mr. Weiss.”

Hesitantly and cautiously, Joaquin accepted the offered hand, saw his brother smile, and knew that he made the right move. For reasons unknown, Noo was relaxed in this man’s presence. Then it hit him. “Chief Medical Officer?” he asked and tensed up. “This is a military ship?”

Bones smiled. “The Enterprise is designed for exploration and fitted with weaponry in case it encounters or transits hostile areas. But we are in a safe zone now.”

Joaquin frowned. “We are at sea?” He lifted his head again. “But, I don't feel anything – no rocking.” He glanced back at Khan. “Where are the others?”

The slender, warm hand of his older brother cupped his cheek again, and the calming gesture was enough to slow his racing heart.

“The others are all right so far,” Khan crooned, avoiding the painful topic of the eight failed cryotubes and the four Augments who died at Marcus's hands. “And, as I said, we slept far longer than intended.” He took a deep breath and fixed the boy with a firm yet soft glance. “We slept for 264 years.” He watched Joaquin’s eyes widening in alarm, and added carefully, “We are in the year 2260 now, and we are aboard a spaceship – technically a Federation Starship.”

“S-s-s-spaceship?” the young Augment stuttered; his bright mind shut down for a moment with the shock of sudden knowledge. “2260?” His voice cracked.

“Yes,” Nien nodded and tried to calm his little brother down by rubbing his shoulders and chest soothingly. The monitor above the biobed sounded as the sensors registered the increased heartbeat of the young Israeli superhuman. “Many things have changed.”
Weiss gulped. “A spaceship!” he breathed. “264 years asleep!”

“Yes, a little bit longer than Sleeping Beauty,” McCoy smiled while he checked the monitor above the biobed again. Then he pursed his lips before addressing Joaquin. “How do you feel, Mr. Weiss? Any head- or stomachache, nausea, dizziness?”

The young Augment hesitated and exchanged a quick look with Khan. He wasn’t sure how much he could trust the mere human, but as he saw the encouraging nod his brother gave him, he began to understand that the doctor held Noo’s trust – something almost confusing given the fact that Khan never trusted a mere human quickly.

“I’m a little bit dizzy, and there is a pressure in my temples. And… I’m cold,” he admitted, and McCoy nodded; his expression told him that he had anticipated this if he hasn't already known it.

“That’s perfectly normal, even for an Augment,” he said kindly. “The circulatory and nervous systems have to adjust to the new environment.” He glanced at Khan. “Mr. Singh, after we recovered you and Jim from the space station at Aldebaran, how long did you feel cold until the effects wore off?”

Nien’s memory was precise as always. “After you released us from the infrared chamber, I continued to experience chills for twenty-two hours.”

“Right. And given the circumstances of Mr. Weiss being in cryosleep for a very long time, I expect that he will continue to feel chilly for two, maybe three days.” He smiled down at the young superhuman. “At least you'll be warm on New Vulcan. They have an average temperature of thirty-two degrees during the day – sometimes up to forty-five. And during the night, you need to sleep in a parka – it's ridiculous. One day in New Vulcan’s sun and you'll wish for the North Pole.”

Joaquin heard the humor in the doctor’s voice, yet the names he used were all foreign to him. “What is New Vulcan – or this Alabada?”

“Aldebaran, a human colony in the beta quadrant. They produce the best whiskey outside of Scotland.”

“Nothin’ compares to authentic Scottish single malt!” Another male voice stated. Scotty looked curiously at the young man, who was nothing more than a boy, and as their eyes met, Montgomery
nodded at him. “Hello, young man, nice ter see ye awake finally.” He glanced at Khan. “I’m down in Engineerin’. Tell me if ye need anythin’ else.”

“I will do so. Thank you once again for your support, Mr. Scott,” Khan replied.

The Scotsman smiled at him, and waved a Joaquin, “See ye, lad when you’re more awake,” then left.

“Who was that?” Weiss asked astonished.

“That was Scotty, our Chief Engineer. A big tinkerer, just like your brother here,” Bones deadpanned. Catching Joaquin’s thunderstruck gaze at these words, he bent over the bed, invading Khan’s personal space. “May I, Mr. Singh?” he asked, and the older Augment rose to make room for him. “Of course, Doctor.”

Bones smiled at Joaquin. “Sorry son, this will be cold, but I have to check your muscles.” He removed the thermal blanket, and instantly the boy shivered. “I know,” Leonard said soothingly. “I’ll put it back in a few seconds. Can you lift your legs?”

Confused, Joaquin did as he was asked and realized to his astonishment that the movement was difficult. McCoy sighed and spread the blanket over him again, tucking him in as though he were a toddler. “I thought so. The dehydration must be dealt with, and you’ve lost muscle mass. No wonder you have trouble moving, but given a little bit time, fluid, food and some easy training, and you’ll back to your normal level of strength soon.”

“Thanks – I think,” Joaquin murmured, suppressing a yawn.

“Are you hungry or thirsty?” Leonard questioned further. “You brother eats us out of house and home when he is healing, so I figured you might be able to eat a bite or two.”

Brown eyes looked confusedly at him, then at Khan, and finally back again. “We… We do need nourishment when our body has been stressed, but how do you know?”

McCoy smiled at him. “Your brother was quite the example when I had to treat him.” He lifted a calming hand quickly as he saw alarm on the boy’s face. “He’s all right and safe – just like you and the others are, so don’t worry. So once again, are you hungry?”
Joaquin shook his head. “Not at the moment.”

“Mmm-hm,” Leonard nodded. “Your body probably has to catch up with your brain. Your stomach will be growling soon.” He winked at Joaquin, who was even more perplexed now. This human was obviously neither afraid of his kind, nor did he radiate hostility. This physician simply treated him like he would do with anyone else – and this was odd.

McCoy went towards the wall. “I think it’s about time to inform Jim.”

“Yes, please call him, Doctor,” Khan nodded, even if he felt his bondmate’s tension and awareness of what was happening here. “I promised to inform him as soon as Joaquin woke.”

Weiss watched the CMO walking to one of the devices on the walls and whispered, “Jim. He’s a just a human too, right?” To his surprise, he saw his older brother smiling a very odd smile; a spark gleamed for a second in his ocean-colored eyes.

“Yes, he’s very human!”

In the background, the doctor muttered something that sounded very much like “Don’t scare the boy with details,” before he activated the strange device. “Medbay to bridge. Jim?”

“Yes,” came the instant reply from a warm, smooth tenor sounding through the speakers. “Is Joaquin okay? I sensed distress, and – and happiness, like, at the same time.”

“You two are spooky; you know that?” McCoy groaned. Mental bonds, empathy, telepathy – he would have to ask Spock some important questions about it all at some point. As far as he understood the Vulcan bond was very similar. “To answer your question, yes, our young guest is awake and has many questions. Can you come down, or are you too busy?”

“The second probe was sent a few minutes ago, so – yeah – I can spare some time. I’ll be down in a moment, Kirk out.”

Leonard turned around again. “He’s very interested in meeting you finally. Spent the whole night here with Khan beside your bed, you know.”
Joaquin frowned and looked confused at Noo, who sighed, “Your cryotube failed, and we got you out at the last second. We – I! – I thought I would lose you,” he finished in a whisper.

Seeing the memories of fear and anguish lurking in his brother’s eyes, Joaquin reached a comforting hand out and placed it on Khan’s arm. “But you didn’t,” he murmured, feeling a chill running down his spine as he realized that he had been on the brink of death. “You got me out – like always.”

Khan’s long warm fingers cupped that of the younger superhuman. “Yes, but it was a close call,” he said hoarsely – and Joaquin took the first real look at his older brother. Khan had aged – not much, but still there were lines in his face which hadn’t been there when they boarded the *Botany Bay*. There was a haunted expression behind his eyes, and Joaquin could sense another change in the older man – a steely bitterness that was unfamiliar. And there was only one explanation that explained Noo’s familiarity with the crew. “You’ve been awake a while, haven’t you?” he asked quietly, and baffled, he saw his brother shifting his posture almost nervously.

“Yes,” came the quiet answer.

Joaquin frowned again. It had been agreed that Khan would wake Otto and Paolo first, then the others. But obviously, this had not happened. “How long?” he wanted to know.

The former dictator didn’t reply first. Only after several very long seconds did he admit, “More than two years.”

Again Joaquin’s eyes went wide. “You… You've been awake for *more than two years*?” He was thunderstruck. “But why didn’t you…?”

“Because there were several obstacles that had to be overcome first,” Khan interrupted, not looking at him. He didn’t want to frighten Joaquin; the boy had barely woken up. What this century had done to him and the others was not something he ought to discuss with his little brother so soon. Things had changed now – drastically, because of Jim Kirk’s far too big and human heart – and Khan wanted the other Augment to come to terms with this new world before he would tell him of the dark side that still existed in this time.

Steps came nearer and McCoy, who had listened to the short conversation, tried to cheer up the two superhumans. “Ah, there comes the most important person aboard. Without him nothing would run right; no one would know what to do and…”
“I’ll remember that next time you try to mother-hen me, Bones!” The same smooth tenor Joaquin had heard through the speakers spoke teasingly from the entrance. Then a man stepped into the room clad in clothes similar to the CMO, only his tunic was gold and had long sleeves with two and a half stripes on it. He was somewhere in his mid-twenties, Weiss mused, had blond hair, striking blue eyes and handsome features. His body was lean and well-built with broad shoulders and a slim waist. His movements were strong and confident; he had an aura of pride, self-confidence, but he also exuded kindness.

This man was used to commanding, this much Joaquin realized instantly, and so he wasn’t surprised that Noo said with a surprisingly soft voice, “Joaquin, may I introduce you to Captain James T. Kirk, commanding officer of the USS Enterprise – mine and all our savior.”

Kirk felt his cheeks heating, as he rolled his eyes at Khan. “Don’t go overboard,” he chided warmly, then he offered his hand to the young Augment on the biobed. “Hi, Joaquin. You have no clue how glad I am to meet you finally. You gave us quite a scare, and it’s been a long twenty hours or so.”

Weiss glanced at the captain’s fingers and saw the injuries. He took the extended hand carefully. “I already heard that – that the Grim Reaper was aiming for me.”

“Yeah, but when he realized that you have an overprotective big brother and a stubborn CMO as your protectors, he grabbed his scythe and took his leave.”

Joaquin chuckled at that, then he bit his lips and glanced at McCoy. “You had a big part in saving me?”

“The biggest,” Khan confirmed, while Bones shrugged, “Hey, I’m a doctor. It’s my job to fix people. And, I hate seeing people all upset.” He nodded towards Nien. “I couldn’t let your brother down, you know.”

Moistening his lips, the young Augment nodded, but Bones read another sign in this gesture. “Thirsty?” he asked.

“Yes,” Joaquin murmured. “Very.”

“Right!” McCoy stepped to the replicator. “Computer, a glass water, half a liter, 20 degrees.” A soft noise sounded, then a small door lifted, and the CMO took a glass water from the shelf. Weiss gaped
at him. “What…?” he stammered and looked wide-eyed at Khan.

“That’s a replicator – very useful when you’re deep in space for months or even years,” he explained. “It does not taste bad, but fresh, cooked meals are still superior.”

“Miss my steak already?” Jim teased while he made room for McCoy, who bent over Joaquin, helped him to sit up, and offered him the glass.

“Slow down, son. Your stomach has to relearn what it's there for, so drink slowly,” he advised, smiling as he caught the grateful glance of the young superhuman. ‘He’s far more affable than Khan – well, he hasn’t been through all the shit his big bro had to face. No wonder that they behave differently.’

Joaquin had emptied half of the glass before he gestured he'd had enough – the CMO’s warning still in his mind. He didn’t want to throw up all over his brother’s lap. He lay back again and turned his attention to the blond man. “So, this here is a… a spaceship, Captain?”

“It’s called a starship,” Kirk corrected him kindly. “And you can call me Jim if you like. Your brother and I are close friends…”

Bones began to cough but was ignored.

“…and he told me a lot about you. I’m glad to meet you at last.”

“Thanks,” the young Augment murmured. Then he glanced around in the room. “So, this is a sickbay?”

“Only one of the private rooms. The central area is next to this compartment, also several labs and some rooms with special machines and instruments which are needed to treat badly injured crew members,” Bones told him. “But this is only one part of this level in the discus segment. Crew quarters and one of the transporter rooms are here, too.”

“One level?” Weiss blinked at him. “And how many are there?”
“Far too many for me,” Leonard sighed. “Even with the enhanced lift system, you need seven minutes to reach the bridge if you’re at the farthest point aft.”

“And it’s a discus? So UFOs do look like flying saucers?” he asked, growing more tired by the minute, but he felt new excitement rising in him.

Bones had to smile at the display of youthful curiosity. “Yes and no. The discus is mounted to a kind of big throat that ends with a long body, from which two nacelles spread out like wings – if you use your imagination.”

Jim began to snicker, and he glanced at Khan, “I can hear Scotty already complaining over the comparison.”

“Yes, that would lead to a much longer lecture.” Nien grinned. “And it would be up to you to end it.”

“Have mercy. When Scotty has a chance to talk about technology and engineering, especially the stuff he came up with, you’ll never get him to stop.” Kirk cocked his head. “Just like you. I swear when I hear you two talk tech, it makes my head spin.”

“And here I thought I made your head spin for a very different reason.”

“Bo-oys!” McCoy moaned, and he was rewarded with two wide smirks.

Joaquin watched the three men in wonder. Never before had he seen his brother so relaxed and utterly comfortable in a presence of someone who didn’t belong to their family. But Noo and Kirk were so much at ease with each other; Joaquin didn’t know what to make of it. They seemed to know each other very well, even teased each other! That was completely new! It was a side of Khan he never saw.

Jim felt the young Augment’s gaze upon him, and he turned his attention back to him. “As soon as you’re well, I’ll show you around – make a ship tour with you if you like,” he offered. “There is a lot you have to learn…”

“That I believe without a doubt,” Weiss murmured a little bit overwhelmed.
“… and none of us will mind answering your questions,” Jim continued kindly. Then he watched as Joaquin yawned and smiled at Bones, “I think our young guest is in need of another round of sleep.”

“I slept long enough,” Weiss protested, only to stifle another yawn.

“Jesus, please not another Mr. I’m-fine-even-if-I’m-carrying-my-head-in-my-hand! You two are bad enough,” McCoy groaned, pointing nonchalantly at Kirk and Khan.

Joaquin gasped and was even more astonished as his brother began to chuckle while the captain – Jim! – began to snicker, looking rather like an overgrown boy than like a commanding officer.

“Admit it, Bones, you wouldn't have it any other way,” Kirk grinned.

“‘Bones’?” Weiss blinked several times. “An odd nickname for a doctor.”

The CMO sighed very dramatically. “I was divorced; my former wife got everything save a skeleton that was in my office. I told that to this guy over there...,” he gestured towards Kirk, “and he promptly gave me that nickname.”

“Funny,” Joaquin commented. Then he looked at Khan. “Did he give you a nickname, too?”

“Yes, indeed,” the former dictator deadpanned. “‘Nien’ is not much of an improvement over ‘Bones’, but you know the Americans. They have to shorten names or to change them completely. Otherwise, they are not happy,” Khan mocked, giving Kirk a gentle glance.

“Nien?” Joaquin asked, baffled again. “He calls you Nien? That is strange!”

“Not any stranger than you calling me ‘Noo’,” Khan looked at Jim again. “He couldn’t pronounce my name at first and called me that as a child,” he explained. “It stuck.”

“Thank God no one calls me ‘Jimmy’ anymore,” Kirk sighed. He lifted a threatening finger as Khan promptly opened his mouth. “Don’t you dare!” he growled, but the Augment only chuckled again and mouthed the child's moniker without actually saying it. Jim groaned and closed his eyes.
“You are teasing each other, aren’t you?” The boy’s glance hung on the former dictator. “What else have I missed?”

“Far too much for your tender soul,” Bones grumbled and thrust his hands into his waist. “Right, you two, stop crowding my medbay. The boy needs rest, and you two should hit the mess hall and get something in you. You both have lost too much weight, and before we’re stranded on New Vulcan with nothing else to eat but salad and vegetables, you should demolish as much meat as you can.”

“And that is healthy, Doctor?” Khan asked.

“For once – yes!” He gestured towards the door. “Out with you two and don’t come back without having dinner first. I’ll ask Spock if you ate something.”

“I don’t need a nanny,” Jim protested.

“You first officer wouldn’t mind taking that job, too, given your penchant for danger.” He smiled kindly at the two lovers. Rolling his eyes, Kirk turned to go, muttering something about bossy CMOs. Khan bent over Joaquin one last time. “Stay here and try to get some sleep. You are safe here, and I will be back soon.”

That convinced Joaquin more than anything else. “Don’t worry. I’m a big boy now, and it isn’t like I could go anywhere, the way I feel – like my muscles are mush.”

Concerned, Jim glanced back over his shoulder at Bones, who only said, “He has to rebuild muscle mass, that’s all.”

“Well, we’ve got three sports and rec decks aboard. I’m certain you’ll find something suitable,” he told Weiss, smiling again. “Good night,” he said, and he watched Khan press a kiss to the boy’s forehead before the former dictator followed him.

Together they left the medbay. Jim felt relief, but still he sensed an uncomfortable tension deep in his mate’s soul. Remembering the fury that had flown in hot waves over their link, Kirk looked questioningly at his beloved.

“What’s the matter?” he asked. When he saw Nien’s frown, he added, “You were angry just before - before you were – happy about Joaquin waking up. So, what’s up?”
Khan took a deep breath. No, there was indeed nothing he could hide from Jim anymore.

“Not here,” he murmured, and Kirk knew instinctively that the topic, whatever it was, had to be very sensitive.

“Right. Let’s go to our quarters. The replicator can shut up our stomachs, too.”

After they reached the captain’s quarters and Jim programmed something for their dinner, Khan finally told him what he and Scott had found out. As he learned of Bones’ own roll in the matter of the previously opened cryotubes, he was astonished. He didn’t know if he should lecture McCoy or not. Right, he was only back among the living because of Leonard’s decision to put him into Joaquin’s cryotube, yet he did understand that the CMO’s conduct wasn’t really in conformity with the Hippocratic Oath.

Deciding to speak with Bones later in private about it, he listened to Khan’s tale, learning what really had enflamed his mate’s rage. Kirk was shocked – furious even – and called Spock to his quarters. Of course the Vulcan’s face remained stoic as he listened to Khan’s explanations, yet Jim knew him well enough to recognize that the gleam in Spock’s eyes was suppressed anger. To abuse sentient beings for experiments was a crime, yes, but to do so while they were asleep and unaware of what was happening to them, breached all ethics. The Vulcan felt something close to disgust.

He didn’t hesitate to offer his support for the upcoming investigation. Without emotional involvement, he looked ahead. “If Dr. Green and his colleagues acted on Admiral Norton’s and therefore Section 31’s order, which would make sense, they must have kept records of the experiments’ results, seeing as they were ready to sacrifice Mr. Singh’s people.” The Vulcan’s stiff posture betrayed his tension. “Mr. Singh was held captive in the LSH lab for a certain purpose and after his escape, Section 31 likely continued its research by choosing an alternate path – namely using his crew for their experiments.”

“They searched for cures for disease,” Khan growled. “I know exactly how the worst of Earth’s and other planets’ diseases make you feel, as I was forced to endure the pain of each and every symptom. I can understand this – my utility and even would have offered some of my blood for their research if I had been asked, but they decided to experiment with me without asking – just like Marcus did.”

“That’s not all,” Jim murmured, feeling sick to the core. “They’re not just looking for cures.” He looked Nien straight in the eyes. “Selek hacked into Command’s data bank and checked Luengo’s terminal. Yes, they tried to extract antibodies from your blood after they infected you with different diseases, but they’re also trying to develop a disease based on Rigelian Fever. They want the pathogen to be immune to any cure or antidote in order to use it in a biological strike against the
Klingons – and your immune system is the foundation.”

Khan stared at him flabbergasted; then he paled dramatically and closed his eyes, whispering something beneath his breath in his Indic tongue.

Jim didn’t need a translation. He could sense how his beloved felt, and even Spock showed a hint of understanding and sympathy. The Augments had been bred to bring peace into the world, and now their enhanced biology was about to be used as a weapon of mass destruction. The thought unnerved even him.

“How far are they in the proceeding?” Nien whispered; fury and terror radiated off him. Even if he had learned to loathe the most Klingons, the thought of them falling prey to a holocaust with the help of his cells made him nauseous.

Kirk took a deep breath. “As far as Selek was able to find out the pathogen is still in development. And to top it all, Norton presented the other admirals with a kind of predecessor to the pathogen, blaming the Klingons for its existence. Luengo is planning a first strike in secret with this holocaust weapon – all the more reason to stop him.” He bent forwards and laid a hand on Nien’s shoulder. “I didn’t want to burden you with this right now, but after you and Scotty found out that Green and his bastards had to have opened the cryotubes several times, I’m sure about what they’re up to. If there is any clear evidence that their experiments went in that direction, we’ve got more evidence to get them to court.”

Khan nodded slowly. “I understand,” he said quietly. “But right now my concern remains the damage those men might have caused my brothers and sisters.” He glanced at Spock who still sat on the second armchair. “I want to examine them as soon as possible and…”

“You will have my full support, Mr. Singh,” the Vulcan interrupted him calmly. “I suggest that you and Jim finish your dinner and then we can meet in the hold attached to medbay. Dr. McCoy will be there, too. I advise that our acquired knowledge of Dr. Green’s work remain in this room and medbay. As long as Dr. Green thinks it safe, he will not take drastic action such as destroying records.”

“I agree,” Kirk affirmed, then his glance softened as he watched Nien. Ashen grey, barely able to hide his anxiety and wrath, he somehow appeared so vulnerable. Jim needed all his control not to gather him into his arms. He wouldn’t in front of Spock who always felt awkward by openly displayed emotions. So he waited until his Vulcan friend left after an agreement on how to proceed with the investigation, and only then Jim rose, rounded the table, bent down and wrapped Khan into a firm embrace.
For almost a minute the Augment remained stiff, clearly fighting for self-control, yet Jim didn’t give in. He knew that Nien was about to reach his limits – again. Fear for his people’s survival, and then their fight together to recover them, afterwards his fear for his little brother and now this! For a moment, Kirk imagined how he would feel if he learned that some sick bastards had run experiments on his friends and had used his blood to create a kind of super weapon designed to bring death to billions of people. He would go mad for sure. And he didn’t need to reach over their shared link to sense Nien’s misery and fury.

Concentrating only on warm and gentle emotions, he tried to calm down his beloved. Finally, after a long minute, Khan gave in and sank against him. His long fingers clung to Jim’s tunic, holding onto him like a lifeline.

“When will all this end?” he whispered. “When will my people be safe – free of the fear of being used as lab rats and being treated worse than animals? We are humans, too! Why do they think we do not merit any rights merely because we were not born of a woman’s womb?”

They were rhetorical questions, yet Jim felt the need to answer them. “It will end the moment Section 31 falls – the moment public learns what happened to you and what these bastards intended. Most people today are moral. Section 31 in no way represents the people of Earth. The public will be outraged when they hear what happened to you and your family, and how you’ve been used.” He pressed a kiss to the midnight dark strands and nuzzled the soft hair. “It will stop when we reach New Vulcan. You and your family will be safe there. Selek will not allow any harm come to them. And as soon as Bob returns with Barnett and the others, Luengo and his followers will be done for.” He felt Nien stirring and gave him room to move. Those blue-green eyes looked up at him, and cupping one of those pale, angular cheeks, Jim whispered, “It will stop, Nien, I promise. I will not rest until your people gain the human rights and the freedoms they deserve. And I also will not rest until you walk away from court martial as a free man.” He leaned his forehead against his mate’s. “We made it this far, we’ll walk the rest of the way together, too, baby. I won’t give in, no matter what, and I think the same goes for you.”

Khan looked into those sky-blue eyes, felt the love radiating from this golden young man who held him protectively in his arms – arms so many times weaker than his own, yet they bore a strength that made him feel safe and comforted.

“Yes,” he whispered. “The same goes for me.” He leaned upwards and caught Jim’s lips with his. It wasn’t a kiss of passion and lust, but a kiss full of warm love and solace. And despite his fear of what he, McCoy, and Spock would find out in the next hours, Nien felt, for just a moment, at ease again.
“Luengo has ordered what?” Richard Barnett stood at the bridge of the Lexington and glanced between Palmers and Wesley, clearly not believing his own ears.

“He had ordered every Starfleet vessel be on the look-out for the Enterprise and to report to him immediately when she’s spotted. Every squadron leader has to be ready to take action against her, meaning they must demand Kirk’s surrender or destroy the ship. The official statement is that Kirk has gone rouge – that he lost his mind and has turned against the Federation.” Bob looked over at the large screen that showed quickly passing stars while the heavy cruiser raced towards Earth at warp 6.

“Sweet Lord!” Richard whispered. “We’ve got to warn Kirk.”

“Believe me,” Wesley sighed, “he already knows. Aside from Palmers, there is no better communications officer in the whole fleet than Lieutenant Uhura. She’ll listen to everything that goes on outside of the Enterprise, and I’m certain that she’ll crack the encryption in time to inform Jim of the new order concerning him and the ship. Hailing Kirk now and forcing him to break radio silence is too risky.”

“This whole damn mission is one big risk,” the Chief in Command growled. “When will we reach Earth?”

Wesley grimaced. “In approximately two days and… Lieutenant?” he addressed his navigator. “How long till we’re home?”

“Two days, four hours, thirty-nine minutes, sir!” came the reply.

“And sixteen seconds now, Commodore!” Sonik added, and Bob suppressed a groan. If Spock was only a little bit like Sonik, then Wesley asked himself, not for the first time, how Jim had been able to befriend his first officer at all.

“Dammit! The Enterprise could be already spotted and…” Richard was interrupted by the hailing signal.

“Medbay to bridge! Commodore?” the female CMO’s voice called, sounding tense.

Bob bent over the comms console and activated the link. “Wesley here!”
“Albereth here. It’s about Ambassador Sarek. I think you should come down here quickly, Bob.”

Alarmed, Bob and Richard exchanged a look; then the commodore straightened up. “I’m on my way, Wesley out.” He turned towards Marceaux. “You’ve got the conn – and prepare a reply for Command that confirms the new order. I don’t want Luengo to get even more wary concerning us than he already is.”

He quickly walked to the turbolift, Barnett on his heels. A short time later they arrived in medbay, where they saw Sarek lying on one of the biobeds, Sokal stood nearby and looked as unsettled as a Vulcan was able. Beside him, Batari Whitman had wrapped her arms around herself and her dark eyes shone with worry. Daniela Albereth checked the monitor above the biobed once again as a nurse hurried towards her, bringing her some supplies she had demanded.

“Daniela?” Wesley called and quickly closed the distance to her and her patient. “What’s the matter?” He glanced down on Sarek and gasped. The ambassador was ashen grey with an unhealthy, yellow hue. His breath was uneven and heavy, yet he turned his head slowly when the two staff officers arrived, but he seemed to be unable to say anything.

“It’s his heart,” Dr. Albereth said, not taking her attention away from the monitor. “A CHD – a congenital heart defect is making itself known. Mr. Sokal informed me that Ambassador Sarek has experienced symptoms before, but… well… ignored them.” She pointed at several readouts. “Now it’s acute. Thank the Lord Mrs. Whitman was with him when he had the seizure. If he hadn’t been brought to medbay immediately, I’d be writing a death certificate right now.” She looked at the two staff officers. “I can stabilize him for two or three days, but that’s the maximum I can delay the surgery. Otherwise…” She didn’t finish the sentence, but that wasn’t necessary. The meaning hung heavily in the room.

A little bit shocked, Barnett stared at the Vulcan he’d known for a long time now, while Bob took a deep breath. “Can you do it – the surgery, I mean?” he asked. “You’re familiar with Vulcan biology, so…”

“I would have no problem operating on him, Bob,” the physician interrupted him and cocked her head so that her dark brown, shoulder length hair with first traces of silver in it waved around her slightly angular face. “My problem is his blood. The ambassador has an extremely rare blood type – T-negative.”

Wesley frowned. “I’m no expert, but as far as I know this is indeed a very rare blood type.” He turned his eyes towards Sokal. “Do you have…”
The Vulcan shook his head. “No, sir. I have another blood type, and T-negative isn’t compatible with any other type.”

“Sonik doesn’t have T-negative either,” Albereth said, “and there is no way on Earth that I can compensate for the blood loss that will occur during surgery. Plasma won’t do. And I’ve checked our data bank. As far as I was able to find out only a hand full Vulcans with this blood type have survived the… holocaust.”

“That’s the reason why the ambassador always took blood provisions with him when he traveled,” Sokal explained, “but it was still stocked aboard the Excalibur when we were evacuated.”

“Dammit!” Bob groused, and he combed his right hand through his thick, grey hair. “Does the university hospital in San Francisco stock T-negative?”

“Maybe – but I can’t contact them and ask,” Daniela answered. “As you told me, the SBI – or whatever’s left of it – has its ears everywhere, and if I asked for a Vulcan blood type that Mr. Sonik doesn’t have, then they will know that something is, indeed, out of place here aboard.” She rubbed her neck. “I see no other choice than to head to New Vulcan at the highest speed possible, or I’ll have to fill out that damn death certification soon. And, by the way, as far as I know the same blood type is passed from father to son. Commander Spock must therefore have the same blood type as the ambassador – and the Enterprise will soon be at New Vulcan. Even if there is no single Vulcan on the planet who has T-negative, at least Spock will be able to share his blood with his father.”

Bob bit his lips while Barnett let his head sink. “Dammit!” he growled. “And we’re running out of time! When Luengo figures out that we’re on New Vulcan, he’ll do something. I just don’t know what.”

In the settling silence, Sarek’s whisper was plain to hear, as he murmured, “It would be illogical to risk the mission only for me. Section 31 has to be stopped. The Federation’s existence depends on it!”

“I intend to keep the promise I gave your son,” Wesley said sternly. “I vowed to bring you to him.”

“And I don’t want to lose a friend like you!” Barnett nodded and added quickly before the older Vulcan could protest, “And speaking of the Federation, you are one of her most skilled diplomats, and your talents will be needed as soon as the peace talks with the Klingons start up again. Your death would leave a hole that no one could fill for at least a decade.”
“If the president is not informed of Luengo’s and the SBI’s true nature, and intention, my son, Kirk and all the others will be as good as dead – and that goes for all who do not share Section 31’s intentions,” Sarek choked and coughed; a green trickle of blood appeared at the corner of his mouth.

“Leave Luengo to me!” Whitman said, and she stepped forward before turning towards Bob. “Commodore, the *Lexington* has long range shuttles?”

“Yes, as the squadron’s flagship, we have a long range shuttle in the hangar.”

“Right. As far as I understand, we have to take action in secret. We need to approach Earth without being caught by Section 31. Luengo shouldn’t get the tiniest hint that we are still alive. A strike, and there must be many done in secret. Only then can we be sure we’ve taken out every shadow department once and for all. A shuttle stands a better chance of arriving at Earth undiscovered, or at least, it can be done under the radar much better than a Constitution class ship, don’t you agree?”

Barnett licked his lips. “This is risky, Ma’am,” he mused. “You shouldn’t go alone.”

She nodded. “Yes, I would appreciate it if one or two admirals would accompany me.”

“I'll send Commander Marceaux as well with you, Ma’am,” Wesley cut in, “as well as Lieutenant Silverhawk and four Red Shirts.” He cocked his head. “At least you’ll have a little protection than should it come to that.”

“Thank you,” Batari smiled. “It’s the twelfth of November today, and Robertson has birthday in two days, on the fourteenth. He’ll be at home in the morning, like always. I’ll wait there for him, and I’ll tell him everything that happened.” Her gaze became stern. “And you, Commodore, will bring Sarek to New Vulcan – and you must take care that Kirk and the others will be safe there. I heard Luengo say he’ll find out where Kirk is headed – and he will not shrink back from anything in his quest to eliminate him, Khan, and the others. But even Luengo will think twice before he attacks two Constitution-class cruisers!”

Wesley took a deep breath. “I don’t like this,” he murmured, and the vice president laid a slender hand on his arm.

“I know, Commodore, and I appreciate your concern for my safety, but Sarek is right. The Federation, as we know it, is at stake. Luengo and Section 31 have to be stopped, and we can kill
two birds with one stone when I go to Earth and you to New Vulcan.”

“It is logical,” Sokal said slowly, and Batari gave him a broad smile.

“I knew that you would agree,” she replied. ‘And it’ll save your boss’s neck,’ she added in her thoughts.

“Right,” Wesley sighed. “I’ll give the order to prepare the long range shuttle.”

“You should change the name and ID in case Mrs. Whitman runs into a patrol or has to identify herself when we’re nearing Earth,” Barnett suggested. “That wouldn’t be the case if I were still leading Starfleet Command, but given the fact that a nut job guy like Luengo is, we have to plan for anything.”

“An excellent idea, Richard, I second that.” He looked at Sarek, whose eyes were still glassy but gazed intently at him now. “You’ll see, Ambassador, in two and a half days we’ll be at New Vulcan, and you’ll be all right.”

Sarek moistened his lips. “There is no need to comfort me, Commodore, though I appreciate your good will.” He closed his eyes. “I will do my best to stay alive until then. After all, my son is waiting for me.”

ST***ST***ST

Aboard the Enterprise, most of the senior officers were still working. Uhura tried to decode the transmissions her colleagues had captured, putting all her pride and sweat in getting a result. She wasn’t named best in her class for nothing, and the commendations she had received spoke for themselves. If there was anyone who would be able to crack the new encryption, it was her.

Jim knew that he couldn’t help her or his two closest friends and his beloved during their trials now. So he carefully added every new detail to the report he planned to give Barnett or – should Bob fail to free them – to the president in person, maybe with elder Spock’s help. Luengo had to be stopped, no matter what.

In the meantime Khan, Spock, and McCoy opened every tube to take skin examples and allow Bones to scan the Augments properly. Dr. M’Benga and Nurse Barbara assisted them; they labeled
and compiled the files with the most relevant data on every superhuman. Their first task kept them busy until late after midnight, and then they began to examine the skin samples for clues as to what had been done to the men and women.

Several times, Khan checked on Joaquin, who was in a deep sleep. No wonder given the circumstances his body had been through, yet all the new facts he had learned about had been overwhelming, too. And this was only the tip of the iceberg, so to speak. McCoy, who checked his young patient too, knew that the boy had to be taught carefully about all the changes which happened since he was sent to dreamland more than 260 years ago – especially concerning the other species. It was one thing to read about aliens, or to watch some fictional creatures in a movie, but meeting them for real... Yes, Joaquin was an Augment, and so his intelligence would help him to cope with everything quickly, yet he was also still so very young and had fewer experiences than Khan or the other superhumans. And Bones was hell bent on helping the boy as much as possible.

Khan decided to remain in medbay overnight – not only to assist the two physicians and Spock in their investigation but also to stay near Joaquin. The boy should not be alone in this strange world that was utterly alien to him.

Jim, who stopped by at 0100 at night, understood Nien’s decision fully. Khan not only had to get the results of his family’s examination, but he would be needed should Joaquin wake up during the night. Kirk imagined himself waking up more than two hundred years in the future and shuddered. He already understood space travel, but the rest of it... He would be nervous first. No doubt about it.

When morning came, most of the results were in hand. McCoy and M’Benga had switched places twice during the night, catching a little bit sleep at least, but both were bone tired – contrary to Khan and Spock. Each looked as neat as a pin and worked quietly side-by-side at the microscopes and the science terminal when Jim entered medbay at 0700 ship time. Seeing his T’hy’la and his mate working in perfect harmony warmed him, and he couldn’t hide a smile when they finally became aware of his presence and looked over at him.

“You two are a good team,” he muttered after they greeted each other, and Spock lifted a brow.

“Mr. Singh’s knowledge of biological science, combined with his analytical mind, is a sound basis for a fruitful cooperation. I have to admit that this is a pleasant experience.”

Kirk began to grin. “Wow, that’s a big compliment coming from you.”

Again, a Vulcan brow traveled upwards. “I only state facts, Captain.”
Nien, who sat at one of the research tables studying something through an electron microscope, looked up at the two friends. “It’s the first time I have worked with a Vulcan, and I also have to admit that concentrating only on the topic – being a complement to another mind like this is… refreshing.”

“Well, don’t ask me for flowers if you two get married,” Jim commented wryly, smirking for a second as he caught two bewildered gazes.

“If I correctly recall your revelation only a few days ago, Jim, you two are already married, and I do not believe Khan is a bigamist based on current evidence.” A grumbling voice sounded behind him. “And if Spock and Uhura ever should exchange rings – or whatever they do on New Vulcan – kiss the bride or whatever – you should definitely be on Spock’s short list of best men.” McCoy entered the lab, looking like hell – bloodshot eyes, hair in utter disarray and pale as a sheet.

“Bones!” Jim exclaimed. “Jesus, what happened to you?”

“You dear hobgoblin and your beloved spouse have happened to me, keeping me up almost the whole night – again, as I have to point out,” Leonard growled.

“Didn’t Dr. M’Benga relieve you during the evening, Doctor?” Spock asked, ignoring the jibe. He looked the CMO up and down. McCoy was worn out.

“Yeah, and two hours are not enough for a beauty sleep.”

“One would not improve your appearance, in my opinion,” the Vulcan commented dryly. Instantly, Bones was ripped from his exhaustion – just as Spock intended.

“What does that mean, huh?”

Quickly Jim lifted both hands. “Gentlemen, please it’s too early – and it’s before breakfast!” He looked back at Spock and Khan. “What did you find out?”

“We found out a lot,” Bones muttered before he addressed all of them. “I got the latest results just now.” His gaze found a tensed Khan. “Thirty-two of your people have antibodies for one disease or
another. What's interesting is that these diseases aren't native to Earth. Other Augments have traces of different pharmaceutical cocktails in their system that are most definitely not available. I've only seen some of them mentioned in medical journals."

Jim’s eyes widened. “So… these bastards actually ran experiments on them?”

He looked at Khan, whose eyes betrayed his rage, then to Spock whose eyes held a hint of loathing, and finally to Bones, who looked ready to hit someone. “Yes, and the last experiments were done only two or three weeks ago” Leonard gritted out. “Three of the Augments even have antibodies for Rigelian Fever. Spock told me what his older counterpart found out from hacking into Luengo’s terminal. Obviously, they tried to replace Khan as a supplier of the antibody, but none of the ladies and gentlemen over there resemble his, um, perfection. So Green stopped some of the testing it seems – very much to the fortune of Mr. Singh’s crew. They are all healthy, but some of them will feel the effects of the illness after waking up – nothing life threatening though.” He shook his head; his fists were balled. “Pray that Green doesn't cross my path anytime soon, or I'll throw my ethos out the next airlock and give him a pounding he’ll never forget!”

Jim sat down heavily on one of the chairs, trying to stomach the fact that his worst fears turned out to be true – mostly. The Council had sentenced the Augments to cryosleep, safely stashed somewhere away from Earth. The sentence was inhuman enough in his eyes. After all the Augments hadn’t committed any crime and had no chance to defend themselves – another gift of the former Chief in Command before Barnett took the lead. Learning now that those sleeping men and women, who lay vulnerable and defenseless in their tubes, had been abused and used in experiments made his blood boil.

He glanced at Spock, whose perfect self-control was the only thing keeping him calm at the moment. “Have all the samples been examined?”

The Vulcan nodded. “Yes, Captain. They are all cataloged. Besides Mr. Weiss, only four Augments have no antibodies meaning…”

“Meaning Joaquin, Silvia, Carlos and Romina are the only four who weren't used as lab rats,” Khan whispered; his face was white with wrath.

“All right,” Kirk said slowly, rising again. He felt Nien’s eyes resting on him, demanding he act – and act he would! There was an icy fury in his glance that made McCoy wary. Khan watched his mate once again become the warrior no one should underestimate. Spock became aware that his friend was about to take action. Action against those who had dared hurt an innocent people – people he had come to love through Khan.
“Spock, take twelve Red Shirts and Giotto and ransack Green and his colleagues' stuff. Check their baggage, their belongings, everything! Maybe they tried to save something – the antibodies – anything. I don't care if you have to strip them naked to do it,” Jim ordered. “And I don’t care what the regulation says about it today. Green and his Frankensteins committed an atrocity first. If they were ready to sacrifice Nien’s crew, then they must have tried to salvage something from those tests. I want them secured – as proof of their inhuman deeds!”

Spock nodded slowly. “Dr. Green will protest – and maybe deny us access to the records he possesses.”

“Oh, he certainly will, and if he gives you trouble, you have my permission – no, my order! Throw him and his collaborators in the brig. Regarding the Federation Laws of Human Rights, he’s guilty on all counts as far as I'm concerned. If he doesn’t cooperate, he’ll spend the last two days of the journey with Finnegan and the others in a tiny room – with a big window instead of a wall and a not-so-nice view!”

The Vulcan lifted a brow, knowing that this was not an empty threat. And, as he had to admit, he could understand his friend’s fury and that of the enhanced man beside him.

“Affirmative, Captain, please excuse me,” he said; he nodded at the three humans and left the labs.

Jim only realized that he was trembling with rage when he felt Bones’ soothing hand on his shoulder, accompanied by the words, “Jim, I’m just as angry as you are, but please calm down. You'll gain nothing if you lose your head now.”

Kirk turned his head; his eyes were cold as a night on Delta Vega, yet a fire burnt in them that made the CMO almost flinch. “You can be sure, Bones, I won't lose my cool. But these bastards will pay for what they did to these men and women. Not just Green and his colleagues, but also Dashwood, Conelly and his people, and Norton and Luengo. They won’t know what hit them; I promise!”

He took a deep breath to calm his raging nerves before he exchanged a glance with Nien, repeating his vow silently with one long promising look.

TBC…

Chapter End Notes
Oh-oh, Jim has always temper, but when he is enraged like this even I would try to avoid him (or maybe not, *grin*). Dashwood and Green and their colleagues really know no limits in their hunger for knowledge and in their wish to learn how far they can proceed. Thank the Lord there are also other scientists, which belong to the ‘good guys’, like Spock and Bones, the engineers who develop new technologies, etc.

In the next chapter Spock will show that even he, as a Vulcan, can be pissed-off (namely with Green, *snicker*). You’ll read more of Joaquin, who is going to face his first ‘alien’ and makes some friends – and, yes, Luengo realizes to where Jim has to be heading, because New Vulcan is the only place he and the others can find shelter. In other words, be ready for the travel of the rollercoaster I spoke of in the beginning.

I hope you liked the new chapter, and that you are going to like ‘my’ Joaquin.

‘Til next time,

Love

Yours Starflight
Hi my dear readers!

I’m very sorry for the delay, but dear Darry had to mourn about a loss and dear Rhiannon has a lot of to do, too. I promise that the next chapter will come sooner and that the new one now will make up for everything.

Well… Maybe this new chapter (and parts of the following ones) are sadder to read than originally thought.

I had this sweet idea that it would be Chekov and Riley, who would befriend Joaquin – seeing that all three are of the same age and all three are geniuses in their own ways. I wrote this chapter already seven weeks ago, and almost imagines Anton Yelchin taking care of Joaquin in his cheerful, sweet, boyish, innocent way.

And now this great actor, who gave as new imagination of Pavel Chekov, is gone – taken away from us (and his family and friends) forever.

I can’t express the shock I had as I read of his death in the web. I still can’t believe it and really hurts to think that he will never come back again. Many of his colleagues wrote / told of his great talents as an actor and of his sweet heart and open mind.

It’s not my style to dedicate a chapter or a story to somebody, but in this special case I want to do it.

I dedicate this chapter – and the following ones – to Anton Yelchin, who gave the character of Pavel Chekov a new striking, beautiful, sweet, brilliant new trait. In the original serial he also belonged to the ‘Kirk-Team’ and had his scenes, but in the reboot-universe he held a special significance – because of Anton’s brilliant portrait of this character.

Words can’t tell how deep the mourning is and they also can’t give any comfort for those, who were close to him.

There is only one thing left to say: Rest in peace – and you’ll not be forgotten.

Starflight

See the end of the chapter for more notes
“I protest! How dare you to go through my personal belongings!” Dr. Anthony Green tried to stop the Red Shirt who had pulled out his clothes from the wardrobe, but was held back by Lieutenant Commander Giotto.

“Doctor, I advise you not to intervene. Let us do our job and -”

“This is intolerable!” Green exclaimed, whirling around towards Spock. “I demand that you order them to stop! How dare you invade my privacy! I demand an explanation for this insolence. Where is Kirk? I want to speak with him immediately!”

Impassively, the Vulcan looked at him, hands clasped behind his back. “Captain Kirk ordered this investigation, Doctor Green, for a very good reason. All evidence points to the fact that you and your colleagues ran illegal experiments on humans without their consent and even their awareness. You willingly risked their lives by infecting them with deadly diseases and left them to certain death as you kept silent about their presence on Gamma 12 after our arrival. If it had not been for the information we had regarding their presence, which led to their rescue, they would be dead now.” He watched the human’s face turn from angry red to ashen grey, and continued with a stony expression while Giotto and his four men looked wide-eyed at him. “You and your colleagues violated one of the most important laws of the Federation – the Sanctity of Life and Human Rights,” Spock continued to address the scientist. “Your experiments are comparable with attempted murder and, as such, you will all face trial.”

Green found his voice again. “How do you…” He took a deep breath. “From whom did you get this information?” He shook his head. “It doesn’t matter in the end. Listen, Commander, you’re very mistaken if you think these creatures in the tubes are humans. They are -”

“Augments from the twentieth century, launched from Earth in 1996, put into cryosleep by their leader Khan Noonien Singh,” Spock said unmoving, feeling the gazes of Giotto and Security resting on him, too. “They are living, breathing, sentient beings of human heritage – men and women who suffered in your labs, helplessly delivered to the cruelty of you and your colleagues. They may not have been born in a way considered natural at the time, yet they are human, and you exposed them to suffering and pain – risking their lives.”

Giotto moistened his lips. Augments… Petty Officer Singh was an Augment. His assumptions had been right after all. The man’s ability to resist phaser stuns and every unusual thing he’d done since he was aboard weren’t miracles any longer. Augments weren’t called ‘super’-humans for nothing. And, to Giotto’s surprise, he felt no resentment towards the enhanced man. No, his rising anger was directed at Green and his colleagues, who hadn’t moved one finger to save the Augments’ lives. Giotto paled as he realized the whole extent of the last mission. The Enterprise had been ordered to kill those men and women! Yes, they were enhanced, but they were people, for God’s sake. And they were only alive now because Kirk disobeyed the order. Giotto had never thought it possible, but he was glad for his captain’s insubordination.
Green was unaware of the security chief’s rising anger. “It’s obvious that you know about them and this madman that all of Starfleet is after,” Anthony said to Spock, “yet you defend these monsters, even their leader. They -”

“I know Mr. Singh, Doctor. You met him, too. He accompanied Captain Kirk and myself down to Gamma 12 – and to use a Terran phrase, you can consider yourself lucky that Mr. Singh only learned about what you did to his crew last night – the people he calls his family. Otherwise, I think not even Captain Kirk would have been able to stop him for making you pay.”

“He and his colleagues really ran tests on Mr. Singh’s people?” Giotto cut in, horrified.

“Dr. McCoy, Mr. Singh, and I examined the Augments last night. Except for a few, all show evidence of biological experimentation,” the first officer affirmed.

Giotto felt sick. That was…unbelievable! In earlier centuries on Earth something like that happened, but now – in the Federation? It was beyond imagination. The Chief of Security couldn’t help himself and put aside his usual professional behavior for once, as he whispered in Green’s direction, “Swine!”

Anthony looked at him. “Don’t judge me too early, Lieutenant Commander. I had orders from the highest ranking staff officers – and you all will rot in prison as soon as we reach Earth! These creatures weren’t needed anymore, and as long as they live, they present a danger to the Federation.” He glanced back at Spock. “I never thought I’d have to say this to a Vulcan, but you’re insane if you think these beasts are humans! They -”

“They are humans – different from you and the others, but still human,” Spock cut in icily. “I would quote a formidable poet from your planet, Dr. Green: ‘Spirits that I’ve cited, my commands ignore’. Scientists like you tinkered with human DNA and bred children in labs, raised them with the purpose that they would do the dirty work. One thing you and your predecessors didn’t consider is that you can’t poach creation without paying a price. Children grow, they learn, and they choose their own paths. Children need shelter, closeness, understanding, and comfort. This all was denied the Augments. They were treated like things, not like the humans they were, and still are. Humankind has evolved within the last centuries, but regrettably there are still those who cling to the old ways and believe that laws are not meant for them, because of a higher agenda. And those people have to be stopped.”

Green stared at him thunderstruck and enraged. “I know that a year ago the Enterprise was involved in the mess with the Augments and their leader – a wanted terrorist. I’m surprised that you, a Vulcan, would defend the mass murderer who brought danger to this ship and -”
“I do not defend Mr. Singh’s deeds, but his human rights that you and your fellows have stripped him and his people of.”

“Human rights – of this creature?” Anthony almost screeched. “I was told what he did last year. He…”

“The cat is always shocked when the mouse fights back, and bites sharply in revenge,” Spock replied coldly. “If you inflict enough pain and sorrow on someone, do not be surprised if he or she strikes back. You and your colleagues are accused of serious crimes – slavery, torture, illegal experimentation on sentient beings, and more. It would be best for you if you cooperate now.”

“Cooperate? What the hell does that mean?” the scientist snapped.

The first officer stood even straighter than usual. “The logical thing for you to have done when you learned that Gamma 12 would be destroyed, was to save as many records of your experiments as possible. Tell me where these reports and documents are, or I will be forced to order Security not only to tear apart your quarters to find them, but any cargo we salvage as well.”

“What?” Green gasped. “You are insane!”

“Your decision please, Doctor,” Spock repeated unmoved. As the scientist only stared at him, he addressed Giotto, “Lieutenant Commander, secure everything you find here and in the quarters of the others, including their accompanying security team. I will assist you with the containers. Everything will be catalogued and any personal belongings will be returned to Dr. Green and the others after delivering them to the authorities.”

“Aye, sir!” the chief affirmed, nodding at one of his staff who left the quarters to pass Spock’s order to the waiting Red Shirts outside.

“This is theft!” the scientist raged. “These documents are top secret, and you’ll sit in prison for decades for stealing them!”

“I beg to differ, Doctor. I am not stealing them, I am securing them for the authorities’ investigation.”
“I demand to speak with Captain Kirk!” Green snarled, and felt a new wave of fury as the Vulcan remained stoically still.

“Believe me, Doctor, you would prefer speaking to me rather than the Captain. Abuse as you and your colleagues have inflicted are against all known codes of morality, and Captain Kirk is a man of high morals. You do not want to face him right now.” His gaze penetrated Anthony. “I ask you once again for your cooperation, Doctor.”

“Do your worst!” Green spat. “None of us will cooperate with you!”

“As you wish, Doctor,” the first officer replied with infuriating calmness, ignoring the murderous daggers the scientist glared at him. Rather, Spock used the opportunity to take a shot in the dark, “Do you think Admiral Norton is going to help you?”

“I don’t need the help of Norton, Vulcan! I have the highest support possible.”

Spock dared another suggestion. “I cannot imagine that the President of the Federation agreed to your research.”

Green chuckled bitterly. “As if the president is the highest authority. He is nothing without the Council, and within it, I have friends who already support me in this matter. And concerning Starfleet: everything depends on the Chief in Command – and Luengo will tear all your heads off when he learns of this!”

If Spock were a full human he would have smiled in triumph, but being a Vulcan he only allowed himself a small flush of satisfaction at Green’s admission and the further information that Council members were involved, too – something he had already anticipated. The whole matter held far too high a position to not be known by some Council member who was certainly supporting them.

“I doubt that it will be the captain’s or my head that will roll, Doctor,” Spock returned with a hint of that arrogance that infuriated McCoy on a regular basis. “Even Georges Danton met the same fate that he had doomed the whole French aristocracy to. He was beheaded – accused of treachery against the French Revolution he initiated. You see, Doctor, who sows the wind shall reap the whirlwind.”

“Mr. Spock?” Giotto called, taking something out of the desk. “I think you’ll find this interesting.” He lifted a case sealed with the Federation symbol. Green gasped again, while Spock simply lifted
both brows. Accepting the offered case, he broke the seal and opened the cover. Papers, disks, hand-written blotters, and more were revealed. The Vulcan needed no more than a few close looks at the old-fashioned written reports to know that he had found what he’d been searching for. And something very close to anger and loathing rose in him, which he quickly suppressed.

“I will take this with me for closer inspection,” he said, closing the cover again. “Dr. Green, you are to be put under a curfew order until the end of our journey. The same goes for your colleagues and your security team.”

Anthony gritted his teeth. “You will regret this, Commander!” he hissed.

“That remains to be seen, who of us will regret something in the end.” Just as before, Spock’s expression resembled stone. “You can use the replicator and the library computer for entertainment, communication will be cut off although a link from the bridge will be maintained. You are not allowed to leave your quarters. Should you decide to disobey, the guards outside will be forced to take you to the brig. Have I made myself clear?”

Green was about to explode, but knew that he hadn’t any other choice. “Do what you think you have to do,” he growled, while in the background Giotto secured the communication terminal and shut off any link that might give Green the chance to send a message.

Spock only nodded, then left the quarters. He heard protests and arguing coming from the adjacent quarters through the open doors, and sighed inwardly. It seemed he had to point out to every single scientist of Gamma 12 that they were now in custody. And he also would have to take care of the potential danger the elite security team represented for Jim and the others…

ST***ST***ST

“Captain, I’ve received a signal from a parsec just outside of the Tholian Empire,” Li said while he turned his chair towards Styles. Since he’d found out that James Kirk had tricked him, the captain’s mood had been dark at best. During the whole day yesterday he had sat on his chair and brooded, and this morning wasn’t any better. No one dared to address him if it wasn’t absolutely necessary, and therefore Li almost expected a sharp answer, but it seemed Styles had finally caught himself again.

Lawrence looked up at him. “What signal, Lieutenant?”
"A subspace transmission, sir – on the frequency of the Enterprise."

That caught Styles’ attention. Quickly he rose and walked towards the comms station. “Can you intercept it?”

“Yes, sir,” Li answered and a moment later Jim Kirk’s tenor sounded from the speakers,

“Enterprise to R6. Mr. Buckson, please come in!”

A moment later another male voice sounded, “Buckson here. Hello Jim. Nice to hear that you made it so far.”

“Yes, it was a close call. We’ll arrive at your coordinates in six hours, twenty five minutes. Is everything prepared?”

“Yeah, everything is ready for you. I’m looking forward to seeing you again, old friend. Have a good trip until then.”

“Thanks, Fox, I owe you one. Enterprise out.”

Li let his headset sink to the console. “That’s all, sir,” he said and Styles bent over him.

“Can you locate the source of who Kirk was talking to?” he demanded.

Li tried his best, but shook his head after several attempts. “Sorry, Captain. The transmission is scrambled. Kirk used Code 9, yes, but the transmission way almost impossible to…” He hesitated. “But I can you give the coordinates from where the Enterprise hailed R6 – whatever planet that is.”

“Transfer them to the navigation console,” Styles ordered, “And then contact Command and pipe it into my ready room.” He whirled around. “Change course towards the Enterprise’s last position!” he growled, balling his hands into fists. “This time I’ll get you, Kirk!”
Jim felt grim satisfaction as he heard that Green and his colleagues were now in custody, only confined to quarters because of their status. He didn’t know exactly what they’d done to Nien’s crew, even if Spock and Bones had explained it to him, but it was enough to make him rage. And Khan, who was with them during the short briefing, burnt in hot yet icy fury he’d somehow managed to control.

Especially as he sensed Joaquin awakening and quickly he returned to medbay. He came just in time to watch his little brother rouse.

Joaquin felt refreshed, but still he sensed that his body wasn’t as fit as his mind was. He smiled as he saw Noo bending over him. After reassuring his brother that he indeed was fitter than the day before, he told the same to McCoy, who made a short visit soon afterwards, checked vital signals, and ordered breakfast, which an orderly brought in a few minutes later.

Weiss began to eat and was practically devouring his food, very much like someone else Khan knew and loved. And, as he realized, he was calming down because of Joaquin’s presence. Yet he caught the boy looking questioningly at him several times, and he knew that his inner tumult echoed over their shared family link, but he wasn’t ready to tell his little brother of the darkness they’d all had to endure during the last two years. First he wanted Joaquin to learn of today’s news without prior knowledge, because Nien knew now that the Federation was a political installation and the Israeli Augment would have to stomach enough without the anguish of learning what had happened to his family.

They ate quickly, but before Khan was able to begin to tell Joaquin a little of the new world they all found themselves in now, he was distracted as he heard the heavy, sure steps of Scott coming nearer. He rose to greet the engineer, who hesitated at the room’s threshold, not knowing if he should disturb the boy on the biobed.

“Good morning, Mr. Scott,” Nien nodded at the Scotsman, who took this as an invitation to enter.

“Good mornin’, Mr. Singh,” he replied as he closed the distance to the two Augments.

“Good mornin’ ter ya too, young man,” he greeted the younger of the two superhumans. “I’m Montgomery Scott, the chief engineer. Nice ter meet ya!” Grinning, he offered his hand that Joaquin accepted.

“Irish?” he asked, and Scotty shook his head.
“Na, I’m Scottish.”

“Well, silly question of me – given your name,” Weiss smiled, having already learned that the tone aboard was one of comradery.

Scotty laughed. “Aye, the name reveals a lot.” He cocked his head. “And how are ye doin’, lad? Yer brother had a hard night concernin’ yer health. He was worried ter say the least”

“I’m fine, thank you,” Joaquin answered, asking himself if the whole ship knew about him and his brush with death.

Scott grinned at him before he turned serious again and addressed Khan. “I wanted ter ask ye if ye can spare some time for Engineerin’. Our lady is havin’ some trouble with the damn generator again. Keenser’s an idea about it, but I wanted yer opinion, too.”

Khan nodded at him. “No problem, Mr. Scott, I’m coming with you.” He glanced at Joaquin. “Will you be alright if I leave?”

Weiss looked from one man to the other, astonished once again at how comfortable another mere human was around his elder brother. He also marveled at how easily Noo behaved towards the engineer. Joaquin knew that Khan was an engineer at heart and tinkering with engines 260 years ahead of their own time had to be a challenge even Noonien Singh couldn’t resist. He simply smiled, “Yeah, go play with your machines. But don’t cripple the ship. I don't think the captain would be too delighted.”

Promptly, Scott laughed as he caught Khan rolling his eyes. It was obvious how close those two were, and he was glad that they were reunited. After exchanging quick greetings, the two older men left medbay.

ST***ST

Kirk had switched his shift with Scotty so that the engineer was free to work with Khan in Engineering. His blood was still boiling because of what he had learned this morning, but he did his best to hide his mood though his brooding was often interrupted.
Uhura’s triumphant “Ha, got you!” from the comms station got Jim’s attention. Turning his seat, he glanced at the young Bantu woman who looked over her shoulder at him with a barely hidden grin. “Captain, I cracked the code!”

In the blink of an eye, Jim was beside her, realizing that Spock had left his station too; he hovered on Uhura’s other side. Curiosity – it was certainly one of the few weaknesses even a Vulcan would and could not deny.

Without another word, Uhura gave them each a headset and pressed a button. Jim paled as he heard the order provided by, none other than, Luengo. Every vessel of Starfleet had to report immediately to the HQ if they encountered or tracked down the Enterprise. Every heavy cruiser not patrolling the former Neutral Zone was ordered to look for them and should try to stop them – and if it came to it – use force.

“How old is the order?” Jim asked with a dry mouth, and Nyota took a deep breath.

“Fifteen hours and thirty-eight minutes.” She rubbed her neck.

Jim pressed his lips into a thin line. “Dammit!” he murmured. “They declared open season on us. Luengo isn't taking any risks that we’ll escape and present his misdeeds to the Council.” He glanced at Spock. “What do you think? How long until Styles catches onto our little audio show?”

“Given the position the Excalibur had to reach to scan our first probe and the speed of the second probe and the delays due to subspace transmission, the chances that Captain Styles has already intercepted your feigned communication is 92.39% percent, Captain,” Spock answered.

“Hmph, as soon as Styles informs Luengo about it I’m certain that several of our ships will be ordered towards the Tholian Empire.” Jim mused.

“If Captain Styles or Admiral Luengo do not see through the ruse, Captain. Even if I doubt that Captain Styles will discover the second ‘bread-crum’ as you called it, Luengo will not be fooled so easily. The SBI has the most advanced equipment an Intelligence Department could desire, and the chance that they will discover our deception soon is high…”

“Please, don’t Spock!” Jim sighed. “Just let me believe that we can get them to chase the trail a little bit longer.”
Promptly, a Vulcán brow was lifted. “Keeping silent about a fact won’t change the fact.” Deep blue
eyes met his and with an inward sigh, he skipped the next comment. Humans! Sometimes he thought
he would never solve the riddle they presented him.

More than 260 years asleep – and everything around him was a riddle. And what was he doing
instead of solving them – instead of exploring this new world had woken up in? He was lying in
bed! Almost two hours ago Noo had left with the funny Scotsman, and in the meantime, McCoy and
another doctor, an African man – Dr. M’Benga, had visited him. The CMO had even brought him
some books from his private quarters for entertainment before he left to catch up on some sleep as he
told him. But it didn’t quench the boy’s curiosity.

But it wasn’t just his new surroundings that busied his mind. Joaquin had a certain gut-feeling about
the ship doctor’s exhaustion. Noo’s controlled fury, he could easily sense over their bond, and a
depressed feeling had settled in overnight in medbay – as if they had found out something was or
went wrong. And Joaquin feared that it had to do with his brothers and sisters.

Sighing, he took one of the other books – a photo book about Earth today. Many things had changed
– cities, borders, villages… Many things were still the same. The novels the CMO seemed to prefer
weren’t exactly to Weiss’ taste. Yes, they were interesting, but they didn’t quench his thirst for
knowledge. And the area outside his room was tempting; it lured him to explore at least a little bit of
his new surroundings.

A spaceship!

He was aboard a real spaceship where artificial gravity wasn’t fiction, but reality. He wanted to see a
little bit more of all this. And he wanted to test his muscles. Yes, he understood the doctor’s caution
concerning his depleted muscle mass and that his body had to adjust to its functioning state, but
Joaquin was an Augment, and his physiology was designed to regenerate quickly – adjust faster to
achieve homeostasis. Surely he could risk a few steps to have a peek outside of the room.

Pulling the blanket away, he swung his legs over the bed’s edge, ignoring the tingling he felt in them
and the cold that still seemed to cling to every fiber of his being. Ever so carefully, he inched forward
until his feet touched the cool ground. He felt a soft vibrating, too faint for human awareness, yet his
augmented senses recognized it. He knew that this was because of the engines, and more curiosity
sparked in him. Taking a deep breath, he raised, supporting himself on the mattress. It worked,
somehow, yet the fiery tingling in his legs intensified, but stubbornly he tried a first step – and
another.
And that was the moment his body told him in an unmistakable way that the mind may be strong, but
the body would have the last word. With a stifled yelp, he fell to the floor as his legs gave out. His
muscles and nerves were still adjusting to taking over their usual functions. Swearing under his
breath, he looked up. Door and bed were too far away to reach either of them, and he hated the fact
that he now had to call for help. Dammit! Noo would give him an ear full!

Then he heard quick steps that came nearer and as he glanced up he saw two young men, maybe his
age, who stopped at the door, looking at him with widened eyes.

“ST***ST

“You’ll see, Hikaru loves to get visitors! He’s bored half out his mind by now, I’m sure. I told him
about you, and he’s curious!” Pavel Chekov chirped enthusiastically as he walked down the hallway
together with Kevin Riley, heading for medbay.

“I’m just a second-year cadet; he’s a lieutenant and already the first pilot of Starfleet’s flagship,”
Kevin murmured, but Pavel simply laughed.

“Hikaru is only six years older than we are, and he’s a funny guy. He’s an excellent friend, and I think
you’re going to like him.” They stepped into medbay. “Maybe…” He cut himself off as he heard a
stifled yelp followed by a thud that was unmistakably the sound of a body hitting the floor.

Instantly alerted, both men raced towards the noise and stopped dead in their tracks when they
reached one of the private rooms and saw that someone had obviously overestimated himself trying
to leave the bed too soon. The young man looked up to them. Almost shoulder-length brown hair
framed a pale, yet toned face; big brown eyes glanced sheepishly at them.

“Hey, you okay?” Pavel asked and entered with Kevin on his heels.

“Yes, I, uh, slipped,” Joaquin murmured, embarrassed to be caught in such a situation.

Chekov bent over him and offered him a hand. “Here, let me help you,” he said, and Weiss had no
choice but to accept the support. At least Noo or one of the two physicians wouldn’t see him like
this. He tried to rise, but his legs had their own idea and began to buckle when he had barely
regained footing.

Kevin instantly realized what was wrong. He closed the distance to his friend, and together they
steadied the stranger before helping him back to bed. With a groan of relief, Joaquin sunk onto the
mattress and instantly covered himself with the blanket.

“Thanks,” he sighed, shivering from the cold still felt. “You spared me a lot of trouble.”

Chekov grinned at him. “Nah, Dr. McCoy can be grumpy, but he won’t behead someone for leaving sickbed – normally. Ozerwise our keptin would have lost his head a dozen times and more,” he joked.

Weiss grimaced. “I was thinking of my older brother rather than the good doctor,” he murmured. That woke the other two males’ curiosity.

“Your brozer serves aboard, too?” Pavel asked. He received a confused frown.

“I don’t think that Noo serves really. I think he’s rather… Rather a sort of passenger, who likes to help out the chief engineer when needed.”

“’Noo’?” Kevin asked; a little bit at a loss.

Chekov cocked his head. He was certain that he had never seen him aboard and… And then it hit him with the force of a ship blasting into warp. ‘Noo’ like in ‘Noonien’ – and if ‘Noo’ was Khan and the ‘older brother’ of this young man, then this meant…

“You belong to Khan’s crew, don’t you?” he asked.

Joaquin looked warily at him and nodded. “Yes,” he affirmed. “I… I was woken up yesterday because my tube was failing.” He waited, expecting the two other males to withdraw any second with a lame excuse because of his heritage. To his astonishment, the contrary was the case.

“Oh shit,” Kevin commented and looked at Pavel. “That was the reason Dr. McCoy hailed Mr. Singh.” He glanced back at the young Augment. “How are you?”

“Other than my legs being too stupid to obey me, and feeling like I’m sitting nude at the North Pole, I feel great,” Joaquin deadpanned. Both men laughed at his wry answer, and the one who spoke with a heavy accent drew nearer.
“Zat we cannot allow,” Pavel said and addressed Kevin, “Go and fetch anozer thermal blanket.” Riley nodded and vanished quickly. Chekov tugged the blanket tighter around the young superhuman. “What’s your name?” he asked.

Joaquin, still perplexed that neither of the two humans seemed to have a problem with his presence, answered, “Sorry. I must have lost my manners somewhere back a few decades. I’m Joaquin Weiss.”

The navigator grinned at him. “Nice to meet you. I’m Pavel Andreievich Chekov.”

“And I’m Kevin Riley,” the Irishman introduced himself as he spread a second blanket over Joaquin that he had taken from another biobed nearby.

“Nice to meet you two,” Weiss said, and it wasn’t only a polite phrase. Here were to mere humans who knew what he was, and they treated him just like he was one of them – just like the doctor and Jim did. If this was a taste of what to expect from the twenty-third century, then he was glad that the Botany Bay had traveled so long through space. “You’re Russian, aren’t you?” he asked Pavel, who nodded with a boyish smile.

“Da. I’m coming from near St. Petersburg and…”

“You mean Leningrad,” Joaquin cut in confused, and Chekov began to grin.

“You’re not up-to-date, my friend. Leningrad was named St. Petersburg at ze beginning of ze twentieth century. But I zink zat’s a tiny detail you missed.”

“Yeah. It’s really strange to wake up more than 260 years in the future,” Joaquin admitted, and Pavel nodded.

“I would be panicking – seriously,” Kevin smirked, feeling surprisingly at ease in the presence of the young Augment. Well, he respected Mr. Singh profoundly, so it wasn’t difficult to be open towards this other superhuman.

“So,” Weiss began hesitantly to ask. “You two are members of the ship’s crew?”
“Yes,” Chekov nodded. “I’m the first navigator, and Kevin is in his second year of Starfleet Academy.”

“You’re the first navigator?” He looked closer at Chekov. “You can’t be older than I am – I mean without all the years I slept.” He cocked his head. “Don’t get me wrong, but aren’t you a little young for such a job?”

Pavel shrugged cheerfully. “I’m nineteen, yes. I got a scholarship for the Academy and graduated two years ago. Then the mess with the Narada happened, and I was forced to take over navigation. When the Enterprise was given to Captain Kirk, he insisted on having me at the navigation station.”

Confused, Joaquin scratched his head, totally at a loss now. “Okay, I don’t know what the ‘Narada’ is – was, but is it normal today that even officer candidates have such important duties?”

“Usually not, but after the mess two years ago when we lost almost half of the fleet and nearly all students of the third and fourth semester, Starfleet’s in need of recruits. The captain was only twenty-five when he got the Enterprise – pretty young himself for that job, but he’s a genius!” Pavel grinned.

“You lost half of the fleet? Why? And what’s Starfleet?” Joaquin asked, more curious now than ever before.

“Khan or the captain haven’t explained?” Pavel was thunderstruck for a moment. As Weiss only shook his head, Chekov took a deep breath. “All right. We’ll give you a crash course in history.” He sat down on one of the visitor chairs just like Kevin did.

“In the middle of the twenty-first century, an engineer called Zefram Cochrane developed the warp drive – a drive that makes it possible to travel at light-speed – multiple times. That caught the attention of the Vulcans and…”

“Warp drive?” Weiss was clearly at a loss now. “Vulcans?”

“The Vulcans are a humanoid species from the star system Eridani 40 about sixteen light years from Earth,” Kevin explained. “They were, as Pavel said, the first aliens we had contact with. They are very peaceful and follow a strict code of logic. They claim to have no emotions, but that’s a big lie – even if they claim to be unable to lie which is a lie itself.”
Joaquin stared at him disbelieving, before he yelled, “There are real aliens?”

Kevin snickered, “Yes, there are real aliens. Many, many kinds. Almost exactly hundred years ago, in 2161 actually, we formed an alliance with several species under the ‘United Federation of Planets’. Kinda like the old United Nations, I suppose. Earth belongs to it; we're one of the founders along with a few other cultures, mainly the Vulcans though.” He smiled at the other young man who had paled even more. “Don’t worry; most are really nice guys. Well, they may differ from what you read in science fiction novels, but the most have a human appearance, maybe with some small differences, but nothing too dramatic.”

The same moment steps came nearer, and a male voice said, “Is everything all right, Mr. Weiss?” Dr. N’Halro, who had been alerted by the loud squeak, stopped at the threshold looking surprised at the little gathering. “What’s going on here?”

Joaquin’s eyes were about to pop out of his head as he took in the thin humanoid with blue skin, white hair and… antennae? Then his sensitive nose caught a strange scent – not unpleasant, but utterly unknown. And it came from the newcomer who was…

An alien!

This was no mask, but a real living, breathing alien! And even if his enhanced mind was constructed to adjust quickly to any situation, this time, Joaquin felt his breath hitch and a mixture of disbelief and shock ran through him.

Pavel’s soulful eyes found the young Augment and acting on pure instinct he rose, stepped beside the bed, and squeezed Joaquin’s shoulder to reassure him, “Don’t fret. N’Halro is our zird CMO – one of ze good guys.”

N’Halro knew exactly why the enhanced human gaped with palpable anxiety at him. ‘I have to be the first non-human he meets,’ he thought. ‘No wonder he is shocked.’

Moving slowly to lessen any threat the Augment might read in his approach, the Andorian stepped nearer and looked at the monitor of the biobed. “Too high pulse, body temperature still too low, blood pressure increasing…” He glanced at Joaquin with pitch black eyes. “I think I’m the reason for your vitals; Am I not?”
Still perplexed, Joaquin stared at the alien, gulping as he became acutely aware that this wasn’t a crazy dream, but real. There stood a creature from another planet talking with him like this was the most normal thing in the world. Well, maybe it was the most normal thing in the world – in this world!

Pavel slapped him on the back. “Come on; N’Halro is a good man. You don’t have to be afraid of him.” He pointed at the doctor. “He is from ze planet Andorra zat belongs to ze Federation, too. He’s one of a few non-humans who are serving aboard.”

“There… There are more aliens on this ship?” Weiss gasped.

Before one of the two ensigns could answer, a familiar deep baritone was sounded through the speakers, “Khan to medbay!”

N’Halro sighed and walked to the intercom. “Medbay, N’Harlo here.”

A short pause, then, “Where is Dr. McCoy?”

“He’s dead to the world on the couch in his office, catching up on some sleep, as is Dr. M’Benga. Is something the matter, sir?”

“Have one of the human nurses check on Mr. Weiss. I sensed distress from him and…”

“I’m here with him, sir and I think his distress is because of my… appearance,” the Andorian answered, watching the young superhuman over his shoulder.

Pavel thought it his duty to smooth the situation. Quickly, he stepped beside the third CMO and said, “Mr. Singh, Pavel Chekov here. Joaquin is a little bit shocked, but ozwerise he’s all right. Don’t worry, Kevin, Dr. N’Halro and I are already explaining everyzing to him.”

“Everything?” There was a certain tense undertone in the Augment’s voice and Pavel instinctively knew to what Khan was referring.

“About alien races, ze last two and a half century, ze Federation – zat kind of stuff.”
Again, for a moment there was silence before the former dictator said. “I will be with you in a few minutes. Khan out!”

N’Halro cut off the intercom while Chekov returned to the biobed, smiling. “He’s a mozer hen, your big brozer.”

“Yes, he always has been,” Joaquin murmured, still eyeing the blue-skinned alien warily.

“What’s going on here?” A very tousled Leonard McCoy with bloodshot eyes appeared at the threshold. “My terminal lit up like a Christmas tree because of the boy and…” His gaze fell on N’Halro, and he stopped dead in his tracks. “Oh!” he breathed, realizing why Khan’s little brother was stressed enough to elicit an alert from his biobed.

“No reason to get all worked up, kid,” Bones said as kindly as he could in his exhausted state; he quickly closed the distance to the little group and placed a hand on N’Halro’s arm. “I know this has to be a shock for you,” he addressed Joaquin, “but you see, we humans are not alone in the universe. Dr. N’Halro is an Andorian. He’s quite sensitive and gentle. An outstanding crew member all around. You don’t have to be afraid of him.”

Joaquin nodded with a dry mouth; still staring at the alien. Then he felt the others’ concerned looks resting upon him and his humor sprang alive – his personal defense mechanism when he faced an uncomfortable situation. “You’re right, Pavel. The aliens here are not like in old science fiction novels. In the books, they have antennas, too, but they were always green.”

Bones felt a grin tugging at his mouth, looking through Weiss’ attempt to adjust to the changes using humor – Jim did that, too. “If you’re looking for a green alien, you’ll have to wait for our first officer. You may not see it right away, but he has a green tint because his blood is green.”

Weiss gulped. “The first officer is an alien, too?”

“Yes. His name is Spock, and he is a Vulcan – well, half Vulcan. His mother was from Earth.”

Joaquin’ eyes widened again. “Vulcan and Andorian. So, how many alien races are there?”
“Oh, even Spock doesn’t know that, and he is our walking, talking onboard library computer,” Bones answered. “Alone in the Federation, there are dozens different species and some of them are represented aboard. N’Halro and Spock for example, but there are some other offworlders. There is Keenser, a nice little guy whose face resembles an oyster; he isn’t exactly the chatty type, so don’t mind him if you get only one or two words out of him. But he’s a damn good engineer. Then we have the Rigeliands; one of my nurses comes from Rigel. There are also many crew members who weren’t born on Earth, but on one of Earth’s colonies.”

“Earth colonies?” Joaquin gaped.

“Yes,” another deep voice said from the entrance. “Mankind spread through the galaxy as explorers, mixed with aliens, built colonies, and peacefully, for the most part, coexist with other species.” Khan entered the room, looked from one man to another, took in the whole situation, and sighed deeply. He had wanted to prepare Joaquin for this century before he met his first alien. It seemed he was too late for that. His gaze was fixed on his brother as he asked, “Are you alright?”

Joaquin nodded hesitatingly. “Yeah, I think so.” He moistened his lips, glanced once again at the alien who stood casually among the others and took a deep breath. “So – the whole galaxy is one big friendly neighborhood?” That sounded too good to be true!

“That would be nice,” McCoy sighed, “but what’s the old saying? You can’t live in peace if your neighbor doesn’t want to. There are other beings that follow their own way and have their own opinion on how to extend their might and expand their territory. On the one hand, we have the Romulans, distantly related to the Vulcans, but where the Vulcans are peaceful and follow their path of logic, the Romulans are warriors and cannot understand that the Federation has absolutely no interest in attacking them. They are more distrustful than my uncle’s old dachshund, and that’s saying something. Then we have the Klingons, who think there is no greater honor than to fight and die in war. And there are also the Tholians. We’ve never even seen them in person, but they tried to imprison our ship in a web of energy while we waited for some dimensional reality shift to get Jim back aboard – please don’t ask me to explain that one. We thought we’d lost him; only Spock didn’t give up hope. He waited for his theory to work itself out. Good thing he’s so stubborn. Jim was still alive, and we beamed him back. And we learned that the Tholians are fiercely protective of their territory and don’t tolerate intruders. We barely escaped.”

Khan looked with a hint of worry at McCoy. “Jim went missing?”

“Yeah, just – gone. He was out in space in a suit and running out of oxygen, but Spock didn’t quit. I think he somehow sensed that Jim was still alive. Vulcan bond, you know.”

Nien nodded. “Yes, I’m quite aware that Jim and Mr. Spock share a telepathic link.” His voice was neutral and Bones realized that there was no hint of the old jealousy he had seen from the Augment
whenever the close friendship of his beloved and the Vulcan was displayed or mentioned. It seemed Khan had accepted the unusual bond between captain and first officer.

“Telepathic?” Obviously, Joaquin began to calm down, and his nervousness was changing into curiosity. “And what is this ‘beam’? I’ve heard it twice now.”

“Vulcans are touch telepaths, so touching them is a big no-no,” Kevin said. “They can practically read your mind then or at least get a load of your emotions they would have to deal with; it’s not very pleasant for them. So it’s very impolite to touch them.” He frowned. “Jim does it all the time though with Mr. Spock,” he thought aloud; frowning.

“Yeah, those two are a special pair, that’s for sure,” Bones chuckled.

“And ‘beaming’ is a kind of transporter,” Chekov began to answer Joaquin’s second questions. “It’s an enhanced technology that transports you within a few seconds from one place to the other, for example from this ship down on a planet.” Eagerness was in his voice. Transporter technology was, after all, his passion.

Weiss’ eyes went wide again. “How so?”

McCoy addressed Khan. “I think we should let them alone. Mr. Riley and Mr. Chekov will answer all the questions your brother has and…” He stopped as he saw the beaming faces of the ensigns, and lifted a pointing finger at Pavel. “But don’t give the boy your Russian version of history, Mr. Chekov! The turbolift is not a Russian invention, and Klingon soap is still Klingon – not made by old granny in Moscow, end of story!” he warned.

Pavel rolled his eyes. “I will behave, Doctor.”

“And, by the way, the turbo drive of today’s lift system was developed by an Irishman,” Kevin cut in.

“What?” That disbelieving shout came from the two doctors and Pavel together, while Khan sighed quietly, already assuming the worst. It seemed Ensign Riley also harbored the tendency to make sure that his own home got the laud it might not truly deserve.

“Irish pride!” another male voice said from the door and affirmed Khan’s assumption. “The turbo
system was developed by a Rigelian named Anzoos,”

McCoy whirled around. “Sulu! Heavens, you should be still in bed!”

Chekov hurried towards his friend. “Ze doctor is right, Hikaru. You shouldn’t be up!”

Sulu grimaced. “My back is giving me hell, and I’m bored almost to death!” he replied, while he ambled towards the bed. “Hi, I’m Hikaru Sulu,” he introduced himself, offering his hand; Joaquin accepted as he told the Japanese his name. His gaze wandered over the scars which marred the Asian man’s face and his upper left side. “What happened to you?” he asked. “That looks painful.”

“Not anymore. Today’s painkillers really do the trick,” Sulu said kindly. “The helm console exploded, and I was too slow to move out of the way. That’s all.” He sat down in the visitor chair. “And when our good doctor is done with me in a few days I will no longer resemble a zombie.”

“Yes, but only if your fever doesn’t return, so be a good boy and go back to bed!”

“Just a few minutes, Doctor.” He smiled up at the CMO. “And given the fact that I’m the highest ranking officer in this room, it’s my responsibility that Mr. Weiss learns the real history and not the chaos those two are going to tell him.” He pointed wryly at the two ensigns, who instantly protested.

Joaquin felt amusement rising in him. He looked up at his brother who smirked slightly and began to chuckle. “Is the mood aboard this ship always so – jovial?” he asked, and it was Chekov, who answered, “Yes – except when we’re kicking some Klingon ass or duty is more difficult than usual.”

McCoy gave N’Halro and Khan a signal and the three left the room; Chekov’s cheerful voice followed them. “I think it’s the best if your brother remains with some boys his own age,” Leonard said to the former dictator. “He’ll adjust more easily to the new world he woke up in. You should tell him what happened to you and why we are really rushing to exile ourselves. I have a bad feeling that not everything will run smoothly, even on New Vulcan.”

Khan nodded gravely, not looking forward to revealing to Joaquin that this ‘new world’ still wore many of the old faces they had hoped to escape all those centuries ago.

ST***ST***ST
“Kirk is going to the Tholian Realm?” Albert Norton blinked in confusion at José Luengo, who sat at his desk. The skies outside were bright and clear for once, and many people walked the pavements during that afternoon in San Francisco. Luengo had just returned from a briefing about the next steps to secure the Federation’s borders, while Robertson waited for M’Rek’s statement concerning the incident with the Excalibur.

Robertson would never see the statement!

Luengo had taken care of it. The communications center would transfer any message for the president to José’s terminal first – a measure of security he told his subordinates, to prevent any spy or malware transmission to the president’s terminal. M’Rek hadn’t answered until now, this much Luengo knew, and even if the Klingon Councilor responded, Robertson would never know. In a few days, the president and the Council would have to declare the ceasefire ended, and he – José Luengo – would be promoted officially to Chief in Command.

And until then, they had to catch Kirk, his friends, and the Augment – the Augments, as Luengo assumed. Styles’ most recent message received late that morning had woken new hope in him. They were finally on the Enterprise’s trail, but the coordinates Lawrence had given confused him, and heeding a gut-feeling, he had ordered a complete analysis of the transmission between the Enterprise and this mysterious man Styles had recorded and sent him. Something wasn’t right here; Luengo felt it in his bones.

“The transmission the Excalibur intercepted was sent from a position near the Tholian area. Given the distance between the former Gamma 12 and the most likely location of the Enterprise based on her current top speed, it would fit, but… I think Styles is about to fall for one of Kirk’s tricks again. R6 – I have never heard of such a planet or colony. There isn't even an asteroid with the name. I checked the databank.”

“A pseudonym maybe?” Norton suggested, and the other admiral shrugged.

“It could be. Kirk and his alley, whoever he is, have to be very careful, this much they know. So it could be possible that they are using some pseudonym in case they were intercepted. I also checked the name, Fox Buckson. There are no known identities in the data bank with this name – just like the mysterious scientist who developed the SDD. And there is something else.” Luengo bent forwards. “Styles could only track down the Enterprise’s position; he couldn't get the position for the ship or the planet that Kirk hailed. It’s one-sided.”

Albert frowned. “You mean you think the transmission was faked?”
“Yes, I think so. Styles is already heading to the coordinates of the Enterprise now, but I don’t believe that this will lead him to Kirk. I rather think…”

The intercom at his desk buzzed; irritated, he opened the link. “Luengo here!”

“Admiral; Stones here,” the Chief of Security replied. “Admiral, I reviewed the transmission. I also isolated each speaker and scanned background noise. The noise is identical on both sides of the exchange.”

Norton and Luengo exchanged a glance. “You're saying that Kirk and this ominous Fox Buckson were in the same room transmitting?’’

“Yes, sir, there is no doubt. And the noise is typical background noise of a starship – Lieutenant G’Rialta is sure that it’s the sound of the warp drive of a Constitution cruiser.”

José narrowed his eyes. “Thank you, Commander, good work!” He cut off the connection and let himself sink back in his chair. “This goddam farm boy's playing cat and mouse with us; luring Styles through the half the Alpha Quadrant! And in the meantime, Kirk's speeding to an unknown place where he thinks he'll be safe! And we're running out of time!” His fist landed on the desktop, and a Spanish curse escaped him.

Norton crossed his arms in front of his chest. “Kirk his very smart – and very clever! I have to admit that!” He looked back at Luengo. “But he has no evidence against us! He doesn't have the slightest clue that the attack against the Excalibur was your order.”

“He already found out that there were two ‘Kor’s’ – the reason why we still have a ceasefire in place while Robertson waits for M’Rek’s statement. Otherwise, we'd already be back at war. And with this SDD we stand a better chance than ever before of destroying the Klingon fleet, even without the new biological weapon, though this part of the plan is still in play. I know Kirk. He is like a terrier – if he grabs onto something, you can’t wrestle him away from it. He's had the taste of blood, and with Khan at his side – these two are a force to be reckoned with; we cannot underestimate them – not least because Khan saw us interacting with Alexander more than once. He knows that we both belonged to Section 31. If the Council learns of this, we’re done for.”

His gaze shifted to the wall where a large screen showed the news from different planets and colonies, but also the position of the squadrons, patrols and single ships of the fleet. “So where is Kirk off to? Where can he find someplace willing to give him asylum? What options are left for him
– now, after the whole fleet has been alerted to his going rogue? Where can he hide – and not only himself and his friends, but also Khan and the other Augments he sure as hell recovered from Gamma 12?"

Norton pursed his lips. "Kirk has made a lot of friends in the last two years – especially during his first mission and now in this the war."

"Yes, but there is a difference between a friend and friend willing to get arrested for you. I'd guess that there are no government members insane enough to offer him and six dozen superhumans shelter!" He shook his head.

"So, he has to go to somebody he can trust completely," Albert mused. "Someone, who will back him up no matter the circumstances."

Luengo snorted. "That description fits all of the senior officers of the Enterprise – especially for the CMO and Spock! I dare say there is nothing they wouldn't do for him or that they haven't done for him, seeing as they've already covered for him concerning this creature." He shook his head.

"McCoy and Kirk attended the Academy together – hell, they shared a room the whole time, but that a Vulcan like Spock is involved in something criminal only because of some silly friendship is…"

He stopped his pacing and tirading; his eyes widened as a particular thought struck him. His gaze found the large screen and hung on the star map of the Federation. The former and new borders were marked with different colors, and near Earth, a planet had been marked as destroyed – Vulcan. The admiral’s glance rushed over the detailed map and found another planet more than twenty-four light years away from Earth – New Vulcan.

And the insight hit Luengo with the force of a hypertruck.

"Spock…" He whispered and closed his eyes. "Jesus, Mary, and Joseph, why didn't I think of that sooner? I'm... I'm an utter idiot!" He stepped towards the wall and the map. "I am such a fool. The answer is so clear, and I was too blind to see it!"

Norton had left his chair, too, and walked towards his ally in the conspiracy. "What are you talking about?" he asked baffled. "Do you know where Kirk is heading?"

"Yes, and the answer is so easy even a child could figure it out!" José whirled around. "There is only one person in the whole universe Kirk trusts completely – not only with his life but also with the
lives of his crew, including that of this creature and the other beasts.”

“And who is that?” Norton wanted to know.

“Spock of Vulcan!” Luengo stated. “If there is one being Kirk knows he can rely on without any doubt, then it’s Spock! Heavens, there are stories about their friendship today – rumors that they have and will again risk their lives for each other. In all their decades together they must have become inseparable!”

Albert cocked his head, clearly confused and even a little bit worried about his colleague’s state of mind now. Maybe the stress was catching up with him. “José, I admit that Kirk and Spock seemed to have developed a close friendship; it may be the only reason why the Vulcan supports Kirk right now. But they’ve known each other for a little more than two years now – not for decades. And Spock is aboard the Enterprise. Why would you say Kirk is going to him if…”

“Ah, you don’t know!” Luengo interrupted him, chuckling. “No, of course not. There are only a few who are aware of this little detail.” He looked Albert straight into the eyes. “What I’m telling you now will never leave this room! High Minister Selek of New Vulcan is none other than Spock, Kirk’s first officer. It’s Spock from the future!” He watched Norton’s face going slack with shock.

“Selek is… But… HOW?” Albert demanded, astonished.

Luengo grimaced. “Selek and Spock are one and the same person. He came from the same timeline as Nero. He just came through that wormhole a little later than that Romulan bastard. He became ‘Selek’ after the whole mess – a security measure that I welcomed back then because his knowledge of the future could be dangerous if our enemies discovered his true identity. T’Pau herself suggested it, and Sarek agreed to it as did the future Spock.” He began to pace again. “I talked to him once, and he affirmed that in his timeline, he was the first officer of the Enterprise, too. He served under Kirk, knew him for more than forty years as well as most of the senior officers who are also aboard today – only in his time. And the way he spoke of ‘his’ Kirk showed me that they shared a profound friendship – just like his younger counterpart and the Enterprise’s captain now. If Kirk needs his help, and he damn well needs any support he can get at the moment, then Selek, aka Spock, will take him under his protective wing without a second thought.”

Albert had sat down on the visitor chair again still baffled beyond his imagination. “And so now you think Kirk is heading to New Vulcan?”

“He has no other place to go to,” the Chief in Command nodded. “There is only one man in the whole galaxy who has the power and is in the position to protect him and his crew. And no one in
the Council would dare force Selek of New Vulcan to turn over a fugitive. For that matter, we can't exactly force the Vulcans to do it either.

“But the Augment is a very dangerous creature as are the other superhumans. Khan killed dozens of people last year. The Vulcan High Council would never…”

“I guess that farm boy came up with a great sad story about how the poor lab-bred bastard was wronged by Section 31. You told me yourself once that Alexander and especially Nathan Conelly brought the Augment to his knees during testing, and I bet my last shirt that Khan told Kirk that story to provoke his compassion. And the stupid naïve boy fell for it resulting in today’s situation. Kirk is using this to appeal to the Vulcans’ sense of morality concerning respect for all life forms! And, of course, the old Spock bought it all and offered them asylum!”

José snorted. “There is only one possibility left. We have to get Kirk before he reaches New Vulcan.” He returned to the map. “His ship has warp 3, maybe 4 at best after the last battle with the Klingon renegades – that incident in which Kor was unfortunately involved too. So Kirk can reach New Vulcan in three days at the earliest.” He quickly strode to his desk. “Lieutenant,” he barked into the intercom. “Hail the Excalibur and get me Styles, priority one! He is to be in his ready room or his quarters when I hear from him. And then contact Commander Stones. He has to make sure that 250 Elite Securities are on standby for boarding!” He didn’t wait for confirmation, but cut the link. Then he looked at Norton.

“Call Professor Dashwood and Dr. Conelly. Tell them if they want to have their lab rat back, they need to pack their bags and be ready to board in the next eight hours. The same goes for you. I ordered the Excalibur to New Vulcan. There are other ships nearby, but I don’t trust their commanders to carry out the duty I’m giving them. Styles is already dependent on me, and he’s got a grudge against Kirk. He wouldn’t mind taking down the Enterprise. I’ll order him to rendezvous with you, then try to intercept the Enterprise. Stop Kirk! No matter what, stop him before he gets to Selek!”

“And what if the Enterprise does get to New Vulcan before we catch up with her?” Norton asked. “We can't attack Kirk on the planet’s surface. The Vulcans…”

“That's why I'm sending Security with you. Seize the Enterprise and get Kirk, even if he is on New Vulcan. And make certain the scientists get the creature so that they can finally finish their damn job! I don't care how you do it, just DO it! When we prepare the final strike against the Klingons, we need the biological weapon – and we have to silence Kirk and his friends! Find a way. If there is no other option, take him by force. Make it look like his precious new friend, Khan, is responsible for it – that he went berserk again. Maybe this will open the Vulcan Elders’ eyes. I have complete trust in
your abilities!” He took a deep breath and his gaze pierced Norton to the core as Luengo added, “We have to get them, or everything we’ve worked for so hard for will be lost!”

TBC…

Chapter End Notes

Yeah, I already warned you that Luengo would figure out soon to where Jim is off to. And more! Especially the last given orders to get Jim at any costs and to imprison Khan no matter what, will make hell breaking lose.

In the next chapter you’ll learn more of what is going on aboard the Lexington, while Joaquin learns of his brother’s fate – and of his bonding with Jim (*snicker*). There is a lot to stomach for him, but thank the Lord he isn’t alone.

I hope you liked the last chapter. As I said in the beginning, I imagined that Pavel and Kevin could be optimal friends for Joaquin and now, re-reading the chapter, it’s really difficult given the actual circumstances. Chekov will have more scenes (in chapters which are also done for some time now) and will become very important soon, together with Sulu, Riley and Keenser – but I don’t want to reveal too much, so you just have to remain patient.

I wish you all a nice rest of the week and a peaceful weekend,

Love

Yours Starflight
Chapter Notes

Hi, my dear readers,

Thank you once again for all the feedback. I’m glad that you like the beginning friendship between Joaquin, Pavel and Kevin so much. I think you’re going to love the new chapter then, because there are a lot of sweet and funny scenes concerning our youngest Augment, but also Jim, Nien and Spock. They all are going to learn a lot in the chapter. You also will meet Barnett and the others again, but also the ‘bad guys’ I’m certain you’re going to hate more and more.

Have fun

Love

Yours Starflight

See the end of the chapter for more notes

Chapter 67 – Something wicked this way comes

“So, all cryotubes are working now, right?” Joaquin looked expectantly at Khan, who had returned to the private room only a minute ago. It an hour before the start of beta shift and Weiss’ head buzzed with all the information he got from Chekov and Riley during the morning. Sulu also stayed for longer than allowed by the CMO. He added the historical details to the others’ tales. Joaquin quickly realized that the officers were highly intelligent as well as a wonderfully formed sense of humor and empathy. He enjoyed their presence and in the end the four men even shared a lunch during which the three officers had gotten a very expressive demonstration of Augment appetite. Joaquin, finally able to eat something more, had devoured three plates of different kinds of pasta, a meal none of the physicians minded. After all, pasta was still the great energizer it always was. Humans hadn’t changed that much, and it seemed the augmented ones worked about the same way. Afterward he had felt tired and fallen asleep, only waking up just before his older brother arrived.

“Yes, don’t worry,” Nien answered quietly. “Our brothers and sisters are all safe.”

“And Suzette?” the young Augment asked tentatively.
Khan frowned. “Suzette?”

“Yes, Suzette Ling! Is she all right?”

The bright eyes of his leader and brother watched him thoughtfully; then the former dictator cocked his head. Khan didn’t need telepathy to feel Joaquin’s tension and a particular suspicion began to rise in him. “Joaquin,” he said carefully. “Is there something you have forgotten to tell me?”

The young superhuman felt his cheeks heating. “Well… I… There was no right moment… We…”

Nien fought a smirk as he heard his brother stuttering and watched him blushing furiously. “So, you and Suzette were… dating before we launched?” he asked casually.

Joaquin shook his head quickly. “No. No, no – I wanted to, but the war was closing in and… Well, we realized that we hadn’t seen each other as just siblings a few weeks before… before we fled New Delhi.” He bit his lips. “There was so much you had to take care of; I didn’t want to bother you. And then I wanted to speak with you before we boarded the Botany Bay, but…” He shrugged, feeling his face heating even more. He and Noo never had any secrets between them. This was maybe the first time that Joaquin had neglected to tell his brother something that serious.

Khan lifted both brows. “Have you kissed?”

That question took Weiss by surprise. “What?”

“I asked if you two have already kissed – or have you only held hands? That would be a shame. Suzette is a nice girl.”

Joaquin stared at Khan. “You… you’re okay with – with us?”

The former dictator sat down on the bed’s edge grinning now. “Why should I be against you two? Yes, you were raised as siblings – after all, Suzette is one of the few children Paolo, Kabir and I were able to save from the labs together with you – but that does not mean that I would forbid you two becoming a couple.”
Weiss sighed in relief and beamed at his brother as the older Augment reached out and ruffled through Joaquin’s thick hair. “Little fool!” Khan murmured, “as if I would begrudge you to find a mate! Ling is brilliant, a warm and kind young woman. You two would fit very well together.”

Joaquin smiled at him sheepishly. “Sorry,” he murmured. “I didn’t distrust you, I only… I didn’t know how you would react.”

“Have I denied Katie and Otto their love?”

“No, but they are older than Suzette and me.”

“Yes, you two are still very young, but love doesn’t know any limits,” Nien answered, knowing that he was referring to Jim and himself too at this moment. “I only can advise you to give yourself and her some time before you make the last step, but this decision is up to you and her, of course. I think it will be easier for you and her to be together after we reach New Vulcan. I trust Mr. Chekov and the others have talked to you about the events of the last centuries?”

“Yeah – especially about this crazy Nero alien who destroyed Vulcan and attacked Earth. Jim and this Mr. Spock had a big part in defeating the guy?”

“They did!” Khan nodded, and Joaquin grimaced. “They also told me about the war with the Klingons and of the uncertainty of the current ceasefire – and how you and Jim kicked some ass during the war. You saved the population of an entire planet; then you and the captain prevented a space station from dropping onto an Earth colony. And several days ago you stopped the ship from crashing into an asteroid. Brother, I knew you were good, but that’s incredible! And that’s not even all of it! You’ve become quite the hero here. There is just so much; my head is still swimming.”

The last statement earned him a sympathetic chuckle from his brother. “This I can easily believe. It was difficult for me too, after I woke up and realized that I had slept for more than two and a half centuries.”

Something in Noo’s voice caught Weiss’ attention. There was an undertone of grave seriousness that alerted him. “What happened?” he asked gently, and he watched how his brother took a deep breath. “Neither Pavel nor Kevin, nor Mr. Sulu wanted to tell me about you despite these past weeks you’ve been working with the captain now. But you’ve awake for more than two years, you said. So what has been going on?”
“A lot has happened, but that’s a story for later. You have gotten enough news for one day. Right now you should concentrate on restoring your strength and…”

“Hey, how are you two doing?” Jim Kirk entered the room, smiling widely at them both. McCoy, still tired but at least no longer that deathly pale like before, was on his heels.

“Hello, Cap… Jim,” Joaquin corrected himself quickly. “Doctor! Thanks for asking. I think I’m better now.”

“Even after having to stomach everything Mr. Chekov, Mr. Riley, and Mr. Sulu told him about the last centuries,” Khan deadpanned.

Kirk smirked. “Yeah, Bones already said that they gave him a crash course in history. I only hope that all that stuff didn’t scare you. If you have any further questions, don’t hesitate to ask. None of us will mind,” Jim continued kindly. “Dr. McCoy will show you how to use our library data bank so that you can catch up with history while you recover, but you can always ask him or me if there are questions the computer can’t answer. You need to get used to so much, and I can imagine that most of it will confuse or even trouble you at first. So ask right away. Nien is already familiar with everything – mostly, and if there are still questions – ask members or us of the medical staff.” He hesitated and glanced at McCoy. “Uh, Kevin told me that N’Halro stumbled in this room by accident. How…?”

Bones smiled reassuringly at him, while he interrupted, “It went surprisingly well.” He glanced at Joaquin. “You have an open spirit, young man.”

Weiss smiled a little bit. “Well, screaming like a girl wouldn’t change anything.”

Jim began to laugh. “Don’t let Lieutenant Uhura hear you. She may look barely grown up, and you might think you have to protect her, but in the end, it’s the other way around.”

“Yes, don’t mess with her ‘boys’, or she will become a lioness you do not want to anger,” Khan nodded.

Kirk smirked at him. “Aw, come on, Nien, she’s taken you under her protective wings, too.”

“Yes, after she gave me a lecture regarding what she would do to me if I hurt you.”
“Yes, that was quite a speech and quite the sight when she stepped up to you.”

Bones cocked his head curiously. “When did that happen?”

“A few days ago. Uhura caught us in a cabin lift and used the opportunity to…”

“She caught you two?” McCoy watched Jim blush the faintest bit, while Khan only smirked. McCoy groaned, “Jesus, don’t tell me you two were making out in the damn turbolift!”

“‘Making out’?” Joaquin gaped at his brother and the captain.

“Hey, it’s not my problem if he’s so damn irresistible!” Jim defended himself, pointing nonchalantly at the still grinning Augment leader.

“You really have no modesty, kid, do you?” Bones continued his exasperating tirade. “And here I thought in the transporter room was the first time you two couldn’t get your hands off each other in public.”

“They can’t get their hands off each other? What…?” Again Joaquin was ignored as Kirk protested,

“Bones, the turbolift is not exactly ‘in public’ and in the transporter room, I was so fucking happy that Nien was out of danger that…”

“You two put on such a show that even a nun would have been turned on! Hell, I think even Spock would have been if he’d seen you both!”

“What’s wrong with acting on your relief when you realize you and the love of your life had escaped a deadly situation?” Jim sounded very innocent.

“Jim, you two were on the damn transporter platform kissing the daylights out of each other! Hell, Chekov almost fainted and Scotty…”
“You two are TOGETHER?”

Joaquin’s outburst finally caught the three other men’s attention. Thunderstruck, he looked at his brother who flushed the tiniest bit. “Yes, we are,” Khan said calmly.

Weiss pointed at him, then at Jim, and back again. “You two are a couple?”

Khan’s gaze didn’t waver. “Yes.”

For several seconds, Joaquin didn’t reach, then he threw his head in the neck, whooped, and began to applaud. “FINALLY! Finally, someone got to you!” He started to laugh; joy written all over his face. “Finally, you found someone for you! Alas, I thought that this would never happen!” He grinned at a highly amused Kirk, who had closed the small distance to Khan and placed a hand on his shoulder that was instantly and tenderly covered by the Augment’s long fingers. “I don’t know how you managed to get my brother, but be sure you won’t easily get rid of him.”

“Oh, it was the other way around,” Jim snickered. “Your brother got me after we had a rough start. I wanted to tear his head off once, and now…”

“And now he would tear off the head of anyone who dares come near your brother,” McCoy smiled. “The two have already given us gray hair, but they are so damn adorable together I swear they could melt stone.”

“Careful, Doctor, or I will contemplate an official bonding ceremony where you stand as best man,” Nien mocked.

“As I said, I’ll throw a party if you two want it, even if the reason for it already happened.”

“One moment!” Joaquin watched his brother and the captain carefully. “You two are… bonded?”

Khan took a deep breath. “Yes, we are,” he affirmed. “We marked each other and bonded with all consequences due us.” He glanced up shortly at Jim, before he told his brother seriously, “I love him.”
Joaquin’s eyes began to brim with unshed tears, while he looked at Kirk. “And you?”

“Nien is my other half – the love of my life,” Jim stated quietly, but with such warmth in his voice that the young superhuman’s throat tightened in a mixture of happiness and affection. He reached out and laced his fingers in Nien’s free hand. “I’m so glad for you,” he whispered. “It was so hard to watch you doing everything alone, carrying all the responsibilities with no one to share it with – no one to find comfort in. I know you always wear a mask of bravado, but even you need someone in your life. I’m… I’m so happy for you!”

“Thank you,” Khan murmured, clearly at a loss for words. He had known that his little brother would be glad about this news, but this kind of reaction took him almost by surprise. Almost – after all, he knew how cheerful and emotional Joaquin was.

Weiss still beamed at him, then he reached out towards Jim, and as the captain placed his hand in that of the young Augment, the boy grinned, “I may be the youngest of us, but I’m also the closest one to Noo. And you are his bonded partner, so… Welcome to the family, Jim.”

A little bit unnerved Kirk felt his throat tightening as he squeezed Joaquin’s hand. “Thank you,” he murmured. “Nien and I share a lot of same characteristics, and one of them is the fact that we regard our crew as our family. My senior officers are family to me, too – Dr. McCoy here, Mr. Scott you already met and my first officer Spock. And then there are also Pavel and Sulu you met today, too, and Uhura. And I know Kevin Riley since I was a teen, and he and I were in the same position as you and Nien were. They are my closest friends – like brothers and sisters. And I want to welcome you among them.”

He felt a wave of happiness from his mate, while the big innocent eyes of Joaquin widened with almost childish glee – showing again how young he was.

McCoy watched his best friend and the two Augments – and just for a few seconds, the world was all right again.

Silent footsteps came nearer and then a deep baritone called, “Captain?”

Jim turned his head. “Over here, Spock! Please come in.” He looked back at Joaquin. “After you already saw N’Halro I think you’ll be okay by meeting your second ‘alien’?”

“Your first officer?” Weiss asked.
Jim nodded, “Yes, and my friend.”

“Ah, the one you have the telepathic link with as Dr. McCoy and Noo mentioned,” Joaquin mused.

“That’s correct,” a deep but surprisingly smooth baritone sounded from the door.

Joaquin tensed up, while his eyes moved to the new-comer. Tall and very slender, straight posture, a pale, angular face with a strange tone deep in the skin, shining black and obviously smooth hair, deep brown and somehow human eyes and… pointed ears!

“An elf?” the young Augment asked astonished.

“Rather a hobgoblin,” McCoy murmured beneath his breath but was ignored by Spock, whose attention was fixed on the enhanced boy.

“I’m aware of the fact that I do resemble some mystical creatures from Terran legends of Europe, but be assured that I’m not from a fairy realm,” Spock said.

Jim instantly realized the soft attempt at humor that obviously should help Joaquin to overcome the culture shock he certainly was still going through and smiled gratefully at his T’yh’la. “You know, I just can’t imagine you with bow and arrow.”

“Even if we had something equal in Vulcan history, I also can’t imagine using them,” Spock deadpanned.

Joaquin watched the alien man in front of him and remembered what Pavel, Kevin, and Sulu had told him of what happened two years ago. This man had lost his planet and nearly his whole race. Weiss did understand what that meant – after all he had been forced to watch other Augments being killed and even if Noo hadn’t told him much until now he simply knew that they two and their still frozen brothers and sisters had to be the last of their kind. So the Augments and the Vulcans shared one and the same fate: There were only a few of them left.

“I don’t know if I’m breaking some taboo and if so I’m sorry, but… I heard what happened to your planet and your mother,” he said quietly. “My sincerest condolences, Mr. Spock. I’ve been told that
your people control their emotions, but I think that no one can live through what you experienced and remained untouched. So, uh – I’m sorry for the losses experienced of your people and your family.”

The strange man lifted a brow which gave his motionless face an expression of surprise; then he bowed his head – too late to hide the short flash of pain in his eyes. “To voice sympathy with those who have endured significant loss is no taboo, not even in my culture, Mr. Weiss. Your words are welcome. Thank you in the name of my people and my clan.”

Joaquin swallowed. His highly tuned senses felt the anguish that was hidden deep beneath a strong shield, yet it didn’t escape the young superhuman’s attention. This alien man was still suffering, and Weiss felt a wave of compassion rising in him. He felt another gaze resting upon him, and as he turned his head, he caught Kirk looking at him with an expression of gratitude on the Vulcan’s behalf. These two males indeed were close friends, no doubt.

Spock watched the augmented boy for a moment longer, and his telepathic skills could sense the mental strength emanating from Joaquin Weiss in soft, warm waves. Obviously, the young superhuman was sensitive, and it would be fascinating to scan his brain activity. Then his attention went back to the reason for his search for Kirk.

“Captain, Dr. M’Benga and I checked out the contents of the cargo container. I think you’ll be interested in the results.” He glanced shortly at Khan. “I also require your opinion on several matters.”

Instantly the former dictator knew what the Vulcan had tried to tell him – that they had discovered more results of the experiments, but he didn’t want to talk about it in front of Joaquin – a kind of consideration Khan wouldn’t have thought to give Spock credit for, but he was grateful for it.

“I’m at your service,” he said, looking pointedly at the first officer who understood the gaze for what it was.

At that moment, the intercom sprang to life. “Bridge to Captain Kirk!”

Jim sighed and went to the wall to answer the hail. The doctor looked to Spock with an asking glance. The Vulcan only shook his head, showing the CMO that he would not talk about the results now.
“Kirk here!”

“Captain, the sensors picked up a warp signature approaching rapidly,” Scott reported. Exchanging a worried look with his Vulcan friend, Jim took a deep breath. “Spock, Khan and I are on our way. Kirk out.” He stormed towards the door; Spock and Nien followed him instantly. And the young captain didn’t need to look back to know that a pair of big brown, worried eyes were gazing at him, too.

ST***ST***ST

“Promise me you’ll be careful!” Lady Ania Morganth glanced worriedly at her friend Batari Whitman, who stood in the hangar of the *Lexington*. Behind her, the long range shuttle had been prepared for launching; its ID number was altered. For good measure, the chief engineer had even added some traces of wear on the vessel’s hull and had altered all onboard codes. Whoever scanned the spacecraft wouldn’t recognize its origins on first or second sight.

Batari smiled at her, yet she couldn’t fool her Betazoid friend. Not only because Ania easily saw through her thanks to her telepathic abilities, but the concern the vice president felt was seen in her eyes. “Are you sure you don’t want to come with us? The *Lexington* may fly straight into trouble and…”

“As Commodore Wesley and Admiral Barnett pointed out, there isn’t a safe place for us at the moment – neither on the *Lexington* nor on Earth as long as this group Section 31 exists. The rescued prisoners and slaves, the other diplomats and I are much safer aboard this ship than accompanying you to Earth. It’s not a walk in the park that lies ahead of you, my friend.”

Promptly, Whitman smiled when she heard the human phrase coming from her friend, but she turned serious again very quickly. “Yet there is the chance that you too will face trouble. I don’t think Luengo will quit easily, and Richard is right. It’s likely Section 31 will figure out where Kirk is going. Luengo will not take it well if he hears that the *Lexington*, who is supposed to be limping to Rigel for repairs, is really at New Vulcan.”

“And it is just as likely that you and the admirals will stop Luengo before he can take any action. You are only a day and a half from Earth and…”

“Admiral Barnett – Wesley!” The shipwide hail interrupted her. “Admiral Barnett. It’s an emergency!”
The two women glanced at each other, then their attention was driven away as Richard, who had been at the ramp of the shuttle talking with Morrow and Nogura, jogged to the next intercom. Quickly, Whitman followed him and as she heard his shocked “What?” she knew that something was terribly wrong.

“What happened?” she demanded barely she’d reached him. He switched off the intercom; his face betrayed his fury.

“Luengo put two and two together and knows that Kirk’s going to New Vulcan.”

The vice president paled. “Did Lieutenant Palmer intercept a transmission or…”

“No, Styles dutifully reported to his squadron’s flagship, the Lexington, that he was ordered to Earth at maximum warp. To Earth, not back to Earth, which is a hint that he has to rendezvous with another ship. And Palmer intercepted a transmission several hours ago between Kirk and a guy who doesn’t exist. I’m certain that Kirk faked it to lead them in the wrong direction, but this time, Section 31 didn’t buy it. Luengo finally realized the only way out for Kirk and wants to stop the Enterprise now before she reaches her destination. The whole fleet is on alert concerning her, but Styles is maybe the only one who will follow Luengo’s order. And I hate to think what that could mean for Kirk.” He rubbed his jaw. “Kirk will be safe on New Vulcan; this much is certain. But Luengo can’t allow him to reach Selek. I have the real bad feeling that the SBI will not hesitate to attack the Enterprise. Marcus already did it; Luengo is not a bit better than him.”

Batari watched him. “What can we do now? We have to protect Kirk and the others.”

Richard nodded grimly. “We have to change our plans. If Luengo sends Styles to attack the Enterprise, and maybe another ship too, there is only one person who can stop them – me. Styles got the Excalibur’s command only a short time ago. His most senior officers are very loyal to Captain Heldron and belong to the good old generation of real Starfleet officers. They will believe me when I tell them that the news about my death was a little bit overstated rather than someone else – Styles saying that I’m a fraud – and they will obey me.” He looked down at the small Malaysian woman. “But this would mean that I can’t come with you, ma’am. My priority…”

“Your priority is the United Federation of Planets and Starfleet. Both are threatened by evil men and women within our lines. They only can be convicted with Kirk and Khan’s help. Therefore, their survival is paramount, and only you can do it. Try to catch up with the Enterprise before she and everyone aboard falls prey to Luengo’s lust for power.” She straightened up. “Admiral Morrow and Admiral Nogura will accompany me. Three of us are enough to make the president and the council see what’s happening, and to make them take the necessary action.”
Barnett sighed. “I don’t like this,” he murmured, “but…”

“The president is the real head of Starfleet. He’ll take over for you until you return to Earth. Morrow and Nogura are going to support him in taking the right measures. As soon as Starfleet Command is freed of this Judas and his fellows, we’ll contact you.” She laid a hand on his arm. “Everything will turn out all right, just wait and see. And, if something should happen to us, then we still have you and the diplomats to contact the president and tell him the truth. Splitting up like this is probably the best solution just right now.”

Reluctantly, Barnett nodded, took a deep breath, and headed towards Nogura and Morrow, who looked expectantly at him. Batari returned to Ania and quickly explained the new situation to her. “It seems the Lexington will be forced into a battle in the end,” she finished. “Are you sure that you still want to remain aboard?”

The Betazoid made an affirming gesture. “Yes, I am. Both paths lead to danger, and should you not make it to Earth or the president, at least my colleagues and I can act afterward and contact the Federation Council. Separating is the best solution now. And, by the way, this Section 31 doesn’t know that the Lexington is here, in the middle of Federation space. Therefore, these traitors will not have time to act against the ship.”

“Hopefully!”

“Hopefully!” Ania affirmed. Both watched Wesley come running into the shuttle bay and talking hectically with the three admirals. “I think, you’ll be in a hurry,” she addressed Batari and embraced her. “Watch out for yourself, will you? And I’m looking forward to meeting you in several days on Earth with the whole dark situation in the past.”

The vice president returned the embrace, knowing that she couldn’t hide her worry from her friend. “Be careful yourself, all right?”

Ania nodded – but both could not assume what lay ahead for them all.

ST***ST***ST

The warp signature Scott had picked up was revealed to be a slow traveling freighter whose inadequate sensors hadn’t scanned the Enterprise – likely couldn’t even if she didn’t have the SDD. The danger of being spied was reduced, yet the little incident was no guarantee that they would reach
New Vulcan without being spotted.

Afterward, the command team, McCoy, and Khan had a short briefing concerning what the first officer had found in the containers – blood samples and test tubes labeled with the names of pathogens, and all likely connected to Nien’s crew. Spock pointed out that he would have to run several tests on all the samples to find out exactly at what Green and the others were doing, but they all had a pretty good idea about it.

Khan took the helm again during beta shift, serving duty together with Chekov, who was at the science station watched by Spock, and Kevin Riley at the navigation. Scott went down to Engineering ready for another double shift. The engines had become louder during the day, and Montgomery whined that there would come a time soon when only a good share of affection could keep the warp drive in one piece – a prophecy that had elicited another discussion between him and the first officer about logic; much to the bridge crew’s amusement.

McCoy, still in need of a very long sleep, used the time before dinner to teach Joaquin how to use the library computer and also help him in the medbay gym where the young Augment began to train his muscles. Within a quarter hour, he had increased his muscle function enough to make the first uneasy steps which became more and more confident after another quarter hour. Bones was not merely surprised; he was thunderstruck. Never before he had seen something like this and the readouts of his med scanner excited him like a child finding gifts under a Christmas tree. He had witnessed Khan’s healing abilities only two weeks ago as well as Jim’s injuries vanishing far quicker than is usually possible, but seeing muscle mass grow by the minute was awesome.

Finally, after almost an hour, Bones called time and sent Joaquin back to bed. The young Augment looked exhausted, but his eyes shone with joy, and as he accepted the CMO’s support crossing medbay back to his bed, Leonard realized how different the boy was from his older brother. Where Khan was proud and mostly arrogant, Weiss was open, a little bit shy, and he had no problem accepting a helping hand. He also didn’t insist on the whole ‘superior-inferior nonsense’ as Bones called it. By now, though, even the former dictator had changed his tune, thanks to his love for Jim. And it seemed Joaquin’s character didn’t contain the sometimes haughty manners Singh had displayed in earlier times. Bones was very curious how the Augment-boy would proceed over the next day and a half that remained of their trip to New Vulcan.

Despite his protest, Joaquin respected the CMO’s instruction to go to sleep early, and he didn’t even realize how quickly he’d done just that when he slipped back into Morpheus’ realm. And as Khan looked for him after beta shift ended, he found his younger brother deeply asleep with a peaceful expression on his still boyish face what made him look impossibly younger.

Joaquin felt his presence and woke up for several seconds, glancing at him with hooded eyes.
“Just go back to sleep,” Nien whispered, touching the boy’s cheek gently. “Everything is fine. Shall I stay?”

Even only half awake, the young superhuman shook his head slowly. “I’m okay,” he mumbled. “Go to Jim.”

Khan smiled. He had known that Joaquin would be delighted to learn that he – ‘Noo’ – had found a mate, but the easiness with which the younger one accepted that change in his life was almost breathtaking. Weiss had learned so many new things a mere human would never be able to handle in such a short period. Even with an augmented mind, it had to be difficult for Joaquin to be confronted with everything the twenty-third century offered, yet Nien didn’t sense any distress from his brother, only weariness and peace. He was glad for the latter. He knew that Joaquin would be shaken as soon as he learned of his – Khan’s – fate before he and Jim became mates. He didn’t look forward to the next day, yet he knew it was inevitable.

He returned to Jim’s and his quarters, being aware of the fact that he had used the guest quarters he could call his own only a few times – and never during night. He preferred to be close to his beloved – to wrap himself around the lean, strong, yet so fragile body of the young captain. And he also loved it the other way around. To tell the truth, he wasn’t used to being the one cuddled, yet he felt utterly relaxed and even happy when lying in Jim’s arms.

As he stepped into the captain’s quarters, he found a dinner prepared for two. Even though it was past 2200, Jim had waited for him, and feeling gentle warmth rising in him of this thoughtfulness, Nien gladly accepted a glass of wine and ate the meal contentedly. They discussed the success of the ruse that had been left for Styles, talked about Joaquin, and finally about their upcoming arrival on New Vulcan and how to proceed from there.

It was past midnight as the two lovers made it to bed, holding each other with incredible familiarity. Jim sensed that a part of his bond mate was still tense.

“What is it?” he asked quietly into the darkness.

“What is what?” Nien replied; his voice a deep rumble.

“You’re not relaxed, baby. Something’s bothering you. Is it about our arrival at New Vulcan?”

For a long moment, Khan didn’t answer before he murmured. “No, not completely. Tomorrow…”
I’m going to tell Joaquin what happened last year. I know that it will unsettle him – shock him, maybe even enrage him. He is very protective of me, despite his age twelve years my junior. He’s curious about this new world, and I think he likes young Chekov and your protégée Riley. I fear that the things that happened to me will damage his hope for the new future he expects here.” He took a deep breath. “Yet I have to reveal everything to him. He’d find out anyway when I go to court martial. It would be wrong to keep something that important from him, but…” He pressed his lips into a thin line and felt Jim’s hold around him tighten.

“Do you want me to come with you?”

Nien brushed his lips over Jim’s forehead. “Thanks, Pyāra, but this is something I have to face alone. I am also going to tell him what happened since I escaped the labs – how we two found each other and who I am here in the moment. And what our situation is now. I know he will understand, yet I hate the thought of disturbing him like this.”

Kirk slipped one calf over the long legs of his bedmate – a protective gesture. “I’m sure you’ll find the right words, but I do understand the dilemma you’re in. You want to spare him the worst of it, yet you can’t keep them a secret because of what lies ahead for us all.” He stretched his neck and kissed his beloved’s cheek. “My offer still stands. If you think it will be better if I’m there at any time for it, call me, and I’m there. I like Joaquin, and I don’t want him to become afraid of the new world he woke up in. Every period has its bad guys and in this decade, it’s Section 31. If he realizes this, then he will come to terms with all the rest of it in a few days – especially on New Vulcan. And Kevin and Chekov will cheer him up, too. Those two already managed that today; they’ll do it again.”

Khan appreciated his beloved’s attempt to soothe his nerves. Jim Kirk – ever the optimist. And maybe his bond mate was right again. Joaquin did come to terms with what he’d been faced with so far, perhaps this would be the same case tomorrow, yet Nien doubted it. His brother would be upset of the demise of twelve members of their family, of whom four had been brutally murdered. Joaquin would also be horrified and furious of what had been done to him, Khan, yet the Augment leader hoped that the younger one would calm quickly. Maybe Jim’s idea to join the discussion at some point wasn’t that bad. In fact, it sounded better and better as often as he thought it through. No, he was no coward. He always fought his battles alone and was used to facing the most displeasing situations without hesitation, yet the prospect of upsetting Joaquin put him on edge – that and the fact that he had to go through this hell of memories again. Yes, maybe Jim’s presence would be a balm for him and his brother.

Sighing, he caught himself snuggling into the captain’s embrace, but he didn’t mind. Everything – every incident, every way he had chosen or had been forced to take – was coming together. It would come to a head in the next days. Even his enhanced mind couldn’t cope with that without becoming anxious. So finding comfort in his beloved’s arms was exactly what he needed right now. Alas, what had become of the independent, strong leader of his people?
A human being with a human soul and a human heart – something your creators never thought possible, but they hadn’t calculated the one detail that changes everything - Love,’ an inner voice whispered. Yes, Jim’s love had changed him from a synthetically bred creature into a whole person. For just a moment, he remembered a traditional fairytale that existed in different versions in almost every culture – the tale of ‘Beauty and the Beast’. Beauty was most certainly Jim, not only because of his handsomeness but for the beauty of his heart. And he, Khan… Yes, in the eyes of the most people he was a beast, a monster, yet he had become human because of the love given him by the man at his side.

Tightening his hold on Jim he murmured, “Maybe your idea of accompanying me is not… Not that bad.”

Kirk, almost half asleep, chuckled, “It’s a brilliant idea!” He could almost hear Nien rolling his eyes. “Don’t deny it!”

“Of course not. You are the genius here,” he commented wryly.

Again Jim snickered. “And don’t forget it!”

For more than a minute both were silent, before Khan grumbled, “Vain man!”

“Mm-hm,” came the sleepy reply. “Love you, too.”

The former dictator smiled, buried his face in crook of Jim’s neck, smelled the familiar scent, and closed his eyes. It wasn’t long before he drifted into a fitful sleep.

ST***ST***ST

“It’s just past midnight; I had to pack everything we’re going to need in a hurry and then you have the nerve to ask me why I need all this?” Professor Matthew Dashwood had stuck his fists on his hips and glared at the Security Chief of the Exeter, who kept his professional calm.

“I’m responsible for the security of the ship, Professor, and therefore, I have to ask you about the cargo you want to bring aboard.” He pointed at several boxes of different sizes. And none of them could be called small.
“This is our equipment for the task we got from Admiral Luengo,” Doctor Nathan Conelly cut in; his frown betrayed his irritation. “Our mission is top secret and essential to the outcome of the war. If you have any questions, contact the head of Starfleet himself, but don’t waste our time!”

Lieutenant Ovasu, a man in his thirties with roots in Tanzania, took a deep breath. First, the ship had been ordered to launch in six hours. Six hours – nothing difficult given the fact that the space dock above Earth had been on yellow alert for weeks, and so all vessels had to be ready for flight on command. But there were 250 elite security members and only 80 available, and getting those scientists aboard who had arrived only a quarter hour ago with their so-called equipment and following getting them to follow any protocol was a challenge.

To his relief, he saw one of the brass entering the cargo transporter. “Admiral Norton!” he saluted, and Albert looked at the three men.

“Is there a problem? Why aren’t you aboard?” he asked sharply, addressing both scientists at that moment.

“Because this young man here insists on knowing exactly what we’re taking with us, despite the fact that our mission is top secret,” Dashwood complained.

Norton lifted both brows. “The lieutenant is doing his job, that’s all, but in this case, it isn’t necessary.” He glanced at Ovasu. “I take full responsibility, Lieutenant. Please beam the cargo over. We have to leave as quickly as possible so that we aren’t late to our rendezvous with the Excalibur.”

“Aye, aye, sir!” the Security Chief affirmed, relieved that the decision and therefore the responsibility had been taken off his shoulders.

Conelly and Dashwood watched the boxes disappear in the golden light of the transporter, delighted that at last there was some proceeding in their task.

Both men couldn’t believe their ears at first when they got the call from Norton, telling them to pack everything they needed to restrain prisoner 3158-17-215 again because HQ knew where the creature was. Finally, they could continue their research to perfect the biological agent they had already developed. They were nearly ready to proceed to serial production. They were aware of the fact that putting the prisoner back into even low-level cryosleep might make it impossible to wake him ever again, but there was no need to have him conscious. His blood was all they had a need for.
They assembled everything they thought would be of use or would be needed to get hold of the Augment. They discussed several matters with their colleagues at the LSH lab in Nevada and then traveled to the space dock. They were outraged to learn that the fugitive had been hiding aboard the Enterprise for some time now, and called Kirk ‘crazy’ for trusting ‘that thing’.

“I knew he was not in his right mind when he berated us in Barnett’s office,” Dashwood said to Nathan as they were on their way to the space dock, and Conelly nodded. It would be satisfying to see the arrogant young captain arrested – and Nathan also looked very forward to the moment the Augment would be back in his care.

He would never, with not a single uttered syllable, reveal that his interest in prisoner 3158-17-215 was not only of a scientific nature but was something more. He had never forgotten these minutes he had dominated the weakened enhanced man, who was too handsome for his own good. There had never been a chance for a repeat afterward, not even when the Augment had been held in the LSH lab, but maybe there was a chance now to have a last go with him before they froze him again in cryosleep for all time.

At least that was what Conelly hoped for, as he followed Dashwood, Norton, and the Security Chief through the night-calm corridors of the space dock.

ST***ST***ST

The next morning Kirk and Khan had agreed to talk with Joaquin in the privacy of the room he has occupied for the last two days. Its surroundings were familiar to him, and maybe that would help him calm down after he heard it all. Weiss already knew that something big lay ahead when his brother and the captain entered the room. After an exchange of greetings and asking how Joaquin was feeling, Jim gave the order not to disturb them and closed the door.

Joaquin knew his brother and leader as nobody else did – except Jim Kirk, and so he wasn’t surprised when the older man sat down on one of the two visitor chairs and began with no preamble, “As I am sure you have guessed, there is a reason why I was unable to wake you and the others shortly after my cryosleep ended. It was not the automatic system that woke me, but the former head of Starfleet, Admiral Alexander Marcus. And he did it because he realized who I was. I was told he needed my help. I later realized he needed me to start and win an unjust war. And with that, I was resigned, for a time, to hell. And I vowed to protect you from just that.”

For the next quarter hour, Khan told his younger brother everything. He spared him nothing, except the details that only his bond mate knew. Joaquin grew paler by the minute. And when he learned of the murder of the four other Augments, tears streamed down his face; he didn’t care that he and his
brother weren’t alone. He also wept for those whose cryotubes failed. He had loved them all, and being young, those wounds of loss hit him hard. But that was not all. As he realized what happened to ‘Noo’ – that his brother, of all Augments, lost control due to the unbearable pain he had been put through, both physically and mentally, his heart pounded loudly in his ears – so much so that the monitor above his bed gave an alert. Fury and sorrow raged in him. Even as Khan rose, sat down on the bed’s edge, and pulled him in his arms, he raged.

Jim, who had been silent the whole time, quickly informed Bones via intercom that everything was all right, knowing that McCoy was still monitoring the young man’s condition and would be alarmed by the alert transferred to his terminal.

Only now aware of Kirk’s presence again, Joaquin looked over Khan’s shoulder at him, and the accusation and anguish in his eyes made Jim cringe inwardly.

“I didn’t know about Marcus’ real intention at that time – no one did. He played us all. He was ready to sacrifice every single soul – every Augment, me, my entire crew, including his daughter, to attain the goal he had set.” Kirk said quietly. “And he used your brother’s rage taken out on the city – on Starfleet to fool me into…” Kirk dropped his head; he couldn’t say it. “…into doing his goddamn dirty work – and his work was dirty. God help me, I almost did too. I almost attacked an unsuspecting planet to kill a ‘criminal’ with no chance of defending himself.” He was in the focus of both Augments now and added with a sheepish smile. “I have to admit that at first I was tempted to do what Marcus told me; your brother’s assault took my mentor from me – the only man I could ever call a father – but a good friend talked me out of my desire for revenge. For that I am grateful. I don’t think I could live with the blood of seventy-two innocent people on my hand – and hundreds of thousands of Klingons too. Those weapons, with you in them, would have caused a climatic catastrophe.” He took a deep breath and his gaze softened as he glanced at Khan. “And I would have never known how it is to be loved by Nien – the best thing ever happen to me.”

Joaquin swallowed and sniffled, still deeply troubled. “After you were sent out to – to kill Noo, what happened?” he asked quietly, knowing instinctively that the captain had no part in his brother’s misery. He simply couldn’t imagine it.

Both men told him of the following days, how they worked together for a short time only to fight on different sides again after distrust won out them. Weiss was confused and unnerved as he learned of Kirk’s temporary death because of radioactive poisoning and how the CMO brought him back. Khan didn’t reveal much about his combat with Spock, only that the Vulcan had been able to overpower him. He didn’t want that his little brother to hold any prejudice about Spock. The half-Vulcan and his elder self would soon be among the only people standing between them and Section 31. As much as it hurt Khan’s pride, he and his family needed the Vulcans. And seeing as Spock was the son of one of the greatest ambassadors in the Federation, the former dictator simply knew that the half-Vulcan also had a high position within Vulcan society. It would not be wise to cross him as Joaquin in his youthful recklessness would be apt to do if he learned of the first officer’s brutality in subduing ‘Noo’.
Then came the next part of the story – Khan’s captivity in the hands of the scientists. And afterward, finally, came the good part – the calm amidst the storm. Together, the men told him about Khan’s escape and search for Kirk – for revenge. That night, they said, the night Khan found Kirk, became one of the best if not one of the most important nights in the lives of them both.

Joaquin calmed more as both men told him of the last months – how they longed for each other in secret, how Khan became a member of The Shadow, how they met again and how they finally became lovers. Weiss squirmed visibly as Jim told him of his imprisonment on Turkana and how he was tortured, only be saved by Nien, who had come to his tormentors like an avenging angel of death. What happened on Aldebaran, Joaquin already knew – at least a part of the two men’s deeds to prevent a Klingon strike from successfully taking place. But Khan and Kirk’s private moments were new to him. And as Nien and Jim exchanged a few memories concerning their more pleasurable and humorous moments on the planet, the enhanced boy’s nerves finally settled.

Of course he was upset to learn how close he had come, once again, to losing his older brother before Khan and Kirk had been saved by the Enterprise at the very last second, but he grinned as he imagined the CMO’s shocked gaze as McCoy, then unaware of the relationship, saw the two men holding – grasping each other.

Then came the last portion of their story, that one that leads to their current situation. Again, Joaquin thought he was listening to a spy thriller. And it seemed this Luengo was even worse than Marcus, attacking an own ship to eliminate the staff officers and diplomats who would stop him if they’d known of his betrayal. To use war as a means to an end was nothing new – not in any time. But this was a new dimension of war. Here, it was not necessarily the people of a few countries that would suffer for the war, but the population of entire planets! Even if Joaquin needed time to come to terms with the knowledge of real aliens, his enhanced mind (and his gentle heart) grasped that the lives of billions of sentient beings could be at stake if this shadow department succeeded in its intentions. Kirk had also told him that Section 31 was about to develop a biological agent – with Noo’s cells! – and that the first minister of the planet New Vulcan had found out that this weapon was about to be used against the Klingons.

Using biological (or chemical) weapons was, in Joaquin’s opinion, the lowest form of war. And the fact that the blood of his beloved brother was misused to build something so monstrous as a pathogen designed to eliminate millions of lives with no hope of treatment because of the augmented cell structure, woke hot rage in the boy.

These men were right – Noo and Jim: Section 31 had to be stopped.

And for that Joaquin was even ready to pray – for their success, for a fair trial, for anything that would save his family and allow his brother to keep his love. He deserved that.
He could understand why Noo cracked; why he ran amok and killed. The best he could hope for was that the court would accept those reasons – understand them. That, though, would not have saved Noo in the twentieth century. He hoped it wasn’t such a long shot now. Jim comforted him stating that the circumstances which had led to the disaster would be regarded. Nevertheless, Noo would need a hell of a good lawyer if he was going to leave court without a sentence of life in prison or worse. Maybe all that Noo did afterward during the war would be a credit to him in the eyes of those who hold his life in their hands. That, and maybe the fact that the hero of this time, Jim Kirk, and Starfleet’s Commodore Wesley would speak on his behalf.

Jim and Noo had told him about Commodore Wesley, who was about to recover the surviving members of the delegation. This man had to be very special if he gave Noo such a chance and even protected him. Joaquin was young but not naïve. He knew that most humans feared the Augments and perhaps this would not change. Due to last year’s events, people would still be wary of the enhanced men and women. Prejudice was easy, maybe easier than acceptance. On the other hand, mankind of today had to be very tolerant if they lived side by side with aliens. Maybe humans had changed. Pavel and Kevin were an example of this ray of hope, just like Dr. McCoy and especially Jim Kirk, but then the people on this ship seemed to be extraordinary, even for the 23rd century.

“So,” he finally said after his brother and the captain had ended their tale, “we’re hoping for asylum on New Vulcan and hoping that the commodore was able to rescue some ‘good’ admirals and a few diplomats. And we also hope that they’ll be able to stop this Section 31 and to remove Admiral – Luengo was it? – and his fellows from their position. And we also hope that Noo will face a fair court martial and leave it a free man because of everything that had been done to him and because of what he’s done since he’s met you.” He glanced at the two men. “There are too many ‘hopes’ for my taste.”

He couldn’t know that he voiced almost the same thing as a certain Klingon lord did only three days ago. Hope was indeed a very complex and a very uncertain concept. It, like love, if loved enough, could move even mountains.

“I know how it sounds,” Jim sighed, “but believe me, today, I think he can get the justice he deserves. And your brother has the right to bring charges against his tormentors, even if they are high ranking admirals.”

“And what if Luengo finds out where we’re heading? What if the commodore isn’t able to recover the admirals and diplomats? Would we be safe on New Vulcan?”

“Selek is the High Minister of one of the most important planets in the Federation,” Kirk replied thoughtfully. “Even Luengo won’t dare go against him. Selek’s opinion is highly regarded within the Council. The same is true of the Vulcan Elders. Luengo will be inviting disaster to himself if he
attacks refugees on an independent planet, especially if said planet is New Vulcan. The Vulcans are officially declared an ‘endangered species’. They are under the special protection of the Federation. Even Luengo wouldn’t be stupid enough to go up openly against them or their Elders.”

“Hopefully,” Joaquin sighed. He glanced at his brother. “You said these ‘Elders’ want to speak with you – decide if they will give you shelter too. What if they determine that your presence would be too much trouble for them? Then…”

“It is illogical to measure one’s worth by the amount of ‘trouble’ one might bring. Life in any form is sacred to Vulcans, and we will not deliver someone up to an unknown fate – certainly not death. Ever. Certainly not because some illegitimate members of a forbidden organization demand it!”

Startled, all three looked up; not one of them had heard the door open. They had been too busy with their thoughts and the discussion to be aware of their surroundings. That spoke volumes with Khan in the room.

Spock lifted a brow as he looked at the augmented boy sitting on the biobed wrapped into blankets and pale as a sheet, as the human phrase went. Apparently, Jim and Khan had told the youngest member of Khan’s crew everything that happened since the former dictator had been woken by Marcus. Sensing Joaquin’s dread he added softly, “You and the rest of your friends and family will be safe on New Vulcan. These circumstances demand giving you and the others shelter and perhaps official asylum. Section 31’s decision to strip the Augments off their rights as humans on Earth essentially created them as a defacto species, and it follows then that Luengo’s order is equivalent to genocide – a crime that will be severely punished by the Federation. My people will protect you and the others, so do not fear for them or yourself.” His gaze found Khan. “Or for your brother. After all, that Section 31 has done to include attempted murder of Khan which puts his life in danger, the Elders will give him the refuge he merits.”

The former dictator looked directly into those dark, all too human eyes of the Vulcan and pursed his lips. “Are you sure?” he asked, and Spock nodded.

“I know Selek; he will pledge on your behalf. That is half the battle as the human phrase goes.” He cocked his head. “And when you tell our clan’s Old Woman of your circumstances, there will be no one in the government who would decide against her, no matter their individual considerations.”

Nien blinked in confusion and glanced at Jim, who also frowned. “What does your clan’s Old Woman have to do with this?” he asked bewildered. “Why do you think she…”

“Selek sent me a message last night. He allowed me the option of telling you about it or not. Given
the situation, I decided to tell you about our clan’s Old Woman’s demand to speak with you and Mr. Singh.” He clasped his hands on his back. “I already anticipated that T’Pau would intervene with a desire to speak with Mr. Singh and you, Captain, so my grandmother’s request is not a surprise for me.”

Kirk stared at him and groaned finally, “Superb! Of all the Elders it’s, T’Pau who wants… T’Pau is your GRANDMOTHER!” His usually warm tenor was high-pitched, and the two Augments winced.

With almost infuriating calm, Spock lifted his brow. “She is my father’s mother, so the term grandmother is correct. But I admit that I am perplexed at your reaction.”

“May I ask what’s going on here? This is a medbay, not a nuthouse!” Bones stood in the entrance, fists on his waist, and an irritated expression on his face.

Before anybody else could answer, Jim pointed at Spock and almost shouted, “T’Pau is his grandmother!”

Promptly the CMO’s arms fell to his sides, and he gaped at the first officer, who only lifted a brow. “Is there a problem with T’Pau being my father’s mother, gentlemen?”

“Spock!” Jim gasped. “T’Pau is… She is the matriarch of Vulcan – the chief of all Elders. She… She’s a kind of queen, her clan’s roots go straight to Surak himself and…” He stopped; his eyes were about to pop out of his head. “That means that you’re like a prince!” Again his voice sounded like a young boy at the threshold of manhood.

This time, the Vulcan did roll his eyes and even sighed. “Jim, the title, Prince, does not rightly convey my position, or that of my clan, in Vulcan culture. Please do not be shocked. I…”

“You… You never told me that you’re royalty!” Kirk wheezed.

Again the first officer showed the typical patience an adult would show a little child with. “Because my family’s status within my culture does not matter concerning Starfleet, Jim.”

Even if Khan was very aware of the serious situation he would face with this old matriarch, he couldn’t deny that the others’ reaction amused him. “Your blood is green - but you're also a Blue blood – a noble, if I may. Commander, again I am in your debt and grateful for your status whatever
it may be,” he commented wryly; a smirk played around his lips. His beloved’s expression was a sight to behold. As he glanced at the CMO, he half anticipated having to call M’Benga at any moment.

“Dear Lord. His anatomy is confusing enough; now you tell me his blood changes color!” McCoy grumbled after a few more seconds of stunned silence. Cocking his head and looking at the first officer, he easily found his taunting manner – his own deflector shield. “Right, now I finally understand your behavior and that stick up your backside. That comes with being royalty, I guess. But don’t think I’m going to call you ‘Your Highness’!”

Jim was regaining his composure, too, and he rubbed his temples with another groan. “Bones!” he sighed exasperated.

“Doctor, the day you use your famous Southern charm on me is the day I will genuinely be concerned for your mental state,” the Vulcan retorted dryly.

“Spock!” Kirk shook with a chuckle.

“Concern, Spock? Isn’t that an emotion?” the CMO mocked.

“It is rather an expression of the fact that ethically the superior minded out to care for those who carry the burden of disadvantage.”

McCoy put his hands on his waist again. “And what kind of disadvantage do I have in your expert opinion?”

“Besides the human weakness of irrationality, you also talk too much, and your thought process is so specious that I am surprised each time you live through a day.”

Bones gaped at him, while Jim let his head sink. “Gentlemen!” He almost pleaded. “Do you think your behavior will help Joaquin come to terms with…” He stopped, as he heard soft laughter and as he glanced at Nien’s little brother, he saw the mirth dancing in his big brown eyes which shifted towards Khan.

“Are they always like this?”
“This is nothing,” Nien replied with amusement written all over his face.

“They remind me of Otto and Paolo.”

“Yes, only worse,” Khan nodded, grinning as he watched the CMO and the Vulcan glaring at each other. “And the funniest thing is, those two are friends, but neither of them will accept it – or admit to it.”

Promptly CMO and science officer fixed Khan with a piercing glare, and Joaquin laughed even harder. “Yeah, you’re right. They’re worse than Otto and Paolo!”

“And there I thought those two were unique,” Jim chuckled.

“Oh, they are – the bantering between Otto and Paolo is a little different,” Nien reassured him before he became serious again to address the Vulcan. “Mr. Spock, you said that your planet’s matriarch wants to speak with Jim and me. Is this a part of the hearing your Elders are demanding?”

The first officer shook his head. “Regard it as more of a private discussion, Mr. Singh – and a favor. If you can convince Lady T’Pau of all that you already have convinced me of, I don’t think that there will be a hearing of the Elders at all.”

Khan nodded slowly, realizing the importance of the upcoming situation. “Then I should be glad that we two have overcome our differences.”

Spock lifted a brow. “Be assured, Mr. Singh, T’Pau will not and does not judge or make her decisions based on her personal feelings. Our relationship, no matter its status, would not influence her decision.”

“And I do not know if this should settle me or not,” the Augment sighed; then he felt Joaquin’s questioning eyes resting on him and he gave him a short, warm smile. “Do not worry, chōtā bhaiya (Hindi for ‘little brother’), Mr. Spock and I… are still coming to terms with each other after all the misunderstandings of last year.”

Joaquin frowned, then he nodded. “I understand.” He glanced back at his brother. “So, you said that Mr. Spock and Dr. McCoy are in denial concerning their obvious friendship, yet you neglected to mention that the same goes for you.” As he caught the baffled gaze of ‘Noo’, he grinned. “You and
Mr. Spock tease each other, and you told me only minutes ago how often you and he had worked together over the last few days. So ‘coming to terms’ isn’t the best description of your relationship, because you’re already a step ahead.”

Khan stared wide-eyed at him while Spock blinked for several seconds and Jim tried unsuccessfully to hide a grin.

“And now there’s another genius to wear me down,” McCoy sighed before he glanced at his two friends and the former dictator. “As if you three aren’t making me gray with your brain power as it is.”

“Did I understand Dr. McCoy correctly, Captain? Did he just call me a genius?” Spock asked, trying to change the topic because first he needed to focus on the meaning behind Joaquin’s words before he could act on it.

Jim smirked and jumped onto that train, too. “Yes, he did,” he nodded. “And didn’t you just say that the moment Bones used his Southern charm on you, you’d begin to doubt his sanity?”

“Yes, I did,” the first officer nodded firmly. “It is not good for the ship if the CMO should be out of his mind. I believe the good doctor was merely stating a fact when he called me a genius rather wasting his non-existent charm on me, Captain,” the Vulcan replied.

“Carry on like this, gentlemen, and you get a particular mark on your sick cards for your next general examination. Believe me; I can make it a very unpleasant experience,” Leonard growled.

“Then there will be no difference in the results of the last general examinations,” Spock retorted, and Joaquin had to laugh again; the tension and shock left him for now, yet the sorrow would return soon when he would ponder all that he had learned. For now, he was glad for the distraction.

He glanced up at Khan, who had closed his eyes in feigned exasperation.

“How do you put up with them?” Nien asked a chuckling Kirk, who shrugged,

“Our original mission was to seek out new life forms and new civilizations. And I started with those two. Believe me, if you manage to survive their bickering you won’t be afraid to face much else.”
The Augment leader smirked at his mate. “In other words, you fight to survive daily. No wonder that even a full blown Klingon attack does not bother you.”

“Yeah!” Kirk grinned.

Bones stared at the two love birds and addressed Spock. “Did Jim say we are worse than Klingons?”

“I think so, Doctor,” Spock nodded, clasping his hands on his back. “And in this particular instance, I almost feel offended.”

“As well you should!” Leonard growled; then both men looked at a laughing Jim Kirk as Khan simply sighed, “And just like that they stick together again.”

Joaquin smiled feeling his mood lift now despite everything he learned in the last hours. The images of his older brother joking with the others and the way Jim looked at ‘Noo’ warmed him. For just a moment he could forget the lurking danger in the shadows or what happened to the man who had raised him. For a while, he felt carefree again.

He couldn’t know that his worry was a foreshadowing of the lurking danger that would become life-threatening all too soon.

TBC…

Chapter End Notes

Yeah, the danger is closing up on our friends more and more, and soon they all will learn for the calmer days they had to leave behind. In the next chapter our three young troublemakers will make… well, some trouble. But not only they will give Jim a headache, the Enterprise’s machines will do just the same. Then there will be a hot – hot! – scene between our two lovers, Uhura and Spock will have some sweet moments and you’ll read about Styles again.

I hope the last chapter was a nice, humorous distraction for you before the hard stuff begins.
For all American reader: Have fun at the Independence Day!

Until next time

Love

Yours Starflight
The last night?

Chapter Notes

Hi, my dear readers,

Thank you so much for the comments. Even if the last chapter was one of the more calm ones, in the background the big trouble his growing. And how big the upcoming mess is going to be is shown in the new update now. Our friends’ enemies are hell-bent to eliminate the danger Kirk, Khan and the others representing – and, of course, our lovebirds and their friends know that danger is closing up…

And what would you do, knowing that there could be no tomorrow? Well, enjoying each other for the maybe last time. This goes for Jim and Nien, but also for our second sweet couple, Spock and Uhura. So, the new chapter will be HOT!

Have fun with the new chapter,

Love

Yours Starflight

See the end of the chapter for more notes

Chapter 68 – The Last Night?

While the Enterprise headed towards New Vulcan, the Lexington tried to catch up with her. The long range shuttle carrying Batari Whitman, Nogura, Morrow, Commander Marceuax and a handful of Red Shirts were on their way to Earth. The Excalibur raced through space to rendezvous with the Exeter. Styles was nervous, and his attempts to hide it weren’t very successful. The bridge crew sensed and saw it, yet no one acknowledged it.

Lawrence had good cause to be nervous – Luengo. The interim Chief of Command had made it very, very clear that he was disappointed in Styles and that could be dangerous. Not that the young captain feared for his safety, but he knew that his jump up the career ladder was because of Luengo’s intervention, and he could lose his command very quickly if he didn’t deliver what the admiral demanded – Kirk’s head on a silver platter.

Kirk…

Three times the American had tricked him. Three times he had been made a fool. Now Kirk mocked
him with this message from the probe they followed, making him think it was the Enterprise. Thankfully, Styles had become suspicious when he heard the odd transmission between Kirk and this other man at the edge of the Tholian space; he had alerted Luengo. The SBI and the Security Department had analyzed the recording within a few hours and revealed it as another one of Kirk’s tricks. Damn him!

And then came the new order to rendezvous with the Exeter and take Admiral Norton and a few scientists aboard. Then they would try to intercept the Enterprise on her way to New Vulcan.

Styles had almost groaned when he received new order, realizing that he had been blind. Of course, Kirk would seek shelter on New Vulcan. He was held in high regard by the Vulcans since his silly stunt on their dying planet that saved the Elders, several members of the council as well as Sarek of Vulcan, who seemed to be a kind of uncrowned king in Styles’ eyes – and more than ten thousand others. Kirk’s break-neck action that cost the Romulan, Nero, the driller which bought time for the evacuation vessels to evacuate as many as Vulcans as possible. It had been a heroic deed. Lawrence was not so ignorant that he couldn't admit this, but he recognized that it gave Kirk an advantage. The cowboy was that advantage now. The Vulcans would give him shelter; Styles was sure of it. And if Luengo and Section 31 wanted to end this cat-and-mouse game with Kirk, they had to get him before he reached his pointy-eared friends.

The captain glared at the main screen that showed the stars as they raced through space at warp six. It sounded simple – intercept the Enterprise and prevent her from reaching New Vulcan. Styles was very aware of the fact that nothing at this order was ‘simple’. The Enterprise was invisible to the sensors. If they couldn’t see her, she's slip away. And even if they were lucky enough to spot her, then there was still the challenge of getting Kirk to surrender. Lawrence knew the other captain well enough to know that he didn’t quit easily. And given all that was at stake for Kirk, he would fight – for himself, for his friends as well as for the enhanced creature and its fellows.

Only a few days ago Styles had been forced to watch his ship suffer because of the fake attack on their Klingon allies. His visit to medbay had shown him, in the most brutal way, the cost of Section 31’s decision to get rid of the delegation. More than twenty men and women of his crew were dead, more than eighty were injured and still healing. And they all suffered because he, Lawrence Styles, had agreed to this dirty game. On the other hand, he had no other choice after learning from Luengo and Norton what was about to come. Stepping back from the order would have meant his downfall – maybe even worse. So he had gone through with the plan, but this didn’t mean that he liked it. And the prospect of battling the flagship was anything but pleasant, thought he would do it.

Because, again, he had no other choice.

Luengo had him in his claws now, but the admiral was also his protection. If Kirk blew up the carefully developed plans of the interim Chief of Command, then he – Styles – would land in prison too. And he would rather send Kirk and his Augment pet straight to the hell than face a court martial.
After Noo and the three officers had left the private room in medbay, Joaquin was once again alone with his thoughts, which went in circles. He was still deeply shocked at the cruelty shown to his brother and the rest of his family, but especially towards Khan. The augmented boy could only imagine what his leader had been through, how he suffered the pain, both mental and physical. Joaquin knew he would have developed an intense hatred towards everyone in Starfleet if it weren’t for Jim Kirk and his friends – or Pavel, Kevin and Mr. Sulu.

Their acceptance of him and Noo, their friendly jokes, and the way they built their own kind of family – it reminded him of his brothers and sisters. And regarding Jim Kirk? Joaquin had been happy for Noo to have finally found a mate, but learning what the captain did for Khan and the others filled the young Israeli with gratitude beyond comprehension. Without a doubt, Kirk would soon face a hell of a lot of trouble because of his decision to give ‘Nien’ a second chance, yet he did it without hesitation after he learned of Khan’s past. Jim had a reason to hate Khan, and he did in the beginning. Now both loved each other with an intensity that made Joaquin wonder if there truly was something like kismet in the universe.

He knew that both men had endured torture and sorrow, but both were healing – because of each other. Weiss had only seen them together for a few hours, but it was enough to tell him that his older brother had indeed found his soulmate. And the utter trust the younger officers held for their captain – the familiarity between the command team that was based on sincere trust too – made Joaquin hope that in the end, everything would turn out well. At least he allowed himself to have some faith and…

“Hey, that lost in thought?”

He glanced up and looked directly into the grinning faces of Pavel Chekov and Kevin Riley. Obviously, his expression gave his thoughts away because the sunny smile vanished from Chekov as he came nearer. “Oh, ze keptin, and Khan told you of ze more nasty zings that happened.”

Joaquin sighed and nodded, while he watched Chekov carefully. “You joined this mission last year, too, didn’t you?”

“Da,” Pavel grimaced and gestured towards Riley to take a visitor chair that he’d placed at the edge of the bed. “I didn’t meet your brozer zen in person, because I had to replace Mr. Scott in Engineering. I tried to hold ze Enterprise togezer after she was crippled first by ze sabotage of Section 31 and later after ze battle with Admiral Marcus, but I had a good idea what was going on.”

Weiss bit his lips. “Where you there when... when Jim…”
“Fixed ze warp core?” Pavel ended the question, giving Joaquin a pointing look – and Weiss understood. Kevin Riley didn’t know that his commander and childhood friend died and was brought back by Khan’s blood. It seemed this was a secret, and he could think of a reason or two why this was a sagacious decision. If other people, especially members of Section 31, learned that Kirk had augmented cells, then… No, Joaquin didn’t dare to think of the outcome.

So he made an affirming gesture and said, “Noo told me how Jim went into the chamber to fix the drive manually. That was a hell of a risk, wasn't it?”

“Damn right!” Kevin grumbled. “You can’t enter the warp core chamber without substantial protection against radioactivity. You wouldn’t survive it.”

“I thought so,” the young Israeli sighed, and Pavel took a deep breath.

“Yes, I was zere at ze time, and… We all feared for ze keptin,” he said carefully, glad that the Augment boy got the hint. Then he smiled again. “But ze keptin is like a cat. He has nine lives.”

“Hopefully, Mr. Spock is keeping track of which life he's on given Jim’s tendency to leap head first into the situations,” Riley grumbled.

“I zink Khan has taken over zat job,” Pavel snickered, and as Kevin began to chuckle, too, Joaquin realized that those two were aware of his brother and Kirk.

“So… Does the whole ship know of my brother and Jim being…?”

“Net!” Pavel shook his head quickly. “But zer have been rumors recently. Two of our technicians overheard as ze keptin asked our chief cook to have ze officer mess for himself and zen ze keptin was seen returning from ze space station loaded with stuff to cook. And a few crew members saw Khan heading for ze officer’s mess ze same evening and vanishing inside, but officially ze mess was closed. And ze next morning some ozers saw the cook take dishes away from ze table by ze big view window to clean. So…” He spread his hands and grinned.

“They had a date,” Joaquin assumed, and as he saw the two others nodding, he giggled. “As far as I know, Noo never had a real date! Business dinner sometimes with pretty ladies or something like that, but an actual date…” He smirked. “I told him once that love would catch him by surprise one day, but he didn’t believe me. And now…” He pursed his lips. “You said, ‘view window’. So you
can look out into space for real?"

“Yes, of course. Well, at the moment we’re traveling at warp 5.8, and so the stars are nothing more than strips of light, but you can look out into space if you like,” Riley replied.

As Pavel and Kevin saw the excitement on the young man's face, they looked at each other, nodded in agreement, and then Chekov glanced back at Joaquin. “Do you feel fit enough for a little trip? We could take a walk to ze officer’s mess and back again, and…”

Weiss’ face lit up like a Christmas tree before he pulled the blankets away. “I’m dying to see more of the ship,” he said; he pushed his thoughts into his subconscious for now.

“Well, we can't have that,” Riley grinned. He walked to the replicator. “Give me your size and I'll program a neutral pair of coveralls for you. I think we would arouse too much curiosity if you walk around in a medbay gown.”

“So, this replicator can not only produce food, but also clothes?” Joaquin’s eyes were wide as saucers, then he shook his head. Alas, there was still a lot he would have to learn about this century.

Ten minutes later three young men left medbay in secret, and for the first time, Joaquin felt really thrown into a strange, new world. The hallways and the many doors – leading to quarters and different departments – resembled the stages of many TV shows and movies he had watched before the war broke out, yet everything differed from fiction. Mostly because this here was real! There was indeed even a soft buzzing he could sense in the floor and that had to come from the engines. There was indeed synthetically-cleaned air by systems he had still to learn of, and the people here didn’t wear costumes but real uniforms.

Strolling through the hallways, they entered one of the turbolifts and Joaquin raised both brows in surprise as the lift began to move vertically and horizontally. He felt the gravity of the turbo drive and, even though the ride only lasted less than thirty seconds, he got an idea how of how large the starship had to be.

A minute later they reached the officer’s mess, and with big eyes Joaquin looked around him. As it was mid-morning and there was more than an hour before lunch would be served, the room was more-or-less vacant. Two servicemen were setting the tables and a very enticing smell wafted from an open door of an attached room. The furniture was elegant, yet functional and the atmosphere was warm and spoke of comradeship.
“Come on,” Chekov urged. “We take a quick peek outside and zen we’re showing you around a little more.” They walked to one of the large windows which were now covered. Typing in his officer code, Pavel ordered the blinds to rise, just the slightest bit. “Sorry, more I can’t open wizout alerting ze bridge. During warp ze larger view windows should be covered.”

Joaquin frowned. “You won’t get in trouble because of me, will you?” he asked, feeling to his surprise that this question wasn’t out of politeness but borne out of real concern for the other young man, who beamed at him.

“I won’t,” the navigator assured him. And so Weiss moved towards the small gap and looked out.

Endlessness, and a darkness that wasn’t so dark at all… There were flashes and stripes of light, and only after several seconds he realized that these had to be planets and solar systems. The ship was travelling so fast that they bypassed whole star systems like this?

“No, but during warp we’re in subspace,” Kevin said, making Joaquin aware that he had spoken his question aloud. “In real space you would see star nebulas, stars, and planets, asteroids, and so on. That’s possible when we’re using impulse engines, but as soon as we enter warp, we’re in subspace.”

Joaquin turned towards him, his heart hammering in his chest in excitement. “So Einstein’s theories have been proved?”

Both other young men grinned at him and nodded. “Da!” Pavel said. “Are you interested in astrophysics?”

The augmented boy made an affirming gesture. “Yes, very! Noo is a formidable engineer and I like to tinker too, but theoretical physics of any kind are my hobby.”

Both ensigns exchanged a look. “Well, then you should stick close to Mr. Spock and Mr. Scott,” Kevin snickered. “Commander Spock is the best science officer in the whole fleet, despite his age, and he’s already written articles which are subjects at the most respected universities. And Mr. Scott…”

Pavel smirked. “Yes, Mr. Scott is a special man – and a damned good teacher. I learned a lot from him during my first year away – enough to take over his duties during his temporary absence. Your brozer developed a special defensive device zat disturbs sensors and made us unreadable for ozer ships. He and Mr. Scott tinkered a lot to perfect it and to integrate it into our systems. If you like to tinker too, I zink you should visit Engineering.”

Kevin cleared his throat. “Engineering is in a high security area,” he reminded his friend, who grimaced.

Pavel rolled his eyes. “I know. We should ask ze keptin first and…”

The intercom whistled and then the unmistakable voice of an obviously very irritated CMO called, “Medbay to Mr. Weiss!”

Kevin and Pavel exchanged a glance. Uh-oh!

Joaquin’s eyes widened. That sounded like trouble.

“Mr. Weiss, please report to medbay!” came the next hail and Pavel walked quickly to the next terminal.

“Chekov to medbay. Dr. McCoy? Mr. Weiss is wiz me and…”

“Pavel Chekov! Of course you’re behind this unauthorized little field trip!” Bones groused. “The boy isn’t fit enough to be running through the ship! Where are you?”

“We’re in ze officer’s mess and…”

“Hold the line a moment, I’m bein’ hailed,” McCoy interrupted him and then the three young men heard Kirk’s clear tenor in the background asking what was going on.

“Mr. Weiss is taking a little jaunt through the ship together with Mr. Moscow, Jim,” the CMO reported indignantly. “They’re in the officer’s mess now and…”
“Khan and I will pick him up, don’t trouble yourself with leaving medbay, Bones. Kirk out!” The captain’s voice said, then McCoy was heard more clearly again.

“Did you hear that, Chekov? You two stay where you are, Jim is on his way. And I expect Mr. Weiss to report to medbay afterwards. Pronto! McCoy out!”

Chekov rubbed his neck. Dammit, now he certainly would get into trouble. His gaze found Kevin. “I haven’t mentioned you. Just go and…”

“Nope, I don’t leave my friends on principle!” the Irishman answered; straightening.

“Well… I encouraged you two to show me around, so it’s me who is responsible,” Joaquin sighed, but stopped as he caught two stern glares.

“We took you, so it’s us who are responsible,” Kevin said. “And knowing Jim he won’t tear our heads off. Right, extra shifts are possible, but…”

The door opened to reveal Kirk and Khan side by side. Promptly the three guilty troublemakers stepped closer to each other and remained shoulder to shoulder; Joaquin between the two ensigns.

“It was my fault, Jim,” Weiss began. “I asked them to -”

“We offered to show him the view,” Chekov cut in. “Zerefore we’re ze ones who -”

“Would the gentlemen be so kind to shut up?” Kirk growled, looking from one to another. And he didn’t need to spare a glance at his mate to know that Nien was glaring at them, too.

Khan’s gaze pierced that of his little brother, who ducked his head. “As far as I remember Dr. McCoy has not released you from medbay. So what you are doing here?” he demanded firmly.

“I… I wanted to look around and…”
Please don’t scold him, Mr. Singh. It was Kevin and me who talked him into leaving,” Pavel cut in, gulping as he found himself at the center of attention.

Khan frowned. Yes, he appreciated that the two ensigns had taken Joaquin under their wing, but he also knew that the forbidden outing had brought trouble to Jim and McCoy – and that should not have happened. “Even so, Joaquin can make his own decisions – the right ones, but he did not,” he replied. “You worried Dr. McCoy and his staff unnecessarily, and forced Jim and myself to leave our jobs to catch up with you. This is not behavior I will tolerate – not in the current circumstances.”

All three looked sheepishly at their commanders, and Jim felt amusement rise in him. There they stood – three young men who seemed to be thrown back to their teens, looking at him guiltily, hoping ‘Dad’ wouldn’t scold them too much. Placing his hands on his hips, he glared at Chekov and Riley. “Joaquin is not familiar with the protocol aboard, but you two should have known better than to send the whole of medbay on alert and me with it. What should I do with you two now?”

Weiss smiled tentatively at him. “Well, you offered to show me around as soon as I was ready to leave medbay, yet you and Noo have many important things to do. And seeing that I was feeling well and strong enough for a longer walk, these two could relieve you by continuing the tour through the ship – after I check in with Dr. McCoy, of course.”

Kirk gaped at him. “Do I understand you correctly? You think I’ll let you three continue this stroll and…”

“It would be logical,” Joaquin interrupted him with a tentatively smile, “given the fact that you’re very busy and certainly needed more on the bridge than walking around with me – as much as I’m honored by your earlier offer. But…”

“We should reward you after the mess you three made?” Khan interrupted him; astonished.

Joaquin gave him one of his time-tested puppy dog looks – something Jim didn’t miss. Inwardly he was laughing. How often had he disobeyed the rules, and done what he’d wanted instead of listening to others? How often had he been in this exact position? He had lost count. He cleared his throat to give an answer he didn’t want to voice but had to, and…

… And something changed. Jim felt a soft jerk go through his ship while the engines were clearly heard now – something that made alarm bells ring in his head like mad. He exchanged a worried glance with Nien and was about to rush to the next intercom, when Scott’s urgent voice sounded through the whole Enterprise, “Engineerin’ ter Capt’n Kirk!”
At the same moment the engines became quieter again, and Kirk didn’t need to ask to know that they had reduced speed. With a few large steps, he was at the intercom. “Kirk here!”

“Sir, we had ter reduce speed down ter warp 4.5, or Engineerin’ will turn into a sauna. Three of the generators are overheated and the coolin’ system is at its limit.”

“I’m coming down, Scotty.”

“Right. Permission ter call Chekov and Khan ter Engineerin’? I need any hand here and…”

“I’m with the captain, Mr. Scott. I’m coming down, too,” Nien called.

“Me too, Mr. Scott!” Chekov yelled – and ducked again as Kirk shot him a sharp glance.

“We’ll be down in a few. Kirk out,” Jim said and switched off the terminal, before pointing a finger at Chekov. “This doesn’t let you off the hook, Pavel, understood?”

“Aye, Keptin!” the young Russian nodded, and then they were on their way to Engineering – Kevin and Joaquin on their heels. Kirk discussed the current problem with Khan – a problem that could turn into a catastrophe if they became stranded out here, still more than a day away from New Vulcan. Nien was very aware of the danger and so both men didn’t even realize that they weren’t riding the lift alone but also with Chekov. Riley and Weiss.

As the turbolift reached its destination, the two lovers raced along the small hallway and entered Engineering, the three young men still close behind them. Scott was kneeling at the cooling system, shouting orders to his staff. Fog hovered in the air, alert lights blinked, and an unpleasant smell hit the nostrils.

“Scotty!” Jim shouted before barely reaching the Scotsman, who looked grimly up at him.

“There! Now we can count the cost! I told you that after everythin’ the Enterprise has been through she’s reached her limit! Travellin’ days at warp 5.8 was…”
“Report, Mr. Scott!” Kirk interrupted him, having no time for his friends rambling.

Montgomery gave him a nasty glare before he gritted out, “Generators one, four, and six are shut off now; the coolin’ system has malfunctions in the three tanks; warp core capacity is down to 42.4 percent! I advise we reduce speed to warp two and…”

Jim bent forwards and lowered his voice. “We have to reach New Vulcan yesterday, Scotty, tomorrow at the latest! We’re too near Earth, and if Luengo has any intelligence, he’s certainly about to, or already has put two and two together and knows where we’re heading. Hell, a whole squadron can already be out there, waiting for us. If we don’t…”

Scott rose from his kneeling position in front of a terminal and looked seriously at his commanding officer. “Jim, I do know how much is ridin’ on our Grey Lady’s speed, but the engines are only held together by ropes and glue now, so ter speak – and said glue is about ter melt! Literally. I don’t have ter tell you what happens if the next generators pack it in. Then we have to shut down the warp drive which means we would be left with only impulse drive. And then we’d reach New Vulcan when we’re a hundred years old.” He straightened and his voice was intense. “Sir, as your chief engineer – and your friend – I must advise you to reduce speed – or the Enterprise’ll blow up around us.”

Kirk bit his lip; his helplessness in this moment made him angry, yet he knew that he hadn’t any other choice. His voice betrayed his inner turmoil as he growled, “Reduce speed to warp two.”

Scotty sighed in relief, before he turned around and yelled, “Allistor, take her down to warp two!” Then he glanced back at his captain. “I’m sorry, Jim, but this is the only option in the moment. We’ll work on it and…”

“Maybe it’s the changes in the generator input and output,” Khan cut in. “We adjusted the cooling system to the new generator levels, but maybe it wasn’t enough – or the cooling system is about to fail because it’s reached its limit.”

Montgomery nodded. “Aye, I thought the same. Want ter join me?”

Nien lifted a brow, resembling Spock very much in that moment. “Of course.” He saw how Scott suddenly looked confused over his shoulder and became finally aware of Joaquin’s presence. Turning around, he saw that his younger brother stared around wide-eyed before something close to shock crossed his boyish features. Following his gaze, Khan recognized Keenser who was crouched, working on one of the tanks which held the coolant.
Feeling his leader’s attention on him, Weiss looked straight at Khan. “That’s...that’s a child!” he blurted out, pointing at the Royalan.

Only now did Jim realize that Kevin and Joaquin had followed them and glanced in the direction where the young Augment was gesturing – and had to grin, despite the situation.

“That’s Keenser, he’s an adult,” he added after a beat. “He’s even one of the tallest of his race.”

Joaquin blinked in surprise. Keenser – the name Dr. McCoy had mentioned. He... He looked like an oyster with a human-like body, but...

He was distracted by Chekov at his side, who addressed the chief engineer, “Mr. Scott, may I check ze working generators?”

The Scotsman nodded. “Aye. Allistor was busy with it, go and support him, son.”

Pavel smiled quickly at Kevin and Joaquin. “Excuse me.” With that, he vanished into the large room of not-so-controlled chaos.

“I will examine the malfunctioning generators,” Khan said. “Maybe they can be brought back online, though not with full potential they had originally.” He glanced away from Scott and fixed his little brother with one of his famous piercing stares. “Shouldn’t you be in medbay by now?”

“But...”

“I’ll take him to Dr. McCoy. Maybe the doc will allow a little trip out afterwards,” Kevin offered.

Kirk nodded before Khan could make a decision. “Right you two – and Kev? Don’t forget to report to duty on time!”

“Of course not!” The Irishman said. He gripped the young Augment’s upper arm, and pulled him towards the entrance. “Come on, let the boys tinker with their toys,” he whispered, forgetting the sharp hearing of the superhumans.
Khan went rigid. ‘Boys’? ‘Tinker with their toys’? Always the same, the young. That was something that hadn’t changed, even in the twenty-third century!

Following Scott to the generators, he left Jim who rubbed his neck. Hopefully this mess in Engineering wouldn’t get them into serious trouble – trouble in form of a sister-ship, or something like that, finding them.

ST***ST***ST

Professor Dashwood knew that the issue was necessary to get the prisoner back and to finish his work. This was the second night he didn’t get much sleep because the Exeter and the Excalibur had met just minutes ago. He, Conelly, Norton and his elite security team were leaving the scout ship and were transported to the heavier cruiser. They materialized in the Excalibur’s transporter room where the young captain, Styles, as far as Dashwood knew, expected them. The Englishman greeted the man with the utmost respect before welcoming the scientists aboard.

Politely, Dashwood refused the offer to be shown to his quarters; first, he had to watch over the transport of the cryotube and his equipment before he would retreat to his quarters for sleep. Conelly stayed by his side the next hour. At the Excalibur’s slight shiver before she went into warp, the scientists finally went to their guest quarters, hoping to catch up with the Enterprise soon.

For Norton and Styles, there’d be no rest this night. Both officers sat in the captain’s quarters where no one could disturb or overhear them. On the admiral’s order, Styles had set course to New Vulcan, racing at warp three which meant they would reach the planet the next evening if they continued their journey without interruption.

“How do you plan on catching Kirk before he reaches New Vulcan if his ship is invisible to our sensors?” Lawrence addressed the largest of their problems, as he saw it after he gave Norton a full report of the last days.

“This is a topic I discussed with Admiral Luengo, too. To tell you the truth, I have no idea how to find Kirk before he reaches his destination. We calculated his course given his start point at Gamma 12 if he goes directly to New Vulcan. But it’s harder to calculate his arrival. Kirk’s last report told us that he is only able to get his ship up to warp 3, but given the fact that he was at Gamma 12 earlier than thought indicates that the Enterprise is maybe able to travel at warp four or 4.5 at best given the damage she took during the battle with the Klingon renegades at the nebula. So it’s likely she hasn’t passed the position that I have in mind for us. As soon as we reach that point, we go cold mic and play dead. All systems are to be reduced to their minimum – no communication, no drives, and no sensor activities that could be scanned by the Enterprise. We have to be damn careful. Spock is a
talented science officer, and their comms officer is just as good. Knowing them and Kirk, they will have open eyes and ears as they get closer to New Vulcan. At the same time, your comms officer will intercept all normal space and subspace transmissions in and out of New Vulcan.”

Styles nodded slowly. “What if Kirk manages to reach New Vulcan before we get him?”

Norton took a deep breath. “I hope that it doesn’t come to that. Otherwise, my orders are clear. Get him and the Augment, no matter what. And I really don’t like the thought of taking action against Selek – even if that means eliminating another kind of danger.”

This time, Lawrence frowned. “What kind of danger could Selek be? And why are you so sure that’s him who is offering asylum to Kirk?”

The admiral sighed, watched the young captain, and finally said, “I think you should know the truth, Lawrence. And I also believe that you’re going to need a brandy.”

ST***ST***ST

Aboard the Enterprise, nobody could anticipate that their opponents were that close – that the way to New Vulcan would not be clear. Scotty, Khan, and the other engineers had made the impossible, possible again. The cooling system was at its limits, as were the generators. Number 6 was still shut down; two others were back online at just forty-eight percent capacity. The ship was running at warp 3.8 – the maximum they could risk.

Jim sat in his quarters and listened to the unusually loud engines. His ship was moaning, this much was certain, yet his Grey Lady still didn’t let him down. He knew how foolish it was to think the vessel was – human? Sentient? But he couldn’t help it. And somehow the Enterprise continued to soldier on, despite all the odds against her.

Then something caught his attention, and even before the doors opened he knew that Nien had arrived. The Augment looked tired – a rarity given his enhancement, but the last days had taken an emotional toll on him.

“He is sleeping,” Khan murmured as he crossed the threshold and stepped into the bedroom where Kirk sat on the bed, a closed book in front of him.
Jim smiled at his beloved. “No wonder. He learned so much in just a day. So, he’s comfortable in his quarters?”

The Augment nodded with an amused expression. “Yes, even if his first encounter with the replicator was… troublesome. Are you in need of any cups or glasses?” At Kirk’s asking glance, he smirked, “The boy ordered too slowly at first, and so the replicator presented him with an empty cup and then a cup of tea – four times. The same happened with the glasses of water and juice. If the officer’s mess or the rec room needs any dishes, they can find them in his quarters.”

Jim began to laugh; his blue eyes shone with mirth, but also sympathy. Joaquin had so much still to learn. Imagining it all from Joaquin's point of view sent Kirk’s head spinning. He had grown up with all this technology, but Joaquin… He was glad that the boy was healthy enough to leave McCoy’s direct care and able to gather his first real experience of space and all this time had to offer – awake.

Leonard had checked Joaquin over after his little trip, only to find that the walk had been good for Weiss. Giving him some stern advice, he released him from medbay and showed him to his assigned quarters – the very same that had been offered to Khan. The former dictator had only used them for a few hours; he’d never actually slept there. “Your brother moved in with Jim quicker than I thought possible. Guess I didn't give Jim enough credit,” the CMO had chuckled. “I thought I would see them creeping through the hallways to get to each other, but they decided for a direct move. Now they share the captain’s quarters. If Command hears about that...” He had trailed off and grinned before introducing the young Augment to the technical equipment inside and how to use it all.

Kevin had accompanied them and had remained with Joaquin until he had to excuse himself for duty – only to return half an hour later to explain that Kirk had sent him down to keep Weiss company. Another cadet had been ordered to the navigation console, sweating like a horse – it was his first time on the bridge. And so like this, the two young men had enjoyed the afternoon and evening until Pavel joined them for dinner before heading to the bridge for the second half of his shift; the first half, he had spent in Engineering.

Khan had only learned of this after he left Engineering, and he was grateful once again for the thoughtfulness of his mate. He felt better knowing that Joaquin wasn’t alone and had agreeable company.

Concluding the three young men’s’ chat, he sent his brother to bed. Of course, that had elicited some protest, but the truth of Joaquin’s exhaustion came out the moment he stretched out on the mattress. Within a few minutes he was deeply asleep, and knowing the boy was safe, Khan headed to his captain’s quarters.

Jim reached out to him and warmth spread from his hand right to his heart as long, strong fingers entwined with his. He met Nien’s blue-green eyes and saw shining tenderness there.
“Thank you for taking such good care of Joaquin,” Khan murmured. “He is not your responsibility, yet you have taken him under your wing just like you did me.”

Kirk smiled gently. “He’s a guest on my ship; therefore he is my responsibility. And, by the way, he is the brother of my heart’s absolute desire,” Kirk cooed these words – needlessly perhaps, but they had the intended effect; Khan gave a hint of a smile. “And he is new to this world. Of course, I'll help him as much as I can, even if it means my bridge crew is a bit understaffed.” He began to chuckle. “Poor Taylor. He was wrung out after his nav duties. It was his first time on the bridge. I think he’ll be a fine officer one day, but first, he needs to learn to be more self-confident.”

“The first time is often the most difficult,” Khan answered, and he sat down beside Kirk. For a long moment, neither of them spoke a word; then their gazes moved to their joined hands – a symbol that spoke of more than merely their relationship. Together – just like this they would face Selek and T’Pau tomorrow. They would stand together at the Vulcan High Council. And they'd face anything Starfleet or the Federation saw fit to throw at them – together. Nothing would be able to rip them apart – not now, and not ever again.

“I sent an article about T’Pau to your PADD,” Jim said, and Khan nodded slowly.

“I read it during a short break. She’s an interesting woman. Strong, stern, powerful, wise.” He began to chuckle. “The only one who refused a seat at the Federation Council! That tells me more than anything else. It is not power and might she seeks. Her concern lies with her people, with Surak’s way, and what is right or wrong, yet she couldn’t prevent her home world’s destruction. Now she and a handful of others have to make certain that her race survives. She is in the same position as I. And I understand that she first wants to test me before she decides on the future of my people. If I were in her place, I would act likewise.” He cocked his head. “So, Spock’s grandmother, huh? I do not know if this is a good thing or not.”

“As Spock told you, it wouldn’t matter if you and he maintained your differences. T’Pau is above that. It’s the Vulcan way. But…” He took a deep breath. “I only met her once. She was with the Elders that we were able to save before Vulcan imploded. She is an impressive woman. Reminds me of steel, really. Sharp, Vulcan steel – and just as intractable. She will not bend and she will not give anything away.” He looked straight at Nien. “Be yourself, don’t hide anything, and treat her with respect. I think that'll give you the best chance with her.”

Khan made an affirming gesture, before he softly murmured, “As I first saw her picture, I was,” he paused for a moment, “… almost shocked. She resembles Shani very much – the woman who took care of Joaquin and the other younger Augments after our flight from the labs.” He saw the surprise on Jim’s face, and sighed, “I hope this will not cause me to let my guard down when I ought not to.”
“You’ll manage it – just like you always do,” Jim assured him, squeezing his fingers. Then his gaze shifted to the wall – not looking at anything in particular. “I only hope that we make it to New Vulcan without any more problems. With that five hour delay now, we won't reach Selek until tomorrow evening.”

“Have you informed him?”

Kirk shook his head. “No. I don’t want to send anymore transmission – even if Old Spock is even better than my Spock when it comes to computer tech and hacking or whatever he does. The SBI isn’t stupid. We’ve been lucky so far, but I don’t want to depend on Lady Luck too much.” He smiled at Nien. “We’ll need her help soon enough.”

Khan chuckled. “You do know that I don’t believe in higher beings, don't you?”

“Yeah, that's why you call on Brahma and Shiva,” Jim winked at him. A moment later he found himself pressed onto the bed – the Augment above him.

“Yeah, and it’s your fault. You drive me to near madness with your crazy plans and your big heart,” the superhuman growled with feigned anger.

Snickering, Kirk wrapped his arms around his mate’s slim waist, not buying the other man’s show for one second. “Is that all that drives you crazy about me?” he teased. And he saw the fire flare up in those ocean-colored eyes.
