Looking forward to the 5 year mission, Kirk is certain that he would never see Khan again. Now the Augment is right in front of him, seeking vengeance. But fate has its own plans. In the middle of the upcoming war between the Federation and the Klingons, both men find themselves captured by a whirl of dangerous passion that can save or destroy them…

Kirk/Khan Slash
Chapter 1 – A Rising Storm

Since the late afternoon, the clouds above San Francisco had become thicker, their darkness like an omen of something sinister that lurked in the shadows. And now, as the day was nearing its end, the clouds blocked out all light from the moon and stars, already changing the evening into night. The air in the city was heavy and sticky, whitecaps on the surface of the Bay danced along with the incoming tide. All this promised one thing: a thunderstorm, a thunderstorm that would last for hours.

But the mood not only applied to the weather. The emotions of the lone figure that surveyed the high-rise apartment on the other side of the street were in as much turmoil as the approaching storm – and were no less dangerous.
The few passers-by who were still out on the streets didn’t pay the man any attention as he leaned against a wall, pale blue-green eyes fixed on the skyscraper and its glassy façade.

He waited patiently, even though his time was limited. Lesser men would have been nervous, would rush things, but he wasn’t a lesser being. He was better – at everything. Some had mused that he wasn’t even human, but this was not true. He looked human – one might call him handsome – and the core of his existence was rooted in the human species. But still, he was more than a simple man from Earth.

His keen eyes pierced the twilight, his sharp hearing analysed every noise in a radius of more than a hundred meters, his nose caught the smell of food and alcohol coming from the nearby restaurants and bars. All this registered in his mind and would stay there as long as he thought the information necessary. After that, he would simply ‘delete’ it.

Somewhere down the street, a church bell rang and called the tenth hour, but the man didn’t need a clock to know how late it was. His sense of time was precise – as though he had his own clock ticking away in his brain.

His gaze wandered once more over the storeys in the upper half of the skyscraper. Several windows were illuminated, some had turned dark by now.

There, on the forty-eighth floor, behind two or three of those windows, was the reason for his coming to this part of the city. In one of those apartments was the man he was eager to meet again – and not for a social call. Far from it. When he was done with this man, there would be more blood on his hands. He had killed before – countless times – and not just in self-defence. He didn’t enjoy killing – he never had – but when it was necessary, he did it; quickly, efficiently, and mercilessly. And the man he was about to visit should expect no mercy! No, this was one of the very few times he really was going to enjoy sending someone to his death. He would revel in pressing the life out of his victim!

His attention was brought to a woman who walked towards the entrance of the skyscraper, and he took a deep breath. He already knew where to find his enemy after he’d checked the board with the names and comm numbers beside the entrance, but he still had to wait before he could take action. It had been too early when he arrived, and the risk of his prey receiving visitors – witnesses – just as he was being made to pay for his deeds, would have been too high.

But now his time had come, and that of his soon-to-be prey was running out. The time of his vengeance was approaching, and the woman who was about to enter the building would unknowingly be his accomplice in his revenge.
From one moment to the next, the features of the silent observer changed from the emotionless mask which had covered his burning hate to a pleasant smile. Then he started to move. With graceful strides, he crossed the street, which was unusually quiet for this time of night. The sedatives which had been forced into his body for weeks had already worn off hours ago, and his long legs carried him easily to the building’s entrance, and to the young brunette woman. She’d just taken her key-card out of her pocket and was about to swipe it through the lock-sensor as he cleared his throat.

“Good evening,” he greeted in a perfectly polite tone. The soft, deep baritone voice instantly suggested trust and kindness – a deceptive fact that couldn’t be further from the truth.

The young woman turned around, startled, but she relaxed immediately as she looked straight into his handsome face with the high cheekbones, bowed lips, and a pair of wide-set pale blue-green eyes. The light of the streetlamp made his almost-white skin shimmer like marble, while the rest of the man was clad in black. Even his smoothed-back hair was ebony, making an attractive, almost alluring contrast to his pale features.

“I am sorry, Miss, it was not my intention to startle you,” the stranger said with a voice other men would probably covet, and lowered his head in an old-fashioned salutation.

“Oh… It’s okay,” the young woman answered, smiling at him. She might be engaged and more-than-happy with her fiancé, but this guy could make her weak. “So… How can I help you?” she asked, trying not to stare at him too much. She didn’t want to give him the wrong idea.

The man glanced quickly at her key card – twelfth floor, he read – and flashed her a brilliant smile. “Oh, only with the usual neighborly help.” He extended his hand to her and the young woman looked pleased with the warm, firm grip of his long, slender fingers. “May I introduce myself? I’m Frank Authborn.”

“Jennie Taylor,” she answered. “Nice to meet you.”

An odd smile hovered on his lips for just a moment, before he continued, “I just moved in on the twenty-ninth level, but I’ve left my key-card in my flat. Would you be able to let me in? Otherwise I’ll have to spend my first night on the street.” He smiled again, this time more widely.

Jennie laughed. “Oh dear, we can’t have that.” She turned and pulled her key through the sensor slit. “How will you get into your apartment if you’ve left the key?” she asked, while she stepped through the sliding doors, the stranger at her heels.
“A friend of mine is up there, helping me unpack my things. Unfortunately, I also left my communicator, so I couldn’t even contact him.”

Mirth danced in Jennie’s large dark eyes. “Bad luck!” She pointed to the board outside of the building. “You could also have tried the buzzer, you know?” she teased, which earned her a low chuckle from the handsome man.

“Yes, if I knew which of all those buttons belongs to my flat, I could have been there with a cold beer and chatting with my friend half an hour ago.”

Another small giggle escaped Jennie’s lips. “Well, I think those buttons are confusing if you’re not used to them. You’re not from around here, are you?”

He shook his head. “No, I’m from the quiet countryside of jolly old England.”

“Ah, that explains the accent.” She winked at him. “Well then, welcome to San Francisco. It isn’t as quiet here as it probably is where you come from, but I’m certain you’ll get used to it. The city has a lot to offer – besides all the people who are usually in a hurry, the noisy cadets from Starfleet Academy, and too much traffic.”

“That’s good to know,” he said kindly, and walked to one of the four elevators. The young woman followed him. Only twenty seconds later and the elevator stopped at the twelfth floor. The stranger bid the nice lady ‘good night’ before the doors closed, and his journey finally ended at the forty-eighth level. The lights in the corridor, which were on sensors, came on as he left the elevator, his feet silent as he walked towards his prey. The open, friendly expression he’d worn earlier had completely vanished from his face. A fire burnt behind his eyes and his whole body buzzed with energy, fuelling his fury and desire for revenge.

He stopped at the door, the last barrier between himself and his target. His eyes found the nameplate beside the doorbell, and a scowl appeared on his features as he read it: James T. Kirk.

Nothing is more soothing than a nice, warm shower with real water. The words of his friend Leonard McCoy echoed in Jim’s head as he braced his hands against the wet wall of his shower cubicle and enjoyed the hot spray that splattered down his back.
The last few days had been full of paper-work and many, many calls and meetings. There had barely been time to have a short lunch with his two friends ‘Bones’ McCoy and his soon-to-be-again first officer, Spock. Somehow he had always managed to slip out of the office to meet them, even if the communication-panel on his desk lit up like a Christmas tree and a yeoman called after him that he still had to… Well, whatever. Jim had needed those breaks – not only to fill his growling stomach with a nice meal, but also to put some distance between himself and the duty he had finally fulfilled today.

It had been an honor to give the speech at the commemoration a year after the brutal attack on Starfleet Headquarters that had cost the lives of several admirals and captains, along with their first officers, but it had taken a lot out of the young man. Not because of the large audience and the media focus from around Earth, and even from other planets; Jim hadn’t worried that he would make mistakes during the speech or that he would miss a gesture during the whole ceremony. No, this event had had a deep emotional connection for him – because one of the dead being commemorated was the only man he’d ever regarded as a father, Christopher Pike, the man who’d pulled him out of his self-destructive early adulthood and who’d given him a new purpose: Starfleet.

For more than for four years, Pike had been a steady presence, had been an adviser, a protector, and a mentor to him. He had shown Jim a way out of the misery he’d constantly felt, leant him a supporting hand whenever it was necessary – which had been often – and had shown sympathy when everyone else had not.

And now this great man was dead. Buried, but not forgotten. The man Jim had looked up to had died because of the mistakes another admiral had made, and because of a super-human relic that same admiral had woken up from a three-hundred-year sleep: Khan Noonien Singh.

Khan…

The name made Kirk shudder even now, after twelve long months.

No one had driven him to his utter limits like Khan had. Hell, he’d even died because of the Augment – and had been brought back, also because of him; well, because of Khan’s blood, to be precise. And, if Jim were willing to admit it, the Augment had saved his life twice before: once on Qo’noS, the Klingon home-world, and again while Jim had been flying blind through space, heading with deadly speed toward the Vengeance, where he would have been squashed against the starship’s surface if Khan hadn’t intervened.

Jim rubbed his forehead as the image of the enhanced man rose in his mind’s eye: strong lean body, slightly taller than him, perfect posture, long limbs which he moved with the grace of a cat, sleeked-back black hair, piercing pale eyes the color of the sea – and just as deep and dangerous as the oceans – impossibly high cheekbones, and a taunting smirk made by a sensitive mouth. The man,
who appeared to be in his early thirties, had been brilliant – his mind even quicker than Spock’s – something, Jim had thought to be impossible, and driven by an inner fire which seemed to burn the world around him. Sometimes cold as ice, sometimes fierce as an erupting volcano, especially when he’d been wronged or when it came to his crew, which he regarded as family, Khan had intrigued everyone but also made them wary, a challenge Kirk would have loved, had the circumstances different.

Nevertheless, in some way, Jim could understand why the Augment had run amok when he thought his crew had been killed – Khan’s reaction couldn’t be described as anything else – but to murder all those innocent people in London and then to attack Starfleet HQ, killing the commanding officers, had simply been too much – not to mention flying a starship into San Francisco Bay, destroying part of the old harbor. It was still a miracle that the town’s landmark – the Golden Gate Bridge that Jim could see from the windows of his living room – had survived the whole mess, but the damage to the skyline was still like an open wound in the city, and it would take years before everything could be rebuilt.

No, what Marcus had done to Khan – and Jim was sure he only knew a fraction of all the Augment had endured at the hands of the admiral and Section 31 – had been utterly wrong, cruel and inhumane. Kirk was compassionate enough to understand the pain Khan had been put through – the sheer agony he’d felt as he’d been led to believe his family had been killed, not once, but twice – but even that didn’t excuse what he had done as a result. If Khan had wanted revenge on those who’d mistreated and threatened him and his crew, Jim would have been able to accept the unleashed fury of the Augment. But to murder those who’d had no hand in the deeds was as wrong as Marcus’s crimes.

Jim sighed and turned off the water and slicked back his thick, blond hair. During the last months, after the nightmare of his death and revival had waned, he hadn’t thought too much about the superhuman. But since Jim had learned he’d be giving the speech at today’s commemoration, the memories flared anew – and this time with unnerving vividness. Sometimes he thought he could even smell the smoke of the burning bridge of the Enterprise, or the not-unpleasant scent of Khan himself, while he walked through the corridors beside Jim on their way to the air-lock. Other times, Jim was back in the warp-core, feeling the radioactivity piercing him in an oddly soft way, making him weaker and weaker with each passing moment, turning his own body against him until all he could feel was the life leaving him. In other nightmares, he faced Marcus at the screen on the bridge, begging for the life of his crew, only to be turned down, leaving Jim helpless and waiting for the Vengeance’s weapons to destroy his ship, and with it his friends and crew – his own family.

The young captain had been relieved when those nightmares became rarer, but for the last four or five weeks now, they had returned – and the reason for this, why Jim remembered every detail from last year’s events with unusual clarity, whispered at the edge of his mind. Also unnerving was that the ability to accurately recall memories wasn’t the only change in him; he was more agile and stronger than before, his mind more focused. There was only one logical reason for all this, one which he wasn’t very happy with: Khan’s blood. It had not only brought him back from the dead, but had also strengthened him in other more subtle ways. All right, so he didn’t hate living with the whole ‘stronger’ thing; sometimes it really was an advantage. But on the other hand, the thought of
Jim stepped out of the shower and dried himself off, before towelling dry his hair and pulling a comb through the blond strands. A glance in the mirror above the wash basin showed the face of a man who’d seen perhaps more than someone should have seen at this young age. But it was also the face of someone full of life and whose sky-blue eyes twinkled with barely-hidden mischief. Several of his superior officers would even go so far as to call him reckless. But, hey! He was only twenty-six, had finished Starfleet Academy one year earlier than any other cadet, had loyal friends – of whom two were like brothers – and, in one week, he would start a five-year mission with the best starship in the fleet. Of course he was alive with anticipation, the shower reviving him somewhat from the malaise he’d felt following that damned commemoration. Yes, it had been a privilege to have been chosen to honor the victims, but he was glad it was over, and he could now concentrate on his soon-to-be travels around the universe.

Eschewing proper clothing, he slipped into a pair of dark blue sweatpants and hung the wet towels over the small drying rack, before leaving the bathroom. The light switched off as he left the room as no further movement was detected. Barefoot, Jim padded into the small kitchen adjacent to the sleeping and living areas, ordered the computer to dim the lights to thirty percent, poured himself a glass of scotch with soda – a gift from Scotty, and was settling in to watch some trash TV, when suddenly he felt with absolutely certainty that he was no longer alone.

Someone was here with him! And his gut told him that this wasn’t a friendly visit.

“Good evening, Captain.”

Jim froze. That voice… That rich deep baritone… He would have recognized it anywhere, just like he’d have recognized the taunting tone in which his rank was pronounced.

Putting the glass on the countertop, he whirled around, and found himself thrown into a nightmare he’d never expected to become real. The figure that had stepped out of the shadows and now watched him with fire in his sea-green eyes sent a chill through Jim, while he took in the marble features of the man he’d been pondering only minutes ago. A man, who had been put back into cryosleep and should have been locked away, together with his crew, and secreted away, secured by Starfleet’s highest protective measures. But here he was, in Jim’s apartment! And very much awake!

And Kirk realized then that he was looking into the face of death – his death!

Jim had no doubt why the Augment had sought him out, and a sinking feeling shot through his stomach.
“You…” was all he could whisper, hoping above all hope that he’d simply fallen asleep on his sofa after he got home and that he was, in fact, dreaming. Okay, it would be the creepiest dream he’d ever had, but still…

A sneer played at Khan’s mouth, while he eyed up his adversary – the adversary he had come to kill. The Augment had heard the shower running as he cracked the code of Kirk’s lock and let himself in, and his nostrils had instantly caught the scent of his opponent. But the thought to use this opportunity to catch his enemy by surprise hadn’t even occurred to him; he wanted to confront Kirk before he made him pay for his betrayal, and everything Khan had suffered after the so-called ‘trial’.

Khan felt his sneer changing into a predatory smile as the intense blue eyes of the younger man grew wider, showing a hint of fear. Good! Very good! At last the man was bright enough to know when was facing an impasse. It would make things more…interesting.

Without his uniform – or that poor excuse for fashion Kirk had worn on Qo’noS masquerading as a ‘dealer’ – the captain looked even younger than usual, more like an oversized boy than a commanding officer, especially in his present state. Clad only in sweatpants, with damp hair and flushed skin after a hot shower, Kirk could easily be mistaken for a simple student attending one of the many academies in San Francisco.

But Khan wasn’t fooled. He knew there was a clever mind behind the boyish appearance, a mind that found extraordinary ways to solve problems. He had seen the fierce fighter that was James Kirk, the recklessness mixed with courage, the loyalty towards his friends, the strong moral compass, and the display of stubbornness – all things Khan could admire, even if these characteristics belonged to an inferior being.

He also could have taken a liking to the looks of his foe; the Augment was not blind. Kirk’s face reflected the perfect combination of soft youth and growing firmness, his shoulders were broad, his belly flat, and years of varied training had gifted Kirk with muscles which didn’t stand out like those of a bodybuilder, but glided beneath tanned skin.

If things had played out differently last year, Khan wouldn’t have minded taking the young man for himself. Whether inferior or not, the super-human recognized beauty when he saw it. During his life back in the 20th century, he’d bedded both men and women, so there would have been no reason not to have claimed Kirk sexually. But after all that had happened during his desperate bid to save his crew, Khan only wanted one thing: to squeeze the life out of Kirk, to beat him to a bloody pulp before breaking his neck.

This damn boy had been responsible for raising his grief to new heights: the loss of his family, the
humiliation during the so-called ‘trial’, being forced back into cryosleep – an unpleasant and painful process – only to be once more revived and find himself again used as a damn lab-rat, kept in a catatonic state, sometimes aware of his surroundings, sometimes not. There was no peace for Khan now, no escape from all the grief and pain the loss of his loved ones had caused. It was now a constant ache in the depths of his soul – if he even had one – to know that he had failed his crew and that he was now utterly alone in this whole universe, the last of his kind. He had failed those he held most dear, after believing he’d finally brought them to safety. Kirk and his damned half-breed Vulcan-friend had tricked him and murdered his family!

All good the looks, all notable attributes that the young man possessed were meaningless; Khan would make Kirk suffer as he had for the last two years. He would have James Kirk begging for mercy before the night was over!

In the meantime, Jim’s mind was racing like a starship in warp drive while he held the Augment’s piercing gaze. This was no dream, this was real! Khan was indeed here, only four or five meters away from him, and even though Kirk didn’t notice any weapon on the super-human, he also knew Khan didn’t need one; the man himself was a weapon. Jim’s gaze shifted for a moment, glided over the figure of his adversary. Clad all in black – well, Khan did have a penchant for the dramatic – and wearing a long coat, the super-human looked similar to when Jim had first seen him back on Qo’noS. But this time, there was no determination in the depth of his pale eyes, only hate, hate and the promise of a very painful death.

Jim’s phaser was on the table in the living area, his communicator… Well, it was somewhere near the replicator, meaning it was reachable. He only had to close the distance, take it, and then run like hell to the door, alerting security. Maybe he could make it. Maybe he could outrun his enemy, but the logical part of him – that part which had grown a little since Spock and he had developed a deeper friendship – told him that there was no chance to escape. Whatever he did, he’d be dead!

Khan had watched the young captain, knowing exactly what was going through his mind. “No snide comments, Kirk? No bravado? Don’t tell me that seeing me again is enough to root you to the spot. Where is your courage?” His voice was laced with soft mockery – and it finally tore Jim out of his state of shock.

“How the hell did you escape?” he gritted out. “Why are you not asleep in your cryotube, sweetly dreaming of tormenting others?” Jim knew it wasn’t wise to provoke the Augment; Khan’s demeanor so far was all calm-before-the-storm, just like the weather outside, but, like so many times before, Jim’s mouth was quicker than his brain.

“How ‘sweetly dreaming’?” echoed Khan, while he took a single step forward, enjoying Kirk’s short flinch. “Sweetly dreaming of what, Captain? How your precious Starfleet used and abused me? How you betrayed me – you, and your damned Vulcan? How you two took everything I was living for away from me?” His voice lowered to a dangerous growl.
The first sheet lightening of the approaching thunderstorm flashed through the darkness outside of the windows, followed by a rumble in the distance. It distracted both men for only a second, then Khan glanced back at Kirk and saw that his opponent had moved slowly to the left, towards the replicator. “Looking for this?” he asked casually, and lifted his right hand.

Jim tried very hard not to give away the rising dread he felt as he recognized what the Augment held in his long, elegant fingers: his communicator! And as Khan showed him what he carried in his left hand, Kirk took a deep breath. It was his phaser. Damn it! Khan had to have been in his apartment for quite awhile to have found the only two things which could – maybe – have helped Jim out of the mess he now found himself in.

The smirk Khan gave him sent another shiver down Jim’s spine, before the enhanced man whispered, “Do you want to know what I have planned for you, dear Captain?” He closed his fist tightly around the communicator. Jim’s eyes went wide as he heard the small device crack beneath the inhuman pressure of the Augment’s fingers. With a smooth gesture, Khan threw the broken communicator at Kirk’s bare feet – and the fighter in Jim awoke.

“Hey, that thing was expensive!” he protested with false indignation. “Didn’t your mother ever teach you not to touch other people’s stuff?”

“I had no mother, Kirk, not in the way you understand it,” came the icy reply, and Jim cocked his head.

“Bad childhood? Well, that explains a lot.” With growing unease, he watched Khan hurl the phaser into the entrance hall while fixing Jim with a glittering stare, before taking another step in Jim’s direction. Every movement of the Augment’s lean body revealed only one thing, he was preparing to strike. Jim gulped. He knew that he stood no chance against the advanced strength of the former dictator who looked at him like a predator would prey. Carefully, so as not to hasten the attack, Jim lifted both hands in a calming manner. “Right, listen, why don’t we discuss this like the adults we are? I mean, come on, how old are you really? Thirty-two, thirty-three? And I’m twenty-six. So, technically, we both count as grown-ups; we can be reasonable and…”

“I don’t remember your being ‘reasonable’ on Qo’noS,” Khan hissed.

“Well, you really pissed me off when you killed the man who’d been like a father to me!” Kirk snapped, knowing exactly what the Augment was referring to. Jim’s control had slipped as he punched Khan over and over again. “And it wasn’t like I even hurt you; you looked fine, while my arm was sore for days after that.”
“Yes, it was quite amusing, watching you tire yourself out by trying to beat me into the ground. But tell me, Kirk, after that... *performance*, would you call yourself ‘reasonable’?” Khan taunted, while he stripped his coat off.

Jim bit his lip. Maybe the chit-chat was calming the rage that seemed to burn within the super-human, so he replied, “Well, to be honest, some of my superior officers would certainly agree that I am not as reasonable as I should be.” He watched Khan drop his coat onto the floor. “But... that’s me, and I...”

“Yes, that is you, Kirk. And now you will pay for what you did to me!” His voice became even deeper – and deadlier. “I hope you enjoyed your last day, because you will not see the sun rise again!”

Realizing that the last few minutes were only a grace period that had now come to an end, Jim was barely able to react as the Augment closed the distance between them with lightning speed. Kirk could feel Khan’s fingers grazing his left shoulder and right arm as he backed away. Acting on pure instinct, Jim rammed his fist into the super-human’s abdomen and ducked beneath the long arms, kicking at Khan’s shin. That proved not to be the best of ideas, as he was still barefoot and only managed to injure himself, while the Augment didn’t even sway. Dammit!

Kirk reached for the glass of scotch and threw it directly at his adversary’s head, but Khan’s reactions were too fast; he simply slapped the glass out of the way before it reached him, sending it against the wall. Scotch with soda rained onto the carpet. But, Jim’s brief attack distracted the super-human long enough to give Jim the chance to move away slightly. Realising that a murderous Augment with lightning-like reflexes stood between himself and his phaser, Kirk decided on another tactic.

He ran for the living area to grab anything that he could use as a weapon. He heard Khan directly behind him, and dove over the sofa, tensing his muscles. The impact with the floor hadn’t been as bad as he’d anticipated, and Jim was on his feet before the Augment could round the sofa. Gripping the side table, Jim lifted the furniture and hurled it at his nemesis. This time, the attack elicited a grunt from Khan, and Jim was able to kick the heavy coffee table – bare feet be damned – in the direction of the Augment, who was about to leap at him, sea-colored eyes wild with rage and a snarl on his lips.

The coffee table stopped Khan – if only for several seconds – then the furniture flew through the room and landed with a loud crash against the far wall, leaving a large dent, before falling to the ground. The noise of the table was accompanied by thunder rolling outside through the sky outside.
“Holy shit…” Jim gasped. The table was made of solid metal and was topped with a marble slab. Two men had carried it into the apartment, sweating like horses when they were done – and this crazy criminal threw it around like a pillow.

Kirk didn’t waste more time considering the unnatural strength of his enemy; he’d already witnessed it before on Qo’noS, and again on the bridge of the Vengeance. In the blink of an eye, Khan was upon him, and Jim did the only thing he could do. He fought back. He would not go down without a fight. He knew that there was no chance to come out of this alive, and that his resistance would only add fuel to the already blazing fury of the Augment. But if Jim had to die, he would not make it easy for Khan.

For several moments they exchanged blows, but as Khan blocked his fists with one arm and head-butted Jim, then swept his legs away with one well-targeted kick, it became clear that the enhanced human was only toying with him. Jim lost his balance but was able to get a good grip on Khan’s shirt, pulling the other man with him as he went down. The weight of the slender, though heavy Augment pressed the air out of Jim’s lungs, and before he could react, Khan had already regained control, straddling him and aiming his fist at Jim’s face. Jim could feel a puff of air whiz past his cheek as he avoided the blow; his enemy hit the carpet where Kirk’s head had been a second ago. But the way he’d moved had shifted Khan’s target to his belly.

It hurt!

It really, really hurt, and for a moment, Jim saw stars, then he blindly hit back – completely aware of the fact that this was all just delaying the inevitable. He saw the blazing eyes above him, felt the deadly rage of his adversary radiating in waves off him, and with growing despair, Jim frantically tried to break free.

All for naught.

Blows found his shoulder and his chest, creating a nasty déjà-vu; Khan had thrashed him like this on the bridge of the Vengeance. However, this time, the super-human avoided Kirk’s head, but only because he wanted him to stay conscious – conscious enough to realize what was happening to him – that he was about to be beaten to death. Fear like he’d never felt before gripped Kirk, a deep, all-consuming fear that reached for his heart with an invisible icy fist and squeezed.

“Khan, stop it!” Kirk gasped and received another punch – directly to his chin. It wasn’t hard enough to break bone, but it made him dizzy, and he tasted blood. “For God’s sake, get a grip!” Kirk shouted with a high edge to his voice that belied his terror.

“As you wish,” the Augment snarled, and grasped Jim’s scalp and aimed with his other hand, this time for his nose. Somehow Kirk managed to catch Khan’s arm with both hands, while the grip in
his hair became unbearably painful. Still, the young Starfleet officer concentrated solely on restraining his nemesis’ fist.

“Do you really think you can stop me, Captain?” his attacker growled, tearing his arm out of Jim’s grasp, ready to lunge at him again.

It wasn’t Kirk who prevented the Augment’s next blow, but a loud knock at the door, followed by an angry, “Young man! What’s all this hellish racket?! Are you having a boxing match in there?”

Jim and Khan stopped mid-fight, Kirk in sudden relief, Khan in irritation. Then, seeing the look in the deep blue eyes of his adversary, Khan clapped a hand firmly over Jim’s mouth. The heated glare he received would have amused him if he hadn’t been so furious.

“Mr. Kirk? Is everything all right?” came the voice of the older man outside of the door again, and the super-human pressed his lips into a thin line before he glanced down. Kirk had started to squirm again, clawing at the hand that gagged him, and Khan couldn’t help but respect the fighting spirit of his adversary.

Bringing his face directly beside Jim’s he whispered, “Tell him everything is all right.”

Kirk stilled and his eyes shot daggers at him.

“One wrong word, the wrong tone of voice, and I’ll be forced to kill him, too,” the enhanced man added quietly.

Jim’s breath left him – damned bastard! – and for a moment he pondered his options, only to realize that there weren’t any.

“Mr. Kirk?” Concern echoed in the question that sounded through the closed door.

“This is the only warning you’re going to get,” Khan murmured, and fixed Jim with a last piercing glance before removing his hand, ignoring the tingling sensation in his palm where it had been sealed over Kirk’s mouth.
Jim knew that Khan was deadly serious; he would kill Mr. Arnheim, his neighbor, without hesitation if Jim didn’t do exactly as he’d been told.

Moistening his lips and ignoring the strangely pleasant taste Khan’s fingers had left, he turned his face towards the entrance hall, cleared his throat, and called, “I’m sorry, Mr. Arnheim, I accidentally knocked over my coffee table.”

For a moment there was only silence, then came the reply, “Your coffee table? Are you okay, m’boy?”

Was he was okay? No, he certainly was not! He was lying helpless beneath his mortal enemy, who was about to finish him off in a no doubt very brutal way.

Swallowing down the impulse to call for help and feeling Khan’s hold on him tightening – as if the Augment had read his mind – Kirk answered breathlessly, “Yeah, I’m okay. I redecorated my apartment, that’s all.” Another rumble of thunder sounded from outside, and Jim asked himself if Mr. Arnheim would complain about that, too. He waited, hoping the old man would get the hint and leave before Khan lost his patience.

“Oh, okay, but keep it down, kid! Some of us have to get our beauty sleep. Good night,” Mr. Arnheim said. With a sinking feeling in his stomach, Jim realized that the old man was leaving, and with him, Jim’s last chance of rescue. But there was no way around that; he wouldn’t risk Arnheim’s life to save his own.

“Good night” Jim answered, desperation rising.

“Well done, Captain.” Khan’s whisper turned Jim’s attention back to the deadly problem at hand, and for just a moment, both men simply looked at each other – and with that came the realization of how close they really were. The Augment still straddled the younger man, and this, Jim had to admit, felt quite suggestive.

All of sudden, Jim became fully aware of Khan’s body heat slipping through his clothes, while his foe’s hot breath washed over his face. It left a tingling sensation that shot straight to a region of his body Jim really didn’t need to respond now! Curse the damned adrenalin! And it wasn’t like he’d never been interested in men before, even if he’d no real experiences with the same sex. And somehow, Jim had to admit, feeling that attraction for an enemy was kind of hot. Though, perceiving this while said enemy was about to kill him was also kind of creepy.
A lock of Khan’s dark hair had fallen over his forehead, but the animalistic fury in his eyes had at least lessened a little bit – exactly like his vice-like grip on Jim’s scalp – and Kirk felt a stirring of hope. Maybe the interruption had helped the super-human regain some control, maybe he had calmed down enough to be reasonable and…

Khan’s next words burst Jim’s hope like a bubble.

“Shall we continue?”

The cruel smile that accompanied this question shot a bolt of terror through Kirk and he reared up. With all his might, he tried to throw the Augment away from him, but the only thing he accomplished was bringing his groin into closer contact with Khan’s. And the fact even enhanced super-humans had normal body functions like any other mortal was proven a second later, as Khan took a sharp breath and his eyes widened.

Using the distraction, Kirk rolled aside and escaped Khan’s hold on his scalp. But he didn’t get far before finding himself trapped again between the floor and Khan’s lean body.

Jim growled in frustration as he fought against his captor. Even if he was weaker than the former dictator, he would fight Khan for as long as he could. He didn’t stop wriggling like an eel, fighting with such fierce determination that he actually managed to elbow his adversary, which earned another grunt from the super-human. Grim satisfaction flared up in Jim. Writhing and squirming with all the strength he could muster, he tried to free himself from the long arms which were wrapped around him like steel, while a strong leg was draped over his calves and immobilized them.

Khan tightened his grip around Jim’s torso, effectively stopping all chance of escape. “Give in, Kirk! It’s over,” he heard the baritone growl near his ear, but Jim didn’t quit. Instead of surrendering, he furiously struggled, not noticing that he was pushing the lower part of his body against that of his nemesis in the process.

Khan took another sharp breath as his body once again reacted; his trousers began to become tight. He knew that the boyish officer didn’t mean to excite him, but while squirming around like they were, contact was unavoidable. And as Kirk once again writhed, and his posterior bumped against Khan’s groin again and again, another hunger besides that for revenge began to spread through the Augment.

Against his will, Khan’s mind turned from being fixed on his opponent with hostility to something else he had successful ignored until now. He could feel the silky skin of the younger man’s chest and arms beneath his hands, a thin sheen of sweat coating it. He sensed the rapid heartbeat, heard the
harsh gasps, felt the strong pulse in Kirk’s neck as he bent down and brought his lips once again near the captain’s ear. The smell of Kirk’s shampoo mixed with the captain’s own scent – a pleasant combination of tangy grooming products and musk – was intoxicating.

Once again, Jim was far too aware of his enemy’s proximity, of Khan’s breath on his neck, and of the super-human’s arms, from which he couldn’t escape, while he felt the rapid beating of his captor’s heart at his back.

And again, for a long moment, both opponents stilled. Then Khan’s voice rumbled in his ear, “Will you surrender now?”

What?

Surrender?

To what? To being beaten to death?

“You must be crazy if you think I’d give in and let you kill me without a fight,” Jim panted, and the low dangerous chuckle he received chilled him to the bone.

“Ah, I didn’t expect anything else from you, Captain!”

Jim turned his head as far as he could and threw a hateful glare over his shoulder. Khan’s face was near – far too near for his liking – and he wanted to punch the Augment, but both hands were still trapped, and he was unable to even move his legs; there was nothing he could do. Khan was like a living force field, wrapped all around his body and making it impossible for Jim to move any of his limbs.

“Go to hell!” Kirk snarled, realizing with growing fear that he couldn’t put up any further resistance. Khan was right, it was over! Jim was utterly and completely at his mercy.

“I have, Kirk, twice, even,” the former dictator sneered, ignoring the feelings the young man beneath him had woken in him. As tempting as it was, Khan would not give in to this unwelcome desire. Kirk deserved the most painful death possible and nothing else. “Your Vulcan broke my arm last time we met – maybe that’s a good place to start with you?” he suggested and the grip of his fingers around Kirk’s left arm tightened.
Jim bit his lip to prevent himself from crying out. He was in the clutches of a man who could literally crush every bone in his body with his bare hands, and – if Jim had correctly understood anything about the way Khan had destroyed his communicator – that was exactly the way the Augment wanted him to die. And it began now. Fear exploded deep inside him, but Jim wouldn’t give his foe the satisfaction of showing it, even if his heart and soul were crying out for help.

Khan sensed the muscular, but slightly smaller body tremble ever-so-softly, but still his captive refused to acknowledge defeat. Kirk was too stubborn for that, too much of a fighter. He watched how the younger man bit his lip, drawing blood, and just for a moment Khan thought of how those lips could be put to better use – and then he smelled it, the familiar scent of an Augment’s blood – not as strong and pure as it was within Khan’s people, but still clear enough to catch the superhuman’s notice.

What had the young woman who spoke Klingon cried out as she materialized on the garbage transporter where the half-breed Vulcan and he had been battling? That he was needed alive to save Kirk? Khan had lost consciousness after she stunned him several times, and the Vulcan had beaten him senseless; he’d only come round in Starfleet Headquarters’ prison several days later. But Khan didn’t need to be a genius to figure out what the woman had meant. They had used Khan’s blood to heal Kirk – from whatever had befallen the captain.

And, as it seemed, a small amount of his blood still flowed in the captain’s veins, giving the young man unnatural strength. New anger flared in the Augment, while something in his mind whispered ‘He is mine’. Khan brushed aside the sudden burst of possessiveness and frowned. ‘Not just betrayal, but also theft! So much for your ‘nobility’, Kirk!”

“You’re one to talk!” Jim snapped, ignoring the inner voice that screamed at him to shut the hell up.

Khan only glared at him before murmuring, “Tell me, Captain, how does it feel to know that you owe your well-being a man you ‘nobly’ sent to a trial that was nothing more than a farce?” Kirk frowned. “How do you feel when you wake? Refreshed, strong, content – even if you’d barely had any sleep? How does it feel to suddenly have heightened senses, knowing perfectly well that all those enhancements are gifts from a ‘criminal’ you loathe?”

“What are you talking about?” Jim demanded, firmly telling himself that the shivers running down his spine were not caused by Khan’s rumbling voice. The voice he not only could hear, but could also feel vibrating along his nerves. No, certainly those tremors were caused by the sheer mortal terror that was eating him alive. The grip on his arm had not loosened, but it hadn’t snapped the bones either. Though it was only a matter of time before the Augment would tire of toying with him, and squash him like he had the communicator.
“I am speaking of the blood your doctor-friend took from me to save you!” Khan snarled, even more annoyed with the innocence displayed by his captive. He watched those sky-blue eyes grow wide. Misinterpreting the younger man’s reaction as denial, he hissed, “Don’t lie to me, Kirk! I can smell it!” His eyes seemed to burn in anger, and with the unwelcome desire that the close proximity had stirred in him, he acted without thinking. “I am sure I even can taste it!”

Giving in to the strong impulse that subdued his usually-controlled mind, Khan bent down and pressed his mouth forcefully over the small cut in Jim’s bottom lip, drawing blood, while his tongue darted out to lick the small drop away the moment Kirk gasped in shock.

The second his captive unintentionally provided even more unwanted stimulation, something that felt like an electric bolt shot through Khan’s body, and he knew he’d made a fundamental mistake. Yes, he could taste his own essence in the drop of the captain’s blood, but that was nothing compared to the taste that lay beneath. His senses were overwhelmed by the flavor of the young man’s mouth, of the soft lips, and the way Kirk’s body tensed up.

The previously-unacknowledged lust began to mix with the anguish and hate Kirk had sparked in him the first time Khan had laid eyes on him – at the Daystrom building, as he’d attacked the meeting of the commanding officers with the stolen ship. At first he had ignored the blasts of the phaser-rifle which were shot at his jumpship from a window; the weapon couldn’t seriously damage his spacecraft, but the sheer courage his attacker showed had demanded respect. And, as he’d thrown a glance at the man who’d been foolish enough to try to bring down the jumpship with nothing more than a phaser-rifle, Khan had seen only a shape – at least at first.

Later, after his opponent had somehow managed to destroy one of the ship’s engines and he had been forced to flee, Khan had taken a closer look at the man who’d come the closest to stopping him. All he had seen was a young handsome face, blond hair and a pair of blazing blue eyes – the same eyes which had stared at him with awe, fascination, and astonishment when Khan had brought down an entire Klingon patrol and revealed himself to the three Starfleet officers who were cowering in the dirt. At first, the fury in which Kirk had lashed out at him a minute later had surprised Khan, then, he had recognized his attacker.

As Kirk stood before the barrier in the Enterprise’s brig and displayed the barely-tamed wrath he’d felt towards him, Khan had revelled in the strong passion this Starfleet officer possessed, a passion he’d, at the time, fervently wanted to direct down a completely different path. But after all that occurred in the wake of their meeting, Khan had dismissed any kind of sexual attraction he may have felt towards Kirk.

Until now…

He had fallen into a trap he’d not anticipated as he bent down to prove to his captive and himself that
his blood was now flowing in Kirk’s veins. The instant Khan’s mouth met that of his young nemesis, the suppressed lust flared again, racing through his being and settling in his stomach. It welled up beneath his skin and rushed heatedly to his groin. Kirk struggled again, which teased Khan’s already hardening flesh even more. His instincts took over. Rolling Jim over, he pushed himself firmly against him, his mouth almost devouring the younger man’s.

The shock that had surged through Jim as the Augment covered his lips with his own was beginning to wear off, when Khan’s tongue entered his mouth.

That…was so not happening!

No!

Not here, not now, and not with Khan, of all people!

The Augment’s hot breath washed over Jim’s face, his arms and legs still holding him close. Then Khan slid over him, forcing Jim’s hands above his head and pressing him down with his weight, while Khan’s lips attacked him mercilessly.

Slowly Kirk realised that their combat had taken a completely different turn as Khan deepened the intimate assault. He tried to push the invader out – and a flash of hot white energy lashed through his whole being the moment his tongue touched the Augment’s. Jim could feel himself hardening even more, and the adrenalin and bottled-up fear searched for a way to escape. The low growl that rose from Khan’s throat was enough to throw Jim into action again. He wouldn’t give in – ever! And even though the violence had changed into something new and completely unexpected, he would fight back as well as he could. At least in this department he might stand a chance against the enhanced man, and could even outdo him!

Khan groaned quietly as he felt Kirk responding to him. Their tongues battled and twined, teeth scratched at the sensitive skin of their lips, gasps were swallowed by each other. Usually Khan would have remained controlled, indeed, controlling his partners completely, but as a certain part of the younger man’s anatomy made itself even more evident, a wave of pure lust rushed through him which cracked his composure.

He would have James Kirk! He would take him again and again, until the captain was out of his system, and only afterwards, would he snap his neck.
Khan tore his mouth from Kirk’s, momentarily relishing the sweet, masculine taste, and stared down at his adversary who lay helpless beneath him. Swollen lips, flushed face, heavy breathing, a soft shimmering layer of sweat covering a well-toned chest… Kirk was everything he’d dreamed during his imprisonment aboard the Enterprise. And Khan’s body responded to this now very real sight with a growing erection, the kind he’d not had in years – neither in his own time, nor since he’d been awakened in the 23rd century.

Oh yes, this night would turn out even better than imagined! The super-human’s natural demand for domination, the too-long suppressed sexual need, and his burning greed for his insolent, lovely foe wouldn’t allow him any other course! Augments were not only stronger in body and mind, their feelings were also more intense than those of normal humans.

Jim was out of breath and more blood had headed south into his shaft, but he didn’t back down as his nemesis’s eyes seemed to pierce his soul. Even if he didn’t loathe the taste in his mouth, even if his attacker was hot as hell with this savage looks, his now-disheveled ebony hair, and the soft blush coloring his sharp cheekbones, Kirk would not surrender to the sudden desire Khan had somehow aroused in him.

“Get. Off,” he all but snarled, but instead of enraging his nemesis, Khan only smirked evilly at him.

“This is exactly my intention, Captain,” Khan drawled huskily. He let go of Jim’s wrists and rose to his knees, still straddling him.

Jim, never one to miss a chance when given it, reared up again and punched the other man, trying to force him down off his lap. All that earned him was a pleased smirk, accompanied by an amused chuckle, while Khan caught his wrists again.

“So stubborn,” he murmured, twisting Kirk’s arms behind his back without actually harming him, and pulling the young captain against his chest in one fluid movement. “So much fire,” he whispered in Jim’s ear, giving it an almost gentle lick, before he left a wet trail down to where Jim’s throat met his shoulder and bit into the soft flesh. Not too hard, not too soft.

“Son of a bitch!” Kirk gasped, as his body had its own idea on how to react to this new erotic assault.

“I will enjoy your hot temper – especially when displayed in a more…pleasurable way,” Khan all but purred.
Jim thought his heart would leap out of his chest as he felt the hard proof of the Augment’s desire against his own groin. Once again he struggled, which made his enemy hiss, not with anger, but in nameless craving.

“Keep this up, Kirk, and we won’t even make it to the bed.”

“Goddamn it, have you lost your bloody mind?” Jim yelled. “I certainly will not…”

Khan didn’t let him finish. In the next second he was on his feet and dragged the captain with him. Instantly Kirk yanked up his knee to hit him where it would hurt the most, but the super-human was too quick and avoided Kirk’s attack. “Tsk-tsk, Captain, I call that bad form,” Khan taunted with a dangerous gleam in his eyes. Then he lifted his captive and simply tossed him over his shoulder like a sack of potatoes.

Jim thrashed around, kicked, landed some sharp blows to the super-human’s back – and received a slap on his butt as though he were a disobedient child. “Fuck you!” he screamed.

“Language, Captain, unless you mean it literally,” Khan scoffed. “If so, I will consider your offer – after I’ve had my turn, of course.”

Anger and fright threatened to overcome Jim again. “Don’t you dare…” Kirk’s outburst was stopped as he was hurled onto his bed, landing between the blankets and the pillows with a huff. Before he could even start to sit up, Khan sat on him again and stripped out of his shirt, ignoring the punches Jim landed on every part of his body that he could reach.

Rain began to pelt against the windows as the skies opened and the thunderstorm finally broke loose, mirroring the turmoil Kirk was going through, as he found himself in a position that was suddenly far more bizarre than it had been before. The flashing lightning made Khan’s sinewy torso shine like alabaster, the muscles of his arms flexed as he caught Jim’s wrists again, and tied them to the headboard with the sleeves of his shirt, leaving the young man nearly helpless.

For several moments Kirk couldn’t conceive of what was happening to him. Here he was, tied to his own bed with his most deadly and – god alone knew why – very horny nemesis upon him, who wasn’t wasting any time in claiming his prey. Jim’s breath caught in his throat as Khan’s long, warm hands spread open on his chest and began to roam almost softly over his upper body. And to Jim’s utter horror, heat began seeping into his skin wherever the Augment touched him, leaving tingling trails which found their way to the pit of his stomach. A further gasp escaped his lips as the super-human ground his groin against Jim’s, eliciting a wave of unwelcome yearning in the depth of his body.
That was just wrong!

That was so completely and entirely wrong!

“Stop it!” he groaned, pleading to all higher beings of the whole universe to save him – not from his enemy, no; but from the flaring, crazy desire that clearly had lurked on the edge of his consciousness for some time.

“I have not even begun – not really,” the former dictator murmured, encircling Jim’s nipples with skilled thumbs, eliciting a low moan from his captive. He saw the fear in the striking blue eyes of the young Starfleet officer, but guessed rightly that it was the fear of his own body’s responses; Kirk was already hard and the enlarged pupils and the soft tremors gave him away. The captain’s mind could fight all it wanted, but his body spoke another language.

Jim gulped as he registered the lustful gleam in the Augment’s gaze and moistened his lips, a gesture that truly tested Khan’s control. “I thought you wanted to kill me,” Kirk whispered, asking himself how it was even possible that their deadly fight had changed into an erotic battle.

A slow, predatory smile curved the succulent lips of the man who was about to ravish him. “And I will,” the super-human replied quietly, his voice lowered to a sinfully deep purr. He bent down and Jim gasped anew as their bare chests finally made contact – warm, tense, and delicious. Bracing his weight on one forearm beside Jim’s head, the Augment’s fingers slipped into the blond strands, no longer brutal but almost gentle. “I will kill you, Captain, over and over again,” Khan stated, brushing his mouth over that of the younger man, while the fingers of his free hand cupped his hip. “Tell me James Kirk, are you familiar with the French phrase ‘petite mort’?”

TBC…

Chapter End Notes

Well, even a brilliant super-human can go astray and fall prey to his own suppressed wishes. Maybe this could be a reprieve to our captain, but – on the other hand – Khan is no one you can deal with easily. There remains so much between them, but desire and passion left no room for clear thoughts.
In the next chapter you will learn what happened to Khan in the past year, how it comes that he is even awake and where he escaped from. And – I promise – you are going to need some cold refreshing drinks, because the Augment doesn’t make empty threats. He didn’t mention ‘petite mort’ for nothing and the whole thing will be HOT!!

I so hope you liked the first chapter and I am more than curious what you’re thinking, so please, please give some feedback.

I’ll try to publish the installments on a regular basis.

Have a nice week,

Long life and peace.

Yours, Starflight
Forbidden Passion

Chapter Notes

Hi once again, dear readers!

At first I want to say ‘thank you’ for the feedback and your interest. I was hesitant to publish the story because of English no being my mother-tongue, but seeing your first reaction to the whole thing, I am glad that I dared to go online.

As I warned you in the epilogue of the last chapter this update is going to be very hot – meaning, it contains adult stuff. So if you are under-age, just return back to the main-page!!!

For all you others, I can only give you this one piece of advice, Just fetch a cold beverage and be aware that you need a very cold shower afterwards, because the attraction between such passionate creatures like Jim Kirk and Khan has risen to level both didn’t expect (and you, too, I hope).

BontanyCamoes, The connection between our hero and anti-hero has many roots, which will be revealed during the story (wink).

Cerridwen, Yes, we are on the same page here, I already asked myself, why there weren’t there more victims in London? That wasn’t real. After all, we’re no longer in the 60s or the 80s, when brutal reality simply wasn’t shown on the TV, so why were there ‘only’ 42 victims and the streets were clean? There must have been a warning before. But regarding Khan’s attack at Daystrom and why he didn’t kill Jim, Well, I do think at this point in time he 1) was only interested in shooting the admiralty, 2) Jim was lucky, or 3) Khan didn’t register him as a threat but only as a puppet of those who lead Starfleet Command, until he understood Jim’s true role. Which of these explanations will take root in my story is a secret I just don’t want to reveal (smile).

Mina and Anya, I also want to give you my thanks for reviewing this story. It really helps a new/old author to go on!!!

Enough with the preamble and off you go into the 23rd century.

Live long and prosper,
Chapter 2 – Forbidden Passion

Professor Doctor Matthew Dashwood switched off his PADD, shut down his computer terminal, and rose. Slipping off his white lab coat embellished with the golden Starfleet emblem, he threw it over his desk chair, and left his office. It was quiet in this exclusive part of the Starfleet Laboratory for Science and Healing – shortened to LSH – which was built underground in the southern part of Nevada’s desert, not far from the long-ago abandoned place known back in the 20th century as ‘Area 51’.

The lab specialized in research to find cures for the most dangerous diseases found in the Federation of United Planets, and therefore had been separated from the main center in Starfleet Headquarters. The closest civilized area next to the facility – which happened to be Las Vegas – was more than eighty miles away, and the transporter room at the center’s ground level was authorized for use only in emergencies; otherwise the staff had to travel by cyber-vehicle.

The highest operational standards were essential for survival – not only for the safety of the employees, but also for that of the whole planet. If anything went wrong, if even one organism came into contact with the outer world, the consequences could be disastrous.

So it was no surprise that security was some of the tightest within Starfleet on Earth, and even Dashwood, being the head of this facility, needed more than ten minutes to reach his own office or the laboratories every time he re-entered the facility.

Walking down the corridors and passing another sealed door, Matthew’s dark eyes found the security guard that was deployed in front of the door which, at the moment, led to the most important section of this facility. Greeting the professor, the guard stood at attention, and watched the scientist enter the lab. Only then did he relax.

Dashwood looked around. “Ryan?” he called, but didn’t see his assistant Ryan Brown at his workstation. Frowning, his glance wandered to the barrier made of an especially strong, transparent glass that was additionally secured with an electrical field. He stared at the lonely cryotube that sat in the small cubicle which held Prisoner 3158-17-215.
Everything seemed to be normal. The airlock to the room was closed and the code-lock showed a green light, meaning that everything was in order. But still...something wasn’t right. It had nothing to do with the fact that his assistant had left his station – everyone had to use the restroom from time to time – but a nagging feeling settled in the professor’s mind.

Stepping to the hatchway, Dashwood entered the code, placed his hand on the fingerprint-sensor, let another sensor scan his retina, then unlocked the door by giving a voice-analyzed password.

Carefully, he entered the cubicle and approached the cryotube. Confused, he only recognized now that the transparent port was frozen; proving that the cryogenic process had been driven up to its full capacity.

“What the hell...?” the scientist whispered. Prisoner 3158-17-215 should not be in full cryosleep; they couldn’t use him if he were completely frozen, but his vitals looked to be reflect the lowest level possible to hold him in that special kind of coma. Which idiot had put the subject back into full stasis? You couldn’t safely freeze and unfreeze a person over and over again. At some point the body wouldn’t cooperate with the difficult procedure any longer – even if said body had been genetically engineered to be stronger than a normal human. Unimaginable, if all the work of the last four months would be for naught because the valuable subject wouldn’t survive another awakening.

With a scowl on his face, Dashwood closed the distance and looked down on the occupant whose face could be seen through the observation window – and backed away with a yelp. The man he’d seen was not Prisoner 3158-17-215, but Ryan Brown! His assistant was lying in the cryotube instead of the most dangerous man on the planet – if not in the whole Federation!

With a frantically beating heart, Dashwood left the room, not bothering to close the heavy door. He ran through the lab, tore open the outer door shouted at the guard, “RED ALERT! The prisoner has escaped!”

The security officer stared at him unbelievingly. “Professor, that’s impossible! I haven’t left my post for one minute since I’ve been on this shift and...”

“He. Is. Gone!” Dashwood’s voice became shrill, and it was enough to spur the guard into action. He stormed away to hit the emergency button, drawing his phaser. A second later, the sirens started to blare; the lights in the corridors changed from a comfortable pearl-white to an alarming red.

Another door across the corridor opened and an Andorian looked at Dashwood, his dark eyes large
in the blue face. “Matthew, what happened?” he asked in the typical smooth, gentle voice of his race, while his antennae curved towards his human colleague.

“The worst thing possible!” the professor answered, his round face white as a sheet. “The prisoner’s escaped!” He raced down the corridor, the Andorian at his heels.

“How did he manage that?” the alien asked, concerned. “He was comatose, securely locked away!”

Dashwood shook his head. “I have no clue, Shran. Ryan’s now lying in the cryotube and…” He stopped as the security chief approached. The professor quickly gave him a short report about the situation. When he’d finished, the chief cursed, pulled out his communicator, and gave curt instructions before turning towards the scientists again. “Is he contagious?” The two scientists shook their heads and the officer sighed in relief, then growled, “Don’t worry, gentlemen. He can’t be far away.”

“And for all I know he could have escaped hours ago,” Dashwood interrupted him. “Ryan wanted to run another series of tests and started to work on them in the early evening – before the beta shift finished for today and left for the weekend. Obviously, the prisoner used this opportunity to blend in with the employees and had already left the –”

The officer frowned. “He’s been heavily drugged for more than four months. He must be weak and therefore…”

Hollow laughter erupted form Dashwood’s throat. “The prisoner may be weak, but he regenerates many times faster than even a Vulcan. He may very well be back to full strength by now!”

The security chief took a deep breath and nodded. “Then we should check every corner, every crawlspace, and every supply duct in this facility, as well as the transporter logs before we contact Starfleet Command.”

He set his phaser to ‘kill’.

Dashwood gasped when he saw it. “Are you crazy? We can’t kill him – not before the tests are complete, and the results –”

“Your lab rat is a goddamned super-human who kills without thought and is impervious to any stun
setting,” the chief interrupted impatiently. “If it comes down to either him or me, you can be damned sure which option I’ll choose!”

“Commander, listen…”

The officer fixed him with a hard look. “This is no longer your responsibility, Professor; the prisoner must be re-captured or killed. Otherwise, you can report to Starfleet Command that the terrorist Khan is not secure at the facility on Gama 12 with the other freaks, but has escaped from your lab and is now roaming the planet, certainly seeking revenge on those who brought him to justice!”

ST***ST***ST

The chief was right. Said Augment was burning to get revenge, but his desire for vengeance had taken another turn than originally planned. And no one was more surprised about this turn than the two men in the apartment on the 48th floor of a San Francisco skyscraper.

Jim stared with wide eyes into the striking face above him.

Petite mort…little death…

Of course he knew what that phrase meant. “No,” he whispered. “No, you will not –”

“I certainly will,” Khan interrupted him and nipped at his jaw for a moment, letting his hand slide from his captive’s hip upwards along his side, his nails scratching softly over smooth skin. “I certainly will take you in any way possible.” His mouth traveled to the sensitive spot beneath Jim’s ear. “I will make you scream, Kirk,” Khan growled before he sucked not-too-gently at the smooth skin of the younger man’s neck. “You will scream until you’re hoarse – not in pain, but in pleasure.” His fingers traveled down again, found the waistband of Jim’s sweatpants and ghosted just above them in an alarming manner.

That was the moment Kirk really became scared – very, very scared. It was simply too much! There mere thought that Kahn was going to touch him in the most intimate way woke an unknown anguish in him that broke out of him in a burst of new resistance.

“Take your hands off me!” Jim shouted, bucked up and tried to roll away, ignoring that his arms started to protest due to the angle they were forced into – after all, they were bound to the headboard.
A strong but soft hand on his belly stopped his escape attempt, while one long leg slipped over his calves again, immobilizing him before he could turn fully around.

“Stop this nonsense, Kirk,” Khan’s voice was still quiet, which was even more eerie. “There’ll be no escape for you, no way to deny me what I want – what you want too, even if you’re so eager to deny the pleasure you would experience.”

“I. Don’t. Want. This!” Jim gritted out, his face red with exertion and the contrasting emotions which raced through his entire being: fear, hate, yes, but also unwelcome desire…

“Liar!” Khan’s deep chuckle carried a promise of what would transpire in the next hours, a promise that was sealed with another deep searing kiss that heralded Jim’s fate.

If it had been anyone other than Khan, Kirk certainly would had savored the lust that had started to take hold of his senses as the Augment plundered his mouth with the force of the raging storm outside the apartment. Kirk never denied himself a night of passionate bedroom antics, but this was his nemesis, the man who’d come to kill him! It was completely crazy to become excited because his soon-to-be-murderer was kissing the daylights out of him.

As those long, experienced fingers glided into Jim’s sweatpants, the young captain panicked. His mortal enemy was about to reach for the most vulnerable parts of his body and Jim’s survival instincts kicked in once more. Turning his head away from those succulent lips, he panted, “NO! No, Khan, NO!” Jim tried to wrest himself away; his breath hitched in his throat while his heartbeat galloped even faster, driven by another burst of adrenalin. No, he couldn’t let this happen. He couldn’t allow his captor this kind of assault. He was going to be hurt in a most intimate way – or he would be completely undone; two options he refused to accept.

The elegant hand stilled and Khan’s soft lips brushed Jim’s cheek while he whispered, “Calm down, Kirk, I am not going to hurt you, not now and not like that.” His words fell on deaf ears and he realized that the younger man was beginning to hyperventilate. James Kirk was anything but a coward; the Augment had witnessed the almost-foolish courage that drove the captain, but this particular situation seemed to push the Starfleet officer to his limits.

Sliding his free arm around the Kirk’s slim waist, Khan did the first thing that came to his mind to stop the rising panic Kirk felt. He simply waited while tightening his hold on Jim, knowing that the other man would calm down as soon as he felt more secure, that the danger seemed to have passed. He had told Kirk that he wouldn’t hurt him, and he meant it. Now Kirk looked like he was starting to believe that.
Eventually Khan’s idea proved successful. A part of Jim’s mind was aware of the fact that panicking wouldn’t help, that it did more harm than good, and as time passed, Khan did nothing more than hold him. Jim slowly calmed down.

The super-human felt Kirk’s breath returning to a less dangerous level, cocked his head, and regarded him closely. The sky-blue eyes were wide as saucers and almost black with fear, yet his chin was stubbornly set and the reddened swollen lips were pressed into a line. Ah, still fighting! Good!

“Calmed down at last?” he asked, careful not to taunt Kirk too much; there was the chance the younger man would relapse.

A moment later he learned that James T. Kirk was stronger than that. “I know I can’t escape you or what you have in store for me.” His voice was flat, but also full of defiance. “Come on, Khan, do your worst. Go ahead, rape me. I am aware that I can’t stop y—”

“I will not rape you, Kirk!” The enhanced human’s features were, all of sudden, very serious and indignant. “I’ve done many things others would call a crime, but I’ve never – and will never – rape anyone. Even I have my limits – and I will not lower myself on the level of…” He stopped and took a deep breath, and for a moment his eyes flashed with an inner fire that seemed to burn straight into Jim’s soul. Then his control slipped back into place – as far as was possible in his strongly aroused state.

Kirk shuddered, but not entirely with anxiety. To hear that the Augment still had some morality left in him was almost a relief. Nevertheless, as Khan started to caress his flank and chest again, Jim gulped. “You said you wouldn’t…”

His words died as his mouth was once again re-captured in a short, hot kiss, before his foe murmured, “I will not rape you – but I certainly will ravish you. And you are going to want it.”

His hand moved downwards once again, eliciting another gasp from the young captain, as the clever fingers found their way under the waistband of Jim’s sweatpants. To Jim’s dismay, his cock started to pulse with anticipation, while his loins tensed in an all-too-familiar yearning way.

He had the urge to yell at the super-human, to shout to leave him the hell alone, and how Khan could never make him want this, but the Augment’s mouth was again on his, and therefore he could only made a sound of protestation – a sound that changed into a throaty groan as Khan’s hand began to
stroke the whole area around his painfully hardened shaft without actually touching it.

Khan felt the growing tension in the muscular body beneath him, heard Kirk’s sharpening breaths, and he released the swollen lips of his adversary. For a moment, he locked eyes with him, then he nibbled and licked his way down Jim’s throat, grinning as the blood beneath the silken skin pulsed even quicker. Oh, but he would have Kirk panting and writhing in passion within the next few minutes!

“S-s-s-stop it,” Jim wheezed, horrified as he realized that his fear was fading into a new fire, one that burned through his veins and made him melt into the seductive touch.

“You don’t want me to,” Khan growled into his skin, pressing hot, open-mouthed kisses over the toned chest beneath him, savoring the taste of salt and something that was uniquely Kirk. Not giving his captive a moment to comprehend what he was aiming for, Khan reached his first goal and started the next carnal attack.

Kirk squeezed his eyes shut and moaned as the gentle lips of his opponent brushed over his right nipple at the same moment the hand in his pants closed around his already-throbbing shaft. The next flash of lightning from outside shimmered through his closed lids at the same instant another bolt of erotic heat shot through his whole body. It only intensified as Khan began to stroke his most sensitive flesh.

Goddammit! The bastard knew exactly what he had to do to break down Kirk’s resolve without using violence. Jim gritted his teeth as sensation after sensation racked through his being, back and forth between the sucking and biting on his chest, and the experienced hand around his shaft making him dizzy with desire. Khan’s warm breath whispered across his already oversensitive skin, the soft pressure of the Augment’s body on his made Jim notice the bruises from the early brutal blows, but the uncomfortable feeling was fading away as the increasing pleasure seized him. ‘All higher beings of the universe,’ he prayed, ‘please show me mercy!’ Khan knew that he was losing this fight; he would give in and let Khan has his way with him – and in the end, he would indeed want this.

The Augment concentrated on the object of his needs and listened to every sound, took in every flinch that became more and more frantic with each stroke he gently bestowed on his captive. He heard the gasps, felt the growing tension in the other man’s body, saw the beginning of rapture on the boyish features, and attended to the left nipple. He was determined to throw Kirk over the edge, to make him writhe in ecstasy before he claimed him fully – not just to grant his adversary some pleasure when he deserved only the worst, but to demonstrate his domination.

Jim’s determination wore off and he felt the all-too-familiar heat in his belly and how it unfurled slowly but inexorably. He was panting now, fighting a battle he couldn’t win anymore, as his body betrayed him – not like it had after he entered the warp core, but in the beginnings of ecstasy that
whirled through his whole being.

And then it stopped.

Just before the incredible tension exploded into relief, Khan moved away from him, leaving him to tremble in desperate need to be finished off. Acting on pure instinct, Jim lifted his head and glowered at his captor. “Don’t you dare stop now!” he gasped, inwardly cringing how indignant his voice sounded. God, where was the formidable Starfleet captain when he was needed the most?

“Already begging, Kirk?” Khan mocked, but the hoarse undertone revealed his own condition. The way the younger man responded to his purposeful caresses, their proximity, the delightful sight of his stubborn adversary losing control like this – it all boosted the Augment’s already-burning lust to a new level.

Kneeling beside the Starfleet officer, he pulled Kirk’s sweatpants down with one smooth movement, eliciting a mixture of protests and sounds of relief from his captive. Khan hurled the garment away. The predatory smile returned to his features as he finally saw what he’d already felt before: James Kirk was very well-built – in every way!

Without hesitation, Khan straddled his foe again, encircling Kirk’s hips with long, strong hands which he let roam once more over the soft sweaty torso, never taking his eyes of Kirk’s flushed face. He savored the power he already held over him, knowing very well that the captain had to play along, otherwise his condition would be become unbearable.

“Do you want me to continue?” The taunting tone didn’t go unnoticed by Jim, and he would have loved to punch the smug expression off his tormentor’s handsome face, but his hands were – literary – tied, and there was also a certain more urgent matter in terrible need of attention. He really wished he could yell at this infuriating bastard who was doing this to him, but that would only worsen the situation. Whether he liked it or not, he really needed Khan to ‘help him out.’

“Jesus Christ, just finish what you’ve started,” Jim growled, cursing his demanding body for its weakness.

“Didn’t your mother teach you how to ask nicely?” The super-human threw Kirk’s earlier words back at him. He ground his still-clad groin into the painful hard erection of his nemesis, smirking as the younger man arched against him. “Well?” he pressed, while one of his fingers wandered deliciously slowly over his captive’s most vulnerable part. It shimmered in an angry, demanding red.
Jim yelped as the soft touch drove him closer to the edge, but denied him what he craved the most by now. Pride, defiance, and obstinacy could go to hell – if he didn’t come soon, he would lose his mind. His heartbeat was already too fast, his soul was in turmoil, and his body screamed for release. “Do it,” he whispered, adding a bitter-tasting, “please!”

Ah, there it was, the first sweet victory. What could be more satisfying than making his arrogant young opponent to want him – him, of all people? And this was only the beginning; Khan was determined to force his captive to desire him!

A loud moan tore from Jim’s throat as he was once again caught in a gentle, but firm grip as Khan continued his erotic attack. Kirk didn’t care that he’d admitted surrender as he took anything he could get from his tormentor, and was finally driven towards pure rapture, heightened by the subconscious knowledge of the danger he was still in. He groaned as Khan’s mouth was back on his neck, sucking, licking, biting, leaving a mark that would last for days. The burning knot in Jim’s belly unleashed an inferno of all-consuming ecstasy that washed over him like a tidal wave of pure heat. His cry was devoured by the Augment’s mouth which closed over his, while the long, warm fingers milked him until there was nothing left to spend.

At last, boneless and glowing in the aftermath, Jim tried to catch his breath as he lay there, eyes closed and unable to move. Tremors rippled under his skin; the sheer force of the strong orgasm had numbed his mind into a state of heavenly oblivion, while every nerve was tingling. Sweet Lord, that had been one of the most intense sexual experiences he’d ever had, and all at the hands of his sworn enemy!

That was not bad, that was insane!

But Jim didn’t care. Not at the moment, when reality seemed so far away.

Khan rose up and studied his rather unwilling bedfellow, who now looked utterly undone. There was still a blissful look on Kirk’s soft features, his face and chest were flushed, and a sheen of dampness covered his body, mingling with the body-fluid that had erupted from the younger man’s loins. It was a marvelous sight.

The Augment had known that his adversary was passionate, but the fervor Kirk displayed as he was overwhelmed by ecstasy promised so much more. And he would have this – would have him! Now! Khan had always been proud of his control, but it was fading away in pure greed which didn’t allow for further delay. His trousers were painfully tight as he unbuckled his belt.

Jim tried to regain some of his senses, and above all sanity, as his mind started to work again. Yes, he
just had been seduced into sexual submission, but – what was certainly more important – he was still alive. Yet that didn’t mean his captor was going to spare him.

Rather the opposite.

Kirk had a certain feeling in his gut that this wasn’t over; after all, Khan had said this was ‘only the beginning.’ The soft sound of something being set down on his nightstand brought his attention back to reality, and a towel wiped the milky tracks of his orgasm away. Tiredly, Jim opened his eyes and glanced straight into Khan’s face, which hovered above him. Desire burned in those sea-green and blue depths, and Jim gulped. Yeah, he had been right. This was far from being over!

He turned his head to see what the Augment had placed on the nightstand – and his eyes widened as he recognized a bottle of sunflower oil, the same sunflower oil he used to fry steaks. And the reason why the super-human had collected it from the kitchen was clear – and it made Jim shiver. Even though he hadn’t been intimate with a man before, Jim knew how it worked, and that sent a new bolt of dread through him – the fear of the foreign, laced with random knowledge.

“Don’t worry, I already told you that I will not rape you – not like you understand it,” Khan’s deep voice said calmly. “You will be prepared.”

Jim looked back at him again and became still. Only now did he notice that the genetically engineered man had taken off the rest of his clothes. His pale skin glistened in the semi-darkness, contrasting sharply in the lightning flashes from the raging thunder storm outside. Tall, shimmering like marble, slender with slim hips and long muscular legs, and with an unholy fire in his piercing gaze, Khan Noonien Singh stood beside him, the proof of his burning desire – perfect in shape, like the rest of his body – pointing hard and strong toward the skies.

This was the moment Kirk became gripped by a new fear – one that differed strongly from that he’d already endured when Khan had been about to beat him to death. This was mixed with something else – a taste of anticipation that seemed to come out of nowhere, and settled in his abdomen, and whispered through his soul.

His mouth went dry as the Augment tossed the towel carelessly aside and knelt down on the mattress. Swallowing the sudden lump in his throat, Jim somehow managed to whisper a “Don’t…” before Khan slid over him again.

“You know that I will not stop,” the former dictator stated. “What just happened was only the beginning.” His hands slid beneath Kirk’s back, while his lean body covered that of the younger man completely. A groan was on the tip of Jim’s tongue as their naked bodies pressed together.
He shuddered – but not out of revulsion, as it should have been. No. Wherever Khan touched him, his skin seemed to be on fire. And as the super-human’s lips found his again, Jim felt himself accepting the challenge of the clever tongue that invaded his mouth.

It did him no good, the Augment deepened the kiss instantly, which set Kirk’s nerves ablaze, and he felt the tightness returning to his loins.

‘Now it’s official, Jim, you’ve lost your mind. Craving the touch of your mortal enemy isn’t really the smartest thing... You should let Bones check your head – if you ever survive this!’ he thought, then his mind shut off, as his captor’s sensual assault became more aggressive. But still Khan did not hurt him. The caresses flooded Jim’s senses with incredible delight, the feeling of the Augment’s heat at his groin was a delicious dichotomy; the mortal threat which lurked beneath this erotic torment was like ambrosia, and made Jim helpless with lust.

‘Better at everything…’

Khan’s words during one of their discussions aboard the Enterprise a year ago ghosted through Jim’s memories, then reality started to melt away, as the new irresistible seduction began to unfold…

ST***ST***ST

Dashwood watched Doctor Sino Lai-Heng, as he checked Ryan Brown’s vital signs. Brown still lay in the cryotube, still frozen and asleep. It was silent in the laboratory and the attached security room, in contrast to the bustle in the rest of the Nevada-based department of LSH. Outside of this small oasis, the security personnel had spread through the whole area, checked every room, every corner – every place Prisoner 3158-17-215 could be. Taking into account the man’s abilities, the guards were on high alert. But Matthew Dashwood had a certain feeling that they wouldn’t find the subject. Ryan had been in cryosleep for hours now, which implied that the prisoner had been free for the same amount of time.

“His heartbeat and body functions have been reduced to the lowest level possible,” the Chinese xenobiologist broke into his colleague’s thoughts and he took a deep breath. “As far as I can see, he had been choked and knocked down afterwards.” He pointed to a barely-noticeable shadow around the scientist’s throat, and then to a small bump at his temple. “I daresay he should feel lucky to be alive. As far as I had learned, the prisoner isn’t known for showing mercy and kills without hesitation. Why he spared Ryan is a mystery.”
“I think it was the easiest way to hide his tracks,” Matthew mused. “Think, as soon the cryotube is open for more than half an hour and not functioning, the alert is activated. He knew this and needed more time to escape, so he required a living body to place it into the –”

“You think he knew how we secured his cryotube and how to avoid an alert?” Lai-Heng blinked. “How so? He was revived after we made the changes to the cryotube. And he’d remained in an artificial coma most of the time. The few days he was awake but sedated could be counted on one hand, and –”

“And still he managed to trick us all and escape!” Dashwood interrupted him, turning abruptly away. He knew that Ryan Brown couldn’t be brought back from cryosleep so soon after he had been frozen. There should be at last several days to give his body the opportunity to adjust to the dead-like sleep until they could attempt to wake him again. Not until then could the riddle of how Prisoner 3158-17-215 was able to break free be solved – that is, if he hadn’t been re-captured before that.

And Dashwood really hoped that the Augment would be caught soon, otherwise he would have to face the unpleasant duty of informing Starfleet Command – and the new supreme commander who had now been in charge for five months: Admiral Richard Barnett, former head of the Starfleet-Academy. And the admiral didn’t know that the research of the LSH’s department in Nevada held blood samples of a certain genetically engineered criminal from the 20th century, and who should be locked away at Gamma 12.

ST***ST***ST

Nothing in the world had ever prepared Jim Kirk to experience such painful pleasure as he did now. Even though his captor had kept his word and had readied him until he was close to the edge of losing sanity, it still hurt like hell when Khan finally claimed him. The soft burning Jim endured at the beginning, as the Augment used his fingers to prepare him, had changed into a strange but nevertheless nice sensation – until the super-human took the last step. Yes, Khan had applied the sunflower oil which replaced the non-existent lubrication – otherwise the whole procedure would have been agony – but Jim wasn’t used to this kind of sexual activity, and his body fought the strange intruder.

“Relax, Kirk.” The Augment’s voice was a gentle whisper at Jim’s ear while he braced himself on his forearms on either side of the younger man’s head and wrists; wrists which were still tied to the headboard. “Relax, don’t fight. It will be easier.”

Why his nemesis even cared was beyond Jim – after all, Khan had shown up on his doorstep only to murder him! But there was something in that deep baritone that made him listen. Blinking away the tears and pressing his lips into a thin line, Kirk decided to do as he had been told. There was nothing
in the world that would keep the Augment from satisfying his own urges now, and if Jim didn’t want to suffer too much, he had to leave the lead to Khan.

Taking a shuddering breath, he forced his body to calm down – to cooperate – and slowly the throbbing pain changed into an uncomfortable pressure he would just have to tolerate. Khan was more than well-built, and even in his fuzzy state, Jim felt a sliver of gratitude that the super-human had given him time to get used to the alien invasion.

Where Khan found the strength to be patient was almost beyond him. Desire blazed in his veins; his primary instincts – increased by the genetic changes – screamed at him to fulfill his needs and to heedlessly take what he wanted…what he craved! But here he was, fighting for control to give the younger man time to adjust to the penetration. It was true, he had never raped anyone before, and he wouldn’t start now, even though his bedfellow was his nemesis. Part of Khan demanded utter revenge for the betrayal and the loss of his family that the captain was responsible for. But that part quieted down more and more, and made room for another harsh whisper that echoed through his mind: ‘He is mine!’

And that was all that mattered as he felt himself engulfed in the incredible heat and tightness that was James Kirk. Khan squeezed his eyes shut as he relished the ultimate closeness and the feeling of the other’s rapid heartbeat against his own. He smiled as he listened to the stilted breathing of his captive, smelled the musky scent in the room, and felt the way their bodies fit so well together, as if they had been made for each other. All this caused the sweat to bead on his forehead, and the moment he felt that the tension leaving the young officer, he started to move; unable to suppress his need any longer.

Jim gasped as the pain returned – but not as strongly as before. Gritting his teeth, he was determined to endure the pain that was inflicted on him in this most personal way. There wasn’t anything else he could do now, and…

…the pain of the penetration began to lesson. As soon as his body became adjusted to the size of the hard cruel intruder, a new sensation spread through him. It was still strange, but not as bad as before. He even became aware of the friction against his own shaft as it was caught between them.

The hot breath of his tormentor washed over Jim’s face, before he was bestowed another searing kiss, which was another nice distraction, but when the Augment changed the angle of his thrusts slightly, a blinding flash shot through Jim’s entire being. He didn’t know what Khan had done – or what exactly he’d brushed against deep inside him – but it re-awakened the forbidden passion. Within seconds the pain was completely forgotten, as was the fact that it was Khan who was ravishing him when that certain spot was stimulated over and over again. Lust like he had never experienced before roared through Jim, flared beneath his skin, made it difficult to simply breathe. With each of Khan’s thrusts the fervor increased until Jim thought he would go mad.
And it was not enough: the feeling of the super-human’s weight on him, their battling mouths, the rapture of their connection – it wasn’t enough! Without thinking, Jim wound his legs around the slim waist of his captor and urged him forward, mutely begging him to take him deeper – and Khan was happy to comply.

Even lost in passion, the Augment’s brilliant brain didn’t stop working, and analyzed the way the younger man responded to him. But the emotion of victory that he’d expected to feel as soon as his nemesis surrendered didn’t manifest. Instead of gloating in the knowledge that he had broken through the captain’s stubborn resolve, Khan felt only the sensation of being sheathed in an all-too-willing body, and of being wanted.

And Kirk wanted more, needed more! As if Khan had read Jim’s mind again, he sped up; his lips found the over-sensitive spot at Kirk’s neck once more and he bit down like he had before, causing Kirk to cry out.

Stars began to sparkle behind the young captain’s eyes. He arched towards his ravisher, struggled to regain some control over his strung-out senses, tried to match every thrust – and the desperate movements made the bindings which tied his wrists to the headboard to come loose. Suddenly, his right hand was free, but instead of attacking Khan, he wrapped his arm around him, which took the Augment by surprise.

He could feel Khan’s inhumanly strong muscles playing beneath the damp, hot skin, and savored the chance to let his fingers wander over the lithe back, while his captor moaned into his neck in delight.

A short twist of his wrist and Jim was able to move his left arm, too. His hands roamed over the velvet skin that covered Khan’s body, found their way into the ebony strands of the Augment’s silken hair, and wandered downwards again, cupping the firm butt, clawing at it without hurting the man who now brought him bliss beyond comprehension.

Meanwhile, Khan was lost. From the moment Kirk embraced him and caressed him with eager hands, everything else vanished. For the first time in what seemed an eternity, he was really feeling! No calculation of advantages, no strategy of manipulation, no pondering of outcomes motivated him. For once, there was no rationale behind his actions, only the plain enjoyment of having his own needs fulfilled, granted with passionate responses. Burying his long fingers in the blond hair of his captive, he gave in to his emotions, to a yearning he thought would be lost to him forever. There was only himself and his young adversary, locked in a fierce embrace, and moving in the oldest dance of the world.

Jim’s sane thoughts had been shut down by the bolts of ecstasy which were overpowering him. Khan was all over him, around him, in him! The Augment filled his senses, his mind, consumed him completely, until they seemed to become one person. Too far gone to do anything else, Jim could
only stammer or scream his ravisher’s name – and then the world exploded in the brightest light he’d ever seen.

His mind was blown away and reality shattered into a thousand pieces; let him fly over chasms and oceans of fire – and still the light pulled him higher and higher. The only hold he had was on the man who’d forced him into this rapture – and to whom he now clung like a lifeline. From far away, he heard the shout of a hoarse, throaty baritone, and then his body was filled with the seed of his dangerous lover, who followed him into that place where all laws of nature lost their meaning…

ST***ST***ST

“He isn’t in LSH anymore!” The captain of security had a grim look on his face while he gave his report to a pale Matthew Dashwood. Still the alert was on, but except for the red light over the door and the gentle beep of the instruments, it was quiet in the laboratory.

The head of LSH stared at him. “Are you sure?”

The officer suppressed the urge to roll his eyes – as if he’d say such a thing when he wasn’t ‘sure’ – and replied, “There is undeniable proof that Prisoner 3158-17-215 took another’s identity, escaped during the shift change and has been out there somewhere for several hours now.”

“Did he use the transporter?” Matthew asked, and the commander shook his head.

“No. He knew that we could follow his tracks if he beamed somewhere else and used the stolen identity to leave LSH.”

“Whose identity?” Dr. Sino Lai-Heng, who was still watching Brown’s vital signs, frowned.

“That of Dr. Hendrik Björnson. My men found him in the changing room, unconscious – drugged, as it seemed – and put in his locker, still wearing his lab gown but nothing else.”

Matthew immediately walked to the cabinet which held the sedatives to control the specimens, while the officer continued.
“Björnson’s security and credit card, as well as the keys of his cyber-bike and helmet are missing. Doctor Björnson is about of the same height as Prisoner 3158-17-215, and his hair is dark, too.” He made a face while the two scientists looked nervously at him. “I already checked Björnson’s last actions. His terminal had been used for the last time several minutes after the beta shift started at work and the cameras filmed him as he stepped into the changing area. A figure in another lab gown followed him, and several minutes later a man left the room, wearing Björnson’s civilian clothes, and carrying the helmet beneath his arm.” He took a deep breath. “Prisoner 3158-17-25 simply walked out of here, straight under our noses!”

“And he took several hyposprays of sedatives with him,” the professor called nervously, closing the cabinet again.

“Well, that explains how he could render Björnson unconscious,” the officer observed grimly. “At least that bastard didn’t kill the doc.”

“Maybe he’s still on the site?” Lai-Heng asked optimistically, and the commander shook his head.

“The guards at the main entrance told me that they saw ‘Björnson’ drive away on his cyber-bike, heading towards Las Vegas after a slightly rough start. Well, regarding the good doctor’s habit to work overly long hours, no one took any notice of the small problems rider had in handling the vehicle before he drove away.” He gritted his teeth. “If you ask me, your guinea pig enjoys his newfound freedom and has certainly gone underground already in Las Vegas, of all places and… Yes?”

One of his subordinates stepped into the room, saluted and reported. “Sir, Starfleet Command contacted Lieutenant Denaux. They want to know why we’re on red alert.”

Dashwood and the commander exchanged a look. Of course the security system of this department was linked to the Starfleet Headquarters, and it had been only a matter of time until it became apparent that something was wrong.

“Well, as it seems we’ll have to let the cat out of the bag,” Matthew sighed.

“Hm-hm,” Sino nodded. “And Admiral Barnett will be so pleased to learn that this ‘cat’ is in truth, a predatorily monster with no conscience, and that the bag it came ‘out’ of is our lab!”

ST***ST***ST
Jim was simply not able to move. Soaring through the most contented afterglow ever, he lay on his bed, trying to figure out what had just happened. To speak plainly, he’d just been driven to an orgasm that had rocked his whole world. He’d never come that hard before, never felt so overwhelmed. And he certainly would never have expected something like this from being ravished by another man.

Jim Kirk was a womanizer, someone who enjoyed female attention and all that came afterwards, but to succumb to maddening ecstasy because some super-human male had seduced him – against his will – had never occurred to him.

But here he was, lying weak like a kitten on his bed, and sexually satisfied like never before.

And he didn’t care that it was Khan – of all people – who’d thrown him into this swirl of incomparable passion. He didn’t even care if the super-human stood true to his word and killed him now. All he could think of was the way he felt a short time ago and that he really, really wouldn’t mind a repeat; bad conscious be dammed!

Khan had rolled away some time after they had assuaged their raging need, had rested for a short time, and had finally risen. Now the young captain could hear the Augment moving around, but he didn’t pay him any attention. He was far too busy trying to find his back to reality and to reclaim some sanity – if he still possessed any.

Suddenly, there was movement on the mattress and he felt strong hands grip his upper arms. “Don’t fall asleep, Kirk,” the deep voice calmly instructed, and Jim cracked open one eye.

“If you want to take a nap as well, be my guest,” Jim all but croaked, closing the eyelid again. He was too wrung out, too tired to deal with the arrogant Augment, who –

He groaned as his nemesis-turned-lover didn’t take ‘no’ for an answer – again – and pulled him up. Kirk realized that his legs were not supporting him, and as Khan caught him, he simply leaned against the other man, hoping the dizziness would quickly go away.

Khan just looked down at the boyish officer he supported in his arms. Swollen red lips, love-bites all over his neck, shoulders, and chest, still-flushed cheeks, and glassy eyes were enough to indicate the captain’s state. Kirk’s heartbeat had returned to a normal pace, but his body temperature was still too high, and the wet mess they’d made during their savage coupling was still clinging to the younger man’s skin and Khan’s own.
“Come on, Kirk, you’re not that weak,” the super-human growled.

“Give me a minute,” Jim mumbled, and made a face as his captor retorted snidely.

“I’ve already given you five, now move!”

“How can a guy resist after such a charming invitation?” Jim groaned as he was simply picked up and was carried. “Let me go!” he squawked, and tried to struggle, which was even less effective than it had been the first time he’d attempted to escape the super-human.

Before Jim even realized what was going on, he was placed on his feet again and blinked, puzzled as he realized that the Augment had brought him to the shower stall. Khan slipped in behind him, closed the door and switched on the water. It was a little too warm but Kirk didn’t protest. Even if his mind was working at the speed of an Andorian water snail, he did know that a nice, hot shower would relax his muscles. Leaning against the wall he simply closed his eyes and enjoyed the water that splashed down on him.

“Skipped the training sessions at your precious Starfleet? Is that why you’re already wrung out?” Khan taunted, reaching for the soap dispenser to wash the mixture of seed and sweat off his body.

“Shut up. A man has a right to be tired after having the best orgasm of his life,” the young captain grumbled nonchalantly, not realizing what he gave away with that statement!

“‘Best orgasm of your life’?” Khan smirked while he soaped himself. “Told you that I’m better at everything.”

“Stop boasting.” The two words were barely understandable, but they made the Augment grin. Insolent, cocky boy! Kirk never knew when to quit or to stay silent, and somehow it amused Khan – if even for just a moment.

Then he turned serious again as the unexpected contentment of the last few minutes was driven away by the memories of the last time he’d had a decent shower. It had been in the cleaning-booth attached to his cell aboard the Enterprise’s brig after he’d surrendered on Qo’noS. For just a moment, he was back in that small, bright room; felt the spray pouring down on him while his mind was fighting the bitter anger he felt. Not only had he grieved deeply for his crew he’d thought had perished, his escape had taken an unexpected twist, and he was a prisoner again while his body healed from the
new bruises he’d been inflicted with.

Khan had and would never admit it, but the furious blows the young captain had inflicted had hurt – and were the very reason why he’d responded in kind on the bridge of the Vengeance after giving up the pretense to have been stunned. It would have been easy for him to have just knocked out the captain of the Enterprise, but wanting revenge after the beating he’d taken on the Klingon’s homeworld and for the betrayal fresh in his mind, he’d reacted like it was second nature.

As it was in his nature to do anything to protect his family!

At the time, those who had been most dear to him still lived. During those events, he’d thought that he could save them, take them away to a place where no one could threaten them or hurt them anymore, but this hope had been for naught. His crew was dead – murdered! And one of the two who were directly responsible for the demise of his loved ones, stood an arm’s length away and…

And had given him one of the most pleasurable experiences within the last years – discounting the three centuries he’d been in cryosleep. For some minutes Khan had been able to forget all the pain, anguish, hate, and fear he’d been through since Marcus awakened him two years ago. As Kirk had given into his lust and had wrapped his limbs around him, the Augment had felt free; free like a bird taking wing and strong like the tigers of his home.

And he yearned for more!

For several hours he wanted to be rid of all the dread and fury – his permanent companions since he’d woken up in the 23rd century. And maybe even before. They would always return to him in the morning, anyway. But for a short stolen time, he was simply being himself, not the leader, but someone who was a part of the great miracle that was called ‘life’. And he would take it from his foe. Kirk had made him feel alive – and Khan wasn’t done with him.

His pale sea-colored eyes roamed over the slim youthful form of the other man, whose current appearance practically screamed ‘tired out’. Khan pursed his own, still swollen lips. If he wanted another passionate round between the sheets, he’d have to make certain that his reckless opponent – now lover – wouldn’t pass out during it.

None-too-gently, he pulled Jim closer, ignored the protest, and soaped him up, too. The effects of the hot, wet skin beneath his hands, the scent of the young officer, and the sight of the marks he’d left on Kirk’s neck and upper body weren’t without consequence. There was another stirring in the pit of Khan’s stomach, and he had to strengthen his control, otherwise he’d ravish his nemesis again, here and now.
Jim tried not to think about the fact that he was being washed by none other than his adversary, that he currently stood with Khan under the shower. He hissed as the Augment took care of a now oversensitive part of his body, and tried to escape the strong but soft hands – again without success. The super-human crowded him against the wall, ordered a firm “Stand still!” and continued his ministrations.

Kirk shook his head. Who ever heard of a murderer who shagged his soon-to-be-victim into blissful oblivion, and then bothered with said victim’s welfare afterwards?

He gritted his teeth as the able fingers of his enemy cleaned him carefully but fully, which evoked a flare of want in Jim once again. Dear God, he had been taken long and hard only a short time ago, and he was really tired. How was it possible that this damned enhanced bastard could stir new lust in him?

“Turn around,” Khan instructed and nudged him when Jim didn’t react immediately. Khan’s gaze took in Jim’s muscular back, the reddened areas of his rump, slim hips and long thighs, and a wave of pure satisfaction blazed in him. There would be more evidence of this satisfaction when the night was over!

Massaging soap into the toned soft skin of his opponent, Khan almost missed the whispered words. “Get the hell away from me.”

A low chuckle escaped the super-human’s throat. “Still in fighting form, then? I’m glad.” For a moment he pressed himself against the slightly smaller man and nipped roughly at his neck, before murmuring, “I love challenges.” With that, he stepped back, rinsed himself off, and left the shower cubical to dry himself.

There was no way for Kirk to contact anyone outside the apartment, or to easily get a hold of a weapon, not with the phaser still near the entrance, and therefore out of reach to the Starfleet officer. And Jim knew this. He was completely and utterly at the super-human’s mercy – a fact that both scared and annoyed him.

Cleaning the lather off himself, Jim finally shut off the water and stepped uneasily out of the shower. Khan was nowhere in sight, but there were voices coming from the living area, telling him that the Augment had switched on the TV.

‘Probably watching the news. If they mention something about his escape – as if Starfleet would be
so stupid to alert the whole planet!’ Jim grabbed a towel, dried himself carefully, wrapped it around his waist, and didn’t even look at his reflection in the mirror before leaving the room.

Khan was indeed in the living area of the apartment and intently watching the news. Outside, the storm was still raging; flashes of lightning and thunder blustered through the night, perfectly reflecting the emotions Jim was experiencing. Than he stopped dead in his tracks as he heard his own voice coming from the large wall screen. Jim swallowed as he saw himself in the courtyard of Starfleet Headquarters during the day’s ceremony – or had it been yesterday? He didn’t know; time had somehow lost its meaning during the last hours.

His eyes found his recorded self on the TV, standing at the lectern with the sun shining down on him and the admiralty sitting to his left and right. His speech was coming to an end, “… words I didn’t appreciate at that time. Now I see them for a call for us to remember who we once were and who we must be – again! And those words are: Space, the final frontier. These are the voyages of the starship Enterprise. Her five-year mission to explores strange new worlds, to seek out new life and new civilizations – to boldly go where no one has gone before!”

Jim could only stare at the screen. It felt like ages ago that he’d uttered those words, not hours. As he’d finished his speech, the applause finally died down after an awkwardly long time. The back-slapping and admirals’ praise came to an end, and Jim finally had a chance to speak with his friends in private, and everything had been okay. He had looked forward to the days to come – to the moment he would finally re-board his ship and take the conn again to explore the galaxy. Now he couldn’t even say if there would be a tomorrow for him. Even though the man who stood only several meters away – clad only in a towel wrapped around his hips – had given him an incredibly passionate experience, Jim knew that the threat of death was still hovering over him like a drawn sword. Khan had not taken him to the heights of bliss for Jim’s pleasure, but to satisfy his own needs.

“Impressive speech, Kirk,” the Augment murmured and switched off the TV with a single voiced command. “Tell me, did you commit it by memory or were these words your own?”

Green-blue eyes met sky-colored ones and the young captain sighed. “Partly a prepared speech, partly my own words.” He padded to the sofa and sat down – only to curse and grimace. Dammit, he wouldn’t be able to sit properly for days – if there were still ‘days’ left for him!

“The last part was the one you came up with yourself.” Khan said and Kirk asked himself how the Augment knew this. “You’re a captain at heart,” the super-human continued, which only served to prove he understood his adversary better than Jim thought. “And you still believe in those foolish ideals Starfleet tries so desperately to show the galaxy.” A hint of bitterness tainted his tone, and Jim frowned.

“You’re wrong if you think that those ideals are only a pretense. Section 31 betrayed everyone –
you, me, my crew, my mentor – and all the others who were victims in this mess! But that’s not what Starfleet truly presents. It –”

“It is a union of soldiers who take what they want – even marching over the dead,” Khan growled, his gaze piercing. “You speak of forgiveness, of seeking no revenge – but what of those who’ve lost everything because of you?”

Kirk stared at him dumbfounded. “Because of me? What do you mean?”

Khan was in front of him in a second. “Don’t play dumb with me, Kirk! You know exactly what I mean.” He bent over the younger man, his whole form suddenly trembling with fury. “You. Murdered. My. Family!” His hand found the nape of Jim’s neck, and for several seconds he was extremely tempted to simply snap the fragile bones.

Even inferior, weakened by the forbidden and very intimate activity, without any hope of defending himself, Kirk was still not someone who gave up. Wrapping his fingers around the strong wrist of his opponent and gripping Khan’s upper arm with his other hand, Jim locked eyes with him. It dawned at him that the super-human still believed his crew was dead.

“Whoa, hold on a minute!” Jim exclaimed, feeling a short pang of panic as he saw the returning hate on his captor’s face and Khan’s tightening grip around his neck. “I think there’s been a big misunderstanding here –” Jim yelped as Khan hauled him off the sofa. He did the first thing that came to mind and let go of the other man’s arms to lay both hands against the firm chest in front of him, trying to calm his nemesis enough to hear him out. “Khan, just wait a sec! Listen!” He took a deep breath as the Augment surprisingly did stop. Jim looked at his opponent, taking in the agonizing pain beneath the rage in Khan’s gaze. That could mean only one thing.

“Did no one tell you?” Jim whispered unbelievingly. Could it be that no one, not one soul on the whole planet had informed the super-human that his crew – his family – wasn’t dead? That was just…too cruel.

“No one told me what, Kirk?” asked the former dictator, his voice barely audible. Of course his brilliant mind had already made the connection between his accusatory statement and Kirk’s reaction to it, but he hadn’t believed there could be the slightest possibility that his crew had survived the torpedo explosion. He didn’t dare to hope that his family was still alive! If it turned out that Kirk didn’t mean what he thought he did, the sorrow Khan would suffer again would utterly shatter him.

Jim’s eyes never left those of his enemy, and as he saw the rising battle of hope and fear in those blue-green pools, it affected him more strongly than expected. Jim forced himself to relax, praying that this gesture would soothe his adversary.
“Khan,” he said softly, “your crew is alive.”

TBC…

Chapter End Notes

Yeah, this really must be a shock for Khan. As happy as he should be, until now he grieved terribly for those he loved / loves, and to learn that all his sorrow has been for naught must also be horrible. But, out of this all new roots will be grow which will rock the whole alpha-quadrant.

The next chapter will be named “Turmoil” and I can promise you that the title will stay true to its definition. Jim and Khan will talk, while Starfleet Command will be tracking our Augment, trying to catch him. You are going learn more about backgrounds, and Spock and Bones will appear.

I do hope that this new installment was to your liking, incl. the introduction of the LSH, and I really, really want to know what you’re thinking of the whole thing.

Long life and peace,

Yours, Starflight
Hi, dear Readers,

Now one very important thing: Thank you so very, very much for the feedback, bookmarks, and kudos. We have only begun with the story, and so many of you are already-head-over-heels. I am totally happy.

Whazzup? Thank you for the reviews and yes, I love showing Khan’s different sides – the darker and the lighter one, after all, he is one hell of a fierce warrior, but also capable of deep love, which will become an important part of the story. By the way, thanks for giving me the hint about the mistake between ‘heart’ and ‘heard’; I’ve changed this as I am writing (wink).

Goworm, Anya, Cumbers? Thank you for your comments and I am glad that you love this story.

Cerridwen? Yeah, Khan could have found a way to blow up that part of the headquarters where the meeting was being held, but I don’t think that was his intention. He wanted the heads of those who wronged him, and also he wanted to make them look like fools by showing them how easily he could overcome their safety measures, even around the headquarters, by simply using the airspace. And the height of the meeting room? Hey, that’s so typical for all manager-types around the world. The best locations are reserved for them to demonstrate their power and invulnerability. Well, it did them no good! And, I totally agree with you that Starfleet Security is really in terrible need for development of better standards (as you will read in the new following two chapters in my story, grin).

And I do think the new chapter will be to your and all other readers’ liking. There are lot of things which are in a terrible state between Jim and Khan; misunderstandings, different point of views, unsaid truths. And some of them are going to be laid on the line. You will meet the new Chief in Command of Starfleet for the first time and two admirals, who are still following the ideology of Section 31.

I hope you all have fun, and please excuse the delay (and errors in my writing).

Live long and prosper,

Yours, Starflight
Your crew is alive…

Four words – and the world seemed to come to a halt.

For a long moment Khan could do nothing else than stare at Kirk, shocked. “What?” was all he said, not trusting his own ears or the captain’s statement.

Jim nodded slowly, realizing that indeed, no one had told the Augment that his crew – his family! – hadn’t died in the inferno the exploding torpedoes had caused. Sweet Lord, whether this man was a criminal or not, he had a right to learn of the fate of his loved ones! Why had no one had the decency to inform him? To let him think his family was dead while he had been forced back into cryosleep was as cruel as his seeking revenge through his attack against Starfleet Command. Had it been a kind of primitive payback for his deeds, or had simply no one been mindful – sensible – enough to tell him the truth?

It didn’t matter which one of these reasons was accurate, all Jim knew was that he had to set things straight. No one deserved to grieve in vain!

“You. Are. Lying!” his captor growled with new pain in his eyes, and Jim shook his head as far as it was possible with the strong grip around his neck.

“No, it’s true. Your crew –”

“Were in the torpedoes your Vulcan detonated!” Khan roared. “I scanned them after they were transported to the Vengeance! My family was –”

“– Is safe, and sound asleep in the cryotubes Bones removed from the torpedoes before Spock beamed them aboard the Vengeance,” Kirk interrupted him as calmly as possible. He noticed that Khan was breathing heavily, while an almost pleading expression mingled with one of hope across his handsome features. Jesus Christ, Jim couldn’t help himself, but right now he actually felt compassion for his enemy.
“Listen,” he said calmly. “Bones and his staff removed the tubes and set up a special biomedical program in the torpedoes using the recorded bio-signals of your crew to make you to think they were still in them. He knew you would scan them. In truth, your crew was in the Enterprise’s med bay.” He felt the long fingers still clamped around his neck begin to tremble. “Your family is not dead, Khan,” he repeated almost gently, and he saw tears welling up in the Augment’s eyes. “They are alive.”

“Your Vulcan…” the former dictator whispered hoarsely, his normally quick-witted brain sluggishly processing the information, too afraid to feel any hope only to have it destroyed again.

“I admit, Spock can be a pain in the ass sometimes,” Jim agreed, “but he would never kill seventy-two innocent people in cold blood. He is a Vulcan after all, raised on Surak’s doctrines – Vulcan’s reformer several thousand years ago, who taught them…” Kirk became silent as Khan’s hands fell to his side as if all of his strength had suddenly drained away.

“Is… Are you speaking the truth?” The super-human’s voice was no more than a tight croak, while he fought the growing hope in the twisted denial he’d held on to in order to protect himself.

Jim nodded sincerely. “Yes, I swear! I would not lie to you or anybody else about something like this!”

For a moment the Augment only looked at him, saw the seriousness on the face of the young captain and knew that it was true.

His family…

Alive!

They were not dead! They had not been horribly killed in the merciless detonation of the weapons which had served them as protection.

The realization hit Khan with the force of a starship thrown into warp, and for a moment he began to sway. He tried to regain some control over his rising emotions, but failed miserably as the first tear rolled down his cheek. He sucked in several sorely-needed deep breaths and turned away, seeking a moment of solitude to get a grip on himself.
Jim swept back his short hair, feeling an immense amount of relief – damn, there would be fingerprints on his neck for the next few days – then watched his nemesis.

Khan had stepped over to one of the large windows, balled his fists, and lowered his head; his chest heaved.

They lived…

His family was safe!

Joaquin, Chang, Katie, Otto, Ann, Paolo, Janine, all the others… They hadn’t been taken from him! They were still somewhere in their cryotubes, oblivious of what had almost happened to them. They had – maybe – a future after all.

He was relieved beyond belief, dizzy with joy – and with that, his emotions got the better of him. The sudden cessation of tension tore at the walls he’d built up, bombarded his well-schooled mind, and shattered his self-control.

Despite the gratitude he now felt, another dagger was stabbed into his soul. The grief, the sorrow, the anguish – had all been for naught!

The agony he’d experienced as the torpedoes exploded and he’d once again thought he’d lost everyone who held his heart, had cost him his sanity – if only for several minutes. The blinding pain in his whole being as he ran through the streets of San Francisco trying to escape the furious Vulcan, the cold emptiness after he awoke in prison days later, had been for nothing. He had been trapped in this spiral of despair only to learn now that his sorrow was nothing more than a cruel joke.

The feelings were too much to handle. Even Khan had his limits.

Jim eyed his adversary carefully, looking for any sign that the Augment might descend further into anguish, but Khan’s reaction was quite the opposite. He simply stood there – and then a single throaty heart-wrenching wail echoed through the apartment, followed by a suppressed sob.

Kirk swallowed. He had expected a number of reactions from his opponent, but nothing like that. And, as he realized, he really didn’t know what to do. Yes, he had no trouble soothing a damsel in distress, but he certainly couldn’t call a genetically engineered man who was more dangerous than a
collapsing warp core *that*, and so Kirk had no clue how to go on from here.

His first simply *human* impulse was to comfort the man; his rebellious, but nevertheless good, heart went out to that soul which wailed in equal parts relief and despair. If it had been Bones, Spock, Scotty, or anyone else close to him, he would have wrapped his arms around them and had held them until the pain went away. But in this case, that was out of question. As far as Jim was able to tell, Khan wouldn’t accept any comforting gestures; he was far too proud and too distrusting for something like that.

Still, Jim wanted to offer some consolation. No human with a heart could watch and hear such a display of utter distress and not be moved by it.

And, as the super-human pressed a hand over his mouth while his shoulders began to shake, Jim couldn’t remain unmoved anymore. Whether a criminal or not, it was impossible for the young man to witness such misery without doing something.

Walking quietly on bare feet, he went to the kitchenette, fetched two glasses out of the cupboard, and poured some scotch in them. He didn’t even know if his rather unwelcome ‘guest’ liked whisky or not, though in this case, the golden spirit was more medicinal than anything else. Jim turned around, and in the glow of the next lightning flash, his eye caught something: his phaser.

There it lay beside Khan’s heap of clothes. The Augment must have picked it up when Kirk was still trying to recover from the aftermath of their coupling, and had put it with his own belongings.

Jim glanced back at his enemy. It would be so easy to tiptoe to the weapon, to take it and…

Well, then what? Khan couldn’t be stunned – or, as Uhura once told him – he could, but only after being hit over and over again, and regarding their close quarters, Jim would never be able to render Khan unconscious before the super-human reached him. And then Khan *would* snap his neck. Jim had no doubt about that.

That only left two possibilities: set the phaser to ‘kill’, or to do nothing.

Once again, Jim looked over to his nemesis and saw that Khan’s legs had given out. He kneeled by the window, hands on his thighs, head lowered, back rigid. The shaking breaths were enough to show that the enhanced man was still struggling for control.
Kirk swallowed again. If he’d been the average Starfleet officer to whom duty and regulation were something close to a religion, he wouldn’t have second thoughts about doing what was necessary. Khan was a convicted criminal – a murderer – and furthermore, he had come here to kill him. Jim had every right to shoot the man, hell, he’d be doing the universe a favor by doing so. Still Jim didn’t move.

He wasn’t the kind to take another’s life easily or – even worse – shoot an unarmed opponent, even if Khan himself was a weapon. Moreover, he knew that the Augment had been betrayed and wronged several times, that the whole mess last year wasn’t entirely his fault. Khan had been driven to the breaking point which had set free his fury.

No, it was impossible for Jim to stab the Augment in the back. Not again. His humanity and strong sense of justice didn’t allow for it. Even after he’d lost his mentor due to Khan, Kirk couldn’t bring himself to end the man’s life. He might indeed be a criminal, but he was not evil. Jim was familiar with the old saying that *only the Devil doesn’t know love*, and if there was one thing he could say about Khan, it was that he loved his family with an intensity rarely found.

‘*Driven to misdeeds by love – it’s as old as time.*’ Jim thought as he looked at his nemesis.

The same nemesis that had incidentally driven him to the most supreme ecstasy only half an hour ago. That shouldn’t affect the captain’s decisions, but still it had a part in it. He was only human after all!

With a sigh, and hoping that he wouldn’t regret this completely insane and irresponsible course of action, Jim returned to the shaken Augment and crouched down beside him. One look at the tear-striken face and he knew that he had made the right decision. He never would have been able to live with himself if he had killed this bundle of wretched emotions. Tensing, he watched his adversary, who seemed not know if he should laugh or cry. Jim then understood what was going through the super-human’s head and heart: immense relief mingled with the release of all the grief he had felt.

Thunder rolled across the sky, the wind howled between the skyscrapers, and rain pelted against the windows. But the raging tempest was ignored by the two men, who fought their own storm.

Khan had his eyes firmly closed while he tried desperately to get his feelings back under control. They were safe! His crew was alive! That was all that mattered now. His own anguish didn’t count – not when the outcome was ultimately what he had strived for. He was near-hysterical with glee, but in addition, his soul was bleeding.
Suddenly a sharp and vaguely familiar scent reached his nose, and he opened his eyes to the blurry sight of a glass with honey-colored fluid being offered to him. Raising his head, he looked straight at James Kirk who knelt beside him. The younger man’s gaze was wary but also sympathetic, and for several seconds, both men didn’t move. Then Khan took a deep shaky breath, wiped his face with both hands – Alas, this was humiliating! – and found himself accepting the glass.

He raised his eyebrows at Jim as he held the glass to his nose, again inhaling deeply.

“Fitting,” Khan murmured and sipped at the strong liquor. “An expensive drink for an occasion more priceless to me than anything else in the whole universe.” He took another sip, relishing the sharp warm taste that filled his senses, yet had no influences on their function.

Perceiving that the Augment indeed was calming down, Jim shifted himself to a more comfortable position, and grimaced as certain sore parts of his body came in contact with the floor. He took another sip of his own whisky. “So…no one told you?” he asked after a minute, and the Augment silently shook his head. “Stupid idiots,” Kirk grumbled, then blinked. “Didn’t you see them when you were put back into your cryotube or when you woke up and escaped?”

The blunt question took Khan by surprise. “I’d been sedated before they sent me back to cryosleep,” he growled. “And when I woke up again, there were only four walls and several scientists around me, nothing else.”

Jim stared bewilderingly at him. “Scientists? Which scientists? And why did they wake you up?”

The Augment rolled his reddened eyes. “Come on, Kirk, think! You do have brains, as I have to admit. Why would someone take me to a high-security underground lab and hold me in a semi-coma for months?”

It took several seconds before the captain’s mind was ready to accept the obvious answer. “They… They ran tests on you? For months?” He made an agitated gesture with his free hand, and the enhanced man’s expression darkened.

“Yes, they took my blood. Sometimes they took skin-samples or other cells. They also injected me with several different pathogens in order to harvest any antibodies my body produced, or they tested new serums for existing diseases.” His voice was flat and emotionless. Concentrating too closely on
what he’d been subjected to these last months – of the helplessness, the fear, the pain – would have tested his self-control once again.

Jim stared at him. “They used you as a lab rat?” he finally burst out. “But… But at the trial you were sentenced to be returned to cryosleep! Tests on humans are…”

“Trial?” the super-human scoffed. “What trial?” Before Kirk could reply, Khan sneered. “That trial was nothing but a farce!”

“But…”

“If you’d have bothered to show up during the so-called ‘prosecution’ you were so eager to put me through,” Khan hissed, “maybe you would have realized that your precious Starfleet wasn’t interested in the truth, but rather judge me as quickly as possible and be done with me!”

“Sorry, but I was a little bit indisposed at the time,” Kirk replied almost as sarcastically and still shell-shocked by what he’d just learned of the Augment’s fate.

“Indisposed’? After everything you went through to give me a ‘fair trial’?” Anger crept back into the deep baritone, while the pale blue-green eyes pierced the captain’s blue ones.

“Does ‘radioactive contamination’ count as being ‘indisposed’ in your opinion?” Jim snapped; irritated by his foe’s ignorance.

This time it was Khan who was staggered. “Radioactive contamination?” he repeated, astonished. “However did you end up with that?” Mockery began to creep into his tone. “Did you dance around the Enterprise’s warp core?”

“No, I kicked it,” Kirk responded dryly, making a face.

“You kicked it?” It was clear that the super-human might also be doubting Jim’s sanity. “Why would you do such a crazy thing?”

“Think!” The younger man hurled Khan’s earlier exclamation back at him. “The Enterprise took
several serious hits, and the warp core had been sabotaged by Section 31. What do you think happened to it?"

The former dictator didn’t even need to think about it: “The warp core was compromised and could only be fixed…manually,” he guessed, and Jim nodded.

“Yeah, even worse. It was misaligned, and the ship’s internal power was switched off. The auxiliary power failed, too. The *Enterprises* was completely without any propulsion or navigational control. The Earth’s gravity caught us. The ship and all on board were going to burn up in the Earth’s atmosphere.”

Comprehending, Khan nodded slowly. “And so you had no choice but to enter the chamber and realign the warp core.” His gaze roamed intently over the boyish face of his nemesis, knowing exactly what Kirk had been through while in a room full of radiation. He had read too many reports about nuclear contaminants and their effects back in his own time. Even in the 23rd century, nothing had changed with regards to radiation. “How did you make it out alive?” he asked curiously.

“I didn’t,” Jim said quietly, locking eyes with the Augment.

Khan pursed his lips. “You died – and my blood brought you back,” he stated and watched as the young officer placed his glass down on the floor, pulled his knees towards his chest, and wrapped his arms around them.

“Yeah,” came the soft reply.

Everything made sense now: Kirk not showing up for the trial, the dark-skinned woman’s yelling that he – Khan – was needed to save the captain, the flaring rage of the half-Vulcan… “Commander Spock,” he began slowly. “He didn’t hunt me down to bring me to justice, but to *avenge* you.”

“He chased me through San Francisco and nearly beat me to a pulp after he caught up with me. Only the appearance of your female crew-member who speaks Klingon…”

“Uhura?” Kirk threw in and Khan shrugged. He didn’t know the name of the officer.
He continued, “She stopped him, but that didn’t stop him from nearly knocking me out.” He frowned, clearly offended. “He was the first who’s ever been able to do such a thing.”

Jim had to grin for a moment. “Yes, Spock’s strength really is something.”

“Indeed,” the Augment exclaimed flatly. “I remember very well what he did – not only during our combat, but also that he killed my family; or rather that he tricked me into believing it!” Coldness crept into his voice once more and Kirk took a deep breath.

“Look, they’re alive. That’s all that matters, right?” He saw Khan narrowing his eyes and added softly, “I know that this whole stupid mess has caused you a lot of grief, and I really don’t understand why no one told you that your people weren’t dead. There must have been plenty occasions to inform you, but…”

“But the guards took pleasure in keeping it a secret as they carried out my sentence. They didn’t speak to me anyway.” Bitterness lay in the deep voice, and Jim frowned.

“They didn’t speak to you? Not once?”

Khan shook his head. “Every question passed unheeded. Only requests for food were answered by giving me something to eat and drink.” He lowered his gaze. “I wasn’t even granted a last request – so much for your so-called advanced civility.”

“Last request?” The younger man pursed his lips. “You weren’t sentenced to death, just put back into cryosl…”

“It is like dying, Kirk, believe me!” the super-human interrupted. “Yes, they sedated me, but sedatives don’t have the expected reaction in me. I could still feel my body functions being lowered, while coldness crept through every fiber of my being.” The bad memories from the last minutes he’d been awake returned, and made him speak without realizing that he shared a personal experience with the man he had wanted to take revenge on. “The life slips out of you, everything becomes a blur, and darkness enfolds you. You think you’re turning into ice, but you can’t even shiver. Your mind struggles against it, tries to stay awake, clings to every thought until you’re too tired to fight anymore. And then there is nothing – absolutely nothing.” He shook his head. “It is like dying! As we left Earth three centuries ago, I knew that I would wake up again. This time I was certain I would remain in this state for all eternity – dead but not dead, alive but not alive.” His far-away gaze focused once more and returned to Jim’s face, taking in the uncomfortable expression on the soft
features. “I think you know the feeling.”

Kirk let the words sink in and nodded slowly. “Yeah, you’re right. I do know exactly what you’re talking about.” He moistened his lips, as his own memories resurfaced. “Being contaminated with radiation feels the same – only you don’t freeze, you burn.” He took a deep breath. “I somehow managed to crawl back to the emergency barrier before I collapsed. That’s how Spock found me, but he was unable to get to me.” He sighed. “I admit I was scared – more scared than I’ve ever been in my life. There was so much I wanted to say, but…” He fell silent.

“There wasn’t any time left.” Khan’s voice sounded almost sympathetic. “Tell me, Kirk, if I could grant you a last request, what would it be?”

“Is that an offer?” the Starfleet officer asked bluntly, realizing that his nemesis hadn’t yet let him off the hook. Dammit, maybe he was a little bit rash to dispense with the whole ‘I-cannot-shoot-him’ decision.

“Yes,” was the Augment’s only comment.

Jim didn’t have to think twice. “Spare my friends!” He looked straight into the sea-green-and-blue pools in the attractive face of his enemy. “This is all I want: that my friends – my crew – are safe.”

The enhanced man nodded. “I knew you’d ask for that.” He pulled one long leg closer to his chest and laid a forearm casually on his knee, the glass dangling between his elegant fingers. “So it seems we do share several traits.”

“You asked me once if there was anything I wouldn’t do for my family.” Kirk rubbed his neck, wincing as he touched the bruised skin there. “Well, I think I’ve answered your question.”

One side of Khan’s mouth curled up slightly. “So you do understand me.” He took a deep breath. “Where are my people?” He changed the subject, while his piercing gaze fixed back to the captain.

Well, that question was expected. And Jim had absolutely no answer for it. “I don’t know,” he sighed, returning the sharp glare of his foe with all the composure he could muster. If Khan didn’t believe him, he would try to get the information by using force, and Kirk very much didn’t want to undergo another beating. So he decided to tell the plain truth. “I woke up more than two weeks after the whole incident. It was several more days before the dizziness went away. Only then did I hear about your trial, your sentence, and that you had already been put back into cryosleep – together with
your crew. I asked Admiral Allistor, who was the temporary head of Starfleet Command at the time, for more details, but all I learned was that you and your people were locked away at a high security facility that no one could enter without permission or a direct order from the Admiralty.” He leaned his chin on his knee, his gaze never leaving the super-human.

Khan stared at him intently, pondering the younger man’s words carefully. Of course James Kirk wouldn’t give away the location of the Augments. He would be a fool if he did. The captain may be reckless at times, but he was no fool. So, there was a good chance his adversary had simply lied to him. On the other hand, Khan had a knack at sensing when people didn’t tell the truth, and he couldn’t find any hint that Kirk was lying just now. All he saw was plain sincerity.

“You and your Vulcan-puppy were the ones who, in the end, were responsible for my capture, yet they don’t trust you enough to inform you where they’d put your enemy?”

Jim shrugged. “This whole thing is top-secret. I’m pretty sure not even the President of the Federation knows the location of said facility.”

The Augment cocked his head. “But you have an idea.” It was a shot in the dark, but it paid off.

Kirk snorted quietly. “Not regarding the location, but I have every reason to believe that they’re no longer on Earth.”

“Why?”

“Well…” Kirk scratched his head before he wrapped the arm back around his knees. “It would be logical to choose a place out of reach – not that it helped. After all, if someone was able to take and abuse you… Well…” He grimaced and fell silent, while he waited for the super-human’s reaction, hoping that Khan believed his statement. If not, the next few minutes could be very unpleasant.

For a long time his foe didn’t say anything and just eyed him thoughtfully, then finally he nodded. “You’re telling the truth,” he said simply and emptied his glass, before placing it beside him, once again lost in thought.

His crew was safe but somewhere out there, out of his reach. They could be anywhere. It was like looking for the proverbial needle in a haystack – and the galaxy was a big haystack! Still, he would try; he had no other choice. They were his family, his responsibility. He had to find and protect them, had to bring them to true safety, whatever the cost!
“What are you going to do now?” Kirk’s words pulled Khan back, and determination once again settled into his whole being. “I will search for them, even if it lasts a lifetime.”

Jim swallowed. “I knew you’d say that.” The words mirrored Khan’s earlier comment.

Both men fell silent, then the captain cleared his throat. “Those scientists, the ones who took you… Do you know who they are?”

Khan shook his head, damp hair falling across his forehead. “No, but I know the name of the facility in which I was imprisoned, ‘Starfleet Laboratory for Science and Healing’. The head scientist goes by the name of Matthew Dashwood – at least that’s what I heard whenever I was pulled out of the coma.”

This time Kirk frowned. “The LSH had you? Here, in San Francisco?”

“No, in an underground facility near Las Vegas,” the Augment answered coolly and Jim stared bewildered at him.

“In Nevada? I didn’t even know there was a lab there.” He shook his head. “And here I thought Section 31 had been dismantled! But it seems these bastards are still active. Only high-security officers could smuggle you away.”

“You know my opinion about your beloved Starfleet,” Khan stated dryly.

Jim bit his lip. “Nobody is perfect – that applies even to you.”

“Barely,” the Augment replied arrogantly and Kirk shook his head.

“Bastard,” he whispered under his breath, but it still was caught by the super-human’s enhanced hearing.

“For someone standing with one foot in their own grave already, you’re surprisingly reckless,” the
former dictator commented nonchalantly. “But then, ‘reckless’ should be your middle name, shouldn’t it?”

“But it’s not; it’s Tiberius.” Jim’s small smile blossomed into a grin upon seeing the look on Khan’s face, before he turned sober again, remembering the super-human’s earlier threat. Was Jim honestly sitting here on the floor, wearing only a towel and chit-chatting with Khan? Yes, he was! Someone should slap him.

He downed the remainder of his scotch and rose with anything but graceful movements – his back and butt still hurt. “Care for another one? I know I could use it.” Looking at Khan, he lifted his empty glass. He was a little surprised when Khan simply handed him his own glass.

“Go ahead, Kirk. Unlike you, alcohol doesn’t affect me.”

“You can’t get drunk?” Kirk asked, baffled. As the Augment nodded, he snorted, “Where’s the fun in that?”

“If you call suffering an immense headache and upset stomach ‘fun’, then I’m glad that I can’t experience such a thing.”

Jim rolled his eyes. “I’m not talking about the hangover, you know.” He headed towards the kitchenette.

Khan’s gaze followed him. The Augment was slightly amused by the casualness Kirk displayed to cover his unease. The younger man knew that he was still in danger and for good reason. Khan had had every intention to end the captain’s life when he broke into the apartment. Now, after learning that his family was alive, and that Kirk hadn’t intentionally missed his trial but had simply been too ill to attend the event, Khan’s urge to kill the officer had diminished. Not least of all because of the good time they’d shared on Jim’s king-sized bed.

It had been a very good time!

And Khan wanted more. It had been years since he’d experienced such intense sexual satisfaction – if at all – and his hunger wasn’t yet sated. Kirk was incredibly passionate, full of life and vitality. It lured the super-human to him like a moth to a flame, especially now, after the emotional chaos he’d endured a short time ago. Khan’s mind and body yearned for a distraction through which he could once again center himself.
As he watched his nemesis, taking in the broad shoulders and slim waist, lust rose in him once more. Kirk was not only spirited, but he was also terribly handsome, and his stubbornness was a challenge that only heightened the Augment’s desire. Tomorrow he would have a new purpose – not to seek revenge, but to find and to save his family. He knew a very long road lay ahead of him, one that might still lead to his death, so why not use these few hours to indulge his own needs? The night was still young, and it would be the last chance to find pleasure in another’s arms before he’d be on the run again.

Khan knew his escape must have been discovered by now and that Dashwood would inform Starfleet Command as soon as the security discovered that ‘the prisoner’ was no longer at the facility. But Khan had hidden his tracks well – out there, in the still crazy city of Las Vegas – and had laid a false trail that would lead his enemies to believe he was on another continent. Hours would elapse before Starfleet Command realized that they had been duped. Hours Khan planned to spend in the nicest way possible. Eventually he would run out of time, and he really wanted to have another round of hot fierce sex between the messy sheets before he challenged the entire universe again.

Soundlessly, he rose from the floor, his eyes fixed on the attractive shape of his captive. He assumed that Kirk would protest at first, but he was certain that he would soon come round. The younger man was as lustful as he was.

Jim had reached the kitchen counter and could almost feel Khan’s eyes on him. It sent a shiver down his spine and a new knot formed in his belly. Somehow the mood was changing again, and Kirk’s senses caught it easily. “So, alcohol has no effect on you,” he began in order to break the tense silence. “I suppose because of your super-blood. Do you think there is any chance that I will have acquired this side-effect too?”

“Would that be such a bad thing in your opinion?” The rich baritone sounded directly behind him, and Kirk almost jumped, dropping the bottle he’d held in his hand. The Augment’s reflexes saved the expensive whisky from being spilled on the floor.

“Easy, Kirk, a good single malt is a work of art,” Khan taunted, and placed the bottle back on the countertop.

“Jesus, don’t startle me like that!” Jim gasped, glaring at his foe. “You almost gave me a heart attack.”

“What would be a shame,” the super-human teased. “If I make your heart stop, it will be for quite another reason.”
The young captain tensed, misinterpreting the words. “I thought we were done with the whole ‘I-am-going-to-kill-you thing.”

Khan cocked his head and let his gaze roam over the beautiful man in front of him. “Whatever gave you that idea?” As his gaze met the clear blue eyes, he added, “After all, you did stab me in the back.”

Jim stiffened. Of course the Augment would bring that up. Yes, Kirk knew that he’d made a mistake when he ordered Scotty to stun the super-human as soon as they’d entered the bridge of the Vengeance. His act hadn’t differed one bit from the other misdeeds which had been levied at Khan, still Jim was sure that he hadn’t have had any other choice at that time. His nemesis had only agreed to help because he had his own agenda, and therefore the captain’s precaution had been justified.

“Don’t tell me that you didn’t intend to kill Marcus and use Scotty, Carol, and me as pawns as soon as you reached the bridge,” Jim said calmly, but also challengingly. “It was the only reason you joined me on the trip!”

Khan surveyed him thoughtfully. “Yes, I admit that I wanted to kill the man who’d brought all this anguish upon me – who’d blackmailed me by threatening my family’s life, who’d ordered tests run on me until I was nothing more than a barely-breathing mess. Marcus had to die! And I certainly would have used every opportunity to get my crew back.” His gaze became piercing. “But I thought you to be someone who had honor. In a certain way you do, yet on the other hand, you did exactly the same: you used me!” He lifted a hand as Kirk went to protest. “I heard every word you said to that sorry excuse of an officer. You didn’t trust him, but the same went for me – after I twice saved your life.”

‘And his selfless sacrifice later saved not only his crew, but also your family!’ an inner voice reminded Khan less-than-helpfully.

‘He wanted to save his ship and his own crew. He never would have gone through all this if only the lives of your people had been at stake!’ the angry part of Khan’s mind replied, but was silenced again by that damn other inner voice. ‘Still, they are only alive because of him!’

Jim took a deep breath, feeling a pang of guilt, not aware of the inner turmoil his captor was going through. “I haven’t forgotten that you saved me,” he agreed softly. “The Klingon would have shot me if you hadn’t interfered. Or I would have been lost as I flew blindly towards the Vengeance. I don’t even care that you didn’t do it out of kindness, but for your own advantage. Despite that, I also knew your real reasons to ally with me, and nothing was going to stop you.”
“Still, I wouldn’t have threatened you,” the Augment growled and Kirk lifted both brows.

“And how would you have ‘persuaded’ Spock to give you your crew if you hadn’t blackmailed him with Scotty’s, Carol’s, and my lives?” He looked straight into the pale sea-colored eyes. “I admit that I made a mistake by ordering Scotty to stun you, but I saw no other way to prevent you from doing what you were so obviously going to.” He moistened his lips. “And by the way, you did pay me back by beating me into a bloody pulp.”

“That was for Qo’noS,” Khan commented dryly.

Jim had the urge to roll his eyes again. “Oh come on, you’re only annoyed because I was a step ahead of you.”

“No, Kirk. I already told you that you’ve got brains, and when someone tries to outsmart me, I see it for what it is: a challenge. You, on the other hand, betrayed me.” He lifted one hand and cupped Kirk’s neck. “I’ve taken lives for less.”

The young officer felt another flash of fear; nevertheless, he said outright, “Still you won’t kill me now.”

An evil smirk tugged at Khan’s well-shaped lips. “You’re right, Kirk. I am far from done with you.” He lowered his arm and put both hands on the countertop beside Jim’s hips, effectively trapping him. Their bare chests almost touched, the warmth that radiated from their skin traveled straight into their veins, heating up their blood.

Jim’s face flushed as he recognized the desire flashing in the super-human’s eyes. “Don’t tell me you’re up for more…” He waved towards the bed and the Augment chuckled.

“Yes, I am.” Khan nodded, and pressed himself against the slightly smaller body, eliciting a quiet gasp from the captain, before Kirk tried to push him away.

“Stop it! This is –”

“– something you want as badly as I,” his adversary cut in, bent forwards, and whispered into his
ear, “You can’t lie to me, dear Captain.” His hot breath washed over the hypersensitive spot on Jim’s neck where Khan had marked him. “I know you’d like me to take you again.” He nuzzled the delicate skin behind Jim’s ear, reveling in the clean scent of shampoo and Kirk himself, while his hands now wandered over the captain’s broad back. “You would love to be consumed once more – here on the counter, or over there against the wall. Or back on the bed.” His voice was a deep husky purr, and the young officer sensed the all-too-familiar fire lapping beneath his skin, finding its way through his entire being.

“This… is insane,” Jim whispered, realizing that he – indeed – didn’t want Khan to stop. He hated his nemesis for making him feel this way, yet he knew that he couldn’t win against his own desire. Nevertheless, he did protest as the Augment pulled away their towels, but his curses were swallowed by soft lips. Khan simply closed his mouth over Jim’s, and then deepened the kiss instantly.

Only as Khan suddenly lifted him and sat him on the kitchen counter, did a small spark of sanity kick in, and Kirk turned his head away. “We can’t… This is madness!”

“Yes it is,” the enhanced man murmured, while he stepped between Kirk’s legs. “But there’s no reason to not let it happen. There is only us and this night – a night we will not waste with false modesty.” His hands cupped Kirk’s face and gently urged him to look at him. “You were born for living out your passion, James Tiberius Kirk, and I will not allow you to deny us both what we want because of some foolish pretense.” He pulled the younger man into a strong embrace, brought their groins together and began to attack his senses in the most erotic way possible.

And for a long time after, there was nothing to be heard but gasps and lustful moans.

ST***ST***ST

“Why wasn’t I informed sooner?” Admiral Richard Barnett’s voice thundered through the small meeting room on the 10th floor of Starfleet’s headquarters. It was three o’clock in the morning and that he’d left his apartment in a rush was plain to see by the way he was soaked through, having not bothered to grab an umbrella after receiving the message from his secretary.

When he’d been told that the terrorist Khan had somehow escaped, Barnett had thought his secretary was joking, but the man had been deadly serious. Khan Noonien Singh, the leader of the 20th century Augments, who should be in cryosleep and locked away on Gamma 12, was not only free, but also here on Earth! This was a security nightmare and nothing less.

The dark eyes of the African man roamed over those present. The assembled men looked taken aback by this unusual display of temper displayed by the head of Starfleet.
Included in their number was Admiral James Komack, Chief of Starfleet Administration after the death of his predecessor, Maurice Deboix. Before ‘Daystrom’, Komack’s responsibilities had mainly focused on the selection of Starfleet Academy’s teaching staff. Now, he’d moved up the ladder to become one of the Chiefs of Starfleet Command. He was in his mid-forties, with a stout body that spoke of a healthy appetite and little exercise. His dark eyes in a round face often showed a calmness that belied a strong contrast to his words.

To his left sat Admiral José Luengo, Chief of Starfleet’s Bureau of Information –SBI for short – and one of the most important heads of Starfleet Command. He answered only to the Federation Council and the president himself, just like Barnett. He was a Spaniard in his early fifties, with a smattering of silver in his black hair and moustache.

To Komack’s right sat Commander Ethan Stones, one of the highest ranking officers in Starfleet Security, and Admiral Albert Norton, Chief of Starfleet Research and Development. With his silver-blond hair, the light gray eyes and the hard features of the forty-three year-old man reminded others of a sharp blade, ready to slice his way through every problem that arose.

The four men looked straight at Barnett as the doors closed automatically behind him. The light was dimmed to eighty percent, and aside from the soft buzzing of several computer terminals, it was silent in the room. A room that smelled of coffee and stress.

“My secretary told me something I cannot believe,” Barnett said, his voice betraying his rising anger. “The man we have come to know as Khan is not only no longer in cryosleep, he is no longer in the security facility of Gamma 12. He’s actually here on Earth. Is there anyone in this room who’s able to tell me how this happened? And why I wasn’t called immediately after you all learned of this debacle?”

Norton glanced at the annoyed Commander-in-Chief and cleared his throat. “You should know, Richard, that Khan had never left Earth,” he said, not waiting for Barnett’s response. “His cryotube remained in one of the highest security cells in the Science Department, and was only transferred to the LSH about four months ago. It seems one of the scientists miscalculated the sedative being used on him and he woke up fully from the coma he’d been held in. Now he’s on the run.”

Richard Barnett stared speechless at him, then at the others – and took the next free chair. For several seconds, he was unable to muster a clear thought, then he inhaled deeply. “Do I understand you correctly, Albert? Have you just told me that a direct order from the Federation Council to remove the Augments from Earth wasn’t obeyed, and that you let this living weapon remain on our planet to be used…for what exactly?” His voice was dangerously low, but Norton answered him stoically.
“Khan’s blood is extremely valuable, as are the rest of his cells. Professor Matthew Dashwood, head of the LSH, informed me that several tests Marcus ran on the Augment showed encouraging results in the development of serums to fight against the most widespread and deadliest diseases in the Federation. So why waste the opportunity to heal millions by letting this bastard rot in that frozen state? This way, he’s at least useful for something.”

Outside, thunder rolled and perfectly mirrored Barnett’s mood. “There are three reasons why Khan should ‘rot’ in cryosleep, as you called it. First, to send him away with his people was the resolution of the Council, which you have no right to subvert. Second, there are laws which forbid the use of involuntary test subjects, and I highly doubt that you asked him before you handed him to the labs. Third, you broke the fundamental right of every intelligent being: no human should be used as a god-damn lab-rat!”

“He is not human – not in the usual sense,” Albert replied calmly. “He is a genetically enhanced subject, bred in a lab and…”

“Sweet Lord,” Richard cut in, “Are we really still that backwards? Augmented or not, this man is a living and feeling being! Yes, a dangerous criminal, but he is human! Of course he has to serve his sentence, but not by being abused!” He took a deep breath. “Who ordered this insanity? You, Albert? Or you, José?” His dark eyes pierced one man after the other.

“The order had been given by Admiral Allistor – the interim Chief of Command before he died in the terrible ion storm his ship fell prey to eleven months ago when you were nominated as head of Starfleet,” Komack explained.

“And you knew this all along?” Barnett asked sharply. The other man shook his head.

“No, I only learned about it four hours ago because Commander Stones and Admiral Norton were in my office when the duty officer of the Security Department reported that the LSH was on red alert.” His small eyes fixed on Norton and then Luengo. “Only then did I learn of Allistor’s order that the two went along with, despite the fact that the Federation Council had decided differently.”

“With all due respect, gentlemen, before we continue arguing about this special order or the subject’s rights, we should turn our attention towards the present problem.” Stones rose to speak. “Khan has fled the LSH and was headed towards Las Vegas.”

“Wonderful! A homicidal psychopath in a town full of fun-seeking people is exactly what we need!” Barnett groaned. “As if we don’t have enough problems – like the Klingons preparing for war!” He shook his head and gestured the commander to continue.
“The fugitive used the credit card of the LSH employee whose identity he stole exactly three times: once to purchase clothing, once at a people-mover station, and finally at an official transporter station, buying a ticket to be beamed to London. His decision to return to the UK makes sense. After all, that is where he was stationed after Marcus woke him, and he knows the city. Additional reports reached me shortly before you arrived, Admiral, reporting that there was an incident at London’s space port. It seems someone tried to steal a small warp-ship, but Security was called, and the almost-thief is now on the run – after throwing the whole port into chaos.”

“Khan?” Richard asked and Stones shrugged.

“It’s not confirmed, but possible. If he’s learned that his people are no longer on Earth, he certainly will try to find them – as impossible as it is.”

“And there I thought his first act would be to seek revenge,” Kormack sighed, which made Barnett take note.

“Did someone warn Kirk and his senior officers? After all, it was the Enterprise’s crew that defeated Khan!”

“We saw no reason to worry them after Khan’s trail led to London,” the commander said. “And the fewer people who know about this mess, the better. I don’t want to risk panic among the population if news breaks out that the terrorist who attacked Starfleet Command, and who’s responsible for a spaceship crashing into San Francisco Bay is on the run. Until now, he’s only killed when provoked. If he feels threatened, he could react like the animal he is.”

The Chief of Command bit his tongue as he heard the security commander refer to the former agent as an ‘animal’. He’d always hated name-calling in general, but right now they had other problems.

“Is there any proof that Khan is in London?” he demanded. “Or could he have left a false trail?”

“My people are already checking security cameras in the space port and technicians are comparing his DNA with the transporter input in Las Vegas. If he used the transporter, his signal will be recorded as well as the final location he was beamed to,” Ethan Stones stated. “If he didn’t go to London, we’ll know soon.”

Barnett pressed his lips into a thin line, while his gaze wandered to the large windows showing the
dark skyline of San Francisco and the still-raging thunder storm. Not half an hour ago he’d been sleeping peacefully. Now he sat in one of Starfleet Command’s meeting rooms, learning that some of his colleagues thought that the order of a dead admiral carried more weight than a resolution of the Federation Council. And because of that, one of Earth’s most dangerous individuals roamed free on the planet.

“Right,” he finally growled. “Keep me updated, Commander! I want to know every new detail, even if it seems unimportant. What about the unlucky fellow who woke Khan up, or the man he took the identity card from?”

The four other men exchanged looks before José said, “Surprisingly, they are alive. Doctor Ryan Brown was found in Khan’s cryotube, put into cryosleep, and Doctor Hendrikson was sedated and locked away in the changing room.”

“So, he didn’t kill them?” Richard was relieved, but also confused. The Augment hadn’t shown any mercy before, so why now? “You would think that he’d at least want to take revenge on the scientist who was directly involved with his enforced stay in the lab.”

“The cryotube is linked to an alert system. If it is shut down for more than half an hour, the alarm will sound. And the tube doesn’t operate without a living body inside,” Albert explained.

“Well, you could say that this time, the rabbit put the hunter in the oven!” Stones sighed, and ignored the sharp glances of the admirals.

“Only that this ‘rabbit’ is, in truth, fiercer than a le-matya and that the ‘hunter’ – us – could fall prey to his fury,” José grumbled.

Barnett nodded. “Okay, gentlemen, it’s now of the greatest importance that we find and arrest Khan Noonien Singh as soon as possible, before he can do any harm. I don’t want to get a report that he’s slaughtered one of our finest captains and his senior officers – or that he declared vengeance on us all. But afterwards,” his gaze fixed on Luengo and Norton, “You will have to answer to the Council. This I can promise you.” He rose. “I want an emergency meeting with the chiefs of all appropriate departments in one hour – and get Dashwood here. I have many questions for him!”

TBC…
BANG! Poor Barnett! All these injustices were going on right under his nose and he didn’t have a clue. But if you are taking on the duty of a predecessor who was killed, there will always some secrets which had gone to the grave with him and only come to light by accident – like now. And Barnett is one of the chiefs with morals and who follows and the law. Therefore, he will have a lot to do in the near future.

In the next chapter, Khan will have to make a decision regarding his no-longer-so-unwilling captive, Starfleet Command will find his tracks, and Spock and Uhura will show up (sorry for the delay of their appearance, but this chapter was more focused on a special captain and Augment).

I hope the last installment fulfilled your expectations. It wasn’t easy to write the spiral of emotions Kirk and Khan went through, and I hope you liked it (please let me know; I’m really eager to learn of your thoughts).

Till next time,

Yours Starflight
Decisions

Chapter Notes

Hi, dear Readers!

First, I have to thank you once again for the reviews and kudos – and that so many readers are already following my story. It is a lot of fun to write, to add details to the main plot, and to let the whole thing unfold more and more.

The next chapter will contain some surprises and twists concerning the plot and the emotions of Jim and Khan. And, as promised, Spock and Uhura are making their first appearance; the same goes for Bones, if only by communicator (just guess why – laugh). And Starfleet realizes where Khan has to be, which results in only one thing: a manhunt.

I hope you enjoy the next update and I would be very, very happy to get some more reviews. Please tell me what you think about the whole thing.

Have a nice Sunday and a good start into the next week,

Yours, Starflight

See the end of the chapter for more notes

Chapter 4 – Decisions

Breathless and utterly exhausted, Jim Kirk lay in the darkness. Only the lightning from the passing thunderstorm allowed him to so see anything – if he’d bothered to open his eyes, that was. His whole body hurt – mostly in a good way – but there were parts of him still aching which he really didn’t want to think about. He knew that sitting down would probably be painful for the next couple of days, and there were bruises from Khan’s initial violent attack forming on his skin, not to mention the love bites which he’d have to hide for even longer. Hopefully Bones wouldn’t insist on a medical check when they boarded the Enterprise in a few days. Having to explain those might be rather awkward.

Well, he could worry about all of this later. That was, if he survived the encounter with Khan, who currently rested beside him.

One of the super-human’s strong arms and one long leg were wrapped around the young captain, while the Augment spooned against him. Jim could feel the soft heartbeat of his nemesis at his back as it returned to normal. The lean muscular body was warm and sweaty, and hot breath danced over Kirk’s neck as Khan simply held him. Obviously, their last round had finally tired the man out, despite the enhancements.
Jim wasn’t going to complain that his foe was finally satisfied; he wouldn’t have been able to withstand much more anyway. He’d lost count of how many times his insatiable bed-fellow had taken him to the heights; how often those clever hands, talented tongue, and thick cock had drawn Jim into another round of mind-blowing sex. And not only on the bed, but also on the floor, on the damned kitchen counter and even – like the Augment had suggested – against the wall. One thing Jim was certain of, it was unlikely he’d survive another session, despite the associated ecstasy. His head ached, his limbs were trembling with exhaustion, and his ass hurt like hell. As it was, his heart had threatened to burst right out of his chest when Khan had taken him the last time.

Never before had Kirk felt so drained, yet entirely sated. He wanted nothing more than to lie here and sleep until the next evening. But, it seemed his captor had other plans, as the super-human tightened his hold around him. He would never have thought of Khan as being a cuddler – well, he’d never thought to end up in bed with the super-human at all – but he had to admit that he rather liked how the Augment spooned against him. Yet his nemesis was up for something more, and Jim didn’t think he had the energy for whatever the other man had in mind.

“Tired?” The deep baritone sounded slightly hoarse, which made Kirk feel just a little smug. Obviously, he wasn’t the only one whose voice had suffered.

“You could say that,” the young captain mumbled.

“A shame. The morning hasn’t come yet and…”

“Don’t tell me that you still want more!” Jim interrupted him, and then yawned. “Even you should be groggy by now.”

“You think so?” Warm lips brushed over the dark purple love bite on the officer’s neck and Kirk groaned.

“Not again, Khan! I swear, one more time and I’ll meet my maker.”

A soft rumble vibrated at his back, as the Augment chuckled. “Sexed to death.”

“What a way to go,” Jim observed and moistened his lips. He was obviously too weary to think straight.
“If this is how you want to die, I can do that,” the raspy voice murmured in his ear, followed by a gentle nip at his skin.

“Could we change this whole thing to ‘sexed into oblivion’ instead?” Jim asked hopefully, and this time the response was something he’d never heard before: rich, deep laughter that sounded like velvet. It sent a pleasant shiver through him, which was something he really didn’t want to dwell on, especially when they were technically discussing his death.

“I knew you’d say something like that,” Khan smirked. “And, as far as I can sense, you’re already at the point of ‘oblivion’, aren’t you?”

“Just give me a short break and maybe I’ll be up for another round, like in three days or so.” Kirk sounded as if he were almost halfway to dreamland. The super-human felt unusually protective, and he strengthened his embrace. ‘He is mine!' the unwelcome voice from hours ago whispered in his soul again, and irritated, he shook it off. But deep down, he knew that he wouldn’t have any say in this matter. It was Khan’s own blood that was calling to him; the small amount of his blood that circulated through the younger man’s veins. That, and the damned lust he still felt for him.

Khan pursed his lips, while his eyes wandered to the nightstand. Two emptied glasses of water stood where he’d set them earlier to help himself and his unwilling lover to rehydrate. Beside the glasses was the alarm clock, showing it was almost four AM. Khan suppressed a sigh. The moment when he had to decide what to do with his captive was quickly approaching. But there was still a little time left, so he would lie here for a while and rest. Khan would never admit it, but the cocktail of sedatives which had been injected into his system over the last months, combined with all the passionate activity of the last few hours were taking their toll. He was tired, but he knew that it could – and would – be dangerous for him to fall asleep. No, it was better to –

The thought was cut short by soft snoring coming from the man in his arms. Lifting his head, Khan peered down at Jim’s youthful face, taking in how innocent and peaceful it looked. With a sigh, he lay back and relaxed. There wasn’t much he could do right now. Pulling Kirk closer, he decided to use the little time that was left to regain some strength, while his body was busy healing his sore groin and the lust-filled marks Kirk had left on his shoulders and chest during their passionate coupling.

Closing his eyes, he focused on rest and reflection, knowing that these would most likely be the last minutes of peace for a long time…
“Admiral Barnett, sir, my men have a full report from Las Vegas.” Commander Ethan Stones’ voice sounded calm as he watched the Chief of Command, after glancing quickly at the admiral’s guests: Professor Matthew Dashwood and Doctor Nathan Conelly, Dashwood’s deputy, who had come straight from home to the headquarters after being informed of events. Admiral Luengo and Admiral Norton were still present, as well as Stones’ superior, Admiral Michael Parker, Chief of Starfleet Security.

“We talked to the shop owner where the prisoner bought his clothes. If he’s still wearing what he bought, Khan’s in black, with a black coat. My men searched the nearest recyclers, but the garments the prisoner took from Dr. Hendrikson weren’t found.”

“Is the shop owner okay?” Conelly asked with no emotion in his voice. He was a man in his early fifties, with pale blue eyes and salt-and-pepper hair. His accent denoted a British upbringing.

Stones spared him only a short glare, knowing about Conelly’s involvement with Section 31. He’d not been sentenced because his attorneys had proved he’d done nothing more than relay orders. “Yes, the man is okay,” the commander answered the doctor’s question flatly. “He told my men that his client had been very polite. There was a security camera installed in his shop. The film that was taken of Khan is already copied to your terminals, gentlemen.” He gave a curt nod towards the screens in front of the admirals.

“What is even more interesting, are the records of the official transporter units, which showed that the fugitive never used them,” he continued, getting the expected reaction.

“What?” Barnett gasped, while Parker frowned.

“So, he’s still in Las Vegas?”

“We don’t think so,” Stones answered. “The cameras on the streets show him stepping into the official transporter area, and as he left it half an hour later, using a people mover that headed in a westerly direction.” He gestured towards the screens and Barnett obtained the corresponding records. His face was grim as he watched the man in question coming out of a clothing shop. “My men are already checking all the stations, which are also automatically observed anyway. Still, there’s a chance that he got away unnoticed by the cameras,” Stones continued. “But I think he spotted the cameras and avoided them.” He took a deep breath. “He is clever, I’ve to give him that.”

“Clever and brilliant,” Dashwood murmured. “How he tricked us all at the lab, the way he
escaped…”

“I warned you from the beginning, Matthew,” Nathan Conelly remarked, and the professor threw up his hands.

“I know, but we had everything under control – or so we thought. But I agree; we should have been more alert.” He shook his head. “Scans showed that the subject has an IQ of over 300, even higher than Leonardo da Vinci, who was the most brilliant mind on our planet.”

“And here I thought Einstein had been the genius,” Parker commented dryly.

“Oh, Einstein only had an IQ of 126,” Matthew answered, but went silent as Barnett cut in, “As interesting a discussion of the most intelligent minds of Earth is, I do think we have more important things to do!” He looked back at Stones. “If Khan didn’t use the transporter unit in Las Vegas – any of them, if I understand you correctly – there are only two possibilities left: he is still in town, which I doubt, or he used an alternative method, like –”

A signal interrupted him, and a voice called through the intercom, “Lieutenant Olsen to Commander Stones! Please answer!”

Richard opened the channel. “Admiral Barnett speaking. Commander Stones is here with me. Report, Lieutenant.”

The man at the other end of the link didn’t hesitate. “Sir, one of my subordinates reported that there must have been a cyber-attack on several staff members’ files.”

Everyone in the room stiffened. “A cyber-attack?” Parker repeated, alarmed. “Was it successful? Did the hacker get around our security measures?”

“Yes, they were able to overcome every defensive measure our best experts programmed – and they even reactivated the security programs after several files were checked,” the voice sounded through the intercom.

“An insider?” Luengo asked.
“Or a former one,” Barnett growled, assuming the worst. “Whose files have been activated?”

“We are still checking it, sir,” Olsen gritted out. “Whoever the bastards were, they were able to cut through our security like a warm knife through butter, and hid their tracks well!”

“Keep us updated, Lieutenant!” The Chief of Command ordered. “I have a very bad feeling about all of this.”

ST***ST***ST

Something told Khan that he was running out of time, and so he finished his meditation. One look at the clock confirmed what he already knew. He’d rested for half an hour – not long, considering even he needed to recover, but it had to be enough for now. The early dawn turned the skies grey, but he could see soft rose and yellow hues on the horizon, as he lifted his head and glanced out of the windows. Obviously, the weather had calmed down and the sky had cleared. Funny, how nature could mirror fate.

His attention was driven back to his bedfellow, who slept soundly beside him. Kirk hadn’t moved since he’d drifted off, and one would have thought him to be out cold, if it weren’t for the quiet snoring.

Khan moistened his lips. He felt a hint of reluctance to leave the bed and his unwilling lover, still he had no choice. It was only a matter of time until Starfleet tracked him down, and he had to be out of range when the bloodhounds came after him. With a bitter smile, he realized how fitting the term ‘bloodhound’ was; after all, he only was valuable to them because of his blood.

Careful not to wake the young captain, he untangled himself from him, feeling a short pang of loss as he moved away. He suppressed an irritated growl as his body protested while he was rising. Even augmented, he was still human, and he didn’t need to look down to know that a certain part of his anatomy would be sore for several hours. At least he wouldn’t suffer as long as Kirk would, he thought wryly.

Sparing his ‘captive’ a last glance, he walked over to where he’d left his clothes, collected the phaser and, just in case, took it with him into the bathroom, only realizing now that Kirk must have seen it as he poured them the whisky in the kitchen. Still, the captain hadn’t used it. He’d had a chance to overpower Khan then, considering the super-human’s emotional break-down during those several minutes. The Augment asked himself why his nemesis hadn’t used the opportunity.
He remembered the look in the sky blue eyes of the younger man; there had been fear and tension, but above all, a hint of compassion. Khan loathed pity, but he could differentiate between pity and empathy. Kirk had shown understanding for him, something the Augment hadn’t experienced for an eternity – especially not during his forced encounter with Section 31, or the last four months in the lab. The Enterprise’s captain had treated him like a human, and Khan felt a soft wave of gratitude towards the young officer.

Ending his shower soon after he’d cleaned himself of all the sweat and semen, he left the stall, dried himself, and quickly looked into the mirror. Surprised, he pursed his lips as he saw the love bites and slightly pink bruises Kirk’s passion had left on his skin. And he knew there was even more proof of Kirk’s burning lust on his back. His captive had turned from being the prey of an expert seduction into an all-too-willing lover, even if he never stopped protesting whenever Khan insisted on another round. James Kirk was just as lustful and fervent as he; giving back as much as he received. He was all claws, teeth, and tongue when driven to the brink of ecstasy. Still he never hurt his partner, even if he could have, and even shared gentle caresses with Khan in the aftermath, not caring that his bedfellow was, in truth, his enemy.

And it had felt good – incredibly good. At some point during the night, the Augment had realized that he hadn’t had to be on guard; that the younger man wouldn’t try something foolish like attacking him at every opportunity. Usually Khan loved a challenge, but after the last months, he was glad to spend several hours without being forced to be cautious.

Carefully, he touched the bruise on his throat, smiling as he remembered the moment Kirk gave it to him, lost in utter lust. It was a shame that it would fade soon; his genetically enhanced blood would heal it all too quickly. Still, it had left a mark on him – not on his body, but on his soul.

And with that, the crucial question rose in his mind once more. What should he do now about his handsome, passionate foe? Regarding all the given facts, Kirk was in his own way a threat to him. The Augment knew that the officer wouldn’t have any other choice than to alert Starfleet as soon as he was alone – but would it really matter? Starfleet was already on his tail, so one more rumor about his location wouldn’t change Khan’s situation. Yet there was still his wish for revenge; Kirk had used and betrayed him during the encounter with Marcus. But the young man had also risked his career to give Khan a fair trial, a trial that never took place. But Kirk couldn’t have known that. The boyish captain had honor and a conscience – two rare characteristics these days among all those self-aggrandizing commanding officers of Starfleet – and he acted on those no matter what. If he didn’t, Khan wouldn’t now be standing here, pondering Kirk’s fate.

The super-human sighed and smoothed his hair back. He always did what was necessary, still he was torn between his old anger and the possessiveness awoken in him during these last hours. Kirk was his now – not only because of the Augment’s blood in his veins, but also because of their wild coupling that night. They’d even marked each other. To the captain it would be only a severe bruise – a memento of the lusty madness they’d both been caught up in – but in ancient cultures it meant so much more. To mark someone like that was comparable with laying claim on them. And in the eastern world, where Khan had been raised, many customs of those old cultures were still alive,
which now stirred in his subconscious. The Augment sensed a kind of bond towards the younger man; a bond that would grow if given a chance.

A chance that lay solely in his hands and would slip through his fingers if he were to stay true to his word and kill the captain. But that was a promise he’d made in pain and fury, when he’d still thought his family dead. Now, everything had changed. His crew was alive, and aside from his wish for vengeance upon those who’d used him once again as a lab rat, he had now a new purpose. Something he hadn’t dared to hope for – and he had Kirk to thank for it.

And, he suddenly realized, this new opportunity would be lost if he didn’t leave this apartment soon!

Irritated with himself that he simply remained there daydreaming despite the feelings it invoked, he left the bathroom and returned to the living area. His glance found the sleeping form of Kirk, and he noticed that the young captain had shifted, displaying his glorious backside. A very red and painful-looking backside, and for a moment Khan smirked, sympathizing. Kirk would be in no small amount of pain when sitting down for the next few days – if he were even still alive then.

Khan dressed quickly, stuck the phaser into his belt at the back, and searched for his shirt which he’d earlier used to tie Kirk’s hand to the bed. He found it next to the nightstand where it had been thrown during the night. It was rumpled and one sleeve was torn, but the Augment didn’t care. He slipped it on before his eyes took in the sprawled shape between the sheets once more.

He took a deep breath. He couldn’t delay his decision any longer, and with one long step he closed the distance to the bed, his glance fixed on the young Starfleet officer. Kirk lay there, peacefully and uncaring, as though nothing could happen to him. He had wrapped both arms around his pillow, his still-swollen lips slightly apart, a soft smile playing around them. He was the picture of utter innocence, even with all the marks of their carnal pleasures displayed on him. Khan listened to the steady breathing and heartbeat, and his gaze refocused over the red mark on the younger man’s neck – a neck he had vowed to snap. But Khan found himself unable to do so.

And then the sun rose over the horizon, illuminating the apartment in its warm glow; bathing the sleeping figure on the bed in a golden hue. It was the beginning of a new day after a long and stormy night, like a light of hope in the blackness of despair.

In that moment, the Augment knew that he couldn’t end Kirk’s life, the life of the man who had become his lover for a short stolen time. Just as the sun ended the darkest hours, James had brought him new hope. He’d reached out and soothed Khan’s pain as Khan had been driven to the ends of his emotional limits when learning his family still lived and that his grief had been for naught.
The memory of that sheer human gesture was like the last stone in the mosaic-like arrangement of reasons of why he wouldn’t harm the other man. Khan didn’t regret the beating he’d given Kirk earlier – after all, the officer had earned the super-human’s wrath – but he wouldn’t hurt him further. Rather the opposite; Khan knew when he was in someone’s debt, and he always repaid his debts.

Bending down, Khan slid long elegant fingers carefully through Jim’s tousled hair, which gleamed like gold in the sunlight. It was a sentimental gesture, the Augment’s cold rational side would even call it ‘pathetic’, yet it felt right. His future held only adventure, uncertainty, and danger; a long dark road he would walk alone until the bitter end. And so he allowed himself to have a moment of warmth and tenderness.

“Farewell, James,” he whispered, and for several seconds he yearned for the chance to find peace at the younger man’s side for more than one night. Then his determination returned with renewed strength. Relishing one last moment with his unexpected lover, Khan finally turned away to pick-up his cloak. He frowned as he saw the up-turned coffee table nearby.

Even in a million years, Khan wouldn’t be able to explain why he did what he did now. A minute later the piece of heavy furniture was replaced back to where it belonged, and even the end table stood upright where it should be. Looking around him, the Augment spotted Kirk’s desk, and giving in to an all-too-human whim, he stepped to the desk, searching for a piece of paper.

Shortly afterwards, the front door of the apartment closed softly behind him. His feet barely made any noises as he headed towards the lift, his brilliant mind already plotting the next step he would need to take in order to find his crew. His revenge on the LSH and those members of Starfleet Command who’d decided to return him to the scientists could wait. First, he had to bring his family to safety so that no one would ever be able again to use them as leverage against him. It was a shame that he hadn’t know about their survival yesterday when he’d hacked into Starfleet’s files. Perhaps then he could have been able to find out something about their location. But that chance was now gone; Starfleet would certainly change its security protocols as soon as they realized that they’d had a ‘visitor’.

He left the building without incident and breathed deeply in the clear, cool morning air. He crossed the street, before looking back one last time. Up there, asleep on the 48th level, was the man he had come to kill. But James Kirk had proved to be more valuable than Khan might have ever thought. And furthermore, he wasn’t out of his system. Even after hours of wild and passionate sex, the Augment still longed for him, desired him beyond all reason.

But there was now no possibility for Khan to claim the other man, even as his instincts told him to do so; they had to go their separate ways. Yet a certain feeling in his gut told Khan that they would meet again – somewhere out there between the stars.
At the same time, the tension in the roomful of chief officers was almost unbearable. Lieutenant Olsen from Security contacted the admirals and his commander once again, sounding highly agitated. “Sir, we were finally able to discover whose files had been activated by the hacker. They’re those of Captain Kirk, Commander Spock and –”

“GOD DAMMIT!” It was one of the rare times Barnett’s temper got away from him. “I knew it! It was him – and he’s after Kirk and his crew, just as I feared! And here you thought it wouldn’t be necessary to warn them!” he all but snapped at Luengo and Stones.

Parker once more demonstrated the strict discipline for which he was famous. “When was the cyber-attack, and are we able to glean the location of the blackhat from it?”

“We’re working on it, but as it seems, the attack was hours ago. It was made from a terminal in Las Vegas – a terminal we located in the lobby of the Ambassador Hotel.”

“He went to a hotel to hack into our systems?” Luengo whispered, thunderstruck. “Simply like that?”

“An old agent-trick: if you can’t hide then walk in plain sight. No one will guess you’d do such a thing,” Conelly commented under his breath. He caught Barnett’s gaze and added, “He was trained by Section 31, after all. They trained him too well, it seems.”

“There’s more, sir!” Olsen’s growling voice sounded through the intercom. “Two of my superiors are already at the hotel. It has a private transporter and –”

“And Khan used it to leave town without us noticing!” Parker ended the sentence. “Shit, he’s even better than we thought.”

“Which parts of the crew files were opened?” Stones demanded. The answer gave Barnett and the others a sinking feeling. “Their addresses on Earth!”

For a long moment, the four admirals and the commander only stared at each other, then they moved into action.
“He’s here in San Francisco,” José muttered and rose, while Stones sped to another terminal, opening a channel. “Lieutenant Favelli, hail Captain Kirk and Commander Spock immediately, priority one. Warn them that the terrorist Khan Noonien Singh has escaped and knows where they live. He’s most certainly on his way to exact revenge on them. Send security to accompany them to headquarters! I want them off the street and brought to safety!”

In the meantime, Barnett had bent forward, as if wanting to jump into the intercom terminal on the desk, and called his secretary. “Muster the entire crew of the Enterprise, including all senior officers. Make certain they are transported to their ship as soon as possible, security level one!”

Parker, who was about to leave the room, turned around at these words. “What for, Richard?”

“The Enterprise is in space, and therefore out of Khan’s reach – hopefully!”

The Chief of Starfleet Security nodded. “A wise move. If you’ll excuse me, I have to launch a dragnet operation. Thank the lord that it’s early morning; a manhunt in the middle of rush-hour could lead to disaster.”

Barnett turned towards the two scientists. “Pray that we catch this bastard before the streets are full of people heading for work! Any bloodshed will be on your hands – as it will be on yours, Albert,” he added, glaring at Norton.

Then he took a deep breath in order to calm himself. His staff was acting as expected, quick, cool, logical. Still, there was nagging unease in his mind, and he sent a hurried prayer to the heavens that the warnings hadn’t come too late. It would be a hard loss for Starfleet to lose one of its best – and most unique – captains, and certainly its best science officer. Besides, they both had once been his students, students who’d given him his first grey hair, to be sure. But it would still sadden Barnett to have to stand at their graves.

ST***ST***ST

He didn’t want to wake up. He knew that he really should let sleep claim him once more, but still, he had this damn gut feeling that something was wrong. Only slowly, he realized the light that shone dimly through his closed lids meant that it was morning. Well, morning was good – as long as he could sleep late, but somehow his subconscious was of the opinion he shouldn’t listen to the seductive whispers of his bed. And – of course – once his subconscious started to complain, it only got stronger until he had to give in.
Slowly, hesitantly, an unwilling Jim Kirk opened his eyes. And then closed them promptly as the golden sunlight blinded him. This indeed meant that it was early morning, or otherwise, the sun would already be higher without blazing at that angle through the window. In other words, he had plenty of time before he had to check in at headquarters and –

Shifting only slightly, he realized his whole body hurt! He felt an uncomfortable pressure in his chest, every muscle ached, and… And his butt felt as though someone had stuck a burning torch into it!

Not a torch, but…

Within seconds, Jim was wide awake as the memories flooded his foggy mind. He’d been thoroughly fucked by none other than KHAN!

In his mind’s eye, high cheekbones, sea-green eyes, and well-shaped lips appeared, while damp, almost black hair fell over a high forehead. Not only that, but imagines of them together whirled through him; of the Augment’s face, flushed in ecstasy as he drove into Jim over and over again, making him mad with desire and giving him the most intense orgasms he’d ever experienced. Their kisses – the hot, and the almost-soft ones – the caresses, the bites, their clinging to each other that had been more clawing than anything else… They both had been like animals, driven wild with lust, unable to keep their hands off each other.

“Holy shit!” Jim let out a loud groan and lifted his head, expecting to face his enemy-turned-to-lover right in front of him. But his gaze fell only on the gouge in the wall that his flying coffee table had left. The furniture itself was missing.

Okay, there were certainly bigger problems now than that. Like, for example, was the super-human still here to keep his deadly promise – even after they’d been a close as any two people could get? Khan wasn’t known for easily dropping a grudge.

Gulping, Jim listened out for anyone moving about, but the apartment was absolutely silent. Although exhausted, Kirk’s heart began to pound as he moistened his lips and cleared his throat. “Khan?” he asked quietly, preparing himself to hear the deep baritone at his back, but no sound came.

After the third try, he managed to brace himself on his forearms, though his whole body protested the slightest movement. He felt like he had been run over by a hyper-truck! Rolling onto his aching back, he sat up, and moaned “Ouch!” as his sore butt came into contact with the mattress. He looked around warily.
The flat was empty! The pile of black clothes was gone, as was its owner.

The young man blinked several times, barely daring to believe his luck. Jim hadn’t forgotten that Khan had promised he wouldn’t see the rising of the sun again. Yet, here he was, bathed in the bright beams that shone from clear blue skies as though the thunder-storm of last night had never happened. Well, both storms had been real – the one outside and the one inside the apartment.

‘I’m alive!’ Jim realized, bewildered. ‘He’s left, without killing me!’

He had just pulled the messy blanket over his legs when he saw it – a note. A good old fashioned paper note lay atop the mattress. Curious, Jim picked it up and his gaze wandered over the message which was written in simple yet elegant script. ‘Enjoy the given sunrise. Until next time – K.’

Jim stared uncomprehending at the note. ‘He… He let me live!’ He ran his fingers through his tousled hair and let out shaky laughter. ‘He spared me!’

For a long moment, he could only sit there and stare into nothingness while relief washed over him, then the rational part of his mind returned. Khan had spared him, yes, but he was still a criminal. And he was somewhere out there on the run, already plotting how to get his crew back. Not that Jim could blame him for it; Jim’s all-too-human heart thought that the man had a right to see his family again. But the Augment had a tendency to leave a tail of chaos and bloodshed in his wake. Kirk’s first duty should be to contact Starfleet Command and inform his superiors that the super-human had escaped – if they didn’t know already – and that Khan was actually here in San Francisco, now certainly planning to steal a spacecraft.

Still, Jim didn’t move.

He couldn’t – and not just because of his sore limbs.

Firmly, he told himself that his lack of action had nothing to do with the mind-blowing pleasure he’d savored in his enemy’s arms, but was actually rooted in reasonable thought. Khan could have been away for hours, and therefore the captain had no clue where the Augment was now. He’d also have to explain how he’d known of Khan’s escape in the first place and that would lead to more questions – like why Jim hadn’t reported the super-human’s appearance immediately. Jim’s communicator was nothing more than a piece of metal with wires and electronics, and its failure to function could be explained away, but that Khan hadn’t killed him, when everyone knew that the Augment always had a strong desire for vengeance, would require a lot more clarification.
Clarification Jim couldn’t give without saying too much. After all, one look at him and anyone could guess about the night he’d had. Of this Kirk was certain. Also, he wasn’t ready to think about the whole thing – let alone speak of it in front of others. Bedding a convicted terrorist who was on the run really wouldn’t look good on his record!

Sighing, he rubbed his face and took a deep breath. Only now did he recognize that the air was cleaner than it should have been after hours of sweaty, messy sex. He heard a soft buzzing and glanced over to the controls of the air conditioning system. They were turned to the highest level, which he didn’t remember doing. Well, that was a surprise and…

And there stood his coffee table as if it had never been hurled through the room by a furious Augment with the strength matching that of a Vulcan. Even the end table was back in its place. ‘This is the first time he cleaned up a mess he’s made!’ Jim thought and rolled his eyes at the bad joke. This attention to tidiness was unimportant, yet he was grateful for the unexpected thoughtfulness. The furniture was extremely heavy and Jim would have needed a second and possibly third person to replace it back where it belonged. And that, as well as the hole the table had left in the wall, would have taken some explaining, too.

Jim sighed again and started to move to the bed’s edge, but that was even more uncomfortable than sitting. His back gave him hell, his thighs were screaming, and his arms felt far too heavy. He’d had other epic sex sessions before, but never had he felt like this. He was drained of all strength, yet he felt more alive than ever.

He placed his feet on the carpeted floor, put the note on the nightstand, braced himself, and slowly rose. The moan that was torn from his throat was born of pure discomfort and growing irritation. He practically had to order his legs not to buckle and his back felt like it might snap any moment. Gritting his teeth, he steadied himself on the nightstand and allowed his body to adjust to gravity before finally standing up straight.

“Jesus! I hope you’re going to be feeling as bad as I will for the next few days!” Closing his eyes to stop the room spinning around him, he promptly saw Khan’s handsome face with that cursed, smug expression popping back in his mind. “Yeah, I know. Super-blood and super-stamina! You’re probably fine already, you son of a bitch!”

Jim rubbed his forehead and sighed. Cursing wouldn’t help now; after all he’d allowed the whole thing to happen – more or less! No, what he needed was a nice warm shower.

Shower…
Khan and him in the shower…

Khan taking care of him, washing him, rubbing lather along his skin…

‘Stop it, Jim!’ he ordered himself sternly. ‘Yes, he’s a fiendishly good lover and… No! No, no and once again no! I’m so not going down that road right now!’ Grimacing, he walked slowly to the bathroom with uneasy steps – and was confronted with new memories the moment he stepped in. A wet towel lay on the floor, the shower stall wasn’t dry like it should be after hours of not being used, and the soft scent of the Augment was still in the air. In other words, Khan had showered before he left. Kirk realized that the Augment must have been here only a short while ago.

‘Maybe he’s still in the area – Starfleet might even catch him if I inform them now…’

Jim hesitated; his sense of duty screamed at him to act as he was expected to. He could throw on some clothes and go to his neighbor and use his communication device. He could report anything to the admiralty, saying Khan broke into his apartment and attacked him. The bruises on his body spoke volumes. Heck, even the love bites could be taken for signs of rape – still Kirk didn’t move. He couldn’t do it – no more than he’d been able to use the phaser to kill his captor all those hours ago. He couldn’t bring himself to call Starfleet Command, and betray the super-human again by lying and starting a manhunt. Jim had betrayed him once and he felt bad about it – especially after Khan pointed out what Kirk’s conscience had already reminded him of countless times before: the Augment had saved him, and Jim had paid him back by double-crossing him. Okay, so that didn’t change the fact that Khan had been up to no good himself, still Jim felt shitty about it.

“You’ve really lost it, Jim!” he admonished himself as he stepped into the shower, turning on the hot water. He moaned in relief as the warm water washed away the sticky mess he was covered in and soothed his aching muscles. Stepping out of the shower, he caught a glimpse of himself in the mirror and went rigid.

There were dark circles under his eyes, his chest and upper arms were covered in bruises and red bite-marks, and… And on the left side of his neck was a hickey large enough to be seen even over the top of his uniform collar. And it would become even more noticeable within the next few days. Now it was purple, but soon it would shimmer in blue and lilac.

‘He marked me!’ The thought shot through his mind, and even though Jim didn’t understand the historic significance of such a deed, he still felt it was pretty extreme. ‘That damned asshole...
MARKED me!’ He moved closer to the mirror and took a better look, groaning as he touched the sore skin. ‘Thank you so much, you bastard! That will be more than awkward to explain! Running around with a love bite like that during the first days of your five-years-mission will be so good for your reputation, Jim!’ Sweet Lord, he already pictured Uhura’s face as soon as she saw it. She was an expert at making snide remarks without even actually saying anything.

Cursing the Augment, Jim picked up his razor and tried to shave off the new stubble on his jaw, wincing as the oversensitive skin smarted in protest.

The curtains were closed in the two-room flat on the other side of San Francisco Bay, near Starfleet Academy. Nevertheless the sun shone through the material and diffused the room with a soft, red-orange glow. The two slender figures on the large bed didn’t move, and their calm deep breaths indicated they were deeply asleep.

Still, the taller of the two sleepers was wide awake within a blink of an eye, as the beeping of a communicator sounded from the nightstand, followed by a computer voice, “Priority one call from Starfleet Command.” A slender pale hand reached for the little device and flipped it open. “Spock here.”

Beside the Enterprise’s science officer the blankets began to move and fine-shaped, dark-skinned fingers peeled the material away. Blinking and suppressing a yawn, a still-sleepily Nyota Uhura looked at her lover and saw him tense up.

“What?” Spock’s deep clear voice betrayed something close to shock while he sat up, hastily pulled his blanket away, and swung his long legs over the bed’s edge. Uhura now knew that something was terribly wrong. Sitting up too, the communications officer brushed one of the slipped straps of her silken nightgown back onto her shoulder, while watching the Vulcan as he nodded once before he answered, “Understood, sir. Have you informed Captain Kirk, Dr. McCoy, and the others?”

The answer caused him to tense up even more. “No, sir, I have not heard from the captain since yesterday evening, when we separated.” He listened closely, before he replied, “I will prepare immediately, and do not bother to call Dr. McCoy. I will do it.” Again he went silent for several seconds. “Yes, sir, Lieutenant Uhura is with me. We will both wait for the escort. Thank you.” He closed the communicator and stood up.

“Spock, what’s wrong?” Nyota asked, alarmed. She had rarely seen such a tight expression on the usually emotionless face of her lover.
The dark, almost black eyes looked straight at her. “Please get dressed and pack your luggage, Nyota. We will return to the Enterprise within the next hour.”

“Within the next…?” Without hesitation, she got out of bed, yet she wanted answers. “What happened? Is Starfleet at red alert? Have the Klingons declared war?”

Spock was already walking to the bathroom. He activated his communicator again, but stopped first to answer Nyota’s question. “No, it has nothing to do with the Klingons.” His onyx-black eyes almost glistened while he revealed, “Khan has escaped.”

For a moment Uhura could only stare at him, then she whispered, “What? How?”

“That is irrelevant at the moment. It is far more important that he is now apparently after us, and seems to be in San Francisco already.” His lips formed a thin line for a moment, and his next words sent ice through Nyota’s veins. “Jim hasn’t answered Starfleet’s calls.”

With a gasp, Uhura pressed a hand over her mouth. Every Starfleet officer had to be within reach at all times by communicator. Therefore, there was only one logical reason for Kirk’s silence when combined with the mortal threat the escaped Augment presented: the super-human had already found his first victim. The thought made Nyota sick.

Her relationship with Kirk hadn’t had the best of starts as cadets, and there had been a time while they attended the academy that she couldn’t stand him. But since then, not only had she come to respect him – after all, he was her commanding officer now – but she also liked him a lot. He had changed for the better; he wasn’t that bragging hot-head anymore, he took his responsibilities very seriously, and he was, above all, a damn good starship captain. And, besides, he was Spock’s best friend. The mere thought that Kirk could have been murdered – slaughtered, given the Augment’s tendency of furious violence – put a lump in the throat.

The Vulcan took a deep breath, which was a rather unusual thing for him to do, and indicated that he was indeed stressed. “Doctor Leonard McCoy, priority one call, authorization Spock, first officer, USS Enterprise,” he said into his communicator, which instantly activated a link to the requested person. Trusting Uhura to get everything ready for their hurried departure, Spock stepped into the bathroom.

Moments later, a tired voice sounded through the communicator. “Yeah?”
At any other time, Spock would have given the doctor a lecture about the correct way to answer a call inside of Starfleet, but just now there was only one thing on his mind – checking on Jim Kirk and making certain that he was safe!

“Doctor, Spock here. As I know you live near Jim –”

“Spock?” McCoy sounded annoyed. “Dear god, man, do you have a clue how early it is?”

“I am able to read the clock, Doctor, but that is beside the point,” the Vulcan interrupted the opening tirade sternly, telling himself that the odd feeling in his belly was not rooted in emotion. “Please listen. Khan has escaped cryosleep and the –”

“WHAAAAAT?!?”

Spock flinched. His hearing was sharper than that of a full human’s, and therefore McCoy’s shout made his ears ring. “Calm yourself, Doctor, and listen.” With patience he barely felt, Spock tried to reason with the hot-tempered human. “Starfleet Command has just contacted me with a priority one message to inform me about this unexpected event. Obviously, Khan is already in San Francisco and is most likely out for revenge. He evidently broke into Captain Kirk’s and my files, and now knows where we live.”

From the corner of his eye, he saw Uhura at the door, unease on her beautiful features, while she sleeked back a strand of her long black hair. He gestured for her to hurry, and opened one of the lockers to take out his personal items.

“The captain doesn’t answer any calls, which is highly unusual. Your residence –”

“Sweet lord,” ‘Bones murmured, sounding both shocked and appalled.

“Your residence,” the Vulcan repeated firmly, “is near that of Jim’s. I would suggest that you check on him. It could be that his silence…” Spock hesitated, but he didn’t need to say anything more.

“I’m on my way,” Leonard all but growled.
“Take your phaser with you and be careful, Doctor. If Khan should be in the area, I am certain your life is also in danger. And set your phaser to ‘kill’; Khan can’t be stunned,” the science officer ordered. His sensitive ears heard soft noises in the background, indicating that McCoy was up and moving around in his flat.

“Why doesn’t Starfleet send the cavalry? Jim is one of their best commanding officers, for god’s sake!” the ship’s doctor ranted angrily.

Spock replied tensely, “They are. Still, it could be too late.”

“Like it is always with the damn cavalry!” Bones groused. “I will update you as soon as I reach Jim’s. Hopefully the kid stayed out of trouble this time!” The connection was cut as Bones closed his communicator, and Spock allowed himself another deep breath.

‘Please be safe, Jim. I do not want to lose you again, T’hy’la.’

ST***ST***ST

Dashwood stood at the window of the meeting room and watched hell break lose several levels below him in front of headquarters. Security officials were running to the building, armed units hastened to several shuttles, officers gave commands. In the background, he could hear Barnett’s tight voice as he received the message that James Kirk hadn’t answered the calls.

“Have you tried his private channel, Ensign?” Richard asked, feeling a cold shiver running down his spine. ‘He got him! That damn bastard has already gotten Jim Kirk – and I had second thoughts about ending that terrorist’s life!’

“We tried every known connection, sir,” the ensign reported. “He doesn’t answer. But I contacted Commander Spock successfully. He and Lieutenant Uhura will be picked up by our escort in an hour, and Dr. McCoy will be informed by Commander Spock. The other senior officers are being updated, too, but –”

“Send security to Kirk’s apartment – now!” Barnett ordered, his expression grim. “Use the transporters but make sure our people materialize out of sight of the building. If Khan should be there, he’d be alerted by the transporter beams. And Ensign? Set phasers to ‘kill’.”
“What? No!” Dashwood turned around, but the reflexes of the other scientist were sharper, and he answered first.

“Admiral Barnett, if the subject is terminated before the last tests can be run, all our efforts will be in vain!”

Norton’s voice was far calmer than that of Conelly, but not less intense. “Richard, think of all the lives we can save if we are successful in creating antidotes and serum from the Augment’s blood! But for this we need him alive, so cancel that order and do everything possible to apprehend him.”

He fell silent as the dark eyes of the Chief of Command glared icily at him. “We are taking no risks with this man. We know his strength and his fighting skills too well to let it come to a showdown in the middle of a city full of innocent citizens.” He turned back to the intercom. “Ensign, tell everyone on the task force to shoot Khan on sight!”

“Aye, aye, sir!” The connection shut off and Barnett looked back at Norton.

“I understand why you thought Khan’s blood could be used to create cures for many known diseases, still it is immoral and illegal to use him for such. And your carelessness has now put one of our best captains and his crew in mortal danger. I will personally ensure that you answer to the Federation Council for this. And if you don’t want me to place you under arrest here and now, you should not interfere in my efforts of damage control again. Do you understand?”

Albert simply looked at him and leaned back in his chair, before giving a curt nod.

The doors opened and Stones returned from his office. “Part of the Enterprise’s crew is already aboard, sir. As I heard Captain Kirk can’t be contacted, I ordered Olsen to accompany our men to his place and…”

“Very good, Commander. What’s about the dragnet operation?”

“The San Francisco police department has been told that we’re conducting a security exercise in the area around the Financial District.” Stones made a face. “You can imagine what kind of reaction I got!”

“Yes,” Barnett sighed. Why the heck had Kirk rented an apartment at the edge of one of the most
densely populated quarters of the whole town? The answer was clear though – because of the night life and the great view.

“We will stick to the story that these exercises had been arranged several weeks ago, but somehow our press office failed to inform the public,” Stones continued. “That will be the best explanation for why suddenly one of the most important districts is flooded with security officials. I think it would be fatal for our reputation and the public’s safety if the real reason came out.”

Barnett took a deep breath. “Very good, Commander. Thank you. How will your men proceed?”

While the admiral and Stones talked about the details, Conelly bent towards Norton.

“We had a deal, Albert. I wouldn’t testify about your role in Section 31 and you’d give me back my research subject.

Conelly only glared at him. “If you and Dashwood had been more careful, the Augment would still be in your possession and we wouldn’t have this enormous problem.” He cocked his head. “But something else has just crossed my mind. Does Khan know about your involvement with the work in the lab?”

Nathan Conelly stiffened. “No, I don’t think so.”

For a moment, Norton smirked. “Just as well – otherwise you would have to choose between your continued silence or disclose your involvement with Marcus and Section 31. And also request personal protection.”

The subsidiary head of the LSH only stared at the admiral, then leaned back in his chair. “Be careful, Albert. If I go down, you’re going down with me.”

TBC…

Chapter End Notes
Yes, if any of you guessed that Norton and Conelly were a part of Section 31, you were right! And Luengo has his own agenda, which matches that of Norton and the two scientists. They are going to be a lot of trouble, even if they are in custody. And Khan is on the run, trying to escape a manhunt that has only one aim: to kill him. And Jim’s friends think Kirk is in mortal danger and are acting on it, while said captain hasn’t a clue about the whole mess.

In the next chapter, Bones arrives at Jim’s flat and – of course – the good doctor connects several hints to the big picture (even if he doesn’t know the most important detail), Khan tries to escape Starfleet Security, and the three friends face Barnett and the two scientists.

I really, really hope you enjoyed the new installment – especially how both men came to their decisions – and I am anxious for your reactions and comments.

Long life and peace,

Yours Starflight
Hi, dear Readers!

Just back from my vacation. I hope you’re up for the next chapter (smile). As promised, this time Bones will arrive – in all his doctor-like glory – and you will see him, Jim and Spock in ‘action’. In the meantime, Khan tries a very odd way to escape the deep water that is threatening to drown him (and this idiom has a double-meaning, laugh), and Jim learns first-hand of the fate Khan went through in the clutches of the scientists.

Thank you so very much for your feedback.

Live long and prosper,

Yours Starflight

Chapter 5 – Hideaway

Jim had no idea about the turmoil his late-night visitor and the destruction of his communicator had created. After finishing his morning routine, he finally left the bathroom and was able to survey his flat properly for the first time after…everything. The furnishings were all back where they should be, but there were still a lot of things to do to get rid of the chaos he and Khan had left in their wake. First of all, the squashed communicator and the really, really messy blankets had to be dealt with, then the carpets needed a good clean, just like his kitchen-counter – and all this had to be done with really sore muscles!

Kirk cursed for the third time and moved into action. First he went to his wardrobe, pulled out a new pair of sweat-pants and a shirt with long sleeves and slipped into them, groaning as the soft material made his groin and butt burn once more. He was just glad that the long-sleeved shirt was a large one, allowing his skin more room. Still, every move was very uncomfortable as he stripped the bed and found the emptied bottle of sunflower oil in the process, like an accusation of the things he had done. Sighing he rolled up the sheets, pillowcases and blankets and carried them together with the note and the bottle to the garbage recycling unit in the kitchen, which wasn’t actually constructed for such large-sized amounts of trash.

A lot of painful effort and an annoyed jab on the ‘start’ button later, the device did its duty and everything was shredded into pieces, leaving the apartment through a pipe that led straight to the large recycler in the basement level, which produced energy for the heating system of the whole building. Shortly afterwards, the remains of the communicator went the same way (the unit made
some really odd noises, but was still working). Armed with a bucketful of soapy water, a cloth, and a
towel, Jim wiped down the kitchen counter and then the carpet near the windows in the living area.
For a moment he reminisced on how the Augment had taken him from behind in the glow of the
lightning flashes; those long strong arms around him, one of those clever hands working his dick, the
hot breath on his neck…

Firmly, Jim pushed the images out of his head and was almost done with cleaning, when his door-
chime sounded, followed by frantic knocking and a loud,

“JIM! ARE YOU IN THERE? JIM, IF YOU CAN HEAR ME, OPEN THE DOOR!”

Startled, Kirk stared towards his apartment door, asking himself what had gotten into Bones, whose
voice he recognized instantly.

“JIM! FOR GOD’S SAKE, ANSWER ME!” There was a hint of panic in the doctor’s tone now.

Rising from his kneeling position – Jesus Christ, his back and legs really hurt – and shaking his head,
he walked stiffly towards the door, noticed that it was unlocked and tore it open just moments before
McCoy knocked at it again – almost hitting Jim square on his forehead in the process.

“Bones! What the hell is the matter with you?” he exclaimed irritated, already expecting Mr.
Arnheim to be peeking out of his flat, complaining about the racket so early in the morning. Then,
somewhat baffled, he realized that McCoy had a phaser in his hand, set on ‘kill’. It was a rare thing
when the Enterprise’s CMO even touched a weapon, let alone being ready to use it.

Leonard was panting heavily like he’d run miles, but now he sighed deeply in relief and briefly
closed his eyes. “Thank the Lord you’re okay!” Without giving an explanation, he stuck his phaser
in his belt under his jacket, took out his communicator, flipped it open, and lifted the device to his
ear; all while eying Jim carefully from head to toe and back up again. “Spock? I’m at Jim’s. He is all
right,” he reported, still mostly out of breath.

Kirk frowned. What was that all about? Questioningly, he glared at one of his two best friends.

“Yeah, he’s okay and in one piece,” Bones said, pursing his lips as he took in Jim’s appearance,
recognizing certain signs immediately. “What? Why he didn’t answer the calls? I have no idea!” He
put down his communicator. “Why didn’t you answer Starfleet’s priority one calls and…”
Two doors down the corridor, a lock was activated and Jim reacted without a second thought. Not bothering with a warning, he grabbed McCoy by his lapels, all but hurled him in, and closed the door, not ready to face Mr. Arnheim. “Ungh…” was Bones’ only comment, while he tried to find his feet, glaring daggers at Kirk, who heard the deep voice of his first officer demanding answers through the open channel of the doctor’s communicator.

“Care to tell me what you’re doing at this ungodly time on my doorstep, sweating and gasping for air like you’ve run a marathon, and waking half neighborhood with your shouting and –” Jim was interrupted by a brusque wave of Bones’ free hand before the CMO continued his conversation with the Vulcan.

“Look, I just arrived at his apartment, and all I know that he’s fine and obviously just out of bed. I’ll contact you again as soon as… What? Yes, we’ll wait for the escort and…” For several seconds McCoy went silent and listened, then – suddenly – his eyes widened and he all but yelled, “We were summoned to board the Enterprise THIS MORNING? And you couldn’t tell me this sooner? I haven’t even started to pack my things and… What, it slipped your mind when you called me earlier? Will you look at that, there are still miracles in the world. You forgot something! I have to mark that in red in my calendar!” An angry flush had crept in McCoy’s already red cheeks, while he listened again. “Yeah, yeah, I know checking on Jim was more important, still you could have said something. I will never be able to make it aboard on time. After all, I’ve got to go back now and… What? I could leave without my belongings? Have you lost your Vulcan mind? I’m going nowhere without my own stuff – and certainly not on a five year mission! Yeah, whatever.” He closed the communicator. “Can you believe this? Spock forgot to tell me that Starfleet Command has changed our departure time. Damned hobgoblin!” Muttering further unkind things about a certain Vulcan science officer under his breath, he pocketed his communicator and swept the sweat from his forehead.

Jim had crossed his arms in front of his chest – Jesus Christ, even that hurt! – and stared at McCoy. “Are you now going to explain what this is all about?” he asked once again, his voice betraying his exasperation.

Bones had the good grace to smile sheepishly before he rubbed his neck, avoiding Jim’s gaze. “Well, Spock got some very worrying news from Starfleet Command concerning you and him, and…” He hesitated as he took another close look at his friend. “Rough night?” he asked and Kirk rolled his eyes.

“You have no idea,” he mumbled. ‘Rough is an understatement. First, I was nearly beaten to death and then I was ravished by a certain greedy Augment who couldn’t seem to get enough. Well, I have to admit that feeling was a bit mutual…’

Grimacing and finally calmer, McCoy observed Jim, glaring at the large hickey, the still-swollen lips and the tense way the younger man stood, and sighed deeply. ‘Don’t tell me you didn’t answer a
priority one call because you were too busy having sex.”

“What? No – of course not!” Jim stated, feeling heat flooding his face to his horror.

Bones cocked his head. “Uh-huh, I see! Caught you red-handed, didn’t I?” For a moment he grinned, before he rubbed his forehead again, this time with his sleeve. He looked around the apartment, clearly expecting to see or hear the other occupant. Or occupants – this was Jim, after all.

“No, I didn’t answer the calls, because…” Kirk swallowed. An excuse, his starship for an excuse! His gaze found the garbage recycling unit and he decided to stick close to the truth as possible. “Well, I started to tidy up this morning… You know, a little spring-cleaning before we leave and… somehow my communicator went the same way as the trash I threw out.”

McCoy lifted both brows. “Did I just hear you correctly? You threw out your communicator?”

“Accidentally, Bones, accidentally!” Kirk smiled bashfully, apologizing inwardly for the lie.

A small laugh escaped Leonard. “Not that I blame you. I’ve thought about doing the same thing from time to time. Still, I can’t wait to see Komack’s face when you tell him you need a new communicator because the old one found its way into your building’s heating system.”

Jim chuckled, but it was forced. Komack… The admiralty… That all reminded him very clearly of what he should have done but didn’t.

“So, what message did Spock have that warranted you waking my neighbors and nearly knock down my door? You could have used the buzzer at the entrance, you know,” he changed the dangerous topic, just to have it flicked back at him like a boomerang.

“I didn’t come to give you a message from Spock or Starfleet Command. I’m a doctor, not a go-fer! And, by the way, a nice little old lady and her dog let me in.” He became serious again and gulped. “Jim, I have some really bad news.” He lowered his voice. “Somehow… Khan escaped cryosleep and is out for revenge.” Leonard watched his friend closely, and Jim’s expression became tight. “They’ve tracked him down, more-or-less. He’s somewhere here in San Francisco and… And he hacked into Starfleet’s files, yours and Spock’s to be precise – and maybe those of others, too.” He took a deep breath. “He’s most certainly after you first, and our pointy-eared friend, now knowing where you two live.” He watched his friend turn away, clearly shocked. “Starfleet is sending an escort to bring you safely into the headquarters and another escort will guard Spock to make certain
Mr. Superman won’t get to him or Uhura, ‘cause I’m sure she’s with our walking computer.”

Jim’s gaze was lost in nothingness. So Starfleet indeed already knew about Khan’s flight. They’d even discovered that the Augment was in the city, targeting those who’d brought him to justice. Or not. What they couldn’t know was the fact that Khan already had a kind of vengeance – one of a type Jim really hadn’t minded – and that the senior officers of the Enterprise were no longer in danger from the super-human. Kirk was sure that Khan wouldn’t hunt down Spock; after all, the Vulcan hadn’t killed the Augment’s family and Khan had no time to go after the science officer anyway. He’d be lucky if he even made it out of the area without being caught, and…

“Jim, are you all right?” Concern softened Bones’ normal abrasive tone and the young captain nodded slowly, even though he wasn’t really ‘all right’. “Look, they’ll get him soon and lock him away – hopefully this time behind bars he can’t break through. I don’t think he’ll have a chance to get near you or Spock,” McCoy continued softly, and Kirk snorted.

‘He’s already been ‘near’ me – nearer than any other man ever has been before!’ he thought and rubbed his neck, wincing as he accidently touched the large love bite. He pressed his lips into a thin line. He doubted Starfleet would get Khan anytime soon. The Augment was far too clever for that. And it was a foregone conclusion that if caught, Jim was certain they wouldn’t put him back to cryosleep, but rather send him back to the lab again – a thought that made Kirk sick. For a moment, he caught himself hoping that Khan did indeed get away.

“So, Starfleet Command decided to send us to the Enterprise earlier than scheduled for our own safety,” Jim stated and Leonard sighed, misinterpreting his friend’s reaction.

“Jim, for a start, I don’t know how this bastard escaped and I can understand that the whole thing is a shock for you, but as soon as we’re aboard, Mr. Superman can’t reach us anymore. You know I’m not the type who runs away easily, but in this case, I do think we should let Starfleet deal with this mess. Anyway, it’s their damned fault that this guy is running through the streets of San Francisco plotting the next disaster. But if the targets aren’t around, maybe it won’t happen.”

Jim closed his eyes. Of course Bones was worried about Spock and him, and of course everyone thought that Khan would use this chance to finally burn down the world, but only the young officer knew that the Augment had other plans; that he would leave Earth and begin the search for his crew. Kirk doubted that Khan would be successful in finding his family. And that could no doubt easily lead to another act of desperation from the super-human, still Jim hoped that Khan had learned from his last mistakes. To begin a one-man-war against the whole galaxy would be more than stupid, and the enhanced man was anything but that.

He felt Bones step to his side and lay a hand on his shoulder. “Please, Jim, don’t go after him,” the CMO pleaded. “I know you, you’re already thinking of a way to catch him again, but…”
“I can assure you, Bones, I will not go after him,” Kirk interrupted him, telling the plain truth. He wouldn’t follow the former dictator. He didn’t want to have any part in Khan’s eventually re-capture – and the reason for this decision was, he had to admit, purely emotional. It made him feel guilty; not only because he’d ignored his official duty, but also because of his mentor Christopher Pike. Jim knew that he shouldn’t let the one who’d killed the man who’d been like a father to Kirk escape, but on the other hand, hadn’t Khan suffered more than any other sentenced criminal should? Had he not been wronged first? What would Starfleet do if they got their hands on the Augment again? Would they really put him back into cryosleep – how many times could a body be put into stasis anyway? Or would he serve as lab-rat again? Jim trusted men like Barnett, still there had to be more Section 31 agents. That was the only explanation of how Khan could have ended in up in LSH, and Jim had a feeling that upon capture, the super-human would end up back at their mercy in a wink of an eye.

He sighed before he looked back at McCoy, who glanced at him warily. “We have our orders, haven’t we?”

“Yeah,” Bones answered hesitantly, surprised that his friend gave in so easily. “I’m sure that the escort assigned to pick you up will be here soon and –”

“And you’re telling me this now?”

“Hey, I told you that Starfleet Command was sending an escort and –”

He didn’t get further as suddenly heavy steps ran down the corridor outside the flat. A second later a lieutenant from headquarters and several security officials swarmed into Jim’s apartment, phasers drawn. Outside, voices were raised indicating that several neighbors had definitely had enough of all the noise, but they were told to return to their apartments immediately ‘for their own safety’.

One of the men aimed directly at McCoy, ordering sharply: “Identify yourself!”

Jim frowned while Bones lifted both hands, directing his words at the young captain. “Jim, care to explain to these gorillas who I am?”

For a moment, Kirk was very tempted to keep silent, but then barked, “Lower your weapon, Lieutenant, that’s an order. This is my CMO, Doctor Leonard McCoy. And for the record, he got here faster than you.”
The lieutenant saluted and stood up straight. “Captain Kirk? Lieutenant Olsen from Starfleet Security. We are here to guarantee your safety, there’s –”

“I already know about the whole mess, thanks to Dr. McCoy,” Kirk interrupted him, and Olsen frowned at Bones skeptically.

“How do you know about the escape of –”

“Commander Spock told me, and he was informed by Starfleet Command,” Bones grumbled. “As you see, the grapevine still moves faster than the cavalry.”

Jim went rigged, as several men started to search his apartment. Oh no, not good! There were still certain traces left of Jim’s recent activity… “Gentlemen, I would highly appreciate it if you would stop rifling through my private belongings! As far as I can tell the escaped prisoner is your target, not my underwear!”

McCoy hid a snicker as he saw the abashed and reddening faces of the four men who had started to move through the place.

“Captain, this is for your own…” Olsen fell silent as he received a sharp glare from the superior officer.

“I can assure you, Lieutenant that the criminal Khan isn’t here! I don’t think I would be still alive if he were.” Another lie, God has mercy on him!

The lieutenant took a deep breath and nodded towards one of his men, who stopped the others. “Captain, I’ll ask you to get dressed and come with us. Leave your belongings here, my men will take care that they are packed and brought to the Enterprise, to –”

“I certainly don’t need anyone to pack my stuff, Lieutenant. I know you have your orders, but I don’t think they include flouting anyone’s privacy. So please wait outside until I’m done here.”

“But –”
“I trust your abilities to secure the building until I leave. But maybe some of your men could accompany Dr. McCoy back to his place because I’m sure he also hasn’t packed. If I know Khan, he’ll certainly be after Dr. McCoy too, so please include him in your personal protection!”

Olsen sighed. “As you wish, Captain.” He pulled out his communicator and informed Stones about the status of the operation. In the meantime Jim watched the other officials leaving his apartment and stepped to the window, looking down. It was as he’d assumed. The streets were full of Starfleet security, passersby were arguing, hyper-cars were stopped, policemen stood around, clearly at loss. The whole area was in turmoil.

“And they think Khan won’t realize the manhunt for him has already begun?” McCoy murmured beside him, but before Jim could answer, Olsen called,

“Captain, Doctor, please step away from the windows. The criminal could be anywhere and already taking aim at you!”

Rolling his eyes, Jim obeyed and Bones did the same before he slapped Kirk on the shoulder and said, “See you in the headquarters.”

“Yeah,” the young captain nodded, smiling at his friend. “Thanks for coming.”

“Any time,” Leonard replied warmly, then he stepped out into the corridor, leaving a very guilty feeling Jim Kirk.

ST***ST***ST

The early sun shone down at the piers along Embarcadero Street in the east of the Financial District. Here, casual fishermen could be found alongside those who fished for a living. Even if this profession no longer held the importance that it had three centuries ago, it still was a trade, and the few fishermen who loved this traditional job were very proud of it.

Capitan Alessio Mazzini came from one of the oldest Italian families in San Francisco, and every male descendant had been a fisherman, owning a boat while another part of the family ran a store, where the seafood was sold. Business was good and because of a tax break given to fishermen, earnings had increased.
Mazzini should be happy, but anyone looking at the capitano at the moment, would see that wasn’t the case. Alessio stood at the railing of his boat with a communicator at his ear, while he listened with an angry reddened face.

“So, you’re stuck blocks away because there’s some stupid Starfleet exercise going on? What was it yesterday, eh? Your friend! An’ the day before it was your mother who was ill. Stop giving me lame excuses; you’re always late! If you don’t get your ass down here in the next cinque minuti, you can get a new job, compreso?” He listened a moment and shouted, “Then we’ll leave without you! An’ don’t bother to show up again!” He snapped his communicator closed and let out a tirade of Italian curses.

“What about Joe? Isn’t he coming?” One of his crewmembers headed from the aft of the boat towards him and Mazzini threw his hands up, while above him several gulls screeched into the early morning skies.

“There’s some Starfleet maneuver going on downtown and he’s says he stuck! Can you believe it? It’s the sixth time in two weeks he’s been late. I fired him!”

The other fisherman rolled his eyes. “And who will replace him? You know that we’re already understaffed and…” He stopped as a shadow fell on him and his captain, and startled, both men looked up at the pier above.

“You need an extra hand, gentlemen? Maybe I can be of help,” a deep rich baritone asked and the two fishermen had to blink because the sun was directly at the stranger’s back and blinded them. His face lay in the dark; all they could see were his black clothes and that he wore a long coat.

Mazzini frowned. “Do I know you, signore?”

“No, Captain, certainly not,” the stranger replied politely. “I was just passing, but am looking for work and heard that one of your crewmen seems not to be available. Is there a chance I might step in for him?”

Doubt rose in Mazzini as he considered the cultivated voice and the posture of the newcomer. This guy was anything but a fisherman! Someone who talked like that was to be found on management floors, not on the docks. “You’re not from around here,” he stated and crossed his arms in front of his broad chest.
The stranger stepped forwards so that his face could be seen and he smiled just the tiniest bit, while his pale sea-colored eyes looked directly at the elder man. “No, I am from England. The job I came for was passed on to someone else and now I’m in terrible need of Credits, and happy to work at anything.”

“Aw shit,” the other crewmen nodded in sympathy. “They got you bad, laddie!”

“You can say that again,” the stranger agreed.

Alessio cocked his head and surveyed the man on the pier. “Have you ever fished before? It’s not as easy as you may think an’ –”

“My grandfather was a fisherman back in Cornwall. I often accompanied him and helped out until he died two years ago. So, yes, I am familiar with a fisherman’s duties.”

Mazzani and his crewmen exchanged a glance, then the capitano locked eyes with the other members of his crew. The eldest of them, George, shrugged. “We’ve nothing to lose, Alessio. Give the guy a chance.”

The elder Italian pursed his lips and pondered this turn of events for a moment. “We’ll be at sea for three days, giovanotto, going for deep-sea catch. If that’s okay with you…”

“It’s perfect. I have nowhere to stay because I couldn’t rent anywhere with no regular income.”

Mazzani’s looked thoughtful again for a moment, then stepped back from the rail. “Welcome aboard, giovanotto,” he said, offering his hand to the tall slender man, who jumped to the deck with one deft move. “I’m Alassio Mazzani.”

“Evan Brendon,” the stranger replied, returning the handshake firmly.

“Any gear?” Alassio asked and ‘Evan’ shook his head.

“No, sir, I stored it at one of the people-mover stations in a locker.” The lie came easily from Khan’s lips.
“No problem,” one of the other men called, while he strolled towards the new crew-member. “We’re the same size, I’ll loan you a shirt and trousers.” He struck out a hand. “I’m Nando, welcome aboard!”

“Evan,” the Augment introduced himself with the false name again, accepting the other one’s hand.

“Right!” Mazzani grinned and slapped him on the shoulder, surprised that the younger man didn’t even flinch. ‘Stronger than I thought!’ he thought to himself before he raised his voice, “All hands on deck, clear the ship. The sea’s calling us!”

The others cheered, and while two jumped back on land to clear the lines, Nando waved towards the companionway. “Come on, I’ll show you your bunk, Evan.”

The super-human nodded but looked one last time back towards the Golden Gate Bridge they would have to pass by to reach the open Pacific. A small smile played around his lips as he saw the heightened activity around Starfleet Headquarters and the shuttles buzzing above downtown. He took a deep breath of the clear, salty air he’d always liked.

Feeling the wind playing at his hair, Khan ignored the fact that he would be stuck on a stinking fishing boat for three days doing a layman’s job. He hadn’t lied to Mazzani – not really. An ancestor of his had owned boat, and he had stayed on ships several times when he’d been nothing more than a kid, enjoying time away from the labs, even if it had always been under observation.

He paused, thinking back on those years from the 20th century, then pushed the memories into his subconscious once more. This was his present now, and that was all that mattered. Travelling with the fishermen would take him away from San Francisco where Starfleet was not going to leave any stone unturned in order to find him. They would assume he’d be anywhere but on a small ship on the sea – a hideout even he hadn’t considered before he’d spoken to the Italian captain.

As he had fled the area where Kirk lived, he had already noticed the increased transporter activity and had been able to avoid some of the security officials with nothing but pure luck. He doubted that they had been called to the area by the young captain, who certainly was still asleep. If Kirk had wanted to see him dead, he would have shot him during the night when he had the chance. No, the appearance of the approaching ‘cavalry’ was for another reason. It had only been a question of time until Starfleet Command tracked him down, so he was pleased to already be on the run again as the guards flooded that part of the city. They’d certainly be heading towards Kirk to make sure he was all right.
There hadn’t been much of an option as to where Khan could turn and so he’d found himself down at the pier an hour later, realizing, amazingly that there were still fishermen left in the 23rd century. Knowing that he had to lie low for the next few days, he hoped to find a hideout somewhere near the harbor – but everything had turned out far better than he’d anticipated as he heard the Italian captain complaining about an untrustworthy crew member. Khan needed a place to stay, and equally important, even genetically enhanced, he needed to eat, which was not an easy thing without any credits in his pocket. The under-manned fishing boat had come to him like a gift from the higher beings which he didn’t believe in.

Now he was about to leave San Francisco behind, had shelter and food, and – what was more – he was out of Starfleet’s reach. He just would have to wait until the security storm blew over before searching for a way to steal a spacecraft and follow the only thing that mattered now: finding his family.

He knew it might take a while and that it could eventually lead to his own death, but he had to try!

He watched another shuttle fly from the Financial District directly towards Headquarters, and with the instincts of the predator he was, he knew that James Kirk was aboard. He was surprised to feel a soft stab in the pit of his stomach. ‘Take care of yourself, James,’ he thought, then turned to follow the slightly impatient-looking Nando.

ST***ST***ST

Spock waited for Jim and Bones behind the safety interlock in the SF headquarters’ foyer. Olsen had informed Kirk and McCoy before they were flown over that Admiral Barnett wanted to speak with them and therefore they immediately went to the office of the Chief of Command, while two cadets took their belongings for transport to the Enterprise.

The Vulcan bent his head briefly in greetings. “Captain, Doctor, I’m relieved to see you well.”

“Isn’t relief an emotion?” Bones taunted under his breath, while Kirk simply put a hand on his first officer’s shoulder and squeezed it gently, realizing that his friend must have been worried about his safety. Just for a moment he thought back to what Khan had told him; Spock had wanted to avenge his captain and friend when he attacked the Augment, and warmth spread through Jim’s soul.

“Thank you for everything, Spock.” He cleared his throat as he saw a flicker of surprise in the onyx eyes of the Vulcan. Saying that was a risk; he couldn’t admit to know about Spock’s intention one year ago without giving himself away, so he added, “I mean your quick decision to send Bones over – even if it put our morning grouch into an even worse mood.”
‘Morning grouch’?” Leonard repeated. “I’m not a grouch!”

“Yes, you are!” Jim retorted and walked with stiff steps to the turbolift, his two friends at his heels.

“Hey, to be woken up in the middle of the night to learn that a homicidal maniac has escaped cryosleep and is after your best friend and that said friend doesn’t answer any calls can lower your mood considerably!” McCoy protested while the doors of the lift closed behind them.

Kirk rolled his eyes, glad that he didn’t blush this time. Well, not immediately, but after Spock’s gaze suddenly fixed on the left side of his throat and the Vulcan lifted one brow, blood warmed Jim’s face again. “Uh…it’s not what you think,” he said lamely. The second brow followed the first. “No, really not. I…my communicator accidently fell into my recycler –” Both brows vanished under Spock’s hairline. “– so, you know, I couldn’t answer the calls.”

“You threw your communicator away? That was foolish,” the Enterprise’s first officer commented dryly and Jim was glad when they reached the level on which Barnett’s office was located. Leaving the lift, they walked down the corridor that was more crowded than usual.

“Well, I was doing some last-minute packing and quite a bit of cleaning up, and…”

“Cleaning up after a heavy night, you mean,” Bones chuckled. “Boy, that must have been one hell of a lover if you needed to clean up that much afterwards!”

An ensign, who just happened to pass by at the same time as Bones’ ill-timed comment stared at Jim, who luckily, didn’t notice. He was far too lost in thought, as McCoy’s teasing awoke the guilt he’d been feeling earlier. ‘Hell of a lover… If you only knew how right you are! Khan certainly is a demon – a handsome demon of seduction you can’t resist. Not with this hot mouth, this wicked tongue, those clever fingers and… God, Jim, get a grip!’

Spock’s face remained expressionless and after giving the ensign one of the hard stares he was famous for, he stated, “Doctor, I would think that the captain’s love life was not something he’d want to discuss in public.”

“Rrrright – after all, his reputation of being a fair virgin might be at stake.”
“Shut up, Bones!” Kirk snapped as a female cadet behind them promptly started to giggle, and Jim sped up. Well, he wanted to but somehow his legs didn’t obey him like they should have, and he groaned while standing up a little straighter.

McCoy started to grin again, while the Vulcan scrutinized his friend and commanding officer. “Are you all right, Captain? It appears you’re having difficulty moving.”

“You should have seen him sitting down in the shuttle,” Leonard snickered. “It should be quite amusing to watch you sit down in front of Barnett with that love bite on your neck and –”

“Spock, do you know how many crewmen are already aboard?” Kirk firmly changed the subject, silently cursing Bones’ big mouth. Wasn’t there something was called ‘medical confidentiality’?

Thank god the Vulcan decided to let go of the topic. “Lieutenant Sulu and Ensign Chekov have been contacted, and I’ve been informed that they were beamed safely to the Enterprise,” he reported. “Dr. Marcus and Mr. Scott were already aboard, as well as Mr. Keenser, and –”

“Why I’m not surprised that Scotty decided to spend his last vacation before we’re in space for five years in Engineering instead of on Earth?” Kirk sighed with a chuckle, glad for the distraction from his chaotic thoughts concerning a certain Augment.

“Because you know our Scotsman by now?” Bones threw in and Jim grimaced.

“Yes, I do.” He glanced to his right where Spock was walking. “What about Uhura?”

“She is aboard, too, and –”

“Let me guess, you personally saw that she was beamed up before you came here,” McCoy commented, which got him a mild “Of course, Doctor,” as an answer.

They neared Barnett’s office and Kirk used the last of the semi-privacy to say, “I don’t know what they put in your coffee this morning, Bones, but you’re certainly hilarious. Is this because of your eager anticipation to begin this five-years-mission, or –”
“Are you mad? I don’t even know why I signed up for this insanity!”

“We all make mistakes,” Jim smirked, but turned serious in the next moment – after all, that saying reminded him very clearly of his own ‘mistake’ and that he had as well, said the same thing to Khan last year when he’d spoken to him in the brig. Damn it, no matter the subject, the son-of-a-bitch continued to pop into his head over and over again!

They reached the office which was guarded by a member of security personnel. “Captain James Kirk of –” Jim wanted to report himself, but was cut off by one of the guards.

“I know, sir, you and your officers are expected.” He saluted and rang the door chime, reporting the arrival of Kirk and his companions via intercom. Only then did the door slide open. “Please, sir,” the young man said and stepped away to let the three officers pass by.

Barnett sat at his desk and looked up as the captain and his senior officers entered the room. “Kirk!” Richard allowed himself a small smile of relief. “I’m glad you and your friends made it safely to headquarters!” He nodded towards the Vulcan and the medical officer. “Mr. Spock, Doctor McCoy, it’s good to see you both in one piece.”

“Somehow everyone seems to believe Khan would like to literary blow us up,” Jim mumbled, actively forcing himself to consider any double entendre that thought conjured up.

“Well, he is known for violence.” Barnett gestured towards a small table surrounded by chairs and followed the three officers, sitting down. The admiral’s gaze found Jim as the younger man lowered himself down very, very carefully, and his glance flickered briefly to the large hickey that could be plainly seen, even under the high collar of the grey Starfleet uniform worn by members while on Earth. Remembering his former student’s reputation all too well, he allowed himself a quick smirk, but decided not to comment; it was up to Kirk how he chose to spend his last few days – or nights – on Earth before the Enterprise’s long mission. “We were concerned when you didn’t answer our calls, Captain,” he began. “Care to explain why we couldn’t reach you?”

For several seconds Jim found himself transported back to when Barnett had been the head of Starfleet Academy when Jim had had to answer to him for countless small and not-so-small misdeeds. Then he took a deep breath and lied through his teeth, sticking to the story of how he’d lost his communicator, which seemed to amuse Richard no end.

“I’ve heard of officers who’d tried very hard to lose their communicators, but this is certainly a new one.” He shook his head, amused. “Thank the lord and the quick action of your officers that you were warned before Khan could reach you. Don’t get me wrong, Jim, but capturing this living
“fighting-machine is a job for dozens of security officials, not you.”

“Yeah, we’ve already enough of him,” Bones grumbled.

“Admiral,” Spock addressed Barnett. “As I understood Commander Stones, the Enterprise is to depart several days earlier than scheduled…”

“Yes, Commander, I thought it would be the best option. Khan is out for revenge – on us all, but especially upon you, Captain Kirk, and the other senior officers – and if you’re in space it’ll be more difficult for him to reach and harm you. I won’t make the same mistake as Marcus and underestimate this man. I gave the order to shoot him on sight…” Jim was surprised to feel a sharp stab of worry as he heard those words. “…and seeing more than six security details are out to find him, I hope to receive the message of success soon. Still, I won’t risk your lives or those of your crew. Aboard the Enterprise –”

“Excuse me, Admiral, but how did Kahn escape to begin with? I was informed after his trial that he was returned to cryosleep, locked away in one of our most secure facilities. How was it possible that he woke up, returned to Earth, and started a vendetta?” Spock asked.

Richard grimaced. “That’s a good question and you certainly will not like the answer. There were –” He stopped himself as the door-chime buzzed. “Yes?”

“Admiral, Professor Dashwood and Doctor Conelly are here,” the young ensign reported and Barnett’s face darkened while he and the others rose. “Very well, send them in.” He looked at Kirk. “Get ready to meet two of the many idiots responsible for the criminal’s escape. They’ve already been interviewed by Commander Stones, yet I just need to ask them a few more questions for the record. But that can wait until you three are on your way to the Enterprise.”

The ensign let in two men. Jim and his friends had never seen them before. Two guards followed them and took up positions beside the closing doors.

The young captain pursed his lips. He already knew from Khan what had happened – mostly – still, he wanted to hear the whole truth from both sides.

Barnett cleared his throat. “This is Professor Matthew Dashwood and Doctor Nathan Conelly, the heads of one of our departments in the Starfleet Laboratory for Science and Healing. Professor, Doctor, this is Captain Kirk, his first- and science officer, Commander Spock, and Doctor Leonard
McCoy, chief medical officer of the *USS Enterprise.*

While Bones and Spock simply nodded at the two scientists, Kirk felt himself stiffen even more. So, these two belonged to the group of men and women who had had no problem abusing a human being for their experiments and denying the Augment any human rights! His gaze washed over the elder scientist before it fixed on the younger one. Somehow the name Connelly seemed to be familiar to him, but he couldn’t put a finger on where he’d heard or read the name before. But one thing Jim saw instantly, this man was as cold as ice.

“Heads of the LSH?” McCoy asked, alarmed. “Is there a new epidemic of some kind? Why would two chiefs of our primary research lab be here?”

“No, there’s no new epidemic – only an escaped subject,” Dashwood answered, and Kirk went rigid. ‘Subject’? Even McCoy, who held a deep loathing for the Augment, glared at the man.

“As I learned only *last night,* Khan Noonien Singh hasn’t been transported to the same security facility as the cryotubes of his crew but remained for eight months hidden somewhere at headquarters, and for the last four months was placed under the ‘responsibility’ of the LSH. Barnett explained angrily, “Somehow yesterday evening –”

“Hold on a minute!” Leonard cut in. “Sir, are you saying that Starfleet’s laboratories held Khan for… For what exactly?” The admiral’s expression was enough for McCoy to understand the answer, and realization hit him fully. “You… You used him for *experiments*?” He stared wide-eyed at the two scientists while Spock lifted a brow.

“I can’t imagine that he agreed to this,” the Vulcan mused.

“He wasn’t exactly in a condition to be asked –” Dashwood began, but was interrupted by Spock.

“By the Common Laws of the United Federation of Planets, it is forbidden to use…” the first officer started, and Connelly lifted a hand.

“Please, Commander, we know the laws. They were made for citizens of the Federation. Prisoner 3158-17-215 isn’t even human, but –”

“‘Prisoner 3158-17-215’?” For the first time Jim raised his voice. Until now he had pretended that
this was the first time he’d learned of the Augment’s fate and didn’t care at all. But he couldn’t stay silent any longer as he listened to these men referring to the super-human as a ‘subject,’ or as a prisoner who was nothing more than a registration number. His blood began to boil, and this time his empathy had nothing to do with last night. There were several things Jim Kirk couldn’t tolerate, and stripping a man off his honor, even of his name and humanity were among them.

“That’s the number the subject is recorded as in our files,” Conelly answered flatly. “However, yesterday evening –”

“What do you mean by ‘He was in no condition to be asked’?" Bones wanted to know, back in full doctor-mode. “Did you keep him in coma the whole time? How else should I interpret your statement?”

“For most of the time Doctor, yes. That was the only way to lower the risk to the researchers to a minimum and –”

Again Conelly was cut off, this time by a consternated Spock, “Your actions breached more than nine Federation laws and seven of Starfleet Command. You –”

“Commander, I understand that it sounds harsh, but the needs of the one were outweighed by the needs of many. This is simple logic which I am certain you, as a Vulcan, understand.” Nathan locked eyes with the first officer. “The subject’s blood and genes are the key to antidotes and vaccines against most known maladies.”

Spock lifted a brow. “This has been attempted before, as you certainly know. It ended in disaster, with experiments such as these changing the appearance of half the Klingon population, after they –”

“We’ve learned from those mistakes! Marcus was very familiar with the whole episode involving another captain of the Enterprise, too,” Dashwood cut in.

“We are a step away from the first successful results!” Conelly informed all assembled. “If the subject could be returned to us –”

“STOP calling him a ‘subject’!” Kirk’s sudden snarl turned everybody’s attention towards the young captain, whose face had turned red. “He is not a goddamned thing, he’s a person!”
McCoy’s nodded angrily. “Yeah! I mean, I would gladly punch the bastard in the face, but he is human, after all! A sentenced criminal, yes, but human! How could you –”

“If your CMO had looked at his bio-scans closely enough, Captain, he’d have confirmed to you that –” Again Conelly couldn’t finish his sentence, as Leonard growled,

“I’ve studied him too, and he is extraordinary I admit, but I swear that he is nevertheless a homo sapiens and should be treated as such!”

“So, it seems this is a difference of interpretation,” Richard Barnett said in a low voice. “You see, Dr. McCoy, these two gentlemen are of the opinion that Khan couldn’t be considered a person and has therefore no human rights.”

“And you’re okay with that?” Jim asked sharply; his expression was grim and a fire started to burn in his eyes that made the admiral mindful.

“No, I’m not ‘okay’ with this, Jim,” he answered sternly. “But obviously some of my colleagues share the same opinion as Professor Dashwood and Dr. Conelly.”

“Bullshit!” This statement came from Bones. “I had Khan in my med bay and I can assure you that the man may be strange, but his genes are rooted in our species!”

Conelly sounded almost bored, as if talking to a child. “You are a doctor, therefore it should be in your best interests to heal people. Research into cures for the most serious illnesses has often demanded unpleasant tests, still –”

“You are a doctor of medicine, too?” Bones asked with narrowed eyes. When Nathan simply nodded, he hissed, “Then you broke your oath, Mister! Or haven’t you taken it?”

A snort escaped the scientist. “Oh please, Dr. McCoy, spare me the nonsense of some archaic sentiment no-one believes in anymore.”

“Archaic sentiment? You’re calling an oath of honor an ‘archaic sentiment’? My god man, do you even have a moral code?” Bones was outraged now.
“No, I am a realist and –”

“Being a realist doesn’t mean that you have to ignore one of the most important traditions in our professional history!”

The left corner of Nathan’s mouth moved slightly. “There, you said it yourself, Dr. McCoy. Traditions! History! The future lies ahead, not in the past!”

“And those trees, whose roots are dying, are sentenced to dry and to fall in the next storm!” Jim cut into the heated discussion between the two medics. “It’s an old Native American saying and it speaks of something very realistic!”

“‘I will prescribe regimens for the good of my patients according to my ability and my judgment and never do harm to anyone’,” Bones quoted. “Does that ring a bell at all?”

“‘According to judgment’, Dr. McCoy,” Nathan replied icily. “We are speaking here of an individual who brought death and pain to many innocent people. And by the way, he is a genetically enhanced creation of a lab that existed three hundred years ago – an intelligent animal at best – but at last useful for something.” Conelly sounded as though he were talking about the weather, and Jim felt a burning fury stirring in his gut that took him – again – by surprise.

This need to step in for his nemesis’ fundamental rights had started as he’d headed for Qo’noS and now, after all that had happened last night – and Jim didn’t just consider the carnal madness that had befallen them – this urge was even stronger. “So, this is your kind future? If someone is a criminal you just strip him of human status so that you can use him as a lab-rat?” he spat.

“I’m surprised that you’re so eager to defend the subject – after all you, your crew, Starfleet and a lot of innocent people suffered because of him. Shouldn’t you be more concerned about the next victims he’ll certainly leave in his wake?” Conelly’s gaze fixed on Kirk’s, who straightened his shoulders.

“He ‘will’? So he hasn’t until now? He didn’t kill anyone when he escaped your clutches?” the young captain pressed.

“He rendered Dr. Brown, Professor Dashwood’s assistant, unconscious and put him in the cryotube, and he knocked out another member of staff to steal his clothes, ID and hyper-bike,” Barnett said.
“So, he could have killed them, but didn’t!” It was more a statement than a question, while relief flooded Jim. Khan had shown unexpected mercy again – not only towards him, but also during his escape. As it seemed, the Augment might be changing his ways.

“So, he could have killed them, but didn’t!” It was more a statement than a question, while relief flooded Jim. Khan had shown unexpected mercy again – not only towards him, but also during his escape. As it seemed, the Augment might be changing his ways.

“He’s already brought death upon many people, now he repays his crimes by saving others through his blood. It’s simple,” Conelly added and McCoy stepped forwards.

“So, in other words, an eye for an eye, a tooth for a tooth. You’re calling the Hippocratic Oath archaic, but act on principles from the Old Testament! This hypocrisy is sickening! I may be a little old-fashioned, but at least I still have morals!” He all but shouted the last words.

“Morals will not heal the sick,” Nathan countered infuriating calmly. “We are speaking here of one life for thousands.”

“This is not the way of the Federation. You are trampling on everything humankind has redressed within the last centuries,” Barnett commented flatly. “And there will be consequences for you. I’ll see to that!”

“What did you mean with ‘one life for thousands’? Was he about to ‘give’ his life?” Jim asked tensely, recalling his own thoughts from earlier in the morning concerning the process of stasis from three centuries ago. “What would you have done with him after you’d finished all the tests? Would you have put him back into cryosleep?”

“We would have tried,” Dashwood nodded, and Kirk narrowed his eyes.

“You would have tried?”

“That’s the whole problem with cryosleep,” McCoy said with a hint of bitterness in his voice, shocked beyond belief that a colleague misused his status and thought to stand above any law because of his ‘good intentions’. “You can’t freeze and unfreeze a body several times,” he explained to Jim. “Khan was put into stasis back in the 20th century, was woken up by Marcus and then sentenced to be put back into his cryotube. Even enhanced as he is, I doubt he’d survive a third ‘sleep’.” He glared heatedly at Dashwood and Conelly. “And you wouldn’t have minded if he died during the procedure. You’d be rid of him for good then, wouldn’t you?”

All the blood left Jim’s face while Barnett fixed the two scientists with another hard glare after hearing of this risk about the antiquated procedure for the first time. “Is this true?”
“Dr. McCoy’s assumptions regarding cryosleep are correct. There is indeed a good chance that the subject wouldn’t cope with further stasis. But taking into account his genetically enhanced body, the chances of success rise to fifty-fifty.”

For the third time within a few hours Jim felt sick to the core. “It was never intended that he’d leave the LSH alive, was it?” he whispered. The silence was answer enough, and the young captain had to fight the urge to punch Conelly and Dashwood. Taking several calming breaths he turned towards Barnett. “May I ask a favor of you, sir?”

The Chief of Command nodded, already anticipating what his former student wanted. He wasn’t mistaken.

“Remove these ‘subjects’ from our research department!” He pointed nonchalantly at the two scientists, before he continued. “And those who ordered this inhumanity shouldn’t be part of our service, whether admirals or not! They have nothing in common with what Starfleet represents!” A demand, rather than a request lay beneath the angry fire in his eyes as he added, “And if you ever catch Khan, then make certain that his human rights are observed! Despite his actions, he is a living, breathing, feeling being, for God’s sake and not a lifeless piece of meat you can put in and take out of a freezer!”

Richard nodded. “I will – if we catch him alive.”

“If you rescind the order to shoot him on sight, sir, you hopefully won’t have to deal with his death.” Kirk took another deep breath – ‘He HAS to live!’ his mind shouted to him out of nowhere – and he said sternly, “I once risked a lot to bring him in for a fair trial, a trial I never heard details about, and from which the sentence had never been completely carried out. Starfleet had wronged him again – even against its own judgment. This we owe him and ourselves in keeping with our code of morality.” Jim’s voice had become strong enough to elicit even a swift impressed expression from Spock.

Barnett sighed, knowing that nothing could change Kirk’s mind if it was set to something. “I don’t know if we’ll be able to capture him alive, but if so, I will personally see that he gets fair treatment. I’ll keep you updated, Jim. After all, you and your crew have the right to know what happens to the man you found first and went to such lengths to bring in.” He offered the younger man his hand. “Good luck to you and your crew, Captain. May the stars show you the right path. You’ll be our representative in any first contact situations with perhaps many new cultures. So Jim?” He winked quickly, “keep the Prime Directive in mind.”

“Yeah, promise,” Kirk mumbled, rolling his eyes, while Spock and McCoy bid their farewells. Then the three officers walked to the door, where Jim looked back once more. “And sir, may I give you some personal advice?” At the asking glance of his superior he growled, “Fire them!” He pointed to
the two scientists.

Ignoring the indignant glares of the other men, Barnett saluted casually. “Captain.”

“Admiral.” With that, Jim and his crewmates left and walked down the corridor towards the turbolift.

McCoy pressed his lips into a thin line, before he gritted out, “One life for thousands, the Hippocratic Oath is archaic, at least his blood is useful… My ass! If this is the real face of Starfleet I signed up to the wrong club!”

“This isn’t the ‘real’ Starfleet, as you put it, Doctor,” the Vulcan was compelled to answer. “We all knew that several sympathizers of Section 31 successfully avoided charges and not all of them were even found. Luckily more of them have been exposed now and this can only lead to a full recovery of Starfleet’s honor and real intentions.”

“I only know one thing, the body cannot heal properly as long as there’s still disease,” Leonard grumbled. “And there are many wounds left in this body!”

Jim kept silent while his two friends talked to each other, actually getting along for once. His thoughts wandered towards downtown or wherever the Augment was hidden at the moment. Though he’d earlier had a guilty conscience about his decision to stay silent about Khan’s ‘visit’, he was now glad that he followed his gut and had said nothing. Even though Kirk still believed that the super-human should be punished for his crimes, he knew that he couldn’t just stand by while the man was killed or – even worse – fell back into the hands of some insane scientist. Yes, Barnett promised to give Khan a fair chance to be heard, still there was a good possibility that further hidden operatives of the former Section 31 could get a hold of him again.

‘Almost two hours ago I felt bad because I hoped that he wouldn’t get caught. Now I really wish he’d escape,’ Kirk’s too-big heart whispered, while he stepped into the turbolift which would bring his friends and him to the floor where the transporters were located. ‘Barnett may have promised to treat him fairly, but there are too many of the old guard in Section 31 who want to use Khan for their own proposes. Even a resolution of the Council didn’t stop them, otherwise he wouldn’t have been forced to serve as a guinea pig for damned medical experiments for the last four months!’ The turbolift neared its destination. ‘Khan told me but only now do I realize what it meant. Four months in the clutches of scientists who didn’t even see him as a human being – and above all, he couldn’t even move or speak to his tormentors; damned to helplessly endure whatever was done to him. No one should suffer like that!’

“Jim, is everything all right?” Spock asked quietly, bringing Kirk out of his reverie.
“Only time will tell,” the young captain murmured, ignoring the confused looks from his two friends. Sure, both were engaged in their own musings of what they’d just learned in Barnett’s office, though perhaps not about Khan’s fate, but rather about how there were still members of Starfleet willing to carry on Marcus’ legacy.

As they left the turbolift and headed towards the transporter room, they passed several windows and Jim looked one last time out into the bright sun and its dancing rays on the Pacific waves before glancing up at the Golden Gate Bridge – a monument to human achievement even before Khan’s time.

‘Wherever you are, Khan, be careful. Don’t get into trouble and don’t CAUSE any trouble! I gave you a second chance today in not giving you away, so please don’t waste it.’

Half an hour later, James T. Kirk walked onto the bridge of the USS Enterprise wearing the gold shirt of command. Uhura glanced at him from her station and lifted a brow as she spied the unmistakable ‘bruise’ on his neck and gave him one of her patented glares, before simply shaking her head. Smiling, she turned her attention back on her duty. Some habits would never change!

Jim pursed his lips – that went better than he thought it would – and looked at the figure in the command chair. “Hard to get it out of your system once you’ve had a taste, isn’t that right, Mr. Sulu?”

The Japanese helmsman had been lost in thought and grinned, startled by his commanding officer. He jumped out of the chair and said, “‘Captain’ does have a nice ring to it. Chair’s all yours, sir!”

The tension finally began to leave Kirk as he – carefully – took his rightful place in the middle of the Enterprise’s command center. His gaze fell on the large screen that showed the Earth. Somewhere down there a lonely man was still running for his life and just for a moment, Jim felt the uncalled need to help the Augment. But there was nothing he could do for him now; after all he didn’t even know Khan’s location. He’d already done more than the law allowed. ‘Maybe he really can escape. Maybe we’ll meet again, just like his note promised.’

Around him, the senior officers were preparing for the mission, Uhura reported that all crew members were aboard despite the earlier departure time, and Bones once again complained about his own foolishness at signing up for a mission that would keep him in space for five years, which made Carol giggle. Jim hadn’t seen Carol in quite a while and he had looked forward to meeting her again. But as she gave him a warm smile, he realized that the usual fluttering feelings in his belly at seeing her were gone. Well, maybe there had been too many things happening during the last hours and he simply needed a break.
But not now – not when the whole galaxy was waiting for him.

“So, where should we go, Mr. Spock?” He turned towards his Vulcan friend.

From his station on the upper deck of the bridge, Spock said, “As a mission of this duration has never before been attempted, I defer to you judgment, Captain.” There was a hint of kindness in his onyx eyes.

‘Good judgment? Well, we’ll have to wait and see if that turns out!’ Kirk thought and took a deep breath. “Mr. Sulu, take us out!”

The helmsman smiled. “Aye, Captain!”

TBC…

Chapter End Notes

Well, Spock and Bones may not be exactly as sympathetic to Khan’s fate at the hands of the LSH scientists, but they are still outraged (in Spock’s case as far as a Vulcan can be ‘outraged’, grin). And this will become very important when they learn about their friend’s encounter with the super-human (don’t worry, this one night will not remain the only one the two will share with each other, smirk).

In the next chapter the Klingons will show up and you will learn why they’ve declared war against the Federation. You will meet an old acquaintance from TOS and later from TNG, and another well-known Klingon will be mentioned. In the meantime, Khan hides among the fishermen and learns that simple-minded inferiors are not that bad – especially when he can use them to leave Earth – and Jim learns that the Klingons do know who ‘visited’ their home-world a year ago. And Barnett will confront Norton.

I hope you liked the new installment – the bickering of the friends, Khan’s plan to avoid Starfleet, and the whole confrontation in Barnett’s office. I would really appreciate receiving more reviews and other feedback.

Have a nice week,
Yours Starflight
Chapter Notes

Hi, my dear Readers,

Thank you once again for the reviews and the kudos. I am so happy about every reaction I’m getting about my writing, even if my English is sometimes rough.

In the new chapter you will meet someone who is well-known from TOS and TNG, as I promised, and I am glad (how evil of me) that no-one guessed who it could be. I hope the surprise will be to your liking.

You will also learn what happens to Khan and how his plot is beginning to work, while Norton becomes even more the bad-ass. And there are two nice Jim-Bone scenes, which will show how deep their friendship runs.

I hope you enjoy the update,

Yours, Starflight

See the end of the chapter for more notes

Chapter 6 – There will be war

Like a silver-white spark in the endless depths of space, the Enterprise sped through the sea of darkness, twinkling stars, and colorful stardust. Only three days ago she had left everything familiar behind her, following the purpose James T. Kirk had spoken of during the ceremony in San Francisco: to boldly go where no one had gone before.

But just at the moment, the orator of said speech was everything but bold. Holding his best innocent smile tightly in place, he watched McCoy as the CMO lowered his bio-scanner, eyed the exposed torso of his friend up and down, and then frowned at him. “What the heck did you do that night before we left? Were you in a bar-fight again?”

Jim lifted both hands in defiance. “No, I wasn’t, Bones! Cross my heart and –”

“Don’t play dumb with me, Jim! There are serious bruises on your chest, shoulders, and upper arms. Your neck is not only decorated with a hickey that’s been the subject of rumors for days now, but also with fingerprints looking as though someone had planned on snapping your neck. And, you have several…love bites on you which almost broke the skin!” He crossed his arms in front of his
“Who did you bed, you idiot? A Klingon woman?”

“A _Klingon_ woman?” Kirk stared at Leonard as if he’d grown two heads. “Are you nuts?”

“No more nuts than you, considering the fact that you’re withholding some important information, such as you were beaten badly just before you left for a five-year mission in space!”

Kirk rolled his eyes. “Is that any way to speak to your captain?” he retorted, slipping back into his black undershirt before reaching for his gold top. He was glad that it was already evening when he’d finally complied with the fourth or fifth demand of his CMO and friend to attend the required medical check every crewmember had to undergo at the beginning of a long mission. Of course, the same check had already been done a few days before boarding the ship, still, every CMO of a starship had to run a second check to complete the files of the whole crew – something Jim Kirk was anything but fond of. And knowing that the whole encounter with Khan had left marks on him even a blind man could recognize, he successfully had delayed this check. Until now. Bones had threatened to put a note in Kirk’s file if Jim didn’t show up at med-bay before tomorrow.

“I can speak like a CMO to his captain, if you really want me to,” McCoy growled. “But then I would have to file a full report about how the commanding officer of the _USS Enterprise_ has some serious bruises he could only have gotten during a fist-fight he conveniently ‘forgot’ to mention.” He returned Kirk’s dark glare and sighed, then his expression softened. “Jim, this all looks to me as if someone tried to beat the shit out of you. And worse, there are several more red and blue marks on your butt and inner thighs that don’t necessarily indicate rape, but do indicate either a very rough coupling, or maybe a first-time in that department?” Astonished, he saw a blush rising up his friend’s face. “Hey, I certainly will never judge relationships or one-night-stands between people of the same gender, but still, I never took you for…for bi.”

“Me too,” Jim mumbled, scratching his head. _Of course_ Bones would have to discover the real nature of his carnal activities with a man whose name Jim had to keep a secret. He hadn’t feared disapproval from his friend – the good doctor was far too broad-minded for anything like that – but he was going to ask questions the captain couldn’t answer.

However, Leonard was sensible and tactful enough to stop himself from asking for details while he lay the bio-scanner aside and surveyed the younger man who sat on the diagnostic bed like the incarnate bad conscious. “Calm down, Jim. There is nothing to be ashamed of. You’re not the first guy who’s given in to his curiosity of how it might feel to have sex with another man. But those bruises you have…”

“It wasn’t a bar fight, or a street-fight – rather…a kind of misunderstanding that was…resolved. And later…” He made a jittery gesture and Bones began to chuckle.
“I never thought I would see the day that you become shy!” Smirking he shook his head. “Do you need a painkiller for your butt, or –”

“I could have done with one of those three days ago,” Kirk groused and hopped of the diagnostic bed.

“Then you should have come sooner, kid, instead of delaying the whole thing.” Bones spoke like an old country doctor lecturing a teen about foolish behavior. Then he sighed, turned away and took up his PADD. “Did you really think I would judge you, Jim? Do you have so little faith in me?” He sounded almost hurt and Jim shook his head.

“No! No, of course not. Still…” He shrugged and Leonard grimaced before he went to one of the cupboards and returned a moment later with a tube of ointment. “Here, use this and tomorrow you don’t have to sit down in the captain’s chair as if you are about to recline on a fakir’s bed.”

Kirk grinned and accepted the medicine. “Thanks, Bones.”

“You’re welcome. And I’ll give you something for those bruises – and this hickey. Sweet lord, your lover really must have been a wild one.”

Jim gulped as the image of a marble-white face with those high cheekbones and captivating pale blue-green eyes filled his mind, while well-shaped lips moved in a controlled, impressive way before they captured his...

“He was,” he whispered, baffled by the sudden longing that rose in him. Then he caught McCoy’s broad smirk and made for the doors quickly, thanking god and every higher being that the med-bay was empty save for Bones and him.

“Jim, don’t forget the cream to get rid of that love bite!” Leonard tried to hold him back with a small smirk, lifting another tube, but Kirk shook his head. Something in him didn’t want to quickly heal this ‘mark’. It was the last connection to the man who was his nemesis and seducer, all in one person – a man of whom he didn’t know still lived freely or had been re-captured or killed during his flight.

“It will fade in time,” he reassured the CMO and left the med-bay, feeling uneasy once again when he thought of Khan, who had the whole Federation against him, and hoping against his better judgment that the enhanced man had escaped.
“Hey, that was a really good haul!” Nando slapped the new crewmember on the shoulder. “And how you pulled Georg out of the water was something we will all remember forever, right Georg?”

The fisherman in question grinned broadly. “Yeah! Without you, m’boy, I would have drowned.” He wrapped one weathered arm around ‘Evan’s’ shoulders, who went rigid, and laughed. “Calm down, laddie! We told you that we won’t let you off the hook. Not after the stunt you pulled. And you even saved a whole day’s haul and, by the way, my life.”

Capitano Alassio Mazzani nodded enthusiastically. “Yes, Neptune himself must have led ya to us, Evan! So, let’s give th’ sea god a sacrifice in th’ next bar. I pay the second roun’ after Georg!”

Most of the crew cheered and followed their captain towards town; only the youngest had to stay back to ensure the catch made it safely to market. They strolled across the pier and while Khan was pondering how to escape this spree without snubbing his fellows – after all, he still needed to hide among them – Nando called out, “What the hell is going on? Don’t tell me this damn Starfleet maneuver is still going on!”

“Maybe this thing is more serious than we thought. I heard the Klingons are making real trouble these days. We shouldn’t be surprised if they start a war,” Georg grumbled.

The super-human had looked up and just for a moment his heart sank as he saw several Starfleet security officials watching the docks, then he called on all his skills as an actor, bent his head down and returned Georg’s far-too intimate gesture. “Thanks for the invitation, my friend. I could use a drink or two.” He grinned and pretended to have sea-legs – something he hadn’t to bother with in reality.

“Yes, I can see that,” the older fisherman laughed. “Not used to the sea anymore, are you, laddie?”

Laughing, chattering, and joking, the crew walked to the end of the pier and left under the careful watch of the guards, who only saw several fishermen returning home, eager to slake their thirst in the closest bar. No one recognized the younger man with the tousled dark hair, the three-day’s growth of beard, the weathered, faded clothes, and the staggering steps as the criminal they were searching for, and Khan let out the breath he’d been holding as they crossed the street and headed towards a favored bar.
That had been far too close for his liking, still luck seemed to be with him. Once he’d realized that his crewmates were simple honest souls, he’d had a chance to prove himself worthy by dragging Georg out of the Pacific after the older man had tumbled overboard. After all, if they’d have lost a crewmate on the high seas then there would have been questions from the police and with them the risk that he could have been recognized. At least his superior reactions saved a day’s haul as he’d activated the break of the automatic cable control that secured the net at the last moment. His comrades had celebrated his quick thinking and Mazzani had promised him extra pay, something he needed in order to cement his own plans.

If someone had told him earlier that he would work as an ordinary fisherman for three days, reel in nets, jump overboard to prevent an inferior from drowning, and sit with his fellow fishermen in a pub drinking ale and rum, he’d have thought them insane; maybe would even have become angry to have been thought of like that. But here he was, sitting on an old wooden bench in a crowded bar, drinking ale he was certain was alien, and had earned his first credits and listened to some funny stories (which couldn’t be anything but fish tales), while from the speakers old shanties blared. A more stereotypical scene wasn’t possible! And no one around him would ever assume that in their midst sat a man who was able to instantly kill them all with his bare hands.

But he had no intention of doing such a thing. They weren’t threatening him, they weren’t enemies, nor did they intentionally hinder his plans. They were simply here at the same place like he was, enjoying “beer o’clock”. And, as he realized surprisingly, he didn’t mind at all. Not really. Even though everything in him screamed to act with more alacrity to find his family, he knew that he had to stay calm. After all, there was nothing he could do as long as Starfleet’s blood hounds were after him. And furthermore, the time at sea had been good for him; the last vestiges of his captivity had been blown away, his mind had found some rest, and his body had fully recovered.

“… eh, Evan?” Nando’s voice brought him back to reality and he lifted a brow.

“Pardon me, I didn’t hear. What did you say?” Khan asked, ever charming.

The young Italian rolled his eyes. “You’re often drifting away, uh?” He grinned. “I asked if you had a place to stay.”

Khan sipped at his ale or whatever it was – and looked at Nando. “No, I’ve nowhere to stay.”

The other man grinned. “Hey, no problem, you can stay with me. I’ve an apartment several streets away from here. I can only offer you a cot, but if you don’t mind…”
“I do not mind, Nando, thank you,” the Augment answered, forcing a smile on his face. ‘Not only doing a henchman’s job on a fishing boat, now I’m reduced to spending my night on a cot!’ he sighed inwardly, but he shouldn’t complain. It was better than nothing and it would be only for a short time until Starfleet became careless again, and he could start to make his plans more intricately, collecting information before he struck.

Still, the prospect of finding shelter in some small room with a lesser human – even if Nando was not so bad in his own way – and to be forced to simply wait didn’t appeal. If he could get back to Kirk’s flat and…

Khan frowned. Kirk was away with his ship; starting his five-years-mission earlier than scheduled, as the news reported. ‘Certainly an order from Starfleet Command to keep him out of ‘the terrorist’s way for revenge’,’ he sneered inwardly, and sighed. Even if James were still in San Francisco, Khan didn’t know if the younger man would again accommodate him, or instead inform Starfleet. Yet Khan believed that Kirk wouldn’t turn him in. Not after that night, and after James had learned about what had happened to him at LSH. The young officer’s heart was far too good – something that would be his death someday.

Unconsciously, the super-human’s fingers reached for the hickey Kirk had given him during their passionate shared hours. It had faded away sometime during the afternoon of his first day at sea; still Khan thought he could sense it. Even if physically healed, it seemed to remain – deep in him, branded on his mind and soul.

Without his doing, the Augment’s gaze wandered to the ceiling. Somewhere out there was the Enterprise, and with her the only living soul he had left at the moment. ‘Stay out of trouble, James, or you will have to deal with me!’

ST***ST***ST

Far away from Earth, almost in the middle of the Beta Quadrant on another planet altogether, evening also approached. Most citizens were either at home or lingered in pubs, fighting arenas, or sport centers, but regardless of the status of their families and heritage, there was only one thing that held their interest these days: the session and resolution of the High Council.

In the Great Hall that was located in the capital’s First City on Qo’onS, the heart of the Klingon Empire, the atmosphere was heated. Deep voices filled the air, fists were balled, younger Council members tried to drown the statements of the elders in outrage. Wiser members had already turned their attention to prior matters, but in the end, they all wanted one and the same thing - the beginning of war! War against a union that had changed from a troublesome neighbor into an enemy: the United Federation of Planets.
For a century there had been quarrels, incidents, and disputes which had led to a tense co-existence, culminating in something the Earthlings called a ‘cold war’.

A Klingon adage espoused that ‘Revenge is a dish best served cold’, but by now this ‘coldness’ had faded away, to be replaced by burning wrath. The Federation was expanding more and more, settlements arose first near the Neutral Zone, and now within it. Yes, the articles of the Organian Peace Treaty allowed both sides to contact the inhabited planets in the Neutral Zone, and could offer them membership to one of the two realms, but any kind of violence was out of question. And there was another article in the treaty that forbade entering the other one’s realm with warlike intentions.

The enmities had stopped and both sides had withdrawn after the treaty had been forced upon them, still the hostile feelings remained. They were too different, the Klingons and the humans – or the Vulcans, Andorians, and other peoples which were a part of the Federation. But at heart, the real issue was between the Klingons and the Earthlings.

Whenever both sides met there would be disputes, provoked perhaps once by the humans, the next time by the Klingons, who had a long memory for insults to their honor. And there had been many – too many, especially within the last two years.

The incident on the Federation Outpost K7 near the border to the Beta Quadrant, concerning ball-like, small furred animals which gave even the most courageous warrior shivers, still burned deeply in the fierce hearts of many Klingon soldiers. It burned particularly brightly in the heart of one of their commanders – Koloth, a warrior of a high-ranking family who had powerful friends in the leadership of the Fleet and in the Council.

One of these friends sat among the older members of the Council, taking his rightful place like his father and father’s father had done before him: Kor, son of Ryan, the last descendant of the Klingon Imperial Family.

Like many other Klingons who came from the families of the chosen ones involved in the experiment with Terran Augment DNA a century ago – and which had ended in disaster – a part of the characteristic appearance of this people had changed into almost human appearance. The ridge on Kor’s forehead had morphed into a smooth one like Terran humans had, his skin was paler and his teeth didn’t sport the sharp edges like those of the ‘regular’ Klingons. But he and Koloth, like most of the genetically altered Klingons, were accepted among the others because of their heritage and acknowledgement of their merits.

Kor hadn’t faced any mockery or loathing after he’d been born with a mere human’s appearance. And the status of his family wasn’t the whole reason for the tolerance. He was a fighter through and
through – brilliant, courageous beyond even Klingon standards, and he was successful, especially when forced to adjust to changing circumstances.

It had been he who had led the peace negotiations on Organia, together with his counterparts in the Federation and Starfleet, the latter represented by Commodore Robert Wesley, captain of the *USS Lexington*. Wesley had been ordered to the planet to offer the Organians Federation protection against the approaching Klingons.

Only later, Kor learned that the new flagship of Starfleet, the *USS Enterprise*, had been originally ordered to Organia, but had been diverted to fly a rescue mission, and the *Lexington* took her place. He didn’t regret this because he found in Wesley an experienced, intelligent, honest negotiating partner who knew what it meant to have *honor* – something that was like a religion to Klingons. And, he preferred dialogue between two warriors instead of negotiations with politicians who spoke too much and said too little. The treaty had been brokered after many long days, having been observed by the Organians, and finally, each party had gone its own way. Still, the animosity and loathing remained – after all, old habits die hard.

Several months later, Kor had met Koloth again and learned of the incident on K7 along with the repellent creatures the humans called ‘tribbles’. He’d also learned of the clashes between Koloth, his crew, and the captain of the *Enterprise*. He was a young human – barely grown into a man – who went by the name of James T. Kirk. Kor had become enraged as he heard about what this Kirk-boy had done; that he had dared to fill Koloth’s ship with these infuriating, cooing fur-balls that the entire ship’s crew couldn’t remove completely. And despite all efforts, there were tribbles found all over Qo’noS and the Klingon colonies, where they stuffed themselves and continued breeding. There were many members of the High Council who saw in this event an attack against the empire.

But that was not all. Last year there had also been the incident on Qo’noS in the abandoned Kheta area where a patrol caught a small K’nornian trading craft crewed by ‘dealers’ who’d posed as bounty hunters; chasing a criminal from the Federation. The results were dozens of dead Klingons, two destroyed scout ships, an escaped landing party of Federation members, and a long list of vendettas from the involved families.

It was Koloth, who’d returned from a patrol along the Neutral Zone five months after this incident, who’d discovered the identity of the ‘bounty hunters’. The leader of this bunch of invaders and murderers was none other than that same James T. Kirk, captain of Starfleet’s flagship. But Kirk, a Vulcan, and a dark-skinned woman, hadn’t been alone as the video records of the space craft had shown. They had been seized days later by a second patrol which had been searching for their missing comrades. Those weaklings from the Federation wouldn’t have stood a chance against the Klingon warriors not for their back-up; a man, whose face had remained in the shadows, and who’d slaughtered dozens of the patrol while Kirk and his fellows joined in the fracas.

A cry of outrage and vengeance had risen through the Imperial Fleet and the High Council as Koloth saw the records and had recognized the ‘terrorist’ straightaway. Within a few days, the High Council sentenced Kirk and the others to death by torture – a verdict that was only handed down for high
treason or grave crimes against the Empire.

And the wrath increased even more.

So, this was the so-called peace the Federation stood for: they talked about peace with everyone, but in the background, they secretly attacked every chance they got. The presence of a disguised Starfleet captain on Qo’nos who’d left a trail of spilled Klingon blood showed everyone that those who had always demanded war against the Federation were right.

The preparation for war had already started weeks before Koloth revealed the intruders’ identity. Klingon spies among the Federation had reported a mighty Starfleet ship – three times the size a Constitution class – that had nothing to do with the so-called ‘peaceful mission of exploration’ the Federation wanted to represent with its Starfleet. This ship had been a bulwark of power; built only for battle. There was talk of the Enterprise having been involved in some operation with it and that this ship had been destroyed near Earth. Still, the whole event proved one thing: the Federation was gearing up for war, and many members of the High Council saw in the young captain’s attack on Qo’nos nothing less than a foray into enemy territory to test the Empire’s stronghold.

Afterwards, the Imperial Fleet had started to extend its forces. Thousands of workers toiled day and night in the shipyards to build more battle cruisers – the mighty D7 classes, the smaller but more maneuverable D12 classes – better known under the name ‘Bird-of-Prey’ – and the quick scout-ships. Engineers developed more advanced weapons, old ones were modified and mass-produced; new shields to protect ships and conquered areas on planets were tested. Even the prototypes of cloaking-devices, whose concept had been seized from the Romulans, were installed in several cruisers, hoping they would deliver what the technicians promised. More recruits than ever signed up for the fleet, officers were trained more intensively, more spies were sent into the realm of the declared enemy.

And this evening the Chancellor of the High Council of the Klingon Empire would decide if the time for war had finally come. Generals, Admirals, Commodores, and commanding officers had reported on the status of their battalions and ships, and now it was up to the leader of the Klingon Empire whether or not they would invade the Federation.

The discussions ended abruptly as a large ceremonial hammer crashed against a large gong near the Chancellor’s dais, and all eyes turned towards the old Klingon who’d held this office for more than a century. M’Rek had had his own encounters with another captain of a former Enterprise a hundred years ago.

His dark-skinned face was wrinkled and time had dug deep furrows around his eyes. The ice-white mane reached past his broad shoulders, and a scar marred his left cheek – a mark of battle he’d received several decades ago, which he wore with pride. But despite his many years, his posture was
proud and body still powerful as he rose from his seat and fixed every member of the Council with a hard stare. “All reports have been given, everything has been said!”

The assembled dignitaries and warriors nodded, before he continued, “Long enough have we endured the impudence and effrontery of the Federation; held back when they tried to increase their realm and aligned with others against our rightful claims! We will not tolerate this any longer!” Cheers erupted. “We will not stand back, watching them build mighty battleships in secret, and sending their officers to kill our patrols to test our limits. We are done with listening to their lies of peace!” Again the Council and the guards shouted their agreement. “We will allow them four days after receipt of our demands to withdraw from the Neutral Zone and to evacuate their unrightfully-obtained colonies at our borders. Those who remain afterwards will serve us as slaves or will be eliminated. The weaklings of the Federation will learn to tremble when our battle cries are heard and there is no one to stand between us!”

‘Finally!’ Kor thought. Even if he still thought that Robert Wesley might be a man of honor, the Commodore’s colleagues weren’t – especially true of this boy-captain he was eager to meet and on whom to deliver justice. And if he was not granted this satisfaction, there were also two commanders of his squadron who’d lost brothers in the cowardly assault by Kirk and his companions, who’d gladly execute the renegade.

M’rek let the approving cheers of the High Council wash over him like a mighty wave before raising a fist to the ceiling high above him, and thundered, “This is the day the Klingon Empire will show its true strength. This is the day we will answer to the deliberate provocation of the Federation. DEATH TO OUR ENEMIES!”

The battle cry was picked up and echoed through the air.

The day of war had come!

ST***ST***ST

“You are in a lot of trouble, Albert.” Admiral Barnett glanced calmly at Norton, who was in custody since Richard had given order to arrest him. “I’ve brought charges against you and the persons in authority in the LSH in Nevada for –”

“For what, Richard?” Norton’s voice was flat. “For following an order given by the former Chief of Command, who was killed in a natural disaster in space?”
“No, for breaking a dozen laws and rules.”

Albert smiled mildly. “Such as?”

Barnett frowned. “Do I really have to repeat the indictments? Infringement of human rights, reckless endangerment of the population, violation of a Council sanction, conspiracy, insubordination...”

“Conspiracy and insubordination?” Norton cocked his head. “I don’t know how you got the idea that I would subvert your authority – or that of the whole Corps. I obeyed an earlier given order and...”

“Nonsense! Allistor was, as I just learned, Marcus’s tool, and continued where Alexander stopped. Marcus was a dead-ender, who used his authority to prepare for his own private war to increase his power. If he hadn’t died out there in space, he certainly would have been brought to trial – just like Allistor, if his connection to Section 31 had been revealed before he died. You knew this, nevertheless you executed an order that was –”

“I beg your pardon?”

This time Albert really smiled. “You heard me. You took Allistor’s place only two or three days after his death. At the time the subject known as ‘Khan’ had still been in his cryotube, along with the others here on Earth. Only later were they all transported to Gamma 12, aside from him, yet you didn’t interfere.”

Barnett’s brown skin became even darker as his face flushed in anger. “I had absolutely no knowledge about...”

“You should have – after all, you’re Chief of Command and it’s your duty to know about the orders and projects of your predecessor.”

This got Richard’s hackles up. He realized immediately what Norton was doing. “There were no files, no notes, nothing that suggested –”
“Records which are marked as ‘top secret’ are rarely to be found in a desk-drawer, Richard! You should have done your homework better; then you wouldn’t be in this position now.” Albert leaned back in his chair in the visitor area of the brig. “The Chief of Command is responsible for everything, my friend, especially for ‘delicate’ orders.”

“The Chief of Command also relies on accurate data from his cadre. You and José Luengo have withheld this piece of information on purpose!”

“You can’t prove that, Richard.” Albert retorted. “And regarding Luengo’s part in all of this…”

“He’ll have to answer to the Federation Council, too. He’s already in custody one cell block away from here!” Barnett stated sternly and felt a rush of irritation as Norton started to laugh.

“He is the Chief of the SBI. It’s his duty to know everything. There are secret files in his desk whose contents would make even you frightened – starting with the not-so-accidental disasters of the ruling parties, politicians, and corporations of every planet in the Federation. And ending with secret records from Qo’noS, Romulus, and New Vulcan. Starfleet is –”

“Starfleet is a semi-military organization which was established to research the galaxy and to protect the population of the Federation – and not a strategic agency that spies on the own members, disregards tradition and law, and quietly builds warships, regardless of anyone’s ‘perceived threat’!” He rose from his chair. “Your shadow organization, Albert, that very same one Marcus set up, will be disbanded – once and for all!”

He turned to leave, but Norton’s words made him stop. “Marcus was our best – but not the one who came up with the idea or Section 31 and fathered it. He was chosen to command it, not least of all because he was already Chief of Command, but because there were and are those who felt the same. They made the whole thing possible from the beginning.”

“They have been removed and –”

“Not all of them have, as my presence here now proves, or that of Josés.” All of sudden Albert gave up his casual posture and bent forwards, his hands resting on the table in front of him. “We are everywhere, Richard, don’t ever mistake that. You can go through with this whole ‘cleansing process’ of yours and make José, the scientists of LSH, and me face trial and the Council, but be assured that it will do you no good.”
Barnett stared at him “Are you threatening me?”

“No, my friend, I’m warning you. You’re the Chief of Command. By accusing us of crimes while you hold that post, you’re effectively accusing yourself, too.”

“I had none of these reports.”

“That’s irrelevant. You hold responsibility for everything going on within Starfleet and its facilities. If we’re going to face trial you’ll also have to answer some very uncomfortable questions. The whole cadre could break apart – and for what, Richard? For a genetically bred subject in a human’s shape that only –”

“Khan is not the reason you and the others are in custody, Albert. You simply don’t get it, do you? You are breaking laws! Khan is a murderer, yes, but you and your fellows are not any better than him. After all, it was your actions that were the very reason for all of last year’s bloodshed. And I don’t just mean those in London and San Francisco. Many of the Enterprise’s crew were killed in the Vengeance’s attack Marcus ordered. Not Khan, but Marcus shot on one of our own ships – because James Kirk discovered Alexander’s true motive: war!”

Albert sighed. “Richard, you may be a man of honor and you certainly were the best Chief of Starfleet Academy in recent history, but you are no soldier! You have no killing instinct, but our enemies do. For years the Klingons have been spoiling for a fight. Last February – on the Eve of Foundation no less – they tried to size Sherman’s Planet and were only stopped because several Starfleet ships were nearby to chase them away. And there’ve been further incidents all along the Neutral Zone. The whole Alpha and Beta quadrants are giant tinder boxes that will explode with the tiniest spark.”

“A spark that Marcus, you, and the others wanted to change into an inferno,” Richard all but spat, and Albert groaned as if speaking to a child.

“Don’t you get it? The Klingons will attack! They will start a major offensive soon, certainly without even a declaration of war against us. It isn’t a question of ‘if’ but ‘when’; all signs point to it. And those who strike first are always in the better position. As you said, Starfleet was founded to protect the citizens of the Federation of Planets. Therefore Section 31…”

“… may have had good intentions at the beginning, but Starfleet is no two-faced institution that speaks of peace and then starts a war, regardless of how covertly! If the Klingons are really going to attack, then it’s because you and your fellows gave them the very reason to declare war!” He walked towards the door.
“And what about the Augment? He –"

“Mr. Singh is still on the run – and even if we catch him, I certainly will not send him back to the labs! This man isn’t going to be sentenced like that again after you and your ‘friends’ made certain he couldn’t be put back into cryosleep without killing him. What will happen to him depends on the Council, but –”

“You are a fool, Richard!” Norton spat, as his mask of control slipped. “That the Klingons not only fight with common weapons but also biological warfare agents is well known, and the subject’s blood could be the answer to those inhuman attacks.” He met Barnett’s dark eyes and added: “He was constructed ‘to bring peace during a time of war’, as he himself had said several times when under Marcus’s care. Well, now he can serve the original purpose his creators made him for.”

Richard Barnett surveyed the other admiral and loathing rose in him. To speak of another person – even a criminal – like that went against everything he stood for. “I have nothing more to say to you, Albert. I thought I knew you and that I could trust you – that you were a friend – but I see now you are nothing more than a sick man, lacking in any morality, honor, compassion, or humanity. I’ll see you at the trial!”

Norton gritted his teeth for a moment before he called after the departing Chief of Command. “The Klingons will attack – very soon – and there will be thousands of victims. Mark my words! There will be a day you will curse your own stupidity and wish you’d listened to me!”

But Barnett was already out of the room and didn’t hear him.

Five days later, a message from Qo’noS reached the Council of the Federation of Planets. The Klingons did not request, but demanded that the Federation withdraw form their border in the Alpha quadrant within the next four days after receipt of the transmission, otherwise there would be war.

If the Federation gave into this demand, it would not only leave Sherman’s Planet, Donatu V, and Station Deep Space 7 exposed, but also dozens of others colonies; shifting the ownership to the Klingons – a preposterous imposition.

The ultimatum so provoked a storm within the Council and Starfleet, that every other topic was tabled in favor of it. Even Barnett’s loudest protests didn’t stop the Council from releasing José Luengo from custody; his knowledge and alliance with the varying secret service organizations were too valuable in these times. The same went for Norton, even though he was only able to work under
close observation. The internal turmoil caused by Khan’s escape faded into the background as the threat of war with the Klingons transcended a hundredfold the danger posed by a single terrorist.

The security forces still deployed to track down the fleeing Augment were withdrawn. Their mission was about to shift dramatically as they would be needed to aid in the evacuation of the colonies in the disputed area near the Neutral Zone and to maintain public order on the other planets.

At first, leading politicians and Starfleet officers tried to hide the worsening situation from civilians, but eventually information leaked through the tightest of security, and the media was full of nothing else. Until now. There had only been a tenuous stalemate and constant cold war between the two realms, which had threatened to escalate before, but had been mutually settled (however unhappily) by the Treaty of Organia. Now, for whatever reason, the Klingons no longer felt bound by this treaty and the sinister shadow of a full-blown war spread through the entire Federation. Even as the bureaucrats assured everyone that it wouldn’t come to open battle, no one believed them. Not enough was known about Klingons among the civilian population, aside from that they were belligerent.

There would be war; everyone knew this, even those who preferred to live in denial must have realized deep down in their hearts that their universe was about to change.

ST***ST***ST

“Blasted Klingons!” Capitano Alessio Mazzini set his glass back on the table and stared at the large screen beside the bar. It currently displayed a talk show hosting several self-named ‘specialists’ discussing the Federation’s options, the usual behavior of Klingons, and their chances of preventing war – or not. Actual news was reported by scrolling updates, which grew more pessimistic from hour to hour. “We’ve such good hauls th’ last days and th’ season promised to be one of th’ best ever. And now they’re coming, these dragon-heads an’ screwing everything up! Santa Maria, th’ pest should come over them.”

“I doubt that the Klingons are susceptible,” Khan drawled, sipping at the red wine that was far more to his taste than the horrible ale that was served in the pub. He had accompanied the fishermen for the whole of the last week, and they had returned only yesterday, facing the calm before the storm on the shore and in the streets of San Francisco. They had learned about the Klingon’s ultimatum while at sea, but to be caught in the tense atmosphere that lay like the usual fog over the city – and the whole planet – was upsetting to their simple lifestyle. Even Khan was uneasy.

“That was meant to be rhetorical!” Alessio groused, ordering a brandy. “Can ya imagine th’ hell tha’ will break loose, if th’ Klingons stay true to their threat? It wouldn’t stop at th’ planets near th’ Neutral Zone. There will be chaos everywhere, even her’ on Earth.”
Beside Khan, Nando sighed and rubbed his neck. “My sister and her family live on Rigel II. The Rigel system is…damned close to the Neutral Zone.” He stared into his glass. “I fear for their safety.”

“What about you? How do you feel about the situation?”

“Just contact them and ask them to come back to Earth,” Georg suggested, taking a sip of his whisky. “Deep-space transmissions are still getting through, so they say on the news, but if war breaks out, I don’t think private messages will be easy to send. And certainly not un-coded ones.”

A snort escaped the young Italian. “You don’t know my sister. She wouldn’t give up her new life on that damned planet for a simple transmission. My cousin Pedro is different and far more reasonable, but my sister…” He shook his head.

The plan just came to Khan like the wind on the sea – simple yet promising. He turned fully towards Nando and made sure that his voice was soft and kind. “Why don’t you travel to your sister and speak with her in person? If you’re travelling all that way just to bring her and her family back to Earth, she might listen to you.”

“You think so?” Nando looked at him with large eyes.

“Yes. Family ties are the strongest bonds which exist, held together by love, honor, and duty,” the Augment answered, in this moment speaking nothing but the plain truth. Oh yes, he knew best how deep the love for the family ran. If only his crew were safe and could live somewhere where no one could ever harm them again…

He cleared his throat as he caught Nando’s questioning glance, patiently waiting for him to continue. “Your sister will glad that you came,” he continued convincingly. “You’ll risk a lot to get to her, because the war will certainly have started by the time you arrive, which will her make think twice before she rejects your offer.”

Of course there was no guarantee the woman would decide such, still Khan knew how simple minds worked, and early on had recognized that Nando was no exception. It stood to reason it would be the same for his sister. This, and the upcoming war, would give him just the excuse he needed to get him away from Earth. He just had to make the right moves in this chess game.

Nando pondered his new crewmate’s words, sipped some more at his whisky, and nodded towards Alessio, who grumbled under his breath. “As long as there is still a chance that business keeps up, he’d never let me go away for so long.”
Khan lifted a brow. “I don’t think so,” he replied calmly. “Alessio is a family man, too, and with the chaos already beginning in town, it’s only a matter of one or two days before he makes sure that his ship is safe and stays on shore. The people are buying tinned food and filling their replicators. The demand for fresh drinking water will rise – not for fish and seafood.”

Frowning, the young Italian moistened his lips. “I would have to buy passage on one of the liners, but…” He gulped and looked suddenly uneasy.

“What is it?” the Augment asked, sounding for all the world, like a caring friend.

“I… I’ve never been in space before, you know.” Nando stared awkwardly into the depths of the golden liquor. “I… I am afraid of flying.”

Khan pursed his lips. ‘That’s even better!’ he thought, delightedly, and replied soothingly, “That’s nothing to be ashamed of. I know several people who’re exactly the same. But I like space. It’s… pure freedom.”

Nando’s glance wandered back to him. “Really? You’ve been in space?”

“Yes, several times,” the super-human affirmed, again meaning every word. “It’s like nothing else you’ve experienced before. There are no borders, no barriers, no horizons; only the endless depths and velvet darkness, illuminated with thousands of shimmering sparkles in all the colors you can think of.” He hadn’t needed to pretend to like being in space or to have seen the universe as more than only an icy vacuum filled with star systems, comets, and elementary particles.

After he’d been woken by Marcus and had looked out of an observation window for the first time – the _Botany Bay_ in the hangar of Marcus’ ship –Khan had been overwhelmed by the sheer unadulterated beauty of the galaxy in which his home planet was located. Then he’d been awakened the second time – not from sleep but from his dreams as he was thrown into the brutal reality the admiral confronted him with. Still, he’d felt a kind of wonder seeing space for the first time with his own eyes.

Rubbing his neck, Nando cleared his throat, hesitated, opened his mouth, shut it again, and finally made up his mind. His question was anything but a surprise to Khan, as the Augment had manipulated the young Italian into this course of action.
“I… I realize that we’ve only known each other for a few days, but…you have seen more of the world than I have, and you’ve been out there.” Nando made a gesture towards the ceiling. “If Alessio stops fishing, would… Would you accompany me?” He smiled sheepishly. “I know I sound like I need a babysitter, but…all my other friends have family here on Earth and they won’t leave them now, not with war on the doorstep. But you’ve told me you have no family and… Well, I’m certain Maria, my sister, and Adriana my brother-in-law would gladly welcome you. So…?” Hope shimmered in his dark eyes as he saw the growing smile on the ascetic face of the other man.

Inwardly Khan was smiling too. Yes, this was exactly what he had angled for. Nando just handed him a ticket off Earth on a silver platter, a gift that would bring him one step nearer to his family. He only had to make certain that they left after real chaos had broken out – when the time allowed in the Klingon’s ultimatum had passed and war had begun. Only then would security in the spaceport lose track of a lot of civilian travelers and he could pass by without worry. There was only one final obstacle he had to break through.

“I would come with you,” he said quietly, “but as I told you after my first trip to sea, the locker containing my stuff was forced open and all belongings are gone. And with them my ID. I’ve applied for a new one, but you know the government agencies. Nothing works as slowly!”

A determined expression appeared on Nando’s features. “I think I can help you. I…know people, who… Well, let me put it this way – they can provide you with any papers you need.” He gestured to the bartender to bring another round for Khan and himself. “I only need a holo-photo.” He looked at Khan’s – at ‘Evan’s’ face. “Do you intend to keep the beard?”

‘Alas, no!’ was Khan’s first thought. Despite his heritage, he’d never liked beards – but casually answered, “Yes. I think it makes me look less of an Englishman.”

Promptly Nando started to laugh. “Mate, then you have to work on your accent. It gives you away four miles against the wind.”

Chuckling, the Augment nodded before he whispered, “How long would it take to…supply me with the necessary papers?”

The Italian only smirked at him. “Get ready for our trip into space by the day after tomorrow.”

That meant one day after the ultimatum of the Klingon Empire had elapsed – perfect!
“War!” McCoy put his glass of Saurian brandy back on his desk and crossed his arms in front of his chest. Jim sat on one of the visitor’s chairs in Bones’ small office in medbay, and took a deep breath as his friend continued, “You’d think that we’d finally progressed beyond such insanity – especially after all our planet went through, and after the first quarrel with the Klingons which, by the way, was only stopped because of some super-powerful-ghost-guys who can switch off a phaser just by blinking an eye.” He frowned. “Has there been anything from the Organians at all about this latest development?”

Kirk sighed. “As far as I know, nothing. Maybe they haven’t heard about it or they don’t care, for whatever reason.”

“Yeah, or they let us bloody our noses to teach us a lesson and interfere afterwards,” Leonard sighed. “After all, we’re nothing but infants in their eyes.”

A snort escaped Jim. “But with the big difference being that the galaxy is no playground, and phasers and photon torpedoes are not toys to squabble over. Still, I hope…” The call signal on the intercom interrupted him, followed by Uhura’s voice:

“Bridge to captain!”

Rolling his eyes, Kirk bent forward and pressed the button to activate the link. “Kirk here,” he answered and the melodious tones of the communications officer replied, “Captain, I’ve Admiral Komack for you. It’s Priority One.”

“Please transfer the transmission to Dr. McCoy’s office, Lieutenant,” he ordered. A moment later the prism screen on Bone’s office sprang to life, and the round face of Komack appeared on it.

“Captain Kirk, Doctor McCoy,” he greeted, waiting until the both men saluted quickly and continued, “I really hoped I could contact you with good news, but as you’ve probably anticipated, the whole situation with the Klingon’s ultimatum is too messy to be straightened out. An hour ago the Chancellor and the High Council of the Federation decided that we will not obey the Klingons’ demands.” His dark eyes locked with the blue ones of the young captain. “You know what this means.”
“Yes, sir,” Jim replied quietly. “War.”

Komack nodded. “Indeed, war.” He took a deep breath. “All starships fit for active duty are ordered to the Neutral Zone. Of course that goes for the Enterprise.” Kirk pressed his lips into a thin line before making a curt affirming gesture. “Maximum speed to K7 and rendezvous with the Lexington and the Hood II. We have to assume that our colonies have to be evacuated; still we will not withdraw one parsec. The Klingons will have to fight for this area if they want it.”

“Is this a rescue mission or a battle mission, sir?” Jim asked, and the admiral snorted irritably. “Oh, that’s – like the Council declared – up to you and the other commanders. Bob Wesley has the conn aboard the Lexington and you will observe his command. Still the Enterprise is our flagship, so if you haven’t already, make friends with Commodore Wesley ASAP.”

“No problem, sir, I know Bob and we get along pretty well,” Kirk sighed, forcing the hint of a smile onto his face. He liked Bob Wesley, knew he had a lot of field experience, and that he was an honest and honorable man. Working with the commodore wouldn’t be so bad, but the whole scenario concerning the upcoming war gave Jim a nervous headache.

“Right.” Komack hesitated a moment, then his voice became quieter and almost apologizing. “I’m sorry that your five-year mission starts with this shitty mess, son.” Jim couldn’t remember a single instance when the admiral had cursed before or had taken such a familiar tone with him. “It will be hard for you, your crew, and all the other ships, but men and women in this area of the Alpha quadrant are depending on us. Keep that in mind when battle is forced on you, as is going to probably be the case.”

“I know, sir, and we’ll all do our best to protect not only our borders, but also the people who need our help.” He moistened his lips; a question that had nothing to do with the upcoming war burned deep in him. “Sir, is there any news of Khan?” He waited, tensing more and more with every second, almost afraid of the answer – and heaven only knew why he feared that the Augment had been captured!

“We’ve not been able to apprehend him,” Komack replied, grimacing; neither the admiral nor Bones was able to recognize the hidden relief that flooded Jim like a warm wave. “Wherever the bastard is hiding must be well-concealed, because even after all this time no one has found him.”

“Have you informed the public?” Kirk wanted to know, hoping for a negative response. He almost exhaled aloud as the admiral shook his head.

“No. The public doesn’t know about Khan or ‘John Harrison’ – only about the crimes of Section 31
– and it should remain that way. There would have been too many questions we can’t answer. That was decided for reasons of safety should his face and name, combined with his heritage and his deeds been in the news.” He sighed. “That’s probably how he can walk in the open right under our noses without being recognized.” He leaned back. “Barnett called the manhunt off. Security will be needed elsewhere from now on.”

“You let him go?” McCoy gasped and Komack shrugged.

“The Klingons are the greater threat than one man, terrorist or not,” the admiral deadpanned. “Of course we’ll still be on guard and spaceports will be watched, but he’s the least of our problems now. And who knows? Maybe the problem will just disappear. After all, we’re at war now and if he manages to leave Earth, his life might end quicker than we hoped.”

‘And that is exactly what you are gambling on!’ shot through Jim’s mind. He was glad that Khan hadn’t been found and that the manhunt for him had been discontinued, even if those thoughts confused him, and he asked himself for the hundredth time why on earth he cared so much for the smug son-of-a-bitch. The Augment was responsible for Pike’s death, something Jim would – maybe – never forgive. Still, there was this completely insane desire to know that the super-human would be safe. Yet there was no guarantee that Khan would escape at all. Komack was right; if the former dictator left Earth in search of his family, he could easily be caught and die in the middle of the madness that was shortly going to overtake the quadrant.

‘Do nothing rash or reckless, Khan you twit, or you’ll get an ear full from me, should we ever meet again!’ And where the hell had that thought come from?

Jim’s attention was driven back to Komack, who straightened his posture again. “As soon as there’s any new information about Khan I’ll inform you, Captain. But the first and most important issue is now the forthcoming war with the Klingons. Be careful, Jim! Our spies heard rumors that the Klingons identified you as the one who “invaded” Qo’noS last year, and knowing how resentful they can be for the slightest reason, they certainly would love to get their hands on you.”

“Just my luck,” Kirk groaned. What had he done to deserve the deep water he seemed to be permanently swimming in? “Don’t tell me there’s a bounty on my head.”

“That I don’t know,” the admiral answered with a tight expression. “You pulled quite a stunt on Qo’noS.”

“Not forgetting Khan,” McCoy interposed irritated. “After all, he was the one who killed most of the Klingons!”
“And saved our lives by doing so,” Jim murmured before he could stop himself, then waved his hand. “I don’t think it would make any difference if the Klingons really want my head or if I’m meeting them in the next battle. Either way, they’ll try to finish us all off.”

“I agree,” Komack grumbled, then looked at Kirk and said almost softly. “Keep an eye out, Jim. You were one of my best students at the academy – and the most troublesome, to say the least. But looking at you now, I’m damn proud as any teacher could be.”

“Thanks, Admiral,” the young captain replied, feeling his ears heating up. “I’ll send a report as soon as we rendezvous with the Lexington and the Hood II.”

“Right! Komack out.”

The screen went dark and the two friends sat for several moments, unable to speak. So there really would be war – and if they were to survive, no one could tell. Finally McCoy whispered, “I knew it was a bad idea to sign up for that five-year mission, but the prospect of exploring new worlds and developing new medical techniques drew me into the whole thing. And now we’re out here facing war with the Klingons. This is…some serious shit!”

“Yeah, I totally agree,” Jim growled and rose. “First we had to start several days early and now I have to inform the crew of what we all assumed was coming but had hoped to avoid: war. We were sent to explore, not to do battle, for crying out loud. But here we are, heading straight into mortal danger. I hate it!”

He started toward the door, but Bones held him back one last time. “Jim? What about the rumors that the Klingons identified you? If there is really a bounty on your head…”

“I don’t care,” Kirk shrugged it off. “They’ll attack any Starfleet ship anyway, so there’s no reason for them to hunt me down specifically. And after all, I still have you, Spock, and the others watching my back. The Klingons will have a tough time succeeding in getting to any of us.” He winked at Bones and left, failing to anticipate just how wrong he was, and the dread lay ahead of him.

ST***ST***ST

As the ultimatum elapsed the attacks began, even without any declaration of war.
This war would make the galaxy burn. Priorities were changed, civilizations would fight for survival, cowards would run, men and women would turn into heroes…

And neither Jim Kirk – who had informed his crew that they weren’t explorers any longer, but soldiers – nor Khan – who’d left Earth unrecognized, together with Nando in the rising chaos – could suspect that their fates would be entwined once more.

There would come a time when both men would meet again in the midst of terror and despair, and then in the backdrop of the upcoming war, again meld together with the passion that had already enflamed their souls. After all, they were two sides of the same coin…

TBC…

Chapter End Notes

So, my dear Readers, I really hope you liked the new chapter. I thought it would be important to explain why the Klingons declared war one year after the events on their homeworld, and to introduce one of the main characters, who will be an enemy, but also someone most will respect (or so I think).

Khan had to find a way to leave Earth, and considering how clever he is – besides his incredible intelligence – he seizes a chance if it is given. And believe me, he will find his own way during his time in space.

Not so nice is the way Norton tries to wriggle off the hook – and, unintentionally – the Klingons ‘helped’ him. There will be several upcoming twists because Norton and his fellows will use any opportunity.

In the next chapter you will meet Bob Wesley and you learn about the first weeks of the war. But the Klingons aren’t the only enemies, and not only Jim & co. will face the ‘copycats’, but Khan will also – which will open up new possibilities for him like never before. And you will also read something about his past while he and Jim realize just how much they yearn for each other.

As I said, I hope you liked the new update (including Bones’ reaction to Jim’s bio-check, grin) and please, please leave some reviews.

Until next weekend,

Live long and prosper,

Yours, Starflight
Hi, dear Readers,

Sorry for the delay, but one of you were so nice to offer her service as a beta-reader and did a very good job in smoothing my sometime rough choice of words and to correct errors. Thank you so much, Rhiannon, I owe you.

The next thank-you is for you, dear readers and those, who leave comments and kudos. I am really happy that you are so taken with the story, and who wants to see Khan in action is going to love the new chapter. Jeep, the tiger shows his claws, so to say, and some guys have to learn that you shouldn’t mess with him. You are also going to learn more about his earlier life back in the 20th century. And adding to this you will meet another high-ranking Starfleet officer, who had his several appearances in TOS and can be count to Jim’s friends.

By the way I got help from the AO3-team and know now how to publish the chapters with all the formatting I put in the work, like italic for the ship-names, ‘spoken’ thoughts or to emphasize something. I uploaded the former chapters, too, for the case you want to read them with the formatting.

Enjoy,

Yours Starflight

See the end of the chapter for more notes

Three weeks later...

“Captain’s Log, Stardate 2060.242 (Note of the author: “242” = 242nd day of the year), 20th day of the war. After the Lexington, the Hood II and the Enterprise reached the Japori System, we found several Klingon vessels ready to attack the colony on Japori II. The battle was short but fierce, and if the Klingons had sent D7-battlecruisers instead of four Birds-of-Prey, the outcome of the fight could have been quite the opposite in favor of the Klingons. We destroyed three enemy ships, and the fourth escaped in the direction of the former Neutral Zone, but the price was high. We lost twelve crew members and, as Doctor McCoy told me, our med bay is overcrowded. The Lexington and the Hood II suffered even greater loss, and the Hood II was severely damaged. I already offered to transport some of our engineers to Captain Dodge to help with the repairs. Captain’s Log out.”

Jim Kirk leaned back in his chair and took a deep breath. The air didn’t smell so bad anymore; the climatic systems cleaned it of smoke from the burned up science-station. The young captain thanked the Lord that Spock had been next to Pavel Chekov’s navigation station as one of the Klingon torpedoes’ hits overloaded an energy-circle of the long distance sensors, which backfired into the science station. If the Vulcan had sat at his usual place, he would have been badly injured.
Around him, his officers were busy checking their stations, repairing small damages or reviewing the reports coming from other departments. Lt. Uhura had a small cut at her temple that made her more angry than hurt, Hikaru Sulu grumbled under his breath while running tests on his console and Spock lay beneath his station, cataloguing the damage. Jim could have sworn the Vulcan word that suddenly escaped his friend was a curse. And as he heard a suppressed amused snort from Uhura – who spoke the complicated language of her boyfriend very well – he was certain that his first officer had given into his human side one time more.

“Scott ter bridge!” The exaggerated Scottish accent of the chief engineer told Kirk enough; Montgomery Scott was under much stress.

Activating the intercom at the right armrest of his chair he replied: “Kirk here. Report, Scotty!”

“That is the most blasted shit in a long time, Cap’n! Two of the warp-inductors are a complete mess, section 1 till 3 are lookin’ like Nessie tumbled through them, and the batteries of the auxiliary energy are as good as done for. Keenser is in the med bay because this oyster on two legs was determined to shove me out of the way as an overload valve went up!” His voice during the last statement showed how he worried about his little friend from the planet Royla, who was always the well-known bastion of calm for the short-tempered Scottish engineer.

“Is he stable?” Kirk asked, hoping that Keenser would make it. He liked the short, silent alien crew-member, who seemed to read anyone around him and had a warm, kind heart.

“Aye, McCoy says so, but I’m still worried.” The Scottish man grumbled something before he continued, “But I canna say the same for the engines! They’re in no good condition!”

Jim groaned quietly. “So we should avoid another battle for several days, Mr. Scott?”

“Days?” Scotty’s high-pitched outburst made the captain wince. “Weeks, Jim! Weeks! Mark my words!”

Kirk saw Chekov rolling his eyes and winked at the Russian before he answered: “Scotty, I know you. You are the only engineer in whole Starfleet who can work magic. I am certain that the Enterprise’s engines will be up to snuff within two or three days.”

A loud moan sounded through the intercom, followed by a “Give me three or four days, Jim, then
we can speak of a miracle again.”

“There is my Scottish Merlin!” Jim all but grinned. “From ‘weeks’ to ‘three or four days’ within a minute! I knew I could count on you!”

A tirade of Gaelic rushed through the intercom, ending with a “… and donna trick me again, Cap’n! Scotty out!”, then the intern link went silent. From here and there Jim heard several chuckles and caught amused glances before his officers turned their attentions back to work. Kirk pursed satisfied his lips. He had killed two birds with one stone; he knew that Scott would put all his Scottish honor in abiding by those ‘three or four days’ and he had lightened up the mood a little bit – something they all need after the battle.

His gaze found the large screen that showed Japori II and its sun. He grimaced as he saw the remains of the three bird-of-preys drifting through the space.

What madness!

No one had wanted this war – no one except for several diehard men on both sides, whose greed for power and might had overpowered any sanity they may have had. The tension between the Federation and the Klingon Empire had always been thick, but besides a few quarrels, peace had remained; no thanks to the Organians. But now the ghost-like species was quiet. Jim had a bad feeling that the Organians would show up at the least opportune moment.

‘And in the meantime thousands will die. War – it is and will ever be the biggest crime of all!’

The young captain rubbed his neck and the mixed cold and heat of adrenaline that still travelled through his veins was chased away by a warm sensation. Gently he touched the spot where a certain, singular mark had been. He had no clue why he still could feel this ‘mark’; he assumed his imagination exaggerated the tryst, but an inner voice insisted that this wasn’t the case. The real reason was bigger and far more complicated.

Hell, it wasn’t the first mark he had gotten. Honestly, he’d received several of them by his female bed-fellows. But this was the first one that didn’t go away, even if it was invisible for the eye now. This bite was a mark of claim he felt beneath the healed skin. Whatever Khan had done, he had made certain that Jim would have a reminder of him – as if this was necessary.

If any of his friends knew how often his dreams were infiltrated by the super-human, displaying them
both in passionate games rolling through the sheets as if replaying a film in his head, he certainly would be deemed ‘insane’. Sweet Lord, Bones would examine his mental condition that Jim now doubted from time to time. And this not only because he had erotic dreams of his—nemesis? Lover? He caught himself over and over again worrying about the Augment; he often asked himself where Khan was and how he was doing. Right, his only concern should be what Khan was doing. But an inner voice told Kirk that the universe needn’t fear another outburst of violence from the enhanced man. The Klingons were doing a far better job in this department.

Jim sighed as once again the marble-white face and jade-colored eyes, shadowed by tousled mahogany hair popped into his head. But before his thoughts could wander further to the cause of this invisible but undeniable ‘mark’ on his neck and new forbidden longing in his being… Uhura’s voice jolted him from his reverie. “Captain? A transmission from the Lexington. Commodore Wesley wants to speak with you.”

“On screen, Lieutenant!” Jim ordered, glad for the distraction, and watched as the face and upper body of Commodore Robert Wesley replaced the backdrop of stars. He was a man in his mid-fifties with clear, straight features, dark, honest eyes, and silver-grey hair. Like all Starfleet members in space he wore the black uniform with the colored shirt, Command Gold. Instead of three gold stripes his sleeves displayed the thick gold band and the Starfleet-emblem enveloped by the sun.

His voice was a pleasant deeper tenor, but just right now it sounded tight; betraying the commodore’s tension. “Hello Jim!” he greeted casually, a quick smile tugged at his lips. Robert – or Bob, as his friends called him – quickly grew fond of the young, promising captain of the Enterprise, who made a name for himself among the rank and file of Starfleet Admiralty based on his daring do’s including the rescue of the Earth and Captain Christopher Pike during the battles with the Romulan Nero as well as the exposure of the shadow department Section 31 had become – and many more adventures that will fill books and training manuals for years to come.

They first met shortly after Kirk had taken the command of the Enterprise. He was impressed by the quick mind, the bright intelligence, and his fierce loyalty towards Starfleet and his crew. Jim’s methods to problem-solve often took him by surprise. It was no miracle that the admiralty went grey at the one or other occasions, and Wesley had to admit, he inwardly had applauded Jim. Bob was a man of action, and his understanding of the desk jockeys in the headquarters was limited.

Soon the men were on a first name basis, despite their rank and age. Each fell comfortably into their respective roles as leaders – Bob of the squadron and Jim of the Enterprise...

Mirroring the quick smile, Kirk nodded towards the commodore. “Hi Bob! How can I help you?”

Wesley took a deep breath. “I contacted the leader of the colony on Japori II, Consul Alan Gordon. He requested that I extend his gratitude to you and Kenneth Dodge. But, as it seems, the Klingons
aren’t their only problem. There have been several assaults by the Orion Syndicate within the last week. The Orions captured two vessels with colonists who wanted to return to Earth and brought them to the Borderland-area – without a doubt for the slave trade, maybe straight to the Klingons. Our ‘dear’ neighbors are in need of workers in their delicium mines and steelworks and the fate of the kidnapped colonists is quite clear, a life of slavery until death.”

Jim pressed his lips shut. Damn Orions!

Their region was adjoined to the Klingon Empire and reached almost to the Regula system in Federation space. It comprised of pirates, smugglers, slavers, drug-dealers and any other criminal elements imaginable, the whole ‘realm’ was a crucible of the scum of the Alpha and Beta Quadrants dominated by the green-skinned Orions. Neither Jim Kirk nor his officers were surprised that the Orions used the war to expand their ‘businesses’. Their attacks at the Japori System were almost logical. Together with the already seized Starbase 234, the Federation property operating Starbase 84, and between the stars Veytan and Acmar, the Orions were slowly building a kind of enclave between Borderland and the Klingon and Romulan Empires. Jim knew that Starfleet Command refused to believe that it was only a matter of time before this part of the Federation would be seized by the enemy, but Kirk was far too realistic to deny this possibility.

“Did Consul Gordon ask for help?”

Wesley nodded. “Yes. But the pirates, who captured the ships were heading towards the Klingons. Unfortunately, the kidnapping happened five days ago there is no hope to rescue the poor devils now. I already contacted Starfleet Command, and I got the order to stay here with you and Kenneth for the next few days to intercept the Orions as soon as they return. Consul Gordon told me that the same three ships were responsible for the assaults and, as Barnett made it clear, it is now up to us to stop them. Their brand of terror ends in this quadrant.”

Jim heard a low noise from the science station and exchanged a glance with Spock, who rose from the floor – looking like he had dug in charcoal. “So, we not only have to fight off Klingons, but also pirates and slavers?” Kirk asked and shook his head, as Bob replied:

“You know how the whole thing works, Jim. Wherever a war breaks out, the unscrupulous profit from blood of innocent people. I suggest that we split off and form a triangle within the Jarobi System. Regardless of the Orions direction, we can stop them, and the others will be there in no time.”

“Good idea, Bob – but please don’t tell my engineer about it. If he hears that we could get into a fight within the next few days, I will need a scraper to get him off of the ceiling. He’s going to go off like a rocket.”
Wesley laughed quietly. “Well, that makes two ‘rockets’ we have to bring down then. My engineer is no better than yours.” He turned serious again. “As soon as the Hood can maneuver properly I’ll inform you so that we can split off.”

Jim made an affirming gesture. “Right. Keep me updated!”

“No problem. Lexington out!” The picture on the screen switched back to the view of the planet and the stars; Kirk sighed loudly. “First these damn Klingons and now Orions. I hate it.” he grumbled and caught the understanding glance of Sulu.

“What do you think, sir? Will we face them again?” he asked. Jim shrugged.

“We certainly will. I already assumed that they would show up sooner or later. Benefitting from the opportunity the war gives them to make more profit with their criminal deals.” He grimaced.

“As if the whole situation isn’t unbearable for the civilians enough, now they have to fear the Klingons and Orion pirates. Someone should stop the slavers!” Uhura cut in. Kirk nodded.

“Yeah – and this ‘someone’ is Starfleet.” He pinched his nose. “There is simply no one else able to combat them.”

Pavel glanced over his shoulders. “Ze news are telling that there are several groups along ze Neutral Zone and Borderland fighting off the Orions, too, Keptin,” he said with his thick Russian accent and Jim snorted.

“Yeah, I heard of them, but they are unorganized and acting without any strategy. It is only a matter of time before they fall prey to the Orions and become slaves themselves, or end up dead somewhere in Borderland.” His lips had pinched in a thin line for a moment before he added: “And credits to doughnuts that the Klingons are behind the increased activities of the Orion Syndicate. They get slaves for their mines and Starfleet has not one, but two opponents to fight.” He grimaced. “I really, really hate it!”
The small outpost near the Risa System was little more than a grid square of the Official Interstellar Chart (OIC) away near Borderland and a way station filled with the species of the universe. Humans, Deltans, Caitians and even two Vulcans and several Andorians were present, as well as non-humanoid species. The air was filled with their voices and languages, heavy with the smell of food and drinks, and the atmosphere was tense. They all were here for only one reason. Each waited for departing space-crafts to take them home – or far away from home as the case may be.

The civil outpost 18-243 was nothing more than a small space-dock in the orbit of an inhospitable little planet, but now – during the war – it had become a place for those who missed the liners that could take them home or at the very least away from the dangers at home. The prices were cheap, and the rides were unreported if discreet or hidden were a requirement for the passengers. Many here had their reasons to avoid an official spaceport or the security officials. Some were illegal refugees and others smugglers of some or no repute at all.

At the edge of the far too crowded waiting and departure area, a lonely figure sat at a table and sipped at a cup of tea – if the dark fluid that swam in the mug could be called ‘tea’ at all. But he kept his complaints to himself. It was better than the most of the other drinks he’d forced down recently, but alien to his palate nonetheless.

From within the shadow of his hood, Khan eyed his surroundings aware of every move the others made. Ten days ago he had reached with Nando Rigel II with little trouble and visited the young Italian’s sister. She was more than glad that her brother showed up. Within a few hours Nando, with Khan’s help, persuaded her and her husband to accompany them back to Earth.

That had been the right time for the super-human to extract himself from the happy little family, who reminded him painfully of his own dear ones. Their whereabouts could be anywhere in this endless galaxy. Pretending that he received a transmission from an old friend in the Risa system, ‘Evan’ bid his farewell and left Nando and the others, taking a cargo-ship in the direction of Risa.

Why Risa? During his travels with Nando to the Rigel system, he carefully followed the news that ran on every official screen in the craft. And so he learned that Starfleet was highly active around this system – to prevent the Klingons and Orion pirates from attacking and enslaving helpless populations, but Khan knew better than to believe the public voice of Starfleet. He learned how Starfleet worked, and even if Section 31 was officially ‘dead’ he didn’t doubt of the practices secrecy and cover-up remained.

Starfleet wanted to hide something within the Risa system and maybe – maybe – it had to do with his crew. It was a long shot, but he must start the search somewhere.
After an awful voyage on the cargo-ship where he had to fight for his self-control on several occasions, he was more or less stranded on this outpost, waiting for one of not official space crafts to take him to Risa. To his dismay his Credits were running out because the hosts of the space-dock charged excessive prices and the ticket he would have to buy nearly extortion.

He sipped at his tea again. This was an Assam? Never in million years! His gaze wandered over the humans and aliens once again amazed at their incredible differences. During his ‘encounter’ with Section 31 he had met Andorians and twice a Vulcan admiral in dealings with Marcus. Khan was certain that the man hadn’t known Marcus’ true face, but otherwise he had only worked with humans or people with earthly heritage. Still he learned a lot about the extraterrestrial life forms inhabiting the Federation.

But it was altogether a different thing to read something and peruse pictures, than to meet the real people, aliens, not even humanoid that reminded him of insects or creatures from the old science-fiction-movies back in the 20th century. The difference was that these were real. Khan’s incredible mind and intelligence were quite capable of coping with the situation, still a part of him – his instincts – made him wary and ate at him. He gathered as much knowledge about this century as possible in the one year he spent as a tool of Marcus, but he still was not raised in this time, and that made it difficult to live here in this now.

His attention fixed on a couple with two children who bypassed his table. His keen hearing caught the long unheard, but still well-known words of Hindi. He looked up and took a sharp breath when his eyes found the young woman who lifted a small boy into her arms. She wore a simple top and trousers with a knee-long jacket and long boots. Her black hair was pinned-up as is now the fashion, and still she seemed to be familiar. She turned around towards the young man at her side, and Khan could see her face clearly now; his jaw nearly dropped.

She was the mirror image of a service-maid from his palace back in New Delhi in the 20th century. Her name was Sushila, and she had served in his close entourage. Being an inferior, simple human he overlooked her before recognizing that she could be trusted – like many other attendants. The times in India had been hard, and the gap between rich and poor, superior and inferior had been like an abyss; therefore, many people were glad to escape poverty and misery by working for him and the other Augments.

Khan Noonien Singh had never abused the hardship of the people within his realm. There had been several Augments who wanted to subdue Earth to their liking, but his intentions were different. Still it didn’t save him or those who thought like him from their ultimate exile.

As the Eugenics Wars broke out in the late 20th century, it didn’t matter that he worked to improve the conditions of his famine ravaged territory of Asia. In the eyes of those who ‘constructed’ him and his kind - those who feared them now - the Augments were cold, unfeeling, inhuman monsters. Yes, he had shown strict leadership principles, steering his realm with a firm hand. But he abstained from
cruelty for the sake of it, knowing perfectly well that people were far more trustworthy living in order rather than fear. Yet he had not hesitated to take brutal measures against those who meant him and the others ill – enemies that had finally overtaken the Augments.

Khan would never forget the day war finally reached his home. They came at night. At first, everything seemed to have calmed down for several days. Then the fires of war struck with intangible ferocity against him and his household. The soldiers all but slaughtered the most servants, calling them traitors of the human race. They massacred everyone perceived as loyal to his rule. The actions taken by the opposition during the coup was a war crime. Still no histories spoke of it. As always the winner writes the histories, and the readers read only half-truths.

Sushila had been one of the last victims trying to protect him and Tarun – another Indic Augment who didn’t make it aboard the *Botany Bay*. He had wanted to show her a secret passage out of the palace so that she and the other servants could flee. He always stood true to those loyal to him, but even his brilliant mind couldn’t foresee the strong determination the girl possessed to serve ‘her’ Khan till the last breath. The moment a dozen soldiers stormed the backyard where he and the others fought on, she threw herself in front of him and the bullets meant for him hit her in the chest. She was dead before he could catch her, and while he was pulled away by Tarun – who realized that they didn’t stand a chance anymore – he watched, horrified how several so-called soldiers all but butchered the dead body of the young woman.

So much hate, so much blood, so much cruelty – and all this only because they feared their creations.

Khan had never been able to understand it.

True, there had been Augments who used their superior strengths and minds to rule their continents with an iron fist, but the most of them had taken their purposes very seriously: To bring peace in a time where there was none to be had. In the end, it didn’t make any difference and only Khan and those he had come to call his family survived by fleeing Earth aboard a spaceship he and his own built in a matter of prudence. They had fought with all their might and abilities, even displaying mercy at first. Only to be thanked with manhunts and death. The cryotube was the last ditch effort made to remain alive and escape the planet – only to wake up in a new world full of aliens. But some human evils never change. Those hungry for power and harboring fear and hatred for anything different, like Marcus and Section 31 proved.

Laughter brought him back to present and his gaze wandered one more time to the strange young woman whose features resembled that of Sushila. The same nose, the same eyes, the same cock to her head… Khan was sure that this strange woman was a descendant of his former service-maid, maybe a granddaughter of Sushila’s sister with many, many ‘great’ in front of the word granddaughter.
Odd that here, on this forlorn outpost several hundred light-years away from Earth and three hundred years after this fateful night, he met an offspring of a member of his former household. He didn’t believe in Kismet – he never had – still a small part of him felt a breeze of fate breathing upon him.

“That is an offence, chipmunk, do you hear me!”

The voice drowned out even the other noises and sounded strangely high-pitched with a hint of… squealing. Not the squeal of a boy in puberty, rather like that of a…

“Dare to compare me to a Terran pig again and I’ll beat you into the next week!”

Khan pursed his lips. Well, if the appearance of the guy was only a little bit akin to his squealing, then it had to be a pig.

“You oink; you have hooves and a snout and you like to bath in mud, Galven, so yes, I do compare you to a…” The other man was interrupted when ‘Galven’ attacked him.

In seconds, the quarrel began. People darted left and right to get out of the way of the two fighters; chairs tumbled, and shouts rang through the air.

Khan rose and his eyes searched for the small Indic family. He found them near a wall where the young man had placed himself in front of his wife and his children.

“I’ll have your sorry excuse for a nose that makes your face even uglier than it already is, Ritek!” This outburst accompanied oinking sounds that took away any threat.

“Do you have a corkscrew tail? Just let me have a look and… Ouch, that was unfair!”

As much as the turmoil belied, Khan realized quickly that this ‘fight’ wasn’t serious. It seemed to be more belligerent bickering with a tendency toward violence, but it wasn’t completely hostile.

Curious, the Augment headed towards the scuffle. And then his eyes widened. Sure, he had heard of Tellarits and had even read about their ‘pig-like appearance’, but somehow he had never seen one – not even on a holophoto – and for a moment he didn’t trust his eyes. His thoughts from several
moments ago concerning the squealing voice compared with the presumable looks of the alien the other man offended was plain. There was a pig on two hooved legs clad in overalls. He threatened a man – whose very pale face showed streak of dark and yellow lines and whose nose was plain and straight – with a hand that had three hoof-like fingers. The Tellarit’s snout above the thick beard moved slightly while the small eyes glistened before he ran straight to his opponent and knocked him down with his stout, strong body then sat down on him like a jockey on his horse.

“Get off me, you hog!” the man – a Rigelian – gasped. “Hell, you’re heavy like…”

“Don’t say it, Ritek, or…”

“Oh no – not again!” an outraged snarl cut the Tellarit off. “By the lights of Rea and Sura, can you two not be in one room without fighting?” A young woman in tight dark overalls with a long bag on her back shoved herself through the crowd, stemming her fists into her slender waist and clearly indignant. Her wild dark-red hair hung loose around her shoulders. Her eyes were an unholy green-gold with the elongated pupils of a cat. Her teeth were pointed. A long elegant tail whipped around her hips – giving her away as a female Caitian; catlike humanoids whose males were furred while the females sometimes lacked it or shaved it.

Galven looked up to her. “He can’t stop calling me a pig!” he oinked angrily, while Ritek moaned, “Just look at the next mirror and you can’t deny the similarities. And now get. Off. Me!”

Khan couldn’t help himself. He had to chuckle. ‘I don’t believe it. A speaking pussy-cat tries to step between a walking, talking pig and a colored man who looks like he was in the way of some dropped paint buckets. In which world have I woken up?’

‘In a very interesting one!’ he thought he heard Joaquin’s cheerful answer and felt a soft stab of nostalgia as the olive-skinned face and the sparkling dark eyes of the young Israeli popped into his mind. Joaquin was like a little brother to him and to know that he was somewhere caught in frozen sleep in his cryotube made Khan cringe inwardly. He missed the twenty-year-old oversized boy with his sunny smiles and high-spirits the most. Nando had reminded him of Joaquin from time to time – certainly the reason he bothered at all to persuade Maria and her husband to return with Nando to Earth.

He sighed inwardly. Sentiments were for the weak; still he wasn’t free of those emotions, even if he wished it so. It would make things easier. ‘But certainly less interesting, big bro!’ Joaquin’s voice teased him in his mind.

In the meantime, the Caitian-woman had offered the Tellarit her hand – with alarming long and
sharp-looking nails – and pulled him on his short, strong legs before she addressed the man: “Stop calling him names, Ritek! And you, Galven, should remember that we have the same…”

She didn’t get any further. Screams sounded from another part of the waiting-area and then phasers buzzed while the alert-sirens started to dim. In only a moment, all hell broke loose and the shouts of “Orions!” echoed through the air.

In the blink of an eye, the two stood side-by-side and withdrew their hidden phasers while the Caitian conjured a rifle from her luggage. “Now count the costs!” she hissed. “Because you two have nothing better to do than to argue, we missed our chance!” Without waiting for the men, she tensed her muscles and sprang over the heads of the fleeing people as if thrown by a catapult. She opened the fire on the approaching pirates. Galven and Ritek followed her quickly - and the departure area erupted into chaos.

Khan’s hand quickly found the phaser he took from Kirk’s flat and set it to ‘stun’, knowing perfectly well that he couldn’t risk the attention of the officials if he killed someone – even if his instincts told him to take no risks with the intruders. He heard enough about the Orions and their so-called ‘syndicate’ during the last two weeks and realized the danger all were in, including himself.

And then he saw them, Orions, together with species unfamiliar to him. Orions, taller than humans, with green skin and strong limbs swarmed over the voyagers like an affliction, overpowering the few security officials little effort. He hadn’t thought that he would end up in an assault of those pirates and slavers who spread terror through the inhabited planets near the Klingon Empire as the Klingons did. But here he was facing a raid of this scum.

And if he were killed or taken captive – as a slave! – he wouldn’t have any chance to save his family at all.

No. Defeat was unacceptable!

Looking for the next emergency exit his glance graced the Indic family, who tried to flee – and ran straight into the path of the Orions and their allies.

A strong feeling of déjà-vu rose up in Khan like bile in his throat. He saw the terrified expression on the young woman’s face when she shoved her children behind herself, protecting them with her body – just like Sushila had shielded him all those hundreds of years ago. Her eyes found his only in the fraction of a second before an Orion grabbed her brutally and tried to tear her away from her husband and her children.
And hot, white fury awoke in the Augment.

He had failed Sushila back in those days – her and the other servants and attendants of his household; they didn’t make it to safety and paid dearly for their loyalty to Khan.

He had failed the citizenry of his palace, in the villages under his protection, and his land begging for his help when the so-called ‘normal humans’ usurped his throne and the other thrones of the other Augments, forcing their exile or certain death.

He had failed his family to rescue from Section 31.

He would not allow himself another failure.

In a split of a moment he switched into fighting-modus. Adrenalin pumped through his veins. His instincts took over and his mind analyzed the whole situation a second. He acted.

Shoving some people out of his way he reached the Indic family, pulled the Orion around who had seized the horrified young woman, and his fist – that still held the phaser – crushed the man’s jaw. With a howl and spitting blood, the Orion let go off her when three other Orions descended upon the Augment.

They didn’t stand a chance. Kicking, punching and using at last his weapon he took them down in no time, he then stunned two other pirates closing in on a group of older folks. Only then did he turn his attention back to the couple and two children, who looked on with large eyes.

“Chaal!” he shouted, using the Hindi-word for ‘run’ and adding a “Sheeghra!” which meant ‘quick’.

The young man overcame his surprise at the stranger who spoke the old native-tongue of his home-country. He responded with a shocked “Nam!” (thank-you) and shooed his wife and children toward the emergency exit where a cluster of people already tried to escape – just what the Orions were waiting for. A dozen of them headed towards the fleeing people, readying their weapons to stun them and take them hostage.

Khan let his instincts drive his actions. With the wild drive of the warrior he was, he ran to shield
those who ran through the emergency exit. He saw despite the red haze before his eyes that the Indic family made it to safety, catching a grateful glance of the young woman before she, her husband and her children were flooded away by the crowd towards the docked freighters and smaller space crafts.

He felt a breeze beside his cheek and ducked at the very last moment as a Klingon *Ba'leth* speeded above his head. Had he moved a split second later, he would have been dead where he stood.

Growling angrily at his distraction, he hit the attacker in the belly with his left hand, while his leg shot out and broke the man’s knee. The aggressor screamed in pain, but it was short-lived as the next blow – aimed for his opponent’s neck – sealed the man’s fate. Three other attackers – one Orion, one human, and a being he couldn’t place – surrounded him and leapt at him, realizing that he was the greatest threat of all. Reacting with the speed and the savagery of a tiger, the Augment lashed out and stunned one of them then killed the other two without hesitation. Even his wish to divert attention away from himself disappeared; he ignored the fact that his hood had slipped down and revealed his fresh shaved face after he had gotten rid of the loathed beard only hours ago.

He heard the cries for help from several young people to his right, picked up the *Ba’leth* and acted again without hesitation. It only lasted a minute and the teenagers made their escape while the attacker suffered further loss.

And Khan wasn’t the only one who fought against the pirates with all his might.

The Tellarit, who went by the name Galven, summoned a handful of allies around him as the Regulian Ritek and the catlike-woman did, and they all threw themselves against the attackers along with members of the space-dock’s staff. But the fleeing people made it almost impossible to fight the pirates properly who began to overtake them. Additionally, those who put up a resistance didn’t act as a united front as individuals, a weakness in their armor and a tact that would lead to catastrophe if left unchecked.

“Move your ass, chipmunk, or the Orions will bring you down!” the Tellarit yelled. Ritek answered, “Be careful, hognose, or you became their escalope!”

Khan rolled his eyes. This rivalry wasn’t helping to gain the upper hand over the attackers. The two groups didn’t work together but tried to outdo one another. It was only a question of time before the Orions would overrun them – and then, this was clear, Khan would be captured as well; losing any possibility to see his family ever again – or James. He cringed at the thought.

Gritting his teeth – ‘*Cretins!*’ – He jumped in the middle of the two groups. Swinging the *Ba’leth* with his left hand and firing with the phaser in his right hand he roared, “Build a line! Drive them
back to the main entrance! Shield the others!" Shooting two more Orions he realized that the Tellarit
and the Regulian stared at him with big eyes frozen in their places. His dominant nature asserted
itself. “NOW! Or you will all die!”

“DO WHAT HE SAYS!” the female Caitian snarled, fighting off another opponent. “This man at
least has brains!”

“All hands beside me!” Galven squealed; referring to his allies. “Line up!”

“The others to me!” Ritek shouted at the members of his own group.

As soon as they operated collectively the situation began to change. The Orions weren’t used to
facing organized resistance; nevertheless they battled even as they lost their booty of captives.

Giving free rein to his wrath and instincts, Khan took down one enemy after the other, not cognizant
of a deep gash on his left arm. It would heal within a day. He threw the *Ba’leth* at another pirate,
bringing him down. Beside him, the others fought bravely, but not all made it out alive. Three of
them lay dead on the floor and more were injured. And the fight wasn’t over.

The super-human heard the shocked outcry of the Tellarit and saw that an Orion and a man with
small eyes and the traditional Klingon beard had Galven on his back; the green-skinned pirate lifted a
blade to kill him.

Like his previous actions over the last four weeks, Khan couldn’t tell why he did what he did now.
Maybe it was because this pig-like creature was his comrade-in-arms at the moment, maybe his quick
mind already had acknowledged the need to ally with these people and to go underground with
them. He shot down the Mongolian-looking man and tore the Orion away from the Tellarit before a
deadly knife thrust could end Galven’s life. He hurled the pirate through the room and knocked two
more Orions off their feet with the living projectile then pulled Galven to his feet and placed himself
in front of the stout alien.

Beside him, a furious hiss sounded, and another Orion lost his life; brought down by the Caitian
woman who grinned at the Augment before she showed another attacker how sharp her nails really
were.

Someone shouted orders and the pirates began their retreat. The two groups around Galven and
Ritek pursued them, but eventually they had to let the remaining Orions go.
Khan took a deep breath and glanced around him. The large waiting room and departure area looked like a typhoon raged through them; it smelled of burning furniture, blood, and sweat and spilled drinks. The food stands were abandoned and ravaged; the fight destroyed the ticket-counters and the red lights of the alert-system flickered over the walls. Tracks of phaser blasts and blood were everywhere, but none of it counted.

Galven and Ritek breathed heavily and glanced at each other.

They had won!

They subdued a whole gang of Orion pirates and had forced the rest to flee!

What a victory – albeit an expensive one.

The few civil security officials were dead as well as a few of the staff-members and three of the resistance. Many were injured. Other travelers crowded together, tended each other, or waited for orders. Some of the staff came to the Tellarit and the Rigelian, thanking them for their help. A few people voiced their gratitude also to Khan, who brushed them off with short but not unkind words. Only after the remaining passengers and employees left they alone did the group of fighters turn their attention toward the stranger who came to their aid.

Galven glanced with big eyes at the pale Terran in the black and grey clothes, who stood among the group of insurgents he commanded. He watched as the Terran flicked off his phaser and hid it in his coat – a phaser that was clearly Starfleet standard.

Ritek stepped to Galven and the unknown human darting his eyes between them. “That was quite a fight you put up here, mate.” he said slowly eying the stranger curiously. “You took half of them down by yourself.”

Khan locked eyes with the Rigelian. That the people of the Rigel System were related to the Vulcans, as he had read, wasn’t exactly obvious. They both had pointed ears that that is where the similarities ended. Ritek displayed behavior and emotions that are incompatible with Vulcan behavior. “They shouldn’t have attacked; they would still be alive if they had not,” the super-human stated coolly while warily watching the two aliens in front of him.

“Who is this?” another man asked.
“Where did you learn to fight like that? You are trained, that’s clear.” a Deltan mused.

“Hells bells, this guy can’t be a simple human.” another one grumbled, but before the Augment could answer to this, Galven cut in, “Shut up, everyone!” He looked up at Khan, who stood head and shoulders above him. “This man saved my life!” the Tellarit declared. Then he offered one hand with the three ‘fingers’; knowing that this was a polite gesture among humans.

The former dictator hesitated a moment then he shook the mitt. “You are welcome,” was all he said and Galven frowned. “You’re hurt,” he oinked and pointed at the bloody and torn sleeve at Khan’s left arm, but the super-human shook his head.

“It looks nastier than it is. A small cut, nothing to worry about.” He began to turn away, but Galven stopped him, “We could use someone like you, buddy!”

Khan halted with his movement. “I beg your pardon?” he replied.

The Tellarit fixed him with his light, little eyes. “You heard me,” he answered casually. “You fight like you were born for it; you’ve a strong sense of justice, and you’ve no problems breaking bone – something the Orions deserve. And you led us to victory.”

The last statement puzzled the Augment, before he turned his attention to the Caitian woman, who closed the distance between them.

“What Galven means is that you managed to unite those bunches of anarchists into a successful fighting group.” She scowled at the Tellarit and the Rigelian, exposing her pointy teeth, before she continued: “If it weren’t be for you, the Orions would have overpowered us and those of us who survived would face slavery now. Thanks to you. How do you say on Earth – the tables will be turned.”

“Yeah, my thoughts exactly!” a dark-skinned man spoke up, who was tending the wounds of some travelers. “We could use you, lad!”

Khan lifted a brow, his mind already pondering the possible outcomes of the anticipated offer. “Who do you mean ‘we’? Who are you exactly?” He needed to know what he was getting himself into if he was to join this band of renegades.
“We are a group of men and women, who’ve decided to no longer stand by while those slavers attack small colonies, space-docks and vessels that cannot defend themselves,” Galven explained.

“Yes, Starfleet is too busy battling the damn Klingons, so we take the whole mess into our hands. The Orion Syndicate is getting bolder as time goes on, using the war for their own gain. If someone doesn’t stop them, they will expand their realm, which means more collateral damage.” Ritek was deadly serious now.

“So you’ve gathered together to fight the pirates on your own,” Khan summarized the statements, and the others nodded. “How?”

Galven scratched his snout. “What do you mean?”

“How will you proceed? Do you have plans, a strategy, weapons, space crafts?” The latter was important should he decide to accept the offer. Maybe there was a chance to ‘borrow’ a space craft later.

The members of each group looked at each other; it was the Tellarit who informed him: “We have two vessels – the Shadow and the Flash.” Galven caught the baffled gaze of the stranger as the names of the two space crafts were mentioned, and he shrugged. “Jeff,” he pointed over his shoulder to a young man, “came up with these names and because we have to use pseudonyms I thought it was a good idea.” Some of the others chuckled, before he continued. “Plus, our weapons are pretty good.”

“And we have a very well-working communication-system – especially for ‘listening’ to messages!” one man threw in; grinning broadly. “We can even intercept Starfleet-transmissions.” Several others snickered, and Khan was suddenly very keen-eared; the odd names of the two vessels quickly forgotten.

The knowledge that Starfleet Command’s orders could eventually lead him to the facility where his crew was being held as well as following James’ voyages was a heady and dizzying realization.

He groaned inwardly. Kirk shouldn’t be one of his most important interests still the young captain managed to occupy many of his thoughts. His sky-blue eyes, his soft manly features and his gentle voice haunted Khan in the long and dark nights since he left the officer’s apartment more than four weeks ago. The things loneliness could do to a man.
“You are eavesdropping on Starfleet and the Orions so you know where the pirates will attack next.” he continued, “And because your militia is anything but an official unit you want to avoid Starfleet.”

Galven grunted, amused. “You got it, buddy.” Khan suppressed the urge to roll his eyes; a talking pig alien using Terran slang – what a crazy universe! “We are doing those uniform-wearers job, still they are ungrateful. Complaining about some shitty laws no one out here in deep space feels obliged to follow.” His clever eyes roamed the face of the stranger. “You have your own problems with them, haven’t you?”

The super-human tensed. “Pray tell where this assumption comes from?”

Again the Tellarit oinked in laughter. “Boy, you’re a trained fighter and have a Starfleet standard issue phaser, but you’re not a member of the fleet. You hid, but helped to stop this raid and now you know we can tap Starfleet’s transmissions you are interested.” He cocked his head. “Are you on the run?”

“No,” Khan lied, “I had… personal reasons to leave Starfleet, so to speak.”

“Deserted?” Ritek asked and chuckled, as he caught the hard glare of the human warrior. “Hey, I have no problem with that, lad!”

“Men like you are needed outside of the fleet, too,” the Caitian woman rose to speak again and returned the stern stare of the stranger’s eyes.

“Men like me?” he repeated and only her extreme sensible hearing caught the quiet but nevertheless dangerous growl in his voice. Unafraid she stepped beside him and fixed her gaze on him then reached out her hand only to find her wrist held in a steel-like grip. Instantly her tail wrapped around his arm and Khan gasped in surprised as she squeezed his muscles with astonishing strength.

She bent forward and almost purred, “I do recognize a predator when I see one. You are one with every fiber of your being, Pretty!” Her cat-like eyes blinked twice then she flashed a toothy grin at him and retreated. “Galven, make him a good offer!” she addressed the Tellarit. “With him we stand a chance against the whole Syndicate, believe me!”

Galven and Ritek, obviously sharing a moment of agreement, exchanged a look. Then the Tellarit spoke up, “Well, to say it plain, the pay is lousy; we are not fighting those bastards for profit. We’re
living on what the people give us…”

“Shall I ask the guys over there for a little donation?” the Regulian cut in, but closed his mouth as he received the glares and scowls of his companions.

“Never mind that git” Galven grumbled towards Khan, and continued, “What we can offer you is shelter, food, some ass kicking, travelling around in Federation space, and outwitting Starfleet. We’re pulling our team together and…”

“By insulting each other?” Khan sneered, already pondering the advantages of taking the given offer and making sure that he and the others avoided capture by either Starfleet or the Orions. “Friends do not berate another one. You need to build trust if you want to survive your… adventures.”

“My word!” the Caitian-woman cut in before she smirked, “I think you are the only one, who is capable of whipping up this lot of idiots into a team! It’s a miracle that we haven’t already been killed.”

Some of the others muttered quietly but didn’t dare to object. As it stood, the female Caitian was highly respected notwithstanding her fighting skills and claws.

Khan pondered the words carefully. Of course he was ‘capable’ of marshalling and leading a militia – after all he had been the leader of nations in the 20th century. Still he knew that the older members of the ‘resistance’ may be intimidated by his presence so he had to make sure at first that no one felt so inadequate that they would be insubordinate later.

“What can you offer?” he addressed the Tellarit. Galven grunted before he replied, “I came up with the idea to shove some fists down the slavers greedy throats. Oh, and I am also the technician here.” He grinned wryly at that then pointed at Ritek. “He’s a big mouth but is skilled in communication and fluent in several languages, an advantage if you depend on information gained by eavesdropping. And Caviw,” he nodded towards the Caitian, “is one of the best hackers in the universe!”

The cat-like woman smiled at the Augment. “If you want to know, if you’re still pursued by the uniform-wearers,” she wrinkled her nose in distaste at the thought of Starfleet, “I could check. It wouldn’t be the first time I made a trip through their data.”

Well, that was interesting! He was in desperate need for any access to Starfleet’s database and here
was his chance! The possibility of learning the whereabouts of his crew would increase drastically if he could view Starfleet’s top secret files. But he had to be careful, very careful if he is to hide his true intentions from this group of wanna-be-heroes. They better never find out who and what he was. They must learn to trust him so that there wouldn’t be any questions when he begins his own private expedition. This plan worked out very well with the fishermen and Nando and should again.

His gaze held the Caitian woman, and he lifted both brows. “Really? You’re that good in hacking into systems? Starfleet has the highest security-standards and…”

Her claw-like nails touched his arm, and Caviw purred, “I am not ‘that good’ – I am better. Maybe you want to test me?”

Was this pussy cat flirting with him? He saw her tail twitching, caught the amused expressions of the others and felt for the first time the urge to send a prayer a higher power (not that he believed in such things), because this was certainly something he needed least of all. She was beautiful in her own way, but she was an alien and he couldn’t… Well, he couldn’t think of anyone else sharing his bed other than a certain boyish Starfleet captain.

Clearing his throat, he replied firmly, “I would like to test your computer abilities, Ma’am, so thank you for the offer.”

Ritek chuckled then he stiffened and stared at one of the staff-members bent over a small console. “Why do I have the feeling that the guy over there is going to make trouble?”

The others followed his pointed finger and both Khan’s and Cawiv’s excellent hearing caught the words exchanged. “A Starfleet-patrol called. It seems they’ve received several SOS-signals from the departing space crafts with the fled travelers, and now they want to know what happened,” the Caitian explained quickly, causing Galven to curse under his breath.

“Time to go!” the Tellarit grunted. “These fans of rules and regs will come to check on the outpost.” He looked at Khan. “What’s about you, buddy, are you in or out?”

There wasn’t any option left for the Augment. If a Starfleet vessel arrived and the remaining people pointed out the fierceness and success with which he fought, he would certainly be recognized, earning him a sure death – though this would be a more merciful outcome rather than being handed back to the LSH.
His decision made he turned toward Galven and Ritek. “I’m in,” he said. “Everything else can be talked over later when there is enough distance between us and Starfleet.” He walked with long, elegant steps toward the exit. “We should hurry!”

Galven blinked. “He already gives orders.” he snorted in amusement, as the others followed the new member as a unit would. “And they are obeying! Just have a look!” He waved at the rescued people “Until next time! Give the Starfleet boys my regards!” With that, he trotted away, sticking to the heels of his comrades.

Only as they beamed aboard their two vessels and Galven saw the stranger sitting at the helm of the ship, Shadow, the Tellarit realized that he even didn’t know the mysterious Terran’s name. Watching the new member of their group steering the space craft away from the outpost, checking the sensors for the approaching Starfleet ship, and handling the engines and the helm as if he were born to it, Galven walked to him and addressed him curtly, “Right, buddy, you’re obviously a benefit to us. Care to share your name?”

Caviw, who was sitting at her station, and several others glanced curiously at the stranger, who set a course away from the outpost and followed the second spacecraft commanded by Ritek. After a minute Khan looked up and locked eyes with the Tellarit and translated his real name in another language that conformed to his pretended origin.

“My name is Hádgere Léo Drythen,” he said. And as he caught the baffled faces of the little bridge crew, he explained: “It’s an old English name. The first one means ‘the year of the strong family or heritage’. Léo means lion – a mighty predatory cat on Earth. The family-name is simple; it means ‘king’.”

The Caitian woman snickered. “Well, with regard to your fighting abilities and your ability to unite the forces of these renegades, you are a predator and king in one.” She tried to say his name, except for the middle one she failed miserably. What came out of her mouth made the Augment almost chuckled. She finally sighed, “May I call you Léo? At least this I can get over my tongue without cutting it on my teeth.”

The super-human lifted a brow. “It’s easier for you; it reminds you of yourself, doesn’t it?”

She grinned. “Yes!”

Galven grimaced and snorted before he said: “First names are used only among the most intimate of relationships in my culture – and in this of Ritek and the most others, too – I would prefer to call you Drythen if you don’t mind.”
Of course Khan didn’t mind!

TBC…

Chapter End Notes

I think that was a surprise, wasn’t it? I hope you liked the details from Khan’s past, which made him interference in the Orions’ assault, which in turn leads to his decision to join the group of resistance. Of course he will going to use this ‘alliance’ for his own proposals (*grin*). Those of you who are wondering about the ‘translation’ of his name… Well, I did a lot of research to learn about the meaning of his Indic name that isn’t an official name at all, but is composed of several names and meanings. Here is the riddle’s solution:

Noon = an old Punjab-clan in the north of Pakistan and India; the clan’s importance peeked in the 17th century, as it became involved in the foundation of the Sikh-Empire (Khan was a Sikh). The ruler of this new caste went by the name Ranjit Singh!

Nien = a component within names, meaning a much as ‘year’, but can also be understand as a description of ‘sun’, because in ancient time Indic people counted the years in sun-circles (this will become important for the story, concerning something in Jim’s and Khan’s relationship).

Therefore Khan’s given name Noonien (combined) refers to this old, still important clan and its heritage at the 17th century, but can also be understood that the year, he was ‘born’ was the year of the strong-ones (maybe the name was given to him by the scientists, who were responsible for his life).

Singh = Name of the royal family of the Sikh-Empire. Until today only members of this clan and its relatives are bearing this name; Singh also means ‘lion’.

Khan = well, we all know that it is an Indic / Asian title of a king / emperor and I simply used the old-English word for ‘king’: Drythen.

His two given names I came up with in old-English:

Hadgere = hád (family, I chose this short-vision because Noon refers to said family in and family is also the most important thing for Khan), gere (year)

Léo = lion

Drythen = king.

I hope the explanation is understandable. I did, as I wrote above, a lot of research and hopefully it is satisfying. I know that Roddenberry named Khan after an Asia friend he lost sight of during WW II and who went by the name Noonian, what isn’t a ‘real’ name
at all. Maybe Gene simply misunderstood his comrade because of the accent, maybe the name of this gentleman is spelled different. But regarding Khan his combined name really makes sense, given his roots and his whole character. After all, he is a kind of warrior-king, who ruled the Asia-part of Earth.

Enough with this epilogue (*laugh*). I hope you liked the new chapter – Bob Wesley, the glimpses of Khan’s past, the fight and the outcome. And I can promise that there will be even more action in the next chapter, together with a ‘satchel charge’ Khan-cleverness, before our Augment realizes that it is necessary to break the silence and to send a message to no-one other than Jim.

Until the weekend,

Please leave some reviews / comments,

Yours Starflight
Hi, dear readers!

Thank you so much for all the kudos, bookmarks and comments. I am very, very happy that you are that smitten with the story and I can promise that you are going to love the next chapters. Like announced there will be a lot of action now, interactions of Jim and his friends / crew, Khan will show once again that he is a master of pulling all the right strings and he and Jim will get in contact again.

Have fun,

Yours Starflight

Chapter 8 – Good and bad surprises

“Which part of me words’ ‘they’re in no good condition’ does the cap’n not understand?”
Montgomery Scott looked half despaired and half enraged. His eyes raked over Engineering and the crew. His workers were scurrying from terminal to terminal, from valve to valve, from cooling-system to main-energy-supply, racing up steps and down. Frankly, it looked as though everyone was running around like rats in a maze, and he was a scientist. To the untrained eye, it was chaos. But to Montgomery Scott, it was a most precise choreographed dance; every movement executed with purpose.

The Enterprise was locked in battle – again – and it was up to Scotty and the Engineering department to keep his lady fully functional.

He was referring to his talk with Captain Kirk four days ago, and the repairs since were nearly complete. The good captain threw a wrench in the works, so to speak, when ‘Red Alert’ sounded through the ship. A moment later the hull shook, and so began the clash with three Orion vessels. And as much as Scotty admired his young captain’s resolve, sometimes he cursed the stubborn Iowa-kid into the next week. He wondered if the captain would ever let his lady heal.

The Orions appeared near the Japori system as expected. The Lexington was on her way to aid them, and Kirk was determined to solve the problem before Commodore Wesley’s arrival.

“Starboard Overload-valve’s going up!” one of the technicians screamed and the Scottish engineer
moaned, “No, not again! “What the devil is the cap’n doin’ up there? He’ll be the end of us!”

Several decks above him, on the main-bridge, Jim Kirk stared, eyes blazing, at the two remaining but all too functional Orion-vessels; the third lost power and navigation. Those all-to-functional ships were giving the Enterprise a run for her money. She received several major hits in the last few minutes. The Orions maybe slavers and pirates, but they knew how to battle.

“Evasive maneuvers, Mr. Sulu!” Kirk ordered, “Keep those shields up!”

“Zey’re down to twenty percent, Keptin,” Chekov called over his shoulder, his large eyes fixed on the data his navigation-console delivered. “Two more hits and zey will fail!”

Phaser-light flickered over the screen, and the Enterprise rocked as the shields absorbed the brunt of the shot. Still, more damage reports flooded Uhura’s station.

“Med bay to bridge! Jim, what the hell are you doing up there?” McCoy’s angry voice cracked with stress. “We’re running on auxiliary power here and we have several patients who depend on the life support systems. M’Benga is busy in the surgery; he needs more energy. If we don’t get full power within in the next few minutes, I can’t guarantee that…”

“Tell the damn Orions, Bones! They are using our ship for target practice!” Kirk snapped.

The CMO groaned. “Couldn’t you just avoid a fight for once? What good are evasive maneuvers if you can’t evade!” Mr. Sulu shot an incredulous look to the speaker overhead.

“I didn’t invite them, Bones, and now – please – get off the line!”

“Captain, the Lexington approaches!” Spock reported, as calm as he would talk last night’s dinner. Jim couldn’t suppress a sigh of relief, and a moment later the attacking Orion-vessels suffered direct hits from the phaser-blasts of the Enterprise’s sister-ship. The tables finally turned; the battle ended quickly with the Lexington’s arrival. The remaining Orion-vessels retreated, ushering the damaged ship with them. Instantly, the Lexington took up the chase making certain the Orion vessels would not return to the area.

Jim leaned back in his chair and took a deep breath. “Damage report, Uhura.” he murmured. She hesitated before replying, “The report will be long like the Christmas gift list of a spoiled child,
Captain. How about the worst of the damage?”

Kirk groaned – why wasn’t he surprised – and sent his communications officer a short smile, accompanied by the words, “Yes please.”

When Uhura finally finished, Jim wasn’t the only with his mouth hung open. Sulu und Chekov exchanged uncomfortable looks and even Spock, as far as a half-Vulcan could, looked surprised. “Um… didn’t you say you wanted to report only the most important damages?” Kirk asked almost cautiously. Nyota sighed, “I did, Captain.”

“Med bay to bridge! Are you done rockin’ the ship, Captain?” McCoy sounded more than irritated but due to the situation Jim kept quiet at the snark in the doctor’s voice.

“Engineering’ ter bridge! Cap’n, one more fight in the next two weeks – and I mean weeks! – and we can say farewell to our engines!”

“Wardroom to bridge. Captain, the last hit destroyed the main-power supply for the food-replicators. We only have a week’s worth of provisions.”

Kirk sighed and closed his eyes. “Has anyone got another shoe to drop?”

“A shoe, Captain? Why should someone drop a shoe?” Spock cocked an eyebrow. He was familiar with many Terran idioms, but this one was lost on him.

Uhura chuckled while Jim rolled his eyes, “I mean if anyone else has bad news, Spock. It’s a figure of speech.”

The Vulcan lifted a brow. “Some of these, uh figures, are highly illogical and impossible to understand, Captain. But regarding your question, Yes, I have more bad information to report.”

Jim pressed his lips shut, “Out with it then, Spock!”

“The torpedoes the Orions used are of Klingon construction.”
Silence filled the bridge.

“Come again?” the captain whispered and the science officer nodded slowly.

“You heard correct, sir,” he interpreted the reaction of his friend correctly. “The Orions fire torpedoes outfitted with what appears to be a Klingon photon-torpedo warhead. The signature of the weapon and its emissions are identical to the Klingon weapons used during our fight near Starbase K7 at Sherman’s Planet.”

“But…” Jim gestured towards the screen. “We saw the torpedoes they shot at us. They looked nothing like the torpedoes the Klingons are using!”

“Correct, Captain,” Spock nodded while he crossed his arms at his back. “It appears they’ve fitted the Klingon’s photon torpedo warhead into their own torpedo casing. This allows the Orions to disguise the Klingon technology as there need not be any external modifications to the Orion ship to accommodate the weapons; in essence hiding the new weaponry until it is fired.”

“So… the Klingons are supporting the Orion Syndicate?” Sulu concluded.

Jim cursed. “I anticipated something like this, still…” He had waved before he collected himself. “Uhura, transmit to Starfleet Command, Priority One. Tell them the Lexington and Enterprise successfully defended the Japori-System against Orions, and will head to Starbase 84 for repairs as soon as the Lexington returns. Oh, and tell them that we exposed the Klingon alliance with the Orion Syndicate. I’m sure this’ll make a few admirals very nervous!”

ST***ST***ST

‘Very nervous’ was an understatement. Admiral Richard Barnett’s blood boiled as the Enterprise’s transmission reached Earth. Finally, some proof to the SBI rumors of the Klingon-Orion partnership! To crown it all, reports of Orion and Klingon assaults were increasing. Several captains announced that they confronted Klingon vessels the sensors hadn’t detected until the battle-cruisers and the Birds-of-Prey had attacked.

“As if they are invisible!” one captain reported. Which led to one conclusion: the Klingons perfected their cloaking devices – a technique previously used exclusively by the Romulans.
Admiral José Luengo massaged his temples; an intense headache beginning behind his eyes and wrapping around his skull. “We didn’t foresee these singular battles becoming an all-out war.” he said slowly. He was still under scrutiny following Khan’s escape from Section 31, but his experience, contacts, and knowledge were too valuable to court-martial him right away. His big moustache twitched as he continued, “We have to redeploy the battlegroup squadrons between the Romulan and the Klingon Empire, the Klingons and Borderland, as well as along the Orion’s territory. If the Klingons want to start a major offensive, they will attack from there.”

“Or they’ll use more Orion territory which would allow them to encircle the fleet – on one side the former Neutral Zone, on the other side the Orions and vis-à-vis more Klingons,” Komack cut in. “No, we should evacuate the colonies and planets along the Neutral Zone and build a defensive line.”

“And how many people do you think, you can evacuate? There are billions! It would take years before we got them all to safety. We have weeks at best!” Luengo shook his head. “No. Intelligence reports that the Klingons are not interested in destroying the inhabited planets, but to seize them – a disagreeable situation for the involved populations, but their lives are not in danger. We should vacate the outposts and the space-stations in the neighborhood of the Klingons, and…”

“And deliver our technology to the Klingons?” Barnett frowned. “No, certainly not. We could destroy the stations as a last resort, but only if we are left with no other option. Till now we’ve only lost K7 and Starbase 133; Starbase 234 and 84 are still in our control and we must keep it that way, gentlemen!” He glanced at Komack. “What’s the status of the civil outposts?”

“Most of them are still intact, but several days ago, Orions assaulted outpost 18–243 – a small space-dock with a dubious reputation. If you don’t want the Security and police to know about your travel-habits; refugees. It’s a popular dock for smugglers too.” Komack sighed. “The Orions knew about it and thought that have an easy capture for their slave trade, but something went wrong. Instead of taking captives they got their butts kicked and had to retreat.”

The other admirals in the conference room frowned, and Barnett stated more than asked, “Insurgents again?”

Komack smiled for the briefest moment. “It seems so.” He glanced at Luengo. “José?”

The Chief of the SBI grimaced. “According to several reports this bunch of wackos ambushed the pirates and fought them off before they could cause too much damage. Several records were made that I hadn't got until now, but as it seems this was a more organized strike against the pirates, otherwise the outcome could have been quite the opposite. Several witnesses told the crew of the
Bonaventure, who reached the outpost first after they caught their emergency signals, that they owe these people their lives.”

“Well, we need any support we can get.” Suzan Heatherd sighed and added quickly, “Of course I know these vigilante style antics are illegal, but if they render the Orions inoperable, even for a while, so much the better for us.”

Barnett nodded. “I understand what you mean – still the acting commanders out there near the Neutral Zone are not too happy with vigilante-style justice. Playing the hero is a dangerous game. One we will eventually have to clean up.”

Suzan smiled. “Well, that goes for all of them – the so-called ‘militia’ and our commanders!”

Luengo listened quietly; he intentionally withheld records he received from the security-cameras of the outpost 18-243 shortly before the meeting began. Specifically, he withheld the video from the cameras of the waiting-and-departure area of the outpost. He thought he saw a fighter in dark clothes, aiding other passengers, as well as the Robin Hood band. If the evaluations of these records confirmed what he anticipated they would, he would have to tell Norton that his run-away Augment was somewhere near the Neutral Zone.

ST***ST***ST

“Argh! Where did these muck-ups come from?” Galven was ready to explode like a tiny volcano; his weak eyes squinted at the screen as a Klingon scout-ship seemed to appear out of nowhere.

Khan didn’t listen to the complaints of the Tellarit. Complaining was a sport for Galven, and he excelled. The Augment, in the time he spent with the group of do-gooder mercenaries, learned to quit asking what Galven’s guttural articulations meant in Federation-Standard. His muttered (shouted, grunted) words were obviously insults. Caviw explained him two days ago that Tellarits knew more than fifty words only for ‘dirt’ – some of them were positive as the one describing the healing-mud used on his home planet. But, some of them clearly meant that the addressed individual would do better to ingest, roll-in, or never come out of a ‘non-medicinal’ mud-bath; others simply meant the addressed was dirty at, well, ‘everything’.

So the super-human employed some selective hearing when it came to the Galven’s native tongue; he didn’t need any distractions. Khan’s gaze wandered over the place the Klingon ship appeared, ‘Klingon scout, fast and easy maneuverable, manned with one-seven crewmembers’ he reminded himself of the scout ship’s specs during his ‘cooperation’ with Section 31.
But Khan noticed something else strange when the scout ship came into view, aside from the spontaneous appearance. Something within the scout ship required a lot of power. The ship’s energy signature dropped, signaling a drop in energy supply as evidenced by the Klingon shields’ loss of power. ‘Interesting!’ he thought. ‘A ship that can disappear and reappear; yet whatever causes it seems to leach the ship’s power. I’ve heard of something like this before – but where?’

His attention was driven back to the problem at hand. The enemy’s ship may be small, but it had an array of armament – and right now the torpedoes were aimed their way.

“Galven, we are being hailed!” Caviw called, and the Tellarit gave her a signal to open a channel.

Instantly the dark voice of a Klingon boomed through the speakers.

“Unknown ship, this is Captain Kardan from the B’rel-ship D’Ghor of the Klingon Imperial Fleet. You have entered Klingon space! Prepare to be boarded. If you refuse surrender, you will be destroyed!”

The audio transmission precluded view of the Klingon’s face, but his voice betrayed a deadly seriousness.

Galven gasped. “Klingon space?” he repeated. “Klingon space? Is your navigator drunk or was he reading star-charts upside-down? You are in Federation space, Kardan, so haul your ass and get lost!”

Khan glared over his shoulder at the outraged Tellarit. That wasn’t the cleverest move to dissuade the enemy from blowing them out of space.

As it seems, the Klingon commander didn’t recognize the Terran phrases but the word ‘ass’ rang a bell, because the answer came like a low growl over the still open link. “Federation-vessel, no more warnings! Lower your shields and surrender, or we will pulverize your ‘asses’!”

“A Klingon with humor – you never too old to learn!” Galven grunted, and Khan realized that, if he didn’t intervene, he and the crew were dead!
“D’Ghor, this is Drythen speaking, captain of the Shadow!” he rose to speak and prohibited any protest by hastily pressing one finger against his lips and glaring at his shipmates with one of his most imposing stares. He had to take the matter in his own hands.

“Captain Drythen?” The Klingon stumbled over the unusual name what seemed to make him even angrier, before he snarled, “Am I speaking at last with the commander of this sorry excuse for a space craft?”

“You are, sir. Captain Dythen at your service!” It rankled him to act as an inferior being, but he had to buy time to collect facts and plan an escape. “Sir, my instruments show that we are near the Betreka Nebula which belongs to the Federation. Could you be so polite as to explain, how…”

“This whole area is seized by the glorious Klingon Imperial Fleet, Shadow, and belongs now to our territory!” the Klingon commander growled. “Who was this insolent petaQ who dared to insult me earlier?”

“My technician – a short-tempered man, that’s all!” the super-human replied nonchalantly, ignoring Galven’s sputtering gasps. “We have several technical problems, and his mood isn’t the best at the moment.”

“Shoot him, if he is such a waste!” came the curt comment, followed by the next demand: “Lower your shields and switch to full-transmission, Captain!”

“Ah, there is one of our problems, Commander!” Khan’s voice sounded almost apologetic in contrast to his flashing eyes. His plot formed. He had to coax the Klingon to lower the shields completely – and he knew exactly how to persuade him. “You see, we had a short circuit in the con-terminal and most of the main-functions are disabled. The life-support-systems are only functioning at twelve percent; we have no warp capability; our weapons are inoperable and our engine…”

He heard roaring laughter coming through the speakers from the Klingons, accompanied by Kardan’s voice, “Captain, thank you for the status report of your ship. You must have mistaken us for the breakdown service. I must disappoint you.” – More laughter. – “But we are in deep space and of course I’ll help you out of your misery - forever.”

Galven, Caviw and three other crew-members – who hadn’t the slightest clue to what their new shipmate was up to – displayed more than a hint of panic on their faces; still, Khan remained perfectly calm. “That sounds like a good offer, Commander Kardan. Thank you. I am certain that your ship will be able to tow us along and that your fleet admiral will be delighted to receive a full shipment of dilithium.”
Silence descended like a shroud.

Galven and the others, thunderstruck, watched the super-human. Kardan replied after several seconds: “Shadow, repeat the nature of your shipment!”

“Our cargo bay is full of dilithium,” the Augment lied. He knew that Kardan had no way of checking their hold properly as long as their shields were up.

“How did you gain a whole shipment of…?” The hostile commander was again interrupted, as Khan answered casually:

“That doesn’t matter. We are dealers with no loyalty to the Federation. We’ll sell to anyone at the right price. As far as I can assume, your fleet is in need of these particular crystals, being away from home and at war. Maybe we can come to an agreement. You hustle us to your fleet admiral, help us with the repairs, and I’ll make you a fair deal in repayment for your service.” He paused for effect, knowing that everything depended on the Klingon’s decision to activate the tractor-beam, which would cause D’Ghor to lower her shields. “Eventually, we can strike a pact for more deliveries, because you will not get dilithium-crystals cheaper in the whole quadrant,” Khan added, tempting Kardan even more with the prospect of a good deal.

There was no answer from the Klingon commander; it was obvious that he was pondering the possibilities – Khan pressed.

“See it as a two-side-advantage or, even better, a three-sided one.” His voice was even and steady, while his fingers darted over the controls of the con-terminal, sending data to the private PADD Ritek left with him before he departed two days ago to meet ‘a very good friend’.

“How so?” The Klingon sounded bewildered, and a cold smirk played around the usual soft lips of the super-human, his gaze never wavering from the terminal. “Well, we will be rid of our technical problems; your fleet will have a larger storage of dilithium for a knocked-down price and you will get commendations from your fleet-commander. A man who takes responsibilities and makes decisions—gaining needed equipment for his fleet—certainly will be trusted with greater duties than those of scouting.”

The reply came hesitantly. “Have I understood you correctly? You will leave your shipment to us for a very low price if we save you neck?” Someone in the background had grumbled before Kardan continued, “There is always the possibility to strafe your ship and beam the contents of your hold
Galven and Jeff Tyler gulped nervously and watched ‘Drythen’, who appeared relaxed, bored even, as if he were discussing the weather on far-away Vega.

“It would be unwise. I am sure I do not have to point out to you the risk - that you would destroy this ship before you could seize our shipment is high, and your fleet-commander would miss the opportunity to obtain his fleet’s needed Dilithium supply for the foreseeable future. And you would neglect your own opportunity showing your superiors your real value as a commander. But perhaps you enjoy scouting duties.” He made the last statement with more than a hint of distaste and leaned back in his chair. “The decision is up to you.”

Once again the enemy captain took his time consider the matter; then he answered slowly, “I have no guarantee that you’re speaking the truth.”

This objection wasn’t unexpected, and Khan was ready for it.

“If you like I can send you part of our technical log disclosing our problems. As you know the computer cannot manipulate the technical logs, so it should be enough proof for you to…”

“Send it! I’ll give you the frequency!”

Khan waited patiently, while he linked the PADD to the con-terminal. Then he activated the sensors again, modifying them in a way the others hadn’t seen before. Curious, Caviw left her station to stand behind him, scrutinizing his actions. She frowned deeply, trying to figure out just what he was planning.

A moment later the frequency was given, and a triumphant smile spread across the Augment’s features, before he said, “Give me a moment, Commander, I have to adjust the transmission of data to your frequency.”

“No tricks, Captain, or I’ll blow you into space!”

Khan rolled his eyes. And there were people, who called him dramatic!
“Here it comes!” he reported and sent the altered data from his PADD to the Klingon ship. But the log wasn’t the only bit of data sent in Khan’s transmission. Covered by the transmission, the sensors of the Shadow scanned the D’Ghor’s energy signatures; a few seconds later Khan had the information he needed. He now knew how the Klingons had been able to sneak up on them without alerting the sensors. This nice little device had made it possible and would serve him very, very well!

“Commander Kardan, does everything appear satisfactory?” he asked as if he was a student addressing his teacher; he smiled inwardly.

“I’ll repeat my earlier advice again, Captain, shoot your technician!”

Khan and the others took that as a ‘yes’, and a moment later they learned Khan correctly determined the Klingon’s decision as Kardan added, “We will activate our tractor-beam and tow you along with us. But make no mistake! At the first hint of your treachery, we will blow your ship to pieces!”

Another threat meant seriously by the Klingon, but for Khan it was almost a joke. Still he kept the charade up and replied, “You have seen our technical status, Commander. We are truly in need for your help.”

The crew heard hushed comments and snickering over the transmission; it was not necessary to speak Klingon to understand that the crew of the D’Ghor was mocking the ‘dealers’.

“Yes, I know,” Kardan sneered. “How it is possible that you’re still able to move, is beyond me!”

Khan’s gaze lay on the sensors while an icy, predatory smile spread slowly over his face. His voice was almost soft, as he said darkly:

“Because…”

The sensors showed that the shields of the D’Ghor began to lower.

“… injured tigers…”

The long, slender fingers of the Augment rested on the controls of the single phaser-bank that
complemented the Shadow’s weaponry.

“… are most dangerous!”

The next moment the phasers sent their destructive load at the now unshielded \textit{D’Ghor}, hitting her directly over the point where the foreign device was installed. Khan followed the phaser hit with a torpedo aimed for the section of her main-power.

The roars of surprise and fury from the Klingon crew boomed over the speakers, then the connection was broken.

“Man your stations! Ready for battle!” Khan yelled and set a course that would bring them under the Klingon scout ship.

Not a second too soon, because the \textit{D’Ghor} shot one of her own torpedoes missing them by a hair’s breadth.

“Computer, switch automatic weaponry-control to manual!” the super-human ordered and a hairline cross appeared in the center of the screen. He did not trust the computer to execute the job he intended to do.

“Are you crazy?” Galven squeaked, clearly in panic now, but – again – the Augment stayed calm.

The \textit{D’Ghor} moved and fired a second torpedo at them – Khan was waiting for it – aiming with perfect precision and steady hand, he let loose his own that sped into the path of the enemy’s shot.

“Hold on!” he shouted, tightening his own hands around the armrests of his chair.

The clash was cataclysmic, as both torpedoes met and exploded in a cloud of released, deadly energy, sending a shock-wave towards the two ships. But because the \textit{Shadow’s} shields were still up damage to her hull was mitigated in contrast to the \textit{D’Ghor}. The scout ship reeled back and tumbled through space, no longer maneuverable.

Checking the sensors Khan reported, “Their energy-supplies are down, warp-engine is still intact but
without power, shields are down. They are no longer firing so it seems their weapons are inoperable for the moment, but I cannot be sure for how long. Life-support-system is down to thirty-five percent!” He turned towards the others. “We should seize the ship here and now, before Kardan activates the self-destruct.”

Galven grunted something Khan didn’t understand, before the Tellarit oinked, “And why should we take that ship for ourselves?”

The Augment was already out of his seat, heading for the small transporter room located at the back of the bridge. “Because they have something aboard that is of use to us!” He slipped into a safety waistcoat and checked his phaser.

“And what is that?” One of the crew asked.

Khan smirked, “A cloaking-device!”

Two minutes later the Augment and the most of the Shadow’s crew materialized on the bridge of the D’Ghor. They were met with stinging smoke, heat from a fire, and four angry Klingons who survived the attack. With a roar of pure wrath the surviving Klingons hurled themselves at the intruders. Galven, Jeff Tyler, and the others struggled to defend themselves against the fury and strength of the Klingons – but Khan did not.

With ease he blocked the blows of his opponent and, despite the ridged forehead, he head-butted his enemy throwing him backwards.

Dark eyes glared first with surprise then with hate. “Who are you?” the Klingon snarled.

Recognizing the voice, Khan answered plainly, “I am your ticket to hell, Kardan!”

“YOU are the double-tongued bIHnuch (coward), who lied to me!” The Klingon commander tore a dagger out of his belt and snapped the blade open, revealing two more blades - a D’k thag – the traditional knife of a warrior.

“You should have stayed out of our way, Kardan!” the super-human growled, his pale eyes glistening with the fire of battle. “Now you have to face the consequences of challenging me!”
“I don’t know who you are, but one thing I can promise: nothing you and your friends will do can stop us from conquering this part of your beloved Federation! Tammeron will be seized and destroyed, the Federation will lose an important trading partner, and we are coming one step closer to your precious Earth!” He spat the last word, and Khan’s instincts flared up. Earth was, after all, his home-planet and even if he hadn’t been on best terms with his home in history, he couldn’t deny his roots.

And there was more. As far as he understood Kardan the Klingons were about to destroy an inhabited planet - millions of lives – something that was utterly and completely unacceptable for the enhanced man. Other Augments had let themselves be carried away by their own power, had committed genocide even – the start of the Eugenics Wars – but Khan Noonien Singh had never been tempted to such inhumanity. And he wouldn’t stand idly by when another force threatened to wipe out an entire population.

“Don’t underestimate us, Klingon!” he growled. “There are enough capable people who are going to kick your fleet straight to hell – I’m just ensuring you follow them there!”

With those words he was upon Kardan. He slapped the hand with the D’k thag aside and delivered a hard blow to the Klingon’s chest, breaking several ribs. The enemy commander went to his knees. The next instant Khan had him in a deadly grip around neck and head; he ignored his opponent clawing at his arms. Bending down he hissed near Kardan’s ear, delivering words for his ears only, “You want to know, who I am? Have you heard the story of Qo’noS and the three patrol units? It was one year ago, wasn’t it?” He saw Kardan’s eyes widening and lowered his voice to a whisper. “Yes. It was me who took them out, all of them, one by one.”

“You…” The Klingon coughed pink-colored blood, while his eyes burnt with hate. “You were the backup for that cowardly man-boy!”

“So I have already a reputation on your planet? Excellent!” Khan tightened his grip; deep inside him a new anger kindled when heard the Klingon call James a coward. “How many ships are on their way to Tammeron and when will they strike?”

Kardan only spit at him – and screamed, as Khan mercilessly broke his arm. “How many and when is the attack?” he demanded again, his face wild with rage.

“Too many, even for you! Two little space-crafts against ten battle-cruisers… Enter Tammerion-territory and my comrades will disperse your molecules all over space!”
“And when will that be in your opinion?” the super-human sneered, but received only a barking laughter.

“Soon – very soon, scum!”

These were the last words Kardan ever said. One hard jerk and a twist of his head, and the Klingon commander slumped to the floor.

Rising, the Augment looked around him. The fight was over; the three other Klingons had taken their last voyage to the Black Fleet. Khan met Caviw’s large eyes; she had watched him breaking Klingon bones with his bare hands. “You shouldn’t be angered,” she deadpanned; then she sighed, gesturing towards Kardan. “He could have given us information!”

Khan shook his head. “He already did. He wouldn’t have given anymore.” He walked to one of the stations and looked over the symbols. “Does anyone read Klingon?” he asked and Galven, who had problems with setting the fire drencher on work, oinked:

“Ritek does – but this chipmunk will only come tomorrow after he has visited his girl.”

“Contact him. He must come immediately. Tell him that we’ve seized a Klingon scout ship with a cloaking device and that we need his help to learn more about it and we need to know how to steer the ship. With it, the Shadow and the Flash we may be able to prevent the Klingons from murdering the population of a whole planet.”

That gave him everyone’s attention. “WHAT?” Galven squealed, in shock, before coughing and cursing the smoke.

“The Tammeron-planet – what do you know about it?” Khan asked sternly. It was Jeff who answered him.

“It’s a smaller planet in the Tammeron system on the other side of the Betrenka Nebula. Tammeron is neutral but has been trading with the Federation for several decades now. Their whiskey is famous as well as their fruits. They are humanoid and very peaceful.”

Khan nodded. “And an entire Klingon strike group is on its way to destroy their planet and erase this important trading partner of the Federation.” He heard startled gasps and pressed his lips tightly
before continuing. “I think we should reconsider our original proposal and adapt our plans!”

Caviw cocked her head. “Even with the *Flash*, the *Shadow*, and this nice little ship with its special gift – we cannot fight a fully outfitted Klingon strike group, and you know this.”

Again, the enhanced man made an affirming gesture. “That we do not have to do at all. We only have to hold them until real help arrives.”

Jeff looked up his ashen hair clung to his sweaty forehead. “You are talking about Starfleet?”

“Yes. If several Federation ships arrive, the Klingons will get a nasty surprise when they reach Tammeron.”

“I thought you parted with Starfleet on, uh, less than amicable terms, shall we say,” the Caitian woman mused, while Galven grumbled, “We don’t even have the hours to spare in order to come up with a plan to bring Starfleet to Tammeron.”

“Still, it is the only way to save the inhabitants of that planet,” the Augment answered sharply. “I will beam back to the *Shadow* and send Starfleet a message. We have to alert them before we can plot how to outmaneuver the Klingons.”

Caviw stepped in front of him. “Do you think they will listen to you? You are a wanted man after you deserted those uniform-wearers. They will…”

“I know someone who will listen,” Khan cut in, taking out his communicator to order the remaining crew-member aboard the *Shadow* to beam him back. Then he hesitated. “Caviw, you said you can hack into Starfleet’s database.”

A soft purr was the answer, and so he continued, “You could play a large part in saving the Tammeronians.”

This time she chuckled. “What do I have to do?”

“I need the whereabouts and the specific transmission frequency of a certain starship.”
Jim Kirk stretched his back and groaned; screaming protests of tense muscles and tight tendons answered the procedure. God, he needed a bath – or a shower… A real shower with water, unfortunately, the loss of the main device for the replicators also powered ship’s plumbing, and that meant there were only a few tanks left with fresh water; a shower was out of the question. Well, a sonic shower wasn’t that bad; still Jim loved the good old-fashioned way of getting clean and relaxed.

Relaxing was something he couldn’t afford just now. Not when his ship was in this condition! Only two hours ago they had parted from the Lexington. After Bob Wesley had provided them with needed medical supplies, replacement equipment for the damaged computer systems, and some food enough to last the trip to Starbase 84, the Enterprise headed toward the next Starfleet outpost to undergo the necessary repairs.

After Kirk’s visit to the med bay, he went to Engineering and saw the whole disaster with his own eyes. He grasped that Scotty’s earlier outburst was no exaggeration. The mechanical heart of the Enterprise looked as if not one, but a dozen ‘Nessies’ had raced through it. ‘Or dragons,’ the young captain thought with a twinge of black humor, as he waited for the turbo lift to reach the bridge again. ‘Fire-breathing dragons, who left their traces all over the walls and floors. Hell, no wonder Scotty was near tears. That is no engineering space, but a cargo hold full of chaos!’

The turbo lift doors opened, and he stepped into the next ‘center of chaos’. There seemed to be no station whose cover panel wasn’t open. Most senior officers and enlisted technicians were stooped beneath or leaning over some piece of equipment or another; all the lights in the space were flickering.

What a mess!

The first hits by the Orions hadn’t done much damage. Then, two of the vessels caught the Enterprise in their crossfire; only a clever move initiated by Jim – one of those tactics that wouldn’t be found in any textbook – saved the ship and its crew, rendering one of the two enemies helpless.

Kirk’s attention was brought to the navigation station, where a tirade of Russian sounded; Jim had no desire to learn what all those words meant. Glancing around he walked over to his Vulcan friend, who closed the cover panel of his station and still looked like a chimney sweeper of earlier centuries.
“Everything all right, Spock?” he asked quietly; his first officer lifted one shoulder in a half-shrug – a human gesture he had adopted from his shipmates.

“Depending on how you look at it, Captain,” he answered. “Is the station completely in order and working properly? No. Is the reduced capacity sufficient until we reach Starbase 84? Yes.”

Jim nodded slowly. “I was in the engineering and the med bay. We lost 18 crewmembers today; more than 40 need medical care and 3 are still critical even after the emergency surgery.” He lowered his head. “So much suffering, so many lives wasted… And for what?” He snorted. “For something that could have been prevented, if both sides had shown more caution, tolerance and respect.” His eyes wandered to the main-screen that was completely intact. “I signed up for Starfleet to explore the galaxy, not to fight wars. Yeah, part of Starfleet’s responsibility is to keep the Federation’s people safe, still…” He sighed.

The night-dark eyes of the Vulcan shimmered softly as he spoke “History shows, behind any war, there are those who remove themselves from the violence and the insanity of battles, and therefore don’t know first-hand what they have done. Others selflessly volunteer to follow those orders to battle because, at some point, there is no going back. We crossed that point last year because of the deeds of Section 31; the Klingons crossed this point even earlier, waiting for an opportunity to that which is their nature – to conquer, to destroy. And so we have no other choice than to do what is expected of us. We will use all our strengths to protect those, who are unable to defend themselves. So long as we do not lose ourselves, so long as we do not let hatred and the desire for revenge dictate our actions – we can aspire toward peace; we will end this war.”

Jim cocked his head and surveyed his friend. He knew that Vulcans didn’t often speak to illicit emotion – most of them even denied having them – but not for the first time Spock surprised him with the sensible part – the human part that was deep hidden in his soul, and Kirk was grateful for the comforting words his T’hy’la found. But before he could reply, Uhura’s voice called, “Captain, I’ve received a transmission on the specific frequency allocated to us by Starfleet Command.”

“A message from headquarters?” Kirk asked, already walking towards the young Bantu, who listened closely. She frowned and shook her head in bewilderment.

“No, Captain. The source is… somewhere…” For a moment, she was busy at her station; her eyes never wavered from the small screen above her. Then she frowned, “From somewhere near the Betreka Nebula.”

Jim blinked in surprise while several other bridge-crewmembers stared at the communication officer and their captain with questioning looks. “Near the Betreka Nebula? And they are using the Enterprise’s specific communication-frequency?” As the young woman nodded, he exchanged a look with a slightly confused Spock and ordered, “On screen, Lieutenant.”
“Sorry, sir, it is only an audio transmission.”

Jim gestured towards her when a moment later a female voice sounded through the speakers; the slightly hoarse and hissing accent gave her away as a Caitian. “This is… the… Shadow… We have reliable information that… Klingons are going to attack Tammeron and… destroy… whole planet. Ten battle-cruisers are on their w… Send help or millions will d…”

Kirk took a deep breath. The transmission was not coming in as clearly as it should; the Betreka Nebula was still within reach for direct contact. He looked at Spock – whose brows vanished beneath his tousled black hair – and answered, “This is Captain James T. Kirk from the USS Enterprise. Identify yourself, Shadow. And how do you know about this frequency?”

He had to wait for an answer and Spock bent forwards; whispering: “Jim, this could be a trap.”

“I know, Spock, still I’m curious, who this woman is and how she got our frequ…”

“We are those, who fight agai… Orion pirates where Starfleet is too… the rescue,” the Caitian-woman replied, taking Jim by surprise. This group of people, who created their own militia to fight against the Orion-pirates was contacting him? Why did they choose him of all people?

He listened to the static noises, which overloaded the transmission again and glanced at Uhura. “Can you adjust the signal to make it clearer, Lieutenant?”

Uhura shook her head. “No, Captain. There seems to be a…” She hesitated, and her eyes widened. “Sir, there is a second signal along with the main transmission.”

“You mean a piggy-backed signal?” Jim ignored Spock’s confused look since he used a very old Terran term, but Nyota understood him. “Yes, sir; indeed.”

“What is the source? Klingon territory or…”

“Cap… the second signa… for you in perso… to believe us! Open i…!” ‘Shadow’ – he didn’t know if this was a pseudonym of the Caitian or the name of the ‘militia’ – sounded more urgent now, and the young captain pressed his lips tightly.
“I have to advise against such a step, Captain. This signal could be anything, maybe a trick to acquire our ship-codes and…”

“Sir, it’s a… a picture!” Uhura interrupted her lover and turned towards Kirk. “To be precise, there are two pictures, scanned in and sent together with the transmission.”

“Open the first, Lieutenant” Kirk murmured, and gestured to the Vulcan to stay silent. He bent over the communication station, watching the small screen. Thunderstruck, he realized that the opened data showed a simple piece of paper with a single handwritten line: ‘To James – For your eyes only!’

Jim knew this handwriting. He would have recognized it anywhere! He had seen these elegant, bold letters only once, but the memory was etched in his mind. His heart began to pound, and several feelings arose in him simultaneously: relief, joy, caution, bewilderment… But, above all, an exciting thrill that went straight to his core, made his mouth dry, and filled him with anticipation.

“Excuse me, Lieutenant,” he said, and waited until Uhura rose and made room for him. Then he opened the second picture. It was again a holophoto of a sheet of paper, this time with the real message: ‘J., Miss Caviw’s information is credible. I coaxed it out of a Klingon commander. There are millions of lives at stake; the assault is soon. Convince SC and contact me in private as soon as you receive SC’s decision. Use HF 25.361.59. – K.’

Jim’s heart seemed to burst out of his chest. This message was the first sign of life he got from Khan after the Augment had left his apartment. The captain was almost ashamed of the amount of relief that washed through him. The super-human had managed to leave Earth and escape Starfleet – or rather had fled LSH and the remaining members of Section 31. Jim was tempted to sigh out loud, but his conscience pricked at him – after all Khan was a criminal! But he couldn’t help himself. He had worried over his one-time lover since that fateful night.

Then it hit him. Khan was somewhere near the Neutral Zone, together – it seemed – with the people who fought against the Orion-pirates. Jim didn’t know how the Augment ended up with them. Perhaps he simply used them for shelter and helped them, while he searched in secret for his family. But foremost on Jim’s mind was the knowledge that Khan was safe – as safe as one could be in the middle of a war.

Quickly, he read the transmission once more before deleting the private message. Then he rose to speak again, “Shadow, I received your second transmission.” For a moment, he pictured Khan at the other end of the transmission link beside the Caitian, listening to his words – and his pulse quickened even more. ‘Dammit, Jim, get a grip!’ He cleared his throat and continued, “Thank you for the warning. I will inform Starfleet Command immediately so they can take countermeasures. Do you
Again there was a pause before the reply reached the Enterprise. “We’ve intercepted information that ten battle-cruisers will attack Tammeron, but there could be more.” The transmission was coming in clearer now but for the pause. The Caitian-woman added, “I shall tell you from ‘Sunrise’ that the Klingons are using cloaking-devices rendering their ships completely invisible, however, we’ve detected a weakness. The cloaking effect appears to require a significant amount of energy; it seems to decrease the power of the deflector shields, rendering them nearly useless.”

Hushed voices and gasps sounded around the bridge at the confirmation of the rumors; the Klingons had stolen Romulan cloaking technology and were now using it to gain further advantage.

“Understood, Shadow. Please pass my sincerest thanks to Sunrise,” Jim answered; knowing perfectly well that this code name was another proof that Khan was – indeed – on the other end of the transmission. Only the two knew the significance of Sunrise. The Augment threatened that he would never see the sun rise again. By sparing Kirk's life, the Augment gave him another sunrise. 'A gift', Kirk thought to himself – one he hoped to share with the giver.

Kirk took a deep breath. “You need to know that the Klingons are supporting the Orion Syndicate, providing weapons and technical equipment. So please be careful when you rush to the aid of potential victims of those pirates the next time.”

Caviw sounded surprised at the captain’s words and cast a quick look in Khan’s direction. “Thank you for the warning, Captain. I’ll relay the information, and… I understand now, why ‘Sunrise’ trusts you. Shadow out!”

The link went dead and for several moments Jim was lost in thought before he realized that Sulu and Chekov were speaking in hushed tones. Uhura manned her station again and cast him a sidelong glance. And as par for the course, Spock had his special kind of non-existent, but nonetheless clear expression of ‘that was a mistake’ look on his face. Kirk shook his head, ignored the gentle tingle at his neck where the mark had been, and absentlly smoothed his shirt while attempting to slow his pounding pulse.

“Lieutenant, contact Starfleet Command, Admiral Barnett. Inform him that the Klingons are using cloaking devices on their ships. They likely stole the technology from the Romulans. Also, tell him we have reliable information that ten Klingon battlecruisers – maybe more – are on their way to Tammeron to destroy the planet. Tell him I’ll contact Bob Wesley since he is the highest ranking commanding officer in this sector, and he has to organize the defense for Tammeron. Afterwards, please hail the Lexington. I have to speak with Bob as soon as possible.”
The Bantu nodded, and Kirk left the upper part of the bridge, returning to his seat. Spock was on his heels and quietly spoke up. “Captain, we cannot determine the veracity of the warning given by this ‘Shadow’ organization.

“I got the proof that the Caitian-woman told the truth, Spock, trust me!” Jim replied, eying his friend.

The Vulcan lifted his brow before continuing, “You are referring to the separate message you received, but still it could be a fake and…”

“No, it’s not a fake!” Kirk interrupted him; his voice was firm. “I recognize this handwriting and the code name says everything I need to know. We can trust this information.”

Spock didn’t even try to get the bottom of this statement. He knew Jim well enough to realize that nothing would change the younger man’s opinion – and he wouldn’t give away, who this ‘Sunrise’ was; still the Vulcan had his own thoughts about it. His friend’s cheeks quickly flushed, and there was a certain bright light in his eyes. That light and that flush never fail to tell Spock more than Jim wants to give away; even if Spock couldn’t even glean the whole truth. “Nevertheless it was against the regulations to give this ‘militia’ military information,” he added. Kirk frowned before he retorted, “And leave them hanging out to dry next time they confront Orion pirates to do what we can’t? Are you serious?” he asked unbelievingly.

“I do understand that their interventions are an additional help against the crimes of the Syndicate, but they are outlaws, Jim, and therefore…”

“Spock, all is fair in love and war, and in my eyes this group The Shadow is doing our job. They are actually supporting the Federation in their own way by picking up the slack. We already had problems keeping the Orions at bay during peacetime; now, during the war it’s nearly impossible to fight the Klingons and to kick the Orions’ asses. So as I see it, The Shadow is more like unconventional support rather than a bunch of outlaws. After all, they are saving lives, not robbing people blind!”

Jim’s thoughts drifted. ‘And there is also this bastard among them, who has somehow wrapped himself around my mind and haunts my dreams. His death would hurt more than I am ready to admit. God, I even LIED to my friends and Barnett to protect him. Now, I should withhold information that keeps him safe, because of some silly regulations I’ve already broken for him once? No!’ He sighed inwardly. ‘He wrote that I should contact him as soon as I got Starfleet Command’s decision, but I think the same goes for Bob’s action. Soon I can talk to Khan again, and… Ugh, Jim, there are more important matters at hand just right now!’ he scolded himself, as his thoughts attempted wander again without his say so.
“Captain, Commodore Wesley for you!” Uhura’s voice brought him back to the present just in time; the screen displayed the silver-haired figure of a tired-looking Bob Wesley.

“Jim, care to explain why I was dragged from a briefing with my senior officers by your Priority One ‘large as the whole galaxy and concerning a red alert redder than red poppy’?” he asked wryly.

Baffled Kirk glanced over his shoulder at Uhura, who only shrugged innocently, which meant, ‘You wanted to speak with him, here he is!’ , and turned his attention back to Wesley.

“I have no good news …”

TBC…

Chapter End Notes

Yeah, The Shadow – means Khan – is now in the possession of a scout ship with a cloaking device, what will be very handy in the near future; not only to battle the Klingons, but also to support a certain trouble-maker who commands Starfleet’s flagship.

In the next chapter Jim and Khan have a personal contact via transmission and I think you are going to love it, how both men will react to speak with each other again – finally! At the same time Luengo checks the records only to find his assumptions confirmed and you are going to ‘meet’ Kor again

I hope you liked the last chapter and I am really curious what you are thinking of it, so please, please leave some comments.

The next chapter is going to be published next weekend (it depends on the amount of work my dear beta-reader has to do to edit my writing).

Until then have a nice week,

Yours Starflight
Chapter Notes

Hi dear Readers!

I have to apologize that it lasted so long until the next update finally comes now, but my dear beta-reader ‘studied’ several information to be better prepared for all the Star Trek technics, background-issues and so on, and then she had to edit the new chapter several times. But I do think the result is worth the waiting.

Jim and Khan will have their talk in private, you learn more about a certain Klingon-Lord and there will be a nasty surprise at the end (*evil grin*)

And to not spoil anything by giving away too much I just release you now to the next update.

Thank you very much once again for all the feedbacks and that you stay so loyal to the story.

Enjoy,

Yours Starflight

See the end of the chapter for more notes

Chapter 9 – Talks

As the Enterprise’s message to headquarters travelled to Earth, Jim Kirk walked to his private quarters, leaving the con to Spock.

‘As soon as you have a decision…’ Khan told him - and a decision Jim got. Bob didn’t doubt Kirk’s words and alerted the starships closest to Tammeron; Commodore Wesley leading the strike group. Hood II remained in the Japori system in case the Orions or Klingons showed. Kirk wanted to accompany Wesley as part of the strike group, but the Enterprise was in no condition for another battle – not until they completed the needed repairs, and the replication-computer worked properly again. A starving crew was not optimal.

Jim exited the turbolift and headed down the corridor, mentally repeating the frequency Khan had given him. He frowned, dismayed that his heart pounded in anticipation, and his hands were clammy; he felt like a teen with a crush on some school-mate. But Khan wasn’t a ‘school-mate’ or a friend. He was a convicted criminal, responsible for the deaths of innocent people and the loss of his beloved mentor. He shouldn’t feel a thrill at the thought of hearing Augment’s voice again; still his body betrayed him.
‘God, Jim, calm down! Khan was an extraordinary lover – he was just what you needed, but he is also a damn terrorist! And you don’t even know why he hooked up with this Shadow-gang – what’s in it for him? He’s certainly not working for some altruistic ends.’

Nevertheless, Khan warned them about the upcoming Klingon attack and had established a pattern of events that would save millions of lives. He took a great risk making contact; a Federation starship could feasibly intercept his message – someone could put two and two together. Starfleet would be on his trail again in no time. Still, Khan chose the perilous path and let him – Jim Kirk – know about the upcoming attack and the Klingon cloaking-device. The Federation owed the Augment now, as did Tammeron.

‘Maybe he wants something in return; that’s why he wants to talk to me alone. He couldn’t make himself known because he assumed that I would be on the bridge when The Shadow contacted us. No one would have believed the Caitian if she revealed that Khan was a part of the militia. Perhaps he needs the private discussion so that he can make his demands.’

Kirk was nearing his quarters; he took a deep breath. ‘On the other hand maybe he contacted us – me – because he knew that I would listen; listen to the Caitian woman and to him. He trusts me enough to reveal his whereabouts, hoping – no, knowing – that I won’t betray him to Starfleet Command! That’s why he warned me of the upcoming assault on Tammeron.’ He shook his head as another thought hit him. ‘God dammit, he did it again. He manipulated me – this time by placing his freedom, his well-being and even his life in my hands, knowing that I would be bound to keep his secret. He said it; I have a conscience. He trusts me to make this step. What does it tell me about us? I don’t think he’s ever trusted someone in this century–only me. But why would one night affect either of us?’

The warnings of his mind continued unheeded by his body and his heart. For all that Pike’s name remained on his mind - his ridiculous emotions regarding his former nemesis ran deeper and stronger. The distance and time between the men have not tamped Kirk’s feelings since he last saw Khan – felt him under his fingers and in his body.

He stepped into his cabin, sealed the door behind him and walked to his desk. “Lights, 50%,” he ordered. Sitting down he rubbed his face, almost irritated as his pulse raced even faster. God, the anticipation of hearing this deep, purring voice was driving him mad. But there it was, the expectancy of seeing the Augment again made him lightheaded. Nothing else mattered at the moment, though the responsible Starfleet-captain in him protested the thought. But, his desire and his sentiment regarding the Augment since he last faced him had intensified; it spread through him as his anticipation did now.

Opening a private channel, he adjusted the transmitter to the frequency Khan had given him and used
the newest high-security-codes to scramble the transmission. He had attempted to steel himself with a deep breath before he said quietly, “Sunrise, J here. Can you hear me?”

Several moments later the screen on his desk came alive – and a warm hand seemed to caress his insides, as he looked once more into those jade-pale and ocean-deep pools.

“Hello, James.”

Khan retreated to his small private quarters. He left the bridge to Caviw with instructions to inform Galven of the successful transmission to Starfleet’s flagship. The Caitian proved to be very capable of hacking into the most secured systems; they otherwise would not have gotten the secret information about the Enterprise’s whereabouts and her codes. The Augment knew that he needed Caviw’s abilities – at least until he learned enough from her to hack into the most secure parts of Starfleet’s database on his own. He must continue the research into the fate of his crew – his family.

Sighing, the super-human gazed down at the dark screen on the table, waiting for James to hail him.

He had known that the young woman, Kirk’s communication officer, would discover the second signal he sent with the audio-transmission. He also knew that James would recognize his handwriting and grasp that it was Khan who contacted him. The captain reacted as the former dictator had hoped – given the vital information Khan provided. Kirk listened and received the information with absolute seriousness. Khan knew the risk he took in revealing his identity, but had to place some amount of trust in the younger man in order to receive it in kind – just as each did that particular night.

It worked. Kirk believed him and would inform Starfleet Command about the Klingons planned attack on Tammeron. The admiralty would send ships to protect the planet and its inhabitants – humans and non-humans alike. The ruler in him, the leader who shoulders the responsibility and needs of others, got the better of him. Countless families had a chance of survival now; the planet would hopefully flourish for centuries to come. Everything had gone the way the super-human expected.

Except himself. His reaction to James’ voice was - unexpected.

Kirk’s gentle tenor was a soft blow that stole Khan’s breath and replaced it with a warmth that
washed through him. When the Enterprise answered Caviw’s transmission, a yearning, a physical want woke in the Augment, an unfamiliar feeling buried for over 300 years. He could see James in his mind’s eye, sitting casually in his captain’s chair and listening to the Caitian’s words. He imagined his ever-so blue eyes light with curiosity – saw his one-time lover walk with determined steps to the communications station to view the secret message. Did he smile when he realized who penned those words?

Giving James the intelligence regarding the Klingon cloaking-device had been an impulse initiated by his instincts to protect the younger man. Promptly, important information was returned; revealing – maybe – that Kirk regarded him as something other than an enemy.

Of course, James recognized ‘Sunrise’s’ identity. To hear the gratitude and the hidden smile in the captain’s voice had been strangely soothing – especially after the battle Khan and his comrades fought; the adrenalin was still circulating through his body. James Kirk had an influence on him that was unnerving; his enhanced mind wanted to reject it. It warred with the savagery encoded in his DNA. Still, there was a part in him that wanted to drink in the comfort James provided – even if this ‘nearness’ was only a one-sided audio-transmission over a distance of hundreds of light years. The familiar voice made him aware that he wasn’t utterly alone in this strange world. There was at least one soul in the dark and cold depths of endless space that was connected to him. For the first time since he woke, Khan realized he had an ally.

Caviw tried to coax Khan into revealing to her how he knew the captain of Starfleet’s flagship, and how it came that they both know each other well enough to communicate in code-words, but Khan evaded her questions. She pestered him until he had snapped at her. “We have a job to do!” He didn’t want to be impolite; he recognized that he required her help, but he couldn’t allow Caviw’s prying to continue. The less the others knew about him, the better for all of them.

He returned to his quarters shortly after contact with the Enterprise and caught himself stealing sidelong glances at the clock, unsuccessfully willing time pass quicker. He found his behavior contemptible – inferior humans reacted this way, certainly not someone like him, someone better. But he couldn’t help himself. The part of him that longed for a true ally, sought the tenderness Kirk displayed during their night of fierce passion. It won out over his cold, calculating logic. He could hardly wait for the moment when he would speak with James again.

Khan knew that he couldn’t contact the officer privately; the captain must take the first step.

A signal buzzed and was accompanied by a voice so anticipated. “Sunrise, J here. Do you hear me?”

It wasn’t physically possible that his heart pounded like the galloping hooves of a race horse. This autonomic response was unacceptable – laughable even! But he couldn’t deny the hard beating of his heart against his ribcage and the warmth that spread through his body. Reminding himself that he
was an enhanced superior – the former ruler of a continent – he steeled his features and activated the transmitter.

Then all good intentions to stay calm and collected were defeated when those sky-blue eyes appeared on screen, and he saw the soft masculine features and cautiously smiling lips again. “Hello James,” he answered, grateful that at least his voice didn’t falter as he feared it might.

Light years away Jim’s pulse quickened too, and a rush of heat washed through him when he finally heard Khan’s velvet baritone again. He took in his features - the impossibly high cheekbones, his impeccable mahogany hair, and the bowed, soft mouth that had imparted him so much pleasure. The tingling in his neck made itself known again and sent a shiver down his spine. “Hello Khan,” he replied quietly, feeling a smile tugging at his lips that found its reflection on the Augment’s face. “It’s good to see you. How are you?”

It wasn’t a polite phrase, but the real question; this much Khan could tell and another warm breeze passed through him. “Given the circumstances I’m - comfortable.” He cocked his head; his glance roamed over the tousled and wrung-out appearance of the younger man. Kirk’s command gold was sullied - grease perhaps. The material was torn at the left shoulder, and a line of soot or grease marred the Kirk’s forehead and streaked down to his temple. He looked like he just came from…

“You were in a battle,” he stated, feeling unease rising in him like bile. James had been in acute danger – expected of a commanding officer, still, Khan’s protective instincts flared.

Jim sighed and nodded. “Yeah, too often these days.” He pressed his lips shut, and then continued, “But it wasn’t for nothing. We defended the Japori system against a Klingon squadron and Orion pirates.” He tilted his head forward. “And it seems, we’re fighting the same fight – again if we add Marcus to our list!” He saw the left side of Khan’s mouth edge up into a half smile. He sighed, “Thank you for your warnings. You helped us – telling us about the cloaking-device the Klingons are using. It will save lives – maybe ours included the next time they confront us.” James smiled and continued, “And you alerted the cavalry. I don’t think either the admiralty or the Council ever assumed the Klingons would attack a neutral planet because its habitants maintain trade agreements with us.”

Khan shrugged. “Often I’ve been called a super-human, James, but I am still human. Genocide was never something I tolerated, and I will not start now.”

Jim pursed his lips. “Is that the reason you partnered with The Shadow?”

Khan’s sea-colored eyes blinked in confusion. “With whom?”
“The Shadow – isn’t that the name of the group fighting the Orion Syndicate?”

To his astonishment Khan started to laugh – a deep, rich, warm sound reaching straight into Kirk’s core. He saw something akin to mirth dancing in Khan’s eyes. His pulse raced. The Augment shook his head, still amused. “I think you misunderstand, James. ‘Shadow’ is the name of one of our ships, not the name of this ‘organization’.”

“Oh!” was all Jim could say, then he teased, “Well, the piggy-back signal a certain genius sent to us was a bit garbled. Sorry for the misunderstanding.”

Khan grinned that smug smirk Jim had wanted to wipe from his face in his apartment now roused in him a different feeling – fondness, perhaps. “So, can I tell the others that we have a name now?” the former dictator asked almost innocently; laughter unexpectedly escaped from his lips again. He couldn’t remember the last time he’d indulged, but it felt good. Really, really good! And he had to thank James for it.

Kirk groaned at the super-human’s question and nodded. “Yes, you can – because I mentioned to Commodore Wesley, the Chief of our squadron, that The Shadow is the name of the militia that warned us.”

Again Khan chuckled. “Well, it fits. After all the Orions don’t know what hit them. We strike out of nowhere.”

“So, how is it that you’re a part of this gang now? How did you escape Earth?” Curiosity shimmered in Jim’s eyes.

“Well, it wasn’t as spectacular as your first ‘jump out of a moving car, off a bridge and into a shot glass’, but I will tell you the story if we meet again.”

Now Kirk had to laugh. “You remember that?”

“Of course,” the super-human nodded. “It was a colorful description of one of your typical escapades.” He cocked an eyebrow at typical.
“Hey!”

“…and I wonder what really happened.”

“Oh, I had to space-jump using a parachute onto a platform on a Romulan drilling rig to stop it from putting a hole in Earth’s core, that’s all.”

Khan stared at him. During his forced encounter with Section 31 he had heard about the incident with the Romulan, Nero, and ran across Kirk’s name in Starfleet records. He knew that the young officer, still attending Starfleet Academy when Nero attacked, played a major role in the defeat of the Romulan. Learning what James did to stop the madman almost made him groan. That was so typical for this reckless, bold churl! But that boldness and willingness to put life and limb on the line was also worthy of admiration.

“That sounds like you,” he stated and shook his head. “And I am certain that isn’t even the most bizarre story you could tell.”

“No, there are quite a few others that gave my instructors gray hair, or sent Bones into another fit of ‘I-so-gonna-to-kill-you-if-you-don’t-survive-this’!”

Khan laughed quietly to himself, certain of every word. The young captain seemed to attract trouble like moth to a flame.

Jim watched the now calm demeanor of the super-human; even Khan’s stiff posture had relaxed. And then Kirk realized; they were chit-chatting again, even laughing with each other. It shouldn’t be like this. He should be upset and demanding answers from the Augment, rather than sharing genialities, but latter simply felt right! He sighed again.

“Don’t tell anyone, but I am glad you escaped,” he said before he could stop himself; his heart spoke up faster than his mind.

The Augment’s eyes had lighted up before he assured quietly, “Your secret is safe with me, James.”

“Thanks – otherwise I would be really fucked. I lied to Barnett and my crew to cover you,” Kirk confessed, asking himself in the same second why he trusted Khan. It was foolish to let his guard down like this – knowing who the other man was – still his instincts told him than Khan wouldn’t
misuse what he had learned. The Augment’s next words proved it, “So, you safeguarded my identity and didn’t send Starfleet’s bloodhounds after me.” It was a statement, not a question; still Jim felt the need to answer.

“No, I didn’t alert them!” He retorted before he added softly, “I couldn’t. Not after you spared me - that night.”

The Augment lifted a brow. He didn’t mention that Kirk had done the same for him. How similar they were.

For a long moment, they stared at one another, each trying to parse out why this seemed easy, comfortable even, just talking. Then an incoming signal on Jim’s desk cut into the warm atmosphere like a sharp knife, “Bridge to Captain!”

The officer groaned. “Hold the line a moment,” he said to the other man, while he bent forward and activated the intercom. “Kirk here.”

“Captain, I have Commodore Wesley on the line for you,” Uhura reported.

Over the distance of light-years, Jim and Khan exchanged another look, before the younger man answered, “Put him on speaker, Lieutenant. I was on my way to the shower, and I really don’t want Bob to see me in my birthday suit.”

“That would be my privilege, James.” Jim startled at the Augment’s innuendo when he read those words from Khan’s lips. He mouthed back a ‘Shut up!’ then Wesley’s voice sounded through the captain’s quarters.

“Jim, is there a reason you don’t want to see me? Why am I only receiving you on audio?”

The casual tone of the commodore showed Kirk that this was not an official call and therefore his answer was just as light. “Bob, as much as I would love to see your face, I have to deny myself the pleasure just now. I was about to hop under the shower, and even I have my limits.” He told the half-truth, while Khan’s lips curled into a knowing smirk.

“We both know that you haven’t,” he commented inaudibly and Kirk was tempted to stick his tongue out to him.
Wesley grumbled something slightly amused, then he stated, “I want to inform you that several missions are on their way to Tammeron. They will reach the planet in twenty hours. Starfleet sent warning to their government alerting them to the situation and our ETA.”

“That’s good to hear, Bob,” Jim replied while Khan, now serious again, nodded approvingly.

“Yes, but I do hope your ‘source’ is trustworthy,” the commodore continued. “I withdrew several ships from key areas the Klingons have their sights on. It would be fatal for us to fall into a trap. Our resources are spread too thin.”

“The source is trustworthy, Bob, as I already told you,” Kirk replied firmly; staring into Khan’s eyes – willing him to see that he indeed trusted him.

“That you did, my friend! I didn’t ask during our last transmission, but I need to know now, Jim. What do you know about the organization that calls itself ‘The Shadow’? I am certain headquarters is going to ask me some questions as soon as they get your message and my report.”

Jim watched amusement play on Khan’s face at the mention of the group’s name, and rolled his eyes before he answered. “Not much, but those I spoke with, are serious. I have no reason to doubt them.”

“Do you have any more information?” Wesley wanted to know; Kirk sighed.

“No, not really. They have – as far as I could detect from our contact – at least two vessels and an experienced communications officer. They must be eavesdropping on the Orions and the Klingons; that would explain their ability to anticipate their movements. The intelligence they’ve acquired has saved lives; we all know that by now.”

Bob hesitated. “So, you don’t know the identity of any of them?”

Kirk closed his eyes and reluctantly lied, “No, not I am aware.” He opened his eyes and met Khan’s gaze. “Still their message sounded very serious. They are, in their own way, professionals. They are making sure that we are working toward the same goal, and informed us of the cloaking-devices the Klingons seemed to have improved.”
Again Wesley was quiet, if only for a moment, before he answered, “That eases my mind a bit. The whole operation is on my head, you know, and I’m not looking forward to facing Barnett and the Council if something goes wrong because a rag-tag militia gave false intelligence to Starfleet as a joke.”

“No joke, Bob, I’m sure,” Jim said firmly. “The Shadow does a good job out there, as the reports from rescued civilians confirm. Their members are on our side, so far, otherwise they would never have contacted us.” His glance wandered over Khan’s face, and he groaned inwardly. God, the Augment’s expression was far too smug.

Kirk couldn’t tell if Bob suspected that he knew more than he was ready to share. If so the commodore hid it well – or he simply trusted him to act only in the best interests of the Federation and Starfleet. Jim had already removed any doubts of The Shadow’s sincerity during their first talk. Kirk assumed that the militia had contacted the Enterprise because she was Starfleet’s flagship. How the militia knew about the whereabouts of Starfleet’s pride was a riddle but, on the other hand, The Shadow had ‘big ears’ so to speak, and the capability to intercept transmissions that would inform them the Enterprise’s in-range.

To Jim’s relief, Wesley didn’t press him further, openly displaying the trust Jim had earned over the years. Kirk only hoped he didn’t betray that trust. His conscience niggled at him over the lies necessary to protect Khan’s identity and allow The Shadow freedom of movement. With any luck, Jim made the right decision.

Bob snorted. “Well, in their own way it seems they are on our side, for now. Even if some of the desk-jockeys at home are losing sleep over the group’s anything but legal methods. Still, I agree with you. We should applaud them after they tricked the Orions and collected that intelligence. We need all the help we can get.” He paused. “I will keep you updated on the Tammeron operation. Bye, Jim!”

“Bye, Bob, and be careful!”

“I will – and stay out of trouble, son. You manage to get into hot water everywhere you go, even in a Starbase. Wesley out.”

The connection broke before Kirk could reply to that last jibe. For a long moment, Jim and Khan remained quiet; then the super-human took a deep breath. “So, this commodore is on his way to Tammeron and summoned increased resources for aid.” He cocked his head. “He seems to accept responsibility at risk to himself.”
Jim smiled slightly. “Bob is a little bit like me. If there’s a job to be done - just do it.” He shrugged. “The message I sent to the headquarters will take hours before it arrives and knowing the admiralty’s love for conferences, their decision may come too late for the people of Tammeron. Bob knows that; he’ll take matters into his own hands as necessary.” A satisfied grin appeared on Kirk’s face, and Khan chuckled.

‘James manipulates others as I do,’ he thought, amazed they shared another characteristic. “Your admirals will not be happy the decisions were taken out of their hands.”

Jim shrugged again. “Difficult situations need a quick solution. I don’t have a problem doing what is necessary…”

“…and you’ve painted yourself into a corner on several occasions,” Khan stated with a whiff of humor. “I never met Commodore Wesley, but I have to agree with him: You have a tendency to get into trouble.”

Jim made a face. “Bob is concerned about my well-being, that’s all. You should’ve heard Admiral Komack when he was still chief of the academy’s administration. He only understands rules and regulations. You cannot imagine how often I had to listen to them while I was still a student - whenever he thought I needed a lecture.”

The super-human’s mouth twitched. “Oh, I can indeed imagine something like that, James – regarding your ability to bend the rules to your will or disregard them altogether!” Soft mockery sounded in his voice.

“Hey, if I followed every rule and ignored my instincts, you wouldn’t be teasing me now.”

Khan turned serious again. “I know, James. I am aware you had a chance to shoot me at your apartment, but didn’t. And you could have obeyed Marcus’ order and killed me and my people on Qo’noS.”

Jim suddenly looked stricken. “No, I couldn’t,” he said quietly, and the older man nodded gently.

“I realized that. As I said, you have a conscience. That reveals much about you.”

For another moment they fell silent, then something else popped into Kirk’s mind concerning Khan.
Intelligence perhaps he should not share due to its sensitive nature, but he knew he couldn’t withhold it if it meant Khan’s safety.

“Speaking of Qo’noS - The Klingons figured out who landed on their planet uninvited last year.” He saw Khan stiffening and continued, “Patrols found the scout-ship’s camera recordings, the ones that ambushed us. The cameras filmed Uhura and then your attack as well as the fire fight afterward.” He heard the Augment swearing softly, and added, “Barnett, the Chief in Command, told me about it. As far as I know, the Klingon law states Spock, Uhura and I may be sentenced to death in absentia. The High Council of the Klingons can impose sentences without a trial. I don’t know if the cameras caught your face too. Either way, you are likely one of the most wanted men in the Klingon Empire.”

The super-human was lost in thought for a moment, before he started, “Today, I met a Klingon commander in person. He was so kind as to share the information about the planned attack against Tammeron.”

“Do I want to know how you coaxed it out of him?”

“No,” Khan replied dryly, “but don’t worry. He boasted that the attack would show us that we are fighting a losing battle. I demanded details he was unwilling to give. Even I know a thing or two about Klingons; I killed him so that he would die with his so-called honor rather than break him further.”

He thought he saw a hint of relief on Kirk’s face and suppressed a sigh. James was far too compassionate. He cleared his throat. “Well, concerning those recordings, the Klingon commander didn’t know my identity until I revealed it to him – without saying my name, of course. As far as I know the Klingons are unaware it was I on Qo’noS with you. I don’t think I have to fear a second hunting party on my heels.” His features softened, and his eyes locked with Jim’s. “But thank you for the warning, James.”

“You’re welcome,” Kirk replied, feeling a blush rise up the back of his neck, heat prickling at the place Khan marked weeks ago. Dear God, what was happening to him? He wanted to ask Khan, what he had done to him. Should an Augment’s bite feel like this still?

The super-human frowned and stated sternly, “James, if the Klingons want you and your two crewmembers, there may be a bounty on your heads. This part of the galaxy is full of outlaws who would be delighted to earn credits by bringing you in. The Orions are working together with the Klingons as you told me. They might try to hunt you down to collect the bounty.”
Kirk grimaced. “Barnett couldn’t tell me if the Klingons put a bounty on my head, but it would make sense.” He sighed, “To tell you the truth, I hadn’t considered the Orions would try to collect a bounty on us.” He leaned back in his chair. “Maybe that’s why they fought so hard, even after we damaged their ships.”

The sea-colored eyes roamed once again over the tousled appearance of the younger man; Jim saw a flicker of concern. “Are you all right?” The apprehension in the deep baritone betrayed the Augment; Khan did care for his well-being, and it touched Jim - more than it should.

“I am okay, but…” He shook his head and lowered his gaze. “I lost more than fifty crew-members since this damn war started, and the med bay is overcrowded. Bones and his cadre are stretched to the limit, and the engines are a mess.” He sniffed and glanced up again. “I fucking hate it.”

Khan’s eyes had widened as he listened to Jim count his losses. He knew that pain many times over. He saw Kirk pale as he spoke of those who fell in the battle, and something else occurred to him. “Your friends? Are they all right?” They weren’t his concern, but he didn’t wish any more suffering on the young captain.

A small smile played around Jim’s lips. “They are – thank God. Emotionally, we’re all a bit wrung out, but otherwise they’re okay.”

“That is good for you,” the super-human answered. “But you are obviously not ‘okay’ – and do not lie to me. You know I can see straight through it – your eyes and your voice belie your words.”

Kirk had rolled his eyes before he shrugged. “Some bruises, too little sleep and too much worry, that’s all.”

That was all too true. James looked like hell, even without visible injuries; the Augment’s heart went out to the bold, brave and far too good-hearted captain - who had somehow managed to wriggle under his skin. For a moment he wished he could be there, on the Enterprise, to offer James his assistance, his support – perhaps comfort – but even with the speed of the 23rd century, it would take some time to reach the starship. The next question had come over his lips before he realized it. “Is there anything I can do?”

The offer took Jim by surprise, if even for a second, but he saw Khan’s serious expression and realized the older man meant it. Somehow the former ruler had softened around the edges, opened up to him – like he did after their night of fiery passion turned to a smolder, and he gathered Jim in his arms when he slept. Gratitude swept through him. Yes, his friends and Bob Wesley supported him, yet Khan’s offer meant almost more – both were captains with a crew they loved like family, and
both knew loss of those they were responsible for. Still, the super-human had no reason to offer him anything, but Jim knew his former nemesis would grant him help if he required it.

“Thank you,” he said, his voice more full of emotion than intended. “There is nothing you can do just now. We are on our way to Starbase 84 for repairs and supplies. But maybe you could keep your ears open - if you hear something about the potential bounty?”

The older man nodded. “This I will do. And should I find something on the matter, I will send you another message like the last time.”

Somehow this prospect calmed Jim. “Can I reach you on this frequency again?” he wanted to know, assuming that he would need to speak to the Augment once more. ‘But only if duty makes it necessary!’ he reminded himself. His heart, however, told him different.

“I can adjust my communicator to this frequency so that you are able to call me whenever you like, but we have to be careful and should change the frequency after one or two uses,” Khan answered, pleased that Kirk wished to continue their contact – not to keep track of the man, but to talk to him. He was surprised at how much this pleased him. What was happening with him? Affection – sentiment should not come so easy.

“That’s good,” Kirk nodded, but before he could say something more, he heard a buzzing and saw the Augment’s attention diverted to something beside him. “One moment!” Khan called; his gaze returned to the screen. “It seems our time is up.” Regret tinged his words and mirrored his expression. Jim was surprised to find his emotions echoed the lament that marred Khan’s lovely voice. “Be careful, James,” Khan said quietly. “I know how hard it is to fight two fronts. One misstep, one second of negligence and all is lost.”

Oh yes, Jim understood the extent to which the Augment knew the danger of a two-front battle. The Eugenics Wars taught Khan as much.

“I’ll be careful – as much as any captain can be in the middle of a war,” he promised, but both men knew that the other would sacrifice all for his crew. Jim still felt the need to ease the obvious solicitude of the super-human. The former dictator had been through much and was anything but safe as a fugitive. He didn’t want Khan to worry over him; he had his own problems!

He winced inwardly. Khan’s personal problems weren’t his concern, but he wanted them. The super-human’s welfare – psychological and physical – were slowly becoming important to Jim, and he was helpless to the emotions that could be his downfall, should others learn of his burgeoning relationship with the Augment.
“You try to stay out of trouble,” Kirk’s voice gentled with concern. “You and the others are playing a dangerous game – especially now, in light of the Klingon-Orion alliance. The Orions may be a bunch of pirates, but don’t underestimate them now that we know they have Klingon technology.”

Khan cocked his head; his heart raced. ‘He cares for me!’ This thought came out of nowhere and filled him with delight – even if the enhanced, rational part of his mind knew these feelings could prove dangerous for both of them. “I will try, James,” he replied then added, “Be safe. If you need me, you know how to reach me.” One last look, one last small smile. Khan cut the transmission and broke their link.

Jim stared at the empty screen for nearly a minute. Since he woke in his apartment and realized that Khan had spared him, Kirk had imagined how it would be, if he got the possibility to speak with the Augment again. He caught himself hoping that the super-human would somehow find freedom. His conscience warred with itself; any responsible-minded man should be ashamed to wish a killer free.

But now the enemies spoke as brothers-in-arms. Khan let his perfect mask slip, showing a side of himself Jim had never seen. Yes, during their night together Kirk had caught glimpses of the man beneath all that rigid control, but this time Khan had opened to him. One thing was clear; there was something between them like the force of opposite poles of a magnet drawing them toward one another.

But that wasn’t the whole of it.

Jim’s gaze roamed through his quarters, and he suddenly realized how empty and cold the room seemed – how it lacked the warmth he felt as he talked with Khan. For a moment he wished the older man were here, near him. He wanted to be wrapped up in him. To be with someone who knew loss as he did – the loss men and woman who willingly put their lives in his hands. The weight coupled with the coldness of his room suffocated him. He longed for Khan to help him forget, if only for a short time. Kirk had always been proud of his independence; it had never occurred to him what it could be like to share himself with someone who truly knew him – who had walked a mile in his shoes. He knew his friends were there for him. Hell, he knew they’d risk their lives for him. But he was their captain, their lives were his to protect. With Khan, there was something he couldn’t put a name to – something that lingered around the edges ready to make itself known. Whether Jim was ready for it or not.

With a sigh, Kirk rose. He had to shower and to change before he could return to the bridge; otherwise anyone would see that he couldn’t have been, well, in the current state of undress that he claimed when Wesley hailed. Besides, he was still a bit of a mess from the day’s events. Rubbing his face, he finally slipped out of his torn and soiled uniform and into his shower-cabin. While the sonic-rays did their work Jim lost himself in the memory of the time he shared a real shower with a certain
Augment. Behind closed eyes, he saw the rivulets of water trailing over the planes of the strong, lean, and marble-white body that had taken and given so much pleasure.

Tired as Kirk was, the heat that had filled him during his talk with Khan returned and flowed through his veins and down to his groin. The memories of the deep, purring baritone, the sea-colored and ocean-deep eyes, and that smug smile climbed from the depths of his conscious and within seconds Jim felt his cock harden. He groaned and banged his head against the wall, cursing the pained stiffness. Still, the desire remained - unwanted and forbidden, but also so deliciously tempting.

Ugh! He had to return to the bridge. The ship was in a terrible shape; his crew worked, pushing their physical limits; they had to reach the next starbase as soon as possible. And here he was beneath the sonic-shower imagining the stunning and beautiful criminal; he remembered how the Augment wrapped him in his arms and took him over and over, deliciously deep and hard. Driving out the pain and loss of his loved ones - Admiral Pike, his crew - with every plunge. His thoughts meandered back to the tenderness Khan showed as he washed him, his teeth almost playfully nipping his neck.

His hand traced down his chest to his cock almost without realizing; he knew himself well enough that he needed to ease the tension – needed the flood of stress-relieving hormones to continue his work, even if the sonic-rays were a poor substitute for his memories. He dragged his fingers up and down his member a couple of times before grasping the base and dragging the foreskin over the sensitive head. He kept his eyes closed in order to more clearly picture Khan’s face, all high cheekbones and sinful smirk playing over plush lips. He thought of those lovely hands with the fingers of a musician playing him, wringing pleasure out of him in thick stripes.

Only after he rested for several minutes, redressed and made his way back to the bridge did the realization hit him; Khan demanded nothing in return for his warnings. In fact, he’d offered help and showed concern. His actions; his words told Jim that given a chance, Khan could be a good man.

ST***ST***ST

“I haven’t figured out exactly how this damn thing works, but I think I can repair the damage. It looks like the blasts only damaged the wiring, and the Klingons have spare parts aboard. I should have it fixed in two to three hours.” Galven looked from the strange device up to Khan, who stood beside him and observed the machine closely.

In the background, several members of their group were busy repairing or removing the vestiges of battle.
“We will need the cloaking device sooner or later,” the Augment said slowly; pursing his lips. “Starfleet requires twenty hours to withdraw their ships from their current position and resume formation for Tammeron’s defense. Kardan said that the assault would be ‘soon’; that could mean anything from hours to days.” He stepped nearer the machine, and his gaze wandered over the wires, links and displays. “We should not take any risk of missing the Klingon attack and fly to Tammeron to intervene should the Klingons show up before Starfleet.

“It’ll impossible for us to stop the Klingons alone. We only have two small ships – three, as soon as Ritek arrives – and the Klingons are sending an entire strike group. They will blast our molecules over the entire area before we get off the first shot.” Galven retorted.

The super-human’s pale eyes fixed on the Tellarit. “There is an old saying on Terra; a flea maybe tiny, but it can drive even a wolf crazy.” His attention turned back to the cloaking-device. “The Klingon fleet-commander doesn’t know the lost the D’Ghor and that we have her. We can advance on the enemy, open fire and cloak again, then change position. It will not stop them, but it will cause confusion, hopefully rattle them enough to make a mistake allowing Starfleet the advantage.”

Galven grunted quietly. “Yes – while we broil in their phaser-fire!”

“Only if we allow them to do so.” Khan narrowed his eyes. The Augment knew he was cleverer, more savage than them all. He looked again at the seized equipment. “The deception of the D’Ghor will work if we operate in a manner the Klingons cannot anticipate. We only have to prompt chaos that will buy time – time for the Starfleet to arrive. The rest is up to them.”

Galven pondered this. “And Starfleet will send ships in the next twenty hours? Caviw told me that you contacted the flagship of the fleet and spoke with its captain, but she didn’t mention anything about the timeframe.” His little eyes fixed the pale face of the super-human.

Khan replied, “I spoke with the Enterprise’s captain in private when Jeff showed up at my quarters and asked me to beam back to the D’Ghor. During our conversation, the captain received a transmission from the leader of the operation at Tammeron, the commodore. Tammeron must weather the next twenty hours, and then the inhabitants will be fine.

“You and the captain know each other well, eh?” the Tellarit spoke aloud. “He didn’t even ask for proof of Caviw’s warnings after he received your message, and then he talked to you in private – you, a deserter. And you offered up this information with no strings. We could have gotten something for the information!”
“We’ve had our shares of... adventures,” Khan avoided answering the unspoken question in Galven’s statement and continued staring at the cloaking-device. “We have to learn how this technology operates and translate the Klingon symbols at the different stations. Only then we can use Kardan’s gift to us.”

“Hmm, Ritek could help; he more or less speaks that vocal disaster the Klingons call a language – but our chipmunk will not reach us for another ten hours and...”

“Too late. We will translate the signs with the help of the Shadow’s computer.” Khan turned to leave the small room, but stopped again. “Oh, by the way, Galven, our group now has an official name.”

Giving a questioning grunt, the Tellarit waited for the Terran to continue. Khan smirked at him, clearly amused at Galven’s confusion. “We are known by Starfleet Command and the members of the Federation-Council as ‘The Shadow’.” Galven oinked in surprise. “And I am certain that name will go public.”

Jeff came around the corner and called, “The Klingons bodies are all in the little cargohold back there, and I took care that their eyes were open as you ordered, Galven.” He pointed backwards over his shoulder. “Shall we open the hatchway now or...?”

“One moment!” Galven squeaked. “It’s not much they do when one of their own dies, still I think we should respect their tradition.”

The Augment lifted a brow. “You want to perform a kind of ceremony for them?” He met the little eyes of the Tellarit. “They would not spare us if the roles were reversed.”

Galven’s snout twitched. “Well, that’s the difference between them and us. They do not care, but I am of the opinion that even an enemy has the right to respectful handling after death.” He trotted towards the cargo hold and Khan – out of sheer curiosity – followed him. Caviw joined them on the way to the cargo hold along with two other crewmembers of The Shadow.

The dead Klingons lay side-by-side on the floor; their lifeless eyes open, fixed toward the ceiling. Galven observed them for a moment; then he gestured for the others to step closer. “All right,” he said; he took a deep breath, put his head back and howled as loud as he could.

Khan wasn’t the only one who looked at Galven as if the Tellarit had lost his mind; the others’ faces were just as thunderstruck.
After a long while, when Galven had no more breath to spend, he stopped, cleared his throat and declared, “Right, we can dispose of them now.” He turned around and saw the baffled expressions of his friends and their new group member, “What?” he exclaimed, and blinked several times.

“Care to explain what… what that scream was about?” the super-human asked bewildered.

“Well, that’s their way of seeing to their dead,” Galven replied. “You see, they think that the dead body is nothing more than an empty shell that doesn’t hold the soul any longer. The soul goes straight to their version of heaven or hell. The loved ones of the deceased gather around and holler one time as loud as they can as a kind of warning ‘Caution, dead Klingons, replenishment is on its way to you’ – and then they get rid of the body.”

The glances around him looked even more confused, and so he shrugged, “Other people, other traditions!” He slapped in his hands. “All right, all men – and the lady – out of here,” he oinked. “Jeff, seal the door and open the hatch. Not the other way around or we join these brave warriors here, and I am not ready to go out just yet!” With those words, he shooed the others out of the hold; even the Augment obeyed.

Khan didn’t know what to think. There stood a walking, talking pig on two legs in the middle of the cargo hold of a spacecraft, who screamed like a banshee and explained that this was the funeral-ceremony of another species. And he twisted Terran phrases quite colorfully. And then Khan was aware of the meaningful glances the humanoid pussy-cat Caviw bestowed upon him while her long tail wrapped around his right arm in shameless flirtation.

Maybe cryosleep hadn’t been so bad after all!

ST***ST***ST

Kor, son of Ryan, the last descendant of the Klingon royal family pitched a stare full of loathing at the screen that showed the green-skinned face of one of the ‘High Honors’ of the Orion Syndicate. Why had the High Council agreed to General KothKe’s suggestion and struck a bargain with this scum? The Klingons didn’t need vagabonds, pirates and cutthroats to gain an advantage in this war. It went against Klingon honor, as well as this damn order, to destroy a planet full of unarmed inhabitants who weren’t even a part of the Federation.

Lord Kor was outraged when he heard of the agreement with the Orions and of the plan to target Tammeron for annihilation. That wasn’t the Klingon way! Their ancestors, who served in the Black
Fleet, would raise their Ba’leths in protest if they knew about this. Still, Kor had no other choice but to obey the decision of the High Chancellor, the Council, and the admiralty. He was only glad that he wasn’t a part of the strike group deploying Tammeron – set on its destruction and the murder millions of noncombatants. It was beneath his honor and pride to commit this war crime.

And besides this deplorable order, those green-skins aliens reported that the Japori system was successfully secured by Starfleet. None other than the starship Enterprise had tanned the Orions’ hide – even after the Orions had been equipped with Klingon technology. This boy-captain – Kirk – was better than he thought!

“So, some rag-tag soldiers-of-fortune destroy one of your vessels, three others are severely damaged, and your people weren’t able to seize the outpost near the Risa system,” he drawled, leaning back in his commander chair. “Any more failures you want to tell me about?”

The Orion, who called himself a ‘Commodore’, scowled at the Klingon. “We couldn’t know about the formidable defense at the outpost.”

“‘Formidable defense’?” Kor repeated with a sneer; his dark eyes mocked the Orion. “A bunch of shambolic, mock pirates stopped you. That tells me much of your real abilities!”

The face of the Orion commodore turned even darker. “They were organized – at least at the end. As one of my captains explained, they were united by a Terran, who fought as if possessed, with a strength Terrans should not have.”

“Really?” Kor sounded almost bored. He was familiar with every excuse tone could make to cover a failure, and the Orion’s put-off was lousy.

The pirate had growled, irritated, before he snapped, “He killed more than two-thirds of our crew – singlehanded – and took command over the others; uniting them. My men stood no chance and had to withdraw.”

These words made Kor sit up. Frowning, the Klingon Lord bared his teeth, thinking. A mere human was able to kill more than two dozen Orions and other pirates within several minutes? That rang a bell. “What did he look like?” he asked the ‘commodore’, who shrugged.

“My men only said he was in his younger years, slender, dark hair, and clad in black.” He shook his head. “And he fought like a le-matya, using with ease every weapon that fell into his hands. Without
him, we would have seized the outpost, but with his interference…” He snorted outraged; not realizing how Kor stared at him.

The Klingon Lord took a deep breath. The description fit. There was not much to see on the records the DS4-scout made of the man who was Kirk’s backup on Qo’noS, but the way to battle and – as it seems – the inhuman speed and strengths spoke loudly enough. The man on the outpost and Qo’noS was one and the same. And whoever he was, he must be stopped before he struck again.

There was only the question, where this human weapon was now – and if he was a member of Starfleet or worked on his own. But if latter was the case, why had he come to Kirk’s aid on the Klingon home-world? What was the connection between Starfleet’s youngest captain and this… super-human? What was he? Had the Federation experimented with augmented DNA again? Was he a descendant of the Augments that caused trouble a century ago? And were there more like him?

Well, those were not one but eight questions. And they all demanded answers to prevent this Terran from getting in the Klingon’s way again – and to halt the advantage of the Federation.

ST***ST***ST

José Luengo’s eyes fixed on at the screen at his desk; his fingers touched the pictures displayed. Pursing his lips he zoomed in on a section of a still shot and nodded. He anticipated the identity of the man he read about in the reports. If the reports of the saved people on Outpost 18-243 were true, one of their human rescuers fought with inhuman speed and strength, more like a Vulcan or Klingon - able to anticipate his attacker’s next move. The descriptions sounded like a superman had shown up to bring the Orions down. Luengo checked the records again, but he had his proof.

Maybe the most recent computer hack on Starfleet records reported to him was connected to the individual he saw on the screen. But then again, there wasn’t a single day that passed without several of these minor attacks; people who tried to gain access to Starfleet’s database. After all, they were at war.

He activated the intercom and contacted his secretary: “Lieutenant, call Admiral Norton and tell him I have questions about a biological report he sent. Have him come to my office immediately!”

It was a lie of course, but he had no other choice than to contact Norton personally. They both were still under observation; every movement, every step, every word was controlled. For that reason, he had to find an excuse to meet Albert to show him what the cameras hundreds of light years away had filmed. There was no possible way of passing the records to Norton without being noticed, so Albert had to see them in José’s office.
Leaning back in his chair, he crossed his arms in front of his chest and waited. Several minutes had passed before Albert Norton arrived accompanied by two Security-officials who nodded at José and left.

“You wanted to speak to me, José?” Albert asked. Luengo nodded and made a quick gesture with three fingers; signal between them not to speak openly. José knew that his office was bugged with concealed microphones, transmitting every word to the hidden ears of the Security. He could have found and removed the little devices, but that would do more harm than good. The Council had to regain some trust in him if he wanted to remain free, and that meant that he had to make them believe that he was reliable. With the deception of pretending he didn’t know about the devices, they believed every word he said. This strategy allowed him to confirm how much Barnett and the others knew.

“Yes, I got a report of rumors concerning a biological weapon. Maybe you can have a look at it and tell me if the report is nonsense or a real threat.”

Norton rounded the desk of his colleague while Luengo pointed at the source of the recording and re-started it; Albert’s cold eyes widened. The screen showed a waiting-and-departing area of a small space-dock crowded with people. Suddenly two males started quarrelling – a Tellarit and a Rigelian. The scene erupted. The argument was interrupted by approaching Orions, who immediately opened fire on the staff-members. Then all hell broke loose.

Luengo pointed at a dark, hooded figure that had watched the combat between the Tellarit and Rigelian. The figure sprang into action to protect a young woman from one of the pirates; he crushed the Orion’s jaw with one well-aimed blow. Then he fought as if an animal was unleashed while the young woman, her children and another Terran male escaped with several others through the emergency-exits. There were others, Luengo noticed, along with the dark-clad figure that brought a good fight to the Orions.

Then, during a quarrel with three pirates that the stranger quickly took down, the hood slipped away and revealed the man’s identity.

Norton gasped quietly. “There you are!” he hissed through his teeth; his piercing gaze never leaving the face onscreen, a pale-featured man with high cheekbones and dark hair.

Astonished, the admiral watched as the Augment took down more than two dozen Orion pirates, saving some older children. Suddenly, a flash lit up the screen; it glimmered then went dark.

“The recording stopped because a phaser blast hit the camera,” José explained in a neutral tone;
looking up at Albert, who took a deep breath. “So, is this an important report? What do you mean?”

Norton’s thoughts raced. “I don’t know,” he lied, while he nodded at Luengo. “I have to check several things before I can tell you more,” Albert replied before he stared again at the black screen. ‘Even the depths of the whole Alpha-quadrant is not large enough for you to escape us!’

“Barnett to Luengo!” The Chief in Command sounded tense as he called through the intercom. “Chiefs meeting in ten minutes. Emergency, Prior One. Confirm, please!”

José activated the link at his desk again. “Understood, Richard. Out!” was all he said, then he rose and glared at Norton, who pursed his lips. It was about time to do something concerning their ‘Barnett’ problem, and then they could take care of the Augment…

TBC…

Chapter End Notes

Yeah, I warned you that there will be a cliff-hanger. And this will not be the last one, this much I can promise.

Well, of course Starfleet – better to say Section 31 – had to learn eventually about the whereabouts of Khan, or caught his tracks at least. And believe me, Luengo and Norton are up to very much more, while our heroes are fighting at the front (and with their feelings)!

In the next chapter there will be action again, because The Shadow and our Augment will face the battle for Tammeron. And this time it will not go easy for the enhanced genius, because even he can be injured. Then Caviw learns more about him (as he certainly wouldn’t like her to do) and there will be also another sweet scene between him and Jim.

I hope you liked the new chapter and that the talk between the two – and how it affected Jim (*grin*). Please, please leave again some feedbacks (you know, I l-o-v-e them).

Probably at the next weekend or Monday comes the new update.

Until then

Yours Starflight
To make things right

Chapter Notes

Hi, my dear readers!

At last you hadn’t to wait two full weeks until you can enjoy the next update, but my dear beta-reader – whom I have to thank for all the work – had a lot to do with my writing (*laugh*).

Thank you so much for your feedbacks and the Kudos; I am still mega-happy that you so attached to the story. And, as promised, in the new chapter there will be action but also something that comes close to romance regarding the two going-to-be-lovebirds.

Have fun,

Yours Starflight

Chapter 10 – To make things right

“You did it again!” Galven grinned at ‘Drythen’, and clapped him on the shoulder; the hit would’ve made a lesser man sway, but Khan was not a lesser man. Still he closed his eyes and counted to five to stay in control. He would never get used to the Tellarit’s ebullient behavior, this was certain, but now he had to ‘howl with the wolves’ – or with the ‘pigs’, he supposed; he thought of the so-called Klingon ‘funeral-ritual’ Galven performed.

Taking a deep breath, he returned his attention to the screen that displayed more than twelve Starfleet cruisers and starships attacking the Klingon fleet, forcing them to withdraw. Khan’s gaze found the Lexington. The Nebula-class starship resembled the Enterprise though a bit more squat in appearance. For just a moment, there unease fluttered in his gut as he imagined it James’ ship fighting out there. Then his rational mind berated him for such nonsense. Kirk and the Enterprise were docked at Starbase 84 by now, safe and secure and far away from the throes of battle. He needed to calm himself.

He was tempted to thank the Fates he never believed in – that James wasn’t the one kicking Klingon ass out there. The battle was fierce, and both sides sustained massive casualties.

But if Khan ignored his instincts, Commodore Wesley wouldn’t have found anything to defend when he and the others arrived at Tammeron. The battle was necessary.
As the Augment had anticipated, the Klingon strike group were ready to attack before the cavalry arrived on the scene, and he did exactly as he told Galven he would. He made sure the Klingons got a nasty surprise which bought time for Starfleet to arrive.

The plot the super-human hatched was risky, approaching the brink of a suicidal tendency, still the plan was successful.

Ritek, who spoke Klingon language well enough, had beamed to the D’Ghor to aid in the translation of the Klingon symbols while the three ships, Shadow, Flash, and D’Ghor, sped towards Tammeron. The three ships waited at the edge of the planet system among a small asteroid belt, reduced power and locked down all communications to reduce their chances of discovery. The Tammeronians few armed spacecraft orbited the planet - ready to protect their homeworld, even if those few vessels stood no chance against the Klingon squadron. Khan and the members of The Shadow hoped Starfleet would arrive in time.

While cloaked, D’Ghor’s passive sensors picked up eleven cruisers dropping out of warp heralding the Klingon’s arrival. Wesley and his fleet weren’t expected to arrive for another thirty minutes. But even without the aid of Starfleet, Khan would soon illustrate the Klingon’s dire mistake in underestimating him.

He let the Klingon squadron pass their commandeered scout ship decloaked. Ritek demonstrated his Klingon skill; he pretended to be Sergeant LargH, one of D’Ghor’s original crewmembers. He told the Klingon flagship that they battled civilian pirates. The Klingons bought the tale because of the damage D’Ghor’s hull and they neared the Klingon flagship purporting problems with the communication system.

Their deception worked; the enemy-vessels didn’t raise the deflector-shields until it was too late. The scout ship D’Ghor approached the Klingon squadron as one of their own, so no-one aboard the flagship saw a reason to waste energy by raising the deflector-shields.

Activating the phaser banks at the last second, Khan had fired at the flagship, steering the scout along the throat of the mighty Klingon battlecruiser. Disguising the D’Ghor again the Augment had brought the scout beneath the flag-ship and sent another blast of deadly energy against the vessel, before he took flight; using the again engaging the cloaking device to disappear from sight.

The chaos that ensued following D’Ghor’s attack was enormous. The Klingons expected a short battle with the few Tammeron vessels the planet had for its defense. But they also had to spare energy for the upcoming fight, because the cloaking-devices required so much power to hide the ships during the flight. Four Birds-of-Prey had left the formation to hunt for the D’Ghor while the
other ships formed up around the flagship taking defensive positions. Khan used the formation to fire on two of them. He did a quick hit-and-run before making his escape. To his surprise, the vessels that left the formation to give chase seemed to know D’Ghor’s position. But two Tammeron ships broke from their defensive positions around the planet to confront the Klingons, distracting them just long enough for the D’Ghor to get away and resume their hit-and-run tactics.

The Shadow and the Flash finally joined the fray, creating further distraction for the D’Ghor allowing them to place well-aimed phaser-fire at the Klingon ships using Khan’s advanced military mind. He tickled the tail of the dragon, but the pay-off would be well worth the strife for Tammeron and Starfleet.

Even with the additional firepower provided by the Shadow and Flash, and Khan’s superior knowledge of tactics, the battle remained unbalanced in favor of the Klingons, who retained superior firepower. Suddenly the Lexington fell out of warp accompanied by several other heavy battle-cruisers and smaller vessels. Cheers erupted from the Tammeronian ships and even Caviw sighed in relief, “I never thought I would be glad to see Starfleet approaching!”

Khan had to agree. They wouldn’t have lasted much longer; even now their survival would be a near-miracle.

The battle shifted from Tammeron’s orbit to deep space. The crews of The Shadow’s three ships watched Khan in awe. He saw the battle as if he were gazing on it from above – discerning moves as a chess master might. But even he wasn’t immune to the violence around him, both from the Klingons and Starfleet – every strategically placed phaser or torpedo meant death. Every hull breach meant bodies sucked into the vacuum of space. Though well acquainted with the cruelty of war, he didn’t embrace violence; he merely regarded it as necessary. He was glad that James stayed out of this bloody encounter – even though he knew, as a captain, James would want to be there.

Caviw and Ritek listened to the transmissions of both sides. The three ships of the Shadow removed themselves from the fray – content to let Starfleet take over, and the Tammeronians resumed their defensive positions in the planet’s orbit.

And then it happened. To provide cover for a smaller starship, the Lexington was forced to leave the formation, but three Klingon heavy cruisers instantly surrounded them, trapping the Lexington in their crossfire. The other starships were too involved in the battle to run interference properly.

Caviw listened closely to the transmissions between the Starfleet-ships and frowned, “It seems the Lexington has real problems.”
Khan viewed the flagship through the screen and pursed his lips. The Lexington’s hull sustained heavy damage and her erratic movements belied damage to her navigation. The Augment knew that the Lexington was as good as lost. The Klingons continued laying down sustained fire at the starship. It didn’t take a genius to realize the Klingons would not let up until the ship was completely obliterated.

‘Bob is simply concerned about my well-being that’s all…’ Jim’s words echoed in his mind, followed by the commodore’s voice, ‘…stay out of trouble, son…’ There was fondness in the tone of the elder officer; the kind of affection shared between mentor and protégée.

The super-human watched the sensors again – active sensors now turned on since they removed themselves from battle. They testified to the precarious state of the Lexington. A smaller Starfleet vessel had finally come to the larger space craft’s aid, but it could only engage one ship, leaving the other two to continue their brutal assault on the Lexington. They needed a miracle, or they would be destroyed…along with the man who had taken James under his wing.

‘…you really pissed me off by killing my mentor – the man who was like a father to me…’” Kirk’s accusation when Khan had broken into the younger man’s apartment and confronted him, whispered in his memories. He remembered that James had accepted his surrender on Qo’noS ‘on the behalf of Christopher Pike’ before he gave into his fit of rage and fiercely attacked – fists driven into his face in sorrow.

Khan didn’t need any more hints to understand that one of the admirals, who had fallen prey to his revenge at ‘Daystrom’, had been close to James. Very close. The Augment knew that Kirk’s father had sacrificed himself to make it possible for his pregnant wife and the other crew-members of the starship, he served on, to escape. James had been raised without his father but found someone, who filled this empty place, Christopher Pike – a man, who died because of Khan.

Noonien Singh never had parents – not in the commons sense – but he knew the unbearable pain to lose a family member. He was responsible for the loss that the young captain now had to bear.

Now it looked as though James Kirk would lose another mentor; someone he could rely on; someone who took up the mantle to guide and protect the stubborn, spirited, and warm-hearted young officer.

No! Not, if he could prevent it.

He didn’t regret his actions that day at Starfleet headquarters, but he was sorry for the grief he caused James. James, who had lied to his friends and the admiralty to grant him, Khan, a head start - and who gave him something no one else had in this century: trust.
The long, elegant fingers of the Augment darted over the instruments of his station. The energy-level of the *D’Ghor* was down to sixty-two percent; they had still four torpedoes left and enough power in the phaser-bank for a dozen shots. It was not much, but it had to be enough.

“Caviw, hail the Tammeron ships and our vessels!” he ordered, unconcerned by the fact that he was not in command. But Galven waited – interested in what the Terran had in mind.

The Caitian looked over at Galven who nodded at her; she obeyed and purred, “You are on air, Léo!”

“Tammeron fleet, *Shadow, Flash*, this is Drythen. It seems the leader of the cavalry needs a little help. Fall in behind the *D’Ghor* in wedge formation. Give a wide enough berth that each ship can fire their photons without hitting one of our own. We are breaking through the Klingon lines to give the *Lexington* cover to return to the safety of Starfleet’s formation. *D’Ghor* out!” He nodded at Caviw, who cut the line.

“What… what are you doing?” Galven squealed in shock. That was not what he had in mind!

Ritek stared at ‘Dythen’ as if the Terran had gone insane. “We have no chance to…”

“The success of an attack lays in the element of surprise,” the Augment answered casually recalling one of his earliest lessons in military tactics. He pushed the regulator forward and set a bearing straight towards the *Lexington*. He did not bother checking the sensors to see if the other ships would, indeed, follow him. He knew that the two vessels of the resistance would not let him, or better yet, Galven, down, and he speculated that the Tammeron commanders were bound by honor to come to Starfleet’s aid.

A new rush of adrenalin circulated through his body, sharpening his already enhanced senses; the warrior awoke in him once more. His actions had nothing to do with a guilty conscience; rather it was rooted in compassion and the wish to make things right. He couldn’t undo what he had done at ‘Daystrom’, but he could spare James Kirk, maybe the only living soul in the whole universe who cared about him, the grief of another personal loss.

ST***ST***ST

The situation aboard the *Lexington* was devastating. The main-power failed several minutes ago, the
auxiliary power was iffy at best, and only one engine-booster remained viable. They had no torpedoes and because of the power failure, the phaser-banks were useless. Fires raged on each of the ship’s decks as well as the bridge.

Wesley’s left hand clung to the armrest of the captain’s chair; the automatic safety-belts didn’t work. He bled from an injury at his right temple, and he knew his right arm was broken as he had been hurled across the bridge against the helm-console and heard the terrific crack. The air was full of smoke and heat. Three red shirts tried to put out the fire. The ship diverted power from the climate system in favor of the life support systems which were only as good as the *Lexington* itself – not very.

Bob Wesley had been involved in several battles since the war started, and faced even more dangerous situations during his career, but this time he wouldn’t make it – neither he nor is crew. He knew that they were fighting a hopeless fight. Even the addition of *Revere* – a Hermes class scout – it was too late to turn the tables. In minutes, the *Lexington* would surrender to the onslaught and be destroyed.

Service in Starfleet went hand-in-hand with risk – especially when the duty station was outer space during wartime. So Wesley, naturally, had faced death on more than one occasion. But no one gets used to it - not really. Bob felt dread and sorrow rising in him as his navigator told him that the shields would fail within seconds, leaving the *Lexington* completely vulnerable. He would have accepted his fate – dying alone, but knowing his entire crew would be killed along with him pained him deeply – and that he wouldn’t see his daughter Katie again. He left for deployment aboard the *Lexington* two months ago, before the Klingons declared war, and he had promised to spend the next shore leave with her. Now she would be left behind.

The main screen flickered then stabilized clearly showing a Bird-of-Prey in front of them. Its torpedo shafts started to glow, ready to spit the last of its deadly fire at them. Taking a deep breath and trying to hide the fear that chilled his blood, Bob steeled himself against what was to come and said, “I am sorry that it has to end like this. I am very proud of every one of you, and I want to thank you all for your trust and your service that has gone above and beyond the call of duty. We…”

“Commodore!” The outburst of his helmsman interrupted Wesley. He looked at the scene pointed out to him, and his eyes became wide as saucers. “What the hell…” he whispered. Out of nowhere a Klingon scout materialized in front of the Bird-of-Prey – but not in a position to fire at the *Lexington*; instead it faced the larger enemy vessel and shot two torpedoes directly into its weapon shaft. Following the shots, it rose and banked left to shoot a line of quick-fire phaser blasts at the battlecruiser’s aft section. This maneuver was not in any Starfleet manual ‘Standard Operating Procedure’.

The result was incredible. The two torpedoes shot from the Klingon scout had intercepted the Bird-of-Prey missiles before they were even deployed! The phaser shots hit the hull section where the
weakened deflectors and the cloaking device were installed. Instantly, the shields folded. The enemy ship returned the fire but missed the small scout by a hand’s breadth. D’Ghor then rolled right to slip beneath the Bird-of-Prey and fire another round along the unprotected hull, slicing it open. One single, small spacecraft defeated the Klingon ship!

Wesley and his officers watched the gambit unfold with mouths agape. “That helmsman is nuts - unbelievable!” Lexington’s communication officer Palmers blurted out - awed. He was the voice of the crew at that moment.

“Yeah, damn good shooting!” one of the Red Shirts agreed. “That was simply… brilliant!”

The commodore nodded; he suddenly realized the danger they were in and jumped into action. “Lieutenant Ericson, get us away from them; maximum speed! If the Klingon explodes, we’ll…”

“Sir, the engines aren’t responding!” his navigator shouted. “We have no power left for them!”

As if on cue, the communication officer caught a transmission from the Klingon scout meant for the allies and put it on speaker. “D’Ghor to the Tammeron ships! Activate tractor beams and pull the Lexington out of the blast zone! My sensors show that her engines have shut down!”

Wesley took a deep breath; the baritone barking orders over the comm was unfamiliar. “Not only a son-of-gun, but as a logical man with command. That guy is a natural talent,” he murmured to himself, deep respect burgeoning for the other man.

“Sir, four Tammeron ships have taken us into their tractor beam,” his science officer called.

Bob nodded in relief while he watched the scene on the flickering screen. The Klingon ship grew smaller as the four Tammeron vessels dragged the Lexington out of danger. Then, as Khan and Wesley anticipated, the enemy ship exploded into a fierce blaze of fire and flying parts ’til nothing remained other than the detritus left behind to drift through space.

Now that the Lexington was out of immediate danger, Wesley could see another Bird-of-Prey clashing with two smaller Federation ships and cadre of Tammerons. Another Klingon cruiser battled with the Revere.

A blinding light at the right edge of the screen saw another spacecraft destroyed. Wesley shot his
science officer an asking look; the Deltan replied, “It was the Klingon flagship sir. It was already badly damaged when we reached Tammeron; those final blasts ended her.”

“Commodore, the Klingon scout D’Ghor – the one that came to our aid – is in trouble!” The helmsman turned around in his chair. “A D4-cruiser is attacking it!”

Bob frowned; he saw a smaller but quicker Klingon ship firing at the scout. Even after the D’Ghor cloaked, the enemy seemed to know its location and attacked mercilessly. Then the cloaking-device failed, and the scout became visible once more.

“Transmit to the Revere and the Columbia! They have to protect our rescuers and…” He didn’t need to complete the order. The Revere was already on her way to shield the allied scout ship and shot full-on at the enemy cruiser, distracting the Klingons from their victim.

It was the last action of the battle. Robbed of their fleet commander and having lost seven ships, the Klingons withdrew to make an escape. Four Starfleet vessels gave chase to make certain the enemy didn’t return while the rest remained render aid where necessary.

Bob leaned back in his chair; ignoring the throbbing pain in his arm. “Hail the D’Ghor, Lieutenant!” he told Palmers. “I want to thank our rescuers.”

The man nodded; a moment later a disheveled Tellarit emerged on the screen. Wesley couldn’t hide the grateful smile that spread over his sweaty and dirty face. “I am Commodore Robert Wesley from the starship Lexington,” he introduced himself. “I want to give you my deepest thanks for your help, sir! Without your intervention, my crew and I would be dead.”

The Tellarit’s snout had twitched before he oinked with a certain degree of pride, “I am Galven from the organization The Shadow. I must return the gratitude; you kept the damn Klingons from turning us into molecules.”

Bob cocked his head. “The Shadow? So it was you who gave us the warning about the Klingons’ planned assault on Tammeron.” It was not a question, but a statement.

The Tellarit shrugged. “One of our members coaxed it out of the former commander of this nice little vessel. We try to give the damn Orions a hard time, seeing that you boys are too busy battling with the Klingons, but when we learned to what those warmongers were up to, we thought we should
change our mission for the sake of the nice Tammeron people.”

This time Wesley had to smile. “I understand Commander Galven – not only are the Tammeronians, but we too are in your debt.” He pursed his lips. “That maneuver you flew was – it was extraordinary!”

“I don’t want to adorn myself with borrowed plumes, Commodore. My helmsman was the hero of the hour. He raced to your aid without even asking me,” he added with a grunt, yet his grinning face showed that he wasn’t angry with the man.

Bob chuckled. It seems The Shadow has several ‘commanders’ – how typical for civilians playing soldiers. “May I speak with him?”

The Tellarit’s expression changed. It showed a hint of dismay, while Galven looked sideward to the floor. “I am sorry, Commodore, but that is a bit difficult just now.”

On the D’Ghor, Galven’s glance rested on the unconscious form of ‘Drythen’, who lay on the deck as Caviw treated him. Galven only remembered Drythen hurling himself out of his chair following a photon blast. While jerking both arms up in an attempt to protect himself, one of the overhead support struts crashed down, missing the helm by inches and sending parts throughout bridge. A large bit of debris stuck the Terran in the temple, knocking him out. If Drythen hadn’t already launched himself from his station and seen it coming, the falling strut would have injured him badly – maybe even killed him.

Now the slender figure lay motionless on the ground bleeding from his head wound. Caviw knelt down beside him and cradled his head in her lap, trying to stop the bleeding with a sleeve torn from her overall. Much to her relief, Drythen breathed calm and steady, though his pulse was slightly elevated.

“He was injured during the last Klingon assault,” Galven grumbled and saw the concerned face of the elder Commodore on screen.

“Is there anything we can do for him? Can we beam him aboard on one of our ships to be tended properly in one of our med bays?”

The Tellarit hesitated before he answered, “That’s nice, Commodore, but…you see…um… He isn’t on the best terms with Starfleet or the authorities. I don’t think…”
“Whatever he’s done, I think his actions speak for themselves. I guarantee his freedom during his stay. He can return to you whenever he wants,” Bob cut in.

Reluctantly, Galven looked down at the wounded man, whose lashes began to flutter. Astonished, the crew of the D’Ghor watched as Drythen opened his glassy blue-green eyes, glanced straight at the Tellarit and croaked a hoarsely, “No!”

Caviw’s tail twitched. “Léo, be reasonable. We don’t have many medical supplies to…”

“It is a bruise, nothing more. I will be fine!” The tone along stated clearly enough that he was anything but ‘fine’, yet his ashen face showed no pain, only desperate determination.

The last thing Khan remembered was the Crack of the metal above; he tried to get himself to safety, only to be hit by hard by a falling girder. For a long moment, only blackness surrounded him; he thought he could hear voices beyond the black. Concentrating on them and the gentle strokes of clawed fingers, he had regained consciousness, listening to the conversation between Galven and Commodore Wesley. He was reassured the commodore was still alive, but when the officer offered to beam him aboard a Starfleet vessel to give him medical support, his survival instincts flared. Though convinced Wesley was an honest man and would guarantee his freedom, Khan knew that the commodore wouldn’t have any other choice but to turn him in as soon as he learned who he was. And this was a risk the Augment would not take.

Gathering all his strengths and ignoring the stabbing pain in his head, he opened his mouth and forced the words out which would decide his fate and that of his family.

Galven grunted in surprise. “Are you sure, buddy? You don’t look so good.”

Khan moistened his lips and whispered, “I will heal shortly, Galven, believe me. Do not… I do not want…” He made a tired gesture towards the screen and the Tellarit sighed before he addressed Wesley again. “Sorry, Commodore, but he wants to stay here.”

Bob grimaced slightly. Well dammit! What had this guy done that he wouldn’t accept an offer to be tended to in a Starfleet med bay? “Very well,” he agreed after a short pause. “Then please accept my bid to beam some medical supplies to you and your ships. They are part of your - organization, aren’t they?”
The Tellarit nodded proudly. “Yes, they are. And this nice ship was booty we got only a short time ago – thanks to this foolhardy daredevil!” He nodded fondly toward the injured man on the floor before adding softly, “It was he who got the information out of the former commander of this vessel regarding the Klingon’s planned assault and contacted you uniform-wearers.”

This revelation took Wesley by surprise – but then, on the other hand, it didn’t. It seems this man, whoever he was, had a good heart. Otherwise, the Lexington’s crew and the 17 million inhabitants of Tammeron would be dead by now. “I will make certain that he’s mentioned in my report in the most positive light,” he promised. “Is there something else that I can do to support you and your organization?”

“It would be nice if you could tell your comrades that we are not Klingons and that they should keep their torpedoes to themselves when they see us,” the Tellarit grinned.

At this Wesley had to smile. “No problem, Commander Galven. Anything else?”

Galven shook his head. “No, thank you, sir.”

Bob bent forward at his terminal. “All right. Thank you once again for your intervention – detaining the Klingons until we came and then for your aid in battle.” Warmth shimmered in his brown eyes. “And please pass my sincerest thanks to your helmsman. That was like nothing I’d ever seen before. His quick reactions made my dizzy just watching them. Can I at least learn the name of the man who saved our lives? If he ever runs into Starfleet authorities, my report could go a long way in helping him.”

He saw the Tellarit look to the floor again and heard a hoarse and deep voice answering, a voice so quiet Wesley could make out the words. Then Galven rolled his eyes and squealed, “He doesn’t want you to know his name, but he gives his thanks for the offer.” He rubbed his snout. “Well, Commodore, go and patch up your nice ship and get some rest. You look like hell – just like your bridge. See ya!” With that, he cut the comm link. The screen returned to its usual state - space.

For a long moment Wesley stared at the small Klingon scout. Then he ordered his science officer to transmit images of the vessel with close-ups of the damage for identification purposes along with its name and hull designation to all Federation and Starfleet starships in the sector, informing them that this was not an enemy, but a valuable ally. Now to take care of his crew, the Lexington and the other ships…
“You are the most stubborn being in the whole universe! You could have it far more comfortable now if you had taken Wesley’s offer. But no, you had to refuse!”

Caviw watched ‘Léo’ as he slept in his bunk. Ritek and she had brought him to one of the small quarters in the aft of the D’Ghor. Ignoring his slurred protests, the Caitian cared for him with the medical supplies received from Wesley: several medical kits containing wound dressings and splints, a variety of hypo sprays, disinfection agents as well as a bio-scanner, medical tricorder, and a dermal regenerator. Caviw used the dermal regenerator to treat the man’s head injury before he fell asleep.

Caviw was glad that the CMO of the starship that delivered them; as far as she heard of the Shadow and Flash received the same equipment. Commodore Wesley seemed to be one of the old school – honorable and trustworthy. She didn’t understand why ‘Léo’ had not accepted Wesley’s offer. The commodore would have set him free after he had been treated at a med bay; Caviw was sure of it.

Her gaze wandered over the dark-haired Terran, whose handsomeness and fierce spirit attracted her like no other male had before. There had been Caitian men who had peaked her interest, and she enjoyed affairs with men of other races – especially humans – but ‘Léo’ beckoned her like the Veganian bees to light.

She listened to his breath, and her glance rested on his face. He slept deeply, and she couldn’t help but wonder if it was a kind of healing-sleep – like Vulcans did following a grave injury. The bio-scan displayed his depressed bio functions.

‘Who are you?’ she thought and pursed her lips. ‘You fight with the speed of a Vulcan, the strength of a Klingon, and the reflexes of a Caitian. And a prescience in battle no Terran possesses. You are merciless toward the enemy, but you are ready to throw yourself into harm’s way to save others. You are not the usual sort of man.’

She sighed and reached for him. Since she met him, she longed to touch his hair. It seemed so very soft and far too perfect for an outlaw on the run. She knew that he wouldn’t have allowed it if he had been awake, so she took her chance now. It was only a gesture of fondness she told herself; maybe it soothed him now in his slumber. It was more than soft, almost feathery – dirty as it was after all the smoke and grime that had rained down on them during the battle. She stroked it gently, down to his neck and…

Her movements stilled; her fingers touched the warm, smooth velvet skin at the back of his neck. There was something – something no eye would recognize. But she could sense it. It was a mark; the mark of a mate.
Among her people, claiming a mate in this fashion was normal, and not unheard of in other races either. Even the Vulcans ‘claimed’ their partners by binding their soul together with their mate, but she never thought the Terrans partook in a similar binding-ritual.

With care she let her fingertips run over the sensitive spot, cautious not to scratch him with her claw-like nails. The mark – invisible, soft and intangible to those who weren’t sensitive to such a thing.

‘Léo’ was taken, claimed by another she realized unhappily. Still it roused her curiosity. Who was his mate and where was she? Why wasn’t she with h…? Caviw frowned as her cat-like instincts sensed something even the telepathy of a Vulcan would not have caught. A female had not given the mark on ‘Léo’s’ neck but by a male. She was certain of it. His partner in body and soul was another man.

Well, it was not uncommon that partners of the same gender would bind themselves to one another. Among her people, there were partnerships like this, and they were highly regarded because the couples were not only mates but also brothers or sisters in blood and soul. Caviw asked herself how ‘Léo’ and his partner found one another and how strong was their bond. Who was this man, able to win such a beautiful and incredible feral creature such as ‘Léo’?

For a moment, she remembered ‘Léo’s’ determination in contacting Starfleet’s flagship Enterprise to give warning about the planned Klingon attack – how he sent the hidden message to the starship’s captain. The commanding officer didn’t doubt ‘Léo’s’ words for a second after he got the message from ‘Sunrise’. Caviw’s heightened senses heard the smile behind the warmth in his voice as he addressed ‘Sunrise’ to thank him for the warnings. Later she learned from Galven that ‘Léo’ had contacted the captain again, this time in private, and talked for several minutes.

Was this captain ‘Léo’s’ mate? Was this relationship the reason ‘Léo’ had been forced to desert Starfleet? Yes, he spoke about his family – told them that he had to leave the fleet for them. She was ready to believe that the truth was a mixture of both. Perhaps – no most certainly there were many other secrets he kept from them.

‘What else are you hiding?’ she thought as she took the bio-scanner and examined his head injury again. The result made her gasp. The wound was already healing. If it continued at this speed, he would be completely well in a day.

Just in case she missed something, Caviw scanned the gash one more time, but the display showed the same result as before. The injury was closing, sped up by a healing ability in his cells she had never seen.
Putting the scanner aside, she pursed her lips thoughtfully. This man was no normal Terran. He was somehow enhanced – and avoided Starfleet so that he turned down an offer to be tended. Very curious. Still he felt loyalty so some of the fleet’s members. ‘Who are you?’ she had thought for the second time before she nodded to herself. It was about time to find something out about him!

She looked up as Galven stepped into the small quarters, still disheveled and dirty. “How is he doing?” he asked quietly. The Caitian sighed, “He sleeps, and the scans show – well, he is healing,” she avoided a direct answer. ‘Léo’ had his reasons for the secrets he kept and she accepted this so long as he wasn’t a danger to them. But she wanted to find out the whole truth before she considered informing the others out of the things she found.

Galven sighed in relief. “That’s good to hear. The boy took a very hard blow to his bullhead – maybe he will think next time he decides to hurl himself into danger.” His little eyes betrayed a bit of fondness as he looked at the Terran male. “I think shore leave will do him good. It will do us all good after this mess we went through!”

Caviw cocked her head. “Where are we heading to?”

“Aldebaran,” Galven answered. “I have a friend there who runs a dockyard and doesn’t ask questions. And the weather on this planet is nice. There are bars and restaurants, and… Well, we have earned ourselves a little vacation, don’t you think so?”

The Caitian smiled at him. “Yes, we have!”

She rose and left with Galven, looking one last time at the sleeping man, before she let the doors slipping close.

ST***ST***ST

Jim received Bob’s message regarding the successful defense of Tammeron several hours later. It was unusual that a commodore gave a report to a subordinate officer previous to the official events release, but Jim was his friend, and he didn’t want to hold him in suspense any longer than necessary. He knew that the young captain worried about him and his crew – made worse by his forced distance from the fight due to the Enterprise’s condition.

Starfleet’s flagship had been at Starbase 84 for ten hours now and was already undergoing the massive repairs necessary to get her back underway. It would be another two weeks minimum at
space dock. There was scarcely a station, a panel, a shaft or a console that wasn’t open and swarmed with technicians. Workers removed overhead and bulkhead claddings; cables hung free, and there wasn’t a level or deck where no work had to be done. Noises boomed from Engineering and could be heard up to the quarterdeck. The air buzzed with voices and the sounds of tools and machinery.

Wesley’s dispatch was a pleasant distraction for Jim, and he had to grin as he listened to the audio transmission of the abbreviated report of the events.

Then Kirk’s mood soon fell though, when he learned that The Shadow ran interference, keeping the enemy at bay until the Lexington and the rest of the fleet dedicated to the battle reached the theater. He heard about how The Shadow even saved Wesley and his crew, employing ‘some incredible tactics’, as well as The Shadow’s damage, sustained at the hands of the Klingons in the process.

“I’d bet my paycheck that this plan goes back to this crazy plot traces right to that daredevil – Drythen – or whatever his real name is. Without him, the Tammeronians would have been helpless. They’re not equipped for battle. The Klingon flagship was nearly beaten by the time we arrived and even then they backed us up when they could have run. If I ever get the chance to shake this man’s hand, I will do it, mark my words! I do not care for what this guy has to answer for. He’s responsible for saving the entire planet as well as hundreds of Starfleet lives – my life,” Wesley concluded – his final words spoken almost reverently.

Jim knew exactly who was responsible for said ‘incredible tactics’. The whole operation bore Khan’s stamp – starting from the warnings sent (care of some questionable interrogation methods) right through to the suicide mission to save the Lexington. The man was a predator – once the scent of blood in battle found him, nothing could stop him. But why did he risk his life to save Wesley and the others? According to Bob’s recounting, the Klingon scout that the militia seized had taken heavy fire; only the aid of another Starfleet ship prevented its destruction and the death of its crew.

Standing at Uhura’s station – which was one of the few areas that didn’t need any repair – Jim waited with a sinking feeling in his stomach until Bob was finished before he asked, “What about the members of The Shadow. Did they suffer losses?”

The seconds until Wesley’s answer came seemed to stretch endlessly as the wave of fear coiled in his belly.

“I don’t know. I only learned from their commander – an older Tellarit named Galven – that his helmsman was injured. I offered to beam him onto one of our ships for medical treatment, but he refused.”
Jim felt his mouth go dry. The helmsman. There was no doubt who this man was. And of course Khan refused Bob’s offer. Accepting it would have led to his arrest and inevitably a return to cryostasis, or fates worse – a return to the hands of Section 31, or even the death penalty. “Did you speak with him, Bob?” Kirk inquired. He needed to know if Wesley recognized his rescuer.

“No, he was barely conscious and only talked to Mr. Galven from down on the deck. I never saw him. Hell, I didn’t even know his name until the Tammeron fleet commander told me an hour ago that the man is Drythen. He took the command of The Shadow’s little fleet in order to stop the Klingons from reaching Tammeron before we arrived and then managed to render the Klingon flagship nearly defenseless with another maneuver.” The commodore laughed. “Dammit, I’d love this guy in our fleet! Some more of him and the Klingons would trip over themselves running away. I checked his name but found no entry in any of our databases. Maybe the name is a pseudonym.”

‘It is!’ Kirk thought as a heavy dread spread through him. Khan was injured – perhaps badly. He had feared this, but the foreknowledge didn’t stop the icy chill racing down his spine now. Perhaps his injury avoided visual contact with Wesley, keeping the risk of recognition to a minimum. He pulled that with Jim on the Vengeance to gain an advantage. Which one of the two possibilities was the truth, Jim didn’t know – it made him uneasy. Of course the Augments were genetically constructed to overcome wounds normal humans could not. Still Khan Noonien Singh wasn’t immortal. The thought that death could take the man he once regarded as his nemesis, but was now his lover, was like a knife slicing him in two.

“I’ll tell you more when we arrive at Risa, and I find some time off,” Bob continued, ignorant of Jim’s distress.

“You travelling to Risa?” Jim asked, forcing himself to be sidetracked for a few moments. He heard the commodore snort.

“As soon as we have our warp drive back, we’ll head to the next dockyard. K7 has fallen to the Klingons and Starbase 133 or 84, where you are, is twice as far as Starbase 12 at Risa. Given the status of the Lexington and her engines, we’ll be lucky to get there in the next three or four days. Anything faster than Warp 2 is off the table.”

They exchanged a few more words of encouragement and good-byes, then Wesley ended the transmission. The short exchange was barely over when Jim excused himself to his quarters; he gave the conn to Sulu, who discussed the status of his console with a technician of Starbase 84.

Walking toward the stateroom, Jim reminded himself of his promise not to contact Khan for personal reasons – after all he couldn’t deny the risk that a transmission could be intercepted, even when using an encrypted frequency – but this was urgent. The super-human was injured, and Kirk’s agitation would only grow until he knew the other man’s condition.
He knew he shouldn’t be so emotionally invested in Khan’s welfare, but that only made his agitation worse. He couldn’t help himself. It was as if his heart and soul abandoned his logic and set out on their own path.

Locking his door, he went to his desk, activated the communication terminal, typed the required frequency and encryption code and tried to hail the Augment. There was no answer. With a sinking feeling Jim tried several more times, waiting some minutes between attempts. Still there was no reply from Khan. Either Khan was out of range, but the shipboard computer didn’t tell him that, or the former dictator was unable to answer. Jim didn’t want to ponder that sickening possibility.

He didn’t give up. It was not in his nature to do so – and his stubbornness paid off as his attempts finally came to fruition.

ST***ST***ST

The annoying pinging sound seemed to come out of nowhere, penetrating the silent darkness that surrounded him. He recognized this noise, but he couldn’t put a finger on it. His usually quick mind was in a haze as it grasped for data just out of reach. The ping seemed to be a kind of calling signal, like that of the first mobile phones of his era. But this ringing was different.

As these first hints of neurons firing made themselves known, he was rewarded with an intense headache that tore him out of the comfortable warmth he was enjoying. Slowly he became aware of several things – he lay beneath blankets, his head hurt like someone had taken a hammer to his skull, and he was nauseous and chilled despite the covers. Next, he noticed the hum of technology – some devices, no doubt – and an alien scent in the air that wasn’t very pleasant.

And still this recurrent ping.

Forcing his eyes open, Khan blinked into the dim, small, and very foreign looking room around him. He needed a moment to recall the events that led him here – the battle with the Klingons, his decision to come to the aid of the Lexington – to the rescue of Kirk’s mentor – the enemy’s counterattack, the falling strut...Oh, that explains the pain in his head. He remembered Caviw and Ritek tending his injuries.

With a groan, the super-human closed his eyes again. He had been hit and suffered a concussion which explained the sickness, the dizziness, and the chills which racked his body. He knew that he would heal within hours, still the process procedure was more than disagreeable. How he hated it to
be weak like this! He didn’t take well to leaving others to command as he was forced to do while wounded. And he didn't like lying about waiting for his body to function properly again. Furthermore, he despised being alone in the middle of a far too strange world!

Again the pining signal sounded. Growling like a caged tiger, he reached for the small device on the nightstand beside his bunk. One look at the incoming frequency and his irritation vanished.

Flipping the communicator open, he moistened his dry lips. “Yes?”

For a moment there was silence, then he heard the soft and familiar tenor tinged with concern, “Sunrise? Is that you?”

If Khan could see himself in a mirror. He knew his expression was doleful – just pathetic. But he couldn't help the genuine smile spread across his ashen face and reached his eyes. “Yes, it is me, James.” His voice was hoarse and quiet, betraying his condition. “You may speak openly. I am alone here.”

Light years away Jim let out a sigh of relief. For nearly half an hour he tried to reach the Augment. The dread in Jim’s gut eased just a bit at Khan’s voice. “Thank God, there you are,” he said gently. “I heard from Bob Wesley what the ‘helmsman’ of The Shadow did – and that he was injured. I figured it had to be you.” He gulped, realizing how weak the super-human sounded. “How bad is it?”

Aboard the D’Ghor Khan blinked several times; he was surprised, but pleased at Kirk’s concern. Clearing his throat, he retorted, “Nothing serious. Nothing that will not heal shortly.”

In his quarters, Kirk rolled his eyes. “Khan” he warned, showing that he didn’t believe Khan’s description of the seriousness of his injuries. “Bob said you were on the floor out cold when he contacted The Shadow. By the tone of your voice, you are barely awake even though you go from zero to warp speed in no time. So, come on, tell me what happened to you.” He swallowed. “Please.”

The soft plea made the former dictator give in. James’ concern felt far too good – so with a sigh he replied truthfully, “I was hit in the head by debris. I have a concussion, nothing more.”

“Uh-huh, and you certainly have a gash large enough to give Bones the chills,” Jim added, clearly upset.
“As your doctor friend pointed out, my cells regenerate faster than a human’s. I will be healed by tomorrow, James.”

For a moment, Kirk stayed silent then he answered. “Even with your enhanced healing abilities you still feel pain.” Gentle compassion accompanied those words and Khan dipped his head in reticence at his words.

“Pain is a signal that the body is out of homeostasis. If you know what caused the pain, you can accept it. Acceptance makes the pain easier to bear.” He took a deep breath and a wave of nausea swept over him. The Klingon smell lingered in his quarters, and their smell was as bad as their manners!

“Still…,” Jim sighed. “You threw yourself and your seized ship in the middle of a war that is not yours to fight.”

“It wasn’t that bad, James.”

“According to Bob you saved him and his crew. He was impressed with your tactics. Starfleet’s going to talk about it for years.” The young captain hesitated a moment, then he asked, “Why did you do it?”

“What do you mean – why did I do it?”

“Risking your life to save the Lexington,” Jim specified. There was nothing but the soft hum of the transmission. Then he heard the Augment take another deep breath; he continued – quieter this time.

“I had my reasons.”

Jim rolled his eyes. That wasn’t the answer he wanted, but he knew Khan well enough by now to let the topic alone – for now. The Augment would tell him when in his own time. And Jim would wait for him. In the end, it didn’t matter why the super-human saved Bob and the crew of the Lexington. He did it, and Kirk was more than grateful for it. He didn’t want to cope with another loss of so treasured a comrade as Bob Wesley – another man so like a father to him.

“Thank you, Noonien. Thank you so much,” was all Jim could manage, his voice fraught with emotion. It seemed such as small offering for such a great act.
On the other side of Borderland, Khan’s heart raced when he heard his given name roll off from James’ tongue. He could scarcely remember the last time he heard his given name; it filled him with a swirl of sentiment he would have denied feeling, if he had been his more rational self. “You are welcome… Jim,” he murmured, remembering the CMO of the Enterprise used this nickname for ‘James’.

A wave of heat flushed young captain to the tips of his ears as that deep, battle-rough voice of the Augment gave this term of endearment. He felt a tingle on the back of his neck as he flushed. Good God, what was happening to him? What was happening to them? Why were they all of suddenly ready to protect each other – break their own set of codes and those they swore to uphold for one another?

He cleared his throat and wished he could do the same with his mind; he seemed to have lost it somewhere back in San Francisco when the super-human seduced him. Because right now he wanted nothing more than to hold his former nemesis close – wherever they were.

“You… you got injured fighting a battle that is not yours to fight, saving a planet you know nothing of – and Starfleet who’d want to see you…dead.” He gulped at these words. “I… I don’t know what to say,” he mumbled, rubbing his face with one hand. He was at a loss for words – a rare thing.

Khan moistened his lips again and closed his eyes. “I’ve endured far worse than a blow to the head, so do not worry so much. I will be well soon.”

Back on the Enterprise, Jim searched for something to say. “That’s not what I meant and you know it.” He sighed. “This is crazy. I contacted you to offer some comfort, and now you are trying to calm me down.” He shook his head, still overwhelmed with his newfound knowledge and at a loss for words.

“Comfort?” Khan frowned at that; Kirk could hear it in his voice

“Yeah, comfort. Everyone needs some comfort from time to time – even you!”

“You think so?” the Augment asked, a bit bewildered and amused.

“Yeah, you do!” There was a short pause, before Jim continued, more his old self again, “I bet you hate having to stay in bed giving in to your body’s needs. Believe me, I understand that. Bones calls me ‘the most unreasonable patient of whole Starfleet’. I get so frustrated when I have to lay still with
nothing to do but heal. It makes me feel useless and weak, especially when he tells me over and over again that I’ll be fine soon.” He mimicked McCoy’s voice perfectly which made Khan smirk. Kirk continued, ‘Luckily my crew keeps me updated I still get my daily reports and read the ships’ logs to keep me in the loop. Somehow it helps, even if depending on my reports, and visits for my state of mind is ‘completely illogical’, as Spock would say. Still, he shows up the most at my bedside. Well, Bones tops those visits, but he is a doctor after all. And I swear he loves to pester me just to remind me he has to treat me at all.”

Aboard the Klingon scout, the Augment listened to Jim’s torrent of speech. ‘Well, his loss for words is over!’ he thought with some amusement, but he didn’t mind. He liked to hear the younger man’s voice. And he learned more about Kirk than ever before. They shared some similarities; James’ description of being forced to the sickbed was exactly what Khan was going through now as he waited for his damaged body to repair itself.

And the comfort James – ‘Jim’ he corrected himself – took from the presence of his friends equaled his experienced back in the 20th century with those who were dearest to him. During the rare occasions when he needed time to heal, Joaquin, Chan, Ann or Paolo came to his bedside to provide comfort – even attempted to cheer him up. He insisted that he didn’t need such ‘pathetic nonsense’, but it had felt good – especially when Joaquin’s sunny disposition chased away his dark moods.

He now understood the close friendship between Kirk and his crew – how much James appreciated the powerful bond with the doctor and the damn half-Vulcan. Hearing Jim talk about them like this reminded him of his family – of Joaquin and Kati. They each shared their own little idiosyncrasies – genetically enhance or not – but he had loved all of them all fiercely; he still did. Khan and Jim shared this trait – the ability to love without compromise or boundaries. Khan managed to love his own beyond the human lifespan, and Jim loved his people through death and beyond.

Did Jim call to comfort a friend before he learned of Khan’s injury? Was there a vestige of affection from Kirk that made him want to cheer him up? They shared something – he wasn’t sure what it was exactly (aside from the blood and their night together). Knowing the young captain was concerned about him gave him solace. But he needed to know why – not now though. His head hurt too much, and his body needed all his energy to heal, so he deferred the needed contemplation until later.

“So, you’re convinced I could use a little distraction?” he asked. He heard the smile behind Kirk’s reply.

“If you are more comfortable calling it a distraction, I am okay with it. Either way my answer is ‘yes’.”

Khan lifted his brow. Yes, he had difficulties accepting comfort, but a distraction was fine with him. James – Jim – seemed to know him all too well, but he didn’t mind. Not this time. “So, by all my
means, do it,” he mumbled, imagining Kirk’s confused expression.

The captain retorted, “What?”

“Distract me,” the Augment grumbled and felt a smile tugging at his mouth, as he listened to Jim’s chuckle; the sound was sunlight to him after a dark and cold night. Again his thoughts betrayed him – he must sort out this thing between them!

“And what could distract you?” Kirk’s voice teased. “I think you’re too old for bedtime stories.”

A low chuckle escaped the super-human – the thought was indeed silly. He sighed, “No, you are right. Bedtime stories were never for me.” He pulled the covers higher. “You grew up in Iowa, didn’t you?” As Jim affirmed with a soft “uh-huh”, he required, “Tell me about it.”

“You want me to tell you about Iowa?”

“Yes, I have never been there. I only heard that it is a part of a vast and sunny area in United States.”

Jim smiled as he heard the description of the country he once called ‘home’. “If you’d like to hear about it, I’ll talk. But don’t complain later that I’ve bored you. Iowa isn’t that thrilling you may think.”

“Even the most barren desert holds beauty and secrets of its own, Jim,” Khan reminded him. Kirk felt another warm shiver licking beneath his skin as the Augment used his nickname again.

“Well, it is still the breadbasket of the United States; large areas are used for the agrarian economy,” Kirk began, but soon skipped the facts, as his memories turned back in time to his childhood. Not everything had been bad then, before his mother married Frank, her second husband, and Sam and he were still boys playing in Iowa’s wilderness.

He spoke of the large corn fields, swaying in the wind like waves in the ocean – the warm sun, the small forests, the clean air and the endless tracts of land as far as you could see. Jim told him about little village near their farm and of the old John Deere tractor their neighbors had, how he and his brother Sam cared for the ancient machinery. He told him about the yearly tornadoes that were terrifying as they were breathtaking and beautiful – a display of the nature’s might. He spoke of the red sunsets and the clear night skies. How when he looked up at the stars in the direction where his
father died – he still was fascinated by them – beautiful and dangerous. He voiced his awe when he first saw the Enterprise being built in the Riverside Shipyard; it changed everything for him.

Far away on the D’Ghor, the super-human smiled ever so gently. He was becoming sleepy; lulled by the soft tones of Jim’s voice that enfolded him like a warm blanket, until they were nothing more than a soft whirl of sound.

“Khan, are you still with me?” The almost whispered question tore the Augment away from sleep’s threshold and tiredly he opened his eyes once more. The speed with which his enhanced body was healing was taking its toll.

“Yesh, I’m,” he slurred – Khan’s slow and quiet tone told Jim that the former dictator was drifting into sleep.

Something tugged at Kirk’s heart – he wasn’t sure what it was. It felt warm, protective and gentle all rolled into one. He imagined reaching out to the super-human lying on a bunk, covered in blankets and with a bandage around his head.

“Go to sleep,” he suggested softly, “You need it.” The answer was a confirming mixture of a growl and a sigh. Jim smiled. “Good night… Nien!”

A faint “night” was the only reply; then the link was broken – leaving behind a deeply affected Jim Kirk…

TBC…

Chapter End Notes

So, my dear readers, I do hope the chapter was to your liking – beginning with the action, Khan’s reason why he came to Wesley’s aid, then Caviw finding out more about him than he certainly is going to like and then ending with the comfort-call of Jim. The relationship between the two men is growing ever so softly, despite the distance of space, and their feelings begin to bloom.
And soon the two will be re-united again, this much I can promise.

For those, who are wondering, why Khan referred to ‘tickling a dragon’s tail’ in his thoughts during the battle, here a little description of the phrase:

*Tickling the dragon’s tail was based on Physics Richard Feynman’s (c. 1945) remarks concerning experiments testing uranium and plutonium, bringing masses of fissile materials to near-critical levels to establish their critical mass values which ran the risk of causing a nuclear chain reaction. This and the fact that he comes from the Asia area where the dragon holds a very special status made me chose this phrase – just for your information.

In the next chapter you will learn more about the plan Admiral Norton and Luengo are initiating to take hold of Starfleet Command. Khan thinks about his relationship to Jim and – by the way – develops some technics which are going to be very helpful soon. Then he learns that Caviw knows more of him than thought and Jim and his crew are getting a new order that will put them in great danger – a danger that is going to bring Khan in the arena, so to say.

I hope you liked the new chapter and I am really, really curious what you think of the characters’ progresses.

Maybe I can publish the next chapter around the 20th but seeing how much work my dear beta-reader has to do with the chapters, I can’t promise that.

Have a nice weekend,

Yours Starflight.
Chapter Notes

Hi, my dear readers!

Jup, this time the update comes quicker, thanks to the hard work of my dear beta-reader. I am still happy that you are to taken with the story and once again a big thank you to all, who are reading it (and are leaving feedbacks).

As promised in the new chapter you will learn more about Norton’s and Luengo’s plan, Khan realizes how much this one night in San Francisco has changed his life and his heart, and Jim gets a new mission that will turn out very nasty for him.

Enjoy the new ‘chapi’,

Love,

Yours Starflight

See the end of the chapter for more notes

Chapter 11 – The darkness rises

When Khan woke, he felt better – far better. The headache reduced itself to a dull throb that he managed to ignore; the nausea vanished, and he wasn’t cold anymore. Slowly he sat up and slid a finger under the bandages to feel the wound he expected was as good as healed. He still held his communicator in the other hand. The channel was closed and the little device on standby. At least he ended the transmission before he fell asleep.

With some regret, he changed the frequency. Kirk and he had used it twice now, and he didn’t want to push their luck; an intercepted transmission would ruin the both of them. He would send the young captain another frequency as soon as necessary, and…

‘Necessary? There is no necessity – I do not need James’, he thought rationally. But he wanted the contact. James lit his dark world – filled it with color. He had ever since that night in San Francisco. Jim personified hope when he delivered the news of his people.

Pursing his lips, he eyed the communicator and replayed the conversation with James… Jim! The
soft timbre of the younger man’s voice sounded tinged with worry for him. His comforting words, the way he seemed to know him... It filled him with a kind of contentment he hadn’t experienced in a very long time. Even now, hours later, he was calm - almost peaceful. What did it tell him about himself?

‘That it feels good to at last have someone care for you enough to show it. And you take pleasure in in the conversation. Don’t deny it.’ Joaquin’s voice playfully teased.

‘That is no reason to get all... all...!’ he began to exhort himself, but was lost for words. Superb! Now he didn’t even know what to think! What good was enhancement if he couldn’t keep his thoughts under control!

‘You know, big bro, when the feelings affect your head, your sense becomes dead!’ it sounded cheerful in his mind, the grinning face of the young Israeli Augment came to the forefront of his mind. Joaquin and his proclivity for impromptu rhyme! Khan knew the boy would love to tease him right now.

‘I cannot allow myself to be emotionally involved! Not when so much is at stake!’ he told himself sternly, wincing as he realized what he had just confessed to himself. ‘Emotionally involved…’ That never happened.

‘Maybe this thing between you and Jim is exactly what you need to hold yourself together, big bro.’ Joaquin’s imagined voice murmured deep in him. We both know that you are lonely, and even an Augment is human enough to need someone at his side. You finally found an equal, even if he is a mere human – but he has our blood, doesn’t he. Maybe this tempts you – a human with your blood in his veins? He challenges you. He has your mind and your heart, doesn’t he? You can’t lie to yourself, Noonien. He is a lifeline in this strange world you are in. Do not spoil it!’

Khan sighed as those words swirled in his mind. Then the image of his kindred brother of soul vanished, and silence greeted him once again. Of course he knew that Joaquin’s voice was only in his imagination. Even with the bond he shared with his people he would never be able to hear their thoughts like that.

He analyzed why he thought he would listen to the younger Augment’s teasing. He loved Joaquin deeply, and lonely as he was, his subconscious yearned for someone familiar. And Joaquin never failed to call a spade a spade. Hearing the young man’s voice in his mind told him quite plainly what was happening to him. He felt emotionally pulled towards Jim Kirk; his voice meant warmth and protectiveness, but those feelings mingled with the still-burning desire in his core that hadn’t cooled since the encounter in Kirk’s apartment.
A low growl escaped Khan as Jim’s face popped up in his mind, sky-blue eyes sparkling with mirth. ‘You’re really fucked up, Noonien!’

Instantly, heat spread through his body as he remembered the moment Kirk called him by his given name. His name on Jim’s dirty mouth woke the long suppressed want in him again, licked flames beneath his skin and coiled in a demanding longing in his loins. Not only to satisfy his carnal needs, but to be close to him again; close to the man whose passionate fire burnt as his own did. Khan knew he would ravish the young captain now – if he were only here.

But Jim wasn’t here. He was…

A loud bang sounded from somewhere within the scout ship and startled the former dictator from his thoughts. What the hell!

Again the noise sounded through the vessel. Then Khan heard strange voices. He realized that the ship was not moving; the endless drone of the engines was silenced.

On alert, he quickly rose and grabbed the phaser (Jim’s phaser - the one Jim pointedly did not use on him) from the small table at the other side of the little room and crept to the door. He opened it and silently listened for any sign that the scout had been seized by Klingons or Orions while he had been in his healing-sleep. Then he heard the oinking voice of Galven. The Tellarit was laughing with a stranger; it sounded more like squealing than laughter. The super-human relaxed. It seemed the visitor aboard was friendly!

All the better! He had to wash, and he had to eat something. He was hungry; that wasn’t a surprise. The speed of his healing process increased his metabolism, and his body demanded food to ‘recharge the battery’, as Joaquin liked to put it. He was always famished after an injury, or when his body functions had been pushed to its limits.

Withdrawing, he searched for a hygiene cell in the small room and found an automatic wash-set. One look in the mirror showed him that he looked like hell. He had shadows beneath his eyes; he was hollow-cheeked and had a bloodied bandage around his head. There was dirt in his hair, and his face marred by grit and soot. Scowling at himself, he tried to get the wash-set to work, but it took several attempts. Glaring at the Klingon signs and letters, and fed up with guessing what each and every button and switch was for on this damn vessel, he became determined to learn some of them.

Removing the bandage and examining his injury, he found out that it had healed – at least one thing met his satisfaction. Then he began to clean himself; he washed his hair and scrubbed his skin until it was pink. Then he re-dressed. He was glad that Caviw and Ritek left some of the medical supplies
on the table and he quickly applied a new bandage. He didn’t need it anymore, but how would he explain his ability to his shipmates without giving his abilities away? He had to continue feigning the injury for just a little while. The ruse lent him some advantage; the crew would leave him in peace for a few days.

He had a lot to think about. Not only of that thing obviously growing between him and Jim Kirk, but also how to continue his search for his people, and how to proceed once he discovers their location. As long as the war continued, Starfleet’s security measurements would be at the highest level possible, not only at the facility storing his family, but also the entire Federation territory. It would be difficult to free them as long as Federation security guarded the quadrant as if it were Fort Knox.

Finding nothing that looked like a replicator in his quarters meant he would have to find some food in the mess or the galley. So Khan left his tiny room and walked down the short corridor straight to Engineering, following the noises. He stepped into the large space; his gaze found Galven, who stood beside a man a head taller than the Augment and twice his weight. The sight of the contrasting pair was a bit funny and Khan hid his amusement as he neared them.

Galven saw him first and threw both hands up. “Hey, Buddy!” he oinked cheerfully. “There you are! How are you doing?” It was always surprising, how fast the Tellarit could move on his short, stout legs because seconds later Khan found himself enveloped in a tight embrace that pressed the air from his lungs. Galven looked up at him, a grin plastered over his pig-like face. “Hell and bells, boy, you really had me worried.” He retreated two steps and observed him intently. “How are you feeling?”

The Augment cleared his throat, a bit astonished at the welcome. He wasn’t used to it. “I am feeling better, thank you, Galven,” he answered politely. Then his attention moved to the other man who came closer to the pair. He seemed to be a Terran human – as far as Khan could tell. But there were extraterrestrials that looked like Earth’s homo sapiens.

The stranger was a giant with a tanned plain and rough, but kind face, wild dark hair pulled back in a low ponytail, and eyes so dark they were nearly black. His movements revealed strength; his stance was relaxed, and his clothes gave him away as an engineer. He looked as though he’d been spit out of a grease-laden turbine. The color of his overalls might have been blue once; now it was covered with oil stains, grease, plasma-spots. The state of them quite betrayed his sense of hygiene – or the lack of it!

“This is Diego Carlos Franco Esteban Juan Soto de… What were the last names again?” Galven managed to ruin the impressive introduction, and the other man rolled his eyes, while he offered a paw-sized hand to Khan.

“Soto de la Vega-Martinez,” he added and flashed the baffled Augment a grin. “But to my friends I’m simply Diego!”
Khan lifted a brow (how did all those names fit on an ID-card?) and accepted the offered hand.
“Peru?”

“No, but close. My parents were from Chile,” Diego replied with a slight accent, before he shook the super-human’s hand like an old-fashioned pump handle. “And you are the hotshot who made the Klingons quake in their boots! Galven told me what you did. Stirred them right up – and stole a ship – congratulations! Starfleet could learn from you.”

Finally able to withdraw his hand, Khan cocked his head and smiled faintly. This guy was strong for a mere human! “It was nothing. The Kli…” He didn’t get further because Diego clapped him hard on the shoulder and laughed loudly. Luckily the super-human remained firmly on his feet; he didn’t even sway.

“Just listen. This man held off a whole Klingon squadron, saved a Starfleet commodore’s ass, eliminated a Bird-of-Prey single-handedly, and says: ‘It was nothing’. Lad, by now the whole quadrant is talking about the ‘mysterious helmsman of The Shadow’.”

Khan’s eyes widened. “The whole quadrant?”

The Tellarit snickered. “What is faster than light? The media!”

“The media?” The former dictator’s voice took a higher tone.

“Yeah, the quadrant news is buzzing with stories of ‘The Shadow’, about its role in the whole Tammeron-incident and its hero-helmsman, who saved one of Starfleet’s most important ships.” Galven rubbed his hands. “We are famous now, and the uniform-wearers are slack-jawed because of it!”

Khan stared at him. For the first time since he woke, he realized his trouble processing given information. The media knew about The Shadow and spread their nonsense. He was missing something – wait!

“How long have I been sleeping?” he asked – and got a shock. The Tellarit replied, “Three days.”
“Three days?” He yelled; his voice echoed from the metal walls while he gaped at the small alien. His stoic mask fell completely.

Diego started to chuckle, and Galven sighed, “Ah, come on, Buddy, it isn’t a surprise. That was a nasty bump you got on your brilliant head; you bled all over the corridor and Caviw’s lap – not that she minds so long as it you bleeding on her.” He winked at the Augment, who still couldn’t believe his ears (he ignored the comment about the cat woman).

Three days! ‘I’ve been out cold for three days!’ He’d been injured worse; he survived multiple bullet wounds sustained in battles fought in his own country back in the 20th century. Even then, he hadn’t slept so long. The enormous stress his body had endured during the last two years - the experiments inflicted on him, the three centuries spent in a cryotube – all had taken its toll on his body.

Stealing control back from his wandering mind, he rubbed his face, took a deep breath, and collected himself. Right, what happened couldn’t be changed. It was time to get a Sitrep. “Where are we?”

“Aldebaran,” the Tellarit answered. “Aldebaran III to be precise. Earth has had a colony here for about sixty years. It’s popular for its…Well, you might say its government here isn’t as strict as the other settlements. Aldebaran III is too far away to be worth the worry.” He grinned. “Otherwise my dear friend here would have a tax investigation bunking permanently in his shipyard.” He nodded upwards to Diego, who smirked.

“Not only that. I think Security would be quite upset if they knew about my collection.” He looked straight ahead at the cloaking-device. “It’s a wonderful gift you’ve brought here, Lad. I never thought I would get a chance to see one of them, let alone study it.”

Khan followed the Chilean’s gaze and frowned. “Yes, this device gave us an advantage – still the Klingons knew our movements. And I want to know why!”

“Uh-huh,” Galven affirmed. “This game of cat-and-mouse was not to my taste. If Starfleet hadn’t come to our aid, we would be nothing more than atoms now.”

“They were able to hunt you – cloaked?” Diego asked baffled. The Tellarit nodded with a grunt.

“How?”
“That’s the riddle I want solved,” Khan murmured, gazing at the device. He knew he should be able to come up with the answer – it was there, licked at the edge of his mind. But he was still recovering from the concussion and his thought process was not as quick as it should be. His lips pursed in concentration as his mind considered every possible and impossible explanation. The cloaking device rendered them invisible to the eye and to scanners – unless the Klingon scanners were able to pick up the tracks of their own cloaked ship? That made sense – but how? Crew bio-data? That couldn’t be right! A cloaked ship shielded by deflectors blocked any active life form scanners. There had to be another kind of trail the Klingons could… see, read, hear, smell… Well, the latter certainly not. After all a spacecraft wasn’t a car with a good old-fashioned combustion engine – fumes and all. Therefore…

The super-human went rigid. ‘Fumes… Emissions… Of course! The D’Ghor’s emissions weren’t cloaked, just the ship! Argh! My mind is working at the speed of a mere human. Is this what they were like all time? It’s intolerable!’

“Galven, the D’Ghor was cloaked, but not her emissions – not her signature! That’s how they tracked us!” He practically shouted at them now with his realization and received the full attention of the two other men.

“Yes, of course,” Galven replied beginning to match Khan’s excitement. “There is the wave of the static warp field, and there is the heated plasma in the warp nacelles that leaves a kind of neutron emission, but…”

“That’s it!” The Augment felt a rush of thrill going through him while he looked at Galven and Diego. “They followed our emissions signature – the emissions signature of our drive.” He stepped towards the cloaking device. “Every ship class has an engine with a unique emissions signature. The Klingon sensors can track the position of their ships based on the signatures and therefore can identify the exact position and orientation of cloaked vessel.” Fire burnt in his pale eyes. “Cunning!”

The Chilean scratched his head. “In other words this pretty technical toy is for the birds!”

A slow smile widened on the austere face of the former dictator. “Not if we feed their sensors false data.” He turned his head to look at the two tech-whizzes. “If the Klingons can’t read the false signature we will emit, they will not realize that they’ve, in fact, scanned a cloaked vessel.”

Diego’s eyes and mouth opened wide. “And how do you propose we do this?”

“There are two possibilities. We can alter either the spectral or the RF trail of the D’Ghor. But if we do this, the Klingons would know a cloaked ship was nearby. The other option would be to send a
mix of RF and electronic impulses to confuse their sensors, so that they read nothing at all. Essentially, making us truly invisible to them. The second option would be easier than trying to alter our signature completely.”

Tellari and Chilean glanced at each other, then at Khan, and back at each other. Galven’s mitt landed excitedly on the super-human’s shoulder.

“Buddy, you are a genius!” Galven oinked. “Just let us feed the Klingons a taste of their own medicine!”

Khan smirked; his brain was already busy considering the technicalities required to pull this off. After all, the solution for their problem will be essential to their survival when they next meet the Klingons.

He didn’t yet know that the life of the young captain he was growing so fond of, and his own existence depended on the successful

The screen in the meeting room showed an attractive young blond woman standing in front of the main building of Starfleet headquarters and bathed in sunlight. The wind coming off the bay gently blew through her hair obscuring the small device at her ear and along her. Her dark eyes looked into the camera her co-worker was holding as she concluded her report.

“… According to an official statement released to the media by Public Affairs Officer, Commander Williams, the forces commanded by Commodore Wesley, the Tammeronian Force of Defense, and the militia The Shadow routed a Klingon strike group. Earth Channel 1 military expert, Retired Commander Jason Smith, states that the outcome of the battle in favor planet Tammeron and the Federation will weaken the Klingon fleet. He recommends Starfleet rethink its standard operating procedure and show more flexibility in battle planning.”

The news anchor looked off camera toward an inset onscreen of the retired commander who continued, “Yes, Alice. The Shadow’s small militia illustrates what flexibility and unconventional, out-of-the box leadership can do in the face of superior forces.”

“Thank you, Commander.” The news anchor turned back to her audience. “Still the questions remain: How will the Klingons react to this defeat? How is it that a civilian militia has better
intelligence than the official Secret Services - intelligence that prevented a planetary catastrophe on Tammeron? Are they really civilians, or could they be rogue Starfleet officers? And who is the head of this organization? Our source reported that only the courageous interference of the militia saved the Lexington and her crew, as well as the 17 million lives on Tammeron. This is Alice Shelldon from Earth Channel 1, live from the Starfleet headquarters.”

Barnett pushed a button on the terminal placed on the table in front of him; the news report switched off. He glared at the roomful of admirals. “Well, this militia made us look like utter fools! Still, I have to agree with Mrs. Shelldon’s point of view; The Shadow was impressive in their use of unconventional tactics. Apparently, against this enemy, unconventional warfare proves more successful than our conventional tactics.” His eyes found Rosé Luengo. “But there is the question of Mrs. Shelldon. I asked you four days ago, Rosé!” Barnett’s voice was getting louder and more irritated now “How is it that a small private militia has better intelligence regarding Klingon activities than the SBI? Have you found out something more about The Shadow?”

The Mexican man pursed his lips. “There is not much information to work with, Richard. As Commodore Wesley reported, their commander is a Tellarit named Galven. I did some research and found an engineer on Tellar, who goes by this name. He worked in a private shipyard and got some awards due to technological innovations that saved the shipyard money. Five months ago, before the war started, he disappeared with a Caitian woman - a co-worker. That was several days after his brother and his cousin vanished together with a cargo ship later found by one of our patrols – unmanned and emptied of its cargo.”

“Did they steal the cargo?” Komack asked. Luengo shook his head.

“No. The evidence indicated they had fallen prey to an assault - Orion pirates. We think Mr. Galven harbors a private vendetta against the Syndicate to avenge his family. Tellarites are very protective of their family. The Caitian woman, who went missing together with him, is named Caviw and is a computer programmer.” He leaned back in his seat. “That's all we found on them. Friends and family-members seem to be respectable citizens. We’ve vetted them already.”

“Right!” Barnett nodded. “What about the helmsman? Bob’s report makes it sound like this guy is a pilot, fighter and strategist all in one.”

Luengo shrugged. “We don’t even have a name – not a real one anyway. ‘Drythen’ must be a pseudonym because records indicate there is no one in all of Federation with that name. Has to be a cover. I can’t even deduce the origin of from the name. We know he has a military education. That’s it.”

“Was he one of us?” Komack asked; Rosé lifted a shoulder.
“It’s possible but there hadn’t been any discharges, honorable or otherwise, of Starfleet members with his ability recently.” He glanced calmly at the two other admirals. “I hate to say it, but we have absolutely no clue who this man is.” He ignored Barnett’s intense stare and continued, “The real reason for this meeting is of far more importance. Ladies and Gentlemen, we must address the rumors regarding a biological weapon the Klingons may have developed.”

“And how much of the rumor is based on fact?” Barnett wanted to know. Albert Norton bent forwards, carefully avoiding Luengo’s eyes. The moment had finally arrived to set his plan in motion – a plan to strengthen Starfleet and wipe out the Federation’s enemies once and for all - both inside and outside of her borders, including those too weak to envision Starfleet’s potential – Barnett.

“Rosé received a data-transmission from one of our agents in the Klingon Empire,” Norton spoke up for the first time since the meeting begun. “Five days ago. I checked and rechecked the data myself.” He used the excuse for his visit at the SBI chief’s office where Luengo had shown him the records about the militia and Khan. He prepared himself for what was to come. “The facts are alarming. The Klingon scientists are working on a virus based on the Rigelian Fever, but it is mutated - enhanced. I reached out to Federation microbiologists, but they are completely baffled. The structure is a-typical for the Rigelian Fever, but they are definitely related. The speed at which the cells reproduce is stunning; the cell membrane, and cell's defenses are resistant to our attempts to stall its reproduction. I’ve only seen a bacteria this virulent once before.”

“Where and when?” Komack wanted to know. Albert sighed, “Khan’s cells share the same reproductive and protective attributes as the bacteria that causes Rigelian Fever...”

“What exactly does this mean, Albert?”

“It means scientists were able to reproduce the material that gives an Augment his or her strength and enhanced healing capabilities. I think the Klingons mean to create an incurable strain of Rigelian Fever.”

“WHAT?” Barnett went rigid. “You mean Khan’s cells are the base for this biological weapon?”

“No, Richard, you misunderstood me,” Albert objected with a neutral, almost kind tone. “To create such a bacteria you need months, if not years. The Klingons started long before we found Botany Bay. No, the subject known as ‘Khan’ had no hand in the creation of this new disease. They have their own source. We all know that the Klingons had an encounter with Terran Augment-DNA a century ago; we can see the results of that encounter. Take Lord Kor, for example, who signed the peace treaty of Organia. The images show a Klingon with an almost human appearance and our files are full of such Klingons like him. I think that the bacteria contains extracted Augment-DNA of
those Klingons and their offspring.”

Richard, James Komack and the others exchanged a glance. “What does this bacterium do – in laymen’s terms, please!”

Norton took a deep breath. He steeled himself and continued. “It is a new strain of Rigelian Fever with no chance to defeat it that we know of. Whoever gets infected with it will not survive. Ryetalin is the only known cure for the previous strains of the disease, but tests show that it is ineffective against this strain. The enhanced disease reproduces at an accelerated rate and then cause the body’s own cells to reproduce uncontrollably. But the cells are abnormal and die as quickly as they reproduce, causing the infected patient to bleed to death inwardly; the patient’s flesh and bone actually begin to rot – even before death.” He looked at the horrified expressions and pressed his lips in a thin line; satisfied with the reaction he received.

“What is your suggestion, then?” Rear Admiral Cartwright wanted to know. “What do our scientists say? How long do they estimate before they find a cure?”

With a worried façade, Albert answered slowly, “They say the chances to isolate the mutative properties of the bacteria are about ten percent. If they can’t isolate the properties, an antidote cannot be created.” He waited until the murmurs and comments died away, before adding, “We simply haven’t enough experience with augmented cells. The only people who worked with the subject, Khan, were arrested and are now in custody. Professor Dashwood and his team at LSH in Nevada learned a lot about his cell function and were on the verge of developing counteragents for several plagues including some strains of Rigelian Fever.”

Barnett looked straight at him; his expression revealed nothing of his thoughts. “Then I suggest that their files be handed to our scientists,” he stated. Norton grimaced.

“Richard, our scientists are the best in the quadrant; still they have no experience with augmented cells. It would take weeks before they come to grips with the whole issue, and they’d still have trouble comprehending the scope of our problem. I am a xenobiologist but this exceeds even my knowledge.” He bent forward, and his fingers touched the screen several times. “Please, have a closer look at the data our agent sent and tell me - how should we find an antidote in time if we don’t even understand how this beast works?”

He transferred several computer diagrams and holo-pictures of a cell structure to the terminals of the other admirals, glad that he had enough knowledge about science programs and cell-building to create something based on the Rigelian Fever and held some of the properties of the Augment’s chromosomes. Still, scientists with enough experience would expose the image for what it was, a fake - something that wasn’t and couldn’t be. But he knew they believed him. The admiralty would accept that a real biological threat had been developed by the Klingons. The Federation Council and
Barnett wouldn’t have another option than to release Dashwood, Conelly, and their staff from custody to let them do the necessary research for an antidote against a malady that doesn’t exist. He would need the professor and his team to re-build Section 31, together with other officers and those men and women, who had realized how important a strong Starfleet was.

Barnett stared at the screen; his mind was in turmoil. If this was really enhanced bacteria, then the threat of facing the Klingon fleet in war paled in comparison. They would need all the help they could get; still, he hesitated to give the Council his recommendation to release the staff of the LSH-facility in Nevada from custody. Even if they worked under observation, they couldn’t be trusted. He would have to ponder the options very, very carefully before coming to a decision.

His attention focused on James Komack, who addressed Luengo once again.

“Have you gotten any information concerning the activities on the Klingon side near Borderland? Are they connected to the biological weapon?”

Rosé grimaced; his large mustache twitched. “Not as such, no, but intelligence indicates that they are marshalling new forces for another strike. I have several very interesting reports from our agents which…”

The meeting continued for another half hour, and then the admirals went their separate ways, unease written plainly on their faces. Ten minutes later, Luengo stepped into his office, nodded politely at the Security guard, and sat down at his desk. The rumors of a planned attack by the Klingons were correct. More certain at least than the new Rigelian Fever. Rosé suspected that one of the colonies was the next target of the of the Klingon’s upcoming assault. Still, there was no concrete evidence, but then again, that’s the nature of intelligence.

The militia’s superior intelligence regarding enemy plans cast a poor light on SBI, his department and his staff. The Shadow had showed him up, and he felt humiliated. Yes, of course he was glad their combined efforts saved the lives of the Tammeronians, but it was outrageous that Starfleet needed the help of these outlaws at all. Not only did they know more than the SBI; no, they even deterred the Klingon fleet from its destructive attack. Above all, they saved one of Starfleet’s finest ships – and all due to the actions of a single man.

Luengo’s squinted as he stared at the dark screen on his desk. Oh, he was sure of ‘Drythen’s’ identity. The pictures of the Tellarit, Galven, he received from the Tellarite government were identical to the records of the Tellarite, who fought on outpost 18-243. The images of the Caitian woman, Caviw, matched his reports as well. He had reasons why he hadn’t confirmed the assumptions about the two Shadow members to the other admirals; he would have been forced to tell them how he came to the conclusion - he possessed very clear records of The Shadow’s fight on the outpost. They would have wanted to see those records and would have recognized the single fighter,
who single-handedly rescued the passengers and the militia. Khan Noonien Singh. Luengo was certain that the Augment and the ‘daredevil helmsman’ were one and the same. It would do no good if the sentenced terrorist suddenly became a hero.

Until now the helmsman of The Shadow was nothing more than a phantom that went by an unusual name – unconnected to the real person. But…

Luengo stopped short in his thoughts as an idea hit him. He quickly bent forward and activated the terminal. Not daring to voice his search request because of the wiretaps, he sent the question manual, “Search Earthen languages for the word ‘drythen’. Give source and translation!”

He had to wait several minutes until the answer appeared on the screen. “Drythen, old English, used until the 10th century, translation: King, mentioned in documents of…” He shut off the terminal. He had learned enough. Drythen – King – Khan. How easy it was if you know for what and where you have to look.

He put his elbows on the armrests of his chair, laced his fingers and rested his chin on them. He stared blankly ahead at the opposite wall where several holo-photos showed the old-fashion automobiles of Carl Benz and Adam Opel, ‘You couldn’t resist, could you? Giving us hints as if you were throwing a bone at a dog. Pride comes for the fall. You think you are safe out there in deep space, playing ‘hide and seek’ with us? Wrong! Even you make mistakes; even you have weaknesses. One of them is your arrogance; it will be your downfall again. We only have to wait and observe.’

He took a deep breath. He would watch The Shadow very, very closely. Just now though, they seemed to sink back into obscurity, but it was only a matter of time before they would re-surface. He knew the Augment to be arrogant, and arrogance does not hide; arrogance craves an audience. And where the militia was, so was the Augment. Sooner or later he would be in their hands again.

Dashwood needed to complete his research and experiments; they were just the tip of the iceberg though – a portent of something greater. Khan was needed alive. But if the enhanced man used his intelligence and strength to fight off the Klingons and Orions, Luengo wouldn’t complain about it.

‘Let him roam free to satisfy his need for release – to show-off. In the end at least he would be useful for more than his Augment-DNA and healing blood!’ His gaze wandered to the window beside his desk and up to the clear blue skies. ‘Enjoy your last taste of freedom. We are right behind you. You will be back in detention faster than you think – as soon as I am head of Starfleet.’

ST***ST***ST
The next ten days flew by. “I don’t know whether I’m coming or going!” Kirk said to the group. Dr. McCoy suggested they all go out for dinner – just to get away from the ship and the melee involved for a bit. Carol Marcus showed up at the request of the doctor. Spock and Uhura arrived a bit later. Everyone enjoyed a fantastic and well-earned meal. The large windows revealed the view of the Enterprise, still connected to one of the three ship-docks. She looked far better than she had when they arrived. The evidence of her hull damage couldn’t be removed completely with the equipment available at this outpost. Areas around the hull damage were covered in scorch marks. But the leaks and holes in the hull had been closed up. The warp and impulse drives were back to full power and the most detrimental damages to the stations aboard were remedied.

The Enterprise was almost ready to leave Starbase 84 and return to her duties – that meant she would be part of the next battle this war had in store for them.

Jim didn’t look forward to it. Not one bit! He was glad that the repairs had been successful and that his ‘Gray Lady’ was in better shape now. He didn’t want to have her vandalized again.

“At least they finally stopped upending my med bay,” Bones said, and put more of the sweet-spicy Risian fruit-sauce on his Rigeluan-cow steak served with dinner. “I swear, I thought I would have to fight tooth and nail for my ICU, the damn techni-freaks would have kicked out my patients to ‘have a closer look at the bio-scanners’.” He shook his head, grumbling to himself.

“Doctor Headen simply wanted to offer you another update for your instruments, Doctor. There was no need to shout at him like that,” Spock commented as he shook some blue pepper and Terran sea-salt onto his salad.

“Update?” McCoy stared unbelievingly at him. “While the LSS were busy helping crewman Andrews and Yeoman T’haran to breathe? Shouldn’t you be familiar with the biological needs of life forms? You are a science officer!”

One Vulcan brow shot up. “I do not think that is necessary to give me a first form physiology lesson, Doctor. I rather meant that…”

Jim didn’t hear the endless banter of his two closest friends or watch the amused smiles of the two women. His mind wandered to his last conversation with Bob Wesley. He contacted Kirk after the Lexington and two ships of his squadron reached Risa’s Starbase 12. During their private discussion, Bob told him about the maneuver the D’Ghor employed and what the Tammeronian fleet-commander told him about the reckless trick The Shadow used to weaken the Klingon strike group before reinforcements arrived.
Kirk found keeping calm and pretending he didn’t know anything about this ‘daredevil’ difficult to say the least. He was glad that Bob’s opinion hadn’t changed regarding Khan, who rescued him and the others. It made him more objective. Nevertheless Jim didn’t dare reveal the true identity of ‘Drythen’. Yes, he trusted that Wesley wouldn’t inform Starfleet Command immediately if he learned ‘Drythen’s’ identity, but an inner voice told Jim to stay silent. That Bob was so keen to meet the mysterious member of The Shadow could be an advantage one day. Jim had a gut feeling that Khan was going to need all the help he could get; a strategic position under the wing of a commodore of outstanding merit would serve him well.

So Jim kept his secret to himself while he listened – not without a bit of glee – as Bob praised the unknown warrior; determined to tell Khan about it during their next contact.

That contact never came.

The ten days in space dock brought no sign from the Augment, no secret message, no transmission via their ‘private’ frequency, nothing! Jim tried it over and over again, but every time the computer informed him that there was no receiver in this frequency’s range. That only could mean two things - either Khan had changed the frequency of his communicator for security (Kirk convinced himself this was true) or the super-human was out of reach. He didn’t dare to think of the third option. It would have been too painful.

“Captain?”

The familiar voice tore Jim out of his musings and startled he glanced up to see Nyota’s beautiful face while Carol, Spock and McCoy were staring at him. It seemed the communications officer had been trying to chase him from his reverie.

“I’m sorry, Uhura, I was lost in thought,” he apologized. Bones rolled his eyes. “Boy, you were galaxies away!”

Jim grinned sheepishly, realizing that his dinner had gone cold – and mostly untouched. Spock wore his special expression, one which showed that the half Vulcan had become wary. His words confirmed Kirk’s assumption. “Is everything all right, Jim?”

The young captain’s sunny smile made the alarm bells in McCoy’s head go off. “Well, you know, the next deployment, the war, the Enterprise’s repairs. My mind just wandered a bit.” Jim’s face was pure innocence and it made Bones even more leery.
“Yeah? It wandered far enough away that you forgot to eat,” Carol said, and pointed at his plate. They reunited five weeks ago, but something between them had changed. They used to flirt quite a bit after his recovery from the radioactive contamination. He even invited her to dinner several times and she had been certain that Jim Kirk was interested in her. But since his speech at the Memorial Day in front of the headquarters and their antedated start for the five-years-mission the next day, he’d been acting strange. He was still charming and incredibly polite, yet he looked at her differently now. Whatever happened after the memorial speech had made him turn away from what they almost had together, and she regretted it. She was fond of the young captain, but her female instincts told her that the chance to win him had passed.

But that didn’t negate her concern for his well-being as well as for McCoy’s. She smiled to herself – Dr. McCoy - ever the charming knight of the southern states – a gentleman through and through. She enjoyed his attention. He was different, and his sometimes grouchy demeanor amused her. Still she wasn’t sure what to think of his obvious efforts to get close to her. The wound of Jim’s premature loss was still fresh, but she was too much a professional to let her private feelings get in the way of her friendships or her professionalism. Kirk was not only the man she had begun to fall for; he was also her captain, and as such, he had her respect.

Jim recognized her worried tone and saw Uhura nodding approvingly. As Bones and Spock did the same, he rolled his eyes. “Aww, come on, guys, it’s not the end of the world when I don’t eat. I’m just not hungry.”

“You’ve been ‘not hungry’ for several days now, Jim,” McCoy stated and looked straight at him. “Medical checkup tomorrow, at 0900 and…”

Jim’s communicator beeped – saved by the proverbial bell. Glad for the interruption, the captain flipped the small device open. “Kirk here!”

“Captain Kirk, Lieutenant Alden here,” the calm voice of the communication officer of the beta-shift answered. “One moment, sir, I will pass you on to the Lexington and Commodore Wesley.”

Jim frowned; that sounded official. He wasn’t mistaken. Several seconds later Bob greeted him, and his tone made it clear that this wasn’t a social call. “Jim, how far have the Enterprise’s repairs progressed?”

“I have been told that will be ninety-five percent complete tomorrow and…”
“So you are, theoretically, ready for a deployment?”

The five officers exchanged a quick glance. “More or less,” Kirk confirmed. “Still there are several…”

“I’m certain your crew can complete the repairs during your flight.”

Jim became keen-eared. “Flight to where?”

“To Turkana.”

That information took the group by surprise. “Turkana?” Kirk frowned. “That’s in Borderland, near the former Neutral Zone!”

“Yes, I know.” Bob sounded tense. “The SBI observed increased activities on the other side of the former Neutral Zone near Turkana. There’s truth the rumors that have been circulating. The Klingons are about to expand their empire by seizing this part of Borderland – among it Turkana, where we have a colony.”

“What about the Orions? Aren’t they going to interfere?”

Jim listened closely to Wesley’s reply. “The Syndicate and the Klingons are allies and there are hints that the Orions have no objection to the partnership. Rather the opposite. The inhabitants of the colony on Turkana are mostly sympathizers of the Syndicate now, but there are still enough people who haven’t turned their backs on the Federation. The settlement is about to fall into anarchy, and those, whose loyalties have changed would like to get rid of the Federation-stalwarts. So it’s in the Syndicate’s interest that these people leave the planet – certainly the only reason they are ‘officially allowing’ a vessel of Starfleet to cross into their area to evacuate these settlers.”

“Did the Federation get a message from those people? How do we know the settlers want us to evacuate them?” Jim asked, and Wesley sighed.

“Yes, the Federation Council received an emergency signal and several transmissions from the settlers; the senators decided to send help to Turkana.”
“Meaning send Starfleet!” Kirk groaned. “And your call tells me that I am the lucky guy who gets the order to fly in the middle of a hostile area, evacuate the willing settlers and be on my way back before the Klingons show up. Am I right?”

For a moment, there was a pause, before Bob answered, “Yes – I am sorry, Jim. Headquarters laid the responsibility for this emergency deployment in my lap because I am the highest ranked officer in this sector of the quadrant, but the Lexington is in not even in the condition for a Sunday trip, let alone a rescue voyage. To evacuate those people we need a ship that can host approximately four hundred people and is quick enough to leave the planet before we have to confront the Klingons. Harassing evacuation vessels used to be taboo in a war, now no one knows how the Klingons will react. Their planned destruction of Tammeron shows that they have changed the rules and no longer recoil from attacking innocent civilians. The risk that they would simply fire at the evacuation ship is high, therefore, we have to get the people out before the Klingons are in the field.”

“They would fire on an evacuation ship?” McCoy couldn’t keep quiet anymore. “Isn’t that against their so-called codex of honor? I thought Klingons got their panties all in a twist if something went against their warrior-honor.”

For a moment Wesley paused, so Jim explained, “I am out with some of the senior officers at the moment, Bob, so don’t worry that…”

“It’s fine. So they already know what their next duty will be. And to answer Doctor McCoy’s question – it is you Doctor, isn’t it?”

“Yes, it’s me, sir. Good evening!”

“Good evening to you and the other ladies and gentlemen. Well, until now we could count on the Klingons’ sense of pride and honor, but the attack on Tammeron speaks to something different. There’s even rumors that they’ve developed a biological weapon, but I’m of the rumors. We should assume the worst. The outcome can only be better.” The commodore took a deep breath. “Jim, set out as soon as possible. The SBI believe that the Klingons are going to strike within the next twenty hours – possibly less. You will need…”

“Thirteen hours and twelve minutes by Warp 9 after the start, Commodore!” Spock cut in, who had already calculated the traveling time, and McCoy grimaced.

“You forgot to tell the seconds, Spock!”
“This depends on the acceleration the *Enterprise* can make after the repairs. I lack the actual engine data to give a more precise statement.”

“Spock, that was a joke!”

“A joke is a short story with a humorous end, but there was nothing like this in your statement, Doctor.”

A brief moment of laughter sounded from Kirk’s communicator. “Sweet Lord, Jim, how to you put up with these two?”

“I love challenges,” Kirk retorted dryly, shooting a warning glance at his two friends before he continued. “So, we should depart as quickly as possible?”

“Every minute counts. Don’t forget, Jim, the Klingons would be delighted to get their hands on our flagship – and you.”

Jim groaned. “Thank you so much for reminding me.” He rose and waved to the waitress. “I’ll contact you when we are in Borderland. Kirk out!” He changed the frequency of his communicator, and offered the waitress his credit card, paying for them all. “Kirk to *Enterprise*. Mr. Scott? Red alert! We are on a rescue mission.”

For a short moment there was no response, then the chief engineer shrieked through the communicator, “Rescue-mission? Cap’n, we’re almost done with the repai…”

“I know – that’s the reason we are off to our next destination. We have to evacuate four hundred people. Beam us up. There is a lot to do before we can host so many men, women and children! Kirk out!” He glanced at his friends. “It seems our vacation is over.”

**ST***ST***ST**

The ocean-blue-green eyes stared intensely at the screen while the computer terminal whirred. Still Khan didn’t get the results he wanted.
Within the last few days he not only developed a theoretical method to disturb the Klingon sensors, he built a proto-type that would make it impossible for sensors to receive precise data – if the device worked, that is. To resolve the problem with the amount of power the cloaking device and the proto-type of the sensor-disturbing equipment, Khan had also suggested storing energy in additional batteries, which could be easily linked to the ship’s power-circles, and charged while traveling uncloaked.

He didn’t know how the Chilean with the incredible list of names had been able to collect so many spare-parts. The components and basic modules you could find in his ‘private’ storage for any spacecraft, sensors, computers and engines rivalled the best that a Federation bazaar had to offer. But the Augment didn’t look this gift horse in the mouth. Without Diego’s collection, they never would have been able to build the needed proto-type.

During the endless days and nights, Khan barely found time to do what his mind was screaming for – finding his people. Going back on his first assumptions regarding the Risa-System that was highly protected by Starfleet, he learned from Ritek and Caviw the reason for the fleet’s presence there. Because of the unstable weather and the earthquakes, the Risians had developed a weather control network that was unique in the Alpha-Quadrant; it had changed the planet into a tropical paradise, and it was now one of the most visited tourist centers. Millions of people from the different planets spent their holiday there. Others went to disappear – find a new life or identity for themselves. Starbase 12 was located there, and where there was a starbase, there were spies attempting to gain information on ship movements – some planetary government spies, others just trying to make a living. It was no small wonder that Federation authorities and Starfleet observed Risa very closely – and it would be damn foolish to hide 72 cryotubes with Augments somewhere there.

In other words, Risa was out of the question for the search – a search that maybe Khan could bring to a successful end if he found his people, but what comes afterwards? He knew he didn’t stand even the smallest chance to rescue them as long as war rocked the Alpha-Quadrant. So long as the Federation was forced to watch any movement within her range, he had no hope of finding a safe haven for his family.

Therefore, it was in his interest that the war come to an end. He never had been a man who saw war as the only solution political and territorial problems. When forced to fight, it was with everything he was and knew, but to reach for a weapon when words could cut far deeper and left impressions without physical injury - he preferred latter. Regrettably there were still men – and women – who thought otherwise.

The scientists of the 20th century had bred him and his fellow Augments to help to solve political problems and to bring peace to the word – a noble intention. Then Khan learned that his creators were afraid of their own conceptions and fought against him and the others, which led to a bloodbath unlike any other in history.
He knew the tendency to answer challenges and problems with war, wasn’t exclusive to humans. It could be found everywhere – even thousands of light years away. The instinct to answer an offense with the fist wasn’t rooted in the individual alone but also in all of creation - everywhere. However, compared to the people who hunted even the moderate Augments, the Klingons were true barbarians. Still Khan couldn’t condemn them completely. He had seen first-hand that Starfleet and the Federation weren’t the saints and saviors of the galaxy as they liked to portray themselves. On the other hand, he could not and would not tolerate the alien race that threatened his home-planet, his family, and the young captain, who had saved his life – in so many ways. He would use all of his knowledge, every bit of his intelligence, every fiber of his being, to fight the enemies off - to make sure that those close to him, would be safe again.

The sensor disturbing device he developed was a step in this direction. He was curious how it would work, but to beta-test the device, he had to install it. While Galven and Diego did this job, he retreated to his small stateroom aboard the Shadow. He wanted to access his terminal to make a new attempt to learn about the location of his people. He knew that he could have used the computers down at the colony, where Ritek and the others spent their time – in some bar or wherever they called ‘a nice place to relax’. But the super-human didn’t care for this kind of leisure. He made another use of his time – more productive use. Or so he thought.

He hadn’t made any progress, and it frustrated him more than he was willing to admit.

The door to his quarters opened; he didn’t have to look up to see who entered. Soundless as Caviw was, he could hear and sense her.

“Galven and Diego have installed the nice little ancillary-device you engineered!” Caviw said to him as she entered his quarters. The Caitian cocked her head; she found him at his computer-terminal exactly as she left him two hours ago – after she hacked into Starfleet Command’s database.

Four days ago she used her talent to do some research of her own in an attempt to discover the identity of this mysterious man. He claimed to be a deserter from Starfleet but was a living fighting-machine with healing abilities that would make a doctor jobless. She hadn’t found anything, which only spurred her curiosity. Still she knew that she could trust him – so she kept her silence and continued to help him. “Any luck?”

The Augment took a deep breath and leaned back, crossing his arms in front of his chest. “Not exactly,” he answered after a pause. “The files I am searching for are nowhere to be found. There are hyperlinks though. Still I am unable to locate the sources or the documents they reach back to.” A deep frown creased his forehead and anger flashed in his eyes.

The Caitian closed the distance between them and looked over his shoulder at the screen. A moment later she whistled. “Holy claw, you are… You are in the security files of Starfleet and the Council!”
Her tail twitched. “Haven’t they realized that they’ve been hacked?”

Khan pointed to a signature he put on the connection and Caviw started to laugh. “Admiral Fitzgerald…” She shook her head. “Well, Admiral Fitzgerald, why are you rummaging around in Federation ‘top secret’ information? I thought he had people to brief him on anything he wanted to know.” She looked down at ‘Drythen’ inquisitively. “Is he trying to hide the fact that he is looking for something?” He didn’t answer. She clapped him gently on the shoulder. “Care to tell, what you are searching for?” Her cat-eyes met his sea-colored ones, as he glanced up at her.

“Every man has his secrets, Caviw. This is mine.” He looked back at the screen. “Still it is frustrating that the information I need isn’t there!”

She pulled up a chair near to him and sat down. “Maybe you are searching on the wrong place. Maybe they have…” Her eyes widened, before she pointed at the screen and yelled, “Damn, they recognized that they have an unwelcome visitor. You have to…”

There was no need to get worried. Khan cut the line and quickly deleted the tracks his search left in the database. Still, that was close – too close! A few seconds more and Starfleet would have located him. Cursing in frustration he squeezed his eyes shut, his right fist landed on the desk beside the computer.

There had been no hints, no entries, nothing about his people, their location, or even himself. Someone removed all traces of John Harrison from the database – understandable – but there was also nothing about ‘Khan’. As if he had never existed, but there ought to be hundreds of files concerning him and his family. All the test results, the experiments, hell, even his so-called trial and sentence had to be stored somewhere. Maybe Caviw was right; he was searching in all the wrong places. But if the information wasn’t saved in the highest security database of Starfleet or the Federation Council, where was it?

The Caitian watched him. She sensed his tension and his anger, mingled with a whiff of despair. Whatever he searched for, whoever he was – she didn’t want him to suffer, even if he was taken by another. “You know, if you would tell me what you are seeking, we maybe could find the solution together.”

The Augment sighed. “Thank you, Caviw, but I have to do this alone.” He straightened again and looked at her. “So, the sensor-disturber is installed?” he changed the topic, and the cat-like woman nodded.

“Yes, Galven and Diego have run the first tests. I came to fetch you. After all, this little technical
wonder is your baby.” She bent forward and fixed him with an unnerving gaze. “You found a solution for something all of Starfleet’s engineers would have taken months to discover and then you built the device to disturb sensors in just days. You are a wonder, Léo.” Her hand touched his arm, and instinctively Khan drew back. He needed her help from time to time, but he wanted to clear things up – preferably without offending or angering her.

“Caviw,” he began unusually gentle, “as much as I appreciate your help as a hacker and much as I am… honored to be you primary interest, I…”

“Don’t fret!” Caviw purred and laid her tail around his waist – the touch made him quite uncomfortable. He sent her a defiant, fierce glare that made even Marcus flinch two years ago. The Caitian only chuckled and bent nearer to him. Her next words rendered him speechless, “I know that you are taken, Pretty.”

Khan needed a moment or two before he came up with an intelligible reply; the hesitation was quite rare. All that came finally over his lips was an almost dumbfounded “What?”

The cat-like woman laughed her mewing laughter. “You are claimed,” she stated bluntly and to his shock sniffed his throat. “I can smell him.”

Seldom could someone baffle the super-human, but right now he could only look with widened eyes at the predatory female.

“He marked you properly,” Caviw continued, winking at him, and instinctively the Augment fingered the ‘mark’ now invisible, he got weeks ago. “It isn’t visible anymore but it’s still there. We Caitians are doing the same.” She cocked her head again. “Where is your mate? You are missing him; that much is obvious.”

Khan could only swallow before he replied coolly: “I have no ma…”

“It’s a male, and his claim on you is strong as yours is certainly on him. You are taken – regrettably – and I have to accept this. Still to… flirt with you is fun.” She backed off with a wide smirk. “After all, it’s cute to see you all worked up for a change. You are far too controlled and stoic sometimes.” She laughed at his speechlessness and rose. “Come on, Pretty, don’t miss the birth of your baby!”

Grinning like a Cheshire cat, hips swinging, tail twitching, she walked to the door and waited for him. “Are you coming or not?”
Finally, the Augment overcame his astonishment, and an irritated growl vibrated in his throat – insolent pussy-cat! He rose and followed Caviw, asking himself for the uncounted time what he had gotten himself into.

TBC…

Chapter End Notes

Yeah, the cat is out the bag – and this in connection with Caviw (*laugh*). She voiced something, Khan hasn’t admitted to himself until now. His connection to Jim is far more intense than thought.

And this will become very important within the next chapters.

While Luengo and Norton are plotting to accede Starfleet Command – and their plan will be very evil and good in one – Jim is going to be in deep, deep water.

In the next chapter the Enterprise will reach Turkana and with it the trouble begins, because the Klingons are on their way to the colony, too. You will meet Kor again, Khan shows one time more his fine instinct and ability to foresee things, and Jim will act in his typical way that makes him the hero, but also hurls him in danger.

I do you liked the new chapter and I am – as always – very curious what you think of it.

Have a nice Sunday and start into the next week,

Yours Starflight
The trouble begins

Chapter Notes

Hallo, my dear readers!

Once again I have to thank you for all the kudos, comments and feedbacks I got for the last chapter. And I’m really happy that I can update so soon, after all I know how curious you are.

As promised in the new ‘chapi’ the trouble begins – just like the headline tells. And because I don’t want to give away too much, I only can say: Have fun – and don’t kill the author, if she leaves you with a mean cliffhanger (*laugh*).

Have a nice weekend

Yours Starflight

See the end of the chapter for more notes

Chapter 12 – The trouble begins

Commodore Bob Wesley stared wide-eyed and dumbfounded at the screen on the communication station of the Lexington. It was one of the few places on the bridge that wasn’t a chaos of wires, buttons, circuits and open covers. But compared to the chaos that threatened to break loose due to the news report he watched, well, the condition of his ship paled in comparison. He blamed the man on the screen; he blamed the anonymous source. Fuck! He blamed Starfleet for the leak! The world – No! World now knew that the flagship of Starfleet had been repaired and was off on a rescue mission.

“…our source reports that the USS Enterprise, under the command of Starfleet’s youngest and most famous captain, James T. Kirk, has been sent on a rescue-mission. Several emergency calls, and an official statement from Turkana have reached the Federation Council, asking for help in an effort to evacuate settlers loyal to the Federation. It is highly probable that the Enterprise is en route to Turkana now, in order to bring those families to safety. The USS Enterprise previously docked at Starbase 234 for repairs. The starbase is the closest in proximity to Turkana making the Enterprise the most likely candidate for the mission.

“We ask: Why the sudden call for help from Turkana? Why is Starfleet’s flagship sent to the rescue? Turkana is near the former Neutral Zone in the middle of an area called ‘Borderland’. The Borderland is controlled by Orion pirates and slavers. Rumors state that the Orion Syndicate has concluded a deal with the Klingons. Political experts concur that Klingons in the Borderland are just around the corner. So what does it mean? Is this the beginning of a Klingon expansion of their
sphere of influence as they continue to annex worlds closer and closer to Federation Territory?

It could be. This is Alec Amstrong, reporting live from Risa III!”

Wesley’s face progressed through several shades of red. “How is it possible that this...ahhh!” There were no words to express the depth of Wesley’s frustration. "Irresponsible jack-ass got top secret information on our ship movements and our mission?!”

Lieutenant Palmer sighed. “I have no clue, sir. The media have been reporting on Turkana colonists, and Federation settlers wishing to leave. We don’t know who could’ve leaked the Enterprise’s evacuation mission. We all know that the Klingons would be delighted to destroy our flagship, and…”

“He’s reporting ‘live’ from Risa?” Wesley interrupted his communication officer, and as the man nodded, the commodore gritted his teeth. “Call his station and get him on board any way you can!” he growled. “I want to know exactly which inane, thoughtless, stupid, about to be court-martialed, asshole has been spilling military secrets to the fucking media!”

Palmer and several other officers looked with large eyes at their commander. It was a rare thing that Bob Wesley cursed, let alone gave in to his temper. The commodore caught the surprised glances and sat up even taller. Yes, he was angry – oh God he was livid, and he was going to give in to it now. The safety of the settlers, Starfleet’s flagship and the life of his young friend Kirk and his crew were all at stake! Someone was going to hang for this.

A deep frown creased his forehead as he continued, “And then hail the Enterprise. I have to tell Jim that he only has a few hours to complete his mission before all hell breaks loose down there!”

ST***ST***ST

Jim glanced around the large shuttle-hanger in the aft section of the Enterprise. The changes to the hanger due to the evacuation still surprised him. The shuttles lay at their stations above the main deck of the hangar, but that was all that remained recognizable of the space. There were more than three hundred makeshift beds, cots, and mattresses placed in long lines as well as chairs, tables and indicator arrows pointing the way to the restrooms. The replicators and the large galley in the mess decks were already producing food easy to distribute. Dr. McCoy made room in the med bay for those in need of medical care.
After their departure from Starbase 234, Wesley informed Kirk that the government of Kenda II, the second planet of a star-system near Borderland, would accommodate the settlers until they could continue on to their home planets. It was eight hours between Turkana and Kenda II; the Enterprise wouldn’t need to host her guests for long. Still the people had to rest, eat, and store their belongings for a while. There was also the need for physical assistance – the elderly, the infirm, and disabled were part of the evacuation as well. All were in need of some support; all were leaving their homes behind to walk headlong into an uncertain future - of a new beginning somewhere else.

“I’ve tagged the way to the refreshing cells in the sports center, Cap’n,” Scotty explained while he pointed at two of the exits at the other side of the hangar. “The women may want to take a sonic shower and I think the children and teens will be distracted if they can play. Several members of the crew, who are off duty, have agreed to keep an eye on them.”

Kirk smiled and clapped the engineer on the shoulder. “Well done, Scotty. I only hope that we will be on our way outta there when the Klingons arrive – if they arrive.” His expression changed. “I don’t like going that deep into a hostile area.”

Two hours ago, they had passed the unofficial border into the Orions’ territory. The Enterprise was being observed; it set Kirk on edge, and he didn’t like that one bit!

“Has the Syndicate answered your transmission, Cap’n?”

Nodding Jim sighed, “Yes, and we have permission to continue, still I don’t trust them. Oh, and why do we need permission from criminals to pass through a territory that still belongs officially to the Federation? It’s just odd. And then their alliance with the Klingons…” He shook his head. He had a bad feeling about this.

“Well, if the Orions are set on double-crossing us, we shoot our way through and run like hell,” Scotty winked; he straightened his frame and bristled with Scottish pride.

Kirk snorted. “If the Orions are leading us into a trap, it would mean that the Klingons are already set to ambush us. Even we can’t fight a strike group on our own. Spock is watching the long distance sensors. So far, we haven’t registered anything out of the ordinary, but we’re too far away from Turkana right now to get precise data. Getting near enough to get the data – well – it could be too late then. Especially if they come in cloaked. We need to be ready in case they are set on springing a surprise on us.” He shook his head. “Bob was right, you know. They would love to destroy Starfleet’s flagship and capture me.”

Scott cocked his head. “Because of your, Spock’s and Uhura’s visit on Qo’noS?”
“Yeah,” Jim mumbled and wanted to add something, but the engineer went rigid and yelled, “What are ya doin’ up there? Haven’t ya been sick enough lately? Do ya think ya can get off duty back by falling on purpose? Get down here, pronto! Med bay is not your personal holiday spot!”

Kirk followed the gaze of the Scottish man and grinned when he recognized Keenser, who had climbed up to one of the upper parking decks and installed another indicator arrow. The little alien glanced with his pitch-black eyes down at Scotty and, as always, there was no expression on his grey-green oyster-like face; he simply continued what he was doing.

“He drives me nuts! Mark me words, Jim, this never hungry, walkin’ oyster will bring me to an early grave one day!”

Amused, the young captain laid a hand on Montgomery’s shoulder. “Let him be, Scotty. We all know that you don’t mean anything by it, so stop pretending that you’re angry. You love him far too much for that.”

The round face of the engineer had flushed for a moment before he grumbled, “Ach, he wears on my nerves! Still…” He sighed. “Aye, he’s my friend. Knows when he has to keep silent and…”

“Maybe he simply can’t get a word in edgewise, with you complaining all day,” Kirk teased. He wanted to add something, but the intercom-signal sounded, followed by Uhura’s voice, “Bridge to Captain Kirk!”

Nodding at Scotty, Jim walked to the next intercom-terminal to answer. “Kirk here!”

“Captain, I’ve got Commodore Wesley for you. It… is urgent!”

Frowning at her hesitation, Kirk blinked before he ordered, “Put him through, Lieutenant.”

Scott watched his young commanding officer from afar, saw his body suddenly tense and his face pale. ‘Bad news,’ he thought, glad that he never chose the career of a line officer. He wouldn’t trade places with Kirk for all the…

When Jim terminated the communication, he pursed his lips, turned around and looked at Scotty with
a grim expression. Scotty knew the other man hadn’t gotten ‘bad news’, but far worse news. Scotty loved his Engineering – the technology, and the crew under him – but when one of his friends was in trouble, he was always there for them. Closing the distance to Kirk, he realized that the captain was taking several deep breathes – obviously to calm himself. He asked tentatively, “What’s wrong, Jim?”

Kirk pressed his lips shut; a bitter taste was in his mouth. Then he looked straight at the concerned engineer. “Scotty, I know that we are travelling without full power to our warp drives and that there are still several needed repairs left in the engineering, but do you think it is possible get up to Warp 8?”

Scotty’s jaw headed towards the floor. “Warp 8?”

“Yes! We have… a situation – or, we’re going to have a situation if we are not fast enough.” His blue eyes flashed. “Some jackass from the media blabbed that the Enterprise is on her way to Turkana. The colony is only two hours away from the Klingon border. As soon as they hear we’re coming…”

“We’re in deep trouble!” Scott nodded. “Especially you, Mr. Computer and Nyota. I’m on my way!” He trotted backwards, lifting both hands in a placating gesture. “Don’t worry, Captain, I’ll tease every last bit of power from my baby and then some more!” He turned and ran towards the next exit. “KEEEEENSSSEEER, you’re needed in the engineering!” he shouted and rushed through the door. He didn’t wait for the baffled Roylan, who glanced with big black eyes in the direction of his human friend. Keenser wondered to himself if it was possible that there was anyone crazier than Montgomery Scott in the whole universe.

Kirk took another breath and tried to stay calm. They would need four hours to reach Turkana and then another hour or two to evacuate those who wanted to leave the colony. They could be on their way back in five or six hours at best. How long would the Klingons need to analyze the intelligence so freely given to them by the media, and then marshal forces to seize not only Turkana but also the Enterprise? How long before the enemy arrived? Everything depended on the present position of Klingon forces and how fast their Secret Service – the Klingon Intelligence – worked. Was the Enterprise fast enough?

He mentally calculated the chances of getting out of the area in time; the odds gave him a sinking feeling in the pit of his stomach. Still, he knew that he couldn’t let those families down. Their survival depended on his ship and him.

ST***ST***ST

Patrons crowded the bar in the early afternoon. Humanoids from different planets all in one place; no
two exactly alike. Khan had never seen anything like this before, and he had caught himself staring at them all for just a moment before his self-control kicked in once more. It was not only rude to do so; it was a waste of time. The galaxy was full non-carbon based life forms. Acceptance of this was one of the first lessons he learned after Marcus woke him. He had come to know much from this new age, but he had to admit, there was still a lot that was strange to him. At least some things hadn’t changed – like gossip and the tendency of the news media to wrap up rumors in half-truths thereby affecting the opinions of millions by asking questions to which there was no answer.

The Augment stopped to follow the news though he didn’t care about anything the reporters said. And he equally didn’t care for the little party Diego, Galven, Caviw and the others were celebrating in that bar – or club. The establishment was sure making money today, what with how much time members of The Shadow spent here. Khan had no interest in accompanying the group, but after the many successful tests of the sensor-disturbing device, and the additional batteries, well, everyone wanted to raise a glass to the accomplishments of the hour. However, the reason for this ‘party’ had to be kept a secret; otherwise he and the two technicians would have found themselves the center of attention – and they didn’t need that.

Sitting at the bar and sipping blue liquid – ‘Romulan Ale’ they said, it tasted as sharp like chili and sweet like pomegranate – he watched his shipmates and the other guests. He’d been here for an hour, and he already yearned for an end to the nonsense. Of course, there had been festivities during his time back in the 20th century; he was not averse to entertainment, but he could not tolerate getting hammered during wartime. The group could not risk discovery by those they were tracking; there was also the risk that some eager authority – or Starfleet – would find them. They could not afford dulled senses.

Taking another sip of the drink containing far too much alcohol, his attention shifted to one of the screens above the counter and his heart skipped a beat. There he saw the swan-white shape of a Constitution-class starship emblazoned with the register-number NCC-1701… The Enterprise.

Letting his glass sink back down to the bar, he stared at the image now showing well-known face of a smiling Jim Kirk in his grey dress uniform, head slightly cocked, blue eyes clear and shining, posture smart and upright. Warmth, curiosity and caution woke in the Augment; nearby, the silken voice of an Andorian visitor gasped, “That is Captain Kirk? That… that boy is the captain of Starfleet’s flagship?” Another humanoid with fire-red skin replied, “Well, that ‘boy’ has saved his planet, defeated a Romulan madman, revealed a conspiracy, and defended the Japoirians against the Klingons, and then against those damn Orion-pirates. He may be young, but he is a hero!”

Khan stopped listening. His sharp hearing had caught the reporter’s account, telling the world of the Enterprise’s next mission. The super-human frowned. Who would be so stupid as to leak military deployment information to the public during a war?

“What? Turkana?” Galven stopped beside the former dictator and sipped at something that looked
like liquid mud mixed with Campari; he watched the screen, too. “They sent their flagship to Turkana? Are they mad?”

Now on alert, Khan looked questioningly down at the Tellarit. “What do you mean?”

Galven snorted. “Turkana lies near the Klingon border in the middle of the Orion’s territory. It is mostly inhabited by people not much better than those green-skins! There may be several people who are still prefer an orderly life under the Federation’s protection, but the others are sympathizers of the Syndicate.” He read the ticker below the news anchor and oinked, “And the Enterprise of all ships is about to evacuate Federation loyalists – two or three hours away from the Klingons. Holy Mud, if Klingon intelligence gets a wind of it then I don’t want to be in that boy’s shoes. The Klingons will jump at the chance to eliminate the Federation’s flagsh-… Drythen?”

The addressed man didn’t reply as he put his glass firmly back on the counter, turned around with a hard, determined expression and headed with long steps towards the exit, communicator in hand. The Tellarit frowned and followed him outside, but the dark-haired Terran disappeared. The empty golden light of the transporter was the only evidence left that ‘Drythen’ beamed away.

Khan materialized aboard the Flash, Ritek’s ship, docked beside the Shadow and the D’Ghor in the shipyard. The Regulian stayed aboard to monitor nearby transmissions – listening for something to alert them of danger. He frowned as ‘Drythen’ left the small transporter platform wearing an expression somewhere between fury and worry.

“Are the drinks so bad down there? Why did you return? What’s wrong?”

“Not now, Ritek!” the Augment interrupted him sternly. “You’ve stayed to monitor the Orions and the Klingons. I need you to watch out for a certain transmission that I suspect the Klingons will send in the next few hours.”

Crossing his arms in front of his chest, Ritek cocked his head. “What kind of message? What’s this about?”

Taking a deep breath, Khan replied as calm as possible, “The Enterprise!” When he caught the bewildered gaze of the Regulian he quickly explained what happened. Ritek promptly rolled his eyes.

“Bloody media! They do more harm than good.” He pursed his lips. “Galven said you only wanted
to contact the *Enterprise* and her captain when you sent Starfleet the warning about the planned attack on Tammeron, and then you spoke with the captain in private. Now you are concerned with the fate of this ship. Is the captain your friend?”

“Friend?” Khan didn’t know if he should smile or scoff. He answered thoughtfully, “I don’t want to call him a friend.” He said those last words as though they were an insult to his intelligence. “I don’t know that he is a friend. He is…” Khan thought a moment, “He is something more – something… different.”

Ritek thought it wise not to ask further questions. Something in him warned him not to press the Terran further. Sometimes it was better to know less than more. He waved at his comrade. “Come on, let us eavesdrop on those damn Klingons! There, I remember now. I caught a transmission from one of the Orion patrols stating that the awaited Starfleet ship crossed their border more than two hours ago.”

Khan went rigid. “So we can ascertain the approximate location of the *Enterprise* and how long before she reaches Turkana?”

“Sure!” Ritek nodded. He hurried as ‘Drythen’ stormed towards the small bridge.

ST***ST***ST

Across the border, in the Klingon territory, fourteen vessels had been summoned to form a strike group to be made ready for the departure. Aboard the flagship *J’Ethl*, a mighty D7-Battle-Cruiser whose name meant ‘Sharpened Sword’, Lord Kor sat at his desk in his Spartan quarters and listened to the reports of the strike group captains. Soon they would be ready to set out to Borderland to support their allies by securing the area of Klingon territory near the former Neutral Zone.

“Men, you have your deployment orders regarding our… allies, the Orions.” He said after the last commander finished. He made no secret of his distaste for the members of the Syndicate and their ‘contract’ with the Klingon Empire. He knew that the most warriors of the old codex shared his point of view – they did not need pirates, smuggler and slavers for support. Still, the chancellor decided otherwise – likely influenced by the twelve Orion beauties sent to Qo’noS three weeks ago. Either way, obedience to the order was mandatory. “We will depart in three hours and head towards Obruli, Turkana and Verix, which lay across the former Neutral Zone in Borderland. The Orions have invited us to secure their territory against the Federation. Very ‘kind’ of them.”

He saw his fellow officers exchange glances. He knew they were as disgusted by the alliance as he was.
“We have been informed by the Orions that the Federation will send a Starfleet ship to evacuate those settlers on Turkana, not loyal to the Syndicate. This evacuation takes place with my assent and that of the Syndicate. Our intelligence reports that Starfleet has delegated responsibility for the evacuation to the Lexington and Commodore Wesley. We will respect the Rules of Engagement; rescue vessels will traverse the designated route unmolested.”

He glanced firmly from one commander to the next. He knew that some of them hated the Federation with every fiber of their being, still they valued the codex of honor. Kor was certain none would disobey him as a matter of honor; even those harboring personal vendetta. Still, he was wary of Commander Koval and Commander Noy. Each had lost loved ones at a Federation captain’s hands.

Koval, son of Torka of the house Gordeck, commander of the Bird-of-Prey BortaS meaning ‘Revenge’. And Noy, son of Kaden of the house Gordeck, the commander of the MeQ’lw – ‘Burning Blood’, each harbored such a vendetta. Koval lost two brothers and Noy his brother-in-law, during the incident with James Kirk and his crew on Qo’nos. The two warriors had sworn revenge on the captain. Kor knew that the fate of the Starfleet captain was sealed should he ever cross their path.

“Captain Koval, Captain Noy, you will secure Obruli together with some of our scout ships. It has a small colony of dealers loyal to the Syndicate, so you shouldn’t face any problems.”

The addressed commanders pressed their fists against their chests, and Kor continued in his instructions to the rest of the commanders. Finally, he rose from his chair. “Man your ships and be ready to depart on my signal. Let us increase our empire!”

A simultaneous battle cry from a dozen Klingon throats echoed through the room; then the commanders left, none looking back. Kor watched them go. After the door had closed behind them, he snorted quietly. “What a ‘victory’ – annexing three small planets full of rotting outlaws! The Chancellor has lost his mind to senility!”

ST***ST***ST

“Reaching Turkana in eight minutes,” Hikaru Sulu reported to his captain, who sat tense in his chair. They had closed the distance to the colony quicker than the four hours estimated, thanks to Mr. Scott’s newest miracle wringing power from the engines to reach Warp 8. They had spared only 9.5249 minutes as Spock had pointed out, still, nearly ten minutes could mean their survival.

All stations signaled their readiness to receive the evacuated settlers. Lt Uhura established contact with the leader of the colony, a humanoid in his early fifties, named Simon Brooks, whose heavy
wrinkles at his temples showed that he had some extraterrestrial roots. Within the colonies in the Borderland, the population’s humanoid species intermixed in the last decades.

Most of Turkana’s evacuees gathered at the market place of the colony’s only town. Several families were still on their way to Turkana City but would arrive before too long.

“Reducing impulse speed in four minutes, sir,” Sulu said. Jim took a deep breath. He glanced up at Dr. McCoy, who had left the med bay to visit the bridge. He was grumpy the whole journey, no doubt in anticipation of the settlers that would be flooding his space soon. “And so begins the trek to the gallows,” he groused.

Jim ignored him. He may have understood the sentiment, but he had his duties to the mission to think about – and to the crew who trusted him to keep them safe; they came first. He looked to the upper deck of the bridge to the science station, where his Vulcan friend was still busy observing space within sensor range. “Something new, Spock?” he asked. The first officer turned around to him.

“Nothing, Captain, but I would point out that our sensors are only able to detect signatures after a ship has dropped from warp. This may indicate…”

“… Ten minutes to ETA. I know!” Jim groaned, gaining a sympathetic glance from the Vulcan. Spock, by nature, showed very little emotion, but Jim knew him well enough to recognize the small hints of anger and worry that his stoic expression displayed. But Kirk and Spock were not alone in their angst. For all of them, it was only too clear the danger that lay ahead.

“Captain, I have Mr. Brooks on the line again. He transmitted the precise data for the evacuation”, Uhura called, and Kirk rubbed his neck.

“Right! Mr. Chekov and Mr. Scott are manning the transporter room. Bones, you and Spock accompany me!” He activated the intercom at his right armrest. “Security! Lieutenant Commander Giotto? Are you and your crew ready?”

The answer came instantly. “Yes, Captain, we are already in the transporter room, waiting for you.”

“Roger that. Kirk out!” Jim turned his attention to the screen as the Enterprise dropped out of warp. A moment later Turkana emerged on the screen – a small planet with a blue, shimmering atmosphere. Jim sighed at the false peace the planet presented to space travelers. “Mr. Sulu, standard-orbit, adjust our speed to Turkana.”
“Aye, sir!” The Japanese helmsman retorted and set heading and speed.

“And when you finish, you have the honor watching sensors and you have the con.” Jim forced himself to smile, as Sulu glanced questioningly over his shoulder at him. “I know, you’d love the chair, Sulu, but blame the damn Klingons for keeping you from it – you have to look out for them.”

Hikaru smiled back. “No problem, Captain. As soon as something moves out there you’ll have me shouting loud enough to scare the little old ladies to death.”

“Well, at least you would have something to do besides complaining,” Kirk commented wryly and rose, waving off the indignant reply. “Mr. Sulu, if the Klingons approach before we complete the evacuation, be ready to haul our asses! We will evacuate as many people as we can, but I will not risk the Enterprise and her crew, or the evacuees aboard.”

Hikaru nodded. “Understood, sir.” He watched Kirk and the others heading towards the turbo lift, and he grinned as he saw Uhura reaching out for Spock and squeezing his hand before the Vulcan followed the others. “Good luck, Captain!” Sulu called. Jim simply nodded in return.

The young Japanese man couldn’t know that he wouldn’t see his captain soon again.

ST***ST***ST

Kor sat in the raised chair on the bridge of the J’Ethl and let his gaze wash over his chief officers, manning their stations. Only two hours until they reached Turkana. It was not the first time the Klingon Lord asked himself whether the Lexington would be there when they arrived. He almost looked forward to having words with Wesley – war or no war.

An incoming signal interrupted his thoughts and a moment later Lieutenant Keroth, the communication officer, turned around. “My Lord, a transmission from the admiralty for you.”

With a frown a bit less fierce (but no less dangerous) due to his more human-like appearance, Kor gestured towards the younger Klingon. He grabbed an earpiece from a small box that was installed at
his left armrest to listen to the message in private. His dark eyes widened ever so slightly, while a grim expression spread over his face. He turned around. “Confirm reception of the message and affirm that I have understood!” he barked and glared back at the screen.

The transmission he received concerned information the Klingon Intelligence had intercepted just hours ago – an official report from Federation media stating that in place of the Lexington, the Enterprise would serve as the evacuation vessel. Normally it would be out of the question to engage a Starship in a rescue-mission, but right now even he was tempted to break those rules. Orders, or no orders – he would not pass up the opportunity to get his hands on Captain Kirk and his first officer. Their value to the Klingon government was too great – as would be his praises were he to capture them.

James T. Kirk and his first officer Spock, now identified as the Vulcan, the interlopers of Qo’noS – what a gift! The identity of the woman and the other man Kor assumed to be the Augment was still a riddle for the Klingon secret service. They rightly assumed that Kirk and Spock were the commanding officers during the small but nonetheless deadly invasion of the Kheta Province – responsible for the murder of the three patrols.

The boy-captain, who trespassed onto the Klingon’s home world, defeated a Klingon squad in the Japori-system, and then gained victory over a strike group of Orion-vessels, would be soon in range. Kor knew every commander in the Klingon fleet would be delighted and jealous, if only he could capture the captain of the Enterprise and his first officer. It would be a great satisfaction and would also deliver a blow to Starfleet if she were to lose her ‘heroes’. There were plenty Klingon families who had a personal vendetta against these two officers.

Still the Klingon Lord was torn between his own codex of honor and the wish to get his hands on that young man. He had to take the two war criminals captive at any cost – even if it meant the destruction of the Enterprise, a bonus in the admirals’ opinion. Kor took issue with the order to destroy a Starfleet ship.

Perhaps he could capture Kirk without irreparable damage to the Enterprise. Oh, the annihilation of Starfleet’s flagship would only sweeten the victory, but he hated the thought of needless collateral damage. He would do what he could to preserve the lives of the evacuees. He didn’t revel in blood of innocents as Admiral Kommora did; he, who led the attack against the planet Tammeron with the intent to kill millions.

But, Kommora got what he deserved. And Kommora not only had been too cowardly to speak his mind, he also had allowed himself to be defeated by a civilian militia and some defense vessels of Tammeron before Starfleet arrived. What a weakling! What surprised Kor the most was the fact that one of their own scout ships had turned against them. He didn’t know the D’Ghor’s commander Karan personally, but his personnel file had been flawless as well as had his crew. Kor could not believe that one of their own people had turned against them and had defected to the enemy. Maybe
the answer to this mystery lay somewhere else.

It wasn’t the time to think about these past events right now. He had to come up with a plan to get Kirk and Spock into his hands without killing the evacuees in order to satisfy the admiralty.

He had an hour left to plot before he would inform the other commanders accompanying him – he would use the time wisely.

ST***ST***ST

“The fat is in the fire, as you Terrans say!” Ritek looked up from his station, where he sat to eavesdrop on the Klingon and Orion transmissions. Khan wondered what Terrans had ever said that. Ritek had been at it for nearly four hours now. “The Klingon spies got wind of the Enterprise’s mission and the Empire’s admiralty sent a message to the fleet, which is on its way to Turkana – just like the rumors said.” He met the piercing gaze of ‘Drythen’ and informed him softly, “They ordered the fleet commander to capture Kirk and his first officer at any cost.”

For a moment, Khan closed his eyes, while a cold fist seized in his chest. He knew it! He knew that it would come to this; James would get in deep trouble someday. Damn, why did Starfleet send the Enterprise – of all ships – so near to the Klingon border, putting one of their best men in danger? He cursed inwardly, then he pushed the rising fear away and switched into the role of military leader. His instincts told him that the Enterprise was not in danger – yet. It fell on his shoulders that it should not come to the worst.

He bent over the communications station. “Is it possible from this position to reach the Enterprise?”

The Regulian cocked his head. “Yes, she should be in range. But if you’re going to warn them, you should scramble the transmission. The Klingons have the same ability to hear as we have.”

“I will do even more,” Khan said. He motioned to Ritek to make room for him. The other man obeyed and let the Terran sit down at his station. “Do you have a voice changer?” the Augment asked. The Regulian pointed with a grin to several buttons; the super-human took a deep breath. “Right. Let me talk to them alone!”

Ritek hesitated a moment, then he shrugged and left the bridge without a comment.
Light years away, a nervous Hikaru Sulu watched the long distance sensors. They beamed aboard the first three hundred people, but there were still many waiting; more than the four hundred evacuees estimated by Commodore Wesley, more like six or seven hundred. It seemed many had changed their minds in the last minutes and wanted to leave Turkana, too. Kirk couldn’t reject them. He had ordered his crew to share their quarters with other shipmates, and all spare bedding was sent to the hanger bay to make room for their guests.

Doctor M’Benga, the specialist for xeno-medicine and Vulcanoids, showed his nitty-gritty side and ordered the senior citizens should stay in the cleared quarters for their comfort; the younger ones moved to the racks in the shuttle-hangar. Already the first vestiges of chaos began. How Giotto kept track with the melee was beyond Hikaru.

“The next ten people have beamed up,” Uhura reported and looked at him.

“If they hurry up then…” Sulu interrupted himself when Nyota suddenly lifted her hand to silence him. She listened to a voice in her receiver. Sulu watched her eyes widen in surprise.

“Sulu, I… I have The Shadow in the line. They… they are using Code 9 to scramble the transmission.”

The Japanese man stared at her, eyes wide. “What? Code 9? That is the newest one – only two weeks old! How did they…” He shook his head. “Never mind. Open the link.”

Quickly the Bantu-woman switched on the speakers and then they heard a male voice heavily altered by a voice changer. “Enterprise, this is The Shadow. Do you hear me?”

Sulu lifted both brows, nodded towards Uhura and cleared his throat. “Shadow, this is acting-captain Sulu of the USS Enterprise. How do you know the newest Starfleet-code to…?”

“No time for that, Mr. Sulu. Seeing that you are in command, I assume Captain Kirk and his first officer are still on Turkana?”

The two officers exchanged a questioning look; their hesitation seemed to make the stranger impatient. “Is Kirk still on Turkana?”
“I cannot say,” Sulu answered, stunned that the strange man knew *Enterprise*’s location. Ship movements were confidential and should not even be shared with family members. The next words took him aback at their brazenness.

“Fine, put me on his frequency and patch me through.”

Uhura frowned, and Hikaru straightened his back. “Shadow, we are very grateful for your help at Tammeron and the intelligence regarding Klingon cloaking devices, but the captain is unavailable at the moment. We are on a tight schedule so, with all due respect, leave me a message for him and I will pass it to him as soon as he…”

“Mr. Sulu, if you do not put me through, your captain’s life and that of your friends on the surface will be forfeit! I have information that a Klingon strike group is heading for Turkana; ETA one hour.”

Shocked the two officers stared at each other, then Sulu cursed before he ordered, “Lieutenant, call the captain and…”

“And pass me through, Lieutenant Uhura! I must speak with Kirk immediately!” The synthesized voice was sharp now.

Nyota opened her mouth in surprise. “What… How do you know my name?”

“We met before, Lieutenant. And if you do not want to lose the captain you consider a friend, or your Vulcan boyfriend, then inform Kirk that Sunrise wants to speak with him! *Now!*” It was an order, nothing less – a command from a man used to commanding.

Sulu stared at the large screen. Sunrise… Wasn’t that the name of the guy, who warned them about the cloaking device and the planned assault of Tammeron? *And now this Sunrise knows about Uhura and Spock? What the hell is going on here? Who is this?* He wanted answers, but now wasn’t the time for looking.

“Nyota, pass him through. I do believe it’s for the best.”
“Never one to hesitate, are you, Mr. Sulu?” Sunrise’s voice took a mocking tone, and Hikaru frowned, but before he could reply, Uhura reached Kirk and informed him of the call. Then she turned her attention back to Sunrise, “Sunrise, I have the captain. I’ll put you through now!”

The sun warmed the slightly damp air of Turkana city in the early midday. The houses were practical in form, but attractive – or they were. Now they were decaying – showing exactly which inhabitants lived hand-to-mouth and which were in the most need of loans from ‘business-friends’, though friends in this case was quite the misnomer.

The city wasn’t that big and offered room for only about two thousand colonists. The town was situated on a small, high plateau that extended like a promontory from the jungles and was reachable via a broad street or the official transporter that was located near the market. Those who lived at the edge of the city enjoyed a fantastic view of the small stripe of jungle situated between the town’s edge and the abyss. The lower lands beside and behind Turkana City displayed a lush canvas of wide fields and jungles sprawled 550 yards beneath the town.

No one took pleasure in the beautiful landscape – not now. The air reeked of fear and apprehension; it lay heavy over the town. Most of the inhabitants had come to the market to watch them go, ‘those who had never belonged here – deserters’. The people leaving Turkana seemed to understand the need to hurry; still they were far too slow for Kirk’s taste. The Security chief and his men received reinforcements from the Enterprise, and more some fifty security personnel were now lining the people up in an attempt at order.

In the meantime McCoy and his staff tried to triage the ill as best they could, while Spock, Carol Marcus, and a young yeoman collected the personal data of the people, and counted the pets. Neither Kirk, nor the others had thought about the fact that several families would have four-legged or feathered friends they wanted to take with them. Spock, who revealed himself to be an animal lover, had agreed to take the animals aboard even before Jim could make up his mind, earning a pointed look from his captain.

Now, after an hour, the evacuation had gained a rhythm, Jim took the opportunity to engage in a highly unpleasant talk with Mr. Brooks, who watched the departing groups with scorn. “Cowards!” the man murmured with loathing. “They never belonged to us.”

Kirk’s nerves were already on edge. He narrowed is eyes and glared at the man. “Everyone can live his life as he pleases – that is the advantage of the Federation. No one will…”
“The Federation is wrapped up in its own canted savior complex. It can’t tell where one lie ends and another begins!” Simon Brooks spat. “Rules, inane laws, taxes until they empty our pockets – until we’re bled dry with nothing left to give. Look around you, Kirk!” His hand gestured to the dilapidated town.

“Don’t tell me the Orions don’t demand payment for their ‘protection’. You can’t pin this on the Federation.” Jim growled. “And for what? They’ll deliver you to the Klingons, who…”

“Who are the Orions allies and therefore ours, too! They will…”

“They will imprison you here, demand ‘payment’ in the form of workers for their dilithium mines and quash the slightest bit of free will you had to begin with! Do you really think you’ll be able to speak your mind – retain any sort of freedom once Turkana falls to the Klingons? Anyone, who doesn’t obey their orders, is going to pay dearly for it – in blood, mark my words!” Jim’s eyes flashed with anger; it didn’t impress Brooks at all.

“Propaganda nonsense, Kirk!” he snorted. “Listening to you is like listening to Starfleet and the whole damn Federation council. You call this ‘speaking your mind’?”

“Well, maybe it is propaganda in your eyes, but maybe I’m right!” the young captain snapped, then his communicator beeped. Glad for the interruption he excused himself. He tried to be polite – he really had – but this guy was blind and glaringly stupid!

“Kirk here!” He answered, hoping that Sulu hadn’t already spotted the Klingons.

“Captain, I have Sunrise on the line for you,” Uhura told him and Jim went rigid with shock.

“What?” he gasped. Had Khan lost his brilliant mind? To contact him on an unsecured frequency via the Enterprise was simply insane!

“He hailed us a minute ago. He says the Klingon fleet will arrive in Turkana’s orbit in one hour. Says his information is solid.” He could hear the fear in Uhura’s voice. One hour – Jim felt himself paling. That was too soon! “Sir, he insists on speaking to you and…”

“Yeah, put him through. And then tell Sulu that we are on red alert.” He walked with long, determined strides towards Giotto and Spock. Just then, an altered, synthesized voice coming from his communicator, “James?”
“Yes, it’s me!” Jim replied. “Hold the line a sec.” He let his communicator sink to his side. “Spock!” he shouted over the heads of the lined up people. “Over here! Quick!” He lifted his communicator to his ear again and whispered, “Nien, have you lost your mind – contacting me like this?!”

Aboard the Flash Khan lifted both brows as he heard the shortened form of his given name – Americans and their nick-names! He decided to ignore it for now. There were more important matters to attend to. Shutting off the voice changer, he said urgently, “Jim, listen to me! We intercepted a message from one of the Klingon outposts meant for the chief of the Klingon fleet. They are on their way to Turkana. Federation news stations gave them everything they needed to know to get to you and your ship. The Klingon admiralty ordered the fleet chief to capture you and your Vulcan ‘at any cost’.”

If Jim’s face was pale before, now it was devoid all color. “So, they already know...” he murmured, feeling his heartbeat accelerate. “And they’re on their way to Turkana!” He looked at Spock, who stepped closer to him, hearing the last words. Alarmed the Vulcan’s eyes widened ever so slightly; Kirk nodded before he said into his communicator, “Stay on the line; my first officer is here.” He took a deep breath of the warm, damp air and turned to the Vulcan. “Spock, The Shadow’s telling me that the Klingons are only an hour away, heading towards us. I already ordered the red alert. We have to speed up the evacuation or we’ll all be dead as soon as the Klingons arrive.” He hesitated a moment. “They say the Klingon admiralty knows about us – the Enterprise – and that their fleet-commander has instructions to take you and me captive. We have to finish the evacuation now…”

“I am on my way, Captain!” That was all the Vulcan said, then he turned and jogged towards Giotto, and called for McCoy.

Jim spoke quietly in his communicator again. “Thank you for the warning.”

“Take the hint, Kirk, and leave! Now – while you still have time!” Khan’s voice sounded firm, but Kirk thought he heard concern in it, too. And it warmed him despite the fear festering in his subconscious.

“I can’t. We are in the middle of…”

“James, you know what happens if the Klingons catch you!”

“Yes, he is definitely concerned for me!” the young captain was pleased by the thought. But he continued, “There are more than six hundred men, woman, and children whose lives and freedom
“The rats are leaving the sinking ship – a ship that was good enough for them until now!” The Augment nearly shouted in his frustration. “They never would have turned their backs on this colony of outlaws, dealers and Orion-allies if it were not for the approaching Klingons. Do not risk your ship and your life for them.”

Pinching the bridge of his nose Kirk took another deep breath. Khan was right, but anyone with half a brain would run from the Klingons. And it was his duty to ensure the safety of those citizens of the Federation. The consequences of letting the Klingons have this planet were too great; the Klingons would never stop their march through Federation territory. They had to be stopped. Jim knew that he couldn’t give in the temptation to run that the super-human required from him. “Nonetheless they are innocent people, Nien. Families! I can’t let them down. You know as well as I do, if we let the Klingons have this – they’ll never stop.” Jim continued, “And you’d do the same thing – you did the same thing, or have you forgotten.”

“No! You’re not, Noonien, and you know that – we’re not. That’s what this is, isn’t it? That’s what we are – and that’s why you are warning me now.” That was as close as either man had come to naming this thing between them – the intangibles tangled in their DNA. Khan knew Jim wasn’t talking about his physical enhancements now. He meant their courage, their resolve…and he couldn’t bring himself to even give a name to other emotions. But these things that made them the men they were and engendered them to one another.

Again, Kirk surprised the Augment, but he admired the captain’s bravery – he needed James’ bravery, because for the first time he was afraid; not for himself, but for Jim. There was a short silence, before Khan growled, “You and your damn compassion and loyalty to Starfleet! Do you know what Starfleet will do if the Klingons get you? They will give a nice memorial speech, a condolence to your mother and brother, and that’s all!” But the super-human feigned the anger in his voice, and Kirk knew it.

Jim heard Khan sigh. “I know that I cannot change your mind once you’ve made it up. You are stubborn as a mule! So hurry – and do not dare get captured. Do you understand, Captain?” Khan’s voice held none of the mocking tone he used to take when calling Jim by his rank. Now, the voice held affection and admiration for the young, valiant commanding officer.

Kirk rolled his eyes. “Yes, sir.” He caught Spock waving at him with McCoy beside him. The doctor talked insistently to the Vulcan. Kirk turned his attention back to his communicator, “Nien, I have to go – tie up loose ends, you know. Thank you for your warning… and your worry. I’m…”
“I am not worried, Kirk, I am simply…”

“Liar!” Jim felt a smile tugging at his mouth that found an echo in his now gentle voice. “You are worried, otherwise you wouldn’t have called.” He had hesitated a moment, before he murmured, “Thank you. I’ll contact you as soon as we leave Turkana.”

“Use this frequency and…” Aboard the Flash Khan closed his eyes for just a moment, “be careful, James!” Khan broke the contact.

Back on Turkana Jim felt an odd mixture of gratefulness, warmth and something he couldn’t put a finger on. Then he closed his communicator, pocketed it and jogged towards his two friends.

ST***ST

They hurried. They beamed the refugees to the Enterprise in groups of ten. Kirk spoke with Brooks again, insisting the man to allow them to use the official transporter of the small city. It could only beam five people at a time, but at least it was some help. The families able to use the official transporter were beamed by Spock to the Enterprise’s cargo-hold. Security personnel waited for them and brought them to the hangar or the med bay – any place that could hold a cot and a body.

The line of those waiting shortened, still Jim was tense and repeatedly looked at the clock in his communicator. The minutes ticked mercilessly by, the clock became more a countdown than anything else.

They had only four groups to go. And then the jeremiad came. “Captain, the long distance sensors show six Klingon vessels just dropped out of warp,” Sulu reported. “A D7-cruiser, three Birds-of-Prey and two D4-cruisers. They will be here in nine minutes.”

Jim had cursed to himself before he replied, “Understood, Mr. Sulu. Make ready to leave on my command.” He changed the frequency. “Spock?”

The Vulcan answered immediately. “Yes, Captain?”

“The Klingons are coming. How many more left to transport?”
“Twelve people to go and…”

“All right, beam with them up and take the con. Sulu’s readying the Enterprise for the jump. I’ll come with the last group.”

The first officer hesitated a moment. “Jim, you should return to the ship immediately and…”

“Take the con ‘til I’m aboard. That’s an order, Spock!” He didn’t wait for a reply and closed the communicator.

McCoy ran towards him. “Are they coming?”

“Yes, you, Carol and your staff-members beam up with the next group.” He waved any protest away. “I’ll follow you soon. Mr. Giotto!” he shouted and the Security Chief, a man in his late forties, turned around and looked questioningly at his captain. “Take your men and beam back to the Enterprise as soon as we complete the evacuation. We are getting visitors!”

Giotto saluted quickly and called for his men to line up. Jim turned towards Brooks, who had crossed the arms in front of his chest and smiled mockingly. God, he wanted to slap this man. “Right, we are about to leave. Are there still people who want…?”

“Those rats deserting the ship over there are all who wanted to go,” Brooks interrupted him. “You can run, Captain.”

Jim felt angry heat rising in his cheeks, still he remained in control. “Pray that it won’t be you and your friends, who have to ‘run’ next!”

“Jim, come on!” McCoy urged him and pointed towards the others. “The people are safely aboard the ship; the Red Shirts will be the next and…”

“And you’ll go with them!” Kirk said firmly, clapping Bones on the shoulder; he turned him around and shoved him gently in the right direction. “There you go – and make some coffee for later.”
He didn’t give Leonard a chance to answer, but walked quickly to the middle of the market, raising his voice. “Is there someone else who wants to accompany us? This is your last chance!”

He looked around and saw only despairing faces. Behind him, the last group was beamed aboard, followed by an apprehensive McCoy and Carol Marcus; several Red Shirts accompanied the team. Then Kirk’s gaze came across a woman who carried a small girl. A boy – maybe five or six – clung to her; his hands tugged at her dress, and Jim saw that the lady was pregnant. Pregnant – and terribly afraid. She glanced at him and then to a man at her side. Whatever she said to him just then got her an angry reply. Kirk didn’t understand her words, but he didn’t miss the man’s loud, angry voice.

Frowning, the captain stepped nearer to the raging man, “I told already, we are staying! End of DISCUSSION!”

“Matt, think of our children. We all know that the Klingons may be…”

“I said, END OF DISCUSSION!” the man roared. “You’re my wife, so shut up!”

To say that Kirk was shocked was an understatement. He was outraged. This woman had two children to care for and a third on the way. How dare her husband put her in danger! “Ma’am!” he called, heading towards her. “Do you want to come with us?”

Her husband whirled around, pointing straight at Kirk. “You stay out of it, boot-licker, or I’ll make you!”

“Try it!” Kirk growled. “I’ve taken loudmouths like you to down while I was still at Academy!” He turned his attention back to the woman. “Ma’am, if you…”

“I said, STAY OUT OF IT!” Matt yelled, stepping forwards as did several other men. The atmosphere was hostile by now, and Jim knew that he was treading on thin ice.

One of the others said, “Mr. Allistor, just calm down. Your wife simply wants…”

“Shut up!” Matt Allistor hissed, glaring daggers at the other man.
“Captain!” Giotto’s voice called from behind Kirk. “We are the last now!”

“Beam back and tell Scotty to be ready to transport me, too!” he shouted without turning his eyes away from Matt and his wife; her eyes were glistening now. As he heard the buzzing sound of the transporter behind him, he spoke again. “Listen, your wife is pregnant. You have small children. Do you really want them to grow up under Klingon rule – if they are allowed to grow up at all?”

“Klingon rule! You Federation guys wet your pants as soon as someone mentions the word ‘Klingon’.”

“You better be ready to ‘wet your own pants’. I’ve have seen what Klingons do. They are savage, and when they get here, they will show no mercy. Believe me, you don’t want your wife in that danger!”

“There’s still one civilian who wants to accompany us, Mister and…”

“My wife goes nowhere without my permission…” Matt started, and Jim felt his anger boiling up once more.

“Your wife is an adult and not…” The communicator-signal cut in, irritated he activated it. “Yes?”

“Sulu here, Sir. Captain, only two minutes and the Klingons will be here. Please, hurry up!”

“Just listen to your friend, Kirk, and go!” Brooks had sneered before he stepped back, making room for Jim to be beamed away without getting himself caught in the transporter sensors.

Kirk’s gaze once again found the now silent weeping woman; her eyes pleaded with him to help her – he did. “Kirk to Enterprise. Scotty?”

“Aye, sir!” sounded the Scottish accented voice.
“Have you located my communicator signal?”

“Yes, sir, I’m ready to beam you up on your command!”

“Fine. Energize!” In the same moment he flung the communicator towards the young woman, who caught it out of reflex. The golden light of the transporter-beam enveloped her and the two children, taking her straight to the Enterprise.

ST***ST

Scotty adjusted the controller of the transporter, while Spock asked through the intercom, “Mr. Scott, do you have the captain?”

“Aye, sir. He just materiali…” Montgomery’s eyes went wide as saucers as he looked to the transporter platform where a young woman and two children appeared. She held a Starfleet communicator in one outstretched hand, her eyes glazed in bewilderment.

“Attention, crew, Klingon fleet approaches, ETA one minute. Prepare for warp!” the first officer’s voice sounded through the intercom. “Mr. Scott, go to…”

Montgomery overcame his shock and pushed the button for the direct-link to the bridge. “Commander, we donna have the captain, only his communicator and a young woman with her children!”

For a moment, there was no reaction; then the Vulcan tightly responded, “Say again, Mr. Scott.”

Gulping, Scotty looked at the young woman; Giotto helped her down the platform. “You heard me, Mr. Spock. The captain sent her instead…”

“Mr. Spock, the Klingons are in sight!” Sulu’s voice interrupted them. The engineer felt his stomach drop at the first officer’s order, “Deflector-shields full power! Lieutenant Uhura, try to reach the captain.”

Scotty balled his fists. As long as the shields remained up, they couldn’t beam the captain aboard.
And the Klingons wouldn’t waste a second before they launched an attack. He groaned. “Dammit, Jim, how do we get you now!?”

TBC…

Chapter End Notes

I waaaarned you, didn’t I? Yes, this is a cruel cliffhanger, and believe me, the next ones will be even more mean (*grin*). Yes, Jim and his damn heroism, but this is one of the reasons we all love him so much. Right, his impulses sometimes more than emotional, but that’s simply him.

And, as you can assume, Khan won’t be too pleased when he learns of the big, big trouble Jim has gotten himself into.

In the next chapter it will be our Augment, who listens to his heart and his guts, instead of his brilliant mind, Sulu will prove one again that you shouldn’t underestimate him and you will learn that there are still people on Turkana, who aren’t that bad – on the other hand, there are those, who are worse!

I hope you liked the new chapter, incl. Keenser, Wesley’s outburst (everyone can lose control), Khan’s worry and Jim’s damn bravery. Curious, as ever, I’m looking forward to your feedbacks.

Once again: Have a nice weekend,

Love

Yours Starflight
Hi, my dear readers!

Thank you so very much for all your lovely feedbacks and comments. Just a little warning: Who has weak nerves should be prepared for the next three chapters, because they will be hard (yeah, I’m evil).

So, no more prologue, but we’re travelling straight to the 23rd century, where a certain captain faces a lot of trouble his friends finding their hands bound and a special Augment loos it completely, before he changes into the fierce fighter and clever leader we have come to love.

Have fun,

Yours Starflight

Chapter 13 – In deep water

Shouts of surprise, anger and disbelief sounded, as the young woman and her children disappeared in the golden light of the transporter. Brooks was furious. He snarled, “Kirk, that was kidnapping and…”

Jim finally had enough. “That was ‘saving four innocent lives’, you moron! Adults can make their own decisions without requiring permission. Is that your idea of ‘freedom’ here? To crush those who don’t share your opinion?”

An older man with white hair stepped up to them. “Captain, I’ve got your ship for you!” he said calmly, offering Kirk an old-fashioned communicator. “They are hailing on all frequencies to reach you.”

Kirk nodded his thanks and lifted the small device. “Enterprise this is Kirk.”

“Captain! Spock here! The Klingon fleet arrived. I was forced to raise the deflector shield, but…”
“Take the ship and leave!” Jim commanded, feeling ice creeping through his veins. He knew exactly what the order meant for him.

For a moment there was no answer. Then the Vulcan murmured, “Jim, if we leave we will not be able to return for you. We…”

“The Klingons are readying their weapons!” Jim heard Sulu’s shout and there was only one thing for him to do to save his ship and his friends – and it just might cost him his life. Again!

“Leave – now! Maximum Warp and take the civilians to safety. That’s an order!”

“Jim, we can’t leave you!”

Kirk hadn’t heard Uhura use his given name, ever, and it made even clearer that his fate was sealed. He gulped. “I’ll try to reach Federation space later and contact you as soon as I can,” he tried to reassure his friends, knowing perfectly well that this must’ve been his father’s last words to his crew. “Now LEAVE!”

He heard Uhura’s voice again, this time addressing Spock. “Commander, the Klingons are hailing us.”

“Audio, Lieutenant,” the Vulcan ordered and Jim walked several steps away; damned and able to do nothing else but listen.

ST***ST

Aboard the Enterprise the tension was almost unbearable as the dark, hard accented voice of a Klingon sounded through the speakers, “Enterprise, this is Lord Kor of the Empire Fleet. We know that you are on a rescue mission. We let pass you through under one condition: deliver the criminals Kirk and Spock to us!”

Spock, who stood near the captain’s chair, lifted one brow; Uhura gasped. The room was full of shocked faces. Sarek’s son took a deep breath and ignored the stabbing pain in his stomach. Contrary to common belief Vulcans experience powerful emotions; using Arie’mnu, Vulcan’s learn to master their passions. Surak’s code enables them to confront mortal danger with control. But it didn’t prevent Spock’s survival instincts from flaring up; dread coiled in him now.
The first officer knew this situation would give him no choice. Not really. He had to surrender to the enemy to save the crew aboard the Enterprise – to save the young woman who made his heart beat faster and woke feelings in him he thought long buried. But what about Jim? Spock couldn’t decide his fate for him. His T’hy’la gave his life for him and his crew once, he couldn’t require it from him again. Though he knew Jim wouldn’t hesitate to sacrifice himself again to keep those he loved safe, but...

All of sudden Sulu stood in front of him, gripped his arms and forced him backwards, taking him completely by surprise; it was the only reason the Japanese man could move him at all. “Please, stay quiet, sir!” he whispered under his breath and nodded towards Uhura to open the channel.

Nyota, horrified at the Klingons’ demand and fearing for the life of the man she loved, realized what Sulu doing and obeyed without waiting for Spock’s confirmation. If he wanted to discipline her afterwards, so be it, but right now she would do anything to keep him safe; him and Jim Kirk!

Sulu threw an imploring glance at the confused first officer and said clearly, “Lord Kor, this is acting-captain Sulu of the U.S.S. Enterprise. As you stated, we are on a rescue mission and have more than 600 civilians aboard. Let us pass through and…”

“Enterprise, the condition stands! Hand your captain and your first officer over and we let you alone – this time!”

At that moment, Scotty reached the bridge and heard the last words, paling at them. His eyes found Spock, who gently but firmly freed himself from Sulu’s grip. The Vulcan opened his mouth to answer, but Uhura was already at his side and clapped one hand over his mouth, pressing the index-finger of her free hand against her own lips to signal him to stay – for God’s sake – silent!

Sulu raised his voice again. “Lord Kor, I am afraid that you are too late. Your Secret Service has wrong information! Captain Kirk and Commander Spock were killed during the battle with a Klingon strike group in the Japori System!” He sneered, before he fixed the astonished Vulcan with an intense glare. Hikaru knew Klingons weren’t familiar with the concept of bluffing – and that was the only chance they had to save Spock.

Scotty realized what Sulu had in mind and hastened with large steps to the astonished first officer and pulled him with Uhura’s and Chekov’s help to the upper deck of the bridge, out of the camera’s range, while a technician, switched them on and nodded at Sulu.
Straightening his body and crossing his arms on the back to hide his lieutenant stripes, Hikaru glared sternly at the large screen, where the face of the Klingon Lord would see him. At first glance it was clear that the hostile commander was a descendant of the Klingon experiments with Terran augmented DNA a century ago. His face was almost human-like, only the darker skin, the smaller dark eyes and his shape gave him away as a Klingon – a confused and angry Klingon!

Kor stared at the young man whose feature were slightly different from the other Terrans he had seen until now, but the officer was a human – and doubtlessly NOT Kirk! He had seen enough images of the Enterprise’s captain to recognize him, and this officer on the screen looked nothing like Kirk. Staring straight at the other man’s eyes he growled, “You are telling me that your captain and his first officer are dead?”

Sulu didn’t need to pretend to be angry; he was outraged by the enemy’s demand. It was an unwritten law that rescue vessels were not to be touched, still the Klingon Lord would only follow this rule of honor if he take Kirk and Spock captive. That was… insolent!

“They and several other officers, who were my friends!” The Japanese snarled. “Thanks to you!”

It was a rare thing to see a Klingon baffled – like Kor was now. “Thanks to me?” he asked, doubting the Terran’s mind. It was the first time that he met the Enterprise and her crew, so how could he be responsible for Kirk’s and the Vulcan’s demise?

“Thanks to your admiralty and Council for this war!”

Kor’s face darkened in anger. “Be careful what you say, human! It was you and the Federation who insulted us, provoked us with the attack against our home world!”

“Attack against your home world?” Sulu snorted. “Captain Kirk caught a criminal, who could endangered you, too, and how did your soldiers thank him? By trying to kill him!”

“Kirk has…”

“It doesn’t matter anymore. He and our first officer are dead! Therefore we can’t agree to your demands. Will you still let us pass through or do I have to inform hundreds of families that they are going to die here and now?”
For a long moment Kor was silent, then he answered simply, “This is up to you!” But something in the Klingon’s eyes had changed. There was a hint of outrage in Kor’s gaze and it told Hikaru that the commander held his honor above nearly all else; it was beneath him to murder innocents. Instantly Sulu used it to his advantage.

“On the behalf of the civilians we have evacuated, I request you to let us go,” he said cold. “If it weren’t for them I would gladly stay and exact my own recompense for their deaths, but I have to think of the men, women and children aboard, whose lives depend on me!”

“You are in no position to exact anything.” Kor’s eyes widened. “You have one ship and we are…”

“I would die with honor avenging my captain’s death!” Sulu interrupted him loudly. “And I would take as many of your people as I could with me. But I will have to wait until we meet again – we, two or any other Klingon commander, who crosses my path!” He couldn’t read Kor’s expression clearly, but the Klingon seemed to be impressed. He didn’t know, but the Japanese concept of honor rivalled their own. “And now let us pass through!” he demanded, not giving an inch.

For a long moment the Klingon only looked at him, then he snapped an order to a nearby junior officer, before addressing Sulu one last time. “You are a warrior and your loyalty to your dead captain speaks of honor. You may go – but I look forward to meeting you again.”

“Count on it!” Sulu replied, before he gave him a curt nod. “Lord Kor!”

“Captain Sulu!”

The technician closed the channel and the screen went dark before flickering to the image of deep space and seven Klingon battle.

Sulu let out a deep breath, wiping his forehead. God, that had been close!

He turned around and watched Spock stepping away from Uhura, Chekov and Scott, who held onto the Vulcan the whole time. Hikaru moistened his lips, knowing perfectly well that he would face disciplinary procedures for his unauthorized action. “Sir…” he began, but the Vulcan lifted a hand to silence him.

“Not now, Mr. Sulu. There are more important things to do just now.” He glanced sternly at the
young Russian. “Mr. Chekov, can you locate the captain?”

The ensign ran to his station and quickly scanned the market place of Turkana City. “Zere are too many humans, zir, and…”

“The captain used a communicator someone handed him. You should be able to locate him through the open channel and…”

“Zir, zere isn’t an open channel anymore.” The bright eyes of Pavel looked helplessly at him. “And… and zere are already dozens of Klingons encircling the market place.”

Uhura had rushed to her own seat and checked the frequencies her chocolate skin paling. “Mr. Chekov is right,” she called over her shoulder, despair in her voice. “The communicator the captain used is switched off. We have no chance of finding him now. He could be anywhere.”

Sulu and Scott moaned, while Spock closed his eyes. They all knew what that meant; they had to leave without Jim Kirk. They couldn’t stay here any longer without alerting the Klingons’ and endangering the ship and all people aboard.

For just a moment Spock felt the urge to curse – something that was highly illogical and unacceptable for a Vulcan – but his human side raged inside him. The order he had to give now was the hardest command ever had to give – and ever would have to give. “Mr. Sulu, set course to Kenda II, Warp 8 as soon as we are out of Turkana’s orbit.”

Uhura swallowed around the lump in her throat. “What… What about Kirk?” she whispered and as she met Spock’s eyes, she saw something no one would see who didn’t know him as she did. There was pain in the dark depths; pain, sorrow and wrath.

“You heard him. He will try to reach Federation space and contact us as soon as he can.”

“And what if he can’t reach Federation space? What if he can’t leave Turkana?” Scott’s voice sounded pressed and Spock took a deep breath.

“Then let us hope that he stays hidden until we can come back for him.” Spock sat down in the captain’s chair – it felt utterly wrong. “Mr. Sulu, take us out of here!”
He felt the shocked and angry glares of the officers on the deck, but he couldn’t blame them. His hands were tied though. He had to get the evacuees to safety – and then he would get Jim back. It wasn’t the first time he understood the all-to-human drive to hope. Right now this was the only thing he could do.

Kirk listened to Sulu’s glorious bluff that saved Spock. Uhura once told him that Klingons didn’t understand feints like the one the Japanese used, and as it seems she had shared her knowledge with Sulu, too. The helmsman’s action spoke of it and Jim was grateful for Hikaru’s meddling, before he switched off the communicator to prevent that the Klingons would scan the open frequency and made the correct conclusions; realizing that they had been tricked. It was quick thinking and the man deserved his own ship one day. It was bad enough that he would be arrested as soon as the first Klingons beamed down and recognized him; at least his Vulcan friend, Bones, and his crew aboard the Enterprise would be safe. He couldn’t require anymore from fate; a fate that had a horror he couldn’t imagine.

When he heard the first sounds of the transporter, a sickening feeling bloomed in his stomach; he straightened his shoulders and readied himself to meet his doom with a stoic grace befitting his station. His thoughts drifted back to Khan, ‘Don’t you dare to get caught…’ Dread and grief filled him. Nien had risked his freedom by warning him, but it seemed the Augment’s selfless act was for naught. Jim knew that he would be taken captive. The prospect of his immediate future made him shiver. He wanted one last look, one last touch, one last word with those he loved most – his crew, Spock. He got that with Spock and he wouldn’t ever take last words for granted. But now he wanted those last touches and last words with Khan too. If only…

“Captain?” The old man who lent him the communicator laid a hand on his arm. “Come with me.”

Bewildered, Jim looked at him. “Pardon?”

The other man took the communicator from him and pulled at his arm when the first heavy steps sounded through the streets. The next transporter beams sounded near the market. “Come quick m’boy. If the Klingons see you in your uniform they will kill you.”

Kirk realized that the old man wanted to help him. Relief breezed through him, and he followed the man; passing through the murmuring crowds.
“Quick, lad, they’ll see you!” The old man continued to pull and Jim came willingly; hoping they could get to safety before the Klingons saw him.

They were nearly running as they moved from the market center to the town. They dismissed the furious glare from the man whose wife and children were now secure aboard the Enterprise. They continued down a small street, around a corner and just as four golden lights announced the arrival of more enemies, the stranger opened a front door and shoved Kirk inside, before he stepped in and locked the door behind them.

Jim found himself in a small foyer from which a staircase led to the second level that contained and several doors led to other rooms.

“This way!” the old man said and pushed Kirk towards a door. “Hurry, we have no time to waste!” He guided him into a room with an open fire-place. “Strip!” he ordered, while he hastened to the fireplace, knelt down and put some wood and paper on the grate. He threw a glance over his shoulder and frowned when he saw the young officer eyeing him warily. “We have to burn your clothes, so the Klingons don’t recognize you immediately.”

Jim nodded quickly – of course, that was the best solution – and stripped off his boots, trousers and shirt; giving everything except his boots the old man, who put them in the fire. Only clad in his underwear, Kirk stood and watched his uniform succumb to the flames.

“Right!” The old man rose. “I’m Patrick O’Farrell,” introduced himself. “And you, m’boy, need new clothes.” He left the living room and Jim had no other choice than to stick to Patrick’s heels, boots in hand. The old man – Kirk assumed an Irish lineage – went into bedroom and pulled a pair of trousers, a shirt, and a sweater. “If someone asks, you are a childhood friend of my son, your family and ours new each other on earth and you are visiting.” He watched, while Jim slipped into the clothes; they didn’t fit well but they was better than nothing.

Kirk looked shortly up. “Where is your son?”

“Not among the living anymore,” came the soft reply. “He died four years ago in a traffic accident.”

Jim was taken aback, before he murmured, “I’m sorry, Mr. O’Farrell. I didn’t mean to open fresh wounds.”

Patrick smiled sadly. “It’s all right. You remind me of him, a bit. He was like you, strong-willed,
brave, ready to help those in need. He spoke his mind without hesitation…” He sighed. “You would’ve like him.”

The captain had dressed by now and pulling the pant legs over the boots. “Do you live here alone?” he asked and Patrick nodded. “Yes. My wife died ten years ago. My son, Brady, was about to get married. I maintained contact with his fiancé for a little while, but eventually she met another young man and we barely see each other now. She moved to one of the farms in the countryside and only comes to town for shopping.”

Jim realized why Patrick O’Farrell hadn’t left Turkana. He had nothing to live for anymore and wanted to stay where those dear to him were buried.

It was getting rowdier outside now. He heard angry voices and the dark rumbling of the Klingons. “It looks like the Klingons aren’t exactly the benevolent guests Brooks and the others imagined them to be.”

Patrick waved it off. “Fools – all of them! But let them be. They will have their eyes opened soon enough.” Havoc erupted outside and the two men exchanged a look. O’Farrell murmured, “What do you want to do now? Your ship had to leave and you are stranded here.

Jim rubbed his neck. “Well, I hope on the situation here Turkana will normalize and your everyday life comes back. Turkana trades with the other planets within Borderland. Maybe I can leave this colony with one of the merchant vessels and return to the Federation.” He pressed his lips shut then quietly said, “Otherwise I’m fucked.”

Patrick closed the distance to him and clapped him gently on the shoulder. “Chin up, m’boy. Your crew won’t let you down. As far as I can tell, that Vulcan is your friend and there is one thing about those pointy-eared aliens – they will move heaven and hell to do what is right for a friend.”

A melancholy smile played at Jim’s mouth. “My crew would fight the devil to save me. But coming back is not an option right now. As soon as the Enterprise nears Borderland or the Klingons see her, they’ll attack. I’d rather hand myself over to the enemy than have them capture my ship and murder my crew. I am on my own for now, and I don’t want to put you at risk – I am a wanted in the Empire. If the Klingons find me in your house …”

“Rubbish!” the old Irish man interrupted him. “I had my life – if I can help to keep yours the rest will be worth it. I’m just glad to be in the right place.” He clapped him once again on the shoulder and headed to the door. “Come on. I think it’s time for a late lunch!”
Jim watched him leave the room and took a deep breath. He was grateful for Patrick’s help, but he knew that he was a danger for O’Farrell. He would leave as soon as possible and attempt to get out of town and to an area not flooded with Klingons; easier said than done. But he had to try. He had to stay alive and to return to the Federation. His crew, his ship, and the war he wanted to win were waiting for him. And so was the man who had gone from nemesis to lover in the space of a night; he was waiting. And Jim wanted him again, it again – whatever it was they had – he wasn’t ready for it to end. It was the first time he admitted to himself what he wanted. He wanted Khan. He wanted to be wrapped in him again, engulfed in the fiery passion that once burned between them.

Khan stared at the communications station aboard the Flash; wishing he could will the device to bring him Kirk’s voice telling him that everything was fine, but the station stayed silent. How long ago had he spoken with James? The chronometer told him that 115 standard minutes had passed since he cut the link. The Klingons must have arrived by now and the Enterprise should be leaving Borderland area. Why hadn’t Jim called yet? Certainly he was busy with the evacuated civilians and in a dangerous area, but a quick message to tell him that all was well didn’t require much time. Kirk could have spared a minute to hail him.

The Augment scowled and groaned to himself. He sounded like an overbearing parent waiting their child to make the ‘I-am-all-right-call’, but he couldn’t help himself. Dread was bubbling up, threatening to spill over now; a feeling of foreboding overtook him.

He simply knew that something had gone terribly wrong. Presentiment, like an injured animal left vulnerable, rolled in his gut and spread through every fiber of his being. It forced the savage side of his character to the surface that screamed at him rail against the vulnerability. If James was okay he would have contacted him by now. Something was wrong.

Ritek sat beside him and rested his feet on the station’s panel listening to the intercepted transmissions. He caught Khan’s asking glance and shook his head. No, he hadn’t heard anything regarding or from the Enterprise.

That’s it! Khan had enough! He borne patience if necessary, but in this case his endurance was at an end. Activating the voice changer and scrambling the transmission with Code 9 again, he hailed the Enterprise. If Kirk was fine and merely frantically busy he would learn about it from Lieutenant Uhura. If Jim was injured or in danger (and the thought chilled him) perhaps he could act in time.

He cleared his throat, adjusted to the right frequency and spoke, “Enterprise, this is Sunrise. Come in, Enterprise!”
“Mr. Sulu, you are certainly familiar with the ‘General Orders and Regulation of Starfleet’!” Spock looked straight at the helmsman, who had turned around in his chair and faced the expected rebuke – if only it stopped there. He could be put to trial for insubordination, assumption of authority and manhandling (a little bit) a superior officer.

“Yes, sir,” he said calmly, looking directly in the Vulcan’s dark eyes.

“And do you know how many regulations you disregarded?”

Hikaru knew that Spock wasn’t angry by the tone of his voice and his face. They knew each other well enough for that. The science officer may be a Vulcan, but even they were not immune to irritation. “Many, sir,” he answered. Spock nodded.

“Yes, ‘many’. You took the con unauthorized, unilaterally negotiated with an enemy during war, pronounced your superior officers dead, silenced the commanding officer” – he glared shortly at Uhura, who simply lifted her chin – “and incited crew members to remove the commanding officer from the scene; that’s mutiny.” He cocked his head. “If followed the rules I would have you arrested immediately to face court martial.”

“He did it to zave you, zir,” Pavel hesitantly cut in and found himself in the Vulcan’s focus.

“I am aware of it, Mr. Chekov. And he not only saved my life by… acting in spite of the regulations, but also the captain’s so long as he stays hidden on Turkana. Therefore, Mr. Sulu, your behavior in this extraordinary situation was curious but welco…”

“Jim is WHERE?” The outburst came from the open turbo lift, where a shocked McCoy had stepped on the bridge just a moment earlier. He came to report the medical status of newest passengers, but all thoughts fled his mind when he heard the news.

Spock turned around and calmly met the horrified gaze of the ship’s doctor. “The captain is still on Turkana. He sent a young woman with her children up before we had to raise the deflectors and…”
Leonard pointed to the screen. “We are MOVING, Spock! We are at warp speed, which means that we are moving away from Turkana – where Jim is!”

The dejected atmosphere on the bridge became even gloomier; everyone looked at the enraged CMO.

“I am aware of it, Doctor,” the Vulcan replied – emotionless to untrained ears. “He ordered us to leave as the Klingons arrived and…”

“And of course you obeyed – leaving him to die!” McCoy was furious - appalled! He had lost his best friend once; he didn’t want to experience the same grief again. And he was sure Spock didn’t either. They both loved the Iowa-kid like a brother. McCoy would die for him and he was sure Spock would too. How could he let Jim down!

“If we hadn’t left Turkana speaking with Lord Kor, we all would be dead now,” the first officer replied almost gently; seeing the same grief on McCoy’s face that burnt deep in him. “If we had stayed, the Klingons would know something isn’t right. They would discover our bluff…”

“There is something not right!” Leonard groused; he pointed at the Vulcan. “Jim should be sitting there, not you!”

“I know, Doctor, and I would rather have the captain here. But…”

“No ‘buts’!” McCoy’s face reddened with raging anger. “Turn the ship around and…”

“That would mean…”

“Commander, I have The Shadow on the line. ‘Sunrise’ wants to speak with the captain,” Nyota interrupted. She exchanged an uneasy glance with her boyfriend and then with the furious CMO, who stared at the Vulcan. Leonard snapped, “Well, tell our secret supporter what has become of Jim!”

Spock didn’t bother with a reply. He understood McCoy’s searing anger. If he were truthful with himself (and Vulcan’s cannot lie, even to themselves), he would admit that he too, was frustrated with the situation.
“Put him on audio, Lieutenant. As far as I can calculate he avoids visual transmission on principle.”

Nyota nodded and answered the hail, “Sunrise, this is the starship Enterprise. I will link you to Commander Spock.”

At the space dock Khan’s brow shot up. Spock… He didn’t want to talk to this man ever again, but it seemed he had no other option. Jim wasn’t on the bridge to answer the call. He couldn’t deny it now. He knew that the Vulcan had the con because Kirk couldn’t fulfill his duty aboard. His unease grew.

A moment later he heard the deep, calm voice of the Enterprise’s first officer and the old wrath flared up. “Sunrise, this is Commander Spock, first offi…”

“I know who you are, Vulcan!” Khan interrupted him sharply. He needed all of his concentration to remain in control of his emotions. Because of this man he had grieved; he mourned and he killed – for nothing. All the despair and unbearable pain he had endured at the thought of his family, murdered, was because of this one Starfleet officer. Spock, who had mercilessly played with his love for his crew. The desire to throttle this man was almost overwhelming. Only his concern for James quelled his anger enough to act civil toward the Vulcan. Fury would get him nowhere. “Where is Kirk!” he demanded. The silence stretched on and his stomach clenched for fear of the news he knew would come.

“I am sorry to tell you that Captain Kirk isn’t aboard, Sunrise. He is still on Turkana.”

Khan went rigid. “Have the Klingons arrived?”

“Yes, over an hour ago.” There was another pause, before Spock continued, “The captain stayed behind to help a woman and her children flee. He ordered us to leave.”

The answer delivered sharp blow to the Augment. Even though he expected bad news, the intensity of his feelings, which rose in him put him off balance. “You… left him?” His voice came out in a hiss at the Vulcan’s reply and Khan saw red.

“We had to activate the deflector shields and leave immediately. The Klingon fleet commander gave us an ultimatum and Captain Kirk gave us an order …”
“YOU LET HIM DOWN?”

This time it was Spock, who lifted his brows and several members of the alpha-shift flinched, as the roar sounded through the speaker. For a moment he thought he heard a predatory animal, ready to strike.

“You call yourself ‘his friend’ AND YOU LEFT HIM TO DIE?” ‘Sunrise’ snarled with fierce wildness and the Vulcán realized that the other man was a warrior through and through. He had an urge to explain his decision – not only to the mysterious stranger, but also to McCoy, who still glared daggers at him.

“I followed the captain’s order and had to think of more than thousand peo…”

“HE DIED FOR YOU, VULCAN!” Khan shouted aboard the Flash; his handsome face a mask of fury and hate; his fist landed on the panel of the communications station. “He DIED once – and has now to face TORTURE AND DEATH AGAIN! HOW COULD YOU!? How DARE you to leave him to that fate after what he has done for you and his crew! I’ve been called a monster over and over again, BUT I WOULD NEVER LEAVE ONE OF MY OWN, NO MATTER THE COST!”

Ritek stared at him – shocked – not knowing how to react as he saw and felt the hot wrath of his shipmate. Then his eyes found where ‘Drythen’s’ fist had landed and he gasped. There was a dent in the metal. Who was this man? He couldn’t be a common Terran. Not in a million years!

“Don’t call me a traitor, but I agree with this guy! You should have done something, Spock!” Another angry voice sounded from the background of the Enterprise’s bridge; a voice Khan knew well.

“Doctor!” he growled, bile rising in his throat. “I thought James was your friend, too.”

Leonard stared dumbfounded at the source of the voice. The voice was heavily altered, but it didn’t matter. Whoever this man was, he knew them. He knew them well enough to identify them by their voices and he knew about their relationships to each other. “Don’t blame me,” he snapped. “I learned about this disaster only a minute earlier than you! And I approve your accusations.” He glared at the Vulcán. “Jim broke the Prime Directive to save your butt back on Nibiru, Spock. He lost his command to save your ass. And what did you do? You stuck to your beloved regulations – just like I told Jim you would if you were in his place.”
“This has nothing to do with regulations, Doctor,” Spock answered with a stony expression. “There were two possibilities: To leave without revealing the captain’s presence on Turkana and hoping he could hide. Or stay, to give the Klingons the indication that they have been tricked – and us killed with 600 civilians! What would you have done?”

“I wouldn’t have left Jim!” Bones hissed.

“And that would have kill us all – and him,” Spock stated as a matter of fact. “The captain will try to reach the Federation space and…”

“And how will he do this?” ‘Sunrise’ s’ voice boomed again through the speaker. “Tell me, what are the chances that the captain gets out of there alive and well?”

“If the captain is not discovered, the chance 9.8263 percent, still James Kirk is famous for his ingenuity and…”

“SHUT UP!” the other man snarled. “You abandoned him and exculpate yourself with your hope of Kirk’s cleverness, excusing everything with your regulations and an order he had to give because he loves nothing more than his crew and his ship.”

McCoy grimaced. “He is right, you know!” he harrumphed toward Spock, who pointedly lifted brow.

“I am certain that Starfleet Command will take proper action as soon as they…”

“Your damn Starfleet will do NOTHING!” ‘Sunrise’ interrupted him, enraged, before he audibly took a deep breath to calm himself. “Pray that our paths never cross, Vulcan, or I will make you pay!” His voice was quieter now, but deadly cold. Then the connection was cut.

For a long moment everyone on the bridge stayed silent. Uhura looked at Spock with large eyes. Had this stranger threatened him? Yes, he had! And the Vulcan stayed perfectly calm, as if nothing happened.

The truth was that the first officer took the threat very seriously, though he knew that ‘Sunrise’,
whoever this man was, had little chance of getting to him. And even if they met someday, the Vulcan 
highly doubted that it would come to a fight. It seemed, ‘Sunrise’ was quite ardent in his perceived 
friendship with Jim Kirk. The man’s nerves were raw, a true statement for all present, humans had a 
tendency to overreact in such situations.

Here and there murmurs had erupted, while McCoy stepped to Spock. “Have you informed Starfleet 
Command?” he asked with a low, irritated voice.

“Not yet,” the first officer admitted. “I wanted to gain some distance from Turkana, before…”

“Contact Commodore Wesley first. Maybe he can help Jim.” He fixed him with a fierce stare. “You 
owe Jim. Fix this!”

Spock nodded wordlessly and turned away; only his eyes betrayed the emotional turmoil raging 
through him.

ST***ST***ST

Aboard the Flash Khan needed a moment to gather his self-control and to stifle his emotions as 
Spock was doing light years away. He knew it would eventually lead to disaster, trying to cork a 
vulcano. But the fear and dread bubbled and leaked out of him. After a bit, he was able to quell the 
torrent and calm down enough to think straight again. James had been left behind on Turkana – a 
planet that was annexed now by the Klingons. This race sought revenge on the young captain and 
would show him no mercy.

Khan had to act now!

Turning around to the darkened main screen on the bridge he raised his icy voice. “Computer, show 
tactical location of Turkana and the adjacent borders of the former Neutral Zone. Identify areas under 
Federation control!”

A moment later a star chart emerged on the screen displaying the requested information. Sitting down 
at the navigation station, he quickly programmed the direct course from Aldebaran to Turkana. He 
bit back a growl as he read the data; he would need nearly nine hours to reach the colony and Jim. 
Even if he set off this minute he would be too late. The super-human didn’t fool himself for one 
second. The Klingons wouldn’t spare the young captain when they found him. And they would 
make his death slow and painful.
Perhaps ‘slow’ was his chance at a successful rescue. If the Klingons seized Jim, the young captain would be put through a very personal hell, but every minute he lived was a chance at survival; every minute brought Khan that much closer. He had to do it – and he was the only one who could. James was his family now; Khan’s own blood coursed through the captain’s veins. He wouldn’t abandon him, just as he wouldn’t abandon the other members of his family – no matter the risk. Though that risk meant he could lose his own life and as a result his crew would be left in their cold sleep indefinitely. But he had to rescue the only living being in this damn universe who cared for him – and who had touched his soul. His heart left him no choice in the matter.

His decision made, he cursed Starfleet for sending Kirk out there and he cursed Kirk for…for what? Jim was right about everything – about who they were as men of honor and duty. And he was right about them and what they were together. James had to follow his own sense of duty and his nature that made him the leader he was. Khan couldn’t blame Kirk for being first and at all a captain.

The Augment deleted the chart and rose. The Flash would be of no use to him. “Where is Galven?” he asked. Ritek, still shaken by the Terran shrugged hesitantly.

“As far as I know he is still down at the bar getting drunk – if he isn’t already.”

“Right. I have to speak with him,” Khan said. He had no intention of doing so. Timing was everything and he wouldn’t waste any asking Galven for permission to use something, The Shadow would never have gotten without him. What was the saying of the old pirate-days, ‘Who seized the booty, will keep it’. And he wasn’t above doing just that!

“What should I do while you’re down there?” Ritek asked. The Augment flashed a predatory look that made the Regulian warily. This man was dangerous – very dangerous – just a step away from being driven over the edge.

“Keep eavesdropping our enemies and listen for Starfleet transmissions concerning Turkana. I’ll be back as soon as I can!” He was about to leave the bridge, but glanced back one more time, feeling real gratitude for the comradeship of the alien man. “Ritek?” The Regulian looked at him with some unease. Khan took a deep breath. “Thank you!” he said with honesty. Ritek returned the sentiment with surprise, “You’re welcome.” But Khan had already activated the transporter and was beamed away – straight to the D’Ghor.

A minute later he powered up the onboard systems and started the engines. After the moorings detached, the D’Ghor began to move. The Augment almost wished he could see the perplexed face of Ritek, and maybe just for a moment, his conscience pricked at him. Perhaps he should have left a message with his intentions. After all the members of The Shadow were his comrades in arms. But
he brushed the sentiment off as quickly as it had come. James’ life was on stake. Nothing else mattered now.

Without effort, Khan steered the Klingon scout away from the shipyard. An incoming signal sounded, followed by Ritek’s voice, “Drythen? Is this you aboard?”

For a second Khan hesitated, then he answered the call. “Yes, it is me.” Before the Regulian could reply, Khan continued, “I have something to do and I will be back as soon as possible. Give my regards to Galven and…”

“You’re going to fly to Turkana to fetch Kirk, aren’t you?” Ritek’s voice sounded shocked. “Lad, that is suicide. If the Klingons or the Orions find you, then you…”

“The D’Ghor can be cloaked, as you well know, the added batteries are fully charged and the sensor-disturbing system works flawlessly! They will not know that I am coming and by the time they do, it will be too late.”

The scout was already at the exit, as Ritek groaned, “Lad, listen, I know that I can’t stop you but just wait until the others are here. Together we can…”

“I will not place you in danger because of my personal business. Stay safe, Ritek. I’ll be back!” With those words he closed the line and set the course to Turkana. The D’Ghor had barely left the shipyard when Khan pushed her to warp speed, leaving Aldebaran and his comrades behind.

ST***ST***ST

Commodore Robert Wesley stared at the small monitor in his quarters that showed the expressionless face of the Enterprise’s first officer, who had reported what happened. Shock was painted across his features. For nearly a full minute Bob stayed silent, attempting to process the young captain’s likely fate.

Damn! This was so typical for George Kirk’s son. He was like his father in so many ways – only more reckless. To stay behind, giving others a fighting chance at survival then ordering his ship to leave before it could fall into the enemy’s hand was one of the bravest things any Starfleet officer had done. And Jim had done this so many times now, it was beginning to get old. But even the thickest idiot could count on one finger what lay ahead. Kirk had to be aware of the fate he would have to face, still he sacrificed himself. Well, it ran in the family.
Bob had heard of the rumors that Kirk had died in the warp-core of his ship last year, during the encounter with the Augment retained by Section 31. But he still took the story for what it was, an incredible exaggeration. No one could return from death, so it had to be sheer luck that the radioactive radiation hadn’t damaged Jim enough to kill him. ‘Oh, but if anyone could cheat death, it would be that boy,’ Wesley thought to himself. But the commodore didn’t know the truth. The events in the med bay that day were secret. Only the most senior admiralty and the bridge officers of the Enterprise along with the doctor, knew how Jim survived.

Taking a deep breath Wesley looked at the Vulcan, who was one of Jim’s closest friends; he thought to see some emotions stirring deep beneath the cool glance. “You did the only right thing, Commander,” he said; his voice tight even as he tried to reassure the other officer. “There was no option left – still I wished there had been something you could have done.”

Spock nodded ever so slowly. “I agree, sir. Captain Kirk is not only one of the finest officers Starfleet has, but he is also very important to the crew.”

Of course Bob recognized what the Vulcan told him in a roundabout way. Jim Kirk was important to his friends and Spock blamed himself for the outcome of the mission. He bit shortly his lips. “Is there still the chance that Kirk could hide somewhere?”

“He was in the middle of Turkana City, sir, and only those who don’t feel any loyalty to the Federation remain on the colony. He may have found shelter, but his odds of staying hidden long enough for personnel recovery are 327 to 1.” Depression tinged his voice and Wesley sighed quietly, damming the reporter to hell and back who had simply tried to boost his career at the expense of the captain’s life.

“Maybe Jim’s uncanny luck can contribute to better odds. Still we have to do something. We both know what Klingons do to their enemies.”

Spock cocked slightly his head and watched the other man frown in frustration. “I will send you my full report in just a few minutes, Commodore, including the details regarding our communication with the Klingon commander, Lord Kor.”

“Kor?” Wesley’s eyes widened slightly. “Commander Kor – plane human forehead, small trimmed beard, shorter hair than the usual Klingon style?”

One brow of Spock rose. “Yes, you describe him correctly, Commodore. I think it’s the same
Klingon you concluded the Treaty of Organia with.”

Bob leaned back in his chair and crossed his arms in front of his chest. “I am almost relieved that’s him we have to deal with. He may be a fierce fighter but he isn’t cruel and is open to reasonable arguments. Should our troublemaker be caught, I maybe can offer Kor something in exchange for Kirk’s release.”

The Vulcan didn’t want to object. He knew how important hope was for humans. Still he doubted that there was something in the world that would change Kor’s mind, if he should capture Jim.

ST***ST***ST

Four hours had passed by since the Klingons had annexed Turkana. The afternoon was about to melt into the dawn of the evening, as Kor, son of Ryan, sat down behind the desk that was in the office of Turkana’s leader. The man had been removed from his position immediately after the Klingons had taken hold of the colony, and only would get back his responsibilities if he proved himself trustworthy. Kor didn’t take any risks. The colonists had welcomed his warriors, but it lasted only minutes before the first of the turmoil started.

Humans!

It was always the same with them. One word against their opinion and they screamed bloody murder.

Still the most of the inhabitants had stayed calm and almost tolerant – something that was new for Kor – and he didn’t trust the peace. Therefore he had given orders to keep everything in order. There was now a curfew until the next morning, and after several unpleasant encounters with some stubborn people, the streets of the city were cleaned and the citizens were in their houses. The countryside was secured too, and the few farms weren’t a threat for the Klingons.

The next step had been to install a protective energy shield over the whole city to hinder the citizens from beaming to Kahless-knows-where and to prevent other inhabitants of the planet coming to the town. Kor wanted to take a census and gather personal data of the people who lived here before he would allow them to return to their daily routine. For that purpose several Klingon technicians had established some devices at the edges of the city which produced the shield that ended at the abysses of the promontory Turkana City was built on. The street that lead into the town was heavily guarded.
Kor looked out of the window that had been opened to let fresh air into the office. Klingons weren’t immune to beauty – far from it. He liked the almost tropical planet with its lush forests and wide fields. It reminded him of a certain area on Q’o’noS where he had stayed as child, back in a time before the war.

A war that held several surprises – even for him.

He wasn’t pleased that two of the most wanted enemies of the Empire were dead. He wanted to arrest Kirk and his first officer – to hand them over to the High Council. It wasn’t because of some vanity or to make another step up the career ladder. No. His wish to present the council Kirk’s and Spock’s heads on a silver platter lay in his pride of his heritage. He was the last descendant of the Emperor’s family, and to catch a declared enemy of the empire would reinforce his own status and that of his clan.

It was a shame that the boy-captain and his first officer had fallen prey to the war so soon. The only satisfaction Kor could find was the fact that the two men had died battling the Klingons. At least there had been a kind of revenge in the end!

Suddenly Kor heard steps nearing the office. One of his security-officers stepped in and saluted. Kor casually answered the greeting before instructing the Lieutenant to speak up.

“Milord, two guards of our patrols were addressed by a Terran male who claims to have knowledge of a Starfleet officer hiding here in the town.”

The Klingon’s bushy eyebrow narrowed and a mixture of curiosity and loathing awoke in him. Yes, he knew that the inhabitants of this colony didn’t feel any loyalty to the Federation, still to give a man or a woman of the UFP away was low. Nonetheless, Kor had to follow every hint of the presence of an enemy within his reach.

“Where is this man?”

“Ensign Tagre brought him to this new headquarters here. He is in the anteroom.”

Kor leaned back in the chair. “Show him in!” he said; waiting patiently until the man was brought before his desk. It was a younger human male, maybe a Terran, who masked his unease with anger, as far as the Klingon Lord was able to read his ‘guest’s’ expression and look.
“I heard you have important information for me?” he asked coldly; the man nodded.

“Yes, sir. The Enterprise’s captain, James Kirk, is hiding in Turkana City.”

If a bomb exploded right next to him the effect couldn’t have been different. Kor shot out his chair and stared at him; his almond-shaped eyes widened. “Kirk is here? Are you sure?” he asked after several seconds, and the man nodded.

“Yes, sir. He was left behind because his ship had to raise the deflector shields as you and your fleet arrived. He ordered the Enterprise to leave.” Something flashed in his eyes, and the fleet-commander cocked his head; he didn’t believe the luck the fates handed him.

“Kirk is dead,” he stated flatly; he sat down again. “He and his first officer were killed weeks ago and…”

“I assure you, sir, that Kirk is very much alive as is his Vulcan officer!” The man spat the young captain’s name and Kor bent forward. If this really was true, if Kirk really wasn’t killed at the Japori System, then…

Then he, Kor, son of Ryan, had been tricked by the young officer, Sulu, and he let the Enterprise pass through without getting what he wanted. The human had… What did Terrans call it? Bluffing? Yes, that was the word. Bluffing. This Sulu had used this twisted kind of lie to get away with the ship and with the Vulcan aboard. It was like this, Kor had been fooled. In Kahless’ name, if he could get his hands on this Sulu, he would squeeze the life out of him.

Still the prospect of having Kirk at his mercy was something that almost made the humiliation worthwhile. And Kirk would pay for the disgrace that had been bestowed by one of his crew members on the Klingon Lord. Kor would make certain of it!

“Who are you?” he asked and the man took a deep breath. “Matthew Allistor, sir.”

The obedient intonation was abhorrent to Kor. He hated boot-lickers and traitors even more! “Well, Mr. Allistor, why do you tell me all of this? Kirk is of the human race, just like you.” His nostrils twitched. To give away one of the own race in a war… It was unthinkable to a Klingon.

Matt snorted. “Because of this scumbag, I lost my wife and my children.”
Kor pursed his lips. The reason for this kind of betrayal was revenge. He could accept that. However, revenge was personal and you don’t share it with others. Not if one’s own family was the reason for the vengeance. “Explain!” he ordered.

“My wife wanted to accompany those who left Turkana, I forbid it. She dared argue with me. The argument must have gotten Kirk’s attention. He tricked me and let her beam aboard his ship with my children.” Fury lay on his face. “Because of this bastard my wife is now out of reach for who knows how long. He has to pay for it!”

Kor frowned again. Did he understand this right? This man subdued his wife and because she found another way out, he wanted to exact revenge on the man who helped her? The whole thing was strange for him. Females were equal to males in his culture. And he was sure the same was true for the majority of Terrans. “You demand complete obedience of your wife?” he probed the topic.

“Of course!” Matt growled and the two Klingon guards behind him exchanged a glance.

The Klingon Lord’s expression changed ever so slightly. “Be glad that your wife wasn’t one of our people, human, because she would have answered you with a dagger instead with words!” he stated dryly, then he took a deep breath. “So, you reveal Kirk’s presence to us to take revenge. Do I understand you correctly?”

Something in the Klingon’s voice was strange, but Allistor wasn’t one of the most intelligent people and ignored the tingling warning in his gut. “Yes – and I think he is going to give you trouble, so…”

“Where is he?” Kor interrupted him. He was glad for the information, but he also felt deep scorn for the man. This human was too cowardly to fulfill his wanted revenge on his own, and instead betrayed his personal nemesis to the enemy. This Allistor had no courage, no honor! The Klingon Lord’s distaste for the human grew.

“An old man, Patrick O’Farrell, took him in. I followed them a little bit and saw them vanish into O’Farrell’s house. With the curfew in place, Kirk couldn’t have left the house without being caught. He must still be there!”

Kor nodded and rose. Even if he spurned the man, there was only one thing to do. “Show us the way!”
Jim put the dried dishes in the cupboard and smiled as he watched Patrick polishing the old-fashioned sink. It was almost a little bit like his childhood, before Frank came and ruined everything. The farm house in Iowa, his and Sam’s mother had rented, had been more than three hundred years old and it had been cozy with its mixture of historic building-style and modern comforts. He had loved this house and…

A loud crashing sound from the front door, that took both men by surprise. A moment later several Klingons stormed the house and went straight to the kitchen; it was the only lit room. Jim didn’t have time to react as the guards pointed their disruptors at him. Patrick O’Farrell yelped, while Kirk felt dread flooding him. The Klingons arrival could only mean one thing. They knew who he was; it meant torture and death for him.

Another middle-aged Klingon stepped into the small room; his ensigns and his proud stance gave him away as a high-ranking officer. The dark eyes roamed over Kirk’s face and for a split of second something like a smile tugged at his mouth – the smile of a wolf that caught the lamb.

“James Kirk, I assume,” the Klingon said with a deep, growling voice that held barely any accent. “I was told that you were dead. It seems your ‘acting captain’ lied to me.”

So this was Kor, the fleet commander of the strike group that had annexed Turkana. He had heard the beginning of the transmission between the Enterprise and the Klingon flag ship, and therefore aware the enemy fleet commander’s name was no secret for him. Jim knew that he would pay for Hikaru’s little stunt, too. He was also aware of the fact that any denial of his identity would do more harm than good. His cover had been blown and he now had to face the consequences. Consequences he would meet with dignity becoming an officer of Starfleet. Klingons loathed cowardice and he would not give them the satisfaction.

He saw Kor’s gaze fall on Patrick and out of impulse Kirk placed himself in front of the old man, shielding him. Instantly, he was again in the focus of the Klingon Lord and he squared his shoulders. “You are right, Commander. I am James T. Kirk of the USS Enterprise.”

The hostile officer looked him up and down, and nodded slowly, almost pleased. “At least you are no coward.” He lifted both brows. “Lord Kor of the Imperial Fleet,” he introduced himself – a polite gesture from captain to captain. Then he turned slightly. “Lieutenant, arrest Captain Kirk and bring him to headquarters!”

Two Klingons stepped forward and encircled Jim’s upper arms in a steel-like grip; it made Kirk’s
stomach clench. He knew exactly what would happen to him.

Just then Patrick recognized Matthew Allistor and his eyes widened. “Matt! Don’t tell me that you are behind this!” he gasped.

“You’re hiding a wanted man, Paddy,” Matt drawled. “You should have thought twice before you did something as foolish as this.”

The old man took a deep breath and stepped towards him; his face reddened in anger. “You slimy little cowardly bastard! This is nothing more than primitive revenge because Sarah finally had enough of you and wanted to leave before it became too late for her. You haven’t even the guts to confront the captain alone; you needed Klingon help for it.” He spit at Matt’s feet. “I’m glad that Sarah made finally up her mind! She was always too good for y…”

Allistor seized him brutally by the collar. “Be careful what you say old man! You are a criminal now and…”

He stopped as a strong hand gripped his left wrist and pulled him harshly away. Kor looked with contempt at him before he glanced at Patrick, addressing him. “You hid Kirk here!” he stated – and Jim interrupted,

“He didn’t know that I was a wanted man in the Klingon Empire. He only wanted to help me because he knew what you and the likes of you would do with a Starfleet captain, that’s all.”

The piercing gaze of the fleet commander was directed at him again; then Kor turned his attention back at Patrick, “Is this true?”

“Yes,” O’Farrell said. “But I would have given him shelter either way.” He nodded towards Jim, who nearly groaned. Patrick had destroyed the bridge had tried to build for him to save him from the Klingons’ wrath. “The boy reminds me of my own son I lost four years ago and I see now good in denying a young man a helping hand because he was ready to sacrifice himself on the behalf of an unknown pregnant woman and her children to grant them a new life.”

Kor surveyed him thoughtfully. “You have backbone as you humans say.” He glared at Matt. “Something many of you lack, rejmor (coward).” He waved at the guards. “Bring Kirk along, we are leaving.” He walked towards the splintered front door as the Lieutenant called, “Milord, what’s about the old man?”
Ryan’s son looked back, straight at Patrick, who lifted proudly his chin. “He is under observation, until he proves to be no more trouble. I don’t want to give order to kill the only courageous and spirited being in this town full of scum!”

Then he left the house. The guards pulled their captive roughly with them, and Jim knew that he was walking the way to gallows…

TBC…

Chapter End Notes

Yeesssss, I warned you, didn’t I? I told you that are coming a lot of cliffhangers and that you will need something to calm down (*grin*). Yeah, Khan is on his way but he will need time – especially after the Klingons raised an energy-shield over the whole town. There is no way to beam someone in or out. And, above all, Khan has to cross a large distance to Turkana, while Jim’s time is running out. In other words: Our dear captain his in deep, deep water.

In the next chapter you will learn, how ‘deep’ this water really is, but of course Jim doesn’t give in this quickly. And Kor’s questioning will give the Klingon the greys, so to say. And in the meantime Spock tries also to find a way to save his friend, as Wesley is doing, while Khan prepares his strike.

I hope you liked the new chapter; including Sulu’s bluff, Khan’s raging fit, Matt’s betrayal and Kor’s way to handle everything less aggressively like his colleagues would do it.

The next chapter will come at the 12th or 13th October, and until then I’m dying to know what you think of the new twists.

Have a nice weekend,

Yours Starflight
Chapter Notes

Hi, my dear readers!

I am so, so sorry that it took longer than thought to publish the next chapter, but first I was on a vacation and then my dear beta-reader had a small trip of her own out of town and, above all, a little ‘fight’ with the charge of her laptop. Therefore it lasted longer, before you are now able to read the next update – but I am sure it worth the waiting.

As you know, Jim has been caught by the Klingons, Khan is on his way to come to the rescue and Spock and the others have to deliver the evacuees first, before the Enterprise can interfere (or can try to help Kirk). And if you think the last chapter was nerve-killing then don’t fret during the new one. You certainly will get a bad gut-feeling (to use Jim’s words).

And at last a little warning: There will be a nasty cliffhanger at the end (*evil grin*).

Thank you so much for all the Kudos and comments,

Have fun,

Yours Starflight

See the end of the chapter for more notes

Chapter 14 – Through hell, part 1

They took Kirk straight to a heavily guarded town hall that served as headquarters to Lord Kor – now facing the captain from his confiscated desk; his dark eyes pierced him. Two Klingon security guards stood at the door. It didn’t matter to Kirk. Even if Jim didn’t wear the manacles, binding his hands in front of him, and even if he could escape the room and could leave the house alive, and then where would he flee? The official transporters were watched; there was no spaceport nearby, and he had seen the flickering in the air that seemed to enfold the whole city, instantly recognizing the force field of pure energy that turned the city in a one big cage. As much as he didn’t believe in no-win-situations, he knew he had to face up to this one. He knew that he wouldn’t make it out of here without help.

Kor surveyed the Starfleet officer in front of him. He seemed to be even younger than he first thought and the name ‘boy-captain’ fit. Kirk couldn’t have been called an adult for much more than a few years. His boyish features and bright blue eyes made him look rather like a student than a Starfleet officer who commanded the flagship. Despite his youth and the position he found himself in, Kirk held the calm demeanor that only wisdom and experience afforded, still Kor wasn’t fooled. Beneath the collected expression this captive wore, the Klingon sensed fear.
And he would use Kirk’s fear! There was a lot he wanted to know, and he would get it!

He fixed the young officer with a stare that made Klingon cadets flinch. He folded his strong hands on the desk surface and cleared his throat. “I am certain you realize the situation you are in, Captain. Not only did your crew abandon you…”

“My crew didn’t abandon me; I gave the order to flee when your fleet showed up,” Jim interrupted him firmly.

“While you were still on the planet?” Kor lifted his bushy brows.

“We had to raise the deflector shields to protect the civilians aboard from you. It made it impossible to beam me up. I’d rather they left me behind than to give you a chance at getting to my crew and the evacuees!” Kirk’s voice was flat; it made the Klingon lord frown.

“I wouldn’t have shot at an evacuee ship with innocent civilians. I am a warrior, not a monster!”

“Oh yes, of course!” Kirk sneered. “So, to demand the surrender of two commanding officers in exchange for the lives of six hundred civilians is a Klingon way of saying, “Hello”, or did I misunderstand something when you talked to my helmsman? Sorry, my mistake. I’m not familiar with Klingon tradition! Maybe we should start a cultural exchange; eventually we could end this damn war, and prevent further misunderstandings.”

Kor blinked several times; then something like a grin tugged at his mouth. “You are a captive of the Klingon Empire, facing consequences for your deeds – and you can make jokes? Either you are a fool or you are far braver than I thought.” He cocked his head. “The question is, which one of the two options is true?”

“Find out,” Kirk challenged, ignoring his mind that screamed at him to shut the hell up!

“I will!” Kor nodded slowly, regarding the Starfleet captain with a hue of curiosity. Was this renegade really so strong in will and mind, or was it all a mask? Certainly Kirk had to know what lay ahead for him, yet he talked like he was on a hunting party with friends. There was only one way to reveal the real James Kirk. “We shall see how much your displayed bravery is worth. Only then I will decide when you die.”

Again, Kirk’s inner voice told him to ignore the challenge, but his fierce heart spoke another language. “Whatever, the outcome will be the same. Your words tell me that you’re no different from
the any other Klingon. You tried to blackmail my crew into handing over Spock and me in order to let the civilians go. What kind of ‘honorable man’ are you to threaten an evacuation vessel like that?”

“We are at war, and everything has its price! It was never my intention to kill innocent families!”

Jim snorted. “Right! Tell that the Tammeron people your ‘glorious fleet’ wanted to murder in cold blood! Your Empire was about to kill 17 million men, women and children, who don’t even belong to the Federation – over trade agreements! Sorry, if I don’t believe a thing you say when it comes to my ship!”

Kor’s eyes narrowed. “I had nothing to do with it – the order to attack Tammeron. Certainly there are staff officers in Starfleet, too, whose honor is less than the others.”

Jim understood what the Klingon tried to tell him, but didn’t dare voice it. There were always men who were blinded by hate. Kirk had learned that lesson in his encounter with Marcus, with Section 31, and even with Khan. Whatever Khan was now, didn’t change what Khan had been – driven by pain and hate.

For a moment, both commanders looked at each other and shared a moment of understanding. Then the Klingon lord took a deep breath. “Tell me about Qo’noS!”

Kirk cocked his head. “You want me to tell you about your home planet? What’s wrong? Aren’t you allowed there anymore, or…?” He gasped as a blow to his back made him stumble forwards where he was unpleasantly stopped by the desk. Kor’s hands steadied him with an iron grip around his upper arm.

“Be careful what you say, human! You are speaking to the descendant of the last emperor’s family!” one of the guards snarled, but Kor waved it off.

Kirk took a deep breath. So this was the reason the fleet commander referred to himself as ‘lord’. He was a man who would be the Klingon emperor if the Empire hadn’t altered its political system.

The Klingon aristocrat looked him in the eye. “Once again Kirk! Tell me about your ‘visit’ on Qo’noS!”

Jim straightened himself again and hesitated. He couldn’t tell Kor the whole truth. Not only must
Starfleet’s…No. Not Starfleet’s, Marcus’s mission had to be kept secret, but Khan must be protected too. The Klingons would move heaven and hell to get the super-human, to capture him, torture him, and kill him. No, Jim wouldn’t give Nien up! Not to Starfleet Command and certainly not to the Klingons!

So Kirk wove a tale based on the truth. “I was sent to capture a wanted criminal who, we believe, attacked Starfleet headquarters. His trail led us to Qo’noS. We feared he would attack your people too.”

“Well didn’t you contact us through official channels? You infringed on our territory. Once he left your jurisdiction, he became our problem. We are capable of arresting a single man as you certainly can attest to!” The last words were mocking, and Kirk had to control his temper. The Klingon lord waited for the young officer to continue, but Kirk remained silent, so Kor spoke up again. “You came to our planet to arrest this criminal – why in secret when you were so concerned for our well-being? Why the masquerade of being dealers, if your visit was of a friendly nature? Why did you try to flee when you met our patrol? If only you were truthful with us, we…”

“Truthful? The woman, you mentioned, met with your patrol commander. She was unarmed and tried to tell him why we were there. She addressed him in your language, respectfully, and your commander tried to kill her! Another ‘honorable’ Klingon seized a smaller, defenseless woman in order to plunge a dagger into her! Why the hell would we be truthful?”

Kor leaned back in his chair and crossed his arms in front of his chest. He had seen the records. The reaction of the Lieutenant who commanded the patrol entity surprised him. The human female was as Kirk described, petite and without aggression. Still he would not acquiesce to Kirk’s rendition of the story. “Neither you nor I know what she said to provoke the patrol,” he said almost diplomatically. “Perhaps he realized her lie and…”

“She didn’t lie! She told him what I’m telling you now. We came to Qo’noS to arrest a criminal!” Jim’s voice was sharp now. “And we didn’t contact your government because we knew that your council would read something else in it. So we went down on the planet…”

“Gave an impressing show of your flying abilities on my planet before the patrols surrounded you. Your female officer was sent to pacify us, and when our patrol exposed you as spies, you killed them.”

“We weren’t there to spy on you!” Kirk snapped. “What the hell could we possibly hope to find in an abandoned city? Construction plans for a restaurant?”
An odd noise escaped one of the Klingon guards, and Jim was almost certain it was a suppressed chuckle. When Kor’s face darkened, he was certain of it.

The fleet commander leaned forwards again. “Even if your statement is the truth there is still the bloody trail of three dead Klingon patrols and one destroyed scout ship you left! More than forty Klingons, Kirk, killed by you and your back-up!”

“Back-up?” For just a moment Jim puzzled over Kor’s words, then the scales fell from his eyes, as the fleet commander growled, “The man, who came to your aid, swung a rifle-canon like a puny hand-phaser and fought with the savagery and the brilliance of an ancient warrigul!”

Ice flooded the young captain’s system as he realized that his captor referred to Khan. Jim knew that Kor would draw the right conclusions; the Klingons had their own experiences with Augments and enhanced DNA. An old phrase came to mind; the best defense is a good offense. “Maybe it was one or your people?”

Kor looked thunderstruck at him, offended by the mere suggestion. “You do not really think that one of our own turned against us and killed so many of the own race, do you?”

“Why not? Maybe he is insane, a rebel or…”

“A rebel?” The Klingon lord shook his head and then he took a deep breath. “Shall I tell you what really happened on Qo’noS? This man was the criminal you came to ‘arrest’. Maybe he attacked Starfleet’s headquarters; maybe you were sent to get him because Starfleet wanted to use him for its own purpose. His strengths lay not only in his body, but in his mind too, because he is enhanced… an Augment!”

Jim wanted to curse. He really did, but it would give him away, and Khan. He controlled his expression as well as he could and replied, “The man you saw was a stranger; I’ve never met him before.” He did his best to stick to his story for consistencies sake. “Whoever it was, he came to our aid, killed the most of our attackers – your people might I remind you – and then vanished. I didn’t even get a chance to thank him. I should’ve. He saved our lives. Well, the most of them. Two of my security officers and he criminal, we came to arrest, didn’t make it. I tried to find the man afterwards, but he was nowhere to be found and…”

“Ever heard of a ‘scanner’?” Kor taunted, and Kirk rolled his eyes.
“If your patrol hadn’t shot at our ship, we could’ve used the scanners. Thanks to your attack, they were damaged.”

“How convenient!” the Klingon snorted. He leaned in and eyed Kirk closely. “So, you say you didn’t know this man, your back-up, and that he disappeared, while the criminal, you chased, died in the combat?”

“Yes.” The young captain’s voice sounded clear and placid.

“And you deny that your back-up is an Augment?”

Jim sighed. “I don’t know him, so I can’t confirm nor deny your assumption. But it is impossible that this man is an Augment. The Augment program was something that happened three centuries ago on Earth, decades before humans developed warp capability. The whole thing ended in a horrible war that killed almost a third of Earth’s population and all of the Augments. So we’ve had more than enough Eugenics bullshit, really. The incident you are obviously alluding to was not a ‘program’ but the attempt of some crazy scientist who wanted to give it another go nearly a century ago. Neither the Federation nor Starfleet has authorized any further experimentation as far as I know. There are no more Augments. But I’m sure you already know this, after all it was us who came to your aid, when you tried something equally idiotic, and it backfired.”

“You know a lot about this special ‘incident’,“ Kor commented thoughtfully and Kirk shrugged.

“Academy stuff. To pretend something never happened doesn’t undo the damage, and it’s better to remember our mistakes in order to prevent them from happening again.”

“A wise attitude, I am almost ready to believe you. But it doesn’t give me an answer to the question, Kirk. Who was your mysterious comrade-in-arms?”

Kirk sighed. “And I told you twice, I don’t know! He vanished and…”

“He wasn’t a common human, Kirk! Don’t tell me otherwise!” The tone became harder. “There are two possibilities. One, he is a Vulcanoid – that seems unlikely since Vulcans are too peaceful, Rigulians are too weak, and Romulans wouldn’t help Starfleet officers. Two, he is an enhanced Terran.”
“You’re wrong.” The lie left Kirk’s lips easily. He was determined to protect Khan with everything he had. His desire to do so had been growing these weeks. Kirk didn’t know why, but he wasn’t one to ignore his instincts – or desires.

“How can you be so sure if you don’t know his identity?”

“Because there are no Augments anymore – not from Earth or anywhere else in the Federation!” Jim replied, sangfroid and with a dignity that belied his position as a captive.

Again Kor’s impassive eyes roamed over his face, revealing nothing of his thoughts. The Klingon slowly answered, “You said, this man simply vanished in the ruins. Our scanners worked very well then. We came to look for our patrols. There was no living being within 150 kilometers of the town. No one could walk that distance in such a short time. This man fled with you. And I am certain that it was him who fought off the Orions on one of your outposts several weeks ago. Our allies described him as a young, slender, male Terran clad in black, who fought with the quickness and mercilessness of a le-matya, portraying inhuman strengths and reflexes. And this is exactly what I saw on our recordings, even with his face masked.” His voice grew louder. “This man on Qo’noS and the man in the outpost are one and the same! He fights like our ancient warriors, with strength to a Klingon or Romulan.” His eyes glittered. “Do you still insist that he isn’t an Augment – that you don’t know who he is?”

“Yes, because if there were something like a new Augment program, Starfleet would know about it. I never met this man before!”

“The latter, I believe,” Kor stated, “but that doesn’t mean you don’t know who he is. And it doesn’t mean that he didn’t leave Qo’noS with you.” He stared at Jim then continued, “I want to explain your situation once more, Captain. You are a captured officer of the Federation, and we are at war! Normally, I would have ordered you shot on sight, but…”

“But you needed me alive to gather intel. You want to know about the fleet, our ships, our weapons, our capabilities. You know I can’t and won’t answer them! I’ve told you more than I am obligated to as it is.”

Kor was tempted to smirk as he watched the fire flare in the blue eyes in front of him. Kirk was a warrior through and through. This fact and the captain’s fearlessness in the face of the Klingon threat in front of him impressed the Klingon lord. The young man had guts; he had to give him that.

“I understand that you cannot divulge the information that I request, still I do believe that you will.” The fleet commander cocked his head. “You will not have a choice and it would be best for you if
Jim was very aware of what Kor alluded to – torture – but he would be damned if he would give this Klingon bastard any satisfaction by revealing the dread that filled him. “Fleet Commander Kor, spare us both the pretense! I know that your High Council has already sentenced me to death and that you ‘don’t have any choice’ other than to execute me. Come on; show your hand. Don’t try to ply me with promises that you can’t deliver on.”

This time it was Kor who was surprised, even as he felt some respect rising in him. The Terran captain had a reputation in the Empire after the incident with the Tribbles and on the battle on Qo’noS, but the Klingon lord was not one for rumors. He needed to make a determination on something, or in this case, of someone, on his own. James Kirk was nothing like the propaganda spewed throughout the empire. Any other time he could have had the luxury of admiring the young man’s fortitude. But here there was no room for it.

“Show my hand, eh? An interesting phrase, Captain – especially, when you are the one with something to lose.”

“You’re this close to killing me,” Jim deadpanned, trying not to think too much on the matter. He felt sick enough over it, and he didn’t want to die again. “What more could I lose besides my ship and my crew? But they’re out of reach for you now, aren’t they?”

Pursing his lips Kor replied sternly, “Yes, the High Council decided the death penalty, but I’d think you’d want to know the method of execution, wouldn’t you, Kirk?” His intense gaze held the Jim’s. “You are sentenced to death by torture.” He saw the younger man pale. “And it is up to me to decide when you’ve suffered enough to grant you your last breath.”

Even with his firm determination to mask his emotions, Jim couldn’t prevent the icy fist from squeezing his heart. Nausea clenched in his belly. Tortured to death by a Klingon's hand. There wasn’t a crueler or more brutal way to die.

Kor watched him carefully and nodded. “I see you realize what lies ahead, and because of your courage I want to offer you a chance to decide for yourself which way you want to go. I’ll give you three of your standard hours to think on the matter. Either you answer my questions truthfully – and believe me, we have ways of finding out if you are lying or not – and I will grant you a quick death. Or you remain silent, and I order the execution exactly as the High Council intends, performed by two men who lost family due to your ‘visit’ to Qo’noS. Believe me, they will let you suffer for days, perhaps weeks. They can make you feel as if you are burning alive from the inside out, without lighting a flame. You are going to talk, Kirk; it is up to you how long you have to endure this harsh way. So think very carefully about your choice before you give me your answer.”
He waved towards the guards. “Take him to the cellars. There are secure rooms for holding criminals in custody. Chain him up and prepare a soundproof room for his questioning.” His gaze found the young captain again who still attempted an expression of bravado, but his face was snow white. “Think about it, Kirk. Three hours – and what follows is up to you.

ST***ST***ST

More than four hours away from Turkana, the D’Ghor speeded through the space. She passed the disputed boundary to the Borderland an hour ago and so far no one knew she was there; the cloaking device and sensor-disturber worked superbly.

Khan’s eyes never left the scanner and navigation displays. He had passed by Son’A and was heading straight for Turkana, which would bring him near Obruli, another colony inhabited by outlaws. The Klingon fleet was camped there too according to the long-distance sensor. Still the Augment was confident that they would not discover him. The Klingons here didn’t have a clue that their cloaking technology had been turned against them. Everything would be fine as long as James stayed hidden.

Khan couldn’t be certain. Kirk might have been in the enemy’s hand for hours now, or he may be free and hidden. Finding him would be difficult. Khan wasn’t one to indulge in false hope, but he applied the same focus and determination to Kirk’s rescue as he did his own Augment family. He would get Jim off this planet and bring him to safety, no matter what; and then he would give him an earful. Well, if James were physically well enough for the lecture. The former dictator was painfully aware of what his one-time-lover would endure should he be a prisoner. He’d find Jim; he’d find them all.

The observation system for interstellar transmissions buzzed and showed Khan a Klingon communique from Turkana to Obruli. The super-human frowned. The reason for the contact between the two strike groups must be important. Surely immediately after an annexation there were more urgent things to do than chat. Perhaps the communique relayed information on further attacks against the Federation. But his instincts told him they concerned a certain Starfleet captain!

Quickly, he recorded the transmission and activated the universal translator.

“Lord, Headquarters to BortaS and MeQ’lw. Your presence on Turkana is demanded. Confirm!”

A moment later another voice answered. “Turkana Headquarters, this is Commander Koval of the
BortaS speaking. Do I understand correctly that Lord Kor requires Commander Noy’s and my presence on Turkana? Are there any problems with the colonists?”

Again was a short pause, before the dark, strong voice replied, “This is Kor. Do you have everything under control, Koval?”

“Yes Milord! Obruli is ours. There wasn’t any resistance. The inhabitants are only interested keeping about their ‘businesses’. I hold out this prospect for them, if they cooperate. I the affirmation of the colony’s leader.”

“Well done, Koval. I have a reward for you and your cousin. The murderer of your brother and Noy’s brother in-law fell into our hands and…”

“You have KIRK, Milord?” Koval interrupted him; his voice trembled with excited wrath.

“Yes – and as far as I have come to understand his character, he going to need some persuasion to tell us what we want to know. I would like to give you and Noy the responsibility of extracting that information. We must get all the required information about Starfleet and the mysterious stranger on Qo’noS. You may have your revenge. How quick can you be here?”

The answer came a moment later. “My navigator told me in 2.8 hours.”

“Right, I’ll await your arrival. Kor out!”

The recorded transmission ended and Khan stared at the device as if it was to blame for what the conversation that transpired. Then he closed his eyes. Dammit! He feared something like this. He feared that those blasted aliens would get their hands on James and James would be subject to torture fueled by vengeance that Khan caused.

Then it hit him. The Klingon fleet commander wanted information from Jim about Starfleet and of course him, Khan! And Kirk had refused to tell the enemy anything.

James – his James would submit to torture to protect him!
Khan Noonien Singh never cursed at a higher being – not of his own people or any other. Right now though he was ready to break with precedent and call to Bramah, the God of creation and Shiva, the God of destruction – two of the Indian Trinity. If there were some higher power in the universe who led the fates then they had to do something. Many times over the centuries, Khan watched doom unfold around him. So many people loyal to him; so many who cared for him died because of him. Humans and Augments alike gave their lives to protect him during the Eugenics Wars. Kirk was different. He hurt Jim – Jim had no reason for loyalty or friendship with him, but there it was. He lied to his superiors and his friends to give Khan a head-start; he covered for him, and now he was ready to endure torture to protect him.

A wordless sound of anger erupted from the super-human’s throat; his right fist slammed into a panel on the navigation panel in an outburst of denial, fury and determination.

No! He wouldn’t allow this! Never!

“Computer, calculate time of arrival to Turkana!”

The device took a moment to translate the English words in Klingon, “4 hours and 48 standard-minutes.”

Khan jaw tightened. The two Klingon commanders so obviously bent on revenge would arrive two hours sooner than the D’Ghor! And even then, he still had to find James before he could take him to safety.

The Klingon – Kor – had called his location his ‘headquarters’. Therefore, it had to be a building that satisfies certain prerequisites, like safety, size, a central location, logistics, and it had to contain the database containing planetary and colony information. That narrowed down the candidates considerably.

Khan wasn’t sure what he would find on Turkana. On one hand, the Klingons should have done intelligence gathering before the invasion. On the other, he wasn’t sure what was available in the database. Lucky for him, where the Klingons were brilliant warriors, they were lax in database security. He barely finished relaying his questions to the ship’s computer when it spit the data on the planet back at him. Data about the geology of the planet and its atmosphere, fauna, climate and details about the colony itself came at him as fast as his Augment brain could comprehend. It was clear that the Klingons took time preparing for the annexation.

Khan listened closely and studied the few charts available on the computer. He learned there was only one town of significance on the planet, Turkana-City. Another ten miles away there was a space
port and on the outskirts of the town were several family farms. The Augment concentrated on the
town and pressed his lips in concentration. He saw that it was placed on a promontory, reachable
only by transporter or a single, broad street. It reminded him briefly of a castle – not from the
architecture but the choice of location. It granted the inhabitants a certain degree of natural safety, but
with a Klingon invasion from above, this advantage meant nothing. Rather, Khan was sure that Kor
chose, subdued, and controlled the area due to the town’s concentrated population.

The latter made no difference to the super-human. Those people had chosen their way, and they had
to live with the consequences. But the layout was important when planning a rescue. The former
dictator had an idea where to find Jim, but he needed certainty. There would be only one opportunity
to free the young captain so the risks must be mitigated and all available knowledge exploited.

Activating the diagram of the Turkana in the ship’s database, Khan discovered the origin of the
intelligence. There was Orion script on many of the documents, charts, and diagrams. The super-
human quickly found the market place and the town hall nearby. Assuming personnel recovery
operating procedures had not undergone major changes, the most logical place to conduct an
evacuation on a large scale was from the market center. And Jim had been there. Perhaps he fled
when his ship left, and was discovered somewhere within the city before being taken to…

His gaze found the town hall and he nodded. It would make sense. It was the largest building,
equipped with everything a leader needed, was central, and a part of it belonged to the town ward,
Khan assumed that served as Turkana’s police. If Kirk weren’t aboard a Klingon ship, then he would
be at the town hall.

He memorized the maps and de-activated the files, checked the ship’s course once more and set the
helm on auto-pilot. Once he adjusted the scanner’s warning system he left the bridge. Jim was going
to bear a few hours of the Klingon ‘questioning’ and Khan knew that the younger man wouldn’t be
in his best shape afterwards. Even if the super-human could locate him and beam him up, Kirk
would need medical attention quickly to stop his pain and heal the wounds. There was only one
thing that would help him, before Khan could treat him properly.

Khan was glad that Commodore Wesley had accommodated The Shadow and sent the medical
supplies. He stepped into the small room between two crew quarters that served as a poor excuse for
a med bay. Quickly and thoroughly, he looked over the medical supplies; he found some laboratory
instruments, analgesics, blood circulation stabilizing agents and antifebriles. Quickly he prepared
everything for his task, rolled his left sleeve up, took a hypodermic needle and watched it disappear
into his brachial artery to draw blood.

He knew exactly what to do…
“For God’s sake, we’ve to help him!” Scotty stood at the Engineering station with his arms crossed. “If they’re catchin’ ’im, he’s dead!”

The Enterprise was barely an hour away from Kenda and the atmosphere aboard was gloomy. Every one of the alpha-shift nodded; even Spock had his head bowed in acquiescence.

“You are right, Mr. Scott,” Sarek’s son said calmly, surprising even himself with this statement. “As soon as the colonists are safely on Kenda, we will return to Turkana to get the captain. I hope as well that we are not too late, but we will get him and we will bring him home.” Spock paused in order that the crew understood the implications of his words – Kirk, dead or alive would not be left behind. “You must understand that we may die as a result.” They crew nodded; he took a slow, deep breath and lifted a brow. “Very well then. We haven’t received any orders from Starfleet Command. By the time they get around to it, we will already be back in Borderland.” His gaze landed on Uhura. “However, we will likely be challenging the admiralty by undertaking this mission, and it may be a– what do you call it – a one-way ticket?

Nyota smiled at him. “Yes, that’s what we call it, but I think we are ready for it.” Her attention was tracked to Sulu and Chekov, who both nodded sternly, while Scotty grinned.

“Look at that, Commander. And here I thought you’d decline a challenge with such a low chance of success.”

Spock lifted a brow. “The captain does not believe in a ‘no win situation’. I think, he would likely say, No risk, no fun.” Laughs sounded, but Spock interrupted, “It will be anything but fun, but Mr. Scott is right. We have to do something, and we will. We owe that Jim.”

It was unbelievable how quickly the atmosphere lightened; the faces of the bridge crew showed relief, but each was also pleased and surprised at the decision of the first officer. Who had thought that the Vulcan would decide such a thing?

But this Spock, is the Spock who lost his friend once, his T’hy’la, his brother in soul. This Spock was tired of losing – his planet, his friend. His human side was determined to fight back for what he loved despite the logic.

Spock sat back in the captain’s chair and closed his eyes, losing himself in thought. Even if they reached Turkana without being confronted by the Orions, they still had to get through the seven Klingon battle cruisers and a very experienced fleet commander who stood between the Enterprise
and her captain. Perhaps they could pretend to be on the rescue mission, returning for colonists who wanted to leave but had not reached the rendezvous point in time. But Kor was anything but stupid. He would anticipate a deception if the Enterprise returned – most assuredly if Jim were already captured. Kor would attack the Enterprise without wasting a moment.

The plan was crazy at best and suicide at worst. It violated so many regulations that Spock didn’t even want to count them; still he would try – he was a Vulcan who ought only to listen to logic and reason! This mission was anything but! And this crew was ready to hurl themselves into danger to save its captain – so was he. Jim had done the same for them, and he knew it was in Kirk’s nature to continue doing so to his last breath – he’s already given that. What had Jim told him, before he turned to Khan for help? He said his decision didn’t make sense, that it wasn’t logical. He heard Jim’s voice, ‘I have no idea what I’m supposed do, I only know what I can do…’

Spock was coming to the realization that the gut instinct, especially Kirk’s, wasn’t a weakness, but a strength when acted upon came with unpredictable risks. Perhaps it is a wisdom whose origin cannot be identified. Jim fed and exercised his so that Spock and the crew trusted it – trusted him with their lives. Still, operating on feeling or intuition without data went against the Vulcan way. But his affection and newly blossomed admiration for this stubborn, proud, brave and bright young man ran too deeply to discount his abilities. The thought Jim could be taken away from him again was untenable; the Enterprise needed her captain. Starfleet might be able to substitute Kirk, but they could never replace him. The ship, even full of people, seemed empty without the golden presence of Jim Kirk; the despondence the crew displayed in Jim’s absence could lead to a terrible outcome in their next battle. Maybe Spock should introduce a new variable to the burgeoning rescue. ‘Sunrise’ obviously cared about Kirk’s outcome; perhaps he should contact The Shadow to ask for some help. Sometimes hunting with the wild Sehlats led to a le-matya’s defeat.

Jim sat on a small cot in the security cell. He still wore the manacles, now secured to the wall, and the position he was forced into was quite uncomfortable.

But that was the least of his problems. The discomfort of his bound hands would be nothing compared to his next encounter with Kor.

Jim wasn’t a fool. Klingon torture technique was legendary. In the Academy, the young captain read reports of victims who fell into Klingon’s hands. Those unfortunate enough to be in possession of information deemed useful by the Klingons were subject to all manner of torment. Each method more brutal and cruel than the one before, and each more painful that the mind was willing to comprehend. The thought made the young man shudder, not to mention the terrible imaginations of his mind. He had heard of Klingon pain sticks – something mostly used in some rituals, but
sometimes also as a torture instrument – and of electrical whips. He also knew that Klingons liked to use their traditional daggers – the D’k tahg – on their victims, and there were certainly hundred more possibilities to make him suffer.

Kor was right. Sooner or later Kirk would give in. There was only a certain amount of pain someone could bear and before he or she reached their breaking point. Then everything Jim would endure would be for naught – Spock, his crew, Khan. Another vicious accompaniment to destroy his heart and soul.

Jim closed his eyes. He had always anticipated that one of his adventures would lead to his death. Work in space was risky and commanding a Starfleet vessel, especially during a time of war, well, the Grim Reaper always shadowed you. But to end like this…

New fear clenched his belly; Kirk took a deep breath of the stale, cool air. The minutes ticked mercilessly away; every one that ticked by brought his end nearer. He heard Spock’s voice telling him to calculate every risk in advance. He did that. He had calculated the risk to others, as a good captain should before he considered the risk to himself. But he knew he was playing a dangerous game when he helped the young woman to flee in his place, still he had hoped that everything would turn out alright.

A miscalculation, albeit a big one – he would not only die, he would die by torture at the hands of the enemy. Even the bravest man would shrink in horror at the prospect. His gaze landed on the manacles fixed above his head, and then the energy-field that locked him into the small cell. There was no way out for him, no possibility of escape, and Jim felt new desperation rising.

‘Don’t you dare to get caught…’

The deep, rich baritone echoed in his mind, and a wave of sorrow enfolded him; his neck tingled and he couldn’t reach back to scratch that ever-present…not an itch, but…something.

Khan…

How he wanted to meet him again. To see the man face-to-face as no longer an enemy, but a comrade-in-arms. He let his mind wander, indulging in memory. He wouldn’t rob himself of them any longer – not so close to death. Olfactory memory is the strongest, and Jim could still to smell his fresh exotic scent. He closed his own eyes to see Khan’s bottomless sea-colored ones more clearly. His body warmed in the cool cell when he imagined long, powerful arms around him and hot lips against his mouth. In his quarters, as now, he dreamed of this man, who as an enemy, seduced him against his will, but as a lover had given him the most pleasurable hours of his life. He had imagined
being joined with Nien again as the Augment did unspeakable, blissful things to him while purring naughty things into his ear. They soared in ecstasy together and came down to rest tangled in one another until sunrise came. Kirk knew their feelings had both changed, and he was sorry he wouldn’t get to see what might have been.

He had imagined Nien at his side – how it would be. A future together side-by-side, even serving on the same ship exploring uncharted space. Wishful thinking – undoubtedly – but even if there had been the slightest chance it was now taken from them both. Khan was somewhere with The Shadow, wondering why Jim hadn’t contacted him. And Kirk was mere hours from meeting his maker.

For just a moment, he damned Starfleet. He had already died once in the line of duty, now he would lose it again at the hands of the enemy – and if they got what they wanted from him, so would many others. How much was one man expected to give! Then Kirk steeled himself. If not for Starfleet he wouldn’t have Bones, Spock and the others, would never have commanded a starship – and he would never have met Khan. Hell, maybe he was the only one who could’ve stopped Nero. Earth would be destroyed if it wasn’t for Spock and him. And the Vulcan only got the idea to defeat Nero because of Jim. Botany Bay would still be drifting in space, and Nien and his family would remain in cryosleep. Or perhaps Marcus and Section 31 would still exist and would have located the sleeper-ship, and Khan would be still a hostage of the insane admiral.

No, the fleet gave him the best years of his life and gave to him the people he loved most in this world – or any other for that matter. But he longed for more of them. And the one passionate night in San Francisco seemed all the time fate would grant him with the Augment. It had to be enough; Jim knew he would feed on those memories of love and adventure, of Khan and his care, when the Klingons came to exact their vengeance.

He was torn from his musings when heavy steps echoed from the walls outside the security cell; he knew that the grace period was over. Ice once again settled in the pit of his stomach, crept through his veins and filled his heart and soul with dread. They were coming for him!

There was no doubt that Kor would stay true to his word; he would order Jim’s execution! As soon as the energy field was switched off, the Klingon guards would take him to Kor, and Jim’s fate would be sealed – finally and inevitably. When the four heavy armored guards were in sight Kirk felt deeply sick. Still he managed to hold his face expressionless; still he remained calm – at least on the outside.

One of the Klingons deactivated the barrier, and the remaining three pointed their disruptors at the Starfleet officer. For a moment, Jim was tempted to lunge at them as soon as they freed him, simply to provoke them enough to shoot him; it would be a far more merciful death than what awaited him. But even then his mind warred with itself. He didn’t want to admit defeat. He couldn’t accept that this would be the end of his road. As long as he lived there was hope! The Enterprise would come – Spock and Bones would come to save him; he knew it! As soon as they had delivered the evacuees
to Kenda they would return.

Still it would take the *Enterprise* more than nine hours to make the trip – not to mention breaking through the Klingon battleships in the orbit. It would be suicide if they tried to rescue him – or what would remain of him. Nonetheless his friends would stop at nothing to get him; something he hoped for and feared for, wrapped in one.

Pressing his lips together, Jim didn’t offer any resistance. When they loosed him from the wall, two of the Klingon guards gripped his arms and dragged him with them. The fright deep in him increased the closer they drew Kor’s office. Jim’s legs were heavy, his mouth went dry and his heartbeat was painful slow. The only things that enabled him to walk straight were his pride and his stubbornness. If he were going to die then he would do so with his head held high. He wouldn’t falter in front of his enemies; never!

Finally they reached the office area and stepped into the room that belonged to Kor now. The fleet commander wasn’t alone. Two Klingon captains and two lieutenants stood there and glared with utter hatred at him. Jim became aware of the fact that he was facing his hangmen.

“Kirk!” Kor greeted him with the cool respect that was usual between two higher-ranking hostile officers, before he came outright to the topic. “Your time is up. What is your answer?”

Plain, straight, without wasting time… Jim had anticipated something like that. This Klingon did indeed differ from the other Klingon commanders he met over the last two years.

“As I already told you, there is only one answer for me. And that is ‘no’!” He was surprised, how stern and unwavering his voice sounded.

For a long moment the Klingon aristocrat looked at him; then he nodded. “I knew that you would say this. I wouldn’t respect you as I do now if you had chosen the easier way.” He made a gesture towards the four other officers. “These are Commander Koval from the *BortaS* and Commander Noy from the *MeQ’hw*, with their first officers Khret and Karum. The two captains suffered personal loss because of your ‘visit’ to Qo’noS and to honor our traditions, they will be your executors.”

Jim didn’t say anything; he doubted that his tone would be as firm as it was before. He felt nauseous now, and the skin on his back contracted. At least he managed to control his expression, but he couldn’t hide that the blood left his face – again.
Kor had observed him for several seconds before he addressed his subordinates. “You know what information we require. Start with the questioning and update me on a regular basis. Don’t kill him before we have all the answers we need!” He rose from his chair and turned his attention back to the young captain, who tried to mask his fear despite his pale countenance. Not well enough for the trained eyes of the Klingon lord.

“I gave you a choice, Kirk. More I couldn’t do. I doubt that we will speak with each other again. Is there a message you want to leave for your relatives or your friends?”

This time Jim needed all his control not to gulp. Kor’s offer showed him once again the finality he was facing now. “You would send my last words to the Federation?” he asked, a little bit surprised.

A wisp of a smile appeared on the Klingon’s face. “I have come to know that you Terrans bury their dead and I intend to send your body to Starfleet as a sign of respect. So, if you want to leave a message, then I will pass it to the Federation, too.”

Another wave of dread filled him; they were speaking of his mortal remains after his execution, for God’s sake. He was scared, but he managed carefully, “Just let them know that I regret nothing.”

Kor nodded. “As you wish!” He waved towards the guards then knocked his fist against his chest and opened his hand – the traditional Klingon salute. “Captain!”

“Fleet Commander!” Jim replied, then strong fingers clasped around his upper arms, and they led him away; his two executors and their first officers followed him.

They brought him back into the cellars but turned another way, heading towards a larger room that was farther away from the main-part of the office area and had a heavy door. They passed a metal tube and Jim realized that it was a coffin – his coffin!

And with this sight came the horror – strong, icy cold and overwhelming. His mind hissed that the Klingons let see him his own coffin on purpose to increase his fear. His soul cried out. Only his obstinacy was stronger as they dragged him into the room that held only a table, two chairs and a manacle-device that had been quickly installed at the ceiling. At the table laid two stick-like instruments and several other items. Jim didn’t want to learn what their use, still he knew he would.

Khret and Karum tore the shirt from his body and forced his hands over his head; only one desperate thought rose in him. ‘Sweet Lord, HELP ME!’
“Mr. Kyle says that the transport of our guests is going very well. We can leave Kenda in less than half an hour,” Uhura reported after contacting the transporter room.

Most of the guests had beamed down to the planet into the visitor center the Kendanian government had prepared for them. Word had gotten around that the captain of the starship had stayed behind to help a young woman and her children evacuate, but the Klingons had arrived. The crew would return to Turkana to try to save their captain and friend. So the people hurried as much as they could, because all – aside from the smallest of children – knew what the fate of the commanding officer would be if he were caught.

The young woman Jim helped was shocked. She plagued and blamed herself; if she had obeyed her husband, the young, nice captain wouldn’t be in mortal danger now. Still she was glad to have escaped an unhappy marriage and life under the Klingons’ pressure.

Spock sat in the captain’s chair and nodded at Uhura’s words. “Very well! As soon as the last group has departs, contact the government official, confirm that all people are on Kenda and then we will leave for the recovery mission.”

“Hopefully with a better outcome than last time. Finally, we’re doing something!” The grumbling voice belonged to McCoy, who stepped on the bridge and looked at the Vulcan. “I came to report that all people in need of medical care are safely on the planet and that my colleagues down there have responsibility for them!”

“Thank you, Doctor.” Spock lifted a brow.

“Right,” Bones nodded. “I’ll be glad when we finally get to Turkana. Jim needs us! And if the Klingons want to give us trouble, we take them out!”

“Hopefully we don’t have to do something like that. Their fleet is situated such that it would be the Klingons who would take us out!” The way the Vulcan used this phrase made the most senior officers chuckle, including Leonard.

All of sudden, Uhura tensed, adjusted the receiver on her station and listened very carefully. She paled beneath her chocolate skin. “Spock,” she whispered, forgetting to address him correctly on
duty. “A message from Turkana. It’s on the official frequency.”

“What is it?” the Vulcan asked; something Jim would call ‘a bad feeling’ spread in his gut.

Nyota turned around, her large eyes showed dismay. “It’s from the Klingon fleet commander, Kor. He says that they have Kirk and… and that he ordered… his execution.” The bridge fell deadly silent. There were tears in Uhura’s eyes now as she added beneath her breath. “Jim is sentenced to death by torture.”

You could have heard a pin drop as everyone on the bridge froze in horror.

“No…” was all McCoy could muster to say, before he lowered his head and pressed a suddenly shaking hand against his mouth, feeling nausea washing over him. Not Jim… Not this cheerful, life-hungry and bright Iowa-kid! It couldn’t be that something this terrible should happen to Jim!

Sulu and Chekov stared at each other in shock while Spock sat motionless in the captain’s chair and felt the same sharp stab of pain – the one he felt as he watched the light go out in Jim’s eyes on the other side of the contamination barrier in the Engineering. A tremor went through him, intense with coldness and dread that even his Vulcan control couldn’t stop.

Jim… His T’hy’la…

Not only was he going to lose him a second time; now Jim faced an even worse death than before. And there was nothing he could do about it – not soon enough anyway. And he didn’t dare to imagine what then would be left of his best friend. Spock knew enough about Klingon methods of torment to shudder inwardly at the mere thought. Suddenly, the wrath of the ancient warrior that lived in every Vulcan despite their chosen way of peace, flared angrily within him.

“Mr. Sulu,” he said with a dangerous, low voice. “Set course to Turkana, maximum warp. Lieutenant Uhura, contact the transporter room and tell Mr. Kyle that the last people should be beamed down within the next ten minutes. He must finish quickly.” His gaze found the young Russian. “Mr. Chekov, during our flight to Turkana you will work with Mr. Scott and Mr. Keenser to increase the distance our torpedoes can travel. I know that Starfleet Command has recalled the weapons Section 31 created, but in this case I see no other option than this technology if we want to bring the mission to a successful end. Dr. Marcus will assist you. She is familiar with this technology.”
McCoy looked tensely at the Vulcan. “We are still going to get Jim?”

“Of course, Doctor. Though the Klingons have sentenced him to die by torture, it lengthens are timetable for rescue.” He looked up at Leonard and added softly. “He will need all the help you can give as soon as we have him onboard, and I will offer to share my mental strengths with him to stabilize his mind and soul. He may be in a terrible condition, but he will be alive. His mental and physical care is up to us.”

He looked at Uhura and for a moment he wanted to go to comfort her; there were tears on her cheeks. As much as a good and composed officer she was, right now she was only a friend of Kirk, and she suffered vicariously with him. “We will get him,” he said softly. “Please try to reach The Shadow. They have ways and means that we are going to need. Sunrise was apprehensive over Jim’s safety. Maybe we can persuade him to help us rescue the captain. Use Code 9. And inform Commodore Wesley about our intentions, when…” He had hesitated a moment, before he said firmly, “After we are back in Borderland.” He caught several surprised glances and added, “I think Mr. Sulu’s unconventional methods are contagious.”

ST***ST***ST

Commodore Wesley stared with wide eyes at the computer terminal in his quarters as he listened to the Klingon transmission given in Federation Standard. He recognized Kor’s deep voice instantly. He and the fleet commander had negotiated on Organia for days and even had a few whiskies together – something Bob never mentioned in his report and he was certain that Kor had swept this private encounter under the rug, too.

So, the Klingons did find Jim Kirk and of course the Klingon lord went with the given sentence of the High Council. And, as Wesley knew the way of thinking of this race, they would try to coax information out of the young captain in the process – a process that made Bob sick. Good Lord, why must Kirk always play the hero? Why did he value his life so little that he continually got himself in the most impossible situations? Yes, of course, every honorable man would have tried to help the poor woman and her children. Bob would’ve done the same in Jim’s place – still the commodore railed against the fate that was about to send the young man to an early grave.

He worried at his bottom lip in thought then hailed the bridge. “Lieutenant Palmers, open one of the frequencies Lord Kor used and try to contact him. I want to speak with him in private.”

“Aye, sir!” the answer came instantly, as if the communication officer had expected this order. Maybe he had.
Wesley knew that he was taking great risk. He was about to speak with a high ranking staff officer of the enemy without the admiralty’s order or even allowance. If one of the admiralty learned of it, he could face trial; still he saw no other way. What was one of Kirk’s favorite phrases? ‘Desperate situations call for despite measures.’ Well, you certainly could call Bob’s action a ‘desperate measure’, but he would try anything to save his young friend.

He had to wait only a few minutes until the screen of his terminal brightened and showed the familiar face of the last descendant of the Klingon emperor’s family. The almond-shaped dark eyes looked calmly at Bob, while the deep grumbling voice of Kor sounded through the speakers.

“Commodore Wesley! This is a surprise – or perhaps not.”

“Lord Kor!” Bob greeted and lowered for a moment his head as a sign of respect, before he said, “As we parted on Organia I hoped we would meet again someday, but under better circumstances than those we are facing now.”

“I agree,” Kor replied. “But fate held another path for us. We are at war now, and I don’t think your admiralty would welcome your decision to contact me directly.”

Bob shrugged casually. “Sometimes it is better to let two warriors talk with each other alone, rather than a dozen chiefs.”

A hint of a smile was on the Klingon’s face before he retorted, “This opinion we shared before and do still.” Then he became serious. “I know why you want to speak with me – and whatever you want to say on the behalf of James Kirk I have to state that there is nothing you or I could do.”

Taking a deep breath Wesley fixed Ryan’s son. “I know that Kirk’s ‘visit’ on Qo’noS was anything but satisfying. But just for the record, it wasn’t Kirk’s fault what happened there.”

“Still his appearance initiated a row of events that led to the death of three Klingon patrols and a destroyed D4-scout. The High Council regards this and his action concerning the tribble event as acts of terrorism against the Empire and handed down the sentence that I must execute.”

Bob bent slightly forward. “But it wouldn’t be the first time that prisoners were set free in exchange for someone else, or…”
“The Federation has no Klingon prisoners, Commodore – unless this has changed within the last hours. And even if so, I would have to consult my superiors to put your request forward. There aren’t many people important enough to exchange them for a criminal like Kirk.”

“A criminal?” Wesley felt the irrational impulse to laugh. “For God’s sake, Kor, this boy is barely an adult and risked his life to protect your home planet.”

“He did what?” The bushy brows of the Klingon shot up.

“He did – but I can’t give you details. You just have to trust my word.” He sighed. “Still, I admit that the whole thing turned into a disaster, but believe me – Kirk is neither a terrorist nor a murderer.”

“This depends on the point of view,” Kor replied dryly, before he cocked his head. “Why is he so important to you? Why are you risking your career by contacting me in private – me, a military leader of the Federation’s enemy?”

Wesley knew that he was treading on very thin ice, still he trusted his gut. Kor was a Klingon warrior through and through and as a result, very dangerous. But he was also honorable and sincere – two characteristics Bob appreciated. “Because Jim Kirk is like a son to me,” he admitted and saw his counterpart pursing his lips; something akin to understanding flashed in his dark eyes.

“Then I am sorry for the personal loss you will have to face, Commodore. You are one of the few Terrans I have come to respect. Perhaps it will make you proud to know that Kirk met his fate with his head held up high as you Earthlings say. He could have gotten a quick death by giving us information we require, but he refused. And he showed bravado the whole time in my presence. I almost regret that I had to order his execution, because I regard courage highly, but I have no other choice.”

“There must be something you would accept in exchange for his life!” Bob threw in, careful not to reveal the despair slowly overwhelming him.

“If there were something important enough that the council would accept, I would tell you.” Kor’s face softened – something rarely seen. “Maybe it comforts you that I’ve already ordered Kirk’s mortal remains sent to the Federation when the sentence is fulfilled. He also wanted to let you – his friends – and his family know that he ‘regrets nothing’.”

Bob lowered his head. He knew that there was nothing more he could do to save his young friend’s
life. Kor’s next words confirmed it.

“I am sorry, Wesley, but my hands are tied. Farewell!” He bent forward and killed the connection, leaving a grief-stricken Bob Wesley alone.

For several moments the commodore sat only there, looking into emptiness, then he balled his hands into fists trying to keep his anger at bay. He hailed the bridge. “Lieutenant, connect me with the Enterprise!” he barked and waited for longer than seemed necessary. Palmer’s voice sounded, “I am sorry, Commodore, but the Enterprise doesn’t answer.”

“I beg your pardon?” Bob asked, baffled.

“There is no answer, sir. Shall I try to contact the officials of Kenda to ask if she is still there?”

Wesley’s mind was steeped in turmoil. It didn’t take a genius to understand what was happening. He would bet money that the Enterprise was about to set off on a completely idiotic, suicidal rescue mission in an attempt to save their captain. And if it weren’t for the Lexington’s state, he would gladly accompany them, even if it meant breaking a handful or two of Starfleet rules. But he could do something else. He could feign ignorance of the crew’s intention.

“No, Lieutenant, I am certain that she is still at Kenda. Maybe they have another problem with their communication systems. The repairs weren’t when Kirk left Starbase 84. I’ll try it later again.”

He leaned back and rubbed his face, asking himself if his decision would lead to more deaths and the loss of the flagship, or to the rescue of Jim Kirk. Then something hit him. Spock had reported the short contact with The Shadow; he told of the outraged reaction of one of the militia’s members when he learned of Kirk’s fate. ‘Sunrise’; it must be a code name. He altered his voice during any contact in order that all attempts at voice analysis failed. Wesley had a feeling this man and ‘Drythen’ were the same person. Maybe this outlaw, whoever he was, could help. The Shadow operated on the outskirts of the law, and Bob didn’t want to think of this detail too much. But they could support the Enterprise and, above all, Jim, well hell! He’d take them.

One look at his terminal told him that the eavesdropping shield was still active. He also knew from Spock’s report that ‘Sunrise’ used Code 9 to contact the Enterprise only hours ago, warning them of the approaching Klingon fleet. ‘If only Jim would have listened to his mysterious friend!’ Wesley thought and activated a line of some main frequencies. It was about time to use some unconventional methods.
Aaaand the next cliffhanger. I have to repeat myself: I warned you (*laugh*). I know this is really a mean moment to end the chapter, after all it is even part 1 of 2 parts. So, our Jim is in dreading trouble and the rescuer haven’t even reached Turkana, whereby the Enterprise is even more far away than Khan.

In the next chapter – as you certainly assume – comes the ‘high noon’, so to say. Of course Khan will stop at nothing to get to Jim, but between the two men stand a whole Klingon squadron and natural as well as technical barriers. Right, Khan is driven by his fierce determination, basing of feelings he hasn’t recognized until now, still even an Augment can be defeated, if he is too outnumbered – or not?

As you see, the whole thing remains gripping.

I hope you liked the new chapter, even if you certainly feel sorry for Jim. Well, nonetheless he can call himself lucky to have such loyal friends and a brilliant and savagely lover, who is hell-bent to rescue him. I’m also curious what you think of Kor’s and Kirk’s talk, Spock’s willingness to disobey rules to help his T’hy’la and Wesley’s risky contact with Kor.

The next chapter comes sometime next week.

Have a nice weekend,

Yours Starflight
Hallo, my dear Readers!

Thank you so much for all the comments and Kudos. I’m happy that the last chapter touched you so deeply and that you suffered with Jim (and his friends).

I know that you are all eager to learn what will become of Jim, if Khan can get to him in time and if the two men will be able to escape. Well, and if everything runs smoothly – more or less – this will be the re-union you are all waiting for so eagerly.

At this point I want to give my special thanks to my dear beta-reader Rhiannon. It is incredible what she makes of my partly horrible writing, but also keeps my style completely. And she gave me several ideas or suggested several details, which made the story even better. Thank you so much, dear Rhiannon, I owe you!

And now – off into the 23rd century. There is a captain to save and to lovers to be re-united.

Those, who have weak nerves, please be warned!!!

Have fun,

Yours Starflight

See the end of the chapter for more notes

Chapter 15 – Through hell, part 2

Khan stared with horrified eyes at the scanners. This. Could. Not. Be! He had calculated every risk, every twist, any ‘ifs’ or ‘when’s’. But the fact that the energy barrier shielded the whole city didn’t occur to him. And scanners don’t lie. Because of this shield, he couldn’t scan the area; therefore, he couldn’t find James and, above all, he couldn’t use the transporter to beam him up. Time was precious now!

As he had heard the official transmission of the Klingon Lord and the words ‘I’ve ordered the execution of Captain Kirk…’ desperate denial caught him and mingled with pain and fury. Then his rational side took control once again. It was exactly as he had anticipated; Jim would have to bear brutal assaults, but it would buy him time for rescue. And Khan was hell-bent on getting the young captain out of trouble.
He just hadn’t foreseen the obstacle that blocked his way to James now. The snarl that escaped the Augment would have made a tiger tremble; then Khan forced himself to calm again. Rage would get him nowhere. A quick look at the displays showed him that the sensor-disturbing-system still ran smoothly and that the cloaking-device worked flawlessly. The mighty battle cruisers on the main screen hadn’t and wouldn’t locate him. At least this part of his plan was successful.

Well, another scheme had to be hatched as soon as possible. Pursing his lips, Khan observed the atmosphere of the now night-dark side of Turkana.

Night…

Dark.

Maybe this could work to his advantage. Back, in the 20th century, there hadn’t been technical devices like transporters, high functional scanners, and spacecraft with superluminals. Still, there had been secret missions fulfilled, prisoners broken out from high-security prisons, and well-secured areas infiltrated. Not for the first time since Khan had woken up in the 23rd century, he remembered old strategies from his time and used them.

‘Even the best secured house has its mouse holes – and I will find this one!’

Making his decision, he steered the D’Ghor through the atmosphere and let her glide down to the planet’s surface. Using the main screen’s infrared sensor, he watched the landscape beneath the scout as he flew towards Turkana-City.

The communications station display blinked again, and Khan suppressed the urge to roll his eyes. He had programmed the station to report transmissions sent within a radius of three dozen parsecs. For nearly three hours the radio traffic was very busy; the Enterprise as well as Commodore Wesley were trying desperately to contact The Shadow. Their reasons were clear. Still, neither Galven nor any other of the militia had answered those hails until now and Khan would have been a fool to pick up the transmission. As far as he knew the Klingons hadn’t cracked Code 9, but they were eavesdropping, too. And they could get the right idea about the spacecraft nearing Turkana if he answered those calls. So he kept silent.

“Running out of ideas, Vulcan, aren’t you!” he sneered. “First, you let James down and now you hope that we can pull him out of the fire for you!” He hesitated. Had he referred to The Shadow and himself as ‘we’? Yes, he had. Alas, he had to be more careful. He was becoming too attached to others outside of his family. Jim was an exception—the young man belonged to him by blood – but others… ‘Alone is what I have; alone protects me.’
Khan shook his head and concentrated once again on the planet surface beneath him, waiting for Turkana City to emerge onscreen. Five minutes later he could see the town on its high plateau and recognized the flickering, glistening air around the settlement. Scanning the barrier he realized that the energy would be highly uncomfortable if he touched it, but it wasn’t deadly. He could overcome this barrier; it was one of many he would have to overcome to reach Jim.

Pursing his lips, the super-human took in the picture onscreen. The wall of the promontory was high, but not too high. A well-trained climber could make it in less than a half hour, and the Augment counted himself among those. ‘What would Joaquin say now? Just let us find a parking space and then we are off!’ Well, he had to land the scout somewhere, but that was not the only challenge. He had to bring supplies with him for the climb up to the city, then move silently and invisibly through the city in order to break out Jim and to return to the D’Ghor – preferably with them both in one piece!

He thanked his foresight in preparing a serum for Kirk. Originally, he had mixed it to help ease the inflicted pain as soon as possible; now it would provide the basis for their flight. Kirk would be injured and weak; he needed strength to follow Khan to safety. The serum would support his body functions adding needed adrenaline and cueing his heart into maximum efficiency – hopefully. Khan knew that Kirk’s body was accustomed to the DNA of the Augment’s blood; still the serum could be useless. There was simply not enough data to gauge its efficacy.

And added to the problem of treating Kirk remained, how to reach the captain. How was he to reach the townhall unseen? He would need several items for this covert expedition. The equipment aboard the scout might do, but Khan doubted the needed equipment was available. So he had to improvise. If an Augment, a ruler, or a soldier learned anything, it was how to make due with what you have. It may not be ideal, but it is possible.

Bringing the scout nearer to the ground, he noticed the large moon of Turkana bathing the landscape in a bright, silver light; that would make it easier for him to move through the night. That at least was something; his enhanced vision and the moon would do well enough that he wouldn’t need to carry an artificial light then. He scanned the area for a fitting place to land and hide the vessel. He couldn’t get too near to the city. He was invisible, but not quiet, and there were likely Klingon patrols in the streets enforcing a curfew. But he couldn’t land too far away either. The captive’s escape would most certainly be found out and even with a head start, he wanted as short a trip as possible since Kirk’s condition was unknown. Every meter could be one meter too many during their flight.

Khan placed the scout ship down in a small clearing not far from the wood’s edge, close to the promontory. As quickly as possible, he programmed the replicator for tight, black overalls and footwear that would be fairly quiet; then he changed his clothes. He toyed with the idea of using Klingon armor as a disguise, but scrapped it. The armor was too stiff and too heavy; it would impede him during the necessary climb.
Sighing quietly, he strapped a supporting pack on his back, pocketed a knife and the injectors he had filled with the serum for James, girded his holster with the phaser, and made for the climb with long, determined steps.

He wished for the portable transwarp beaming-device now. The transwarp addition was useless, but a portable transporter would shorten their escape as soon as they were outside of the energy barrier. To Khan’s regret this item wasn’t in The Shadow’s inventory. It would only impede his travel anyhow. He would have to end the personnel recover mission the good old-fashioned way, by running for dear life – his and James’.

The crag rose like a wall of darkness in front of him. He turned back to the D’Ghor, closed her steel door and killed her lights with a small tricorder he had programmed to work as a communication device and remote for the scout’s main functions. He wanted to be sure she was as invisible as possible in the dark – no use the ship giving him away.

After several steps, the Augment glanced back one more back. There was nothing to see. The cloaking device was still running, and the added batteries would keep it functioning for several weeks, if necessary. Khan hoped that he didn’t have to test its longevity though. If everything worked out, James and he would be back within hours. If not, he wouldn’t need to worry about anything in the world anymore. He was well aware of the fact that this was a suicide mission if unsuccessful. He took a deep breath of the damp, cool and fresh air, then inwardly bid his family’s forgiveness. Should he fail and die in the attempt to free the young man then Joaquin and all the others would likely sleep for all eternity – or until the cryotubes finally failed.

Bending down he scratched some earth from the ground and rubbed it on his face and his fingers to darken his marble-white skin; it was an ancient trick, but it still worked. Then he began to walk. Once he left the jungle, he jogged towards the cliff. The upward climb would be risky, but the trek through the city was even more dangerous. He would need all his enhanced senses and instincts to reach the town hall undiscovered, invade the building, find James, and to get him out of the hellhole that the reckless boy had maneuvered himself into…

“Commodore, I have a report of the Enterprise for you.” Lieutenant Palmers’ voice cut through Bob Wesley thoughts. He was still in his quarters trying for what seemed an eternity to reach The Shadow – without any success.

He took a breath and replied calmly, “Put them through, Lieutenant.”
A moment later the ascetically pale face of the Enterprise’s first officer appeared on the screen.
“Commodore Wesley!”

“Commander Spock,” Bob greeted. “It appears you solved your comms problem.” For a moment the Vulcan looked confused; then something akin to surprised realization appeared on his expression and he replied carefully, “Obviously, sir.”

“Well, status, Mr. Spock?”

“The colonists are all safely on Kenda.”

Wesley nodded. “But there are some colonists left on Turkana that require evacuation now, yes?” His look turned serious as he caught expression of surprise on the Vulcan’s face a second time.
Wesley sensed the commander’s omission. “Spock, I know what you and the Enterprise’s crew are up to, and I think that you’re back in Borderland again, aren’t you?” He took the first officer’s silence as an affirmation. “Listen very closely, Commander, because I will only tell you this one time. If you can possibly drag your hero’s ass out of the hot water he is in, then, by all means do it. But do not risk the ship and the lives aboard! The Orions will figure out that you are back and this time you haven’t their allowance to pass through their territory, as illegal their claim of ownership is. And the Klingons will not hesitate to attack you, too. Be careful – and if there is no way to save Jim, leave!”

One Vulcan brow curved slightly. “Do I understand you correctly, sir? You give us your permission to…”

“For God’s sake, NO, Mr. Spock! I got word from Starfleet Command an hour ago that they deeply regret Kirk’s capture, but they can’t do anything – and that you should be ready to receive new orders. So keep quiet and don’t mention that I ever spoke with you directly, or we both end up on trial.”

Another face appeared beside the Vulcan, Doctor McCoy.

“Starfleet Command will do nothing to rescue Jim? After he saved Earth, revealed Section 31 for what they really were and…”

“It seems out of Admiral Barnett’s character to decide something like this,” Spock cut in before Leonard could reveal too much of his irritated state. Well, the good doctor was perpetually in an
irritated state, but best not to exacerbate it.

“Barnett and the admiralty are in an important meeting with several members of the Federation Council, counselors, ambassadors, and the president. They are conferring about a way to find a political and diplomatic way to end this war. I got the message concerning Jim from Admiral Luengo’s office, the chief of the SBI.”

McCoy frowned. “The SBI? Since when do they have a say in…”

“It doesn’t matter. When Barnett learns of this disaster, it will be too late for Jim,” Wesley interrupted him and rubbed his chin. “Just try to get him out of there and return in one piece. I’ve tried to contact The Shadow to see if they can offer you support, but so far I’ve had no luck.” He shook his head. “This isn’t my day. I also hailed Lord Kor. Even though he genuinely seems apologetic, he has to obey the Klingon’s Council command and means to execute Jim.”

Spock nodded slowly. “We will try our best, sir, and, on behalf of the crew, thank you – for your… support.”

Bob smiled grimly. “It’s the least I can do. I ask that you don’t reveal our discussions. It would likely stall any hopes of Starfleet involving themselves in Kirk’s rescue and perhaps even endanger talks to end this war.”

“Understood, sir!” the first officer murmured. “Thank you.”

“Wesley out!” Bob leaned back in his chair and shook his head. “God dammit, boy, you are going to get an earful from me – if you survive this mess.”

ST***ST***ST

Jim had never thought that it was possible to be in so much pain. His whole body was on fire; his shoulders, which carried his weight, burnt no less than his back and chest, wherever the pain-sticks were pressed against his bruised skin. Blood buzzed in his ears; his heart rate was dangerously high, and he had trouble catching his breath. Sweat blazed in the cuts left by the Klingon daggers on his upper body and in the tracks of the laser whip.

And there was no end to any of it; no end to the questions, no end to the brutal assaults, no end to
incredible hate Koval and Noy inflicted on him. He sighed in relief when the two captains left the ‘interrogation room’ to update Kor about their lack of success in gaining the desired information from their victim. But Jim’s relief was short-lived as two the Klingon lieutenants returned and undertook their questioning again. They weren’t any less cruel than their commanders.

When Khret delivered a sharp blow to his belly, Jim couldn’t prevent himself from vomiting – though only blood and bile came out of his mouth. His breath was hollow and harsh, and he fought against the tears threatening to spill in reaction to the brutal treatment he endured.

He heard the rough Klingon voices laugh and someone slapped him hard enough to make his ears ring. Then Khret gripped his scalp, forced his head up and stared at him with dark, wrathful eyes. His breath reeked of the raw meat he must have had as dinner. “Once again, human, the security-codes and the positions of StarFleet’s strike groups!” he demanded, increasing his brutal grip. “And who is this dark fighter; who killed our warriors?”

Jim looked defiantly at him and set his jaw. The Klingon took this as a negative answer. “You’re stronger than we thought, Ha’Dlbah (animal), but it will not help you! Khret growled. “This is your last chance before I get unpleasant,” he almost whispered. “Where is he?”

“Where you cannot get him!” the young captain gasped, imagining the super-human in the safe shelter of his quarters.

“What’s his name?”

“He has many names; all a great as he is,” the Jim murmured. His mind only acknowledged one though - Nien

“HIS NAME! Say it, human!”

New resolve flared up in Kirk. “Rumpelstiltskin! You don’t know Rumpelstitskin? The little gnome, who taught the miller’s daughter how to spin gold, so that…” The pain the Klingon inflicted this time was exponentially worse than the one before.

Khret reached for his D’k tahg, the Klingon dagger augmented with two smaller twin blades, and pressed it with the blunt side against the young captain’s chest. He bent forward and whispered, “I will skin you alive, Kirk! I will cut this sorry excuse of a biological coat from your body while Karum will carve pictures of your eviscerated organs on your back with his knife. Just think about
Kirk shuddered inwardly. He couldn’t remember whenever he had been so full of fear and despair. Not when he entered the warp core chamber without any protection to save his friends and his ship, and not when he found Khan in his apartment, ready to kill him. He had felt so much terror now though; his soul, his heart, every fiber of his being was crying for help – for mercy! But there was none to be had. Not this time. He would have to bear whatever the Klingons had in store for him until he died of shock and exhaustion. Or he could betray his friends, Nien, Starfleet and every free man and woman of the Federation by giving the enemy the demanded information to receive a quick death in return.

Not an option – not today and not ever. Despite his dry mouth, he spit straight into the face of Khret and rasped, “Fuck yourself, bastard!”

The Klingon backhanded him hard and snarled, “Karum, step five!”

Jim barely had time to understand what the Klingon meant; then the pain stick was pressed against his back again. There was no pain comparable to the pain that shot through his nervous system now. The proudest being wouldn’t be able to control their scream – neither could Kirk. He screamed. His peripheral nervous system was on fire – stimulated into overdrive by the pain stick. His whole body convulsed and his eyes rolled back. He wanted to plead, to beg, but he was incapable of voicing a coherent word. Everything melted into a red, fiery haze of sheer agony; darkness crept towards him to his conscious. And then the pain stopped.

His screams still echoed in his ears, almost loud enough to drown out the roar of animal fury – almost! The sounds around him changed. He heard angry shouts, grunts and tumult; then something hot and sticky splashed against his bare chest. Forcing his head up and his eyes open, Jim struggled to focus.

One Klingon guard lay a few feet away from him on the floor; his throat was slit. Khret fell next; his own D’k tahg was buried in his chest, penetrating one of his three hearts. Karum and three other guards were still fighting, but not one could overpower the slender figure clad in black who whirled between them like a dark lion – just as graceful and deadly.

The figure hurled a knife at one guard who lifted his disruptor – but it was too late. The Klingon’s life ended in a blink of an eye, cutting through the armor with the sheer force of the throw. Slender and inhumanly strong hands tore a Ba’leth out of the grip of another Klingon and beheaded him a moment later. Then the attacker threw the Ba’leth at a fourth guard who died before he could make to the door to call for help. Pink blood covered the walls and floor.
Karum reached for the stranger but grunted in pain as a fist shot forward and broke his breast bone, sending him to his knees. He wheezed and looked up at the stranger. His face twisted when he recognized the male humanoid beneath the dirt masking his face. It was a Terran, he assumed, not even out of breath. A second later the man grabbed his throat and pulled him up. Pale blue-green eyes glittered with frenzied rage; a deep voice snarled, “No-one. Hurts. One. Of. Mine!”

The grip around his throat tightened. The last thought that whirled through Karum’s mind was, ‘The Federation still has her Augment-program!’ Then he began his voyage to Khaseless and the Black Fleet. Khan watched the life slip out of the Klingon eyes as he crushed his trachea; blood dripped from the Klingon’s mouth. The Augment let go of his neck, and he slumped to the floor.

Khan warily looked around him one last time, only then did he allow himself to come out the battle reverie that had befallen him the moment he heard Jim’s agonized screams. He heard them through the ventilator shafts he had used to invade the building; then he saw what was done to him. Khan wiped his bloody hand clean on Karum’s sleeve and turned around. His gaze landed on Kirk’s pale and swollen face, roamed over the bruises and cuts – all the blood – some Jim’s, and some from the dead guard nearby. Then he met the glassy eyes of the younger man who looked at him in awe. Unbearable anguish mixed with disbelief and impossible hope shone in his eyes.

“James!” Khan whispered, shocked. His charge was in an even more distressing condition he imaged Jim would be; not just physically but also mentally. Kirk’s haunted gaze spoke volumes, and the tremors of shock began to rock his bruised frame.

Khan didn’t waste another second. Hastily, his keen eyes searched for the remote that would open the manacles. He found it on the belt of a guard. He hurried to the dead warrior, took the remote and dashed to Jim. He wrapped one arm around the slim waist of the young captain to steady him; almost instantly Kirk’s head sank to Khan’s shoulder, and a stifled sob rocked the strong but beaten body of the officer. Khan pressed his lips shut, and wrath flashed in his eyes at the realization of what had been done to his James. Then he eyed the symbols on the remote and recognized the Klingon symbol denoting ‘off’. Quite useful he learned a view symbols thanks to Ritek and the D’Ghor. He pressed it, the manacles snapped open and the super-human caught Jim as his knees buckled, and his arms dropped.

Careful not to injure him further, the Augment eased the captain to the floor. The pained groan and whimper that rose in Kirk’s throat sent a stabbing sensation through Khan’s heart as he supported the younger man with an embrace, cradling him gently to his chest. Khan thought he could feel Jim’s pain as if it were his own; sorrow rose in him like a dark phantom. Alas, why hadn’t he been quicker? Why had it taken so much time to reach James? Yes, the ascent up the crag, then a trek through the small wood to the town and finally through the streets of Turkana City had been anything but easy. At the very last moment, before he reached the town hall, he had to avoid four Klingon patrols. Still, he damned the circumstances that slowed him down. The young officer had been through hell – a hell he maybe could have prevented if he had been faster. But at least he made it in time. James was alive – that was all that counted in this moment.
He felt the slightly smaller body tremble, heard the raspy gasps, and listened to the quiet sobs that escaped Jim’s lips. Another stab of anguish pierced his heart. James Kirk belonged to him and to see one of his own suffer like this caused him deep grief.

“Shh, I have you,” he murmured soothingly, brushing his lips over Jim’s sweat soaked temple. “Calm down. I have you, mērē pagalā sāhasi. * Hindi for ‘my crazy daredevil’

For a few more moments he allowed James and himself to rest, holding the Starfleet officer as if he was made of glass. Gently, he laid his cheek against the tousled golden shock of hair and tenderly stroked a hand through it. Jim reeked of sweat, blood and bile, but Khan didn’t care. All that mattered was the man in his arms who had endured Klingon torture and was shaken to the core.

The fury that had engulfed the super-human the moment he heard Kirk’s screams was no less intense now as he held the other man close and to comfort him. The condition of the boyish officer filled him with helpless rage. James had been through more than any living being should be – and it wasn’t over. As much as Khan wanted to grant him more rest, he knew that they were running out of time; he had to act now!

His right hand searched the pocket of his trousers, hoping he hadn’t lost the injectors with the serum during the crawling-tour through the shafts; with relief he found them. Pulling one of the hypo-sprays out, he brought his mouth near Kirk’s ear and whispered, “I’ll give you something for the pain, James, all right?”

Jim didn’t answer; he simply leaned against the strong chest and tried to quell the tremors and echoes of the agony that had wracked his body for what seemed an eternity. Something pressed against his throat; a short sting shot through him and a chill seeped through his veins and glided gently along the hyper-stimulated nerves. It soothed his aching muscles, cooled the burning skin and brought his pulse back to normal. The absence of pain cleared his mind and allowed him to focus.

Within a minute, he became aware of his surroundings. He noticed the cold air of the room, metallic and sticky with the stench of alien blood. Then he felt the long, strong arms around him and a soft heartbeat beneath his cheek accompanied by the familiar scent of the man who had touched his very being; it was someone Kirk could rely on – a rock in the middle of a raging ocean. The warmth of Khan’s body seeped slowly into his aching limbs. He allowed the warmth to envelop him, make him feel safe even though they were not yet out of danger. For several seconds, Jim lay simply there and clung to the super-human – grateful but beyond exhaustion – then he felt Khan cupping his face and lifting it gently.

Instinctively Jim leaned in this soft touch, too overwhelmed to attempt to hide his surprise or
discomfort. He almost didn’t dare to trust his eyes and ears – oh, but that delightful scent could only be one man. Not only did help arrive out of nowhere, no! It came in the form of the man he had yearned to see one last time before he died. His dark, avenging angel. Kirk saw the dirt-covered face hovering above him, the sea-colored eyes so full of worry and suppressed anger. And he heard that rich baritone that soothed his hyperactive senses like a balm; that voice was nearly as good as the hyposprays. But then the realization sank finally in as his mind start to work properly again.

The only living being in the whole universe able to creep secretly into a building full of Klingons and kill six warriors in less than a minute held him in his arms. Khan risked his own life to come to his rescue.

“Nien…” he breathed and his sight blurred again with rising tears of relief. Khan was here! He was here to save him! Everything was going to be fine now. A wave of gratitude washed over him, combined with wonder. “You… you came,” he choked out; his voice not more than a hoarse whisper after all the screams the Klingons had torn from him.

“Yes,” was all the Augment murmured; he laid his forehead against the feverish one of the younger man. Then he reminded himself that they had to flee; now – before it was too late. “We have to go or they will catch us both. Can you walk?”

Could he walk? No, not really. On the other hand, if moving his legs meant he could escape this hell-hole, he would walk anywhere! It took him a moment and even more effort to nod, but somehow he managed.

Khan pursed his lips. It was more than obvious that Kirk was anything but ready for the flight that lay ahead, still they had no other choice. And so the Augment hoped the serum he injected into the captain’s body would help him to recover soon enough to do what was necessary to escape. He had enough for a second dose if it came to that.

“All right,” the super-human muttered. He helped Jim to sit up, rose and pulled the younger man carefully to his feet. Kirk swayed and instantly Khan wound one arm around him. Then the dizziness began to ebb away. Jim was still hurting, his legs seemed filled with lead, and his mouth was dry and tasted bitterly of bile. Nonetheless, the captain fought for control over his body. After several moments, the trembling stopped, and his legs supported him once again.

For the first time, he took a look at his surroundings, and he gulped when he saw the mess the Augment had made. Khan had seen red, and painted the room with Klingon blood. The four guards, Karum and Khret, were dead – slaughtered. A head lay just about a meter away from its Klingon owner.

“They tortured you; exposed you to inhuman pain. They didn’t deserve anything else!” Khan stated flatly; his eyes blazed for another moment like an inferno, then he calmed down again. Brushing damp hair from Jim’s forehead, he murmured, “I don’t take it well if someone, who is mine, is threatened or tormented.”

Kirk knew that he should protest. He wasn’t Khan’s property, yet the Augment’s words had a nice sound and offered him something he hadn’t in a very long time: protection, safety and even comfort. It also meant they no longer danced around the feelings they shared. So he simply said “Thank you!” and thought he saw the pale eyes of his rescuer light up; then the super-human frowned. “Can you stand alone?”

If Jim nodded, it meant that the serum was working well. The younger man made an affirming gesture and new relief touched the former dictator. Warily he let go of him, mustered himself and, a bit reluctantly, stepped away though ready to rush back to Jim’s side should he fall again, but the officer stood straight. Quickly Khan took the torn shirt that hung over one of the chairs, and helped Kirk carefully but hurriedly to slip into it. Even in its sorry state, the shredded material offered little protection against the outside temperatures, but the Augment knew that even small bit of cover allowed one to feel less exposed – not just to the temperature. Then he collected his knife, two Klingon daggers, and took two disruptors from the fallen Klingons and returned to Kirk.

Handing Jim a knife and a disruptor he asked, “Do you think you can crawl through the ventilation shaft?” He pointed towards the ceiling and as Jim followed the gesture, his eyes widened when he saw the open hatch.

“You came through the shafts?” he whispered; he fastened the weapons on the belt of his torn trousers. Khan simply nodded. “I’ll try,” the young man said.

“Good!” Tucking his disruptors in his own belt, the super-human grasped Jim’s hips with both hands and asked a quietly “Ready?” He lifted Kirk up as soon as he heard the hoarse “Yeah.”

Lifting his arms holding himself for a few seconds on the edge of the open shaft was hellish. Jim’s muscles were on fire again and tears of pain spilled over, but with the stubbornness of a mule he clung to ceiling’s metal then groaned in relief, as Khan’s fingers gripped his legs and pushed him upwards through the opening. Biting back another moan of distress, Kirk crawled a few yards through the small duct, making room for the Augment.

Khan tensed his muscles and shot up like an arrow from a bow; his fingers found purchase on the opening, and he pulled himself into the shaft with the grace of a panther. In the dim light of twilight that fell through the opening he saw James and whispered, “Several yards away I stocked a
flashlight. Take it and keep going. I am right behind you.” He didn’t wait to see if Jim obeyed. He rolled himself in a ball, turned around and closed the hatch; he hoped to gain a head-start. God-willing the Klingons would be slow to discover how their captive escaped. But it was only a question of time before they discovered the dead guards and officers and James’ absence. When it came to this, he wanted to be as far away from this building as possible.

Guiding Jim with murmured orders through the shafts quiet as mice, they reached the access hatch connected to the outside through which Khan had come in just a short time ago. Slipping beside the young captain and pressing against him, the super-human peeked through the grate to the outside. If it weren’t for the injuries, Jim would be pleased with the proximity of his rescuer, but right now it hurt like hell to be pushed against the metal sides of the shaft. Still he didn’t complain. The fresh night air that was sweet with the promise of freedom, and there was Khan – like a sword-wielding guardian angel, who broke him out of his cruel hell. Enduring a bit more pain was nothing compared to the prospect of escape.

The Augment listened carefully then nodded. “All clear,” he whispered before he loosened the grate from its mounting. “I’ll go first and help you down. We are about a meter above the ground,” he murmured. He slid past Kirk and slipped out of the shaft holding the grate securely with one hand. His feet touched solid ground and quickly he rose, laid the grate beside him against the building and supported the younger man as he followed him down to the ground.

Jim became dizzy again as he stood on unsteady feet in the cool, clear air and leaned against Khan trying to dispel the sudden vertigo and regain his legs. Almost instantly something was pressed again his throat, and another dose of the serum entered his system. “What… are you giving me?” he mumbled. Seconds later a rush of warmth and power rushed through his veins.

The super-human put the hypo-spray back in his trousers as he looked with piercing eyes watchful of the sights and sounds around him and poised to react at the slightest disturbance. “Later,” he answered quietly, harkening still to every noise. But there was none besides the sounds of the night. “Quick now,” he whispered and pulled Jim with him – only to nearly run headlong into a group of three Klingon guards on patrol, joining with other warriors in the area surrounding the town hall. Ducking into the shadows, both men waited until the Klingons passed by before continuing on their way.

Khan headed straight towards the next street, using every dark area and every shadow afforded them by the surrounding buildings cast in moonlight and streetlamps. The Augment checked his tricorder to avoid Klingon patrols, while he supported the slightly swaying Jim as much as he could.

It went smooth – almost too smooth as the always cautious super-human thought. He turned onto a street near the town’s edge, where small gardens decorated the houses. He stopped at one low garden fence and bent over it to pull something out of the bushes. Jim frowned when he saw Khan strap on a backpack; he met his gaze. “We will need this, trust me,” the Augment murmured. He had stored
the supporting bag here before he hurried to the town hall and to Jim only half an hour ago.

“What do you have planned?” Kirk asked beneath his breath as he tried to ignore the pain of the injuries and slight twitches beyond his control; he still suffered nerve hyper-stimulation due to the pain sticks.

“We will…” Khan didn’t get further. Suddenly shouts echoed through the streets and the town’s alarm started to howl. There was no doubt they were the reason for the turmoil.

“They know,” Jim gasped, feeling an unwelcome rush of new fear tingling throughout his body.

“Obviously,” the former dictator growled before he turned and dragged Kirk with him. “RUN!”

ST***ST***ST

Kor listened closely to Koval’s report, while Noy stood beside his cousin with a dark expression. Not one of them had thought that Kirk would put up much resistance to their torture. In any event, the Klingon Lord again felt respect for the young human. There had been other men, strong in body and soul, who had given in within a short time after their first encounters with Klingon interrogation methods. But strength does not wholly correlate to age and life-experience. Kirk was young – ‘…barely an adult…’ as Wesley had pointed out – but he showed a fortitude that impressed Kor.

Of course, Koval and Noy saw Kirk’s silence differently, as a personal affront. That Kirk did not respond to their interrogation methods was an insult to their abilities.

While Koval explained in detail how he and his cousin made the captive suffer in order to gain the answers demanded of him, Kor heard Wesley’s voice in his mind speaking fondly of the young officer. ‘…risked his life to protect your home planet…’ the commodore had said; that comment gave the Klingon Lord pause as did Wesley’s confession ‘…Jim Kirk is like a son to me…’ Wesley loved Captain Kirk with his…heart, as the human metaphor went. Or as in the Klingon case, with his three hearts. Kor had taken a liking to the commodore and to hear the man beg for some mercy on behalf of the young captain, had moved something in the aristocrat. Perhaps it was due to the war or sharing a drink with Wesley so long ago, but he earned the respect of the Klingon – out of respect that person’s burdens were worth commiseration. That Wesley tried to appeal to the bond of respect shared with Kor was bold though, considering the war, but the fleet-commander was not immune to compassion.
'If Kirk only answers two or three questions, I may indulge the whole matter and give the boy a quick death. After all, it’s up to me to decide, when he has suffered enough.'

He lifted a hand and stopped Koval’s irritated tirade. Quite the opposite of other Klingons, Kor took no pleasure in torturing other beings and accordingly, he didn’t like to hear in detail about such measurements.

“It seems the captive is stronger than we thought,” he said firmly. “Maybe it’s for the best, if I speak with him again.”

Koval rose to protest, but shut his mouth as the Klingon Lord glared sternly at him. “I’ve learned that most Terrans are more receptive to reason after they learn that their stubbornness gets them nowhere. I’ll go with you!” He rose, took his disruptor and set it to ‘kill’, before he headed out of his office; the two angry captains followed him.

They walked swiftly through the corridor and down the stairs to the cellar until they reached the interrogation room. The three Klingons didn’t take notice of the quiet. The rooms were soundproofed, and likely the Terran had finally lost conscious after his interrogation with Koval’s and Noy’s first officers. When they were a few steps away from the door, a bad feeling came over Kor. It was deathly quiet.

Drawing his disruptor, the Klingon Lord pulled the door open. He froze at sight that lay before him; Karum and Khret lay among the four guards on the floor dead – slaughtered. The floor and walls were painted with Klingon blood. And there was no trace of the captive; the manacles that once held Kirk were empty.

Koval let out a furious shout that alerted other guards who came running – ready to fight.

Kor overcame his shock. Wrath woke hard in him. Kirk had help. Who could kill six well-trained Klingon soldiers and leave with the young captain in such a short time?

Trembling with rage, Kor whirled around roaring, “FIND THEM! BRING ME KIRK AND THE COLLABORATORS – ALIVE! NOW!”

The two captains and the guards obeyed instantly rather than getting shot where they stood for losing the captor. Kor stared one last time at the massacre at his feet. “They can’t be far. The energy shield prevents them from beaming away, and Kirk is too weak by now to move quickly. I’ll find you –
and then may your gods have mercy on you!"

Kor would have been astonished if he saw Jim now. But for his bruised and torn appearance, you couldn’t tell what he’d been through. He stormed through the jungle at Khan’s side, through the moonlit night. He forced his legs to move faster. His whole body was bathed in sweat, serum pulsing through his veins. But it couldn’t prevent the burning sensation when salty sweat poured over his injuries. Still, he didn’t slow down no matter how he ached or how his limbs demanded.

Behind them, hell broke loose. Shouts and heavy steps echoed through the streets, tracing the path of the Augment and the captain. Not far ahead they dived into the bushes and undergrowth of the small between the town and the abyss below. Branches whipped at their faces and bodies as they raced through the woods; jumped over roots and broke through brushes and mighty ferns, never stopping, not for a moment. But the speed wasn’t enough; they heard their pursuers behind them, led by their tricorders that showed them the two Terran bio-signals.

Barks added to the chorus of shouts and Jim cursed. He knew exactly what was behind them.

Beside him, Khan sprinted with no signs of tiredness and a grim expression on his face. He pulled Jim along whenever the young captain fell behind. Kirk’s heart hammered against his ribcage; his breath came in short, sharp gasps and his body protested the inhuman efforts asked of it. His nervous system started firing again, burning, still he kept running. Mortal fear and despair urged him forward, pushed him to his limits and beyond.

Arms raised, he tried to protect his face against the harsh branches in his way. Jim even increased his speed when he heard Klingon voices coming at them from the right. He didn’t know how he was able to gather so much strength after the hours of torture, but the prospect of being caught again made his feet fly despite his screaming muscles. The Klingons were trying to surround them, flank them on either side. But what would come next was too horrible to think of, so Jim did the only thing he could; he ran. He and Khan ran like the devil was on their heels. And in a way, he was.

All of sudden something broke through the undergrowth to their left and Khan whirled around, phaser in his hand. His eyes widened. The creature that sprang on Jim and him was a living nightmare; it was a scaled wolf-like animal with the head of a crocodile and paws sharp enough to kill a tiger.

“A warrigul!” Jim wheezed hoarsely. “Shoot!”
You didn’t need to tell Khan twice. The phaser blast hit the beast directly in its ugly head snarling at them with finger-long sharp teeth. It came at them just a few more steps before it fell dead to the ground.

But it wasn’t alone. Three more of those creatures appeared and ran snarling and growling towards the two men, followed close behind by two Klingons who aimed their disruptors at the fleeing Terrans.

Jim didn’t think, he simply reacted. Hurling himself against Khan, he shoved the Augment out of the way only a second before the blast could hit him – a deadly blast. These Klingons ignored the order to catch the fleeing men alive. As the two allies fell together, Kirk wrenched one of the obtained disruptors of his belt and fired – not caring if it was set on ‘stun’ or ‘kill’. One of the Klingons dropped dead against his comrade throwing off his aim. Khan’s shot sent the second warrior to Khaless. Then the three warriguls were on them, and both men fired without hesitation. Still one warrigul was able to dig its teeth into the Augments left arm.

Khan yelped in pain and fury and his right fist, the one that held the phaser, came down on the beast’s skull hard enough to break its bones. Howling, the warrigul let go of him and the super-human shot the creature. He pulled Jim along with him once more.

Behind them roars of anger sounded and orders were shouted.

And again they were running, determined but with the sinking feeling of dread in their hearts. In front of them, the woods opened to the fields as they passed the energy-shield. It felt as though they ran through a permeable hot wall. Jim moaned as his over-driven nervous system reacted awfully to the new stimulus; he stumbled, glad, as Khan once more steadied him and pulled him along.

The Augment had slowed his tempo in the very last moment before they reached the promontory’s end. He wrapped his good arm strongly around Jim’s waist to prevent him from plunging off the high cliff. Small stones and pebble kicked loose from under the men’s boots and fell into the precipice.

“What now?” Kirk gasped, not ready to admit defeat, even when facing a no-win situation. Behind them, the heavy steps of their hunters drew closer.

Quick as he could, Khan holstered his weapon. And he was finally out of breath. “Hold tight!” he panted. Not waiting for Kirk to understand, the Augment pulled the younger man close and gripped
his belt with the hand of his good arm. “Hold tight!” he repeated. Jim was ever aware at the trust he now placed in the super-human. The Enterprise’s captain wrapped both arms around the former dictator. A shocked outcry escaped him as Khan threw them both over the edge, straight into the abyss. Beyond them was nothing more than cool air, wide fields, and the jungle rushing toward them.

Jim closed his eyes wondering for several seconds if the Augment would rather die than be captured – a decision Kirk would’ve rather made for himself. Then Khan made a sharp movement with his free arm. Opening his eyes, Kirk clung to the super-human for dear life, but his disruptor was wrenched from his grasp when the parachute shot out of Khan’s supply-backpack to slow their fall. Thankfully, superior intellect was on his side, Khan had thought of everything they would need for the rescue.

But this rescue was about to be cut short.

Above them, the clamor grew louder, and both men realized that the Klingon Lord had called for reinforcements. Three Birds-of-Prey broke through the atmosphere and headed downwards, the descent of the ships eerie as their shape looked like winged evil in the silver moonlight.

Khan glanced down and saw only a few meters between Jim, him and the ground. “Pull your feet up!” he called, knowing that the impact would be too strong for Kirk’s weakened state. To his relief, Jim obeyed without protest. Khan landed harshly, hopped several steps to regain his balance due to the added weight. The younger man wrapped himself around Khan like a koala, and put his feet down the moment the super-human came to stand.

A push of a button on the strap and the parachute retracted automatically. Both men began to run again.

Khan’s eyes scanned the jungle; the edge was so far away. The sound of the approaching ships became louder, turning to a thunderous roar while the noise of the break nozzles swirled up the air. Strong searchlights bathed the fields, the crag and the near jungle in bright lights and caught the two men.

Throwing a glare over his shoulder, the Augment observed dozens of Klingons descending from a Bird-of-Prey, using strong lines to bridge the distance between the vessels and the ground. He asked himself why they didn’t simply beam Jim and him up. But Klingons were first and foremost warriors not scientists; he doubted that there was among them a Klingon well-skilled enough to use a transporter-device outside of normal protocol.
He heard the eruption of disruptor-shots. They smacked into the ground from above. Soil, grass and stones flew in every direction. Their pursuers reached the edge of the promontory and aimed their heavy phasers down at the pair. Behind the two men, the first of the Klingons reached the ground and bolted towards them! One Bird-of-Prey soared past them to block their last escape route. The ship’s search light blinded them, and they were forced to stop.

Khan whirled around, phaser drawn once more, but the sight of more than three dozen heavily armed Klingons storming towards him and Jim made him rethink its use. There was no doubt that the riflemen would fire given the slightest provocation; endangering Jim and condemning his crew, his family.

“They are hunting us like animals,” Jim wheezed, blue eyes wild with desperation.

“Welcome to my world,” Khan growled bitterly, remembering all too well his escapes with captors on his heels. Though it seemed this time it would not only end with is capture, but also with his death. They were surrounded.

“Here speaks Fleet Commander Kor!” The dark voice of the Klingon Lord sounded from the speakers of the hovering spacecraft. “Surrender this moment or my men will cut you down!”

Khan glanced back over his shoulder while Jim beside him turned around, shielding his eyes against the light with one hand. An escape route! They needed an escape route, or…

“LAST WARNING! SURRENDER!”

“He wants us alive,” the Augment bit out, knowing perfectly well the reason for Kor’s decision.

“Not again!” Jim whispered, and something in his tone made Khan look at him. The hopelessness in the younger man’s voice – the one who never believed in the no-win-scenario – gave the super-human a ripple of chills.

Thick ropes dropped down around them from ships above, and several Klingon warriors glided down towards them.

It was over.
There was no escape anymore.

He saw Jim gulp and laid the free hand on his shoulder, realizing that this was their very last moment together before inevitable capture. The prospect of what would be their short future made even the former dictator sick. He fixed his eyes on the exhausted man, so dear to him now – so full of defeat – and pulled him in an embrace full of overwhelming sentiment.

He had failed… again! He had failed the only living soul in this universe that was on his side, who cared for him and saved him despite his own suffering.

“I’m sorry!” he whispered, feeling the young captain trembling in his continued pain and new dread while the Klingons closed up on them. Frustration, anger and fear filled him, mingled with sorrow; his family would be doomed along with him – he knew that much. And it pained him to think of what James would have to face now again; together with him.

“Don’t be sorry,” Jim murmured. “You did all you could.”

“It wasn’t enough,” Khan’s deep baritone rumpled, and Kirk felt the urge to comfort the Augment despite his own fear. Not hiding his affection for the other man any longer, he ignored his burning muscles and his pride in his need to be close to the Augment, he encircled the Khan’s waist with both arms and hugged him for a several seconds – the last fleeting moment of intimacy, such as they were allowed.

“End it,” Kirk breathed and the super-human understood instantly what the younger man was expressing. It was better to die by the hand of a trusted friend than be delivered into the hands of the Klingons. The monsters didn’t have the right to choose their fate! But he found himself unable to do so. The mere thought of feeling Jim’s life slip from him in his arms, of killing him, was unbearable – unthinkable. His throat tightened; his mind raged and his heart clenched in his breast. He couldn’t do it! He could not end the life of the only human being in this time who touched him in the way only his family ever had. He couldn’t even imagine to…

“Hi, Buddy! Need a hand down there?”

Galven’s unmistakable squeaking voice came through the reprogrammed tricorder Khan had strapped on; it sounded like heaven.
“Galven?” the Augment whispered, unbelieving. Then his eyes found the approaching Klingons and his fighting instincts flared up again. “GALVEN!” he yelled while Jim lifted his head and stared wide eyes at the super-human. “GALVEN, BEAM US UP! NOW!” Khan’s voice boomed, unusually high with new hope.

He noticed the tilt of the Klingons’ heads as they received new orders over their headsets. Obviously they were informed of the sudden appearance of the spacecraft in Turkana’s orbit. They slowed down and gripped their ears with free hands, before aiming at them…

And then the two men felt the tingling sensation as the transporter seized them, and their bodies melted into golden light with the sounds of distributor blasts ringing in their ears.

They rematerialized in a small transporter room that Khan hadn’t seen before. At the controls stood Galven; he bent forwards and called in the intercom, “I got them. Shields up and get us out of here, Diego!” The drives howled as they were forced to spring from half impulse to warp.

The Tellarit frowned and stared at the two men on the transporter platform. His little eyes found the baffled ones of ‘Drythen’ and he squealed, “There, you have gotten yourself into a nice bloody crap, Buddy! It was pure luck that we were even in the area.” Then he frowned as the other man disentangled himself from the long arms of ‘Drythen’ and turned carefully around. Galven made a sound of compassion as he took in the torn, bleeding and bruised appearance of his guest. “Holy mud, m’boy, they really gave you a grilling, didn’t they?”

Jim needed a moment to find his bearings; a part of him had trouble comprehending that he and Khan were not any longer on Turkana’s surface, surrounded by Klingons. They were in a space craft. He felt numb all of sudden and Khan had to help him down from the transporter platform. The last efforts and encounters had sapped most of the strength from the captain’s mistreated body, and even the serum couldn’t dope him up enough to function properly. Only the adrenalin that still circulated through his system kept him on his feet.

The next moment the space craft shook violently; if it hadn’t been for Khan’s super-human reflexes, Kirk would have been hurled right through the room. So the Augment caught him and held him tight. Galven was not so lucky and found himself ass over kettle and on his butt across the room.

The vessel rocked again while the alert sirens blared through the corridors. Then a male voice shouted from somewhere behind the open door, “DRYTHEN! GET YOUR ASS OVER HERE! THIS DAMN SENSOR-DISTURBING-THING DOESN’T WORK ANYMORE!”

Though one would never address the former dictator who’s crushed lesser men’s’ skulls in this
manner, Khan didn’t give it a second thought. They were under attack. A Tribble could figure out who their pursuer was. Half dragging, half carrying Jim, he hastened out of the transporter room and followed Galven’s advice, “The bridge is on the starboard side!”

A few seconds later he reached the control room; the spacecraft bucked like a fierce stallion. His gaze instantly found the main screen that showed four Klingon battlecruisers in pursuit. Ritek stood at the sensor station and yelled, “Four bogies coming up at six o’clock, two coming in from our nine o’clock!” He looked up. “Dammit, we are at warp now and they’re still after us!”

At the helm, a tense Diego watched the display and maneuvered the ship manually, cursing all the while. “We are at Warp 5 and they shouldn’t be able to follow us, if this blasted device would work correctly! Hell, where is Drythen?”

“I’m here!” Khan moved into action and made Jim sit down on the floor. He called a “Caviw, take care of him!” and with several long steps, he was beside the Chilean. “What did you do?” he demanded; the technical genius looked up. Stress was written across his face.

“During our flight to Turkana, Galven and I built a second sensor-disturbing device and installed it. But I think we made some mistakes because all of sudden we’re getting errors, even before we were hit and…”

“They are closing in!” Ritek shouted, watching the sensors. “If they catch up with us they can open fire at us, even in Warp.”

“Oh, holy crap!” Galven groaned, glaring at Kirk and ‘Drythen’. “What have you two done to upset the Klingons like that?”

Khan didn’t answer while he steadied himself at the helm-station; watching the display. Yes, Diego and the others installed a ‘twin’ of his invention, but there was something wrong. He would have to check it firsthand. “Right, you and Galven are coming with me to the Engineering. Ritek, take the helm,” he ordered, taking one time more the command without even realizing it.

“I have to watch the sensors to see, where the bastards are!” the Rigelian answered with a grim face.

“I take the helm!” Somehow Jim managed to push himself up from the floor and staggered toward the station; the Caitian woman helped him to remain on his feet. A worried glance from sea-green and blue eyes met his and he managed a smile that was more a grimace than grin. “Just go, Nien. I’ll
hang on so don’t get your panties in twist.”

Khan growled wordlessly. This reckless, loveable idiot would give him grey hairs one day – if he’d ever get them; he wasn’t sure yet. He nodded. “Try some of your maneuvers then, but no stunts like you pulled on Qo’noS!”

“You saw me flying and…?”

“I was not even five hundred meters away when you used the abandoned skyscrapers to trick the Klingons!” He turned to go, and Jim let himself fall in the seat that Diego had just vacated.

“It worked, didn’t it?” Kirk murmured, cursing his hurting limbs.

“Yes – and it made me dizzy just watching your airshow!” With those words the Augment left the bridge and followed Diego and a tense Galven to Engineering. Again the vessel was hit and the Chilean snarled, frustrated. “Shoot holes in my ship, and I will make your life very uncomfortable!”

Khan ignored the insulting expression. The information that this space craft belonged to Diego was far more interesting. It seemed The Shadow and the tech genius had left Aldebaran and had followed him shortly after he had taken the D’Ghor to go on his rescue-mission. And they didn’t use the Shadow or the Flash to enter Borderland, but the Chilean’s vessel – a clever decision; the other space crafts were well known by the most Orions and Klingons now.

He entered the engine room where two members of The Shadow stood duty. He didn’t need the Tellarit to point out, “Over there!” to find the added device. Quickly, he closed the distance and checked it. Diego and Galven had done a good job rebuilding it without his help, but something wasn’t right. “Try to coax more speed from the engines!” he called over his shoulder. “I need a moment!”

“You need a moment, you get one!” the Tellarit nodded and hobbled to the engines; Diego was on his heels.

On the bridge, Jim sat with determination at the helm; he quickly familiarized himself with the controls; his full lips pressed to a thin line in concentration. Ritek, or whatever that Rigelian’s name was, did his best to issue a warning whenever the sensors alerted him that the Klingons had taken another shot so that Jim could avoid it. Phasers and torpedoes used during warp was a dangerous game and it really made your aim quite lousy; still Kor didn’t give up. Kirk was certain that the
Klingon Lord was aboard one of the battle cruisers in pursuit and he would bet a paycheck that Koval and Noy were with him.

Suddenly, a tremble ran through the spacecraft and a voice came over the intercom. “Kirk, rev up! I coached a bit more speed out of the engines!” The pig-like snorts peppered in the words told Jim that it was Galven who spoke.

“Okay!” he called back, pushing the vessel to its limits.

Several seconds later, the familiar baritone sounded through the comms system. “Jim, reload the deflector-control. It’s linked to the sensor-disturbing-device. It will work properly after a re-start.”

“A RESTART?” Galven squeaked in the background, shocked. “We are going to be unprotected for several seconds and…”

“It’s the only way to reboot the system and…”

“And the Klingons can’t aim properly at this speed!” Jim finished Khan’s impatient reply. “Right, I’ll restart the deflectors!”

Despite the dangerous situation, the Augment felt a surge of warmth as he realized the amount of trust the young captain put into him again. Then he took a deep breath and watched the device beside him. He had found the error quickly. A wire had been connected wrong to the cooling-system of the device’s battery and overheated, a small mistake with big implications, but he corrected it.

His gaze turned to the display of the deflector device that was switched off and then re-booted. The seconds they remained unshielded felt like an eternity; then the shields and the sensor-disturbing system functioned fully. A broad grin tugged at Khan’s mouth and he called through the still open link to the bridge, “Jim, it worked! Evasive maneuvers; try to lose them. They will not be able to follow us if they can’t see us!”

“What do you think I’m doing here?” came the reply and Khan chuckled. Even beaten, injured, weakened by torture and mentally at his limits, Jim Kirk didn’t quit; he kept his wit and his sarcasm. It was no wonder that he felt so attached to the younger man.

“Don’t expect an honest answer from me!” he smirked; even his enhanced mind became dizzy with
the prospect of fleeing successfully from mortal danger. Then he turned around and looked at his two companions. “Gentlemen, congratulations! You re-built something for which there is no precedent – no plan. And except for a bit of a mistake, you did well.”

They made it!

They cheated death once more and tricked a whole squadron of Klingons. They got out of that living hell!

Again the vessel shook and he heard Jim and Ritek cursing through the activated intercom. Quickly Khan, Galven and Diego left the engineering and returned to the bridge the moment the Rigelian cheered, “You did it, Kirk! They lost track of us!” Triumphant, he lifted a fist into the air and grinned at ‘Drythen’. “And you did it, too, by getting that baby to work! I don’t want to hear the Klingons now. Their roaring must be through the delta-quadrant by now!”

Jim snickered and wiped his forehead. His whole body was bathed in sweat; every muscle and nerve trembled and his mouth was dry as a desert, but the immense feeling of relief that flooded him the moment he realized that they had escaped, made up for it all. Looking over his shoulder, his eyes found Khan’s who stood tousled and dirty between the Galven and the giant human. He smiled at the Augment – his savior.

Khan dipped his head in acknowledgement and returned Kirk’s smile.

Their smiles said, what each man could not.

They said, “thank you for saving me.”

“I couldn’t leave you.”

And it also meant one thing that went for both,

“I didn’t know I needed you.”

All those on the bridge sensed the unique bond between the two men. It was tangible and electric.
And theirs.

TBC…

Notes:

Dear Readers, for the case that you’re a little bit confused about the Klingon’s ability to chase and to fire at Diego’s ship in warp, here a short explanation:

The Enterprise is one of the newest ships of Starfleet and therefore the one with the most developed drives – Warp 8. The Vengeance used transwarp-drive. This was originally created at the time of Star Trek III and was installed on the Excelsior. Khan’s introduction sped its development in the alternate timeline. Transwarp capability allowed the ship to outrun even the Enterprise. Galven’s ship (or Diego’s in this case) only reached Warp 5, so a Klingon ship with Warp 5 or better can chase it and attack though accuracy is severely diminished.

Chapter End Notes

Well, I think you all have to calm down now (*laugh*). Maybe a cup of tea will help? Or try a Vulcan method: Meditation (*snicker*). I promised you a hell of action and feelings, and I think I kept my given word. I hope you enjoyed to read the whole ‘ride on the roller coaster’ like I had fun to write it, and I am curious like hell to learn of your reactions and thoughts.

At last Jim and Khan are safe – for now. And to grant you and my characters a time of rest, the next two chapters will be calmer. There will be time for comfort, healing and ‘candies’ now, because Khan will show his caring side and how tender he can be. And Jim is going to need it.

Well, and then there is still the Enterprise, who is on her way to Turkana and I can already promise another special contact between Spock and The Shadow – and, of course, with Jim.

Have a nice weekend,

Yours Starflight
Hi, my dear readers!

And once again a big, big thank-you for all your reactions to the last update. I cannot tell you often enough how happy I am that you like this story so much.

As I promised the next chapter will be calmer. After all the stress our heroes had to face they earn a moment of peace – especially Jim and Khan. So, a nice warning: Time for caaaaandies.

Have fun

Yours Starflight

See the end of the chapter for more notes

Chapter 16 – Safe again

“How were they able to escape? Where did that damn ship come from and why the hell didn’t you see it!? Why didn’t you see them sooner? Why are these scanners USELESS! Who are they!?” Kor looked from one officer to the next. “ANSWER ME!” he roared; only his first officer dared to speak.

“Milord, our scanners are operating correctly. I ran a systems check. The problem is the signals they are receiving; they are – confusing – wrong.”

“What the HELL does ‘wrong signals’ mean?” Kor didn’t believe his ears. “If our systems are working and you saw any signal, why didn’t you investigate?” No one spoke. “If it is not our system, then it must be their ship, you imbecile!” His strong index-finger pointed to the screen that showed nothing more than the blurred stars. He whirled around to his helmsman. “AND WHY DID YOU NOT FOLLOW THEM? Where did you learn to fly, at the simulator in a space bar?”

The officer dipped his head in reticence, and the fleet commander bared his teeth. “Find them!” His voice had gone quieter, but his crew knew better than to think they were in the clear. They all recognized that he was most dangerous like this – quiet – a brewing storm.

“I’m sorry, Milord, we cannot,” the first officer told him. “We lost track of whatever signal we were
Kor gritted his teeth. The lieutenant was right. Ahhh, these people were clever. Of course, they fled Turkana’s orbit while the Klingon ships were unable to get a read on them. He thought back to the sensor problem – or signal problem, since his crew believed the sensors were operating properly. The aristocrat had never heard of something like this. Intelligence had never reported this type of technology on any of the Starfleet ships, nor had intelligence reported on Starfleet activity in the area other than the planned evacuation. But the Klingons let that slide – the evacuation. Better to let Starfleet have their little evacuation than give away the Klingons’ plans. Besides, an evacuation meant fewer citizens to be a bother. In any event, the vessel that took Kirk and his rescuer aboard did not have any Starfleet identification. If Kirk only had one rescuer on the ground, this must be a civilian spacecraft. Interesting.

Balling his fists he took a deep breath. Kirk had tricked him – or the man with him. The man…How was it that only one human was sent to recover the young captain? And how was it possible he left six dead Klingons in his wake; Kirk was incapable – too wounded to do the damage inflicted on the guards and officers.

His anger rose, and he roared in frustration. One single man!

Again!

Just like…

“Did someone record the Terrans’ flight?” he barked; the communication officer nodded hastily.

“Yes, Milord.”

“Good – at last one of my officers uses his brain for something other than handling a disruptor.” He rose. “Hail the others; we are returning to Turkana. And then send the records to my quarters.” He looked at the screen one last time. ‘You escaped, Kirk – this time! But you will see us again. You and this…phantom, who always shows himself when you are in trouble. I will get you both and then we will see, which of us is the better warrior!’

ST***ST***ST

“…then Ritek beamed to Aldebaran, informed us of your planned solo act and Diego was kind enough to lend us his vessel to save your butt – and that of the boy over there.” Galven looked at Jim
Kirk, who had left the helm and sat on one of the smaller chairs near the communications station, pale and exhausted – a sheen of perspiration coating his face and neck.

“How did you get close enough to beam us up?” Kirk asked quietly; the last of his strength and adrenaline were sapped from him now that they were out of mortal danger. “The Klingons must have recognized you and…”

Ritek started to grin. “Easy. At first, the sensor-disturbing device worked; we knew we could draw close to Turkana without being recognized on the scanners by the Orions or the Klingons. Our long-distance scanners showed the location of the Klingon's battle-cruisers in Turkana’s orbit, so we figured the fleet commander had to be there. We caught the transmission from the bastard, and it was clear that he used the sentence of the High Council interrogate you, Captain. Logical conclusion – we would find you there, where the Klingon squadron was lurking. So we dropped out of Warp at the last moment; Diego, over there, decelerated so quickly Starfleet would be jealous. When we arrived, we scanned and found two Terran bio-signals surrounded by dozens of those dragon-heads. Galven contacted you, lowered the shields, beamed you up, and we made our getaway before the Klingons realized what happened. You know the rest.” He frowned at Khan, pointing a finger at him. “And if you want to pull another stunt like that, then let us know about it. You are one of us now, and we stick together.”

Jim had to smile when he saw the baffled expression on the Augment’s face. Of course, Khan wasn’t used to being lectured. That little speech was also proof of Galven’s comradeship; the young captain would know.

“As I told when I departed,” the super-human replied stiffly, “I did not want to put you in danger because of some private…”

“Bullshit!” Galven cut in, ignoring the piercing gaze of ‘Drythen’ at his outburst. “You belong with us and we are with you. You saved my life. I owed you – I still do.” He glanced at Kirk. “And before we discuss this any further, someone should take care of the lad.” He addressed Kirk now, “Don’t get me wrong, m’boy, but you look like hell!”

The former dictator directed his attention back to the younger man and felt a pang of guilt. Of course, it was far more important to treat Kirk’s injuries rather than argue with Galven and Ritek.

Khan extended his hand and helped him to his feet. “Thanks,” Jim murmured. He didn’t want to appear weak, but after a few steps he staggered; the super-human caught him before fell.

“Easy, James,” he said soothingly as he steadied the captain, ignoring the pain in his left arm where
the Klingon creature bit him. Kirk groaned when Khan’s hand brushed the cuts on his back, but forced a small smile when the Augment apologized for the accident.

Caviw watched them. For many minutes, she could not take her eyes from the pair. There was no doubt regarding their relationship. They were mates! Her enhanced cat senses felt the bond between the two men like a cord of singing energy. But she also felt the turmoil in the young Starfleet captain. “What did they do to you?” she asked. “Did they use pain sticks?” Jim nodded with a grimace. She addressed Khan firmly. “He needs something to calm his nerves. And if you help him wash, then use no sonic-shower! His nervous system is overstimulated enough, and the sonic rays would exacerbate the effect.”

Khan nodded. “Thank you for the advice,” he answered seriously, and the Caitian smiled at him.

“Go down the corridor. The last door to the right leads to your quarters. I’ll bring the medical supplies.” The Augment nodded.

He supported Jim as they left the bridge and walked down the narrow hallway. Even though the ship was small, they took a while to reach the cabin due to the slow pace. The quarters were spartan but comfortable; it held a bed, a wall closet, a desk, a chair and a small, attached hygiene-area. The air smelled fresh and clean, and the temperature regulator spread comfortable warmth through the room.

Carefully, Khan helped Kirk to the bed. He sat him down gently and removed the torn shirt to have a closer look at the younger man’s injuries. New anger flared up in him as he saw the deep, long cuts made by Klingon daggers. The bruises and angry red splotches littered Jim’s chest and back; muscles rippled beneath the marks. The Augment realized that these were the tracks of the pain sticks – the rippling muscles a result of overstimulated nerves.

‘I killed those animals too quick!’ he thought furiously. ‘After what they did to him, they deserved worse!’

“If Galven took the medical equipment from the Shadow or the Flash, I can treat the cuts with a dermal regenerator. That combined with the serum I gave you, will heal these wounds quickly.” He tried to sound calm, still, his eyes betrayed the wrath that remained.

“What did you give me?” Jim asked hoarsely, repeating his question from their flight on Turkana. The super-human sighed.

“A mixture of my blood plasma and pain killers mingled with synthesized adrenaline and vitamins. Your body is used to my cells now, and so rejection is not a problem; rather just the opposite.” He
caught Kirk’s wide-eyed stare and chuckled, “Why, do you think you were able to run like that when they chased us through the town and woods?”

“You… mixed a serum from your plasma, just like that?” Kirk saw the Augment’s smug grin; he shook his head. “You’re unbelievable.”

“Thank you,” Khan replied with a hue of his former arrogance; then his expression softened again. Without thinking, he reached out and cupped the younger man’s cheek with one hand, moving his thumb gently along the dirty skin. The blue orbs, still troubled, looked up; grateful but tired. “Didn’t I tell you, not to get caught?” the former dictator whispered.

Jim took a deep breath; the super-human’s scent soothed him. At one time, it would have alarmed him, but not anymore. He couldn’t tell if that should bother him or not as just now he couldn’t be assed to care.

“If only they had come a minute later, then…”

The doorbell buzzed; Khan pulled his hand away the moment the door slid open to reveal Caviw, who carried a miscellany of items in her arms. Her wide, knowing grin told the Augment that his gesture was not missed. “Sorry to interrupt you gentlemen, but I brought a gift for the Federation’s hero.” She didn’t wait for a response and simply dumped everything on the table. Disinfecting agents, medical dressings, hyposprays, a dermal regenerator, and more landed with a clatter. “Diego has reprogrammed the replicator over there.” She pointed towards the device. “It will produce new clothes for you two; just choose what you want.” She grinned broadly. “If you want anything to wear. After all, you both haven’t seen each other in quite a time.”

Kirk stared, mouth agape at her; his face flushed. ‘How does she know…?’ Khan’s dangerous growl interrupted his thoughts, and he looked up flabbergasted. He saw the fierce stare the Augment gave the Caitian. Yet the cat woman simply ignored them both!

Caviw turned and left, but not without teasing Khan by tousling his hair with the tip of her tail.

The super-human moved aside and scowled at her again, but she gave him a toothy grin, threw him a kiss, winked at Jim and left with a purring, “Behave, boys! You both need rest!” The door closed behind her, and Khan couldn’t suppress the low moan in his throat, only to hear Kirk snicker.

“She’s flirting with you,” Jim said amused and Khan rolled his eyes.
“Tell me something I don’t know,” he grumbled, mentally cataloguing the items on the table. “This… pussy-cat tries my nerves.”

Jim had almost laughed out as the word ‘pussy-cat’. Caitians were anything but. “And I thought getting on your nerves was my privilege?”

“It is!” Khan nodded. “She gets on my nerves; you have tried my very last one!” He glared over his shoulder and saw Kirk smile knowingly at him. He groaned again; it was becoming a habit. Shaking his head, he returned to the bed, pulled Jim to his feet and led him to the hygiene room. The young captain sat down on the toilet while Khan quickly washed his hands and face – necessary if he was going to treat Jim’s injuries.

Reaching down to remove his boots was difficult for Kirk; the movements were painful, and his fingers didn’t obey him as they should. Suddenly two pale, strong hands gently stilled his attempts. Khan crouched down in front of him, gripped the boots and pulled them off, ignoring the throbbing pain in his left arm. Jim flushed with embarrassment – he hated weakness like this. “I… I can do this alone.”

Khan scoffed. “Sure!” He placed the boots beside the toilet, then he looked up through dark lashes at Kirk’s flushed cheeks. He recognized how awkward Kirk felt and added softly, “But you don’t have to do it alone.” Then, to lighten the mood he added, “It’s not often that I offer my services. I’ve done this only twice before.” He continued his story to distract them both now. “Joaquin, and then later Katie had been injured. When I ruled, I was responsible for…whole countries. I am not above the – personal touch if it is required – especially if it is for one of my own. Let me help you now, James.” He pushed Jim’s shoulders carefully back and opened his belt to pull off the captain’s trousers.

“That… that is really not necessary…” Jim began, and Khan shook his head, rebuking.

“Don’t be shy! I’ve undressed you once before, Kirk, haven’t I?”

Jim’s eyes locked with Khan’s – sky over ocean. Both men remembered the last, the only time they were intimate like this. But it was different then. It began violently before a denouement of burning passion. Now, tender care was added to the experience. Then a teasing smirk tugged at the Augment’s mouth; it made him appear younger.

“I dreamed of doing this again, so do not rob me of this little pleasure!” Khan’s expression was the perfect mix of innocence and mischief as he divested Jim of trousers and pants. He allowed himself a
moment to gaze at the body of the younger man. Even bruised, dirtied and with tracks reminiscent of torment, James Kirk was perfect in his eyes. Deep within him suppressed desire licked his insides, flickering like an ember just starting to flame. But Khan tamped it, not allowing it to fire. He was an Augment, not ruled by bodily demands like a mere human. Jim needed medical treatment; nothing else mattered – at the moment.

He rolled his eyes inwardly, then said softly, “Just let me do this.” He filled the basin with warm water, took a cloth, dunked it, added soap and showed James exactly how well-trained he was even in medical care. Gently, he washed the filth and dried blood from Jim’s skin. Carefully, so as not to hurt him, he ran the cloth over the injuries.

At first Kirk tensed. He wasn’t used to this kind of care, not since he had been old enough to tie his shoes. He hadn’t even had a relationship long enough to…to feel this. He didn’t know how to react, as one of the most powerful men in Earth’s whole history – one of the most dangerous – kneeled before him, and cared for him. If he were his more casual self, if things had been different, he would have made some wry remarks. But this was something different, and just now he was only grateful. Grateful for the touch that chased away the waking nightmares he lived – they lurked at the edge of his conscious.

Khan worked quickly, but tenderly. He changed the water four times until he was satisfied that Jim was clean as possible then he ordered the young officer to stay where he was and returned to the main room of the small quarters. He went to the replicator for a kurta, a casual, collarless leisure shirt worn by the men of his home country. The kurta reached past the knee, so Khan programmed the replicator to shorten it a bit; he also arranged for shalwar pants. Both garments were made of soft cotton and a size larger than needed for James’ comfort.

He found Kirk standing at the basin brushing his teeth with one of the spare toothbrushes he found in the cabinet – ridding himself of the taste of bile and blood. He steadied himself with one hand and bent to rinse out his mouth before disposing of the brush. He turned slowly around; exhaustion enveloped him like an invisible blanket and Khan helped him slip into the pants – the kurta left draped over the chair – and guided the younger man back to bed, turning the blankets.

Jim wanted nothing more than to lie down and sleep, but he knew his wounds needed attention. He grimaced as Khan disinfected and treated them with the dermal regenerator. It wouldn’t close the cuts completely, but it hastened the healing. Unfortunately, it also made the raw nerve endings scream. Afterwards, the Augment applied an antiseptic salve to the lacerations and bandaged the younger man’s torso. Should the one or another injury re-open, the damage would be mitigated and was unlikely to become infected.

“Almost done,” he murmured softly, as Jim’s eyes drifted closed. Kirk swayed where he sat – so tired. “Sorry, only time and rest will do for your nervous system,” Khan added. “I can give you something to help you sleep.” He helped his charge slip into the kurta.
Jim smiled. “No problem. My nerves will be alright, when I wake up.” He yawned, apologized for it, and took a deep breath. “I think I could sleep for days.”

“It would be the best if you did. Sleep cures – it’s an old saying, but it’s still true.”

“You sound like Bones…” Kirk mumbled. Then all of sudden, he straightened upright. “Bones… MY CREW!” He glanced up at the frowning super-human. “I have to tell them that I’m still alive!”

“They let you down!” Khan hissed, and Jim threw his hands up. The gesture was met with punishing pain and stinging in his shoulders. He grimaced.

“I ordered them to leave Turkana as the Klingons arrived. We had more than six hundred evacuated civilians aboard and my crew. Of course, they fled. It was the…” he made a face as he said the next word, “only logical thing to do.”

Kirk couldn’t help himself. He had to smile at that. He understood the words the super-human didn’t say as well as those he did. He wanted to have Jim to himself for a while – to be close to him again – maybe test the waters of this new dynamic. In any event, even if Jim had wished it – he was in no condition to fulfil his duties as captain during the war. Khan was right. Not only his body, but also his spirit required time to heal. Both received a beating over the last 24 hours. An inner voice told him where he could find peace best – in the arms of his former nemesis, his savior.

Still he had to inform Spock, Bones and the others that he was safe before they did something idiotic, like embark rescue mission with no one to rescue.

Lacing his fingers with Khan’s long ones, he said gently, “My crew is my family, Nien. You told me that, remember?” Jim saw the blue-green eyes widening as the super-human recognized his own words echoed back to him. He added, “Knowing them, they will move heaven and hell to save me and will put themselves in danger. I don’t want that for them. You’d do the same in my place – you
Khan growled quietly, deep in his throat, but saw the pleading look of the younger man. Dammit! That look mirrored his own when Jim had told him that his crew was alive. He would bow to Jim’s request. And besides how could he resist those eyes! Abruptly, he turned around and in two strides he stood at the desk and activated the intercom. “Drythen to bridge. Ritek, is it possible to reach the Enterprise from this position?”

The Rigelian’s face appeared on the screen. “They’ve been trying to reach us for about five hours now,” he reported. “And that nice Starfleet commodore has been making the same attempt.”

“Bob Wesley?” Jim asked, and Ritek looked into his direction.

“Yes. Galven already said we should tell them that you are… Oh, there they are again! Just listen.” He put the hail on the speakers. They heard Galven in the background; he oinked something in his own language.

Warmth and relief washed over the young captain as he heard the familiar melodious voice of Uhura. She sounded tired. “Shadow, this is the Enterprise. Come in, Shadow!” A moment later the Bantu woman added, “Sunrise if you hear us, please answer! This is an emergency.”

“Never thought I would live to see the day your crew would ask me for help,” Khan grumbled; Kirk sighed heavily.

“They don’t know that it’s you they are trying to contact – as I’m sure you know.” He looked at the Rigelian. “Mr. Ritek, I have to talk to them before they do something rash. I won’t tell them where you’re headed…”

“Aldebaran,” the Tellarit grumbled from somewhere off camera.

“… and I will not give anyone’s identity to Starfleet Command. But knowing my first officer, my CMO and the others, they will break every rule to…”

“Mmmm,” Khan hummed in agreement. “You are probably right. After all your Vulcan has learned to break bones, the rest will be easier,” the super-human commented under his breath sarcastically, and Jim groaned.
“I so don’t want to discuss that right now.” He looked from the Augment to Ritek and back. “I have to speak with them.”

“Just let the boy chat with his friends before they try something foolish and the Federation loses her flagship,” Galven said in the background.

Ritek nodded and opened a shielded channel. “Enterprise, this is The Shadow. Hold on, I have someone who wishes to speak with you.” He put the transmission on audio and gave Jim a wave. “You’re up.”

The officer smiled; new strength flowed through him as he carefully rose and padded barefoot to the desk where Khan stood. Jim sat down and took a deep breath. “Uhura? It’s me, Kirk.”

ST***ST

Aboard the Enterprise Nyota had tried over and again to reach the militia. She stayed at her post for over 24 hours by now and the tension never left her, since they all were forced to leave their captain. But the accompanying adrenaline was gone now, and she was tired. Still, she refused relief. Always careful to shield the frequencies, she used Code 9 to hail ‘Sunrise’, this mysterious man; he must be a good friend of Kirk’s if his rage was anything to go by. But, why didn’t she, McCoy, and Spock know about him? Either way, her calls went unanswered – until now.

All of sudden a clear, male voice replied to her calls and Uhura sighed in relief – finally! – but before she could report the success to Spock she heard another voice. One that sounded as exhausted as she felt; it was like heaven to her. She started up from her chair as if stung by an adder and caught the attention of the others. She whirled around to meet the asking gaze of her lover.

“I… I HAVE THE CAPTAIN!” she burst out and in less than a second Spock was on his feet, while a very pale McCoy, who had remained on the bridge, gasped.

Quickly, the communications officer switched on the speakers and the tired but very much alive tenor of James T. Kirk sounded through the bridge. “Uhura, you don’t have to shout. We’ve had these electronic devices for more than 350 years that transport your voice over long distances without you needing to yell, you know.”

Nyota pressed a hand against her mouth, the impulse born out of pure joy as she suppressed a laugh.
“Jim!” Spock didn’t care about a formal address at this moment or the rush of emotions threatening to spill – his human side on display. His relief plain in his voice and on his face.

McCoy was far less controlled. He stepped toward the comms station as if it brought him nearer to his friend. “JIM! Sweet Lord, how are you? Where are you? Are you all right?”

The answer came after a short hesitation. “I’m aboard a vessel of The Shadow. They rescued us… me.”

For a moment Spock, son of Sarek, stilled himself, only able to close his eyes in relief – his T’hy’la was alive and safe! Then he calmly replied, “We have tried to reach them for quite some time now, but…”

“We couldn’t answer in case the Klingons or Orions were listening. They have a bit more in their head than just swinging a dagger.” The squealing comment told the first officer that a Tellarit was on the line.

“Commander Galven, I assume. As the captain said, you came to his rescue. Thank you for your help, and…”

“Oh, no problem, Lad. We had to pull two asses out of the fire, after all – your young Starfleet hero and that of our daredevil. No one could stop him once he learned of the trouble the boy was in. So, no problem at all.”

Spock and McCoy had exchanged a look with each other before the first officer lifted a brow. “Do I presume correctly that said ‘daredevil’ and ‘Sunrise’ are one and the same?”

“Yeah, you’re right, Spock, but don’t expect to get an answer from him right now,” Jim confirmed the Vulcan’s assumption.

“Jim?” McCoy rose to speak again. He heard the pain in his young friend’s voice, and he frowned in anger. “What did those damn Klingon bastards do to you?” Hope and fear finally overwhelmed his tensed nerves. Kirk was alive, but he sounded terrible. Bones’ demeanor slid from friend to full doctor mode as he joined the talk.
Aboard Diego’s spacecraft, Jim sighed as he heard the worry in McCoy’s voice, and answered evasively, “Well, it was a shore leave I wouldn’t like to repeat any time soon, but aside from some bruising, I am all right.”

Khan, who stood still beside him, snorted in wordless protest – a sound that wasn’t missed by the transmission. Or Leonard McCoy.

“Kid, when you say ‘some bruising’, other people would be carrying their head under the arm. So don’t give me that nonsense. What. Did. They. Do. To. You?”

Jim rolled his eyes. “Some cuts, Klingon pain sticks and…”

“What?”

Kirk asked himself seriously why the CMO needed a communicator at all. He had to be heard parsecs away.

“Jim, you have to be treated immediately!” Leonard almost yelled. “Those pain sticks…”

“I’ve already received medical care, Bones,” Kirk interrupted him, trying to calm him down. “‘Sunrise’ has many talents, and they have adequate medical supplies.”

On the Enterprise’s bridge, McCoy frowned. “Rrrright, why I’m not surprised? This guy is the 23rd century’s superman, tell me he doesn’t fly like Peter Pan, too.” He sighed. “Jim, is Sunrise with you now?”

“Yeah, he’s here.”

Dr. McCoy continued, “Sunrise, there is no chance the captain will follow my instructions, so I ask that you do – for Jim please.”

“Ugh, just get on with it, Bones.”
McCoy growled in response. “Sunrise, the Klingon pain sticks send neural impulses to whip up the nervous system. They trick the nerves into believing they are being burned and depending on the length of time they were used on Jim, he will be haunted by phantom pain – especially during sleep. So you should administer a strong sedative for sleep …”

“Hey, I’m tired enough, so there is really no need…”

“… but he also needs the 88-mood,” McCoy finished his speaking, ignoring Jim.

Khan frowned. The what?

Jim saw the Augment’s confused expression and said, “Bones, could you please explain. What is the ‘88-mood’?”

“I thought your special friend is a wonder-boy?” McCoy retorted snidely, then he sighed, “You can read the number 88 right side up or upside down; it will always be 88. 88-mood means you’re in the ‘I-don’t-mind-anything-anymore-mood’. Do you have anything aboard with midazolam in it?”

Jim read Khan’s curt nod. “Yeah, they have some.”

Leonard continued, “Right, give him a dose!” The CMO explained quickly what ‘Sunrise’ had to do, and the super-human signaled Kirk with a grimace that he understood. The young captain wasn’t too thrilled.

“Are you two trying to knock me out for a week, or what?”

“If the midazolam doesn’t work, maybe your friend should do just that,” Bones grumbled, before Caviw’s voice interrupted,

“And how does such advice meet with the doctor’s oath?”

“Sleep, no matter how he gets it, is good for him. And that…”
“Boys,” Ritek suddenly cut in. “I really hate to interrupt this heart-touching reunion full of happy tears, but I caught a transmission from the green-skins. They have spotted you, Enterprise.”

Jim went rigid. “Spock, where are you guys exactly?”

“2.8943 standard-hours away from Turkana and…”

“What?” Kirk almost leaped on his feet. “Are you crazy? What are you doing in the middle of enemy territory? Get the hell out of there! Leave the Borderland – this instant!”

“And don’t take the shorter way between Suliban and Obruli,” Galven squealed. “The Klingons have control of that area! They would love to shred you to pieces.”

“Mr. Sulu, set course back to Kenda, Warp 8,” the Vulcan told the helmsman as calm as if he were talking about the weather. “We must avoid a confrontation with the Orions and the Klingons. Nyota, contact Commodore Wesley. We may need some reinforcements.”

“Spock, if you smash my ship, you’ll get a pointy earful,” Jim threatened.

“And his ears are pointy enough!” Bones snickered beside the Vulcan before he added, “Jim? You lie down now and get some rest. Don’t fret, Spock will work it out.”

“Any other time I’d mark this day on my calendar as a holiday with a comment like that, Bones, but right now I…”

“Calm down, boys!” Ritek drove the attention of the others once more to himself. “As far as I understood them, the Orions do not know who is crossing their territory. That’s an advantage and…”

“They received Kor’s message concerning Captain Kirk’s fate as we did, Mr. Ritek. Therefore, even the Orions can conclude which ship has invaded their territory,” Spock cut in. “And as soon as they know our movements, they can plan for an attack.”

Kirk groaned. “Jesus, Spock, why did you come back?”
“That’s not a serious question, Jim, is it?” McCoy grumbled. “Of course we had to try to haul your…”

Jim’s eyes widened suddenly, and he gasped, “Spock, hold the line a moment. I think I know a solution!” He switched off the microphone and the speakers and glanced up at Khan, who lifted a brow.

“Yes?” he asked, and the young officer took a deep breath.

“If I understood Ritek and Galven correctly, you constructed a device that messes with the information sensors receive from us,” he began slowly and Khan narrowed his eyes.

“Don’t ask me to…”

“It may be the only chance they have to escape,” Jim interrupted him urgently. “The Orions know that there is a ship in the area that doesn’t belong there. It will be easy for them to track the Enterprise down and to attack her. More than five hours lay between my crew and Federation territory – enough time for the slavers and pirates to assault them. But if my ship becomes invisible to their sensors, my crew – my ship can escape.” He rubbed tiredly at his neck. “I know it’s asking a lot of you, given your history with my crew, but – if we particular about it – you only have differences with Spock, not with the others. Hell, there are even new members who weren’t part of the crew during the whole mess last year. They had nothing to do with it and…It’s my crew, my family, my ship – you understand that, I know you do.”

“Kirk, I do understand that you want to protect them, but it isn’t that easy. There are no schematics for the device, only some computations and the final result,” the Augment cut in reasonably. “And I cannot instruct your technicians on its construction. I’ve already risked my identity and this crew contacting your ship. The voice-scrambler will not trick your officers forever. Therefore…”

“Galven and Ritek re-built it, so they can guide Scotty in its construction!” Kirk quickly explained. “If there is anyone who could build a device with minimal direction, it’s Scotty. Just let your friends tell him what to do, and he can start.” Jim had taken another deep breath, before he continued gently, “Nien, this invention is your intellectual property, and I have no right to demand anything from you. I can only ask you to help them. Their lives could depend on your decision. Please!”

Khan knew how James felt. He had been in this place more times than he wanted to admit – pleading for the life of his family. He had done the same – even on his knees in front of Marcus.
His family… The Enterprise’s CMO had kept them safe. He had removed them from the torpedoes and had stored them securely and well-observed in his med bay. McCoy could have refused, and it would have meant the death of the last of his people. But he didn’t, the doctor protected each and every one of them, despite all Khan had done.

Khan owed him.

He owed him not only for his family, but also for the doctor’s hell-bent stubbornness and genius ensuring James’ survival following radioactive contamination. Jim came back from death because of his – Khan’s – blood, but it had been McCoy who had the idea to use the blood, McCoy’s intellect alone healed him. The life that was returned to Kirk was the prerequisite for what was growing between Khan and the younger man. The super-human didn’t want to think of what would have become of him, if he hadn’t met Jim Kirk again – hadn’t fallen for him. He would have…

Noonien Singh went rigid. There it was; he thought it. He had fallen for James Kirk – hard! And it was only the beginning. He knew he could deny it any longer. ‘I don’t take it well if someone, who is mine, is threatened or tormented.’ When he said it, he meant it, but he didn’t connect it with…love? The fear that drove him when Kirk’s life was at stake – it told him more than anything else. And this look in those clear blue eyes – they were full of hope, trust and something more now for Khan. So different than before where there was only fury and something akin to hate. All rational thoughts went out of the window followed closely by his enhanced mind when it involved James.

A growl escaped Khan. He couldn’t deny his lover, his beloved, his support – not if he was the only one who could prevent him from personal loss – again.

He lowered his head; there was only one thing to do. He sighed and grimaced. “For you, James,” he murmured, and as he looked up again, he met the wide, beaming smile of the younger man. He was certain that Kirk would have embraced him had he been strong enough to do so. Activating the intercom, he grumbled, “Galven, connect to the Enterprise’s chief engineer, Mr. Scott is his name, and instruct him on the design of the sensor-disturbing device. With it, they will have a chance to escape without being caught.”

For a long moment there was silence, then the Tellarit oinked, “You want to give them your ‘baby’?”

Jim had to grin at that description – where had he heard something similar? Ah yes, from his crazy Scotsman he called his friend, too.
Khan rolled his eyes. “As you said once, we are all pulling at the same string here. Give the Enterprise the information.” He stopped as he felt Kirk’s hand slip into his. He read the gratefulness in his lover’s gaze and felt Jim’s grip tighten in his; the super-human made a face. ‘The things I’m doing for you, Jim!’

Quickly, the captain opened the frequency again. “Spock, is Scotty there with you?”

“Negative, Captain, Mr. Scott is still in the engineering ‘holding his baby together before she can blow up in our faces’ as he put it.”

Kirk had to chuckle at that while Khan only shook his head, amused. It seems all engineers were the same. “Right,” Jim smiled. “Put the transmission through to Engineering, when we finish. Here’s the plan, Spock. Commander Galven and Mr. Ritek are going to give Scotty instructions for a sensor-disturbing device.”

“A sensor-disturbing device?” It was a rare thing that the Vulcan voiced any surprise. “You don’t just mean signal jamming, do you Jim? There aren’t any devices that can…”

“Wrong, Spock! Sunrise constructed one – that’s how he and the others were able to reach Turkana without getting caught. Galven and Ritek will give you all information you need. As far as I know, it’s quick to build but must be done to exact specifications.” He remembered Galven’s and Ritek’s mistake on their first solo build, “so the Enterprise will be safe from scanners soon.” He looked up at Khan again; his face betrayed his happiness, and he didn’t let go of the strong, pale hand entwined in his.

Aboard the Enterprise, Spock lifted both brows. This ‘Sunrise’ had to be a genius in many facets. He answered, “Please pass our thanks to Sunrise, Jim. We owe him.”

McCoy had nodded in earnest before he spoke up once again. “And now that Spock has assured you of our safety, Jim, you will lie down and do anything your special friend tells you! Do you understand me?”

Kirk glanced up and almost choked as he saw the widening smirk on the Augment’s face. Khan looked just like a Cheshire cat, a wicked smile full of promises.

“You really shouldn’t have said that, Bones!” the captain gulped; feeling, despite his condition, a certain stirring in his gut.
Of course, Bones couldn’t know the feelings elicited by his well-meant advice. “Oh, I am sure that this was the wisest decision I’ve made in a long time…”

Khan nodded at those words, looking to the entire world like the cat that got the cream.

“Your friend is very concerned for your well-being,” Leonard continued, “and he is as determined as Spock is with a calculation.”

“This comparison is beyond logic, Doctor,” the Vulcan’s voice cut in but was ignored by the CMO.

“Therefore I can be certain that Sunrise will do anything in his power to make you lie down and rest for a while, Jim! Sunrise, you also have my permission to tie him down if he doesn’t obey.”

Khan would have loved to give a fitting response, but he kept quiet, grinning mischievously at Jim and wriggled his brows. They both knew that he had far better methods of keeping the captain in bed.

Kirk cleared his throat. “I will behave, Bones,” he said – a bit throaty. The fire in the eyes of his lover rendered him weak.

“We will see. I’ll check you thoroughly when you’re back!”

“Captain,” Spock joined the talk again. “Where can we pick you up?”

Jim and Nien had looked at each other before the younger man answered calmly, “I don’t know where The Shadow is going, Spock.” A lie, but he had given his word to not reveal the militia’s next destination. “And to tell you the truth, I don’t care. I’m not trapped; I’m not kidnapped. I’ll contact you again as soon as possible, but right now you need to get my ship and crew out of there. That is your priority! I’m safe, but I need to recover.” His glance still rested on the attractive face of the Augment and even if Jim didn’t say it aloud, Khan could hear the ‘… with you…’ deep in his soul. And only as the Augment watched his fingers running through the golden hair of the rebellious captain did Khan realize what he was doing – and he was quite happy to continue!

“Jim is right, Spock. He needs sleep to recover properly, and we need you to get us out of here and
back to Federation space as fast as our engines can take us. We can arrange a rendezvous later,” McCoy grumbled.

“And if we get another mission from Command, then we have the dilemma of recovering the captain or to following the…”

“You WILL fulfill the mission and come for me later,” Jim said firmly. “Understand, Spock? I don’t think Command knows of your little trip into Borderland, and I don’t want to see you, Bones or anyone else risking your careers, because of your unauthorized excursion and insubordination. If you get an order for a mission, you will go along with it and pick me up later. I am safe – you take care of my ship and crew. The Enterprise needs you in that chair.”

“Aye, Captain,” Spock confirmed, and only because he knew his Vulcan friend so well could he hear the confusion in the science-officer’s voice, between love and duty.

“Thanks, Spock. Contact us again when you are out of the Borderland. And please inform Commodore Wesley that I’m far more alive than the Klingons want me to be.” He rubbed his head with both hands; out of nowhere a headache worked its way into his temples and behind his eyes. “And to prove Bones that I’m a good boy, I’ll go to bed now. Commander Galven and Mr. Ritek will tell Scotty, how to build the device. It’ll drive the Orions crazy; you’ll see. I’ll put you through the bridge. Kirk out.”

“Recover, Jim,” the first officer replied while Bones called from the background, “Sleep well!”

Then Kirk disconnected his coms; knowing that the two members of The Shadow and Scotty would have much to talk about. He sighed and leaned back in the chair feeling dizzy and exhausted as the tension finally left him. He didn’t even realize that his lids dropped until a warm hand squeezed his shoulder, and he heard the deep baritone grumbling, “Keep your word to your doctor friend and go to bed, James. You must rest.”

“Yeah,” was all Jim mumbled before he forced his eyes open and padded to the bed with uneasy steps. He groaned as he sank on the mattress – both in relief and pain – and didn’t protest as Khan urged him gently to lie down and spread a blanket over him.

Quickly, the Augment mixed a sedative with midazolam, complying McCoy’s advice regarding the dose, and gave Kirk the hypospray. He got a protesting grumble for his efforts that made him chuckle.
Once Kirk was settled, Khan opened his overalls and pushed them down to his hips. He wanted to get rid of all the dirt and sweat before treating the bite wound from the scaled monster the Klingons set on him and James.

Jim watched him and even exhausted, hurting and numb, he reacted to the view almost immediately especially after all that teasing just minutes ago. How many nights had he dreamed of that well-toned, alabaster body? How often had he imagined those muscles wriggling beneath the skin, bright like finest marble? Back and chest melted into slender hips and ebony hair contrasted beautifully with the snow-colored skin. In his dreams he had traced this delicious body with his lips, teased the pale nipples and nipped at the strong, slender throat so often.

Kirk bit back a moan. Dammit, even beaten and bruised as he was, he felt heat raising in him that hadn’t anything to do with the fever his immune system produced in response to anything he had gone through. His mouth dried; he looked up and met piercing sea-colored, ocean-deep eyes. It was like looking into a mirror reflecting the fire that burned in him, too.

A smile tugged at the bowed, sinful lips of the Augment as he sensed the other man’s hunger and murmured, “Not yet, James. I’ve longed for ages to touch you again, but you need to heal first.” He visibly shook himself of the desire flaring in him.

He turned around again, and Jim’s gaze fell to the super-human’s arm. “The warrigul bite…” he said as he saw the angry red bite-marks and dried blood. He reached out, “Let me see it, please.”

Khan frowned but returned to the bed and offered the young captain his arm. Gently, Jim took the wrist in his fingers, while he worryingly observed the injury. “There isn’t much we know about these…beasts, but there is the possibility that their teeth emit poison. You should disinfect it immediately and…”

“There is no poison. I would feel it if my immune system were fighting it,” Khan replied, voice soft in response to the tender moment. Then he lifted his brows. “What are these…warriguls?”

Jim sighed. “As far as I learned at the academy, they originally come from ch’Rhian, Romulus. The Klingons imported them decades, if not a century ago. They have the lifespan of a human, eighty years or so, and are domesticated. They are wolf-like but also have lizard ancestry. Klingons keep them as pets, well, working dogs really as you saw today.” His thumb drew circles on Khan’s skin. “Just clean it and use an anti-inflammatory ointment before you bandage it. Your DNA may be enhanced, but it isn’t used to the saliva of extraterrestrial animals.”

Khan smiled at the open show of concern from his lover and nodded. “This I will do. Don’t worry,
James. You have enough with your own injuries.”

“They will heal. They have nothing else to do all day.” He yawned, and his lids slipped closed again. He was beyond fatigued now and didn’t even notice that the Augment pulled the blanket higher over him. He managed a last, “Thank you, Nien, for everything.” Then sleep claimed him …

Khan treated the warrigul bite then took a sonic-shower and changed into comfortable clothes, similar to those produced for James. He returned to the young captain, content to remain with him.

He knew that the transmission between Galven, Ritek and the Enterprise’s chief engineer would take some time, and he didn’t want the Scottish man to hear his voice. And he didn’t want to face the others just yet. He had much to think over concerning them.

He wasn’t used to receiving such loyalty outside of the fidelity of his family and those who served him of their own free will under his reign back in the 20th century. They were long gone now and his family asleep. These aliens didn’t know him – not really – still they risked their lives to come to James’ and his aid and treated him as one of their own. Not that he it was complaining. He preferred allies to isolation. Before Marcus, before the long sleep, his family was with him every waking moment. Still it confused him; the humans of the 20th century had been loyal to them because he ruled them, not because of sentiment or friendship. Jim Kirk had proved to be the exception – just like the members of The Shadow, even alien as they were.

The most important reason, though, to stay by James’ side was the threat of the nightmares that would come sooner or later. Even the sedative wouldn’t stop the terrors that threatened Kirk’s subconscious. The younger man had been through hell and not for the first time. Back in San Francisco they talked about James’ death experience much like cryosleep, but with the major difference that Khan could hope that he’d be brought back, while Kirk knew that his life was over. The Augment understood the fear James must have felt as the radioactive rays destroyed his body, realizing that these were the last minutes of his life despite his young age. He had been brought back though, but only to face death again, this time by torture, made to endure the torment of his Klingon captors.

Khan wouldn’t leave Jim’s side as long as the officer slept, anticipating that he would need Khan to wake him eventually.

Looking down at his one-time lover, he saw how the bruises darkened, changing from purple to blue and black and how pale James appeared beneath them. He remembered meeting the boyish officer all those weeks ago, and how he intended to beat him to death – before everything changed. After that night, Kirk had been bruised, too, but Khan hadn’t regretted it initially. Later, he doubted his behavior because Jim hadn’t betrayed him – except for his overcautious order to stun the super-human, but Khan had forgiven him this incident by now. Kirk had only tried to stop him from doing
something rash and the Augment understood the worries of the Enterprise’s captain.

Now as he watched James sleep, the evidence of the Klingon torture became more and more visible; he winced inwardly. Jim was young and strong – even without the minute changes to his physiology. But receiving such brutal treatment twice in a few weeks was difficult for anyone to overcome. He may had overcome the first time, that night in San Francisco, especially after it turned out in something very much more pleasurable. But those memories would combine with the new ones to haunt him.

Khan would be there for James when the nightmares began. He would offer him all the comfort he needed – and more. He found himself cupping the swollen cheek of his lover again before he tenderly stroke through the tousled golden shock of hair. His gaze wandered over the long, dark lashes, the luscious lips and the relaxed features. Jim appeared so innocent and vulnerable; it squeezed the Augment’s heart. He bent down and brushed his mouth over that of his beloved, surprising even himself at the act of tenderness, relishing in the familiar taste that was so uniquely Jim Kirk.

‘I’ll protect you, James, against the whole universe if needs to be. Our enemies will have to take down me first before they will ever get near you again!’

In his quarters aboard the J’Ethl, Lord Kor stared at the screen of his terminal; the picture paused on a frame that warred with the Klingon’s mind.

It was not possible for a Terran to show such strength as Kirk did during his escape – beaten and injured as he was. Klingons have studied human physiology and weaknesses for a century. His race knew how to break a human. And what of the other man on the screen that held the Starfleet captain in a tight, protective embrace? Kor only needed a few enhanced imaged to recognize the Terran, who had dared invade the Klingons’ headquarters in Turkana City. This Terran killed two officers and four guards before freeing the captive. Even with the dirt obscuring his features, Ryan’s son quickly realized with whom he dealt – the very same Terran who single-handedly brought down three Klingon patrols, and brought an end to the Orion’s assault on the Federation’s outpost a few weeks ago.

The recordings recovered from the extraction on Turkana displayed the speed and strength of the Terran as he caught himself and Kirk following a far too quick parachute descent. It could only be an Augment; there was no other explanation for his abilities displayed in the captain’s extraction. No normal Terran could have been able to retrieve Kirk from the well-guarded prison and kill six trained Klingon warriors in seconds – so quickly, in fact, that they did not alert anyone. The stranger must have come over them like a silent, invisible demon of the ancient times – fast and deadly.
Kirk lied to him! He told him that he didn’t know the stranger and… Kor’s eyes widened as he recalled the words of the Starfleet captain: ‘And I swear that I never met this man before…’

He spoke in the past tense concerning Qo’noS. Right, Kirk hadn’t met the man, his back-up, until that incident. But that didn’t mean he had not seen him since. And then Kirk’s speech about the non-existent Augment-program… He swore that there wasn’t one and that Starfleet would prevent another from ever happening again.

“Clever, Kirk,” Kor whispered. “This man is an Augment, but he wasn’t created by Starfleet or some official Federation program. You know him far better than you let on and told half-truths. But why protect him, Kirk?”

Pursing his lips, the commander stroked his beard. He pondered over the portion of video recorded shortly before Kirk, and the stranger were beamed to the spacecraft that escaped the six Klingon battlecruisers.

Kor cocked his head as his eyes trained on the image of the two men locked in an embrace. The first time he reviewed the record he thought Kirk had stumbled or had lost his balance after his incredible escape, but now the Klingon wasn’t so certain about that first assumption. Perhaps there was more to this gesture than meets the eye. Quickly, he replayed the record and slowed down the video, paying close attention to the men onscreen taking in their surroundings. He saw that the young officer hadn’t tripped. The reason the stranger pulled Kirk close was different – the embrace was both protective and sentimental.

Kor observed how Kirk’s expression changed from determined to fear and defeat. Then the Augment laid a hand on the young man’s shoulder and wrapped him in his arms, only to receive an embrace from the captain in return. He saw pain flicker on the stranger’s face, but not because of some injury. As far as the Klingon lord could determine, the Terran was completely unscathed. The anguish on the human’s face came from somewhere else.

‘He doesn’t fear for himself, but for Kirk!’ Kor comprehended, surprised as he parsed the meaning of his new-found knowledge. Were these men soul mates? Lovers? Both?

Relationships of the same gender weren’t unheard of in the Klingon culture. It was neither common nor forbidden. Sometimes, strong men sought the company of men equally as strong and the requirement or wish for strength in comfort overpowered the desire for the softer sex or procreation. Kor didn’t know how the Federation or Earth people regarded such bonds, but he understood that there were feelings between the two men far beyond simple friendship.
Bending forwards his gaze roamed over the face of the Augment. He could only see half as the other was obscured, buried in Kirk’s tousled, short hair; a gesture so affectionate, even a blind man would have recognized it for what it was – a final good-bye between lovers.

‘Who are you really, Augment? You’re loyal towards Kirk – your mate, perhaps? You wouldn’t have faced death to save him otherwise, and would not have reacted with such – sentiment. But you don’t belong to Starfleet. The people who beamed you and Kirk away are militia; the militia giving such trouble to the Orions. I recognize a Tellarit when I hear one. Exactly like the rebel on the outpost. You belong to them, Augment, not to Starfleet. Why? Why aren’t you one of their soldiers? We are at war and you one of the fiercest warriors I have ever laid eyes on. You could afford the Federation so many advantages. But you choose to work in secret and lurk in the shadows – ready to attack at any moment and vanish back into the darkness. What are you up to?’

He crossed his long arms in front of his chest. ‘Hmmm, I wonder, does Starfleet know about your liaisons? I don’t think so. If you were an agent or a mercenary, Starfleet would be providing support. So, Starfleet has no clue about you. Wesley wouldn’t have risked a trial when he called me to beg for Kirk’s life if he’d known about your plans for rescue.’

He took a deep breath. ‘I will reveal your secret, Augment, and I will catch you. You and Kirk! And then I will get all the answers I need. Neither of you will allow the other to face the pain I will inflict, and there I will exploit you both, honor be damned! You are too dangerous, Augment, to be spared. And concerning Kirk, there is still a sentence to execute…’

Bob Wesley sat at his desk in his quarters. Since he learned of the media-incident with the big-mouthed reporter he hadn’t slept at all – first out of concern of the Enterprise’s safety and now because of the fate of his young friend, Jim Kirk. If he were honest with himself, he was sick with worry. The Enterprise was approximately three hours away from Turkana and deep in the enemy territory, now even more dangerous with the presence of the Klingons. Should he have tried to stop Spock from returning to the colony? Should he have been more forceful with Kor? Should he do something other than these futile attempts as reaching The Shadow?

And why, for God’s sake, did the militia not reply? They had to hear him, he was certain of it, and…

“Commodore? I have the Enterprise for you,” the voice of his communications officer from beta-shift interrupted his musings.
“Put them through!” he said, not bothering to hide his nervousness. Spock couldn’t be at Turkana yet, so there had to be another urgent reason for the contact. ‘Dear God, please don’t let them be in trouble. Please, no Orion or Klingon attacks or...’

“Commodore Wesley, this is Commander Spock.” The Enterprise’s first officer’s deep voice coupled with his ascetic face appeared on Wesley’s screen. “Sir, it’s my pleasure to inform you that Captain Kirk was recovered by The Shadow.”

Bob gasped; not caring that a man in his position should be more in control. “You are sure?” he asked. New hope for the captain flared up in him like the first rays of the sun after a very long and cold night.

“Yes, sir. I spoke with the captain of the vessel Captain Kirk is aboard. He is injured but being treated now by members of The Shadow. Doctor McCoy gave orders to Sunrise regarding his treatment.” The Vulcan looked visibly shaken. “The captain underwent torture at the hands of the Klingons. Pain sticks among other things…”

“Blasted Klingon bastards!” Bob growled balling his hands into fists.

“...but he was well enough to talk with the doctor and me for a while,” Spock ended his report ignoring the furious interjection of the commodore.

“Have you arranged a rendezvous with The Shadow to take Kirk aboard?” Bob wanted to know, and if he weren’t so tired and glad with relief, he would have smiled at Spock’s audible sigh.

“They are already half away from the Borderland border. One of their members, a man named Ritek, intercepted a transmission from the Orions concerning our presence in their territory. There was no time to meet with The Shadow to…”

“Shit!” Bob took a deep breath. “Get out of there, Commander. Now!”

“We have already altered our course back to Kenda, sir, but I... think it is possible to avoid any contact with the pirates. Sunrise, who, by the way, was the one who rescued the captain in a single-man mission, developed a sensor-disturbing device. The Shadow has tested it successfully. He agreed to give us the technical specifications and Mr. Scott is building it now. We will use it to avoid the Orion’s sensors. Our odds of escape are 1 in 59.6784 based on the simple concept of the device
and its previous success. We are only concerned over the time in build and readiness. So long as we remain undiscovered before its use, we will be alright. It should be ready for operation within the next hour according to Mr. Scott.”

Wesley stared at the Vulcan. “This ‘Sunrise’ seems to have more talent than the whole Command staff together. He flies and shoots, single-handedly saves a Starfleet captain from an invading Klingon battalion, tends his injuries as if he is a doctor, and then builds a sensor-disturbing device within a few days, a project our scientists have been working on for months.” He shook his head. “Hell bells, this guy is ready for the next New Nobel Prize. So now for the question of the day.” He cocked his head. “This Sunrise… He is Drythen, isn’t he?”

“Sir, Captain Kirk’s exact words at my presumption of Sunrise and the ‘daredevil’s’ identity were: ‘You are right, but don’t expect to get an answer from him right now.’” The science officer lifted a brow. “This man is hiding his true identity very carefully, but regarding his support to Starfleet these last weeks, I see no priority in finding out more about him so long as he remains on our side.”

An amused snort escaped Bob. “You almost sound like Jim. You two have spent too much time together,” he teased before he remembered that Vulcans haven’t a sense for humor. He sighed. “Right, I’ll expect your report soon, Commander. Where are you going to pick up our troublemaker?”

Spock knew of whom the commodore referred and replied, “The captain is in need of rest and healing. I accepted his request to arrange a meeting point later when he has recovered. He also ordered me not to wait for him should Starfleet have a mission and to let him know when we leave Borderland.”

“Right, in other words, he needs a break. I can sure as hell grant him that much. Let him deal with the terrors he endured in his own way. Maybe it’s good for him to be with his mysterious friend and out of this damn war’s cross-fire for a while. But knowing him he will be back at the con in a few days, so… give him a break. He can’t stand tobe away from his ship and crew for that long anyways.”

And Spock’s soft nod told him that the Vulcan saw it the same way…

TBC…
So, my dear readers, now Jim is finally ‘out of the fire’ so to say, but another fire lies ahead for him and Khan – a far better ‘fire’.

In the next chapter the phantoms of the past will haunt our captain, Barnett learns of Kirk’s fate (after all there is damn time offset until a message reaches Starfleet Command and Barnett can’t know of Jim’s rescue) and Khan’s get another proof, how much he belongs to The Shadow now.

I hope you enjoyed the new chapter and I’m curious like hell, what you think of it.

Have a nice week

Yours Starflight
Chapter 17 – Hours of comfort

Khan sat at the small desk in his quarters. He hacked into Starfleet’s database again, a difficult and time-killing procedure because of the great distance between the spacecraft’s position and the headquarters as well as the changing cryptography protecting the most sensitive information. He checked Starfleet’s deep-space facilities. Could they securely hold and maintain 72 cryotubes? He remembered Caviw’s suggestion to start his search in a different place each time and look at a problem from a different point of view. The Caitian could be right. The location of his crew was top secret and therefore well hidden with few who knew of their existence and fewer still who knew where they were.

Khan looked for a fitting outpost of Starfleet or civil departments under Starfleet jurisdiction. But after he found four facilities, he had to withdraw because the SBI discovered the unauthorized access and were attempting triangulation of the server, though without success. He was too quick and careful; still he didn’t want to reveal his venture. He switched off the terminal and disconnected from the vessel’s main-computer. It was out of the question to risk his comrades’ safety because of his search.

Cursing under his breath, he leaned back in his chair. A gentle rap on the door got his attention, too quiet to disturb Kirk’s slumber. Pleased by such sensibility, the super-human rose and let his visitors in, Ritek and Galven. They gaped at him for just a moment. None of them had ever seen him with
bare feet, clad so casually in kurta and shalwar. Only his hair was sleeked back in his usual fashion.

The Rigelian quietly reported, mindful of their sleeping guest that the Enterprise’s chief engineer had built the device and that it had been successfully linked to the starship’s deflector-shields. Khan lifted a brow. They were quick, but after checking the chronometer at the bed stand he realized that more than three hours had passed since Jim spoke to his crew and rested. Indeed, time does fly when you’re busy.

Galven glanced at the young captain, and compassion shimmered in his little eyes. “The boy really looks bad,” he whispered. “And the Klingons only ‘questioned’ him for a few hours.”

Khan nodded grimly. “I don’t want to imagine, what would have happened to him, if I had come later.”

“How did you break into their headquarters and find him?” The Augment sighed.

“I didn’t have to search for him. His screams led me through the supply-shafts.” He shuddered inwardly and felt an impulse to go to the bed and take the younger man in his arms. He was always there for his people if they needed him, when they needed him, but it was different with Jim Kirk. Not only because of the super-human’s blood in Kirk’s veins. No! The reason went deeper – deeper than his veins, deeper still than his heart. With Kirk, Khan knew that despite his unconventional creation, he had a soul. He knew because it was entwined in Jim Kirk’s. It warmed him, and it grew stronger with each passing hour.

“What became of his tormentors?” Galven asked quietly, and as he caught the piercing gaze, he gulped. “Let me guess, they aren’t among us anymore.”

“Yes,” was the only reply. Then Khan took a deep breath, “I want to thank you, Galven. And you, too, Ritek.” His attentions rested fully on his two comrades. “You risked your lives to come to James’ and my aid. Without you, Caviw, Diego and the others we both would be in the enemy’s hands and…” He grimaced before Galven clapped him on the shoulder.

“You’re welcome, Buddy. As I said, you are one of us now, and we stick together, no matter what. If we can’t rely on each other, then we should quit now. We are but a few in number, but our strength is reliance upon one another – the bond we share through common experience and purpose.” He rubbed his snout. “You could have asked, you know. You could have told us what you were up to, and we would have been with you from the beginning.”
“Yeah, telling me that you want to speak with Galven only to see you seize the D’Ghor and speed away wasn’t the ideal way to go about it.” Ritek nodded and lifted a hand to ‘Drythen’s’ objection. “I know, the boy was running out of time and you had to get to him as soon as possible. Still the whole thing could have gone wrong. In fact, it did, and you only got out of there because we showed up.”

Khan felt his cheeks heating. They were right. He would have failed Jim, and by his death, his family, too. If it hadn’t been for his comrades of The Shadow, he and James both would face death by torture now – or he certainly would be back in some labs, this time in a Klingon one.

This was strange. He wasn’t used to such a close comradeship other than his crew, but there they stood – two alien men who didn’t know his true identity, but showed him loyalty nonetheless. It was a new experience, and he realized that he had begun to value this relationship.

Ritek watched his shipmate and recognized the other man’s embarrassment – a rare thing given ‘Drythen’s’ pride – and smiled. “Think of it the next time you want to save the day again. We are with you. And whatever the problem that is weighing on you, even now, it will be easier if you share it. Whenever you want to talk about it, just come to Galven, Caviw or me. Or Jeffry – when he is sober again. We had to leave him on Aldebaran because he was drunk as a sailor when we departed. Anyhow, we all have an open ear and a sealed mouth; you can talk to us whenever you want, okay?” He saw the wary gaze of the Terran man and added firmly, “Whatever you’ve done that you have to avoid Starfleet and the authorities doesn’t matter, because here,” he tapped against the Augment’s chest, “you are a good guy. That’s all that counts.”

To his surprise Khan felt a lump in his throat. If Joaquin and the others heard this, they would think that times really had changed; then he nodded. “Thank you,” and he meant it.

Ritek grinned at him. “And you have to tell me, how did you punch a dent into the Flash’s comms station? I know that you are strong after seeing you take on the Orions and the D’Ghor’s captain, but whatever feed pellets you’re eating, must be damn good.” He winked at him and left.

Galven stayed a moment longer. “We will reach Aldebaran in approximately 5 hours and Diego will arrange a shore leave for you and the captain so that the boy can heal. He said something about a small cottage somewhere at the Silver Bayou, or whatever that lake is called, and that you two can stay there for a few days. A break will be good for the lad – and for you, too!”

Perplexed, Khan stared at him. “Diego is going to rent his cottage to us?”

“No, he will not rent it but will give you a free stay.” He grinned as he caught the utterly baffled gaze
of ‘Drythen’. “You’ve impressed him with your technical genius and the stunt you pulled to save your friend. Someone who dares to fly deep into enemy’s territory and risks his neck to haul someone else’s ass out of trouble should have songs written about him – and Diego is a hopeless romantic.” He turned to leave, but hesitated. “Is it true? Is the boy your mate?”

Khan’s eyes widened even more, while his jaw made the downward plunge toward the floor. “What…? How…? I beg your pardon?” No, his voice didn’t hitch, did it? Alas, so much for being an enhanced super-human.

The Tellarit chuckled. “There’s no denying it, Drythen. Caitians have a very fine sense for such things and even if Caviw hadn’t explained to us, we would have realized it on our own, certainly after we got you and the boy back. You’re far too fond of the lad to see in him ‘only’ a friend.”

“Caviw explained…?” The former dictator felt completely taken by surprise. “What did she explain?” he demanded thunderstruck.

“Well,” Galven smirked, “when Ritek alerted us that you took the D’Ghor and were off to Turkana to save the boy’s neck, I wasn’t too happy about it. Then Caviw told us that you were claimed, most likely by the Enterprise’s captain since you obviously trust no one to save him and that our young hero here is your mate.” He smiled. “I can understand your determination to save him no matter the cost. We Tellarits have very strong family ties, and nothing means more to us than our clans. With the Caitians it is the same and the Regulians are Vulcanoid, which means that they bind themselves mentally to their mates, too. You and Kirk share a bond, a bond that drives you both to each other beyond logic and reason. So I understand your decision to fly to the rescue – even if I wanted to put you over my knee making me worry like that.” He scratched his snout again to hide his grin as he took in the shocked expression of the Terran. “What has become of the D’Ghor?” He changed the topic. ‘Drythen’ avoided his gaze, quite uncharacteristic of the Terran so the Tellarit left it with a grumble.

Why – oh why – did Khan feel like a small boy again just now? He was in the ascendancy over the others, even over Galven and Ritek, and never had to answer to anyone; still there was something festering at the edge of his conscious. Those people cared for him. Not because of his enhanced abilities, his status or title, but because of himself. They saw a brother in him, and that was more than he ever had since his awakening from cryosleep. Moistening his lips, he replied, “I had to give her up. She’s on Turkana somewhere in the wilderness. Still cloaked, but…” He rubbed his neck in an uncommon wave of shyness and Galven rolled his eyes.

“Shit! She was of use to us, you know.” Then he shrugged. “Well, the boy’s and your lives are of more value. I’m glad that we have you back and that the crew of the Enterprise hasn’t lost its friend and captain. They seem to love him, given the Vulcan’s outburst when he heard Kirk’s voice.”
“'Outburst’?” Khan blinked. That had been an outburst?

“By Vulcan standards that was an outburst of delirium, rather rare for Vulcans, but if they like someone… Not that they would admit to ‘liking’ someone at all.” He sighed. “Right, it’s late and I think you have better things to do than to chat with an old guy like me.” He turned. “Night, Drythen. We will not wake you when we arrive at Aldebaran. Take all the time you need. And don’t forget to eat something. You’re far too thin!”

With those words, he left. Khan stared at the closed door for more than a minute speechless, half irritated, half bemused. And, above all, deeply touched, as a certain fact hit him with force: He wasn’t alone anymore! He had friends, friends he could rely on without fear of being let down. These people were more like James Kirk, rather than Marcus. Perhaps there was a place for him in this world after all – a place for friendships, relationships, although his relationship with Jim was… far more intense.

His gaze drifted down to the sleeping man, and Galven’s words echoed in his mind, ‘your mate’. Hell, it was too early to call them mates. They weren’t even lovers, just… Well, he couldn’t name what they were. Only one thing was for sure, there was indeed a bond between them and, as Galven put it, it was beyond logic and reason. Under normal circumstances, they would be still enemies; nature had positioned them on opposing sides. Yet they had too much in common to not realize the spiritual kinship. And there was the hunger and the instinct that drove them to protect each other from harm. From the beginning, Jim shielded him and his people from annihilation using weapons of his design. Jim had even been willing to endure torture to keep Khan’s identity a secret now, to keep him from injustice as he did before. They were close, bonded even, and fate kept throwing them together, using each to preserve the other; as if they were meant to be.

Even in San Francisco, after he had left Kirk’s apartment, he had felt the urge to claim the young captain utterly; to make him his and his alone. And now this longing burnt even stronger – not only with the flames of desire, but also with the warm glow of protectiveness and the beginnings of tenderness. Maybe they could be more than lovers – far more. If only circumstances were different. If he wasn’t a wanted criminal feared by the world because of his past acts and breeding. If Jim wasn’t a Starfleet captain, who should arrest or even kill him on sight. Only then might the future look brighter.

But all these ‘perhaps’ and ‘maybe’s’ didn’t count. Not in this moment. Just right now all that mattered was their stolen time together and the health of the younger man – the opportunity for this time was nearly lost to them. Khan shuddered as he thought back at the moment Kirk asked him to kill him as the Klingons closed in on them blocking their egress. Of course, the former dictator could understand Jim’s decision. Sometimes death was the easier and more merciful way than bearing what lay ahead; still the plea shocked him. A year ago he wouldn’t have hesitated at the request, but now…
The mere thought of feeling James’ neck snapping beneath his fingers, listening to the captain’s last breath, feeling the cessation of his pulse sent a stab of intense pain through the Augment’s being, making him almost dizzy with sorrow, even if it never happened.

For a moment he imagined the chest stilling, those cheeks turning grey and this handsome face turning waxy. An icy chill ran down his spine. He wouldn’t have obliged Jim, even if Galven hadn’t shown up at the very last second. He couldn’t have done it despite his rational mind agreeing with the captain’s decision. He would have lost more than James – he would have destroyed a part of his soul! He couldn’t have killed James just as he couldn’t kill Joaquin, Katie, Otto, Paolo or any of his family. Jim and he had marked each other; the link between them was already strong and he would fight the whole universe to keep Kirk out of harm’s way. It was in an Augment’s nature to protect their dear ones.

There – he had thought it again – a dear one.

He groaned. He had no time to get emotionally involved like this, but he knew that there was no going back now. James Kirk had become a part of his life – of his heart – and he would stay true to it no matter what. He had no other choice. He could fight against an enemy, but never against himself.

Closing the distance between himself and the bed, he bent down and softly kissed the dry and swollen lips of his former adversary. He couldn’t give voice to the truth of his feelings that his ever-working mind and his soul were whispering to him – not yet. It would be foolish – insane – given their predicament.

Sighing, Khan rose and rubbed his forehead. No, a headache was something an Augment didn’t suffer – well, not often. But now seemed to be one of the few occasions, and even the enhanced human had to bend to this unpleasant experience. The whole Turkana disaster had tired even him out, not physically necessarily but mentally. He knew that he was a kind of monster in the eyes of the most people, but they would never understand how deep his feelings ran for those who belonged to him. It was hell for him to see what had been done to his lover; hearing his screams was something that would haunt him for a long time. The rage that had burnt in him when he realized Jim’s agony had sapped his mental strength. Coupled with his healing injury, he felt a rare tiredness gripping him.

And with that another completely normal albeit unexpected body function kicked in – his stomach growled.

Khan rolled his eyes. Of course, his body demanded its replenishments. His arm was still healing, slower than normal actually. And the emotional maelstrom was taking its toll.
Banishing the terrible memories of the moment to the cellars of his subconscious, the super-human went to the replicator to fetch something to eat, hoping that Diego had programmed the replicator to produce some Asian food. He had enough of the alien meals!

"Why wasn’t I informed sooner, José?" Richard Barnett had a strong sensation of déjà-vu as he stood in José Luengo’s office. He felt the heat of rage burning in his veins as he asked that same question all those weeks ago when he got the message about Khan’s escape – the Augment was after Kirk and his friends for revenge. Again the young office, one of his most troublesome but also best students, was the cause of his outburst.

"You were in the same meeting with Federation Council as I was. I learned about Kirk’s fate an hour ago – after I returned to my office," the Spaniard answered calmly. "And I informed you as soon as I could."

"The Klingons captured the captain of our flagship, and they ordered his execution – and your office has nothing better to do than telling the Enterprise that there is nothing Command can do?" Barnett braced his hands on the surface of José’s desk and fixed the Chief of the SBI. "How is that possible?"

"You gave the order that this meeting shouldn’t be interrupted for any reason, except… What did you say? ‘Unless the Klingons knock down our front door’." Luengo watched as Barnett threw his hands up before replying,

"Dammit, José! I didn’t want be interrupted for some report of a scratch on a starship hull. The Klingons took one of our commanding officers captive and ordered him to be executed by torture; that fucking counts as ‘knocking down our front door’. This execution is just more information gathering about us! Kirk is strong and stubborn as a pack of mules, but we both know the Klingon methods. They are going to break him – slowly – just to see how long he can last. And then? What about the outcome, the PR nightmare at leaving one of ours to die? What about the intelligence the Klingons get out of him before he succumbs?"

"Do you really think Kirk will talk? I don’t know him like you or Chris did. But our officers would rather die than to betray Starfleet or the Federation."

"There will be no salvation for him, no death until he tells them what they need to know. They can torture him for days – weeks even! It is our duty to do something. We are at war, and there are always sacrifices that leave scars on us all. But never – under no circumstance – do we leave a man
behind! And THAT is as old as war itself! Jim Kirk saved our planet just two years ago. He saved uncounted lives during his first one-year mission, and if I’ve read your report correct, he stayed behind to help a pregnant woman and her children to flee from Turkana.” His voice lowered dangerously, “We don’t have many heroes like him, and we need men like Jim Kirk if we are going to win this damn war!” He pointed at Luengo’s terminal. “When did the messages on Kirk come in?”

Luengo checked his received transmissions and replied, “Commodore Wesley’s report reached us fifteen hours ago; the Klingon commander’s message concerning Kirk’s execution came in seven hours later.” He grimaced, “We couldn’t have interfered even if we reacted immediately following the first transmission from the Lexington. The distance between here and Turkana is too great.” He looked up at Barnett. “I’m sorry, Richard. I know that you valued the young man highly, and he was one of our most promising officers, but…” He didn’t finish but took a deep breath.

“So, if I understand you correctly, Lord Kor’s message has been sent eight hours ago?” Richard asked; the Spaniard nodded and straightened. “Then it isn’t too late to do something. Death by torture – it means that the execution takes time. Maybe there is still a chance to get the boy out of the hell he is in now.”

He turned to leave, but looked back one more time. “And you should instruct your staff to understand the difference between bullshit reports and emergencies. If Kirk breaks and dies because of the SBI’s inaction, there will be consequences!” The door closed behind him – and out of the attached room Norton stepped into the office.

The two admirals exchanged a look, before José took a piece of paper and wrote something down; offering it Albert, who took the small sheet. ‘Golden Gate Park, boathouse at Stow Lake, 2200.”

Norton curtly nodded and left.

In the meantime, Barnett strode through the foyer like an angry bear; no one wanted to cross path his path. He stepped into his office. For a moment, he wished for a good old-fashioned door he could slam, instead of familiar swish of the entry sliding closed.

He ran his fingers through his dark curls, and pulled just short of tearing at them; a wild curse rushed past his lips. The weariness after the marathon of a conference had finally left him. Fifteen hours ago the SBI learned of Kirk’s fate. Given the distance, the report of the Lexington had been sent nineteen hours ago. Nineteen damn hours! There could be two strike groups, twenty ships at least, in Borderland by now to send the damn Klingons home and recover the young officer. Kor’s transmission, a name he had read so many times he thought he should know this Klingon lord, reached Starfleet Command seven hours later. At the latest then, he should have been informed, Barnett thought. A recovery team could have been dispatched, maybe already there. But because of those cretins blinded by the damn rules, Jim Kirk was delivered to a fate far more cruel than the
human mind can comprehend.

Barnett rubbed his face. He knew that it could be already too late to send the cavalry. If Kirk remained alive now, he certainly was only a shadow of his former self – crippled in body and soul. But Richard had to do something. And this without robbing the Council of their precious peace.

Of course, he understood that the president of the Federation and the council members, as well as the admiralty (mostly), wanted to end the war. But it was a never-ending loop; the Klingons attacked and were driven back only to assault the next planet – the next territory. Now that the Klingons had annexed the Borderland, with the allowance of the Orion Syndicate, Barnett was certain that they would the newly acquired territory to mount further attacks on surrounding Federation-space.

And as though the attacks weren’t enough, the Federation still had to contend with the enhanced Rigelian Fever bacterium the Klingon labs were breeding. If perfected, the war would take on a whole new dimension of horrifying with the introduction of biological weapons. Both sides had already suffered many losses, and Barnett was tired to read casualty reports day-after-day. This whole disaster had to end. He voted for peace talks with the Klingons, still he doubted that the enemy would listen. Klingons saw no crime in war. They embraced war as an inevitable destiny that filled them with pride. Reasoning with them was anything but easy.

Right in the middle of the casualties and looming bio attack is the loss of the Federation’s young hero, Jim Kirk. Perhaps his loss didn’t mean the loss of the war, but their side suffered severe handicap without the Enterprise’s captain. Though he knew that he should do nothing to complicate the prospect of peace talks, but he couldn’t let the young man down. He simply couldn't! He had never entrusted someone with this information, but the way Jim Kirk had faced trial during his time at the Academy, after he manipulated the Kobayashi Maru, had impressed the admiral.

Most students would have tried to talk themselves out of the trouble they were in, but not Jim Kirk. Hell, he even deigned to defend his deed and argued with the Vulcan, Spock. Most admirals, even Barnett, avoided confrontation with the Vulcan as much as possible. This kid had more courage and stood strong for what he believed good and right; more than other so-called heroes who did so out of convenience rather than conviction.

Kirk had always had that certain something in him, even from the time of Tarsus IV. That quality just needed someone with an eye to see it and bring out its true luster. Chris Pike saw what Kirk was and could be. He made him is protégée and defended him with the fierceness of a mother-le-matya. Maybe Richard didn’t see Kirk as Chris did, but if Chris valued something, that was good enough for him – even after death. It was up to Richard to pull the boy out of deep water – just like Chris would have done. Chris – or Bob Wesley; if it was good enough for Christ, it was good enough for Bob. Richard smiled at the thought.
The Chief-in-Command knew about the growing friendship between the nitty-gritty commodore and the Enterprise’s captain. He would bet a whole months pay that Bob already tried to save his younger friend’s neck – he didn’t need a Starfleet report to know that – there probably wasn’t one. Kirk wasn’t the first and wouldn’t be the last, who wasn’t that particular about rules. Bob had the same tendency – and maybe this was the solution for Jim Kirk’s rescue.

“Lieutenant?” he called his secretary through the direct-link, “Yes, sir?”

Barnett took a deep breath. “Open a deep-space frequency, Priority One, Code 9, and link it to my terminal!”

“Aye, aye, sir!”

Seconds later the channel switched on, and Barnett looked straight at the camera on his screen. “Lexington, Admiral Barnett speaking. I just learned that Captain Kirk of the USS Enterprise has fallen into the hands of the Klingons on Turkana. Commodore Wesley, if you have already dispatched a personnel recovery team, then I want the details. If not – do it now; try to save Kirk. No open confrontation; the mission must be done secretly. I give you free reign to do whatever is necessary; however, you cannot confront the Klingons. Any confrontation will blow our negotiations out of the water – spoil it all. As soon as Captain Kirk is rescued or confirmed dead, I expect your personal report, sent only to me! Barnett out!”

He re-played the recording and sent it over the Lexington’s very own frequency. Then he prepared a similar message for the Enterprise, ordering Spock to wait for Commodore Wesley’s instructions concerning the rescue-mission or if the mission had already started, to avoid open battle. He wished the crew of the flagship luck and sent the transmission on its way scrambled with the same security methods as the Lexington.

Now he could do nothing more than give his attention to other urgent matters that needed his attention. That – and hope that the young captain wouldn’t suffer too horribly before help arrived.

ST***ST***ST

The heat was excessive. It burnt under his skin, crept along his neural system, infiltrated his organs and drove the blood from his pores. Jim could feel his insides melting – dying – and there was nothing he could do to stop it. Neither the cool glass of the security-lock nor the figure on the other side, who looked on with wet, sorrowful, dark eyes could end the pain. “I’m scared, Spock… Strange feeling… Not used to… Help me not to feel.” The words fell from his bleeding lips.
The fear… This unbelievable, vise gripping fear… He would die – here and now – alone in this radiation-filled room, his body slowly shutting down. He could feel his heartbeat slow down; his lungs refused to inflate to take in much-needed air… Then everything stopped, and the world melted into the darkness…

The darkness lifted, chased away by burning pain in his back. Tearing his eyes open, Jim gasped for breath only to receive a murderous blow. An alabaster face with piercing blue-green eyes appeared. “Shall we continue?” The deep baritone was familiar, but it sounded… strange. It was full of wrath and hatred. Far from the warm tones with which he was accustomed to now. “Your Vulcan broke my arm last time we met – maybe it’s a good start for you,” the man in front of him sneered. He knew the man before him; this hate was wrong – it didn’t fit. There hadn’t been any rancor between them since… Well, quite some time. Jim felt ice running through him in agonizing contrast to the searing pain he felt.

No, this phantom was false, a trick of his mind. Nien and he were allies, brothers… more than that. They shared passionate, sweet kisses, gentle caresses and seducing touches that drove him over the edge. Nien wasn’t an enemy! He was…

Those sea-colored eyes became caring and tender; a strong hand gently cupped his cheek… “Jim, calm down. You are safe…”

The memory faded from pale marble to the dark, looming anger of two Klingon captains.

“What are Starfleet’s security codes?”

“Where are your strike groups?”

“Who was your back-up on Qo’noS? Give me his name!”

“What are your next orders?”

The questions showered down on him – and he couldn’t answer them. A blade sliced down his chest; a laser whip tore the skin from his back. Then another Klingon lifted a short, thick rod and pressed it against his side. Never had such agony flooded his senses. Another blow landed on his temple making his ears ring.
“Who was this man on Qo’noS?”

“I will not tell you,” Jim whispered hoarsely.

“What is he?”

“A thousand times better than you!” he gritted out, remembering the private and tender talks, the heroics of the Augment, who saved his good friend Bob Wesley.

He heard Khan’s voice from far away. “James, wake up!”

“Where is he?” the Klingon continued.

“Where you cannot get him!” the young captain gasped, imagining the super-human in the safe shelter of his quarters.

“What’s his name?”

“He has many names; all as great as he is,” Jim murmured while his mind only called out for one alone: Nien

“HIS NAME! Say it, human!”

New resolve flared up in Kirk. “Rumpelstiltskin! You don’t know Rumpelstiltskin? The little gnome, who taught the miller’s daughter how to spin gold, so that… The pain bestowed on him once again was incomparable to the one before.

One of the Klingons, the commander’s first officer, pressed a dagger against his chest. “I will skin you alive, Kirk! I will cut this sorry excuse of a biological coat from your body…”

“Fuck yourself, bastard!”
“Karum, step five!”

*Fire raged under his skin, found its way into his skull, and filled every fiber of his being with white-hot agony. Jim screamed and this time he was able to beg for the pain to stop. But there was no end to it, no escape, only searing torment…*

“Jim, do you hear me? Wake up!” The voice tried to cut through thick fog of his mind; it reached him – sort of.

*The ache remained, tore at his body, tried to tear his nerves to pieces… And this heat… Again this terrible, scorching heat! He…*

Something pressed against his neck, and almost instantly the brutal burning was soothed. He could breathe. Then he heard a deep, rich voice again calling to him.

“Jim, wake up! Come back to me, *pyāra* (Hindu for ‘love’), come on.”

Someone tapped him softly against his cheeks, and the familiar voice demanded he open his eyes.

The nightmare cleared; the gentle baritone chased away the fog. The harsh Klingon voices ebbed away, and the pain stopped. Fighting against the darkness that tried to envelop him once more, he forced his lids open and met the worried gaze of the voice’s owner.

Long fingers gently stroked his temple. “There you are.” Khan felt a wave of relief as Jim finally broke free from his restless sleep.

The moment the first nightmares stirred the younger man’s slumber, Khan hurried to his side, trying to soothe him, but for naught. Jim was deep in REM due to his exhaustion and the effects of the sedative. The Augment’s attempts to wake him up were unsuccessful. With dread, he watched the pain on Kirk’s face, listened to his pleas and cries to make the agony stop. And that’s exactly what he did.

Checking his torn and dirty coveralls, he had found the two hyposprays with the doping-agent and realized, to his relief, that one wasn’t emptied completely. Quickly, he injected Jim with the remains
and the young captain finally calmed down. The serum-mixture of Khan’s blood, adrenaline, vitamins and the pain-killer worked far better than the medicine he gave him earlier. Tapping the other man’s cheeks, he woke Jim.

Glad that the mental torment was over, the super-human ran his fingers through the sweat-damp hair. As he saw Jim’s disoriented, confused glances, he smiled. “There you are,” he whispered. “Stay calm, Jim, you are safe.”

“Where am I?” Kirk mumbled dazed.

“Aboard one of The Shadow’s vessels,” Khan replied while his fingertips wandered tenderly over the other man’s jaw, prickly with the first beard growth. He saw those glassy, sky-blue eyes roaming over the walls and overhead before fixing upon him again. “Everything is fine now, Jim, you are safe,” he repeated. And as he saw the uncomprehending but hopeful glance, he knew that healing would take some time. The younger man’s body was strong, but to enduring death and torture in the space of a year was something the mind couldn’t bear without lashing out. Lesser men would break, but Khan knew that James Kirk was no lesser man. Only time, though, would completely heal Jim’s wounded body, mind and soul.

Jim heard the words, but they took their time permeating his addled mind. Snatches of his dreams still echoed in his ears and before his eyes. It mixed itself with the truth around him. He heard the soft drone of engines, smelled cleaned air and the familiar scent of the man who bent over him and watched him with tender care and worry.

Nien…

His rescuer.

The man whose presence meant safety and protection.

Jim always loathed depending on someone else, but in these minutes he was glad for the sentry that kept watch over him. More than a sentry! Kirk’s memories were a blur, but he knew that he wouldn’t be here if it hadn’t been for Khan. The Augment rescued him from torment and prison, had fought like a lion for him and brought him to safety. The man, he had met as an enemy, had turned into a fierce protector, caring friend and…

The young captain moisture his lips, as his subconscious whispered a gentle ‘Lover’.
Yes, all this was Khan Noonien Singh now – and more. For a long moment Jim wanted nothing more than to be enveloped wholly by the other man, to be one with him, to know him in every sense of the word.

The super-human watched the reactions of the captain very carefully. He saw Jim’s tongue dart out to wet the dry, cracked lips. “Do you want something to drink or to eat?”

Finally, feeling a bit more himself again, Jim replied, “I’m thirsty.” His voice was rough.

Khan nodded, ordered the replicator to produce a glass of room temperature water, and helped Kirk sit, before he set the glass against the younger man’s lips and held it, while Jim downed the much-needed fluid.

“Slow down, James, or you’ll get sick,” the former dictator said, providing once again evidence of his medical knowledge.

Kirk obeyed. He was aware of the risk of nausea if he drank too quickly, but the thirst seemed insatiable; the cool water in his mouth was like heaven. He groaned in relief and Khan eased him down on the mattress again, before laying a hand against Jim’s forehead to check his temperature.

The captain still ran a fever – not unexpected. His immune system had to be in turmoil, what with all of the medications, foreign plasma, and not knowing what to cure first.

“I don’t want to inject you again,” the super-human said. “Let the fever and your immune system do the work for which it is intended. If the fever goes any higher then I will treat it, but it is not dangerous now.”

“Good. I don’t want another hypospray,” Kirk muttered. “How long did I sleep?”

“Not more than five hours,” Khan replied.

“Any news from the Enterprise?” Jim asked; the worry for his friends, his crew and his ship was present even in his current state.

“Two hour ago, Galven told me that Mr. Scott successfully built and installed the sensor-disturbing
device. The enemies have no chance of locating your ship anymore.”

Kirk sighed in relief and gave him a tired, but grateful smile. “Thanks, Nien. Thank you so much. Without your permission and instructions for Scotty, my crew would be certainly dead now.”

The Augment grimaced. “They are your family – the only reason I helped.” He observed the exhausted appearance of the younger man and added softly, “Try to sleep some more.”

Even with his eyes half closed Jim shook his head shuddering. “No, better not.”

The Augment lifted a brow. He didn’t need to ask why the man in his bed didn’t want to fall asleep again. Nightmares were horrible and could exacerbate an already existing exhaustion. Khan remembered all too well his own experiences – and he knew the perfect remedy.

“Scoot over,” he ordered gently, while he kicked off the light shoes produced by the replicator – after three failures. He caught Kirk’s confused gaze and smiled. “Scoot over,” he repeated, gesturing to the officer whose sharp intelligence was still more or less, well, not so sharp at the moment.

Finally, Jim registered the instruction and carefully moved to one side of the bed. The painkiller worked, but as Bones had warned them, his hyper-driven nerves continued to send pain signals to his brain.

Once again, the enhanced man showed how patient he could be. He gave Kirk all the time he needed to make room for him, and only then did he slip beneath the blankets. Almost chuckling over Jim’s expression, he made himself comfortable, facing his bedfellow. Reaching out, he softly touched the younger man’s shoulder and let his hand wander down over his arm. Khan remembered perfectly well where Kirk was injured; he carefully avoided these spots.

The warm caresses were like a balm for Jim. His rational mind told him that the worst of his recent experience was over; he escaped death, and he should stop thinking about what happened to him. But fear gripped him still, and he wasn’t ready for logic just yet. The wounds in his mind and soul were too fresh for such reason.

To be completely in the grips of an enemy who only seek the suffering of others was something out of a nightmare. It wasn’t just the torture itself that shook him so, but the fierce hate ruthlessness displayed by the two Klingon commanders and their first officers.
Nothing that would stop them; he would have to go through this cruel hell until death. That was how it was to be utterly and completely at an enemy’s mercy. He hadn’t felt so much dread even in the night Khan ambushed him in his apartment, prepared to beat him to death. Finding himself entirely helpless and defenseless, stripped of the innate rights of a living, feeling being, and faced with such inhuman cruelty made his soul scream in a desperate disbelief. They confronted him with such fury and brutal ferocity as if he were Satan himself.

Jim didn’t realize his eyes beginning to water as the memories rose in his mind like dark shadows ready to confront him with terror again. But Khan’s tender touches contrasted harshly with the violence he bore. It was almost too much to contain.

Long, delicate fingers ran softly through his hair and massaged his temple as a thumb drew light circles on Kirk’s swollen cheek. Jim looked deep into the blue-green eyes so close he could see his own reflection. Those eyes were so full of warmth and compassion; it made him tremble.

Khan knew the thoughts pinging around James’ mind – battering and clawing to spill out. He could almost see the sinister phantoms behind those sky-blue orbs tormenting the younger man. The super-human was very aware that memories could be as bad as the real thing. More than comfort was needed now.

Leaning forward, he laid his forehead against the feverish one of the man in his care. “Let it out, Jim,” he whispered, cupping Kirk’s jaw with his hand. “Let it out. A wound has to bleed before it can heal properly – and tears are the blood of the soul.”

Jim felt a lump in his throat and a sting in his eyes, and bit his lips. Even in his still slightly sedated state, his rebellious nature fought against the urge to give in to the temptation of reliving the pain. He was the captain of a starship for God’s sake, and not a child. And even as a child on Tarsus IV, he had learned better, quickly. Nor would he be caught dead, no pun intended, weeping in front of the man who ruled nearly a quarter of Earth. What would the super-human think of him should he start to cry like a toddler?

Even without being able to read the young man’s mind, Khan realized what was going on in Jim’s head – knowing that he would feel the same were he in Kirk’s place. He would try to hide everything behind an emotionless mask, wry comments and mockery, ignoring his screaming mind – and Jim was about to do the same.

But Kirk was not among subordinates or even enemies. Jim was with him! And Khan would not allow the younger man to hurt even more by ignoring his pain until the anguish grew into a constant companion.
He closed the small distance between them and let his hand glide over Jim’s shoulder again. “You don’t have to be ashamed,” he murmured. “We both are born leaders, ready to confront dangers wherever we meet them – to keep those safe who are close to us. But even we have our limits.” His lips brushed ever so gently over his lover’s forehead – a gesture of comfort. “You don’t have to hold back, Jim, not because of me. I know the turmoil that rages in you. Nothing is as bad as being forced to endure the rage of those that hate you – to be made lower than the dirt on their shoes. They think they have the right to do whatever they want to you. I’ve experienced it several times, too. I know what you’ve been through.” He watched those blue eyes fill with understanding and tears.

“Was it like this for you – in the labs?” Jim whispered with a thick voice, and Khan took a deep breath.

“Yes, but not only under Section 31 or Marcus’ ‘tender’ care. I – we were born and raised in a lab, you know. And not all of our ‘creators’ saw us as human,” he replied calmly. “The first time you face that callousness is the worst. You never get used to it but given time you learn how to endure.”

Jim gulped. “It wasn’t the first time I faced – brutality, but… They didn’t want to teach me a lesson; they wanted to kill me. I’ve never met them before; I never harmed them, but it was like they saw the devil in me; I was an animal and deserved only the most painful death.” He took a shuddering breath. “I’ve been hunted – like we were – before… on Tarsus IV… but I was a kid as saw things differently. Now…” He shook his head and closed his eyes.

The Augment had listened closely, and he heard the words between the lines. James and he were more alike than he thought. He didn’t know what happened on this planet, Tarsus IV, but being hunted down like a wild animal, even so young was familiar to Khan. He had his own congeneric experiences.

And like him, James Kirk had left it behind him, fought for his place in the world and Starfleet to become one of the youngest Starfleet captains in command of a flagship. Still the past held its demons, and they lurked in the shadows, waiting for their chance to pounce on a wounded soul.

All too aware of the pain of confronting one’s past, Khan pulled the younger man to him – and James came willingly. Cautiously, he wrapped his arms around Kirk. Ignoring the stinging pain of the warrigul’s bite, he ran his hand soothingly over his beloved’s feverish body, careful avoiding the injuries. He felt the tension in James’ frame and heard the hitched breath of suppressed tears. He didn’t know if he should roll his eyes or smile in understanding. They both loathed being weak, but there were times when weakness served as strength’s foundation – like now.

“This is not the place for pride and stubbornness, Jim,” he whispered. “When you are with me you don’t have to pretend. We have left this behind us, haven’t we? Let me see you.” His fingers ran gently over Kirk’s warm cheek. “The memories will not fade until you let them out.” He raised his
head and pressed a kiss to the tousled shock of blond hair as Jim faced away from him. “Just give in. Let the pain out, so that you can go on.”

Still Jim bit his lips and tried to swallow the lump in his throat – for naught. The peace of the small room and the knowledge of being safe again enveloped him. And then the gentle touches, the tender words of compassion, the feeling of security and understanding… It was too much. Against his will, the first tear spilled over and rolled down his cheek, followed by a second and a third one. And then the levee broke. At first suppressed, then heavy sobs shook him, and he hid his face in the crook of Khan’s neck as he finally surrendered to the anguish. His arms clung to the Augment as if the other man was the only lifeline in this storm of emotion that tore him apart.

Words weren’t necessary, and so Khan simply held him, offered him a place full of solace and appreciation. He felt the man’s tears wet his skin. It wasn’t their heat that burned through his skin to his soul, but their mere presence. It grieved him to see and to feel the younger man hurt, yet he knew that it was for the best to give him time to work off the horror he had faced.

Cradling the shaken captain even closer to him, he listened to the heart-wrenching sobs while Jim pressed himself in the Augment’s arms as if he wanted to crawl into him. Khan’s heart opened and went out to him. Oh, how he yearned for someone to hold him like this – and to hold someone again. So long ago, he had been nothing more than a small, scared child imprisoned in the labs, only allowed to leave his ‘living-area’ under observation. How often he wished for a willing ear to hear his fears, his nightmares and hopes. Those hopes only came true after he and other Augments escaped the claws of their ‘creators’, freed the younger ones and spread out into the world. But the memories of his youth never left him; they flared up once more now as he held Jim close and gave him that which had been denied for himself all those years – centuries ago – a shoulder to cry on.

“Oh James, I’d open you up and write my name inside of you. If only that you’d have me with you when you hurt.”

In these minutes, they weren’t a wanted criminal with enhanced DNA and a brilliant starship-captain, they were simply Nien and Jim – two men who shared congeneric painful experiences. Each needed to give and to receive comfort from the other.

It seemed to last hours. Jim give into all the fears, sorrows and pain he had suffered within the last year: the loss of his mentor, the fight for his friends’ lives and for his ship, his own death in the warp core chamber and his rebirth, the terror of war and terror of torment at the hands of his captors. Everything that had built up now broke loose; it seemed to find no end – because the pain went all the way back to his beginning.

There had been the unpleasant times with his stepfather, the moment his beloved elder brother Sam left the family to live with his grandfather, and the day his mother left him in the care of friends on
Tarsus IV. Several weeks later the governor of the colony ordered the execution of half of the population because of an unforeseen food crisis; Jim was among those who slated for death. He had fled and hid with other children; he tricked and stole to stay alive. Countless days of fear and stubborn will to survive went by, until Starfleet showed up. He had cried then too, but not like he did now.

He had wept for Chris Pike in front of Spock, who laid a hand on his back and bowed his head to offer his comfort as well as a Vulcan could. And he had shed tears for his friend Gary Mitchell; he didn’t survive their first-year mission. But none of it made him break like he did now. Perhaps it was a cumulative effect.

Like a drum filled by rain – it was this last drop, this straw that broke the camel’s back; it was the Klingons that nearly broke him – well anyway, that proverbial barrel overflowed. But Khan was there to secure him in the flood that was about to sweep him away.

After a while, Jim calmed down. The tears finally spent, his eyes burnt and his mouth was dry; he slowly came to himself again. He sniffled and hiccupped here and there, but the heart-rending sobs subsided until he simply lay there – quiet and exhausted. He moistened his lips and rubbed his nose on his sleeve; Khan squeezed him gently in a sudden wave of tenderness. Right now, James Kirk resembled a shaken child more than the strong commanding officer he was.

“S… Sorry,” was the first word Kirk muttered, not daring to look up at the other man. But there was no reason to be ashamed. The Augment’s elegant hand cupped his wet cheek, while the warm baritone murmured, “There is nothing to be sorry for, Jim. We all have our breaking points.” Gently, he forced the younger man to look at him. “Sometimes even the strongest have to surrender to their soul’s demands,” he whispered. “Remember? I already cried twice in front of you. How could I deplore you for my own actions?”

Kirk read between the lines. He knew Nien’s humiliation; how he despised weakness in front of strangers – mere humans. Khan was an Augment, proud of his enhanced abilities, yet he hadn’t been able to fight off his tears. If he couldn’t stay in control because he had borne too much, it was no surprise Jim found himself in the same place.

The captain bit his lips for the umpteenth time and nodded finally when he saw nothing but compassion and understanding in the eyes of this precious man (though the man may actually kill him if he called him that out loud, maybe). They shared another moment of closeness. “Thanks,” he breathed and sniffled. “This… Christ, I don’t do this, but…” He gulped and frowned. “Blasted Klingons!”

Khan had to smile. Jim was already blaming those responsible for his torment. This was a good sign.
“Better?” he whispered, and received an affirming gesture in return before Jim glanced downwards once again. Obviously he was still ashamed of his behavior; Khan understood. Leaning down, the super-human ever so softly kissed the closing eyes of the younger man; his lips followed the tracks of tears until he captured Jim’s mouth with his. This kiss was not born of desire, though that had its place here as well. No. Khan’s kiss wished to console his man.

For a moment Kirk hesitated, then the feeling of this tender mouth on his own overwhelmed him and almost shyly, so unbefitting of his character, he returned the endearment. Lovely, worthier memories rose from subconscious to replace the torrid ones that ate at him; memories of their first time together. After the threats, after the protests – he remembered the moments after each had come a third, maybe a fourth time; they laid there in a glorious post-coital bliss. Somehow Jim’s arms still held the Augment, finally out of breath. Then his captor had lifted his head and both men reacting on impulse and heat, kissed each other – not with the demanding force of before, but deep and sensual.

Just like it was now.

At first Khan only massaged at Jim’s mouth before his tongue darted out and slid over the other man’s lower lip, asking for entrance. And Jim was far away from denying him the access. It felt so good – the way the kiss bloomed, full of emotion and comfort.

Never before had the young captain been the object of true affection. Of course, he had shared gentle kisses with his female partners in the past, but not once it had been like this. Khan’s tongue caressed his slowly and almost lovingly; his lips fondled Kirk’s; his breath danced like a lover’s touch over the officer’s face. Contentment slowly spread through Jim’s body, warming him from the inside out, filling the cold emptiness after the emotional breakdown with warm light and tugged at his well secured heart. The exotic, masculine and fresh taste of the Augment overwhelmed the younger man’s senses, and he found his hands in Khan’s dark, silken hair, while the super-human’s fingers explored his body with care. The wounds on his chest and back stung, but he ignored it – forgot it even. All that mattered was the closeness – the tenderness.

Khan closed his eyes. To be near James like this again, eased the emotional strain of the last few days and gave him the security he didn’t even know he wanted. Jim’s utter trust in him, his hunger for nearness and touch, so similar to Khan’s own, and the devotion felt in this kiss warmed the super-human to the core. That Jim welcomed his affection was something he hadn’t experienced in a long time; centuries. It made him feel alive – more human. He was simply accepted for being him – Noonien Singh and not the dreaded Augment-leader. His enhanced part, the part that threw up defenses against such sentiment protested these pathetic thoughts once more, but Nien pushed them down deep. Not now – not when he had his James in his arms. He immersed himself in the sweet freshness and humanity that was so unique Jim Kirk mingled with the salt of too many tears Khan wanted to kiss away.
The need for breath forced Jim finally to break the kiss. His nose was congested from the weeping and felt twice the size. He didn’t want this kiss to end, still he had to sniff. “Even my nose conspires against me,” he grumbled.

“Absolutely unacceptable,” his bed-fellow chuckled, amused by the pout on Kirk’s face. “You’re the captain, so just order your nose to obey.”

The whole suggestion was silly enough to make Jim laugh, and Khan smiled, satisfied. The merry sound from his beloved woke an unfamiliar feeling in him; happiness, and as he saw the wide grin on James’ handsome yet bruised face, his heart raced.

“If my nose doesn’t obey my order, I have to take the usual measures for such misdeeds, but I haven’t my log-book here to leave a censure. What shall I do?” Jim pretended to ponder in mock tones.

Khan smirked. “Well, in this case it will be you who must obey. Believe me, in the end the nose has the upper hand.” He scrunched his nose at his poor pun.

“I don’t obey on principle,” Kirk stated with a gleam in his reddened eyes, and the Augment laughed out loud.

“I know this very well! You are certainly the most proud and stubborn man in the whole Alpha-quadrant.”

“Look, who’s talking,” Kirk grinned and sighed in contentment as the Augment’s lips found his once more. It was a short, but most sweet kiss, one of those pecks that proved a familiarity and ease with one another. Then Khan untangled himself from the younger man and rose, instantly missing the proximity. He shook his head of the sentiment and stepped to the replicator and ordered handkerchiefs. Jim gladly accepted these as the super-human returned to the bed. Blowing his nose, Jim felt another wave of serenity that seemed to come from Khan’s presence. But before he could give voice, the super-human’s attention was driven to a twinkling signal at the intercom and stepped to it.

“Drythen here,” he reported and Galven’s reticent voice answered, “Hey, Buddy, I hope, I didn’t disturb you. I didn’t want to wake you, so I sent a visual signal…”

“We are awake now,” Khan interrupted him not unkindly, and the Tellarit chuckled.
“Well, we caught a sub-space transmission from the Enterprise several minutes ago.” He spoke up now. “They left the Borderland unharmed and were returning to Starbase 12 to meet with the Lexington. The nice communications officer left a special frequency for the captain to use to contact his ship in private if he wants to.”

Khan looked over to Jim who beamed at him and called “Thank you, Commander Galven!” His voice was thick and rough, but considering his poor shape, the Tellarit certainly wouldn’t recognize the real reason for the odd tone.

“You’re welcome, Lad,” Galven answered with a clear smile in his voice. “Just relax and try to get better. Night, you two.” With that, the connection to the bridge was killed, and Khan returned to the bed chuckling.

“If someone had told me that I would meet a walking-talking pig on two legs and a human pussy-cat after I woke up from cryosleep, I would have called them insane. And look who I’m speeding through space with now.”

Jim smiled. “Is this whole universe one big fantasy for you?”

The former dictator lifted his brows. “Indeed. Maybe the same goes for you. You did talk about Rumpelstiltskin in your sleep,” he smirked as he slipped back into bed.

“What?” Jim looked with large eyes at him.

“You talked in your sleep and mentioned this fairytale character.” He braced himself on his elbow, took in Kirk’s baffled mien. “Wasn’t it about a gnome who could weave straw into gold? He helped a miller’s daughter cover her father’s lie. The gnome demanded her first-born in return for weaving gold for her?”

Jim had blinked several times, before he crammed his hanky beneath the pillow. “Why I am not surprised that you even know 19th-century occident fairytales?”

“Because you already know that I am a genius and that the whole lexicon is stuffed in my head,” the Augment replied – half joking, half smug – and Kirk had to laugh.
“Which edition?”

“The best one,” came the expected answer; then Khan cocked his head. “Ready to tell me, whom you referred to, as you mentioned Rumpelstiltskin?” To his surprise Jim blushed before he mumbled,

“The Klingons wanted me to give them your name. They know you were on Qo’noS and Kor knows you are…augmented, but not how or when. They asked me over and over again and then… well… I sort of went a bit defiant and told them ‘Rumpelstiltskin’. They didn’t buy it, mind you.”

“Rumpelstiltskin,” Khan deadpanned. “You called me Rumpelstiltskin?”

“Not you, but – well – you know, I gave them an answer and…” He smiled sheepishly. “After all you are a brilliant scientist in your own right. If anyone could weave straw into gold, it would be you and…” The younger man stopped his lame explanation, as the super-human glared darkly at him, only to suddenly move closer, his expression predatory.

“You are aware of the fact that this calls for revenge, don’t you?” Khan growled. “Revenge that will make you scream, dear Captain!”

In the past, Jim would have stiffened at those words, but times have changed. Now he only smirked, “Is that a promise?”

“Oh yes!” Khan nodded, his eyes full of longing and fire; a dangerous smile played around his lips that send a shiver of pleasure down Kirk’s spine.

Still grinning Jim snuggled back into the pillows. “I’m looking forward to it.”

The Augment’s soft snicker still vibrated in his chest, as he bent down and stole a passionate and far too short kiss from the young officer, before taking him carefully in his arms again. “Then heal quickly, James, because I think we both are hungry for something food will not satisfy.”

TBC…
Yeah, they both are starving for each other, still Jim has to heal more, before he can do what his heart and body scream for. Or not? Jim is stubborn if he wants something and even an Augment can be forced to send his sane mind to hell and to go with the feelings…

In the next chapter you will learn what Luengo and Norton are up to, one of Jim’s friend begins to approach the truth about Sunrise and there is a lot of candy and fluff concerning our two ‘boys’.

I hope you liked the last installment. Not only that Khan begins to learn to trust someone besides his family and Jim, he also shows his caring and tender side as he comforts his beloved. I really enjoyed to write these scenes and concerning ‘Rumpelstiltskin’ – I couldn’t resist (*laugh*).

Until next week

Yours Starflight
Hi my dear readers,

Thank you so much for your feedbacks and I’m still happy that you are so taken with the story. At this point I have to tell you that some of very beautiful phrases or additions are done or inspired by my dear beta-reader Rhiannon. Thank you so much for all the work you put into this story, Sweetie, I owe you a lot!

As I told you within the next chapters there will cute and sweet scenes, but there will be also the next shadows, which are going to raise and to encircle our dear ones.

I hope you’re going to enjoy the next chapter.

Have fun

Yours Starflight

Leonard McCoy sat at his desk without looking at the untouched food on his plate. A nurse brought it in half an hour ago, and it smelled delicious, but Bones was not hungry. Tired as hell, yes, but his stomach felt heavy and knotted.

He didn’t want to think about how close he had come to losing his best friend again – but he was. Only the daring commitment of a mysterious stranger prevented the worst. He knew he shouldn’t blame Spock. The Enterprise’s mission was a near disaster, and it was Jim’s damned misplaced bravery that nearly killed him. McCoy needed a place to vent. It was unfair, but he knew Spock wouldn’t take it personally. He felt so damn helpless! As a field doctor in wartime he had to be ready to face loss every day, but it would have broken his heart if Jim had died a second time. Hell, it broke his heart the first time.

Even though Jim had been rescued, Bones knew his young friend’s crisis wasn’t over. He learned enough about Klingon torture methods at the Academy to know that Jim would suffer physically and emotionally. The prospect of Kirk facing the trauma without him – without his doctor – filled Bones with unease. And ‘Sunrise’ filled him with unease.
And the Vulcan filled him with unease. Dammit, he was three for three.

Spock surprised McCoy when he failed to mention the device that allowed their escape in his report to Starfleet Command. Furthermore, he didn’t tell them that it was a single man who rescued their young Starfleet captain. When Bones asked him about it, he had received one of Spock’s typical non-answers, “There are too many open questions concerning Sunrise to mention him in an official report”.

“Bullshit, Spock. You know as well as I do, you have never submitted an incomplete report.” Leonard knew Spock had as many questions about Sunrise as he did, but Spock’s intentional negligence in the report was alarming to say the least.

First, Sunrise broke Code 9 – Starfleet Command would be up-in-arms as soon as it learned about that – but they wouldn’t because the damn hobgoblin left it out of the report. Then he distracted a Klingon strike group long enough for Starfleet to arrive. He rescued the Lexington. Finally, and God knows if he is finished, he snuck into a Klingon headquarters and saved Jim all on his own. Oh, and not to forget his divining technology out of thin air. Scotty talked excitedly for what felt like hours. Even Spock was enthusiastic – well, as enthusiastic as a Vulcan could be. The first officer lifted both brows, nodded and said, “Fascinating!” As close as the Vulcan would get to the excitement of a boy under the Christmas-tree.

‘How the hell do you fail to report all that, I’d like to know!’ Bones mentally cursed the Vulcan again. But Spock was correct on one account. Whoever this ‘Sunrise’ was, he was brilliant. Hell, he even knew a thing or two about medicine; he took care of Jim’s injuries and played the Orions and Klingons like an overgrown boy-genius with a penchant for mischief.

This guy was a real superman and…

Bones’ thoughts came to a screeching halt and for a moment he only blinked. He had a moment of déjà vu. When had he said that before? He remembered walking with Jim and Spock through the Enterprise’s corridors to…

… to the brig!

He referred to Khan as a superman. And he wasn’t wrong. Extremely intelligent, well-trained, quicker and stronger than any human, and extraordinary healing powers were only a few characteristics of this man. His abilities spoke an even more impressive language. Designed to be a ruthless fighter, he strategized in seconds and adjusted to new situation in the blink of an eye. He learned more in one year with Section 31 than others could if they spent half a lifetime studying. In
short, no one could learn all that this man knew in one lifetime.

Jim told Bone about his talk with Bob Wesley and how this ‘daredevil’ Drythen or ‘Sunrise’, had flown a maneuver no one in Starfleet had even considered.

And an awful thought rose from the depths of McCoy’s mind.

‘A maneuver no one in STARFLEET thought about before – perhaps he didn’t learn it in Starfleet. But Starfleet is 200 years old.’ Leonard thought with a sinking feeling. ‘The only living thing that precedes Starfleet is…Oh God, Khan! He’s the only one who could’ve trained outside the auspices of Starfleet. And that was a damn plausible explanation for why the D’Ghor looked like it was dogfighting in space. All Academy students study military history, even I had to sit through videos of MiGs and F-14s going at it in the air. So crude, but a dance worth watching. That’s what it reminded me of. Oh, and how easy would it be for a dictator to lead a militia successfully against the Klingons and Orions where others and Starfleet have failed… Maybe this is the answer. What if Drythen was more than just gifted? Why does he alter his voice and avoid visual transmission every time he contacts us? He has to hide, even if he is a kind of hero. Why does he have to hide? Because he is wanted.’

McCoy pursed his lips. It would make a lot of sense if the ‘daredevil’ and Khan were one and the same person, and it would answer a lot of questions…except… Why would the Augment risk his own life to save Jim Kirk? He hated him and the other senior officers of the Enterprise. And why would Jim cover for ‘Sunrise’? Jim had to know the man behind the pseudonym by now, and Kirk would never help Christopher Pike’s murderer. Never! Except Kirk had a moral compass like nobody’s business and a stubborn streak as wide as the alpha quadrant. Kirk had been outraged when he learned the Augment’s fate after the so-called trial, but that had nothing to do with a sudden feeling of… of loyalty or obligation toward the former dictator. It was simply rooted in the deep humanity of the young man and his far too compassionate heart.

No, ‘Sunrise’ couldn’t be Khan Noonien Singh. Jim would never align with him. He did it once, and it ended in a disaster. And he certainly wouldn’t keep the criminal’s identity and location a secret. Jim would not lie to his friends or would withhold such important information from Starfleet Command. Unless someone forced him to lie.

But the idea was too far-fetched; Leonard chided himself for being silly even entertaining the thought that Khan and Kirk’s rescuer were the same. Exhaustion. That was the explanation for his mind’s wanderings. McCoy told himself to go to bed. He’d been awake over 30 hours, and he was completely shot – his nerves frayed with worry over the damn ‘Iowa-kid’.

But the niggling at the edge of his mind had started, and you can’t kill an idea.
Golden Gate Park was quiet, bathed in the late evening darkness. Stow Lake enjoyed great popularity since it's opening in 1893. It lay like a black mirror positioned between old trees, enchanting meadows, rambling paths and large, gray boulders. The picnic areas, normally crowded during the day, were abandoned, and the night air carried the low rumbling of a distant waterfall splashing over boulders in its wake. The swans, ducks and geese sought refuge in the banks and the island for the night.

There were boathouses near the lake - all refurbished several times since the lake opened almost 450 years ago; each was made of wood, one story high, painted dark red and white with a gabled roof.

The boats and chairs and tables, normally bustling with use were stowed now; the autumn weather had turned cold and windy in San Francisco.

Albert Norton turned up his coat color against the wind. He looked down at the small tricorder he had taken with him, checking his surroundings for signs of life, but there were only animals and one single human in the locale. The person had remained still on the other side of the boathouse for more than ten minutes; waiting. The small display on the tricorder dimmed to display the local time – 2159. A final visual sweep confirmed he was alone and he took a deep breath.

It had been easy to fool the observers assigned to watch his apartment around the clock. He'd done it for more than four weeks now and had already advised Luengo to order improved training as soon as Starfleet Command was under their control. It was outrageous that someone under surveillance could throw their tail with so little difficulty! But right now it served Luengo and him well. The so-called surveillance team keeping their eyes glued on his apartment would see the flickering of the TV and the movement of a man either fetching something from the kitchen or going to the bathroom. God bless the ever-bickering old couple in the apartment three doors down. The old man wanted to watch baseball, but she watches those silly late-night shows; her husband refused to buy another TV.

Norton had listened to their squabbling for quite some time, and the whole ‘drama’ had come to him as a gift from God. Contact with the older couple had been easy. Everyone trusted a Starfleet officer and Norton could be charming when he wished. So the gray-haired idiot wasn’t the tiniest bit askance when Norton offered him his place to catch a ball game. This charade had gone on for about two months before Albert needed to get out without the surveillance team on his heels. He feigned a call from headquarters, excused himself and left the apartment, offering his neighbor use of the apartment to watch the ball game.

It worked.
At first he only made short trips around town, watching his tricorder and the passers-by with something his grandmother always had called an ‘eagle eye’. Then he had informed Luengo about his ability to walk freely through the city. He learned that the other admiral had used this same technique even longer than he. Of course, José made it very clear to Barnett and the High Council that he had to contact his assets without risking their identities. It meant he could take more liberties than Norton. Either way, he had to be careful, many in Tactical Operations and Surveillance were loyal to Section 31 rather than Barnett.

Both admirals had used the granted and gained liberties to follow their own intentions – intentions that would, in their opinion, lead Starfleet to a future of greater strength and power. Starfleet’s original purpose was outdated. Exploring the space was certainly important, and as a scientist Norton was as eager to find new planets and life forms as any other man or woman who answered Starfleet’s call. But a military was needed to protect borders, uphold regimes and fight.

The endless meetings of admirals, ambassadors and council members, as well as the President of the UFP, were useless according to Norton; diplomatic solutions were giving in. The Klingons interpret this ‘appeasement process' as a weakness. ‘We are practically advertising that Starfleet is unable to defend the Federation.’ Norton considered this appeasement by Barnett, Komack, the president and the others as high treason and he would not sit back and watch the downfall of the fleet and the Federation.

If they wanted to save the Federation and Starfleet of the shame that lay ahead, they had to act now – before it was too late. He was certain that Luengo agreed with him, and he needed him on his side.

He moved closer to the other side of the boathouse and a lone, dark figure stepped out of the shadows into the pale moonlight walking a dog. For a moment Norton hesitated, thinking he was facing the wrong man; then he recognized Luengo holding the leash. Closing the distance between them, Norton advanced and both men nodded curtly, while the dog sniffed at Albert’s legs. José Luengo wore a warm parka and scarf. He gestured down one of the paths. “Let’s walk. The trees over there will give us more cover.”

The two admirals strolled towards a group of large trees. Norton’s gaze found the funny pet again, and he lifted a brow. “Gone to the dogs, my friend?” he asked and the Spaniard shrugged. “Skippy belongs to my neighbors, who were glad to have me take him. I thought he would be a good cover. No one looking for me would look for two men walking a dog.”

“No, not a bit. Sergeant Addison is on duty tonight, and he’s one of my men. The two in front of your apartment are mine too.” They reached the tree line and walked into the woods before Albert stopped.
“You wanted to talk to me in private. Does it have something to do with this… meeting of the admiralty and the Council?”

Luengo snorted. “Meeting? You mean the discussion on how to destroy the Federation as quickly as possible?” He pressed his lips into a thin line before he continued, “The substrain of the Rigelian fever Professor Dashwood and Doctor Conelly have created convinced even the scientists among the members of the Council. They all think the Klingons developed a biological agent to use against the Federation. Adding the gene to the bacteria was brilliant.” He sighed. “It’s unfortunate that the pretense hasn’t had the desired outcome yet. Instead of increasing our forces, the president, Barnett, Komack and the Council have decided to attempt a diplomatic solution for the war.” He glanced into the darkness of the bushes. “I anticipated something like this though. Barnett is an academic and a judge, not a soldier.”

“We are aware,” Norton nodded. “During the conference, I got a message from our labs in Nevada transferred by one of your people. Professor Dashwood and Doctor Conelly were successful in producing an antidote for the new substrain and it’s stronger than necessary for our needs should it fall into the wrong hands. Officially they are still searching for the antagonist.”

“Is it possible to synthesize more of the new strain? We might need it.”

“Not in this form. Dashwood doesn’t have enough blood from prisoner 3158-17-215 to mass-produce the bacteria. The same goes for the other experiments they’ve been working on since their release from custody. Of course, the observers assigned to the scientists are very careful, but they don’t know that work. Dashwood and his team are using Latin, Vulcan or some other language whenever they refer to something that could cause us trouble. So far they haven’t been caught, but if we need more of the bacteria with enhanced DNA we have to have Khan’s blood, or perhaps one of the other Augments would do.”

Luengo lost himself in thought as they continued their way through the woods towards the next clearing; the dog was eager to sniff at all the interesting scents around him. “I thought the subject was the best enhanced of his species and that his blood is necessary to…”

“It would be best to have him back, but the prisoner is still on the run, and you told me four days ago that we lost the trail of the militia hiding him. The blood of the other Augments is better than nothing, but Dashwood would have to make adjustments if it were to work – and it might not.”

“Oh, there’s been a sign of life from our ‘friend’,” the chief of the SBI interrupted him. “Two hours ago, I was informed by my office that they received a transmission from the Enterprise. Kirk has been recovered…”
“I thought your office told the Enterprise that there wouldn’t be a recovery mission – though I still don’t understand what you have against Kirk,” Norton commented wryly. “He’s least likely to toe the line, but we need all of our commanding officers to win the war and force the Klingon Empire to its knees.”

José’s smile was humorless. “If you think I wanted revenge for all the insolent comments Kirk made about us in Barnett’s office when he found out we were… involved in returning the Augment to the labs, you’re wrong. I don’t care what this boy says. I’m rather of the opinion that our flagship should be commanded by an experienced captain and not by a Starfleet brat. I don’t give a shit what he did two years ago. He was only able to stop Nero because he defied the order banning him from the Academy until his trial wrapped up. His captain’s log reads like Gulliver’s Travels and that incident with the Tribbles on K7 provoked the Klingons even more – certainly another added reason for them to declare war. He broke the Prime Directive for Christ’s sake. Pike let him get away with far too much – and now Barnett’s doing the same thing. That kid should be back shoveling shit in Iowa! You heard Barnett today when he learned that Kirk had been captured by the Klingons. We need Kirk out of the way. He’s a loose cannon, and we don’t need him interfering with our plans.”

Norton cocked his head, almost amused at Luengo’s rant. “I understand your reasons for instructing your office to delay the information about Kirk’s capture – even if I feel a bit bad for the kid. A Klingon death is a cruel one, but, on the other hand, there was nothing we could have done in time.” He glanced at José, “Wait - what does his rescue have to do with the Augment?”

“Kirk was recovered by The Shadow.”

The Chief of Starfleet Research and Development stopped dead in his tracks. “WHAT?”

“You heard me. The Shadow recovered Kirk, alive,” Luengo confirmed; the other admiral stared wide-eyed at him. “He isn’t on the Enterprise at the moment. He’s still with them – the militia. Commander Spock will let us know where that is as soon as he knows.”

Albert blinked, still thunderstruck. “But… if Khan is with them…He hates Kirk! He swore revenge. Hell, Command lost their mind with the prisoner escaped, hacked into our database and found the addresses of Kirk and the Enterprise’s senior officers.”

“Yes – and now he’s managed to save his ass.” Luengo watched Skippy for a moment, and he continued. “Of course, this all could be a trick to get Kirk in his good graces before taking his revenge; and that could play right into our hand, but I doubt it. He had to know that Kirk would recognize him immediately. Why risk his cover being blown to save Kirk?”
“Maybe he stayed back and wasn’t a part of the recovery mission. Kirk may not know that Khan is involved at all and…”

“Please, Albert, think logically. The Shadow may be a functional group, capable of a few hit and run attacks against the Orions, but probing deep into enemy space without being caught, invading a Klingon base to free one a Klingons’ prisoners. Think of the physical demands, the coordination, the logistics! I can’t give a handful of untrained civilians credit for that. That bears the mark of a specialist with experience and high intelligence. Khan led that rescue mission; I’m sure of it. And I’m sure Kirk knows who rescued him! He’s a lot of things, but he’s not stupid. So, why would the Augment risk revealing himself like this?”

“Maybe he wants something from him,” Albert suggested. “If Khan is aligned with The Shadow, it must serve his purposes somehow. Does Kirk know where the other Augments are held?”

“No. The location is top secret and only a few have access aside from me.” The Spaniard continued walking, and Norton followed him. “Even if Khan asks Kirk about the whereabouts of his crew, the captain won’t be able to answer him. The question remains, what will Kirk do now? His duty is to arrest the Augment, kill him if the Augment threatens him, but I have my doubts that he will. The boy is too… generous for his own good.”

“You’re right,” Albert agreed with him. “And it won’t be his misguided gratefulness that stops Kirk from doing what he should with the Augment.”

“What do you mean?” Curious José glanced up at the other admiral.

“Dashwood told me in detail, how outraged Kirk was in Barnett’s office when he learned that the Augment wouldn’t survive another cryosleep – that it didn’t matter to the judge in his sentencing. He and the Enterprise’s senior officers were angry that Conelly sees the prisoner for what he is: a subject with the form of a human, but nevertheless non-human. That the Vulcan and the CMO disagreed is understandable. Vulcans value the life of a worm and doctors, of course, are to ‘do no harm’, but Kirk’s outburst was uncalled for. He had a fit; he offended Dashwood and Conelly and insulted us.” He lifted a brow. “And now Khan risked his cover and his life to save Kirk.” He stopped again. “Tell me this doesn’t sound as strange as I think it does.”

Luengo kept quiet for a long moment, pondering; then he nodded slowly. “It does. It remains to be seen, what Kirk will do after he returns to the Enterprise. At the very least, he is obligated to report Khan’s whereabouts if he cannot arrest him, and I’m sure he can’t single-handedly. But if he doesn’t report him…”
The two admirals looked at each other, and Norton narrowed his eyes. “You think Kirk will Khan let go?” He lifted a brow. “Kirk was Pike’s protégée. His death hurt him badly. He was eager to avenge him and…”

“…And then he moved hell and heaven to give Pike’s murderer a fair trial. As I said, the boy is too generous for his own good. I bet that he won’t turn Khan in – not after the Augment and the militia saved his ass.” He made a gesture, pulled gently at the leash to signal the dog to come along, and started back the way they came. “Maybe this will play our favor. We catch the prisoner ourselves and Kirk is forced out of Starfleet, officially.”

“What do you mean ‘officially’? If he’s insubordinate, we have all the right in the world to…”

“Kirk was Pike’s man and now he's Barnett’s. This could turn into a problem. Barnett, Komack, Morrow, Nogura… They’re all the same when it comes to bringing change to Starfleet, like increasing the fleet’s strike forces and advancing weaponry. They all fought against the development of the Dreadnaught class. Now we need them, but one ship would take over a year to build. We could’ve had it already if Barnett and his cronies, as well as the Council, agreed with my assessment, but they didn’t. That’s not the only mistake. The last one was the decision to talk to the Klingons. It has to stop – here and now! And those loyal to Barnett and his staff have to be silenced - including Kirk!”

He bent down as Skippy suddenly sat and whimpered; he took the offered paw into his hands to remove a pebble from between the pads. “Kirk has become a cult hero, and we can’t risk losing Starfleet’s popularity in the public eye if we cut him loose. The whole encounter with Section 31 has cost us enough. I agree with the Council’s and the admirals’ decision to keep the John Harrison – Khan disaster a secret. So we cannot accuse Kirk of teaming up with some criminal, who doesn’t officially exist. Besides, Kirk has friends in high places, not least among them the Advising Minister of New Vulcan, or Confederacy of Surak, whatever the Vulcans are calling the planet now. If we want to take control of Starfleet Command and to keep it, we have to be cleverer than our expected adversaries and remove them before the whole thing can backfire on us.”

“What?” Norton prompted as his colleague rose again and fell silent for a moment.

“Well, there must be a very good reason the Council of the Federation would accept me as the new Chief- in-Command. I’m still under observation, and if it weren’t for this war, I’d already be on trial. We have to aim our strike carefully to initiate a catalyst that will play into our hands.” He glanced up at Norton. “And it won’t be easy. There will be bloodshed, but keeping the Federation safe will be worth it.”
“Whose blood is being shed here?”

“Those who are in the way of strengthening Starfleet will have to die. What is the old saying, dead men tell no tales? If we only move the pieces out of the way rather than eliminate them altogether, it would prove fatal to our cause. No, every new way demands sacrifices. I do respect Barnett; I really do, but he, members of his staff and several others are hindering the fleet’s natural growth. She has to be strong, forceful and deadly in the face of her enemies.” He looked straight at Norton. “Are you with me?”

Albert made an affirming gesture. “I am!” He glanced at Skippy, who sat there and watched the two men, oblivious to the evil plans taking shape in front of him.

“What’s your plan?”

Luengo’s unwrapped his plot for Norton, carefully displaying his plan to take over Starfleet Command and to eliminate those that stood in his way as if it were a precious gift. Only the water-birds, a little dog and the calm, silent trees bore witness to the fiendish plans set before them.

ST***ST***ST

“It’s beautiful!” Jim whispered as he shielded his eyes with one hand against the bright sun. In front of him, the lake shimmered like fluid silver in the golden light of day – giving it its name ‘Silver Bayou’. Nestled in dark green, wooded hills, it’s nature intact nature and pristine, Kirk thought it looked like Canada or Pennsylvania in summertime. The air was warm and fresh; a soft wind breezed through tree branches, and birds were singing – their chirping and colorful plumage reminded him Earth’s exotic birds. Two of Aldebaran’s six moons shone dimly in the blue skies, and the third one was about to peek over the hill tops. Thalessis, one of the bigger cities of the planet, was located in the northwest of Aldebaran’s only continent. The climate was cool with mild summers averaging 25 °C and icy, snowy winters where the temperature dropped to -20 °C.

It was late summer now, just before the leaves changed their colors. The air and the wind were tepid and pungent with the scent of wild herbs and flowers blooming beneath the tall trees so similar to their Earth cousins. But you could see the difference in the leaves, bark and the way the roots spread over the ground before diving into the soil to take their nourishment.

It was quiet and peaceful – like a piece of paradise. Exactly what these two men needed. They stood near the shore where soft waves lapped at the sand and the grass.
A third man was on the porch of the wood cottage that seemed to come straight from the North American continent. Just a single-story with a shingled roof, white-painted window and door frames and a porch just large enough for a small table with two chairs. So much like a typical lake house bungalow found in Europe and America. So bucolic - this little house, the lake and the virgin nature – what an incredible contrast to the harsh world outside this little Eden.

Khan’s eyes roamed over their tranquil surroundings – a sight he never thought he’d see again. This may not be his India or even Asia, but it was so close to the untouched, natural beauty of his home – before the Eugenics Wars. He could smell the richness of the earth and the sweetness of the flowers; he listened to the gentle whispering of the wind in the trees and the lapping of the lake, and took a deep breath.

Peace!

For several stolen days, he would find some peace – not only in this seclusion, but in the presence of the younger man at his side. Jim was still pale and slightly feverish, but the haunted expression in his eyes finally retreated.

Galven was true to his word and didn’t wake them until after their arrival in the Aldebaran system. Khan was surprised to find he had slept over seven hours, but he was grateful for their rest.

Kirk shook off his slumber quickly, though both men had spent some more time in bed, simply lying there, holding each other and relishing in their proximity as well as the calm surrounding them. Finally, the Augment insisted they eat, and Jim relented. Afterward, he examined the captain’s injuries which were healing well. When Jim felt strong enough, Khan contacted the bridge to see if anyone remained aboard the ship.

Diego stayed aboard and grinned broadly when he met them in the transporter room. He beamed down with them directly to the Silver Bayou to show them his small, comfortable cottage – their home for the next several days. He didn’t rent out his cottage to tourists; he only welcomed friends here. Though he’d only known ‘Drythen’ for only a week and the Starfleet captain a few hours, he was glad that he made up his mind to offer them respite here. The young officer still looked like shit and truth be told, ‘Drythen’ was in need of a vacation too. The quiet peace would be a balm for the pair.

Diego may not know him well, but he respected the younger and oftentimes strange, dark-haired man; a technical genius, a hero, and a rescuer of the innocent and the man he loves. The Chilean had nothing against couples of the same gender. The experiences tying these two men bred feelings true and deep. ‘Drythen’ hadn’t left the captain’s side since he arrived onboard and even now he was poised to support him at any given moment. The giant smiled inwardly at the thought. If the two only knew what a sight they were to behold, as they stood there side-by-side at the water’s edge. They
Grinning, he went inside the cottage to give the men a moment alone; he nodded, satisfied when he saw that his friends from The Shadow kept their word. The windows were tilted, the freezer was stocked, the solar unit that ran the electricity had been activated and ‘Drythen’s’ gear lay on the large bed, the only bed, in the bungalow, along with some clothes and personal items for Kirk. Whistling a tune, Diego made coffee and unpacked pastries from the bakery in the small village.

His mind drifted back to when Galven told him that ‘Drythen’ had run off and why; he didn’t hesitate in offering his help to Galven and his crew. He knew that the Shadow and the Flash had to be well-known by now; his friends wouldn’t stand a chance if they tried to use one of them to go after Drythen. They needed his ship.

Now Diego didn’t offer his friendship easily. Skirting the edge of legal operations – often falling off that edge - made trust and friendship a valuable and expensive commodity. But he had taken a liking to the mysterious and quiet man. When he had found out that that ‘Drythen’ left – and left them to rescue this young captain, well, his romantic side overruled his more logical reasoning. Protecting love – finding it and helping it flourish in these dark times was important if they were to have hope for life after the war.

Diego’s whistling was interrupted when he heard the door open; he turned around. ‘Drythen’ helped Kirk inside. The captain took in his surroundings with wide eyes and wonder; the Chilean felt a twinge of pride and beamed.

“This is a wonderful cottage you have here, Diego,” Kirk said quietly, his voice still hoarse, and Diego chuckled.

“Well, it’s a safe haven, when I’ve had enough of crawling around turbines and engine rooms.”

“Is that ever the case?” Jim teased, and Diego started to laugh.

“Rarely – but it’s good to get away from time to time…” He rubbed his neck and looked around. “Sorry, guys, I asked Caviw to clean up here a little bit, but she’s afraid of water! Cats are all the same!” He sighed. “I haven’t used the cottage for quite a time and, well, it’s still a bit dusty.”

Khan smiled the tiniest bit. “We will not suffocate, Diego. It’s alright.”
“It’s more than ‘alright’. It’s perfect,” Jim corrected him softly; his eyes began to shine. He was still easily overwhelmed after his experience and the new emotions hung close to the surface. He studied his new surroundings carefully – another side effect of Klingon treatment.

They stood in the cottage’s largest room. The kitchen, dining room and living room were all open to each other. That comforted Kirk, ‘fewer obstacles for intruders to hide behind’. He chided himself with the thought. He shouldn’t worry about that here, but he continued his mental survey anyway. The furnishings were all made from native wood; the grain of these trees was warm, the color of copper – different than the trees of Earth. The décor was rustic and native, emphasized by the traditional masks of the Arauca tribe, ancient weapons hanging on the wall and the coverings of the chairs and the sofa – all wrapped in the rich colors of South America. Brightly colored curtains framed the windows, and Chilean rugs lay arranged on the floor like art. The only technology found here was in the kitchen and in the small communications station in the corner.

“Galven and Ritek filled the freezer; I hope, it’s to your liking,” Diego continued as he dumped the pastries on a plate. “Drinkable water comes directly from the lake to the treatment unit.” He pointed to the small device. “There’re more drinks stuffed down there,” he nodded to a countertop indicating storage space beneath the counter. “Some beer and wine from here and from Chile. Some friends delivered it for me.” He looked up and grinned. “Don’t tell anyone. Customs would be a bit upset at me if they knew how much import duty they lost.” He opened one of the cupboards and withdrew an exotic looking bottle filled with dark green fluid. “And of course, the export gem of Aldebaran. Their very own whiskey.” Diego closed his eyes, nearly salivating as he continued, “Smokey, full aroma, honey-smooth, best enjoyed after a good dinner outside on the porch or in front of a cozy fire on a cold winter evening.” He opened his eyes again and gestured towards the open fireplace. “But you cannot stay so long, can you? Though believe me, you’ll want to,” he added with a wink.

Jim smiled at him and carefully eased himself down on the sofa. His back hurt and his legs took some bruising during the flight – aching more since he had woken two hours ago. “Like at a five-star hotel,” he commented. “Thank you very much, Diego. I’ll pay everything back to you as soon as I’m back on the Enterprise.”

“Forget it, amigo!” The Chilean waved a hand. “I don’t take money from friends – and only friends are allowed to stay here.” He grinned while he took three cups out and filled them with the steaming coffee. He placed them on dining table in front of Kirk and a watchful ‘Drythen’. “I hope you know how to cook, guys, because I don’t have a replicator here.”

Khan gave him one of his smug smiles. “We will not starve, Diego, don’t worry.”

The Chilean chuckled. “Is there anything you can’t do?”

“Yes. Fly,” came Khan’s wry reply and Jim began to laugh.
“Then you get off completely.”

The sea-colored eyes brightened as they fixed on the captain. “Believe me, Jim, I will ‘get off’ as soon as I’m ‘flying’ in the… most pleasurable way possible.”

Diego burst out laughing, as Kirk’s face turned several shades of red. “Nien!” Kirk scolded, but all he earned was a very wicked smirk that held as much heat as it did humor.

Still snickering, the Chilean looked at the two men. “Why do you call him ‘Nien’?” he asked. “Don’t get me wrong here, lad, but the others heard you using this name, too, and we were all curious. It doesn’t fit anything we know of him.”

Khan schooled his features and directed his attention to Jim, waiting to see what story the younger man would spin.

Kirk didn’t hesitate. “It’s a very personal nickname.”

“Very personal,” the Augment confirmed, pleased with the quick answer of his charge – as he had come to think of him while in his care. He was quite amused that Jim still didn’t know, what the nickname meant.

“You two are so cute,” and he giggled when he thought of how that must sound coming from such a large man such as he. He retreated back to the small kitchen for sugar and milk.

Khan sat there, dumbfounded. Cute! Did Diego just call him cute? His shocked gaze found Jim, and he saw the younger man staring at him and fighting his laughter. Khan rolled his eyes and gave it a rest. He was far too relaxed to be angry, and he wasn’t about to insult his host. Still he snorted inwardly. ‘Cute’ – really!’ He could almost hear Joaquin’s snickers, ‘I always knew you were cute, big bro!’ Katie and Otto would tease him mercilessly.

He suppressed the voices and images and found himself looking straight at Kirk still trying to suppress giggles. Yes, that’s how Joaquin would look at him.

“How sweet. A starship captain and a former ruler are ‘cute’,” Jim whispered under his breath,
chuckling. Khan rolled his eyes again and shook his head. The degree to which he thought of James as one of his own, as his charge, surprised him, though it shouldn’t. He was a leader by nature, by breeding, and they were bonded by blood and by...by more than that. And that bond only strengthened through separation and trial. It was only a matter of time before James was well enough to test the strength of their bond. Then Khan would claim him completely; make him utterly his – or Khan would be claimed, perhaps he already was.

Over the next half hour, the three men talked and drank their coffee while munching on the interesting pastries. Finally, Diego prepared to leave. “A hyperbike is parked behind the cottage in the shed. The entrance code is 152347. You have to charge the solar batteries, but it doesn’t take more than an hour for a full charge. There is a path from the shed to the road. Follow that and turn left at the junction. From there it’s about thirty minutes to the village – in case you want to do some shopping or have had enough solitude. There’s a bar, “Six Moons” on the main road. It’s nice; they serve good food, and the drinks aren’t expensive. It’s run by a guy named Thomas. Give him my regards, and he’ll give you a drink on the house.” He opened a drawer and pulled out a simple old-fashioned scratchpad and a pencil. “Here is my private frequency. If you need something, just call me.” He looked at Jim and offered him a communicator. “If your ship contacts The Shadow, they’ll try to link your ship to frequency in the communicator.”

“Thanks, Diego.” Jim said gratefully, and the Chilean shrugged.

“No problem, amigo. You can return the communicator when you leave the planet. Until then, get well young man.” He offered his paw-like hand first to Khan, then to Kirk. “Have fun you two.” He lowered his voice to a conspiratory whisper loud enough for Jim to hear. He nudged the Augment. “And before you go at each other, get some rest. You both need it.” He grinned when he saw ‘Drythen’s’ cheeks flush. He waved one last time as he bounded down the porch steps. Flipping open his own communicator, he called his workshop. Several moments later the typical noise and golden light of a transporter beam engulfed the big man, and then there was only silence.

Jim and Khan looked at each other and only now did they fully realize that they had several days all to themselves - far away from war, enemies, duties and those hunting them down. They had their own personal Eden for a whole week, and a rare feeling of quietude settled over them.

Khan took a deep breath and looked at the door that led to the next room. Diego told them that there were some personal items and new clothes for Jim laid out on the bed. Interested, he stepped into the chamber, and his eyes lit up as he saw that there was only one large bed. So much the better. He hadn’t planned on sleeping alone, anyhow.

He looked to the carryall on the bed that held the few belongings he possessed; a bundle of comfortable footwear for Kirk.
Out of the corner of his eye he saw the curtains wave in the breeze and he looked to the bucolic tableau before him. A tree filtered and split the sunlight, turning it golden-green in the twilight. His attention shifted back to the room. There was a wooden wardrobe, a dressing table and chair and a mirror hung on the opposite wall near the door to the bathroom.

He crossed the room to the bathroom and grinned wryly, a shower. A real, hot water shower barely large enough for the two of them. Ah, but if he had his way – and he would – even water would be hard-pressed to find space between them. Snapping out of his reverie, he took note of the basin, towels laid for two, and a small heater guaranteeing cozy warmth even in winter. Soap, shampoo and whatever else they could need were stuffed on a second shelf. There were two new toothbrushes in glasses. Every detail was taken into account, right down to the matching razors.

Everything they needed for their stay was present.

Khan heard soft footsteps behind him, “This is heaven!” Kirk sighed happily, and Khan smiled as he turned to face his companion.

“I never knew you were so easily impressed, Jim,” he quirked an eyebrow at him and the young officer shrugged.

“I’m not, but… Well, like I said, it’s not a luxury hotel or maybe your home? But after these last few weeks, after…,” he gulped. “After Turkana... Well, we both need this. And no one would think to look for either of us here.”

The Augment cocked his head. He knew the thoughts Jim couldn’t bear to voice. This was the best place to forget Turkana or to make peace with it. He lifted a hand and gently cupped Jim’s jaw, still dark from the brutal Klingon fists. “You are right,” he simply said. “We must remember that despite technology, we are all – nature’s creatures. We can gain renewal resting Mother Nature’s lap - here.”

Jim returned the smile, relishing in the warmth of Khan’s elegant fingers on his face and sparkling eyes in front of him. He brought his hand up to Khan’s arm, closed his eyes and turned into Nien’s hand so that lips met palm. Then Kirk met the other man’s eyes. “I didn’t know you waxed poetic,” he said, smiling.

“There are many things you don’t know about me yet, pyāra,” Khan gently teased. Then he moved his hand and leaned in to brush his lips over Jim’s. But before Kirk could reach for him with his free hand, the super-human stepped around him and returned to the living room.

Jim groaned. The contact had been enough to send a wave of electricity through him that made his
heartbeat quicken; heat spread from his belly up to his cheeks, and he blushed. God, was desire this potent normal? Gulping, the captain followed his companion into the other room and lifted his brows as he saw Khan clearing the table and filling the sink with water. Watching the Augment being so… domestic. It was almost unnerving. This man had ruled nations, crushed skulls, and broke bones. Then he realized the Augment did the last two recently – for him.

Khan caught the younger man’s surprised expression. “Don’t get used to it,” he said wryly. “As soon as you are well, we’ll share the chores.”

“Of course – that is if I’m able to move at all.”

“And why wouldn’t you be able to move?” Khan wanted to know. He dipped the cups into the water ignoring the sting of the warrigul bite once again. The wound was healing, still it lingered longer than the other injuries, but it too would vanish.

Jim wriggled his eyebrows. “Well… If you plan to have a repeat of San Francisco, I won’t be able to leave the bed for days.”

“As long as I’m in that bed, I will not mind,” the Augment purred before he continued his work.

Jim closed the distance between them, still a little unsteady on his legs, but they hadn’t suffered as much as his upper body; the muscles of his arms and shoulders still ached. He leaned on the counter beside Khan and fixed his eyes curiously on the handsome profile of his former foe, amazed at how far they’d come together – from the Vengeance to this place.

“What did you call me earlier?” Jim asked.

The corner of the super-human’s mouth twitched just the slightest bit. “What do you mean?”

“Piarah? That word you said.”

Khan lifted his brows. Had he really called Jim ‘love’ in Hindi? Yes, his memories confirmed it. Twice, to be precise – and he was. He recalled the first time, after James’ nightmare and again just now. Alas, he ought to be more careful! He didn’t know how James would react if he understood what Khan really meant. Khan wasn’t sure, if… If what? If Jim would reject the feelings? Reject him? No, he wouldn’t. Still, voicing such sentiment was too early – too soon after the events that left
them so emotionally raw. But never before had the Augment developed such an intense affection for someone in so short a time. It was as strong as his love for his family, but so different, so sensual, as well as protective and caring. It was wretched, unnerving – and felt so damn good!

“‘Pyāra’,” he corrected the pronunciation and placed the clean cups on the drain board beside the sink.

“And what does it mean?”

“Take it… as a kind of nickname,” Khan avoided a clear answer and smirked at Jim’s frustrated huff. “Believe me, it’s far more… sensual than what you call me.”

That caught Jim’s attention. “I just shortened your given name,” he said hesitantly, already assuming he’d committed a faux pas.

“Americans!” the former dictator scoffed as he placed the spoons and the saucers beside the cups and removed the plug. The sink emptied. He saw that Jim still looked expectantly at him and turned around. “Oriental and Asian names are rooted in deities, saints, heroes or describe circumstances, strength and so on,” he explained. “Noonien is a compound word. Noon was the name of a Punjab clan in the former Pakistan - North India in its time. A mighty family that reached its summit in the 17th century. The same area where the Sikh empire was founded by Ranjit Singh.”

“Singh,” Jim nodded slowly. “Your family name.”

Khan smiled shortly. “Yes – even if I’m not part of them, not really.” He took a deep breath. “‘Nien’ is a kind of suffix, it means literally ‘yearly’.” He chuckled as he saw James’s eyes widen. “Both parts together indicate something akin to ‘an important year for the family of Noon’ – or that the year, I was… created, was ‘a strong one’. Singh means ‘lion’, as you may know. And I suppose ‘Khan’ doesn’t need a translation.”

Thoughtfully, Jim watched him. “Your name tells a lot about you – even if those who… were responsible for your life, didn’t really know you. You are a part of them, a part of India, regardless of the circumstances of your creation. And I for one am glad for it.” He placed his hand over the Augment’s attempting to relay the depth of feeling behind his words. After a moment, he broke the silence. “Do you descend from the clan Noon?”

Khan hadn’t missed that James didn’t say ‘that you exist’ and chose the word ‘life’ instead. To most
mere humans, he was nothing more than a creature, an experiment that didn’t deserve the ascription of life. By all merits, he was never born. There was no man who planted his seed into a woman’s womb granting Noonien Singh’s right to the world – the right to a soul. Even the priests of his day hadn’t accepted he and his kin as human – not his own or those western priests in collars or their great philosophers, like Aquinas, who held that God infused a person with a soul in the womb. He and his came from none.

Still he sensed that there was something to him besides his brilliant mind – he was more than the sum of his parts. There was warmth in him that wasn’t rational or physical. He didn’t feel it with his nervous system or endocrine system but with his heart – deeper than the chambers that pumped his blood. Of course, the scientists said these ‘emotions’ were rooted in his DNA, but the DNA was altered and enhanced, incomparable to ‘mere’ humans now and so, irrelevant.

They didn’t feel irrelevant now. They felt as real as the air he breathed. He felt…more now. His James sensed it in him, maybe showed it to him even before he knew it was there. And Nien was grateful beyond all measure for the sensibility of this so very strong-willed and compassionate young man who saw more in him than an engineered monster. To Jim he was a human with extraordinary abilities, part of mankind and imbued with a soul.

There was a time when he would’ve been offended if any had regarded him as…human. Now Jim did, Galven did, Caviw did, and the rest. And it was good. He belonged somewhere again, to someone. Another wave of warmth and a feeling of ‘home’ in James’ presence washed over him.

He met the still asking glance of his near-lover. Did Jim even realize the gift he had given him with this one, simple choice of word? He remembered that the young captain awaited an answer.

Jim waited on him patiently, though. Both men had so much to process.

Khan dried the cups and other dishes with a dishtowel. “You are right. My names indicate something like a connection to one of the clans, but I have no proof. There was no one who would tell me when I tried to find… well, the persons who provided their genetics for my creation.” He turned and leaned against the counter beside Jim and crossed his long arms in front of his chest. “I was fourteen and had escaped the labs together with the other Augments of my age and several of the younger ones. There were labs around the world – in Delhi, Tokyo, Hong Kong when it was still part of the Commonwealth; London, Paris, Jerusalem, New York, Rio…” He snorted. “Everywhere the same experiments with different outcomes. It’s no surprise that there were… Are…” Khan corrected himself, “many Augments with diverse talents.” He looked back at Kirk. “I tried to find my biological mother or father – unsuccessfully. Our donors didn’t want to have to do anything with me, us. Yet we were only children.”

“Idiots!” Jim growled. “Denying a child the support and safety of a family is a crime. Family is a
right, not a privilege.”

For just a moment, there was a soft, sad glint in the former dictator’s eyes; he glanced at Jim. ‘A mere human - one of those who hate and fear the Augments. Yet he is full of empathy and doesn’t mark the differences between us and his own kind. This man’s soul is deep as the ocean and bright as the sun,’ he thought, before he cleared his throat and replied, “I think they were afraid of me and the others.” He shook his head and his somber expression changed back to something lighter. “So, regarding the nickname you gave me, you are calling me ‘yearly’. It’s a little bit strange, don’t you think?”

Kirk grimaced. “Yeah! I didn't know Asian names were so complicated.” He had pondered for a moment before a certain boyish gleam appeared in his eyes. “So tell me Mr. Smartypants, did your people measure time like the ancient Egyptians or the Incan culture?”

Lifting a brow Khan nodded slowly. “As far as I know, yes. Why do you ask?” The triumphal expression on Jim’s face made him very wary – in a good way. He knew that Jim teased with no malice.

“Well, in ancient times, a year was calculated on the basis of the solar cycle,” Kirk explained his idea. “Some ancient cultures called a ‘year’ a ‘sun’. So, if you look at it like this, ‘Nien’ can also mean ‘sun’ – and since you allowed me the sunrise…” Jim drifted off before continuing, “Jesus, you gave me more of those than I thought I’d ever have when you saved my life,” Kirk swallowed at the gravity of that thought. “Besides, you use it as a cover yourself. I picked the right nickname for you.”

The super-human stared at him with open mouth – one second, two seconds, three seconds…Then he burst out laughing. The sound was so rich, full and melodious that it made Jim’s head spin. God, he loved that sound!

Khan held his belly and looked at the younger man with glistening eyes. He saw the smug face Jim wore, and had to laugh again. “James, you are impossible – but I don’t object to your logic,” he chuckled, after he regained his composure. He asked himself when he had last laughed so hard. It felt amazing – refreshing and freeing.

“We’ve had a hell of a year, haven’t we?” Jim winked.

Acting on impulse, he pulled the younger man to him and closed his lips over Kirk’s. The need to feel his James against him now was overwhelming – and Jim happily returned the embrace – and the kiss.
The two men lost themselves to time and the tranquility enveloping them. They kissed each other with searing passion.

Spock watched the image of Bob Wesley with a blank expression on the main screen of the bridge. They had not reached Starbase 12 until now but would in 3.5967 hours – if they didn’t get an order for another mission. The alpha shift had not started yet and of the senior officers, only Sulu and Uhura were with the acting captain in the control center of the Enterprise.

“If I understood you correctly, Commodore, Starfleet Command decided to mount a recovery mission after all?” The Vulcan lifted a brow. “A little bit late.”

Bob grimaced. “The transmission was made by Barnett himself in his office no less; it reached us five hours ago. I wanted to inform you as soon as your shift started.” He shook his head. “It came about the same time as your report regarding Jim’s rescue, still I’m glad that at least Barnett was ready to do something. I don’t want to ascribe anything the SBI, but their reaction was… disconcerting.”

Spock simply lifted a brow. Several hours ago Nyota had said something similar in their quarters, but the Vulcan was wise enough not to mention it. He had his own thoughts about it all – thoughts, he would ponder very carefully before he would discuss them.

“They had their reasons. As you told me, most members of the admiralty were in a conference with high-ranking politicians and diplomats. There were orders not to be disturbed.”

Wesley snorted. “The captain of our flagship was captured and the SBI thought it too trivial to report it immediately to the Chief in Command. That was a screw-up of epic proportions to say the least.” He took a deep breath. “The second reason I contacted you, Mr. Spock – the Enterprise has new orders. Several scouts reported increased Klingon activity near the Arakon System. That’s deeper in our territory than we thought they’d venture. From there it’s only a stone’s throw to Norellus. The Klingons are likely interested in the deuterium mines and station, Norellus run. Check these rumors and report back. If the Klingons are really trying to infiltrate Federation space, we have to act immediately. Starbase 133 and K7 have already fallen to the enemy; the next inhabited planets would be Arakon, again Tammeron and the Aldebaran system. I want to know if the Klingons are planning to expand their Empire with further assaults.”
Spock nodded slowly. “What about Captain Kirk?”

A quick smile flashed on Bob’s face. “I knew you would ask. Well, Jim is on convalescent leave. You have the con and will pick up your captain after your return. You shouldn’t need more than seven or eight days provided the situation remains as-is. If not, Jim gets more leave, or I’ll send a nearby ship to retrieve him. Speaking of – do you know where he is?”

“If we knew that, I’d be a much happier doctor!” another voice from the turbo lift answered, before the Vulcan had the possibility to do so.

Wesley was amused. The bridge crew sat huddled together as his own senior officers did. “Good morning, Doctor,” he greeted and McCoy returned it with a kind, “Good morning to you, sir!”

The commodore cocked his head. “So you still don’t know where Jim is, do you?” As Vulcan and CMO shook their heads, he sighed. “Can you contact him?”

“Only via The Shadow,” the first officer replied. “Though the organization has shown us support, their leaders are still very carefully keeping their distance from authorities.”

This time Wesley sighed. “Yes, they avoid us at all costs, especially this ‘Drythen’. You neglected putting him in your report on Turkana.”

Spock lifted a brow. “No, sir. I thought it in Sunrise’s best interest to avoid any conspicuous attention directed at him.”

Bob rolled his eyes. “I didn’t mention it because I assumed you would’ve given a complete report.” He frowned. “I want to know what our friend has done to be this cautious.” His attention was diverted when the buzzer of his quarters sounded. “One moment!” he called before he returned his attention to the screen on his desk.

“Well, Commander, you have your orders. Inform Jim via The Shadow about your deployment – without any details, of course. If you figure out where he is convalescing, let me know. If it becomes necessary, I can pick him up.”

Spock nodded shortly. “Understood, Commodore. Have a nice day.”
“You too, gentlemen!”

The transmission was cut off; the first officer and CMO looked at each other.

“So, we start without Jim?” The Vulcan asked himself why humans must always ask questions to which they already have an answer.

“You heard the commodore, Doctor. We have an order now.” He cocked his head at McCoy’s annoyed expression. “And you heard Jim. He told us to obey Starfleet orders.”

Yeah! We don’t have any clue, where he is. Safe or not, I’m still worried. This Sunrise guy may be a genius and know a bit of first aid, but I would feel better if I could treat Jim.”

“The point is, Doctor, that Jim does ‘feel better’. For now, he requires emotional and physical distance from his time in captivity. Sunrise seems to have provided the captain with both, though we do not know why as so far he has shown no motive for his actions. But, he seems to value the captain.”

McCoy stepped beside the captain’s chair and pursed his lips before he bent down and lowered his voice. “Do you trust this ‘Sunrise’?”

In the night-dark eyes of the Vulcan, something akin to surprise began to shine. “Where Jim is concerned, I do trust this man. He risked his life to save the captain; his concern for him showed in his vocal inflection if you remember the discussion we had, after he learned of Kirk’s capture.”

“We don’t know much about this guy. He’s a hell of good fighter, strategist, and technician and even understands a thing or two about medicine. And he is hell-bent to hide his identity. I don’t know what you all think, but something’s brewing and I’m not in the mood to get burned.”

The Vulcan just a bit. “Cooking, Doctor? What has the preparation of meals with heat to do with Sunrise’s abilities and identity?”

McCoy groaned while Uhura suppressed a chuckle. “I meant that there is something - odd, Spock. Hell, I thought you know our idioms.”
“Not all, Doctor,” Spock retorted. “Especially the old-fashioned ones. Those you indulge in quite often and I am not always familiar their use.”

“Old-fashioned ones? I’m old-fashioned?” Bones demanded, outraged.

The first officer lifted a brow. “Isn’t that what you always say, you are a good old country doctor? And I recall, you told the two scientists in Admiral Barnett’s office that you are a little bit old-fashioned? Since you are so fond of these idioms, I merely concluded that you are – indeed – someone who favors manners and points of view from the past.”

This time only Leonard stared at him, Uhura started to giggle. Then the CMO took a deep breath and straightened himself. “It’s too early to get angry, Len. Don’t fret, the bogey doesn’t know it better. Stay calm. Go to the officer’s mess and enjoy a hot, strong coffee!” he advised himself. Then he turned around and headed for the turbo lift.

That moment the doors of the transport cabin opened and Sulu and Chekov stepped out greeting the CMO instantly with a kind, “Good morning, Doctor!”

McCoy made a face. “I doubt it!” he growled and bypassed them, vanishing in the turbo lift.

“What’s zhe matter wiz him?” Pavel asked baffled, and to everyone’s surprise it was Spock, who answered wryly, “I think the good doctor got up on the wrong side of the bed.” He turned around in the chair and looked at the two newcomers and a very amused Uhura. “This phrase was correct, wasn’t it?”

“Perfect, sir!” Sulu grinned and stepped towards his station. “If you ask me, I’ll never understand what the side of the bed has to do with one’s mood. But if that’s the case, the doctor has never woken on the right side.”

“Ze left side is ze bad side. Zat’s an old Russian saying, because Czar Alexander the Great had one time…” Pavel couldn’t finish his Russian version of history because everyone snickered and laughed – expect, of course, for Spock. Still there was a tiny sparkle in his eyes. The mood on the Enterprise’s was light again; her captain was safe…

TBC…
Yeah, at least some Spock-Bones-banter – it had to be done finally. And of course with our two ‘boys’. Teasing is a sign of affection, after all, and Jim and Nien are going to ‘tease’ each other a lot within the next chapter – means: It will be HOT!!!

I hope you liked everything so far. Yes, Luengo and Norton are becoming quite the bad-asses and their plan will enfold soon. And anyone, who assumed that Bones will get the right idea about “Sunrise” – you were right! Okay, he hasn’t any proof until now, but he will (and you certainly can imagine the speech is going to give Jim, before he learns the whole truth – *snicker*).

I would be happy to learn of your thoughts and muses about everything and I’m looking forward for your comments.

Have a nice weekend,

Love

Yours Starflight
You’re mine (but I belong to you)

Chapter Notes

Hello, my dear readers!

Thank you so very much for all the many comments and kudos, and I’m really sorry that I cannot answer them properly, but I have injured my right hand and have to write only with the left in the moment – quite difficult, if you have to type a lot. It’s only a good thing that I already wrote the new chapter two weeks ago, otherwise you would have to wait for the update.

But – being quite lucky in the circumstance – the chapter was done before the incident and you don’t have to wait for the HOT chapter.

Yeah, you read correctly, this chapter is definitely only for adults.

So have fun

Love

Yours Starflight

See the end of the chapter for more notes

Chapter 19 – You’re mine (but I belong to you)

Today, Jim Kirk went to bed early. Though had slept a lot during their travel to Aldebaran, he felt tired immediately following tonight’s dinner. They ate dinner on the porch outside. The fresh air, the nature’s tranquil tableau, and his still healing body, well, all demanded their own pound of his flesh. He wanted to protest it all – his exhaustion. Khan would have none of it; he could be very convincing when it came to the health of one who belonged to him. He did not force, and he did not threaten, only gently requested what was reasonable for them both.

The next two days flew by, and Jim’s health improved in leaps and bounds. He and Khan took short walks along the bayou’s shore and rested afterwards in deck chairs found in the shed. The gentle exercise, the climate and the excellent food worked miracles on the young man. And Khan knew that the peacefulness of the cottage and the removal of the element of danger were good for him, too. Only once were they interrupted. Galven called on the second day informing the men via communicator that Ritek had received a transmission from the Enterprise’s first officer. Starfleet sent Jim’s ship on a seven-day observation mission.
The men spent their time relaxing, reading and talking. Well, they talked but the former dictator noted what Jim did not talk about – his capture. After his breakdown during their travel to Aldebaran, the captain put on a brave mask, hiding the hurt of his soul. Khan knew that it was only a matter of time until the emotions would break through his facade again. The Augment remembered the few occasions he had buried horrors and nightmares deep beneath a stoic expression and distraction, only seeming not to care about what happened to him. Even the soft coaxing of Katie, Otto, Rodriguez, Pia or even Joaquin hadn’t made him talk before he had been ready for it. So he didn’t press the matter, and he wouldn’t. Kirk would talk when he was ready and not a moment sooner. Khan respected Jim far too much to demand something that the younger man couldn’t give.

So they spoke of harmless things – safe things, things that taught them more about one another. Jim told him about his time at the Academy. He never tired of answering Khan’s questions about the different alien races, cultures, and developments – as well as the development of the Federation following Earth’s exploration of space after Khan’s days. Nien learned more about the world in which he woke during these two days than in the one year forcibly spent indentured to Section 31 or following his escape. He couldn’t hide his fascination; his mind, always hungry for knowledge, found new levels of curiosity and knowledge. For the first time, he wanted to live – here, in this century, and if he allowed himself the thought – with this man.

Khan still missed his family deeply. The pain of separation was ever present. The point of separation from his loved ones ached as a lost limb or a bit of his soul amputated. The young captain kept the anguish at bay just enough that he could find some hours of peace. James was right for him and the former dictator could distract himself from the pain with the care of his beloved; it satisfied the part of the leader’s nature that told him to care for those in his charge – as he had when he first recovered Jim. An Augment’s genetic make-up ensured they would protect and seek solace in one another in order to enhance their chances of survival. Khan’s blood in Jim and Khan’s love for Jim engendered that familial bond now.

And Kirk felt it as keenly as he could feel he and Nien’s joined DNA in every cell of his body. Jim didn’t return Spock’s transmission. Not because he didn’t want to. The Enterprise and her crew were an extension of himself, and he was its heart. Without them (without him) he (the Enterprise) was incomplete – less. But he justified his inaction, telling himself that he still had to heal and wouldn’t be any good to his crew just now. Justification wasn’t the truth, though, was it? His heart, his soul, his blood told him why he really didn’t answer that transmission. They told him the truth, and the truth had eyes with the color of the ocean, full of warmth. The truth had sinful lips curved beneath cheekbones so sharp you could cut yourself on them.

Truth desired him, and he desired it right back.

The mutual longing was always there, simmering just under the surface. During the day, it was easy to distract each other especially in conversation. But as soon as they went quiet, the wish to be as close together as possible increased.
The nights were the worst. The first night Jim slept nearly without disturbing, but Khan felt too protective – on alert so much so that he ignored his own need for rest. The second was full of restlessness and unsatisfied longing. As they lay side-by-side listening to one another’s breath, the burning need to consume had been almost unbearable. Khan was shocked when sweat broke out on his forehead and palms; his mouth went dry with the suppressed urge to close the short distance between him and the younger man – to surrender to what they both craved. He was a superior human, and he was better; he had his emotions and his bodily demands under control! At least he thought he did. But to be this close to his beloved and not able to touch him was agony. And his enhanced senses heard Jim’s racing heart and smelled his arousal, and it was heady. He forced himself into meditation to prevent himself from reaching out to the captain.

At some point during the night they both fell asleep. But waking up entangled in one another did nothing to ease the longing or enable rational action. Yet Khan managed somehow, and Jim masked his disappointment with pride. Only the cool morning air let into the cottage by the thrown open windows allowed the men a path back to sanity.

The day went by as the last one had – a walk along the shore, resting, reading, talking…

As the afternoon gave way to evening and Jim had fallen asleep in his deck chair, Khan vanished into the cottage to prepare dinner, as he had the last two days. But this time he was up to something. He rifled through the goods Galven had left and found several ingredients that pleased him immensely.

Jim woke just as the sun set to an irresistible smell emanating from the cottage behind him, and he noticed that the table on the porch was set for dinner. Carefully folding the Chilean blanket that warmed him, he walked into the cottage curious and he must admit, hungry.

“What are you cooking?” he asked surprised as he found the Augment very busy in the small kitchen. It still was an unusual sight to see the super-human standing at the counter and preparing a meal. The sight itself wasn’t unusual; Khan had cooked the previous two days, but this was different. He was relaxed; he looked focused and pleased with himself. Kirk could see that Nien was aiming for something special tonight.

“It’s a surprise,” Khan answered and there was a certain gleam in his eyes, as he motioned towards the bedroom. “Wash up and slip into something warmer. The evenings are cool here.”

Jim rolled his eyes. “Yes, Dad!”
He could feel the Augment’s gaze on his back as fetched a sweater and grinned broadly at the slightly scowling super-human as he returned to wash his hands in the sink beside Khan. The men walked together out to the porch carrying the night’s fare. The table was set beautifully – romantic even – with a tablecloth, a candle, fresh napkins, wine glasses and a bottle of white wine Khan chose for the meal.

The Augment pulled Kirk’s chair for him and served the meal as the trees’ shadows stretched toward the cottage. The meal consisted of a native bird’s flesh that reminded Jim of chicken. Fried fruits accompanied the bird along with a spicy, sweet sauce and bread and salad. Usually, Kirk favored the more American cuisine – steaks, burgers, sausages, potatoes, corn, and beans and so on – but this food was delicious. Kirk nearly devoured it; he caught Nien’s baffled glance and blushed in embarrassment, but the former dictator smirked knowingly and continued to eat. Kirk’s body craved the nutrient rich food.

Nien confirmed Jim’s assumption that the meal had an Indian flare. And he was inwardly thrilled that his James enjoyed it so much. One would think he looked almost happy. Kirk had to admit that he could get used to this kind of food. Bones would be head over heels if he exchanged his less healthy eating habits to this. Apparently, Khan shared the doctor’s opinion.

The dinner had sated Jim fully without feeling as though his belly would burst at any moment. That certainly would make it easier to lie down sans the feeling of stones in his stomach.

As they finished their dinner, the last rays of the sun bathed the landscape in a warm, golden and red glow, before darkness rose. A breeze of cool air wafted from the lake, bringing with it the rich scent of soil. The few birds still awake chirped; otherwise it was completely silent – except for the hushed tones of men’s voices sounding from the small porch of the secluded cottage.

Jim and Khan sat on the comfortable chairs and sipped the Chilean wine Diego left. It was full-flavored with a hint of nutmeg and berries, dark as a ruby and not too heavy; still this wine had to be taken carefully. The bottle read 14.5 % alcohol, perfect for after dinner.

Khan talked of India; he described the ancient temples, the ancient villages and bustling modern cities (modern for him anyway), and of the dense jungles and the sea in the south. He told of the raging typhoons, the sun’s heat and its beauty when set; the old traditions juxtaposed to the modernity of his age.

Curious and fascinated, Jim listened. Khan was a living history book. His words chronicled time with vivid images that flowed into Kirk’s mind on a soft, baritone wave. His rapt attention staved off his growing tiredness – for a short time.
Oh, but as Khan spoke, it didn’t slip his attention that the younger man was ready for bed. James’ lids drooped, his posture was far too relaxed and his cheeks grew pale in the light of the single candle burning between them. “Time to sleep,” he said gently, but Kirk shook his head.

“No. It’s so comfortable here,” he mumbled and suppressed a yawn while he looked up to the darkened sky. The light of four of the six moons now high over the mountains danced like silver on the dark surface of the lake and bathed the woods in its pale shimmer. “Did you know that the six moons were named after old shires of Ireland and Australia?” Kirk asked. “The first colonists came from there and some Scots, too. That’s why they named the capital New Aberdeen. Scotty told me one time. He was shocked that the whisky here was green and not gold. You should’ve heard how he groused that it didn’t compare to his ‘water of life’, ya know, ‘whisky’. That’s what he told me it meant.” He shook his head and grinned. “Scots are a strange bunch – but I like them. They are brutally truthful. I much prefer that over feigned politeness.”

Khan’s lips twitched in amusement. Jim’s speech slurred and slowed a bit – a further hint divulging how tired he was. Still the younger man refused to go to bed. ‘He has such a bright mind, so intelligent, but sometimes he acts like a little boy!’ the super-human thought and a wave of tender protectiveness swept over him usually reserved for Joaquin, Otto or Katie – or Kabir before his sacrifice while they tried to reach the Botany Bay. But, again this was somehow different with Jim. There was something added to the Augment’s emotions, something new.

He rose, placed his own and Kirk’s empty glass on the table and bent over a surprised starship captain. “Come on, James. It’s late enough. You have to rest, and I would like to lie down, too.”

Jim frowned. “You’re tired?” he asked surprised, and Khan rolled his eyes.

“As you’ve pointed out several times, I’m human, too.” He said this with a smile. “Of course I can get tired – especially after racing through space to save a reckless moron’s neck…”

“Hey!”

“… Being hunted by alien warriors, playing doctor and nurse, and now I’m…” Khan looked around his surroundings and noted the dishtowel slung over his shoulder, “…domestic.”

The truth was that Khan was anything but tired; he used a timeworn trick to get his will. He played on the younger man’s empathy. Khan was well aware he wasn’t playing fair, but his beloved’s health was far more important.
Jim looked with wide eyes at him, then smiled sheepishly – embarrassed at his perceived lack of compassion. “Sorry, Nien. I… don’t have much experience with your… enhanced abilities or your limits. Of course, you can get tired like anyone else.” He got to his feet and looked straight into the blue-green eyes of the former dictator. “Even if I think your fatigue is really you being concerned about me and just trying to get me into bed.” Kirk smiled knowingly at his double entendre.

Khan stared at him for several seconds – dammit; it was a mistake to underestimate James T. Kirk – with empathy comes perception. He gave him a shining smile. “You are free to think as you wish, Pyāra.”

Promptly the Enterprise’s captain laughed. “Ha! I knew it!” he grinned – and had to yawn.

“Yes, and I see that you are indeed tired.” Khan bent forwards and took the two glasses, blew out the candle and reached for the bottle. Instantly the men were enveloped in the dark; the moons’ light illuminated only the outside. Jim chuckled, “Well, I hope you are not only graceful as a cat, but can see like one too, because I can’t see anything now.”

Khan couldn’t help feeling some pride, pleased that Jim thought of him this way. Damn, how absurd! He was a genetically engineered warrior, a ruler of millions during his time, stronger and more intelligent than any other human. Yet here he stood on a strange planet on a porch of a small cottage, nothing more than a hut compared to his palace; but his heart thrummed in his ears and the compliment from a man six years his junior. That was insane – yet it felt so good. And Khan realized that this impossible, daring, terribly handsome and crazy boy-captain was slowly wrapping him around his little finger – and he didn’t even think about resistance! He only wanted to surrender to it. Joaquin would convulse with laughter, telling him that no one was safe from cupid’s arrows. “You think me graceful?” the former dictator asked quietly; despite the darkness he saw Kirk’s serious and open expression.

“Yes, I do,” Jim confirmed without any shyness or hesitation, while his hand found the Augment’s arm. “Go ahead, I’ll follow you.”

“You trust my guidance?” Nien wanted to know – more than just leading in the dark – though, he supposed he’d do that too.

Kirk shrugged. “I have before – in the air lock when you crouched down to get a better start as soon as the lock opened. And I trusted you in the dark to get us safely on the Vengeance. And I trusted you when we fled Turkana.” In the moonlight, Khan could clearly recognize, how Kirk’s eyes became very soft, as the officer added, “And when I didn’t trust you, on the bridge of the Vengeance, everything went to hell. But whenever I did trust you, I never had a reason to regret it. It’s those times – it’s now – I know I couldn’t have made a better decision.”
Warmth flooded through the former dictator. He had never met a mere human before, who knew exactly what he was and trusted him regardless. Yes, his servants, his army’s flag staff, all under his command followed him as expected, but this here was something entirely different. Jim didn’t entrust himself to Khan’s enhanced mind or abilities, but rather to a comrade-in-arms, a friend, a lover perhaps! There was no awkwardness in Kirk’s reaction to the super-human. There never was with him. He wore his heart openly and unashamedly. And because of that, Khan realized that Kirk treasured him – his companionship – not for what he could do or what he could give, as Marcus had. But for who he was and what he freely offered of himself.

Khan’s engineered intellect protested that the human’s feeling towards him didn’t matter, but his heart and soul spoke another language – a language that seemed to be made of melodies laced with touch, and light, and substance.

He bent forwards and showed Jim how much the words meant to him. He caught the lips of the younger man in a gentle kiss that deepened instantly as Jim wrapped his arms around him and opened his mouth – eager for more. Nien groaned; he tasted sweet from the wine and dinner, but James’ taste was laced with virility and electricity and all things James Kirk was. And Khan did his best to pour the melody his soul sung into James. Oh, but the sparks he felt singing through him; he feared electricity meeting spark would flash to set them both aflame, burning his already weak control to ash. He wanted to ravish the younger man badly, and that was anything but good given Jim’s state of health. But the longer he waited, the more he wanted.

He put glasses and bottle back on the table and snaked both arms gently but firmly around the slightly smaller frame and returned the kiss with fervor. He moaned as their tongues resumed their still familiar dual, each passionately vying for dominance. Heat rose in both men; it branded their bodies from the inside and their want consumed all rationality from their minds. Lips danced, and arms enfolded and all of it stirred the far too long denied hunger.

Only Khan’s strong will finally broke the kiss. Jim moaned in protest, missing the intimacy, but a tiny voice in the back of his mind reminded him of his healing injuries. He needed time and rest before he could follow his desire. Still Jim Kirk was not one to listen to reason when his gut told him otherwise – his gut or his heart. And both of those are what brought him this far.

He wanted Nien! He wanted him now; injuries be damned!

“Lead the way,” he whispered. His clever mind had plotted a way to break through Khan’s control already pouring from him as if from a sieve; the other man’s hoarse voice and the fire in his eyes told him as much.
The Augment, who didn’t know what his beloved was up to, nodded. He guided Jim inside the cottage and closed the door, leaving the lights off until they reached the bedroom where Khan closed the windows. Midge-like bugs existed even on Aldebaran, and neither the super-human nor the young officer wanted to suffer their bites.

Khan felt Jim’s eyes on his back as he drew the curtains closed and swallowed. His mouth had gone dry, and a certain throbbing in his groin made it obvious that he had a problem. A big problem – again! His prudence told him that James still needed time to heal, yet his blood thought differently – lower. It hummed with desire and pulsed demandingly through his entire being – even stronger than the night before.

“Do you think it safe if I take a shower?” Jim’s gentle tenor tore him out of his attempts to stay calm.

Jim…

Shower…

The first moment he had laid eyes on the bathroom he thought of their shower together back in San Francisco. Now those images were ever present at the edges of his consciousness. Well, they were. The images were quickly making their way to the forefront of his mind. His perfect memories showed him the naked younger man under the spray like a film; velvet skin glistened, and lips swelled from fierce kissing. Defiant eyes shined radiantly in the bliss of the afterglow…

Khan suppressed a groan. Dammit, he had already told himself last night that he was stronger than that! He was an Augment – superior – and stood above greedy bodily need. End of story!

Still, he didn’t trust his voice and cleared his throat before he answered, “If you don’t stay too long under the water, you should be fine.” He switched on the lamp on the nightstand and met Jim’s beaming smile. The soft light flickered and cast shadows on Kirk’s handsome face and made his hair shimmer like gold.

“So we are on the same page here,” the Enterprise’s captain said cheerfully and started to get undressed. “Help me with the bandages?” he asked casually; it didn’t slip his attention that Nien gulped. Oh, Khan’s control was about to become undone. Very good! Jim would add personal measures of his own to ensure it.

The Augment took a deep breath, not one of his better ideas because his enhanced senses could smell
the familiar scent of the younger man now even more intensely, and it was intoxicating. As he closed the
distance between them, he realized that his trousers were far too tight. And dammit again! He
looked in the sky-colored eyes of his beloved – did Jim know how difficult it was to stay controlled?
Khan reached for the bandages. The next minute demanded everything as the super-human had to
remain stoic, because every time his fingertips brushed over the warm, silken skin of the captain, heat
spread from his hands through his veins straight to the middle of his body.

And the gleam in Jim’s eyes and the bulge in his trousers said the same went for him.

Quickly, Nien distracted himself by observing the injuries.

“They’re healing well,” he murmured while he examined the few caked slits the dermal regenerator
hadn’t been able to close completely. The other bruises were still there, but many have faded now to
greens and yellows, much better than the ugly black and purples from the previous days. Kirk’s
healing abilities had always been good, but since the last shot augmented blood plasma, his healing
seems to have increased. “Yes, the shower will be no problem,” the former dictator murmured. And
Kirk flashed one of his winningest smiles. The kind that lit him up from the inside.

“Thanks, Doc!” Then Jim kicked off his shoes wriggled out of his blue jeans and his underwear,
threw them on the chair in front of the commode and walked without inhibition to the bathroom; the
proof of his arousal in plain view. This time it was he who felt the other man’s gaze like a burning
caress and smiled inwardly. Step one of the plan had been successful. Off to step two; hopefully step
three wouldn’t be necessary anymore.

Kirk momentarily forgot anything about steps though, as the spray splashed over his face and down
his body. It was pure heaven to wash the medicinal scent of the ointment and sweat from his body
finally. For a few minutes, he stood there and relished his first refreshing water shower in what
seemed ages. Then his mind drifted back in time to the moment, when Khan carried him bodily into
his own shower cabin. The thought struck him as funny now. Then he remembered those talented,
clever hands that cleaned him – everywhere after a mad bout of sex and two mind blowing orgasms.
And he thought about that time aboard the Enterprise after their talk via subspace-transmission.
‘Maybe that was…Yes, that was when I knew it. Oh God, the shower’. In a blink of an eye, new
desire flared up in the young captain.

Right, now he had to go to step two.

He reached for the soap he had taken with him into the shower-cabin and let it drop, yelping in faked
surprise. He bent down – knowing that his shape was visible through the frosted glass of the shower
cabin. His posture ought to give the Augment the wrong – correction – the right idea.
He didn’t have to wait very long. Seconds later the door to the bathroom was yanked open, and Khan’s deep baritone called, “Jim? Are you all right?”

Kirk suppressed a triumphant grin. “’M a’righ’,” he mumbled as slurred as possible and far too quiet to be heard properly – even for augmented hearing. His plan was perfect, because suddenly the door to the shower cabin was pulled aside, and cool air hit him. He straightened up and turned to smile sheepishly at Khan, who stood only there and stared.

“Soap slipped,” he explained apologetically and pointed down at the object of offense near the drain.

“Indeed,” the Augment said, his glance only grazed the soap for a moment before it roamed over Kirk’s body; taking in every firm muscle and soft curve beneath the glistening silk of skin. Jim’s breath was caught in his throat as he saw the fire in the super-human’s eyes locked onto his. For a long moment, neither of them spoke. Then as if pulled by invisible strings, Khan moved nearer, helplessly drawn by the memories that have sustained him these last weeks. Almost unbelieving that the real sight stood before him now.

And most certainly not believing that the young captain didn’t intentionally lure him here. It would be the best to turn and go, but he found himself unable to do so. His shaft throbbed with desire and his hands itched to explore Kirk’s delicious body. The yearning – the hunger – to get reunited with his beloved in the most intimate way, shut down any sane thought. He didn’t even stop and the strings continued to pull as the water hit him drenching his shirt and trousers. The air seemed to vibrate between them as they stood together.

Khan bent forwards not caring about the water, the hurt – not of it. “Don’t think that I can’t see what you are playing at, Kirk,” he whispered. His lips ghosted Jim’s neck and he moaned; pins pricked in the wake of Khan’s lips, around his mark of claim that neither could see, but both knew was there.

Jim shuddered as a bolt of energy shot through him; his loins tightened into a hard knot. He felt dizzy and held to the Augment’s shoulders to steady himself. The evidence of their desire brushed against each other, separated only by the material of Khan’s trousers. Kirk’s knees went weak as his cock pulsed against the wet material and throbbed with untamable need. Instinctively, his grip on Nien’s shoulder tightened to keep him from sinking boneless to the shower floor.

Despite the aromatic soap at his feet (still) the super-human could smell the younger man’s arousal and desire flared like an inferno. He had to put some distance between himself and Kirk. He ordered his legs to step back – but they didn’t obey him. The need – the desperate wish – to be close as possible to the one who held his heart overpowered his will. His rational mind melted away into the lava that ran through his veins. One of his arms snaked around Jim’s hips, and steadying them both with his free hand pressed against the wall, his mouth crashed down on that of his lover-to-be.
Both groaned; the levy broke and their control was washed away in the flood of emotions. The prospect of being one soon again made them light-headed. Mouths opened, their tongues swirled around each other, teeth nipped at one another’s lips. They kissed like there wouldn’t be another day together – perhaps there weren’t many. Their hearts and souls starved for closeness, their bodies hummed with longing unfulfilled.

Jim slipped his hands down to Khan’s hips, pulled the shirt out of Nien’s waistband and swiftly opened belt and trousers. The Augment gasped as the pressure on his throbbing shaft finally relented when Kirk shoved the garments down; he closed his eyes in relief – if only for a moment. Then he let go of the younger man, stepped out of the trousers and underwaear and rid himself of his shirt, tossing it beside his other clothes on the floor, instantly forgotten.

Jim’s hands ran back up Khan’s thighs to his waist, wandered over his back and up to the back of his neck to tangle in his hair. Kirk pressed himself against the other man, threw his head back and keened with need as Khan assaulted his neck with lips, tongue, and teeth. Their cocks aligned and slid bare together – hard as rocks, red with need and glistening with water and pre-cum. Their lips found each other in another searing kiss. They had held each other in a tight embrace, before Jim began to nibble at the Augment’s neck teasing the spot he left all those weeks ago, his own mark. He heard Nien groaning in pleasure and bit gently down on the soft skin before he sucked and kissed his way down over his the other man’s chest. He relished in the taste – nearly familiar now – and sighed as Khan’s fingers found his butt and kneaded it gently. The men rocked together, hinting of the dance that lie ahead for them, and as Kirk’s mouth closed over one of the Augment’s nipples, Khan let his head sink into Jim’s neck and closed his eyes in bliss. God, how much had he longed for this!

Fondling the sensitive little nub tenderly, Jim lowered closed his eyes against the shower spray. His hands explored the iron muscles beneath the wet velvet of Nien’s skin; his shaft rubbed unabashedly against Nien’s thigh so that his urge was almost painful.

Suddenly, Khan turned them both around and pressed Kirk carefully to the wall then slipped one hand between them encasing their both cocks in the cage of his long, delicate fingers. Jim gasped, and his head dropped back against the tile. He closed his eyes; his injuries stung under the water, but he could care less. Pure rapture made him tremble as his lover stroked them both expertly, and the Augment’s name escaped him in a low moan. Nien’s mouth found his again and despite the water raining down on them, neither took note of anything beyond the body pressed against them.

Khan’s movements increased as he worked himself and his beloved towards the edge. To feel James’ hard, silken member against his own was absolute bliss – and absolutely not enough. His body demanded to be sheathed in the warm body of the younger man again. And he would give into the demand just as soon as he took Kirk with him over ecstasy’s cliff. Kirk’s well-played seduction had blown his control, and he was not going looking for it now. Hell, as he said before, he was only human after all!
As the pressure in his loins grew, Jim thrust into Khan’s clever hand. He sighed and mewed as he felt his lover’s cock rub against his own in the circle of Khan’s tightening fingers. He knew he wouldn’t last much longer. The suppressed desire was about to be satisfied. Wrapping both arms around the slightly taller man, Jim panted as the heat in his groin started to tighten into a tight ball, ready to explode.

He wanted to warn Khan, but couldn’t utter a word as the fire in his veins roared up. His senses narrowed only to the warm, wet hand and the hard cock against his own; the hot demanding mouth on his neck nipped and sucked at the sensitive area that had reminded Jim of their first night together.

Pleasure rippled along his spine and down his legs; it weakened his knees and he clung to Nien for dear life when it became too much to contain. Pleasure’s explosion erupted from the depths of his body and soul. Shouting his lover’s name, Jim came long and hard; he heard somewhere at the edge of his perception the deep baritone moaning the Hindi word Khan had chosen for him. Tremors rocked Kirk, and if it weren’t for the Augment, he would have sunk into a heap on the floor as his knees gave out. As his orgasm ebbed slowly away, he felt the super-human shudder and held onto him in a soft embrace and buried his face Khan’s wet neck.

Khan tried to catch his breath and to find his way back to reality as he flowed down from his first peak. Some of the unbearable tension had left him, but it wasn’t enough! Finally, mind came back online, and as he lifted his head, he felt Jim clinging to him, warm breath on his throat. Their cocks had softened a bit and their cum, sticky between their bodies, mingled and flowed down the drain with the shower of water from above. He didn’t care because all that mattered most was in his arms and wrapped strong arms around the Augment’s waist, his heart and soul. And he still starved for that which mattered most.

“Wow,” escaped Jim’s lips in a whisper; it didn’t slip Khan’s attention.

The Augment chuckled, ‘Americans’, and pressed a kiss to Kirk’s temple before he murmured, “You’re all right?”

He had to wait for an answer before Jim sighed in content, “Mmm, far better than before.”

Of course, Nien understood words unspoken and grinned. “You’re insatiable.”

“Look, who’s talkin’,” the captain slurred and rubbed his cheek on Khan’s shoulder.
“Now who’s the ‘cat’?” the former dictator teased. “Getting all cuddly.” He laid his head against Jim’s and closed his eyes, still gloating at his accomplishment in the aftermath while he pulled his beloved towards him and away from the hard wall. Promptly Kirk snuggled even closer to him and for a small time they only stood there beneath the shower and enjoyed the closeness even more now that some of their sexual tension has abated.

Then Khan carefully straightened up with James and put a little distance between them. “We should get rid of – that,” he mumbled, pointing nonchalantly at the semen that remained.

“Well, I don’t think that will be all, do you?” Kirk snickered and fumbled for the soap, only to find it missing.

“Your companion in conspiracy lies at your feet.” Khan grumbled, pointing at the soap. He caught the officer’s innocent gaze and as James asked, “Why sweetheart, what do you mean?” he reached behind Kirk and gave his butt a slap.

“Ouch!” Jim pouted, rubbing his behind. “What was that for?”

“For tricking me! I told you: Don’t think that I failed to see your intention with your little soap trick.”

Kirk couldn’t help himself; he grinned broadly and mischievously – like a boy after pulling someone’s leg. “Well, it worked to both our benefit and…” He yelped as Khan wrapped both arms around his waist and hoisted him up, shaking him slightly.

“As I recall, I’ve sworn revenge for calling me ‘Rumpelstiltskin’, and now you’ve further offended me, Captain, so…”

“So be a man! Stay true to your word and take your revenge,” Jim smiled, snaking both arms around the Augment’s neck. He bent down until his forehead touched Nien’s. “I’m waiting for it,” he breathed.

New desire flared in the Augment; he felt empty and wanting again as his cock began to thicken. Cursing in his native tongue, he pressed Kirk to him with one arm, switched the water off with his free hand, opened the door of the shower cabin and stepped out; Jim still dangling.
“What did you say, gorgeous?” Kirk asked, again with feign innocence. He wrapped his legs around his lover’s middle eliciting a gasp from the super-human. For a moment Khan had to muster all his control to stay balanced as his knees wobbled – not from Jim’s added weight, but from lust thrumming through his veins.

“You are going to be the death of me, James Kirk!” the Augment growled, fixing those sky-blue eyes with his ocean-colored pools. Then he saw that bright smile – the one that made Kirk’s boyish features glow.

“Petite mort, right?”

The super-human chuckled as he carried Jim to the bedroom. “Believe me, Pyāra, nothing will be petite about this ‘mort’.”

“I thought so,” Kirk snickered. “Remember what I told you, if you want a repeat of our first night, I won’t be able to move for days.”

“At least you would be still, if only for a while. I swear, even I do not have enough eyes in my head to keep them on you with how you flit about.”

This time Jim laughed. “Hmmm, I’m not flitting about now and you still can’t…” The rest of his sentence got lost in a surprised yelp as Khan simply let him fall – straight onto the mattress. Before he could react the super-human slid over him, braced himself on his forearms besides Jim’s head and gave him a dangerous, predatorily smile.

“You are adding more and more offenses to which I must exact my revenge!”

Kirk only smirked while he let his hands roam over Khan’s back and down to his surprisingly plush backside. “Good!” He lifted his head and caught the other man’s lips with his own. Groaning, Nien gave in. There was no reason to fight this anymore; he responded to his beloved’s kiss as if to devour his James. His… ‘Lover’. He rolled the word over in his mind. He thought it before, but never was it as true as in this moment – in this time.

His lust was running deep; his hardness was demanding and hot now. Tearing his mouth away from Jim’s, Nien kissed the water droplets from the young captain’s face and throat. Then he gently bit down and sucked his claim, the mark visible again; the officer moaned in delight. Khan continued his path, down over the chest, where he carefully licked the healing cuts and bruises. He sucked
blushing marks into unmarred skin until James writhed beneath him whispering his love’s name over and over again, while his fingers wove into the Augment’s pitch-black tresses.

Khan could feel Jim’s blood rushing to the surface beneath his lips as he sucked – marked; he listened to his beloved’s heartbeat throbbing fast and hard, and smiled as he heard sighs and moans and his own name. Kirk’s skin shimmered like gold in the lamp’s dim light, and as Nien reached his lover’s navel and swirled his tongue around it, the younger man gasped and wrapped his legs around him.

Without wasting a moment the super-human continued his course, following the trail of honey-colored hair; he felt James tense beneath him. Lifting his head, he threw a heated glance at his bedfellow whose glassy eyes met his. The wicked smirk that pulled at the Augment’s sinful lips made Jim tremble in anticipation and kneading Khan’s scalp, he whispered a single word.

“Please…”

The tone, the desperate need in those sky-colored eyes and the scent of arousal mingled with soap and the unique fragrance of his lover were all Nien needed to give as he rarely had before. Bending down, he flicked his tongue out to touch the tip of Jim’s most vulnerable part. Instantly the younger man bucked up and moaned loud enough to be heard outside the cottage if there were any to hear, Khan smiled – tender and proud. Again, he licked the head of the rock-hard shaft and savored the taste of his mate, salty, intense and utterly James. Then he took the glans into his mouth – sucking gently at it before engulfing as much of Kirk’s large member as he could. This was not the act of submission he once thought. This was simultaneous claiming and worshipping; making his lover his own, and he, his lover’s own.

Jim was in heaven. The moment his cock was enveloped by the hot cavern of the Augment’s mouth, he was utterly lost. He had gotten blowjobs before; his reputation was well-earned. But this was different. Enthusiastic, certainly, but there was tenderness in the way Nien began to work him off, as if he poured his feeling into the task. But dangerous too, just the knowledge of Khan’s strength and what he could do was heady. Jim knew that the super-human would never hurt him – not anymore – but his mind was well aware of the power Khan wielded – like the tigers of his home country.

Gasping for air, he lifted his head and looked down to meet the fierce gaze of his lover peering back at him through long ebony lashes; the damp strands of his hair shadowed his features. Jim watched rapt, as his manhood vanished between those soft, curved lips. It was the most erotic sight he had ever laid eyes on, and his breath hitched in his throat. He felt Khan’s hand move along his sides, over his hips and back over his chest. Nimble fingers brushed over his nipples and wandered back towards his waist. This was bliss in its purest form and Jim lowered his lids in sheer rapture; moans and mewls escaping his lips.
Khan smiled inwardly. There was power in this worship. It pleased him to draw out those groans from Jim’s mouth, to feel his strong body tensing and trembling with fervor and shining with sweat. He heard how Kirk’s breath became quicker and sharper. Khan gave one last suck and sat up – much to the captain’s dismay.

“No… Please!” The young officer’s voice was hoarse and raspy; devastatingly sexy since Khan knew he was the cause.

Gently letting his left hand wander over the taut, flat belly of the younger man, Khan leaned over to the nightstand, opened the drawer and pulled out the bottle of lubrication he had found the first day. “Relax, Jim”, he murmured. “I will not let you down. I will make it even better for you.”

Their gaze met again, and Kirk realized what the Augment held in his hand; a new wave of anticipation washed over him. A part of him knew that what followed would be unpleasant at first – it’s been so long. But he longed to feel Nien inside him again. Reaching out to Khan, he stroked over the super-humans arms to his shoulders and down his chest, relishing in the steel-like muscles and the warm, still damp velvet of his alabaster skin. He watched as Nien drizzled the slick onto his right hand and moaned as those talented fingers carefully massaged his balls and perineum before they reached their goal.

One long finger circled and teased over his hole before gently dipping inside. It was uncomfortable, but the movement was so slow that Jim easily relaxed into it. He felt Nien’s hot breath on his chest as the Augment bent down and pressed open-mouth kisses to his body; the rippled muscle of his abdomen teased over Jim’s cock.

Khan took his time preparing his lover, smiling as Jim squeezed his eyes shut and groaned in pleasure; his face flushed with passion. He added a second finger and scissored inside of Jim, stroking his walls, and then a third finger. He crooked them to search out the almond bud inside him that Kirk (quite happily) now knew as his prostate. Scorching heat shot through his whole being and gasping he wrapped arms and legs around the super-human, begging wordlessly for more.

And more he got. Khan removed his fingers and sat back on his heels to take in the lovely, debauched sight beneath him. Jim thrashed his head from side-to-side and whined at the loss. The Augment slicked up his member and held it at its base. He flicked the head over Jim’s hole, catching it on the rim and Jim bucked up, nearly impaling himself on that gorgeous prick. Khan smiled mischievously, bent down to brush his thumb over his lover’s face and guided himself into Kirk in one long, tortuously slow push. Jim cried out, a mix of pain and pleasure, and gasping he clung to Khan, who stilled and gave him time to adjust. Breathing in the scent of his beloved, Nien closed his eyes; he was finally here, right where he belonged – where he felt home sheathed in the young captain again. The tightness and heat brought a wave of relief for his soul and heart as flames licked their way through his veins and down his spine and into loins. They whirled together into a storm of demanding desire.
With one last sane spark of lucidity, he remembered Jim’s injuries and rolled them over; making Kirk gasp in surprise. Then he raised James’ upper body, steadied him with strong hands and bucked up into the wanting, willing body.

Jim needed a second to realize what happened; he was straddling his lover whose cock speared hot through him. And then Khan arched his back and Jim felt a mix of exquisite pain. He burned for want of more; instinct took over, and he began to move in concert with the man beneath him. The last cognizant part of his mind worked out why Nien changed their position and warmth spread through him; then passion erased all thoughts.

Throwing his head back, Jim let himself fall; the sensation of being joined with his dangerous, secret lover, being filled by him, riding him, rocked his whole being. Bending forwards he looked at the locus point of connection linking them and stole a breathless kiss from those perfect lips before a shout of ecstasy tore from his throat. The new angle made the hard intruder stroke over the little knot of nerves deep inside him.

Khan felt his breath leaving him as Kirk involuntarily clenched around his shaft. He looked up at the glorious, golden creature hovering above him. The view brought him pleasure beyond measure. His James looked wild and free with his tousled shock of blond hair, gleaming eyes – blue and bright like the midday sky over the Indian Sea – and the expression of pure delight on his boyish face. Those luscious, kiss-swollen lips opened to take air in short gasps and pants and the pink tip of his tongue darted forward to lick over his bottom lip. A ripple of possessive pleasure shot through the Augment. ‘My James!’ And as his James bent down and kissed him, Nien held him close, trapping the younger man’s cock between their bodies, holding it close to him – hot and wet with new pre-cum.

Their movements became frantic; both craved their release. Nothing else existed for them, only their closeness; bodies remembering what once was. Jim felt his tension grow into an unbearably sweet torture; he wanted to come – to let go – but somehow his body prolonged the relief.

He heard Nien whispering his name, felt his long arms around him tighten. So he clenched around the cock that branded him hotly from the inside – filling him like nothing else could. A loud groan escaped the super-human as Kirk repeated the carnal teasing. Khan’s eyes flew open and stared at him, awestruck and absolutely rapturous – bright as if they wanted to burn him.

“Pyāra…” It was more a breath then an uttered word; then the Augment bucked up again, and Jim took the hint and squeezed his lover’s cock once more. The usually pale features flushed hot and pink; sweat pearled on the super-human’s forehead as he whispered in his native tongue. His thrusts increased and found their purchase in Jim’s equal enthusiasm. Every push and pull stroked hard over Jim’s prostate.
The heat between them was too much, the paroxysm of their passion threatened eruption – until it did. Orgasm hit them with the force of the inferno that raged in them.

Khan was hurled over the edge as he felt Jim’s burning walls clenching his shaft mindlessly and he screamed his pleasure when Kirk’s lips found his own claim on Khan’s throat; biting into it – not hard enough to break the skin but retrieving the mark he left all those weeks ago. Pulling the sweating, warm body to him, Nien let himself fall into the burning abyss of bliss, taking his lover with him, who seemed to be unable to stop coming. His mouth hung open, and his moans resonated as he painted Khan in long, milky stripes from chest to belly.

A last, low sob escaped Jim, as he finally – finally! – was spent. Trembling and soaring in the dark warmth of aftermath, he wasn’t aware that he clung to the Augment mouthing at his throat or that Khan was still in him. All he felt was the strong chest heaving beneath him, long arms around him and the incredible salvation after weeks of longing.

With eyes still closed, Khan let himself drift through the star-full and secure darkness of release; his heart sighed with contentment, and his mind rested for the first time in what seemed to be an eternity. Jim’s body on his was like a blanket of safety; the captain’s warm breath was caresses on his sweat-damp skin. He smelled the sweet musk scent of his beloved and the milky proof of their passion.

Fingering for one the edge of the sheet he leaned just a bit so he could wipe the semen from between them, then flung it away still holding James in his arms. He didn’t want to let go; he didn’t wish to slip out of this willing, soft body that welcomed him. He heard Jim murmur something and pressed a kiss to his temple, breathing deeply.

Usually, he wasn’t tired, but nothing was usual with James Kirk. The younger man stirred protectiveness in him as well as lust, tenderness and a feeling of safety – of finally belonging to the world – to someone. Cupping Jim’s cheek with one hand, he relaxed; relishing in the captain’s weight on him and enjoyed the afterglow.

It wasn’t long before soft snoring drifted through the room, coming from the two lovers…

ST***ST***ST

“Do I understand you correctly, Mr. President? You want to send Mrs. Batari Whitman as the Federation’s ambassador to Qo’noS? Your own representative?” Richard Barnett looked surprised at the President of the United Federation of Planets. He was elected more than two years ago, and so had less than two years left in his term before making room for the next president.
The president was in his late fifties. Two small protrusions on his forehead proved that his heritage wasn’t entirely human. His mother was from the planet Halii, and he had inherited the empathetic-telepathic abilities of the race, albeit limited. He and his family left the planet for Earth when he was a small child. He spent his childhood in Italy and later his teen years in New York where his career began. He was lean and tall; his shoulders were broad, and his tanned skin contrasted with his silver-blond hair. His dark eyes were calm, clear and bright as his mind, and his voice sounded a clear and strong tenor.

The president stood beside his desk as the men took their seats on plush, antique mahogany chairs. They were nearly as comely as the desk in front of them – a beautiful carved piece from the early 19th century. The rest of the room was just as striking there was a grand piano and centuries old oil paintings on loan from the Louvre. The only technology in the room was of the highest standard. Large windows revealed the lively capital of France. Paris, the seat of the Federation government.

Barnett had been here many times before since being named Chief-in-Command of Starfleet. He was here just three days ago for a meeting in the lower levels together with the other high-ranking admirals, ambassadors, and council members. Now he was back in the president’s office because President Anthony Robertson wanted to talk to him in private. They’ve known each other for quite some time, and they worked hand in hand back then and now.

Robertson looked at the baffled Chief-in-Command and took a deep breath. “I know that I wouldn't typically send the vice-president on such a mission, but Batari has not only has my utmost trust, but she is a very firm and strong-minded woman. We want to make the Klingons listen, so we have to show our strength. The Klingon counselor wouldn’t accept anyone less than me or my direct representative, and since the president must remain in Federation space during wartime, Batari is the only choice left.” His expression changed just a bit. “And she will not go alone.”

“Of course not. I’ll send my best men with her and…”

The president shook his head. “No, Richard, I thought of you.” He lifted a hand as Barnett instantly readied his protest. “I know all that you want to say, my friend. That the Chief would be a welcome hostage during wartime and that your place is at headquarters, but we must demonstrate power and fearlessness in the face of the enemy. Klingons are always accepting of courage, and their pride forbids any hostile behavior towards high-ranking delegates, even from an enemy. If you, as the head of Starfleet, accompany Batari and our ambassadors, the High Council of the Klingons will welcome you.”

He turned towards the window and looked at the Eiffel Tower that shimmered in the late midday light. “We have to try everything in our power to end this war before the whole universe burns. If I understand Admiral Luengo correctly, the Klingons will complete their biological agent and…”
“Oh, yes. I received the report that our labs have discovered and formulated an antidote, sir. We are prepared.”

Robertson turned around to face him again. “And how much do you have? How long will it take to distribute to every member of the Federation? How many will die before then?” He cocked his head. “And how long until the Klingons modifies the agent again making the antidote useless? No, Richard. We decided during the meeting to seek talks with the Klingons. You voted for it, too. We didn’t want that war, and if we have a chance to end this senseless bloodshed, we must grab for it – despite the danger.’

Barnett nodded slowly. “I understand, sir. My doubt isn’t for my safety but that of Mrs. Whitman, the council members, and the ambassadors. Even if the Klingons accept our proposal of peace talks, we have to cross the war zone to travel to Qo’noS. And there is also still the danger that some Klingons don’t commit themselves to the neutrality of delegation. It would be a catastrophe if the Federation lost her vice-president and some of the most prominent politicians and ambassadors.”

“I know,” the president affirmed. “Still we have to take the risk as soon as the Klingons agree to meet with us.”

This time Richard suppressed a sigh. He knew that Robertson was right, but he felt very uncomfortable about the whole situation. “Who will join the delegation?”

“We’ll send one ambassador from every founding member of the Federation and three members of the council, Mrs. Whitman, you and Harry Morrow. Sarek of Vulcan has already agreed to accompany the delegation, so has Ambassador Gav of Tellar – unfortunately. The relationship of the two ambassadors is… complicated. But they are the best.”

For a moment, a chuckle escaped Barnett. “I’ve witnessed the two in action last year. Icy logic meets hothead. It was almost funny.” He turned serious again. “Well, Sarek’s presence makes me feel a bit better. He is brilliant and uses his empathetic gifts brilliantly in his diplomacy.”

Robertson smiled. “I have the same opinion.” He pursed his lips. “I will personally send a message to the Klingon counselor to arrange a meeting with our delegation, him and the Klingon High Council. Knowing them, they will take their time to come to a decision and are going to weigh every word I say. But ending this disaster is in their interest, too. This continuous back and forth costs lives and resources on both sides. I am sure that there are enough bright minds in the Klingon council to listen to the voice of reason. The SBI must gather as much information as possible about the internal politics of the Klingons and its members. Maybe there are some council members who share our point of view and we can use them. I want you to arrange travel for our delegation. At first, I thought
to have the *Enterprise* to bring you to Qo’noS, but since the Klingons captured Captain Kirk and he escaped, I think it would be a provocation to send it now.”

“I share your opinion, sir. Kirk was taken from right under their noses. The Klingons would view it as an insult that Kirk of all our captains would accompany the delegation.” Barnett nodded, but he couldn’t suppress a little smile at the memory of receiving news about the young man’s rescue two days ago.

His thoughts drifted to the day he received Bob Wesley’s message and the initial information report of Commander Spock; a wave of relief hit him. His transmission to the *Lexington* was intercepted, that much was certain. He was glad Starfleet’s own was safe and healing. He also had been shocked to learn, who saved the young man’s neck. How the hell was The Shadow able to invade enemy space unnoticed for hours!? He got no answer. Neither Wesley nor Spock had given him details, and his curiosity grew. Somehow he knew that this mysterious ‘Sunrise’ had a part in the rescue mission, even if the reports failed to mention him. This man – whoever he was – had to be a well-trained warrior, maybe private security for some off-world firm. There was no other explanation for all that happened in association with The Shadow. In any event, Barnett didn’t care about the man’s real identity. Not as long as this mysterious phantom supported the Federation and Starfleet – and hauled reckless officers out of the mess in which they (Kirk) managed to find themselves (himself). Still he was curious…

Robertson watched the admiral, and a smile played around his mouth, too; he knew Barnett’s thoughts instinctively. “At least we have some good news – Kirk’s rescue, I mean. I was shocked when I learned that the man who saved our planet had fallen into enemy hands. Jesus – and their plans for him. I only met him once – two years ago after the Nero incident – and he is quite a brilliant and brave young man. His death would have been a great loss for us – not only for Starfleet, but also for the people. War needs heroes and public have taken a liking to him.” He sighed. “You failed to mention, how he was saved. Did his crew pull a stunt of their own?”

Richard shook his head. “No. We can thank The Shadow that we didn’t lose the captain of our flagship.”

The president’s eyes widened. “The Shadow? The same militia that repulsed an Orion attack on one of our outposts and warned us about the planned Klingon assault against Tammeron?” Robertson asked baffled; Barnett chuckled.

“Yes, the very same group. I sent a message to the *Lexington* and ordered Commodore Wesley to organize and man a recovery mission for Kirk only to receive the report several hours later that Kirk had been rescued by The Shadow, before Wesley or the *Enterprise* could act.”

“Did you get some details?”
“No, not really. The message was short, but the omission was far more interesting.” He snorted, amused. “I am absolutely certain that Wesley and the *Enterprise* were already planning on executing a recovery mission. The Shadow was faster; that’s all.”

Robertson frowned. “Invading enemy space, tricking the Klingons, freeing Kirk and successfully escaping is something I would like to think our assets capable of, but a gang of civilians…?” He pursed his lips. “War spawns heroes from surprising places,” he murmured; then he straightened up and made an offering gesture towards the chairs in front of his desk. “Take a seat and tell me all you know about this militia. We assume they operate illegally, but we don’t specifically know why or how. Are they traffickers, smugglers…Either way we need strong allies. Maybe we can…contract them.”

ST***ST***ST

“It’s runnin’ without a hitch!” Montgomery Scott stood beside the control station of the deflector shields and looked fondly at the device fitted to the deflector shields. “No problems. It’s a very simple but very effective little machine; no bells and whistles to cause needless trouble, nothin’ complicated. The Scotsman grinned. “If all of Starfleet’s silly equipment were like thi’ little baby, life would be so much easier!”

Spock lifted a brow and wordlessly analyzed the illogical phrases. He nodded, finally recognizing what the engineer meant. “So you think it would be quite safe to connect the sensor-disturbing device to our shields?”

Scott nodded. “Yes, sir! I ran several tests, and I’m sure that it will cause no trouble. Rather the opposite. It renders us invisible to enemy sensors, and there is no hint that this will change.” His eyes roamed over the small device. “This thing could save a lot of lives if Starfleet fitted it on all our ships.” He looked back at the first officer. “Have ya told Starfleet about this little trinket?”

“Trinket?” The Vulcan looked lost, and Montgomery smirked.

“It’s a valuable trinket,” he explained before he rubbed his neck. “Did ya report the device?”

“Not yet,” Spock replied. “I wanted to be sure that fitting the device wouldn’t be the source of any problems.”
This time Scotty looked very seriously at the first officer. “Sir, if ya’ve Sunrise in the line again, please advise him to file a patent application.” When he saw Spock raise an eyebrow in question he continued, “This device has been developed by Sunrise; therefore, he’s the owner of the idea and design. I know what it’s like to pour yer heart into a creation only to have it stolen from you by some higher rankin’ brass. Look what they did with my transwarp beamin’ device. They said ‘Very good, Commander Scott’, took the prototype and the construction plans, and I was left out in the cold. I got no lousy credit for it, no official appreciation. Nothin’! I only discovered Starfleet screwed me over after Daystrom – half melted and broken into pieces.” He huffed. “I don’t know much about this Sunrise, but if Starfleet wants to have his ‘baby’, she should pay for it like the rest of the free world!”

Spock watched the engineer with interest. Of course, he shared the same point of view that everything has its price, and intellectual property should be compensated fairly, but the passion with which the Scotsman spoke, surprised the Vulcan. He knew that Command had instantly taken the transwarp beaming device for testing, but he didn’t know that Scotty had received nothing in return for it. Actions like that were punishable by law, but Mr. Scott was a member of Starfleet and not a civilian scientist. Therefore, anything he developed was the property of the fleet.

The first officer sighed inwardly. Morality and law didn’t go hand in hand very often.

“If it comforts you, Mr. Scott, I will give Sunrise your advice. And I will certainly point out in my report that the sensor-disturbing device belongs to a civilian – um – engineer and is, therefore, his intellectual property. If Starfleet is interested in this device, it must purchase the design.” His gaze wandered to the small machine once again. “Maybe you should make some test reports. It will be interesting for Sunrise and Command, and then Sunrise can determine what he might want for the design.”

He turned to leave, but Scott held him back one, “Do ya know now, who this Sunrise is?”

The Vulcan maintained his calm mask, but Montgomery could see the gleam of frustration in his eyes as he replied, “We still lack the data required to identify him. Uhura has tried everything to remove the effect of the voice changer Sunrise uses without result. He must have used the changer and then fed it through a continuous loop, essentially hiding the original voice behind an infinite amount of data. There are no known identities that use ‘Sunrise’ or Drythen as an alias.” He hesitated a moment before adding, “As far as we know he has – differences with the authorities, so he avoids any direct contact with the Federation and Starfleet.”

“Then perhaps his little invention and good deeds can work fer him,” Scotty smirked pointing at the device. “If he ever has to face Federation authorities, he has these in the bank to getta good lawyer. He deserves it after he saved Tammeron and Jim!”

“How are these ‘in the bank’?” Spock shook his head slightly and lifted a hand to stop the Scotsman,
who opened his mouth to explain the idiom. “Never mind, Mr. Scott, I think I know what you meant.”

Montgomery chuckled. He understood that it had to be difficult for the Vulcan to acknowledge the slang of his colleagues and friends. Then he pursed his lips. “What was the other name of this Sunrise guy?”

“Drythen,” Spock repeated and Scotty cocked his head thoughtfully. “Ever heard this name before, Mr. Scott?” the first officer probed, and Montgomery sighed.

“No, not really, sir. But I’m almost certain that I’ve heard this word before, I just don’t remember when and where.”

The Vulcan nodded. “If you can recall the information, please notify me. Maybe…”

He was interrupted by the ship’s intercom. “Bridge to Mr. Spock,” Uhura’s gentle voice called; the first officer walked over to the terminal.

“Spock here. Yes, Lieutenant.”

“Sir, our sensors picked up a spacecraft coming from the former Neutral Zone.”

“Identity?” the Vulcan wanted to know and the Bantu woman answered calmly, “Not confirmed, sir. It seems to be a civilian vessel. It must be unregistered because I can’t tell where it is from, but it has set course for the Aldebaran system.”

Spock caught Scott’s wary glance and replied, “I’m on my way, Lieutenant.” With those words, he left the Engineering; Montgomery’s gazed followed him. He caught a movement from the corner of his eye, and he looked down to find Keenser, who emerged out of nowhere.

“Why do I’ve the feeling that means trouble?” he asked the small alien, and as Keenser only looked quietly up to him, he sighed. “This Scottish nose, knows when somethin’ is in the wind, and I can smell a storm comin’. Mark me words!”
Chapter End Notes

Well, is anybody melted or in need for a cold shower? Regarding the weather in Germany it would be enough to step out of the house for a minute because it is really ugly cold outside (shudder).

I do hope you loved this chapter and I can promise that our two ‘boys’ are facing a very erotically time within their next days, while in the ‘outer world’ new and old shadows are closing up.

In the next update there will be candies and jokes, but you – my dear readers – will meet also an old enemy Jim knows from his first-year-mission. And he will be there, on Aldebaran. And while this man is preparing a move against the Federation, Jim’s friends are still pondering of ‘Sunrise’s’ identity, until one of them comes across a certain hint.

Please, please leave me some comments and sorry again that I didn’t answer your last ones, but already needed half an hour to write the little prologue and epilogue of this chapter, so please understand my lack of reply.

Love from Germany

Yours Starflight
Chapter Notes

Hi, my dear readers!

Almost at time one week later you get now the next update. As promised there will be more sensual, sweet, sexy and funny scenes with our two ‘boys’, Spock gets more and more suspicious because of the whole situations around him and you’re going to meet an old ‘acquaintance’.

Thank you so much for your comments and kudos; I am still so happy that you’re loving this story so much.

Have fun with the new chapter,

Love

Yours Starflight

See the end of the chapter for more notes

Chapter 20 – Sleep, lover; til Sunrise wakes us

Wakefulness occurs languidly, gently as multiple neurotransmitters dance through the midbrain, the hypothalamus, the thalamus, and the basal forebrain. Eugenic scientists saw this slow dance as an inefficiency to overcome in their progeny. An Augment, of course, takes the same path to awakening as any human, but they are better, more efficient. The dance through systems occurs in the blink of an eye. Usually. There are exceptions. When James Kirk is a variable, he creates exceptions. In other words, Kirk is the exception to the rule.

Khan floated from indulgent somnolence to the land of the living in pleasant languor. He felt the blanket of his lover, his variable. And with a contented sigh, he tightened his hold around the firm, warm body of Jim Kirk, who still lay sprawled over him. The super-human smiled as he followed memory’s thread back to the night’s intimacies that swelled with the heat of desperation and long suppressed desire. Now, as those flames finally mollified, he was – for once – simply at peace. And he wrapped that peace and around him as tightly as he held his mate.

‘My mate…’

He could deny it no more than he could deny the ever expanding universe. James Kirk was his mate
in blood, heart, and soul, and he would do anything to keep him safe and – hopefully – by his side. Khan knew the latter was an illusion. His past – both of his pasts – would force their separation sooner or later, but he found himself uncharacteristically clinging to a foolish spark of hope that maybe there were indeed miracles in the world, and one might befriend him – them.

Jim stirred, and Khan realized that he and James were adhered just a bit here and slippery just a bit there. He heaved a sigh, gently rolled Jim onto his side and disentangled himself from Jim’s sleep-heavy limbs to make his way to the bathroom. Not wanting his lover to wake to an empty bed, he quickly wet a cloth with warm water, cleaned himself and returned to the bed with another warmed cloth. He deftly and ever so gently cleaned his beloved from chest to belly then down through blond curls, so carefully over the cock. Sleeping Kirk seemingly enjoying these ministrations; he opened his legs, and Khan took that as an opportunity to swipe gently between cheeks and over a none-too-abused entrance.

That woke his dear captain who let out a hiss, “Wha’s ‘sis?”

Nien cocked one brow, amused. He recognized his beloved’s query despite his foggy mind and heavy tongue.

“Everything is all right, James,” he whispered as he propped himself on one elbow near Kirk’s head. He stroked gently through the shock of tousled blond hair, dropped the cloth to the floor and pulled the (relatively) cleanest part of the blanket to cover them both. “Go back to sleep. There are several hours until sunrise.”

Jim mumbled again and replied with a crooked grin, “Sunrise woke me up.” Then he frowned and groaned.

“What is it?” the Augment asked.

“Mmmm, my ass burns …” Kirk lifted his head, and the look in his eyes conveyed that he was fully awake now. “Did we…?” he began, before a broad grin spread over his sleep-softened features. “Yeah, we did!” He answered his own question and glanced positively gleeful at the amused Augment. Jim stretched and hooked a leg behind Khan’s knee to pull him closer; then he kissed his lover with deep affection – the gesture gratifyingly returned.

Holding his James as close as he dared without hurting him, Khan allowed himself time, a rare gift, to savor the sight of his mate – Alas how this word made his heart flutter! He touched and stroked, carefully caressed and fondled the younger man’s body, mentally cataloging and checking injuries – pleased that none had been aggravated. And only then settled in to enjoy the lazy semi-battle of
tongue and mouth, and teeth on jaw and throat.

Long minutes passed ensconced in peace and quiet; defenses down – each safe in one another’s presence. Hands roamed and stoked but no more than that. Even as passion simmered under the surface, just now they were content with exchanging tender caresses and sweet, long kisses, until the pre-dawn hour and weariness overwhelmed Jim once more. Khan was not aware of his own smile; he watched the boyish officer fall asleep – snuggled against him with one arm securely slung around Nien’s waist.

Jim’s breaths became calmer and deeper, warm against Khan’s neck as the young man tucked himself under the Augment’s chin. Nien closed his eyes and breathed Kirk’s scent in deeply, burying his nose in blond hair; dotting kisses. It was balm and helped to chase away niggling thoughts; their inevitable separation. Instead, he focused on his partner’s body language. Bared and open; defenseless and vulnerable in sleep, Kirk unknowingly (or did he) demonstrated trust and closeness. He showed the super-human, this ruler of nations long past, where he belonged – in this place and time – with his captain. And that likewise – his captain belonged to him. Come what may (and it would come), they were together, now.

Pressing another gentle kiss to his lover’s forehead, the former dictator relaxed and closed his eyes; wishing with all his heart that it could be like this forever – well, like this, and with his family safe.

But the phantoms of the past and war crept closer to the slumbering lovers …

ST***ST***ST

Spock stepped into the quarters he shared with Uhura. The alpha shift had ended four hours ago, still the Vulcan remained on the bridge to solve the riddle of the unidentified spacecraft – without success.

As the Enterprise reached the Aldebaran system, the unknown vessel had already taken a place at the space dock and a transmission between the starship and the space harbormaster’s office had only revealed the busy traffic of trading vessels. Every spacecraft berthed here was authorized to do so.

Nevertheless, the first officer was suspicious of the incident. The ship had come from the direction of the former Neutral Zone. Perhaps it harbored enemy spies.

The space harbormaster had not been pleased as Spock insisted on checking the licenses of all the
vessels that had arrived at Aldebaran III in the last ten hours. Only when he contacted the small outpost of Starfleet located near the spaceport was the responsible commander able to exercise his authority; Spock received the required information.

Attentively, Spock viewed the licenses, the freight documents, and the crew data, but he didn’t find anything unusual. Still, he simply knew that there was more to the incident than he could see. Jim would call it a ‘gut-feeling’; the first officer was confused that this human trait suddenly made its appearance. There was no logical reason to think that something was wrong with the information he received, but the whispering voice in the back of mind wouldn’t let up.

And as he finally ordered the Enterprise out of orbit to continue the patrol, his inner unrest increased. Aldebaran III became smaller and smaller. With one last look at the screen, the Vulcan left the bridge, relieved by the Scott who was the third in command and changed his shift to take the con. Little did he know that his captain and friend was a mere one hundred miles beneath the Enterprise on the planet’s surface – deep asleep and secure in the arms of a man regarded by all of Starfleet and the Federation as an enemy.

Uhura looked up from the sofa where she sat comfortably and laid the PADD aside. Her glance found that of her lover; it was enough to tell her all she needed to know.

“How do you know?” he asked while slipping out of his uniform shirt to change into the far more comfortable Vulcan robes.

“There is this certain expression in your eyes; you’re not satisfied with something. Beta shift warped us just a few minutes ago, so we are leaving the Aldebaran system. Logical conclusion: You found nothing unusual about the ship. Still you… you think there’s something wrong with it, don’t you?”

Spock observed her; his mouth twitched minutely, the Vulcan equivalent of a smile, then he nodded. “Your observation is correct, my dear. I checked the documents regarding the berthed vessels, their crews, and their cargos and found nothing that points to illegal activity, yet… I feel as though I overlooked something.”

Nyota smiled. “Kirk would call it a ‘gut-feeling’.”

“Exactly,” Spock nodded and closed the warm robe before he sat down on one of the two the
armchairs adorning the seating area. Bracing his elbows on his thighs, he folded his hands together and pressed the tips of the index fingers against each other – a typical gesture when in deep thought.

“There is a possibility that the spacecraft held more in its cargo than goods. It came from the direction of the Klingon Empire. Commodore Wesley sent us out here to check the rumors regarding Klingon activities. The chance that there is a connection lies...” He caught Uhura’s intense gaze and paused to calculate the odds. He knew that she didn’t exactly appreciate his precision in private, so he continued. “The probability of Klingon involvement is high, but I see no way to investigate since we have no cause to board. The documents are correct; the crews are ‘clean’, as you put it. The identified cargo was official trading goods.” He frowned slightly.

“Maybe everything is okay,” Nyota suggested and rose to make some tea.

“Maybe – maybe not,” her lover murmured before he leaned back in the armchair. The air wasn’t as warm as he was used to, but it was comfortable enough for him. “It is alarming regardless.”

“I know what you mean,” the young Bantu woman sighed. “An outsider could be a traitor or an enemy, or both. War makes us lose trust, and that leads to misunderstandings and aggression. Assessing a situation without bias is difficult.” She carried a tray with two cups full of steaming tea to the small living room. The long dark green kaftan she wore played elegantly around her legs. As she placed the dishes on the table, she observed the Vulcan. Strangers would call his expression stoic, but she had learned to read him. “You’re asking yourself, what Jim would do if he were here.”

The son of Sarek son looked up at her – not for the first time surprised by her empathy without having specific empathic faculties. “As illogical as it is, pondering another’s strategy when that person acts based on feeling and instinct…”

“As well as reason, discernment….” Uhura added gently. “He’s been more…level-headed, I guess since the…” She pursed her lips. She hated to even think about it. “Since the warp core.”

Again Spock lifted a brow; he added honey to his tea. “You are right, Nyota. Indeed, Jim has been more judicious in his decision-making, still he is quite impulsive when it comes to…others’ lives.” He sighed without realizing it. “Otherwise he would be here instead of a place we do not know and where we cannot reach him directly.”

Taking her seat near him again, Uhura bent forwards and laid one slender hand on his shoulder. “I don’t think that will ever change about him. And it’s saved every single one of us. I yell at him, but he wouldn’t be…Jim if he was any other way.” She sighed, “You’re still worried about him,” she stated and met his undefinable gaze.
“Worry is an emotion that...” He shut his mouth as Nyota merely looked at him with knowing eyes; he finally admitted softly, “You are right as you often are. I am still concerned for him. Yes, he has been rescued; The Shadow brought him to a place where he can recover, and this Sunrise is with him. It is this close connection to the captain that he has. It makes me – uncertain, wary. Jim has told me much about his family – or lack thereof. About his brother and sister-in-law, his friends from earlier days and from the Academy; those not so friendly, like Sean Finnegan, an upper classmate who took a great joy in playing pranks on the younger students as well as ‘bullying’ them. He entrusted me with much that he has otherwise kept private, but he never mentioned a ‘Sunrise’.”

“Of course, ‘Sunrise’ is a cover, not a real name.” Uhura sipped her tea. “But, let me guess, he never talked about a guy named ‘Drythen’ either, did he?”

The Vulcan nodded. “Exactly. Sunrise has extraordinary abilities, is well-trained – certainly in military tactics. He has a very unique combination of skill sets. Otherwise, he would not have been able to accomplish all that he has so far. Jim would have mentioned him at some point; I am sure of it.”

“Maybe he wasn’t allowed to? If this man was an asset, intelligence or spec ops, perhaps Jim had to keep his identity a secret – still does.”

“No.” Spock shook his head. “Since his contact with Sunrise via The Shadow, when he warned us of the planned attack of Tammeron, Kirk spoke freely about him, only hiding his real name. It is as if he had met this Sunrise only a short time ago. So why was this man so full of rage when he learned of Jim’s capture? Why did he risk his life to rescue the captain? Even though I have little experience with emotion, I do understand that strong feelings are involved – the feelings of someone who holds another one dear.”

Nyota blushed just a bit, knowingly, and put her glass back on the table. “Dear – as in a strong friendship?”

“Yes, perhaps. But a friendship like this does not emerge in only weeks or even months.” Spock folded his hands again. “We missed something here – I missed something. And I have no idea what it could be.”

A gentle smile played around Uhura’s lips. “Maybe you should give it a rest until Kirk is back. Then you can bombard him with questions until he snaps.” She winked at him and for her sake the Vulcan nodded. Still his worry remained; worry for his T’hy’la, who had an unfortunate tendency to fall into deep and troubled waters.
Said man faced no such trouble at this moment. Slowly rousing himself from sleep, Jim felt as warm and cozy as any man anywhere ever had. Perhaps it was the air or the blanket, or maybe it was the two long arms wrapped around him. Birds chirped, and natural, golden light shimmered through his still closed eyes. He lay sprawled across a slender, muscular body; his head pillowed on a powerful chest, rising and falling; his bristly cheek rested against the Augment’s silky skin. Nien’s familiar scent wafted around him, and the steady heartbeat of the super-human found its echo in Jim’s own pulse. He felt... home. There was no other word to describe the contentment, peace and security that covered him like a mantle.

For a long time, he simply lay there, not caring for the outside world. The stars of space forgotten for now. He felt lazy and a bit achy in certain parts of his anatomy, but in a good way; the memories of last night made Kirk smile. He relished in his serenity – in every sense and sensation around him. And with every breath that Khan drew, Jim felt practically dandled – safe, secure, and loved...

It was all so surreal, even more so hovering between sleep and wakefulness, to be snuggled up to a man who once – well twice – had tried to kill him. And then to have him transformed into a passionate, tender lover who fought for him like a tigress for her cubs. Khan cared for him as if he were the most precious thing in the world. Never had Kirk felt more precious than now.

And that wasn’t all – if only it were it would be enough. There was a tugging at his heart and his soul, urging him to hold the other man tight – to shield him from harm. Though Khan was stronger than any other human, he could be injured; the past had shown that much, and Jim would do anything to safeguard Nien’s heart and his body from any further harm. The man had endured so much for so long.

It was in the captain’s nature to protect his loved ones and those who depended on him – no less than it was in Nien’s.

Funny, his thoughts were only of Nien now. He loved his ship, his crew, and his friends dearly, but Khan...
heart beat faster and filled him with joy. What did it mean? It was like his affection for his friends but compounded a hundred times over. It touched a part of his soul he had shielded for so long. Fuck! Why now and why him? This… Khan could be taken away so easily.

An inner voice whispered the answer. It said, ‘Jim Kirk never did easy’. He might get scared, but he was no coward. This ‘thing’ between Khan and him would change so much; yet he was way past denial though; it would get him nowhere. No, it was better to face a situation than to run away from it. He learned that lesson long ago.

So, what was the situation, exactly?

‘Fucked up. That’s what it is,’ his inner voice told him kindly, and he almost groaned when he realized the plain truth. He was trapped this time. He wanted Nien in his life – for good. The sentiment was entirely new to him. He never had a committed relationship before. Well, not counting his crew, his friends, Spock, Bones…He couldn’t keep a relationship, even with his own family. A weekend with the same girl; that’s as close as he ever got. So what was Khan then? Kirk might be relationship phobic (until now). But he knew what he wanted. He just couldn’t believe who he wanted it with – a criminal, a fugitive, and a man responsible for the death of his beloved mentor. But that man was a hero now too. No, Kirk never did easy…

‘A weekend with the same girl’ Jim had been straightish – or so he thought. Jim was surprised; Khan surprised him. Sure, he could appreciate a beautiful – well, anything. The universe was vast. But he never thought desire could turn into something like this. He wasn’t only attracted to Nien; he burnt for his former foe. But there was more to it, he wanted to be close to the Augment, wanted to know him better, to see and explore more of the gentler side of Khan Noonien Singh.

Nien was a fierce, dangerous man, but there were feelings in him, strong ones. Not just hate, pain, and fear. But passion, gentleness, compassion. And they were directed at Jim. In his mind, the young captain went through all that happened within the last couple of days. He remembered how the Augment cradled him in his arms in the prison on Turkana, giving him the first ray of hope for rescue. Then there was the moment they held each other for what they both thought was the last time. Khan’s apology that he hadn’t been able to save him still echoed in the officer’s soul; the super-human had been ready to throw his own life and the safety of his family away to retrieve him. Khan put his Jim’s life above his own and that of his crew.

The thought floored him. Nothing was more important to Khan than his crew; Jim was sure of it… At least, he thought he was sure of it. Now he wasn’t sure of anything. His feelings or Nien’s. Every time he thought he understood something, it slipped through his fingers. Like trying to grasp water in his hand.

He let his thoughts tug him back again to the moments aboard Diego’s ship as the former dictator
washed him, tended his injuries and comforted him after the troublesome nightmares. The gentleness – the tenderness in those blue-green eyes seemed to flow like balm through Jim.

He remembered his breakdown – so uncalled for and humiliating, still Nien had given him the feeling that there was nothing to be ashamed of. He even revealed some of his own torments, just to ease Jim’s pain and shame. Nien had shown him an empathy that Kirk hadn’t thought possible. He comforted him, held him, and whispered sweet things to him to soothe the anguish that had broken through.

Jim smiled at the memory of the warm baritone’s murmured words. He hadn’t listened too closely at the time, but somehow they came back to him, ‘Oh James, I’d open you up and write my name inside of you. If only that you’d have me with you when you hurt…’

Those were the words the Augment had whispered as he cried. Khan wanted to keep him safe, to shield him from pain and danger, just like Kirk did. And this told more than anything else.

The young captain swallowed, as his pulse quickened again – not in passion but in another wave of affection. His sharp mind knew exactly what was happening to him: He was about to lose his heart!

He had always kept it protected by a thick wall made of flippancy, false bravado and denial. He never wanted to be hurt again as he had when his brother left and later his mother chose her career over him. Yet he longed to have someone with whom he could share his life with. Nien was certainly the most troublesome choice, but ‘trouble’ was Jim’s middle name, and he would be dammed if he was going to ignore his feelings now, just because the rest of the world expected it from him.

No! He and Khan were too much alike; they shared so many experiences, walked too similar a path and they had grown far too close to each other to let rationality win. Prudence melted into nothingness when love was born and grew and…

And Jim gulped as he realized what he had thought: ‘Love!’

Oh God, that’s what this was, wasn’t it. This tenderness, this fervor, this warmth, this security – all of it. The butterflies (was he a twelve year old girl?) in his stomach, their desire for each other and the trails of the shared blood. All of it was… What – love? Was it possible that he – James Tiberius Kirk – had finally fallen?
The answer was ‘Yes’.

Love’s web had caught them both and Jim didn’t want to leave its shining meshes again; he was certain that Nien felt likewise. Jesus, the man had even thought about Jim’s comfort in the throes of their passion as he turned and pulled Kirk atop himself to prevent any damage to the healing wounds. Nien’s feelings for him ran deep and the young captain had to admit that the Augment had found a hole in the wall around his heart and had slipped into it. It was the first no-win situation that he did not want to win. And it felt wonderful!

Jim Kirk opened his eyes to his emotions and to the world.

Sunlight slipped through partially closed curtains and bathed the sleeping room in daybreak’s first light. Dust danced in its rays and the chirping birds seemed sweeter all of sudden. The world was changing for the young captain – slowly but inevitably. He felt whole, happy in a way he never had before. Lifting his head, he looked at the sleeping man beside him and dared to hope that there was indeed someone for him in this universe, a soul mate. The future was uncertain – Khan’s past notwithstanding – but Jim would fight for them both no matter what.

Kirk’s sky-blue eyes roamed over the handsome face of the former dictator. His ebony hair fell tousled over his high forehead. The long black lashes lay like fans over high cheekbones and his sinful mouth curved into the slightest hue of a smile. His features – usually so controlled – were relaxed. He looked much younger, innocent even, and vulnerable. New protectiveness squeezed Jim and acting on impulse he craned his neck, and ever so gently kissed those well-shaped lips.

Something changed. For just a moment, there seemed to be an interruption in the steady breath of the Augment; then he stirred. For the length of a second Khan tensed – obviously feeling that he wasn’t alone, and his instincts tested the situation for danger. Then Jim felt his lover smile into the kiss, and one elegant hand came up and cupped his head.

Khan slept deeply when a warm, strange sensation spread through his subconscious. Immediately, his senses recognized a second presence nearby, and his adrenal response switched on. But then he smelled the unique, sweet masculine scent that meant something… Meant family to him. Then soft fondling lips touched his – and every caution was thrown to the wind.

‘Jim…’ he thought; then the last remaining vestiges of sleep mingled with gladness. His fingers found the golden, short strands of the younger man on their own and he returned the kiss slowly – a kiss that ended far too soon.

“Good morning.” He heard the gentle tenor and opened his eyes. The handsome face of his beloved
hovered directly above him; sky-colored eyes looked tenderly down at him. He could get used to that sight at the beginning of every day.

“Good morning,” he murmured back. It’s been a long time since he’d been woken by someone so close to him. The last time one of his family had roused him from sleep, Kabir was shaking him; the palace was under attack. This time couldn’t be more different, nor could this young man laying half on him, smiling down. Yes, this was definitely the best way to wake. “Did you sleep well?” he asked quietly, worried last night’s exploits may have done Jim’s healing injuries harm.

But his worry was uncalled for; Kirk nodded. “You mean after we finally fell asleep?” he teased and grinned. “Yeah, I did. You?”

Khan took a deep breath. Truth was he hadn’t slept well for what seemed an eternity. “Very well. Thank you, James.” He observed the bruises on the younger man’s face and lifted a brow. “How you are this morning? No – pain?”

“Ass is a bit sore, but it’s been a while.” Jim smirked and shrugged one shoulder. “It stings here and there, and my back hurts a bit, but I told it to shut up and maybe it’ll obey; who knows,” he answered humorously and winked at the Augment.

Promptly, Nien rolled his eyes and chuckled. “Your nose didn’t bother to. What gives you the idea that your back would listen to you?”

“Well, a man can hope,” Kirk grinned, and then turned serious again. “You were – thoughtful last night. I don’t know that I would’ve had the presence of mind to switch positions. I appreciate it.” He brushed his lips over the other man’s shoulder. “Otherwise I’d have more problems than my protesting back.”

A real smile brightened the Augment’s face, with the affirmation that his caretaking was a welcomed endeavor. “My pleasure, Jim,” he replied softly. Then his gaze found the mark on the left side of Kirk’s neck. Pride and possessiveness stirred in the super-human; his fingertips ghosted over the mark clearly visible to the whole world again.

A pleasant shiver ran through Jim’s body as his lover touched him. It ached, but in a good way due to the pleasant memories associated. Eyeing the twin mark at Khan’s throat, Jim ran his fingers over it carefully. Nien shuddered and his ocean eyes darkened with untold emotions. Curiosity sparked in the young captain.
“This isn’t a normal hickey, is it?” he asked quietly and met the calm gaze of the former dictator. “I felt it… In San Francisco and on the Enterprise even after it had healed and…”

“Yes. It kind of – itched, I guess. Mostly after I thought of you; definitely after we talked.” He cocked his head. “It had completely vanished, but…”

“It never vanished, James, it only became invisible. The broken vessels beneath the skin heal but… Well, it’s as though you remove the source of heat from a surface, but the heat signature remains. That is what this mark is like, and it will continue to be so,” Nien murmured stroking the mark on Jim’s neck again; his eyes shone like stars. When he caught the confused expression of his beloved, he explained, “I didn’t realize that I marked you during our first night together; it was consciously not my intention. I saw the bruise, your ‘hickey’, and I took it for the same.” He took a deep breath. “My nature overpowered my more – rational mind.”

Jim braced himself on one elbow and stared at his lover. “Marked?” he repeated. “You ‘marked’ me? How?”

“I am not sure; I certainly didn’t know it at the time,” Khan answered after a long moment of silence. His hand fell from Kirk’s neck and trailed down to lazily caress the other man’s hip while he thought. “Marking is not a concept unknown to humans, at least ancient humans, but I suppose today it’s unheard of, isn’t it? Still…” He moistened his lips. “Katie and Otto, two members of my family, fell in love and married half a year before we fled Earth. Otto told me several days after the ceremony that he and Katie had already bonded before the marriage; that they’d ‘marked’ each other during their lovemaking. The mark makes itself known under certain circumstances – like when you thought of me. You might feel it depending on our proximity too.”

His eyes and his thoughts went far away with thoughts of his family. “Katie and Otto and I talked about it with Paolo once. He is the eldest of us all. We think that our engineered DNA affected not only our bodies and our minds, but also our nature as it applies to the purpose for our creation. For instance, the need to protect each other as well as our home, our countries and our territory is – was crucial to our survival, even if as a species, we were created sterile. We considered that our ability to mark was an extension of our engineering to protect and care for one another as well as an extension of our ability to conquer, protect, and defend our territories.”

Jim listened very carefully and concentrated mainly on the facts as Khan knew them. They could talk about this ‘bonding-thing’ later. “They made you sterile! That’s… That’s barbaric!”
“Ahh, they made us that way, but if there is one thing the history of evolution has taught us it’s that life will not be contained. As we understand it, our bodies repaired us of sterility. It took a decade and a half, but there you have it.”

Kirk blew out a huff of air, “That’s fantastic.” For the moment, Kirk was more interested in the marking. “So… you think that your instinct to mark is a side-effect of your engineering?”

“That’s not just our instinct, but also our more base nature,” Khan nodded. “In earlier times, when the human race was still young, marking was a common way to show others who belonged to whom.” He frowned slightly. “Mostly it was done by branding or tattoos, depending on the culture, but there are other means.”

“Until someone came up with the idea of wedding rings; that’s a kind of modern mark,” Kirk thought aloud; he fingered his mark again. “But this…” He pursed his lips. “In theory an Augment should only be able to mark another Augment; I wasn’t engineered. Even with your blood… The blood and plasma cells have been replaced by now. So for me to have a mark – like an Augment…” He thought for a moment and chose his next words carefully. “My DNA must’ve changed, taken on some Augment properties after the blood transfusion and then have been continually reproduced in my cells.” Kirk stopped to breathe and reflect on his own words. What it might mean for him, for them, before continuing. “The marking, your nature… This is the genesis for the link between you and your family, isn’t it?”

Khan’s eyes widened. “How do you know…? What gave you the idea that there is a link between us?” he asked baffled; Jim sighed.

“Well, everything about you is – more. If you have more brain activity than a non-augmented human then your empathic or telepathic abilities will surpass a human’s capacity for the same; if they have any to begin with. Like twins, I guess.” He smiled gently down at the quite frankly, astonished super-human. “Besides, there is so much anguish and longing in you to be with them, to protect them. It must be like someone has a piece of your soul. That’s where the bond would be, I suppose. If it were anywhere.”

Nien marveled at Jim’s insight and intelligence. He understood his family and the bond they shared like no one ever had before – even better than the scientists who engineered them.

Jim saw the awe in Khan’s eyes and was embarrassed; he lowered his gaze. “I understand that bond because I share a kind of link with Spock, too.”

Nien suddenly felt as though Jim dumped a bucket of ice-water over him. His James was bonded to
Kirk saw shock on lover’s face; and hurt and anger. He realized what must be going through Khan’s mind and quickly took steps to diffuse the situation and appease his lover. Tenderly, he cupped an alabaster cheek with his free hand. “Nien, it’s not what you think. What Spock and I share is nothing like what we have.”

He could see wheels turn behind Khan’s eyes and felt the tension under his fingers. “Explain!”

Jim sighed. “When I was in…” he swiped his hand through the air at nothing. “…the hospital after the warp core last year. Even with your blood, I stopped recovering and started deteriorating, fast. Anyway, Spock came to visit. He told me my room was empty when I went into shock. So he performed a mind-meld on me; he shared his strength with me until Bones could get to me. Spock retreated then, but a shadow of connection remained. We only realized it later during a short mission. I got into trouble, and Spock felt it; he arrived with the cavalry just in time. We think that his half-human side fostered the mental link with another human – me in this case. We have a pretty multi-faceted friendship to begin with, for lack of better words.” He laughed to himself at this. “The Vulcans have a word: T’hy’la – it means… Huh… English is so inadequate here. It means friend, brother-in-soul, something like that. It’s the highest form of friendship and love.”

“Maybe,” Khan retorted; his eyes flashed. “So there is a friendship link between you and your first officer. Only friendship?”

A soft laughter escaped Kirk. “Oh Jesus, you’re jealous!” His heartbeat quickened while he returned the fierce gaze with his own, full of warmth and affection.

“I am not jealous!” Khan growled. “But I don’t like the idea that the Vulcan is mentally bonded to you. I do not share – least of all you!”

Jim rolled his eyes. “Nien, Spock and I are friends, no less and no more. Vulcans are touch telepaths and a mental connection to those they are close to… It’s common for them.” He bent down and kissed the pouting Augment. “There is no reason for the green monster,” the young captain whispered as he let his lover’s lips free. “Spock is happy with Uhura. Well, as happy as a Vulcan can be – and I’m happy with y…” He stopped and blushed as he realized what he had nearly said.

The tension began to leave the super-human. “You are happy with me?” he asked. And the mixture of awe and hope that lay deep in those blue-green pools woke the protectiveness in Jim again.
“Yes, I am,” he answered gently. “I know if you total it all up, we’ve only known each other for a
week, maybe. But it doesn’t feel that way.” He took a deep breath. “I’ve never had a real
relationship. I’ve been happy with my independence, and then came you and…” He gulped.
“Somehow you managed to wriggle right into me.” At this Nien raised an eyebrow. “Into my heart,
you idiot.” He groaned and let himself falling on the other man’s chest. “God, I’m lost!”

Feeling a smile tugging at his mouth, Nien wrapped his arms tightly around the younger man; the
pain he felt when he thought his James was bonded to another one faded into nothingness. “You are
not lost,” he whispered. “Not as long as I have you.”

“Then never let go,” Jim mumbled, his lips moving against the warm, soft marble-colored skin. He
could taste the salt of their mingled sweat, the musk of their night together and the unique spice that
was pure Nien.

Curling himself around the younger man, Khan held him close and buried his face in the golden,
tousled hair. “Never,” he vowed. He closed his eyes, feeling immense relief and contentment his
augmented mind fought against. He simply wasn’t used to these feelings, but he drank them like a
man parched in the desert.

It didn’t slip his attention that Jim avoided the detail about bonding via marking with a bite, but he
gave it a rest. They had to come to terms with their own hearts first; this trek into relationships, ardor,
and love was alien to them both. So he relaxed completely and enjoyed having this special man in his
arms – bonded to no one but belonging to him as much as he to his beloved.

The minutes ticked by while the two held another and took their pleasure in each other’s company.
Chaste kisses dotted faces then became an open-mouthed drag of lips over lips and tongue over
tongue. Hands roamed over shoulders and chests and hips, and cocks strained toward one another.
Khan brought his palm up to Jim’s cheek, and Kirk turned into it, nuzzling his hand then laving over
the palm with his tongue until it was slick with saliva. Nien took the hint and dropped his hand to
gather their erections together. Precum leaked from the tips of them both. Khan smeared it around
them with the pad of his thumb before dragging his fist down and drawing their foreskins back up to
the crown.

“Oh fuck, that’s – that’s good.” Jim stuttered out. His eyes closed, and he dropped his head to press
against Nien’s shoulder, mouthing kisses anywhere he could reach. With one hand, he stroked up
Khan’s arm, the one working them both off; he felt the ripple of muscles in forearm and bicep. And
with his other hand he interlocked their fingers curled around their erections, working with Khan to
shape each stroke.

“Jim, tell me. Tell me how.” Khan breathed out.
“Nggng, fast and light. Oh God, Oh, so good!” Khan earned an extra moan each time he ran his thumb over the crown, smearing the pre-cum over them as it leaked to ease his way down. Jim gave one long, low groan as his semen pulsed out between their fingers.

Khan let him go but holds him close with the other arm. Just a few more tight, rough strokes and he groaned his own pleasure, spilling over Kirk’s heaving stomach. He cleaned his hand on the side of the bed then brought it up to trace over the shell of Jim’s ears and his jaw before capturing his partner's lips in an easy kiss. Jim kept his hands lightly on Khan’s wrists; each man had only eyes for the other. The sunlight, the quietness of the cottage, the chirping of the birds, the scent of musk and sweat and sex – war was far away, and the peace of their little own world enveloped them whole. Khan reached over for the cloth on the floor to wipe them down; and then both men dozed wrapped in each other.

They rose much later, roused by Jim’s stomach causing the captain to blush; the Augment chuckled only to have his own belly grumbling at him, earning Khan a teasing snicker. They showered again, rinsing off the night and mornings deeds, but this time they merely washed each other, sharing a few gentle kisses. Khan left the shower cabin first, shaved and slipped into his comfortable Indic clothes before vanishing into the kitchen.

Jim took his time letting the hot water wash away at least some of the aches. Then he slipped into his shalwar pants and changed the sullied blankets and sheets. As he finished, Khan returned from the kitchen; a delicious scent waved through the cottage. He examined Kirk’s healing injuries again. He covered them with the ointment he took with him from Diego’s ship and bandaged Jim’s upper body as he had each morning. But before Nien could turn around and walk back into the living room, Jim’s hand shot forward and caught his wrist.

“What’s about your arm? I saw the bite marks last night,” he asked and firmly returned the gaze of the other man.

“The bite is healing,” came the cagey reply and Jim lifted both brows.

“Shouldn’t it be done by now?” he pressed gently and the super-human sighed.

“It could be that my DNA’s ability to cope with the alien saliva has, indeed, something to do with my retarded healing rate as you said.”

Kirk stared at him and chuckled. “You sound like Spock.” At that, the Augment only sneered. Then
the young officer turned serious again. “The warrigul bite still bothers you.” Concern shone in his eyes.

Khan shook his head. “That’s not necessary, James, I assure you. It’s just healing a bit slower than I’m used to. That’s all.” He reached out and stroked for a moment the other man’s cheek; touched by his lover’s concern. “Don’t worry, Pyāra, I’m all right.”

Jim pressed his face into the long, warm fingers. “You still haven’t told me, what ‘Pyāra’ means.”

Another sigh escaped the super-human, but before he could answer, a shrill beeping and the distinct smell of something charred came from the little kitchen. He cursed, whirled around and stormed out of the bedroom with Jim hot on his heels.

A pan was on the stove and a cloud of smoke rose into the air above it, activating the smoke alarm. Khan crossed the room in three long steps and reached the pan, took a potholder and pulled the pan off of the induction field. Jim followed him and looked down at the pan’s contents.

Black, shriveled, stinking…

“Ummm… What was this before it fell prey to the heat?” he asked, and Nien grimaced.

“Something like bacon – at least ‘Aldebaran bacon’ was written on the package.”

Jim nodded slowly, glancing at the blackened mess with interest. “Well, I do love my bacon crispy, but don’t you think you overdid it just a bit?”

The two men looked at each other; then Kirk burst out laughing, while Khan rolled his eyes. “If you didn’t stop me, I could’ve returned to the kitchen and this…” He waved his hand toward the object of his derision… “…could have been prevented.”

“Admit it, you’ve never done bacon before,” Jim grinned, and the former dictator groaned.

“No, it doesn’t exactly belong to India cuisine, you know.”
“And you tried to…” Kirk stopped as he realized the intentions of his forbidden lover, and cocked his head. “You did it for me.” he whispered; his words were a statement rather than a question. Khan was quiet, and so Kirk knew that he had hit the nail on the head. In an impulse, he cupped one of Nien’s cheeks, turned the super-human’s face toward him, bent forwards and placed a warm, lingering kiss on his lips. “Thanks,” he whispered as he drew back.

“What for?” Khan asked, a little bit confused. “I burned it.”

“For trying,” Jim answered. “It’s the thought that counts.” In a gesture of fondness, he pressed his forehead against the Augment’s then reached for the pan. “And now we can make something you’ll eat and…” Kirk stopped as Nien caught his arm, stilling him.

“You are still healing; no housework!”

“I can clean the pan, Nien. I’m not made of glass,” the Enterprise’s captain retorted wryly, but the super-human shook his head.

“You already made the bed. Right now you must take it easy, James – especially after last night,” he added with a knowing smirk.

“But I feel fine!” Kirk protested.

“And I’m glad for it, still, you have to rest.” Khan remained reasonable.

“If I don’t use my muscles soon, I’ll get weak.”

“You’ll become weaker if you don’t let your body heal properly. The workout last night was stressful and quite enough use of your muscles,” the super-human replied patiently.

“But I’ll go crazy if I can’t do anything.” Jim began to whine like a little boy.

“You mean crazier than you already are?” Khan teased. The captain’s eyes widened.
“Hey, that’s not nice!”

“The truth is rarely kind.”

“You are not kind,” Jim huffed.

“Oh, I can be very unkind as I’m sure you know – especially if the health of one my own is at stake. So put on you kurta, go to the sofa, sit down and wait until I’m done here.” Khan’s voice permitted no backtalk. But Kirk was not one to back down from a challenge, not from a Gorn, Orion, Klingon, and most certainly not from the beautiful creature in front of him.

“No! You can’t order me out of the room like a child…”

“Yes, I can if you are acting like one!”

“No, you can’t. I’m a fucking captain!”

Khan heaved a heavy sigh. “I’m not ordering you; I’m simply advising you to listen, for once, to the voice of reason.”

“I AM reasonable!”

“When you’re sleeping! As soon as you are awake you…”

“How long have you two been married?” The third voice sounded from the entrance, and both men turned around, startled, to find a large, grinning Diego. “Heavens, boys, you sound like my parents!” He chuckled and stepped towards them, a bag in his right hand. “I came by to bring you something to entertain yourselves, well, besides each other. Here are a few books and two PADDs.”

Khan grimaced; Otto or Paolo would’ve said something like that. Kirk just gave the newcomer a cheerful smile. “Thanks, man. For the record…” Jim jerked a thumb towards Khan. “He’s the mom.”
The Chilean began to laugh. “‘Mother-le-matya’ more like,” he joked. “Believe me, your Vulcan and our Drythen have quite the competition going on trying to protect you.” He placed the bag on the table. “Do you two always eat breakfast this late?” he asked curiously.

“Shit, how long have you been standing there?” Kirk asked.

Diego grinned.

Jim rolled his eyes at that. He was becoming quite the expert at it on this trip. “We weren’t in the mood for an early morning,” he answered and strolled to the bedroom to slip into his Indic shirt. Even with the home’s heat system running, the cottage was cool, and Diego went to fix some hot coffee for the men.

“Aldebran has 27 hours per day, but even by Earth’s standards, you’re up and about pretty late.”

“So, the nights here are longer than Earth’s?” Khan interrupted him, cocked his head and fixed Jim with a promising gaze through the open bedroom door. “That is a welcome fact.”

“Yes it is,” the cottage’s owner confirmed knowingly. “During this season, the nights are approximately an hour and a half longer than days. Once winter comes, the nights are two hours longer Earth’s.”

“Sounds like Alaska,” Jim quipped, returning from the bedroom.

Diego chuckled at the sight of the love bites along the line of Jim’s throat. Much darker than the pinkened marks at Khan’s throat – nearly healed now. “Hell and bells, boys; looks like I’m going to have to stock more linens.”

Jim blushed while the super-human just smirked. “We would be obliged, Diego,” Khan answered as the Chilean murmured, “I’m adding a lot of shower gel and slick to the shopping list!”

Kirk’s face flushed a shining, tomato red right up to the tips of his ears.

Of course, it didn’t slip Diego’s attention. “Ah, I see. You already need ‘em, huh? And here I
thought you had to heal.”

“He is still healing – that would be the conversation you walked in on,” the Augment drawled. Jim marveled at Khan’s nonchalant attitude regarding their relationship. A stranger was teasing them about their relationship, and Nien reacted as if it were nothing. Now, Kirk was anything but shy, but he wasn’t sure about his new partner. He kind of figured Khan would be more protective, more furtive of the relationship. Not out of shame – just... So as not to put all of his cards on the table in front of others. Either way, the Augment didn’t so much as look Diego’s way; he just continued on with breakfast’s second attempt.

“Ah, so he is eager as a foal,” Diego laughed. “Or should I say, a young stallion?”

“Latter fits best, I suppose” Khan nodded; he was clearly enjoying Kirk’s embarrassment much more than he felt the need to keep their...activities private. Jim reddened right down to his neck, and he tossed the former dictator a fierce gaze that could melt lead. ‘So much fire’. No wonder he had fallen for the younger man.

“Yes, but tigers don’t run from horses; they get caught in the end.”

“Oh, Nien, the chase is half the fun,” Jim answered pleasantly.

“And what is the other half?” Khan questioned wryly; Diego snickered.

“The fight to the finish, man,” Kirk replied with eyes lowered.

“So the old saying is true then.” Diego interjected. “The quarrel of lovers is the renewal of love!” He returned to the coffee machine and added water to the reservoir; he missed the severe stares the men leveled at each other.

“So, how’s everyone?” Jim changed the topic carefully, feeling warmth right down to his toes when Khan’s gaze softened towards him.
“Oh, the usual. Ritek and Galven bicker all day; Caviw tries to calm them down. Jeffrey and the others are enjoying the time-out.”

“How have you seen any news on the war?” Jim asked tentatively.

“Mmm, yeah, some. The media’re spinning the war any way it wants, but we’ve heard that before. Starfleet has increased her forces in the sectors near the former Neutral Zone. Aldebaran’s security is seriously high strung – no spacecraft is allowed port without a thorough check of documents and crews, so be glad that we arrived three days ago. Oh, UFP news says they’ll be a meeting of the Federation delegation and the Klingon High Council. Nothing’s official, but as it seems both sides finally remembered that you can use your mouth to solve problems rather than fists and photon torpedoes.” He leaned against the kitchen counter. “I’d definitely prefer a conference instead of more violence.”

“You are absolutely right,” Jim nodded. “To tell you the truth I’m fed up with the war! Still, I’m surprised that they are already considering a congress. The blood-letting usually goes on much longer before anyone’s ready for the roundtable – especially the Klingons.”

“Well, they’re still just rumors,” Diego shrugged; he brought the coffee pot to the table. “I don’t think that the common herd will learn the truth until the conference actually happens.” He sighed. “I have an idea. Are you two in the mood for a visit to town – or New Aberdeen?”

“What?” Jim lifted both brows, and the Chilean smiled.

“Well, you are doing better; war is near but far enough away that this planet still enjoys a bit peace. And since you are both from the outer world, I figured you would like to explore a little bit more than just the bayou.” He hesitated. “Have you already walked the shores?”

“Of course,” Khan nodded and brought fruits, bread, cheese and marmalade to the table; behind him in a second pan, scrambled eggs were notably uncharred and almost ready to be eaten.

“Then you should take a sight-seeing tour through New Aberdeen. The brother-in-law of my best friend’s cousin has a travel agency and… Man, do you always eat this healthy stuff?” He looked wide-eyed at the breakfast ‘Drythen’ had prepared.

The Augment smirked, “Of course, Diego.” He pointed at Jim. “It’s not for nothing he’s the Federation’s new hero; and I can damage a comms console with my fist. You don’t get that from
It was a joke – and a good one. Diego and Jim were both surprised at Khan’s show of humor this morning. Diego responded to it in the only possible way. He laughed.

“Really, Drythen, you’re a hell of a guy; I like you.” He became very aware of the intense glances the two younger men shared – all warmth and not-so-subtle passion. “I like you both!” He grinned and shook his head. “And when I look at you guys…” He glanced between them again. “I think our little trip to New Aberdeen should wait a few more days. But then you’re my guests, clear?” He sat down and poured the freshly brewed coffee into the three cups. “A shopping trip will me more necessary then.” He chuckled. “If I have to buy a new bed by then, just let me know!”

“Of course, my friend!”

Jim’s sputtered, nearly losing his coffee at Khan’s dry retort, leveling a stern gaze at his lover.

None of the men could foresee the threat on the horizon…

Crowds milled around the small café in the shopping center in New Melbourn. Most visitors came from the shops and offices in the neighborhood trying to catch lunch before they return to their jobs. The atmosphere was one big pretense of a light mood. Too many people feared that the war would reach the planet sooner rather than later, but no one talked about it. Somehow the silence made it easier to deny.

Guests milled, baristas shouted orders; they’d all flee if they knew the identities of five men in the corner booth.

At first, second, and even third glance, the men looked like any other human, albeit a little taller than the average Terran. But other than that, they resembled humans in every way. Only an extremely sensitive tricorder or a med-scan would have revealed their heritage – this or the language left unspoken in order that they not draw unwanted attention.

One of them stared with green-brown eyes down into his cup of coffee, clearly not enjoying the beverage. “I always knew that Terrans had terrible taste, but this here reminds me of the slap of an
enraged woman: Bitter and hot.” His accent was hard and guttural.

“Quit complaining and put some sugar or something in it,” another man murmured, glaring at him with dark eyes. They both had well-trimmed moustaches and short, shorn hair – exactly like the other three men, who stayed silent. “We are not here to discuss Terran food and drink.” His voice was sharper but bore the same accent as the first speaker. He lowered his head. “Can anyone see our contact?”

“He’s coming down the stairs outside in the shopping area now,” one of the other three men said.

The first speaker grumbled, “At least he isn’t late!”

They fell silent again and waited until another man stepped to their table. “Good day, gentlemen,” he greeted and pulled a chair to the table. He was in his late thirties with an ordinary face and dark blond hair – nothing remarkable. It was an asset as far as he was concerned. Lifting a hand, he ordered coffee and a salad before making a bit of small-talk with the five other occupants. When the newcomer’s meal arrived, the topic of discussion changed.

“Any problems arriving on Aldebaran?” he asked quietly, adding the table spices to his salad.

“None,” the leader of the little group answered, and the newcomer lifted both brows.

“Then you are unaware of the danger you barely escaped,” he said casually. “A Starfleet cruiser was here and checked every arriving vessel over the past day – including yours.”

The other man bent forwards. “What Starfleet cruiser? Did they find something? Did the cretin of a captain kept his mouth shut?” The newcomer only looked at him, not cowed by the threatening look being leveled at him. “Tell me Mr. Makfurton!”

“The name is McFurthon – Mc for ‘son of’ and…”

His table mate cut short his explanation hissing, “I do not care for the meaning of Terran names. Just answer my questions!”
For several seconds, both men glared at each other; then the newcomer lowered his voice, barely understandable. “The captain did what he was paid to do; he smuggled you and your comrades to Aldebaran. He kept quiet. No one would consider those documents false – after all I prepared them. The commanding officer of the Starfleet ship checked yours thoroughly because your vessel came from the former Neutral Zone, but he found nothing illegal.” He leaned back and looked smugly considering his own success. “And that ship that took notice of your vessel’s course. I’m sure you’ve heard of it. I advise you to keep calm if you don’t want to draw attention to yourselves.” He had paused for a second before he continued, “It was the Enterprise.”

“What?” the other man gasped; his comrades tensed. “The Enterprise? KIRK is here?”

The newcomer glared at him. “For God’s sake, Koloth, shut up!” He looked under his lashes around him, but no one took notice of them. “As far as I heard, the Enterprise is under the command of the Vulcan first officer – a Mr. Spock. One of your generals captured Captain Kirk. The transmission about Kirk’s ordered execution was…”

“Lord Kor caught him – but, it seems you are not up-to-date, spy! Kirk escaped!”

McFurthon stared at him. “He… escaped? How?”

“He had help. When Lord Kor gave me the Aldebaran-mission, he told me that the man responsible for the demise of our patrols on Qo’noS freed Kirk.” A deep frown appeared on the Klingon’s human-like brow; evidence that he too descended from those Klingon clans which had been treated with human augmented DNA. “Apparently Kor’s ‘hospitality’ did Kirk no good or he’d be in command of his ship.” His glare darkened even more. “Kirk defiled my reputation and my honor when he beamed over some damn fur-balls the humans call ‘Tribbles’. They spread through the whole Empire – a plague of the worst kind.” He spit out his words and balled his hand into a fist. “It was an attack against us. First his officers taunted my first officer,” he nodded towards the man he had been speaking with before McFurthon came. Hate glistened in his eyes. “And he picked a fight, treated us as if we were criminals and then he beamed the Tribbles onto my ship! If I ever get my hands on him, he will think Kor’s treatment was a caress!”

McFurthon sighed – Klingons and their pride! He fixed Koloth with a glare. “Forget about Kirk and concentrate on your mission. Your admiralty hired me to support you and paid me the half of the agreed price – the rest after your success. And your reputation will be restored to its former glory if you manage to blow up this system’s Starfleet’s base, making the way free for your fleet to pillage and plunder as it sees fit.”

Koloth snarled wordlessly at him but nodded. “You are right.” He pursed his lips. “How does it feel to betray the people you once considered your own?”
“You framed it correctly. Past tense! I once considered Starfleet my people. I gave them the best years of my life and they let me fall! I made one little mistake and everything I ever did for them was conveniently forgotten. I was stripped of my rank and am rotting in Admin hell. Well, their bad luck wasting my talents. The information I get on the job is valuable – as your admiralty admitted.”

“So you are doing this for revenge,” Koloth assumed.

“Yes. As your people say: Revenge is a dish best to be served cold. Starfleet won’t know what hit her when you’re done here.”

Koloth nodded, but inwardly he despised the human. Betrayal was something he could never and would never tolerate. A Klingon would rather die than betray his people. Well, right now the Terran’s weakness, his treason, suited his purposes. It made Koloth’s mission possible; still he loathed the way the Terran thought and acted, but it made the exploitation that much sweeter.

“So, you have the layout of the spaceport and the Starfleet quarters?” he asked quietly.

McFurthon smiled coldly. “Yes, I have. They are not far from each other,” He handed over a small data key. “Here is all the information you need; still you should check it out yourself. Visit the spaceport and have a closer look at Starfleet headquarters. Both are northwest of Thalassis in New Aberdeen; the address is there too.” He also handed him three credit cards and murmured, “They are loaded with a thousand credits. That should cover hotel and meals.” Then he leaned back. “I think two days will be enough for you to check everything; we’ll meet back in three days. Until then, I have the materials you need to destroy the headquarters and the spaceport. Then your fleet should have no trouble annexing the Aldebaran system.”

Koloth pursed his lips and rose. “Where will we meet?”

“Near the spaceport is a small pub called “The Stars”. We will meet there in three days at 1400, all right?”

The Klingon simply snorted, took the three credit cards and put them together with the data key into his trouser pocket. Without another word, he left the café, his officers trailing behind him.

McFurthon grimaced – Klingons! Then he realized that Koloth had left without paying the drink tab. Cursing he reached for his credit card to settle the bill the waitress had already in her hand…
Chapter End Notes

Surprise, surprise – Captain Koloth is the opponent of the past. Maybe some of you have guessed something like this, after all the Tribble-Incident that caused (along with other events) so much wrath in the Klingon High Council had already taken place before. And, as you certainly remember, Koloth has big mouth but less courage. I think you know to what this will head, hm? Yeah, our boys will kick some Klingon asses and are going to proof what a great team they make (not only in bed).

Well, referring to the ‘bed’: I think it was about time that Jim makes up his mind and that he realizes what his happening to him and Nien – that they both have developed deep feelings for each other. And the riddle of the mark had to be solved sooner or later, so I hope you liked it (and their bickering at the morning).

Within the two next chapter you will learn about Khan’s fate in the hands of Section 31 and there will be the overdue talk about Khan’s deeds afterwards (especially concerning Pike’s death because of it). And you will learn more about his past in the 20th century. Luengo and Norton will plotting, Koloth and his men will appear once amore and someone of Jim’s friends his going to solve the riddle of ‘Sunrise’.

You see, there is lot of coming for you now.

I hope you liked the chapter and I’m – as always – curious about your thoughts.

Until soon,

Love

Phantoms of the past

Chapter Notes

Hi my dear readers – and MERRY CHRISTMAS!!

I’m so sorry for the delay, but as I already wrote those who left a comment, the computer of my dear friend Rhiannon, who is my beta-reader, had a crash and she had to re-do the most of the work. And this before Christmas, when stress is an eternal companion. Thank you so much, Rhiannon, that you still managed to edit my writing during Christmas and for all the efforts you put in the story.

A big ‘thank you’ also to all my readers who left Kudos and comments. It really makes me happy that you love this story so much and even show it.

The new chapter has, indeed, something to do with the message of Christmas; of rue, sins, compassion and forgiving. Jim and Khan will talk about the things which happened one year ago, as the Augment ran amok. And I hope the whole thing is to your liking.

Have a very Merry Christmas,

Love from Germany

Yours Starflight

See the end of the chapter for more notes

Chapter 21 – Phantoms of the past

At the Silver Bayou, no one could know that war would finally reach Aldebaran. Nature’s repose contributed to the content atmosphere in the small house as well as a delicious lack of awareness of the universe around them. Not the rumors of a peace conference nor any other possible happenings with the war were discussed among the men after Diego left at the early midday with a promise to return in two days to take the two men on a day trip to New Aberdeen.

Jim and Khan strolled along the lake’s shore after their late breakfast; relishing in the sun-warmed, fresh air and the harmony of their surroundings. Kirk stripped off his shoes and socks, hitched up his trousers and walked through the cold water; Nien – to Jim’s surprise – followed his lead. The Augment relaxed; his expression was soft. Jim was glad for it – for him. He knew how long there had been nothing else than fight, flight and fear for the super-human, but he couldn’t comprehend that time – the centuries. But he knew what is was to be cast out, unwanted – and then hunted. He was thirteen when his hell began. No doubt that Khan’s youth was much the same.
The Augment felt the eyes of the officer resting upon him, and as he looked at him, he smirked. Jim grinned sheepishly, blushed and took a deep breath. “What is it?” Khan asked gently, and Kirk pursed his lips.

“You seem settled,” he answered after a short moment. “At peace.”

The former dictator smiled. “I am for once, yes.” He glanced around him. “This reminds me of one of the few times I was happy – sort of. It was one of the few occasions I was allowed to leave the labs completely; I had a bit of time off, officially to test my reaction to the outside world, to people. They wanted to assess my behavior. Some of the other younger Augments had been with me.” His smile brightened. “We were brought aboard a ship and stayed at sea for two days – only us, our guards and two scientists, and the crew.”

He tipped his head back toward the sun and took a deep breath. He was transported back to the days of when he was a child or while he was aboard Mazzini’s boat. The memory of the Italian captain made him grin. If Alessio or the others had seen him during his battle against the Klingons, they would be speechless.

Jim didn’t miss the suddenly Nien’s pleased look, but before he could ask, Nien chuckled, “If someone tried to tell me that two days on a boat would save my neck three hundred years later, I would have called them insane.” He caught the confused glance of his beloved and looked back; Kirk stopped and Khan did the same.

“What do you mean?” Jim asked; his brows furrowed in question. Khan sighed. “I was hired by a fishing vessel boat out of San Francisco. We were out at sea and…”

“You did what?” The ever so blue eyes of the young captain widened. “You worked on a fishing boat? As a fisherman?”

The smug expression on Khan’s face that had infuriated Kirk in earlier days was full of humor now. “Yes, I was a deckhand,” the Augment nodded, correcting Jim’s lexicon and amused by his reaction. His lover gaped at him. “Can’t imagine it, can you?” Nien chuckled. “The leader of the Augments, a king in his time, hauled in the catch of the day.” He laughed quietly. “Never occurred to Starfleet. They turned every stone in San Francisco, checked the air and spaceports, the transporters, everything. Watching the piers, the boats; it never occurred to them.” He grinned triumphantly. “Not that they were ever close to catching me. After our first trip, a joint team of Starfleet and Federation security were at the docks but they didn’t recognize me.”
“Really? You are a bit, ummm, unique looking.”

“Hmmm. Well coveralls, sweater, dirty, disheveled, sea-legs, and a beard.”

Jim looked him up and down, and began to snicker suddenly. “I’m trying to picture it. I can’t. You in a beard?” He grimaced. “I like my Augment clean-shaven. Must be a Starfleet thing.”

“Mmmm, I couldn’t agree more!” Nien nodded. “I got rid of it as soon as possible – on the outpost where the Orions attacked; I met Galven there.”

Cocking his head, Kirk pursed his lips. “And the other deckhands didn’t recognize you.”

“Of course not. As far as I know Starfleet swept my part in the whole disaster of Section 31 under the rug, so to say and therefore there are no official records about me. The fishermen were simple and good people; worked hard.” He closed his eyes again. “I enjoyed myself, the hard work, the men, after all the months in the lab. I hid more than two weeks on Alessio’s boat – just working; blending in, until the war threatened the colonies. One of the crew members, Nando, wanted to retrieve his sister and brother-in-law from one of the colonies near the former Neutral Zone. He’d never been in space before and was… anxious. I offered to accompany him and in turn he ‘arranged’ for a new ID-card for me. Once security was overextended with the Klingon threat, leaving Earth was easy.”

For a long moment Jim could only stare at him, and then he began to laugh. “You’re the cleverest and most imaginative man I’ve ever met and that’s saying a lot with Scotty on my ship. I learned early how to become invisible, but I think you’ve made it an art form.” He shook his head again and chuckled.

Khan smiled. “Have you never asked yourself how I evaded the authorities after I left your apartment? Surely they would assume I’d come for you first.”

The officer sighed. “I asked myself a lot of questions after you left. For example, why didn’t I alert Starfleet after I realized that you must have left only minutes before I woke up – my shower was still wet? Or why I found myself hoping that they wouldn’t catch up with you. I asked myself why I was affected by the note you left for me.” He winked. “By the way, thanks for putting the coffee table back. That damn thing weighs a ton.”

He padded out of the water and sat down on the grass; the Augment, again, followed suit and sat
close, touching from knees to shoulders. Jim pulled his knees up and lay his folded arms on them before he softly continued, “I asked myself why I couldn’t get you out of my head or why I lied to my friends. Bones came to my apartment in a panic. Spock told him that you had escaped cryosleep and were out for revenge. Then I asked myself why I couldn’t stop thinking about you or why I was glad, relieved even when I found out that Starfleet stopped looking for you.” He shook his head. “And I wonder why I am about to forgive you for Daystrom – for Pike.”

There it was – the thing that stood between them despite their feelings for each other.

The Daystrom Conference – the place where Khan’s revenge caused the death of the man who had been like a father to his James. Nien knew that these events would come up for discussion at some point. He was relieved that it happened here rather than on his or Jim’s ship. This was neutral territory without pretense or rank or running to get in the way.

“If I could change it, Jim, I would,” he said after several seconds of silence. “I do not regret that I fired at Marcus, and I certainly do not regret that I killed the admirals that I knew they were part of Section 31. I recognized them through the window.” He had pressed his lips into a firm line before he whispered, “But I do regret that I took your Admiral Pike from you. I knew him only from what I’d heard while in Section 31. I thought Section 31 was an official department of Starfleet; that’s what Marcus led me to believe. He convinced me that Starfleet knew about my crew and me; I thought they knew what Marcus was doing to me – to us – and they didn’t care.”

Jim knew that they had to talk about it. Lay it all out. The damage, the dirt, the hurt; all of it would fester and infect what they had if they didn’t clear it once and for all. So he headed straight for the hard parts. He never learned to take the easy way.

“Why did you think Marcus had killed your family after he found out that you hid them in the torpedoes?” He asked this first; it seemed to be the catalyst for the disaster that followed – Daystrom.

“He told me that he would switch off the cryotube’s life support if I ever tried to deceive him or flee. But I had to get them out! I knew that Marcus would never allow them to wake. He would keep me under his thumb by blackmailing me with their lives.” He pulled his knees to his chest and wrapped his arms around them – protecting himself from now invisible demons. “At first I thought he wasn’t serious. This is the 23rd century; the human race had progressed, allied itself with alien planets. I assumed cruelty, intolerance, greed and lust for war was a thing of the past – my past.” He snorted. “Naïve, I know. Those first days Marcus fed my notions. Then…he let his mask slip.”

“He insisted you work for him,” Jim supposed and Khan nodded.
“Yes. He began the tests then – nothing dramatic; more assessments, nothing I wasn’t used to or didn’t expect considering this world had never known anything like us. Afterward, he came to me and offered me a place on his staff. He also told me about the Federation’s enemy; he said I could help to defend my home in this new time. At first, it seemed like a good proposal; I thought I had found a place in this time. Then I realized that the threat didn’t exist. The Klingons never declared war. Eventually, I became aware of Marcus’ true intentions – he wanted a first strike against the Klingons after a century of peace, albeit tenuous.”

The former dictator lowered his head.

“I was born in a century where a powerful, mighty man launched a war by first strike; it cost millions of people their lives. Decades later, as I grew up, his shadow still loomed large. My people and I were created to bring peace to the world – to bring them out from the shadows. It only led to more war, the height of the Eugenics Wars. I know the damage, the folly of a first strike. I lived the bloody history that Marcus wanted to repeat; I warned him, and he would have none of it. He said that I was new to this world; that he could judge the present far better than I. So I refused to assist him any longer.”

“And that’s when he threatened you,” Jim murmured; meeting Khan’s steady but also painful gaze.

“Yes. First he threatened me; I tried to break away from him, from Section 31 and Starfleet – to flee with my people. I wasn’t familiar with the security systems and tech. I didn’t have enough time to learn it. I got far though – only two doors away from the space where he held my crew. Marcus took this as feigned motive to run more tests on me – on all of my abilities.” He took a deep breath. “Four weeks of anything he could think of, but I didn’t yield. Then he pressed his finger to the only breaking point I have: My family.”

He shivered, and Jim wrapped an arm around him, offering strength and creature comfort of touch. Kirk knew the worst was yet to come, and his heart went out to the man beside him. His marble pallor the color of marble’s ashen striations.

“One morning Marcus escorted me to the room where the cryotubes…” he squeezed his eyes closed and steeled himself. “…where my people were kept. He gave me a choice; I could cooperate or watch my family die.” He bit his lips. “Despite everything I had already suffered at his hand, I couldn’t believe – I didn’t want to believe – that he would murder people unable to defend themselves, asleep and unaware of the world.” His eyes went distant. “He switched off the stasis field of a tube. He had decided, indiscriminately, who of my crew would die. He killed Silvio, one of the younger ones.” He spoke every word from between clenched teeth, and lowered his head. “He was gentle, so peaceful. He didn’t have the aggression, so many of us did.” He glanced at Jim. “…do. A remarkable doctor and an even more remarkable man.” He looked Kirk straight in the eye and continued. “All my pleading for his life was for naught. Marcus didn’t re-activate the stasis. Silvio died right in front of me.”
Jim stared. He tried to hide the shock, but it was hard. Bad enough, Starfleet’s – or Marcus’s evil was inflicted on a loved one. Starfleet shocked at him. He trembled with anger at Marcus, at Starfleet’s blindness, intentional or not. Marcus would have stopped at nothing to get his war; everyone knew that now, but to look at a defenseless sleeping person and outright murder them – there was nothing worse, and the sadist did it to hurt another intentionally for his own gain. He pulled Khan closer; his lover’s grief reached straight to his soul. “Nien…,” he breathed, feeling his heart beating for the other man.

Khan took another shuddering breath; a lump built in his throat. It hurt to speak about it; he knew these wounds had to bleed themselves clean. He just wished that the bleeding would stop at some point. It felt like he’s bled for so long, that he has very little left to give. Hopefully talking about it would ease the wound – be the salve he needed to continue.

“Marcus killed four more of my family like this until I broke and gave him what he wanted,” he continued with a tight, quiet voice. “I was already grieving for the eight men and women whose cryotubes had failed during our venture. So I promised my support to his insane vision; war with the Klingons that he so yearned for – in exchange for my crews’ life.” Khan heaved a sigh, “But during the next few months, it became apparent that he never intended to let me or my crew go, so I devised a plan.” He chuckled bitterly. “I smuggled them in the torpedoes aboard the Vengeance. I was going to wake them during the first test flight, take over the ship and run. It was my only option – and it failed. Marcus discovered the tubes missing and knew. He ordered me shot. The Vengeance was as good as complete; he didn't need me anymore.”

He rubbed his arms as if he were cold. Jim understood. Even if the sun’s rays bathed them, he felt cold inside, too as he listened to Nien’s story.

“Under pretense, he led me to my stateroom where he had a team waiting for me. I avoided the first phaser blasts set to kill, and then I fought back. Somehow I managed to flee and reached the transporter room. I didn’t want to leave my family in his hands, but if he killed me, I’d be of no help to my people.” He bit his lips. “I programmed the transporter with the coordinates to the jump ship Marcus used to travel between the secret space dock and Earth. Then Marcus used the intercom for a ship-wide transmission so that I would hear it no matter where I was. There was no misunderstanding his intentions towards my people.”

Jim knew what was coming. He and Khan had had this conversation before; only Khan was in the brig and Jim was on the other side of the glass. Hearing it again, hearing how Nien was played over and over again made him nauseous. “What did he say?” he asked softly.

“He said ‘Whatever happens now would be my fault’. And then…” Khan swallowed. “I was already on the transporter platform as the transmission sounded through the ship. I beamed away just as I
heard him ordering his subordinates to switch off the life support systems of the cryotubes.” His eyes brimmed with unshed tears at the memory. “I tried to leave the platform then, ready to deliver myself to him again, even if it meant my death. I would rather die than fail my family. But it was too late. The transporter had caught me before I was able to take a step. I materialized in the jump ship knowing that I had lost everyone I ever loved.” He swallowed again, the pain fresh as if it happened only yesterday. “I’ve never felt so much horror,” he whispered. “Until I learned they were alive only to be deceived again when your Vulcan detonated the torpedoes. And then the rage. I’d never felt so much rage, not even during the wars.”

He was not surprised to see tears shimmering in Jim’s eyes. But he was surprised when Jim took his cheek forcing their eyes to meet and touched his forehead with his own; he just admitted he acted in rage, and that certainly deserved no comfort. But he got it anyway.

Jim knew that for Spock, there was no other solution. Eliminate the enemy and save as many lives as possible, and that included the lives entombed in the tubes; he had to trick Khan. Still, hearing what it did to the Augment pierced his heart. He saw Nien grieve in his apartment in San Francisco with the false knowledge of his family’s death. That breathed sympathy into him for the man. Strength, conviction, and sympathy – those are the things that fed his feelings for Khan. Even if they hadn’t, this story had been told by a stranger, it would not be any more palatable.

He wrapped his other arm around Khan and the super-human held to him tightly and uncurled his legs allowing Kirk to get closer. “I am sorry,” he murmured. “I’m sorry we added salt to such fresh wounds.”

“Don’t be. The decision was – logical. Your Vulcan friend did what he had to do to protect you and your crew,” Khan’s mouth twitched bitterly. “A small hint afterward that my crew was still alive would not have gone amiss rather than attempting to pound me into a garbage transport. I suppose he wanted – he needed to even the score. I can certainly relate to the need to avenge those you love. Only for Marcus had I ever felt that kind of rage, and I fought. I thought my loved ones had been murdered right next to me, so…” He shook his head and moistened his lips while he lowered his gaze.

Kirk took a deep breath. “I can understand why you did what you did,” he finally said, his voice gentle and quiet. “Twice you were deceived, lied to, made to believe your crew – your family – had been killed. And after all you’d been through at the hands of Marcus – the tests, the experiments, but…”

“You’re right!” The super-human nodded, his voice hoarse. “I was starved, frozen nearly to death, infected with viruses and bacteria, just to see how long I could live, how much I could endure. Not to mention the other experiments and… violations. And I had to endure it, or they would have taken other members of my family for tests. I suppose it’s not ‘legal’. But I did not know it then. I woke up in Marcus’ world; a world he spun for me.” Khan hissed out. He hugged his knees back into himself
as if he wanted to shield himself from the whole world. “And then this icy bastard ordered my family killed while I was unable to defend them. They were dead, murdered as far as I knew. The bond between us disappeared. I was so hurt that I didn’t realize our link, weakened due to their sleep, faded due to distance rather than death” His trembling fingers curled into the material of his trousers.

“It was too much for me to bear.” His voice was not more than a breath. “After everything I did to rescue them from war, after all I went through in the hands of Section 31 to keep them safe, losing them in the end was…” He took another deep breath to calm himself. “It was simply too much. I couldn’t think straight anymore – I couldn’t think at all. And I didn’t want to.”

He felt Jim pressing his cheek against him again as if trying to share in the pain. The proximity of his mate – he could say that now – the warmth, understanding and compassion which enveloped him, helped him to fight the pain that had risen from the depths of his subconscious. Well, all of it was welcomed in a way it hadn’t been for centuries.

For a long time, Jim held his lover close – deeply moved and hurting for him. He gave Nien time to come to terms with himself then he took up the threat again. “That’s when you decided to avenge your family.” It wasn’t a question but a statement, and the Augment nodded.

“Mmmm. For the first two days I was in agony. The link I no longer felt, physically hurt. I stayed in an abandoned flat in London until the pain abated – until the rage was not so hot.” He had hesitated before he murmured, “It didn’t. It was only replaced with emptiness and cold hatred replaced burning rage. That was when I began to plot my revenge. It was strange. Everything I did, all that I planned was… It was as if I was watching myself from a distance. It didn’t stop me from ensuring that I made them pay – everyone who held my heart out of my reach. I knew that I would die in the process, but I was determined to take as many murderers with me as possible.”

Jim bit his lips. “So it was – a one-man war.” Their gazes met – Khan’s with a hue of hope that someone finally understood and Kirk’s full of compassion but also sadness. “Nien,” the young officer continued gently. “I know the damage that grief can do and that there comes a point you don’t care about the outcome, but there were many losses at the Archive in London.”

“Losses?” Nien frowned. “Kirk, I’m certain you saw the pictures. Did you not notice? There were no victims outside of the Archive.” Khan’s voice was soft. “Security cameras must have images of the scene as I left. Jim, there were no bodies, no casualties.” He watched his beloved hesitating. “Why do you think there were…?”

“There were forty-two victims,” the captain cut in. “Forty-two, Nien!”
“Yes. And they all belonged to Section 31. Not to the civil employees of the archive above the secret facility!” The Augment moved slightly so he could look at Kirk. His gaze was intense. And deep down, beneath the stoic façade and intelligence, lay something like a plea. The man ached to be listened to and believed. “Marcus didn’t tell you and the other of officers these facts, Jim, did he?”

Kirk frowned. “So, are you trying to say that you cleared the streets before the bomb went off?” Khan didn’t answer. “How?” Jim demanded, thunderstruck. If Khan had taken care that he caught no innocent victims in his hurricane of revenge, then Marcus must have known about it and kept it a secret on purpose. Fucking bastard! He had planned to use Nien’s anguish from the beginning to get rid of him and to start the war he longed for without lifting a single finger. They were both Marcus’ tools!

“I have my ways, you know,” the Augment explained. “I was, after all, an asset of Section 31 and Marcus didn’t tell anyone outside of his personal staff who or what I was or that one of his ‘assets’ went rogue. I made a few calls, and the streets were barricaded for a feigned joint exercise; the civil archive was evacuated. Section 31 didn’t think anything of it; they were convinced that a civil exercise was being run.” He watched Jim’s eyes widen, and he cocked his head. “Everything planned to the last detail, but Marcus turned the tables once more by portraying me as a mass murderer of innocent civilians, even as he knew that there weren’t any civilian victims. And that was when he played his card to get his war – you. You joined the game.”

Jim groaned. “So he used us both, pulling at our strings like puppets. He knew exactly how we would react.”

“Yes, he was extremely intelligent. I have to give him that,” Khan growled before he snorted and glanced away.

Kirk assimilated this new information regarding the London. That in the explosion only members of Section 31 had been killed was somehow relieving. Mitigating collateral damage was paramount to Jim – to Starfleet, the real Starfleet anyhow – not Marcus’; morbid facsimile of Starfleet. Still, killing another person while their back was turned, even if they were the enemy, was wrong. Jim bit his lips. Whom was he kidding? He had killed – as Starfleet officer and before that, back on Tarsus IV. He killed only in defense of himself or others, but it was no less bitter. He remembered every death he caused, try as he might to bury it deep in the back most edges of his mind. He rubbed his forehead as if the physical action could tamp down his phantoms from the past.

Khan’s war against Starfleet – a fake Starfleet, Marcus’ perversion of Starfleet – was far more complicated than he thought. There were so many twists. And Marcus played them all into a perfect storm. They all should be glad it wasn’t a bigger disaster than it was. All this because a few men were greedy for power and might, or just scared shitless because of the so-called Klingon threat. Maybe it was worse; they were at war now. Marcus got what he wanted. He just didn’t live to see it the show.
Jim and Khan never asked for the starring roles but nonetheless they got them.

Kirk fixed the Augment, straightening up, not so angry anymore but wanting explanation. “You blew the Archive to eliminate members of Section 31, but you also knew would demand a meeting of the area fleet admirals, captains and first officers,” he said as a matter of fact. “You wanted us all together in one room. We were sitting ducks!”

“Yes – I had to stop them from continuing their work. I told you Marcus’ intentions. He and his staff wanted to start a war!”

Kirk pursed his lips before he stated sternly, “Not all admirals agreed with Marcus’ point of view. Many didn’t even know that Section 31 existed and if they would have taken it down! Chris Pike would have…”

“I told you, Jim, I didn’t know Admiral Pike, and Marcus boasted that ‘all of Starfleet’ was on board with plans to build the Vengeance. I assumed its secrecy was based on operational security reasons. There was no way I could know that Section 31 operated in secret. I woke up in Marcus’ world, the one he wanted me to believe in. I stayed believing he’d kill my family. All flag officers were guilty as far as I knew, they either agreed with Marcus and the work of Section 31 or, buried their heads and ignored the inhumanity against my family and me. Tell me, would you have thought otherwise if you would have been in my place?”

The young captain didn’t think long over the answer; Khan was right. He would have assumed the same. “Still I wouldn’t have fired on people if I wasn’t sure of their guilt – if I decided to meet out my own judgment at all, but I don’t and you already know that about me. Well, except for Qo’noS.”

“Yes, but that was personal. I understand that.” Khan paused for a moment. “At Daystrom, I was sure of the admiralty’s guilt. In the world Marcus painted for me, how could I have come to any other conclusion? But I assumed that lower-ranked officers weren’t informed of Marcus’ plan. In my time, flag officers kept their secrets among themselves, that’s one thing I know hasn’t changed in three centuries. That’s the why I didn’t torpedo the conference room. I took aim only at those who wore the uniform of an admiral or a commodore.”

Jim blinked. “What?”

Khan cocked his head. “Do you really think, you, your Vulcan or the other captains would be still alive if I had wanted you all dead? I hit one man unintentionally. He moved between my sites as I
was taking a shot.” He lifted on hand and cupped Jim’s face. “I had you in my sights twice, but recognized your insignias as that of a commander and didn’t pull the trigger. I am thankful for that decision. Had I done things differently, I would have never met you and would have missed the only real happiness I ever found in my life.”

For a long while, the officer was lost for words. God, this was all so fucked-up! “Then I owe you my life, again,” Jim finally murmured.

“After I threatened it, you mean?” There was a hint of a smile on those well-curved lips.

“ Seems to be a pattern with us, doesn’t it?” Kirk replied with a twinkle in his eye.

“Mmm, yes. But…When I saw you on Qo’noS I knew I’d found the only person in all of Starfleet who might hear me out. The moment you accepted my surrender on the behalf of a man you called ‘a friend’ and then took your hurt out on me for his death, I knew that I’d found a soul that hurt as mine did. There was something in your eyes, despite your sorrow and wrath that told me I could trust you.”

He slipped one arm around Jim’s waist. “But you turned on me, on the Vengeance. I can’t say I blamed you. But I didn’t see it coming – and that is a rare thing. That was how much I trusted you. Even so, when I was in your apartment, I realized that I wasn’t wrong about you. You have honor, James Kirk, and a depth of compassion that is rare. I never believed in kismet, but I may be ready to. You are the one, in all my time who understands me, who doesn’t see the monster.” He took another deep breath; the familiar scent of his beloved soothed his nerves and fears of rejection. “And I am so sorry that you had to suffer the loss of your mentor because I lashed out in anger. I couldn’t fight Marcus any other way; I didn’t know how. I didn’t have you. And it broke me.”

“I know,” Kirk whispered. “I know that now.” And he did. Kirk understood the difficulty it took for Khan to admit his weakness and his need. Only once had he seen the Augment so flayed open. He gave his lover a short, soft kiss. “Shit!” he whispered. “This is so fucked-up! The ones responsible are dead or will deny anything you say. How the hell will we get you out of it as a free man?”

Khan was thunderstruck. “We. You want to…what?”

Jim sighed and nodded. First, in sadness that Khan would be surprised that he wanted to help him through this – be with him and see him through it until the end and whatever came after for them. And he sighed knowing he was walking into yet another no-win situation as was his way. He was no fool. Khan was a convicted criminal, and his rampage cost many lives. Still, the Augment could not be held wholly responsible for those events. Kirk knew what it was to be driven to desperate
madness. His capture was still so fresh in his mind. Without Nien’s intervention, the Klingons would have forced him to his breaking point. He didn’t dare imagine what would have become of him then. Khan had been pushed and pulled over that line too many times. It was a miracle he maintained his sanity after all he had endured – and that he could build something real and true with Jim.

These last days as Khan threw his focus into Jim’s care, well, they’d shown him the man Khan truly was. Not who he could be, but who he was meant to be. The world just needed to see it.

This world, this century had denied him so much. Marcus woke him because of his natural savagery and used him just as those who built him had. He only sought to defend those he loved at his own cost. He had been met with threats and violence every step of the way. No one listened to his pleas, no one saw him for the person he was, and no one had considered his feelings. His feelings were so much more intense than those of ‘mere’ humans; it was no wonder he finally snapped.

Anyone with a spark of compassion would give Khan a second chance – Pike would have given him a second chance. Jim didn’t doubt it.

Pike…

Christopher Pike; the man held a saving hand over Jim even when he’d messed up. Pike had always considered both sides of a thrown coin, bore unique understanding, and always found the right words so that other could see another perspective.

For just a moment, sorrow rose in Kirk as he thought back to Pike. He still missed Chris; his senseless death left a scar on the young man’s soul. But the sadness, the anger was different now. It wasn’t directed at Nien anymore – the insanity of that one night in San Francisco and these last days eased the way to directing it where it truly belonged. The one responsible for Pike’s early grave was the one who brought him to Starfleet in the first place. Marcus! And if Jim were honest with himself, his eyes began to open the when Khan came to the Enterprise.

Jim had done just as Pike had done for him; he listened. He listened in the brig as Khan told him why he blew the archive, and he listened when the Augment told him of Marcus’ plans. Kirk made up his mind later – and sealed the decision that night in San Francisco – throes of pleasure notwithstanding. But it was Kirk’s own compassion that opened his heart. And now that he knew the Augment’s story, he couldn’t excoriate the super-human. He stopped damning Khan the moment he saw him kneeling on the floor, sobbing in relief at his family’s survival. No one who loved this deeply could be evil!

Now, after Kirk had come to know this dangerous, beautiful, breathtaking man, he found himself
unable to the past against him. Khan’s rampage was the logical outcome of Marcus’ puppeteering. No more, no less. It was a damn good thing Marcus was dead. Otherwise, Jim would go after him, himself – and Kirk didn’t want to think how far he would go for Khan. He was not one for vigilante justice, but here, for this man, it felt right.

For the uncounted time, Jim sighed again and leaned his head against Nien’s shoulder looking out over the peaceful, uncaring lake.

“I want to get you out of this, Nien!” He declared his intentions to an astonished Augment. “The real criminal was Marcus, not you. Sure, you snapped, but that’s what he wanted. Hell, even Spock lost his control trying to take you out. We all have our breaking points, and Marcus counted on yours. Your rampage is on him, not you. Marcus is the villain, not you or your family. I don’t know what happened during the Eugenic Wars, but I’ve watched you save people over and over again, I can’t imagine that you are a warmonger. No one can hold your past against you because there isn’t enough proof or even jurisdiction. It’s your word against a lousily documented history. The presumption of innocence applied to you and your people.” Jim touched Nien’s cheek so he could look him in the eye. “You’ve been through more any human should. Marcus ensured your breaking was not a question of ‘if’, but ‘when’. Any good lawyer can…”

There. Jim did it again. Never hesitating to call him human, a person. “The Vengeance…” Khan began, knowing that he would introduce another issue that could turn Jim away from him, still he wanted to put anything on the table. Here and now! It would be the best for both of them. But Kirk’s answer managed it to make him do something that was rare like a black pearl: He gaped.

“The Vengeance?” Jim grimaced. “I know that she wasn’t maneuverable after the torpedoes detonated. I talked to Sulu, Chekov and Spock. She fell to Earth like a stone and the heat from passing through the atmosphere only damaged her circuitry more. That she didn’t explode is almost a miracle. It could have been so much worse for San Francisco, but you couldn’t prevent it even if you wanted to. Khan, cameras recorded and thousands of witnesses stated that she altered her course. First, she headed for the Academy in Sausalito and the dozens of universities there, and then she changed her course to the sea before she crashed into the harbor.” He locked eyes with Khan. “There can be only one explanation for her altering course. Someone steered her manually – and you were the only person alive aboard.” He cocked his head. “You saved thousands of students and…”

“I ordered her to fly into Starfleet Headquarters,” the Augment heard himself saying, shocked that he revealed this horrid detail, but he wanted to tell James the whole truth. But again, the fear of rejection from the man he loved was bitter on his tongue – more so than the truth. And it scared him more than the truth. But it had to come out – it would come out someday. If it didn’t, if he even omitted the truth, Kirk would turn away from him.

The young captain fixed him, not surprised – not really. He knew Khan well enough to understand how the man ticked. “I know why you did it – for the same reason as you blew up archive in
London.” He took a deep breath. “Jesus, you were so far gone.”

He saw a glimpse of something in the sea-colored pools. Something that reminded him of rue – regret and sadness. Well, if the Augment felt remorse, it was the signal Kirk had looked for.

“You gave an order that couldn’t be followed anymore. And if you hadn’t tried to steer the ship manually, the outcome would have been devastating. The *Vengeance* would have crashed right into the universities. It was the middle of session in the middle of the day. The place was packed. The casualties would have been enormous if the *Vengeance* wouldn’t have altered her course. You wanted revenge, but you saved innocent kids. Maybe that means something to you.” Kirk uttered that last sentence quietly, and Khan felt a sharp pang in his chest.

For a long moment, he only stared at Kirk, relieved that his temporary insanity had somehow been a blessing, but there was a nagging feeling deep in him. In his anguish, he wasn’t thinking clearly as he set a new course for the *Vengeance*. But he never intended to bring death and destruction to civilians. He was shocked to the core when the *Vengeance* finally came to rest, and he saw the catastrophe the dying ship had caused through its torn-open hull.

Until now, he had thought that he was responsible for it, but it seemed fate had intervened again.

“The deaths in the harbor are bad enough,” Jim continued, “every victim was one too many, but the ship falling wasn’t your fault.” He lowered his head. “I talked with Spock about it often; after all he gave the order to use the torpedoes. But neither he nor anyone else could have anticipated that the *Vengeance* would be caught in Earth’s gravity.” He looked Nien straight into his hopeful eyes. “You could have ordered her to fly to Yellowstone Park, to the Pacific Ocean, or to Hawaii – she wouldn’t have done it. The computer wasn’t in charge anymore; our technicians figured it out after they took her apart. What happened was awful, but it was inevitable. That you somehow managed to steer her manually, saved countless lives.”

Khan bit his lips. Had he done that? He had no clear memories of those minutes on the destroyed bridge. His enhanced mind and memory let him down. Everything was a haze of white hot pain.

“I finally thought I had my family safe in my care. And then they died, and I had to watch it in a blazing inferno. I… I was mad with pain,” he heard himself saying; a part of him cringed, demanding a lie to protect himself. He found himself unable to do so. “As the *Vengeance* was falling, I realized I was above California, and I ordered her to fly to Starfleet Headquarters.” He saw Jim stiffen, and he had to turn his head away. For the first time, he was ashamed – and hid. “The computer told me that the destination was – maybe – not attainable, but I confirmed it nonetheless. One course was as good as another.”
He moistened his lips; his heart beat painfully slow. “As I came through the clouds, I knew the ship headed for Sausalito – the universities. The automatic controls failed, so I punched another course into the Nav computer, and then the Vengeance wasn’t reacting anymore.” He bit his lips. “Then I recognized that the ship was about to land in the water. I was… almost relieved; I wanted to die in that crash – share in my people’s fate. The next thing I knew was that hell broke loose and that I was hurled through the bridge, paralyzed for a short time. I came around and realized that I was still somehow alive; I went to the hole in the hull and saw what happened.”

An icy shiver ran down his spine so intense that Kirk felt him tremble; he squeezed the Augment to remind him that he still had him. Kirk was quiet, but present for him. Then he spoke again – no malice, just a statement. “You were ready to destroy the whole Headquarters.”

“You were ready to destroy the whole Headquarters.”

“Yes – the source of all that went wrong for me and my family.” He lifted his gaze bracing himself for the loathing he expected to see in Jim’s eyes. Kirk knew what Khan expected. ‘When will Nien believe that I’m with him – for him?’ Jim worked to radiate calm and to show the love he felt.

“I never intended to crash into a city full of civilians!” Khan continued nearly pleading for understanding. “I am no monster. Even if the humans have mistreated my kind over and over again, I can’t, I couldn’t kill innocents, but…” He stopped and shook his head; his voice echoed with despair, self-loathing, and bitterness. Closing his eyes he waited – waited for Kirk to turn around and to walk away; to tell him that he despised him for what he tried to do. He braced himself for the hurt and for the cold emptiness his James’ abandonment would cause him. It didn’t.

Instead of being confronted with disappointment, disgust and wrath he suddenly felt two warm fingers beneath his chin, “Nien, look at me – please.”

Feeling the irrational need to collect his courage, the super-human did as his beloved asked; he felt a tight knot in his stomach as he glanced at the younger man.

“What you tried to do. No one can find out …”

“The computers must have recorded my…”

Kirk interrupted the Augment firmly. “No, you don’t understand. No one can find out. There are no records left from the bridge. The main computer was destroyed in the crash; the records are irretrievable. No one knows what you planned and no one will. What they do know is that the Vengeance altered her course sparing the university center and the Academy. Even this information is not officially known. Starfleet only released that a prototype of a new ship came down into San Francisco Bay following a malfunction. Starfleet investigators and the Federation’s independent
investigators don’t know what happened after you had beamed Carol, Scotty and me back to the *Enterprise* and Spock sent over and detonated the torpedoes."

Khan swallowed. “You know the truth, James, and that matters to me.” He forced the next question to his lips; his augmented mind protested the fear that filled him. “How can you still look at me and not loathe me? I was…”

“Do you regret it?” Jim interrupted him slowly.

The super-human went still and for a long moment he didn’t answer; then he whispered, “There are not many things I regret, but that all those people…”

“There was no chance to prevent the disaster because the *Vengeance* helm control was no longer operational. I don’t mean the fuckin’ crash Nien, I mean your attempt.” Kirk said calmly, and Khan remembered his beloved’s words from the morning: ‘It’s the thought that counts’.

“I know now that Section 31 was an unsanctioned department and that they killed hundreds of men and women who had no part this,” Khan answered slowly, his voice hoarse. “I should…I wish I’d had more foresight, the ability to reason.”

Jim sighed. “Exactly! It’s a good thing the crash wasn’t your fault.” He brought his hand up to stroke through the dark, silken strands tousled by the wind. “You can’t do it again. You can’t lose it when the outcome is not the one you want.” He lifted a hand as Khan started to protest. “If we are going to do this, if we are going to get the fuckers, you need to keep it together. I need you for this…And…I need you. I know you thought they killed your family. You were abused, violated and…” He stopped as a horrible thought rose in him. “You said violated, do you mean…” He couldn’t say it. The thought was too cruel to finish.

Khan kept his stoic façade, but the flash of defiance, pain, and hate in his eyes told Jim everything.

“No,” Kirk breathed, feeling as if he would lose the contents of his stomach. “Oh fuck, no!”

“If there really is a higher power, it wasn’t watching over me when Conelly came to my cell to show me who was ‘stronger’. He used me after Section 31 starved me and froze me half to death for their ‘experiments’.”
Jim shot up like an arrow shot from a bow. “Conelly? Nathan Conelly?” he yelled, shocked.

Khan lifted both brows and looked up at him, surprised. “Yes.” His eyes narrowed. “You know him.”

Kirk didn’t listen. He could only look at the Augment in utter disbelief. His blood boiled and rushed in his ears. “That… That fucking, wretched, perverse, dirty pig! Talking about you as though you aren’t a person, calling you prisoner-what-ever-number, but raped you?” Jim’s face was red with rage now; he felt a sudden urge to tear something apart. The feeling wasn’t new to him, but it’s been a long time. “That cold-blooded, sneaking bastard! Thinking he’s better than you and doing that prove it! How dare he! How could he possibly do that to someone who’d already been subjected to... As far as I’m concerned an illegal conviction and even more illegal experimentation? Fucking coward, lower than dirt little shit! If I ever see him again, he will pay! Hear me?! I will make him pay for what he did to you! I will beat him to a bloody pulp and drag his ass to trial, so...”

“No, you won’t!” Khan interrupted the furious tirade that was a solace for him – someone in his corner, he supposed the saying went. He couldn’t remember the last time anyone defended him, not since he was separated from his family, but this could be dangerous for his James. He wouldn’t allow it. Gracefully, he rose and held Jim’s shoulders. “You will not accuse him and drag his ass to trial, because then you would have to admit how you know what you know, and that would reveal our contact. They’d know that you did nothing to facilitate my arrest.”

“I. Do. Not. Care!” Jim gritted out. “This asshole raped you, for God’s sake, and got away with it! He has to p...”

“He didn’t get away with it completely. Even Marcus had his line; he transferred Conelly to another project for disciplinary reasons. I was never threatened by him again.”

“Wrong!” The blue eyes of the young captain blazed. “Conelly is the assistant to the scientist who ran the tests on you in the LSH-lab in Nevada – Professor Dashwood. All that time you were half-conscious in your cryotube, Conelly had his filthy hands on you. He let you suffer and pretended to be a human when he is nothing more than an ice-cold, unfeeling, brutal monster!”

This time Khan went rigid. “He was...? He belongs to...? How do you know that? Did you meet him?”

“Yeah, I had the ‘pleasure’ of meeting him and his boss in Barnett’s office. Barnett called Bones, Spock and me to bid us farewell for our mission and there we met those two buggers. Both were eager to get you back for testing. Some serums – they said for most known diseases. Jesus, that...”
means you were probably infected with them too.” Jim had to stop at the thought, and Khan stayed silent. Kirk went on, “He, Conelly, kept calling you a subject,” Kirk spat. “I thought I was gonna lose it then and there. It wouldn’t have taken much more. I didn’t know you then; not like I do now. I was still…I was confused – by you; by my own actions. For not contacting Starfleet the minute, you were gone. I thought I made the wrong decision. But when I met those two disgusting freaks, I was glad that you ran, glad you got away.” He tried to regain some of his composure, but that was easier said than done. “If I had known about Conelly then – what he did, I’d ’ve beaten the shit out of him, there. Unbecoming behavior be damned!”

“What happened to him – him and Dashwood?” Khan hissed; wrath flashed in his eyes.

Jim took a deep breath. “Barnett wanted to put them on trial for running illegal experiments on a human – you, but I don’t know if anything came of it. Conelly should rot in prison until the end of his pathetic life for what he did.” He closed his eyes in an attempt to reign in his emotions; then he wrapped both arms around the Augment. “I’ll get him Nien; I promise!”

The super-human didn’t immediately return the gesture, but he laid his head on Jim’s shoulder. “You risk your career, your ship, and your freedom if you try to take him on,” he clung to Jim tightly now, held him close. “You would have to tell the judge how you know about this all, and I don’t think that even your Admiral Barnett could you get you off the hook for withholding information on a wanted man.”

“That has to change,” Jim murmured; he buried his face in Nien’s neck. The scent, the proximity to where he marked him, soothed him. “‘There are always possibilities’ Spock told me once, and I don’t believe in the no-win scenario,” he mumbled; his voice muffled, speaking almost into Khan’s skin. “And even if it grates on me that we agree; that he is usually right, I have to admit it makes me hopeful.” His hands wandered over the firm back of the Augment. “You deserve a second chance. If Pike were still alive, he’d give it to you. He gave me my second chance, and I was as lost as someone could be.”

“It’s easier to forgive a very young man some foolishness than to give a man like me a second chance,” Khan stated flatly. “In their eyes, I’m a mass murder and war criminal and…”

Jim lifted his head again, still feeling nauseous and outraged, but his fury was about to change into new determination. “You are anything but a war criminal, Nien. You are a hero. You saved the whole population of Tammeron; you saved the Lexington; you saved me; you saved my friends with your device you gave them! You saved those people on the outpost! You can’t count how many people that adds up to! I want to make the world see you for who you are really.” His fierce gaze was locked with the blue-green windows of the super-human’s soul. He continued, “I am confident that anyone on that outpost will take your side, as well as the people of Tammeron. Hell, Bob will support you, I’m sure! You should hear him talk about ‘the daredevil’ who saved him and his crew…”
“I didn’t help to gain favors, James.” Khan interrupted him softly and earned a loving smile for it.

“I know – and that makes a difference. You, Khan Noonien Singh, are a good man – and I will move heaven and hell to show this the rest of the world!”

“Jim…” Khan chuckled; there was a sad undertone in his voice and he pressed a gentle kiss to his beloved’s forehead, amused and touched by his mate’s naïveté. “Do you really think you could succeed? The world only sees what it wants to see and…”

“And I will make them want to see the truth! The world needs and loves heroes – you’re one!” He pressed closer to the Augment and scrunched nose in thought. “Nien, why did you save the Lexington? You said earlier that you hated the staff officers, yet you risked your life for Bob.”

Nien smiled; then he sighed. “You will not let it rest, will you?” As Jim merely shook his head, the former dictator gave in. “You told me that Pike was like a father to you. He died because of me. I understand Commodore Wesley is like Admiral Pike. That he filled the hole that Pike left. I cannot give you back your friend, whom you loved. But I realized that I could prevent your mourning another loss. So I decided to interfere by kicking some Klingon ass – as you say.” Khan concluded the sentence with a quirk of his lips and an eyebrow rose.

Any other time Kirk would have burst out laughing at the Augment’s use of the casual phrase with apparent distaste in his voice – just like Spock. But it hit him; Khan faced death to spare Jim grief.

“You… You did this for me?” Khan’s silence spoke volumes. “Why?” he asked, barely audible. “We weren’t exactly lovers at the time. You could’ve been found out. Why’d you risk it?”

Khan gathered his thoughts before he answered, “As you know, I am quite acquainted with the agony that accompanies the loss of those you love. Twelve of my people did not survive our escape from Earth; eight cryotubes failed. Four men and women fell prey to Marcus’ greed and determination to force my hand. The pain of their loss – it will never leave me. After all you did for me and… After I learned what kind of man you really are – I did not want you to suffer like that again. If there is one person in this whole universe who does not deserve that pain – that anguish, it is you, James.”

Jim felt a lump rise in his throat that he swallowed down with some effort. This damn manipulative, beautiful, bold and fierce man had turned Kirk’s life upside-down. He rescued his friend for the sole reason of sparing him pain. And then he risked his own life to save Jim.
The young captain didn’t know what to say. Gratefulness was only one of the emotions whirling through him. There was also warmth, a deep affection – and that jarred him. He wanted to tell Khan how much he appreciated his selfless act – how much the life of his friend and the sacrifice the Augment had been ready to make, meant to him. But his brain stuttered over the right words.

And so he did the only thing that came to his mind: He leaned in to close the short distance between himself and the Augment and closed his lips over this soft, plush mouth. After the turmoil of the last half hour, after all he learned during this time, the show of tenderness eased the stirred-up emotions of sorrow, shock, fury and hurt. He held Khan close. He wanted to shield him, to protect him, to fight for him until the whole universe saw how wrong they all had been about this special man! Above all, he wanted to be beside Nien – wanted to make him forget all he had been through. He wanted to kiss away the anguish and the cruel memories. He wanted to make up for what this century had done to him.

They stood there, bare-footed at the lake, wrapped around each other. Jim knew that he would walk with his lover till the end. He could still feel Nien hurting inside as if it were his soul that was bleeding. The world could be cold and hard, turning the kindest heart into stone, but the Augment fought against it. It tried to steal something he was accused of not having. In truth he had more of it than the most. He was filled to the brim with it: Humanity.

Kirk would protect it, cherish it, and make the world see it no matter the cost…

**ST***ST***ST**

“Hold still, man!” Dr. McCoy carefully laid one hand on Crewman Parsons’ shoulder who grimaced painfully. “I know it hurts, but if I don’t treat this wound quickly, it will get infected.”

The Welshman grimaced but did as instructed while the CMO cleaned the injury at his right forearm. Several of his colleagues stood around him and watched the procedure, concerned. Even Scotty’s pointed gazes, bidding them return to their work, didn’t move them.

It was just a minor accident. Crewman Parsons slipped on the ladder leading to one of the coolant tanks. He steadied himself at the very last moment with a hand on the rail, but he fell against the stairs, injuring his arm in the process. Within seconds a few crewmates were with him, another called for Scott who immediately raced to the unlucky fellow. Another one contacted the med bay. McCoy was on duty and hurried down to the Engineering, medical kit in hand.
The wound wasn’t deep, but it bled a lot, the flow lasting several minutes until the doctor had been able to stop it. Marvin Parsons was pale and obviously in pain, so Leonard quickly injected him with a painkiller before treating the injury. The Welshman cursed in a tongue McCoy assumed to be Welsh and smiled in sympathy.

Scott cleared pointedly his throat, and Parsons grinned sheepishly. “Sorry, Commander.”

Montgomery rolled his eyes and met McCoy’s asking glance. “You don’t want to know what he said, Doctor, believe me.”

“You understand Welsh?” The CMO sounded curious. “And there I thought you only spoke English and Gaelic.”

Promptly Scotty laughed. “There’re different Gaelic dialects all closely related. The Welsh are speakin’ P-Gaelic; the people in North Wales are easy ter understand fer us Scotts.” He bent down and padded Marvin on the shoulder. “Cheer up, lad, ya’re getting’ one or two days off.”

Parsons sighed. “Believe me, Sir, I would rather have a double-shift.”

His shipmates and Montgomery laughed quietly while McCoy rose. “All right, Mr. Parsons, off to the med bay. The bleeding has stopped, and I bandaged the arm, but I’ll have a closer look at it in a day or two. In the meantime, if it burns, turns red, anything like that, you tell me.” He began packing his medical. “Miss Shepard?” he referred to a young engineer who tore herself away from Parsons and to look at him.

“Yes, Doctor?”

“Please accompany Mr. Parsons to the med bay, I will take Scotty’s report for the records and follow.”

Montgomery pursed his lips and suppressed a smile. It was an open secret that Shepard and Parsons like another, a lot. The rumors had already reached the med bay. And as he caught Leonard’s smirk as he watched the two heading for the exit, Scott was sure that the rumors were already a hot topic here.

“Thanks, Doctor,” he said. “After the shock the two need a moment to themselves.” He glanced at
the walking couple one time more; then he stopped short as he saw the smirking faces of the others. “What’s the matter with ya, ladies and gentlemen? Do ya’ve nothin’ to do? Back ter yer posts! Now!”

Without any protest, the others obeyed, discussing the accident quietly as well as the obvious relationship of Shepard and Parsons. Scott shook his head. “Chatterin’ as if they were in the cafeteria and not at work. I swear, sometimes they’re like children!”

McCoy chuckled and closed his medical kit. “So, you speak more than one Gaelic dialect?” he asked while he rose. “I didn’t even know there were different dialects.”

“Aye, there’re! Irish, Scottish, Welsh and then all the other Nordic languages, like Icelandic. The latter is much different, but some words are even to find in Gaelic.” He accompanied the CMO as McCoy headed for the door. “We Scotts are proud that Gaelic is still a spoken language. It’s even taught at school – as an elective course. You can also learn Old English, the runes and literature, ancient culture…”

“Runes?” Bones shook his head. “Who, on Earth, still wants to learn runes? Right, historians maybe, but…”

Scott sighed. “Our history is very turbulent and shouldn’t be forgotten in this world of interplanetary alliances. Many texts from these times are in runes and…” He stopped, and his eyes widened. “One moment, my relays are working.”

McCoy frowned. “Your ‘relays’?”

The Scotsman began to beam. “Yes, now I remember where I heard the word ‘drythen’! In an old Nordic rune poem; a rhyme for every rune.” He laughed quietly. “I learned it in school, but I guess I forgot it. Wait, if I can get it!” He thought for a moment intensely; then he cleared his throat, took a deep breath and cited with an intense tone in his voice,

“Byþ on myrgþe his magan leof. Ceal þeah anra gehwylc oðrum swican. For ðam drythen wyle dome sine earme flæsc eorðan betæcan!”

McCoy stared at him. “Very nice,” he commented wryly. “And what does it mean?”
A low chuckle escaped Montgomery. “Oh, it means ‘Human is mirth to the beloved kin; he shall though each one deceive, when the Lord will doom this miserable flesh to be entrusted to earth’.” He continued his way, while Leonard followed him. “From this rhyme I figured out the name Sunrise also uses,” Scotty smiled. “‘Drythen’ is an old English word for ‘lord’ – or ‘king’.”

Bones lifted both brows. “So ‘drythen’ means ‘king’?”

“Yes, or ‘lord’. A warlord could also wear this title and… Doctor?”

The CMO stopped in his tracks; his eyes went wide as saucers, his face white as snow. Leonard didn’t hear Scott’s question. His world narrowed so that he didn’t take notice of anything around him. All of his thoughts focused on what he had learned seconds ago, and his bright mind wove the single strands of information into a strong cord.

Drythen – king – and king meant…

KHAN!

McCoy had the particular feeling that someone had pulled the rug out from under him. Icy fear ran down his spine.

Drythen was the old English word for king and the title ‘king’ translated to ‘khan’.

Sunrise was Khan – and Jim was with him right now – had been for days.

For a moment, something close to panic rose in Bones; then he called himself to order. First, the homogeneity of the names was a big hint but circumstantial at best. Second: Sunrise had saved Jim, had taken care of him. So if Drythen was really Khan, the Augment must have an important reason to take care of Jim.

Still, Jim could be in serious danger if Khan were with him. No one knew what the super-human was up to but they all knew how quickly he could snap. No one would ever forget that.

Bones needed proof – now! And he already had an idea how to get it.
“Doctor? What’s the matter? Yer pale like a ghost,” Scott asked concerned, laying a hand on the CMO’s back.

McCoy looked at him without actually seeing him; then broke into a run towards the exit. “I have to go!” he said and heard Montgomery calling,

“And what’s about the report?”

“Later! Send it to my office!” Bones had shouted over his shoulder before he bolted out of the exit as if the devil was on his heels.

Scott stared dumbfounded after him; then he stuck his fists on his hips and shook his head. “Sometimes I think a doctor's need for a physician is greater than their patient's.” He sighed, turned around and heard something above him. Groaning he rolled his eyes. “Keenser, come down from there. One accident at day is more than enough!”

The small alien looked down at him from his place high on one of the pipes and blinked. He may not have understood everything his friend and the CMO talked about, but he had sensed the fear and the shock in the doctor.

Something happened – and Keenser simply knew that it had to do with the captain…

TBC…

Chapter End Notes

Surprise or not surprise? It’s Bones who gets the right idea about ‘Sunrise’s’ identity. And, of course, our dear doctor will act on this in his very own, special way…

I also think it was about time that Jim and Khan spoke about the events that happened before (during STiD) and especially about Pike and the Vengeance. If you watch the course of the Vengeance before she grazes Alcatraz you can see her changing her course the slightest bit. I thought it could be because someone tried to steer her and that
gave me the idea of taking the blame away from Khan. I hope you like it – as well as his own story. I imagined how Marcus must have deceive him in the beginning before he let his mask slip and showed his true face to the man who was still recovering from a culture shock. That Marcus ran tests on him is clear and to use them to force him into service seems to be logical for someone who thinks like Marcus did. And I guess there are a few of you who want to kick Conelly's ass even more now.

In the next chapter Bones finds the proof of his assumption that ‘Drythen’ is Khan and, like I said earlier, he going to react on it in his own, very typical way. And this will lead to more…

I hope you liked the chapter and I’m very, very curious for your thoughts about it.

Until next week,

Love

Yours Starflight
Revelation

Chapter Notes

Hi, my dear readers!

Thank you so much for all the Kudos and comments, and referring to the ‘silent’ readers: Thank for staying loyal to this story. When I see, how many ‘hits’ the fiction has, I simply know how many of you have taken a big liking to it.

And thanks to the quick work for dear Rhiannon, I’m able to give you a kind of early ‘New-Year-gift’, because – voila! – here is the next update.

After McCoy is well on the way to reveal the true identity of ‘Sunrise’, you certainly all more than curious what will come next. I think you will LOVE this chapter (*smile*).

Have fun,

Yours Sunrise

See the end of the chapter for more notes

22. Chapter – Revelation

McCoy stormed into the med bay. “Geoffrey!” He gestured to Parsons, who had already arrived, to sit down on the bio-bed; Shepard remained at her colleague’s side. Dr. Geoffrey M’Benga emerged from the lab, alerted by the CMO’s shouting. Before he could ask what the matter was, Bones pointed at the young patient. “Accident in the Engineering, take care of him. I’ve got another emergency!” Without waiting for an answer, he hurried to his office, closed the door behind him and locked it.

He was at his desk in a few steps. He sat down and took a deep breath to calm himself. The attempt failed; his heart beat like the hooves of a galloping horse, and he shivered. If this Sunrise was Khan, then…

Well, what ‘then’? Jim was with him; that was certain, but was his friend in danger? Any other time, Leonard would have answered this question with a resounding “YES!” But new information came to light that made Leonard doubt himself – and perhaps Jim’s sanity. Hell, who was he kidding? He doubted Jim’s sanity on a daily basis.

Like now. Jim must have known ‘Sunrise’s’ identity. He sounded tired as he spoke to them
following his recovery, but he had also sounded relaxed, even comfortable. How was that possible! He was in the presence of the man responsible for Pike's death. Khan had taken Kirk hostage and attacked the Enterprise. He was responsible for Kirk entering the warp core where he sacrificed himself to save his ship and his crew. Still Jim had obviously covered for the Augment. 'That can only mean he doesn’t see the Augment as a threat – not anymore.' Leonard thought.

But why?

The new information made no sense, but seemed the only logical conclusion. Damn, he was sounding like the Vulcan. Before he could take action on the new information, McCoy had to make certain that he was correct regarding Sunrise’s identity.

He stared at the computer screen while he carefully reviewed all that happened with the mysterious stranger in the last days. One detail stuck out in his mind: Sunrise’s transmission after Kirk had been left on Turkana and how furious he was when he learned of the young captain’s fate. There was something vaguely familiar in the way ‘Sunrise’ spoke – no miracle if this member of The Shadow was indeed Khan Noonien Singh. Still, the reason for his outburst made just as much sense as Jim’s obvious attempt to keep his rescuer’s identity a secret. That is, none at all.

McCoy pursed his lips. Uhura had tried everything to backtrack along the computations that scrambled the man’s voice in order to find the original, but it was no use. From what Bones gathered from Uhura’s explanation, ‘Sunrise’ had synthesized his voice several times and then encrypted the computations so that even the ship board computer couldn’t undo the alterations. Clever, brilliant even, she’d said. ‘Just like Khan’ he thought. Leonard was hell-bent on seeing through the Augment’s game and discerning his intentions towards Jim.

Leaning back in his chair, the CMO pondered how they could reveal Sunrise’s face. The conversation left no doubt Sunrise knew them well. Uhura said she couldn’t identify the voice because of the layers of data over the original transmission, but what, if…

Reaching for button to hail the bridge, McCoy spoke quickly to the lieutenant on duty at the comms station. The young man confirmed Leonard’s request without hesitation. If he thought anything of McCoy’s query, he said nothing; a CMO always had special status. Half a minute later Bones got the data he needed.

He listened to the recording of Sunrise’s transmission paying close attention to the heavily altered voice and his and Spock’s answers. Pressing his lips into a thin line, McCoy nodded grimly. Hell, he would bet the bourbon in his quarters that the mysterious man and Khan were one and the same person.
Bones took another deep breath. Familiar… He knew it was Khan, but why did he know it was Khan? On a whim he decided to play the security footage from the first time he had Khan in the med bay. Christ, he’d hoped he’d never have to see or hear that man again, but maybe seeing it – hearing him would shake something loose in his memory. “Computer, give me security footage from camera 1, med bay, star time 2058.0812.” A moment later Khan was on his screen. He sat on a bio beds, wrists cuffed, back rigid, posture absurdly straight with security on either side of him. McCoy scanned his vitals and murmured something about their moving at least. The Augment answered with a dark suggestion that no one was really safe.

“Computer, stop!” Bones ordered and leaned forwards. “Computer, replace the voice of the incoming transmission of star time 2059.1028-17 to the voice of the speaker from transmission star time 2058.0812-45.”

“One moment, please,” the board computer’s feminine voice answered as it fulfilled the requirement. “Order accomplished.”

“Play back!” Leonard said; anticipation knotted in his belly.

The computer complied with the imitated voice mimicking Khan. It was too close for McCoy’s comfort. “I know who you are, Vulcan! Where is Kirk!?” the deep baritone sounded, and McCoy held his breath with a sinking feeling in his gut.

“I am sorry to tell you that Captain Kirk isn’t aboard, Sunrise. He is still on Turkana.” Spock’s voice answered, followed by a tense “Have the Klingons arrived?” the mysterious stranger asked.

Again the Vulcan spoke, “Yes, over an hour ago. The captain stayed behind to help a woman and her children flee. He ordered us to leave.”

“You… left him?”

“We had to activate the deflector shields and leave immediately. The Klingon fleet commander gave us an ultimatum and Captain Kirk gave us an order…”

“YOU LET HIM DOWN?” ‘Sunrise’ roared and Bones ordered the computer to stop. He heard enough. The last outburst left no doubt: Sunrise was Khan!

McCoy moaned and rubbed his face. “Sweet Lord, Jim, in what have you gotten now?” he whispered, feeling dizzy with worry. Jim was with the Augment – the very same man who had
sworn revenge against them all. Heaven alone knew what the super-human was doing to the young captain right now, making Kirk pay for his defeat and anything else that happened following his capture. The thought made Leonard sick.

But again, something was off with that train of thought. Why had the super-human been concerned about Kirk’s well-being? Bones remembered Sunrise’s rage very well. Was it been real fury born out of worry for the captain or was it a part of a larger plan? McCoy firmly ordered the computer to continue, and a moment later the Augment’s enraged voice sounded again.

“You call yourself ‘his friend’ AND YOU LEFT HIM TO DIE?”

“I followed the captain’s order and had to think of more than thousand peo…” Spock interrupted but didn’t get far.

“HE DIED FOR YOU, VULCAN! He DIED once – and has now to face TORTURE AND DEATH AGAIN! HOW COULD YOU!? How DARE you to leave him to that fate after what he has done for you and his crew! I’ve been called a monster over and over again, BUT I WOULD NEVER LEAVE ONE OF MY OWN, NO MATTER THE COST!”

“Computer, stop!” McCoy pursed his lips and ran his hands nervously through his hair. He had real proof of his assumption – not the voice, but the words ‘Sunrise’ said. ‘I’ve been called a monster over and over again, but I would never leave one of my own…’

If you could say one good thing about Khan Noonien Singh, if he had but one quality – it was that he was loyal to the death where it concerned his crew – his family.

‘…one of my own…’

Bones leaned back and crossed his arms. Did he understand that correctly? Did Khan regard Jim as ‘one of his own’? How? Why, for God’s sake? They were enemies; Khan wanted to kill Kirk. Now he risked his neck to save the reckless Iowa-kid. He talked about him as if he were his ‘family’. Kirk was no Augment! The treatment of Khan’s blood had some side-effects: improved vitals, a stronger immune system, greater strength and so on, but Jim was no super-human.

And Khan couldn’t have learned about Jim’s therapy. There were only a few who knew about Jim’s death and ‘resurrection’ – a few admirals, Starfleet’s chief of internal medicine, and of course, the crew of the Enterprise. Still the Augment’s statement allowed no other conclusion. Khan must have heard or read about Jim’s death in the warp core chamber, of his revival and recovery. That was the only explanation for why he thought of Kirk as one of his own. And so he rescued the Starfleet
officer, treated him and took care of him.

When all possibilities have been ruled out, the impossible must be true. Christ, but this was one hell of a truth.

Still it provoked another question: How did Khan learn of Jim’s death and recovery? He could rule out the guards and staff of Starfleet Headquarters’ prison; they didn’t have the clearance or the access. Khan had very little contact with any flag officers and there was no reason for them to reveal the information. So, how had the Augment gathered that information? Bones was sure that it wasn’t in Kirk’s personal files the super-human hacked to get their home addresses.

On the other hand that wasn’t this critical; curious, but not critical. Far more important was the question of Jim’s safety in the company of the Augment. The super-human was a ticking time bomb, ready to explode the second you pushed his button. Jim had the uncanny ability to unnerve even a Vulcan. Hopefully, Kirk was careful around him, but Bones doubted that. His friend sounded far too easy in Khan’s presence – as if the Augment would and could not be a danger for him. That carelessness was unusual, even for Jim Kirk. The young captain may be reckless, but he wasn’t careless. He was calculating. Only Bones wasn’t always thrilled with the results of his calculations.

Therefore, Kirk must have discerned that he could trust Khan; God knows why!

‘Something happened between them,’ Leonard thought. ‘Something has drastically changed between them; otherwise Jim wouldn’t react this way. Hell, he trusted Khan’s information about the planned attack on Tammeron without question. And he spoke of him – of ‘Sunrise’ – as if he was a… a friend!’

McCoy’s fist landed hard on his desk. He had to talk with Jim – now! He had to make sure that the damn kid – his captain was all right. And he had to know what the hell going on. Of course, he also knew that he also should contact Spock immediately; tell him what he had found out. But he wasn’t going to do that. There was a reason Kirk was keeping the information close to his chest and if he was sure of one thing in the world, it was his trust. He trusted Jim Kirk implicitly, without condition, and without reservation. Bones didn’t have a clue what was going on between his friend and the Augment, but he had a feeling that it would end in a disaster if he informed Spock of his discovery. He would have faith in Jim – as long he wasn’t in any danger!

Bending forwards, he hailed the bridge. Uhura was back from lunch and surprised when the CMO asked her to contact The Shadow, but knowing McCoy she didn’t question his request. The good doctor did nothing without good reason, and so she hailed the militia with Code 9. It wasn’t long before the comm was answered by one of the militia’s members, Ritek. She linked him to McCoy and dutifully suppressing her curiosity.
From the science station, Spock looked at her with his eyebrow raised. “Did Dr. McCoy tell you why he wants to contact the captain?” There was no doubt that the CMO’s request for a transmission with The Shadow was an attempt to reach Jim.

Uhura shook her head. “No, he didn’t say anything to me. Maybe it’s private?”

At this both Spock’s brows practically vanished beneath his black hair – the Vulcan equivalent of a shocked expression. Normally the comms station was not used for private transmissions. On the other hand, it could be that McCoy only wanted to know how Kirk was doing as his friend and doctor. So Spock left the matter to rest. He’d ask McCoy next time he saw him.

Jim laid in one of the deckchairs with his eyes closed. He seemed relaxed, but inside turmoil roiled in him and he knew the same went for Khan who lay beside him in the second chair. It was late afternoon and normally the temperature dropped at this time, but not today – rather the opposite. It was even warmer than midday now and the air was thick. Without checking the forecast on the PADD, both men were well aware of the impending thunderstorm – not uncommon for this time of year. It was similar to the late August storms back home, Kirk thought to himself.

Maybe the stirred up barometric pressure affected the unrest in the two lovers.

Khan was still stunned that Jim was ready to forgive him Pike’s death – a man who had been like a father to Kirk. After everything he had learned about the admiral he was indeed sorry that the officer had fallen prey to his fury. Pike must have been a great man. Kirk had been quiet about his past, but there were small tells – hesitations and far-away looks. Kirk didn’t trust – didn’t make someone his family easily. But he did Christopher Pike, and he did it for Khan. That made Pike’s death all the more difficult. It made Khan, all the more sorrowful he’d hurt his James. Kirk was right. He needed consider all the pieces on the board before he made his move. After all, what good was an engineered mind if he didn’t use it?

But that wasn’t the only thing that kept the Augment deep in thought. Jim’s words – his point-of-view had opened the super-human’s eyes and his mind.

The Vengeance. In his pain, he wanted so badly to bring death and destruction to those he’d convicted of guilt. He hadn’t realized that in Starfleet Headquarters many, many men and women had no hand in his pain. He fought and killed those he regarded as a threat – as the enemy. But how
could a janitor be guilty? He was only at work, earning a meager living for his family. The cooks and servers in the cafeterias, all the civilian employees – none of them had anything to do with Starfleet besides the fact that they earned their living at Headquarters. He never thought of them or the cadets or even the school children that may have been on a trip to Starfleet.

Noonien Singh hadn’t thought of the innocent lives which had no part in Starfleet’s guilt – Section 31’s guilt! He had to change how he thought of this century’s explorers because now he knew the truth. A handful of power-hungry officers had subverted and sullied the noble cause Starfleet was founded upon – to explore and to protect. Perhaps he was no better than Marcus. He only saw his needs and his unbearable anguish. But his deeds were rooted in fidelity to his family. He only wanted to protect them. He thought he failed as he grieved for them. Marcus only wanted power. He provoked a war to show the whole world how ‘right’ he was about everything. At least the man considered his daughter’s life when he beamed her over to the *Vengeance* before he attacked the *Enterprise*. The act was against her will – practically kidnapping. Still, for a few moments Marcus had thought like a father.

A father…

Khan’s memories drifted back to Thomas Harewood. He was assigned to Section 31 in a minor capacity. Thinking about the officer and his behavior, the Augment was almost certain that the man believed he worked for Starfleet’s Secret Service and not for an illicit section of Starfleet. Nevertheless, Khan had used him as a jump point for his revenge. He used the man’s desire to save his daughter to turn him into a traitor. Harewood had been as desperate as he; still he showed no sympathy for the man or his family. A family now without a father.

It might have been guilt that stirred in the super-human, or perhaps remorse. One feeling was as unfamiliar as the next. He was glad that at least the little girl, Lucille, if he remembered correctly (and of course he did) might be healed. He had no proof; he would ask Jim if he knew anything about the child later, when they came down from their melancholy. With infallible instinct, Nien sensed the continuing turmoil in his beloved.

He would keep his promise to Harewood. He would leave the child and its mother alone even though she, like Jim, carried a bit of himself in her now.

One thought bled into another, but he had to work through each and every one of them for his own good – and theirs. And so he continued to follow its flow.

There was no doubt their shared blood linked him and Jim, but the blood was only the catalyst for their relationship. Now, he knew that nothing in the world – nothing he would say or do would make Kirk change his mind about him. And he meant to keep it that way. He wanted Kirk to be proud of him, wanted his approval. That was enough to scare the Augment. This wasn’t about blood anymore. Kirk thought Khan could be saved – was worthy of saving. From the beginning Jim
regarded him as a human being and over the last few days Kirk showed him just how precious he was in his captain’s eyes. Jim wanted to give him a second chance to find his place in this universe and this time. And when Jim found something worth fighting for – he didn’t stop until he won the fight. That was more the super-human could have ever hoped for in one lifetime. And now he’s been given a second lifetime complete with someone in his corner.

Khan wondered if the cost would be too great for Jim. He feared for Kirk in his determination to officially vindicate him; it could mean the end of Jim’s career, or worse. But risking his ship, his career, and even his freedom in an attempt at the impossible was typical for Kirk, who always did what he thought was right. Now quite familiar with the officer’s stubbornness, he’d wait for a chance to talk his James out of this insanity. He wouldn’t allow his Pyāra to sacrifice everything for his benefit. Khan was a criminal Earth could not forgive. Perhaps there was some small possibility that the law could be interpreted to his advantage, but who would listen to him – to his side of the story? Who would not look at him and see anything other than a terrorist?

Still, Marcus had shaped this present for him by reporting civilian casualties in London that never happened. But proving it would be difficult. And then there was Daystrom and Qo’noS. That trip was likely the catalyst for the Klingon declaration of war. And finally there was his attack on the Enterprise.

What had Jim said? ‘This is so fucked-up! The ones responsible are dead or will deny anything you say.’ A correct appraisal. There was no way on Earth that he would get out of this unpunished. But he didn’t care as long as his family and Jim were safe. But his crew was still in Starfleet’s hands, and Kirk ran the risk of getting caught up in this whirlwind because he covered for him.

Nien sighed. Of course it warmed him that the man beside him wanted to stay beside him – to shield him from penalty, still…

The communicator in his pocket interrupted his musings. Frowning, he pulled it out. He felt Jim’s asking glance on him as he opened the little device and lifted it to his ear. “Yes?”

“Hi, lad, it’s Ritek!” the Rigelian’s voice called cheerfully through the small speaker. “How things are going with you and the Federation’s hero?”

Khan’s sea-colored eyes moved towards Jim, “We are well, Ritek, thank you for asking. How can we be of service?”

“I got a transmission from the Enterprise’s doctor. The good man wants to speak with his captain. Seems urgent.”
The Augment lifted a brow and saw James tense. Something must have happened; otherwise the CMO wouldn’t try to contact Kirk. “Can he talk with him directly, Ritek?” the super-human wanted to know.

“The receiver and the transmitter of your communicator are too weak to cover the distance to the ship. The boys must be further out somewhere, but I may be able to piggyback the signal through our comms station to boost it.”

Jim rose, stepped to Khan and bent over him. “Ritek?” he called into the communicator. “Kirk here. I really appreciate your help, but maybe Dr. McCoy’s reasons for his call are…personal? Can you switch off the speaker at your station so that…?”

“I'll kill the link and leave the room. If I return in five minutes, will that be okay for you guys?”

Khan rose and handed Kirk the 23rd-century version of a cell phone; a smile played around Jim’s soft lips. This wasn’t a casual acquaintance with the militia now. The Shadow were friends! And the young captain was grateful for it. “Yeah, that would be okay. Thank you so much, Ritek.”

“You’re welcome, Captain. Just wait for the bill I’ll present Starfleet with for my work as a personal outpost comms station for one of their boys!” He laughed, before he continued, “Here is the good doctor, Ritek out!”

Khan pursed his lips. “I'll be in the cottage preparing dinner,” he said quietly, wanting to give his lover some privacy.

Jim smiled a beaming smile and cheekily blew him a silent kiss before turning his attention to the communicator. “Bones, that you?”

“Jim!” The doctor’s exclamation sounded relieved, and Khan asked himself what had happened that caused him such agitation. For Jim’s sake, the Augment hoped that nothing had befallen one of Kirk’s friends. Nodding at his beloved, he walked away to the cottage. He’d start dinner while Jim tried to placate his dear doctor.

Hearing McCoy’s voice filled Jim with joy. As much as he relished convalescing far away from the war with his lover beside him, he also missed his friends, his crew, and his ship; so he was glad for the contact. Then he sobered. Ritek said Leonard wanted to speak with him urgently. That could
only mean something was wrong.

“Bones, what happened? Is something wrong? Were you in another battle? Is everyone okay? Are you all right or…”

“Jim,” the CMO interrupted his friend's questions, and his voice turned firm. “Are you alone?”

Kirk frowned. “Well, Sunrise is in the cottage and I’m in the garden, but…”

“Can ‘Sunrise’ hear us?” Leonard cut in again, and Jim’s alarm bells rang; he had a feeling…

“No, I don’t think so,” he answered slowly, but he made his way towards the lake’s shore anyway. He knew that Nien’s hearing was engineered. He also knew that if Khan saw him walk down to the shore, he would know there was something Jim didn’t want him to hear. “Why, Bones?”

There was a short silence, before Leonard tensely said, “Because we both know that his ears are far better than ours – augmented, aren’t they?”

Jim felt the blood leave his face. “Beg your pardon?” he asked, but even in his own ears his voice sounded hollow.

“Don’t play dumb with me, Jim! I know who ‘Sunrise’ is – or should I call him ‘Drythen’? But that’s not right either, is it? Ya know what that name means? It’s the old English word for ‘king’. I don’t have to tell you what that title is in Asia, do I?” He sneered now, obviously angry.

Kirk stopped dead in his tracks. For several seconds, he could only stand and stare over the water, eyes focused on nothing; he only heard the blood pulse in his ears and the heat his cheeks. Then his thoughts came online and raced through his head fast, but still he was lost for words.

“Jim, are you still there?” New worry echoed in Leonard’s voice tearing Kirk from his shock.

“Yeah, I’m here.” He gulped as his mouth went suddenly dry. Caught! McCoy caught them and it was clear that he was none too delighted. “Bones, I…”
“Tell me I’m wrong, please Jim,” McCoy was pleading for what he knew wouldn’t be. “Tell me Sunrise isn’t who I think he is!” Leonard sounded calm – too calm.

Jim rubbed his head. He wouldn’t lie to him. Besides angering Bones, it’s just not something he’d do. He owed his friend more than that. “Bones, I can explain everything.”

“Oh, I’m eager to hear it,” the CMO growled. “Sweet Lord, KID, are you out of your corn-fed mind? You know this basta…”

“I thought I knew him – but things have changed, Bones. A lot of things!” Kirk had answered quietly, and he took a deep breath. He wasn’t willing to reveal more just yet. “Do the others know?”

“No, not yet. Even though there were countless hints left to identify this ‘daredevil’ Drythen. I’m damn proud that I figured it out before Spock, and that I figured out how to identify the voice when Uhura gave up on it. I’m a doctor, not a goddamn computer whiz.” McCoy grumbled that last bit out, but he was still angry. Jim could tell.

“Are you going to tell Spock now?” he asked, his tone small. He wasn’t afraid of the Vulcan’s reaction towards him, but rather, what he’d do to Nien, if he learned ‘Sunrise’s’ identity.

“Tell me one good reason why I shouldn’t inform your first officer, your Thy’la, that one of the most wanted individuals in the Federation is with you right now – close enough to snap your neck any second!” And before Jim could reply he added, “Is he threatening you? Blackmailing you? Is that the why you haven’t told us who he is?”

Kirk gasped. “What? No!” He shook his head. The mere thought of Nien threatening him was absurd after all they’d been through together. “No, I’m not in any danger, Bones. Far from it. He… He’s cared for me, healed me. Remember, Bones? It was him you gave instructions too.” Jim realized he’d just confirmed the doctor’s suspicions but he continued, “He’s helped me work through the…What I had to endure with the Klingons. It…It was bad, Bones. But he’s helped me, more than I can explain.”

“By fixin’ dinner, I suppose,” the CMO snorted. “I heard him before you got on the line.” Again the men were silent, then McCoy sighed heavily. “Jesus Christ, Jim, in what has gotten into you!? This man is a criminal – a murderer. He’s dangerous and…”
“He saved Bob and the *Lexington*; he saved the people of Tammeron; he saved me! Bones, I…” Jim closed for a moment his eyes. “Please, can I explain everything when I get back?” he pleaded with his friend now, rather than his subordinate.

“You mean if he lets you go,” the CMO groused.

“Why wouldn’t he? I’m not his prisoner if that’s what you’re worried about.”

McCoy huffed. “Dammit, Jim, don’t tell me that he’s just gone and forgotten that he swore revenge. He is…”

“He doesn’t want that – not anymore. Not after I told him that his family is still alive and… Well, there’s so much more, but…Christ, I don’t know. We’ve both gone through a lot. But we’re okay – with each other. I mean no one’s killing anyone, right now.”

“That’s not much of a comfort, Jim. You know that, right?”

“I know, but I also know that you trust me.” Jim was playing the friendship card now and Leonard knew it – and he let him. But he wasn’t letting Jim off easy.

“Is it because you’ve got some of his blood in your veins, now? Did he call you ‘one of his own’? He did you know, when he practically tore Spock a new one during his transmission – when the Klingons captured you.”

Jim blinked surprised. “He did?” He chuckled; a spark of amusement lightened the sinking feeling in his stomach. “That sounds like him. You should have seen how he shellacked the Klingons that interrogated me on Turkana. They literally had their heads handed to them.” Jim shuddered at his own comment – at the thought, but he sure wasn’t sorry.

“Yeah, God help anyone who messes with one of his majesty’s ‘own’. Don’t get me wrong kid, I’m glad that he kicked those bastards’ asses and saved yours. But you’re doing it again. Damn! Why do I have to point out the obvious to you?” Leonard fell silent once more, and Kirk dared to make his request.

“Bones, please don’t tell anyone about Sunrise, not yet. I’ll explain everything to you as soon as I’m aboard the *Enterprise* again, but… Bones, if Starfleet figures out who and where he is…” He bit his
lips. “I can’t bear to see him arrested, locked away like a wild animal. I don’t think he could now either. What if they sent him back to the labs? We both know how wrong that was in the first place.

“Starfleet liquidated Section 31 and the rest of them have been arres…” McCoy stopped himself. “No, dammit!” he thought aloud. “Luengo is still in charge. Spock and I found out when Command received word about your capture.”

Jim frowned. He would need to know more about this little detail, but just right now his worries lay elsewhere. “There you go. We know what happened to Nien the last time Command got their hands on him,” Jim took the same line, hoping to convince his friend to keep his secret.

“Nien’?” Leonard echoed. He groaned when Jim replied somewhat sheepishly “Yeah. Umm, it’s a nickname. It’s a bit less cumbersome than his given name.”

“You two are already use nicknames?” He snorted. “Please don’t tell me he calls you Jimmy. Jim and Nien are bad enough! Are you two holding hands, now?” McCoy was well-known for his sarcasm, but this time it didn’t bother the young captain; rather, it gave him a bit of hope.

“How did you know?” he asked innocently and to his relief heard a short laugh from his friend.

“Sure! Jim Kirk, Starfleet’s poster playboy is strung out on a guy.” He snorted. “Don’t pull my leg, Jim. It’s too creepy even for you!”

Jim chuckled – if Bones only knew – then he turned serious again. “So, you haven’t told anyone?” he asked softly; he could almost see the CMO roll his eyes. He didn’t receive an answer; he was close to begging now. “Bones?”

“You do know that you’re standing with one foot in prison?! Command will have your head if it ever came to light that you are covering for him.”

“Yes, I do, Bones, still…” Kirk answered gently, but firmly.

“Still you’re ready to risk everything for him!” Jim could almost hear as Leonard shook his head.
“He did it for me. Please trust me on this, Bones.”

“I know he did, kid. He stepped up, but I don’t trust that he doesn’t have an ulterior motive. I can’t believe you do,” the CMO grumbled. “This is a lot to ask Jim. If it wasn’t for my faith in you – and I have a lot of that, mind you, I would have already told Spock. We’d all move heaven and Earth to see the guy in shackles again. But Jim, I have the feeling you are still hiding something about him.”

Jim lowered his head; guilt rose in him. He wasn’t lying, but he didn’t like omitting either. “I can’t tell you everything over this line, Bones. By the way, Ritek granted us five minutes before he’d come back to the comms station. We gotta end this quick.” He glanced over the calm bayou and caught himself sending a prayer to the Lord. “Will you keep this to yourself, for now? Please?”

He heard Bones moan before he replied in frustration, “I will – and I hope you have some damn good answers when you’re back.”

Kirk felt a heavy weight fall from his shoulders, and his heart lifted just a bit. He sighed in relief. “Thank you, Bones! Thank you so much!”

A grumble sounded in Kirk’s ear, followed by an irritated, “Don’t make me regret this, Jim! I want you back aboard safe and as healthy as possible. And if Khan lays one finger on you, he’s going to have to face me. I don’t care if he is an Augment!”

Another short laugh that betrayed his now lightened heart escaped the young captain. If McCoy only knew how the super-human had laid all his fingers on him, in him, and all over him. He didn’t think the good doctor would recover from that bit of knowledge! Still he knew what Leonard meant. “He won’t, Bones, not like that. He really has been looking after me.”

“Yeah, it seems so – that’s what scares me!” Then his tone became calm for the first time since they had gotten into contact. “When will you back?”

“I don’t know exactly. A few days more would be nice, but…”

“Get well, Jim. I’m aware of the fact that the injuries those Klingon bastards inflicted on you are still healing, but what you really need to do is to get your head screwed back on straight after what they did.” He lowered his voice. “I’ve seen reports of Klingon torture at the Academy – really hard stuff. I can only imagine how you are. Actually, no I can’t. And now that I know who you’re with, I’m pretty sure your head is far from okay. So…”
“Damn, you’re going to hypo the hell out of me when I get back, aren’t you?”

“Oh, most definitely, kid.”

“Don’t worry, Bones, the flesh wounds are as good as closed and the deeper ones don’t bother me too much anymore,” Jim whispered warmly. “You helped. I know it bothered you that you weren’t there, but you were there for me. Just like you always are.” Jim nailed it. Leonard hated not being there for him and it came out as anger. As usual, Jim read it, read him like a book. Didn’t even need to see him to do it.

“I know what you’re trying to do, Jim. I wasn’t though.”

“You were! If not for you, I’d be a lot worse off. You told him what to do so he could get me well. He couldn’t do it without you. Between that and my good healing, I’m okay. Well, I’m getting okay. My head’s getting’ okay too.” He looked around him; the world seemed brighter again as the danger for Nien had evaporated. “A shimmering lake, woods, warm sun, naps on the deck chair, reading, talking and healthy food. Believe me, it helps. Not just with Turkana, but everything else too. I don’t think I knew how bad off I was.” It took a lot to admit that much. Bones knew it; he was just glad the kid was finally taking care of himself. His vitals hadn’t been right since they went to Qo’noS.

Jim took a deep breath. “Bones, I really would love to talk with you more, but I think our five minutes are up. Can we continue this later?”

There was another snort, before the CMO murmured, “Oh, bet on it, Jim. I wouldn’t miss it for the world!” Then he sighed a bit more deeply than before. “Take care of yourself – and tell your friend that not even his augmented ass would be enough to save him if he gets rough with you!”

Jim laughed, amused. He wondered what Bones would say. He could hardly imagine the super-human being rough with him now. Never before the young captain had experienced so much tenderness, coupled with the fierce passion Nien showed when they were together.

“Don’t worry, he won’t. Besides, I’m not helpless.” Kirk smiled.

“Rrrrrright,” McCoy scoffed. “After all he’s just a fallen angel trying to get some new white wings.” You almost could hear him grimacing. “Call us when you’re ready to come back. We miss you. Don’t get me wrong, Spock’s doing a good job, but the Enterprise isn’t the same when you’re not
“I know, Bones,” Jim sighed. “When do you finish the mission?”

“I don’t know exactly – maybe in a week. We’ll contact you then. Maybe we can pick you up…”

“In a week?” Ritek’s voice chimed in. “Boys, before you make more calls, think of my bill getting longer and longer.”

“Later, Jim – and please be careful!” the CMO couldn’t stop himself from warning Jim one more time. Then the link was cut off and there was only static. But Ritek was still on.

“Everything all right with you boys?”

Jim pinched his nose. Nope. Well, he was alright now, but he had much to answer for when he got back to the Enterprise.

“We’re all right, Ritek, thank you – for you concern and your help.”

The Regulian laughed. “You’re welcome, Kirk! Give Drythen my regards. Bye!” He killed the link and the officer closed the communicator; then he rubbed his forehead against the impending pressure.

Bones knew about Khan. Jim was more than grateful that the CMO had contacted him first instead of running to Spock and telling him what he suspected. Kirk knew that his first officer would have alerted the cavalry and that the Red Shirts would scour every planet in the area to find the ‘space-terrorist’ and his hostage. God bless McCoy’s big heart and his boundless trust in Jim. The young captain was well aware of the fact that his friend was worried about him and thought of Khan as a significant threat. Of course, Leonard didn’t know what Kirk knew now, but that was going to change – after McCoy browbeat him. Jim wasn’t looking forward to the talk, but it was necessary to convince Bones that Khan wasn’t what they all once thought he was. He had to get Leonard on board if he was going to protect Nien – no easy task, but he had to try.

Sighing deeply, Jim put the communicator in his trouser pocket and walked back to the cottage. He couldn’t smell anything. As the Starfleet officer stepped in, he saw that the Augment preparing a cold
dinner. Bread, cheese, assorted cold cuts, some vegetable and butter. All were ready to be set out on the porch; Khan was busy chopping the rest of the fowl from yesterday’s supper for a salad.

‘If Bones or Spock could see me now, they wouldn’t believe it,’ Kirk smiled at the thought. But it was too quickly replaced. For a short moment, he pictured Starfleet security storming the little cottage and taking Nien down – manhandling him in the fight the Augment would surely put up. Jim’s stomach knotted at the thought; his determination to protect his forbidden lover grew even more.

The super-human looked up as Kirk entered and lifted a brow. He not only saw but sensed that Jim was more troubled than before. “Is everything all right?” he asked, anticipating that the Enterprise had run in some trouble and that one of Kirk’s friends had been hurt.

“No,” Jim murmured and glanced hesitantly at him. “Bones – he knows.” He let the cat out of the bag and the former dictator frowned.

“What does your doctor-friend know?”

Taking a deep breath, the captain explained, “Bones knows that you’re ‘Sunrise’ – or Drythen.”

Khan let the cooking knife sink to the cutting board; his eyes widened with alarm. Then he asked in a voice far calmer than he felt, “Do I have to prepare myself for an arrest? Is Security going to come barging in here?”

Jim shook his head. “No.” He moistened his lips. “Bones doesn’t know where we are and…”

“And he assumes I’m a danger to you.” Khan lay the knife aside and straightened his stiffened frame. “What is he going to do? Alert your Vulcan? Maybe his lady friend will be able to retrace the good doctor’s transmission and so they’ll find out, where…”

“Bones won’t tell anyone about you,” Jim interrupted him softly, stepping towards him. He saw the disbelief written all over Nien’s face so he continued. “I asked him not to; I told him I’d explain everything when I’m back.” He shrugged. “It’ll be a hell of a talk, but as least he will stay silent until I’m aboard again.” Then he added, “I trust him Nien; that’s my family.”

For several seconds, Khan observed him carefully. He might not trust the doctor, but he did trust James – with his life and even the lives of his family if it ever came to that. McCoy. As far as he
knew, the doctor was very protective of Jim and a very close friend. His captain seemed to inspire that. The Augment smiled then continued his train of thought. What if the CMO went to the Vulcan first officer despite his promise to Kirk, just to protect his captain? Jim must realized what the Augment was thinking, because he added calmly, “Bones will keep his word, don’t worry. I can convince him that you’re not a threat to me or my crew – that I’m okay.”

Cocking his head, Khan pursed his lips. “So, he will stay silent about his discovery?”

Kirk sighed and nodded back at him. “Yes – he’ll make me pay for it later; I’ll get an earful as soon as we are in private.”

Little by little, the super-human relaxed. “What are you going to tell him?”

“The whole truth?” Suddenly a smirk appeared on Khan’s handsome face. “Then you should make certain that the good doctor has sedatives in a hypo near him. He’s going to need it after your confession.”

Kirk rolled his eyes again. “I will not shock him with the delicate details so get a grip on your dirty fantasy,” he grumbled. The super-human chuckled. “But I have to tell him as much as necessary with as few details as possible.” He rubbed his neck. “Fuck, admitting that we met in San Francisco is going to seriously piss Bones off. He arrived half an hour after I woke up, panic-struck because he thought you were there and had killed me. He was relieved when he found me untouched.” Khan looked at him from beneath long lashes. Kirk groaned, “Alright, untouched is not the best word to use following our roll between the sheets, and then on the floor, against the wall, the kitchen counter.” Kirk’s voice had drifted off before he began again. “But… you know what I mean.” He pulled a face. “Bones is going to get the shock of his life,” he whispered to himself.

“How much will you to tell him about me?” There was some tension in Khan’s voice now, and Jim fixed him with a gentle glance.

“As much I need to, to get him to see what I see – with your clothes on,” He added, trying to put Khan at ease. “Only what is necessary.” They both knew what Jim was really talking about – the violence Khan endured at the hands of Conelly.

The former dictator let out a held breath. It wasn’t only painful; it was humiliating and mortifying.
The Augment never wanted it discussed – not in public or even in private. Once was quite enough. He knew that he couldn’t forget it, ever. That – that hurt never leaves a person. He tried to forget it; he should be able to. Damn Conelly for dredging it all back up – forcing him to relive the trauma. It was centuries ago; he was just a child then. He thought as long as he didn't have to talk about it, he could deny that it ever happened. He preferred it this way. Seems humans never changed. It would almost be easier if Jim was like them. He’d know what to expect – no surprises, no complications. But he wasn’t. Jim surprised him over and over. “Thank you, James,” he murmured, and Jim closed the small distance to him, cupping his cheeks in his hands.

“What you entrust to me is safe with me, Nien. You are safe with me.” He softly reassured Khan; his thumbs circled tenderly over the Augment’s velvet cheek. “I will tell Bones some of what you’ve been through since Marcus woke you and what you’ve done since with The Shadow. I’ll explain him how you saved me, how you took care of me and how… How we are now, together. But that’s all. He will understand, you’ll see.”

Khan’s arms slipped around his beloved’s waist. “You’re sure about McCoy.”

“I am,” Kirk affirmed returning the gesture, wrapping his arms around slender, strong shoulders. “My good doctor has a big heart, is compassionate to a fault, and is the most loyal man I know.” He leaned forward and brushed his lips over Khan’s. “Everything is going to be okay, Nien. Bones will keep his word; he trusts me as his friend and his captain and he knows that I believe in him and you. If he betrays that trust than I’d be forced to do the same and he wouldn’t trust me enough to…” He frowned as he saw the amused smile on Nien’s face. “I stopped making sense a while ago, didn’t I?”

The Augment shook his head. “Yes, you’re rambling now.” He laughed quietly, finally relaxing again. “It tells me enough.” He leant his cheek against Jim’s and whispered into his ear. “You’re worried about me.”

Kirk shivered, sighed and pressed closer to love. “Yeah. I am. I’m not ready to let you go. I don’t want to be ready. So please stay out of trouble.”

“Isn’t that the pot calling the kettle black,” the former dictator teased before he lifted his head and captured Jim’s mouth fondly with his own. Hunger crept and stirred between them both.

ST***ST***ST

Ritek stared at the small screen that showed him several communication hot spots around Regula; they centered around the transmission stations. He used a standard desktop whenever the comms station on the Flash wasn’t operating – like now. He had switched it off after the Enterprise’s CMO,
and Kirk ended their conversation, and the Regulian wouldn’t activate the station anytime soon. He had to think – no distractions.

It wasn’t his intention to listen to the conversation between the two officers. Sometimes it was better to know less than more. He caught the beginning of the discussion purely by accident, because as soon as he had connected the Enterprise’s transmission to the communicator Diego had left for Kirk and ‘Drythen’, the doctor had started to talk. Ritek wasn’t out of the room before he heard more than he wanted.

At first, McCoy’s question if ‘Sunrise’ was out of ear’s shot had made him curious. After all the Enterprise’s crew knew that ‘Drythen’ had saved their captain. And then there had been that one word that had rooted him to the spot: augmented – ‘augmented ears’, the CMO said. And then the doctor said it: Augment!

Ritek wasn’t that familiar with Earth’s history; there were only rumors about the human Augments a century ago. Still he knew enough to be wary. He knew that Earth’s population had made attempts to breed a kind of super-race – that they took over most of the planet and it ended in war. Nearly two centuries later, there was an incident at one of the deep space stations. Young Augments seemed to come out of nowhere, and it caused a near-disaster with the Klingons. Some years later, Klingons appeared with an almost human-like appearance. Tests with augmented human DNA had gone wrong. That was why there appeared to be two Klingon races rather than one.

That was all Ritek knew about Augments – they were a biological mistake that caused a catastrophe and pain in epic proportions, but it was in the past. It had ended in the 22nd century.

Or so he thought. Obviously, he had been wrong. About everything. The Augments weren’t gone, and whatever Khan was, he was no mistake. Not to Ritek, not to The Shadow, and most certainly not to Kirk.

So he wasn’t a mistake, but how was he… Kirk and the doctor revealed much – enough to explain part of the riddle that was ‘Drythen’. After the transmission between Kirk and the CMO had ended, Ritek sat there in the calm of the Flash’s bridge and thought about all he had heard. He pondered what it meant – its implications.

The Regulian remembered all too well how his shipmate’s fist dented the comms station – it was still there – and how he brought the Klingon commander of the D’Ghor to his knees. He remembered ‘Drythen’s’ fight at the outpost. He seemed to be everywhere, hurling Orions far bigger than himself, and pirates through the air as if they weighed nothing. The plot ‘Drythen’ came up to put off the Klingon fleet long enough until Starfleet arrived to protect Tammeron, simply put, was brilliant. And as uncommon as it was brilliant. His flying, the sensor disturbing device. As far as Ritek knew, engineers and technicians tried to develop a working prototype for years now without success.
‘Drythen’ constructed one in a few days. But his pièce de résistance was his mission to recover Kirk. He had to reach the annexed planet, land on it and to arrive in the taken capital uncaught. Fortune had to smile on him. And he still had to sneak into the Klingon Headquarters, find Kirk, and flee – beyond the shields. An Augment could manage it, but never a mere human.

All the little clues now were like the stones of a mosaic. Set together they gave the whole picture. The doctor confirmed it: Drythen was a human Augment. His speed, his strength, his brilliance, his natural authority, even his protectiveness – all were the feature of his ‘race’.

‘Drythen’. They called him ‘Khan’ twice. It could be a family name. Either way, he had to avoid the authorities. McCoy called him a criminal and a murderer. But Ritek knew that sometimes judgments were meted out rashly. ‘Drythen’ seemed to have already a run-in with the Enterprise’s crew and therefore with Starfleet. That’s why he nearly panicked when the nice commodore offered him medical assistance.

So he was a wanted man – wanted by Starfleet and presumably this Section 31; Ritek hadn’t heard of them before. They had Khan once before; otherwise he couldn’t be handed back to them. He understood why it would anger Kirk and Khan, but Kirk seemed genuinely scared for him. The Rigelian had a very bad feeling about that. What if Khan was the result of a secret program – another attempt create stronger, faster – better people, maybe a kind of elite soldier? What if Khan had fled from the labs, killed some guards in the process and was now on the run?

And what about his family? Did he mean other Augments he thought dead – the one’s Kirk told him were alive? It made sense. Maybe there were several more ‘test-subjects’, still in the hands of this ‘Section 31’. Maybe they ‘bred’ elite soldiers. It was a hell of a lot of maybes. Ritek couldn’t imagine any of it was legal, so maybe the whole thing was top secret, flying under the radar without the High Council’s knowledge. That could only mean Section 31 was after Dryth… Khan, to stop him from outing them.

So, what did this mean for them – for Galven, Caviw, Jeff and all the others? The man they had welcomed into their little family was an Augment. But he was their friend too! He had proved more than once that he was loyal to them; he was grateful for their trust in him. Galven’s and his talk with him after Kirk’s rescue belied much more than his words. The man was surprised and deeply touched by Galven’s and Ritek’s concern for his well-being – as if he wasn’t used to these simple gestures – common among friends. He wasn’t used to being treated as an equal. He expected disappointment and was afraid to rely on others. Had Khan only known fear, loathing, or force with whomever he’s encountered?

If so, Kirk proved the exception. Their relationship must be so new; otherwise his friend, this doctor, would have known about it. Maybe their friendship had begun after Khan gave his blood to the young captain. Ritek remembered McCoy’s words concerning Khan’s blood in Kirk’s veins. That’s why the Augment abandoned his need for revenge against the Enterprise’s crew. Maybe this was the
reason for Khan’s icy, furious manner towards the Vulcan first officer. Ritek remembered his friend’s
conversation with another officer of the Enterprise and the nice female comms officer – Uhura if he
recalled her name correctly. Khan had been more or less polite towards them, but not to the Vulcan.
Bad blood he guessed, and he chortled at his own pun. That’s why he wanted revenge, now all but
abandoned because of the young captain.

But to McCoy and the rest of the crew, Khan was the enemy. Ritek supposed something must have
happened, and not too long ago either. Whatever Khan had done scared Kirk’s crew and angered
them so much that a captain had to plead with his friend and subordinate to stay silent about the
Augment.

And it wasn’t just because the captain and the super-human had a relationship (that Kirk pointedly
did not divulge). Ritek listened closely as the young captain tried to explain that they didn’t know
Khan – not like he did. The Regulian was sure Kirk wasn’t referring to some bedroom escapades,
but to who can really was – the man that The Shadow had come to know.

Ritek had to agree with the CMO, Khan was very dangerous. He figured Khan could kill a man in a
hundred different ways, without a weapon. But he was also loyal and honorable.

And that lent him far more credence than his augmented constitution. His character was all that
mattered as far as Ritek was concerned; he was sure the same went for Galven, Caviw, Jeff and the
others, even Diego. ‘Nien’ Khan was one of them now, and if some scientists messed with his DNA
to make him better or different, well, it wasn’t his fault. The Rigelian was sure that the man hadn’t
asked for it, but had to live with the consequences – consequences that had forced him into the role
of the lonely fighter. He had no one except for The Shadow, Kirk, and his family he seemed to
search for but couldn’t find. The Rigelian assumed correctly that his uncommon friend’s family was
somewhere locked away, and that Khan was desperate to free them. Perhaps that had something to
do with why he was a wanted man now. And his fierce protectiveness of Kirk. You didn’t need to
be a genius to figure out, how he would react if anyone threatened his family. Ritek assumed this
family also had their DNA engineered by science.

‘One of his own’ McCoy had said. He had used the same periphrasis as he referred to Khan’s
relationship with Kirk, obliquely referring to the Augment’s blood in the captain’s body. That’s why
the super-human considered Jim Kirk ‘one of his own’. It was another piece of the puzzle that was
Khan. His family must be Augments too. Well, if his family was anything like him, Ritek would
have no problem offering them a hand. And he’d support Khan in his attempt to save his family from
wherever they were. They owed Khan that much.

The Rigelian knew that the rest of their crew wouldn’t drop Khan like a hot potato. Not after he told
them what he knew. They’d stand with him, just as he would. Khan has more than earned their
allegiance.
Ritek took stock of the new information. Khan was an Augment; he was hiding from the authorities, was on the run from a mysterious Starfleet department, and he was searching for his people. What else? Khan was a good man. And he very likely was a man in love, even if he didn’t admit it. Maybe he didn’t know it himself. But Khan put the search for his family on hold, put himself in danger and within reach of Starfleet for the captain in his care. Whatever Khan had done, he’d certainly done his penance.

Nodding slowly to himself, the Rigelian rose. He would tell the others what he found out. Sharing what he knew, well, it was a matter of trust; he didn’t fear that Galven, Caviw or the rest of the crew would turn on ‘Drythen’ because of his past or who he was. Hell, they were all aliens now, the universe was so much bigger then Dryth... Khan realized. They’re all unique – some even stronger than Khan – maybe not smarter. They all had their run-ins with the law, and they all had their problems. Sharing these made them strong - a cohesive unit, a family. And now that family included Khan, Ritek didn’t doubt that for a moment.

What he didn’t know was how much the family would need each other, how deep The Shadow would get into the mire that was their future...

ST***ST***ST

‘Unbelievable – Jim’s covering for Khan! I know that he doesn’t do anything without reason. I don’t always get it, but I know him, I know that, but this is... It’s madness! Sweet Lord, this bastard blew up a building, killed innocent people, and he attacked the conference of Starfleet officers. He killed PIKE, for God’s sake! Hell, Jim DIED because of the son-of-a-bitch. Now he’s protecting him? It doesn’t make sense. Well, that was just par for the course with Jim, wasn't it?!’

Leonard McCoy stared at the wall straight ahead and had crossed his arms in front of his chest. The talk with his captain and friend had shocked and calmed him in one. Shocked because his worst fear was true – ‘Sunrise’ was Khan Noonien Singh! But Jim seemed to be okay, and the Augment didn’t appear to be a threat to the young man – not yet anyway. But Kirk’s instinct was rarely wrong and that was the only reason McCoy would keep his word. He’d keep quiet. Even though his mind screamed at him to not trust the Augment or his intentions. He wanted to send the cavalry to his friend’s rescue. Bones was almost certain that Uhura could backtrack the transmission so that they could find Jim and this monster, who... Who had done some good these last weeks. Why?

Without him, Starfleet wouldn’t have learned about the planned attack on Tammeron until it was too late. Who knows how many lives were saved. Without him, Jim would be dead by now – tortured to death. And without him and his development, the sensor disturbing device, the Orions and Klingons would have ambushed the Enterprise; they’d all would have had to face their makers, whoever they were.

Something else held McCoy back: Jim’s the gentle, pleading tone. Kirk’s gratefulness obvious. The
debt Jim owed Khan was bitter in Leonard’s mouth. Not only because the Augment saved his proverbial ass, but Khan stayed and cared for him. Leonard shuddered at the thought. How bad off was Jim when the super-human got him out of prison to let Khan of all people take care of him? But there was no doubt how much Kirk’s health had improved compared to when he first spoke to him. After his retrieval, Kirk could barely put together a sentence. McCoy remembered hearing how strained, how pained he sounded. Now Jim seemed well and at peace.

At peace in the company of the man who had killed his mentor and friend.

But nothing was more important to McCoy than his captain. It took Leonard a long time to come to terms with the attachment he had with Jim. His divorce made it so hard to form those attachments. But Jim was worth it, worth everything. And McCoy knew the rest of the crew felt the same way. Jim, the leader, inspired that kind of loyalty. It was unmatched in all of Starfleet. So McCoy could keep his promise to Kirk to keep ‘Sunrise’s’ identity for himself. He didn’t have to like it (he rarely liked Jim’s decisions), but he would do it. If Jim was ready to put aside Khan's past (and this was obviously the case for now), then Kirk must have good reason. It couldn’t just be that the Augment saved him. Jim understood debt and perhaps he felt he owed it to Khan to keep quiet for now. But it didn't explain why they were still together. Every minute with the captain was a risk to Khan. What was the reward then that outweighed the risk? McCoy had the feeling that he only hair’s breadth away from the riddle’s solution, but his brain was already overtaxed processing this new information.

It all boiled down to one thing. Jim asked him for something – his trust. And, dammit, McCoy had learned years ago to do just that. Bones would never begrudge him the fidelity that Kirk earned long ago. He loved him too much. No matter how reckless, wanton, a bit arrogant and just a little crazy, Jim Kirk knew exactly what he was doing. And if he could put aside Pike’s death to cover for and to work with Khan, then that's exactly what he would do, no matter the cost to himself. And McCoy would back him, no matter the cost. That's just who they were. 

‘Dear God, don’t let it end like the last time. Please, let Jim keep his eyes open. I don’t ask much, but I need this. Please keep him safe.’ Khan had grander plans, Leonard just knew it. Whatever they were, he knew they had to do with his ‘family’ and he needs Jim to carry them out. He certainly wasn’t caring for Jim out of some misplaced obligation. Jim didn’t turn him over to Marcus, saved him from that monster in fact – and did exactly what he said he would do! Maybe…”

His musings were interrupted by the door buzzer, and McCoy remembered that he was in his office and that this was still his shift. Groaning he rubbed his face. “If someone cut his finger and is crying he’s bleeding to death, I’ll give him a reason to need a doctor!” he growled and pushed the button on his desk to unlock the entrance.

As the doors slid open Bones opened his mouth to show exactly what he thought of the interruption, but closed it as soon as he recognized the tall, slender frame of the first officer. Of course, Spock would show up here – why wouldn’t he?
“Do you have a moment, Doctor?” Spock’s deep voice asked politely and Leonard rolled his eyes.

“If I say ‘no’ you wouldn’t believe me would you?” He watched confusion pass over the Vulcan’s face; he waved his hand. “Forget it. Please, come in.” He rose and pointed to the visitor chair on the opposite side of his desk. “Have a seat,” he offered, “Do you want something to drink? Tea, water or something else far too healthy?”

Stiffly, Spock sat down. “It eludes my understanding why you, as a doctor, would call something ‘too healthy’. Is it not in your interest that the crew take care of their health?”

McCoy looked from the replicator over his shoulder towards Spock and grimaced. “Of course, I’m glad when the crew looks after themselves, but believe me, sometimes a brandy goes a long way.” He brought the Vulcan his tea and looked at the clock on the screen. “End of shift – thank the Lord!” With that he opened the locker behind his desk and took out a bottle of Saurian Brandy and a glass.

Spock lifted a brow. “Am I assuming correctly that your talk with the captain wasn’t to your satisfaction?”

“Your perception never fails to surprise me, Spock,” Bones taunted and poured himself a finger (or a few) of the amber liquid. “And before you ask: yes he feels better and yes he will return to the Enterprise after our mission!”

This time Spock raised both brows. “That seems an agreeable outcome for all, Doctor, doesn’t it? I do not see why this wouldn’t satisfy you. But that was not the only reason for my visit. I also wanted to ask why you wished to contact Jim via The Shadow. We agreed that the captain would only be disturbed in an emergency; otherwise he was to be let alone to get some rest and heal per your orders.”

Bones pressed his lips shut for a moment – damn Vulcan curiosity! Then he sighed, “And it didn’t occur to you that, that’s why I contacted him?” He met Spock’s calm but asking glance and made a face. “I’m Jim’s doctor; he was rescued from Klingon torture just five days ago. It’s my duty to look after his health and discern his needs and further course of treatment. It bothers me that he isn’t seeking real medical treatment. Of course it doesn’t surprise me though.”

‘Good, Len, you didn’t lie to him, just applied a bit of misdirection,’ he encouraged himself. Still the firm gaze of the first officer made Leonard uncomfortable.
Spock cocked his head and rose his cup of tea. “As far as I know ‘Sunrise’ has at least rudimentary medical knowledge and you’ve already entrusted him with the captain’s health.”

McCoy had to carry it off well as the Vulcan called Khan by his cover name. He put the glass on his desk, finally sitting down across from the first officer. “He does know a thing or two about first aid and field aid, no doubt about it. But he isn’t a doctor, I don’t care how talented he is. Anyway, I would still require a report of Kirk’s status if ten professors and twenty doctors were treating him.” He raised the glass and took a too large gulp of brandy while Spock sipped at his tea.

“You are not… happy with the present situation,” he stated, and Leonard rolled his eyes.

“Obviously!”

“Do you have a reason to believe that ‘Sunrise’s’ treatment will not be enough to help Jim?” Something like concern sounded in the first officer’s voice. “Maybe Nyota can backtrack your transmission and…”

“There’s no need for it,” Bones cut in, sounding calmer than he felt. “Jim is doing better; he feels well where he is and ‘Sunrise’ seems to be good for him. He was preparing dinner for them while I spoke with Kirk.” The CMO emptied the glass but held it in his hand, while he felt a sudden grin tugging at his mouth. The mental image was kind of funny – imagining Khan in an apron, cooking on a little stovetop. Why the hell should that be funny? Oh yeah, because he was an augmented, murdering tyrant!

Spock observed him silently as he emptied his own cup. He wasn’t too familiar with human emotions, but his close relationship with Uhura had taught him much. He couldn’t read humans he didn’t know very well, but he knew McCoy – knew his baseline for reacting, and so he could discern McCoy’s behavior as a mixture of human frustration, worry and anger. Something must have happened, but knowing the CMO he wouldn’t say anything he didn’t want to and would rather make an excuse for privacy rather than give information he wasn’t ready to reveal.

But at least Jim seemed to be on the road to recovery, and for now that was enough for the Vulcan. So he rose and folded his hands behind in. “Then I suppose everything is in order. Please excuse me, Doctor, I’m still on duty. And thank you for the tea.”

“Yeah, you’re welcome,” McCoy murmured, nodding shortly at Spock before the science officer left the office. Pursing his lips, Leonard took a deep breath, before he refilled his glass. “Dammit, Jim! I
hope we can say everything is in order, as far as it can be for you. Because I don't trust Khan as far as I could throw him. Christ, don't let this be a trap – the moment Khan has been waiting for!”

TBC…

Chapter End Notes

Oh dear, Spock will not be too delighted when he learns that McCoy kept ‘Sunrise’s’ identity to himself or the real reason why he contacted Jim. But this will happen after Jim’s return to the ship and even after Kirk gets an ear full of Bones, who will get in return the shock of his life (just as Jim foresees it - *laugh*.)

In the next chapter Ritek will inform the others about Drythen’s / Khan’s real heritage, you will learn more about Luengo’s plan to take over Starfleet Command, and there will be touching but also hot passionate scenes of our two love-birds.

I hope you liked the chapter and the talk no. one between Jim and Bones. It really was fun to write it and hopefully it gave you fun too. And – as always – I’m damn curious what you think of it.

The next chapter will be updated next week, so therefore I wish you all a beautiful New Year Eve-party and Happy New Year!

Love

Yours Starflight
Hi, my dear readers!

A little bit later but: HAPPY NEW YEAR!!! Sorry for the delay – new year, old running out of time like always (sigh) – but I think the chapter worth the wait. Just a little warning: This chapter is really only for adults and I would like to advise you to fetch some ice-cold orange- or apple-juice, because this chapter is going to be very, very HOT!!! Yeah, smug and romance in once – I’m sure you’re going to love it.

Just a little disclaimer: Jim’s quotes some lines from a poem that is well-known among military-members: “Through a Glass Darkly” from Patton. If you want to read it (it really fits well) then use following link: http://www.freerepublic.com/focus/news/543355/posts

And now have fun,

Thank you so very much for all the comments and kudos (I love you all)

Yours Starflight

“Drythen is a what? “ Galven stared at Ritek, who leaned against the open window in the small hotel room the Tellarit had rented. Outside the air was thick, brimming with electricity. Dark clouds loomed over New Aberdeen and reached far across the countryside; they loomed over the leaders of The Shadow.

The Rigelian sighed as he repeated, “Drythen’s real name is Khan. He’s what they called an Augment.” He lifted his hands in a helpless gesture as he caught Caviw’s reproachful stare. “I really didn’t want to listen to the conversation between Kirk and Dr. McCoy, but the man started talking before I could leave the room. Then I caught the word ‘augmented’ and that it had to do with ‘Sunrise’. So I stayed and – well – eavesdropped.” He rubbed his neck while he looked from the Caitian to Jeff and then to the confused, stout man he squabbled with so often. Still, he was his best friend, and he was going to do his damnedest to get him on his side.

“Well… Ung… All right,” Galven finally said. “Care to explain what an ‘Augment’ is?”
Jeff and Ritek stared disbelieving at him, while Caviw pursed her lips.

“Augment like in ‘augmented’ meaning… You mean he’s enhanced?” she asked and Ritek rolled his eyes.

“Sweetheart, you’re not too familiar with Earth history, aren’t you?”

Her long tail twitched. “Why would I be? Not everyone has the same interests as you and Jeff, Ritek,” she grumbled.

“Yes, that’s right, chipmunk,” Galven couldn’t resist to mock Ritek. “I think I heard something about those ‘Augments’ somewhere, but don’t ask me the context; I couldn’t tell you.”

“Maybe because you’re too busy with taking mud baths,” the Rigelian countered, but before another round of endless bickering could start, Caviw stepped gracefully between them; her red hair flamed in the light of the lamps as did her temper.

“Boys, I think we have other things to discuss now, so SHUT UP!”

“And how can we ‘discuss’ something if we are not allowed to speak?” the Tellarit asked innocently; his little eyes sparkling with mischief.

“Yeah, good question, Galven,” Ritek nodded and Caviw threw her hands up.

“Of course, as soon one of you out, you’re all the sudden thick like thieves!”

Jeff grinned. “That’s them – as always!” Then he turned serious again. “Concerning the Augment thing. The Augment program almost three hundred years ago was set up to… to construct… to breed stronger, more intelligent humans; they were made immune to nearly every malady of their time.” He shrugged when Galven and Caviw frowned. “They were… umm… bred to end the wars being waged in several countries over decades – to bring peace.” He sighed. “It backfired.”
“Some thought bringing peace meant ruling Earth; they took over country by country,” Ritek added, showing his knowledge about Earth’s history. “The ‘normal’ humans tried to stop them finally peaking in what were the Eugenic Wars. The Augments were either captured or killed; the war left a lot of destruction in its wake and it took decades for the planet to recover. Then a clever mind, Zefram Cochrane, developed the warp drive. That captured the attention of the Vulcans, who promptly visited Earth and the rest… well… is history.”

Galven frowned. “That would explain a lot – especially Drythen’s… Khan’s strengths, his quick mind and why he was able to get Kirk’s ass out of a Klingon prison.” He scratched his yaw. “So, he is a kind of super-human – and belongs to a breed race of living killing machines?” A hint of disbelief sounded in his voice.

“That doesn’t explain how he got here though.” said Ritek.

Jeff shrugged. “No, it doesn’t. Galven, I don’t think all were like this, but most. Yes.”

“Léo… Khan isn’t like this!” Caviw said firmly. She earned glares and eye-rolling but she ignored it. “You’ve seen him with Kirk and how tender he can be. And he was the whole time on our side, lived with us and…”

Ritek lifted both brows. “You don’t seem to be too surprised about this revelation,” he said and the Caitian-woman’s tail twitched several times again.

“No, I’m not. I knew he was…He’s human, but he’s more – different. I sensed a predator in him.” She caught the perplexed gazes of the men around her and sighed. “When Léo… Khan was injured at Tammeron, I stayed with him after we brought him to his quarters. I checked his vital signals over and again with the bio scanner the Commodore left us and… And after several hours, his injury was as good as healed.” She realized that everyone was staring at her, and she smiled, showing her sharp teeth. “His head wound had healed too before I left his quarters. His cells healing, regenerating with a speed that is impossible for a human. Now we have an explanation at least. He’s an Augment.”

Galven bent forwards. “And when were you planning on telling us about it?”

The Caitian shrugged – a gesture she had borrowed from her human fellows. “I didn’t think it was significant. It’s up to Khan to tell us. I found out about his healing properties by accident. It wasn’t my place to tell.”
“I rather think your feelings for him had something to do with it,” Jeff murmured, before he shook his head. “An Augment… I don’t know what to say. He’s become a good friend to us, still he’s…”

“Still he’s the same he was when we met him,” Galven cut in. “Just because we know more about him now, doesn’t mean anything. We met him, got to know him better – he’s one of us now. We all decided that when he went off after the captain. I don’t think it’s fair to pull away from him now just because we learned that some scientists messed with his DNA.”

Jeff rolled his eyes. “Do you know what the Augments did to my planet? They…”

“There! You said it yourself, Jeff: The Augments did. Khan’s alive now, not centuries ago. Humans have treated their own no better, especially in the 20th century. They killed their own and then they created a race to do it for them and…”

“And it still doesn’t explain where he comes from?”

Ritek cleared his throat. “Kirk said he was afraid Khan would be handed back to some lab if they caught him. And the doctor mentioned a Starfleet department – Section 31. If you ask me, I think Khan fled those labs, escaped. He’s hiding now, using us… No, not like that – with us because this Section 31 is after him. Maybe they tried to make some super-soldiers or something like that, or…”

“This can’t be legal,” Galven oinked. “Maybe they ran some tests on him and the outcome is his amped-up biology and brain. Anyway, we know he has good reason to avoid the authorities. He’s augmented; he’s running, and something bad happened involving him and Kirk’s ship.”

Caviw sat down on Galven’s bed. “You know I love to read databases which aren’t… publicly accessible.” The others chuckled. “I read somewhere that there was an incident a century back with augmented humans.”

“So, you’re saying there are still some of them left,” the Tellarit pondered. “And you think Khan is one of them?”

“He is too young to be a survivor of those Augments a century ago,” Jeff murmured. “Even if they age slower, that was never known. No one lived long enough, all the wars – no one knows what their life spans are – could have been. But Drythen, he can’t be older than, I don’t know, his early thirties.”
“Nien – Khan is an Augment I think he had a run-in with the Enterprise some time in the past,” Ritek said. “The doctor was less than pleased that Kirk covered for Dryth... I mean Khan. Kirk had to convince him not to inform the Vulcan first officer or Starfleet Command.” He grimaced.

“Whatever Khan did, it... It sounded bad. I thought the doctor was going to have a heart attack when he confronted Kirk about it. The captain defended Khan like a mother-le-matja would her cub.” He sighed. “But the ship’s doctor called him a criminal and a murderer. Said he was responsible for the death of a man who – sounded like he was a mentor to Kirk,” he revealed.

The Tellarit blinked. “Well, if Kirk forgave him, what obviously is the case, then it’s not up to us to judge Khan. Maybe everything went different that it sounds. I’m more worried about this ominous Section 31 and that the boy fears for Khan to be handed ‘back’ to the labs. Something isn’t right here and I’ve a certain feeling that our Augment-friend is in danger different from what we thought until now. He is threatened by this Starfleet-department, mark my words.”

“I remember that there was an accident at Starfleet in San Francisco – Earth last year,” Jeff threw him. “A new prototype of a large battleship fell down in the San Francisco Bay and killed a lot of people in the harbor. Before that, there was an attack on Headquarters. Officially, they said it was a terrorist attack, but who knows what actually happened?”

Galven’s snout twitched. “Hmm, now, after you said this, I remember the whole thing too. Media tried to find out as much as possible, but Command kept stonewalling. There were a lot of arrests of some high ranking officers. The media did a lot of speculating, said there was an illegal department. Starfleet denied it of course. Maybe this all goes together somehow? Maybe this shadow department is Section 31 and their responsible for Khan’s condition?”

“It could be an explanation,” Ritek murmured. “I thought that too, listening to the Captain and Dr. McCoy. There’s one thing more I thought of. Khan talked about his family, and it sounded like he isn’t on best terms with Starfleet because they took his family from him. Maybe his family are Augments too, and he’s trying to find them. What, if his people are locked up against their will? He...”

“He’s trying desperately to find someone. He hacked Starfleet’s database a few times. I saw. He was into the top secret stuff. He never found what he was searching for,” Caviw commented. She met the glances of the others and added, “I was with him when he was digging through the files. The information seemed really important to him. Must’ve been for him to take the risk. I offered to help him, but he never told me what he was looking for.”

“He hacked into the Starfleet’s top secret database?” Ritek looked at her with large eyes. “Holy moons! That alone would bring him years of prison if they found out. He really must be desperate to get that information.”
Galven nodded. “You’re right. Think how possessive and protective he is where Kirk is concerned. If I wouldn’t know it for certain that they’re lovers, I also could imagine them as a kind of brothers. But I don’t think it matters. If he thinks his family’s life is endangered, he must be half mad with worry. I can certainly understand that.” He looked at Jeff, as the younger man said,

“I can sympathize with Dryth… Khan. He is alone, isn’t he? Alone and half of Starfleet might be after him – or at least this Section 31. I know they worry Kirk enough that he would risk his career to protect Khan from them. If you ask me, there’s some serious bullshit around here and Khan is stepping all over it.” He took a deep breath. “But he’s an Augment and even if I’ve come to like him, I’m… I’m a little bit cautious. Augments are very aggressive and very intelligent…”

“And both of those qualities saved the Tammeron people, our necks, and the young hero of Starfleet,” Galven added softly for consideration. “Eventually, we figured out he wasn’t your typical human. The question is: Does our knowledge change the way we deal with him, or not? I say he’s done nothing to threaten or to harm us, rather the opposite. He even went out alone for Kirk. He didn’t drag us into his mess knowing full well he might have needed us – which he did. He’s a lone wolf, but so were we before we ended up The Shadow. I say he’s stuck with us and we’re with him. So, who thinks nothing has changed? Whomever believes name and DNA doesn’t mean shit, well, gentlemen – lift your hand. Pardon, Caviw – and her hand.”

He smiled as everyone lifted a hand to signal that they agreed with Galven’s assessment.

“I’m with you,” Ritek nodded. “He has given us no reason to distrust him – rather the opposite – and as long as this is the case he will be my friend. End of story!”

Jeff rubbed his neck. “Okay, I agree.” He looked at Caviw. “And if I know you, you’ll certainly stay on his side – or by his side,” Jeff winked at her, “no matter what.”

The Caitian smirked. “He may have a mate; nevertheless, I sense a related soul in him. We are both predators and therefore must hang together.” She chuckled. “And, by the way, I’m happy that he has a mate who understands and loves him for what he is. He and Kirk are cute together!”

“I think the good doctor will see things entirely differently,” Ritek laughed. “He’ll get the shock of his life if he learns that his captain and Khan are a couple!”

He was quite right about this detail, but this moment was still days ahead…
The waves slapped gently against the ships and docks contributing to the music of San Francisco harbor. Otherwise, it was quiet in the harbor. The charter boats had all returned now and the usually busy area was silent and abandoned except for the two men who sat between a ticket counter and a large sculpture of an anchor. Even if people passed the docks, no one would see the two lonely figures. Precisely as they intended.

“So, the president wants to go through with it!” Albert Norton shook his head. “And he wants to send his own representative?”

“Yes, Miss Whitman has the honor of speaking with the Klingons and a handful of high-ranking diplomats, including Sarek of Vulcan, Gav of Tellar, and a few more elite – names with planets after them, you know the type. Robertson insists that Barnett, Morrow, and Komack accompany them with a few tactical advisors, two linguists, and five other council members. I didn’t catch those names. Nogura will be in charge of Starfleet Command during Barnett’s absence.” Luengo looked up to the evening’s starry sky. “Their loss will be a blow to the Federation and will show Robertson that there cannot be any peace with the Klingons.”

Norton eyed him suspiciously. “You plan to eliminate the delegation and to make it look like the Klingons did it?” He pursed his lips. “You’re right; the loss would be immeasurable. Sarek is near irreplaceable. No one has the historical knowledge or diplomatic skill he does. Gav is the glue that keeps the Tellarites in check; you know how touchy they can get. And what is Starfleet without Barnett, Morrow, and Komack. Pike was bad enough, but four admirals?”

Luengo shot him a glare, obviously questioning Norton’s loyalty.

“No, no. I get it. I just don’t want anyone to think that four admirals lost in the span of a year is suspicious. “How do you want to do it?” He answered, placating the other man.

“Two of my men are in contact with some Orion pirates. They delivered some very interesting information to us – for a lot of money, mind you! They’ve profited the most from this war. I’m sure if we offer them independence from the Federation and officially give over sovereignty of the Borderland, they’ll take it, and they’ll support us. The Klingon attack must be successful. We’ll never get them to agree with our plans for the Orions otherwise, and we need them on our side. So…”

“There’s no way you’ll get any of the CO’s to go along with it,” Norton cut in. “A few might of them share our opinion of the Klingons, and some of them certainly would volunteer to head Section
31 given the chance, but none of them would torpedo their career committing treason. That's all this mission is until you're the new head of Starfleet, and we've convinced the president that we are right, and his advisers are wrong.”

“I know,” Luengo nodded calmly. “But I think I know an eligible candidate: A young commander who was Valedictorian for his year at the Academy. I checked his file, his preferences and tested his loyalties he showed towards Section 31 until it was nearly eliminated last year. He is intelligent, knows what he wants and comes from one of the best families in Great Britain. Alexander was fond of the young man, who has been passed over for a promotion he should've received. As far as I’m concerned; I would have preferred him to be promoted to a captain instead of Kirk, but the most of the admirals decided otherwise after he’d saved Earth. Maybe now I'll get my wish.” He crossed his arms in front of his chest as a cool wind breeze came from the sea. “Barnett declared that the USS Excalibur will ferry delegation. She’s nearly as powerful as the Enterprise, and Captain Helrom is an experienced CO,” he continued while Norton frowned.

“Tebra Helrom will never agree to a plan that…”

“Oh, he won’t command the ship. Regretfully he’ll be recovering from an accident he is going to have shortly before the Excalibur leaves Earth leaving wide open the opportunity for a newly promoted captain to get his first command.”

Norton snorted. “Do you really think Barnett or Komack would entrust someone inexperienced with such an important task of commanding a ship carrying the most elite of Federation and Starfleet?”

A terse smile played around Luengo’s lips. “They will; after all they and Morrow are on board and can have a look at the young man. He’ll play his part perfectly. I’ll also put some of my own Red Shirts aboard. I trust them implicitly. They can keep an eye on him.” He took a deep breath of cold, salt air. “I already talked to him. He shares our point of view. The Klingons can’t be trusted and Starfleet needs to adjust her mission as the Federation’s military. Force and power are all the Klingons understand and Starfleet needs to be able to show that. They’ll think twice before attacking. Our candidate knows this; I think he is our man to carry out the first step of our mission.”

Norton nodded slowly. “All right, then we’ll have to have our talk with him soon.”

“I thought so,” Luengo smiled, but like so often this smile didn’t reach his eyes. “I already arranged a meeting with him for tomorrow night. The security details who watch my and your apartment will be several my men so there will be no problem if we take a late evening walk, like today.”

A short chuckle escaped Albert. “That sounds good, José. I had to invite my neighbor again to get
away, and I swear this guy is eating me out of house and home. I'm coming home to an empty fridge.” He sighed. “Who is this young prodigy you want on board for our mission?”

“Commander Lawrence Robert Styles!”

Surprised, Norton glanced at the Head of the SBI. “Styles? As far as I know he was the only cadet who could rival Kirk at the Academy; except Kirk ended up skipping a year while Styles stayed the whole four years.”

Luengo laughed quietly, a real laugh this time. “Yes, and Styles will be happy to go along when we dangle the Enterprise in front of him. Once we've gathered enough proof of Kirk’s betrayal by protecting prisoner 3158-17-215 to remove him from command, we'll be rid of him once and for all. And if his officers take his side instead of saving their careers, they’ll share the same fate!”

He glanced out once again over the dark harbor, the lights of the illuminated Golden Gate Bridge and the black surface of the bay and the Pacific. “You’ll see, Albert, everything will play out just the way we planned. And no one – neither staff officers nor Kirk, his crew, or Khan will get in our way!”

The thunderstorm didn’t break loose suddenly but announced itself with heat lightning over the hills and a faraway growling high in the atmosphere. The air was heavy, thick enough to cut with a knife. The birds were quiet now – a calm before the storm. But this time the storm was real – the men’s’ tempest long past now.

Jim stood on the porch after he and Nien had their light but still delicious dinner, and listened with half an ear to the music the radio was playing inside the cottage. Khan relaxed at music and he seemed to have taken a liking to some classic and ballades – latter mostly unknown to Jim.

The young captain looked out to the dark bayou watching the approaching rage of Mother Nature. He liked this part of an approaching thunderstorm – just before the torrent. It reminded him of the days in Iowa, when Sam and he were still happy – the time before Frank came. The two boys – one not more than a toddler, the other ten years old – stood outside of the farmhouse under the eave and watched the storms form and swirl and grow in strength as it traveled. Of course, two-year-old Jim wasn’t too delighted at first, but Sam explained how a thunderstorm worked to a child’s understanding. The boy who would Starfleet’s hero captain years later was fascinated by the sky then. Not too long after, he’d set his sights far more distant – to the stars.
Kirk sighed. Odd that he would think of chatting with his brother now of all times. He loved his older brother dearly, even if he had been disappointed as Georg Samuel left the farm to live with his grandfather. Now, almost fifteen years later, he had come to understand his brother. They talked often and about everything that first year Jim attended the Academy, but since then their contact was much more – occasional. Sam married a beautiful woman named Aurelan and had two sons; a third child was on its way. Jim met his both nephews only once, but he liked the boys a lot and never forgot to send them something for their birthdays, Thanksgiving, and Christmas. Though Sam lived far away on Deneva, modern technology made it possible to stay in contact; Jim had not used since the war started. He was only glad that Deneva wasn’t in the area that was influenced by the battles until now. So he knew his brother and his family safe – as well as his mother who had flown to Deneva after the war began.

Even if he wasn’t on the best terms with his mother anymore, he didn’t want anything bad to happen to her. After she had left him in the care of friends on Tantalus IV to accompany a mission of xenobiologists, he had lost the last bit of trust he had for her – already damaged by her marriage to Frank. They planned for Jim to stay on Tarsus IV for six months with family friends; the mission was no place for a thirteen-year-old. During that time, Winona divorced Frank, finally, as Jim loved to say. Jim could either attend an Earth boarding school or stay where he was on Tantalus IV. What happened next wasn’t Winona’s fault. No one could have foreseen the governor’s insanity or the government's complacency and stalling actions. Still, Winona’s abandonment chipped away what was left between mother and son. The bitter taste lingered all these years later Jim. From time to time, the old nightmares still haunted him.

“Lost in thought, Pyāra?”

Jim flinched in surprise as he heard a deep voice at his back; a second later, long, warm arms wrapped around his waist, and a strong body pressed against his back, while he only now registered the music was a little bit louder since the Augment had come through the still open door.

“It’s only me, Jim,” Khan said gently, hearing his beloved’s heartbeat quicken. Leaning from behind, his cheek against that the younger man he smiled, “Sorry, if I startled you.”

A soft sigh escaped the young captain, and he relaxed into the solid body. “It’s okay, Nien. I… Just lost in thought, I suppose.” He saw the next flash above the bayou in the skies out of the corner of his eye followed by the distant growl of thunder. “My older brother and I loved to watch thunderstorms.” He chuckled. “I was afraid first, but Sam told me ‘big secret of thunder’ – why the beauty of the flashes is the real danger.” He laid his head backward on the Augment’s right shoulder; Khan’s warm breath danced over his skin. “It seems danger and beauty have accompanied me my whole life.” He twined his fingers through Khan’s, holding his hands tighter to his abdomen, snuggling closer to him.
Of course, the super-human realized instantly what Kirk meant – He meant the storms; he meant the stars, his ship. He meant him. The thought made him smile as did the meaning that Kirk missed. “Perhaps you need them because… Because you are like them.”

“I am…what?”

Khan only looked at him with love and a bit of forlornness at his ignorance.

Blushing Jim turned his head slightly and looked up at Nien. “You think I’m beautiful?” he asked perplex. “And dangerous? Hell, even Spock sees straight through me; I think he has a problem with me being so emotional. That’s no danger but…”

“You misunderstand me, James,” the Augment interrupted him almost tenderly. “You are dangerous because no one recognizes the predator in you until it’s too late. On the outside, you are beaming and careless. A boy made of sunshine.”

Jim beamed him his most open smile, "And you’re waxing poetic, again."

"Mmm, perhaps, but shut up now, I'm not finished with you yet."

Jim dropped his eyes and retorted with a cheeky, "Yes, sir."

The Augment let it go and continued. “I suppose the unobservant around you might only see the friendly, gullible man easily convinced of frivolity and trash because nature gave him beauty rather than brains. But they couldn't be more wrong, could they? You’re brilliant, discerning, and intuitive. You see the truth where others wouldn’t even think to look. You’re the bravest man I’ve ever had the pleasure of meeting – in this century or any other. You never quit. You are faithful to all that is true and right and good in the universe and will defend it to the end. You stand up for those you love, no matter the cost. And your heart is warm and compassionate. You are beautiful inside and out. And that’s what makes you dangerous. Your character is a mirror. It scares those too cowardly or too egotistical to do what you do.” He pressed a soft kiss against Jim’s cheek and smelled the metallic scent of Jim’s tears.

The younger man’s blue eyes brimmed with them as he whispered, “That’s how you see me?”

Khan looked fondly at him. “Yes, that’s how I see you – only you!” He watched a single tear roll
down his beloved's cheek and turned him gently around to press their hearts together – hearts that beat in perfect union.

Jim needed that, still emotionally raw and craving the security Khan offered. His capture did more than hurt him physically or emotionally; it shook his confidence. It made him doubt his instincts, his intuition, and his abilities as a leader and a warrior. He tried to swallow the lump building in his throat when a stabbing sensation of disbelief and hope ran through his chest. “I… But I’m… I’m reckless and shallow. I’m stubborn, rash and rebellious. I don’t know when to be respectful and… I’m unreasonable, irrational and…”

“Says who?” Nien interrupted him quietly, asking himself not for the first time, why this gorgeous oversized boy thought himself unloved, unlovable, and unable to love.

Almost helpless the young captain looked at him. “Everyone…,” he whispered and sounded so forlorn that it pained Khan. Slowly the former dictator shook his head.

“Everyone? I cannot imagine that the good doctor or your Vulcan friend think that of you. The same goes for your Scot engineer or your quite fierce communications officer. And the man who stood for you when we were on Qo’noS, Sulu; he obviously respects you, loves you. And then there was Admiral Pike. Why do you think he took you under his wing, made you his protégée? Bob Wesley does the same now for you, doesn't he? I’m certain that he was going to launch a recovery mission of his own when you were captured on Turkana. Every one of them sees much in you, but it’s not what you think. Diego only met you for a few minutes and offered you his cottage to recover in – and Diego doesn’t trust easily. Ritek and Galven both took almost instant liking to you, as well as Caviw.” He paused here and closed his eyes before continuing. “And my family – they’d welcome you, too. Not because of me, but because of your good and noble character.”

Jim was unable to swallow; the lump in his throat big and aching. His eyes watered so that he couldn’t see Nien clearly. Never had anyone said anything like this to him. He wasn’t used to compliments on his character, let alone confessions of love. But Khan’s words couldn’t be construed as anything else. It felt wonderful. It was like balm to his injured soul, beaten down over and again through the years. He had never thought that there would be someday someone, who would see anything else than a rebellious young man. Bones was the first real friend he ever had, followed later by Spock, Scotty, Uhura, Sulu and then young Chekov. But friends were one thing, and he was ever grateful for them. He never thought, never dared to hope that despite his damage, there'd be someone to love him, really love him.

But here he stood on the small porch awaiting the gathering storm together with this beautiful, powerful and stunning man. He was so much stronger, so much more intelligent. But he told him in the most wonderful words that he was more than just the hothead he thought himself – that others thought he was. It was… unbelievable – like a redemption and affirmation all in one.
Another tear spilled over, and Khan caught the salty pearl with his lips. “Why do you think I am here with you now?” He tightened his arms around the younger man, as he saw the intense mixture of unbelief and pleading in Jim’s gaze.

“Nien, don’t make me answer that, I can’t.”

“Jim, do you still think so little of yourself?”

“No, but…” He took a deep breath, ready to face the last doubts which still remained in him and were eating at his soul. “Dammit, that’s not it. Fine! Why aren’t you out there now, looking for them? You’re risking yourself every moment you stay with me. You have feelings for me, and you know I have them for you. You rescued me, and there isn’t a place I wouldn’t go or a thing I wouldn’t do for you, you know that now, I know you do.” Jim closed his eyes and whispered to him, “Tell me why you are still here.”

“I’m an Augment. I’m designed to be superior, to care for and protect those in my charge and destroy that which threatens the peace I and my kind were to bring into the world. I suppose those purposes are at odds aren’t they? In any event, my kind never regarded humans as equals. You changed that, James!” He leaned his forehead against that of his beloved and breathed in the fresh, sweet scent, now tainted by salty tears that made him feel at home. “You are my equal, though we are different. But you are more than that too; you are my light – my sun. I’ve walked most of my life in darkness, shrouded by a never-ending night. Only seeing through the glass, darkly; every shape a threat. But you brought light into my world, James. You allowed me to see the world as you reflect it the shining light of your soul. Your heart pulled me out of that darkness, enveloped me and warmed me. If I were religious, I’d say you were an angel – a warrior and guide like those of the Christian Bible. But I’m not. Still you gave me something I thought I’d lost a long time ago. You gave me back my faith. It’s more than anyone has given me in a long time.”

A suppressed sob escaped Jim – this is how Nien saw him? Utterly overwhelmed, he pressed himself against the Augment and buried his face in Nien’s neck. His tears wetted the mark that was invisible to all but them. Khan heard Jim murmuring, “So as through a glass, and darkly, the age long strife I see. Where I fought in many guises, many names, but always me.”

“Mmm, Patton, very good Pyāra.” Khan held him close; his hand moved in comforting circles over the muscular back of his mate.

His mate…
His kind may regard humans as less, weaker – inferior to his Augment physiology, but his nature – his instinct, designed to safeguard one another for their survival now ached to do just that. Khan sensed pain in Jim and by designed sought to heal him and vindicate him. Whoever did this to his James should pray that their paths would never cross. Until then, Khan vowed to defend and guard his mate – soothe, caress and love him until the old hurts disappeared into nothing. Heal Jim; that’s what his instinct compelled him to do – heal and nurture that which he cherished above all.

Leaning his cheek against Kirk’s temple and cheek, he murmured, “I don’t know who talked you into believing yourself unworthy of love, but they couldn’t be more wrong. Every trait, every little peculiarity has endeared me to you.” His lips had brushed against Jim’s cheek before he breathed, “Love!”

It lasted a moment until the young captain finally whispered, “What?”

“You asked me was Pyāra means.” He smiled. “It means ‘love’.”

For several seconds, Jim stood stock still unable to breathe. Then he lifted his head and stared with wide, teary eyes at the handsome face of his lover. The sea-colored windows to the Augment’s soul shone like stained glass in a church. Then Nien’s words sunk in.

Love…

Nien called him ‘Love’ – his love!

And Khan Noonien Singh didn’t know any half measures.

He – Jim Kirk – was unconditionally and utterly loved by another!

Jim felt his heartbeat quicken; felicity bubbled up within him threatening to spill from him in a rush of tears and nonsense. He knew the wish to see the stars together was reciprocated; he knew then he wasn’t just a replacement for those Khan had lost – that he wouldn’t be forgotten when the superhuman’s family was found. His sadness and doubt now replaced with hope for their future and joy – if a miracle happened and the authorities and Command would let Khan go.

In the light of the first real flash above them, he saw Nien’s tender smile, while in the background of the cottage a violin was crying; accompanied by the soft tones of a small orchestra. The Augment
went against every instinct to wear his heart on his sleeve for Jim; he exposed himself with his confession of love. Jim did the only logical thing he could think of and the only thing to keep him from spouting nonsensical declarations that both were so sure of now. He kissed him. His mouth closed over those sinfully bowed lips, pouring every emotion he felt at the moment into Khan’s mouth. Hope, warmth, endearment, passion and above all love, cascaded in happy moans over his tongue and into Khan’s mouth that he might swallow it down and take it into himself, imprinting Jim into his very DNA as he had done to Jim not so long ago.

Just then thunder rolled through the skies and the rain fell washing away dust and dirt that clung to the cottage. The symbolism was not lost as he felt finally purged himself. The filth that soiled and clung to him now washed away so that he could clearly see himself – not only in love, but that he loved! He loved this beautiful, breath-taking and unique man, who had once been his enemy. And he knew that there would never be another to share his life – himself.

And as Khan returned the kiss with the same tender fervor, Jim knew that he had indeed found his mate!

Happiness and endearment were suddenly too much to bear; it needed to come out and a place to go. So it did, and so it went. As if his feelings had a life of their own and purpose. They dribbled out of his fingertips guiding his movements. His fingers found their way beneath Nien’s kurta; they glided over the warm, silky skin of the Augment and savored the heat the strong body radiated. Another flash raced above them through the skies; its electricity no less intense than the sparks that flew between the two men. The following thunderclap echoed of the flaring passion kindled with love and tenderness.

Jim lost himself in the spicy, fresh and so familiar scent of his forbidden lover – citrus and cinnamon. Khan was everywhere – around him and in him. Not in his body, not quite yet, but most certainly in his soul, nestled in there in safety – like home, where he belonged. His confession of love whirled through Kirk’s mind, making him dizzy with emotions that he intended to show and to share.

Pressing himself closer to the Augment, he meant to hold – to lead this round of affection. His right hand slipped out from under Khan’s kurta and curled into the soft, mahogany hair; his hold was protective and loving. Jim needed a surprising amount of effort to end the fond duel of tongues so that he could rain delicate butterfly kisses on the high cheekbones, temples, nose and over closed eyes; Nien seemed to melt into him.

This was new for the super-human. Kirk welcomed his love with open arms, and now he took the lead. Khan wasn’t used to relinquishing command to another. He loved and led as the king, commander, and protector that he was. Of course, he enjoyed the fondling and caresses that were part and parcel of sex, but never was it connected with such longing and love, and time. In his time, sex was always heat and races to the end because danger lurked. Danger – war was always around him – but not now, not here. And for the first time, the temptation to give in and give up the lead not
only present, but it was overwhelming. The temptation swallowed up and tamped his nature that was always looking for an out, an escape. Affection and joy overcame instinct in a way that he’d never before experienced.

He gasped as his beloved’s lips found his again. The captain’s cleverness apparently extended to his tongue as it explored the hot cavern of his mouth again. Jim’s slightly broader shoulders shielded him from the wind, as the rain just beginning to wet them; they shielded him against the thunderstorm and against the whole world. Even if his engineered mind still knew that he was the stronger one of them both, he felt safe – protected, cherished, loved. Though neither Jim nor he had said those three words which moved the whole universe, he knew they both felt them; they both knew them. Khan recognized that Kirk confessed them now, with his body. Khan didn’t mind one bit – quite the opposite in fact. He was after all, a man of action.

So was Kirk.

As the younger man pushed him gently towards the door, never breaking his kiss, the Augment sighed and smiled. He had taken a risk when he had opened up to Jim – he had been hurt before and stating that he loved someone as deep as he did now made him vulnerable. Still his heart and his soul told him that he could trust this man with a heart of gold. If not him, whom then?

Kissing and touching, they somehow found their way to the bedroom, now only illuminated by the flashes outside and the dim lamp on the nightstand. The soft music from the radio was still playing as it did over dinner. Kirk gripped Nien’s kurta and lifted it, pulling it over the Augment’s head who blinked in surprise. No one had ever stripped him – not since he was a small boy. As he fingered for his trousers, Jim’s hands stopped him.

“Let me do this for you,” he whispered and the super-human knew that his lover meant to show affection for him even in this menial task! The incredible tenderness, mingled with the burning in those sky-blue eyes told Khan everything. Jim wanted to make love to him. It took much to weaken the Augment, much to make him feel as though he couldn’t stand tall. Apparently Kirk could do it with a look.

Their lovemaking has gone through many metamorphoses already. At first greedy and passionate, then tender, mindful and careful – fraught with pent up emotion. This would be different. He became aware of it the moment Jim took action – and kept it. His captain placed open-mouthed kisses over his chest, licking and nipping tenderly at the skin while strong yet gentle hands pushed the trousers down over his hips. He didn’t care that they landed in a heap on the floor beside the kurta – or that he kicked off the light shoes leaving everything in disarray. All that mattered was this special moment, because even now in his state of growing arousal, his brilliant mind realized that Jim had not only stripped him of his clothes but also of the inner wall he’d built around him for protection.
Bare and vulnerable (made even more so with Jim still clothed) he stood there ready to deliver himself to another man, and a common human at that. The Augment checked himself: James Kirk was anything but common, still Khan’s engineered instincts screamed in self-defense as the young captain pushed him gently to the bed, stripped himself quickly, and then followed him down.

Jim saw a quick flash of defiance in those bottomless, sea-colored eyes as the former dictator braced himself backward on his elbows, unwilling to drop any lower. Slowly he straddled Nien – carefully, so as not to make him any more uncomfortable. He cupped the super-human’s face with his hands. He knew how the man he loved had been hurt, and he could only imagine what scars it had left on Khan’s soul. Leaning his forehead against that of his mate he whispered, “Shhh, Nien, it’s me. It’s okay. If you want, we can always switch positions. Just say the word, and I’ll stop. But…But I want to show you – please let me show you how much you mean to me; let me show you that it’s your blood, your body that keeps my heart beating even now. Let me show you how deep this is – how deep we go.” His lips brushed over his lover’s. “I want to worship you, please you, if you would allow me to show you how beautiful it can be.” He kissed him again with a slow-building intensity. “You’ve been so good to me; took care not to hurt me even when we were still enemies. Trust me, baby, I’ll never hurt you. I only wanna make you feel good.”

Finally, something like resolve settled in his mind, but it was still tainted with fear – all those times he had been abused as a child and later the polluted by Conelly’s sullying dominance. They lurked in the shadowed corner of his mind where he’d hid them. But this was James – his James. His beloved spared his life more than once, protected him when ordered to give him up. Jim would never hurt him. And so he relented.

Wrapping one arm around the younger man’s waist, he sank back on the mattress; knowing full well that he was about to give himself to Jim. Again a part of him was ready to rebel, but his near desperate yearning to trust someone in the most intimate way was stronger. He was so tired of being alone, wary every waking moment and even in sleep. Jim had come into his life like a whirlwind, entirely different than anything he’d ever known, and he needed this affectionate, caring, passionate young man in so many ways it almost scared him. Believing in the goodness of a human being – it would be his liberation or his doom. But even with all the sinister experiences of his past, his heart knew it was safe with his James.

Jim sensed that Khan was still tense, even if he tried to hide it. His furrowed brow forced Jim to remember what his beloved had been through. He refused to give into the hot anger building in him at those who caused his lover pain. Tonight was not for the darkness of the past; it was for the light of the new days they had shared – and would share with each other. There would be time for anger later.

Bracing himself with one hand beside Nien’s head, he bent down and kissed him deeply; his free hand stroked gently over the Augment’s shoulder and neck. He broke the kiss to trace his lips over jaw – neck, before wandering to Khan’s mark, just a faint blue now. He smiled as he heard his lover moan and he closed his lips over the sensitive spot; licking and sucking, marking his soul-mate again. He could feel the other man hardening beneath him, and he bit gently down on the ‘hickey’. He let
his lips wander over the collarbone, down over the pale, muscular chest — smooth, hairless and with the unique taste and scent of Nien. The fingers of his free hand found one delicate nipple; his mouth sought its twin making the Augment gasp anew. He heard and felt his lover’s heartbeat and breath quicken. Khan’s long, elegant body trembled.

“You like that?” he whispered into the alabaster-white skin; only an approving sigh escaped the other, normally well-articulated man. Jim smiled at his accomplishment then turned his attention to the other nipple wetting and cooling it with his breath – teasing with teeth. Only as the little peaks turned to hardened pebbles and Khan’s heart beat madly beneath his lips did Jim let his mouth roam further, making sure no skin was left un kissed. He marveled how Nien reacted to every touch – however light; the muscles rippled beneath the human velvet that became salty with the first beads of sweat. He realized that the Augment still tried for control, but Jim Kirk would have none of it.

Leaving a wet line of hot kisses, he headed southwards – very much like Nien did the evening before. He stopped at the nest of dark curls and licked along its line. The long, flushed red cock of his lover flexed against his throat, begging for attention. But here was where Jim excelled; he knew exactly how to increase the anticipation of his bedfellow and he aimed for exactly that. Time was on his side, and he would make every minute count; he wanted to make it special for his beloved. Quite cruelly, Jim ignored Khan’s member. He let his hands slide down along the other man’s sides until they reached the points of his pelvis – quite pointedly ignoring... just along the line of hair.

If he had looked up, he would have seen Nien glaring at him with glassy eyes; burning desire flared in his gaze. The Augment wanted to will the younger man to use that gorgeous, full mouth there where he needed it most, but his pride kept him from begging. Biting his tongue, he let his head fall back on the pillow, knowing that he couldn’t do anything to sate the lava in his veins or the clenching in his groin. Alas, if James didn’t take him in his wicked mouth soon he would go mad. He grasped the sheets beneath him with an iron grip to deter himself from reaching into the golden shock of hair. He closed his eyes as the yearning and fire coursed hotter and hotter. He had lusted for Jim before — in San Francisco and afterward over and again until they were finally reunited, increasing his desire even more. But what he felt now was almost too much to bear. Maybe because this time there was nothing standing between them. This time there wouldn’t be any suspense, doubt or false modesty, no unspoken topics; their passions and feelings now lay as bare as they.

Suddenly Jim lifted his head and gave his soul-mate a long knowing, tender, smile with a hint of mischief and warning. Then he slipped his right hand between their bodies and...

And the world came to halt only to whirl back into motion a moment later.

The gentle, talented fingers of the young captain carefully captured heavy balls. He alternated between tugging and stroking its seam dragging load moans and tiny whimpers from Khan. Sparks danced behind his tightly closed eyes and he arched into the sensations. And again Jim’s mouth was on his belly, his tongue dipped into his shallow, sensitive navel.
Jim felt, could even smell the heady scent of arousal, sweat that dripped from every pore and pre-cum that leaked twitching cock at beneath him, pooling between them. His own shaft was hard and pulsed with lust, but he held back. This was for Nien – for the man who held his heart! He wanted to give him the most long-lasting pleasure possible.

“Jim…” It was not more than a breath, but it was enough for Kirk to take a peek. The usually pale cheeks of the super-human pinked; the color spread to his heaving chest, straining to draw in needed air. His legs twitched as if he needed every bit of his enormous control to avoid wrapping them around the younger man.

Taking mercy and giving into his own desire, he pushed himself backward and smiled as he realized that Khan gulped heavily in anticipation and longing. Glancing down he asked himself not for the first time, how the long, thick cock ever fit into him. Then he bent down to satisfy their hunger together.

Jim’s mouth closed around his shaft’s head; he dipped down and gave a long, slow suck up the shaft. Khan heard a loud moan echoing through the room; it took his bright mind just a second to realize the moan came from him. Then Kirk’s hot tongue glided carefully over his cock, swirling around the head – and every sane thought left the former dictator. Past lovers had satisfied him this way before, but never was it like this. Never by someone he truly loved and who cared for him – and not about the powerful dictator. Sheathed in his hot, wet cavern, teased with the soft, warm and firm tongue, he let go and just let the pleasure sing through his body. It made him forget everything around him. An entire security patrol could have burst through the door, and he wouldn’t have noticed. His whole world suddenly reduced to those soft, shining lips, clever tongue and torrid, burning mouth. And as Jim managed to take most of him in, a rapturous yelp escaped his lips.

And still those fingers were fondling him. Just. Right. There!

It was pure bliss – heaven! He wasn’t religious, but this WAS heaven!

His hands found their way to the younger man’s head – not urging or guiding, but searching for hold. Electricity sang along his legs to the tip of his toes and upwards along his back to his neck, his mates mark tingled. English slurred and slipped to Hindu, tumbling nonsensically over his lips. His shining intelligence finally dimmed.

He felt his loins tighten, the knot in his belly unbearable in its intensity, the flames beneath his skin were scorching him – and still this sweet, evil mouth worked him off. The knot unfolded into ecstasy; his breath faltered, the pressure in his balls increased under Jim’s ministrations…
“James… I…” His voice was hoarse and barely audible. Kirk heard the warning – and ignored it. He loved the taste in his mouth – so much his Nien and it was even stronger than ever before. He loved the way his soul-mate writhed with want and how his voice sounded – dark and throaty… He knew what his beloved needed from him. So he dropped further down letting his teeth run ever so carefully over the delicate soft skin covering the rock-hard shaft and hollowed his cheeks on the way back up to the glans. Here seemed a nice place to lavish attention; he sucked and kitten-licked, pressed his tongue into the slit and swirled it around the edge, but making sure not to neglect his sensitive balls just beginning to draw up. He gently pulled and ran his middle finger back and forth over his perineum.

It was Khan’s undoing.

Shouting his pleasure to the world and sans any control, he came – long and hard; spasm after spasm shook his frame; rapture washed over him. Stars danced behind his eyes; his whole body shuddered in release and his heart felt as if it would burst from his chest.

He felt as though Jim delivered him to his untamable orgasm that rocked his whole world. But he didn’t abandon him there. Jim drank down the first spurt and then noisily popped off. He wanted to see the evidence of Khan’s pleasure so he let it paint his chin and another rope pooled in the concave belly before sliding down in a silver rivulet. Kirk held him through the white and the aftershocks. And when the last slow, trickling stream of milky cum drooled from his dick he laid there so still–finally spent and floating in glowing aftermath. A single tear rolled down his heated cheek. Reality was far away, as soft, wet lips kissed his. He tasted spice and salt – the essence of himself mixed with the sweet, fresh taste with which he’d had become so familiar. Like citrus and cinnamon, they were together. And now he felt Jim’s weight on him; the younger man buried his fingers in the Augment’s dark strains. Warm, sticky wetness clung between them, mingled with sweat – and he didn’t care.

Slowly, his arms went around Jim, holding him close. Still his heart beat far too quickly – even his augmented body needed some time to come around after such an outburst of ecstasy. Soft tremors went through him again before he was finally able to open his eyes. He could only see a part of his beloved’s face because Kirk was still kissing him. The young man pulled gently away to look down at him. A shining, milky white droplet clung to the corner of his mouth, and he licked it away, purring like an oversized cat and stoking the craving that built-up in Nien.

Yes, he was engineered; his stamina certainly would have shocked the most biologists, but that he indeed felt new hunger for his mate just after a mind-blowing orgasm took even Khan by surprise.

On the other hand, it didn’t. He sensed Jim’s burning desire that fed his own; the hot, hard cock of his beloved against left thigh was not the only evidence of the younger man’s desire for him. Pushing
in from the edges of his mind, he felt their bond growing, bringing them closer together than ever before.

Arching up, the super-human caught his lover’s lips with his own and he smiled at their taste. He could get used to this. He had every intention of getting used to this! His hands roamed over the damp silk of Jim’s skin – exploring and caressing. He heard James’ breath hitch, and the younger man’s kiss became almost frantic. Then Kirk sat up, his eyes as bright as the sun.

“I need you,” Jim whispered; his loins and his shaft throbbed with unsatisfied want; his pulse a thundering echo in his ears that drowned out even the raging of nature outside the cottage.

“You have me,” Nien murmured; his deep baritone hoarse and purring.

As Kirk bent over to the nightstand to fetch the bottle of lube, a tingle of caution seated itself in Khan’s stomach, but he chased it away; his confidence in his captain was stronger than his fear. Steadying his beloved’s movement with a firm hand, he listened to the song of their bond and felt the flames of yearning that flared in his soul-mate – strengthening his own longing.

Their gazes met, and Jim sensed his returning awareness; he bent down and kissed him again – deep, gentle, and sensual. The golden shines of love flickered along the threads of the mental link between the men. Nien’s soul reacted to it immediately as he reached out for the light.

Jim smiled into the kiss as he felt his lover relaxing again. Even half mad with lust, he recognized the amount of trust Nien gave him and a wave of tenderness soothed the demanding desire enough to take it slowly – even through his ache. Swallowing despite his dry mouth, Kirk moved back between the long, slender thighs of his beloved, used more lube (oh they would definitely need more of this) and let his finger drift and stroke over the Augment’s already hardening shaft. He heard Khan hiss, and he grinned. Yeah, Nien was definitely ready for the next round.

Slicking his fingers one more time he let his fingers dip and slip behind Khan’s swelling balls, firmly stroked over his perineum then slowly circled round the tight pucker giving the super-human time – as much as he needed while he nipped and licked and kissed the Augment to distraction. Jim’s instincts told him that he had to be very gentle and careful. The following minutes would be far more important for Nien than for himself because an inner voice whispered that this man had never given himself like this of his own free will. Being filled in this way meant force and violence to him, and Jim was hell-bent on healing this trauma. Even if his body screamed to take what it needed most, his priority was to help and please the man he loved.

Bowing down he pressed a warm, tender kiss on the Augment’s belly, while he pushed his finger
with utter care into the tight, hot hole. Instantly Khan tensed up, and Jim paused; concentrating on kissing and soothing his mate. He listened to the speeding heartbeat and only after Nien relaxed again did he begin to move his finger – circling around the sensitive rim and dipping just the tip in and out.

Khan closed his eyes. The moment he felt something entering his body, his survival instincts flared up. But those delicious lips and warm breath on his skin stilled him again; his mind whispered only one word: ‘Jim’. He forced the tension out of his muscles. There was no danger – not with his James.

And then he felt soft pressure on the walls of his anus – not hard and brutal, but careful, almost exploratory. Jim stroked and sought and then… His fingertip brushed over the small nerve bundle, and a flash of pure lust went through him. And again – and again.

Jim’s mouth fondled his cock anew, licking it, kissing it; one hand came to lie at the super-human’s heart, shielding it from harm.

New bliss spread through Nien; his senses fixed on the utter tenderness with which he was imbued. James added a second and finally a third finger to the first one gently thrusting and withdrawing. Over and again they brushed over his prostate, making him dizzy with desire. He lifted his head and looked down at his beloved kneeling between his legs, poised to finish him off a second time. And it was not enough. He wanted to be filled – filled by this glorious golden creature; the only one who could set him free!

“Pyāra…” he groaned; the augmented part in him cringed at the plea in his voice.

Jim gave the pulsing, rock-hard shaft a last lick and glanced with burning eyes at him. They both needed each other as they did the air to breathe.

“Please…” Nien breathed. Alas, he did just beg, did he? Yes, he did – and it sounded right. There was no shame! Here, with Jim there was no need for pretense or demonstration of might. There were only them – two men, made for each other and caught in the net of love.

“I’ll be careful,” Kirk whispered; his tone rough with arousal.

Khan even didn’t bother with a nod. It was not necessary to confirm something he knew with certainly as he knew Earth’s sun rose every morning in the East. He was safe here. A low moan
escaped him with the loss of those talented fingers deep in him, but they soon were replaced with his beloved. Kirk sat up to generously slick himself up. Then unyielding but slowly and with care, Kirk pressed in, pressed home. It didn’t hurt, but it was strange – filling and full at first – lovely until the sting. Then the suppressed, dark phantoms rose from the shadowed corners of his memories.

And Jim saw it. Finally sheathed in the incredible scorching, warm, tight cave, his nerves were on fire. But he saw the haunted expression emerging in sea-colored eyes, nearly blackened with lust but tinged with – something else, not good. From where Kirk found the strength to stop was beyond him. A voice whispered in his mind that Nien had done the same for him – all those weeks back when he seduced him first against his will – and then not. Khan waited for him and so Jim forced himself to remain motionless.

“Love,” he whispered, willing his body to obey him; a new layer of sweat broke out on his forehead. “If you don’t want… One word and I’m out. I don’t want to hurt you; I’ll never hurt you…”

For several seconds, Khan had been back in the lab of Section 31, at a secret space doc near Jupiter. He was too weak to move, and his stomach clenched with fear and dread. He was naked in the semi-dark and cold room, lying over an even colder steel table and enduring brutal thrusts, Conelly's heavy panting in his ear and his sweat dripping onto his back.

Then warm hands stroked over his chest – tender and soft. A familiar voice drifted through the ghosts of the past; the words tearing him from haunted memories. Blinking the fog from his eyes, he looked into the sky-blue eyes above him; Jim looked down sweating, radiating desire and passion.

And then the words of his James sunk in.

He was given a choice – like always with Jim. He never pressed, he never forced, he never demanded – he asked, just like now.

He was with his love – with the man who had already saved him in so many ways – the only one who could cut the last chains away.

Nien licked his lips and squeezed the captain’s biceps. He wouldn’t give in to some stupid memories that could harm what he and Jim had worked so hard to develop. He was stronger than that – stronger because of the young man above him.

“Take me,” he said hoarsely. “Make love to me, James – free me, please!”
This plea, the meaning behind it, brought tears to Jim’s eyes; his desire mingled with determination and absolute affection. Slowly he began to move. Looking down to the point of their coupling only increased the sensation. He was finally inside the man who held his heart and touched his soul. And as he saw the first vestiges of pleasure softening Nien’s expression, he knew that he could beat back the sinister memories that had once held his beloved in their devil-grip.

Changing the angle the slightest bit, he could feel his glans skip over the small lump as it rubbed over the silk, hot walls around his shaft – and was rewarded with blissful moans.

“Yessss…” Khan’s voice was barely understandable anymore. “Just like this… Please, Jim, please…”

And Kirk didn’t need to be told twice. His thrusts still strong and steady, he increased his pace always taking care that despite the speed and strength, he kept his eyes on his mate trying as hard as he could to project the love that he felt – never taking, only giving his body into Nien. He watched Nien writhe beneath him; his head thrashed from side to side. Sweat and last remains of his first orgasm glistened like silver on his marble-white skin. The sight seared itself into Jim's soul for all eternity. The reckless boy from Iowa was undoing the strongest and most dangerous man of Earth. But he didn’t think about that now. He was only happy that he could give this gorgeous creature so much pleasure; that he was able to make him forget the horror he endured. Then his body’s demands took over, he knew it was safe to let go.

Nien’s eyes closed and opened again and again, the pleasure almost too much. It tore the chains of his denied trauma, Jim’s presence enough to destroy the past’s phantoms and blow their remains away like dust.

Feeling free – really free – for the first time he gave into his soul’s, heart’s and body’s yearning; surrendering to his feelings and to the man he loved. He let go the last final vestiges of control, pain, hurt. It all just – disappeared. And with this sweet surrender, the dark clouds that were as much a part of him as his own heart finally vanished, and the man he really was, soared to the surface; with them came the sheer rapture and bliss rolling hotly through him in wave after wave. James sat back even further, held onto the Augment’s hips and plowed over his prostate with every stroke.

Jim felt the silken walls of his lover tightening around him, spasming in time with his heaving breath. Enveloping Nien’s hard cock with one hand he began to stroke him in the same rhythm he pushed into him. Khan howled his pleasure – meeting every thrust. English and Hindi again spilled from his mouth; tears swam in his glassy eyes. Then he roared like the wild tigers of his home country as the ecstasy became too much. He arched up into Jim like a man possessed; milk-white fluid exploded from his prick in thick streams, striping across his chest and stomach.
Clenching walls squeezed around the young captain and in the blink of an eye, Jim tipped over the edge into euphoria right along with him. His arms couldn't hold him any longer; he shuddered his last into the man below, filling him and warming him from the inside before allowing himself fall on his beloved’s chest, unconcerned about the sticky mess between them. Wrapping both arms as far as possible around Nien, he closed his eyes.

Finally spent, sated, exhausted and consumed by love for one another, both men clung to each other as though they’d never let go – soaring in the glorious aftermath of giving themselves to the other one. In minutes, they dozed off – safe and secure in each other’s arms…

TBC

Chapter End Notes

Well, anyone still there or are you all puddles on the floor? *Laugh*, did I promise too much? I hope not. It was about time that both are making their confessions – one with words, one with action. Both are healing each other and I love the imagination that they’re setting each other’s soul free.

In the next chapter it’s up to Jim to let the past behind, and therefore the next chapter will have the title “Sweet surrender – part 2”. And there will be also a song for them.

I hope you loved this chapter and I’m dying in curiosity what you think of it (*grin*).

Have a nice weekend,

Love

Yours Starflight
Hi, my dear readers!

I am so, so sorry that it lasted that long 'til the next update. I really hoped that the January would be calmer for me, but the opposite was the case: Everything was in chaos – especially finishing my old job and my soon to be opened own shop.

I also want to apologize to those, who left me a comment and I haven’t answered it, but I needed every free minute to end the new chapter and to write the next one that is now in my beta-reader’s good care. I will answer your comments within the next week and hopefully also your newest reactions to the update.

The second part of ‘sweet surrender’ is not as hot as the first one, but it will be full of emotions – not only because of our two love-birds, but also because of Spock, because our dear Vulcan will realize something that will bring him sleepless nights.

One little (and needed) disclaimer: The song that is enacted and its lyrics aren’t mine. It’s sung by H. Fischer. Who want to listen to the ballade – here is the link:

http://www.musictory.com/music/Helene+Fischer/Sweet+Surrender

And now I hope you are going to enjoy the next installment.

Love

Yours Starflight

See the end of the chapter for more notes

Chapter 24 – Sweet surrender, part 2

Jim sighed as reluctantly, sleep set him free. He was draped over something warm, damp and firm; gentle hands roamed over his back, and soft lips nibbled at his neck. His face was somewhere between something that could be a pillow and… a shoulder. A familiar scent teased his nose and as he took a deep breath, peace bloomed.

Nien…

He lay on Nien, was held and caressed by him. And Jim didn’t want to open his eyes – just wished
he could stay like this forever – safe and sound in his beloved’s embrace.

“Jim?” The deep baritone was quiet and full of warmth, but demanded attention.

“Hm-hm?” His vocabulary had not come online yet.

“Pyāra, as much as I love having you this close – in me. I think soon it will become rather unpleasant for us to separate.”

“Why should we do that?” came the barely coherent reply as Jim snuggled even closer to him. And this was the moment he felt it: a soft twitch and jerk of his most vulnerable part firmly sheathed in Khan’s warm body.

Oh…

OH!

It was difficult to lift his head but somehow the young captain managed. His back ached exquisitely as did a particular spot on his neck, and his limbs felt as if they weighed a ton. A voice in his mind tried to lure him back to sleep. Still, he braced himself on his arms and glanced down at Khan, who looked as content as a cat that not only gotten the cream but the caviar, too.

Jim realized that he was nestled – caught between his lover’s cheeks. Carefully he tried to move though there was a bit of – adhering so to speak. Gently, Kirk pulled away.

The former dictator had never thought it to be possible, but he instantly missed the intimate contact. He missed Jim; their intimacy now too far away.

He reached to cup one of his James’ cheeks, pressed up and kissed him quickly, but fondly. Then he grinned. Barely awake and drowsy, James reminded him of a little boy – with the other hand he stroked through the tousled golden hair.

“Welcome back from dreamland, Pyāra.” His expression betrayed his manly satisfaction. “You blacked out!” he smirked. Kirk frowned, finally completely away.
“I didn’t! You fell asleep, and I didn’t want to wake you.”

Khan cocked his head. “Don’t you think that the other way around is more realistic?”

“Nope, no chance!” Jim shook his head – and a loud crack of thunder from outside startled him. He had forgotten about the weather.

“Don’t fear, little Jim, Khan will take care of you!” the Augment said dramatically and pulled him closer again; the Starfleet officer burst out laughing.

“Too late, baby; it’s been over twenty years since I was afraid of thunderstorms.”

“Shame! I want to keep you safe from the things that go bump in the night,” the super-human whispered and pressed this time a kiss to Kirk’s temple. There was suddenly seriousness in his voice, and Jim relaxed almost instantly while he nuzzled his lover’s neck.

“I know,” he murmured. “I want to do the same for you.”

For a long minute they simply laid there – happy and at peace; relishing in the proximity and emotional closeness they provided each other. The thunder clapped again and the wind seemed to increase while rain pelted the roof and windows.

“Jeez, that’s a good one.” Jim sighed and licked gently over the warm, salty skin of his Nien’s throat; savoring the taste.

Khan purred and dropped his hand from Kirk’s hair to wander over the younger man’s back. “Does it remind you of something?” he asked.

Jim chuckled. “Yeah, it does.” He kissed the Augment’s jaw before he continued, “Remember? There was a storm that night you came to my apartment and… well…” He lifted his head again and caught the glance of those blue-green orbs with his own sky-blue-ones. “Whenever something changes between us it’s accompanied with a lot of noise and electricity.” He gave Nien’s nose a peck. “It’s almost poet, don’t you think so?”
A soft smile played around the bowed lips of the super-human. “Yes, we clashed in the beginning but I believe we’ve cleared the air, and the outcome is something I would never want to miss.” He wrapped both arms around Jim. “The storm, it illustrates us.”

A flash sliced through the half-closed curtain followed by another of Mother Nature’s roars.

“Light and darkness – both fighting for dominance. Like us. Like you,” Jim murmured, cupping Khan’s jaw with one hand. He watched Khan; tenderness lay in his gaze. “Is the light stronger?” he asked quietly, hopefully. Nien smiled again.

“It is now – because of you.” He guided Kirk’s face back to his throat and marveled how the younger man’s body fitted to his – how Jim’s breath danced over his neck. The captain’s weight was a comfort – like home. He felt home – home like he had never before. It wasn’t the solitude of this little cottage nestled in the wilderness of a strange and beautiful planet, but because of his mate, who had banished the phantoms of the past and the ghosts of pain and humiliation that had haunted him for so long. Jim had burst his inner bonds and freed him. He felt not only accepted but loved – utterly and simply loved as any other human being. The feeling was positively gleeful.

The time before his James, before they grew close to each other, had been dark, stormy and full of the beginning self-destruction – not unlike the weather their first night together. Now the storm in his mind abated; the anguish was soothed and the bitter taste of the sinister memories vanished and made room for sweetness of his mate – as sweet as his mate’s soft and clever mouth tasted. He knew that Jim would be there for him, no matter the cost. He would be at his side – even if they would have to separate; Jim Kirk would always be with him. The young captain was a part of his soul now, mended the wounds and scars life had left there. For the first time, Khan didn’t mind that someone reached out to him – held out a hand to lead him out of the darkness. Not as someone exhorting their false authority over him, attempting to control him, but as an equal who only wanted to guide him away from pain and sorrow to a new day.

The music played on in the living room, and as he heard a woman’s voice sing a ballad, he closed his eyes and let the tune wash over him like the soft waves of the Indian Ocean.

Now I wondered where I was going to

Direction in the darkness until I saw you

Everytime I look and I see your light

I can't give up 'cause you're my life

Sweet surrender, now it's all that I can I feel
Sweet surrender, this time I know it's real
And like in a wonder my heart was born again
I'm not afraid to give you everything
Cause that's what sweet surrender means

Lightning and thunder continued through the skies and Jim snuggled closer to the Augment, burying his face in the crook of Nien’s neck. Here, in the arms of the man who had won his heart, he felt warmth in his soul and at peace. And beneath the blankets, Khan had pulled over them, Kirk felt Nien’s steady heartbeat beneath his palm and his gentle pulse beneath Jim’s lips. Kirk had never felt more whole – complete as he did now, with his beloved.

His beloved…

Jim tasted the word in his soul and heart, and it sounded right – beautiful even. It sounded right. A place where he belonged – a person to whom he belonged. He never dared to trust someone like this, not since he was abandoned by his mother and abused by his step-father. Bones and Spock were the exceptions. He would and had trusted them with his life. Scotty and Uhura – he would put his shirt on them, as well as on Sulu and Chekov; they were a family of his choosing. His faith in them was time-tested. Khan. Jim’s faith in him was tested too, but different all the same. It ran bone deep. He could feel Nien in every cell of his body so revealing his heart and soul was revealing what Khan already had right to – a right well-earned. There wasn’t any hesitation, doubt, or shyness in opening himself up utterly to this one man – how could he? Khan was already inside.

His heart beat wildly with his realization: He loved Khan – his Nien, his dark lion, his strong and elegant tiger. He loved this extraordinary, beautiful, feral, but also so gentle and protective creature with everything he was. It was more than he ever thought he had to give and he wasn’t sure that he’d reached the end of it yet.

Gone are all my doubts, gone is yesterday
I no longer want to turn and walk away
Sometimes I was lost I didn't see the signs
But now I'm found because you're mine

Sweet surrender now it's all that I can I feel
Sweet surrender, this time I know it's real
And like a wonder my heart was born again
I'm not afraid to give you everything
Cause that's what sweet surrender means

Jim sighed and pressed a gentle kiss to Nien’s neck, feeling the Augment purring his contentment while a strong, gentle hand caressed his side. Then Khan turned his head and their mouths met. Lips fondled, tongues tasted and teased, fingers flitted over velvet skin to silken hair and back again.

If those who knew the men best could see them now, none of them would believe that these two men – lost in tenderness and devotion – had been enemies. None would recognize the strong-willed, brilliant Starfleet captain or the fierce Augment leader. These sides of the two men had vanished into nothingness. Here, in this moment, they were only two hearts entwined with each other and wrapped in the golden warmth of love. There existed nothing else for themselves, except themselves and their private little harbor. Even the ferocity of nature was like a barrier that protected them from the rest of the world.

I almost feel ashamed, my heart, my everything
My weaknesses are there to see
But I don't care at all, I'll show you how I fall
Cause I know that it has to be

Sweet surrender now it's all that I can I feel
Sweet surrender, this time I know it's real
And like a wonder my heart was born again
I 'm not afraid to give you everything
Cause that's what sweet surrender means

The ballad in the living room faded away and made room for another song, but neither the voice nor the soft violin reached the mind of the two mates. Lost in the desire to be one again, they drifted through the haze of new awakening passion, eager to surrender to each other anew – to experience the bliss of falling and being caught and held…

ST***ST***ST

On Aldebaran, evening turned into night, and aboard the Enterprise the Alpha shift had been off
duty for more than six hours now; its members prepared for bed. Most of them. On the recreation
deck that lay beneath the living area of the ship, Montgomery Scott sat on an armchair in one of the
conversation pits near the large picture window. He nipped at his Scotch and talked with Keenser.

Well, Scott was talking. Keenser was listening to him as usual and to the conversation of the few
men and women from the alpha shift hung about this section of the recreation deck while other
worked out on the sports deck that was next door.

The engineer didn’t indulge in strenuous workouts. As chief engineer of a ship as large as the
Enterprise and with his own station at the bridge, he did quite enough exercising. Frankly, he was
glad finally to have some time to simply sit somewhere and to rest. He even denied himself the usual
pleasure of reading technical magazines; that said a lot. He was tired, well, not too tired to go to his
quarters.

“And then this idiot gearhead took a standard chart and wondered why the cadmium hardware failed
inspection, ‘cause…”

Scotty’s story about a study fellow who knew about as much about machines as he did about cows
laying eggs was interrupted; the tall, slender frame of the first and science officer approached.
Usually, he would already be in his and Uhura’s quarters, but as acting captain of the Enterprise he
had more responsibility now. For example, reading departments’ reports was a new duty he took on
in Jim’s absence. One of them brought him to this part of the ship where he wasn’t often seen.

“Good evening, Mr. Scott, Mr. Keenser,” he greeted politely.

The little alien nodded while Scotty looked at the Vulcan in surprise. “Good evening, Commander.
Around so late, are ye?”

Spock lifted a brow. “Obviously.” He crossed his arms behind his back in his typical gesture. “I am
sorry to disturb you during your free time, Mr. Scott, but I noticed in Dr. McCoy’s report, the
circumstances of Mr. Parson's accident. It is missing from your report.”

The Scotsman raised his brows at him. “I sent it to Dr. McCoy half an hour later. I’m certain that he
gotta it. There’s no error message indicating the transmission failed.”

Cocking his head, the Vulcan observed the chief engineer carefully. “Usually the section chiefs
report an incident to the CMO; he documents it in his report and adds their reports, too. But this time
both explanations about the unfortunate incident are missing.”

Thoughtfully, Scotty rubbed his neck. “Well, this time I couldn’t tell the good doctor exactly what happened, but I sent him my report half an hour later. Did you talk to him? What did he say?”

Fascinated, Montgomery watched how the first officer took a deep, slow breath before he answered with a clipped voice, the Vulcan version of irritated, “Dr. McCoy is… already asleep and it doesn’t seem wise to disturb him. He… concluded his shift by – how do you humans put it? By ‘flushing down his anger’.”

A broad grin spread over Scott’s face. “He had a drink?” Even if a Vulcan claimed that their expressions were expressionless, Montgomery could read something akin to frustration on Spock’s face. “Ah, he hadn’t one but a few drinks.” He chuckled. “Then Dr. McCoy must be really troubled by somethin’. I forgot that he had booze saved from shore leave.”

Spock decided not to advise Scott that such words weren’t to use by staff officers and continued, “Dr. McCoy was ‘in need’ of some brandy after he talked with the captain. Therefore…”

“He had Jim on the line?” When off duty or if he wanted to indicate something important to Kirk, Scotty used the captain’s nickname; Kirk didn’t mind. He and Scotty met each other under… They could be called extenuating circumstances; and the crazy Scotsman supported him from the beginning, without knowing much about the younger man. Scotty trusted Jim implicitly, as Jim did Scotty, even if they differed in opinion once in a while. The chief engineer felt relief hearing that McCoy had been in contact with Kirk because, despite Jim’s recovery from the Klingons and staying with The Shadow to heal, the engineer was worried about his friend. “How is Jim doin’?” he asked and Keenser, who was sensitive on the inside (though he seemed unmoved on the outside), bent forwards to take in the conversation.

“As far as I understood Dr. McCoy, the captain is still healing. He will return in a few days.” He could sense the relief now visible on Scott’s face. And inwardly, he too felt as calm as he thought of his Th’yl’la’s welfare now under Sunrise’s care.

“That’s good to hear, sir! I like the lad a lot and…” He cleared his throat. “I mean, I’m glad that the captain’s doin’ better.” Then he frowned. “But why is McCoy frustrated if Jim is gettin’ better?”

“I do not have enough data to analyze Dr. McCoy’s state of frustration, Mr. Scott, but his current emotional state is odd enough that he neglected to submit a complete report. That action is highly unusual for him.”
Montgomery pursed his lips. “Hmm, now that I think about it, it acted very strange after I told him where I know the word or name ‘Drythen’ from. He went rigid, stared at me as if I had turned into Nessie and raced out of engineering, calling back about some ‘emergency’.”

Spock looked emotionless as usual. Still Scott thought he sensed tension in the Vulcan’s posture as the acting captain of the Enterprise asked, “And from where do you know this name, Mr. Scott?”

“It’s not a name, but a word – a title, to be precise. I heard it in an old English rhyme from my school days. ‘Drythen’ means lord or king.” Surprised, he watched the Vulcan go rigid now, just as the doctor had. Scotty was sure he could see wheels turning in Spock’s mind; then the son of Sarek went pale.

“Are you sure about that, Mr. Scott?”

“Aye, of course, sir! I speak Gaelic – Scots and Irish, even a wee bit a Welsh and some Old English. ‘Drythen’ means lord, warlord or king and…”

“Thank you, Mr. Scott, you’re information is useful!” Spock cut in; he turned on his heels and left, nearly running.

Montgomery frowned. “’Good night, Mr. Scott! Have a nice evening, Mr. Scott!’” he growled. “So much for Vulcan politeness!”

Keenser blinked, pulled his legs up the chair and laid his folded arms across his bent knees. Contrary to humans, he had a particular ability for empathy, and what he felt from the Vulcan – shock, wariness, worry – concerned him. And he wasn’t alone in his worry; he sensed the same from his human friend.

Spock had to remind himself of Vulcan discipline as he headed for his and Uhura’s shared quarters. He felt the irrational impulse to run, but it would be uncalled for, for a staff officer to race through the ship without reason or alarm. But he was on alert – on red alert, so to speak.

Drythen meant king and he knew that ‘Khan’ was an Asian word for the same.
What if the super-human used his name and only disguised in in a different language? What, if Drythen was Khan Noonien Singh?

It made sense once ‘Sunrise’s’ many abilities were accounted for. A mere human, even a well-trained asset, couldn’t do what this ‘Drythen’ did. Still, Spock hadn’t any proof that ‘Sunrise’ was Khan, and he didn’t want leap to an illogical conclusion. He needed more data as quickly as possible! If the mysterious stranger from The Shadow was indeed the Augment, then Jim was in great danger. Spock had lost his brother in soul once at the hands of the super-human; he would not experience the pain of that loss a second time.

For a moment, he thought about waking McCoy. The good doctor’s frustration could be rooted in the realization that Jim’s rescuer was Khan, and if this were the case, then…

Spock stopped midstep, frozen in place.

If the CMO concluded that Sunrise was Khan, then why hadn’t he informed him immediately? McCoy’s very first reaction would have been to mobilize the whole ship and to rush to Kirk’s rescue. The doctor would have remained on the bridge, pestering everyone to find and to get to Jim as soon as possible. But instead of this, he stayed in his office in a worse mood than usual, and poured himself a brandy the minute his shift was over.

The pieces to the puzzle didn’t fit – unless Kirk had talked McCoy out of altering him. Nevertheless, the CMO wouldn’t keep something like this a secret if there were the slightest possibility that Jim’s health and life were at stake. Something convinced McCoy that Kirk wasn’t in danger. That fact contradicted the supposition that Sunrise was Khan. The former dictator had sworn revenge on them all, and if Jim was with him… The Vulcan didn’t need to imagine what the Augment would do to the young captain. For a moment, the old fury of last year knotted in his belly, but he suppressed it instantly. Emotions were no solution to a threat nor would it solve this puzzle.

Weighing logic when considering McCoy’s certainty of the captain’s safety, Spock thought it impossible – no – improbable (very improbable) that Sunrise was Khan. But, on the other hand, there was evidence to the contrary.

Spock pressed his lips into a firm line. Trying to work a Jim Kirk puzzle was like putting it all together nice and neat only to turn it over and see a different picture with no order at all! He needed more data – now! He hurried towards his quarters and stepped through the door.

Nyota was already in bed reading a book – a real one, not her PADD Spock realized. She looked up and gave him one of her soft, fond smiles she reserved for him. But she turned serious the moment
she recognized his stiff posture and the fire in his eyes. She and Kirk were two of a very small number of people who could read the Vulcun.

Placing the book on the nightstand she sat up. “What happened?” she asked and the son of Sarek took a deep breath. First, he had to get some answers before he could make accusations.

“When Dr. McCoy asked you to link him to The Shadow, did he sound… unusual?”

The young Bantu-woman glanced at him, surprised. “You mean, did he sound odd?” She reflected for a moment. “He seemed to be… tense and in a bit of a hurry, but that's not really new for him.”

Spock nodded; still the apparent nervousness of the CMO fitted discomfited him. “Did he speak to your relief while you were at lunch?”

She hesitated. “Joe reported only that McCoy requested some records from the communications database after we left Turkana. That's all.” Her slight hesitation indicated her guilt over leaving Kirk behind. Illogical. They merely followed his orders, and there hadn’t been another way to save the evacuees. Still, he understood guilt from a human point of view. Then his attention returned to the topic.

“What records did Dr. McCoy request?”

Uhura slipped out of bed, went to the computer terminal at her desk. She opened the program and logged in with her ID to obtain the information. “He wanted to have the record…” She frowned. “That’s odd. He wanted to have the record of Sunrise’s call after we left Turkana.” She glanced up at her lover, who stood motionless there; his face turned hard. He turned abruptly, sat down at his desk and began his research. Curious, Nyota stepped to him and glanced over his shoulder. “McCoy also retrieved med bay records from the ship’s computer base – older ones from more than a year ago,” she murmured as she saw the data logs Spock observed. “But which ones?”

“There are no tracks left,” the Vulcan answered. “Dr. McCoy deleted everything.” He switched off the terminal, leaned back and crossed his arms in front of his chest. His typical gesture when lost deep in uncomfortable thoughts.

Uhura knew better than to disturb him; she followed her own musings.
McCoy must have found out something critical he wanted to discuss with Kirk – something connected to Sunrise’s call and events from last year. She pursed her lips. The last year had been more or less calm if you compared it with their first-year-mission – Section 31 and Khan. The latter had been more than a year ago, and records from med bay were only taken out of security if necessary – only when there were prisoners aboard – prisoners that were deemed a threat.

And whom had the med bay held so dangerous that the red shirts were required?

Khan!

Nyota bit her lips. Could Sunrise be…?

No. She shook her head. Khan would kill Kirk, not rescue him. And he certainly wouldn’t go half mad with worry for the captain – or anyone that wasn’t his crew. Then again, the Augment was probably one of the few living beings in the whole universe who could sneak into Klingon headquarters, free Kirk and flee with him – successfully! The super-human also had many talents – in strategy, battlefield tactics, plotting and constructing. The sensor-disturbing device was as simple as it was brilliant (as Scotty stated with glee). Sunrise's knowledge of battlefield first-aid and medical knowledge further supported the hypothesis that Sunrise was indeed Khan. After all Khan was responsible for the cryotubes he used for his crew and himself, indicating advanced knowledge of biology.

It all sounded logical. In addition, Jim had to know this mysterious ‘Drythen’. Otherwise, he wouldn’t trust him so quickly. But if Kirk knew Sunrise’ was Khan, he would move heaven and Earth to capture the Augment, not cover for him.

Still a quiet voice whispered to her that the answer was right in front of her, but she waited until Spock moved, signaling the completion of his contemplative state. He took a deep breath and his lips twitched in irritation, and so she began to speak again. “You think this all has to do with Sunrise, don’t you?” He glanced up at her, and so she continued, “So, any idea who this ‘Sunrise’ is?”

“I have a theory, but I will need more data to confirm it,” Spock answered slowly.

“More data?” The communication officer fixed her eyes on him. “How much more data do you need? It's clearly someone Kirk knows and…”

“But hasn’t known for long,” her lover interrupted her calmly, “or I believe we would also have
heard of him. The captain would not keep that hidden – not even if the man in question is an asset. Also, whoever this man is, he knows us, and we must know who he is, or he would not have disguised his voice when making contact with the Enterprise.”

Uhura nodded. Spock’s deductions matched her assumptions. “Someone strong, intelligent, fast and resilient,” she began and the Vulcan cocked his head.

“Someone with considerable ingenuity and engineering skills; that sensor-disturbing-device is a complex mechanism, even if the build is simple,” he completed the list.

Sitting down on Spock’s desk, the young Bantu-woman looked him straight in the eyes. “So, stop me if I’m wrong here, but doesn’t that sound very much like someone we know?”

The son of Sarek lifted a brow. Obviously, Nyota had the same impression as he had. “Indeed it does, my dear. It sounds like Sunrise is Khan!” He paused for a moment. “And there is more. Mr. Scott told me earlier that he remembers where he had heard the word ‘drythen’ before and what it means.” He moistened his lips. “It means ‘lord’ – or ‘king’”. He heard Uhura taking a sharp breath and continued, “But we also know two things that would suggest we might be incorrect in that assumption. One, Khan and the captain are not friends. In fact, I would call them mortal enemies. Also, I would remind you that Khan is currently hiding. No one knows his whereabouts, and no one has heard from him since his flight from the lab in Nevada. His tracks stop somewhere in San Francisco.”

“Still, there is the likelihood that Khan is Sunrise. I think the evidence speaks for itself.” Uhura bent forwards so that her face was mere inches away from the Vulcan. “And assume Sunrise is Khan. Ah! I know what you think about assumptions. But consider this. If Sunrise is Khan, then it was him who warned Starfleet through us of the Klingon attack on Tammeron – saving millions of people by doing so. Afterwards, he saved the Lexington and as a result Commodore Wesley. A close friend of Kirk. Wesley has sort of slipped on Pike’s shoes for Kirk’s sake. And then Sunrise rescued Jim; he could have easily been killed. He saved Kirk, took care of him. He treated his injuries and, despite his anger at us for letting Kirk ‘down’, he shared his development with us so that we could escape Orion-controlled space. What does this sound like?”

This time the Vulcan lifted both brows. “As illogical as it should be, it sounds as if… He acts like - like he is Jim’s friend.”

Uhura smiled. No one would ever convince her that Spock didn’t understand humans. He did – he simply wouldn’t admit it, because it would show that he also experienced these emotions that made human’s tick. “Friendship? Yes – and given their history and the other circumstances, it must be an extraordinarily one. You would risk your life to save Jim, Spock. You already did! Why? Because he is not only your commanding officer and friend, but also your T’hy’la. Scotty would never share
any of his inventions getting the credit due him unless someone’s life is at stake; someone that he loved. He would and did it for Kirk though because his loyalty is based on friendship. Jim would fight for a friend or the family of a friend no matter the cost. He did just that when he saved you on Niburu and a hundred other times. You are his brother. The bonds of friendship tie us all together and make us do the extraordinary for each other.”

“You are correct,” Spock nodded.

“Now let’s talk about Sunrise – Khan, if we continue on the assumption,” Uhura went on. “He saved the Lexington because Jim considers Wesley the closest thing to a father he’s had since Pike. The question is: How does Khan now about it?”

Spock lifted a brow and opened his mouth to answer, but Nyota shook her head.

“No, just let me voice my thoughts. Then Sunrise blew up at us when we were forced to leave the captain behind. He sounded as if he considers us traitors. And, remember he said that people called him a ‘monster’ but that he would never let someone down who belonged to him. And at last he risked his life to recover Jim. Everything ‘Sunrise’ does lately is connected to Jim and his welfare. It’s as if he wants to protect him – to spare him pain. Just like we will always do for Kirk and each other because we are family.

Spock pondered those words for a short time, then he added for consideration, “You will remember, though, while Khan possesses strong ties to his crew, his own family, he has never showed any kind of loyalty to this crew, not least of all the captain. He may have helped us, but only to serve his own intentions.”

“Intentions that protected his family – and now he is protecting Kirk.” She bit her lips. “We both know how Bones saved Jim after the warp core chamber. McCoy used Khan’s blood plasma to force Kirk’s cells to start working and reproducing again – just like the Tribble experiment. Jim is stronger since then. You told me about how you've sparred with him since then, and how surprised you were to find his strength increased. He recovers quicker from injuries and is more vital than ever. Khan’s blood did more than to bring him back from the death; it enhanced him, even if just a bit. What if Khan feels responsible for him because of it?”

Thoughtfully, Spock observed her face looking for any trace that she was displaying human ‘humor’, but he didn’t find a hint of it. Of course not. Uhura was far too professional to joke in such a situation. She was serious – and it made him uncomfortable.

“You suggest that Khan sees Jim as family, like those…”
“Like those separated from him now. Stashed away somewhere secret where no one but a few admirals and council members know about. Think about it, Spock; Khan is utterly alone. The only one he has now is Jim – if my intuition is right – and it usually is.”

“So as a result of the blood plasma and the fact that his family is unreachable to him, you think he has developed some… loyalty towards the captain,” the Vulcan mused.

“This would explain a lot,” Nyota affirmed and Spock almost sighed.

“If Sunrise is indeed Khan, and McCoy somehow found out about it, Jim must have told him to stay silent. The reasons for the captain’s decisions to cover Khan could be that he is grateful towards the Augment for saving his life and…” He frowned the slightest bit. “Still it makes no sense. Khan is responsible for Pike’s death. Jim would never…”

“Forgetness is anchored in the Christian religion, Spock; Jim is religious to a certain degree. What, if he forgave him his personal loss? After all, most of his anger was based on Pike's death. Perhaps he found the strength to forgive Khan and that's why he's covering for him. As for Khan’s actions now. Kirk is like Pike was – thinks he can save anyone. You and the doctor know better than anyone... Jim changes people. I don't know if even Khan is immune to that side of Kirk.”

“After all Khan did – not just at Daystrom, but...?” Spock was thunderstruck, and his Vulcan mask slipped for several seconds.

“We never heard Khan’s version of the story – only what he told you and Kirk in the brig, and you admitted that it much but ‘very emotional’. We might have gotten more details if the Vengeance hadn’t shown up when it did.” She crossed her slender legs that were barely covered by the short negligée she wore. She was now thoroughly convinced of ‘Drythen’s’ identity. “Imagine Kirk and Khan are sitting somewhere together now on neutral ground. Jim is healing, Khan is taking care of him. What do they have to do, except talk? Maybe Kirk learned something that makes him see Khan in another light, and that's why he's protecting him.”

Spock nodded slowly, as his quick Vulcan mind went through the different possibilities, the different reasons why his friend and captain would protect the Augment. “Still, I see no logical explanation why Jim stayed silent about ‘Sunrise’s’ identity even before he was rescued by him. The captain trusted The Shadow’s information about the planned attack on Turkana the moment he got a private message from ‘Sunrise’. He must have known him – must have realized who his tipster was. Maybe that’s the reason he deleted the message as soon as he read it.”
Uhura cocked her head and brushed one long, loose strand behind her ear. “You’re right, that’s odd,” she confirmed. “I think you will have no other choice but to ask him after his return.”

“If he returns,” the Vulcan murmured; his eyes narrowed ever so slightly.

“Are you afraid that Khan won’t let him go?” the young Bantu-woman wanted to know, and Spock shrugged is one shoulder – a gesture borrowed from his mother.

“I’m not able to calculate the Augment’s reactions and decisions. He is brilliant; he is logical; there is no doubt. Still his actions are steered by emotion and as a result I cannot say what he will do if Jim wants to leave.” He pursed his lips. “It might depend on the captain’s persuasiveness. He must reassure Khan that he wouldn’t give him away to Command or the authorities.”

Nyota sighed. “In other words: There are a lot of ‘ifs’, ‘whens’ and ‘maybes’.” She lowered her head. “I don’t like this.”

“I have to agree, my dear,” the first- and science officer nodded. “I am unable to come to a decision.”

She reached out and touched his shoulder; tried to transfer some soothing calmness to him. “What do you want to do now?”

Her lover lifted a brow. “What I want to do is, to find out where the captain is exactly and rush to him to protect him from harm that could befall him any minute he is in Khan’s presence. What I should do is to alert Command and to give them any information I have.” He fixed her. “Can you backtrack the transmission between McCoy and Kirk?”

“Give me some time, and I’ll find out where Jim is,” she said. “The question is: Do you want to know because you are concerned about Kirk or do you want to report Khan to Starfleet?”

A small frown appeared on the Vulcan’s forehead. “What do you mean?”

Uhura sighed. “Look, if Jim’s protecting Khan, he has his reasons for it. They must be important to him, or he wouldn’t shield the man. Kirk is a little reckless from time to time and takes risks where other people play it safe, but he knows exactly how far he can go. He knows where the line is.”
“Still there is the risk that Khan will do something dangerous – hurt him, and…”

“How Kirk knows this; he’s not stupid.” Her hand on his shoulder began to massage his tensed muscles. “Do you trust Jim?”

For a long moment, Spock looked at her, baffled. “Of course!” came the almost indignant reply and Nyota smiled.

“You trust him as a friend – but do you trust him also as your captain?”

“I do not have to justify my concern nor should one question my trust in his abilities as a captain!” the Vulcan answered clipped; there was a particular fire in his dark eyes. It made Uhura smile even more.

“There you go, love! Kirk wouldn’t risk anyone’s safety – not the people of the planet he’s on and certainly not his crew. He’s made his decision to keep Khan a secret, as he sees it, in our best interest Trust him in this, and he’ll entrust you with his reasons.”

Spock let his gaze roam over her gentle, beautiful face and allowed himself a sigh.

Why was everything with humans always so complicated?

ST***ST***ST

The water poured down on the two men; the steaming heat bathed the whole room in a warm fog that smelled pleasantly of soap. Jim had wrapped his arms around Khan, and his head rested on the Augment’s shoulder while they gently massaged soap into tense muscles.

None of them – neither Kirk nor Khan – could know that their secret was slowly coming to light, now not only by McCoy but also the half-Vulcan and his human lover would find no sleep now. Jim and Nien only relished in the hot water that relaxed them after their second passionate round that finally forced them under the water to wash away the evidence of their devotion and ecstasy.

“Diego won’t be too thrilled when he gets the water bill,” Jim said as they stepped out the shower
cabin; rolling his eyes as he heard another thunder outside. Dammit, this blasted thunderstorm has definitely taken a liking to the area.

Khan chuckled as he offered his beloved a towel. “And the bill will increase when we finish the laundry.” He dried himself quickly and toweled his dark hair then he opened the bathroom door. “Oh Alas – do we have any clean sheets left?”

“Might be a set left,” Kirk shrugged and threw his towel on the sink. “Why?”

An amused smirk danced around the super-human’s mouth as he pointed at the bed. “Because I don’t think that we should lay back onto this!”

Kirk’s gaze followed Khan’s finger and groaned. Nien was right. The blankets and sheets were a wet mess. The air was musky and could tell a mile against the wind what happened here. Jim cocked his head. “Well… I see what you mean.” He looked at his lover. “Are you in the mood to… to do some housework now?”

Khan lifted a brow. “Definitely not! You?”

Promptly the younger man shook his head. “Nope! I rather want to crawl into something soft and warm, snuggle up with you and…”

“A brilliant idea, Captain!” the Augment teased, went to the wardrobe and fetched the two last sheets. “Check the pillows and see if they’re still usable then come to the living room.”

Confused Jim glanced at him. “Why?”

“You had an idea, Pyära; I only developed it a bit.” Whistling and nude, he vanished into the attached room and Kirk needed a moment to collect himself. Khan was whistling! That was new. And Khan seemed so at ease – unguarded; like a weight had been lifted from his heart and soul. Jim smiled happily. Was this change in Nien really his doing? Had he helped the Augment to overcome the horrors he had experienced most of his life? It sounded too good to be true, but maybe this night was truly the beginning of Khan’s healing. He hoped that his beloved could find some peace at last.

He checked the pillows – at least one was still clean – thrust it under his arm and went to the door. If it weren’t for the weather he would open the window, but the wind still raged. Closing the door
firmly behind him, he looked around for Khan and his eyes widened when he saw what the super-human was up to.

Nien piled the Chilean carpets in front of the open fire and added one of the woolen blankets he and Kirk had used outside to keep themselves warm while resting in the deck chairs. Then he spread a sheet above it and used the other one to cover the second wool plaid. He glanced up and smirked at Jim’s perplexed face. “It may not be soft as the bed, but if you get uncomfortable you can always use me as a cushion,” he offered with a subtle tone in his voice; mirth danced in his eyes.

Jim felt his heartbeat quicken once again. The man in front of him looked like Khan Noonien Singh, but his behavior had changed. He was… teasing, almost playful. Kirk loved this lighter side of the Augment just as much as he loved his ferocity.

“So… A makeshift bed in front of an open fire. Quite romantic,” he smiled, placing the pillow on one end of the bundle of blankets and carpets.

“And that’s not all,” Nien replied while he put wood to the fireplace; he added some paper to it and lit it with a long match from the small box that was placed on the ledge. “Lay down, James, I will bring us something to drink.”

Humming to the music from the small radio, he walked to the kitchenette, fetched two glasses and the last bottle of Chilean red wine. When he turned around, he found Jim already beneath the blanket; the corner was turned down in a silent invitation while the young captain stretched himself comfortably and crossed his hands beneath his head. The glowing flames in the open fireplace sent their shadows over the ground and bathed Jim’s clean, muscular body in a warm shine and danced in his short strands – a picture of seduction that Khan would remember for a very long time.

Returning, he uncorked the bottle and put it on the floor beside the two glasses, only then he slipped beside Jim beneath the blanket. “The wine has to breathe before I can offer it to you. The bouquet must unfold first.”

Kirk chuckled. “Yeah, I learned about it at the Academy. You don’t learn the value of a good wine in Iowa. The value of cheap beer, now that’s another story. My mother loved a good glass of wine, but she gave it up after she married Frank; he thought it was a waste of money.” He grimaced.

Khan turned towards him. “So… you and your stepfather weren’t on the best of terms?” he asked, already assuming that this ‘Frank’ was responsible for Jim’s feelings of inferiority. If so, then the man was lucky they would never meet!
A snort escaped the young captain. “Far from it,” he growled. “This bastard was all ‘nice as long as my mother was around. As soon as she went away to some conference or project, he’d order Sam and me around, treated us like dirt and if we disagreed with him, he beat us – made certain he put bruises where they wouldn’t be noticed. Hurt like hell. Worst was, she didn’t believe us at first. She thought we were trying to separate her and Frank because we were jealous, but we weren’t. Sam pleaded with him for us. It worked a bit in the beginning, but then Frank began to drink, and everything turned nasty.” He frowned. “He was an asshole.”

The hand that didn’t cup Kirk’s hip had curled into a fist. He. Had. Known It! This stepfather was the reason that this strong, bright, compassionate and brilliant young man weighed and found himself wanting. This Frank had driven James’ older brother out of the house – forced the boy to leave his younger brother behind – and had hurt Jim’s soul over and over again.

For long a moment Khan remembered another boy, far younger than he had been. Large brown eyes, a mess of dark gold and brown hair on his head, a slender hand that gripped his in search of safety and trust.

Joaquin, his little brother. Not by parentage, but to people who make their own family, parentage means very little.

He had met the churl as the older Augments helped to set free the younger. They tried to save as many from the labs as possible, never giving in the lurking fear for their own lives. Joaquin had been one of the last children rescued. He was a sweet little boy, only five years old and unaware of the fact that the men and women charged with his care were about to murder him.

Khan had fought for the little boy and in the process discovered the first bonds of a family of his own making. One look at the boy and he was lost – determined to protect him from all harm. The bond stretched both ways. In those first nights after their escape from the labs, the child sought him out desperate for some comfort. Seventeen year old Noonien Singh gave all that he had to give to the child.

He remembered the weeks Joaquin didn’t speak, traumatized by the events previous. Then he had tried some single words in English rather than. He had been raised fluent in many languages but chose not use them. He did use a resource he didn’t know he had – patience. During those long, dark nights, he tried to lure words from the boy who showed his affection by snuggling up to him. Then all of sudden, the levee broke. During one very long night, the child talked, and talked and talked – poured out his soul to the older boy who had saved him – fought ferociously for him and still showed so much tenderness. Young Noonien listened to the boy’s anguish and held the child ‘til the next morning. In those hours, the bond of brotherhood formed; and it grew through the years. Khan loved his crew – his family, his brothers and sister. But this young, bright and beautiful child
that grew into an equally beautiful young man held his heart like no one else had.

It took almost three hundred years for someone to try again – his James.

He listened to Jim’s story about his stepfather; his mother seemed overtaxed with the death of her husband and her two growing sons – unable or unwilling to give up her career for them. And then the older brother who left the younger one to walk his own way, Nien felt the spiritual kinship between himself and the young captain more than ever before. Alas, Jim even resembled Joaquin in some ways, and the Augment didn’t doubt that the two men would have gotten along quite well.

It was a cruel joke for fate to play. History replayed over and again, but no one was ready to see it – and only he had lived long enough to watch. But no one listened to the man who saw so much – had so much to give and teach. They only saw their own purposes. If only someone had listened – perhaps they wouldn’t be at war now. Oh, but if someone had listened, he would have never met Kirk. So maybe James was fate's peace offering to him for his pain. If he believed in fate.

Khan took a deep breath. “Knowing you and your strong sense of justice and morality, you didn’t tolerate your stepfather’s abuse for long,” he said. He sat up and poured some of the wine into the two glasses.

“Damn right,” Jim grumbled. “I got my revenge after he overdid it.”

Offering his beloved one of the glasses, the former dictator looked at him curiously. “What did you do? Did you burn a treasured item? Slash his car tires?”

Heartful laughter escaped Kirk while he braced himself on one arm and took the glass. “Well, I wouldn’t slash car tires. Even I wasn’t that evil – but I smashed a car. Ran it into a ravine.” He hesitated shortly. “Unintentional, honest.”

Khan toasted towards him and waited until the young captain took a sip of the wine; then he cocked his head curiously. His eyes seemed to be endlessly deep and a constant whirl of blue and green, mixed with a mysterious fog-grey. “This sounds interesting,” he commented and Jim grinned.

“How do I jump from a bridge into…”

“You love danger. I’m well aware of it now,” Nien interrupted him almost gently. “So, do tell, why
you hurled a car into an abyss – unintentionally.” The tone of the last word betrayed his disbelief at the statement.

Kirk grimaced. “Well… It belonged to my real father and Frank…” He sighed. “Sam just left us to live with my grandfather. Said he couldn’t be a ‘Kirk’ under our stepfather’s roof, and even if I could understand him, I was… shocked – outraged – that he left me alone. My mother was away for her job, again. She left me alone with this… God, he was really a bully. Anyway she had a blind spot when it came to him.” Jim pressed his full lips into a thin line then he continued, “I felt… betrayed, abandoned. Everyone left me – they didn’t care about me. And then Frank, drunk as usual, ordered me to clean dad’s Corvette and…”

“WHAT?” Khan went rigid all of sudden and looked almost shocked at him. “A Chevy Corvette? What model year?”

Jim shrugged. “I’m not entirely sure, but I think around 1962 or 1967… I don’t know… What is it Nien?” He never had seen the Augment that thunderstruck.

For a moment the super-human stared at him – mouth agape, eyes wide, utter disbelief written all over his face. “James, do you have the slightest… idea how prized that car was? It was practically priceless in my time – thirty years later. To think that the vehicle survived for three centuries…” He shook his head, half amused, and half baffled. “Your stepfather must have truly provoked you.”

Pursing his lips, the captain cocked his head. “He wanted to sell it behind my mother’s back. He knew that she didn’t want to lose it. He was going to do it while she was away. He never respected my real father, was always jealous of him. People always said I looked like my dad. Mom always said I had his smile. I think that’s why Frank loathed me so much – and Sam even more so because Sam was like my father: Generous, gentle, strong-willed and noble. Frank hated Sam, but he took it out on me – and my mother was too grief-stricken to realize it.” He took a sip of the heavy wine. “So anyway, after Sam left and Frank was foolish enough to tell me why I had to wash Dad’s car, he was selling it. I snapped. I took it and drove away.” His gaze became unfocused.

“I wanted to be free, wanted to feel what my Dad must have felt whenever he drove his car. I passed a classmate who recognized me. I didn’t care. I drove and Iowa’s vast and fuck it was I thrill. Frank was furious! He yelled, I could hear him through the speakers of the old comms station telling me to turn around. And on top of all a police officer on her hyper-bike followed me and put on the lights. Course, I didn’t stop. I veered off onto a wide trail.” He chuckled. “And then there was suddenly this fence, the warning sign that I was entering an abandoned mine. It was a dead end – literary – and I made a decision. I sped up. I barely had time to turn the wheel and to jump out of the car before it flew into the ravine.” He began to laugh. “And then the police officer caught up with me, stood there as fierce as she could be, demanding my name.” He grinned. “I told it with pride. I think that was the start of my first career – as a troublemaker.”
“You still are, James!” Khan’s voice was fond and teasing in one, yet his gaze spoke of gentleness and understanding. His lips twitched. “In a certain way you avenged Frank’s disrespect of your father’s memory.”

Kirk pondered those words and nodded slowly. “Yes – you are right. I did it for him, for Sam, for Mom and for me. This car wasn’t Frank’s to take. It was Dad’s! And he had put off Sam! I didn’t want him allow to do the same to me! And to Mom.” Jim looked back at the Augment. “First, when Mom introduced Frank, I hoped for someone who would take care of Sam and me. But he made us feel like intruders in our own home. It was about time he was taught a lesson – and I did it without regret. Mom would never have driven the car, Sam didn’t dare to touch it, and so it was up to me to decide what should happen to it. It belonged to my father, no-one else. And if he couldn’t drive it anymore and I was about to be robbed of it, I had to rescue it – it ended a bit disastrously, I have to admit.” He took a deep breath. “I’m sorry that that I destroyed it, but honestly, I’d rather than have it taken from our family – one of the last reminders of Dad.”

Khan smiled. A genuine smile that mirrored in his glances, then he began to chuckle. “That’s so like you – hurling a three hundred years old Corvette to its doom to teach your stepfather a lesson. You are a rebel, James Kirk – and I am glad that our paths crossed. You are all I could ever hope to find in a mate – and more.”

Promptly, Jim’s heart beat faster again as he caught the warm, fiery gaze of the Augment. He knew that Khan would understand. They were so alike in so many ways that it was eerie – as if they were two parts of a whole.

“So, have you wrecked anyone’s car?” he asked playfully and Khan began to laugh.

“No, Erwin had bigger toys – like a private jet that wasn’t any use after I was done with it. And it had the nice side-effect of ruining his plans. It saved many lives.” He sipped again at his wine.

“Care to tell?” Kirk looked to him with interest and Nien realized once more that he could deny the younger man nothing. Either way, it felt so right to about the family he loved so much with someone who was eager to hear!

“Well, Erwin was one of those Augments who wanted to take the biblical decree as gospel you could say: to subdue the Earth. At any rate, he didn’t care for people enhanced or not, and was about to inflict a catastrophe onto Russia. I – We! – stopped him just in time. And during combat, his jet was destroyed.”
“With him aboard?” Kirk’s voice was calm, and the super-human took a deep breath.

“Yes, but it was still on the ground, so there was no collateral damage.” Khan pursed his lips. “The expression of Erwin’s general was priceless. I am almost certain it was not Otto’s shot that killed him, but a heart attack.”

Curious, Jim watched him. “So you took down one of the other Augment leaders to protect people. Or, I guess a whole country.”

It was not a question, but a statement and Khan shrugged. “I hate senseless blood spilling. Leaders should take care of their people, even if it is a people conquered. To treat them with anything other than the most basic of human dignity is wrong. I admit, I’ve killed too often, but I always tried to avoid innocents.”

“Like the scientists in the LSH lab you escaped from,” Jim nodded slowly, and the former dictator lifted a brow.

“There wasn’t any reason to kill them. The scientist who accidently pulled me out of a coma served me alive better than dead; after all I needed someone to put in the cryotube. And the man whose identity made it possible for me to leave the lab, was a family man. I listened his talk to his little daughter as I snuck into the changing room. There was no need to take his life, so I didn’t.” He caught the thoughtful gaze of the younger man and rolled his eyes. “Contrary to the popular belief, I do not enjoy killing. If I have to do it, I do it without regret, but slaying without reason is beneath me.”

“I know this now,” Jim replied after a second, his face gentle. Then he sighed. “If only I’d known you sooner!” He laid down and placed the half-emptied glass beside him

“Yes, so many ‘ifs’,” Nien nodded, drained his own glass, put it down on his side of the makeshift bed and lay down. Kirk snuggled closer to him, wrapped one arm around his hip and smiled.

“Well, now we are beyond this ‘if,’” he murmured; ignoring the next growl of thunder outside. “Would you tell me more about your crew – your family?” Hopeful, he looked up at Khan who replied his gaze. A genius’ smile spread over the delicate features of the Augment and he pulled the younger man even closer.

“I would love to introduce them to you. I think you would like the most of them.”
Jim smiled too now, laid his head on the strong shoulder of his beloved and listened to the tales of ‘the Augments who left for good’…

TBC…

Chapter End Notes

Well, the two love-birds are really getting very close - while aboard the Enterprise Jim’s friends are worrying their heads off.

In the next chapter Spock will confront Bones with his assumptions and our dear doctor will find himself in a tight corner. Then you will meet Kor again and Jim begins to realize that the whole ‘marking-thing’ means a lot more than he thought.

Hopefully you liked the new chapter. It’s still calm and sweet for the two men, but this will soon change (the chapter after the next). Just right now they enjoy their ‘vacation’, not knowing that trouble is already on its way to get them.

Once again sorry for the delay and I hope you’re not too angry with me – and that you liked the candies and that the first part was a kind of ‘song-fic’. I love this song very much and I thought it fits to what Jim and Khan see and find in and through each other.

The next chapter will come sooner, promised.

Have a nice evening,

Love

Yours Starflight
Bonds of friendship and love

Chapter Notes

Dear readers,

I’m so sorry that I somehow missed publishing this chapter. Yes, this is the real chapter 25 and not 26 as you already know, comes afterwards. The mistake was the outcome of too much stress and chaos. I’m truly sorry and I hope this chapter makes up for it – especially the last part (*snicker*).

I promise an incredible talk between Spock and Bones, sweet fooling around by our two love-birds and at last something you all have certainly waited for.

Have fun

Yours Starflight

See the end of the chapter for more notes

Chapter 25 – Bonds of friendship and love

The morning brought no fairer weather than the night before. It was still raining and windy, but finally the thunderstorm had exhausted of this place and moved on. It didn’t matter the weather though, the two men in the small cottage at the Silver Bayou sensed nothing that wasn’t his pleasure or his partner. Khan spooned against Jim; both were still deeply asleep with smiles playing around their lips. They had talked until late, made love again and had finally drifted off – for once not caring about anything outside of their little world.

Aboard the Enterprise, another man lay still in slumber; he slept right through the alarm clock. It wasn’t often that Leonard McCoy got himself drunk, but last evening had been one of those occasions. Worry, frustration, and anger had caused him to forget that he had duty early in the morning. He knew that as the ship’s doctor and staff officer he ought to be a model of control and responsibility. His concern and irritation over Jim’s ‘idiotic, foolish and frankly sudden trust in that blasted superman’ caused his reaction.

Saurian Brandy was as strong as its Terran twin and its high sugar content ensured that the alcohol entered the blood system quickly. It was no surprise that McCoy didn’t register the alarm clock. At the same time, there was a very distressing (to his pounding head) noise repeating over and again, until it finally reached his drowsy mind; the door buzzer finally registered.
Opening one eye and then the next, Bones needed a moment to account for his continued existence and where that existence might be.

Was he in a bed? Yes!

Was it his own? Maybe. Good enough.

Was he in his quarters? He looked around, just to be sure.

Why was everything in a blur? Mmm, likely the headache.

What was that awful taste in his mouth? It could have something to do with the reason for his headache. Which might also have something to do with the empty bottle and tumbler over on the table. Well, that was good; at least his vision was beginning to clear.

What was this evil noise? It sounded like a doorbell, didn’t it?

As his mind came finally to the conclusion that he was indeed in his bed and that he felt like dying, he realized there was someone at his door demanding entrance; Leonard McCoy lifted his head carefully.

Not good!

Really not good!

He felt like a hypertruck had run him over.

His foggy gaze found the alarm-clock. 0830… Well, it was morning and…

Morning!
His shift started at 0800.

Oooohhh…. SHIT!

“One moment!” he called. Well, he wanted to call, but what came out of his mouth was something that sounded like a mixture of Chinese and Rigelian, spoken with a hot potato in his mouth.

Somehow he managed to throw the blanket off and swung his legs over the bed to rise. Promptly the walls around him started to move, and he had to hold himself steady with one hand on the nightstand as nausea washed over him. Sweet Lord, he hadn't had this bad of a hangover since his divorce! Staggering towards the door, he ordered the computer to let in the visitor. And as if the morning hadn’t started out bad enough, Spock stood at the threshold; his raised brows and his gaze transformed him into a kind of Vulcan avenging angel.

The science officer stared at the pitiful man in front of him, took in the red eyes, the pale face and the glassy gaze, and crossed his hands on his back. “Good morning, Doctor!”

McCoy rubbed his face – there were times he wished this ship could make him disappear. Unfortunately, he hated the beaming device. Of all people, it had to be Spock who caught him in this state.

“’Morning, Spock,” he greeted with a heavy sigh. “I’m… I’m sorry that I overslept but…”

The Vulcan simply entered the quarters and while the door slid close he interrupted the CMO calmly. “It appears you are not feeling well, Doctor. Maybe you should take the day off.”

Bones shook his head – a bad idea because all of sudden there seemed to be a little dwarf in his skull wielding his ax against the good doctor’s skull. Groaning, McCoy closed his eyes and pointed towards the living area. “Please, have a seat and…” He stopped as the alarm clock buzzed again and cursing, he returned to his bed and switched it off.

Spock had been in McCoy’s quarters only a few times before, but he knew the doctor to be fastidious. Right now though, it looked as though a bomb exploded. The CMO’s day-old uniform lay on the floor, his right boot was by the bed, his left boot at the door to the bathroom. An empty bottle and a likewise empty glass sat on the nightstand; some books had fallen off of the table, and the most of his blanket hung over the bed’s edge.
“Your frustration seems to have grown, Doctor,” he commented almost wryly and McCoy rolled his eyes.

“It’s nothing,” he shrugged and pulled the blanket back on the bed. God, he felt horrible.

“I wouldn’t call it that,” the Vulcan replied. He watched the other man very closely as he carefully chose his next words. He was going to take what humans would call ‘a shot in the dark’. “That Jim is with Khan is certainly not ‘nothing’.”

If someone had frozen time, Leonard would not have been more surprised. He stopped dead in his tracks; his eyes went wide and shock was apparent on his expression. “What?” he somehow managed; his voice not more than a squeak.

Spock lifted a brow. The CMO’s reaction told him all he needed, and for a moment a sinking feeling passed over him that he quickly suppressed. Nyota’s and his thoughts had been right. Sunrise was Khan! And McCoy had known it. For how long, he was not sure, but at least since his last conversation with the captain.

“Doctor, if you know something about Sunrise’s true identity – if you confronted the captain with your knowledge yesterday and Jim talked you out of passing this information to me or Starfleet Command, it is best to say so now.” The calm tone didn’t fool McCoy. The Vulcan was irritated. There was no doubt about it by the look in his nearly black, stormy eyes. And Bones was in deep water now. He willfully omitted passing valuable information to the ship’s acting captain and could face court martial.

Sighing again, Leonard sat down on the bed’s edge and looked up into the emotionless face. Still, he thought he could feel hot anger burning deep in the Vulcan – anger that began the moment Khan had taken Jim hostage aboard the Vengeance. It found its apex when Jim died on the other side of the warp core chamber’s safety glass. Vulcans may state that they had no feelings, but McCoy was convinced that this was a lie. They had repressed feelings and emotions at the very least, and Spock was only half Vulcan. His human side was in constant battle with his Vulcan side. ‘What happened when the human part of him broke through and unleashed its fury,’ Bones mused as Khan had been brought in unconscious state to his med bay? A mere human wouldn’t have survived the Vulcan’s wrath, and as Leonard looked into the black abyss of the first officer’s eyes, he saw a spark of this furious flame again.

Taking a deep breath, he bent forwards slightly. “Jim’s in no danger,” he began carefully. “He was alone when I talked to him, and he… He asked me to keep this – development – to myself, at least until he’s back. He promised to explain everything, but right now… Now he wants to enjoy his little timeout with…” He made a short gesture with one hand.
“With Khan?” Spock asked icily; both brows raised. Jim was indeed somewhere alone with the Augment, and McCoy stated that their friend and captain wasn’t in any danger? For a long moment, the acting captain of the Enterprise thought back to those minutes when he found the only friend he ever had, broken and dying, untouchable behind the glass in the Engineering. Jim was afraid and pleading with him to help him to face death without fear.

His human side had flooded him with unfamiliar emotion in those moments. As he had faced a mortal situation within the volcano on Nibiru, he had decided to feel nothing at all and after he had witnessed the emotions of Pike in his last moments he had thought he had made the right decision on Nibiru. Nyota had accused him of diminishing her – their relationship then, but he hadn’t. It had been a logical thing to do. To suppress any emotions in the face of the one’s impending death. But Jim did not have that option. Nor would he take it if he did. Jim was that kind of man. And so Spock longed to reach his friend – to share his mind with him and offer him strength and during the last minutes of his life as he had with Pike. But he could not. Jim had died alone, separated from his friends and without the comfort of just a touch. He could only feel life dripping out of his body and soul.

In the second Kirk’s gaze broke and the light left his eyes, Spock had felt hatred for the first time in his life. Real and burning, it seemed to consume him from within in hot flames. Pursuing the man responsible for the loss of his only friend had been something from which he could not stop himself. Logically, he knew he had to capture an immensely dangerous criminal to prevent any more death and destruction, but in truth he had chased the Augment down to avenge Jim’s death.

Afterwards, Spock needed many hours of meditation before he was even ready to admit that he had sought revenge – something a Vulcan should never allow himself. And he had needed even more time still to accept it.

Khan Noonien Singh had driven him to and behind his limits, had provoked the worst in him and had brought him a terrible loss that had shaken him no less as the destruction of his home planet. And the very same man was now with Jim. Yes, Khan may have saved Kirk, but the reasons for his doing were certainly no charitableness.

And he doubted that McCoy was that naïve to believe that Khan had found all of sudden a ‘golden heart’.

McCoy massaged his neck as he watched the quick change of expression on the Vulcan’s face before it was blank like always. He knew that he couldn’t deny this little secret any longer. “Yes,” he admitted and looked up at the first officer. “Yes, you are right. Jim is with Khan.” He watched how the first officer pressed his lips into a thin line before continuing calmly, “But, it was Khan who recovered Jim from the Klingons, and it was Khan who warned us about the planned attack on
Tammeron. He also saved the Lexington.” He shook his head. “I don’t know what happened. I don’t know why the bastard is all of the sudden so eager to keep Jim safe. But one thing is certain, the Klingons would have tortured Jim to death by now if not for Khan.”

Very slowly Spock nodded. ‘Nyota has been right!’ he thought. ‘Khan tries to protect Jim. The question is still: why!’ he cocked his head. ‘How did you find out about Sunrise’s identity? Why are you so sure that the captain isn’t in any danger?’

Bones rolled his eyes. “As I told you, Jim was alone as I finally had him in the line. He wasn’t forced to say anything he doesn’t want, still he almost begged me to stay silent about Khan’s presence. He fears that Section 31 will get its hands on the Augment again and that Khan will be handed back to the labs. He is very concerned about him. Don’t ask me, why. Aside from the fact that Khan saved his ass and fought on the right side this time, I honestly don’t know why Jim is all of sudden so protective of our special ‘friend’, but he is.”

Observing the CMO, the Vulcan lifted one brow again. “And how did you find out about Khan? Because of Mr. Scott’s hint that ‘Drythen’ means ‘lord’ or ‘king’?”

“So he told you too?” Bones pursed his lips for a moment; then he snorted. “I’m wonder if Scotty didn’t put two and two together and figured out by himself because he’s too busy with his machinery.” He sighed again. “I already had a suspicion that it could be Khan because everything Sunrise has done can’t be done by one human working alone. Still, I couldn’t imagine Jim covering for Khan, so I just figured I was going down the wrong path.” He grimaced. “After Scotty revealed the meaning of ‘Drythen’ I… did some researches. I compared Sunrise’s voice with the record of Khan’s while he had been in my med bay last year, and… Well… After, I had the computer transfer Sunrise’s voice into Khan’s, I had no doubt that it was him.”

Spock looked at him, and his eyes widened ever so slightly. “Fascinating!” he commented. “Even Nyota didn’t think to do that.”

McCoy grinned shortly. “As you see, this doctor can do more than just patch up careless crew members.” Then he turned serious again. “As I realized that all hints are pointing at Khan, I contacted Jim, confronted him and then…” He shrugged, clearly frustrated. “Well, the Iowa-kid knows exactly how to persuade me to do things I’d rather not.”

The first officer made an affirming gesture. Oh yes, he knew exactly how persuasive his T’hy’la could be. “And you are sure that the captain is not in any danger? It seems to be doubtful if Khan is involved.”
McCoy threw his hands up. “Jim was outside in the garden and Khan was inside fixing dinner just as Jim told me he’d be safe. He sounded like he was on vacation with a buddy.” He frowned and chuckled for a moment. “I imagined Khan in an apron stirring a pot on a stove. Somehow that struck me as funny.” This time Spock had no problem understanding human humor. He pictured moment the Augment in a domestic setting, and it was – unsettling. Then he turned his attention back to the problem at hand. “What isn’t funny, Doctor, is you withholding such information from me.”

Even with the mother of all hangovers and tired as a bear at the beginning of winter, Bones knew exactly how he could get away with something that was just this side of insubordination. “Jim asked for it and he is, even in his absence, still the captain of this ship. I just followed his order and…”

“As you already pointed out, Doctor, Jim asked you to stay silent. He didn’t and couldn’t order you in this particular situation.” He took a deep breath and suppressed a grimace. Even if the air conditioners worked flawlessly, he could still smell the alcohol on the CMO. “Khan is a wanted criminal. Starfleet Command had classed him as ‘highly dangerous’ and the last time I checked the status, there was still Admiral Barnett’s order to shoot Khan at sight. Why Jim covers for him now is beyond my understanding. He has all reason to be wary of the Augment and…”

“This Augment saved our friend and captain, Spock! He protected more than 18 million lives from Klingon rule and helped Wesley; probably saved his life. Shooting him on sight would be a hell of a way to repay this man’s help – even if I want to kick his ass from here to the next week for what he did last year. I still have nightmares of the moment the Red Shirts brought me the body bag. And only after I opened it could honestly believe that my best friend lay dead inside of it!” For a moment, Bones went silent before continuing. “But somehow Khan switched sides, or his plans mesh with Jim’s, I don’t know! But Jim deserves a chance to explain everything. He deserves everything we have to give him and you know it! If after all Khan has done to him, he is standing up for him now, protecting him, then he must know something we don’t. That’s good enough for me!”

The Vulcan crossed his arms in front of his chest. “I am still wary. Yes, the captain owes Khan his life – again – but the question is: Why did Khan come to his aid all of sudden? Why did he risk himself to rescue Jim? And why does Jim cover for him and refuse to hand him to the authorities?”

“Section 31,” McCoy answered without hesitation. “Jim is sure that not all members have been removed, and he thinks they’ll use Khan again as a lab rat. That man should be in jail, no doubt, but running illegal tests on anyone is a crime. So I can understand why Jim that he is hell-bent on sparing Khan that fate.”

Spock pondered these words for a minute. He had his own thoughts and they went mostly along with the CMO’s musing. “You and Jim are confident that Section 31 somehow… still exists,” he suggested, and Leonard nodded.
“Yes. Just think of the SBI’s reaction when it got your report of Jim’s capture. They gave us some bullshit about how sorry they were, but couldn’t do anything to help him. Then Barnett returned from the conference and ordered Wesley to start a rescue mission. It was unnecessary because Khan had already recovered Jim, but none of us knew it. Luengo was ready to sacrifice Jim; Barnett did the opposite when he learned about it.” He bent forwards. “Luengo was or is a member or a sympathizer of Section 31. He knew about Khan’s transfer to the secret lab and Barnett was about to put him and Norton in custody for misconduct. But Luengo is still free and leading the SBI as we speak. And when Jim was in trouble, he didn’t lift a finger to help him. It’s as though he’s trying to get him back sullying his good name.” The doctor thought for a moment. "Or he's trying to keep Jim quiet. Dead men tell no tales. I’d bet my last shirt that Section 31 is still operating, but staying well off the radar. And they want Jim out of the way. He ruined them once, rightly; he could do it again – maybe even with Khan’s help. The Augment worked for Section 31. He must have a few ideas of his own on how to take them down, permanently. Maybe that's why Jim is covering for him.”

Spock couldn’t deny the logic. “You mean that Khan and the captain made a deal. Khan testifies against members of Section 31 and in return he gets a reduction in sentence.”

“Something like that,” Bones nodded. “Khan was sentenced to cryosleep – a really odd sentence if you ask me. But then it isn’t if you consider what happened afterward. It was the only way they could use him as a lab rat again. And there was not consequence to that abuse of power. But that’s not all. He can’t be put back into cryosleep without it killing him. Twice he's been frozen and re-awoken; a third time would be too much. Even his engineered body has its limits. The Federation will repeat his trial. They only use the death penalty under a very specific set of circumstances. And after all Khan's done for the Federation and Starfleet over these last weeks, the death penalty is out of question. They'll sentence him to cryosleep again, and he won't survive. It's the death penalty without the name. He's the real victim here.”

“A victim?” Spock lifted his left brow. “Concerning the illegal tests he had been forced to endure and the blackmail by Section 31 – helping Marcus develop weapons and a warship. I suppose you can call him a ‘victim’, but nevertheless he is still a murderer and criminal.”

McCoy cocked his head. “Jim said something about how he didn’t know Khan as he does now – that he learned something that changed a lot. This could be the reason he's covering for Khan. Maybe they have some sort of deal – I help you; you don't turn me in.” He fixed the first officer with a look. “And that brings me back to Jim. We should give him the chance to explain himself and his decision. If you inform Command now about Khan, you also have to tell them where you got it. And then you'd put Jim at risk with Starfleet. Think of Nibiru and…”

“I am aware of the unfortunate chains of events that led to Jim’s temporary demotion, and it is not my intention to cause him another,” Spock replied firmly. “It was not my plan to inform Command about Sunrise’s identity without speaking with the captain first, yet… I am concerned about Jim’s well-being. Khan may have saved him, but the Augment is dangerous and…”
“Jim feels safe with him, as crazy as it sounds. And I think he can judge the situation better than we, after all, he's the one out there.” Bones shook his head. “I have to agree with you though. Khan is as harmless as a tiger on the hunt. I hope Jim doesn't do anything stupid like provoke him. On the other hand, Khan seems to need Jim; otherwise he wouldn’t have rescued him. They must have declared a kind of truce, and I don’t think it would be wise to destroy it by doing something rash.”

Before Spock could answer, Uhura’s voice sounded through the intercom, “Bridge to Commander Spock!”

The Vulcan stepped to the terminal on McCoy’s desk and activated the link. “Spock here. Go ahead, Lieutenant.”

“Sir, I was able to backtrack the transmission,” the young Bantu woman reported; a wave of uncertainty tainted in her voice. She didn’t know if the matter was official now or still private.

Recognizing his lover’s dilemma, Spock made his decision. “What did you find out, Nyota?” he asked quietly, indicating the private nature of the matter by addressing her with her given name.

A sort of relief sounded in her next words, “The transmission was answered from a comm station in the orbit of Aldebaran III and was transferred to a private communicator on the planet’s surface.”

Bones and Spock exchanged a look. They had been there only two days ago; never would they have thought that their friend was somewhere down on the planet, only a few kilometers away from them!

“Well done, Nyota, thank you,” the Vulcan answered and switched off the link, only to see that another call had arrived – this time from the med bay. Observing the tired and hangover CMO again, Spock called the med bay, told M’Benga that McCoy was still in a meeting with him and that the doctor would arrive later in the morning, barring an emergency.

Bones listened and smiled at Spock; grateful that the Vulcan more or less covered for him and gave him time to get sober. “Thanks, Spock,” he said quietly and the first officer lifted his brow and he switched off the terminal.

“There is nothing to thank me for, Doctor. As you say, extraordinary times call for extraordinary measures. Your – indulgence, I hope is only a reaction to the captain's current situation.”
“Of course,” Bones beamed. “It’s not my style to get drunk on a regular basis.”

“I am aware, Doctor,” the first officer replied and went to the door. “Because we cannot report officially on Sunrise’s true identity without giving Jim trouble, this stays private for now. Therefore, I can’t order a disciplinary action for withholding relevant information from the commanding officer of this ship, but if you’re slipping into the role of the literature detective Sherlock Holmes again and have success, I expect your report.” He saw the slightly guilty expression on McCoy’s pallid face.

“Sorry, Spock, but I only accepted Jim’s…”

“I know, Doctor. Under normal circumstances, I would have done the same, but we are speaking about Khan here. To use a human phrase: This is all a ‘bit not good’. Still you are right about giving the captain the credit of his discernment.”

Curiously, Bones looked at the Vulcan. “What will you do now?”

Spock hesitated a moment, before he carefully replied, “I will give the captain two days. If we haven’t heard anything from him by then, we will observe the former Neutral Zone near the Aldebaran system and pick him up during this mission. And if Khan gives us any problems, I will have no other choice than to arrest him.” He lowered his head in greeting. “Good day, Doctor!”

With those words, he was gone, and McCoy sighed deeply before he fetched some painkillers and readied a hypospray that would help him to get the alcohol out of his system.

ST***ST***ST

On Aldebaran, the two lovers weren’t aware of the fact that at least in part, Jim’s friends uncovered his secret. Khan was the first to wake up this morning, and a smile played around his lips as he realized that it was him this time who used the other one man as a make-shift pillow. His head lay on Kirk’s shoulder, one arm wrapped around his beloved’s waist, and their legs were entwined. He listened to the rain that still wept from the skies, to the steady heartbeat of his mate and to the soft noises of the wooden cottage. He could smell the cooling ashes of the fire that died during the night, the red wine left in one of the glasses and Jim’s ever present and now familiar scent.

Nien moistened his lips; his eyes remained closed. The Augment relished in the peace of the new day – a new day they both would use to find some rest. The super-human didn’t want to admit it, but he felt slightly tired after the last night full of sweet passion, sheer devotion, all-consuming ecstasies and
soaring aftermaths. And even his engineered nature hadn’t been able to make all evidence of his and Jim’s lovemaking vanish – those blooms left on his body and the sore muscles within. He was certain that his James would suffer even more for some hours.

No, today they would laze around, do some very necessary laundry, read, talk, cook – whatever they had mind to do. It wasn’t as if the weather would allow them to leave the cottage. There was no reason to get drenched.

The former dictator pursed his lips. He couldn’t remember when he had ever spent a day loafing before, now there had been several days that he did nothing but relax. Paolo would certainly call it a waste, but Khan was glad for the timeout. Even he needed time to recover. And the last two years – and the years before he and his family had to flee Earth – had been more than exhausting. An ordinary human would have already broken under the brutal emotional (and also physical) pressure he had to endure. And indeed he would have reached his limits by now if it hadn't been for the boy-captain who offered him a place in this strange world, his friendship and, above all, his trust and even his love.

Khan wasn’t aware that he snuggled closer to the strong, yet so fragile body of his mate, who responded in sleep by tightening his hold around the Augment. Nien felt safe – secure; an odd thing considering he was the stronger of them.

Deciding that it was too early to start the daily routine, the former dictator allowed himself to drift back to sleep and only woke later in the morning. He listened to Jim’s soft snoring and disentangled himself finally from his lover’s limbs. A quick look at Kirk’s upper body and arms showed him that the healing wounds had not re-opened and that the most of them were nothing more than some reddened stripes on the new skin. The captain’s healing abilities were indeed incredible, and it pleased Khan that it was due to his blood in his beloved’s body. ‘You saved my soul and my heart last night, James. I’m glad that I can give you something back, even if it is only a little bit of my blood.’

He rose and stretched himself and felt the tell-tale aches of his posterior; that was a new one! Then he spread the blanket carefully over Jim and went to the bathroom to do his morning routine. He finally returned clad only in his shalwar trousers and still damp hair. Kirk sat in the puddle of blankets and carpets on the floor, and his hair was tousled as though he had been out in the wind and his expression was still groggy.

“Good morning, Pyāra,” Nien greeted, chuckling as he got a spat of incomprehensible words as a reply. “Slept well?” he asked innocently, and Kirk shot him a glare before he massaged his left shoulder and said the first clear word he’d uttered all morning, “Ouch!”

“Oh, poor boy,” Khan teased him. “You’re in need of a stretching session.”
Promptly, Jim let himself fall back into the blankets. “I’m no glutton for punishment. I’m on vacation anyway,” he mumbled and pulled the blanket higher and closed his eyes. For a beautiful, long minute, he laid there and was about to enter dreamland again when something very wet and very cold was thrown toward his face. Cursing he started up, his right hand caught out of reflex the washcloth that had ended his slumber. With big eyes, he stared at a broad grinning Khan; then he hurled the wet ‘alarm-clock’ back at the Augment, followed by a loud “Are you crazy?”

The super-human didn’t even need to look at the terry cloth ‘missile’ to catch it as he laughed. “Laying will not help you to get the tension out of your muscles.” In two steps, he was beside his beloved and pulled the protesting captain to his feet. “Up and be ready for some training,” he said, and then he looked at the mess that still covered the younger man’s skin and lifted a brow.

“I think a long hot shower is more important now, and – by the way – that will take care of the relaxing stuff,” Jim stated triumphantly. “So, thank you for the offer, but you have the training area all to yourself.” He made an inviting gesture to the room and slipped away before Khan could stop him.

“No good morning kiss?” the Augment called; his gaze fixed on his lover’s firm but quite generous...butt as he made his way towards the bedroom door without a hint of inhibition.

Jim gave him one of his brightest smiles, as he answered, “Washcloth shooter don’t get any good morning kisses out of principle, sweetheart!” Then he turned away to go to the bathroom. He didn’t get but one step before two strong arms wrapped around his waist from behind and he was hauled up in the air; he yelped in shock.

“What the…? Nien, let go!” he protested and caught the evil gleam in Nien’s eyes. “That’s not nice!”

“What did you call me?” Khan asked with a low growl, and Jim began to snicker.

“Sweetheart!” he repeated, squealing as the super-human turned with him around, and he found himself back on the makeshift bed a second later. Laughing, he rolled on his back just before Nien dropped down on him. The half full glass of red wine beside them tumbled and spilled over the floor – ignored by the two men. Kirk bolted upwards as his waist was pinched – more startled than anything else.

“Hey!” he protested and caught the evil gleam in Nien’s eyes. “That’s not nice!”
“Are you ticklish, my James?” the Augment purred, and Jim had to laugh again, his sore muscles long forgotten.

“No, sorry to disappoint you, sweetie, but…” He gasped as all of sudden Khan gripped his wrists, and he found his hands forced over his head within a blink of an eye. Damn it, he had almost forgotten how incredibly quick the super-human could be. Unafraid and still laughing he glanced up at the dangerous, glistening eyes above him and wriggled seductively under the lean, strong body that covered his now. “Do you have a problem with sweet things, honey?” he asked full of mischief and Nien’s expression even darkened more. It only made Jim smirk more and continue to poke. “Nope, no chance! You can’t fool me, baby, you’re not angry. I can tell!” Kirk grinned. Khan rolled his eyes while shaking his head.

“I’ve been called a lot – even in bed – but never ‘sweetheart’!” He made a face as if he had bitten into something very sour.

“Well, then your former bed mates didn’t know you like I do,” Jim answered. He slipped one leg out from beneath the Augment and wrapped it around his hip, pressing them closer together. “You can be sweet like royal jelly and cuddly as an oversized cat, my dark lion,” he purred seductively before he arched his head up and nipped carefully at Nien’s left earlobe.

Khan gave in. He couldn’t even pretend to be irritated with this reckless churl of an officer. One look at this beautiful, soft but so masculine face, and this beaming grin and he melted like butter in the sun. “You’re impossible, James!” he stated and let go of Kirk’s arms which snaked instantly around him.

“And you love it,” Jim teased.

“Not only that,” the former dictator whispered, his heartbeat quickened before he caught his beloved’s lips with his and deepened the kiss instantly. All too willingly, Jim’s mouth opened and allowed him entrance while the eager hands of the younger man began to explore the Augment’s body anew; fondling him just above the waistband of his light trousers. Both felt their blood rush south and smiled into the kiss, as hardened against one another. Sweet Lord, they would never get enough of each other!

Pulling the shalwar down from Khan’s slender hips, Jim’s hands wandered over the Augment’s soft skin. With a low groan, Nien replied by rubbing his length against Kirk’s, slotting himself just right before he wriggling out of his trousers. He reached for the nearly empty bottle of lube beside the makeshift bed. They would need a lot more of it before morning’s end…
Lord Kor stared with wide, disbelieving eyes at the small screen in his private quarters that showed a staff general answering the High Council and the Chief Counselor. For a moment, the younger Klingon thought the general had made a joke, but General Kargan, Son of Keppa, was not known for humor – quite the opposite. He was cold, sober and given only to fact. Therefore, Kor could be sure that the news Kargan gave him was accurate.

“The Federation wants to send a delegation for peace talks?” The Klingon lord snorted. “Do we have them already in fear so much that they are driven to save their skins with rhetoric? Is that the only weapon they have left?”

Kargan bared his teeth. Unlike most other aristocratic clans, his family hadn’t joined the experiments with human Augment-DNA and hadn’t been infected with the virus that resulted from it. His forehead showed the sharp ridges typical of the Klingon race, his dark silver hair fell down to his waist, and his eyes were a piercing brown. Like many HemQuCh – ‘the proud forehead’ as what the common Klingon called themselves. It gave him a menacing appearance. He usually looked down on the QuChHa’, the ‘unlucky ones’, whose appearances were almost human. Kor was an exception. After all, he was not only the last descendant of the imperial family, but he was also a famous warrior – a hero of sorts.

So, Kargan used the Klingon high standard as he spoke to the lord. “I do not think that we’ve driven them to their knees just yet, my lord. Their president made no secret that he thinks the Federation can withstand our forces for years if necessary, but he also sees no sense in spilling blood. And even if it pains me to say this, but we haven’t gained much territory since the war started. The Borderland was given freely to us by the Orions, who hope for our support. And those few star bases we conquered are unimportant strategically speaking. The attack against Tammeron was useless and cost many ships. Starfleet is strong in power and number.”

Kor cocked his head. “So… we will accept the offer?” he asked carefully and Kargan shrugged.

“The counselor has not made his decision and there are many voices in the council demanding more forceful and greater forces against our enemies.” He bent forwards slightly. “How has the Aldebaran mission progressed?”

“Koloth and his men are on the planet. They spoke with our contact man and are observing the two targets. Our fleet is ready to annex the planet as soon as the spaceport and the Starfleet base are eliminated.”
“Very good! Maybe then they will be ready for ‘peace-talks’, but under conditions,” Kargan nodded. “What about your prisoner?”

Kor felt heat of anger rising in him, but he kept his expression neutral. “There is no news to share, General. Kirk escaped and his supporter too.”

“The Augment!” the other Klingon all but spat and the lord lifted his bushy brows.

“We have not confirmed that the man who broke Kirk out of prison is indeed an Augment, but he was well trained and one of the best warriors I ever saw. He can’t be pure human, this is for sure, still…” He had bared his teeth, before he continued, “The ship that picked up Kirk and his… friend wasn’t to locate anymore. I ordered a complete check of all sensor functions. I manually reviewed available data when the computer couldn’t match the emission signature to known ships. Everything is working, and the information isn’t there. The Federation must have a device designed to thwart our sensors from detecting their vessels.”

For a long moment Kargan went silent, then he growled, “Then I must ask myself why they want peace talks when they can move invisibly until they want us to see them. They could ambush and attack us before our units are readied for battle. Why not using this advantage?”

“Humans and Vulcans – what do you expect?” Kor’s voice betrayed some mockery directed at the Federation, and the general laughed shortly before he turned serious again. “That the terrorist Kirk escaped is… unfortunate. Not only could we have presented him to the council as a gift, but we also would have been rid of him. He will give us some trouble in the future, of that I am sure.”

“But not just yet,” Kor continued calmly. “He is weakened significantly and won’t be able to do anything other than convalesce!”

ST***ST***ST

“Don’t think that I am going to move anytime soon for you so-called training!” Jim Kirk’s slurred voice betrayed his fatigue. Khan lay beside him, still caught in a pleasant combination of endorphins and sweet exhaustion, despite the fact that he and his James slept more than three hours after they sated their newly awoken hunger for each other.

It was midday; the wind blew northeast now, and the rain vanished too. The sun fought to send its
rays through the thinning clouds, but the two men in the cottage could care less.

“Like San Francisco?” Nien asked, and Kirk began to chuckle.

“Yeah, but a lot less fighting this time. We got the good part first!”

The Augment lifted his head and looked around. “Well… the windows are smaller; we didn’t upend the living room furniture, and the wall seems intact.” He grinned. “There is only a large amount of laundry to be done and we ran out of lube.”

“Shame,” the young captain murmured.

“Which one? The laundry or the lack of lube?”

The two lovebirds looked at each other and started to chuckle. “Both!” they said in unison and laughed. Then Jim rolled carefully onto his side, wrapped one arm around Khan, put his head on the Augment’s chest and snuggled closer with a contented sigh.

“You do know that we can’t lie here all day,” the super-human murmured after several minutes while his hands caressed the younger man gently.

“Why not? We are on a vacation, baby. No duties, no…”

“Laundry!” Khan reminded him. “I refuse to sleep in the mess we made in the bedroom and the blankets aren’t in any better shape.”

Kirk stretched himself a little bit. “Feel free to do whatever you like, tiger,” he yawned and closed his eyes.

“Really?” the former dictator asked slowly.

The captain should have known better than to ignore this particular tone in his lover’s voice, but sleepy as he was, he simply mumbled a “Yes.”
Big mistake!

He realized it the moment he found himself quite suddenly pushed aside and lifted into the air. “Wha…?” he began betraying his intelligence as he was carried away – straight to the bathroom.

“A problem shared is a problem halved,” Khan replied and stepped with his beloved into the shower where he put Jim onto his feet as he switched on the water. “We get cleaned up and then we both take care of the mess we made!” Nien stated, and Kirk shook his head.

“I’m too tired – which is totally your fault by the way, and…” He yelped in shock as the Augment switched off the warm water, and the shower became icy. Gasping, Kirk tried to move back but to no avail.

“I’ll wake you up, Pyāra, somehow!” Nien grinned and wrapped his arms around the young Starfleet officer.

“Aaah hell, you’re mean – and cruel!” Jim sputtered, shivering beneath the cold shower.

“You will thank me later,” the super-human drawled, but allowed his lover to turn as he sought a bit of warmth in his arms.

For a minute, they remained beneath the cold spray; then Khan added hot water again to it and took care that they both warmed up before they leaving the shower cabin. Still, Jim shivered and shot his beloved a dark glare. “What is up with your sudden desire to hit me with something cold and wet – twice?”

“I have learned that this is the quickest yet gentlest method to tear someone out of sleep,” Nien answered wryly.

“Really?” Jim slipped in his boxer shorts and reached for his jeans. “And what is the ‘not-so-gentle’ method?”

“Waking up to the alert that your home and loved ones are under attack,” Khan answered calmly as he slipped into his kurta, looked around, frowned and went to the living room to get his shalwar.
Pursing his lips, Kirk took one of his sweaters and followed the Augment. He had learned a lot about Nien’s past during the night and the early hours of the morning, so he knew immediately to what events former dictator referred. But he didn’t want to douse the light mood, so he stayed silent and just nodded.

He saw the super-human standing beside the make-shift bed with a deep frown on his face, and as Kirk followed Khan’s gaze, he saw the dried, deep red spot on the floor. “Uh-oh, not only will Diego get a water bill as long as the Enterprise’s preflight checks, we left him a gift that isn’t.”

“With salt and lemon-juice you can reduce the red wine stains until they’re nothing more than a grey spot,” Nien answered before he looked towards the kitchenette. “Do we have some lemon left?”

Jim shrugged. “Yeah, you are asking the wrong captain. You are the cook here, tiger!”

Khan rolled his eyes. “You had to heal, and regarding your usual fare, your doctor friend’s knives would be out and pointed at me if I fed you some noxious fast-food. I thought it best for both of our health to prepare the meals myself.”

A large grin appeared on Kirk’s face. “You wouldn’t reject my filet mignon with my special barbeque sauce! People give their eye teeth for it.” He caught Nien’s mocking gaze and chuckled. “Wanna bet?”

“You would ruin a filet mignon with barbeque sauce?”

“Hey!”

“Yes,” Khan nodded. “I’ll take the bet. What are we wagering?”

Jim pondered this for a moment. “If you don’t like it I… I give you a full body massage with a massage oil of your choice and special attention paid to the – tenderest of places.”

The Augment smiled. “Sounds good. And if I lose, then you’ll get the same from me.” He caught the skeptical glance of his beloved, laid one hand over his heart and lifted the other one to an oath. “I swear that I play fair! I like it – you get the massage. I do not – I get your hands on my back and
“Deal!” the young captain beamed, and they shook hands. “And now we should make a shopping-list. When we’re in New Aberdeen tomorrow, we can get whatever we need.”

“Right!” Nien replied wryly. “But first we have to rob a bank – or try to win a lottery. Your wallet is now Klingon war booty and I don’t even have one.”

Jim scratched his head. “Shit – I forgot about that!” He pursed his lips. “Should we ask Diego to front us some Credits?”

Khan sighed. “I hate it to contract debt, but I don’t see another way.” He snorted and nodded finally to himself. “Diego it is then.” A grumbling noise from Jim’s belly woke his attention. “But first we need a decent breakfast, before you get thin.”

“Ha! If I lose any weight then it’s because of our – extracurricular activities,” Kirk joked and went to the kitchen. “So, some scrambled eggs, bacon and toast?” When he got no answer, he looked back over his shoulder at an amused Augment.

“And you call that a healthy breakfast?”

“Honey, it’s already midday, so look at it as a kind of brunch!” Cheerfully, Kirk gripped the pan and switched on the stove. He felt Khan step beside him before he saw the movement.

“Right, brunch – but not without some fruits and fresh juice. Honey!”

Kirk laughed. “See, I knew you’d like being called something sweet!” Whistling, he looked in the fridge for the bacon. “Where are the eggs?” he asked, pulling out the bacon.

“In the cupboard. Eggs stored in a fridge taste… funny.”

Jim looked at him. “Really? I didn’t even think about that.” He opened the cupboard. “Do we have salt and some synthetic garlic to…”
Khan frowned at him and chased him away, “Let me do the breakfast, otherwise you’ll never get anything decent in your stomach. If you want to make yourself useful, then start with the bedclothes!”

Jim pouted before he promptly saluted, “Yes, sir!” and he turned to his task. After a little tussle with the automatic washing machine, he joined Nien at the table and they had a tasty but in Kirk’s eyes a far too ‘healthy’ breakfast. Afterwards, they worked to bring some order into the chaos they had left during the night, and only then as the clean sheets and blanket went back to the wardrobe and the bed was made, they relaxed on the sofa, read, and talked.

Sometime that afternoon, Diego called and spoke with them about their planned sight-seeing trip the next day. He offered to beam them over from one of the official transporters within New Aberdeen or they could use his hyperbike that was in the shack beside the cottage. If they chose the longer way to New Aberdeen, they could meet at the edge of the town at a pub he knew.

The weather report said they’d get sunshine, even if the temperature would be lower than the days before. So Jim and Khan knew how they wanted to get to New Aberdeen. Kirk loved a ride on a hyperbike and Nien wanted to feel the wind of freedom on his face again. They agreed to meet Diego at the pub near the spaceport around at 1100 – that was 1230 regular time. They bid the Chilean farewell after he gave them again the code to unlock hyperbike.

During the afternoon, the sun won its battle against the clouds and the two men finally left the cottage and went to the shack to charge the bike’s solar battery. The air was still cold, nature glistened with the last drops of dampness and both lovebirds took pleasure in the fresh air after the thunderstorm.

The hyperbike was a two-seater. And after they wheeled it out of the shack and put it in front of the cottage to charge the battery, they took a walk along the lake, passing the spot where they had sat yesterday and had talked about the things that still tamped the bond between them. That was gone now. Out of instinct Jim entwined his fingers with Khan’s who smiled at him. Yesterday had been full of revelations and painful memories, but it led to a kind of salvation for them both that peaked in this playful and peaceful day.

They passed by the spot where they sat yesterday as they left the past behind them, and walked along the shore. They returned to the cottage as the dusk settled. Despite their parkas, Jim was shivering and drank the tea Khan prepared for them eagerly. After a light dinner, they lounged on the sofa, Kirk had his head in Nien’s lap and listened to the deep, soft baritone as Khan read to him from the PADD he had activated only to find an excellent selection of literature.
Jim sensed the relaxed state of his lover, and the inner warmth with which the Augment seemed to radiate. He pursed his lips in thought. It was as though he could feel Khan deep in his soul; as if the two flowed together through him.

And then he realized it. Their souls were entwined!

Not like a Vulcan mind-meld, still there were some similarities. He sensed another presence in himself, but it didn’t feel like an intruder. Rather it was like something had been added to him – made him…more. It was woven with an invisible cord tying his soul to another. It was… strange, but not unpleasant.

He thought back to what Khan told him about the ‘marking’ and ‘bonding’ in the process. Did he mean this? Was he now bonded to Khan Noonien Singh? He pondered this for a moment. There were little details and hints that answered his question with a resounding ‘yes’ and he wasn’t certain what he should think about that. His heart began to beat quicker and his soul felt a wave of bliss, yet his mind began to whisper complications. But James T. Kirk listened to no one, but even his own mind if his heart was set on something – or someone in this case. He knew that he had never felt like this. He’d never had such strong emotions for anyone before – and he would stand to his feelings and Nien, no matter what! Though, Kirk normally decided his endgame before he knew the way to the end.

“Stop thinking. It’s too loud,” Khan’s rumbling voice murmured at his ear, and Jim began to chuckle, looking up. The super-human had put the PADD aside and observed him with knowing eyes. “What is it, James?” he asked and Kirk hesitated a moment, before he beginning, treading carefully.

“You told me about the marking thing and that… that there is a… a bond.” As he saw the Augment nodding, he continued, “I… I don’t know, if I’m excited or if I’m saying this right, but… I have the strange feeling as if… you… you’re swimming in me. I don’t mean physically, but I do! I feel… different.” He added quickly, but this time Khan wouldn’t use the chance to tease his beloved. This topic was far too serious to make light.

“You are right, Jim,” he answered quietly. “As I explained, to mark, to bond with each other is in our nature. But even I don’t know why this is so. Most Augments are my age or younger and some of them were only about to choose a partner as we fled Earth. So I don’t have much practical experience in this matter, still I learned that we somehow bond to our mates. Two members of my family married. They told me later that they were linked mentally to each other after they had coupled and true feelings for each other surfaced.” He cocked his head. “And I remember Jonas, an Augment from Scandinavia. I met him a year before the Eugenics Wars broke out. He was attached to a young woman – a common human. He asked me if it was normal that he could feel her even when she wasn’t present.”
Jim stared at him. “Augments and humans had relationships?”

“Some of them,” Khan confirmed. “Those who saw in humans, an inferior race that had to be eliminated condemned them as ‘traitors’ and I heard that some of those dictators even executed them – something I deplored. Kabir had fallen in love with one of the service maids in my palace and I had no problem with it.” He took a deep breath. “She died during a violent uprising several days before my palace was attacked. I think Kabir’s decision to stay behind, to suspend our enemies long enough to give the rest of my family and crew a head-start was rooted in the loss of his beloved. Her death struck him hard and his inner fire was nearly out; it only to flared up again as he fought against those who took his mate away from him.”

His hand began to stroke through Jim’s short, blond hair, as the young captain murmured, “I can understand that. If someone killed you – or Bones and Spock – I, I would lose my mind and…” He stopped and their eyes met. Not only that he had mentioned Nien first, he also had set him in the same line with Kabir and the man’s lost love of his life. This meant only one thing: His soul and his heart saw in Khan its other half – its mate.

“Are…” He moistened his lips. “Are we … bonded?” he asked quietly.

Nien’s face was carefully steeled as he replied, “We are linked by my blood – and mentally.”

Kirk frowned. “I can understand that I’m tied to you because of the blood in the serum McCoy put in me. It… changed me; I know that. But the mental thing…” He fingered the blooming bruise that was the mark.

Khan’s free hand gently cupped Kirk’s fingers; his skin was warm and soft. “My people’s mental abilities are stronger than those of the ordinary humans. We are not telepaths like the Vulcans, but there is a cord that binds us together as family. When we take a mate from among our own, this bond strengthens. That is what occurred in the moment to you and I…”

Jim blinked. “You… you consider me your mate?”

“Yes, I do!” Nien said seriously. “You are my mate. There will not be another for me.”

A lump rose in Kirk’s throat. He knew both of their emotions ran deep, but that Nien truly regarded him as his mate! The prospect shocked and warmed him at the same time. “You mean because we’re sleeping together, have feelings for each other and…”
“It’s not just that, Pyāra. You opened your soul to me, James, and I did likewise. Understanding and compassion are all part of love. The three together form the three legs of empathy. And enhanced mental abilities in the partners can lead to an empathic bond, not unlike the Vulcan bond of brotherhood. In our case, it is the bond of mates.” He bent down and brushed his lips over the younger man’s mouth. “I’m a part of you now. We left our mark on each other; I staked my claim the moment I realized that you are my other half, my Pyāra – my heart in your body. It was unintentional at first, I admit, but there is no going back for me now. My mind, my heart, my soul, even my body chose you!” His hand slid slowly down over Jim’s temple and fondled the side of his face. “And when you are ready for it, you will claim me – leaving your mark.”

Jim felt a wave of uncertainty. Permanence seemed to allude him. It was never in the cards – or so he thought. “So… the whole bonding thing is still in progress?”

“Yes! The partners must want and accept the bond, only then it will be complete.” Nien kissed the forehead of his beloved.

Kirk felt his mouth go dry. “And it will last for the rest of our lives, won’t it?” As the Augment simply nodded, he took a deep breath. Bound to another for good. Christ, he was halfway there. If halfway felt like this, he couldn’t imagine what all the way would feel like. A mate to this glorious, dangerous creature who had a part in his temporary death, resurrected him, rescued, protected and healed him; Khan was already in his heart and soul to stay there, bond or no bond. Jim didn’t know if he should be thrilled or terrified.

Khan sensed the hesitation in his beloved and forced himself calm. He expected that Kirk would be confused. Still, trepidation – fear lurked at the edge of his mind. What if it was too soon or worse yet, unwelcome? What if James rejected the prospect of their bond and…

“So, do I have this right? We will be bonded – sort of married to each other when I claim you – when I leave my mark on you?”

“Yes.” Khan said slowly. “How do you feel about it?” Nien whispered now. His augmented mind didn’t mock him for his trepidation now. This was too important. This…This was his heart.

How did Kirk feel about it? He didn’t know quite yet and so he listened deep inside himself. Being bonded to Khan would bring him a whole set of new problems – a mountain of them. Nien was a wanted man; half of Starfleet was after him. His family was somewhere locked away and if certain bastards got their hands on him he would be nothing more than a test subject, a tool to be used until useless and tossed away. And if Command learned that he not only covered the Augment, but was his lover – his mate! – he’d be jailed and left to rot, his heroic rescue of Earth be damned.
The question was, though, did any of that matter?

No!

All that mattered was the man in whose lap his head lay; this man freely offered his trust and now his love – a love Jim refused to miss out on! He was bound to his Nien – body, heart and soul. The mere thought of losing it, of losing this feeling was unbearable. Being part of someone else and having them… He looked up at his mate. And having him, Khan, inside of him was like nothing else he’d ever known. Losing what Khan offered terrified him more than the Klingon torture he’d endured several days ago. He’d go through it all again if it meant he could have this. Oh God if he could keep this. The subliminal knowledge that his great love was always with him, even when separated, gave him strength and comfort; it made him feel stronger than he ever had before.

He smiled up into the face with adorably blushed and impossibly high cheekbones. Those ocean eyes spell-bounded him. He lifted a hand and cupped an alabaster cheek. For a fleeting moment he saw a spark of fear and hope in those eyes, and he knew that he could destroy this fierce, powerful man with one single word. But he had something else in mind – other words.

“It feels right,” he said softly, but firmly. “Being…” He swallowed hard. This was serious, certainly no time to jest or tease. “Being bonded to you feels, right! Being bonded to you is right. It’s like I’ve waited for it, for you all of my life. I only feel right, settled, you know whole – when I’m on my ship. She puts me right. But I feel that way now, with you. With you, I’m whole.”

Khan let his held breath escape. Jim didn’t reject their bond – didn’t reject him! He wanted to be his mate – his beloved – for good. He never thought he would find someone who would accept him, want him, even love him knowing who and what he was.

Bending down, he captured James’ mouth with his own; the kiss deepened quickly. Reaching up, Jim held him close; his fingers wove through the night-dark, silken strands as Nien wrapped his arms around the young captain; he thought he might never let go. Their tongues fondled and caressed one another slowly and sweetly, savoring the closeness of the body, heart and soul.

As Nien finally let Jim free, the men locked eyes in loving looks. All of sudden Kirk began to grin. “I can imagine Bones – oh God, when he learns that I’m bonded to you – to you of all people!”

A soft chuckle echoed in Khan’s chest. “I don’t know if I like you thinking of another man while in bed with me, but I’ll allow it this once. I think your doctor friend would have his own head
Jim burst out laughing feeling happy, completed all at the same time. He pulled the other man’s face down until their lips met again…

TBC…

Chapter End Notes

Yeah, there you have it – the bonding is in full progress and it’s now up to Jim to make the final step. At some time he simply has to do it and I’m certain you’re all eager for this to happen – so just wait (*evil smirk*).

I hope you liked the chapter, despite the chaos of didn’t publish it before chapter 26, and that it really made up for the turmoil.

The next chapter you already now, and chapter 27 will be published within the next three days.

Love

Yours Starflight
New trouble approaches

Chapter Notes

Dear readers,

PLEASE READ THIS FIRST!!! THE NEW CHAPTER IS THE PREVIOUS ONE!!!

Beta here. We are very sorry for the confusion, but we misnumbered the chapters and missed 25. Believe you, me; you will want to go back to read the new 25 which will explain so much of actual 26 as well as - you know...Most of it is set in the cottage. I know, careless of us. But is reading Khirk so much of a hardship, really. I thought not.

Again, we both apologize for the oversight. Really, Starflight tolerates me too well.

No onto the story! Enjoy - again.

Yours Starflight and Fleetwoodinflames

See the end of the chapter for more notes.

Chapter 26 – New trouble approaches…

Admiral Barnett stepped into the conference room located at the seat of the government of the United Federation of Planets in Paris. It was one of the smaller rooms, designed for twenty to thirty people, just right for their twenty-six men and women, who stood in small groups talking. Instantly, Richard recognized the president speaking with a tall Vulcan whose once dark hair had gone grey. He had an expressive face, lacking emotionless mask the most Vulcans wore. There was a warm gleam in his brown eyes – sad eyes; those eyes told of too many things they had seen but wished they hadn’t. And there were wrinkles around those eyes and softly bowed lips. Those lines weren’t tracks of age or a lifetime of stoic expression, but of life and laughter. These traits made Ambassador Sarek unique among his people.

Every Vulcan who had survived the destruction of their home planet had been in more pain than many species could bear. But this particular man had faced another loss: The loss of his bound partner. Though this race controlled their emotions in a way that Barnett thought unhealthy. The death of a spouse made up for that in spades. Perhaps its result was so awful because every other emotion was repressed. The pain of repression had to come out somewhere – in the loss of the bonded left behind. This loss could lead to death. Fortunately that didn’t happen to this man; and perhaps it was because of the good lady Amanda and the proximity of Spock. He felt safe in his emotions with her and so without her, with his son, he could live. Her gifts to her beloved, if you will.
Nodding towards several council members, greeting ambassadors here and there, Barnett headed towards the president and his conversation partner; they ceased their conversation as so as they saw him make his way.

Offering Robertson his hand, he greeted him, “Mr. President!”

“Richard, thanks for coming.”

Then the admiral turned his attention to the other man, lifted a hand and his fingers spread into the Vulcan gesture of greeting. “Ambassador Sarek, it’s a pleasure to see you again. I only wish the circumstances were different.”

Sarek of Vulcan returned the gesture and answered in his warm baritone, “The pleasure is mine, Admiral Barnett, and I’m glad to offer my service in these hard times.”

Once more Richard was surprised at how easily this Vulcan used Terran phrases, full of expressions of emotions. And they sounded right coming from Sarek’s lips. ‘Lady Amanda’s influence was never overestimated,’ Barnett thought and regretted anew that the gentle, woman who married Sarek, had fallen prey to the insane Romulan. Nero’s greed for revenge ultimately destroyed the Lady Amanda and Vulcan. Barnett loved Amanda Grayson as had all those who met her. She had not only captured Sarek’s heart, but also that many Vulcans and UFP ambassadors; Richard was only one of her admirers.

‘His wife’s death hit him hard. The sight of her death, not to mention the death of his planet must have been traumatic’ Barnett mused as he observed the slight changes in the ambassador’s face. ‘I heard that often Vulcans who lose their bond partners even die due to mental shock. At least Sarek survived it. He still had his son near, a bit of Amanda to help him cope. Perhaps that helped him survive. Or maybe it was because Amanda was human rather than a telepath. Maybe that lessened their bond just a bit so Sarek could survive. Or maybe it was something else. Her strength – those things she could give Sarek that another Vulcan couldn’t – her wonderfully human traits and their unique son – that allowed him to survive rather than be ripped in two by her death.’

And aloud he said, “I’m grateful for your confirmed assistance in the upcoming mission. Your experiences and your diplomacy are more than welcome addition. Talking to Klingons is like speaking to, ugh, Lord of the Flies, war hungry knights of the middle Ages, and divas too good for the likes of us.”
He wasn’t surprised to see a ghost of a smile hovering around Sarek’s lips. The ambassador had learned decades before that it was easier to deal with humans in this manner. “The Klingons are a proud and aggressive race, of this I must agree, Admiral. Still some of them have a sense of accountability that does not directly impact their clan or their career. Find those Klingons. It is surely the best way to start the peace talks. Adaptations or shifts of thought are most successful when they come from within the ranks.”

“A very good suggestion,” Robertson joined in. “We have to come to an agreement regarding how the delegation will proceed. It won’t be easy to negotiate with the Klingons. Their reactions differ greatly from ours and we cannot be certain, who of them is listening and who is planning our demise. I’m glad that were able to get aid in this matter. Our application of support for this delicate mission has been granted. Betazed doesn’t belong to the UFP, but the mutually beneficial commercial relationship and the exchange of scientists are have made great strides in our new alliance. Lady Ania Morganth of the Third House of Betazed will accompany us to Qo’noS. She is an experienced diplomat and a successful politician, readily accepted by all races wherever she goes.”

“I know Mrs. Morganth,” Sarek said. “I met her five years ago at a conference. She is calm and unobtrusive… well-trained concerning her telepathic abilities – or controlling them I should say.”

Barnett nodded sympathetically. For Vulcans, it had to be hell working with the casual and open Betazoids who held the opinion that telepathy was something for everyone and should be used on little discretion. As a people, they talked openly about partnerships and their sexual life was – shockingly uninhibited. Still they were sensible and respected the wish of other non-telepathic species. So Betazoids stayed out of the otherworlder’s heads. Most time.

A Betazoid among the delegation would give the ambassadors and politicians a significant advantage when dealing with the Klingons. Lady Morganth could warn them if one or two of the Klingons didn’t feel bound to the law of hospitality. She could also sense and read the thoughts and intentions of their negotiating partners. It was always better to know their point of view before taking action.

“So, where is Lady Morganth?” Richard asked, looking around him. Betazoids were completely humanoid in appearance, only their irises were pitch-black. You could recognize one of their people quickly if you knew this little detail. Here, though, was no one he could identify as a Betazed.

“She will come aboard when it is time for travel,” Robertson answered. “Batari already talked with her and she is waiting for information on the rendezvous time. Lady Morganth and Batari are friends.” He nodded into the direction of a small woman of Asian heritage. Her long black hair was worn a tight knot at her neck and she wore a formal, knee length, red dress, accentuated by a wide, silken scarf that was over her left shoulder that hung nearly to the floor in sari-style Batari Withman was a beauty and as she turned around you could instantly see her bright intelligence and her calm, professional expression. She caught the gazes of the three men, excused herself from her conversation partner, an Andorian, and walked to them.
“Admiral Barnett, I’m honored that it is you who manage our security for the mission,” she said offering her slender hand. He took and kissed in hers politely.

“Mrs. Withman, the honor is all mine,” he replied.

“Hopefully, you Starfleet guys are able to keep any nasty surprises to a minimum,” a voice oinked behind them and Richard didn’t need to look at the suddenly cold expression of Sarek, or turn around to know who was speaking to him.

“Ambassador Gav!” Barnett greeted him politely. “Nice to see you again.”

The ambassador of Tellar looked him up and down, wrinkled his snout and nodded shortly. “Admiral!” was all he said, then the glance of his little eyes was fell on the Vulcan. “Maybe we don’t need the Starfleet guys to lose their touch to get in trouble. As far as I know, Klingons regard Vulcans as wimps. I doubt that one of them would even listen to the ‘wise’ speeches of you, Sarek.”

The Vulcan ambassador merely lifted a brow. “And my education forbids me to tell you exactly what the Klingons think of the Tellarites ‘and your inept grasp of Federation Standard.’” His baritone was no longer soft now, but icy; his dark eyes reminded one of two onyxes – shimmering and hard.

“Gentlemen,” Batari interrupted them before they exchanged harsher words. “I think all have arrived now.” She smiled at Robertson. “Shall we begin, Mr. President?”

“Of course, Madam,” he smiled, offering her his arm. Barnett looked around and saw that the Admirals Morrow, Komack and Nogura stood at the entrance, accompanied by two more council members. “Well, off to the first fight. That should lead to an agreement for productive talks,” Richard grumbled; his tone dripped with mockery – and stepped towards his colleagues.

ST***ST***ST

Captain Koloth of the Gr’oth stared with narrowed eyes out of the hotel’s window that was across the street of the spaceport. It was early morning and outside the weather had turned sunny again. Seeing how the most humans wore thick parkas, the Klingon mused that they found the temperature too low, but for him and his companions the colder air was perfect. Qo’noS’ temperature averaged ten degrees lower than Earth’s, and while the men, women and children down in the street were
unhappy with the chill, Koloth, Korax and the others were quite comfortable.

Each man had separately cased the spaceport to ensure proper intelligence gathering while taking care not to be seen together. Five men wandering through a spaceport for an entire day would have drawn attention.

Last evening’s thunderstorm forced the Klingons to improvise today’s meet; they convened in Koloth’s hotel room to exchange their impressions and observations. Security alerts and measures were high at the spaceport. You could enter and leave it without checks, but free roaming was limited. Passenger embarkation and cargo were in high-security zones only accessible through a security checkpoint that included a vital bio scanner.

It was well known in the Federation that many Klingons appeared human after the failed human Augment DNA experiments a century ago and here, in proximity to the former Neutral Zone, the authorities took no risk. The Klingons would certainly try to exploit every advantage.

So Koloth, Korax, and their men had to be very careful, but they hadn’t been chosen for this mission in vain. Koloth was famous for his undercover work, and his first officer was the best right hand out there. The men spent hours planning, not uncommon as they each had their own opinion about how things out go. And Koloth was a man who first thought and acted later. He sent his companions to bed, demanding time to rethink only to return the next morning with new plans. Failure was unacceptable, so every move was organized precisely.

Korax and the other three warriors arrived at their commander’s room before breakfast. Contrary to the most Klingon captains and their subordinates, there was no rivalry between Koloth and Korax; Korax had no desire for Koloth’s position and so their missions always bore fruit.

They conversed in hushed voices. The Klingon language is guttural and hard, and they needed to be sure that that speech was not recognized by passers-by. Discussions were conducted with practiced calmness, quite strange to them as the Klingon nature is anything but calm.

Finally the time for a solution had arrived.

Koloth pressed his lips into a firm line while he watched the people down on the street. They planned to check Starfleet quarters near the spaceport in the morning and meet their contact man midday at the inn called ‘The Stars’. There, they’d retrieve the weapons to conclude their mission. Everything was planned up until then.
He felt someone fall in stride beside him; he didn’t need to turn his head to know who it was.

“This weather yesterday evening crossed our schedule,” Korax murmured; his green-brown eyes flicked to the spaceport’s entrance.

“We checked; we have all we need to know about our target concerning the spaceport. We will case the Starfleet building this morning; the weather was too poor to do it properly last night.” Koloth replied, calmer than he felt. He pointed to the cargo service gate. “We will enter the high security zone there – this evening. I had a closer look at the arrival and departure screen in the spaceport. A cargo ship will arrive around midday and will leave tomorrow. No civilian ship is expected and none will leave. There should be few civilians in the immediate area of our strike.” His dark eyes wandered over a family that left the port, walking down the street to a waiting hypercar. “I have no interest in killing children and their parents. It is without honor.”

Korax nodded. Even if he loathed – hated the Federation and had no sympathy for humans and their allies, he took no pleasure in the murder of innocents. War was honorable when waged between warriors. Civilians had place in such fights. The death of children brought no fame – no glory. And nor did Kor who had assigned the mission. The Klingons were warriors, not cowards or murderers; that’s what he thought these soft target assaults amounted to – like Tammeron. But they had their orders; they would mitigate the casualties as best they could.

“Where do you want to place the bombs?” he asked his commander and friend of sorts. Koloth’s gaze dropped to the normal looking suitcase that contained PADDs, four scanners and technical equipment meant for the medical sector. Each item harmless items at the first sight, but the Klingons knew how to put them together to build quite a destructive device. If they were successful, the spaceport would be of no use to anyone and Starfleet’s quarters would be ash. Last but not least, McFurthun would furnish them with the main component the day after tomorrow: four small, hand-long tubes with a high blast power but without the danger of radiation. McFurthun wanted his revenge but he was not a mass murderer. He was after precision and Starfleet. He had no interest in collateral damage.

Still the number of victims would be great, and even if Koloth wanted to keep the body count low, there was no way to destroy the most important station in this planetary system without…breaking a few eggs as the humans said. But the victory would be sweet nonetheless. When Starfleet lost her base on Aldebaran, its destruction would call the defense vessels out of orbit down to the planet to help aid and evacuate survivors. The Klingon fleet hiding cloaked and silent near the former Neutral Zone would conquer the Aldebaran system easily in mere hours.

Koloth was lost in thought again, but he remembered Korax’s question and pointed towards the cargo service area again. “Inside there. Kurhan told me that a worker informed him that they are expecting a large shipment of liquid plastics. They can’t produce that here on Aldebaran. The tanks will be stored there for several days until customs completes their processing.” He looked at his first
officer. “It will go up ‘like a match’, as the humans say.”

“So we only need one bomb?”

Koloth shook his head. “No, two. One at the cargo area, the other one at arrivals. It’s connected to the main section of the spaceport and opens to the least populated section of the town. Only a few houses are there because of the noise from the spaceport. The blast will cripple the spaceport completely without much collateral damage.” He rubbed his jaw. “Regarding Starfleet, those in the building will not be so lucky. Too many dead for my taste and Lord Kor doesn’t like it either, but an order is an order. We annex the Aldebaran system, and we’ll gain a large part of the Federation’s territory in this part of the Alpha quadrant. From here we can strike the other systems.” He sighed. “Sometimes war is dirty – even I have to admit that.”

“But it is glorious.”

Koloth snorted. “Yes, it is when fought between warriors. But this here…” He gestured towards the spaceport. “This here is no glory. Kor sees it, and so do I.”

“What will happen if the Enterprise is still around? McFurthon told us that she was here investigating. Even if Kirk isn’t aboard, his officers…”

“They are nothing without him. And Kirk isn’t here to interference like he did at K7. Regretfully.” His dark eyes turned to stone. “I would like to shake his hand – and then break every bone in his body!”

**ST***ST***ST

“You find one yet?” Jim asked as he searched the right side of the shack for a motorcycle helmet or something similar. Khan was busy checking the other side of the small building and shook his head.

“No, neither helmets nor protective clothing.” He glanced up. “Diego must like it risky.”

“Well, as far as I understood you and Galven, Diego’s shipyard has some customers that prefer to fly under the radar. So yeah, I don’t think the risk bothers him all that much.” Kirk shrugged, then gave up the search and pressed his fists into his waist giving a nod in concession. “Right. Then we drive without helmets. More fun like that anyway. I love to feel the wind on my face; it’s been a long time.”
They smiled at each other – both grew up starved for freedom and risk was as much a part of them as their shared blood. They left the shack, locked the door and went to the porch where the hyperbike was parked. Jim’s looked coyly beneath lowered lashes at his lover.

Khan chose warmer clothes for this jaunt instead of the comfortable but thin Indic outfit. He wore a dove gray turtleneck sweater – the color turned his eyes from their intense blue-green into something that reminded Jim of a misty ocean on a foggy day. Black jeans covered his long legs and accentuated his lean body. A black parka would protect him against the cooler temperatures. He found two pairs of gloves, of which one he had given Jim and took the other pair for himself. The wind played in his ebony hair, and a few strands fell over his high forehead; mysteriously shadowing his bright eyes.

Jim gulped as Khan moved smoothly toward him. The Augment was a living temptation on two legs – legs that felt so nice wrapped around Kirk’s waist as they made love – like last night. In hindsight, the young captain couldn’t believe that they had found new flames of passion – again. After the night before and the morning, he thought their lust might be sated, but he had been wrong. Their lovemaking went from gentle to a fiery intensity and back to sweet just last night. Jim licked his lips as he relived it in his mind’s eye. Those first kilometers on the hyperbike wouldn’t be comfortable – either for him or for Nien.

Khan’s baritone ripped Jim from his reverie. “If you continue to strip me with your eyes, Pyāra, we might have to call off our trip to New Aberdeen and return to our still warm bed.”

“Wh-wh-what?” the officer asked, wincing inwardly as he sounded like a schoolboy caught with a bit of naughty literature hidden in his schoolbook. The Augment gave him one of his slow, lazy smirks and Jim rolled his eyes. “Ugh, you need a license for that smile,” he grumbled and caught Nien by surprise with this joke.

“A license for my smile?” Khan repeated confused, and Kirk gave him one of his own radiant smiles.

“You could melt stone and wrap anyone around your little finger with that thing,” he said nonchalantly and headed towards the hyperbike.

“Hmm, have I wrapped you around my little finger?” the former dictator purred and watched Kirk mount the hyperbike.
“Yup, you have!” Jim nodded and felt warmth rising in him as Nien sat down behind him and snuck one hand beneath Kirk’s dark blue parka; stroking his back with is thumb and just a bit of fingernail to feel Jim shiver.

“Without any protective gear, I’ll have to wrap you in my arms to keep you safe,” Khan whispered in his ear and nipped a bit of skin not covered by clothing. Then he snaked his arms around Jim’s waist and tensed his muscles. “Switch on this machine, Mr. Kirk! Off we go!” he called with a strong voice that betrayed a certain thrill of anticipation.

“Hold on!” Jim answered with a laugh and started the hyperbike. After feeling the bike out a bit, Kirk steered it onto the small street that led away from the cottage and opened the throttle as much as he dared given the poor state of the road that led them through the woods and out to the main ten minutes later.

He stopped at the intersection and Khan pointed left.

“Diego said we have to drive that way and to follow the signs to town.”

Jim nodded. “You ready?”

“Are you?” Khan retorted; he bent forwards and looked at Kirk over his shoulder, catching the knowing gaze.

The same words they had exchanged as they steeled themselves in the airlock of the Enterprise, ready to be hurled through space towards the Vengeance. Then, they were reluctant allies. Today… Today was worlds away from that time! Pressing a gentle kiss to Jim’s temple, Nien leaned back and gave the go-ahead. Grinning like mad, Jim let the machine roar and off they went. The wind blew through their hair, coolly caressed their faces and enveloped their bodies. Because they didn’t have safety glasses, Kirk couldn’t drive the bike to its limit but 120 kilometers per hour was enough speed to have a bit of fun. Jim watched the landscape fly by; he felt the pull of gravity and loved every bit of it.

Khan was bombarded with even more sensory details. His engineered senses scented the wood and earthy odor of the still wet forest floor, the dust of the street, and he felt Jim’s pulse beneath his gloved hands. But this was not all. He sensed the excitement and joy in his beloved and it was contagious. He relished in the freedom this ride presented, but he enjoyed the happiness of his mate even more.
They would need three or four hours to reach the spaceport and then the small inn in New Aberdeen where Diego would meet them, and both lovers had every intention of savoring the time as much as they could…

Sitting at her station aboard the Shadow, Caviw stared at the screen with widened eyes. Galven and Jeff were conducting ship’s checks, so she was using her time to do some research. She contacted the Library of Aurelia, an archive containing nearly all historical data of the most of the known planets. Pretending to be a student of Earth history, she requested data on late 20th-century political science, scientific, and biological developments of the time. Jeff talked about the first Augment program on Earth and what the ‘super-humans’ had done to his home during the 20th century so she wanted to research anything that could be connected to this ‘race’.

She read about the first two world wars on Earth and then the sudden appearance of humans that were faster, more intelligent, stronger and immune to the illnesses of the time: Augments. Her interest grew as she mined the data. Then she saw it; the name Khan Noonien Singh.

_Noo-nien – Nien_! Captain Kirk’s nickname for his lover. And the doctor of the Enterprise had called Léo ‘Khan’. Could it be that their Drythen was this man; a man who had ruled almost a quarter of Earth three hundred years ago? It sounded fantastic – unrealistic. But this strange reality surpassed fantasy as the name and face on the screen mocked her. She took in the alabaster white skin, the high cheekbones, the full, bowed lips and those piercing blue-green eyes she had fallen for the moment she first looked into them. His hair was longer. It fell long and thick over his shoulders down to his waist like a midnight-colored curtain and made the beautiful features softer. He wore silver and golden tunic with a high collar slightly open in the front and embroidered with pearls and small, precious stones. The clothes and the hair style were strange, but there was no doubt about the identity of the man in the old photo. It was Drythen – or, as Caviw now knew – Khan Noonien Singh.

“Holy tree, how have you survived for three hundred years?” she whispered, blinking several times. Her tail twitched as she continued to read. The archives told of rumors that he and approximately eighty other Augments escaped their purchasers in a sleeper ship called Botany Bay. Aptly named, it seemed, for Earth’s Australian penalty colony a century before the Augments appeared in history. Investigators found the launch platforms where Khan and his fellow Augments were thought to have vanished. But in the years and decades that followed, the rumbling rumors died down, and those convinced that Khan and his most loyal friends had fled Earth, died; the rumors became legend and the legend eventually forgotten. Back on Earth, the ‘mere’ humans chose to document the Eugenic Wars as they wished them remembered. The blame was placed squarely on the shoulders of the Augments whose names were not deemed fit to be taught in schools. Only those interested in Earth’s history ever hear about these super-humans.

“So, you are truly one of the first Augments the Terrans ever created. And you were a king – why
does that not surprise me?” she murmured. “Now you fly through space fighting side-by-side with creatures that must be… so strange to you and risk your life for a young human male who isn’t even one of your people.” Her eyes roamed over the photo. “You must have been so hurt – so without hope that you felt you had to leave your planet. Yet you remain sagacious and open to… love, perhaps? You are a brave man. It is your heart and soul that give you strength, Léo, not your engineered body.”

“Who are you talking to?” Galven’s voice asked from behind her. He startled her, and the Caitian woman jumped.

“Galven!” she squeaked. “By the four moons, do you want to give me a heart attack?”

The Tellarit grinned at her. “This is the first time I’ve ever been able to sneak up on you. What engrosses you so much that you didn’t even hear me approach?” He peeked around her and oinked in amusement. “Of course, our Drythen – or Khan. Sweetheart, you said yourself that he is taken and….” He stopped and cocked his head. “He looks… different. His hair…” He stepped nearer. “This photo can’t be older than two or three years, but…”

“But you couldn’t be more wrong,” Caviw sighed and pointed at the text beneath the photo. “It was taken on Earth 1995 – almost 265 years ago.”

“Not possible!” Galven grumbled and began to read the data.

Behind him Jeff stepped onto the bridge closing the small distance between them; he stared at the screen just like the Caitian had done several minutes ago. “This is…?” He took in the information the archive had sent and gasped sharply. “Our Drythen is… Khan Noonien Singh?” he burst out.

Galven looked up at him. “Does this name mean something to you?” he asked curiously; the young man snorted.

“It most certainly does! Khan Noonien Singh was one of the most powerful Augment leaders from 1990 to 1996. All of Asia and more was under his control.” His gaze lingered on the screen and took in the familiar yet suddenly strange features. With the lavishly decorated Indic clothing and long hair he looked… different from the ‘Drythen’ he had come to know. “I never saw a photo of him before. Odd, I always thought he would have a more… Indian or Asian appearance.” Galven and Caviw frowned in confusion, so he explained, “The people in this area have darker skin and brown sometimes almond-shaped eyes. Look at him. He is pale, and his eyes are like the ocean in summer…” He shook his head. “Maybe it’s the augmented DNA.”
“So… he was a kind of ruler?” Caviw asked. “That would fit. There is another photo from 1993. His residence.” She touched the screen and scrolled the view down revealing a large palace that seemed to come straight from an Indian fairy tale.

“The Hawa Mahal – Palace of Thousand Winds,” Jeff murmured, taking in the large building that shimmered in the sun. It was the color of gold and pale coral. Arched windows, too many to be counted, slender pillars and a flood of ornaments were only a few eye-catchers. The architecture spoke of the old Indic grandiosity. Even the high walls offering security for the palace’s inhabitants were not free of the beautiful ornamentation. “The Palace of Thousand Winds wears its name well,” the young man said with a sigh. “Its unusual architecture was and still is responsible for the fresh air that circulates throughout the building.” He pointed at the photo. “It around eight floors and its colonnades and latticework windows allowed the ladies of the harem to watch life on the streets and the festival processions of their lord.” His index finger pointed at the image. “Look at the arched tower-roofs, the columns, and the floral patterns. The whole palace is a mix of the Hindu and Islamic imagery and architecture.” He rubbed his neck. “Unlike most other Indian palaces, this one was built in the center of town and so the people were inherently part of palace life – perfect for a man who wants to show his superiority and wealth to the people. But it’s not without risk. If the citizens wanted to rebel, even the mighty walls wouldn’t have kept them at bay.”

Galven sniffled – a typical sign that he was thinking hard about something. “So… our Drythen was sure of himself, of his rule and chose a palace accordingly.”

“The Hawa Mahal is in Jaipur, a city in the southwest of Delhi that borders on Punjab; near Afghanistan in those days. Many small villages and summer residences of the Maharaja’s family were placed around the city. One of the great Maharajas of India built this at the end of the 18th century,” Jeff said. “I was there once; took a trip on my own.” He bit his lips. “I think this Maharaja was a Singh, too.”

“Built 1799 by Maharaja Sawaj Pratap Singh,” Caviw read while she looked at the small text beside the photo. “So, ‘Léo’ lived in the palace of his family.”

Jeff grimaced. “Singh is not really a name; it’s more of a title for the men of a religious group called Sikhs.” He observed the photo. “What a building! I’ve almost forgotten how big and magnificent it is.”

Galven grunted. “And now Drythen – Khan – is living in a small cabin and without a Credit in his pocket; his world doesn’t even exist anymore.” He glanced up at Jeff. “What does history tell about him?”
“The books say that he… He was a dictator but not a tyrant. During those days, many Augments saw humans as nothing more than inferior beings to be toyed with or eliminated. There were mass murders around the world, genocide if you want to call it that. But in Asia…” He took a deep breath. “In Asia there was peace – at least in the first years of his rule.”

Caviw nodded. “I also read that he only fought when his borders were attacked. He never struck first.” She glanced up at the two men. “That hasn’t changed.”

Galven scratched his snout. “Agreed! The first time I laid eyes on him, he was sitting at a table in the outpost’s bar. He only attacked to protect a family when the Orions attacked.”

Jeff pursed his lips. “Yeah. The first time I noticed him, he was shielding some teenagers from the pirates before he saved your butt, Galven.” His attention still lay on the screen. “Of all the Augment leaders, he was the most – peaceable, I guess is the word. It didn’t hinder him from fighting or protecting his people or borders when necessary.” He shook his head. “In the end, peace was of no use for him. The rebellion stripped him off his rank and his home, and he had to flee.”

“With some of the other Augments; they all vanished. Rumors say he escaped in a sleeper ship,” Caviw confirmed, pointing at the text beneath the photo.

Galven’s snout twitched. “So… if our Drythen is this former dictator from almost three centuries ago, then his ‘family’, he searches for, are the other Augments who fled with him together. No wonder he’s avoiding Starfleet…”

“…And this Section 31… The Enterprise’s doctor and Kirk mentioned them,” Jeff cut in. “Everything makes sense now. If Drythen is Khan Noonien Singh, then the legend of his sleeper ship is real. Maybe this Section 31 is a secret department of Starfleet; they found his ship, recognized who he was, took him prisoner, kept his crew and…”

“… And they ran tests on him. That would fit Kirk’s fear that Khan would be handed ‘back to the labs’,” the Caitian woman threw in.

“He must have escaped and is now trying to find his friends or family – whatever they are,” the Tellarit ended his musings.

The three friends looked at each other, then Caviw whispered, “All the alien species, the spaceships, the Federation… The universe is so different from the one he knew; it must be so strange to him.
Imagine you wake up after three hundred years; you have never seen someone from another planet, you are confronted technology that’s utterly foreign and then you are held against your will by a military organization. He was at the mercy of others wanting only to use him. He was alone, separated from his dear ones in the middle of new world, fighting for his life and maybe for his peoples’ lives. This must have been… Well, it is terrifying.”

“Yes – and he isn’t easy to terrify. The lad has courage without equal… And the Kirk-boy, I see why they get on so well. The captain is similarly brave, or he wouldn’t have risked his neck on Turkana to help a woman and her children knowing what lay ahead: The Klingons. Still Dryth… Khan never showed any fear – not for himself.”

“But he feared for Kirk,” Caviw sighed.

Jeff sat down in one of the free chairs. “I have to admit that I have no sympathy for Augments, but we already agreed that Drythen… Khan is one of us now and that we won’t turn our backs because of what he is. Now we know who he is for real and…” He threw his hands up. “Hell, we are dealing with a king. Deposed and from a bygone era, but still! He is a great warrior and a brilliant strategist, but he’s been a loyal friend, too. I’m having trouble seeing the dictator he once was, but… he was.”

“My words,” Galven agreed; smirking before he shook his head. “One year ago I was a simple technician on my home planet; now I’m speeding through space with more loyal friends than I ever thought I’d have. We kick Orion and Klingon asses and keep the company of a fugitive king.” He snorted. “Life is crazy and I’ve never been happier.”

Jeff grimaced. “Who’re you tellin?!?” He pursed his lips, thinking once again of the former dictator’s possible past fate. “Damn this is fucked up! If Starfleet is after Khan because he’s an Augment, then who’s to say whether they are right or wrong trying to capture him? The Augments could become a danger to us all. On the other hand, if they did stick Khan into some lab just to see how he ticks, then fuck them. They deserve to get their asses handed to them. Augment or not he is human and has feelings! Jesus, if Kirk, Starfleet’s newest hero, is willing to protect him – risk his career and his life for him… And it’s not only because he and Khan are together. But there’s… There’s just more to this all I’m sayin’.” He hesitated. “Guys, I think we are in the middle of a stirred up hornet’s nest. Starfleet has the other Augments, Khan wants them back; he’s on the run because Starfleet wants him too – maybe for some more possibly illegal tests. And Kirk is the only one who has taken his side, unconditionally.”

“Ritek already assumed something like this because this doctor was upset with Kirk’s covering for Khan,” Galven thought aloud. “Maybe the Enterprise had indeed a run-in with him and it had been Kirk’s job to arrest the Augment, but he didn’t. And why didn’t he follow his order? Because he realized that there is a much bigger mess than just an escaped Augment; Khan is a part of it, an unwilling part, and Kirk is just doing what his conscience tells him is right.”
“And his heart,” Caviw added. “There are reasons we are not privy to as to why Léo trusts the captain as he does, and the captain does likewise.” Her gaze wandered back to the screen. “Whether he was a dictator or a king centuries ago does not matter anymore. All I read tells of a firm but fair leader. During my research, I learned that life was difficult in his territory and that the most people lived from hand to mouth. Khan changed that. Of course, those changes didn’t proceed without force and fighting, but then there was peace in this area of Earth. His intentions were good and noble, and he has shown us that they still are considering his actions on the outpost, during the Tammeron incident, and his near suicide mission getting Kirk.”

“And still Starfleet wouldn’t hesitate to arrest him and lock him away,” the Tellarit murmured. “I know these uniform-wearers. Orders and rules are all they know. Morality and even humanity don’t count if they stand in their way. There are exceptions – like this boy-captain. But otherwise, Khan is alone in the universe. In other words, he needs help – our help.” He looked at his two friends. “If Starfleet has locked his people away because of their DNA then it’s racism. That’s against all that the Federation represents.” He pointed one hooved hand at the screen. “And I bet my last credit that Starfleet blackmailed him with the welfare of his people until he was able to escape. Now he’s trying to recover his friends.”

“You could be right, Galven, but think. What if he finds his people and frees them. What then? Then we have dozens of Augments roaming free through the universe and…”

Jeff was interrupted by the Tellarit. “Really Jeff! How is it different than the strength of the Gorn or the intelligence of the Vulcans? What if Starfleet tried this on the other races it’s encountered. It wouldn’t dare because we are not helpless; we have our own worlds and technology. They took advantage of him…of them because they have no home or defenses save their own strength. Holding a race of people hostage because who they are is against all that the Federation presents. If this is allowed that it will be the beginning of the end of the Federation as we know it. And concerning the Augments’ – as far as I can tell they fled Earth to escape war and therefore gave their enemies no further reason to speak with the weapons. They give the Federation no reason to hold them hostage. They did the only thing possible to protect the people in their area and to stay alive. I call this responsibility. It’s further proof that Khan prefers peace. This is no calculated intention, but a trait of his character. Give him a place where he and his people can live in freedom and peace, and they will take this offer gladly.” He looked straight at Jeff. “Everyone deserves a second chance, don’t you think so?”

The young Terran sighed. “Yeah, you’re right. Khan was no Napoleon or Hitler, rather a kind of Alexander the Great or King Richard – totalitarian but not an insane mass murderer.” He crossed his arms in front of his chest. “Think about it. We have a real king from three hundred years ago with us. And he is seriously out of his element.”

Galven snorted at him, “Hey brainiac, you are going all professor on us again. But we know what you mean.”
Caviw grinned. “So, we will help our lordship?”

Galven chuckled. “Don’t call him that. I don’t think that he would appreciate it.”

“We should keep it to ourselves that we know his true identity,” Jeff nodded. “We don’t want him to feel threatened and then leave. It would only be a matter of time until this Section 31 catches him.”

“There, now you have revealed how you truly regard him,” the Caitian rejoiced. She caught Jeff’s confused gaze and explained, “You are not afraid of him hurting us if he learns we know who he is, only that he will leave, and you fear for his safety.” She giggled as the young man rolled his eyes. “You see a friend in him – despite who he is.”

Lifting his hands in mock surrender he grumbled, “You caught me! Yes, in my eyes he is our friend.” He let his hands sink. “If you would have asked me a year ago what I would do if I ever met an Augment, I would said ‘lock them away on a faraway planet’. Now… Now I meet one, and he’s a comrade-in-arms and a friend and…” He sighed.

“And now this is all that counts,” Galven smiled. “Right! We continue to call him ‘Drythen’ or ‘Léo’…”

“‘Léo’!?” Jeff interrupted him; throwing up his hands. “How could I be so blind? Singh means lion! He gave us his true name, just in another language.” He glanced once again at the screen smirking. “Cheating bastard! But I have to admit that was clever. He didn’t even lie to us when he gave us his name.”

“And he is like a lion,” Caviw nodded. “I’ve read a little bit about these predator cats and…”

“Sorry, Sweetheart, I’d compare him to a white tiger now,” Jeff grumbled, and before his two friends could as, he ordered the computer to show a picture of these big cats on another screen. Caviw gasped, and even Galven oinked in respect; the photo of a large white tiger lying gracefully on a stone with its mighty paws crossed and head held proudly reminded them all of the image of the king. The tiger’s ice-blue eyes fixed the rag-tag group through space and time as Drythen was able.

“It’s beautiful!” the Caitian whispered and Jeff made an affirming gesture. “Yes, I have to agree. Tigers are fascinating, beautiful, dangerous animals – especially the white tigers. Their coloring is due to a pigment mutation. They are larger and often stronger than the orange tigers, too. They were
bred in zoos, overbred, and biologists messed with their genetics for more dramatic snow white color and the intensity of their black stripes. They sold them off to other zoos, safari parks, and even shows. Some of them escaped and roamed the wilderness, but they didn’t stand a chance at survival. They were hunted for their coat or because people were afraid of them. By the middle of the 21st century, they were nearly extinct; today they only live in animal parks.”

“That’s so sad,” Caviw said quietly.

Galven murmured, “That fits our friend all right, not only because of his appearance but also because of their fate.” He pursed his lips while he sc...
The young captain laughed. “At last there is one thing I’m better at,” he joked, winking at the Augment, who promptly rolled his eyes back at the captain and chuckled in amusement.

After they’d come about halfway, they took a little rest and then Khan had tried his luck with the hyperbike. He had ‘borrowed’ a similar machine from the man in the labs, whose identity he used to escape, but Diego’s bike was old yet unsteady as a young Arabian stallion; its handling was completely different from the bikes of Khan’s days. So he thought it wiser to let Jim drive, and he just enjoyed the ride behind his beloved who transformed from a determined officer into a big teenager during their trip. And Nien was glad for his mate. Jim’s progress in healing after his ordeal at the hands of the Klingons gave the super-human a kind of peace.

Dismounting the bike and securing it with the code, both men left it where it was parked and crossed the road. The weather was sunny and now that it was midday, the air began to warm. Hypercars zoomed through the street and passersby walked lacking the usual hurry of other big cities. Somewhere a woman called down from a window to her husband and a dog followed several giggling girls wearing school uniforms – probably on their way home. The trees at the side of the road shadowed the pavement, and their large leaves rustled gently in the soft wind.

It was like a late summer day in the north of Earth, and even the proximity of the spaceport couldn’t disturb the peace that lived in this town. War was far away – or so it seemed. But neither Jim and Khan nor Diego could know the claws of war were so near… And about to strike.

The Chilean grinned broadly as the two younger men reached him, and he gave them a warm, firm handshake. “Hi, boys, how are you doing?” he asked. “Is my cottage still intact?”

“Tidy and clean as it should be,” Khan answered; already knowing that Diego would take the bait. He was right.

“Had to do some spring-cleaning, haven’t you? And I think my sheets have been washed several times by now. Do I have to fear a higher water bill?” He winked at them.

“Maybe,” Khan drawled before he nodded at Jim. “He had to heal and therefore I had to cook a lot.”

“Oh, come on, guys, you can’t tell me that you needed a lot of water only for cooking,” the giant Chilean chuckled and nudged Kirk with one elbow, who only grinned with a hue of a blush.

“Na, not really,” the Starfleet officer admitted. “And speaking of cooking – I need your help my
Diego cocked his head. “Anytime. What do you need?”

“Well, Nien and I made a bet that he will like my special steak with self-made barbeque-sauce. You have to know, he thinks the American food is unhealthy, and I want to show him that we have some dishes even his spoiled tongue would be pleased to taste.” He ignored Khan’s double-meaning look at the words ‘spoiled tongue’. “We placed bets; winner gets a back massage, and I really want to get one, but I have to buy the steaks and the stuff for the sauce at all.”

Diego scratched his neck; amused by the obvious playfulness between this strange technical genius with the eyes of the seas and the young Starfleet captain who already had become a hero despite his youth. “Well, there is a meat marked down the road and a supermarket three streets away. I can show you the way if you like and…“ He stopped as he saw Kirk’s sheepish smile, and it made clearly ‘click’ in his mind. “You two are out of money, as far as I remember, and…”

“The Klingons took my wallet, and he hasn’t even one,” Jim sighed.

“And we also need some further… toiletries,” the Augment added – and the Chilean began to laugh.

“Hah! I can only guess.” He winked at the two other men. “No problem, guys. I’ll help you out with some Credits. If I can’t trust the captain of the Federation flagship, who can I trust?” He looked at his chronometer. “May I suggest something? A few blocks down the street there’s a nice pub that serves good food. We’ll stop there for a bite to eat after some sightseeing. And before you drive home we’ll go shopping. Sound good?”

Jim smiled widely at him. “Thank you so much, Diego. I’ll pay back any Credit when my ship picks me up.”

The ship mechanic waved one hand. “Don’t rack your brain over it, amigo. That goes for you too, Drythen,” he grinned. Then he led the way down the street. “Come on, guys, I’m certain you are hungry after the trip.”

“What about the bike?” Khan asked, taking their responsibility very seriously.

Diego turned around and walked back toward the Augment, smirking. “What about it? You are in
New Aberdeen here, not in New York City or Rio de Janeiro on good old Mother Earth. The crime rate amounts to 4 percent. I’m no Vulcan, but the odds that this bike’ll be stolen are, I assure you, very low.” Then he turned around again and began to whistle; Jim and Khan followed him.

A minute later they stepped into the pub ‘The Stars’. The place was crowded as though they were giving away free food and drinks. Diego shoved through the people to the bar. “Sean? I need my table and…“ He hesitated when he saw a stranger behind the bar. “Where is Sean?” he asked and the other man jerked his thumb over his shoulder.

“In the kitchen. The cook is ill, and Sean is holding the kitchen down on his own right now. Have you booked a table?”

Diego frowned. “No, I have a fixed table whenever I’m here.”

The man who appeared to be bussing tables and waiting on customers looked him up and down; he clearly disliked Diego’s casual appearance. “Well, this time not. We are full and…”

The Chilean pointed at a table in the corner. “It’s the table over there – and it isn’t taken. So…”

The stranger, a large man with light hair in his forties, lifted a brow. “Sorry, it’s booked.”

“Now?”

“No. In about forty-five minutes,” the stranger answered.

“We will be finished by then. I’ll take the corner then…”

“No, sorry, I told you it’s booked,” the stranger said cleaning the bar with a rag. The waiter had taken money under the table from a man yesterday to hold the table for a small group. And he was not going to return that money because of this ‘guest’…whatever he said. Besides, he had the distinct feeling it would be bad for his health if he tried to return the cash.

The Chilean’s eyes narrowed in anger. “Listen, gringo, I am Diego Carlo Franco Esteban Juan Soto de la Vega-Martinez! I own the shipyard in this orbit, and I won’t be treated like this! That table is
mine whenever I’m here and if you have a problem with it, go talk to Sean!” With those words, he spun on his heel, fought his way back through the crowd, waved at his two companions and sat down in his usual corner.

“Problem?” Khan asked. He had listened to most of the conversation despite the noise in the room.

“Nothing I couldn't handle,” Diego grumbled, took the menu from the waitress, ordered three glasses of wine and then recommended dishes he thought his guests would enjoy.

A half hour later the three men were full and enjoying their mochas. Jim could still taste the spareribs he had ordered and devoured them like he was starving. Diego ordered the chili con carne and Khan had chosen a salad with fruits, chicken strips and mango chutney. The food was good here and Jim and Nien savored the familiar taste of foods they hadn’t had for quite some time.

“One bite more and I’m going to explode,” Kirk sighed, rubbing his belly.

“Please do this outside, Pyāra. It would be too much for Diego’s wallet to pay for the mess your ‘explosion’ would cause,” the Augment teased wryly, feeling at ease.

“Well, to prevent it, I’m going to hit the restroom,” the young captain commented. “Anyone else?”

Khan rose with Kirk. “Though they say only women cannot go to the restrooms alone, I feel I must accompany you.”

Diego pointed to a door behind the bar. “The restrooms are there. Turn left at the door, and you’ll face the entrance.” Smiling, he watched to two men go; then he leaned back and sipped his mocha. ‘They are quite adorable,’ he thought. ‘And so much in love! I wonder if they even realize how deep their feelings run!’

His attention was diverted to the six newcomers entering the pub. The men looked around, and one of them headed to the bar talking to a waiter. Diego had caught the man’s irritated glare before he turned again to the new guest; he nodded the direction of the of the corner table. So these were the guys who had booked ‘his’ table! Well, Jim, Drythen and he were almost done, and the six men could wait. He lifted his hand to signal the waitress to bring the bill and watched then the men who remained in front of the bar. There was nothing unusual about them – simple workers it seemed. Still an odd feeling was rising in the Chilean. Dealing with customers the authorities shouldn’t learn of had made him sensible and wary, and something about those men made him beware of them.
Kirk dried his hands in the bathroom and watched Khan wash his own. “So what would you be most interested in seeing here in New Aberdeen?” he asked, and the Augment shrugged.

“I’m not familiar with the city, and the few things I know comes from the information on the PADD Diego gave us. The town is kind of like a Scottish colony and even has some manors and a small castle. Maybe we should start with them?”

Jim grinned. Of course, Khan chose something that he knew from his own time. “Right then,” he nodded, before he added teasingly, “You and Scotty have a lot in common regarding your love for technics, but in one thing you two are quite different. Scotty would have started with the distillery, not with the castle.”

“Even if the whisky here is green as the grass?” the super-human commented amusedly and held the door for Jim – an absurdity under ordinary circumstances. He would have never done this for an ‘inferior’, but James was his mate, and so it felt natural to show him this kind of respect and affection. Chuckling at Kirk’s cheeky “Thank you, Tiger!” he followed the younger man, amused and touched by his Jim’s returned affection.

The Starfleet officer smiled at him; his eyes sparkled with mischief. “You’re right about the whisky and its color here. Probably why Scotty turns up his nose and goes on about ‘real whisky’ for hours.” He chuckled, opened the door to the pub’s main room, looked at the bar, and stopped dead in his tracks. Then he whirled around and shoved Khan back into the small hallway, taking the Augment utterly by surprise. Otherwise, he wouldn’t have been able to move him at all. Following quickly he closed the door ‘til only a small gap remained, and leaned against the wall pale and panting.

“Klingons!” he whispered and met the perplexed gaze of his beloved whose enhanced reflexes prevented him from falling none too gracefully on his butt.

“Klingons? Here?” Khan’s voice barely above a whisper, he forgot the comment about the rude behavior instantly. He glanced shortly through the gap and pursed his lips. “James, I don’t see any Klingons. You must be mistaken. There only humans. Not one of them has the ridged forehead and…” He stopped as he caught Kirk’s confused expression; then Jim’s eyes widened.

“You don’t know…? He never told you…?” The captain stopped himself, grimacing. “Of course the bastard wouldn’t tell you. From his point of view, it would have been foolish.” He shook his head
angrily before turning to the Klingons at the bar once more, outraged at their casual behavior – atypical for their race. What in God’s name did they want here? They were pretending to be human, and that they were up to something nasty was practically written in big letters on their smooth foreheads.

“James? What is it Marcus didn’t tell me?” the former dictator asked, and Jim sighed knowing that the super-human wouldn’t drop the topic before he got at least a few details. If something had stirred Khan’s curiosity, he could be stubborn as a mule – just like Kirk.

“A century ago the Klingons conducted some…undesirable experiments with DNA of human-Augments,” he explained quickly, throwing a glance back to his lover who went rigid. “It backfired and brought on a virus out that threatened to go pandemic. It was stopped, finally as were the experiments, but, as a result, many Klingons have a more human appearance. The Augment-DNA was too aggressive even for Klingon genetics its results remained today.” His attention turned back to the five – now six – men at the bar.

“Yes and no. I’ll tell you the whole story later.” He reached back, found Nien’s hand, squeezed it and added a soft “Promise!” before focusing his attention back to the Klingons. “But right now we have to watch the surprise guests over there.” He took a deep breath. “I know two of them.” He pointed at one of the men. “See the guy with the slicked back hair and the trimmed beard? And next to him, the other one with the curly hair? They’re Koloth and Korax – two Klingon officers that I had the displeasure of meeting at deep space station K7.” He cocked his head. “I think they weren’t too happy that my intervention disturbed their plans to bring poisoned corn to Sherman’s planet.” He grinned for a moment. “And I think they were less happy with the farewell gift we gave them.”

“Farewell gift?” Nien needed some distraction from the news he had just received. Experiments with human-Augment DNA in the last century. So some of his people must have survived. Maybe there were other Augments left. If so, he had to find them. They were his brothers and sisters too…

“We met at K7 a man who dealt in purring, sweet little furballs. They practically enchanted my crew – even Spock – until there were so many that, in two days I found them in my captain’s chair and even in my coffee cup. They were in the ventilation system, and they ate half of our provisions!” Jim gave a short version of the incident. “Scotty got rid of them – by sending them to the Klingons; they didn’t like that one bit. Maybe you’ve heard of them? Tribbles?”

Khan frowned. “Your engineer sent Tribbles to the Klingons?”
For just a moment, Jim resembled a churl who had successfully played a prank. “Hundreds. And I think Koloth wasn’t too happy about it.” He turned back to the Klingons again and saw them leave with another man. He had spoken to the man at the bar. “They are going. Quick, we have to find out what they’re up to.”

“Trouble, no doubt,” the former dictator growled and followed his beloved quickly shoving the information about other human Augments from so long ago to the back of his mind. Right now, his mate was about to throw himself into danger’s path again, and he had to protect him.

Diego rose as they neared the corner table “I already paid, but those guys who booked my table, didn’t want to wait any longer.” He took his parka and looked to the two other men. “Is everything all right?”

“No!” Jim said slipping into his own parka. “The guys you mentioned are Klingons.”

The Chilean went stock still. “What?”

“I know two of them – met them a while ago,” Kirk grumbled. “Come on, they’re here for something and I have the distinct feeling that this purpose is very, very bad.” He headed for the entrance. “We have to follow them and…”

He stopped dead in his tracks. He had just opened the door and came face to face with none other than Captain Koloth…

TBC…

Chapter End Notes

Of course latter had to happen, don’t you think so? Of course Koloth and Jim have to stumble about each other and I can already promise that this ‘meeting’ will lead to a lot of chaos.

In the next chapter you will learn more about McFurthon’s abilities, Koloth and his comrades are preparing to strike, Jim and Khan are determined to stop the Klingons (even if they only can assume to what the enemy is up to), Spock gets an ‘interesting’ sensor-scan and The Shadow is ready to show the whole world anew that you better
shouldn’t mess with this militia.

I hope you enjoyed the last installment and – of course – I’m curious like a little girl to learn about your thoughts.

Have a nice week

Yours Starflight
Chapter Notes

Hi, dear readers!

Yeah, already the next update. After the chaos with chapter 25 and 26, Rhiannon and I had to make something up to you. I hope anybody read the new posted no. 25, because the talk between Spock and McCoy and the whole bondage-mate-thing between Jim and Khan in the end of said chapter are really important for the storyline.

Now up to chapter 27.

Trouble is coming. Spock and the others recognize the Klingon fleet, Jim and Koloth face each other (and more) and The Shadow will be involved once more in ‘Starfleet-stuff’.

Have fun

Love

Yours Starflight

See the end of the chapter for more notes

Chapter 27 – The threats around us

Aboard the Enterprise, Spock intensely watched the display of the long-range-sensors at his station and felt the eyes of the other officers heavy upon him. Finally, he lifted his head and looked at Sulu who had alerted him just a few minutes earlier.

“Your observations are correct, Lieutenant, the sensors are showing energy fluctuations and the emissions of several warp engines in the former Neutral Zone between Starbase 133 and deep space K7.”

“How many vessels do you think there are?” the Japanese helmsman asked, and the first officer lifted a brow.

“I don’t have enough data to give a precise answer. The distance of 1,036 parsecs doesn’t allow for a detailed scan, but regarding the mass of the emission the sensors caught, I daresay that it has to be a large squadron.” He paused for a moment, thinking back to the spacecraft they had followed to
Aldebaran several days ago. Even after checking the ship thoroughly, Spock had an illogical ‘feeling’ concerning the vessel’s true mission. It seemed that his ‘gut-feeling’ had been right. The Aldebaran System was shaped like a triangle with Starbase 133 and deep space K7 at the two corners. The possibility that the warp drive emissions belonged to the vessel they followed was high. Spock could guess (not that he did) what the Klingon activity meant. He raised his voice just a bit. “Computer, show tactical display of the area around the warp emissions.”

The section emerged and overlaid on a map that included the former Neutral Zone, the newest borders and the seized space stations and planets. The Klingon emblem blinked where the vessels had been found and Spock pursed his lips.

“If these emissions are from Klingon vessels, then they are likely planning a large-scale attack beginning with the Aldebaran System,” the Vulcan thought aloud.

“Shall I contact Command and…” Uhura began, but Spock shook his head.

“No, Lieutenant, we first have to ascertain that these emissions are indeed coming from Klingon ships, and we have to find out how many vessels the enemy has dedicated to this mission. Estimates are not very useful when we need exact numbers. But please send a transmission to Commodore Wesley. Tell him that the rumors the SBI caught seem to contain more truth than originally thought.”

He returned to the captain’s chair and activated the intercom. “Bridge to Engineering. Mr. Scott, is the sensor-disturbing device still activated?”

A moment later the Scot’s voice answered, “Purrin’ like a kitten, sir. And I’m almost done with linkin’ it to the helm console so that ya can check and control it any time ya need.”

One Vulcan eyebrow climbed up at the unprofessional description; the first officer let this phrase pass. “That is good to hear, Mr. Scott. And please take care that it continues to ‘purr’. We will need this device very soon. Bridge out.”

He addressed the helmsman. “Mr. Sulu, put us on course to the location of the emissions, Warp 8. We’ll drop out of warp just outside of enemy sensors so that the Klingons can’t see us. The sensor-disturbing device will prevent our detection while we scan their vessels. Time of arrival, Mr. Sulu?”

The lieutenant had already set the course and watched his display on the helm console. “Three hours, twenty-nine minutes, sir.”
“Very good, Mr. Sulu, Warp 8!” He sat down on the captain’s chair. “Lieutenant Uhura, did you inform Commodore Wesley of our development?”

“Yes, sir, and I also added that we are concealed.”

“Thank you, Lieutenant. From now on, no external communications. Please inform the departments of our mission!” He leaned back in the chair. “I don’t want to make any hasty conclusions, but I think the Klingons haven’t answered the Federation’s proposals for peace talks because they plan a strike!”

ST***ST***ST

Koloth, captain of the Gr’oth, watched McFurthon as they left the pub. It seemed the man’s connections weren’t as good as he’d imagined. The table in the corner that the human booked was occupied by another Terran who obviously held more sway than the ‘strangers’ here. Maybe it would be better if they left. An argument with a regular guest would put them on radars they would rather avoid. Remaining unnoticed was best for the five Klingons and their contact man.

“These humans have odd unwritten laws, but this one I understand,” Korax whispered towards his commander. “You have to stay back if another one has the older right.”

Koloth nodded. “Yes, in some things, Terrans indeed make sense – not many though!” He looked at an irritated McFurthon and closed his parka, grazing his belt while doing so – and went rigid. His communicator was missing!

Frowning, he turned around and looked to the entrance of the pub. Thievery by a Terran occurred to him more quickly than the possibility that he had lost it. Either way he needed to get it back. It didn’t bear contemplating what would happen if Kor or the general tried to contact them and got a mere Terran on the line!

“I’ll be back in a few seconds,” he said in Federation Standard to McFurthon, and headed back to the entrance with firm steps, determined to get his communicator back that was, thanks to Kahless, not a Klingon but a Federation model. Gripping the handle, he opened the door…

… And froze, firmly planted and rightly stunned.
Directly in front of him was a young human male readying to leave the pub, a man with blue eyes, blond hair and smooth, youthful features. A man he recognized immediately!

‘Kirk!’ he shouted inwardly as he stared at his enemy’s face bearing the same surprise he felt.

Jim Kirk’s eyes were wide as saucers as the Klingon captain he wanted to follow was all of sudden in front of him. And one of the many devils of mischief the young Starfleet officer had never been able to tamp, woke in him.

Giving the Klingon one of his brightest smiles, he called cheerfully, “Ah, Captain Koloth! Nice to see you again. How’s is the Tribble breeding business?”

Behind him, Khan stifled a groan. That was most definitely the wrong thing to say! He watched the Klingon’s face turn from surprise into a thunderstorm of pure rage and tensed, ready to shove James out of harm’s way. The Augment’s foresight came in handy.

The reasonable part of Koloth ordered him to react circumspectly, the mission was more important than James Kirk, but the savage in him flared up at the sight of the man. The captain was to blame for his failure at K7 and the disaster with the furry, purring pestilence that plagued his ship! And now he mocked him!

Seeing red, Koloth coldcocked his fist back and let it fly at the human’s face only to be caught in a steel-like grip as Kirk was pushed away by the man behind him.

And Koloth got his second shock.

He took in the pale, slender face, the fierce blue-green eyes and the black locks that fell over the Terran’s forehead as his fist was squeezed in those long, thin but inhumanly strong fingers.

There was no mistaking this man’s identity.
“You!” he snarled.

Khan glared back. “Me!” he confirmed with a low growl, realizing that this Klingon recognized him. He tried to push Jim further behind him with his free arm – a gesture Kirk appreciated but didn’t allow.

“You honor us with your visit Captain Koloth. What are you doing here?” Jim asked, his voice dripping with feigned politeness. Diego glared over the officer’s head at the stranger.

“What’s the matter boys? You know him? Is he trouble?” he asked. His voice resonated with warning. The blood of his native ancestors thrummed through his veins, keeping his senses keen and sharp.

“Diego? What’s wrong?” someone called from the kitchen door as several guests turned to see what the commotion was about.

“Someone seems to have a problem with my taking my regular table, Sean, that’s all!” the Chilean answered loud, knowing that it would be foolish to start a fight with Klingons in the pub. He didn’t want anyone hurt or his friend’s property damaged.

Outside of the little restaurant, the others in Koloth’s group had realized that something was not right. Seeing his commander still at the threshold, Korax walked to him. His green-brown eyes widened as he recognized none other than James Kirk – and beside him…

“Qli-jagh (the Dark Warrior)!” he gasped reaching for his phaser. The gesture was not lost on Khan.

Once again the super-human proved why he was so dangerous when provoked. He shoved Jim out of the way and attacked Koloth all in the same movement. He threw Koloth and himself at Korax who stumbled and fell to the ground.

Koloth somehow managed to shove the Terran he knew to be an Augment away and rose on his feet. Khan jumped up like one of the striped predator cats of his home-country. Both men met and wrestled with each other before the force of their combat brought them back into the pub where a group of men protected the dining families from the fighters with their bodies, trying to keep the melee contained. From somewhere inside, a man called to the group to calm the hell down, but his words fell on deaf ears.

Korax followed his commander as Kirk rushed forward to attack the Klingon in an effort to cover
Nien’s back. It earned him a hard hit in his stomach, but he held his ground. Most of the time when Kirk fought, he fought for himself. This was different; this time he fought not only to defend himself, but to protect his love – not that his love couldn’t hold his own, he could. But that didn’t make Kirk any less formidable.

In the meantime, the guests in the background had realized that an argument at the front had turned into a scuffle and they began to take sides. They didn’t need a reason for the brawl, just a side to shout for.

“The younger man attacked first; I saw it!”

“Nonsense! The guy who wanted Diego’s table tried to hit the boy over there; the other one knocked him out of the way.”

“What? No way! Are you blind?”

“No, I ain’t had that much to drink!”

“Are you sayin’ I’m drunk?”

“Aye, like a sailor!”

“Hey, play nice guys!”

“Stay out of it!”

And the beginning disputes between the patrons came to blows. They also saw strangers who had been here only a minute ago, return and attack the two younger men and Diego; that was enough for them to interfere. Diego was well-known here, and his two companions were, therefore, as welcome as he. Scotch and Irish tempers flared hot with the fierce desire to protect and serve those friends under their roof in the name of good old hospitality.

A huge hulk of a Scotsman with a temper as short as he was tall slammed his glass on the counter and pushed through the crowd. “Lads, stop that nonsense now!” he called and came face to face with
one of the strangers who cracked him in the jaw. Tumbling backward, two other guests caught him; he regained his footing, but lost his control.

“Who are ye comin’ here an hittin’ me without a reason, eh?” he shouted and tackled the other man to the ground.

Another stranger entering the pub and had a phaser in his hand, but two other spirited visitors attacked him, grabbed for the phaser and tried to wrestle him to the floor, upending a table, dishes and someone’s lunch. The people at the table jumped up and joined the fight.

By now many patrons had taken their verbal discussion about who had started the bout very seriously and fists and bottles started to fly, provoking onlookers and friends to come to aid. Mayhem engulfed the pub. Sean tried to calm the disorder, but it was for naught. He sought shelter behind the bar, watching the melee with outrage and horror as tables and chairs were turned into kindling, dishes broke, and the large mirror behind the bar was smashed to pieces as it was hit by a thrown bottle.

And in the middle of it all, Koloth and Khan fought with unleashed fury. The Klingon captain was a well-trained fighter and even if he preferred cleverness above pub brawls, he didn’t hold back when he attacked the Augment with all he had, only to find every blow, every kick and every use of leverage blocked and returned by his adversary. He had seen this man on the recordings of Qo’noS and he knew how quick and extraordinarily strong this Terran was. Facing him in a hand-to-hand-combat was something else entirely though. Koloth realized that he wouldn’t gain victory over this man and tried something else; he entrapped him into struggling with another.

Well, it was an attempt, because the ‘another’ was an Irishman who, when hit on the back, whirled around. But with one look at the threatening face of the pale man with the sea-colored, flashing eyes – and he knew that retreat was in his best interest. He backed away, sensing the predator.

Koloth was clever enough to use the distraction to put some distance between himself and the Augment. His right foot crushed something that lay on the floor. He looked down and cursed in his mother-tongue as he recognized the remains of his communicator. He must have dropped it when he first entered the pub. For good measure, he added more colorful curses to his tirade, retreating back only to bump into the back of another patron: Kirk! He was still fighting with Korax.

Hissing with hate, Koloth wrapped one arm around the young human’s throat from behind. Kirk yelped in surprise. Koloth squeezed harder, choking him, trying with all his might to crush the young man’s fragile trachea.
All of sudden, Jim found himself hauled back from Korax with a vice-like grip around his throat. He clawed at the cruel arm that cut off his breath, but his enemy was too strong – a Klingon, no doubt. And a moment later he knew who had him as he heard the familiar voice growl, “I swore that you would someday pay for the humiliation you brought upon me, Kirk. Now die!”

Koloth! And he was serious!

Still, Jim was angry rather than fearful. He had been trained in the Academy for this and Spock had had trained him in Vulcan hand-to-hand combat on the sport deck of the Enterprise. But here, the ‘Iowa-kid’ who fought before he thought – did react by instincts. Kirk slammed his elbow back into Koloth’s stomach.

The Klingon grunted but didn’t loosen his grip, so Kirk kicked back at his enemy’s shin and threw his head back hitting Koloth in the jaw.

By now Korax was on his feet and attacked the young in Koloth’s grip, delivering brutal blows to Kirk’s midsection – but didn’t last. All of sudden, a snarl that would drive a warrigul away was heard and the Klingon found himself lifted off his feet and hurled through the air straight at McFurthon still standing at the pub’s entrance. The former officer didn’t know whether to move or catch and ended up doing neither of it. Both men landed in a heap, crying out in confusion and anger.

Koloth stared at the furious Augment and tightened his grip around Kirk’s throat; he understood the engineered man would protect the captain – perhaps for the reasons Lord Kor assumed. “One move more and I break his neck!” the Klingon spat out and he held fast the wild, struggling human with brutal strength.

The Augment stopped.

“Let. Him. Go!” Three words, but they couldn’t have sounded more threatening if Khan had pointed a phaser at the Klingon. This creature menaced his Jim! Fury mingled with fear in the former dictator. He was overwhelmed with the urge to fight ‘til the last drop of blood in order to protect his mate. “Let him go and I let you live!”

Koloth opened his mouth to answer, but nothing came out. Someone fell against the Klingon captain, taking him by surprise. That bump was all Khan needed. Lashing out, he gripped Koloth’s right wrist and forced his arm away from Kirk, breaking bones in the process.
Despite Klingon pride, the commander screamed in pain; then he lost the ground beneath his feet and was thrown away like a doll over the heads of the other rumbling patrons. He landed on Korax and McFurthon, both just finding their footing. All three tumbled to the ground again in a heap of limbs.

“Thanks,” Jim croaked hoarsely and looked gratefully at Nien, rubbing his throat and his belly. “You shortened an epic beating and…”

“He would have crushed your trachea if I hadn’t interfered,” the former dictator corrected wryly, blocked a falling man before he could stumble against Kirk. He looked around quickly. His eyes only found men fighting all around him, and he and Jim ducked as something was hurled over their heads.

“Time to go,” Jim stated and Khan nodded. “Indeed! The pub’s owner, Sean, has called the police.” His eyes narrowed suddenly, and he pulled Kirk to him and out of the way of a swinging chair leg. The Augment gave the attacker a dangerous growl and one of his piercing gazes, and wisely the man thought it best to turn and hurry away.

“You heard him calling the police in this racket?” Jim addressed Nien, impressed – and saw a bottle aimed at his lover's head. Without a thought he pushed him out of the way; the bottle missed Khan by an inch.

“Are you nuts, man?” Jim shouted. “What’s he done to you?”

The man didn’t get a chance to answer, because Khan finished the conversation his own way. He struck out blindly as he never saw the attacker, and landed a lucky punch. The man fell to the floor like a sack of potatoes.

Apparently, three men nearby didn’t like their friend being knocked-out and decided to try their luck with the pale stranger by attacking him together. Jim tried to come to his aid, but a strong hand on his shoulder held him back.

“Jim, Sean called the police and if you don’t them to arrest the captain of Starfleet’s flagship we should go!”

Diego!
Kirk was torn between helping Khan – who really didn’t need any assistance; he was handling himself quite… beautifully – and getting out of the pub. Then he realized that the Klingons weren’t there anymore! Anger rose hot in his face. They used whole bar fight to flee – and he hadn’t paid attention. Dammit!

“Help Nien and get him out of here! The police can’t see him. His welfare and his life depend on it!” he said urgently. Then he pushed through the crowd, earning a few hits in the process; he ignored them. There were far more important things to do. Storming out of the pub he looked around and saw six people running down the street, their distance growing alarmingly fast.

“Shit!” he cursed, balling his fists.

In the pub, Khan delivered one well-aimed hit at his last remaining adversary; he watched the man crumble like a marionette who had its strings cut, then felt someone at his back. Whirling around, he stopped his fist in the last second when he recognized Diego who looked tousled and out of breath. Besides a darkening bruise around his eye, he was unharmed.

“We have to go. The police will be soon here and the Klingons have already gone!” the Chilean panted and Khan nodded, pulling Diego with him. They fought their way outside, only stopping once they got to the street where many passers-by looked curiously at them and the tumult in the pub. The Chilean bore signs of the brawl contrary to Khan. His only evidence was tousled hair and crumbled clothes; not one bruise marred his handsome face.

“Where is Jim?” he asked, scanning the street for his mate and fearing the Klingons may have taken him. Then he heard a noise coming up from behind him. Police sirens howled through the streets.

“NIEN! GET ON!”

Kirk brought the hyperbike to a halt beside his lover who immediately mounted behind the young captain. Jim caught the Chilean’s attention, shouting over the clamor. “Diego, call Galven and the others. Tell them that Klingons are here and we need help. I’ll contact you as soon as I know to where the bastards are off to!” With that he opened the throttle and raced down the road; Khan clung tightly to him.

For a moment, Kirk meant he saw a flash and hoped that he hadn’t passed a speed-trap. He didn’t much care if he was caught speeding – it was an emergency. But his passenger couldn’t risk discovery.
It was indeed an emergency. And neither of the two lovers could guess its outcome.

Koloth stormed up beside Korax and his three warriors down the road. His teeth gritted and his lips pressed into a thin line he tried to fight off the throbbing, intense pain in his injured right arm as well as his burning rage.

Kirk!

And the Augment! The man the Klingons now called Qli-jagh (the Dark Warrior).

The two most wanted enemies of the Empire were here on this planet, right where the Klingon admiralty planned to strike next! This couldn’t be a coincidence. Starfleet’s intelligence must have heard about the planned moves of the Empire and sent this infuriating child. And the Augment, was he Starfleet’s newest weapon?

And as much as Koloth had wanted and tried to kill them both, it had been impossible to gain victory over them. The super-human was too strong and too quick – even for a Klingon. So Koloth went for Kirk and overpowered him, ready to break his neck, only to be stopped by this cursed Augment again, whose only purpose seemed to be to protect the Starfleet captain.

What had Kor told him in secret? There seemed to be a kind connection between the two Terrans – a romantic relationship perhaps? Well, Koloth could only confirm this assumption. The super-human was more protective of Kirk than a warrigul mother of her whelps, and fought with feral force to keep the younger man safe. But Kirk also knew how to battle. He had proven to be far more combative than thought.

And if he were quite honest with himself, he would admit that Kirk and the Augment had kicked Koloth’s, Korax’s and the others’ asses. They ought to call themselves lucky to be still alive. The Augment did not seem to make idle threats.

They were alive, but hurt. Korax limped, Kaghon, Kurhan and Noras had some bruises. Koloth notes that he too suffered from abdominal pain after Kirk elbowed him and his arm ached from two broken arm bones.

The Klingon captain growled deeply in his throat as he and the others followed McFurthon. He would get Kirk for that! Kirk and the Augment! He would kill them both or capture them. And when
he did, the whole of Starfleet wouldn’t be able to recover them!

McFurthon ran down the road cursing the unfortunate circumstance that brought him and the others into Kirk’s path. He knew a thing or two about Starfleet’s newest and youngest hero. He was bold and reckless. But he was also brave and committed. Rumors had it that he and his officers were a tight-knit group. They’d go through fire and hell for each other – and they had.

Where Kirk was, his crew was near. That meant the Enterprise had to be somewhere around and not, as the Klingons assumed, somewhere else after her brief stop at the planet several days ago. Maybe the scrutiny of the space harbor in the orbit had been a distraction so that Kirk could beam to the planet and go undercover.

Not good. A Klingon squadron lurked only hours away in the former Neutral Zone, ready to attack as soon as the spaceport and the Starfleet building on Aldebaran were eliminated.

If the Enterprise was alone she wouldn’t stand a chance against so many Klingon vessels. If she was a scout and Starfleet planted other starships nearby, then the Klingon mission would be for naught.

Dammit all to hell and back! They had to do something – but first they had to escape Kirk.

McFurthon had looked back over his shoulder. After he had managed to get the Klingons out of the pub, he saw the unmistakable golden shock of the captain’s hair outside of the inn. Kirk had watched them leave and the former officer would have bet his last shirt on the horse that the kid would try to hunt them down. A further look later proved his assumption right; the captain was following them on a hyperbike; another man sat behind him.

McFurthon raced around a corner onto a narrower street and then into another, before vanishing into an alley between two houses with shops; he waved at the Klingons to follow.

Hurrying through the alley, the former Starfleet officer entered a crowded pub by an open backdoor; he passed through the restaurant and left through the front, the five Klingons on his tail. Again, they crossed a street and walked quickly but without drawing attention to themselves. The group rounded a few more corners and finally McFurthon stepped into a house, held the door for his companions and gestured to the staircase. “Go up to the second floor. Take the door on the right!” he panted.

A few moments later, the six men entered an apartment that was, as the former officer confirmed, his own. “Take a seat!” he said and walked to the window. Still out of breath, he peered through the
drapes down on the street. Only then, did he allow himself relief. “They didn’t follow us – that I’m calling luck. Kirk is young and clever – fucking tireless.” He turned around and faced the Klingons.

Koloth, whose face was gray with pain beneath his tanned skin, sat at the table, and Korax tried to treat his broken arm bones. McFurthon glared angrily at him. “I said that Kirk was unimportant compared to the mission. Why…”

“Don’t lecture me, human!” Koloth spat; wrath reddened his cheeks. “It wasn’t me who attacked first!”

The former Starfleet officer tried to keep his temper in check. “Why did you go back to the pub? If you would have just stayed with us, then we wouldn’t have met Kirk or that… he waved his hand in the air as if grasping for words, “…whatever that other one was, and…”

“One of those filthy Terrans stole my communicator. Would you have preferred the thief have a dedicated line to our admiralty?” the Klingon growled.

McFurthon stared at him, cursed and took a deep breath. “Did you get it back?”

Koloth only glared at him. “I destroyed it, Macfuarsen…”

“McFurthon, Captain!”

“I destroyed it after fighting with that damn Augment, just before the cursed Ha’DlbaH (animal) crushed my bones!” He lifted his injured arm.

The human man frowned. “An Augment?” he asked disbelievingly. “We don’t have any Augments and…”

“Qli-Jagh, the Dark Warrior, attacked my captain. He is the one responsible for the death of the Klingon patrol on Qo’noS more than one of your Earth years ago. He also freed Kirk on Turkana – and he is now here with him, shielding him from danger, like he is his hu’tegh (damn) bodyguard!”

McFurthon blinked several times. “An Augment … During my time in Starfleet, I never heard
“Show me a mere Terran who can hold and fire a phaser canon like a handgun, jump down more than 10 meters unharmed, destroy a Klingon scout ship and finish off a whole patrol single-handedly! And then he sneaks in one of our headquarters, frees a captive, kills an entire unit of guards without that one of them giving alarm and above all, escapes with the captive. No Klingon or a Romulan could manage that – no matter the training!”

Rubbing his neck, McFurthon took a deep breath. “I don’t know what’s going on, but whoever he is, he’s not Starfleet and he’s not Federation. Starfleet may be a bunch of arrogant, self-loving uniform-wearers with a sickening pretense of so-called ‘morality’, but the Augment program ended three hundred years ago. And what almost happened last century hasn’t been forgotten. This man can only be the result of…of something else – probably illegal.”

“Illegal or not, we have to stop him – and Kirk! Those two are a danger to our plan!” Korax threw in; his captain nodded.

“Yes! We have to act – now!” He looked around. “Kirk doesn’t know where we are going or where we are now, so we have some time.”

“If he alerts Starfleet, they will scan the whole town and then they will find you,” McFurthon added for consideration, but Koloth only lifted his brows.

“All the more reason more to complete our mission as soon as possible. Do you have the core tubes for the explosives?” As the human nodded, the Klingon captain bared his teeth. “Then we have to retriever our parts from the hotel before we begin!”

“I got more for you,” McFurthon said and stepped to his desk, activating a communication console. “I adjusted it to the emergency Starfleet frequency only Starfleet members use,” he said, gesturing to the device. “If Kirk tries to contact the outpost, we will know it!”

Koloth rose, ignored the throbbing pain in his arm, and stepped beside McFurthon. “Brilliant!” he commented with some respect. “So, if Kirk tries to contact the others…”

“I can intercept the transmission – or answer it instead of the communications officer in the outpost.” He glanced at the console. “He will need support to find us, but he won’t know to who he’s talking to. It’ll give us a chance to delay Starfleet and find Kirk” He glanced at Koloth. “You up for a man
Jim brought the hyperbike to a stop and glanced around him, then his fist hit the handlebars.
“Dammit, where can they be?” He had followed Koloth, Korax, and the others as they had turned onto another street. He kept well back from his prey, though, to prevent any provocation that could lead to a gunfight that would injure innocents. He realized too, that they had a human ally – a traitor! Who would ally with the Federation’s enemy? And why?

Banning this question to the back of his mind, Kirk started again and concentrated on maintaining his adversaries’ in his sight. But as they ran down several small streets, vanishing into an alley between two houses, he realized he couldn’t follow them without risking the safety of passers-by. Watching them cross a yard, he sped down the street. He made two right turns hoping to cut them off, but they were nowhere to be seen. Reducing his speed, Jim drove along the buildings, peered into the shop and restaurant windows. He didn’t see them. And Nien’s “I think they escaped!” didn’t raised his hopes any.

Finally, he brought the hyperbike to a halt and braced himself with one firm food on the road. Cursing under his breath he began to weigh his options. “Why are they here?” he murmured. “What could they want here? We only saw five Klingons. I don’t think there’d be more – it’s possible, but the more Klingons, the greater their risk of being found out. So, I suppose it’s likely that what we saw is all there is, here.”

Khan bent slightly forwards, bracing with one foot the hyperbike, while he mused, “An undercover mission. They dress as if they are native to the area, they were in company of a human who apparently knows who they are, and they fled instead of fighting to the death as though it were normal. Conclusion. They have a certain destiny what weights more than their so-called honor. And what could that be? A mission ordered by their superiors.”

Jim nodded slowly. “You are right. Koloth is sneaky. He’s not your typical Klingon. He’d rather worm his way out of a problem. Fighting isn’t his style… Well, a few minutes ago it was, but…”

“What did you expect? He was about to be revealed and you insulted him by asking about the Tribbles you sent him. It is no wonder he ‘saw red’.” Khan’s voice sounded wry, and Kirk glanced over his shoulder, grinning.

“I couldn’t resist.”
“Yes, that was plain to see, Pyāra!” the Augment retorted with some amusement, and then he turned serious again. “Are you hurt? The Klingon, Koloth, had you and the other Klingon…”

“Don’t worry, honey. I’m fine,” Jim cut in, smiling shortly at him – amused by Khan’s grimace at the word ‘honey’. He just couldn’t help baiting. Then he frowned. “We have to find the bastards, figure out what they’re up to and stop them. If I only knew what they’re here for and…”

A hypercar sped down the road and forced another car aside. The drivers honked angrily at each other and the one who ignored the speed limit called through the open car window, “Move, you idiot! Some of us have a spaceport schedule to keep!”

Jim and Khan watched the whole scene; then both went rigid and looked at each other.

“The spaceport…” the young captain whispered. “If they destroy it, Aldebaran would be defenseless.”

“Starfleet has a station here, too,” the former dictator mused. “Where are her vessels based?”

“Two in orbit above the space harbor as far as I know; the rest are smaller scouts that are…” His eyes widened. “…based at the spaceport on the planet’s surface. They use it for military missions and sometimes police support.”

The two lovers stared at each other – comprehending the Klingons’ target instantly. Then Jim gripped the communicator and opened a line. They would need help, but Kirk didn’t dare contact Starfleet yet. He wouldn’t risk Nien being revealed to them. “Kirk to Diego. Come in, please!”

He had to hail the Chilean three times more before he got an answer, “Nice of you to remember me, amigo. After you lovebirds sped away, I barely escaped police. Where are you?”

“Don’t ask me,” Jim replied. “Somewhere near the spaceport. We lost the Klingons.”

Diego cursed before continuing, “I’ve contacted Galven. He’s alerting the others. You can close the line but activate the signal, Jim. He and the others will beam to your position within the few next minutes!”
“Understood!” Kirk confirmed. He closed the communicator and sent the signal, then dropped the
device into his pocket. Only then did he allow himself a moment for a deep breath; he and Khan
dismounted the hyperbike and threw the stand. “I want to know what’s gotten into the Klingons!” he
murmured. “First Tammeron, now they’re trying the same with Aldebaran. Haven’t they learned
their lesson? Haven’t we beaten them enough for them to realize that the Federation is not going give
up territory that easily? Idiots! The only thing they’ll get are bloody noses and damaged ships!”

Nien’s pale, sea-colored eyes fixed him – forcefully and urgently. “Don’t underestimate the
Klingons, Jim. Their way is brutality and force, but believe me, that isn’t all. They want to spread
terror in the Federation. Confusion and soft target strikes like the spaceport must be part of a larger
plan.”

“What plan?” Kirk asked. “What could they possibly win by terrorizing civilians?”

“That may not be correct question, Pyāra. What is their endgame? How long do you think the
planets’ governments will tolerate Klingon assaults like the one Koloth is up to? How long do you
think are the governments willing to watch Starfleet’s attempts to keep the Klingons out of
Federation territory? Eventually, they will demand more from the Council and the Admiralty. How
long until they take matters into their own hands? Some of them already have. And what would it
mean for the future of the Federation?”

Jim stared at him and realized his lover was right. “It would be the beginning of the end of the
Federation – of the allies and partnerships.”

Khan nodded. “The Klingons’ tactic is simple. Simple but successful: Drive a wedge between the
members of the Federation, and rip the union apart. Then the Klingons can seize planets one-by-one
including Earth. And, if you ask me, they’re already doing a damn good job!”

Kirk rubbed his neck uncomfortably. “So,” he began slowly. “What would you suggest?”

This time real bafflement appeared on the Augment’s face. “You are asking me how your Starfleet
should proceed to win the war?”

“You are not only one of the most brilliant men in the universe, but you have a unique perception of
the world. I hate to admit it, but Starfleet’s current structure may… actually preclude it from taking
the actions it needs to take in the time it takes act.” He caught Khan’s quick, smug, smirk and rolled
his eyes, before he continued, “You, on the other hand, think more quickly and have the freedom to
act without consulting a committee. You do what it is necessary, when it is necessary and without expending needless energy. So… I’m guessing you already have a few ideas cooking in that brain of yours.”

A little chuckle escaped the super-human and a soft shimmer emerged in his eyes. “This is a most unusual request.” He cocked his head. “You do realize that even if I did have a plan, Starfleet would never listen to it?”

The younger man shrugged. “I am here and you know that I’m a good listener. Maybe we can come up with something together?” He grinned. “Besides, we make a good team. Just look at our body count! My numbers have more than doubled since I got you.”

Khan snorted amusedly. “Yes. And I am entirely certain that your superiors would throw their hands up in horror if they ever found out who ‘you got’.”

“Extraordinary times call for extraordinary measures, which brings us back to the topic at hand.” He bent forwards and locked eyes with his beloved. “Are you going to help?”

“Help with what?”

Jim grimaced. “Oh, come on, baby. This ‘I-don’t-know-what-you-mean’ really doesn’t suit you. You are far too smart for it.” His gaze roamed softly over the pale features of the Augment, who had managed to crawl under his skin straight into his heart and soul. He stepped closer to Khan so that their bodies so very nearly touched and spoke – almost into his lips. “Would you help me…” He punctuated his words with a kiss. “…figure out…” And another. “…how to stop the insanity that threatens to burn the whole galaxy?” He nudged Khan’s cheek with his own and kissed him again, then stepped back just a bit.

For a long moment Khan didn’t say anything and only looked at the young captain. Then he bent forward; his countenance was solemn. “Whenever you need me or my help, Jim, just ask. You are my mate – the most important person to me, followed by my family. And even if I could find my crew right now and take them to safety, I would be there for you.” He took Jim’s hand in his own and squeezed it gently. “We are bound to each other now, by blood and so much more. I will never let you down.”

“Yes, I know… and I do. Need you.” Kirk whispered to him, touched. Warm feelings rose in him as he saw the absolute fondness in his lover’s eyes and heard – again – his special vow of loyalty and love. “And…” He stopped, as he heard the familiar buzzing of transporter beams. A moment later Galven, Caviw, and Jeff materialized beside them, grinning as they watched the two men stepping
hastily away from each other dropping one another’s hands.

“And this in broad daylight,” Galven oinked. “Really, boys, you can’t keep your hands off of each other, can you?”

“It’s difficult, yes,” Khan drawled. Then he turned his attention to a person jogging around the corner closing in on them. It was Diego; he’d apparently had gotten their location from Galven or one his fellows.

Jeff observed Kirk. The last time he had seen him, the young captain had been full of bruises, cuts, and other injuries. Though most of them were nothing more than some shadows, nearly healed now; some new ones had been added. He frowned. “You got yourself a few more… war wounds,” he murmured, but Jim only grinned,

“You should see the other guy.”

“Yes, after Drythen finished with him. Or shall I say ‘with them’?” Diego’s voice panted behind them. The Chilean was out of breath and smirked at the two lovers. “Brimstone and gall, amigos, do you always leave a track of chaos like this? I certainly can’t show up at Sean’s ever again.”

Jim was about to apologize, and then he saw the excited gleam in Diego’s eyes and the broad grin on his face before the Chilean turned serious again. “All jokes aside, my friends, what about the Klingons?”

“We lost them,” Kirk grumbled. “Nien and I have surmised as best we could. It definitely has something to do with the spaceport or Starfleet’s base here in town – or both.”

Jeff nodded slowly. “That would make sense. Why don’t you contact Starfleet for reinforcements? They can find the Klingons faster. Problem solved.”

Kirk hesitated, the same idea had already occurred to him; then he shook his head. “Not possible, Jeff.” His looked to Khan who instantly understood.

“You don’t worry about me, Jim. The chance that one of them will recognize me is…” The former dictator hesitated. “It’s very small.”
“I’m not taking the risk and I’m not letting you!” the younger man said fiercely, locking his mate with his gaze. “You know what would happen, if they find you.” And as Khan went to protest, Kirk added, “Protecting your mate is not a one-way street! It goes both ways, and you will let me – end of story!” It was the first time he’d addressed Khan as such in front of the group, but the Augment needed to understand he loved him just as much as Khan did him – and he was capable of protecting that love even against Nien’s will. Ignoring the Augment’s scowl, he addressed Galven who hid a smile at the captain’s confession. “Do one of your ships have some decent sensors? Maybe we can locate them.”

“Standard sensors, nothing special,” the Tellarit answered and Jim cursed quietly. With standard sensors, they would need hours to scan the whole town – hours they didn’t have.

“What if we use all three ships? Their sensors can scan parallel different parts of the town and…” Caviw’s suggestion was well intended, but Kirk shook his head.

“Still too slow. The Klingons we met are descendants from those altered with human Augment-DNA. Their body temperature is still lower than that of Terrans and their heart rate is faster, but even the Enterprise’s sensors would need some time to locate Koloth and the others in a bio scan. And there is still the matter of the traitor, who is with them. We couldn’t locate him that way.”

“A traitor?” Jeff asked, and Khan nodded sharply. If there was one thing he hated on principle, it was traitors.

“A middle-ages man, Terran heritage as far as I could see. He was with the Klingons and led them through the streets as we pursued them. He has to be a contact man given his familiarity with the area.”

“Then he must know about the spaceport and the Starfleet base if these are the Klingons’ targets,” Galven mused; his little eyes lay on Kirk. “I think, lad, you have no other choice than to contact your uniformed comrades.” His gaze shifted to Khan. “And concerning our Drythen here – we can beam you to the Shadow or the Flash. Then they will not see you and…”

“That’s out of the question!” the super-human interrupted him, fixing his gaze on the captain. “I know your tendency to get in deep water, James. I’ll go with you!”

The young captain sighed. “Nien, if Starfleet takes the matter into her own hands, then we’re out of the shot, so to speak. We might be out of our league anyway. The Klingons didn’t come unprepared
to Aldebaran, and they have support here. Whatever they’re up to is definitely well-planned, and it might be too big for us – even with The Shadows’ crews.”

Khan cocked his head. “I’m familiar with the scenario you’re imagining, Jim. This is war after all and…”

Kirk laid one hand on his lover’s arm. “This is not your war to fight, Nien,” he said quietly.

“But you are my fight. You are mine to fight for,” the Augment replied softly, yet determined to make his point. “And there is nothing or no one that will stop me from keeping you as safe!”

Caviw smiled smugly at the others; her gaze clearly said ‘told you so’, while Jeff pursed his lips. He recognized love when he saw it and that the engineered man was deeply in love with the young captain was as clear as the cloudless skies above them. Jeff had to admit that he was relieved that he made the right decision concerning Khan. The former Augment leader was anything but evil!

Galven snorted, half amused, half touched at this display of intense feelings, and Diego glanced fondly at the two younger men so madly smitten with each other. Then he took a deep breath and nudged Kirk in the side. “Go on, Jim, call Starfleet. And besides if the mission becomes official, the police can’t get my ass for the trouble in ‘The Stars’, after all I helped an important Starfleet officer. The brawl was official business, yeah?”

“Did they recognize you?” Kirk wanted to know, and the Chilean scoffed.

“Oh, definitely! And even if they didn’t, it’s only a matter of time before one of the patrons gives me away. No-one wants to pay for the mess we made, and the other guests will demand my share.”

Jim bit his lips, and looked from one man to another then murmured, “If you want to stay out of it, I understand.”

The Tellarit grunted in irritation. “We are not ducking out, lad; call your comrades!”

Resigned at their decision, but thankful all the same, Kirk opened the communicator and set it to a frequency only Starfleet members used and lifted the little device to talk. “This is Captain James T. Kirk of the USS Enterprise. I’m trying to reach Starfleet Quarters on Aldebaran III. Please come in!”
For a moment there was silence on the line; then a male voice answered, “This is Starfleet Quarters on Aldebaran III, Lieutenant Taylor. Identify yourself.”

Jim frowned. Hadn’t he given his name already? “This is Captain James T. Kirk from the USS…”

“I require you to refrain from jokes or get off the line. This frequency is only for Starfleet personnel, so…”

The young captain took a deep breath. “Haven’t I made myself clear, Lieutenant? I am Starfleet! This is Captain James Kirk, and I order you to put me through to your commander. This is an emergency code red, so…”

“Listen, man, because I’m only telling you this once: Captain Kirk is dead – caught and executed by Klingons as a general transmission from them informed us several days ago. So skip the nonsense and get off the line!”

Jim stared at Khan, then at Galven and gritted his teeth. “It seems the news about my death are a bit exaggerated, Lieutenant! I’m on Aldebaran on an undercover mission and…”

The line was cut off, and Kirk stared at the communicator as it was itself to blame for the Lieutenant’s stupidity. “I don’t believe it!” the Enterprise’s captain growled and hailed the frequency again. As soon as he got an answer he snapped, “Before you cut the line again, Lieutenant, I advise you to contact the Enterprise. Ask for…”

Again the line went dead, and Jim growled in frustration. “Idiot! I wanna rip his rank off through the communicator!” He snapped the communicator closed and frowned; his clever mind was already musing alternatives. “Galven, is Ritek still on his ship in the orbit?”

“Yes, my message caught him under the sonic shower and he said he would come in several minutes. So…”

“Call him and ask him to contact the Enterprise.”

“Your ship will be light years away, Jim. Your officers’ intervention would come too late,” Khan
said quietly, and Jim smirked.

“‘If the mountain won’t come to Muhammad; Muhammad must go to the mountain’ – or something like that. I hope for the sake of this overeager lieutenant’s career that he will believe Spock.”

Galven’s oink was accompanied by a snicker; then he took out his own communicator. “Chipmunk here speaks the cleverer of us two.”

For a moment there was silence before the unmistakable voice of Ritek answered, “I doubt that highly, Mr. Piggy. So, what’s up?”

“Can you hail the Enterprise?” Galven asked; his eyes flashed at the new nickname the Rigelian had given him.

“Does it concern the boy’s newest development down on the planet?” Ritek sounded very serious all of sudden and Jim raised his voice.

“Yeah, it’s about that, Ritek. So could you…?”

“Consider it done, Captain!”

Jim sighed, hoping that everything would be easier after talking with Spock. He couldn’t know that his Vulcan friend was unable to answer the call…

ST***ST***ST

McFurthon had closed the channel and smiled. Korax showed a sense of Klingon humor as he said, “That was clever, ‘Lieutenant Taylor’.” He pointed at the console. “Do you know where Kirk is?”

The former officer nodded. “Three streets up at the main road; he’s cut off from any support Starfleet could give him.” He left the console on standby so that it would mask him as soon as Kirk tried another Starfleet frequency. “We can’t attack him there – too many witnesses. But I think we will meet him at our targets. The man is no idiot and has likely guessed why you are here and what you plan to do.” He pointed to a lowboy. “I stored some phasers for you in there, as well as two
tricorders. I am sure they will be needed to eliminate the nuisance Kirk. And even if the man in his company is an Augment, I don’t think his body can resist a phase set to kill!” He glanced at Koloth. “You want revenge for you humiliation, your broken arm and your dead comrades on your home world? I think you are very close to getting it!”

TBC…

Chapter End Notes

Yeah, this is nasty. McFurthon is anything but stupid and is a step ahead our friends – or so it seems. After all, he has two geniuses as opponents (Jim and Khan).

In the next chapter anything starts to become worse for our dear captain, his lover and their unusual friends. And Nien will ask Jim for the other Augments of one century back, what will lead to a certain decision.

I hope you liked the new chapter and I’m – as always – curious of your thoughts.

Love

Yours Starflight
Hi, my dear readers!

Yeah, the next update is installed and I hope you’re going to like it. Thank you so much for the comments and kudos; I’m really happy that the break of almost one month didn’t drive you away and that you’re still so attached to the story.

In the new chapter old loose strings will come together – the Klingon strike group is approaching, the Enterprise is still on the scout-mission, yet Spock and the others are worrying mainly for their captain. Ritek will show once again how clever he is, Galven and the others try to find Koloth (who has his own plans), and then there will be the talk between Jim and Nien concerning the other young Augments a century ago. It will be heart-wrenching, believe me.

I wish you fun,

Love

Yours Starflight

See the end of the chapter for more notes

Chapter 28 – Of tricks and contemplations

The Enterprise raced through the space, nearing enemy annexed territory – the former Neutral Zone and deep space K7. Everyone’s nerves were on edge – tight as a bowstring. Beta shift was ready for relief but the bridge was crowded. But Spock knew better than to insist they leave. The atmosphere on board was already tense. Everyone worried over their captain, even the ones who knew his whereabouts. If Kirk needed to convalesce for so long, his injuries had to be bad and the uncertainty of the captain’s health combined with a possible Klingon strike hurt the crew morale; the tension was so palatable you could cut it with a knife.

Sulu and Chekov remained at their stations as did Scotty, McCoy and of course Spock. They needed the whole crew for this task. If together, they could figure out the enemy’s next move, it could mean survival of the UFP. Every officer gave their best. All of them (save the Vulcan) wanted to make their captain and friend proud of them. None of them wanted their captain safe and back among them more than the Vulcan.

Suddenly, Nyota turned in her seat; her eyes went wide. “Commander, I’m receiving a transmission from The Shadow. Mr. Ritek wants to speak with you. He says it’s urgent.”
Spock lifted a brow. Even without data he simply knew that the militia’s attempt to get in contact with him had to do with Kirk. There could not be another reason for it. And Jim wouldn’t try to reach him if it were not important.

“Time of arrival, Mr. Sulu?” he asked, and the helmsman answered, “Two hours and fifty-eight minutes, sir.”

The Vulcan nodded slowly. Answering the call now could give them away even if The Shadow used Code 9. The Klingons hadn’t cracked that encryption yet. But if they did, the Klingons could triangulate the signal and attack. Or even worse, if the enemy cracked the encryption and stayed quiet, they would have the opportunity to learn of Starfleet’s plans and gain the strategic advantage. Spock inwardly begged Jim’s forgiveness. Highly illogical, but he couldn’t answer the hail and know for certain that the Enterprise would be safe and though the probability was high that it was Kirk, there was no way to be certain. He turned around in the captain’s chair. “No reply, Lieutenant,” he ordered and caught the sideways glances of the crew. “Any external communication could be caught by the Klingons. Even if they cannot decrypt the transmission, they would know that there is a Starfleet vessel in this parsec. That would put us all in unnecessary danger, and the captain needs us and his ship safe if he is to return.” Spock smartly appealed to their love for their captain.

“And… if the captain needs our help?” Uhura asked quietly, returning her lover’s firm gaze with one of her own.

“The Shadow is orbiting the same planet that the captain is on and Jim has a ‘bodyguard’, as you and Dr. McCoy are convinced. Whatever the situation, Jim is well equipped to handle it.”

“Isn’t hope an emotion?” one of the officers mumbled under his breath; still the Vulcan’s sensitive hearing caught it, but he let it pass. The tension on the bridge was already thick enough. So Spock leaned back in the captain’s chair and fixed his eyes on the large screen, indeed ‘hoping’ that Jim would be all right.

ST***ST***ST

On Aldebaran III, Jim Kirk paced nervously back and forth. Ritek had been trying to reach the Enterprise for more than a quarter of an hour now without success. Normally, the ship wasn’t out of subspace communications range. If fleet command dismissed the Enterprise from her current mission, Spock would have sent him a message. His Vulcan friend wouldn’t leave without informing him. So, why did his ship not answer? The Enterprise was on an observing mission – relatively safe as mission go, but Jim didn’t have any details. What if his friends had run into Klingons and…?
Suddenly a warm, slender hand lay on his shoulder. “Stop this, Jim, or you’ll run a hole in the street,” Khan said calmly. “Maybe your ship is out of range and…”

“Spock would not leave without telling me,” Kirk murmured. “That means he can’t answer the hails. But, why?” He bit his lips before he whispered. “They were ordered on a scouting mission. What if they were attacked…?” He made a gesture with his hand; the worry that was so palpable reflected in his eyes.

“Or they must maintain radio silence due to the mission; perhaps they found something and need to gather more information,” the Augment suggested. “I didn’t answer the hails as I headed to Turkana for you. The Enterprise tried for hours, but I could not reply for fear of revealing myself.”

Jim tried to smile, and failed miserably. “Maybe – maybe not. Not knowing what’s happening out there, if my friends, my crew, and my ship are all okay… Fuck. I hate it!”

“I know, James,” Nien answered quietly. “I know exactly what you are enduring.”

The two lovers looked at each other, and Kirk nodded finally; he remembered all too well what Khan told him about the uncertain times after his family and he fled Earth, and the time after when he had been woken up by Marcus – never sure what really happened to his dear ones, only knowing that they were in danger. Nien was perhaps the only one who understood his fear. It was the fear of a leader, a friend, and a brother. It reminded him to thank fate, God, whatever, for his lover.

Galven stepped near to them; sympathy, but also determination mirrored in his small eyes. “Ritek will remain aboard the Flash and continue trying to get your ship, Captain, but I think we should take some measures of our own.”

Kirk made an affirming gesture. “Yes, we should – and we will. Do you have any portable scanners aboard?”

“We have some tricorders and…”

“Very good. We’ll split up. We’ll take a look at the spaceport and the Starfleet outpost. Each group gets one tricorder. I know Koloth and the others, you guys don’t, so you have to scan every man who passes by the entrances. It’s cumbersome, but it’s our only chance to find them.”
“What could they achieve by blowing up the spaceport and the outpost? Aldebaran, I understand, but then what? We don’t have many mineral resources or anything else that could be in their interest,” Diego grumbled.

Kirk sighed, “They would have another piece of the Federation under their control.” He pursed his lips. “Not a pleasant thought. Then they’d have another staging area to continue their of more Federation airspace. From here, it’s not far to the other inhabited planets in this sector that belong to the Federation and…”

“Jim, maybe this is only the beginning of a larger invasion,” Khan mused and caught is beloved’s asking glance. “The Federation wants peace talks; as far as we know the Klingons have not responded until now. Maybe they want to make a last attempt at victory before they decide to accept the offer.”

“By seizing a single planet system?” Jeff cocked his head. “They already occupy so much and…”

“I am not familiar with the exact layout of the Federation’s borders, but maybe to seizing Aldebaran is strategically important,” Khan mused, and Kirk frowned.

“You could be right,” he murmured. “Their target could be the Aldebaran System, first, and then Tandar and finally Betazed. If the Klingons seized those parsecs, they would isolate all the planets of the Federation between Klingon Empire and the Cardassian Union. One-by-one, they could take down all our colonies and allied planets without having to fear Starfleet intervention. We wouldn’t be able to help them. The Klingons would bag a quarter of the Federation, and we’d be rendered helpless.”

“So attacking Aldebaran first is logical,” Nien nodded. “If I wanted to annex territory, I would proceed the same way. Encircling first, then strike. The Klingons are at the beginning stages of a major offensive! Koloth’s presence leaves no doubt.” He cocked his head. “And maybe this is why the Enterprise will not answer. If a major offensive is imminent, then one or two Fleet strike groups have to be nearby – possibly directly in the former Neutral Zone. It is possible that your ship saw them and is observing them from a safe distance.”

Jim paled. “If the Klingons find them, then…”

“Remember, your friends have my device. I don’t know much about of your chief engineer aside from his name. You called on him often during our flight between the two ships; I will never forget it…”
Kirk grimaced. Yeah, he had called ‘Scotty’ a lot.

“… but as far as I understand he is a good engineer…”

“He’s not just good; he’s a genius,” Jim sighed; it made Khan smile for a moment before he continued, “… and I have no doubt that ‘Scotty’ has studied my device, and that it is integrated in the general ship’s functions by now. The Klingons will not be able to scan the Enterprise. They can only recognize her if she comes into visual contact. Your Vulcan can prevent that. He is highly intelligent, I have to give him that.” His gaze became warmer. “So, don’t worry too much, Pyāra. They will be relatively safe.”

The young captain looked grateful at Nien; the Augment’s words soothed him a little bit – well, concerning his ship. But the other matters…

“So, we are facing a major Klingon strike – a bid to take over Federation space starting right here – on this planet, in this town, directly under our noses. And I’m standing here and can’t anything about it because some little, smartass doesn’t believe that I am me,” Jim growled. “Dammit!” He took a deep breath, suppressing his frustration. “All right, we’ll split up. Caviw and Diego, you go to the Starfleet station and watch the entries. Scan the area for Klingon bio-signs. Galven, you and Jeff go to the main entrance of the spaceport. Koloth and the traitor have never seen you so they won’t get suspicious when they see you. Nien and I are will watch the side entrance and…”

“There is also a large cargo area,” Diego interrupted him. In the background, Galven called Ritek and asked for three tricorders and some phasers. “Usually cargo is stored there until the customs is done with it. The area holds HAZMAT. If they decide to plant explosives there, the effect would be devastating.”

“Right, then Nien and I will check the cargo area, too. We’ll remain in contact, but switch-off the audio on your communicators. It’s safer this way. Set them to vibrate so you can tell if someone is trying to get in touch with you.”

He looked to Galven as the Tellarit closed the small distance to him. “Ritek will beam down everything we need to my location in a few minutes. I’ll go into the pub to use the restroom. I’ll receive the ‘cargo’ there. I don’t think it wise if other people see phasers materializing in front of us.”

Jim grinned at him. “Clever,” he said, then he addressed Khan. “You sure you want to do this? It’s dangerous, and if the authorities show…” He stopped when the Augment glared at him, and lifted
both hands. “Alright, alright, I’ll shut up.”

“Good!” Khan grumbled. The others laughed and Jim pouted. Then Kirk turned serious again. “Okay, guys, even if our super-hero here sees this as a walk in the part, I can assure you it’s not! It can and will be very dangerous as soon as we locate the Klingons. So if someone wants to back out, do it now or forever hold your peace!” Five pairs of eyes looked to him, but the mouths stayed silent, and Jim smiled. “Thanks,” he said softly. “I appreciate it.”

“Then you certainly will be even more happy to hear that Ritek has alerted our other members and that they are ready to support us,” Galven oinked. “All you have to do is ask, and the whole gang comes running – or beaming, in this case.” He winked at the young captain and headed for the small restaurant to receive the ‘cargo’ as he put it.

Jim and Khan exchanged a glance. It was good to have friends!

ST***ST***ST

Korax and Kaghon entered the hotel. Koloth had stayed with McFurthon, who had much to do, what with their change of plans. Kurhan and Noras were also with their commander awaiting instructions. All Korax knew about the new plan was that his commander was going to lure Kirk into a trap; the rest were continuing with the original plan of bringing down Aldebaran’s defenses. The first officer mused that Koloth would also use Kirk as a hostage to keep the Augment at bay and to force surrender. The *Qli-jagh* wouldn’t risk Kirk’s life; that much was obvious from the Turkana ordeal as well as the more recent pub brawl.

‘It is a shame! The *Qli-jagh* is a great and fierce warrior yet he sticks to this weak, common human. Yes, Kirk is a warrior but without honor – a terrorist. The *Qli-jagh* could do better than be taken with Kirk. Feelings… Every human becomes weak with them, even the augmented ones!’

He entered his commander’s room and quickly selected the harmless materials there suited to his needs. Each piece, on its own, seemed useless but taken together they would bring death and destruction.

Kaghon looked out of the window and suddenly tensed. “Kirk is there! And the Augment too,” he said, pointing outside. Korax was at his side in a flash. Sneering, the first officer nodded as he watched two human males walking quickly down the pavement.

“Koloth was right. Kirk saw through our intent – but it will be of no use. Our plans have changed and he and his Augment friend will walk straight into our trap.” He pulled his communicator from
his belt and activated it.

“Captain?” he hailed his commanding officer. “You were right – Kirk is here!”

He didn’t have to wait very long for an answer. “Very good! Where is he heading?”

“To the cargo area of the spaceport,” Korax replied and heard his captain chuckling.

“Perfect! Koloth out!”

Korax deactivated the communicator and exchanged a glance with Kaghon. “Everything is going smoothly!” he said.

ST***ST***ST

Caviw and Jeff stared across the street at the Starfleet outpost located in one of the less harried quarters of New Aldebaran. Surrounding the outpost were several contract companies and consulate buildings. The few houses that could be seen belonged to company CEOs and the few diplomats posted on Aldebaran. A small restaurant stood across from the Starfleet building; the Caitian and the young human were there watching the passersby. They ordered a bit of food and something to drink so as to seem innocuous. Every now and then secretly checking the pedestrians and patrons with their tricorder; the two pretended to be a pair of lovers, feigning slight touches and loving looks, hoping that nothing would slip their attention.

Covering as an Aldebaran resident showing the spaceport to a friend he hadn’t seen in a long time, Diego and Galven ‘enjoyed’ the port’s shops. The Chilean checked today’s arrivals and frowned as he read on the large displays that only a freighter was expected in the next half hour. Because he was well-known in the spaceport, it was Galven who went to the information office pretending to be a businessman waiting for his goods. A young Andorian lady was very sorry to tell him that the freighter Athena didn’t come from Tellar and didn’t carry the Tellarian food he was waiting for, but liquid plastic used for Aldebaran industry. Thanking the woman, Galven left to tell Diego what he had learned.

Alarm bells went off in the heads of both men. “Liquid plastic is quite flammable. The freighter is carrying hundreds of tons of the stuff. Can you imagine what would happen if those tanks are blown up?” Galven whispered, and Diego nodded, reaching for his communicator. The Tellarit continued observing the area with his tricorder, and the Chilean hailed Kirk.
He had to wait a moment, before the quite voice of the young captain answered. Quickly he informed the Starfleet officer what Galven and he had learned.

“Dammit!” Jim whispered. “The plastic would increase the impact of whatever they are using as an explosive several times over. We have to find the others before it’s too late.”

“I’ll get what we need from our comrades,” Galven murmured and opened his own communicator, putting distance between himself and Diego.

“Can you enter the cargo area without trouble, Jim?” the Chilean wanted to know and heard the captain snorting,

“There are four guards. Several minutes ago, a man attempted entry. They had him present a slew of documents before they let him pass. Security is everywhere; still Koloth’s going to find a way inside. Can he beam inside, maybe, using the official transporter?”

“Negative,” Diego sighed. “The cargo area is shielded. Otherwise too many ‘businessmen’ would see a self-serve and help themselves to the goods.”

“Rrright. Well at least that option is off the table. On the other hand, Nien and I are having trouble entering the area, what with all the guards and…”

“I know most of the guards because I do a lot of shipping and receiving. Maybe I can smuggle you inside. Where are you?”

“Across the street from the west entrance into the cargo area,” Khan’s deep baritone answered, and Diego nodded unseen by the two men.

“All right, just wait. I’ll be there in a few minutes.” He closed the communicator and looked at Galven, who ended his own call just then.

“We will have seven of our people here about three minutes,” the Tellarit said. “Go to Kirk and Kh-Drythen. We have to have them inside of the cargo area.”
Diego made an affirming gesture, for a moment confused why Galven had stumbled over Drythen’s name. Then he waved at the Tellarit and quickly walked away.

McFurthon looked up from the communications station and glanced at Koloth whose face wore an even more determined expression than before. “So, Kirk thinks the cargo area is safe because of the shield. Naïve, if you ask me, but his misdirection is handy. He will not know the plan until it is too late,” the former officer said. He congratulated himself as he thought back to Kirk’s communication interception. He turned his attention to the check-in list of the space harbor that he had hacked into earlier. He smiled as the name of the expected freighter appeared on the screen.

“The vessel has arrived,” he informed the Klingon captain. “Usually unloading proceedings begin within an hour of arrival.”

Koloth bared his teeth in a parody of a smile. “Right, then it begins now!” He activated his borrowed communicator, opened another frequency, and hailed the Klingon strike group waiting in the former Neutral Zone.

“General? I’m honored to inform you that the triumphal strike can begin!”

The answer came back in the guttural Klingon language, and Koloth cut off the link with a satisfied grin. “They are coming!”

“Time to arrival, Mr. Sulu?” Spock asked even though he knew that they would need more than another hour to reach their destiny.

“Sixty-five minutes, sir,” the helmsman answered; his body suddenly went stiff. “What the hell…” he whispered, before turning sharply around with his chair. “Mr. Spock, the vessels are moving – they’ve entered warp.”

The Vulcan was on his feet in a blink of an eye. “Course?” he asked as he hurried to his own station.
“I’m not sure, sir. It could be Aldebaran,” Hikaru said after another look at his instruments. He didn’t see the first officer stiffen, nor would he know why if he did. He added, “If they remain at speed, they will see us in twenty-three minutes and…”

“Full stop, Mr. Sulu!” the Vulcan interrupted him, and the Enterprise came to halt. Suppressing the sudden stab deep in him at the mere thought that the Klingons could be heading to the planet where his T’yth’la was recovering, Spock checked his sensors. Pressing his lips into a thin line for a moment, he murmured, “Eighteen vessels make up the strike group. That is what the sensors read before the ships cloaked.” He looked at the helmsman. “Mr. Sulu, standard measure points for ion trails and warp signatures. We have to find their exact heading.” His gaze found Uhura’s. “And we have to risk recognition. Transmit to the Lexington, Code 9: Klingon invasion. And give Commodore Wesley the coordinates of the Klingon’s last location.”

He bent over his sensors again, while he ordered, “Yellow alert, Mr. Chekov; General Quarters. We are going into battle.”

ST***ST***ST

“Pablo! It’s a surprise to see you on duty!” Diego beamed at the young guard at the cargo area check-in. Pablo Sanchez came from Chile too, and knew Diego very well, “I thought you were still on your honeymoon with sweet Maria!”

Sanchez grinned at him; his white teeth made for a sharp contrast against his tanned skin. “It’s my first day back at work,” he said. “It’s hard to be apart from her, but… well… duty, you know?”

The giant Chilean nodded and smirked. “Yeah, duty can royally disturb a lovely day.”

“Yeah, who you tellin’,” Pablo sighed; then he looked at the two strangers. “And who are you?” he asked.

His eyes went wide, and he was stock-still when his fellow countryman bent forwards and whispered, “Don’t tell anyone, but this is Captain James T. Kirk and one of his officers.”

The other Chilean stared with eyes large as saucers. “You are…” He looked at the young from top to bottom and took a sharp breath. “Indeed, it is you. I watched your memorial speech on the television and saw your picture on the news.” He blushed, and extended his hand. “It is a great honor to meet
you, Captain Kirk.”

Jim, who hadn’t known that Diego would blurt out his identity, cleared his throat and returned the gesture. “Thank you, Mr. Sanchez.” He pointed at Khan to whom Ritek had beamed down an old-fashioned baseball cap that the Augment wore pulled down over his eyes, a thoughtful measure by the Regulian. “My… tactical officer, Commander…”

“Commander Lavi, at your service, Mr. Sanchez,” Khan said, shaking the younger man’s hand too.

“Nice to meet you, Commander,” Pablo answered.

Jim glanced quickly at his beloved – Lavi? Why not! – And decided to grab the bull by the horns. “Mr. Sanchez, I’m undercover here and Commander Lavi and I need your help.”

The young guard snapped to attention. “How can I help you, sir?”

“We need to get into the cargo area. We think that spies of the enemy are here and…”

“Spies?” Thank the Lord the young man was bright; he lowered his voice. “Klingons?”

Jim nodded. “Yes.”

Sanchez paled. “Why don’t you call the Starfleet outpost here and…”

“They are already in the area and looking for them too,” Kirk lied through his teeth before he nodded at the large hold. “We have to…”

Pablo simply waved at them. “Follow me, sir!” he said; he walked to the check-in, signaled to the other watchmen, and then led the three men into the cargo area.

ST***ST***ST
General K’taH sat centrally in the upper leveled of the flag ship’s bridge and stared at the screen as if he could force the Federation ship to appear by his will alone. It was there; he trusted his comms officer to be right in this – or he’d pay with his life. The transmission had been scrambled using the same encryption that Klingon intelligence had been trying to crack for some time now. That was not all; it was as if the message had been sent from nowhere at all. There had to be a dispatcher, yet the sensors could not locate the source of the transmission. This was a riddle K’taH wanted to solve.

He had read Lord Kor’s report of the small vessel that appeared from nowhere at Turkana. The ship beamed aboard the sentenced terrorist Kirk and his rescuer, and then vanished. Kor had pursued it as long as he and his men were able and fired when in range. Once visual contact was lost though, no sensor aboard the Klingon ship could locate the vessel.

The same went now for the Federation vessel; it had to be near, still the sensors showed nothing.

The bulky, though strong Klingon rubbed his beard. He didn’t belong to those Klingons whose appearance had been influenced by the Augment DNA experiments, and he was proud of his pure, ridged Klingon appearance. Aye, he respected Kor, the last descendant of the Imperial Family, but he was convinced that the more human-like Klingons such as Kor also thought too much like humans. Kor was a fighter, but still there were several Klingons who regarded him as weak and – Kahless help him – even regarded him as a traitor after the negotiation of Organia.

Kor, son of Rynar, had negotiated with a staff-officer of Starfleet. It was some commodore K’taH didn’t remember, but Kor had talked about him with great respect. The general knew that there were indeed some humans, who were warrior enough to earn respect, still he would never say this aloud. Kor had told the High Council that they could trust this Earthling’s words; K’taH doubted this statement. And since the glorious Klingon Empire was at war with the Federation, he saw in her members nothing more than whimpering cowards. This offer of peace talks – offer! It was an offense!

“Something new?” he barked, looking over at his science officer who turned around towards him.

“I am sorry, Milord, but the sensors still find nothing. Neither our sensors, nor those of our other ships.”

“There was a short message, but it’s impossible to tell from where it has been sent,” the communication officer confirmed.

K’taH bared his teeth, but stayed silent. Still his mind was in turmoil. ‘The Federation has developed a new technical device that hinders our sensors from detecting her ships. Another low trick of these cowards!’ He cocked his head and felt his long, thick plaited hair fall over his shoulder.
“Sensors on maximum power! Even if this Federation vessel is playing dead it has to leave a warp signature. Find them!”

His science officer nodded and fixed his attention back on his station. K’taH bit his lips. ‘Nothing is invisible!’ he thought. ‘Even the enhancements of our newest generation of cloaking-devices which will be installed at our vessels soon will be obsolete in a matter of months!’

ST***ST***ST

“The Shadow is still trying to contact us, Commander,” Uhura reported and looked at her lover, who seemed lost in the information at his station.

“The short message to the Lexington was risky enough. If we send a longer transmission, the Klingons would have enough data to triangulate its point of origin - us, but we still need more information about them before we can continue.”

“New data from the fourth measuring point, Mr. Spock,” Sulu said while he watched his display intensely. “In due consideration of the first measuring point and their present course, they are heading for Aldebaran. With regard to their speed, sir, they are going to see us in two minutes.”

Spock nodded. He had already anticipated the disaster. “Does the sensor-disturbing device still work, Mr. Sulu?” he wanted to know and the helmsman glanced back at him.

“Yes, sir, it running smoothly.”

The Vulcan straightened his frame. “Red alert, Mr. Chekov! All hands to their battle stations. Mr. Sulu, take us away from here. Course – Aldebaran.” His gaze found Uhura’s again. “Send a message to Starfleet Command. The Klingons have begun a major strike against this sector! And please inform Commodore Wesley about the enemy’s target. The Klingons will reach it in two hours and fifty-three minutes.” He stepped beside the captain’s chair and activated the intercom. “Engineering, battle stations.” He changed the frequency. “Bridge to med bay. Doctor McCoy, prepare your station for casualties.” Before he could cut off the link, the CMO’s voice sounded.

“What’s happening up there, Spock?”
The Vulcan’s keen eyes lay on the screen and the tactical picture of the advancing enemy. “The Klingons have decided to annex this sector,” he said calmly. “A larger strike-group is on its way to Aldebaran and…”

“Holy shit – JIM is there!” Bones yelled. Sulu and Chekov looked over their shoulders at the acting captain. He and the doctor knew where Kirk was and hadn’t said anything? Not that they were obligated to, but Kirk was Hikaru’s and young Pavel’s friend too. They were just as concerned and wanted to know the whereabouts of the ship’s ‘heart’ so to speak.

Spock lifted a brow. “I’m aware of it, Doctor.”

“And are you going to do about it?” Leonard almost challenged.

“Whatsoever is necessary!” With those words, he cut off the line and sat down in the captain’s chair.

McCoy was right.

Jim was on Aldebaran!

If the Klingons seized the star-system and its third planet, his T’hy’la would fall into the enemy’s hands again. The planet was not as well protected as it should be, but if the Klingons arrived before Starfleet, the Enterprise might be able to stall the assault just long enough to enable reinforcements to arrive before the entire planet was subdued.

“One ship against eighteen. That’s not logic; it’s hope at best!” his Vulcan side whispered, and the first officer pursed his lips. Maybe he chose a way that wasn’t a way at all, but, as Jim Kirk says, ‘if you run out of options go with your gut.’

ST***ST***ST

Ritek leaned back in his chair, frustrated and resigned to failure. “You either can’t or won’t answer, Enterprise?” he grumbled. “Holy stones, when you uniform-wearers are needed, you’re unreachable!” He shook his head. Someone had to tell this idiot of lieutenant down at the Starfleet station that Kirk was indeed… well, Kirk! Someone who knew the young captain had to clear up the misunderstanding and…”
The Rigelian went rigid before he groaned and slapped his forehead – a gesture he had adopted from his Terran friends. “Not the lieutenant. Damn, I’m an idiot! Why didn’t I think of it sooner?” He bent forwards again and adjusted a wideband frequency using the Code 9. “This is The Shadow to USS Lexington! Come in, Lexington!”

He had to repeat his hail three times before he received an answer.

“This is the USS Lexington. Who is speaking?” a male voice wanted to know.

“This is Ritek from The Shadow. Patch me through to Commodore Wesley, please. It’s urgent! Captain Kirk needs…”

“One moment!” he interrupted the voice; then the visual signal caught up with the voice. Quickly, Ritek activated the large main screen on the small bridge. He looked straight at the level gaze of Bob Wesley. Tension and worry lay in the commodore’s brown eyes, and he seemed to have some more grey hair since the last visual transmission. He bent forwards slightly. “Mr. Ritek!” he greeted and the Rigelian nodded back.

“Commodore, we have a situation here – a grave one. Klingons are here – we think to blow up our spaceport, and one of your outposts. The outpost doesn’t believe that Kirk is Kirk, and now…”

Wesley lifted a hand. Since receiving the first message from the Enterprise indicating that a Klingon strike group had entered Federation space between former K7 and DS 133, his ship was on red alert. He had ordered all ships in the surrounding parsecs to the area. Even without the new information from Kirk’s Vulcan first officer, he simply knew that a decisive battle in this war was imminent. Receiving a kind of SOS from The Shadow concerning a ‘situation’ and Kirk was something he didn’t need. Still, he knew he couldn’t ignore it. What’s more, if he was quite honest with himself, he’d admit that the situation did need Kirk. “Please, one thing at a time, Mr. Ritek. Where are you? And what does Captain Kirk need from me?”

Sighing, the Rigelian quickly explained what happened and was about to happen. The commodore’s expression changed from concern to shock and finally became grim while his hands tightened around the armrests of his chair. “It fits!” he whispered. “Their planned major strike begins on Aldebaran!”

Ritek had heard the quiet words and went pale. “A Klingon invasion? Kirk and Drythen think the same thing. Koloth and his Klingons are here on Aldebaran to…”
“Koloth? Captain Koloth?” Wesley interrupted him and the Rigelian nodded.

“Yes, that’s the name Captain Kirk mentioned. He, Drythen and one of our friends had a run-in with this Koloth and…”

Bob groaned. “Of course those two had to run into each other!” He shook his head and asked himself, not for the first time, how it was possible that Kirk always stumbled into trouble! Scratch that. He didn’t stumble into it - he went looking for it! Then he went rigid. “So the Klingons are aware that we know of their presence on Aldebaran?” As the Rigelian made another gesture of confirmation, he sighed. “They will change their plans. No doubt about it. Can you…”

“Commodore, an incoming message from the Enterprise!” his communication officer interrupted him. “Code red!”

“Mr. Ritek, hold the line, please!” Wesley said, and then he nodded to Palmer. “On speaker Lieutenant.”

He heard the warm, melodious voice of the young, dark-skinned woman he knew to be Nyota Uhura. “This is the USS Enterprise. The Klingon invaders are heading for the Aldebaran System. Estimated time of arrival, two hours and fifty-three minutes.”

Wesley cursed. It was becoming a habit since the war started. But he didn’t question the Enterprise, he knew better. “Message our ships, Lieutenant Palmer. Klingon invasion. Target annexation of Aldebaran. Prepare to intercept the enemy at coordinates 42.3591.” He looked at his helmsman. “Set course to Aldebaran, Warp 9!” He made a signal, and Ritek was on the air again. “Mr. Ritek, what I’m telling you now is very delicate information. I hope you’re able to handle it with prudence. A Klingon strike group is on its way to Aldebaran. It's most certainly in connection with Koloth’s presence on the planet. I need to…”

“… To talk to Kirk?” the Rigelian threw in. He had paled at what he just learned but remained calm.

“Yes, after I spoke with our outpost. Something is odd here. To ignore an emergency code red is… uncommon.”

Ritek nodded. “All right, sir, I’m on standby.” The Rigelian’s expression was determined, after he had overcome his shock.
“One more moment, Mr. Ritek,” Bob said, lifting a hand. “What’s the name of said lieutenant, who ignored an emergency code red on our own frequency?”

“Taylor, sir,” Ritek answered, before he added, “Commodore, Kirk is with my people down on the planet. They’re trying to locate the Klingons, but we can’t do it alone. They only have tricorders to scan the bio-signals around them and the Klingons in question are from Imperial families. Human looking, we’re afraid we won’t recognize them. The differences between human and human-like Klingon bio-signals is difficult to ascertain. I’ll have my ship and Galven’s ship scan the area, but we only have simple standard sensors and…”

“I’ll take care of it, Mr. Ritek. Thank you for your quick reaction and please continue with your scans. Maybe you’ll find our ‘friends’ before we can. And please remain ready to receive the equipment!”

The screen on board of the *Flash* went dark and Ritek gulped. A Klingon invasion – here, on this planet. And he was stuck in middle.

“SHIT! As Galven asked me to kick some Orion asses I never dreamed that I would find myself involved in the war, helping Starfleet!” He punched the buttons on his station. “I’m going to send Command a bill when this is over!”

ST***ST***ST

Back on Aldebaran at the Starfleet outpost, Commander Elias Capricio ruminated over the last reports of yesterday’s patrol; he saw that another freighter had arrived in the space harbor. He was about to answer his messages when the intercom buzzed.

“Commander, Commodore Wesley on the line for you.”

Capricio’s dark eyebrows shot up. *Santa Maria!* What could the highest ranking officer in this sector want from him? “Patch him through Lieutenant Anderson!” he ordered and watched the screen on his desk come alive; the grey haired staff-officer appeared. He knew him only knew from video transmissions and holographs.

“Commodore Wesley!” he greeted; the other man nodded shortly.
“Commander Capricio, You have a big problem. Two to be precise. Listen…”

Wesley explained the planet’s impending situation. Capricio reacted as a Starfleet officer in his position ought. Even as Wesley was on the screen, the Italian gave the red alert, called his leading officers to his office, and ordered a complete scan of the town.

Bob looked at the outpost’s commander. “You would have been informed sooner, but one of your communication officers omitted passing an emergency code red call to you!”

The Italian man stared wide-eyed at his superior. “I… beg your pardon, sir? I don’t know about a call like that. When…”

“That’s the problem. Lieutenant Taylor refused to link Captain Kirk to you. He’s on Aldebaran and requires…”

“I hate to interrupt you, sir, but I none of my officers go by that name. Not anymore.”

The commander’s dark eyes narrowed. “Explain!”

“Lieutenant Josef Taylor transferred to Starbase 67 a week ago, and there is no one else by that name, sir.”

Wesley frowned. “Where’d he work?”

“Comms, sir,” Capricio replied.

Pursing his lips, Bob thought about his knew bit of information. “So, you have no Lieutenant Taylor on your team, but Kirk spoke to one when he tried to contact this post. This man refused to patch Kirk through. Told the answering officer that the Enterprise’s captain was dead which is not the case!”

The commander bent forwards slightly. “Sir, I have no information that Captain Kirk is on this planet, and…”
“He is… he’s on mission now, but that’s not important right now, Commander.” Wesley took a deep breath. “What is important is that you have a mole on your team, and we know that because Kirk tried to reach you via our emergency frequency, but was put off. Who is on duty now?”

“Lieutenant Anderson, sir. He’s been on for about five hours now. He’s a good man – one of my best. I can’t imagine it’d be him intercepting calls for the enemy.”

Wesley nodded slowly. “Alright, we’ll take care of that detail later. You have another problem to solve. I’m on my way to Aldebaran, but we won’t be there for another…” He glanced at his helmsman, who said,

“Two hours, fifteen minutes, sir.”

“You heard that?” Bob said to him; he nodded.

“I understand, Commodore. I’ll keep you updated. Aldebaran out.” He switched off the comm screen and looked up when his senior officers stepped into his office. “Ladies and gentlemen, we have a situation!” he said rising up from his seat.

ST***ST***ST

On Aldebaran, Jim and Khan left Diego who continued watching the entrance of the cargo area with Pablo’s help. Even though this section of the spaceport was shielded, Kirk didn’t trust the stillness around them. He had met Koloth only one time, but he knew perfectly well how sneaky this particular Klingon was, and he didn’t want to give his adversary the chance to get the jump on them or succeed in his plans.

Hiding between two tanks with Nien beside him, he could see the entire area. He watched the borrowed tricorder’s display, ready to react as soon as the device detected Klingon presence.

Khan remained silent beside him; his engineered senses caught the quietest of noises and the stillest of movements. Still his thoughts drifted away from him. He reflected on what he had learned about the Klingon human appearance. There must be others! His people alive! Otherwise those experiments would have never been.
He pursed his lips. Though, in their present situation, this might not be the best time to ask, he decided to use the short pause fate had granted them to ask the questions that had been niggling at the edges of his thoughts since he learned about the other Augments. “Jim,” he began quietly. “Tell me about the Klingon experiments with… with the DNA of – of my people.”

Kirk stayed silent for moment. He nearly forgot about the topic. But now he would have to tell Nien. He didn’t look forward to the task. He never wanted to intentionally cause distress to the man who had captured his heart. And he certainly didn’t want to be the one to tell him that he and his people were the last of their kind. He also knew that this time was anything but ideal. But the matter embittered his beloved’s mind and soul. His man was a good man and deserved nothing less than the truth.

Giving the tricorder’s little display a last glance, he faced Khan, whose posture betrayed his tension. Taking a deep breath he began gently – feeling out his words, “After the Eugenics Wars, eighteen hundred embryos were found in labs around the world – Augment-embryos. Discussions regarding what to do with them went on for a long time. Finally the Organization of Human Rights won out. The embryos were kept in a sort of stasis.” He saw the tension growing in Khan and instinctively took one of his hands in his own before continuing. “Later, warp drive was developed and Earth made contact with Vulcans and other species. So – and I don’t know who was in charge at this point. The embryos were brought to a safer place – a space station called Cold Station 12. Mid twenty-second century, a scientist – Dr. Soong – decided to prove that the Augments weren’t evil. Not like history made them out to be. He stole and raised twenty Augments from childhood, but he was caught by the authorities when the children were ten years old. The authorities didn’t know about them, though. Dr. Soong was arrested for illegal and unethical experimentation. The children grew up alone.”

“Alone! Ten year-old children!” Khan shook his head, shocked at the thought. “And I thought my poor excuse of a ‘childhood’ was difficult.” He felt Jim’s thumb stroking soothing circles on the back of his hand. The movement told him that there was worse to come. He was right.

“Mmm, they escaped about ten years later when a ship passed by the planet they were living on. They took it and freed the man they knew as their ‘father’ – the doctor. As far as is known, their leader just wanted to go somewhere safe and to live in peace but it didn’t work out. He was killed during a combat with another young Augment who wanted to ‘recover’ the Augment embryos for himself. They stole a Klingon bird-of-prey, RAID Cold Station 12, and forced the scientists to hand over the remaining embryos. The new leader took them and headed for the Klingon Empire. A Starfleet ship followed them and warned the Klingons. They tried to stop the young Augments, but they were determined to incite the Federation and Klingons into war against each other. If they destroyed a habited planet in the Empire, the Klingons would blame the Federation and go after them.”

“What?” The former dictator went rigid. “That is… against everything we were created for!”

“Born for, Nien. You and your people are not machines, you are enhanced humans!” Jim corrected
him softly, before he continued gingerly, “The Starfleet vessel would have prevented the disaster, but instead of giving up, the leader of the young Augments…” And here James struggled to pull a name from his memory. He knew just how important every Augment was for Khan – how precious each name was to him. “Malik, I think, was his name. … He activated the self-destruct on the ship.” He bit his lips before adding, “All of the embryos aboard were… they were no longer viable.”

Khan stared at him, horrified; he was in complete disbelief. “He… he killed all of…?” The last words were choked off. He couldn’t say it, couldn’t even imagine it. The embryos – the last remains of his people… Dead! Killed by one of their own! It couldn’t be true! Then he saw Jim’s compassionate expression and his brilliant mind allowed no doubt. Jim wouldn’t lie and he would tell Khan if he doubted the information. Moaning as if in physical pain, he closed his eyes. “All the unborn children…” Khan couldn’t imagine it. He risked his life – he waited three hundred years to get his crew to safety, and he was still working for their safety and eventual freedom. Nothing, not time, not Starfleet, not war would keep him from his goal. His family was everything. These children never learned that. Never learned what it was to be Augment. They had no one to teach them – no one to look to. “All that was left of us… Killed by one of our own! How hopeless the child must he have felt to commit genocide on his own kind?” He felt his throat tightening. “I can’t… This is…” He couldn’t the words.

“I’m sorry, Nien,” Jim whispered; he let go if Khan’s hand and cupped his cheek. He anticipated that the news would be hard – would hurt his beloved deeply, but he hadn’t thought that Nien would take it that bad – that he would be left speechless. It brought him back to San Francisco – that night. “I am sorry for your loss – even if you never knew them. They… belonged to your people and…” As he saw the anguish in the Augment’s eyes, he closed the small distance to him and gathered him in his arms, ignoring the small weight and the pulsing lights of the tricorder in his left hand. “I am sorry, baby. I’m sorry that we’ll never get to know what could have been.” And he was. He continued to hold the man he loved in a calm, secure embrace.

For a long moment Khan simply leaned into him, his arms encircled the young captain’s waist as if searching for support and shelter; knowing that in his captain’s arms, he was safe from prying eyes. Then, after a short while, he straightened his frame again.

Sadness will make even the best of men lash out. “Would you say that if you didn’t lo-?” He stopped, unable to continue that train of thought. “Would you say it if you didn’t know me – if we weren’t this? Would you still be sorry for them – for their loss?”

“I… Nien. Please don’t ask me what I can’t answer. That’s not the way it is. I know you. I see you. And there is no going back from that – ever! So I am sorry for it – for them. I’m sorry for what could have been because I know what could have been. I only know that because of all that you’ve shown me. So don’t ask me – don’t you dare ask me to go back there – back to…” And now it was Kirk’s turn to choke on his words. And he couldn’t meet Khan’s eyes. “… to when I hated you.”
The words stung Khan like a slap and now he was instantly sorry for his words. He didn’t want to ever, ever bring Jim back to that place nor did he want to visit it himself. But you lash out at those you love because they are safe, because they will continue to love you – because they are the only ones that can bring you safely to the other side and away from the things that hurt you.

Khan placed his hands on either side of James’ neck; his thumbs stroked along his jaw and he brought their foreheads to touch. “I am sorry. That was not fair of me. I cannot bear to think of you hating me.”

Nien lowered his gaze. Those events were a century away now. It didn’t make it any less painful, but it wasn’t James’ fault. While he – Khan – and his family were caught in cryosleep, what remained of his people were killed at the hand of one of themselves. Though he only learned of them now, he knew that with them went the last hope of survival for his kind.

He felt… guilty – guilty for not being there. Not being able to save them. Not being the leader – the father he should have been to those unborn children and the twenty young adults. His rational mind told him that there was nothing that could have been done, but it didn’t make it any easier to bear.

Three centuries since he and the others fled Earth. In the meantime so much has happened – so much he’d never know. He knew all seventy-two of his peoples’ names. He knew everything about them. He didn’t know the children’s names save one. Malik. The young man was responsible for the death of his own kind. The other names were lost along with those unnamed. Khan’s eyes stung at the thought. And then chastised himself for it. Blaming himself for events a hundred years ago was foolish. His mind warred with itself. The embryos – even those young Augments – they belonged to his people and he had been their last remaining leader. He still was. There should have been something he could have done before they fell into rebel hands and…

He frowned and looked up again. “The Klingon experiments… When were they?”

“They were months after, when…”

“After?” Khan cocked his head. “If every Augment embryo and the young Augments were dead, how could the Klingons experiment with their DNA at all?”

Jim looked at him sadly. “The embryos were well protected in containment, but the blast… From what we know, the Klingons were experimenting with non-viable embryos recovered from the blast site. The Klingons feared that Earth was experimenting with enhanced DNA to make Starfleet stronger and began with their own tests. It ended in disaster. The genes ended up mutating the Levodian flu virus carried by one the test subjects. It became an endemic within the empire. It was a
Starfleet doctor, actually, who designed an effective treatment; he was assigned to the ship that pursued the bird-of-prey. They kidnapped him. His captain, the doctor’s that is, followed him and offered himself as a test subject. His risk saved millions of Klingons. And as a ‘thank you’ they’re at war with us now.” He shook his head. “Never trust a Klingon.” he added sourly.

Nien’s stomach was in knots at the onslaught of the new and distressing information so his subconscious did the only logical thing: It distracted him with something else.

“You know of these…events,” he said quietly. “I learned many things about Starfleet; this isn’t covered in Academy curriculum.”

Jim smiled sadly. “No, it’s not. I admit; I did some research after…our first encounter last year – after I was treated and discharged from hospital.” He chuckled softly. “Care to guess, the Starfleet ship’s name that chased the bird-of-prey and tried to stop Malik?”

Something in Kirk’s voice told Khan everything. “Don’t say it was named…” He made a gesture with one hand, and Jim nodded with a mixture of a grin and a grimace.

“Yeah, it was the first Enterprise commissioned by Starfleet.”

For a long moment the super-human only stared at him, and then he rolled his eyes. “Of course – why am I not surprised?”

“Fate has an odd sense of humor, don’t you think so?” Jim sighed and Khan huffed.

“Obviously!” He cocked his head. “And this doctor, who later helped the Klingons, and the captain who agreed to test the treatment must have been staff officers of that same ship.”

Jim went from smirk to smile in seconds. “You got yourself hundred points! Yes, it was Captain Archer and Dr. Phlox, who were involved both times.”

Khan snorted. “The captain and the CMO of another Enterprise… Like McCoy healing Kirk. Kismet,” he murmured. “And there I have never believed in it.” He pursed his lips before he asked, “And those experiments the Klingons did…”
Jim made an affirming gesture. “The gene causing the virus mutation affected the offspring of those infected. It changed their appearance. The Augment genes in the DNA overpowered their own. Since then, there have been two different Klingon types.” He snorted. “Those more human looking ones belong to the Empire’s high society. Their parents, of course, were the first to receive the treatment for the flu. They were also eager to line up because they thought they might become ‘stronger’ and ‘quicker’. You know, like an Augment.”

Khan had listened carefully. “Mmmhmm, but you speak in the subjunctive. So they are not ‘stronger’ and ‘quicker’?”

“No,” Jim shook his head. “They’re as strong and fast as a common Klingon. They just look like us humans. That is as far as the similarity goes though. Earned ‘em some colorful nicknames.” He took a deep breath and murmured full of sympathy for his lover, “But the embryos Malik kidnapped… None of them survived.” He met his beloved’s gaze again and saw the sorrow in those blue-green pools. “I’m sorry, Nien. There are no other Augments left. You and your crew are the last.”

Very slowly the former dictator nodded. “I thought so,” he murmured and felt Jim squeeze his hand again. It did his heart good – this warm compassion and understanding. “The space station - …”

“Cold Station 12.”

“Yes, if it once held Augment embryos it must be a maximum security facility. Could it be possible that…” He didn’t finish the sentence and looked hopefully at Kirk; he hated having to shake his head again.

“Starfleet deserted Cold Station 12 over fifty years ago. It’s nothing more than a ruin in a rock in space.” He pursed his lips. “But you’re giving me an idea. There are other facilities like Cold Station 12. Maybe your people are there.”

He saw new hope sparkling in Nien’s eyes and pushed an ebony lock of hair off of the superhuman’s high forehead. “I’ll check it as soon as I’m back on the Enterprise. Our computer must hold some information about those space stations.”

Khan froze; his eyes widened. “You will help me to find my crew?” he whispered. Even if Jim and he were lovers – mates – he hadn’t dared to hope that Kirk would support his desperate attempt to find his people. He would never have asked this of him, never have made him choose between his loyalty to Starfleet or to him. It wouldn’t have been fair and Nien didn’t want Jim to believe he had seduced him into a relationship only to use him. He would never try to use his James again, like he
Jim trusted him and he wouldn’t risk what they had – not even for the sake of his people. But Kirk’s offer to do some research on his own made his heartbeat quicken and filled him with new hope.

Jim took a very deep breath. If he searched for Augments and disseminated his finding to Khan, it was a betrayal to Starfleet and the Federation – even if they were in the wrong. Command would have his head for it, no doubt. But on the other hand, Khan’s people had never done anything wrong – not in this century. Whatever happened in the twentieth century was unclear and in a time of war. The records of the Eugenic Wars were lost. Either way, in Jim’s eyes someone was innocent until proven otherwise. Joaquin, Rodriguez, Katie, Otto – they should not be condemned to endless cryosleep on some far away space station – perhaps until their cryotubes failed. These people wanted to escape the horrors of war – not contribute to them. It was Earth’s regimes that created the situation allowing for the remaining embryos to be taken. They created the situation that led to Malik’s fatal decision for an entire race of people. Blood covered the hands of those in authority on Earth – then and now. It was not on Khan’s and not his people’s.

Jim would never stand by and watch another wronged when he could stop it. He didn’t on Tarsus IV, his own life be damned. And he wouldn’t here either. If there was one thing James T. Kirk was up to, it was doing right thing! And Khan was his lover now – his mate. His everything. He had little say in Kirk’s decision.

“Yes, I’ll help you to find your family,” Jim said slowly, but clearly. He saw how Nien’s eyes widened. “It’s wrong to deny them a chance to live a life in freedom and peace. It’s wrong to blame them on principle because of what they are. They are people. And it’s wrong to keep them apart from you.” He smiled softly. “I’ll help you in any way I can. I told you, everyone deserves a second chance. As far as I know, your crew never had a part in the war crimes. Damning them to endless cryosleep is a crime. It’s unlawful detention and racism – and I will fight it with you!” He watched Nien’s eyes glisten with tears that threatened to spill. The desire to comfort him was overwhelming so he embraced him anew. “We’ll find them – and I will move hell and Earth to make everyone see all that you are – see you how I see you, how The Shadow sees you.”

Khan had lowered his head; a lump rose in his throat. Not only did his soulmate intend to stand by him and bear his burden with him, no, Jim would risk his own freedom to help him and his family. You didn’t have to be a genius to figure out just what Command would do to the young captain if his intentions were revealed.

Wrapping both arms around his beloved, he whispered, “I should not accept your offer, James. It is too much to ask. Still, I am unable to reject it. I –.”

“I didn’t offer anything, Nien. I told you what I intend to do. I intend to help you. I intend to make things right for them. I intend to move hell and Earth to get it done – with you. I expect you, to expect nothing less of me. I told you once, this is who we are.”
Khan nodded in reticence. This is why he loved the man. His bravery, his single-minded morality. To deny James his intentions was to remove the very things he loved about him. “I have to find and recover them, and I am at a dead end. They could be anywhere and the universe is so large. I have tried my luck often enough, hacking into Starfleet’s computer base. I was nearly caught once; I put Galven and his crew in danger – I was onboard at the time. Nevertheless, I am ready to try it again as soon as possible. My family trusted me beyond sanity when they agreed to follow me aboard the *Botany Bay*, not knowing if they ever would wake up again. They counted on me – they still do, even in sleep.” He gulped and buried his face in the crook of Jim’s neck, just there where the mark was left – now mottled from their days and nights together. He brushed his nose and lips over it, then spoke. “But on the other hand, I don’t want to bring Galven and his crew – least of all you into more danger because of my promise to myself and my people. Besides, I just put you back together.” He sighed and breathed in Jim’s familiar scent. “This all is… is so…”

“So fucked up?” Jim helped him out; he heard and felt the Augment chuckling.

“Yes,” was all Khan said before tightening his arms around the younger man; his heart beat with joy and dread in one.

Kirk thought he could sense the inner turmoil of his beloved and held him close. “We’ll find a way, baby! We’ll find a way and…”

Khan’s communicator buzzed soundlessly, but its vibration didn’t slip the men’s attention. Frowning Nien activated it, and heard Ritek’s voice, “Drythen, is Kirk with you?”

The frown lining the Augment’s forehead deepened. “Yes, he is. Why don’t you contact him inst-…?”

“Kirk’s last transmission was compromised. I’ve got Commodore Wesley on the line for him.” The Rigelian paused for a second before adding, “We are in really deep, deep water, guys!”

TBC…

Chapter End Notes
Yeah, in the middle of the upcoming action with Koloth and the approaching Klingon strike group, there are another very emotional mess involved. I only watched “Borderland” and “Cold Station 12” because of Khan (mainly because of STiD) and I thought of Khan’s reaction, if he would ever learn of the events. While in the original series he shows a kind of egoism – even if he is utterly loyal to his crew – the Khan in STiD is so attached to his ‘family’ that he even endured the slavery and violating of Section 31. It shows, how absolutely smitten he is with his people – and to them Malik and the others count too. It somehow was logical for me that he would take these news very bad. He is a leader through and through, a kind of father for the younger ones of his people, and therefore the incidents with Malik must hit him hard.

I hope you like the way the talk went between Nien and Jim and that latter made up his mind to help his beloved to find the other Augments. As Kirk said, it’s a kind of racism Starfleet Command and even some members of the Federation Council are showing here and Kirk being Kirk he had to stop this. I already can promise you that a hell-ride of rollercoaster lies ahead for the two lovebirds, but their devotion for each other is also an example for their friends and is going to make them supporting the two.

As I already told you all, action is coming more and more. While the two fleets are closing the distance and battle approaches, Jim and Koloth will face each other again on Aldebaran – in the next chapter. Also Jim will have contact with Bob Wesley, McFurtho shows how ruthless yet brilliant he is, because a part of his plan will work. In other words, the next chapters won’t be anything for poor nerves (*snicker*).

Please give me some feedbacks, what you think of the last chapter. The updates will come more regular now, after my dear beta is done with the most of her stress.

Love,

Until soon

Yours Starflight
Hi, my dear readers,

Thank you so much once again for the comments and the kudos. I’m really happy that so many of you stick loyal to the story.

As I already warned you the action begins to take full place now. Kirk and Koloth will face each other again in this chapter, McFurthon’s plan is partly successful what leads to a starting catastrophe, and our heroes have all hands full to do.

Have fun,

Yours Starflight

Chapter 29 – Kirk vs. Koloth

“Here we go,” McFurthon grumbled pointing toward the platform of the official transporter. Koloth and his four men followed him – wary and cautious. Seeing their contact man in uniform was strange, to say the least. He made no secret of his hatred of Starfleet. But stranger still was the sight of five Klingons clad in Starfleet affects. The clothes didn’t fit all that well; after all they belonged to McFurthon. Their ownership, however, was irrelevant. All that counted was that the uniforms were part of the masquerade that would bring them to their destiny – the orbital space harbor from where they would launch their attacks.

They didn’t have to pay at the official transporter station as was usual for this kind of transport system. And they didn’t even need to check in – standard procedure if someone wanted to enter the orbital space harbor via transporter. McFurthon’s Starfleet ID card let them use the equipment without hindrance; they could beam directly into the orbit-station in the security area. Even the attaché cases they carried aroused no suspicion. The two Klingons wore Starfleet’s Administration insignia on their shirts.

Koloth had warned the Terran. After the assault, Starfleet wouldn’t need much time figuring that it had been one of their own who beamed to the station shortly before the attacks. Any idiot could put two and two together and discover the conspirator. McFurthon’s history told it all.

The former officer didn’t care. He had put his past behind him and only lived to fulfill his revenge against those who had let him fall. He was going to fall again; he knew that. He would not survive
his revenge, but neither would many others. He had nothing to live for anymore and wanted to cause as much damage to the fleet as possible – to the fleet, the Federation, whoever in his opinion, had betrayed him.

They materialized behind the security checkpoint at the arrival terminal in the space harbor. McFurthon greeted the two personnel who looked at them wide-eyed before they saluted and then let them alone.

“This way,” the former officer said quietly. “The cargo drop will start soon and then the cargo area shields will be down.” He looked around, “No one’ll notice when the tanks and a few uninvited guests beam down before it’s too late.”

Koloth, who held his injured arm close to his body, nodded. “Right! Noras, Koghan – you will come with me down to the spaceport! We will catch Kirk and his Augment pet by surprise. Kurhan, ready to beam back to the Starfleet base. Let them feel Klingon fire! You, Korax and you, MacWulson will stay here, ready to ’warm up’ this place.”

McFurthon rolled his eyes. This damn Klingon would never learn to speak his name correctly!

Koloth glanced at his chronometer. “Our fleet will reach us in approximately three hours, and then the defenses of this planet will be – up in flames.” He looked at his comrades. “*Heghl’meH QaQ jajavim* – this is a good day to die! *Qapla!* (Success)”

```
ST***ST***ST
```

Khan lifted both brows at Ritek’s message and glanced at Jim. He had a notion of why the Commodore was on the other end of the line; Ritek must have called him after he couldn’t contact the *Enterprise*. Clever, he had to give that to the alien man. “Hold the line a second,” the super-human whispered and offered the communicator to Kirk. “Ritek has someone for you,” he said, and caught the hopeful look of his beloved and shook his head. “It’s not your ship,” he added softly; he hated that the hope died in Jim’s eyes.

“Kirk here,” the young captain said quietly, trying to hide his disappointment and his increasing worry.

“It’s Ritek. Captain, I’m patching someone through who urgently needs to speak with you.”
“Right,” Kirk murmured, asking himself who could be on the other end; he hadn’t anticipated the voice sounding through the little speaker of the communicator.

“Jim? It’s good to hear you.”

“Bob?!” It was evident how thunderstruck the younger one of the two officers was.

“Yeah, it’s me. One of your Shadow friends, Mr. Ritek, was intelligent enough to contact me after he couldn’t reach the Enterprise.”

Jim felt an icy knot tightening in his belly. “What’s wrong with my ship?!” he demanded. He felt Nien’s gaze on him, but ignored it this time.

“Your ship’s near the former Neutral Zone. They’re fine, Kirk. They spotted a Klingon strike group on its way to Aldebaran – where you are and, as Mr. Ritek has informed me, our ‘friend’ Captain Koloth is, too.”

That was it; that is what Ritek meant when he said they were all ‘in deep, deep water’. “Dammit, I knew it! I knew those bastards were planning something big!” Jim snarled; his outburst persuaded Khan to lay a calming hand on his shoulder. Then the Augment took the tricorder from Kirk and watched its display, listening intently to the talk about the incoming Klingon fleet; his brilliant mind already considering their options.

“That’s not all,” Wesley continued. “Your communicator’s been intercepted, Jim. Lieutenant Taylor – there is no Lieutenant Taylor. He was transferred a week ago. You spoke to an imposter so…”

“Koloth isn’t here alone,” Kirk interrupted him. “I had a bit of an encounter with him, his first officer Korax, and three other Klingons…”

“That much I got from Mr. Ritek,” Bob commented wryly.

“…and they were accompanied by a human; they knew where he was going too. He helped them get away and hid them somewhere. He’s probably the one I talked to.”
“You used a Starfleet frequency. Whoever he is, he’s familiar with Starfleet frequencies and protocol, but not as such with the post because he did not know that the real Taylor has been transferred. Maybe this man is a deserter or perhaps dishonorably discharged and bitter,” Khan whispered meeting Jim’s widening eyes.

“You could be right,” he mused. But the side conversation was not lost on Bob, “Who is with you?”

Kirk grimaced. Sometimes he wished Wesley wasn’t so smart! “Sunrise is with me,” he replied. The commodore sighed. “As far as I can gather, he isn’t willing to speak with me. Please give him my regards. I haven’t forgotten that my crew and I owe him our lives.”

Khan only nodded and caught Jim’s warm smile before the young captain answered back, “He sends his too, Bob.” He steered back to the topic at hand. “When will the Klingon fleet be here?”

“I only received a short message from the Enterprise and… Hold on, Jim, your ship is calling me again.”

Jim’s heartbeat quickened as he listened to the short conversation in the background and heard Spock’s deep voice. Then Wesley addressed him again. “Your ship is on its way to Aldebaran as is every available Starfleet vessel within four parsecs. The Enterprise is at Warp 6 now, still watching the enemy. She should reach you in two hours and thirty-four minutes. We’ll be there about twenty minutes sooner. The Klingons were traveling at Warp 6 too when they activated their cloaking devices. You can expect them a little bit after the Enterprise and me.”

Kirk pursed his lips. “We need a full scan of the town, the spaceport, and the space harbor. Can you arrange that the outpost here…”

“We let them know and you have their full support. Commander Capricio will contact you soon. I’ll let him know this frequency. It’s encrypted; Mr. Ritek has assured me.”

“Right. Some members of The Shadow are already guarding the outpost; others are in the spaceport, where I am too, in the cargo-area to be precise. They are expecting a delivery of liquid plastic here that…”

“The explosion would take more than the building with it, and the fumes could sicken even more,” Bob groaned. “Perfect!” he added with some sarcasm. Then he turned serious again. “Jim, you have to stop Koloth at any cost. The planned assault is a distraction from the genuine danger, and a way to
weaken Aldebaran. I’ll inform the governor when we’re done here, but I doubt that his police will be able to prevent Koloth from anything. It’s up to you and the outpost to stop this, Kirk.”

“I know. I didn’t inform the authorities or Security. We need to avoid public mass. If the Klingons get wind that we know they’re here – and evacuating half the town will do just that – Koloth may do something rash. We need him to stick to his plan because we know, for the most part, what it is. If he deviates, it’ll leave us in the dark. The Shadow, Starfleet’s outpost and I will do everything in our power to keep them from their goal. You make sure the Klingons don’t take this planet.”

“You can be sure of it, Jim,” Wesley replied, sounding grim.

Kirk sighed. “Right! Please, keep me updated, Bob.”

“Of course. Lexington out!”

Khan looked at him. “The situation is exactly the one we imagined,” he said, and Jim nodded with another heavy sigh while he closed the communicator.

“Yeah – and worse. Eighteen Klingon ships are on their way to Aldebaran.” He shook his head. “I hate war!” He rubbed his neck; another worry stirred in him. “As soon as this Commander Capricio contacts me and shows up with his men, you should beam up to…”

“We already had that talk, James. I will stay here at your side!” Khan interrupted him; his baritone firm.

Jim groaned. “Nien, if they recognize you, then…”

The Augment bent forwards. “The chance is minimal as I told you!” His blue-green eyes hooded from the shadow the baseball cap became piercing; that expression has made lesser men cower, but Kirk was no lesser man. Defiantly, he lifted his chin.

“But still, there is the possibility that someone will figure out who you are. They will arrest you, lock you away. The chance that you’re – mistreated again is... Well, it's fucking likely! I can’t and won’t stand by for it. The risk is…” He was interrupted again as Khan’s communicator vibrated in Jim’s hand. Rolling his eyes, the young captain answered the call. “Kirk here!”
“Commander Capricio from the Starfleet outpost on Aldebaran. Captain Kirk, it’s a pleasure to hear from you,” an unknown voice with an Italian accent replied.

“Thank you, Commander!” Jim said businesslike. “ Commodore Wesley informed you about the current situation?”

“Yes, Captain, I already ordered a full scan of New Aberdeen and I’ll have the data in no more than fifteen minutes. I also informed the spaceport’s security about the danger and twenty of my men are on their way to your position.”

Jim sighed, half with relief, half with worry; the latter concerned the damned stubborn, gorgeous man beside him. “Alright, Commander. I have two friends of mine near the outpost observing. They’re looking for the Klingons who are likely planning to attack the building. It would be nice if you could get them to safety. You’ll identify them easily. It’s a young Caitian woman and a young man – Caviw and Jeff.”

“Understood. I instructed two from the security team to find them and get them somewhere safe. I will order an evacuation of the area around the spaceport and our outpost.”

“I'd advise you to wait on this, Commander. I know the Klingon captain who is on the planet. If he thinks that he and his men are about to get cut off from their goal, he’ll overreact and do something - possibly worse. I don’t want to have Klingons running amok near our base or the spaceport. An ignorant Klingon is easiest to beat.”

For a moment there was silence, then Capricio answered, “If you know this Klingon then I suppose you could be right, Captain. Still, the civilians around our outpost are my responsibility, and I am also bound to the contract between Starfleet, Aldebaran Security, and the governor that states we will support them during times of need or crisis. If we are not able to stop the Klingons, there will be a body count and Starfleet may be blamed.”

“There will be more victims if you force Koloth’s hand, Commander Capricio,” Jim retorted. “May I suggest that we try to find and to catch him and his people, as well as the traitor who is with them, and if we don’t locate them soon, we… We could force an evacuation of the spaceport by setting off the fire alarms – maybe some smoke bombs to make it more real?”

“Hmm, Koloth could think that the ensuing melee’ would be the best moment to enter the spaceport in secret; we can catch him then,” Khan whispered.
Jim grinned at him. “A good plan, ‘Commander’!” He had winked at him before he turned back to the communicator. “Commander Capricio, I think we can lure Koloth into a trap.”

There was a moment of silence before Capricio answered, “Where you are exactly, Captain?”

“I’m in the cargo area,” Kirk told him. “A friend is with me, and I’ve got another man and a port guard watching another section of the spaceport.”

“Excellent, Captain. What about the space harbor in orbit?”

Kirk pondered this suggestion for a moment. “Can civilians access the orbital station transporters?”

“You have to identify yourself and anyone arriving there without a shuttle, is checked,” the Italian answered. “We introduced that security measure several years back after several instances of theft.”

Jim nodded slowly. “So Koloth and his comrades shouldn’t be able to beam up without someone seeing them.” He pursed his lips shortly. “Give the alert in the harbor, Commander, but make sure your people handle the shipment per your standard protocol. Koloth has to believe that everything is cool.”

“I agree Captain. I will be with you soon. Capricio out!”

Jim closed his communicator. “Here we go,” he whispered reaching for Khan’s hand. Khan squeezed back soothingly, telling him wordlessly that everything was going to be fine even if this conviction was truly only hope.

ST***ST***ST

Koloth’s dark eyes watched the transporter Athena. She hung like a fat animal in the large hangar in the inner part of the orbital space harbor. Several smaller ships were stationed here, too. Two of them belonged to Starfleet; they were small and built for speed. Two security scout vessels and three civilian spacecraft docked at the other side of the hangar. The zero gravity and vacuum left each ship looking as though suspended by unseen strings.
The Klingon captain cocked his head and looked down at his arms covered by Starfleet red. One golden stripe indicated the rank of lieutenant and he traded his Administration insignia for one of Security.

Not one of the so-called ‘red-shirts’ had stopped him or the others as they walked through the harbor following McFurthon. No one hindered them as they entered the observation deck. From there they could watch the progress of the soon-to-be discharged cargo.

All of sudden the alert sounded and yellow lights flashed – the lowest of alerts. Cautious, Koloth turned around and glared at McFurthon who frowned before he headed to the door and left observation deck. The Klingons followed him.

Outside the situation was still calm, but two security members walked towards them. Disguised, McFurthon demanded, “Report!”

One of the two men answered, “Commander Capricio ordered the alert, sir! He said that enemy spies may be targeting the station.”

Inwardly, McFurthon cursed. Kirk! He would bet his last shirt that the damn boy-captain was responsible for this! Outwardly, he remained calm as he asked, “What about the schedule for unloading *Athena’s* cargo?”

The man who had just spoken replied, “There’s been no change in the schedule so far, sir!”

McFurthon suppressed a sigh of relief. “Right, you two watch the area around the observation deck. Lieutenant?” he addressed Koloth, who stayed true to his role.

“Aye, sir?”

“Come with me! We will secure the arrival area and the transporter rooms.” He glanced back at the two security personnel he’d fooled. “As you were!”

Both red-shirts saluted. “Aye, aye, sir!” They walked down the corridor while McFurthon hurried in the other direction; Koloth and his comrades were on his heels.
“Small change in our plans if you agree, Captain,” he said quietly to the Klingon leader. “You and your men beam down with the second tank. Mr. Korax and I will start the distraction maneuver two minutes after you’ve beamed down. This will give you enough time to orient yourselves to the area. Act as soon as you can. I am almost sure that they’re scanning the area, so they will be aware of your presence relatively quickly. The same goes for Mr. Kurhan. Act the moment you’re down on the planet.” He glanced at Kurhan; his face in a twisted sneer of satisfaction with his task of destroying the Starfleet outpost in New Aldebaran. He looked back to the other four Klingons. “Any questions?”

Koloth shook his head, answering for all of them.

“Right. Then let’s begin!”

They headed for the cargo transporter room and again it was McFurthon’s ranking security officer’s uniform that opened every door to them. They reached their intended destination without trouble; only to two guards stood in front of the door to the transporter room.

Korax looked at his captain who nodded. A moment later, the Klingon first officer and Kurhan pulled out their phasers, stepped around the corner, and shot before the two Terrans could comprehend the unfolding events. The Klingons merely stunned both humans; a full-blast phaser shot would have been recognized by the station internal sensors setting off a red alert. As it was, the stun blast incited no reaction for the system.

Without hesitation, McFurthon stepped over the two unconscious men and entered the transporter room facing the transporter chief and a technician who had just overseen the unloading.

“Good afternoon, gentlemen,” he greeted politely. “Just a little security check; seeing if everything is all right.” Behind him, Koloth and Noras stepped in using their phasers without hesitation as Korax and Kurhan had before; they pulled the stunned red-shirts into the room with them. The Klingon first officer and Noras quickly began to mount the different parts together, adding the explosive bins to them. In just over a minute, they had built four bombs – two for the spaceport, one for the Starfleet outpost, and one for the orbital station; each placed for maximum impact.

“All clear,” McFurthon murmured, and stepped to the transporter controls. “Ready, gentlemen? I’ll beam you down with the second transport.”

They answered only in dark glares making the former officer smile.
Jim and Khan hid; they saw several Starfleet members stepping out from the large depot hall into the outside area of the cargo bay where the container was expected. Realizing that Diego, Jeff, and Caviw were with them, gesturing and chattering, he knew that support from the Starfleet outpost had finally arrived. Signaling Khan to stand back, he left the small hide-out and walked towards the small group. He saw a light in the corner of his eyes, and it caught his attention; the Augment must have noticed if Kirk read the man’s reaction correctly. He pulled the collar of his parka higher; there were observation cameras installed. Jim cursed inwardly; hoping that the silly cap Khan was wearing would stay on his head; otherwise Starfleet Command would soon know about the super-human’s whereabouts and of Jim’s involvement with the former dictator.

Bringing his attention back to the main problem, his gaze wandered to the insignias on the station-uniforms the men wore. He addressed one of them directly as they had closed the distance towards him. “Commander Capricio?”

“Si, Elias Capricio.” He extended his hand to the younger officer. “It’s a pleasure, Captain Kirk,” he said; his accent fluid and silky.

Jim shook the other man’s hand, and then he gestured back to the Augment. “My tactical officer, Commander Lavi.”

Holding himself in the shadows the late afternoon sun created, Khan nodded towards the strangers. “Commander Capricio,” he greeted neutrally, and Capricio returned the greeting.

“Commander Lavi!” Then the Italian turned his attention back to Kirk. “Our sensors are almost done with scanning the town. We paid special attention to the quarters around the spaceport and our outpost. We detected no Klingon bio-signals.”

“Maybe they ran,” Diego mumbled. “They knew we found them out and, of course, knew Jim’s next step would be to stop them.”

Capricio looked at him. “You could be right, Mr. de la Vega-Martinez.” He caught Kirk’s amused gaze and explained, “Mr. de la Vega-Martinez and I already know each other. He is an excellent ship technician; he helped us with some repairs three months back.” A communicator buzzed, and the commander opened his. “Capricio here,” he said.
A voice reported, “Lieutenant Svenson. Sir, the space station is on yellow alert; all security measures initiated. The freighter unload can begin if you still want to…”

Capricio glanced at Kirk, still uncertain if he should continue the charade and act as if nothing was about to happen. At the young captain’s encouraging nod, he sighed soundlessly and added, “Beam down the first three tanks and then the next three in two minutes.” He opened another frequency. “Ensign Haver? Set off the spaceport fire alert! We want to make it easy for Koloth.”

Khan took his communicator from Jim and hailed Galven, telling him ‘the dance’ would begin now. An oinked “Keep your neck out of the mud, buddy!” came back to him. Then the sirens began to howl while several Starfleet members at another part of the spaceport unpacked little devices. A moment later, smoke filled the air at the rarely visited traveler check-in in the large building complex. Almost instantly, chaos let loose and the staff members, as well as the few visitors, hurried to the exits. It was certainly an uncommon way to evacuate a spaceport, but it was effective, and they could kill two birds with one stone. Koloth would think his task easy.

Capricio closed the communicator and gestured for the others to withdraw with him back into the large hall. Jim saw Caviw and Jeff looking from the Starfleet member to Khan. They seemed to be worried about him, as if they knew his freedom was at stake. Caviw and Jeff only followed Capricio as Diego, Kirk, and the Augment did the same.

Behind them, the air began to glimmer as the first tanks were beamed down. None of them knew that a traitor, one of Starfleet’s own, took the transport order from Lieutenant Svenson to pull the strings of fate.

ST***ST***ST

“General!” The Klingon science officer aboard the flagship ReghQIS, the ‘bleeding knife’, turned around and looked straight at his superior. “Our sensors are registering the warp signatures of about fifteen vessels which are on a direct intercept course to our fleet.”

General K’taH went rigid. “Starfleet?”

“Obviously,” the younger man nodded.

K’taH frowned. “Fifteen Starfleet vessels… They are outnumbered. But even if their numbers were
even, they stand no chance! Not against us!” He bent forwards. “What about the ship that sent the transmission burst?”

The science officer shook his head. “No trace of them, Milord. I caught the emissions of a warp drive that had to be somewhere in the area, but it’s impossible to track it down or to get information. The ship is as good as non-existent to our sensors.”

“Like at Turkana,” the general murmured. “But the other ships are not invisible.” His dark eyes were directed at the science officer again. “Have you identified them?”

“Only one, sir. The USS Lexington. Her warp signature is well known by now. Regarding the other ships, our computer is still working on it.”

K’taH bared his teeth. “So, Kor’s Starfleet commodore is one of our adversaries. Very good!” He stared at the screen. “I only hope the Enterprise is there somewhere too, maybe with Kirk and his Augment friend. It would be a real pleasure to atomize them!”

ST***ST***ST

Caviw had crossed her arms in front of her chest and watched Kirk and Khan discussing something quietly while Jeff stood beside her in the large hall. Deep frown lines lined his face. Still the sirens continued to blare, but the firemen were quickly informed about the exact nature of the incident; they pretended to work.

“Something isn’t right here. We missed something.” Jeff mumbled, and the Caitian woman rolled her eyes.

“Yes, we missed telling Kirk not to sic his Starfleet boys on us.”

The young man sighed, while outside the next three tanks were beamed down. “He only wanted us out of danger. I think it’s nice of him and…”

“In the case you don’t get it, Jeff, we are still in danger. If something is going to happen, then it will happen here and…” She stopped, and her tail tensed. “There was something,” she said glancing towards the large door that led outside. “There was a movement.” Without waiting for Jeff’s reply, she walked to Khan.
He acknowledged her approach even before she had closed the distance to him. He glanced over his shoulder at her, and then he looked down at his tricorder again. “Captain, they are here!” he reported quietly, just before Caviw reached him. “I am reading three Klingon bio-signals directly between the three containers which were beamed down.

Kirk’s eyes narrowed. “I knew it!” Then he hesitated. “The Klingons and the containers came together?” he asked perplexed. “But the tanks are from the *Athena* in the orbital station and the Klingons…”

“… had to come from there too,” Khan completed Jim’s thought. Both men’s eyes widened in alert; then Kirk whirled around, stopping Capricio, who was about to send the red-shirts out to capture the enemies.

“Commander, the Klingons came from the space harbor! And they’re three, not five! Two must still be up there.”

The Italian stared at him, shocked, but only for a moment. Then he activated his communicator. “Lieutenant Svenson!” he barked into the little device. “The enemy is in the orbital station! Two Klingons and a human ally.”

“I’ll check the internal sensors, sir!” Svenson said. “I’ll give the red alert and…” He didn’t get further because all of sudden a deafening explosion sounded through the communicator’s speaker followed by screams and shouts. Static hummed for a moment, sounding over the sirens of the space harbor.

“Svenson!” Capricio called; he was pale as ash. “Svenson, are you hurt? Status report!”

For a long moment there was no answer, then the lieutenant panted, “The explosion was somewhere in the cargo section near the *Athena*. I just got the call; the center of the blast has to be at dock 12 where the *Athena* is berthed.”

“The remaining tanks aboard the freighter!” Jim gasped. “If they explode, then it could tear apart the space harbor and…”

“Lieutenant Svenson,” Capricio acted without letting Jim finish. “Evacuate the area. And, for God’s sake, take care that the damn freighter leaves the station before it catches fire, too! I’ll be up there in a few minutes.” He glanced at Kirk. “This is a disturbing! They are refocusing our attention from our
‘friends’ outside to the shit that’s happening over our heads!’

“Go, I’ll take over from here,” Jim said, addressing several red-shirts. “Spread out and surround the Klingons outside. Don’t take any risks; stun them at sight!” He pulled out his phaser and hurried towards the large door; Khan at his side, followed by Diego, Caviw, and Jeff.

Capricio cursed. He thought they had foreseen every circumstance; the space harbor should be secure against invasions of this kind. But they had been wrong. The traitor, whoever it was, and two Klingons were up there and about to blow up the orbital station. The fallout would be a catastrophe. Like meteors, pieces of the station would fall to the planet bringing death and destruction over a large portion of New Aberdeen that lay directly beneath the space harbor. And this was only the beginning!

He couldn’t know that one of their enemies wasn’t in the space harbor anymore; he only kept on his mission – weakening Aldebaran.

ST***ST***ST

Kurhan had materialized only a minute ago in a small street near the Starfleet outpost and to his surprise, passersby were still around. From the workshop of a nearby business, noises sounded. A few cafés were open and at the edge of the street young men stood together discussing sports. ‘Drivel and trivial human banter’, the Klingon thought to himself as he passed them.

His right hand closed around the handle of the attaché case holding the bomb. No one took notice of a ‘red-shirt’ as he walked down the street, took the corner, and headed towards the Starfleet station. From beneath lowered lashes, he looked around him over and again, but he saw nothing unusual. A young woman and a middle-aged man in an ice cream shop flirted with each other; another couple were necking hidden behind a tree. An Andorian studied his PADD and sipped a drink and women walked down the lane, chattering as only females can do. At the entrance of the Starfleet outpost, two guards were on duty and looked cautiously at everyone who passed them by, but they only wore standard phasers as their weapon without phaser resistant uniforms or helmets.

Kurhan frowned. The commanding officer of Starfleet on this planet had given yellow alert for the space harbor in the orbit because he assumed spies were there, but he didn’t secure his own building? Did he feel safe?

‘Idiots!’ Kurhan thought. ‘Starfleet’s arrogance will be her downfall as well as the damn Federation!’ He walked to the two guards; his left hand fingered for his hidden phaser. Something had to be done quickly. He would shoot them, and then activate the bomb, throw it inside and wait
for Kahless’ Black Fleet to take him. He had settled his affairs and felt only pride to be the one who would weaken the enemy enough to let the glorious Klingon fleet annex this system.

All of sudden a young woman stood before him and addressed him. “Excuse me, sir, can you please tell me what time it is?”

Kurhan stared at her; for a moment he felt a hint of panic, but there was nothing noticeable about the Terran female. She was small with slender curves beneath her dress. Bright large eyes were made brighter by her friendly face. A shame that she maybe wouldn’t live to see another evening.

“I’m sorry, Miss, but I don’t have a chronometer with me,” he answered politely and tried to step around her.

“Odd – don’t you need one for your duties?” the woman replied, and a moment later he felt her grip his wrist. Whirling around, he pulled out his phaser; then a blue light enveloped him. Everything around him began to sway and blur. Darkness crept over him, and he fell.

The young woman stepped back, glaring at the approaching couple the Klingon had watched kissing only moments ago. “What took you so long?”

“Well, we…” The young man blushed while his companion scanned the area. “Only one of them is here,” she said. The guards, the elder man and his young coquette, as well as the young men talking sports, came running with their phasers drawn. Others also scanned the area, but no one found the other Klingons.

“Is he alone?” the elder man asked, and the young woman nodded.

“Yes, sir! I watched him as he turned onto the street. He was alone.”

“He materialized just twenty meters away from us, sir!” one said. “There was no one else with him.”

The two guards had searched the stunned Klingon’s pocket, and one of them was able to open the attaché case. “Shit!” he cursed. “The bastard put a bomb in it. It’s activated; the countdown is set to ten seconds.” He glared down at the unconscious enemy. “This was a suicide mission.”
The elder man nodded. “Cuff him. Get him into custody.” He took a deep breath. “At least one of these bastards can’t do any more damage. I hope the commander and Captain Kirk are successful too!” His communicator buzzed and quickly he opened it.

“Rickman,” he answered; he listened for a moment and paled drastically. “I understand, sir. We got one of the Klingons. He was about to blow up our outpost. He was stunned, and the bomb is in a safe place, deactivated. Any orders regarding the orbital station?” He waited for Capricio’s answer and nodded grimly. “Aye, aye, sir!” Then he deactivated the communicator and looked at his comrades. “Someone blew up a part of the cargo section of the space harbor. We have to be ready to help the evacuation effort.”

“They know we are here!” Noras said quietly while he hurried beside Koloth and Koghan. The area was sun drenched, and the only shelter was the space between the tanks.

“Of course. Kirk is not stupid,” Koloth answered and peeked around a tank. He gestured toward the smoke that came from one of the buildings in the spaceport. Sirens were blaring, and he watched firemen running everywhere – some toward the smoke and some to a fire that broke out in another part of the spaceport. “How handy that someone forgot to switch off the oven,” Koloth said. “Fire is exactly what we need.” He pulled the first bomb out from his bag, passing it to Noras. “Go over there.” He pointed towards the parked ships, “and mount it to one of the vessels; then run if you don’t want to join the Black Fleet today!” He took the second bomb. “I will take care that these tanks explode in celebratory fire.” He heard steps approaching quickly. He didn’t need to look; he knew who it had to be. “Koghan, cover our backs.” With those words, he sped off. Koghan went for cover beside a tank knowing that Kirk and the others wouldn’t dare shoot at him as long as he was beside the large container full of liquid plastic.

Baring his teeth, he saw Kirk rushing out of the hall with a slender man donned in a ball cap. Despite this ‘masquerade’, the Klingon recognized the male at Kirk’s right hand. It was the Augment.

“Down!” Jim shouted as phaser blasts were suddenly shot in their direction. One of the security personnel screamed in pain while the others dropped to the ground. Another red-shirt was hit and disintegrated in the deadly blast. His comrades shot back, and Jim yelled, “Cease fire! If you hit the
tank, it’ll all be over!”

“We’re set to stun, Captain!” the security officer called back; then he was hurled back by a full blast. And the blast left no remains.

“Withdraw!” Jim shouted. “We’re too exposed! Withdraw!” Rising and pulling Khan with him, unwilling to leave him behind, he ran back toward shelter, the others on his heels. Two more red-shirts had died before they all made it to safety; Jeff bled from a shot that grazed him and Caviw’s eyes were dark and large with fear. Diego cursed from somewhere beside him while Jim gathered the others around him.

Time! They had no time to plan. The Klingon outside was only there to buy time for Koloth and the others to do what they came for.

“Give me your communicator,” he said, looking at Khan, who immediately offered him the little device. Opening a frequency, Jim called, “Kirk to Flash!”

“Ritek here,” came the reply instantly.

“Ritek, we need your help. Klingons are here, but they’re covered. We can’t reach them without getting shot ourselves. They’re about twenty meters away. Locate me and beam me behind them.”

“I could beam them up and…” The Rigelian’s voice was cut off by the young captain.

“Too risky, they’re well-armed, well-trained, and would overwhelm you in seconds. Locate me and beam me back behind them.” Before he could continue, Khan gripped his wrist and said with a voice that brokered no backtalk, “Beam me with Jim, Ritek!”

Kirk groaned. “Nien, I…”

“No discussion!” the Augment snapped; his green-blue eyes glistened dangerously. “We go together or not at all!”

Jim caught some surprised gazes from the Securities and lowered his voice. “You’re gonna blow
your cover! None of my officers would dare…"

“They would keep you safe, too! Your Vulcan did; your doctor-friend would do the same,” Khan hissed back, barely above a whisper. “We go together or we or not at all! Choose!”

Kirk pressed his lips into a thin line. They didn’t have time for this! “Ritek, beam Nien and me over.” He lowered the communicator and looked at the security team. “As soon as Commander Lavi and I leave, create a distraction.” His looked to the two members of The Shadow and Diego. “Leave while you can. There’s no guarantee that we can stop the Klingons.”

“Just kick their asses, Captain!” Jeff said through clenched teeth while Caviw treated his injury. “Don’t worry about us!”

Jim suppressed the urge to roll his eyes. “Ritek, energize!”

He and Khan felt the typical disorientation and prickling of the transporter beam. For just a moment, they found themselves in a small room only to re-materialized seconds later behind the six tanks of the liquid plastic, blinded for a moment by the sun. Directly in front of them, they saw a figure cowering behind one of the containers, firing at the large door of the cargo hall in quick bursts.

Jim didn’t know this man; he had only seen him for a short time during the bar brawl. The man wore civilian clothes, and if it hadn’t been for the gun in his hand and his obvious role in this evil game, Kirk would have mistaken him for any other human.

The Klingon heard the soft bell-like buzz of a transporter over the noise of the phaser blasts. He whirled around, phaser drawn. Khan’s reactions were fast. He had barely materialized when he kicked the phaser from the Klingon’s hands and stunned him with a blow to the back of the head. Like a falling tree, Koghan hit the ground, unconscious.

Jim smirked – never underestimate an Augment! He glanced quickly at his tricorder. “One is over by the parking pad, by those ships over there; the other one is by the third tank!” he whispered.

Khan nodded; his bright mind was already calculating the information. The man nearby could be Koloth. Injured as the Klingon captain was, he wasn't fit for quick movements and a fight; the other adversary went to the vessels. That would give the Klingon an unforeseen advantage. Without hesitation, Nien made the only logical decision he could in order to keep his mate safe. “I’ll take the Klingon at the parking area; you catch the other one,” he murmured and was on his way before Kirk
could protest.

The young captain cursed. Of course, Khan had to choose the riskiest action, damn him! He headed in the direction of the Klingon in question. An inner voice whispered that it had to be Koloth. He clearly remembered hearing bones breaking as Nien fought the Klingon commander. It likely saved Jim’s life. Koloth needed shelter to act. A part of Kirk hoped to face the menace of K7 again and pay him back. His throat still hurt where Koloth had brutally gripped him only half an hour ago. That annoyed him. What infuriated him was that the Klingon was about to kill innocent civilians. Jim would find satisfaction in catching the bastard himself.

Looking at his tricorder, he watched the display that showed the location of the Klingon. Quickly and silently, Jim rushed forward; then he heard a gentle click and another sound to his right. Putting the tricorder on the ground, he gripped his phaser with both hands, crept forwards quietly and jumped out of his cover aiming at his adversary only to find himself facing the barrel of a phaser; Koloth’s face smirked at him in triumph from behind the weapon.

“I knew we would come face-to-face again before this was over,” the Klingon captain said in a low growl.

“Well, it's a small world,” Jim shot back; his eyed a little device attached to the tank behind Koloth. The small display blinked and showed a rapidly declining countdown from forty-five seconds, then forty-four, forty-three… “Is this how the proud and honorable Klingons fight now? With assaults against innocent civilians like a common terrorist?” he asked angrily. Fury boiled in him while cold fear crept through his veins. If this bomb blew, there would be no escape for any of them, and Nien would die with him in the mighty fireball that would blow a crater where the spaceport stood.

No! He wouldn’t allow it! Not if he had any chance to stop it.

Koloth watched the young Terran with a sneer on his face. “Thank the fire over there, most of the civilians have already left the spaceport. After our little encounter a short time ago, you had enough time to warn everyone, Kirk – ever the hero.” He lifted his broken arm. “I regret that I can’t kill your Augment pet with my bare hands, but it soothes me that he will die along with you!”

Thirty seconds…

And Jim heard several fast approaching steps. After body checking the gunman out of commission, there was nothing to hinder Security from reaching the source of danger. Still, they could come too late.
“Pet?” Jim mocked and stepped nearer ignoring the phaser that aimed at him. “You should know. After all you brought a whole shipload of cute, little pets home with you. Tell me, how much does a Tribble go for Qo’noS?”

Twenty-five seconds…

A snarl escaped Koloth. “For the shame you brought upon me, you should die slowly and painfully. Death by fire should achieve that end.”

“And you’ll still go down in Klingon history as the warrior who brought fussy, chirping furballs to the Klingon Empire rather than rule over Sherman’s Planet!” Kirk taunted.

Twenty seconds…

Jim’s last words had the reaction he hoped for. Pure rage showed on Koloth’s face, and he hissed, “Ready to die like a warrior or do you want to stand there and wait for the end, human?”

“If that’s an invitation to beat the shit out of you again, I’m all over it.” He didn’t play fair this time, he knew the Klingon wouldn’t either – wouldn’t sacrifice a win for honor. Jim threw his phaser at Koloth, hitting his weapon hand the moment a blast shot out from the barrel. It went high and missed the young captain and the container behind him by only a few centimeters. Without waiting a second, Kirk hurled himself against the Klingon who, despite his broken arm, clawed at Jim’s throat. The Enterprise’s captain dodged the grip at the last moment, and they went down to the ground. For a while they only grappled with each other, both determined to get the upper hand; then they were surrounded by Security. Someone shouted an order, feet hastily hurried to the bomb while hands gripped for the two fighters caught in combat.

“Captain, we got the explosive charge – the countdown is stopped!” someone called, but Kirk was far too busy holding the furious Klingon at bay.

“Jim, move aside!” a familiar baritone barked, but it was easier said than done because both men were still in a hand-to-hand struggle, neither was ready to quit.

Koloth grunted; hate near blinded him. He managed to grip his D’g tahg, the Klingon dagger, and pulled it out from his belt with his good arm, but the side of a pale hand collided with his neck and strength immediately left him. His muscles gave out, and he found himself lying on the ground; the
dagger clattered down beside him. His whole body paralyzed.

“I already told you to let him alone, Klingon! You should be happy, I let you live!” Khan snarled, standing threateningly and proud above him. The wind blew open his parka and through his dark hair; he had lost the cap while wrestling the enemy. Two red-shirts bent over the fallen Koloth and cuffed him. The Augment gave the Klingon a last dangerous glare before he turned towards a tousled and breathless Kirk. “You really have a thing for fights, don’t you?”

“Hey, he started it!” Jim protested, and Nien rolled his eyes. Sometimes his beloved sounded like a pubescent boy.

“Captain, that was close,” the chief of Security said, handing the bomb to Kirk who looked at the display. Three seconds! Jim gulped. “Well, at least there was enough time to switch it off.” He glanced at Khan, who only snorted in amusement. “What’s with your Klingon?”

“My Klingon?” The Augment shook his head. “Let me put it this way. He didn’t like the way the ships were parked and wanted to give them a hand back up in the air. I broke the hand, and then I broke his neck.” He gestured towards a red-shirt, who held another identical blasting composition like the one Koloth had placed on the container. “By the way, I won our little competition.” As Jim looked uncomprehending at him, he smirked, “There were only two seconds left after I convinced the detonator to stop where it was.”

One of the red-shirts began to chuckle. “‘Convinced’ is a nice choice of words, Commander. I would rather call it ‘tearing it apart’.” He lifted the explosive device that looked… odd.

Curious, Jim stepped to the man and observed the bomb. “The detonator… You tore it out?” he gasped; comprehending how close he had come to lose the man he loved. Shocked, he glanced at the super-human. And then he noticed it: Khan’s face was no longer hidden by the cap. Dammit! At least here, between the containers, were no cameras.

Khan shrugged. “I was not familiar with this type of bomb, but without a detonator there is no explosion – end of story,” he explained nonchalantly.

Diego, Caviw and a pale Jeff, who had accompanied the security team ready to help Kirk and Khan, stared at him as if he had suddenly grown a second head. The red-shirts gasped or snickered, the chief’s jaw fell open, and Kirk shook his head. This was so typical of Nien! He always chose the simplest solutions to a problem.
“End of story?” Jim groaned not knowing if he should be irritated or not. “That story could have had a much unhappier ending!”

“But it didn’t,” the Augment answered lazily, giving Kirk one of his slow, smug smiles. Then his communicator buzzed.

He answered the hail and recognized the Rigelian’s voice, “Ritek here! If you answered, does that mean you caught the bastards?”

“Yes, they can’t hurt anyone anymore,” Nien replied, watching the security chief reporting their success to someone with Kirk beside him. Then his attention turned back to his to Ritek. “Is there any news on the station?”

“I left with the *Flash* from Diego’s shipyard to help with the evacuation. I can see a fire at the space harbor, but I’m not certain which section is affected.” He stopped and groaned, “And another attempt from the *Enterprise* to reach her captain. Is Kirk there? His first officer has been trying to get him for several minutes now and is, as it seems, quite upset – well, for a Vulcan.”

Khan grimaced. The Vulcan grated on his nerves though the Augment could understand his concerns. They both worried constantly about the cocky, oversized boy talking with the security chief and someone else on the line; his face paled. Their eyes met, and the former dictator made a gesture. “Wait a sec, Ritek, I’ll patch you through and…”

“Shit! The space harbor's sending a ton of SOSs!” Ritek interrupted him. “I have to answer!” His voice changed slightly. “*Enterprise*, I’ll put you through!” Then the link switched to the *Enterprise*, and Khan heard the deep, calm voice of the first officer.

“Captain? Is this you?”

Khan growled – and dammit again! Then he whispered into the speaker, “Hold the line a moment, your captain is busy!” Not waiting for a response, he let the communicator drop to his side and stepped to Jim, who listened intensely to Capriccio speaking from the orbital station, “The gravity is affected too. The evacuation has begun, but because of the faltering energy supply we can’t use the transporters anymore. It’s too dangerous. We’re stuck using the escape capsules, and there are not enough of them to bring every one of the approx. 500 people to safety.”

“Pity the universe still cannot build a decent ship. Don’t tell me that the *Titanic* is up there!” Khan
sneered, forgetting that his communicator frequency was open and that a keen-hearing Vulcan was on the other end.

“Titanic? What do you mean?” Capricio asked, confused.

Khan stared disbelievingly at Kirk. Was the most infamous ship catastrophe of Earth’s past already forgotten?

Jim rolled his eyes. “A historic event – a luxury liner sank more than three hundred years ago in the Atlantic Ocean,” he answered the commander’s question quickly, displaying his penchant for history. “They didn’t have enough lifeboats to save as many passengers as were aboard.” Then he got back to the topic. “What’s about the _Athena_? Can she leave?”

“The airlock and moorings are keeping her in place! The _Athena_ can’t move without tearing the dock apart; we’d lose all the air in the station. The explosion destroyed part of Engineering; the fire suppressant system and security bulkheads are out of commission. The fire is completely out of control, and if it reaches the central power units, the outcome will be catastrophic.” Capricio’s voice sounded harried. “The captain and his officers have sealed the _Athena_’s bridge entrance. If the moorings fail, they’ll lose the air. It'll be a vacuum in there except for the bridge. Yet as long as the mooring holds, Captain On’thara’s hands are tied.”

“Can we beam the rest of the freighter’s cargo down here?” Jim asked. His attention focused on the upcoming disaster – the likely explosion of the orbital station.

“No, interference is too strong because of all the SOSs and the unpredictable power supply,” Capricio answered through the communicator. “And the cargo transporter up here is destroyed. The only chance to prevent the tanks from being blown up is to make sure that the _Athena_ leaves in time.”

“And what about the two Klingons?” the super-human asked after their other problem.

“One was caught in front of our outpost and is in custody. Our scanners showed another here in the space harbor after we materialized, but the systems are down so we're not receiving any data,” the Italian said.

“So, the bastard and the traitor are still alive!” Jim groused; then he, Khan, and the others heard another explosion in the background. “Commander?” Kirk called. When he didn’t get an answer he
yelled, “Capricio!”

“We’re still here!” the Italian replied; his voice hoarse while coughed. “Dammit, that was one of the auxiliary power supplies. *Santa Maria*, it’s only a matter of time before the main power fails completely and we’re sitting in the dark. But what frightens more is the possibility that the next explosion will damage the *Athena*; her cargo will go up like a Christmas tree.”

“Is it possible to unlock the mooring manually?” the Augment asked. Out of the corner of his eye, he saw Caviw, Jeff, and Diego stepping toward him, Jim, and the chief.

“The way in is cut off by the fire and we can’t use the supply line because of the smoke. We tried to contact the control room but got no answer. Most times a technician is there, but he either abandoned the station or he's dead.”

Jim and Nien exchanged a glance. “Commander, has the fire hit the dock’s control room? Can we get in there?” Kirk wanted to know, and the former dictator sighed soundlessly, already knowing his beloved’s thoughts.

“The fire is not there yet as far as I know, but it’s only a matter of ti…”

“Right, then we beam in, unlock the mooring, try to close her airlock manually, and beam back to safety!”

“That could work, but it’s very dangerous,” Capricio answered hesitantly.

“Since death has been, so life has been always dangerous. Ain’t stopped me yet,” Jim deadpanned wryly. “We’re on our way, Commander! Kirk out!” He looked at the chief. “Secure the area and be ready to receive evacuees.”

The Lieutenant nodded and jogged over to his men. Jim turned back to Khan. “I would go alone, but…”

“I thought we discussed this topic thoroughly, Jim!” the super-human said impatiently. “I’ll go with you!”
Kirk sighed. “I said, I would go alone, but I might need a hand up there.”

“I’ll accompany you too, Jim!” Diego cut in. “You’re one of the Federation’s best and brightest, I’m sure, but you’re no engineer. Drythen is a hell of a good technician, but four hands can do more than two.”

“I accept,” Kirk said, and then he pointed at Caviw and Jeff. “You two, try to find Galven. Take care of your injuries and help with the evacuation. If Nien, Diego and I don’t prevent the *Athena* from being blown, then the orbital station will crack like a walnut. The spread of the debris field will cause serious damage; we need all the help we can get. Stay with Ritek aboard the *Flash* or with Galven. We’ll probably need you to beam us out before we end up fried.”

Khan’s eyes widened at Kirk’s words.

Ritek!

The Rigelian had patched the *Enterprise* through minutes ago and…

… And he had joined the discussion openly without altering his voice!

Gritting his teeth, Nien lifted his communicator; knowing that there was no need to hide his identity now. The Vulcan’s sensitive hearing picked up the conversation. He must have recognized Khan’s voice. “*Enterprise*, I’ll pass you to your Captain!” he said firmly.

Spock’s stoic reply proved his surmise correct. “I would appreciate it, Mr. Singh!”

Kirk looked at his lover with questioning eyes as Khan offered him his communicator. “Your Vulcan officer, Jim,” the Augment said quietly. Slowly, realization made its way across Kirk’s features; his sky blue eyes widened. Nien nodded slowly. “He listened to us. He knows!”

Jim stared at his soul-mate, shocked and a little afraid. Khan’s identity was now revealed to the bridge crew of the *Enterprise*. Gulping, Kirk took the small communication device and lifted it to his ear as they made their way to the next transporter room. “Spock?” he asked quietly, realizing that the moment had come to let the cat out of the bag; and he would stay true to the choice he had already made.

Battle for Aldebaran - part 1

Chapter Notes

Hi, my dear readers!

And once again I have to thank you all for the comments and left kudos – and for all, who are hungry for more action: Here it comes! The next two and a half chapters will be full of action, and even afterwards several things will hold you at the edges of your seats, so to say.

Therefore I don’t waste any more words in this little ‘prologue’ and off you go to the 23rd century.

Have fun

Yours Starflight

Chapter 30 - Battle for Aldebaran, Part 1

Aboard the Enterprise, McCoy stood beside the captain’s chair and waited. His heart beat near out of his chest as the Rigelian, Ritek, patched over the call. He was sure that Spock was as tense as he was. The impending battle loomed large over them; Kirk was on a planet the enemy wanted. What was worse, Starfleet’s own was part of a misfit band of ‘Robin Hoods’ with Khan of all people!

He listened as the Vulcan spoke quickly with Ritek; he learned that the Klingon assault had already begun. Then the Rigelian was interrupted by incoming SOS messages; he put them through so that the Enterprise could hear the transmissions.

Spock lifted a brow. ‘Civilians! How typical of them to ignore proper channels.’ Taking a quick breath, he said clearly, “Captain? Is that you?”

But instead of the familiar bright, tenor of his best friend, there was silence; then a voice whispered, “Hold the line a moment, your captain is busy!” There was a commotion in the background; the whole bridge crew listened to the far away conversation between their captain and a man with an Italian accent apparently on another communicator. McCoy and Spock exchanged a glance as they heard the situation on Aldebaran and its space harbor; then Spock’s usually expressionless face
became hard as a third voice joined the conversation. He instantly identified the smooth baritone voice as belonging to Khan Noonien Singh!

The Augment was with Jim, and Spock didn’t know if he should be even more worried than he already was. If McCoy and Nyota were right and the engineered man was indeed protecting Jim, then the captain would be safer with Khan. After all, the super-human was not only a formidable warrior, but also brilliant minded, comparable even to a Vulcan. But the abilities of the former dictator wouldn’t be enough to keep Kirk and the inhabitants of Aldebaran safe if the Klingons won the next battle.

Sulu and Chekov frowned but kept their discomfort from the acting captain. This voice was somehow – familiar in its timbre and articulation, but they couldn’t put a finger as to why it was so familiar, until now. At the comms station, Uhura looked with widened eyes at her lover as she recognized the third man’s voice as Spock and obviously McCoy already had. Khan!

Bones moistened his lips as he listened to the quick discussion. If Khan was there, he knew that Jim was about run headlong into the next precipitous situation. Frustrated, he balled his hands into fists. Kirk had to be danger-addicted. There was no other explanation for the younger man’s constant readiness to run towards a fire. Not that McCoy, himself, wouldn’t have tried everything to save anyone whose lives were at stake anywhere – the orbital station included. And if the space harbor were to explode and fall to Aldebaran, the casualties would reach into the thousands because New Aberdeen lay directly beneath it!

Spock remained calm on the outside during the talk he and the others had to listen to, but deep inside he already calculated Jim’s chances of preventing the catastrophe in the orbit of Aldebaran. The result wasn’t good, still he knew that it would be impossible to stop Kirk from doing what he had to do. He knew his friend and his stubbornness far too well. All of sudden, Khan’s voice sounded clear and no longer altered through the speakers, “Enterprise, I’ll pass you to your Captain!”

The Vulcan’s face was stoic; he masked the old anger and pushed it to the back of his mind. “I would appreciate it, Mr. Singh!” he answered flatly, watching Sulu and Chekov go rigid before turning sharply in their seats. They stared at him, and he merely gave them one of his famous stares. He heard the Augment say, “Your Vulcan friend, Jim!”

The way the super-human addressed Kirk elicited a reaction from Spock, who lifted both brows. ‘Jim’?

There was a soft murmur from the former dictator, so quiet even the first officer couldn’t hear, and then finally, their captain's voice sounded through the bridge.
“Spock?”

“Hello, Captain. It’s good to hear your voice,” the son of Sarek replied carefully.

“You too,” Kirk answered; his tone tense.

For a second, both men went silent; then Leonard chimed in breaking the growing, uncomfortable quietness. “Hey, Jim. Is everything all right?” He almost heard Jim’s smile as the captain answered, “Yeah, I’m fine, Bones. Had a short run-in with some Klingons, but…”

“We already heard about it from Commodore Wesley,” McCoy interrupted him. “Are you all right? Anything broken?”

“Some tables and chairs, a few Klingon bones, nothing else,” Kirk deadpanned; then he turned serious again. “Spock, Bob reached me via The Shadow and told me that a Klingon fleet is on its way to Aldebaran. What’s the status?”

The Vulcan lifted a brow. Jim avoided the ‘Khan’ topic and was all business, a logical decision Spock welcomed. There were more important matters at hand. He would confront his T’yl’la about the Augment later when this was over. If Khan was determined to protect Jim during the upcoming rescue mission of the orbital station that was obviously in danger, Spock would not protest.

“We have a head start of thirty minutes,” he reported. “I do not have more precise data because the enemy is cloaked, and the emissions do not allow for an exact analysis. The Enterprise is one hour, fifty-six minutes, and twelve seconds away from Aldebaran, ready for battle. We will join with the strike group in one hour and seventeen minutes.”

“Right! I wish I would be with you guys, but right now we’re trying to prevent a space station from falling on our heads. I’ll contact you as soon as the danger lets up.” Kirk’s voice sounded out of breath as if he were rushed. Then after a short hesitation, he added carefully. “Concerning my companion, Spock…”

“As far as I was able to follow your discussion, Captain, your… rescuer is with you. He lacks the experience required to operate in space, but his talents are many. I hope, Mr. Singh’s offer of help is as sincere as it was when he recovered you from Turkana.”
Jim stopped dead in his tracks. “You know…? How?”

“Doctor McCoy didn’t tell me anything in case you assumed such a thing, Captain. It was sheer logic that brought me to the conclusion of the identity of your rescuer.”

Again Jim said nothing for a long moment. He had known that Bones would cover for him; still the Vulcan was too smart to be fooled. He groaned inwardly before he asked, concerned, “What will you do, Spock?”

The first officer had expected this question. “Nothing, Captain. I trust your reasoning; I trust you.” Spock heard an audible sigh on the other end of the line, “Thank you, Spock!”

The Vulcan had pursed his lips, before he replied, “I listened to your plan to beam into the space harbor to give Commander Capricio, whom I know from an earlier encounter, a hand. Try to stay alive until we’ll arrive, Jim.” He purposefully chose to call his captain and friend by his given name. This was private now, and he didn’t know if he would have the chance to speak with his T’hy’la ever again. They both were about to face mortal situations whose outcome none of them could calculate. If one of them died, this was the last possibility for them to exchange private words.

Kirk’s smile echoed in his voice as he heard the worry in his friend’s voice. “Spock, you know me!”

“Yes, we all know you, kid, so stay the hell away from those Klingons and that traitor! Let Khan handle them!” McCoy cut in. Sulu and Chekov coughed, and Kirk chuckled, if only for a moment.

“Nien already had two run-ins with them. I don’t think the Klingon bastards will risk another fight with him – not a fair one anyway.”

Bones smirked. Yes, he was a doctor first, and he loathed violence, but in this case he was glad that Khan had such overwhelming protective instincts, not only for his crew but also for Kirk. He watched Spock’s face betray his confusion and shock as Jim called Khan ‘Nien’; he directed his next words to his younger friend again. “Even with your superman at your side, you’re in a hell of a hot spot. Be careful Jim, promise me!”

“Yeah, I’ll be careful; I promise!” Kirk grumbled; his eye-roll apparent in his voice. “Good God, three mother hens is more than enough!”
Pavel allowed himself a hidden grin at this comment, while McCoy snapped, “Don't think I don't know who you're talking about, Jim, but Spock and I aren't with you and ‘Nien’ has his hands full with that freighter – and you! So – so just be careful, kid, okay?”

“Yes, Mom!” the captain sighed. “The same goes for you, guys. Don’t try anything with the Klingon squadron. Oh, and that’s an order, Spock!”

“Understood, Captain. It is not my intention to ‘experiment’ with the Klingons. Enterprise out!” He nodded at Uhura, who cut the connection; then the Vulcan looked up at an anxious McCoy. “’Nien?’” he repeated consternated, almost not trusting his ears, and Bones shrugged helplessly.

“Whaddyawantmetosay? Lookslike they get along, now.”

“Obviously,” Spock replied wryly, not knowing what he should think of the sudden comradeship between his T'hy'la and the Augment.

ST***ST

On Aldebaran, Jim, Khan (who had raised his parka’s collar to hide as much of his face as possible), and Diego had separated from the others during Kirk’s conversation with Spock. They hastened towards the next transporter. They needed the exact coordinates from Capricio to beam directly into the technical room of the dock that held the Athena so that they could avoid the flames and smoke. The men hoped the commander would have this information for them soon. Pablo and two other security personnel had offered to show them the way to the transporter room, but Kirk declined. Diego knew the spaceport inside out, and all hands were needed down here to deal with the chaos.

Nien’s heightened hearing had caught most of the conversation between his beloved and the Vulcan, but not all. Cautious, he glanced at Jim as the younger man shut the line. He knew that his Pyāra would do anything to keep him safe, and McCoy had promised to stay silent about his friend’s ‘little secret’, but now the first officer knew, and Khan felt a wave of uncertainty. He knew that his freedom lay in the Vulcan’s hands – an unnerving thought. “Commander Spock knows who I am,” he stated quietly, hurrying at Kirk’s side down the large cargo hold towards an exit.

Jim sighed. “Yeah.” He shook his head. “Dammit, how’d you miss him on the line?” There was no malice, just the honest question, and Khan recognized that.

“Ritek patched your ship through too quickly, as the emergency transmissions were coming
“I… I forgot for a moment that I had Spock at the other end of the transmission when I heard you and Capricio.” He grimaced. “It appears you are correct. Even Aug… I make mistakes!”

Jim frowned. “You made some suggestions, and Spock heard your voice, of course.” He rubbed his forehead. “And we were so careful – you were so careful!” He shook his head ignoring Diego’s curious glances. “I’m just relieved that he won’t tell Command instantly or come barreling in with the cavalry.”

The Augment was still tense as they stepped through the door that Diego showed them. “There is no guarantee that he will not contact Command after the battle is over and…”

“He said he trusts my reasoning. In other words, there will be a hell of a lot of explaining to do when I get back,” Kirk snorted. “And not only to Bones, but to Spock too, and my bridge crew, because Uhura, Sulu, Chekov and the others on duty know that we're working together now.”

They reached the transporter room and Diego looked back over his shoulder at ‘Drythen’. “You must have messed up pretty bad if the Enterprise is that shocked to hear about you and Jim working together.”

“An old story,” Khan replied as he followed the two men into the room.

A technician looked at them. “I already got the coordinates from Commander Capricio, gentlemen. He also said that two engineers have managed to reach the main power control room and will try to prevent the worst from happening.” He pointed towards the platform. “Please take your stations,” he said while a second technician handed Khan a bag of tools; he shouldered it with his tricorder.

“Thanks!” Kirk said, and within seconds he, Khan and the Chilean were on the transporter platform.

The technician at the station glanced at them. “Now the fire is spreading through dock 12 B; that’s where the Athena is. The security bulkheads, which should seal off unaffected sections, are not working. The air conditioners failed just a minute ago; the gravity control function is intermittent. If you can’t avoid the disaster, please send an emergency signal. My partner and I will remain here to beam you back instantly.”

Jim nodded grimly. “Thank you again!” he replied; then the transporter was activated, and they re-materialized some moments later in a dark room lit only with auxiliary lighting. Smoke traveled
through the ventilation shaft; the alert sirens blared, and from far away, voices screamed and shouted. The orbital station was groaning like a dying animal.

Kirk and Khan took a second to orient themselves; both men were far too well trained for emergencies like this to get distracted. Diego needed a second longer, still he recognized, as the other men had, the Starfleet member at the controls.

The man turned around, baffled; then he sighed in relief. “Support finally!” he said.

“James Kirk, Enterprise!” Jim introduced himself quickly and stepped towards the uniformed security man whose face he didn’t recognize. “Report, Lieutenant!”

“The power for the mooring has failed, and the Athena is stuck,” the man answered. “The fire…”

“JIM! DOWN!” Khan’s roar drowned out the sirens as he hurled himself against the young captain. He pulled Diego with him who yelped in surprise.

Not a moment too soon. A phaser blast came from behind and hissed along where the three men had stood only a second before. It hit the opposite wall leaving scorch marks. At the same time, the security guard who had welcomed them had his phaser in hand. Khan hurled his tricorder at the man with all the strength he could muster.

McFurthon screamed as the tricorder hit his left shoulder, and the sheer force broke a bone. He could still hold his weapon, but for several moments the pain paralyzed him.

Jim, who was the closest to him, attacked without another thought, wriggling out of Khan’s protective grip like an eel. Now he realized where he had seen this face before. It was at the entrance of ‘The Stars’. This man was the traitor, and Kirk’s temper flared up hot as the flames outside.

Khan’s quick mind had already analyzed that the real danger came from the shooter behind them. Staying close to the floor, he crouched behind the next console, leaving the tool bag where it was. Another shot missed him by hair’s breadth. Pulling out his own phaser, he looked to the console. He saw a reflection, a shape of a man in a red shirt near the door and fired.

The reflexes of his adversary were too quick for a human. The man ducked and threw himself out of harm’s way; returning the shots which didn’t hit home.
‘The last remaining Klingon!’ Khan thought and looked quickly over his shoulder. The traitor and Kirk were still wrestling with each other; they made a good target. Cursing inwardly, the former dictator jumped up and offered himself to the Klingon’s phaser; determined to distract the hostile man from Jim. He shot back in the enemy’s direction as he sped toward the control console. To his surprise, his opponent didn’t fight back. And then he heard a gasp from his previous position, followed by a voice that belonged unmistakably to a Klingon, “STOP this instant, or he dies!”

The Augment gritted his teeth as he recognized Diego. The Klingon forced him to his feet at gunpoint. One arm was brutally bent backward by the hostile warrior. Behind Diego, Khan saw the Klingon for the first time clearly and recognized him as the man who had fought and hit Jim at ‘The Stars’.

“Drythen, shoot!” Diego called. “We have to stop them. Don’t worry about me!”

The super-human had pressed his lips into a thin line. What the Chilean said was true enough, and logical. One life for hundreds, perhaps thousands. But Khan couldn’t. He had done it too often in his life – accepted the sacrifice of a friend to prevent worse fate. He had lost too many people who had earned his trust and even his friendship. He couldn’t and wouldn’t be responsible for another comrade’s death. Those burdens were too much to bear.

“No, Diego,” he murmured. “I will not watch him kill you.”

Near him, Jim and the traitor were still fighting; grunts, hisses, and yells were almost drowned out by the blaring sirens, but not for Khan’s enhanced hearing. Louder than the fighting, louder than the sirens was the sense of his beloved’s fury. It made the blood pound in his ears.

Korax realized that he could blackmail the super-human and raised his voice again. “I said STOP!”

Finally, the two gamecocks heard him. Pushing Kirk back, McFurthon rose and wiped away the blood from his nose. Then he stepped back, bending down to retrieve his phaser. He pointed it at Jim and Khan.

“I really would like to shoot someone right now,” McFurthon panted; pain from Kirk’s fists made his eyes water. “But I have something better in mind!” He stared at the two men with hate. “Drop your weapons!”
Diego tried to rear up, but the Klingon’s hold on his arm was too strong. “No!” he shouted. “Jim, Drythen, for God’s sake! If we don’t stop them, then…” he gasped as the Klingon’s grip increased, nearly dislocating his arm.

“Last chance, Kirk!” Korax snarled. “The same goes for you, Augment! Surrender, or he dies!”

Jim and Khan exchanged a short glance, and both agreed without the need for words. They would find another way – without losing Diego! Pulling out his phaser, Jim let it fall as Khan threw away his weapon; then they raised their hands. Holding the men at gunpoint, McFurthon gestured that Kirk and Khan should move to the other end of the room. Unwillingly they obeyed, waiting for a chance to turn the tables.

McFurthon nodded, satisfied. “Korax, keep them covered!” Then he turned around and shot full phaser blasts at the controls, destroying them, before he walked towards the Klingon and aimed at the two men. “The manual control for the mooring is useless, gentlemen, as was your attempt to stop us. I’ll grant you a few last minutes before the fire reaches this room. With any luck, you’ll have already suffered from smoke inhalation before you burn to death.” He stepped to the entrance and the doors slid aside. The first billows of smoke entered the control room.

Korax glared at him. “Let us shoot them and be done with them, McFurthon. The Augment…”

The demoted officer’s eyes moved to Khan. “This is your so-called Augment?” He looked him up and down, and Nien bared his teeth.

“Ready for a demonstration Judas?” he growled.

McFurthon laughed at him. “Judas? You’re quick to judge. Starfleet let me fall. I risked everything for them and for one little mistake, they stripped me of my rank.”

“Maybe your mistake wasn’t so small,” Jim snarled. “Good men get a second chance and…”

“The nobility you speak of, Kirk, is nothing but a farce. Look at your companion!” He pointed at Khan. “If he really is an Augment, then I’m certain he came from Starfleet’s lab! Just ask yourself how noble is your ‘club’ if they are willing to create that!” He collected the two phasers and nodded towards Korax. “Let us go. They are no danger to us anymore. Suffocation will be their punishment for meddling.”
The Klingon grumbled something but stepped backward as McFurthon did, pulling the still struggling Diego with him. Only after Korax had crossed the threshold did he push the large Chilean back. McFurthon closed the entrance from outside, locking the men inside.

Inside of the control room, Diego fell to his knees cursing in his mother-tongue before he gathered his injured arm to his body. “Dammit!” he spat.

Jim sprinted towards the doors, passing Diego. “Are you okay?” Then he went to the entrance that was, of course, sealed. Opening the cover of the manual control, he tried to unlock the doors, but again nothing happened. “They must have destroyed the emergency lever on the other side!”

A flurry of Indic words (which needed no translation) woke his and Diego’s attention. Helping the Chilean back on his feet, Kirk closed distance to his lover who stared bitterly down at something on the floor. The young captain followed his gaze and took a sharp breath. The reason for the unanswered hails lay one the floor in a pool of blood. The man at the comms station had his throat slit. Jim knew a D’g tahg injury when he saw one!

“God dammit!” he whispered. “I’ll get that bastard! I’ll get Korax for this! Mark my words!”

“First we have to make sure that you’ll get the chance to catch him at all,” Nien stated. He loathed unnecessary violence, and this man’s death was utterly senseless. It would have been enough to stun him, but the Klingon had slaughtered him.

Diego had followed Kirk, looked down at the death technician, gulped, and went to the controls that were shooting sparks into the air. “They’re done for!” he grumbled. “That cursed gringo made sure of it!”

“Korax called him McFurthon,” Jim said and pulled out his communicator. “Kirk to Capricio!”

He had to repeat his hail three times before the commander answered. Watching Khan and Diego try to douse out the flames on the console, he gave a quick report to the Italian whose voice rose in anger when Jim mentioned the traitor.

“McFurthon? Edgar McFurthon? From the archive? Santa Maria, I knew we should have kicked him out!” Several harsh sounding Italian words followed which, again, needed no translation. Then Capricio spoke up again. “What’s your status, Captain? Can you leave the control room?”
“Say again!” Jim stated, “We can only …” Interferences and static interrupted the transmission. “Commander?” Kirk called, but he only heard a few syllables before the static hissed and whistled high enough to call dogs and to hurt their ears. “Oh, for God’s sake!” Jim snarled and closed the communicator. He looked at Nien and Diego. “Can you re-activate the controls?”

“No chance!” the Chilean groused; then his eyes widened as he saw something above him. From the air conditioning shafts, he could see smoke thickening above them. “The door is locked and the fire is coming! What a way to go!”

“We’re not done yet,” Jim said firmly, opening a wider frequency range. “Kirk to Ritek! Can you beam us out of here?”

No answer.

“Kirk to spaceport!”

Again only static could be heard through the small speaker.

He glanced at the other two men. “Do you think you can somehow… force one door half aside?” he asked Khan.

The former dictator frowned in thought. “It’s worth a try. Give me a minute,” he said and stepped to the door. For a moment, he simply stood there, took a deep breath and closed his eyes in concentration. Then he pressed his palms together, and even the parka couldn’t hide tensed, coiled muscles. Then he laid his hands against the door and began to shove.

Diego stared at him. “If he thinks he can move it, then…”

“If any of us can do it, Nien can,” Jim murmured, watching his beloved.

Diego stared at him. Drythen was strong, but in order to move a locked sliding door by sheer physical force, you have to have the strength of a Vulcan or… He frowned and something the Klingon had said sunk in. “Augment?” he asked, blinking. “Did those two bastards call him an Augment?”
Kirk pressed his lips shut. Dammit, he didn’t want to reveal Nien’s secret to more people than necessary.

Khan gasped; his face went red, and then something cracked and the door moved slowly, but steadily.

Thunderstruck, Diego stared at him. “I don’t believe it!” he whispered; his eyes were large as saucers. Then he turned towards Kirk. “Don’t tell me that the Klingon was right – that Drythen is – is…”

Jim sighed and nodded slowly. There was no way they could hide Nien’s identity any longer. “Yes, he is genetically enhanced,” he answered quietly, and the Chilean’s jaw almost hit the ground.

“But, how? There aren’t any Augments anymore. They’re history!”

“Sometimes it’s a bit early to call a situation or people ‘history’,” Jim murmured. He had watched his lover’s efforts a second longer before he turned to Diego. “Nien didn’t ask to be what he is. He was born like this and has been used since then over and over again. He’s free now and on the right side. Don’t you agree?” He saw the uncertainty in the man’s dark eyes and added, “You saw a friend the entire time he’s been with you. You saw someone who risked his life for his comrades time and time again. And down there, in the spaceport, for hundreds of nameless people. Are you going to change how you feel about him just because you know where he comes from?”

De la Vega-Martinez bit his lips. “I shouldn’t,” he murmured. “After all, my people know the best how it feels to be treated like a non-human because of the color of their skin. Still…” He didn’t explain further.

A shout of anger and defiance was torn from Khan’s lips, partly with effort as much as to encourage himself. Jim left Diego’s side to lend his hand.

“Stay back!” Nien hissed. “If I slip, I could hurt you!” Again he tensed his muscles and pushed with all his might, and the door vanished into the slit of the wall. Despite Khan’s warning, Jim added his own strength, and together they managed to open the entrance enough to let a grown man slip through. Khan waved at Jim to go first; then he pushed the door a little bit more to make room for the Diego who looked half shocked and half baffled at him. The former dictator went after them and blinked in the smoky corridor that was dim in the auxiliary lighting. The air continued to heat. The fire approached slowly but steadily, and they still had to unlock the mooring of the *Athena*, and catch McFurthon and Korax.
Somehow they had to manage!

Aboard the Shadow, Galven stared at the glimmering red and yellow within the orbital space station while two of his crew beamed people aboard – those whose SOS signals they intercepted. Then they sent them down to the planet’s surface in New Aberdeen. Beside the Shadow, the Flash did the same; but the Tellarit and Ritek agreed on one thing – their efforts weren’t enough! The space harbor was full of people even though only the Athena was expected today. The staff consisted of more than five hundred people, and then there were the Starfleet members and the men and women of the security team. There were escape capsules, of course, but they wouldn’t be enough to bring everyone to safety. Those people who didn’t catch one of the escape capsules had to be evacuated another way.

And they were running out of time.

The Starfleet scouts based at the spaceport on the planet had arrived and tried their best to help. The same went for the private vessels, but their efforts evaporated as quickly as a drop of water on hot stone. If the fire didn’t get under control soon, the orbital station would be lost.

Galven scratched his snout while his little eyes shifted between the sensor display and the space harbor. Somewhere inside of this growing inferno the last Augment and the Federation’s newest hero were fighting for others’ and their own lives. And the Tellarit was hell bent on supporting them in any way possible.

Suddenly one of the sensors beeped and Galven gasped. The scanner showed a Klingon bio-signal aboard the space harbor. Grunting, his hoof-like fist landed on the console. “Got you, you bastard!” he oinked. Then he called out, “Martin? Stop the evacuation. I got the damn Klingon! When we beam him out then…”

“No chance, Galven!” the man called through the open door, “the problems down on the orbital station are all blocking our sensors. We can’t beam anyone else out of that mess.” Martin Hudson stepped on the bridge. “I regret to inform you that the transporters are to no use to us anymore.”

Galven cursed and gestured to Caviw. “Hail this Starfleet commander and give him the Klingon’s last known position. Maybe he can arrest the bastard.”
The Caitian nodded while Galven glanced at Martin. “No chance we can boost the signal and cut through the interference?”

“No,” regretfully the Terran shook his head.

“Ritek to Shadow!” The Rigelian’s voice sounded through the speakers. Caviw had opened the line while she talked to Capricio.

“What is it?” Galven asked.

“We can’t beam anyone else outta there.”

“The same goes for us,” the Tellarit grumbled. “The blasted interference is too strong now.”

“Yeah. Are you in the mood for an old-fashioned rescue-mission?”

Galven rolled his eyes. “It is becoming a habit. You think so?”

Ritek laughed shortly. “Yes. By the way, our two troublemakers and Diego could use some extra hands, I think.”

The Tellarit grunted in agreement; then he turned towards an Andorian, who sat at the helm in Khan’s absence. “How good are your docking skills?”

The Andorian’s antennas vibrated. “I think I can berth the Shadow without crushing her.”

“Rrrright!” Galven glanced at Caviw. “What’s about the commander?”

The young Caitian woman grimaced. “I can’t reach anyone at the station, neither the commander nor Jim, ‘Léo’ or Diego.” She looked to Jeff who sat beside her; he was pale with a makeshift bandage around his arm. “Do we get the bastard ourselves?”
A small smile played over the Tellarit’s face. “You can bet your life on it!”

“Dammit, it is small here!” Diego’s face betrayed his irritation and the emotional stress he was suffering. As quickly as possible, they had raced down the corridor, straight towards the small observation windows where they could see the *Athena* hanging in the hangar just meters away from them. Coughing because of the thickening smoke, the three men felt their way down the corridor and had found the shaft that led down to the anchoring mechanism of the *Athena*. Only a wall of metal separated them from the deadly vacuum outside.

Diego and Khan had stripped off their parkas to make their way through the shaft and to the mooring; they examined it quickly, but thoroughly.

“How’s it look?” Jim called from above them and the Augment shook his head in irritation.

“It is going to take much work.” He glanced up; Kirk’s face was nothing more than a pale spot in the darkness pierced only by the display of the two last remaining tricorders Khan and Diego had taken with them from the control room; the one the Augment hurled against McFurthon’s shoulder was broken. The tool bag lay useless beside the young captain in the shaft. “We have to loosen it and…”

“Here is something like a hand lever!” Diego suddenly yelled; his voice sounded excited.

“Can you use it?” Jim wanted to know, feeling a spark of hope.

Khan pressed himself up against the large Chilean and observed the mechanism Diego had found. “I think so!” he replied and opened the cover of the manual device. It was a simple lever, so simple the Augment felt the irrational impulse to laugh. Here he was, in the 23rd century where space travel to other star systems was a common occurrence, and a simple lever was still just a simple lever. He gripped it and hissed. The object was cold!

Too cold!

The small room where it was installed was not insulated against the bitter cold of space. “Jim!” he
yelled, “throw my parka down. I need something to protect my hand, or my fingers are going to freeze!”

“Okay!” A moment later Kirk added, “Here it comes!”

The soft material fell to the super-human who pulled it in front of him; he wrapped his right hand in the sleeve of his parka and gripped the lever again. He couldn’t get a secure hold as he needed, still, he was too determined to quit. He and Jim Kirk shared personality traits; stubbornness was one of them.

Pulling with all his considerable might, Khan tried to move the unlocking lever but the lubrication inside of the mechanism was frozen. Khan tried again, but the hand gear would not budge. This time even his engineered muscles were too weak. He was, after all, human.

“Together?” Diego suggested, who had watched the vain attempts of ‘Drythen’. If the man he thought he knew went by the name ‘Drythen’ at all.

Khan took a deep breath. In his time, there had been Augments who had been offended at offers from ‘mere’ humans, but Noonien Singh had never thought that way. Every individual had his or her own advantages and strengths. Why not accept it? An added hand could be the difference between victory or failure. Looking at Diego, he nodded. “Together!” he agreed; he offered the Chilean the other sleeve of his parka and made room for him to grip the handle. “On three!” he said taking command as was his. “One, two, three!”

What followed then was a major effort; later no one would have been able to tell how they managed to move the frozen lever at all, but they did!

Khan’s muscles screamed with exertion; they felt as though they would tear from his bones, but he didn’t give in. He was not only driven by the knowledge that hundreds, maybe thousands of innocent people would die if he failed, but also by the thought of his mate and his crew. The threatening firestorm would kill him – kill them if the fire reached the _Athena_. If that happened, his family wouldn’t have any chance at freedom. And Jim would die with him. He couldn't accept that; he couldn’t even grasp it! Jim was his family; Jim was his mate! He would never quit as long as his beloved’s life was at stake!

And so he pulled, ignoring the agony in his muscles.
Millimeter by millimeter, the lever moved with the combined strength of human and enhanced muscle. Little by little the mechanism gave in.

“How’s it going?” Kirk called, and it was Diego who answered, though just a bit out of breath, “It's moving, but slowly.”

“All right, I’m off to Athena’s airlock and try to seal it manually. If the ship moves with the damn bulkhead still open, the obit section will be a lot more crowded in the Aberdeen Press!” Jim began to move but hesitated one more moment. “Be careful, Nien, will you?”

The reply came in a grunt; the Augment couldn’t answer.

Khan listened with one ear for Jim’s movements; his beloved was crawling back through the shaft. Again he concentrated on the lever. The blasted thing gave him hell, but he was not one to surrender.

Together with Diego, who was very strong for a human, they both pulled ignoring their screaming muscles. A fine layer of sweat broke out on Khan’s forehead and back; his jaw hurt from clenching his teeth with the effort, but the torture was not for naught. The lever was moving.

Suddenly and finally giving in to the men’s combined strength, the hand gear went down setting the mooring of the Athena free; both men sighed deeply in relief. Diego let fall himself backward against the cold wall and heaved for breath. Nien was more reluctant to show his fatigue at the act of strength. He rolled his shoulders and his neck trying to loosen his cramped muscles. Then he took a deep breath and readied himself to return to the supply shaft and Jim.

“How did we…? How did you do it?” Diego panted.

Khan looked at the Chilean. Of course, he had heard the short exchange between the South American and Jim concerning his origin, and so he answered, “You know, how. The Klingon and the traitor told you, and Jim confirmed their statement. I am indeed an Augment.” He had hesitated for just a moment before looking into the Chilean's the eyes. “Still I needed your strength to set the Athena free; so, thank you.”

He glanced up through the shaft. “Let’s go, Jim needs us!” With those words, he wormed his way up to the main shaft again; Diego, still a bit shocked, followed him.
Trusting Khan to look after himself, Jim left the shaft and checked his own tricorder as soon as he reached the corridor again. Somewhere behind him, near the heat source, the small scanner showed a Klingon bio-signal, Kirk had to ignore for now. There was a larger problem at hand. Orienting himself, he turned right and stormed down the hallway; coughing because of the smoke that was thicker here. Turning a corner, he saw the open bulkhead of the dock and, to his relief, the closed airlock of the Athena. Obviously one of her technicians had been able to move the door manually. Still there was the danger that any air left would escape the hangar if the ship moved.

‘Dammit, why didn’t the technician tried to close the dock’s lock manually?’ Kirk thought angrily; he closed the distance to it and observed the emergency lever that… That was melted – most certainly by a phaser blast.

‘Korax or McFurthon! To hell with them!’

Jim pursed his lips and examined the powerless electrical controls. Just then, he heard a muffled noise from deep beneath his feet followed by a jerking motion of the Athena. A wave of panic gripped the young captain; the slightest gap between the freighter and the lock would mean death. He held his breath and waited for the inevitable hissing of escaping air, but it never came. The Athena was still docked.

Gulping and with pounding heart, Jim activated his communicator; he was irritated that he hadn’t thought to try communicating with the freighter sooner. Maybe the interference wouldn’t affect the ship since the distance was short. ‘Kirk to Athena. Come in, Athena!’

“Athena, this is Captain On’thara!” the high voice of a Benzite answered. Benzites came from the planet Benzar – famed for gaming and computer programming.

“This is Captain James Kirk of Starfleet,” the officer replied. “Stay on the dock until we close the bulkhead, or I give another order. If you don’t, everyone in this section will die!”

“Understood, Captain. We’ll wait for your instructions! Athena out!”

Jim sighed, finally a little victory. He turned his attention back to the bulkhead control. The smoke was becoming more unbearable by the moment, and Kirk coughed several times. Then he felt Nien’s presence before he heard his lover’s and Diego’s steps.
“The mooring is unlocked!” Khan said and stopped beside his mate; a fine layer of sweat shone on his forehead.

Jim looked shortly at him. “You’re all right?” he asked with concern. It was rare that Khan showed signs of exhaustion, well, aside from their rounds of intense lovemaking.

The former dictator shrugged and immediately grimaced. His face betrayed that even his augmented muscles had reached their limits. “That was an effort I do not wish to repeat any time soon,” he grumbled before he observed the bulkhead controls. “No power!” he stated. “And the emergency lever is destroyed.”

Diego pushed aside his new knowledge of Drythen as well as any residual apprehension related to it; he pursed his lips in concentration. Sweet Lord, his arms, shoulders, and neck screamed in pain after the inhuman exertion, but the pain didn’t stop him from trying to find the technical solution to the given problem. “Maybe we can override the controls with a tricorder?” he mused. “It has its own battery, and if we connect the tricorder to the controls, we maybe can re-activate them using the tricorder as a secondary control unit.”

Jim and Nien exchanged a glance – brilliant! Then Kirk smiled at the Chilean. “Can you manage on your own?”

“Are you trying to offend me, amigo? Of course, I can manage!” Diego answered with feigned indignation.

The young captain grinned at him. “Right, then do what you can and if you succeed, inform Captain On’thara on the *Athena* that he can leave the station. Communication with him is possible despite the interferences, because of the short distance to the ship.” He glanced down at his tricorder. “Nien and I are off on a Klingon hunt!”

Diego frowned. “Our egress is cut off by the fire and…”

“Korax and McFurthon must have left this part of the dock,” Jim interrupted him. “We’ll search for them; hunt them down before they do more harm than they already have!” His eyes found Khan’s. “Shall we?”

“With pleasure, Pyāra!”
Spock watched the display of his sensors; the captain’s chair remained empty for quite a while now. After his talk with Kirk, he had left the captain's chair and had returned to his own station. Observing the Klingons’ movements was the most important thing now. The possibility of an upcoming battle depended on the data he collected and sent encrypted to the Lexington and the rest of the strike group. He knew that the enemy would become – or perhaps they already were – aware of the transmissions. But Code 9 was still secure and as long as the sensor disturbing device worked, the Enterprise couldn’t be found by the Klingons.

The task demanded the Vulcan’s concentration. He watched the enemy’s speed to make sure that the Enterprise was still out of sight; otherwise even Khan’s development wouldn’t be enough to protect the ship anymore.

The sensor disturbing device…

Something Starfleet’s engineers were working on for years, and Khan had constructed one in just days. Spock remembered Jim’s words in the brig when they interviewed the Augment for the first time. ‘What does a Starfleet admiral want from a three hundred years old frozen man?’ Kirk had asked provokingly. And the former dictator had stated calmly that Marcus needed his brilliant mind and his savagery. Khan’s technical abilities were extraordinary. It was no miracle that the Vengeance had equipment and technology unlike any Starfleet vessel. Noonien Singh’s mind worked well beyond imagination. Under other circumstances, Spock would have not only respected but also admired the genius of it, but after all that had happened last year, the first officer had trouble with seeing the enhanced man as anything other than a foe.

‘These thoughts are secondary to the circumstances at hand and illogical to waste them on someone who is not aboard nor a threat to this ship.’ His right eyebrow twitched ever so slightly. ‘But Khan is with Jim, and this is, indeed, a factor for concern!’

“Commander, I'm getting more from the space station in Aldebaran's orbit,” Uhura’s voice cut in. “The primary communications have failed, but there are enough private communications.” One of her slender hands remained on the receiver at her ear while she looked at her lover. “All available spacecraft are helping with the evacuation, but…” She listened. “I caught a transmission between Mr. Ritek and Mr. Galven. It appears the interference from the orbital station is too strong to continue beaming the evacuees to the planet's surface.”

Sulu allowed himself a quiet curse while Chekov murmured his own in Russian.
Spock bit his lips. Jim was on the orbital station fighting a losing battle. The Vulcan simply knew that Kirk wouldn’t leave the space harbor as long as people were in danger there.

He met the asking, piercing gaze of Uhura; her dark eyes screamed at him. ‘Do something! Our friend is trapped there! Do something!’

Taking a deep breath, he made a decision. The only logical decision he could make because the *Enterprise* needed her captain; and illogical because the main reason for his decision lay in his heart, in his friendship with the young man. “Hail the *Lexington*, Lieutenant. As far as I understand, she must pass Aldebaran before she joins the strike group. Maybe Commodore Wesley can help Kirk and the others out by sending shuttles. If the transporters are useless, the evacuation must be done the old-fashioned way.

A hint of a gentle smile softened the tense expression of the Bantu woman before she quickly did as ordered. Spock pursed his lips; it was the only sign of the turmoil that plagued his usually calm mind. He was risking much with the transmission, still he knew that Jim would have done the same for him if the tables were turned. Jim did when he broke the Prime Directive to save him on Niburu. This was friendship – willingness to break your own rules in order to keep the one’s you love safe.

And for just a moment, the first officer asked himself if Khan had done the same as he rescued Jim from Turkana and cared for him afterward.

ST***ST***ST

“General, there is another transmission from the unseen vessel!” The Klingon communication officer turned around in his seat and looked at K’taH, who went rigid.

“Are you now able to locate the origin of the dispatch?” he growled, and the younger warrior turned towards the science officer. “I will send all information to your station,” he said off the responsibility of actually answering the question.

The thin, tall Klingon scientist watched his sensors with intense concentration, not caring that the general was impatient. K’taH was always impatient, so letting him wait bore fewer risks than giving him wrong information.

“It has to be half a light year away from us, similar to the last transmission. It is holding its distance in
proximity to us and matching our speed.” He glanced at the general. “In my opinion, it is a larger starship because the smaller vessels can only manage up to warp six for a short time.”

“Can you unscramble the transmission?” K’taH wanted to know, and his comms officer shook his head.

“No, Milord, they’re still using the encrypted code for transmission. But this time the communication was longer and was sent on the same frequency as before.”

The general leaned back in his chair, thinking. Suddenly, he rose. “Helmsman, increase speed to warp eight. Comms officer, inform the others that we are in a hurry now.” His dark eyes looked to the science officer. “Watch your sensors. We will catch the Federation-weaklings by surprise, and then maybe we can gather more information on them before they adjust their speed to match ours – if they can.”

He sat down again. “The sooner the battle starts, the better!”

---

“Mr. Spock, the Klingons are speeding up!” Sulu’s alarmed shout made all on the bridge turn towards him. Only the Vulcan remained calm, periodically checking his sensors.

“You are right, Mr. Sulu, warp nine. Hold for twenty seconds, then reduce to warp eight, too. Maintain your distance to the enemy.”

Chekov had cursed in Russia before he shouted, “There they are!”

The young man’s outburst was enough to alert Spock, too. He turned his attention to the main screen where he could see the Klingon vessels just for a moment.

Sulu closed his eyes in silent prayer. All tests on the ship’s newest warp capabilities had been simulation only. This would be her first real test – and she couldn’t afford to fail. The Enterprise sped to warp nine increasing their distance from the hostile strike group; then Sulu reduced her to warp eight again, holding their position out of sight.
“They saw us,” the first officer stated as calm if he were talking about the weather.

“Do you think they identified us?” Uhura asked, and the Vulcan lifted a brow.

“They only could see us for a short time, and they can’t do anything other than follow our emissions. Scanning us is impossible.” ‘Thanks to Khan’s technical development,’ an unbidden voice in his mind whispered. He left his station and took a seat in the captain’s chair. “Hold the Enterprise on course, Mr. Sulu. Lieutenant Uhura, inform the Lexington that the Klingons have increased their speed. They will reach Aldebaran twenty seven minutes earlier than expected.”

ST***ST

Aboard the Klingon flagship, General K’taH stared at the main screen. For just a moment, they all had seen the Federation ship, a large one – a constitution class starship. Then it vanished as it went to warp nine.

“We cannot scan them, Milord. Our sensors do not detect the ship, only the warp signature,” the Klingon science officer reported.

“Could you zoom in?” K’taH demanded and met the other man’s pleased expression.

“Yes, Milord. The name or the registration number were not in view, but regarding the new deflector dish, the individual form of the warp nacelles and the signal lights, I am sure it is the Enterprise.”

The general stared at him and then he began to laugh – a low, barking sound. “So, the legendary Enterprise! It will be the last time that she crosses our path.” He glanced back at the main screen. “I don’t know if you’re aboard your ship or not, Kirk, but it will be history soon, and hopefully you along with it!”

ST***ST***ST

“Commander Spock requires what?” Wesley looked at his communications officer, Palmer, in disbelief.
The Lieutenant took a deep breath. “Sir, this is the message. The orbital station of Aldebaran is apparently more damaged than they thought. They’re having trouble evacuating the remaining people, among them Captain Kirk. The interference is blocking the scanners of the transporters. The Enterprise requests that we lend a hand when we pass the planet and send some of our shuttles to the station to…” Palmer stopped. “Another transmission from the Enterprise, sir. They’re warning us that…” His eyes widened. “Dammit, the Klingons have increased their speed to warp 8. They’ll reach Aldebaran twenty seven minutes earlier than previously estimated.”

“And I’m going make a side trip to shuttle evacuees?” The commodore shook his head, rose from his chair, and went to the tactical station. Looking at the newest calculation of the point of impact between the enemy and their own fleet, Wesley made up his mind. “Message to all ships, Lieutenant. Change intercept course; contact enemy at coordinates 2.05S 2.03E, 10.6, 56.5, -17.1 – and hurry, for God’s sake!” He glanced at his navigator. “How much time would we lose if we get close enough to Aldebaran to send shuttles that would reach the space harbor in time?”

“In order to disembark the shuttles as soon as we drop out of warp and then resume present speed, we would need four minutes and fifty-three seconds, sir.”

Bob bit his lips. It was a decision that could lead to disaster if he arrived too late. On the other hand, there were hundreds of lives at stake not least among them one of the most promising and admired Starfleet captains. “Mr. Sonik,” he addressed the Vulcan helmsman who was on duty. “Change course to Aldebaran. Lieutenant Palmer, inform Security of our new mission and that they have to have the shuttles ready to leave the moment we stop. Everything hinges on their speed, now.”

He returned to his chair and sat down. “Speed, warp 8, Mr. Sonik, and if our engineer has a problem with it, tell him to make it happen anyway!” He had closed his eyes for a moment, before he added quietly, “We have to be faster than the Klingons!”

TBC…

Chapter End Notes

Well, that not everything would go the way Jim and Khan hoped for, doesn’t come unexpected. There are always some hindrances fate simply loves to put in the way. But – at least – they gained some small victories, even if the real problems are still lying ahead.

In the next chapter the great battle will take place, while the people aboard the space harbor are fighting their own fight against time and death – Jim, Khan and Diego among
them. McFurthon isn’t done with all the tricks he has down his sleeve, Korax will give some more trouble, Jim shows one time more that he is a leader through and through, and Khan can demonstrate again that there are indeed advantages, if you have an Augment on your side.

I hope you liked the new chapter and I’m – like always – really, really curious of your comments.

Happy Eastern to all of you

Love

Yours Starflight
Chapter Notes

Hi, my dear readers!

I hope you all had beautiful holidays during Easter and that the weather wasn’t that bad. After all: To search for Easter eggs in the snow isn’t really funny.

Thanks a lot for your comments and kudos. As promised there is still action now – a lot of action, but also sentiments. And a little warning: In the end you all are going to be mad at me (*smirk*).

Enjoy

Yours Starflight

Chapter 31 – Battle for Aldebaran, part 2

Aboard the space harbor, the bedlam swelled. As the people learned that they couldn’t be beamed away anymore, they began to panic. Others tried to calm down the situations or to help the security team or the firemen to keep the fire at bay, but the flames only grew in their intensity. Sparking cables spread the fire through the station wherever it found fuel to feed on.

The air conditioners were about to fail along with the central power units, and smoke crept in thin billows through the station’s airshafts. Two sections were cut off by the protective barriers that had closed automatically after the first explosion. The emergency fire suppressant systems worked only where the fire was not, and where the suppressant was needed, there was none. On an earlier casing, McFurthon sabotaged the automatic alarm check valves thus stopping the chemical foam from flowing to ensure the maximum amount of damage. The gravity and the lights wavered with the failing current of the main power. The few engineers able to reach the power control room tried everything to stabilize the electricity and the life support systems, but they were fighting a losing battle.

The people were safe where they were, though, as long as the orbital station remained in orbit, and the life support systems continued to function. But they still required evacuation.

Through the thin smoke that infiltrated the air like fear, two males hurried through the orbital station trying to catch an emergency capsule.
Korax gritted his teeth; his right leg, injured in the bar-fight at ‘The Stars’, gave him trouble. While he and the others began their destruction, he had ignored it. But once they had crippled the orbital station, the pain was constantly on his mind, humiliating and mocking him! The only thing he was glad for was the fact that Kirk and his Augment friend had to be dead by now – suffocated and burnt!

Beside him, McFurthon walked with long strides down the corridor lit only by auxiliary power. Pain showed on his pale features. He knew instantly that the tricorder hurled at him had broken bones. Pretending to belong to security, McFurthon and Korax followed the passengers, visitors, and staff members.

They had found a way out of dock 12 by climbing down the emergency ladder to the next lower level where the smoke wasn’t as thick; then they used an elevator shaft to continue their escape. The escape was not easy. McFurthon knew that he had inhaled too much smoke, but they had made it. They were now in the main sector of the station, ready to evacuate with a group of staff members and…

Behind them, an angry voice sounded over the clamor. Glancing over his shoulder, the demoted officer couldn’t believe his eyes; two figures pushed through the throng of people. Despite the dark and dirtied faces, there was no doubt who the two were.

“Kirk and the Augment!” McFurthon gasped the moment his and the captain’s eyes met. He saw the fury in the blue depths just before the man at the officer’s side ran at him with a speed impossible for a human. No, there was no doubt what this man was!

Without another thought, the traitor gripped the Klingon’s arm. “RUN!”

Ruthlessly, they shoved women and men out of their way not caring that who they toppled or hurt as they stumbled over them.

Kirk saw fear grow into panic among the people, and panic would cost lives!

“STARFLEET!” Jim roared. “EVERYBODY DOWN! NOW!”

To his relief, the staff and technicians were trained well enough to realize the gravity of the situation, and they dropped at his command pulling others with them. Jim and Khan had no phasers. The
enemies that they were hunting had stolen their weapons. It was a blessing that most people now were out of harm's way. Korax and the traitor had no scruples, and both lifted their phasers set to kill. McFurthon directed two shots at Khan whose incredible reflexes saved his life. The shots missed their mark when Khan threw himself aside; then a courageous man – orbit security – made up his mind and attacked the former officer. An attacker shooting at an unarmed Starfleet man was enough to spur him into action.

The attack took McFurthon by surprise and for a moment they wrestled. Then the red-shirted security member yelped in pain as Korax appeared beside him and thrust his dagger into the man’s waist. With his other hand, he fired towards Kirk.

Khan rolled over his shoulder to evade fire and glanced over his shoulder as he heard the phaser blast. For a second, fear gripped him – the icy, searing fear that his beloved was hit, but Jim had ducked out of the way and threw his tricorder at the Klingon. It didn’t have the same effect as Khan’s attack on McFurthon in the dock 12 control room, but it was enough to distract Koloth’s first officer. A few brave men attempted to tackle the Klingon.

Korax growled in fury, shook the two men away like flies, and aimed at the Augment again, but too late. Khan was above him like a snarling demon; his pale eyes burnt with an inner fire that the Klingon might have admired if the circumstances had been different. The long, slender fingers of the enhanced Terran closed around Korax’ wrist, hard enough to force the weapon to drop from the Klingon’s hand. The next moment, Korax brought his dagger in his other hand to the human’s throat, but again the Augment was too quick. Turning aside, the blade only grazed his shoulder; then his fist hit Korax in the belly with a force that expelled the air from his lungs. Hooking one foot behind his enemy’s leg, he dropped the Klingon but was pulled down with him.

Around him, the people were on their feet again and clearly panicked as they tried to put as much distance between themselves and the men on the ground.

The injured security man continued his fight with McFurthon, but was slowing down due to the blood loss from his injury. His comrades appeared, but Jim reached the traitor first. Pushing the red shirt aside, he gripped McFurthon, braced his foot against the traitor’s midsection, and dropped to the floor launching him.

The former officer screamed in agony as he hit the floor on his injured shoulder; the pain paralyzed him for a moment. Kirk kicked the phaser out of McFurthon’s hand. Security was there to haul the Judas to his feet. Behind them, a woman yelled she was a nurse and pushed through the crowd to take care for the wounded security man.

Suddenly all the lights went out; everyone stood still in pitch darkness; then the gravity failed. Jim cursed as his feet left the ground; nausea caught him for several seconds – the typical physical
reaction to a sudden loss of gravity. Somewhere nearby, he could hear the unmistakable growl of his lover, “Don’t you dare to move, Klingon, or I’ll tear your throat out!”

Apparently Korax took this threat seriously; he was silent.

“Everybody stay calm!” Jim called firmly; his voice full of authority now. “Find someplace safe, stand fast and await further instruction!” The people murmured agreements here and there, but there were quiet sobs and far too quick breaths. He could understand the people, this was not in their plan of the day. He felt queasy. Experience taught him what a sudden failure of synthetic gravity could do – how painful a fall from that height could be when gravity returned suddenly.

Then he and all the others heard it – the dangerous groaning of stressed metal. The attack had compromised the integrity of the structure; Jim didn’t want to think about the moment the hull would give in. All of sudden, gravity was back along with the auxiliary lighting. The young captain pulled his legs into his body as he fell to the floor and onto McFurthon, who howled in pain.

‘At least the bastard is useful for something!’ Jim thought with grim satisfaction. He glanced in Khan’s direction and felt the urge to laugh because the Augment had used the Klingon to buffer his own fall. A tirade of Klingon curses tore from Korax’s lips before the Klingon pushed the former dictator away, jumped up and tried to escape.

Khan’s reaction resulted in a few rather unsavory words in his native tongue; then he was on his feet again chasing after the fleeing Klingon.

He got as far as the catwalk that linked the central section to the next dock. Korax was halfway across. Brutally, the Klingon shoved a young woman in Starfleet Security’s red uniform out of his way when she tried to stop him. She lost her footing and tumbled over the handrail into the chasm between the catwalk and the lower level deck.

No one would ever be able to tell how the following two seconds were possible. Even with his enhanced musculature which provided Khan with strength five times that of a human, it was unimaginable that he could accomplish the feat, but he did. Forcing his legs to run even faster, he pushed himself off his feet. Nearly flying, he closed the gap between himself and the falling woman and gripped her hand. He slipped under the handrail but caught himself with his free hand. He gritted his teeth; his shoulder stung where the Klingon dagger had slit open the skin, yet his grip didn’t slacken.

The young woman yelped as the jerking motion nearly dislocated her arm, but she didn’t fall. With teary eyes, she looked up at the strange, pale man who had appeared out of nowhere and spared her
likely life-threatening injuries, maybe even death. Still mortal dread coursed through her veins; her heart raced.

“Hold on, I have you!” Khan shouted down to the young female whose big, wet eyes looked at him with awe, hope, and fear. Then a staff member was beside him and bent down to take the woman’s other hand. Together they pulled the female security member back onto the bridge where she sat down cradling her aching arm; she was shaking and weeping, but grateful beyond imagination.

“Thank you,” she whispered to Khan. “You saved my life.”

“You are welcome,” he answered before he addressed the Starfleet enlisted man. “Take care of her!” Then he stormed over the catwalk after the Klingon, who was already out of sight. But the Augment didn’t need a tricorder to find the fleeing enemy. Somewhere in front of him, angry shouts and yelps paved his way. Pushing his strength once again to its limits, he pursued Korax through the station. His enhanced senses combined with his almost feral instinct turned him into a hunter.

He rounded a corner and looked to the source of the noise; he stopped dead in his tracks.

The Klingon lay on the ground between two people very familiar to Khan. Galven sat on the enemy’s chest and used his remarkable weight to hold down his foe while behind him Caviw pointed a phaser at Korax. The Tellarit looked up when he heard the approaching steps. “Hello, Buddy. Look, who just ran straight into my arms. It seemed the poor guy was so afraid that he searched for comfort in my embrace!” Galven’s little eyes sparkled with mirth.

“Get off me, you stinking animal!” Korax roared; he gasped as Caviw stepped on his injured wrist.

“Tut-tut, that is not very nice!” she said with false sweetness. “If he is an animal, then consider what am I – and what can I do with these?” She lifted her free hand showing him her nails that were, well, more claws than nails really.

Khan took some needed breaths and shook his head in sudden amusement. Galven had a tendency to show up at the most incredible times. His gaze wandered to the large observation window on his right. It showed the hangar, and in it the freighter that was still a danger to the orbital station. Then the super-human heard steps behind him and sensed his mate before he saw Kirk storming around the corner. But Jim was not alone. Capricio, a lieutenant, and four security personnel were with him – dirty, full of grit and ashes, but determined and calm.
“Mr. Korax,” the commander addressed the Klingon by the name he heard from Captain Kirk. Purposefully, he headed towards him. “You are under arrest as a prisoner of war of the United Federation of Planets. You are accused of crimes against civilians. Under Federation Interplanetary Law, this is a war crime. Anything you say may be used against you in the Federation court of law. You have the right to an attorney prior to questioning. Do you understand these rights as I have stated them?” The Klingon grunted an acknowledgment, “You’ll get a lawyer as soon as you’re processed, until then everything you say can and will be used against you.” The Italian’s voice was hard. “Lieutenant Svenson, cuff him and take him away!” he ordered. Only when Security had the Klingon in a firm grip did Galven rise and let him up.

Around them, people whispered, others tried to get away, and a few stayed looking on curiously.

Jim had gone to Khan and smiled at him. “The woman back there,” he pointed with a thumb over his shoulder, “she owes you her life, right? You’re the ‘protecting angel’ who prevented her from falling.”

Nien shrugged. “The Klingon shoved her, and she fell; I was quicker than gravity; that’s all.” He realized that Kirk stayed silent and finally tore his gaze from Korax and Capricio. He looked at the captain and saw the utter warmth and tenderness in his mate’s eyes. He cleared his throat. “It was nothing,” he added.

“Nothing!?” Jim shook his head, grinning. “You’re way too modest.”

“Perhaps,” Khan replied nonchalantly refuting Kirk’s statement in jest. He earned a chuckle from his lover who quickly turned serious again.

“You’re hurt,” he murmured and grabbed Nien’s parka; his gaze fixed on the blood seeping through the Augment’s shirt.

“It is just a scratch, James, don’t worry,” the former dictator whispered gently, touched by the care his mate showed. “It will heal soon.”

Kirk rolled his eyes. “I can’t help it. I worry.”

A tender smile played around Khan’s lips; this smile made its way to his ocean-colored eyes. “I know,” he said. Then the main power sprang back to life. The sirens began to blare again. “Damn, can’t they switch that off? An idiot could figure out that the station is in trouble!” he groaned; his
enhanced hearing protested the shrill noise. Sighing, he broached the next topic. “What about the traitor?”

“He’s arrested just like Korax.” Jim bit his lips before adding quietly. “They know what you are. If they tell Capricio or other officers, then…”

“That was a risk I had to take,” Nien interrupted; then he frowned. “And I put you in danger in doing so. If your Starfleet learns that we worked together, it may jeopardize you and your career.”

Jim sighed. “I knew the risks when I took up with you.” His looked to Korax. “Well, at least I can say that we caught a group of Klingons.” He addressed Khan while keeping his eyes locked on Korax, “Without you, we never would have been able to…” His eyes widened suddenly. “Diego made it!” he shouted in delight. Khan turned around and saw the Athena was moving away from the damaged dock; the airlock she had been bound was closed. “Damn Chilean daredevil!” Kirk grinned before he addressed the Klingon, “Looks like your victory was a bit premature, ya think?”

Koloth’s first officer didn’t answer; his brown-green eyes burned with hate.

That moment, a technician raced towards them; he spoke quickly with Capricio, who nodded grimly before closing the small distance to Kirk and Khan. “The drives holding the station in orbit are near failing. They won’t function much longer. The engineers tried to reroute power to the main portals so the Athena and the other small vessels could leave. But if the drives fail, it’s only a matter of time before the station falls and burns up in the atmosphere.”

Jim gritted his teeth. “How many people are still here?”

“More than five hundred, we think, including those in each of the sections. We don’t have exact numbers because comms are down.” He looked out of the observation window; small ships followed the Athena away from the station. “The ships are full, but it’s not enough.”

“We have room for forty people aboard my ship; it’s similar to the Flash,” Galven cut in. “We’re on outer dock number 7. If you bring the people aboard, I’ll take them with us. And as soon as the interference from the station clears, we’ll beam people to the planet with our transporters.”

Capricio looked at the Tellarit. He didn’t know who this guy was, but he had a sneaking suspicion that he was dealing with the militia that was the talk of the Federation. It didn’t matter; he was grateful for any help he could get. “That is very kind of you, Mr…?”
“It’s Galven; skip the ‘mister’.” He waved towards Caviw. “Come on, sweetheart, we have a lot to do if we want to find the strays who need a ticket out of here.” He looked at his Andorian comrade. “Go back to the Shadow and inform Ritek. We need his help too.”

Jim addressed Capricio. “Do you have a layout of the station? We have to make sure we find everyone and get them to the evacuation docks. Can the harbormaster…”

“He is dead. The explosion took out cargo transporter room and the central office,” Capricio sighed.

Kirk groaned. “Okay, then we have to split up – proceed methodically. Commander Lavi and I will search the lower sections for people and send them up. We also have to search for our friend, the one who freed the Athena.”

The Italian nodded. “Bene. How long do you need, Captain?”

“I’m not sure. We should agree to meet where security can lead the evacuees to the Shadow and the Flash. Since comms are down, we need to decide on a time,” Kirk suggested and thanked the damage controlman who handed them respirators. It wouldn’t keep all the smoke from their lungs, but it would have to do while they returned to dock 12.

“The engineer told me that the station will be close enough to the atmosphere to break apart fifty minutes after the last stabilizers fail. That could happen any minute. We need to have those two ships in forty-five minutes at latest.”

“Done!” Jim nodded as he and Khan accepted new tricorders from one of the security personnel. The two lovers turned around as three of Starfleet’s security passed them by with McFurthon in between them. The man spat in Capricio’s direction and hurled insults. The commander remained surprisingly calm.

Then gravity faltered just a bit; McFurthon took advantage of the opportunity and hurled himself at his guards. Kicking one of the security personnel in the stomach, he tried to flee leaving Korax to his own devices and raced down the hallway. He ignored shouts calling for him to stop and running zigzag, he avoided the stun blasts shot in his direction.

“Follow him and bring him back!” Capricio ordered furiously.
Khan tensed his muscles and readied himself to pursue the fleeing traitor, but Jim held him back. “No, Nien, we have to search for Diego and the survivors,” he said quietly; the Augment nodded. It was only a question of time before they would get him. Finding Diego was far more important now.

“Let’s go,” he murmured and a moment later the two men were on their way to recovering their Chilean friend, and helping those who needed them.

---

“Our ships are in sensor range. Five Constitution-class starships, four heavy cruisers, two Armstrong types and the others are Mayflower and Newton class ships; one is the USS Biddeford. The Lexington has changed her course and is heading towards Aldebaran at warp eight.” Sulu looked up from his scanners towards the science station where Spock stood.

“So Commodore Wesley is going to aid the captain,” the Vulcan murmured; a hint of a frown moved his usually expressionless face. “If both sides continue at this speed they will meet in eighteen minutes. The Lexington will reach us in thirty-two minutes, but she needs time to send her shuttles to the orbital station.” He adjusted his long distance scanners, and his left brow shot up. “The station is beginning to rotate,” he murmured. “And its energy is levels are fluctuating. If the drives and stabilizes fail, it will drop out of orbit.”

Uhura gasped while Sulu and Chekov turned in their seats. “Will it hold until the shuttles get there or will the station break apart?” the Japanese asked tensely. Worry for his captain and friend echoed in his voice.

“I do not have enough data to answer this question, Mr. Sulu,” the Vulcan replied calmly.

“Then collect the goddam information, man!” McCoy groused from the open doors of the turbo lift. “Jim is down there!”

“I have already requested support from the Lexington granted by Commodore Wesley. If the station survives the next thirty minutes, shuttles will be there to get the last of the evacuees, and with them Jim.”

Leonard bobbed up and down on his feet. “Hopefully! Knowing Jim, he’ll be one of the last to leave the space harbor. He and Khan.” He shook his head. “I never thought I’d say this, but after the
enhanced bastard saved Jim – hell he’s probably doing it now! Well, I want him to survive if only for Jim’s sake.”

Spock only looked at him before returning his gaze to the scanners. Aside from his worry for his T’hy’la (to which he would never admit), he also had to think of the upcoming battle. And until the Lexington arrives at the scene, the Enterprise would lead the strike group; after all she was the Federation’s flagship.

ST***ST***ST

McFurthon ran as quick as his feet could carry him. Security was on his heels and even in the chaos around him they didn’t lose him. Turning the corner, he crashed into two technicians and they landed in a heap on the floor.

Shouting in pain due to his injured shoulder, the defamed officer regained his footing and continued running. One of the two other men saw his handcuffs and heard shouts from the red shirts to stop. Kicking the technician in the belly, he tried to flee again, but the other man grabbed his legs and McFurthon fell again. Falling, he turned around and brought his bound arm over the man’s head, strangling him despite the searing hot agony that shot from his shoulder. “Stay back, or I crush his throat!” he screamed; the four men stopped in their tracks.

“Give up, man, you don’t stand a chance!” one of the red shirts said, and McFurthon laughed a slightly hysteric laughter. “He’s the one that doesn’t stand a chance if you don’t let me go!” he shouted increasing his pressure on the technician’s throat.

But the former officer hadn’t considered that his ‘victim’ didn’t want to be a victim at all. The man was almost sure that his captor belonged to the group of terrorists that had attacked the station. He had also realized that his captor was injured. Bringing his elbow back, he hit the aggressor in the liver while his colleague, who had gotten a gulp of air, attacked from behind.

The tussle was the only excuse security needed to join the fray. Two of them tried to overwhelm McFurthon, but the two technicians were furious and remained in the way, stopping them from doing their duty.

Suddenly the gravity failed completely, and anyone who was in the space was suddenly in the air. The technicians were confused. McFurthon used the chance to push himself up, leaving the technicians alone. Soaring through the smoky air, he drifted through the corridor towards the next door ignoring orders to stop.
A stun blast whizzed by him, but he made no attempt to slow down. He knew that they couldn’t shoot accurately just then, and he was determined to use this last opportunity to escape, even if he didn’t quite know to where.

The noises behind him told him that the four Red Shirts were chasing him again, moving hand over hand across the bulkheads to compensation for the lost gravity and gain some momentum. He floated through the door that led to an emergency ladder. Using the handrails, he half launched himself toward the higher decks where he knew there must be an emergency capsule.

Beneath him a voice shouted to stop; another phaser blast missed him by inches. This one was set to kill – obviously one of his purchaser wanted some revenge. Gritting his teeth against the pain, McFurthon continued his way and pushed himself up to the handrail of the next level.

It happened without warning. Gravity. One moment he was reaching with for the rail with cuffed hands, the next the world seem to come to a halt; and then he was falling straight, and with increasing speed, down, down, down…

The security chief held onto the handrail, his feet firmly rooted to the steps; his three comrades were beside him. They watched the man who had been once a loyal member of Starfleet plunge past them and down between the ladders. His screams echoed off of the walls and ended abruptly the moment he hit the deck several levels below.

The chief took a deep breath, coughed shortly because of the smoke, and looked at his companions. “Maybe it’s better this way!” he murmured and returned with them to the main section where he knew his superior had to be. In the same moment, a hollow sound echoed through the station and a jerk went through it. The chief cursed while one of his men whispered, “The drives have shut down. We’re lost!”

Diego searched to find his way out of the hell he was in. He was able to override the airlock control closed it with the help of his altered tricorder. If he had been able to contact Athena’s captain, he would tell the man that his ship was free and could leave, but now the Chilean had to think of himself.

And leaving that burning dock behind him was precisely Diego’s intention. Kirk had said that the Klingon and the traitor had left this part of the station and that they would follow, but which direction
the young Starfleet officer and his Augment lover had gone was beyond the Chilean. Still he continued his search, never once giving up.

The air was almost too thick to breathe anymore. Biting fumes from the burning plastic, cables, and melting covers brought tears to his eyes and pained his lungs. He knew that the risk of suffocation was higher than the risk of burning alive; still either prospect woke a mortal fear in him. Then for just a minute, gravity failed again; he needed every bit of strength to keep from panicking.

Protecting himself from the smoke by pressing one arm against his nose after gravity was switched once again, he glanced around and realized that he had lost his way. The smoke was thick like a fog and in his despair he got on his knees because the thickest smoke was up overhead. As romantic as he sometimes was, most times he was a realist, and he knew that his chances of getting out of here were zero.

Closing his wet eyes, he tried to gather his strength one last time if only to delay the inevitable. ‘Shit – and I had so many plans for my life!’ he thought.

All of the sudden two boots appeared in front of him, and then two strong hands pulled him to his feet. Despite the fact that everything was a blur, he recognized the pale face immediately beneath the mask – Drythen, or whatever his name was. Relief flooded the Chilean – relief and gratefulness. The Augment had come back for him. If there had been any doubts about this man’s character, they were blown away now.

Khan needed only one look to realize the state Diego was in; he took a last deep breath then stripped off the mask and put it over the other man’s nose and mouth. The technician tried to bat his hands away, but the former dictator shook his head firmly and fixed the mask. Quickly, he pulled Diego with him and headed back the way he came.

The lung capacity of an Augment is fifty percent greater than an ordinary human; still Nien knew that he had to hurry if he wanted to reach the emergency ladder before he required respiration. The smoke was dangerous, even for him. Trusting his sense of direction, he rushed through the foggy corridor searching for way back.

Above them the ceiling began to glow; the fire had reached the dock’s arm and found enough fuel to burn. It was hot enough to melt the fireproof material. In front of them something cracked, and a wave of heat swept towards them.

Khan didn’t waste any time; he dragged Diego with him faster now. His muffled coughs and nausea became more pronounced with every step.
They reached the door to the emergency ladder just before the fire was there; greedy flames licked down through the thoroughly perforated overhead and over the long bulkhead walls towards the exit. The two men pushed through the door, and Khan gasped for breath. To run holding your breath was difficult even for him, and he had to cough through the smoke-filled air. For just a moment, his mind slipped back in time – a time he had to lead his people through smoke and fire while saving the younger ones, which were still hold captive within the labs. Some died then. Diego would not! He ran faster pulling Diego along with him. As quickly as possible, they climbed down the ladder, stepped into the lowest corridor, and headed toward the disabled elevator that would allow them to leave dock 12.

The doors were still open where Korax had forced them apart during his flight with McFurthon. This was the end, or the beginning, of the elevator shaft that led to the upper levels. But as Khan and Diego stepped in and looked up they could see the yellow and orange flickering above them and smoke slowly sifted its way down the shaft.

“Four levels,” the Augment coughed. “We have to hurry. If the fire destroys the lift cabin, it will come down like a missile. Quick, you go first and I will follow. Should you stumble, I can catch you.”

Diego nodded; not doubting the ability of the other man to catch him should he fall. Somehow it was soothing to be with someone who was so much stronger and quicker than himself. Hastily, he stepped to the ladder and began to climb; the enhanced man followed him instantly.

The Chilean could feel the heat increasing and knew that they were running out of time. Above him, he saw the bottom of the lift cabin and the flames above that. The dock had turned into an inferno. The metal of the emergency ladder beneath his fingertips grew hotter, and the smoke thickened. Diego was thrilled when he finally reached the fourth level, swung himself through the open doors, and looked quickly around him – more smoke. He offered a supporting hand to ‘Drythen’ who took it without hesitation, and finally the two men stood in the corridor near the next dock.

Diego wanted to strip off the mask to offer it to Khan; he shook his head again. “No, you need it more than me!” he said and pulled him with him again.

They walked like this quickly down the corridor and met Jim Kirk, who also wore his respirator. “I checked this section,” he said. “There's no one here.”

Khan nodded. “As I suspected,” he grumbled glaring at the young captain. When they had returned to dock 12, Jim took the lead slipping in the role of a scout. Nien pointedly did not approve. Not because he didn’t trust Kirk’s instincts and qualities as a leader, but because the Augment’s reflexes
Kirk would have none of it though; Nien was the only one strong enough to haul Diego the rest of the distance if it came to that.

Kirk caught his beloved’s irritated gaze and sighed while they hurried down the corridor towards the next dock. “Nien, you can’t shield me for the rest of our lives. It’s…”

Khan instantly recognized that Jim said ‘the rest of our lives’! He assumed they had a future together. Nien barely dared to hope that he could have that. So he concentrated on what his beloved had said and growled, “I know that. I do not have to like it though.”

Kirk made a face at the almost pouting Augment. If it were cute, he’d never admit it. “Like I don’t like watching you throwing yourself in harm’s way. This ‘I am better, quicker and stronger at all’. It’s going to... I just got you, and I'm not ready to lose you!”

“That will not happen!”

“I don't want it to, but that doesn't mean it won't!”

Diego couldn’t help himself; he had to chuckle. It was muffled by his respirator. “Really you two, if someone is going to write a new love drama with the potential of ‘Romeo and Juliet’, it should star you two!”

"Yeah, well I’m not Juliet. And I'm gonna kill him if he doesn't get himself killed first." Jim sternly stated, mostly amused, but not quite.

This earned him two sideward glares; then their attention was brought back to the real danger they were in. An eerie shallow sound echoed through the station like a dark omen. It felt like the station shivered; they felt it in their bodies.

They knew what happened, but it was Jim who voiced it, “The stabilizer and drives have failed!”

ST***ST***ST

“Shuttle bay to Commodore; this is Commander Marceaux’s. We’re ready to launch.”
Bob Wesley sat in his chair; his eyes turned from the right side of the main screen that showed the orbital station. But soon the empty space would fill with vessels battling each other for dominance. “Understood, Marceaux. Good luck. And tell Kirk that he owes me one. Bridge out!” He deactivated the intercom at his armrest and addressed the helmsman.

“Mr. Sonik, as soon as the shuttles have left and are out of range of the expected warp field, warp eight to the rendezvous.”

“Aye, aye, sir,” the Vulcan replied calmly.

The engineer, who sat at his station, tracked the launch process of eight shuttles carrying only pilots and medical supplies. The *Lexington* couldn’t give anymore. As painful as it was for her commanding officer, he had to think of the casualties the upcoming battle would demand as payment. And if he had to give up the ship, they would need shuttles to give the crew a chance at escape.

“Commodore, a transmission from headquarters, Aldebaran. The acting commander there informs us that three of the five Klingon intruders are in custody. The fourth is dead, the fifth is on the orbital station, but they don’t know more about him. Contact broke an hour ago.”

“Sir, the orbital station drives have failed, the stabilizer too,” the science officer cut in. “The space harbor is drifting. It will be caught in Aldebaran’s gravity in an hour!”

Bob cursed quietly. The space harbor would crash down on the planet; that was for sure. Hopefully, the spin will take it away from its position above New Aberdeen; otherwise the casualties will be enormous. The atmosphere would burn up much of the orbital station, but not enough. Pieces would rain down on the town like meteorites, and the larger parts including the reactors would be like bombs to the helpless town.

For a moment, he considered flying directly to the station to steady it with the *Lexington*’s tractor beam. But the ship would be too weak to hold the colossus in orbit. The fleet needed him, needed a leader for the approaching battle. Not only a town or even a planet, but the whole sector depended on him and his leadership to keep them safe.

He damned the Klingons into next week and considered his next move. Whatever was necessary and whatever the cost, that's what he would do. That's what made him great at his job - and that's why Jim loved him near as much as he once did Pike. And if Jim was the only one down on that planet,
Bob was pretty sure he'd still do anything, no matter the cost. The young captain deserved that and more from him. And then he silently damned himself for not doing enough while Jim was trapped on Turkana. To hell with the admiralty or Starfleet if they thought differently.

“Shuttles have departed; closing hangar door now, sir,” the engineer reported, and Bob nodded.

“Right. Lieutenant Palmer?” he addressed his communication officer. “Confirm transmission and tell our station on Aldebaran that eight shuttles are on their way to aid the evacuation effort. I'll order every available ship equipped with a tractor beam to lock onto the harbor. We can't hold her up forever, but we can put her over an uninhabited area.”

“Aye, sir!”

The engineer turned around in his chair. “Sir, it’s safe to warp now.”

“All right. Mr. Sonik, warp eight! The quickest way you know how to the rendezvous. Lieutenant Palmer, inform the Enterprise that we sent the requested rescue shuttles, and we're on our way. Until our arrival, she is in command of the strike group!”

ST***ST***ST

Jim, Khan, and Diego sped down the hallway towards the central section of the space harbor. All three coughed continuously; even Nien’s enhanced body could not remove the smoke particles from his lungs fast enough to prevent smoke inhalation. The volume was too great. As they finally reached the massive hall, chaos unleashed again.

The security and staff tried to bring some order to the evacuation procedure without success. It didn't take a genius to figure out that the station was lost after it had become apparent that the drives and stabilizes had gone down. It would burn up in the atmosphere scattering pieces all over Aldebaran’s surface. Everybody wanted to catch a ride on the last remaining evacuation vessel to escape certain death.

Jim found Capricio on one of the catwalks talking hectically with his chiefs; Lieutenant Svenson stood beside him. Closing the distance to the commander, Kirk, Khan, and Diego heard the last words concerning the disposition of the people. Then Capricio turned around towards them.
“Kirk, Lavi! Thank the Lord! I thought you were lost when a fireman reported that dock 12 had burned.”

“We made it just in time,” Jim answered hoarsely. “What about McFurthon?”

“He’s dead – fell down the ladder when gravity returned. Went right down the middle more than fourteen levels. No one could survive that.”

Usually, Kirk wouldn't feel satisfaction at another's death, but not this time. McFurthon’s betrayal had brought cost so many innocent people their lives, and the real fight for survival had only just begun.

“Were there any survivors in the sections you searched?” Capricio asked, and Jim shook his head.

“No, there was no one besides our friend here who cut the last link holding Athena.”

Capricio offered Diego his hand. “You've outdone yourself once again, Mr. de la Vega-Martinez. Even if I don’t think that we will make it out alive, I want to tell you how proud and glad I am to have such a man as you among my people here at the station, and as my friend. Thank you!”

Diego had returned the handshake and made to gesture to Khan before he thought the better of it. He might not know everything, but he knew enough. The man saved his life, the life of his friends, and so many others. If Kirk protected him, then he was worth protecting. “Thank you, sir. We appreciate that.”

Capricio shook Khan’s hand too. “And that you, too.”

“You are welcome,” the Augment said politely.

The Italian looked to question Kirk about this other man but he was interrupted.

“COMMANDER!”
The shout sounded not scared, but happy!

And as the men turned around towards one of the outer observation windows, they felt a wave of hope. A handful of shimmering Starfleet shuttles appeared from behind one of the six moons and raced towards the station bringing rescue to the stranded people.

“Thank the Lord!” Capricio sighed. “With Galven’s and his friends’ transporter and the shuttles, we can save – maybe everyone on the station before she goes belly up.”

Jim smiled shortly; something in his gut told him that Spock was responsible for this little miracle.

And outside of the Aldebaran system, unseen and unknown by even the most enhanced of men, the battle had begun.

ST***ST***ST

Spock did not know but made the safe assumption based on probability (because a Vulcan does not assume) that the visual contact between the Enterprise and the Klingon fleet gave her identity away. He was right. Starfleet’s strike group had barely met with their flagship before the enemy spread; three birds-of-prey attempted to flank Kirk’s gray lady.

Before the Vulcan could order evasive maneuvers, Sulu pushed the ship downward beneath the three ships, forcing the Klingon vessels to alter their course if they didn’t want to crash. “Uncommon but very effective, Mr. Sulu!”

The Japanese grinned at him. “It’s called ‘Kamikaze’. Except we don’t have to sacrifice ourselves to outwit the foe.”

After that, all verbal communication revolved around requirements, orders, and reports. There was not time for banter.

The battle broke loose with all the merciless, terrifying brutality that war brings with it. The Potemkin and the Hood II, sister ships of the Enterprise, built a triangle with the flagship and attacked the enemy while shielding the smaller ships without robbing them of the opportunity to shoot at their opponents. The Klingon birds-of-prey, on the other hand, used their cloaking devices to vanish, only to reappear at the flanks or aft of the Federation ships.
It was a hazardous game; both sides were equally strong in different ways.

Damage reports flooded the bridge after the Enterprise endured severe hits. Her shields still held, but she suffered damage. While Spock directed fleet strategy, he also tried to mitigate risk to the strike group. McCoy and his team received the battle's first casualties; they did all that they could. Scotty shooed his staff through the Engineering, doused a fire here, and gave a hand there. Keenser's incredible climbing ability came in handy as a leak in the cooling system threatened to strand them where they were and fill a good part of the Engineering with acidic cooling gas. The little Royalan had closed the leak quickly as he was immune to the effects of the fumes.

Not only was the Enterprise in trouble, but two Mayflower-class ships took heavy damage; the Potemkin suffered seven torpedo hits, and two interceptors were still upright only because a heavy cruiser shielded them against the Klingon strikes.

The enemy had losses as well. Three birds-of-prey had lost their weapons; one was destroyed, and two had lost their cloaking devices. Still the battle waged; the universe was a silent witness of the madness.

Flying directly into the chaos of phaser blasts, photon torpedoes, drifting vessels, emergency transmissions and cries of the injured and dying, the Lexington appeared as a silver saving grace.

Her presence turned the tide of the battle; she eliminated one of the two enemy spacecraft, which ‘welcomed’ her, and rendered the other one nearly helpless. Bob quickly ordered his ship into the center of the battle; he sent missiles to any enemy that was in range. Still the readouts he got from the fleet’s status were worrisome.

Behind him, two junior officers doused a fire that had broken out after Lexington swallowed a few too many hits. Bob wiped the sweat from his forehead not realizing that he was spreading ash over his face. “Spock's done a good job; there could've been more of them,” he murmured, and then he turned to his communications officer. “Tell the Enterprise that we’re taking command. Spock's got enough problems aboard without having the responsibility of fleet commander.”

Palmer nodded and hailed the Lexington’s sister ship before he continued to pass messages from damaged sections to the emergency department.

Bob’s concentration lay on the position of the Federation’s ships and the Klingons’ vessels. Then he saw something strange, a bird-of-prey. It looked different somehow - newer construction or design.
What caught his curiosity was its armament. It looked - better, more menacing if that were possible.

“It’s their flagship,” he mused.

“Sir?” Sonik asked from the helm, and Bob stepped to him. “This ship there,” he said, pointing at the main screen. “It’s the Klingon flagship. If we hit it hard enough, they might retreat. It’s like fighting against a swarm of bees. Kill the queen and the drones will stop their attack.” He smiled slowly. “We beat them before that way – at Tammeron. Palmer, give me the Enterprise. We have to flank it.”

ST***ST

On the Enterprise’s bridge, Spock bent over the sensors at his station; the captain’s chair was abandoned. In the Vulcan's opinion, it was not necessary to sit there if he was needed at the scanners. He could give his orders from here as well as from the centered seat!

“Sir, I’ve Commodore Wesley for you!” Uhura called. A bruise darkly decorated her right temple, and her uniform dress was ripped at her left shoulder; dirt clung to the material. Still she held firm and stood her ground proudly like a brave sailor in a storm.

“On the screen, Lieutenant. Mr. Ashton, watch the enemy!” he ordered the junior science officer, who stood at the science console near the captain’s chair.

“Mr. Spock!” Wesley looked terrible, but the fire in his eyes and his determined expression told another story. “We figured out which Klingon vessel is their flagship. It’s the ReghQIS on your starboard side. We’ll flank it and fire until either they surrender or they’re destroyed!”

“Aye, sir; Enterprise out!” the Vulcan replied. Then he addressed the helmsman again. “Mr. Sulu, you heard the Commodore.”

“It will be my pleasure, sir!” the Japanese growled altering their course.

ST***ST

Aboard the ReghQIS, General K’taH ignored his bleeding temple. The trickle blinded his left eye.
He also suffered broken ribs as he was hurled from his chair after a severe hit in the aft section of his ship. He barked orders; he was hell bent on victory or to dying a noble death.

Suddenly his science officer whirled around. “Milord, the Enterprise and the Lexington are encircling us. They…”

The ship shook like a boat in a storm as it was hit from both sides. “Return fire!” K’taH roared. He gripped his armrests as a volley of blows shook his ship. Gritting his teeth, he knew that he stood no chance against two starships!

And how right he was. Even as other birds-of-prey came to the general’s aid, it didn’t change his outcome because the other Starfleet ships held the Klingon group at bay while the Enterprise and the Lexington attacked the ReghQIS. The shields collapsed, the left wing of the bird-of-prey exploded in a fireball as three torpedoes hit the ship simultaneously. Fire made its way through the central part of the vessel.

Balling his fists as Engineering reported the complete breakdown of the warp drive and that the warp core was about to explode, K’taH lifted his chin ready to give the last order.

“Helmsman, activate self-destruct! We are going to take the Enterprise and the other ship with us and…”

“General, I have the commander of Starfleet’s strike group on the line. Commodore Wesley.”

Wesley, the man Kor had spoken so highly of! ‘This is about your honor Starfleet officer!’ he thought with loathing.

“On screen!” he snapped, straightening himself in his chair.

A moment later, a middle-aged human male appeared on the flickering screen, a symptom of their failing systems.

“This is Commodore Robert Wesley from the USS Lexington,” the Terran said with a strong, firm voice. “Our sensors show that your warp core is about to explode. Surrender, and we’ll beam the survivals of your crew aboard. Otherwise…”
“A Klingon doesn’t surrender, Earthling!” K’taH spat. “He dies with pride in a battle, earning his place in the Black Fleet. Only cowards give in!”

“Cowardice seems to be a new trend in the Klingon Empire; obvious since you weren’t ashamed to send five of your men to a planet to terrorize civilians. And you didn’t even need a ship to do it. Avoiding a real fight, then?”

“Don’t you dare to call us cowards, human! We don’t run from a battle! We…”

“PujwI HIvlul’chugh qvbe’lu – There is no honor in attacking the weak. That’s one of your phrases, isn’t it?” Wesley spat out. “I learned that from a real honorable warrior of the Empire. Who came up with the plan to terrorize Aldebaran? There is no honor in that act. Bad luck for you that your spies were found and caught!”

“They were successful,” K’taH boasted. “The orbital station…”

“… Is secure,” Wesley lied, “No harm came to the spaceport or Starfleet headquarters, and your spies are in custody. And you, General, are about to lose this battle too. Surrender and…”

“Bogh tlhInganpu’, SuvwI’pu’ moj, Hegh!” the Klingon fleet commander roared. “Klingons are born, live, and die as warriors! You will die with us, Earthling!” With those words, he signaled the comms officer to close the frequency.

ST***ST

The Enterprise’s junior science officer, Ensign Ashton, flinched. “Mr. Spock, they’ve activated the self-destruct!”

Spock, who had finally taken the captain’s seat again during the attack, was on his feet in the blink of an eye. “Mr. Sulu, take us away from here! Uhura, warn all our ships. Explosion in damage range!”

On the screen, he watched the Lexington depart the area while Nyota caught the warning from her counterpart on Wesley’s ship.
The Starfleet vessels were informed about the impending self-destruct of the Klingon flagship. The commanders gave orders to put a safe distance between them and the dying flagship. None of them would run from a danger as a coward, but if they wanted continue to fight, they had to survive at the very least.

KissnaH, a much-experienced captain, took over the command of the Klingon fleet per their chain-of-command. Ordering the other ships into formation, he watched the dying flagship as did his enemy. Then he addressed his comms officer, “Transfer to the Qachjan (swinging sword), Captain Kreth shall break away as soon as the battle resumes. He will fly to Aldebaran to pick up Koloth and his men. We cannot allow the Federation to question them.”

The man saluted and contacted the other ship – a quick and agile scout class bird-of-prey. Then KissnaH rose from his chair as the ReghQIS exploded into a massive fireball. He roared his warning to the ceiling for Kahless and the Black Fleet to expect the great warriors.

ST***ST***ST

At the orbital station, no one knew what was happening at the edge of the Aldebaran system – not even those informed of the Klingon invasion. Jean-Claude Marceaux, the commander of the small shuttle fleet Wesley had called for rescue, had given a quick report to Capricio. He greeted Kirk and set to work helping out with the evacuation. He sent two of his shuttles to the two docks that were separated by the closed security barriers.

As if on cue, the interference that made it impossible to beam the evacuees safely, cleared so the work could resume. Galven and Ritek, together with Diego were busy with beaming people out of the station and down on the planet. The transporter together with the evacuation space aboard the shuttles, they would be successful in bringing everyone away from the station before it burned up in the atmosphere.

Khan stood beside Jim and pursed his lips while he watched the people leaving by shuttle. Others gathered in a group and The Shadow beamed them away one-by-one. “Now this I will call a last minute rescue,” the former dictator said quietly, pleased.

“Yeah, Hollywood-style!” Then Kirk sighed heavily. “I don’t wanna think about what comes next though. Hopefully, the station can alter its course before it comes down. Otherwise, it'll crash into New Aberdeen and… What is…?” Jim had seen that Khan’s eyes suddenly widened as he stared out of the observation window.
“There is something coming,” the Augment said quietly and pointed straight ahead. “A vessel – it just dropped out of warp.”

Jim turned around and hope sparked in him. It could be the *Enterprise*! But hope was doused the moment Nien stated far too calmly, “It’s a bird-of-prey.”

Kirk paled. “You’re sure?”

Khan’s gaze spoke volumes and without further hesitation, Jim raced towards Capricio and Marceaux calling, “A Klingon ship is coming!” He heard shouts of fear from the people, but he ignored them. Even if he were quiet, they’d see it soon enough.

The Italian whirled around. “Holy Mother of God,” he gasped while Marceaux hailed his counterpart on one of the shuttles. “John, a Klingon vessel is coming. Contact them and tell them that we’re on a rescue mission here and that we have children aboard. Maybe this will stop these bastards from blowing us up!”

Khan had stepped towards the large window and watched the bird-of-prey slowing down before it passed the orbital station. Its dark form was in sharp contrast to the pale moon. At the same time, one of the security personnel shouted, “Commander, the prisoner has been beamed away!”

The bird-of-prey didn’t stop but dived down towards the planet’s surface only to turn again and head straight for the space harbor.

The Augment pressed his lips closed while Jim closed the distance to him. “They’ve gotten what they came for, Koloth and the others,” he growled still observing the green bird.

“And somehow I do not think they are finished here,” Nien nodded slowly. He saw the ship turn sharply toward them.

Kirk’s eyes were wide as saucers as he saw the position the enemy took. “They won’t…” he whispered, his words born of denial instead of the facts unfolding outside. “They will not attack a dying station full of innocent people!”

Khan felt his mouth go dry as the bird-of-prey faced the station now. “They will,” he murmured. “They will and it will tear the station apart.”
In the background, the people had realized what the Klingon ship was about to do, and panic broke out once again. Others simply stood there, paralyzed, or reached for their neighbors’ hands in order that they not die alone.

Jim saw how the phaser canons at the end of the spacecraft’s wings pointed directly at the space harbor. Ice crept through his veins and his stomach knotted while a shiver ran down his spine.

This was it!

This was the end!

Several well-aimed phaser blasts and the station would explode.

There was no escape from it.

Not this time!

Death would find him again in the cold void of space, and Khan with him!

Looking away from the steel eagle, Jim’s gaze caught the blue-green eyes of the man who had captured his heart and soul. Not caring that they were in public – it didn't matter now – Jim reached out for him the same moment Khan moved to him. Each knew that death had started a countdown for all aboard the station. Embracing each other, the lovers buried their faces in the crook of each other's neck, inhaling their familiar scents and feeling their hearts beat in unison for the last time.

Jim took a deep breath. This was the last chance to say the thing that burnt inside him for days now, always on the tip of his tongue. Squeezing his arms around the slender, sturdy frame of his mate he whispered, “Given a choice between you or a life in space, I would have chosen you, Khan Noonien Singh. I love you!”

Those three words that moved the world were like a warm balm for the Augment’s soul. Here, in this space station far away from the planet he once called home, seconds before his life was over, those words were his! Finally, they were meant for him – for the man behind the mask of a leader. Bliss
and sorrow rose in him like day and night – the bliss of requited love and sorrow over love lost too soon. And if he wanted one thing more; could be granted one more wish than the love of this warm-hearted, passionate, bright, beautiful young man – it was that his Jim would live!

But it was not to be. Death had spread its wings over them and would take them away.

Kissing the mark beneath his lips, Nien murmured, “You are the best that has ever happened to me, James Kirk. You woke my soul and filled my existence with life.” He pulled his mate even closer, clinging to him in dread that they soon would be ripped apart by death. “Tumasē pyāra karatā,” he whispered those important words back that he hadn’t dared voice before now. Then he closed his stinging eyes and waited for the inevitable, silently pleading with his family for forgiveness. In his death, they would remain in cryosleep forever.

TBC…

Chapter End Notes

Aaaaall right, please put away any knifes, phasers, daggers and so on – you should know me by now. I LOVE evil cliff-hangers. I also gave you a fair warning, didn’t I? (*grin evilly and wriggling my brows).

I don’t tell you much now about the next chapter. I’m really curious, of which solutions for our two ‘boy’ you’re thinking (*snicker*).

I hope you liked the last chapter and that I was able to catch the dread of the battle (in space and on the orbital station), the greater and smaller deeds of heroes, and the emotions. Please leave some comments.

Until soon,

Yours Starflight
At the last minute

Chapter Notes

Hi my dear readers!

Finally the next chapter – just in time for Sunday. Thank you so very, very much for all your comments, and even if the action will ceased with this chapter at the moment, you can look forward to several scenes you all waited for (*snicker*).

I don’t want to reveal too much of the new installment, therefore I already release you to the 23rd century.

Have fun,

Love

Yours Starflight

See the end of the chapter for more notes

Chapter 32 – At the last minute

The battle had begun anew before the last vestiges of the Klingon flagship dimmed in the cold vacuum of space that suffocated the last flames. The fight seemed fiercer than before. The Klingons were motivated to avenge their leader’s death; the Starfleet captains were hell-bent on forcing the enemy back behind the lines of the former Neutral Zone.

Wesley had ordered a new attack strategy and used the fact that the Klingons had to build a new formation before they could strike again. Apparently, K’tahH’s death didn’t leave them leaderless; someone else had taken the general’s place. Still the Klingons were too slow, perhaps because of the confusion caused by the change of command mid-battle. The outcome was not one any would hope for. Two birds-of-prey fell to well-placed Starfleet torpedoes; another Klingon scout was rendered powerless. Starfleet was gaining the upper hand.

And in the middle of battle, Ensign Ashton aboard the Enterprise received a sensor readout that made him alert his senior officers.

“Mr. Spock,” he called, and his tone made the Vulcan look away from the main screen towards him; he raised an eyebrow in question. “Sir, one of the smaller enemy ships left the battle zone and is heading for Aldebaran.”
Spock rose and scanned the area himself. The Klingon vessel didn’t use its cloaking device; the device would have depleted its energy. So the Vulcan could follow and calculate the ship’s course and destination. “They’re flying to Aldebaran III,” he murmured before he was distracted by Sulu’s call, “They’re firing at us again!”

A moment later the Enterprise shook with the impact of a full phaser blast.

“Ze shields are down forty-eight percent, sir!” Chekov reported; his Russian accent now thick with fear.

The first officer steadied himself at his station. “Return fire, Mr. Sulu,” he called while he watched the sensors. “What do they have in mind?” he whispered; a short, unpleasant sting coursed through his stomach.

“Maybe they want to free Koloth and the others. Commodore Wesley told the general about their capture, and I’m sure this transmission has been intercepted,” Uhura said. “They won’t risk Koloth and his men telling us anything.”

Spock pursed his lips; it was the only reaction to his thoughts that he allowed. Again, something Jim called a ‘gut-feeling’ spread through him. There was no logical reason to think that this hostile vessel would be a danger to his T’hy’la. His human side thought otherwise.

“Mr. Sulu, how is our fleet proceeding?” he asked knowing he could not leave if there was the slightest chance that the Enterprise’s absence would cause Starfleet’s defeat.

“Two more Klingon ships are dead in the water, four are close, one more was destroyed,” the helmsman reported after checking his scanners. “I dare to say that we have the upper hand,” he added realizing the reason for the first officer’s question. Spock could and indeed had seen the evidence in his scanners. The Vulcan needed a second statement to warrant the order they all were waiting for. Save the captain.

The battle for the sector was on the line; his brother’s life was in danger as well as Aldebaran III. He knew the consequences per Starfleet regulation if he left the battlefield without the permission of the fleet’s commander, but the feeling in him – the pull of his T’hy’la became stronger with each passing second. Was this what Jim had been through as he made his decision on Nibiru to ignore Prime Directive and come to his aid?
The Vulcan pressed his lips together in thought. He was running out of time, and he had to make up his mind now!

The needs of the many. The war needed Jim Kirk; the universe needed Jim Kirk. He needed Jim Kirk.

Taking a deep breath, he looked at Uhura. “Send a transmission to Commodore Wesley. Tell him of our development. Tell him we are going to Aldebaran. Perhaps the Klingons are trying to avenge their defeat with an attack on the planet.” He looked intensely at her. “Please, Nyota,” he whispered. A short nod proved that his lover had understood his true intention.

While the young Bantu woman turned around and took care to squelch the interference disrupting her transmission to the Lexington, Spock addressed the helmsman. “Mr. Sulu, warp nine. Course, Aldebaran!”

“The warp drive is damaged, sir, we can only reach warp six,” the Japanese man called, and the first officer gritted his teeth.

“Then as quick as we’re able, Mr. Sulu! I think the captain needs us!”

ST***ST

The Lexington’s helmsman, Sonik, lifted a brow as he saw the Enterprise fly out of sight rendering a Klingon scout defenseless in its wake. That same moment, the science officer reported a bird-of-prey heading for Aldebaran.

Bob Wesley’s eyes widened. “A Klingon ship to Aldebaran?” He turned around in his chair. “What about the Enterprise?”

“I’m sorry, sir, but I can’t locate her. The Enterprise’s sensor-disturbing device must be on. But regarding her course before she vanished from our screen, I think she…”

“… Is heading for Aldebaran of course!” Bob growled remembering the Enterprise's unofficial trip to Borderland. “For some reason, Mr. Spock seems to have a problem informing me about his self-
assigned missions! Saves him from lying, I suppose.”

“Sir, the Enterprise is hailing us, but I can't hear her through the interference,” Lieutenant Palmer called.

“On speaker!” the Commodore ordered, gritting his teeth. He already guessed the contents of the message.

“… bird-of-pr… hea… Aldeba… revenge f… dead genera… protec… habi… Lexing… answ… ple… bir…prey hea… Al… planned reven… general… habita… Lex…”

“I can't get it any clearer!” Palmer stated, and Wesley took a deep breath. He had heard enough of the Enterprise’s communications officer, and he had a damn good idea of what she was trying to tell them. Dammit, what had gotten into Spock? They were in the middle of a battle for God’s sake and…

“Sir, another bird-of-prey is drifting, warp core malfunction in ten seconds,” Sonik interrupted him. “I can’t get a read on them, sir.”

“Hmm. A farewell gift from the Enterprise before flies off to Aldebaran to stop that bird-of-prey,” Bob nodded. “How is the fleet’s status?”

“The Klingon's casualties are high compared to ours,” the science officer reported, and the Commodore leaned back in his chair. “Right, message at the Potemkin and the Hood II. They’ll have to fill in the gap left by the Enterprise.” He took a deep breath of the air thick with the smell of hot metal and electricity. “And give the Enterprise the go-ahead to save her captain’s ass, Palmer! That's the reason for her side trip!” He frowned, ‘You’ll have some explaining to do with this is over, Spock! So you better bring his ass back in one piece.'

ST***ST***ST

Kreth, Captain of the Qachjan, looked at Koloth and Korax, who stood beside him watched the drifting space harbor. “You are sure?”

Korax’s face contorted in anger and pain; his broken shoulder ached. He nodded grimly. “Yes, they’re lying! There are no children aboard the space harbor. I was there, as you know. I did not see a single child! It is a ruse used to extort our pity.” He fixed Kreth in his sights. “But Kirk is there! Kirk and the Augment!”
The captain bared his teeth. “Kirk? Now this I call good fortune! And the Augment too? Even if we lose this battle, we can report to the counselor that two most wanted enemies of our Empire are dead.” He bent forwards. “Weapons officer, take aim at the space harbor. I don’t care for more victims; just blow this station apart. Kirk and the Augment must die!”

Koloth, who had regained his ability to move just before he was beamed out of Starfleet’s prison, smiled slowly. Every bone in his body hurt; his neck was stiff where the Augment had struck him, but his shame of failure wouldn’t be for naught. At last Kirk and the dark warrior would lose their lives. At least he would have this triumph to lie at the feet of his superiors despite the failure of the mission.

Feeling a wave of satisfaction, he listened to Kreth’s command “FIRE!” and watched the deadly blasts make their way to the space station.

ST***ST***ST

The jolt and shudder that went through the space harbor as the first phaser blasts hit home were not unexpected, not after all those aboard had seen the bird-of-prey position itself for an attack. Screams of terror and despair rent from the passengers. Men and women fell; others froze in fear then came to their senses and tried for the shuttles. As if on cue, the auxiliary power hummed back to life and the emergency barriers began to close, trapping those not quick enough to reach the gates where the shuttles waited.

Marceaux, Capricio, and the others officers hurried the people along. Three of the shuttles took off into space, their occupants hoping and praying that the hostile ship wouldn’t fire at them.

Galven, Ritek, and a nauseous Diego did their best to beam the last of the remaining men and women away, but had to quickly undock as the orbital station began to drift and fire broke out.

Another volley was aimed at the space station and Diego paled. “Sweet Lord, please don’t let Jim and Drythen still be there!”

ST***ST***ST

The Enterprise raced the short distance from the battlefield to Aldebaran. The hostile vessel had a head start, but no one on the bridge doubted that they would arrive in time. Ashton had observed the
bird-of-prey's speed and orientation and reported that the ship had reached the planet just two minutes ago. Uhura had stated that she recorded Wesley’s permission to leave the battlefield in order to stop the Klingon vessel. Thankfully, that would spare them a court martial.

Spock sat in the command chair; his mind was fixed on his need to reach Aldebaran as quickly as possible. He focused as though he could will the ship to fly faster despite the warp drive roaring like a hurt animal. He knew that Mr. Scott had all hands on task keeping the ship going; still he would run the ship into the ground if it meant finding Jim and getting him to safety. This inner voice he had never heard before meeting Kirk whispered now that his T’hy’la needed him. It did not escape his notice that his inner voice always pertained to his captain.

“Mr. Sulu, stop the engines ten seconds before we reach Aldebaran III’s orbit. That will place us exactly four thousand kilometers away from the space harbor!” he instructed, knowing perfectly well the risk of this maneuver.

The helmsman nodded grimly; he had a bad feeling that Kirk was in serious trouble.

He was right!

ST***ST***ST

In the main hall of the space harbor, there were still a dozen men and women, and among them Jim and Khan. After the second phaser hit, the orbital station listed hard; it was impossible to keep one’s footing. Helplessly, the passengers slid toward the far wall.

Nien reached for the leg of a mounted bench and held Jim tight with the other arm. His muscles, overtaxed at the inhuman amount of strength required to free the Athena, burned and screamed in pain; still Khan didn’t let go. The Augments had been bred to survive at all cost; their survival instincts were stronger than those of mere humans. But now there was only one instinct that drove Khan – protect his mate. Nothing else mattered; his genetics, his heart, and his soul affixed to this one purpose. Not even the thought of trying to escape alone occurred to him. He would stay with Jim; there was no other option!

Then the space harbor shook again; explosions were heard throughout the structure, and an awful, disastrous tearing sound grew louder. At the same time, a storm broke loose – literary. Everything that wasn’t nailed down flew toward the starboard bulkhead. There had to be a crack in the outer hull.
As the bird-of-prey fired at the dying station a third time, Galven squealed in anger and desperation. He stood at the transporter controls trying to find the bio-signals of those trapped in the main hall of the space harbor; one bio-signal after another blinked out like the stars at first light. Jeff remained beside him cursing God and whispering prayers.

Suddenly Caviw shouted in triumph, “There they are!”

Abandoning the controls, Jeff raced to the bridge, pushing himself through the evacuees who were huddled tightly together. He arrived just in time to see why the Caitian woman was so delighted.

A giant, silver-grey shape emerged from beneath the Klingon vessel and hovered over it; it was nearly three times larger than the hostile spacecraft. A golden-blue phaser blast pierced through space striking the green bird like St. George’s spear into the dragon.

The bird-of-prey instantly swooped and took flight; its commander was perfectly aware of the fact that he couldn’t withstand the power of a Constitution class starship.

Then Jeff and the others saw the number and name on the large discus of the spacecraft: USS Enterprise, NCC-1701.

Kirk’s gray lady and his friends had come to save the day.

Khan felt the pulling of the vacuum, terrible in its power; he heard the death screams of passengers forced toward the gap in the bulkhead. Lifting his head and pressing Jim to him, he watched them disappear one-by-one. And then it came – the cold. As the heat escaped, the cold found its way into the hall – merciless and deadly.

Closing his eyes again, the Augment clung to the bench leg and his mate with all his might, ignoring the agony in muscles that were stressed beyond their limits. He felt Jim tremble; the younger man tried to wriggle even closer to him seeking warmth and hope for survival.
The air thinned and the cold enveloped Khan along with the hands of Death himself. Somehow, Nien managed to wrap his legs around Jim’s shivering frame and buried his face against Kirk’s throat finding some comfort. Within seconds, the temperature dropped below the freezing and pierced his flesh. Memories of the moment cryosleep took him rose from the depths of his mind. His only solace was the man in his arms whose heart began to slow dangerously. He thought back to their time on Turkana, to Jim’s request to kill him as the Klingons had surrounded them. And now the fate they avoided once was back to claim them; the younger man’s breath became shallower.

Kirk was dying in his arms!

The realization cut through Khan’s heart like a sharp sword. The tears, which sprung to his eyes, were painfully hot behind his closed lids against the bitter cold that flooded around him; then his consciousness began to waver.

Everything became a blur as though he were looking through an autumn. His hearing dimmed; his senses ceased their function, and the blood in his veins rushed to the surface due to the falling pressure.

‘I love you, Pyāra!’ he thought; despair shook him, and his mind drifted in and out of time.

Still, he clung to sanity; he didn’t give in, and he didn’t give him up. He loved life, and he loved the man so bound to him too much to loosen his grip. He couldn’t keep hold; finally his fingers went stiff and lost their grip.

A cry, no more than a hoarse whisper, escaped his blue lips.

His cry was lost in the sea of voices, but he couldn’t make sense of the words. Something hot touched his shoulder, but his enhanced mind was too far gone to react.

An eternity, or perhaps only moments later, warmth spread from his neck through his upper body, and through sheer will-power, he forced his lids open just one more time. He saw lights and a face hovering above him – a face he knew but couldn’t place. Then someone tried to loosen his grip around Jim.

Someone wanted to separate him from his soul-mate – wanted to take him away. Acting on instinct alone, he tightened his hold on the younger man.
No! Nobody would take his beloved from him!

He had to keep him warm – had to protect him! If he let go, Jim would die! Khan’s body was the only thing keeping his lover’s heart beating.

Wrapping himself tighter around the strong, yet so fragile body of the man he loved, Nien closed his eyes. It cost him a considerable amount of strength but somehow he was able to move his face up to Jim’s tousled, golden hair. He breathed his love in deep and clung to him like a lifeline.

Voices were around him again; then the merciful darkness pulled him under once more.

ST***ST

Spock stared at the main screen, and for a second, his Vulcan control slipped as he saw his worst assumption was correct. The Klingon vessel was indeed firing at the dying orbital station! And deep in him was the nagging feeling that his captain and friend was in terrible danger.

“Mr. Sulu, aim at the bird-of-prey and – FIRE!” he ordered; his voice unusually sharp.

The helmsman punched the button, and the Enterprise’s phaser bank within the discus sent a full photon blast at the hostile ship. It would have been easy to chase the bird-of-prey now and destroy it, but there were more important matters at hand.

Spock rose. “Mr. Sulu, lower shields! Transporter room, make ready to beam the survivors over!”

Lieutenant Kyle stood at the transporter controls and checked the sensor data. There were three dozen people in the outer docks where the Lexington’s shuttles anchored to recover the men and women. Eight bio-signals were in a large space within the station, but two of them vanished almost as quickly as Kyle had registered them, then one more. The readout of the scanner showed that there was a gap in the hull, and the deadly vacuum began to pull the air out of the station and into space.

When the order came from the bridge, he didn’t hesitate; he activated the transporter. Its transmitters and receivers locked on the only three bio-signals left in that mortal trap. Kyle hoped that he got those three signals in time. The golden shimmer of the beam left behind two men laying curled around each other on the transporter field floor; a third person lay beside them.
“Quick, gentlemen, we have to beam up the others!” Kyle called and Ensign Shelton, Kyle’s assistant, hurried towards them ready to give them a hand. He bent over the two males, who held each other in their arms and tried to move them. He froze in shock.

“Oh my God, it’s the captain!” he almost screamed, and knelt down beside Kirk and the dark-haired man he had never seen before. “He’s unconscious!”

“Shit!” Kyle cursed and activated the intercom. “Transporter room to med bay, Dr. McCoy! Emergency! I have…”

“Med bay. This is Nurse Barbara. Doctor McCoy is busy. I’ll send you…”

“It’s Captain Kirk!” Kyle snarled while Ashton yelled over his shoulder, “He barely has a pulse, and he’s half frozen. The other two are in the same condition!”

Before the nurse could answer, they heard the CMO shouting from the background, “I’m on my way!” Then the connection went dead.

“Dammit!” The transporter chief left the controls while Ashton slipped off his uniform shirt and covered his captain in an attempt to warm him. Kyle crouched down beside the stranger who enveloped Kirk with his legs and an arm; his other arm was outstretched as if clinging to something. The man trembled like a leaf in the wind; his teeth chattered, and his breath stuttered. He was barely conscious. Kyle removed his own shirt and placed it over the man then carefully shook his shoulder.

“Mister, do you hear me? Mister!”

“Bridge to transporter room! Mr. Kyle, why did you stop beaming over the survivors?” Spock’s deep voice rang with urgency from the speakers.

“Because our captain is blocking the transporter deck!” Kyle shouted back. “He’s barely alive and…”

He didn’t get any further, as McCoy stormed into the transporter room; two assistants with three hover carriers followed him.
“Holy shit – JIM!” Bones yelled horrified; he as at his friend’s side in less than a second. One look at the second male holding onto Kirk as if his life depended on it was enough to send McCoy into a tailspin of emotion. Khan! Of course!

Quickly, the CMO waved his bio-scanner over Kirk and the Augment; he took data from the third man. All of the readouts showed men in very poor condition.

“Ben!” Leonard called over his shoulder and took out three hyposprays from his medical kit. “Inject this here the other guy over there!” he said, pointing at the third man and handed one of the hypos to his assistant. He barely heard Spock order the cargo transporter to continue its recovery mission while he took two more hypos and pressed them to Jim’s and the Augment’s neck, injecting both men with stabilizers for blood circulation and adrenaline. “They’re highly concentrated; capillary damage beneath the skin was extensive because of the severe drop in air pressure. Kirk has some bruising; he’s suffering from a smoke inhalation and a concussion. Our special friend here is about the same, and he has a deep gash in his shoulder; looks like a knife or a dagger. He’s also severely strained his muscles, tendons, and ligaments. The third man, I don’t know who he is, is in worse shape. I don’t think he’ll make it.” He spoke loud enough for Spock to hear him through the open intercom link.

Then something caught his attention and he gasped.

The Augment was still conscious; his eyelids suddenly fluttered. The CMO looked into the blue-green depths that lacked the cold intensity he had come to know. Instead, it was replaced by confusion and fear; then the super-human began to shake so badly that Leonard couldn’t stop himself from laying a soothing hand on his shoulder.

“Mr. Singh, can you hear me?”

The former dictator didn’t answer; apparently even his enhanced abilities had reached their limits. Carefully, McCoy tried to move Khan’s arm and legs to separate him from Kirk, but without success.

Rather the opposite in fact. The Augment moved his free arm slowly and wrapped it around Jim; every attempt of the CMO to prevent it was useless. Khan held tight to the younger man and slowly pressed his face back into Jim’s hair while continuing to shiver from head to toe. McCoy groaned; Khan was in his over-protective mode! Determined, Bones tried to move Jim’s arms away from the super-human’s waist, but it was impossible to loosen even Kirk’s vice-like grip.
“Ugh! You’d think they were glued together!” he groused. Suddenly, Khan’s body was loosed of its tension; nature finally demanded tribute and the super-human was robbed of his remaining consciousness. But he continued to shroud Kirk with his body, and his subconscious stayed fixed on the younger man.

“Dammit! They have to be naked before I can stick them in the infrared chamber to warm them up properly.” He saw Jim shudder; his breath heaved, and the tricorder showed an atrial flutter. “Oh no, you don’t!” McCoy snarled. “Don’t you dare to die on me again, Jim!”

“Doctor, how is the captain?”

McCoy thought he could hear a note of concern in the Vulcan’s voice and at any other time, he would have taunted the first officer over it, but not now. They were both worried out of their heads for their friend. “Not good! I’ll give you an update as soon as I can,” he answered while injecting Kirk with a dose of medicine designed to keep his body functions working. “Hold on, Jim! For God’s sake, hold on!”

Then he rose. “Alright Kyle, ship’s emergency transport. Beam Kirk and Mr. Singh directly into infrared chamber one and the other man into chamber two. Quick!” With those words he stormed off to return to the med bay; his assistants followed him with the unused hover carriers. On his way, the CMO informed his chief nurse of the incoming casualties; he arrived just as Nurse Barbara switched on the two infrared chambers. Geoffrey M’Benga was busy connecting Kirk and Khan to their life-support systems. In the second infrared chamber, Dr. N’Halro an Andorian did the same with the third man that Kyle beamed aboard.

“Status!” McCoy demanded as he stepped beside his colleague into the small chamber where Jim and the Augment lay. The infrared light had been switched on and bathed the four men in a red glow that would warm the two patients without the risk of cardiac infarction due to warming the body too quickly.

“I stabilized the captain; readouts are on your computer and the chambers’ monitors!” M’Benga answered.

Leonard took another bio-scan with his medical tricorder to see for himself. He sighed in relief as he saw his friend’s heart rate increase. “Thank the Lord!” he murmured. “Body temperature at 34.7, heart rate at 24 and rising, brainwaves…” He frowned. Khan’s brain activity was far above human standards, even injured; that was normal, but as he read Jim’s scans, his eyes widened.

M’Benga turned his head. “Something wrong, Len?” he asked, and McCoy gulped.
“Well, if I’m reading this thing right, our captain will be even more… Christ, a bigger pain in my ass as soon as he comes out of this!” He showed his colleague the results and Geoffrey whistled.

“Our captain is a genius.”

“Yes – a genius with a tendency to get his ass fried any time he gets a chance,” McCoy sneered and bent over Jim and Khan and attempted to remove their clothes.

“He looks more frozen then fried,” M’Benga grumbled. He watched Leonard taking boots off of the two men before demanding a scalpel from one of the nurses to cut off Kirk’s parka, shirt, and jeans. He pulled and tore at the material removing it from between the two men.

M’Benga lifted both brows. “Wouldn’t it be easier just to separate them?”

McCoy’s face was red with effort. He wheezed, “If you can get them apart without breaking anything, be my guest! The bastard is holding onto Jim like he’s the last solid rock in the sea, and Jim is clinging to him like the infant he is!”

Geoffrey chuckled at his boss and stepped beside him to help in the task. “Well, all this points to exposure to the vacuum of space and sub-zero temperatures. There might have been a hole in the hull of the area they were in. If that’s the case, then this ‘bastard’s’ strength is the only reason they’re still alive.”

“Please don’t remind me that Jim owes Khan his life – again. That’s like the fourth, fifth or … Awww hell, I’ve lost count!”

The doctor pursed his lips. “I read your reports from the incident with Section 31 last year; this is the Augment, isn’t it?”

Bones rolled his eyes. “Yes, be ‘honored’ to meet Khan Noonien Singh, last dictator of Asia, Augment, killer, and savior.” He bit his lips while he ripped the torn parka from Jim’s motionless body. “And a genius. The sensor-disturbing device is his baby.”

M’Benga stared at him. “Well, then I think we all owe him our lives. We wouldn’t have made it out
of Borderland without that little engineering miracle.”

“Yeah!” McCoy said while he concentrated on removing Kirk’s and Khan’s clothes. Two minutes and more than a little of the doctor’s sweat later and Kirk and the Augment lay on the bed naked as the day they were born. Petechiae and mottled blue bruises covered their bodies. M’Benga took the torn, dirty clothes out of the infrared chamber, trashed them, and returned to his other duties while McCoy examined the two men; he was completely out of breath.

“Even knocked out you idiots give me trouble!” he growled in Khan’s direction before his attention lay only on Kirk. He let his bio-scanner wander over his friend’s body and with a critical eye, took in all the injuries the little device read out to him. There was some swelling and bruising on his upper body, and two serious looking contusions on his left leg – likely a hand-to-hand fight. Right, Kirk, ‘the Iowa-kid’ went a few rounds with the Klingons aboard the space harbor. There were also older wounds, as good as healed, striping his assaulted body.

Frowning, McCoy took a closer look at them and recognized them for who they were. These were the remains of torture that Kirk endured at the hands of the Klingons. The pink lines were nothing more than the remains of healing skin after they had been split open by something very sharp. Bones had a good idea of their cause – daggers. There were also fading bruises, greens and yellows, inflicted by brutal beatings pain sticks, too.

McCoy shook his head in disbelief. Jim had a good constitution, especially after the help of Khan’s blood more than a year ago. But this was... This was something different, unusual even for Kirk. There were no scabs, only the traces of scars, even though the torturous ordeal was only eight or nine days ago. There was no way that a human body could heal this quickly – not even Kirk’s.

This, together with the higher brain activity and the fact that Jim’s poor condition had been stabilized with the first treatment, made the CMO cautious. “What happened to you, Jim?” he whispered. He took a scan of Khan and compared it to Kirk’s readouts, and pursed his lips in thought. “Your cells are regenerating not at the same speed, but still yours are working very quick, kid.”

The conclusion came quickly. Still McCoy would run some tests before he accepted the results. Quickly, he took blood samples from both men. He swore under his breath as he needed three attempts before he got blood from Khan; the Augment’s soft but tough skin resisted the needle at first.

Afterward, he checked the newer bruises and carefully examined Jim’s hip; the bio scanner showed that his right leg was out of alignment. Thank the Lord, Kirk only had a dislocated the thigh and no breaks to show for the ordeal. A quick pull and twist and the joint popped back into its place. “Sorry about that, Jim, but in two days you’re going to thank me.”
Then his gaze drifted down over Jim’s back and to his buttocks; they were reddened, and a bit abraded. ‘As if he slid over something hard. Maybe that's how he dislocated his thigh,’ Leonard thought; then he choked as the bio scanner gave a complete different explanation for Kirk’s state. “Erythema in the rectum?” McCoy didn’t even realize how high-pitched his voice sounded. He gaped at his friend who habitually flirted with any female that resembled humanoid. Then he remembered another time when Jim had been in the med bay; he admitted almost shyly (something Kirk was most definitely not) to having a wild night with some guy.

Listening to an inner voice, Bones bent over the younger man and carefully lifted his head to have a closer look at his neck. There was a bruise on his throat as if some hand tried to strangle him, and next to the bruise was the biggest goddamn hickey McCoy had ever seen. Well, almost. He remembered the hickey Kirk sported a few weeks ago after...

Thunderstruck, he laid Kirk’s head carefully down; then he looked at the Augment still wrapped around the captain, driven by his need to protect. Leonard dropped his head and remembered Kirk’s words, ‘…things have changed, Bones. A lot of things…” McCoy had confronted Kirk with his knowledge about Sunrise’s real identity. ‘…I’m not in any danger, Bones. Far from it. He’s cared for me, healed me…” That had been Jim’s words. ‘…he’s helped me, more than I can explain… we’re okay – with each other…”

“Sweet Lord, don’t tell me…” Leonard whispered hoarsely and made a quick bio-scan of Khan’s lower abdomen. And sure as hell the readouts were the same – well, almost, because the Augment’s enhanced body had already righted itself. But that wasn’t the only evidence of amorous activity between the men. McCoy saw finger pattern bruising on Jim’s shoulders as thought someone had clung to him. A deep tissue scan revealed more bruising no longer visible on the skin – nothing serious. But it all added up. Jim and Khan were… Were what? Fucking? In lo-? Oh dear God, not that. But that first day in the med bay, the rescue, the – ugh, caring. And then the physical evidence he had now as well as the fact that he still couldn’t move a muscle on either man.

McCoy leaned against the curved wall of the infrared chamber; it wasn’t the heat that made McCoy sweat.

He remembered all too clearly another exchange of words.

‘…You two are already use nicknames? …Are you holding hands now?’ he had asked, and Kirk’s reply had been an innocent. ‘How did you know?’

“God dammit, Jim, I hit the nail on the head; you even confirmed it, and I didn’t believe it even then!” Bones hissed. He felt anger rising – anger at himself and Kirk. “I can’t believe it! You risk
your career, your freedom and even your life for a – for a…” He couldn’t finish the sentence.
“Stupid kid! You got the brain of a genius, but you think with your dick!”

Bending down, he spread a special warming blanket over the men designed to trap the infrared and reduce heat loss; it also offered privacy for the two men.

“You have a lot of explaining to do, my friend! Your bio, your healing, and what the hell has gotten into you that you think rolling around with Khan is a good idea!?” he growled; then he left the infrared chamber closing the door firmly behind him.

He glanced over at the second chamber and checked the readouts of the other man Kyle had beamed aboard. There was no guarantee that he would make it; still Bones would give his best. He never stopped trying to save a patient’s life even if it was hopeless. What had his father said once?
’Hopeless is only what you don’t try’. This sentence had been firmly stuck in his brain ever since, and ever since it helped him to find solutions where no one else could. It made him one of the best doctors in Starfleet.

“Doctor, new patients are arriving – survivors from the space harbor!” Barbara called from the main room of the med bay crowded with injured crew members. McCoy moaned. Good God, would this nightmare that began with a phaser blast ever end?

Quickly he returned to the large room as the lights began to dim. There was still enough energy for the life support systems, the bio scanners, and one quick look at the monitor proved to Bones that there was enough power for the surgery suites. Still it was obvious that the Enterprise was losing power for some reason.

“What the hell is Spock doing up there!?”

ST***ST

As McCoy had ordered the intership transport of Jim Kirk, Khan, and a third man straight to the infrared chambers of the med bay, Spock knew that he wouldn’t get any information about the captain’s condition. The CMO would first assess and treat his patients; inside the med bay doors, he might as well be CO. The Vulcan turned his attention back other urgent matters, the kind of that looked like a drifting, rotating mass of devastation.

“All remaining harbor passengers have been beamed aboard with the cargo transporter,” Uhura
reported. “And Mr. Scott wants me to tell you that ‘the engines are ready in fer a funeral’, if we don’t stop using the power he needs to keep the warp core going on.”

Spock lifted his brow. He had to have a talk with the engineer about more professional reports when this was over. “Understood and acknowledged,” the first officer commented wryly before his gaze wandered over the main screen. He watched the remaining ships depart the orbital station and fly a safe distance from the dying space harbor. Cocking his head, the Vulcan addressed the helmsman. “Mr. Sulu, what is the station’s orientation and projected trajectory?”

The helmsmen turned around in his chair; his face was pale. “It’s shifted from its original position above New Aberdeen. Still, the largest part of the town and the smaller villages around it will be directly affected when the space harbor burns up and breaks apart in the atmosphere.”

The crease in his forehead betrayed his frustration; Spock returned to his station, “ETA to planet’s atmosphere?”

“Fifteen minutes and forty-nine seconds, sir,” Hikaru answered promptly anticipating the question.

The science officer didn’t waste time calculating before he glanced at Uhura. “Lieutenant, how are the comms? Is our transmitter working again?”

Nyota met his gaze. “Yes, it is, sir.”

Understanding and concern passed between the two lovers; then Spock straightened. “Hail the Lexington. Ask Commodore Wesley if he can spare six ships. We will need six tractor beams in addition to our own if we are to hold and pull it from Aldebaran’s gravity.”

Uhura’s eyes widened, while Chekov murmured, “I already hear Mr. Scott complaining.”

Aboard the Qachjan, the Klingon Captain Kreth cursed while his comms officer continued to receive damage reports. The Enterprise had come out of nowhere. No sensors and no readouts had warned them of the starship’s approach until it was behind them. There was no doubt that it was the same ‘phantom’ that had accompanied the strike group at a safe distance and informed Starfleet about the Klingon fleet.
Koloth stood beside him; his gaze was dark and furious. “Just like Turkana!” he growled. “Kor told me about the small ship that was suddenly there and then gone. The Federation has developed something to impede our sensors.”

“But why doesn’t Starfleet use it on every ship? The only vessel we could not scan during the battle was the Enterprise and…” Kreth stopped when his ship reached the battlefield again, and it was obvious that Starfleet would have its victory.

He cursed colorfully when he got the order to withdraw the still operative members of the Klingon strike group – back to the Neutral Zone. The battle the Klingons had looked forward to was lost. There would be no annexation of the Aldebaran system or its neighbors; they would not be able to cut this sector off from the rest of the Federation. The Klingon attempt to expand their Empire was brought to an end.

As the hostile ships took flight, Bob Wesley decided to make sure they left Federation space for good.

He was about to order five ships to follow the fleeing enemy, but just as he was about to give the order, Palmer turned around in his chair. “Commodore, I have the Enterprise. Commander Spock wants to speak to you.”

“Ah, let me guess, the interference has magically disappeared!”

His comms officer just shrugged, and Bob groaned in frustration. To hell with this crazy clique of officers. He supposed their looking out for one another ought to be an admirable trait. “On screen, Lieutenant!” he growled and gave the Vulcan, whose face appeared on the screen, a dark glare. “As I can see your communication systems are working perfectly again, Mr. Spock!”

“Sorry, Commodore; there was an electrical short in the transmitter. I was able to bypass the route pending repair,” he heard the Enterprise’s female comms officer state in the background and Bob grimaced. “In this short a time? Well done, Lieutenant Uhura, isn’t it?”

“Yes, sir,” the woman answered; then Spock rose to speak.
“Commodore, I want to report that all have been evacuated from the orbital station, but we still have an emergency situation here. The space harbor doesn’t have any power and will drop into Aldebaran’s atmosphere in approximately fourteen minutes. The sensor readouts state that the station’s damaged drives cannot alter its current projected trajectory over New Aberdeen. We require six vessels with tractor beams in order to hold space harbor in orbit and shift it away from Aldebaran’s populated areas. Otherwise, there will be thousands of victims despite the Klingon retreat.”

Wesley cursed like a twentieth-century sailor before addressing his comms officer, “Palmer, broadcast to Mayflower III, Al’dh’re, Hood II and the two scouts. I want them to follow the Klingons to the end of the sector. Everyone else, max speed to Aldebaran. Explain to them what the Enterprise is proposing. I expect their cooperation.” He punched the intercom button on his armrest.

“Engineering, ready for maximum warp and ready the tractor beam. We’re going to pull a space station away from Aldebaran – and I don’t want to hear a word about our engines. I know that they’re in a bad way, but I want you to make it happen. Bridge out!” His gaze returned to the screen. “We’ll be with you in a few minutes; use your tractor beam to slow its rotation and decent if you can, Mr. Spock.”

“Aye, Commodore!”

“And one thing more. The next time you go off on your own little venture, inform me! Lexington out!” His hand gripped the armrests. “Mr. Sonik, maximum warp, now!”

The Lexington and the other vessels arrived as the space harbor was nearing Aldebaran III’s atmosphere. The continent below was on alert including New Aberdeen and the eastern. The smaller towns around New Aberdeen, as well as the area between the capital and the coast, were warned, too. People sought shelter in their cellars and small bunkers; the planetary defense systems were ready to shoot larger parts into smaller pieces as soon as entered the atmosphere. But it wouldn’t do much to mitigate the upcoming disaster.

The Shadow’s two vessels, the Lexington’s shuttles, the two Starfleet ships previously stationed in the space harbor and the private spacecraft, all crowded with the evacuees, remained in the orbit. The people were safer there than down on the planet. After Spock had broadcasted his plan and instructions, all ships equipped with tractor beams helped the Enterprise stabilize the orbital station as best they could.

The bridge crew of Starfleet’s flagship watched the mental giant slowly disintegrate as pieces broke apart and floated down toward the atmosphere before flaring and disappearing like a spark in a fire. Each broken piece foreshadowed what could be – what they were now trying to avoid – a planetary disaster. The effect of the fallen orbital station would mirror the effect of a large meteor. Tsunamis,
dust, and debris would spread for miles and miles from the point of impact, and New Aberdeen would cease to be.

The remaining vessels of the strike group led by the *Lexington* finally arrived. With military precision, the *Lexington* and the other ships took their positions between the private spaceships; everyone activated their tractor beams. Caught in the energized net, the space harbor’s descent slowed down and finally stopped.

Aboard each ship, engineers frantically fought to keep the engines and tractor beams functioning despite the damages. Valves popped, electronic circuits were overstressed and sent sparks through the air; still the crews managed the impossible.

Spock watched the sensors; Sulu corrected and recorrected his ship’s course – careful to keep a safe distance from the many ships around them. Chekov calculated the course to the outer moon where the damaged space station could be towed; Uhura recorded the damage reports each of the ships’ sections and their needs. Each Starfleet ship sounded the same.

They did it. The combined power of the starships and the smaller vessels overcame Aldebaran’s gravity; they dragged the former space harbor away from the planet at first meter by meter, and then a little faster.

Aboard the *Enterprise*, the lights in the corridors and ships’ spaces flickered; life support systems not necessary were switched off, and even the main lights on the bridge had been reduced to only what was needed. The command center illuminated mainly by the displays of the consoles. The ship shivered; the engines roared, but the proud ‘gray lady’ didn’t let her crew down.

Finally, as they reached the sixth and outermost moon of Aldebaran, the tractor beam was switched off; everyone on the bridge sighed in relief. Even Spock had allowed himself a deep breath before he glanced at Uhura. “Damage report, Lieutenant.”

Nyota Uhura was always professional, but right now her nerves were frayed. “May I report what isn’t damaged? It will save time, sir.”

Her unusual answer confused Spock for a moment; then the bridge crew burst out laughing. The Vulcan lifted a brow. Of course, he understood that this illogical fit of laughter was a kind of release of stress for the all-to-human crew. Human reactions were often more than illogical – if that were logically possible!
“Engineerin’ ter bridge!” Scott’s voice sounded as grim as his ancestors must have as they battled their own invaders. “Sorry, if I maybe donna use a polite tone, sir, but are ye done wit’ squeezin’ out t’e engines like an orange? I swear, this isn’t an Engineerin’ anymore, but a junkyard!”

Serenely, Spock cocked his head. “Then I suggest you should start to bring it back to order, Mr. Scott.”

“And with what, sir? With a shovel?”

This time the first officer lifted both brows. “If you think that this measure is necessary, you should contact the laboratory in the arboretum. I am sure that Lieutenant Ti-Ming will lend you a shovel.”

A snort was heard followed by an outraged, “If that be a Vulcan’s idea of a joke, I canna laugh about it.”

“I merely answered your question, Mr. Scott. I await your status report in an hour. Bridge out.” He heard a curse, then the connection was cut off. Spock straightened in his chair. “The same goes for the other sections. Status reports in one hour. I will be in the med bay.” He glanced at the helmsman. “Mr. Sulu, you have the bridge.”

The Japanese man rose. “Aye, sir.”

With a nod, the Vulcan left command central, stepped into the turbo lift, and rode it down to the medical deck. In every corridor, only the auxiliary lights were lit; crew members and evacuees, the least serious of the injured aboard, crowded outside of the med bay. McCoy had claimed a few neighboring spaces as a necessary expansion of the medical department.

As Spock stepped into the med bay, he was instantly confronted by controlled chaos. His gaze wandered to the wounded men and women; the medical staff did what they could with the dwindling supplies that they had. The surgery lamp was lit and from within, McCoy’s voice could be heard barking orders.

Searching his way through the cots and couches, he stepped into the CMO’s office. McCoy appeared seconds later soiled, sweaty, and distressed; he demanded medical files from the onboard computer.
“Spock!” Leonard acknowledged the Vulcan. “I’m very busy.”

“I am aware, Doctor,” the science officer replied calmly. “I only wish to look in on the captain.”

Bones was bent over his desk but looked up. “He’s out of danger. Kyle beamed him and Khan up just in time. The third man died a few minutes ago. His pulmonary and circulatory systems were too damaged to save him.” He gritted his teeth. “I hate losing patients!” He took his PADD and headed for the door, distracting himself with another topic. “What have you done up there that we have only auxiliary power?”

“We pulled the space harbor away from Aldebaran’s atmosphere and to its outer moon and away from the gravitational pull of the planet,” Spock answered as calmly as if he was talking about the weather.

McCoy stopped dead in his tracks and looked agape at the Vulcan searching for a hint that the first officer was joking. That was not the case. “We dragged the entire space harbor away?” he asked in disbelief and watched as Spock crossed his arms.

“Not only the Enterprise, but also the strike group minus five ship that are following the Klingons now,” he corrected the CMO. Then he lifted a brow. “So, the captain is no longer in mortal danger. How is his condition?”

McCoy grimaced and turned around. “Barbara!” he yelled and the nurse hurried to him. With a “Give this Geoffrey!” he handed her his PADD, and then he gestured to the Vulcan to follow him. Together they stepped into the room containing the infrared chambers. “Jim and Khan are in there,” he said pointing to his right.

Spock frowned slightly. “Why didn’t you separate the captain and Khan?”

At this Leonard had to snort. “You can try if you like,” he simply answered and stepped to the small observation window of the chamber where his friend and the Augment rested. “Just have a look. You see why I had to stick them in this tube together?”

Spock stood beside Bones and glanced through the window; his stoic expression changed just a bit and betrayed his bafflement. There, bathed in the warm infrared light, was his T’hy’la, naked and half covered by a warming blanket and lying in Khan’s arms! The Augment had wrapped himself around the younger man, his face looked – tranquil, and was an inch away from Kirk, who returned
the former dictator’s embrace.

“Doctor, can you explain why they…?” Spock began astonished but was interrupted by the CMO.

“M’Benga assumed and Kyle confirmed some minutes ago that the space from where Kirk, Khan, and the third man had been must have had a crack that opened directly into space. Kyle said that one of Khan’s arms was outstretched as though he were holding onto something. He was holding onto Jim with his remaining arm and legs when they materialized on the transporter deck. It seems Khan held onto Kirk to prevent him from being pulled into the gap. His muscle and tendon damage attest to it.”

Spock’s gaze remained on the super-human. Something deep in him stirred as he saw the too-familiar face again after all this time. It was anger that he quickly repressed. Whatever the enhanced man had done more than a year ago and despite the fact that the Augment had been responsible for Kirk’s temporary death, it didn’t matter now. Now the former dictator took care of the young captain; he had paid a penance. Slowly Spock looked at McCoy. “So, Khan protected Jim, again, but that doesn’t explain this… embrace!” There was a hint of repulsion in his voice.

McCoy sighed frustrated and irritated. It would be easy to tell the Vulcan about Kirk’s newest ‘conquest’, but it was Jim’s place to admit his foolishness to his friend and first officer. He didn’t want to spit Kirk’s dirty little secret out before Jim had the chance to explain. “Khan is very protective about those he regards as ‘his’,” the CMO said carefully. “He refuses to let go of Jim even in his unconscious state. He seems to be possessive of our captain.”

“Why should he regard Jim as his?” The Vulcan voiced the question he had asked himself a dozen times and more. “Because of the blood you used to… revive the captain last year?”

Bones made a face. “Maybe, but there’s more. During my examination, I found out that Jim’s cells regenerate nearly as fast as Khan’s.”

Alerted, Spock lifted both brows. “I beg your pardon?”

“How should I explain it?” McCoy felt a new wave of headache stinging behind his temples. “Jim had been tortured by Klingons barely a week ago; still all the wounds are as good as healed. His brain activity has increased; his body is already fighting off the aftershocks of being hit with temperatures beneath -50 degrees and lowered air pressure. Hell, he survived a room that was about to become a part of space – just like Khan. Aside from Jim’s only slightly slower processes, their scans are identical.” His glance switched back to the two men who cuddled together like two small children in sleep. “It wasn’t like that at Jim’s last exam. There were some side-effects after the
procedure last year that brought him back, but not like this.”

“Do you think Khan gave him some of his blood plasma when he rescued him from Turkana? Perhaps to increase the captain’s strength for the flight?” Spock made the right conclusion, and Bones rubbed his neck.

“That – or he injected him something afterwards to help him heal. I have no clue how much our superman knows about field medicine, but it’s obviously it is enough to mix some decent drugs and treat Jim after he recovered him. Don’t forget, I instructed ‘Sunrise’, but he knew enough to carry it out.” He shook his head.

“Will these ‘changes’ be a problem for Jim?” Spock asked carefully, and McCoy threw his hands up.

“How should I know? I don’t think so, but the tests I started running aren’t finished. I don’t think that there will be any serious biological implications. His body has already accepted the few augmented functions I’m seeing. What I fear is that he will be even more… Jim Kirk than usual. In other words: We will have even more trouble holding him in check!”

Spock nodded slowly understanding what McCoy meant. “How long do you want to keep them in the infrared chamber?”

Bones glanced at the monitor. “Their temperature is by 35.2 and 35.4 now, heart rate at 29 and 32. It’s an improvement, but not enough to remove them from the chamber. If they continue to improve, I think I can let them out in four hours – five at latest. I want their heart rates over 65 beats per minute and warmed through and through, before I place them in regular med-beds.”

“In separate ones, please!” Spock said; his face gave away the slightest hint of rejection.

Promptly, the CMO rolled his eyes. “Believe me, I’ll do my very best!”

TBC…

Chapter End Notes
Well, that was in the last nick of time that the Enterprise came to rescue. And that Khan gave Jim this ‘doping-drug’ made of his blood plasma not only helped him to escape on Turkana, but also saved him now, otherwise he wouldn’t have survived the whole disaster at the space station. Yet it will not save him from several necessary talks and explanations.

And latter goes for Spock, too, because in the next chapter he will have to answer to Bob Wesley, who is anything but pleased about our favorite Vulcan’s newest self-given mission. Parallel our two boys are giving Bones and later Spock another shock, and Galven and the others learn that their friend ‘Drythen’ is exactly there where he never wanted to be: On a Starfleet vessel. Of course that is going to make them act.

I hope you liked the new chapter – beginning with the action and ending with an outraged Bones because of his development concerning Jim’s and Khan’s relationship, and a thunderstruck Spock who will have some problems to recognize what McCoy already knows.

Thank you in advance for your comments,

Love

Yours Starflight
Chapter Notes

Hi my dear readers!

Sorry about the new delay, but my time was running short again and my dear beta-reader was in a lot of stress, too. But now I’m glad to get the corrected chapter and to be able to upload it for you. There will be candies, something to grin about, some hair-tearing situations and a lot of fun.

Thank you so very, very much for all the comments,

enjoy the new chapter,

Yours Starlight

See the end of the chapter for more notes

Chapter 33 – What’s going on here?

The next hours flew by for all of them. While McCoy continued to treat all those who needed medical attention, Spock received the ship status report, and he relayed the information to Wesley. Then the Enterprise and those vessels, which had evacuees on board returned to Aldebaran on impulse power. They beamed the recovered down to New Aberdeen. The needed repairs began, and all able-bodied crew members pitched in.

It was the same aboard the Lexington and the other ships. The starships most damaged would remain at Aldebaran for repair. Diego would be busy, that was certain. Two vessels would also stay to secure the planet while the other Starfleet cruisers would fly to different starbases for the needed technical refits among them the Enterprise. Her departure for Starbase 6-S between Aldebaran and Betazed was planned within the next 24 hours. Until then some auxiliary installments would be finished to ensure the ship’s functions.

And even if she had suffered some severe hits, Scott adamant that he would make the most repairs by himself. He didn’t trust some ‘civilian gearhead to mess with his babies’.

Said ‘civilian gearhead’ remained with Galven and the others, but as the poison smoke thickened, he began to vomit and to shake. The Tellarit took care that the Chilean made it to one of the overcrowded hospitals. But Diego’s condition wasn’t the only thing that worried Galven. He hadn’t heard word about Khan and Kirk. As soon as he was certain that Diego was in good care he began
to search for the Augment and the young captain – starting, of course, at the Enterprise. If someone had to know about the officer’s whereabouts, and therefore for Khan’s too, it had to be his friends.

Ritek contacted the starship. A wave of relief spread through the militia when they learned that Kirk and ‘Drythen’ had been beamed aboard in the very last moment and were now recovering in the Enterprise’s med bay. But this knowledge brought new concern to Galven and the others. The man they had known as ‘Drythen’ was now held by Starfleet, whether Starfleet knew it or not. He’d avoided it this long, and Galven, Caviw, Jeff and Ritek knew exactly why.

“We have to get him out of there before the uniform-wearers lock him away!” Galven oinked, and Ritek lifted both brows.

“Kirk wouldn’t allow this. He would never…”

“His hands are tied,” the Tellarit cut in. “There must be some kind of Federation warrant for Khan and with his first officer is in charge, well… One word and our augmented friend will find himself in custody.”

“The ship’s doctor promised Kirk he’d give him the chance to explain everything, and the Vulcan is his friend, too,” Ritek mused. “If he arrests Khan, he’ll also be condemning his captain. I don’t think that this Spock will do anything against our daredevil – for now.”

Galven had listened to the Rigelian’s words and scratched his snout. “Still, we should think of a plan to pull Khan’s ass out of the hot water he’s in. The boy can try to protect him as much as he wants, he will have no other choice than to bow to the laws or risk trial, too.” He cocked his head. “And to spare both the drama especially our young hero, we should act.” He glanced around. “What do you think?”

ST***ST***ST

“What do you think of this?” Geoffrey M’Benga turned away from the two men in the infrared chamber and towards McCoy who studied the readouts on the monitor.

“What their body temperatures are nearly normal now; their heart rate and breathing are steady. I don’t think another hour will hurt them, and then we should put them into med-beds.” He turned towards his friend and colleague. “With regards to ‘Sunrise’s’ true identity and his tendency to tear a place apart if things don’t go along with his wishes, we should keep Khan away from the other patients.”
M’Benga pursed his lips, looking back at the two males who still clung to each other. No, not clung – that was the wrong term. They snuggled against each other. “Len, you said Augments register higher brainwaves.”

“And this whole time, he's hanging onto the captain as if he thinks Kirk might disappear. In other words, he cares deeply enough for our captain that even unconscious, we can’t pull him away from Kirk. I think it would be the best for all of us not to separate them.” As he caught the baffled expression of the CMO, he added, “Khan’s instincts are fixed on Kirk and his subconscious will know if the captain isn’t with him anymore. And then we could have a real problem. An Augment only driven by his basic instinct is nothing I want to deal with.”

Bones rubbed his neck, acknowledging the truth in the other doctor’s assumption. “Rrrrright,” he grumbled. “Then make a room ready for the two – alone. The senior officer staterooms are all crowded, so clear out storeroom 3 and equip it with two med-beds, the portable life support, and link them to the terminal on my desk. I don’t want to let either of them out of my sight.”

Thoughtfully, the African doctor watched his colleague. “I do understand that you don’t trust Khan given your history with this man, but Kirk…”

“… May trust Khan too much,” McCoy interrupted him; driving his attention back to the small observation window of the infrared chamber. “Khan does nothing without purpose, and I'll be damned if I allow him to use Jim – not that I know what I'd do. But I'm watching him with both eyes wide open!”

Geoffrey nodded slowly. “Okay. I'll get a room ready.”

“Thanks,” Bones smiled at him and watched him leave the room. Then he glanced back at his friend and the Augment, who...Who was just starting to stir. 'Of course he’d wake up first. Even with more smoke than air in his lungs, and more bruising than skin, his brain just won't let him rest! I wonder if his enhanced intelligence isn’t a curse sometimes.'
He didn’t know what happened – or where he was. His keen hearing caught a gentle hum, and he thought he saw a red glow through his still closed eyes. The air was warm but synthetic, and he was laying on something comfortable.

And he wasn’t alone.

More asleep than awake, he felt a weight against him and in his arms; his nose caught a familiar scent mixed with traces of smoke and sweat.

Jim…

His mind and soul reached out for their mate and without his own doing, Nien shifted closer to the younger man in his embrace; instinctively searching his nearness. His action, as slow as it was, sent a sharp pain through his shoulders and screaming muscles in his arms. It hurt enough to wake him if only for a few seconds.

The soft buzzing and red shimmer caught his attention again. As he tried to analyze the data his senses were delivering to his mind, an intense headache began. Unable to suppress a small groan, he forced his eyes open.

All he could see was a metal, curved wall in arm’s reach and Jim’s face close to his own bruised, ash gray, dirty with grit, but relaxed. What was most important, he could feel and hear his beloved’s heartbeat and breath.

Memories crept to the surface.

Smoke, fire, shaking ground, explosion, screaming…

A large window showing the stars, a giant green bird on the other side of the glass, flashes of photon shots…

A raging storm in the hall; people were dragged away by the wind. There were more screams and then cold.
Khan shivered as his body remembered the iciness that had hit him. He began to tremble, and his teeth clattered with the memory of the cruel coldness. It was in his muscles, his bones, his heart, and even his soul. It reminded him far too much of cryosleep’s beginnings, and everything in him refused to endure that again.

Freezing, he closed his eyes again and searched for warmth. The warm air and the blanket, he only felt now, were not enough. His body and soul had its own ideas of fighting the cold and finding solace in one. Tightening his arms around Jim and ignoring the increasing pain in his arms and shoulder, he cuddled against the young captain; his instincts told him that they were safe with each other.

Safe, after they had been in danger.

Most of the memories of recent events shrouded themselves in the dark, but the Augment knew that death had tried for them and that they somehow escaped the Grim Reaper.

One memory, though, shone like a beacon brighter and warmer than the sun. His beloved’s voice, "I love you."

Jim loved him!

Nien had known it for quite some time, but neither Jim nor he had dared to voice it.

But in the face of death they had uttered those words that moved worlds.

Peace spread through the Augment. He was injured, this much he realized, and he was in a strange chamber filled with hot light. Infrared, his mind told him, but he didn’t care. All that mattered was that fact that he and Jim somehow escaped mortal danger; they both were safe, and this beautiful, shining young man loved him!

Listening to his own breath still shaky from the cold, he was soothed by the steady heartbeat of his beloved. He nuzzled the captain’s cheek and pressed a kiss to Jim’s dirty forehead. Somehow he knew that he could be happy; he had the man who held his heart and soul.

The tender gesture was enough to pierce Kirk’s consciousness. Feeling only warmth around him and the familiar proximity of the man he loved, one of Jim’s arms snaked around the Augment’s waist,
and he slipped a leg between Khan’s. His subconscious yearned to be as close as possible to his mate. Then sleep took him again.

Khan sighed quietly before he tugged Kirk’s head beneath his chin – relieved. Their lives were not threatened at the moment, this much his mind knew. They were safe and cared for, and just right now, that was all that mattered. Relaxing again the super-human drifted quickly back to sleep.

And outside the infrared chamber, a shocked Leonard McCoy stood and tried to comprehend what he just had witnessed.

ST***ST***ST

“Welcome aboard, Commodore!” Spock stood in the transporter room and greeted Bob Wesley who had showered and changed into a clean uniform before he beamed over to the Enterprise. He had gathered reports from all ships, had visited the Potemkin, and he wasn’t about to rob himself of the chance to get some explanations from the Enterprise’s first officer in person.

“Mr. Spock,” Wesley replied, then nodded at Kyle before he addressed the Vulcan again. “As you informed me, Kirk was among those you rescued from the wrecked space harbor. How is he doing?” he asked while leaving the transporter field. He followed the science officer into the corridor.

“The captain is still being warmed in one of our infrared chambers and has not regained consciousness. As far as we could trace back the situation aboard the orbital station, he and others were trapped in a hall that was about to crack open completely.”

Wesley stopped dead in his tracks. “What?” he gasped and as the Vulcan faced him, he thought he could see an echo of emotion in the almost black eyes of the other man.

“He suffers from capillary damage indicative of exposure,” Spock revealed. “Both definitive proof of being in contact with extreme cold and rapidly falling air pressure, that points toward one conclusion.”

“The room he was in must have had a breach in the bulkhead,” Bob murmured. He rubbed his neck feeling exhaustion for the first time since the battle ended. “Holy shit! A few seconds later and he would have been dead.”
“Exactly,” Spock commented calmly. Wesley shook his head. How was it possible that Vulcans could act on concern but never show it? Spock, as well as every other Vulcan, was a riddle to him.

“In other words: You saved your captain’s neck,” he straightened his frame, “by leaving a battlefield without conferring with me first.” As the science officer opened his mouth, Wesley groused, “Oh, I forgot, the problem of the Enterprise’s communication system. It came handy, don’t you think so? You are lucky to have such a capable comms officer who repaired an electrical short in a few short minutes.”

Spock recognized sarcasm; one cannot spend five minutes with Jim Kirk and remain ignorant to this particular human characteristic. And his so human inner voice now told him not to test the boundaries of Bob Wesley. Even he had his limits. Spock’s unilateral decision to follow the Klingon ship and Nyota’s lie could end in a trial for both of them.

“Lieutenant Uhura was top of her class for good reason,” was all Spock had said concerning his lover before addressing the main topic. “Our scanners reported that a Klingon ship left the battlefield and headed for Aldebaran shortly after General K’taH’s death. The action made clear that they planned to avenge him; the battle was as good as lost for them. Klingons do not go down without setting an example. Attacking the planet they had come to seize fits their modus operandi.” He and Wesley continued their way toward Engineering.

“Yet they didn’t attack Aldebaran, but the space harbor,” Bob murmured.

“Commander Capriccio informed me that all Klingon prisoners were beamed away – recovered by the bird-of-prey. Perhaps one of them informed the Klingon captain of Kirk’s presence at the station. That might have led to an attack. Jim and I are two of the most wanted persons in the Klingon Empire. It should come as no surprise that the hostile commander was tempted to gain at least one small victory by killing a declared public enemy.”

Wesley pursed his lips and stepped into the turbo lift followed by Spock. “Is this speculation or do you have proof?”

“Only Koloth, Korax or the hostile captain can answer,” the Vulcan replied casually lifting a brow. “But the events speak for themselves.”

Sighing, Bob shook his head and glared at Spock. “Still, your decision to race to Aldebaran should have been reported to me before the action took place.” He stopped the first officer’s reply with his hand raised. “You did the same at Turkana.”
“Sir, you gave us your permission to…”

“You were already in enemy territory when I gave you my unofficial permission, Mr. Spock. Don’t forget that little detail. You launched a rescue mission on your own without informing me twice now.” He fixed the Vulcan in his sights. “Jim Kirk’s tendency to bend the rules to his whim seems to have rubbed off on you!”

Spock had no reply and Bob snorted. “You boys give me more gray hair than I need. I’m happy with the loyalty and even friendship between my senior officers, but you’re crew are thick as thieves. Not that this is a bad thing – rather the opposite, because out here in the depths of space we need each other. But I’ll remind you that you all made an oath. This friendship cannot lead to insubordination, and what you did, Spock, comes very close to it.”

“Without my rash decision not only would the remaining people in the space harbor have died, but there would be thousands of casualties if the orbital station had crashed.”

“Do you think I don’t know this?” Wesley growled. “It’s the only reason I don’t drag your ass to court martial!”

The lift doors opened and revealed an absolute mess at the first sight; still Bob recognized some order in the chaos in front of him. “And now I want details about this sensor-disturbing thing that makes the Enterprise invisible for sensors.” He stepped out of the lift, Spock at his heels.

Together they searched for Scotty while Wesley got a first-hand report on the Enterprise’s condition. The deflector shields had to be repaired, and Wesley was determined to see this device that rendered the Enterprise invisible to sensors.

They found the Scottish engineer in one of the supply shafts that led to an overload valve. Well, a young technician told them that the pair of booted legs which hung out of the shaft belonged to Mr. Scott. And the fact that Keenser stood beside them like a small vision of a bodyguard confirmed the technician’s statement. The little alien was never far away from Montgomery.

“Mr. Scott?” Spock raised his voice; he got Scott’s typical answer.

“Ach, nae now, Mr. Spock. Tha’ damn valve ‘s about ter drive me insane!”
“Then I hope a short break will save you from the insanity’s unpleasantries, Commander Scott!” Wesley said firmly. The legs in front of him stopped moving.

“Commodore Wesley?” sounded the Scot’s muffled voice.

“In person, Mr. Scott,” Bob answered feeling amusement prickling in him, as the feet in front of his face kicked and struggled; their owner crept backward. First the waist, then the upper body and shoulders, and finally the tousled shock of hair came into view. Finally, Scotty slipped out of the shaft and landed on his feet, steadied by Keenser. Turning around, it was plain to see to what the Engineer had been up to these last hours. His clothes and face were full of grit, grease, and anything else you’d find climbing into an engine. ‘One thing’s for sure: An engineer will give his last breath for his machines!’ Bob thought smiling inwardly. It was the same with his own chief engineer. It seemed these men were cut from the same cloth.

“Commodore,” Scott saluted, and Bob allowed his smile to break through.

“Mr. Scott – busy with repairs, I can see.”

Montgomery nodded. “Aye, sir! Those bloody Klingons hurt not only my engines, but many of the systems that draw their power from the engines. It’ll be days until they’re fixed.”

‘He’s about those engines like they’re his kids just like my chief engineer. Hell, those technicians are all crazy!’ Aloud Bob said, “Well, then I don’t want to keep you away from your duties for too long. I’ve got a couple of questions concerning this experimental device you installed.”

Confused Scotty looked between Spock and Wesley back and forth. “Experimental device, Commodore?”

Bob sighed. “You know damn well I’m talking about whatever it is that you have that makes ships invisible to scanners.”

“Ah!” Montgomery nodded enlightened. “Well… it’s, as ya already said, an experiment and…”

“And when were you going to report this ‘experiment’s’ results officially to Starfleet Command?”
Bob asked.

Scott made a face. “Sir, all due respect, but the little machine wasn’t developed by a Starfleet member. Its owner is a civilian, and he shared his development with us only to… Well, to help us.”

“To get you out of Borderland, I know,” Wesley said calmly. “And I also know that our secret hero ‘Sunrise’ developed it. I only want to have a closer look at it before…”

“Commodore, I developed the transwarp beaming device. Command confiscated my work, and a psychopath terrorist used it to hop through the galaxy straight to Qo’noS. I got nothin’ more than a ‘Ya did well, Mr. Scott’ and that was it. This Sunrise guy developed somethin’ that could be critical to the survival of Starfleet, and he should get his money for it!”

Wesley lifted both brows. “Do you know ‘Sunrise’?”

“Na, I dunna, sir, but he must be a hell of a good engineer, and we engineers stick together. Professional honor, ya understand?”

“Of course, Mr. Scott, but you know the Starfleet regulation stating every new installment of new technology must be tested and the results submitted to Starfleet.” He smiled. “I also understand that you had to run tests first and then were too busy afterward because of the battle, so I understand your lack of information. But I’m sure you understand that I ask you to find a few minutes show me this device.”

Scott felt his cheeks heat up, and he gulped. Wesley’s words were a warning that he was treading on thin ice. “Well, it’s connected to the deflector shields that are being repaired as we speak. So I can’t demonstrate it, but show ya, sir.”

“That’s all I asked for, Mr. Scott,” Bob replied wryly before following Scott and Spock through the bustling engineering space. “Don’t you worry about me absconding with Sunrise’s development. If Command gets word and is interested in the technology, they have to offer him a fair compensation in return. I’ll see to that myself.” He glanced at the Vulcan while they climbed down the ladderwells built around the cooling tanks. “Speaking of ‘Sunrise’, what are the odds that he is aboard the Enterprise?”

Spock stiffened ever so slightly. “May I ask how you came by that assumption, Commodore?”
“Because he was with Kirk when I spoke with him via The Shadow. And, by the way, you aren’t the only one who talked with Commander Capricio. Care to guess what interesting news I got from him? He met Kirk in the spaceport – him and his ‘tactical officer’ who goes by the name ‘Nien Lavi’.”

He let two technicians pass carrying an obviously damaged engine part and remained rooted to the spot as he continued. “I could be wrong, but as far as I know there is no ‘Commander Nien Lavi’ officially aboard this ship, and the position of tactical officer and navigator is given to our Russian wonder-boy Chekov. Kirk, however, introduced a man named ‘Lavi’ to Capricio as the Enterprise’s tactical officer. Hazard another guess, Mr. Spock, who accompanied Kirk to the orbital station? Not only the owner of the civil shipyard over there that Capricio speaks so highly of,” he pointed to his left. “But also ‘Commander Lavi’, who was able to disengage a cargo ship full of liquid plastic that was about to explode because of the fire at the space harbor.”

He saw Spock’s face become even more stoic while Scott stared wide-eyed at him. Wesley wasn’t done.

“Capricio described him as a slender, dark-haired man in his late twenties or early thirties with pale eyes. The description fits extremely well with the account a young woman related to us of her rescuer aboard the space harbor. A Klingon pushed her over the balustrade of a catwalk, but ‘Lavi’ somehow managed to catch her at the very last moment. I learned this little story from one of the shuttle pilots I sent to help with the evacuation; he had the young lady aboard. She is quite head over heels for her savior.” He crossed his arms in front of his chest, looking straight at Spock. “Commander Lavi, Sunrise – or Drythen – are one and the same person. And he was with Kirk the whole time. You beamed Jim up, didn’t you? And he wasn’t alone, right?”

Spock had listened to the commodore’s conclusion and felt the highly illogical urge to curse. Wesley was brilliant; the Vulcan had known this for quite a time now. But how the Commodore wove the cords of information was – impressive.

Bob interpreted the first officer’s silence. “Don’t make me ask your transporter chief if he beamed up Kirk alone or if there was another man with him, Mr. Spock!”

Crossing his arms behind his back, Spock looked at the Commodore; his expression was stoic but different than others. ‘I’d never play poker with this man!” Wesley thought; then his thoughts were interrupted by the Vulcan’s answer.

“Jim wasn’t the only one rescued from that exposed hall. Two other males were beamed aboard of which one, regrettably, was lost even after all of Dr. McCoy’s efforts.”
After the first officer stopped and didn’t make any move to continue, Bob narrowed his eyes. “I haven’t forgotten; there is still the third man you mentioned but won’t talk about!” he huffed; irritated. “For God’s sake, man, spit it out! Is Sunrise aboard in McCoy skilled hands? Yes or no?”

Spock took a deep breath, ignoring the smell of burnt cables, hot metal, and other unpleasant reminders of their recent confrontation. He knew that he had to answer the Commodore. “Yes, he is,” he replied.

Wesley sighed. “Hell, this admission took some doing!” He shook his head. “And you know is true identity?”

Again the Vulcan felt cornered – not for Khan, but for Jim who would be in deep water if it came out that he worked hand-in-hand with a wanted terrorist. “Yes, I know this man.”

Scott stared wide-eyed at him. “Ye do, sir?”

Bob cocked his head. “But you don’t want to reveal his true name.” As Spock again only looked at him, he threw his hands up. “What has this man done that he needs to hide? And who is he that even you'll keep his identity a secret? Did he rob the crown jewels or what?”

“No, sir, not the English crown jewels. You do mean the English ones, don’t you?”

“Quit doing that delay of clear answers!” Wesley had snapped before he pinched his nose. “Spock, I only want to speak with him. I don’t know why everyone is so hell bent on hiding him, but I give you my word that I won’t tell anyone about his identity. Neither my nor your officers nor Starfleet Command will find out about him from me! But dammit, I have to talk to that man!”

“I understand,” the Vulcan replied carefully. “Right now he remains unconscious in the infrared chamber as is Captain Kirk.”

Bob grimaced. “I knew you’d point that out. But you’re leaving in about twenty hours for Starbase S-6. Maybe the two gentlemen sleeping beauties will wake long enough to answer a few questions before the Enterprise is on her way.”

With those words, he turned around to a curious and confused engineer. “Shall we visit Mr. X’s device now?”
Scott nodded wordlessly and guided the Commodore through Engineering; the Vulcan followed him, lost in thought.

Jim had given Spock his word that he would explain Khan’s presence and why Kirk not only protected but trusted the Augment after their experience with him one year ago. Only afterward would the Vulcan decide on his next course of action. He had learned to trust Kirk’s lead and didn’t doubt his friend and captain’s decisions. But in this case, he didn’t know what to think of Jim’s actions. Still he promised to stay silent – a promise he was forced to extend to another person. He knew Kirk did not want that; it was against Khan’s interests. Spock could only hope that the super-human wouldn’t feel threatened and betrayed, wouldn’t feel the need to retaliate.

ST***ST***ST

The information that the Klingons had left Federation territory and withdraw to the new Neutral Zone reached Wesley two hours later after he had returned to the Lexington. The Hood II and the other ships remained near K7, annexed by the enemy. The ships patrolled along the new border.

Aboard the Enterprise, the crew was still busy despite the late hour. McCoy finally removed Jim and Khan from the infrared chamber after their temperature and bio-signs had finally regulated. Still they would suffer chills for a while longer.

Switching the infrared light to a sonic beam, he took care that his friend and the super-human were washed before he left the chamber. It wasn’t easy to separate them, but with the help of M’Benga, Nurse Barbara, and Paramedic Ben, they finally had the two men laying in separate beds and clad in hospital gowns. Together they connected them to their devices and monitors. Once again checking their bio-signals, Bones finally left the former storeroom 3 and returned to his office – glad that for his short break.

The main room of the med bay was dimly lit for the night; most of the on-call nurses rested in the staff room and except for the soft peeping of the bio-scanners and life support systems it was quiet. Rubbing his eyes, Bones let himself fall back into his chair. He closed his eyes – tired like as he hadn’t been in a very long time.

He didn’t even realize that he fell asleep until a warm, strong hand gently shook him accompanied by a deep, familiar voice. “Dr. McCoy?”

Grumbling, he unwillingly opened his eyes feeling groggy and exhausted. Above him Spock’s face
hovered; his dark eyes were unusually soft.

“I’m sorry to disturb your well-earned rest, but if you sit like that for several hours you will adversely affect your neck and back. Besides, I have to speak with you.”

Bones sighed. Sometimes he wished the Vulcan away to anywhere but here. He yawned and straightened up. An unpleasant stabbing pain in his neck and shoulders punished him for his unusual sleeping position. “Ouch!” he groused, rubbing his face with both hands. “Past tense, Spock, I already have back problems.”

“No wonder, your sleep position is incongruous with proper rest or sustained health,” the first officer commented wryly and stepped back at the other side of the desk.

Shooting the Vulcan a dark glare, McCoy massaged his neck, forcing his mind to return to work. God, was he tired! “So, what can I do for you?”

To his surprise, Spock seemed to be uncertain. “I came to…” He hesitated, highly unusual for him. “I need your advice, Doctor.”

This admission was enough to catch Leonard’s full attention. “You need my advice?” He scratched his temple. “I have to mark this day red in the calendar.” As he saw the Vulcan stiffen, he waved it away. “Forget my comment. When I’m ready to drop, I get sarcastic.”

“Then you are obviously quite often ‘ready to drop’,” Spock replied arching brow.

McCoy rolled his eyes. “Point taken,” he said; then he clasped his hands on the desktop and looked expectantly at the Vulcan. “So, how can I help you?”

The first officer took a deep breath. “Commodore Wesley was aboard…”

“So I heard,” Leonard mumbled.

“… he is demanding to meet Sunrise – Khan.” He saw the CMO go rigid; McCoy stared at him, shocked.
“What?” As Spock nodded, Leonard gasped, “I hope you talked him out of it.”

“I was unable, Doctor. Commodore Wesley insists on speaking with ‘Sunrise’.” He sat down in the visitor chair. “He also promised to keep our special ‘guest’s’ identity a secret.”

“And you gave in,” Bones groaned. “Sweet Lord, now the shit is going to hit the fan. When Wesley learns about Sunrise, he’ll have to turn him in. And Jim will go right along with him not only because he participated in the cover-up but because of his damned misplaced loyalties!”

Spock raised his brows. “We all covered for Khan by staying silent after we discovered his identity. And this is precisely my dilemma,” he said. “I have to obey the indirect but still firm request of the Commodore, but I also made a promise to Jim. If I keep that promise, I can be put to trial for insubordination. I would risk court martial if the act would prevent what Jim fears, but it would only delay the inevitable and negate the benefit to Jim. The Commodore is already suspicious. Preventing this meeting would alert him, and we may appear unreliable; he might reconsider his decision to ignore ‘Sunrise’s’ past.”

Leonard pursed his lips, aware of the dilemma the Vulcan faced. “And you think as long as Wesley stays in the dark about ‘Sunrise’, Jim and Khan are safe – more or less. But that all depends on whether the Commodore recognizes Khan. It’s not like we can ask him. We can only find out when they meet.” McCoy dropped his head. “Superb!” he growled.

“Not exactly the words I would choose, but we agree on the topic,” Spock said.

Bones looked back at him. “A joke? From you, Spock? Jesus, now I’m worried.” He ran his fingers through his already tousled hair. “God dammit!” he groaned. “All this,” he gestured wildly around him, “mess because Jim is suddenly all buddy with that blasted ‘I’m-better-at-everything’!” He shook his head. “He’s taking years off my life!”

For a long moment both officers were silent, then the Vulcan continued quietly. “There is more I wish to discuss with you concerning Khan. He has a short temper. And he is going to feel threatened as soon as he realizes where he as well as when the Commodore arrives. Khan is known for his brutality where his survival is concerned. He told us himself that his instincts were engineered to survive at all costs. I will send Security to the room where he and the captain are…”

“Oh no, you don’t!” McCoy said firmly fixing the first officer with an intense stare. “My med bay is crowded enough. I don’t need here six or eight gorillas in red-shirts taking up even more room. Khan
“How can you be so sure, Doctor?” Spock interrupted him. “Because Khan saved Jim’s life? Perhaps he feels a familial bond because of the blood and plasma he has shared with him in the past, but I do not believe we can trust Khan if he feels threatened or…”

He stopped as an alert from the monitor at his desk beeped. The CMO’s eyes widened.

Bones gulped as he saw the readouts. Khan’s med-bed sent the alarm – no signal.

“Shit!” Bones whispered. No signal meant one of two things: Khan was dead or had pulled off his connectors. That meant that he was out of his bed.

“What is it, Doctor?” Spock asked curtly.

“Khan’s med-bed isn’t reading.” He rose. “And I highly doubt he’s dead. That means…”

“…He is up; he left the bed!” the Vulcan finished the CMO’s sentence. Both men had rushed out of the CMO’s office before Spock spoke the last word.

Cold… It was so bitter cold. Snow crunched beneath his fast fleeting feet. In front of him a boy two or three years younger than he stopped, heaving for breath he just couldn’t catch. He looked around panic-struck. “If they find us, we’re dead.”

“I don’t get it, Kevin. Why did this man murder my mother’s friends? Why kill all those people? I know food is scarce here, but killing half of us isn’t the answer. Supply vessels are on their way and…” He stopped, and the other boy pulled him along. “Run, Jim, they’re coming!”

And he ran until the surroundings changed. He wasn’t on Tarsus, the lost colony where the self-proclaimed governor Kodos ordered the execution of half the planet’s population to grant the other half survival. He was on a small ice-moon, marooned after Nero destroyed Vulcan. And he wasn’t alone; a mighty, hungry lobster-like creature hunted him for its next meal. And this time there was
no cave nearby, nowhere where help could find him.

Jim ran like never before through the icy cold air…

All of the sudden, strong arms stopped him and for a moment he struggled with all his might, then warmth seeped through his clothes right down to his bones.

He was pulled into a secure embrace, and when he turned into the shelter of those arms, he inhaled safety and love. His heartbeat slowed until it beat in unison with the man who held him tight – took him away from the planet and the hungry beast that would eat him alive.

ST***ST

The moment McCoy stepped into the former storeroom, he knew that he would find Khan’s med-bed empty. He wasn’t mistaken. The bed was abandoned; the blanket hung to the floor.

Leonard’s gaze flicked right to where Kirk’s bed was placed, and his jaw nearly hit the floor. Behind him, Spock stopped dead in his tracks and inhaled sharply.

With uneasy steps, Khan walked slowly towards the young captain unaware of the two other men’s arrival. Jim thrashed frantically in his sleep, whimpering and moaning. Astonished, Bones watched as the Augment lifted the blanket that covered Jim and slipped beneath it. He gathered the young man in his arms once more who… Who almost instantly relaxed in his arms! Jim gave a miserable whine then turned towards Khan and snuggled into his embrace only to sigh with contentment.

The bio scanner attached to Kirk’s bed recorded the data of both men now, and Bones eyes became wide as saucers. “That… that’s not right!” he whispered, staring at the readouts before looking back to the two men in the med bed again.

“What is it, Doctor?” Spock asked; his tense voice betrayed the shock that had hit him, too.

“He… he’s asleep!” McCoy turned around and looked at the first officer. Spock looked irritated. And if you could tell the emotion of a Vulcan by his face, well, McCoy felt the urge to hide the breakables. Spock looked as though he would spring at the slightest provocation.
“Of course he is asleep. Jim evidently experienced a nightmare and…”

“I'm not talking about Jim, Spock. I'm talking about Khan. The scans say he's asleep, but he got out of that bed,” he pointed across the room, “and walked over to Jim in his sleep!” His attention shifted back to the two males lost somewhere in dreamland; they looked peaceful. McCoy refused to think ‘cute’, so peaceful would have to do. “Khan’s survival instincts may be strong,” Bones whispered, “but his protective streak is intense – and it's directed at Jim.” He sighed and rubbed his face again, his headache return.

Spock stared at his friend and the Augment feeling a certain… There was something his logical mind hid from him – something he couldn’t put a finger on. “There must be a fundamental reason for Khan’s changed behavior towards Kirk,” he murmured.

Biting his lips, McCoy remained silent. He knew that ‘fundamental reason’, and the prospect that there were deeper feelings involved rather than only lust made him uneasy. Jim's never had a relationship that lasted longer than several days – a few weeks at best. Something told Bones that Khan was quite the opposite; he didn’t seem like a guy who had many one-night stands. Not with his personality. He gave and demanded fidelity. Bones knew that just by the way he spoke of his people. If Jim didn’t take seriously whatever it was that was between them, Bones was sure it would lead to a disaster beyond his pretty damn vivid imagination.

Still there was that inner voice whispering to the CMO that this was entirely different – that there was more to the two men than just desire and sex. Khan was unconsciously pulled to Jim even in sleep. McCoy knew mothers went to their children if they cried at night. He saw Jocelyn do it when she was asleep. Khan reacted in nearly the same manner by literally sleepwalking to the younger man to comfort him; he must have felt the captain’s distress. This was only possible if there was a strong bond present, like that between parents and children, siblings or twins perhaps – always between family.

Family!

Khan did everything for his family. And now he did everything for Jim.

Jim was family to Khan by blood, but that didn’t account for all the evidence – the men together, the bruising, and the cottage banter.

Bones had time to process the information, but it didn’t make it any easier. He had come to know Khan as a foe – a mortal enemy. And leopards can’t change their spots, so what the hell was going on?
Khan’s feelings for Jim influenced his decisions.

McCoy took another deep breath and turned his attention back to other matters concerning their ‘guest’. “I don’t think we have to fear about Khan flipping out when he realizes where he is or that Wesley insists on speaking to him,” he murmured after several seconds. “He won’t threaten Jim’s captaincy – let alone his health and life.”

Spock looked at the two entwined figures on the bed and then back to the CMO. Even without examining how the doctor came to the conclusion, he realized that McCoy was right. For reasons that defied all logic, the Augment had gone from an enemy to someone who valued Kirk’s life more than the own. His actions at Kirk’s side then and in his bed now spoke for themselves – comfort in impending death, and in life.

Spock’s Vulcan mind didn’t understand what was happening between his friend and the former dictator, but his human side began to formulate an answer – one he did not want to consider.

Ten minutes later he stepped into his and Uhura’s quarters; he found his lover deeply asleep. Of course, they had all pulled more than two shifts; each gave their best and more to win – against the enemy, against time, and against the odds their friend and captain faced. Even the strongest of constitutions required rest after the strain and stress of recent events. Even Spock, who could go for days without sleep, knew its importance in restoration and maintenance of health.

Quietly, he stripped off his uniform, chose a short, light Vulcan robe and pants, and slipped beneath the blanket careful not to wake Uhura. Nevertheless, she began to stir; one of her hands reached for him. Even if Spock avoided other’s touch, he tolerated the young Bantu woman’s need to feel him near. As her fingers curled into the soft material of his robe, he turned towards her. And like so often, she scooted closer and snuggled against him – still asleep.

Spock lifted a brow. He had experienced this behavior often enough and had never asked about it, but it triggered another memory of a similar scene only a quarter hour ago. Like Nyota, Khan had been asleep yet reacted to another’s presence. Pursing his lips, the Vulcan pondered. As McCoy said, instincts played their part in the actions of many different species – perhaps all of them. Even Vulcans acted on instinct if the course of action was logical. Still there was the question of how.

“Sevrythinrigh?”
Spock needed a moment to comprehend what Uhura had mumbled, that she had woken up. He answered quietly. “I am all right, thank you, my dear.”

She took a deep breath and exhaled with a soft, contented sound before she relaxed; asleep again in seconds.

Again Spock felt a wave of confusion. How was it both Uhura and Khan display similar nocturnal behaviors towards others and what did it mean?

ST***ST***ST

Jim noted first the warmth around him. Then one by one, his senses came back online and each one reported. He had a foul taste in his mouth, a sore throat, pain in his chest, right hip and thigh, nausea, and exhaustion that seemed to weigh down his whole body. But the warmth; he wasn’t alone, and he didn’t need to open his eyes to know that it was Nien holding him in his arms.

This was a good thing!

It meant they were together and most likely safe; so why did he feel like he’d been run down by a dozen hypertrucks? He moistened his lips and felt his head throb.

A hangover perhaps? If so, then this was the granddaddy of all hangovers.

Then a chill from deep inside passed through him. Shivering, he pressed himself closer to the Augment whose body offered the heat Jim needed. Still trembling, he listened to the quiet sounds around him. There was a hum, muffled steps far away, hushed voices…

Where were they? They weren’t in the little cottage, their very own private heaven, of that he was quite sure. Well, he would have to open his eyes to have a look at his surroundings, but the first try turned out to be a mistake. The light was dimmed, but still too bright. Instantly his headache went from dull to pounding. With a moan, he quickly closed his eyes again; looking around was not an option to figure out where they were.

“I know you’re awake, Jim,” a familiar voice said calmly. Kirk forced himself to open his eyes once more; he saw McCoy’s face above him.
“Bones?” he whispered in surprise and relief; he ignored the pain that the light caused.

“Yeah, it’s me,” the CMO nodded; he scrutinized the captain. “How do you feel?”

“Not good,” Kirk admitted after a second.

Leonard snorted, “That’s no surprise; you suffered space exposure.”

Uncomprehending, Jim blinked at him; then his memories returned.

The assault on the orbital station…

The fight against the flames, the traitor, and Korax…

Starfleet shuttles and the hope of escape…

Then the bird-of-prey fired at the space harbor…

Certain death…

The gap in the bulkhead…

The terrible pull with the escaping air. The cold…

Nien holding him tight…

Nien!
Jim turned his head, and his gaze fell instantly on the beloved’s face – pale and now marred by spider webs of tiny dark veins. His eyes moved beneath the closed lids; otherwise he lay perfectly still on their shared bed.

Happy but concerned, Kirk’s gaze roamed over the Augment’s features before his eyes found McCoy’s again; the pain in his temples lessened a little bit. “How’s he doing?” he whispered hoarsely; it hurt to speak.

“He’s strained the muscles, ligaments and tendons in his arms and inhaled too much smoke just like you. I also treated a gash on his shoulder. That’s the medical bits. But why it was and still is impossible to separate you two is beyond me.”

“’scuse me?” Jim mumbled, confused, and Bones rolled his eyes.

“He held onto you as we beamed you aboard…”

“Aboard?” Somehow the young captain was able to lift his head despite the apparent effort it took to do so. Disoriented, he looked around and McCoy grimaced.

“You’re back on the Enterprise, Jim.” He met the widening eyes of his friend and continued, “Spock went all ‘Jim Kirk’ on us and came to get you. We arrived just in time too. Had to chase away a Klingon or two and then we beamed you and Khan from where you were trapped.” He shook his head, and his eyes betrayed his so oft-hidden emotions – well, except anger, frustration, dismay; those are normally on his sleeve. “Two or three seconds later and you both would be dead now,” he mumbled.

Jim’s eyes were wide as saucers now; the shock woke him up just a bit more. They would have died if… The pain in his body stopped his movements. With a groan, he let his head sink back. “Jesus!”

“You can say that!” McCoy deadpanned; he was angry and relieved all at once.

Taking a deep breath that made his nausea worse, Kirk moistened his lips. “Are you guys okay? Any losses? What about the ship – and the battle? Did we win – is the sector safe?”

This time Bones smiled for a moment. These questions were so typical of his friend who always thought about others first. Then the CMO turned serious again. “We won – but had to pay a price for
it. Nine of the crew didn’t make it; forty-eight are my guests at the moment. The man we beamed with you and Khan aboard died, too. He was too far gone to stabilize his condition.” He grimaced and caught Jim’s sympathetic gaze; the young captain knew all too well how much the older man hated to lose a patient. “As for the ship,” McCoy continued. “Mr. Scott says ‘she’s hurt pretty bad and will need quite the miracle to be right again’. Spock told me that we could fly with warp four if necessary and that, except for several needed repairs, the ship is in ‘remarkably satisfactory condition considering the overall optempo of the battle’. We’re heading to space station 6-S in the next couple of hours for a technical refit. Scotty needs some parts to keep the ship going until we reach 6-S, so he says,”

Jim groaned. “Those two…I should find out for myself.”

The CMO raised his brows and resembled Spock for just a second. “First you have to get well – again, Jim. Smoke inhalation is nothing to sniff out – no pun intended. And your body is suffering from not getting the opportunity it needs to heal completely before you go wrecking it all over again – regardless of whether you can recover almost as fast as Superman over there.” He nodded at the still deeply sleeping Khan. “Any explanation?”

Very slowly Kirk nodded. “Yeah. Nien gave me something when he broke me out of the Klingon prison. A mixture of his blood-plasma, adrenalin and some… well… whatever he had.” His gaze wandered back to the Augment; warmth and tenderness lay in his eyes. “Without it I wouldn’t have made it – the flight, I mean. I was… I was in a bad condition, Bones.” His gaze flickered back to the CMO whose face was uncommonly expressionless.

“I thought as much,” McCoy stated quietly before he added, “But this drug he gave you affected your cells, Jim, your physiology overall.”

“I know, but I didn’t care then, and I don’t care now.” He swallowed. “It was hard, Bones. I thought I was going to go insane from the pain. The hatred, the knives, the whip, the pain sticks… It all hurt so much.” He closed his eyes to the sting. He hadn’t gotten over it yet, not completely. Healing needed love, but it needed time too. “Then Nien was suddenly there and stopped them; he freed me, held me…” He gulped down the rising lump in his throat and tightened his arms around the former dictator.

For just a moment Khan stirred and his lids fluttered open only to pull Jim closer; he was asleep a second later.

McCoy, whose little-known compassion sparked as he listened to Jim’s words, frowned now at this new compulsion. The way the two men acted spoke volumes. Leonard didn’t want to consider what that meant at the moment. There were more urgent matters at hand, like, for example, this cozying up thing! Couldn’t Jim see what this looked like? Obviously not. Crossing his arms in front of his chest,
Leonard glared at his friend. He felt anything but doctor-like with an urge to punch some sanity in the younger man who was about to lose everything because of the man in his bed – literally. That would come, but Leonard had to triage what he could see, now.

“You know, I have nothing against a nice cuddle, but this isn’t the goddamn time or place! You two already give me and even Spock the chills.” He caught Kirk’s confused gaze and explained, “We couldn’t separate you after Kyle beamed you aboard. I had to cut off your both clothes before I could stick you into one of my infrared-chambers. Only later, after M’Benga and I somehow managed to put you in two different beds. But later Mr. ‘Better-at-everything’ actually sleepwalked to snuggle up to you again.” He watched his friend’s cheeks reddening and growled. “You wanna imagine Spock’s face when he saw you two?”

Jim stared in alert at him. “Spock saw…?”

“Of course! And you can call yourself lucky that your friend was able to stall Wesley. He wanted to make a sick bed visit during his short stay yesterday evening. Explaining why you two are inseparable in one of my infrared-chambers would have been a bit awkward!” He watched Jim bite his lips. The anger he had felt when he found out about the true nature of Kirk’s and Khan’s relationship rose again. “Are you going to tell me why you two are clinging to each other like little children, or not?”

Jim felt the heat in his cheeks increasing in his whole face. Did Bones know? No, how could he? Kirk knew he had to tell Bones the truth, but right now he just didn’t have the strength. “Instinct?” he offered sheepishly; his friend’s expression darkened.

Jim lied down in shock trying to comprehend what just happened. McCoy was angry with him; this much was obvious. Bones had been less than delighted when he found out about ‘Sunrise’s’ identity, but he had promised to give Jim a chance to explain. So why was he so irritated now? Because Khan and he sought comfort in each other after all they’d been through? They had faced death from fire,
smoke, phaser blasts and – dammit – by exposure to space! What did Bones expect? That they just say, “Excellent, we're still alive,” and be done with it? Hell, they both had been through more traumas in the last hours than most people have in a lifetime. In their lifetime, they both had been abused and tortured; they both have suffered at the hands of others. Wasn’t it normal to seek for solace and security – to bond with someone who shared in your traumatic experiences? Bones was a doctor, for God’s sake! That includes at least some basic psychology, doesn't it?

“If you want to sulk, I can’t stop you!” Jim grumbled to no longer present Bones.

Well, on the other hand Bones was right on one point. The whole senior staff would be in trouble if Bob Wesley recognized Khan. In the crew’s silence, they all had covered for Kirk and the Augment; they had all hidden the former dictator’s identity. They could all face trial for not reporting the location of a wanted criminal to the Federation authorities or Starfleet Command.

Jim groaned and closed his eyes. He and Khan had been beamed out of mortal danger only to find themselves in another precarious situation that not only might cost his and Nien’s freedom, but also his friends' careers.

“Fuck!” Kirk swore under his breath and buried his face in Khan’s crook of the neck. But even the familiar scent of his beloved couldn’t mollify him; there was just so much at stake. Yet he wasn’t able to avoid the gentle pull of sleep that finally overwhelmed him…”

TBC…

Chapter End Notes

This I’m calling ‘from smoke to smother’ – and in this case this proverb has a double meaning (smile). Bones got another demonstration of his friend’s new found relationship and how an Augment reacts emotionally, Spock got a little shock (the big one is still to come yet) and Jim is cornered. And above all Khan’s identity is about to be exposed to Wesley.

In other words: Our two boys are again in deep water.

I don’t want to tell you much about the next chapter, only that Uhura takes some own action, The Shadow and Diego are about to help ‘Drythen’ but are stopped by something, you all are not expecting and that Wesley…

No, you’ll have to wait until the next chapter will be published.
I hope you liked the new installment and I’m – as always – damn curious about your reactions.

Have a nice rest of the week

Yours Starflight
Chapter Notes

Hi my dear readers,

Just in time for the weekend comes the new update. Thank you once again for all the kudos and comments. Yes, our two heroes are safely aboard the Enterprise, yet both are still at stake – last but not least because of a certain commodore, who (after all) presents Starfleet Command in this sector. And Bob gets some very serious hints which give him the right idea about ‘Sunrise’.

Parallel Diego, Galven and Caviw are getting a little bit in action, Uhura realizes something her lover just can’t and then comes the confrontation between Bob, his protégée and ‘Sunrise’.

Enjoy the next chapter,

Love

Yours Starflight

See the end of the chapter for more notes

Chapter 34 – Everything comes to light in the end

While McCoy talked to a still groggy Jim Kirk, elsewhere, Uhura watched Spock slip into his uniform shirt while she pulled on her boots. Her lover was often quiet in the morning, but the Vulcan was so lost in thought that he didn’t recognize her apology as she stepped out of the bathroom nearly running into him. His usually expressionless face appeared tense. He stopped his movements and cocked his head as if he listening to a voice only he could hear; Nyota had enough.

“All right, Spock, out with it!” She said rising from her chair.

This time she got a real reaction of surprise as her lover looked at her rather than through her for the first time this morning. “I beg your pardon?” he asked; Nyota sighed.

“Love, the whole morning you’ve been off to worlds unknown. You were so lost in your own head; you didn’t even react when I nearly walked into you. What’s going on!?”
For a long moment, the Vulcan pondered his answer; then he decided instead to voice the question that plagued him for hours now. “Nyota, as I came to bed last night, you were deeply asleep; still you reacted to my presence by closing the small distance between us and pressing your body to mine. Why? Or perhaps how might be the better question.”

Uhura pulled her long hair up into a ponytail. “Did it bother you?” she asked baffled; since they've been in a relationship, Spock had never complained of her touching him.

The first officer shook his head. “No, of course not, my dear. I am sorry if I intimated a false conjecture because of my question. No, I ask because I do not understand how you could react when you were asleep. I made sure that I was silent and careful to not disturb you when I came to bed; still my presence elicited a response.”

Cocking her head, Nyota watched him attentively. “Well, I don’t remember it, but if you say that I acknowledged your presence, then I must have just sensed it.”

“You… You sensed it?” Curiosity shimmered in the Vulcan’s eyes, and the young woman sighed again.

“How can I describe it? We are very close – perhaps closer than purely human couples because you're touch telepath. We share a bond due to your abilities that touches both of us. If my mind is not otherwise occupied, I can feel your presence – it's a gentle feeling and deep. I probably sensed your arrival last night in that same way. When you’re asleep, the conscious part of your brain is turned off. The subconscious becomes alert and able to react.” She examined his face – his eyes, which had widened ever so slightly.

Pursing her lips, Uhura continued softly, “Let me guess, your question is not just about us, rather you're thinking of someone else.”

Spock nodded slowly. “Yes, you are right. Your reaction was similar to something I witnessed just before I came to our quarters.” As he caught her asking glance, he added quietly, “I am thinking of Khan.”

“Of Khan? Did he…?” Uhura frowned. “He reacted to someone while he was asleep?” As the Vulcan made another affirming gesture, she blinked in confusion. “To whom? I mean, with him being an Augment and all, his subconscious must work on a whole another level when it comes to his crew, but…” She stopped when her bright mind gave her the only possible answer. “Kirk!” she said quietly, and Spock allowed himself a sigh.
“I went to the med bay last night; the captain had a nightmare. Khan left his bed and went to him for comfort I suppose – while he was asleep.”

“Khan… sleepwalked?” Uhura’s eyes were wide now.

“Yes, sort of, as Dr. McCoy explained. And what confuses me even more is the fact that Jim calmed instantly after Khan…” He made a short gesture. Nyota realized what her lover saw but didn’t want to voice.

“Khan held Kirk in his arms and Kirk returned the gesture – like how they were when they were beamed aboard.”

A Vulcan brow rose. “How do you know?”

“Kyle. We were all worried about the captain. When Kyle came to the bridge to give me his report for the log, Sulu asked him for details. He told us that Kirk was beamed away from the station securely held by a tall and slender man with dark hair. We all know by now that ‘Sunrise’ is Khan; you don’t have to be a genius to figure it out. Kyle also told us that the stranger was barely conscious, and Kirk was out cold. The other man has to be Khan. And besides, you’ve been frustrated since we got Kirk back onboard and you visited the med bay.”

This time Spock lifted both brows. “I am a Vulcan, Nyota; I do not get frustrated.”

Uhura groaned. “Oh, please, Spock, don’t deny the obvious. You’re irritated just like McCoy. We all contacted the doctor yesterday to ask after Kirk. All Leonard says is Jim’s got more luck than judgment. True, but Kirk could steal his grandmother’s silver and the doctor would defend him. Only Khan could get his ire up like that.”

Spock looked at her sweet face, took in the healing bruise at her temple, and the bright intelligence that shone in her night-dark eyes. “You are one of the few humans able to fuse the facts into a logical conclusion, Nyota.”

She smiled. “Thanks for the compliment.”
“It is no compliment, but the truth."

She began to laugh. “Still a compliment, coming from you.” She rubbed her neck. “I want the doctor to take a look at this.” She pointed to her head. “Still hurts more than I thought it would. While I'm there, I'll look in on the captain and his new friend.”

“I would appreciate it, Nyota, but please be careful around Khan. He may be weakened at the moment, and Dr. McCoy is convinced that he will not do anything to cause trouble, still…”

“Hell, him being aboard is trouble,” Uhura deadpanned.

Taking a deep breath the first officer nodded. “You are right again. Commodore Wesley insists on meeting with ‘Sunrise’ and…”

“What?” Nyota stared at him, before she let her head sink into the neck. “Oh Jesus Christ, then we all are in trouble – especially you and McCoy. And Kirk, of course!” She glanced back at her lover. “After Khan escaped several weeks ago, the Federation authorities and Starfleet circulated his photo all across the quadrant. It’s impossible that Wesley wouldn’t recognize him.”

“I know,” Spock answered softly and reached out a soothing hand as Uhura’s look betrayed her fear for him.

“Couldn’t we – you know… Could we somehow disguise him? A wig or a beard maybe?”

A hint of surprise flashed over the clear-cut features of the first officer. “Khan’s face is very recognizable; Wesley would not be fooled, and if Khan were found out, we'd likely be in deeper trouble than without the ruse. As it is, Jim and Khan had a part in Koloth’s and the other Klingon’s arrest at the spaceport. The two were likely caught by security cameras. One look at the security feed and Wesley would recognize him. Human reaction may puzzle me at times, but I am sure a deceitful action would anger Wesley and cause a consequence that none of us want. Hiding Khan’s identity is one thing, lying to a superior officer is an offense that would force Wesley's hand.”

Uhura pursed her lips and nodded slowly. “Yes, I know; I didn't think it through.” She rubbed her neck; worry edged soft lines in her face.

“I do not think the worst,” Spock continued gently, sensing his lover’s discomfort and concern. He
tried to soothe her. “Commodore Wesley promised to keep ‘Sunrise’s’ identity a secret, and he owes Khan his life. His own and the lives of his crew. Bob Wesley may get irritated, but I regard him as a man of honor who keeps his word.”

“Still you, Dr. McCoy – we’re all are going to get an ear full from Wesley – especially after our little trip yesterday.” Nyota shook her head. “What the hell was Kirk thinking, trying to cover for Khan in the first place?”

ST***ST***ST

“Jim and Drythen are where?” Diego stared wide-eyed at Galven and Caviw who had come to make a sick bed visit. The Chilean still felt as though he'd partied too hard for too long, played too hard for too long, and spent too much time in the cigar bar. He knew that the doctors would let him go shortly. There were people in greater need for a hospital bed than Diego.

“They’re aboard the Enterprise,” the Tellarit answered. “And Drythen, well… You already know he is on the run from the authorities. And he…”

“He already had a run-in with the other officers of the Enterprise. They were less than delighted to learn he was with Kirk when he spoke to them,” Diego interrupted him. “I figured out a thing or two yesterday as we were on our way to the transporter room to beam up to the space station. Jim spoke with his first officer via communicator.” He sighed and rubbed his face. “Drythen is in deep water now. They know who he is.”

“‘Who he is?’” Galven echoed while behind him, Caviw tensed. She was in a sour mood since she learned that ‘Léo’ could be in danger because of the very same people he helped. And she worried over Jeff who had been brought to another hospital to get his phaser wound treated.

The Chilean looked questioningly at his friend and the Caitian. “You know?” he asked.

Galven answered with an avoiding, “We know what?”

“How Drythen is,” Diego replied tensing. He watched the two look to each other clearly uncertain. He groaned. “Guys, is there the slightest possibility that you found out something about Drythen you don’t want to talk about?”
Galven rubbed his snout and while Caviw’s tail twitched.

Again the Chilean sighed heavily. “Guys, Drythen and I unlocked the mooring of the *Athena* with only our combined strength. Do you really think this would be possible if it not for Drythen? I’m strong, but not *that* strong. Drythen did the most of the work. And he got me out of that burning hell hole I would have suffocated in. Plus, he single-handedly rescued Kirk from a *Klingon prison*.”

Again Galven and Caviw exchanged a glance before the Tellarit carefully asked, “And you know, why he is so strong – so resilient?”

“And so quick, so brilliant in fight, so intelligent with a passion that burns far stronger than in any other human?” Diego nodded. “The Klingon and the traitor knew his background and Kirk confirmed it as did Drythen, if that is his true name.”

Galven sighed while Caviw wrapped her tail around her middle – a clear signal of her discomfort. “You… you are okay with it?” she asked quietly, and the Chilean snorted.

“That he owes his super-strength some damn scientists? Jim asked me an important question. He asked if it would change my mind about Drythen.” He leaned back into the cushions supporting him. “It doesn’t!” he declared. That earned him very relieved smiles.

None of them had to utter the word that described their friend’s heritage. They knew better than to mention it in public. Besides, they had more urgent matters to discuss.

Galven crouched down on the Chilean’s bed edge. “So, you understand why we have to get ‘Drythen’ away from the *Enterprise* before they lock him away?”

Diego blinked baffled. “Jim would never allow it. The two are so utterly and madly in love with each other, he would rather…”

Caviw’s communicator beeped. She answered call and listened a moment; her large eyes grew wide. “What?” She hissed and snarled something in her native language then said “Thank you, Ritek!” and closed the little device again. Meeting the asking looks of her two friends she growled, “Ritek intercepted a transmission between the *Enterprise* and the *Lexington*. Commodore Wesley wanted to know if ‘Sunrise’ and Kirk have finally woken up. He’s demanding to be informed as soon as they are.”
Diego stiffened. “Jesus Christ, if he recognized Drythen...”

“... And he finds him aboard the Enterprise with Kirk...” Galven nodded.

“... Then both boys are in a hell of a lot of trouble!” Caviw ended the thought.

Determined, the Chilean threw the blankets away and waved away Galven’s worried, “You’re not released yet, Diego!”

“That crazy superman is going to need our help,” Diego grunted. He carefully rose to his feet and was instantly supported by his two friends. “And I know how we can get him out of the tight spot he’s stuck himself in – he and Kirk!” He took a deep breath and grimaced. “Santa Maria, the smell here is horrible! I'll be glad to get out of here.”

“Mr. de la Vega?” The voice caught the attention of the three friends.

“Yes?” Diego answered before laying eyes on the man who addressed him. A sinking feeling spread through his gut. At the door of the room stood two Federation police officers, and the Chilean knew exactly why they were here. Their stunt in the bar ‘The Stars’ found them out.

ST***ST***ST

“Ouch!” Nyota Uhura was not one to complain, and Nurse Barbara was careful, but the bruise was anything but pleasant for the comms officer.

“Sorry, Lieutenant, maybe you should have come earlier,” Barbara apologized.

Uhura sighed, “Too much to do and I thought it wouldn’t be that bad. You had enough patients here and... Ouch!” Uhura shied as the nurse set the small medical device to her temple again.

“Lieutenant, please keep still,” Barbara said sternly; grimacing Nyota obeyed. Her gaze moved through the crowded room of the med bay, then to the door that led to McCoy’s office. It finally rested on the corner hall that led to the small storerooms and restrooms. Spock had told her that Kirk and Khan were in one of the storerooms and that no one knew Khan was aboard and in sickbay.
“There, all done!” Barbara said, and Uhura hopped off the bio-bed.

“Thanks, Nurse Barbara,” she said with a smile; she signed the short report and walked away as if to leave the med bay. She looked to make sure Barbara and Dr. M'Benga weren't looking her way and rushed to her destination.

Several seconds later, Nyota stood in front of the door that led to storeroom 3, took a deep breath, and stepped in.

The lights were dim and a monitor showed a patient's readings. The room smelled of medicine and disinfectant. All was quiet; so different from the hustle and bustle of the med bay.

Uhura instantly saw the empty bed to her left and then the occupied bed to her right. Frowning, she saw a heap covered by a blanket. Recognizing this 'heap' as her captain and the Augment, she walked silently to the two men.

Startled, she looked to Kirk’s pale features covered in a thin net of veins and capillaries as well as bruises. She didn’t need a closer look to know that his whole body must look like this. Then her gaze wandered to the second man on the mattress. She bit her lips as she realized that the Augment wasn’t in much better condition than Kirk. The Grim Reaper touched both men; it was a miracle that they were still alive.

Only after she overcame the shock of seeing her captain and friend like this did she remember her second reason for coming here.

Spock had been right – of course he had. Still it was awkward seeing Jim Kirk and Khan Noonien Singh snuggled together on the bed. Kirk’s head rested on the super-human’s left shoulder, one of his arms was wrapped around the Augment’s middle, and his expression was peaceful – as was Khan’s. The former dictator held Kirk in a gentle embrace as if it was the most natural thing in the world. His usually tight features were relaxed making him look younger – almost innocent.

Uhura cocked her head. To think that Khan left the other bed and walked to Kirk while asleep just to hold him – it was a language Spock couldn’t understand. But Nyota Uhura did. This intimacy, this finding peace in each other’s arms. This was a lover's language.

‘This can’t be!’ Uhura’s mind yelled. ‘Khan killed Pike, and he attacked us. Kirk died because of
him – and then…’ She frowned as another thought occurred to her. ‘And since when is Kirk attracted to men? Hell, he got on my last nerve with his flirting; a skirt was a challenge just to feed his fat ego. He’s a Casanova; there’s no way that he can be attracted to men!’

Still, her women’s intuition told her she was lying to herself – except for the Casanova part. He seemed to still have that. Then her eyes caught a dark, mottled shadow on Kirk’s neck. Carefully she moved around the bed to Jim’s side. She reached for the collar of his hospital gown and moved it away.

And sure as Earth’s sun rose in the east, there was a hickey – a hickey just like the one he had when they started their five-year-mission. It was even, as far as she remembered, in the same place.

‘A mark!’ the words shot through Uhura’s mind. ‘That is a stake-your-claim mark!’

She didn’t dare to examine Khan’s neck for a match, but she was almost certain that the bond between the men was two-sided. Pressing her lips together, Uhura eyed her captain.

‘Of all the foolish things you’ve ever done, James Kirk, this is the biggest one. But I can’t help feeling that this is the most serious relationship you ever have had.’

Sighing, she turned away. She knew that Spock wanted answers, but her love for him didn’t make her blind to the loyalty she held for her captain and friend. It wasn’t her place to tell Spock about Kirk’s newest tryst. The two friends had to discuss this privately – and probably with McCoy.

Her thoughts came to a grinding halt as she came face to face the CMO who looked none too amused at finding her here.

“Lieutenant, may I ask what you are doing here?” he asked quietly so as not to disturb the two men, but firmly enough to give Uhura the impression of a pupil caught doing something forbidden. But, like the rest of the senior officers of this unique ship, she was not one to sway by just any breeze.

“I wanted to make a sick bed visit. We’re all worried about him.” She saw McCoy’s gaze wander to the med-bed and added, “Don’t worry, Doc, I won’t tell anyone about our captain’s admirer – or is it the other way around?” She watched McCoy’s eyes go wide and sighed. “It’s obvious why Khan sleepwalked and why they look like little love birds – they are.”
Bones stared at the young Bantu woman. You can't hide anything from Nyota Uhura. “And you’re… You're okay with it?” he asked in disbelief.

Uhura frowned. “What? No, of course not!” She realized how this sounded and added with a sigh, “I mean… I don’t have anything against him with a man – that's just a surprise.” She gestured to the two males. Shaking her head, she added, “But this – It’s beyond stupid. I’d say unbelievable except they’re right there! Kirk was ready to kill Khan when Marcus sent us after him. Spock talked him out of it; still Kirk got carried away in his rage even after Khan surrendered on Qo’noS and beat the crap out of him. Even for the short time they were allied, they were ready to walk over each other’s dead body. And now this?” She grimaced and looked back at the two sleeping men.

They hadn’t moved. Off someplace in dreamland and peace in each other’s arms, content in the shared proximity.

“I guess Kirk could get over his anger, but Khan?” she was almost talking to herself now. “He must have or he wouldn’t have gone after Kirk and rescued him from the Klingons. Something happened between them that changed everything. I loathe prejudgment, so I guess we’ll all have to wait for Kirk’s explanation. If he overcame his fury enough to develop feelings for him, then there have to be reasons he was able to forgive him in the first place. Without forgiveness, he wouldn’t have shared his bed with Khan.” She turned back to McCoy. “God, I really want to punch some sense into Kirk right now,” she gritted out, “but I don’t want him to get into any more trouble than he already is. I’m on the bridge.” She turned and addressed McCoy, “I’ll warn you when Wesley comes aboard. Maybe those two shouldn't be,” she flitted her hand toward the bed, “like that when he shows up!”

With those words she left, and McCoy looked after her, surprised before his he turned his attention back to Jim. ‘You’re the luckiest idiot in the whole universe to have such good friends. Damn corn fed farmboy! Even now, none of us will let you down!’

ST***ST***ST

“I beg your pardon?” Wesley stared at Lieutenant Palmer as if the younger man had suddenly grown a second head.

“Well, sir, I received transmissions from very frustrated captains of the ships staying back for the repairs. ‘Diego’s Shipyards’ can’t work for us because their boss has been arrested for a bar fight he was in. I also got a call from The Shadow. This Tellarit, Galven, wants to speak with you, because… How did he put it? ‘Diego was only arrested because he helped our young Starfleet-hero and was therefore involved in a Starfleet mission. And now it’s the commodore’s damn duty to get him out of custody’.”
Bob’s eyes even grew wider. “When was the call made?”

“Thirty minutes ago, Sir. I wanted to inform you, but you were in a teleconference with Aldebaran’s governor.”

Wesley stopped him with a wave of his hand. “You were right not to interrupt.” He rubbed his neck. “Did you find out if this ‘Diego’ is really in custody?”

Palmer sighed. “Yes, I contacted the Aldebaran’s police force, but they said it was a civilian issue, and Starfleet has no jurisdiction.” He rubbed his stubbled chin. Alpha shift had been on duty long enough.

“So, do I have this right? A part of our fleet is dead in the water because some power-happy civilians think a damn bar fight is more important than winning a war against the Klingons?” Not for the first time in these last hours, Bob felt a headache approaching. “Link me to the idiot! We need this Diego de… What’s his name?”

“Diego de la Vega. I’ll spare you the long form,” Palmer answered with a hint of humor. He turned around in his chair and called the police station. Whether the police chief was very busy or if he was playing a power game, Wesley wasn’t sure. But he was sure to be pretty pissed that he had to wait ten minutes to speak to the man.

He was a stout male in his late fifties; his red hair and beard showed the first streaks of silver. The many wrinkles around his green eyes spoke of too much work, too little sleep, and maybe too much Aldebaran whisky.

“Lieutenant Mark O’Donner,” he introduced himself; the Lexington’s commanding officer straightened.

“Commodore Robert Wesley, fleet-commander of Starfleet in this sector. Lieutenant, you arrested a man working for Starfleet to…”

“Sorry to interrupt you, Commodore, but if you’re talking about the troublemaker de la Vega that your men have asked for, I’m afraid I can’t help you. He is accused of starting a bar fight that resulted in destruction of property, seven injured patrons, and three passers-by. He and two of his friends…”
“Lieutenant, I really don't care about a bar fight or its outcome. You can't tell me there isn’t a space station or an outpost in the whole of Federation space where such incidents don’t happen every few weeks.”

“Commodore, you and I may serve under different authorities, but our vocation is the same. We’ve both taken oaths to obey the written rules and laws. I can’t let a man go who is responsible for the destruction of a pub and who fled the scene, not caring for the injured that he left behind. But maybe you can answer me a question. De la Vega stated that he helped out a Starfleet officer who had a run-in with some alleged Klingons here, on Aldebaran. Maybe you can explain, how…”

Wesley’s eyes widened only to narrow a second later before he barked. “In case it has slipped your well-trained attention, Lieutenant, Aldebaran has suffered a terrorist attack from the Klingons. That's why the capital is on alert. That's why there is a mass evacuation. That's why your hospitals are crowded. My ships dragged that harbor away to prevent a planetary catastrophe. And that's why the damage to the planet wasn't worse!” His voice had become louder. “And when you tell me that de la Vega said he assisted a Starfleet officer, then I say you should give him a fucking medal! He is one of the three men who secured the space harbor until we could reach the scene to move the station out of your orbit with our tractor beams. One of his ‘two friends’ who allegedly started the bar fight was none other than Captain James T. Kirk of the USS Enterprise. Does the name ring a bell?”

O’Donner stared at him. “Of course, it does. And if he and your people fought for the safety of our town, then we are grateful for their help. Still this doesn't help the pub’s owner. His restaurant is closed, and it can’t reopen without extensive and expensive repairs. If de la Vega was indeed involved in a Starfleet mission, then Starfleet has to pay for the damage. I do think the pub’s owner will be glad to hear that there is a chance for him to gain restitution.”

“I don’t believe it,” Bob groaned. “Without Kirk and the others there, there’d be no pub or town, and you’re worried about restitution?”

“The pub’s owner wants to press charges and I have to fulfill my duty, Commodore. I’m sure you understand. Your hands are tied as well where your rules demand it.” He bent forward at his desk. “The pub’s owner gave us a record from the security camera he had installed above the counter. I can offer you a copy, and if one of the three guys is really Captain Kirk, then I’m certain Starfleet will not hesitate to pay for this unfortunate incident. And if they post bail for Mr. de la Vega, I can let him go.”

Not for the first time, Bob wanted to curse but he controlled himself. He knew that the lieutenant was right. Starfleet held no power over any civilian security force. They were bound to obey the laws of the individual planets. “All right, Mr. O’Donner, please send me the copy and the documents for the bail. I’ll check it and let you know if one of the three men you mentioned is indeed Captain Kirk. But regarding de la Vega, he has to be released immediately! We are at war, man, and we need him to keep our fleet operational.”
“I know, Commodore, sometimes the law hinders proper function.” He leaned back again. “One thing more. I got a report from our traffic department. A hyperbike drove away from the pub at twice the posted speed limit several minutes after the fight started. The hyperbike is registered to Mr. de la Vega, but it wasn't him on the bike. It was his two friends who started the brawl. If the driver is Captain Kirk, perhaps you can arrange a payment for the traffic ticket we have for him.”

Bob gritted his teeth and counted slowly to three before he gave his answer. “If the driver is indeed Captain Kirk, then he was on said mission and, therefore, isn't subject to the speed limit as any emergency vehicle would be. But I promise that I will check into it!” He was about to turn away but added sharply, “Oh, by the way, the reason that you’re still in that exalted position and not a Klingon is because my men fought them. My fleet took out a Klingon strike group that was on its way to annex Aldebaran. Maybe you should think twice before you decide to hinder Starfleet again. Otherwise, it is my duty to contact your governor. I'll happily explain my and your situation to him. The safety of the United Federation of Planets can’t be threatened by a single police officer, who thinks he can demonstrate his power by abusing his authority rather than cooperating with Starfleet. Lexington out!”

He felt the eyes of his officers on him and took a deep breath. “God damned, stupid civilian!” he groused. “How dare he come to me with that petty shit!” He grimaced.

“Do you really think it was Captain Kirk, who…” his science officer began, and Wesley snorted.

“He told me that he was involved in a ‘run-in’ with Koloth and the others. And Commander Capricio mentioned Diego de la Vega in his report as one of those men who fought alongside Kirk’s and ‘Commander Lavi’s’ side on the space harbor. He had to be with them the whole time.” He planted his fists at his waist and shook his head. “Why is it always Jim Kirk, who…”

“Commodore, I got the records from O'Donner,” Palmer said and Bob went up to the comms station where the other man already activated one of the smaller screens. “Here it is,” he said and left to give his commander some privacy.

In the next minutes, Bob watched the arrival of Koloth, the four other Klingons and a human male in their company; then he saw them leave again. Then Jim Kirk and another man at his side ran straight into Koloth as he returned. Seconds later, Koloth hurled a fist at the young captain that was caught by the dark-haired man who accompanied Kirk. Then the fight started and the pub's patrons joined the fray. With widening eyes, Wesley witnessed how one of the Klingons was suddenly thrown over the heads of the group. “What the hell?” he whispered and he concentrated on the man who did the throwing. He only caught glimpses of him, but he was always near Kirk and protected him any way he could.
Bob had the feeling that he knew this man, not that he'd met him before, but something struck a
chord with him. Logic dictated that he was looking at ‘Sunrise’ for the first time, but his gut also told
him that this wasn’t the first time he’d seen him.

Frowning, he witnessed the Klingons use the opportunity afforded them by the chaos to leave the
bar. A short time later, Kirk followed them. Wesley also noticed a large man box his way through the
crowd. He followed the captain; a smaller man was at his side. Now the screen showed only the
fighting guests.

Opening O’Donner's second file, he saw a short recording and some holo-photos of two men on a
hyperbike; a line stated that they were clocked at 120. The speed limit was fifty-five kilometers per
hour.

Bob worried at his bottom lie and stared at the photo of Jim Kirk – the short, tousled golden hair, his
grim face, his eyes narrowed in fury. Behind him sat the other man, one arm was wrapped firmly
around Kirk’s middle. The wind blew his night-dark hair away from his face; Wesley zoomed in. It
had to be ‘Sunrise’.

The man’s features were angled and despite the poor video quality, Wesley could make out the pale-
colored eyes. The man’s expression was calm, yet determined. Bob knew that look.

In his mind, the shadows of a memory lurked; the memory of a holo-photo he once saw. If he only
could remember, where and when, then…

In his mind’s eye, he saw an incoming message; a man wearing the insignia of Starfleet Command –
a warning of an escaped criminal – of a terrorist. It had reached the Lexington some days before the
war started and…

“That can't be!” Bob whispered and quickly obtained the file from the ship’s data banks. A second
later, another image appeared on the small screen beside the photo of the speeders.

The man depicted wore a black Starfleet undershirt, his hair was dark and swept off of his high
forehead, and there was a stoical expression on his features. The similarities were plain as day!

Bob Wesley sat down heavily on the comms station’s chair; a sinking feeling swept through him.
“Jesus, Jim, have you lost your mind!?”
He rubbed his temples with both hands; his headache grew in intensity. He was stuck between a rock and a hard place now – because of his word to Spock, because of everything this man did before and after prison, and because of one captain who could turn a world upside-down. It had to be. The man on the holo-photo that Command sent and the man on the recordings were indeed one and the same.

“Palmer!” he barked and closed the files. His comms officer hurried to him. “Send this idiot cop the documents and tell him that Starfleet will post Mr. de la Vega’s bail!” Bob growled and rose. “And then hail the Enterprise. I have to speak with Kirk. If he’s is still out, then advise McCoy that he should use a bucket of cold water to wake him up. I will speak with Kirk now!”

McCoy hastened into storeroom 3 and stared at the two men who still lay entwined on the med-bed. The EEG’s readout showed that they were asleep just as it had done the last time he was in the room. Kirk slipped back into unconsciousness just minutes after his short talk with the CMO, and he hadn’t woken since then. With a low growl deep in his throat, Leonard hurried to the men and bent over Kirk, ready to shake him awake. A second later, there was a very quick movement at Jim’s side; a strong, slender hand gripped Bones’ wrist. Glassy green-blue eyes fixed him half confused and half threatening; they flashed a warning to stay right where he was.

But Bones was not the kind of man that shied away at a look. He fought to tame his temper, and far too calmly he stated, “Good day, Mr. Singh! Sorry to disturb your beauty sleep, but if you don’t want to cause any more trouble for yourself or Jim than you already have, you should let me wake him now.”

Khan glared at the hovering man. Even exhausted and disoriented following the days' events, his foggy, yet brilliant mind quickly came back online to take over where his instinct had formerly kept charge.

“Dr. McCoy,” he acknowledged, and the other man pulled a face.

“In the flesh and bone you're about to crush!” He caught Augment’s confused stare; he added sharply, “Excuse me, but there are people aside from you who need my medical care. I’d appreciate it if you would let go of my wrist and keep it intact, please.”

Khan blinked – then his senses registered several things at once. There was a soft hum – the background noise of the engines; the air smelled of disinfectant, and there were voices and steps outside the room where he and Jim were placed. Logical conclusion – they were aboard a ship. It didn’t take a genius to figure out which.
He felt a firm tug on his fingers and realized that he still held McCoy’s wrist in a vice-like grip, and let him free. “My apologies, Doctor,” he said; his usually deep, velvet voice was still hoarse.

Bones held his wrist in this other hand and shot the former dictator an irritated look, before bending down over Kirk to shake him. “Jim, wake up!”

The younger man only sighed. Bones groaned in frustration. “Oh, for God’s sake, kid, WAKE UP!”

Kirk’s face twitched and he snuggled closer to Khan. “Fifmominets!” he mumbled. Bones had needed a moment before he understood, five more minutes.

“Absolutely not!” he groused. “In five minutes the hell is descending on all of us, so wake up!”

Usually, Jim was awake in just a few seconds. A childhood lived in fear and officer’s training was to blame, but just now, his mind still was far from grasping the straw of reality. “Whasgonnaon?” he mumbled groggily finally looking up into the angry but also quite determined face of Leonard McCoy.

“Wesley ordered me to wake you up; he’s on his way here. And I don’t think he should find you like this!” the CMO answered impatiently; he pulled the blanket away from Kirk and a frowning Khan covered himself and helped the young captain sit up. “For the love of Christ, hurry!” he snapped when Jim didn’t react.

“Commodore Wesley is coming?” Khan asked; his body instantly switched to an alarmed state.

McCoy spared him a quick look. “Yes – and don’t get all crazy. It’ll only worsen the situation!” Then he turned his attention back to a slow-moving Kirk. “Hurry, Jim – dammit!”

“I’m coming, Bones,” Jim groaned. He began to tremble. “Jesus, it’s cold!”

“Yeah, you’ll feel like that for a few more days since you boys thought a trip into space sans a suit was a good idea.” the CMO muttered; he pulled the younger man to the edge of bed.
Kirk tried to suppress the shivers that wracked his body. He took several deep breaths before he braced himself and rose – only to cry out in pain; he tumbled forward.

Khan went to jump and catch him, but a sharp pain in his arms, shoulders and neck stopped him. A sound of discomfort escaped him as he watched McCoy catch Jim at the last moment.

“Sorry, I thought you knew that you dislocated your right femur,” Leonard said to the younger man. “I put ‘er back, but still needs time.”

“No, I didn’t know,” Jim moaned and pressed his lips into a thin line as Bones draped one of Jim’s arms around his shoulder to support him. “Where are we going?” Kirk asked feeling weak; he hobbled across the room hating that he looked like Huckleberry Finn – that he was so weak.

“To the other bed, genius. You’re not leaving med bay for another day or two, but we don't want Wesley to find you cuddling with a wanted criminal.” He had glared back over his shoulder at the super-human before he added, “Uhura told me that he sounded angry when he insisted that I wake you. That can only mean one thing. He knows about Sunrise, here.”

It was impossible, but Jim paled even more. “But… how?”

“How should I know? You two mixed it up pretty good the spaceport and the space harbor. Probably on a dozen cameras. Maybe you two geniuses forgot this little detail. Or maybe Wesley had enough pieces of the puzzle; he's anything but stupid.”

Jim stopped dead in his tracks as his mind comprehended the events to come. ‘Wesley will be here any minute, and he knows that ‘Sunrise’ is Khan.’ God dammit, why had he fallen asleep instead of thinking of a way out of this? After all, McCoy did warn him. Fear clouded his eyes as he looked back to his mate. “You have to run – now!”

“Are you crazy?” Bones snarled. “If Wesley knows that Sunrise is Khan and comes over only to find him gone, we all land in prison.” Firmly he pulled Kirk with him. “Besides, you two can’t go anywhere at the moment. Too cold, too much smoke, too many bruises!” He helped Jim down onto the med-bed while he growled in the Augment’s direction. “Same goes for you, too, Mister! Super-biology or not, you’re in no condition to go anywhere!”

Ignoring the own aches and pains, the former dictator watched his mate and the CMO. His instinct screamed at him to find a way to escape the inevitability of certainly being arrested which would lead
certainly to his demise. Still, he found himself unable to make an attempt to flee. Besides the fact that McCoy was right, and he wouldn’t get far in his current state, he couldn’t let Jim face the Commodore alone. It would, indeed, worsen the younger man’s situation. And Nien would never, under any circumstances, let his mate down. His mind continued to search for any possibility of breaking free of the trap he was in. But it would destroy his last chances to save is family.

His family… Joaquin, Otto, Katie, Pablo, Rodriguez… Their lives and freedom depended on him; still there was no way that he would abandon Jim.

Panic at his dilemma grew with every passing second. It spread through his heart, soul and mind piercing through each layer like a sword.

McCoy had spread a blanket over Kirk before turning back to Khan. He raised his brows when he saw the Augment half sitting, half cowering on the med-bed. The monitor above him signaled the enhanced man's alarm. The CMO had to calm him and quickly before fright turned to fight. Maybe Spock’s suggestion of posting guards wasn't so off base after all!

Trying to appear calm, the CMO stepped towards Khan, feeling as though he were trying to sooth a predatory cat. “Move over some so at least there's the pretense you two didn't share a bed.”

Piercing sea-colored eyes narrowed ever so slightly, and Leonard thought the great cat of a man might strike. ‘Well, his name means ‘lion’; at least he's consistent!’ his dark humor shining through if only in his own mind.

“Do you think it will change anything if Wesley finds out that Jim and I not only worked hand-in-hand, but became… friends?” Khan sneered though he did as the other man asked. He had no choice; he would wait and see what fate, what Wesley, had in store for him. He hated being caged like an animal – being at the mercy of another's whim. He could only hope that Wesley was that type of man he thought him to be – honorable.

McCoy decided to ignore the comment. Everything depended on Wesley’s mood and whether he was willing to keep his promise concerning ‘Sunrise’. Finding Jim and Khan in bed together wouldn’t help the situation. Outside, he heard voices raise; taking a deep breath Bones said firmly, “Right, you two, show time. Stay polite and for God's sake, stay calm! No one wins here if you two are freak out.”

The doors slid open. Spock’s deep voice followed the Commodore striding in. “After you, Commodore.”
“Thanks,” Wesley’s usually warm tenor did nothing to hide his irritation. Spock followed the Commodore into the room. Bob’s brown eyes had roamed quickly over the two beds before coming to a halt on Kirk.

“Jim,” he said. “It’s good to see you alive – and awake.”

Carefully Kirk tried to sit up, but one sharp glare from McCoy and Wesley's imploring him to take it easy stopped him. “Thanks, Bob,” he whispered; his throat still felt as though he'd been fed sandpaper. He looked to the Vulcan, who remained at the door. “Hey there, Spock,” he said hoarsely, and for just a moment the first officer’s expression softened.

“Hello, Captain. I have to agree with Commodore Wesley. It is good to see you awake,”

Bob glanced back at the Vulcan. “You two haven't spoken yet?”

“No,” the science officer replied. “Captain Kirk slept through the night and was only awake for a few minutes this morning, as I have heard.”

Bob nodded shortly. “Yeah, sleeping is easier than facing the music.” Then he looked back at Jim; a frown creased his forehead. “You've given me some serious gray this past week; you also have a lot of explaining to do, son!” He turned his attention to the second bed and as his gaze roamed over the features of the dark-haired man, who looked calmly back at him. But Wesley wasn’t fooled by the outer calm exuded by this man, whose blue-green eyes held a cautious gleam in those. He was poised and tense – ready to spring at the slightest provocation. There was no uncertainty in his eyes though, rather an air of authority and superiority. If this was a pretense, it was pretty damn good, but Wesley doubted it was.

He took a deep breath. Yes, there was absolutely no doubt, whom he was facing. This was the very same man who was responsible for the London archive bombing and the Daystrom attack. He fled to Qo’noS and had been taken captive by Jim Kirk before stealing the Vengeance only to be taken prisoner again by Commander Spock. This same man who had been sentenced to cryosleep but had been somehow escaped a year later.

Bob knew that he shouldn’t speak to him – that he should take action to lock this criminal away in the most secure brig possible. But without this man, he and his crew would be dead right now; the same went for Kirk, the inhabitants of a planet, and the citizens of New Aldebaran.
God, what a mess! Against the institution he vowed to support and defend, and against his own good judgment, Wesley did the only thing he could. “At least we meet, Sunrise,” he said slowly. “I promised myself when I met you face-to-face, I would shake your hand.” He stepped to the second med-bed and extended his hand. The offer surprised Khan; gestures of good-will always did, but he accepted. Long, pale fingers covered by a fading net of damaged capillaries enveloped Wesley’s strong, tanned hand.

Bob was aware that these fingers could crush his, still he remained cool. He gently squeezed and pumped Khan's hand, “My crew and I owe you our lives, so I'm glad that I can finally give you our thanks in person, Mr. Singh.”

Jim moaned inwardly. Bob knew!

Khan returned the brave gesture carefully; a hint of a smile played around his lips, and he replied neutrally, “And I am pleased that my notion of you proves to be true, Commodore Wesley. I assumed you to be a man of honor and conscience when I learned what you mean to Jim, how you have mentored him. I was right.” He let go of Wesley’s hand, and the Commodore stepped back. The Augment watched the staff officer warily. As the older man eyed him, he added, “As far as I understand, we are aboard the Enterprise. She was in the midst of battle when a Klingon bird-of-prey attacked the space station. Therefore, you must have sent her from the battle to us. I thank you.”

“Don’t thank me; thank Mr. Spock, who takes his role as acting captain of this ship quite seriously. So much so, that he seems to have picked up a few of Jim’s traits,” Wesley replied. He shot a look at Spock, who stood at a relaxed parade rest and returned the commodore’s stare.

Jim’s gaze had wandered to Spock as he heard Nien’s words. The implication was not lost on Kirk, and he felt then, the depth of their friendship – he felt the true meaning of T’hy’la, as he did the day he died. His Vulcan friend had risked all to come to Khan’s and his rescue – his ship, his career. Warmth spread through Kirk. “Thank you, Spock,” he said quietly. “Bones told me what you did. Nien and I owe you.”

“You are welcome, Jim,” the Vulcan replied, but for a short moment there was a hint of warmth in his eyes as he looked at his T’hy’la. The moment passed far too quickly to be recognized by humans – except for Khan. He felt a stir of jealousy in his gut, but it left as soon as it came. The Augment reminded himself that Jim and Spock's relationship was different, unique. It did not endanger or in any way minimize the bond between himself and his Pyāra. That bond, too, was unique, and there was room for both.

“Hm, and because Spock’s side trip saved thousands of people, I cannot reprimand him, especially
after I permitted the mission with some… delay,” Wesley growled. “And I also cannot act now as I ought.” He looked squarely at Khan. “I gave my word, and I intend to keep it; I and my crew are in your debt. Your identity is safe with me.” He looked around the room. His words brokered no argument as if it was the most natural thing in the world for dutiful officers to protect a wanted criminal.

“Are you three aware of the position you put me in?” Bob exploded; his face flushed in anger. “My first reaction should be to put Mr. Singh under arrest, locking him in the next Starbase's high-security brig, ordering twelve guards on him at all times, and only then contact Command to tell them that I caught one of the most wanted men in the Federation. And since you three covered for him – hid him – I would have to arrest you, too, as well as the senior staff of this ship, because I am absolutely certain that they all were complacent. But instead, I’m bound to the promise you elicited from me, Spock, as I am to a personal code that forbids me from delivering a criminal to the authorities because he not only saved my ship and my crew, but also the entire population of Tammeron.” He looked back to Khan. “You saved my friend; that will never be forgotten. You fought with him against our enemy preventing a planetary catastrophe, and you made certain that our flagship could get away from Borderland without being blasted into atoms. I am grateful; do not doubt that, ever, Mr. Singh.”

He closed his eyes, pinched his nose, and swore under his breath. His voice held a tone of irony, “Seeing that I’m in the presence of not one but four geniuses, perhaps one of you gentlemen can tell me what I ought to do now!”

After a bit, Khan was first to break the silence. “I would suggest that you calm down, maybe Dr. McCoy’s can prescribe something useful. You do not look well. You were in a battle, accountable for thousands of lives and to an outcome crucial to the tide of the war. You have had too little sleep and even less food, of that I am sure. Therefore, the level of your emotional stress is understandable, but unhealthy – and you are needed, Commodore. Not only by your ship and your Starfleet but your friends and your family as well. Perhaps you might take a seat and hear Captain Kirk and me out.”

Perplexed, Bob turned towards the Augment and stared at him. “That's a joke, right?”

Khan lifted both brows; his reply wry in its tone, but the Augment wore no man's uniform. He could be charged with much, but not insubordination. “No, Commodore, you asked for a suggestion and I made one.”

Wesley looked at him with widened eyes. Then he couldn’t help himself; he laughed, before he shook his head. “Look at that; there's a bit of humor in you after all.”

“All intelligent people have humor,” Nien replied pleasantly before his gaze meandered to the Vulcan. “Well, almost all!”
Jim saw the Vulcan’s body tense ever so slightly; a cold glimmer appeared in Spock’s eyes. He quickly piped, “I think, Nien is right. You look weary, Bob.”

“And whose fault is that?” Wesley snapped.

“The Klingons?” Kirk stated, and the Commodore rolled his eyes. “Ten birds-of-prey can’t wear me out like you do – you and your damn impulsiveness.” He took another deep breath. “Right, you want to explain everything? You got your chance!”

“Oh yes, this I want to hear,” McCoy nodded fixing Jim with a dark glare.

Kirk sighed. “Bones, I…”

“I understand that you tried to help some woman on Turkana, even if it meant you had to put your neck in a noose. That's just your way, kid, I understand that. But why Khan, of all people, came to your rescue in the first place – how you two are good buddies now is completely beyond me!” McCoy interrupted him.

“Be grateful that I was able to recover James. You left him.” Nien spit through clenched teeth, but Spock’s returned the comment with ice of his own.

“The captain gave us a direct order and contrary to your indefensible assertion during our first meeting, I am indeed capable of breaking bones without breaking rules.”

Khan sat up despite the burning pain in his shoulders and arms; his eyes narrowed to threatening slits. But before he could give a fitting reply, Wesley rose to speak.

“Spock, I always thought that Vulcans were unable to lie, but you cut it real close. We both know that you broke not one but a dozen rules when you entered Borderland without orders and when you sped off to Aldebaran to save Kirk’s and Mr. Singh’s necks without informing me of your leaving the theater.”

“Sir, we informed you of the reason for…”
“Yes, yes, an electrical short at the comms station, I know!” Bob shot the first officer an angry glance. “Don’t make me check the ship's logs!” It was a warning; one Spock was forced to accept for Nyota’s and his own sake.

“I am impressed, Mr. Spock! You are a maverick, after all,” Khan taunted. “I misjudged you at our first meeting.”

“But I will not make that mistake with you, Mr. Singh! Your determination to protect Captain Kirk lies in no change of heart but for your own purposes and intent.”

In the blink of an eye, the Augment was on his feet; his eyes flashed dangerously. “Don’t you dare to accuse me of misusing Jim!” His voice was low and angry.

Still the Vulcan remained unimpressed. “It would not be the first time that you have used the captain’s desperate situation to your own advantage.”

“Spock, you don’t know what happened,” Jim cut in trying to diffuse the impending quarrel. “Before you judge Nien's intentions, you need to get the details and…”

“Mr. Singh is very clever in his choice of words, Captain, therefore…”

“All right, that’s enough!” Bob said with rising voice. He turned around to Spock and Bones, pointing at the door. “Out!”

“What?” McCoy asked disbelieving and then remembered himself. “Yes, sir.”

It was Spock who seemed to forget himself. “Commodore, you are not familiar with the manipulating ways of Kh…”

Bob’s voice sharpened. “Jim Kirk is your commanding officer, and he has to answer to none of you! Neither to the first officer nor to the CMO. The only person in this room entitled to demand an explanation of his decisions and actions is me. I know that you were worried about him as I was, but you have no right to bring his orders and motives into question. And since I want to hear the true story behind this mess, I have to speak with Jim and Mr. Singh alone – without you fussing over one
“Commodore,” Bones began, “the chance that Jim has been…”

“Enough!” Wesley said sharply. “If you want answers from Jim as your friend, then wait! I have to make a decision that not only will impact your future, but mine as well. I don’t need two overprotective mother-hens puffing themselves up to keep their little chap out of harm’s way. This ‘little chap’ is your captain and a grown man who does nothing without consideration. He earned this ship, and you will treat him like it. As his friend, you can ask, lecture and scold him all you want; I know he’ll give it right back. But only *after* I learn what I have to learn. I can't do that with you around.” He gestured once more towards the doors. “Dismissed, gentlemen!”

Leonard chewed his lips, gave Jim and Khan one last glance that screamed ‘*Don’t do anything stupid!*’ and walked to the door, while Spock’s glare warned and challenged Khan in one to do something that would cause Jim even more trouble. Only then did the Vulcan turn to leave.

“Oh, and one of the gentlemen should be so nice to bring me a chair. I think I’m going to be here a while!” Wesley said sternly; he didn’t wait for a reply before turning towards the two remaining men. He sighed deeply. “Heavens, sometimes I can’t shrug off the idea that I’m in a kindergarten!” he muttered under his breath. Then his gaze wandered back to Khan who still stood beside the med-bed; his pale, furious eyes fixed on the spot where Spock had stood.

“Please lie down, Mr. Singh,” Bob reasoned. “You’re in no shape to be out of bed.” As those ocean-colored depths glared at him, he added, “You’ve analyzed my condition quite well, but I’m not blind. You’re still enduring the effects of the events aboard the space station, and even if your enhanced body recovers far quicker than Jim’s or mine, you're still doing just that, recovering. So please, go back to bed.”

Still, Khan only looked at him; then he gave Kirk a quick glance, and the captain nodded encouragingly at him. Right, he had to play along for now. This may be his only chance to stay out of prison. Cautiously, he let himself sink onto the bed, and he gingerly pulled his feet back on the bed. Feeling the all too human urge to cover himself against the inner cold and the outer world, he slowly reached for the blanket gritting his teeth as his aching muscles and tendons made themselves known again. He froze as two strong, ruddy hands took the material and spread it over him.

Bewildered that someone who knew who he was, cared enough to help him out, he glanced up at Wesley questioningly. “I’m not a doctor, but again, I’m not blind. I see you’re in pain. You probably shouldn’t move so abruptly for a while, huh?” Bob straightened again. “How’d you hurt your arms?”
“He loosened the mooring of the *Athena* manually and held onto me when the hull split,” Jim murmured; his glance roamed gently over his mate’s face. “The last thing I remember is you holding me with your arm and legs while you clung to something stationary.” He sighed. “I would have been pulled into the gap and dead within seconds if it hadn’t been for you – again! I don’t know how many times over I owe you my life now.”

The Augment smiled at him quickly; it was a real smile full of warmth. “You’re welcome, Py… Jim.”

Bob lifted both brows as he witnessed the short interaction of the two men. Interesting. Then McCoy returned with a chair he placed wordlessly between the beds and left again; the door closed behind him.

“Right,” Wesley sighed and sat down addressing Jim. “Tell me the whole story starting with Turkana – the woman and her children you helped and stop when you get -,” he gestured to the room, “here.”

Jim’s eyes widened. “The whole story?”

“Yes, and now that I think about it, you should start earlier. For example, how you came in contact with ‘Sunrise’ at all. How and why did you vouch for him?”

Kirk gulped. He couldn’t tell Bob the circumstances of the Sunrise cover. It would be too much even for Wesley's infamous patience. “That's rather long story, Bob,” he tried carefully.

Wesley only smiled at him. “I have time, Jim.”

“Really?” The captain’s face was pure innocence. “I thought you were busy and the *Enterprise* is about to leave…”

“Don’t worry about me being in a hurry, Jim. I can take all the time I need.” He leaned back. “And the *Enterprise* will not leave Aldebaran before I’m done here, so, gentlemen, please begin!”

TBC…
Well, so far Bob isn’t a treat for our two boys, yet he will learn things he has to add to consideration, before he can make up his mind. And, of course, Bones and Spock are not too delighted about the whole situation, yet they have to remain silent (snicker, it’s hard – especially for Bones). And then you shouldn’t forget the records which have been made from Jim and Nien…

In the next chapter comes the big talk between Bob and our two love-birds; The Shadow and Diego are hell-bent to ‘save’ Khan and there are a few decisions to make, which will separate our boys or bring them closer together.

I hope you liked the last chapter and I’m – as always – curious what you think about it.

Have a nice weekend,

Of laws and tricks

Chapter Notes

Hi, my dear readers!

Just before Whitsun is over I can provide you with another update. Thank you so much for all the comments and kudos; I’m baffled every time I see all the results a new chapter entails.

I know that you’re curious about the talk between Wesley, Jim and Khan, but also what The Shadow will do, thinking their friend to be in danger. Well, I hope the outcome is to your liking.

Enjoy the new installment,

Love

Yours Starflight

See the end of the chapter for more notes.

Chapter 35 – Of laws and tricks

Diego!” Galven waved at the tall Chilean, who stepped out of the police station; Diego brusquely returned the gesture, and then crossed the street and headed towards the Tellarit and Caviw. The city was still in a state of chaos though the catastrophe was nearly forty-eight hours ago. Crossing the street was a chore; the whole town was out and about, and it seemed they forgot the law – traffic law included.

When he finally reached his two friends, he shook his head. “The people are crazy,” he grumbled. He embraced Caviw first and then Galven. “Thanks for your help, guys. If you hadn't have contacted that Commodore you talked about earlier, I would still be rotting in prison.”

“Well, we didn’t talk to him directly,” the Tellarit responded; his hoof-like hands poked Diego’s back in a friendly manner. “He was in a conference, but his radio officer informed him shortly afterward of the mess one of yesterday’s heroes was in.”

“Yeah, Starfleet posted my bail,” the Chilean nodded, “they’ll probably deduct the amount when I send them my bill for the repairs and parts.” He sighed. “But I can’t complain. Without this Commodore Wesley, I would still be in custody. Hell, it still took them more than three hours before
these cursed police bureaucrats readied the documents for my release!” He grimaced. “That Sean would accuse me is unbelievable. I’ve been going to his place for over twelve years, still…” He shook his head.

“As soon money is in the game; friends are forgotten,” the Tellarit oinked. “Well, mostly. You could offer me a million credits; I wouldn’t backstab a friend for it.”

“And I appreciate that. You got a good crew; can’t put a price on that,” Diego said. “What about Drythen now? Me being arrested put a damper on us being able to help him.”

Caviw laid a hand on his arm. “Ritek contacted the Enterprise two hours ago and asked for Kirk and Drythen, telling the comms-officer that we were worried and wanted to speak with them. We were informed that Commodore Wesley is with them and that they are not available.” Her tail twitched while she glanced gloomily to the ground. “If Wesley knows who Léo is, it is too late to help him.”

“Maybe not,” Diego pondered pursing his lips. “The Enterprise needs parts-equipment; that much is obvious. And to deliver the right equipment to one of the newest ships in the fleet, I should appeal to her engineer in person.” He saw his friends’ widening eyes and grinned. “Starfleet wants repairs and material from my shipyard; they won’t deny me the access to a ship in need – not when I have what they need. I’ll take an assistant and a lady from my office, they will not deny you access.” He glanced down at the chuckling Tellarit. “Now, amigo, you can demonstrate your technical knowledge.” He looked at Caviw. “And you can show your acting skills.”

The Caitian woman cocked her head. “How so?”

“Just wait, my dear!” He turned to leave but hesitated. “Oh, and Galven? Ritek should ready one of your ships for departure.”

ST***ST****ST

Aboard the Enterprise, none of the three men in the storeroom turned patient’s quarters was aware that The Shadow was preparing a rescue of one of its members – unnecessary as it was.

Jim told Bob Wesley everything that happened since the militia contacted the Enterprise that first time. The Commodore didn’t know what to think of it all. If he called Capricio’s report an adventure story, then this here was a thriller ready to storm the bestseller list. He was outraged when he learned of the betrayal of the woman’s husband on Turkana. Selling a Starfleet officer out to the enemy in a
time of war was high treason. Wesley would love to get his hands on this bastard – throw his ass into prison. Because of this coward, Jim Kirk went through hell; he was lucky to come out on the other side of it alive. As Kirk told him about the ‘hearing’, Bob had been horrified. He felt another wave of gratefulness towards the other man in the room. Khan sat in his med-bed and kept silent, for the most part, only adding details here and there or answering questions to which only he had answers. The Augment had not only saved the young captain, sparing him an agonizing, cruel death, he took care of him afterward – helped Kirk to overcome the horrors he had faced.

But there was so much more Bob had to consider. This man, this criminal – a terrorist – had risked his life several times over to protect innocent people. Tammeron, the citizens of New Aberdeen, the people on the outpost where he first met the gang that was later called ‘The Shadow’ – so many people alive because he was free. According to Starfleet Command, he was a cold-blooded, mass-murderer without scruples or conscience. Coldly, he preyed on a vulnerable father and then exploded a hellfire of photon blasts on Daystrom.

But now...

After Jim had finished giving his report about the events as they occurred after Turkana, he turned to those events plaguing Bob. Why this man, who had ruled a quarter of Earth three hundred centuries ago, did it – the manipulation, the violence. Jim was right in a way; Khan’s outburst of violence had been the results of a shattered soul, broken once too often.

Wesley had glanced at Khan from time to time while Jim told him about the background and the unbelievable crimes perpetrated on the super-human. He chose his words carefully to spare the engineered man the pain of reliving the memories. And the former dictator had listened to Kirk’s words. He sat quietly, his face a stoic mask. His eyes stared at nothing; they looked dead, as though there weren’t sparks and flashes of dread, pain, fury, bitterness, and sorrow mingled together in a dark kaleidoscope of emotions that could tear the strongest man apart. Yet there was another spark. One, Kirk was responsible for – that spark that saved the Augment’s soul.

And because of Kirk, Bob understand that whatever the super-human had done back in the twentieth century and now in the twenty-third – no human being should have to endure what he had. Snapping was inevitable. Lashing out at everything and everyone was never a question of ‘if’, but ‘when’.

Guilt. Bob felt guilt, anger, and bile in his throat as he learned that the Starfleet he loved and served for over thirty years caused the Augment’s suffering. True, Section 31 hadn’t been an official part of Starfleet, but it was responsible for all that went down - the Vengeance going down over San Francisco. The former Chief of Command, admirals, and even commodores had been members of this ‘shadow department’. It made Wesley physically sick that that the peaceful organization dedicated to exploration and extending a message of peace was infiltrated by the power-hungry. Section 31 was a cancer; Marcus was a cancer metastasizing, causing the decay of Starfleet from the inside, out. Marcus had abused, blackmailed, violated and enslaved Khan Noonien Singh for his
own purposes. He murdered four of his crew in front of his eyes to force his obedience. He made him believe that all of his sacrifice was for naught when he ordered the Augments’ death. Khan broke then – inside, and he wanted to make the world break with him.

Though his treatment in this century was horrible; the deaths he caused due to it were no better. But Wesley could understand them, even empathize on some level.

As Kirk’s tale came to the end, Wesley noticed his nausea. For more than a minute, he simply sat there in silence trying to comprehend the incomprehensible – the horror Khan suffered at the hands of Wesley’s own people. The image of a human being used as a lab rat, forced to the brink of death. Several times Wesley was reminded of Earth's twentieth century Second World War. 'We know our history and still we repeat it.'

Jim started to become anxious as his superior and mentor stayed quiet for so long. Nien’s fate lay completely in Bob’s hands now. He had given the older man all the information necessary to make a call. He left out only the most intimate and violating of detail as well as the true circumstances of their confrontation in San Francisco, the night before the start of the five-year mission. And, of course, Jim had kept the nature of their relationship a secret. Not because he was ashamed – far from it. Rather, he thought it wouldn’t do either of them any good if he revealed it now. Wesley might believe that Jim’s motives for covering Khan lay in his dick rather than his belief in justice and things right. Well, there may be truth to both, but Kirk liked to think that even without the carnal relationship, he'd make right choices for Khan and for Starfleet.

As the minutes stretched on, Jim felt a wave of uncertainty – fear that his report and his words weren’t enough to keep his beloved safe. But, if Bob Wesley were really as ticked as Kirk thought, then the older man would give Khan a chance for real equity and defense. If Bob’s sense of justice and humanity was a great as Jim believed, the commodore wouldn’t arrest the Augment but would support the plan Kirk had in mind.

Khan watched the staff officer carefully. Hearing it all again pained him, but he was grateful for the way Jim described his captivity at the hands of Marcus. His beloved had not minced words but had called attention to facts and their effect on his emotions without the need for the graphic details – details that thus far remained between them. The narrative also proved to Khan just how much Jim cared for him and his feelings. Now, his future depended wholly on Robert Wesley.

Said officer took a deep, deep breath and looked up again. “If this all is true…”

“It is!” Kirk said sternly.
The Augment murmured, “Jim spared you… There are more painful details that Jim left out, but they are not essential to the account as he has told you.”

Wesley's head spun, but he didn't doubt the statement for a moment. “If this all is true, then there are no right words in which I or Starfleet could beg for forgiveness for all that have been done to you and your people, Mr. Singh. Neither your past nor your genetic make-up gave Marcus and his followers the right to put you through that, any more than any other species in the universe. But you are no other species; you are human. I am deeply ashamed that these acts were done under the guise of Starfleet and saddened that they were done at all.”

Khan lifted both brows. Again the commodore had managed to surprise him. He could see, now, how Jim became so fond of the older man and why he would regard him as a father figure. The same kind heart and fierce propensity toward justice that constituted his Pyāra was evident in Wesley. He was indeed a man of honor, and the Augment was glad that he had been able to save this officer and his crew. Not only would Jim have lost another father figure, but the world would have lost a great man – and men like Commodore Wesley were needed to heal the damage men like Marcus left in their wake!

“Thank you, Commodore. After Marcus, I thought it impossible that there were right men left in the world, but then I met Jim – and now you. It is not for you to apologize for Section 31 or Marcus. You had no part in it. If I had known then what I know now, I would have tried to contact you before any of it happened. That being said, Commodore, it will be up to you to heal your precious Starfleet. You and James must make it now what you once thought it was.”

“I don't disagree with you. Perhaps then the mess in London and Daystrom wouldn't have happened, and several very good women and men would be still alive. Daystrom didn't just have Section 31, but also officers ignorant to Marcus' first strike plan. They – I would have stopped him had we known. They're dead now. I needed them, and they're dead now because of your rampage. I can understand its reasons, but it did more harm than good for your cause – our cause now, I suppose.” Bob sighed and rubbed his temples.

“I know,” the former dictator replied softly. “And after I learned the truth from Jim, I do regret my actions. Still, I was kept from the truth – I was kept from the real world. Marcus had…”

“…Had built a false world around you,” Bob nodded remembering one of the many details of Jim’s explanations. He grimaced before glanced at the younger officer. “What do you want to do now?”

There was no hesitation, as Kirk answered, “I want to get Nien out of it!” As Khan rose to speak, Jim quickly added, “He and his people will never find peace and the freedom all have a right to, if this mess stays as it is.”
Wesley laughed. “I should have expected that answer from you, Jim.”

“James, we both know that there is no chance of me getting out of it as you put it,” Khan tried to reason with his mate; Kirk stubbornly shook his head.

“I don’t give up when I’ve set my mind to something. You should know that by now!”

Bob snorted. “Yeah, you’re as thick-headed as a pack of mules,” he grumbled before he turned serious again. “Jim, this is a rocky path. Mr. Singh has already been convicted and…”

"No, he hasn't!” the Enterprise’s captain cut in.

This time the commodore stared wide-eyed at him. “No? Jim, Mr. Singh went on trial last year. You might have been out of it, but surely you know by being told about it.”

“I mean, yeah, he was convicted but it wasn’t a fair trial. He faced a judge without a lawyer, no defense, not even his own word was allowed in court. Only his sentence ‘back to cryosleep’ and that’s that!” Kirk growled. His still hoarse voice gained a dangerous edge.

Wesley frowned. “What?” He glanced from his protégée to Khan, who made a slow confirming gesture.

“It’s the truth, Commodore. I had no legal aid, not even a public defender as was customary in the western civilizations of my time.”

"Well, they damn well are here!” Kirk croaked out.

“That’s… that’s not possible!” Bob gasped. “Since the Federation’s founding, the right to trial with representation is an untouchable Federation right granted to all sentient species housed on Earth.”

“Marcus’ successor stripped my people and me of this right. He, like Marcus, didn’t regard me as either human or of Earth. I wasn’t – my people weren’t supposed to be. We were laboratory
specimens then, and we were treated as such now. We were supposed to be dead – long dead, he told us. He said we lost our rights to Earth,” The former dictator choked, “the only home we knew.” His eyes glistened, but he remained calm.

Khan didn’t need to continue. And as Wesley said, he wasn’t a doctor, but he didn’t have to be able to imagine just what the Augment had been through. Any color that had returned to the Commodore’s face vanished again. White as snow, he looked between the two younger, then closed his eyes. “Oh good God!” he whispered. Bob now understood how Jim was able to put Pike's death behind him – or better yet, in the proper perspective. The real monster was not the dark-haired man with the strength five times greater than a human and a mind brighter than the sun. The real monsters wore command gray, the same uniform Bob Wesley wore. For just a moment, he wanted to rip it off. Marcus, Alexander, and the rest of their cronies showed an inhumanity that was difficult to grasp. “Does Barnett know what happened to Mr. Singh after he was sentenced to cryosleep?” He addressed Kirk, who nodded.

“Yeah. The lab alerted Command after Nien escaped; the scientists had to fess up.” His blue eyes flashed in fury. “I had the displeasure of meeting him in Barnett’s office. Him too, he knew and condoned what was done to Nien. He must have. I met him just before we started the five-year mission that the Klingons cut short with damn war. Barnett acted outraged, but he ordered Nien shot on sight.”

“Barnett cancelled that order,” Bob cut in. “Still though, there's the warrant. And I should enforce it, but I can't.” He nodded at Khan, "Not after I promised you, not after all you've done for me, and certainly not after what I know now.” He saw Jim breathe a sigh of relief, and the Augment’s face softened for the slightest moment.

“Thank you, Bob!” Kirk whispered, and Wesley rubbed his neck; the whole situation made him uncomfortable.

“You’ve put me in a hell of position, son. But I'm glad you did. Mr. Singh deserves justice as much as anyone!” His eyes wandered back to Khan. “You, Mr. Singh, have every right in the world to press charges against Starfleet for the miscarriage of justice done to you, unlawful dentation, slavery, blackmail, human rights abuses, and, above all, the murder of your crew and their detention and whatever else a lawyer can think of. Hell, wake them and let them sue – I don't know how all of this is going to come out in the wash.” He cocked his head. “Unfortunately, no matter how guilty Starfleet is, they will not go down without trying to take you with it. The trial will be repeated and you'll be accused of a terrorist attack on London and Daystrom.”

“Nien took care that the streets were empty around the former archive, Bob. There were no civilian casualties, neither outside the archive nor inside. He used his affiliation with Starfleet to get the local law enforcement to block the streets for a Starfleet exercise. We could prove that; there have to be records.”
Wesley lifted both brows. “You lost your mind out there, but you still had the presence of mind to mitigate collateral damage?” he addressed the super-human. “Impressive. Another point for premeditation, but impressive nonetheless.”

“I am an Augment, Commodore. I was bred to protect those in my charge or sphere of influence so long as I am not threatened by them. It’s in my genes so to speak. After the agony of losing my family as I had been led to believe, I suppose the proclivity to protect ebbed a little bit. I went on auto-pilot as they said in my time.”

Thoughtfully, Bob watched the other man and nodded finally. It made sense, and it highlighted just how Augments differed from humans. In earlier centuries, the differences would have frightened humans, but time had changed. In a world in where sentient species lived together in relative harmony, tolerance within the given standard of behavior was not only normal; it was expected.

Wesley cleared his throat and looked back to Kirk. “I doubt that any documentation on Mr. Singh's call exists. Marcus certainly took care that everything vanished. But even if Mr. Singh’s precaution can be proven – if Marcus never found out about the call to the local law enforcement agencies, then there is still the attack on Daystrom. That can also be construed as terrorist in nature.”

“Marcus gave Nien the rank of commander, but in his time he was like a general and the leader of a country – of a few of them. He fought against an unprovoked attack on him and his people, like any other soldier would. Who are the terrorists, Bob, because it doesn't look like him?”

“I understand why you took Mr. Singh’s side, Jim! After hearing what really happened, I'd personally drag Marcus’ ass to the Council if he were still alive. The fact that we can't complicates matters a bit.” He looked at Khan sternly. “You might have snapped and you can't be blamed completely for that. But killing Marcus for revenge? That was murder.”

“No, maybe not,” Kirk chirped in again. “Marcus threatened his life.” Bob glared at him in exasperation, but Jim plowed on, “Marcus tried to persuade me to turn Noonien over to him. He promised me he’d spare the Enterprise. That implies he meant to...” He dropped off and looked down at his hands in his lap. "He meant to kill us - to take out the Enterprise." Kirk looked up. Bob could see how hurt he was that his beloved Starfleet would threaten him and his ship. "Marcus said that he would make everything vanish – our part with if I would let him have him. He told us Nien and his people had been sentenced to death in the twentieth century, I believe Marcus intended to carry out that sentence. In other words, he threatened to kill Khan. Isn't Nien’s reaction then self-defense?” Jim argued, and before Bob could reply Jim added, “And, by the way, there is no proof that any twentieth-century authority either tried or sentenced Nien and his people to death. As far as I researched, history's treated him fairly well. Marcus made the whole thing up to justify his intent concerning Khan and his family. He had to eliminate them to keep his plans secret! I’m convinced
that he not only would have killed Nien and his people, but my crew and me, too, as soon as we turned our backs.”

Wesley grimaced. The fierce way in which Kirk defended this man spoke volumes to the nature of the changed relationship of the former enemies. “There's no trial here, Jim; you don’t have to defend Mr. Singh. Not against me. I believe you; you know that, and I demonstrated my support to you both by allowing Mr. Singh remain free. That could land the lot of us in the brig if it comes out.” He turned his attention back to the former dictator. “But Jim is right. If you want to end this cat-and-mouse game, if you want to be a free man in this time, then you've got to get clear of this once and for all.” He pursed his lips. “You’re going to need a very, very good lawyer not just to get and keep your freedom, but to avoid a rehabilitation center.”

Jim went rigid. “A rehabilitation center?” he gasped, horrified. “You’re kidding, Bob, right?”

The commodore’s brown eyes fixed Kirk’s sky-blue ones. “No, I'm not, and you know that. Despite the fact that sentencing someone to cryosleep is way outside the norm, I don’t think a second trial would deliver the same sentence again. After all, this would be really then a double jeopardy issue here.” He glanced back at Khan. “Latter could be a chance for you to get out of it. You’re already sentenced, they can’t give you another penalty for it. On the other hand, cryosleep is not a legal penalty.” He shook his head. “This whole case is absolute unique.”

“Nien can’t go back to cryosleep,” Jim threw in. “He's been subjected to cryosleep too often. If he goes down like that again, he'll die; Bones confirmed that, so did those bastard scientists.”

Wesley nodded, ignoring the young officer's harsh language. “There you go. The chance that Mr. Singh would be sent to a rehabilitation center for God knows how long is high. To prevent this, he's going to need a hell of a good lawyer.”

“Do you know one?” Jim asked hopefully.

“I know our lawyers, but this doesn’t seem the best solution.”

Khan cleared his throat. “I’m grateful that there are men – good men – concerned about me, it will never cease to surprise me, but…”

“I promised you I'd find a way to get you out of this, and I will!” the young captain snapped.
“In case you have forgotten a small but not unimportant detail, Kirk, I own only the dirt beneath my fingernails. Lawyers are expensive; I don’t think that has changed.”

“No, it hasn't, but we'll find a solution. I've got credits saved…”

“You will absolutely NOT pay for me,” the Augment said sharply.

“Oh, come down from your high horse, Your Majesty!” Jim groaned, rolling his eyes. “You’re going to need all the help you can get.”

“This has nothing to do with pride, Jim!” Khan replied, ignoring Kirk’s snort. “Can you imagine what would happen if you, the captain of Starfleet’s flagship, pays for the defense of a man suing Starfleet itself? A man regarded as a criminal and even a terrorist as Commodore Wesley pointed out? You’ll lose your command and your rank faster than you can say ‘Bob’s my uncle’.”

At those words, both officers blinked in confusion.

“Bob is not my uncle,” Jim said baffled. “Why would I say that?”

Khan sighed and closed his eyes. He quickly opened them again and grimaced ever so slightly. “I apologize, gentlemen, my mistake. It is an old phrase from my time one of my brothers loved to use, and means that something will happen quickly.”

“Okay, I understood,” Jim murmured, while Wesley looked in amusement at the two other men, before he smirked nonchalantly at his protégé. “Ugh, well, say anything but that. That's just too weird.”

Kirk grinned when the super-human’s lips curled ever so softly in a smile. They'd had little reason to smile these last few days. Then they both turned serious again.

“I understand why you don’t want to have Jim do this,” Wesley addressed the Augment. “And it tells me a lot about your new found friendship – that you think of him first, even if you're the one in trouble.” Bob fixed Khan. “And I think I have a solution for you, Mr. Singh.” He bent forwards; his elbows rested on his thighs. “This device you built is of utmost interest to Starfleet – and they will pay a lot for the design. You…”
“I never made a design,” Khan interrupted him cautiosly. “The Enterprise’s engineering already has a device. All you have to do is…”

This time it was Bob who did the interrupting. “Contrary to the opinion of a certain chief engineer aboard this ship, we are not thieves, Mr. Singh. This sensor-disturbing device is your baby, so to speak – your intellectual property. Apply for a patent and Starfleet cannot take it from you without remuneration. And the price is up to you though I’d suggest you demand at last two mil for it.” He heard Jim gasp and added, “For the design you'd come up with, the value to the Federation, and for the patent, it's appropriate – maybe even low-balling now that I think about it.”

Jim stared at Khan – not in envy, but in shock and joy. If Nien could put his hands on that much money, he could hire a whole cadre of lawyers for him and for his people!

And Wesley wasn’t finished yet. He knew that Noonien Singh was a murderer in the eyes of Starfleet and the Council. But this man's hand had been forced by the wrongs done him over and again by Starfleet. A bit of advice on how to gain the advantage was well overdue as far as Bob was concerned. “I'd suggest that you reserve the rights to oversee future tests and development. You'd kill two birds with one stone. You’ll have enough money to employ all the lawyers you need for business and Starfleet would realize that they need you out of prison and out of a rehab.”

Cocking his head, Khan watched the commodore waiting for the punchline. None came. “You’re serious,” he said after a long pause.

Wesley nodded, “Of course!”

“There is one catch,” the Augment replied slowly. “I am in no position to apply for a patent. I cannot risk…”

“Galven!” Jim cut in – his hope stoked now by Wesley's words. “It’s easy. Galven is a technician and knows how Nien's device works. Hire him as your assistant, give him power-of-attorney or whatever they call it to act in your name.”

“My name?”

“Nien Sunrise, for example, or something else in another language, ‘Commander Lavi’,” Kirk grinned before continuing, “Galven applies for the patent for you and then the contact between you
and Command goes via Galven, until…”

“Jim, the patent would be null and void if it’s applied for under a false name,” Bob cut in. “As soon as Command learns about this detail, they won’t be bound to the patent or the contract. Hell, they could demand their money back and sue Mr. Singh as well as this Galven, too.” He glanced at the Augment. “Does Galven know who you are?”

Khan shook his head slowly; the movement was uncomfortable in his shoulders. “No, they do not. Only Diego de la Vega-Martinez-Martinze; he learned that I’m an Augment aboard the space station, but even he does not know my real name.”

Wesley pursed his lips. “Still Galven could get into trouble, if anyone finds out he's working on your behalf.”

“Well, ‘Sunrise’ could be a cover name or a pseudonym, right?” Kirk asked. Wesley made an indifferent sort of gesture and Jim continued. “There are a lot of people who use those to market something – art or tech stuff. Hell, books are written under a pseudonyms and the content belongs to the author no matter what name he uses. The same has to go for a patent, right?”

“I don’t know about patent law; I was a leader, then a runaway, then a prisoner. I haven’t been keeping up, but I suppose that's possible,” the former dictator sneered with little malice intended.

A sigh escaped Wesley. “I guess I'll just have to do some research. I'm just an old pilot.” He looked from one man to the other. “Suppose it's possible for Mr. Singh to patent the sensor-disturbing device. The moment the cat is out of the bag on the designer, we're in trouble.”

Jim shrugged. “If Nien follows the law and stays in the background, what can they do? This device can save thousands – Starfleet, Federation civilians. We need this; Starfleet will have to choke on their charges when they figure out who invented it.” He glanced at Khan. “You get the money; pay the best lawyers. All you need is someone who doesn’t belong to Starfleet and is willing to help. Any of The Shadow would do it for you, but I think Galven is the best choice. Give him enough to support The Shadow and everyone's happy!”

Khan laughed quietly – a warm sound that rumpled in his still hoarse throat. Amusement lit his green-blue eyes. “You are an optimist, James Kirk!”

“Yeah, that’s me,” Jim nodded with a bright smile.
"I'm still going to need some sort of documentation to apply for these patents, aren't I?" the Augment teased.

"That can be arranged," the younger man shrugged, and Wesley cleared his throat.

"I'm sure I didn't hear that, Jim!"

"Rrrright!" Then the captain smirked as a memory struck him. "Didn't you get some kind of papers when you on that fishing boat?" he addressed Khan again. Bob let his head sink into the neck; groaning, "Oh good Lord, stop!"

"That I did; they served me well when I left Earth, but I don't know if they would hold up against real scrutiny," Nien mused.

"If you slipped through an Earth port without getting stopped, they have to be perfect," Jim chuckled. "Use them, they'll be all right."

"Nothing will be 'all right', if it comes out that we are talking here," Wesley grumbled and rose. "And so it's important that no one becomes curious about the newest 'crew-member' of the Enterprise. Mr. Singh has to stay out of sight until everything is set into motion – especially when it comes to the trial." He looked from one to the other and back. "So, please no extra trips, no escapades, no attention-getting at all, gentlemen. We are all in this now, and I don't want to see any one of us or all of us ending up behind an energy barrier with a bunch of Redshirts watching our every move."

"I agree. I've spent a lot of time in your so-called prison cells, first under Marcus, then here," Khan deadpanned. "I felt like a fish in a fishbowl."

Jim looked at him, puzzled. "A fishbowl?"

"Yes, you don't know...? A fishbowl is a round glass bowl filled with water for a small fish, like a goldfish."

"Hey, I'm not mocking you, darlin'. We've still got aquariums here and I know what a goldfish is –
“you can't eat them.”

With a groan, Nien closed his eyes again. “Why do you always think of food?”

“Because I’m hungry?” Kirk offered with a grin.

Khan glanced back at him. “Hungry – after smoke inhalation and all we've been through? You are as tough as any of my people.”

“I knew you'd rub off on me!” Jim smirked. “But why'd you call the cell a fishbowl?”

“Because the barriers are transparent, you are stared at like an animal at the zoo.”

Jim pursed his lips. “I never thought much about it, but you're right. No much privacy there, huh?”

“That is quite the understatement!”

Wesley had listened to the curt encounter and pursed his lips. Yes, Jim and the Augment were most definitely friends! “Leaving fishbowls and lunch to get back on topic, I think both gentlemen agree that Mr. Singh's whereabouts must remain secret. If Command figures out Mr. Singh is aboard this ship, we're all doomed.”

“Perhaps I should leave the Enterprise then?” Khan asked feeling a surprisingly sharp stab in his gut at the mere thought of separating from Jim. He had never needed someone like he needed Jim, and admitting that he needed at all was foreign – but undeniable in its truth. His mate near him was as necessary as food and air. But he would suppress his needs if it meant his beloved was safe.

Jim looked at him as though he'd just invited a Klingon to dinner. That would get as resounding a 'No!' as the implication that he should leave. Not if he had a say – and he's the captain; he always had the say. “You’ll stay!” he said firmly, and then added a soft “Please,” remembering that his beloved would appreciate choice that was so long denied him.

Khan sighed. “Jim, many of your crew members will recognize me. And then they will ask questions – questions you can’t answer. And if one of them goes to Starfleet behind your back... You need not
Kirk thought about the issue a moment, then he replied thoughtfully, “If the crew discovers what you've done since escaping the shitty situation you were put in. If we tell them that you saved millions of people and me, no-one will turn you in. Sure they may be a few less than thrilled at the prospect of having you aboard, but I let Spock check the files. I’ll speak to those personally who hold a grudge. They will understand – I'll make them.”

Bob had listened closely and looked at Kirk. “It’s your crew. You know them the best, but be warned. If just one of them thinks that this is a good chance to take revenge on Mr. Singh, you, your senior officers and Mr. Singh will end up jail. Me, too. I don't mean to sound self-important, but we're at war; Starfleet and the Federation need you – need the both of us.”

“I wouldn’t tell anyone that you know about Nien.”

“Don’t be stupid, Jim!” Wesley snapped. “If Command learns the truth, your only hope is me, so of course I know where he is.”

“They would arrest you, too,” Khan added for consideration, and Wesley nodded.

“Yes, but we've got our own set of rules and the war forces exceptions.” He took a deep breath. “When a staff officer guarantees for someone due to their usefulness, the Council must accept it. Like an informant in law enforcement. If all of our covert contacts were required to be clean, we'd never get anything done.”

Khan cocked his head. “What do you mean by guarantee?”

“Well, Jim did it in not so many words when he informed me about your warning concerning Tammeron.”

“Yes,” Nien nodded; after all he had heard the talk between Kirk and Wesley as he listened in on their transmission.

Bob didn’t seem to be surprised that the Augment knew to what degree Jim trusted him. “As much as Jim believes in you, Mr. Singh, so will I. Jim's earned that much,” he nodded at the young man. "I know my faith is not misplaced – not where he is concerned, and so I will extend it to you. These
extraordinary times require extraordinary measures. But know the risk that Jim and I take for you. I know what you've done for him. Make no mistake, I will not hesitate to do the same.”

Thunderstruck, Khan stared at the older man. Oh yes, he knew what risk came with placing so much trust in someone! Jim had done it only several weeks ago, and it had touched the super-human. But Wesley had no reason to offer his own. Yes, the commodore and his crew owed the Augment their lives. But Nien could only hope that it would spare him an arrest. He never expected Wesley to cover for him. Of course, it was Jim who inspired more in those around him.

“Thank you, Commodore,” he said with open honesty. “I do understand the risk you take on my behalf.” He took a deep breath and offered his hand to Wesley, who closed the distance between them and accepted.

“I'll make an official statement in my log and send a copy to Jim so that he can present it, should this step becomes necessary.” He fixed the Augment. “You are under my protection now; if I had more to offer, I would, but don’t make me regret this!”

“I will not, Commodore. You have my word of honor!” Khan replied; his tone changed with the promise he made as they shook hands.

Khan Noonien Singh had met many men – honorable men and less than, naïve and intelligent ones, strong and weak ones. But never had he met such men as his mate and Commodore Wesley. There were mere humans, ‘inferiors and weaklings’, as some Augments would have called them. As far as Khan was concerned, the worth of these men was far above so many of his own kind.

Bob watched the super-human. He's had the benefit of a lifetime of experience with humans and aliens alike. Many were great actors – subtexting their parts and hiding who they really were and what they wanted – dubious intentions included. Now he knew that many of them belonged to Starfleet – were friends he no longer trusted. But where trust was lost, trust was gained, and Wesley knew that the man sitting in the bed before him was serious, and more honest than whom he thought were the most honest of men.

Smiling, he let go of the pale, strong hand. “Right! And now we should set the whole patent issue in motion as soon as possible,” he went on to plan. “I'm sure that Mr. Galven is willing to help if you can apply for a patent under a pseudonym. After that's done, I'll send my report to Starfleet Command about the sensor-disturbing device. Mr. Scott should be done with the tests by then. I'll also send my permission to test non-Starfleet technology aboard the Enterprise to Mr. Spock. That'll keep us on the right side of things for when Command asks questions. We have to expect that. I'll also hunt down some names of the better-known lawyers in patent law and military tribunal law.” He lowered his voice. “We have to be very careful, gentlemen – completely aboveboard and by the book. One slip and this is all over before it begins!”
“We know, Bob,” Jim said firmly and Wesley nodded.

“Good!” He turned around to go but stopped. “By the way, you never told me how you came to know that ‘Sunrise’ is Mr. Singh.”

Jim’s face was pure innocence as he replied, “We had a conversation once about the ‘last sunrise’. When The Shadow contacted us, he sent a piggy-backed transmission and referred to himself as ‘Sunrise’ I knew it was him.” Well, he didn’t lie. When Khan came to his apartment, it was only the third time they had met.

Bob cocked his head having no reason to doubt Kirk’s words. “And you trusted him? Why?”

“He risked discovery to warn us of a planned Klingon strike against a neutral planet. He knew what was at stake and the risk it posed to him; still he put the well-being of the planet above his own. That was enough, I thought, to go on.”

Wesley frowned; then he shook his head. “Gut feeling?”

“Yes,” the younger man confirmed, and the commodore snorted before addressing the super-human. “And you contacted the Enterprise because you knew how Kirk would react?”

“Jim listened to me when I told him about Marcus and his intentions. He is open to suggestions and is not afraid to hear unpleasant truths, so I hoped that he would believe me. And, I never lied to him. I hurt him, and for that I am sorry. But I did not lie to him.”

“That’s right,” the captain said. His eyes shined, and he hoped it escaped Bob's notice. “Nien's never lied to me. Last time he warned me about something, it was true, and so I believed him again.”

Bob chuckled quietly and shook his head in amusement. “You two are a hell of a team; I'll give you that,” he said. “Well, I’ll head back to the Lexington and try to get this Mr. Galven. Maybe…”

“Commodore,” Khan cut in. “What about my crew?”
“Your crew?” Wesley asked.

“Bob, they’re somewhere locked away in a secure facility. I’d bet good credits that the admirals who knew Nien was being tested on know where his people are. I’m assuming – God I hope they are still in cryosleep,” Jim explained. “But they’ve done nothing that justifies it. They are human and have a right to their life and peace!”

“Minutes ago you told me that the former Chief of Command stripped Mr. Singh and his people of their status as human. Granted, that’s crazy as whether or not they are human has little bearing on their treatment in the Federation. We are one of many species!” the commodore replied and glanced back at Khan. “Consider it slander and sue ’em for whatever else your lawyer can come up with. Starfleet has neither the authority nor the right to make such an outrageous call.”

“So there is a chance to free them using the law?” Nien demanded, and Wesley sighed.

“I should think so! They aren’t accused of anything and leaving them in their current state due to world events that occurred centuries ago is idiotic nor can any alleged crimes be verified. You left the planet! What charges could they possibly face? I don't think the Council will have any other choice than to wake them and support their… your building new lives.”

“They are Augments, like me. I fear due to history, my own recent included, we will not be looked on kindly. Do you really think they would grant us true freedom?” Khan pressed, and the older man nodded.

“Yes, I do – but we shouldn’t rush anything. First, we have to make certain that you get a fair trial. As well, your lawyers will press charges against Command with regards to the confinement of your people.” He pursed his lips and then asked. “How many are you?”

“Seventy-two,” the former dictator replied.

“Right. I’ll try to find them. I’m a staff-officer; I’ve got half-way decent access. Kirk, I may need your help though.”

"Of course, Commodore."

Hope flashed in the ocean-colored eyes of the super-human. Both men saw it. “I can’t promise you
that I’ll be successful, but you have my word that I will try,” Wesley said quietly.

“Thank you, Commodore – once again.”

Bob smiled. “You’re welcome.” He straightened up. “Right, you two, now get better and…” He was interrupted; voices outside became louder, and Khan went rigid.
