“No,” Khan whispered, “and you know it.” He lowered his head and his lips brushed over Jim’s, before they claimed that clever mouth in a searing kiss.

Instantly, the warmth in the captain’s heart and body began to heat up. Snaking a calf around the long legs of the Augment, and slipping his hands under Khan’s clothes to stroke over his strong back, Jim returned the kiss with all the longing that had grown these last three nights. Yes, he completely understood why Nien had stayed at his brother’s side the first night after Joaquin woke, yet he had missed the warm and safe presence of his beloved in his bed. Even if they didn’t make love, they were used to that. But just now, sleep wasn’t what on either of their minds. They hadn’t been together in days – half an eternity their souls and bodies thought.

The kiss quickly became an intimate, erotic duel of tongues and teeth; hands sneaked beneath clothes, and searched out the warm soft skin rippling over muscles beneath. Their groins pressed
together despite the trousers – rubbing, seeking friction and pleasure.

They didn’t need more than a minute to get rid of every piece of clothing they wore, and both groaned in relief and desire as they finally felt each other skin to skin again. Hot breathe danced, raising goosebumps; open-mouthed kisses were pressed on throats. Teeth nipped at little bits of flesh; hands teased and fondled. The more they felt each other’s skin against their own, the more their hunger grew.

Jim’s fingers fondled the delicate skin of his mate's scrotum and Nien gasped; his cock pulsed with anticipation. Whispering his beloved’s name, the Augment managed somehow to rise on his knees to escape the talented hands. He bent down and took the younger man into his mouth, relishing the sounds that escaped Jim and his taste that was so purely his Pyāra. He felt Kirk trembling beneath him, felt his hands gripping for his shoulders, and he listened to the deep, lusty growl brimming in Jim’s chest as he licked and sucked at the hard dick under silk-soft skin.

“All, please!” Kirk whispered, not knowing whether he was pleading for this sweet torment to end or begging for more. Khan understood it to be the latter and he had Jim writhing in seconds. Holding him steady by placing his hands on the captain’s hips, he continued to tease and to stimulate the younger man, interrupting the erotic attacks every time he felt his mate coming close to climax – edging him relentlessly.

Jim was in heaven – or hell. He wasn’t so sure which. All he knew was that Nien was driving him crazy – insane with desire! Helplessly, he tried to buck into Khan's sinfully hot mouth, but the Augment’s strong hands held him down. It was up to Khan whether Jim would finally get to come or not. As Nien drew him close to the heights for the fifth time without sending him over the edge, Kirk was almost sobbing. God, this man would be the end of him. And the crazy thing was that Jim didn’t care. He would risk everything to have this, to have Nien, with him until the end of his life.

He heard himself pleading again; then he moaned in delight when all of sudden one long finger entered him – wet with salvia. It was his downfall, the moment Nien touched the little bundle of nerves deep in him. And he pressed his tongue into the small slit in Kirk’s glans, using his teeth carefully to give him even more pleasure. This peak of sweet torture was too much. Jim came with the force of a storm, shouting his release and pleasure into the room. The world whirled around him – seemed to be only made of pricks and rays of light as he spent himself in his lover’s mouth.

All too willingly, Khan swallowed, loving the musk-sweet taste of his soulmate. He glanced through long lashes over the heaving, golden chest, shimmering with sweat, and felt himself smile as he saw the utter rapture on the flushed, boyish face – the young man who held his heart and soul. It was confusing – this mixture of power he had over Jim and the pleasure he found in giving his beloved this joy.

Jim lay spent on the mattress, trying to catch his breath. He was flying in the blissful nothingness of
aftermath. Warm, wet lips found his and he could taste himself mixed with Nien’s taste while he felt his lover’s hard heat, pressing against his side. Opening his eyes, his gaze was caught in the fierce glance of those ocean-deep eyes above him, and he knew that it was now his turn to give his mate pleasure.

Rolling them gently over, Kirk slipped a hand between their bodies, and he gripped Khan’s cock carefully and closed his fingers around it – stroking it slowly with gentle strength. A deep-throated moan was the result, accompanied by a shiver. Nien lifted his head and buried his face in the crook of Jim’s shoulder, nipping at the sensitive spot that bore his mark. He heard Jim gasp and smiled wickedly into the soft, warm skin. Feeling the pulse beneath his lips quickening again, a certain stirring at his hips gave away the captain’s new sense of arousal.

His free hand found his beloved’s reawakened cock and he mirrored Jim’s fondling, eliciting another groan from the younger man. It didn’t last long before both were close. Nien relished in being cocooned between his mate and the soft sheets beneath him. He felt sheltered – cherished and loved. Licking once more over the invisible mark, he lifted his head and whispered in Kirk’s ear, “Take me.”

Jim’s half-closed eyes widened. Only two times had he been offered this – at first in their little hideout at the Silver Bayou, and later as they truly bonded. He instinctively knew that Nien still had to heal from what had been done to him first by the guard while he was a child, and later by Conelly. Looking down on the beautiful face with the impossibly high cheekbones, his skin flushed with lust; he murmured, “You’re sure, love?”

Nien nodded. “Yes,” he replied softly. “I want to feel you in me – to be utterly yours.” His hand cupped Kirk’s heated cheek. “This night will be the last one for us for a long time and… And I want to be it for us, something to remember and draw from.” He pulled Jim’s face down. “Take me, as I will you later.”

Their lips met in another deep – at first sensual then more fierce – kiss. Kirk reached over the Augment to the nightstand, opened a drawer, and took out the lube he’d stored there. He fumbled with the fastening until it opened, swearing under his breath because Khan used the opportunity to rub his length against Jim’s, while those long, experienced fingers kneaded the captain’s butt.

Feeling pure fire racing through his veins, Kirk was finally able to open the bottle and oil the fingers of his right hand. He somehow managed to place the bottle back on the nightstand, fighting for any rational thought as his mate was driving him crazy with want.

Bending down he nipped gently at those sinful lips. Jim murmured, “I’ll be careful.”
Nien only smiled; words weren’t necessary. And then a loud groan was torn from his throat, as one of Kirk’s fingers entered him slowly. For a second he tensed up; old memories lurked like ghosts in his subconscious, but they vanished into nothingness as his heart and soul told him that this was perfectly right. The ghosts faded and were replaced quickly. This was his bondmate, the man he trusted as he did no one else, and relaxing, he allowed the daring finger to slip deeper. It stroked against the very spot where James’ name was branded inside him for all eternity. Electricity seemed to zing from his mark through his whole being, changing his blood to lava. It sent all rational thought away allowing him only one thing – feel.

Jim added a second and finally a third finger – gentle, yet firm; preparing him for what would happen next. And as he finally withdrew, a sigh of relief and pure pleasure escaped Khan's lips. This was not an act of surrender, but the glorious knowledge that he belonged to someone! Wrapping both arms around the younger man, he bucked against him, pleading wordlessly for more – and Jim loved to obey.

To be in his beloved again, to feel those hot, silken walls closing around him was pure heaven for the young captain. Nien’s cock, hard and pulsing with heat, rubbed between their bodies as Kirk began to move – slowly at first. But then he increased his speed as he sensed that his mate had adjusted to him. Bracing himself on his elbows, he buried his fingers in midnight black strands of the Augment’s hair. Blue eyes caught green-blue ones, and at that moment something connected between them – deepened, and their bond strengthened. Suddenly neither knew where one man began or where the other ended. Not only were their bodies united, but their souls also shared these moments, too.

Reality seemed to skip away as their entire beings were bathed in warmth and golden light. Their mouths met; tongues stroked each other, and breath was shared. Love poured from every pore of their joined bodies. Their passion climbed higher and higher, spiraling to the stars – and finally burst.

Time had no meaning for them – neither during their ecstasy nor afterward. Wrapped around each other, they soared through the warm calm of their own oblivion – utterly spent and satisfied. After minutes – hours? – Jim slipped out of his beloved’s body. He felt for one of the blankets and pulled it over them both. Nien murmured something in his native tongue as he slipped a leg around Kirk and held him close. Their hearts continued to beat in unison as their pulse slowed. Sighing in contentment and too tired to do anything else, both men drifted into a deep, fitful, and peaceful sleep.

In their shared quarters, Uhura watched her lover, who sat on the mat in front of the meditation stone. The gleam of the little flames bathed his stern features in an orange light, and it was evident that Spock hadn’t reached the relaxing state of meditation that was so important for Vulcans – maybe even more important than sleep. Nyota knew that the mantra, ‘Vulcans have no feelings’ was a big lie (despite the claim that they cannot). They had emotions stronger than any human could imagine or bear. Maybe those feelings were too mighty for the Vulcans to contain, the very reason why they
first learned to control and finally to suppress them. Those emotions burned like wildfires deep in their subconscious, and only meditation could soothe the Vulcan soul – the *katra*. Uhura was not only a superb xenolinguist; she found that studying language forced a confrontation with the culture of the people whose language she learned. And after she began a relationship with Spock, she studied the Vulcan culture as much as she could.

Spock, realizing what she did, appreciated it at first. And it was evident to Nyota that he took pleasure in her efforts. He even broke a Vulcan social taboo or two by speaking with her about subjects no outworlder was privy to. Yet the Vulcan knew that his father once did the same before he married Amanda. And Spock’s intention concerning this brilliant, beautiful, incredible human woman resembled Sarek’s plans all those years ago when he brought Amanda to his home and confronted T’Pau with his decision to make Amanda Grayson his wife. The ambassador once called the decision ‘logical’. More than three decades later, he admitted to his son that he chose to marry Amanda because he *loved* her. And what was Spock felt for the young woman on the bed, he dared to call ‘love’ too.

So, why not make the next step and bring her home like his father once did Amanda? Spock knew that his father must still be aboard the *Lexington*. The chances of seeing him soon were slight; the *Lexington* was headed for Earth where the fight against Section 31 would begin. Yet the Vulcan was determined to use the next opportunity to introduce Nyota properly to his father and his clan.

As was tradition, he had been engaged as a young boy to the daughter of another high ranking clan official, yet the wedding wouldn’t take place before his first Time. *Pon farr*. The Time of blood madness – insanity, when the urge to mate drowned a Vulcan's lucidity. The Time demanded the consummation of a bond, or the blood fever would kill the Vulcan male. Spock knew that it was only a matter of months before his first *pon farr* took him. Most full Vulcans had already suffered their first Time by his age, yet the first officer had a ‘gut-feeling’ that he wouldn’t be spared the madness though he was half human. His spouse, T’Pring, died with Vulcan. He had checked it officially, even though he felt their weak bond ripped apart as the planet imploded. That bond could only be severed by death. Therefore he would need to search for a bond partner soon – if he hadn’t already had Uhura.

With the threat of his impending *pon farr*, it was only logical to introduce her to his family – or the remains of his clan, to be precise. Yet he was uncertain what his father's reaction might be. Or T’Pau's.

T’Pau... Another reason Spock’s could not find rest enough to slip into a fitful mediation.

Though T’Pau was his grandmother, the old matriarch was unlike the grandmother types of human relations. Spock had watched grandmothers together with their grandchildren on Earth. T’Pau’s behavior towards him was nothing like grandparent handling of grandchildren among humans. She had never been unkind to him, but she had never been kind either. If anything, she expected even
more from him than from the other children of their clan – a clan that had been founded by Surak more two thousand years ago.

Her indication that she was ready to meet Khan and scrutinize the Augment’s intention in person surprised Spock at first. Then he realized that his older self had likely pushed for it, which meant that T’Pau listened to him – valued his opinion. Spock would have never thought it possible. But perhaps he had failed to separate himself from ‘Selek’. ‘Selek’ was only a few years younger than T’Pau; he’d gained much wisdom during his life, while he – Spock – was still young and still feeling out his place in the universe. T’Pau would listen to ‘Selek’ – it was logical given his position as the Vulcan High Minister. She pushed for him to take the position two years ago. The first officer was aware of the danger that came with this meeting. T’Pau would examine Khan thoroughly, in ways the superhuman could not imagine. And everything depended on her in the end. Not just the fate of Khan and the other Augments’, but Jim's, Uhura's, Dr. McCoy's and all the other officers who had dared this bold act of near mutiny against Starfleet. Spock respected T’Pau. On the other hand, there was always an awareness from childhood that he perhaps feared the old woman. He did not like the prospect that his friends’ and his future depended on her.

And that was the third topic that took residence in the Vulcan’s thoughts.

They all were a step away from a crossroad that would lead them either to freedom or to prison – and prison was the optimistic option when it came to the penalty for their actions. As acting captain, while Kirk had been in medbay after his rescue from the space station at Aldebaran, it had been up to Spock to arrest Khan and to inform Starfleet Command that had been still under Barnett’s leadership at that time, but the Vulcan hadn’t done it; thereby disobeying a direct order. He didn’t believe in luck, but he would need it if the judges sentenced him to prison. Jim, by covering for Khan like he did, would face graver consequences if the judges were henchmen of Section 31 and Luengo. If Barnett took charge, the outcome might be less grim. But there was no guarantee that the rescued admirals and Commodore Wesley would reach the president to inform him of Luengo’s true intent so that they could remove the treacherous admiral and his fellows from their positions.

Spock, always ready to calculate the odds of success or failure, stopped himself from doing so this time. And he blamed his human half – illogical as that was, for he was not two people, but one person. Perhaps Jim had influenced him as only T’hy’la could. Because his friend loved to point out that sometimes it was better to face a situation without knowing too much in order to stay open to possibilities you wouldn’t think of otherwise. Humans had a strange logic, but sometimes it worked. And it never ceased to surprise him that an illogical emotion was often as successful as logic – hope.

He had to admit, he had heeded his emotions concerning his father. After Commodore Wesley had told him of the delegation’s death, and as such, Sarek’s demise, Spock had been almost overwhelmed with grief – only to find it replaced with one of the strangest feelings he had ever encountered. Hope. There had been a slight chance that some of the delegation hadn’t met a cruel death, and Spock had been more or less (but not illogically) certain that his father belonged to the survivors. He had been convinced of it even before they received Mr. Galven’s information about the Vulcan blood in the crashed shuttle where, pointedly, no Vulcan was found.
He never had a strong link with his father as other children had with their parents. Only a few times did they share their minds in his youth, and after Spock went to the Starfleet Academy against his father’s wishes, he hadn’t had contact with Sarek – until the moment Vulcan was destroyed. Yet a part of Spock hoped that his conviction of his father’s survival was not illogical, but the result of a stronger link since his mother’s death.

All of sudden, his thoughts turned to the stronger bond he now shared with Jim. Since his T’hy’la had bonded with Khan, the link between Kirk and himself had grown. Even Jim felt it, and Spock knew from experience that his brother’s psi abilities were practically zero. Something had changed after Jim and Khan bonded. Spock remembered McCoy telling him that Jim’s brain activity had increased, likely due to the blood serum Khan had injected the captain with during their flight from Turkana. The drug had worn off by now, this much was certain, but their T’hy’la bond was stronger and Jim was healing quicker than ever. The black eye and the other bruises he had gotten from Finnegan were already gone – a clear sign that his cells remained augmented. And Spock was not sure whether this was a positive or negative attribute to Jim's physiology.

Suddenly the Vulcan felt a familiar presence beside him and then a slender, cool hand was placed on his shoulder. Turning his head, he looked straight into Uhura’s large, dark eyes.

“No matter how much you consider and catalogue the events of all that has happened and might happen, you can’t steer the future completely or prevent the events that will inevitably take place.”

Spock lifted a brow, surprised that his lover understood the reason for his musing. “Am I that transparent?” he asked quietly, and Nyota shook her head with a gentle chuckle. “No, but I do know you a little bit by now.”

The Vulcan took a deep breath. “I think ‘a little bit’ is an understatement, my dear. There is no one who can read me as you can.”

Uhura smiled. “Oh, I can think of someone who has read the same book I have.” As she caught the slight confusion on his face, she revealed, “Jim Kirk.”

“Oh!” The Vulcan nodded. “Yes, he has become quite adept at understanding me, but given Jim’s intelligence combined with his sensibilities and compassion, I am not surprised.”

Promptly, the young woman began to laugh. “I bet you hadn't thought of that turn of events since you first met him in the Academy – after he cheated your test.”
Spock lifted a brow. “Indeed,” he affirmed, and he watched Nyota become serious again.

“Shee? All the factual information available still can't perfectly predict an outcome.” She squeezed his shoulder and added softly, “So stop brooding and come to bed. I don’t think that you’ll be able to mediate tonight.”

The Vulcan pursed his lips and looked into the meditation flame, but he realized that Uhura was right. He couldn't find the calm he needed to enter the meditative state. He sighed soundlessly. “You are right,” he murmured, and he reached forwards to douse the flames with the little cup of water that stood beside the stone. “Yet it would have been better if my mind and my thoughts were clear, fresh – before, to use a human phrase, all hell breaks loose.”

Uhura cocked her head; her hair fell over her shoulder and down her back like a silken curtain. “Mediation is not only to purify your mind, but it relaxes your body too, doesn't it?” she asked, and again the first officer lifted a brow.

“I’m sure you are familiar with the reason for our habit of meditation.”

She only smiled lovingly. “Well, I do know another way for you to reach a state of relaxation.” This time, he didn’t understand her, as the confusion in his dark eyes told her. She offered him her hand, and he accepted the gesture that, for Vulcans, held even greater meaning than for humans. Softly she pulled him to his feet. Folding her pinky and ring finger, she brushed her middle and index fingers against his – the Vulcan equivalent of a kiss.

Given the sensitivity of Vulcan hands, the gesture sent tiny flames up Spock’s arm and elicited a soft gasp from him. Realizing finally what she was referring to, he cocked his head in question. As he saw the passion flaring up in her eyes, accompanied by her inviting smile, he felt a stirring in him – a stirring that a Vulcan, before his first Time, did not experience. But he was only half Vulcan.

And he realized one thing more. Tomorrow they would be on New Vulcan, and they would remain there, likely, for quite some time before facing court martial. The chance that they would be sent to prison or a penalty colony – separated – was a real threat. Tonight might be their last chance to be intimate together as they had been over the past two years. And Spock wanted to bathe in the warmth and love of Nyota before duty, and an uncertain future took them away from one another.

Following a very human urge, he lifted her in his arms and carried her to the bed where he lowered her onto the sheets. She had barely touched him before he let his meditation robe drop to the floor.
Instantly, her arms wrapped around him, and as he quite enjoyed the human way of kissing, he bent down and caught her soft lips with his, forgetting the Vulcan way just a little while…

TBC…

Chapter End Notes

Yeah, I had to write some hot, sweet, passionate scenes – after all Nien and Jim hadn’t had each other for quite a time, and even a Vulcan isn’t immune against a siren’s call.

In the next chapter, the admirals and Whiteman will reach Earth – and realize that Section 31 has already begun to spread its control all over the planet. And while the little landing party tries to reach the president, the Enterprise reaches New Vulcan. There will be a reencounter with Prime Spock…

I hope you liked the last chapter and I’m really curious about your reactions – like always.

For all who have already summer vacation: Have fun – and maybe you find some time to leave feedback? (*smile*).

Till next time,

Love

Yours Starflight
Chapter Notes

Hi, my dear readers!

Sorry for the delay, but there are summer-holidays by now and that means vacation (absence) or to work double shift for those who are on vacation. Yet I’m really happy that my two beta-readers always manage to spare some time to correct my rogue writing.

Thank you so much for the feedback and that you like the little parallel storyline of Joaquin, Pavel and Kevin. Those three will have some very important actions soon.

As told, our friends are about to reach New Vulcan. And the admirals and Whitman are trying to get to the president of the UFP. And there will be a reunion with a certain character of the ST-universe.

Have fun,

Love

Yours Starflight

See the end of the chapter for more notes

Chapter 69 – Ambushed

“Nearing Earth,” Commander Marceaux reported to Batari Whitman, Morrow, and Nogura. They sat in the small control center of the large long-range shuttle on small bunks (which also served as sofas) and ate an early breakfast. Four Redshirts were on their seats, eating too. “Reaching Earth in fourteen minutes,” Ensign Dempsey at the helm added.

The two admirals and the vice president looked up. It was 06:43 ship’s time and Batari was already unsettled. Not because of the danger of discovery that grew with every minute they neared their destination, but because time was running short. She knew that she had only a little time in which she could get the president inside his private home; afterwards it would be impossible for the next ten hours or so to reach him in person. Not as long as she had to stay hidden.

“Can we increase speed?” she asked not for the first time, and the Lexington’s first officer sighed.

“Ma’am, we’re racing at warp 4.3 – the absolute maximum for a shuttle. Our engineer would scream
bloody murder if he knew what we’ve demanded of the engines. And, we’re going to have to drop out of warp soon. Therefore…” He spread his hands and Batari nodded.

“I know, Commander.”

Several minutes later. Dempsey turned around again. “We’ve been hailed, sir,” he said to no one in particular.

“On speaker!” Nogura ordered, and then they heard the familiar standard transmission from the space dock.

“Unknown vessel, this is Starfleet Flight Control from Space Dock One. You’re nearing Earth, Identify yourself.”

Dempsey took a deep breath. They had agreed that he should do the talking because there was little danger that his voice would be recognized. “Space Dock One, this is the Ancestor. We’re traders, from Rigel to deliver orders of our goods. I’ll send you our manifest, if you want.”

“Are you docking in space or can you land at one of our space harbors on Earth?” the voice asked, and Dempsey replied in a friendly manner, “We’re able to land on the planet. Our destination is Paris Space Port. We’re delivering food for several hotels, restaurants, and the central market. I’ll send you the documents and request permission for landing.”

“Send the documents through this frequency and remain on stand-by. Turn into standard orbit and wait for further orders; the flight system will give you the exact coordinates for orbit.”

“Okay, Flight Control,” Dempsey drawled, leaving out standard answers protocol that demanded – after all, they were just traders. He glanced over his shoulder at his companions and had to hide a smile. No one would see that the two men beside the Asian woman were two of Starfleet’s most important admirals. Hell, even their colleagues would have to look twice to recognize them. Morrow had a beard, his hair was silver now, and he wore Rigel-style civilian clothes. The same went for Nogura; only he wore a blond wig with hair that reached his shoulders and had shaved his mustache. Batari Whitman wore simple blue jeans, a sweater, and a jacket. She had hidden her hair beneath an old-style baseball cap. Marceaux wore jeans, too, with a plaid flannel shirt and cowboy boots. Dempsey didn’t want to think about the efforts the clothing store on the Lexington went through to replicate the garments.
The four Redshirts and he wore similar clothes; it hadn’t been necessary for them to drastically change their hair or to hide behind false beards. Sometimes being a nameless, faceless corporal was an advantage. “You’ll see, sirs. We’ll set down in Paris in a few minutes. I don’t think we’ll have too much trouble. Trading vessels from Rigel are as regular as the tide.”

He was mistaken. They had to wait for more than an hour after sending the electronic documents (counterfeited perfectly by Marceaux and Palmers) before they got the permission to head for Paris Space Port. They’d barely landed when they received another hail to be ready for Customs Control.

Barnett gaped. Since when was there a Customs Control? Was that another insane order from Luengo?

Dempsey, quick-minded as he was, switched off the comms so that the receiver would be informed that the line was closed. “That'll buy us some time,” the officer murmured and looked at Marceaux, the two admirals, and Whitman, while he opened the door. With a hiss, the seal gave away, and cold, damp air filled the little vessel. “Quick now,” he said and smiled, as Barnett clapped him on the shoulder.

“Well done!” Richard murmured before he followed Marceaux, who left the shuttle first. Morrow and Batari Whitman were on his heels and then came their four accompanying security personnel.

“Good luck!” Dempsey whispered and returned to the control room, preparing himself for trouble that he would use to buy the others even more time. Sitting down to the controls, he opened the frequency and drawled, “Who’s calling us?”

Instantly a hard voice snarled, “This is Lieutenant Antoine Leraure of Federation Customs. You’ve been ordered to wait for our inspection and…”

“Sorry, mon ami, but I haven’t heard anything since we landed. So what’s up with all this customs nonsense all of sudden?”

He looked out of the cockpit window and saw a hovercar racing closer; the alert light on its top and its colors gave it away as a customs vessel. A further glance showed him that the landing party was already out of sight. They must have disappeared into the normal foot traffic. He sighed knowing perfectly well that the customs inspector would be anything but delighted to find the shuttle already relieved of its ‘goods’. And the trouble would certainly increase the moment said inspector realized that the ‘trade ship’ was actually a Starfleet long-range shuttle.
Leaning back in his seat, Dempsey listened to the man on the other end, who told him about the new security measures concerning all space vessels that land in Paris where the Federation Council resides.

Dempsey rubbed his neck as he watched the hovercar stopped beside the ‘Ancestor’, realizing that this ominous Section 31 (he had been informed of during the flight from the Lexington to Earth) was already taking control even over civilian authorities like customs. And the fact that everyone who entered Paris was watched reminded him of his history classes where he learned of another time, more than three hundred years ago, when another leader in Europe controlled every step of the people.

Steps drew nearer and then four men in uniform entered the shuttle. Sighing, Dempsey rose, facing the trouble that awaited him.

**ST***ST***ST**

While the shuttle was still in orbit above Earth a few parsecs away, another vessel was in a hurry – and its crew was determined not to be spied and caught. Just that was about to happen.

“Bridge to Captain Kirk!”

Spock’s voice tore Jim out of his blissful dreams, and for a moment he looked into the darkness of his quarters disoriented, but feeling the long arms of his mate around him. Then the trained Starfleet captain kicked in and wriggling out of Nien’s embrace he all but jumped out of bed, pulling the tangled sheets with him.

“Lights – hundred percent!” he yelled, cursing as the sheets hindered his movements. “Dammit, get off!” he snapped at the material, kicking it away while hobbling to the desk.

“Spock to Captain Kirk! Urgent!” the Vulcan’s voice repeated at the moment Jim reached his desk and opened the channel to the bridge.

“Kirk here!” he answered knowingly – something was wrong. It was 0703 ship’s time, almost an hour before alpha shift started, yet his Vulcan friend was already on the bridge. And even if people said Spock’s voice never betrayed anything, Jim could hear the tension in the dark baritone of his first officer.
“Captain, our sensors caught sight of a ship that is closing in on our current course.”

Jim felt a sinking feeling in his stomach. “Could you identify it?”

“Yes, sir. It’s the *Excalibur.*”

Kirk’s gaze found Khan, who sat up on the bed, his face tense and his eyes alert. “Right,” Jim said slowly. “Alter course and lead us in a bow pattern around the approaching ship, then re-set course to New Vulcan. Is the SDD working?”

“Yes, Captain, we’re still invisible to all sensors, yet…”

“I know. Should we come into viewing range, we’re caught. Alter course now…”

“Already done, Captain,” Spock interrupted him.

“Good! I’m on my way. Kirk out!” He switched off the intercom and cursed again before turning around; he combed his fingers through his tousled hair. Khan had already left the bed and put the collected sheets into the drop that transported them down for the cleaning service.

“It was only a question of time before Luengo deduced our final destination,” the Augment said. “The presence of the *Excalibur* is proof of it.”

“Yes – and I’ll be damned if I let us get caught before we reach our destination!” He hastened to the bathroom. “You’re coming?” he called over his shoulder, and both men took a quick shower together – washing away all traces of their passionate and intense love-making last night.

They had been consumed in their hunger for the other one at least four times, and both felt a bit sore, but that was quickly forgotten. Skipping breakfast, they headed for the bridge and made it ten minutes after Spock’s call. Gamma shift was still on duty and Khan relieved the ensign at the helm while Spock informed Lieutenant Albers, who would have taken the helm during alpha shift that he had a day off. The Vulcan sighed inwardly. There was a good chance that Albers wouldn’t be needed for duty for many days.
Jim’s gaze hung on the main screen that showed the endless depth of space. “Any sight of the Excalibur?” he asked, realizing that out of no-where Uhura came to the bridge to relieve her colleague. He was glad for it. This was now the most critical phase until they reached New Vulcan and he didn’t want to draw any other crewmember into the mess the main crew of the bridge was already in.

“No, sir,” Spock answered, watching the sensor read-outs carefully. “There is her warp signature maintaining her heading, but we’re not close enough to be spotted.”

Jim nodded and glanced at Nyota. “Any transmissions?”

The young Bantu woman had pressed one delicate hand against her headset and listened closely before she shook his head. “Nothing, sir.”

Kirk rose unable to tame his nervousness. “Tactical view!” he ordered, and Khan quickly changed the image on the main screen that showed two points – the Enterprise and the Excalibur. Two bowed lines showed their past course and the current direction of the heavy cruisers. Jim breathed a sigh of relief when he saw that the Excalibur would cross their course several minutes after the Enterprise had passed. There was no chance that the Excalibur could get a visual. Still the young captain didn’t want to chance bad luck.

He punched the intercom at his arm rest, “Bridge to Engineering.”

“Keenser!” came the reply and Kirk felt a small smile tugging at his mouth as he imagined the little alien reaching up for the intercom and calling upward.

“Mr. Keenser, is there any chance that we can do warp 4 for a few minutes?” It would take them away from the Excalibur quicker – something not only Jim wished for, but so did everyone on the bridge.

“Not happy, but, two minutes okay,” Keenser almost grumbled. “Not more!”

Jim chuckled inwardly. Any other captain would have ordered the Royalan to the bridge to give him a proper lecture about behavior towards a superior officer, but Kirk knew Keenser very well. This was no display of disrespect, but rather his way of speaking with everyone.
“That’s all I want, Mr. Keenser. Thank you.” Kirk switched off the intercom and sat down on the center seat again. “Mr. Singh, please increase speed to warp 4 for two minutes, then reduce back to current speed and set new direct course to New Vulcan.”

“Aye, Captain,” Nien affirmed.

The engines became instantly louder and almost howled. Jim counted to ten in his mind before he looked at the intercom in the armrest and…

“Scott ter bridge!”

“You needed twelve seconds to react, Scotty. Still in dreamland?” Jim teased his tech-crazy friend over the open channel.

“Capt’n, did ye give the order ter increase speed?” Montgomery’s voice was a mixture of bafflement and pain.

“Just for two minutes, Scotty, to avoid the Excalibur. She heading towards us.”

“The Exca… By Nessie’s flippers, so Luengo knows where we’re goin’. Shit! I’ll go down ter Engineering, see if I can provide ye with a little bit more speed for the next hour. Scott out!”

Jim grinned for a second – his crazy Scot was a very special man. Then his attention returned back to the situation at hand.

“Distance between the Enterprise and the Excalibur increasing,” Spock reported, still bending over the scanners.

“She alter her course?” Kirk wanted to know.

“Negative! The ship is maintaining her heading.” The Vulcan straightened up and looked at his captain and friend. “They did not know that we were near.”
Jim sighed again – this time audibly. “That was a close call!” he murmured.

“They know – or they have correctly guessed our destination,” Khan muttered, watching the helm’s read-outs.

“Yes, we have to be extremely careful when we approach New Vulcan. As soon as you and your people are under the Vulcans’ care, the danger will be over for you.”

He couldn’t know how wrong he was.

The residence of the current President of the United Federation of Planets was outside of Paris in Versailles, approximately 23 km away from the French capital. Nestled in the soft green hills with their valleys and woods, it was one of the most visited places on Earth. The royal castle had often been copied from other rulers, but was still unique in its completion. Famous and mighty people had built their houses here for more than six centuries; many of them survived the three World Wars and the Eugenics Wars. The architecture styles were as different as were the epochs they were from, yet everything fit as well as a pleasant harmony and melody.

But the eight people who left the hover-bus at the market had no eyes for the beauty of the little town. Harry Morrow all but dragged Nogura with him while Batari Whitman kept on the men’s heels, Marceaux at her side.

They had needed more than four hours to reach this place, not daring to use an official transporter after they realized that Starfleet Security and Elite Security seemed to be everywhere. “Eerie,” Nogura had said, and voiced what he read on many faces of the civilians around them. Having no other choice, the eight people took the metro to La Defence in the west of Paris and used an overland hoverbus to travel to Versailles, pretending to be tourists.

They had lost time, this much was for sure. It was time they didn't have!

“This way!” Batari murmured and walked quickly down the pavement.

“I still don’t know how you plan on sneaking into the villa,” Harry whispered. “The president’s residence is one of the most secure buildings and…”
“It’s Robertson’s birthday today, and he usually celebrates it with his closest friends privately – especially now while we are technically still at war. He may be at his headquarters office at the moment, but Susan will be at home supervising the preparations for dinner. We’ll go to the side entrance, and hopefully, I can contact one of the employees I know – maybe even Burton Hamilton. He is Robertson’s butler.” They walked down the street, struggling to remain calm so as not to draw attention to themselves.

Ten minutes later they entered a street and saw the high garden wall with its secured entrance and a guard house. No visitor could pass without being noticed. They passed by the entrance; then Batari turned right around the property, seeing another smaller lattice gate where several people were unloading a hypertruck bringing food. Cameras followed every movement of the group, yet Whitman didn’t hesitate to stop in front of the side entrance to address one of the attendants.

“Is Mr. Burt Hamilton present?” she asked for the president’s butler, and the man frowned at her.

“Who wants to know?”

“Sally Anderson, his daughter Anna's friend,” Batari lied, using the name of, indeed, Anna’s friend. “We…”

She didn’t get any further; the next second, security came running towards her and her companions.

Morrow rolled his eyes. “Sometimes I think we’re training the security a little too well!” he groaned, while he lifted his hands just like the others were doing.

The commander of the security team spoke quickly over his headset. “Williams, secure the villa and make sure that Mrs. Robertson stays away from this part of the estate. We caught some burglars here!”

“Capt’n, I may be riskin’ ye everlastin’ wrath, but if we fly a minute longer at 4.8, all the stories about our dear Enterprise will begin with ‘Once upon a time’!” Scott had raised his voice to be heard over the howling engines.
Jim groaned and dropped his head for a moment, knowing that his chief engineer didn’t overstate the situation. He felt the eyes of the bridge crew resting upon him and sighed, “All right, Scotty, I got it.” He looked up again and straight at Khan. “Lower speed to warp 3, Mr. Singh and…”

“Warp 2.5 is the absolute maximum, Capt’n!” Montgomery cut in, sounding more stern than Nogura giving Kirk a lecture.

“Right!” Jim growled. “Warp 2.5 is it then!”

Nien nodded and reduced the speed. “New ETA to New Vulcan – 32.837 minutes.”

“Precisely!” Spock affirmed, and Uhura, who had breathed a sigh of relief as the noise lessened, hid a grin. She knew that Spock wouldn’t like to hear it, but she had to admit that he and Khan had a lot in common!

“We’re only half an hour away from New Vulcan?” Jim beamed. “Well, that sounds better!” He punched the intercom button at his armrest. “Kirk to McCoy!”

The private hail told Bones enough. “Yeah, Jim, what’s up?”

“Make ready to come to the transporter room in half an hour. We’re beaming down to New Vulcan as soon as we arrive. Are the cryotubes ready to be evacuated to the planet?”

“I checked them thoroughly an hour ago. Everything is perfectly fine. Oh, and I did a last med check on Mr. Weiss. The boy shouldn’t stress himself over the next two or three days, but otherwise, he’s in perfect health. He’s with Mr. Riley in the guest quarters at the moment, packing a few things he got from the uniform shop he’s going to need on the planet.”

“Thanks, Bones,” Jim said; smiling to himself.

“My thanks, as well, Doctor!” Khan called over his shoulder.

The doctor answered in kind, “You’re welcome, Mr. Singh. See you guys in the transporter room in half an hour. McCoy out!”
Kirk leaned back in his chair, knowing that his time aboard this ship was rapidly nearing its end. The chances of his returning to the center seat were small at best – as soon as he beamed down to New Vulcan, and he felt a knot forming in his belly. He loved his ship; he loved his crew – his friends! And he loved his job, yet he wouldn’t change anything given the chance.

His gaze wandered to Spock, who bent over his sensors, and he got a bad feeling – not for the first time. He had hoped that his friends would stand by his side during this whole mess, but knowing that they were actually willing to throw away their career and even had the prospect of being sentenced and imprisoned for who knows how long, made him gulp. He’d never wanted them in trouble because of him – because of their loyalty and friendship, but it was too late to go back now. The moment they decided to support him by not giving Khan away, they crossed a bridge that led them away from everything they had worked for so hard.

Jim knew that Spock had a less-than-ideal childhood on Vulcan. Vulcans often looked down on him – well, did! Now every one of their raced counted, even the ‘half-breed’ who had saved the Elders and stopped the madman who destroyed their home world. Jim was aware of the fact that the Vulcans, despite their logic and their regard for IDIC had treated his T’hy’la with thinly-veiled loathing, and now Spock was willing to give up his career in Starfleet just to help a friend – something that could be described as emotional. Jim could guess how Vulcans would react to that.

And there was Uhura. She was with them in this, and being Spock’s girlfriend, she…

Kirk frowned. If Spock went with him into exile, Jim would give him and Nyota a chance to stay together! It was the least he could do. “Uhura?” he addressed his communication officer, and the young woman turned around in her seat.

“Yes, Captain?”

“Have you packed?” As he caught her confused gaze, he added, “I don’t know if we'll be coming back to the Enterprise after we beam down to New Vulcan, so I suggest you pack your stuff.”

Nyota frowned. “You want me to join the landing party?”

Jim took a deep breath. “That’s up to you. Sooner or later we’ll get visitors from Starfleet. Since you are involved with Spock, no one will believe that you weren’t involved in this. On New Vulcan, I think you’d be safer.”
He met Spock’s gaze and saw the gratitude shimmering in those dark eyes before the Vulcan looked at Uhura. “The captain’s offer is logical,” he said. “I would appreciate your company.”

Blushing the tiniest bit, Nyota smiled at him, hearing his concern and affection between the lines. “Thank you,” she answered quietly. “But who's going to be here at the comms station? I’m…”

“Nyota, as soon as we’re on New Vulcan and beam down, we can regard ourselves as suspended,” Jim voiced the unpleasant truth. “Call the next comms officer to the bridge after our arrival to New Vulcan. I will leave instruction that you’re coming with me by orders and that your relief has absolutely no clue why you’re part of the landing party. That should keep her safe.” He smiled at her. “But first, you’ll have to contact Selek when we get to our destination.”

“And I’ll have to answer Vulcan Flight Control,” Uhura added, but Kirk shook his head.

“They won’t know we’re there because of the SDD. And it’s better this way. I don’t want to involve even more people in this mess.”

More than twenty minutes later, a sun system could be seen on the main screen that had adjusted the distortions of subspace for better viewing. Khan had to admit that he felt relieved as he saw his people’s future home – or, better to say, the place where they would be finally safe.

“Ready to drop out of warp,” Jim instructed. “Full impulse drive!”

“Aye, Captain,” Khan affirmed businesslike as he was when serving on the bridge. His long fingers sped over the controls, and a moment later the Enterprise left subspace. That same second, the lights on the bridge began to waver before they blacked out and the alerts sounded.

“What the hell?” Jim gasped. “Computer, auxiliary lights!” he ordered, but the lights were on again even before he finished his sentence. “What happened?” he demanded, addressing Allistor, who manned the engineering station.

The second engineer knew that his commanding officer was asking him; he didn't need to see him to know that. “Malfunction of the warp drive, Captain. Generator one and four are non-functional; compensators at their max, cooling system overheated, and deflector shields are offline. We’re running on auxiliary power now.”
Jim cursed and was about to hail Engineering when Scott’s voice sounded through the speaker, “Scott ter Capt’n Kirk!”

Rolling his eyes, the young captain answered the hail. “Yeah, I got the report from Allistor, Scotty. We’re limping to New Vulcan now.”

“Limpin’? Jim, if I were Dr. McCoy, I would say that only an emergency surgery’d save this patient! I'm looking at a hell of work before she’s ready to race through space again!”

Jim pinched his nose. “I know, Scotty, and the Vulcans will get you everything you need.”

“Ha!” Montgomery huffed, “They’ve enough problems without supportin’ a starship – and, by the way, they don'na have a space dock. I have no clue how they’ll be able ter help us at all.”

“Is there enough energy left for the transporter to beam down Nien’s crew and us?”

Silence, then Scott growled, “We made it this far, and we’ll finish the job – even if I’ve ter summon every battery of every single PADD and have ter add the energy of our phasers ter feed the transporter. We’ll beam them down – an’ ye too, Jim! Just get us ter New Vulcan and I’ll work some more magic down here – some glue ter the engines ter hold them together. Scott out!”

Kirk rubbed his neck and glanced back at Allistor. “Is the SDD still working?”

The man checked the display. “The auxiliary system provides its power, sir. It’s still functioning.”

“At least that's good news.” He shook his head. His ship was in bad shape – dreadful shape – and they were about to leave it soon. Well, he would have loved to stay on New Vulcan for a few days, at least until Starfleet Command was hopefully back in the hands it belonged to, but things had changed. He was still the captain of the Enterprise and his ship needed him. As soon as the Augments were safe on the planet, including Nien, he – Jim Kirk – would return to help with the repairs. It was his duty to the crew and…

“Nearing New Vulcan,” Khan’s voice interrupted his thoughts and looking back at the main screen Jim saw the single red ball that began to fill out the screen.
“Uhura, hail Selek. Tell him that we’re ready to beam down in a few minutes and he’ll give us the coordinates. Mr. Chekov, standard orbit, Mr. Singh, reduce to one quarter impulse!” He leaned back into his chair, maybe for the last time. “Lady, Gentlemen, it’s been a pleasure and great honor to serve with you!”

ST***ST***ST

“Captain?” Commander Ben Taylor, science officer of the Excalibur turned around in his seat and looked at Styles. “Our sensors picked up a small fluctuation in subspace.”

Admiral Norton, who stood beside the center seat, frowned. “Source?”

The commander adjusted his scanners. “That’s not clear, sir. It was as if… a door was opened and closed again.” He pursed his lips shortly. “Sir, the long-range scanners are reading warp field particles – not much, but still…”

“Coordinates?” Styles demanded, feeling excitement filling him. Maybe the damn SDD Kirk had installed aboard his ship was failing and they could finally find the Enterprise.

“Coordinates 6.583-12.834 and…” He stopped as he realized the planet in the vicinity of those coordinates.

Wilson looked over his shoulder. “That’s near New Vulcan, sir.”

Styles and Norton had exchanged a glance before the captain hissed, “Dammit, he was right under our nose, and he got away! He’s already there, ready to hide like a coward behind Selek! Alter course, Mr. Wilson, set to New Vulcan. Lieutenant Kramer, maximum warp!” He glanced up at Norton. “Sir, I think Elite will get its action.”

The admiral nodded grimly, damning Kirk and his friends to hell and back. Intervention on New Vulcan was supposed to be a last resort only, but it was about to happen now. ‘You’ll pay for this, Kirk! You, your friends and your damn Augment pet’

ST***ST***ST
“Mr. President, I have your wife on the line. She says it’s urgent.”

Robertson frowned. Usually, Susan didn’t call him at his office, especially during such difficult times. There had to be an emergency. Otherwise, she would have waited for his return in the early evening to talk to him.

“Put her through, Judy,” he instructed his secretary, and a moment later his screen came alive, showing the striking features of his wife, Susan, framed by a golden-brown hair. “Susan, what’s the matter?”

“Harhan, some burglars tried to break into the villa. Lieutenant Dubois caught them, but you need to come home to answer some questions.”

Robertson stared at her. Burglars – well, that was nothing new. They had uninvited visitors two years ago. Dubois arrested them. So everything should be fine. But then why did Susan asked him to leave his office and to come home?”

“Sweetheart, is there something wrong?” he asked carefully, becoming very wary all of sudden. Was there a trap to…?

“Everything is in order, darling, but still, I would be glad if you could leave your desk for once.” She looked to something or someone out of the camera’s range and added. “Oh, Chu-Chu's coming back from the gardens – alone. I think I’ve got to look for Burt. Maybe she escaped him once again, and he's still looking for her.” She glanced back, smiling at him. “So, can you come?”

Harhan cocked his head. Chu-Chu was the little poodle he and his wife owned – and she was also the code word used when something was very, very wrong. That she ‘came back alone’ meant he had to return to the residence alone without informing anyone. And that his wife wanted to ‘look’ for his private butler indicated that this transmission was of secret nature.

Whatever was the cause of her concern, it had to do with him – and it was crucial!

“I’m on my way, Susan. See you in a few.” He switched off his terminal and rose. He trusted his wife enough to know that she didn’t call him – and with those words on a whim. She wouldn’t even do such a thing to surprise him for his birthday today, knowing that he had better things to do at the moment than having a party or greeting surprise guests. Something had happened – something that
demanded his immediate presence at home, and so home he would go.

He strode to the entrance and nodded at Judy and her four colleagues who worked in the office – sometimes around the clock, as Robertson considered. The time of day didn’t matter; he somehow reached always them if he contacted his office.

“Judy, I'm going home for today. Please cancel the date with Minister S’Hethelem and put him off to tomorrow afternoon. Just check my schedule to see when I have time enough to meet him.”

His secretary smiled at him. “Your wife planned a surprise?”

“Yes, naturally,” Robertson chuckled; he greeted the others and left. He knew that at least two of his bodyguards had to accompany him and sure as hell, they were waiting for him as he entered the transporter room. They saluted and stepped together with him onto the platform. The transporter chief entered the code that would allow him to transport someone directly to the private residence of the president. At the same time, one of his bodyguards informed the villa’s security of the president’s arrival.

Only a few seconds later, they materialized in the lobby, and nodding at the two men, Robertson walked away and entered the private area of the residence – without the bodyguards who knew only that they had nothing to do now until the first birthday guests arrived.

Or so they thought.

Harhan climbed the steps, walked down the hallway, and heard his wife and several other voices. Chu-Chu ran towards him and greeted him as if she hadn’t seen him for weeks. Lifting the little furry, black bundle into his arms, he followed the voices and entered the upstairs sitting room. Susan instantly rose and smiled in relief at him.

“There you are! That was quick,” she said.

Confused, Robertson looked at Lieutenant Dubois and four of his men, who lingered at the windows while on the sofa sat a woman and two men. Around them in various chairs sat several other men he didn’t know.

“Harhan, I think we've got guests you didn't expect,” Susan whispered, and Whitman rose, removing
her cap.

“Hello, Mr. President!” she greeted him – and Robertson thought the rug had been pulled away from beneath his feet.

“Batari?” he whispered, shocked – convinced for a moment he was seeing a ghost.

The two men in her company had risen, too. One removed a blond shoulder-length wig, the other one put off a false mustache and pointed to his hair, “Sorry, sir, I can't exactly take this off; the hair is dyed. Usually, I’m not that gray.”

Robertson opened his mouth, but no word came from his lips. Only after some attempts, which made him look like a fish out of the water, could he croak, “Harry? Heihachiro?”

“At your service, Mr. President!” Nogura answered, saluting almost casually as Morrow did.

Marceaux had watched the most powerful man of the Federation, and he realized that the man was about to faint. He intervened before something very humiliating could happen. “Commander Marceaux, first officer of the USS Lexington, Mr. President. Commodore Wesley sends his best wishes for your birthday, sir!”

The proper salute tore Robertson out of his shock, and he was grateful that his wife took his arm, led him to one of the armchairs and helped him to sit down. “Oh God,” Harhan murmured after another moment, feeling immense relief mixing with his confusion. “How… how is this possible? How did you escape? Why wasn't I informed? Does Luengo know…?”

“No, Mr. President, and we advise you to keep our presence a secret – especially from Luengo!” Morrow cut in, skipping protocol for once. He glanced at Susan. “Ma’am, I think it would be helpful if you would offer your husband a cognac – whiskey – something to that effect.” He glanced at his companions and the four house security personnel. “And I think the same will be necessary for the others.” He looked back at Robertson, who began to regain some composure, while Susan began to pour some glasses.

“How did you escape?” Harhan whispered. “Captain Styles reported that Klingons attacked your shuttle and…”
“We were attacked by Klingons, but they were renegades – renegades hired by Admiral Luengo,” Nogura said and sat down again, watching the president’s face paling even more.

“Luengo? He… he hired Klingons to…?” Robertson couldn’t finish the sentence. The shock of it was too big. “But why!?” he croaked as the two admirals nodded.

Harry took a deep breath. “The war between the Klingons and us has been used by certain people to increase their power – to position them take over Starfleet Command and to steer the war to their own advantage. I’m talking about Section 31. There was a remnant left over from – well, you remember. It was not fully eliminated, and they've grown, quite under the radar, over the last months. At its head is none other than Admiral Luengo, who hired the Klingons to kill those staff officers who wouldn’t allow Section 31’s return, so he could become the new Chief of Command – a rank he needed to better entrench Section 31 within Starfleet. Not officially, of course, but as a secret group so it could resume its work under the mask of the SBI and other science departments. He would have succeeded – if it hadn’t been for some bright minds who saw through Captain Styles’ report and recognized it for what it was: a fake.”

Robertson was ash gray now; he didn't doubt the admiral’s words – after all the sheer presence of Morrow, Nogura and Whitman (which were officially declared dead by Luengo) were proof enough. “Captain Styles…?” he whispered, already anticipating the answer Nogura would give his unfinished question.

“Yes, Styles is Luengo’s man. A few of us, including Richard Barnett and James Komack, as well as Sarek, Gav and a few other diplomats survived the shuttle crash that Styles didn't bother looking for. We were taken prisoners by Orion slavers and were about to be sold to the Romulans when Commodore Wesley and Fleet Commander Kor of the Imperial Fleet showed up and freed us at last possible second.”

“Kor, the Klingon warlord?” Harhan interrupted bewildered. “He was accused of being the one who attacked…”

“He was not near our position when the assault happened but was actually helping the Enterprise at the Briar Patch,” Morrow said, taking his seat again as Batari did. “Kor and Wesley met by accident in the Borderland, spoke with each other, built an alliance and saved us – clearing a secret slavery market in the process and killing the imposter who pretended to be Kor. Some of the imposters’ and the slavers' allies are in custody aboard the Lexington.”

Robertson accepted the drink gratefully that Susan offered him and emptied the glass with one big gulp. The cognac warmed his turning stomach, and taking a deep breath he asked, “So, Wesley found out about this conspiracy and…”
“It was Jim Kirk of the Enterprise who looked through the gossamer of lies Luengo wove. He presented Wesley the evidence. James, Richard, Harry and I eavesdropped on our kidnappers and learned that one of our own was responsible for the attack and our imprisonment. We only figured out later, after we were safe aboard the Lexington, who the Judas is.”

“Luengo!” Robertson murmured. “I should have assumed something like this after I learned of Luengo’s order to destroy four of our high-security facilities from some Council members – something Luengo forgot to inform me about in advance.” He moistened his lips, feeling sick to the core. “Where’s the Lexington now? Is Richard Barnett with you?”

“No, he stayed aboard the Lexington, which is heading towards New Vulcan; Kirk is too. Luengo knows that Kirk saw through him when he sent him to destroy the facility. Kirk knows the Excalibur is after him.”

“New Vulcan,” Harhan blinked baffled. “Why is he going there?”

“Selek!” was all Harry said, and Robertson nodded in understanding.

“Of course.” More, Robertson didn't dare say more about the old Vulcan, at least not in the presence of his wife and security. Selek's identity should stay a secret after all. He pressed his lips together then added, “I hope the Enterprise reaches New Vulcan before the Excalibur catches up with her. It would be a shame if two of our ships fought each other.”

Morrow grimaced. “Yes. I have no doubt that Styles would destroy the Enterprise given a chance. He and Kirk were rivals back at the Academy and as it seems the old grudges live on. To prevent the worst, Barnett remained with Wesley to stop Styles, who hopefully will listen to a direct order from the real Chief of Command. If not, maybe his officers will obey – they're old school and loyal to their former Captain Heldron.”

“By the way, Captain Heldron and his first officer weren’t injured in a traffic accident per se. All evidence points to a deliberate attack; it looks like the SBI – or, better to say, Section 31,” Batari threw in, and Harhan shook his head as if to clear his mind of this new shock.

“This… this is the biggest conspiracy within the Federation I ever heard about it. Marcus and Section 31 tried something similar last year, but Luengo’s succeeded – almost succeeded. At least now we know of his intentions.” Then he took a further deep breath and straightened his his. “I think it’s about time to do some cleaning up in the Headquarters!”
“Yes, sir, this is of highest priority – and Luengo should not learn of our presence on Earth before absolutely necessary.”

Robertson rose. “Damn right he won’t learn about you here – not until he sees you face-to-face. At that moment we’ll arrest him.” He turned to leave. “I have to make some calls and…”

“Mr. President, we must assume that some members of the council are also involved in this mess. Otherwise, Section 31 couldn’t have proceeded as it did,” Morrow stopped him, and Robertson nodded grimly.

“I’m aware of this. We will have to get to the root of the problem – Luengo. It’ll be like fighting a swarm of bees. You won't win unless you kill the queen. Only then will the animals will stop their fight. And that’s exactly what I’ve in mind. Get Luengo and his closest allies – and then we’ll catch the rest.” He cocked his head. “What about Commander Stones from Security Department. Is he loyal or one of Luengo’s men? What do you think?”

Morrow and Nogura exchanged a glance. “Ethan Stones is loyal to you, Mr. President, as well as to the laws and ethos of the Federation. I think it’s safe to take him into the boat,” Harry said. “And I also know that we’ll need his support when we return HQ and go to my former office without being stopped.”

“Right, then I’ll contact him first and order him to be on standby without informing Luengo. He has to accept a direct order from me.” With purposeful steps, Robertson strode to the door. “Batari, please stay with Susan and try to get some rest. Gentlemen, come with me! We’ve got to stop a Judas!”

ST***ST***ST

Scott stood at the transporter controls and watched Kirk, Spock, McCoy, Uhura and the two Augments stepping on the pads. Beside him, Pavel Chekov checked the coordinates one last time; then he glanced up – straight at a very nervous Weiss.

“Hey,” he said softly, and when he had Joaquin’s attention, he smiled encouragingly at him. “Zis beaming is nozing bad.”

“No,” McCoy snorted sarcastically. “Your whole body will only disassemble into atoms and…”
“Bones!” Jim snapped, who realized that the young superhuman was growing pale. “You also are afraid of shuttles, space travel and space itself, and you serve on a starship. So quit it before you terrify Jo even more.” He flicked a thump at Joaquin; using the shorten form of his name unintentional and for the first time. Khan, who stood beside him, rolled his eyes as he heard the nickname. Americans!

Weiss gulped. Khan had explained to him what this transporter did and that he had used it dozens of time now, yet Joaquin was unsettled. Very! Looking back at Pavel, he tried to replicate the Russian’s grin but failed miserably.

Chekov, of course, saw it and nodded at him. “Believe me; it’s nozing terrible. In a few seconds, you’re stepping for ze first time on a strange planet. Zat’s something to remember later.” He grew serious again. “Good luck!”

Jim and Nien exchanged a quick look, touched by the apparent growing comradeship between the two young men; then Kirk took a deep breath. Maybe there was the chance to return and to watch the repairs; maybe this was the last time he saw this quarters – the last time he'd be aboard his beloved ship. Moistening his lips, he straightened up to give the final order. “Energize!”

The golden light of the transporter surrounded them only to place them on the surface of New Vulcan a few seconds later.

The heat of the late afternoon was diminished a bit by the winds blowing off the large nearby lake, yet the temperature hit the human visitors with force. Even the two Augments had to adjust to it. But it wasn't just the temperature that was difficult. Khan and Joaquin instantly became aware of the greater force of gravity and Weiss swayed for a moment; his still weak muscles protested against the effort that was demanded of them.

Jim had been on New Vulcan twice and knew about the small and significant differences between this new home of Surak’s people as well as other planets; he would patiently wait until the dizziness passed. He heard Bones complaining under his breath, while Spock remained unaffected. One quick glance showed Kirk that Uhura bore the burning heat surprisingly well – but, she had grown up in Central Africa. Those years in San Francisco and later in space couldn’t eliminate the body’s memory.

Khan glanced around him. Behind him, the Vulcan government building rose into the skies, built in the traditional Vulcan style that allowed not more than three levels. Other larger buildings nearby were constructed in the same way as were some residences. Khan assumed that they belonged to the ministers, diplomats, and Elders, who had representing duties to business partners and government
members of other planets. The rest of the Vulcans lived in the skyscrapers and other larger buildings which had been built in haste to offer the people a place to live. That would change in several decades when time and healing wounds would allow for the establishment of their some of the former lifestyles.

Joaquin stayed close to him, looking wide-eyed around. Pavel was right about what he said earlier. When Joachin set foot on a planet that wasn’t Earth, an eerie yet curious feeling came over him. He caught the strange but pleasant scent in the air – desert but also plant life. The increased gravity did not bother him – not really – but the strange smells, the strange noises of machines, cars, and devices he couldn’t name, and the foreign architecture made him wary. He wasn’t afraid, but he felt uncertain.

Soft steps sounded from behind and quickly both Augments turned around. They and the others had materialized on a larger terrace, and now they saw a tall, slender figure leaving the building and coming nearer with elegant movements which nevertheless spoke of age. A brown Vulcan robe embroidered with golden Vulcan symbols billowed in the wind that also mussed the ice-grey hair.

Joaquin gaped as he stared at the old Vulcan who quickly approached them. Pavel and Kevin had shown him some pictures of Vulcans, yet this man resembled Spock in a way that was almost unbelievable. For a moment the young Augment thought that this could be Spock’s father before he remembered that the ambassador was on this other ship, the Lexington after he had been rescued by Jim’s superior officer and mentor. So this man couldn’t be Spock’s father, but maybe an uncle? Or his grandfather? They belonged to the same family; there was no doubt about it.

His attention was driven to Jim Kirk, who had seen the newcomer only seconds after the two Augments did. He pushed his way through his friends – a broad grin on his face. “Selek!” he called; his joy was clearly heard.

The old Vulcan was close now, and Khan was surprised to see a hint of a smile on the aged face. The dark eyes, surrounded by many wrinkles, shone with warmth as ‘Selek’ stopped a step away from Kirk. “It’s good to see you alive and healthy, old friend!”

Knowing that he was smiling like an idiot but unable to stop, Jim held himself back from throwing his arms around ‘Selek’. Like always, Old Spock made him feeling safe, protected, loved – just like coming home to a tender father. Maybe it was exactly like he regarded his T’y horrible older counterpart.

The Vulcan Elder seemed to recognize Jim’s struggle to control his emotions and without hesitation, he reached out, offering his hands to the young human. Instantly the strong, yet so fragile – and cool, fingers clasped his hands, and Selek felt his senses overflow with joy, relief, and love – the love of a son towards his father, or that of a younger brother towards his older sibling. He had been used to
these feelings coming from his Jim Kirk for decades. And it was no different than with this Jim Kirk. It was the respect of the young towards a beloved elder.

“Thank you for your support, Spock,” Jim murmured; addressing the Elder by his real name. “Without your help, we wouldn’t have made it to Gamma 12. I’m happy to be here, not only because we’re finally safe now, but really, I'm glad to see you again. How are you doing?”

“I am well, Jim, thank you,” the Vulcan High Minister said; the ghost of a smile on his lips increased. He knew that Kirk’s question hadn’t been merely a polite phrase – it had never been, neither with his Jim nor with this younger counterpart. He sensed caring in the captain that was meant for him, and even if he only could admit it to himself, it felt good to be so important to someone again.

“I trust your travel to New Vulcan was without difficulty?” he asked, and promptly Jim rolled his eyes while in the background he heard the familiar voice of a young Dr. McCoy groaning and a melodious female voice of another very dear friend from days past sighing, “As if anything would ever go smoothly.”

Selek’s dark eyes looked behind Jim, and instantly he found those of his younger counterpart, who had lifted a brow and greeted him in the Vulcan way. Leonard McCoy bowed, while Uhura raised her hand in the Vulcan greeting and formulated, in accent-free Vulcan standard, the traditional words. Besides the three officers, Selek’s gaze found two other human males – one familiar, the other one was a boy at the threshold of adulthood.

For a moment Selek’s gaze linked with that of the Augment leader and both males regarded each other warily. Then Jim chirped in, feeling the rising tension he wanted to prevent from growing. “Well, we had to avoid the Excalibur Luengo sent after us. Engineering is a mess, and the Enterprise more or less limped to New Vulcan over the last few hours – you should hear Scotty complaining. We had trouble with one of the cryotubes. Bones and Nien saved Joaquin at the very last minute. We had to keep eyes and ears open because Luengo sent the half fleet out to find us. We don’t even know where the Lexington is or whether Wesley was able to rescue the captured admirals and diplomats. Without Barnett or Nogura, we’re done for.” He spread his arms. “In other words, it was a normal trip given the chaos.”

“Affirmative,” Selek deadpanned. “This sounds like the typical days aboard the Enterprise I remember so well. Jim Kirk did not and still does not take the easy path.” There was a teasing undertone in his voice and Jim flushed a bit.

Stepping aside, he made room for Spock Prime to greet the others properly. Nodding at his younger counterpart and exchanging some words with him, Selek then greeted Uhura in an almost warm way, before he addressed the CMO. Something close to amusement sparkled in his eyes. “Leonard! It’s a pleasure to meet you again too, old friend.”
McCoy gaped at him for a moment, before he stuttered, “Does this mean that the hobgoblin and I were friends in your timeline, High Minister?”

“Bones!” Jim hissed, asking himself what had gotten into the CMO all of sudden. The nickname McCoy chose for Spock was something he barely tolerated in private, certainly not openly – least of all in Old Spock’s presence.

McCoy realized that he made a gaff and ducked his head. “Sorry, I mean…”

‘Selek’s’ eyes danced with silent laughter. “Yes, we were friends, despite our differences. The friendship was stimulating and strengthened us as a team. Each could support the other or Jim as needs arose. And, I have to admit, I enjoyed the banter we shared, ‘Bones’.”

Khan saw the younger Spock wince the slightest bit, and shook his head in amused understanding. “They are already friends, but do not acknowledge this,” he whispered under his breath, but the keen Vulcan hearing caught his words nevertheless. Both Spocks looked at him. Pursing his lips, he gave both a half amused, half challenging glance.

“Mr. Singh, welcome to New Vulcan,” ‘Selek’ addressed the Augment.

“High Minister Selek, it is a pleasure to meet you in person,” Khan replied; the politeness came easily to him. “Please accept my sincere gratitude at your offer of shelter for my family. We are in your debt.”

The old Vulcan bowed his head curtly. “Life is sacred for my people and me. Our chosen Way of Surak does not allow us to watch the endangering or killing of other beings passively. Genocide is a high crime – a crime that is strongly punished within the Federation. Admiral Luengo’s order concerning your people, Mr. Singh, forced me to act. Your people will be safe here.” His gaze found the boy at Khan’s side, who bit his lips and apparently did not know how to react.

Nien saw that Old Spock’s attention moved to Joaquin. He placed a hand on the younger Augment’s shoulder. “High Minister, may I introduce Joaquin Weiss to you – the youngest of my crew and my younger brother.”

Joaquin gulped as he met clear, knowing eyes and he bowed. After all, the Vulcan was the highest ranking politician on this planet, and he was the man who offered him, his brothers and sisters a safe
place to stay. “Sir,” he greeted quietly. He thought he was a flash of amusement in those brown eyes before ‘Selek’ nodded at him.

“Mr. Weiss, as far as I understood Jim’s report of events over the last days, it was your cryotube that failed. Therefore you have been awake in this time for only those few days. I know that this all must be very strange and unsettling for you, but be assured that no harm will come to you here on New Vulcan. Has Spock advised you in behavior among our people?”

Joaquin shook his head. “I only know that your people don’t like to be touched because they are touch telepaths and that they… They control their emotions. Pav… I mean Mr. Chekov and Mr. Riley told me a little bit of your history, but that’s all.”

‘Selek’ raised one eyebrow at the mentioned names and Jim explained, “Pavel and one of the cadets, Ensign Riley, have befriended Joaquin and helped him to settle in as much as possible in the four days he’s been awake.”

Spock Prime looked at him. “I know Kevin Riley – and I hope you have not had the displeasure of listening to his ‘Take me home, Kathleen’ rendition.” As he saw the confused expression on the human’s face, he changed the topic and glanced back at Joaquin. “In this case, Mr. Weiss, it would be good to stay close to your brother or me. Do not hesitate to ask me any questions. There are several taboos that I will inform you about soon; until then no offense will be taken if you slip here or there.”

The young Augment nodded slowly. “Thank you, sir.”

Jim reached out and laid a hand on the Elder’s arm. “Spock, I don’t want to push anything, and I know that T’Pau wants to speak with us first, but the *Excalibur* was only a few hours away from New Vulcan when we scanned her. I'm afraid Luengo knows that we’re here, and he sent her after us. I would feel better if Nien’s people could be beamed down as soon as possible. Even that pompous bastard, Styles, will not be stupid enough to take action against New Vulcan. He'll have to accept that the cryotubes are out of reach.”

“Your worries are understandable, Jim,” Selek said gravely. “T’Pau will not be available until the evening, yet I understand that the danger for Mr. Singh’s people has increased because of the *Excalibur*’s proximity.” He took a deep breath and Jim, who knew his Spock well enough to see behind the ‘Vulcan mask’ saw the wheels turning in ‘Selek’s’ head. Then the Elder made up his mind and looked straight at Khan. “Mr. Singh, a moment please!” he said and made an inviting gesture towards the edge of the terrace where several chairs were placed in the shadows.
Khan instinctively knew what would come now. It was the only logical thing the old Vulcan could do after it became clear they couldn’t wait for T’Pau to decide if he would get asylum. Should the *Excalibur* arrive at New Vulcan soon, he would be only safe from arrest if he was under Vulcan protection.

A sudden knot formed in the superhuman’s belly that he quickly suppressed as he felt Joaquin’s hand on his arm. Squeezing it gently, he gave the boy a quick, reassuring smile and followed Spock Prime.

Jim’s quiet “Nien?” seemed to fill him new strength – his mate’s concern for him was, like always, balm for his soul. Looking back over his shoulder, he replied softly, “Do not worry, Jim. I know what I agreed to do.”

Kirk bit his lips. He didn’t fear that Selek would deny Khan his support. As soon as Spock Prime had seen what happened to the superhuman, he would help him. But Jim knew that the first mind meld experience was unsettling at best, and his mate had been through so much already. Kirk knew as well, how reticent the other man was to expose himself. Selek would be careful, of this the young captain was confident, yet the next minutes would be unnerving for Nien – and Jim suffered with him.

In the shadows, both men stopped and faced each other. ‘Selek’ didn’t need to be a genius to be aware of the Augment’s nervousness. He also felt Jim’s unsettled gaze hanging on them both, and he sighed silently. Typical for James Kirk, he was independent and protective no matter when he lived. He always worried about his friends! And Khan had not only become Jim’s friend, but he was also his lover – even his mate. That was reason enough for the Elder to utter the next words, “I trust that Jim has given you the details concerning a mind meld?”

Khan felt his mouth going dry. “I already have my experiences with it,” he said calmly, yet there was an edge in his voice that made ‘Selek’ wary.

“It can be unpleasant if one of the two persons puts up resistance,” he said slowly.

“Do not worry, High Minister. After all, this time, I am asked in advance. I know that this mind meld is not an attack.”

That got ‘Selek’s’ attention. “A mind meld was forced on you?” Khan’s silence was answer enough, and Spock Prime’s eyes hardened. “That is counted as one of the highest crimes among my people. Who…” He stopped himself. There was only one Vulcan around Khan for some time now, and therefore the only logical answer to the question. “Spock,” he stated, and the Augment leader
nodded. This time, ‘Selek’ did sigh before he shook his head. “What he did, was…”

“…Was during our fight after the Vengeance crashed down into San Francisco’s harbor and he thought Jim dead. We both fought… dirty – he to avenge Jim; I to stay alive.”

‘Selek’ listened to words between the lines, unspoken but present. He cocked his head. “You have forgiven him.” It wasn’t a question, but a statement.

Khan pursed his lips. Always so direct – typical for this particular Vulcan, for the older and the younger vision. “Much has happened between us to inflict pain in body and soul. We have come to terms recently. Making peace with the events of the past is a step we are still taking, but I can understand why he did what he did. He snapped, as I had done before.”

The high minister watched him for a few moments before he slowly nodded. “So you will not bring charges against him?”

“I will not,” the former dictator said plainly. “It is in the past. Only the future concerns me now. Old grudges would be a hindrance. And he is Jim’s closest friend – his brother in soul and in arms. I would hurt Jim if I officially accused Spock of breaking a Vulcan law.” A smirk danced for a moment around his lips. “Not that your younger version has any problem bending a rule here or there.”

‘Selek’ lifted both brows. Oh yes, he remembered very well the occasions when he broke laws and regulations to protect Jim and his shipmates. And he also remembered the three times he forced a mind meld on someone – once again to protect his T’hy’la or the Federation. Forcing a meld was a crime. Using a mind meld as an attack was an even more serious crime. That Khan forgave his younger counterpart was interesting to the old Vulcan. As far as he understood Khan Noonien Singh, the Augment did not easily forgive, neither in ‘Selek’s’ own nor in this timeline; yet this was exactly what he did – for Jim. Again. The Elder suddenly knew that he did not have to doubt the Augment’s feelings for the young captain. They were as pure as his feelings towards Marla McGiver in ‘Selek’s’ timeline, yet he had to know the superhuman’s intentions concerning his people – that he would not seek his own goals at any cost. Not this time. This time, this Khan must count the cost. That cost would not be New Vulcan, and it would not be Jim. And he had to learn what happened to Khan after he had been woken up by Marcus. He was aware of the fact that Jim was convinced of what Khan told him, yet Spock knew far too well that the former dictator could deceive. There was no place for doubt if he was going to offer the Augment leader asylum.

“The mind meld is a strange experience for people who are psi-null, yet I’ve come to understand that you share a bond with Jim, which means that you must have some psi ability, even if it is not the same as mine. I advise you, put up no resistance. I will not probe too deeply, nor will I ever share with anyone else what I may see. You privacy is safe with me, and independent of my decisions.”
The Elder’s words were soft, yet firm, and Khan knew that the old Vulcan was trying to calm him. As much as Spock denied it, he – both versions of him – were very sensitive and aware of human feelings and their fears.

Taking another deep breath, he nodded slowly. “I will try, High Minister,” he said gravely, and Selek nodded.

Offering the Augment one of the chairs, he pulled another one out for himself and sat down in front of Khan. For a long moment the old Vulcan prepared himself, then he raised his left hand and pressed the tips of his fingers against the superhuman’s psi-points. “My mind to your mind,” he whispered. “My thoughts to your thoughts…”

TBC…

Chapter End Notes

Yeah, they finally made it to New Vulcan. And I know that there are a lot of readers who are thrilled to read more about Prime Spock.

I was in the new ST-movie today, and I really got tears in my eyes as two scenes referred to Leonard Nimoy’s last voyage. It’s so well-done – and I’m glad that they thought about this little but also very important interlude I don’t want to tell you now about to prevent mega-spoilers.

Back to the story: In the next chapter Old Spock gets some more surprises concerning the ‘old enemy’ that cost him once his life and Jim in the aftermath the Enterprise. But that will be not the only surprise – or shock, because Norton really won’t stop at everything. While Jim, Khan and the others thought / hoped to be safe on New Vulcan it becomes clear that Section 31 knows no limits. And they have no problems in using even pirate methods…

I hope you liked the new chapter, and – like always – I’m curious about your reaction.

Dark clouds on the horizon

Chapter Notes

Hi, my dear readers!

Thank you so much for the feedback and I’m glad that you’re still so taken with the story. From now on you’ll experience a rollercoaster of the very extraordinary kind, so be warned.

At first ‘Selek’ will – of course – check Khan through and he sees more than he ever gambled for, yet the mind-meld will be a winning situation for them both. The Excalibur will reach New Vulcan and Norton shows exactly that he does indeed has no scruples at all! And you’re going to meet a Vulcan character some of you maybe know from the novel “The Vulcan Academy Murders” – therefore now a little disclaimer: Healer Sorel is not my creation but comes from above mentioned book.

Have fun with the new chapter,

Love

Yours Starflight

See the end of the chapter for more notes.

Chapter 70 – Dark clouds on the horizon

Spock, who went by the name Selek now, didn’t know what he should expect as his mind carefully entered that of the superhuman. He knew that Khan Noonien Singh was brilliant, highly intelligent, and had intense emotions, but he never thought he’d be confronted with such a strong mind, barely controlled, surprising psi-powers, and such deep and untamed feelings. Curiosity mingled with necessity, and slowly the Vulcan Elder probed deeper.

He almost gasped audibly, recognizing that the Augment’s feelings were as intense as those of a Vulcan. They were reined in now but Old Spock quickly realized that they lurked beneath this control like a tidal wave waiting to reach land before loosing its full power. And those emotions were a kaleidoscope of worry and joy, amusement and disgust, forgiveness and lust for vengeance, warmth and cold, dark and light – fury and love.

Love...
Love for his crew – his family – and love for Jim Kirk so strong and bright it almost blinded Selek.

No, this mind was nothing Spock Prime had expected from the man who had been, in his world, Jim’s deadliest enemy.

Nero had begun to cripple the timeline only three decades ago, therefore Khan wasn’t touched by the event until Admiral Marcus found him – ten years before the Enterprise would have met the Botany Bay. Yet Spock became quickly aware of the differences between the Khan he knew and the man who shared his mind with him now. Yes, Spock had never mind-melded with the Khan of his universe, yet he realized instantly that the Augment in this timeline had changed dramatically, and as the Vulcan caught glimpses of Khan’s memories from the time he awoke, he headed for them.

He felt resistance for a moment and sent out a first real thought:

‘Don’t fear or fight me, Mr. Singh. I’ll do you no harm, but you’ll hurt yourself if you try to block me out.’

Surprise. He could feel it – taste it almost. Then came the hesitantly answer. ‘I can hear you – in my head.’

Selek allowed himself a mental smile. ‘This is how a mind-meld works.’

‘So… This is a kind of conversation between two minds?’

‘Yes and no, because I can also see and feel what you once saw and felt.’ He sensed the alert deep in the Augment, and said soothingly, ‘I will not force you to reveal what you do not want to expose, but I ask you, permit me entrance. Only then can I…’

‘… can you see that I did not lie to Jim or you!’ Irritation, anxiety, and bitterness washed over Spock Prime at Khan’s words. ‘Very well, High Minister, then relive my past since my awakening.’

And with those words, Khan removed all barricades his mind and soul had built instinctively around the painful and humiliating experiences he had to endure.
Spock looked through Khan’s eyes up at an older human – Admiral Marcus, as he recognized – who stood beside Khan’s bed and looked down on him, smiling encouragingly. The first realization where he was and how much time had passed; then the first steps in the space vessel. Afterwards the time on the station near Jupiter. The learning of the new century, of the technology; then the confrontation between him and Marcus concerning the so-called threat of the Klingons – and then the hell began…

A hell that shocked Selek to the core.

He felt nausea rising in him, mixed with rare but existent Vulcan wrath and mingled with compassion. No one should endure what the superhuman had. It was inhuman, cruel – that kind of thing humans called evil!

Then Selek saw Jim through Khan’s eyes – a cocky young man, golden and warm like the sun, gentle like a summer breeze, tender like silk and velvet. There was anger in the beginning, forbidden lust, realization how much he/Khan desired this boyish man, but fate had put them on opposing sides.

Old Spock felt the beginning trust of the Augment as Jim Kirk didn’t deliver him to Marcus, but kept him safe. Then their flight through space, the moment as Kirk seemed to be lost, and Khan’s determination to save the captain from being smashed against the Vengeance’s hull. Then on the bridge – the fury and bitterness the moment the phaser blast set to stun hit him. Betrayal bloomed into rage – yet Khan held himself back as he punched Kirk. Something in him couldn’t harm the younger man like his furious mind wanted to.

Agony as he thought his people had died in the explosion – the burning hate, the blinding wish to bring destruction over those who killed his family by commanding the Vengeance to fly to Starfleet Headquarters. And then the shock as he realized that the ship wouldn’t make it but would crash into Sausalito, where the universities and schools were placed. Children! That word seemed to echo everywhere in the Augment’s mind, pierced the rage and woke other instincts in him. Then the desperate attempt to steer the ship. Contact with something solid on the ship’s underside, then the crash. The sight from the torn bridge down into the destroyed part of the city raised horror in the superhuman, yet his survival instincts were stronger.

The run through the city, Selek’s younger version on his heels; then the fight. The stoic Vulcan face gone, dark eyes shone with grief, pain and wrath. Khan’s punch hit home, Spock fell – and the Augment turned around and tried to flee again, sparing the man who was responsible for his crew’s (assumed) death. But the fight continued – the attack with a mind-meld Khan withstood. Spock’s attempt to use the Vulcan nerve-pinch on him which only ended in searing pain but was otherwise useless; then the breaking of arm bones, new pain. Any hesitation had vanished into raging fury and the desire to kill. Then a bell-like sound – Uhura, phaser drawn, trying to stun him. Spock’s new attacks – and the woman’s shout to save Kirk.
Kirk…

The last feelings were those of betrayal, lust, desperation, grief and endless exhaustion, then blackness…

Only to find himself caught in his cryotube – awake but not awake. New tests, pain and cold, fever and healing. New pain over and over again without any hope of an end…

Then the escape – the determination to take revenge.

An apartment with large windows, an oncoming thunderstorm outside…

A golden-skinned figure stepped out of another room, clad only in sweatpants – Jim Kirk.

Blue eyes widened with shock and anger, and the exchange of taunting words was exchanged. Then Khan’s icy fury took over. A wild struggle; blood on bowed, soft lips, and the smell of his own people. The urge to taste it, so strong; then suppressed lust flared up again. Gentle lips beneath his…

Selek tried to turn away from this part of Khan’s memories, after all, they were his most private ones, and Selek didn’t need the details, but he found that the Augment’s mind was suddenly filled with the events of this particular first night that he shared with Jim Kirk.

The golden body on the bed writhing in passion; his bonded hands became free. Then Kirk’s strong yet fragile arms wrapped around him – the feeling of being wanted for once…

A whisper, ‘Did no one tell you? Your crew is alive.’

Shock and relief hit home with brutal strength. His people were alive!

Emotions too much to handle; his legs gave out, and sobs racked his body.

The familiar biting scent of liquor…
A glass offered…

Jim crouched down beside him – showing compassion…

New lust…

Hours of passion made them forget the past…

A decision to make – his hand reached out to stroke the neck of the deeply asleep Jim Kirk – a soft brush of his fingers against the golden hair – a silent good-bye. A note placed on the pillow. ‘Til next time – Sunrise.’

A swaying boat on the sea – escape…

A space station with strange people. Pirate attack. Determination to protect a family whose mother wore a face of the past…

A Tellarit, a Caitian, a Rigelian... Fighting side by side... Exchange of jokes... Laughing... Acceptance finally…

A conversation with Jim via subspace transmission, and then the growing feelings between them. Khan’s fury when he learned of Kirk’s capture. His fight to free the man who somehow had become so important to him. Their escape. Recreation on Aldebaran and their time together. Lust turned into love; old grudges were spoken aloud. Wounds healed with forgiveness and understanding.

Then the fight on Aldebaran and in the space station – the moment they thought would be their last…

The Enterprise’s medbay. Instinct drew him to Jim’s bed, keeping him safe and warm…

Deepening love – the bond bloomed into a warm golden light…
Selek could feel it, taste it – so strong and true. There was only Khan’s desire to keep Jim and his people safe – and the desperate hope of peace for them all.

Peace – and not gained by using violence to force the goal. Violence was the last method he would use – if all other options had been exhausted, or when he had to fight to protect himself or those who were dear to him. Just like any other man would do.

No, Khan Noonien Singh had no ill intent. The superhuman was starved for friendship, stability, and peace.

And so there was only one decision possible for the Vulcan High Minister.

‘You and your people will be safe here,’ Spock Prime murmured, profoundly shaken by what he saw, heard, and felt. ‘You will get your second chance to find real justice and to gain the life you crave. I will see to that!’

Khan’s answer was a wave of relief, and Selek sensed the hidden exhaustion in the Augment again. Khan was emotional and physically exhausted, and the old Vulcan wondered how it was that the man hadn’t collapsed. ‘You’ll find peace on New Vulcan,’ he assured the superhuman softly. ‘Peace and time to heal.’

Again Khan didn’t answer with words, but Selek sensed gratitude mingled with hope. Ever so gently, the Vulcan Elder withdrew from the Augment’s mind to keep the confusion and disorientation to a minimum.

Nien was more shaken than he wanted to admit when he suddenly found himself alone again. He could still feel the Vulcan’s fingertips on his face after the contact was lost, and he thought he heard an echo of Spock Prime’s mind in his own. Blinking against the light of day, he saw the aged face mere inches away from his own, and for a moment an intense longing for that compassion and warmth once experienced filled him again; then he sobered up.

‘Selek’ had seen everything – the good and the bad things, the humiliation, the torment, but also his passion and love. The old Vulcan had witnessed everything he had been through over the last two years; he had shared his feelings and thoughts, but Khan didn’t feel violated or exposed. The man across from him knew him better than his people now, but it wasn’t awkward as it ought to have been. Nien felt rather relieved that there was nothing to hide anymore. Above all, he knew that ‘Spock Prime’ understood him. Even more important: his family would be beamed down and would find shelter here.
The realization drew him out of his reverie, and he swayed on the chair. Then weathered, slender, but still strong hands caught and steadied him.

“Do you require medical aid, Mr. Singh?”

Khan could be mistaken, but he would bet his last shirt that he heard concern in the Vulcan’s voice. “You are a softy, as they say?” he murmured before he could stop himself. Promptly one ice-grey brow was lifted, and Khan had to chuckle when he recognized the typical indignant yet stoic expression on ‘Selek’s’ face that he knew so well from his younger self.

“There is no need to offend,” Old Spock said, but he couldn’t fool Khan. The Augment had seen the flash of amusement in those dark, far too human eyes, and chuckling again he tried to rise – only to sway again. Obviously, his body had its own ideas of when it would be ready to function following the meld.

The next second, Jim was at his side; he wrapped a steadying arm around him. He could feel his beloved’s concern and murmured, “Don’t worry, I’m okay.”

“My ass,” Kirk snorted, throwing Selek a glare, who clasped his hands behind his back in his typical way and watched them with a ‘Spock-look’ – as if they were a science experiment.

“Mr. Singh, do all Augments possess telepathic or empathic ability?” he asked and was confronted with two very baffled faces. Sighing inwardly Selek added, ‘The bond between you and your family, Mr. Singh, implies certain mental abilities. And the bond between you and Jim is as strong as the bond between Vulcan bondmates, yet I know that Jim is psi-null.”

“Thanks! I’ve been told that” Kirk grumbled sarcastically, asking himself why Spock – both versions – insist on pointing it out over and over again.

“But still you both can sense each other – especially when one of you experiences strong emotions. I saw it in the mind-meld,” the Elder continued as if he hadn’t heard Jim’s comment.

“I do not know exactly how this bond works,” Khan admitted slowly. “There has been only one married couple among my crew and their marriage was only half a year old before we fled Earth. Both told me of experiences – feelings – that I now share with Jim. And there was this... This urge to mark each other.” At those words both humans flushed bright red, and ‘Selek’ allowed himself a
half-smile.

“Compatible souls call to each other, and the urge to ‘mark’ his or her mate is as old as time. It
doesn’t explain Mr. Singh’s mental powers, but I’m willing to explore them – if you would allow it.”

Khan cocked his head. “I’m curious, too; your aid would be welcome.”

“Oh, by the way, maybe I’m not as psi-null we thought,” Jim cut in, looking at the old Vulcan. “I
can feel Spock’s presence even before I can see him – stuff like that. And he feels when I’m under a
lot of stress or worked up about something” As he caught ‘Selek’s’ confused glance, he explained,
“It's only been since Khan and I bonded.”

Two ice-grey brows were raised again. “Fascinating!”

Khan rolled his eyes at this statement. “Even that is identical!” he murmured, then he took a deep
breath of the hot, dry air, feeling better with each passing second. “Since I have passed your test,
High Minister, I would appreciate it if we could proceed,” he said not unkindly, and ‘Selek’ nodded.

“Of course. I will show you and the others the place where your people will be hidden until the
danger passed. Then we will begin to wake them.” He caught the surprised gaze of the Augment at
those last words and knew the reason for this reaction. How many times had Khan heard that
promise and had it broken? Too often, that was for sure.

The others had silently watched everything. Joaquin had been confused as his brother followed the
old alien man who put his fingers on Khan’s face after they sat down and remained in this position
for quite a time. Bewildered, he asked what was happening. The young woman, who had
accompanied them onto the planet, explained to him what a mind-meld was. She had introduced
herself as Lieutenant Uhura when he met her in the transporter room for the first time. He
remembered that Noo had referred to her as a lioness. Well, she looked more like a female you want
to protect. At first. Her posture and her expression, including her eyes, spoke another language. This
woman was a fighter, no doubt, yet she was gentle. The way she explained what the old Vulcan and
Khan were doing was sensitive and soothing, but it didn’t push Joaquin’s concerns aside. And as his
brother, Jim and the high minister walked back towards them, Weiss couldn’t stop himself. He all but
dashed to his brother’s side. “Are you okay?” he asked, and Khan sighed.

“Yes, I’m okay.”
The soft beep of the med scanner distracted him, while McCoy stepped beside him and checked him over. “Why do you guys always say that even when you are practically carrying a severed body part?” he grumbled, shooting Jim, Khan and the younger Spock a glare.

“Because that’s what warriors do. And besides, it would not change your actions.” Nien deadpanned.

“It would make my job easier, dammit! Someone has to look after you, boys!” Bones growled, eliciting a snorting chuckle from Jim, an almost inaudible sigh from Spock, and a giggle from Uhura.

’Selk’ lifted a brow and let the memories of his own time on his Enterprise wash over his. He felt a mixture of relief and joy that at least some things were still the same. “Please follow me,” he said and made an inviting gesture towards the entrance of the building.

ST***ST***ST

“ETA to New Vulcan?” Norton’s voice sounded calm, yet there was a steeliness in it that increased the tension on the Excalibur.

“Two hours, forty-nine minutes,” the helmsman replied.

Li and Taylor exchanged a quick glance behind the admiral’s and the captain’s back. What was going on here? The Enterprise was already at New Vulcan, and her senior officers were certainly down on the planet, so what could Norton and Styles do to ‘get’ Kirk, as the captain put it? Kidnap him? Maybe by deploying the elite security team that had accompanied the admiral and those ominous scientists? What was Norton planning? How could he compel the Vulcans who had welcomed Kirk and take the captain and his officers by force?

No, even Norton and Styles wouldn’t do that, would they? It would violate the sovereignty of New Vulcan and result in unpleasant consequences. Every member of the Federation was sovereign, and New Vulcan was under special protection after the destruction of the Vulcans’ home planet. No Starfleet officer in his right mind would violate the autonomy of a free planet. Li could only hope that his commanding officer and the admiral wouldn’t get carried away by their obsession with the arrest of Kirk and his staff.

Taylor looked at the scanners on his station to Li’s left and pressed his lips into a thin line. He had an awful gut feeling that he and the other officers, who belonged to Captain Heldrom's original crew,
were really pawns in a game that shouldn’t exist. A game that included a staff officer on a manhunt. Maybe he was the one who removed Heldrom from the board! They were hunting Captain Kirk of the Enterprise, this much he knew; that was troubling enough. Kirk was a hero so far as he knew. More than hundred elite security and two scientists were part of the game too. And what was this mysterious coffin-like tube he saw in the med bay this morning? Whatever it was, he was sure the game was dirty, and it would come to a head on New Vulcan.

He had the unsettling thought that he and his crewmates would be forced to make a decision that would affect them all - maybe on their lives would depend on

ST***ST***ST

“How is Sarek doing?” Worried, Richard Barnett’s gaze rested on the very pale Vulcan who lay motionless on the biobed beneath the bio-blanket. The ambassador’s skin held an unhealthy yellow hue and shivers ran through his weak body despite the bio-blanket being set to proper Vulcan body temperature.

“Not well,” Daniela answered, watching the read-outs on the display above the biobed. “Mr. Sokal has mind melded twice to strengthen the ambassador, but I don’t know how many more times that will work. Sarek’s bio signals are becoming weaker by the hour. I’ve stabilized him as much as I can, but he’s experiencing palpitations, and his heart rate is dangerously low. I don’t have meds effective for Vulcans. His blood pressure is dropping even with the vasoconstrictors I’ve administered.” She rubbed her temples. “I’ll be glad when we reach New Vulcan.”

Barnett nodded slowly. “Me too, Doctor, me too!”

ST***ST***ST

Khan looked at him wide-eyed, astonished by the simple but brilliant decision ‘Selek’ made as he showed him and the others the safe place he chose for the Augments. It was in a natural cave beneath New Vulcan Academy and the hospital, accessible from both sides and now illuminated with several lights. Usually, that wouldn’t be a safe place at all – one scan with a starship’s sensors would show the big hole in the underground and the different metals – Vulcan pots and the tubes, but once again Old Spock’s knowledge about technology came in handy. He had enhanced two shield generators which would produce a deflector shield that could hide what was beneath it – what a trick! A unique program that made any sensor believe there was nothing but a big rock being scanned.

Jim stared disbelieving at the old Vulcan, while his Spock murmured his favorite word to express his excitement, “Fascinating!”
“You built a kind of new deflector shield that can deceive a sensor? Just like that?” Kirk was almost speechless.

The left corner of ‘Selek’s’ mouth quirked ever so slightly. “It is simple – in my own time, that is, Jim. Today, I needed to call in a favor from one of our technicians to get all the parts I needed to enhance the two generators.” He pointed at one of them. “They receive energy from three batteries, powerful enough to keep the shield up for more than four months should this be necessary. Personally, I hope that – how do humans put it? … that the storm will pass and the sea will calm sooner than that.” His gaze found Khan. “The sooner we begin waking your people the better. Human bodies were not designed to endure cryosleep for so long. If your family had not been augmented, I doubt any would have survived.”

Joaquin stood close to Khan and had wrapped both arms around himself. The heat outside had been tolerable for him, but here in the cave, the temperature was ten degrees. His body remembered far too well the frozen condition it had been in for almost two and a half centuries. “Are they still safe in the tubes?” he asked quietly, meeting the warm brown eyes of the Vulcan Elder.

“I am confident that Mr. Singh and Mr. Scott checked them thoroughly, and that Leonard is continuously monitoring them. If the tubes have been working up until now, then there is no reason why they will not continue to do so. Experience has taught me that it is better for the body to function on its own rather than remain frozen in any stasis.”

McCoy lifted both brows. “Did you study medicine in your, umm, time?” he asked carefully, aware of the fact that Joaquin didn’t know before now, who ‘Selek’ was for real.

“No, but… My Leonard taught me much during our time together – even if it was not his intention; I learned many things from him. There were many occasions I assisted him in medbay or he assisted me in the labs.”

Bones cocked his head. There was it again – this melancholy expression deep in the Vulcan’s eyes - the pain of grief. ‘Our other selves worked and lived together for decades,’ he thought. ‘It must be hard, awful even, to outlive the people closest to you.’

Silent steps drew nearer, and while Khan whirled around in alert, ‘Selek’ remained calm. Two Vulcans stepped into the cave, one old like the high minister, and the other one maybe the same age as Sarek. Jim was certain that he had seen one of them aboard the Enterprise two years ago, but couldn’t place him.
Selek introduced them as Elder Sanak and Healer Sorel, whose name apparently held meaning for McCoy. Out of instinct, the CMO smiled at the man for a moment before remembering that Vulcans had no sense for such things – at least that’s what they claimed. But contrary to the usual Vulcan behavior, Sorel’s face softened, and he quickly bowed his head.

“Dr. McCoy, it’s a pleasure to meet you. I trust Dr. M’Benga fairs well under your command?”

Jim and Spock exchanged a quick glance, while Bones answered, “Geoffrey is my most capable colleague, Healer Sorel. You taught him very well.”

The older Vulcan’s face remained calm, but Jim was sure he saw a slight gleam in his dark eyes. “He was an impressive student. Please send him my regards.”

“My pleasure, Healer. He didn’t know that you were back on New Vulcan. Otherwise, he certainly would have wanted to see you.”

Jim cocked his head. “Did I hear you right? Dr. M’Benga was your student, Healer Sorel?”

The older Vulcan nodded slowly. “Yes, he was. He came to Vulcan just over five years ago – a young medical student who wanted to learn more about our biology to help those Vulcans not living on their home planet. He was very promising, and so I took him under my wing, as you say on Earth. He graduated his studies with more than adequate result.”

“I’m glad that we have him aboard,” Kirk said. “Our travel is sometimes dangerous – especially during this blasted war now – and even though I try to keep my crew safe, Mr. Spock has been injured more than once. Dr. M’Benga helped him well and… Mr. Singh and Mr. Weiss here received his good treatment, too.” He nodded at the two Augments, who were instantly in the focus of the healer.

“High Minister Selek shared the secret of your heritage with me so that I may help your people should it become necessary,” Sorel addressed Khan. “I am familiar with medical stasis fields as I myself have enhanced the current generation of stasis chambers in the New Vulcan Academy. I do understand that the cold stasis you call cryosleep works differently; however, the principle is the same. So if you are in need of medical support, you may rely on me.”

Khan knew that the last words were not merely a polite phrase, but were meant earnestly. He was grateful for ‘Selek’s’ foresight in calling a healer in case something went wrong with the cryotubes.
After all that Nien had experienced in the last two years, Murphy’s Law seemed to be a reality!

“Thank you, Healer Sorel,” he answered and bowed his head. “Your support is most welcome.”

“Elder Sanak is one of our best engineers; our clans are related by marriage,” ‘Selek’ continued. “It was he who helped me get the parts to enhance the shield generators. He will control them during your work.”

Khan bowed towards Sanak, who watched him with barely hidden interest. “Selek told me why you and your people are requesting asylum on New Vulcan. And given the fact that you and the youngling are here, I can only surmise that refuge was granted.”

“Mr. Singh’s only wish is to see is people safe,” Spock Prime said. “I am convinced of it.”

‘In other words, I checked his mind,’ Jim thought, knowing that a mind-meld was never discussed in public.

Sanak nodded slowly, understanding the words between the lines without trouble. “Then welcome to New Vulcan, Mr. Singh. The same goes for you, young man,” he said to Joaquin, who blushed a little bit.

“Thank you, sir!”

Then the Elder looked at Jim and Spock. “Captain Kirk, Spock cha’ Sarek, I remember very well the day we last met; it was the last day of our home world. Because of you both, our culture and our people survived. We are in your debt. As far as I understood Selek, you two and your comrades are under threat of arrest because you are protecting Mr. Singh and his people – preventing a genocide from taking place. You can expose a conspiracy within Starfleet Command that cost the Federation’s delegation their lives. If you seek refuge here until the traitors are caught, you’ll have the protection of my clan. The same applies to your friends.”

Jim bowed his head. “Thank you very much, sir.”

“You honor us with your offer, Elder Sanak,” Spock replied in the traditional way.
‘Selek’ watched them with a warm sparkle in his eyes, then he addressed Jim. “You should begin with the evacuation. If Command assumes to where you were off, the Excalibur doesn’t need much time to reach New Vulcan.”

Jim nodded and flipped open his communicator, but the old Vulcan’s hand on his wrist stopped him. “Is the frequency scrambled?” he asked, and the captain grinned broadly at him. “I’ve got Uhura on my staff.” This was explanation enough as ‘Selek’s’ affirming gesture proved, and Jim lifted the communicator to his lips. “Kirk to Enterprise!”

“Enterprise, Scott here!” the voice of the chief engineer answered.

“Scotty, give my coordinates to the transporter room. I’m in the chamber where the cryotubes will be contained.”

“Aye, Capt’n. Chekov is already in the transporter room; I’m as good as on my way ter it. Dr. M’Benga and a few nurses have already brought some of the tubes ter the transporter room so that the beamin’ down can begin at your command. I'll pipe ya down ter Chekov.”

A moment later Pavel’s voice sounded, “Transporter room, Chekov here, Keptin!”

“Ensign, on my command start beaming those tubes down.” Jim exchanged a reassuring glance with a very tense Nien. Then he waved at the others to make room. Retreating to the wall, the men and the young woman waited. “Now, Chekov!”

“Aye, Keptin!”

Seconds later bell-like sounds were heard, accompanied by the golden sparkling light materializing into four cryotubes. With a few long strides, Khan was between them; Joaquin and McCoy were on his heels. They checked the functions thoroughly, and as Nien lifted a triumphant thumb in Jim’s direction, Kirk ordered Chekov to proceed.

Aboard the Enterprise, the hallways on deck 5 between medbay and transporter room were cleared on strict orders from the captain. Only M’Benga, H’alroh, two nurses, and Scott were there, moving the cryotubes, one by one, to the transporter room, where Chekov beamed them down.
All of sudden, Carol Marcus stepped into the otherwise empty corridor and watched the two doctors and nurses bringing more cryotubes down the way. “May I help?” she asked M’Benga, who stopped the moment he saw her coming.

“Dr. Marcus?” Geoffrey straightened his shape. “Per captain’s orders, these hallways have to stay clear to…”

“To hide the fact that Khan’s crew is being taken to the transporter room to beam them down. I know about them. After all, I was there when the cryotube of this young Augment failed. Joaquin is his name, isn’t it?”

Scott closed the distance to them and watched the weapons officer carefully. “Lass, Jim said that no one else other than us should…”

“Mr. Scott,” Carol interrupted him softly. “I know that Jim wants to protect me, but it’s a little bit too late for that. We’re at our destination where the cryotubes will be hidden – New Vulcan, isn’t it? And as far as I understood, in the last hours we've been chased by a ship belonging, for all intents and purposes, to Section 31. I've had my own experiences with that, and I fear the worst if Section 31 catches us. So I think we should hurry to get these people to safety before that ship arrives, don’t you agree?”

Before Montgomery could answer, Marcus added, “So let me help here. I know that these men and women have nothing to do with last year's events; they are innocent but endangered by Section 31. Hell, they were about to be killed. They'd be dead now if it hadn't been for Jim. So let's get them out of this ship before something happens.”

She stepped around the two men and headed for the room where the rest of the tubes were stored.

Scott and M’Benga glanced at each other, then shrugged. There was nothing they could do. Scotty had the conn so he could order Carol Marcus out, but every pair of hands was welcome here, and she did know about everything that was connected with Khan. So, why not let her help?

“Come on, we’ve no time to lose,” Scotty grumbled, and he began to push the cryotube from the hold towards the transporter room. Geoffrey did the same with the tube he had taken away.
“Captain, reaching New Vulcan in twenty-three minutes and forty-eight seconds,” Kramer reported, looking at the readouts of his navigation station.

“Reduce speed, sir?” Wilson asked, and Styles threw an asking glance at Norton, who stood beside him and the center seat.

“No, stay at warp until we reach the star system. If we drop out of subspace too soon, the Enterprise's sensors will detect us!” the admiral ordered. Then he addressed Styles again. “Captain, I will lead the boarding of the Enterprise. After we secure our flagship, I want you to accompany me down to New Vulcan.”

“Aye, sir!” Lawrence nodded; anticipation knotted in his belly.

Norton bent forwards and activated the intercom on the captain’s chair armrest. “Commander Nabusu?” he contacted the commanding officer of Elite Security.

The answer came instantly. “Nabusu here, Admiral.”

“Take ninety of your men; go to the transporter room, and the cargo transporter. Be ready to beam aboard the Enterprise on my command. Make certain that the Enterprise’s crew is detained. Use force only if you are resisted or feel you are in danger!”

“Understood, sir. We will hold the current shift at their stations and lock the others in their quarters. I already instructed the transporter chief where to beam the different groups. The Enterprise will be in range in a few minutes, Admiral.”

“Excellent – I’ll hold you to this promise, Commander. Norton out!” He turned around towards the comms station. “Lieutenant Li? On my command, hail the Enterprise on all frequencies. I hope Kirk will come to his senses before I have to make the last step.”

Li murmured, “Aye, sir!” but felt this nagging gut feeling deepen. They were about to board their flagship and to arrest a whole crew – a crew whose captain and staff officers were heroes during the war and even before. A crew that had a big part in Kirk’s formidable and noble deeds. This crew was known to be utterly loyal towards its captain.
This was wrong! Very – very wrong! But what could he do to stop the insanity that was about to break loose? If Norton beamed down to New Vulcan to arrest Kirk, he’d be violating Vulcan sovereignty! What were they supposed to do? There was no manual for this! His morality and good sense told him to intervene; the officer in him demanded obedience. He would face court martial if he tried to go against his commanding officer. On the other hand, wasn’t it his duty to act if a superior – or two in this case – were about to break the law? Starfleet had no authority over the civil government of Federation member planets. But that’s exactly what Norton and his goons were going to try exerting.

Li sighed soundlessly. He and his comrades that he had served with for years had a dilemma. Ought they blindly follow any order given, or should they do what a sane mind would dictate? He would be forced to make a decision soon, and the thought made his belly tighten.

Khan’s gaze wandered over the seventy-two cryotubes of which only one was empty. He, Kirk and Spock had agreed that it was too risky to leave the defective tube aboard the Enterprise. No one knew for certain if Bob Wesley had recovered any of the admirals. Should they fail to arrest Luengo and his fellows, it was better if Section 31 didn’t find proof of the Augments’ rescue from Gamma 12. M’Benga and his staff were still removing the devices in medbay that monitored Khan’s crew during the last days. Bones had taken all the data from the Augments’ personal files he and Khan made with him. Jim didn’t anticipate Styles hijacking the Enterprise, but better safe than sorry.

Now the last cryotubes were safely beamed down to New Vulcan, placed side by side – a view Khan saw last on Gamma 12 and aboard the Enterprise. He hoped with all his heart that this would be the last time he would have to see his them like this – closed, cold – his sleeping brothers and sisters inside, waiting to be woken up. His longing to speak with them again, hear their chattering, embrace them, and smell their familiar scent was so strong that he felt a lump building in his throat.

‘Soon!’ he thought. ‘Soon you all will be awake to live a life in freedom – even if only on New Vulcan.’

Jim stepped beside him, gave a still freezing Joaquin on Nien’s other side a small smile, and laced his fingers with Khan’s. “Finally, they are out of danger,” he whispered, feeling the intense emotions of his soulmate. “Whatever may come, here they are safe.”

Nien nodded slowly. “Yes – at least this promise I could keep.” For a moment, he gave into his yearning for closeness and leaned his head against Jim’s. One of Kirk’s arms went around the Augment’s waist, and he squeezed him gently. Then he became aware of Sorel’s thoughtful look resting on them and blushed as he saw the Vulcan healer lift a brow in understanding before assisting McCoy in checking the inhabitants of last cryotubes. Scott had beamed down too and was checking
Jim’s communicator beeped, cutting through the quiet and filling the room with tension. It could only be a hail from the Enterprise. Chekov would only contact them if something was up – certainly something wrong.

“Kirk here!” Jim answered.

“Chekov here, Keptin,” the young Russian said. For the time that Scott was on the planet’s surface, Chekhov had the conn. It made Jim proud and nervous at the same time. “Sir, our sensors picked up the signal of a ship dropping out of warp at the edge of the star system.”

Kirk felt the adrenalin pumping through his veins. “Identity?”

“It’s the Excalibur,” Pavel affirmed what they all had already known.

‘Selek’ lifted a brow. “We have to return to my office immediately!” he called. “The seat of government is banned, even to Starfleet!”

Jim nodded grimly and began to hurry towards one of the two entrances; the others except for ‘Selek’ and Sanak followed him while the two Elders started the generators, set-up the program, and raised the shields the moment the others were outside of the shield’s range. Then they raced to them with long, quick steps.

“Chekov, try to…”

“Keptin, we’re being hailed by zem on all frequencies.”

Kirk’s face betrayed his anger but also determination. “Let me listen to it!” he ordered, and then he
heard the slightly familiar voice of Lawrence Styles coming through the speakers on the *Enterprise*’s bridge.

“*Excalibur* to *Enterprise*! This is Captain Styles speaking. Respond *Enterprise*!”

“Should we answer or not, sir?” Pavel asked, nervousness plain in his voice.

‘Selek’ stepped beside Jim. “We need about ten minutes to reach the transporter room in the Vulcan Academy to beam back to the seat of government.”

Kirk nodded again, understanding what Prime Spock really meant. “Chekov, try to buy us some time – but do nothing, *absolutely nothing*, that will endanger my ship! We call you back as soon as we’re in High Minister Selek’s office.”

“Aye, Keptin! *Enterprise* out!”

They hurried back the way they had come more than two hours ago, towards the cellars of the New Vulcan Academy, using only the flashlights they had taken with them.

“Capt’n, shall I return to the ship?” Scotty wheezed behind Jim as they ran.

“No!” Kirk shook his head firmly. “You're my staff, so you're a wanted man, too. If the *Enterprise* is commanded by a junior officer with seemingly no part in this, Styles has no reason to take action against our ship, which will hopefully buy us more time.” They reached the bottom-most level and stepped into solidly built rooms. ‘Selek’ sealed the door behind them, and Sorel and Spock pushed furniture in front of it while Uhura began to erase all traces of the group. When she had barely finished, ‘Selek’ led them back upstairs into the Academy where they bid Sorel and Sanak farewell for now. Then they raced through the corridors towards the Academy’s transporter room, knowing that they attracted more attention than needed, yet not even ‘Selek’ gave a damn about that. They had to reach his office before the *Excalibur* arrived. The odds that Styles would simply beam up any human life form his sensors read was high which would mean that Jim and the others would fall into Section 31’s hands. The Vulcan High Minister would try to prevent that with everything he had.

‘Selek’ was and would always be one thing for the rest of his life: Jim Kirk’s first officer who valued the health and the safety of his friend more than his own!
“Ensign, they’re hailing us again!” The young man at the comms station glanced nervously over to Pavel Chekov, who was at the science station watching the sensors. Kevin Riley sat at the navigation station. Ensign Noschisnki, another cadet, was at the helm.

“Zey’ll be wizin beaming range in ze next minute,” Pavel mused. “Right, time to let ze show start.” He gave the comms officer a signal who opened a frequency and cleared his throat.

“Excalibur, zis is Ensign Pavel Chekov, acting keptin of ze Enterprise. Please repeat your message, but only on audio. Our communication system has a malfunction!”

For a long moment all was silent; then another voice, forceful in his authority, sounded through the speakers. “This is Admiral Albert Norton of Starfleet. Did I hear that right? An ensign has the conn on a flagship?”

Pavel’s face heated not in embarrassments, but in anger. “Keptin Kirk knows what he is doing, and if he trusts me wiz ze Enterprise in a standard orbit around a Federation member planet, then he has his reasons, Admiral, and I will honor them AND follow my orders!”

“Yes, I’m aware of his reasons, Ensign. Prepare to be seized…”

“What?”

“… and you would do yourself and the crew a favor if you would make a ship wide hail and tell them to remain where they are and to put up no resistance.”

Chekov gaped at the speakers, not trusting his ears. Then fury woke in him. “Seized, sir? You want to hijack us? And you call yourself an admiral of Starfleet?”

“Ensign…!”

Pavel didn’t let him finish; his outrage and his worry for his friends and the ship gave him the courage he needed. “As current acting keptin, I insist zat you first identify yourself before I give any
orders to our crew in your name!”

The same moment the alert system reported intruders and six shimmering columns appeared in the middle of the bridge. The columns formed into five elite security personnel and a man in the green and white ground staff uniform of an admiral.

Several of the bridge officers jumped from their seats, and one of them punched the intercom, calling for the Redshirts; he slumped down as a stun shot hit him. Elite Security had their phasers ready and aimed at the rest of the bridge crew.

Pavel cursed inwardly and straightened up, knowing that he had to play this game unwillingly – this pretense of ‘going along’. Crossing his arms in front of his chest, he first glared at the strange man in the admiral’s uniform; then he forced a surprised expression on his face and managed to relax. “I… I know you, sir! I saw you in HQ several times!” he burst out with surprise that quickly changed into feigned relief.

Norton glared at the young Russian man; he took in the boyish, almost happy face and realized that the ensign was no danger to him. “Ensign Chekov?” he demanded, and instantly Pavel snapped to attention and saluted.

“As Ensign Pavel Andreievich Chekov, Admiral, current acting keeping of the USS Enterprise.”

Norton looked around and saw that the other officers had followed Chekov’s example. His gaze found the men at the navigation and the helm stations, 'Heavens, more children!', and wandered back to the Russian. “At ease, Ensign!”

As he was trained, Pavel spread his legs a little bit and clasped his hands on his back in parade rest – a small act of defiance, but defiance all the same. He tried to mask his anger as he watched Elite Security take over station by station. This was indeed an enemy boarding and nothing else! He had to play along. As long he was free he maybe could wait for a chance to turn the tables – a crazy intention given his youth, his low experiences and the fact that the best-trained Securities of Starfleet were now in possession of the bridge, but a guy could still hope.

Norton stepped to the center seat and activated the intercom. “Attention, crew of the Enterprise. This is Admiral Albert Norton, Starfleet Command! I’ve taken over command of the Enterprise. Do not resist my security staff. The current shift will be replaced with my men and everyone – I repeat, everyone – must return to her or his quarters and await my further instructions. Anyone who leaves his or her quarters will be arrested for insubordination. Leading officers will remain in their departments until I can interview them. Further, I order staff officers to report via intercom to the
bridge now! Anyone refusing to deliver a status report will be declared a deserter and will face the consequences. Admiral Norton out!”

He sat down in the center seat making Pavel and Kevin’s blood boil, yet the friends knew that they had to act as if they didn’t care while they listened to incoming messages. Heads of the departments demanded an explanation; they would go answered for now.

Chekov stared at the admiral in Kirk’s seat and had to control himself. He knew that the man belonged to Section 31 and had no problem using drastic methods to protect the dirty secrets he and his fellows had. This much was clear; this smug bastard had to be stopped. The question was only: How?

ST***ST

The moment the ship wide comm ended, the first of the elite security team were beamed into the most important of departments.

Allistor gasped as ten strangers in well-known special uniforms materialized in Engineering, instantly raising their weapons and aiming at those around them. A man stepped forward and called sharply, “Lieutenant Commander Montgomery Scott?”

Allistor gritted his teeth. That speech was from a pirate, not a Starfleet admiral, but then murdering and seizing ships seemed to be Luengo and his fellows’ leadership style. “Mr. Scott is not aboard!” he said, and he found himself in the focus of the commander he regarded as an enemy. “He’s on New Vulcan getting parts for the necessary repairs.”

“And you are?”

“Commander Jason Allistor, second engineer.”

The other man nodded. “Commander Nabusul!” he introduced himself. “You’re confined to quarters. My men will take over and…”

Allistor’s blood pressure began to rise dramatically. “Commander, in case it has slipped your otherwise remarkable attention, Engineering is a mess!” He pointed at the generators and the cooling systems and continued before the elite soldier could say anything, “Two generators have serious
failures, the cooling system is overheated, and only permanent fixes will prevent a collapse! Are your engineers able to take over our work? If not then it’s not a question of if the ship will blow up in our face, but when – maybe taking your ship with it!”

Nabusu stared at him, and both men seemed to pierce each other with their glares; then the lieutenant turned around dramatically and headed for the next intercom. Allistor listened as the intruder spoke with the admiral who had taken over the bridge with an impressive speech – bunch of lies though it was. After a minute the commander returned, annoyance plainly written on his face. “You may continue your work. Select a few of your best men and women; the rest will be confined to the switch room next door.” He lifted a hand as Allistor was about to protest. “These are Admiral Norton’s orders; you are obliged to follow them! And remember, you will be under observation, so don’t try anything stupid!”

Jason snorted. “If this is a legitimate operation then why should I try anything foolish – whatever you mean by that? But I wonder when Starfleet took to pirating!” He brushed past Nabusu, making certain to bump him none too gently and calling out some choice names under his breath. He knew he had to play the game for now.

No one saw the small figure on one of the pipes above the cooling tanks watching and listening to everything very carefully.

Keenser cocked his head; he was very aware that the Enterprise had fallen into the real enemy’s hand. And that enemy would stop at nothing. If Jim Kirk thought he would be safe on New Vulcan, then he was mistaken. Keenser heard the hidden fury and icy determination the admiral’s voice. The man would not hesitate to do what had to be done in his eyes – meaning he would even force entry to the places on New Vulcan where Kirk and his friends were.

Blinking twice, the little Royalan made up his mind. Jim Kirk would need his ship for backup soon. Of this Keenser was convinced. And these brutal looking men beneath him were threatening his home – the only home he’s had since he left his planet. And they manhandled his friends as they forced them into the attached room.

No, something had to be done! And not for the first time his tiny stature came in handy.

Making no sound, he rushed over the pipes until he reached a ventilation shaft. Quickly, he removed the grid, slipped into the shaft, and closed it again. He knew that he would need help with the plan forming in his mind – and he also knew exactly where he could get that help.
Dr. Geoffrey M’Benga knew that he had run out of time as he heard the ship wide hail. The devices which monitored the Augments’ bio signals had not been removed yet even though he, three nurses and Dr. Marcus had worked as quickly as possible. Signaling to them to follow him, he returned to the central area of medbay, the three nurses on his heels. The next moment five elite security personnel stormed into medbay, phasers ready. Hot anger rose in M’Benga at this sight, and he stepped in front of his startled staff.

“This is a medbay, not a shooting range for your training!” he barked. “Lower your weapons, Gentlemen! I’m sure you’re familiar with Starfleet protocol that forbids forced entrance in here!”

The leading officer had a lieutenant's stripes; he lifted both brows and answered curtly, “Starfleet protocol was suspended on Admiral Norton’s order until this ship is secure. Therefore…”

“Only the President of the Federation can suspend Starfleet protocol. Has President Robertson been informed of this act of piracy?” Geoffrey snapped, and to his indignation, the man in front of him only smiled smugly.

“You can be assured, Doctor, that the president has all information he needs.”

‘*In other words, he only gets the information Section 31 wants him to have!*’ M’Benga thought, but aloud he replied, “Then I’m confident that he still respects the immunity of a hospital or a medbay. We have several injured crewmembers here, including…”

“A nurse will watch them and sees to their needs; all others are to go to their quarters!”

Geoffrey crossed his arms in front of his chest. “No way! A doctor has to remain here because we have a coma patient to take care of!” His voice was louder than necessary, and he pointed to the private room where Sulu lay. “This man is senior staff and was critically injured during our last battle with Klingon renegades. His condition is still critical and…”

“And why is Dr. McCoy not here to watch him?” the lieutenant interrupted him. “I’ve seen of your CMO – and you are not him!”

“Dr. McCoy is on New Vulcan discussing Lieutenant Sulu’s condition with their healers and assessing the possibility of transferring him to the Vulcan University Hospital,” M’Benga lied through his teeth. He watched them roam through medbay, pushing a nurse out of their way who
stumbled against an empty biobed.

“Hey!” Geoffrey called. “Do you have your guys to act like some cliché from a bad cop movie, or is there the slightest possibility that you can behave like you’re Starfleet’s elite?” Two sharp glares hit him, but he didn’t care.

“Doctor, believe me, I take no pleasure in this mission,” the lieutenant said coolly, “but I have my orders, and you will not hinder my carrying them out. Show me the coma patient and if your presence is necessary, you and one of the nurses may stay. The others must remain in one of the nearby rooms until Admiral Norton decides what to do next.” He pointed at the private room. “After you, Doctor!”

They walked into the private room, and the lieutenant took a quick look at Sulu who lay motionless, breathing shallowly on the biobed. “Poor bastard!” the lieutenant murmured, while his gaze wandered over the Asian man’s scars which still covered his face and a part of his throat. “That looks painful.” He glanced back at M’Benga. “You may remain here, but I advise you not to…”

“Lieutenant?” The shout came from the other side of the medbay, and instantly Geoffrey knew the reason for it. The elite security team had found the last remaining devices in the room next door that had held the cryotubes. And that meant that he was about to get arrested because there was no way the intruders would believe that he didn’t know about it.

He threw a last glance at Sulu before following the lieutenant out of the room, cursing inwardly. They had barely left when Hikaru opened his eyes; his mind worked furiously to plan how he could use his ‘critical injury’ to his advantage.

Then he heard something else: Dr. Marcus’ voice. And what she said made his blood freeze and then boil with wrath.

“Finally, you’re here! Took you gentlemen long enough to catch up with us. Maybe it isn’t too late to get the monster that murdered my father…”

TBC…
Yeah, I promised you twists, action, sensible and harsh moments when the show-down begins. And here it is!!! The big show-down has started!

Riiiggghhhttt… All, please, calm down. I know that this is a mean cliff-hanger, but be certain, it gets WORSE (snicker).

The next chapter will tell of other heroes aboard the Enterprise, who know exactly that Kirk and his closest friends relay on them, while the traitors are weaving their net of lies and intrigues even more. And how far Norton and Section 31 are ready to go will even shock ‘Selek’ and the others…

I hope you liked the new chapter, and – as always – I’m curious about your reactions.

Have a nice start into the next week,

Love

Yours Starflight
Chapter Notes

Hi, my dear readers!

Thank you so very, very much for the many reviews and kudos. I know that you’re all dying of curiosity to what the next chapters will lead, and I can already promise you that the new one is the beginning of an up and down of strong emotions, big messes and shocking measurements Section 31 (means, Norton in this case) is willing to take.

Therefore I don’t want to let you wait any longer.

Have fun with the new chapter

Love

Yours Starflight

See the end of the chapter for more notes

Chapter 71 – Judas gives his kiss

On the bridge, the atmosphere was tense after Norton completed his little speech over the intercom. He now sat in the center seat as if the Enterprise belonged to him. He knew that Elite Security would need some time to secure the decks, and he would use the time to interview the ‘acting captain’. He looked at Chekov and waved at him nearer. Pavel obeyed with fake enthusiasm.

“Where is Captain Kirk?” Albert asked sharply.

Pavel felt his palms beginning to sweat, yet Jim Kirk trusted him to buy him and the others time – and this was exactly what he would do.

“Keptin Kirk is on ze planet, sir. May I ask what’s going on?”

“You may, but don’t expect an answer,” Norton replied coldly.
Chekov stood up straighter. “Sir, with all due respect, I was given ze conn, and as acting keptin I have ze right to ask a superior officer about details when he suddenly appears and takes over command using his rank and other more unusual methods. Do not get me wrong, Admiral, I don’t want to give you any trouble, but you boarded our ship as zough we were ze enemy, and restricted ze whole crew to quarters. I may be young but I know ze protocols. If I don’t demand an explanation from you, I would be neglecting my duty as acting keptin and my responsibility for ze crew.”

Norton’s gaze wandered over the too-young face of the ensign and he couldn’t help but feel respect rising in him for his brave behavior. And, of course, the ensign was right. In the position he had been placed, it was his right and his duty to demand answers. “Ensign, why is the Enterprise here at New Vulcan?”

Pavel knew that he had to be politically correct with his answer, so he replied, “Sir, all I have been told is zat we’re on a need-to-know mission, but I was not informed of ze details.”

“And this is why I can’t give you details, either. You need only know one thing: Captain Kirk and his senior staff are accused of several crimes and I’m here to arrest them.” He watched Chekov’s eyes go wide, and asked, “So, Kirk is on New Vulcan. And where is his first officer, Commander Spock?”

“He went wiz him, sir,” Pavel murmured, wracking his brain over what to do next.

“Of course,” Albert snorted. “And let me guess, the other senior officers accompanied him, too?”

“Chief Engineer Commander Scott left ze ship a short time ago to order spare parts in person. As you have certainly been informed, sir, we were in a battle last week and ze ship is in need of repair.”

“The chief engineer is ordering spare parts in person on planet?” Norton didn’t know if the young man was pulling his leg and knew damn well why Kirk had travelled to New Vulcan. Norton turned towards the science station. “Try to locate every human lifeform in New ShiKar!”

The man nodded while another security officer came over with a PADD to Norton who studied it quickly. “This is your personal file, Ensign. I recall now where I’ve come across your name before. You’re the Russian wonder kid. You’ve served under Kirk for two years now.” He looked up again. “Answer me one question, Ensign. What do you know about Khan?”

Pavel’s stomach flip-flopped, but on the outside he remained perfectly calm. “He was ze man who
was involved in the mess with *Vengeance* last year, sir.”

“Yes, exactly,” Norton said softly. “And do you want to tell me that you didn’t realize that he is or was on board for more than two weeks?”

Chekov frowned. “He was here…?”

“Ensign, don’t even try to fool to me! You were aboard last year and therefore have to know Khan. You can’t claim to have no knowledge of his presence aboard over the last few days!” Norton’s voice was sharp now, yet Pavel continued his act of a baffled, innocent boy.

“Sir, I’ve never seen Khan in person. I was ze acting chief engineer during ze mission, and down in Engineering ze entire time. But…”

“Are there any civilians aboard?” Albert interrupted him, sensing that the Russian knew more than he was letting on, and he was determined to find out as much as possible from this boy. It was only a question of time until the ensign gave himself away.

Pavel glanced at him and nodded. “Yes, sir, we had a civilian aboard. He was wiz ze keptin after we saved him at Aldebaran.”

Norton bent forwards. “And where is said civilian now, Ensign?”

Chekov shrugged. “I have no clue, Admiral. I only saw him once or twice, zat’s all.” He was very aware of the questioning looks of his comrades on the bridge, and hoped they’d all got the message to say absolutely nothing about ‘Petty Officer Singh’.

“Sir?” The man at the science station looked over at the captain’s chair. “There are more than five hundred human lifeforms in the township – engineers and relief workers, no doubt. I’ve also scanned approximately thirty humans in the hospital, and even more in the government building. Should we beam up all of them?”

Norton groaned inwardly. Yes, he knew that there were many non-Vulcans in New ShiKar to help the colony settle, but so many humans… It was enough to drive him crazy. “No, of course not! We would be brought up on charges of kidnapping.” Dammit, Kirk knew exactly how to hide in plain sight!
“Admiral!” the officer at the comms station called. “I have Commander Nabusu on the line. He’s in Engineering as ordered, and he says that there are serious problems with the engines.”

“Put him through!” Norton ordered and listened to his subordinate’s report with growing unease. Realizing that members of the original crew would be needed to keep the ship running, he commanded that some of them should continue with repairs, then he switched off the intercom and turned his attention back to Chekov.

“Where were we, Ensign? Ah yes, the civilian. You said you only saw him once or twice. Maybe you can describe him to me and…”

The intercom whistled. “Lubkemeier to Admiral Norton.”

Losing a little bit his patience, Albert activated the link. “Norton here!”

“Sir, I’m in the transporter room. All logs and protocols were effectively deleted. There is no way to know the last coordinates or who or what was beamed down.”

“Of course not,” Norton growled. “As if Kirk and the others were foolish enough to leave any trace.” He glanced back at Chekov. “Well, Ensign, I -”

“Admiral, a hail from medbay. It seems to be urgent!” Norton was interrupted for the fourth time. Growling quietly in his throat he nodded at the man at the comms station and a moment later another voice reported, “Sir, we’ve found the room where the cryotubes had been held. It’s an adjacent room where a large number of medical devices had been monitoring something. It’s linked to the CMO’s office.”

“Do you have the exact number?”

“No, sir, but we’ve got the statement of an officer who confirms that the tubes had been here.”

That was all Norton needed to know. “Arrest the CMO and…”
“He isn’t aboard, sir. His subordinate told me that McCoy is down at the Vulcan University Hospital. They needed treatment for a patient in a coma.”

Albert gritted his teeth. “So, the rats have abandoned the sinking ship,” he sneered. “Carry on, Lieutenant, and interview the whole medical staff. McCoy couldn’t have done this alone. I want those who supported him brought to the brig!”

“There’s one thing more, sir. The officer, who informed us about it is Dr. Carol Marcus.”

Albert’s eyes widened. Alexander Marcus’ daughter? At least she had kept some sense about her through this whole mess. “I’ll talk to her soon, then. Norton out!” He glanced at the man at the comms station again. “Something else?”

“Yes, sir, Reports from our troops. All decks are safe, the acting shift is detained at their stations, and the other crew members are locked in their quarters, or will be brought to them.”

Pavel’s mouth had gone dry. Carol Marcus had betrayed them! Damned Judas – after all Jim Kirk did for her! And here he had thought she belonged with them, part of the family the officers had become. The young navigator could understand that she perhaps never would forgive Khan for killing her father, but she had been informed about everything that had happened to the other Augments. She had given them away! Heartless bitch! Alas, Kirk trusted her – and she’d fed him and the others to the wolves!

And that was not all that gave Chekov the chills. The Elite Security hadn’t needed more than a few minutes to take over the whole Enterprise. Sweet Mother Russia, that was almost eerily fast. But at least Kirk and the others had reached the Vulcan capital and were safe.

“Lieutenant R’Lek’h to Admiral Norton,” a voice cut through the bridge.

“Norton here!” Albert replied, asking himself how many messages he was going to receive – revealing more and more of Kirk’s unbelievable deeds.

“Sir, I’m on deck three and just freed Professor Green and his staff. They were restricted to their quarters and -”

“Admiral Norton?” another voice called from the background – a very angry voice. “Admiral, Kirk
and his damned Vulcan stole all our documents concerning... Well, you know! They know about everything!

Albert sat stock still, yet he balled his fists. Shock and fury mixed together into a deadly cocktail of emotion in him. 'Kirk knows about the experiments and their true nature. He knows everything! I'll kill this damn farm boy!' he thought. 'I'll kill him and his cursed bunch of friends before he gets a chance to confess what he knows!' Then his attention was driven away as another hail reached him.

“Admiral, Lieutenant Huan. I’m in the brig and just released Lieutenant Nureaux and Commander Finnegan along with some of his men. I think you should come down here, sir. They have some very interesting things to tell you about Kirk and the creature.”

Pavel grew pale. Did Nureaux or Finnegan know about Kirk and Khan being a couple? That would be a catastrophe!

Norton took a deep breath. ‘Stay calm, Albert! You knew that you’d face a big mess that you’re in charge of cleaning up, so don’t freak out!’ he told himself, then rose. ‘Ensign Chekov,’ he addressed Pavel, who still hid his anxiety. ‘You and the bridge crew are confined to quarters, too, until I’m convinced that you had no part in this. Please follow Lieutenant T’Hoven over there.’ He pointed at the Andorian among the Elite Security who gripped his phaser tight.

At that moment, the Security man from the comms station called, “Admiral, we’re being hailed by Kirk.”

Norton smirked and nodded at another of his men. “Try to locate him!” he ordered and the man hurried to the science station. Then Albert straightened up. “Open channel.”

With rising dread, Kevin listened to everything that had been discussed over the last minutes. All he knew was that somehow he had to stop this insanity and help Jim! He watched how the security man’s fingers flew over the buttons on the comms station and was aware of the fact that there was only one chance to warn his captain and friend. The second Norton took a deep breath to answer Jim’s hail, he called, “Admiral, I’m sharing Ensign Chekov’s quarters. Are we confined together or separately?”

Norton stopped dead in his tracks and threw Riley a murderous glare. A deep growl escaped him as he was told that the hail was instantly dropped, and too short to locate Kirk’s position. “Bravo, young man!” he hissed. “You’ve just done Command a huge disservice and yourself no favors!”
Riley looked with large eyes at him. “I… I don’t understand, Admiral – sir!”

Turning fully around to Kevin, Norton asked slowly. “Do you really not understand, Mr…?”

“Ensign Kevin Riley, sir, cadet second year, classes in navigation, communication, astrophysics, command…”

Albert lifted a hand and snapped, “Enough! I don’t want to know your class schedule!” He studied the young man in front of him – and sighed in resignation. A second-year cadet – so green. “You should be taught when to keep silent, Cadet!” He nodded at T’Hoven. “Take the children to their quarters! The others are restricted as well! Dismissed!”

Seeing no other choice but to leave the bridge, Chekov and Riley stepped into the turbolift; the others and three security personnel followed them. The last thing Chekov heard was Norton’s voice, calling the Excalibur, “Norton to Captain Styles. Inform Commander Genrow that he and twenty of his men will report to the cargo transporter room. Be ready to beam down to New Vulcan to the seat of the government. I am forced to take a step I wish I didn't have to.”

“Aye, Admiral.”

“And I want you with me, so beam down as well. Oh, and ask Professor Dashwood and Dr. Conelly to join you. I’m certain they want to be present when we get their run-away test-subject back! Inform me when you and the men are ready to beam down!”

Then the lift doors closed and Chekov took a deep breath. Norton would do it – would more or less attack the Vulcan government to get Kirk, Khan, and the others! Pavel bit his lips. He had to do something! If he only knew, what!

**ST***ST***ST**

The moment Jim Kirk heard Kevin’s voice in the background asking the admiral if he would be restricted to quarters together with Chekov, the young captain knew that his worst fears had come true. Section 31 had taken over his ship!

He and the others had returned to the seat of government only a few minutes ago, where ‘Selek’ had led them to his office, command his secretary that no one was allowed to disturb them except for
T’Pau, who was expected in the next two or three hours. The air was cooler than it was outside, yet it was warm – for the humans almost too warm. The floor was covered with dark carpets which fit the functional, yet elegant wooden furniture bearing the Vulcan style though it was made from wood of other planets. Except for the furniture that had been taken to other Vulcan colonies before Vulcan was destroyed, no original Vulcan furniture existed.

The second Spock Prime heard the vaguely familiar voice addressing an admiral on the Enterprise’s bridge, he was beside Jim. He took the communicator from him, snapped it shut, threw it on the floor, and crushed it beneath his light boot. Now it was impossible to locate it and therefore Kirk’s exact location from aboard the Enterprise. This would buy them more time until Section 31 decided on more drastic methods to get hold of Jim Kirk and his friends.

Jim’s protesting “Hey!” was cut off by the younger Spock, who also had moved towards his captain but stopped now, “A very quick and logical action. Thank you, High Minister.”

‘Selek’ simply lifted a brow at him before he fixed Kirk with a steady gaze. “They still may not know where you are exactly, but whoever this admiral is above the planet, he is not among the ranks of the stupid. There are staff officers aware of my identity. Your enemy will put two and two together; he will find you in time. I will take you and the others the high-security section of the building until the danger is eliminated.”

Kirk shook his head furiously. “I can’t slip away and hide in the next mouse hole, Selek. They have my ship!” he snarled, and the Elder lifted both brows this time.

“Obviously.”

“Those bastards hijacked my ship! We have to do something!”

The familiar brown eyes, surrounded by wrinkles, looked gently at him. “What? There is no way for you to return to the Enterprise without being arrested. And caught, you are of no use to your crew.”

“Sitting here and waiting for them to take the next step isn't helping either,” Kirk replied with a growl before he began to pace.

The older Spock watched, the younger version of his T’hy’la with understanding. He knew all too well how deep his friend’s emotions ran, especially in situations like this one. Jim Kirk had a high level of tolerance, but when his ship or his friends – or both – were in danger any tolerance left him.
‘Selek’ remembered all the times he had tried to calm and reason with the captain in such situations, yet it had been Jim’s impulsiveness and his logic that brought victory in the end.

His gaze wandered to his younger self, and their eyes met over a distance of just three meters. For a second there was a profound understanding between them, fed by their concern for the young Terran who currently was doing his best to run a hole into the carpet. Then another thought struck ‘Selek’. “Jim, have you deleted the data you collected concerning the conspiracy, Styles’ deeds, and your personal logbook?” Urgency echoed in his voice.

Jim stopped and rolled his eyes. “Yes, and I did one better. I took everything with me.” He pulled a data chip from his trouser pocket and showed it the old Vulcan. “Here is everything – even a little bit more than I sent you a few days ago.”

“More data?” The High Minister cocked his head.

“We found documents and records in Green’s quarters concerning the illegal experiments he committed on Nien’s people.” He heard Joaquin behind him gasp and looked over his shoulder at the shocked Augment boy, who sat beside Uhura on the sofa. “I’m sorry, Jo, Nien and I wanted to spare you, but it seems, Section 31 is leaving us no choice.”

Uhura, who had learned of this new bit of information from Spock, laid a comforting hand on Joaquin’s shoulder, squeezing it in sympathy.

“They… they ran tests on us?” Weiss croaked.

“You are one of five exceptions,” McCoy muttered. “I checked you thoroughly same as I did your brothers and sisters. Except for four of ‘em, everyone will suffer a few side-effects, nothing dramatic though.” He glanced at Khan. “But it’s no excuse for what happened. I’ll move heaven and earth to get those bastards in prison for the rests of their lives!”

“Did you copy the examination results, Leonard?” Selek addressed him, and Bones nodded, still baffled at how easily the older vision of their first officer spoke with him. “Yes. I opened a personal file for every Augment with Khan’s help and made a set of copies that I gave to Jim.” He pointed at the chip in Kirk’s hand.

“To our regret, we weren’t able to take the original records and documents from Dr. Green with us,” Spock said, “but I scanned them and copied them, too.” He also took a data chip from his pocket. “I
think the copies will be proof enough of the scientists’ crimes.”

‘Selek’ pursed his lips. “Right, give them to me.”

Jim and Spock had exchanged a quick glance with each other before they handed over the data chips to the Vulcan Elder, who sat down at his desk and sealed them in a high-security envelope. He activated the intercom and called his secretary who arrived seconds later. “Bring this T’Pau!” he said, giving the envelope to the young Vulcan woman. “It is important that you hand it to her in person – and only her! Tell her that this comes from her grandson, and she will not ask any questions. If someone asks you what you are doing at New Gol, tell everyone that you have the day off and that you are interested in becoming a priestess.”

The woman stared at him. “High Minister, that would be a lie!”

“No, it’s an excuse – and it is the only way to protect yourself, our guests, me, and the Federation. I will explain everything later, T’May, but please go now! Use the side entrance and do not look back! I will try to contact you tomorrow.”

For a long moment, T’May looked at him, then she took the envelope and hid it beneath her robes. “You honor me with your trust, Elder,” she said and vanished; her long honey-brown hair trailed like silk behind her.

Joaquin looked after her. “They do look like elves!” he whispered under his breath, eliciting a soft, amused noise from Uhura.

Jim stepped to ‘Selek’ and watched him switch on his terminal and send the files away to someone whose identity he could not tell. And Kirk knew why Spock Prime was doing this. “You think Section 31 will try to force you to hand us over to them.”

The old Vulcan lifted a brow. “The chances are 19.65 to 1 - maybe 17.87.”

“And what is with the rest 1.78,” McCoy asked.

Selek looked up. “The Lexington may well have rescued all admirals. In that case, they can arrest Luengo and his fellows before the admiral in orbit decides on to take more drastic measures.”
“You’re an optimist!” Bones sighed sarcastically.

“No, I’m a realist,” Old Spock deadpanned. And Jim had the burning gut feeling that the Elder’s apprehensions were a foreshadowing.

ST***ST***ST

Commander Ethan Stones was an experienced man, but the situation he found himself in now was something he had never experienced or even imagined. Two hours ago, he had received a private call from none other than President Robertson, ordering him to go to Central Park in San Francisco and to wait at the café “Jelly Fish”. At first, he thought someone was joking with him, but when the president gave him his priority code that no one else could know and declared the highest security level, Stones got the feeling that something bad was going on.

Using all the tricks he had learned over the last years, he left HQ unseen and arrived just in time to the place. He followed a man whom he knew was the head of the president’s bodyguards.

What happened then was something out of a dream – a bad or a good one, Stones wasn’t that certain even now, an hour later. On the way around the little lake, he had met ghosts – or so he thought at first, but those ghosts were very real and very much alive. Never had he imagined he’d meet Admiral Barnett, Admiral Morrow and Admiral Nogura again – and in such outfits. On an open street, he would have passed them without recognizing them, but he realized quickly that they were indeed the superiors he believed to be dead. Robertson was with them, and Stones asked himself how many protocols the president had broken to come here without the security fuss he and others always had to endure when he left his residence. Only four of his bodyguards, the three admirals, four Redshirts, and the first officer of the Lexington were with him – most of them hidden in plain sight sitting on benches or walking.

What he learned then pulled the carpet from under his feet.

Luengo was a traitor, who only nearly succeeded in sending the delegation to certain death so that he could usurp Barnett’s position for himself and remove all those who could disrupt his plans. And if it wouldn’t have been for Kirk, his most trusted comrades and the Lexington, Luengo’s plan would have worked. And there was more. Of course, Stones knew about Section 31, and he had to admit that he had compared the leadership style of Luengo with that of Alexander Marcus during the crisis last year. But he was shocked to learn that Section 31 had risen again – and was about to take the war with the Klingons to another level.

Stones was a Starfleet officer through and through, and what Luengo did was more than betrayal. To
leave comrades was a taboo, intentionally sending them to death to gain personal advantages was something beyond backstabbing. And the thought that Luengo had used him, Stones, the whole time to secure his position woke fury in the commander.

There was no doubt where his loyalty lay – with Barnett and the others. He knew that the next hours would be very dangerous. Robertson and Barnett were right. They had to re-take HQ with one strike without Section 31 realizing what they were doing. And they had to do it soon.

Stones’s men and women were loyal, too. He could name those who maybe belonged to Section 31; they wouldn’t be part of the mission that was about to unfold. One hour after the commander met with the president, the three admirals, and the president’s personal security team, Stones entered HQ again – alone. He had to prepare everything before they could cut loose. He would make certain that this was the day on which Section 31 would be vanish – a day, Admiral Luengo would never forget!

ST***ST***ST

Sulu was still on the biobed listening to the turmoil in medbay. Of course, the discovery of evidence that Kirk had rescued the Augments would lead to trouble – and Dr. Marcus’ betrayal seemed to poison the atmosphere even more. He listened to the invaders interview Dr. M’Benga and the others, then arrest them and take them away – putting up resistance. In the end, Dr. N’Halro and a young nurse were allowed to remain in medbay to take care of the patients, but three of the invading security team would watch over them. One of them checked on him, then the light in his room was dimmed. With the door half-closed, Sulu heard the guard make a rude joke about his not so perfect face he had at the moment.

Sulu kept to his role as unconscious patient and listened intently to learn what would happen next, but except for some murmuring from the guards and the quiet noises of the medical devices, silence spread over medbay.

Maybe this was the only reason why Sulu heard the soft scratching at all. And it came not from the door, but from above him – to his right!?

Carefully, he blinked in that direction and his jaw dropped as he looked straight into the face of Keenser, who was crouched behind the grate covering the airshaft in the room. The little alien cocked his head before he carefully removed the grate.

Sulu was about to leave the bed, but remembered that the biobed would send an alert if its scanners didn’t receive input from the biobed’s occupant. Holding his breath, Hikaru watched as the Royalan held the grate in one hand, secured the strap of a tricorder, and jumped soundlessly down to the floor,
where he placed the grate against the wall. Then he hastened towards Sulu and pressed one wrinkled finger against his mouth; his big, pitch-black eyes roamed over Sulu’s face and then up to the display of the biobed. Without hesitation, the little alien activated the tricorder and took some readings from the helmsman before he ducked under the bed and began working on something.

“What are you doing?” Hikaru whispered, glancing over towards the door, half expecting to see Elite Security come running.

“Tricking,” came the short reply and Sulu groaned inwardly. Keenser and his one-word answers.

“What are you tricking?”

“Biobed!”

“The biobed?” Sulu looked back at the door, ready to drop back onto the mattress and to continue his role as coma patient, but no one neared the room.

All of the sudden, Keenser reappeared, grabbed Sulu’s right wrist, and began to pull on it. “Out!” he murmured.

Hikaru’s eyes widened. “The biobed will alert them when I…”

“Not anymore. Out!”

Sulu bit his lips, fixed the Royalan with a doubtful gaze, and when Keenser didn’t react, he gave up and swung his legs over the bed’s edge, slipping out of the blankets. The monitor above him still buzzed, echoing his heart beat – a heart beat the sensors shouldn’t be able to read anymore. Then Hikaru understood. Keenser’s tricorder was a medical tricorder, and the Royalan had recorded the human’s bio-signals that the tricorder now sent to the machines.

“You’re a genius!” the helmsman whispered, and he helped Keenser put some pillows beneath the blanket, and they hid the tricorder in the heap. At the first (and maybe second) look, none would realize that the ‘comatose man’ wasn’t in bed anymore.
“Quick!” Keenser murmured and raced back to the open shaft.

Sulu grimaced as he became aware of the only escape route he could take. Folding his hands into a hold, he waited until Keenser had put a foot into them and pushed the little alien over his head. Then he grabbed the grate and took the Royalan’s offered hand, who pulled him up with the surprising strength given his tiny frame. Slipping into the shaft and not losing the cover was an act Sulu was sure he couldn’t repeat. But somehow he managed it, and a minute later he crawled after Keenser through the inner workings of the Enterprise.

There was only one place on the ship where they could take action against the enemy successfully: The auxiliary room. If they could reach it without being caught, maybe they stood a chance to help Kirk and the others…

ST***ST

Pavel Chekov and Kevin Riley walked side by side down the hallway towards the Russian’s quarters. Lieutenant T’Hoven was behind them; his right hand rested on his phaser at his hip. The other members of the bridge crew had separated from them only moments ago, accompanied by other guards.

The ship was uncharacteristically silent, and a certain dark atmosphere loomed about her. The crew members who hadn’t been on duty were locked into their quarters, and Elite Security was patrolling the hallways. It reminded Pavel of an old prison he once visited in St. Petersburg, only that here the walls were made of steel and not of stone, and that the guards wore the uniform what ought to be an ally and not an enemy.

Chekov’s and Riley’s minds were working frantically. They had to do something – had to stop Norton from getting Kirk and the others, and prevent him from damaging the relationship between New Vulcan and Starfleet. The Vulcan High Council wouldn’t accept any activity that would threaten the seat of government – or the Vulcan High Minister, yet Pavel would wager that this wouldn’t stop Norton from harassing ‘Selek’. After all ‘Selek’ was an older version of Spock, and after Kirk and the Vulcan had tricked Section 31 over and over again, Norton had to be furious with them. Men like the admiral lashed out when it comes to a bruised ego. Pavel had a certain gut feeling that Norton would take out his wrath, not only on their Spock but also on the old one, if he got the chance.

They neared Chekov’s quarters, and Pavel knew that the chance to act was coming to an end. A simple, desperate plan formed in his mind – a silly one – one that could be seen in any B-movie. But maybe that’s why it would work.
They stopped in front of the door to his quarters, and he tapped in the code. The door opened, and Pavel gestured to Riley to step in first; he turned around. “Zanks for ze escort,” he grumbled before he followed Kevin. The door hadn’t fully closed when he bumped hard into the furniture and let out a painful cry, falling.

Kevin recognized immediately what Pavel was up to and called out his name in alarm.

That was enough for the Andorian to enter the room before he could lock it with an override code. Confused he looked down on the young Terran who lay on the floor. “What happened?” he demanded and made another step towards the two ensigns. It was enough for Kevin to take action.

A second later, he tackled T'Hoven taking him by surprise. Obviously, the lieutenant had never thought that the two ‘boys’ would make trouble. But this was a big mistake. Both young men were determined to fight against the enemy ‘til their last breath and buy their captain and friend some more time.

T'Hoven overcame his shock quickly and tensed his muscles as he tried to push Kevin away. He met with firm resistance. The lieutenant had worked with Terrans for quite some time, but none of them had ever told him of the Irish temper and Irish stubbornness. Though smaller than the Andorian, Riley put up a good fight; his fury gave him the strength he needed to busy the lieutenant for a short time – several seconds in which Pavel got back to his feet and raced to the sleeping area.

The carved statue of Czar Alexander that was on the sideboard was a gift from his parents after his graduation from Starfleet Academy. Thirty centimeters long, made of oak, and beautifully painted – it was a rarity, and it came in handy for the young Russian just now.

Rushing back to his friend still wrestling with the Andorian, he swung the statue like a sword and brought it down on T'Hoven’s head shouting a victorious shout in Russian. The lieutenant was felled like a tree and didn’t move again. Chekov stood above him – statue ready to use again.

Carefully and out of breath, Kevin bent over the lieutenant and searched for the Andorian’s pulse. He looked up at Pavel and grinned, “He's out cold!”

“Ha! Long live Czar Alexander!” Pavel smirked, then he laid the statue down and hurried to his wardrobe to grab some belts. “Help me bind him and to hide him in ze closet.” He pulled out a dark blue scarf. “Do you want to gag him, or should I do it?”
Kevin grinned. “You rendered him speechless so let me do the second half of it.”

Two minutes later T’Hoven was cored, gagged, and locked into the wardrobe.

“What now?” Riley asked quietly and felt a little nervous flutter in his belly as Chekov took his phaser and smirked at him, “Now we’re going to ze auxiliary room to get our ship back!”

ST***ST

Albert Norton looked at the two men in front of him – Lieutenant Nureaux with his right arm in a sling and a bruised Lieutenant Commander Finnegan. Behind them, the brig was full, but instead of the three Elite Security members from Finnegan’s group who had been in there, the cells were occupied with nearly the whole medical staff. Elite Security was still interviewing them in the cells but were receiving no answers at all.

“So neither of you managed to carry out orders, and you blame a corn-fed cowboy, a Vulcan and a creature more than 200 years old for your failure!” He shook his head, and Finnegan felt the urge to defend the lieutenant and himself.

“Sir, it’s not only because of Kirk. His staff is thick as thieves; their loyalty belongs utterly to him – not to Starfleet or the protocols. And unfortunately his staff is extremely clever and intelligent. They not only obey his orders, but they are also ready to give their lives for him. The Chief of Security aboard, Giotto or whatever his name is, didn’t even ask why he was attacked by Gamma 12’s security. He just opened fire on my men as if it was a routine – to fight with his own people. I tried to get Kirk – I had him in the hangar! And then, out of nowhere, this damn Vulcan and the Augment appeared, and they turned the tables. Kirk had no chance to call one of them on the communicator. We were in close combat the whole time, yet somehow this blasted Vulcan, and the creature seemed to know that he was in trouble. They came to his rescue.”

“Yes, Commander Spock and Khan seem to have a kind of radar when it comes to Kirk,” Philippe Nureaux affirmed.

“Kirk and Spock are close friends – and Vulcan’s do have some telepathic powers,” Norton mused. “Maybe this can be used to our advantage.”

“There is more, sir,” Nureaux said, lowering his voice as he caught the admiral’s asking glance. “Kirk and Khan are a couple.”
Silence!

For a few seconds, Norton was speechless; then he burst out, “They are a couple? Impossible! Kirk'll chase any skirt and…”

“I was in his quarters and saw the undeniable proof that he shares it with someone – a male someone. I assumed that it was Khan and confronted Kirk with my theory after I got arrested and he interviewed me. His reaction told me everything. He and the Augment are sexually involved with each other. There is no doubt.”

Norton stared at him while Finnegan sneered, “Jimmy-boy always had a thing for the exotic ones, but I never thought that he’d want a dick stuck up his ass.”

This time, the admiral gave him a sharp glare; this kind of language was unfit for an officer! Then his attention was driven back to Nureaux. “Are you sure? I have to be certain if this relationship is real before I can make use of it.”

“It is true,” Philippe answered. “When I confronted Kirk with it, McCoy was with him, and he wasn’t the tiniest bit surprised by my words.”

“Ah, that’s the reason why the Augment went berserk when I fought Kirk. I thought he would tear me apart – literally,” Finnegan grumbled.

“He could have done it,” Norton murmured. “Consider yourself lucky that you’re still alive.” He rubbed his jaw. “So, Kirk has taken Khan not only under his wing but into his bed as well. Well, this comes in handy. Should the Augment actually have feelings for Kirk, he will not endanger his life. If both are a pressure point for one another, I’ll have their surrender quicker than I thought.”

“Careful. They are men who know how to adjust to any situation and can act accordingly!”

The female voice came from behind him, and Norton turned around; his gaze hung on the young blond woman who stood between two Elite Security personnel. “Carol!” He began to smile. “I’m pleased that at least you weren’t taken by Kirk’s insane kind of morality – or his charms.”
The weapon officer snorted shortly. “He is an excellent officer and captain, but after he had come under the influence of that murderous bastard Augment, he went crazy.”

Albert closed the distance to her and looked into her hard eyes which hid a spark of fury. “So, can you affirm that Kirk and Khan…”

“… are rolling between the sheets? Yes, they can barely keep their hands off each other!” Disgust lay in her voice, and the admiral had to chuckle.

“There were the rumors that you and Kirk…”

Marcus shook her head. “I once thought there could be more between us, but I was mistaken. Jim seems to be done with collecting women. Now he's after men – or one enhanced man in particular who easily could break any bone in his body, which he already tried a year ago.”

Albert pursed his lips. Ah, hell had no fury compared to the wrath of a dumped woman! And this came in handy, too. “Well, Kirk loves danger,” he commented wryly.

The intercom buzzed. “Bridge to Admiral Norton.”

Albert went to the next terminal. “Norton here!”

“Sir, Captain Styles informed us that he, the scientists, and Commander Genrow with his men are ready to beam down.”

“Thank you, Lieutenant, I’m going to the transporter room. You have the conn until Commander T’Hoven returns to the bridge.”

“Aye, sir!”

Norton switched off the terminal and turned around. He met Carol’s fierce gaze as she asked, “May I come with you, Admiral? I want to be there when my father’s murderer is finally arrested!”
Albert’s mouth twitched the slightest bit. Nothing burnt hotter than a woman’s wish for vengeance. One thing gave him second thoughts. “Carol, I’ve known you since you were a little child, and sometimes it amused me that there was nothing that could stop you if you wanted something. I don’t think that has changed. So why did you not once try to contact and warn us about what was going on aboard?”

Marcus snorted. “Albert, only after Jim was chased by the Excalibur did I realize that something was clearly off, I learned about Khan’s crew only yesterday. The whole ship was monitored. Kirk would have found out instantly if I had tried to send a transmission to you. And how was I supposed to know that Section 31 still exists?”

Cocking his head, Norbert asked, “So Kirk knows about us?”

“He assumes that Section 31 is back, but he had no proof – nor had I. I know that my father overdid it last year, but I believe he had the right idea. This war will not stop until Starfleet shows her full power. And we don’t have time to chase a love-sick captain who abuses our flagship for his own mission of whimsy.”

Albert nodded slowly. “But you knew about Khan’s presence aboard.”

“Yes, I did. Jim talked with me about it, and after the bridge crew went along with his intention of giving the creature ‘a second chance’, I thought it wiser to play along and to wait for a chance to inform Starfleet Command. I didn’t get that chance, but thank the Lord this game of hide and seek is over now.” She lifted her chin. “May I accompany you, Albert?”

A smile spread over his face. “Of course.”

Neither Pavel Chekov, nor Kevin Riley would ever be able to tell, how they managed to creep through the corridors without being caught. They had to hide in abandoned rooms several times and one time they escaped a patrol by pure luck, climbing into a supply shaft, but finally – after what felt like eternity – they reached the emergency stairwell and rushed down to deck 8. And there the game started anew.

As they finally neared auxiliary, both were sweating and tense as a ready bow. They knew here lie the real trouble. There was no way that the room wasn’t watched, and they had to eliminate the
guards before they could take over auxiliary – without giving their enemies a chance to alert the main bridge.

Pressing themselves against the wall they peeked around the corner. And true as the sun rose in Earth’s east, there stood two Elite Security, both armed with phaser rifles.

Pavel and Kevin exchanged a glance, gulped, nodded at each other, took a deep breath – and stepped out into the open.

“And you zink Ana is going to date me?” Chekov asked eagerly, and Riley smirked at him.

“Hey, she only has eyes for you and…” Both stopped dead in their tracks, as the two Security personnel blocked their way and raised their weapons.

“Who are you?” one of them demanded. “What are you doing here?”

Both ensigns gave them a look of pure surprise and innocence. “We're beta shift and were asked to go to our quarters. Well, we're on our way and…”

Kevin didn’t get any further because the second Security snapped, “No one goes without an escort! Where is yours?”

“Escort?” Pavel pretended to think hard. “Why should…” He stopped and pointed at the door that was his and Kevin’s target. “Hey, zis is ze auxiliary!” He looked at Riley. “Are we not on deck five?”

Kevin slapped a hand against his forehead. “I told you that the computer in the lift didn’t understand you! Look, where you got us – and this is the third time this week!”

“Ze computer doez understand me!” Pavel gasped, speaking with a thicker accent than usual. “Zere muzt be a malfunction and…”

“How can the computer understand you with that crazy accent of yours?” Riley groused.
“I zpeak wiz an acczent? Are you daft?” Chekov shot back, frowning in feigned irritation.

Delivering a big show of frustration, Kevin addressed one of the security personnel, while he flicked a thumb at his friend. “Does he have an accent or not?”

Not really knowing what to make out of the oversized boys in front of them, the two guards blinked in confusion before one of them answered, “Accent or not, you both should be…”

“See!” Riley interrupted while glaring at Chekov. “He confirmed it; you have a wicked thick accent!” He turned back to the security man. “Do you have the slightest idea how often he’s us both into trouble because no computer aboard can understand his commands?” The man opened his mouth to respond, but Kevin continued as if he finally had found someone to bleed his heart out to.

“Last week we ended up in Engineering, the week before we reached our department five minutes late because the turbolift computer understood everything but where we wanted to go because this guy here is practically tongue-tied! Hell, one time we even landed on the bridge! Can you imagine the captain’s face?”

“Hey, we alzo…”

“I always tell him to let me do the talking in the turbolift, but no, the little czar here always has to blurt out the command, and we land God knows where. It's all too crazy and…”

Kevin went on, and both the security personnel thought of two solutions to the situation they were facing just now. Should they let the boy talk to them until they went insane, or ought they take them to their quarters to shut them up? Both looked at each other for a moment – and that was all Pavel needed. With Kevin keeping their attention, he slowly moved his arm behind his back, reaching for the phaser hidden beneath his tunic in the waistband of his trousers. The second the two guards glanced exasperated at each other, Pavel took action.

He had the phaser in his hand set to stun, and in the blink of an eye, the two men realized that something wasn’t right. The first of them fell to the ground, stunned. Kevin, who had no phaser since he was only a cadet hurled himself against the second man, grabbing the man’s weapon hand. For a moment they wrestled; then Pavel was beside them and kicked the man directly in the back of the knee. It was a mean attack, this much knew the navigator, but in this case, he had to do it. The success of their mission depended on the quick defeat of the last remaining security personnel.

The kick had its intended effect, even if it wasn’t the one that the ensigns hoped for. It was enough to
make the man stumble. Kevin jumped backward – making room for Chekov who instantly pulled the trigger of his phaser. The shot sent the man to the ground, where he lay beside his colleague unconscious.

Chekov and Riley listened carefully, but they heard no footsteps. The little fight hadn’t elicited any attention. Well, there were only slightly more than a hundred of the elite forces aboard, and the Enterprise was a large ship, which allowed for just a handful of them on each deck.

“Quick now!” Pavel whispered, and they both grabbed the two guards under their arms and pulled them toward the auxiliary room. The doors opened, and they dragged the heavy men inside; then Chekov quickly closed the door but didn’t seal them. That would have set off the alarm on the bridge, and if there was one thing they didn't need, it was discovery.

“Right,” Kevin wheezed. “And now?”

“We have to…”

Chekov stopped as he all of sudden saw a tall figure coming from the back of the auxiliary – another Elite Security, who aimed a phaser at them. “What are you doing here?” he demanded, raising his weapon. Then he saw his two comrades in dreamland and cursed. “Hands up and go over there!” he almost snarled. “No tricks or I’ll shoot you where you are!”

“Isn’t zat phaser set to stun?” Chekov asked, surprised at the cold-blooded way he acted. “Zis is against protocol, you know.”

The man narrowed his eyes and moved the phaser towards them, yet out of range. “I said go over there, and get your damn hands up, boys or your mothers will mourn you!”

Kevin knew that their plan was at stake and suppressing the growing dread he snapped, “Then you’ll have a big problem, Mister, because a Starfleet member who kills another member will face court martial!”

“As if I would get any trouble because of two traitor ensigns! I…” Whatever he had wanted to say would remain a secret forever, because out of nowhere a small figure fell down on him and clawed at his face. With a shout, he dropped his phaser and grabbed for his attacker, whose tiny yet strong fingers with sharp nails left bleeding stripes on his cheeks and jaw.
“No shooting!” a voice snarled at his ear. “Stupid human!”

Chekov and Riley hadn’t the faintest clue from where Keenser came from all of sudden, but one does not question a gift that falls from the sky. Pavel pulled his phaser out, yelled “Keenser! Down!” and the moment the little alien let himself fall, the navigator shot. The stun blast hit the man squarely and he sunk to the floor.

Keenser pushed himself from the ground and looked threateningly at the fallen Security man with his pitch-black eyes. Then he felt a warm, soft human hand on his shoulder and glanced up into Chekov’s face.

“Keenser, you’re awesome!”

That confused the Royalan completely. “You knocked out man,” he said – a little bit at a loss why the Terran would compliment him so.

Soft laughter from above their heads made Pavel and Kevin almost jump out of their skin; then they grinned as they recognized a smirking Sulu, who looked out of a supply shaft. Dirt streaked his outstretched hands.

“Hikaru! What you’re doing here?”

“How did you escape medbay?” Riley asked, beaming from ear to ear.

Chuckling Sulu pointed at Keenser. “He got me out – tricked the biobed with a mocked up tricorder. The med-scanner is monitoring its signals now.” He cocked his head. “Hey, what you two are waiting for? No one gonna catch a severely injured man who has to jump from this height?”

“Oh, poor Hikaru. Creeping all ze way from medbay to here in ze shafts, and zen he tries to make us cry in sympazy for him.” Still, he and Kevin rushed to the wall to help the helmsman down. Groaning, Sulu let himself drop and needed a moment to regain his footing as the two ensigns supported him. “Right,” he sighed. “Here we are. So, status?”

Pavel grimaced. “Admiral Norton wants to beam down to New Vulcan to get ze captain and ze others by force. I heard him talking to Captain Styles before Kevin and I had to leave ze bridge. Oh, and Carol Marcus…”
“… is a damn Judas, I know!” Sulu growled. “She was in medbay when the bastards stormed in – and she couldn’t tell them soon enough about Kirk’s ‘unbelievable actions against the Federation’.” He shook his head. “And I thought she was one of us, but she’s as blind and cowardly as her father was.”

He headed toward the science station he spoke and checked it. “Dammit, the transporter has already been activated. Whoever is coming or going, I can’t stop it now.” He glanced at his three comrades. “So, what’s your plan?”

Chekov cleared his throat. “Well, I zought we could use ze inner defense system to bring zose intruders to zeir knees.”

“The knock-out gas?” Kevin assumed, and the two other men grinned at him.

“Well, the only downside is that everyone aboard would go to sleep for a few hours – including the crew,” Sulu mused, but Pavel shrugged,

“Medbay will need a lot of his headache pills, but ozerwise ze the whole zing is harmless. Let us seal ze aircon and ze door. Zen it can’t reach us.”

Hikaru rolled his eyes. Pavel took so many things in stride, but he was still so young that it didn't surprise Sulu at all. “Right. First, we have to transfer the conn to the auxiliary room so that no one on the main bridge can cancel our commands. Kevin, take Pavel’s phaser and secure the door! Pavel, I need your help at the science station. Scan the area outside of auxiliary. I don’t want any surprises. Keenser, take the engineering station and make certain that the gas stays outside this room.” He sat down the navigation and weapons station. “Well, let the games begin!”

ST***ST***ST

‘Selek’ had sent all documents to three members of the High Vulcan Council – every transmission was encrypted with a code only they knew; then he deleted everything. As a precaution, he also alerted security, not taking the risk in case the admiral in orbit forced his way to the building – a situation Spock Prime never thought would come to pass. Yet Nero’s influence had not just altered the timeline; it poisoned the timeline.

You could cut the tension in the large office with a knife. ‘Selek’ ended his call to security. Jim Kirk
stood beside the old Vulcan’s desk and tried to calm his boiling anger. His Grey Lady and his crew were in the hands of Section 31. That was unacceptable – unbearable!

Spock Prime rose. “I’ll show you your rooms,” he said. “As long as Section 31 is in orbit you will be safe there. Afterward…”

Tumult sounded from the outside. The men whirled around, and Uhura quickly jumped from the sofa, stepping in front of Joaquin who rose as well. ‘Selek’ straightened up; he pulled Jim quickly back and shielded him with his body. His face became an unreadable, icy mask exactly like his younger counterpart, who drew beside him; placing himself in front of Kirk, too. The same moment the door opened revealing green-white admiral uniform accompanied by command gold. Elite Security dark blue-grey followed …

TBC…

Chapter End Notes

Well, Section 31 and Norton are stopping at absolutely nothing – like it is so typical for people who are about to lose everything. And Norton and his fellows will go even further, just wait.

In the next chapter above mentioned disaster will take place, and I already warn you know about an emotional rollercoaster that blends out the other ones before. Everything peaks now into the big show-down and everyone (and every mission) is at stake now.

I hope you liked the last chapter and how, at least, four of Jim’s most loyal friends and subordinates trying to turn the table.

As always I’m very curious what you think about the whole thing.

Have a nice weekend,

Love

Yours Starflight
Chapter Notes

Hi, my dear readers!

I know, I’m a little bit late with the next update and I’m sorry for that, but on the other hand, this chapter comes exactly with the big anniversary. 50 years Star Trek today! Sweet Lord, I think Gene Roddenberry never imagined what would become of the TV-serial he produced all those decades ago – that even 50 years later several special idioms, used in the episodes, belong to casual language today and that there would so many people around the world, who still love the universe he created. This I’m calling a success, but – hey – Star Trek is really special, as I know you all agree.

Therefore: CONGRATULATIONS, STAR TREK!!!!

Well, of to my story.

Thank you so much for the many, many reviews. I knew that the showdown will put you all on the edge of your seats, and I can promise that the peak hasn’t reached until now. Rather the opposite. The real nasty and nerve-robbing things are beginning now. And if Star Trek shows us one thing over and over again then the fact that friendship and love is the greatest good that sometimes demands sacrifices – and not one of the main characters (regardless which serial of ST) would hesitate to sacrifice himself or herself to protect the friends, the beloveds or the ship.

Well, I know in this connection it sounds almost fatal – and I warn everyone to be ready to face the beginning of the biggest rollercoaster possible.

Have fun

Love

Yours Starflight

See the end of the chapter for more notes

Chapter 72 – Sacrifices

The moment Norton and his companions entered the office, phasers partly drawn, “Selek” pulled his shoulders back and stepped in front of his guests. “I do not remember you asking for a meeting with me, Admiral. Your barging into my office without permission is equitable with storming into the governmental offices of a Federation member.” His voice was strong and hard – it could have splintered ice. “Lower your weapons; surrender to our sentries and ask for a meeting with me, and I will not press charges against you and Starfleet Command.”
Albert Norton stared at him, then at the younger Spock, and back again. Incredible! One person in
two different versions and ages. It was…unbelievable! And it also made him aware of the fact that
“Selek” couldn’t be trusted. Not this time – not when his allies’ freedom and more was at stake.

“High Minister,” he said with an equally hard voice, “your people were informed that wanted
criminals are in this building, and that Starfleet has been forced to intervene to prevent worse from
happening.”

Old Spock lifted a brow and replied before a furious Kirk was able to say something, “There are no
criminals here, Admiral, only those who have asked for political asylum which was granted by the
Vulcan High Council.”

“You are saying a wanted terrorist who has killed high-ranking staff-officers, blown up a building in
London, and who crashed a large vessel into San Francisco isn’t a criminal?” This time it was
Norton who lifted both brows. “And there I thought Vulcans wouldn’t understand the concept of
black humor.”

Jim took a deep breath as he listened, his face flushed with even more anger. “You’re right, Admiral,
there are criminals, but they are not us. You and Styles could look in the mirror, and you’d find your
‘criminals’.”

“Shut up, Kirk. Your plans were exposed and have come to an end here and now!”

Jim felt his disgust increasing as he recognized the voice. Finnegan! If there had been any room for
doubt concerning the Enterprise, then this was the utter proof that his ship was indeed in Section
31’s hands.

“Finnegan!” he growled, while he felt his Spock stepping beside him, ready to support and to protect
him. “That you, who tried to murder a starship captain, support a criminal element like Luengo and
his fellows fits so well with your rotten character!” Jim threw into the Irishman’s face.

Sean had moved beside Norton and glared with hate-filled mockery at Kirk. “I had my orders to stop
you. It’s not my fault you chose to fight instead of surrendering. And, by the way, you had a back-up
like always. Your Vulcan pet and your Augment lover came to protect their little boy, so don’t whine
now because it got rough on Gamma 12!”

Jim ignored the fact that Finnegan – and therefore certainly Norton too – knew about Nien and him.
His fury was about to get the better of him, as he snarled, “You attacked Starfleet officers in an
ambush with the clear intention of killing them. That’s called attempted murder, and for that, justice
will freeze your ass for the next eighty years!”

“As I said: I had my orders!”

“As far as I remember you didn’t even demand we surrender before you attacked us with phasers set
to kill,” Spock said coldly; his eyes hid his own growing irritation well enough for those who
weren’t familiar with him. “This, indeed, fulfills the definition of attempted murder, Commander.”

“I knew the dangerous subject that was with you and is here now, too. I had to fulfill my orders
without endangering my men,” Sean shrugged.

“A kind word prevents the necessity of using weapons, boy,” McCoy snapped. “But thoroughly
thinking was never one of your strengths. Once a bully, always a bully.”

“Oh, shut your mouth, you quack. You always complain when someone messes with Jimmy-boy
here!”

“As entertaining as this is, we’ve absolutely no time for this happy reunion between former school
chums,” Norton taunted, before he addressed Spock Prime. “As I’ve already said, you are sheltering
rogue officers and a very dangerous individual that has already been sentenced to…”

“Mr. Singh,” “Selek” emphasized, “never faced a proper legal trial, and therefore any sentence is
also legally void.” He cocked his head and began a little speech, knowing that it was only a matter of
time until Vulcan security would overcome the intruders. For a brief moment he was reminded of
another situation when he’d been forced to buy time by carrying on a longer lecture until a stolen
cloaking device had been installed aboard the Enterprise. Kirk had been able to beam him away
from the Romulan ship before the execution took place. And something Jim Kirk called a gut-feeling
told Spock Prime that the danger here and now was no less great than all those decades ago back in
his own time-line.

“You allowed illegal tests to be run on Mr. Singh,” he began. “He was held in a semi-coma and his
augmented nature was abused for an indeterminate number of experiments. He never consented to
these, nor was he granted any say in the matter of their nature. As I have also learned, Mr. Singh
never had a truly legal trial, as a public defender was denied, as well as his right to give any
testimony after he had undergone torture and was forced to watch four of his crew members killed in
an attempt to blackmail him. Given all these facts, it is highly doubtful that Mr. Singh will be
granted a fair trial under the current leadership of Starfleet Command. Therefore, it is his life being at
stake that convinced the Vulcan High Council to offer him and his people political asylum. You certainly know that…”

Norton began to chuckle. “Let me guess, Kirk was full of tearful pleas to win you over to this insanity.” Before the Elder could reply, Albert raised his own phaser. “And it is obvious that you’ve already made up your mind, and that there is no way to talk some sense into you. Therefore you give me no other choice than to act. Please be so kind and step over there to the visitor lounge.” He pointed his phaser directly at Kirk’s face. “The same goes for you and your companion! Hands up and go over there!”

Three more of the Elite Securities aimed at them too, while Styles glared with blatant malice at Jim. “It seems this time I was quicker, Kirk! Don’t confront someone with an April’s fool joke if you’re not ready to be at the receiving and, too.”

“The difference being that I sent a harmless probe, but you on the other hand, charge into an official seat of government with phasers drawn, and threaten the sovereignty of a planet!” Jim snarled.

“Enough!” Norton cut in. “Hands up and get over there!”

Joaquin stared at the strange officers and soldiers with a dry mouth before he spared a short glance towards Khan. Hadn’t his brother and Jim said that they would be safe here on New Vulcan – that their enemies would not dare to take action against this special member of the Federation? As it seemed, they had miscalculated the readiness of their opponents to overstep boundaries.

Khan felt the rising anxiety in Joaquin, while his bondmate’s fury burnt hot over their shared link, mixed with fear for him and his friends. And, as Nien had to admit, he himself felt the first pang of dread as the Elite Securities aimed at them to lend weight to Norton’s order. With the Enterprise in the hands of Section 31 and New Vulcan’s seat of government more-or-less taken by the second in command of said organization, their chances had lowered immensely. At least his other brothers and sisters were safe – until now. There were only a few who knew about where they were hidden, and if there was one thing Khan was certain of, it was the fact that neither the Vulcans, nor Jim and his friends would ever give away this secret.

Kirk’s glare hung at the phasers aimed at them, and realizing that they had no other choice than to obey, he retreated – signaling to the others to follow his example.

‘Selek’s’ dark eyes were like granite as he glared at the intruders. “This will have unpleasant consequences for you, Admiral. And for you and your companions too, Captain. New Vulcan is an independent member of the United Federation of Planets, yet you force entry into its government
sanctuary with weapons and dare to make demands – you, a high-ranking officer of Starfleet Command. And as we know, you have overstepped your boundaries many times. Captain Kirk and his companions are under the protection of my government. Therefore even Starfleet has no right…”

“Civilian protocols are suspended if Starfleet officers are involved!” Albert interrupted him.

“Mr. Singh is a civilian,” the Elder stated, which earned him a mocking snort from Finnegan.

“You’re not up to date, High Minister. I learned first-hand from Lieutenant Murreaux that Kirk has made his sweetheart here a petty officer. Therefore, this creature does, indeed, belong to Starfleet.” He shook his head. “What they allow into the fleet these days is beyond me.”

“Mr. Singh was relieved from duty before he beamed down and is therefore a civilian,” Spock corrected calmly. “He was recruited because of an emergency situation aboard and was made a petty officer in the absence of enough officer’s, but still maintained his civilian rights. Therefore High Minister Selek is correct. Mr. Singh is not an official member of Starfleet and governed therefore only the civilian laws.”

“Prisoner 3158-17-215 isn’t acknowledged as human; it doesn’t matter by which laws he is governed,” Norton retorted icily. “And, by the way, if the Federation’s safety is in danger, it is my duty to carry out any actions to keep her safe.”

“Big words, Judas!” Jim hissed. His eyes shone with fire. He knew that he and the others were a step away from being imprisoned, and what that would mean for Nien was clear. “Tell me, Admiral, what are today’s thirty pieces of silver equivalent to? A seat in the Council? Higher salary? More authority? With Luengo in charge of Starfleet Command, the possibilities for him and you are almost endless!”

Norton frowned. “You are calling me a ‘Judas’? You, who is accused of conspiracy against the Federation?”

“What?” Kirk didn’t believe his ears, just like the others.

“Are you utterly nuts?” McCoy blurted out. “Jim risked his neck more than a dozen times for the Federation, and you dare to accuse him of…”
Irritated, Albert cut in, “You should hold your tongue, Doctor. Your role in this conspiracy is not as little as it seems.” His gaze found Kirk again. “You and your Augment friends were planning to take over the Federation. With our flagship as the base and seventy-three enhanced super-creatures, you think you have a chance for a revolution with Starfleet is weakened after the loss of our most important admirals and the Federation still at war with the Klingons.”

The accusations were jaw-dropping! Jim fought for breath as fury rose like bile in his mouth. “Aren’t you perverting the facts, Admiral?” he snarled. “It wasn’t me who arranged the attack against the Excalibur which gave Styles the chance to get rid of the men and women who would never allow traitors like you and Luengo to take over Command!”

“I don’t know what you are talking about, Kirk,” Lawrence drawled, obviously enjoying the scene, while Norton saw Luengo’s fear confirmed: Kirk knew of their deeds. That was a death-sentence, and he already knew how to inflict it.

“Didn’t you give Prisoner 3158-17-215 over there shelter, hiding him aboard your ship?” He pointed at a fierce glaring Khan, but addressed Kirk. “Didn’t you take the cryotubes with the Augments aboard, too, before you destroyed Gamma 12?”

“So you knew that they were kept imprisoned there and you still ordered their death?” Jim almost shouted. “You and Luengo made yourself guilty of attempted genocide!”

“Nonsense, the Augments are not people; they’re synthetically bred creatures.” Joaquin choked in the background, but kept silent as Uhura squeezed his arm hard. “Creatures you took aboard our flagship!” Norton continued. As Jim wanted to respond, he snapped, “Don’t deny it, Kirk! Selek affirmed it only a minute ago and we also found the installation of medical monitoring equipment in the hold next to medbay. And I have the statement of one of your crew members, who was sane enough to stay loyal to law and order!” He looked over his shoulder. “Isn’t this the case, my dear?”

Dr. Marcus, clad in the coveralls for an away mission, pushed herself through the men in front of her and stepped beside Norton.

“Carol!” Bones gasped, not trusting his eyes. “You?”

The weapon officer glanced with large, almost sad eyes at him. “I’m sorry, Leonard. I really like you and I didn’t want to hurt you, but you’re so blind in your friendship with Kirk that you lost any sense of right and wrong.” Her gaze hardened as she glanced at Khan. “This man is an ice cold killer who murdered my father, many good commanding officers and blew up almost a whole street only to get his revenge for being treated as what he is – an animal!” Her look found a flabbergasted Jim. “I tried
to talk sense into you, but you wouldn’t listen. I don’t know if Khan brain-washed you after saving you from the Klingons or if you really don’t care that he killed your own mentor along with the others, but one thing I know: This insanity has to stop! Here and now!”

Kirk knew that any discussion would be for naught as he saw her fierce eyes and the barely hidden fury on her face. “And there I thought you understood everything.”

“Oh, I understood everything, Jim. I still understand perfectly well what is going on here!”

“Enough!” Norton cut in again. “Captain Kirk, you and your crew here are under arrest, and…”

“Captain Kirk and his companions have requested political asylum that was granted,” ‘Selek’ interrupted him sharply, asking himself what was taking Vulcan Security so long to come to their aid. “I am certain you are familiar with this term and its consequences. Under this circumstance, even Starfleet Command has no right to demand a delivery or even try to force an arrest with weapons. I will repeat myself only once: Retreat and respect the law of the Federation!”

Norton couldn’t help himself and sneered, “Oh, I’m sure you’re very familiar with laws and protocols; you are famous for twisting them to your liking and talking others dizzy with your discourses. Kirk and your younger counterpart are doing a good job emulating you.”

The Elder cocked his head. “I do not know what you mean, Admiral.”

“Really?” Norton laughed without any humor. “So Vulcans can lie – or is it only you, the half-Vulcan, that can lie to my face.” His face hardened again. “You and I – and a lot of more people – do know who you really are. And that you are still completely loyal to Kirk – loyal enough to abuse your title to cover for him help him. Isn’t it true, Mr. Spock?”

Joaquin, who stood behind Uhura and McCoy, gasped again. The incredible resemblance between the Enterprise’s first officer and the old Vulcan had astonished him from the beginning. But if they really were one and the same person at different ages, it wasn’t a wonder anymore. But, how could something like this even be possible?

“You just broke another decree of the Federation Council, Admiral, namely concerning my person and identity,” the Elder replied calmly. “Your list of crimes grows. And be certain that I will personally see that you face court martial!” In the background more tumult was heard and the old Vulcan felt a wave of irritation waking in him that he instantly suppressed. “If just one of our people gets hurt because of your illegal actions, my government will press charges against Starfleet Command and you!”

“So, you’re trying to tell me that you would use official channels rather than a short cut? Asking your guests for help?” Norton taunted, seeing a chance to eliminate the problem of ‘Selek’ once and for all. “This will come in handy for you and New Vulcan, wouldn’t it? Your people are an endangered species now and with the Augments used as reinforcements you not only can strengthen your colony, you also can make more demands on the Federation, because no one wants six dozen
Augments free in Federation space. You and Kirk had a clever little plan running, but we exposed your intentions just in time to prevent it.”

“Are you accusing me of endangering the Federation intentionally?” This time it was ‘Selek’ who continued without giving the admiral a chance to reply. “If a head of a government is accused of such crimes, only the Federation Council can demand his or her dismissal – and this is also only possible after detailed investigation. Show me the Council’s order and the accepted results of an official investigation concerning my person, Admiral, and I will come with you!” As Norton stared at him, ‘Selek’ nodded. “We both know that your mission is not approved by the Council. I dare say that no Council member or the president knows that you are here and what you are doing – attempted kidnapping of a political asylum seeker and the head of government of a Federation member. Your actions, Admiral, are forcing me and my government to engage the Council and the president!”

Commander Genrow, who was in command Elite Security on the ground, frowned and looked at Norton. “You deployed this mission without the Council’s approval – or even their knowledge?”

“Mind your own business, Commander!” Albert snapped.

“Abiding by Federation law is my business, Admiral!”

Norton stared at him. “We are at war, Commander, and a conspiracy has already weakened the Federation and Starfleet. We are about to solve this problem, so…”

“The conspirator wants to reveal the conspiracy he and his friends plotted,” ‘Selek’ deadpanned. “It never ceases to amaze me how easily humans twist facts.”

“You’ll get a chance to tell your side at your trial, High Minister!” Norton growled.

“As we already discussed, Admiral, you do not have legitimate authorization to arrest me – not here on my planet, least of all in the seat of my own government.”

“And as I told you, the protocol is clear when it comes to threats to the Federation, and you, High Minister Selek, are accused of conspiracy against…”

“That’s the biggest load of bullshit I have ever heard!” McCoy flared up again, having had enough now. “Do you hear yourself, man? Are you accusing the Vulcan High Minister of crimes against the Federation? Now I get it. They don’t have police for their own people, but for offworlders like us. Jesus!”

Norton looked at him sourly. “Dr. McCoy, your part in this mess is enough to send you to prison for the rest of your life. You’re comments are only making it worse. So shut up!”

Bone’s face reddened in anger. “Like hell, I will! Am I accused of crimes too? Saving lives is a crime to you I suppose if it concerns people you don’t like or want to get rid of? You need a shrink!”

Norton didn’t answer him but looked at the others. “The same goes for Mr. Spock, Mr. Scott, and Miss Uhura.” His glance then found Joaquin. “And who are you, young man?”

Before the young Augment could answer, ‘Selek’ said, “Mr. Achim Blanch, an intern, as you say on Earth.”

Albert looked ‘Blanch’ up and down. “Found yourself a nice vacation job, boy – serving a man who aids and abets criminals! You’ll be interviewed, too. Maybe you heard or saw things that don’t mean anything to you, but does to me.”
Joaquin felt heat rising in his cheeks, and even though he caught Khan’s warning gaze, he snapped, “I may only be an intern,” he played along, “but one thing I know for sure, until he is convicted in a court of law, you have no right to calling High Minister Selek, Captain Kirk, or anyone else ‘criminals’.”

“Oh, God help us if you ever become a lawyer or a judge. Another bleeding heart shyster to defend the dregs of society!” Norton mocked and turned his attention away.

“And who should judge Captain Kirk and the others, Admiral?” Old Spock challenged. “You?”

Albert shook his head. “I have no time to discuss this with you, Selek. Where are the other Augments?”

It was almost eerie to watch both Vulcans take a deep breath, put on an almost bored expression and clasp their hands on their backs – at exactly at the same time. Norton growled. He knew that there was no way to force a Vulcan to say or to do something he didn’t want to. Albert’s gaze wandered over the others, and on every face, he saw the same stern and fierce expression. He sighed. “We’ll find them; your silence is only worsening your situation.” Again no one said a word. Rolling his eyes Norton glared at Khan. “Prisoner 3158-17-215 will be taken to…”

“Even a man like you can address a man by his rightful name, Admiral. People are not numbers,” the Elder interrupted him again.

“Your loyalty is misplaced and dangerous, High Minister,” Norton sneered.

Khan, who was tense as a tiger ready to pounce, had enough. “You are one to talk of ‘loyalty’. Yours and Luengo’s are derived from the paranoid delusions of Alexander Marcus and your own hunger for power. Your infatuation with the thought of power is enough to turn you and your fellows into murderers who willingly kill their own!”

This time, the admiral almost smiled as he glanced at the Augment. “Prisoner 3158-17-215, you've done a lot of damage since you woke up, including multiple murders. At least your existence is good for something and will serve the Federation by…”

“Don’t you dare to touch him! You will not abuse him or use him as a lab rat again!” Jim snarled, balling his fists, while Spock, Scott, and McCoy stepped as one, in front of Khan, shielding the surprised Augment.

“He was created in a lab, and that's exactly where he belongs,” Norton retorted wryly, ignoring Commander Genrow’s shocked expression. “Don’t you agree, Gentlemen?” Albert raised his voice. Dashwood and Conelly, who were waiting outside of the office between more guards, entered the room.

Jim stared first with wide eyes, and then he narrowed them, eyeing Conelly specifically. Pure hate bubbled to the surface as he realized that this was the man who had hurt his Nien in the cruelest way possible. He wanted to punch the man into a bloody pulp – rip him apart for what he did to his beloved, but right now there wasn’t the chance to make this bastard pay.

Khan also could only stare at Conelly. Painful memories nearly healed by Jim’s love and understanding emerged from the depths of his subconscious, and for a moment he felt a hint of nausea washing over him; then dread was overridden by hot burning fury. There, only a few meters away, stood his tormentor – the man who forced himself upon him and inflicted the most intimate and worst hurt possible. Khan had begun to control his dark side – begun to get a grip on his wrath, but in these seconds the urge to strangle the other man was almost overwhelming.
Nathan Conelly glanced at the Augment and suppressed a smile as he saw the shock and then the rage showing on the superhuman’s face. The Augment looked good – far better than during his stay with Section 31 or later in the LSH lab. And Conelly felt a new wave of greed as he watched the strong, slender frame, fierce eyes, and those expressive lips which were drawn back in a soundless snarl.

Dashwood watched the Augment and was taken aback when he saw him in casual civilian clothes standing between other people – people determined to protect him – as if he belonged to them. The view was unnerving and gave him a strange feeling. Obviously, the creature had found real friends in those men and the young woman – famous and excellent officers who had more or less mutinied against Starfleet to help him. Among them was the Federation’s newest hero who had saved Earth two years ago. Something was very wrong here. Something was out of place, but he couldn’t see what it was.

“You brought those men into the seat of our government? Men guilty of illegal experimentation on a sentient being? War criminals!?” ‘Selek’ fixed Norton with one of his piercing gazes. “I’m familiar with the concept of shame, and you, Admiral, lack it entirely!”

“I don’t know what you’re talking, Selek, but one thing I know. This discussion is over.” He looked at Genrow. “Commander, arrest High Minister Selek, Captain Kirk, and his officers and be careful with Prisoner 3158-17-215 so…”

Jim pulled Spock Prime back and pushed the older Vulcan behind himself as he ducked into a fighting stance – cursing, not for the first time, that he and the others had handed over their phasers as they had entered the building. “Over my dead body!” he almost thundered. “You will not take them!”

Norton cocked his head and closed the distance to Kirk, glaring daggers at him. “Over your dead body?” he repeated slowly, giving the young captain a flat smile. “That can be arranged!” He lifted his phaser and at that moment, ‘Selek’ gave a shout of alert and Uhura screamed; Albert had grabbed the captain’s wrist and pulled him towards himself, pressing the muzzle of his phaser to Jim’s temple. He twisted Jim’s arm brutally behind the captain’s back. “One move, Kirk, and you are dead!” he threatened. The officers and the two Augments took steps toward the admiral, ready to fight. But the sight of their friend and commanding officer being held at gunpoint stopped them. Neither Vulcan was surprised to hear Khan growling deep in his chest.

“I’ve been told that you and the Augment have begun – an intense relationship shall we say? He pretends to care about you; that is all. I don’t think he cares for you one bit, but let’s just check.” Norton asked and he felt the younger man tremble, not in fear but in rage.

“Don’t you dare!” Jim hissed, trying to wriggle free. Norton increased the pressure on his arm. “If anything happens to Nien, I’ll hunt you down like the animal you are, you sadistic bastard!”

“And that statement will bring you even more trouble, Kirk.”

“Do I look as if I care what you think of me – or Section 31?” Jim shot back; utter disgust was plainly heard in his voice.

Norton ignored him; his gaze fixed the fiery eyes of the Augment leader. “Step forwards and let Commander Finnegan put the manacles on you.”

“Admiral, this is going too far!” Commander Genrow protested, but he was ignored.

“Afterward, you’ll be beamed aboard the Excalibur;” Norton continued towards Khan, “where
measures will be taken to secure you and give you over to Professor Dashwood and Dr. Conelly so that they can finish their tasking. I advise you not to…"

“You can’t put Khan back into cryosleep!” McCoy snapped, looking to Dashwood. “His body has been frozen twice already. A third time might kill him!”

“It’s not our intention to put him back into cryosleep – at least not right away. Stasis will do for now.”

“Stasis is practically the same thing and it sure as hell won’t guarantee his survival!” Bones raged.

“His augmented nature will be robust enough to keep him alive until he isn’t needed anymore,” Conelly stated emotionlessly.

“You heartless bastard!” the CMO snarled. “We’re talking about a man’s life here!”

Genrow turned completely towards Norton. “Sir, is this true? Do you want to force a man to hand himself over to scientists who would run illegal tests on him with the prospect of his death? That’s illegal and crime!”

“Commander, one more word and you’ll face court martial!” Albert snarled.

“Like Kirk? Unless you decide to execute him without a trial,” Genrow barked almost challengingly. “I’m beginning to wonder if isn’t Captain Kirk who is right here and you are the one who should be accused of high crimes. I’ve already seen it with my own eyes, and I - !”

The Vulcan Elder saw the chance instantly. “Every man in this room who supports Admiral Norton’s in his intentions is an accessory to these crimes, including murder,” ‘Selek’ said, looking at every Elite Security man. He saw uncertainty in many eyes. Maybe he could manipulate them. At least Commander Genrow seemed to use his common sense.

Norton apparently looked through Old Spock and raised his voice again. “You will not be able to talk my men into insubordination, Selek, so skip it.” He glanced at Finnegan. “Commander Genrow is under arrest. Keep an eye on him!”

Several protested in murmurs. Obviously, security didn’t share Norton’s point of view, but he could care less. He glared back at a very pale and very enraged Khan. “Surrender or your lover will be the first to lose his life.”

Jim felt icy fear twisting his gut – not for himself, but for Nien. If his beloved delivered himself to Section 31, he would be lost! Dashwood and Conelly would put him into stasis, maybe even back into cryosleep, and would run their experiments on him only to let him die afterward. And even if by some miracle help arrived, it would be too late, because the moment stasis took Nien, there was, most certainly, no way he would ever wake up again.

The mere thought made Jim sick to the core and filled him with a fear he’d never felt before. Even when he entered the warp core chamber was his fear not so sharp as it was right now.

Ignoring the muzzle at his temple he tried to rise up to gain footing, but Norton had seen it coming and tightened his hold on him even more, nearly breaking his arm.

“Stop it, Kirk, or I will shoot you now!” His glance found Khan again. “You have ten seconds to make a decision. Refuse and he dies; surrender, and he’ll live to see court martial.”

Genrow narrowed his eyes. “Don’t you see that this is blackmail?” He addressed his men. “The
"admiral has lost his mind if he thinks this isn't criminal!"

“Shut your mouth, Genrow, or I will silence you!” Finnegan threatened, aiming his phaser at the commander.

“That shows more than enough!” Genrow growled. “Be assured that I will drag your ass to court martial, and the admiral’s, too!”

Khan had neither ears nor eyes for the two rival security men. He didn’t know which emotion ran stronger through his mind and heart – fury or fear. Seeing Jim threatened like this, sensing his mate’s soul in turmoil woke the dark side in him, and his protective instincts flared up like a firestorm. No one would hurt his Jim as long as he was able to take a breath! Never would he allow any harm befall his beloved – not when he could prevent it. There was no doubt that Norton would stay true to his threat; he would kill Jim in cold blood if he, Khan, wouldn’t surrender. He knew what lay ahead for him and the prospect of a repeat of all the days and weeks of semi-consciousness, dread, pain, and torment made him shiver, but he would accept that fate if it meant that Jim would live! And there was still the hope that Wesley had made it and that Barnett and the others would stop Luengo in the next hours. Jim would be safe then. What was his life compared to his Pyāra’s life? Jim came first, no matter what!

Khan was not one to develop tender feelings quickly, or give his heart freely. Besides his closest brothers and sisters, there had been only a few people he had taken a liking to, but Jim was something else. The young man had captured his whole being, was a part of his soul now, and if there was one man in this universe he would give anything for, it was Jim Kirk.

And if Section 31 had him and he put up no resistance, Norton would show less interest in Jim’s friends and Joaquin until, maybe, the tables turned in his favor. He sensed his younger brother’s shock and fear, and he only hoped that Joaquin wouldn’t give himself away by an overly powerful, tell-tale Augment reaction to the situation.

Jim and his eyes met, and he saw those sky-blue depths widening in realization, as Khan made a step forward.

“NO, Nien!” Kirk shouted and tried to wriggle free again, only to have the pressure on his arm increased – and something cracked. Pain shot through his shoulder that he ignored. The hurt in his heart and soul was ten times stronger.

“Seven seconds,” Norton counted icily, and Jim was about to go berserk.

“NO! There is no need for you to surrender, Nien; he’ll kill us one way or the other to keep us quiet. RUN!”

“Five seconds!”

Ice crept through the superhuman’s veins. Norton would shoot! He had gone so far already; there was no going back for the admiral now. And Jim would die! Khan couldn’t let this happen.

“I will not watch you be killed,” he whispered. “I will not witness your death – least of all because of me.”

“Two seconds!”

Jim tensed up; a shiver ran down his spine – half in mortal fear, half in terror for his beloved’s welfare. “No,” he whispered, knowing that couldn’t talk Nien out of his decision.
Pushing McCoy and Spock aside almost gently, Khan stepped forward; his whole being cringed at what would come next, while he offered two security men his hands.

“Just look; you do care!” Norton’s voice was full of mockery, as he bent forwards toward Kirk and taunted, “Your reputation of being good in bed must be true if even this subject feels obligated to protect you after a roll between the sheets.”

“Is there anything in the universe you don’t pull through the dirt?” Uhura hissed, wrapping and arm around Joaquin who was ready to throw himself against the two Elite Security who put the manacles on Khan; the electronic lock clicked closed with dreadful finality.

“Why?” Albert asked innocently. “It’s not me who is dirty enough to sleep even with that cre…”

Using the tiny moment of distraction, Jim threw his head back and hit Norton square in the nose. Something cracked for real this time and the admiral let out a shriek of pain. The same second ‘Selek’, who stood next to Kirk, moved like a flash despite his age and he grabbed the officer’s weapon hand – twisting it. A blast disengaged from Norton’s phaser and hit the opposite wall, leaving a burning mark there. An alert was given as the energy discharge caused the alarm system to go off.

Commander Genrow used his chance too and punched Finnegan as hard as he could – wrestling the other man’s phaser away. “Arrest the admiral!” he shouted.

Elite Security didn’t know, exactly, whom they should obey now. Everything was so much out of place; Norton was their highest ranking superior, who had just put Genrow under arrest. Four of them reacted as they were trained and then the others followed.

They forced the High Minister back with the others with phasers raised. A fifth and a sixth put some distance between Genrow and Finnegan, holding them back. ‘Selek’ lifted both hands. They knew that they could be accused of manhandling a sovereign of a befriended planet they stopped but kept him surrounded.

“That was unwise,” Norton gasped, covering his bleeding nose. Jim had escaped his grip, yet the young captain was now held by two other soldiers. His blue eyes shone with grim satisfaction.

“How does it feel?” he hissed. “And that's not even a fraction of the pain Nien has already been through and is going to face again.”

Norton nodded at Styles, who opened his communicator. “Styles to Excalibur! Be ready to beam the scientists, the prisoner, Commander Genrow, the guards and me up. Commander Genrow is under arrest.”

“Albert.” Carol cut in. She had been shielded during the incident by security. “May I accompany them?” She met his teary gaze and added with loathing in her voice, “I want to be there when this monster is frozen again.”

“Carol,” Jim almost pleaded, “you know the truth. All I told you were the facts. Don’t support those who are the real reason for this mess - all the pain you, the others, Nien and I went through last year.”

“The facts can be twisted, as you well know! I’m sorry, Jim, I like you, but this has to end!”

“Nien’s death won’t bring your father back, Carol! Killing him doesn’t undo what happened last year! For God’s sake, don’t…”
Marcus turned around. “Albert?” she asked.

One of the security personnel had given the admiral a handkerchief that he was pressing against his nose. He nodded again. “Right, I understand you.” Then he glanced at Finnegan. “You have command of Elite Security, for now, Commander. Don’t mess it up again.”

Finnegan saluted and glanced at the young woman. “Doctor Marcus, would you, please? The two gentlemen, too!”

Dashwood and Conelly stepped beside Carol while two guards flanked Genrow.

“One more thing,” Norton said, “Prisoner 3158-17-215, if you give us any trouble, Kirk will die instantly. Keep this in mind!”

“Sick bastard!” Uhura snarled; her gaze flickered to Khan who didn’t answer because there was no need for it. He would do nothing that would endanger his beloved bondmate.

His belly tightened into a hard knot that even his augmented mind could not prevent. These were his last minutes of consciousness; his final seconds with those he loved most. He wanted to turn to Joaquin, wanted to say goodbye, but it would have given the boy’s identity as an Augment away, and he would protect his little brother till the last breath. There was nothing else he could do but send warmth over their shared link before his eyes found Jim’s.

He saw the utter desperation in those sky-blue depths which had so often smiled at him and shone with love. He was grateful for every minute he had with this shining, golden young man – his rescuer in so many ways. There was so much he wanted to tell him, so much he wanted to show and to give him, but it was too late.

As Finnegan ordered, “Excalibur, energize!” Khan mouthed a mute ‘I love you’ to Jim, sending all the love and warmth he felt for his beloved over their shared bond, then the surroundings vanished. The last thing he heard were Jim’s desperate cry of his name; then New Vulcan faded around him…

Jim couldn’t breathe, couldn’t think clearly as the golden light of the transporter surrounded his soulmate. Nien’s name was torn from his lips in pain as the slender, tall figure vanished, and for a moment he thought he was dying again. Then the two security men who still held him, forced him backward to the others.

“Right!” Norton said, lowering his handkerchief. The middle of his face would shine in a dark rainbow of color soon. “And now back to another urgent matter. Where are the other Augments?”

“If ye think one of us will give them away ter watch them being killed, ye’re crazier than I thought!” Scott growled fiercely; his temper flared up even more in his compassion for his hurting friend and in fear for Khan’s life. During the last two weeks he had come to respect the former dictator and now he genuinely liked him.

“I think you will give me the answer I demand,” Norton replied arrogantly and aimed his phaser at Uhura’ left leg.

Spock was in front of Nyota with one quick motion, shielding her, while Bones gasped, “Are you insane? She’s pregnant!”

The first officer knew that this was the humans called ‘a white lie’, because he would have sensed if his future wife was carrying his child. And had he just referred to Uhura as ‘his future wife’ in his mind? Yes, he had!
“Well, that’s regrettable,” Norton shrugged. Finally, one of the other Elite Security team began to use his mind something other than order taking.

“Admiral, I have to admit that I’m beginning to question your methods! Aiming at an unarmed, pregnant woman and blackmailing others with threats of violence against her friends... It's criminal, sir!”

Albert stared at him, knowing that he was overstepping the boundaries even the most loyal security team, but he was running out of options. Luengo had made it very clear that he, Norton, had to return with Khan as a prisoner, Kirk preferably dead, his comrades arrested, and with the other Augments gone forever or frozen and for further experiments. He was facing an impasse because neither the officers nor ‘Selek’ would tell him where to find the Augments. And given the noises outside, he wasn’t only running out of options, he was also running out of time.

His glance had flickered over the officers and the old Vulcan before it rested on Kirk. “But maybe I can kill two birds with one stone.” He aimed at Jim – who was instantly pushed behind McCoy and the young man ‘Selek’ had introduced as an intern.

In the next moment, there was turmoil outside of the office in the hallway. At the same time the door opened and a sharp female voice demanded, “What is the meaning of this?”

Norton whirled around, phaser raised, and his eyes widened as he recognized the old Vulcaness who stood in the entrance and looked at him with granite-hard eyes.

Joaquin, who was more or less in shock as he had been forced to watch his brother get arrested and taken away to perhaps inevitable death, stared wide-eyed at the old woman. For a moment he thought he was seeing a ghost and one name echoed in his mind – ‘Shani’. Then he saw the pointed ears curved elegantly over the pinned-up dark hair and the slanted eyebrows. This wasn’t the old Indian woman who had raised him, Sue, and the other Augment children, but a Vulcan woman who resembled her. And instantly he felt protective of her, even as she created the impression of anything but vulnerable.

Not caring that a weapon was pointed at her, T’Pau stepped nearer; two large, Vulcan males flanked her.

“I repeat, what is the meaning of this? Is this the new decorum of leadership in Starfleet – disrespect of befriended planets by assaulting their government?” Her voice could have cut through stone.

“All due respect, Ma’am, but this is not your business!” Albert replied, feeling cornered as he faced the Vulcan matriarch.

“You are threatening my grandson, his T’hy’la and another member of my family in the seat of government where you forced entry. That makes it my business.” Ice would melt at the sight and sound of her now.

“And you are in no position to do anything about it,” Norton growled, but the sudden very quick expression of satisfaction on the matriarch’s face almost unnerved him – as did her words; she drew nearer.

“Admiral, your sinister dealings were revealed. Members of our Council were informed of your and Admiral Luengo's conspiracy. Proof of the faked attack against the Excalibur, its captain’s betrayal in sending the delegation to their death, and the genocide you ordered of Mr. Singh’s people have been saved. The same goes for the records and reports of the scientists of Gamma 12, which record the illegal tests run on the Augments.”
Norton paled drastically.

“And that’s not all,” ‘Selek’ added. “Professor Dashwood, Dr. Green, and their staff have the order the development of a biological weapon using Khan’s blood – the agent is to be used against the Klingons. I found the faked pathogen you presented to Admiral Barnett at the last meeting, as well as the reports of the real one on Luengo’s computer. I made copies of everything and gave them to our most influential Council members who will not hesitate to share them with the Federation Council and the President if anything goes wrong within these walls.” He lifted a brow and looked at the utterly shocked staff officer. “To use a human phrase, Admiral: Game over!”

Jim couldn’t stop the triumph showing on his face, as he hissed, “We caught you, Norton! You and Luengo! You wanted to kill the admirals who would keep Section 31 down. Luengo who couldn’t step into Barnett’s shoes fast enough. The attack on the Excalibur was staged to eliminate them. But surprise! Your plan failed, and the delegation wasn’t destroyed, and the delegation evacuated in that shuttle survived. Those survivors are on their way to HQ now to haul Luengo’s ass to prison.” He smirked grimly. “You’re done for!”

Albert stared at him. The admirals survived? There was evidence that revealed his and Luengo’s plot? This… This couldn’t be! He looked at ‘Selek’, who simply nodded, and then at T’Pau before he began to laugh. “You’re insane – all of you!”

The old Vulcaness, who stood only a meter away from him, lifted both brows. “I can assure you, Admiral, that we all are in the best of health.”

Lieutenant Alahmba, who was the highest ranking officer of the remaining Elite Security team after Finnegan had beamed aboard the Excalibur and with Genrow arrested, realized that he and the others had, indeed, been taking orders from a madman. Any remaining doubts concerning Kirk’s accusations vanished. Vulcans didn’t lie – least of all T’Pau! And when she said that she had proof of Norton and Luengo’s criminal deeds that she would share with the Federation Council, then he believed her.

Stepping forward, he said forcefully, “Admiral Norton, given the grave accusations against you and the confirmation of those accusations by two Vulcan Elders, I am forced to arrest you. Give me your weapon and surrender, or my men will see to it that you do!”

Norton laughed, knowing that he was facing defeat. Intolerable! Utterly unacceptable! He couldn’t allow this to happen. Still chuckling, he looked around – and the grabbed T’Pau, pressing his phaser to her temple. He had dared to do the same to Kirk, he didn’t hesitate to do the same to the ‘old hag’.

The Vulcans and humans made a step forwards, but he barked “STOP! Stop or she dies!”

ST***ST***ST

“It’s unbelievable that security hasn’t found my records and reports!” Dr. Green sat in one of the lounges on rec-deck 3. His colleagues were with him and two irritated young crew members – cadets – were serving them tea and coffee. It was obvious that the cadets didn’t like the situation and liked it even less as they were forced to act as gophers, but Green could care less. On one hand, he was satisfied that Command had finally shown up and had taken over the Enterprise, on the other hand, he was still furious that Kirk – or really his Vulcan first officer – had stolen his documents. There was not much he had been able to save from Gamma 12 regarding the tests and their results that he and the others had run on the Augments. And now what little remained were gone now, too.

“They are still searching.” His colleague suddenly and jumped up; his eyes wide in shock.
Following his gaze, Green let his cup of coffee drop, while three other scientists leaped out of the seats, swearing.

The two cadets turned around, too, and frowned when they saw white smoke coming from the ventilation duct; then a strange scent reached their noses and within a few moments, they felt nausea wash over them, followed by an incredible sleepiness. They hit the floor seconds later, just like Green and his colleagues.

And they weren’t the only ones. In the corridors, Elite Security had realized instantly what was going on, but there was no way out for them because the anesthetizing gas was everywhere. Some of them tried to give the alert, and a few of them even managed to reach an intercom to inform the bridge before they were rendered unconscious.

In quarters and departments all over the ship, Enterprise crew members dropped to the floors, too, or fell asleep at their stations.

On the bridge, the commanding officer realized what was going on, and ordered the computer to shut down the ventilation systems in command central, but he was not fast enough.

“Sir, all command protocols were transferred to auxiliary!” the lieutenant associate at the science station reported; then white fog filled the bridge. It was too late to hail Norton and inform him. Only a minute after the inner defense system was activated, only four people remained awake aboard the Enterprise. And those four individuals sat in the auxiliary room a discussing what they could do next to help their captain and friends.

“Can’t we just beam them up?” Kevin asked, and Pavel, who manned the science station, looked up.

“No way to tell where zey are. Zere are so many human and Vulcan bio-signals, it would be pure luck if we got zem. We might end up with a bunch of zose guards or some wery confused Vulcans.” He shook his head. “If I knew where High Minister Selek’ office was I could simply beam up anyone who is in zere, but wizout…”

“Even if we had their position, they would land in a transporter room full of sleeping gas,” Sulu cut in. “And unconscious they’re no help at all. And, then what should we do? The moment Norton learns that the Enterprise is no longer in the hands of his guerillas, he'll order the Excalibur to attack us. And the four cannot battle a starship on our own!” His gaze found Keenser, who crouched on the chair in front of the engineering station. “Did you switch off the warp drive to save the cooling system?”

Keenser nodded. “Maneuver nozzles only,” he grumbled.

Sulu made an affirming gesture. The maneuver nozzles were needed to keep the Enterprise in her current position.

Riley, who had a headset on his left ear, having switched to the comms station, lifted a hand. “Excuse me, Lieutenant, but I’m receiving a transmission.” He listened while the atmosphere in auxiliary became tense. “Shit!” Kevin cursed. “It’s Styles. He’s ordering the Enterprise to beam him and a prisoner up.”

“A prisoner? Who?” Sulu demanded, and Pavel murmured under his breath, “It’s gotta be Khan. Zey’re after him because of his super blood.”

“Styles is only mentioning only one name – Commander Genrow. He is under arrest.”

“The guy who was wiz ze admiral on ze bridge and was ordered to accompany him?” Chekov
cocked his head. “It seems some of ze guerillas are beginning to zink and realize zat somezing is very
wrong here!”

“Yes,” Hikaru nodded, “but that also means that they’ve caught Kirk, Khan, and the others. That
they are only beaming one prisoner – maybe Khan – up, tells me that they have other plans for our
friends.” He raced to the science station. “Look for two Vulcans and just a few human life forms
close together, Pavel. Selek and Spock will be with Kirk, so two Vulcan bio-signals near human
ones will give us their location. We’ve got to beam them up. It’s better that they end up unconscious
rather than killed down there.”

“We’ll have to fight sooner or later,” Kevin groaned. “Right, I’ll man navigation. Someone should
switch the impulse drive back online.” He punched some buttons and the auxiliary main screen
sprang to life. “I hate…” He stopped. “Guys?” he said, forgetting any professional decorum for the
moment. “Can someone please tell me that I'm not losing my mind?”

“Haven’t!” Keenser deadpanned, while Sulu and Chekov gasped as they looked at the screen. There,
behind the Excalibur, another ship dropped out of warp – and it wasn’t a Vulcan ship.

ST***ST***ST

“Sir, I caught a transmission between Captain Styles and the Excalibur,” Lieutenant Palmer reported
as he turned his chair around towards the center of the Lexington’s bridge. Wesley and Barnett, who
stood beside the captain’s chair, looked expectantly at him. “He has ordered them to beam him,
security, and a prisoner up.”

“To beam him up?” Barnett repeated. “From where?”

“I guess, from New Vulcan,” Wesley growled.

Richard’s eyes widened. “You think he took Kirk and the others by force, violating every protocol
regarding interplanetary diplomacy by assaulting the place where Kirk and the others found
asylum?” The sheer thought was horrible. A high ranking staff officer of Starfleet breaking one of
the most important laws of the Federation and infringing the sovereignty of a Federation member?
‘They have no scruples regarding the dignity of life! No problem committing murder! Norton and
Luengo will also not hesitate to break any law and all laws that will get them what they want!’ an
inner voice whispered, and he took a deep breath.

“Lieutenant Palmer,” he addressed the comms officer. “Try to contact Vulcan Security, but scramble
the transmission. Ask if they were alerted to - to some intruders wearing Starfleet uniforms. And then
get me T’Pau!”

Wesley frowned. “Shouldn’t we try to contact Selek? He…”

“Kirk was under Selek’s protection, yet it was of no use, as the transmission tells us. I'll bet Selek is
in the same trouble as Kirk and his friends are. And if there is one person involved who can help, it’s
T’Pau!”

Bob cocked his head. “I know that she holds a high position among the Elders, but why do you think
she is involved?”

“She’s the Head of the House of Surak – and Spock is her grandson.” Richard felt amusement rising
in him for just a moment as he watched the astonished face of Wesley; then Palmer’s call drove his
attention away.

“Admiral, I have Mr. Sirel on the line, head of New Vulcan’s security. He told me that there is an
emergency at the seat of government. Starfleet Elite Security forced entry and Admiral Norton, who is among them, told them that war criminals were trying to harm the High Minister.” He looked at the admiral and the commodore. “Mr. Sirel doesn’t believe this statement because T’Pau informed him a minute earlier that High Minister Selek contacted her via his secretary, fearing that Starfleet would disregard diplomatic protocols to get to the refugees.”

“Dammit!” Wesley cursed. “Norton! Luengo sent him to get Jim and the others! I knew that something was amiss when Styles was ordered to Earth.” He shook his head. “Norton must have lost his mind, attacking the Vulcan government.” He glanced at Palmer. “What about T’Pau?”

“I’m still trying to get an answer from her office, sir.”

“God dammit it!” Bob cursed again and rose; stepping towards the helm and navigation station. “ETA to New Vulcan?” he asked Sonik, who answered, “Two minutes, forty-three seconds, sir.”

The door of the turbolift opened, and Ania stepped out. “Permission to enter the bridge,” she said, looking at the two highest ranking officers beside the center seat.

Barnett and Wesley turned around, surprised. “Milady, this is hardly the right place for you as far as your safety is concerned. We are about to face serious trouble.”

Richard didn’t get further, as the Betazoid interrupted him gently, “Admiral, I sense grave turmoil surrounding two extremely troubled minds. One is on New Vulcan; the other one is somewhere nearby, but off the planet!” She pointed at the screen. “I sense dread, fury, and despair; it is growing. The one off planet has… He has mental abilities.”

Bob bit his lips. Given the transmission they caught and regarding his knowledge of Kirk’s and Khan’s relationship, he didn’t need to be a genius to figure out that it had to be the Augment who was brought aboard the *Excalibur*, while Jim was forced to stay behind. Wesley had no clue what happened down in ShiKar, but one thing was clear: He had to do something as quick as possible.

“Sir?” the science officer called. “Our scanners picked up the *Excalibur’s* signature – and the *Enterprise!*”

“They’ve switched off the SDD. Otherwise, we wouldn’t be able to read her,” Barnett murmured.

Bob nodded with a grim face. “Yes – and that gives me a bad feeling.” He raised his voice. “Mr. Sonik, ready to leave warp in thirty seconds.”

“That brings us damn close to New Vulcan,” the navigator murmured, which elicited a, “Ten thousand three hundred and nine kilometers above the atmosphere, to be precise,” from Sonik.

Wesley rolled his eyes but kept silent.

“The one off planet is… He is anxious but also determined,” Ania said slowly, deep in concentration. “And he worries so much, not for himself but someone else.”

“Definitely!”

“Khan,” the commodore murmured. “He worries for Jim. And I gotta a pretty good idea how Norton was able to force Khan away from New Vulcan. Nothing can make Khan do something he doesn’t want to, despite the fact that he’s being blackmailed. But he has two weak spots – his crew and Jim.”
Barnett rubbed his neck. “They became good friends, huh?”

This time, Wesley had to snort. “You’ve no idea.”

“Leaving warp,” Sonik reported, and they dropped out of subspace. Immediately they saw the two other Constitution class ships soaring side by side above the reddish atmosphere of New Vulcan.

“I got an answer from T’Pau’s office,” Palmer called. “I was told that she’s on her way to the seat of government. She left her office ten minutes ago in a hurry.”

Barnett and Wesley exchanged another glance. The Vulcan matriarch was practically running to the seat of government – it was a showdown! This sounded more than really bad! And maybe they were too late to intervene!

“I’m beaming down with some of your Redshirts!” Richard said when the Lexington entered standard orbit. “Whatever Norton is up to, I’m the only one who can stop him before he damages the relationship between Earth and New Vulcan for good!”

Bob nodded. “I’ll try to find out about the current status and distract Styles. He’s back on the Excalibur; maybe I can buy you some time before he takes action. The boy is in deep water and given his character; he can snap – something I want to prevent.”

“I agree!” Richard answered and left the bridge, while Palmer ordered ten Redshirts into the transporter room.

Wesley pressed his lips together before speaking. “Lieutenant, hail the Excalibur and the Enterprise!” he ordered. Then he looked up at Ania. “Milady, please stay outside of the camera’s range. Styles can’t learn about you and the others survivors just yet. This surprise can be used to our advantage later. I ask you to concentrate on him, though. I want to know what’s going on with him.”

The Betazoid nodded gracefully and quickly climbed the three stairs to the upper deck of the bridge stationing herself near the science station.

The same moment Palmer reported, “Sir, I have… It’s not the Enterprise; it’s the Excalibur for you on the line.”

“Right,” Bob growled. “On screen!”

TBC…

Chapter End Notes

Well, with the arrival of the Lexington it seems as if the tables could be turned, but our friends are already in deep, deep water – with Khan in the hands of Section 31 again and separated from Jim and the others, and with Jim, Spock & Co. blackmailed by Norton. And, above all, Khan is running out of time, because Dashwood is going to put him back into stasis as soon as possible – means within the next minutes…

Yeah, I know, that was a mean cliffhanger (like always). But cheer up, the next one will be even nastier (*snicker*).
I don’t want to reveal more about what will come in the next chapter, only that you should be prepared for more action, despair and dread.

I hope you liked the new chapter and, as always, I’m curious about your reactions and thoughts.

Until next time

Yours Starflight
Chapter Notes

Hi, my dear readers!

I’m just back from the vacation and after two weeks of waiting I think it’s about time to publish the next chapter. I know how much on the edge you all are (*snicker*).

Thank you so much for all the nice comments and kudos, even if my cliffhangers are driving you all more or less crazy. And, to make it clear, there are more to come of these evil open endings.

It’s in the middle of the big showdown now, and therefore I don’t want to reveal too much concerning the new chapter. Just plunge into it and have fun.

Love

Yours Starflight

Chapter 73 – An old trick

As the landing party materialized aboard the *Excalibur*, Styles quickly left the platform and nodded at the four Security men, who had expected them. “Two of you accompany Commander Genrow to the brig,” he ordered. “Commander Finnegan, make certain that the other prisoner reaches medbay without trouble. I’ll come with you.”

Khan’s enhanced mind ran at full speed. If he couldn’t find a way out within the next two minutes, his life was forfeit. Usually he would try to fight, yet this would mean Jim’s death. It was obvious that Styles was waiting for him to make a wrong move – to give Norton a reason to kill Kirk. Nien had been put between a rock and a hard place, but a part of him hadn’t given up. He was escorted out of the transporter room and down the hallway, yet he felt dread rising with every step that drove him nearer to medbay.

The same moment the intercom sprang alive. “Bridge to Captain!”

Frowning Styles answered the call. “Styles here!”
“Li here, Captain. You’d better come to the bridge, sir.”

Lawrence blinked in surprise. “What’s the matter, Lieutenant?”

“We’ve got visitors, sir, and they want to speak with you.”

“Visitors?” Styles had absolutely no clue what the comms officer was talking about.

“Yes, sir. The Lexington just appeared and Commodore Wesley wants to speak with you.”

Khan and Commander Genrow may have been led further down the corridor, yet the Augment’s keen ears heard the exchange of words. The Lexington – help! – was here! Wesley had obviously changed his plans, and had headed directly to New Vulcan. Khan didn’t know if this had been a wise decision, given the fact that the rescued admirals had some very important and urgent spring cleaning in HQ to do. Yet he knew one thing: Wesley would intervene and hopefully prevent Norton from doing Jim any harm. And, maybe, there was the tiny chance for him, Khan, to escape the fate that lay ahead of him.

Nien wasn’t even aware that he’d tensed his muscles to use any opportunity to take action. Conelly, who saw it, frowned and addressed his colleague. “Do you have the sedative with you, Matthew?”

“Yes,” Dashwood nodded and took a hypospray out of his jacket.

Behind the next corner the group stopped and Dashwood stepped to Khan. Their eyes met – and then everything happened at once.

The moment the scientist raised the hypospray to the superhuman’s throat, Carol whirled around – in her hand was also a hypospray which she pressed against the closest Security’s neck, unloading half of it. She kicked the other Redshirt in the groin and grabbed his phaser, setting it to stun.

Genrow, who had come around to the fact that Kirk was right and Norton must have gone mad, didn’t ask why the young woman had suddenly switched sides. He saw his chance and acted. Wearing no handcuffs, he punched one of the guards square the jaw and attacked Finnegan, but the Augment also wasn’t idle.
Khan felt the sharp sting of the hypospray as some of the sedative entered his body; then he shoved the man as hard as he could with his bound hands, before he turned towards Conelly. Raising his right leg, he kicked his tormentor straight in the belly, and Nathan stumbled backwards – in Carol’s direction, who just had stunned two more guards. Using the phaser, she hit him on the temple, while Genrow had seized the phaser of one of the downed guards and stunned two others. The three Elite Security who had beamed up with them opened fire at Khan and the Commander, but while the latter simply ducked, Nien’s body absorbed the stun blasts. And then Carol was beside one of them and emptied the rest of her hyspospray into his throat, while Genrow stunned the second guard.

Finnegan cursed and fled, running down the hallway towards the next intercom. Dashwood, Conelly, and the last remaining Elite soldier followed him. Genrow sent phaser blasts after them, but only caught a security man, as Finnegan and the two scientists vanished around the next corner.

“Dammit!” Carol hissed, putting the hypospray back into the pocket of her coveralls where she had hidden it before. “We have to hurry before they alert the whole ship!”

“Yes, and more importantly before they inform Norton and he follows through with his threat to Jim!” Khan snarled; his eyes shone bright with fury – and fear for his soulmate.

Genrow pulled a remote from his former colleague’s pocket. “What next?”

“Auxiliary Control,” Khan rasped, feeling the sedative slowly creeping through his system. “From there we can take over the ship. The Lexington has arrived and I think Commodore Wesley could use some support from us.” There was a small beep as Genrow activated the remote, and Khan’s handcuffs opened.

While the commander pulled the heavy cuffs away, Khan’s eyes pierced Carol’s. “Pray tell me what this was all about?”

Marcus lifted both brows. “I assumed that Jim and you would eventually be backed into a corner; that Section 31 would stop at nothing to apprehend and silence Jim and his friends. As the Enterprise was boarded I took a strong sedative from medbay and pretended to be on Norton’s side. He’s known me since I was a child, and I knew he would believe me – after all, my father and I happily worked side-by-side for years without me really knowing what was going on.” She bent down and took a second phaser. “I will not forgive you his death, but Jim was right. You really have earned yourself a second chance.”
Genrow hadn’t the slightest idea what the two were talking about, but there was no time to ask for more information. “Quick now!” he whispered, handing the Augment a phaser. “We’ve got to…"

An alert went off and steps drew nearer. Obviously, the two scientists had already informed Styles.

Gripping his phaser, Genrow pressed himself against the wall to secure the corridor. “Go down to support shaft 4 and climb down to Deck 8. Auxiliary Control is there! Hurry, I’ll cover your backs!”

Khan didn’t try to talk Genrow out of it. There was no time for useless nobility – Jim’s life was still at stake and nothing, besides his family’s safety, mattered more to him. Nodding at the man, he ran down the hallway, Carol at his side. Listening carefully for anything, he threw a glance at the young woman’s direction. She had planned this from the beginning when the Enterprise was seized? This whole scene down on New Vulcan had been nothing more than one big act of theater? Deep respect woke in him for his now-dead enemy’s daughter. Even he hadn’t seen through her true intention.

He felt nausea washing over him and realized that Dashwood and Conelly must have changed the composition of the sedative because it had already begun affecting him. Pushing this unpleasant thought aside, he stopped in front of the supply shaft and stuffed the phaser in his waistband at his back.

“Usually I would say ‘ladies first’, but given the possibility that we could face some very irritated people on Deck 8, I’ll go first.” Not waiting for a reply Khan climbed into the shaft; Carol followed him without hesitation.

They descended the ladders in silence and reached Deck 8 a minute later. Khan, fighting a new wave of dizziness, glanced through the grate that blocked their way. Crew members raced down the hallways and Khan realized that they couldn’t continue until the corridor was less crowded. Fighting down the urge to take action and ignoring the increasing effect of the sedative, he remained in his squatting position – a tiger ready to strike…

ST***ST***ST

Captain Lawrence Styles sat down in his captain’s chair; his mind was in turmoil. What was the Lexington doing here? Shouldn’t she be near Borderland, limping to the next space dock to be repaired after those idiots had damaged her nearly beyond repair? And what about Wesley? Luengo had told Styles that the commodore had been badly injured in the incident, but the man who appeared on the screen looked neither sick nor injured. Rather the opposite. Wesley looked fit like a fiddle – a very grim fiddle given his expression.
“Commodore Wesley,” he greeted respectful. “I heard that you were injured in an incident your Engineering department had sustained. I’m glad to see that that report was…exaggerated.”

“Captain Styles,” Bob nodded curtly to him, his dark eyes were hard. “The last time I heard from you, you were ordered back to Earth by Admiral Luengo. Pray tell me what are you doing on New Vulcan?”

“A secret mission, Commodore. Certainly you understand that I can’t give you any details. I got my orders directly from Admiral Luengo.”

A hard line appeared around Wesley’s mouth. “Oh, I’m sure that you got your orders from him – exactly like the others concerning a past ‘secret mission’ that ended not so gloriously for those you were supposed to protect.” He didn’t give Styles time to respond. “Where is Admiral Norton?”

There was a twitch in Styles’ face, before he asked. “How do you know that Admiral Norton is here?”

“I don’t have to answer to you, Captain!” Wesley said sharply. “Is Admiral Norton on the planet?”

“Yes, he’s visiting the Vulcan government,” Styles replied carefully.

For a moment fury shone in Wesley’s eyes. “You chois[ed an interesting way to describe the assault down in New ShiKar.” In the background Lin and Taylor exchanged knowing glances. “Who is the prisoner you beamed aboard?”

The same moment Finnegan’s voice sounded through the speaker of the center seat’s armrest; overriding the transmission from the Lexington. “Finnegan to Bridge!”

Lawrence began to realize that a) the commodore seemed to know more than he should and b) that something bad must have happened, because Finnegan used the internal emergency frequency.

“One moment please, Commodore, I’m receiving an emergency call from one of our departments,” he said, still clinging to the polite façade he played so well.
Signaling to Li to cut off the audio transmission, he answered the hail. “Styles here!”

“Captain, the Augment has escaped.” Before Styles could express his flaring fury, Sean added, “Dr. Marcus betrayed us, sir. She’s still on Kirk’s side, and attacked my men with a sedative. Genrow helped her, as did the Augment.”

“Dashwood here, Captain!” another voice sounded. “I was able to inject the Augment with a little of the sedative I’d developed to incapacitate him. He didn’t get the full dose, but I think it will be enough to slow him down soon.”

Styles groaned and looked at Li. “Yellow alert!” Then he addressed the intercom again. “Get them, Finnegan. I don’t care what happens to Dr. Marcus or Genrow, but get them!”

“I’d love to make that bitch pay – and especially the creature. There’s still an outstanding score to settle between us for Gamma 12.”

Styles shook his head impatiently, even if Sean couldn’t see him. “The scientists need him alive, so don’t shoot him! Take as many men as you need, but find him and the two others!”

“Aye, sir. Finnegan out!”

Styles turned his attention back to the main screen and realized that Wesley had left the center seat on the Lexington’s bridge. The empty chair now took up the whole of the screen. Lawrence frowned. What was the meaning of that now? For a moment he was tempted to call Norton to inform him of the newest turn of events, but before he could come to a decision, Wesley was back online. For now he’d have to play along – and hopefully he would get the chance to report to Norton of the Augment’s attempted escape. It would mean Kirk’s end, and even if a tiny voice in the back of Styles’ mind protested against that dishonorable thought, he really looked forward to seeing his rival eliminated once and for all.

ST***ST***ST

Wesley had gone to the comms station as Palmer informed him that he had reached the Enterprise. The communications officer carefully watched his station to inform the commodore as soon as Styles opened the audio channel again. Bob used a headset and glanced at the little screen in front of him which showed the scarred face of none other than Lieutenant Hikaru Sulu, Kirk’s helmsman who
had been badly hurt during the last battle with the renegade Klingons. What was going on aboard the Enterprise that this man, who obviously belonged to bed in medbay, was hailing him? In addition, Sulu wasn’t on the main bridge. From behind him, it looked a lot like the auxiliary power room.

“Commodore Wesley,” the Asian man’s voice sounded through the headset. “Glad to see you, sir. You came just in time.”

“Lieutenant, what the hell is going on over there? If Kirk’s on New Vulcan then why are you…?”

“Sir, we were boarded by Admiral Norton and more than a hundred of the Elite Security Forces, who grounded the whole crew, arrested most of Dr. McCoy’s staff, and only allowed a few engineers to remain on duty. Ensign Chekov and Ensign Riley managed to escape as I did with Mr. Keenser’s help. We are in Auxiliary now and have activated the internal defense systems. We’ve put everyone to sleep with knock-out gas. Auxiliary is the only room that hasn’t been infiltrated by it.”

Wesley’s eyes widened. “Well done, Lieutenant,” he wheezed. “And you were boarded?” He just couldn’t believe it.

“Yes, in best pirate style,” Sulu said grimly.

“Commodore, Pavel Chekov speaking.” Beside the lieutenant the boyish face of the young navigator appeared. “Sir, before Mr. Riley and I were escorted from ze bridge, Admiral Norton ordered Captain Styles and ‘two scientists’ to be ready to beam down to New Vulcan to get ze keptin and zeir ‘test subject’ – meaning Khan. He also spoke of ze step he had to take now zat he never wanted to.”

“He assaulted the seat of government,” Wesley nodded. “Barnett is on his way down to prevent worse.”

The two young men grinned at him. “So Admiral Barnett made it – and he is here?” Sulu, pleased, asked and Bob made an affirming gesture.

“Yes – and hopefully the vice president and the other two admirals are hauling Luengo’s ass from his chair at this moment.”

“Commodore, Captain Styles has come back on audio,” Palmer murmured. “Ours is still switched
off.”

Wesley nodded and glanced at Sulu. “Hold the line, Lieutenant.” Then he set the headset down and walked to Ania. He didn’t need to ask her because she murmured,

“He is very nervous and angry. A little bit more pressure and not a little irritated. He feels caught, but doesn’t want to admit it. And he fears something he’s just learned of.”

Bob snorted. “And I think I know what that is – better to say, who he fears. Khan is always good for a surprise – just like Jim.” He returned to the center seat while signaling to Palmer to switch on the audio transmission as well.

“Is there some trouble aboard your ship, Captain Styles?” he asked, not able to keep the taunting tone from his voice. “Maybe a certain Augment is giving you a hard time?”

This time Lawrence’s expression gave him away, before he controlled himself again. “Augment, sir?”

Wesley stood taller. “Captain Styles, we both know what’s happening down on the planet and aboard your ship. I’ll beam over with some Security personnel. I advise you to put up no resistance and -”

“What are you talking about, Commodore? You sound like you wanted to arrest me.”

Bob gritted his teeth at facing so much impertinence. “Correct! You are under arrest, Styles! We know you’re a part of Luengo’s and Norton’s conspiracy and we know all about it. I also know that you kidnapped Khan, who has been granted asylum by the Vulcans – and that Norton is about to kill High Minister Selek, Kirk and his officers! The game is up, boy, and you -”

The transmission was interrupted and a second later Sonik called from the helm, “Sir, they are activating their shields.”

“I sense a lot of rage,” Ania said.
“He wants to *attack* us?” Palmer gasped disbelieving.

“I’ve no clue if this idiot is bluffing or serious,” Bob groused. “Red alert, shields up, battle stations. If Styles thinks he can outsmart me he has to get up much earlier in the morning!” He looked at Palmer. “Inform Admiral Barnett what’s going on here and .”

“Sir, the *Enterprise* has activated her impulse drive that is now on stand-by. She’s also raised her shields, sir,” Sonik reported as calmly as if he were talking about the weather.

Bob shook his head in amazement. “Sweet Lord, the *Enterprise* is only being manned by two novices, an injured helmsman and a little Royalan at the moment, and they want to *join* the fight? Kirk’s friends are as crazy as he is!”

“Sir, Admiral Barnett’s landing party doesn’t answer the hail,” Palmer reported, and Wesley took a deep breath to calm his fraying nerves. What the hell was going on down on New Vulcan?

ST***ST***ST

Albert Norton heard his speeding heart in his ears, overwhelmed by the situation he was about to lose. T’Pau didn’t put up any resistance, yet she was stiff as a stick, small and old as she was, Norton knew that she was at least as strong as he – maybe even stronger. Pressing the muzzle of his phaser harder against her temple, he let his flickering gaze drift over the others.

He knew that he wouldn’t get through this – that after this stunt he would face consequences even Luengo wouldn’t be able to protect him from. But he couldn’t think clearly anymore. All that mattered was that he had to get out of here – and with Selek, Kirk, and his friends – latter was better off dead, but this could be arranged later. And he would do anything to prevent defeat.

“Lieutenant Alahmba,” he barked at the current commanding officer of Elite Security, “Hail the *Excalibur* and…”

“You will hail no one, Lieutenant!” another male voice said from the entrance. A voice Norton had thought he would never hear again. He felt like he’d turned to a pillar of salt.

“Admiral Barnett!” Jim’s outburst of surprise and relief distracted Norton – and T’Pau, even old as she was, reacted. Elbowing Norton in the belly with as much strength as she could muster, he
wheezed and doubled over. The old Vulcaness freed herself with a determined jolt the moment Norton tried to grab her again.

This was all Jim needed. Quick and determined as a panther on the hunt he pushed Bones away, leaped forwards, and threw himself against Norton. Joaquin was at his side; his protective instincts drove him towards the old Vulcaness who resembled his foster mother so much. The second Kirk attacked Norton, Weiss reached T'Pau. “Down, Ma'am!” he yelled and pushed her to the floor, throwing himself above her to shield her.

T'Pau’s two companions rushed forwards, covering the two on the ground with their bodies, while the *Lexington*’s Redshirts took action, too.

Spock, Scott, and McCoy attacked the five of the Elite Security who were utterly confused about what had just happened, but they began to defend themselves as the *Enterprise* officers, taking no risk and went for them. Uhura also didn’t hold back and showed one of the soldiers that it was a big mistake to underestimate her petite, slender form.

Selek had no problem acting as well. For a moment, old memories came back – memories of the many situations he and Jim had fought side by side – and these old pictures gave him more strength than he thought possible. He punched one of the Security personnel in the jaw, and as the man whirled around with the momentum of his swinging ax, Selek nerved pinched him before he turned his attention towards Alahmba. For a moment they only looked at each other, then the human nodded, lifted both hands and raised his voice.

“Attention, Elite team; stand down!” he shouted, and the two Security men still on their feet, obeyed instantly. They were secured by Scott and Spock a moment later.

Kirk and Norton were still fighting each other – Jim with the fury of righteousness, and Albert with the wrath of a man used to getting his way but facing defeat now. Jim punched him with all his strength, showing no mercy as he hit the already broken nose again. His enemy reeled back, screaming in pain and while his knees gave out. Jim was on him like a flash. Forcing Norton’s arms back he snarled, “Surrender!”

The whole ordeal had only lasted not more than thirty seconds before it was over again. The second chief of the *Lexington*’s Security and one of his subordinates grabbed Norton, hauled him to his feet, and secured him between them relieving Kirk, who quickly looked around, checking his friends and Selek.

Joaquin saw that the danger was over and moved into a sitting position; looking concerned at the old
woman. “Are you okay, Ma’am?” he asked quietly. He couldn’t know it, but he was one of the very few people in the whole universe who ever saw T’Pau with a thunderstruck expression which she quickly schooled back into the stoic Vulcan mask as she recognized her lapse.

“I am well,” she said, observing the young human beside her. He was far too strong for a Terran and during the contact she also sensed a vivid mind that seemed to hold mental abilities. Without asking she knew that he was an Augment, too, yet there was not aggression in him – only confusion, distress and fear. “Thank you for your effort,” she added politely.

Weiss rose, saw the two other Vulcans looking at him with raised brows, and he offered the Vulcaness a helping hand. Hearing a gasp from one of her assistants, he remembered that it was a taboo on this planet to touch someone without permission, but he couldn’t draw back his hand in time because the long, slender, aged fingers of the woman wrapped around his own. Carefully, he helped her to her feet. He thought he sensed little electric shocks coming from her hand; confused, he frowned. Then the contact was broken. The Vulcaness looked at him the last time and drew her attention to the others.

Barnett bowed quickly in front of T’Pau and then ‘Selek’. “Milady, High Minister, my sincerest apologizes for the mess Admiral Norton made. At least none of your people were hurt.”

“This is a good message,” Spock Prime nodded tensely with suppressed anger in his eyes.

Richard’s attention was driven to the traitor, and his face darkened. “Albert Norton, in the name of the United Federation of Planets you are under arrest!” Barnett’s voice sounded strong and firm through the office. “You are accused of murder, more than twenty attempts at murder, conspiracy against Starfleet and the Federation, attempted genocide, ordering the development of illegal biological weapons, illegal testing, slavery, and assault on the New Vulcan seat of government…”

“Add threat of violence, the threat of murdering my comms officer, blackmail, hostage-taking of the Lady T’Pau, and kidnapping to the list!” Jim growled; his face flushed with rage. “And the seizure of my ship and taking my crew hostage, too!”

Barnett stared at him, shocked. “What?”

Joaquin went rigid as he heard the name of the old woman he protected. This was T’Pau – Spock’s grandmother and the matriarch of his clan – of New Vulcan? And he pushed her to the floor overstepping a taboo among the people here? Oops! Then his thought was driven back to the only thing that mattered to him. His brother! His gaze wandered to the dark-skinned man in his late forties who was the admiral, Noo, and Jim counted on.
Norton could only stare at Barnett. “How is it you’re still alive!” he demanded, realizing that neither T’Pau nor Kirk had bluffed when they told him that Luengo’s plan had failed completely. And he also knew that the game was, indeed, over.

“But there are still honorable women and men in the fleet, who stay true to their oaths and their comrades,” Barnett snapped; his face and voice betrayed his disgust towards the man he once called a friend.

A Redshirt pushed through the crowd to him then with a communicator in hand.

“Admiral, I have Commodore Wesley for you. He's been trying to reach us for a minute or so,” said Lieutenant Haong, one of the Lexington’s Redshirts who accompanied Barnett. He handed his superior the communicator and then they heard Bob’s voice,

“Admiral? Is everything all right down there? I was informed that Norton had assaulted the…”

“Norton is under arrest; Kirk and his officers are well, so are Mr. Selek and the Lady T’Pau, yet…”

“Bob!” Jim shouted, relieved to hear his friends and mentor’s voice. Maybe there was still hope for Khan. Hastily, he stepped beside Barnett and grabbed the admiral’s wrist to pull the communicator nearer to his mouth, ignoring his superior’s protesting snort at the rough handling. “Bob, they beamed Nien aboard the Excalibur a few minutes ago. Dashwood and Conelly are there now, too – and as much as I understood, they’ve got Nien’s cryotube with them. They blackmailed him into surrendering, or he’d have to watch me being killed by Norton. If they put him back in stasis or even cryosleep, then… You know that he will not survive it!”

Aboard the Lexington, Wesley raised both brows. If there had been only the tiniest doubt left about his protégée’s feelings for the Augment, they vanished completely. Kirk was half mad with worry for ‘Nien’. “I know,” Bob answered tensed, “but just right now I can’t do anything. The Excalibur has raised her shields and readied her weapons. We and the Enterprise are on red alert, but…”

“Section 31 has my ship, so you’re outnumbered!” Deep concern edged the young captian’s voice.

“Not anymore, Jim,” Bob replied. “Four of your boys were able to escape; they activated the inner defense systems and sent the intruders and the crew to bed so to speak.”
In New ShiKar the two Spocks lifted their left eyebrow in mild surprise, while Bones in the background groaned, “Superb! I don't have enough headache pills for this!”

Kirk ignored him. “My ship is no longer in Section 31’s hands? Who…”

“Sulu, Chekov, Keenser and an ensign who goes by the name Riley. They’re in Auxiliary right now; they took command of the Enterprise!” Wesley told him, and for a moment Jim felt a wave of relief and sighed deeply, while Scotty felt a hint of pride that Keenser was among them who kicked Section 31 in the ass.

“They’ll get a medal from me,” Jim stated. Then his attention turned back to the most important matter. He thought he could feel Nien’s dread like a faint echo in his mind, and it drove him almost crazy. “Bob, we’ve got to do something. If Nien learns that my life is no longer at stake, he will make an attempt to flee.”

“The handcuffs they put on him are too strong – even for him,” Bones grumbled, coming nearer. “They restrained him last year, remember?”

“And Carol Marcus betrayed us and beamed up with Styles, Khan, and the others. She wants nothing more than to see Khan suffer. That lowers the lad’s chances,” Scotty murmured, feeling miserable.

“God dammit, we’ve to get him out of there! I will not stand by and watch him sacrifice himself for nothing!” Jim looked ready to tear his hair out; his face was white as a sheet. If he could reach his beloved somehow, maybe over their shared link, he could make him realize that he – Kirk – was no longer in danger. But for that Jim would have to feel utterly calm and comfortable which was impossible at the moment.

“Kirk, calm down!” Barnett tried to reason with the young captain, surprised by the intense fear Kirk showed for the Augment’s health. Right, they had become good friends as he heard, but these reactions were a bit over the top. Kirk sounded as if his life would end if something should happen to Khan.

Jim ignored Barnett again and turned towards ‘Selek’ with desperation shimmering in his eyes. “Is the transporter here powerful enough to beam us up to the Excalibur?”
“Yes, but with her shields up you cannot beam into her,” Old Spock reminded him softly, compassion in his gaze.

Jim threw his head into the neck. Every second they wasted brought Nien closer to death. “Bob, can’t you order Styles to drop the shields?” he called.

A snort was heard, followed by the words, “He interrupted the transmission before he readied his ship for battle. He will not listen to me – or anyone now.”

“See, Kirk, you’re at a dead end concerning your Augment pet!” Norton sneered, and Jim had to use all his self-control not to punch the man again. Scott wasn’t that moderate and stepped beside the admiral, lifting his fist threateningly.

“One more word and yer broken nose won’t be the only thin’ that has ter be treated!”

Barnett shot him a warning glance, yet he could understand the engineer. He wanted to beat the shit out of Norton after all he and the others had been through, but, of course, he wouldn’t do such a thing.

Instead of giving into the temptation to punch the treacherous admiral, Richard simply said, “Well done, Albert, you delivered the inventor of the SDD to a few sick scientists, who have nothing better to do than herald his death the moment they put him into stasis or cryosleep. You did Starfleet and the whole Federation a big service!” he taunted.

Norton stared at him, thunderstruck. “Khan? Khan is the inventor of the SDD? He is this Evan Brendon?” His voice became shrill, and Barnett couldn’t help but giving him a mocking glare.

“Yes. And if you had used your mind for something other than plotting conspiracies and climbing the career ladder with as little effort as possible, you would have realized it days ago, you fool!” Right, Barnett himself hadn’t gotten the right idea about ‘Evan Brendon’ and it had been up to Wesley to tell him this fact, yet – afterward – Richard knew that he would have figured out himself given some time.

Jim didn’t listen to the two men. His mind worked furiously searching for a solution while he bit his lips. His eyes found the pleading ones of Joaquin, who still stood beside T’Pau trembling slightly.
Spock Prime watched the younger vision of his T’hy’la; then he went rigid. Memories of another near no-win-scenario from his timeline sprang to his mind – a situation that also involved Khan, not as an ally but as a deadly enemy. Jim had one of his unorthodox yet genius ideas that saved the day. And the same trick would do it again!

Telling something to one of T’Pau’s companions in Vulcan tongue, the man nodded and vanished; then ‘Selek’ addressed Barnett while he quickly stepped towards him. “Admiral, I need the Excalibur’s prefix code.”

Richard turned towards him; his eyes widened. “As a civilian, you shouldn’t even know about the prefix code’s existence.”

“We both know that I wasn’t always a civilian. And concerning the prefix code, I know how to get it for the Excalibur by using her registration number, but it would cost too much time – time Mr. Singh doesn’t have.”

Kirk was utterly thunderstruck. “What do you have in mind? You can only use the prefix code from one Starfleet ship to another,” he said to Selek, who simply lifted a brow.

“I know. I will beam aboard the Enterprise and force the Excalibur to lower her shields and switch off her weapons with the prefix code. Ask Mr. Sulu for the exact coordinates of Enterprise’s Auxiliary so that I can beam up, and tell him to be ready to drop the shields for this transport.”

Four Vulcan security personnel stepped into the room, and ‘Selek’ pointed at Norton. His voice was calm, yet icy as he ordered, “Take the admiral to preventive detention; four guards shall watch him.”

The guards took Norton between them, who spat at Barnett. “You haven’t won yet!”

“On the contrary, I think we have already won!”

Selek was already on his way from the office; Jim and the others were on his heels. Barnett followed him after a short, polite ‘farewell’ to T’Pau and then he called Wesley to inform him that six dozen Redshirts should make themselves ready to board the Excalibur. Until now Styles hadn’t done anything since raising the shields – he didn’t even answer the attempted hails. No one knew what was going on aboard the Excalibur – an unnerving situation.
The Starfleet officers, the young Augment, and the two Vulcans headed through the building; they heard several discussions in Standard but also in Vulcan, and some of them were heated. Obviously, Starfleet’s Elite Security had problems accepting orders from the Lexington’s Redshirts. That their mission turned out to be an illegal one and that some of their superiors were already arrested made them nervous.

Jim couldn’t care less. His mind was repeating over and over again one sentence like a mantra. ‘Hold on, Nien; I’m coming! Hold on!’ Scrambling the frequency of the communicator Scotty gave him, he hailed the Enterprise, while rushing through the corridors.

“Sulu here, Captain!” the helmsman’s voice sounded through the little device.

“Hikaru! Bold move, man! I’ll hug you guys when I’m back!” Kirk said, running around the next corner beside Selek.

“Oh, we’d happy wiz an added day of liberty, Keptin!” Pavel called from the background. Normally, Jim would have grinned at that, but not now.

“Consider it done, whiz kid!” he said, before he continued, “Sulu, give us the exact coordinates of the Enterprise’s Auxiliary and lower the shields on my signal. Selek is coming aboard. Give him anything he needs!”

“Aye, Captain. One moment, please!” Sulu affirmed, knowing, of course, who ‘Selek’ truly was.

They entered the Vulcan transporter room, and Jim waved Joaquin to his side. “Accompany Selek back to the Enterprise and…”

“Jim!” raged the young Augment, shocked. “You can’t send me away! Noo…”

“You are not trained for engagement today. You have never used a phaser nor do you know about the other weapons of this century. You would be in danger, and I can’t watch out for you, my companions and myself. You’ll be safe abo…”

Weiss shook his head wildly. “You can’t demand I sit back and watch other fighting for my brother’s life!”
Kirk groaned. “Listen, I know how you feel. I have experienced it too often, and I understand you, I do. But I also gave your brother my word – I swore to him that you’d be safe on my watch. I’ll do everything in my power to get him out. I’ll rather die than let him down, but I only can concentrate on the mission when I’m not distracted. I need you out of harm’s way.” He placed both hands on the boy’s shoulders; his gaze was stern, yet full of understanding. “Go with Selek. It will hurt Nien beyond imagination if something happens to you. He loves you so much. What do you think will happen to him if he lives but finds you were injured or, worse, killed? He already lost so many of those who are dear to him. Don’t make the list longer.” Urgently he glanced in those big, fearful brown eyes.

Joaquin bit his lips. Every fiber of his being urged him to go with the others, to fight for his brother – do anything to rescue him, yet his clear, logical mind realized that Jim was right. He had no clue about today’s weapons or how to fight aboard a starship, where any misdirected shot could mean the death for all if it pierced the hull.

“Jim is right. Come with me!” ‘Selek’ said from one of the transporter pads he had already stepped on before he glanced at Barnett. “Admiral, the code please!” It was a demand, not a request.

Barnett groaned. Giving a ship’s prefix code to a civilian was against Starfleet protocol, yet this was an emergency, and for such a situation the code had been created. “I’m coming with you.”

“Your presence will be needed aboard the *Excalibur,*” ‘Selek’ interrupted him sharply. “Even if Styles would disobey you, his officers and crew won’t as soon as they learn that you are alive – and therefore still the legal Chief in Command.” He turned towards Jim again. “I will hail you the moment I have overridden the *Excalibur*’s commands, and you can beam aboard.”

“Okay!” Kirk nodded, while he pushed Joaquin gently towards the transporter platform. “Quick. Every second we waste is a second less to save your brother.”

“We need our phasers,” Scott said, and ‘Selek’ made an affirming gesture.

“I already sent for them.”

“Captain?” Sulu’s voice sounded through Kirk’s communicator. “I have the exact coordinates. High
Minster Selek will materialize at the science station.”

The Elder lifted a brow. Having him materialize at the science station – even in that one in Auxiliary – was a sentimental gesture by Sulu. Spock Prime recognized and appreciated it. Humans! In earlier times they were a riddle, but not anymore. His Jim had taught him well.

The Vulcan at the transporter console listened to the coordinates and programmed them. Kirk looked at ‘Selek’, feeling once again deep warmth and gratitude towards the older vision of his T’hy’la. “Be careful,” he murmured.

‘Selek’ nodded, pushing aside the Vulcan denial of something so illogical than believing in fortuity. “Good luck, Jim!”

Barnett took a deep breath. “The code is 1-7-0-4-3,” he grumbled, knowing that an exchange of the Excalibur’s prefix code would be necessary.

Jim raised his communicator back to his mouth. “Sulu? Drop the shields – NOW!”

“Energize!” Spock Prime ordered the same moment, and he and the young Augment vanished in the golden light of the transporter.

Several Redshirts entered the transporter room led by another Vulcan. He carried five phasers that he handed the officers. The tension in the room was almost unbearable.

Barnett turned towards Kirk and his officers, glaring at them. “It seems I only saved your necks so that you can put them in danger again.” Then his glance found Jim. “To whom was the boy referring when he talked about his brother? Did Norton kidnap more people?”

“Joaquin meant Khan,” Jim explained quietly; his nerves were on edge now. “He is Khan’s younger brother.”

Richard gasped and pointed at the transporter platform. “You mean this boy is an Augment – one of Khan’s crew?”
“Yes,” the young captain nodded absently; his thoughts were only with Nien now.

“How many of his crew has been woken up?” Richard asked, shocked. And then he frowned as he received gruff glares from McCoy, Scott, and Uhura.

“Joaquin is the only one,” Bones grumbled. “And don’t worry, he’s one of the most gentle and nicest guys I've met in a long time.” He set his phaser to stun. “I hate using these damn things! They should be forbidden!”

Jim was pacing up and down like a caged tiger; every second seem too long for him – and passed too quickly for Nien…

Khan and Carol crouched behind the grate of the ventilation shaft. An eternity seemed to pass – an eternity in which the superhuman didn’t fear for himself, but for Jim. What if Styles had been able to inform Norton about the prisoners’ escape before Wesley could take action? What if Norton carried out his threat and shot…

No! Even with the distance, Nien was certain that he would have felt the bond ripping apart if Jim were killed. His beloved was still alive, and Khan even thought he could feel a hint of wrath and worry that was not his own. Jim was alive! This much he knew – and it gave him the strength to hold on.

Khan listened carefully for any noises in the hallway below him; when his keen hearing didn’t catch any steps nearby, he whispered, “All clear; follow me!” He released the grate, held it in one hand and slid out of the shaft. Jumping soundlessly to the ground, he helped Carol down, put the grate back and ran towards Auxiliary. He simply knew that even Wesley couldn't successfully complete the mission – not with the Enterprise in Section 31’s hands, and Kirk and the others held hostage.

They slowed down a few meters away from the door the moment they heard the internal alert change to red alert. Styles’ voice sounded from all speakers. “Battle stations, battle stations; all hands man your battle stations. This is not a drill. I repeat, this is not a drill!”

Carol gasped. “He won’t attack the Lexington! He can't do this.”
Khan only snorted. “He can and he will,” he growled. “Styles has nothing to lose anymore and a lot to gain. He is cornered; he will stop at nothing. The latter is up to us.” He raised his phaser as he stepped into the range of the door’s sensors; Carol closed up to his side, holding her weapon.

The door opened, and three surprised faces looked at them. They were stunned even before the first hit.

“Quick now,” Khan ordered, and as Carol rushed to the controls, he destroyed the manual opening lever on the outside with the help of his phaser before he sealed the door, programming it with a new code. He felt the sedative’s effects stronger now as he began to sweat, and for a moment he had to concentrate to stay upright. Then he reached the engineering console to determine how to switch the command protocols to Auxiliary. He had developed a process for the Vengeance to do this in the shortest time possible, but the technology wasn’t aboard the *Excalibur*. He needed time to learn how to override the safety protocols – and then he and Carol whirled around as banging from the door was heard.

They knew exactly what that meant; Elite Security had arrived. For now, the door held them, but this would change if someone how to cut through it with phasers. And they would. Khan didn’t want to imagine what would happen then.

ST***ST***ST

‘Selek’ and Joaquin materialized in *Enterprise*’s Auxiliary, and the Vulcan was instantly bombarded with memories. Yes, the room looked different from the second bridge of his *Enterprise* all those decades ago – the enhanced technology of the future, Starfleet got images from the time after the Nerada appeared for the first time twenty-seven years prior. But many things were still the same.

His gaze found a wide grinning Chekov, a very young Kevin Riley, a curious looking Keenser and then Hikaru Sulu, whose face wore the still healing scars of the battle with the renegade Klingons. But Spock Prime was confident that McCoy would successfully remove these scars. After all, the good doctor was a genius in his department!

“High Minister Selek!” Sulu greeted him with a quick smile and a not too well done ta’al (the Vulcan greeting gesture) before he nodded in compassion at Joaquin. “Don’t fear, my friend. Jim will get your brother out!”

“I hope so,” the augmented boy whispered; he wrapped his arms around his slim frame, cursing the circumstances once again. He couldn’t do anything to help ‘Noo’.
In the meantime, ‘Selek’ hurried to the navigation console, where Chekov made instantly room for him. “Our shields are raised again, sir,” he reported dutifully as if reporting to the Vulcan’s younger self.

“Very good,” ‘Selek’ replied as he sat down. A moment later he was surrounded by four very curious young humans and one Royalan. “Gentlemen, this is knowledge you shouldn’t have before you receive captain stripes!” He made no move to send them away.

For two seconds his attention was directed at the faintly familiar instruments; then his long, aged fingers began to move quickly over the buttons.

Sulu frowned. “You're increasing the computer’s firewall.”

“Yes,” ‘Selek’ nodded without interrupting his work.

Chekov pursed his lips. “You’re trying to hack into ze Excalibur’s databank,” he stated surprised a moment later.

“Correct,” the Eldar affirmed, sounding very much like the Spock they knew.

“The prefix code!” Sulu gasped, as he realized what the old Vulcan was up to.

“The what?” Kevin asked confused.

“The prefix code. Only the admirals and the captains have them. Every ship has its own that can be used when a ship falls into enemy hands or some other catastrophe. After you the input of the code you can switch the other ship’s command protocols to your own console – as long as the enemy doesn’t use the code to get the control back.”

Fascinated Pavel, Kevin, Keenser, and Joaquin had listened to Sulu’s explanation and then watched ‘Selek’ punch something into the computer, using the spare keyboard on the right. “How is it you know the Excalibur’s prefix code?” Hikaru asked, baffled.
The Elder didn’t look up from his task, while he answered, “You should forget everything you see here, Mr. Sulu. The same goes for the other gentlemen. Admiral Barnett is upset enough that he had to give the code to me. He would be outraged if he learns that I had to share it with other officers and a civilian,” ‘Selek’ deadpanned, feeling something close to satisfaction when he got the access he needed. “Mr. Riley,” he addressed Kevin, who eyes widened. How did the Vulcan High Minster know him?

“Yes, sir?” he replied nervously.

“You are interested in communication, right?”

Kevin’s eyes were wide as saucers. “How do you know that…?”

‘Selek’ interrupted him. “Then you are familiar with the comms station – at least with its most important functions. Inform Captain Kirk that he and his companions will be ready to beam aboard the Excalibur in forty seconds.” He looked up at Pavel. “Mr. Chekov, man the science station and locate the coordinates for Captain Kirk; he needs to be beamed aboard the Excalibur. Given the fact that the scientists have Khan and want to put him into stasis, I assume that this will take place in or close to medbay in the case something goes wrong. Khan is vital to them – his blood that is. They will not risk his life. Give the captain the coordinates of deck 5 near medbay.”

“Aye, sir!” Pavel all but raced to the science station.

“Mr. Keenser, please go to the engineering station and watch the read-out of the warp core's security scanners. As far as I understood Mr. Scott, the Enterprise's main drive requires urgent repair, and I do not want any unpleasant surprises. Make sure that the deflector shields are at 90 percent at least.”

The Roylan nodded and climbed the stairs to the higher part of the bridge.

“Mr. Sulu, be ready to make a quick maneuver with the Enterprise to distract Styles. The busier he is when the captain beams aboard, the better!” It was so natural to give commands again – to refer to Jim Kirk as his captain; the only captain he's ever had!

“Aye, aye, sir!” Hikaru sat down beside him – and for a few moments, Old Spock was thrown back in time and, finally, at home again.
As Styles heard Wesley’s words about being arrested, he threw a glare in his first officer’s direction, and Thammerson was instantly at Li’s station to switch off the transmission. Taylor, next to Li at the science station rose, alerted, but his captain’s next orders made him gasp.

“Wilson, raise the shields. Red alert!” He punched the button on the left armrest of his chair. “Crew, battle stations; battle stations. All hands man your battle stations! This is not a drill! I repeat, this is not a drill!”

Kramer, the navigator and loyal to Captain Heldron, turned around in his seat. “You want to attack a ship from our fleet, Captain? The commander of this squadron?” he asked disbelievingly.

“Don’t you get it?” Styles snapped. “Kirk is not alone in this insanity. His back-up was Wesley, the whole time. Wesley’s first officer reported to Admiral Luengo that there was an explosion in the Lexington’s Engineering where the commodore was severely injured, and the ship was critically damaged. Did the man look wounded to you, Lieutenant – was the ship damaged? It was a lie to come to Kirk’s aid in secret and.”

“The admirals Luengo and Norton and you were accused of a conspiracy,” Li cut in, rising from his chair. “And I have to admit that there are a lot of strange things since you took command over the Excalibur, sir.”

Lawrence whirled around; eyes narrowed, face reddening in fury. “One more word, Lieutenant, and I’ll arrest you for mutiny.”

“It’s the staff officers’ duty to watch out for the good of the ship and make sure everyone follows Starfleet protocols and Federation laws. That includes the captain,” Taylor stated, rising too. “And as far as I understood, you overstepped the limits when you entered the Vulcan seat of government without permission and…”

“I’m on a secret mission assigned by Luengo,” Styles almost shouted. “Man your battle station, or you’ll face court martial for insubordination.”

Kramer abandoned his station as well. “The commodore mentioned that you kidnapped a man under New Vulcan’s official protection – the man who obviously just escaped Security and is wanted by those scientists. Arresting a refugee on an independent planet is…”
“This Augment is not a person; he's a synthetic creature bred in labs more than…”

Again Styles was interrupted, this time by Rhandrola, a Regulian at the second science station. “He is obviously a sentient life form and therefore a ‘person’, Captain. Even if he was bred in a lab, you have no right to assault New Vulcan and to abduct the man from…”

Styles turned back to his chair. “Security to bridge! Emergency!”

Kramer and Li began to move towards him, as Thammerson and Wilson, both men of Section 31, pulled out their hidden phaser. “Stop, or you’ll be shot!” the first officer growled.

“Phasers on the bridge!” Taylor raged. “That’s against protocol! The commodore is right! There is a conspiracy going on – at the highest ranks.” He pointed an accusing finger at Styles. “And you, Captain, and your two fellows belong to it!”

“How dare you!” Styles screamed in rage; his face flushed in wrath as he felt cornered once again.

Li lifted his chin. “This chasing Kirk, the order to attack the Enterprise, the Augment you, Norton and these scientists want so desperately, the death of our most important Admirals and the curious orders from Luengo since then… The rogue officers aren’t Kirk and his staff, but you! And Thammerson and Wilson, too!”

The Redshirts arrived, and Styles pointed sternly at the four officers who had dared to contradict him. “Arrest Taylor, Li, Kramer and Rhandrola for mutiny and…”

The same moment internal alert was given and still aiming at Taylor and Li, Thammerson waved at Wilson to check the Engineer station. The Redshirts looked at the first officer with confusion. Phasers weren’t allowed on the bridge.

“Captain,” the helmsman reported a moment later. “The door to Auxiliary has been sealed.”

“What?” Styles stormed towards him.
“Someone is switching control to Auxiliary and…”

Lawrence hit the next intercom button. “Styles to Finnegan. The fugitives are in Auxiliary. Get them at any cost – but spare the Augment!”

“Aye, sir!” came the instant reply.

“Captain,” Wilson called once more. “Sir, someone has access to our command controls.”

Styles paled dramatically. “Khan?” As he received a confused gaze from the helmsman, he added impatiently, “I mean the Augment!”

Wilson shook his head. “No, sir, someone has hacked into our system from outside the ship and…”

“The prefix code!” Lawrence whispered. “They’re using the prefix code to checkmate my ship.” He stormed to the helm. “Computer, this is Captain Lawrence Styles, override code…”

He didn’t get further as Thammerson called, “Captain! The Enterprise is moving!”

Styles looked at the screen and saw how the other starship heaved to and headed towards them. “Are they insane?” he shouted. “What the hell is going on there? Has Commander T’Hoven lost his mind?” He turned towards Li. “Hail them – now! Or I make certain that you’ll rot in prison until the end of your days.”

Li didn’t move one finger. “Hail them yourself, Captain!” he answered icily, ignoring the Redshirt who stopped beside him, but hesitated to arrest him. That something was very much out of order was more than clear. On the screen, the man could see the Lexington and he did know what the prefix code was and meant. Obviously, the commodore used it against the Excalibur. This was only allowed in cases of emergency when ships fell into the wrong hands. He glanced at Li who simply nodded with a grim expression in the direction of Styles. “The commodore accused him of having a part in a conspiracy and had him arrested,” he murmured under his breath. “But the captain didn’t obey him.”

A gasp from Wilson drove their attention back to the main screen.
“Are they trying to run us down, or what?” he yelled, pushed Kramer aside and sat down at the navigation console. “Sir, our shields are lowering and I can’t stop it!” Quickly he programmed an evasion maneuver only to curse a moment later. “God dammit, the warp and impulse drives are shut down. Someone deactivated them; I have no control over them!”

“Khan!” Styles growled. “Computer!” he called again, “this is Captain Lawrence Styles. I revoke the…” Again he was stopped – this time by Wilson.

“Captain, the Enterprise passed by us at a distance of only twenty meters.” He turned around in his chair. “If they wanted to run us down, they would have done it. And they also could have attacked us, but…”

“A distraction maneuver,” Styles whispered. “But why? T’Hoven should have taken command – or this lieutenant still has it, but both are from the Elite Security, and Norton gave them clear orders.” He frowned. “What the hell is going on here!?”

Rushing to the comms station, he activated the external transmission. “Styles to Norton! Come in, Admiral.”

No answer.

“Styles to Norton. Emergency!”

The same moment the invasion alarm sounded. Taylor, Li, and Kramer exchanged another glance. They had a pretty good idea who was boarding them: Wesley.

Styles had obviously the same idea because he activated the intercom for a ship wide hail. “Attention, crew, this the captain. We’ve been boarded by Starfleet personnel, led by traitors accused of high treason. Everyone that is not crew or Elite Security is an enemy. I demand that the ship be defended no matter the cost. Styles out!”

He closed the inner channel. “Computer, this is Captain Lawrence Styles. Seal the bridge!”

No answer.
Wilson checked the computer. “Sir, we have no control over ship's functions anymore. The command protocols have been switched to Auxiliary.”

“Cancel it!”

Wilson tried several adjustments and shook his head. “I can't! I mean... Captain. I can try to override it, but I need some time.”

“You’ll get it!” Lawrence glared at the Redshirts, who seemed to be irresolute to their task. “Secure the bridge, three of you watch the criminals.” He returned to his chair determined to do everything possible to turn the tables back in his favor.

The fight between the real Starfleet and Section 31 in this sector had begun…

TBC…

Chapter End Notes

Well, I did promise you more cliffhangers, and here you go. I know that this is certainly a hell of place to end this chapter, but be sure that there comes a lot of more action and twists. Therefore I will not reveal what comes in the next chapter, because it would give away too much.

For all of you who still believed in Carol: Yeah, you were right. Or those who thought her to be the big Judas: I got you (*smirk*). Yet the worst isn’t over by now; rather the opposite.

I hope you liked the new update and, as always, I’m curious what you think of it.

Have a nice rest of the week,

Love

Yours Starflight
Chapter Notes

Hi, my dear readers!

I’m so sorry for the delay, but Darry is out of the beta-reading-business for quit a time because of her new responsibilities concerning her job, and Rhiannon has also a lot to do. And, after I got the edited chapter, I was on a very short vacation at the Rhine-River. So you guys had to wait a little bit, but I hope the new chapter makes up for it. I can promise you the big action-show-down – and an evil cliffhanger in the end.

Thank you so very much for all the kudos and comments; I love you!!

Beware of the new chapter and here a little warning: This chapter contains brutal violence and is nothing for ‘tender hearts’.

Yours Starflight

See the end of the chapter for more notes.

Chapter 74 – Human monsters

Aboard the *Lexington*, Lieutenant Palmer had barely closed the channel after Barnett had spoken with Wesley, when the commodore was already out of his seat. “Remain on red alert,” he ordered, “but be ready to lower the shields on my command.” He activated the intercom at his left armrest. “Security!”

“Lieutenant Hamilton here, sir,” reported Silverhawk’s substitute.

“Lieutenant, you and sixty Redshirts report to transporter rooms 1, 2, 3 and 5. Be ready to board the *Excalibur*. Captain Styles and certainly some of his officers are accused of conspiracy and murder. Our mission – to support Admiral Barnett in arresting Captain Styles, and to free a kidnapped refuge placed under New Vulcan’s protection. There is also Elite Security aboard the *Excalibur*, so try to reason with them, if there is no way that they accept reasoning, try to keep them at bay. Phasers to stun! Ten Redshirts to transporter room 1 to accompany me. Wesley out!”

He raced to the turbolift. “Ambassador, stay here!” he said as he passed by Ania, before he called over his shoulder, “Lieutenant Sonik, you have the conn!” A moment later the doors closed behind him, and he rode the lift down to deck 5. He all but ran towards his destination, and as he rounded the corner he not only saw Hamilton and fifteen Redshirts rushing towards him but also…
Bob rolled his eyes inwardly. He had no time for the militia.

“Commodore!” Galven called from afar, pushing his stout frame through the lines of the Redshirts. “Is this racket about the boys?”

Wesley didn’t need to ask to whom the Tellarit was referring to when he said ‘the boys’. “This is a Starfleet mission, Mr. Galven, so I ask you and your companions to stay back and to let us do our work,” he said more harshly than intended, while he accepted the phaser one of the Redshirts handed him.

Of course, that didn’t stop Galven or Ritek. “What’s going on here? We are at New Vulcan, and the whole ship is on alert. Red alert – that means immediate danger. And you are about to board the Excalibur. I heard this when I passed by the Security department. I’m short in body, but not in mind. Are the boys in danger?”

For a moment, Bob pressed his lips into a thin line, before he growled, “They are. And the longer you waste my time, the more danger they are in.”

Galven nodded. “Understand,” he said, and he stepped onto the first transporter pad. Ritek, Jeff, and Caviw followed, the other members of The Shadow remained where they were to beam over with the second party, leaving pads for Wesley and the first group of Redshirts.

Bob’s jaw almost hit the floor. “Mr. Galven…” he began but was interrupted from an irritated oinking, “I think we have no time to lose, Commodore. So please hurry!” Then the Tellarit drew an older phaser from his belt as his friends did.

“I don’t believe it!” Wesley growled; realizing that it was useless trying to talk some sense into them. Grumbling, he stepped onto the transporter platform. “But don’t expect me to take any responsibility for your welfare!” he snapped, and Galven only looked at him.
“We haven’t asked for it!”

“Commodore, the Excalibur’s shields are down!” the man at the transporter console called after he got the information from the bridge.

Within seconds, the remaining free pads were occupied by four Redshirts; all had their phasers ready, set to stun. The other eleven waited to follow soon.

Wesley took a deep breath. “Place us near medbay. If they want to put Khan into stasis or whatever, they’ll do it there.” He ignored the gasp and outraged reactions of The Shadow members. “The next group follows me, the one in transporter room 2 should be beamed into Engineering,” he continued, “the following in the weapons bay and…”

“Sir, information from Admiral Barnett. He's at the transporter near the bridge; Kirk is already aboard the Excalibur.”

‘Of course, Jim goes first, trying to save his man,’ Wesley thought, while he said aloud, “Right, the third and fourth groups are meant for Barnett’s enforcement. Energize!”

ST***ST***ST

At the same time as Wesley was in discussion with Galven, Kevin Riley hailed Kirk and told him to be ready to beam over to the Excalibur. Within a blink of an eye, Jim was on one of the transporter pads with Spock beside him, Bones, and a few Redshirts. Scotty and Uhura wanted to follow, but Jim quickly lifted the free hand, “Accompany Admiral Barnett and help him take the Excalibur’s bridge. Maybe you have to take over the one or other stations should more of Styles’ officers belong to the conspiracy.”

“Kirk…” Barnett tried to stop him and to get an own place on the transporter platform, but the young captain shook his head.

“Sir, we’re materializing on deck 5 near medbay. You should beam as close to the bridge as possible to arrest Styles before he does more damage. So, please, come with the second party.”

Barnett stared speechless at him. Who was the highest ranking officer here? Well, on the one hand, Kirk was right, but…
“Captain,” Kevin called through the communicator, “ready for beaming in five seconds, four, three, two…”

“Energize!” Jim ordered before Barnett could make up his mind. And the Vulcan at the controls immediately activated the transporter.

The room vanished, and moments later they found themselves in a corridor that resembled those of the Enterprise very much, yet there were tiny differences – after all, the Enterprise was newer than the Excalibur and had undergone two modifications over the last two years. Red lights gave alert; several crew members stared startled at the intruders.

Instantly, Jim felt Nien’s presence; he sensed the distress his beloved felt and took a deep breath to calm his rising nerves which were far too much on edge. ‘Love, I’m here! Hold on!’ he tried to send over their shared link; then his attention was driven to the several crew members of the Excalibur around him, who had stopped dead in their tracks at his sight. “At ease, Ladies and Gentlemen. We’re here on Command’s order,” he called, lifting one hand in a reassuring gesture.

The same moment the ship wide hail of Styles sounded through the speakers, “Attention, crew, this the captain. We are boarded by Starfleet personnel, led by traitors who are accused of high treason. Everyone, who doesn’t belong to the crew or the Elite Security, is an enemy. I demand that the ship be defended no matter the cost. Styles out!”

Kirk cursed inwardly as instantly several of the Excalibur’s crew withdrew and gave an alert, while five Redshirts reached for their phasers.

“Gentlemen, Captain Styles is officially arrested by none other than Admiral Barnett, who survived the attack in the Borderland!” he tried to reason with the Security. “Just wait a moment, and you’ll get the proof.”

That same moment, the typical noises of an incoming transport were heard, and that seemed to be enough for the Redshirt to take action. Jim groaned as he pulled the trigger like Spock and Bones did, stunning three of the Security personnel while Lexington’s few Redshirts, who had accompanied them, knocked their comrades out. But steps were drawing nearer, and Kirk rolled his eyes. He knew that it was inevitable; he’d have to force his way to medbay.

Behind him, Wesley materialized, but he wasn’t alone. With widening eyes, Jim recognized Galven and his friends as well as more Redshirts.
“I’m racing through half the Alpha quadrant to save your neck, and where do I find you, son? Of course! In the middle of trouble!” Bob grumbled, looking at Jim.

Galven’s reaction was a little bit different. He looked up at Jim with a mixture of a smirk and a scowl. “Told you that we'd come if you or the White Tiger needed a hand,” he oinked, then he squeaked, “BEHIND YOU!”

Several Elite Security rounded the corner and instantly opened fire. Any chance of stopping this growing insanity verbally was forfeit. A moment later Kirk, Wesley, and the others found themselves in combat with Starfleet’s special security department.

ST***ST

On the bridge, more internal alerts were given as fights broke out in different sections of the ship.

“Intruders on deck 5; Kirk and Wesley are among them,” Wilson reported. He had switched the main functions of the comms station to navigation. “Others are spotted in Engineering, in the weapons bay and…”

“They want to seize the Excalibur!” Styles growled. His mind knew that the game was over now, but his pride and his fear of arrest didn’t allow for thoughts of surrender.

The intercom whistled and then a vaguely familiar voice sounded through the speakers; robbing him of all hope that there might be an escape route.

“Captain Styles? This Admiral Richard Barnett, Chief in Command, Starfleet. I am aboard to arrest you and you men. You are accused of attempted murder, more than thirty counts of murder, conspiracy, membership in a forbidden organization, and so much more. Don’t resist or you'll face consequences. I’m coming to the bridge. Barnett out!”

If someone would have emptied a bucket of ice water over Styles he couldn’t have been more shocked. Barnett – alive? This was… impossible! But that was his voice, no doubt.

Taylor looked at the Security, seeing a chance to turn the tables. “You heard the admiral! You got
the wrong guys here. Arrest the captain!”

Lawrence whirled around. “He’s an imposter!” he yelled, clearly in denial now. “This is nothing more than another trick from Kirk and his friends to confuse you while they try to take over our ship!”

Li shook his head. “What, if you’re wrong, Captain? Let me compare this message against a record from our data bank with Admiral Barnett’s voice. Then you’ll have proof of an imposter or not.”

An index finger, shaking with rage, was pointed at him. “Shut up! SHUT UP or I’ll make you!”

“A death threat, Captain?” Li asked calmly. “I am certain everyone on this bridge, including the Redshirts, know that this crime forces on to relieve even a captain from command. You, sir, are emotionally compromised and unable to command any longer.”

“Enough!” Styles seemed to need all his power to gain back some self-control. “Security, watch the turbolift and the emergency exit. The moment someone tries to get on the bridge, open fire. Set phaser to kill.”

He didn’t wait for affirmation but activated the intercom again. “Attention, crew, this is the captain speaking. We have an imposter aboard pretending to be Admiral Barnett. He and his companions are accused of a conspiracy against Starfleet and the Federation. Wherever you meet this imposter: Don’t believe him. I repeat: Don’t believe him. Try to eliminate him. Bridge out!”

He sat down on his chair. “Status of the Enterprise?” he asked Wilson.

“She’s heaving by again, sir, and has activated her phaser banks, but she is not aiming at us.”

“What the hell is going on over there?” He heard faint whispers at his back and turned his chair around. “What are you doing there?!” he demanded furiously, as he saw Li sitting at his station and two of the Redshirts bending over him.

The comm officer turned towards Styles; his face and eyes were full of reproach. “I checked the ‘imposter’s’ voice with a recording of the admiral. There is no doubt. The man who spoke was Admiral Barnett!”
“You’re lying! You’re lying to save your sorry neck!” Styles’ face was alarmingly flushed now.

The Redshirt frowned. “Captain, I watched the process, and I’m trained in communication and information. Lieutenant Li’s check of the data was correct. The voice is Admiral Barnett’s!”

The tension on the bridge was thick enough to cut with a knife.

“Of course that is Barnett’s voice – cleverly recorded and manipulated by Kirk’s comms officer to fool you all! It’s not too difficult to splice sentences and words from Barnett’s speeches and put them together for a new message!” Lawrence’s eyes seem to burn. “And you damn fool fell for the trick!”

“The computer program would have recognized something like this, sir, my aural ability is excellent! The hail was live, and it came from deck 2!” Li snapped.

Styles’ fist landed on the armrest of his chair. “Liar!”

By accident, he had activated the intercom and he heard loud voices and fighting. Hissing in frustration, he deactivated the intercom, but it had been enough for the Redshirts to recognize the real situation. Stepping forwards, the man beside Li said, “Captain, I think it will be the best for you, Commander Thammerson, and Lieutenant Wilson to relinquish command and to surrender!” Instantly, the first officer pointed his phaser at him, and he added, “You’ll only make your situation worse.”

“No one will force me out of this chair!” Styles snarled. “Not as long as I can lift a finger to fight!” He glared at the Redshirts. “And those, who won’t obey my orders will face court martial for mutiny!”

But, to his horror, every single Redshirt crossed his arms in front of his chest, lifted his chin and stared silently at him. None of them would move one finger to ‘secure’ the bridge. And then all command protocols were offline – not even the turbolift was functional anymore. There wasn’t even a chance to override it…
Admiral Barnett swore beneath his breath as he heard Styles’ shipwide hail concerning Richard’s identity – calling him, the Chief in Command, an imposter who should be shot on sight was the final straw. This insolent boy was playing one of the dirtiest games Barnett had ever the displeasure of experiencing, and as several Redshirts of the \textit{Excalibur} entered the hallway on deck 2, where Barnett, Scott, Uhura, and several Security personnel of the \textit{Lexington} had materialized. He gritted his teeth. Stun blasts were exchanged; then Richard stepped forwards, ignoring Uhura’s startled “Admiral!” while she tried to hold him back.

“Ladies and Gentlemen!” he raised his voice and stopped where he was, showing himself fully to the Redshirts. “I’ve been aboard this ship for several days. Is there the tiniest chance that one of you recognizes me?”

The blasts stopped more or less instantly while the Redshirts of the \textit{Excalibur} stared at him open-mouthed.

“Admiral…?” one of them stuttered, utterly shocked.

Barnett only nodded slowly.

Another Security pointed nonchalantly at him – not in disrespect, but in surprise. “It’s him! I belonged to the escort who showed him his quarters when he came aboard!”

“Sir! How did you survive?” another Redshirt, a petite female with fierce eyes, called in obvious joy.

Beside Barnett, Scott and Uhura took a deep breath of relief, yet they still watched the Security personnel in front of them warily. Maybe there were sympathizers of Section 31 among them.

The commanding officer of this Security’s group stepped forwards, putting his phaser away. “Admiral, I have to admit that I’m confused, but please accept my apology for attacking you. The captain said that you’re an imposter and…”

“Captain Styles is a tool of a larger conspiracy that has been going on for quite some time now,” Barnett interrupted him and looked at the men and women in red, who had first attacked him and his companions. But it wasn’t their fault. “Ladies and Gentlemen, you only followed your commanding officer’s orders. For that, no one can accuse you. None of you have to fear court martial for this as long as you are ready to follow my instructions now.”
“At your service, Admiral!” Sounded from several mouths and Barnett suppressed a smile.

“As I said, Captain Styles is officially arrested and accused of several grave crimes, yet he refuses to give up.” He pointed upwards. “This is going to be an ugly scenario.”

“We are with you, Admiral!” the leader of the Redshirts said. “Several weird things happened since the Klingon attack in Borderland, things I understand now given the new information. It’s not easy to go against one’s own captain, believe me, sir. My people and I have obeyed his orders without asking questions, yet in the last days the questions increased exponentially. And we are not the only ones who got wary. Something’s been off for days now, and I think it will be a relief for the crew when he is gone for good.”

Barnett nodded. “Obedience is the most important attribute in the fleet, yet it shouldn’t prevent anybody from using their mind. Hopefully there are men and women on the bridge who use their brain, too.”

They began to march towards the next turbolift, only to learn that the lift system was functional but no cabin would transport them to bridge. Scotty quickly checked it and grumbled, “Someone has isolated the bridge – and I’ll eat my hat if there is even one single station still working on the bridge.”

Barnett frowned. “Source?”

“I’m not certain, Admiral, but it could be that control was switched to Auxiliary.” He looked at his superior, who rolled his eyes. “Why do I have the feeling that a certain Augment has his hands in this?” He shook his head as he only saw the two Enterprise officers smirk. “Yes, I know, he has become a kind of friend to you.” He turned around. “Lieutenant, we’ve got to storm the bridge using the emergency ladder. Please follow me.”

ST***ST

Sean Finnegan stared furiously at the two technicians who had begun to batter the door, using phaser cutters which were more effective than phasers. After it had become clear that any attempt to override the code would be for nothing and that even the manual emergency lever was useless because it was melted, Finnegan was determined to get access by force, and the two technicians did their best to follow his order.

Sean trembled with rage. It was more than a humiliation that this damn augmented bastard was able
to keep him at bay – at least until now. Finnegan hadn’t forgotten the hand-to-hand combat he had with the superhuman at Gamma 12 – how this guy defeated him in seconds. And, above all, this creature had prevented him finally giving Kirk back what he has deserved since the Academy.

Yes, Finnegan knew that the pranks he loved to play at the Academy had been rough and that it had been childish, holding grudges against someone who simply paid him back and didn’t succumb to his demands like the most others did. Maybe Finnegan could have respected Kirk for his strong back and courage, but Kirk had exposed him to ridicule several times, and Sean would never forgive this. Finnegan looked like a fool. And now Gamma 12 – Norton had made it very clear that this was Sean’s last chance to correct his mistakes, and the Commander was determined to prove to the admiral that he was worth the Elite Security uniform and that he wouldn’t disappoint the brass again.

“Can’t you speed up, man?” he snapped at one of the technicians, but before the man could answer, Style’s ship wide hail was heard talking about the intruders and – moments later – of an imposter who claimed to be Barnett, the dead Chief in Command. Uncertain, the two technicians glanced at Finnegan who gritted his teeth. He knew exactly who was behind this: Kirk – as usual!

“Do you need an invitation?” he snarled. “Keep going – pronto!”

With increasing impatience he watched the laser cutter slide slowly – far too slowly – through the metal. And behind this damn door, the Augment was taking over control of the Excalibur. Dammit! He would show this enhanced bastard what it meant to mess with Starfleet – and he would make this bitch pay for betraying the admiral’s confidence!

ST***ST

“Phaser fire on deck 5, 7, 10 and in Engineering,” Carol said, while she watched the internal sensors. Khan bent over the Engineering console and switched the inner defense controls. The readouts of the displays seemed to dance in front of his eyes, and for a long moment his sight blurred; then his concentration forced the effects of the sedative one time more to submit his will.

“They’ll try…” He swallowed as his tongue seemed to be too heavy; then he began anew. “They’ll try to seize the Excalibur.” He activated the internals cameras and to put the view on the main screen. With a shaking hand, he wiped the sweat from his forehead, while he felt his heart frequency speeding up. “Jim is aboard,” he murmured. “I can sense his presence. Heesh not far away…” He heard that he began to slur and cleared his throat.

Carol looked over at him and frowned. Khan was deathly pale now and seemed to get worse with every passing minute. An inner voice in Carol’s mind whispered that only his stubbornness let him
“Jim is aboard?” she asked, but before Khan could answer they both smelled an unpleasant stench – that of melting metal.

Turning around, Nien frowned as he saw that a small strip on each side of the two-parted door glow red. For several minutes now the angry knockings and other attempts to break through the door had stopped – and the reason for it became very clear now. They would cut through the door to open it by force.

“Dammit!” the superhuman growled and turned his attention quickly back towards his console, closing his eyes as his surroundings began to swirl around him. Gritting his teeth, he fought against the sedative again. He couldn’t give in – not now when Jim was near and…

“Dr. Marcus to Captain Kirk!”

The young woman’s voice tore him out of the inner fight and frowning, he glanced up at her, realizing only now that she had stepped beside him and had activated the intercom. He wanted to ask her why she was calling Jim – any distraction during the fight endangered the young captain more, but to his astonishment, his tongue didn’t obey him. At least for several seconds, then Kirk’s clear, but very angry tenor seemed to give him new strength.

ST***ST

Three decks above Auxiliary, Jim Kirk was fighting side by side with Spock. Bones was behind them and kept their backs clear together with three Redshirts, yet Styles’ ship wide hail seemed to have come to fruition. In the opinion of the Excalibur’s Redshirts and Elite Security, Jim, Wesley and the others were enemies – rouge Starfleet members who had to be stopped. And thus they forced a combat upon them that was horrible given the fact that they all belonged to one and the same union.

Jim stunned another Redshirt and dared to look quickly over his shoulder, but Wesley was nowhere to be seen. They had been separated only a minute ago when others had arrived from an adjoining corridor and attacked them. Kirk hoped that Bob would be able to bring his opponents to their senses before the first deaths would have to be mourned.

Sending another opponent to dreamland, he felt a tugging at the bond he shared with Nien. His
beloved wasn’t well. Kirk thought he could sense Khan’s inner struggle, and the fear that maybe his mate was already being forced into stasis made him mad with worry and fury – and it made him careless.

“JIM!”

Before he realized what was going on so he could react, a strong, far too warm hand grabbed his collar and hauled him aside. A phaser beam hit the wall where he had stood only a second ago. The same moment Spock stunned the attacker; his narrowed, fierce eyes betrayed the ancient warrior that still lived deep in every Vulcan.

“Thanks,” Kirk wheezed while finding his feet again, steadied by his T’hy’la. More Security appeared, and Jim felt his control snap.

“GOD DAMMIT, CAN’T YOU JUST LISTEN FOR ONCE BEFORE YOU SHOOT?” he shouted, making two of them, indeed, hesitate for a moment, only to be forced to fight a moment later as Jim’s companion opened stun fire at them. For a moment shots were exchanged, then the attackers retreated around the next corner to find cover, and quickly Kirk and the others did the same in the opposite direction so as not to be a target. For a moment the cross fire stopped.

Jim felt a new wave of extreme discomfort coming from the bond and wiping his forehead he growled. “We’ve got to reach medbay. Nien is…”

The intercom whistled and a familiar female voice called, “Dr. Marcus to Captain Kirk.”

Jim and Spock exchanged a glance. “That woman has nerve calling me after her betrayal!” the young captain hissed and balled his free hand into a fist. Looking around, Kirk saw that the next intercom was only a step away and trusting his friends and the Redshirts to cover him, he closed the small distance and punched the button with a fist. “What do you want?” he snarled, feeling bitterness rising again at the memory of Carol’s betrayal.

But it wasn’t his treacherous weapon officer who answered, but a very familiar, deeply missed and beloved baritone. “Jim? It’s me. Dr. Marcus tricked everyone. She’s on our side. She helped me to escape.”

Kirk’s jaw almost hit the floor, while he looked at Spock with eyes big as saucers, who was the epitome of a surprised Vulcan, while Bones in the background began to grin widely.
“Jim!” Carol’s voice again. “We’re in Auxiliary, but they’re trying to break through, and we don’t stand a chance if they’re successful. Khan is getting weaker by the second. Dashwood injected him with a dose of sedative before I could act, and…”

“I’m not that weak!” the Augment protested, but it sounded hollow even for those who didn’t know him like Jim did.

“You can barely hold yourself on your feet,” Carol sounded impatient before she addressed Kirk again. “Jim, we’re trapped and if these bastards break through, then…”

Kirk had overcome his shock and new adrenalin pumped through his system, increased at the sound of his mate’s voice again and by the new situation. Nien had escaped but was near caught again. Nien needed him – and there would be nothing that would stop Kirk from getting to him.

“Hold on, love, I’m coming!” he shouted, closed the channel, and whirled around. “Deck 8 is where we’re going! Hurry!” he thundered and began to run towards the next turbolift, shooting stunning blast towards any movement that didn’t belong to his companions.

Spock was instantly beside him, while behind him McCoy cursed about ‘stupidity’, ‘recklessness’ and ‘fools in love’. Not caring about the danger he found himself in, Kirk tried to force his way to the next turbolift as new Elite personnel stormed into the hallway, cutting them off. Cursing Jim did the only thing that was left: he continued to fight.

ST***ST

In Auxiliary, the air began to reek even more, and the glow at the two sides of the door was accompanied by flying, blinding white sparks. It was only a question of one, maybe two minutes before the room would be taken by storm.

Khan bared his teeth in wrath and frustration. He knew that Jim was on his way; he could feel his bondmate’s fierce determination to get to him, but time was running out. He saw Carol take her phaser and ready herself, and all of sudden he became aware of one very important fact; he was needed alive. Dr. Marcus, on the contrary, was an inconvenient witness. Neither Styles nor Norton wanted her around to implicate them in their deeds. There was no doubt that Finnegan – or whoever was leading the Security which tried to break through the door – had clear orders concerning the young woman.
Coming to this conclusion, there was only one thing left he could do – especially after she aided him and Jim. Rising on unsteady feet, he crossed Auxiliary as quickly as his wobbling legs allowed, reached up, and tore the grate away that closed the supply shaft.

Carol was at his side in an instant and looked at the opening that would be their escape route. Khan pursed his lips; it would be unpleasant to crawl through this small shaft, but this was better than waiting for the hunters to corner their prey. Interlacing his fingers, he offered her the makeshift stirrup. Placing her right foot in his hands, Carol steadied herself on the Augment’s shoulders and found herself lifted a second later. She could feel how his arms and hands trembled and she asked herself how long he would be able to hold on like this; then any thoughts were chased away. Behind them, a loud banging was heard. Marcus didn’t need to look back to know that the cutting process had come to an end and that now several men began to knock the heavily damaged door down.

“Quick!” Khan hissed, knowing that the remaining time would be too short for him to escape, too. If he could replace the grate before his enemies arrived, he could state that he had been alone here, increasing the young woman’s chance to escape certain death.

The moment Carol’s upper half was in the shaft, he gave her a not too soft shove with both hands at her butt, eliciting a muffled protest from her that would have made him smirk under different circumstances, but not now. “Go!” he whispered urgently.

“What?” The shaft was too small to turn around, and so the weapons officer wanted to crawl back, but her feet were stopped by the superhuman’s hands.

“I said go! There is no time left for me to follow you. Be silent and try to reach Jim. Tell him that I am caught and that they will try to put me into stasis in medbay.”

“But…” Her voice was weak and betrayed her shock – something he couldn’t consider at the moment.

“Go. They will kill you if they find you,” he growled, placing the grate back. “They cannot risk that you reveal your knowledge to the Council. I am not in mortal danger, after all, they need me for their precious experiments.” Not waiting for an answer, he fixed the cover, took the phaser, and began to return to the engineering console the moment the door gave in. With a loud bang, one-half of it fell to the ground, and Auxiliary was swarmed with Redshirts and Elite Security.

Khan lifted his phaser and shot stun blasts at them, knowing that it would make him look better at
court martial if he didn’t kill them now – if there would be a chance for him to face trial at all.

Four of his opponents were hit, then the rest of them rushed towards him – in front of them was Finnegan. The Augment tried to stun him, too, but one of the Redshirts grabbed his weapon hand, and the shot missed. A second later Finnegan reached him and punched him hard enough that he would have been knocked out if he were a mere human. He only swayed; the sedative was making him even dizzier.

And then the men were on him. Khan fought back with everything he was and every bit of strength he could still muster, but to no use. Suddenly he found himself on the floor lying and then it began – the merciless kicks and the punches, accompanied by hateful curses and insults. Somehow he was able to cover his face with his arms but after a cruel kick into his side he tried to roll into a ball. His instincts fixed only on the task of protecting himself, but the movement exposed his back, and another brutal kick hit his left kidney, while someone stepped with all his might on Khan's left calf. He heard something break, felt pain erupting from his leg accompanied by merciless burning and stinging sensations everywhere he was attacked.

And the whole time only one thought lived in his heart and soul: ‘Hold on, Jim will come!’

Three decks above, Kirk tried desperately to break through the hostile lines. He, Spock, Bones, and their companions were cornered between two attacking groups and that they still weren’t stunned – or shot – was only because they didn’t stop shooting at their opponents.

He thought he heard Bob calling his name, and then – all of sudden – from the left side came support in the form of Galven and his friends. Squealing in hot anger, the Tellarit hurled himself against the Elite Security, running two down with his mass. Ritek and Caviw followed him, while Jeff and the other members of The Shadow fought side by side.

The distraction was enough for Kirk’s group to take action, and while Bones and two of the Lexington’s Redshirts kept the other side of attackers busy, Jim and Spock fired at the left side without stopping. Like this, they could reunite with The Shadow, and Galven gave Kirk a shove into the direction of the next turbolift.

“Go! We’ll keep your backs clear, lad,” he oinked, and Jim was more than happy to obey. With Spock and Bones at his side, two Redshirts of the Lexington, Ritek, and Caviw behind them, they raced down the hallway. From afar they heard more crossfire. Obviously, Wesley was still in combat with some eager Elite Security several corridors away.
All of sudden Jim sensed pain scorching over his bond with Nien strong enough to make him cry out. His knees buckled and again it was only Spock’s quick reaction that saved him from an unpleasant experience, as the Vulcan saw him stumbling and caught him before Kirk could fall.

“Captain! What’s the matter?” Worry edged in Spock’s voice, while he lowered his friend to the ground, kneeling down beside him.

“Jim?” Bones called, concerned.

Kirk gasped for breath, and McCoy was instantly at his side checking his pulse in the old-fashioned way because of the lack of any med-scanner. “Dammit, his pulse is at warp!” he grumbled before he addressed his friend sternly. “Jim, tell me what’s wrong!”

“Nien,” Kirk gritted out. “Something is happening to him.”

Ritek watched the three officers confused while Caviw bared her teeth. “He senses his mate’s distress.” She glanced at the Rigelian. “Khan is in danger.”

Spock ignored the two. He sensed the turmoil Kirk was in; he saw and felt him trembling, and without hesitation placed the fingertips of his right hand against Jim’s meld points. “My mind to your mind, we are one,” he whispered the traditional words to initiate a mind-meld. Instantly he sensed the painful burning that crept along the mating bond – a mating bond that indeed resembled that of Vulcans (as far as Spock could assess), yet it differed. But it was enough to show Spock that a telepathic but untrained mind like Jim’s couldn’t withstand such a storm.

There was only one solution – to shield his T’hy’la by building a mental wall that would contain the raging fire that leaked over the bond. But the moment the Vulcan prepared himself to help Jim, Kirk jerked back – ending the mind-meld abruptly. Both men groaned, and for a long moment, the first officer was disoriented because of the shock. Then he felt his captain’s weight in his arms, as light as it was for him, and found back in the present.

Kirk was heaving before he shook his head violently. “NO, Spock!” he rasped; having obviously realized his friend’s intention.

“Jim, you will further weaken if you do not let me help. You are not used to a mental bond and…”
Those sky blue eyes glared at him fiercely. “I’ve got some experience with our bond, Spock. And
my link to Nien may be the only thing that keeps him holding on. ‘In good and bad times’ – I haven’t
sworn it with words, but with my heart and soul.” He recognized only now that he was crouching on
the floor and Spock steadied him. With the force of his stubborn will, he began to rise. “Nien needs
me and…”

“And you need stabilizing medicine!” Bones snapped. “You’re close to a heart attack.”

“Dr. Marcus to Captain Kirk!”

Jim couldn’t deny this as Spock continued to support him by wrapping an arm around his waist and
steering him around McCoy towards the next intercom, while from afar the noises of the nearby
fighting became louder. Kirk’s hands shook wildly enough to miss the answer button twice, and it
was up to the Vulcan to activate the channel.

“Kirk here,” the captain wheezed, fearing the worst.

“Jim, I’m on deck seven,” Carol cried. “They broke through the door, and Khan forced me into the
supply shaft and sealed it before they stormed Auxiliary.” The young woman’s voice shook with
stress and emotions. “Jim, they… they beat him. They kicked him. I’m not sure how bad it is, but…
But there was so much blood. They dragged him away; I couldn’t do anything, and… Jim? JIM?”

But Kirk couldn’t answer anymore because he was already racing down the hallway towards
medbay, where he knew his beloved would be brought …

ST***ST

Styles paced on the bridge back and forth, glaring daggers at the ‘mutineers’ from time to time, but
mostly he was fixed on Wilson, who tried to override the computer orders which had switched the
command protocols to Auxiliary.

Only two minutes ago they had heard the ‘traitor’ Carol Marcus hailing ship wide for Kirk, and
Lawrence asked what kind of trickery his enemies were up to now. Again the intercom whistled; the
young woman’s voice called for Kirk again.
Styles had enough. “Dammit, is there no way to hear what they're saying?” he snapped at Li, who sat at his station with his arms crossed in front of his chest. He looked impassively at him.

“Am I allowed to speak now, Captain, or shall I prepare myself for death as you threatened only minutes ago if I didn’t shut up?”

The face of the young captain turned alarmingly red. “You don’t expect me to answer this question.”

“Yes, I do, Captain,” Li replied calmly; the tension on the bridge thickened.

Lawrence took a deep breath to get a grip on his rage. “Permission to answer the first question, Lieutenant,” he gritted out, imagining squeezing the life out of this infuriating bastard of a comms officer.

Li nodded. “As you wish, sir. As you certainly know, I have no control over the comms station anymore. The whole communication system has been switched to Auxiliary, and as long as this circuitry is activated, I can’t do anything.”

Styles didn’t know if Li was pulling his leg or not. But before he could reply, the intercom buzzed; this time, it was a direct hail, using the available emergency frequency. “Finnegan to Captain Styles.”

In a few steps, Lawrence was in his chair and he activated the intercom at the armrest. “Styles here!”

“Captain, we got the Augment. A few of my boys and I are bringing him to medbay now, using the ladderwells because the turbolift system is offline – that's what the engineering station shows. Johnson and N’ulgnes are trying to switch off the command protocols in Auxiliary, but the enhanced bastard has changed the codes. I can’t tell you when they’ll be able to override them.”

Again Styles gritted his teeth. “Proceed, Commander, good work. What about Dr. Marcus?”

“She wasn’t in Auxiliary, sir. We checked the entire compartment. I have no idea where she could be.”

“Forget about her for the moment and continue your work in Auxiliary. Styles out!” He rubbed his
“They got Khan – so far, so good. Maybe we can blackmail Kirk to…”

He didn’t get any further, as all of the sudden the emergency exit burst open and four Redshirts stormed onto the bridge. Instantly, their colleagues, who were still in command central, acted by attacking Thammerson and Wilson. Taylor leaped towards Styles, who whirled around and tried to punch the science officer, but to no avail. Taylor was quicker, ducked, and tackled his captain in the next second. Both men landed hard on the ground, where Taylor tried to immobilize Styles.

A moment later three Redshirts were there; one pulled Taylor away, and the two others helped Styles to his feet, securing him with a hard grip.

And then Lawrence’s eyes became wide as saucers as through the emergency exit a well-known person in admiral’s white and green stepped forward. “Barnett!” he whispered, while Taylor, Li, and the others beamed at the Chief in Command.

“Admiral on the bridge!” Taylor called dutifully, earning him a quick smile from his superior, before Barnett’s face turned into the darkest expression possible, while he walked towards Styles.

“Captain Lawrence Styles, you are hereby relieved of duty. In the name of the United Federation of Planets and in conformity with Starfleet protocols you are arrested. Every word you say can and will be used against you. You have the right to a lawyer that you may contact as soon as we reach the HQ because New Vulcan has no official office in Starfleet.”

Styles could only stare at him; knowing that the game was, indeed, over.

“How did you…”

He couldn’t finish his sentence because Richard made a sharp gesture with his right hand that silenced the treacherous captain instantly. He glanced around and saw that the Redshirts had secured two more officers. With an asking glance, he addressed the officer in the blue science tunic who had attacked Styles – normally an act of mutiny, but Richard evaluated it rather an act of necessity to prevent an open fight.

“Status, Commander…”?

“Commander Taylor, Admiral, science officer of the Excalibur. I have to report that currently all
command protocols are switched to Auxiliary, obviously done by the man named Khan, Captain Styles refers to as an Augment and a prisoner. He was caught only minutes ago again by Commander Finnegan and is being brought, as I heard in a discussion between the captain and the commander, to medbay. A Dr. Marcus is still on the run. Further, I have to report that Lieutenant Wilson and Commander Thammerson threatened the other officers with a phaser on the bridge as we heard your voice and began to ask questions concerning your identity. Lieutenant Li was threatened with death by the captain. I also have to report that Captain Styles ordered the attack on the Lexington after he broke up a talk with Commodore Wesley, accusing him of treachery and that he also ordered Elite Security to force entry into the Vulcan seat of government to kidnap the asylum seekers."

Barnett nodded. “You only confirm what I already knew – except for the identity of Captain Styles’ allies in his dirty game and that neither he nor his fellows threatened their own colleagues.” He glanced at Lawrence again. “Khan has been caught and Finnegan’s taking him to medbay?” he changed the subject, knowing that this was most important now if he and the others wanted to save the superhuman. As the captain kept silent, Richard sighed. “To refuse cooperation will worsen your situation, Mr. Styles, but knowing you, you’d rather try to break through a wall head first before you listen to reason.” He walked to the center seat and activated the intercom. “Barnett to Captain Kirk!”

No answer.

Once again Richard tried to reach one of his bravest captains who was also his biggest problem child, but again the hail wasn’t answered.

“Dammit, there is something very off!” he grumbled and turned towards the two Enterprise officers, which were helping their colleagues at their stations, trying to override the code to get the command protocols back.

“Mr. Scott,” Barnett called, and the Scotsman turned around.

“Aye, sir?”

“Try to find Kirk and tell him about the new situation his augmented friend is in. If I’m not mistaken, you’ll find our troublemaker on deck 5.”

Montgomery was already on his way towards the emergency exit. “Aye, sir!” he called over his shoulder and vanished, hoping that he could find his friend before he lost his mate.
Dr. Michael Burmaster was certain that he had never encountered such a shocking mess – and that he would never experience such a thing again. As the second CMO aboard the Excalibur he first had to deal with his superior’s and friend’s death as the shuttle with him, an admiral, and diplomats aboard were destroyed by the Klingons. Then there had been the many wounded crew members after the battle in Borderland, which still crowded his medbay. All this belonged to the trouble a physician of field medicine had to face when it came to battle. But until now these fights had been against the enemies of the Federation, renegades or Orion pirates – but never before he had to treat men and women of Starfleet because they fought each other.

It was hell!

People he knew for years were brought to him stunned or injured, but there were also strange faces in Starfleet red and grey; they belonged to same organization for God’s sake! And they fought in the corridors and on the decks everywhere, because one accused the other of treachery and the other way around. Burmaster didn’t know whom he should believe, as he heard the captain’s ship wide hails concerning a supposed imposter posing as Admiral Barnett. Then there were the ship wide calls of a woman trying to reach Captain Kirk twice, which woke his wariness even more. Kirk was the Federation’s newest hero, yet Styles had stated officially that the captain had gone rouge and that he had to be stopped – something Burmaster simply couldn’t imagine. He had met the young American captain one time, and you certainly could say a lot about him, but not that he would betray Starfleet or the Federation. The young man was filled up with so much loyalty and honor it had almost blinded the doctor and had shown him that even after the mess with Section 31 there were still men and women who had honor.

Section 31…

Burmaster had read the numbers of deaths and wounded people Section 31 had left in its tracks after it attacked the Enterprise more than a year ago, and Michael had hoped that he would never find himself in the situation his colleague aboard the flagship had faced, but fate had other plans for him. Just right now, as the door opened and more unmoving crew members were brought in, he realized again that this was as bad as it had been aboard the Enterprise fourteen months ago.

“Stunned crewmembers on the mattresses on the floor next door, injured ones to the free biobeds in room 2!” he ordered and walked through the beds as an arm shot out and stopped him.

“Doctor, when are you going to treat my stomach?”
Burmaster looked down at the scientist who had come aboard together with Admiral Norton. He didn’t know why but he instantly had disliked Conelly, exactly like his colleague Dashwood. There was arrogance and something shifty in them he couldn’t place a finger on; his instincts went on alert when one of them was present.

“I told you to lie down and to breathe steadily. You’ll have a few bruises; that’s all.”

“But…”

“Listen, man, there are injured people who need my help. I don't have to time to babysit!” he snapped and continued his way. More racket at the entrance made him turn around, and then his eyes widened in horror as he saw four Elite Security men dragging a bleeding man into medbay. He couldn’t even stand. Burmaster saw dark hair, smeared with blood, torn civilian clothes, and beneath those, bruises, cuts and more injuries which switched him instantly into full doctor-mode.

“Nurse!” he yelled. “Prepare surgery room 3 and… What are you doing?” Bewildered, he watched Security take the man into the next room where the scientists had stored their thing – a room of his sickbay he had been forbidden to enter by threat of court martial. And then he saw how Conelly, who just had whined about a kick he had received in his belly, rose and followed them with an expression that made every alert bell in the CMO ring.

Taking a med-kit, he stormed towards the next room, not caring for any order he had received concerning this part of his medbay!

He crossed the threshold and stopped dead in the tracks. Within the secured area was a tube large enough to hold a human body. A kind of tube he had never seen before, but he had a good guess concerning its purpose.

Dashwood was there, too, and he eyes the injured man warily. “You shouldn’t have slammed him like that,” he rebuked. “Even his augmented nature has its limits.”

“The bastard gave us a hard time, Professor. My boys had to defend themselves,” a voice drawled behind Burmaster, and as he looked over his shoulder, he came face to face with a commander of the Elite Security that he hadn’t seen until now. But one thing he recognized instantly: the trickster expression in those pale blue eyes and the arrogant smile on a brutal face.

“I understand,” Dashwood said, “but everything was for naught, if this imposter, Kirk, and the others
win. We’ll never be able to end our task, so there is no need to put the subject back into stasis.”

Finnegan frowned. “You wanted him for your experiments, and my boys and I risked a lot to fulfill your wish. Now end it!” He looked at his four subordinates. “Put that beast into its cage!” he ordered. “Even if the scientists have trouble completing their project, at least the world is free of the monster.”

Burmaster stared thunderstruck at the Commander and then at Dashwood. Did he get this right? This man was abused for… A painful keening sound drove Michael’s attention back to the injured person. He couldn’t believe what he saw; two of the guards began to tear the rest of his clothes away not caring that they were inflicting more pain on him.

Right. Enough was enough!

“Stop this instant!” Burmaster barked and began to close the distance. “This man needs medical att…”

A large hand landed on his shoulder. “Stay out of it, Doctor. You’ve got no say in…”

“This is my medbay, and here I have the command, so get your ass out of here, or I’ll remove you!” Michael thundered, not caring that the commander was more than a head taller than him.

“You don’t mean this,” Finnegan said, knowing that the CMO had, indeed, the command within this area.

“Yes, I do! Leave!” Burmaster snapped and pointed to the door.

“As you wish. Knowing the cowboy, he’s on his way to rescue his sweetheart. Maybe this is the chance to get rid of him once and for all.” He vanished, but even without him, the problem wasn’t solved for Burmaster. With quick steps, he was at the wounded man’s side, but before he could even take his med-scanner out, he was grabbed by another guard, while Dashwood snapped,

“You’ve have your orders, Doctor, so go back and patch up the crew as is your duty. This creature is not your concern!”
“‘Creature’?” Burmaster outraged. “This man is badly injured and has to be treated immediately, or…”

“He is enhanced, so don’t worry. He’ll survive like he has until now,” Matthew answered without even looking at the CMO.

Enhanced… ‘Augmented nature’ Dashwood had said before…

Burmaster’s gaze found the tube that seemed to be a kind of transportable stasis chamber, and he began to realize what this was all about. The man was augmented, maybe an experiment from these scientists and they used him for their purposes. That was… outrageous!

The man weakly lifted his head, and blue-green eyes full of agony met his. Michael listened to the ragged breath, smelled the blood, and saw the injuries – and didn’t care what this man was! Burmaster was a doctor at heart, and he didn't give a damn about heritage when it came to helping ill or wounded people. The moment the guards had stripped the man of all clothes and tried to lift him into the tube, Burmaster jerked free.

“STOP, or I’ll have your asses for attempted murder!” he snarled.

One of the guards aimed a phaser at him. “Retreat, Doctor, or your real patients will have to wait a little bit longer for help.”

“How DARE you! When I’m done with you and your colleagues, you’ll be guarding a trash transporter – after rotting in prison for decades!”

Khan didn’t understand much of the heated words being exchanged. There was only pain – searing, scorching, throbbing, and sickening pain. Somehow his mind was still able to analyze the injuries he suffered – that he had broken ribs, a fractured calf and arm, internal injuries. His lungs didn’t work as they should, there was a terrible pain where is liver was, and bruises and lacerations seemed to cover his whole body. The sedative had him in a firm grip now and changed any voice into a dull noise he could barely understand, and his surroundings were a blur.

There was one thing his senses took in very clearly. To add insult to injury, he could clearly see his cryotube only half a meter away jacked up – the very same tube that had once saved his life was now about to become his coffin. He knew that he would not wake up again as soon as he was put inside and either cryosleep or the stasis was activated. He would die – after more suffering, more pain, more
sorrow. And there was nothing that could change it.

The thought fed him for a moment with new strength, and he lifted his head – and effort that cost him, and he almost fell unconscious. His eyes found that of an unknown man, who looked at him with deep concern, rage, and shock. Concentrating on the voices around him, Khan realized that this man was a doctor and wanted to help him, but of course was hindered at taking action.

The torment, as the rest of his clothes were torn away from him, made him sick, and he gritted his teeth again the agony and humiliation. He refused to allow the despair that began to rise to break through, but it slipped through his stubbornness and pride, and made lump in his throat grow.

Jim…

He would come!

He had to come!

His Pyāra never gave up, he never quit! He hadn’t before, and he wouldn’t now. He would come and prevent the worst. As much as his augmented mind would have protested against such childish hope in earlier times, he now clung to it. Jim was his hope, his golden ray of sun in the darkness of the night – a darkness that loomed over him again and that would be chased away in several seconds. Khan was sure of it.

But as rough hands grabbed him and lifted him from the floor, he realized that this time Jim might come too late, and his agony laced with desperation. Fear clenched his stomach. Somehow he managed to wriggle, to push at his captors, but his weak attempts to break free were for naught. The sedative and grave injuries prevented him from fighting. Instinctively his mind went out to his mate and cried for help. Alas, in earlier times he had never feared death – only when members of his family were in danger. Then he had hoped and fought for an escape, but there had been times when the temptation of finally finding peace had been almost overwhelming. But not now.

His family was safe so far, yes, but life held so much more for him now. Where earlier he hadn’t cared if he survived or died in battle, he now had a reason to live. Brahma, he wanted to live! To live a life with Jim, to see his brothers and sisters adjusting to this new century, to explore space together with Jim, to grow old beside him… Even if that was wishful thinking, a part of him had been infected with Kirk’s everlasting optimism, and he clung to this bit of hope – hope that was about to be smashed by the despair that overwhelmed him. His enhanced mind went numb at the realization that everything would be over in a few seconds, and what remained was only the human, filled with mortal dread – and rising fury. His soul screamed frantically for his mate to come and to rescue him
from the fate that lay ahead – his mind shouted in wrath that he was about to be denied a life worth living.

He felt himself being lowered in the tube, saw the blurry face of Conelly bending over him, and tried to lift his arms to fight back, but his muscles did not obey him. Despite the burning injuries and the scorching rage, there suddenly seemed to be ice flowing through his veins – the ice of fear that was about to change into full blown panic. The hoarse, terrified “No!” that came from his lips was nothing more than a breath that went by unheard. And then the cover of the tube began to close…

TBC…

Chapter End Notes

Haven’t I told you that the show-down is full of very mean cliff-hangers? Well, I always keep my promises (*snicker*). It really was fun to write the fighting scenes, but I also loved to show how incredible close Jim and Khan have become – how strong their bond works. And Finnegan? I didn’t like the guy in the TOS-episode and I have to admit that I simply enjoyed making him the badass he seems to be – and to give Spock the chance to bring him down. Hm, and Jim getting all the blood and the blood-doping from Khan had to be for something good, even if Spock had to cover for him (again).
In the next chapter you’ll learn of Nien’s fate. More I really don’t want to reveal.
I hope you liked the new chapter and, like always, I’m curious of your thoughts.
Have a nice start into the next week,
Love
Yours Starflight
Hi, my dear readers,

Thank you so much for the many reviews and kudos. I’m happy that I don’t have to let you wait longer this time, and can update in ten days. I know how keyed up you are because of the current situation aboard the Excalibur – and what happened to Khan.

Concerning the whole 'body-temperature of Vulcans' please check the enlarged prologue at the beginning of the next story. I wanted to post it here, but it was too long and therefore I put it in the text before the chapter really begins.

But now back to the story.

The new chapter will be a roller coaster, too, and I think there are several moments you will want to cry or to beat the crap out a bad guy or two. Well, let me tell you, that is something a few of our friends are going to do.

Have fun

Love

Yours Starflight

Just a little thing in advance. I knew that I would be caught-up in the whole Trek discussion concerning Vulcans' body temperature sooner or later, so here we go.

First: Neither Gene Roddenberry, nor Diane Duane – who wrote the most episodes and several very good novels concerning Vulcan and its habitants – mentioned Spock’s temperature (or that of his father, for example). Not once! The idea that it differs from ours is rooted in McCoy’s statements about Vulcan anatomy being different from human anatomy, and Vulcans have blood containing copper. There is also the moment McCoy teases Spock about the ‘ice-water’ in his veins. Well, I do understand this scene as nothing else than indeed ‘teasing’ – Bones refers to the old saying that someone is ‘cold-blooded’ because of the lack of emotions (or showing them).

The elevated body temperature of Vulcans compared to humans was first considered because of their home world’s high temperature and so Spock reacts differently to cold compared to humans.

I know that the book “Starfleet Medical References Manual” mentions that Vulcans have a lower
body temperature – approx. 32 °C. Yet there is no proof that this is correct and that a higher body temperature is incorrect. The same goes for the statement that this is canon. It is not.

The “Starfleet Medical References Manual” was first published in October 1977 and was never confirmed as ‘canon’ from Roddenberry and the TV-show- and movie makers. The book contains many mistakes. For example, concerning Klingons: the book states that Klingons have a higher body temperature, are 1.70 – 1.90 meters tall (they are often much taller) and life expectancy of 69 (females) and 89 (males) years. Well, in the TOS episode “Trouble with the tribbles” that was produced in 1967, the Klingon spy Darvin was revealed not only because of the tribble’s reaction towards him, but also because of the read-outs of McCoy’s med-scanner: “Too low body temperature, heartbeat like a drum”. And concerning Klingon life expectancy: Koloth, Kang and Kor – all three coming from TOS – met Captain Picard approximately 100 years after Kirk, Spock and Co. All three Klingons had aged, yes, but they were still healthy and at full strength. Therefore Klingons must have a life expectancy close to that of Vulcans.

I know that the makers of TNG used the book during production of the TV-show, yet they didn’t use it as a hard and fast rule. See the above mentioned example.

Back to Spock – or Vulcans in general.

Most mammals that live in deserts have a higher body temperature than humans. And this is logical, because the body would waste energy trying to stay cool. Desert fauna regulate their temperature by sending heat through exposed and specially designed areas of the skin, e.g. elephants through their ears. Vulcans don’t sweat but they radiate heat if they’ve been exposed to hot areas or after a very hard workout (according to T’Pol, ENT).

Cold-blooded fauna like snakes and lizards have a life-saving instinct to preserve them as outdoor temperature drops. Most of them sun bathe during the day and hide deep in the ground to stay warm during the day’s absence.

In ENT, we see T’Pol and Captain Archer visiting Vulcan, and while Archer begins to feel cold during the night in the desert, T’Pol seems to be unaffected – at least she doesn’t suffer like Archer. She even mentions that Vulcans have no problems dealing with several hours of cold. Spock shows the same resistance to cold during his unintentional stay on the planet Sarpeidon’s while McCoy nearly froze to death after a short period of time. Spock remained strong enough to take Bones to the shelter of a cave.

As well, there is only a certain range in which the body can cope in a temperature drop until it is life-threatening. Life forms with lower body temperatures have a very low tolerance to cold, unlike warm-blooded animals.
I believe that is enough evidence to support a higher core body temperature in Vulcans. If this is the case, it is a secret Roddenberry took with him on his final journey. The Trek fandom is torn when it comes to this detail, and I think it’s up to any hobby-author or fan to decide for himself or herself with which hypotheses they will stand behind. Unfortunately there is no test to date to confirm or deny the hypothesis.

I hope this explains, at least a little, Jim’s feeling a ‘warmer than human hand’ as Spock supports him, and why I believe that Vulcan body temperature is higher than human body temperature.

Chapter 75 – Love knows how to fight

In Auxiliary of the Enterprise, the atmosphere was tense. ‘Selek’ had gotten the affirmation from the technician in the New Vulcan seat of government that all legitimate Starfleet members had been beamed aboard the Excalibur, and Chekov had reported that the sensors caught energy discharges on several decks. It was clear that on the other ship fights had broken out – obviously, there were a lot of people who simply didn’t believe that Barnett was… well, Barnett. Otherwise, no Security or crew member in his or her sane mind would have put up resistance. The second explanation for the display of violence was that there were more members of Section 31 aboard than originally thought.

‘Selek’ s gaze wandered to Sulu, who sat beside him at the helm and had brought the Enterprise parallel to Excalibur, while on the other side, the Lexington loomed, ready to take action should the treacherous captain try something foolish like attempting to escape. It didn’t slip the old Vulcan’s attention when the Asian helmsman sat rigidly on his chair with his shirt soaked with sweat. He was anything but fit for duty, yet he was here – supporting his captain and friends even in his weak condition, just like the Sulu ‘Selek’ remembered so well. Always loyal, always ready to sacrifice himself for the ship and its crew, always present when he was most needed.

At the communications station, Kevin Riley bent over the displays and listened closely to every transmission that was sent, but since Kirk and the others had beamed aboard the Excalibur, there was silence. Spock Prime pursed his lips, remembering all too well the Kevin Riley of his own timeline, and for a moment he thought he heard the Irishman’s terrible rendition of ‘Take me home, Kathleen’. In hindsight, the whole situation had to hold some kind of humor, even if they all had been in grave danger in those hours. ‘Selek’ recalled the moment he admitted to Jim that he was ashamed of the friendship he felt for him, not realizing how much this hurt his T’hy’la. He hadn’t been ashamed of their relationship, but of the feelings which came with it – that he was feeling anything at all. A Vulcan had no emotions, or so he had believed, until he came aware of the fact that this was, indeed, a lie. Even his father had admitted to having feelings. The secret was to control them, not to suppress them – something he learned later. And later he and Jim had talked about those minutes in the briefing room, and – like always – Kirk had understood him; had already forgiven him long before.
‘Selek’ felt some very un-Vulcan nerves rising in him. Something was off, this much he could tell. Funny, in his own days aboard this ship, he always had been confused whenever his Jim did something based on a ‘gut-feeling’, now this odd instinct called out to him, too. Something was…

“Something isn’t right!”

Joaquin Weiss’ quiet voice cut into the heavy silence in Auxiliary that was previously only interrupted by the quiet sounds of the computers and sensors.

Pavel and Kevin looked at the young superhuman, and even Sulu turned his eyes away from the helm’s display and glanced over his shoulder. “What do you mean?” he asked, and Joaquin gulped,

“Noo… Something’s happening to him. He…” He stopped, and his eyes widened before he bent forward over with a harsh gasp. Pavel made a step into his direction, but ‘Selek’ called, “Stay at your station, Mr. Chekov. Mr. Sulu, I’ll switch the navigation to the helm.” Not waiting for an affirmation he did as he just said and was at Joaquin’s side a moment. “Mr. Weiss, what is it?” he asked softly, steadying the Augment-boy.

Joaquin had pressed his eyes shut and tried to regain his breath. He felt much distress coming from his older brother – dread, fear – and pain. So much pain. It burned like fire in Weiss.

“He is hurt,” he whispered. “Badly. And… And he’s so afraid.” He felt the strong, far too warm hands straightening him up and opened his eyes again. His gaze found that of the alien old man in front of him, who watched him with alarm but also sympathy. “He’s injured – gravely,” Joaquin choked out. “And he’s scared. I’ve never felt anything like this from him.”

“You sense your brother’s feelings?” Sulu asked, perplexed, but it was ‘Selek’, who answered him.

“The Augments have some mental powers – nothing dangerous, but given their Terran heritage, it’s extraordinary. Mr. Weiss and Mr. Singh seem to be linked by an extraordinarily strong family bond.”

“Like the captain and Mr. Singh after they became a couple?” Pavel offered.
Joaquin murmured, “They are bondmates. I think it’s normal for us to develop this kind of telepathy after marking and bonding one another. It was the same with Otto and Katie.”

His statement made the three officers gape at him in surprise; only Keenser simply nodded. He had sensed the strong bond between his captain and the augmented Terran for quite a time now.

Spock Prime cocked his head as he thought about Weiss’ statements concerning Khan’s condition. Hadn’t ‘Selek’ sensed trouble coming from young Jim only a minute ago? Was it because Khan was injured and Jim felt it over his mating-bond with the Augment leader? If so, Jim was certainly going half mad because of his far too human, loving heart – a circumstance that could be dangerous in the middle of combat.

‘Selek’ came to a decision – one he had made before in many not so different situations. And he had and always would deny them as emotional choices, yet they were always born out of worry for his T’hy’la – and this was now the case, too. “Mr. Keenser, activate the suction system to clear the air between here and deck 5. I will beam over.” He went to the wall at his left side and pressed a button. A door opened, revealing a small room that contained a phaser, oxygen bottles, spacesuits with helmets and gas masks.

Quickly, the old Vulcan picked up a gas mask and a phaser, but before he could fasten the mask he heard a soft noise behind him, followed by a hoarse, “I’ll go with you.”

Of course, underestimating a situation was one of the most typical characteristics of young humans. That went for augmented teens as well.

“No, Mr. Weiss. Given your lack of experiences in combat these days as well as your limited knowledge about this century, the risk that you’ll get hurt is…”

“I don’t care! I’m going with you!” Joaquin snapped. He stepped beside the High Minister and took a gas mask that he quickly fixed over his mouth and nose. “I may not know much about today’s technology, but I do think I can handle a weapon that can stun people. And how to act in proximate combat is something I learned when I was not older than seven or eight. I grew up with this shit!” He took a phaser and offered it ‘Selek’. “Put it on stun or whatever you call it, or I’ll have to try it, but don’t rant at me if it goes wrong.”

Spock Prime lifted a brow. He knew the stubborn way the chin was set and the flash in human eyes. At this moment, the young Augment resembled Jim Kirk, even if both men looked completely
different. And ‘Selek’ was keenly aware of another fact – a determined mind would not be stopped. This was something he had learned over the years at Jim’s side. It was a waste of time to discuss this, and so he gave in. Taking the phaser and setting it to stun, he said, “Very well, but you stay behind me, and when I instruct you to seek cover, then this will be exactly what you do! I do not want to tell your brother that you were injured on my watch!”

Joaquin put the phaser in his waistband. “You sound like Jim.”

“Maybe because we both seem to share the same point of view,” the old Vulcan replied wryly, then he fastened his gas mask, took an additional communicator and left the room, Weiss on his heels.

“The air isn’t clear yet, but the suction system is still working, sir!” Sulu called, and ‘Selek’ nodded.

“It will be enough to reach the transporter room. You have the con, Mr. Sulu, hold the Enterprise in position. If there is a change in the Excalibur’s course, call me on the Starfleet Standard Emergency Frequency.” He went to the door, not realizing that he was giving orders like the first officer he once was. “Hold your breath, gentlemen, Mr. Weiss and I will hurry, but it’s inevitable that some of the sleeping gas will come through the door upon our exit.”

He unsealed the door and vanished quickly. Joaquin slipped through it, too, and Spock Prime resealed the entrance from the outside immediately.

In Auxiliary, Sulu, Chekov, and Riley exchanged a glance. “And there I thought Vulcans were always in control, but Selek fell right back into his old ways, didn’t he?” Hikaru smirked.

“Da,” Pavel grinned. “Iz like he time traveled in place, becoming our first officer all over again. I had troubles not calling by his real name.”

Kevin frowned. “What do you mean with ‘becoming our first officer all over again’? And isn’t ‘Selek’ his true name?”

Sulu and Chekov exchanged a glance. Oops!

ST***ST
The fights aboard the *Excalibur* were still raging on several decks, while other sections were secured or the ship’s own Redshirts had been reasoned with. That, however, was not the case on deck 5.

Carol wasn’t quite finished with her report, as Jim Kirk took action, knowing that his mate was in immediate danger. Not caring for his own safety, he hurled himself head first into the fight that was ongoing between Galven, the rest of The Shadow, some Redshirts from the *Lexington*, and Norton’s men. As if pulled by invisible strings, he shot and punched his way through the quarrel, slapped hands and phasers away, shoved an Elite Security back with enough force to send the man into the next wall, and escaped grabbing hands with a speed that was head-spinning.

As before, Spock remained at his side, yet the Vulcan recognized with a hint of atypical nervousness, the inhuman strength his T’hy’la developed. Jim’s treatment with Khan’s blood more than a year ago had left physical changes in the young captain, and the blood concoction the Augment had given him during their flight from Turkana was still showing its effects. Jim Kirk wasn’t an Augment, but he wasn’t just a human anymore. This much became clearer to Spock, and so the Vulcan’s efforts weren’t expended by covering his friend’s back, but also in covering up the extraordinary power Kirk seemed to brim with – to prevent questions later which could lead to a minor catastrophe.

Jim didn’t even realize what Spock was doing or that he pushed his way through the combating crowd as if the Security men around him were nothing more than some untrained kids. His mind was focused on only one thing: get to Nien.

And then he felt it – the rising despair and wrath that leaked over their shared bond. It made him tremble, but also showed him the way. Jim sensed that he was getting closer to Khan; he shoved another Elite Security away and gasped as he heard the soundless cries for help deep in his soul. Nien was running out of time!

“KIRK!”

Finnegan appeared in front of him – seemed to materialize out of thin air. “You’re too late, Jimbo,” he sneered. “Your warming pan is about to be frozen and…” The rest went down in a shout of pain and shock, as Jim didn’t even slow down and crashed into him at full speed and with furious determination. Both men collided and went down to the floor where Kirk didn’t waste any precious seconds; he socked Sean on the jaw with enough strength to dislocate the bone. Finnegan howled like a beaten dog and slapped his hands over the lower part of his face, staring with teary eyes at his old school rival whose expression was murderous. The next moment Kirk was on his feet again and continued his way, not looking back.

Sean felt nausea with the pain, but instead of quitting it woke his ire even more. Rolling onto his stomach, he grabbed for his phaser, but he didn’t have a chance to draw it. He felt a warm, hard hand on his left shoulder; a stabbing pain shot through his whole systems and then the world turned black.
Spock straightened up after he was certain that the Vulcan nerve-pinch had served him well again, and followed Jim and McCoy towards the medbay. He heard the well-known voice of Barnett hailing ship-wide for Jim Kirk; the Vulcan wasted no time answering it for his captain, who obviously overheard or ignored the hail. The combat was left behind, yet Spock’s keen hearing didn’t miss Wesley’s roar,

“CEASE AND DESIST ALL COMBAT ACTION! THIS IS COMMODORE WESLEY. I ORDER YOU TO LAY DOWN YOUR WEAPONS. ALL OF YOU!”

Spock wasn’t certain if the attempt by the commodore to settle the fights by exercising his authority would be successful, but he had no time to watch the outcome. Kirk was already twenty meters away, and the Vulcan knew that his T’hy’la was going to need him.

Jim forced his legs to run even quicker as another wave of panic rushed over his link with Nien. Several people were in front of him who were about to enter medbay. Without slowing down, he pushed them out of his way not caring for their protests; he stormed into sickbay driven by the terrible fear for his beloved and by Nien’s blinding panic.

A furious male voice sounded from an attached room, accusing "You’re going to kill him!" Kirk dashed through the door. For a second, he was stopped dead in his tracks as his eyes and mind took so much at once. The air reeked of blood, there were Nien’s torn clothes on the floor, a cryotube stood only four meters away from where weak knocks sounded from, and Conelly was bent over it.

Conelly…

Something snapped in Jim, and with a roar he leaped at the scientist, shoving him against the tube. This bastard had raped his mate and now he was about to kill Nien. Kirk would have his head for it, no matter what!

Conelly cried out as the collision forced him hard against the cryotube; his left hip bone pressed one of the buttons – the movement of the cover stopped a hands breadth away from closing completely; it began to re-open. Two of Elite Security tried to intervene, but a kick from the young captain sent one flying; the other one collided with Dashwood who had rushed forwards to help his colleague. The third Security had trouble with Burmaster who used the unexpected chance to put up resistance against his captor. The fourth guard tried to assist his three colleagues at once – something even a well-trained Starfleet officer couldn’t manage.

Jim didn’t care what was going on around him. His attention lay only on Conelly who lifted his arms and fought back, but Kirk seemed to have the strength of three men. He blocked the attack, grabbed
Conelly’s collar and hauled Nathan away, head-butting him in the process. For a moment, the
scientist saw stars, then he raised his right knee hard and tried to hit his opponent were it hurt the
most – unusual for males using this trick, even in combat.

Jim avoided the attack and delivered a blow that swept the scientists off his feet. Conelly tumbled
backwards – straight at the cryotube that began to sway with the force of the impact. Pushing himself
away he attacked Kirk – and the shoving of the cryotube had a big side effect.

Khan’s mind had begun to shut down as the cover started to slide close and there was nothing left
than horror and a gut-wrenching fear – not for others, but this time for himself. Over! Everything
would be over in a few seconds without a way back! Desperately he tried to stop the cover but he
could barely lift his hands – never mind the strength he would have needed to bring the device to
halt. His base instincts took over and his fists hammered against the lid, yet his effort was nothing
more than some punches even a child could have withstood.

Then a shout, ringing with fury and threat echoed through the air, followed by a jerk against the tube.
In that moment, a part of Nien’s soul sensed the nearness of its mate. The cover stopped moving and
began to open again. Snarls and outcries were heard before the tube was shoved again and began to
roll aside. As if in slow motion, Khan saw the floor coming closer before the tube crashed on the
ground.

New pain shot through his body and cleared his mind long enough to make one thing clear – there
was a last chance to escape this coffin. Again his survival instincts kicked in and sent new adrenalin
through his system; it overcame the sedative effects long enough to allow his limbs to move. His left
arm burnt like hell; his left leg was useless. Every fiber of his body seemed to be on fire, but
somehow he managed to crawl out of the tube, using mainly his right arm and leg. His heart raced
and his raging breath echoed in his ears and drowned out the fighting noises around him.

Another sharp sting pierced his left side and from one of the other moment he had trouble breathing.
Yet it didn’t make him stop his attempt to get away from the tube that didn’t represent protection
anymore but only danger. The floor seemed to be made out of ice and heavy shivers shook him as he
attempted to crawl away from the cryotube; trying to suck air in his burning lungs.

He sensed the proximity of a stranger, felt a hand on his shoulder and with a shout he struck out his
right arm and sent the approaching human flying away, while his upper body – robbed of any
support – fell hard on the floor. The stabbing pain in his side increased and sickness tried to
overwhelm him, but he didn’t even recognize it, while new panic sized him at the realization of his
own helplessness. Away! He had to get away – that was all his mind was yelling at him…

Bones had entered the separate room of the medbay only seconds after Jim, together with Ritek and
two Lexington-Redshirts. Still hating to use a phaser, he didn’t hesitate now to stun one of the Elite
Securities who had been kicked away by Jim only a second earlier, while Ritek and the others did a quick work at the rest of their opponents.

Dashwood, intelligent enough to realize when he better had to quit, had raised his hands and had retreated to get not involved in the hand-to-hand combat that raged between his colleague and the infuriated young captain.

McCoy’s gaze grazed a man in the blue tunic of the medical staff, who stumbled away from the Elite Security Ritek had stunned. Then Leonard’s attention was driven to the cryotube that fell off the pedestals as the two enemies crashed against it. In horror Bones watched the bleeding, torn, nude man who crawled out of the tube and not wasting a moment, McCoy ran to him. He bent over Khan to help him, only to find himself sitting on his butt a meter away a second later. Dammit, even in his terrible condition the Augment could lash out like a tiger.

“Doctor, are you hurt?”

Spock – of course! Jim was right, McCoy decided. Their Vulcan was a big, big softie!

“Khan’s having a damn panic attack,” he wheezed and rose, watching appalled as the fallen superhuman crawled over the ground despite his grave injuries, leaving a wet, red track.

The strange medical officer on the other side of the room made a movement into Khan’s direction, but Bones stopped him with a loud, “NO! Don’t touch him!” There was no way Khan would accept anyone in close range now given his state of mind, only…

Leonard whirled around and saw Jim kneeling over Conelly, punching the man mercilessly. “JIM! Stop pummeling the bastard into a bloody pulp and take care of your mate! Khan’s having a panic attack!”

Spock didn’t wait until those words were registered by his enraged T’hy’la. With two steps he was at Kirk’s side, towering over him; he caught his friend’s wrists in a firm grip and said sternly, “Captain, STOP!” Ignoring Jim’s resistance, he pulled him to his feet and shook him for a moment, until the unnerving, savage look left Kirk’s gaze, and the blue eyes became focused again. “Jim, Khan needs you!” he repeated urgently, steadying his friend’s swaying body.

That was enough to tear Jim out of the red haze of hate that had begun to engulf him. His glance found the naked, bleeding, broken figure on the ground – and pure terror rose in him.
Slipping away from Spock, he dashed to his soulmate and knelt down in front of him, blocking Khan’s path. Not wasting a thought of his safety, again, Jim bent over the Augment and reached out to him with trembling fingers. A hoarse cry escaped the superhuman while he instinctively tried to push away the assumed threat, but Jim would have none of it. Trying to find an uninjured swath of skin on the beaten body, he softly touched him, and slowly, gently got close enough to bury his nose in the midnight dark strands caked in blood.

“Sh-sh-sh, honey, it’s me. I’m here, love, I’m here. Calm down, Nien, calm down. It’s me. I got you, baby, I got you. No one will hurt you. I’m here. Sh-sh-sh, you’re safe now,” he whispered. Any anger left him like water flushing away into an abyss and was replaced with shock, love and rising fright. God, why hadn’t he come sooner? Why had it taken him so long to get to his mate – to his husband? Who had done this to Nien? Why for God’s sake! Why this violence against him? Questions which weren’t important in the moment – not really. Only his beloved counted now, nothing else.

Khan’s mind had shut down completely again. The only thing that had made him move was the drive to escape – to stay alive, somehow! Someone blocked his way; he was trapped again – hands on his back – a voice at his ear – a smell…

A familiar smell – familiar hands – a familiar voice…

A voice that meant safety – protection – love.

Jim!

Jim was here!

He had come!

He would stop the agony – would make the pain go away.

His augmented senses slowly became aware of the warm breath on his neck, of the warm body that
enveloping him.

Safety…

Shelter…

That was what it meant!

He opened his mouth, tried to say something, but all that came over his blood-smeared lips was a whimper.

The sound broke Jim’s heart, and made his soul weep; it brought tears to his eyes. Bending lower down, he brushed his lips against the sweat-soaked temple of his beloved. Nien’s heaving, dry sobs woke new panic in Jim, and quickly he lifted his head to shout for Bones. But he was already there beside them cataloging the many injuries Khan suffered. Another man stepped beside them – the unknown medical officer who obviously belonged to the ship.

“Michael Burmaster, current CMO of the Excalibur,” he introduced himself, offering Bones a medscanner.

“Leonard McCoy, CMO of the Enterprise,” Bones replied, accepting the device. He ran it carefully above the superhuman’s body. “Sweet Lord,” he murmured as he read the results. “These animals should rot in hell!” He glanced up. “His left lung is pierced by one of a few broken ribs. He must have gotten this additional injury when the cryotube crashed onto the floor, given the fresh blood. I need a portable respirator. Quick!”

Michael nodded and already headed for the door. “I’ll get it and some stabilizer to…”

“Mr. Singh is an Augment,” Bones called after him, looking at to his colleague to check the man’s reaction. To his surprise, Burmaster only shrugged.

“I figured as much. What does his body need?”

McCoy sighed in relief. Finally, a colleague who took the work and the honor of a doctor as serious
as he did. “Get me…” A rush of Latin words followed which told Jim nothing, but Burmaster obviously understood because he stormed out of the room, yelling for a nurse.

Jim tried to calm his agitation. A pierced lung – what else had been done to his beloved? He lifted a hand and looked at it, shuddering inside as he saw that it was covered with blood – Nien’s blood! He felt his mate shivering and bent closer trying to warm him.

Khan was cold – so terribly cold. The floor, the air – his whole body shook with tremors, but there was also something warm and soft.

Jim…

Again his soul reached for his love and sensed the dread in Jim, but also the fierce determination to make it better for him. Khan gulped, and for a moment his mind was clear enough to show him that it was hard to breathe; that woke his survival instincts again. Acting on them, he clung tighter to the only being in this whole world that was able to save him.

Ritek closed the distance to them, shocked. “Holy moons,” he whispered as he took in his friend’s beaten form. “What have they done to you, mate!?”

Quick, pounding steps drew nearer, followed by a gasp. “Holy mother of God!”

Jim didn’t need to look over his shoulder to know who had arrived: Bob Wesley.

The commodore stepped nearer; his gaze aghast at the wounded man on the floor who weakly tried to wrap one arm around Kirk’s waist; he fought for every single breathe and was barely recognizable as the proud, handsome superhuman Bob met aboard the Enterprise.

Bones rose, stepped to the med-kit and began to rummage through it, searching for an antiseptic spray and dressing material. Some cuts and lacerations had to be treated immediately, or Khan would not be able to avoid infection – not in his state. And then the superhuman had to get to surgery – now!

Connelly had regained some composure and got to his feet; wiping away some blood from his mouth and nose – that was definitely broken given its angle. The area around one of his eyes began to swell, yet pure mockery glistened in his gaze, as he glared at the young captain who held the
Augment in a protective, tender embrace as best he could in this position.

“He’s a good fuck, isn’t he, Kirk?” Nathan taunted. “You should have heard him moan for me when…”

Jim’s head lifted and a promise of death began to shine in his eyes. Yet it wasn’t him who shut the scientist up.

Something exploded in McCoy at those words which made a light of one of the cruelest crimes possible. With a snarl, he whirled around and his fist connected with Conelly’s jaw. If it was pure luck or Bones’ anatomical knowledge, well, Nathan went to the ground like a fallen tree to not moving again.

“Doctor!” Wesley and Spock rebuked in union, and got promptly an ear full from the enraged CMO.

“This bastard didn’t deserve anything less after what he did. First this vile monster forced himself on Khan, abusing him in the most painful and humiliating way possible, and then he has the nerve to state that Khan enjoyed it. He’s lucky that I didn’t break his jaw for spitting out those lies! I can live with injuries inflicted in a battle, even if it is a waste, but I will never tolerate someone who stoops to rape and then, makes fun of it!”

Not realizing what he had revealed to an utterly shocked Ritek and Wesley, and an equally astonished Vulcan, he stomped back to Jim and Khan and knelt down beside them. “Mr. Singh,” he said gently, “it’s me, McCoy. I’m going to examine you and to treat some of your wounds. All right?”

There was no answer. Only Jim felt Nien tense and tried to get closer to him. “Sh-sh-sh, honey, it’s all right. Bones won't hurt you. Let him help you – I'm here, love. I’ll watch over you. I won't go anywhere. Promise! Just let Bones check you.” He kissed the tousled, sticky hair again, not caring who saw him.

“Okay,” McCoy murmured and took a deep breath, but before he could do anything, and outcry came from the door.

“Noo!”

Jim, still fixed on his mate, looked over his shoulder – and straight at a very pale Joaquin Weiss and a stiff ‘Selek’. “How did you get h-?” Kirk couldn’t finish his sentence because Joaquin rushed
towards them with a shout of anguish and knelt down beside Jim and Nien, his eyes wide and dark in horror.

Khan sensed a familiar presence, but the terror that echoed over the family link mixed with his own – what made him cringe. A soft hand touched his back – a familiar one and so he kept still, but the tension didn’t leave him.

Joaquin looked in utter shock at the torn figure on the ground. Blood – there was so much blood it made him dizzy with nausea. And it all came from his brother’s body! He sensed the pain Noo was in, sensed the deep fear his normally fearless brother and leader felt, and tears sprang to his eyes.

McCoy threw a short glance at Joaquin. “Calm down, son; I’ll do everything in my power to help your brother.”

“Dr. McCoy; Oxygen,” Burmaster called while he rushed back into the room. “The stabilizer will be finished in a minute.” He gave Bones the oxygen mask who placed it carefully over Khan’s mouth and nose – easier said than done, because the superhuman put up resistance, and only gave in as Jim coaxed him to hold still. At his nod, Michael switched on the device and McCoy could see Khan was calming down as his body was supplied with the needed oxygen.

“All right, next.” He glanced shortly up his colleague. “Watch his bio-signals. If his heart rate goes back over 90, tell me.”

Burmaster grunted an affirmation perplexed about the read outs the med-scanner delivered.

Ritek was still trembling with rage and filled with intense worry for his friend. He looked at the boy who sat beside Khan close to tears. ‘Brother’? Was this boy Khan’s brother? Then some of Khan’s crew had been woken up? Well, that was a surprise – and utterly unimportant in the moment. Khan’s condition and the sorrow of the boy were his only concern at the moment, and the Rigelian felt a wave of compassion.

McCoy had begun to treat the worst of the injuries; he cleaned a laceration carefully – and Khan cried out, starting to put up resistance again. Even Jim was almost unable to calm him. Nien’s brilliant, bright mind was shut off again – only his instincts were working now. Trying to soothe his frantic bondmate, Jim held him as close as he dared and crooned gentle nothings in his ear.

Bones used the distraction and quickly began to disinfecting the more severe wounds, but he knew
that this was only on the surface. The real injuries lay inside. “I have to operate, Jim, as soon as possible,” he said, hating to bring more misery to his friend and the Augment-boy with the facts he had to reveal now. “His liver is injured, his left lung is pierced by a broken rib; he has serious abdominal bruising – I think at least a ruptured spleen. His left arm and left leg are fractured. But it's the internal injuries - he's shutting down, not healing. Those bastards did this with intent to kill.”

Joaquin gasped again, while Wesley bent over Kirk and the Augment. “What are his chances?” he asked quietly, fearing the worst.

Bones continued his work, while he gritted out. “I’m not Spock. I can’t give you a number, but Khan’s chances are poor – and they’ll with every minute he’s not in surgery!”

“Thanks,” Leonard said before he raised his voice. “Mr. Singh, I'm giving you some stabilizers, so please don’t freak out. I only want to help you, okay?”

There was again no answer, but at least the Augment relaxed a little bit as Jim’s lips brushed over his temple.

McCoy administered the stabilizers, while he asked his colleague, “Is a surgery room free?”

Michael shook his head. “No. To tell the truth, my patients are lining up to get a free place there.”

“Superb – and our medbay is filled with sleeping gas,” Bones growled. “What’s about the Lexington?” he addressed Wesley without interrupting his task.

Bob frowned. “Of course, it's yours, but…” He hesitated before he suddenly crouched down beside the little group. “Jim,” he murmured, “as long as Khan is on a Starfleet ship he can be declared under arrest and it would be valid.” He gave his protégé, who looked at him with pain written all over his face, a pointed glare before he laid a hand on Kirk’s shoulder. “Maybe…”

“The New Vulcan Academy is affiliated with our hospital,” ‘Selek’ cut in, instantly knowing what the commodore suggested. “It has the most modern medical technology the Federation has to offer. I will call them to prepare for an emergency surgery under your command, Leonard.” He stepped to
Jim looked at McCoy worryingly. “Bones? Is Nien okay to be moved?”

“There more time we lose the closer I get to ‘no’, so let’s get him down to New Vulcan so that I can patch him up. I’m still amazed that he can breathe on his own, but I don’t think he will for very much longer.”

“All right, then let’s bring Nien to the transporter room.” Jim looked at Wesley. “Can we risk leaving medbay or are there more idiots waiting to shoot us out there?”

“I was able to reason with Elite Security and the Excalibur’s Redshirts. They’ve laid down their phasers, but I think they want to see Barnett in the flesh. I can’t fault them for that; they’re only doing their duty.”

“But can we get through them?” Kirk urged.

Wesley nodded. “I don’t think one of them is going to lift a hand against a severely injured man – or his doctor.”

“Okay,” McCoy nodded and glanced at the nurse. “Bring an antigrav stretcher – quick!”

The woman dashed away, and McCoy bent over the former dictator again. “Mr. Singh,” he said gently, “we’re going to put you on an antigrav stretcher to take you to surgery. This will hurt like hell, but we’ll be careful.” He didn’t know if the superhuman had understood him, but he trusted Jim and Joaquin to keep Khan calm.

Spock watched his T’hy’la. He saw the anguish in Jim’s eyes and the deeply rooted fear. He knew that over the bond the dread and pain echoed in each other’s mind and he wished Jim had allowed him to build a shield. It would prevent both from feeling the other one’s agony, but on the other hand, Khan needed to sense Jim – and the other way around. In good and in bad times – indeed!

McCoy glared at Dashwood, who crouched beside the still unconscious Conelly. “Dr. Marcus told us that you sedated Khan. And obviously the potion you mixed is like an anesthetic. What exactly
“Did you inject?” He saw Dashwood frowning and added, “I have to operate on him, and usually my patients aren’t awake during this time, so out with it!”

Dashwood only looked uncertain at the CMO. Bob exploded. “Listen, man, you’re in deep, deep shit and I’m about to put you not only on court martial, but you will answer to the Federation Court of Human Rights. And if you don’t want to spend the rest of your life in a penalty colony, you will answer Dr. McCoy truthfully, or, God help me, I’m going to lose it!”

The scientist gulped and addressed Bones, “We mixed a standard anesthesia with…” A flood of words followed and McCoy listened closely before he abruptly nodded.

“Right, that makes sense.”

The nurse returned with the needed equipment. The same moment another familiar voice called, “Capt’n? Are ye here?”

“Over here, Mr. Scott!” Spock answered, being aware of the fact that his friend had only eyes and ears for Khan at the moment.

The engineer entered and stopped with a shocked gasp. “Holy Mary! Don’t tell me this blood is all from Khan!”

“It is,” Spock deadpanned. “Mr. Singh owes his condition to those men over there,” he pointed at the still stunned Elite Security. He looked at Michael. “Dr. Burmaster, I want the clothes, and the hands of these men examined. I’m sure that the blood on their clothes is from Mr. Singh and that you also will find more traces of their display of violence against him. The same goes for Commander Finnegan; I assume he is the ringleader of this personal payback.”

“He came with the patient into medbay, telling the professor that he and his men had to defend himself,” Michael growled. “But given the Augment’s condition, he couldn’t put up a lot of resistance. Those injuries are all inflicted by brute force against a man that was unable to defend himself.”

“I anticipated this,” Spock nodded. “Dr. Marcus told us that Khan was sedated and was weakening rapidly. She also will confirm Mr. Finnegan’s aggression, but I want more evidence.”
Wesley looked at him. “Dr. Marcus witnessed this… this beating?”

“Yes. She is on our side and helped Mr. Singh to escape when he was first brought aboard the Excalibur. Only later was he caught in Auxiliary, after he had made certain that Dr. Marcus could flee through the support shafts,” the first officer replied calmly. Deep in his eyes shone something close to disgust. Vulcans despised violence, and what happened to Khan could wake loathing even in a Master of Gol. He saw the stretcher being brought into position beside the injured Augment and went to the little group where he gently pushed Joaquin aside to give Jim a helping hand.

“Well, then Finnegan’s ass will rot in prison until he’s old and wrinkled,” Bob growled. “What’s the status on the bridge, Mr. Scott?”

“Admiral Barnett has taken over the command, sir. He sent me to find out what’s going on here after Captain Kirk didn’t answer his hails.” He looked with compassion at his friend. “I feared something happened to Khan, but this…” He shook his head.

B Burmaster looked at him thunderstruck. “Admiral Barnett?!”

“Yes, he’s alive,” Scotty nodded, “and just arrested Styles and two of his officers, who are part of a conspiracy.”

Nien cried out just then as he was carefully lifted on the antigrav stretcher by Jim and Spock. The Augment began to roll his head and heaved despite the respirator, and Bones realized that the superhuman was shocking worse than he’d thought. “Khan, you’re safe,” he said firmly, but also softly. “No one will hurt you here, promise!”

Those blue-green eyes, glassy with pain, looked at him and then at Jim, pleading mutely to make the pain stop.

Bones couldn’t help himself; he patted the Augment’s right shoulder soothingly. “We'll get you down to New Vulcan and into surgery in no time!” he promised before addressing Kirk. “Jim, stay with him. You seem to be the only one who is able to keep him calm. Joaquin, stay at your brother’s other side, I’ll steer the stretcher. Spock, Scotty, make sure that we can get through the corridors with any problem. Ritek, watch our back. Commodore, maybe you can use your authority help us out. Off we go!” Not waiting for any affirmation, McCoy activated the antigrav drive and moved the stretcher quickly towards the door.
Burmaster called some of his nurses and instructed them to take the four stunned Elite Security personnel to the makeshift beds and Conelly back to his biobed and restrain him there. Then the CMO turned towards the Dashwood. “You’re waiting here until Admiral Barnett decides what to do with you.” He left the room and sealed it not caring for the professor’s protest. He watched his colleague and the others leaving medbay, and called “Good luck!” and then he turned towards his patients.

Outside, controlled chaos had taken place. The corridor was filled with Redshirts from both ships, some Elite Security, and other crew members. Wesley’s thundering voice that demanded room was instantly obeyed, yet many men and women looked at the troop warily.

“Oh… NO!” The hissing voice belonged to Caviw, who had supported the Lexington’s Redshirts together with Galven, Jeff and the other. Now they watched the surrendered troops with the eyes of hawks. That is before they caught sight of their friend.

With graceful, elegant steps she was at Jim’s side, while Galven oinked something in his native tongue and joined her. “Buddy – Holy Mud, what have they done to you?” His little eyes looked at the ashen gray Jim Kirk and one hoof-like hand was laid on the captain’s right arm. “Laddie…” he began helplessly, but found no words.

“We’re taking Nien down to the Vulcan hospital – for surgery,” Jim said hoarsely, and Galven nodded.

“Right, m’boy, we’ll cover your guy’s back!” He took a last, very worried glance at Khan and murmured, “Hold on, buddy! Please, hold on!”

Khan didn’t react – didn’t even acknowledge that he was addressed. He still felt so cold – icy-cold – dizzy and sick. He didn’t know what was going on; his keen orientation had left him completely. Only one thing was present in his numb mind that still fought the sedative: Jim and Joaquin’s presence.

Joaquin barely spared The Shadow gang a look. In his concern, he didn’t even recognize their strange appearance – after all he’d never seen a Tellarit or a Caitian before. Wordlessly he stayed on the other side of the antigrav stretcher holding ‘Noo’s’ left hand as Jim held his right hand, as they headed down the corridor.

Only Spock heard Galven’s furious words: “Whoever did this to Khan, they’ll pay. I’ll stomp them into the ground until nothing but their hair is left.”
“But only after I claw out their eyes!” Caviw snarled – and Spock was very aware of the fact that she meant her threat. Caitians were well-known for their close family- and mating-bonds. They also protected those who did not belong to their clan, but were nevertheless close to them. The Vulcan knew that The Shadow regarded Khan as their friend and that they had taken a liking to Jim Kirk. Seeing Khan closer to death than life, and the captain in such anguish because of it, had woken Caviw’s strong protection instincts.

A tousled figure that stepped towards them woke Spock’s attention, and he and Jim recognized Genrow, who looked like he had taken a walk through a jungle, yet his movements were strong.

Shocked, the commander stopped in his tracks when he saw Khan on the stretcher covered by a Vulcan robe. Behind him, ‘Selek’ walked purposefully down the corridor, talking quickly in his mother tongue to someone via a Starfleet communicator.

“Heavens,” Genrow murmured. “So they did catch him again.”

Jim had no time for the man, but Spock – always able to focus on several things at once – addressed him. “Commander Genrow, down the corridor is Commander Finnegan. I stunned him with a nerve pinch. Please make certain that he is brought to the brig. He’s accused of inflicting grievous bodily harm.”

“He’s already there, sir,” Genrow replied with a grim expression.

“Good work!” Wesley grumbled. “In medbay are four of his men and the two scientists, Conelly and Dashwood. Make certain that they’re guarded and after being treated by the CMO are brought to the brig, too.”

The commander saluted. “Aye, sir!”

Jim and the others didn't but continued their way. Half a minute later they stepped into the transporter room where Scotty quickly walked to the controls; he dismissed an ensign with a wave of his hand. McCoy maneuvered the stretcher onto one of the transporter pads while ‘Selek’, Jim, and Joaquin took their own places. Spock wanted to follow them, but Wesley, who had entered the transporter room only a second ago, held him back, “Mr. Spock, please remain here! I have an urgent matter to discuss with you.” He caught the alarmed gazes of the others and added, “A private one; it can't wait.”
Vulcans don’t get nervous – at least that’s what one would state. But right now Spock sensed an unsettling pressure in his gut. Looking at Jim, he got a short nod.

“Stay here, Spock – and take care of our ship, if Barnett allows it,” Jim said quietly, trusting his friend to make the right decisions.

Spock clasped his hands on his back. “Affirmative, Captain.” His glance softened. “Successful surgery increases Khan's survival, Jim. Khan is strong; optimism is logical.”

Jim felt a lump rising in his throat. Spock tried to comfort him – in his own, Vulcan way. Leave it to his T’hy’la to render him speechless.

Spock Prime adjusted his communicator. “Selek to bridge.”

“Bridge, Uhura here, sir!” answered the familiar, melodic voice.

“Miss Uhura, Healer Sorel from the New Vulcan University Hospital will contact you within the next minute to give you coordinates. Please transfer them without delay to transporter room 1.”

“Aye, sir.”

Before ‘Selek’ could close the communicator, another voice sounded through the little speaker. “High Minister Selek, Barnett here. What’s going on? Did I get it right? You’re aboard the Excalibur?”

The old Vulcan lifted a brow, knowing that this was a critical moment. Barnett shouldn’t know that Jim, Khan and the others were leaving the ship to beam to New Vulcan. Spock Prime would not concern Barnett, but Khan was a wanted man and the Elder wanted no risk the admiral insisting the Augment undergo surgery aboard a Starfleet ship. “It was only a short visit. I am returning to New Vulcan now, Admiral. I trust you have everything under control now?”

Inwardly, Jim had to smile at this for a second. Typical Spock – to distract from a topic he didn’t want to go discuss by referring to another matter.
“What?” Barnett was confused for a moment before he answered, “Of course everything under contr… Lieutenant, may I ask what are you doing?”

“Sending Mr. Selek the required coordinates, sir,” Uhura’s innocent voice was heard in the background. “He wants to return home, that’s all.”

“But… High Minister, may I ask what you were doing here in the first place?”

“You may,” ‘Selek’ answered dryly and closed the communicator.

Wesley almost groaned. It seemed the old Spock was worse than the young one.

“Good luck,” Ritek said to Jim. “Keep us updated, please.”

Kirk nodded tightly. “I will when time allows it,” he whispered.

“Got the coordinates from Uhura, sir!” the Scotsman reported and watched the controls. “I’ll beam you down.”

“Barnett to High Minister Selek!” the admiral’s voice sounded through the speakers, but he was ignored.

“Thank you, Mr. Scott, as always it’s a pleasure working with you,” the Elder said; then they vanished in the golden light of the transporter beam.

Wesley sighed and rubbed his neck. “Has any one of the gentlemen cared to count how many regulation have been ignored in the last few hours?”

Spock lifted a brow. “I only can give you data about the different loose interpretations of protocol my direct officer colleagues and I were forced to make, but I cannot speak for Admiral Norton, Captain Styles, and…”
“Spock!” Bob let his head drop into the neck; his gaze hung exasperated at the ceiling. “That was a rhetorical question – an attempt to bring to your mind that you are in a hell of a lot of trouble – and I am as well because I didn’t stop you, but…”

“…But gave the captain the hint about Mr. Singh’s presence aboard a Starfleet ship?” The Vulcan looked very innocently and returned the commodore’s piercing glare with a calm expression.

“Barnett to transporter room 1. Can someone explain to me, please, what the High Minister did aboard, and who beamed him down despite my attempt to reach him?”

Montgomery sighed – that promised trouble. Nevertheless he answered the hail. “Commander Scott here, sir, High Minister Selek was in hurry. An emergency, sir.”

“An emergency?” Richard’s voice held a hint of taunting. “According to the engineer's station on the bridge, not only him but four other people were beamed down. Care to tell me who went with Selek?”

Scott gulped and glanced at Wesley and Spock, obviously seeking help.

“Admiral, it’s Wesley,” Bob rose to speak. “Mr. Singh was gravely injured in an act of extreme violence inflicted by Commander Finnegan and his men. The medbay here is overcrowded and so he was beamed down to New Vulcan’s hospital together with Dr. McCoy, another young man and Selek.”

For a moment there was a pause, before Barnett growled, “And appropriately, Khan is out of Starfleet’s reach on New Vulcan. Clever – all of you!” Bob thought he could hear Richard shaking his head. “I hope the fifth man was Spock. I got information from your CMO. She’s beamed down with Sarek straight to the hospital and that healer – Soral – informed us that the surgery for Sarek is prepared.”

Spock had gone rigid the moment his father’s name was mentioned in connection with ‘CMO’, ‘hospital’ and ‘surgery’. “Admiral, I’m still aboard. What’s the matter with my father?” He became conscious of Scott and the ensign’s glances, but ignored them; he couldn’t deny the rising tension in him.

“Bob, you haven’t told him yet?” Barnett addressed Wesley, who answered, “Sorry, but there wasn’t time for it before now.”
“Rrright! Mr. Spock, your father has to be operated as soon as possible and you’re needed for the surgery, too. So get your ass at the next transporter pad and beam down, too. That would also kill two birds with one stone. I bet my last shirt that the fifth unnamed person, who was beamed down, was Jim Kirk and knowing you two, you want to go after him. So, off you go. Wesley'll explains everything about Sarek. Barnett out!”

For a second, the Vulcan was very close to calling himself speechless; then he was back to his controlled self – at least on the outside. Inwardly, he had to fight against increasing dread.

Wesley caught his questioning look and turned towards the ensign, Ritek, and Scotty. “Would you gentlemen please leave us alone for a moment?”

The three men nodded – Scott and Ritek more hesitantly, feeling concern for the young half-Vulcan who stood there stiffly. Then they vanished, and Wesley took a deep breath. “Mr. Spock, I’m sorry to tell you that your father suffered a severe heart attack almost three days ago. His assistant explained that Sarek has had cardiac trouble for quite some time now. Did you know this?”

The Vulcan shook his head slowly. “No, he never mentioned it. Not over the last two years while we were in contact. Before… Before ‘Vulcan’ we… We were not in regular contact.”

Understanding dawned in the commodore. ‘In other words, they didn’t speak with each other. Obviously, Sarek didn’t approve of his son’s choice to join Starfleet. I’m only surprised that he it didn’t go on longer with his son after Spock decided to remain in the fleet. Well, losing your home world, your family, and your wife can alter your perspective.’

Aloud he said, “His assistant told us that Sarek had heart trouble shortly before the delegation left the _Excalibur_ and that it has worsened since then. He is in our medbay and on life support. My CMO didn’t operate on him because we don’t have his blood type aboard – T-negative – yours.”

Spock instantly recognized to where the talk was heading to. “I am needed to donate blood for Sarek.”

Again Bob made an affirming gesture. “Yes. Your father is running out of time.”

“What about the _Enterprise_?” Spock’s question took the commodore by surprise, and so the first officer felt obliged to explain, “Don’t get me wrong, sir. My father is one of the few members of my
clan – my family – who survived the Vulcan holocaust. Yet I still carry responsibility not only to my relatives, but also to my duty as Starfleet officer and therefore for the Enterprise as her first officer. The entire command staff is about to be arrested – or suspended at best, yet the ship is in a critical state given the failed warp drive. That Admiral Barnett is… willing to let me aid my father under these circumstances is…”

“Circumstances?” Wesley almost sighed. Vulcans! How was it possible that a race that followed logic could under make such understatements? “If you're talk about the gamble you, Kirk, and the others played then let me tell you that this is secondary at the moment. Vice President Whiteman doesn’t risk her life for nothing. She agreed to fly to Earth in secret with a hand full of loyal men to stop Luengo so that we could race to New Vulcan to take your father to your hospital and to reach you so that you can help him.”

Spock wasn’t aware that he moistened his lips, suppressing the urge to run to his father’s side that grew stronger and stronger. He was Vulcan; the needs of the many outweighed his own – even his father’s. “I'm… I'm grateful for Mrs. Whiteman's and Admiral Barnett’s understanding, but I know that Selek has the same blood type, too. And the Enterprise needs me. I am not as expert as Mr. Scott, but I am familiar enough with the technology to make decisions concerning the second and third engineer’s requests. And Captain Kirk asked me to…”

“Jim didn’t know about Sarek; otherwise he would have never asked you to keep an eye on his gray lady.” Bob saw the surprise in the Vulcan’s eyes, and grumbled, “I know what he calls his ship – it’s cute if you ask me.” He took another deep breath, “Spock, I admire your willingness to think first of your duty to the ship, but your father is the priority – not only for the diplomatic corps and your clan but also for the Vulcan population. There have been enough losses and sacrifices these last two years – and you suffered enough, son. I’ll take command of the Enterprise, and if Mr. Scott gives me his word that he'll stay aboard, he'll be my XO. The ship'll have her command team and its chief engineer.”

Spock tried to remain calm on the outside, yet his shifting stance betrayed his nervousness. He knew that it wasn’t well-received among Vulcans – this emotion – or having fight against an urgent drive. But he thought he had lost his father once, and he didn’t want to experience these moments again before Sarek was old and gray; he thought they had time – years.

“Thank you for your understanding and kindness, Commodore, I’ll stay in contact!”

He quickly stepped to the transporter control to initiate a delayed transporter process, but Bob waved him away. “I'll use the coordinates Kirk was beamed to; I can manage a transfer,” he added as he saw the asking glance Spock gave him.

“Of course, sir,” the Vulcan answered and climbed on the transporter platform.
“I know you and your people don’t believe in luck, but good luck!”

Spock lifted a brow. “You would be surprised, Commodore; there are some Vulcan Elders who wish others ‘luck’,” he said, remembering the words his older counterpart had spoken to him in the hangar on Earth after Nero was defeated. At that time he had been confused by his older self’s statement – assuming that age and grief had worn down ‘Selek’s’ mind. Now he understood him – himself, so to speak. Jim had proved it over and over again. Sometimes ‘Lady Luck’ seemed to exist, because many outcomes over the last two years were beyond logic but still existed. Maybe now was such a situation that demanded this human ‘luck’ again.

The Enterprise’s first officer nodded politely at Wesley; then he was enveloped by the transporter light and returned to New Vulcan. His mind worked fiercely with three different topics: The life of his father, Jim Kirk’s own fight against the eventual death of his bond mate, and the current situation on Earth and in the Starfleet HQ.

TBC…

Chapter End Notes

Yeah, the main-danger may be over, but only what concerns the action of battle – well, the violence battle. I know that this was an emotional roller-coaster, yet I hope you enjoyed it nevertheless.

In the next chapter Barnett learns more of the true deeds of Section 31 and the others learn of Carol’s true intentions, while Bones tries everything to save Khan by surgery. But there are different ways to fight such a battle our dear CMO does, and the outcome can differ from the one wished for.

As always, I’m curious about your thoughts.

Have a nice start into the next week

Love

Yours Starflight
Jim Kirk and the others had barely materialized when they were hit by New Vulcan's relentless late afternoon heat. They were only a few meters away from the hospital entrance. Two Vulcans hastened towards them; one was known to Jim now – Healer Sorel, the very same man who watched out for Khan’s sleeping family and made certain that they were okay.

None of them asked a question, they simply took the antigrav stretcher from McCoy and headed back into the building; the others followed them – Jim and Joaquin never leaving Khan’s side for only a moment. As soon as they entered the hospital, the heat was replaced with warm, but now a more comfortable temperature as they rushed through the building.

Entering a lift, Sorel turned towards Bones. "Dr. McCoy, Selek told me that you wish to be chief surgeon. I offer you the support of my assistant Daniel Corrigan. He's still young, but very promising. I would assist you, too, but my service is needed for Sarek, who is prepared for surgery a few rooms away this moment."
Jim, who held Khan's right hand in a gentle grip, looked up worriedly. "Sarek?" he asked. "What about him?"

A Vulcan brow was lifted. "Captain, I'm certain you know of medical confidentiality."

"Healer Sorel, please don’t get me wrong, but just a minute ago my superior asked my first officer and friend to remain aboard because of an urgent, private matter. And now you mention Spock's father and that he is about to be operated, too. I'm already worried out of my mind for my mate's health," he nodded at Khan, "so please spare me a bit of concern for my T'hy'la, Spock, and tell me what's wrong with his father."

Sorel lifted a brow. Was the augment the young human's mate? Interesting! And he called Spock cha'Sarek his T'hy'la? That was even more interesting. Sorel gave Selek an asking glance which was answered with a nod, and so the healer said, "Sarek has to be operated because of a cardiac defect, but this kind of surgery needs…"

"…Needs a lot of blood," Bones murmured understanding. The lift reached its destination and the doors opened. "And given the fact that Vulcan fathers and sons share the same blood type and Spock's is quite rare, he's needed to give blood for his father – the 'private matter' Wesley wanted to talk about with him." He followed the others out of the lift. "Dammit! Can't just one thing be wrong at a time?"

They reached a double door, and Sorel pointed. "Daniel waits for you on the other side. Human blood reserves have been brought, too, but I don't think it will help Mr. Singh given his augmented nature."

"Noo and I have the same blood type," Joaquin cut in; his voice was hoarse with fear for his brother's life. "You can use me as a blood donor, Dr. McCoy."

"I don't like this," Bones grumbled. "You're still fighting the effects of your long cryosleep."

"I've regained my strength, Doctor. Just ask High Minister Selek. During our run from the transporter room to medbay on Excalibur, we met a few guys who still thought it their duty to take aim at any stranger aboard. The next time they will think twice before they attack at an older gentleman and someone they regard as a 'barely grown child'."

"What Mr. Weiss means is that his quick reactions spared me the unpleasantness of being stunned,"
the Elder said dryly; his eyes softened for a second as he caught the Augment boy’s gaze and saw Jim's grateful glance to Joaquin.

"Right, so Superman's little brother has joined the ‘I-don't-need-any-rest-club'," McCoy sighed. "But we will need more blood than you can give, son."

“At least it’s a start. Maybe it will help to filter human plasma for Mr. Singh's blood production,” Sorel said, then he turned to leave. "Please excuse me, I have a surgery to conduct." He left quickly, vanishing around the next corner within a few seconds.

The same moment a door opened, and an older Vulcaness stepped out. "Dr. McCoy?" As the human turned to her, she introduced herself, "Healer T'Ley. Dr. Corrigan and I will assist you." She stepped to the stretcher and looked down at Khan. For the tiniest moment, Jim saw a movement in her face; the result of the brutality that had caused the injuries touched even the Vulcan woman. Then she drove her attention back to Bones. "A sterile suite and sterile clothes are prepared for you. Please follow me." She grabbed for the handle of the stretcher and lifted both brows when she almost touched Jim's left hand that closed around the handle like a band of steel.

"Sir, you must wait here," she said.

Kirk felt Nien's hand tighten around his and shook his head. "I gave him my word that I'd watch over him. Get me a sterile gown; I will come with you."

"This is not possible."

"Khan is my mate – my bonded partner. And no one – no one! – will keep me away from him when he needs me!" Jim gritted out, cursing inwardly that they had to waste time because of Vulcan stubbornness – not realizing that he was as stubborn as a mule, too.

"Humans cannot bond as you imply, sir, and…"

Selek cut in. "T'Ley, Mr. Singh is an Augment, and he and Captain Kirk are indeed bonded as he implies. Mr. Singh is deeply traumatized and reacts very strongly to Captain Kirk's presence or absence. I advise you to let the captain join the surgery. The result will be more positive."

For a second, the Vulcaness pressed her lips into a thin line before she replied, "As you wish, Elder
Selek." She vanished behind the double doors where Bones was already preparing himself. Jim and Joaquin quickly followed her, steering the stretcher in front of them.

“Jim?”

Kirk glanced back at the older version of his first officer and the gentleness and sympathy he saw in those familiar, yet foreign brown eyes warmed him. "Have faith! Your presence always helped them who were – and are! – close to you."

The complete trust of the old Vulcan made young captain give a short smile; then the doors closed.

Inside of the anteroom, Jim gave Joaquin sterile coveralls, caps, gloves and covers for their shoes, while a nurse took away Selek's robe that still covered Khan. Jim watched his beloved shiver and sensed his growing dread. Closing the distance to him, he took his hand and bent over him.

"I'm here, Nien," he whispered and stroked through the sticky hair, glad that he hadn't put on the gloves until now. "I'm here, love. You're not alone. I'll stay with you – through the whole surgery. Don't worry, honey; I'll watch over you."

Glassy blue-green eyes looked at him, and slowly the Augment relaxed as McCoy gave instruction for the anesthesia. A young man in his late twenties, Daniel Corrigan, began to clean Khan's body, a procedure that made the superhuman tense. Jim's soothing voice and Joaquin's soft petting of his older brother's hair did the magic again. Khan remained still, yet it was evident that his mind was far from its usually brilliant functions.

Outside of the operating area, Selek looked through the view window into the operating room and waited. Several minutes later five figures, clad in surgery green, appeared. One of them, Jim, steered the stretcher. One glance showed the Elder that Khan was anesthetized. He watched the Augment leader be transferred onto the operating table. Jim stayed near his head, holding one of Khan's hands in his. Joaquin laid down on a biobed beside the operating table, offering his right arm for the blood transfusion.

Selek waited another moment, then he took a deep breath and turned away. He knew that he could do nothing for Khan, but maybe for Sarek. He remembered all too well the 'Journey to Babel' as he referred to the travel of the Enterprise to the conference place Babel in his timeline when his parents were aboard, and his father suffered from the same illness. It had happened more than eight years later than now, and he assumed that the happenings of the last two years had sped the process of the congenital heart defect.
His McCoy had risked a lot as he operated on the ambassador aboard the Enterprise during a battle. And he, Spock, had risked his life too when he agreed to be injected with a drug that increased the blood production in the body. That was the only way he had been able to donate enough blood to his father. But, as far as Selek knew, today the drug had barely gotten into the testing phase – it still had been at his time eight years later. Maybe he was now needed to give blood to Sarek again – together with his younger counterpart, who just stepped out of the turbolift, ashen gray.

Selek cocked his head in sympathy. He had not been on speaking terms with his father when this incident happened in his timeline, yet he remembered precisely how he had feared for his father’s life. And his younger counterpart had already lost so much and had thought for a few hours that he also had to mourn his father. Vulcans didn’t believe in higher beings, but just right now the Elder was almost ready to pray to the old Goddesses before Surak’s times that the surgery wouldn’t end in a disaster.

"Spock," he acknowledged the younger Vulcan's arrival with a short nod. "I assume you have learned of our father's illness and you are here to give him blood."

The first officer of the Enterprise lifted a brow, trying to reveal nothing of the concern that tore at his control – for both men who were important in his life: His father and his T’hy’la. "Correct." His gaze wandered to the double doors. "Are Jim and Khan…?"

"Khan is in the care of Leonard, Dr. Corrigan, and other physicians. Jim and Joaquin Weiss went with him – the youngling has the same blood type as Khan, and Leonard hopes that is enough to save Mr. Singh." He made an inviting gesture. "Follow me; I will lead you to the operating room where our father waits."

Spock nodded hesitantly. He could sense Jim's inner turmoil, felt his worry and fear, and wished for an opportunity to support his soul-brother and captain, but just now there was nothing he could do. For the moment they had to go their separate ways – Jim would stay with his mate and he, Spock, would aid the healers that would save his father's life.

A minute later, they arrived at the operating room. Through the view window, they could already see Sarek lying on the surgical table, and Selek pointed to the double doors.

“Prepare to join the surgery in a spare bed. I will follow you in a few minutes. I have some calls to make which certainly will give Vice-President Whitman and the others some support when they go against Admiral Luengo and Section 31.”
The younger Spock lifted a brow. “What do you have in mind?”

For a second something close to a hint of a smile curled the Elder's mouth. "An old friend once said 'Traitors always reveal themselves when they believe themselves cornered'. And I will give them exactly that idea."

“What traitors are you referring to?” Curiosity shimmered in the first officer’s eyes.

"Section 31 can't have acted all alone – not to this extent. They must have some back up from members of the Federation Council. And if we want to eradicate Section 31 and its supporter once and for all, we have to get them all!"

ST***ST***ST

"Ma'am, are you all right?” It wasn't the first time Palmer asked this question as he glanced with concern at Lady Ania Morganth who sat in the vacant center chair, pale as a table cloth. The Betazoid had started to sway about half an hour ago and had whispered the words ‘so much in pain' and ‘so much fear'. Palmer had been ready to call medbay, but Sonik who was still at the helm despite being acting captain, had prevented it. He understood quite well what was going on – that the ambassador's telepathic skills were assaulted by someone's turmoil. No physician could help her; this much the Vulcan knew.

Ania took a deep breath and blocked the strong emotions which had changed – they were more distant now, but still intense. "I'm all right, Lieutenant," she murmured, which was a transparent lie given her ashen face and her far too wide eyes. "They are still suffering but in different ways," she murmured and met Sonik's gaze.

The Vulcan lifted a brow, becoming aware of a soft tugging in his subconscious that startled his firm self-control. "Is it Commodore Wesley?" he heard himself asking before he could stop it. There was absolutely no logical reason to assume that something bad had befallen his superior, yet there was this nagging in him that could only to be described as worry. As a Vulcan, he shouldn't feel concern, especially when there was no real cause for it, yet he did.

"No," Ania answered quietly. "I'm familiar with the commodore's aura by now, and it's not his pain I sense. It's a combination – three persons are involved. Two are hurting emotionally – the third one because of injuries and deep dread and… exhaustion.” She shook her head; strong compassion brimmed in her dark eyes. "It changed a few minutes ago – felt further away – no longer in closer range, yet I can still sense them. One… one is becoming fainter?" Confusion sounded in her voice, and Palmer nodded slowly.
"I intercepted a call a few minutes ago from the Vulcan Academy Hospital; this time not hailing us concerning Ambassador Sarek, but the *Excalibur*. Coordinates were given to them. Someone – or several people – were expected at the hospital besides Sarek. Maybe those you sense were beamed down to receive treatment that couldn't be given aboard."

Sonik watched his fellow human officer. "A logical deduction, Lieutenant," he said before he returned his attention to the helm, holding the *Lexington* at starboard of the *Excalibur*, while the *Enterprise* flanked the other side of the ship whose captain was a traitor.

ST***ST***ST

Aboard the *Excalibur*, Barnett and the others tried to bring some order to the chaos after the fights – and Khan Noonien Singh's seizing of the ship's auxiliary compartment. It was incredible how skillfully the Augment had managed to change command computer protocols and codes to make certain that the main bridge couldn't regain full function anytime soon – a shrewd move given the fact that Styles was still in command and had to be stopped. After the captain and his two allies had been brought to the brig, Barnett, Uhura and Li, Taylor and the rest of senior officer staff tried to crack the new codes without much success.

Scott had returned to bridge only a minute ago, carefully avoiding Barnett, who was busy with checking the log book, receiving reports, and trying to bring some order to the chaos aboard.

Uhura saw her colleague and friend entering the command central, and she waved him towards her. Scotty had been in the transporter room when Barnett told Spock about the private problems with his father. If anyone could tell her what exactly was going on, then it was Montgomery. Her attempt to learn something from Barnett had been for naught – to be precise, the Chief in Command had first looked surprised at her, and then he rebuked her for being nosy. And Nyota, knowing that her relationship with Spock was unknown, thought it wiser to keep her mouth shut.

But not anymore. As Scotty stepped to her, she switched her headset function to Li, whom she had assisted up to now, and whispered, "Gomery, do you know what the matter is with Sarek?"

Scotty, realizing the private nature of her question given the intimate use of his name murmured, "They sent me out as Wesley talked ter Spock, but I could hear somethin’ before the doors closed. Sarek had a heart attack as a result’ of some heart problems he seems ter have had for a while now. Spock beamed down ter the hospital – no doubt ter donate blood. Even I know that such a surgery needs a lot of blood and given our Vulcan friend's rare blood type – McCoy complained about over and over again. I think they need Spock to operate."
Nyota's chocolate skin paled. "Sweet Lord – poor Spock. First, he lost his mother; then he thought his father dead, and now…"

"May I ask what is going on here?" Out of nowhere, Barnett stood beside him, giving both a stern glance. "Lieutenant, I thought I made myself clear that Ambassador Sarek's condition is not a topic for ship gossip."

"Spock is our friend, sir!" Scotty cut in, risking the admiral's anger again. "And he endured a lot durin' these last years – and durin' the last week when his father was declared dead. Of course, we're worryin' for him now."

Both men glanced at each other, and wonder of wonders, it was Barnett who finally lowered his look for a second. "I know that you consider Commander Spock a friend and I do understand your personal concern for him and his family, yet I must repeat myself: Sarek's illness is not meant for gossip! So keep silent about it!"

"Aye sir!" both answered in unison.

“Good,” Richard nodded. "And one thing more, Mr. Scott, I do appreciate officers who use their brain for more than following orders, and I admire the loyalty you and the other members of the Enterprise’s senior staff display towards your captain, but if I want to speak with someone aboard this ship, it isn't helpful when you beam that person away."

Montgomery sighed. "Aye, sir, I know I caused my own trouble listenin' ter Selek’s order instead ter yers. And ye can fry my ass in the next supernova if ye like, sir, but ter affirm Commodore Wesley’s statement several minutes ago: Khan’s life was and certainly still IS at stake. Ye should have seen the poor lad. That blasted bastard Finnegan and his fellas beat and kicked him mercilessly, before they dragged him up the emergency staircase ter medbay ter get him frozen in the damn tube! Jim prevented it at the very last minute, yet I dunna know if it wasn't still too late fer Khan. He's badly hurt, and his chances of survival are not good, despite his augmented nature."

“They… they tried to beat him to death?” Uhura gasped, deeply shocked.

"As far as I understood they had orders ter catch him alive, but that didn't stop them brutalizing him til he was barely recognizable,” Scott growled. “He can't even breathe on his own and panicked when McCoy began ter treat him. He's in shock, Leonard said, and only Jim and the kid – Joaquin – were able ter calm him down."
Nyota's heart went out to Kirk and Khan, knowing how much her friend and captain loved the Augment and that Khan's bad condition must worry Jim out of his mind. And her compassion was also for Khan. She had come to respect the superhuman in the last two weeks – even had begun to take a liking to him. Learning what had been done to him made her blood boil. Finnegan! Of course! This guy had been a bully like none other during her time at the Academy, and she knew that Kirk and he had some run-ins that turned nasty. She could be wrong, but she was almost sure that Finnegan only had brutalized Khan to take revenge on Jim.

She felt a lump rising in her throat. “Poor Jim!” she said quietly. “He must be mad with worry by now.” She had witnessed the barely controlled hysteria Kirk had suffered the few minutes on New Vulcan between the moment Khan had been kidnapped and brought aboard the Excelsibur until the second they were finally able to follow the former dictator. And Spock had told her about the mental link both men shared. Jim had to be filled with dread for his mate.

Barnett watched the two Enterprise officers carefully, but Uhura's comment confused him. Her first reaction concerning the bad news about the Augment’s condition was ‘poor Jim’ and ‘mad with worry’? Well, Kirk had shown concern for the superhuman – heck, the young captain had been frantic! That was more than ‘normal’ worry. And as he looked at the beautiful face of the Starfleet’s communications wonder-girl, and the crazy but genial Scotsman, and he knew that he missed something critical concerning the troublemaker and his new friend. But he couldn't put the finger on it.

Scott nodded as Uhura's words. "I think so. Jim was pale as a sheet. Hell, even Spock showed some concern. And all this because damn Finnegan thought it would be a nice payback fer Jim and Khan kickin' his ass at Gamma 12!"

"Mr. Scott," Barnett rose to speak. "Is there evidence that the harm inflicted on Khan was done under Finnegan's command?"

"The guys in medbay that Jim and the others sent to dreamland belonged ter Finnegan, who lay in the corridor outside, nerv-epinched by Mr. Spock, as I heard. Given Finnegan's character that I had the displeasure ter experience on Gamma 12, I bet my last shirt that he's responsible fer Khan's condition."

"This brat is rotten a bully!" Nyota felt her control slipping. "At the Academy, his only joy was tormenting or blackmailing the younger and weaker ones, and now he beat a man, who…"

"…Who was already sedated so that he could barely stand!" a female voice said from the turbolift.
Uhura’s eyes narrowed. “You!” she spat, glaring daggers at Carol Marcus while she stepped threateningly toward the other woman. "You have the nerve to come to the bridge and…"

Before Barnett could act, Scotty was already at Nyota's side and held her back with a soft grip. "Uhura, lass, calm down. Dr. Marcus tricked us all, includin’ Khan with the show she performed.” He returned Uhura’s disbelieving and still very angry glance, and added, “The capt’n told us and Commodore Wesley, while I was down in medbay. Dr. Marcus helped Khan ter escape after they were beamed aboard and…”

"… And he more or less forced me to flee as the Elite Security was about to break through Auxiliary entrance. He was confident that our pursuers would kill me, but he knew that he was needed alive, so he made me escape through a support shaft and stayed behind to cover me.” She bit her lips and wrapped her arms around herself. “I watched what they did to him, but I couldn’t do anything to help him. It… it was terrible. They didn't stop, even as he laid on the floor and tried to shield himself. They… they only went on and on, and… Finnegan… he kicked him over and over again.”

“So it was correct to put Finnegan and his men into custody for attempted murder!” Richard growled, feeling his blood beginning to boil with disgust and anger.

Only now Carol realized who stood there. "Admiral Barnett, sir!” She sighed. "Sir, it's a relief to see you alive and well again.”

The Chief in Command nodded shortly. "Thanks, Doctor Marcus. And did I get this right? You pretended to be on Norton's side but you…”

"I feared that Norton would stop at nothing and would even assault New Vulcan to get Jim, Khan, and the others. They know too much. He and Luengo had to silence them. As Norton seized the Enterprise, I was in medbay, dismounting the devices which had monitored the cryotubes of Khan's crew. I realized what was coming. I got the idea just hours before after we passed by the Excalibur and slipped away by a hair's breadth." She bowed her head. "I'm sorry that you all thought I'd betrayed you, but…”

“You did a damn good job,” Uhura all but grumbled. “I truly believed your show.”

"I tried to give you guys hints,” Carol defended herself, spreading her hands. "Remember what Jim said to me and my replies? I hoped he would get what I was really up to, but I think there was too much going on to let my answers sink through."
Nyota pursed her lips, as she remembered the few words Carol and Kirk exchanged in Selek’s office.

“And there I thought you understood everything.”

“Oh, I understood everything, Jim. I still understand perfectly well what is going on here!”

Yes, Carol had tried to tell him that she was very aware of the illegal actions Norton had taken. And there had been the short reply before Khan and the others were beamed aboard the Excalibur.

"Carol, you know the truth. All I told you were the facts. Don't support those who are the real reason for the mess and all the pain you, the others, Nien and I went through last year."

“Facts can be twisted, as you certainly know!”

Uhura sighed deeply. "Afterward your words make sense – an entirely different sense given the game you played."

"Yes. I admit it wasn't easy to read between the lines, but I didn't dare to say more. Norton is no fool.” She took a deep breath. "I'm sorry about what happened to Khan. I won't forgive him my father's death, but Jim is right. He has earned a second chance. I told Khan that much."

Barnett had listened to the talk and had crossed his arms in front of his chest. "I hear from all sides that Khan ‘has earned a second chance’. True, this war could've been much worse without him – especially on Turkana, at Aldebaran, and at Tammeron. I also learned from Wesley what had happened to him during his forced stay with Section 31, and I have to admit that this man has all the rights in the world to press charges against his tormentors. Yet I'm still thunderstruck that the entire senior staff of my flagship, including one of my most impressive commodores – even the Vulcans – are so eager to protect him.” He looked at Carol. “I would have expected that at least you would report him, but even you covered for him.”

“Have you ever met Khan in person, sir?” Scott asked, and as Barnett shook his head, Montgomery sighed, “Well, he’s special. Very special. He’s brilliant, utterly loyal ter those who hold his heart, has wits…”

"He's got a lot of tricks up his sleeve...," Uhura threw in, "genius ones!"
“He has proven himself to be a valuable and useful ally,” Carol nodded.

“He also uncovered a part of the conspiracy, together with the captain, Spock and Scotty,” Nyota added.

"And with yer help, too," Scotty smiled in her direction before he addressed Barnett again. "That we made it that far with such a mess of warp-drive is also to his credit. Working with him is pure pleasure."

Barnett pursed his lips and took a very deep breath. “I see. He somehow has wrapped you all around his little finger…”

“And the other way around,” Uhura deadpanned. “He gave us the construction of the SDD to protect ‘Jim's family', as he put it – meaning that he didn't care for us, but Jim really, and so us only by extension. He worked among the crew and has since dropped the whole 'I'm superior to you all' shit. He relaxed. He even joined us for meals in the officer's mess hall, joked with Scotty…”

"Got Keenser to speak more than four words – a novelty," Montgomery threw in with a chuckle.

"… and even relaxed in Spock's presence. That says a lot given their personal history with each other. Khan was about to find a place he felt at ease – it must have been heaven for an outcast like him to be finally accepted – belonging to a place and people.”

Barnett looked from one to the other one; then he stopped short. "Khan worked among the crew? But he is a civilian."

“Well, we were runnin’ out of helmsmen, ye know, and he's a damn good pilot," the chief engineer began reluctantly. "He saved the ship when it was about to be smashed on an asteroid when those damn Klingon idiots attacked us. Heard he fought the pressure due to a gravity malfunction and steered our ship away before it was plastered against a blasted, big piece of rock. Sulu was injured a minute before and so..."

“Don’t tell me Kirk allowed Khan at the Enterprise’s helm!” Richard gasped. "I know that he has no love for regulation, but even he should respect that no civilian…”
“Uh, the captain followed Regular 58b, and named Mr. Singh petty officer for a limited time,” Nyota said carefully.

“Mr. Singh was officially relieved from service before he beamed down on New Vulcan,” Scotty added helpfully.

Barnett was speechless for a second before he croaked. "But Khan is a convicted…"

"No, he isn't!" Uhura cut in. "He was never legally convicted because he didn't face legal trial."

“He is merely accused." Carol murmured.

For another moment Barnett was unable to say anything; then he snorted. "I don't know if I should commend you all for smart thinking, or if I should lock you all away to prevent Starfleet becoming a heap of self-appointed lawyers."

“Na, sir, this we leave ter the shysters,” Montgomery smiled.

"Mm-hm, and you all are going to need some very good 'shysters'," the Chief in Command grumbled and looked in the sheepish faces of the three Enterprise officers, as the intercom whistled.

"Wesley to bridge!" the commodore's voice sounded through the speakers, and Richard nodded towards Li to open an internal channel. "Barnett here!" he answered.

"Sir, Dr. Burmaster's assistant has examined Commander Finnegan and his men. The blood on their clothes and hands are from Khan – and there's more. Two of them have bruises on their knuckles and the sides of their hands as though they were in hand-to-hand combat. Finnegan's boots have fibers of the clothes Khan wore – those are secured now. They're quite torn and bloody."

Barnett nodded grimly. "Commander Finnegan and the four other men are arrested for attempted murder and will remain so. What about the other Elite Security?"

"They all have surrendered. They followed Norton's orders. Commander Genrow, their superior, was most helpful in clearing things up. I think it will be okay to let him continue his duty but under
observation. We have to wait for the statement from the Vulcan government concerning his actions
during Norton's assault on the seat of government."

“I agree,” Richard said. “Are all decks secured?”

"They all are, sir," Bob answered. "Most members of the crew are confused, but I got several
interesting statements concerning the last few days here aboard."

"Excellent. The crew is allowed to return to duty. Concerning the Enterprise… I think the boys over
there are going to need some helping hands – after all the current acting bridge crew is a hurt
lieutenant, two green cadets barely out of Academy, and a little Royalan."

An amused chuckle came through the speakers. "Yes, they're all quite young – and were able
to checkmate Starfleet's Elite Security! I think this will go down in Starfleet's history." Bob sobered.
"I'll beam aboard and take over command. Fifty of my Redshirts will accompany me to make sure
that the Elite Security on the Enterprise will surrender when they wake up. I talked to Lieutenant
Sulu a minute ago. They've begun to clean the air ship-wide, and it will be okay to beam aboard in
the next quarter hour. If you allow, I'll take Mr. Scott with me. The ship is in bad condition, and I
need our Scottish genius to fix her."

Barnett looked at a triumphantly smiling engineer. "You do know that the senior staff is suspended,
Bob? And the same goes more or less for you, too."

“Admiral, we already talked about it. You can’t arrest the whole crew because everyone covered for
Khan. Unlike to the Vengeance, the Enterprise cannot be flown by one man alone. We need every
man and woman should anything go wrong on Earth. I need the crew and some of the senior
officers. Mr. Scott is the best damn engineer in the whole fleet."

"… And Vice President Whitman told me she doesn't want to see Kirk and his people in custody and
that the whole incident should be handled more 'delicately', I know!" the Chief in Command
groaned. Then he turned towards Montgomery. “Do I have your word that you will make no attempt
to leave the Enterprise without my personal permission?”

“Aye, sir!” Scotty nodded. "Yet I ask fer yer permission to contact Capt'n Kirk and update him about
the ship. Knowin' him, he won't have a calm minute as long as he doesn't know what's goin' on his
Grey Lady."
Barnett stared at him – and gave in. If there was one thing you can state about Jim Kirk, then it was the fact that he loved his ship with a passion. "Right, I have nothing against you calling him. But I trust your honor that these calls are only strictly about the ship's status." He grimaced as he saw the other man's eyes widening. "Give me some credit here, Mr. Scott. The little speech you and your fellow officers just gave me concerning Kirk and Khan – and Spock – I know that there is no power in the universe that could prevent you from asking how they're doing."

Scotty beamed at him. “Thank ya, sir!”

Richard had a dozen things to say to that, but he skipped it – after all, the Enterprise’s cliquish staff officers were the reason for the many successes Kirk and his crew had had over the last two years, and also the reason that he, the other admirals, and a part of the delegation were still alive. “Right, then accompany Commodore Wesley. I want a full report of the Enterprise’s condition in two hours.”

“This will be done,” Wesley said, before he added, “Mr. Scott, please come down to transporter room 1. Wesley out!”

Richard watched the engineer leaving the bridge and pinched his nose as he felt a headache rising. God, what a mess! Then he turned his attention towards the two female Enterprise officers, who looked expectantly at him.

“Dr. Marcus, I expect your full report of the events of the last hours as soon as possible. The same goes for you, Lieutenant Uhura, before you return to the Enterprise and consider yourself restricted to quarters except for duty. Help to restore the ship's efficiency, but otherwise remain in your quarters.”

Nyota took a breath to protest – Spock needed her on New Vulcan! But it never came, because Li called from the comms station. "Sir, New Vulcan is hailing. It's… It's the Lady T'Pau."

The two Enterprise officers would have sworn any oath that Barnett paled a little bit beneath his dark skin before he took a deep breath and ordered, "On screen, Lieutenant!"

A moment later the large view window was again a screen that showed the aged face of New Vulcan's uncrowned matriarch, sitting in a dimmed room with a covered window and the Vulcan IDIC symbol in the background. “Admiral Barnett!” she greeted coolly.

"Ma'am," Richard bowed slightly. "I hope Admiral Norton's assault on your person left you
“I’m quite well and already back in my office," T’Pau answered and came straight to the topic without any preamble. "I have learned that you have regained command over the Excalibur which means that her treacherous captain is in custody. Are you updated concerning Vice President Whitman’s mission?"

Barnett didn’t bother to ask how she knew about the top secret mission on Earth and shook his head. “No, Ma’am. We agreed that we would keep silence until…”

“Have you had a chance to contact one of your fellow admirals who is involved in the mission?"

Richard took a deep breath. "We agreed on a particular frequency that can be used, but only in case of emergency."

"Hail them. If you want to eliminate the danger of Section 31 once and for all, you have to get the instigators – namely those men and women within the Federation Council, who support Luengo in secret. Selek and I have an idea how to get them, but it has to be done in concert with Luengo’s exposure."

If Richard was irritated by T’Pau’s stern interruption, he didn’t show it. “May I ask what you have in mind, Ma’am?” He was cautious whenever it came to the matriarch, because even if she was a Vulcan who followed Surak’s ways to the very last word of his teachings, she could be dangerous. How razor sharp her mind and her will had been proven more than 120 years ago, as Vulcan experienced its own share of internal conspiracy that had been revealed by a very young T’Pau and another captain of another Enterprise – the first ship with this name in the newly founded Starfleet.

The matriarch lifted a dark eyebrow at Barnett’s question. “I want to cite one of your Terran proverbs: Cast out the devil with Beelzebub. Or perhaps another proverb is more fitting: The rats will leave the sinking ship first. Selek got a the report from Captain Kirk about everything Luengo and his fellows did, including copies of the records the scientists of Gamma 12 made as they abused Mr. Singh’s crew for their experiments."

Barnett gasped. “Dr. Green experimented with…”

Again the Vulcan Elder didn’t let him finish. “Selek also was able to copy the records of the pathogen Professor Dashwood and the others designed from the Rigelian flu together with some
elements of Mr. Singh's DNA, mainly his enhanced immune system. The pathogen…"

"One moment, Ma'am!" Richard said, lifting a hand. "I was informed that the Klingons are developing…"

“Luengo twisted the facts. It's not the Klingons searching for such a biological weapon, but Section 31 – to eliminate every living Klingon. This is the real reason why Mr. Singh was sent to the LSH labs in Nevada and had to serve as a lab rat. The pathogen is immune to any known antidote and neutralization is more than difficult because of the augmented DNA that repairs itself.”

On the bridge several gasps and murmurs were heard; everyone was as shocked as Barnett was, as he whispered, "And Selek has evidence of this… This insanity?"

T'Pau nodded. "Yes – and more. I suggest that we send everything to every single member of the Federation Council. Those who are part of the conspiracy or have knowledge of Luengo's true intentions, will reveal themselves by their reaction and so trusted security personnel have to be present to get them in time. But this step has to be done in unison with the arresting of Luengo and his fellows so that they cannot warn each other in advance."

Barnett pursed his lips for a moment, before he murmured, “Let me guess. This is Selek’s idea.”

Again the old Vulcaness simply lifted a brow and that was answer enough.

"When you say you have incriminating information from Kirk, then obviously it is Starfleet. I want to check it first, before…"

“I invite you down to my office to have a closer look at the records Selek sent me minutes before our seat of government was assaulted by Admiral Norton.”

“A clever move, I have to give him that,” Barnett murmured. “Where is Selek now?”

The aged face didn't show anything. "He's still in the hospital donating blood for Sarek's surgery, but he will arrive soon." T'Pau cocked her head. "My assistant will give you the coordinates for transport. I expect your arrival within the next five minutes.” The screen went dark and showed a moment later the ball of New Vulcan again.
'Vulcans are polite – my ass! If there is anyone who can make the leading admiral of Starfleet feel like a four-year-old being rebuked by a teacher; it's T'Pau,' Barnett thought, shaking his head. "Commander Taylor, you have the con 'til I'm back. Please don't hesitate to contact me should something come up."

Quickly, he left the bridge before Uhura was able to refer to the topic of her being restricted aboard the Enterprise.

Wesley, Scott, and four Redshirts materialized in the Enterprise’s Auxiliary and looked straight at four beaming faces – well, one was motionless as an oyster, yet the pitch black eyes of the little Royalan seemed to laugh. Bob glanced at the scarred and obviously exhausted Sulu and then at the two other young men who looked more boy than adult. ‘And those four brought a whole troop of Elite Security to their knees! Incredible!’

"At ease, Gentlemen," he said as they quickly remembered protocol and came to attention.

That seemed to fire the starting pistol because Scotty quickly closed the distance to his crew mates. "Sulu, you're the best!" he grinned, clapping the helmsman on the back before he pulled Pavel and Kevin into a rough embrace. "Lads, I owe ye a bottle of the finest whiskey. Mark my words!" Then he rushed to Keenser and gathered him into his arms, earning him a protesting gasp that he ignored. Lifting the tiny Royalan almost over his head like a toddler, he laughed, "And who initiated the mission, got the boy out of medbay, and tricked McCoy's biobeds? Of course my little climber!"

"Down!" Keenser grumbled asking himself what had gotten into his human friend.

"I thought you loved heights," Montgomery teased, before he set the Royalan down, whose eyes seemed to ask 'Have you finally lost your mind completely?'

"Keenser saved Kevin and me when we were caught in Auxiliary hidden from Security. I zink he was about to shoot us; then Keenser dropped down on him literally and beat ze daylights out of him," Pavel said, looking fondly at the little alien.

"Ha, never underestimate the little people!" Scotty chuckled.
"I don't think you're referring to the fairy realm now, Commander," Riley smirked. As an Irishman, he and the Scots shared a lot of myths and legends.

Wesley had watched the short encounter with amusement; then his communicator sent a signal he quickly answered. "Wesley here."

"Lieutenant N'Hale here, Commodore. Our men have secured the decks which were infiltrated from Norton's men. They are all still unconscious even though the air is clean now. The gas has been removed from the climate system. I checked crews' quarters. The Enterprise’s crew is also still out."

"Right, Lieutenant, take the Elite Security to some rooms you can lock them in. Two of your men should go to the brig to set the imprisoned crewmember free – but only the Enterprise’s crewmembers. All civilians should remain in custody – should they still be there. If not, search for them and lock them up again. They are accused of some very grave crimes."

"Aye sir, I'll report when the work is done. N'Hale out!"

Bob closed the communicator and looked at the four Enterprise officers. "All right, Gentlemen, I want an exact report of everything – every detail you can remember. I also want to check the log book, so please someone sent me a copy on my PADD. And afterward, Mr. Sulu, you take your leave to medbay. You, son, belong in the next available bed – and that's an order!"

"Commodore," Pavel dared to address the staff officer directly. "May we learn what happened to Khan? Joaquin felt his pain and despair, and he and Selek beamed over to ze Excalibur, but we haven't heard anyzing from zem. Is Khan okay?"

"Yes, that's the question. And what about the captain, Mr. Spock, and the others?" Hikaru added, concerned.

Bob sighed. ‘Indeed, thick as thieves!’ And then he began to explain the events aboard the Excalibur, hoping that his lovesick protégée and the Augment were going to be all right.

ST***ST

Time is an odd thing. For some it seems to run, for others, it seems to creep. The same went for Barnett while he consulted the records and reports T'Pau showed him, and the same also went for the
present people in the two surgery rooms in the New Vulcan hospital.

While Spock would always point out that time never alters its speed, he found it difficult to track the minutes as he lay beside his father on another biobed and watched the surgery, donating his blood. Selek had already given a lot – almost a liter and Sorel had practically ordered the Elder to lie down and to rest but had been ignored. Spock had to admit that he felt some amusement as he witnessed his older self, refusing to give himself a pause and discussing with the physician the logical and illogical reasons for resting when something else very important had to be done. The first officer remembered all too well similar moments with McCoy, only that the CMO’s arguments were loaded with one-sided emotional outbursts, while Sorel kept calm and controlled. Spock was able to detect some irritation in the healer, as Selek left on unsteady feet.

That had been two hours ago, and Spock couldn't deny that his control struggled with his nagging worries for his father – who was still being operated on – and for Jim. He could sense his T’hy’la’s fear like an everlasting echo deep in his soul, and he wanted to reach out and soothe Kirk. Emotions! It was difficult to deal with them sometimes, yet there was no Vulcan who was truly without them.

A female healer bent over him and checked his vitals. "Are you experiencing nausea or chill, Spock?" she asked through her medical mask, and he shook his head carefully.

"No, I am all right," he answered, which was – if he would admit it – only half the truth. He did feel a little bit cold and even sleepy – both symptoms of the blood loss.

She removed the needle from his arm and treated the small wound quickly. Sorel looked over his shoulder; his gloved hands were green with Sarek’s and Spock’s donated blood. “The surgery was successful,” he informed the young half-Vulcan. “Your father will be weak for quite a time, and he needs a lot of rest, but his health will be fully restored after some rehabilitation.”

“My clan owes thee,” Spock answered traditionally. To thank verbally for someone fulfilling his duty would have been an illogical act in the Vulcan culture.

He allowed himself a deep breath as he lifted his head and stole a glance at the pale face of his father, and only as both healers turned away, did he closed his eyes in relief. His father was out of danger and would heal. Only now he realized how tense he had been during the last hours.

Down the hallway, in another surgery area, the tension was even stronger. Joaquin had donated all the blood he could and rested on a biobed beside the operation table, where McCoy, Corrigan, and T'LEY still tried to save Khan's life. Jim sat beside Nien's head and held one of his beloved's hands, hoping that the touch and his proximity were enough to give his bondmate strength even in his
sedated state. Adrenalin still coursed through Kirk’s system, while he listened to the surgeons’ exchanges of statements, suggestions, and demands.

Nien's torso was covered by a portable pressure chamber through which the surgical procedure was done, necessary because of his punctured lung. His liver had already been mended with a plasma regenerator, but there was still internal bleeding. Bones had aspirated the abdominal cavity twice before he had been able to close veins which had ripped under the brutal assault of the kicks and blows the Augment had received. As McCoy put it, "Any other human being would be dead by now."

From time to time, Jim looked at Joaquin, who had turned onto his right side and watched every movement of the doctors with eagle eyes, yet he was alarmingly pale and utterly exhausted, which was no wonder. After all, the Augment boy still suffered the side effects of the long cryosleep. A thermal blanket offered him some warmth, but Kirk saw him shivering and knew that the cold Joaquin felt had many reasons – blood-loss, exhaustion, fear, shock… The kid was ready for a good, long vacation; that much was sure.

But Jim's primary concern lay with Khan. Seeing him lying there on the steel operating table, white as a sheet with sunken cheeks, shadows beneath his eyes covered by the long lashes, and blooming bruises, he looked more dead than alive. And Kirk had a hard time repressing the dread that lurked deep in his soul. He somehow knew that Nien maybe would sense it, if he allowed his fear to come to the surface, and this wouldn't help the superhuman at all.

"Dammit!" McCoy growled as he looked at the screen of the life support system. "He'd lost so much blood I'm surprised that his heart works at all."

Joaquin, feeling dizzy and freezing like a little puppy, lifted his head. “If you need more, then…”

Daniel Corrigan, who had made his interplanetary examination only a few months ago and was now specializing on Vulcan biology, glanced first at him and then at his colleague. “No way! We can’t take more from Mr. Weiss, or…”

"Bones," Jim said quietly, clinging to the far too cold hand of his soulmate like a lifeline. “Maybe you can use my blood plasma to give his body at least a little bit more fluid?"

“Jim, you know that Khan’s blood differs from hu…”
"I've got his cells in my blood, as you of all people know," Kirk interrupted him, desperate enough to speak about his changed biology in the presence of strangers. "And I he doped me during our flight from Turkana with a drug made from his blood. This certainly is..." He stopped as he caught McCoy's exasperated glare, while Corrigan glanced baffled at him. Even T'Ley showed a hint of surprise.

"Jim!" Leonard groaned. "You know what you just spilled?"

Kirk's face became stern while he looked at the two other surgeons. Grabbing the bull by the horns, he said, "What I'm telling you now, is top secret, and I trust that it will not leave the room. I got radiation poisoning during an incident in my ship's Engineering compartment more than a year ago. Khan's blood healed me, but it left traces – changed my cells and my DNA just a bit. I heal quicker, and I'm more vital. The imprint he left, so to speak, was refreshed because of a similar treatment he gave me after he freed me from Klingon captivity; that was made from his blood, too. This circumstance is now an advantage because you can use my blood plasma for him." He drew a deep breath, feeling new fear clenching his belly. The thought of losing Nien was agony! "Please, at least try it! I wouldn't be able to handle his death!" Oh yes, love was selfish!

Daniel bit his lips, and his gaze roamed over the captain's face. "You're… augmented, too?"

Usually, Jim would have rolled his eyes, but he was far too tense for it now. "Let just say that I'm a little bit healthier and stronger than before; that's all. No super powers or that kind of stuff. My blood is maybe Nien's only chance!"

Bones grimaced. No super powers, all right! If he remembered correctly that minute in which Kirk sped through the hostile lines of Elite Security aboard the Excalibur, he couldn't find another description other than 'super powers'. And the CMO was very glad that Spock had covered it by pretending it had been him who hurled those men out of the way by mimicking Kirk's action only a second after Jim's attacks.

Corrigan took a deep breath and nodded at the captain's words, acutely aware of the secret's weight, but also of the medical confidentiality he was bound to. T'Ley just bowed her head in acceptance and turned away to prepare the blood drawing supplies to extract the plasma from the blood sample. "I will first check if your blood plasma will be compatible with Mr. Singh," she simply said, and returned with the equipment. Kirk offered her his left arm; his right hand still clutched Khan's fingers; his gaze hung on the pale features of his beloved. 'Hold on, honey; I'll help you. No matter how much they have to take to keep you alive, but the Grim Reaper will not get you today – or anytime soon!'

The next minutes seemed to stretch into endlessness. The seconds as T'Ley tested the blood plasma until she finally exclaimed that it wouldn't harm Khan but would help him, felt like hours. Jim sighed
in relief at the Vulcaness' words and beaming at a grumbling McCoy; he watched as T'Ley took blood from him.

‘Nien stopped his deadly assault back in San Francisco when he smelled his blood in me. Will he be able to smell mine in his veins, too? Are we brothers then too?’ Jim asked himself.

The next quarter hour was spent removing the splintered rib from Khan's lung and mending all his broken bones – Bones doing some of his miracles as he healed the broken body as best he could. Another critical moment came and went when the med scanner beeped an alarm because of swelling in the brain – a result of the brutal beating, yet Khan had suffered more than a concussion. McCoy knew that the enhanced nature of the former dictator would perhaps prevent worse, but a traumatic brain injury always bore significant risk, and Leonard hadn't the slightest idea how the brain of an Augment would react to that kind of damage – if the brain cells would restore themselves or not.

The alert and Leonard's frantic reaction, followed by him and Corrigan working with some devices at Khan's head, raised new alarm in Kirk and Weiss.

“Bones?” Jim demanded, and McCoy sighed, "The concussion is worse than I thought. He has the symptoms of a TBI." He gave Kirk a look full of understanding and sympathy, while he murmured, “I'll do my best, Jim!”

Kirk closed his eyes and sent a prayer to any higher being that might listen, while Leonard continued his work with his colleagues. Then his eyes found Joaquin, who lay on his side. His knees were drawn up and he watched with big, fearful eyes as the surgeons worked on his brother. Usually, Jim would have gone to him to gather him into a brotherly embrace, but he couldn't. Somehow he knew that his hold on Nien's hand was the only anchor to the living that the Augment had left.

The surgery lasted almost three hours, despite the modern medical technology, and the CMO felt bone tired as he finally called the surgery complete. Thanking Corrigan and T'Ley for their work, McCoy lifted Khan from the operation table on a portable biobed with Daniel's help to take him to the recovery room next door. Bandages were wrapped around the Augment's arm, leg, chest, and abdomen; dark bruises marked the alabaster body, and Nien remained connected to the life support system.

McCoy stretched his back and glanced at Kirk and Weiss; one was still lying on the biobed – Joaquin – and one sat on the chair looking as though he was about to fall off – Kirk. Bones caught the demanding stares of the two other males, while Corrigan washed his hands behind them.

"And?” Jim prompted as Bones kept silent.
McCoy looked at his friend and saw the intense worry that had burrowed wrinkles around Jim's usually bright, now glassy blue eyes. "I don't know, Jim," he said truthfully. "We did all that we could for him. Only time will tell if it was enough."

Kirk gulped down his rising fear. "But... But you stopped the internal bleeding, and... And he got enough blood, didn't he?"

"The damage was so much; even a Vulcan would have trouble healing. I know that Khan can deal with a lot, but truly, Finnegan and his men did their best to beat him into the ground." His gaze found the Augment leader, who lay like the dead beneath the sheet T'Ley had spread over him. "Just have faith, Jim. Maybe he can sense it." He nodded towards Corrigan. "Let us take him to the recovery room."

Kirk rose unsteadily to his feet, and Bones, who instantly wanted to protest, closed his mouth with a click when he caught the fierce gaze of his friend and captain. Well, he knew a protest was doomed to fail. Nothing would stop Jim from remaining at Khan's side, not even his weak condition.

Grumbling something under his breath, he nodded at Jim, and together they left the operating room. Joaquin followed them with weak knees, supported by Corrigan.

The next room was cool by Vulcan standards, but for humans it was comfortable. The portable biobed was placed beside a life support system, and quickly McCoy linked Khan to it before he got a chair and placed it beside the bed, helping Jim to sit down. Ordering Joaquin to lay down on a spare bed, the CMO began to remove his gloves and washed his hands.

Jim still gripped Nien's hand. His back was giving him hell; he was exhausted and stiff, but it didn't matter. Nothing but the soft beeping of the monitor that told him that Nien's heart still beat and the gentle hiss of the air supplying the oxygen to his lungs and the movement of the bandaged chest.

"It will be about an hour before he wakes up," McCoy said groggily, "maybe a bit sooner. Hard to tell with him being all super – and the sedative Dashwood developed. I'm not entirely sure."

"I'll stay with him," Jim murmured.

Bones rolled his eyes. "Of course you will," he sighed. "But you should get rid of the sterile clothes – or the cap and the mask, at least." He stepped to Jim to give him a hand, but at that moment the
biobed gave an alert, and McCoy whirled around to his patient.

"Sweet Lord!" he gasped as he saw that the Augment's eyelids flutter. "He can't wake up already! That's not pos…"

Khan's eyes opened and stared blankly ahead. In two steps, McCoy was at his side; Corrigan followed within seconds.

The pale, bloodshot eyes of the former dictator moved quickly around. They took in the lab-like room, the monitors above him, and finally found the two figures who bent over him, wearing sterile clothes.

Bones saw horror rising in the superhuman's eyes, and shocked he realized that Khan, still sedated, misunderstood the situation he was in. His surroundings reminded him of the time he was the scientists' captive.

"Khan, you're safe!" he called, but his words didn't reach the Augment, who began to panic. Bones ripped the mask and cap from his head and bent over the enhanced man, hoping that Khan would recognize his face, but his attempt resulted in the superhuman's wild thrashing.

“Nien!” Jim still clung to his bondmate’s hand, bent over him, and tried to calm him down, but the blue-green eyes saw Jim – and didn't recognize him. They only mirrored terror. Then the Augment's body arched; he ripped his hand away from Kirk's soothing hold and grabbed his mask. The signals of monitor above the biobed went wild showing the Augments pulse racing dangerously.

"Quick, the sedative!" McCoy shouted, knowing that the Augment's mind was too far gone for him to reason.

Then, all of sudden, Khan's body went limp and his eyes closed; above him, the monitor let out one long shrill sound. The bio-signals had flatlined.

TBC…

Chapter End Notes
I know, this is certainly the meanest cliff-hanger of all… And many of you will think, ‘hey, Khan is an Augment, of course he can overcome such a physical and psychical stress. But, please remember, everyone has his limits – and Khan had been pushed over his own limits far too often…

Regarding the ‘cliffy’ I will not speak of the next chapter and what you can expect. Only that there will be some serious twists…

I hope you enjoyed the new chapter nevertheless – and that you all have a nice Advent time.

Love

Yours Starflight (who will seek cover now – smile)
Chapter Notes

Hi, my dear readers!

Thank you so much for all your reactions. I know that the last cliff hanger was one of the meanest I ever wrote, and I can understand that you all are sitting on the edge.

So, to release you into calm holidays, you get a little Christmas-gift from me now: The next chapter.

Because I don’t want to give any spoilers, I will not give a little pre-view this time.

Have fun with the new update

Love

Yours Starflight

Chapter 77 – The power of love

The moment the monitor in the recovery room sent its long signal that told of death's finality; a shout of sheer pain escaped Jim, accompanied by Joaquin's outcry. Panicking, the Augment boy left the spare bed and staggered towards his brother, while Jim bent in despair over his bondmate and called his name frantically.

“God dammit, it’s the shock! Defibrillator, quick!” McCoy shouted over his shoulder towards T'Ley, who had already slipped out of her scrubs. In a few seconds, she brought a portable defibrillator, while Corrigan made short work of the bandages around the Augment's chest.

"Jim, step aside!" McCoy ordered, and he saw his friend's eyes wet and brimming with despair. "Gel!" he snapped towards T'Ley, who already had the needed tube in her hand. A moment later she had prepared the two pads and Bones pressed them on the superhuman's chest. "200 joules, 3-2-1, now!"

Khan's body arched up as the energy bolted through him to stimulate the heart and restart its function. Bones' gaze hung at the monitor above and for five seconds there was a heartbeat before it stopped. "Once more, 300 joules, 3-2-1, now!"
Again the charge reached the heart instantly – and this time the rhythmic signal showed that the heart began to work.

"Heart rate increasing. Twenty-three, thirty-seven. BPM is forty-eight now." T'Ley gave McCoy the readouts. "If his heart rate continues, I believe he will stabilize soon."

"Adrenalin, four units!" Bones ordered, and Corrigan hurried away to get the demanded serum.

"Is he safe?" Joaquin asked hoarsely which Jim's mind was screaming as well, yet Kirk didn't find the strength to voice it.

"I can answer that in a few minutes, son," Leonard murmured, still watching the monitor. He didn't need to look at Jim to know how terrified his friend was. His heart went out to Kirk, yet he couldn’t comfort him like he wanted. Khan needed his full attention. "Dammit, his brain activity is confusing," he said quietly. "It is as if he wants to shut down, but is augmented nature won't allow it." He glanced down at the pale face. "Don't you dare to give up now, Noonien! Don't you dare to leave Jim and your little brother behind, or I'll kick your ass into the next week!"

Jim didn’t listen to Bones’ rambling. His own heart beat painfully slowly; ice seemed to flow through his veins, while a lump was in his throat – bitter with fear. This couldn’t happen! Not now, not after they made it so far! Kirk’s whole being was fixed on his bondmate; his soul was crying out to him in rising panic, ‘Don’t give up! Come back to me! Don’t leave me! Please, Nien, come back to me!’

“Jim!”

That voice was, besides Nien’s, the only one that could get Jim Kirk's attention at any time. Looking over his shoulder, his gaze found the tall figure, clad in hospital clothes. His normally shiny, black hair was tousled, and he supported himself on the door frame.

"Spock!" It was a shout of relief but also for help. Somehow he knew that with Spock's presence, hope had a better chance of winning. It was illogical, this much Jim's mind was aware of, but the deep faith he had in his Vulcan soul-brother woke the almost childish belief that everything would turn out to be all right because of his arrival.

Spock had rested in a separate room beside the PAR, where his father lay when he had sensed something – a rising sensation deep in him. Shutting out all impressions and noises around him, the
Vulcan had listened inside himself, only to be bombarded with bone-deep dread and rising desperation. Jim!

Something was the matter with his T'hy'la. He felt Kirk’s fear, heard him crying out to someone – Khan, no doubt. Something went terribly wrong, and Spock didn’t need to be a genius to figure out what it was. The Augment was on the brink of death.

In a blink of an eye, Spock had pulled out the needle that supplied his body with fluid after he had donated almost a liter for his father. Ignoring the alert his biobed instantly initiated, he flung the blanket aside and rose. Nausea washed over him, and for a second he had to support himself on the bed's edge; then his Vulcan control kicked in. Straightening up and pressing two fingers on the tiny wound the needle left, he walked on unsteady feet towards the door when a nurse stepped in.

“Commander,” she addressed him without preamble. “You have to stay in bed for…”

"No time!” Spock pressed out, ignoring his wobbling knees. Forcing his body to function, he slipped past the nurse and headed down the hallway, taking deep breaths to calm his churning stomach. Jim needed him; that was all that mattered at the moment.

"Commander, after a blood loss of almost one liter, your system must be granted some rest. Commander!” The nurse wasn't used to someone who didn't listen or react to her reasonable orders, and she rushed after him. Barring his way, she lifted her chin. "Commander, I have to insist that you return!"

Spock felt another wave of panic coming from Jim and gritted his teeth without even realizing it. "Nurse, you will not stop me from aiding my T'hy'la!"

For a second, bewilderment flickered in her eyes. “Your T'hy'la?” she asked with as much surprise as a Vulcan could admit. Spock used this little distraction to step around her and to continue his way. Again, dizziness gripped him, and he had to keep himself on his feet by using the wall, as he tumbled forwards. His stubbornness was the only thing that made him going on.

He passed the door to the surgery area where he knew Jim would be and headed towards the operating room, as the nurse appeared again. Spock felt a very unvulcan wave of anger waking in him. "Nurse, I apologize for my bad behavior," he said, and the Vulcaness lifted a brow.

“What bad behavior, Commander?”
Spock steeled himself. "This one!" With those words, he simply lifted her at her waist and put her down again behind him. Not wasting another valuable second he entered the double doors to the surgery. Instantly, he heard McCoy's voice ordering someone to adjust the defibrillator, followed by a female voice that reported the return of the heartbeat.

Taking another deep breath, Spock closed the distance to the room he identified as another recovery room like the one his father rested in, and he braced himself against the doorframe. He saw Jim bending over Khan, while McCoy laid the defibrillator pads aside and reacted in his typical manner to let off steam: he groused at the Augment, daring him not to give up and leave them.

Calling out his captain and friend's name, he met Kirk's terrified gaze a second later. Jim looked half relieved, but his body – his soul, cried out. Straightening his shoulders, Spock pushed himself away from the doorway and walked on unsteady feet to the little group, ignoring McCoy's startled, "Spock! Sweet Lord, you should be in bed! And what's with your arm? Don't tell me you ripped the needle out!"

The Vulcan's glance found the Augment – bandages cut open, the pale skin reddened where the electrodes of the defibrillator had reanimated the superhuman's heart, sealed wounds bleeding anew in the area. "What happened?" he asked. "Did the surgery…"

"It went fine, Spock, until Khan woke a bit early – just two minutes ago, stared around at us, panicked, and then just shut down," Bones snapped frustrated, while he quickly took a disinfecting spray and a patch to treat the first officer's arm.

The Vulcan lifted a brow and looked around him. Yes, this was a recovery room, not a lab, yet the similarities were clearly seen. "He thought he was back with Section 31 clutches," he murmured, not caring what McCoy was doing to his arm.

"Jesus!" Jim whispered. "But, I held his hand the whole time and…” He shook his head in despair. "He didn't recognize me."

Spock glanced at Jim. The captain still wore the sterile clothes, the medical mask, and cap, so it wasn't a surprise that the traumatized Augment mistook him for one of his tormentors. "His mind was already shut down when we saved him on the Excalibur," the first officer mused quietly. "He has withdrawn into himself – as a kind of defense mechanism. And now…"

"Now he wants to die rather than to find himself in those bastard's hands again!" McCoy groaned,
finishing treating the Vulcan. "Superb! Jim, maybe it'll help if you try to kiss our sleeping beauty awake or… Spock, what are you doing?"

Sarek’s son didn’t answer, but sat down on the biobed’s edge, rubbed his palms against each other, reached out with his right hand, and placed his fingertips on Khan's psi-points. "My mind to your mind, my thoughts to your thoughts – we are one," he murmured, realizing that this was maybe the only way to bring the Augment back and to save Jim the agony of losing his bondmate.

First, he met resolve, then fear that he tried to soothe. And then the barrier gave away, and the Vulcan plunged…

… Right into Khan’s mind.

Darkness surrounded him; icy wind tore at his clothes and hair, bit into his skin and made him tremble. He stayed where he was and looked around himself. Bit by bit he could make out a corridor; the walls were covered with colorless flags and the floor with an odd synthetic dark material. It smelled of disinfecting agents – and blood.

Carefully, Spock began to walk down the hallway, passed security doors and rooms separated from the corridor by large windows. He saw medical equipment, cots, operating tables, and labs. After passing another corridor, he saw rooms with beds – side by side with lockers on one wall. Faceless people sat or lay there, most of them only children.

The first officer lifted both brows, realizing that this had to be a dark mirror of the labs where Noonien Singh had been bred and lived in as a child. Despite his Vulcan control, Spock felt a small shiver running down his spine. This was NO place to raise a child!

Suddenly, he thought he heard harsh breathing, and as he stopped at the next edge, he saw a small figure jumping up and dashing away, black hair shimmered in the pale light of the old fashioned strip lights, the movements gawky, yet somehow familiar. Spock knew that this was Khan as a boy.

Quickly, he followed the child, calling softly, "Noonien, you do not have to fear me. I will not harm you!"

It didn't help; the boy ran even faster, and Spock had difficulties following him at all. Suddenly the corridor ended in front of a door that didn’t open, and the Vulcan realized that the Augment had slammed another door in his mind behind him to keep the painful world out. Aware of the danger of
losing Khan completely, Spock carefully tried to open the door, and after some tugging it was possible.

As he crossed the threshold, he stopped for a moment in surprise. He was on a high plateau bathed in sunlight. It was warm even for his senses. The air was filled with the scent of plants and rain that seeped into the earth. Animal sounds were heard from afar – the chirping of birds, the shout of a primate, the buzzing of insects. Behind him, a large jungle raised its trees into the skies; in front of him, he recognized mountains, covered with more jungle. A waterfall rushed down into the abyss to the east, and the sun had painted a rainbow over the water. The high plateau ended only a few meters away from him, and there he saw the tiny figure of a boy, who sat on a rock, had pulled his knees to his chest, had wrapped his arms around them and rocked gently back and forth.

Spock took another deep breath; this time was the smell far more pleasant. Then he started to close the distance to the boy with slow steps so as not scare the frightened child. As he walked nearer, the boy lifted his head quickly and looked at him with big blue-green eyes. The sun shone on the small face with the high cheekbones and shimmered in the tousled, almost black hair. Yes, there was no doubt. This was Khan Noonien Singh – only eight or nine years old.

Being aware that his presence was another pressure for the Augment, he stopped dead in his tracks and cocked his head, trying to appear as non-threatening as possible. "Noonien?" he asked quietly, using the superhuman's given name purposefully. Experiences with his human comrades had shown that this calmed them in periods of extreme stress.

The child didn't answer, but continued to look at him. Then he moistened his lips and answered something Spock was unable to understand.

"I am sorry, but I do not speak your language," he murmured. "Do you speak English?"

The boy nodded slowly. "Yes, I do – other ones too," he replied carefully; his stance told Spock that he was ready to flee if it became necessary. "You are not one of them," he pointed out, and the first officer didn’t need to ask to whom the child was referring. Of course, the boy meant the scientists who had bred him.

"No, I am not," the Vulcan replied. "My name is Spock."

Again those pale eyes looked at him – waiting, wagering, curious. "I think… I know your name, but I don't know how." He cocked his head. "Your ears… Is that a mask or are they pointed?"
Of course. Of all things, this was the first thing a human of the twentieth century would ask. Spock felt a hint of amusement but turned serious again in a second. "They are real," he answered.

“I don’t believe in higher beings or magical creatures. Therefore you have to be an alien.”

Again the first officer nodded, impressed by the calm logic the child displayed. "That is correct. I am a Vulcan."

Noonien pursed his lips. “That sounds… familiar, too. Why is that so?”

Spock took another step towards the boy, who shrank back. Lifting both hands in a calming gesture, the Vulcan said gently. "I am not here to harm you, Noonien."

“And how do you know my name?” the boy demanded, then gulped. “You were THERE! I saw you. And you called my name then, too, but you’re not one of them.”

"When you say 'there' you mean the shadow labs," the first officer stated, and the child nodded carefully. "I wasn’t there, Noonien. I saw it through your eyes in your mind,” Spock added – a comment that confused the child.

"How can you look through my eyes?” he asked, bewildered.

Spock crouched down; knowing that he looked less threateningly like this. “Where are we, Noonien?”

“South of New Delhi, near Bhopal,” came the calm reply.

“Have you been here before?”

"Yes,” the boy nodded, "after we escaped the labs and we began to explore the country I came here for the first time. I came later back after I ensured my position.” His words were those of an adult, yet his voice remained that of a child. He glanced to the mountains and jungles on the other side of the valley cut. “It’s calm here, not as noisy and busy as in New Delhi. It’s a place where I can find the peace that I cannot get in my palace.”
Spock lifted a brow. "You speak of your palace in New Delhi – the seat of your government." As the boy made an affirming gesture, the Vulcan asked quietly. "Isn't it strange that a child your age rules a whole country?"

The Augment boy glanced at him, frowning. "I'm..." He stopped himself and looked down on himself. "I'm a child again," he murmured; thunderstruck.

“No, you are not,” Spock replied. “You are a strong man in his early thirties, loved by his family – and his bondmate.”

With wide eyes, the boy stared at him before he fiercely shook his head. "No, I'm... I'm..." he stammered and gulped, realizing how antithetic this all was.

"Noonien," the Vulcan began again, his voice soothing and soft. "This is not real; it's a dream – a memory you love, so you fled to this place to escape the outside world."

A dark glare hit him. “I'm no coward!”

"No, you are not – you never were and never will be," the first officer agreed. "You are one of the most fierce warriors I have ever met, loyal to the death to those who hold your heart, yet you withdrew into yourself and are about to LEAVE those who love you most."

Enraged the boy jumped to his feet. "I would never let my own down, Vulcan, never!"

The first officer had to fight the sudden urge to smile as he heard the way the Augment almost spat the name of Spock's race – the first hint that Khan was becoming himself again; after all, how often had he called Spock by his race before they came to terms with each other? "No, you so not let your family down easily – or the man, who is waiting in the real world for you. He is in agony at the moment, because he thinks you are about to go forever."

The child drew some harsh breaths. "What are you talking about!" he demanded; his boyish voice held a bit of the superior arrogance Spock knew so well from the adult Khan.

"Noonien, this is an illusion you created yourself, nothing more. Right now you are on the planet
that the survivors of my race have colonized. You are in a hospital because you were severely wounded during a battle."

“That’s not possible! I’m on Earth!” He made a gesture towards the mountains.

“You and your people fled Earth in 1996 aboard a sleeper-ship you named ‘Botany Bay’,” Sarek’s son stated. “You created cryotubes which ensured the survival of your people, allowing them to sleep safely for 250 years. We are now in the year 2260 and…”

“That’s the story you came up with!” the boy interrupted him in angry denial, yet Spock realized that the child had begun to mature as younger memories stirred in him.

“No, it’s the truth. Your ship was found, and you were woken up. You had a rough start, but now you found your place in this new world; you’ve made new friends,” the Vulcan continued, knowing that he had to go on until the boy became a man again. "And you are bonded with my captain and friend Jim Kirk."

The Augment, now in his early twenties, looked at him with something close to fear in his eyes; his chest heaved. "This… cannot be,” he whispered. "I’m here, in India, near…"

"Khan," Spock called him by his title to wake some more memories, "as I told you, you fled from the real world because you thought you were in the clutches of an organization that inflicted great pain and sorrow upon you. But you are safe. You are on New Vulcan in the Vulcan Academy Hospital. The surgery was successful – you only have to return with me – to Jim."

During those words, the superhuman had matured back into the fully grown man, yet there was an almost childish innocence about him that confused Spock.

"Jim?" Khan quietly. "This name… It's so… so familiar."

"You call him ‘Pyāra’," the Vulcan added helpfully.

“Pyāra – that means ‘love’ – or ‘beloved’,” the Augment mused. He lowered his head as if he were listening to something only he could hear. "Blue eyes…” he whispered, ”golden skin kissed by the sun…"
"Sunrise," Spock commented and met Khan's gaze again. "This was the cover name you gave yourself after you and Jim spent a night together in San Francisco. You used it to send us warnings – and to have an official name during your time with The Shadow – a gang of people you joined to fight against the Klingons in the war that has come to a ceasefire now – thanks to you and Jim." The Vulcan stopped as he realized that the surroundings began to change. The sunlight turned into twilight; the voices of the jungle faded away. The mountains became walls; the air cooled. He saw, Khan wrap his arms around himself, and added quietly, "You rescued Jim on Turkana and brought him to Aldebaran, an Earth-like planet where you two stayed several days. You became lovers there – later you bonded."

“Bonded,” Khan repeated slowly. "We… We marked each other," he whispered, fingerimg his throat were Kirk gave him the first mark – pale in comparison to the one Jim branded inside of him while they bonded, yet it was still there. "I can sense him, and I'm used to feeling his warmth, but…" He looked around himself. "It's so cold here!"

“I agree, this is not the place you should be,” Spock nodded and rose to his feet. “Shall we return?”

Alarmed the Augment stiffened. “To where?”

"To Jim," the Vulcan answered, knowing that it was the best when he referred only to Kirk. He turned around and walked back the way he came several minutes ago. Between the trees which had turned into stones melting into a wall, he saw the door again and looked over his shoulder. Khan still stood where he was; uncertainty is written all over his face. "Are you coming, Mr. Singh?"

The Augment shuddered. "Don't go through this door! It leads to a dangerous place."

The first officer nodded. "Yes, to your memories of your childhood – of the labs you spent your first years in. But this is the past, Noonien. On the other side is acceptance, friendship, freedom, peace – and your bondmate."

The superhuman moistened his lips. "Can we just walk directly to this place you speak of?"

Spock sighed inwardly. Despite his deep baritone, Khan sounded almost like a child again, and the Vulcan realized how fragile the Augment's soul had become; how deeply wounded it truly was. "You have to confront your fears before you can get rid of them," he answered with a hint of sympathy. "Believe me. I have been through the same." Fighting down his instincts, he offered the enhanced man a hand – for the compassion that moved his far too human heart, and for Jim. “Take hold of
my hand and do not let go. I will lead you through the darkness."

Never in a million years did the Vulcan think he would see this man hesitating, almost afraid to deal with a supposed danger; this here was not the man Khan showed everyone on the outside. But his mind – his soul... And it was vulnerable as any other soul, maybe even more given the Augments’ higher brain activities and their potent emotions. Sometimes intelligence could be a curse.

The superhuman in front of him bit his lips, and then – inch by inch – he lifted his hand while he closed slowly, carefully, the distance to Spock. Reluctantly, he finally placed his hand in the Vulcan’s, and a barely audible sighed escaped him as Spock’s fingers closed firmly, yet reassuringly around his.

Side by side, they faced the door. "You have to open it," Spock told him. "This is, after all, your mind."

“Give it time,” Sarek’s son said quietly. “You’re in deep shock and even your brilliant mind has to come to terms with everything you went through.”

For the first time, a hint of a smile ghosted around the Augment’s lips, a memory of the arrogant smirk he so often displayed. "'Brilliant mind’, huh? I like that!” He took a deep breath and reached out for the handle; his hand began to shake badly, yet determination woke in him. With a shout of defiance, he tore the door open and almost shrank back as darkness and an icy wind seemed to grip for him.

"I am with you, Mr. Singh!” Spock’s voice turned forcefully. "I am here, and I will not leave your side. But you have to pass through these hallways, or you will never find a way back."

Khan glared at him; a part of his old self showed through the grim face he wore. "I hate it!” he growled, and Spock nodded.

"Understandable. And if your fury helps you to overcome your fear, then hold to it – and to my hand. Whatever happens, do not let go! I will not allow any harm come to you!"
"Brave words, Vulcan. You have no clue what lies ahead!"

"I saw images as I searched for you, Mr. Singh," Spock objected. "But as I said, this is the past. If you allow the past to control you, you never will have a future."

"An alien with poetic understanding! What a world," Khan scoffed, straightened up and crossed the threshold – Spock at his side. The door closed with an eerie bang behind them; its echo sounded from the walls.

The first meters were easy; the corridor was dimly illuminated. Then they reached a place where several hallways crossed, and again Spock saw walls made of glass, faceless people bending over stretchers, devices linked to small bodies. "Turn away," the first officer advised quietly. "This is not real! This happened a long time ago – in another century in another world. This is the past!"

"You are repeating yourself," Khan grumbled, but his trembling voice betrayed his rising fear – buried for decades but still alive.

Together they made their way down the corridor; Spock remembered the way he came, but the surroundings were different. Through a window, he thought he saw a large Indian style building, burning down in wild flames that raged into the night. People were running; he heard screams and shots. Khan stopped at his side and gasped. Out of instinct, Spock wrapped his free arm around the Augment and led him away, reminding him that this was also events from a long time ago.

They faced another door, and Spock lifted both brows. He hadn't come through this one and… Before he could think of explanation, Khan had already torn it open, and so the Vulcan followed him – only to be the one who stopped dead in his tracks this time.

The rooms were modern – today's style, yet they were laboratories, too. Faceless people in dark coveralls crossed their way without seeing them, wearing the Starfleet symbol encircled with a script Spock was unable to read. Someone came out of a room and Spock instantly recognized the man in his middle fifties: Admiral Alexander Marcus. The former Chief in Command's bright eyes were narrowed as he sneered, "You got enough time to think about my offer. Accept it, and I'll forget your little rebellion. Refuse to cooperate and face the consequences!"

Spock felt loathing tugging at his mind – a human emotion he quickly suppressed, yet his human side couldn't deny the disgust Marcus woke in him. "He is not real!" he said to Khan. "He died more than a year ago."
The enhanced man didn't answer but continued his way – passing the admiral's ghost without sparing him a further glance. They rounded the corner – and this was the moment Spock understood fully what had made Khan snap. They were in a cargo hold and in front of them the cryotubes were lined up. Marcus was there again, together with four other men, and his hand lay on one of the tubes. "Last chance! Agree, or he dies!"

Another man stepped towards Spock and Khan – Conelly, grinning widely and making a grab for the Augment. "Another round, pretty?"

Dashwood appeared, too. “Four days in sub-zero and he's still going. Maybe we should add another day – to see how far his augmented body can keep him alive."

"No food until he starts working on the Vengeance! And if he becomes ill, I don't care! The schedule for the war stands! And we have to be finished!" Marcus railed.

And there were more phantoms of Marcus, more Conelleys, more Dashwoods, more faceless people – they all closed in, while in the background, four of the cryotubes were destroyed. Spock thought he could hear the sleeping Augments crying out in agony while dying.

Khan had moved to the wall, surrounded by the images of his enemies, yet he somehow was still clinging to Spock's hand – almost like a lifeline. In the broadest sense, it was a lifeline.

Spock watched the cornered Augment, saw the terror and the exhaustion weighing him down – and realized that Khan did not have enough strength to deal with this alone.

Placing himself beside the superhuman, the Vulcan pulled him closer, steadying his swaying frame. Darkness and cold increased, and Spock shivered, but still, he didn't let go of the Augment though a part of himself withdrew from the scene.

He knew that what he intended was risky – would be even for Vulcan healers. Spock may be sensible, and his telepathic skills were considerable, but he was no trained healer. His plan was dangerous. But this was maybe the only chance to save them all – Khan, Jim and himself, too, because he realized how deep he was involved in the Augment’s memories and that he couldn’t leave without consequences.

Concentrating on the warmth that was in the outer world and trying to listen to its noises, he attempted to regain some consciousness, but also stay connected with Khan. At the same time, he
searched for the golden light that was his T’hy’la, and for a moment he opened his eyes and…

… And saw Jim bending over him still wearing sterile clothes but sans the mask and the cap. Kirk was pale; his eyes were large and dark with fear and hope, and then Spock felt his friend's hand on his shoulder. Kirk's lips moved, but the Vulcan couldn't make out what Jim was saying.

It was an effort beyond imagination to rasp out audible words, "Jim, you must join us."

McCoy, who watched the monitor and his friends, gaped at Spock, who sat on the biobed's edge, ashen, shaking and about to drop to the floor. "Join you? Have you lost your Vulcan mind?" he snarled. "I don’t know what mumbo-jumbo you’re doing here, but… Jim! Don’t!"

But Bones’ shout was utterly ignored, as Kirk pulled the chair directly in front of the triangle Spock, Khan, and the bed built. He reached out and placed his T’hy’la’s free hand on his temple, guiding the Vulcan, who was still in a mind meld with Nien. Spock's fingertips moved over Jim's soft skin, found the psi-points, and then Kirk felt his mind being pulled away…

Khan pressed himself against the wall that seemed to be made of ice. His whole body was frozen, while he watched Marcus switched off the four cryotubes, Conelly forcing him on the steel table, binding him with handcuffs too strong to rip them apart – and the unbelievable pain. He heard Marcus ordering the destruction of every cryotube; heard the explosion in the Vengeance's belly; saw Dashwood bending over him in the labs – and then Elite Security kicking, beating, and brutalizing him without mercy…

“You’re nothing, Singh, only a bred creature!” The words came from one of the Indian guards in New Delhi, his face a sneering mask.

“You’re no human, only an animal!” another voice shouted.

"You were bred to serve the humans – Earth! Now do what you were created for!" Marcus smirked darkly at him and…

And behind him, a single golden figure stepped into the scene, pushed through the crowd, and finally stopped in front of Khan. Blue eyes bright like the skies shone at him with utter tenderness. Lips, soft and promising, smiled lovingly; blond hair shimmered golden like the sun.
“Nien, it’s me,” a warm tenor said soothingly, comforting, compassionate. “Come back to me, honey. This all here— The man made a gesture that encompassed the surroundings. “is not real anymore. You’re safe – loved!” He closed the distance to him and cupped his face in both hands. “I love you, Nien! I love you more than anything or anyone else in the world. You’re safe with me, I swear.” He bent forwards, and those gentle lips touched Khan’s in such a sweet way, the Augment felt a sob rising in his throat, filled with longing. "Come home with me, baby," the man in front of him whispered. Warm, strong, yet fragile arms closed around him, and his mouth was captured again.

Sweetness – freshness – masculine cinnamon mixed with honey…

It was familiar…

So familiar, Khan was ready to weep if these lips and warmth would ever be denied him again…

The voices around him, the scenes, the icy wind, the darkness – everything vanished and made room for the warm, golden light that began to cocoon him. A body of a mere human, yet so strong in its own way, supported him. Gentle breath washed over his face. Soft lips and a clever tongue challenged and comforted him.

Another place – a flat or apartment… Outside a thunderstorm that mirrored his emotions – a hand offering him a glass of liquor. Blue eyes looked with wariness and sympathy at him – the same blue eyes which were filled with love while the bright flickering of a fireplace danced in them. A lean, muscular, golden body glistened in the light of the flames. Soft music played in the background, love that was directed only to him…

Pyāra!

This time a sob did escape the Augment, while the dark veils around his mind changed into a mist that fled.

"Jim," he whispered, feeling his soul reaching out to the only being he would never be able to live without.

"I'm here, Nien, I'm here," the younger man replied – and then the last vestiges of confusion left Khan.
He looked around – the scenes had frozen, yet he shivered. Then he felt another presence and turned
his head. His gaze wandered over the greenish, pale features of the alien man he once thought as an
enemy – the man he thought had killed his family. Now he was a protector and ally – and more!

"Mr. Spock," he said quietly, finally fully recognizing him.

"Mr. Singh, I'm glad that you found your way back to us." It wasn't an empty phrase, but the truth. The Vulcan was, indeed, pleased that the Augment was overcoming his trauma and became more and more his real self. Spock had learned to respect Khan – not only his brilliance and logic but also the person. And even more, Spock would do everything to spare Jim the agony of a ripped mental bond that would result in Khan's death. Therefore, the first officer felt relief as the superhuman let go of his hand and allowed Jim to pull him into an embrace – even returning it. For a long moment both men stood in the middle of the frozen nightmare the Augment leader had been captured in – then Khan lifted his head.

“Take me home, Jim,” he whispered.

Kirk smiled at him; tears glistened in his eyes, but they were tears of joy. "I will, baby. Come with me – with us. We're together in this."

Taking Nien's hand, Jim turned around toward the way he came, and Spock, knowing that it was up to him to lead his T'hy'la and Khan back and to end the mind-meld, took the superhuman's other hand again, strengthening the mental bond.

Together they went down the hallway, passed by rooms and persons from Khan's past, yet none of those phantoms moved or talked anymore, and the scenes vanished. Finally, they stepped through another door and found themselves in only warmth and light.

Khan visibly and audibly sighed in relief and closed his eyes, before he looked at Jim, who smiled at him, "You made it!"

"Yes, thanks to you." the Augment whispered.

Spock turned towards the two humans and said quietly, "It's time. I'll separate us now." He seemed to fade away, and Khan called, "Spock?" For the last second the Vulcan was clear to see, and so the former dictator added, "Thank you for coming for me."
The first officer lifted a brow. “You are welcome, bondmate of my T’hy’la!” Then he vanished and…

… And Khan blinked into the clear light of a room. He felt a throbbing pain in his chest and even if his enhanced senses told him that the temperature was quite warm, he was freezing. Disoriented, he blinked, then he recognized the soft beeping of medical systems and turned his head.

And a face appeared over him – a face he loved.

“Jim,” he whispered; his voice was hoarse.

Kirk suppressed a sob of utter relief as he glanced into those beloved blue-green eyes. Nien was awake! He had left the sinister spiral of haunting memories which had almost taken him away. Khan would be okay – now, after he had overcome the shock and had followed him, Jim, back to the real world.

“Nien!” he croaked, closed the distance to him and kissed the dry lips. It didn't matter that everyone watched him. All that mattered was that Nien had given up first and had been at the brink of death, only to return to him at the very last moment. "God, never do that again!" he whispered into the Augment's mouth, while his hand combed tenderly through the dirty, dark hair of his beloved.

"You three can't do that again! It's more than creepy to watch you three lost in a trance and mumbling like a bunch of monks!" Bones groused but didn't get further, as he heard Joaquin's suppressed sob. The Augment-boy still stood at the other side of the bed, glanced at his brother in heart-wrenching relief and then, all of sudden, almost fell on the bed's edge. Jim lifted his head and made room for Weiss, who bent over Khan. "Noo! What happened?" he choked out, placing a hand on his older brother's shoulder.

The Augment leader turned his head carefully. "Joaquin," he rasped. "Don't worry; I'll be all right."

The boy swallowed another sob, while he stroked the older man's cheek. "I thought I'd lost you." He glanced at Spock. "What you did – it was the same thing the high minister did after our arrival, right?"

The Vulcan nodded slowly; his eyes were half closed.
T'Ley exchanged a glance with the nurse who had followed and tried to stop Spock; both Vulcan women were confused about what just happened. McCoy, who knew that he had to patch up Khan again soon, glared at his two friends and the exhausted Augment-boy. "You three should…"

Jim began to sway and supported himself at the biobed’s edge – the blood loss and the psychological stress of the last days and especially during the mind-meld took their toll. Spock, suffering similar effects, reached out for Kirk to steady him, yet every movement was arduous. As Jim stumbled, he was able to hold him, yet it was Corrigan who spared the captain of the Enterprise the humiliation of a fall by shoving the chair directly under his butt.

“Look at you two!” McCoy pointed at Kirk and Spock. “You can barely hold yourself upright and, so – for God’s sake! – lay down!” He turned towards Corrigan. “Get two stretchers and…” He stopped again, as Jim, still holding Khan’s hand, rested his free arm on Spock’s right arm to support himself. The Vulcan didn’t comment on this behavior; rather he used the offered opportunity to steady himself on Kirk.

Bones pressed his fists into his hips, glaring at the four males – three hanging around together to keep each other upright, while the fourth lay there, shielded by the others. “A veritable knot of bodies,” he swore under his breath. "Jim! Spock!" he called. "You really should lie down and get some rest! What you’ve been through is not exactly chicken feed!"

T'Ley lifted a brow. “Why should one of them use food that is meant for Terran fowl?”

Daniel grinned for a moment, while Bones rolled his eyes. Vulcans! Then the CMO glanced at his patients again, who hadn't moved, yet it was more than clear that Kirk and Spock were only able to sit because they supported each other. They were on the brink of falling asleep.

At that moment another person stepped into the PAR – Healer Sorel. He glanced at the biobed and its many occupants, lifted a brow and looked at McCoy. "May I ask what is going on here? Spock should rest and…"

McCoy combed his hand through his hair that was already tousled from the surgical cap. "They all should rest, and I think Spock is going to need your help after he mind melded with Mr. Singh to bring him back from the brink of death." He pointed frustrated at the four men. "But you try to separate them!"

Sorel lifted the second brow. "That appears to be a difficult task, Doctor."
"See, that's the point!" He nodded his head in the direction of the biobed, before he once again called, "Jim, Spock, try to get to your feet and hit the next bed possible! The same goes for you, Joaquin." Again there was no reaction, and Bones threw his hands up. "I give up! There is no cure for them!" He shook his head and looked Sorel. "To spare us all trouble and a lot of arguing and running – does this hospital have a room with four beds?"

More than two hundred kilometers above New Shi’Kahr, Admiral Barnett sat in the center seat of the Excalibur’s bridge, sipping iced tea. He had returned from New Vulcan only half an hour ago and had informed Wesley and the other senior officers of the meeting with T’Pau and later with Selek, who had come to the one-level, elongated house, built from the sand-colored stones of the mountains that served as a kind of abbey until New Gol was completed. It was not much that the Elders had been able to take with them when Vulcan was destroyed and, at least, T’Pau had managed to save the shrine that held Surak’s *katra* – the only *katra* in the Halls of Eternity that could be recovered before the whole planet had imploded.

Most of the documents and artifacts within the house T’Pau and the others used as keepers for Vulcan traditions and ceremonies came from other colonies, but at least it was a start for something greater. Barnett was very aware of the honor T’Pau had paid him by inviting him to this place as he had stepped into her office, and his hope that the relationship between Earth and New Vulcan wasn't damaged after Norton's assault, had grown again.

But this topic was not his biggest concern at the moment. There was the whole mess with Luengo and Section 31 that busied his mind.

Richard had only needed a quarter hour to look through the all of the documentation Old Spock had assembled from the records and reports Kirk sent him, and from the copied data he got as he had infiltrated the data bank of Starfleet Headquarters. The Chief in Command didn't want to think too much of the latter. Yes, Selek was from the future, and even his younger counterpart was a genius when it came to computer technology, just like Kirk, as Barnett had to admit after the stunt Cadet Kirk pulled two years ago. But the fact that it had been so easy for the old Vulcan to get access to one of the most secure data banks of the Federation was alarming.

Barnett had simply asked Selek how he had been able to bypass all the security protocols, but the only answer had been a quick half-smile – scandalizing for a Vulcan, yet Spock Prime seemed to have made peace with his dual heritage and was comfortable with his human side. T’Pau hadn’t even reacted to slip – and Spock was – technically – her grandson. So Barnett didn't dare say anything and let the topic drop.

The documents the admiral had inspected held so much shocking and almost terrifying facts, he still
felt nausea three hours later. He never thought that Section 31 would go this far; that a man they all knew and trusted until several weeks ago, was able to plan a genocide. It was insane. The plan to kill every Klingon with a pathogen was… Barnett had no words for it. Luengo's betrayal concerning the events in Borderland and his attempted murder of Khan's crew, Kirk, and the others, paled in comparison to his ultimate goal. And that said a lot!

Richard was also aware why T'Pau – and Selek – were so hell-bent on supporting him in his attempt to not only reveal the conspiracy but also to catch the traitors. Vulcan had its share of conspiracies in the past, as Vulcan High Command used the existence of the Syrrannite movement, a cult concerning Surak, to cover its intentions. Command did not even shrink back from bombing the Vulcan embassy on Earth, using the young Vulcanaess T'Pau's DNA to make it look as if she had been behind the cowardly assault, giving the Federation and Earth a reason to intervene with the cult and to support the Vulcan High Command. That was until Captain Archer, the first captain of the first Enterprise within Starfleet, met T'Pau and together they revealed the truth.

Barnett had read the history books and the Starfleet protocols regarding this incident during his time as a cadet, and later, after he and Sarek worked together, he increased his knowledge of this troublesome time. After all, Sarek was the son of this remarkable Vulcan woman who prevented Vulcan from becoming corrupt. Even all that brilliance and logic was not immune to the hunger for power, as this case showed – a case that had a lot of parallels with what Section 31 has done over the last weeks.

It was no wonder that T'Pau supported him and the others in stopping Luengo and his fellows before Section 31 – and therefore Starfleet and the Federation – made themselves guilty of war crimes beyond imagination. It was a significant advance to have the Vulcan matriarch as an ally, yet Barnett was still wary when it came to her. He would never admit it – he had even trouble admitting it to himself, but the female Elder scared him! End of story. How Spock could be her grandson was almost beyond Richard, because the young half-Vulcan was a very sensible and gentle being – well, as long as no one was mixed up with those who were close to him, then Spock could turn in someone very uncomfortable to deal with. Vulcans may deny their emotions, but Barnett recognized the difference between duty and deep friendship and love of different kinds. Spock's loyalty towards Kirk and the other staff officers of the Enterprise based on more than duty and that marked the science officer from his grandmother.

Again Barnett had to admire T'Pau's razor-sharp mind – and that of 'Old Spock', too. The plan they came up with to convict those Council members, who supported Section 31 or even belonged to it, was simple but effective if they didn't make any mistake in its implementation. They had to startle the traitors so that their reactions would give them away. And to reach that goal they had to send the most relevant documents, Selek collected, and copy them to every member of the Federation Council and staff officer. Those, who had a reason to fear the truth, would reveal themselves.

Barnett had contacted Whitman via a secret frequency that Selek himself scrambled to discuss the details, sending the signal piggy-backed, using other transmissions as the transmitter. They all knew that such a counterblow needed a lot of preparation, yet time was what they had least of. Barnett
called it 'pure luck' that Commander Stones of Starfleet Security didn't belong to Section 31. He was the most important person to give the plan a chance of success. Stones – and the fact that most Council members were on Earth at the moment so that Security could start an observation within a few hours. The declared death of Barnett and the delegation, as well as the situation concerning the ceasefire, had forced the Council to hold several meetings, and therefore the members were on permanent standby in different towns and hotels. If everything went as smooth as Barnett (and Selek) hoped, then Luongo's strategy would backfire on him.

And now all they could do was wait for Whitman's or Stones' message that the 'package' could be delivered – meant that the preparation was finished. T'Pau had offered to make the transmission from her office. It was safer to communicate from New Vulcan rather than a Starfleet ship. SBI had its fingers everywhere, especially when it came to Starfleet's technology, so it was only logical to use the opportunity of exchanging messages with Whitman and the others from T'Pau's desk.

Barnett sipped his tea again and threw Li an asking glance, who shook his head. Still nothing from T'Pau and therefore nothing new from Earth. Richard took a deep breath and tried to remain calm outside, even if the inner tension was taking its toll on him. His gaze wandered to the large main screen and the view of New Vulcan.

This silence was getting on his nerves. And what was about the two surgeries? Was Sarek all right? What about Khan? Why, for God's sake, didn't he get any update? Shouldn't have someone contacted him by now – McCoy or one of the Vulcan healers?

Dammit, this waiting was the worst of all!

ST***ST

Of course, the hospital didn't have a room with four beds. Vulcans valued their privacy to the extent that it was unheard of for humans and other races, and that went especially for the cases when a Vulcan became ill or injured. Khan had to stay in intensive care, so McCoy managed to organize a spare bed for Jim that was placed beside the Augment's biobed; another one was placed on the opposite wall and offered Joaquin a place to stay the coming night. Bones didn't try to talk the boy into leaving and returning to the Enterprise. He knew that it would be fruitless. Augments were bred to be stronger at everything – and that went for their emotions and stubbornness, too. McCoy could understand Weiss. The boy was not only a stranger to this planet, but to the whole world – the universe – around him. If Leonard had been in Joaquin's shoes, he would be scared half to death.

Spock had been led away by Sorel, and Bones knew that the first officer would meditate as soon as he was able to. You don't have to be an expert in telepaths to understand that the mind-meld had shaken Spock to the core – after all, they all knew the hell Khan went through as a small child and after. And Spock could deny it all he wanted, but it was a fact that the half-Vulcan hid a very gentle
and compassionate heart under the stony mask of Vulcan control. That Sarek's son needed time to come to terms with everything he saw and felt during the mind meld with Khan, who had been out of control, was... well... logical!

Jim worried for Spock as he watched his friend being led away, but he believed Bones' words that Sorel would take good care of the younger Vulcan – that Spock would get the treatment he needed.

After reaching the intensive care station and after the equipment and beds were set up, Kirk didn't want to lie down first, even if he only was able to walk with McCoy's help. Therefore, the CMO decided it was about time to use some drastic methods. The moment Kirk sat down on Khan's bed, he felt a sharp sting in his neck, and even while he was turning around and cursing at his friend, the sedative took its effect, and the captain fell instantly into a deep slumber. A male Vulcan nurse, who had set up the life support systems and bio-monitor for Khan, helped McCoy put Kirk to bed. Joaquin, who had no desire to be tricked like this, lay down on the other spare bed, watching everything around him with tired eyes. Everything that happened within the last hours began to overwhelm him, and only his pride prevented him from shedding tears.

McCoy sensed his mood – Leonard was not only a good doctor but also, deep beneath his harsh behavior, a very sensitive man. He took some time to sit with Joaquin and to talk with him after the Vulcans had left. Half an hour later, Joaquin's eyes began to drop, and after checking one last time at Khan and Jim, McCoy finally left the room and went to the next healer's ready room to contact first Wesley or Barnett, and then Selek to give them the required update. He had learned from Sorel that Sarek was out of danger, and not knowing if the healer had informed at least Selek, he also would tell his superiors and the high minister about the success of both surgeries.

The healer's assistant was quite helpful with contacting the three ships in New Vulcan's orbit, and a minute later Bones heard the familiar melodious voice answering the hail, "New Vulcan Hospital, USS Enterprise here."

The CMO nodded politely at the young Vulcanness and took over the call. "Uhura, it's me, McCoy," he said, frowning slightly. "Pray tell me, what you're doing up there?"

"I'm here on duty, Doctor – and afterward I will return to my quarters. Only my quarters," she added with a whisper and Leonard's eyes widened. Uhura was restricted to quarters – dammit! And he had a very pretty good idea why Jim had ordered her to come with them as he had told Bones in the transporter room. He wanted her and Spock to stay together during their time in exile. And McCoy also assumed that the first officer would use the chance to do what Vulcans maybe did when they brought an intended to their family's attention. Bones didn't know if Sarek was informed of his son's involvement with the Enterprise's comms officer, but the CMO had a certain feeling that Spock had planned to make his relationship with Uhura official – perhaps making the last step in binding them permanently. Bones may not be too familiar with every written order of Starfleet protocol or Federation law, but as a physician, he was informed about certain rules concerning couples when
telepathy was involved. Federation law protected those bonds by not allowing justice to separate them – and McCoy, knowing Spock always had some tricks up his sleeves, presumed that the Vulcan would use this regulation to keep himself and Uhura together whatever court material might bring for them all.

Bones frowned. He would have to do something about Nyota's restriction aboard the Enterprise – out of reach and with no chance to return to exile. He may quarrel with Spock at every given opportunity, but he hated it when two people who belonged together, were separated against their will. But just right now he had to keep up the professional behavior.

“Who has the conn now?” he asked, shoving the problem to the back of his mind to deal with it later.

“Commodore Wesley, Doctor. He’s already aware of your call and…”

Her voice was replaced with that of the staff officer. “Doctor McCoy, Wesley here. One moment, please, we open a link to the Excalibur and Admiral Barnett.”

Bones rolled his eyes. So much for his intention to speak with Wesley in private. A few seconds of silence followed, then he heard Barnett's deep voice. "Doctor McCoy? What news do you have? Are Sarek and Khan out of danger?’

Bones gave his two superiors a summary of what happened, and clearly, he could hear the admiral’s relief at the mention of Sarek’s stabilized condition, and Wesley’s worry as he learned that Khan had been clinically dead and had been reanimated. But it was a fact that the August leader wasn't out of danger quite yet. Barnett required that Kirk hail him as soon as he had recovered from the mind-meld Bones had to tell him about. And after McCoy had gotten a short report about how the Enterprise’s crew was dealing with the side effects of the sleeping gas, the transmission was ended. He had wanted to speak with M’Benga, too, but before he could, the channel had been closed.

Bones stared out of the window into the late afternoon sun. Dammit! It seemed that Jim, Spock and he were out of the fray – at least for now. And neither Wesley nor Barnett had answered his question as to what was going on in the HQ with Luengo and the others. Both staff officers seemed to be only half into the talk which told Leonard enough. Obviously, the big counterrevolution in Starfleet was lying ahead or was in full progress.

Sighing, he rubbed his face, knowing that the next call lay ahead – certainly a nicer talk than with Barnett. McCoy couldn't help himself, but somehow it was easy to speak with Old Spock – easier than with their clipped first office. And, as Bones pondered, maybe Selek's clever mind and high position was exactly what was needed to help Spock and Uhura.
Straightening, Bones hailed the seat of government and, oh wonder, had no problem with being patched through to Selek. Apparently, his call was expected. Only half a minute later the screen on the desk sprang alive automatically, and the CMO looked in the aged face of the Vulcan Elder.

“High Minister,” he greeted politely.

“Oh, Leonard!” Old Spock answered in this oddly familiar brotherly and warm tone he used with every one of the Enterprise’s senior officers. “Sorel informed me that Sarek is out of danger, but how did Khan’s surgery go?”

The human doctor grimaced. “The surgery went well – at first. And then, afterward, there were… complications. Spock helped when physical treatment was not enough.”

“What happened?” The Elder wanted to know, feeling unvulcan concern rising in him.

“I patched Khan up as far as was possible. He suffered not only broken bones, torn arteries, a tear in his liver, a punctured lung and bruises enough to cover most of his body, but also a TBI, yet I was able to operate him successfully. And then I got a flatline.”

Selek stiffened, while his gaze wandered to T’Pau on the other side of the desk; he was sitting in a visitor chair. He was still in her office to assist her as soon as they got Whitman's information that the transmission of the documents to every single member of the Federation Council had occurred. McCoy had been piped through from the seat of government to the matriarch’s desk – not aware of it, as far as the Elder could tell.

Spock Prime watched his Clan Mother lifting a brow in confusion at McCoy’s words, not familiar with this term, but Selek was. He tensed as he learned of Khan having a cardiac arrest and a part of him instinctively reached out to the faint echo of Jim’s soul he was somehow able to sense. “Leonard, could you bring back Mr. Singh?” he asked, worrying more for Kirk than for the Augment. If the former dictator didn’t survive the surgery, then the Elder had a pretty good idea of what his younger counterpart would need to recover from now: to stabilize Jim Kirk's mind and to shield him against the shock that a ripped bond always left.

Bones sighed deeply. "Yes and no. You – I mean, our Spock – mind melded with him together with Jim.”
"Spock and Jim mind melded together with Khan? A triangle mind meld?" Selek's brows almost vanished under his ash-grey bangs not having expected this. Even T'Pau, still out of the camera’s range, bent forwards, fascinated and a little bit concerned.

"Such a successful triangle mind-meld needs long and detailed training before a schooled healer can execute it," the Elder said slowly. "Spock has no training for such a thing."

McCoy shrugged. "It isn't the first time Spock helped someone like this. It only concerns Jim, yet they have become very close friends as you certainly know, so I think the effort Spock had to undergo during these mind-melds weren’t that bad. He didn't hesitate to help Khan in the same way when he showed up in the PAR where I tried to reanimate Khan.” He shook his head. “Without Spock’s intervention Khan would be dead now, no doubt about it.”

Selek took a deep breath. His younger counterpart did exactly what he would have done if he would have been in place – well, he did things like this in his own time with his own Jim. “How is Spock doing now?”

“Healer Sorel examined and led him away after we were able to separate him from Jim. Our troublemaker and Khan are as sleep as I'm sure Spock will be as well. He's exhaust because of the amount of blood he donated for his father and because of the mind-meld with Khan. The latter was no walk in the park – rather a walk through hell. I didn't understand everything Spock or Jim muttered during the procedure, but it was enough to give me still the chills. The man has faced torment and sorrow almost his whole life and has finally reached his limits. He woke up in the PAR and freaked out when he saw us. We still wore our scrubs and…”

"And he thought he was back in the hands of Section 31 and went into shock," Selek nodded in understanding. "Leonard, as you assumed correctly, Mr. Singh is deeply traumatized. I became aware of it during the mind-meld I initiated with him after the Enterprise’s arrival this midday. He suppressed the trauma and Jim’s… friendship helped him to heal some of the mental wounds he received, yet he is far from being cured. He's very vulnerable at the moment."

McCoy made a face. “I know. ‘Never thought I would say this, but aside from medical help, the man needs a big group hug badly and…” Bones stopped himself as he remembered that it was taboo among Vulcans to speak about intimacy. "Well, given time he certainly will overcome the trauma, yet I don't see him fully recovering for least a month or more – despite his enhanced nature. The injuries he got would have killed any other human. What Finnegan and his men did was…”

"Was attempted murder," Spock Prime cut in. “They are in custody, together with Professor Dashwood and Doctor Conelly, as Admiral Barnett informed me. Green and his staff are arrested too, for illegal experimentation on sentient beings."
McCoy nodded grimly. “Very good! These bastards violated not only a dozen laws and ethical codes, but they also were ready to leave the Augments to certain death.”

“Very good!” the high minister agreed before he got back to the topic that busied his mind most – among other things. “Leonard, how is Jim doing? After the close-call Khan went through, I assume he isn’t in the best condition.”

"Jim is dead to the world at the moment,” Bones snorted. “I gave him a mild sedative, and I don’t know how long he will be in dreamland – after all, he not only has to recover from the mind-meld but also from donating blood for Khan."

For a second, Prime Spock's eyes widened. "He gave blood to Khan? But… Khan is an Augment. His blood…"

“Spock, we both know how Jim was saved last year after he was radioactively contaminated and that this treatment left some traces. Jim's blood plasma was compatible with Khan's body, and so we defaulted to it after Joaquin had given his blood for his brother.”

On the other side of the desk, T’Pau lifted a brow at words concerning Kirk's blood but remained silent. She would ask Selek later for details.

“Please inform me when Jim comes around,” the Elder asked.

Bones affirmed the request with a short. “I will.” He hesitated; Selek reminded the CMO that he had something more on his mind.

“What is it, Leonard?” he asked, and Bones chuckled dryly.

“You know me well, don't you?” He took a deep breath. "This… is a private thing, but…” He gulped. "Hell, how can I put this?"

For a moment something close to amusement lit in the Elder’s eyes. "Just say it like you say everything that troubles you – or, like Jim would say, 'spill it.'"
Again Bones grinned for a moment before he began slowly. "Do you… Uh, are you informed about … Spock’s and Uhura’s… uh… close relationship?"

T’Pau’s both brows were lifted, and this time her Vulcan façade slipped. "My grandson is involved with someone?" she asked sharply, breaking her silence.

At the other end of the line, Bones' eyes widened in comprehension as he heard the female voice in the background, rough with age. And after T’Pau's forceful entrance and behavior only a few hours ago during Norton's assault, McCoy remembered her voice very well. Looking with big eyes at Selek's weathered face, there was only one thought left on his mind: Oooops!

TBC…

Chapter End Notes

So, my dear readers, as promised this chapter was more calm – and maybe calmed your nerves. It also contained a big step in Spock and Khan coming to terms with each other. I hope you liked it.

In the next chapter everything is ready to spring the trap concerning Luengo and Section 31. T’Pau will learn a lot more of Spock and Uhura (the old lady will be really shocked) and there will be some changes going on in the hospital.

I wish you all know a Merry Christmas and a Happy New Year,

Thank you so much for all your comments and kudos within the last year and that you still stay with the story, even if it lasts so long now.

For you all: Happy Holidays.

Love

Yours 
Starflight
Hi, my dear readers!

I hope you all had a good start into the New Year and that business doesn’t give you a too hard time. Sorry for the delay, but especially at the beginning of another year there is really a lot to do. Please don’t fear that I will drop the story; of course it will be written to its end!!! I know that the larger breaks of approx. two or three weeks make you all a little bit nervous, but I depend on my beta-readers, and the two ladies are very, very busy in the moment, so please show patience with us.

Thank you so very much for all your reviews (and kudos); I love you guys.

No more words now, but off you go to the ST-universe.

Have fun with the new chapter,

Love

Yours Starflight

Chapter 78 – Fall of Judas

McCoy stared at Selek with large eyes. Selek, in turn, lifted a brow and tried to get his thoughts back under control. T'Pau was with Old Spock? And she had heard his, Bones', request to help Uhura and Spock? This is how she learns that her grandson had an affair – a lover?

Mega shit!

Spock was going to kill him, no doubt about it (well, maybe, given the Vulcans' peaceful ways, he would survive the first officer's anger).

But how did the old saying go? You're too late if you close the barn door after the horse has escaped. And now he, McCoy, had to fetch a lasso to catch said horse – well, figuratively. He knew that he had to fix his mistake. Somehow!
He cleared his throat and felt his ears beginning to burn, as Spock Prime turned the screen a little bit and the stern face of the Vulcan matriarch appeared. "Ma'am!" Bones croaked. The hint of surprise on her aged face told him everything. Dammit! The old woman obviously didn't know about Spock and Uhura's relationship and McCoy feared that he just revealed something to her that would mean trouble for the Enterprise’s lovebirds – well the other lovebirds. The most famous pair rested side by side, sedated, just down the hallway.

T'Pau looked firmly at the younger human male on the screen. She saw first his ears and then his face turn red, and she interpreted that reaction herself – after all she had dealt with humans for more than 120 years. She had caught him red-handed, as the Terrans say. "Did I understand your words correctly, Doctor? My grandson is in a relationship with a Terran woman?" As McCoy only nodded, she looked at Selek. "Did you know about this, too?"

Old Spock cocked his head and replied calmly, almost casually, "If you are asking if I am aware that my younger counterpart and Miss Uhura are romantically involved, then the answer is yes." He ignored his grandmother's stiffening and the soundless gasp that escaped her lips. Selek did not know if it was a good thing that his clan mother had learned of young Spock's involvement with the Enterprise’s comms officer like this, but now the cat was out of the bag. There was no logic in pondering the 'ifs'. His glance returned to Bones. "You did not mention this delicate topic for naught, Leonard. Is there a problem between the two?"

The CMO caught himself finally and took another deep breath. The damage – or non-damage – was done, so he grabbed the bull by the horns and plunged ahead. "No, everything is perfectly fine with them, as far as I know. I mentioned it for another reason. They need your help."

That woke Selek's' attention. "Why had Spock not mentioned that?"

"Sorry, Selek, but Spock doesn't know, and I stumbled across it by accident when I hailed the Enterprise several minutes ago to give our friends and the commodore an update concerning the surgeries. Uhura answered my hail and let me know that she's restricted to quarters when she's not on duty."

The Elder nodded slowly. “Nyota was here with you and the others, and now…”

McCoy combed a hand through his thick hair. "That's the problem I wanted to talk to you about. Jim gave Uhura orders to accompany him and the others. That way he could protect her from any charges of desertion Command might accuse her of. And after she found asylum on New Vulcan everything seemed to be all right. But by leaving New Vulcan to fight at our side against Section 31 and free Khan, she also left that protection and Barnett punished her for it, restricting her aboard the Enterprise for being involved in hiding our Augment hero.”
"So the woman is arrested," T'Pau said, her voice neutral.

Bones nodded. "Yeah, she is. And that robs her and Spock of the only chance they have to prevent Command of separating them unfairly with a court martial."

Selek lifted a brow in understanding. "Spock wanted to introduce her officially to the House of Surak and declare her as his intended?"

Leonard rubbed his neck. "I might be mistaken, but I think that's exactly what Spock wanted to do. That way he can protect her. The two – I think that's the way they are headed... And if Spock did that – introduced her as you put it, no judgment can separate them, given the fact that one of them is a telepath and they have special protections concerning their intended."

"Logical!" Selek commented, while T'Pau straightened her tiny frame.

"Uhura is a fellow female officer." It was more a statement than a question, but McCoy felt the need to answer it anyway.

"Nyota Uhura is our principal communications officer – a highly intelligent young woman who speaks more than twelve languages and several dialects. She also has a vast knowledge of many cultures. She and Spock met at the Starfleet Academy and…"

"So my grandson has had a relationship with this woman for a period of years?" T'Pau interrupted him, and Leonard smiled sheepishly.

"Yes, they have, but I don't know for how long exactly."

The Vulcan matriarch nodded slowly; her face betrayed nothing of her thoughts. Selek took the opportunity to speak up again.

"You want me to demand her return to New Vulcan." he deadpanned, and Bones sighed,
"Yes, that was what I wanted to ask you. The two belong together. Every one of the staff would state this. But with Uhura restricted and under arrest and Spock on New Vulcan, there is the chance that they will be separated not only until court martial takes place, but maybe even a long time. And, blame my romantic southern heart, but I don't want to see the two unhappy and denied the chance to grow old together. So, yes, I wanted to ask for your support. An admiral of Starfleet assaulted you and the Lady T'Pau, violated Vulcan's independence, and above all forced entrance in your seat of government. In my opinion, Command owes you big – and letting Uhura return to New Vulcan would be a start to the reparations Command should make for the whole mess."

To anyone one else, Selek's face revealed nothing, but McCoy recognized the amusement in the dark eyes and the quick twitch of the lips. Old Spock was laughing in his Vulcan way, which gave Bones hope.

"As always you come up with quite simple, but practical solutions, Leonard. I'm glad that this hasn't changed in this timeline." He bent forwards, and his hand reached for the button to cut the link. "I will see what I can do for them."

McCoy smiled at him. "Thanks, Spo… Selek." He looked at T'Pau, whose eyes and face reminded him of a hawk – a hawk on the hunt. Uh-uh, not good! Still, he managed to keep his expression neutral, bowing slightly in front of the screen. "Ma'am!" he greeted and the old Vulcaness only nodded at him.

"Doctor, thank you for your information." Then the connection was broken – and in the hospital, Bones quickly wiped his forehead clean of the sweat he became aware of only now.

Right, Selek would try to help his younger self and Uhura, but T'Pau… Dammit, why had no one in the seat of government told him that he was through to the old woman? Had he known that Selek was in T'Pau's office, he never would have mentioned it.

Groaning, he rose and rubbed his neck. "Dammit to hell and back," he whispered. "I don't want to think about what Spock is going to say about this."

He rose and left the office – only to stumble into a few colorful figures. Two powerful, hoof-like hands steadied him when he almost lost his balance; then he looked straight into the pig-like face of a Tellarit. A very familiar face now!

"Galven?" he asked perplexedly, and the Tellarit oinked an approval. "Aye, it's me," he squealed.
Behind him, McCoy recognized the fierce Caitian with the fire-red hair who had given him trouble in med bay and tried to charm Wesley: Caviw. At her side were a Rigelian and another young man, obviously a human. Bones groaned. Yes, like many other people, he owed The Shadow his life – and he owed them Jim's life and Khan's too – but right now he had no patience left for them.

“Uh… nice to see you, guys, but please excuse me. I have to…”

"What about Khan?" Caviw asked; her tail whipped for and backward – the clear signal of her stress.

"Yes, and what's the matter with Jim? The lady at the entrance told me that he is in intensive care, but when we saw him aboard the Excalibur he was brimming with energy. So…"

Bones interrupted Galven by lifting a hand. "Khan's surgery went well, and Jim is staying with him for now. Sarek is well, too, so please don't worry."

"Can we talk with Kirk?" Ritek wanted to know, and the CMO shook his head.

"I'm sorry, but I gave him with a sedative so that our whirlwind would sleep for a while. The same goes for Spock and…"

"There was this other young man – boy," the Rigelian interrupted him. “I heard how you referred to him as being Khan's younger brother. He's an Augment, too, right?” he asked, and Leonard grimaced. It seemed Joaquin's identity was out in the open by now.

"Yeah, he is an Augment – a drained and exhausted young Augment, who has to deal with the fact that he slept twice as long as Sleeping Beauty, came face to face with aliens, is on a different planet and had seen his beloved brother beaten into a bloody pulp. So he is sedated, too."

Galven nodded slowly and checked his chronometer. It was late afternoon and the chance that one of the boys would wake before nighttime was not high. Therefore was only one logical thing to do, if they didn't want to leave the planet to stay close to their friends. "Do you know if they have hotels here in the colony?" he asked, and McCoy shrugged.

"Given the fact that several hundred non-Vulcans are working here to set up the colony, and that New Vulcan is cultivating contacts with many Federation members, the answer has to be yes.” He hesitated and groaned inwardly. Dammit, now he sounded like Spock.
Caviw began to snicker. “The Vulcans are rubbing off you, Doctor,” she teased, and Leonard sighed deeply.

“Yeah, I’m aware of it!”

After the talk with McCoy, Selek leaned back in the visitor chair, knowing what the next minutes would hold for him. His gaze found T’Pau's, who observed him with deep black eyes.

“You knew about your younger counterpart being involved with this Terran woman. Why did you not say anything? Our clan…”

“It was up to Young Spock to decide when to bring his relationship with Nyota Uhura to the clan’s attention,” he quietly said, interrupting her.

A thin brow was lifted, then the old Vulcaness pursed her lips. "Were you involved with this woman in your timeline, too?"

Selek took a deep breath and something close to regret shimmered in his gaze. "No, I never dared make the first step." His glance wandered into the nothingness. "I met Nyota first time at the Academy. I was, just like Young Spock, her tutor there and I… I felt some attraction towards her, but I made up my mind to speak with her only regarding professional matters. My younger counterpart was… more daring in this case. Why we differed at this point of time years before Nero attacked, I do not know." He looked back at T'Pau, who listened closely. "Nyota’s and my way separated after her graduation. She was sent to the USS Farragut; I became junior science officer aboard the Enterprise. Only twelve years later we met again – after Jim took command of the Enterprise and I became his first officer. With Pike gone, many of his senior staff left, too, and were replaced with the crew I served with for more than thirty years. Uhura was among them, and we became friends – just like I befriended the others. We were – like the humans say – one big family.”

The Vulcan matriarch nodded slowly, recognizing the missed chance her grandson from the other timeline was obviously regretting. "Did your Uhura show any interest in you?"

This time it was the Elder who lifted a brow. "Nyota was always too professional to let personal feelings disturb anything, yet – thinking back – I do understand that often her concern regarding my
person was based on her affection for me. But she showed it through friendship. We often made music together – she sung and I played the *Ka’athyra.*” (Author’s note: Vulcan lyre) He took a breath. “Later I taught her to play the *Ka’athyra.* She was surprisingly gifted for a human.”

"But you were never romantically involved with her." T'Pau stated, and Old Spock nodded.

"That is correct. After we had met again, we both were more mature and wrapped up in our jobs. I have to admit that, looking back, I could imagine regarding her as more than a friend, yet our lives in the other timeline followed slightly different paths than here – and I dare say that I admire my younger counterpart to have made the move that I never allowed myself.”

T'Pau fell silent. Still, she watched him. She could comprehend that Selek showed understanding for his younger self and would try to protect him and the young human female, but this didn't mean that she was delighted that her grandson had chosen a Terran woman as his bond partner.

On the other hand, she had foreseen something like this when Spock declined his study at the Vulcan Academy and went to Earth to join Starfleet. Then she had learned from Selek that he had been *T’hy’la* to his captain and that his younger counterpart had found the same steady anchor and close friend in the James Kirk of this timeline.

Kirk – another captain of another *Enterprise,* yet it seemed to be a kind of fate that the commanding officers of the ships with that name were there whenever Vulcan needed real help. Captain Archer had once supported her effort to bring the Vulcans back to the way of Surak they were about to leave. Kirk, just a cadet, was there as Vulcan was destroyed, yet his intervention was something generations of surviving Vulcans would remember.

Kirk had bought the rescue ships time to save as many Vulcans as possible by accepting a mission in Vulcan's skies that had been almost suicidal – also giving Spock the chance to evacuate the Vulcan High Council and therefore Vulcan's roots of culture. T'Pau accepted that Kirk and Spock's rough start turned into a profound friendship as she had accepted for many years now that Spock was unique. Well, like the Terrans said, Spock's obvious soft spot for humans ‘ran in the family’. After all, he was his father's son. T'Pau remembered very well her long talks with Sarek after he declared Amanda Grayson, a human teacher from Earth who volunteered at the Vulcan Embassy, would be his wife.

Like father, like son so a human proverb goes – one she could understand. And concerning Spock, there was more to calculate. His mixed heritage was evident in his genes and *katra* and his understanding of the humans therefore, greater. Selek had spoken of it many times and she had to admit that he opened her eyes to some fascinating interpretations and ways. To watch and to keep Vulcan tradition was her priority, but she had also learned that to cling to them at any cost was illogical. In earlier times, before the Federation, Vulcan had only a few contacts with other species,
which changed drastically with the foundation of the UFP. For a long time, she had blamed it for what Vulcan Command tried more than 120 years ago; then she had begun to realize that many Vulcans had started to leave Surak's ways even centuries ago. The influence of other species was only one part of that progress that had been stopped at the very last moment. Now, afterward, T'Pau had to admit that the different opinions and point of views of other species could be instructive. It was IDIC coming to life – and it was illustrated in the marriage between her son and Amanda, and in the friendships Vulcans developed with other species, personified by Spock and Kirk.

Another marriage between a Vulcan and a human was something that would bring unease among the Vulcan people. They were an endangered species now, and their survival depended on the next generations – as more children were born so grew the chance that the race of Vulcans would continue to exist. Yes, Spock was a half-Vulcan and therefore his offspring – if he were able to reproduce due to his hybrid state – would not be pure-blood Vulcans, but every child counted now. Logic dictated it. On the other hand, despite any logic and calculation, T'Pau was also a mother – a grandmother! And she knew better than to cling to the legend that Vulcans were unable to feel and that logic was the answer to everything. She had seen how much her son Sarek had bloomed after he married Amanda; how at peace he had been with himself and everyone. ‘Happiness' didn't belong to Vulcan language officially and was only found in old poems and legends, yet T'Pau could not deny that it did exist. Sarek had been the living example of it.

The same would go for Spock. T'Pau was very aware of her grandson's difficult childhood – of the shameful behavior of his schoolmates because of his mixed heritage. Even Vulcans adults had treated the child and later the adolescent with arrogance and coldness – something the matriarch had witnessed with distaste. Prejudice was illogical, and the others’ manners were incompatible with the principle of IDIC, yet even Vulcans had their weak spots. Spock's decision to join Starfleet had not surprised her, yet the way he confronted his father with his wish had been… impossible – for a Vulcan. Well, he was half human after all, and so something like this could be expected.

What T'Pau hadn't expected was the way her grandson matured. She had known from the beginning that he was extremely intelligent and sensible, but this was not all. His PSI-abilities were astonishingly strong – maybe stronger than those of many other full-blooded Vulcans. How he had helped the Augment Khan only an hour ago proved his great telepathic skill. But there was, again, more. Spock had become an everyman – an excellent scientist, highly regarded by his superiors and friends, loyal beyond the usual extent, brilliant. He was also a warrior in the best sense of the word. The most formidable and admired characteristics of Vulcans and Terrans were united in her grandson! And for that she admired him.

And also, he maintained a rebellious spirit. She wasn't exactly someone who obeyed rules to the letter, even if she was a fierce hard-liner of Vulcan tradition based on Surak's ways. There had been times in her earlier days where she had shaken the Federation and Vulcan, and some of her doings had taught everyone a lesson – including her. So you could say that Spock's sometimes rebellious streak was ‘in the family’ not only in Amanda's humanity.

It was no wonder that she, deep down, felt attached to her grandson. Maybe it was also a good thing
that she knew what kind of man he would grow into. She was blessed with the miracle to meet him as an Elder, near her age. His life within Starfleet – his life with his friends – had done him well, and it was evident how much he missed them even now. Especially Kirk – and, as it seemed, the missed chance with the woman Nyota Uhura. Vulcans didn't speak about sentiments, yet they were able to have them. Sarek had been happy with Amanda, this much T'Pau could tell. Should she prevent her grandson from having the same happiness – he, who had lost already his mother and his whole planet?

Logic dictated that the survival of the Vulcan people was priority – her heart told her that Spock deserved more. And, as she had to admit, his mixed heritage and therefore the human blood within his children would always make him and them lesser in many Vulcans' eyes. So, why misspend his life to attempt to be someone he would never be and deny him something even Vulcans needed – love?

And there was another important matter she couldn't ignore. Spock's intended bonding partner, T'Pring had perished with Vulcan, and because his Vulcan genes were dominant, he would face Pon Farr sooner or later. And then he had to take a bond mate or die. If he thought the Terran woman could withstand his blood fever as Amanda had, then T'Pau would trust his judgment. Even more, she wouldn't stand in his way.

Selek had watched his grandmother the long minutes she simply sat there staring at nothing, but he saw the many thoughts mirroring in her eyes, while she weighed the options. He hoped that she would not give his younger counterpart trouble. In his timeline, T'Pau had been unrelenting and hard, insisting on tradition, even if it cost a young Starfleet captain's life because he was the best friend of a Vulcan in Pon Farr. Selek had never forgiven her for that incident, and if his Jim really would have died all those decades ago in the red sands of Vulcan, he – Old Spock – would have broken with his home forever.

But now Selek had some hope. Vulcan's destruction had changed T'Pau, and he dared say for the better. She showed more acceptance, more willingness to listen to others, and toleration for the decisions and needs of those who didn't conform to her point of view. Maybe now she would...

"I came to a decision!"

T'Pau’s voice tore Prime Spock out of his thoughts, and questioningly he lifted a brow.

"When Starfleet is back in the rightful hands of the chosen Chief of Command and the members of Section 31 have been arrested, I will contact Admiral Barnett. I want to talk with the woman who would be my grandson's wife!"
Admiral José Luengo shut off his terminal and looked at the darkened screen. Six hours! Six hours ago he received the last scrambled transmission from Norton, telling him that they were nearing New Vulcan and that the sensors caught the emissions of the Enterprise. And since then – nothing! Absolutely silence.

What was taking Styles and Norton so long? Was it that difficult to get a few deserted officers, one Augment, and a couple of tubes? Right, the Vulcans certainly didn't agree to deliver Kirk and his friends to Norton. Selek would complain about that, but New Vulcan had only a few ships and Luengo knew from earlier visits on the original planet and later in the colony that Vulcans didn't have much of a security staff. There was simply no need for something like a police force among their people, which meant that they couldn't put up much resistance if Norton took Kirk and the others by force.

True, Luengo expected a call from the Vulcan High Council with an official objection any moment, but…

But what he not expected was his secretary informing him that a Commodore Durandet from their station in Paris wanted to speak to him about an urgent matter. Curious, what did the highest ranking officer in the capitol of the United Federation of Planets want from him? He ordered his secretary to put the man through, hoping that this wasn't about some planned attack against the president was celebrating his birthday today.

The screen sprang alive and showed an older man with gray hair and a round face, wearing the gray uniform of the ground personnel. "Admiral Luengo, thank you for accepting my call."

"Commodore Durandet, how are things in Paris?"

"Calm, given the fact that we’re technically still at war, but we don’t need Klingons to have trouble. Sometimes puzzles accomplish the same thing."

That caught Luengo's interest. "What do you mean, Commodore?"

The man nodded, "Lieutenant Leraure of Federation customs caught a space vessel this morning arriving from Rigel and stated it was manned with dealers. When customs went to inspect the delivery, they not only found the crew gone except for one man; they also recognized that the
spacecraft is a Starfleet vessel."

"One of our vessels?" Luengo frowned. "Given the fact that you think this important enough to inform me in person, I assume that this ship isn't an old, decommissioned one that was sold off."

"Correct, sir. It wears the traces of heavy use, and the registration number was removed, yet it belongs to the newer generation. It's a long range shuttle – the kind standard aboard the heavy cruisers – like the Constitution class, for example. My men are trying to find out which space dock it came from by checking the numbers of the drive's construction parts, but they'll need time to… Admiral? Is something wrong?"

José had gone rigid. A long range shuttle from a Constitution cruiser! Maybe this was the reason Norton hadn't sent any new information? Had Kirk tricked them again, by sending his ship to New Vulcan and escaping with Khan in that shuttle that now was parked at the Paris spaceport? But why should he return to Earth? The chance of getting caught was multiple times greater than if he had gone to New Vulcan. And what about the other Augments? Khan would never leave them – except if he thought their chance on New Vulcan was better and his chance of protecting them was better here on Earth. Or had this shuttle nothing to do with Kirk?

'Never!' a voice in his mind spoke. ‘Every odd thing which happened over the last weeks was connected to that damn farm boy and his new super friend. But what is Kirk doing here? What…‘

Luengo shot from his seat as though he were bitten by a spider.

Paris…

The President…

This cursed boy, and his Augment pet chose the direct way to solve their problems and ran to the president, informing him about Section 31 and…

"Commodore, have your people tracked down the crew of the shuttle?"

"No, sir, even the custom members haven't seen them, except one – and he's silent as a grave. My Security department scanned his retina and the databank is collating it with other entries, but given the large amount of data it will take some time."
Luengo felt his mouth going dry and a twisting in his gut. "Keep me updated, Commodore – and put your security staff to be on standby, ready to rush to the president's house. I've got to check something first. Luengo out!"

He interrupted the transmission and took a deep breath. “Dammit! DAMMIT!” He punched the button of the intercom on his desk. “Lieutenant, get me a line to the president and…”

He didn’t get any further, as the door to his office opened and a well-known voice said, “I’m here, Mr. Luengo. And the shuttle, that obviously unsettles you so much, belongs to the Lexington – and its crew is with me!”

José went white as he turned around to President Robertson, whose face was grim. Beside him were two men in admiral green and white’s – one of Asian – the other one of African heritage. Luengo was certain that the floor beneath his feet had turned into thin air and he was in free fall – at least he felt like it.

“Morrow – Nogura,” he whispered.

"In the flesh – no thanks to you!” Harry said icily.

Commander Stones, Chief of Security, stepped forwards. “Admiral José Luengo, in the name of Starfleet Command you are under arrest! Charges are…”

Luengo, whose mind worked furiously, could only snort. “I am Starfleet Command, Commander, so…”

"The Head of Starfleet is still me, Mr. Luengo! And it was me who ordered your arrest.” Robertson made a fleeing gesture towards the secretary's desk. "That was an interesting talk we just heard. At least Starfleet Security in Paris still works – that is if they aren't infiltrated by Section 31 like HQ.”

“Section 31?” José tried carefully, but was stopped by Morrow, who snapped,

"Skip the theatrics, Luengo. You and your fellows have been unmasked – your dirty game was revealed. It was you and Norton's idea to use the war as a chance to bring back Section 31. And
knowing that neither Barnett nor Morrow, Nogura, and the others would agree to such measures, you sentenced them – us – to death in order to take over Command! And Styles and the Klingon renegades were the hangmen you recruited. A shrewd move, I have to give you that, but lies have short legs, and you can't run away from the truth that will come out sooner or later. Thankfully it wasn't too late – and thanks also to some brilliant minds which looked through the tales you and the others wove."

"Kirk," Luengo said quietly, realizing that he and the others had been busted. "He and Khan, am I right?"

"An extraordinary team," Robertson affirmed with a short nod. During the last hours, he and the others had to wait for the trap to be set up, Morrow and Nogura had informed him about the Augment – that the wanted 'space-terrorist' Khan and the mystical war hero 'Sunrise' were one and the same person. The same man who developed the SDD, saved Kirk, Tammeron, and Aldebaran, and had been through inhumane cruelty in Section 31’s hands – including the murder of four of his crew members, and faced the genocide of his people that Kirk was able to prevent. Robertson had been shocked, to say the least. He had been outraged, yet he knew that there was no way he could spare Kirk, his staff, and the Augment a trial – a fair trial that he would attend, too, to make certain that everything would be… well… fair!

But just right now there was another problem soon to be solved, and the president felt some very human satisfaction as he hurled into Luengo’s face, “Kirk, Khan, Sarek's son, Kirk's staff and Wesley found out the truth of your well-played out conspiracy. They acted the way true and honorable people – Starfleet members are expected to."

José stared at him. "Wesley… Of course! I knew that he was in cahoots with Kirk and that this transmission about the accident in his Engineering was a fake – just like the probes Kirk sent to chase Styles through the half Alpha quadrant."

Nogura looked smug at that. "My teaching!" he said, not without pride, and as he saw Morrow's baffled gaze, he added, "Haven't your read my essay about misdirecting an enemy to buy time to prevent being caught in a battle you can't win?"

"Yes, I did – but I am not sure Kirk didn’t come up with this idea alone. The boy has his sleeves so full of tricks I'm sometimes surprised he can still move his arms."

Robertson didn’t listen to the two admirals. His attention was focused on Luengo. "Yes, Kirk used distraction tactics to escape you and your fellows. He…"
"He has allied with Khan, a wanted space terrorist. I got holophotos of them together on Aldebaran, but instead of delivering the Augment to the authorities, Kirk hid him on his ship!" Luengo interrupted him; waiting for the shock of this revelation setting in. But it never came, rather he looked into the almost bored faces of Robertson, Morrow, and Nogura. So they knew? "Are these facts irrelevant to you?" he asked enraged. "And that's not all Kirk did! He destroyed Gamma 12 to get hold of Khan's crew, and now they are…"

“Gamma 12 was destroyed on your order, Mr. Luengo,” the president stated with cold loathing. "I got the reports of the last meeting of the Council, in which your order to eliminate four of our high-security facilities came out by accident because Wesley’s first officer confirmed that the members of the squadron completed the mission. You called it a preventive measure to stop the Klingons from taking the secrets which were stored in the station, but I rather think it was nothing more than a trap for Kirk. You knew that Khan was aboard the Enterprise from your spy. But instead of officially accusing and arresting the senior officer staff of the Enterprise you wanted to lure them together with Khan into a trap to have a reason to destroy her, eliminating the danger Kirk and his crew had become for you. And the bait was seventy-two people, unaware of anything – asleep, not knowing that you ordered their death to get hold of their leader and his allies!"

Luengo knew that everything was lost – that he was likely going to be convicted and that there was no escape. Straightening up, he still clung to his defense. "These creatures are not people. Barnett's predecessor stripped them off human rights and…"

"And as such, created a new race, because there is no doubt that they are sentient beings in every meaning of the word," Morrow said coolly. "And that gave Kirk the right to protect them against the genocide you ordered, Luengo, and to take them to New Vulcan, where they now have asylum."

José balled his fists. "I don't understand why you all seem to be all right with the fact that Khan is roaming free through the galaxy and even has asylum on New Vulcan. The crimes he…"

"According to Wesley, Khan has agreed to face trial – a real trial this time, not the farce he faced the last time. Because he was denied any lawyer and had no chance to make a statement and was never really asked, his sentence is invalid. And there are many occurrences which have to be heard by trial – from both sides! Khan has been enslaved, tortured, blackmailed and held captive. He will press charges against Section 31 and those who murdered four of his crew. And he will press charges against you, Norton and the scientists, who ran illegal experiments on him," Morrow stated coldly.

“He wants to press charges?” Luengo shook his head. “This criminal…”

“Had been pushed over his breaking point first by Marcus and then by your scientists, yet he was strong enough to change his ways and to become a hero!” Robertson interrupted him again. "You wanted to know who ‘Sunrise’ is? It's the same man you call a ‘creature’.” He almost relished the
shock on Luengo's face, and couldn't help but to add with a smile, "Oh, and he is the SDD developer as well."

"WHAT?"

Nogura smirked grimly. "Yes, those delegation members, which were rescued by Wesley, can thank Khan for developing this device, because otherwise Wesley and his ally wouldn't have been able to save us at all."

"Wesley's ally?" Luengo hoped that he was still lying in bed and would wake up any moment. "I thought Kirk was…"

"Oh, Kirk was already on his way to New Vulcan when Wesley found us – but not alone. Contrary to yours and Section 31's firm belief that the Klingons are soulless monsters which have to be exterminated by developing a deadly plague based on the Rigelan fever, enhanced with Khan's DNA concerning the immune system, the Klingons are…"

Morrow interrupted himself as Luengo’s eyes widened in horror; his face became white as a table cloth.

"Yes, we even know about that, Luengo!" he spat. "All you and Section 31's crimes have been revealed – thanks to Selek of New Vulcan!"

"But…” José could only stammer, not believing that, indeed, every well planned secret operation was out now.

"There is no denying," Harry continued; his eyes blazed. "You were about to murder a whole race – an entire empire! Only to establish your power! The Klingons have more honor beneath their fingernails than you have in your entire body! You know who Wesley's ally was? Who came willingly to our rescue, risking his life by doing so? It was Lord Kor, fleet commander and warlord of the Klingon Empire!"

Nogura bared his teeth with a sinister smile as he watched José's eyes look as though they would pop out of his head. "Isn’t it interesting that a high ranking admiral of Starfleet falls prey to greed and hunger for might, and a *Klingon* helped an enemy so that the truth will come out?"
"Hah!" Luengo was regaining some composure and cocked his head, not ready to give in. "You have only a few accusations and speculations, which are nothing more than twisted truths or outright lies by that cursed farm boy and his friends! Every so-called bit of evidence you have based on Kirk's and Khan's lies is so they can cover their deeds to get you on their side to prevent him being executed. You…"

"You're wrong, Luengo – about the documents and our assumption concerning Kirk and Khan. Both are more than willing to face court martial and bring out the truth. None of them, neither Kirk nor his officers and not even Khan want to stay in exile on New Vulcan forever. They want to deal with everything officially – and that speaks volumes!" Morrow growled.

"We've all needed evidence to arrest you and you can all yourself lucky if you're not executed for multiple murders and high treason," Nogura said sternly. "We have the records from the Excalibur's bridge, we have your orders concerning the Augments, Kirk, and the Enterprise, and we have the Orion pirate who made a deal with your men concerning the attack against the Excalibur. And he's ready to testify against you, Norton, Styles, and the contact men you sent."

"Your precious main accusers won't be able to testify at all," Luengo taunted; feeling grim satisfaction rising in him. "Norton is on New Vulcan to get the rogue officers, and I'm certain they are in his care by now. Without them…"

"Wrong again!" Morrow said. "The Lexington has been at New Vulcan for a few hours now. Styles and his two allies are under arrest, just like Norton – after he forced entrance into New Vulcan's seat of government, threatened Selek, took T'Pau hostage and forced Khan to deliver himself to the scientists, which backfired as another Judas turned out to be a savior. Your gorilla Finnegan forgot himself and tried to kill Khan out of revenge – and if Mr. Singh doesn't survive the injuries, I will personally see to it that Finnegan gets a life sentence!"

Luengo stared at them. "It seems you already have sentenced me and there is nothing I can say to make you see it from another point of view, but…"

"Where murder, attempted genocide – twice! – and high treason is involved, there is no place for 'another point of view'. You are the new leader of Section 31 who abused its power to an abhorrent extent, barely recognizable anymore for what it was original founded," Morrow said icily.

Luengo lifted both brows. "And you think you can eliminate the organization that was established by the first officers of StarFleet watch out for dangers to the Federation? Did it not occur to you that the watchers of law and order – of StarFleet – is needed and therefore supported very well by those who take their responsibility towards the Federation very seriously?"
“Of course you couldn’t push your intrigue as far as you were able without support from influential and powerful people, who hold the political reigns of the Federation in their hands.” Robertson interrupted him harshly. "Well, I have more news for you: They will reveal themselves within these very minutes – as we speak, Mister Luengo – and we are ready to get them all!"

For a long moment both men only looked enraged at each other, then – all of sudden – Luengo’s terminal gave the signal of an incoming message. José stared at it but didn't move a finger.

“Don’t you want to answer the call?” Robertson asked, and after the signal was repeated and the president nodded at him sternly, Luengo sat down and opened the channel.

"Luengo here," he said shortly and frowned as he saw the face of Nahal Nushua, a Federation Council member on the screen.

"Luengo, I just received a transmission from New Vulcan. Kirk has managed to send proof of action concerning the delegation to Selek. And you must have a leak in Starfleet's firewall. The plan about the pathogen is out, too. I just called you to warn you – and I'm off planet now for… WHAT IS THE MEANING OF THIS?" The man had interrupted himself before he was able to finish his sentence as he jumped from his desk chair – face flushing in anger.

"Starfleet Security, Mr. Nushua, in the name of the United Federation of Planets you're under arrest!"
A voice said from somewhere in the background, then the screen was switched off.

Paling even more, Luengo could only look at the empty screen, then another hail reached him he answered without any word. Another member of the Federation Council appeared on the screen, whispering fiercely, "José, your and Section 31's cover is blown. Somehow Selek of New Vulcan got reports and documents about your plans and sent it to every Council member and the president. If I were you, I would pack my things and go off world. I'm off for now. Maybe… Sir this is a private office, and you've no right… WHAT THE HELL?"

This transmission was closed, too – and Luengo rose from his chair, leaving his desk. His gaze found Stones. "Obviously every Council member has been watched so you could intercept at the right time – when Selek's transmission reached them… That must be your doing." The commander only nodded, José smiled – an actual smile this time. "You're a hell of a good Chief of Security – flawless work. Congratulations – even if it means that this will weaken the Federation enormously for decades."

“Wrong, Mr. Luengo,” Robertson addressed him. “You weakened the Federation by trying to murder Starfleet's most prominent staff officers and ambassadors during the war, trying to end a declared
ceasefire. If it weren’t for Lord Kor's prudence and his high regard for even hostile officers who are honorable, and Kirk's and Wesley's ability to look past an enemy's mask, the acts of war could have continued and hundreds – thousands – of people would have died on both sides. You weakened the Federation by infiltrating Starfleet with your spies, who fed you with information about respectable officer's decisions and doings you wanted to use for your purpose. You broke dozens of laws…"

"The laws are made for people, not the other way around. And during a war, there is no place for petty regulations that hinder warriors from protecting their home and fighting the enemy, no matter if they come from inside or outside!"

"So, that Norton assaulted New Vulcan, threatened its government and took the highest ranking Elder hostage is acceptable in your opinion, because Selek followed the law and offered asylum to those you wanted dead?" Nogura asked sharply. "Dead, because this someone and his friends revealed your crimes?"

“And what about Captain Heldron and his first officer?” Morrow threw in. “Are you responsible for the accident that placed Styles in command of the Excalibur? Or what about Khan? The man was delivered to the LSH-lab and was abused as a lab rat. That was your idea, too, wasn't it? Only the SBI, corrupted by you, could pull all these strings, including hiring Klingon renegades who attacked the Excalibur!”

“And what about the sudden custom demands for every trading ship that nears Earth?” Nogura continued. “Are you in need of more credits to build up your little empire, masked by a 'new' Starfleet? And what's with the increased security at every corner in the larger cities Earth wide? You're observing our civilian citizens so that you can act the moment some of them get the wrong – better to say the right idea – about all the sudden changes? I'm very familiar with Earth’s history, and this kind of scheming and action is still very well-known – from a time in first half of the twentieth century. Hitler and Stalin seemed to be good teachers even today!"

Luengo sighed. "You don't understand! None of you understands how important it is that Starfleet become a military unit and…”

“What I understand very clearly is that you broke your officer's oath, that you went against everything the Federation stands for, and that you abused your rank to make your twisted ideals real," Robertson said slowly. "For this, you didn't shrink back from any method, including conspiracy with terrorists, pirates, and slave traders. And because of you, many good women and men had to die aboard the Excalibur during the feigned Klingon attack, including those delegation members and some of our officer colleagues who manned the second shuttle that was destroyed by the Klingon renegades. You and your fellows will face court martial for this, and you will pay for every single crime you did in person or ordered!" He looked at Stones. "Commander, conduct Mr. Luengo away to custody. No visitors, no rank-privileged perquisites." He glanced back at Luengo. "You have the chance to call your lawyer or a lawyer will be provided." He nodded at Stones.
"Commander, if you please!"

Stones stepped forwards and placed heavy handcuffs around the former admiral’s wrists. Without another word, Luengo accepted the escort that instantly took him into the center and led him away.

Robertson sighed. "Finally! I thought I might feel sick at the end of this day because of too much birthday cake. I had no idea the interim Chief of Command would top it. I couldn't imagine it if I tried." He rounded the desk and looked at the screen. "Unbelievable! Eight more incoming messages – all from Federation Council members." He looked up at the two admirals. "This is going to be impossible to keep from the public!"

ST***ST

At the same time, Starfleet Security also stormed the offices of the SBI, arresting everyone who worked there. Files were opened to get the personal information of the SBI members which were off duty at the moment, and Redshirts were sent to their homes to take them into custody, too. Computer terminals, data disks, even printed documents – everything was secured. Officers who worked with the SBI faced custody, too, and there was also a big mess as Redshirts forced entrance into the offices and rec rooms of the Elite Security. Right, they had only followed orders, yet there were doubts about those. Obedience only stretched so far. Richardson had a quick talk with Barnett, and after he had learned of the battle aboard the Excalibur and how many of Elite Security acted in the New Vulcan seat of government, he realized that the most of them had to be fellows of Section 31.

In the meantime, the LSH lab in Nevada was stormed, too – its Security putting up no resistance as Admiral Morrow showed them the order of the president. Within an hour, the lab was empty save for the Redshirts and Morrow, who took over the science department, replacing Norton. Records, tests, and examination results and analyses from Khan and many things more were secured – and Harry, who was interested in science, though he'd chosen another department, was schooled enough to realize the shocking dimension the whole incident had taken. Reading just one record concerning the Augment's reactions to diseases introduced to his system was enough to make Morrow sick to the core. What had been done to the enhanced man was beyond imagination, and the admiral began to understand – really understand – why Jim Kirk risked his career and freedom to help Khan. Despite what the superhuman had done last year, Morrow knew that Starfleet and some of her widely civilian departments would have a lot of to make up for.

There were also tumults – particularly in the residences or other homes of those Council members whose calls to Luengo (or to Norton’s abandoned desk) gave their real face away. Data was rescued there too, revealing connections to other supporters of Section 31. It was evident that it would take weeks to follow every twisted path and round up everyone involved. Realistically, some would slip through the cracks if only for a time. But he wouldn't rest until as many as possible were brought to justice.
Four hours after Robertson had stepped into Luengo’s office there was one thing that could be proclaimed: Section 31 had been smashed, and its leading men and women were in custody. But the work had just begun.

“It’s done! Luengo and his fellows are arrested, Section 31 will be gone soon – and Mrs. Whitman is safe,” Wesley told Lady Ania Morganth, after the conference between himself, Barnett, and President Robertson a few minutes ago. Bob, pretty busy aboard the Enterprise, didn’t hesitate to contact the Betazoid ambassador, knowing how much she worried for her friend, Batari.

"So, Starfleet is back in the rightful hands?” Ania asked, and as the commodore on the screen nodded; she sighed in relief. "That is good news!” she smiled, then she bit her full lips. "Commodore,” she said softly, “during the turmoil aboard the Excalibur and on New Vulcan, I sensed despair, anguish, fear and pain from two or three persons. Their emotions seemed to drive out all others and… and then they seemed to come from a greater distance. And now I sense… nothing at all anymore. Can you tell me about them? Do you know who had to suffer so much? Do they still need help?"

Wesley stared at her with rather large eyes. Oh, he had a pretty good idea whose emotions she had sensed. Kirk's panic and frantic attempts to calm Khan had been heart-breaking as had been the Augment's horrible condition. McCoy's statement that he had sedated Kirk after Khan's surgery spoke volumes. He also knew that the two lovebirds weren't the only one who had been through horror within the last hours. Wesley had met the augmented younger man only briefly, but how much the mere boy loved his ‘older brother' had been plain to seen. Wesley was convinced that Ania had sensed the boy's turmoil, too.

Sweet Lord, how strong their emotions had to be that the Betazoid had felt them over the distance – not only from ship to ship (normal range for a Betazoid's empathy) but also from the ship to the planet's surface. Bob was not religious, yet he had a certain feeling that those three souls had cried out in anguish loud enough to be heard, and he didn't want to think about the pain required for such a cry.

Realizing that the lady's dark eyes still rested on him, he cleared his throat. "I might be mistaken," – he was not! – "but it's possible that you sensed Captain Kirk and Mr. Singh. The latter had been injured and…"  

“I want to meet them!”
Wesley grimaced, as he looked in the suddenly very stern face of the Betazoid-woman. "Ma'am," he began carefully, "Captain Kirk and Mr. Singh are in very good and capable hands, so you don't have to worry about them. And, by the way, both have asylum, so…"

“I already plan to visit High Minister Selek and so there is certainly the chance to meet the two gentlemen. Vice President Whitman is… concerned for Mr. Singh, regarding the fact that he belongs to her home's past. And Captain Kirk is a hero in the Federation, and his reputation is known on our planet. When I give my report to our government, our leaders certainly want to know more details about the human man who was able to stop the Klingons." She cocked her head. "After all, his activities within the last weeks led to the ceasefire.'

Taking a deep breath, Wesley stopped himself from making a grimace. Lady Morganth knew how to reach her goal, and so he spread his hands in a gesture of surrender (and frustration). "Ask High Minister Selek, if he’ll allow you to make contact with the two. Oh, and don't forget to inform Dr. McCoy first that you want to speak with his two troublemakers. I swear this man is the biggest and most terrifying mother-hen in the whole galaxy when it comes to his friends."

Ania began to smile; recognizing the humor. “Don’t worry, Commodore, I know how to… persuade someone.”

"I've no doubt," Bob sighed before he bowed his head and bit her farewell. The screen went dark, and he leaned back in the chair in the captain's ready room. He was about to rise as the doorbell informed him of a visitor, and curious who sought him – here, behind the bridge – he called an "Enter!"

To his surprise, the two ensigns with the incredible luck stepped in, and his gaze wandered from the Russian wonder-boy to the cadet, and back. "Yes, Gentlemen?” he asked, as both remained silent.

Bob lifted a gray brow. "The young Augment – Khan's little brother?"

Both ensigns nodded. “Yes, sir,” Kevin answered this time. “As far as we know he’s on New Vulcan in the hospital.”

“And wiz ze keptin and Khan out cold he’s alone zere,” Pavel cut in. “Right, Dr. McCoy is zere, too, but he certainly has ozer zings to do zen distract Joaquin from everzing zat happened.”
"You see, sir," Riley added, "Joaquin only woke up four days ago – in a completely strange world full of alien people. And now he’s on a foreign planet, surrounded by men and women who are not human, worrying his head off for his brother. I would be scared if I would be in his shoes."

"Scared, sir!" Chekov nodded quickly.

Bob frowned. "Yes, this certainly is a difficult time for the young man, but may I ask what you have to do with it?"

The ensigns looked at each other before Pavel said quietly. "You see, sir, we've… befriended Joaquin. He knows us, and we've stayed togezer between ze time of his awakening and our arrival at New Vulcan. Ze kep'in even declared it our duty to stay wiz Joaquin. I zink it would be good for him, if he would have some friends wiz him just now, so…"

"Do I understand you correctly, Ensign? Are you asking me to leave the ship and to beam down to New Vulcan to keep the Augment boy company? You are aware of the fact that Admiral Barnett more or less grounded everyone who is involved in the whole matter with Khan?" Wesley was baffled by request. Was Kirk's staff completely crazy?

“Sir, we’re off duty now until beta shift tomorrow,” Pavel held his ground. “We give you our word of honor zat we report in time back to ze ship…”

“To you in person, sir!” Kevin threw in helpfully.

“Da!” Chekov nodded firmly. “We report to you in person, but we should take care of Joaquin."

"Commodore, please understand that Joaquin has only come to know dark times since he woke up. Except for Ji… Captain Kirk and his crew, his only experiences with this century, are of violence against his beloved brother, blood, and brutality. That's no good reflection of our world – a world he and his siblings are going to live in. The least we can do is to be there for him now – showing him that people still care these days."

“And to show him what it means to have friends here,” Pavel added. “Please, sir, give your permission to…”
Wesley lifted both hands, and instantly both ensigns silenced. Bob looked at them – and began to chuckle. “Sweet Lord, Kirk has a bad influence on you boys! You even sound like him.” He shook his head and took a deep breath. "All right, gentlemen, I agree that Mr. Weiss certainly hasn't got a good picture of our today's world and that there are a few things which have to be set right. Having someone with him he knows, will help him stomach everything he's been through." He saw the excitement on the two boyish faces and pointed a finger at the ensigns the moment Chekov opened his mouth. "You can beam down tomorrow in the morning, and I expect your return to the Enterprise at 1500 ship's time! There is no need to stay the night on New Vulcan occupying the few hotel rooms New ShiKar can offer at the moment – or rob Dr. McCoy's already stressed nerves by bombarding him with questions.”

“Zank you, sir!” Pavel beamed at him.

“Thank you so much, sir!” Kevin grinned the same moment, and Wesley rolled his eyes.

"Don't make me regret this. If something goes wrong, Barnett will have my head for it. As grateful as he and the others are for being rescued because of Kirk's and Khan's clever minds, both are still in trouble as the rest of this ship's staff – including me, because I covered for Khan, too. So, if the two gentlemen play with the idea to accepting Vulcan hospitality for longer, then I'm in trouble!"

“We'll be back in time, Commodore! I swear by the welfare of Mozer Russia!” Pavel avouched. Kevin nodded, too. “I swear on Ireland's fairies!”

Promptly, he got a baffled look from both men when Pavel murmured something under his breath in Russian, and Wesley felt the urge to laugh. "Well, then I hope you actually still believe in fairies."

"It may sound strange for someone who chose a career in Starfleet, sir, but in a certain way, I still believe in them. Sometimes it's a good feeling to remember fairy tales and that they usually have a happy ending. It increases the courage when everything around you is falling apart,” Kevin smiled.

Bob nodded. "Wisely spoken, Ensign. We all need hope to cling to when the times are dark, and everyone has their own way of facing the dark." He rose. "Right, you two, off to your quarters. I'll inform the transporter chief that he'll beam you down to New Vulcan hospital in the morning." He cocked his head. "And if there is the tiniest chance that Jim Kirk is awake during the time you're there, please tell him to contact Barnett or me. There's a lot we need to ask him."

The two ensigns saluted and vanished the second Wesley said, "Dismissed!” Amused Bob watched them almost flee the ready-room – bright smiles on their faces. Had he been that young, too? Yes, a long time ago, and just for a moment, he wished he could go back in time to be that careless young
adult again without the weight of responsibility on his shoulders.

ST***ST

The evening came quickly in New ShiKar, and like all places near an equator, the time of dawn was short. New Vulcan's burning sun had barely touched the surface of the mountains when night already settled in.

As Spock opened his eyes after a long nap helped by the mild sedative Sorel had given him, nature was already bathed in darkness, and the voices of insects and night animals from near mountains came through the open windows. A cool wind was coming from the large lake, but it was not unpleasant – not even for Vulcans.

“It’s good to see you awake, my son.”

The deep, familiar voice was still a little bit hoarse, yet Spock felt a wave of relief and something humans called ‘happiness’, as he turned his head and looked straight at his father, who lay in the next bed to his left.

“Father!” he murmured. “I am glad that the surgery was a success and the healers were able to help you.”

"Yes, Healer Sorel is not called one of the best healers in the Federation for naught," Sarek agreed; his breath was still a little bit heavy. Given the fact that was in surgery only a few hours ago, to be awake now and even able to talk, told much about Vulcan strength.

For a moment both were silent, then Spock took a slow breath. “I was not aware of your illness and only learned from Admiral Barnett and Commodore Wesley about it after we got the Excalibur back.” It wasn’t meant as a reproval, and Sarek understood.

"I thought I had more time before a surgery would be necessary. Therefore, I didn’t see any reason to concern you. It seems I was wrong." He moistened his lips. "We have to thank Admiral Barnett for my arrival at New Vulcan in time. He insisted that the Lexington not return to Earth but to our colony, where he hoped to meet you in case Selek would not be able to provide enough blood." For just a moment there was a soft twitching the left edge of his mouth. "The admiral can be quite stubborn if he has set his mind on something."

“I know what you mean. My captain has the same characteristic!” Spock deadpanned with his very
own dry sense of humor that showed up from time to time.

Again the ambassador’s left edge of the mouth curled for a moment; then his dark eyes roamed over the pale face of his son before his features relaxed. Sarek looked for a moment almost vulnerable, as he whispered, “Sorel told me what you did – for me, but also for Captain Kirk and his bond mate. I am… proud of you, Spock! Your selflessness saved lives – again – and spared your friend a great loss.”

Spock shifted on his left side to face his father fully. "You have been awake longer than I suspected to know this,” he stated, and Sarek nodded slowly.

“Three and a half hour ago, I woke for the first time, and the second time thirty-two minutes ago. Sorel was here shortly before you woke up. Maybe his departure pulled you out of sleep.” He took a breath slowly, and Spock let his gaze linger on his father's ashen features.

"Is that truth?"

Promptly a gray brow was lifted. "Do you imply I would not tell you the truth, my son?” It wasn't a rebuke, rather a kind of uncommon teasing between two Vulcans. Amanda had rubbed off on her husband, and Spock had, after all, her genes.

"I imply that you want ‘not want to concern me’ again, Father,” he answered wryly, and for just a second, amusement shone in the ambassador's eyes.

"Then be assured that the surgery was a success and that Healer Sorel is confident that I can leave the hospital within a few days."

“And I’m certain that he also will order two or three weeks of rest for you,” Spock commented dryly, which elicited a quick frown from his father.

“We will see!” he murmured. Like his son, he regarded rest as a waste of time.

The same second Spock felt something tugging at his mind – a fearful pull from a familiar soul he was able to sense far more clearly these last days than ever before. Without hesitation, he sat up and pulled the thin blanket away.
Alarmed Sarek lifted his head. “What’s the matter, Spock?”

“Jim needs me,” was all his son answered, then the younger Vulcan was already on his way; knowing that something must have happened to Khan…

TBC…

Chapter End Notes

Well, at least one good thing: Luengo is arrested and Section 31 was destroyed. I loved to write this scene, because it gave me great satisfaction to bring the evil guys finally to fall (*snicker*). But even without Luengo and his goonies there is still trouble for our friends – and with Bones’ being a chatterbox even more.

In the following chapter Khan’s condition will be the reason for the next big alert, Spock learns from McCoy about his slipping with T’Pau, Joaquin gets support from his two new friends and Bob learns some more new things which won’t ‘amuse’ him.

I hope you liked the new chapter and, like always, I’m curious about your reactions.

Have a nice rest of the week and an even nicer weekend,

Love

Yours Starflight
Aftermath

Chapter Notes

Hi, my dear readers!

And once again a big ‘thank you’ for all the comments and kudos you left. After almost 80 chapters of this story I’m still flabbergasted that you all are sticking true to the fanfiction for this lone time. Thank you so, so much.

As I already promised this chapter will be one of two parts that leads to the last big ‘shot’ of the story – in a longer term of approx. 8 or 10 more chapters, so don’t freak, please.

And because I don’t want to reveal too much, I release you know to the ST-universe.

Have fun

Love

Yours Starflight

See the end of the chapter for more notes

Chapter 79 – Aftermath

He was deeply asleep – not only because Bones had stabbed him with one of those dreadful hypos and sedated him. No, he was simply exhaust.

Jim had woken up during the early evening, had looked at Nien who lay dead to the world beside him in the bio-bed, and had fought to doze off again. The quiet around him, the setting sun, and the fact that sounds from the town came through the open window made it clear to him that there was no
actual danger around. It should have lulled him back to sleep.

He had contacted Scott via a private channel, using the doctor's ready room. Montgomery had given him a quick report. Besides the fact that the whole crew was suffering from a king-sized headache, the ship was running within acceptable parameters. The talk had been short because Jim didn't want to wake his superior officer's suspicion or worry him.

The ship was currently under the command of Wesley, and Kirk didn't want to have to answer questions about the last hours before the *Lexington* arrived. Right, Bob was his mentor – a fatherly friend – yet the whole mess in the Vulcan seat of government had left some trouble. In addition to that, Jim wanted to avoid Barnett. He had the feeling that the Chief of Command wasn't amused by the escapades of the *Enterprise's* staff officers over the last weeks.

So Kirk cut the conversation with Scotty short and had returned to the room where Khan rested. Being utterly exhausted, sleep found Jim easily again – only to be risen by a strong hand on his shoulder that shook him. “Jim, wake up!”

The voice was familiar and…

"Jim! Please! Something isn't right with Noo, and I don't know how to alert the healers. I can't find any alert bell or red button!"

Joaquin!

The boy’s voice combined with ‘Noo’, ‘not right’ and ‘alert’ was enough to push his mind and body from zero to hundred in seconds. Nearly jumping out of bed and hurling the blanket away in the process, he was with beside Khan in one step. He looked down at the pale face, darkened and colorful with far too many bruises.

“I can barely feel him and look at the monitor!” Weiss said fearful, pointing at the display.

Four of five indicators were low – too low! And the heartbeat…

“SHIT!” Jim yelled as a wave of panic began to seize him. With a, "Stay here with him, I'll get Bones!” he raced out of the door. Frantically, he looked around and saw at the end of the hallway the open door of the doctor's ready room through which light fell into the corridor. The rest of the station
was dim during the night.

Not wasting any time, Jim ran down the hallway and stopped at the entrance, out of breath. On the couch laid the sleeping form of his friend. For a moment he felt regret waking him after all the stress of the last day, but he had no other choice. Closing the distance to the couch, he bent over his CMO, shaking him. "Bones, wake up! Something isn't right with Nien!"

Leonard had been deeply asleep, and he needed a moment to wake up. He looked groggily up to his friend.

“Wha’is’n?” he mumbled and groaned in protest, as Kirk shook him harder.

"Wake up, Bones! Nien's monitor going crazy and he…"

He didn't need to continue. Years-long training kicked in, and McCoy rose quickly enough to make Jim hastily step back to prevent a collision. Swearing beneath his breath, Bones hastened to the desk and checked the incoming data at the terminal that was connected to Khan's biobed.

"Dammit!" he growled, took the med kit that was placed beside the desk and left the office – Kirk on his heels. Several seconds later they entered the intensive care room and Bones strode with determined steps to his patient, shooing Joaquin out of the way with a few waves of his free hand. Eyeing the monitor for a moment, McCoy bent over Khan and addressed him – without any result. He took a med scanner from the kit, let it roam over the Augment's body, and checked Khan’s pulse finally the good old fashioned way by pressing two fingers to his wrist.

Jim stood beside Joaquin; both almost didn't dare breathe. The biosignals were very low – heart rate and blood pressure, and Jim had to agree with Joaquin concerning the bond. He could barely sense the familiar presence of Nien in him.

Soft steps drew nearer, and Jim didn't need to look to know that Spock had entered the room, too. As always when something terrible was about to happen, the Vulcan was there like a rock in the raging sea ready to support and help. Kirk couldn't suppress the urge to brush the back of his hand against Spock's arm in silent gratitude as his first officer stopped at his side.

"What happened?" Spock asked quietly, taking in the data on the monitor with some unease, while his friend’s gratefulness washed over him like a warm breeze mingled with the cold fear that held Jim in its brutal grip for so many hours now. Spock wanted to make the latter go away – wanted to shield
his *T’hy’la* from this darkness, but he knew he could not. Not at the moment. But his intention to teach Kirk (and hopefully Khan) some mental techniques to benefit their health became more resolved.

“I don’t know what happened,” Kirk whispered anxiously. “Jo woke me.”

McCoy straightened his shape and turned around. His eyes were soft – too soft. "He… He's in a coma," he said quietly. He heard Jim gasping and watched Joaquin pressing a hand against his mouth. Gently he continued, "This could be a natural reaction of the brain – to give the body a better chance to heal. It also could be…”

Spock interrupted him with a lowered voice. "Are you suggesting that his coma is a kind of healing trance?"

Leonard pursed his lips. "Like you Vulcans do when you're seriously injured?" He cocked his head. "It could be. After all, his brain activity resembles a Vulcan's – and he has some PSI-ability as we learned yesterday." His glance found Weiss. "Have you heard of something like this before, Joaquin? Have other brothers or sisters of yours shown similar reactions to grave injuries?"

The young Augment gulped, feeling all eyes on him. “I’m… I’m not sure,” he said pressed. “I remember when I was younger that Otto got injured during a mission, but I was only allowed to visit him after he was better. And during the Eugenic Wars…” He shuddered. "Noo always wanted to protect me and kept me away from the wounded people. He and the others got a bruise now and then, and one time he was shot in the shoulder, but I never saw one of us do this." He pointed to his older brother.

"Still the chance that he is in a kind of healing trance is a possibility," Bones mused quietly before he looked first at a miserable Jim, and then at Spock. “Do you think one of your healers could find out more about it?"

The Vulcan nodded slowly. “A trained healer should be able to detect the nature of Mr. Singh's condition. I suggest you speak with Healer Sorel; he already knows of Mr. Singh's and Mr. Weiss' heritage.”

“Right,” Bones nodded. “Any chance that he is still on duty?”

Spock lifted a brow. "My father told me four minutes and eighteen seconds ago that he spoke with
Healer Sorel only approximately eight minutes before I woke."

“So he could be still here despite the late hour. Excuse me!” McCoy was out of the room in a rush, running down the corridor. The Vulcan’s acute hearing listened as the CMO discussed something with a nurse. Listening carefully, he finally turned towards his friend and the Augment boy.

He had to admit that Kirk’s usual ability to control himself was quite admirable – for a human. But now it failed him completely, as it had several hours ago. Jim's eyes were wide and dark with fear; his complexion was ashen gray. He was terrified for his bondmate's life, and Spock felt the illogical but irresistible drive to comfort him. “Calm down, Jim,” he said gently, laying a warm hand on his friend’s shoulder knowing how much Kirk craved physical contact when he was upset. “As far as I am able to read the monitor, all essential biological functions of Khan's body are working as they should, albeit rather slowly. I assume that his body has, indeed, entered a healing trance,” Spock continued softly.

“And what if it's not? What if he is in a coma?” Jim asked, his voice hoarse. A slight tremor went through his body, and Spock instinctively squeezed the strong shoulder of his T’hy’la.

“Then he has to overcome it all alone, Jim,” Bones’ voice sounded from the entrance, as he entered the room again. “Medical science has come a long way. Still, there are several things nature can fix. A coma is one of those things.” He sighed and rubbed his forehead. "Sorel is still here. He is on stand-by until he is confident that Sarek has successfully recovered from surgery. He's on his way.”

“Thanks, Bones,” Kirk murmured; his eyes hung on the pale, motionless figure on the biobed.

Leonard grumbled something and looked at the two emotional men and the Vulcan beside them who hid his obvious discomfort only as half as good as he usually did. ‘We're all overdue for a nice, long, calm vacation!’ McCoy thought.

That same moment Sorel arrived. Giving the others a nod of acknowledgment, he stepped to Khan and took in the readouts of the monitor. "He's in a coma," he said quietly.

"Is it possible that he has entered a healing trance?” Spock voiced his assumption again and met the healer’s dark eyes. "Selek recognized Mr. Singh's telepathic abilities, and Mr. Singh's augmented nature affects not only his body but his mind as well. His brain activity resembles that of a Vulcan," the Enterprise’s first officer explained.
"The evidence points to this possibility," the healer answered slowly.

"Could you check?" Kirk addressed Sorel, who lifted both brows.

"Are asking me to meld?"

Jim nodded. “I know that this demands much of a Vulcan – even a Vulcan healer – but… Please!” Kirk, who always knew how to talk people into doing something they didn't want to, failed to find the right words. The older Vulcan understood him. If there was one thing a Vulcan was able to grasp and respect, it was the depth of a true mating bond. And, as incredible it sounded, these two Terrans had entered into this kind of special relationship that was otherwise only known among telepathic races.

“You are right, Captain. This may be the only way to discover Mr. Singh's actual mental condition," Sorel said quietly. He looked into the pleading blue eyes of the Terran captain, then in the bidding dark ones of the boy beside him, and finally at those of McCoy. Finally, he saw Spock, whose gaze betrayed a hint of a plea as well. Friendship – the principle wasn’t foreign for Vulcans, yet he never saw a friendship like this one. He took a deep breath. “Very well,” he almost sighed. “I will meld with him.”

Nervous, Joaquin watched how the old Vulcan fell silent, pressed his fingertips together for a long moment and at last bent over his brother, placing his fingers at Khan's temple just like the old Spock of the future had done that morning.

Tension grew in the room. Jim didn't even realize that his right hand clung to Spock's left wrist, but the first officer didn't make any movement to stop this touch. He could barely shield against Kirk’s whirling emotions, and so he endured it – knowing that his T'hy'la needed him. ‘I have to talk with Selek,’ he thought. ‘We must teach Jim and Khan to shield their emotions better – for their sake and mine.’

For several minutes, Sorel stood there bent over Khan and didn't make a sound. Then he blinked and straightened up carefully before turning slowly around. He was pale, and his dark eyes were glassy for a moment; then he took a breath and gathered his self-control.

"I cannot sense if he is truly in a coma or if his body is undergoing a healing trance. The fact is that he has withdrawn himself completely; his brain is maintaining all bodily functions, and they are stable though nearly dormant. He does not answer my attempts to reach him, but I can sense his mind, blockaded as it is. He is calm, this much I can tell." His gaze found McCoy. "I suggest that you continue to monitor his condition. If anything changes, especially his brain activities, call me
regardless of the time of day or night."

Bones nodded. "Thank you, Healer Sorel."

Jim gulped. "So… we know as much as before?" he whispered, and the old Vulcan looked at him with something close to sympathy.

"I am sorry that I cannot give you another answer, Captain. If this is a healing trance your bondmate initiated, then it is one of the deepest I have ever witnessed."

"What can we do now?" Kirk asked, already knowing the answer.

"Nothing," Bones replied quietly. "Nothing except for you to get some rest – and to be there for Khan. Some coma patients can sense and hear what is going on around them, especially from those who are close to them. And since you and Khan share a mate's bond – and Joaquin a family bond with his brother – the chance that Khan is aware of you two is high. And if he is in a healing trance, I think it a good thing if you stay close to him."

Sorel nodded solemnly. "I agree with Dr. McCoy. Given the unique link between you, Captain, and Mr. Singh, it would be wise to remain close by his side. Of course, you don't have to stay here non-stop for next days, but I advise you to be reachable and only a few minutes transport away in case Mr. Singh begins to wake or his condition changes." He bowed his head slightly in a polite gesture. "Despite the unpleasant news, I wish the gentlemen a good night." His gaze found Spock. "And you should return to your room to meditate."

"I will, Healer Sorel," the first officer acknowledged and watched as the healer left. A part of him had hoped that Sorel would find out more about Khan's condition and he felt a hint of disappointment; then his Vulcan control was back in place again.

Bones sighed as he closed the med kit and stepped to his two friends and the Augment boy. Placing a comforting hand on Kirk's shoulder, he said, "Lie down, Jim, and try to get some more sleep." His gaze wandered to Joaquin. "The same goes for you, son. You both are no help to our superman here if you drop from exhaustion."

"I'm not that tired, Bones," Kirk mumbled.
“Yes, you are,” Leonard answered firmly, yet gently. “Stop being so obstinate, kid! You are beyond exhausted. So follow your man's example and rest! Don't worry about him. Knowing Khan, he would come back from the death to be with you – and his little brother.” He winked at Joaquin who tried to smile back but failed miserably.

‘Something has to be done for the boy,’ McCoy thought. ‘I have to think of something that will pull him from this nightmare! Augmented or not, his soul is human – and he has been through hell, too. Interrupted by a 250-year nap, but the terrible mess back on Earth was just a short time ago for him.’

Jim took a deep breath – God, how much he loathed the sterile smell of the hospital! "All right," he whispered, "I'll lie down again." He nudged Weiss. "You too, Jo. Try to get some sleep. Bones'll watch your brother." His glance found Spock. "Thank you for coming – again. How is it that you always show up when I'm upset?"

“My mental shields appear to be weaker than they typically are. I sensed dread from you," the Vulcan admitted, aware of the three humans' curious glances as he uncharacteristically spoke of his weakened state.

“And of course you came running," Bones sighed. "Sweet Lord, someone should call the press, Vulcans fee…”

"Doctor," Spock interrupted him before he could finish his comment. "You know that it is my du…”

"Don't tell me ‘it's my duty as the first officer to, etcetera, etcetera'. We know that you two have the biggest soft spot for each other ever known in the fleet." He flicked a thumb at the two gaping officers and said to Joaquin. "You can't imagine what I've been through the last two years with these two around. Hell, I thought it couldn't get crazier than when I shared a room with the kid during our time at the Academy, but – boy! – I was wrong. These two are about to send me up the wall one day because they freak as soon as the other one even mutters an ‘ouch’ or sneezes.”

“Vulcans don’t sneeze, Doctor!”

"I'm not a sissy, Bones, and I don't whine because of a bruise!"

McCoy’s grousing and his friends’ protests did the miracle. Joaquin had to chuckle for a moment. Then he turned serious again and closed the distance to his ‘brother's’ bed, taking one of his hands
Leonard watched him and gave his two friends a short nod, but Jim had already understood what the CMO was up to. And one look at Spock confirmed that the Vulcan had recognized the doctor’s weak attempt to cheer the young Augment up, too.

Focusing on a fatigued Kirk again, Spock said quietly, “This time I have to agree with Dr. McCoy…”

"Don't! It scares the hell out of me," Bones grumbled, but he was ignored.

"Go to bed and sleep, Jim. I'm sure that Admiral Barnett will not be delayed anymore tomorrow and we must answer him. And humans are better… functioning when rested. So lie down, _T'hy'la_."

Whether it was the soft, pleading tone Spock used or his referring to Jim as his brother – Jim didn't know. He just obeyed, but not before he referred to his friend's earlier support. "I didn't thank you for your help back in the recovery room." Before Spock could answer something, he added heartily, "Thank you, Spock! You saved Nien – and me."

Spock cocked a little bit his head. “There is no need for you to thank me, Jim. You are my _T'hy'la_, and I was and will always be there for you.”

The statement, spoken with warmth, was like balm for Jim's troubled mind and soul, yet he knew that Spock’s help was demanding for the Vulcan. Kirk let his gaze wander in concern over the pale, even slightly yellow features and the glassy eyes of his friend. "How are you doing? This mind-meld… It shook you pretty bad, didn't it?"

Promptly the Vulcan clasped his hands behind his back and lifted a brow; his stoic mask was firmly back in place. "Healer Sorel saw to my needs, and I am rested now. I will meditate soon so that I am fully recovered in the morning."

‘In other words, I'm still exhausted and need to sort out my thoughts,’ Jim translated in his mind. Then he remembered the other reason his friend still troubled. "And how is your father doing?"

“He was already awake as I woke up and we talked. Then I sensed your fear and left the room…”
“To which you will return now, Spock!” McCoy stepped in. “And I don’t want to hear anything about Vulcans and their need for less sleep. You look terrible and even off-duty, you’re still my patient.” He pointed to the door. "There you go – and I'll come with you!"

This time the first officer did sigh. “Doctor, I assure you that it is not necessary to…”

“I have to speak with you in private,” McCoy admitted, looking suddenly rather nervous which, of course, didn't slip Jim's attention.

"What's the matter, Bones?” he asked worriedly, and the CMO rolled his eyes.

"If someone calls me mother hen again! You are even worse than me.” He gestured to the empty biobed. "Off you go, kid! What I have to talk about with Spock has nothing to do with you, your honey, or our boy here, so don’t be so nosy and lie down.”

Kirk grumbled something not even the enhanced hearing of Spock or Joaquin was able to understand, and he walked to his bed. Bones watched him for another moment; then he gave the Vulcan a signal to follow him. After exchanging a few words of good night wishes, the first officer left the room and went at the CMO’s side. He glanced at McCoy from beneath his long lashes, sensing the other man's discomfort coming in waves from him.

“What happened, Doctor?” he asked quietly, and Bones shook his head.

"Not here," he answered quietly. "You Vulcans have sharp ears, and I don’t want the whole hospital hearing our talk." He headed for the office he was using, stepped in, waved at Spock to enter, too, and closed the door. Rubbing his forehead, he tried to find the best words to start the confession he now had to make. The only thing that came to his mind was a blunt, "I think I dropped the ball."

Promptly, a Vulcan eyebrow was lifted. "I was not aware that you found time for recreation these last hours, Doctor, but I'm confident that no one will give you trouble because you got a little too loud in the gym."

Leonard stared at him for several seconds, before he stuttered, "You're pulling my leg, aren't you?" As Spock's eyes moved to his legs, McCoy lifted both hands. "Stop it, Spock! I know you know what I'm talking about, and I think this topic is too serious to joke about."
THAT got Spock's full attention. "What is it, Doctor?" he asked, feeling some tension growing in him. Tension without the tiniest clue what he should expect. Illogical! He was in need of a long meditation.

Bones bit his lips for a moment. "I know we both have our differences – we rarely agree on things, but... But Khan was right, you know. I do regard you as a friend – even if you rob me of my nerves sometimes."

Okay, now Spock was indeed worried! "What did you do?" he asked calmly, which seemed to unsettle the human even more.

Bones looked at the tall Vulcan, wearing only a black long robe and nothing else. He was in bare feet – a clear signal that he didn't waste any thought for himself as he left his bed to rush to his soul brother's side. Deep inside, the 'hobgoblin' was gentle as a summer breeze, and despite their many, many verbal quarrels, McCoy liked the Vulcan. And he liked Nyota Uhura. The two were so good for each other, and now...

"I swear I only wanted to help you and Uhura, Spock!" he almost whispered and he saw how the Vulcan's eyes widened ever so slightly betraying his inner alarm. "I called the Enterprise to tell our friends and Wesley about the success of the two surgeries, and Uhura answered my hail. She signified that she is restricted to her quarters when she's off duty."

"Nyota has asylum on New Vulcan," Spock interrupted him, which was highly unusual for the always polite Vulcan, betraying his rising unease.

"Yes, I know, but when she accompanied us to the Excalibur, she didn't have a chance to return to New Vulcan and Barnett restricted her." He moistened his lips. "Am I right that you intended to introduce her to your family and become engaged?"

Spock only nodded, and Bones groaned. "Superb! This is exactly what I assumed. You want to marry her sooner than planned so that Command can’t separate you, whatever the sentence of court martial will be." He gulped. "I contacted Selek to tell him of Sarek's and Khan's state. During the discussion I..., I asked for his help concerning you and Uhura."

The first officer cocked his head. “I fail to see what unsettles you so much. Your intervention was very considerate, Leonard. Selek knows about Nyota and me. I am certain he agreed to help.”
“Yeah!” Bones lowered his gaze, realizing in the back of his mind that the Vulcan had called him by his given name – as his older self did. “What I didn’t know was…” He took another deep breath. “…that Selek wasn't in his office but in T'Pau's.” There, the cat was out of the bag!

"Selek was with T'Pau?" Spock asked slowly, already assuming what had shaken the good doctor so much.

"Yes," McCoy nodded. "And she heard me refer to you and Uhura as a couple." He glanced back at the Vulcan, who had grown stiff. "I swear, I had no clue that Selek wasn't in his office – or that he wasn't alone. I learned of it when T'Pau more or less freaked out – well, for a Vulcan, you know. Selek remained calm, but your grandmother…” He combed his right hand through his already tousled hair. "She wasn't too happy about the whole thing and… Spock, I think I've given you and Nyota more trouble instead of help.” He looked like a kicked puppy at this moment; the brown eyes sad and full regret.

Spock was familiar with the concept of regret. Even a full-blooded Vulcan could face a situation in which he or she had to take the blame, and had to make up for it. And given McCoy's strong running feelings – and his deep compassion he usually hid so well – Spock understood the doctor's emotional turmoil.

This time it was the first officer, who took a deep breath. McCoy had put his foot in his mouth this time – or however this human phrase went, yet Spock realized that the CMO had only meant well. It wasn't his fault that Selek had been with T'Pau. Spock had to agree with McCoy. Knowing T'Pau, she would give him trouble, no doubt about it.

Realizing that McCoy still looked at him like a child hoping for less punishment than he deserved for his mischief, he audibly sighed.

"I know that you only wanted to help Nyota and me, Leonard, and I appreciate it," he said carefully and saw something like hope in the human's dark eyes. "Yet you could be right in your assessment that your intervention will backfire. T'Pau is not known for tolerance and understanding. I had hoped to speak first with Sarek about my intention to marry Nyota – to receive advice from him. Now I think this chance is forfeit.”

McCoy looked crestfallen. “I’m sorry, Spock,” he said quietly. “I’m so sorry.” He grimaced. “Do you think there is the tiniest chance that your older self will convince T’Pau that she should give you and Nyota the opportunity to explain yourself?”
“It depends,” the Vulcan answered slowly. “What exactly did she ask you about Nyota and me?”

Bones shrugged. "The usual, I guess. How long you two knew each other – which I couldn’t specify, yet she understood that you two have been together a while. I mentioned the academy.” He pursed his lips. “She also asked about Uhura, and I told her about Nyota's job, of her knowledge and... and that the whole crew thinks that you two belong together. I also told her and Selek that Uhura didn't hesitate to join you and us to fight against Section 31, risking her own arrest."

Spock lifted a brow. “You talked as Nyota’s friend with T’Pau?”

“Of course,” Leonard rumpled. “I was not speaking as the Enterprise’s CMO that moment, but simply as your and Uhura's friend, as I pointed out. I also mentioned my assumption regarding your intentions – that you maybe wanted to introduce Nyota to your family to give her and yourself the chance to stay together no matter what the trial will decide concerning us." He threw up both hands. "I have no clue how your grandmother took it – you Vulcans can be eerie when you're doing the staring thing as she did. I think she wasn't that happy learning that her grandson has his father's stubborn streak and wants to take a Terran woman as his wife." He shook his head. "I'll never forgive myself if I've destroyed what you and Uhura have," he whispered, looking away again.

Suddenly a far too warm and firm hand was laid on his shoulder. "Leonard, look at me, please!" The Vulcan's voice was unusually gentle. As Bones did as he was bidden; he glanced straight at Spock's calm, but also soft features.

"You tried to help – and perhaps your attempt was more successful than you think. Nyota has no blood relatives here on New Vulcan, who could have informed T'Pau of her relationship with me. But you – like Jim – are something close to family for Nyota – and as such you spoke with T'Pau. Therefore T'Pau was formally informed by one of Nyota's ‘family members' that a member of Surak's House wants to marry Nyota. Usually, the intended groom introduces the lady to a Clan Mother, but time demanded other actions. There is still the chance that T'Pau accepts this unusual, but reasonable proposal – because you only sought to ask her help."

McCoy frowned, then he rubbed his neck again. “In other words: I didn’t mess it up totally?”

"Oh, you certainly ‘messed’ T'Pau up enough that she would enough for you to distinguish it," Spock deadpanned, "but given time she may come to a decision that is acceptable for all of us. And, as you said, my older self is with her. I am sure that he will talk to her."

Bones’ look roamed over the Vulcan’s face. “I know that your people don’t say anything only to spend some comfort, yet my gut tells me that you attempt to calm me.”
"I do understand that humans easily blame themselves when something goes wrong – humans of exceptional character, at least. But be assured, my words are not only are chosen to offer you some comfort, but also to inform you about Vulcan tradition. You will stay for several weeks now, Leonard, and I do not want you to ‘drop another ball’.

McCoy chuckled – half relieved, half still rueful. "You could be a decent therapist, Spock – even in your Vulcan way. Thanks for that!"

"Your gratitude is reciprocated, Doctor. You tried to help and to protect Nyota and me – not from mortal danger, but for our planned future together. Thank you." He turned to leave.

“Well you still speak with your father before you face T'Pau?” Bones asked softly, and Spock looked back over his shoulder at him.

"This seems to be the best way," he affirmed. "Good night, Doctor." He left, and Bones took a deep breath.

A brandy! He'd trade a kingdom for a Saurian Brandy, but knowing the Vulcans, there were probably only a few bottles in some hotels, which only served to offworlders. And he, McCoy, couldn't leave the hospital at the moment. Not with Khan's life still at stake and a freaking captain, whose heart only beat for said Augment.

Sighing, Bones decided to have a last look at his two troublemakers before he would hit the pillow again – or, in this case, occupy the couch. Returning to the room that held Kirk, Khan, and Weiss, McCoy stopped dead in his tracks at the threshold. He wasn't certain how Jim managed it – maybe with Joaquin's super-strength – but somehow Kirk had moved his biobed so that there was no gap between it and Khan's. Jim lay on the mattress, eyes closed and holding one of Khan's hands. Joaquin sat on the other side in a visitor chair; his upper body rested on the bed beside his older brother, his head lay on his folded arms.

McCoy only shook his head. What should he do with those boys?

ST***ST

The morning came far too quick, even if the day and night cycle on New Vulcan was longer than Earth's. But so much happened the previous day that everyone, even the Vulcans needed time to rest (or meditate).
Jim woke very early but didn't rise, staying just where he was – beside Khan, holding his hand. Joaquin had moved to his bed during the night and was sleeping deeply; his stressed body (still healing from the long cryosleep and the psychological pressure of the last hours) needed time to adjust to everything, especially the higher gravity of New Vulcan.

Bones was also already on his feet after he received a call from M’Benga on a private frequency half an hour earlier. He was glad that his colleague and friend had no problem ignoring protocol to update him about the crew’s condition aboard. The painkillers had mostly worked, and everyone was declared fit for duty except those who were injured in the fight for control of the Excalibur and of course except for Sulu, who slept the sleep of the just. Leonard was not at ease. It should have been him who helped the crew. His place was in his medbay, but at the moment there was nothing he could do about it. And his very own personal troublemakers needed him – that went for the hobgoblin, as well as for Jim, Khan and even Joaquin for whom Bones worried.

In another room not far away, Spock ended his meditation just half an hour after Jim woke up. He left the meditation alcove and returned to the recovery room where his father rested. Sarek had entered a healing trance, and Spock knew that his father would remain that way for the next couples of hours. For a long moment, the younger Vulcan looked at the ambassador and slipped finally back into bed. It was, after all, still very early in the morning and feeling better after the meditation, Spock had time to ponder how to bring the topic of Nyota and himself to his father's attention and gain his support in this delicate matter.

Two hours later the peaceful night was over – in the New Vulcan Hospital and aboard the starships in the planet's orbit. While McCoy examined Khan again and wracked his brain over how to cheer up Joaquin, who was ashen pale and didn't want to eat breakfast (like Jim), Chekov and Riley were already hastening towards the transporter room. They had agreed to beam down as early as possible, and so they asked Kyle to beam them down 0758 ship's time. Kyle had received Wesley's permission for the two ensigns spend time on the planet, and so a minute later the two young men materialized on the campus of the Academy. Even now, early in the morning, the air was very warm, and both ensigns simply knew that at midday the heat would be almost intolerable for the most humans.

They entered the hospital and asked a Vulcan woman where the intensive care station was located, then headed in the given direction. Five minutes later, after riding the lift to the wrong level and twice taking the wrong corridor, they reached the waiting area of the surgery and intensive care unit. The area differed considerably from their equivalents on Earth. There were seats and tables, and even a replicator, but rooms were built along two walls, each one provided with thick, dark red curtains to offer privacy to the person occupying the space. Every space had a simple stone bench and an elegant iron holder where a bowl was placed. Chekov, always curious, stepped to one of the spaces and peeked down in the bowl. A soft scent emanated from it and he saw old-fashioned matches set on the edge of the bench. He realized that this little bowl was meant for a single flame.

He lifted both brows, as he remembered something Uhura once told him. "Zis has to be for
meditation,” he whispered to Kelvin, who had closed the distance to him. “I have smelled zis scent on Spock and Uhura a few times – when zey come to ze recreation deck after shift. Uhura once told me zat Vulcans use a single flame to concentrate before zey meditate.”

Riley nodded slowly and looked at the wall. "They're offering the family members or their friends a chance to come to terms with the condition of the sick or injured ones," he murmured, lowering his voice like Pavel out of respect for this place. "And everyone says Vulcans have no feelings."

"Bullshit," Chekov grumbled. "Even if our Mr. Spock is a special exception because of his human mozer, I know zat zey are sensitive. I saw his fazer on the bridge of ze Enterprise after Vulcan was destroyed and I watched him and Spock afterward. And all the ozer Vulcan survivors we had aboard… It was heartbreaking!” He took a deep breath. "Remember Selek yesterday, how he reacted as he zought our keptin in danger or as he learned zat Khan needed help? He was completely like our Spock when ze keptin is in trouble – his emotions were on his sleeve so to speak.”

Kevin pursed his lips and made an affirming gesture. "Come, let's look for Jim and the others," he murmured. "I think, Joaquin will be with them and…”

Pavel quickly waved him silent and pressed an index finger against his lips, before he pointed to an alcove at the end of the waiting area. The curtains were closed; the nook was in use, and Chekov didn't want to disturb the man or woman who had sought solitude to meditate. On silent feet, the two young men crossed the area and bypassed the alcove. The curtains weren't completely closed and the navigator, nosy as always, couldn't suppress the urge to throw a glance toward the occupant inside.

He stopped dead in his tracks when he saw the familiar shoulder-length brown hair and the simple civilian clothes that Enterprise’s replicator had produced only two days ago.

"Joaquin?” Pavel burst out in surprise, and the slender figure in the alcove raised startled his head. Big brown eyes looked at him with a glassy expression; then they cleared, and acknowledgment began to shine in them.

"Pavel?” While Weiss rose, Chekov already opened the curtains. Riley returned to his side instantly.

"Hey, mate, what are you doing here?” Kevin asked, smiling at Joaquin.

Pavel rolled his eyes. "He was obviously meditating," he deadpanned. "And I was stupid enough to interrupt him.” He grinned sheepishly at the young Augment. "Sorry for zat."
“No need to apologize, Pavel,” Weiss answered and stretched his slender frame. “I wasn’t far gone.” He sighed. “I never was good at meditation – especially not when I have so much on my mind.”

Chekov took in Joaquin’s pale face and the dark circles under his new friend’s eyes – eyes which held enough anxiety and sadness to stop his compassionate heart completely. "How’s your brozer doing?" he asked quietly – already assuming the answer.

"He was clinically dead yesterday after the surgery, then Spock got him back with this mind-sharing or whatever it's called. And last night he… He went into a coma." The words sounded calm, yet his eyes gave his inner turmoil away.

Pavel and Kevin gasped, then Chekov closed the small distance between them and pulled him into a brotherly embrace. Riley mirrored the gesture immediately.

For several seconds, Joaquin tensed, but after sensed their compassion and the well-meaning behind the gesture, he relaxed and returned the embrace, feeling as if he was together with his brothers again.

And at the door that led to the intensive care unit, a thunderstruck then smiling McCoy stood watching the little group hugging. He was glad that the youngest of his ‘problem children’ had found a place to relieve his stress and the moral support of his new friends.

Of course, Joaquin sensed his presence since he wasn't trying to meditate any longer. Looking over Pavel's shoulder, he saw the figure of the CMO in the door frame and instantly went on alert. "Noo?" he asked fearfully, which made the two other young men turn around.

Leonard lifted both hands in a calming manner. "No, no, son. No change. I just wanted to look for you, but I see that you already got yourself some company."

Chekov and Riley had both saluted – after all, McCoy was a staff officer. Bones smiled at them. “At ease, boys,” he said kindly. “I do hope that Wesley knows about your little trip?”

“Yes, Doctor,” Pavel nodded. “We got his permission to visit Joaquin when we’re off duty.”
"That's good to hear." McCoy came nearer and gave Weiss a critical look. "Okay, son, you're far too pale, too stressed, too exhausted." He glanced back at the two ensigns. "I am certain that there are a few restaurants around the hospital and the academy. Take Joaquin to one and see that he eats." He shook his head as the Augment boy opened his mouth to protest. "Healer Sorel already said he doesn't expect any changes in Khan's condition in the next few hours – and I still think that he is in a healing trance. So there is no need for you to stay here and to walk holes in the floor – or to worry your head off. There is nothing you can do at the moment. So go with your friends and have a look around. This is the first foreign planet you've visited, full of strange but fairly gentle people – if you don't irritate them too much, that is. Go. Get yourself some fresh air and try to find something for you to think about besides your brother. I'm sure Khan would want that. He didn't risk his neck for you and his other family members just so you could you linger inside a stupid hospital when there is a whole new world to explore."

Joaquin bit his lips. He knew that McCoy was right. There was no logic in spending the day at this place, yet he felt as if he were abandoning Noo if he left.

Pavel – realizing his new friend's dilemma – put a hand on his arm. "I know zat you don't want to leave your brozer, but he's in good hands here – and ze keptin is wiz him. We will only be away for a few hours and zen we'll come back. And I'm confident Dr. McCoy will call us if anyzing happens." He glanced at the CMO, who simply nodded.

"Yeah, no problem. Give me your frequency, Mr. Chekov, and I'll call if Khan decides to leave dreamland while you're away." He sighed. "It isn't as if I have anything else to do."

Pavel chuckled, looking straight through the grumpiness of the good doctor. It was his way of dealing with stress. Quickly, giving McCoy the frequency, he and Kevin pulled Joaquin with them before the young Augment could change his mind.

Bones watched them leave and took a deep breath. He wasn't as confident as he pretended to be, but he knew that the boy needed a time-out. Rubbing his stiff neck, he returned to his patient.

ST***ST

Admiral Barnett stepped into the Excalibur's transporter room to beam over to the Enterprise. His night had been short, too, because there had been long conversations with President Robertson and Vice President Whitman, who wanted to know in detail what happened on New Vulcan. Barnett wasn't surprised to learn that Robertson already knew about Sunrise's true identity and of him being the constructor of the SDD. Morrow and Nogura, who joined in had plenty of time to inform the first man of the Federation's near solving the riddle of ‘Sunrise'.
Robertson and Whitman were both shocked to learn what Norton and Section 31 had been ready to do to reach their goal. The assault of the Vulcan seat of government and taking T’Pau, of all people, hostage meant trouble, no doubt about it. And the fact that a man – wanted criminal or not – was nearly beaten to death by Starfleet's own Elite Security was something Robertson didn't want to think about in detail. Not to mention that Norton had threatened to kill Kirk, his officers, and the Vulcan High Minister. The president was furious, to say the least, especially after he learned that Dashwood and Conelly had been ready to put the Augment back into stasis or cryosleep which was truly just a death sentence of which they were fully aware. Robertson knew that the impending court martial would be nasty, yet he looked forward to it. And he had to admit to himself, secretly, he hoped that the outcome would be a good one for Kirk, his new Augment friend, and the officers of the Enterprise.

The talk went on for more than two hours, and afterward, Barnett didn't find any sleep easily. He read the reports he got from the four ‘boys', who gave Starfleet's Elite force a hard time, protecting their ship with the fierceness of a le-matya, once again. To think that two green ensigns, an injured young helmsman, and a little Royalan fought off a hostile boarding led by highly trained officers – it was almost laughable. The four had gained Barnett's heartfelt respect with the stunt they pulled.

After he finally lay down on the bed, his thoughts shifted to Kirk and the others down on New Vulcan. In his memories, the scenes in Selek's office replayed over and over again – Norton, who held T’Pau hostage, the short hand-to-hand battle, Kirk beating the crap out of Norton, and the Augment boy who tried to protect the Vulcan matriarch.

And then, afterward, Kirk’s reaction to Khan's forced surrender to his tormentors – the young captain had been half mad with worry for the Augment. This concern was far too intense for just a friend. Something was going on, and he couldn't put the finger on it yet, but he was determined to find out what it was. With these thoughts, he finally drifted into a restless sleep that was over far too soon.

Therefore he wasn’t in the best mood when he beamed over to the Enterprise to meet with Wesley and have a closer look at Starfleet's flagship. A quick inspection of Engineering made him think of the costs Starfleet would have to pay for the needed repairs. On the other hand, he couldn't deny that he was impressed with Scott's excellent work. It was almost a miracle that he had been able to keep the machines together until the damaged ship finally reached New Vulcan.

Barnett also spoke with Keenser and Sulu and stifled any comment as he learned that the other two heroes – Chekov and Riley – were on the planet to keep the Augment boy company. Of course, Scott defended this decision and even Keenser looked with big black eyes at the Chief in Command and grumbled, "Boy afraid, feels his brother's anguish. The boy needs warmth – needs friends! Keenser glad that others with him.” Compared to the amount the little alien talked normally, this was a speech to remember.

Richard rolled his eyes inwardly. Sweet Lord, the entire Enterprise’s officer staff seemed to
transform into a pack of fierce mother-hens when it came down to the two enhanced males – always protecting and watching out for them. There was no doubt; the two Augments belonged to them now; they had become a part of the family the command team had built around themselves.

After the inspection, Barnett and Wesley had a short briefing to determine how to proceed. There were many things to do before the *Lexington*, and the *Excalibur* would return to Earth. Richard put Wesley in charge of interviewing the scientists – those from the destroyed high-security station and Dashwood and Conelly. They, Nurreaux, Finnegan, Styles and his two allies would be questioned soon. But first, they would ask Norton a few questions. It was questionable if the Vulcans would deliver the treacherous admiral to Starfleet. After all, the man had attacked their government and the most respectable matriarch of the Vulcan High Council. It would be the Vulcans’ right to hold Norton, yet he was also a key figure in the conspiracy.

And then Barnett had to meet with Kirk, Spock and the others. Even if Richard had gained knowledge of what had happened aboard the *Enterprise* since Kirk recognized the true nature of the fake attack against the *Excalibur* in the Borderland, there were still many questions unanswered.

Leaving briefing room three, they met Scott on the way, who had come from an inspection of the impulse drives and was on his way to the bridge. Wesley and Barnett returned his polite nod and continued their talk. Bob moved to another topic that had to be discussed. “Richard, Lady Morganth wants to meet Selek – and Kirk and Khan. She sensed their great distress yesterday and intends to learn of their fate in person.” He threw Scott a short glance, hoping the engineer would get the hint and would warn Kirk that an empath was about to visit him and his sweetheart. If their love affair had been a secret so far, it wouldn't be much longer.

Barnett stared wide-eyed at him. "She wants to learn of… What IS it with those two that everyone wants to make certain that they're all right? And why, in the name of God, does Lady Morganth show any interest in them at all? Yes, all right, Kirk and Khan discovered Styles' foul game which saved the lady, Sarek, the others and me. I understand that she is concerned for the two troublemakers in a more personal way."

Behind him Scott bit his lips, having caught Wesley's pointed glare. Of course, he knew that Betazoids were empaths. Apparently, the lady in question had sensed Kirk's great turmoil and maybe Khan's pain, too, and worried about them. That was all right and even sweet given the fact that she didn't even know the two men, who had a big part in her rescue. Yet Scott realized immediately the danger that his friend and the Augment's true nature of relationship could be revealed, should the woman visit them.

What surprised Scott was Wesley’s meaningful look at him after he told Barnett the lady’s wish. And, as far as Montgomery was aware of, neither Wesley nor Barnett had the tiniest idea that Kirk and Khan had become lovers – bondmates even. Could the commodore's glance mean that he had learned of it? Did he want him, Scott, to warn Kirk? There was no chance of asking Wesley in a
direct way – not here and not now. In other words, it was once again up to Scott to give his friend and captain a warning of approaching trouble behind their superiors’ backs. Superb! Why was it always him who had to keep Kirk’s neck out of the noose?

His attention went back to the two staff-officers.

"She told me about how the Betazed Council would ask her questions about the Federation's newest hero and this mysterious ‘Sunrise’," Wesley replied to Barnett's complaining as they stepped into the next turbolift. "Betazed doesn't belong to the Federation yet, but the chance that they will join is high. We should cooperate – especially after Lady Morganth accompanied the delegation as a neutral member and was kidnapped and held captive during the mission because a group of our people used her and the others to re-start the war and make a bid for power. It's only logical that the Betazed Council would want to have details about the mess. And Kirk and Khan being those who initiated the rescue mission – well, the interest of the Betazoids concerning those men's fate is understandable."

The admiral groaned in the meantime. He knew that there was no way to deny the lady what she wanted. "Rrrright," he sighed. "I'll see what I can to do for her." Then he shook his head. "Damn clever move Khan made – becoming a war-hero and winning a whole lot of people for himself. And, what is unnerving, is the fact that he didn't do it on purpose, as you said – and I believe it, too. This man is the great, black knight with his heart in the right place – someone you fear and admire in one. I already see the media going in that direction should his identity and his role in the war ever become known to them!"

The lift reached the bridge, and the three men stepped into the control center. Scott walked to the engineer station, while Barnett's gaze wandered over the men and women present. Carol Marcus was also there, checking the weapons station and doing some repairs. Uhura was on duty, too, and even Barnett, who didn't know her that well, recognized the paleness beneath her chocolate brown skin and the dark circles under her eyes. The atmosphere on the bridge was tense; Kirk's and Spock's absence was like a hole in an otherwise tight net. Sulu was still in medbay, and with Chekov off duty too, the mood was even darker. The cheerful way of the young Russian was obviously missed by his comrades. Richard sighed.

Good God, he had known that the aftermath of the whole Section 31 thing was going to be highly unpleasant, but it has turned out to be one big mess!

"Any news from Kirk or Spock?" he asked Uhura, who shook her head. "No, Admiral. We haven't had any hails from the surface since yesterday evening when Dr. McCoy informed us about Ambassador Sarek's and Khan's condition." A lie – at least a little one. Of course, she knew of the private hails, but they were private, and therefore she had no problem being silent concerning them.
Barnett frowned slightly, and Wesley sighed, "Contact the hospital and try to get Dr. McCoy on the line, Lieutenant. It would be meaningless to beam down to the hospital only to learn that Kirk and Spock are still under McCoy’s observation.” He caught Richard’s surprised glance and added under his breath, only for the admiral to hear, "You don't want to have this overprotective CMO down your throat because you dare attempt to see one of his poor, sick sheep. I swear this man is creepier than a bunch of Klingons, Romulans, and Orions together when it comes to his patients."

This time the Chief in Command couldn't help himself. He had to chuckle. Oh yes, McCoy may be one of the best CMO's within the fleet; the man had gained himself quite the reputation over the last three years. But his temper when it came to his patients was notorious.

“Sirs?” Uhura got the both staff officers’ attention. "I reached the hospital and the ward healer of the intensive care unit. Dr. McCoy is not available at the moment. He is in a briefing with Vulcan healers." Worry and sadness shimmered in her eyes. "Khan went into a coma last night."

Scott cursed quietly, and even Barnett couldn't suppress a quiet, "Shit!" Then he glanced back at Uhura. "Did they give you any details?"

Nyota shook her head; her kind heart was full of worry for her captain and friend – and for the Augment, too. Somehow Khan had become one of them, a member of this fine little family aboard this mighty ship, and she was concerned for him.

“Then maybe we should interview Norton first,” Wesley suggested. “Kirk will be not availa…"

"Kirk isn't the one in a coma, Bob," Richard reminded him. "He must have some time for us. After all, he doesn't have much to do right now.” He sighed inwardly, as he caught Wesely’s uncomfortable shift. What in God's name was it with Kirk being beside himself because of Khan? Grimacing, he grumbled, "Yet I agree that we should first get the permission of Selek to see Norton, and then we'll have a closer look at our troublemakers.”

Wesley smiled at him, and the comment ‘good choice' was on the tip of his tongue, but he bit it down. He turned towards Uhura again. "Lieutenant, please contact New Vulcan and ask when Selek will be in his office.”

Nyota nodded, and while the two staff officers talked quietly with each other, she hailed the New Vulcan seat of government already assuming the outcome. Spock would be on duty if he were in Selek's shoes given the current situation – and she was right. A half minute later she called, "Sirs, High Minister Selek is already present and accepts your transmission."
Barnett and Wesley exchanged a quick look. Selek was there at this early hour? Well, this was Spock after all! A moment later the screen showed the aged, weathered face of the Vulcan high minister. After exchanging polite greetings, Richard got straight to the point. "High Minister, I want to visit Mr. Norton to interview him. Seeing that he is in your custody, I ask for your permission."

Selek cocked his head and lifted a brow – a gesture that was very familiar for Barnett, Uhura, and Scott. "Admiral Norton is in our high-security area, and despite some emotional outbursts of an unpleasant nature which certainly wasn't good for his blood pressure, he is well. If you want to visit him, I've nothing against it, yet I want to accompany you – as the high minister of the planet whose seat of government he assaulted – not to mention his manhandling the Lady T'Pau."

Barnett nodded. "Of course, High Minister. It's in both our interests to get answers to the many questions we have. I also want to ask you about what transpired in your office before I showed up."

Spock Prime frowned slightly. "Hasn't Captain Kirk told you about it?"

"Sorry, High Minister, but I haven't seen Kirk or talked to him since we beamed aboard the Excalibur to stop Styles and rescue a certain Augment from being beaten to death. And I don't know when Kirk will be available for an interview. He seems to have taken Khan's condition very much to heart."

Something shifted in the old Vulcan's face. Nothing Barnett could put the finger on, yet there was a slight twitch in his expression that made Richard wary. Apparently, Selek knew more than he let on, but being Vulcan – a Spock from another timeline who seemed to be devoted to Kirk as his younger self was – the admiral knew that it was fruitless to ask him about it.

"I haven't heard anything from Dr. McCoy since yesterday evening," Selek said. "Is there a problem with Mr. Singh?"

Barnett sighed. "He went into a coma last night. Obviously, even his augmented nature is having trouble healing from the serious injuries he sustained."

"I see," Selek said quietly; his far too human heart went out to the younger version of his T'hy'la knowing Jim had to be crestfallen by his soulmate's condition. "In this case, Admiral, I suggest that we meet at the hospital. All questions can be asked there, too, and Captain Kirk will not be required to leave Mr. Singh for an extended period in case his present is needed."
Richard pursed his lips. "All due respect, High Minister, but why for God's sake should Kirk's presence be needed concerning Khan. Mr. Singh is in very capable hands and…"

"Admiral, this is a private matter that I am unable to discuss with you. It's up to Captain Kirk to satisfy your curiosity about this topic." Selek had taken a slow breath before he continued. "We will meet in fifteen minutes in the intensive care unit of the hospital, Admiral. In the meantime, I will instruct our security to prepare for our visit of Admiral Norton which can take place after our talk with Captain Kirk."

“I agree,” Robert nodded, aware of the fact that he wasn't given any choice. "There is one thing more, sir. Lady Morganth, the Betazed ambassador, asks politely for a meeting with you. She also wants to go the hospital to pay Ambassador Sarek and Captain Kirk a visit.”

For a moment, Barnett was certain he caught Old Spock sighing. They all knew how prying Betazoids could be. "I'd be honored to welcome Lady Morganth to our planet, Admiral. Please inform her about it."

Richard nodded. "Thank you, High Minister. See you in fifteen."

The Elder bowed his head and cut off the connection. Richard groaned – for what he was sure was the thousandth time this morning. "Okay," he grumbled and closed the distance to Wesley. "I ask myself how Kirk managed to get not one but two Vulcans as personal bodyguards," he mumbled. "Oh, I forgot, they are the same person."

Bob smiled amusedly. "Don't forget to add his staff to the list of ‘bodyguards’, Richard. They all would and already have thrown themselves into the fray for him."

"Yeah," was all Barnett said – torn between frustration and amusement. Then he straightened up. "Well, I think you should start to interview Styles, Nurreaux and Finnegan. I'll beam down to…"

Both superior officers turned around. “Kirk?” Barnett asked, and Nyota shook her head.
“No, sir, it’s… T’Pau’s office.” Surprise was in her voice.

Wesley and Barnett exchanged a glance. T’Pau – this early in the morning? This could only mean one thing: Trouble. Nevertheless, Richard ordered, "On screen, Lieutenant!"

A moment later, the stern face of the old matriarch appeared on the screen – and though the Vulcan's expression was motionless, Barnett knew that this wasn't a friendly call…

TBC…

Chapter End Notes

Ooooh crap, what does T’Pau want? Of course it has to do with Uhura – and Barnett has no clue of our second couple of lovebirds. And concerning Jim and Khan – well, in the next chapter Richard will get it. And not in a gentle way, rather he gets confronted with the true relationship of our two boys with a big ‘bang’.

Yet also there is still the question, if T’Pau agrees with Spock’s choice of marrying Nyota, and if not, what our dear Vulcan will do to get the ‘maiden’s’ hand in marriage.

Furthermore Joaquin will meet the Shadow-Gang – better to say, he will become aware of them, after all he already met them aboard the Excalibur, but was too distracted by his brother’s condition to realize how strange these guys are.

I hope, you liked the last chapter, even if it was without so much trouble. But sometimes even the more silent things are serious. And – what a wonder – Bones has a bad conscious because of Spock. Right, our dear CMO is a ‘softie’ at heart, who tries to mask it desperately with his hard charm, but to admit it in front of Spock is a new one. I hope, you loved to read this scene like I loved to write it.

As always – I’m curios of your reactions.

Have a nice rest of the week and a better weekend,
Love

Yours Starflight
Love is worth everything

Chapter Notes

My dear readers!

I’m really sorry that the publishing of the next chapter is so much overdue, but my dear beta-reader Rhiannon as very hard, personal time in the moment (family matter) and ran out of time for our hobby. Cerridwen has agreed to edit the next few chapters and I can already promise that the pauses between the chapters will be shorter now.

Thank you so very much for all the comments (and kudos); will answer them in a few hours.

For now I wish you fun with the next chapter.

Love

Yours Starflight

See the end of the chapter for more notes

Chapter 80 – Love is worth everything

Barnett watched the image of T’Pau on the screen. “Ma’am,” he greeted her politely; lifting his right hand into the Vulcan greeting Ta’al.

T’Pau simply returned the greeting, before she came straight to the point. “Admiral, I require your assistance in a private matter.”

Richard controlled his features to hide his bafflement. He hadn’t the tiniest clue what T’Pau meant with ‘private matter’, but he had a certain feeling that it wouldn’t be a comfortable one. When Vulcans indeed referred to something ‘private’ then it was of enormous importance, otherwise they wouldn’t speak of it – especially not to an outworlder.

And, after everything that happened yesterday, Barnett was well aware of the fact he better not deny his support to whatever the matriarch demanded from him. “How can I be at your service, Ma’am?” he asked.

Again the old Vulcaness didn’t waste any time with polite phrases. “It has been brought to my
attention that Lieutenant Uhura, the Enterprise's first communication officer, has been restricted to her quarters when off duty. I require her return to New Vulcan.”

Barnett threw a glance over his shoulder at a very aghast looking Uhura. “I beg your pardon, Ma’am?” He asked astonished. He didn’t know if he was still asleep and having a very – very! – weird dream, or if this was indeed reality. Why should T’Pau be interested in Uhura? His eyes hung at the Vulcan matriarch, who looked sternly from the screen at him; her dark eyes as hard as granite.

T’Pau lifted an elegant slanted brow; asking herself for the hundredth time why humans had the very illogical urge to pretend to have not heard something correctly when they didn’t agree with it. “I was informed that Lieutenant Uhura is hold aboard the Enterprise despite her status of being an accepted asylum seeker on New Vulcan,” she repeated. “I require her to return to us, for that she needs your permission to prevent personal consequences.”

Frowning, Barnett cocked his head. “Ma’am, contrary to all Starfleet regulations I allowed that Kirk and his comrades can stay out of custody, but…”

“Admiral.” T’Pau’s voice became sharp as steel. “Only yesterday Starfleet assaulted our seat of government, threatened Selek, my grandson and his friends – and one of your admirals took me hostage. I know that Norton is a traitor and ran amok as he felt himself cornered, yet there will be consequences because of these actions. You owe us – and I don’t think that under these circumstances you will deny me my request of speaking in person with my grandson’s intended.”

Silence!

Absolute silence!

You could have heard the famous needle hitting the floor.

Barnett didn’t even realize that his jaw hung open, while Carol looked with big eyes at Nyota, and then began to grin as she realized that her friend was about to marry Spock.

Scotty blinked in shock. The two wanted to marry? Really? Well, it was about damn time, but why hadn’t they said anything – at least Uhura? He glanced at her and realized that the pretty young Bantu woman was utterly taken by surprise, too. Well, Vulcan proposal obviously differed from Earth tradition, if Spock’s Granny was informed of the First Officer’s wish before the bride.
And with this, another thought struck him. ‘Spock’s grandmother… Holy Mary, T’Pau is Spock’s grandmother! She’s one of the most important Vulcan Elders – of Surak’s House, as far as I know. And therefore Spock is… By Nessie’s giant flippers! Spock is kind of royalty. Just have a look. The silent waters are always the deepest ones!’

His gaze wandered back to Uhura and he had to stifle a chuckle.

Nyota was utterly speechless. Spock hadn’t mentioned his intentions – not once. They’d grown pretty close – a cohesiveness that went beyond of sharing a bed, and Uhura had hoped that Spock would make the last step, but this here seemed to come out of no-where. And, above all, how did T’Pau already know about it? Spock was still in the hospital after he donated blood for his father. Of this she was certain. He wouldn’t leave Sarek’s side so soon after he got his father back from death, so to speak. And he also would never leave Jim in the situation the captain found himself being placed – with Khan’s life still at stake which had to trouble her friend and captain beyond imagination. She simply knew that Spock hadn’t any chance to speak with T’Pau in private. So how did the matriarch know of his and her – Uhura’s – relationship?

After seconds of thunderstruck hesitation, Nyota remembered Vulcan traditions. Quickly she stepped into the range of the cameras and lifted her right hand for the Vulcan greeting Ta’al. A fluid of Vulcan words left her lips as she greeted the Vulcaness in the High Vulcan Standard; showing her deepest respect like this. T’Pau’s face revealed nothing if she was surprised or pleased to hear the young woman speaking her language that well, yet her dark eyes softened, as she returned the greeting.

Barnett had caught himself by now and turned towards the communication officer. “You and Commander Spock are… a couple?”

Nyota felt some resolve waking in her. What was so unbelievable in her and Spock being an item? Lifting her chin a little bit she turned her head and looked the Chief in Command straight into the eyes and said, “Yes. Is there a problem, sir?”

Richard was very aware of T’Pau listening to every word and that the old hag wouldn’t be pleased if he said something against her grandson and his future wife. “No, Lieutenant, not really – after all you both are members of the bridge staff and therefore no advances could be demanded or given. I’m only… confused that I haven’t heard anything of this planned marriage concerning two staff officers of our flagship.”

‘Guess who is surprised here, too!’ Uhura thought dryly; aloud she spoke, “Vulcans are very private people, as you certainly know, and until we have received the assent of Commander Spock’s clan nothing will be officially mentioned.” She cocked her head. “Sir.”
Barnett knew better than to rebuke her – after all she did nothing else than submitting to the tradition of the culture she was about to join. And, like any other culture’s traditions within the Federation, the Vulcan one was accepted and protected by the UFP Constitution.

Knowing that here diplomacy was more demanded than strictly following Starfleet protocol, he saw no other option than to bow to T’Pau’s request. “Very well, Lieutenant. But I can count on your return when it comes to the court material?”

“Of course, Admiral. I won’t dishonor the House of Surak or my oath as a Starfleet officer.”

Barnett believed her without hesitation. “All right, then please pack the things you’re going to need on New Vulcan and report to the transporter room. I’ll instruct the chief there to beam you down.” His glance returned to the screen and for a second he thought he recognized some kind of satisfaction on the matriarch’s face, but it vanished so quickly he assumed he was mistaken. “Ma’am, please give us the coordinates Lieutenant Uhura can beam to.”

“My assistant will inform you. I expect Lieutenant Uhura’s arrival.” She watched the young Terran woman bowing towards her, saluting to her superior officer and vanishing from the camera range. Then T’Pau’s attention was driven to the next topic, as she slightly bent forward. “Am I correct that you plan to beam to the hospital soon?”

Again Barnett had to control his reactions. “Yes,” he answered. “To pay your son a visit – and to speak with your grandson and Captain Kirk.”

T’Pau’s expressionless features became even sterner. “Please keep in mind that James Kirk and his officers are under Vulcan protection, Admiral. The same goes for the two Augments and their still sleeping comrades.”

Barnett took another deep breath. “Are you certain that you or your government want to take the responsibility for them, Ma’am? I know that Mr. Singh was violated and run amok – something the other Augments have no fault in, yet they are not comparable with ‘usual’ humans.”

Again a black eye-brow was lifted. “I appreciate your concern, Admiral, but I think that we are far more qualified to handle them than Starfleet. What I learned from Selek about Mr. Singh and what I also learned from the short contact with the Augment-boy who shielded me during the combat in Selek’s office, the Augments are highly intelligent, have mental abilities, are much stronger than mere humans and have deep running emotions. They remind me of our people before Surak came to
show us a better way to handle our aggressive streaks. We’ll be able to help the Augments how to cope with this new world they will find themselves in, and I’m also sure that we can teach them some self-control concerning their mental and emotional strengths.”

Richard pursed his lips and nodded slowly. “It’s a high responsibility and even risk you are willing to take, Ma’am.”

For a second the left corner of the old Vulcaness’ mouth curled. “Not more than we took when we made the first contact with your people, Admiral – and look what a benefit it was. Not only for you, but also for us.” She cocked her head. “What are your intentions concerning the violation of Mr. Singh? I know that he committed crimes, too, yet what has been done to him can’t remain unpunished.”

‘God dammit’, Richard thought. ‘This woman is more forward with the topics than anyone I ever met before. Vulcans! It costs a lot and needs even more time to win them, but once you’ve gained their protectiveness they defend and fight for you like a wild sehlat for its puppies! And not only Kirk, but also somehow Khan has won at least the House of Surak.’

He cleared his throat. “Those, who are responsible for his injuries – and the other crimes which were inflicted on him – will be brought to court material.”

T’Pau nodded. “A small but first step to eliminate the criminal subjects within Starfleet. It’s good to hear this and makes it easier for me to decide what should be done concerning Admiral Norton.” She bent slightly forwards in her chair. “He is still in our custody. We’ll deliver him to you and Starfleet justice when you return to Earth. If you want to interview him first, please inform Selek in advance.”

This time Barnett was grateful. New Vulcan had every right in the world to take justice in its own hands, yet T’Pau was ready to let Starfleet handle Norton. There weren’t many other planet governments within the Federation which would have reacted like this. “Thank you, Ma’am. He assaulted your seat of government, the employees there and even you in person. To leave him to Starfleet Command is regarded well.”

Again the matriarch didn’t show what was on her mind, as she answered, “The Federation has Her laws and Her justice which are involved whenever necessary. It responds to everyone’s rights and duties independent of heritage and title. I will be there when Justice will be called. Only then is the right time to bring everything into the open.” She straightened her shape. “Good day, Admiral.”

The screen went dark and showed a moment later the ball of New Vulcan again.
Barnett sighed. He had a good imagination of what T’Pau meant with her last words: She would be present when the court material happened – as a witness and, as Richard would bet his last shirt, also as support for her grandson, Kirk and the others. The House of Surak was the most influenced clan of Vulcan and as a close friend of Spock, Kirk was more or less under the personal protection of Sarek’s family. Of course something like this shouldn’t matter when it came to court material, yet Richard knew that this connection had to be considered.

But for now there were more important things to do – like speaking with Kirk, and delivering Uhura to her maybe future grandmother-in-law.

ST***ST***ST

The same time Barnett had his short briefing with Wesley before he went to bridge to talk with ‘Selek’, Chekov, Riley and Weiss left the hospital. The day was still young and the murderous heat was yet to come. The soft wind from the lake made it almost pleasurable to walk down the campus.

Joaquin had to admit that his curiosity was growing despite his worry for his ‘brother’. Again he could smell the foreign air, the strange scents of the plants which grew along the campus, and he took in the architecture around him. The sky was a light red orange and as Pavel saw his gaze, he explained, “Vulcan – ze original Vulcan I mean – had ze same colored sky in ze morning. During ze day it became more a grey-sandy color – exactly like here.”

Weiss nodded slowly. “It’s… difficult to deal with so many new things at one time. My senses take in so many different, foreign sensations, it’s dizzying.” He grimaced. “Right, I was outside yesterday, too, but as I have to admit, I was utterly caught in meeting the Vulcans, to see my other family members being brought to safety and then this damn shit in Selek’s office.” He shook his head. “It’s…”

He stopped dead in his tracks as he saw a group of people coming their way. A very strange group of people, as he realized. In the front marched two beings which reminded him of pigs on two legs, with curly messy hair, something that could be a beard and a mouth that was definitely a snout. Beside them walked a slender woman with fiery red hair who had a… tail! She reminded him of a cat becoming human. On the other side was a man, whose face held several stripes which obviously weren’t any tattoos, but were part of his skin. Behind them walked a male in his middle twenties who looked, to Joaquin’s relief, simply human. Something stirred in his memories. He already had seen these people – yesterday, as Jim and the others raced to the transporter room to bring Noo down to the hospital. He hadn’t paid much attention then, but now…

“Just have a look,” Chekov grinned. “If zis isn’t Ze Shadow…” He caught Joaquin’s confused gaze
and added, “The gang your brozer hung out wiz.”

“These are Noo’s allies during the last weeks?” Weiss almost squeaked; staring at the people who could have come straight from a fantasy novel.

Kevin began to laugh. “They are not the only strange guys in the universe.”

“I believe you!” Joaquin croaked as just that moment two other, very foreign looking men bypassed them; reminding Weiss at amphibians just coming out of the water. How they could be comfortable in this dry climate was beyond him.

The Shadow was reaching them now and Caviw watched the young warrior between the two other Terran males with worry. They all had learned from Ritek what kind of violence Khan had been forced to endure during his first encounter with Section 31 – with Conelly. They had been outraged – furious! Conelly could call himself lucky that he was aboard the Excalibur in custody; otherwise there had been the chance that he wouldn’t have lived to see another day. Tellarits and Caitians were very possessive and protective of their family members and friends, and something like rape could end in a very painful death for the rapist. Neither Galven, nor Caviw would have had a problem with killing Conelly with their bare hands – even if that would have meant jail for them.

But with Conelly out of reach for them, their whole attention was driven to the victim – to their friend and comrade in arms, Khan. And therefore their concern lay also with his younger brother. None of them knew if the boy had learned of this one detail of the many torments the older Augment had been through, and none of them would mention it for now, yet their urge to comfort and take care of their friend’s younger brother drove them. At least the boy wasn’t alone. Neither Caviw nor the others had ever met the two young Starfleet officers, who accompanied the barely grown enhanced man, but given their gazes and the protective way they hunched close to the boy told The Shadow that they meant well for the young Augment.

Galven greeted them first. “Morning, Gentlemen.” he oinked, before he looked straight at Joaquin. “I learned that you’re Khan’s younger brother.”

It was a statement, not a question, yet Joaquin felt himself compelled to answer, “Yes, I am.”

The Tellarit nodded. “How is he doing?”

Weiss gulped and looked at the others. He found himself surrounded by the aliens and for a long
moment anxiety woke in him. Then he felt Pavel and Kevin stepping closer to him and to his surprise it indeed calmed him. Was he really watching them as friends already that he trusted them like this? Obviously the answer to this was 'yes'. “He’s… in a coma – or healing trance. The healers are not sure,” he said quietly to the stout alien.

The cat-like woman bent forwards and laid a slender hand with very sharp nails on his shoulder. “Calm down, young warrior,” she said softly, while pointy teeth were to see. “I know this all must be very unsettling for you, but you are among friends.” Her tail came around and was laid on his other shoulder in a soothing manner. Perplex he stared at it – and Caviw began to giggle. “Your brother used to pull at it to tease me,” she explained.

Weiss frowned. “Noo… pulled your tail?” he asked perplex; imagine Khan of all people pulling a cat-human at its… ungh… her tail. It was… unbelievable. Almost. His brother did have a sense of mischief after all.

“I think he’s the only one who is allowed to so and come out of it healthy,” the other young human looking man chuckled. “Hi, I’m Jeff.” he introduced himself and offered his hand. The others followed his example and within a minute Joaquin had touched more alien hands than he liked. It was so… strange, unnerving almost, yet he sensed that these beings didn’t mean him any harm.

“So, any chance that we can visit your brother or Jim?” the man who had introduced himself as ‘Jeff’ asked.

Joaquin shrugged. “Dr. McCoy sent me away to ‘clear my head out’, as he put it. He and some Vulcan healers were fuzzing around Noo as I tried to meditate, and Jim was sitting on his bed, jumpy like a caged tiger.”

Galven oinked something in his own language, before he grumbled. “No wonder. The two are so smitten with each other; it must be hell for the boy to watch his mate in such a condition.”

Weiss’ eyes widened. “You know about them?”

Promptly the whole gang burst out laughing, before Calvin giggled, “They are so cute together!”

Joaquin almost choked. Noo and ‘cute’? He could imagine his brother’s reaction to that statement.
Galven rolled his eyes in a very human way, before he turned towards the two ensigns. “How are the things aboard the *Enterprise*? I hope, Kirk’s superiors don’t give you guys too much trouble for your solo actions within the last weeks?”

Chekov sighed. “Zey are not too happy zat ze keptin hid Khan on his ship. Better to say, Admiral Barnett isn’t zat delighted about it.”

“I thought so,” Caviw nodded. “Mrs. Whitman talked with us about Khan during our journey to New Vulcan, and we learned a few things about him, we didn’t know about earlier – like him losing it last year and running amok. Yet we have only come to know him as a loyal ally, who cares dearly about those who hold his heart. And in my culture family comes above everything else, so fighting for them is usual.”

“On my planet the people think the same,” the other pig-like man added, who had introduced himself as Galten.

“The lad may have overdid it a little bit,” his brother oinked, “yet we Tellarits can justify the best how it is to lose your temper when your own clan is at stake. I only hope the admiral learns to see it likewise.”

“Admiral Barnett is grateful for Mr. Singh’s help,” Pavel said carefully. “And he also sort of admires ze keptin for doing ze right zings despite any protocol or orders from zese traitors. But he has to weigh ze protocol and what ze heart tells, and so it’s not easy for him. But he already allowed ze keptin, Mr. Spock and ze ozers to remain out of custody. Mr. Scott, for example, can be on duty but under observation.”

Galven grinned at him. “This Mr. Scott is a fine engineer. How is he doing?”

“He’s very busy with the repairs,” Riley answered. “Jim let the engines run to their maximum for several days despite their condition, and now they are more or less done for – at least the warp drive.”

“Hm, I could give them a hand up there,” Galven pointed a hoof-like hand towards the skies. “It isn’t as if I have nothing else to do in the moment.”

“Zank you, sir, but I zink you need Admiral Barnett’s or at least Commodore Wesley’s okay for zat – wiz you being a civilian, and so on,” Chekov smiled sheepishly.
“No problem, Buddy, I’ll call him. It isn’t as if we hadn’t had a few talks with each other before,” Galven smirked. “I also talked with Diego last night – better to say, I sent him a message about everything that happened here. He’s a friend of your brother, too, and…”

“The man who let Noo and Jim stay in his cabin at the lake on this planet the Klingons tried to assault later?” Weiss asked; glad that he knew at least a few things of this strange new world.

“Yes, exactly,” the man with the stripes on his face nodded, while he chuckled, “I think, the outcome for him was the best of us all. He got the task to fix a few of Starfleet’s ships after the battle, and provide them with spare parts. His ship yard profits big by it.”

Galven glared at Ritek. “This was my speech, you know.”

“Aw, don’t fret, piggy. There is still enough news you can tell the boys.”

“Piggy?” the Tellarit outraged. “Did you just call me ‘piggy’?”

The other man sighed. “How often I have told you to look in the mirror – really look, I mean. You do resemble a Terran p…”

“What?” Pushing his fists there were other people had a waist, Galven straightened his shape so that he reached to the Rigelian’s chest. “And you, chipmunk, have…”

“Guys, not here.” Jeff cut in. “Heavens, you are on the almost ‘holy’ grounds of the New Vulcan Academy and the hospital. And when I see the gazes the Vulcans are throwing in our direction, I get the feeling that our stay will be overdue soon, if you two continue like this. So shut up, for once! And, by the way, what shall our young lion here think of you, if you behave like old-fashioned sumo wrestlers?”

Galven cocked his head. “What is a sumo-wrestler? Are you trying to offend me, Jeff?”

Caviw groaned, and shook her head, before she addressed the two ensigns and the Augment-boy. “Never mind them. This is a never-ending story.” She pointed nonchalant at the Rigelian and the Tellarit with the tip of her tail. Then her glance fell at the hospital. “Well, as long as those healers are
flittering around our White Tiger, we’ve no chance to have a look at him. Just as well we can have a nice, decent breakfast until the way is free for us.”

“’White tiger’?” Joaquin echoed; already assuming to whom the cat-lady was referring.

He was right, because she simply grinned, “It’s a cover-name we came up with for your brother. I saw a photo of a white tiger of your planet and with its blue eyes and white and black, it really resembles Khan – including the grace and danger both possess.”

Weiss stared at her, while Jeff sighed, “We so are not going down this road again, Sweetie. The man is taken, as you know.” He shook his head. “But in one thing you’re right: breakfast.” He pointed at a building on the other side of the street. “They’ve intergalactic food over there. Come on, boys, I’ll buy you a meal.” Without waiting for a reply he began to head in the right direction, and the others followed him; among them Galven and Ritek, who couldn’t stop grumbling some more things beneath their breaths.

ST***ST***ST

Lost in thought Uhura entered the transporter room; carrying only a small bag. After all, she already had taken her most needed clothes and utensils with her as she accompanied Spock, Kirk and the others yesterday to New Vulcan, yet she was glad to have the chance to save some personal items – not only her own, but also some of Spock’s he valued. Yes, they would eventually return to the Enterprise – maybe to fly back to Earth to face court material, yet Nyota didn’t take the risk that Command would store their stuff somewhere. Some of Spock’s belongings were very personal; especially those that he got from his mother, and even if he called it ‘illogical’ Uhura simply knew that these things were very important for him.

“Hey, lass.” Scotty’s voice torn her out of her thoughts and startled she looked up. She smiled as she recognized Montgomery, who stood at the controls. Kyle was nowhere to be seen.

“Scotty,” she nodded. “Are you beaming me down?”

“Aye,” he said and waved her urgently over to him. Curious she closed the distance to him and cocked her head. “What is it, Gomery?” she asked.

“Have ye heard that a Betazoid is goin’ ter visit the capt’n and Khan?”
Nyota made an affirming gesture. “Yes, she’s the ambassador Wesley and the others rescued…”

“She’s an empath – an’ Barnett dunna know about our lovebirds.” He saw the realization on her face and added, “I think Wesley has at least an idea about the two – gave me quite the pointin’ look as he told Barnett about the lady’s wish. I’ll try ter contact Jim via the private frequency we agreed on, but maybe you’ve also the chance to warn him? If Barnett learns that he and Khan are…”

The same moment the door opened and revealed the admiral in question – and Scotty, always the quick thinker, instantly switched the topic smoothly. “Afterwards the transmitter should be okay again. I’ll have a look at it, lass.”

“Thanks, Scotty,” Uhura answered; pretending to discuss some business with Scotty and that she hadn’t recognized Barnett’s arrival. “I don’t know if I’m only over-sensible, but I really think there were some noises in the background which don’t belong there.”

“Always on duty, Lieutenant.” Richard said not unkindly – and Nyota did a very realistic show of being startled. Jumping an inch into the air she whirled around, gasping an “Admiral!”

Richard chuckled quietly. “That jumpy, Lieutenant? I can understand it. I don’t want to be in your shoes in the moment – facing T’Pau all alone, who certainly is going to probe you a lot before she gives her permission for you and her grandson to marry.”

“By the way, Nyota,” Scott smirked. “Congratulations!”

Uhura sighed; relieved that Barnett bought her little show. “I think that’s too early, Scotty. First I’ll have to pass the test of his Clan-Mother.” This time her groan was real. “Sweet Lord, why has it to be T’Pau?”

Again Barnett had to grin, while he fastened the strip of his tricorder around his shoulders he would take with him to record Kirk’s and Spock’s statements. “You have my sincere sympathy, Lieutenant. I dealt with the old dragon a lot of times and…” He cleared his throat. “My apologies for that slip of politeness. After all, you will belong to her House soon, if everything runs smoothly.” He cocked his head. “Yet I think this whole proposal came as a sort surprise for you.”

Uhura promptly grimaced. “Yeah, I haven’t the tiniest clue how she learned about Spock and me. Spock certainly had no chance to speak with her in private since his arrival on New Vulcan, and T’Pau may be a wise woman and her mental abilities are one of the most powerful ones among her
people, but she is no seeress.”

Barnett nodded slowly and watched the young, brilliant woman with almost fatherly affection – despite the fact that she was in big trouble just like her friends. “Am I right that Spock hasn’t proposed to you until now?”

An almost sheepish smile was the answer, followed by an, “You are right, sir. I hoped for him to ask me, but…” She made a fleeting gesture; sighing again.

The admiral laid one strong hand on her small shoulder. “Just be yourself and don’t back down in front of her. I’ve come to learn that it gains her respect if someone speaks his or her mind. And knowing you, you’re going to pass this ‘test’ with flying colors – just like you did at the Academy and here aboard the Enterprise.”

Nyota gave him a warm glance. “Thank you, sir. I know that all of us including me are in deep water for covering for Khan, and I’m grateful that you gave us the chance to explain everything without putting us behind bars.”

“Even if Jim Kirk sometimes behaves like a good, old-fashioned cowboy we aren’t in the wild west anymore, Lieutenant. Bars are history,” he chuckled. “And I do know whom I can give my trust and whom not. Kirk, you and the others definitely have earned it, even with the stunt you all pulled. And if I would put everyone in custody that covered for Khan, I would have to lock up the whole crew – and then there is no-one who would take care of our flag-ship. And, by the way, Kirk has some very mighty protectors I really don’t want to piss off even more. And despite that fact, I owe him, Khan, Spock, you and you too, Mr. Scott, my life. If it hadn’t have been for you all, Commodore Wesley would have never come to our rescue, Luengo’s plan would have been successful and the Federation would be back at war now at latest. And Starfleet would have the blood of seventy two innocent people on her hands, too – not to speak of the many lives the continuation of the war would demand. So, to arrest heroes doesn’t go well with me, the public and certainly not with the media. And, above all, the president and Mrs. Whitman declared that you all have to remain free – but under observation, even if it is only a formally thing. This all doesn’t really give me any choice.” He pointed to the transporter pads with another smirk. “And now – off you go. Don’t let T’Pau wait.”

Uhura gave him one of her wide, brilliant smiles and stepped onto the transporter platform. Taking a deep breath she addressed Scotty, “Just check the transmitter in my console and please run some tests with it. I let you know how everything went.”

Montgomery grinned at her. Of course he understood the real meaning of her words – that he had to use her communication station to send Jim a short warning and that she would try to do the same. “Aye, Nyota, don’t fear. I’ll take care of it.”
She nodded. “Energize!”

A moment later she vanished in the golden light of the transporter beam. Barnett rubbed his neck and stepped himself on a transporter pad. “All right, Mr. Scott, beam me down to the hospital. I’m certain you know the coordinates well by now.”

A large grin spread over the engineer’s face. “Aye, sir, ya could say that.” He activated the transporter and watched how the Chief in Command vanished, too.

The sound of the transporter beam had barely faded away, as Scott was already running out into the corridor, heading towards the bridge. He had to warn Jim that a full blown empath was about to come his way. He only hoped that he were able to send the secret transmission before Barnett would reach Kirk.

ST***ST

Uhura had materialized in the front of the flat large house, built in the typical rational style of Vulcan architecture. She had seen pictures of Gol and of the ancient buildings near the former Vulcan Academy, where the Elders had their working domicile – among them T’Pau. What a difference to this actual Seat of the Elder, yet it held the remains of Vulcan’s culture.

Only a few artifacts had been saved in the minutes before Vulcan was destroyed, and the new building was not even the beginning of a copy of the original one – something that made Nyota very sad. But she knew that this was only the beginning. She could already see the preparations to add ornaments to the house – art of pre-Surak time. Of course it had been more important to make shelter for the survivals than to re-build an abbey, but even the logical Vulcans needed something familiar after the grave losses they mourned in their own way, and Uhura was glad that there had been time enough to establish something cultural.

Taking a deep breath of the still fresh air, Nyota walked the small path that led to the main entrance. She hadn’t reached the door yet, as a Vulcan male stepped out, wearing the traditional clothes of a religious instructor. Lifting her right hand into the Ta’al-gesture, Uhura greeted him with utterly respect and just for a moment she thought to recognize a hint of surprise in his dark eyes, before he returned her greeting and walked her into the building.

Nyota had to admit that she got more and more nervous the closer she drew towards T’Pau’s office. She had to take over the comms station as a cadet during the Nero-crisis, had watched the home-
planet of her beloved being destroyed, had feared for his friends and for Earth, had faced a very aggressive Klingon patrol on Qo’noS, had thought to die as Admiral Marcus ordered the *Vengeance* to fire at the *Enterprise*, had thought to lose Spock in that damn volcano on Niburu, had watched her captain and friend dying and revived… The list could go on for many more occasions she had lived through and had been afraid. But to meet Vulcan’s matriarch now, who was above all Spock’s Clan-Mother and to know that the next minutes decided about Spock’s and her future, was the top of everything. Yet she would have to stay calm and had to pretend as if her whole happiness wasn’t at stake – a task that was a challenge even for someone as brave as Nyota Uhura.

The Vulcan in front of her stopped at a door, gave a signal and gestured to her to step in. Schooling her expression into calmness and straightening her slender frame, Uhura nodded politely at him and entered the room. It was an office for two or three people, but there was no-one to see. But the door to the next room was open and simply knowing that it led to T’Pau’s office, the comms officer walked towards the entrance.

She was right. T’Pau sat at a large desk in the middle of the room; wearing traditional robes and head-cover. The sun rays fell through the window and bathed the old Vulcaness in gold-red light; on the shelves at the walls were stored ancient papyri, boards, documents and books. But they weren’t many – only several dozens. The rest were data-chips and re-prints – donations from Vulcan’s colonies. Other data-chips came from befriended planets who had copies of ancient Vulcan documents to study, but returned them immediately so that a part of the destroyed records could be restored. Right, they weren’t comparable with the originals, but at least the written words of many centuries ago weren’t utterly lost.

Uhura realized that she had stared as T’Pau’s old voice said, “Come in, child. Do not fear.”

Nyota was tempted to lift a brow, but controlled herself. Lifting again the *Ta’al*, she said in Vulcan High Standard, “I come to serve, Ma’am. And it is not fear that made me stop at the threshold, but the respect I hold for you and the remains of Vulcan’s culture.”

The Vulcaness looked her straight in the eyes, and then she leant back – a good sign in Uhura’s opinion. “You are partly familiar with our manners, tradition and culture. I think my grandson had a hand in it.”

Nyota shook her head and stepped nearer, but didn’t sit down on the visitor chair. It wasn’t offered to her until now, and she wouldn’t occupy it before T’Pau invited her to. “I am a linguistic, Ma’am, and you only can learn a foreign language for real when you know more about the people who created it.”

“A wise mindset for someone so young,” T’Pau answered slowly; regarding the young Terran female in front of her. For Earthen standard she was pretty – even for Vulcans’ taste she was
aesthetically pleasing. Harmonious facial features, bright intelligent eyes, a slender feminine figure and obviously a strong and determined mind. And she seemed to be able to hold her composure. There weren’t many Terrans who would stand like this in front of Vulcan’s matriarch in such a calm manner, and T’Pau had encountered men and women of far higher ranking and heritage. It impressed her; this she could admit.

“And since we begin to speak if wisdom – do you think it wise to bond with a Vulcan?”

Uhura took a slow, deep breath. ‘Here we go!’ she thought, before she carefully answered, “Wisdom goes barely hand in hand with personal wishes of emotional nature, yet often new wisdom will be born from fulfilled wishes.”

T’Pau nodded. “True. To follow the heart, as you humans put it, can initiate new ways and new ways are important for the growing of a people. Stagnation is a step backwards, as the saying goes. Yet sometimes new ways can be a hindrance when it prevents the progress of people – in this case of an endangered species.”

This time Uhura lifted a brow. “You refer to Spock and the children he is supposed to have to make the Vulcan race rebuild – children from him and a Vulcaness.”

“Correct,” T’Pau affirmed; watching her with hawk-eyes.

“Are you sure that this is something the other Vulcans want?” Nyota asked carefully; returning the matriarch’s glance calmly.

This time she got a reaction from T’Pau, as she said, “Explain.”

Uhura took a deep breath. “As far as I understand Vulcan culture and point of view, every individual’s life and nature is valued – the principle of IDIC. Yet Spock was never on the receiving end of this dogma, but faced intolerance and even rejection from other full-blood Vulcans because of his Terran mother. His children, born by a Vulcaness or a Terran woman, will never be regarded differently, no matter his wife’s heritage. They will always be the ‘children of the half-breed’ – not full-bloods your people want and need. Therefore there is no logical reason to deny him at least the bond-mate he wishes for, rather than be forced into a bond with someone he doesn’t know and who doesn’t want him. ‘The duty to his people’, as you certainly going to refer to, would be for naught.”

Was she mistaken, or was there really a spark of amusement in the dark eyes of the matriarch?
“Did you talk with Selek?” T’Pau asked, and Uhura frowned for a second.

“Yesterday, at our arrival, yes. May I ask what he has to do with this?”

The Vulcaness lifted a hand and made an almost human fleeing gesture with it. “I was only curious, because he used almost the same arguments like you, why I should allow Spock the step of bonding with you.” She straightened her shape again. “Don’t misunderstand me, child. You are an intelligent and pleasing young woman, but Spock has not only duty to his people, but also to his clan. He is the heir of the House of Surak – and as such he carries responsibilities beyond those towards this new planet.”

“The line was already broken by Sarek as he married Lady Amanda,” Uhura argued politely. “Her genes and blood are rooted in Spock which caused the whole problem – a problem you certainly have become aware of shortly after Spock’s birth. But, as far as I’ve heard, Sarek has a brother who lives in an outer colony and will return within the next months. He has two children who can continue the line – therefore the House of Surak is not at stake.”

“And yet Spock is the heir – as Sarek’s son who is my firstborn.”

Nyota cocked her head. “And yet you allowed Sarek to bond with Lady Amanda – knowing fully well that the line of Surak would change because of their child’s mixed heritage and maybe would come to an end should Spock be sterile – latter is thankfully not the case, as medical science confirmed.”

T’Pau took a deep breath – the Vulcan equivalent of a sigh. “Of course I’ve foreseen these possible outcomes, but Sarek can be very… strong minded if he wants something.”

“A quality his son shares,” Uhura commented dryly, and for the length of the blink of an eye both women understood each other; then the matriarch pointed at one of the visitor chairs. “Have a seat,” she invited the Enterprise’s comms officer, and Nyota felt herself calming down. This offer was another good sign. So far she had managed to gain some respect from the stern Vulcaness.

T’Pau folded her weathered hands in front of her on the desk surface and watched the young woman in front of her for another minute. It pleased her that the female officer didn’t get nervous because of it. There had been strong men who almost squirmed under her firm gaze, but this ‘child’ held her ground with determination and grace.
“So, you think that even the most survivalists of our people will still look with disdain at Spock because of his mixed heritage? Despite the fact that he saved the Elders and the remains of our culture?” T’Pau continued the topic. “That would be illogical.”

Nyota nodded. “I agree, Ma’am, yet what he did for his people won’t be enough to change their behavior towards him for good. You must have recognized the other Vulcans’ rejection of your grandson when he was still nothing more than a little boy. Even the role he had in saving as much from Vulcan as possible won’t alter his former classmate’s opinion. His generation – and the older ones – will always see the ‘half-breed’ in him. You spoke of his duty towards his clan – that you want him to come into your inheritance. The other Vulcans will never accept this – especially in the given circumstances. If all, this would confuse your people even more.”

Again Uhura thought to see a hint of disport as T’Pau’s left mouth edge curled for a moment. “This all is not only because of him, child, but it’s also a matter of his bonded wife. She will be the new Clan-Mother after I pass. Tell me, could you fill my place?”

Nyota stared at her; her bright mind reeled before she came up with the only answer possible. “I’m no Vulcan and even learning everything possible of your culture would not be enough to fulfill the duties you are bonded to – especially concerning the telepathic parts.”

T’Pau nodded slowly. “I see you understand my point.”

At this Uhura lifted a brow. “I do, Ma’am, yet I ask myself: Would Amanda has become the new Clan-Mother if you would have passed before her? If so, Spock’s mother would have faced the same problems you confronting me with now. The Lady Amanda was Terran, just like I am – therefore a part of a Clan-Mother’s duty couldn’t have been fulfilled by her. If she or I would have been named Clan-Mother, it would have ended in one and the same dilemma. So please excuse my plain statement that this topic isn’t an argument against Spock’s and my marriage.”

T’Pau looked at her for a long time, before she quietly murmured, “You are indeed brilliant. Selek was right.” She activated an intercom. “T’Lal, bring two cooled H’nt-teas into my office.” She didn’t wait for a reply, but cut the link and looked back at a surprised Uhura. “I think this talk will last longer than thought, young one.”

Jim didn’t know exactly how much time had passed since he watched Joaquin leaving the room after
he insisted that the boy get some fresh air. Not that Weiss would really listen to him. Kirk simply knew that the young Augment would stick around somewhere, but after all Joaquin had been through – emotionally – within the last days it was important to get some distance to the current big mess. Jim was relieved as ‘Jo’ obeyed finally and left. Then, for a while, it had been only Jim and Khan, before the young captain was forced to use the restroom. After his return he simply sat down again at his bondmate’s bed and watched the slow and almost not recognizable rising and falling of Nien’s chest.

Despair…

That was what lurked deep in Kirk’s mind, mixed with fear and dark visions. What if Khan wouldn’t wake up again? What if this was indeed a coma and not a sort of healing trance? What if these injuries would be too much even for his mate’s augmented body?

He couldn’t lose Nien – he simply couldn’t! It would be too much to bear.

What had Khan said after Spock and the Enterprise had rescued them from the space-station above Aldebaran? That he, Nien, would keep on going if he would lose Jim, but it would be a mere existence – a function of body chemicals and duty. A human robot at best.

Only now Kirk began to realize fully what Khan had tried to tell him – now, as the situation was the other way around and Jim was about to lose the love of his life; the very being that gave his life the sun and made his soul soar.

Without his own doing he reached out for the Augment’s hand and wrapped the usually so strong, now weak, motionless fingers into his own, while his other hand found its way into Nien’s shock of dark hair. Even when Khan stood still and was concentrating he vibrated with energy – now there was nothing to see or to feel. It was as if only the body was still alive, but his soul had gone.

No!

Jim wouldn’t accept this!

He would not allow Nien to go!

Not without a fight – a fight without a real enemy he, Kirk, could combat with. He only could try to
hold the dark phantoms at bay which haunted his beloved.

‘I'm here, Nien! I'm here! I'm not going anywhere! I'll stay with you! Please, keep going! Hold on! There is so much I want to show you. I want to explore the stars with you – the real ones and those which dance around us when we’re making love! I want to be at your side – sharing my life with you! Always and forever!’

He pressed a kiss to the far too cool hand, while his thump stroke over the pale, smooth skin of the back Khan’s hand. He felt how his eyes began to sting and gulped down the lump that was forming in his throat. Nien needed his strength now, not his sorrow and pain.

Yet this was easier said than done. Jim had always hated it to be helpless – if it was in a situation concerning him being in danger, or, even worse, concerning his friends and his ship. It was not in his character to stand idly by and to nothing more than to watch and to hope. Now he had no other choice. There was absolutely nothing he could do to help the man who held his heart and soul except for be there for him – to be at his side and hopefully make him feel his presence.

Jim knew that Khan had been his whole life more or less alone. Yes, there were his friends – his family. Yet being the utter leader Nien was he didn’t burden his brothers and sisters with his own personal fears. It was exactly what Jim did, too, and Kirk was very aware how much he and his soulmate were alike. Worries, pain, anxieties… He tried to block it from his friends who had their own problems to handle. And Jim was absolutely certain that Nien had done the same with his brothers and sisters. It was the fate of leaders – to be alone, even with loyal friends around them.

But not now. Jim would make certain that Nien never ever again would think to be alone in dark times. He would share them with him, exactly as the good ones. But Khan would have to overcome the injuries for that; would have to win another battle again. Kirk knew how much tired the Augment was of fighting – of being threatened and of fearing for those he loved. But this was over. He, Jim, had only to make him see this.

Clinging to Nien’s hand and combing the fingers of his free hand through the damp mass of midnight dark hair, his gaze hung on the pale, bruised face with the aristocratic high cheekbones and the soft lips; willing his beloved to hear him in his mind.

‘Come back to me, honey. The danger is over – you, Jo and the rest of your family are safe. No-one will harm you here. You are among friends. You are with me and I will not allow anyone to harm you again. Just open your eyes – give me another sunrise to enjoy. Just one more miracle, Nien! Please – I beg you! Don’t give up. Come back to me!’
But the Augment’s eyes remained closed; his chest never hitched a sudden breath that would show his awakening; the monitor beeped in its endless monotonous way.

All of sudden Jim sensed a calm presence – that of Spock. He didn’t even know how he got this perception; he simply felt his T’hy’la being near. Like yesterday after Nien’s surgery and like last night, his Vulcan brother must have recognized his inner turmoil and had come – steady like the ocean’s tide.

Lifting his head, Kirk looked towards the entrance and the view-window beside it.

And what he saw made his blood freeze. There, at the other side of the glass, were the shapes of several people, but only one was clear to see. Jim gasped as looked straight into the face of no-one else than an obviously absolutely shocked Admiral Barnett!

ST***ST

Spock lay on the biobed that was placed next to his father’s and was thinking. Well, ‘brooding’ fitted it better. Usually any kind of problem was a challenge for him and, if he was human, he would have admitted to enjoy solving problems. And usually almost every problem could be dealt with by using logic. But this time logic wasn’t the answer to the current problem, because said problem was an emotional one. And to admit the latter was not right for a Vulcan, therefore the whole problem was split in two sides: One, the fact that it had to do with feelings and two, the resulting fact that logic couldn’t be used.

In other words: The challenge Spock was facing turned in circles, and as highly intelligent and brilliant as the first officer was, here he didn’t know how to even begin to search for a solution.

The problem itself was a wide-ranged one: his affection for Nyota, his wish to bond with her and the certainly expected trouble T’Pau would give them. And not only T’Pau. Spock anticipated his father was going to decline a bonding between his son and the Enterprise’s comms officer. No, Sarek was no Vulcan who pedestalled old traditions, seeing that he himself married a Terran woman. But Vulcans belonged to an endangered species now, and the survival of their people was the most important thing in the moment. Of course the Elders would expect – demand – that Spock would marry a Vulcaness to help in rebuilding the population. It was only logical, and Sarek would be right by requiring this logical step from his son. Yet something humans called ‘hope’ was brimming in Spock that his father maybe would support his decision – egoistical as it was.

Their relationship had improved within the last two years. In their grief for wife and mother, the reason for the icy silence between them had vanished completely, and both tried to catch up the time
they lost of being simply father and son. Sarek had become… softer somehow. Yes, it was also possible that Spock as a fully adult now saw his father in another light. He could understand his father’s point of view better than years ago. Maybe both facts had a role in their better understanding for each other. But Spock wasn’t certain if this was enough to convince his father to support him in this special matter. There was no time for their people to be egoistic, not when the survival of their whole race was at stake. Yet…

The door opened and a gruffly looking McCoy peeked inside. “Morning,” he whispered after a short glance at the ambassador. “Are you all right, Spock?”

The first officer lifted a brow. McCoy could be grumpy like rarely any other human he had met in his life, but he had come to know that this was the doctor’s very own way to deal with stress – especially when said stress was provoked by one of Leonard’s friends being ill. And the CMO regarded him, Spock, as a friend, even if he seldom showed it. Of this the Vulcan had no doubt.

“I’m quite functional, Doctor. Thank you,” he answered quietly.

Bones nodded with a grimace. ‘Translation: I’m doing a little bit better,’ he thought. Sighing he stepped into the room. “I got a call from Selek only a minute ago. Barnett is on his way to the hospital to interview Jim and you. Selek will come, too.” His voice was still hushed.

This time Spock lifted both brows, while he rose. “I’ll be with you in a minute, Doctor. Is Jim informed of the admiral’s arrival?”

Leonard shook his head. “He was in the restrooms as I checked on Khan and him,” he murmured.

The first officer slipped in a robe and in a pair of light shoes. With a wave of his hand he gestured for McCoy to leave the room; he followed the CMO on his heels. “How is Mr. Singh doing?” he asked as they walked down the corridor.

“No change in his condition,” Bones sighed. “I had a briefing with Healer Sorel and two other Vulcan healers as well as with Daniel Corrigan. They analyzed the read-outs of Khan’s brain activities and they all are unsure what to make of it. We simply haven’t enough data of an Augment to conclude if he is in a coma or in a kind of healing-trance. We have to wait until…” His communicator beeped and rolling his eyes, he put it out of his trouser pocket and opened it.

“McCoy here,” he answered the hail and was met with the whispering voice of no-one else than
“Doctor, I tried ter reach Jim but he doesn’t answer the hail.”

“Yeah, he’s there where even a king goes to afoot,” the CMO grumbled – a comment that made Spock looking at him in an almost astonishing way.

“Ye’ve ter warn him, Len. The Betazoid ambassador will visit him and Khan – and bein’ a Betazoid she’s…”

“An empath.” Spock said; a hue of concern edged in his voice.

McCoy stared with wide eyes at him; getting the implication. “Dammit! When she tells Barnett of our two lovebirds, then we’re done for!” He began to run. “Thanks, Scotty!” he said and closed the communicator.

“I’ll try to speak with my counterpart. He has to inform the lady about the secret affair and how important it is to stay silent about it,” Spock mused, while he remained at Bones’ side.

“Yes, do this!” Leonard wheezed and rounded the next corner. “Maybe…” He stopped dead in his tracks and would have lost his feet if it hadn’t been for Spock, who quickly steadied him with a steel-like grip around his upper arm. His gaze followed McCoy’s shocked glance and then he went stiff himself.

There, only a few meters ahead of them, was Jim’s and Khan’s room – and outside at the view window stood a very uncomfortable looking ‘Selek’ and a flabbergasted Admiral Barnett, who turned towards CMO and first officer as he heard their approach. His right index finger pointed nonchalantly at the window, while he gasped, “Pray tell me at WHAT exactly I’m looking at here?”

Spock was the first who found back his composure and straightening his shape he stepped away from McCoy, who rubbed absently his arm. Closing the distance to the Chief in Command, he greeted him respectfully with a, “Good morning, Admiral. Elder Selek.” he bowed towards his older counterpart. Only then he turned his attention to the scene behind the window – and felt the very illogical and far too human urge to curse.

There, beside the still motionless and unconscious Khan, sat a pale and very tired looking Jim Kirk,
who held the Augment’s hand in a tender way before he kissed it – a gesture far too intimate to be a simple one of friendly concern. And as if this wouldn’t be enough to give Barnett the utterly right idea of the true nature of the two males’ relationship, Jim’s other hand was stroking through Khan’s sweat-wet, tousled hair, while his face betrayed not only his worry, but also the deep feelings he had for the former dictator.

McCoy had closed the distance to them; anticipating the worst.

Well, it was more than worse.

There was no way on Earth that Barnett would mistake the scene for something else than it was.

Leonard gulped.

Shit!

TBC…

Chapter End Notes

Oooops, this certainly isn’t the best way for Barnett to learn about our two lovebirds. And Jim will have to explain a lot within the next chapter. And not only to him, but also to Wesley, who confronts him with the whole secret love-affair our dear commodore learned from Kor.

I hope you liked the new chapter and the little discussion between Uhura and T’Pau.

As always I’m curious of your reactions.

Have a nice rest of Sunday and a good start into the next week,

Love

Yours Starflight
No more secrets

Chapter Notes

Dear readers,

Thank you so very much for the comments. I’m glad that the long delay of the next update didn’t push you away. And, as promised, the new chapter comes quicker now.

I know how much you all simmer with excitement for the scene in which Barnett FINALLY learns about Jim and Khan – and therefore I don’t want to let you wait any longer.

Have fun with the new chapter

Love

Yours Starflight

See the end of the chapter for more notes

Chapter 81 – No more secrets

Barnett’s astonished question had barely been voiced, as Selek tried to save what could still be saved. Quietly he said, “Mr. Singh’s condition is very grave – and Captain Kirk and he have become friends. It’s no wonder that the Captain is concerned about…”

Barnett whirled around; forgetting for a moment that he was speaking with the Vulcan High Minister. “‘Concerned’? ‘Friends’?” He shook his head as if he wanted to clear it. “All due respect, High Minister, but don’t give me this lame excuse. I sat at my wife’s bed like this as she was about to give birth to our first daughter and heavy complications arose. And I guess that my expression wasn’t that different from Kirk’s now, not to mention the kiss he just pressed to Khan’s hand.” His dark eyes found the two younger officers, who wore almost sheepishly expressions – even Spock in his very own Vulcan way. Richard’s face became stern. “What. Is. Going. On. Here?” he demanded and fixed Spock with a glance that had sent students and cadets fleeing on a regular basis.

Well, it didn’t have the same effect on Sarek’s son, yet Spock saw no other choice than to stick to the truth. Barnett had witnessed the tender affection Jim held for Khan. There was no chance in denying it any longer. “Captain Kirk and Mr. Singh have grown close together,” he said carefully.

“‘Close’?” Richard didn’t believe his own ears. For a moment he thought the Vulcan had pulled his
leg, but dismissed that thought immediately. Even if he knew perfectly well that Spock did have a fine, dry sense of humor, this was certainly not the right time to use it. “You’ve a nice way of understatements, Mr. Spock. Please enlighten me: How close are they?”

Spock clasped his hands on his back. “It is not my place to speak about the Captain’s private life, Admiral.”

Richard took a deep breath to answer, but Selek was quicker.

“They are lovers.” The Elder’s calm words earned him two piercing, almost accusing glares from Spock and McCoy, and a deep frown from Barnett. “And before you ask, Admiral, Mr. Singh’s feelings for Jim Kirk are deep and true – just like it is the other way around.”

Barnett had the certain feeling that he had lost the ground beneath his feet. Kirk, Starfleet’s ‘lady’s man’ number one, had indeed a liaison with a male? Well, that would have been a big surprise even without the twist that said ‘male’ was a wanted criminal and that Kirk had even hidden on his ship.

“Their feelings for each other have nothing to do with the captain’s decision to help Khan to get a fair, second chance, Admiral,” Spock said, and Richard asked himself not for the first time if the Vulcan was able to read minds even without touching someone.

“No, of course not,” he growled; sarcasm plain to hear in his voice and obvious enough for Spock and Selek, because the younger one of the two Vulcans added, “They got close during their stay on Aldebaran – after the captain already worked together with Khan concerning the Battle of Tammeron and after Mr. Singh saved him from the Klingons.”

“Yeah, and I really want to know why Kirk trusted him from the beginning.” Barnett sounded anything but amused.

“Because Mr. Singh made the first step of trust as he revealed himself by warning the captain about the Klingon’s planned attack at Tammero…”

The Chief in Command rolled his eyes. “This sounds naïve – and Kirk is anything but.”

“Jim has a fine sense for sensible matters,” McCoy cut in. “And…” He stopped as he saw a movement within the room. Kirk had sensed Spock’s presence and lifted his head. He took in the
four men on the other side of the view window – and then his blue eyes widened in shock as they fell on Barnett. Like he had been stung by an adder he shot up from the bed’s edge and let go of the Augment’s hand; his face flushing alarmingly.

Richard grimaced and gave him one of his infamous glares – something that made Jim hurry towards the door and step out into the corridor.

“Admiral, sir,” he greeted a little bit breathless. “I… uh… I checked Khan’s fever and…”

“Not that we haven’t med-scanners today which are perfectly capable of checking for fever among further things – without using the sensibility of human lips. And even if Mr. Singh is maybe in need for a barber – to comb through his hair with your fingers will not replace a coiffeur’s work.” Barnett scoffed and if he hadn’t been so irritated, he would have been amused as his most promising but also most troublesome captain turned an even deeper shade of scarlet. He shook his head. “Really, Kirk, I never took you for one being in the man-to-man-department, but that’s up to you. What isn’t exactly compatible with being captain of Starfleet’s flag-ship and your private life is the fact that you obviously are bedding a wanted criminal – and hid him from the authorities.”

Jim gulped; realizing that the big fat cat was utterly out of the bag. He glanced quickly at the others. Spock’s eyes betrayed a hint of sympathy but also determination. His T’hy’la would support him, like always. McCoy looked rather contrite – and anything but happy. And Selek? His eyes held a mixture of warning to stay calm, but also reassurance. Jim knew that Old Spock would back him up too. And given the fact who he was now – the High Minister of Vulcan – and the role Starfleet played on this planet only yesterday, Jim was certain that the older counterpart of his Vulcan brother would light a fire under Barnett’s butt, if the admiral would give Jim a too hard time.

Taking a deep breath, Kirk looked his superior officer straight in the eyes, and said, “I didn’t hide Khan from the authorities, sir; I granted him asylum like every starship captain should if the given circumstances demand it – and go hand in hand with the book. Mr. Singh never faced a legal trial, never got the chance to press charges against his tormentors and the murder of four of his crew members, and never got a correct sentence, yet punishment was executed. He was abused as a lab-rat and had faced inhuman cruelty and unthinkable agony as the scientists forced his augmented body to produce anti-bodies against maladies. And even after he escaped, there were still official Starfleet personnel after him who simply wanted him back for their sick experiments or to kill him. His crew endured a like-wise fate at Gamma 12 and were about to be killed in an act of genocide. Tell me, Admiral, if Mr. Singh did not have any right to pledge asylum for his crew and himself, who then?”

Richard groaned. “I already heard all those arguments, Kirk, and they are hard facts I can’t and never will deny. Mr. Singh has been wronged beyond imagination and his people’s lives were at stake. I agree with you on this. But what I really wonder is, if you helped him because you fell for him or because it was the right thing to do.”
Kirk’s face hardened; anger streamed through his veins and made his eyes blaze like an upcoming thunderstorm in the late summers of Iowa. “You should know me better, sir. Yes, I admit that I care for my crew and my friends a lot and that I… interpret a rule here or there in my own way to keep them safe …”

“An understatement,” Barnett commented wryly, but Jim continued without hesitation.

“But I wouldn’t have agreed on helping Khan in the first place, if I hadn’t been convinced of his real background story and of his intentions of seeking true justice. According to the regulations and as the captain of a Starfleet starship I considered his request of political asylum and complied. Mr. Singh made it clear from the very beginning that he would go to a trial – a real one. All we had to do was to wait for the best chance to speak with you in person, because, as I also have to admit, there are not many members of the brass left I trust – not with such a delicate topic. But, regrettable, this damn war prevented the chance to speak with you in person and then Luengo took your place after you were declared dead. My officers, Commodore Wesley and Mr. Singh did everything in their power to rescue you and your surviving companions after we found out the mean trick that had been pulled on you, your companions, Starfleet, the Federation – us all, to point it out plainly. We tried and succeeded to prevent the cease-fire from being ended – by hairbreadths. And Mr. Singh paid the highest price possible for it.”

He pointed nonchalantly through the door at the motionless Augment. “There he lies – in a coma, almost beaten and kicked to death by fellows of the same organization that already took his crew hostage, killed four of them, put him into slavery, abused him and tormented him. Several minutes alone with them, and see what they did to him The healers and Dr. McCoy are not even certain, if he makes it at all despite his augmented nature. And you have doubts that I let my personal feelings for him get in the way as I made my decision to ‘hide him from the authorities’? I can’t imagine that your question was a serious one.”

Barnett watched the young man in front of him. He had seen and heard many things during his career – first in the Academy and later as Chief in Command. There had always been men and women who broke rules because of personal relationships and feelings. It was only human to do so, despite any good intentions and all given vows of duty. And Richard was convinced that this was also the case with Kirk now, yet the captain had given some very serious reasons why he had helped Khan at all. Reasons, which had been enough even for a staff officer like Wesley to spread his protective wings over the two allies – allies which were also lovers. Barnett was almost certain that Bob knew about the two, and he would have a word or two with him about ‘holding back information’, but just right now the admiral had to make sure that the captain of Starfleet’s flag-ship hadn’t broken dozens of rules and orders because of his bolting libido.

“Every point you made is correct and I’m glad that there are still officers in Starfleet who follow the codex of honor and for whom ‘morality’ isn’t an alien concept. But all your given arguments would have been stronger if you wouldn’t have taken Khan to your bed – or the other way around,” he
grumbled as Jim promptly opened his mouth to protest.

Kirk glared at him. “I didn’t know that love is a crime now that it even can influence given facts.”

Barnett cocked his head. “Love, Jim?” he asked – and the young captain was reminded at Old Spock’s reaction as he told him about his true feelings for Khan. Funny that both men used the same words, but made it sound so different.

“Yes, love,” he nodded; straightening his shape as if he wanted to dare Barnett to assume something different.

“And… does Mr. Singh return this affection?”

“He does,” Spock Prime spoke up for the first time. His calm gaze caught Richard’s troubled one, while he continued. “Everything Captain Kirk said is true, Admiral. Mr. Singh’s intentions towards him and concerning finding justice are true and even honorable.”

“And you know this how?” Barnett asked, which earned him a lifted brow.

For a Vulcan Selek almost looked exasperated. “Admiral, I don’t have to remind you about certain telepathically abilities Vulcans – and especially we Elders – have. Mr. Singh allowed me to share his mind. There are no doubts left anymore.”

“Usually it isn’t allowed for a Vulcan to share information about impressions he got during a mind-meld,” his younger counterpart cut in. “Not without the other one’s permission, but seeing that Mr. Singh is unconscious and the circumstances demand a quick decision, I dare to tell you that the cruelty and pain he experienced in Section 31’s hands were intense and large enough to break even a very strong mind. That he is still sane and is able to develop… tender feelings, is something humans certainly would call a ‘miracle’.”

Richard stared at Spock. “You saw it during your mind-meld with him last night, as you ‘pulled him back from the brink of death’, correct?” As he recognized the fleeting expression of surprise on the younger Vulcan’s face, he nodded at McCoy. “His words, not mine.”

Promptly Bones found himself in the focus of two half-Vulcans and one baffled starship captain. “Hey, I had to give our superiors a report about yours and Khan’s condition, Jim – after all Khan’s
injuries were inflicted by Starfleet personnel. The admiral and Commodore Wesley asked questions, I had to answer. And the two gentlemen were also worried for Sarek and Spock. Therefore I had to give them proper information. That’s all.”

“As it seems, Doctor, an old Terran phrase fits very well with you,” the first officer said indignantly. At McCoy’s asking glance, he explained, “To talk stress away.” He gave him a pointed glare, and Leonard grimaced.

“I already told you that I’m sorry for the mess I made for you last night.”

“Yes, Doctor, and I accept you apology. Yet even you should know that Vulcans speak very – very! – rarely about mind-melds.”

Jim looked between his two friends back and forth. “What did you mess up, Bones?”

The CMO groaned as he saw Kirk falling back into his typical protector-mood he had been about to leave. “Sweet Lord, never mess with your Vulcan brother, isn’t it?” He rubbed his neck. “As I informed Selek about Khan and the successful surgery of Sarek, I didn’t know that he was in T’Pau’s office and I somehow slipped that… well… that there is a second pair of lovebirds aboard our ship.”

Kirk gasped; his eyes wide as saucers. “Bones, you chatterbox!”

“Oh, so I can give you my thanks that I had a very stern and peeved T’Pau on the line this morning, who demanded that I had to release Lieutenant Uhura from being restricted and to send her back to New Vulcan immediately.” Barnett grumbled.

“You restricted Uhura?” Jim asked; new anger shimmered in his eyes. “She already got asylum on New Vulcan before she risked her neck to bring down the traitors aboard the Excalibur.”

“Lieutenant Uhura is back on New Vulcan, Admiral? Could you please tell me, where she is?” Spock asked at the same time; his stance tense.

“T’Pau got our language-wonder free?” Bones beamed and looked at the Elder. “I think you had a little part in it, Selek, didn’t you?” He pointed at Spock. “Our pointy-eared Romeo here worried his head off what his granny will say to the fact that he wants to marry a Terran woman, but I think you
already had a talk with the lady concerning our couple here.” He snickered. “Sneaky hobgobl…” He stopped himself; giving Selek an apologizing glance that was returned with look of barely hidden amusement.

Jim’s eyes were about to pop out of his head; his anger forgotten at the moment. “You’ve proposed to Uhura?” he addressed Spock, and before his friend could answer, he clapped him on the back. “Congratulations, Spock. Why didn’t you say anything? Hell, I would like to throw you and Nyota a party – if this is agreeable with Vulcan culture.”

“Jim, I assure you that I haven’t proposed to Nyota until now,” Spock corrected him. “I hadn’t the chance for it, yet it is indeed my intention to marry her.”

Kirk began to laugh; for a moment the tiresome worry fell into the background. “As I said: Congratulations, my friend.”

McCoy began to chuckle. “Well, I already promised you and Khan a little party, Jim. Maybe we can link this together with Spock’s and Uhura’s engagement.”

Barnett realized that his jaw had dropped during the little exchanges of the three friends, and quickly closed his mouth with an audible ‘click’. “Sweet Lord,” he wheezed, “Starfleet’s proud flag-ship has become a love-boat.” He met two grinning faces and one that showed nothing more than mild frustration. “You three are costing me years of my life with your crazy escapades, do you know that?” he growled.

Jim smiled at him. “Sir, what would be life without challenges?”

“In your case it would mean peace for me.” Richard retorted wryly and then he had to give into Kirk’s boyish grin, and smiled the tiniest bit. Pointing a finger at Jim he warned, “But don’t think that you’re already off the hook, Kirk. The same goes for the two other gentlemen. I think, we’ve got a lot to talk about.”

Kirk sobered up. “I know, sir.” He glanced back into the room and at Khan. “But… I can’t let him alone in the moment. I promised him to stay with him until he… he’s himself again.” He looked back and directly at Selek. “Please, don’t get me wrong, but Nien has experienced only pain and abuse within scientific and medical hold. He freaked out yesterday after surgery as he came around and found himself facing people in sterile clothes. That was the reason for his panic attack and him clinical dead for a minute or so, until Spock showed up and was able to get him back by initiating the mind-meld Bones mentioned. I’m simply afraid that he will react the same way when he wakes up, sees the sterile room and no-one is there he knows and trusts.”
Spock Prime lifted a brow; knowing of course of the other fact Jim didn’t want to name now: The mating-bond. Khan, even untrained in mental abilities, reacted on pure instinct when it came to his mate’s presence. With Jim’s absence there was the tiny but real chance that the Augment would withdraw even deeper into his mind as he was just right now.

But officially this shouldn’t be mentioned. The telepathically link between Jim and Khan should be kept a secret until it would be wise to reveal it. Therefore Selek answered gently, “I’m not offended, Jim. I realized how deep Mr. Singh is traumatized while I melded with him yesterday. Your reason for your wish to stay with him is logical. Yet I do think that the talk with Admiral Barnett is important – for all of you four. Mr. Weiss certainly will stay with his brother until you are back.”

“By the way,” Richard cut in, “where is the superboy – or our two greenhorns who buffalooed over hundred Elite Securities?”

Kirk frowned. “Whom do you mean?”

“Our whiz-kid Chekov and that young Irish sprite, Riley,” the admiral deadpanned. “According to Wesley they beamed down that morning to keep the Augment-boy company – something he and your whole remaining senior staff greatly approved.”

Jim grinned. “Well, they became friends.”

“I saw Chekov and Riley together with Joaquin in the waiting lounge at a meditation alcove,” Bones informed the others. “I sent them out to get some fresh air and maybe something decent between their teeth.”

Kirk nodded. “Well done.” He took out his communicator and looked at Barnett. “I know that I’m released from duty in the moment, but may I call the Enterprise so that they contact Chekov, asking him to take Riley and Joaquin back to the hospital?”

Richard glared at him. “As if you wouldn’t have already talked with your officers aboard since yesterday.” he scoffed. “Lieutenant Uhura may state that there were no hails from the planet since Dr. McCoy’s quick information about you, Khan and Sarek, but I know you too well, Kirk. There is no way in hell that you haven’t talked at least with Mr. Scott in the meantime.” He grimaced, as Jim shrugged with a sheepish smile and opened his communicator that was an admission in its own way.
Spock used the chance to address Barnett in an own private matter. “Admiral, can you tell me to where Lieutenant Uhura was beamed?”

The Chief in Command sighed inwardly. “Don’t worry, she is with your grandmother,” he said, and cocked his head, as Spock instantly went rigid.

“She is…?” The first officer stopped himself as he realized that he was about to copy a typical human behavior by repeating something he didn’t want to be true.

“She!” Bones grumbled, while in the background Jim talked with Scotty, before he was patched through to Chekov.

Selek lifted a calming hand. “Don’t fear, Spock. Leonard was right as he assumed that I already talked with T’Pau. I stated several very serious and logical arguments which she can’t thrust aside in her consideration of your request to bond with Nyota. And if your Uhura is only the tiniest bit like the Uhura I know from my time, she’ll do fine in the moment.”

Bones began to chuckle. “Just have a look, the universe never cease to surprise me. You are a matchmaker, Selek.”

Promptly an ice-grow brow was lifted. “I simply performed damage control, Leonard.”

McCoy shook his head. “Aw, don’t give me that excuse. You – and your younger counterpart – are big, big softies at heart. But don’t fear, I’ll tell no-one.”

“Sorry, Doctor, but this is something I can’t believe.” Spock commented dryly; still tense by the thought of Nyota being with T’Pau.

“What? That you’re soft hearted hobgoblin or that I won’t tell anybody about it?”

“Guys, it’s too early for that.” Jim closed the communicator and glared at Bones and Spock. Shaking his head he glanced at an obvious amused Barnett and then at Selek, whose dark eyes shimmered
“Are they always like that?” Richard wanted to know, and Kirk rolled his eyes.

“You have no idea, sir. They’re like fire and water – and yet they can’t be without each other. I have a big assumption that they love their bantering.”

“Captain, you have no reason to offend me,” Spock declared, and Jim was certain to see his Vulcan brother pouting for a tiny moment.

“And there I thought you’re my friend, Jim,” Bones complained, but deep in his eyes shone something close to laughter.

“I admit that you really have a difficult job, Kirk,” Barnett teased and then he nodded at the closed communicator. “Any luck?”

“Yeah, the boys are at a restaurant a few hundred meters away from here and having breakfast with The Shadow-gang. Pavel promised to hurry up. They’ll be here in less than a quarter of an hour.”

Barnett took a deep breath. “All right. It isn’t as if I have nothing else to do,” he mumbled. Then he pointed at Khan. “May I have a closer look at him, Doctor?” he addressed McCoy. “I got your short report, yet I want to see with my own eyes what these bastards did to him.”

“From my point of view there is nothing that would speak against it. Jim?” he asked his friend and captain, who bit his lips.

Jim knew how much Nien hated to be seen weak and vulnerable. But, on the other hand, it would serve them both good if Barnett realized how brutally Khan had been handled by Starfleet’s Elite and Section 31. He didn’t know if Barnett would be the judge at the expected court material, but the chances were high. The whole matter of Luengo’s and Norton’s betrayal, Section 31 and the part the Enterprise and Khan had in revealing everything, the trial would be a high explosive military and political subject; something the public would follow with hawk-eyes. That the Chief in Command would preside was logical. All right, Barnett was involved and personally affected which could prevent of him becoming the judge, yet he would at least be a witness and would belong on the jury. And to have him on Khan’s side would be half the battle, so to say.
“I agree,” Kirk said quietly. “Please follow me.”

He entered the intensive care room with Barnett and stepped to Nien’s bed. Selek was on their heels and Jim heard a sharp intake of breath from the admiral. Turning around he watched how Barnett’s eyes widened, while he took in the bruises, bandages and read-outs of the med-scanner above the biobed.

“Sweet Lord,” Richard whispered; getting at last the idea which kind of brutal violence had been needed to wound the enhanced man like this. “Those … animals!.”

“He suffered likewise before, during his forced stay with Section 31 and Admiral Marcus – both in body and soul,” Spock said softly, who had followed them, too. McCoy was at this side; his expression hiding his outrage only barely.

Barnett looked shocked at Sarek’s son and then he shook his head. “I believed Wesley as he told me about the true background history of Khan concerning Section 31, but to see it now…” He pressed his lips into a thin line. “I can understand that you wanted to protect him, Kirk, even if it almost sounds laughable that an Augment of all people needs protection.”

“I am certain that this was ‘only’ a pay-back from Finnegan because Nien shielded me at Gamma 12 against his attacks,” Jim murmured; his eyes blazed. “Finnegan opened fire at us without even demanding surrender or making himself recognizable in advance. He attacked from ambush. If it hadn’t been for Khan who pushed Spock out of harm’s way, I would be without my first officer now. Later Finnegan lay in wait for me after his fellows attacked me and our Redshirts came to my support. We fought and I realized that he had every intention of killing me. Then Spock and Khan came into the scene, and Nien joined the fight – protecting me. Finnegan realized that he stood no chance against Nien and aimed at him a phaser set to kill and… Well, Spock had been able to call the Enterprise and Scotty beamed us out in the very last second. Finnegan was taken to the brig, because twice he tried to murder my senior officers and me. That he wasn’t successful in at least killing me and Spock was because of Khan’s intervention.”

“By the way, Mr. Singh made no attempt to kill Commander Finnegan, but to defeat him without using full his strength – after Finnegan shot at him first,” Spock added; knowing that this behavior would grant Khan another bonus. Fascinating, how much he – Spock – had begun to support the Augment and his intentions.

Barnett nodded slowly. “Wesley will interview Finnegan today – also Styles, his two allies and Luengo’s spy.” He glanced at Kirk. “Any chance that I get more surprises concerning your relationship with Khan?”
Jim shook his head; not ready to reveal the bond between himself and Nien. “No, sir, we are together – seriously together. There is nothing more to tell.”

Richard nodded, before he sighed, “I should be glad that wild boy-you finally found someone who not only caught your heart for true, but also has begun to tame you. But had it to be a wanted man half of Starfleet is after?”

Bones chuckled. “I asked him the very same question, sir, but there is only one answer possible: Love can’t be controlled – it happens.”

“Yes, I know – but I ask myself what the judge will say to this statement – or T’Pau should Lieutenant Uhura use these words, too.”

Kirk groaned as he saw Spock stiffening again. “Admiral, did you have to make Spock any tenser because of the fact that his intended spouse is facing his hag of grandmother just right now and he can’t do anything to support her in the moment?”

“Captain, I assure you I’m not tense,” Spock protested and Bones rolled his eyes. “Sure thing. And there is the saying Vulcans can’t lie.”

“Doctor, there…”

“Jim?” Joaquin’s quiet voice interrupted the next round of banter and the four men in the room turned around. Weiss’ big eyes drifted quickly to his ‘brother’, before he looked at Kirk and then at the dark-skinned man in the green and white uniform he recognized as the admiral who had come to their aid yesterday.

Behind him stood Chekov and Riley; both having a doggy-box in their hands. Obviously they hadn’t finished their breakfast in peace, but had headed back to the hospital immediately; taking the rest of their food with them. And according to the voices in the corridor, The Shadow had arrived, too.

“Jo,” Kirk smiled at him. “Thanks for coming so quickly.” His glance found Chekov and Riley. “The same goes for you, Gentlemen.”
“At ease, boys, I’m out of the chair at the moment, and, by the way, you two are here in private.” He stepped to them and laid a hand on both their shoulders. “As I heard, you two re-seized our ship,” he nodded towards the ceiling. “You, Keenser and Sulu. Thank you so much, guys. I don’t have any details now, but if I put the pieces together the picture is clear. You kicked those pirates in uniform into the next week and also supported Selek enough so that he could manipulate the Excalibur and we were able to beam up to save Khan and to arrest Styles. Well done, Gentlemen. I’ll leave a commendation in your files – if I get the chance for it,” he added; looking swiftly at Barnett.

“They already got the entry in their files, Jim, just like you, Mr. Spock, Dr. McCoy and the other senior officers.” As he caught the surprised gaze of the young captain, Richard added, “That you all ‘interpreted’ protocol to your liking doesn’t prevent that you saved the day again so to speak. You all surpassed yourself to protect civilians during the war, saved the cease-fire and revealed a new conspiracy within Starfleet what led to the rescue of the surviving delegation members; myself included. Of course that deserves the highest commendations possible.”

“This I’m calling ‘the spirit’,,” an oinking voice commented. “Knew you had it in you, Admiral.” Galven winked simply at Barnett; not giving a damn about the Terran man’s position and rank within the Federation.

Richard almost groaned, but somehow he had come to like the stout Tellarit, who never had a problem to call a spade a spade. “Not a spirit, but rather a crazy phantom seems to have encountered our troublemakers here.” He glanced at an innocent looking Spock, a grumpy CMO and a scary pale, yet at least a little bit smiling Jim Kirk. Then his gaze found the rest of The Shadow-gang, who had gathered around Khan in an almost protective way.

Silence returned to the room, while the members of the militia looked outraged and shocked at their augmented friend. Ashen grey, sweaty from fever, body and face covered in bruises he was barely recognizable as the proud, fierce warrior they all knew.

Caviw laid one hand on his arm; making a half meowing, half purring voice in the back of her throat; her tail twitched in worry and anger. “This is wrong,” she hissed, before her blazing eyes glared at Barnett. “Shouldn’t your men be trained to avoid such violence? They were Starfleet’s Elite, for the holy tree’s sake. To lash out like this on someone vulnerable, is the lowest way of acting possible.”

Barnett felt his cheeks heating up – in embarrassment, but also in irritation. The latter was aimed at Finnegan and the men who were responsible for the Augment’s state. And he had no problem in voicing it. “Those, who did this to Mr. Singh, will pay, Miss Caviw. Be sure of it.” he all but growled. “I don’t tolerate any violence inside of Starfleet and certainly not between Starfleet and civilians.”
The Caitian woman nodded slowly, but it was obvious that she wasn’t satisfied.

The two Tellarits had greeted Selek in the meantime; showing respect despite Vulcan and Tellarit history, but times had changed for the better. And as Spock Prime thanked Galven for taking Jim Kirk to safety and to look out for him, the Tellarit grumbled something awkwardly – displaying an uncharacteristically shyness.

Then Galven looked the young captain up and down, closed the distance to him and laid one hoof-like hand on his shoulder. “Don’t lose hope, lad,” he said almost gently; knowing exactly why the Federation’s newest hero was so crestfallen. “Khan is a fighter – and he loves you deeply. He’ll come back to you and the boy,” he nodded towards Joaquin.

“Galven!” Caviw hissed; throwing a pointed glare at her friend, whose little eyes widened as he realized what he revealed. Turning his attention quickly to Barnett he found the human rolling his eyes and grimacing.

“No need to watch your words,” he murmured. “I already know of the two lovebirds here.” His glance found Spock. “Pardon, two pairs of lovebirds.” He watched how the younger Vulcan’s ears turned green, and – oh wonder – it was McCoy who came to Spock’s aid.

“Don’t get me wrong, Admiral, but ever heard of Vulcans valuing their privacy?”

Richard sighed; getting a new proof how close the three officers were for real. Then his glance turned towards Kirk, who was talking quietly with Joaquin. He watched the augmented boy with rising curiosity, which didn’t go unnoticed by Weiss. Looking from Jim away he returned the admiral’s gaze unblinking. Jim realized who had caught Joaquin’s attention and turned towards his highest ranking superior. “Admiral, may I introduce you to Joaquin Weiss? He’s Nien’s younger brother.” He laid a hand on the boy’s shoulder. “Jo, this is Admiral Richard Barnett, Chief in Command of Starfleet.”

Moistening his lips, Joaquin headed towards the admiral and offered him his hand. “Sir, it’s a pleasure to meet you without a big fight going on.”

Barnett didn’t hesitate to take the almost grown boy’s fingers into his own. “Welcome in the 23rd century, Mr. Weiss. I’m sorry that you were introduced to our time like this, but I hope that the worst is over and that you’ll find peace here.”
Weiss nodded slowly. “Thank you, Admiral. I appreciate your concern. Jim told me about you – that you are an honorable man who doesn’t prejudge. I heard that my brother… caused some big trouble last year, even if this took place after he had been wronged in brutal ways. That you are willing to give him – and us – a chance is very generous of you.”

Taking a deep breath, Barnett said quietly, “Your brother has earned a second chance. And concerning you and your ‘brothers’ and ‘sisters’ – well, they did nothing wrong here. The Vulcans offered to help them coming to terms with this century and the Federation. I think this would be a good start for them and I hope I can convince the Federation Council to see it likewise.”

Joaquin nodded, before his gaze drifted first to his brother and then to Kirk. “I know that the admiral has to speak with you, Jim. Just go, I wait here. Should something change, I inform you.”

Kirk gave him a little smile. “Thanks, Jo. We’ll be… uh, where the next briefing room?” he addressed Selek, who pointed to the left. “Only four doors down the corridor.”

Barnett rubbed his neck. “All right, Gentlemen, just let us get the talk over with.” He glanced up at the high minister. “Do you really want to join that briefing?”

It made the alert bells in him ringing, as Selek answered dryly, “Admiral, I haven’t had the pleasure to listen to Jim Kirk talking himself off the gallows for many decades. Believe me; I have time for this discussion!”

ST***ST***ST

Wesley all but stormed down the corridor towards the next turbo-lift. No, he wasn’t in a hurry; it was rather a way to get off some steam. Outside his face betrayed nothing despite a set jaw and some tension around his eyes, but inside he was boiling with rage.

He had interviewed Styles – who didn’t say anything useful. And he also spoke with the two other former bridge officers who had been part of the conspiracy. They all three insisted on their rights to give no statements without any lawyers. Bob could live with that. The proofs Command had concerning the three officer’s high treachery were clear enough. No lawyer in the universe would be able to get them off the hook.

This wasn’t what had awoken the commodore’s fury. It had been the talks with Green, Dashwood and Conelly – latter was still recovering from the beating he got from Kirk. And his wrath also
rooted in the talk he’d had with Finnegan.

He had known that neither the scientists nor the commander regarded Khan as a human, but to deny him any rights of being called a ‘sentient being’ had woken Bob’s searing fury. And what shocked him the most was the coldness of which the three scientists spoke of the ‘subject’, while Finnegan only referred to him as ‘the creature’, and how sorry he was that he hadn’t been able to ‘finish him off for good’. Between the Irish man’s words lay also the deep loathing and hate he held for Jim Kirk, calling the Enterprise’s captain a ‘man-slut’ and ‘gay bastard’ – something Wesley didn’t tolerate for a second and added ‘heavy offences against a superior officer’ to Finnegan’s list of crimes. And the short interview with Nurreaux was as frustrating and infuriating like the other talks. Luengo’s spy didn’t held personal grudge against Kirk or Spock, but the cold-blooded way of shrugging his shoulders as Bob mentioned that Nurreaux had almost killed the Vulcan, showed once again that future officers should be selected more carefully. Starfleet didn’t need any functional machines in human bodies without any care for their colleagues. What this could lead to showed in the present situation.

What also unsettled Wesley was the fact that Finnegan and Nurreaux were both aware of Kirk and Khan being a couple – and sure as hell both certainly had blurted that out to Norton. The treacherous admiral’s way of blackmailing Khan into surrender by threatening Jim’s life made it clear that Norton knew of the two love-birds. If this was the case, Bob’s protégée’s weakness concerning the handsome Augment would be out in the open the moment Barnett would interview Norton, who would love to rub Kirk’s ‘failure’ into Richard’s face. Bob sat between two chairs. He didn’t know if it was better to beam down and to speak with Jim in person to make him understand that it was for the best if Barnett learned from him of the love-affair, or if he – Wesley – should keep silent; hoping for the best outcome.

His glance found his chronometer he wore at his left wrist, hidden beneath the uniform sleeve. Three hours. Barnett was on New Vulcan for approx. three hours. Certainly he was done with interviewing Kirk and maybe Spock, and was about to investigate further with talking to Norton. Hopefully the Chief in Command hadn’t had any chance to do the latter until now. Then it wouldn’t be too late to inform Richard of the true relationship of Kirk and Khan. It would be far better if Barnett learned that detail from him rather than from Norton. And as this thought grazed Bob he realized that he had already made up his mind.

Reaching the bridge – and collecting his composure to hide the wrath that still boiled in him – he ordered the current comms officer to call the hospital and to get Kirk or McCoy into the line, but it didn’t come to that.

“Sir,” the young man addressed him. “The Lexington is calling us. Lady Morganth wants to speak with you.”

Bob groaned. “I have no time for her in the moment and…”
“She says it’s about her visit to New Vulcan,” the comms officer interrupted him carefully.

Wesley closed his eyes. Yes, the lady’s visit to New Vulcan – and her checking on the two beings whose great distress and suffering she had sensed.

Just a moment! He had to meet her before she met with Kirk, Spock and certainly Barnett. He had to tell her to keep the love between the two heroes for herself – at least until he had had the opportunity to speak with Barnett in private about it.

‘Dammit, Jim, I knew that one day one of your love affairs would catch up with me and give me the grays – lucky me.’ he groaned inwardly.

“Right, Lieutenant, please ask the lady to meet with me at the New Vulcan’s hospital main entrance. And send Lieutenant Ericson of the Lexington the coordinates. Lieutenant Li of the Excalibur can give them to you. They will be the same that High Minister Selek received yesterday from Healer Sorel as he beamed back to the surface, together with Captain Kirk, Dr. McCoy and Mr. Singh including later’s brother. And give the coordinates to Mr. Kyle, too. I’m going to transporter room one.” He activated the intercom. “Commander Scott, please come to the bridge. You’ve the conn while I’m gone.”

Nodding at the officers he left the bridge; assuming that the next hour would be fateful at least for Kirk, his friends and Khan. He couldn’t know that the cat was already out of the bag – a very large cat…

Five minutes later New Vulcan’s merciless heat enveloped him as he materialized on the campus. It was early midday and the sun brimmed in the rusty colored sky. But, at least, there was a soft breeze from the gigantic lake a few kilometers away that made the air bearable. Bob had been on Vulcan a few times and he instantly realized the similarities between the original world and New Vulcan, but also the differences. And, as he had to admit, one difference was very pleasant for him and certainly for all other humans: said soft wind with the fresh aroma in it.

“Commodore Wesley.”

He turned around and was greeted with a very nice view: That of Lady Ania Morganth, dressed in a white and sandy long dress and with her golden hair open except for some locks which were pinned away from her sweet face. Her dark eyes twinkled in the sun and Bob could have sworn that two Vulcan males looked a little bit longer than polite into her direction. Well, why not.
Bob closed slowly the distance to the lady and greeted her politely. While walking towards the entrance he quickly informed her about the two secret lovers and why it was necessary to keep the true nature of their relationship a secret for now.

Ania looked with big eyes at him and smiled, “No problem, Commodore. We Betazoids have a knack for secret love-birds.” To use a human term like this just sounded funny coming from her.

Two minutes later they reached the intensive care station – and Wesley stopped as he saw the many figures who crowded the entrance of a patient-room. Instantly he recognized The Shadow-gang, and among them Chekov, Riley and the young Augment Jim had referred to as Khan’s brother.

“This is exactly what I needed,” he groaned, and Morganth began to chuckle.

“They are all worried, but they all try to show a brave face. How sweet.”

She ignored the commodore’s indignant gaze which was directed at her, and walked ahead. She could feel a special mind among the others – the unsettling concern, mixed with shining love and stubborn hope she had already sensed yesterday. Even before she reached the room she could hear the gentle tenor she had heard in live streams and other media reports concerning Starfleet’s newest hero. She smiled at Galven and Caviw, then at Ritek and Jeff, nodded towards the other three young Terrans and stopped at the door.

She gasped.

There, on the biobed, lay a beaten, very pale human man with dark hair. The bruises couldn’t fool the aristocratic high cheekbones, full lips and even features, while beneath the blankets the shape of a lean, slender body was recognizable. Even in his wretched condition the enhanced man was highly attractive, and Ania didn’t need to think twice why the young captain had fallen for his former nemesis.

Then her gaze wandered to the other men in the room. She recognized a human male in his early thirties, who looked rather concerned at the readouts of the monitor above the biobed. On the other side of the bed stood the young, gold-haired man she had seen in the media. He was pale, dark shadows circled his eyes and his thick hair was in disarray, yet these boyish handsome features, the strong, lean body, the broad shoulders and those incredible blue eyes were not to be mistaken. She couldn’t help but gave the young man a warm, gentle, shining smile, as he lifted his head at her entrance and looked at her confused.
“Captain Kirk?” she asked quietly, and the officer straightened his shape.

“Yes, Ma’am? How can I be at your service?” he asked politely with a smooth tenor.

She closed the distance to him. “Ania Morganth – one of the lucky people your intervention saved from a cruel fate in the Borderland.” She offered him her hand he instantly took and implied a kiss on it.

“Milady, it’s a pleasure to meet you,” he replied quietly; realizing that he faced the Betazoid ambassador. He gestured politely to Bones. “May I introduce you to Dr. Leonard McCoy, my CMO?”

While Ania greeted Bones, Jim continued, “I’m sorry that I can’t introduce you also to my first officer, Mr. Spock. He went with Admiral Barnett to Ambassador Sarek, his father.” He saw her nodding and only then he recognized Bob, who stood at the entrance and looked shocked at Khan. On silent feet Kirk closed the distance to him and stopped beside him.

“Good God, he looks even worse than yesterday,” Wesley murmured and Jim swallowed.

“Yeah,” was all he said; his voice turned rough again.

Bob’s gaze wandered over the injured figure on the biobed. “How are his chances?” he asked quietly.

“Bones isn’t sure,” Jim whispered; feeling a sharp pang in his chest. He realized that the Betazed ambassador looked his way, but he hadn’t the strength to return her glance that certainly was full of compassion. He knew about these people’s empathy. “They don’t even know if he is in coma or if this is a special kind of healing trance. The readouts are still the same since last night.”

Wesley put a hand on Kirk’s shoulder. “Don’t give up hope, son. I know how much he loves you and that he certainly fights his own battle for you, his brother and his family – to be with you and them.”

Jim nodded first and was about to thank Bob for the gentle words, as his older friend’s statement hit
home. Kirk’s eyes became wide as saucers. “You know…?” he began and the commodore grimaced.

“Yeah.” He nodded towards the corridor. “Do you have a minute?”

Kirk hesitated – his glance wandered to Nien.

Bob rolled his eyes. “For God’s sake, Jim, Khan will go nowhere at the moment and he is safe here with your friend, his brother and a whole militia as bodyguards, so tear yourself away from his side for a few minutes more.”

Promptly the young captain sighed. “I don’t fear that someone will harm him – but something.” He gulped. “Nien snapped as he came around after the surgery and…”

“He’ll be fine, Jim,” Joaquin said quietly. “I’ll stay with him. If he should wake up I make certain that it’s me he first lays eyes upon.”

Kirk nodded reluctantly; scratching his head inwardly at how Bob had come to learn of him and Nien. Well, there was this call in the middle of the night and Wesley spoke first with him and then with Khan. Nien even had assumed that the good commodore would put two and two together and would realize what was going on between his protégée and the former dictator, but that Bob was so calm about it made Jim almost nervous. Almost.

Nodding towards Bones, which meant ‘keep an eye on Nien’, he left the room and followed his superior towards a quieter place down the corridor.

“So,” he began carefully, “you know that Nien and I…”

“Are sharing a bed?” Wesley interrupted. “Being madly in love with each other?” He watched the younger man blushed, and growled, “Yes, I know! And I would have preferred to learn it from you instead from Kor – of all people.”

Kirk’s eyes became wide as saucers. “Kor?” he asked thunderstruck. “How did he know…? We weren’t even together in this sense as Nien saved me from this hell-hole Kor called is headquarters.”
Bob snorted. “Please, Jim, this tale you can tell your grandfather, not me.” He took Jim’s left elbow and gestured towards the lift. “Let’s go outside the campus. I don’t think anyone should hear this within the near future – or ever.” He didn’t wait for the young captain but walked briskly towards the lift.

“Lady Morganth is an empath and…” Jim began, but was shut up by Wesley firmly.

“She knows about you two and I asked her to stay silent about it. Especially in front of Barnett.” His brown eyes narrowed. “And he should learn of your liaison from you and not…”

“He knows,” Kirk murmured, walking towards his mentor and superior officer. As he caught Wesley’s surprised gaze, he added sheepishly, “He caught me as I was holding Nien’s hand and… and checked his fever in a rather unusual way.”

“Meaning?” Bob asked.

“Well… I kissed his hand and…” He stopped, as Bob moaned in frustration and closed his eyes for a moment before he glared at Kirk.

“You really have knack for rearing things up, don’t you?” As he saw the younger man only smiling rather embarrassed, he demanded, “How did Barnett take it?”

“He… wasn’t that delighted, but when Selek told him about his mind-meld with Nien and Nien’s real feelings for me and his true intention concerning facing a real trial, Barnett was convinced that I helped Khan NOT because we were rolling between the sheets. Spock also added fluid to the flames, when he explained what Nien has been through – stuff Spock experienced during his own mind-meld with Nien. Barnett… well, he believed them. He hadn’t any other choice, after all they are Vulcans and Vulcans don’t lie.”

“Yeah, except when they stretch the facts and the truth to an extent until it makes another sense – just like your first officer did the two or three times he bent the rules to come to your aid. And I’m certain that Selek did the same with his Jim Kirk – and still does today when it comes to you.” Bob said, planting both fists at his hips and stared at the other captain. “You can call yourself very – very! – fortunate that you have not one, but two Vulcan friends who stand up for you without a second thought. Hell, if they talk about mind-melding with Khan, they really broke a sort of taboo – all for you.” He rubbed his face; making a decision. “Come on, there is something I need to ask you – but not here.”

Giving in, Jim followed him. Two minutes later they stepped outside in the now brimming heat of
New Vulcan’s midday, and walked in the shadows of some trees along the campus.

Kirk was the first to speak again; curiosity getting the better of him. “So, you learned from Kor that Nien and I…?”

“Kor’s ship made records of you and Khan after this little trick with the parachute – while you were surrounded by Kor’s warriors,” Bob grumbled. “He showed them to me when I was aboard his ship. The way you two embraced has absolutely nothing to do with a hug among friends – not even in the face of death.”

Kirk bit his lips; avoiding Bob’s piercing eyes. Wesley shook his head at his protégée’s silence. “You told me that you and Khan met on Turkana for the first time and that you became friends afterwards. And here is where I get this certain feeling that you used a little white lie; because there is no way that you two weren’t already in some sort of relationship as those records were made. Khan pulled you closer into this embrace and you came willingly – even clung to him. You…”

“I just escaped hell, Bob. I was sentenced to death by torture and was already tormented for hours when Khan showed up and broke me out of that damn hole. We fled and then the escape failed. I was facing the next brutal attack that would lead to my death – and Nien was about to face the same fate. Of course I was scared shitless and…”

“Bullshit!” Wesley barked; lowering his voice as he received some lifted eyebrows from by-passing Vulcans. He saw the shock written on Kirk’s face and added, “I don’t doubt that you were afraid – deadly afraid. Hell, I would have gotten weak knees myself. Who wouldn’t? But the way you two reacted, held each other – the way Khan looked as if someone was going to kill one of his family, spoke volumes.”

“I told you that Nien regards me as a kind of family member, because…” He stopped, but it was too late.

“Because?” Bob prompted.

“Because I’ve got some of his blood in my veins,” Kirk mumbled. Taking a deep breath he revealed in a few short sentences what really happened during those minutes the Enterprise tumbled towards Earth and that he died behind the glass door of the warp core – and that Khan’s blood brought him back. Speechless Wesley listened and looked his protégée up and down afterwards.
“You… you were dead? Really dead?”

Kirk nodded. “Yeah – I even was brought in a black sack to medbay, where Bones more or less had a silent breakdown – that’s until the dead Tribble he gave a shot of Khan’s blood to wake up again. Then Spock caught Nien, brought him back aboard, Bones took a blood sample and… well, the rest is history.”

Bob stared at him – pale and perplexed. “You know what this would mean if this ever becomes public?” he finally whispered.

“Yeah, they would be after Nien and his family like the devil after a lost soul,” Jim growled.

“Not only this, but you would be regarded… different,” Wesley mumbled.

“Yep – they would call me a ‘freak’, because Nien’s blood left some nice side effects in me. More agile, stronger…”

“Crazier,” Bob deadpanned, while he shook his head for the second time. “And this blood doping shot Khan gave you during your escape from Turkana strengthened the side effects, didn’t it?”

Kirk chuckled. “Bones doesn’t know if he should thank or curse Khan for it.”

For a moment both men fell silent, and only the soft murmurs of the wind and the gentle noises of the town were heard, then Bob murmured, “So, because of some of his blood in your veins Khan regards you as family. Makes sense. What doesn’t make sense is the fact, why you and Khan already acted like lovers from the moment you two met in person for the first time after over a year.”

Jim moaned inwardly. Wesley wouldn’t let it rest, as it seemed.

“Well, he smelled his blood in me and…”

“And that gave him the idea, ‘Hey, he has my blood in him, I love him for it and therefore I will embrace him for the last time in front of approaching Klingons. And his coming death pains me as if someone is about to tear my limbs from my body. Because, Jim, that’s just what his expression
looked like.” Wesley cocked his head; his face became hard. “This wasn’t the first time you two met after the whole shit last year. This is the real reason why you already trusted him before ‘Turkana’ happened. This is the reason why you believed him the moment he contacted you to warn you about Tammeron. This is the real reason why he came to save your neck, risking his own life. You two were already close when you were taken captive and he raced to the rescue.” He took another deep breath of the hot, dry air. “When did you two became lovers? Last year, before the…?”

“No!” Jim snapped. “Last year I was ready to strangle him – I was ready to kill him like Marcus ordered. Spock talked me out of it, thank the Lord. I don’t dare to think what would have happened if I had shot these torpedoes at Qo’noS, and…”

“So when did you two get close at all? After his escape from the labs in August?” He saw the younger man blushing and snapped, “Jim, for God’s sake, spit it out! I can’t help you if I don’t know the whole truth.”

Kirk bowed his head; looking like an uncertain schoolboy for a moment.

Wesley pressed his lips in a line for a moment, before he said quietly, “I thought, we’re friends – that you trust me.”

Jim lifted his head again; blue eyes wide. “I do trust you, Bob, but… you won’t understand…”

“Try me.”

The Enterprise’s captain sighed tormented. “You’re going to hate me.”

“Nonsense. I’m sure that Spock and McCoy already know this little dark secret you’re so eager to protect, and they don’t hate you, but are still protecting you. So, out with it.”

Rubbing his neck, Jim finally whispered, “We met back in San Francisco – several hours after his escape from the labs in Nevada. It was the same day of the memorial speech I delivered. He… he came to my apartment to kill me – still thinking his family had been murdered by Spock, and me being okay with it.” He moistened his lips. “It didn’t get so far – everything changed after a short fight. Turned out that he was attracted to me from the beginning and I… I had no chance in stopping his… his seduction he forced upon me after he smelled his blood in me. Afterwards we talked. He learned of his family still being alive, I learned of his fate during the earlier months.”
Wesley stared aghast at him. “He came to your apartment and… You let him go?”

Kirk shrugged. “The night was… intense. I fell finally asleep – absolutely exhausted. When I woke up he was gone.”

Bob snorted angrily. “And of course it slipped your mind to inform Command of your nightly visitor.”

Jim spread his arms. “What should I do, Bob? He was already gone, and as I sorted out my thoughts Bones came running, thinking Khan had murdered me after Spock contacted him, giving him the news of Khan’s escape. Before I could even make up my mind Security was there, too, and I recognize a man-hunt when I see one. They wanted to kill Nien, after all he had been put through by some double-faced staff officers who still roamed free through Command; breaking all moral codes and kicking every kind of honor into the next century with the way they treated him. Yes, he killed, but I realized that his rampage the previous year was an amok-run because they broke him first.”

He rubbed his neck; cursing the heat of the early midday. “You should have seen him after I told him of his family’s survival. He sobbed, Bob. It was if someone pushed a needle into a rubber dinghy and all air escapes. He simply broke down in relief and new anguish. All his mourning had been for naught. No one told him that his crew was still alive. I couldn’t attack him in this moment of weakness. And I couldn’t give him away to Command after all the stuff I learned – not only from him, but also later during the encounter in Barnett’s office. As I heard how Dashwood and Connelly referred to him as a ‘subject’, stripping him of all human rights because of his heritage some crazy ancestors of the same kind of insane scientists were responsible for at the first place, I made up my mind. I couldn’t give him away. I simply couldn’t!” He took a deep breath. “And my decision had nothing to do with the fact that he seduced me earlier and gave me the night of my life. I’m a sexual being, I know this, but I do think with my brain, and not with my dick. I kept his visit a secret because I couldn’t live with the knowledge that he would be killed because of me – not after he spared me and told me about everything he had been put through by the very same people I thought to be honorable men and women.”

Wesley had listened carefully to everything the younger man told him, and one thing was clear: Jim was telling the truth; the harsh, unpleasant truth. He had lied for Khan and had covered up for him even back on Earth – because of compassion. Because of this damn urge to do the right thing, even if it went against protocol and broke rules, even laws.

Rubbing his jaw, the commodore murmured. “If Khan would have gone rogue again, his victims had been on your hands, too. You know this, Jim.”

Kirk nodded. “Yeah, but I knew he wouldn’t snap again. He was calm as he told me that he would search for his people. He knew – or hoped – that they were safe where they were. He asked me
about their whereabouts and I answered that I didn’t have a clue, but thought them to be off planet. He agreed, because it was a logical step for Command to take them away from Earth. He said he would find them – and if it would last a life time. That didn’t sound as he would go Rambo again. I think he learned his lessons.” He bit his lips again, before he added, “He left me a note; telling me that he gave me another sunrise to enjoy.”

“That’s why you knew it was him as he referred to himself as ‘Sunrise’,” Bob acknowledged, and moaned back in his throat. “Who knows about this all?”

“Only Spock and Bones. They came to the same conclusion than you did, but not because of some records the Klingons made, but because of other intimate details which were exchanged during our talk and during a call from Bones to Turkana – to me, to be precise.”

Wesley nodded very slowly. “Does Barnett suspect something? Does he assume that you and Khan have to know each other in a ‘familiar’ way for longer than after Turkana?” As Kirk shook his head, Bob sighed. “Right. Take care that it remains this way, otherwise you’re in deeper shit than you already are. That you granted Khan asylum on your ship after you learned of his true background on Aldebaran, like you told me and certainly Barnett, too, is the story you and Khan have to stick to. Otherwise, son, prosecution will use your ‘slip’ in San Francisco against you. That you hid Khan aboard the Enterprise because of the given reason is one thing. To stay silent about your encounter with him in your own apartment before war and everything started, would mean your downfall, so stay the hell silent about it.”

Jim gaped at him and closed his mouth with a click as Wesley grimaced. “You… you’re okay with it?” he asked flabbergasted.

“Of course I’m not ‘okay’ with this shit, Jim. Goddammit, you withhold important information from Command and covered for an escaped criminal – you lied for him! I’m already afraid that the prosecution is going to accuse you of complicity concerning the whole mess last year because of you hiding Khan within the last weeks. If they learn that you both already fucked before the Turkana incident they’ll steer the trial into a direction neither you nor all the other people involved want to face.”

“Did you clean your apartment before you left?” Wesley asked and Jim nodded.

“Yeah. I also terminated my lease contract, because of the upcoming five-year mission. I also ordered a storage company to stock my few furniture in a hold. I received the affirmation of the order’s
execution a day after we departed Earth. And you know that a flat is utterly disinfected before it’s rent out again. There are no tracks left which could give a hint of Nien’s presence in my rooms.”

“Very well, at least we’re on the safe side concerning this mess you made,” Bob grumbled. He looked at his sheepishly smiling protégée and pulled a face. “Really, Jim, you do know how to complicate things. Why didn’t you tell me sooner?”

The last sentence had been spoken in a quiet voice, and Jim felt a bad conscious nagging at the edge of his soul. “Well, I knew it would screw up the whole thing by staying silent about Nien’s ‘visit’, yet I was more afraid for him and of the outcomes if the truth were to be revealed, than for me. And I worried for my friends. Not that they would drop me like a hot potato. I know that they would listen and understand, just like you do, yet… I made a decision that was utterly my own and I didn’t want to pull anyone in the mess because of it.” He shrugged. “Turns out that my friends know me better than I assumed.”

Bob grumbled something beneath his breath, before he murmured, “Someone has to look after you, son. Your far too big heart and this crazy drive to set things right will be your death one day – already was, as I learned several minutes ago. I’m only glad that I heard about it now, after you’ve been brought back and stand healthy in front of me. I really don’t want to mourn your loss – already thought I’d lost you as Kor told me that he couldn’t do anything to help you.”

Jim frowned. “What did you mean?”

Wesley sighed. “Right, you are not the only one with big secrets here, and given the fact that this is the hour of truth, I think I have to admit something, too.” He pursed shortly his lips, before he went on, “I contacted Kor when I learned of your capture, and more or less begged him to spare you. Later I learned he was about to give in in his own way, by granting you a quick, painless death. But as he came to the ‘questioning-chamber’ Khan had been already quicker and broke you out.”

Kirk blinked. “One moment- You contacted him during open war? You, a staff officer contacting in private a hostile other staff officer?”

Wesley rolled his eyes. “You are not the only one who interprets the rules… differently, if there is a necessity for it.” He snorted again. “Luckily everything turned out quite all right. And it should remain like this, so don’t say or do anything that gives Barnett even the tiniest clue that you and Khan have been lovers or far longer than he thought.”

Jim felt like a huge burden was taken from his shoulders. It was a relief to tell about this last of all secrets to someone besides Spock and Bones, knowing he could trust Wesley like he trusted Pike.
“Thank you, Bob,” he murmured; his eyes shone with gratitude.

“Yeah, whatever. You’re taking years of my life away, Kirk, and…” His eyes looked behind Jim and widened. “Uh-uh, now I’m dying of curiosity, how that talk went.”

Confused the young captain turned around and he took a sharp breath. Not far away, at the street, a hyper-car had stopped, wearing an official Vulcan sign on its front doors. A male Vulcan, obviously the driver, had already opened the door of the back-seats and just in this moment T’Pau raised from it; Uhura stood on the other side of the open door and waited for the matriarch.

“Sweet Lord, here we go,” Jim gulped; hoping that everything had turned out well for his T’hy’la and his female friend…

Faith wins

Chapter Notes

Hi, my dear readers!

And once again thank you for all the comments and reactions. Even if the ‘action-part’ is more or less over now, I can promise some more twists, thrills and so on.

One of it comes in the new chapter – a father-son-talk between Sarek and Spock. Then you learn about the outcome of the talk between T’Pau and Uhura, before the old matriarch comes face to face with Joaquin, whom she owes big.

Therefore I don’t want to keep you away from the next chapter any longer.

Have fun

Love

Yours Starflight

See the end of the chapter for more notes

Chapter 82 – Faith wins

Spock had accompanied Admiral Barnett and High Minister Selek to Sarek after ‘the talk’ was done. He understood that the Chief in Command had developed some friendly feelings towards his father and that Barnett still worried about the older Vulcan. Of course Selek went with them. Even if he was older than Sarek now, the ambassador was still – somehow – his father, too, and the younger Vulcan could understand that his older self was concerned about him.

In the timeline ‘Spock Prime’ came from, Sarek was already dead – this much had the Enterprise’s first officer learned from the Elder – and therefore Selek used every given chance to be with Sarek. And there was no need to tell his younger self about the dispute he also had with his father in his own timeline. Spock simply knew that they both shared the same kind of childhood and the same results of their good-bye from home as they both chose Starfleet above the Vulcan Academy. The younger of the two half-Vulcans couldn’t deny that he was glad that he and Sarek were on speaking terms again, yet something Jim called a ‘gut-feeling’ told Spock that the family history of his older counterpart had been different. Last but not least because of Amanda’s early death. Spock simply knew deep down in his soul that Selek and the Sarek of his time-line had clung to their stubborn pride longer than their others selves now. So it was in its own way logical that Selek wanted to be in Sarek’s company as often as possible.
The ambassador was still pale, but he looked better as they arrived and he even made polite small-talk with Barnett. Yet his composure wasn’t fully restored, as it was plain to see for the two other Vulcans, as Sarek finally asked about the meeting. This could be the only reason why his face even showed relief as Richard told him that the statements of his son, Kirk and McCoy had been recorded, and that they remained free until court martial would happen. And, this much Barnett could admit, it didn’t look that bad for Kirk and his officers. It really was a big advantage to be heroes and, by the way, had saved the survivors of a delegation and staff officers from Starfleet Command, restored a cease fire during a war, revealed a conspiracy and protected the capitol of a planet. Well, and that Kirk’s decision to cover for Khan led to everything good the Augment did within the last weeks (which peaked in saving a planet’s whole population and in protecting Starfleet ships by sharing his developed SDD), wasn’t that bad also.

Rather the opposite.

Jim had done everything possible to let everything look in a slightly different light.

Spock was still baffled (if he would admit to feel something like this) how easy Kirk had twisted here and there some small facts, answered questions with own questions which led to an answer that was positive for him and the others, and ‘titillated’ Barnett at his honor, like the Terrans said. His older self (who had mostly sat there and had watched everyone with satisfaction and amusement) had been right. Jim Kirk could talk himself from the gallows, no doubt about it. How did Dr. McCoy put it before they parted? ‘Jim could even sell a freezer to an Eskimo.’ Kirk was highly intelligent and had a way with words that almost made Spock dizzy. Of course he was… well… relieved that his T’hy’la was able to render the whole ‘Khan’ incident with a special touch that had to impress Barnett, but it also showed the younger Vulcan how difficult humans could be, when they said one thing and meant something completely different.

Now he stood at his father’s bed and bid Admiral Barnett and his older self good-bye the moment Jim Kirk followed Bob Wesley to the campus. The door closed behind the two older men, and Spock took a deep breath, got himself a visitor’s chair and sat down beside Sarek. There was another topic that demanded his full attention – something he had to talk with Sarek about here and now. No-one could know how long T’Pau would speak with Uhura, and he wanted his father to be prepared when the outcome of said talk would take its influence on them all.

Having pursued a line of arguments, Spock was about to open the conversation, as Sarek already murmured, “What troubles you, my son? Speak openly.” Two pairs of dark eyes met each other – one calm and almost gentle, the other one first surprised, then it masked the rising feelings.

“I am not troubled, Father, yet there is an important matter I need to discuss with you.”

For the hint of a heart beat something close to amusement curled Sarek’s left mouth edge, while he
answered, “Spock, don’t try to be more Vulcan than Vulcans themselves. It’s okay to be tensed about important things which have to be settled.” He recognized confusion in his son’s gaze and sighed inwardly, ‘Is this my fault? Did I tried to trim him too hard as a child to embrace the Vulcan way that he is even ashamed of himself when he does feel something? We do feel, we only don’t allow our emotions to rule us. Maybe I was too stern with him – he, who also bears his mother’s human and emotional side in him what makes him so unique.’

Spock saw the questioning look of his father and took another deep breath. To avoid a necessity was illogical. “Father, as you said the first time aboard the Enterprise you met someone in my quarters – a cadet in her fourth year who took over the comms on Captain Pike’s order.”

Sarek nodded slowly. “Yes, a young talented woman you spoke highly of. An ascetical pleasing looking Terran woman, as it didn’t slip my attention. As far as I understand it’s the same young lady you often mention within our correspondences and sub-space communications.” He lifted a brow as he saw his son’s soft astonishment. “You haven’t noticed how often you bring her up, have you?” His glance became gentle. “Is there something… special you want to tell me about her – and you?”

Against all attempts to control his body functions, Spock felt how his ear tips and cheeks warmed up and he knew that he was blushing like a little boy. And, out of no-where, all words he had prepared to say, fled his usually so bright and clear mind. For a moment he was twelve all over again, admitting to his father that he had given his schoolmates, who not only perpetually mocked him but also had dared to insult his mother, bloody noses.

Sarek interpreted his son’s reaction in his own very correct ways. “I think, your mother and your human friend would say ‘congratulations’.” His amusement increased as Spock’s face flushed fully now, and allowing parentally instincts taken over, he reached out and laid a hand on his son’s arm. He knew exactly what this all was about. “Spock, to find a mate is most important for us – not only because of our Time that yet has to come for you, but also our katras need a counterpart. Especially now, after the Great Loss, we need to find new ‘anchors which stabilize’ us, like your mother once put our… need to bond with someone. You lost your betrothed and therefore it was absolutely necessary for you to find someone new who can and wants to be your bonding-partner. And as I take it, this young woman is your intended.”

Spock was for another moment lost for words. He had hoped that his father would display some tolerance for his choice – especially after he himself married a non-Vulcan. But this kind of understanding was… close to a shock. “You agree with my decision?” he asked quietly and promptly earned another risen eye brow for it.

“Why shouldn’t I? Because the young lady is Terran? I married your mother and as I admitted to you, I did it because I loved her – still do. Am I correct that you harbor equal deep and warm feelings for Lieutenant Uhura?” Oh yes, he remembered her name – after all there was no correspondence with Spock without his son mentioning the other young officer.
“I do – as much as a Vulcan is able to,” Spock whispered, and Sarek nodded.

“Very good. We Vulcans do feel, my son. And even if we have learned to control our emotions there are situations in which they bloom too strong to ignore them – even outside of our Time. It became clear to me after I met your mother and she ‘slipped beneath my Vulcan shields’, like her father said. And I think the same goes for you and Lieutenant Uhura.”

It wasn’t a question, yet Spock felt obligated to reply, “Yes, it is.”

Sarek’s features softened. “I am… glad for you, my son. To find the right partner, someone who shares more with you than simple respect, is something not all Vulcans manage – even before our race was so cruelly and drastically reduced.” He sighed quietly and it was obvious that the next words demanded something from him. “I think… T’Pring wouldn’t have been the partner you wish for. Your mother warned me as we made the arrangements between you and T’Pring as you were children, but I didn’t listen – following traditions. Now I have to admit that your mother… had been right.”

“How so?” Spock wanted to know; unable to suppress the immense relief he felt at his father’s acceptance, but also at Sarek’s fatherly words.

The Ambassador hesitated, before he answered Spock’s question, “I met T’Pring several months before… The Day. She’d become quite a fine lady with a pleasing appearance, yet she seemed to be… very distant – sullen in company even.” He lifted a brow. “‘A block of ice’ as your mother said afterwards.” He nodded slowly to himself, before he looked his son straight in the eyes. “I know you, Spock. This bond would have been a burden to you. You’ve your mother’s soft heart – a gift many of us didn’t recognize as such. This includes me – at least in the beginning. As you decided to join Starfleet I worried that this gentle side of you could become a danger for you – out there, deep in space that harbors not only phenomena and new cultures, but also hostility. Only after the Great Loss, as I became aware of my mistake concerning you and got more involved in your life again, I realized that your soft spirit is a great advantage – one, not only you but also your shipmates and friends benefit from. Especially your captain. He is a highly intelligent, yet very emotional and impulsive young man – something that certainly wasn’t easy to deal with in the beginning. Nonetheless you two became close friends – despite your rough start.”

Again a gentle hue of green tinted Spock’s cheeks. “Jim and I spoke about those minutes you witnessed on the bridge of the Enterprise, as I told you afterwards. There stands nothing between us anymore.”

“Yes, Selek told me that it was his idea how to ‘set some things right’. I had to agree with his logic. It
was sound and plain. Yet… you’re my son, and when someone hurts you, my logic… fails me sometimes.”

This admission sent warmth through the younger Vulcan, but the chosen words woke also something like amusement in Spock. This time it was him, whose left edge of the mouth curled a little bit. “Your neutral regard of Jim Kirk wavered during these moments and you wanted to act on it.” He thought he could hear McCoy ‘translating’ his statement in a Southern drawl of ‘You thought this insolent kid needed a good spanking’… Well, it was good that the CMO wasn’t here in the moment. Spock could imagine his father’s reaction to that ‘translation’.

Sarek snorted quietly – something he had begun to mirror from Amanda three decades ago. “I was about to nerve-pinch him, and not in a gentle way,” he admitted. “During our Time we not only experience passion and need, but under certain circumstances also rage. Believe me, for several seconds I came close to the latter, even if my next Time is years away.”

Spock stared at his father – his non-existing expression vanished and made room for an almost baffled face.

Sarek lifted both brows. “Don’t look so shocked at me, Spock. I just suffered the severed bond from your mother, had lost our planet, had to stomach the fact that not more than ten thousand of us had survived, and then there was this cocky half grown boy, who had nothing else better to do than to insult you and my dead wife. Even Vulcans have their limits – and yours was reached a breath before mine.” He squeezed his son’s arm. “And if it hadn’t been for Kirk’s success in saving Earth and his sincere apology towards you including a sound explanation for his behavior that you told me of, I would have made certain that this insufferable individual were kicked out of Starfleet.” He relaxed. “And then you two became the command-team of the Enterprise, are known as ‘heroes’ Federation-wide and above all it turned out that you two are soul-brothers.” He allowed himself the tiniest of a sigh. “The universe never ceases to surprise me.”

“I know what you mean,” Spock murmured; asking himself why it had lasted almost three decades until he and Sarek could have a real father-son-talk. It… was good and calming to speak openly with his father like that – an experience he last had when he was five.

“After I returned to bridge that day to offer my service despite the fact that I was emotionally compromised, I… was astonished how well Jim and I worked together,” he said quietly. “During our mission aboard the Nerada, he and I saved each other, and somehow… we both knew what the other one was doing without checking first – like we had known each other for years and not days. Then I manned the abandoned small ship in the Nerada’s hangar and was greeted with ‘Ambassador Spock’. That and the technical enhancements aboard allowed only one logical deduction: It came from the future – with my older self aboard whom I later met.” He looked away; knowing that the next revelation would hurt Sarek, but he saw no reason to hide his decision anymore.
“I was ready to die in those minutes – hurling the ship with the Red Matter and myself against the Nerada to stop Nero from destroying Earth just like he took our home planet from us,” he continued; seeing from the edge of his view how his father tensed. “There seemed to be no other way to save at least Mother’s home planet – the only home I had left. I was… full of rage and pain – something I experienced last year again, after Jim… Well, you know what happened during our first encounter with Mr. Singh.” He took a deep breath. “That day in Sekel’s ship I was ready to embrace death – a way out of the pain and also a chance to stop this insane madman and to avenge Mother. But Jim wouldn’t allow it – not then, not a year later as he broke the Prime Directive to rescue me out of an erupting volcano, or as he entered the warp core chamber unprotected to save the crew, myself included.”

Sarek frowned the tiniest bit. “You sought death?” he asked quietly.

Spock took another deep breath. “I have to admit that after the shock of so many Vulcan bonds ripped apart – something even I sensed – to die didn’t seem too bad. Today I think Jim recognized this and kept me on my toes, like the Terrans say, to give me a reason to fight and therefore to live. Then he became my friend and his safety became my priority – another reason to go on and to bear the pain that begins to become less by now. And this is Jim’s doing. He knows me so well I sometimes find myself questioning how this can even be possible. He looks through me and is there for me when times are dark. He’s an anchor, as you or mother put it, and I don’t think I would have made it so far, would have healed the way I am now, if Jim hadn’t entered my life.” He still held his gaze lowered – after all he was speaking about deep emotions here. He was almost certain to see rebuke in his father’s eyes, but this was not the case.

Again Sarek showed real understanding. “As I said, Vulcans do feel – and I don’t want to know the real number of those we lost after The Day, because they couldn’t handle it and simply died in soundless pain.” He met his son’s surprised glance, and continued, “Don’t be ashamed of your pain or to think of death, Spock, but don’t give into its luring. Life is still worth living. Not only because we’ve a duty to those who have survived and need our help, but also because whatever happens, life remains sacred. And you have more reasons to turn away from darkness and walk back into life. One of them is Kirk, as you already said. You’ve a T’hy’la. There are not many Vulcans who can say that. I don’t remember hearing about T’hy’las within the last centuries at all, but you’ve found yours. Kirk helped you going through the storm of the Great Loss, but I think he also needs you – not only as his first officer, but also as his friend. And I think it’s the same the other way around.”

Spock made an affirming gesture. “I’ve talked with Sekel several times since our first meeting, and he always pointed out how important the friendship between Jim and me will be – how much it would define us.” He felt the illogical urge to moisten his lips and he suppressed it in the last second. “I began really to understand it the moment Jim took his supposed last breath – and his first after his revival. As he died in the warp core chamber, I… Something in me snapped!” Something close to shame edged in his voice and he felt his ear tips burning, as he looked at his father at this admission. “I… cried and I screamed… I hunted Khan through San Francisco – not to arrest him, but to kill him. I thought him to be responsible for Jim’s death – and therefore almost prevented Jim’s only chance of survival: Khan’s blood.” Now he did moisten his lips. “I was emotional compromised that day on the
bridge you witnessed, but this was nothing compared to these minutes I was after Khan. I… failed the Vulcan way utterly, Father. I wept in pain and went out to get revenge by killing someone. That is… far from anything Surak taught us.”

Spock was certain that he would see a signal of disappointment, maybe even disgust in his father’s eyes, but there was none of it. The ambassador’s gaze even softened more, while his voice took a deeper and warmer tone. “No, Spock, you didn’t fail Surak and the Vulcan Way. You simply became one of our ancient warriors for a few minutes – someone who had already suffered a lot and now had to deal with another deep loss. You snapped as another bond was ripped apart – a growing bond of friendship this time and not a parental one, but nonetheless an already strong link. The pain was too much finally. As I said: Even we have our limits, despite Surak’s teachings.”

Spock stared at him. He couldn’t remember when they had spoken with each other like this. Maybe the Great Loss and the life-threatening situation a few days ago had broken through Sarek’s resolve and had made clear for him that any talk with his son could be the last one – with Spock being in Starfleet in these difficult times, and Sarek being still a diplomat who had to leave the colony over and over again.

For a moment – like many times before – Spock wished with all his heart that his mother would still be alive. He knew how much she had hoped for him and Sarek to become close again – how much she had suffered under the icy silence that had spread between father and son for years. Now father and son had renewed their relationship, but too late for Amanda to enjoy it, and for that Spock felt sad and a little bit guilty. Maybe, if he had acted less proud and more rational that fateful day in front of the Elders, Amanda would have had her whole family intact.

Spock sighed inwardly. Of course it was highly illogical to think about an ‘if’ when nothing could be changed anymore, yet his human side couldn’t be silenced easily.

And the topic they were discussing wasn’t finished until now.

The younger Vulcan swallowed a not-existing lump in his throat. “Father, the loss of my self-control almost made it impossible to retrieve Jim. My wrath would have been his ultimate demise, if it hadn’t been for Nyota, who beamed down and stopped me. All chances to get Jim back would have been forfeit because I lost control.”

Sarek realized how much this matter troubled his son, and he reached out again and took Spock’s hand in his own. The parental link brimmed with new found energy between them and transmitted warmth and understanding from the older to the younger Vulcan. “This is the real reason why you are at odds with yourself,” the ambassador assumed correctly. “You blame yourself for something that didn’t happen. You were stopped! You didn’t kill Mr. Singh. Kirk was brought back. That is all that matters, Spock, everything else is nothing you have to be ashamed of. I saw Vulcans losing
control because of less and I would never judge them because of it. It needs a lot to make a Vulcan snap, but it has and will happen again. Kaiidth – what is, is.” He pursed shortly his lips.

“Kaiidth,” Spock murmured. “If I would have given into this old statement, Jim wouldn’t be here now.”

Sarek lifted a brow. “It’s an expression of accepting something that can’t be changed anymore – not an excuse not to try every option left to change a situation, Spock. And, as your mother always pointed out, hope dies last.” He watched his son nodding, and came to his own conclusion. “I assume that you and Kirk built the T’hy’la-bond after his ‘revival’ – as a kind of… healing?”

Again Spock made an affirming gesture. “Yes. The monitor above Jim’s biobed gave an alert and Dr. McCoy wasn’t there. I initiated a mind-meld and kept Jim’s soul with me until Dr. McCoy arrived and stabilized the captain’s condition. Only later I realized that we still were linked on a special level.”

“The ripped bond was completed again. Two souls which reached out for each other – parted and never parted…” The older Vulcan took a deep breath; something close to wonder, but also acceptance shone in his dark eyes. “Like I said: true T’hy’las are rare.”

“Yes,” Spock agreed quietly. “He’s the brother of my soul, and his welfare is important to me like that of Nyota.”

“The one is your T’hy’la, the young lady is your will-be-bondmate.”

Spock took another deep breath. “I know that in earlier times – before Surak – T’hy’las could also have separate bondmates. Yet I never thought it could work like this – or that I would face such a situation one day.”

“You mean, T’hy’las have to be lovers, too? That’s not necessary. Of course to be close to someone like this can lead to a sexual relationship, too, but it doesn’t have to be. Miss Uhura fills this part for you and I understand that she is the one who will be your bond-mate, while Kirk is your friend and brother.” Sarek cocked his head. “When do you plan to introduce her to our clan?” he changed the topic a little bit; knowing that this was the real reason why his son had begun this talk at all.

This time Spock really sighed. “She already is introduced – sort of.” As he caught the hue of confusion in his father’s eyes, he explained, “Dr. McCoy mentioned Nyota’s and my relationship
towards Selek and asked for his help, because Admiral Barnett had grounded her despite the fact that Nyota already got asylum on New Vulcan. What the good doctor didn’t know was the fact that Selek was with T’Pau, and like this grandmother learned of Lieutenant Uhura and me.”

For a moment Sarek’s eyes widened; already assuming the worst. “How did T’Pau react?”

“I don’t have any precise data, Father, but Dr. McCoy said that she was ‘shocked for a Vulcan’. I also learned from Admiral Barnett that T’Pau demanded Nyota’s return to New Vulcan and that she was beamed to New Gol several minutes before the admiral came to the hospital to interview the captain, Doctor McCoy and me.”

Sarek lifted his head. “Miss Uhura is with T’Pau? This… could mean complications. Did Selek mention something how T’Pau…”

“He said that he talked with her and gave some serious arguments in mine and Nyota’s benefit. Yet I’m not certain how grandmother will decide concerning my wish to marry Nyota. It is very well-known how much T’Pau values the Vulcan way and that she distrusts outworlders – at least most of them.”

To his surprise, his father carefully sat up. “I think I’ve got to speak with her. I already know all her arguments which will be against this bond.”

“Because of you and Mother?” Spock asked, and Sarek’s right edge of his mouth almost curled.

“You have no idea of the discussions I had with my mother. I was ready to leave the clan, if T’Pau would insist of me giving up on Amanda. Only then…”

Steps drew nearer and Sarek allowed himself a soft frown as he sensed his mother’s present. “She’s here,” he murmured.

Spock remained stoical while he rose from the chair. For a moment Jim’s voice seemed to echo through his mind, ‘Speaking of the devil…’.

Then the door opened and T’Pau stood in the entrance. Her dark eyes immediately found the sitting person on the biobed, and her hard features seemed to soften for a moment. “Sarek, I’m glad to see you awake and in re-growing health, my son.” she said calmly. “This gives me the chance to speak
with you and your son about a serious matter concerning our clan.” Her gaze wandered to the younger Vulcan. “Spock, as I was informed of one of your friends, you want to bond with a young lady from Earth. Your friend spoke on her family’s behalf, like it is traditional if a bride’s family isn’t present. You chose your friends well.” She turned around. “Please, child, join us.”

Spock needed every inch of self-control to prevent his jaw from hitting the floor, as Uhura stepped beside T’Pau and the matriarch laid a hand on her shoulder. In the background the young Vulcan recognized a broad beaming Jim Kirk, who lifted a thumb in triumph and beamed at him like crazy…

“Sarek, may I introduce you to Miss Nyota Uhura – your son’s intended.” T’Pau’s voice was strong and didn’t allow any protest.

The ambassador watched the young Terran woman he only had met once for a few minutes. He took in her gentle eyes, the soft and beautiful features, the long thick black hair and her tiny frame. Then he saw the high intelligence in her glance, the calm expression of her face and the proud stance of her slender body – fragile, yet not vulnerable. An aura of warmth and understanding, but also of strength surrounded her, as she lifted her right hand; her fingers parted in the Ta’al-greeting. The traditional sentence “I come to serve.” was spoken in almost perfect Vulcan High Standard – just like Amanda did all those years back, as she was introduced to T’Pau.

‘Well chosen, my son,’ he thought. ‘Your mother would be proud of you.’

“Your service is welcomed,” he replied quietly. He saw how her glance wandered to Spock and only his long experiences with Amanda made it possible for him to recognize the deep warmth and love that shone for a moment in her dark eyes as she looked at his son. ‘Composed, yet emotional – she’ll be a perfect match for Spock.’

The younger Vulcan felt something bubbling up deep in him – recognizing it as a very positive emotion as he realized that T’Pau obviously wasn’t against his wanted marriage with Nyota. And with this he remembered his expected manners. Quickly he offered his grandmother the vacant visitor-chair, before he went to Uhura’s side and clasped his hands behind his backs. He heard a soft noise from the corridor and throwing a quick glance over his shoulder, his eyes met the blue ones of Jim Kirk.

His friend still grinned at him, lifted this time both thumbs, waved at him, bowed towards a slightly amused Sarek and went away – knowing that the coming talk was a very private one he didn’t want to bother with his presence…
Jim walked with quick steps down the corridor; feeling relieved for once. While he and Wesley had accompanied T’Pau politely into the hospital, Kirk had exchanged a short but very concerned glance with Uhura, and as she had given him a fleeing brilliant smile, he had known that everything had turned out to be okay for her and Spock. Happy for his T’hy’la and for Nyota he could push his worries for Nien aside for some minutes, but now – as he neared the intense care station again – he felt the heaviness of his concern returning.

He stepped around a corner and heard Wesley’s and Barnett’s voice talking.

“You knew it, Bob! You knew of these two being a couple, and you didn’t tell me! Hell, even Norton had nothing better to do than to rub this liaison under my nose, as I interviewed him a few minutes ago!” The Chief in Command didn’t sound too happy.

Jim stopped. It wasn’t his way to eavesdropped, but he had to know where Barnett really stood.

“Sweet Lord, Richard!” Wesley sighed. “As I said, they love each other. Love happens! If there is one thing in the whole universe you can’t change, then it’s this fact! And, by the way, don’t you think it’s far more important that the conspiracy was stopped, the traitors are arrested, you and the others survived and above all that the cease fire still exists, instead of grousing about a pair of love-birds, who are, by the way, responsible for all the good I just listed?”

“You don’t even deny that you knew about them!” Richard sounded more frustrated than angry by now.

“I had a suspicion – and it was confirmed as I asked Jim straight ahead while you visited Norton in custody. Yes, they are lovers – and? As I said, I don’t think that this is any kind of drama.”

“You are aware that trial will see this differently – that the lawyers will try to use this to their advantage? Kirk and Khan are going to need a hell of a good lawyer to get out of this mess in one piece – and I don’t even speak about Kirk remaining captain of the Enterprise.”

“I know someone, who will be perfect for Jim’s and Mr. Singh’s case.” – That was Selek’s voice and Jim felt a wave of affection for the old Vulcan. Like always Spock was there for him – even in his aged form from another universe.

“Good Lord, High Minister! Is there the tiniest chance that you will stay only once out of this?”
Barnett sounded exasperated by now.

“No, the chance is zero-point-zero, to be precise, Admiral,” Old Spock deadpanned wryly, and Kirk had to suppress a chuckle. He wasn’t very good at it, as it turned out a moment later.

“How are my younger counterpart doing, Jim? Does T’Pau approve with his choice of bondmate?” Selek called, and Jim rolled his eyes.

“Sorry,” he said nonchalant as he finally turned around the corner; letting his shoulder drop while his stance became unsteady. “I didn’t want to eavesdrop, but I got a little bit dizzy and had to rest for a moment. The blood-loss, you know…” He finished lamely and suppressed the urge to duck his head, as his two superior officers gave him a stern look – not buying his show for a minute. Only Spock Prime remained calm; his glance showed gentle amusement.

“You didn’t seem that dizzy as you followed T’Pau and Uhura,” Wesley grumbled.

“Maybe the briefing with me and your constantly firing of ‘clear and logical’ arguments finally got to you,” Barnett almost scoffed, even if the left edge of his mouth curled.

“Bones told me to take care not to overstress myself – I didn’t listen to him,” Jim shrugged sheepishly.

“Like always.” Old Spock commented dryly. The Vulcan Elder enjoyed himself far too much for Kirk’s taste, but he could understand him. He knew that he gave a very lame excuse for eavesdropping to the admiral and the commodore.

“Well, then you should return to your room and lay down, son. I really don’t want this mother-hen of CMO fussing around you, because you slumped,” Barnett said, and added for good measurement, “This is an order, Kirk!”

Jim rolled his eyes. “Aye, sir!” Hesitating for a moment, he drove his attention to Selek. “To answer your question: Uhura let me know that her talk with T’Pau ended positive. The old lady isn’t against Spock’s and Nyota’s bonding.”

Satisfied the Elder nodded. “It pleases me to hear this,” he replied, but something in his stance and his voice told Jim that Spock Prime already knew about it. ’Bones is right, Spock IS a matchmaker!’
Kirk thought with an inward grin.

“Please pass my congratulations to Commander Spock and Lieutenant Uhura,” Barnett addressed Jim. “I would tell them in person, but the Lexington and the Excalibur will depart for Earth within the next two hours, and I’m needed aboard.” He glanced at Selek. “Would you please tell Lady Morganth that she should contact the Lexington within the next 90 minutes? Otherwise she’ll have a longer vacation here on New Vulcan.”

Spock Prime nodded slowly. “I’ll tell the ambassador of the departure schedule after we’ve exchanged some topics about mutual interests, Admiral. Lady Morganth is the first Betazoid who has visited New Vulcan, and I think her people are able to… help us with some upcoming urgent matters.”

“Urgent matters?” Kirk asked; concern laced in his voice.

Those old, knowing and gentle eyes turned his way. “It’s something Vulcans do not speak of – especially not towards non-Vulcans, yet I’m ready to explain it to you in private. Later.”

Jim nodded in acceptance – and he felt honored. If there was something Vulcans didn’t talk about with outworlders (well, there was a lot Vulcans didn’t talk about, by the way) and Selek was ready to break this taboo, then he – Kirk – felt a little bit special.

To change the topic he turned towards Barnett. “What about Norton?” he asked; his voice a low growl.

“High Minister Selek and the Lady T’Pau allowed us to take him with us, but they will also press charges against him for the attack on their seat of government. The Lady T’Pau will also join in action because of the assault of her person.”

Jim’s expression became grim. “If she wants witnesses, my officers and I would love to give our statements – as I’m certain Joaquin will to.”

Barnett made a face. “Just see that you, your officers and your sweetheart get a very good lawyer who can pull you all out of the fire, before you start worrying for T’Pau. I personally think you did well and my heart tells me that you had no other choice to act like you did, but the law will see it differently. And even my influence will not be strong enough to give you and your friends a free ticket.” He turned to leave, but looked one time back over his shoulder; his face was soft now. “Jim?
Thank you for everything you and your comrades did for me and our fellow captives – not to mention all the other good things you and Khan were responsible for. If there is something I can do for you, contact me.”

A true smile spread over the young captain’s face. “Thank you, Admiral. Maybe there is one little thing you can do.” As he caught the questioning look of his superior officer, he said, “Please allow me to return to the Enterprise as soon as Nien is out of danger. I know that Commodore Wesley is now in charge of the ship, but she is still my ship – and my crew needs me.”

For a long moment Barnett looked him straight into the eyes, and then he sighed. “You know the book, son. When you’re relieved of duty because of an upcoming trial, even I can’t allow you to pick up duty again until that trial happens. This permission can only be given by the Head of Starfleet – meaning the president.” As he saw the disappointment in those blue eyes, he grimaced. “When we’ve returned to Earth President Robertson will certainly have many questions only I can answer for him. I’ll ask him if he could make an exception for you and your staff – seeing that there really is no danger of you all running off. I’ll let you know about his decision.”

Promptly Kirk beamed at him. “Thank you, sir! When, do you think, will you be able to speak with him?”

Richard chuckled. “Jim, as far as I understand you won’t leave Khan’s side until Mr. Superman is back in the land of living and himself again. Therefore the matter of you returning to the Enterprise doesn’t become acute within the next days, so don’t push me.” His expression was gentle; almost teasing. Then Barnett sighed, “All right, son, take care of yourself. You too, Bob.” He looked at Spock Prime. “Selek.” he bowed his head towards the Elder and walked away; his steps echoed through the corridor and faded away.

“Rrrright,” Wesley murmured; glancing at Jim. “As Barnett said; off you go and find some rest. You really look like someone ate and spat you out again.”

“Thanks a lot,” Jim answered sarcastically; rolling his eyes.

“Jim, Commodore Wesley is right,” Selek cut in gently. “Come with me, young one. I’ll accompany you to your room.” He laid a hand on the captain’s shoulder and steered him softly forward. Kirk chuckled again.

“You don’t trust me to really return to my room – despite the fact that Nien is there and needs my presence?”
“No, Jim, I know that you will go to your room – but I simply know you too well. You will not lay down without some… persuasion. And I will make certain that you don’t find any excuses for staying out of bed.”

Jim groaned. “You are really as bad as my Spock – maybe even worse!”

“Young Spock doesn’t have the experiences with your stubbornness like I have, T’hy’la. I do know how to persuade you!”

Wesley watched them go away – the young proud and mule-headed captain and the older counterpart of his first officer and soul brother. Both were arguing with each other in an almost teasing way – both aware that neither of them would give in easily, yet both seemed to relish in the little discussion. Bob sighed; hoping against hope that the next weeks would turn out well for his protégée and his friends…

ST***ST

Two hours later the Lexington and the Excalibur left orbit and headed towards Earth. Those, who would face their own court material and had been aboard Enterprise, were on the Excalibur in custody: the members of the conspiracy including Nureaux, the criminal scientists and those men of Elite Security, who hadn’t listen to Barnett’s direct order and continued their fight against the admiral and his allies the day before – among them of course Finnegan and his four fellows who had tried to kill Khan. Aboard the Lexington were the rest of the delegation – all diplomats were happy that their odyssey would be over soon. Further talks with Whitman had confirmed that the HQ had been cleared. Yes, several men and women who were accused of having a part in Section 31 or / and in the conspiracy were still being sought, yet the main group of the ‘ulcer’ – how McCoy named them – had been arrested.

The Enterprise stayed in orbit around New Vulcan, and – as Scotty put it – the Grey Lady was in need for a serious ‘cure’ for the next two or three weeks. Galven offered Wesley his help aboard and the commodore accepted gladly. The Shadow-gang had also remained on New Vulcan; not ready to leave their augmented friend, his ‘little brother’ and Kirk.

Chekov and Riley beamed back aboard around 1330 ship’s time, reported dutiful to Wesley and prepared for their shift. Yet they had left Joaquin a communicator they had switched to a private frequency on which he could reach them any time. The Augment-boy hadn’t said much, but the gratitude that shown in his dark eyes spoke volumes. And the two ensigns were glad and a little bit proud that their offered friendship was this welcomed.
As the afternoon began in New Shi’Kahr something close to daily routine had returned and the waves were calmed.

Almost.

T’Pau had spoken with her son, her grandson and Uhura for quite a time. Only as Sorel appeared and insinuated that the ambassador needed rest, the visitors left the room. The two younger people insisted on accompanying the matriarch to the exit and therefore they passed by the intensive care area, where the elder all of suddenly stopped. Without saying a word to her grandson and his intended, she entered the corridor and after orienting herself she headed straight for the room in which Khan and Kirk rested. The younger Terran male she had come to know as Dr. McCoy left the healer’s ready room in this moment, and stopped dead in his tracks as he saw the old Vulcaness coming his way.

Bones knew that he maybe would never be able to give a proper Ta’al, and therefore he bowed in the old-fashioned gentlemanly way as the matriarch closed the distance to him. “Lady T’Pau, it’s an honor,” he said.

Spock’s Clan-Mother looked at him, recognized his genuine respect and stopped in front of him. “Dr. McCoy, I want to inform you as the Speaker of Miss Uhura’s family that your intercession has been accepted. Spock’s wish to bond with your friend was met with my approval.”

Bones felt like a whole mountain dropped from his heart in relief. And the short glitter of amusement in the matriarch’s eyes spoke volumes. Grinning like mad he turned towards a calm Spock and a beaming Uhura, waited until T’Pau continued her way and closed then quickly the distance to his two friends.

“Nyota, congratulations!” he smirked, pulling the young woman to him and placing a quick kiss on her cheek. Laughing quietly Uhura returned the gesture of affection, before Leonard turned towards the first officer.

“Spock, m’boy, congratulations!”

A lifted brow and a short frown were the reactions to that addressing, before the Vulcan answered politely, “Thank you, Leonard.”
McCoy grinned at him and suppressed the urge to slap him on the shoulder; knowing that this was a privilege only Jim was allowed to do – being soul brothers, and so on. Instead of forcing an unwanted contact on the Vulcan, the CMO smiled, “Finally one happy ending! I could get used to it.”

Spock clasped his hands on his back and nodded. “I have to agree, Doctor. And to use a Terran proverb: you were quite lucky under the given circumstances. Obviously your chosen words and your reactions during your talk with T’Pau were interpreted by her as your right as a friend to speak on Nyota’s behalf in place of her family.” He lowered his voice that became soft. “Thank you, Leonard.”

McCoy couldn’t help himself – he blushed. Out of joy that his mistake had turned to a good account, but also because it was very rare that the clipped Vulcan showed and even voiced gratitude.

“Well… you two are welcome,” he mumbled, then he saw Nyota’s eyes widening in alert and turned around. “Uh-uh,” he whispered, as he watched T’Pau and standing at the threshold to Kirk’s and Khan’s room.

The matriarch had reached the room in which Khan lay, and looked inside. Her glance found a sleeping James Kirk, laying on another biobed beside a male Terran with dark hair, who was tightly monitored by med scanners. She saw the bruises on his face and a hue of irritation grazed her – an instinctively reaction to any display of violence. She heard her grandson, his intended and the human doctor stepping beside her and asked in a hushed voice, “How is Mr. Singh’s condition?”

“His injuries are serious and he fell into a coma – or healing trance. Healer Sorel and I are not sure,” Bones said.

T’Pau nodded slowly. “And Kirk?”

“Exhaustion – physically and psychically. The last weeks weren’t a walk in the park, Ma’am, with him taken captive by Klingons and being tortured, then his stunt on Aldebaran – better to say above the planet – and afterwards everything he went through until the conspiracy was revealed and we all reached New Vulcan. And now he suffers because of the mental bond he shares with Mr. Singh. He needs rest – even if he wouldn’t agree with me on it.”

The matriarch lifted a brow. “To overestimate the own strength is the prerogative of the youth, Doctor. That even counts for young Vulcans.” She gave her grandson a pointing look, before she turned away. “Keep me updated of Mr. Singh’s condition, Doctor. And when Kirk feels strong enough again, I want to speak with him.” She lifted her gaze one last time to her grandson. “Am I
right that you want him and Doctor McCoy being present at the bonding ceremony of you and Miss Uhura?”

“Jim is my T’hy’la and Leonard is my friend, too,” Spock affirmed.

“Very well, then I have a topic more I have to discuss with Captain Kirk. When he is ready to leave his bondmate’s side, tell him to contact me. I will instruct my secretary to link him through as soon as he calls me. Spock, you’ve the frequency of New Gol. Please pass it to Kirk.”

“As you wish,” the first officer nodded, then T’Pau walked away – quick, with smooth movements, proudly straightened shoulders and yet with the burden of someone who had to carry too much responsibilities on their shoulders.

The old Vulcaness left the intense care station and walked through the visitor area where the meditation alcoves were. She thought she sensed inner turmoil from someone and her gaze found one occupant of the alcoves. She watched a human boy rising from his position from the bench – the youngling at the threshold to adulthood, who had protected her.

Joaquin gulped as he saw the old Vulcaness stepping into the visitor area and shot off the bench. He had tried to meditate again, but it had been for naught. His thoughts turned in circles around everything that happened within the last days, and therefore he heard the matriarch’s silent entrance. Their eyes met and gulping Joaquin straightening his clothes while he closed the distance to the female alien. He bowed – not knowing when this odd lifting of a hand and spreading its fingers was allowed and when not. “Ma’am,” he greeted respectfully.

T’Pau lifted a brow. “You are Joaquin Weiss as I learned from Selek.”

Weiss knew that it was a statement, not a question, yet he felt obligate to answer, “Yes, Ma’am.” He cleared his throat. “Uhm, I apologize for… for my rough handling of the situation yesterday in High Minister Selek’s office. I learned from him and Mr. Spock that it is more or less a taboo among your people to touch them, but… I saw no other way to prevent you from further harm, as help arrived and this crazy guy was losing it.”

The old Vulcaness had not expected to get an apology from the Terran youth that spoke of a greater sensibility than the most humans showed in that matter. And it sparked her curiosity about his true intentions of his yesterday’s action. “Why did you do it?” she asked. “As far as I understood, you didn’t know who I was then, yet you risked your own health to protect me. Why?”
Promptly Weiss blushed. He couldn’t tell her about Shani, couldn’t he? Or would the old lady understand it the way he meant it? There was only one way to find out – and, by the way, he had a certain feeling that she would sense it if he would come up with some lame excuses. Therefore he would tell her the plain truth.

“Well… uhm… I don’t want to sound offensive, but… it was a simple reaction. You… you remind me very much at a woman I knew in my childhood. She was the first normal human who treated my siblings and me like… like people and not like things – or animals. She became something like a mother for us.” He scratched his head – a gesture of embarrassment. “Of course there are many differences between you and her, Ma’am, but your face and your statue resemble that of Shani very much. I… I simply acted on an impulse.”

For a long moment T’Pau let those words sink in. This wasn’t the first time she was confronted with human emotions and their own very special way of dealing with difficult situations. Usually she couldn’t understand humans’ reasoning for their acting on feelings, but this special case was different. She had to admit that she hadn’t expected this kind of explanation, yet she could grasp the boy’s motivation for his action. “You are right, I may not resemble this woman except for my looks, yet I do understand your loyalty and… affection for her and that you passed it on my person. You don’t have to be embarrassed – as far as I realize this is even a sort of compliment.”

Promptly the young man grinned at her and bowed his head. “Thanks, Ma’am. I feared that you would be offended.”

T’Pau cocked her head. It was and would be always difficult for her to grasp the concept of human gratitude, but she had come to accept it. And, what surprised her now for the second time this day was the fact that she was confronted with a human who respected Vulcan ways and traditions without hesitation, yet remained simply himself. That was a new experience for her. She hadn’t expected something like this. Neither from this boy, nor from her grandson’s intended. Maybe the Terrans had learned a thing or two within the last century. Of course she knew that the officer staff of the Enterprise and the enhanced youngling in front of her weren’t usual examples for the human species, yet she couldn’t deny that she was impressed with them. One more time she could comprehend why her grandson had taken a human as his T’hy’la and had chosen a Terran woman for his bondmate.

She met the big eyes of the Augment-boy and nodded slowly. “We Vulcans don’t overvalue our ego to take offence. And given your case, Mr. Weiss, Terrans would say that it is a compliment to be compared to someone who was this important. I do understand this sentiment. And given the fact of your and your siblings’ heritage, this woman, you spoke of, must have been very tolerant and… sensitive to give you younglings a home.”

Joaquin sighed. “Yeah, she really was special,” he affirmed. “She didn’t understand the difference between normal humans and us. She simply saw us as children who needed help – that counted even
for the older Augments, like Noo, Otto and the others.” He lowered his head; sadness tingled in his voice. “We missed her after her sudden death.”

T’Pau didn’t ask how this woman had died; she had a really good imagination how this female had met her ending – last but not least she had studied some documents about Terran history of the Eugenic Wars. It had been necessary after she learned from ‘Selek’ of Kirk’s pledge of asylum for Khan and the other Augments.

“It’s the fate of young people to face the death of the elder sooner or later – and it pains.” She saw surprise in his gaze, and added, “A pain even we Vulcans do experience. To follow a path of logic and to control emotions doesn’t mean to be immune against the latter. The way you choose how to deal with it decides if the pain rules you or if you will find peace again.”

Joaquin made an affirming gesture. “I know what you mean, Ma’am. Noo told me likewise after Shani’s death, yet even he mourned. She was, like I said, the first human who treated us fairly and with affection.”

T’Pau cocked her head. “You and your siblings faced a lot of cruelty, as far as I learned. How much do you know about your brother’s fate in this century before he and James Kirk became friends?”

The short flash of anger told the matriarch already enough, as Weiss growled, “Noo and Jim told me everything. And I got a very nasty example how these treacherous bastards within Starfleet think about my people, as they had nothing better to do to beat Noo into a bloody pulp. If it wouldn’t have been for Jim, McCoy and Spock – or this funny engineer – who showed friendship towards my brother, I would think that we’re still in the nightmare we tried to escape two and a half centuries ago.” He shook his head. “I fear that certain kind of people will never change.”

“I agree with you,” T’Pau said quietly; surprised at herself that she had risen such interest in the young superhuman and his ‘siblings’. “There will always be those who are incapable of accepting new ways and who cling to their old believes, as proven wrong they ever may be. But there are also those who have opened their eyes and whose minds are stronger and ready to learn. Admiral Barnett risked his life as he came to your and your brother’s rescue, knowing perfectly well who you are. Captain Kirk suffered the loss of his mentor because of your brother, as Spock told me, yet James was ready to listen to your brother’s words and forgave him. You are strangers to us – ‘aliens’, is how you humans would say the other way around – yet we are ready to protect you and your siblings, and to help them settle in this new time they will face. You see, young one, there are always two sides among people. To not fall prey to bitterness and hate because of the so-called dark side is the best way to show them, how wrong they were in the first place.”

For a long moment Joaquin only watched her, and then he smiled, “You should have had the chance to speak with Ghandi. He was a great thinker and strong defender of peaceful ways. I think you two
could have philosophized for hours.”

Again a dark slanted eye brow was lifted. “I learned about him after my contacts with Terra grew. He was a wise man. Several of his teachings are almost identically with Surak’s ways.”

“With ‘growing contact’ you mean Spock’s mom, don’t you?” Youthful curiosity shimmered in the augmented boy’s eyes, and T’Pau recognized it as such. For a second she was almost startled that this offworlder, who was awake in this century only for a few days, knew already so much about her grandson and their clan, but on the other hand it made sense. Spock had obviously tried to help the boy to come to terms with this strange world Weiss had found himself in after waking up. There was no doubt that the young man must have been overwhelmed with anxiety after finding himself two and a half centuries in the future, facing not-Earthen species. When Spock spoke about his own people it certainly had helped the boy.

Still seeing the curiosity in Joaquin’s eyes, T’Pau decided to follow Spock’s example and to speak of the House of Surak – and of one particular person within the clan. “Amanda was a very tolerant and bright woman, who left her own world to join ours. Not many humans are ready to do this, because our way of life differs greatly from their own. The most Terrans call us ‘cold-hearted’ – a phrase I had at first difficulties to understand, because our body’s core-temperatures are higher than that of humans. Amanda explained it to me among other many things which were confusing for me. I have to admit that my understanding for her people increased because of her, and the other way around. She was… an enrichment for our clan and her death was a great loss that also brought my son awful unsettlement.” The Vulcaness pursed shortly her lips. “I think she would have tried to help you and your siblings to gain a foothold, as you Terrans say.”

Weiss nodded slowly; beginning really to understand what open wounds the destruction of these people’s home world must have caused. “You speak of the lady’s loss and what it did to your son and your clan. I think… this is even crueler than the loss of your home.”

T’Pau nodded slowly. “To lose a house – the ground you’ve been born on – can be very difficult for many species, yet the loss only contains stones and familiar surroundings. It fades in comparison to the death of so many people. There is not one family that wasn’t and still isn’t faced with the consequences of dead bonding partners.

Joaquin frowned. “I hear in your words that the latter is a big problem for your people. Because of the mental bond married couple share?”

“Yes,” the matriarch nodded; not surprised that the Augment-boy made the correct conclusion. “Selek told me that your brother and Kirk are sharing a likewise bond – one that led James to Mr. Singh as he was attacked aboard the Excalibur – one that gave your brother strength during surgery. I am… curious how you people developed this kind of mental ability.”
A short smile rushed over Joaquin’s youthful face. As it seemed, there was one thing Vulcans couldn’t resist: When something stirred their interest they developed a great hunger for learning and knowledge. Well, that was fine with him. And, by the way, the old Vulcaness had told him a lot about her family and her people, it was only fair to return the favor.

“Dr. McCoy thinks it’s because of our stronger brain activity that we develop some mental skills usual humans lack,” he said. “Otto and Katie were the first of us to be married and they told Noo about this bond at some time. Noo explained to me a few days ago, after I woke up, that he sort of claimed Jim – and the other way around. I think this was the beginning of the bond, but I have no clue how strong it is – or how deep our telepathic skills are.”

T’Pau watched him again. “I recognize your exhaustion in body and soul – the latter because of your brother’s condition. To settle the mind by meditation is a good way to calm your soul, yet I think your attempt of meditation was unsuccessful?”

Weiss looked back at the alcove he had sat in a few minutes ago. “Yeah, I was never good in relaxing enough to enter the state of mediation. And now it’s almost impossible with everything that is going on and being on this strange planet, whose noises and smells are so foreign for me. Sorry.”

“There is no need to apologize, Mr. Weiss,” the matriarch replied. “Your mental skills are uneducated and therefore uncontrolled.” She made a decision. “I advance a proposal. A mind-meld. I can calm your mind and your *katra* – your soul – so that you can bear up the next days without suffering like you're doing in the moment.”

Joaquin bit his lips, before he said, “And in return you learn of our mental abilities and of our past.”

“Selek already got the latter information from your brother. His word is good enough for me – your people will find here a safe haven from the horrors they escaped as your ship was launched. But they will be among telepaths and it will be better for both sides to know how to handle each other.” Her voice became softer. “And, by the way, you are still very young – and the young ones have to be taught how to use their skills to their best abilities. Selek told me that you felt your brother’s pain, exactly like Kirk. While such bonds have their advantages they can be a hindrance under certain circumstances – yes, they even can be a danger for both sides. You should learn to shield yourself to keep a clear mind. This is something Selek will teach Kirk and your brother when the latter has regained some strength. And I think Selek also will be your teacher, but until then it can become necessary that you are able to control yourself.”

Rubbing his neck, Joaquin murmured, “Let me guess: My emotions are screamingly loud for you and your people.”
Again a Vulcan brow was lifted; remembering what Selek told her about Lady Morganth and her requirement to visit the hospital. “Kirk’s and Khan’s bond was strong enough to bring a Betazoid to her knees and to alert her enough to have a personal look at them despite the distance between her and the two men. So, yes, the emotions of your people are very strong.”

Weiss didn’t know why, but he felt himself blushing. “You’re speaking of the beautiful lady who visited us around midday?”

“Yes, Selek told me of her visit. She was in great worry for your brother’s and Kirk’s wellbeing with them being responsible for her rescue from the Orion pirates. Even for a Betazoid it’s very difficult to sense emotions of others over the distance between a ship in orbit and someone on a planet’s surface, yet the anguish of those two was deep enough to call to her. And if I lower my own shields only for a moment I can sense your fear like I would if I were touching you. While I know that emotions are very important for humans, I also came to learn that they can do damage to them. Let me help you, young one, like you helped me during the scenario in Selek’s office.”

It was the matriarch’s way to show gratitude, this much Joaquin was aware of, yet he felt something knotting in his stomach. But he tried not to show it. Rather he straightened his shape, while he asked quietly, “How much will you see?”

“I will not probe your mind. To invade personal parts without allowance is a crime among our people – something I will not do. Show me what you are comfortable with or keep your thoughts for yourself. I simply will try to calm your unsettled mind and will test how strong your mental abilities are.” For a second the left corner of her mouth seemed to curl. “It will not hurt.”

“I’m not afraid of a headache,” Weiss murmured, while he remembered the short talk between Selek, Spock and Khan the day before – how shocked the old Vulcan was as he learned that his younger self had forced a mind-meld on Noo during their fight the year previously. It showed him how serious these people were concerning their incredible mental abilities. And one look in those dark eyes of the old Vulcanaess was enough to convince him to give her his trust – something he didn’t do only because she still resembled Shani so much.

“Okay,” he said slowly. “Where shall we do it? Here?”

T’Pau made an inviting gesture towards the alcove. “We will be not disturbed there.”

Politely Joaquin let her sat down first, before he closed the curtains and took his place beside her. He
felt another pang of nervousness, but fought it off. “What do I have to do?” he wanted to know.

“Just close your eyes and relax. Don’t fight me, it will become uncomfortable otherwise. I will sense how far you will allow me to go and will respect your decisions, so don’t be afraid. I am not here to harm you.”

Her voice was warmer now, softer – alluring. For a moment Joaquin compared it with the behavior of a Greek siren, ready to lull the mindless sailor in, and then he remembered that these people were anything but a dangerous creature from Terran legends, and forced himself to relax. He felt warm finger tips pressed gently against his left temple and cheek, then a careful pressure seemed to be in his head. For several seconds he stiffened, and then he heard the Vulcaness’ voice in his head.

‘Don’t fight me, young one. There is no reason for it.’

Gathering all his courage, Joaquin slackened his frame and tried to ease his rising mind. Noo had done it, so he could do it too! And, by the way, this was Spock’s grandmother, no real siren.

‘Nice comparison,’ the voice in his mind deadpanned, ‘but usually Vulcans do not swim.’

Out of no-where Joaquin felt the impulse to laugh at that shown dry humor, then warmth and peace began to engulf him – and he drifted away…

And in the entrance stood the tall, slender frame of Spock, who had just witnessed something he had never thought possible: T’Pau, the un-crowned matriarch of Vulcan, the defender of Surak’s ways and keeper of traditions, had shown sympathy for a young boy who didn’t even belong to their race. She offered her help in a way the most members of the clan had never gotten – him included.

No, it wasn’t jealousy Spock felt, rather the opposite – something like warmth and gentle joy. T’Pau was known as a stern, sharp woman who barely accepted compromises. Now she showed even understanding for the need of an outworlder. How would McCoy put it? She’s not such a dead loss as he had thought…

TBC…
Chapter End Notes

Yeah, T’Pau really surprised a lot of people, but how is the saying? With age comes wisdom, grief can open the eyes (it’s an old Indian saying, by the way). And that Sarek starts to understand his son was about damn time!

In the next chapter, there will be a very sweet and romantically scene between Spock and Uhura. Then something changes within in Khan’s condition, and Selek stays true to one of the promises he made to himself: To teach Jim some mental controls.

I hope you liked the new chapter, and – like always – I’m curious about your reactions.

Have a nice start into the next week.

Of emotions and telepathy

Chapter Notes

Hi, my dear readers!

And once again I have to thank you for all the lovely comments and kudos. I know that all of you hope for Khan to wake up, but after all the serious injuries he got, his augmented nature has to fight its own battle.

One point of it is the empathically and telepathically connection between him and Jim – and the two Spocks have enough of watching Jim and Khan suffering because both feel the distress of the other one. Therefore both Vulcans decide to do something.

Well, and then there is still an open issue between our second lovebird-couple – namely ‘young’ Spock and Uhura; after all Nyota was never officially asked for her hand in marriage.

I promise you a sweet and romantically, but also a chapter full of warm friendship – and a little silver lining concerning Nien.

Have fun

Chapter 83 – Of emotions and telepathy

As Spock returned to the intensive care room, Jim was still asleep and even without touching him; the Vulcan knew that his friend suffered nightmares. Not bad enough to warrant waking him up to prevent harm, but his slumber was restless. Brushing a hand over his captain’s temple, Spock tried to send warmth and calmness to his T’hy’la’s troubled mind, and only as Kirk lay still again did Spock turned his attention to the other man in the room.

The read-outs of the med-scanner above Khan’s bed didn’t show any changes, as he had already assumed. Spock knew that there was nothing he could do now, and so he decided to give Nyota and himself a break.

Bidding the approaching McCoy fare-well for now and asking him to give Jim his regards as soon as he woke up, Spock and Uhura left the hospital – both not wanting to disturb T’Pau, who would
return to her own seat later.

Spock led Uhura to the flat his father usually occupied, where they would stay for the next days until Sarek would be released from hospital. Until then, so Spock dared to admit the ‘human emotion of hope’, the president would have allowed him and the others to return aboard. Otherwise he and Nyota would go to a hotel. The flat was simply too small for three people – what a difference to the residence Sarek had called his home once.

Joaquin returned to the intensive care room one hour later – pale, confused but far more stable than he had been within the last two days. Spock hadn’t told McCoy of what he had witnessed between T’Pau and the Augment-boy and so Bones almost got a heart attack as Weiss mentioned the mind-meld with the matriarch. It had been an ‘exciting but also strange experiment’, he said; feeling far more at ease now. Bones’ comments about ‘Vulcan voodoo-magic’ and ‘she just had to peak into your head, hadn’t she?’ woke amusement in Joaquin. He knew the CMO well enough by now to realize that this was McCoy’s way to deal with stress and to hide his obvious concern.

He easily fell asleep afterwards and only woke up the moment Jim rose from his own bed in the early evening – rested but still not feeling well. Bones didn’t let him and Joaquin alone until they had eaten a decent dinner in the cantina with him. Kirk’s talk with Scotty afterwards affirmed that everything aboard was in order – well, at least concerning the daily routine. Montgomery didn’t hesitate to whine about his machines and Jim, who was well taught in technics too, had a good imagination what Engineering was looking just right now. It itched him to return to the ship to have a closer look at everything, but he knew he couldn’t leave the planet without giving Nien stress. And, by the way, he was still released from duty and in official exile. For now Scott’s reports had to be enough, but just like Spock, Jim hoped that President Robertson would give him and the others the permission to step on the Enterprise again. Kirk wouldn’t waste any time afterwards to return to the ship – well, of course only after Khan was out of danger and himself again.

Jim contacted Spock via the Enterprise, got his private frequency on New Vulcan afterwards and bid him and Uhura good night – thanking once again for the help especially Spock had given him and Nien.

While the Lexington and the Excalibur headed back towards Earth, night fell on New Shi’Kahr, and this time there were no horrible changes in Khan’s condition. The next morning began far more peacefully, yet the immobile body on the biobed was eating Jim’s nerves away. Even Chekov’s and Riley’s return to the hospital and their jolly behavior didn’t cheer him up. The same went for The Shadow-gang which also paid a visit. Like this Kirk learned that Galven had offered Wesley his service to support Scotty – an offer that had been accepted half an hour ago. Jim was grateful, yet it rankled it that the Tellarit was allowed aboard and he, captain of said ship, had to wait for the president’s permission to step aboard his Grey Lady.

Around midday, after the two ensigns beamed up again and The Shadow-gang had vanished, Bones
had had enough of Jim’s mood and more or less kicked him out of the intensive care station –
together with Joaquin. Shooing them away and giving the medical order not to return until evening,
the two thought first of hanging out on the campus, but the scorching heat chased them back indoors
within a few minutes. Learning that the hospital had a gym, both let out their frustration by doing
some sports.

At one point Spock showed up; having learned of their whereabouts as he checked on Khan and met
Bones. Even if he had come to visit his father, he decided to seek him out later as he was informed
by McCoy of the mental state his friend and the young Augment were in. Quickly he borrowed some
sport outfits and began to teach Joaquin Ashumi – training with Jim, too. Sweating, with some
bruises but feeling better after letting off some steam, Kirk and Weiss returned to their room, only to
learn that there were still no changes. After showering, Jim went off to pay Sarek a visit – barging
into a discussion concerning the upcoming wedding. With Kirk being Spock’s T’hy’la and also
Spock and Uhura’s commanding officer, Sarek included the young captain in the matter, and Jim
was surprised as he suddenly realized that he had talked with them for almost two hours in an almost
comfortable atmosphere.

Sarek used the given chance to thank Jim for his help during the Borderland-crisis, and promised him
support at the upcoming court martial. Sarek had great influence within the Federation and even, if
he wanted, within Starfleet. To have him as an ally was a big advantage.

Spock accompanied Kirk finally back to his room, and as he saw how the soft color that had returned
to his friends complexion was rapidly changing back into ashen white, he decided that something
had to be done. He would not watch his soulbrother suffering like this any longer. This had to stop –
now!

He was barely back in his father’s flat as he contacted Selek; discussing with him a few possibilities
to cheer Jim up. They both knew that Kirk’s mental state wouldn’t get any better until Khan’s
condition improved – and the latter worried both. The injuries Khan had suffered were healing, yet
the former dictator made no move to come out of the depths his soul had gone to. Spock had a theory
about it – that the distress Jim felt by his mate’s condition echoed in Khan’s soul that withdrew even
more because of it. Had the feeling of Kirk being in trouble always alerted the former dictator since
the two became lovers, it seemed to have the opposite reaction now, as only Khan’s subconscious
worked and its instincts were on full survival mood.

Selek listened to his younger self’s muses and agreed. Jim had to learn to shield the bond with Khan
at least a little bit, otherwise it would bring both more harm than anything else. And the high minister
was ready to give Kirk a few lessons next day – something Spock was grateful for. He knew that his
older self had a certain way to deal with Jim’s stubbornness he – the younger Spock – still had to
develop yet.

Satisfied with the talk Spock cut the transmission and rose to join Nyota in the small living-area. She
looked up at him from her PADD, and smiled at him; having listened to the conversation with one ear the whole time.

“It will be good for Jim to be distracted by learning something new – something that maybe will even help Khan in his current state,” she said quietly.

Spock nodded, while he took the seat beside her on the settee. The sun was nearing the horizon and the great window gave a full view over the large lake. “Yes, I think so, too. I already tried to talk Jim into letting me shield him, but he refused. Maybe my older self will be more successful.”

Nyota lowered her PADD. “Isn’t it weird?” she asked, which earned her a lifted brow and look of light confusion.

“To what do you refer, ashayam?” Spock asked.

Uhura felt warmth spreading through her whole being as she heard the Vulcan familiar form for ‘beloved’ that Spock had never used before with her, yet she concentrated on the conversation.

“You practically talked with yourself – as if you would look into a mirror and some magician presented you with a picture of yourself only several decades older.”

This time the Vulcan was able to grasp the complexity of emotions and human way of thinking he just was confronted with. “I do know that Selek is in truth me, but he is also not. His life differed from mine a lot.”

“Yet there are many things within both your fates which are identically. You both were first officers aboard the Enterprise. You both developed a deep friendship with Jim Kirk. You both verbally quarreled with Leonard. You both…”

“As my older counterpart said, the universe seems to try to correct done damages to the time-line. He…”

“He made certain that at least this part will be the same – and it was totally egoistical,” Nyota grinned at him, which obviously confused her lover completely.
“I beg your pardon?” Spock asked; both brows lifted this time.

“As far as I understand his friendship with his Jim Kirk, it was the most important thing in his life. It made him strong – still does. He wanted this for you, too – and therefore in a twisted turn for himself. It must be calming for him to see you and our Jim Kirk going along so well with each other. It certainly gives him some peace – and so he made certain that you two got a second chance after you were at each other’s throats first.” She saw Spock wincing the tiniest bit and laid a hand on his arm. “Sorry, love, I didn’t want to wake unpleasant memories. Kirk had earned your wrath almost two and a half year ago. I think it was a kind of lesson for both of you – and in the end everything turned out well. Last but not least because of Selek.”

“His… support in several personal matters was and still is welcomed,” the Enterprise’s first officer admitted reluctantly. “He had earned a wisdom I wish to have one day.”

“Well, he is 156 years old and had more or less a whole lifetime to gather knowledge and experiences.” Uhura cocked her head. “Could it be that you don’t see yourself in him but rather a kind of distant relative?”

This last question was an interesting one – at least for Spock. Pursing his lips in a gesture his mother had often done, he leaned back against the back rest and thought about it. “It may sound strange,” he answered finally, “but it really is that case. Selek… is a little bit like my father, yet he shows streaks Sarek never had. Of course, after all he has mother’s… genes in him. Yet I have to agree with your assumption. I rather regard him as a kind of distant uncle than as an older vision of myself.”

Nyota chuckled. “Well, that explains why you don’t find it weird to be in contact with him. I think I would freak out to meet my older self – maybe with white hair and added weight on the hips.” She winked at him, and again Spock was able to understand the humor Uhura displayed.

“I am certain that you would be still of pleasing appearance – and that your mind would be still the inspiring warm breeze I have come to be attached to.”

The young woman smiled; recognizing the love declaration in those words. “I hope so,” she teased. “After all you’re stuck with me now – even if you never asked me THE question of questions regarding an upcoming wedding.”

Spock blinked uncomprehending, and so she added with a sigh, “Don’t you think you should have asked me first for my hand in marriage before your father began planning the ceremony?”
A soft huff escaped the Vulcan – the only audible sign of frustration. “I planned to ask you – yet Dr. McCoy was quicker in informing T’Pau about my intentions.” He shook his head. “I know he meant well, yet he initiated unsettlement with his thoughtless words.”

Nyota snorted, amused. “You mean, he woke chaos – nothing untypical for him.” She bent forwards and looked expectantly at Spock. “Well?” she asked as he only looked at her in silence.

“‘Well’ what?” Spock questioned; at loss what she wanted from him.

“You still have to ask the special question,” Uhura reminded him gently.

Again a slanted brow began to wander upwards. “Our marriage is set,” he said. “To ask for something that is already decided is illogical.”

Uhura suppressed a groan. ‘Patience, Nyota, he is after all a Vulcan and even if he lives among us humans for quite a time and had a human as mother, you can’t expect that he knows all our customs.’ Taking a deep breath she said gently, “Spock, to be asked for the hand in marriage by the groom is one of the most important things for a woman. It’s not only a matter of polite behavior, but also a very intense experience – if the right man asks this particular question.”

Spock cocked his head; accepting Nyota’s wish. Yet it confronted him with a little problem, because what were the right words? How to do this properly? He asked himself what his father had done and said to Amanda all those years back. He didn’t know. He had never asked – and now it was too late. He hadn’t even thought about that tradition among humans, even if he had seen it in TV-shows, movies and even witnessed two times at the academy this kind of custom. Well, at least that gave him an idea how to proceed now. Should he rise and bend on one knee in front of Nyota, like he had seen in one of these silly movies? It was the only gesture he was certain of that it belonged to this ritual.

Rising gracefully he hesitated a moment, before he offered Nyota his hand, who took it. Calmness, warmth, joy and this excited wild emotion he knew was love, spread from their connected fingers to his mind – and all of sudden it wasn’t that difficult at all to go on with this special human tradition. It would make Uhura happy and that was all that counted.

As she stood in front of him, he glanced softly at her – and bent on one knee. He heard her gentle gasp while her eyes widened in disbelief. Obviously she hadn’t thought that he would stick to this particular human tradition while already following one of her people’s customs, and a little part in him enjoyed her reaction that also gave him some satisfaction. He liked to surprise her.
“Nyota Uhura, since we first met at the Starfleet Academy you woke my interest – with your brilliant mind, your beauty and your warm, kind soul. It gave me pleasure to be your teacher, yet it was me who learned more from you than I could ever teach you. You gave me your acceptance, your friendship, your trust, your loyalty – and finally your love. I find satisfying pleasure in your presence, and your heart and mind are often my anchor. My father once told me that it was logical for him to marry my mother. Later he admitted that it was logical because he loved her. It is untypical for Vulcans to admit feelings, even such sincere ones, yet I’m also half human, and therefore I want to tell you: I love you. Do you want to become my bondmate – my wife?”

With rising unease he watched tears suddenly brimming in Uhura’s eyes, but her gaze was one of sheer happiness.

Nyota couldn’t believe it. Not only that Spock had asked her in the perfect mixture of his people’s and her own people’s way of words, no, he even went down on one knee – a gesture he certainly had seen on TV or had witnessed elsewhere. The warmth of his fingers which still enveloped hers, the soft gaze of his dark eyes and the way he asked for her hand in marriage made her heart beat like the hooves of a wild galloping horse.

Her usually melodious voice choked in her throat, as she fiercely nodded and whispered, “Yes! Yes, yes and thousand times again yes!”

He rose with the elegance of a feline. “I think to repeat one word a thousand times is a waste of breath and…” He didn’t get further, as Nyota wrapped her arms around his neck and her full, gentle lips found his. For a moment he was caught by surprise, and then he returned the embrace and her kiss. His always present mind realized that his pulse rose by 69.3 percent and his body core temperature by…

His clear thoughts left him, as not only his human, but also the part of his Vulcan ancient ancestors began to rise. Fire licked along his nerves and under his skin. For a second a warning voice reminded him that he was here in the flat of his father, who certainly wouldn’t appreciate it to have his son and his future daughter-in-law giving into the thing humans called ‘passion’, then Spock decided to ignore the voice. His mother would approve with his flaring longing to be together with the woman who held his heart.

Lifting Nyota on his arms he strode with uneasy steps towards the settee – allowing his mother’s genes to take over…
The next morning brought a change – one that was hoped for, but seemed to be out of grasp since the final battle aboard the Excalibur.

Kirk woke up and still felt groggy. He had to force himself to go to the bathroom, where he spent a short time to give into human urges and to clean himself. Looking in the mirror above the basin he scowled as he observed his own face. No, it wasn’t the two-days-beard he would have to shave off this day or the fact that his hair was in need for a proper washing. It was rather the haunted look in his eyes, the shadows beneath them and the fact that his cheek bones were plain to see. He had lost weight – and quite a lot. How had Wesley put it the day before yesterday? He looked like he had been eaten and spat out again? Well, Bob was right. He really looked… sick. But was this a miracle? The love of his life, the other half of his heart and soul, lay only a few meters away on a biobed and was dead to the world. Hell, even such a good Vulcan healer like Sorel couldn’t tell him if Nien was simple in a kind of healing trance or in coma, and this uncertainty was driving Jim mad.

After brushing his teeth and rinsing out his mouth, he searched for the single-use shaver he had seen yesterday in the cabinet, when he felt a weird sensation rising in him. Only a second later the med-scanner in the room next door gave an alert. Like he had been stung by a spider, Jim let fall everything he just held in his hands and raced out of the small bathroom. His fearful gaze found the slender body on the bed beside his own – and saw Khan’s head rolling from one side to the other.

Not hesitating one second, Kirk dashed to him; calling his name. He heard quick steps coming nearer – Bones, without any doubt – but Jim didn’t take his glance away from the Augment, while he bent over him and gently gripped his shoulders.

“Nien! Nien, wake up! It’s me – Jim! You’re safe, honey! You’re here, with me! Wake up, Nien, wake up!”

McCoy stopped beside the bed, checking the monitor. “His brain activities are changing – they are increasing,” he mumbled.

The same moment Joaquin burst into the room. He had been again in the visitor area to attempt a meditation as he had felt the soft change within the family-link he shared with his older brother. Hope and worry warred in him, while he looked with wide eyes at ‘Noo’ and the two other males.

There!

For a moment Khan opened his eyes – the blue-green depths were glassy and reddish. He took a
deep breath and something close to fright began to shine in his gaze.

‘The smell of disinfection agents!’ Jim thought. ‘They remind him of...’

“Nien!” He bent straight above Khan’s face; cutting of any other sight than that of his own. “Nien, baby, I’m here! You’re safe!” He cupped his beloved’s left cheek with one hand; his thumb stroke in gentle circles on the feverish skin, before he pressed a quick kiss to his dry lips. “Everything is all right now, honey! There is no danger anymore! You are with me. Stay with me, Nien, please!”

Bones pursed his lips. “If he were a casual human I’d inject him with some stimulants, but given his augmented nature I don’t dare such a thing.”

Jim’s attention was only directed on Khan. Their eyes met...

And there...

For a few seconds recognition shimmered in Nien’s eyes and the left corner of his mouth curled. His lips formed the captain’s given name – then his conscious faded away again.

“Nien…” Jim whispered; feeling so damn helpless. Then a warm hand on his shoulder startled him. He looked up and straight at a beaming McCoy.

“He’s asleep now, Jim, no less, no more. No coma or some voodoo-mind-tricks. He is simply asleep. I think he is out of the woods now.”

Silence.

For a long moment there was only silence in the room after those longed for words, and then Joaquin let out a loud whooping sound, while Kirk closed his eyes. A sob escaped him – one of utter relief, and he didn’t even realize that Bones supported him and more or less carried him to the bed beside Khan’s.

“Easy, kid!” Leonard said gently; still smiling. He couldn’t help himself and ruffled his friend’s thick hair in a brotherly way. “The worst is over, as far as I can tell. He’ll heal now. Just give him some
time and… uff!” Kirk had wrapped both arms around his middle and was hugging him strongly enough to cut off his breath. Behind him Joaquin was laughing now – loud and boyish laughter that rang through the corridor. A by-passing Vulcan nurse lifted both brows at this behavior. Humans!

The wave of relief was strong enough to make Jim dizzy. He felt his eyes beginning to burn and even as he tried to suppress the tears, the emotional stress was too strong and needed a valve. Bones bit his lip and felt a lump in his throat, as his friend’s body in his arm began to tremble with uncontrolled sobs. McCoy showed everyone a snappy and grouching mask, but deep inside he was as soft as pudding. And he was anything but immune to such an outburst of emotions – especially when it happened to a friend – his best friend! Jim had been through so much, Leonard’s heart went out to him like rarely before.

Bending down he simply buried his face in Jim’s tousled hair, and held the younger man close to him; making cooing sounds and whispering nothingness of comfort and understanding – just like an older brother.

Behind him Joaquin had stopped his war-dance like hopping; his eyes hung on his brother’s mate and the doctor, who did his best to give his friend some security. Feeling himself ready to burst with too many emotions, he let himself fall on the spare bed and closed his eyes. Like this he all of sudden heard quiet steps coming nearer and stopping at the entrance. Looking up he saw the aged face of Selek, who first glanced alarmed at the two officers, then his gaze found the read-outs of the med-scanner and he relaxed visible.

Joaquin, grinning like crazy, rose and bowed slightly. “Good morning, High Minister,” he greeted politely, what made McCoy looking over his shoulder.

“Morning, Selek,” he said quietly, while the Elder stepped nearer.

Jim lifted his head from Bones’ middle and Selek sighed inwardly as he saw the familiar, yet far too young face wet with tears and with puffy eyes, which shone with happiness. “I take it that Mr. Singh’s condition has improved,” Spock Prime concluded, which was answered with two nods.

“He woke up for a few seconds – and recognized me!” Kirk all but sniffled; his blue eyes brimmed with joy, relief and more tears.

The old Vulcan felt the urge to reach out and to offer the younger self of his $T'hy'la$ some reassurance. Without his own doing his weathered fingers cupped one of Jim’s strong shoulders and squeezed it. “I am glad to hear this news,” he said softly. He had watched his own Jim mourning two times for a lost love – and both times it had hurt him, too, even if he hadn’t been ready to admit it. To
see now that this time-line had at least some twists for the better filled him with peace.

“He’s asleep now,” Joaquin added; still beaming.

Old Spock’s attention was driven again to the former dictator, who lay absolutely motionless on the biobed, yet his eyes moved beneath his closed lids.

“He reacted badly at first after he took a deep breath, then Jim was all over him and he relaxed again,” McCoy murmured. “He still associates his surroundings with nasty memories from his past.”

Selek pursed his lips. “Then still his instincts rule him – something I knew would happen. His augmented nature may heal the body quicker than usual, yet his soul is deeply hurt. Young Spock and I talked about it yesterday evening.” He looked back at Jim. “I have an idea how to keep his bad memories at bay and to improve his mental healing. He reacts strong to everything that has to do with medical care – even the scents are unsettling him. Therefore it would be the best if he would be released from the hospital and…” His voice grew stronger while he raised a hand to stop McCoy’s instantly beginning protest. “And to be brought to a place that doesn’t remind his subconscious permanently of the labs of his youth or of his captivity in Marcus’ and later Dashwood’s hands. Of course he has to be supplied with a biobed and med-scanners, and if you, Leonard, will still take care of him, I do believe he will heal as quickly as he is doing now. Yet his mind will be more at ease if his surroundings don’t constantly wake the worst memories in him as soon as sleep releases him for a moment.”

Jim had wiped his happy tears away, and was now looking at the Elder with big eyes. “What place do you have in mind?” There was no doubt that Old Spock had already thought the whole thing through. Otherwise he wouldn’t have made the suggestion at all.

The warm, brown eyes glanced at him. “New Gol,” Selek said calmly, and his mouth curled the tiniest bit as two hanging jaws were the result.

“You… you are kidding, right?” Kirk finally managed to gasp.

“Jim, you of all people should know that I don’t do ‘kidding’,” Spock Prime rebuked gently.

“Bullshit! You – better say your younger self – pulls my leg often enough,” Bones said, and Selek gave him his not showing half-smile.
“Because it is always... fascinating how easily you can be driven up the next wall, Leonard.” he deadpanned, what earned him a scowl from the CMO and a short laugh from Jim.

“Rrrright, no kidding then,” Kirk said; his blue eyes shone even more. “So... you already talked to T’Pau about your idea?”

“I did this morning,” Selek affirmed. “And I didn’t have to persuade her for too long. As it seemed, our young lion here impressed her.” His glance was directed on Joaquin, who gaped at him.

“W-w-w-what?”

“T’Pau mind-melded with you yesterday and your way of thinking and the structure of your mind impressed her,” Selek repeated, before he turned his attention back to Jim. “Young Spock and also T’Pau brought to my attention that you, Mr. Singh and Mr. Weiss should be trained in working with the bond that links you to each other. I already knew from my own meld with Mr. Singh that he and his family have some telepathic abilities and Spock told me how much Mr. Singh distress had distracted you during the fight on the Excalibur, Jim. This could turn out to be very dangerous in serious situations – for you, Mr. Singh and the ship. I offer you, Mr. Weiss and after his healing also Mr. Singh to teach you some possibilities on how to shield yourselves. It will not be a hindrance to your mating-bond or to Mr. Weiss’ family bond with his brother; it rather will serve you to the best purpose in the face of dangerous and harmful situations.”

Jim frowned. “When I shield from Nien, he will think that he is alone again and...”

“You misunderstood me,” Selek interrupted him gently. “You both still will be able to sense each other and the most times there will be no need for you or Mr. Singh to raise your inner shields at all. But if you’re in serious situations again – and knowing you, you will – you both will be able to act without being hindered by each other’s discomfort. The latter is maybe a further reason for Mr. Singh’s and your distress that you are both suffering from at the moment.”

Kirk blinked in confusion. “What do you mean?”

Spock Prime allowed himself a little sigh. “You fear for him – which is understandable. But your fear produces unpleasant echoes in Mr. Singh’s mind. And by the other way around you feel his pain which increases your worry. To use a Terran phrase: The cat bits her own tail. If you could shield your fright for Mr. Singh’s welfare it would end this circle.”
“Just a sec!” McCoy flared up. “Did you just say that’s Jim’s fault that Khan remains more or less lost in dreamland?”

“You didn’t listen closely enough, Leonard – a streak I remember very well,” Selek answered calmly. “I just said that…”

“Selek is right, Bones,” Kirk interrupted any upcoming discussion and lifted a hand. For a moment he felt like he was preventing one of the many verbal quarrels between his own Spock and McCoy. “I was compromised as I sensed Nien’s agony and dread. It drove me forwards…”

“… Quite recklessly, when I remember those minutes correctly,” Bones nodded shortly. “You fought a way through the others like a berserker and hurled people away as if they were dolls. If it hadn’t have been for Spock, who covered your sudden super-strength, you would have had to answer many questions by now.”

“See, that’s the point,” Jim agreed. “I didn’t think but acted – driven by the bond between Nien and me. And the bond still works like this – even in this very moment. Selek is right concerning these mental echoes. I’m tired despite a long sleep, I’m restless, have lost any appetite and…”

“And look like the living dead,” McCoy grumbled. “Because you sense on a certain level Khan’s suffering?”

“I knew that he woke up even before the biobed gave an alert, so, yes, I do think that his condition influences me constantly,” Kirk agreed. “This all really comes in handy, yet just think if Nien feels my worry and restlessness in return. Yes, he recognized me, but only after I touched him and talked to him. Selek just said it: Nien’s soul is gravely injured. The last assault on his person was one time too often. I saw it through the mind-meld with him and Spock. I saw these shadow-labs and witnessed what the former guards of those labs in New Delhi, Marcus and the others said and did to him. This all left deep scars in his soul and they are now entwining with what his senses tell his subconscious about his surroundings here – for example the typical smell of a hospital and through it his brain only remembers the labs. It gives his subconscious the wrong idea of his actual whereabouts. And my fear for him doesn’t help this at all.”

“You think he misinterprets your fear for worry because he had fallen in an enemy’s hands again?” McCoy cocked his head. “This would mean that he is still able to make some logical conclusions even in unconsciousness or in sleep – something I would call ‘impossible’, but given his superhuman nature it maybe is possible after all.” He glanced at the intense listening Joaquin. “Have you heard of such a thing before?”
Weiss shrugged. “I remember that I once was hurt during a monsoon and lost conscious. Yet I somehow sensed the moment Noo arrived and picked me up. I knew that I was home even before I fully woke up.”

Leonard nodded at this affirmation. “Well, I think that answers my question.” He looked back at Jim. “Your honey simply knows that he is a medical or scientific place – and given his whole experiences with those facilities he fears what will be when he wakes up. And, maybe, Selek and Spock are indeed right and your worry adds oil to these flames.”

Spock Prime lifted a brow at the words ‘maybe indeed right’, but he skipped any comment. Knowing Leonard he would pick a little quarrel only for good measure, and they had no time for something like this – even if the Elder would enjoy a discussion with the feisty CMO. The last time he had argued with ‘his’ McCoy was an awful long time ago.

So instead of reacting at the verbal punch, he simply said, “After we at least agree on my assumption, I suggest that we discuss how to proceed from here on. Mr. Singh should be moved to New Gol as soon as possible, but only if his condition allows it.” His attention returned to Jim. “You’ll find the calmness and the peace you need to concentrate and to learn. And, by the way, you also can summon on your mental and physically strengths.”

Jim rolled his eyes. “I’ve rested and…”

Kirk’s protest was cut off, as Old Spock said gently, “You, my friend, are in serious need for a vacation. Not one of the shore-leaves you prefer, but a real vacation. And Khan will need you at his side during his own healing, and you need to be close to him to find peace for yourself. New Gol offers you a refuge where you can heal, too.” He lowered his voice. “You are going to need all strengths possible when you return to Earth to face court martial – you, Leonard, Khan, even my younger self. T’Pau offered her support in many ways. She has not forgotten that it was your courage that gave Spock the time to save the Elders, her and at least some documents and irreplaceable artifacts of our culture, before our home world was destroyed. And what you did now to rescue Sarek – her eldest son. You even risked your life and career not for the first time to do what is right.” He cocked his head. “Spock told me you even broke the Prime Directive to rescue him.”

Jim shrugged. “I couldn’t let him die in that damn fire hole he was caught in. I think that we’re being stuck together like this is simply fate – in this timeline, just like you and your Jim were in yours.”

McCoy gave him a glare. “Jim!” he warned, before he looked carefully at Joaquin. Promptly Kirk stiffened as he realized what just had slipped him.
The young superhuman cleared his throat and closed the little distance to them. “Uh, just for the record – I know that he is Spock II, only a little bit older,” he said; flicking a lazy thumb at the Elder. Three pairs of eyes looked rather big at him, and he smirked sheepishly. “Well, this Judas of an Admiral called you ‘Mr. Spock’ as he attacked you in your office, High Minister, and you really have to be blind not to realize that you and Jim’s first officer are one and the same person. Okay, you’re more aged, but the gestures and stances are quite the same, as are the choice of your words and the way you act towards Jim.”

Kirk gulped; knowing that there was no reason for denial. “Jo, do you understand how important it is that this is kept a secret? Selek comes from the future more than 100 years ahead. The…”

“Time-paradoxes! I understand, Jim. And I think bastards like Norton would love to gain the knowledge the High Minister must possess. So my lips are sealed, don’t freak!” He had clasped his hands on his back and was bobbing on his toes forwards and backwards; a smug smile on his face.

“He’s just a smartass like you are, Jim!” Bones commented wryly and returned his attention to Selek. “So, you think it would be the best for Khan if we put him somewhere nice, peaceful and decent and he comes out of his Sleeping Beauty slumber?” He glanced with a lopsided grin at Kirk. “In case that isn’t enough, you still can kiss him awake – you with being Prince Charming and all.”

Jim shot him a glare. “Will you ever develop some sensibility, Doctor?”

“Yeah, the day you stop being a stubborn hothead, Captain!”

“Believe me, Leonard, this day will never come,” Selek threw in his own comment; looking very innocently at the two younger selves of his old friends. Then he turned serious again. “To return to the topic, I do think the sooner he is removed from the hospital the better it will be for Mr. Singh. How is his exact condition, Leonard?” He threw Joaquin a short glance. “With your permission as Mr. Singh’s brother, Mr. Weiss.”

Joaquin made a fleeing gesture with his right hand. “You’ve my brother’s best interest at heart, so, yeah; I have nothing against it that Dr. McCoy tells you about Noo’s condition.”

McCoy took a deep breath. “The rip in his lever is closing and his lung is healing, too. These two injuries are the most serious ones besides the TBI. I don’t think it will be safe to move him within the next two or three days. The broken bones in his body are still mending, but given the actual progress the process won’t be finished within the next ten days or so. The same goes for the torn sinews. The bruises are also beginning to fade, yet those which lie deep in his body will need some more time than the superficial ones.” He grimaced. “His augmented body is awesome and today’s medicine has
a lot of tricks, yet there are no such things as miracles. Every good healing needs time; that goes even for our superman here.”

Selek made a slow agreeing gesture. “Then we’ve enough time to prepare a room for Mr. Singh that he can share with Jim.” His glance found Joaquin. “Would you mind sharing a room with the good Doctor? The original seat of Gol was made of many large buildings, but until now we were only able to raise one building in which the priests are living. We don’t have so much room to spare.”

Weiss nodded without any hesitation. “That’s no problem, sir. I… I appreciate the chance to stay near my brother despite the own problems your people have.” He glanced at Leonard. “I will behave.”

McCoy grinned. “I hope so, son. I’ve already all hands full enough with this overgrown boy here!” He gestured towards Jim, who rolled his eyes.

“Love you too, Bones!”

“All right, then it’s settled,” Selek said. “I…” He didn’t get any further, as cheerful voices sounded down the corridor. “I think your friends showed up again, Mr. Weiss. Don’t let them wait.” He nodded towards the door.

Weiss hesitated, gave Jim an asking glance, who mumbled, “Go! I’ll stay with Nien!” That was enough and Joaquin quickly left the room; meeting Chekov and Riley half the way. Kirk scratched his head and looked at Selek. “So, any advice on how to behave in New Gol? I don’t want to give anybody trouble.”

An ice-grey brow was lifted. “I am certain that Spock will teach you everything you need to know. And otherwise: Just trust your instincts. They never failed you.”

Jim beamed at him and elbowed a groaning McCoy. “See, told you so!”

“Ego much?”

“Nope, only healthy self-conscious!”
Selek felt new amusement rising in him. Some things would never change, despite the altered time-line. Then his glance found the read-outs of the med-scanner again. Khan was still not out of danger, this much he could tell, yet the chances for survival had increased. Soon it would be about time to take care that the Augment not only healed, but would also remain free. He, Jim and the others. Spock Prime nodded to himself. Yes, he would have to make some calls soon – but first he would begin with the most needed matter…

Selek wasted no time to begin his instructions concerning Jim’s and Khan’s link. He knew from his own Jim and from the experience with his T’hy’la’s younger counterpart on Delta Vega during their mind-meld that James Kirk’s psi-powers were practically non-existing. Yet it didn’t surprise him that he found during the meld he initiated with Kirk in one of the meditation alcoves in the late morning that the mental skills had increased. Young Jim’s brain activities were higher than he remembered; his sensitivity strengthened by them even more.

Curious the Elder slipped deeper into Kirk’s mind until he saw the two bonds the young captain shared with the two people which were most precious to him. The bond between him and Young Spock shimmered in warm golden and rational blue in Jim’s colorful mindscape – the bond between him and Khan was even stronger and shone in passionate gold and red like a large big firestorm, yet there was also the cool color of rationality that kept both men sane.

The mind of this timeline’s Jim differed from the one Old Spock knew from his own friend, yet the ground and the many emotions which flowed in harmony were almost the same. Selek felt the deep love the young captain held for his friends, his crew, his ship – and, of course, for Khan. He also sensed the compassion and the strong need for equity that drove Kirk, tangled with fierce protectiveness and faith. There was also earnestness and sincerity, combined with high intelligence, hunger for knowledge and deep tolerance. This Kirk’s mindscape was certainly a little bit more chaotic as Selek was used to finding in his own T’hy’la’s katra, yet on the other hand it was similar enough to give him a feeling of home-coming.

Once again he painfully realized how much he missed his own Jim – what dark, cold hole gaped deep in his soul where once his T’hy’la’s presence had been.

For Jim it was a new experience to meld with Spock Prime. Yes, they did it on Delta Vega, but during those minutes, he a) just had to calm down after being chased by a giant lobster-like monster that wanted him for lunch, b) had to come to terms that he had been, indeed, marooned on a block of ice in the middle of nowhere, and c) that the older vision of the Vulcan who just had kicked him out was there and didn’t hold any grudges against him but rather seemed to love him. To say the least: Jim Kirk had been in a highly confused state. And the many pictures, voices, events and emotions he received from the old Vulcan during the short mind-meld hadn’t lessened his bad shape.
Later, after his own Spock had melded with him sporadically, Jim had felt more at ease – the younger Vulcan’s mind was a like a lukewarm ocean in which he could soar without any efforts. Yes, he even had relaxed and had thought to be near a beach in the sunny warm Caribbean Sea instead of sharing his mind with his first officer.

Selek’s mind still differed from what Kirk experienced with his own Spock, but he didn’t get an overload of images like he received the first time. He could sense the strength within the Elder, the power of an old soul that had grown with the decades, but he also felt the warm affection and the burning protectiveness Spock Prime held for him. It made him lower his instinctive wariness – something the Elder called Jim’s ‘inner shields’ which he had to learn to control.

Kirk had ever been a quick student. Curiosity coupled with a high IQ is certainly an advantage when you step into a completely new territory – because nothing else could describe the whole ‘Vulcan voodoo-jumbo’, like McCoy called it as Jim and Selek left the room for the first lesson.

The young captain listened to Selek’s instructions he ‘heard’ within his mind and tried his best to get some control over the link he shared with Khan, but after half an hour it was obvious that he would have to learn a lot more.

Ever so carefully Selek helped Jim to raise his inner shields and to keep them in place. He sensed the young man’s sudden wariness and calmed his worry by telling him that Khan was still able to feel him, yet Kirk’s stronger emotions wouldn’t spill so powerful into the link anymore. Especially the fear that still ruled Jim – the fear for Khan’s health and life. The Elder really hoped that this little trick would help both men.

But this was not all the Vulcan High Minister learned during the mind-meld.

He knew now why Young Spock could sense his friend’s stronger emotions better than before. The link between Kirk and Khan, together with Jim’s increased brain activities, had initiated some psi-powers in the young captain where only a spark had been before. The Elder had a pretty good idea how this happened: Khan’s blood. It was only logical that Kirk’s cells had been influenced by it. McCoy already affirmed this a mere hour ago as he referred to the ‘super-power’ Kirk developed during the battle aboard the *Excalibur*. Khan’s blood had left changes in Jim – not only in his muscles and immune system, but also in his brain. This, together with the mating bond, had strengthened the tiny mental skills Jim had, which echoed also in the link he shared with his Spock. Not even knowing that he possessed mental shields, Jim had no reins on his strong emotions. Selek could only guess how much his younger self had been forced to keep his own mental shields in place – and despite this Kirk’s feeling pierced them.
The proof for the latter came several minutes later, as Selek stated that this was enough for the first lesson and he left the alcove. He wasn’t really surprised to find his younger self sitting in the visitor area and waiting for them; his posture stiff.

Spock rose as he saw the two figures emerging from the meditation alcove and his eyes roamed with barely hidden concern over Kirk’s pale features. Nodding his head in respect at the Elder, he first addressed his captain and friend, “Are you all right, Jim?”

Kirk grinned, yet he couldn’t hide that he was groggy. “Yeah, I’m okay. He poked around a little bit with his mental fingers and showed me my ‘inner shields’. Still have to learn to rise or to lower them, but at least I sensed them.”

Selek lifted a brow. “You did well, young one. For someone who never learned any mental techniques this first lesson was very successful.”

Jim whistled. “Wow, a compliment from you!” His gaze found that of his own Spock. “I could get used to it,” he said, winking at him.

“I rather stated a fact,” the high minister corrected him, but he couldn’t fool Kirk.

“I had you for half an hour in my mind, Selek. You aren’t the only one who had a proper look inside the head!”

“Half an hour?” A small crease appeared between Spock’s slanted brows, while he glared at Selek. “Was this necessary?”

“It was, otherwise I wouldn’t have done it,” Spock Prime replied softly. “His mindscape differs here and there from the one I knew from my Jim – and I had to learn how it comes that you can ‘hear’ him even if you don’t touch each other. The results of my research are fascinating, and I think we should inform Leonard about them, too. I’m certain that he can add the one or other missing piece of the puzzle.”

The Enterprise’s first officer still fixed him with a hard stare and only shifted his gaze away as he felt Jim’s hand on his arm.

“Hey, don’t fret,” Kirk said gently. “I’m fine.”
“I don’t ‘fret’, Captain, as you certainly know,” the younger Vulcan replied indignantly.

Kirk rolled his eyes. “Sure, just give me a minute to find the Vulcan equivalent of ‘fretting’. Oh, I forgot, that’s exactly what you just did!” He watched how Spock took a deep breath and shot him one of his famous glances, what made Jim chuckling. Then the captain turned serious again. “I’m really okay, Spock.” He squeezed his friend’s arm before he let go of it. “Selek didn’t go any further than where our link and that between Nien and me begin. Then he began to practice with me.”

The tiny frown on Spock’s forehead deepened oh so slightly. “You have to be deep in someone’s *katra* to see a mating- and friendship link, Jim.”

“You don’t have to search for it for long,” Selek explained softly. “Both links shine brighter than our new homeworld’s sun.” His warm eyes lay once again on Kirk. “You were and will always be a man of strong emotions, yet you already have a tight grip on them when needed. The only thing you have to learn is to get some control over what you reproduce into the two links you share with Young Spock and Mr. Singh. Everything else will turn out all right afterwards.”

Jim beamed first at him, then at his own *T’hy’la*. “Told you so. It isn’t that bad!”

Spock ignored him for once; still not liking that his older self had such a deep mind-meld with Jim. “Did you find the reason why the captain’s and my link suddenly has increased like it did?”

Selek nodded. “Yes – and I have some more assumptions I want to discuss with Leonard. And, of course, with you two.”

“Bones will be delighted,” Kirk sighed. “You know how much he distrusts the ‘Vulcan mind-voodoo’.”

“Given the fact that he is the *Enterprise’s* CMO and that a Vulcan belongs to the ship’s crew, he has no other choice than to deal with this topic,” the Elder deadpanned.

“Rrrright,” Jim snickered. “But it will be you who tells him that!”

A quarter hour later the atmosphere in the little room that served McCoy as a ready-room was tense.
Bones had crossed his arms in front of his chest and glared at the two Vulcans and Jim; his left foot tapped on the floor under the desk.

“So, let me get this straight. You-” he pointed at Kirk, “have developed some mental skills because Khan’s blood drives your crazy brain to an even stronger thinking-chaos-mix than it already did and that certainly will give me more grey hairs than I already have because of you.” Then he pointed at Spock. “And Jim’s increased brain-working influences the link you and he-” he flipped a thumb at Kirk, “have, because your two minds are fitting together like a pair of old shoes.” He nodded towards the corridor. “And Khan is in the middle of it, because the sensitivity of his super brain works like a transmitter?” He glanced at Selek. “Did I get the last part right?”

“Not really,” the Elder replied. “The links Jim shares with Mr. Singh and Young Spock are separated. Spock can’t feel what Khan feels and the other way around.”

“So, Jim is the lucky guy with a direct connection to Spock and a second one to Khan, but both still have to use a communicator to speak with each other if they aren’t in the same room. Great!” he groaned. “This is a free ticket for the kid to be even more reckless!” He lifted both hands as Kirk began to protest. “Save your breath Jim, we both know that you hurl yourself head first into the most dangerous situations without thinking of yourself for only a minute. And knowing now that your first officer and your superman will come running the moment they sense only the tiniest unsettlement from you, will certainly give you some very bad ideas.” He pointed nonchalantly with his index finger at his friend. “And you can be certain that I will not stand aside and watch you take even more risks than you already did until now. I really don’t want to have a fretting Vulcan and a looming Augment in my medbay every time you come back from a foreign planet and I have to patch you up!”

“Told you that you’re fretting,” Jim grinned at Spock. “Even Bones says so.”

The first officer wasn’t able to suppress a sigh this time, while he looked upwards for a second. Selek, who sat at his side, gave him an amused glance. “It’s really difficult to remember Surak’s Teachings when dealing with those two, don’t you agree?” he asked.

“To deny it would be a lie,” Spock answered wryly.

Kirk laughed quietly, while Bones stayed serious. “All right, so we know now why Spock all of sudden is a receiving terminal for Jim’s emotions, and how it was even possible for Jim and Khan to build a mental mating bond at all. The question is: will it harm them sooner or later?”

Selek shook his head. “I don’t think so, Leonard. Vulcans share links with their parents, with their
siblings, with their partners and sometimes, like in this case, even with close friends. It’s in our nature.”

“Fine and dandy,” Bones grumbled. “But what about Jim and Khan? They’re humans. This mind-jimbo-jumbo isn’t common for us – at least for those of us who weren’t born as supermen. And Jim’s increased brain activities are only resulting from Khan’s blood. Will these activities cease again or will they remain? And how will the bond react if Jim comes down from his super-high-flight?”

Spock cocked his head. “Interesting questions, Doctor.”

“Questions I need answers for,” Leonard stated more sober now.

“Because this is a first case, I can only speculate,” Selek said.

McCoy whistled. “You – speculating? That’s a new one!”

The high minister ignored him, while he continued, “There was only one mating-bond between a non-telepath and a touch-telepath, and that was between my parents.” He leaned back in the chair. “The Sarek in my timeline once told me that my mother’s mental skills grew with time during their marriage and that she was a permanent presence in the back of his mind. Great distances sometimes lessened the presence, but never enough to harm the bond they shared. My mother had zero mental abilities, Jim has some – even my Jim possessed some which increased over the years we shared the T’hy’la-link. Therefore I think that, despite whatever will occur concerning Jim’s enhanced cells, the bond between him and Mr. Singh will certainly remain, yet I don’t know how strong it will be when Khan’s blood might cease to influence Jim’s body functions. And referring to the latter: only time can tell how long he will have them.”

McCoy grimaced. “Well, now I know as much as before,” he grumbled. “At least I can be sure that those two don’t have a fit because of a fading bond if it remains. If I’ve learned one thing during dealing with our lovebirds here, then it’s the fact that both are only functional when they sense each other being all right.”

Kirk shot him a glare. “Because I was worried aboard the Excalibur doesn’t mean…”

“Jim, you weren’t only ‘worried’, you were about to be pushed over the edge,” McCoy corrected him gently. “You panicked – and I have to agree with Selek. This could turn out to be a real big problem if one of you two gets injured during a crisis and the other one has to stay true to his duties
to solve said crisis. I’m happy for you that this bond between you and Khan exists. It stabilizes you – sort of. And it stabilizes our superman and certainly prevents him from becoming homicidal again. I’m relieved that this link will not cease to be because of your cells losing their super-abilities sooner or later, yet I also understand that it can and already has influenced you greatly. Not only you, but also Spock.”

“I’m not influenced, Doctor.” the first officer stated and earned two raised brows from the CMO for it.

“No? So tell me, how did you know that Jim was being beaten into a pulp by Finnegan at Gamma 12? Or why you come running as soon as Jim gets knitters in his boxers because of Khan’s condition or because he doesn’t feel well? You’re calling this not an influence?”

“I share a T’hy’la-link with the captain as you know, Doctor. Therefore…”

“Spock, you and Jim have been soulbrothers for more than a year now. Just tell me, did you feel Jim’s anxiety as you decided to leave the battlefield and to speed to Aldebaran, or was it more a calculated chance that the Klingons would attack the burning space station and you came to the deduction that he could be in danger?”

The younger Vulcan cocked his head. “I had no proof for the captain being in danger because of the Klingons. I…” He hesitated. “It was… a gut-feeling.” It was obvious how much it cost him to admit this.

Bones nodded not unkindly. “See, you followed an instinct – and not a clear knowledge. Knowledge you couldn’t possess at that time because the link between you and Jim wasn’t as strong like it is now. The last days were proof enough. Every time Jim was greatly unsettled you arrived on the scene – even admitting that you sensed his distress. This is a big change – and it worries me. How will it be for you in person – and for Jim – if the super-drug Khan gave Jim loses its effect and our kid’s brain isn’t running 1000 miles per hour? Then the link between you, Spock, and Jim certainly will lessen. Or what will happen if the super-blood’s effect doesn’t wear off and you three are staying connected like you are now forever?”

“I can live with that,” Jim said quietly.

Spock nodded at him shortly; showing his agreement at this. Then he lifted a brow and looked at McCoy. “You gave this matter a lot of thought within the last hour, Doctor.”
“Of course. You three are not only my friends, but also my patients. And I’m the CMO of the Enterprise and responsible that the commanding officers are fit for duty. This all here, Jim with his increased body and hyper-active brain, and this special bond between him, you and Khan is completely a new one within history. And I really want to be prepared for all possible or impossible opportunities which can happen to you three. Selek’s explanation after his mind-meld with Jim only confirms what I already assumed.” He glanced at the Vulcan High Minister. “And I really can sleep more in peace if I know that these three will be able to handle the bonds better.”

Selek nodded in understanding. “It’s my intention to help all three in this matter, Leonard – and therefore you, too. I do remember your need for a decent beauty-sleep here and there,” he added with a hint of teasing in his voice.

It didn’t go by unnoticed by McCoy, who first made a face, then grinned at the old Vulcan. “Well, even a high-tech, well-cared warp-drive needs a break here and there to stay functional. Just ask Scotty about it. And I’m not a robot, but a simple country doctor.”

“The latter is well-known, Doctor,” Spock threw in; his face once again very innocent.

“At least you skipped calling me a shaman,” Bones growled.

“Every intelligent being is able to increase knowledge – therefor you are not a ‘lost cause’,” the first officer answered very politely, what let McCoy sputter something no-one was able to understand.

Jim snickered and shook his head in amusement, while Selek watched the interaction with fondness and melancholy. Several things really wouldn’t change – but what had to change was the current situation concerning Kirk, Khan and the latter’s family. And Selek would start to make the fitting arrangements now!

TBC…

Chapter End Notes

Well, never underestimate Spock when it comes to Jim – and that goes for both visions of our favorite Vulcan. Of course Selek will move Earth and hell and to help the
younger counterpart of his T’hy’la, yet it will be a hard and stony way the team around Kirk and Khan are going to face.

Well, Selek also promised Jim and the others a peaceful stay in New Gol – and they will move to the seat of the Vulcan priests within the next chapter. Then there will be the official statement of the president and Barnett on TV concerning the whole mess media got wind of, and the broadcast will not be to Jim’s liking. And then – well, Khan already woke up for a moment; it’s about time that he will start to end his ‘beauty-sleep’.

I hope you liked the new chapter, and – like always – I’m curious about your opinion.

The next chapter will be posted next week before I’m off for a vacation.

Love you all,

Yours Starflight
A broadcast with consequences

Chapter 84 – A broadcast with consequences

The next two days flew by. While the repairs aboard the *Enterprise* proceeded, The Shadow-gang showed up here and there, and Kirk got two more training lessons from Selek while Spock and Uhura began to make further plans for their wedding. A message was sent to Nyota’s family and her parents, her two sisters and her cousin at least would attend the ceremony, the date of which still had to be settled. Spock and Nyota wanted to wait until Sarek was strong enough to join the ceremony without too much problems.

Jim stayed with Nien at the hospital, but at least he was able to talk Joaquin into making trips to town together with Chekov and Riley or with Caviw and Jeff. Spock accompanied them once; he was curious of the progress New Shi’Kahr had made. In the afternoon of the first day, he and Jim hacked with their PADD’s into the *Enterprise’s* databank and learned of the ship’s true status. Spock knew that this behavior was childish at best, yet he couldn’t say ‘no’ to Kirk as Jim mischievously suggested trying their computer skills in a ‘different way’, and looked with this wide-eyed pleading look at him – something the young Vulcan found impossible to resist. He told himself that this ‘prank’ distracted his friend and made him happy for a short time – something Jim needed.

Well, of course Wesley wasn’t happy to learn from the second science officer that someone had gotten access to the ship’s computer – someone who was down on New Vulcan. Irritated he called
Kirk, knowing that this had his protégée’s handwriting on it, and his gruff “If you want to know something, Jim, then just ask and don’t hack into the data-bank of your own ship!” stopped the two friends – one grinning like mad, the other one obviously amused and not the tiniest bit ashamed. Rather the opposite. The little trick showed Spock that the databank wasn’t as safe as it should be. He would increase the databank’s firewalls as soon as he was back aboard, and Jim agreed on his suggestions.

At the same time Selek made several arrangements – some of them in secret, some of them officially. The latter was especially the case as a room in New Gol was prepared in a medical way; containing now a bio-bed with med-scanner and monitor, life support systems (just for a possible emergency), a second bed and other furniture including a small desk with a computer terminal. A door led to an attached bathroom that even offered the luxury of a real water shower. Because of the lake close by, the town of New Shi’Kahr didn’t need to be economical of water use – something completely new for the surviving Vulcans. Yet this was only a small comfort given the circumstances which led to their new settlement on this still strange planet.

The secret arrangements Selek was responsible for concerned the outcome of the conspiracy and, of course, the upcoming court martial. Jim, Khan and the others needed a ‘hell of a lawyer’, as Barnett had put it, and Spock Prime would make certain that the younger vision of his T’hy’la and his friends would get exactly such a man. He knew who he was going to contact soon, and did not need much time to trace the man down. As it seemed the lawyer was busy with an important current case and so Selek would wait one or two days more before he would speak with the man.

That same late afternoon Khan became conscious again – if only for a minute, but it was enough to make Jim and Joaquin hilarious with joy. After arguing with McCoy for almost a quarter hour, Bones gave finally in and allowed – with hesitance – that the former dictator would be moved to New Gol the next day. Kirk informed Galven and the other Shadow-members of Khan being brought to the Vulcan abbey, before he contacted Spock.

Learning from Jim of the news, Spock came to visit him in the evening and explained to his two friends and the Augment-boy several rules which should be regarded while staying at New Gol. As it seemed everything was allowed except for disturbing meditations – something the two officers and even Weiss were well aware of. And to be loud and noisy wouldn’t fit into that place as well as it would confront Vulcans with a strong display of human emotions. The three humans understood it, and as Jim compared it to a living in an abbey, his first officer agreed on the parallels. Well, they could live with that.

Afterwards Kirk contacted Wesley to inform him about the upcoming change of location. Bob only stared with big eyes at him; realizing the honor that was being given to his protégée, McCoy and the two Augments to be granted a stay at New Gol. During their talk Jim learned about what had been happening on Earth – or better to say around the whole Federation. It didn’t catch him by surprise that the big cat was out of the bag and was the first topic of conversation for all people and in all the news – news he had skipped watching or had any interested in all until now.
Of course a large security operation like what had happened in the Headquarters, in the Chamber of Council, in private residences and even in hotels couldn’t go unnoticed. The media got wind of it within a few hours and for the next four days as the first mass arrests happened reporters began to swarm out like bees. Starfleet’s press center, the spokesmen of the Council and the president weren’t granted any rest as it became clear that something like a coup attempt must have happened within Starfleet’s own ranks and among a few council members.

When the *Excalibur* and the *Lexington* arrived two days after their launch from New Vulcan’s orbit, the news channels were full of reports, interviews and wild guesswork. Barnett and Sonik, who was acting captain of the *Lexington* during their flight back to Earth, knew that they would barely be able to set a foot outside of Headquarters without being surrounded by reporters. Fortunately there were other methods to reach designations and Norton, Finnegan and their allies as well as the scientists were beamed to the high security prison where they were put into custody. Barnett, a not fully healed but feeling better Komack, Lady Morganth and the bridge staff of the *Excalibur* met with President Robertson and Mrs. Whitman at the Headquarters – and Sonik was the only one who didn’t get hug or a slap on the shoulder; respecting his repulse of being touched. Robertson didn’t mind embracing Barnett for a moment in relief to see his Chief in Command alive again, and the two ladies didn’t care about showing the depth of their friendship by more hugging and smiling.

During the hour in which Spock taught Jim, Bones and Joaquin several rules which had to be respected in New Gol, President Robertson sat together with Barnett, Sonik and the bridge staff officers of the *Excalibur*, and had a subspace hook-up with Wesley. Komack had been brought to Starfleet’s Medical Center where he was in good hands, while Lady Morganth enjoyed the hospitality of Robertson’s private residence. She would find more peace there than in a hotel, where reporters otherwise would hunt her down for interviews.

Robertson and Barnett agreed on giving an official statement the next day, and after the talk with Wesley was done, the two men and some advisers sat for a longer time together to discuss which details should be kept a secret and which facts could be revealed to the public without scaring the people too much – or damage Starfleet’s reputation even more. The chaos of last year wasn’t forgotten, and if the people learned that the same organization that had been responsible for the mess more than a year ago had now attempted to take power by a coup, even ready to sacrifice the most important admirals and diplomats for it, an uproar would go through the Federation. And, technically, they were still at war with the Klingons. A ceasefire didn’t mean a long stable peace – not at this point in time.

They agreed on sticking to the truth as closely as possible, but without revealing too much – especially concerning the fact that the *Lexington’s* rescue mission only had been possible because of a certain Augment’s technical development. Barnett thought it to be safer if it didn’t become public that the war-hero ‘Sunrise’ was in truth an Augment from the twentieth century and had snapped a year ago which resulted in a blown-up archive, the attack on the Headquarters and in the end, the crash of the *Vengeance* into the San Francisco Bay. Starfleet would certainly lose another big part of her reputation if it came out that Section 31 had enslaved the Augment and was the reason for his running amok. Barnett wanted to keep the ball low, especially when it came to Kirk’s court martial.
To send a hero to trial wouldn’t go well with the public – after all the young captain had saved Earth, the citizens of Aldebaran’s capitol and the ceasefire, and was responsible for the revelation of the conspiracy, including initiating the rescue mission for the declared dead delegation.

In conjunction with this topic of discussion Barnett informed Robertson of Kirk’s requirement to be allowed back aboard the Enterprise – he and his officers. There was no risk that they would try to run off with the ship. James Kirk, Spock, Leonard McCoy and Nyota Uhura were honorable people, who wouldn’t do something like that, yet the book was very clear about this. There couldn’t be made an exception – not even for heroes like the gang around Kirk. It was already against protocol that Scott stayed on duty, yet given the ship’s status and the engineer’s knowledge it was a necessity.

Robertson deeply regretted that he had to decline Kirk’s request, but his hands were tied in this case. Yet he allowed that Kirk would be updated and could remain in contact with his crew. The same went for the other officers. But at least one exception could be made – Leonard McCoy.

He was the leading physician and given the fact that medbay was overcrowded and that one of the senior staff – Lieutenant Sulu – would be soon in need for another surgery, McCoy could return to the Enterprise; working under observation. Like always, doctors held a special status.

Hearing about Sulu, the president also asked about Khan and as Barnett told him of the bad condition the Augment was still in, Robertson decided that the court martial shouldn’t happen within the next two or three months. The man had to regain his health first – this was the least Starfleet could do for him after all he had been put through because of Section 31 (again). Yet the president wanted to get Kirk’s trial done, after all Starfleet needed her flagship as soon as possible. Only as Barnett pointed out Kirk’s case was mixed up with Khan’s, two different court martials would make absolutely no sense. Robertson realized that this whole matter couldn’t be delayed more than one or two months. But, of course, first the Augment had to heal.

And, after all, in the meantime the judges would have their hands full for the next weeks with all the arrests. No, court martial for the heads of the conspiracy wouldn’t happen within the next couple of months – if not even years until all evidence was sifted – but decisions concerning custody had to be done and this would need a lot of time. And there were a lot of main witnesses which had to be interviewed – for example the Orion pirate who had been hired by Luengo, or the scientists which had run illegal tests on Khan and his people. There was so much to do the president and the staff officers didn’t know where to begin first.

Neither Robertson, nor Barnett could know that their well-meant decision concerning Kirk’s and Khan’s delayed court martial would be turned upside down sooner. Just right now they had a lot of problems to deal with, therefore they didn’t waste a thought that someone famous like Jim Kirk would be needed soon concerning the war again – but until then a few weeks would elapse.
The talk between president and admiral went on very late, and Barnett remained in the Headquarters for the rest of the night – sleeping like the dead. He knew that the most trouble would start with the official statement the following day.

The next morning certainly would bring new turmoil for the Federation population, yet on New Vulcan early morning in New Shi’Kahr was calm. Well, not exactly for Jim and Joaquin, who watched with worry as Khan was prepared for the switch of location. After he was secured on a stretcher with life support systems, he was removed from the hospital and brought to New Gol with an ambulance service. Spock and Nyota were present, too, and drove Kirk and Joaquin to the seat of the priests; using Sarek’s hover-car the ambassador had lent his son, McCoy rode in the ambulance with Khan; keeping an eye on his patient. With Jim in close proximity only a few meters away there was no risk that the superhuman would react to the short separation at all.

The journey didn’t last long – only half an hour – but Jim was glad as they finally arrived. Despite his concern for Nien he was curious about New Gol, and looked fascinated at the large flat building that would be his home for the next days; maybe even weeks. To his relief and delight Selek awaited them and showed them their rooms. At Jim’s question if the Elder really could spare time like this for them, he only got a half-smile back combined with the words, “If you don’t find any time for your friends, then you did something wrong.”

Selek led them through the building in the southern direction, where the quarters of the priests were. Passing many doors, he finally entered a side-wing to the west. Broad daylight flooded the corridor from the large windows to their left, while they passed by another door, before the Elder opened the last remaining entrance.

He revealed a larger room, furnished with a casual bed, a biobed, a desk, a small table with two arm-chairs, a wardrobe and a dresser. The walls were painted in the warm color of the sand outside, the two windows were framed with curtains in a warm red and soft yellow and the furniture was made from wood – certainly an import from one of the many Federation colonies and Earth itself who supported the Vulcan survivors with everything they needed. The room was functional, yet it contained a comfortable atmosphere. And, what was certainly most important for the Augment, it smelled of fresh air, dry sand and a pleasant scent Jim instantly recognized as the same he knew from Spock’s and Uhura’s quarters; smoke candles Vulcans liked to use during meditation.

“It’s not comparable with a higher standard hotel, but I think you will do well here,” Selek said quietly to Jim, who beamed at him.

“It’s perfect, Selek! Thank you so very much!”

McCoy quickly checked the medical equipment. Of course everything was correct – Vulcans never ceased to impress him with their accuracy and foresight. “All right, please bring Mr. Singh in,” he
said to one of the Vulcan nurses and made room for them.

With Argus-eyes Jim and Joaquin watched the nurses during the next minutes, in which the Augment was placed on the biobed and connected to the life support system, while the med-monitor gave its first readouts. McCoy studied them carefully and nodded satisfied.

“No harm done because of the transport.” He glanced at the two nurses. “Thank you for your support, Gentlemen.”

As members of medical staff the two Vulcans were familiar with customs foreign to Vulcan culture, and therefore they didn’t point out that thanks were illogical when all they had done were doing their jobs. Rather they bowed their heads, replied with a “You are welcome,” and left after paying Selek respect.

Spock and Uhura entered the room too, now, and Jim exhaled in relief as calmness settled in. Then his attention was driven back to Nien and Bones.

“How is he?”

McCoy sighed. “The healing status is quite the same as before we left the hospital, and the brain waves show that he is still simply deep asleep.” He glanced back at Kirk and Selek. “Let’s hope that this new location will really help our dark knight in shining armor get better soon.”

“You doubt about it, Leonard?” Old Spock asked calmly and Bones shrugged.

“I still haven’t figured out how this super-brain of his works. Maybe he indeed realizes that he isn’t near any labs now, maybe not. But, like my uncle loved to say, ‘Let’s clutch at a straw and hope that it will change into a big piece of wood’.”

Kirk frowned. “I’m not sure if I’ve ever heard that last part of your proverb.”

McCoy rolled his eyes. “Well, what do you want to do with a straw when you’re flooding in deep water? A big piece of wood will float on the surface and can carry you.”
It was Selek, who commented wryly, “Contrary to your point of view, Leonard, I would know what
to do with this straw while being in water.” At the CMO’s asking glance, he deadpanned, “Using it
to breathe after sinking under the surface.”

Bones groaned. “I knew it! Never try to use a metaphor on a Vulcan. Either he talks until he’s blue
in the face, or his not understanding of the simple use of proverbs drives you up the next wall.”

“I have to correct you, Leonard: Vulcans can’t turn blue in the face – only brown-green,” Spock
Prime retorted – and Jim wasn’t the only one who recognized the hidden fun the Elder obviously
had. Joaquin and Uhura did their best to suppress a giggle, while he – Kirk – snorted with choked
laughter.

Leonard grimaced and flicked a thumb at Selek, while he addressed the younger Spock. “He’s as
bad as you!”

“Thank you, Doctor,” Spock replied politely.

This time Jim couldn’t control himself anymore and began to laugh, which almost made him miss
Bones’ sour answer,

“Typical! Only you would take an insult as a compliment!”

“It always depends on what you’re willing to make of said words, Doctor. And, by the way, if you
want to be understood more clearly you should choose more precise formulation.”

Joaquin snickered soundlessly, while he looked at Uhura. “They are really like this all the time,
aren’t they?”

Nyota nodded, chuckling and grinning widely. “Yes. I’ve come to take it as a signal that they are
both okay.”

“Be careful, young lady or I’ll put a red sign in your med-chart,” the CMO growled.

“Well, then it’s really bad luck for you that I’m engaged to one of the best hackers within the fleet.
The ‘red sign’ wouldn’t be there for long,” Uhura beamed at him.

“Spock breaking regulation?” McCoy gasped. “Never!”

“He just did – the day before yesterday, with me,” Kirk smirked. “We hacked into the Enterprise’s databank and…”

Bones lifted both hands. “I don’t want to hear about it, Jim! We’re already in deep shit enough without you two becoming boys again doing mischief.”

That sobered Jim up a little bit. Rubbing his neck, he shrugged sheepishly, “Well – at least we found out like this that our databank needs a better firewall.”

“Let me guess – this is the excuse you presented Wesley for the prank you two pulled.”

Innocent faces were the answer – and Selek hummed what was clearly a not too successful attempt to suppress the Vulcan equivalent of laughter. It brought the attention of the others back to him, which he instantly used to come to the next topic.

“Speaking of the deep water you are in, I made some researches concerning a lawyer.”

Jim bit his lips shortly. “Well, I thought I would use the time during Nien’s healing to search for a good lawyer, but if you know one then I would be happy.”

“I know one. He is one of the best within the Federation. I’ll contact him soon and…” His communicator buzzed and quickly he answered the call. He listened, nodded, obviously thanked someone and ended the talk by closing the little device.

Jim gave Spock a short glance and saw that his friend had stiffened, as had Nyota. After all she spoke the modern and the ancient Vulcan language fluently.

“Leonard, your room is next to this one on the other side of the bathroom,” Selek addressed the CMO. “Yours is equipped with a TV just like this one here, but I don’t think it to be wise to use it until Mr. Singh is in a better condition. I suggest that we use yours to watch Starfleet’s and the
President’s official statement that will be live broadcasted in one hour and thirty three minutes. My secretary just informed me about it.”

The four officers looked at each other. “An official statement from Starfleet concerning this whole mess? This is going to be interesting,” Kirk mused.

ST***ST

One and a half hours later Jim, Bones and Joaquin had settled in with the help of Uhura and Spock, while Selek went to T’Pau to inform her about the upcoming official statement and to discuss some matters with her. As Bones switched on the TV, he stepped backwards and sat down on his bed beside Spock. Joaquin took the other bed that was placed on the other side of the wall and Jim simply joined him. There were also two chairs and a table in the niche near the window, but they all had agreed that the lady – Nyota – should make use of them. The other chair was kept unoccupied for Selek, who certainly would return to watch the live broadcast together with them.

Jim let his gaze wander through the room. It was more or less similar to the room he and Nien had been presented with, only that its window showed to the north and that the bathroom was to the left. It was functional, but also comfortable and ‘aesthetically pleasant’, as Spock put it, to which Bones was forced to comment “Can’t you just use the word ‘nice’ for once?”

Of course the first officer hadn’t replied to that at all.

Now they sat there and waited for the broadcast to begin. As the scene changed from a reporter in front of Starfleet Headquarters to a larger room within the building, Jim sighed as he instantly recognized the official conference hall that was always used if Starfleet was forced to give official interviews.

The hall looked ready to burst because of the many people which crowded the room. It seemed every Federation member had sent reporters, and the four Starfleet officers were certain that the many humans among them came from outer Earth colonies. The flags of the UFP hung down on two walls while on the long table on the stage the emblem of Starfleet shone and the windows were covered – banning the clear sun of the morning.

At the same moment Selek entered the room, caught Jim’s short grin, nodded at everyone and took the free chair beside Uhura, who gave him a gentle smile. The old Vulcan sighed inwardly. Yes, not to act on his attraction towards the beautiful and highly intelligent comms officer in his own timeline had really been a mistake!
“Here it comes!” Bones grumbled, as on the screen the door behind the podium opened, and two ordinances appeared.

“Ladies and Gentlemen, please rise from your seat and pay respect to the President of the United Federation of Planets!” one called and instantly everyone rose and exceptional silence spread through the hall.

Robertson entered the room; Barnett, Nogura and Morrow behind him. The appearance of the three admirals resulted in surprised shouts and urgently called questions.

Jim exchanged a glance with Selek. “Did no one know that they were rescued?” he asked quietly, and the Elder lifted one shoulder in a kind of shrugging.

“As far as I learned their survival was kept a secret to give securities more scope to catch the conspirators by surprise,”

Jim snorted while Bones mumbled something under his breath even the two Vulcans and Joaquin couldn’t catch.

On the TV two commodores and Sonik followed the admirals. Kirk glanced at Spock. He knew that his first officer and the other man were the only Vulcans within Starfleet. Not for the first time he wondered to himself what his friend thought of it.

The commentator’s voice speaking of what was to come drove Kirk’s attention back to the screen where Robertson had reached the dais. Barnett remained at his right; Nogura took the side to the president’s left, while Morrow, Sonik and the two commodores took the remaining seats.

Robertson remained on his feet, looked quickly at the tiny screen in front of him, cleared his throat and began to speak – simply drowning out the verbal tumult by raising his voice.

“Ladies and Gentlemen, please cease speaking. I know that you all have many questions and I promise you I’ll answer them as detailed as possible, but certainly some of your confusion will be resolved if you give me a few minutes to explain everything that has happened.”
He had to wait almost half a minute until the last reporters fell silent, then he nodded politely. “Thank you.” He took a deep breath.

“No, this wasn’t the case. We all, including me, were convinced that the Federation had lost her most important diplomats and Starfleet five of her leading admirals. How did it come to this misinformation? Well, what I now have to reveal to you will certainly cause you all – not only the present ladies and gentlemen, but also all the people on Earth and outside on our befriended planets and in our colonies – horror and anger.

For a few days now, rumors have spread through the media and are the prevailing topic on every world and colony of the Federation. Rumors of a conspiracy, of treachery and of an involvement in said conspiracy of high ranking Starfleet officers and even Council members. The many arrests which have happened seemed to give proof to these rumors and gossips. And to my deepest regret I have to tell you today that those rumors are thoroughly true.”

The uneasy whispers began to become louder. Robertson looked into the cameras.

“The Council and Starfleet were infiltrated by men and women, who took the view that the values of the Federation are outdated, and that ethics and morals are for the weak. They wanted a Starfleet that was utterly militarized and a security system that watches all citizens on every planet and colony – a Federation in which surveillance of all people has priority to prevent resistance that sooner or later would happen. For that a kind of coup was necessary – which needed a precise plan. The premise to implement this plan was given the moment the leading officer of the SBI – Admiral José Luengo – was won for that sick idea and he used all the resources his department was able to provide him with.”

The voices within the audience got loud again, and Robertson had to wait for a further minute until he could go on.

Within the next quarter hour he explained what happened and he revealed more than Kirk and the others had thought he would. The president told of the ways Luengo misused the SBI to execute his plan step by step to become first interim Chief in Command in the hope to take over that appointment.
Robertson didn’t spare the audience in the hall or through the screens all over the Federation the brutal details of how Luengo and his fellows manipulated other officers, Council-members and even himself, the president. Robertson also told of the sheer coincidence that led to the revelation of the conspiracy, as the Klingon Warlord Kor – who was accused of being the attacker of the *Excalibur* in Borderland – was at the same time parsecs away to support the Federation’s flagship against Klingon renegades.

That was the moment Robertson mentioned Kirk and his staff officers, naming them ‘those, whose brilliant minds and staunchly, intrepid souls stood true to the Federation’s and Starfleet’s true values’. He spoke of Kirk’s and Wesley’s unswerving efforts to save the surviving members of the delegation, and to stop the conspiracy. Robertson also told of the ordeal the admirals and diplomats went through, how Kor – again – supported a Starfleet officer to help justice to gain a victory over treachery, and how the *Enterprise* and the *Lexington* played ‘cat and mouse’ game in the end to lure the treacherous Styles, Norton and the others into the set trap.

After he finished with his report, most reporters were unable to stay silent anymore; bombarding the president and the admirals with questions, and the two ordinances had a lot to do to bring some order back into the erupted chaos.

Jim looked still straight at the TV; not listening to the short discussion that broke loose between Spock and McCoy concerning the president’s speech. Something wasn’t quite right here, and Kirk didn’t need more than a few seconds to figure it out.

“Why hasn’t he mentioned Section 31 at all?” Bones just asked. “I’ll tell you why, Spock: He wants to wipe it under the carpet, even if the same bunch of idiots were responsible for whole trouble last year. And now Section 31…”

“Doctor, as I tried to tell you only 8.3 seconds ago, the existence of Section 31 was and still is top secret. There is no way the president can reveal this sub-department of the SBI to the public.”

“Nonsense!” McCoy groused. “It was the beginning of everything. The members of this sick club are…”

“He hasn’t mentioned Nien,” Jim cut in – with a quiet voice that instantly ended the discussion. To hear Kirk speaking in this manner was highly unusual.

“I beg your pardon?” Bones asked, confused.
His friend’s ever so blue eyes were directed at him. “Sunrise,” he said. “The president hasn’t mentioned Nien’s involvement at all – neither has he referred to his pseudonym as ‘Sunrise’, nor did he tell about Nien’s existence at all. Nien has become quite the war hero – with him not only saving Tammeron but also the capitol of Aldebaran and the people in the space station. He developed the SDD. He was the one who rescued me – otherwise I wouldn’t have been able to reveal the conspiracy at all, because I would have been dead. Nien rescued Diego – hell, he saved Starfleet personnel and travelers by going after Koloth. The whole war, the cease fire and the revelation of the conspiracy are strongly intertwined with him and his nature. Now would have been the best chance to tell public of Nien’s existence. The people would have accepted him, and…”

“Jim, he also didn’t tell that you, Uhura, Spock, I and the other staff officers are about to be sent to court martial – because we hid Khan, who attacked London and San Francisco last year,” McCoy cut into Kirk’s rising tirade.

“It doesn’t sound so good that war heroes have to face trial,” Uhura added. “Therefore the president obviously decided to not speak about the whole matter, otherwise he would have to tell the public why we’re going to face trial – what would lead to Khan and the reason why keeping him on the ship was breaking the law.”

“Now would have been the best time to tell public the truth about everything – about the shit last year and now! But again they want to keep it all a secret – just like I already said!” Kirk growled. “And we saw how well that went last year. And what about the other Augments? Heavens, they’re going to live here within the Federation! Their existence can’t be kept a secret! Not like this! And, dammit, they have the fucking right to live free and without any silly old-fashioned prejudice against them – because sooner or later their true nature will come out!”

“Jim,” Selek said calmly, “they are speaking about you.” He nodded towards the TV, which silenced Kirk, while Spock cocked his head and Uhura sighed soundlessly.

“Yes, it had been Captain Kirk and his staff who found the first irregularities in the records of the Excalibur’s bridge during the pretended attack,” Robertson obviously answered a reporter’s question at this moment. “As it became clear that either Captain Styles had been tricked by the Klingons who pretended to be Kor, or that he made a willing false statement, Commodore Wesley – Styles’ and Kirk’s superior officer – sent Kirk the records to compare the camera shots of the attacking Klingons with the records the Enterprise made from Lord Kor’s ship. It was the beginning of the revelations, so to speak.”

A woman rose from her seat, after she had lifted her hand and Robertson pointed at her. “Yes, Ma’am?”

“Halley Miller from CNN Earth. Mr. President, we heard about Captain Kirk’s strong involvement
in the whole matter and how he and his crew looked through the net of lies. He’s therefore one of the key persons which caused the conspiracy’s downfall. Why is he still on New Vulcan and not here? Shouldn’t he be an on Earth to testify against Luengo, Norton and Styles?”

Robertson glanced at Barnett, who answered the question. “The Enterprise was heavily damaged after her fight with the Klingon renegades, and her engines have to be rebuilt after their strong overstressing during Kirk’s flight from near the Borderland to New Vulcan. The Excalibur tried to intercept the Enterprise to hinder Kirk from reaching New Vulcan where he and his staff officers were granted asylum – a precaution should the attempt to stop Luengo have failed.”

“Yes, this much we all understood,” Halley Miller replied, “But Norton’s ineffable attack against New Vulcan’s seat of government to get hold of Captain Kirk was five days ago. Why did the captain not accompanied you, Admiral?”

Only those who knew him very well saw the rising frustration in Richard’s eyes. “Because the whole fight didn’t leave him and his officers unharmed. As I launched from New Vulcan’s orbit he was still in hospital. The Enterprise’s medbay was overcrowded after the whole knock-out-gas matter President Robertson told you about, and therefore Kirk was treated on New Vulcan. Next question, please!”

Kirk rolled his eyes at the CMO and was rewarded with a low chuckle, and then Jim’s attention returned to the TV as he heard the name ‘Sunrise’ for the first time during the whole broadcast.

“… Therefore I and great deal of my colleagues think that the mysterious man who goes by the name ‘Sunrise’ had to be involved in all this, too,” the male reporter, who was a Rigelian, said. “Rumors don’t want to quit that he saved Captain Kirk from Klingon captivity and we already learned that this man warned Starfleet about the planned attack against Tammeron, and – above all – there are plenty of witnesses who spoke about a slender, dark-haired man who fought with Kirk side by side at the space station above Aldebaran. We all know that the Enterprise came just in time to hinder the space station from dropping on the colonists’ heads and that she also saved Captain Kirk in the last moment. But the mysterious fighter vanished – just like this.” He snapped his fingers – a human gesture he mirrored from some co-workers. “So, we all ask: Is the mysterious war-hero dead, because he gave his life by saving the day aboard the space station once again, or was he rescued by the Enterprise, too?”

Jim held his breath, while a fierce fire began to shine in his eyes. “Don’t you dare to declare him dead!” he hissed; addressing the admirals and the president on the TV-screen. “Don’t you dare – or I’ll give a live-interview, too, and convict you all of lying through your damn teeth!”
As if Barnett had heard him – or he simply knew Jim Kirk well enough not to provoke an outburst from him – he sighed. “Sunrise was rescued together with Captain Kirk.” Instantly new questions bombarded him and he raised his hand – and his voice – to stop all the asking. “He is also on New Vulcan and in medical care because of some severe injuries he suffered during the big show-down, to use some dramatic words. And please – please! – skip questions about his true identity. While we learned about it by now, he asked for privacy – a request we accepted and granted.”

“Bullshit!” Jim snarled; his face flushed with anger. “You don’t want to tell the truth because that would lead to far more uncomfortable questions – like those of ‘why was his identity kept a secret’ which would lead to explanations which will provoke the next question ‘why did he run amok’. It really would become inconvenient for Starfleet to reveal that the ‘under-department’ of the SBI tortured, blackmailed and enslaved the man who is today a war hero!”

Spock bent forwards and laid a hand on his T’hy’la’s arm. “Hush, Jim. Your rising emotions will disturb Khan until you’re able to shield yourself better. Just let us listen to the rest of the interviews.” He returned Jim’s furious glance with one of his soft ones, and Kirk visible forced himself under control.

“I repeat,” Robertson just said, “High Minister Selek and Lady T’Pau require that their guests will not be disturbed at the moment. No reporters are allowed near Captain Kirk and his staff to give them time to heal and to repair their ship, so please don’t even try to set a foot on New Vulcan. Given the highly explosive political subject Norton’s incursion and assault on the Lady T’Pau left, it would be unwise. It cannot be in anyone’s interest to defy the Vulcans’ decision that was made in agreement with Captain Kirk.”

“Pray and cross your fingers that the members of the writing guild listen to him, otherwise New Vulcan will experience a glut of nosy reporters!” McCoy grumbled. “These guys are the last we need at the moment.”

On the TV the interviews continued; several of them still referred to Kirk and his friends, some even to ‘Sunrise’, but none of the admirals or the president really answered them.

Ten minutes later the show was over, and Robertson thanked everyone for being present, then he, the admirals and Sonik – who had given some information, too – left the podium.

Jim rose from the bed and switched off the TV. For a long moment there was only silence in the room, before he growled. “It’s just like last year – they keep the public in the dark about the most important details! They’re too cowardly to admit even now, after Section 31 more or less kicked their asses, to call a spade a spade! They’re still afraid the public would grill them if it comes out what
these bastards did to Nien and to what it led to in the end – and that they were blind and ignorant enough not to recognize something as large as the building of the *Vengeance* just under their noses.”

“At least they admitted that even Council members are involved in the mess – that’s a beginning,” Bones tried to calm him, and received a heated glare.

“Of course – after all there are hundreds of holo-photos and records which show how these guys were arrested and taken away. And after Norton was crazy enough to attack New Vulcan’s government and Luengo pulled the strings, Command had to stick close to the truth. But, of course, they still keep the real start of this shit – what began with Section 31 within the last years – a secret.” His glance found Joaquin, who looked at loss and a little bit unsettled. “I will not allow them to wipe your brother’s torment at their hands under the carpet. Right, neither Barnett nor the other admirals had any part in Nien’s walk through hell, yet they disregard Starfleet’s values and also their oaths as officers, which are based on said values, if they try to keep something like this from the public!”

“And what do you want to do about, Jim?” Bones wanted to know; his voice quiet. “If you are going to be willfully obstructive they can give you hell. They have the upper hand, after all.”

Kirk shook his head. “Truth has the upper hand, Bones, and nothing else. Everything comes to the light in the end. There is no other way, or the lies will go on which will lead to more secrets, to more distrust, to more violence. It *has* to end – and I don’t care about the consequences regarding me!”

The same moment his communicator came alive, and the young captain wasn’t surprised to hear Wesley’s voice. After a short greeting Bob asked, “Did you watch the live broadcast they just showed on TV?”

“Yeah, my friends and I did!” Jim’s tone of voice betrayed his anger.

Bob sighed; clearly aware of Kirk’s mood. “Jim, I don’t know what you expected. They told the people of the conspiracy, of the attempt murder of our delegation and of your role in this whole mess.”

“Yes, they did. But what about Khan?”

For a moment Bob didn’t answer, before he obviously realized the reason for his protégée’s irritation, because he said “No one knows of his true identity and nature, Jim, so…”
“And this is the way it should remain? The public has no right to learn that the war hero, the media already made their figurehead, is in truth a superhuman from the 20th century, who was abused and enslaved by the same club that now tried to take over Starfleet and the Federation’s government in the end? The people shall not learn the truth? Or doesn’t Robertson know about Nien’s true role in all this?”

Wesley groaned. “Jim, President Robertson is well informed about Khan’s whole role in the mess and that millions of people owe our superman their lives. Barnett told me an hour ago about his talk with Robertson last evening and night, and that he spoke well of our superman. His support during the war and his selfless actions will not be forgotten during his trial – rather it will be welcomed. But Barnett fears that the public will go crazy if they learn that an Augment from the 20th century had a part in the mess last year and is now even deeper involved in the new conspiracy. And referring to Section 31: It has to be kept a secret so as to not unsettle the people even more.”

“In other words they want to deal with Nien more or less in private, keeping the public in the dark about his martyrdom and heroics to prevent that Command is shown in an even worse light than last year,” Jim said bitterly. He took a deep breath. “I will not tolerate this!”

Another sigh was heard. “Jim, I know that you have Khan’s – and your friends’ – best interest at heart. And you are right when you say that the public has a right to learn about the truth, but some details are better not mentioned. The people are uncertain enough at the moment with the war on an uneasy cease-fire and Starfleet in an uproar. Barnett’s – and the president’s – decision to keep the one or other low ball is a wise one. And you should accept their decision.”

“Why? Because it’s easier for them to deal with everything like this?” Jim snapped.

The others could practically hear Wesley rolling his eyes, as he answered, “Please remember that not only Khan, but also you, your officers and I are in deep water, too. And don’t antagonize Barnett or the president. Both are on your side, son, and want to help you coming out of this shit with your captaincy still intact.”

“And for what price?” Kirk snarled. “I’m not bribable, Bob! Not even with my command!”

“I know – just like Barnett knows it. He asked Robertson to make an exception for you and the others to step aboard to help with the repairs, but the president’s hands are tied in this matter. You remain free, but released from duty you aren’t allowed to be back aboard the Enterprise.”

Kirk growled quietly. “I knew it!”
“Jim that you and the others are remaining out of custody as soon as you leave New Vulcan is a premature show of trust that Robertson puts in you. He could have ordered us all under arrest, me included, yet he bent the law to an extent that is remarkable. And, by the way, I was allowed to update you on regular basis and you and the others got the permission to speak with the crew openly through the comms. The latter is a relief for me. I swear, if I watch the sour faces of the crew members any longer I’ll go crazy. I have the feeling that I’m surrounded by bottles of vinegar, and not by people.”

Kirk felt a hue of satisfaction. That was his crew – loyal to the toes! Yet his crew was still up there and he was down here – unable to support them. “So, Spock, Bones, Uhura and I are out of the game for now,” he said; his voice couldn’t hide the bitterness.

“Uhm, I forgot to mention that McCoy is allowed back to his medbay to support his staff – especially when it comes to Mr. Sulu;” Wesley replied. “The good man is in proper need of a beauty surgery, and because he is a senior officer and McCoy his personal physician, your friend may return aboard as soon as he wants.”

Leonard felt the gazes of the others upon him and stepped up to Jim; bending over the communicator. “Commodore, McCoy here. Can you give me a report about Mr. Sulu’s condition?”

“He’s up in the gym and can be barely kept in medbay, yet he tries to avoid contact with the crew because of his current appearance. I spoke with him yesterday evening and despite that he shows a brave façade to everyone I know that the poor boy is very unhappy about the whole situation.”

Bones sighed. “I’ll beam up as soon as Mr. Singh is really stable and talk to Sulu. Maybe you can assure him that he’ll be as pretty as he was when I’m done with him.”

“Sure – I’ve nothing else to do at the moment,” Bob grumbled sarcastically, yet it was out of question that he wouldn’t indeed try to comfort the helmsman. After all, Wesley was – like Jim – a captain to the heart.

Kirk nodded at Bones, before he began to speak again. “Bob? Please tell Barnett when you talk with him that I appreciate his efforts and that I’m glad that at least my CMO is allowed to aid my crew. But I will not take this as a payment to stay silent about the truth Command obviously still tries to hide!”

“Jim…”
“I will consult with my lawyer about this topic…”

“You lawyer?”

“… and will consider what he will advise in this matter.” He looked at Selek, who lifted a brow. “Thanks for the information, Bob. Kirk out!” He closed his communicator before Wesley could say something more. He knew that he was too angry to stay rational at the moment, and he didn’t want to say something he would regret later. He had learned his lessons, yet he wouldn’t hesitate to teach the brass some lessons, too.

Spock cleared his throat – a signal that he disagreed with something and had to voice it. “Captain, you do know that protocol demands that the higher ranking officer ends a communication, right?”

Jim smirked grimly. “I’m still released from duty, Spock, so to hell with protocol!” His attention drew back to Selek. “Now, the lawyer you spoke of… How quickly can he arrive on New Vulcan?”

The old Vulcan lifted one brow – just like his younger self did the same moment. “I already know of his current location, but I wanted to contact him after the official statement of Starfleet and President Robertson. It will give me some advantages when I wake his curiosity about the hidden facts behind the live broadcast.”

Bones snorted, Uhura chuckled, Joaquin shook his head and Jim smiled mischievously at him – relaxing visibly. “You do know that you have an evil streak deep in you, don’t you?”

“On the contrary, Jim, I call it ‘acting with advanced logic’,” the Elder deadpanned. “As far as I know of this lawyer, he will be not able to resist taking over such a complicated case like yours and Mr. Singh’s.”

“Rrrright,” Kirk nodded. “But please tell him that I only can give him a deposit. Nien has to be on his feet again to pillage his bank account Starfleet Command filled so nicely.”

“Khan wants to use the money Command gave him for the SDD to pay the lawyer that will lead the case against Starfleet?” Uhura snorted in amusement. “You know that you and Khan are impossible, Jim, don’t you?”
He grinned at her. “Tit for tat, Nyota! They want to wipe the dirt that was thrown in Nien’s face under the carpet once again? They’re going to be shocked by the big vacuum cleaner I’ll use to clean the mess they try to keep hidden. And the best part is: They even took care that said vacuum cleaner can be bought!” He bent down to the little table and took a fruit from the plate that had been placed there before they arrived at New Gol. Biting in it, he gave his comms officer an impish grin. “Jusht wait until we drop she ball on shem,” he munched; his face betrayed his mischievousness but also stern determination. “Shis will be a moment shey never forget!”

ST***ST

One hour later Selek stepped into his office. The tracks of the violence Norton’s assault left were repaired or removed, and something like daily routine had returned to the seat of government. But not for the old Vulcan. He knew that his role in the whole drama wouldn’t be over until Jim, his friends and Khan (of all people) were free men (and women) again. The Federation – the universe – needed Jim Kirk and his officers. Spock Prime knew what the future held, and that Earth and many other planets wouldn’t survive the next twenty years (and more) without this particular team around the man who was the captain of the Enterprise. If it would come to the worst he would have to reveal some information to the brass to keep Jim in the center seat of the Enterprise, but first he would exhaust all possibilities to help Kirk without breaking his own self-given oath.

Contacting his secretary he waited for the required comms link and sat down in his chair; his mind replayed the last hours. He knew that Jim was playing with fire if he would go against Starfleet Command, yet he remembered that his own younger Jim Kirk had been a hothead too, whom he, Old Spock, had trouble understanding in the beginning of the five-year-mission. Only during the first months did he realized that his new commanding officer’s strong display of emotions came from the devotion and passion to do the right thing, to help right to succeed and to support and protect those who were weak. Jim Kirk was a man of high morality and deep compassion. He held sympathy for everyone, even bothered to win his stiff first officer who was struggling with the two sides of his heritage. Spock knew that he wouldn’t have found that kind of inner peace he developed later if it hadn’t been for Jim Kirk, his acceptance and his deep friendship with him.

The Jim Kirk of this time-line was younger then Spock Prime’s own Jim when he met him for the first time. In his world Jim had gone through the whole teaching at Starfleet Academy and had gathered experiences first as an ensign, then as a lieutenant aboard several ships before he took command of the Enterprise. In this new time he had been thrown into cold water at the age of 25 – forced to take a responsibility he hadn’t been ready for. Now he was 27 and in the Elder’s eyes he still was too young to have such burden on his shoulders, yet Kirk managed somehow to remain captain of the Enterprise and even had his first share of heroic deeds. Jim Kirk always did what was in his nature – fighting instead of quitting.

Selek was aware of the fact how much the young man had struggled at first after he was given the command of Starfleet’s flagship. He had fought so hard to gain the crew’s respect and had won them over – just like he won the senior officers. And now he was about to throw everything out of the next airlock, like McCoy certainly would have put it, only to help right to succeed again. Jim Kirk
didn’t think of himself, but put others welfare above his own, like always.

But this time he could pay a price for it that was too high – and Old Spock would not allow that this happened. He would do anything possible to keep the younger version of his T’hy’la there, where he belonged and where his fate lay, and not only Jim’s fate, but that of the universe and the Federation, too.

“High Minister, I have reached the person you want to speak to. I will put him through,” his secretary’s voice sounded from the comm station on his desk.

“Thank you,” he answered politely; still grateful that she took the risk several days again and brought T’Pau the dangerous disks of Jim’s collected proofs against Luengo and the others. The screen of his terminal sprang alive. Selek hid his reaction very well as he looked at a man, he met in his own time-line, too – and who was now, of course, also younger than he remembered.

“Thank you for accepting my hailing,” he began the talk, and the man on the screen looked with blue eyes at him.

“High Minister Selek, it’s an honor to speak with you. How can I be at your service, sir?”

ST***ST

The feelings within the Federation ran high after the live broadcast. Media went head over heels with statements of so-called experts, new speculations, and interviews with dubious witnesses and live reports of many colonies’ and planets’ reactions. As it became late afternoon in San Francisco – and early afternoon in New Shi’Kahr – the whole Federation seemed to be in turmoil. The comm stations at Starfleet’s press center didn’t quiet down, hundreds of reporters gathered in front of Headquarters, demonstrations against Starfleet, against war in general and against anything possible spread across planets. It was chaos; Security was only barely able to keep control.

None of this was really acknowledged by Kirk and his friends on New Vulcan. While Jim, Bones and Joaquin settled in, thanked T’Pau for her hospitality and got a short tour through New Gol, Spock and Uhura visited once again Sarek and talked with him about the broadcast he also watched and their own private matters. As Spock learned that his father would be released from hospital in three days, he and Nyota decided to stay at his flat even after his return – tight space be dammed. They didn’t want Sarek to be alone in his flat even after his return – tight space be damned. They both knew how stubborn and secretly proud Sarek was – streaks he shared with his son, as Nyota teased her betrothed.
Joaquin had to admit that he missed Pavel and Kevin, but the three friends had decided the day before to wait a little bit before they would ask Selek if the two ensigns were allowed to visit New Gol, too. Bones used the time to give Joaquin a few lessons in history – true history, not the chaotic summary he got until now. And Jim, who had calmed down after Selek informed him that the lawyer would arrive within five days, gave into his body’s demand for some rest and took a nap in his bed beside Khan’s biobed. The air within the abbey was warm, but not hot, clear and smelled of peace – somehow. It didn’t last long until Jim fell deeply asleep; snoring softly what elicited an amused raised brow from a young Vulcan priest as he stopped by to bring some fruits.

Like this the early afternoon shaded into the later day – a day that held another surprise for the young captain…

ST***ST

It was warm – and bright. These were the first real impressions his mind could acknowledge. Next his nose caught a pleasant but strange scent – a smell of dry sand, warm stony walls and something he knew but couldn’t place. And then he heard it – the soft beeping and buzzing of electronic devices, yet he also felt a foreign object stuck in his left hand while fluid entered his body. Simultaneously he smelled something that made his belly clench in anxiety: the reek of sterilization products and medical equipment.

Then the pain came – in his arm and leg, in his upper body, in his side, in his head… There seemed to be no spot that didn’t hurt. Yes, he realized that he was sedated – a little bit – but it wasn’t enough to stop the whole pain.

Sedated…

This realization woke new horrible memories – without pictures and voices. They were nothing more than bad emotions which lurked deep in his mind but they rose from the shadows like phantoms. Yes, he sensed that this time soft material was beneath his back – maybe a hospital bed – but his body was being fed with some unknown chemicals.

Like before when he was in the hands of Section 31…

Like the times he was held somewhere else without any chance of moving or talking, asleep and not asleep, full of pain he soundlessly begged to subside…
And at this very moment when he was about to give up, his instincts reacted. He had to survive! Like before his instincts wouldn’t allow anything else.

Before his mind could clear up enough to gather one logical thought, Khan forced his eyes open and sat up – ready to rip out the needle in his hand to fight his way to freedom.

A searing pain in his side and in his left arm and leg made him gasp, while dizziness made his head spin. The bright light around him blinded him for a few seconds and even his enhanced eyes couldn’t prevent the rising tears, then something dipped beside him on the mattress and a familiar scent mingled with the not unpleasant but unfamiliar one.

“Nien!”

Warm, gentle hands cradled his head; a rush of relief, warmth and love washed over him.

So much love…

He thought he would drown in it, yet he felt no urge to fight it. Rather the opposite. The love enveloped him, bathed his scared soul in security and caring, made him forget the pain more and more – and finally his eye sight adjusted to the brightness.

The first he saw was gold and blue, and then his view cleared.

Sky blue eyes in an ashen face looked with awe and unlimited joy at him; daylight brightened golden, tousled hair; the grey features began to flush with new life. A moment later gentle lips brushed over his; the familiar taste and scent woke deep trust in him.

Jim!

While his usually so quick mind was still struggling with coming to terms with his surroundings, his heart went out to the younger man beside him, who pulled him into a careful, yet tightening embrace and whispered words of relief and love.
Kirk bit his lips to hinder the tears of joy in his eyes. Nien was awake! Despite the fear and confusion the Augment radiated, he was really awake!

Even in his deep sleep Jim’s soul had picked up the rising awareness of its mate, which tore the young captain out of his well-earned slumber. Feeling Nien’s rising anxiety he forced himself to wake up, only to see his beloved sitting up – eyes wide and teary, the face betraying the fright and pain that seemed to engulf him. Without wasting a moment he more or less jumped out of bed and was a second later at Khan’s side; taking the beloved, pale face gently between his hands.

Those so deeply missed blue-green eyes sought his, looked at him with questions, puzzlement and still lingering horror, then recognition began to shimmer in them – and Kirk couldn’t hold himself back any longer. Bending forwards he gave his bondmate the most tender and gentlest kiss possible; knowing that Nien needed reassurance and safety more than anything else at the moment. Those far too cool and dry lips became soft under the fondling, and acting on pure instinct, Jim closed his arms around the slender frame; cradling the Augment against him just like Khan did all those weeks back as he rescued him from the Klingons.

And then the tension left the enhanced man’s body.

Simply relaxing against the strong, yet so fragile body, Khan allowed himself to close his eyes again and to lay his forehead against his beloved’s shoulder; taking in the familiar scent that soothed him even more. Wherever they were, whatever happened to him to be in such bad condition, it didn’t matter at the moment. He was safe, as was Jim. Nothing else counted for now.

“Nien,” Jim whispered; barely believing that the other half of his soul was awake and obviously doing better. “Honey, please lay down again. I’ll help you.” As Khan made no move to do as he was asked, Kirk delicately pushed him back; using both arms to lay down the older man with utter care – cradling the Augment’s head with one hand to ease it gently down on the pillow. He met the newly rising questions in his bondmate’s eyes, and answered them with a soft, “You’re seriously injured, Sweetheart, and you really shouldn’t move very much. Your liver was torn, you’ve got several bone fractures and other inner injuries. Oh, and you suffer of a TBI, so – please! – don’t stress yourself.”

Khan needed a little bit until his mind caught up with the information, then a low groan left his lips. As it seemed he got it nasty this time – whatever ‘this time’ happened – but he knew deep in his soul and heart that he didn’t need to be wary. He was in good hands and was well-cared for. Jim was here and…

The same moment the door burst open, and while Jim almost jerked right out of his skin, Khan simply tried to lift his head to take a peek at the entrance; his instincts had already acknowledged the arriving person.
“Noo!” shouted a joyful young voice, and then Jim had barely time to move aside as a happy Joaquin more or less threw himself at the older Augment.

“Careful! Your brother is still healing!” Kirk chided, but his eyes laughed.

“Just have a look, Sleeping Beauty honors us with his shining awakened presence!” a voice drawled from the entrance. Bones strolled into the room; med-scanner in hand. “I really don’t need any med-monitor when the boy is near. He recognized the changing condition of his brother before my instruments gave alert.” His glance found Jim, who beamed at him like a boy who finally got the most wanted candy or toy. “And I don’t have to ask if you woke up because of our superman leaving dreamland before even he knew that he was waking up, didn’t you?”

Kirk only chuckled, and Leonard – shaking his head in fond amusement – stepped to the bed.

Khan glanced up as he heard the other almost familiar voice and instantly recognized the grumpy face of McCoy; yet the brown eyes of the good doctor betrayed his relief.

“About damn time you woke up,” the CMO said softly, while he shooed Weiss away and passed the med-scanner along the older Augment’s body. “These two infants here really drove me up the wall!” He nodded towards Jim and Joaquin, who both grinned at him. “One day more and I would have asked Spock or Selek to show me how to meditate!” He watched the readouts and grimaced. “Alright, my friend. You’re healing, but are far away from being healthy. I don’t want to bother you with details – after all you’re only awake for a minute or so, and I don’t want to give you the greys. BUT: No quick or uncontrolled movements, no leaving of the bed, sitting up only with help and slowly, and…”

“Bones, I already gave Nien a quick report of the injuries he received,” Kirk cut in, while he sat down at the bed side again and took Khan’s hand.

“You did?” McCoy frowned at him. “Ever heard the phrase ‘don’t shock a patient with the truth after he just came back from the dead’?”

“No,” Jim shook his head. “And I’m pretty certain that this isn’t a common phrase but something you just came up with.”

“No, not me but my Doctor-father told me that! And that man was always all right – well, almost,”
he finished with a grimace. Then his attention was driven back to his patient. Khan looked pale and ashen, his eyes betrayed his tiredness, yet Bones saw the returning clearness and intelligence in the Augment’s glance.

“Are you thirsty or hungry? Are you in much pain or is it tolerable? To tell the truth, I pumped you so full with sedatives I really don’t want to heighten the dose if it isn’t absolutely necessary.”

Khan moistened his dry lips and croaked something no one was able to understand. At loss Leonard glanced at Jim, who bent over his bondmate. “Nien, are you thirsty?”

A short nod.

“Are you hungry?”

A very slow shaking of the head.

“Your pain – do you need more against it?”

Again a negative answer.

“Right,” Bones grumbled and filled a glass with the fresh water that was in a bottle, placed on the table. “We start everything slowly – including taking food.” He returned to the bed and watched how both Jim and Joaquin helped Khan to move his upper body a little bit into a more sitting position. Gently Leonard pushed the glass against the enhanced man’s lips; realizing that the two other males kept close like a pack. He sighed. “And, as it seems, this time I’m outdone in the whole ‘mother-hen-department’.”

TBC…

Chapter End Notes

Yeah, Bones is outdone with being THE mother-hen of the Enterprise. All right, Spock outdoes him often enough when something happens to Jim, yet our dear captain is as
bad as his two friends (laugh).

I think that the president doesn’t inform public about everything was something to be expected, yet he really missed a chance to make Khan and his heritage known to the people in a good way. But don’t fear, Jim has the last word in it (he, Selek, the lawyer, and so on).

In the next chapter Khan will wake up completely and will have a longer talk with Jim. Then Wesley tries to calm Kirk down, what will be impossible – and T’Pau demands Jim’s presence in her office to have a certain talk with him.

Sorry, but the next chapter won’t be published within the next two weeks, because I’m now off for a vacation, and the new chapter isn’t quite finished.

I wish you all Happy Easter,

Love

Your Starflight
Chapter Notes

Hi, my dear readers.

I hope you all had a nice time during Eastern. Sorry for the delay, but after the return from my vacation I was very busy, and only found time to end the next story during the last weekend. But therefore it will hold a lot of what you’re waiting for. Promised!

So, I don’t want to let you wait any longer. Off you go to our Star Trek universe – and thank you for all the comments and kudos you left.

Have fun

Love

Yours Starflight

See the end of the chapter for more notes

Chapter 85 – Waking up

Khan had fallen asleep again barely after he had drunk half a glass of water, yet it was a peaceful slumber. Jim hailed Spock and told him about the good news; learning as he did so of Sarek’s planned release from the hospital in three days. Kirk was glad that Spock’s father was doing so much better.

Bones contacted M’Benga to get an update of the current situation in medbay. Both he and Kirk were happy to hear that Sulu – indeed – was doing very much better and was regaining his strength in the gym.

The rest of the late afternoon went by uneventfully and New Gol’s guests went early to bed – both Jim and Joaquin at peace for once, even if the young captain still boiled because of the broadcast and the president’s wasted chance to make the public aware of the new war-hero’s true nature.

In the middle of the night Jim’s slumber was interrupted by Khan’s sudden movements and whimpers. The young captain was wide awake within a second and out of the bed the next moment – closing the distance to the biobed with two large strides. In the pale light of New Vulcan’s satellite Jim watched his beloved, whose face grimaced while words in Hindi left his dry lips. Yet you didn’t need to be a genius to figure out the current matter. Nien was having a nightmare – nothing
unexpected.

Sitting down on the bed’s edge, Jim took Khan’s hand into his and stroked with his free hand through the older man’s sticky hair; making soothing sounds. It seemed to help – at least a little bit, but as the Augment finally lay quietly between the sheets, he didn’t let go of Kirk’s fingers. He rather clung to them like a life-line, and Jim realized that his close proximity was the only reason for the former dictator to have calmed down.

The urge to be as close to Nien as possible, mixed with his protectiveness and his desire to comfort his still hurting mate made Jim shift, and quietly he slipped beneath the covers beside the Augment. Promptly Khan moved closer to him and rolled on his right side – snuggling against the other man with a satisfied sigh.

Jim smiled into the semi-darkness, carefully lifted Nien’s head, placed his left arm beneath it and pulled the far too thin body closer to his own. He felt the fever that still burned in the Augment, as Khan’s head came to rest on his shoulder. His hot breath brushed over Jim’s exposed upper body, while the enhanced man wrapped his still healing left arm around the other man’s waist – something that had to give Nien pain, yet his instinctive longing for nearness and protection were stronger.

Ever so tentatively Jim wrapped both arms around Khan. He felt as if he had come home – now, as he finally could hold his beloved once again like this. Their closeness chased the dark phantoms of the last days away, and utter peace began to wash over the young captain. Even the damn broadcast was forgotten for now.

Suddenly Kirk heard a low noise at the door and after lifting his head his eyes found the slender frame of Joaquin lingering on the threshold.

“Is he all right?” the Augment boy whispered. It was obvious that he had felt his brother’s distress.

“Nightmare,” Jim answered equally quietly.

Joaquin stepped nearer and looked with big, compassionate eyes at his brother’s still form. “Sometimes he had them even back in New Delhi. He never told me about them, yet I know they were strong. He… never admitted it, but I know he was grateful when I cuddled with him.”

Jim smiled; realizing what Joaquin was more or less asking for. The young man was still stressed from everything that happened, and was therefore in need for a ‘cuddling’. Carefully moving his arm
on which shoulder Khan’s head rested, Kirk moved the blanket a little bit. “Come here,” he murmured. “I don’t think your brother would mind having you close, too. Rather the opposite.”

Weiss hesitated a moment, then he simply slipped under the covers at Khan’s other side and moved closer; spooning against his brother.

A soft sigh escaped Nien and even if he was already relaxed, Jim thought he felt him relaxing even more. A smile tugged at the young captain’s mouth. Super-strength and genius-brain be dammed, his beloved was also simply a human who needed here and there to be shown affection.

Snuggling against Nien’s forefront and feeling Joaquin’s arm touching his own as the boy wrapped himself around his brother’s back, Jim took a deep breath. Pressing a sweet gentle kiss on Nien’s forehead, Jim sighed in contentment and closed his eyes; feeling whole for the first time in days. It didn’t last long until he fell asleep again.

In this night Khan suffered no more nightmares.

ST***ST

“Awaw – how cute!”

The slightly sarcastically voice woke Jim up. For a moment he blinked into the golden-red rays of the sun which fell through the uncovered window and quickly he closed them again. Then he felt Nien’s weight pressing him down into the mattress and a smile spread over his face. At the same moment Kirk felt another hand gripping around and brushing against his arm – a slender hand with surprising strength. It came to rest on his wrist and relaxed again – something that was accompanied by a satisfied sigh.

“You three remind me of a bunch of ferrets. They love to cuddle in sleep like this, too.” the intruder’s voice mocked.

Groaning Jim opened his eyes again and looked straight into the half amused, half exasperated face of McCoy.

“Morning, Bones,” he mumbled.
“Morning, kid – or shall I say, kids?” The CMO grinned at him and a sleepy Joaquin, who looked up at him with big eyes. “Hell, why didn’t you tell me that you wanted to do a pajama-party?” Leonard teased them further. “I would have joined it, really! I only ask myself what the Vulcans would say if they catch you like this.”

“They are far too polite to barge into someone’s sleeping room – contrary to someone who just tore me out of sleep!” Jim grumbled.

“It’s already late morning, Jim – even by counting Vulcan time. Aboard the Enterprise they are about to have lunch, so rise and shine, oh glorious Captain! Wesley beamed down a few minutes ago and wants to speak with you,” McCoy rallied him even more. He threw a short glance at the biobed’s monitor that informed him about the three males’ current condition, and left the room while whistling a melody very off key; obviously in a very good mood.

Joaquin, who had oriented himself, moved away from his brother’s form and sat up. He had to grin as he realized that Noo more or less lay fully upon Jim, who rubbed his face with his free hand. “Usually Bones is the grumpy one early in the morning,” Kirk complained, and Weiss began to chuckle.

“Well, maybe that changed because it’s already late morning.”

They exchanged a glance. “Yeah. He must have had a cup of coffee by now,” Jim sighed. “There is no way in hell that he is in such a sunny mood without a decent coffee.” His free hand found its way into Khan’s messy hair and stroked gently through it. “I hate to move now, but I really shouldn’t let Wesley wait.”

“I’ll help you to get out without waking Noo,” Joaquin said gently and supported Jim in moving Khan enough to give the captain room to slip out of bed. Groaning, Jim stretched; mumbling something about “This mess can’t be my back!” Yawning he walked towards the bathroom; simply knowing that this day would be unusual.

He couldn’t know how right he was.

ST*###ST

The Augment woke up shortly after Jim had left dreamland and the biobed. He was disoriented and didn’t say more than a few words to Jim and Joaquin. Bones, who came running as the monitor in
his room gave an alert, checked Khan thoroughly again and was satisfied with the readouts. The enhanced man was healing nicely, yet it didn’t slip the CMO’s attention that the former dictator was still very weak and made no move to fight against it. This fact made Bones nervous, but he wouldn’t say anything about it for now. Maybe Khan simply needed time to rebuild his strength for once. Soon afterwards the Augment slumbered again.

At the same time Bob sat in the shadows of one of the many refuges outside in the gardens and waited for Jim, who arrived a quarter of an hour later – hair still a little bit tousled, expression a little bit sleepy and with a growling stomach and the shadow of a growing beard. It was more than obvious that he had been asleep as the commodore asked for him, and Wesley regretted that he had woken his protégée up. That Kirk was in serious need for some time-out was clear, yet they had to speak about the whole situation. There was no delay possible.

Kirk greeted Wesley politely. It didn’t slip Bob’s attention that his protégée was still irritated – obviously about yesterday’s broadcast – and after asking how Khan was doing, Bob suggested that he and Jim should take a short walk. It was very late morning and the sun was burning hot, yet it didn’t stop the two officers from taking a stroll. Kirk led the commodore further into the gardens and chose a small path that headed towards the near mountains. And only after they had brought a little distance between themselves and the building did Bob began to speak.

“What you are about to do?”

Jim frowned. “I beg your pardon?”

Wesley asked himself if Kirk was playing dumb or really didn’t understand the question’s reason. Sighing he clarified, “What will you do concerning Khan – and Section 31? Robertson’s yesterday lack of mentioning them isn’t for naught. You can get into even deeper hell if you don’t play along.”

Jim pressed his lips into a thin line briefly, before he answered, “As I told you yesterday: I’ll speak with my lawyer and will consider yours and his advice.”

Bob grimaced. “Jim, I can understand that you want the best for Khan, but you won’t do him or his people a favor if you decide to take your own road in that matter. Barnett told me that he spoke with the president about Mr. Singh and the other superhumans very intensely, and Robertson shares our opinion that the Augments should be given a chance to build their own life in this world, yet the public’s interest has to be considered. And I do understand that he doesn’t want to fall with the door into the house by telling the public that some supermen and –women are about to spread through the Federation. The Eugenic Wars were more than 260 years ago, but they have not been forgotten.”
Jim snorted. “If this is the case then he started in the wrong way. Khan’s positive role within this war would be a good chance to change the public’s opinions concerning his people. ‘Sunrise’ has become quite a hero and, as Lieutenant Uhura told me during the last week several times, the channels are filled with rumors and stories about him. This could be used to an advantage.” As he watched Wesley rolling his eyes, he added, “Maybe you should think about my idea instead of prejudging it from the beginning.”

Bob watched him shortly. Khan was a part of the Enterprise’s crew by now; a member of the ‘family’, like Kirk loved to call his friends. And woe betide anyone, who went against one of the ‘Enterprise-family’ – he, she or they would be confronted with the full force of enraged mother-hens no one wanted to face then. Bob could sing a song or two about it. He himself had been on the receiving end of it a few times. When he remembered the moment more than three weeks ago as McCoy made a big fuss as he, Wesley, wanted to speak with the still healing Kirk, or how Spock ruffled his feathers every time someone dared to come near Kirk with unkind intentions, the commodore really didn’t want to imagine what would be the outcome, if Barnett – and Robertson – wouldn’t do the best for the Enterprise’s senior officers and Khan.

Bob sighed inwardly and shortly pursed his lips. “I do understand what you mean, Jim. I really do! But we’re walking a tightrope here, and I fear that it will swing too much in the storm that would be raised by Command.”

Kirk remained unimpressed. “The admirals owe their lives to Khan’s SDD – just like Miss Whitman and the surviving diplomats do. Nien didn’t hesitate one moment to give the construction plans for his development to you so that you could travel into Borderland to start the rescue mission. And he had a part in revealing the conspiracy, which in the end saved Starfleet and the Federation we know. All this, combined with his further role within the last months and his torment at the hands of Section 31, would certainly influence public’s point of view in a positive way. To use one of Dr. McCoy’s idioms: If you have a good card then play it before someone else plays the first hand.”

Wesley wiped his forehead. The heat was strong, and here, farther away from the lake, the winds weren’t cool anymore, but warm. “In other words: We should make the first move before Command does.” He cocked his head. “To say in plainly, Jim: I get a stomachache when I think of everything that could go wrong.”

“No risk, no success, Bob,” Kirk deadpanned.

“Yeah, right – that’s your life-motto, isn’t it?”

Jim smirked shortly, before he stopped, which made the commodore halt too. “Bob, this is far away enough from New Gol.”
Surprised Wesley looked at him. “I don’t think that any wild life would come so near to a settlement, and…”

“It’s not because I fear some new kind of Lematya. I simply don’t want to put more distance between Nien and me.”

Bob frowned. “Why?”

Jim took a deep breath. “I have to remain close to Nien until his mental condition allows him to think rationally again. Augments have a very fine sense when it comes to the proximity of their family members, and because we have become close as two beings are able to, my presence soothes Nien.”

Wesley’s brown eyes wandered over the skyline of New Shi’Kahr and the glistening lake in the background. “And there is it again: This mysterious ‘staying near’ you always come up with since Khan was injured.” He glanced back at his protégée. “Why do I think that you’re withholding something from me concerning you two?”

“Bob, if I don’t know exactly which information you require, I can’t answer you,” Kirk avoided the question.

Wesley rolled his eyes. “Sweet Lord, it is as if I’m talking to Spock or Sonik when they don’t want to answer a question.”

“Well, Spock rubs off on me,” Jim shrugged with a trademark grin, and Bob shook his head.

“I surrender!” he groaned. He followed Kirk back the path they had just come, and grumbled. “And, by the way, Jim, next time we two talk via communicator, please don’t shut the line. It’s still a superior officer who ends a talk!”

Jim smiled sheepishly. “Spock already pointed out this part of protocol to me yesterday.”

“As if you didn’t know this part of protocol,” Bob rebuked, but was met with another disarming smile.
“Sorry?” Jim offered, and Wesley rubbed his forehead again in frustration. Sometimes imagining of retiring from Starfleet and to use some connections to get a nice, calm desk job wasn’t that bad!

ST***ST

After Wesley beamed up again, Khan awoke in the early midday – and this time his eyes weren’t that glassy anymore. Still tired but with new clarity in his gaze he looked up only to find Jim sitting at the table and working with his PADD. The younger man’s face betrayed his concentration, the small frown on his forehead spoke of problems and the way he chewed at his lips told the Augment that Kirk’s mind was fiercely at work to solve the obvious problems.

For a long moment Nien simply watched his soul-mate, enveloped in the warm light that fell through the window and made his blond hair shine like gold. It was quiet around them – the silence of a peaceful place – and for a few seconds the Augment felt utterly at peace. The pain wasn’t that bad anymore, his mouth didn’t feel that dry like before and the headache was less than the last time he woke up, yet there was something that unsettled him. He couldn’t remember what happened.

The last thing he knew was that he had been involved in some fight – a battle even – the rest was a blur. And whenever he tried to remember more, something blocked his brain. This was highly unusual for him and he felt slightly irritated about it. He was enhanced, he was superior, he was better! Then why did his mind play that mean trick on him and deny him access to his memories which would explain why he was this injured at all?

Suddenly Kirk turned his head and their eyes met. Pure joy spread over the captain’s face, while he sat the PADD down and rose.

“Hey,” he greeted softly; closing the distance to the bed and sitting down on its edge. His left hand reached out and smoothed some sticky locks away from Nien’s forehead. “How are you’re doing?”

Khan moistened his lips and rasped, “Better – I think.”

Jim, happy to hear an understandable answer from his bondmate, bent down and pressed a gentle kiss to Nien’s dry lips. “I’m glad,” he whispered. His gaze roamed full of love and tenderness over the slender and far too pale features. “Do you want something?”

“Yes – my memories back,” the Augment murmured. As he saw how those blue eyes widened in
shock, he carefully raised his right hand and touched the other man’s shoulder. The effort he needed to do so, was unbelievable. “Don’t worry, I do know who you are,” he croaked. “But I haven’t the tiniest clue where I am and why I’m in this bad condition.”

Kirk sighed in relief – for a moment he had feared Nien had lost his memory completely and therefore didn’t recognize him. But this fright was for nothing. Sitting up a little bit more and taking Khan’s hand in his own, he answered, “We’re at New Gol – the seat of the Vulcan priests. We were invited to stay here and heal.”

Khan frowned; his usually so quick and bright mind needed a moment to work out what Jim had said. Well, if this was a seat of priests, it was an abbey. So it was no wonder that it was so quiet and peaceful here. He looked around himself. He saw the hooked-up infusion that was linked with his body, recognized that the beeping belonged to the monitor of the biobed he obviously lay on and that his left arm was wrapped in bandages – just like a great part of the rest of his body.

“What happened?” he rasped, while he once again tried to remember. But everything was still shut away in a dark fog he simply couldn’t – or didn’t want – to pierce just right now.

Jim bit his lips. He didn’t know how much Khan could already take and what would be too much for him. Okay, Nien wasn’t comparable with casual humans and could stand a lot more other people wouldn’t bear at the moment, yet Bones had made it very clear that Khan needed rest – augmented nature be dammed.

“Well,” Kirk tried to beat around the bush, “there was this fight and you… Uh...” He stopped, and saw how his beloved made a face.

“If you try to spare me, please notify that I get far more unsettled by not knowing what happened than by learning the truth.” Khan’s voice was still hoarse and there was no smoothness in his usually full baritone, yet there was this stubborn streak Jim knew all too well.

Kirk grimaced. “Nien, Bones practically ordered rest for you and…” He caught the defying glance deep in the still tired eyes, and gave in. He and Khan were so similar! If he – Jim – was in Nien’s place he wouldn’t give it a rest too, until he knew what happened. “What is the last thing you remember?” he asked softly.

The former dictator pursed his lips; thinking straight made the headache worse. “Hallways on a starship and… we crawled through a supply shaft. And… there was a room with many stations, but not the bridge…” He blinked in confusion.
Jim nodded slowly. “‘We’, you said. Who was with you?”

Again Khan had to concentrate and for a second he thought could see another known face – that of a young woman with shoulder long blond hair and blue eyes. “Marcus…,” he mumbled. “Carol Marcus. She was with me and… we were in this room. We locked the doors and… and I was busy with at a station, but…” He shook his head, before another memory crept through the fog. “There were men, too. They… they attacked…” He fell silent and looked questioningly at Jim; trusting him to fill the gaps that lingered in his memories.

“What do you remember us arriving at Vulcan, taking your people to safety and being at Selek’s office as Norton and his cronies arrived?”

Khan’s forehead furrowed and he needed a moment before he slowly nodded. “Yes, there are fragments of images and voices in my memories, which point out something like this. But I can’t remember it clearly.” He took a deep breath. “This is highly irritable!” he whispered.

Jim gently squeezed his hand. “Give it time, baby. You’re suffering a TBI. It’s normal that your brain shuts down in the aftermath – even for a genius like you.” he added teasingly; winking at the Augment, who was… pouting. Jim sighed. Sweet Lord, sometimes this biological enhanced superman was simply cute!

“Well, let me tell you what happened. Maybe you’ll begin to remember then,” Kirk said softly; receiving a huff from his bondmate. Shaking his head inwardly he began to speak, “Let’s start when Norton and the others stormed Selek’s office,” he began quietly. He knew that it was indeed better to tell Nien what he wanted to know than to keep him in the dark.

“After Norton, Styles and Elite Security cornered us, Dashwood and Conelly arrived, too. Norton blackmailed you in surrendering to them by threatening my life.” He gulped; the memory of those minutes still pained him – this damn helplessness he had been forced to endure and to watch the love of his life sacrificing himself… It still gave Kirk the chills. “You gave in and were beamed aboard the Excalibur together with Styles, the scientists and Carol, who pretended to be on Norton’s side.” Jim took a breath. “Only after she was beamed up she let her mask slip. She didn’t betray us but lied to Norton to remain free to support us. She somehow helped you to escape and you made it to the Excalibur’s auxiliary – the room you remember.” He bit shortly at his lips. “In the meantime Bob and the Lexington had arrived and…”

“Hold it,” Khan murmured; furrowing his forehead as another fragment of his memories returned. “As far as I remember the Lexington was supposed to speed to Earth to stop Luengo.”
Jim nodded at the underlying question that was in Nien’s voice. “Yes, you remember correctly, Sweetheart. But Bob and Barnett changed the plan, because Spock’s father became very sick and needed surgery. And because of his rare blood type he had to return to New Vulcan as soon as possible. Mrs. Whitman, the vice president, flew to Earth with the other admirals, managed to catch Robertson in private, told him about everything that happened and now Luengo and his fellows rot in custody.” For a moment Kirk grinned broadly.

The Augment blinked slowly. “So… the conspiracy was stopped? And Mr. Spock’s father belongs indeed to the survivors?” he asked; confused that he remembered these details almost without any effort, but still had problems to catch what had initiated his current condition. And then this blasted headache! It was more than irritating.

Jim smirked widely. “Yeah, Sarek lives. And concerning the conspiracy: Section 31 was destroyed; Luengo and his cronies are in custody like several Council members, too and…” He hesitated as Khan’s eye lids began to drop. He waited a moment and was about to rise, as the Augment looked up at him again.

“Please continue,” he said quietly, but Kirk frowned.

“You’re sure? You look tired.”

“I am tired,” the former dictator admitted, which told a lot about his condition. “Yet I want to know what happened.”

Sighing, Jim gave in again. Taking a more comfortable position on the bed’s edge, he continued, “Barnett beamed down to New Vulcan just in time, and together we overpowered Norton and his men. Then we beamed aboard the Excalibur to free you, but Styles was clever enough to set Security up against us, telling them that Barnett was an imposter and that I and the others had to be arrested. It came to a battle, during which I first learned from Carol where you and her were and then… I felt your pain.”

Khan looked at him confused. “You felt… my pain?”

Kirk nodded. “Yeah, I did – just like you feel when I’m upset or when something is the matter with Jo.” He shrugged. “Selek thinks it has to do with us being bonded – but more of it later.” His thumb moved in soothing circles over the back of the Augment’s hand.
“As Security was about to break down auxiliary’s door, you forced Carol to flee through a support shaft and remained behind to cover her back,” he continued to fill the gaps in Khan’s memories. “Finnegan and a few of his men finally stormed auxiliary and… Well, you were weakened by a strong sedative one of the scientists gave you before Carol could act against it. Because of it Finnegans and his bastards overpowered you and… they found it a nice pay back for escaping them at first by beating you senseless. Then they took you to medbay to… to put you into stasis in your cryotube.” He watched how Khan’s now glassy eyes widened and added hastily. “But it never came to the last step. We…”

“Jim came in the very last second, gave Conelly the beating of his life and got you out of this ice-coffin before anything worse could happen to you – well, almost, given the state you’re still in,” another voice cut in. Bones stood at the entrance and smiled gently at the two lovers; his usually grumpy face betraying his soft side. He stepped nearer; his eyes directed at the Augment. “Your mind was more or less gone, and you only reacted on your instincts. My butt hurt for hours after you made it very clear that only Jim – or Joaquin – were allowed to touch you.” He rubbed his backside; shrugging as Khan looked puzzled at him.

“I don’t understand,” he said quietly, and Bones chuckled,

“I wanted to check you thoroughly, and give you something against the pain and stop the bleeding – and as a hearty thank-you you struck out like a wounded tiger and I found myself a few meters away polishing the floor with my butt.” He shook his head, while he stopped beside Kirk. “The only one who was able to reach you was Jim.”

The former dictator closed his eyes; fighting against the increasing headache. “I apologize, Doctor,” he said nonetheless; knowing when an apology was necessary.

“Don’t – you weren’t in your right mind, which was utterly understandable,” McCoy said softly. “These bastards really got you pretty bad. Any casual human wouldn’t have survived it. I’m only glad that Jim gave Finnegans his own pay-back.” He met the ocean-colored eyes again, and added, “He broke the bastard’s jaw after he gave him the punch of his life. And Spock nerve-pinched Finnegans in the hardest way possible afterwards – certainly his own way of revenge, even if he will deny it for the rest of his life if you confront him with his actions.”

“Spock… sort of avenged me?” Khan asked baffled; forgetting his tiredness for a moment longer.

This time McCoy laughed quietly. “Yeah, he was obviously pissed off by the whole situation – with Jim at the edge of losing it, you in mortal danger and Starfleet’s Elite playing Rambo.” He snorted in amusement. “The Vulcan nerve-pinch can be delivered ‘softly’ and even then it’s quite unpleasant,
so I’ve heard. But it also can be bestowed in a very hard and therefore really painful way – and when
I remember the scream Finnegan howled just before he dropped back on the floor and an almost grim
looking Spock just leaving him, I simply know that our Vulcan gave him his own piece of mind.” He
smirked. “As it turns out the Vulcans’ peaceful way doesn’t count for Spock anymore when it comes
to his friends. Then he transforms back into one of his ancestral warriors.”

“Yes, this I remember very well,” Nien grumbled, but his voice lacked any of the old grudge he had
held against the Vulcan. Somehow within the last weeks it had vanished. And the thought that Spock
of all people more or less avenging him, confused but also pleased Khan. Maybe they could become
friends one day.

“Spock simply checkmated Finnegan before this bastard could do more crimes,” Jim mumbled;
feeling the illogical urge to defend his soul-brother’s unusual behavior.

Bones shook his head. “You were ahead and didn’t see it, Jim. I just threw a glance over my
shoulder as I heard Finnegan cry out. Spock just looked like a demon in this moment, with fire in his
eyes and this not-real, yet existing thunderous expression on his face. I almost wish that I had had a
holo-camera with me to record him in those seconds. I could rub it under his nose until he’s old and
grey.” He sat down on the chair Jim occupied before and comfortably stretched out his legs. The
monitor above Khan showed that the Augment’s condition was stable, and therefore there was no
need to check him again with a med-scanner.

“This is so like you!” Kirk groaned; already knowing that his two friends would bicker about this
matter in the future.

Khan had listened closely. He was well aware of the seriousness of the whole topic concerning the
battle aboard the Excalibur – a battle he still had to remember properly – but he also realized that his
bondmate and the CMO were trying to lighten the mood, and even if it was unnecessary, Nien
couldn’t deny some gratefulness for their attempt. It showed once again how much he was cared for.

“So, you fought your way to medbay to reach me in time,” he took up the thread again; suppressing
a yawn.

McCoy made an affirming gesture. “Jim got to you in time by fighting his way free with his bare
hands. I swear the amount of people he simply punched or threw out of his way to get to you is
uncountable. I’m still baffled that no-one noticed that he somehow got super-strength.”

“Yeah, as far as I learned by now we’ve Spock to thank for it. He somehow covered for me – but
don’t ask me how,” Kirk sighed. “I reached medbay just in time to stop Conelly and Dashwood from
activating the cryotube, pummeled Conelly…"

“You beat him into the ground, kid, and I really don’t mind it one bit!” Bones threw in; crossing his arms in front of his chest.

“… And during that fight your cryotube crashed to the floor, opened and you crawled out,” Jim finished without reacting to Leonard’s comment. “Spock and Ritek, who was with us, secured us while Bones treated you, first Bob and then Joaquin and Selek appeared, and…”

For a moment Khan’s growing tiredness was forgotten, as he slowly lifted his head. “You took Joaquin with you aboard the Excalibur?” he asked; almost shocked.

Jim’s eyes widened. “What? Of course not! I sent him with Selek aboard the Enterprise and…”

“The Enterprise was in the hands of Section 31,” Nien interrupted; anger began to shine in his eyes.

“No, not anymore at that time,” Kirk assured him and started to grin. In the next minute he told Khan about the trick Chekov, Riley, Keenser and Sulu played on the Elite Securities and Section 31. “So they all woke up hours later with the mother of all headaches, the Enterprise was free and could corner the Excalibur together with the Lexington, and now…”

“And now the two kids walk around with an ego as large as the Mount Everest, and half of the brass laughing their heads off because two boys, a little Royalan and an injured young helmsman brought down more than a hundred Elite Securities,” McCoy snickered. “This will go down in history, mark my words!”

Khan looked from one man to the other one; still struggling to comprehend everything he had just heard. “And… where is Joaquin now?”

“Outside in the gardens, talking with a young Vulcan priest last time I checked on him,” Leonard informed him. “The two seem to get along very well, yet I think the boy misses our two troublemakers, Pavel and Kevin. They kept him company during the last few days, but now, since we are at New Gol, we still have to check if it’s okay when they come here to visit him.”

Jim smiled reassuringly; knowing that Khan wanted the best for his little brother. “I’ll talk to T’Pau about it. She wanted to speak with me anyway, yet I waited until you were better.”
Again Nien seemed to need some time to stick all this information in his mind, before he mumbled, “Obviously I was out for a long time. How long?”

“Five days,” Kirk answered softly. “You were dead to the world for five days.” Something in his tone told Khan that Jim’s words had a further meaning, but he was too tired to ask about it. And, by the way, the main injuries that he yet had to count were paining him more minute by minute.

Bones realized the Augment’s condition and rose. “Okay, that was enough for the first time,” he said. “Khan needs rest and you,” he looked at Jim, “can maybe ask T’Pau’s secretary for a meeting with her. I’m really surprised that she hasn’t demanded your arrival in her office until now.” He cocked his head. “She seems to have a soft spot for you.”

Jim snorted. “You exaggerate. T’Pau simply accepts that Nien needs me close by – with him being my bondmate, and so on.” He grimaced. “I don’t look too forward to the talk.”

“Yeah, I know she can be scary, but – as I said – she is softer when it comes to her family. And you with being Spock’s Tyhna…”

“T’hy’la!” Jim corrected with a roll of his eyes.

“Whatever. With you being his soulbrother you more or less belong to the family. So don’t turn chicken and go speak with her.”

Kirk made a face, but nodded. Then his attention returned to Khan, who had listened to the short bickering with something close to amusement in his eyes, and then he took a deep sigh – clearly trying to fight off sleep. Jim bent down and kissed his forehead. “Try to sleep, honey. I’ll back in a few – promise.”

Khan hummed under his breath – then he slipped back into slumber; delaying any thoughts of what happened to a later time. Jim carefully let go of the pale, usually so strong hand and rose. His gaze lingered lovingly on the older man, who just looked so innocent and vulnerable in his sleep, before he turned away. He and Bones exchanged a glance.

“He’s going to be fine, Jim,” Leonard said gently. “Don’t be afraid any longer. He is doing well so far.”
“Yes, but what about when his memories return?” he asked quietly. “His real memories, not only the facts I gave him? The brutality he has been forced to endure, the cruelness he faced… This won’t leave him untouched.”

“It certainly will take a toll on him,” McCoy nodded. “Beneath his arrogant façade our superman is a very sensible man. But you will be there for him. You and Joaquin – and I think this is all he’s going to need then.”

Jim wasn’t convinced – and it would turn out that his concerns weren’t for naught.

But the trauma Khan suffered wouldn’t be the only problem the friends were going to face. And fate wouldn’t give them much time to recover.

ST***ST***ST

Just like the last time Kor had been at this place, the Great Hall was crowded with veteran warriors and the council members of the Klingon Empire. Guards closed the high double doors behind him, as Kor stepped into the chamber of the High Council; his gaze fixed on the grey, yet still impressive figure of Chancellor M’Rek who sat straight vis-à-vis on the other side of the large round table on the elevated throne that had already held the emperors of centuries now bygone.

Kor knew exactly why he had been called to the High Council: His report concerning everything that happened within the last week in the Borderland and in its neighborhood. It must have been like a bomb dropping on everyone’s head – including M’Rek’s. Of course the chancellor had known some parts of the events before; after all the Federation president Robertson had contacted him after Kor had been accused of attacking the diplomats’ starship, but the true background of everything had certainly been a shock for everyone. And Kor already knew that at least the half of the High Council members sniffed a chance to conquer the Federation once and for all – with Starfleet weakened like it was.

The moment his entrance was acknowledged by the High Council members, he was already bombarded with questions and demands of statements – the most appealing to the wish to conquer just like Kor had already anticipated. The chancellor’s eyes and Kor’s met and for a moment they held each other’s gaze, before Kor pressed a fist to his chest in the traditional greeting and bowed his head. Still the verbal tumult continued and it was only M’Rek’s sudden outburst of “SILENCE ALL!” that made the others shut up.
Kor’s gaze wandered over the present Klingons – politicians, counselors, veteran warriors, generals and highly honored commanders. Among them he recognized Kang, an old friend of his, who simply nodded a casual greeting. Formality wasn’t usual between them after knowing each other since childhood. To his regret, but not unexpected, Koloth wasn’t among the warriors. His failure on Aldebaran must have brought him more trouble than thought.

M’Rek looked at the last descendant of the past emperors and raised his voice again. “Kor, son of Ryhan, welcome in the Great Hall and within the circle of the Empire’s most trusted men.”

Kor’s face betrayed nothing, yet a satisfied thought rose in him. ‘Last time he demanded an explanation of something I didn’t do and I had to prove myself, and now I’m welcomed back. This man is more complicated than a room full of Vulcans!’

“Your reports were read by the High Council and the generals – and they left more questions than gave answers,” M’Rek continued. “You were given the order to elucidate the incident within the Borderland concerning the attack on the Federation ship *Excalibur* and why the Federation president Robertson accused us – you! – to be responsible for the death of the delegation.” He lifted a PADD that lay before him on the table. “But what I got as your report is… a joke – or the most daring thing I’ve heard of for a long time. And knowing you I think it’s the latter – hopefully. The Empire doesn’t need to suffer the loss of one of its finest and bravest fleet commanders.”

It was praise and a threat in one. Kor knew that he stood with one foot in his grave, like the Terrans said. He had known it from the beginning as he agreed to Wesley’s daring plan – and he hadn’t regretted it. Not then, not now.

“I’m certain that my answers will prove me to be still the fleet commander you need – despite my temporary alliance with a Terran.”

M’Rek cocked his head. “Yes, this is a good point to start.” He bent forwards, while placing the PADD back on the table. “You allied yourself with a Starfleet commodore, crept into an Orion slave market that wasn’t ruled by the Orion Syndicate and freed the members of the delegation which already were declared dead! Then you took some Romulan officers captive and in the end re-sized a captured Klingon vessel that was equipped with this strange new devise that makes it impossible for any sensor to read, but said device was de-mounted before you got the ship back. And you and the commodore parted ways just like… good friends. And several days before this whole strange incident you flew into Federation space to offer support to the *Enterprise* which battled against rebellious Klingons. I ask myself, Kor, son of Ryhan, what’s on your mind!”

Grumbles and growls were heard from the other present warriors, veterans and council members. Kor remained calm. “I simply saw to it that the Empire’s given word of ceasefire during the upcoming peace talks wasn’t broken, which would have brought shame upon everyone within this
chamber. No one will make the Empire look like its given word is unworthy. No renegade Klingons, no pirates, no slave traders! And certainly no Romulans! The way I had to choose to protect the Empire’s honor may seem to be… unusual, yet stony ways shouldn’t stop a warrior to stay true to his given task.”

“With the ‘stony way’ you mean your alliance with this Starfleet commodore – Wesley. The same officer who was involved in the incident on Organia which led to the current situation!” M'Rek took a deep breath. “Your path crosses with this Terran often, doesn’t it?”

“Maybe Kahless tests me,” Kor shrugged. “Or fate shows that there are opponents who are honorable enough to go along with if circumstances demand it. I have come to know Wesley as a trustworthy warrior, who shows the same honor and fighting spirit like we possess. He came to me, asking for help to elucidate the same incident I was trying to clarify. It was only logical to combine our efforts and to support each other to save the surviving delegation members.”

“You speak like a Vulcan!” a High Council member mocked.

Kor’s gaze became piercing. “The Vulcans were once a race of fierce warriors – and this fire of their ancestors still lives in some of them. I heard that Ambassador Sarek was injured and in weakened condition because of the way the slavers held him and the others captive, yet he took part in the fight as Wesley and the others tried to free him. He broke a Romulan’s neck with one single snap of his fingers. And the Enterprise was captained by his son Spock during the Battle of Aldebaran. According to the official reports of those who survived the battle, the Enterprise led the Starfleet formation for the most time, took down many of our vessels and sped afterwards to Aldebaran to save her captain in the last moment. Sarek’s son may obey the rules of cold logic, but he also is a fighter – just like his father. I’m not offended to be compared with them!”

His short speech earned him many disbelieving looks, whispers and the one or other toothy grin. Yes, the Romulans were well-known to be fierce fighters and being related to the Vulcans it made the Vulcans look weak and boneless – on first sight. Yet the saying ‘never make a Vulcan lose control’ didn’t exist for nothing. Vulcans could be deadly warriors if given no other choice – or if they had to protect their family or those they called ‘friends’.

The last gave Kerekh, a veteran general, the transition to the next topic. “You are speaking of the Enterprise. Tell us, why you decided to come to her aid as Koval and Noy attacked her. Yes, we were on ceasefire, but Koval and Noy rebelled. They could have finished the Enterprise off and it wouldn’t have been our fault – after all, the two commanders worked without the High Council agreement. The criminal Kirk would be finally dead and…”

“I am surprised which measurements you are willing to embrace only to get your personal goal, General. Yes, your grandson died in the incident on Qo’noS, but he died in battle and was therefore
welcomed in the Black Fleet. I don’t think he would be proud of his grandfather to learn that said grandfather approves of a revenge that would cost the Empire’s honor!"

Kerekh jumped from his seat and bared his teeth! “How dare you to speak like this!”

“Truth has to remain truth! Lies are for the weak and the cowards!” Kor returned with a growl.

“Kirk came to our home planet, killed our guards cowardly and…”

“As much as it irks me to say that, but Kirk is anything but a coward!” Again murmurs were heard. “By our standards he is still more a boy than a man, yet he chose to endure the given sentence of death by torture instead of taking the lighter way out to give away a few secrets and to die painlessly. He withstood torment for hours without breaking – something I don’t think many men would be able to. At Aldebaran, he risked his life to help the people aboard the space station. True, his intervention prevented Koloth from being successful, yet Kirk didn’t think twice as it was up to him to stop his enemies. And later during the battle with Koval and Noy he fought honorably and even offered the defeated crew mercy – what of course wasn’t accepted, yet he showed generosity. He may be a pest in the ass, so to say, but he is no coward!”

“He is a sentenced criminal – he, his first officer you speak so highly of, and…” The younger Klingon who was member of the High Council for only several months now was interrupted by Kor again.

“I know – and I didn’t hesitate to execute the given sentence when Kirk was in my hands, despite the dishonorable reason we got hold of him. Yet I repeat myself: he remained brave and strong and faced his fate with his head held high. There was no wavering, no display of fear as he was brought to the chamber where he was about to face an agonizing death. He and his first officer are warriors, no doubt about it!”

M’Rek bent forward again. “There is one thing missing in your report – one thing that is connected to the time you held Kirk captive and later to the other actions Kirk did. Koloth spoke in his report about the Dark Warrior, who obviously is the same who freed Kirk earlier – and who attacked our patrols on Qo’noS. Koloth affirmed that this man was with Kirk – and that he had the strength of a Vulcan yet he his human appearance. I also know the records from the fight on Qo’noS. This figure is a slayer through and through. You already voiced your assumption once that this man could be an Augment – which would mean that the Federation has lied about the stopped Augment program and has broken her word by stating that there weren’t any Augment embryos left after the incident with another Enterprise a century ago. I am certain that you have crossed paths with this man – or, at least, know more about him. Tell me and all the others here plain and simple what you know about this man. Is he an Augment or not?”
Kor stilled and took a deep breath. He had known that it would come to this question – of course. The Augment had freed Kirk, had fought side by side with him since then and had worked in the background during the war. The latter wasn’t confirmed by Wesley, yet it made sense. And if there was one reason to stop the ceasefire and the peace talks, then it was this engineered man, whose existence was a threat the Klingon Empire would not accept.

And Kor knew that the only way for the Empire to survive were these damn peace talks!

No, his decision to vote for peace hadn’t anything to do with his deep respect he held for Robert Wesley, or with the growing respect he began to feel towards the Kirk-boy, who turned out to be a warrior of honor and showed more bravery than quite a few people within this room. No, Kor wasn’t that sentimental – after all he was a warrior at heart. His opinion to end this war had been formed as he realized that other parties drew a lot of advantages while the Federation and the Klingons weakening each other with battles.

The Romulans were already daring enough to send military members through Klingon space and to interact with Orion pirates. The Orions themselves became bolder and insolent from day to day, and it was only a question of time until the Tholians would smell the rat and would take the given chance to conquer parts of the Federation for themselves – and certainly wouldn’t stop at the formal Neutral Zone. And there were also still the Gorns, who wouldn’t let slip the given opportunity to get a piece of the pie, too. Alpha- and Beta quadrants would be in uproar for decades – and Kor knew all too well that the Empire’s resources wouldn’t last forever. Rather the opposite. The battles with Starfleet had them brought already to their limits – war against the Romulans and other realms would be too much and would lead to the Klingons downfall.

Kor was not a typical Klingon. He rather used his mind before he drew his dagger, yet his reputation was also that of a fierce warrior. But he knew that he would have to do a lot of persuading to make the High Council see reason. At least M’Rek was circumspect. His decision to give the Federation the chance to do some research on the incident in the Borderland instead of reacting to the offending accusation of attacking a diplomat vessel, proved M’Rek’s providence. And maybe M’Rek would regard the Dark Warrior like Kor did when he learned the whole truth about him.

His voice sounded strong through the Great Hall as he answered the chancellor’s question, “Yes, the Qli-jagh is an Augment.” Shouts erupted from everywhere, demanding return to war because of this new threat.

“So, the Federation lied about the stop of…” M’Rek began; something close to disappointment but also fury was in his eyes.
“No, they didn’t lie about the whole incident a century ago,” Kor answered; rising his voice to be heard. “This man is a relic from the Earthers’ first attempt to increase their race. The Dark Warrior comes from a time almost three hundred Earth years ago.” Open mouths and widening eyes were the result of his statement, before several Klingons cried “Lies!” and “Cheat!”

M’Rek’s fist landed on the table in front of him and silence spread once again through the chamber. “Continue, Kor!” he demanded.

“The Augment who goes by the name Khan was one of the engineered humans three centuries ago – an experiment that led to a global war. Some Augment leader overdid it and the casual humans fought them. At these times the Terrans weren’t that advanced in space travel. The newest development was a kind of sleeper ship. The Augment escaped with such a ship and slept on it until two years ago, when the leader of the traitors which undermined Starfleet found him and awakened him. He forced him into service by threatening the Augment’s family, who were also aboard. Khan escaped again and fled to Qo’noS, thinking to be safe there from Starfleet and plotting a plan to free his family, too. Later Kirk was sent to Qo’noS to capture an escaped criminal who seemed to have some terror attacks against us in mind. Knowing that we wouldn’t believe him, Kirk flew with his first officer and a language specialist to Qo’nos, where he was attacked by our patrols. The criminal died in the battle and the Augment, who hid nearby, came to Kirk’s aid. He didn’t know that Kirk was a member of Starfleet with him being out of uniform, otherwise the Augment certainly wouldn’t have moved a finger after all he went through. He only saw young humans threatened by our warriors – and blood is stronger than water. After the battle was won and the Augment learned whom he helped, he fled again – and returned somehow to Federation space later, where he went underground. He re-appeared as the war started, helping Kirk again whom he had come to trust.”

“And who told you that story?” another general asked. “Kirk?”

“He and later Wesley. They told me independently of each other and even mentioned the same details as I asked first Kirk and later Wesley. I believe them.” He straightened his shape. “But that isn’t all. Wesley let me know that this shadow department that undermined Starfleet was led by the former highest ranking admiral of the Federation, who ordered Kirk to kill the escaped criminal on Qo’noS by bombarding him with over seventy torpedoes.” – Again an uproar went through the Great Hall. – “I don’t have to tell you what this would have meant for our home world. And Kirk knew it too. He disobeyed the order and tried to capture the criminal in person. The traitors tried to use Kirk to start a war which would have strengthened their position – and when we started the war several weeks ago we gave these cowards exactly what they wanted: A reason to militarize Starfleet and gain power. The new leader of this shadow department pulled the strings which led to the attack on the Excalibur as we agreed on peace talks – he wanted to end the ceasefire to consolidate his position. We all, the true warriors on both sides, were nothing more than pawns for him and his fellows! And this has to stop! None of us should tolerate to be used as a puppet in this foul game. And to end this insanity we have only one way to go: making peace with the Federation and to take the wind off the last traitors’ sails which maybe are still roaming free.”

None of the present Klingons were still sitting except for M’Rek. He watched the members of the
High Council, the active generals and the veterans, who discussed wildly with each other. He knew that it was useless trying to stop them at the moment and so he gave them time to live out their rage. Looking at Kor he waved him over, and respectfully the fleet commander closed the distance to the chancellor.

M’Rek observed him for a long moment, before he bent forwards and said with a lowered voice, “You seem to have made up your mind concerning the peace talks.”

Kor nodded; seeing no reason to deny his opinion. “My Lord, cowardice and dishonor are an offence for every true warrior. That goes for the honorable men and women in our fleet as it goes for those Starfleet members who are true warriors, despite their sometimes foolish ways to fight with words instead with weapons. They and we were misused to help some power hungry cowards to gain their goals. If we continue the war, those, who used us all as pawns, would succeed – even if the most of them are arrested, like our Intelligence found out by simply listening to the Federation’s media, which are full of the news. But this is not all.”

He paused and M’Rek gave him a signal to continue.

Kor took another deep breath. “The longer we battle with the Federation, the more others are ready to use our weakened position to make their own moves. The Romulans already traveled through our space to reach the Borderland without being caught. It shows the condition our outposts are in. I give the Romulans enough credit that they only wait for a chance to seize our territory. The Orion Syndicate is not a trustworthy ally. We can’t count on them if we should be forced to fight on two fronts. And I’m sure that the Tholians also only wait for an opportunity to gain territory – of the Federation and us.”

The older Klingon nodded slowly. “Is this the reason why you allied yourself with Wesley and freed the surviving members of the delegation?”

“Yes and no,” Kor answered. “First I only thought of defending the Empire’s honor. The rest of the delegation were at stake because of a Klingon who was dismissed in dishonor from our fleet. Then another thought occurred to me. The surviving admirals – and the two Vulcans – were about to be handed over to the Romulans, which could result in a great disadvantage for us if the pointy ears learn more about Starfleet as soon as the captive admirals would fold – something that would have happened. The Romulans are good in torture like we are. And that they have some tests running with Vulcan DNA is something our Intelligence knows, too. You didn’t need to be a genius to guess what they had in mind for Sarek and his assistant – and Sarek is maybe the best candidate to make peace work. To save the admirals and the diplomats was the only way of preventing worse from happening.”

M’Rek bared his teeth in a short grin. “You should consider a career as a diplomat whenever you
feel the pull to leave the fleet.”

Promptly Kor groaned. “Please not! Wesley suggested the same and I already told him that rather the Black Fleet should take me away than becoming one of them.” He pointed nonchalantly at the still discussing Council members and veterans.

The chancellor began to laugh and clapped the younger Klingon’s shoulder. “It would be a shame to lose such a fine warrior within our fleet.” He turned serious again. “Concerning the peace talks: Many things have to be taken into consideration. This shadow department may be smashed and I do know that men like Barnett or this Wesley are honorable warriors, yet our generals are right when they say that Starfleet and the Federation are very busy with themselves which gives us a chance to make a one and all deciding strike.”

“And for what purpose? We declared war because we were offended and threatened. But the offence and threat weren’t what we thought. We shouldn’t give into the Starfleet traitors’ intention which would turn us into their puppets once again. And, as much as it pains me to admit it, the Federation is stronger than assumed. There is an old Terran saying: If you can’t defeat an opponent make him your ally. And a Starfleet under command of men like Barnett or Wesley are an honorable ally. The Romulans will think twice before they take action against us again – or making demands because of their spies we captured. We have to pick up the shards the war left before we are strong again – and I really don’t want to fight off our pointy eared neighbors just right now.”

M’Rek sighed. “It’s a fine line between wisdom and showing weakness – or between pride and sanity.” He shortly pursed his lips. “What about the Augment? He killed seven of our warriors as he freed Kirk. And what about Kirk? We could demand both men’s delivery in exchange for the peace talks.”

“That would be unworthy for us,” Kor said calmly. “And, by the way, the Augment killed those who threatened and tortured Kirk. He avenged his mate. He did nothing different from what anyone of us would have done in his position. This is something I can accept.” As he caught the chancellor’s baffled glance, he smirked. “Yes, my Lord, I said ‘mate’ on full purpose. The two are nuH-loDnl – brothers in arm.” His grin widened. “In every way!”

M’Rek frowned, blinked, realized to what Kor was referring – and began to laugh again. “Terrans! If you think you have understood them finally, they come around the next corner with another surprise!” He shook his head. “So, you think we should simply wait until we have another chance to seize them?”

“If we make peace with the Federation we’ll have no right to capture them. But, as I already said, why not make them allies? Kirk has the potential to become an admiral someday, which could be an advantage for us, given his codex of honor and quirk to help anyone.”
Cocking his head, M’Rek grumbled quietly under his breath, before he said, “You think highly of this boy, don’t you?”

“He gained my respect during his captivity – and, even if I don’t like to admit it, but his disobedience last year saved thousands of Klingons – if not our whole home planet. A climatic catastrophe would have been the smallest outcome if Kirk had fired all those torpedoes on Qo’noS. They maybe would have destroyed our planet. He risked his life then to do the right thing by turning against his highest ranking officer. Later he took the same risk as he protected the civilians on Aldebaran. So, yes, I have come to respect him. And I’m certain you would agree if you would meet him in person once.”

M’Rek nodded slowly. “That gives me an idea.” He looked at the still discussing other Klingons. “But first we have to convince them!”

TBC…

Chapter End Notes

Well, a few people woke up within this chapter. Khan, Wesley as he began to understand Jim’s arguments, and some Klingons – on top of them M’Rek. Kor really can be convincing, but if his reasonable arguments will be enough to make the High Council see is something to be bide.

In the next chapter there will be a cute scene in the beginning, then there is the talk between Jim and T’Pau (with some surprises for our captain), and then Bones will get the shock of his life (snicker).

I hope you liked the new chapter and – like always – I’m curious what you think about it.

Until next week

Yours Starflight
An unusual task

Chapter Notes

Hi, my dear readers!

Thank you so much for your lovely comments. I knew that you were eager to see Khan awake, and I can already promise that you’ll ‘see’ more of it. Yet he suffers greatly and even his augmented nature can’t keep up with everything. Therefore he has a longer road to go – but he has Jim and the others.

In the new chapter there is the big talk between Jim and T’Pau – and the old lady has a special task for our captain (and for Bones – poor guy, *giggle*). Then Khan wakes up again and he faces Spock for the first time after the big mind-meld our Augment has now memories of (until now).

Well, and for all who are very sensible: Be careful. There comes a new cliffhanger.

Have fun with the new chapter – and for all moms: Have a nice rest of Mother’s Day.

Love

Your Starflight

See the end of the chapter for more notes.

Chapter 86 – An usual task

Warily Jim headed to T’Pau’s office. He really hoped the uncrowned matriarch was in a good mood – even if she would have stated that she as a Vulcan had no moods at all. The old lady could be scary as hell, this much he knew, and he really didn’t want to be at the receiving end of her sometimes icy behavior.

Reminding himself that she was also Spock’s grandmother and that her grandson certainly got the one or other streak from her, which would make her more familiar, he entered her anteroom. The secretary replied to his polite greeting and announced his arrival to T’Pau, before he was led into the highest ranking priestess’ office.

Kirk lifted his right hand into an acceptable Ta’al and formulated the traditional words in Standard, “I come to serve, Ma’am.”
T’Pau sat behind her desk and returned the greeting with the traditional reply, “Your service is welcomed.” She waited until her secretary had left and closed the door, before she pointed at one of the visitor chairs. “Please, James, have a seat.”

For a moment Jim was utterly surprised that she addressed him with his given name, and then he tried to control his features and sat down with a polite, “Thank you, Ma’am.”

T’Pau’s gaze told nothing if his slip of control had been recognized or was simply ignored. She came straight to the point. “I heard that Mr. Singh is doing better.” It was a statement, not a question, yet Jim felt obligated to answer,

“He was awake yesterday evening and this midday he spoke with Dr. McCoy and me. Yet… he is disoriented and doesn’t seem to remember what happened at all,” Jim told her quietly.

T’Pau lifted a bow. “As far as I was informed Mr. Singh suffers a TBI. Temporary amnesia is quite common in those cases – even for Vulcans. Patience, James – even if this is much to ask of a human as emotional as you are.” It wasn’t meant as an offence, and Jim took none in her statement. It rather showed that the old Vulcaness seemed to understand him a little bit, and this realization pushed some of his inner stiffness away.

His attention was still drawn utterly to the matriarch, as she continued, “I want to speak with you about Spock’s upcoming bonding-ceremony, but also about your stay here and how to proceed from here on. Selek informed me that he already contacted a lawyer who will conduct your case. I did some research concerning this man and agree with Selek’s choice. It was well done. Yet you’re going to need all the help you can get.”

Kirk grimaced. “I know, Ma’am. My officers and I are in deep water because we covered for Khan. Hell, I practically lied to my superiors and more or less hijacked the Enterprise for a private purpose as I first recovered Khan’s crew and then sped to New Vulcan afterwards. I practically stole my own ship. All right, Luengo was the leader of a conspiracy that threatened the whole Federation and he had to be stopped, yet I broke more rules than the first officer of the Bounty.”

For the tiniest moment the young captain thought he saw something close to amusement in the matriarch’s dark eyes, as she replied, “I’m familiar with this classical Terran novel. It’s a good comparison, after all the Bounty’s first officer did what was necessary to keep the crew safe – even against his captain. Just like you did as you went against Luengo and the others.” She cocked her head. “As Spock told me you don’t always play by the rules, yet you do what has to be done despite any personal consequences. Some of your admirals may call it insubordination, other people call it heroism. The truth lies, like always, somewhere between both sides.” She leant back in her chair.
“When you work out a strategy with your lawyer on how to act during the upcoming trial, please remember that you have my support. I am considering pressing personal charges against Admiral Norton for taking me hostage and against the Elite Security for doing nothing against it. Our government will also press charges against Starfleet Command for the illegal storming of our seat of government, for threatening the high minister and rightful accepted asylum seekers, and for injuring our guards.”

Jim frowned. “Starfleet Command wasn’t responsible for…”

“At the time the crimes happened, Admiral Luengo was the rightful interim Chief of Command and therefore the highest ranking officer of Starfleet Command. Two of his direct underlings – Admiral Norton and Captain Styles – followed his orders and went against established law; something they shouldn’t have done despite their mission. Every man or woman in his or her clear mind should know where the red line is, yet Norton and Styles overstepped it greatly. And with Norton still being a legitimate admiral at this time, Starfleet Command was indeed responsible for what happened in Selek’s office and later aboard the Excalibur – and aboard your ship. This has to be punished.” She folded her hands on the desk top. “And, by the way, by doing this Command will be brought to make up for everything that was done to us – something I plan to use to your advantage.”

Jim knew what T’Pau meant without voicing it. Command would do everything to straighten out the crimes the treacherous officers had done against New Vulcan. They would think twice before going completely against T’Pau’s and Selek’s wishes. Yet he was baffled that the old Vulcaness was obviously so hell-bent to get him out of the hangman’s loop he had put himself into.

“Why do you want to help me?” he asked quietly. “Because my realization what was going on saved Sarek in the end?”

A pitch black eyebrow was lifted. “Of course I’m grateful that my eldest son’s life was spared. Yet this isn’t the whole reason why you have not only my and Selek’s support, but that also of our whole people. You, James, saved the most important matters of our culture.”

“Me?” Kirk didn’t believe his ears. “Ma’am, I couldn’t save Vulcan. I failed you all and…”

“You did more than you are obviously aware of,” T’Pau interrupted him; her voice softened. “Because of your intervention there was enough time to save at least some of our most important and sacred artifacts and documents. Without them our surviving people would have lost the roots of our culture and therefore the hold they need now while trying to rebuild our race.”

Jim gulped as he realized what T’Pau was implying – but in his eyes what he had done hadn’t been
enough. “As much as I’m glad for you that you could save religious objects and documents, but this wasn’t my merit. I could have done so much more, yet I didn’t.” He looked miserable – and T’Pau lifted a brow again; realizing what went through the young human’s head.

“Tell me, James, did you know that our enemy came from the future and had therefore enhanced technologies we still have to develop?”

Kirk looked up. “No,” he said; shaking his head in surprise. “I only learned later from Selek where Nero came from.”

“So there was no chance for you to stop the drill before it was too late, yet you still tried, didn’t you?”

“Yes, but…”

T’Pau didn’t let him finish his self-accusations. “Did you waste valuable time fighting the Romulan guards off, who expected you on the drill?”

“No, of course not! I…”

“Did you stop the drill in the end?”

“Yes, but it was too late and…”

Again T’Pau interrupted him. “None of us, James – not even Vulcan engineers! – would have been able to stop the attack before the point of no return was reached. You were a young cadet in his final year at the Academy, facing a whole life – yet you were ready to die that day. To die for a planet that was not yours and that was, despite that it was a member of the Federation, alien to you. You risked your life to buy the surviving ships time to evacuate as many people as possible – even jumping after a colleague to save him, knowing full well that the chance for success was practically zero and that your action would lead to certain death, yet you risked your life again to help your colleague. Only the skills of another young man prevented the worst from happening to you and the other man, as he beamed you two up in the very last second.”

Jim stared at her; astonished. “How do you know…?”
He didn’t end his question, as he saw the short flash of humor appearing in the matriarch’s dark eyes. It vanished so quickly he thought for a moment to be mistaken, but T’Pau’s next words affirmed his guess. The old Vulcaness was amused.

“Selek has many talents – and to hack into Starfleet’s databank to learn more about you and the other younger visions of his former crew mates, was an easy task for him. He told me of what you did – what you risked. ‘A typical Jim-Kirk-stunt’, he called it, and given what you did within the last weeks I have to agree with him. To use a human phrase: You like to dance between the rain-drops. Even if this is the most illogical saying I ever heard, I do understand what it means. And it fits you well.”

Jim rubbed his neck; embarrassed. He knew that T’Pau had just given him a compliment, yet he still didn’t think he deserved it.

The matriarch seemed to read his thoughts, as she turned very serious again. “I repeat, James, you made it possible that a few thousand Vulcans and the most important artifacts of our culture could be saved. From this we have a tiny but real chance of re-building our species and our culture. There has never been a greater support from offworlders concerning our people.”

Kirk blushed a deep shade of red, while he lowered his head. “Yet so much was lost. I even can’t really grasp what all the loss means for you. The severed bonds, the millions of deaths, losses in every clan…”

“Yes, our people are facing the darkest time of their existence. Even in pre-Surak times we didn’t suffer like now. But that we even have the chance to survive is because of you – and your colleague.”

Kirk looked around himself and his gaze fell on the shelves with the documents. “This is what you mean, isn’t it?” he asked quietly; pointing at the ancient scripts. “Are they from Surak’s time?”

“Some of them are from Surak’s time, some of them were written before his birth, others shortly after his death.” She lifted a brow again. “What do you know about Surak?”

Jim took a deep breath. “He reformed the Vulcan way of life. Your ancestors were fierce warriors and your people were about to kill each other. He cultivated them by using logic and peace as a way out from the destruction that was about to sweep across your planet. He taught them how to tame and to control their emotions – sometimes even to suppress them. I’m not aware if he also was the one
who taught you how to meditate to find this level of steadiness and peace every day despite everything that happens, but it was he who began this way of calmness that led to your today’s peaceful ways.”

T’Pau took a deeper breath. “You know more about him than many other humans I met,” she stated.

Jim shrugged. “Spock told me about him – and I was curious and did some research. I think if you want to learn about something about foreign cultures you have to start with their religion and their traditions. And with my first officer being a Vulcan it was only… logical to learn about Surak to understand Spock better.” His look wandered back to the shelves. “At least a few things from Surak’s time could be saved,” he said quietly; a sad tone in his voice.

“Yes, but they are not all that was brought to safety before Vulcan was lost to us forever. The most important relic – the root of our today’s culture – was saved, too,” the old Vulcaness told him.

Jim frowned. What could be small enough to be taken with a handful of Vulcan priests while being beamed away, and was of such great importance as this?

Again T’Pau proved that she was very skilled in reading people. “You are curious what this could be.” She leant back again in her seat. “It was the relic that holds Surak’s *katra*.”

Promptly the young captain’s jaw dropped, while he gasped. “Surak’s… *KATRA*?” His eyes widened even more. “Spock told me that the *katra* is… is comparable with what we humans call ‘soul’. Are you telling me that Surak’s *soul* still… uhm… exists and could be taken with you as you were evacuated from Vulcan?”

The matriarch remained placid. “Yes, his *katra* seemed to be lost for centuries, and then it was saved almost a hundred years ago. Another Starfleet captain had a hand in it. I think you are going to find this amusing. It was Captain Archer, captain of another *Enterprise*.”

Jim’s eyes were about to pop out of his head by now. “Archer… saved Surak’s soul?” He had a certain assumption when this happened: During the crisis in which Vulcan Command tried to start a war against the Andorians and T’Pau had been still young; trying to save her people by reminding them of Surak’s teachings – a path they were about to leave. Archer had left out several details in his report concerning his stay on Vulcan; stating that he had to stay silent because of the Vulcan culture. And thinking closer about this all, Jim was convinced that these ‘details’ referred to Surak’s soul. “I… I learned from Selek that Vulcans can transfer their souls to family members before they die and that they… continue to exist somehow. But… they can be… transported?”
“Sort of,” T’Pau nodded – and for a moment her gaze became absent. “As the grounds began to shake and Spock appeared in the Great Hall in Mount Seleya, calling that we had to leave immediately, I knew that something bad would happen. I couldn’t assume that we were about to lose our home planet, yet I realized that everything that was holy to us was about to be harmed. So I took with me the relic that holds Surak’s katra, while some other priests gathered as much as they could, before they followed Spock out to the mountain’s side.” For a moment she seemed to age several decades and she looked almost fragile despite the mighty robes. “It turned out that even I understated the situation. The only things which were left for us were those documents over there and Surak’s katra. All the other katras, billions of them, died with our planet.”

Jim felt his throat tightening as he realized the enormity the surviving Vulcans mourned. The immortal essences of their ancestors and family members didn’t exist anymore – lost forever like their destroyed home-planet. “I’m sorry,” he croaked; feeling his eyes moistening.

T’Pau didn’t need to ask what he was sorry for. It wasn’t an apology, but an expression of compassion that was plainly written on his even features and in his dampening eyes.

“‘To look back will never change the present; only the look forwards will’, an old saying of Surak goes,” she said quietly. “Kaiidth – what is, is. To accept this is the first step of continuing the path that leads to the future and therefore to life.” She leant back in her chair.

“Surak was indeed wise,” Kirk murmured; his composure back in place. “It’s no wonder that Spock devotes him…” He stopped, before he corrected hastily. “I mean, Spock honors him.”

T’Pau looked straight at him. “I do know that my grandson has effort in controlling his human emotions, so you don’t have to cover for him in choosing synonyms for his point of views and… feelings. In my opinion he has embraced the Vulcan way just like any other full-blooded Vulcan, yet he regards himself as imperfect in being a Vulcan.”

“Guess whose fault that is!” Jim grumbled; knowing from his first mind-meld with Selek how much Spock had suffered as a child from the bullying of his schoolmates and his everlasting attempts to meet his father’s never voiced yet still existing demands to be ‘fully Vulcan’. Given the fact that Nero’s influence on their personal life only began two and a half years prior, it was logical that Jim’s Spock and Selek experienced the same childhood. Therefore the Enterprise’s first officer had endured the same affronts, insults and bad behavior of the other Vulcans like Selek did – something their father (and grandmother) could have prevented, or, at least, would have been able to offer him the comfort the little boy simply needed from time to time. But they didn’t, which resulted in Spock’s wrong conclusion that he disappointed them by being not ‘fully Vulcan’. And this was something that made Jim furious. He had to force himself to stop thinking about it; otherwise he maybe would say something he would regret later.
A moment later he realized that the matriarch’s fine hearing must have heard his uttered words of a few seconds ago, because for a second her lips were pressed into a thin line.

Knowing that he shouldn’t irritate the matriarch given his friends and his own position at the moment, he took a deep breath. “Sorry, Ma’am,” he apologized, yet his next words made it clear that he wouldn’t change his opinion because of the current situation; his loyalty to Spock shining bright in them, “I know that it isn’t my place to criticize the stony way Spock was forced to walk as a child, yet I can’t help myself. I have sometimes this silly human urge to shield him, even against things which happened in the past.”

T’Pau lifted both brows this time. “To stand up for his T’hy’la is something every Vulcan respects – and you are protective of Spock. This much I have understood by now – even if he is the stronger one of you two.”

“In body and mind, certainly,” Jim agreed. “But when it comes to his personality many people misunderstand him and hurt him without realizing it. I will never tolerate this! Spock is my friend – my brother in soul – and anyone who tries to attack him verbally or in person, or hurts him in any other way, will have to face and answer to me!”

The fire that suddenly flashed in his blue eyes, told T’Pau more than words ever could. Vulcans, despite their chosen way, weren’t immune to strong emotions – like love in any kind of way. And this young human man in front of her, who had managed to be the Federation’s youngest hero in history, loved her grandson fiercely. Not in the way he loved the former Augment-leader, yet his feelings for Spock were equally strong. He would stop at nothing to protect his chosen brother.

Slowly she nodded at his strong statement. “Spock can call himself fortunate that he was blessed with a T’hy’la like you. And I begin to realize why Selek still mourns the loss of his own Jim Kirk. You are indeed two parts of one katra.” She folded her hands on the surface of her desk again. “And since our talk has reached this topic, I want to speak with you about something that concerns your friendship with Spock.” She took slowly a deeper breath. “As Spock’s T’hy’la you’ll join the bonding-ceremony between him and Miss Uhura. I learned during Sarek’s and Amanda’s wedding that you on Earth knows a similar position during a bonding-ceremony. It’s called ‘the groom’s best man’.”

Jim made an affirming gesture. “Yeah, the best friend of the groom testifies the correctness of the wedding, assists the groom in the days before the ceremony and… well, he is the one who gives the groom the wedding band. I don’t know if latter is a custom between Vulcans, but…”

“It isn’t, yet Sarek gave Amanda a ring. And I think Spock will stick to this part of Earthern tradition,
too. He’ll need your help in selecting it – and to make the other arrangements. Usually the groom’s family is responsible for the latter, but given the fact that Sarek still has to take it easy after his surgery and that our clan has been drastically reduced after the Great Loss, Spock would have to make the arrangements alone if he wouldn’t have a T’hy’la – you.”

Kirk’s eyes widened as he realized to what the old Vulcaness was up to. “I shall… organize Spock’s and Uhura’s wedding?” He gulped; feeling cornered. Not because he didn’t want to help, but… “I have absolutely no clue, how this ceremony runs – or what is expected of me.”

“I’ll instruct you – and support you whenever support is needed. I contacted my younger son, Silek, on Hydrilla. He and his wife will travel to New Vulcan within the next week. But given you and your officers’ position with the upcoming court material, Spock and Nyota should marry as soon as possible so that no-one can separate them. It would delay the ceremony if Silek would have to organize the bonding-ceremony by himself after his arrival.”

“So it’s up to me to throw Spock the wedding party,” Jim sighed – before he suddenly began to grin. “Bones is going to faint, when he hears this,” he snickered, but sobered up as he remembered where he was and with whom. He cleared his throat and looked sheepishly at her.

T’Pau ignored his little slip. “As I said I’m going to support you – in both cases: your upcoming trial and Spock’s bonding ceremony.” She took a small disk from her desk and offered it to Kirk. “I compiled information about traditional Vulcan bonding-ceremonies for you. They are translated in Federation Standard. You also have to learn a few Vulcan sentences, because you will have to answer some traditional questions which will be asked by the priest who will perform the ceremony. I’m certain that Spock or Silek will help you to practice the pronunciation. One of my assistants will also provide you and Dr. McCoy with traditional robes.”

Jim cocked his head, while he took the disk from the matriarch’s aged hand. “Dr. McCoy shall attend the ceremony, too?”

“Yes. I have come to understand that Dr. McCoy is also a close friend of Spock, and the speaker of Nyota’s clan. As such he will attend the ceremony within the family circle.”

Kirk needed all his control to suppress a smirk. ‘Bones is going to LOVE this!’ he thought gleefully; imaging his friend wearing long Vulcan robes and standing in the middle of the day in the hot sun, trying to compose a neutral face.

“He will be honored, Ma’am,” he said, before he bowed his head – remembering his good manners. “As I’m honored to arrange Spock’s wedding.”
“You should be,” she affirmed nonchalantly. “You are the first offworlder who is accorded to this honor – and to the House of Surak.” She watched how the young human paled, and added, “But given your many talents I’m certain you’ll manage.”

Jim almost pulled a face. ‘Just have a look. The old hag has some humor – even if it is at my cost!’ Aloud he answered, “I will not disappoint Spock – or dishonor his clan, Ma’am. I’ll do my very best.”

“I know, James,” she replied almost casual. “As Spock’s T’hy’la you are accepted within our family by very ancient, yet still existing laws. This is another reason why I will aid you during yours and Spock’s court material.” For the tiniest moment the left edge of her mouth curled, as she saw the shock on Kirk’s face; knowing the reason for it. “Yes, James, you are under the protection of the House of Surak from now on.”

Jim was at loss for the right words. And given everything that happened within the last weeks, he was just astonished enough now that even his quick mind didn’t come up with any kind of answer. “Uhm…” Was all he could muster.

“The correct answer is, ‘I’ll honor my T’hy’la’s House until death parts us and our katras remain as one in eternity’. ”

Even if Jim simply knew that with this comment T’Pau was pulling his leg in her very own Vulcan way of dry humor that her people sometimes displayed in humans’ company, Kirk also realized that she was serious. With dry mouth he repeated the sentence; grasping only now that he now belonged – more or less – to Sarek’s family; Spock’s brother so to speak. For a moment the humorous part of him flared up and he would have loved to ask T’Pau if he could address her as ‘granny’ from now on, but he suppressed the urge; knowing that it would be utterly unwelcomed. Therefore he bowed deeply and waited for what the matriarch would say next.

“I’m sure that Spock will answer all your questions you certainly have.” She leant back again. “Do you have any further questions only I can provide you with answers?”

“No, Ma’am, I’m…” Jim stopped as a thought occurred to him. “Ma’am, there is indeed something I wanted to ask you. It concerns Joaquin Weiss. See, he has made friends with two of my junior officers and they kept him company until he came here to New Gol. I wanted to ask for your permission that those two can visit him when they’re off duty. Their company… does him good and gives him a feeling of safety.”
The matriarch hesitated a moment, then she nodded shortly. “If the two young men will not disturb our daily routine here, they may visit Mr. Weiss. Distraction and security are necessary for him given his whole situation.”

Jim bowed slightly. “Thank you very much, Ma’am. I will instruct them to stay quiet.” He didn’t expect an answer, and didn’t get one. Rather the old Vulcan woman straightened her shape.

“If this is all I release you to return to your bond-mate’s side.” It was a kind of dismissing him, but Jim did hear the softer tone in her voice.

“Thank you, Ma’am,” he answered and rose.

“Farewell for now, James,” she used a traditional Terran greeting, what showed Kirk her respect.

He managed to form another Ta’al. “Live long and prosper, Ma’am,” he said; bowing afterwards for the uncounted time, which was answered with a short nod. Quickly he left the office, flashed the secretary a smile – what was answered with a lift of an eyebrow – and returned to his room.

ST***ST

“You are going to do WHAT?” Leonard McCoy was famous for his outbursts which sometimes rocked the medbay – or the briefings with the other officers. That he had controlled himself until now after everything that happened within the last weeks, was something Jim was ready to praise him for. But just right now the good doctor forgot any kind of composure. Eyes wide, jaw hanging open, expression thunderstruck he stared at his best friend and commanding officer; simply not believing his ears.

Jim leant against the table in Bones’ and Joaquin’s room and sipped at the glass of water he had helped himself to after he returned from T’Pau’s office and after he checked on the still sleeping Nien.

“I’m going to arrange Spock’s and Uhura’s wedding-ceremony,” he repeated; his grin wide. “T’Pau in person gave me that task – and who am I that I disappoint Spock’s granny? Now, after I practically belong to his family?”

McCoy’s eyes bulged even more. “You do WHAT?”
Kirk chuckled and placed the empty water glass on the table top. “As Spock’s *T’hy’la* I’m welcomed in his family and I’m now under the protection of the House of Surak. T’Pau’s words, not mine,” he added, as he watched his friend gasping for air. And for good measure he mentioned the next fact that would freak out his CMO – no doubt about it. “Oh, by the way, as the speaker of Uhura’s family and Spock’s friend, you also have to attend the ceremony – kind of second best man, or something like that.” His grin was about to split his face, as he watched Leonard paling. Smirking he continued, “You’ll be provided with the correct Vulcan robes for the ceremony, just like me.”

It really could be called fortunate that the next chair was close behind Bones, as he let himself fall on its seat. “I will WHAT?” he more or less squeaked.

Kirk couldn’t help himself anymore: he began to laugh – hard enough to shed some tears. “Sweet Lord, Bones,” he gasped; shaking with laughter. “God, that face!” Nonchalantly he pointed at his friend. “You should see yourself!”

Promptly the CMO frowned darkly. “If this is one of your sick jokes, Jim, I swear I will…”

“No joke, promise!” the young captain snickered; lifting both hands in mocking surrender. “We both will attend Spock’s bonding-ceremony, I’ll be his ‘best man’, so to speak, and you will stick around because you are the ‘speaker of the bride’s family’. And, of course giving the fact that this is a Vulcan ceremony, you and I are going to wear Vulcan clothes.” He cocked his head; still fighting off some more chuckles. “Heavens, Bones, close your mouth! There are no bugs to catch.”

McCoy did hear Kirk’s words, yet he didn’t grasp them, as he continued to stare with hanging jaw at his friend.

“Is there a particular reason that the Doctor opened his mouth without giving one of his long strains of illogical comments?” The deep voice from the entrance made both men look over to the door, and while Jim still grinned, McCoy seemed to be torn out of his shock at Spock’s arrival. Nonchalantly he stuck his right index finger in Spock’s direction instantly and growled,

“That was *your* idea, just admit it! That was *your* idea of pay-back for all the little discussions you lost during the last two and a half years. And to prevent me from any escape, you stuck behind your grandmother and let her give me the task so that I can’t decline without risking an interplanetary scandal. And the whole while you stay back and rub your hands in delight!”

At these accusations both slanted brows almost vanished beneath Spock’s black hair, while the
young half-Vulcan looked with as much surprise as it was possible for him at the CMO. “May I ask to what you refer to, Doctor?” he asked; his voice betraying his confusion, before he cocked his head. “And if you mean with ‘little discussions’ my permanent attempts to neutralize your illogical ways of acting and arguing, then please note that I succeeded in render you speechless in 72.6 percent of all cases. So, to use your words, I ‘won’ more of our ‘discussions’ than you.”

“You… you counted our discussions?” Bones asked flabbergasted.

For the tiniest moment there seemed to be something close to satisfaction in the Vulcan’s far too human eyes. “After I came to know your personality better, I assumed that you would state a wrong result of our arguments at the first given possibility. And to prevent false rumors from spreading, I – indeed – counted our talks concerning different opinions.”

McCoy opened his mouth and closed it again; looking like a fish out of water. And promptly the Vulcan topped his little teasing attack with pretended worry, “Doctor, aren’t you feeling well? If the heat finally has taken its toll on you, I will call Healer Sorel to attend to you.”

“Ha, what for? There only will be another Vulcan who drives me nuts!” Leonard groused; finding his voice again.

“To get in touch with rationality and logic should prevent a mind from being ‘driven nuts’. Maybe this offers an enticement for you to control your emotions for once and to try some rational thoughts ruling you.” Spock looked very innocent.

“Rational thoughts’?” Bones complained. “The last time I had ‘rational thoughts’ I tried to give you and Uhura help by asking Selek for support, and just look to where it brought me! I have to wear a nightgown in front of all, while I’m roasting in the sun!”

This time Spock was indeed confused. “A nightgown, Doctor? Who demands something like this from you?” He was clearly at loss by now.

“Who’, you ask? Your dear granny!” McCoy growled; shooting the first officer another glare.

It was obvious that the CMO’s statements were as clear as mud for Spock. “T’Pau asked you to wear a nightgown?” He looked at Jim; hoping his friend and captain could explain what was truly happening, because McCoy made less and less sense. Then the Vulcan almost frowned, as he saw how Kirk had wrapped his arms around himself and had lowered his head. “Jim, maybe you can
clarify for me what’s going on h…?” Spock stopped himself as Jim lifted his head and he saw the tears which rolled over his T'hy'la’s cheeks – tears of silent laughter. Jim tried to control himself, but he just couldn’t stop the guffaw anymore that broke out of him.

“You two,” Kirk finally gasped; wiping some tears away. “I swear, one day I really will…” He never ended his humorous threat, because new laughter shook his whole body.

Promptly Spock straightened his frame and clasped his hands on his back. “Captain, if you simply would tell me what makes Doctor McCoy even grouchier than usual and what amuses you beyond all measure, I would be able to give the correct answers and reactions you two obviously expect from me.”

Jim pushed himself away from the table and crossed the room to his indignant Vulcan friend; hiccupping from all the laughter that made his belly ache by now. “Spock,” he began, but failed miserably at becoming serious. Again he had to chuckle and bit his lips in another desperate try to sober up.

“I think you are having something humans call a ‘laughing-fit’, Captain,” Spock deadpanned; cocking his head in barely hidden curiosity.

“Yeah, whatever!” Kirk snickered and looked with still wet eyes at his first officer, but there was also a warmth in his gaze that washed gently over the stiff Vulcan. Again he cleared his throat. “Spock, I talked with T’Pau a short while ago and she told me some very interesting facts of being someone’s T’hy’la – especially concerning wedding-ceremonies and their preparations.” To speak about the serious topic finally calmed the young captain enough to put his whirling emotions back under control. “I don’t know what she told you already, but…”

“T’Pau and I haven’t spoken together since her meeting with Uhura, my father and I in the hospital,” Spock interrupted him; curiosity mirrored in his eyes. “She talked with you about my upcoming bonding-ceremony?”

Jim nodded. “Yes. She said with your father still on medical leave and your uncle only arriving next week, I – as your T’hy’la – should make the preparations for your wedding. Something I will love to do, even if I haven’t the tiniest clue what is expected from me.”

Spock’s face seemed to be expressionless like always, yet Jim had learned to read his friend like no-one else. And therefore it didn’t slip his attention how Spock’s features softened the tiniest bit, while something in his eyes lit up. “It would be a great honor for me to call you my nenikaya t’ Van-Kal T’telan, Jim.” At Kirk’s confused face, he translated, “You would call it a wedding planner.”
“Be careful while choosing the flower arrangements, Jim. You know that you are allergic to the half of them,” Bones commented wryly from his seat he still hadn’t left. Then his gaze wandered to Spock. “That is, if Vulcans use flowers at ceremonies at all.”

“Doctor, even you should realize that it would be a great waste to use flowers during any ceremonies on a desert planet, whose flora is reduced to a minimum. Of course we don’t use flowers,” Spock rebuked him, before all of sudden his eyes widened. “But Nyota certainly expects some. Doesn’t a bride have a bridal bouquet?”

“Yes – and after the wedding ceremony the bride throws the bouquet away and the unlucky lady, who catches is, will be the next who falls into the trap of marriage,” McCoy grumbled.

Jim rolled his eyes. “Bones, some marriages are ending in ‘happily ever after’, you know. And given Spock and Uhura I have no doubt that they’ll have a happy, long life together.”

Kirk turned his attention back to Spock. “Uhura also expects a ring from you. T’Pau thought that I could be of help by giving you some advises.”

Spock nodded. “Logical – after all you certainly have greater knowledge about Earthen traditions concerning wedding ceremonies than I possess.”

“What? You admit that there is something you don’t know?” Bones couldn’t skip to taunt. “Hallelujah, I mark this day red in my calendar!”

Jim turned around; grinning broadly. “I’ll mark this day in my calendar, too, because this is the day you begin to learn some Vulcan sentences.”

“What?” Bones gasped again.

Kirk looked to the ceiling. “Gosh, has the heat really caught up with you, why else are you mainly reduced to squeaking this one word?”
“Maybe it has to do with the fact that you two are giving me the shocks of my life and are about to drive me crazy,” McCoy muttered.

“Doctor, you can’t be ‘driven crazy’,” Spock said wryly. “It’s impossible to cause something that has already happened.”

Again Bones’ jaw was about to drop to the floor, while Spock looked – in Jim’s eyes – almost smug. Then the Vulcan turned his attention back to Kirk. “If you’ll attend the ceremony as my accepted T’hy’la, you have to learn some Vulcan sentences, too.”

Jim, who had been on the brink of getting another laughing-fit at the last to and fro between his two friends, stopped dead in his tracks. Well, Spock was right and… And didn’t this sneaky Vulcan look almost gleeful that he, Jim Kirk, sat in the same boat like Bones? Yes, in his very own, expressionless yet existing way Spock really seemed to enjoy the position T’Pau had brought his two friends to.

‘Vulcans and free of emotions and glee – my ass!’ Kirk thought. But he also had to admit that the whole situation had, indeed, a streak of fun.

He sighed. “Yeah, T’Pau told me that I have to answer some traditional questions in the traditional way during your bonding ceremony. But I’m not that lost as you seem to think, my dutiful first officer,” he pointed out with a triumphant grin, while he took the disk out of his trouser pocket. “T’Pau gave me this. She said that it contains all the information I’m going to need, including the traditional sentences.” He watched how Spock cocked his head and opened his mouth certainly to state that he didn’t think Jim was ‘lost’, and added quickly, “I’m sure I’ll manage those few words.” Then he frowned as he remembered the times he had listened to the Vulcan languages and groaned, “All right, maybe I’m going to need some help. But, hey, Uhura will certainly give Bones and me a hand. Or Selek would.”

Spock looked a little bit offended. “Jim, as if I would let you struggle with something when I could help it. Of course I will practice with you and Dr. McCoy. And given the whole preparation: I would be grateful to have your support with it, yet I will not let you do the whole work alone. And I’m certain that my father will give you a hand, too – as much as he is able to in the moment.”

Jim smiled at him; knowing that this was a serious topic now, even if some laughter still bubbled in him. “Thank you, Spock. I don’t want to mix up the certainly most important day in your life. And the same goes for Bones, right?” He looked over his shoulder at Leonard, who dangled on his chair, supported his upper body with his left elbow on the table and looked for the whole world ready to surrender to anything that could happen to him.
“Of course I’ll support our hobgoblin,” he grumbled. “And… I’m honored to be invited to your wedding, Spock,” he added; failing in his attempt to hide the joy that somehow lurked beneath all the grousing.

“That’s the spirit!” Kirk beamed at him, and then he became stiff as deep in him something began to stir. He needed no more than a second to recognize it. “Nien is waking up!” he called; rushing out of the room.

Spock and McCoy exchanged a glance, before the Vulcan turned around and followed Jim; Bones – chuckling under his breath something about ‘fools in love’ – on his trail.

Jim sat down on Khan’s bedside, smiling down at the older man as the Augment slowly blinked and woke up. His eyes looked groggily around before they came to rest on Kirk, and instantly Nien relaxed.

“Hey,” Kirk greeted gently; taking one of Khan’s hands into his. “How are you doing?”

“Don’t know,” came the mumbled reply, before the Augment seemed to clear his mind. “I felt… something from you. You were… upset?”

Jim shook his head. “No, rather the opposite. Those two slobs over there gave me a laughing fit,” he smirked; flicking a thumb backwards at his two friends. “And all of this because Bones doesn’t want to wear Vulcan robes.”

“Hm, if this would be all I could adjust to it, but certainly this whole ceremony will take place in the middle of the day and I really don’t look forward to being roasted in this blaring heat of a sun!” McCoy grumbled.

“Doctor, contrary to your belief Vulcans do not seek out ‘the blaring heat of a sun’ on principle – and we are, as I often stated, a race of logic. Of course the ceremony will be in the early evening for the comfort of anyone.”

Khan, realizing that something important must have happened, squeezed Jim’s hand to get his attention. “What is this all about?” he asked quietly.
He received a confused glance, and then Jim rolled his eyes at himself and sighed, “I forgot, I haven’t told you until now. Something very good is about to happen.” An almost face-cracking broad smile spread over his face. “Spock and Uhura are getting married.”

The Augment’s eyes widened for a moment, before he deadpanned, “About time.”

Jim burst out laughing, while Bones groaned, grimaced and murmured something about ‘the whole world is in love.’

Spock couldn’t suppress a sigh. Humans! Then the Vulcan’s gaze wandered to Khan and their eyes met. It was the first time they had met after the Augment had woken and seeing the enhanced man in his still weak condition – the tracks of the battle and the received injuries still standing out – raised something deep within the young Vulcan. Something humans would call compassion.

“Mr. Singh,” he greeted. “I am pleased to see you awake finally and, as Jim would say it, ‘out of the woods’.”

Nien’s gaze hung on the slender tall form of the alien man who had once been one of his most loathed enemies and who had turned into a comrade in arms – and more. They had grown to respect each other, had trusted each other with the other one’s life and…

And there was something else. Deep down, in the edge of his still shut-off memories, Nien thought he could grasp some pictures from his earlier times as a boy and young man – mingled with the Vulcan’s presence. For a second he saw the green of jungles, the blue of waterfalls and the abyss of mountains – and Spock crouching down beside him. It made no sense – absolutely no sense at all. Yet he knew that something important had taken place while he was out cold. Something that was connected with the Vulcan. But as long as he couldn’t truly remember he thought it better to stay silent about these weird pictures.

So he tried to nod while he answered, “Mr. Spock, as far as I heard you took part in my rescue. Thank you for it – and for having Jim’s back.”

The Vulcan lifted in his typical way one brow. “You are welcome, Mr. Singh. And concerning Jim: He is my captain and my friend. Of course I watched out for him.”

Nien felt a smile tugging at his mouth. “Nonetheless: Thank you.” Then he remembered what he just learned and added, “My congratulations to your engagement with Lieutenant Uhura. You two make
Spock knew that it was absolutely illogical, but he felt the tips of his ears becoming warm. Gathering his full Vulcan body control he willed the blood out of his ears (and face), while he watched the Augment. Khan was Jim’s bondmate – his other half – and Spock made up his mind; not only because of politeness, but also because Khan’s interventions within the last weeks had saved Jim and also the Enterprise – and therefore Nyota and him, Spock, too. Clasping his hands behind his back, he said calmly,

“Nyota and I would be pleased if you would attend the ceremony too, Mr. Singh – if your health allows it,” he added quickly as McCoy drew a deep breath to protest.

“That has to be seen. The lad is far from leaving his bed any time soon,” Leonard pointed out.

Jim grimaced and winked at Nien, “Welcome to the club!”

Khan frowned; inwardly pleased at the invitation. “What club?” he wanted to know; confused.

“The club of those Bones fusses over worse than any real mother-hen ever could!” Kirk replied wryly; snickering as instantly the expected protest sounded,

“I do not mother-hen! I’m a doctor and as such I’m responsible for my patients.”

“Really, Doctor? Maybe you should start to spare your patients’ nerves then. That would demonstrate real responsibility,” Spock made a potshot and as Jim looked over his shoulder, he had to chuckle again. Spock stood there with a very innocent expression while McCoy glared at him.

“It remains to be seen whose nerves are more tried – mine or the patients. Especially when I have to treat patients like you and Jim! I swear, the first grey hairs I got are because of you two.” He heard Nien snorting in amusement and pointed a nonchalant finger at him. “The same goes for you, mister! I really thought I would lose you, your augmented nature be dammed. It was a close call I don’t want to experience again any time soon, so please stay out of trouble for once.”

Khan lifted both brows and looked at the CMO, while he saw – and felt – Jim cringing. “Was it… that bad?” he asked quietly; once again cursing the fact that his memories were blocked.
“Yeah,” Bones murmured quietly. “You went flat line for several minutes after the surgery – better to say after you woke up too early, spied Jim in full medical outfit, got a panic attack and then your body gave in. If it hadn’t been for Spock, who did his Vulcan-voodoo-magic on you, we would have lost you. Guess the kid’s condition in those minutes.” He nodded towards Jim.

The former dictator didn’t even realize that his mouth hung open. Staring first at McCoy and then at Kirk, he finally glanced at Spock, who still stood unfazed at the foot of the bio-bed; returning his gaze calmly. “I… was clinically dead?” Khan whispered; grasping what that meant – not only for him, but also for Jim. He had been dead – gone! Still he was here now, alive. And this only because of the Vulcan?

His face must have betrayed not only his shock but also his unvoiced questions, because the first officer nodded slowly. “Yes, your life indicators were completely down. I… sensed Jim’s distress and hurried to the PAR, only to learn that your body and obviously also your mind had shut off. As Dr. McCoy put it; it seemed that you didn’t want to survive – after being confronted with men in medical outfits and your mind obviously mistaking them for your former tormentors. I… melded with you, convinced you that there was no danger anymore and you agreed to follow me out of the world you had fled to. Jim joined our meld at one point and together we made it back.”

Spock’s voice sounded as composed like his whole stance was, yet Khan realized what the Vulcan had done for him. What Spock had risked saving him.

“You… came for me,” he murmured; astonished.

Promptly a Vulcan brow was lifted again. Khan couldn’t remember that these were the exact words he had said to Spock shortly before the mind-meld was ended, but Spock recognized them instantly. Taking a deep breath, he said softly, “Your body was seriously harmed and you thought yourself back in the hands of Section 31. You gave up – but I couldn’t allow this. You are needed, Mr. Singh – not only by your family, but also by your bondmate, who happens to be my friend. And… perhaps not officially but nonetheless you belong to the crew now – to those who are ‘family’, as Jim likes to say it. None of us would let you down.” He shifted slightly, like he wanted to mask some unease, before he added with a tight voice, “And I… apologize for the mind-meld I tried to force on you last year. Even in a fight to the death it is unethical to use this skill as an attack. There is no excuse for leaving the Vulcan way like I did at that moment, even in my emotionally compromised state.”

For a long moment silence hung in the room. Jim looked with big eyes at his Vulcan brother, Bones hid a smile and Khan – well, his gaze was fixed on Spock. He knew what it had cost the man to offer this apology, and for a second he felt something close to satisfaction, then this feeling faded away with rising understanding. “You wanted to avenge your captain – someone who is in a special way a kind of brother for you. You were in anguish – just like I was as I thought my crew, my
family, to be dead. Therefore I… understand what you did.”

“Yet it is no excuse for my failure,” Spock murmured; his body stiff.

Khan closed his eyes; a headache was coming. “No, but it’s an explanation.” He forced his eyes open again. “You are forgiven,” he murmured. “I can’t let you face one of your most important days in life with guilt weighing down your shoulders, can I?” Before the Vulcan could answer, Nien added, “And, by the way, I understood your actions a long time ago – certainly earlier than you did. To understand means to accept – and I accept that you simply reacted like I did in a comparable situation. Now you have to learn to accept it, too.” He smiled a little bit. “And if it hadn’t been for your people’s skills concerning this mind-melting-thing, I would be dead now. Therefore we are even – if you agree.”

Spock took a slow breath and bowed his head shortly. “I agree, Mr. Singh. Thank you.”

The Augment snorted quietly. “Well, than I thank you, too – after all it was you who brought me back from the dead.”

“Spock didn’t do it alone,” Bones grumbled. “As far as I understand you were confronted with some very nasty shit from your past as you hovered between death and life, and Spock saw no other way to get Jim to convince you to join the world of the living again. Your three minds were connected.” He shook his head. “It was almost like in a good old séance, only without candles and pentagrams.”

Even if these words woke some funny imaginations in Khan’s mind, he didn’t miss the point McCoy was making: Not only Spock, but also Jim had risked a lot to bring him back?

Looking at Kirk, he whispered, “Didn’t I tell you to keep the ball of danger low, Pyāra?”

Jim smiled; cupping Nien’s hand with both of his hands now. “And I already told you that I can’t give you this promise. Not, when your life – or that of my friends – is at stake.” He bent down and kissed the Augment’s still feverishly hot knuckles. “I couldn’t lose you, Nien. Not ever, damn the risk! And, besides, this wasn’t the first time Spock and I melded. You simply were with us in the boat, that’s all, so don’t freak, okay?”

“‘That’s all’!” Bones scoffed. “Hell, the stunt you two pulled” – he pointed at Kirk and Spock – “shocked even T’Pau. Sort of!” he added as he received another raised eyebrow from the first officer.
Khan frowned. “How many people know about our mind-melding?”

“A few,” Bones admitted. “Two Vulcan healers, Selek, T’Pau…” He shrugged. “Obviously it’s uncommon for three people to meld and therefore Spock’s stunt drew some attention.” His voice turned soft. “But our dear hobgoblin is right. This was the only way to save you.”

The former dictator nodded slowly; his eyes sought that of Spock again. “What did you see?” he asked; clearly uncomfortable with the idea of the Vulcan witnessing his nightmares.

“Dark corridors of some labs, faceless people – adults and children – and you had fled beyond these rooms to somewhere within the Indian landscape. You… were a boy, too, then but as you learned what you were about to miss if you wouldn’t follow me back, you accompanied me. There were… glimpses of what you went through during your time with Section 31 and this was the point you didn’t want to continue. I saw no other chance than to have Jim join us – after all you trust him utterly and I was still someone who you were wary of. Jim’s presence chased away the phantoms of the past and you followed us back to reality, where I ended our meld. Afterwards you were shortly awake, but soon went into coma – or a comatose condition.”

“Or a sort of healing trance,” Bones cut in. “Not even Healer Sorel was sure what happened to you – if you were in coma or simply very deeply asleep.” He shifted a little bit; his curiosity got the better of him. “Is healing-trance something common among your people?”

Khan pursed his lips shortly. “We… our bodies lower their functions when we’re seriously injured. At least that happened to Otto once and to Paolo, too. I think my body reacted in the same way.”

Leonard nodded. “The lesson is clear: Augments have a kind of healing-trance.” He bounced on the balls of his feet. “I was right!” he beamed.

Jim groaned. “Yes, oh mighty genius, you were right!”

McCoy grinned at him. “And don’t forget it. Maybe you and Spock will listen to me from now on when I prescribe medicine or bedrest.” His gaze found Khan. “And the latter goes for you now too, Mr. Singh. Do some eye care and I’ll bring you some food in the evening – testing what your stomach says about it.”

“Eye care”, doctor?” Spock was, once again, at loss.
“Off to dreamland, meeting Morpheus’ realm, kipping – *sleeping*, Spock!” Bones explained exasperated. “Dammit, you can’t tell me that you’re liaised with a human woman and befriended with Jim, but haven’t heard those idioms before.”

“The illogicality of human idioms never does cease to surprise me, Doctor,” the Vulcan replied indignantly. “It is really worth a closer study. Maybe I should suggest it to the New Vulcan Academy.”

“Hmpf!” was all, Leonard said to it, and Spock – obviously in high spirits, even if he would deny it till his death – said kindly. “And again, Doctor, I won one of our ‘arguments’. As you see, I didn’t exaggerate when I told you that I render you speechless 72.6 percent of our discussions. But I have to correct that number, because now the correct percent is 73.8.”

Bones’ jaw dropped down, while Jim began to laugh again – bending over Nien and pressing his face at the Augment’s neck. “I swear, one day they’ll drive me insane,” he snickered.

A far too warm hand weakly cupped his head. “Don’t fear, I’ll be with you and will hinder them in driving you even crazier than you already are,” Khan whispered; chuckling as he heard the protesting sound Jim made.

Feeling enveloped and safe in his bondmate’s presence, the Augment sighed and closed his eyes – his mind still too tired to think closer of everything he had just learned…

ST***ST***ST

Healer Sorel stepped into his office and sat down at his desk. Opening Sarek’s case sheet he added the last examination results, which showed that the ambassador was doing very much better. The surgical wound was healing well. There wouldn’t be even a scar left when Sorel was done with it. Sarek’s heart beat strong and even, his body had caught up with the blood loss and the other injuries he received during his captivity weren’t any problem at all.

Satisfied Sorel prepared the ambassador’s release papers for the next day, added a to-do-list and a prescription for the medicine Sarek would have to take for the next weeks. He was almost done with it, when suddenly a little device in his robe’s pocket began to beep.

His body stiffened as the alert startled him for a moment, then he quickly gave his terminal a code
and the picture of the screen changed – showing now the large cave hall beneath the hospital that held the 72 cryo-tubes with the sleeping Augments. Quickly he analyzed the data the scanners of the monitoring collected non-stop, and he took a sharp breath as he saw the results. One of the tubes had a malfunction – and whatever had triggered it meant danger for the man or the woman within the tube. And maybe for the other sleeping Augments, too, shouldn’t this malfunction be limited to this one tube.

Gripping a communicator he opened the frequency that would connect him with the human healer McCoy, while he hurried out of the office. Yes, Sorel was one of the most experienced healers of Vulcan, yet the Terran already had collected experiences with the enhanced individuals of his species – experiences which would be needed.

“McCoy here,” came the reply while Sorel already stormed towards Daniel Corrigan’s office.

“Sorel here. One of the cryotubes has a malfunction,” the Vulcan informed the Enterprise’s CMO. “If we don’t find the cause and can make the old technology work again, we will have to wake up the man or the woman who is in the tube. Please come to the hospital as quickly as possible. I will inform Dr. Corrigan to wait for you at the entrance.”

A loud “Shit!” followed by a hastily, “I’m on my way!” was all Sorel got from physician, and then the connection was shut off.

He reached Corrigan’s office and entered without any knock; startling the young human. “Daniel, we’ve an emergency I’ll need your support for.”

The young human rose from his chair. “How can I be at your service?” he asked his mentor.

Sorel took a deep breath. “The Augment you met in surgery a few days ago wasn’t the only one who stepped on New Vulcan. Down in our cellars there are 72 cryo-tubes, which hold his crew. One of the tubes is about to fail – and I think we have to wake the man or the woman who is inside to prevent his or her death. You’ve had some experiences with this special Terran race, therefore your support is needed.”

Sorel lifted a greying brow. “Yes, the tubes are of old Earthen technology that put humans into a kind of stasis. They were brought from the Enterprise to New Vulcan to ensure their inhabitants’
safety, but I received an alert that one of the tubes has a malfunction. I’ve informed Dr. McCoy who is on his way to the hospital. Please meet with him at the entrance. I will instruct you where to go to find the tubes.”

Daniel stared wide-eyed at him – realizing that he had only scratched the tip of the iceberg as he assisted the Starfleet doctor during the strange Augment’s surgery. Yet he was first and foremost a doctor – and there was someone in need for medical assistance. Questions could wait.

“I’m with you,” he said; already taking his med-kit with him. “Do you know what kind of malfunction threatens this old kind of stasis?”

Sorel shook his head, while both men headed towards the next elevator. “No, I don’t. But I will contact Elder Sanak. He’s already familiar with this old Terran technology.” They stepped into the next lift cabin “Hopefully our help will not come too late.”

TBC…

Chapter End Notes

Yeah, I know, that’s really a mean cliffhanger. And the outcome will be not like the one as Joaquin’s cryotube failed…

In the next chapter there will be action, many sensible moments and more cliffhangers.

I hope you liked the new chapter and, like always, I’m damn curious what you think of it.

Have a nice start into the next week

Love

Yours Starflight
Chapter Notes

Hi, my dear readers,

Like so often at the beginning of a new chapter I want to say ‘thank-you’ for all your comments concerning the last installment. I know that you all are really curious what will happen next – and what’s about the failing cryotube and its habitant.

Therefore I do not want to keep you waiting any longer and hope that you’ll have fun with the new chapter.

Love

Yours Starflight

See the end of the chapter for more notes

87. Chapter – Decisions

It wasn’t really a surprise that Dr. McCoy wasn’t alone as he and Daniel arrived in the large cave that held the cryotubes. A very nervous Jim Kirk and a tense Spock accompanied them.

“Long life and peace!” Kirk greeted quickly; offering like Spock a ta’al before the young captain instantly continued, “How is the man’s or woman’s condition?”

Elder Sanak, who had arrived only a few minutes earlier, looked up from the cryotube that gave them trouble now and answered the greeting shortly with his own ta’al, before he replied, “The man is alive, but the malfunction… confuses me. I can’t detect the reason for it.”

Spock had already hurried to him and kneeled beside the cryotube; examining the mechanism.

McCoy had closed the distance to Sorel in the meantime, who came straight to the point, “The first read-outs of the med-scanners say that the man’s life indicators are changing.”

“In what way?” Bones asked; heading toward the cryotube in question.
“Pulse and blood circulation are increasing – only slowly, but continuous,” Sorel informed him; falling into step with McCoy; Daniel and Jim on their heels. Spock had risen to his feet and walked from tube to tube.

“What about the others?” Kirk asked him.

Spock lifted a brow. “They are still functional, but as long as we don’t know what triggered the malfunction there is the risk that the error can befall them, too.”

Jim looked down at the man on the other side of the frozen observation-window. He seemed to be of the same age as Khan, but he was clearly of northern heritage – Europe maybe. Brunette hair, straight features and a strong neck was all Kirk could see, but it was enough to wake an assumption in him. “This could be Otto,” he murmured, “one of Nien’s closest friends.”

“I don’t care who this guy is. He’s in danger that is all that counts for now,” Leonard grumbled; checking the life signals with his own med-scanner.

Jim nodded slowly before he stepped to Sanak’s side and observed the read-outs of the old-fashioned small display as well. Some signal lights were blinking and the usual soft humming sound of the cryotube was different. “What’s causing the malfunction?” he wanted to know.

The old Vulcan took a deep breath. “As far as I understand this old technology, the cryo-condition is reduced now. Which means that…”

“That the man inside is going to wake up.”

“Yes, but only if the cryogenic is ended in the correct way. Otherwise…” Sanak didn’t need to finish the sentence; the outcome was obvious for everyone.

“Can you control the mechanism?” Jim asked.

“I can try it,” Sanak said reluctantly.
Kirk shortly pressed his lips into a thin line, before he looked at his Vulcan friend. “Spock?”

The first officer cocked his head. “My knowledge concerning the cryotube’s technology is limited. Mr. Scott has worked together with Mr. Singh after Mr. Weiss’ cryotube failed. If there is someone who could analyze the problem in a short time, it’s Mr. Scott.”

Kirk nodded grimly and pulled out his communicator. “Kirk to Enterprise. Come in, Enterprise, it’s an emergency!”

A moment later the voice of one of Uhura’s substitutes answered, “Enterprise here, Captain.”

If the whole situation wasn’t so serious Kirk would have grinned that he was still addressed with ‘captain’, even if he was released from duty. But given the present circumstances his thoughts were only fixed on the current problem. “Lieutenant André, please put me through to Mr. Scott. It’s an emergency!”

“One moment, Captain.”

A few seconds later Jim heard the familiar Scottish drawl coming from the communicator’s little speaker.

“Cap’n? Scott here.”

“Scotty, one of the cryotubes has a malfunction – different from what happened to Joaquin’s tube, yet it’s a danger for the habitant. Take your equipment and go to the transporter room. I’ll speak with Wesley to get his permission for you to beam down to the hospital.”

A short curse in Gaelic was heard, followed by an “Aye, Cap’n! I’m on my way.” Then the connection was shut off.

“I’ll go upstairs to lead Scotty down here. I don’t know if he remembers the way,” Jim called; already running towards the exit, while he hailed the Enterprise anew; this time demanding to speak to Wesley.
Bones watched him go, before he returned his attention towards the male Augment in the cryotube. “Dammit!” he grumbled, checking the life signals for the second time. “And once again: Dammit! Pulse at 9 per minute and rising; breath rate increasing, too.” He exchanged a glance with Sorel and Daniel. “If you ask me we should bring the tube upstairs to the stasis-department. Then we force this coffin open and put the lad into one of the stasis-chambers before anything bad happens to him.”

Spock lifted a brow. “Do you think that to be wise, Doctor?”

“It saved Joaquin – and the situation is similar. At least it would reduce the risk for the patient as long as we don’t know what’s making this cursed coffin quitting its work.”

“If the malfunction would be stopped now…” Spock began to ponder, but Leonard quickly shook his head.

“Too late for it. The man’s awakening is too far gone to put him back into cryosleep. Stasis is the only answer now.”

Sanak rose from the kneeling position before the tube’s mechanism. “As far as I can tell, there is an error in the cooling system – and the fresh air supply isn’t starting its work like it should to ensure the inhabitant’s survival after the end of the cryogenic.” His dark eyes found McCoy’s. “I agree with you, Doctor. The inhabitant of the tube has to be removed to prevent him from serious harm caused by an abrupt ending of the cryosleep and lack of oxygen.”

Sorel made an affirming gesture. “I agree, too.”

“All right. Lend me a hand, gentlemen!” Bones ordered; instinctively taking command. Spock was at his side with three large steps, while Daniel and Sorel went to the end of the tube. Together they lifted it and began to carry it towards the exit. Sanak stayed back. “I will check the other cryotubes and follow you afterwards.”

“Okay,” McCoy called over his shoulder. “Maybe you and Scotty can find out what makes this cursed thing start quitting – before the same coughing infests the other tubes, too.”

Confused the Elder lifted both brows. “‘Coughing’? ‘Infests the other tubes’?” he asked, almost perplexed.

“Doctor McCoy means that there is a chance that the same malfunction could be happen to the other tubes, too, if there is a general cause for it,” Spock translated, and Sanak nodded.
“I understand,” he said; exchanging a glance with Sorel. Humans!

The two human males were panting as they finally reached the cellar of the hospital; Spock and Sorel didn’t show any signs of tiredness despite the fact that the cryotube was heavy. Quick steps approached and even before Kirk and Scott rounded the corner, Spock knew that his T’hy’la was coming.

“Captain, stay where you are. We are bringing the cryotube upstairs!” he called. There was no reason that Kirk and Scott had to run more than necessary.

“What… what are you doing?” Jim gasped, out of breath as he fell into a slower step; Scott beside him.

“We… we bring hi… him upstairs to put… out him into stasis,” Bones wheezed; his face red with effort. “No… no other chance to… to make him survive.”

Kirk’s worry deepened even more. “How is he? Is he in danger? What’s about the others? What…”

“Captain, Elder Sanak monitors the other tubes,” Spock interrupted him. “Mr. Scott and I will check this tube here after we’ve removed its inhabitant. Maybe the cause of the malfunction can be found that would help to gain knowledge if the other cryotubes are about to fail, too,” he continued calmly while bypassing Kirk and Scott.

“Damn Vul… Vulcan strength! I… I can’t even breath prop… properly and he… he is relaxed like du… during a walk in the park!” Bones groused; shooting Spock a glare.

“If you would spare your breath and stop talking so much, you won’t have a problem, Doctor,” Sarek’s son deadpanned, which made Corrigan chuckle – even if the young physician was wheezing just like his older colleague was doing.

Several minutes later they reached the department where the stasis chambers were placed – after bringing a lot of attention to themselves as they first carried the cryotube through the lower level of the hospital and then used a lift to ride it to the third level. Bones was sure that he hadn’t seen so many raised Vulcan eyebrows in such a short range of time ever before.
“Captain, take my place! I’ll inform our colleagues of the arrival of the new patient,” Daniel Corrigan addressed Jim the moment the lift door opened, and hurried away before Kirk could say something. Not wasting precious time Jim helped to carry the tube and a few moments later they arrived in one of the rooms that held a stasis chamber. Two Vulcan healers looked from a quickly explaining Corrigan to the newcomers with as much astonishment as Vulcans were able to; obviously taken completely by surprise.

“Healer Sorel,” one of them began. “What is the meaning of…?”

“I’ll explain it later. This patient has to be removed from the tube and brought into stasis immediately. The correct adjustment of the stasis procedure will be made by Dr. McCoy,” Sorel interrupted his colleague. “I take full responsibility for this case,” he added.

Bones wiped the sweat from his face; grumbling something about ‘heavy stones’ and ‘damn heat’, before he stepped to the stasis chamber, where he got a short instruction from Daniel. The annotation was switched from Vulcan language into Standard, and because the array on the panel was almost identical with the stasis chamber aboard the Enterprise McCoy didn’t need more than a minute to learn everything he needed to know. Quickly he programmed the stasis-chamber and within a few seconds the blue light shimmered through the observation windows, while the chamber sprang to life.

Leonard turned around and saw that Scott and Spock were already engrossed with the cryotube’s function. “All right, time to move our male sleeping beauty to another bed,” he said. “Can you open the tube without problems, or do we need some hammers and Vulcan arms for it?”

Scott shot him a short glance. “Doctor, are you offending me? The mechanism I don’t look through still has to be developed.” He punched several buttons and a noise as if air was escaping abruptly was heard. Several clicks sounded and the lid moved a little bit. A warn-peeping and several blinking lights followed, but neither McCoy, nor the others were distracted by them.

“Quick now!” Bones called, and while Scott opened the cover, one of the younger Vulcan healers bent down, pushed his arms under the naked human form and lifted the Augment on his arms. No expression showed on the Vulcan’s face that the icy fog inside of the cryotube was unpleasant for him. With long steps he closed the distance to the stasis-chamber his colleague had opened by now and lowered the large Augment inside. Seconds later the stasis undertook the former cryo-function and ensured the enhanced man’s life functions.

McCoy’s eyes hung on the display Sorel had switched from Vulcan to Federation Standard. “Pulse at 14 per minute, blood pressure 34 to 12, hypoventilation but constant.” He grinned. “If his body behaves like Joaquin’s, I dare to say our friend here isn’t in any danger and will stay in dreamland until we wake him up by reducing the stasis.”
Jim sighed in relief and rubbed his face. He didn’t want to imagine how Khan would have reacted if there was another loss of his beloved crew to mourn. “You recorded the data of all Augments in sickbay after Joaquin’s case,” he said; remembering that the enhanced man’s identity was still more of a guess than knowledge. “Can you compare them with the DNA of our friend here, so that we can learn who he is?” he asked Leonard.

Bones nodded. “I took the data with me when we left the Enterprise. All medical charts are recorded in here.” He lifted his med-tricorder and pointed it now at the man whose shape shimmered in the blue light of stasis. A minute later the tricorder peeped and McCoy rolled his eyes. “You should have placed a bet, Jim. You could have earned some Credits this way. Our sleeping beauty here is – according to the information Khan gave me – indeed Otto Hoffmann.”

Kirk smiled shortly. “He’s one of Nien’s closest friends – one he knew from childhood. He told me once that Otto was brought to the labs of New Delhi a year prior to the Augment children’s escape from said labs. Like Nien he took the smaller Augments under his protective wings. He, Nien and a few others were the only ones who were like a family to the younger ones.”

Leonard grimaced. “Children raised in a lab – with no social bonds to parents or parent-like adults. It’s a miracle that they are able to develop true relationships at all.” He looked over his shoulder at the cryotube, as he heard the soft murmuring behind him.

Scott and Spock were already busy with analyzing the mechanism of the cryotube; checking the electronic and mechanical components – searching for the error that had led to the malfunction. Yet they would need time to find any results.

Sorel met the asking glances of his two colleagues and explained in Federation Standard, “The patient belongs to a group of fugitives which were granted political asylum on New Vulcan by High Minister Selek and the Lady T’Pau. They were held hostage by the members of the conspiracy that shook Starfleet and were abused as test subjects. I ask you to stay silent about their presence – and the fact that the patient is an Augment.”

For Vulcans the two healers reacted rather shocked, but before they could say something, Sorel continued. “This is the reason why Dr. McCoy and Dr. Corrigan will monitor this man and undertake his case. They have already collected experiences with this subspecies of Terrans and will be able to help him should his body react differently from what is usual.” His glance found Kirk. “Has your… friend knowledge of what happened here?” he asked.

Jim sighed again. “As your call reached my CMO, Nien was already deep asleep again, but I think Joaquin will be rather suspicious because Bones, Spock and I more or less peeled off from New Gol.
I would appreciate it if one of your staff could beam me back to New Gol so that I can speak with him, before the boy gets bees in his butt and does something that would mean trouble.”

Sorel lifted a brow. “We don’t have bees on New Vulcan, Captain, but an equivalent that…”

“Healer Sorel, this is a human description for someone who gets very nervous,” Spock translated.

Something close to a sigh escaped the older Vulcan. “Illogical,” was all he murmured under his breath. Then he turned to one of the two other healers. “Please escort Captain Kirk to our transporter room and beam him back to New Gol.”

A short nod followed by a “Please come with me, Captain,” was the outcome.

Jim looked at Spock and Scott. “Please keep me updated with what you find – or not find, okay?”

“Of course, Captain.”

“Aye, Cap’n.”

Kirk’s gaze found Bones. “That goes for you, too. If something should change…”

“I’ll call you,” McCoy affirmed. “Just make sure that the boy doesn’t freak out – or Khan. He has to stay in bed, no matter what, even if you have to bind him.”

Jim grinned shortly. “I know a far better method to keep him in bed.”

Spock lifted a brow, Scotty chuckled and McCoy groaned, while Sorel and the other healer politely ignored the obvious meaning of said ‘method’. With a “Thank you for your help, sir!” towards Sorel, Kirk left the room – but not without throwing a last glance at the stasis-chamber. ‘Hold on. Nien will need you!’
A few minutes later Jim found Joaquin sitting at Nien’s biobed. To say that the Augment-boy was nervous was an understatement. He was unsettled – restless even – and he almost jumped out of his skin, as Kirk entered the room. Pressing a quick finger to his lips, Jim gestured towards Joaquin to accompany him and led the boy outside into the gardens. In the later afternoon it was still hot, but Weiss’ augmented nature had already adjusted to the strange climate that ruled New Vulcan. Jim, on the other hand, felt the heat like an impact and took some deep breaths before he began to tell Nien’s ‘little brother’ what happened.

Of course the young Augment was shocked and deeply worried – not only for Otto, but also for his other brothers and sisters. What if the malfunction of Otto’s cryotube wasn’t a single case but would befall the others, too? What if his whole family except for Khan was in danger of falling prey to the old technology that once promised them survival?

Jim did his best to calm down Joaquin. Scotty knew so much about the cryogenic process by now – last but not least because of Khan, as the two men had worked together in sickbay aboard the Enterprise. If there was a general error that showed its effect now, then Scotty – or Spock or Sanak – would find it.

Afterwards Kirk contacted Wesley to keep him updated and also to tell him that Chekov and Riley were allowed to visit Joaquin. And then he and Weiss could do nothing else than wait.

Jim had to admit that he was nervous as well, yet he tried to remember the few mental techniques Selek had taught him before. Under no circumstances did he want to wake up Nien because of some emotions flaring through their link – at least as long as he, Jim, didn’t know any results.

The sun was already lowering to the horizon as his communicator peeped.

“Kirk here!” he answered the hail.

“Spock here, Captain. Mr. Scott, Elder Sanak and I have checked Mr. Hoffmann’s tube. It seems as if something influenced the tube’s own energy supply which triggered the integrated emergency protocol which would wake up the tube’s inhabitant to prevent him from dying by a wrong cryogenic process or lack of oxygen supply.”

“In other words: The battery was about to run out of power and therefore the wakening procedure was started, but had some problems because the air-supply didn’t work?” Jim made sure that he had understood his first officer.
“Correct. The latter was the second error. The first one is the fact that the battery ran out of energy at all. Mr. Scott told me that the battery re-charged itself by using not heat but the coldness of the cryogenosis – another development of Mr. Singh. But something interrupted the process now.”

Kirk bit his lip and exchanged a glance with Joaquin. “Do you have any idea what interrupted the re-charging?”

Another voice sounded, “Scott here, Cap’n. We have ter pick the tube ter pieces ter get maybe an answer for that question. If ya ask me I think the battery’s useful life was simply over – maybe evoked by fatigue of one or the other components. The cryotubes weren’t constructed ter work for centuries but for decades, as Khan told me once. And even if he got the best materials for the tubes Earth could serve with at his time, they aren’t comparable with today’s productions. Another reason for the failure can certainly also be found in two other facts: One – several cryotubes were certainly placed nearer to the hull of the _Botany Bay_, what could have influenced their work. I don’t think the ship’s internal energy lasted the whole time and it got really cold inside – especially near the hull.”

“Nien told me that Marcus found the _Botany Bay_ drifting, what means that her drive and certainly other functions had quit by that time,” Jim interrupted his engineer’s report.

“Aye, that makes sense,” Montgomery affirmed. “And another reason can certainly be found in the handlin’ of the tubes within the last months. They were opened several times by Section 31 and later by those scientists on Gamma 12. The tubes had a lot of work ter do ter compensate the temperature fluctuation in the inside. And, by all means, Jim, the tubes weren’t exactly handled carefully. If ye take a closer look you can see bucklin’s and dents in them – not big, but still existin’. This all certainly led to the current situation.”

“In other words: Otto’s cryotube wasn’t an exception, but maybe the beginning,” Jim murmured.

Yet Scott heard him.

“Aye. The question is not ‘if’ another tube will quit workin’, but ‘when’. It could last minutes, days, weeks or even months, but I don’t think that they will function for a longer time now.”

Weiss had listened to the talk quietly. Now he rose to speak, “Then we have to wake them up!”

Jim nodded slowly. “Yes, it seems so. But with your brother still in dreamland we have a big
problem: Only he knows how to end the cryogenic correctly so that there will be no danger for your brothers and sisters. Even with the Enterprise’s and the Vulcan hospital’s combined number of stasis-chambers we can’t wake your friends up at the same time.”

“And there is another problem, Captain,” Spock cut in. “We know how… sensible Mr. Weiss reacted after he came out of stasis. And like Mr. Singh told us Mr. Weiss is a peaceful example of his people. If we wake the Augments up and they find themselves on a strange planet without their trusted leader, we could face some serious problems.”

“They are highly intelligent, Spock, and I do think that some logical explanation and a calm treatment of their worries will keep them calm,” Jim pondered.

“I could also speak with them,” Joaquin piped in. “They know me and trust me. I may be the youngest of them all, but they knew how close Noo and I are. If I tell them what happened, where they are and that they are not in danger, they will believe me.”

“Be that as it may,” Scott took part in the talk again. “I can’t guarantee that the other cryotubes will continue to do their work dutifully for the next weeks. One catastrophe could be prevented, the next time we may run out of luck.”

Kirk pinched the bridge of his nose. “I know, Scotty.” He pursed his lips as many thoughts ran through his mind, before he asked, “Is there a chance we can charge all the batteries up with an external energy supply?”

“I don’t trust the old batteries anymore, Jim. Or the components. Joaquin’s tube quit because it was opened one time. Mr. Hoffmann’s tube went down certainly because it was opened several times. To be opened and closed doesn’t do the tubes well. And I don’t know how much damage hides in their functions by now.”

Jim made up his mind. There was only one possible way to go now. “Okay, Scotty. I’ll speak with Selek and T’Pau and tell them that we have to wake their guests up earlier than thought.”

“But we don’t know how to start the wakenin’ process and…”

“But Otto knows,” Kirk interrupted his engineer, before he looked at Joaquin. “Right?”
Weiss nodded. “Yes, Noo taught Otto, Rodrigues and Paul everything about the cryotubes in case that he… wouldn’t make it.”

Kirk smiled at him. “Security first – typical of your brother.” He lifted the lowered communicator again to his lips. “We wake up Otto and he has to help to wake up the others. Are the tubes still monitored?”

“Yes, Captain,” Spock spoke again. “Elder Sanak has installed another alert program that will inform him instantly as soon as one of the tubes runs an error.”

“Please tell him I’m grateful for his thoughtfulness and his efforts, Spock. I think we have to accept the fact that we’re going to wake up Nien’s family earlier than planned. Please ask Healer Sorel if several larger rooms could be prepared for them, where they can rest and come to terms with the new situation they will find themselves in. I’ll contact Selek and keep you updated. Is Bones on his way back to New Gol?”

“Negative, Captain. Dr. McCoy wants to stay here for some more hours and will return in the later evening – if Mr. Singh doesn’t need his medical support.”

“Nien still sleeps and I think he’s doing fine – well, as fine as you can be after what he’s been through,” Kirk answered. “Are you returning to your place?”

“If you don’t need me for the rest of the evening, Jim, I would like to return to Nyota. My father will be released tomorrow and…”

Jim smiled. “Don’t apologize for wanting to prepare everything for your father’s arrival – or for spending the last free evening with your girl, Spock. You already did enough for the others and me.”

The Vulcan sounded confused. “Captain, I didn’t ‘apologize’, I simply wanted to explain…”

“Sp-o-ock, you understood me. Have a nice evening with Nyota and give her my greetings,” Kirk chuckled, before he turned serious again and raised his voice. “Scotty?”

“Aye, Cap’n?”
“I know that you’re needed aboard our ship, but please remain on standby in case that you’re needed down here again.”

A soft laughter was heard, followed by “Okey-dokey, Jim. I’ve already kept that in mind. I gave Elder Sanak my private frequency. If one of the cryotubes coughs he’ll call me.”

“Thanks, Scotty! I know I could count on you,” Jim beamed, before he added, “And Scotty? No word to Wesley about the need to wake up the others soon. He’s still bound to answer to Command, and I don’t want to get them nervous. Just tell him about the one tube that failed and that its inhabitant is safe in stasis for now. I’ll inform him about the changes later – when I know more.”

“Understood, sir. It’s not my place to speculate about ‘ifs’ and ‘whens’.” It was clear that Montgomery was pulling Jim’s leg a little bit, but was also deadly serious what the little secret involved. “Good luck with Selek and T’Pau, and give the boy my greetings. Scott out.”

Jim closed the communicator and looked at Joaquin, who shifted from one foot to another. “And now?”

Kirk took a deep breath. “Now we have to contact Selek.”

ST* ***ST

The clear dark eyes within the old face looked with thoughtfulness at the young captain. “You do know the risk if the Augments wake up without finding their leader in their midst?”

Jim leant back on the bench he and Selek occupied in one of the separated parts of the gardens. Kirk thought it wiser to speak with him alone and had asked Joaquin to watch over his brother for the time he, Jim, was busy with the High Minister.

Rubbing his sweat-wet neck – it was still damn hot this evening – Kirk sighed. “Yes, I know, Spock,” he said quietly; using the old Vulcan’s true name on full purpose. “Your younger self already drew my attention to it, and I have to admit that I do get some bellyache at the thought of what could go wrong, but…we’ve no other choice. There is no guarantee that Otto’s cryotube will be the only one that quits working. Hell, Joaquin’s was the first, properly speaking. And his failed because of the same reason as Otto’s: it was opened and closed while the cryogenic process was working. Only three other Augments were spared being abused as lab-rats, that means that only three tubes may work flawlessly for a longer time. Concerning the others it’s only a question of time until
the next emergency call from the hospital will reach us. And besides the fact that we haven’t enough stasis chambers in which we could place the Augments to keep them alive, there is still the risk that we’ll come too late. I really don’t want to tell Nien that one of his brothers or sisters died under my watch.”

Selek nodded slowly. “They would have to be woken up sooner or later, Jim, but the plan was that Khan would be a part of the procedure and would keep his family calm.”

“Yes, but Nien is out of question at the moment,” Jim grimaced. “But they trust Joaquin – and certainly Otto, too. If Otto learns and believes that he is among friends – people who won’t harm him and the others – he can take Khan’s place for the time Nien heals.”

One ice-grey brow was lifted. “Don’t get me wrong, Jim, I know that the risk for the Augments has increased because of the new situation, but what do you think will be Mr. Hoffmann’s and the others’ reaction when they learn that their beloved leader was beaten almost to death and is too injured to visit them? They will demand answers – answers which could lead to misunderstandings. And given their stronger emotions, this all could end in a catastrophe.”

Jim understood Selek’s concerns, but he had made up his mind and would not change it. “It would end in a bigger catastrophe if more tubes get malfunctions and we run out of stasis-chambers to keep the tube-less Augments alive. Nien and all the others will ask themselves why we simply didn’t wake them up – with Otto assisting us. They will think we distrust them – Nien will think we still distrust him. That I still distrust him – and this after I pledged my trust and love for him. Can you imagine what this would do to him?”

The Elder looked in those soft pleading eyes, which still held the wrong color – at least for him. Yet they were the same which had looked at him so often like this all those decades ago. Logic mixed with humanity – it had been his undoing during all the times he spent with his own Jim; it was his undoing now.

“Like always your logic is… strange, but sound,” he admitted, and felt warmth rising in him as he caught the bright, boyish delightful grin of his old friend’s younger counterpart. Even the recall of the strictest ways of Surak’s teachings couldn’t prevent the warm feelings from spreading through Selek now.

“So, you agree?” Jim asked.

Selek allowed himself a sigh. “Do I have another choice?”
Kirk only smirked at him, and the old Vulcan shook his head in amusement. The things he was and would always be ready to do for this man…

“I will speak with T’Pau,” he said, “and convince her of the necessity to wake up the Augments so soon. I hope that you and Joaquin will be able to keep Mr. Hoffmann calm. With Mr. Singh still healing and Mr. Hoffmann in charge we face another situation that originally planned.”

Jim cocked his head as he realized that Selek was still concerned. “You knew him from your time, don’t you? Otto, I mean.”

This time it was Selek who took a deep breath. “It was a whole different situation – and he and the others were fed with wrong information. What happened then and now isn’t comparable in the slightest bit. I only ask you to be careful when you deal with Khan’s family without him. I don’t want to see you get hurt – emotionally or physically.”

Kirk began to chuckle; his eyes shone with almost son-like affection for the Elder. “Bones is right. You’re a big softie when it comes to me.”

A short glare was shot in his direction. “You have no idea!” Selek deadpanned. “I never admitted it, but my Jim was able to wrap me around his little finger in the end. And given your personality and charms, and my younger counterpart’s youth I fear the worst for him.”

That was it. Jim had to laugh – a clear, rich sound Selek hadn’t heard in a very long time. Repressing the mixture of sadness and joy, he watched the young captain at his side; vowing to himself that he would look out for him ‘til the end of his life.

ST***ST***ST

He was on the flight – climbed through a shaft; a young woman was with him…

A room full of stations…

Blinking lights…
The floor and the stations seemed to whirl around him…

A woman’s voice, “Jim, we’re in Auxiliary, but they’re trying to break through, and we don’t stand a chance if they’re successful…”

Lights ate their way through a door, sparks flew…

And then they were there – men in uniforms. He found himself lying on the floor, his arms and legs didn’t obey him like they should, and then the men were above him.

He was kicked and hit everywhere; booted feet met his abdomen, his back, his legs, his shoulders. Gloved fists smashed down on his head and face he was barely able to cover with his slow arms. Pain from almost every part of his body shot through him, blinded him, and slowed down his already foggy mind. Hateful shouts called him ‘bastard’, ‘creature’ and ‘monster’, while his own screams of agony echoed in his ears. He looked up and saw a tall, bulky man standing above him, the slightly familiar features glowing in glee, before the sole of a boot aimed for his face. He managed to turn his head away in the last moment but the boot hit his temple and everything was dark for a moment…

Then a long corridor…

Lights that gleamed above him, while he was roughly pulled among two men down a hallway…

A small room…

The faces of his former tormentors mixed with those he knew from earlier times – one of them bore the bitter taste of one of his ugliest humiliations he had ever experienced…

And there it was – the long object that had become his greatest horror…

They dragged him towards it – towards his certain death. He tried to fight…
A man who attempted to stop them but didn’t succeed…

He was in the object – in the tube…

He waited for the iciness to put him under, to send him to everlasting sleep – to death…

The cover closed…

No!

He had to survive!

His family… Joaquin… JIM!

His soul screamed for its mate, begged his tormentors to stop, to let him live, to give him a chance to stay with those he loved…

“Nien, wake up! It’s all right, Honey, you are safe.”

That voice…

That voice that meant security, warmth… love!

Gentle lips touched his, soft fingers stroked his face, a strong feeling of affection flooded his mind and soul…

The world around him melted away and gasping for air he tore his eyes open.

Jim’s beloved face hovered inches above his own; worry and love lay in his gaze.
“Hush, Sweetheart, you’ve nothing to fear. You are safe now – here, with me.”

Only slowly did the dreams release their hold on Khan’s mind. He looked around him and saw in the light of a little lamp sand-painted walls, listened to the soft peeping of some monitors and smelled dry air and a faint scent of something he knew, but couldn’t place at the moment.

And there was Jim – his soulmate; bending over him and shielding him against everything that could harm him. Just like the moment he had come to the rescue…

For a long moment Khan closed his eyes; imagination flickering through his mind: Of the minutes he lay on a cold floor with Jim curled around him while someone injected him with something before a device was placed on his face and he could breathe easier again… Then new pain while again lights flashed above him on a moving ceiling, then fresh but hot air that changed into cooler one, heavy with the smell of medicaments… and then – nothing.

He moistened his lips as he realized that these pictures and the nightmare he had just suffered weren’t phantoms of his subconscious, but true memories. The raging hate he had been bestowed with, the brutal blows and kicks, the hateful insults, the cold ignorance of his agony, the unaffected indifference with which he was forced to face certain death… This all hadn’t been a bad dream, but reality.

His memories were back – but he wished that they would have stayed hidden. For the first time in his life he would have preferred to be ignorant instead of learning the truth.

“I remember,” he whispered; feeling a soft burning behind his closed lids as the wounds in his soul began to bleed again. “I remember now.”

Jim felt his throat tightening. “Oh Honey,” he murmured as he realized what the returning memories did to his beloved. He could feel it – deep in his own very being.

“Is everything all right here?”

Bones stood in the entrance. He had skipped to put on a top over his sleeping pants as his monitor gave an alert to Khan’s flipping life signals. A dozy Joaquin stood beside him and looked with tired, big eyes at his brother.
McCoy had returned very late from the hospital and had given Jim a short report of everything, before he went straight to bed. Before his return he had had a small dinner with Corrigan, who would take the night-watch, before Bones would come back to his patient in the early morning.

“Nien got his memories back,” Jim told him quietly and looked over his shoulder; knowing that Khan didn’t want Joaquin and McCoy to see the tears which prickled beneath his closed lids in the long dark lashes. “I’ll handle it. Go back to bed, you two.”

Joaquin wanted to protest, but before he could utter a word, Leonard pressed a finger against his lips, took the Augment-boy’s arm and pulled him along with him. “Night, you two. If you need me, you know where to find me,” he said softly, before he closed the door. He knew that it would be far better for Khan to speak with Jim now than getting a sedative.

Kirk’s attention returned to the Augment. He saw the tight expression Khan wore – obviously the enhanced man was trying to suppress the rising emotions which raged through their bond. He felt dismay, fright, horror and bitterness battering against his mind like a giant wave of sorrow. For a moment he drifted back in time to those minutes in his apartment after he had told Khan about the survival of the other Augments. Nien had been likewise affected – only with one big difference. Then his breakdown had been because of immense relief mixed with old sorrow, now his feelings were raging because of new terror he had faced only a few days before.

Not wasting any time, Jim rose, lifted Khan’s blanket and slipped under it – taking the stiff, yet slightly trembling man in his arms; careful not to hurt him because of the still healing injuries. For several minutes Nien remained stiff and didn’t react at all – his usually so brilliant mind was turning in circles. The voices and pictures of what had happened played within his mind over and over again, like a tape on a loop, while his intellect tried to chase them away and in the end attempted to ignore them. With little success…

“They didn’t stop,” were the first hoarse words Khan whispered suddenly. “…I was on the floor – couldn’t fight back, couldn’t even move, everything hurt so much, I begged them to stop, but they… they didn’t.” He gulped. “They simply didn’t.”

Jim felt a lump rising in his throat, as his mind confronted his heart with the harsh reality of something he had already known deep down. Finnegan and the others would have beaten Nien truly to death, if it wouldn’t have been for the orders Finnegan had been forced to obey.

And in this moment Kirk realized that Khan had been through something he once had chosen for Jim. All those weeks back the Augment had come to his apartment to give him exactly this kind of death – only it hadn’t come to that. Khan’s instincts had forced him to alter his plans. His feelings for him – Jim Kirk – had already been too deep, without even acknowledging them before it was too late for any change. And if Kirk thought closer on to those moments, something else came to his
attention. Khan could have beaten him to death within a dozen seconds, yet he didn’t. Something had held him back after the fury of their combat was stopped by the door-bell and Kirk’s angry neighbor. Something had made Khan pause afterwards; had made him simply hold Jim at bay while voicing threats instead of acting on them. And the young captain was convinced that this all wasn’t only because of his own blood Khan had smelled in Jim’s body.

No!

Something deep in the Augment had tried to stop him from carrying out his revenge in this way. Something had forced Khan to handle Jim gently during and after the seduction; making him care for him even when they were – technically – still mortal enemies.

And it had nothing to do with the fact that Khan had and would never violate someone in the way he had endured as boy and later at Connelly’s hands.

What had driven Khan even in those minutes in Jim’s apartment was humanity; despite his deep mourning of his people he thought to be lost forever and the fact that he thought Kirk to be guilty.

Humanity had been the reason for him to fight the pirates at the outpost to keep Federation citizens safe.

Humanity had been the reason he risked revealing himself to Starfleet when he warned of the planned attack of Tammeron.

Humanity had been the reason to get Diego out of the burning part of the orbital station above Aldebaran – and Khan’s whole action aboard the doomed station.

Despite anything the people of the past and some of the present believed, Khan Noonien Singh had far more humanity in him than many casual humans were able to feel or to act on.

And the search for humanity in others had been the reason why Khan had entrusted him, Kirk, with how to get in touch with him again. Those sub-space talks before the disaster on Turkana… they had been nothing more than a silent plea from the Augment for someone to accept him – and for Jim to show that the human race could do better than in the gory past of the 20th and the beginning of the 21st century.
Kirk and Khan had begun to really understand each other even before they turned true lovers. And before their stay on Aldebaran it had once again had been humanity that had steered Khan’s decision to come to Kirk’s aid.

Jim would never forget that Nien had put him over his own and his people’s sake as he came to his rescue on Turkana.

Turkana…

Jim had been delivered to the same cruel brutality with no hope of escape – until Khan showed up and broken him out of the hell-hole. The horror that followed the young captain in dark dreams afterwards were so like what Nien had to endure now – and Jim remembered all too well how the Augment held him on his bunk in his arms to comfort him; accepting him despite of his shown weakness and tears.

Sweet Lord, how similar was the situation now, only the other way around.

“I know what you faced,” Jim murmured; brushing his lips over his beloved’s suddenly icy forehead. “I know how it is – the hate of people you’ve never met in person, yet they treat you like you were dirt – as if you had earned every pain they inflict on you. You… can’t grasp their wrath, don’t know why they hate you so much and how to stop them… to make them see what they do to you and how wrong they are. You can only try to avoid the blows – and hope that they will stop. But they don’t.” Pure empathy echoed from Kirk’s soul to that of the mentally suffering Augment.

Khan’s brilliant mind understood instantly the explanation for the strong understanding he felt from his soulmate. Jim was maybe the only one in his social environment who was able to comprehend what had been done to him – not only in body, but also in soul. Jim had been through the same – on Turkana. He had faced the same brutality, the same cruelness…

Jim wasn’t surprised that Nien didn’t answer, but he knew that his beloved was listening. He moved his head and pressed another sweet warm kiss to the Augment’s surprisingly cold forehead despite his still lasting fever. “I only wished I could have stopped them like you did for me on Turkana. I… was too late to hinder them carrying out their stirred up hatred, forgetting in their raging fit that they were attacking a sensitive living man who was already weakened by a sedative. I was too late to spare you… this horror.” He felt tears rising in his eyes and quickly swallowed down the lump in his throat. Nien needed his strength now, not his pity – or self-accusations. Yet he couldn’t stop himself from whispering, “I’m sorry, Nien. I’m so sorry that I let you down like this and…”

“Don’t!” Khan croaked. “Don’t apologize.”
Jim felt his heart sinking – thinking for a moment that he had truly failed Nien and that the Augment was disappointed in him. But he didn’t need to fear. Khan’s next words proved the deep link they had with each other anew.

“You have nothing to apologize for. You came after me, you fought your way through corridors full of enemies, and you didn’t hesitate to battle your own people – misguided as they were. You… you saved me, Jim. You came in time to… to stop Dashwood and Conelly from… putting me back into cryosleep – a sleep I would have never woken up from again. You stopped them.” He took a deep breath; Jim’s familiar scent calmed his raging nerves at least a little bit. “You saved me,” he whispered again; relaxing the tiniest bit. He felt the younger man’s arms tighten around him, and a feeling of security washed over him for a moment.

It was over.

He was no longer threatened.

His family, Jim and his friends, and he himself were safe now – here, on New Vulcan.

What happened, happened. There was no changing the past. He had faced hate before, had been treated like an animal often enough in his life to develop some inner walls against it. He always overcame the ghosts of those events; he would manage to do it again – eventually. He would go on like always… even if he didn’t know how in the moment. His intellect realized that he maybe had been brutalized one time too often now – that he wouldn’t be able to shake off the memories of those agonizing minutes like he did before, but he refused to admit it. He was tired, that was all.

“I would move the Earth and heavens to save you,” Jim murmured; kissing his brow again. “I will always come for you, Nien, will always be there as long as I live. If you are uncertain of everything, but not of this. I would cross hell to get you out of it.”

It was a vow – one Kirk had already made with other words, yet it gave the shaken man in his arms new reassurance.

“I know,” Khan murmured; exhaustion rising in him like a night after the sun had vanished behind the horizon. “I know…”

Jim felt how Nien relaxed utterly and he didn’t need to look at the small pale face to realize that
Khan had fallen asleep. Stroking gently through the now really sticky, dirty hair, Kirk held his beloved close; hoping that his presence was enough to keep more nightmares from Khan’s slumber away…

Kirk overslept – after a very restless night. Over and over again he had woken up and had listened to the breathing rhythm beside him or had listened into himself; fumbling with mental fingers for the bond between him and Nien to learn if the Augment was maybe plagued by more nightmares, but despite some uncomfortable stirrings the enhanced man slept fitfully through the night.

In the end Jim joined his deep slumber and only woke up, as a far too warm, strong long hand gently shook his shoulder. Blinking groggily in the bright daylight that streamed through the uncovered window, he needed a moment to sort out where he was. On his shoulder lay a tousled dark shock of hair and a long, fever-warm arm was wrapped around him.

‘Nien!’ he realized, but before he could gather further thoughts, he was shaken again – this time a little bit more firmly.

Turning his head his gaze found the weathered, angular face of Selek hovering over him – one eyebrow raised and with something close to amusement in his dark eyes. “I apologize for waking you up, Jim,” he whispered, “but I have news.”

Starfleet-training kicked in as the young captain went wide awake from one second to the other. Careful not to disturb his soulmate’s sleep, he untangled himself from the Augment and sat up. “And?” he murmured, while he slipped from beneath the blanket – Selek making room for him.

“T’Pau agrees,” was all the High Minister answered. “I already informed Leonard. He, Healer Sorel and Dr. Corrigan are going to wake up our special friend.”

TBC…

Chapter End Notes
Well, the whole scenario with the failing cryotube didn’t turn out as nasty as you maybe thought. On the other hand to wake up the Augments without Khan will be a big challenge – and to keep Nien more or less in the dark to spare him more stress, will be even more troublesome. And then there is still the question if you can keep Khan in the dark at all… And he really needs rest after his memories returned.

Given all these new facts, I don’t want to reveal what will happen within the next chapter. I only can promise you another roller-coaster of emotions, some more problems and trouble, among some sweet scenes.

I hope you liked the new chapter and, like always, I’m curious about your thoughts.

Have a nice start into the next week,

Love

Your Starflight
Chapter Notes

Hi my dear readers,

Sorry for the new delay, but like always I was too busy to finish the chapter sooner. Therefore you'll get something for the heart – an emotional rollercoaster, so to say.

So, no long words now.

Enjoy the next chapter – and thank you so much for the feedback.

Yours Starflight

See the end of the chapter for more notes

Chapter 88 – Pain and joy

“And you really think to keep Noo in the dark will be better for him?” Joaquin looked skeptically at his brother’s bondmate, who emptied his cup of tea; a bowl with almost untouched cereal stood on the table beside him. They were in McCoy’s and Weiss’ room because they didn’t want to disturb Khan’s still lasting sleep – and they didn’t want him to listen to their conversation.

“What do you think will be his first and only reaction if he learns of the almost-disaster yesterday – and that we are going to wake up Otto?” Kirk simply asked and watched the Augment-boy, who grimaced and finally even rolled his eyes.

“He would try to get up and go to the hospital, not caring about his own injuries,” Joaquin admitted; knowing his brother far too well.

Jim nodded. “See my point?”

“Yes,” Weiss sighed, before he bit his lips for a few seconds. “But you know that he could get furious when he learns later that we kept something like this from him?”

The young captain took a deep breath. “Even if I loathe the mere thought of arguing with your brother, I’d rather risk his anger than his relapse. His broken bones are still mending and the TBI is
still dangerous for him. I have no problem of getting an earful from him, but watching him hurting himself because of his stubbornness would be a problem for me.” He looked at Joaquin who suddenly grinned at him. “What?”

“That’s the pot calling the kettle black,” the Augment-boy smirked. “As far as I’ve learned by now you and Noo are equals when it comes to stubbornness.”

“Hey!” Jim feigned to be hurt. “I’m simply strong-minded.”

“The understatement of the year,” Weiss chuckled.

“I’ve to agree wiz Joaquin,” sounded a quiet voice from the door. “You are very strong-minded, Keptin.”

Kirk and Weiss turned around and faced the wide smiling Chekov and Riley.

“Are you calling your captain a mule-head, Mr. Chekov?” Jim asked sternly, yet the laughter in his eyes and the broad smirk betrayed his amusement.

“Njet, sir, zat I would never do,” Pavel said innocently.

“Yes, but you think it – just admit it, Mister.”

“Thoughts are free,” piped up Kevin, then he and his companion stepped into the room – greeting Joaquin by slapping him on the shoulder and beaming at him.

“How are things up there?” Jim wanted to know, pointing a finger to the ceiling.

“Not ze same wizout you, Mr. Spock, Doctor McCoy and Lieutenant Uhura,” Chekov sighed. “Ze repairs are proceeding, but… ze mood isn’t good. Ze whole crew worries for you four – and for Khan.”

Joaquin felt warmth rising in him as he got another proof that his brother had truly found a place in
this new time where he belonged and that there were people who regarded him as one of them.

“Well, at least Khan is out of the woods given his injuries, but the rest…” McCoy spoke up as he entered the room; coming from the next room where he had checked on Khan. He had heard the last sentence and despite his usual sarcastic manners he also felt soft joy that the whole crew was concerned about Jim, Spock, Nyota, Khan and himself. He caught Kirk’s asking glance and said, “Khan’s readouts are okay. He’s healing well, yet some of his brain parts are in uproar. I think it’s a result of the returned memories.”

Jim nodded slowly. “He… he was stiff and almost beside himself last night. He didn’t take his up-welling memories well, as you can guess. I fear that they resulted in a kind of shock.”

Bones made an affirming gesture. “I agree. Selek already told us that Khan is deeply traumatized, and Spock confirmed this after his mind-meld with him in the hospital. The man has been through so much that most other people would have broken by now – and I fear that he is only a hairs-width away from it, too. I’d advice sparing him anything that could upset him further. He needs calmness and peace to come to terms with what happened to him – again, as I have to point out. As far as I understood Spock, Khan has been through very serious shit from young age until now, and even an Augment has a breaking-point. So none of you should say anything that gives him new reason to be on alert.”

“Understood,” Jim acknowledged – giving Joaquin a pointed glance, who nodded. Pavel and Kevin affirmed McCoy’s instruction with an “Aye, sir!” before they drove their attention to Joaquin.

“You’ve been here for quite a while now. Care to show us around?” Kevin asked him.

“Boys, you can do whatever you want except for disturbing the daily routine here or the Vulcan priests,” Kirk said; slipping easily back into his captain-role. “Don’t talk loud, no childish games and please no displays of temper. It’s a great honor that T’Pau permitted us to stay here and to allow you two to visit your friend.” His firm glance wandered from Chekov to Riley and back. “I really would be greatly disappointed if I’m confronted with any kinds of complaints. Understood?”

Promptly the two ensigns saluted. “Aye, aye, sir.” The snappy salute lost its seriousness as Weiss lazily tipped two fingers at his temple, drawling an “Aye, Captain.”

Pavel and Kevin had some effort to keep down the bubbling laughter, while Jim closed his eyes, praying for patience. Sweet Lord, had he been so cocky once, too? Yes, he had been as he clearly remembered. Grimacing at the three young men he quickly ruffled Joaquin’s hair like he would do with a younger brother; chuckling, “You’re impossible.” Then he turned to leave – and Weiss
became very serious again.

“Dr. McCoy? Please keep me updated, okay?”

Bones nodded with sympathy. “I will.” He slipped the strap of his tricorder over his right shoulder and took his med-scanner. “I’ll inform Jim about the process and he passes the messages to you, okay?”

Joaquin made an affirming gesture and left the room; ignoring the curious glances of his two friends. As soon as the three young men had vanished, Kirk took a deep breath and addressed his CMO, “What do you think? How long will the process last?”

Bones shrugged. “That isn’t easy to say. Joaquin needed some time because his body was weakened by the malfunction of his tube. Mr. Hoffmann was luckier. We could put him into stasis before his body had to struggle too much. If everything runs smooth, I think he’ll be awake by tomorrow.”

Jim pursed his lips and stepped to the window, before he murmured, “I think Jo should be there when Otto awakes. I can imagine that Otto will have some kind of shock when he learns that he is on a strange planet with ‘aliens’ around him. Jo’s presence will give him some assurance that he and the others are not in danger.”

“Good idea,” Leonard agreed. “What about Khan?”

Kirk looked back over his shoulder. “What do you mean?”

“I said that Khan shouldn’t be upset about anything, but given the new situation with the cryotubes and Otto, I don’t think we have any other chance than to do some damage control.” At Jim’s confused face, he added, “For in case that you have forgotten, your sweetheart is mentally linked to the closest of his crew members – his brothers and sisters. Don’t you think that he will simply feel that one of his brothers is awake? How, do you think, will he react?”

Kirk stared at him; realizing for the first time that it was more or less impossible to keep Nien in the dark concerning the change of not one, but of all his family-members’ condition. He moistened his lips. “You said that he shouldn’t get upset and…”

“Jim! He will know – as you are certainly aware of. Hell, he sensed the tiniest changes in Joaquin
from afar. Right, the boy is his charge, but given the information you shared with me concerning Otto, these Paolo, Rodriguez and Katie, they are very close to Khan, too. I do think that he will be able to sense Mr. Hoffmann’s awakened presence despite the distance between here and the hospital. And then he will realize that we didn’t tell him about it. Do you think that will be wise?”

Jim sighed and pinched his nose. “This is something I’m still working on.”

Bones rolled his eyes. “I don’t think that there is anything you could ‘work’ with. After all I witnessed from you and Spock, mental links can’t be fooled. Heavens, the hobgoblin comes running every time you’re in big distress and I remember several situations in which you got all nervous because your ‘belly told you that something isn’t right with Spock’ – and it turned out be right. Mental links just work like that – and I’m certain that Khan will feel Otto being awake the moment this European giant opens his eyes.”

Biting his lips, Kirk pondered over the given possibilities. “Well, you said yourself that Nien shouldn’t be upset at the moment. And if he learns that one of his closest friends was in danger and is stuck in a stasis-chamber right now, he’ll be more than a little bit itchy. And just think of his reaction if he learns of the chance that all cryotubes are about to fail within the next weeks. He would be out of bed within a blink of an eye, despite his own condition.”

McCoy crossed his arms in front of his chest. “Yet there will be no way to keep Khan in the dark. He’ll learn of it sooner or later – and just think of his reaction then. He has come to trust you utterly. Don’t you think that he will feel betrayed that you didn’t tell him about his family, even if you did it only to protect him?”

Jim shortly pressed his lips in a thin line. “You sound like Joaquin.”

“Then maybe you should think about our arguments. They certainly are not that wrong.” He sighed. “It’s your decision, but I think the aftermath of you keeping something like this from Khan will be far more upsetting for him than telling him the unpleasant truth from the beginning.”

“In other words, whatever I do, it will be wrong – the one or other way,” Jim whispered.

Bones stepped beside him and clapped him on the shoulder. “You just have to decide what of the two possibilities will be the better one – and given your way of words I think to tell him the plain truth will the only solution without damaging what you two have gained so far.” He smiled encouragingly at Kirk, before he walked to the door. “I’ll keep you updated.” He looked back one time. “Oh, shall I inform Spock about the decision to wake up the Augments, or are you going to do it?”
Jim grimaced. “I… would appreciate it if you would call Spock. I don’t want to be caught by Khan at the phone, speaking with Spock about the Augments before Nien learns of it. Could make him angry and…”

“And upsetting him more than necessary is not an option – from a doctor’s point of view,” Leonard winked at him. “I’ll tell your dear hobgoblin about it. Maybe we can meet at the hospital – after all Sarek will be released today.”

“Give Sarek my greetings,” Jim asked him and the CMO nodded.

“Of course. Until later.”

The door closed behind him and Kirk was alone – alone with many things to ponder about.

ST***ST

“Not so mighty and superior now, are you, freak?” Another blow was delivered to his belly, another kick was added to his back the moment he curled himself into a tight ball. More kicks hit him, on the upper leg, against the shoulder, his back, even his feet – fists followed quickly.

“Stop it!” he rasped; being more in pain than ever before, while sheer mortal fear erupted in him. Even slowed down by the sedatives his mind realized that he was absolutely helpless and could do nothing more than endure what was happening to him. “Stop!” he gasped again.

Harsh laughter and more blows were all that followed.

“It talks in single words like a toddler. You really think he’s all mighty and a genius?” a second voice taunted.

“You have no idea of what this beast is capable!” the first voice answered, before it continued, “This is for intervening with the farm-boy!” A further brutal kick broke his arm. “And this is for hitting me!” New pain shot through his body.
A cruel hand buried in his hair and tore his head up; agony pierced his whole being as a fist collided with his jaw. “Yes, regrettably!” The first voice was so close; breath grazed his skin. “Otherwise I would send this Frankenstein-monster to where it belongs – to hell!” Another blow – and then everything melted into a blur...

Khan woke up with a gasp; the hateful words still echoed in his mind, while he thought for a moment he could still feel the violence that had been bestowed on him. Only as his mind grasped his surroundings – the private atmosphere of the room, the sunshine, the sandy colored walls, the peace around him – he became fully awake.

He was on New Vulcan, in this Vulcan abbey – safe and well cared for.

The phantoms of what happened to him only days ago melted away – at least a little bit, yet he could still feel them lurking in the depths of his subconscious.

Lifting his head Nien realized that he was alone. He heard the soft peeping of the medical monitor, some quiet voices down the hallway talking in an alien language – presumably Vulcan – and the opening and closing of a door, otherwise it was silent.

Where was anyone? Khan was certain that his nightmare had made the med-monitor give an alert and until now the good doctor had come running every time that happened. Not to speak of Jim who was at his side as soon as he – Khan – only was about to wake up. And Joaquin? There was no trace of his little brother, too.

Odd!

Really odd!

Not that he complained. After all he was not only an adult, but also an Augment – the former leader of millions of people! He really didn’t need anyone to hold his hand during sleep because he got some bad dreams, but somehow he had become used to finding Jim beside him as soon as he left dreamland.

Laying back his gaze trailed to the ceiling; its warm color of sand was calming. The enhanced man
was still shaken from the dream – from the memories which had risen during his sleep. He remembered every detail by now: the pain, the brutal blows and kicks which were delivered to him without any restraint, the cruel words, the utter hate he faced without even knowing the men except for one – Jim’s old school rival Finnegan.

It hadn’t been the first time Khan had been exposed to such treatments, yet every time it happened it didn’t only hurt his body but also his soul. He still couldn’t comprehend why people who didn’t know him in person met him with such loathing. His rational mind of course concluded the reason for the people’s reaction: fear. Fear of him as an unnatural being; fear of him because he was born from a test tube; fear of him because of his strengths and his intelligence – and fear because he wasn’t human. Not in the traditional way of sense. It was intangible that the people of today accepted aliens, trusted them and made friends with them – even married them – but had problems with accepting a synthetically enhanced human from their own planet.

It would never change, this much he had come to realize by now. Jim, McCoy and the others – even Spock – had befriended him (in the Vulcan’s case it was a big victory to have gained not his friendship but his respect), yet he knew deep down in his very being that he and his family would never be fully accepted from the original human race. As much as men had proceeded in evolution tolerating a synthetic being among them was something no man or woman would ever be able to get along with.

And it pained. He knew that it was an illusion to hope for acceptance among the human race, yet some childish hope had never given up on this dream. And look where it had gotten him: Beaten into a bloody pulp who only survived because today’s medicine was something close to miracle-work and because of a half-Vulcan who chose to save him because he was his best friend’s bondmate.

Khan sighed and bit his lips. His clever mind knew what he was doing – that he was about to spiral down to darkness once again, yet he couldn’t stop it. Something had broken in him as he was kicked and punched over and over again, despite the fact that he lay already on the floor, unable to defend himself. The panic that had risen in him as the cover of his cryotube closed, knowing that the icy sleep he was about to face would lead to certain death, had done the rest.

Khan Noonien Singh was tired of fighting – tired of trying to find a place in the world. Yes, he had found one, beside Jim, but did he really belong into this century – in this world at all? He didn’t think so. Yes, he was being unfair towards Jim’s ‘family’, who had taken him inside their circle, but these officers were outstanding in any sense of the word, so they couldn’t count as ‘usual’. The casual humans would never, ever, approve of him or his crew. He would remain an outcast, despite what he had done during the war within the last weeks – and, what almost shocked him, he didn’t care.

He was about to care of nothing at all anymore, except for Jim.
Jim, who was sitting on the edge of his bed and looked with worried eyes at him, and…

One moment? Jim was here? And he, Khan, hadn’t even recognized him coming in?

Alas, he was far more off the edge than thought.

“You okay?” Kirk’s voice was soft and warm; betrayed his concern.

Was he okay? No, certainly not, but he didn’t want to worry the younger man even more than he already was.

“Yes,” he mumbled.

The young captain frowned. “Liar,” he said quietly with a teasing tone adding to his gentle voice. “You can put on your poker-face all you want, but I look through you, honey. You’re anything but ‘okay’.” He reached out and cupped one of Nien’s cheeks in his hand; his thumb stroke soft circles on the impossibly high cheekbone. “You forgot that I can sense it when you are troubled. I could feel it even when I was outside in the gardens, speaking with one of the priests who is a kind of gardener. It made me rush back to the house, you know.” He bent over the Augment and pressed a kiss to the still warm forehead. “What was it that upset you so, sweetheart? Another nightmare?”

For a moment Khan was really tempted to tell Kirk of his dreams, but he decided against it. He didn’t want to add more concern to his bondmate’s shoulders. So he simply nodded and took a deep breath; the familiar scent of his beloved calmed him like it always did.

“Do you want to talk about it?” Jim asked; sensing that Nien withheld something from him, but didn’t push for an answer, as Khan only shook his head. Sighing, Kirk let his fingers comb through the sticky strains of the Augment’s dark hair. “Alight, baby, but if you want to talk about it, I’m here, okay?”

Making an affirming gesture, Khan drove his attention away from the younger man towards the table. Kirk instantly knew what his bondmate needed and rose. “I’ll bring you a glass of water. Are you hungry?”

“No, not really,” Nien murmured while he watched Jim pouring him a glass of water from the carafe that stood on the table. For a second it struck him that a race with advanced technology like the
Vulcans still stocked their water in carafes, and then he realized that this wasn’t the usual case but a kind of luxury. The water would turn stagnant within a few hours and would have been poured away, yet it was served like this to offer some individuality to the abbey’s guests.

Jim returned with the glass. “No wonder, after all you’re hanging on IVs for days now.” He helped Khan to sit up and offered him the glass the former dictator took; careful not to move his broken arm. His hand shook slightly as he lifted the glass; hating it to feel so weak. Kirk’s first impulse was to help him, but he knew what he would feel if he would be the one on the biobed. He would loath it to be too weak to even hold a damn glass! Therefore he simply remained on alert to react if needed, otherwise he watched the older man slowly sipping the water.

His glance roamed over the slender, pale figure. Nien was obviously shaken and far from being healed – inside and outside. The mere thought of Khan leaving bed now was absurd, but Kirk assumed that his bondmate would try exactly that as soon as he learned about Otto Hoffmann. Yet Bones’ and Joaquin’s arguments of keeping Khan in the dark concerning one of his brothers wouldn’t do anyone good – neither him nor Jim. On the other hand, Nien had just come out of a very disturbing nightmare, this much was for certain. To be confronted with another personal problem could harm him more.

Khan had emptied his glass and handed it Kirk; catching the young captain looking intensely at him while being lost in thought. Something wasn’t right; Nien felt it in his bones.

“What happened?” he asked quietly; startling Jim.

“What do you mean?” Kirk asked; face far too innocent, while he put the glass on the nightstand.

The Augment rolled his eyes. “Give me a little bit of credit here. I may be injured, but my mind is still working. Your thoughts are a kind of rollercoaster. Don’t think I couldn’t feel it. So, out with it.”

Kirk stared at him. Dammit! He had raised his inner shields as he had stepped into the room, but obviously he hadn’t been able to keep them in place. He really needed some more sessions with Selek, no questions.

“You’re doing better, aren’t you?” he tried to distract the Augment. “Two days ago you could barely talk, yesterday you had a little conversation with me and now you’re sitting there talking.” He beamed at him. “I’m so happy that you’re out of the woods.”
Those green-blue eyes watched him; some of the old Khan was blinking through the tired expression of the older man’s face. “You’re avoiding my question,” he simply stated. “Something is troubling you – and I can’t shake off the assumption that it has to do with me.”

“Why would you think something like this?” Kirk asked; faking surprise.

Khan narrowed his eyes. “It’s not your style to duck out of something, you’d rather face it.” His glance found the door. “Where is Joaquin?”

“Out in the gardens with Chekov and Riley. T’Pau allowed them to visit Jo, and they beamed down a few hours ago to keep him company until their shift starts.”

Nien nodded slowly. “And where is McCoy? I’m sure my nightmare made this thing over there” – he flipped a thumb at the med-monitor – “beep like a bevy of sparrows in uproar, yet he didn’t come running. Odd, don’t you think so?”

Kirk flashed him a charming smile – a smile of hiding something else. “Bones isn’t here at the moment. Sarek will be released from hospital today and…”

“And McCoy is his personal doctor all of sudden so that he has to oversee the ambassador’s release?” Khan interrupted him, lifting both brows in a mixture of mockery and beginning irritation. “Jim, what are you not telling me?”

This time Kirk bit his lips; his mind and heart battled with each other. And the moment his instincts joined the struggle, he listened to what his belly was telling him. It always turned out to be the best if he listened to his belly, and not to his mind – well, almost all the time.

“There was an incident yesterday Bones is taking care of,” he began hesitantly.

The Augment only sat there; looking expectantly at the captain; urging him silently to go on.

Jim sighed. There was no going back now. “Sonak, a Vulcan Elder and distantly related to Spock’s clan, is a technician to the heart and monitors your crew since arrival. He called Bones yesterday and…” He quickly bent down, took Khan’s bony shoulders in his hand and tried to hold the enhanced man back; knowing exactly why the Augment wanted to leave bed. “Nien, listen! No one was hurt or is in danger! They are all okay, promise.” he said quickly; seeing and feeling his
bondmate’s rising fear. Those sea-colored eyes seemed to pierce him, as Khan rasped, “What happened? Tell me!” It was a demand, not a question. And Kirk could so understand it. He would have reacted the same way if the lives of Spock, Bones, Nyota, Scotty, Hikaru or Pavel would have been on stake.

He sat down on the bed’s edge; still holding Khan’s shoulders – one to restrain him, two to calm him. “One of the cryotubes began with the wakening-process. Sonak installed a monitoring system that alerted him as one of the cryotube’s systems changed if its sound and its display gave signals. He instantly alerted Bones, and Spock, he and I beamed to the hospital. Corrigan, one of Healer Sorel’s protégées who was also involved in your surgery, waited for us and took us underground to the cave where your crew is hidden. Sorel was there, too. I also called Scotty to beam down to have a closer look at the tube – after all he worked with you in our medbay as you two checked all the tubes through. It became clear that something had triggered the wakening process, and so we took the cryotube upstairs. Your brother was put into stasis – he isn’t in any danger.”

Kirk felt how tense Khan was, while he sensed over their shared bond how anxious and upset the older man was. “Who is it?” Nien asked hoarsely; his heart beat painfully hard behind his rips. “I helped Dr. McCoy to catalogue every cryotube’s inhabitant and…”

“It’s Otto Hoffmann,” Jim interrupted him gently and heard how Nien took a sharp breath. Losing the grip on Khan’s shoulders, he took the slender, now trembling hands into his. “Bones and Corrigan monitored his life signs for many hours and he was absolutely stable as Bones finally returned from hospital yesterday late evening. His pulse and breath has increased, but he is still deep asleep.” He bent forwards and rested his forehead against Nien’s; recognized the soft quiver that went through the Augment’s body. “He is safe, honey, believe me. Corrigan, Bones and Sorel watch over him. That’s the reason why Bones isn’t here. He left to take over the watching-shift.”

Khan bit his lips and tried to stop the tremble of his hands, but without results. After all he was through; he now had to learn that one of his closest brother’s life had been at stake while he lay and slept. Slept, for Shiva’s sake! That was unacceptable. “Was he ever in danger?” he wanted to know; his voice still hoarse from the strong emotions which filled his chest with anguish.

“I am not sure,” Jim said truthfully. “Sonak and Spock mentioned that the wakening process had begun but the air support system didn’t kick in. Therefore they, Bones and Corrigan carried the whole cryotube to the next stasis chamber upstairs and put Otto into it. I think we can thank Sonak and his installed monitoring system that nothing bad really happened.”

Khan closed his eyes; feeling guilt and shame spreading through his heart and soul. He had been about to lose Otto – and he hadn’t had even the tiniest clue about it. He should have been there to save him. He should have been able to sense his German brother’s distress so that he could act on it. Instead of being alarmed and rushing to Otto, he had lain on this damn bed to nurse some bruises – well, a lot of bruises and inner injuries, as his mind told him sternly, yet…
“I want to see him,” he whispered and felt how Jim’s left hand cupped his cheek again.

“Honey, this is exact the reaction I anticipated – and the reason why I hesitated to tell you at all.” Instantly he found himself in the focus of now angry eyes, and continued softly, “You cannot leave your bed at the moment, Nien, no matter what. You would tear up the inner wounds again if you walk too much, and would feed your TBI with new nourishment that would strap you to bed even longer. Besides, your left leg is broken. Even with the today’s usual bone-menders you need at least two weeks to use your leg at all again.” He winked at him. “Well, given your augmented nature you maybe can strain it a few days sooner, but you’re far from being able to leave this room now or tomorrow or the day after.”

Khan frowned deeply; not happy with Kirk even considering keeping him in the dark of something that important. “Otto is one of my dearest brothers. He would do the same if I…”

“He will do the same as soon as he learns that you are bounded to sick-bed,” Kirk spoke up; again he didn’t let Nien finish the sentence. He already anticipated Khan’s reaction to this special choice of words, and indeed it woke the Nien’s attention immediately.

“He will?” Khan pressed.

Jim smiled. “They are going to wake him up,” he let the cat out of the bag. His smile broadened as he saw how Nien’s eyes became wide as saucers. “And not only him. I talked with Selek yesterday evening and he had a discussion with T’Pau, who agreed with my intention to wake up your sisters and brothers within the next days.”

Nien gasped. “You are going to…?” He gulped as hope was washing over him with the might of a tidal wave. “You’ll wake them up? So soon?”

Kirk nodded. “Neither Scotty, nor Sonak or Spock could detect what triggered Otto’s cryotube to start the wakening process. They assume that it has something to do with it being opened several times while being in full operation – at least that’s Scotty’s opinion. And the system-battery of Otto’s tube was about to be discharged and the emergency system you installed for such a case kicked in – only it didn’t bring the air-supply online. Scotty thinks the batteries have simply outrun their serviceable life and will fail one by one. And this goes maybe for all tubes.”

He saw Nien paling even more and stroked once again through the Augment’s dirty hair. “Don’t fret, honey. We’ll wake up Otto who will help us to start the regular wakening process of the other
cryotubes, before another one of them makes us running like mad to the hospital again. Bones thinks that Otto will be fully awake by tomorrow. During this time Sonak watches over the other cryotubes with hawk-eyes. Should one of them get a hick-up again we’ll beam its inhabitant to the Enterprise’s medbay to put him or her into one of our stasis-chambers, or we bring her or him upstairs to one of the hospital’s stasis-chambers. Sorel is preparing three large halls to contain your brothers and sisters, setting them up with biobeds, monitors, and so on.” He pulled the now shaking man into his arms. He knew exactly what invoked the Augment’s physical reaction. “You’ll see, baby, in a few days you and your family are reunited – finally!”

For a long moment Khan simply sat there, hugged by a – like always – optimistic Jim Kirk. Then the news he heard reached his mind. His chest became wide with too many emotions – hope, joy, disbelief, relief…

They would be woken up – all of them!

He would see them again in a few days, safe, sound and well!

He would listen to Katie’s gentle humor, to Otto’s dry comments, to Paolo’s ramblings about technics, to Rodriguez’ certainly rising curiosity of the alien planet’s geography… Joan, Harley, Omar, Sanchez, John… The names were flooding his heart and soul. They would be reunited with him in a few days…

His always brilliant mind failed him as for several seconds as he wasn’t able to grasp the whole truth – that the time of being separated from his beloved ones was rapidly nearing the end. Wild feelings, too much to handle, flared up in him. He didn’t even realize that tears burnt behind his closed lids or the dry sob that escaped his tight throat.

Jim was hyper-aware of the turmoil that rocked his bondmate’s soul – turmoil of utter delight and almost painful relief. The bad condition Nien was still in, did its own to let the superhuman almost break down – not in sorrow, but in joy and something like redemption. Kirk tightened his hold around the older man’s slender form and laid his head against Khan’s, as the Augment buried his face at Jim’s neck. It really was good to have listened to his instincts and to have told Nien the truth. Jo and Bones had been right. To keep Khan in the dark would have done him no good – both of them.

He felt how Nien’s arms went slowly around his waist, and while Khan held the left arm as still as possible, his right one returned Jim’s embrace almost fiercely. His feelings bombarded the captain’s mind; his shields too weak to resist the emotional wildfire that had overtaken the usually so composed Augment. Yes, Spock and Selek were right. Not only he, but also Nien would have to learn to work with their bond to keep each other and themselves sane.
Something wetted his neck and Jim realized that it was Nien’s tears – tears of heart-melting happiness. Whispering sweet nothingness in his beloved’s ear, he let his hands roam over Khan’s back, into his hair and down again. He really was glad that he had spoken openly with his bondmate. He had the assumption that Khan’s youngest nightmare was connected with his returning memories – cruel memories of most brutal violence. To receive finally such a blissful message, to know that his torment hadn’t been for naught and that he was about to reach the end of the long dark tunnel he was forced to walk, must be like balm for the enhanced man.

Jim heard the door opening behind him and looked back over his shoulder. Joaquin stood there, Chekov and Riley flanking him. Smiling at the Augment-boy and making a short gesture with his head to leave him and Nien, was enough to let Weiss nodding towards him and to retreat; knowing that his brother had learned of the good news.

Kirk pursed his lips; asking himself if all Augments were mental connected like those two, or if it was an example. Well, he would get the answer as soon as Otto would be woken up.

Khan needed some time to calm down and as he finally loosened his embrace around Jim, he looked almost sheepishly at the young captain. “Sorry,” he mumbled; realizing that he must look like a big mess.

“What for?” Jim replied gently. “For being overjoyed to see your family in a few days again?” He tenderly kissed Nien’s dry lips; tasting salt on them. “Your reaction is pretty understandable. Hell, it would have been strange if you wouldn’t have reacted like you did. I know how much you love them and that you missed them terrible. You had to fear for their lives so often, fighting for them. It’s only normal – human! – that you are a little bit overwhelmed now.”

Nien sighed and lowered his gaze; a headache was forming again. “I don’t want to fight anymore,” he whispered. “Yet I know that we will have no other choice. Your and my future are still uncertain – that of my family, too. And…”

Jim brushed his lips over Khan’s temple. “Don’t worry, love. Selek contacted this mysterious lawyer he is almost smitten with. I do believe that this guy will bring us out of the deep water we’re swimming in.”

The Augment looked up; mocking disbelief on his face. “Selek – smitten with someone else than you?!”
Kirk laughed quietly. “Well, he is all ‘he’s the best’ and ‘he’s the only one who can get you out of it’. For a Vulcan that is quite an enthusiastic hymn of praise. Even T’Pau was happy with his decision.”

“T’Pau – happy?” Khan had to chuckle finally. “I haven’t met her until now, but from all I heard of you and what I read about her, I don’t think she will ever do ‘happy’.”

Jim groaned. “All right, she agreed with Selek’s choice – I mean, she really agreed with it. That says a lot.” He smirked. “So don’t get your boxers in knickers and relax. No soup will be eaten as hot as it was cooked.”

“You’re bad with adages like Dr. McCoy.”

“Well, he rubs off on me,” Kirk admitted; smirking like mad. Then he turned serious again. “Jo will accompany Bones and me to the hospital tomorrow to be there when Otto awakes. So... you will be alone for a few hours. Do you think you can manage it?”

Khan glared at him before he grimaced. “I’m not a toddler, James,” he grumbled.

“No, but you are quickly bored – just like me. Hell, I really loath the times I’ve laid on a biobed and had nothing else to do than staring at the ceiling. The minutes were creeping then. And I think it’s the same for you.”

This time the Augment sighed. “As I said, I will manage. Maybe you can give me a PADD to have some distractions, maybe with some literature loaded down on it.” He looked around him. “Do you think there is the tiniest chance to leave this room for a while – maybe resting on some cot outside?”

Jim chuckled. “Just have a look. Really awake for only a few hours and already he has ants in the pants.”

“I don’t wear any pants in the moment – only this damn hospital gown,” Khan muttered. Carefully he lifted his right hand and combed his fingers through his hair. At least he tried to, but his fingers were stuck within the strains, sticky with dried blood and sweat.

Kirk bit his lips. “I know Bones will give me the lecture of my life, but... I think I can organize some help to get you cleaned up. Maybe even we can wash your hair. You’ll feel better afterwards.”
The hope that shone on Nien’s face was utterly different than the hope he had flooded with a few minutes ago. He looked almost… like a boy shortly before being led to the birthday table. “You think this could be done?” he asked; childish joy on his face. It made him look so much younger and almost vulnerable.

Jim snickered and stole a kiss from him. “Just give me a little bit time and I’ll come up with something – before Bones returns. What has been done can’t be change, so he can complain all he wants.” Mischief glittered in his eyes.

Khan couldn’t help himself; he had to chuckle. His beloved reminded him of a little rogue. “You love to mix up everything and everyone, don’t you?”

Kirk shrugged. “Hey, what is life without a little bit fun?” He rose. “I think I’ve already an idea. I’ll be back in a few.” He left – and Nien lay back on the mattress.

He would see his family in a few days again!

He still couldn’t believe it and for a moment new tears threatened to rise, then he closed his eyes and sighed in happiness. Even the new headache didn’t lower his rising moods.

ST***ST***ST

“How is Mr. Hoffmann doing?” Spock had clasped his hands on his back and looked expectantly at McCoy, who threw a further glance at the read-outs, before he answered,

“Pulse at 38, breath rhythm is increasing.”

The first officer nodded slowly and gazed at the stasis-chamber. The blue shimmer bathed his face in an almost eerie light and made his face even more angular than usual. “So, T’Pau agreed to the captain’s plan to wake all Augments up,” he said slowly.

Bones sighed. “It was the only logical choice if we don’t want to risk the lives of Khan’s family. Jim was right, yet… I’m a little bit at the edge imagining that all these supermen and superwomen will be awake in a few days and Khan not being here to keep them in check. No offense against Joaquin,
but he is a mere boy at the threshold to adulthood. I don’t know if his word will be enough to calm
the others.”

Spock stepped nearer. “Do you fear trouble, Doctor?”

“Trouble is Jim’s middle-name, and given the fact that he is strongly involved in this all, I do have
some second thoughts. Yet, like I already said, we had no other choice. Hoffmann and the others are
still people. Enhanced, yes, but they are human beings. I don’t want to risk their health because we
have to make the last step now, of which we all knew it would happen sooner or later.” He rubbed
his neck. “How is your father doing?”

“Healer Sorel is handing him the release-documents and instructs him about the medicaments and
how to behave within the next days.” Despite the fact that Spock’s face was expressionless like most
times, something close to frustration mirrored in his dark eyes. “I have doubts that Sarek will follow
the latter in detail.”

“Like father so son,” McCoy teased and received a rising brow for it. “If Sarek is only a little bit like
you while being sick or injured, I sympathize with Sorel. To keep you in check is almost
impossible.”

Indignant the half-Vulcan cocked his head. “Doctor, as long as your instructions make sense, I’ll follow them.”

“Yeah, except if the ship is in danger, Jim needs you or you’re bored to death. Then I need additional
eyes in the back of my head to keep you in medbay.” He chuckled. “And I have the certain feeling
that Sarek isn’t the tiniest bit different.”

Spock preferred to skip any reply. Instead of reacting to the CMO’s banter, he turned his attention
back to the Augment in the stasis-chamber. “How long will it last until he is fully awake?”

“Approximately in twenty hours,” came Sorel’s voice from the entrance. The healer entered the room
and continued, “Basing on the standard life-signals of a Terran human, Mr. Hoffmann is stable and
the process of awakening is flawless. Usually the process of wakening someone up from stasis
doesn’t last longer than a few hours, in this case I advised Doctor McCoy to take it slower. Mr.
Hoffmann’s body has to come to terms of getting its full functions back.”

“Logical,” was all Spock said to this.
“Your father is ready to leave,” the healer informed the younger Vulcan. “He expects you in his room.”

The first officer lowered his head in affirmation. “Understood. I’m on my way.” He looked back at McCoy. “Please keep me updated, Doctor. I want to be here when Mr. Hoffmann awakes.”

“Of course,” Leonard nodded.

“Was Mr. Singh informed of the changing of the made plans?” Spock asked further.

The human surgeon sighed deeply. “Ask Jim. He wanted to keep Khan in the dark, because our sleeping beauty has started to get his memories back and reacted badly to them. Jim wants to spare him. Personally I think this will be a mistake and I told him so, but it’s up to him if he tells his sweetheart about the news, or not.”

Spock pursed his lips. “If Sarek’s condition allows it I’ll visit the captain in the afternoon. Good day, Doctor.” He left the room to return to his father’s side; knowing that Uhura had prepared everything at their momentarily shared flat. He was down the hallway as his communicator beeped.

“Spock here.”

“Kirk here,” he heard his friend’s voice. “Spock, I need your help.”

“How can I assist you, Captain?”

At the other end of the line Jim sighed exasperated. “Spock, we are both released from duty. There is really no need to call me ‘captain’.”

“I know that we are released from duty, Jim. It’s the reason why we both are on New Vulcan, together with Dr. McCoy and Nyota.”

Kirk, who stood on the terrace, had to chuckle. He knew that this was Spock’s very own way of
teasing him. “Well, shore-leave is always a good thing – even a forced one can be it,” he smiled, before he turned serious again. “Spock, Nien got his memories back and they do him no good. He’s… depressed. The only thing that cheered him up was me telling him of Otto Hoffmann and that we’re going to wake his crew.”

“So you decided to follow Doctor McCoy’s and Mr. Weiss’ advise,” the Vulcan answered, and Jim frowned.

“How did you know?”

“I’m at the hospital to pick up Sarek, and visited Doctor McCoy to get an update. He told me about Mr. Singh’s condition. So, with what exactly do you need my help?”

Jim smirked. Typical Spock – always coming straight to the point. “Nien is absolutely tired of being sticky, dirty and clad in hospital gown. Concerning the latter I didn’t dare to ask the priests here to help us out with clothes. Therefore I wanted to ask you if you could buy some light Vulcan trousers and tunics, maybe a robe, too. I would do it myself, but a) I don’t know New ShiKhar and where to find the shops, and b) I don’t want to leave Nien in the moment. Despite that he is almost hilarious with the prospect to see his brothers and sisters in a few days again, his returned memories have shaken him badly. He needs me.”

“I understand,” sounded Spock’s voice. “I wanted to visit you anyway in the afternoon. I’ll bring some clothes for Mr. Singh – light ones he can wear on the biobed and after the time he is bound to bed.”

Jim sighed in relief. “Thank you, Spock. I’ll transfer the Credits to your account. I don’t know about the prices here, so… I’ll transfer an amount and pay you the difference after I learned of the exact price.”

For a moment Spock was silent, before he replied almost offended, “Jim, I do have some money spared. I really can spend some Credits without you paying in advance.”

Kirk snickered. “Sorry,” he said; clearly not sorry.

“What do you plan concerning Mr. Singh’s non-existing hygienically status?” his friend wanted to know and the young captain groaned. “We – Jo and I – will wash him.”
“Does Dr. McCoy knows about your intention?”

“No – and it shall remain this way. I know that he has only Nien’s best interests at heart, but Nien’s soul needs a proper healing as bad as his body. And this is my responsibility. We’ll clean him up, help him getting some other clothes on and you will see he’ll bloom up like a flower after a long night.”

The same instant Jim felt his face flushing. Heavens, he was sweet-talking like a lovesick schoolboy.

“Be careful that said flower will not get dehydrated by your plan,” Spock deadpanned – and Jim had to laugh. Vulcans did have humor, no doubt about it.

“No problem.” He hesitated a moment. “So, thank you, Spock. And please give Sarek my regards.”

“This I will do. Until later, Captain.” The link was closed and Kirk rolled his eyes. “It’s ‘Jim’,” he grumbled, and changed the frequency. “Kirk to Enterprise.”

“Enterprise here, Captain,” came the answer instantly.

Jim smiled this time by being addressed with his rank. He knew that he technically wasn’t his Grey Lady’s captain at the moment, yet the crew still regarded him as such. “Lieutenant, please put me through to medbay, Dr. M’Benga.”

“One moment, sir!”

Only seconds later Kirk heard the rich voice of the second CMO. “M’Benga here, Captain. How can I be at your service?”

“Geoffrey, I need a favor from you.” In the next minute he explained what he needed and as the talk ended, everything was settled. Grinning broadly Kirk looked over to Joaquin, Pavel and Kevin, who sat in the shadows of a large tree and were talking with each other. “Well, boys, I’m going to need your help, too,” he whispered and left the terrace; heading to the young Augment and the two ensigns.
McCoy returned in the early evening – tired but relieved. The wakening process was going perfectly and Otto Hoffmann’s body reacted exactly as it should. Bones was glad for it and looked forward to the next day. He had to admit that he was curious to meet another Augment. Joaquin had been a nice surprise. The boy was sweet and affable, contraire to his older brother at first. Leonard wondered how Otto would be – if he would be like Khan or like Joaquin, or completely different.

Suppressing a yawn, he headed to the guest-wing of the abbey and heard Jim, Joaquin and Khan talking as he entered the hallway. Kirk and Weiss were chattering, sometimes joined by the deep rumple of the Augment leader’s baritone. Well, that was a beginning.

But as McCoy stepped into Kirk’s and Khan’s room, he stopped dead in his tracks. The former dictator sat on the biobed, clad in a light Vulcan robe. His hair was clean and a lock fell over his high forehead. He still wore the dark bruises of the brutal violence he had to endure, but he also looked more… content.

“What the hell…” Bones began, meeting Jim’s and Joaquin’s broad smiles and the almost challenging glance of Khan. “How did you…” He stopped again; glaring at Kirk. “That was you!”

Jim grinned at him. “Nien felt dirty and sticky, and so…”

“Have you lost your mind?” Leonard snarled. “Mr. Singh suffers a TBI and has several broken bones, including inner injuries! No strong movements, no stress, no…”

“Calm down, Bones, we took care of everything,” Kirk interrupted him; rolling his eyes. “Nien needed to get the smell and dirt removed. What is the old saying? A healthy mind in a healthy body?”

“Don’t give me a quotation of Freud!” Leonard growled. “Physiology is up to me, kid!” He closed the distance to the biobed’s monitor and checked it, before he glanced down at Khan. “Right, your bones are still mending and your brain activities are not unusual – for you, at least. Yet I ask myself: Do I really want to know how these two stupid boys have managed to wash your hair and put you into clothes without doing any damages to your barely healing injuries?”

Nien simply smirked at him, and it was Jim, who answered, “I had medical help, Bones. The whole medical equipment for such cases – freshly beamed down from the Enterprise and with M’Benga
taking care of everything.”

McCoy whirled around. “You called Geoffrey to…?”

“You were at the hospital to watch Otto, so I asked M’Benga for support. He beamed down with the
cleaning equipment from our medbay, and while Jo and I held Nien, M’Benga washed his hair.
Spock stopped by later and brought fresh clothes and he and I were able to help Nien to put on the
robe. Light trousers and tunics are over there and hopefully Nien can wear them in a few days.” He
pointed to the wardrobe.

Khan knew that the whole thing had held some risk, yet he was incredibly grateful that he was at
least cleaned up with washed hair and shaved jaw. And he really appreciated it to wear something
else than the damn hospital gown. He always had loathed them – in his time and now in this new
century. It made him feel weak – something he would never be able to accept.

“I have to thank Jim and his clever mind that I feel like a human being again,” he said softly. “I know
that you worry about me, Doctor, and I’m grateful for your professional and also friendly concern,
yet I’m more myself again after your colleague, Jim, Joaquin and the two ensigns were done with
me.”

“Yeah, and risked your health!” McCoy snapped.

“Heavens, Bones! M’Benga was here – he is your substitute. Give the man some credit to do his job
right,” Jim sighed.

“And he agreed to your intentions – even given Mr. Singh’s injuries?” McCoy was angry, this much
was clear.

“I do think that M’Benga is able to decide something like this,” Jim answered, while he rose, stepped
beside Leonard and laid a hand on his friend’s shoulder. “We were very careful and Nien did
everything M’Benga asked of him. If M’Benga wouldn’t have agreed to the measurement, we would
have listened to him, but he said it was okay.”

“I’m really glad to be clean again, Doctor,” Khan joined the talk. “At least the stench of these
bastard’s fists, my own dried blood and a lot of sweat don’t bother me anymore.” His right hand
stroke over the soft material of the Vulcan robe. “And to be out of the hospital gown is good as
well.”
Yes, the whole washing-procedure had been a little torture for him, but he had endured the pain gladly to get really clean. It also had been embarrassing that Spock had been forced to lift him on his arms while Jim and Jo stripped him of the hospital gown and clad him in the robe, but even these moments worth the result. He felt like new born – well, almost.

Bones grimaced. “Yes, I do understand you, yet you took a big risk – despite your augmented nature. A TBI is nothing you should take easily, you know.” He pinched his nose. “Right, what’s done is done – and at least it turned out well.” He pointed a stern finger first at Khan and then at Jim. “But no more risky experiments, Gentlemen, or I’m forced to stay here!”

“Are you blackmailing us?” Jim asked and McCoy only snorted.

“I call it ‘discussion with strong arguments’ – the only thing that will go through your thick head, kid.”

“The most important thing is now to wake up my family properly – and Otto in advance,” Khan cut in, and McCoy looked with big eyes first at him, before he smiled at Kirk.

“You decided to listen to me for once? Hurrah, I mark this day red in my calendar.”

Jim only snorted, while Khan commented wryly. “You’ve to mark a lot of days red in your calendar by now.”

“And whose fault is that?” Leonard grumbled. He shook his head, before he sighed. “And now I want to take a nice, decent shower, have a good dinner and then I’ll leave for bed. Tomorrow will be a big day, and I want to be well rested when I welcome Mr. Hoffmann to the 23rd century.” He glanced at Jim and Joaquin. “And you two should hit the bed soon, too – after all you’ll be also at the hospital tomorrow.” He went to the door. “Until later.”

Jim took a deep breath and smiled at the two Augments. “Well, that went better than thought,” he beamed.

Khan only rolled his eyes, while Joaquin began to chuckle. “He really can be scary sometimes – but he is a good man.” He leant back in his chair; looking at his older brother. “Do you really think you can survive tomorrow while we all are being away?”
“Yes, I will,” the former dictator almost groaned. “Stop handling me like a little child, you two!”

“Well, Chekov and Riley could keep your company,” Jo suggested. “They already offered as they learned that I’m away tomorrow and…”

“Let the boys enjoy their spare time for once,” Khan interrupted him. “I will be all right!”

“You are sure?”

This time Nien only groaned and closed his eyes; faking offence. Joaquin promptly snickered and Jim grinned as he saw how his beloved’s mouth curled for a moment. But Kirk couldn’t be fooled. He saw the tension in Nien’s body and behind the cheerful mask Khan wore for their sake. He knew that deep in his soul the Augment leader was filled with worry for the next day. And if he was truthful to himself, Jim Kirk was nervous, too…

TBC…

Chapter End Notes

Yes, it’s understandable that all are nervous, even if they are nervous out of different reasons. The next day will be THE answer if the other Augments are able to fit in the new century and this new world, and how they are going to react to everything. Well, at the moment it’s only one Augment – namely Otto Hoffmann – but is from Khan’s generation like the most other enhanced men and women, and so Otto can be seen as an example.

In the next chapter you’re going to meet him, but not only him. Of course Khan gets bored while being alone, but Jim – who knows him best – has an idea how to distract him.

I hope you liked the new chapter.

Have a nice weekend,

Love

Meeting Otto Hoffmann

Chapter Notes

Hi, my dear readers!

Thank you for the many comments. Even as I told you several chapters ago that the last big show-down was done for now, you certainly assumed that there would come more interesting scenes. Well, besides the fact that Jim, his friends and Nien are – indeed – going to face trial, there are first other matters they have to take in their hands.

And new persons will arrive.

First of all another Augment, Otto Hoffmann. Being an Augment from the ‘first’ generation he resembles more Khan than Joaquin, yet he differs from Nien.

And Khan? Well, a highly intelligent man with such a bright mind gets easily bored when there is absolutely nothing to do except for looking at the ceiling – or the wall, the door, the window and back again (somehow I imagine Sherlock in this moment – snicker). But, of course, Jim always thinks of his beloved and takes care that Khan will not die of sheer boredom, while parallel he worries for Otto. Our Augment-hero gets visitors – while Kirk, Spock and Bones will meet Otto.

Have fun,

Love

Yours Starflight

See the end of the chapter for more notes

Chapter 89 – Meeting Otto Hoffmann

The night seemed to be longer than usual – at least for the guests within New Gol. Neither McCoy, or Joaquin or Jim found much sleep, and even Khan woke up several times; lying in the dark and staring at the ceiling. Nightmares and the mixture of anticipation and anxiety didn’t let him find any good rest. During the night Jim crawled into his bed; knowing that his sheer presence would calm his bondmate. Yet none of them slumbered well, and the next morning Nien’s mood seemed to sink from minute to minute.

He wanted to be there when Otto awoke; wanted to be the one who instructed McCoy and the others how to start the wakening process of the cryotubes and to watch over it. Instead of doing what was his sacred duty and keeping his word to his family that he had given them before launching the Botany Bay – to wake them up when they were all safe – he lay here in this damn bed and had to leave everything to others.
It was… infuriating!

He had hoped – dreamed – of starting the wakening process and to watch his brothers and sisters waking up, and now he was bound to sick-bed and could do nothing else than waiting.

And waiting – and waiting.

Jim had promised him to keep him updated, and if there was someone Khan trusted his family with then it was James Kirk, but to be unable to attend his people was beyond frustrating.

Useless!

He was utterly useless, and this after all he had done his whole life to keep his family safe.

As the minutes crept away and the morning turned into early midday, Khan was almost ready to climb the ceiling. Yes, Jim had left him some interesting literature on his PADD, but despite his high intellect and superior mind, Khan Noonien Singh found himself unable to concentrate for only a minute.

One of the Vulcan priests looked in two times after him and served him something to drink, but even these short distractions weren’t enough to keep his thoughts away from what was happening at the hospital for more than a few moments.

As he heard different steps coming down the hallway, Khan gritted his teeth and fisted the sheets in his hands – almost tearing the material. He knew that the priests meant well and he was grateful for their hospitality, but he was about to lose his polite manners, if they…

“Mr. Singh? You have visitors,” an older Vulcan told him as he reached his door. He stepped aside and five people stepped in.

Khan stared astonished at them, before his almost painful attention melted away and made room for joyful surprise. “You?” was all he managed to say, and then he was surrounded by five broad smiling faces.
“Surprise!” Galven oinked.

“Jim called us and said that you had to be alone here for today. We thought it was about time to pay you a visit,” Ritek smiled at him.

“How are you doing?” Caviw asked; her tail slipped gently around the Augment’s shoulder and stroke over his neck; tickling him.

“Better, thank you,” he replied; still astonished.

Jeff grimaced. “Don’t get me wrong, my friend, but you look like shit.” He cocked his head. “These bastards got you pretty bad.”

“I’m healing – and thanks to my enhanced nature I’ll soon be fit again,” Nien played down the issue.

“Your little brother told us that you’ve gotten a TBI and several broken bones. You shouldn’t take these injuries too lightly,” Caviw murmured.

Khan lifted both brows. “You met Joaquin?”

The five members of The Shadow began to snicker. “Yes, him and these two young ensigns. He was utterly perplexed at first,” Ritek smirked. “The poor boy certainly got a kind of shock – after all he isn’t used to alien people.”

“His face as I told him that you pulled my tail literary, was priceless,” the Caitian woman giggled. “He really is sweet.”

The second Tellarit, Khan was certain he hadn’t met before, chuckled, too, which woke Galven’s attention. “Ah, may I introduce you to my brother, Galten?” he said; putting a hoof-like hand on the other Tellarit’s shoulder.

Nien felt his mouth curling into a real smile. “So you found him,” the Augment stated; glad for his
comrade. His ocean-colored eyes hung at the far too thin frame. Galven’s brother looked like he had been through hell.

“Yes, during our mission with Wesley to the slavery market, where the survivors of the delegation were held prisoner,” Galven nodded; his little eyes shone with delight. “That was an adventure! I only wished you could have joined us, lad.”

“I was busy otherwise,” Khan smiled.

“You mean besides cuddling with the captain?” Ritek teased.

Promptly the Augment rolled his eyes, “Yes, even if you don’t believe it. I was made petty officer for some time and took the place of the first helmsman. At least I could do something useful,” he grumbled.

Jeff nodded in sympathy at him. “It’s boring to lie here all day, isn’t it?”

“You have no idea,” the former dictator murmured.

“We thought so. And when Jim called me and told us that it would be okay now to visit you at New Gol, we came here as soon as possible,” Ritek beamed at him. “That is, after Galven returned from the Enterprise where he helps out in Engineering.”

“You assist Mr. Scott?” Khan asked, a little bit perplexed.

The Tellarit shrugged. “You all made quite a mess of the ship’s engines and with you being away, Scotty and Keenser are really in need for some help. But when Kirk told us that you’re here all alone for today, I took a day off, beamed down and here we are.”

“But if I think of the reaction of the Vulcan at the entrance, I guess Jim forgot to inform your hosts of our visit. The good man looked slightly taken aback, and this tells a lot given the fact that the doorman is a Vulcan,” Galven chuckled.

Nien only groaned. Typical Jim! Avoiding trouble by creating precedents.
“So, Kirk has to assist Spock with the preparation of his wedding?” Caviw piped in. “That’s really nice. I haven’t heard before that Vulcans allow outworlders to be a part of their ceremonies.”

“Jim and Spock are close friends,” Khan replied; realizing that Kirk hadn’t mentioned the real reason for his absence in New Gol. “And with the most members of Mr. Spock’s family being dead, Jim is the logical choice to support him.”

“So, you and Spock made peace with each other?” Jeff wanted to know, and the Augment shrugged.

“As far as I understand I owe Mr. Spock my life. He helped me with a mind-meld after my life-signals went flat-line after the surgery. And with him being Jim’s ‘Vulcan brother’ so to say, it’s better for all of us if we two get along. And, by the way, he isn’t that bad when you come to know him better.”

“Aha, listen to this,” Ritek laughed.

Khan smiled at him, before his manners kicked in again. “Sorry for my failure, my friends. Please have a seat. I apologize that I can’t offer you anything else than water, but…”

“Don’t worry, I took care of everything,” the Caitian woman smirked, stepped to the table, stripped off her backpack and emptied it. One by one two bottles of wine, glasses, sandwiches, sweets and a lot more was placed on the table.

“We thought that you maybe would want to have something else than water, tea and vegetables,” Jeff joked.

“Or being feed with this stuff,” Ritek said; pointing at the IVs.

“And if the good doctor complains about the wine – just tell him that not only your body, but also your soul needs some healing. Wine is joy – or something like this,” Galven oinked.

Khan shook his head in fond amusement. They were really his friends. “I’ll take a glass of the wine – and a sandwich, please,” he said. “And then you have to tell me how you were able to retrieve the delegation.”
Pulling the two chairs nearer, the two Tellarits took their seats, while Jeff and Caviw sat down on Jim’s bed – all of them just plunging into the story, while Ritek filled the glasses he took with him from the hotel room he and the others lodged in at the moment. And Khan didn’t even realize how he began to relax.

ST***ST

„Pulse 64, blood pressure 124:75, body temperature 36.9 °C, brain activity within the standard parameter – well in Khan’s and Joaquin’s parameter.“ McCoy smiled at the others. “I think we can take Mr. Hoffmann to the prepared hall and wait until he wakes. All life signals are stable.”

Joaquin Weiss sighed in relief while he felt Jim Kirk’s hand squeezing his shoulder. Beside him Spock remained silent, but the young captain could read the soft satisfaction in the Vulcan’s eyes. McCoy and Corrigan pushed an antigrav-stretcher beside the stasis-chamber which was switched off by Sorel in this moment. The door hissed as it was opened and coldness crept into the room, while Sorel bent down and lifted the large body of the Terran Augment from the chamber; placing him carefully on the stretcher.

Two minutes later Otto Hoffmann lay in a comfortable biobed within one of the three halls Sorel had ordered prepared. Transportable dividers were placed between the beds to offer the patients some privacy, but could be removed easily if wished. At one wall three large windows usually gave a free view to the town and the lake, now they were covered with curtains. Enhanced intelligence or not, the Augments would face some culture shock after they woke, and Sorel – and McCoy – thought it better to let them learn about their true whereabouts step by step. To know to be on a strange planet and actually seeing it were two different pair of shoes, and the two surgeons agreed that it would be the best to break the news gently to the men and women.

“All right,” McCoy murmured. “Now there is nothing else to do than wait.” He glanced at Jim. “Didn’t you promise to support Spock with his wedding? Maybe you two could head to downtown and...”

“We haven’t even talked about anything until now,” Kirk interrupted; looking questioningly at his Vulcan friend, who lifted a brow.

“We have no data when we can expect Mr. Hoffmann to wake up. And because we all want to be here then, I suggest that we stay close by.” His gaze found Jim’s. “If you agree, we can retreat to one of the refreshing rooms and you can give me some information about the human way of marrying. I know that there are details within the ceremony Nyota certainly expects me to consider. For example the tradition of a wedding-band.”
The young captain smiled at him. “No problem. Bones, would you be comfortable to be here alone with Otto?”

McCoy rolled his eyes. “I’m a grown boy, you know. And Joaquin will be here, too. So, off with you two.” He made some shooing gestures with both hands. Jim chuckled and walked to the door; Spock on his heels. “Call me when Otto wakes up,” he said over the shoulder. “I’ll inform Nien about Otto lying in a bed now and that his vitals are okay.”

Leonard nodded. “Good idea. I’m sure he’s bored to death by now – and itchy, too, because he’s worried for Mr. Hoffmann.”

Kirk stopped at the entrance and turned around. “I don’t think that he is bored. I called Galven and asked him to spend some time with Nien. He agreed to go to New Gol together with the others.”

Bones smirked. “Good idea.”

“Did you inform T’Pau about the guests in advance?” Spock asked him – and Kirk’s face told him instantly everything.

Jim stared wide-eyed at him and smiled sheepishly, “Uh… no?”

Sarek’s son sighed. “You are aware of the rather tight relationship between Vulcans and Tellarits, aren’t you?”

An almost boyish mixture of innocence and mischief shimmered in the captain’s sky-blue eyes. “Well, you and Galven get along very good – and he and the others are visiting Nien, not T’Pau. So… I don’t think that it will be a big issue.”

The Vulcan slowly shook his head; almost exasperated. “To use one of your Terran sayings: Your words in the Lord’s ear.”

“Well, it was an emergency – sort of,” Jim defended himself. “Nien is traumatized and to be all alone with his worries wouldn’t do him any good. So the visit of some friends is important for his health. I’m sure T’Pau regards it likewise.”
A Vulcan brow was lifted. “You should ask her at the next given opportunity,” Spock commented dryly. “And prepare a proper apologizing. Who steps into New Gol and who not is only up to T’Pau and the other high priests.”

Jim rubbed his neck. “I did something rash, didn’t I?” And as Spock only nodded, he sighed, “Right. I’ll talk to her when I’m back at New Gol.” He waved at Bones and Joaquin. “See ya!” He pulled out his communicator and hailed Galven.

“Hi, Galven, it’s Jim,” he said after the Tellarit answered the call. “Are you still with Nien?”

“Yes, we are,” replied the leader of The Shadow.

“That’s great. Can I talk to him?”

“One moment, laddie.”

A second later Khan’s still hoarse baritone sounded from the little device. “Jim? Is everything all right?”

“Better than right,” Kirk smiled. “Spock and I are off for some coffee now, just waiting for a friend to join us. He has overslept, you know, but he is okay and we’ll wait for him now.”

Jim thought he could feel Nien’s relief even from the distance. “That’s good to hear. Just enjoy your little break, Jim,” the Augment played along; answering the hidden message that lay in Kirk’s words. “I’m fine here – with Galven and the others keeping me company.” In the background the soft clinking noises of glasses were heard, and Jim and Spock exchanged a quick look.

“Did you have lunch with the others?” Kirk wanted to know and heard for the first time something close to a laugh in his bondmate’s voice.

“Caviw feared that I was starving here and brought sandwiches, cookies, a cake and even something to drink. Even if the IVs feed me, I prefer real food.”
“Enjoy it,” Jim chuckled. “I call you if something new happens, all right?”

“Thank you – and have a nice time with Mr. Spock.”

“I will. Bye!” Jim closed the communicator, while they stepped into a cafeteria. “I should have left him a communicator,” he murmured. “How shall I reach him if we all are not at New Gol?”

“Just ask Commodore Wesley to beam one down from the Enterprise. You’ll be with me away from New Gol for a few times from now on, and I’m certain the commodore doesn’t get wary because of your request.”

Jim smiled at him. “Why do you think I want to avoid Wesley getting wary?”

“Because you haven’t informed him until now about the changed status of a further Augment – or that we are about to wake them all up. And I think you don’t intend to let him know about it any time soon.”

Kirk frowned while they sat down at a table. “Do I recognize there some disagreement from your part, Mr. Spock?”

The Vulcan suppressed another sigh. “Wesley is our ally, Jim, not our opponent. He has to answer to the Federation Council just like we are going to do. Command could even send him to trial for keeping Khan’s presence aboard the Enterprise a secret. We have to pull at one string, therefore Wesley should be ‘taken in our boat’, as the saying goes. His statements could turn the scales.”

Jim had to chuckle as he heard Spock using so many idioms. “Can it be that Bones is rubbing off on you?” he teased.

“I have watched you understanding the good doctor instantly when he uses idioms, even if you don’t approve of this particular habit. I simply chose to speak like he would do to make you see my point.”

“You mean you want to emphasize the importance of your opinion by using human phrases.” Jim shook his head in fond amusement. “You are always good for surprises, Spock.”
“On the contrary, Jim, it’s you who never ceases to surprise me.”

A barman came and Spock ordered tea for himself and coffee for Kirk. When they were alone again, the Vulcan continued, “Command will be not very pleased to learn that all Augments were woken up – without informing Admiral Barnett and the Council in advance. Yet the circumstances demand quick acting from our side, yet you would spare yourself more trouble if you would at least inform your direct superior of the changed status. And, as I said, Commodore Wesley is our ally – and your friend. He trusted your judgment enough to keep Khan’s involvement of the last weeks a secret. I think it’s your turn to pay his trust back by showing yours in him.”

Jim pursed his lips, while he returned the intense glance of his friend. Spock was right – like always. Wesley sat in the same boat like he, Spock and all the others. They had to act and to appear on the scene as one big team – or Command would tear their arguments apart.

“You’re right,” the young captain mumbled. “I’ll inform Wesley this evening, after Otto has maybe woken up for the first time. Then I can report to Bob of Otto’s hopefully nice behavior. It would calm Wesley’s nerves.”

Spock nodded slowly in agreement. The same moment their tea and coffee was served, and then their talk headed towards another important matter: The upcoming wedding.

ST***ST

The air smelled – strange. It was warm, but not unpleasant, yet it simply smelled strange. His mind, slowly beginning to work again, identified disinfection agents, among other things which told him: hospital. He lay on something soft and a blanket was spread over him. Beeping noises were nearby and he sensed an injection needle being stuck into his left hand – maybe IVs. It was quiet – well, almost. His enhanced hearing picked up some steps outside, hushed voices which spoke in a foreign language and one time he thought an opening and closing of a door, but he wasn’t certain.

As the sleep gave him more and more freedom, he tried to explore his surroundings without giving himself away; keeping his eyes closed and his features relaxed.

One thing was for certain: This was not the Botany Bay. It was not only the strange smell in the air, but also the fact that outside of his room people were walking by – something impossible aboard a spaceship, after all there didn’t exist any antigrav-devices. Not in their time. Khan was an excellent engineer, but even he hadn’t been able to create synthetic gravitation.
The lesson was clear: He wasn’t on the *Botany Bay*, but somewhere in a hospital. Had the rocket engine failed and they had fallen down back on Earth? How did he survive then? Had they fallen in the hands of their enemies at the end? Where were the others then?

He tried to concentrate on his bond with Katie. He could sense her – not far away and obviously deep asleep. Maybe she was still in her cryotube. But who had woken up him then? It had been the plan that first Khan’s cryotube would start the wakening process after ten years and he would decide if it was safe to return to Earth or not. Only then he would have raised the others, but Otto Hoffmann was sure that his leader and friend wasn’t somewhere nearby. He would have felt him otherwise.

So, what was going on?

There was only one way to find out: Taking a proper look.

Realizing that he was alone in the room, he carefully opened his eyes – only to close them as they promptly began to sting. The light in the room was dimmed, yet it was enough to make tears well up. His enhanced sight was only used to the darkness of sleep; his pupils far too large for any brightness.

The next time he simply raised his lashes a little bit and gave his eyes time to get adjusted to the light. He saw a polished floor, a sand-colored wall a few meters away from him and a door. Carefully lifting his head and peeking upwards he saw a monitor above his head showing things he didn’t understand. Beside him were a nightstand and a holder with a bag holding some fluid that was fed to his veins.

So, definitely a hospital – or some likewise medical facility. But in which country was he? Who treated him – friend or enemy? What…

Steps drew closer and quickly he lay back again and closed his eyes; willing his features to relax again. A moment later the door was opened – it hissed open, therefore it had to be some automatic door. The steps came nearer and stopped beside his bed.

Otto listened closely. The newcomer’s breath was steady and even. A soft scent of some cologne grazed the Augment’s senses – again unknown, but not unpleasant. Then he became aware of the stranger bending over him – and his self-defense instincts kicked in.

McCoy had been outside to talk with Corrigan, who would take over the late shift. Joaquin had excused himself for a few moments to go to the restrooms, yet Bones didn’t think there would be a
problem if he left the room with the enhanced boy gone. It really would be a stroke of bad luck that in these three or four minutes Otto would wake up.

Well, the bad luck did strike, as Leonard learned all of sudden.

Only seconds ago he had watched the monitor before he bent down to pull the blanket higher over the Augment – remembering very well how much Joaquin was cold for the first days after waking up. And in the next moment a large hand closed mercilessly around his left wrist and pulled him down, while the second hand gripped his throat.

Brown eyes glared up at him. “Where am I?” a hoarse voice whispered; unused to uttering a sound for almost two hundred and seventy years. “Who are you?’’

The shock Bones felt the moment he was gripped began to leave him; his training as a doctor and a Starfleet officer helped him to stay calm.

“You are obviously in bed – and I’m the nice doctor who simply wanted to check on you,” he deadpanned.

The Augment didn’t seem to be amused, because he growled, “This is no answer to my questions.”

“Well, on principal I don’t answer guys who try to wring my neck,” McCoy replied wryly. “Maybe we can make a deal. You let go off my throat and I tell you where you are.”

The large man still flashed his eyes at him. “You’re either stupid or very brave.”

Leonard grimaced. “I’ve been called both.” He tugged at the hand that was still closed around his throat. “Well?” he demanded.

Reluctantly the Augment let go off his throat, yet his fingers around the CMO’s wrist tightened even more – a silent warning.

At the same moment Bones heard the light steps of Weiss coming nearer, and clearing his throat he called, “Joaquin? Would you please tell your big brother here that I belong to the good guys?”
“What are you…” Otto began, but didn’t get any further as a familiar, slender, half-grown figure stormed into the room and yelled a joyfully “OTTO!” A laugh sounded, before the newcomer called, “Let go off Dr. McCoy, Otto. He’s a friend!” A second later Hoffmann indeed had to let go of the casual human because he had his arms full with a very enthusiastic Joaquin Weiss.

Bones retreated two steps and rubbed his wrist; eyeing it. Dammit, that would leave bruises. Then his attention was driven back to the giant enhanced man on the biobed and the happy Augment-boy, who hugged the larger male like he wanted to break his bones.

“You are awake! Finally! I’m so happy to see you! How are you? Are you okay?” Joaquin more or less squealed – and Hoffmann had no other choice than to return the hug, before he glanced warily over the boy’s shoulder at the human, who simply smiled at him. Realizing that the strange man was no danger, he clapped Joaquin on the back and whispered,

“I’m okay but where are the others? Where is Khan?”

Joaquin began to chuckle. “You don’t have to whisper. Dr. McCoy and the others are perfectly aware who and what we are.” He felt Otto tensing up, drove back a few inches and beamed at him. His eyes roamed over the familiar features, the tousled brunette hair that had grown an inch or two, and over the bulky stature of his older brother. “Everything is okay, Otto, don’t fret. The others are still asleep and Noo…” He sobered a little bit. “Well, he got injured and… is confined to bed – and certainly is pouting because he can’t be here at the moment.”

Hoffmann tensed. His leader and beloved friend was injured – bad enough to be bound to bed? And the boy said ‘everything was fine’? He looked around – and saw beside him and on the other side of the room – no, hall! – many beds placed, which were empty. “Where are we?” he asked and tried to sit up. And, to his astonishment, he only could move slowly.

McCoy cleared his throat; knowing from Khan that with him bound to sick-bed, Otto Hoffmann was in charge for the other Augments – together with the oldest of the superhuman, Paolo, if he would be awake.

Stepping nearer again, he said calmly, “Mr. Hoffmann, as Joaquin already told you the others are still asleep, but they are safe and well watched. Khan, regrettably, was indeed injured during a fight, but he is out of the woods. Yet I ordered bed-rest for him to avoid any chance of a relapse. And as for your question; where you are, I’ll think you better remain in a lying position. You’re going to need it.”
Otto watched the man in front of him. He was in his early thirties, had clear eyes, an open face and wasn’t the tiniest bit threatening. There was no falseness in his voice – and no fear. The man had to know whom he was facing – after all he knew Khan. Yet he wasn’t on alert. Yes, he was wary – no miracle after his, Otto’s, rough handling of him. But the man was free of anxiety.

Odd!

Really odd!

“I can bear some news, Doctor…?”

“Starfleet is a para-military organization that explores deep space. The Enterprise is her flagship.”

Otto frowned again. “Exploring of deep space?” he repeated; baffled. Then he looked at Joaquin. “How long have we slept?” He tried to sit up more and his arms shook as he attempted to steady himself backwards.

“That’s exactly the reason why I suggested that you lie down again,” Bones threw in; pointing at the stressed limbs. Closing the distance to the bed again he gently pressed Hoffmann back on the mattress. It was clear that he was only able to do so because the Augment was too perplexed to be touched this casually. “Your muscles must learn to do their work again, so give them some time,” McCoy continued. “And the higher gravity doesn’t help it at all, so just stay relaxed and let your body adjust to the new situation. Augmented or not, muscles are still muscles, and they have their own agenda.”

Otto’s eyes went wide for a moment. He couldn’t remember that there ever had been a simple human who didn’t mind touching him or one of his other brothers and sisters. Well, that wasn’t true. He remembered that there had been Augments which bound themselves to casual humans – Kabir for example.

Kabir…
The flight from India to Australia, Kabir’s sacrifice as he stayed back to grant him, Katie, Khan and the others a chance to escape…

Them all boarding the *Botany Bay*…

Khan putting him to sleep, promising him to wake him up first…

Otto shook his head. Handling the unsettling memories – his last memories before he went to cryosleep – could wait. Just right now he had to make sure that he and the others weren’t in danger. The human doctor beside him seemed to be friendly, but Hoffmann had his own share of bitter disappointments. He wouldn’t trust anyone easily.

Watching the surgeon he frowned again as the man’s words reached his mind. ‘Stronger gravity’, ‘exploring deep space’, ‘starship’…

Dammit, the human race couldn’t have developed something like this within ten years. Impossible! So…

“How long have we slept?” he asked again, and Joaquin smiled sheepishly at him.

“You’re sure you can stomach the news?” As Hoffmann only shot him a glare, Weiss sighed, “We’ve slept for almost 270 years.” – Otto’s features got out of control and he gasped. – “We’re in the year 2260, November to be more precise,” Joaquin finished.

Paling, Hoffmann could only stare at the youngest of his brothers and sisters. “You’re kidding,” he croaked.

“Nope?” Joaquin shook his head. “No kidding here.”

“He is right, Mr. Hoffmann,” Bones cut in again; throwing a wary glance at the monitor. Some of the Augment’s vitals went crazy which told McCoy everything: Shock – at least a little one. And seeing that this man was more like Khan, Leonard decided to give his patient enough information to calm him down, but not to reveal too much to spare him more stress. “It’s indeed November 2260. So you were a more than two times longer asleep than Sleeping Beauty,” he joked, before he turned serious
again. “The world has changed since you left Earth – a lot. You’ll have to catch up on a lot of history.”

Otto only nodded; still stomaching the fact that he and the others had been asleep for more than two and a half centuries. Of course his enhanced mind could wrap around this fact, yet some part of him still couldn’t believe it.

A tremor shook him and he realized that he felt very cold despite the warm temperature in the room. Promptly the surgeon pulled the blanket higher. “You’re going to feel chills for a few days,” he explained. “With Joaquin it was the same, and Khan told me the same went for him after he woke up.”

Otto nodded. Noonien had hinted that these reactions could be expected as a by-effect of the cryosleep. Apropos…

“Where is Khan?” he asked. “If this is a kind of hospital and he was injured, he must be here. Can I see him?”

“Noo is not here anymore,” Joaquin piped in. “You know him and hospitals. He reacted badly to this place, even when he was still out cold. Jim decided that it would do Noo better to be away from here and brought him to the Vulcan abbey outside of the town. And it was the right thing to do. Noo is healing nicely.”

Otto blinked baffled. “Vulcan abbey? Are we on Sicilia or what? And who is Jim?”

McCoy chuckled. “No, we are not on Sicilia, Mr. Hoffmann. We are not even on Earth.” He waited – and the reaction came quickly.

“Not on Earth?” This time the Augment’s voice was an octave higher.

“No,” Bones shook his head. “We are on New Vulcan, a colony of a befriended species of peaceful humanoids – well, vulcanoids fits it better. They look a lot like us, but there are a few differences. The first contact was made on the 5th April in 2063, after an engineer developed the warp-drive – a drive that makes vessels fly with multiple light-speeds. Their attention was driven to us as the engineer tested his development. It changed everything. Earth, Vulcan and some other inhabited planets founded a Federation – the United Federation of Planets, short UFP. Today we’re living in peaceful context with a lot of species.”
Otto could only look at him; mouth hanging open. “Aliens…” he whispered. “You’re really telling me that men have befriended aliens – and that I’m on an alien planet at the moment?”

“Yeah, on New Vulcan – the new main colony of the Vulcans. They are a race that follows the path of logic, are very peaceful and our oldest friends, so to say.” He watched Hoffmann closing his eyes for a moment. “I know that’s a lot to put up with,” he said sympathetically. “Jo here had the same problems in the beginning.”

Weiss grinned at him as Bones used the short-form of his name just like Jim did. Then he glanced at his older brother. “As I met my first alien I almost screamed like a girl. Poor Dr. N’Halro, he really is nice – and I almost freaked out.” He met Otto’s eyes again. “You’ll see most aliens are really nice guys. Well, some of them do look like they just came alive from some science-fiction or fantasy-novels, but they are okay. When I think of the Tellarits…” He had to snicker as he remembered his first contact with the gang Noo had hung out with. “I think it was a good idea of Jim to call Galven to keep Noo some company,” he said; his words directed at McCoy.

Otto lifted his head. There was again this English or American name. “Who is this Jim?” he wanted to know. Obviously this mysterious man was an important figure given the fact that he took care of Khan and relocated him from the hospital to some abbey.

“Ah,” McCoy nodded, “that reminds me that I should have contacted him minutes ago.” He pulled his communicator from his trouser pocket and opened it. “McCoy to Kirk.”

“Kirk here,” came the reply only seconds later; a pleasant smooth tenor as Otto recognized.

“Jim, our patient is awake. Do you want to welcome him to this new world?”

“Spock and I are on our way. Have you told Otto about... well, his whereabouts?”

“Yes, I have. Therefore you can bring Spock in. Mr. Hoffmann knows that there are aliens. At least our hobgoblin doesn’t look scary.”

“I take that as a compliment, Doctor,” sounded a second voice – a cool baritone – through the futuristic mobile.
“I was stating a fact, Spock,” McCoy answered.

“As did I, Doctor,” was the dry reply.

“Boys, play nice. We’re there in a minute, Bones. Kirk out.”

Joaquin was chuckling again as he watched the surgeon, before he whispered to his giant brother. “Dr. McCoy and Mr. Spock love to banter. Don’t put too much in their bickering. It’s a kind of hobby for them.”

“And I know someone who is about to get a red mark on his medical chart,” Leonard grumbled.

“No problem, Jim is a good hacker. He would remove it,” Weiss beamed at him.

“Don’t be too sure, son,” McCoy smirked. “I have some ‘hypo’-arguments Jim certainly wants to avoid.”

Hoffmann had listened silently to the short exchange of humor. And it made one thing clear. “You are already longer awake,” he assumed; glancing at Joaquin.

“For ten days,” Weiss affirmed.

“And Khan?”

“Uh… longer. There were some problems which first had to be solved before…” Joaquin’s well-meant explanation without revealing details which would upset Otto were interrupted by Kirk’s and Spock’s arrival.

The door opened and Otto’s attention was instantly driven to the newcomers. The first who stepped into the room was a young man in the middle or the end of his twenties. He had gold-blond hair, striking blue eyes, a very attractive face and a slender, yet muscular body. Even as young as he was he radiated authority – a natural streak of character, as it seemed.
Behind him was another man; only a little bit taller. His hair was black, his eyes were brown and he had angular features. He wore dark trousers and a kind of strange tunic. His movements were graceful, like that of a panther, and…

And Otto went rigid as his eyes returned to the man’s face. The newcomer had shortly nodded at McCoy, which had him turn his head the slightest bit. And this was the moment Hoffmann saw it: The man had pointy ears. And only now the Augment also realized that the man’s eye-brows were slanted upwards. In the same second his nose caught the unknown scent, while his ears picked up the other rhythm of the stranger’s heartbeat.

Alien!

This man was an alien!

Instinctively he was instantly on alert.

The blond man stopped in front of him and eyed him for a moment, before he extended his hand.
“James Kirk, captain of the USS Enterprise. Welcome in the 23rd century, Mr. Hoffmann.”

Reluctantly Otto shook the man’s hand. The young male wore no uniform, but strange yet nice civil clothes, yet he was someone who was used to leading people. There was no doubt about it.

“Thank you,” he said hesitantly. “Otto Hoffmann is my name, but I think you already know.”

The alien man had stepped beside the captain, lifted his right hand and split his fingers between the middle and the ring finger. “Long life and peace, Mr. Hoffmann,” he greeted.

Otto, unsure how to react, answered hoarsely. “The same for you.”

The man nodded slowly, let his arm sink and clasped his hands behind his back. “Thank you.”

“My first officer Commander Spock from the planet Vulcan,” Kirk introduced the strange man. “The Vulcans are our hosts at the moment.”
Again Hoffmann could only make an affirming gesture. “Thank you for your people’s hospitality,” he said; hoping not to offend the man. He had absolutely no clue of polite habits of these people, so he simply went with his guts.

“You are welcome, Mr. Hoffmann,” Spock replied. “Circumstances made it important to ask the captain for my people’s support which was granted. You and your comrades are safe here.”

The Augment frowned. “And yet my leader and friend Khan was injured. Bad enough to bind him to bed. So, what happened?”

“It’s a long story,” Jim answered. “And I’m certain that Nien wants to be there when we explain everything to you.”

“Nien’?” Otto echoed, perplexed.

Joaquin smirked at him. “You know the Americans, Otto. They love to shorten names, despite what they make of them by doing so.”

“So, you’re from the United States?” Otto asked the blond male, who smiled at him. And for the first time the Augment became aware of the high intelligence that shone in those deep blue orbs.

“It’s called simply North America now. It belongs to the United States of Earth.” He chuckled as he saw the other man’s confusion. “Don’t worry, I’ll provide you with some reports and literature to catch up on history.”

“Thank you, Captain,” Hoffman said slowly. “Yet my priority lies with my friends – and my leader. How is he? How does it come that he was injured?”

Jim smiled in utter understanding. Those questions would have been the most important ones to himself, too, if he were in Otto’s place. “Nien was injured in a battle I’ll tell you later of. He… got some broken bones, inner injuries and suffers a TBI…”

“What?” Hoffmann hissed, trying to sit up again.
“Please calm down, Otto,” Joaquin said softly; grasping one of his brother’s hands. “Noo is really doing better and he’s on the road of recovery.”

“I’m sorry that you are confronted with something like this, minutes after you woke up, and I do understand your concern for Khan. We all were worried about him, but he is already whining at being stuck in sick-bed and that tells a lot,” Jim said gently.

“I’m no stranger to your brother, Mr. Hoffmann. Nien and I are… close friends,” Kirk replied kindly.

Promptly McCoy began to cough. “Yeah, very close,” he deadpanned; rolling his eyes.

Curious Otto looked at him and then at the alien – the Vulcan – and to his astonishment the man’s ear tips became green. Fascinating!

Then his attention returned to the youthful captain. “You befriended Khan?” he asked; surprised. “Khan isn’t known to trust others easily – especially non-Augments. You must be very special to wake his interest.”

Jim didn’t know if he should be embarrassed or amused. In the end he was both. “Nien and I have a lot in common – and we had our shares of different situations that bind us together.”

Slowly Otto nodded, sensing that Kirk spoke the truth. “When can I see Khan?” he almost demanded. If his friend and leader was this heavily injured he had to make certain that he really was well cared for, no matter how much these strangers tried to reassure him.

“As soon as you can walk for several minutes without falling over your own feet,” McCoy said. As he received an almost offended glare from the Augment, he added good-natured, “New Vulcan has a higher gravity than Earth; therefore you’ll have some problems at first getting adjusted to it. And, don’t get me wrong, but even an Augment’s muscles have to rebuild after resting so long. You’re going to need a few days – especially after you weren’t woken up like it was planned.”

Otto blinked shortly. “I was not?”
“No, your cryotube began the wakening-process without being initiated. The air supply didn’t kick in and therefore we had to put you in stasis – a medical deep sleep not unlike the cryonic but different enough to change your body functions,” the CMO explained. “It was the same with Joaquin here. He needed two days to get up without landing on his butt.”

Weiss looked with big eyes at him. “You know?”

“That you left bed and ended up on the floor? Of course. I’m used to this kind of behavior of another thick-headed mule.” He glanced at Jim, who only grimaced and shrugged it off.

Hoffmann had watched them. The officers were more than colleagues. They were friends, no doubt about it. Then he thought of what McCoy had said – that his, Otto’s – cryotube had started the wakening process without it being initiated. In other words: His cryotube had a malfunction. Alerted he raised his head. “If I understood you correctly, Doctor, you were forced to wake me up because my cryotube didn’t work anymore.”

It was the captain, who answered him, “Yours and the other cryotubes are monitored and well watched over. We planned to wake you all after Khan was back on his feet, because he knows best how to initiate the process. But your tube is the second that failed now and…”

“The second?” Otto pressed; even more alarmed now.

“Mine was the first,” Joaquin informed him. “Noo and Jim got me out it in the last second. I was also put into stasis, but needed longer until I came around – contrary to you, as it seems.”

Hoffmann’s face became soft for a moment. “You come from another generation of Augments, Joaquin. You and Suzette were… created for other purposes than Khan, I and the others.” Then his glance wandered back to Kirk.

“Did you discover the reason for the malfunction?”

“Mr. Scott, my chief engineer, Mr. Spock and Elder Senak, a Vulcan technician, think that the batteries of the cryotubes are quitting. They were not constructed to work for such a long period of time. To say it plainly: You and the others are very fortunate that the batteries didn’t quit decades ago.”
Otto turned grey beneath his paleness, and then he caught himself. They did survive; there was no reason to think of what could have happened. “So… my friends are still in danger,” he deduced, and Kirk sighed.

“I talked with Selek, the Vulcan High Minister, and Khan about it. Nien thinks it’s the best if you assist us to initiate the waking processes of the other tubes, before another one begins to quit.”

“And to be able to do so, you first have to regain your strength,” McCoy said; making his point. “So, no premature attempts to leave bed before your muscles are ready to work. I’ll make some trainings with you while you are still in bed and some others afterwards. It helped Joaquin a lot and I’m certain it will do the same for you. I hope that you’ll be able to have some walks within the next two days. In the meantime we watch the other cryotubes with hawk eyes. If it should come to another emergency we’ve enough stasis chambers to put your brother or sister in it. Yet the latter isn’t the optimal solution. To wake them up the way it was planned will be the best; therefore it’s important that you’re up as soon as possible.”

Otto nodded slowly; agreeing with the CMO’s reasoning and sound logic. “You’ll have my full support, Doctor, in bringing me back on my feet and during waking my friends up.” he said quietly. He pursed shortly his lips. “So, I also can visit Khan in two or three days?” he asked again, and Kirk smirked at him.

“Yes, at latest. But you can speak with him. One moment.” He pulled out the same-looking device like the one the surgeon had used before, and opened it. “Kirk to Galven.”

This time Otto had to wait longer until he heard an answering voice – an oinking one? “Galven here. How’s going, lad?”

“Everything is fine, Galven. Are you and the others are still at New Gol?”

“Yes, filling Khan in on what happened in the Borderland, and he told us about everything that happened since we last heard from you. Boy, no wonder that your ship looks like shit at the moment.”

“Don’t remind me,” Jim sighed. “Could you link me to Nien, please?”

“Of course, buddy. Here we go.”
A second later Hoffmann heard the familiar baritone of his leader and friend – worry edged deep in his tone. “Jim? Is everything all right over there?”

Kirk smiled… tenderly? Yes, there was clearly affection on the captain’s face. Interesting!

“Yes, everything went perfectly fine, Nien. I’ll link you to someone.” He offered Otto the communicator and nodded encouraging, as the Augment hesitated. “Just take it. You don’t have to put it to your ear like the old mobiles of earlier times. Just use it like I did.”

Hoffmann took the little device; nervousness all of sudden settled in his stomach. “Noonien?” he asked quietly into the communicator; hoping that this wasn’t some kind of trick.

“Otto?” Khan’s voice was not more than a whisper – a whisper of awe. “Otto, is that you?”

“Yes, it’s me,” Hoffman said quietly: his voice still rough.

Silence. Then Khan choked, “How… how are you?”

Otto gulped as he realized that his friend was at the verge of tears – something that happened rarely. “I… I’m fine, I think. A little cold and… confused.”

“This is normal,” Khan murmured; then he took a shaky breath. “I… I’m just glad that you’re okay – that you are awake.”

Hoffmann couldn’t remember his leader sounding like this since they left childhood. Khan was deeply shaken, this much he could tell.

Jim could sense his bondmate’s turmoil like it was his own. Nien was overwhelmed with joy, wonder and relief, and Kirk wished he would be at New Gol to take his beloved into his arms. “Hey, honey, don’t fret. He is fine and will visit you in two or three days,” he said into the communicator; bending over Otto in the process.
Another deep intake of breath was heard, followed by a gentle, “Thank you, Jim! Thank you so much.”

Kirk felt his cheeks warming. “I didn’t do anything. That was all Bones’, Corrigan’s and Sorel’s doing. I’m just the messenger.” His eyes found Otto’s who gaped at him. ‘Honey’? Jim felt a chuckle rising but suppressed it. “I think Mr. Hoffmann is just a little bit overwhelmed with everything – new time, new places, and new people – among them aliens. He’s wary.”

Khan’s voice became steadier by now, as he addressed his brother. “Otto?”

“Yes?”

“You can trust Jim Kirk utterly. That we are still alive is only because of him. He saved me and you all; protected us fiercely. There is no need to distrust him. The same goes for Dr. McCoy and the other officers.”

Otto moistened his lips and looked at Spock, who simply lifted a brow. “And the alien?”

There! For a second Jim heard Khan laughing quietly, which soothed him. “I take it that Mr. Spock is also there?” Nien asked.

“I’m here, Mr. Singh,” the first officer raised his voice.

Again there was amusement in the Augment leader’s voice. “Otto, you also can trust Mr. Spock. Just don’t mix up with Jim and everything is perfectly fine. Otherwise you could learn why these people are called ‘Vulcans’ – outside stony, inside fiery. And by the way, I need Jim whole and healthy.”

“Yeah, cuddling can be unpleasant when bruises are ruining the moment,” Bones grumbled sarcastically – and earned a sharp glare from Kirk. “What?” he asked innocently. “It’s enough that Khan is denied the pleasure when you two are playing teddy-bear to each other. If you suffer likewise I would have to deal with two pouting boys, and that’s more I can endure.”

Otto just stared at the surgeon and then at the young captain. Cuddling? Teddy-bear? Pleasure? And… had this casual human just called Khan Noonien Singh a ‘boy’?
The next moment Khan’s voice sounded again – exasperated but also amused. “Doctor, originally I wanted to fill Otto in of my… changed status.”

“Be my guest,” Bones called.

Hoffmann began to realize that Khan seemed to be very comfortable with these men and that something important was going on here. He threw a quick glance at Joaquin, who beamed brightly at him. What the hell…

“Otto?” Singh’s voice sounded again. “Just follow Jim’s lead and everything will be fine.”

“You… you really trust him, don’t you?” Otto asked; still trying to put the evidences together.

“Of course I do – after all Jim is my bondmate.”

The giant Augment only stared at the communicator. “B-b-b-bondmate?” he stuttered; staring with wide eyes at the smiling young captain beside him.

“Yes, Jim and I are bonded,” Khan affirmed. “He’s my soulmate – just like you and Katie.”

“Noo finally found one to share his life with!” Joaquin grinned at Otto. “Isn’t this great?”

Otto gulped. Maybe it was a good idea to simply go to sleep again and to wake up anew. Eventually everything turned out to be nothing more than a crazy dream…

TBC…

Chapter End Notes

Yeah, sometimes every one of us wishes to simply go back to sleep and to wake up again in the hope that everything has changed then and turned out to be nothing else
than a weird dream. This is exactly the point Otto just reached – understandable. Poor guy. Not only that he slept for more than 270 years and woke up on a strange planet, no, he learns ‘by the way’ that his friend and leader is practically married. And above all he also meets an ‘alien’. This is a little bit too much even for an enhanced man. At least he could talk with Khan and got assured that everything is ‘fine’. If Otto knew of the guys who keep Khan company in the moment… I think he would freak out (at least a little bit – LOL).

In the next chapter you get Nien’s POV from his talk with Otto, latter learns more about the century, Wesley gets the news about another Augment being awake and you also read something again from the president and Barnett, because the two men and justice have a lot to do in HQ on Earth.

I hope you liked my ‘vision’ of Otto – and I promise you’ll read more of him. And soon of the others, too.

Have a nice rest of the week,

Love

Many confusions

Chapter Notes

Hi, my dear readers!

At first I want to thank you again for the feedback you left. I’m amazed that the story has still so many fans, and this after it already runs for 90 chapters!!! Thank you so much.

As promised you’ll get Khan’s POV of his talk with Otto, but also the reaction of The Shadow-gang. Further you’ll witness how Otto will react to everything he learned. And then Barnett and Robertson will have an interesting talk, while Jim talks with Wesley (just imagine the good commodore’s shock – snicker).

Have fun with the new chapter

Love

Yours Starflight

Chapter 90 – Many confusions

As Galven’s communicator beeped for the third time since The Shadow-gang had arrived at New Gol, Khan instinctively knew that Jim finally had the news he was desperately waiting for. The moment Jim said he would link him to someone and explained to said ‘someone’ how to use a communicator, the Augment’s hope had changed into certainty: his brother was awake and already fit enough to talk. But even this certitude paled compared to the overwhelming joy that washed over Khan as he finally heard Otto’s voice – a voice, even rough as it was in the moment, he had painfully missed, just like those of his other brothers and sisters.

He hadn’t been able to control his rising emotions. Relief and happiness brought tears to his eyes – which was almost embarrassing because of the gang’s presence in his room. He had always held his feelings in check when someone else was present. To stay collected was a necessity he had learned when he had been still nothing more than a young boy. But this time his control failed him miserably. After all those months – years – of fearing for his family’s life, of thinking to have lost them not one but two times, he was beside himself to finally speak to another member of his crew.

Maybe – maybe! – the TBI and what he had been put through during the last battle also had part in his reaction, yet he couldn’t care less. Another one of his siblings was awake and out of danger. Nothing else mattered. And, by the way, he was among friends – friends who had seen him at his
worst and had learned what he was, yet they remained loyal and called him still ‘one of them’. To show some tears was a luxury he permitted himself to display for once.

And, at the same time, he felt a wave of deep love and understanding coming from Jim. It was obviously that his soulmate felt over their shared bond the depth of his emotions and reacted to them. Warmth, joy and also relief washed over the link and wrapped his mind and soul into a protective blanket. Alas, how had he ever lived without this closeness to someone who shared not only his bed, but also his soul? He had only been half alive without his mate – something Otto had explained to him as he informed him of his engagement with Katie. Well, only now, since Jim and he had become more than lovers, Khan could finally understand the deep peace and anchor Otto had found in his wife.

Otto…

He had sounded tired, confused, wary, yet it was unmistakably him. Khan knew Hoffmann inside out, and therefore there was no doubt that the other Augment was on alert – finding himself on an alien planet with unknown people and learning that his leader was injured. The only thing that would keep him in check was to ensure him that none of them were in danger – that they were among people who were their allies; their friends. So he told him to trust Jim Kirk. His bondmate would find the right words to tell Otto what he needed to know without revealing the dark facts, which would unsettle Hoffmann.

Otto was a protector, maybe even more fiercely than Khan. His giant figure had given him this role after he came from the German lab near Munich to the labs of New Delhi, a year prior to the Augments’ revolution and their escape. Hoffmann felt responsible for all of his siblings, just like Khan did, and even if Noonien Singh was quicker in hand-to-hand combat, Otto was someone the Indian Augment didn’t want to face as an opponent. This and his deep running affection for his siblings had made Otto an excellent guard. His personality mixed with his technical know-how, he had been the logical choice to wake up first. His enormous strength could have helped Khan if some of the cryotubes would have given them trouble and had to be forced open.

Now he and Otto were separated, nothing had gone like planned, yet Khan was grateful that at least some things turned out well. Jim was with Otto – and Kirk had a special way to calm down most people he crossed paths with. Then there was McCoy. As grumpily and as sarcastically as the good doctor could be, deep down he was soft like butter and he had a high empathy with everyone. And he was brilliant. Nien was certain that McCoy had already gained Otto’s respect. And Spock… Well, maybe it was a good thing, too, that of all aliens this Vulcan was the first extraterrestrial Otto met. He was calm, peaceful, highly intelligent, sometimes infuriating logical and loyal to death. And, what you wouldn’t guess on the first and second sight, he was also a warrior and this in the best sense of the word. If Nien imagined Otto’s reaction had he seen Galven or Ritek before he met Spock… The mere thought was fun.
Apropos Galven and Ritek…

They and the others looked with big eyes at him; an invisible question-mark printed on their faces. Well, of course they had listened to his talk with Otto. And that they were able to put two and two together showed in Ritek’s next words,

“This Otto just awakened and you practically ordered him to trust Jim and his officers?” The Rigelian cocked his head. “They woke up another of your crew.” It was a statement, not a question, yet Khan felt obliged to nod.

“Yes, his cryotube began the wakening process without the air supply kicking in. Healer Sorel alerted us about this change, and Dr. McCoy and he put my brother into stasis yesterday. Today he woke.” He lowered his head; joy flushed his still pale face. “I’m happy that he is okay.”

Caviw’s tail wrapped around his right arm; squeezing it in soothing manner. “I’m glad to hear this,” she said.

“So, another one of your family has joined the world of living,” Jeff said. “I’m curious how he will react to everything.”

“That makes us two,” Nien deadpanned; grinning for a moment as he saw the slightly shocked faces of the others, then they began to chuckle.

“So, why was his cryotube waking him up?” Galven asked; his technical understanding rose anew. “What triggered the process?”

“Mr. Scott and Mr. Spock assume that the batteries have outrun their functional life,” the Augment explained, and it was Ritek who instantly came to the correct conclusion.

“That goes for all tubes then – in other words, they’ll wake up your crew soon to avoid further problems.”

Khan nodded. “Yes, they will. Seeing that I’m stuck to this damn sick-bed it will be up to Otto to assist Jim and the others. And soon as he has adjust to his surroundings and his muscles allow it, he and the others will initiate the wakening process of all cryotubes.” He looked from one to the next, saw the thoughtful expressions and was about to comment it, as Caviw said gently,
“Then you’ll be re-united with your family in a few days.” She gave him a toothy grin. “I’m so happy for you.”

“Yeah and just think how happy Starfleet Command will be,” Ritek joked. “They certainly hoped to have some more time before they had to face the fact that the Federation can add another species to her member-list, and now they have to deal with it so soon.” He snickered. “Serves them right.”

“You seem to have no problems with my siblings being woken up,” Khan mused, and it was Galven, who shrugged.

“Hey, after we learned who you are we knew that this day would come. And if your brothers and sisters are like you…”

“Or the boy!” Ritek threw in.

“… then I really have no problem with welcoming them in our century.”

“I only ask myself, why Jim didn’t mention the true reason for his absence from New Gol today,” Jeff grumbled. “Doesn’t he trust us?”

“I rather think he imagined us becoming nervous with concern for the lad’s family,” Ritek pondered; clasping carefully Khan’s left shoulder. “And because Jim wanted us to distract our genius here from worrying his head off by us being our cheerful selves, he kept us in the dark.”

“And, by the way, Jim really is counseling Mr. Spock concerning the upcoming marriage,” Nien added. “He’ll be away within the next days for several hours.”

“Just call us, and we’ll keep you company,” Caviw smiled at him.

“Yeah, and continue to feed you,” Jeff winked at him. “You’re far too thin.”

“How, do you think, will your crew react when they face this new world?” Ritek came back to the
main topic, and Khan took a deep breath.

“Well, this is something I really want to witness,” he murmured. “Especially when they face you guys for the first time.”

Confused the gang looked at each other, and then they realized which effect their appearance must have on those men and women, who had never seen non-human sentient beings.

“Hm, concerning Galven they certainly will think Porky Pig has come alive,” Ritek began, which instantly raised the Tellarit’s irritation.

“And concerning you they’ll think that you have fallen into some paint buckets,” he oinked. “Or they’ll think…” He stopped as he heard Khan groaning,

“Gentlemen, you’re in an abbey here, please no childish fights!”

As Galven and Ritek only glared at each other, but at least kept silent, the Augment laid back and closed his eyes; amusement plainly written on his face. Sometimes he was almost convinced he was in the middle of a kindergarten.

ST***ST

Jim closed his communicator and looked down at the large Augment, who simply stared back.

“Bondmate,” Otto stated; shaking his head. “I… can’t believe it. Khan never considered… Hell, in our time he had his share of romantic adventures. Attractive young men, beautiful women… Yet it was never more than simply that: adventures. And now, after being here for a short time, he…” He took a deep breath. “Don’t get me wrong, Captain. I don’t want to offend you, but what do you have the others didn’t have?”

Jim shrugged; he didn’t feel offended in the tiniest bit. Heavens, he had asked himself the same question a dozen times and more. “As I said: We’ve a lot in common.”

“Two sides of one coin, may I add,” Bones threw in, smiling.
“Yeah, something like this,” Jim affirmed. “First we… didn’t get along very well. To tell the truth, we fought – and not only with words. Then things changed and turned the tables. First it was simply passion – then it became more. Much more.”

Otto watched him closely; trying to ignore the tiredness that was rising in him. Taking another deep breath this time his nose caught a scent he had smelled before as the captain stepped into the room, but only now he identified it.

“Blood…” He whispered; shock written all over his face. “You have Noonien’s blood in you!”

“You Augments are pure scent-trackers, aren’t you?” McCoy sighed, but was ignored.

“Yes, I have,” Kirk nodded. “Khan’s blood saved me – and it opened the door to the change of our relationship.”

Very slowly Hoffmann made an affirming gesture. “Kinsman. Noonien regards you as a kind of kinsman. This given with your personality, intelligence and appearance won him over.” He snorted. “Khan always had a thing for not playing by the rules – and he had a soft spot for casual humans. No wonder that he is attracted to you.”

“Well, Jim has that first ‘weakness’, too,” McCoy deadpanned. As he caught Otto’s asking glance, he defined, “Not playing by the rules, I mean. Jim has a very special way of interpreting the rule book.”

“I have to agree,” Spock said; giving Jim a certain glance that proved that he was pulling the captain’s leg.

“Don’t, Spock! I told you several times by now that it’s eerie when you agree with me,” the CMO grumbled.

“It’s not my fault that you’re scared that easily, Doctor.”

“Scared easily – me? After sharing a room with Jim at the academy and galloping with him and you through unknown space?” Leonard scoffed. “I’ve earned a bravery medal hundred times over.”
“Even if the captain’s academy-days have reached quite a reputation among other students and his extraordinary way to beat my test has become a legend by now, I have to defend him. There certainly was nothing he did that would scare a follow student.”

“I got my first grey hairs because of him – and you!” Bones pointed an accusing finger at him.

“If the human aging-process has already proceeded like this, Doctor, I would suggest that you let Dr. M’Benga check you thoroughly. Or you should try some meditation techniques, because I think your nervous system simply overreacts because of your lack of controlling your emotions.”

Joaquin, who had kept quiet since Otto and Khan had talked, began to snicker. “See?” he addressed his brother. “That’s what I meant.”

Hoffmann looked slightly baffled up to Kirk, who groaned in this moment, “Can you imagine what I have to endure to speed through space with those two in tow?”

For a few seconds the Augment felt pure amusement rising in him; the bickering reminding him of some of his brothers. “Sorry but I don’t have any regret for you,” he commented wryly, before he lay back again and slowly rubbed his face with one hand.

“You’re all right?” Jim asked and Otto’s brown eyes were directed at him.

“Yes – as far as someone can be who learns that he has slept for almost 270 years and woke up on an alien planet, where said someone is greeted by bantering officers which serve on a spaceship that flies quick enough to reach other star systems within months.” A hint of sarcasm was heard, but it was good-natured. This much was clear.

Jim laughed softly. “Yes, it’s quite a shock.” He cocked his head. “But I have to correct you. We don’t need months to fly from Earth to New Vulcan. Only two days and a few hours.”

Hoffmann stared at him, before he slowly shook his head. “Alas, I think I have a lot to learn.” He bit his lips shortly, as his mind returned to his wounded brother and leader. “Khan sounded… not well.”

“He’s injured,” Bones said softly, turning serious again.
“Yes, but I know my friend. Rarely did I hear him...like this.”

“He has been through a lot,” Jim admitted quietly. “And now he is only happy that you and the others are safe.”

Hoffmann quirked both brows. “Did I get that right? We’ve been in danger great enough to bring Khan of all people close to tears after the danger was over?”

Kirk nodded slowly. “Yes, regrettably. Nien fought hard to keep you and the others safe – even thought that you all were lost. Therefore it’s understandable that he is so glad that you and your siblings’ lives are no longer at stake – and to hear your voice after all this time.”

Otto pursed his lips, as his mind made further conclusions from the captain’s last words. “How long was Khan awake?”

“More than two years,” Kirk answered truthfully. As the Augment gasped in disbelief, Jim added, “Circumstances prevented him from waking you and the others up like it was planned. Then... several things got out of hand, so that only now could your long sleep be ended.”

Lifting his head again, Hoffmann stated plainly, “And if it hadn’t have been for my cryotube’s malfunction I would still be asleep, wouldn’t I?”

Jim nodded. “Yes. It was planned that Nien would assist us in waking you all up when he’s healed. Therefore your cryosleep was ended only a few days sooner than intended.”

“How comforting,” Otto grumbled. “He said he would wake me up first. Well, there certainly are several things that went wrong that he had to change plans.”

“You’ll learn of it soon,” Jim promised. “But just right now you need rest.”

“You’re taking my words right from my mouth,” Bones said sternly. “That was enough for Mr. Hoffmann for now.” He raised his voice as Otto wanted to protest. “I know, enhanced mind, augmented nature and super-brain. Khan already gave me a full list of arguments why he didn’t need any rest when he was my patient in med-bay over three weeks ago, nursing frost-bites and stretched
muscles. And yet I proved my concern correct when he fell asleep barely as he hit the cushions – and snuggled to his sweetheart here.” He nudged Jim, who simply rolled his eyes. “So, please be a good patient and do what the nice doctor says,” McCoy ended his little speech.

For a moment Otto only looked at him, and then he began to laugh. “I was right. You are foolish and brave, but also a good man. Khan told me to trust you, and I begin to see why.” He snorted. “You three are the first casual humans who treat us like we belong to your people.” He glanced at Spock. “Well, two casual humans.”

“I’m not offended, Mr. Hoffman. Indeed you are fifty percent right, because I’m only a half-Vulcan. My mother was human and came from Earth.”

A low whistle escaped the Augment. “Just have a look. Men really learned a thing or two by now when they even marry aliens.”

“Love knows no limits,” Jim smiled.

“Obviously – seeing that Khan chose you as his bondmate,”

“Well, what can I say? I have my charms,” Jim joked – and Hoffmann laughed anew.

“Yes, I can see this.” He shivered slightly, which made McCoy step to the next bed to get a further blanket. He spread it over Otto, who gave him a tiny smile. “Thank you, Doctor.”

“You’re welcome,” McCoy nodded.

One more time Otto looked at Kirk. “Has Khan decided in which order the rest of us will be woken up?”

Jim instantly knew the real question behind those words. “I can imagine that you are eager to see your wife again.” He smiled as he received another astonished glance from the Augment. “Nien told me about you and Katie. You two were a kind of example for us as we realized how very close we had become – in soul and heart, I mean. Nien explained to me the connection you share with your wife – and it’s the same for Khan and me. So, yeah, I do know about Katie.” His voice became even warmer. “And I don’t think that something speaks against it to wake her up as one of the firsts.”
Otto pursed his lips before he began to relax. This young man and Khan were indeed close if Noonien shared such delicate details with the captain. At least it gave him the assurance that everything he had witnessed in the last minutes wasn’t one big masquerade to lull him into a false sense of security, but the plain truth. “Thank you, Captain,” he said quietly.

“You’re welcome. And please call me Jim.”

Hoffmann lifted both brows, before he nodded. “Well, you’re Khan’s mate and have his blood in you. Therefore you belong to the family – sort of. Please call me Otto.”

“With pleasure,” Kirk replied.

“Right, I’m glad that this is settled,” Bones cut in businesslike. “And now I ask you two to get lost,” he said to Kirk and Spock; flicking a thumb at the door. “And you,” he addressed Otto, “should relax and try to get some more sleep. The sooner you’re back on your feet, the sooner you can see Khan and your wife again. So, off to dreamland.”

Otto couldn’t help himself: He had to chuckle. The easiness with which the doctor treated him was a welcome exception of the usual behavior of men towards him and his people.

“May I stay here with Otto a little bit longer?” Joaquin asked and McCoy nodded. “Of course – but give your brother the chance to sleep. Just remember how tired you were after you woke up from cryosleep.”

Weiss saluted informally. “Aye, sir!”

Jim laughed softly and shook his head in exasperated fondness. “He’s like me in my first year,” he said.

Spock shook his head. “From what I have heard concerning you, captain, you were worse.”

Kirk gaped at him, speechless for once. And Otto – who looked at them – could have sworn he saw some teasing satisfaction in the deep brown eyes of the alien man, while in the background the doctor chuckled.
Harhan Robertson, President of the United Federation of Planets, looked up from the PADD Admiral Barnett had given him, held his gaze for a few seconds, took a deep breath and blurted out,

“What a mess!”

Richard snorted. “If I may say it plain and simple, Mr. President that is the understatement of the century.” He pointed at the PADD. “I haven’t gotten the results of all the questionings, but I don’t think they will change a lot. If we hadn’t the proof of the whole conspiracy and of what Mr. Singh has been put through – he and his crew – I would say that there is no way on Earth Kirk and his officers would get their heads out of the noose they have placed their necks in. If we only listen to the statements of Norton, Styles and his allies or those of Green, Dashwood, Conelly and their colleagues, I would be forced to think that Kirk and his team have gone utterly rogue. Insubordination, desertion, rampage of a high security facility, unlawful detention of the scientists and their security men, unauthorized changes of flight, ignorance of direct orders, hiding a wanted criminal… The list is shocking long.”

Robertson nodded. “And yet Kirk and his team did all of this only to save Starfleet from an inner putsch and to protect the Federation’s fundamental laws in the middle of a war. His actions prevented a genocide from taking place; his intervention revealed said conspiracy and saved our delegation. And, by the way, he gained the Klingons’ respect enough that Lord Kor, of all warlords, came to his aid and supported another Starfleet officer – Wesley – to get our most important admirals and ambassadors out of captivity. And then he also stopped another admiral gone rogue from damaging our relationship with the Vulcans. Pray tell me how shall I condemn this man? He already saved Earth, stood loyal to the original Starfleet without giving a damn about his own career and even his life, and – above all – had a big deal in stabilizing the ceasefire, not to speak of the thousands of people he saved at Aldebaran.” He shook his head. “Sweet Lord, this boy is about to drive me nuts.”

Richard snorted. “I know what you mean, sir.” He took a deep breath. “All Jim Kirk did was for Starfleet and the Federation. I do know that he interprets the rules a little bit… casually here and there, but if there is one thing I can say about him, then it’s the fact that he is a man of high morality and loyalty,” he stated softly, but firmly.

“Yes,” Robertson nodded. “Yes, I know.” He rose and stepped to the window; his gaze hung at the Eiffel tower which was illuminated by the orange light of the sunset. “And the court martial I’m forced to convene wouldn’t be more than a hearing in Kirk’s and his officers’ case, if it wouldn’t be for the fact that Kirk hid a wanted criminal aboard his ship.”
Barnett pressed his lips shortly in a firm line. “Well, Khan was never truly convicted. His trial was unlawful because he didn’t get any counsel nor had the chance to give any statement. He wasn’t even questioned. I checked the protocols of that trial. The so-called witnesses which were heard never entered the courtroom but were on duty elsewhere. The only correct statements were from Commander Spock and Captain Kirk’s entries in their log-books. Khan’s walk through hell during his forced servitude with Marcus was never mentioned.” He bent forwards and looked straight at the president, who had turned around again. “Khan still has to be convicted, this time within the frames of law – and I think the outcome of this trial will greatly differ from the last one. Not only because he has become quite the hero within the last weeks, saved a whole planet and the population of a colony’s metropolis, but also because he had been wronged first. Amok-run is a good reason to attenuate a judgment, not to mention the fact that he was tortured, abused for illegal science experiments and blackmailed with the lives of his crew.” He leant back again. “We have to be damn careful that this whole mess doesn’t become an affair of state, and the heavens may prevent that this all ever gets made public.”

Robertson crossed his arms in front of his chest. “You mean the court should be held secretly?”

“At least concerning Khan. There is no way on Earth or in hell that we can deal with the wirepuller of the conspiracy behind closed doors. The public has a right to learn the truth. And, by the way, our ‘dear’ neighbors, the Klingons, want to see heads rolling for the wrongful accusation that was made against them and their pride as Norton and Luengo blamed them for the attack against the Excalibur. And there are still the Vulcans. High Minister Selek has already informed me that he and his government will press charges against Starfleet Command because of Norton’s storming of their government’s seat. And I bet my last shirt that T’Pau will press personal charges against Norton because he took her hostage. We have to deal openly with these details in our own interest. The media are already stinging the public’s opinion. If we keep silent about the next steps they will eat us alive. But concerning Khan we should hold the ball as low as possible.”

The president sighed and sat down again. “You already advised me about it before we faced the media during the live media conference four days ago, yet there are two big problems we should find solutions for – and this before we decide how to proceed from now on. First: Kirk’s case is tightly woven with Khan’s. There will be no way to separate the case and I’m prone to hold the assizes for them together. And two: Khan is not the only Augment. The second superhuman is already awake – and there are still seventy-one further enhanced women and men waiting to be woken up from their frosty sleep. And the Vulcans will wake them up, as you told me. What to do with them? Shall we keep their existence a secret, banning them to a fitting planet to build their own colony or shall we try to integrate them into society? If we do the latter then we have to tell about Khan at the least.”

Barnett stared at him – and groaned. Only thinking of all this gave him a headache.

“And that’s not all,” he finally said; knowing that he had to inform the president about another delicate detail in advance, before he learned of it during the trial. “Kirk and Khan could get into more trouble during the trial because of their relationship. Someone could and certainly will get the idea that none of them is neutral anymore.”
Robertson cocked his head. “How so?”

Robertson lifted both brows. “They’ve become friends, as far as I know and detected. I saw the pictures the speed-trap on Aldebaran made from them – Kirk driving the hover-bike and Khan on the backseat, clinging to him. And then the way both acted in union during the whole crisis. They understand each other and…”

“Sorry, sir, for interrupting you, but… it’s not only friendship that has transpired between them.” He cleared his throat. “The two are a couple.”

For several seconds the president only looked at him; trying to comprehend what he just heard. Then his control slipped. “WHAT?”

Barnett shrugged. “They’re lovers – maybe even more. Kirk freaked out as Khan was forced aboard the Excalibur and was about to be stuck into his cryotube again. That was more than the worry for a friend, that was the panic of someone who is about to lose a loved one. And… I caught them – better to say I caught Kirk as he held Khan’s hand in hospital and kissed him.” He grimaced. “Spock and Dr. McCoy – even Selekt – confirmed it in their very own special way. Kirk and Khan are romantically involved and they have been so for quite a while now.”

Robertson had leant back on his chair; his face baffled. “Since when?”

“Since Aldebaran – after Khan rescued Kirk from the Klingons. First it was obviously nothing more than letting off some steam. It’s nothing new that fury can turn into passion in the straight opposite way, but in this case it grew into more. It’s more than an erotic adventure. They both are pretty close by now.”

Pinching his nose, Robertson sighed heavily. “Then Kirk is emotionally compromised and a neutral statement in Khan’s case…”

“Sir, I already talked to him about it – and believe me, he didn’t help Khan from the first because he and the Augment shared a bed. The change of their relationship came after Kirk learned of Khan’s true fate. He let go of the old grudge because he knew what drove Khan to snap like this. Both men want to get even with everything and certainly hope for a ‘peaceful life together’. At least that’s the
Shaking his head, Harhan grumbled, “That’s exactly what we need – a sappy love-story between the criminal turned into hero and our other hero, who is, by the way, the captain of our flag-ship. The media are going to LOVE it – if they ever get wind of it. And I don’t want to imagine the public’s reaction – especially that of the romantics among them.” He grimaced. “Who knows about the two?”

“Besides Kirk’s team, the half of the Enterprise-crew, Selek, T’Pau, a handful of healers on New Vulcan, The Shadow-gang and Wesley?” Barnett asked and had to chuckle as he caught Robertson’s shocked face.

“They all know…?” He groaned. “Well, then we’ve got to deal with this situation. I only ask myself how we can convince the jury that the two are speaking the truth when they make their statements. Both are emotionally compromised.”

“Yes, they are. In Khan’s case even twice, because of what he has been through in the last two years. But I think I have an idea, Mr. President,” Barnett smiled. “It’s uncommon, as I have to admit, but given the unusual case we have to take any chance we get.”

“You’ll do WHAT?”

Jim Kirk asked himself why Bob Wesley needed a communication station at all. The commodore was loud enough to certainly be heard throughout the whole ship without using the intercom.

“We’ll wake up Nien’s family,” the young captain repeated calmly. “It’s the only way to prevent a catastrophe.”

“B-b-b-but… But it was planned to wake them up later,” Bob all but stuttered.

“And now they’ll wake up a few weeks earlier. What’s the problem?” Kirk asked innocently. “We all knew that this day would come, so why risk their health – their lives – by waiting until another cryotube gives up the ghost? That would be unforgiveable – and highly illogical.”

At the other end of the line Wesley groaned. “Let me guess, you already spoke with Selek and got
“his blessing.”

“Well, yes – and even T’Pau agreed to it,” Jim added quickly; exchanging a glance with Spock. He stood with his first officer outside of the hospital, in the middle of the sun and Kirk was already sweating, even if they had only left the temperature-controlled building two minutes ago.

A noise of frustration was heard, before Wesley asked, “Is this man – Otto – already awake?”

“Yes, he woke up half an hour ago. He’s a little bit confused and wary, mind you, but after he talked with Khan he calmed down. He’s sleeping again now and Bones is watching over him.”

“He talked with Khan? I thought our superhero is still confined to bed?” Bob sounded surprised now.

“Yes, but you know there are these interesting devices for more than 350 years now that allows people to talk with each other from afar,” Kirk joked.

“Jim!” Wesley rebuked, which made the captain laugh, before he said, “Since we’re speaking about communication – I need a new communicator, Bob.”

“Why? Is your broken?”

Jim frowned. “Well, now that you mention it – yes, mine is no more. Selek smashed it to prevent Norton from tracking me down and I got Scotty’s afterwards. But nevertheless I need a further one.”

“And for whom?”

“For Nien. I’ll be away from New Gol here and there, and I don’t want to bother the Vulcan priests with patching me through to Nien every time I have to speak with him.”

“Of course, no problem,” Wesley replied sarcastically. “There is no reason why a civilian shouldn’t be provided with Starfleet property.”
“Bo-ob, Nien belongs to the crew and he was even petty officer for some time…”

“Don’t remind me. I get a belly-ache thinking of the moment Command learns of it.”

Jim rolled his eyes. “They are used that I interpreted the book differently if circumstances demand it, so don’t panic.”

“Why should I panic? It’s only my head that is at stake here – oh, and yours and more or less that of the whole crew, so why should I get nervous? There is absolutely no reason to be unsettled – even less because in two or three days more than seventy Augments will roam New Vulcan.” This time stress edged in the commodore’s voice.

“If they behave like Otto everything will be fine,” Jim assured him. “He’s a nice guy. A little bit on the edge first, which I can understand utterly, but he is peaceful and took the news well that he has slept for more than 270 years and is on an alien planet.”

“He certainly thinks he’s still dreaming,” Bob deadpanned, before he silenced for a few seconds. “How long until they all are back in the world of living?”

“Two or three days. Otto has to support us to start the wakening processes correctly, and Bones thinks he’ll be able to walk the day after tomorrow at the latest. To hope for Nien’s assistance is out of the question. He’s still confined to sick-bed – even if he’s pouting like a six-year old by now.”

“Oh, doesn’t this sound familiar?” Wesley scoffed, and then he took another deep breath and let it out in a giant sigh. “Well, there is nothing I could or want to do concerning your boyfriend’s crew. The Vulcans took over the responsibility and I’m not foolish enough to interfere with them.”

“A wise decision,” Spock murmured, but quietly enough not to be caught by the communicator’s microphone.

But Jim heard and only grinned at him, before he returned his attention back to the talk. “What about my request to get an additional…”

“I’ll beam you down a communicator to your recent coordinates,” Wesley interrupted him. “I’ll give Kyle the instruction, so wait a few minutes.”
“Please hurry up, Bob,” Kirk said. “It’s hot enough out here to melt bones.”

“Well, try to think about something cold then – an ice-cream maybe,” Bob replied wryly. “I have to ponder a lot more than a few hot sun-beams. For example how to inform Command about the fact that New Vulcan will have seventy more special inhabitants within the next few days.”

“Knowing you, you’ll come up with something,” Jim flattered, and Wesley only snorted again.

“Too much honor here, m’boy. Be careful with your new friends. I don’t think they will be too delighted when they learn what happened to their leader and four of their comrades, so… just be careful, son, all right?”

Jim smiled. “We’re careful, Bob, don’t fret.”

“Fretting is for McCoy – and Spock when you get yourself injured again.”

“Commodore, I do not fret!” the Vulcan said indignantly.

“Tell that your grandmother, Spock. Wesley out.”

Jim closed the communicator and Spock looked at him, at a loss again. “This is the second time someone said to me I should tell something utterly unimportant T’Pau. Why?”

Kirk began to snicker. “Well, it’s a figure of speech that someone doesn’t believe what you say. Not that you’re lying, no. It means that someone doesn’t believe that you believe your own words.”

Now the Vulcan was obviously confused. “Why should I say something I don’t believe, and then, above all, to make someone believe that I don’t believe what I say? That’s highly illogical.”

Jim began to laugh and clasped a hand on Spock’s shoulder. “Just keeping up with these kinds of sentences, and you can talk someone dizzy.” He stepped towards one of the trees to wait in its shadow for the communicator to be beamed down.
His first officer followed him. “It’s impossible to make someone dizzy with a speech.”

“Oh no, it isn’t,” Jim shook his head. “Just listen to the politicians for half an hour, and you’re dizzy with tiredness because it’s so boring.”

Spock lifted a brow. “I can’t help myself but to recognize that you’re trying to tease me, Captain – or that you’re trying to confuse me.”

Kirk laughed again; mischief shimmered in his eyes. “Maybe both. It’s so cute when you try to analyze one of our human idioms.”

Cute!

That screamed for revenge – even if it was against Surak’s principles.

Spock clasped his hands on his back and cocked his head. “On the other hand, Captain, the human idioms give me another reason to be grateful towards my ancestors that they were wise enough to follow Surak’s path of logic. At least we’re speaking in understandable sentences.”

Jim smirked at him; taking the bait. “But you love challenges. Don’t deny it!”

“As a scientist you need a personal streak of natural curiosity, otherwise you wouldn’t…” Spock was interrupted as the bell-like sound of an incoming transporter beam was heard and a communicator materialized only a few meters away from them.

Kirk retrieved it and turned towards Spock. “So, what about you and I having a trip downtown to look for some wedding-bands?” he changed the topic.

The Vulcans’s eyes became very soft. “Don’t you want to return to New Gol to…”

Jim shook his head. “No, Spock. I promised you to support you with your wedding. Nien has company and feels reassured that Otto is out of the woods. He can go on without me for two or three
hours more.” He closed the distance to the Vulcan and said gently, “Your great day is important for me too, Spock – after all you are my closest friend. My T’hy’la. My being bonded to Nien doesn’t prevent me from spending time with you – ever!”

Sarek’s son pondered the words. “I’m not jealous, if this is what you read in my suggestion.”

Promptly Kirk chuckled. “I know. You rather worry that I’m forced to do something I don’t want or don’t have nerves for at the moment, but be certain: I’m looking forward to prepare your wedding together with you. And, as far as I understand it, also Nyota is going to need a hand or two. Her family will arrive in a few days and until then everything has to be ready.”

Suddenly something close to glee shimmered in Spock’s eyes for a few seconds. “With Leonard being accepted as the speaker of Nyota’s family it’s up to him to support her.”

Jim gaped at him – and began to snicker. “There you caught Bones on the wrong foot, my friend. Because he and weddings are a big problem after his divorce. And, by the way, he’s taking care of Otto and the others. So it’s up to me to help Uhura out.” He shortly pursed his lips. “Maybe I can ask Bob if he’ll allow Carol to beam down a few times to assist Nyota. After all, there are certain things only women can do.”

“I’m sure Commodore Wesley will be very pleased to be asked to make another exception from the regulations,” Spock commented – and Jim had to laugh again.

“You’re full of jokes today, Spock.” With those words he began to head towards the end of the campus.

Spock had lifted both brows and almost looked scandalized at him. “Captain, there is really no need to offend me!”

The answer was another brilliant laugh from his friend, and then he followed him into the day’s heat.

ST***ST

Otto blinked into the dimmed light. For a moment he was utterly disoriented, and then his memories kicked in again. He and the others had slept for almost 270 years, were now on an alien planet and Khan was injured.
That wasn’t exactly the outcome Khan had planned for them all. At least they seemed to be among people who weren’t hostile towards them – even friendly in the three young officers’ case. Well, he wasn’t certain what to think of the alien man on whose species’ planet they were. The doctor had said these Vulcans were peaceful, but Otto had learned in painful ways that ‘peaceful’ was a word people interpreted differently. He could only hope that the Vulcans and he understood the same meaning of the word, otherwise he and his siblings would have a serious problem at hand – after all these people here had a technology remote from what he was used to and could best them any time.

“Otto? You awake?”

Joaquin!

Of course. The boy had said he would stay here for a little bit longer – and he was affectionate through and through.

Lifting his head, Hoffmann looked into the direction the voice had come from. He spied Joaquin on one of the other beds; something that looked like a little screen was in his hands.

“Yes, I am,” Otto murmured.

With smooth movements the young Augment rose and stepped to the older one’s bed; the little screen was still in his left hand.

“You’re okay?” he asked quietly, and Otto nodded.

“Yes. I’m still… cold but Khan said that is normal.”

“Yeah, I experienced the same,” Weiss admitted. “I was freezing for two or three days. It was only when I came to this planet that the coldness left me. It’s pretty hot here – approx. 36 to 42 degrees Celsius every day.”

Otto pondered these words. “It’s a desert planet?”
“Yes. One with a big lake where the town is built now. The skies are sandy-orange like the
mountains, but the plants are green like on Earth.” He sat down on the bed’s edge. “You’ll see,
despite the temperature and the desert it’s beautiful outside.”

Hoffmann nodded slowly before his gaze wandered to the device in Joaquin’s hand once again.
“What’s that?”

The boy showed him. “It’s called a PADD. It’s like a transportable mini-computer, only with much
more memory capacity. Jim gave me one after I woke up. I took it with me from the Enterprise and
now to the hospital, so that I have some entertainment while you’re sleeping.”

Otto watched him closely. “You seem to be content,” he said slowly; his mind worked better and
better by now.

“Yeah, I am. I already made friends – good friends. They are ensigns aboard Jim’s ship and one of
them, Pavel Chekov, is indeed a genius. If I didn’t know it better I would say he’s one of us. He’s
only eighteen, but is already the Enterprise’s first navigator, graduated the Academy two years ago
with honours and his hobby is enhanced transporter techniques. Jim thinks he’ll be an expert in no
time.”

Hoffmann had listened intensely and grimaced. “You were always easy to impress, little brother,
so…”

“I know, I know,” Joaquin interrupted him; rolling his eyes. “You always say that. But you’ll see.
When you come to know everything – really know, I mean – you’ll be impressed, too.”

Otto sighed; knowing exactly that the youngest of them all was quickly excited. “So, you already
made new friends. Isn’t it odd that they seem to accept us this easily?”

Joaquin shook his head. “The humans of today are used to having strange people around them.
There are hundreds of different species and they accept them. And, by the way, Jim’s team already
knew Noo when I woke up – and he did a lot of unbelievable things within the last weeks. They are
on his side, defending him even – despite what he did before.”

Aha! Now they were getting to somewhere. Otto tensed.
“What did Noonien do?”

Biting his lips for a moment, Weiss said, “Noo wants to tell you himself. He… mixed up several things very badly. But it wasn’t his fault – otherwise he wouldn’t have Jim’s and the others’ full support. Hell, even this commodore – Wesley – stood up for Noo and took him under his protection.”

Now Hoffmann was really on alert. “Khan needing protection? Since when?” He tried to sit up. “What’s going on here, Joaquin? Out with it!”

The boy shook his head. “No. Both, Noo and Jim, told me to not upset you and to let them explain everything.” He smiled softly. “Don’t ask me to break my given word.”

Otto groaned and rubbed his face. “You know that this sounds even worse?”

Joaquin shrugged. “Well… So much happened, I do think it’s for the best that those two tell the tale. I think, even I only know the half of it.”

Hoffmann grimaced. “Noonien and his secrets!” He shook his head. “At least he wasn’t alone the whole time. How long have he and Jim been a couple?”

“For several weeks,” Joaquin smiled. “But they’ve known each other longer.”

Shortly pursing his lips, the older Augment grumbled, “This Kirk seemed to be a sincere man of high morality. And if Noonien trusts him enough to make him his mate, I’m ready to put some trust in him, too. The doctor seems to be okay also, but this other man – Stog…”

“Spock. His name is Spock. And he is the son of Vulcan’s ambassador – the very same the commodore saved from being kidnapped by allies of those damn conspirators and was brought to New Vulcan at the last minute, because he needed a surgery.”

Otto stared at him; his lips curled in amusement. “Should these crazy hints of something big that obviously happened tell me anything, or are you going to be so nice as to explain it in a way I’m able to understand at least a little bit of it?”
The boy blushed and snickered. “Sorry, more I can’t tell – only that the last weeks sound like one big adventure novel.”

“No miracle when Noonien is involved,” Hoffmann deadpanned wryly; smiling for real now. “So, you’re feeling well here and…”

He stopped as he suddenly he heard steps coming nearer. The door opened and McCoy entered; a Vulcan in his middle age followed him. “Ah, awake again.”

Otto lifted both brows. “How did you know, Doctor?”

The surgeon smiled and pointed at the monitor above Hoffmann’s bed. “A little birdie told me.”

“They have a way to scan your vitals, brain activities, nerve stimulus and so on, while you’re lying on this kind of bed. It’s called a bio-bed and alerts the medicals if the patient needs something,” Joaquin explained quickly.

Bones grinned. The boy learned really quickly. Then he turned serious again. “Mr. Hoffmann, may I introduce Healer Sorel to you? He is the one who is monitoring your brothers and sisters, and alerted me when your cryotube got into trouble.”

Otto looked at the other man and this time he saw instantly the foreign appearance. Firm, angular facial features, slanted brows, pointed ears and a hue of yellow-green on the skin. He wore a half-long tunic and fitted trousers in sandy colors with an emblem on the left side of the chest that showed a circle in which a triangle pointed. The man was middle-aged, as far as the Augment could guess, and seemed to rest in himself. Never before had Hoffmann met someone who seemed to be that calm or as much at peace like this man.

A man who had saved him.

“I learned from Captain Kirk and Dr. McCoy that I owe you my life, Healer,” he addressed the man; hoping not to trespass on some etiquette. “Thank you for your help.”

Sorel only nodded slowly; familiar with the human urge to thank even for things which were done in the line of duty. “You are welcome, Mr. Hoffmann,” he answered politely.
“Mr. Hoffmann, Joaquin and I will return to New Gol within the next half hour, and Sorel will keep an eye on the progress you make,” Bones began. “If you have any problems, he’ll be there for you. The late-shift will be taken by Dr. Daniel Corrigan – a colleague who assisted me during Khan’s surgery and monitored your vitals during your stay in the stasis-chamber last night. He’s informed about your enhanced nature and already got some experience with it while Khan was still here. Tomorrow in the morning I’ll be back and we see if you can get up already. Please don’t try to leave your bed alone. You would only hurt yourself and your dear brother would have my head for it.” He winked at the last sentence, and Otto sighed.

“I promise, Doctor. Just enjoy your evening – and give Khan my greetings.”

McCoy snorted. “I’m far from done for today – and, by the way, it’s only afternoon. I have to prepare another surgery aboard our ship – concerning our helmsman.”

Weiss looked quickly at him. “You’re going to operate on Mr. Sulu?”

“Yeah,” Bones nodded. “He’s healed enough and neither he nor we want to let him walk around with such a face longer than necessary, the poor man.”

Joaquin only nodded, before he asked, “Doctor, may I stay here over night? Otto is utterly strange to this world and knows no one here except for me. I think it would be better for him, if…”

“I don’t need a babysitter, Joaquin,” Hoffmann cut in; exasperation and amusement shone in his eyes.

“I know that you’re the big guy, but do you really think you’ll be comfortable wholly alone on a foreign planet almost 270 years in the future and with no one around you know? Hell, even Noo was unsettled the first night, as he admitted.”

The German Augment rolled his eyes, but kept silent. The boy had a point here; there was no denying about it – as much as it tickled his ego.

McCoy shrugged. “There is nothing that would speak against it.” He glanced at Sorel. “If you agree?”
“Mr. Weiss’ suggestion is quite logical given the current situation,” the healer answered. “There is no reason why he shouldn’t remain here.”

Bones nodded slowly. “Okay. I’ll replicate some sleep clothes for you and…”

“We have spare tunics in a clothing storage,” Sorel interrupted him. “I’m certain that I’ll find something fitting for the youngling. You can eat at the cantina, Mr. Weiss. I’ll send Daniel over to accompany you to dinner in four hours.” He glanced back at Otto. “I think it will be save to serve you breakfast tomorrow. Your stomach should be adjusted to functioning by then. Just right now your body will be fed by the IV.”

Hoffmann sighed. “Don’t trouble yourself on my account, Healer. Khan already told us before we boarded our ship that our bodies will need a day or two to be fully functional again. And I think he’s right.”

“Of course he is,” Bones rolled his eyes. “Your brother seems to be skilled in many departments. When I think of the doping-agent he produced from his blood that gave Jim enough strength to storm through a jungle despite the torture he underwent …” He shook his head, before he straightened his shoulders. “Right, I’ll tell Jim that you are staying here, Jo. I’m back early in the morning. You have Jim’s private frequency?”

Weiss shook his head. “Nope – I don’t even have a communicator.”

McCoy sighed. “I’ll send you one down after I returned to the Enterprise, programmed on Jim’s and also Spock’s private frequency. If something happens, just call.”

Weiss smiled at him. “Thank you!”

“You’re welcome,” Leonard nodded.

“Where is Jim?” Jo wanted to know; wondering that the captain hadn’t returned by now.

“Jim is in town with Spock – shopping for wedding-bands and further stuff. And afterwards he’ll stop by at Sarek’s to discuss the details of the upcoming ceremony.” He cocked his head. “That gives me an idea. Uhura certainly needs a hand. Maybe Carol can support her. I’ll ask Wesley about it.” Again he recognized the asking glance of Otto and explained, “Spock and Nyota Uhura, our
Hoffman cocked his head. Uhura – that meant freedom, as far as he remembered the Swahili-language he learned some from his Zulu-brother Mandla. And Nyota was a female name of the same language. So, a woman of African heritage was about to marry an extraterrestrial man? Interesting! “Give him my congratulations, Doctor,” he said politely.

“Oh, you’re going to see Spock again to tell him, no doubt about it. If there is one thing Vulcans can’t resist then it is satisfying their curiosity.”

“Is this the result of your experiences with Commander Spock, Doctor?” Sorel asked and received an amused laughter from the CMO. “This is the result of my experiences with all Vulcans, Healer – you included.” He nodded at Otto. “Just sleep a little bit more. Tomorrow we’ll try to get you on your feet.”

“I’ll try,” Hoffmann answered; dazed by everything he learned – and not learned until now.

With wary eyes he watched the surgeon leaving the room, before his attention was driven back to the Vulcan, who lifted a brow. “And now?” he asked.

“Given your already proceeded condition I think it’s safe to make some tests on how far your arm-muscles can be stressed.”

Eager to be fit as soon as possible, the Augment only nodded – hoping to get a chance to ask the healer some more questions about his race.

TBC…

Chapter End Notes

Well, there are many lines within this part of the story, which proceed parallel. Spock’s and Uhura’s upcoming wedding, the waking-up of another Augment, on Earth the president (and Barnett) learn more and more about the whole mess and are going to face
several unpleasant public occurrences... This all are storylines which are heading into the same direction to become one.

In the next chapter Jim will meet Sarek again – and Spock’s father has some interesting ideas concerning the current problems. Bones will learn that obviously ALL Augments are stubborn and Bones will be aboard the Enterprise again and meets Carol.

I hope you liked the new chapter. I know that the story doesn’t proceed quickly in the moment, but many details will be very important what will come soon.

Please leave some feedback again – I love them all.

Have a nice start into the next week and for those, who’re going on vacation soon, have a good time.

Love

Yours Starflight
Hi, my dear readers!

And once again thank you for the feedback. I know that you all are eager to read more about Otto, but in this new chapter the focus is on Jim and him being now a ‘part’ of Spock’s clan. Our dear captain will be tired out in the evening, because neither an upcoming Vulcan wedding nor discussing important topics with Sarek will be easy for him. In the meantime Bones will see Carol again, and Wesley is about to need a vacation soon (snicker).

Have fun with the new chapter,

Love

Yours Starflight

See the end of the chapter for more notes.

Chapter 91 – Vulcan oddities

“Jim! This is a nice surprise.” Uhura smiled at her captain as she opened the door to the flat she and Spock, and since the day before, Sarek lived in.

Kirk looked shortly over the young woman’s appearance. She wore light wide pants and a half-long tunic that hugged her slender figure nicely, while flat sandals showed her painted toe nails. Her clothes were Vulcan – and in their own way they seemed to be very comfortable.

Smiling at his communication officer, Jim returned her warm greeting. “Thanks, Nyota. That’s a nice welcome.” He stepped in after Spock nodded at him. Barely controlling his curiosity, Kirk looked around.

The entry merged into a surprisingly comfortable living area with large windows from where Kirk could see the lake. A dining area was to his right next to the open door where Jim recognized the kitchen. To his left a sofa, two arm-chairs and a coffee table was placed, while another door – now closed – led to an attached room. The flat was functional yet it didn’t miss some personal decorations. On a shelf Jim saw two framed holo-photos, a lyre-like instrument was placed on a side-board and Kirk also saw a 3D-chess-set. Yet this flat reminded him of a suite in a hotel – pleasurable but impersonal.
Of course.

This was where Sarek lived. Every personal item the ambassador possessed had been destroyed with Vulcan. The few things which showed that this was a private flat were new – or had escaped destruction because they hadn’t been on Vulcan when The Day happened.

Yet someone – and Kirk had a very good idea who this ‘someone’ was – had added some homey things. There were two carpets in the living room and dining area – one of Terran, one obviously of Vulcan heritage. Candle holders were on the tables and two of the walls had different color emphasis which harmonized utterly with the basic color. The air was warm, but not hot – the perfect compromise for the human and Vulcan inhabitants.

Jim realized that he had stood here for some time, staring, because Uhura smirked almost mockingly at him, while Spock faced him was a raced eyebrow. Feeling blood rushing into his face, Kirk mumbled an, “Uhm, it’s… nice here. Comfortable and…” He sighed. “To tell you the truth, I didn’t know what to expect, but I really like it here.”

For a second amusement shimmered in his Vulcan friend’s eyes. “Thank you, Jim.”

Uhura’s glance found the bags Spock carried and cocked her head. “You two were shopping?” she asked perplexed.

“Yes, several purchases were necessary,” Spock replied. “I also brought something for dinner. Would you please be so kind to put the nourishment in the fridge?” He offered her two bags she took from him.

“Of course,” she nodded, before she headed for the kitchen. “Will you stay for dinner, Jim?” she called over her shoulder.

“Sorry, I would love to but I have to return to New Gol – telling Nien about Otto in detail.”

“How is he – and how is he doing?” Nyota’s voice sounded from the kitchen. “I mean this Otto?”

“Huh, he is… more like Nien than like Jo. He worries about Khan and the others, is wary because of
his current location and seems to be very protective of his friends. But all in all he seems to be a nice guy.” He caught Spock’s asking glance and shrugged. “Well, give him some time to come to terms with everything. It’s quite a culture shock for him.”

Spock only nodded, while Uhura called, “Sounds like Khan. No wonder. Both have to be about the same age, what means that they were… born for the same purpose. Is he aggressive?”

“No,” Jim shook his head. “He’s wary, distrusting and on alert, but he’s not aggressive. It became better after he talked with Nien.”

Something was opened and closed in the kitchen. “Just imagine how you would feel waking up over 250 years in the future, surrounded by strange people.”

“Thanks. I had already enough to wake up and to find out that I’ve missed two weeks. That really wasn’t a nice experience.” He saw how Spock slightly winced and laid a hand on his arm; squeezing it while giving him a calm smile which meant ‘don’t fear, I’m here’. “So, is your father at home?” he asked; tactfully changing the topic.

“Sarek is resting in the next room,” Uhura said; returning from the kitchen.

“I’ll go to him,” Spock murmured and gestured towards the living area. “Please have a seat, Jim. We’ll discuss the further preparations for the wedding when I’m back.” He vanished through the left door and before it closed, Kirk heard the slightly familiar voice of the Vulcan ambassador.

“How is he?” Jim whispered, after Uhura had closed the distance to him.

“He’s still weak, but he’s doing better,” she answered. “I’m sure that he will be back on his feet within a few days. I only ask myself how to make him take it slow afterwards.”

“Just handle him like you handle Spock in these cases and…”

“That’s the matter, Jim. If Spock is injured he listens to you, not to me.” She sighed and threw her hands up. “Boys – half grown, fully grown or aged. It’s always the same with them!” she grumbled and led Kirk to the sofa, where he sat down. His glance found the two framed holo-photos on the shelf. One showed a very young Sarek and a Terran woman with dark hair and very familiar big, brown eyes, who held a tiny elf-like boy in her arms. Jim felt a wave of fondness as he realized that
the toddler was his now often so stiff first officer.

The second photo showed the Terran woman alone – middle aged, with a peaceful expression, shimmering brown hair and large expressive eyes. Spock’s eyes, as Jim recognized again.

“Spock’s mother was beautiful,” he murmured and Uhura nodded.

“Yes, she was. And she was deeply loved.” She caught Kirk’s asking glance and explained in a hushed voice, “Spock told me that his father admitted his exquisite love for Amanda after… The Day.”

The warmth in Jim’s heart turned into sadness and a lump was rising in his throat. Quickly he suppressed the emotions of deep compassion and licked his lips.

Nyota, recognizing her captain’s mood but also his attempt to control it, cocked her head. “Do you want something to drink?”

“Water please,” Kirk nodded; grateful for the distraction. “The heat outside really got to me.”

She examined him. His shirt was partly soaked, his face was red and he looked exhausted. “Why did Spock pull you along for a shopping trip in this heat? He should know better!”

“Bones gave me a hypo with trioxide before we were off to town,” Kirk defended his friend and himself. “And, by the way, we had to start the preparations for your’s and Spock’s wedding. It’ll take place in eight days – there is not much time left.”

Uhura had gone to the replicator and offered now Kirk a glass of luke-warm water. He grimaced as he sipped at it. “Cold water would make you sweat more and would stress your blood system and your heart,” Nyota explained. “Believe me. This climate here doesn’t differ so much from several areas in Africa.”

“I believe you,” Jim sighed and drank more; feeling some of his tiredness being chased away. “So, how you are doing?” he asked, while he placed the empty glass on the table.
Uhura had sat down on one of the arm-chairs; her legs were gracefully crossed. “Very well. Sarek can be almost charming and the neighbors here are very polite. At first, they were curious, but after they learned who I am, they showed acceptance and respect.”

“So… they have finally come to accept Spock?” he asked hopefully, and the young Bantu woman shrugged.

“There isn’t a single Vulcan who doesn’t know that it was Spock’s deployment and effort that saved the Vulcan High Council, the priests and the most important artifacts of the Vulcan culture.” She flipped her ponytail back. “And they all know also about you – that you bought Spock time to get the council and the priests to safety. And many Vulcans owe you their lives, because without that almost suicidal mission many less Vulcans would have been evacuated.” She smiled. “The outcast and the outworlder saving the rest of a doomed culture. Believe me, Captain, they would celebrate you two if their traditions would allow it.”

Jim rolled his eyes. “Please, Nyota, not you too! T’Pau already complimented and thanked me for something that was simply my duty.” He took a deep breath. “To admit the truth, I was simply hell-bent to stop this bastard – and to hinder him from another bloodbath. He killed my father, and now he was about to kill the people of a planet Earth owes so much. I was… furious and… hoped for a chance of revenge. Yet I couldn’t prevent the holocaust from taking place.”

“There was no time left to stop Nero,” Uhura said gently. “But you and Spock stopped him from destroying Earth, too. Two young men against a whole bunch of ruthless Romulans going pirate… It’s no wonder that you two became heroes – even here on New Vulcan.”

“If Vulcans would call someone a ‘hero’, you mean” Jim smiled, and Nyota chuckled.

“Well, they are very sparing with such terms.”

The young captain looked warmly at her. “And yet you’re going to marry one of them.”

“Spock is… different – and very special,” the communication officer stated with a hue of tenderness in her melodious voice.

“This I would subscribe to any time!” Kirk nodded. Then he shortly pursed his lips. “How are your preparations going? Do you need help?”
“T’Pau sent one of her assistants to support me, but…” She sighed. “I’m glad that I learned all the
details for the ceremony, yet I’m looking forward to when my family arrives. My younger sister,
Uaekundu, will be a more personal help for me and I also think my brother Malcom Marien can also
support you and Spock. I sent them the most important details of a Vulcan wedding ceremony so that
they are prepared when they’re here.” She sighed. “Father said he and the others will be here in five
days.”

“Three days left then until the big issue – not much, if you ask me.” Jim cocked his head. “You and
Carol have become good friends. Shall I ask Bob for permission to let her come down to New
Vulcan to assist you?”

Uhura beamed at him. “That would be nice.” She sobered a little bit. “And I have to make it up to
her. I almost scratched her eyes out as she came to the bridge aboard the Excalibur after the battle. I
still thought her to be a betrayer and was about to give her a piece of my mind. Only Scotty stopped
me…” She chuckled sheepishly – and Kirk grinned.

“Yeah, never mix up with you or those you regard as friends or family. Those who did should seek
cover immediately.”

Nyota rolled her eyes. “You’re not helping here, Jim!”

Kirk laughed quietly, but stopped as he heard the door opening again and two different steps nearing.
Quickly he rose as did Uhura, and turned around.

Spock led Sarek out of the attached bed-room; steadying his father with one hand on his upper arm.
The ambassador wore a loose robe over a casual tunic and loose trousers – obviously sleeping
clothes. His hair was combed, yet not in order as it used to be, and there were still dark bags beneath
his eyes. Yet he looked better – far better.

“Ambassador Sarek,” Jim greeted and lifted his right hand in a passable ta’al. “I’m glad that you’re
doing better.”

Sarek watched the captain in front of him – his son’s best friend and T’hy’la. And just like in the
hospital it didn’t cease to surprise him how much the young human had matured since The Day and
the incident on the bridge he had witnessed.

“Captain Kirk, welcome to my home,” he answered.
Jim, realizing that Spock steered his father to the sofa, hastily made room for him, while Uhura addressed the ambassador, “Do you want some tea, Sarek?” She pronounced his name differently than he, Kirk, did it. Hell, he had to learn some Vulcan soon, this much was clear.

“This would be acceptable, thank you,” Sarek answered and slowly sat down. Spock took the place beside him, while Jim took the second arm-chair.

“Spock told me that the Augment has woken up – Otto Hoffmann,” Sarek came straight to the point.

Jim nodded. “Yes. Spock, Dr. McCoy and I talked to him. He is confused and wary, but remained surprisingly calm in the face of the utterly foreign situation he found himself in.”

Sarek lifted a brow. “He’s enhanced, Captain. As far as I understood my son, Mr. Singh adjusted to this world in a short time, as did this younger Augment, Mr. Weiss. I do not doubt that the other Augments will come to terms with this century, too. I am rather… apprehensive that they will overreact when they learn of what their leader was put through.”

Kirk sighed. Sarek had a point here – a point that gave Jim a bellyache whenever he thought of it.

“To admit the truth, Ambassador, this is something I fear a little bit, too,” he said quietly. “Otto was very protective of Khan after he learned that Nien was injured. Strong family-bonds seem to be usual among the Augments. On the other hand, I can understand them – if Otto and Nien are typical examples for these ties. From an early age they had only each other, and no-one else. The scientists and guards within the labs didn’t treat them like an adult should handle a kid, not to speak of the lack of parentally affection and the security of a family’s bosom. I think it tied them more strongly together then if they would have been raised separately with some host-parents. To be protective of each other was the only thing that kept them going on and in the end ensured their survival. To learn now that the man, who was always there for them and risked his life on many occasions, was tortured, blackmailed and abused in this new age will certainly stir up some fury. Fury I have to soothe – with Nien’s help, at least concerning Otto. When we win Otto over and gain his trust, then it will be easier to deal with the other Augments.”

“Logical. Mr. Hoffmann is one of their own and they will believe him easier than you, Captain,” Sarek nodded. “It will need time before they will accept everything that happened – to their leader, and to them. I learned from Spock that most of them were also unwillingly part of illegal experiments – something that will terrify them, but also will hurt their pride. I offer you my support in negotiating with them.”
For a second Jim was astonished. “Sir, all due respect, but you’re still healing from a heart attack and a difficult surgery,” he began to protest. “You certainly…”

“I’m well enough to talk to people, Captain, after all that is what I’m just doing right here and now.” – Kirk could be mistaken, but he thought he saw a short glimpse of amusement in the older Vulcan’s eyes. – “And Healer Sorel insists that I check in with him every three days, so it’s no effort for me to meet at first Mr. Hoffmann – and afterwards his comrades.”

Jim cocked his head. “You already made up your mind,” he stated. “You only made the offer because of politeness.”

Sarek again lifted a brow, which Jim translated to ‘guilty as charged’. Then the older Vulcan took a deep breath. His voice was firm but also gentle – reasonable in a way Kirk knew all too well from Spock.

“As understanding and compassionate as you are, Captain, you are no diplomat – not in the common sense of the word. And, by the way, the ladies and gentlemen are going to have many questions, especially concerning their present exile here on New Vulcan. Questions I can answer the best, while at the same time I would be the connection between them and the Vulcan High Council. I would appreciate yours and my son’s assistance, because you two have more experiences with Augments, yet you two will not remain here for eternity, to use a Terran phrase, and to whom shall they come if they have questions or need support, when you and your team are back on Earth for the trial? They need a man of confidence. My current situation of health doesn’t allow me to make long travels within the next weeks, which more or less banishes me to the colony. By supporting Mr. Singh’s crew, I can do something useful until maybe a resumption of the peace-talks calls me away again.”

Jim looked at him for several seconds, then he grinned. ‘In other words, you’re bored to death already and hope for something to do. Like Spock you simply can’t sit back and do nothing. Sweet Lord, Vulcans are easy to read if you know their own language beneath the spoken words and beyond the showed expressionless faces.’

Aloud he said, “You gave a lot of thought to the whole problem, sir, and I’m glad that you offer your support. It’s true, Spock, Dr. McCoy, my team, I – and Khan – will be called to Earth within the next weeks to face court martial. Alone this circumstance will unsettle Otto and the others – and they are utterly foreign to this time and to their location. They, indeed, need someone they can trust. I already thought to ask Selek to take care of them, but I know that Selek is more than busy with his job and the growing colony. If you’re willing to help, Ambassador, I can travel to Earth with the knowledge that Khan’s crew – his family – are in good hands.”

Sarek made an affirming gesture. “Then I think it would be the best if you introduce me to Mr. Hoffmann the day after tomorrow. I’m back at the hospital then for the check-up and Mr. Hoffmann
should be adjusted enough then to talk about how to proceed from now on.” He took a deep breath. “Maybe he should be informed of everything then.”

Jim sighed. “I could barely ask for his patience after he woke up and learned of Nien’s injuries. He wants to meet Khan as soon as possible, and then Nien and I have a lot of explaining to do – including the whole shit that happened to him and the others.” He felt heat rising to his cheeks as he realized his harsh wording. “Sorry,” he mumbled, but both Vulcans decided to let his slip pass.

“How long does Dr. McCoy think Mr. Hoffmann will need to be properly up?” Uhura asked, and Kirk shrugged,

“He anticipated Otto being on his feet in one or two days. Jo needed longer, but – as I have learned from Otto – this could be because Jo belongs to the ‘second generation’ of the Augments, which were… born for a different purpose than Nien and the others. Otto is more like Khan – means that he’ll be up soon. Hell, he was thinking straight and clear within minutes, while Jo needed a whole day to get a proper thought done.”

“So, Mr. Weiss is in mind and body weaker than the others?” Sarek asked; curiously.

Jim shook his head. “He’s quick in thinking like Khan, but – as Nien told me once – he and the others of the younger generations were ‘created’ to be less aggressive. And aggressiveness isn’t always a bad streak. Used in a good way it can encourage intentions or can expedite healing processes. Jo came around rather quick compared to ‘casual’ humans, but slower than Otto – and certainly slower than Khan, too.”

Sarek pondered this a moment. “It will be fascinating to interact with the Augments,” he said – and Jim chuckled. As he caught the ambassador’s asking glance, he clarified,

“You and Spock are so similar when something has woken your interest. I think, Ambassador, deep in you a scientist is slumbering.”

“Scientists are people who explore the unknown or try new paths others haven’t done or haven’t succeeded in walking. To be a diplomat doesn’t differ so much from it, Captain, no matter if there are negotiations within the Federation or with foreign or even hostile cultures. There are riddles to solve, problems to eliminate and new ways to find. Only the purpose differs.”

Jim smiled at him; his blue eyes sparkled. “Well, your last words cover a lot of my job description.
So, I’m after all a diplomat, too.”

Sarek stared at him; his eyes widened for a second in surprise.

Uhura repressed a soft laugh, while Spock deadpanned, “You just experienced one of Jim’s peerless ability to talk someone into admitting or agreeing to something said someone had denied or disagreed to only moments before.” He glanced at Kirk; something close to fondness and pride flickered for a short second in his gaze. “Like this he even smoothed out some of his marginal actions within the last weeks due his talk with Admiral Barnett.”

Kirk knew that he was blushing again, while mirth mirrored on his face.

It was rare that a Vulcan showed reactions at all, but there was no mistake now: Sarek was impressed. “I have to correct my earlier statement, Captain. You may not a diplomat in the common sense, but that doesn’t hinder you in using our strategies.”

Jim chuckled again. “To talk myself out of a mess saved me a lot of punishment when I was younger.”

“You had problems with the law before the last weeks?” Sarek wanted to know. His face gave nothing away of his thoughts.

“Not really,” Kirk sighed. “Not when I was a boy, mind you.” He leant back. “If you would ask my mother she would say that I wasn’t… an easy kid. And it didn’t get better as I grew into a teenager. At the beginning of my twenties I lived at the razor’s edge and I certainly would have spiraled down, if it hadn’t have been for Christopher Pike, who met me by accident, recognized me because he was a friend of my dad, and dared me to do better. He suggested I should join Starfleet – something that occurred to me several times, yet I never ventured another failure of my non-existing career as a man living into the day with no duties and no purpose.” He shrugged. “Next day I drove by the shipyard in Riverside, saw the half-finished Enterprise – and fell in love. I wanted to captain such an incredible vessel one day. I think some genes of my dad – besides my appearance – woke up in me. I smuggled myself on Starfleet grounds, faced Pike, told him that I wouldn’t need four but three years to graduate the academy, stepped into the shuttle, met Bones there and well… And that was the beginning of it all.”

The dark orbs of the Vulcan ambassador watched him thoughtfully. “Changing from a rebel into a Starfleet captain within a few years. Fascinating. Maybe a certain rebellious streak has to be present in someone to make such a person – and to do the right things, no matter the written rules or the consequences.” He looked at Spock and then back at Kirk. “This is something you both have in
Jim grimaced. “If you refer to the incident on the bridge more than two years ago, I…”

“My son already told me everything, Captain, and I understand your motivations and actions. And you two have developed a close friendship – you are even T’hy’la. A sacred bond that is very rare, especially today. And Spock chose his friend well, seeing that you stop at nothing to keep your subordinates and friends safe, and even risk your career and freedom to do what has to be done. As far as my mother told me, she already promised you our clan’s support and welcomed you in the family. I want to repeat this given word. Not only my son, but also you and your team, as well as Mr. Singh, can rely on me when it comes to the trial.” He straightened his shape. “And to repeat T’Pau’s statement: As Spock’s T’hy’la you have the support and protection of the House of Surak.”

Jim bowed his head. “Thank you, Ambassador. I’m honored.”

Of course, it didn’t slip Sarek’s attention that the young captain used the traditional words, even if they were spoken in Federation Standard. ‘He learns quickly,’ he thought, content. “Seeing that you’re welcomed in our clan, formalities aren’t necessary anymore. Please call me Sarek.”

Kirk couldn’t help but smiled openly at him; his eyes sparkled. “Thank you again. Please call me Jim.” He looked at Uhura. “Could you teach me how to pronounce the name of your future father-in-law correctly? Because I certainly don’t do it right.”

Nyota smirked at him. “On this occasion, I will also teach you to pronounce Spock’s full name.”

“I would appreciate it if you would also teach Jim the sentences he will have to speak at our wedding-ceremony, Nyota,” Spock cut in. “I will assist you, but you know better methods to teach a human something he isn’t ‘in’ for.”

“Hey,” Jim protested. “I like foreign languages. It’s only they don’t like me.”

Uhura closed her eyes; knowing already what would come. And she was correct.

“A language can’t ‘like’ you, Captain. A language is a language – developed not to irritate you, but to give people the possibility to exchange…”
“Spo-ock!” Jim groaned; throwing his head back. “You know what I mean!”

Nyota laughed quietly, as she watched her betrothed and her captain. And she could have sworn that new amusement shimmered deep in Sarek’s eyes, before the older Vulcan – always the diplomat – drove the talk’s topic to something else that was also very important: The upcoming wedding. And soon Jim learned what was expected from him and how he could assist Spock until the big day arrived.

ST***ST

“Len!”

Dr. McCoy interrupted his talk with Geoffrey M’Benga and Sulu. The latter sat on a biobed and had just passed a last examination for the upcoming surgery. The left side of his face was still red and a web of scars deformed it, his throat and his left shoulder, but Bones had already assured him that he would be like new after the operation.

Hearing the short-form of his name, McCoy looked over his shoulder and saw Carol Marcus standing there; a joyful smile on her lips.

“Carol!” he greeted; grinning at her. “Just give me a minute, then I’m done here.”

She nodded and stepped back after winking at Sulu, who had grimaced at her. “No false shame, tiger. Len will get your face okay again,” she winked, and Hikaru sighed with a short nod.

“I hope so!” he mumbled.

“You can trust me,” Bones grumbled, before he discussed the last steps of the surgery with M’Benga. Clapping Sulu on the unhurt shoulder, he said finally, “So, no alcohol this evening, no fat food and try to sleep early. Tomorrow is the big day.”

Hikaru snorted. “One: I rarely drink alcohol…”
M’Benga coughed.

“Well, except for shore-leave or during some parties,” the helmsman clarified, before he continued. “Two: I don’t like fat food, and third…”

“Ah, Dr. Marcus and Dr. McCoy! Exactly the two people I wanted to speak to.”

Bob Wesley crossed the threshold and headed towards the little group. Bones saluted with a polite, “Commodore!”

Wesley stopped him with a wave of his hand. “At ease, Doctor.” He looked at Sulu. “So, the big day for you is tomorrow?”

Hikaru made an affirming gesture. “Yes, sir – and I have to admit I’ll be more than happy when I look normal again.”

“I can understand you,” Bob smiled, before he addressed McCoy. “I want to have your opinion on Mr. Hoffmann, Doctor, so please come to my quarters when you’re done here. Deck 5, cabin 1H52.”

Bones nodded. “Yes, sir.”

Then Wesley looked at Carol. “How is the situation in the weapons bay, Doctor?”

“The torpedo shafts are as good as repaired, one phaser-bank is burnt out and needs repair in a shipyard, and aft phasers are functional. The same went for seven torpedo shafts, one has to be fixed in a shipyard, too. I sent you my report three hours ago, sir.”

Wesley sighed. “Yeah, I saw your message but didn’t find any time to read through it.” He cocked his head. “I ask for another reason, Doctor. Captain Kirk called me only a few minutes ago. He asked if you could assist Lieutenant Uhura with her personal wedding-preparations. T’Pau already sent her assistance to support Uhura, but Jim thinks that our language-wonder needs a friend at her side, too. I agree with him. This marriage will be a big thing within the Federation, after all Spock is the heir of the House of Surak. And to support his future wife will maybe calm some irritation of our ‘not-irritable’ Vulcan friends after Norton’s assault. So, if I have your word that you’ll return to the ship when needed, you can beam down tomorrow in the morning to help the lieutenant with… well,
with what women do before a wedding.”

Carol smiled at him. “It would be my pleasure, sir, and of course I’ll return when needed.”

“I had no doubt about it, yet I’m bound to ask you this question,” he murmured. Then he glanced back at Sulu, then at McCoy and finally at Carol again, before he groaned. “What a mess! And I have no clue how we’ll get out of all this unharmed and still having our jobs!”

Bones, who wasn’t the big optimist, managed a small smile this time. “My grandmother loved to say: Just wait and everything will work out all right.”

“Then I hope that the old lady was correct, Doctor, because I have no idea how to haul our asses out of the swamp we’re in.” He went for the door. “Meet me in my quarters when you’re ready, Dr. McCoy!” he repeated and vanished.

Sulu looked up from his sitting position at McCoy. “I think the good man is a little bit nervous by now.”

“No wonder. This time we’re really in deep water,” Bones sighed.

Carol closed the distance to the two surgeons and the helmsman; giving Bones a short, warm glance before she asked. “Okay, who is this Mr. Hoffmann our dear Wesley wants to meet so much?”

Bones took a deep breath. “Rrright, Jim didn’t forbid me to speak about him.” He glanced at his three friends and said quietly, “Otto Hoffmann is one of Khan’s fellow Augments. We had to wake him up and…”

“What?” This came from Sulu and Carol in unison; while M’Benga only pursed his lips. Geoffrey already knew about it after all he had been called by Jim to help him to clean-up Khan, because McCoy was the New Vulcan Hospital caring for one of the Augments.

“And what kind of guy is he?” M’Benga asked.

McCoy only sighed again, and began to tell the others of the overprotective enhanced man, who had
found himself in an utterly strange world after almost 270 years of sleeping. Of course, it woke even more curiosity and Bones promised them to keep them updated. Afterwards he left medbay and headed towards Wesley’s guest-quarters; Carol accompanied him.

“I’m glad that you’re back aboard,” she said quietly; giving him a soft glance.

Bones felt heat rising into his cheeks – but not only because the beautiful young woman was flirting with him. “I’m sorry,” he mumbled and received a confused look for it.

“What for?” Carol asked.

McCoy gulped. “I… I thought you betrayed us all – and called you a ‘Judas’ inwardly.” He lowered his head. “I should have known that you wouldn’t do something like this – that you would stay loyal to Jim and us all, even if you haven’t forgiven Khan for killing your father.”

The weapons officer took a deep breath. “I think I tricked you all – Norton and Styles, but also you, Jim, Khan and the others. Even Spock, and this tells a lot.”

Bones had to chuckle while they headed towards the turbo-lift. “Yeah, that was quite a show you delivered.” He stopped in his tracks and turned towards her. His face was unusually gentle, as he said. “I apologize, Carol. I should have trusted you more.” He slightly shook his head. “You can’t imagine how relieved I was when you called Jim during the battle, told him about yours and Khan’s whereabouts and then when Khan informed us of you being still an ally who even saved him.” He moistened his lips, before he uttered, “It… hurt as I thought you’d betrayed us. Not only because of the betrayal, but mainly because… it seemed to be you who did the backstabbing.”

Carol smiled softly at him, lifted her right hand and cupped his cheek. “Apology accepted,” she said quietly. “I’m surprised myself. I didn’t know that I’m such a good actress.”

Bones chuckled. “If you ever get tired of taking care of weapons, you should consider a career at a theatre.”

Promptly Marcus had to laugh. “Oh no! This is really the last thing I can imagine for the future.”

The CMO cocked his head. “And what did you imagine for your future?” he wanted to know; asking himself in the same moment what had gotten into him to be so bold.
Another smile spread over Carol’s face. “Oh, maybe to do something big – to develop something that will change the whole galaxy,” she teased, then she became serious again. “But just right now I can imagine having dinner with you after your report to Wesley.”

Another sigh escaped McCoy, while they continued their way and stepped into the turbo-lift. “Regrettably I’ve to return to New Gol. I still have patients down on the planet but…” Bones began to beam. “I have an idea. How does it sound if I invite you tomorrow evening in one of the best restaurants New Shi’Khar has to offer?”

“Only you and me?” Carol asked hopefully, and as Bones nodded, she laughed quietly.

“I would love it, Len.” She rose on her tip toes and pressed a quick kiss to his cheek. “Just call me on my private frequency and tell me the location. I’m certain they have taxis on New Vulcan and I’ll find you.”

“Sounds great,” Bones smirked at her. At the same moment, the lift cabin came to a halt and the doors opened; the computer voice informed him that he had reached deck 5. “Well, I have to take my leave,” he said, before he took her right hand, lifted it to his face and pressed an old-fashioned kiss on it. “See you later, my lady,” he said, bowing dramatically and stepped into the hallway.

And he heard Carol’s jolly laughter even as the lift doors closed.

ST***ST

It was already evening, as Jim Kirk finally returned to New Gol. He had used an official transporter that wasn’t too far away from Sarek’s flat and had beamed over; happy that the murderous heat had changed into bearable warmth by now.

Gripping the three shopping bags tighter he headed for the entrance, where a tall Vulcan priest opened the door.

“Good evening,” Jim greeted him politely.

“Captain Kirk,” the Vulcan replied. “The Lady T’Pau expects you. Please follow me.”
Kirk felt a little stone dropping into his stomach for a moment. Hell, the old hag really seemed to have taken some offence by him sending The Shadow over to give Nien some company without informing her first. Then Jim straightened his shoulders. T’Pau was a hard-liner of logic and his decision to take care so that Nien in his mental state wasn’t alone, was only… logical.

Half a minute later he found himself in the anteroom of T’Pau’s office he already knew; only this time the matriarch’s assistant wasn’t present. The priest knocked, entered as the old Vulcanness’ voice called something and announced Kirk’s arrival, before he gestured towards the captain to go inside.

Taking a deep breath Kirk stepped in – and stopped dead in his tracks as he saw that T’Pau wasn’t alone.

“Selek!” he called, while a big smile appeared on his face.

The Vulcans high minister looked gently at him and nodded shortly, “Jim, it’s a pleasure to see you.”

“Thanks,” Kirk replied, before he dropped the bags to the floor and lifted his right hand in a ta’al. “Lady T’Pau, long life and peace,” he greeted. Then he folded his hands in front of him; waiting.

The matriarch looked him up and down. “You know why I called you?” she asked – and Jim felt a very unwelcomed blush widening on his cheeks.

“Yes, Ma’am. I apologize for not informing you of Mr. Singh’s visitors before their arrival. There was so much on my mind this morning, and it… simply slipped me to ask for your permission.”

For a long moment T’Pau said nothing, before she replied, “This isn’t the reason I asked Stran to bring you to me as soon as you arrived, but… your apology is welcomed – and accepted. I know you have your mate’s best interests at heart and worried for him if he would be alone for too long in his current condition. Yet I would appreciate it if you, indeed, let me know when visitors are expected at the guest wing.”

Jim nodded quickly; relieved that the expected tirade didn’t come. Well, T’Pau was Vulcans – and Vulcans never said more than needed. “Of course, Ma’am,” he answered; politely bowing his head.
T’Pau only nodded, before she came straight to the point. “I want you to tell Selek and me about the newly woken up Augment – Otto Hoffman, as I learned. And I also was informed by Sarek that you and Spock used the afternoon for the first preparation of Spock’s upcoming wedding. I can imagine that you have questions now.” She gestured towards the second chair that was still empty. “Have a seat, James.”

Jim would have loved to take a shower first and to have something to eat, but there was no chance for it now. So, he did as he was asked for; exchanging a short glance with Selek. And like always he felt utter safety and peace in the old Vulcan’s presence.

“There you are!” Leonard McCoy called, as half an hour later a very tired looking Jim Kirk headed towards him down the hallway that led to the guest-wing; the three bags in his right hand. “I was ready to file a missing person’s report by now!” Bones continued.

Kirk sighed. “I was already here half an hour ago, but one of T’Pau’s priests intercepted me and I had a little talk with her and Selek until now.

“So, Khan was right when he mentioned that you were near,” the CMO nodded. “This link you two have really comes in handy.” He began to grin. “Your honey bombards me with questions for more than an hour now and, by the way, he is very eager to see your lovely face again,” he teased.

Jim sighed; wiping new sweat from his face. “I also thought to be back sometime during the afternoon, but fate had other plans for me. I was with Spock shopping and afterwards we had a longer talk with Sarek.” He shook his head. “You don’t believe how complicated this whole ceremony will be.” He fell into step with Bones. “Nyota tried to teach me a few sentences I have to utter at the wedding. It was horrible. I tied my own tongue into a knot. I swear, Spock and Sarek were laughing their heads off – inwardly and in their very own Vulcan way, of course.”

McCoy chuckled. “Well, that’s the result when you not only befriend someone of a completely different culture, but if you become something like a part of his family.”

Jim rolled his eyes. “It’s not that bad. Sarek even allowed me to address him informally – and Spock was happy. Well, as happy as a Vulcan can be.”

“I’m over and over again surprised what you read in our hobgoblin’s not-existing expressions,”
Bones sighed.

“He does express a lot of hidden emotions – you only have to know how to read them,” Kirk protested. “Oh, by the way, he bought something for you.”

McCoy stopped dead in his tracks and looked with big eyes at him. “He did what?”

“He bought something for you – and for me.” He lifted the bags. “Our formal robes for the ceremony, including light boots. I hope I got your shoe size right. Spock meant they will fit, but I’m not certain.”

Bones gasped. “You’re kidding!”

“Do I look as if I would be kidding?” Jim asked seriously, opened one of the bags and let his friend peek into it.

All McCoy could see was a silver-white silken material. Suspicious he touched it – and whistled lowly between his teeth. “That’s indeed silk – or a Vulcan equivalent of it. Spock must have dug deep into his pocket to buy it.”

Jim nodded. “You have no idea. He bought a wedding-band for Uhura – titan and gold, woven in a beautiful web. He meant the silver color would stand for cool logic and the gold for warmth and emotions. I swear, he never ceases to surprise me. I knew that he can be very thoughtful but this kind of sensibility really astonished me.”

Bones smirked shortly. “Our hobgoblin is a romantic. Just have a look!” He cocked his head. “Gold and titan, eh? He really doesn’t spare expenses.”

“It’s the same with my robe,” Jim nodded. “I tried to stop him and to pay for mine, but there was no chance to talk him out of it. I only received one of these sharp glances he always musters as a silent warning, accompanied by a rebuking lifting of his right eyebrow and then he bought the clothes.” He smiled. “You should have seen his robe. I think Uhura will lick her lips when he wears it.”

Bones chuckled; his gaze was gentle. “Our pointy eared walking computer! Outside like stone, inside soft like pudding.” He shook his head in fond exasperation, while he continued his way down the hallway; Jim at his side. “I don’t know if I should damn or cuddle him sometimes,” the CMO
murmured.

A bark of laughter escaped Kirk. “Shall I tell him how you think of him, or…”

“Dare it and I’ll hypo you into the next week!” McCoy threatened.

“I already told you, Doctor, that such an endeavor would only bring you great disadvantages!” Khan’s dark baritone sounded from afar, as they headed towards their rooms.

“Dammit! Another guy with super-hearing. In Spock’s case, I can understand it – after all those long, pointy ears have to be for something useful. But Khan’s are round and…” Bones’ tirade ended, as Jim only laughed more and jogged the last meters to his room, calling joyfully, “Hi, honey, I’m home!”

McCoy rolled his eyes, mumbled something of ‘idiots in love’ and followed Kirk. And again, he had to groan, as he watched his friend letting the bags fall and bending over the Augment; hugging him before he kissed him. “Guys, you’re not alone!” he grumbled, but was ignored.

Khan couldn’t help himself. The moment Jim stepped into the room and beamed at him, he felt at ease for the first time in hours. And as Kirk embraced and kissed him, peace and something like happiness spread through him. Alas, so much for being an enhanced, superior being! And the oddest thing was: he didn’t care one bit – like many times before when this special young man was with him.

Without hesitation, he raised his good arm and slipped it around Jim’s waist; hugging him back. The familiar scent, mingled with the smell of something foreign, washed over him and his tension melted away.

“Sorry that I’m so late,” Jim began while he sat down on the bed’s edge. “But my stay at Sarek’s was longer than planned, and then T’Pau and Selek had several questions for me.” He took the Augment’s hand in his. “How are you?”

“Fine – now,” Khan said; admitting how much he had missed Jim. “Dr. McCoy already told me everything about Otto, but…” He seemed to seek for the right words.

“You want to know what I think of him – what my first impressions are,” Jim nodded; understanding
Nien’s need to know how his brother was doing and what Kirk thought of him. “Well, he was at first confused and on alert, but as Jo…” He stopped and looked around. “Where is Jo, by the way?” he addressed Bones, who sat down on one of the chairs.

“He wanted to remain in the hospital to stay with Otto. We thought it would be a good idea, after all Mr. Hoffmann is utterly foreign to this world and knows no-one except for the boy.”

“I’m glad that Joaquin decided to stay at Otto’s side,” Khan agreed. “Dr. McCoy and Healer Sorel were very considerate in allowing him to remain there.” He lowered his head. “I only wish I could be there to calm him. I know Otto. He can be very… demanding when it comes to the safety of us and certainly worries now, even if he hides it.”

“Well, I know another Augment who acts exactly the same way,” Jim joked; squeezing Nien’s hand. Blue and ocean-colored eyes met in mutual understanding and soft teasing. Then Kirk turned serious again. “He calmed down after he talked with you. Yes, he was still unsettled but he was willing to listen.” Kirk snickered. “And he was shocked that we two are bonded. He told me that you had lovers, yes, but never intended to bond yourself to one. To learn that I, a casual human, is your bondmate baffled him.”

Khan frowned. “I hope he didn’t say something offensive. Otto is more direct in speaking – less diplomatic so to say.”

Jim laughed. “No, he only asked me why I’m special to you at all.”

Nien groaned. “Typical! He gets an ear full from me when we meet.”

Kirk shook his head; still grinning. “There is no need for you to rebuke him. After we talked a bit, he spoke more easily with us and even apologized. He is curious, this much I can tell. And he worries for the others when he learned why he was already woken up. He has many questions, especially concerning the time you’ve been around here, but I told him that you want to do the whole explanation and so he stopped asking.” He smiled encouragingly as Khan grimaced slightly. “We can explain everything together to him, if you want,” Kirk offered. “I think he’ll have a lot of questions I can answer, too – and maybe can avoid making him hate the fleet.”

“Not all of Starfleet is responsible for what happened to us,” Nien said calmly. “Only a few people which filled, regretfully, important and powerful positions.” He sighed. “I’ll make Otto see and understand, Jim, don’t fear.”
“I don’t fear his anger but his disappointment. To board a ship and to risk everything by escaping to an unknown fate demands a lot of courage and certainly desperation, too – only to wake up and to learn what happened to you and your friends while you were asleep.” He shook his head. “I could understand when he’ll get furious, yet I hope that he remains calm. It’ll be the better for everyone.”

“Hm, and I hope Jo will be headstrong enough to ignore Mr. Hoffmann’s insisting of getting answers,” McCoy grumbled.

Khan only smiled lazily. “Joaquin may be a very young man and plays nice, but he can be stubborn as a mule. Believe me. I was often enough on the receiving end when he was still nothing more than a little boy. And this streak hasn’t changed much.”

“No wonder that he and Jim go along so well,” Bones scoffed.

Kirk rolled his eyes. “You’re really a mockingbird today. You should rather tell me how Sulu is, when you’ll do the surgery on him and how things aboard are.”

McCoy crossed his arms in front of his chest. “I already was wondering when you would ask.” He sighed as Jim only shot him a glare.

“Sulu has recovered nicely,” Leonard continued, “and I plan to operate on him tomorrow at 11:00 ship’s time, after Geoffrey has prepared him and I’m done with the first training session with Mr. Hoffmann. I don’t think the surgery will last longer than an hour. Wesley made me report to him in his guest quarters and asked a lot of questions concerning Mr. Hoffmann. He’s… wary, Jim. Maybe you should introduce Mr. Hoffmann to him as soon as possible to give the poor man a rest. He’s a lot on his mind with the Enterprise still being in chaos and with the upcoming questioning Command will put him through sooner or later. The mood aboard isn’t good. The crew is unsettled because of yours, Spock’s, Uhura’s and my fate – and a lot are also nervous because of Mr. Singh.” He looked at Khan, who lifted both brows. “They are worried for you, too. As it seems, they have fully accepted you in their midst and call you one of them.”

Was he mistaken, or was there a faint blush on the Augment’s face? Yes, obviously. Khan lowered his head but not quick enough to hide the surprise and joy that began to shine in his eyes.

‘He is grateful to have finally found a place he belongs to. How is it to be an outcast your whole life because of your heritage?’ McCoy mused. ‘Humans aren’t made to be alone. Yes, he had his siblings, but to prove every day anew that you aren’t a monster but a feeling, sensible being must be incredibly hard. And then everything that happened to him since he woke up in our time… Jim is right. It’s a miracle that this man is still able to love and to cling to hope at all.’
Aloud Bones went on with his report, “If you want to talk with Jo, no problem. I asked Scotty to beam a communicator to the boy and he received it. Khan and I already made a test-call when I came back.”

Jim nodded. “Well done, Bones.” Then he chuckled. “I can imagine what Wesley said when you asked this favor of him. He already got his knickers in a knot when I asked for a communicator for Nien and… Bones?” Jim saw his CMO’s face and knew instantly that something wasn’t right. “You did ask Bob in advance, didn’t you?”

“Uhm… it somehow slipped my mind,” he admitted – and Jim groaned.

“Superb!” He shook his head, before he snickered. “We both should check our memories then, because I forgot to inform T’Pau about The Shadow-gang’s visit.”

“Khan already told me,” McCoy chuckled. “And I don’t really believe that you indeed forgot it.”

Jim gasped. “Dr. McCoy, do you ascribe your captain to have contravened our hosts’ rules and to present T’Pau with a fait accompli to avoid an eventually refusal of my request?”

Bones shortly pursed his lips. “Just give me a sec.” He cocked his head, frowned and called with a grin, “Yes, this is exactly what I think you did.”

“I would never do something like this,” Jim replied with faked hurt.

“Of course not,” Leonard nodded with exaggerated seriousness. “We all know that you always play by the rules, obey every word written in the book and have the bedside manners of a high noble, not to speak of that you never try any trick in the universe to get what you want.”

Kirk couldn’t help himself: he stuck his tongue out at Bones, who simply smirked even more.

Khan laughed quietly; feeling another knot of tension leaving his belly. Otto was awake and well, Jim seemed to have gotten along with him and in a few days the rest of his family would join him in this world.
Yes, life seemed to take a little liking to him for once – if there wouldn’t be that damn trial that hung over his, Jim’s and the other one’s head like the sword of Damocles…

TBC…

Chapter End Notes

Poor Jim. It’s really a big difference to be ‘only’ befriended with a (half-)Vulcan or to belong (more or less) to the House of Surak. Right, Sarek certainly can be of big help concerning the Augments and later with the trial, but in return Jim has to learn what it means to be ‘adopted’ by a Vulcan clan. At least he isn’t the only one who has to howl with the wolves; Bones will get his own share.

In the next chapter Otto learns what happened to his leader and his friends. It will be an emotional rollercoaster, this much I can already promise. But that’s not all, because in the aftermath Jim is forced to make some amends. And Bones’ date with Carol? Well, the good doctor will get first almost a heart-attack.

I hope you liked the new chapter and I’m, like always, curios about your reactions.

Have a nice rest of Sunday and a good start into the next week.

Learning of the 23rd century

Chapter Notes

Hi, my dear readers,

Like always I want to thank you for the nice feedback. After all these many chapters I’m surprised that you all are still keeping up with the story. Not everything is told – yet. And I can promise some very interesting twists and turns until the end of the story is reached.

But first Jim and Otto are going to have a talk – a talk that isn’t very pleasant, as you can imagine. Yet there are some humorous scenes (after all, Otto is utterly new to this world and its technics) and there is also something you’re all waiting for.

Have fun,

Love

Yours Starflight

See the end of the chapter for more notes

Chapter 92 – Learning of the 23rd century

The next morning McCoy returned to the hospital. Jim stayed with Nien – the latter talked with Joaquin and then with Otto via communicator. The former dictator was glad to hear that the night went uneventfully for his other brother, even if Hoffmann still was cold ‘like a puppy’, as he put it, but his voice was stronger now. Yet Khan hadn’t had to ask how Otto felt. He could sense his brother’s nervousness stronger now, and he hoped to be able to talk in person to him soon.

As McCoy arrived at his patient’s room, he found Otto and Joaquin still having breakfast. Hoffmann didn’t complain about the vegetarian food, yet Bones could easily read in the older Augment’s expression that he wasn’t too fond of it. Well, that made two now, because the first thing Leonard would do after Sulu’s surgery was to eat a big steak at the Enterprise’s officer’s mess.

McCoy suggested that the boy should to return to New Gol soon. Jim would visit Otto during midday and – this much the CMO knew – it was becoming more and more difficult to keep Khan in sick-bed. Yes, Nien knew that his broken leg wouldn’t carry him at the moment and that he had to lie still to heal his TBI, yet he was barely able to be patient. And Jo’s present would distract him.
But first Otto had to make the first attempts at walking – and he managed them. Barely.

“Well, that looks promising,” McCoy smiled at his unusual patient, who sat down on the bed with a groan.

“I should be able to walk properly by now, instead of a few meters!” Otto Hoffmann was the living example of frustration. “This here is… unacceptable.”

“Give it some time,” the CMO answered kindly. “Your muscles haven’t been used for more than two and a half centuries and you’re confronted with higher gravity. This kind of reaction is normal – even for an Augment.”

“I landed on my ass the first time I tried to walk,” Joaquin said. Sitting on one of the other beds and sipping at a glass of tea he grinned at his brother.

Hearing Joaquin admitting to having kissed the floor with his bottom, he grimaced. To tell the truth, he hadn’t been far away from suffering the same ungraceful incident only a minute ago and that irked him. He glanced at his legs, which trembled slightly. He – like his siblings – had been bred to be stronger; better. And just have a look at what a too long of a sleep did to him and certainly to the others, too: he was barely able to walk a few steps without getting the strong urge to sit down somewhere. “Khan said that some tension and maybe failing function in the muscles could be expected within the first hours. I am awake now for almost 24 hours but I’m still hobbling like a toddler,” he grumbled.

Leonard laughed quietly. “Impatience seems to be a characteristic streak of alpha males. Khan gets grumpier and grumpier from day to day, because he still has to stay in bed, and with Jim it’s exactly the same when he has to remain in sickbay. I swear, both use almost one and the same intonation when they grouch like boys and demand to be released.”

Otto glanced up at him. “So, Khan was injured before? I remember that you mentioned something about cold bites and stretched muscles yesterday.”

A sigh escaped McCoy. “It happened during one of those crazy adventures he and Jim had together. Your leader gave me quite a hard time as we had him and Jim back aboard from a tearing up space station…”

“I told you about Noo and Jim saving a planet’s capital by taking action aboard a space station,”
Joaquin piped up, but went silent as Leonard gave him a stern glance.

“… and Khan was wrapped so tightly around Kirk that I had to stick them both together into the infrared-chamber – naked,” Bones continued. “And then he made Spock and me come running because his biobed stopped sending signals and I feared for the worst, only to see him sleepwalking to Jim’s bed and crawling in with the captain.” He shook his head. “Is this tight mental bond between two lovers usual among Augments?”

Otto, who had to stomach the news that Khan’s instincts to keep Kirk safe had been so strong that he had functioned on auto-pilot so to speak, pursed his lips shortly. Only then he replied carefully, “Katie and I were the first who bonded this way. And one of our friends had fallen in love with a casual human woman, who died during the attack of the butchers, who slaughtered everyone who had been loyal to us. He was barely able to think afterwards and… sacrificed himself to give us a head-start to reach the Botany Bay. And, as you just told me, Khan reacts instinctively on Kirk’s behalf. So, yes, I do believe that these kinds of strong bonds are part of what we are.”

Bones nodded slowly. “It would make sense,” he said, while checking Hoffmann’s vitals again. “Khan found you and the others because he felt your presence. And he came running as Joaquin faced his first alien and got a shock. These kinds of mental connections are not unknown today. The Vulcans, for example, have these bonds with their parents, their closest friends and their mates. Spock simply feels when Jim is in danger, and Jim – psi-null like he is – still gets a ‘bad feeling’ when our hobgoblin is in trouble. The same is between Jim and Khan – only stronger. Selek, the Vulcan High Minister, is teaching Jim how to shield himself against the influence of the bond so that he can keep a clear head when Khan gets in trouble again. And he offered to do the same for Khan.”

Otto cocked his head. “This planet’s high minister is teaching Kirk? Is this a special privilege or is he the only one who can teach this mental technique?”

Bones transferred the read-outs of the biobed to Otto’s medical card. “Selek is an old friend, so to speak, and he has taken Jim and us all under his protective wing,” he explained. The same moment his communicator beeped and giving the Augment a short apologizing gaze, he accepted the hail.

“McCoy here!”

“M’Benga here. Morning, Leonard. I wanted to inform you that Lieutenant Sulu is prepared for the surgery.”

“Morning to you too, Geoffrey. So, the big issue can be started?”
“Yes,” came the reply. “Sulu is already getting impatient.”

“The boy is always in hurry. And there someone would think that he, as an Asian, would know what patience is.” He shook his head. “I’m on my way in a few minutes. Tell Kyle to be ready to beam me aboard.”

“Okay. See you!”

The connection was closed – and Otto looked with unhidden curiosity at him. “This was a man aboard Kirk’s ship, right?”

“Yeah, this was Geoffrey M’Benga, our second CMO.” He took a deep breath. “All right, Mr. Hoffmann, just lie down again and get some more rest. Healer Sorel will do further training with you in the early afternoon and Jim will stop by for lunch. I’ve a surgery to do.” He lifted his communicator, but stopped. “Uhm, what you’ll see now will certainly give you a little shock. We not only travel by hover-cars or shuttles today, but have developed a special kind of transporter. It’s called beaming.”

“You’ll be dismembered into your atoms and will be reassembled again at the location that was programmed by the transporter’s computer,” Joaquin explained helpfully – only to receive a horrified glance from his older brother.

“WHAT?” He stared with wide eyes at McCoy. “He is kidding, right?” he wanted to know and the CMO sighed heavily.

“No, he explained the procedure with simple words.” As he saw the Augment paling, he added, “I hate transporters, but you safe a lot of the time by traveling like this. And, by the way, they really come in handy if you’re in deep water and are facing trouble or certain death, and all of sudden the transporter beam catches you and takes you to safety. Jim and Khan were rescued like this from the space station. And I’ve lost count how often Jim, Spock, Scotty or even I have only lived for another day because we were beamed away in the very last second.” He gave Otto an encouraging smile. “It doesn’t hurt and if you would believe Chekov…”

“The ensign I befriended,” Weiss threw in.

“…then a transporter is the best thing of the world. The boy loves transporters and is really skillful
“Dismembered into atoms and reassembled again’,” Otto only murmured. “I’m still dreaming.”

“No, you aren’t,” Leonard said with another laugh. “I’ll call Jo when I’m back aboard, so that you can hear that I’m indeed still alive.” He opened his communicator. “McCoy to Enterprise.”

“Enterprise, Svenson here,” came the reply of the current communication officer on duty.

“Miss Svenson, patch me through to the transporter room, please.”

“One moment, Doctor.” A few seconds later a male voice sounded,

“Kyle here. Ready to be beamed up, Doctor?”

“Yeah, do what you have to do,” Bones grumbled, before he mouthed towards Otto ‘I hate transporters’.

Hoffmann was about to reply something, as a high ringing sound was heard – like hundreds of tiny bells. Then a golden light began to play around the doctor’s body – finally enveloping him completely like millions of blinking stars. Then the man simply vanished with the light. From one second to the other the surgeon was gone.

With an open mouth Otto could only stare at the spot on which McCoy had stood only seconds ago. The same moment Joaquin’s communicator beeped and as the boy opened it, the CMO’s voice sounded, “Just for the record: I’m still alive.”

Jo looked at his older brother – and burst into laughter. “You should see Otto’s face, Doc!” he managed to say; shaking with mirth.

Weiss’ obvious glee tore the older Augment out of his state of shock, and glaring at the jolly youth, he growled, “You’ve been awake longer in this time, so give me some credit for being surprised here and there!”
“Peace, boys,” McCoy said through the communicator. “Just don’t be at one another’s throats until Jim comes. Bye!” The link was disconnected and Joaquin closed the little device. He tried to sober up, but to no avail. Still snickering he watched Otto; knowing that this was only the beginning of all his older brother would have to learn.

An hour and two of further attempts at walking later, Otto sat on his bed; grinning broadly. The last attempt to get his muscles back to work had been successful. Right, with Joaquin’s help, still the older Augment was satisfied that he could walk through the whole room and back again three times without wobbling knees. He had made some stretching exercises – careful not to overdo it – and his body was finally adjusting to the higher gravity.

He was just about to do another walk, as the door opened and Jim Kirk entered; a young Vulcanness accompanied him. Otto couldn’t help to note how attractive the alien woman was with her thick hair pinned up in a complicate looking knot, with her exquisite even features, her slender body and her graceful movements.

After greeting the two Augments Jim asked Joaquin to return to New Gol to keep Nien company. During the morning, after Jim had helped him to get shaved again, Khan had become even more impatient and Kirk feared his bondmate would throw all caution to the wind and would try to leave his bed. Well, Jim knew a trick or two to ‘persuade’ his beloved to remain between the sheets, but given Khan’s still bad condition there was no thinking of employing said tricks at the moment.

So, distraction was the key to keep the Augment-leader in bed, and knowing that Khan was dying to learn more about Otto’s first hours in this new world, Jim sent Joaquin over to keep his brother updated. The young Vulcanness would lead Weiss to the hospital’s transporter where he would be beamed over to New Gol – to Otto’s utter horror.

“You say that you will… dismember him into his atoms, too?” he almost shouted as soon as Kirk had barely addressed Weiss.

Jo rolled his eyes. “Keep calm, big bro. I’ve been beamed several times before. It’s nothing dramatic.”

“Nothing dramatic?!?!” Otto’s voice was an octave too high. If the CMO risked everything by using this crazy way of transport then it was his decision, but to risk Joaquin like this was in his opinion…
The Vulcanness rose to speak. “The transport by beaming is a normal method for more than hundred Earth-years now and the number of accidents is proportionally small. The hospital transporter is checked every hundred days and the last check-up was four days ago. You and your siblings were brought to New Vulcan like this – and you are all well. There is no need to be afraid of it.”

“No need…” Otto stopped and took a deep breath. He had to calm down. He was almost 270 years in the future and that technology had improved was logical. Hence, this odd ‘beaming’ was certainly only one new development of many he still had to learn about. Clearing his throat, he continued, “I’m usually not easy to scare but to think that the boy here will be…”

“When I told you I’ve been beamed before,” Weiss interrupted him. “Noo did it dozens of times…”

“He even used a new kind of transwarp beaming device and transported himself from Earth to Qo’noS, right through the Alpha quadrant,” Jim cut in. “And he was more than well after his arrival. Hell, he brought down a whole Klingon patrol single-handedly. That says everything.”

Otto didn’t know what ‘Klingon’ was or what ‘Alpha-quadrant’ meant, but he didn’t care at the moment. His worry for the youngest of his siblings was stronger than his natural curiosity. “Khan knows what he doing – most times. But with him banned to sick-bed I’m responsible for the boy and…”

“I’m a grown-up, Otto, so stop mother-henning me,” Joaquin protested instantly.

After several back and forths Otto realized that he would have to learn to accept this crazy way of travelling, even if the mere thought made his stomach roll. And Kirk’s further well-meant words and explanations weren’t calming Hoffmann the tiniest bit, yet he had to give in finally.

With a cheerful, “See ya, big bro!” Joaquin left and followed the alien woman, whose expressionless face couldn’t hide the fact that she was more than astonished about the older Augment’s vehement denial of a transporter’s safety.

Three minutes later Joaquin called the captain and affirmed that he had reached New Gol ‘in one piece again’, as he put it. Only then did the older Augment lose some of his tension.

Jim smiled as he closed his communicator. “I know, there is so much that is new for you that you simply have to be overwhelmed,” he said sympathetically.
Hoffmann snorted. “You have no idea. All these new things are making my head spin.”

“I can ask the healers for a painkiller for you,” Kirk offered, but Otto shook his head.

“That’s not necessary. I’m just… nervous, that’s all.” He glanced back at his legs. “At least I’m making progress with walking. I want to see Khan and to assist you with my siblings’ awakening as soon as possible.”

Kirk pulled a visitor chair nearer and nodded. “I understand you, believe me. If I were in your place I would be impatient, too.” He leant back casually. “Healer Sorel still monitors the other cryotubes. Until now they’re running fine.”

Otto sighed and leant against the headboard. “Almost 270 years… It’s no miracle that their functions and batteries have begun to quit working.” He shook his head. “I don’t want to imagine what would have happened if the Botany Bay hadn’t been found in time. She must have lost course, otherwise she would have returned to Earth 15 years later and would have woken up Khan first.”

“She was in deep space,” Jim affirmed. “Yet I’m not informed about her condition. It wasn’t me who found her.”

Nodding, Hoffmann pulled his knees closer and laid his arms on top of them. He seemed to be relaxed for once, yet his thoughts were running a hundred per mile as his next words proved, “It will be an effort to wake up the rest of us. To monitor 82 people at once will be a challenge – even today, I think.”

Jim stiffened. 82… With Nien, Jo and Otto awake there would have remained 82 from the 85 which started their journey into the unknown all those centuries back. But the truth was that only 70 still waited to join the world of the living again. Kirk dreaded the moment Otto would learn of it – not because he feared the Augment’s fury. No, his heart simply bled because of the mourning that would follow.

Something in his face must have given him away, because Otto tensed again. “There are 82 left, right?” he asked slowly; alert rising in his eyes.

Jim avoided his gaze for a moment; knowing that it was up to Khan to explain everything. On the other hand, he knew that Nien more or less dreaded the hour he would have to tell his siblings – and
first Otto – of everything that happened to them and that some things were even his fault. Maybe Jim could help his beloved by taking this nasty occurrence from him. Maybe Nien would be relieved to not have to explain everything by himself.

Otto interpreted Kirk’s short silence in his own way. “What is it?” he asked. “What do you not want to tell me?”

Jim sighed. It seemed he had no other choice. He looked back at Otto. “Not… all made it,” he said quietly.

Hoffmann stared at him for a moment in rising fright, before he whispered, “How many?”

There was no doubt what he meant. “Twelve,” Kirk answered. “Twelve didn’t survive.”

“Twelve!” Otto gulped and bit his lips. For a second pain mirrored in his eyes, before he forced himself into control. “Regarding the length of time the cryotubes were forced to work, more of them could have failed until now.” He took a deep breath; bracing himself for the brutal truth. “Who are…?” He stopped as he saw how Kirk avoided his gaze again. The young captain’s whole body was tensed and there was something in his expression that made all alert bells ring in the Augment’s head. His enhanced mind already put two and two together and so he asked before he was even aware of opening his mouth, “They did fail, didn’t they?”

Jim had a sinking feeling in his stomach; knowing how much depended on the next minutes in which he had to tell the man on the biobed everything. “Eight failed. Your siblings were already dead when the Botany Bay was found,” he said softly.

“Eight!” Otto stated. “That leaves out four. What about them?”

Kirk hesitated. How to begin? How to tell someone that four of his brothers and sisters had been killed? This was a task dreaded by all police officers, security members or other investigation services in the whole galaxy. Hell, Jim was convinced that even a Klingon or Romulan police officer loathed these moments the most. But there was no way to avoid it now. Of course, he could have used some excuse and could leave anything to Nien to explain this mess to his brother, but Jim had never been a coward. And if it meant sparing a friend – his bondmate – nasty vexations, then he would walk this path; as uncomfortable it might be.

Rising his gaze, Jim decided to tell Otto the plain truth. “No, the cryotubes of these four men and
women didn’t fail,” he said; steeling himself for what would come now. “They were murdered.” He watched Hoffmann’s eyes widening in shock. “They were murdered in cold blood while they were deep asleep – dead to the world. Murdered by a man who held all our respect, was entrusted with one of the highest ranks within the Federation – within Starfleet – and deceived us all by having a double life which he used to gain power and might. It was he who murdered them.”

Otto felt one of his veins throbbing at his temple. “Who is this man?” A low growl echoed in his voice; a dangerous fire began to burn in his gaze.

“This man was Admiral Alexander Marcus, the Chief in Command of Starfleet.” – Otto gasped. – “It was he who found the Botany Bay,” Jim continued, “concealed his discovery, recognized what he found, woke Khan and forced him into service.”

“Forced by… killing four of us?” the Augment concluded correctly; his face reddened in fury.

Jim nodded slowly. “Yes – after other attempts didn’t lead to success.” He saw how Hoffmann balled his fists and fixed him with a stern gaze. “Don’t think of revenge, Otto. It’s too late for that. Marcus is already dead – killed by Nien’s hands. Literally.”

The Augment’s breath was heavy with effort to keep up his control. “And for that he is in this ‘trouble’ that Joaquin spoke of,” he spat.

It was a statement, not a question, yet Jim felt obligated to answer, “Yes – and no. As I said, Nien didn’t falter immediately. He put up resistance that Marcus tried to break. In some points, he was successful – and unleashed Nien’s rage and later his utter pain of mourning. Khan ran amok and left a blown-up skyscraper and a dozen dead staff officers in his path, who didn’t know anything of him or the other Augments – or about Marcus’ true plans.” Jim saw the inferno that had begun to burn in Otto’s gaze and carefully went on,

“None of us knew that Marcus had his own agenda. On the outside, he was the stern but flawless acting Head of Starfleet – the second in command right after the president. He wasn’t really well-liked by everyone, but he was respected and his reputation spoke for itself. No one, not even his own daughter, knew that he aimed for more power than he already possessed – that he wanted to militarize Starfleet. To reach this goal he implemented a secret department within Starfleet that was a kind of intelligence organization but without following the written law of the Federation. It was called Section 31. It ran through part of the Federation Council, Starfleet departments and corrupted several secret services. He built his own kind of state within Starfleet…”

“Aren’t there any checks of the psychological profiles before a man or a woman is entrusted with
such a position?” Otto interrupted; his tone was sharp enough to cut through stone.

“Yes, but you see, the whole Federation was in turmoil after the Nero Incident three years prior. It changed everything – not only wars and opinions, but also people.”

“Nero incident?” Hoffmann’s voice demanded answers – answers Jim was very willing to give.

Taking another deep breath Kirk continued, “Three years ago Starfleet Headquarters received an emergency call from Vulcan. The planet was under attack by an unknown mighty vessel. Half of the fleet headed to Vulcan to help – among them the Enterprise under the command of my mentor Christopher Pike. Because of a wrong start we arrived later at Vulcan than the other ships – only to find them destroyed. The strange giant vessel seemed to be inviolable, even if it was only a mining ship as we learned later. It drilled a hole into Vulcan’s core and… there was nothing left we could do to prevent the catastrophe.”

Otto stared at him; still trying to keep his rage in check but the young captain’s words distracted him for a moment. There had been nothing left to prevent…

“This planet here is named New Vulcan. Does it mean that…” The Augment hesitated – and got a sinking feeling in his stomach as the other man nodded with dread on his face.

“Vulcan was destroyed – utterly. Within a few minutes,” Jim confirmed his assumption.

Pure shock ran through Hoffmann’s soul, while ice crept through his veins; pushing his fury away for a moment. “Within a few minutes?” he repeated. “How many… survived?”

Kirk swallowed. “Not more than ten thousand – from an original six billion,” he said quietly.

Face white like death, Otto opened his mouth and closed it several times, before he only whispered, “Lieber Gott!”

Jim didn’t need a translation for the uttered German words to understand them. “The Vulcans are today an endangered species. This city – New ShiKahr – is where the most of all still living Vulcans are now. Befriended species try to help, of course, but it’s nothing more than like a drop of water on a hot stone. The loss of their home planet isn’t the worst that happened to them. Vulcans are touch telepaths and they have tight mental bonds between family and friends. There isn’t a single clan who
hasn’t lost most of its members – and the survivors suffer from mental shocks of the ripped bonds. I’ve heard that several of them even quit living, because they didn’t have any anchors more that could give them stability.”

Otto closed his eyes shortly. “We… know how it is to lose others we’ve… links to,” he murmured. “I can imagine how these people here feel.”

Kirk nodded, before he bent forwards. “Yes, your people and the Vulcans have some similarities. That’s one of the reasons why the Vulcans offered asylum for you and the others – because you and they share a similar history. You and your siblings are the last of the Augments, the people here in New ShiKahr are the last of their race.”

Hoffmann rubbed his face, as the full truth hit him with the force of an impact. All those lives… six billion people dead – within minutes! It was unimaginable – sickening.

“Why did this ship destroy Vulcan?” he asked hoarsely. “It… makes no sense. It was a miner like you said and…”

“It was an act of revenge,” Kirk explained. “A revenge for something that happened in the future.” Of course, he received a very confused gaze from the Augment, and so he continued, “What I’m telling you now is of a delicate nature, Otto, and I’m breaking some internal orders by doing so, but I don’t want to give you anything but the truth. You have a right to know, because it involves you and the others, too.” He bent forwards and braced his forearms on his legs.

“On the 4th January 2233 this mining-vessel, the *Narada*, came through a black hole from the future into our time. The vessel was manned with a crew of Romulan survivors who had just watched how their whole star system vanished because their sun went supernova. The latter was a process that started only years prior and… one of the Federation’s ambassadors, a Vulcan, offered help. The Vulcans had developed something that maybe could stop the process. But said Vulcan came too late, the sun exploded before he could reach Romulus. There were only a few survivors – among them the captain of the *Narada*. He called himself Nero and…”

“Romulus? Nero?” Otto was obviously at a loss now. “How do some aliens know about ancient times of Earth?”

“We named them Romulans, because their ranks are called ‘centurion’, ‘senator’, ‘consul’, etc. This much we intercepted during a war against them after they attacked us first last century. Their star system has two habitable planets we called Romulus and Remus, because both populations, even sharing the same heritage, aren’t on really friendly terms. As far as we know today, the Romulans are
keeping the Remulans subjected,” Jim explained. “But back to the story. Nero watched his home being destroyed by the flames of the supernova – and vowed revenge on the Vulcan ambassador, whom he accused of letting him and his race down. But before he could intercept the ambassador the Nerada was pulled into the black hole that was created by the supernova – the ambassador’s ship followed shortly because it also couldn’t resist the black hole’s gravity.” Kirk pressed his lips shortly into a thin line; deep in his memories he heard Old Spock explaining everything due to their mind-meld on Delta Vega.

Sighing he went on, “As the Nerada arrived in our time, more than 150 years in the past, she met a Starfleet-ship – the Kelvin. Nero, not knowing that he had been hurled into the past demanded information about the Vulcan ambassador from the Kelvin’s captain – an ambassador who wasn’t even born then. Of course, no one could answer Nero’s questions and in his fury, he attacked the Kelvin – without provocation according to what the taken records show. His first shots overcame the Kelvin’s deflector shields, hit the bridge and almost all staff officers were killed. The miner was built in the 24th century and was technically superior compared to our standard. Most of the Kelvin’s crew was able to flee in escape shuttles, but it was clear that the Nerada wouldn’t let them go in peace. So, one lieutenant stood back and steered the Kelvin into the attacking vessel – crippling and forcing it to flee. The lieutenant had only at three minutes at the con, but he saved hundreds of people.” – ‘And left his wife and new-born son,’ Kirk thought bitterly.

“And this ship from the future… It headed to Vulcan to destroy the planet in revenge?” Otto asked; feeling dizzy with all the information he got.

“No directly. It vanished for 25 years – waiting for the Vulcan ambassador to arrive. Black holes are no constant things. They change their gravity and therefore the forced time-travel caught both ships differently. Finally, 25 years later, the ambassador arrived. For him only a few minutes had gone by, for Nero two and a half decades. Nero captured him, told him what he planned to do, banished him on a nearby planet close to Vulcan to make him watch everything – and started his attack. That was the moment Starfleet was alerted, but we came too late. Nero had used one of the drills of his mining-ship to drill a hole into Vulcan’s core and set-up a kind of bomb. The planet imploded – within minutes. Less than ten thousand could be evacuated in time. Then Nero headed towards Earth to continue his path of destruction; wanting revenge on the Federation’s main planet, too. With half of the fleet destroyed and the other half on the other side of the Alpha-quadrant he had full rein. Almost. We – Spock and I – were able to stop him. We intercepted him, beamed onto his ship and while I freed our captain, Spock got the ambassador’s ship that was still in the Nerada’s hangar and used it as a weapon. The explosion created a black hole in which the dying Nerada was pulled into and torn into pieces. Earth was saved – but Vulcan is lost for all time.” His voice had become very quiet in the end.

Otto watched him closely; his enhanced mind was working quickly to store all the given information and to make his own conclusions. “You saved Earth – you and your first officer.”

Jim snorted. “I was still a cadet in my last year, Spock was a professor in the Starfleet Academy whose character-test I just beaten by cheating, and the officer team that serves today with me was
also only a bunch of cadets – assigned to the Enterprise in haste after the emergency call from Vulcan reached us. And then Nero demanded that our captain surrender in person. Pike obeyed to save the ship – and ordered Spock and me to take care of the Enterprise. The oldest of us was Spock, the others are of my age and younger, yet we beat the bastard. But I have to admit that we were simply lucky, nothing more.”

Hoffmann nodded in understanding, but as shaky as this story was, it didn’t give him any answers how it came that four of his siblings had been killed and Khan had run amok. “May I ask what this all has to do with us – and with Khan being forced by this Marcus into service?” he demanded.

Kirk grimaced. Now began the more complicated part. “This is the moment where I really began to disobey a general order concerning the whole Nerada-incident by telling you background knowledge. The whole catastrophe doesn’t only contain the destruction of Vulcan. Nero changed the time-line! We’re living in an alternative time now and that made Marcus go crazy – or berserk. It’s up to you how you want to call it.”

“An alternative time-line?” Otto wasn’t sure if he was still dreaming, if the captain had a vivid fantasy or if this was all really the truth. “How can you know something like this? You must have to remember the ‘original’ time to realize any difference to what happens here and now, but this is impossible because anything that went on since Nero happens for the first time.”

Jim smiled without any amusement. Enhanced mind, indeed!

“I learned about it from the Vulcan ambassador we rescued from Delta Vega after the Nerada was destroyed. He told us and Starfleet Command about the original time. In his time Starfleet wasn’t enhanced like it is now. The visual- and sensor-records about the Nerada, which could be saved from the Kelvin by the escaped crew, gave Starfleet engineers a good idea about the future’s technology. Based on this all our engineers developed technical devices within the 25 years between Nero’s first appearance and his ultimate attack – developments which weren’t built in the original time-line not until decades later. But Nero’s arrival from the future because of crossing a black hole did more than destroying a planet and giving some clever heads new ideas. It made Admiral Marcus realize that there are dangers in deep space which could threaten us before we even see them coming.”

He sighed again and shook his head.

“I think the whole Nerada-mess frightened the shit out of him – after all Starfleet cut quite a dash in this matter, and it could happen again. He began to explore deep space on his own, while he decided to militarize Starfleet. The latter is unprovided for, because Starfleet was founded to be a para-military group of explorers. So, he formed the plan to provoke a war with our aggressive neighbors, the Klingons. Then the Federation Council would have to agree to his request to militarize Starfleet
and parallel to this he would consolidate his own position. To reach this goal he founded Section 31, built a secret base near Jupiter and began to construct a new proto-type of a giant warship. And that was the time he found the *Botany Bay* on one of his patrol flights."

Otto frowned. “He… knew who Khan is?”

“There are still some records left from the Eugenic Wars,” Jim nodded. “The *Botany Bay* had become nothing more than a legend during the decades, but when Marcus found her he didn’t need much time to learn who he was dealing with. He woke Khan, told him about the upcoming threat from the Klingons and Nien – being the protector he is – agreed to help to shield Earth from harm. Only later, as he realized that Marcus followed his own plans and that there wasn’t any real danger from the Klingons, Khan denied any support to avoid a war.” Jim moistened his lips. “And then his hell began…”

Within the next minutes he told Otto everything that happened to his leader and friend – and what triggered the amok-run. He skipped the detail of Khan being raped, but every other cruel thing which had been done to him were laid open to the other Augment. Pale, trembling with rage, fury in his eyes, but staying silent Hoffmann listened; his heart went out to his brother who had suffered so much. Eyeing Kirk, he growled suddenly, “For someone who wasn’t part of this inhuman game you know a lot about it.”

Jim grimaced. “Nien told me – and concerning his flight from Earth to the Klingon Empire… Well, it was me Marcus sent after him. I had the order to kill him – using the new torpedoes which held you and your siblings, without me knowing about it.” He saw Otto’s eyes widening in horror. “I was furious because ‘Agent Harrison’ killed my mentor – the only man who was ever a kind of father for me: Christopher Pike.”

“Your former captain?” Hoffmann asked hoarsely; realizing how close he and the others had been to death as the young man in front of him was sent on a man-hunt to get Khan.

“Yes – and, as I said, Pike was also my mentor. The only man who saw more in me than a young rebel and dared me to do better. He was always there for me – and he died in my arms after Nien’s rampage.”

“And yet Noonien and you became lovers – bonded even,” Otto said; astonished.

“Well, what can I say?” Jim replied; shrugging his shoulders. “There was a sort of attraction from him for me from the beginning, as he told me later and he… persuaded me step by step. And after I learned the true background of everything I couldn’t fault him any longer. He was driven to do what
he did and I forgave him in the end.” He moistened his lips; realizing something he hadn’t acknowledged until now. He really had forgiven Nien that Pike had died because of the Augment’s amok-run. As he and Khan had spoken about everything on Aldebaran, Jim hadn’t been sure if he could ever really condone his lover for this particular outcome of his rampage. But now, hearing himself uttering these words, Kirk understood that he had made peace with this last thing that had staid between him and Nien.

He sighed and continued his telling, “But at that time back everything was still very different from today. I was torn between rage and pain and wanted nothing more than to make the man who took my father-figure from me pay. But Spock stopped my wrath by calling on my sense of justice. Luckily. I don’t want to imagine what would have happened otherwise. And I don’t only speak about my relationship with Nien now. If I would have followed my orders, the outcome would have ended in another catastrophe.” He snorted in anger. “At this time, I didn’t know that Marcus tried to use me to start the war he yearned for so much by sending me deep into Klingon space to kill ‘Harrison’. If I would have obeyed my orders, I also would have attacked the Klingon homeworld, where Nien hid. Instead of doing as told, I took Khan captive – better to say he first saved my, Spock’s and Uhura’s asses by eliminating a Klingon patrol that found us and surrendered afterwards as he learned that we had you and the others aboard. And then I learned the truth concerning Marcus…”

Kirk began to tell the second part of the story – and finally the third part. He didn’t spare himself or Otto anything. He told of his own death in the warp core chamber and how Khan’s blood revived him, while Nien had been sent to a fake trial he only learned of very much later. He spoke of Khan’s escape and how they learned to trust each other later, after the war finally started despite the fact that Marcus was stopped. He told about him being captured by the Klingons, of Khan saving him, of their time on Aldebaran where they became lovers and then their return to war as the space station above Aldebaran was attacked. And then came the most difficult chapter of the whole story – the one as they realized that Marcus was dead but not his idea and that he still had loyal fellows who didn’t shy away from sending their own delegation to death and ordering the murder of the Augments. Jim also spoke of Khan becoming a part of the crew, which accepted him in their midst after they learned what really happened to him – and how said crew risked career and freedom by supporting Kirk and his team, despite the fact that they broke a dozen laws and more.

As Jim finally came to an end, Otto was breathing hard and his face showed the shock and wrath that raged in him.

“They abused us as lab-rats, then they ordered you to more or less to kill us, tried to get you because you saved us – again! – and finally attacked this planet’s seat of government to get hold of you and all of us. And in the end some blokes almost beat Noonien to death – injured him badly enough so that he is bound to sick-bed for days now.” His shaking hands were balled into tight fists so that his knuckles shimmered white. It was obvious that he was a breath away from losing control.

Jim remained calm while he nodded, before he answered, “And they did more. By eliciting this war thousands of people were killed – on both sides. Hell, Luengo was ready to kill the highest-ranking
admirals and diplomats of the Federation to get the chair in the Chief in Command’s office; weakening the Federation like this in a way that more or less would have crippled her. His blood-dog Norton was ready to kill even the Vulcan High Minister and tried to kidnap the Vulcan High Priestess – the matriarch so to speak. Hundreds of good Starfleet personnel died because of these bastards, planets were annexed, families separated by force, people were taken into slavery. The whole Alpha- and Beta-quadrants will suffer for decades – only because of an obsession of this sick madman and his fellows.” He rose from his chair; unable to sit anymore. His bottled up energy had to be let out somehow, as he began to pace.

“And concerning you and the others? We knew that you were held captive somewhere in a high security facility and we all knew that Khan was abused for illegal experiments while the scientists had their dirty hands on him, but that they abused you and almost all the others in the same way was new to us. I thought Bones would have a raging fit when he realized the truth. Hell, even Spock was furious in his own Vulcan way.” Again, he shook his head. “I wished I could have decked Greenwood for this crime, but he will get his pay back for it. Be sure of it!”

Otto stared at him with still fiery eyes. “And you really think there will be true justice for them – for us? For Khan – and you and your officers?”

Jim nodded. “Starfleet and the Federation Council will have a lot to do to clean up the mess Luengo, Norton and the others left. The public was informed and the people want to see heads roll – the right heads because what happened last year with Marcus already left an uproar. The Klingons are demanding answers, too – and given the fact that we want to keep the cease-fire Starfleet is forced to intervene correctly. The Klingons may be brutal but they are not stupid – and they have good Intelligence. If the top brass tries to sweep something under the carpet, the Klingons will learn of it quicker than our media.”

“And Khan?” Otto demanded. “What about him?”

Kirk interrupted his pacing; now his eyes seemed to burn. “Nien ran amok. All he wanted was safety and freedom for his people – and then he lost it because he was driven over his breaking point as he was forced to watch four of his siblings being killed and finally was made to believe you all died. And he had reached his limits even before all this as Marcus tried to break him by using torture. Nien will press charges against Command because of murder, unlawful detention, slavery, blackmailing, torture and for running illegal experiments on him – several of these accusations were even done two times. Further he will press charges against the fake trial and for being imprisoned afterwards. Believe me, before a court martial could send him to a penal colony, they will have to make up so much for him their heads will spin. And there is still the public. I’ll make certain that the people learn of his true fate which will bring them on his side – and this will be half of the battle.”

Otto watched him closely. “You’re determined to get him out of trouble,” he stated slowly.
“Damn right!” Kirk growled. “He will get real justice and those who tormented him – and you all – will pay a high price! And I don’t do this because I love Nien. This is about right and wrong, and for this I’ll fight to my very last breath.”

Cocking his head, surprised by this casual human’s fierce morality, the Augment murmured, “You’re a patriot of your own through and through.” He took a deep breath. “You want to fight for Noonien, but what about you? You and your officers? As far as I understood you’re in deep water, too.”

Kirk grimaced. “Well, insubordination, disobedience of orders, wrong reports to HQ, stealing of the Enterprise more or less, hiding a wanted man, lying to superior officers… The list is longer than the budget list of the Federation Council. I certainly will not get away with all this, despite the fact I did it to reveal a big conspiracy within our own lines, therefore saved the ceasefire and the chance of peace, and prevented a genocide from taking place. If I’ll command a garbage transporter afterwards I can call myself lucky – but I don’t regret it.” He rubbed his neck. “I only wish I could keep my officers out of the whole mess, but they made up their minds and supported Nien and me of their own free will. They all stated it in front of Barnett. My friends are going to share my fate – and this is the only thing I wished for to be different.”

Otto shortly pursed his lips. “You saved Earth. You saved the population of a big town on this strange planet. Because of your intervention the admirals and the diplomats could be saved. Hell, if there is a small chance of making peace with these Klingons it’s also because of you. You, James Kirk, are a hero. You and your officers. I cannot imagine that they’ll give you a big penalty.” He made a face. “Yet you’re going to need a very good lawyer.”

Jim smiled for a moment. “Selek already called one. The man is on his way to New Vulcan. I don’t know who this guy is, but Selek says he’s the best. Even T’Pau said something likewise. And when two Vulcans praise someone for his abilities like this, it’s good enough for me.”

Nodding, Otto accepted this explanation, before he asked, “These pathogens they infected us with to gain antidotes – will they leave any side-effects on my brothers, sisters and me?”

Jim thought about it for a second. “To tell the truth, you’ve got me stumped here. Bones examined all of you after he and Khan found out about this shit, and both said afterwards you were all well, but if you want to have details, please ask Bones. He opened patient’s cards for all of you and wrote down all the results. He can show you and explain everything to you, if you want.”

“I want!” Hoffmann answered; there was still a sharp edge to his voice.
After everything he just learned he felt sick – sick in heart and soul. They all had hoped to escape the hell Earth had become – not only for them but also for most other people. They had risked everything when they boarded the **Botany Bay** and set off into the universe; dreaming of a better future somewhere else or at a later time. The latter had been the result, but for what price? A price Khan had paid for them. To imagine his strong leader and friend treated like an animal, tortured enough to drive him over the edge, made Otto nauseous. He would have damned them all – all of this so called ‘Starfleet’ – if it weren’t for this young man in front of him. He and his friends, who had sided with Khan and had given him their protection and friendship. And there was this commodore, who risked his own career when he learned of Khan’s true fate and had shielded him too. There was also this new Chief in Command, Barnett, who already interviewed Kirk, Spock and the others – and seemed to be a man of morality and decency. And there was more. Humans who married aliens, aliens who had close friendships with humans. Bigotry didn’t seem to be a big problem anymore.

Time HAD changed. There was no doubt about it. Only it was maybe too late for Noonien. Despite Kirk’s optimism concerning Khan’s case, Hoffmann was sure that a hard stony way lay ahead for his old friend. And he also was convinced that there were a lot of people like this Marcus and Luengo out in the world – men who stopped at nothing to gain more power. Men, who still saw monsters in the Augments. On the other hand, humans seemed to have learned to accept differences of foreign races. Therefore, there was maybe still a chance for him and his siblings to find a place in this world. If only the whole mess around Khan wouldn’t be… Otto would give his right arm to spare his friend what lay ahead – or what he had been through.

Again, he imagined the hell Noonien had endured, and his desire to see and to hold his brother became overwhelming. He had to see Khan with his own eyes – had to speak with him, had to embrace him. He was about to suffocate if he couldn’t meet his brother now!

Resolute he threw the thin blanket away and swung his legs over the bed’s edge. Jim’s eyes widened as he saw it.

“What are you doing?” the young captain asked; alarmed.

“I have to see Noonien – no matter what!” Otto growled and rose. For a moment, he swayed on his feet and dizziness overcame him, then he felt a fragile yet strong arm around his waist.

“Easy with the horses,” Jim said softly. “You won’t make it to the transporter room if you overdo it.”

Otto frowned. “You won’t stop me?”
Kirk only snorted. “If I were in your place – learning after a long sleep that Spock or Bones had been through such a hell – I would stop at nothing to go to them. And if I would have to crawl on hands and knees, I would somehow manage to reach them. How shall I demand from you to not do something I would do at any cost?”

Hoffmann looked deep into these intense blue eyes – and saw the kindred soul in the young casual human with Noonien’s blood in his veins. This man was a warrior of the best sort, and Otto felt real respect rising in him. This man was, indeed, worthy of Khan’s obvious affection.

“Let’s go,” he murmured, but Jim shook his head.

“Not so quick. You’re in hospital clothes, are on a strange planet and have never breathed its air. Just give me a few minutes to prepare you.” He carefully loosened his grip around the Augment’s waist and stepped to one of the windows which were still covered. Removing the roller blind, he glanced out and saw a part of New ShiKahr and even a little bit of the lake. “Ready to have a first look on your first alien planet?” he asked over his shoulder and watched Otto walking slowly towards him; ready to catch the taller man should his legs give out.

They didn’t. Driven by determination – and a good portion of stubbornness – Hoffmann closed the distance to him and stopped at his side. Jim couldn’t help himself but smiled as he saw the baffled expression on the Augment’s face.

Otto didn’t know what he should expect, but this was certainly something he wouldn’t have imagined. He saw an orange-sand colored sky with a few soft-yellow clouds over a city that held some skyscrapers, but also a lot of flat buildings – all constructed in the same simple but also somehow exotic style. It was harmonious, yet strange. Alien! He saw car-like vessels driving on streets not far away and people walking the pavements and the campus below the window. He recognized further Vulcans and a few humans, but also… creatures which looked human but obviously weren’t. Gulping he glanced away and to the shimmering surface of a lake at the edge of the city. Mountains enclosed the town – wearing the same sand-color but also showed the green of woods. It wasn’t too strange to get afraid, but it still was foreign enough to make Otto fully realize that this wasn’t Earth.

“It’s… strange, but also beautiful, yet…” He didn’t know what to say – something that didn’t occur often.

Kirk understood him. “Give yourself a chance to get accustomed to everything. This here must be unsettling for you, but I’m sure you’ll get used with everything soon.” He gently clapped Otto’s shoulder. “I’ll back in a minute – getting some clothes for you. And then we’ll beam to New Gol and be back before Bones returns and will have our heads for sneaking away.”
Hoffmann only nodded mutely and didn’t react as Jim left the room. Only after the door closed behind the young captain did he become aware of what Kirk had said. On alert he whirled around.

“‘Beaming?’” he echoed shocked, but there was, of course, no one to answer him. “I will not let be shredded into atoms and be set up like a puzzle again!” he called, before he leant against the window sill. “I will not!” he repeated; crossing his arms in front of his chest.

Spahrn, Vulcan priest-adept in his second year of study, had just left the abbey and closed the entrance behind him, when his fine ears caught something that truly startled him. There was not only the ringing of an incoming transporter beam, but foremost a male scream that grew louder and louder. Two humans materialized only a few meters away from him. One was the starship captain who was under T’Pau’s protection. The second one was a tall, strong-built human male with brunette hair and brown eyes – eyes which were widened in terror, before their gaze changed into surprise and the screaming stopped.

Jim looked to his left at Otto, who still had his mouth open and was breathing heavily. “You all right?” he asked.

Hoffmann tried to catch his breath and looked quickly down at himself. Well, he was complete, so to speak.

“You’re in one piece – just as I told you,” Kirk chuckled and began to snicker as he was rewarded with a deadly look.

Jim was still baffled with himself how he had successfully blackmailed the Augment into giving in. He had simply told Otto that there were two possibilities: one to be beamed to New Gol or, two, to stay at the hospital for a day more until he would be strong enough to make the trip to New Gol with a ride on a hover-car. Hoffmann had acted as coy like a maiden on her wedding-night before he had finally stepped on the transporter platform; cursing like a sailor and glaring daggers at Kirk. But his urge to see Khan had been stronger than his fear and so he had agreed. Jim still grinned inwardly as he remembered the Vulcan at the transporter control, who had watched Otto with the perfect mixture of fascination and lack of understanding.

The same look the young Vulcan in front of him was giving them both, only that this poor guy had even raised both brows and seemed to be at loss for words.
Giving the Vulcan a sunny smile, he bypassed him. “Sorry about that, but it was his first time,” he said; flicking a thump at Otto, who tried to get his composure back.

It hadn’t been unpleasant, but also not pleasant – this odd ‘beaming’. Otto felt a little bit dizzy, but this could be a result of the higher gravity, his still re-gaining of muscle-function and this damn heat. Sweet Lord, was this temperature normal for this planet? Yes, he still felt cold – better to say, had felt cold until now – but this here was definitely too much. The Sahara was comfortable compared to this temperature!

Seeing Kirk bypassing a Vulcan in long robes, he forced his still lingering anxiety into his subconscious, ordered his legs to move and followed the young captain. He glanced shortly at the alien man, tried to be as casual as possible and greeted him with a polite “Hello.”

“Hel-lo,” the Vulcan replied; stumbling over the word as if he was uttering it for the first time. Maybe this was even the case. Otto nodded at him and entered after Kirk into the large, flat building.

Spahrn reminded himself that he was a student of Surak’s Way and schooled his features, decided to think of everything later, straightened his shape and continued his path as if nothing happened.

Inside of New Gol the temperature was comfortable and Otto sighed in relief as the heat stayed outside. For a moment he pushed the thoughts of his purpose aside and looked curiously around himself; took in the simple but elegant ambience of the vestibule that also showed the obviously favorite sandy colors. A foreign smell was in the air and the silence was peaceful – inviting even. Parallel he could feel Khan’s presence – stronger than in the hours he had spent at the hospital. His friend and leader was here; he could sense him and to know that Noonien was nearby calmed his nerves.

“Can you tell me something of the Vulcans’ religion? I don’t want to rub them the wrong way by my lack of knowledge about their culture,” he whispered.

“There is no religion in the common sense,” Jim answered quietly. “It’s rather a study of the way of the Vulcan founder of their philosophy – Surak – walked first.”

Otto was about to ask more, as his fine hearing picked up quiet but quick steps which drew nearer. A moment later Kirk must have heard it too, because the young man turned around and looked for a second surprised before he controlled his expression, lifted his right hand, spread his fingers between the middle- and the ring-finger and bowed his head. “Ma’am, long life and peace.”
Hoffmann turned around, too, and saw an old Vulcanness with still black hair and…

“Shani?” he blurted out, perplex. Then he rebuked himself. The Indic woman who had taken the youngest of his siblings under her gentle, caring wings was dead for more than 270 years now. But the old female in front of him resembled her in an almost eerie way. “Sorry, Ma’am,” he mumbled. “You remind me very much of someone I knew in earlier times.”

T’Pau looked from Jim Kirk to the man at his side. Tall, strong muscles, clear gaze, an aura of arrogance that tried to hide the uncertainty the human displayed… She knew exactly whom she faced. Yet she waited until Kirk introduced them.

“Ma’am, this is Otto Hoffmann, another of Khan’s brothers.” Then he made a polite gesture towards the Vulcanness. “Otto, this is the Lady T’Pau, High Priestess and matriarch of New Vulcan and Clan Mother of the House of Surak.”

“Mr. Hoffmann,” T’Pau addressed the Augment, “welcome to New Vulcan.”

Otto bowed politely and offered his right hand – only to find his wrist caught in a surprisingly strong grip, given the fact that Kirk wasn’t an Augment (even with Khan’s blood in him). “No!” Jim said forcefully and shook his head. “Sorry I didn’t tell you sooner, Otto, but to shake a Vulcan’s hand is a very big no-go. Vulcans are touch-telepaths and you would force your emotions and thoughts on the Lady T’Pau if you touch her like this.”

Hoffmann felt heat rising to his cheeks. Despite his superior strengths and mind, he didn’t want to offend his hosts – hosts which had given him, Khan and the others refuge. “I… apologize, Ma’am,” he stuttered; replying to the stern gaze of the old Vulcanness without lowering his own gaze.

T’Pau lifted one delicate brow. “No offence is taken, Mr. Hoffmann. You are new to this world and had no chance to learn about our traditions in the short time you’ve been awaken.” She looked back at Kirk. “I heard a loud screaming outside. Do you know the source of it?”

The Augment blushed even more. “That… was me,” he admitted. For the blink of an eye the Vulcanness’ face betrayed surprise, then the impression vanished as quickly as it came.

“Otto didn’t trust the transporters and… it was the first time that he was beamed,” Jim said; mirth danced in his gaze.
“You find this very amusing, do you?” Otto grumbled and felt – despite everything he learned within the last hour – a smile tugging at his mouth, as Kirk simply nodded with a broad grin.

“You’re worse than Bones when it comes to beaming, and that tells a lot,” Jim replied; then he remembered that T’Pau was still present and turned his attention back to her. “Ma’am, I told Otto of everything that happened last year and now. Of course it unsettled him a lot and he’s here to see Khan.”

The Vulcan matriarch lifted a brow while she addressed Otto, “Your brother has been through a lot, Mr. Hoffmann. Your presence will give him comfort. Feel free to visit him whenever you want.”

Otto bowed again. “Thank you very much, Ma’am – for your hospitality and the refuge you offered my friend and my other siblings.”

Jim thought, T’Pau would answer with a typical ‘thanks are unnecessary’ or ‘illogical’, but again the old woman surprised him, as she replied, “You are welcome, Mr. Hoffmann. James certainly told you also about the fate that has befallen my people. We know what the loss of mental bonds means and how it is to be the last remaining few of a once big nation. You and your people are safe here.” Her glance again found Jim’s. “Please tell Mr. Singh that I will visit him tomorrow. I refrained from seeing him because I wanted to give him time to heal and to come to terms with everything that has happened to him. But now, I think, the time is right. I’ll come to him tomorrow in the morning.”

Jim nodded. “He’ll be honored, Ma’am. Shall I leave then or I am allowed to stay?”

There was again a short movement in the usual expressionless features of the Vulcanness – amusement maybe. “You can stay, James. It is logical that Mr. Singh will be wary first and your presence calms him. And, by the way, knowing you, you would find an excuse to stay even if I wouldn’t agree to it.”

Kirk flushed and grinned sheepishly, but skipped from answering.

Nodding at him, T’Pau turned around and walked gracefully away.

“Yeah. She can be scary as hell, but deep down she’s a nice guy. She only masks it perfectly.”

“It’s called ‘control’, James!” T’Pau’s voice sounded through the hallway, before a door was closed – and Kirk became bright red.

Oooops!

“Obviously these Vulcans have good ears,” Otto teased him – and then a true laughter was about to bubble up in him, as Kirk slapped both hands in front of his face and moaned,

“I just called Spock’s granny a ‘nice guy’. Spock is so going to kill me.”

Otto had to chuckle quietly, as he followed a still flushed Kirk down the hallway. “So, the old lady is your first officer’s grandmother?” he asked.

Jim sighed. “Yeah. I learned it only a week ago that my friend and first officer belongs to the highest clan among his people and that he is something we would call a prince.” He snorted. “I was absolutely baffled – and there I thought I knew almost everything about him.”

“They are tightlipped these Vulcans, aren’t they?” Hoffmann mused and Kirk rolled his eyes.

“You’ve no idea.”

They entered the guest wing – and then both heard from afar Joaquin’s urgent voice,

“Dammit, Noo, you can’t leave the bed. Your leg wouldn’t carry you and… Hell, lay down again!”

Jim and Otto exchanged a worried glance; knowing exactly what was going on. With a “Follow me as quickly as you can,” Kirk began to race down the corridor.

“I HEARD him, Joaquin! Something is wrong. Let go of me this instant!” Khan’s voice almost thundereed, even if it was still hoarse.
Jim skidded to a halt as he reached his and Nien’s room. The scene in front of him was exactly what he expected: Khan had swung his legs over the bed’s edge and was about to rise, while Joaquin had gripped his shoulders and tried to hinder him.

“Hey, what’s going on here?” Jim panted and entered the room; knowing that he had to calm the situation.

Khan’s ocean colored eyes shone with the inner fire the young captain had missed so much. “Otto! I heard him screaming outside. Where is he?” the former dictator demanded.

“Down the hallway. He’s still a little bit slower than I am,” Jim answered with a soothing smile, while closing the distance to his beloved. “Everything is all right, honey. Otto was simply… overreacting because he was beamed for the first time.” He tried to push Nien back onto the mattress but he might have as well have tried to move a large rock.

The same moment Otto stepped into the room; his legs felt heavy after he had tried to run without success.

Time seemed to stand still, as the two Augments looked at each other.

Khan’s eyes widened as he took in the familiar face, the broad shoulders, the strong neck and the rising warmth in those brown eyes. From day one as they had met for the first time all those years ago he had trusted Otto – his instincts told him that the German Augment was a brother in heart and soul. And to see him again was like balm for his tormented spirit.

Another one of his siblings was awake – finally!

Nien didn’t even realize that his good hand reached out to the other man; his heart hungry for the touch of another family-member.

Otto could only stare at his brother. He was thin – and scaringly pale. Dark shadows lay beneath the familiar blue-green eyes, his left arm was fixed and beneath the collar of the strange tunic he wore, Hoffmann could see dark bruises. One eye was still slightly swollen and there were also healing bruises on his face. The man he had accepted as his leader looked fragile; more vulnerable than he had ever seen him before – and Otto began to grasp utterly the hell Khan had been through. And it pained! It pained more than any stab through his heart could have hurt him.
With a mixture of a snarl and a whimper he was in front of Khan in three long steps. Kirk quickly made room for him and pulled Joaquin with him. And then Otto bent down and closed his long arms around his brother’s lean frame. He buried his face in the tousled hair and breathed deeply in; smelling Noonien’s familiar scent mixed with that of medication. His heart went out to the other man and for a second he felt a sharp sting in his eyes, but for Khan he willed his rising tears away.

Nien fought the lump in his throat as he was wrapped into the strong arms of his brother again – after all those weeks and months of fear of losing him and the others. He heard Otto’s heartbeat and how his breath heaved, while he could sense his brother’s inner turmoil. Lifting his right arm, he slung it around Otto’s waist, while he pressed his face for a long moment in the other man’s shoulder.

Re-united!

Finally, he was re-united with another one of his brothers!

He didn’t care what picture he and Otto gave – or that his eyes felt suddenly very hot. He was simply overjoyed to have another of his sibling with him again.

After what felt like a little eternity but really only lasted a minute, Otto lifted his head, loosened one arm and cupped Khan’s face. His wet gaze wandered over the pale features, while he felt feverish heat radiating from the smaller man. Beside the fact that his leader was indeed sick and injured, he was still very much the same he remembered – well, except for…

“You cut your hair,” he said quietly, and Khan chuckled for a second.

“Obviously.”

Otto ran his fingers through the short strains. “It suits you,” he murmured, before he became serious again. “Alas, what have they done to you,” he whispered, before he bent forwards and placed a gentle kiss on Nien’s forehead.

“It’s a long story,” Khan answered quietly; relishing in the brotherly display of affection.

“I already know this ‘story’,” Otto replied; a low growl in his voice, before he sat down beside him;
one arm still wrapped around his leader.

Nien frowned. “You know?” His gaze found Jim, who stood with Joaquin at the table and nodded in affirmation.

“As we talked this midday the topic came to the number of cryotubes and… I had to tell Otto the truth,” Jim said. “I hope you aren’t angry, but I thought it would be better this way.”

Nien cocked his head; knowing exactly why Jim had done it – to spare him the pain that explaining everything to Otto would have caused him. A wave of warmth and love rose in him and as he caught Jim’s smile it was obvious that his bondmate had felt it.

“I figure that you two have still a lot to tell each other,” Kirk smiled gently, before he nudged Joaquin. “Come on, Jo, give them some time for themselves.” He went to the door. “We’re in the garden.”

Weiss followed him, but Otto held them back. “Isn’t it too warm outside?” he asked cautiously.

Jim smirked over his shoulder. “There are some places beneath the trees which shield us from the heat. Just take your time, you two. See you later.” He gestured Joaquin to leave first, waved at the two other Augments and closed the door behind him. He could imagine that Otto had still a lot of questions – and that Nien just needed time with his brother alone…

TBC…

Chapter End Notes

Yeah, they are re-united. I know that you all waited for this to happen; Nien meets another one of his siblings. Finally. And this is only the beginning.

I thought that it would be typical for Jim to grab the bull by the horns instead of avoiding trouble – means, he wanted to spare Nien to re-tell what happened to him and the dead Augments by explaining everything to Otto. I chose to go more into the details of what led to the whole disaster instead of let Jim speaking of everything that happened
afterwards and is well known by now. I also wanted to lighten the mood a little bit by letting Otto reacting badly to transporters or by Jim forgetting about the ‘fine Vulcan hearing’.

I hope you enjoyed the new chapter and I’m, like always, curious about your reactions.

In the next chapter it begins: Otto, Bones and the others start to wake up the Augments. And you’re going to meet the lawyer Selek hired for Jim’s, Khan’s and the others’ case.

Have a nice start into the next week,

Love

Laughter is the best medicine

Chapter Notes

Hi, my dear readers,

I’m so sorry for the delay, but a computer-error didn’t show me that the next chapter I sent to my beta-reader was stuck in the sending-process. I only learned of it days later, had to reset my e-mail program and then I was able to send the chapter finally to Kat, who did (again) a super job on my writing.

The chapter will be an emotional one and I’m sorry to tell you that the lawyer will not show up in it, but in the next one. It is better this way because with his appearance a complete new part (the last one) begins.

Thank you so very much for the feedback you left; I’m always happy when I get comments and kudos.

Have a nice rest of Sunday,

Love

Yours Starflight

See the end of the chapter for more notes.

Chapter 93 – Laughter is the best medicine

“Hi, Carol!” Nyota Uhura beamed at her friend and made an inviting gesture. “Please come in.” Closing the door she added, “I’m so happy that Kirk could talk Wesley in letting you beam down.”

Marcus smiled at her. “You know that Jim has a way with words. After my shift was done I changed quickly and came as soon as I could.” Curiously she looked around herself and took a look at the flat. Then her gaze fell on the tall lean figure that just came from an attached room, and stood to attention. “Commander,” she greeted.

Spock lifted a brow. “At ease, Dr. Marcus. We’re off duty and technically I’m not your superior officer at the moment.” He bowed his head slightly in a polite gesture. “Welcome to my father’s home.”

“Thank you, sir,” Carol nodded. “I hope I do not disturb you or the ambassador.”
“My father is resting after lunch. And besides he and I were informed of your arrival, so your presence isn’t disturbing at all, Doctor.”

Nyota linked an arm with her friend. “Come, have a seat and something to drink. And then we’ll go out for some very overdue shopping issues.” She saw Spock lifting a brow, gave him a mischievous grin and led the other woman to the living room suite. The first officer sighed soundlessly. When women talked of ‘going shopping’ they don’t mean to purchase necessaries, but buying things which mostly weren’t really needed. And, if he remembered well, his mother had the same weakness.

“Please have a seat, Doctor, I’ll bring you something to drink,” he said; copying the human custom of a male host.

Nyota gave him a surprised gaze, then smiled tenderly at him; realizing his effort to fit into two worlds again despite the fact that he was at his own home planet (well, sort of). Sitting down with Carol she watched Spock walking to the kitchen. Turning serious, Uhura bent forwards on her seat and looked at her friend. “Carol, I have to apologize for my behavior aboard the *Excalibur*. I really thought that you betrayed us, even if I should have known better.”

Carol cocked her head; a soft smirk played on her lips. “I tricked you all. Leonard already suggested I should consider a career at the theatre, but I don’t think that this is something for me. It was difficult as hell to listen to all the crap Norton, Styles and those bastards of scientists said, and to keep calm. There were moments I wanted to scratch their eyes out.”

Uhura sighed. “Well, I was about to do the latter to you.”

Marcus snickered as she watched her friends flushed face. “It shows how good my acting was.”

“It brought you on the verge of getting hell from me,” Nyota mumbled, and Carol laughed quietly,

“Thank the Lord for Scotty. I really don’t want to have you in my face – literally.”

Spock returned and placed two glasses with a light red juice on the table. “My sincere apology, too, Dr. Marcus. I also was convinced that you have switched sides and condemned you without further proof.” He lifted a brow. “And I also want to compliment you. Your ‘act’, like you called it, was flawless.”
Carol felt heat rising into her cheeks. A real compliment from the stiff Vulcan was comparable with a commendation. “Thank you, sir,” she said.

“There is no reason to thank me, Doctor. I just stated a fact. But I’m certain Captain Kirk regards your engagement with even greater gratitude – after all it saved Mr. Singh in the end.”

Khan…

Carol still felt distaste whenever the Augment was involved, yet she had overcome her wrath concerning him. And as she remembered how Finnegan and the others had brutalized him, she felt a soft stirring in her heart. “How is he?” she asked, after she had sipped at her drink – a juice with a mixture of sweet and bitter taste. It was very refreshing.

Uhura gave Spock an expecting look; after all he had seen Khan only yesterday.

“He’s still in the healing process despite his enhanced nature. His broken bones are mending and Dr. McCoy doesn’t think that he will be able to leave sick-bed for only a short walk within the next days. Yet his mental state has improved, as have the most of the bruises and the inner injuries he suffered.”

Carol shortly pursed her lips. “His mental state?” she asked; feeling against her will some alarm bells ringing.

“Khan was almost beaten to death and faced certain demise after Finnegan forced him back into the cryotube. And after all he had been through until now the last encounter sent him over the edge by almost breaking him utterly,” Nyota explained; giving her fiancée a quick look.

“I was forced to mind-meld with Mr. Singh to make him see that the dangers were over and that life is still worth living,” the Vulcan told reluctantly. “And the last days weren’t exactly bright for him, to use a human term. Only after he was cleaned and changed into something else than a hospital gown did his mood changed for the better. And now, with one of his other siblings awake and the prospect to see the rest of them soon, his fighting spirit has awakened anew.”

Marcus was surprised with herself to hear her own words, “I’m glad.” She took a deep breath. “Not that I will ever forgive him killing my father, but I do understand the pressure he was put under. And to see how someone is beaten into a bloody pulp while said someone is helpless, made my stomach churn. He earned his second chance - and, by the way, I don’t want to see Jim mourn the love of his
life.”

Spock said nothing to this, but there was for a second an approving shimmer in his eyes.

Carol changed the subject. “Mr. Spock, I need your advice,” she said. “When I need a taxi-driver, are there any fixed taxi-points in the town or do I have to call a service to pick me up?”

Again, the Vulcan’s face didn’t betray any surprise or curiosity, yet Nyota did see some inquisitiveness in her beloved’s eyes. If there was something no Vulcan could resist, then it was to gain knowledge – even of unimportant things.

“I’ll give you the service-number. Nyota can help you with giving your current location and your destination.”

“I don’t know the destination until later. Leonard invited me for dinner, but he still has to tell me which restaurant,” Carol smiled.

Spock’s left brow almost flew to his hairline, while Uhura began to chuckle.

“So, our good doctor finally made up his mind and invited you to dinner?”

Marcus beamed at her. “Yes, he did. He was still operating on Sulu as I left the Enterprise, but I hope that he will find some calm minutes afterwards so that we can enjoy our evening together.”

Uhura nodded; glad for her friend that the beginning flirting between Carol and McCoy seemed to have reached the next level. She exchanged a quick look with Spock, who sighed this time audibly.

“Knowing Dr. McCoy, he will give himself no pause until everything is to his liking. And seeing that besides Mr. Sulu, two further current patients are at two different locations, the doctor will not rest until he has made certain that both are in satisfying condition.”
With open hanging mouth and large eyes McCoy stared at the empty bed with the ruffled sheets. There was no trace of its former occupant to be seen; the same went for a certain starship captain with the propensity to attract trouble.

“What the hell…?” Bones began; shocked. It was already afternoon and he had just beamed down from the *Enterprise* to look after Otto and to give Jim an update of Sulu’s surgery that had lasted longer than originally thought. But who could have known that the helmsman would react badly to one of the sequences the cellular fuser used for the deeper skin-layers? They had to interrupt the surgery and to stabilize Sulu before they could continue their work. Hikaru had woken up half an hour ago and was now asleep again – looking like himself again.

“Dr. McCoy?”

Startled the CMO whirled around with a yelp, only to see Healer Sorel standing behind him; his calm face showed a hint of rebuke at the Terran’s reaction. Didn’t the human hear him coming?

No, Leonard hadn’t heard anything as his words confirmed, “Sweet Lord, man, do you want to give me a heart attack? You Vulcans and your sneaking up on people!”

“May I interpret your words that you were unaware of my presence until I addressed you?” Sorel asked; lifting a brow.

“Yeah, exactly,” Bones nodded and tried to calm his racing heart. “Do you have an idea where our patient could be?”

The second brow was lifted. “I have no idea, but I do have knowledge about his whereabouts, Doctor. Mr. Hoffmann beamed with Captain Kirk to New Gol, and…”

“He did WHAT?” Bones groused. “Has the kid gone crazy? Hoffmann is in no condition to walk more than a few steps, not to speak of making a trip to New Gol!” He bypassed Sorel and began to storm down the hallway, before he stopped and looked back. “Uh, do you know a good restaurant at the lake-side where I could take a lady to?”

If Sorel was surprised of the drastic change of topic he didn’t show it. “The ‘Starshine’ is known as an excellent restaurant with a good cuisine that offers meals from different worlds – including Earthen food.”
Bones nodded. “Any chance to book a table there for this evening?”

The healer cocked his head. “If you wish I can call them and book a table for you. Just give the name of the restaurant to a taxi-driver and he will take you to the right address. The restaurant is very well-known on New Vulcan.”

McCoy smiled at him. “That would be very nice, Sorel. Thank you.”

The older Vulcan bowed his head. “You are welcome. I will send you a message if I’m successful or not.”

The CMO lifted a thumb. “Great! I’ve to go. See ya.” With those words he hurried away; his mood changing back to a stormy one.

‘*Beaming with Otto to New Gol. Jim must be insane. Just wait, my friend, this will get you an ear full, just mark my words.*’

ST***ST

Otto sat quietly on the edge of Khan’s sick-bed; his large hands folded in his lap, shoulders tense, his face pale with some hectically red spots on his cheeks. Even if Kirk had told him almost everything in advance, there still had been many questions the Augment assumed the young captain couldn’t answer for him or Otto simply didn’t want to ask him because he knew Kirk wouldn’t understand their true meaning.

Khan had been awake for over two years now, but for him – Otto Hoffmann – only 30 hours had gone by since he last talked with his friend and leader, just before he was put to cryosleep, facing an uncertain future. And the memories of the final attack against Khan’s summer palace, the slaughter of the whole staff they were forced to watch and the personal losses they suffered by seeing friends die, were still very fresh in the German Augment’s mind. He was still mourning those who didn’t make it aboard the *Botany Bay* and new sorrow had been added now because of the loss of twelve who fell asleep in cryo by his side but were gone now forever. That and Khan’s year of torment were weighing heavily on Hoffmann.

Without his own doing he gripped one of Khan’s hands and held it in his own fingers; love was radiating in gentle waves between the two kinsmen – the two ‘brothers’. 
“I am sorry,” Otto whispered. “I’m sorry for everything you have had to put up with and for everything you were forced to go through alone. We – I – should have been at your side. Your safety was always my first duty, and then…”

Nien squeezed carefully his hand. “No, Otto, it’s I who has to apologize. It wasn’t in my power to save those eight of our sisters and brothers whose cryotubes function fell prey to the long passage of time, but the lives of the four others were in my hands. I should have known Marcus well enough then to realize that this man wasn’t bluffing – at the latest as he switched off the first cryotube I should have understood that he would stay true to his given threat. Yet I tried to reason with him – ignored his warnings.” He shook his head. “Those deaths are on my shoulders.”

Otto bent forwards and lifted his free hand to his friend’s jaw, as Khan lowered his head in sorrow and shame. “Look at me, Noonien,” he said softly. And only after those sea-colored, sorrow-full eyes met his own brown ones, he continued, “Once and for all: It wasn’t your fault! You did everything – everything! – within your power to keep us safe. And not only us, but also Earth and the unthinkable number of people within this odd Federation. We were breed to protect, to take care of peace and to fight those who are a threat. Your decision to rebel against Marcus to prevent a war was the absolute correct thing. I wouldn’t have done anything different. This man was too deluded in his greed for more power and his bottled up fright of the ‘dangers out there’ to think straight. We’ve witnessed similar things in our time over and over again. Men have matured, no doubt, but those who build imaginary enemies to gain more might over the weaker ones have always existed and will continue to exist. To not give into their false ways and made-up point of views is the key of stopping them. You did what you had to do, after all peace and therefore Earth in the end were at stake. Earth is at stake now as long as this ceasefire Jim told me of doesn’t change into a peace contract.” He took a deep breath. “I’m only outraged and feel pain because of everything you had to endure.” He snorted. “And knowing you, you only told me the half of the torment that was inflicted on you.”

Khan shrugged; feeling at least some weight lifting off his shoulders at the forgiveness of his friend. “There is no need to go into details, Otto. You know how much we can bear and what it costs to bring us close to break down.” He grimaced. “I did break down before I ran amok. And if it weren’t for Jim and his rebellious streak to cling to this almost childish sense of morality and justice, you, Joaquin, I and all the others were dead by now. It was Jim who pulled me away from the darkness that had engulfed me and showed me the light again. He gave me new hope, despite the personal loss he suffered because of me.” He shook his head; fondness was written on his face. “This boy-man is too good for his own wellbeing.”

Otto watched him; a small smile began to tug at the left corner of his mouth. “You really love him.”

“Yes,” the Augment leader nodded without hesitation. “I love you and the others deeply, yet this love is different.” He chuckled. “I never thought that I would feel something like this – that something like this even exists.”
This time it was Hoffmann who chuckled. “Well, ask Katie after she wakes up. It’s the same with her and me.” He sighed soundlessly. “At least one good thing came out of all this: You’ve found a true mate. Well, and maybe we’ll have a safe future here.”

Khan smiled for a moment. “You and the others will be safe here, don’t doubt it. It takes a long time until you gain the trust and even the friendship of a Vulcan, but with Selek being attached to Jim like he is, and with the Vulcan matriarch on our side, no-one will dare to go against you and the others.” He gently freed his hand from his brother’s fingers and rubbed his temple with both hands. “If only they could make the headache go away. Hell, even today’s medicine isn’t flawless.”

“Especially when there are people who don’t listen to the good family-doctor!” A voice sounded from the entrance. McCoy felt, despite his irritation, amusement rising in him as both Augments jumped in surprise. “Don’t tell me you didn’t hear me coming;” he teased them, before he turned serious again. His stern gaze found Otto. “You, Mister, belong in bed! Pronto!” He pointed at Kirk’s abandoned bed, while he continued his tirade. “This was more than careless. Maybe you’re able to walk a few more steps by now, but your body is exposed to the air of a strange planet for the first time. It has trace elements that the air on Earth doesn’t have. Do you have any idea how your body could react to those strange contents you pick up with every breath? Superblood or not, your body has still come to terms with being functional again. And then the higher gravity, not to speak of the air.”

Khan cleared his throat, but Bones was quicker than him. “And you,” McCoy addressed the former dictator, “should lie back and rest. A TBI isn’t something to joke over – superman or not.” He placed his med-kit on the table and gave both Augments another heated glare, as both didn’t react to his words. “That was a medical order, Gentlemen, not a request. So, chop-chop.” He waved both hands before he turned his attention to the med-kit. “And where is the churl who took you on this trip, Mr. Hoffmann?”

“If you refer to Jim, he is outside in the gardens with Joaquin; giving Khan and me some privacy,” Otto grumbled.

“I know that you and your brother have a lot to talk about, but this is no excuse to risk your health,” Bones replied, turning around and stepping to Otto; hypo in hand. “This is a tri-ox dose that helps you to breathe this thin air easier. I take it that Jim didn’t think about it before he left the hospital with you?”

Otto lifted both brows. “He’s a captain, not a doctor,” he stated calmly. Then he saw McCoy’s face and lifted both brows. “What?”

“That’s my sentence!” Leonard protested.
Promptly Khan began to laugh; feeling some more weight being lifted from his shoulders. That same moment steps came nearer, and the CMO whirled around – pointing an accusing finger at his friend who entered the room; Joaquín on his heels.

“You! Are you out of your corn fed mind to take Mr. Hoffmann to a trip?” Leonard groused. “The man is awake for no more than 27 hours after sleeping in ice for almost tenfold that time, and what are you doing? Dragging him with you on a tour to New Gol.”

“I dragged him to the transporter room, the rest did the beaming, not me,” Jim answered cockily – and ducked his head as McCoy almost exploded.

“Do you think that’s funny? Dammit, Jim, I know that you aren’t a doctor, but I’m certain that this brilliant mind of yours is thoroughly able to get some logical ideas of what a weakened person can do and cannot do! You…”

“You always say that the soul is as important as the body is. And after the damn shit I had to tell Otto he needed to see Nien. Think of their mental family-bonds. His body maybe still has to adjust to being up again and dealing with Vulcan gravity and air, but I think it will be easier for Otto to concentrate on his healing now after he and Nien have been reunited.”

Kirk’s voice was calm and reasonable; he sounded almost like a Vulcan.

McCoy, recognizing it, grimaced. “Spock is rubbing off on you,” he grumbled.

“Perhaps, but in certain situations a cool head is better than a hot one.”

Leonard stared at him. “Aaaaall right,” he said slowly. “Who are you and what have you done to Jim Kirk?”

Joaquin began to chuckle, while Khan laughed quietly. Some more tension left the Augment leader’s body, as he listened to the familiar bickering. Otto, on the other hand, looked still utterly perplexed at the CMO. He couldn’t remember whenever he had been lectured like this. And then the way of speaking to Kirk… Shouldn’t McCoy be showing a least a little bit of respect towards his captain?
“Is this kind of tone usual between two officers?” he asked perplexed.

“Nope, only between these overgrown kids,” Khan deadpanned and laughed again as he caught a glare from his bondmate.

“I’m no kid,” Jim protested.

“Really? Even McCoy calls you ‘kid’ often enough,” Nien teased; relieved that the difficult part of talking to Otto was over. For now. Of course his brother had been furious and shocked beyond imagination at of all the things which happened to him. Even without the family-bond they shared, Nien would have had to be blind and deaf not see and hear how upset his brother was; how much he suffered inwardly with him.

It really had been fortunate that McCoy had chosen to enter the room at this point; letting out a tirade while scanning the baffled German Augment with his med-scanner. Khan, who was used to the grousing of the CMO’s mother-hen-behavior, had watched the whole thing with rising amusement. And to see Jim now being on the receiving end of the good doctor’s rebukes and to listen to how his beloved tried to talk himself out of the situation was almost fun.

Smiling innocently he replied to his bondmate’s glare, “Don’t pout, Jim. This boyish behavior of you does have its charms.”

“Thank you so much,” Kirk replied sarcastically. “That so helps my reputation.”

“What? That of a reckless churl?”

Jim rolled his eyes. “Just look who is talking. Do I have to remind you of the stunts you pulled within the last weeks?”

“No – but I was forced to do the most of them to keep a certain ‘kid’ safe.”

“Boys!” McCoy interrupted them, while fishing another hypo out of his med-kit. “Stay quiet, after all we’re in an abbey here.” He checked the content of the hypo – and realized not only that utter silence had befallen the whole room, but that he was being stared at with wide eyes and raised eye-brows. “What?” he asked.
“I don’t believe it!” Jim gasped; flicking a thumb at Leonard. “He yells loud enough to be heard in New ShiKahr, and certainly has made T’Pau fall off her desk chair, but we have to stay quiet because of our current location.” He cocked his head. “I have to agree with Spock…”

“Don’t you always?” Bones threw in mockingly.

“… The heat really got to you.”

“No, I simply ask myself why everyone always gives the nice family doctor – that would be me – such a hard time.” He stepped to Otto and pressed the hypo at the Augment’s throat, who still looked astonished at him. “Don’t fear, this is a mixture to relax your muscles which are strained by being exposed to the higher gravity after your long sleep.” The hypo emptied itself with a low hiss.

“‘Family-doctor’ is a fitting description, but ‘nice’…” Jim stopped as Leonard shot him a death-glare.

“Just guess why I have to rebuke and to grouse every time I have to treat you, the hobgoblin, or – as of late – our superman here.” He glanced at Khan, who simply lifted both brows. Then he looked at Otto. “And I haven’t lost hope that at least you are reasonable enough to listen to what the good doctor advises you.”

“I want to spare you a heart attack, Doctor, so envision yourself as listened to,” Hoffmann said wryly. Then he turned serious again. “Doctor, Jim brought to my attention that most of my siblings, included me, have been…. abused as lab-rats.” Instantly he had McCoy’s sincere attention. “Can you explain to me what exactly has been done to us – and if my sibling and I will suffer after- or side-effects?”

Bones sighed, pulled a chair nearer and sat down. “This will take a while,” he said quietly. “First I have to give you a short overview concerning the maladies these damn Frankenstein wanted to fight with the antibodies they won from your and your siblings’ immune system.”

Kirk interrupted gently. “Bones, before you begin, only one question concerning another matter. How is Sulu?”

“There were some complications during the surgery because he reacted badly to some frequencies of the dermal fuser, but he woke up half an hour before I left the Enterprise and I think he’ll be back on his feet within the next two days. He already looks a lot better than before and by then the scars will
be vanished completely.”

Kirk smiled. “That’s good to hear. Thanks, Bones.”

“I’m just doing my job, kid, that’s all.” He turned back and looked again at Otto. “All right, Mr. Hoffmann, I’ll explain to you what happened, but please first lay down. You’ve overstressed your body enough already and we don’t want a relapse. You can use Jim’s b…” He stopped and his jaw was on its way down to the floor again, as Hoffmann simply gestured to Khan to make some room for him and stretched himself out beside his friend, who… who had this smug look of satisfaction on his face McCoy had come to know.

Shaking his head, the CMO sighed, “All right, this may do it, too.” He leaned back on the chair. “Okay, I’ll explain what has been done to you and the others. And if you have any questions, please do not hesitate to interrupt and ask me.”

Jim gestured to Joaquin to sit down on his bed, and then Otto began his first lesson in extraterrestrial maladies. Here and there Hoffmann interrupted McCoy’s explanations and asked questions, and it was obvious that the Augment did have a basic knowledge about medicine. And the more Otto realized what had been done to him and the others, the more his face darkened. That these bastards had tried to use the Augments’ enhanced immune system to develop antidotes against the most terrible maladies was something Otto could live with. When he heard how many victims alone this curious Rigelan Fever demanded every year he felt tempted to offer his help by donating blood. But to learn that he and the others were infected with all these maladies and that the scientists simply waited until their ‘lab-rats’ bodies could produce antibodies or not, risking the clueless sleeping people’s life like this, made Hoffmann’s blood boil. But the last straw was the fact that these monsters had tried to produce a new kind of malady that was immune to any known medicine to wipe out a whole race – a race this madman Marcus had provoked to war to establish his own power and to reach his own private goals. The thoughts made Otto sick and he could only assume how Khan felt about it – the man whose only goal was to bring peace and justice to the world.

Without his own doing his hand found that of his friend again, while he still asked McCoy questions that the CMO answered with utter patience and almost brutal truth. Half an hour later Otto had run out of questions, for which Bones was grateful. Sure, the man had a good basic medical knowledge and his enhanced mind made him a quick learner, yet it was something completely different to discuss medical details with a colleague or with a layman. One thing was for certain: McCoy would never, under any circumstances, become a professor!

Hoffmann stared into the distance without actually seeing anything. His mind drove in circles. His thoughts were like a mantra, ‘They injected us with mostly mortal maladies to win antibodies against it. We may still have the illnesses in us. They didn’t give a damn about us being feeling, living people.’
Then he felt Khan’s hand tightening around his, and as he turned his head he met the calming gaze of his friend and leader. No words reached his mind, because this kind of enhanced telepathy wasn’t possible even for Augments, but Otto sensed a warm attempt to soothe him. Khan’s eyes told him, ‘It’s done and it’s over. We are safe now. Don’t fret.’

The German Augment lowered his head. “When will you be certain that none of us will suffer from the maladies they put us through?” he asked.

McCoy sighed. “With Mr. Singh’s permission I took skin-samples from everyone and checked them thoroughly. All of you have enough antibodies in your blood to make you immune whenever you’ll be confronted with those pathogens again. I don’t think that anyone of you will suffer some side-effects, but I will be really certain several hours after your other brothers and sisters are awake.”

Otto nodded slowly and lifted his head again. His brown eyes found those of the CMO. “Thank you for everything you did for us – and for your honesty.”

“I am a doctor, Mr. Hoffmann. I made an oath to help people, not to harm them intentionally.”

“These bastards who did this to us are doctors, too – and I think they believed the Hippocratic Oath wouldn’t count for us, after all the status of being human was taken from us.” Bitterness swept within his voice.

“As cruel as it sounds, but the latter was fortunate for you,” Jim spoke up and met Otto’s asking glance. “It gave me the possibility to declare you as your own species that is endangered and was about to get killed in an ordered genocide of the current – nor former – Head of Starfleet. Being confronted with this situation I could legally hide you in my ship and the Vulcans could officially give you asylum. Even the Federation Council can’t do anything against this.”

Otto watched him for a few moments, then he chuckled humorless. “You really have a brilliant mind – seeing chances where they shouldn’t be and using them to your or others advantage.” He shook his head. “I think we really can call us lucky to have met you.”

“Oh no, please not! His ego is already big enough,” Bones groaned.

Jim stuck his tongue out at him, before he addressed Hoffmann again, “Every honest man would have done what I did. Bob… I mean Commodore Wesley is only another example of those who
would and *have* helped."

“By the way, the commodore wants to meet you, Mr. Hoffmann,” Bones cut in.

Kirk made a short affirming gesture. “And not only he. Sarek, Spock’s father, offered his diplomatic skills to be an intermediary between your people and the Vulcan High Council. I already talked with Nien yesterday evening about it and…”

“I haven’t told Otto about this detail until now,” Khan cut in and looked at his brother. “I’ll be away when the trial takes place – and maybe my absence will last longer. As much as I have learned Ambassador Sarek is a very trustworthy and honorable man, whose reputation is almost a legend by now. I haven’t met him in person until now, but if Jim trusts him, I do also. Sarek wants to meet you tomorrow after his check-up with the healers. I advise you to listen to him and try to come to terms with him. You and the others need someone who looks true to your needs when I’m not available. And with him being married to a human woman for thirty years or so, he understands men better than the most Vulcans.”

Otto sighed; knowing that Khan was right. They needed someone to whom they could turn when problems occurred, but this didn’t mean that he had to like it. Far from it. The mere prospect of *why* Noonien wouldn’t be available made the German Augment sick, yet his brother had made it very clear during their earlier talk that he would clear the air by facing trial of his own free will. And if Khan had made up his mind, there were only a few things that could make him re-think it. And in this case, Otto was sure, Noonien wouldn’t ponder another way than the one he had decided to walk.

“I’ll speak with him,” he agreed. “But I certainly need some instructions of Vulcan customs. I don’t want to rub him the wrong way like I almost did with this old lady that resembles Shani so much.”

As Jim caught Nien’s asking glance, he snickered, “Otto met T’Pau – who wants to speak with you tomorrow, by the way. And… well… Being raised as a gentleman, Otto wanted to greet her in the perfect Earthen gentlemanly way.”

Khan’s eyes widened, before he stared at his brother, who shrugged, “How should I have known that to touch them is a taboo?”

“Well, I pushed her out of harm’s way down on the floor and covered her with myself the first time we met,” Joaquin piped up; grinning broadly. “And she even thanked me.”
“Of course, after all she sensed your real worry and good intentions through all the touches,” Bones sighed. Then he glanced at Otto. “All right, I’ll take you back to the hospital in an hour, when I’m done with changing and getting clean. I’ll explain some general customs of Vulcans and check you through before I’m out for dinner.”

“You’re going out tonight?” Jim asked; surprised.

McCoy rose and only smiled at him, “Yes.” He walked towards the door. “And don’t wait for me, it can be late until I return.”

For a second Kirk’s eyes were wide as saucers. “You… have a DATE?” he almost squeaked.

Bones rolled his eyes. “Is that such a surprise for you? I do have my own charms, you know.”

“Yes, of course,” Jim hurried to agree, “but… I thought you were done with the ladies?”

“What?” Leonard cocked his head. “Whoever gave you this idea? I’m done with marrying, but that doesn’t mean that I’ll spend the rest of my life as an Eunuch.” As he saw the astonished expression on Jim’s now flushed face, he had to chuckle. “Don’t fret, I won’t put my foot in it. We’ll behave. And now excuse me, I’ve to dress up for the lady.” Jim’s call stopped him again,

“Hey, with who have you hooked up?”

“Aren’t we nosy today!” came the sarcastic reply.

“We never have secrets from each other. You even learned about Nien and me first.”

“Yes, after putting two and two together and confronting you with it so that you couldn’t use any excuse anymore.”

“Oh, come on, that was something completely different. Now, tell your captain who has caught his CMO’s heart.”
Leonard sighed loudly. “Dammit, Jim, don’t stress my nerves. I have a date, end of story. Now bother your honey and let me get ready and some beauty sleep before I bring our runaway back to the hospital.”

“Aw, come on, Bones,” Jim whined. “I’m so happy for you, really I am. I mean, Spock has Uhura, I have Nien, only poor you are all alone. I’m glad that you found someone. So, just tell me…”

“I tell you off, Captain. And now, let a man get a decent shower.”

Kirk threw up his hands. “Heavens, and there you complain over and over again, how I’m complicated.”

“You’re not complicated, you’re a full-blown natural catastrophe. Just like our dear hobgoblin. And now, for the last time, let me get…”

“This comment is illogical, Doctor,” a certain deep voice sounded from the entrance. “A member of a species, no matter how matured in culture or not, can never be a natural catastrophe. Neither the captain nor I are able to produce flashes, storms, earthquakes…”

“You two have elicited earthquakes within the HQ more than once, Spock,” McCoy said over his shoulder, before he glanced at the newcomer. “I don’t know about you during your Academy days, but Jim already started with giving the brass grey hairs only a few days after his first classes.”

“Hey! I wasn’t that bad,” Jim protested, before he smiled at his first officer, who stood on the doorstep, clad in a short brown Vulcan robe and fitting trousers with light shoes. “Hi, Spock. Everything all right?”

“Yes, Captain, I’m fine,” Spock nodded; bowing his head slightly before he looked at the two Augments. “Mr. Singh, Mr. Hoffmann, I trust you are feeling better?”

“Despite my head, and this damn leg and arm which still quit working, I’m a little bit better,” Khan said. “Thank you, Mr. Spock. How is your father doing?”

“He is healing well,” the Vulcan nodded, before he drove his attention to Otto. “I heard from Healer Sorel that you and Captain Kirk beamed over to New Gol. Obviously you’ve come to terms with your new surroundings.”
“He broke free of the hospital, with Jim’s help,” Leonard growled. “Don’t think that I allowed this foolishness, Spock.”

“On contraire, Doctor, you really should know by now that Jim loathes medical care and strongly sympathizes with everyone who is forced to endure a stay in medbay or hospital. That he would use the first given opportunity to reunite Mr. Singh and Mr. Hoffmann was only logical for him. Therefore it was ‘foolish’ enough for you to not foresee the current outcome.”

McCoy gaped at him, while Jim began to laugh. Khan shook his head in amused exasperation and closed his eyes. “Can you imagine how much my nerves have been stressed since I met these three?” he asked Otto, who chuckled for a second.

“Yes, I have a good idea about it.”

The same moment Bones’ communicator buzzed. “McCoy here,” the CMO answered the call.

“Sorel here, Doctor. I want to inform you that my attempt to book you a table at the ‘Starlight’ has been successful. Please inform your companion that you are expected at 1900 hours Standard Time. The table was booked in your name.”

Bones was very aware of the curious glances which were directed at him, while he replied, “Understood. Thank you very much for your assistance, Healer Sorel. I really appreciate it.”

“You are welcome, Doctor. I wish you and the lady a pleasant evening. Sorel out.”

Humming with satisfaction Bones closed the communicator, put it back into his pocket – and lifted both brows. “What?” he looked around. “Yes, Sorel helped me to find a nice restaurant. So what?”

“Doctor, may I be of some assistance?” Spock addressed him. “Dr. Marcus is still with Nyota. Shall I contact her and give her the chosen location for the dinner?”

Bones felt for the third time within a few minutes that his jaw hanging open, before he snapped it close, threw his head back on his neck and groaned, “Spo-ock!”
“You’re going out with Carol?” Jim asked perplexed, before he began to grin.

“I’ve Carol’s private frequency, so don’t bother with calling her,” Bones said to the Vulcan; ignoring his captain and friend for once. Now that the cat was out of the bag he could speak openly with Spock concerning the identity of his date.

“So, she finally answered your attempts of getting to know her better?” Kirk continued to question his CMO further.

“It wouldn’t bother me, Doctor,” Spock replied to Leonard. “Nyota and Dr. Marcus are still out for ‘shopping’, as they called it. The ride from downtown to the ‘Starlight’ is shorter than from my father’s flat. It would spare Dr. Marcus a longer ride on a taxi.”

“Since when have you two hooked up with each other?” Kirk cut in, but – again – McCoy ignored him.

“Well, this would be indeed good for her. On the other hand I don’t think that our girls want to go shopping ‘til the evening. Not in this heat. I’m certain that they want to return to your father’s flat to refresh themselves.”

“I assumed that you had a thing for her, Bones, but that you really invited her to dinner is a big step for you,” Kirk tried to interrupt again; mirth danced in his sky-blue eyes.

“Nyota and Dr. Marcus only left a quarter hour ago and ‘need some time out for the girls’, as they put it. I’m certain that they will find refreshment in one of the cafés in downtown and Dr. Marcus wants to take a ride from there to the restaurant,” Spock said to McCoy; refusing the temptation to look at Kirk. He knew exactly what his friend was playing at: ‘Driving the good doctor up the next wall’ – maybe as a little pay-back for McCoy grousing prior. And, to his surprise, the Vulcan felt a hint of amusement because of his T’hy’la’s silly behavior.

“Did she tell you that how long they want to do their shopping?” McCoy began the same time as Jim quipped in again,

“I never thought that you had it in you – a new relationship. You always want to play it safe and…”
That did it. Leonard’s patience was hurled over the limits.

“God dammit, Jim, can you stop talking for one god forsaken minute?”

Promptly Joaquin burst out laughing, quickly followed by Jim and Khan, while Spock lifted both brows – the equivalent of Vulcan guffawing.

“Rather Earth’s moon will be orbiting backwards,” Nien chuckled.

“Really, Doctor,” Kirk snickered, “as your captain I have to make certain that…”

“Don’t pull your rank, Jim,” Bones snapped. “We both know that I’m not in the same boat like you and Spock concerning ‘superior and subordinates’. I’m simply the CMO and the service I offer on duty is equal to everybody on the ship. So…”

“How unfortunate for the crew. And there I thought only I get sick from the medicaments I am given by you,” Spock said wryly. Some of his few human streaks were unable to resist the temptation to tease the doctor.

For the fourth time McCoy could only stare with open mouth, while now even Otto joined in the general amusement by chuckling quietly.

“You know what?” Leonard groused. “Have your fun all with yourself, Gentlemen. I, for my part, am going to my room now, to take a shower and get ready for the lady, before I take Mr. Hoffmann back to hospital.” He stomped out of the room. “And stop making surprised eyes at me, Jim. If you would have used your usual sensibility you would have realized that Carol and I got closer within the last weeks.” He vanished, while Kirk snickered,

“I don’t know why he makes such a big issue of it. He has a date – bravo. On the other hand, when I remember his complaining in the shuttle to the Academy and how his divorced wife took everything from him except for a skeleton that was in his praxis, I never thought he would try to win another lady over ever again.”

“‘Skeleton’?” Otto echoed. “Is this the reason you call him ‘Bones’?” As Kirk only nodded with a broad smirk, the German Augment began to laugh. “Heiliger Bimbam, you Americans really have a way to pick nick names!”
Spock remained at New Gol for some time more, and only left after not only McCoy and Hoffmann, but also Weiss had left. Joaquin had asked to stay with Otto again, keeping him company – well, that was the official version. In truth he knew with McCoy gone from New Gol for several hours ‘til late night, Jim and Noo had some time for themselves, and the way the two had looked at each other, Joaquin had a pretty good idea how the two wanted to spend the given chance of everyone else out of the house – well except for the Vulcan priests, but they lived in another wing of the building, so they didn’t count in this case.

Khan had nothing against his little brother accompanying Otto. Now, after everything was out in the open, Jo didn’t need to fear more uncomfortable questions of the German he couldn’t answer. And it also calmed Nien to know that Otto wasn’t alone in this strange world.

Bones left them with the strict order to get rest – especially Khan who sported a new headache and looked tired enough to fall asleep any second. “Don’t do anything I wouldn’t do,” he had said before he called the hospital and was beamed away with the two Augments; Otto again grousing about this way of transportation.

Spock bid his farewell, too, and went to the other wing to pay his grandmother an overdue visit. Despite their talks in the hospital several days ago he still owed his clan-mother a polite visit, and he also wanted to speak with her about several details concerning the upcoming bond-ceremony. To his surprise – he hid it very well – he was instantly let into T’Pau’s office, where the matriarch greeted him with unusual warmth as soon as the secretary had left. And somehow Spock knew that he had found, at last, family in the old lady’s presence, too.

In the meantime Jim and Khan did – for once – what McCoy had told them; but, of course, differently from what the CMO originally meant.

Kicking off his shoes, Jim joined Nien on the bed; offering his arm and shoulder as a pillow which was gladly accepted. And while Khan told him about his talk with Otto, both men drifted off to dreamland, only to be woken up later by a Vulcan priest, who brought dinner. Of course the priest didn’t show any reaction to the view of the two Terrans cuddled against each other on the bio-bed, yet Jim had learned to read Vulcans a little bit, and he could have bet his last shirt that the priest was amused.

After emptying their plates with salad and the bowls with something that reminded them of pasta and was surprisingly savory, Jim helped Nien to get ready for the night. Bones had asked if they needed support – M’Benga would have come down for it within minutes – but Kirk had learned a thing or
two of nursing someone and additionally he knew that Nien was far more comfortable with him
taking care of him than with anybody else.

With utter care he undressed Nien; realizing that several of the bruises did look better than two days
ago, yet Khan’s lean body still wore the brutal traces of Finnegan’s revenge. Some bruises were still
deep red, others had turned blue, the more healed ones wore the colors of the rainbow. Most cuts had
closed by now and only red stripes showed where the usually thick skin had been hit with enough
force to split open. But four lacerations were still matted, despite McCoy’s use of a derma-regenerator.

Khan had followed Jim’s gaze and sighed, “This all will heal, don’t worry so much.” He still
sounded tired, and if he would be truthful with himself, he would have admitted that he was
exhausted. The talk with Otto, despite Jim telling the other Augment the whole truth in advance, had
been an emotional rollercoaster. There was no chance for him to speak of everything without strong
feelings, and this combined with the after-effects of the TBI had worn Nien down.

“I know,” Kirk answered quietly, “yet I still think this all could have been prevented if I had been
quicker – or had been more on alert so that Norton couldn’t take me as a pawn and use me against
you.”

“Jim,” Nien chided, “whether Norton would have been able to grab you or not, isn’t relevant. He
always could have pointed his phaser at you from meters away. And he knew that keeping you safe
was and always will be my pressure point, and he used this knowledge. It wasn’t your fault.” He
groaned as he lifted his butt from the mattress to give Jim the chance to pull the comfortable wide
trouser from his hips. “This isn’t as worse as it shows,” he added as he received another concerned
look from his bondmate.

“Right, and I’m the emperor of China,” Kirk grumbled.

Jim took his time to wash the older man, who – of course – groused about being ‘damn useless’
again, but after Jim cleaned his legs, one look at the Augment’s eyes spoke of another language. And
the proof of Khan’s further thoughts was plain to see by the bulge in the boxer-shorts he only wore at
the moment.

Giving his bondmate a mischievous grin, Jim teased, “My, here is someone eager to regain full
strength.”

Khan frowned. “Of course! I’m tired of lying in this damn bed and counting the nails in the ceiling.”
“There are no nails, honey, only plaster.” He looked up from his washing again; his eyes full of mirth. “I’m worrying here again. People see white mice, but nails?”

Nien rolled his eyes; suppressing the urge to stick out his tongue. He stood over such a childish behavior, even if he was tempted. “You know, what I mean,” he said – and Jim began to snicker.

“You’re so cute when you’re pouting.”

“I’m not ‘cute’ and I don’t do ‘pouting’. The latter is for you,” the Augment leader protested; pouting even more.

Kirk’s chuckles turned into laughter. Crawling up, careful not to hurt Nien, he stole a kiss from his beloved. But the moment he wanted to move backwards, Khan’s good arm snaked around his waist and pulled him close again.

“Not so quick,” he whispered in Jim’s mouth. “It’s mean to give a very sick man a taste of heaven only to retreat instantly.”

“’A very sick man’, uh? Baby, then I really have to stop what we’re doing.”

“Don’t you dare!” the former dictator growled, bent his head forwards and captured his bondmate’s lips again with his own.

This time the soft warmth Jim had felt flared into something quite hotter. Sparks danced beneath his skin, despite his attempt of willing them away. It has been more than a week when they had been together, and even if this didn’t sound too long, after all they had been through their yearning to feel the other one – to get lost in the familiar warmth and love – grew within seconds.

Their mouths and tongues fell easily in the familiar erotica battle; eager fingers stroke through hair and skidded over skin; breaths mingled with each other. The desire to be with each other, to feel the other one alive and safe for once, was about to drive every sane thought away.

Only as Khan was about to wrap his broken arm around Jim and a piercing pain shot through his body, both stopped – panting, flushed, still aroused but also a little bit frustrated. Especially Nien.
Cursing in Indic, Punjab and several other Asian languages, Khan leaned back into the pillow; glaring darkly to the side to avoid Jim’s glance. “Even for this I’m incapable,” he growled; damning his weak body to hell and back.

Kirk braced himself with one hand and lifted the other one to Nien’s face; taking his chin between thumb and index finger. “Hey, look at me,” he crooned softly; a request that was only followed after the young captain used some gentle power. “You. Are. Not. Incapable! You are injured and are on your way to healing. There is a very big difference. Got me?” Jim’s voice was forceful, yet gentle. Their eyes met in silent challenge – and this time it was indeed Khan who gave in first. Lowering his gaze he mumbled,

“If you say so,”

Promptly he got a kiss on the nose for it. “Stop sulking,” Jim smiled. “I have every intention to cherish and kiss every part of your body as soon as you are more cured. And believe me, darling, you’re going to need a lot of stamina then.” He winked at him.

Nien rolled his eyes. “I’m an Augment. I thought you know by now that I don’t tire out so quickly.”

“Yeah, but the latter goes for me, too – even with only a little of your blood in my veins. I promise you, when I’m done with worshipping you, you’ll be ready to sleep for hours.”

It was another challenge – a sweet one. One, Khan couldn’t resist. Not when it came to this boy-man who had caught his heart and soul.

“I’ll hold you to this promise, Pyāra, be sure of it.” He lifted his good hand and combed his fingers through the thick golden hair of his bondmate. “And we will see, who will be exhausted first.”

“Yes, we’ll see,” Jim grinned, kissed his beloved one last time and rose from the bed. “All right, let’s get you ready for bed and…” He caught Khan’s heated gaze and threw his hands up. “I mean that you should be getting ready to sleep, not what you obviously interpret into my words.”

“And what do I interpret into them?” the Augment purred.

Jim threw his head back into his neck. “You are impossible!”
“And you love it.”

Realizing that this teasing was exactly the other way around like it usually went, Kirk began to laugh. “Well, now he even throws my own words back at me.”

“How does your medicine taste?” Nien asked with another purr in his voice, and the young captain groaned,

“I so wasn’t that seducing back on Aldebaran.”

“No?” Khan smirked at him. “I will only say two words: Fallen soap.”

Jim rubbed his face, peeked between his fingers down at his bondmate, saw that the bulge in his boxers hadn’t vanished – and was about to tease Nien of being ‘superior means to control himself’, but silent steps made both males tense up.

The Vulcan priest stepped into the room to clear the dishes. His glance found Kirk, then Khan who lay there in all his nude glory except for the boxers – and lifted a brow.

With haste the former dictator fingered for the blankets and threw them over himself; glaring at the Vulcan who… who had the nerve to lift both brows in a way Khan knew to be the Vulcan expression of amusement.

“If you need cold water, Captain, just ask for it,” the priest said in something close to dry humor. And as Khan only glowered at him, the Vulcan took the tray with the dishes and vanished with grace.

Jim began to snicker. “I’m only glad that Vulcans are not ones for gossip.”

“Are you sure? Given how nosy they are, I would say that they do have thing for gossip,” Khan grumbled. “Well, of course only for ‘logical gossip’.”
Kirk laughed again and helped his bondmate to get ready for the night.

And as McCoy arrived long after midnight – earning a rebuking lifted eyebrow from the doorman for it – he found his friend and the Augment in one and the same bed; arms and legs tangled with each other and cuddled together like two little boys.

Smiling in fond exasperation at the two, Bones pulled the blankets higher above them before he went to his own room; glowing in the aftermath of a very pleasant evening first in the restaurant and later at the lake’s shore he and Carol had spent a romantically late walk on…

TBC…

Chapter End Notes

Well, trust Jim and his friends to break the tense and sad atmosphere Khan and Otto experienced during their talk. As it seems, laughter is indeed the best medicine – especially when deep warm emotions are involved. And that Jim’s curiosity got the better of him while pestering Bones with his questions was, indeed, a part of the whole intention to cheer up his beloved bondmate. I also thought it important that Uhura apologized to Carol – and that Spock ‘felt’ the urge to do the same.

In the next chapter you really go to meet the lawyer Selek hired for Jim and the others; Khan meets T’Pau for the first time; the moment in which the Augments will be woken up comes and you also hear something again from the Klingons.

I hope you liked the new chapter, and sorry once again for the delay. I’ll try to get the next chapter ready before I’m off for my summer-vacation.

Have a nice start into the next week,

Love

First steps

Chapter Notes

Hi, my dear readers,

Thank you so much for the comments again, and I’m glad that I was able to write the chapter until I’m off for my vacation.

As promised T’Pau and Khan will meet for the first time and you’re going to meet the lawyer. Fans of the original TV-show will know him; who hasn’t heard of him until now can have a look on the Star Trek-sides; then you have a good imagination what he looks like, even if he was older in the original show.

I can promise you some sweet scenes, fun but also serious stuff.

Have fun

Love

Yours Starflight

Chapter 94 – First steps

The morning came far too quickly. Not only for Jim and Nien, but also especially for Leonard McCoy. Of course he could go on for two or three shifts in row if an emergency demanded it, but usually he was in bed one or two hours before midnight. Midnight of Earthern count, not of Vulcan. In other words, Bones had gone to bed at 0440 am Standard Time and therefore he was groggy as a puppy when the set timer of his communicator woke him in the early morning.

Somehow he managed to get cleaned and dressed, commed M’Benga to ask how Sulu was doing and dragged his tired feet afterwards to the next room, where a very cheerful Jim Kirk greeted him with far too much enthusiasm.

“Bones, there you are! How was your evening? Everything went all right? Did Carol like it?” he asked; beaming at his moody friend.

“God, kid, these are too many questions for a poor man who hasn’t gotten his morning coffee until
Jim chuckled. “Well, I don’t think that they serve any coffee here.”

“A good tea does miracles sometimes,” Khan added; eyeing the tired-out CMO with amusement.

“Nothing is better than a strong coffee in the morning,” Bones grumbled and looked at the bowl Jim was eating from. “Porridge? I’m glad that you for once listened to me, but I need something different this morning. I’m beaming up and have a good, warm Southern breakfast.”

Kirk grinned at him. “My, my, I think I’ll have to speak with Carol to take better care of you.”

“So, how was your evening?” Jim wanted to know again, and the CMO sighed deeply while a true smile appeared on his face.

“Beautiful,” he whispered. “The dinner was fantastic; the wine was far too good and then the walk on the lake’s shore…” He sighed again; lost in his memories. Then, suddenly, he recognized the broad grin Jim was giving him, and even Khan chuckled quietly. “Oh, shut up, you two. Let a guy relish in his memories until the cold, hard reality catches up with him again.”

Kirk rolled his eyes. “Drama-queen!” He leaned back on his chair, while Khan emptied his own bowl; supported by several pillows Jim had stuffed behind his back to make it more comfortable for him. “Otto called a few minutes ago,” the young captain continued. “He was already up and has some training sessions with Sorel now. He thinks that he is fit enough to support us by waking up the rest of Nien’s family.”

Bones took a deep breath. “What is it with this rising at inhuman early hours? Is there no-one who values a decent long sleep anymore?” He stepped to Jim, took his friend’s cup of tea and emptied it; ignoring Kirk’s protest. “I’ll beam up, look after Sulu, have breakfast and then I’m down in the hospital to speak with Sorel and Daniel. If they give the green light for Otto for being up for a few hours, we can start to wake up the others tomorrow at the latest. I think it would be wise, if Scotty could assist us, too.”

“I’ll speak with Wesley about it. If he can decide that Engineering can go without Scotty for a few
hours, our Whiskey-lover will assist you.”

Khan, who had tensed up the moment the topic of his sibling’s awakening came on the table, looked at McCoy. “You’re going to wake them up?” he whispered, and for several seconds Bones was sure he saw some moisture in the Augment’s eyes. His compassionate side was instantly on full alert. Heavens, how often had that man hoped for this moment, only to realize that he had been lied to again. But not with him – Leonard McCoy. Or with this lovesick kid, who glanced with utter tenderness at the older man.

“Yes, we’ll wake them up within the next 24 hours. I’ll check Otto and if I think him strong enough, we’ll begin this afternoon. Everything is prepared for the big moment.” He pursed his lips. “I only ask myself if we should beam the cryotubes into the prepared rooms or if they should be moved manually.”

“Given the unsafe way from the cave up to the hospital, I think beaming would be better,” Jim stated; earning an affirming nod from Khan.

“Yeah, I thought that you would say that,” Bones sighed again, before he gripped his communicator. “Okay, I’ll beam up – and you should call Selek; tell him what we’re about to do. I think he should know about it.”

Jim nodded. “I already planned to call him after Nien’s and my talk with T’Pau. I’ll do it around midday. He certainly is very busy and I don’t want to harass him early in the morning.”

“If all people were as considerate as this, I would still be asleep,” McCoy grumbled, before he cocked his head. “So, the old lady wants to speak with our superman here?” He smirked at Khan. “Just stay calm and don’t interpret too much in her stern behavior. She is simply more Vulcan than the others.”

“Aw, come on, Bones. She isn’t that bad,” Jim said.

“What happened to ‘scary’ and ‘eerie’?” Leonard teased him. “But, of course, you would change your opinion. After all she’s the granny of your dear Vulcan brother.”

“This has nothing to do with Spock,” Kirk protested, but only received a short laugh as an answer, before McCoy opened his communicator and asked to be beamed aboard. As the soft ringing sound and the first light engulfed him, he heard Jim calling, “My greetings to Carol and don’t use too much
of her time during breakfast, or she be too late for her shift.”

Bones was about to give Kirk a fitting answer, but the transporter already beamed him away.

Jim snickered as his friend dematerialized and vanished; having seen the protest on Bones’ face before the beam took him away.

Khan looked amused at him. “You can’t stop yourself, can’t you? You have to pull his leg.”

“Bones loves me nevertheless,” Jim smirked.

“Obviously,” Nien deadpanned. “It’s the only answer to the question of why he still puts up with you.”

“Hey!” Kirk pouted; knowing that his bondmate wasn’t serious. Then light steps drew nearer, and Jim felt the hair on his neck rising. He knew exactly who was coming down the hallway, and quickly he took the tray with the rest of Khan’s breakfast away and placed it on the table beside his own bowl and cup.

His assumption concerning the newcomer was correct: It was T’Pau who stopped shortly at the threshold and let the gaze of her fathomless eyes linger on the two Terran males for a few seconds.

Jim lifted his right hand into the ta’al. “Good morning, Ma’am,” he greeted her, while bowing his head.

“Good morning, James,” she answered, while Khan tried to copy Jim’s gesture; glad that his right arm had been spared during Finnegan’s brutal assault.

“Long life and peace, Milady,” he said.

“The same to you, Mr. Singh,” T’Pau answered, while she stepped into the room. Instantly Jim offered her a chair she accepted, before he took the other chair; waiting for her permission to sit down that came in the form of a short nod.
“I see your healing process has progressed,” the old Vulcanness addressed Khan after her dark eyes roamed over his figure and face for a short time.

“Yes, I am feeling better, Ma’am. Please accept my gratitude for your hospitality in New Gol – and for giving my people, Jim and his officers and me asylum.”

Vulcans always pointed out that thanks were unnecessary, yet Jim was convinced that T’Pau took Khan’s words well. She simply bowed her head. “You are welcome, Mr. Singh. Your people and mine share a very similar fate. Only someone who burnt his hand really knows about the pain and will try to prevent others from getting harmed in the same way.” She watched him for a moment longer. “Your healing abilities are even better than those of my people, yet you are still far from being cured. Those men didn’t show any restraint as they attacked you.”

Nien nodded slowly. “No, Ma’am. I was already more or less paralyzed by the narcotic I was injected with and therefore defenseless.” It pained him to admit the latter, but it was the truth.

T’Pau lifted a brow. “And such a crime from Starfleet’s ‘Elite’. I will press charges against Starfleet for what Admiral Norton and his underlings did here on New Vulcan, but I will add a petition to the Federation Council that the psychological standard tests that the recruits of the Security Elite have to undergo, must be revised. Starfleet is liable to the Council. Such a behavior is unworthy of the Federation. I’ll make certain that such a situation will not rise again. Regrettably this comes too late for you.”

The Augment took a deep breath. “I’m not the only one who fell prey to Section 31, Luengo and his goonies. And I don’t only mean my people and the way they were abused in Starfleet labs. I also talk about the good men and women which lost their lives because of Marcus’ and later Luengo’s insanity. I’m certain that we wouldn’t be at war if Marcus and later Luengo had behaved differently.”

This time it was the matriarch who nodded. “You are certainly right, but it changes nothing to ponder about what ‘would have happened’. Kaidith – what is, is. We can’t change the past, only chose the future path.” She leaned back on the chair. “And I’m here to speak with you about your people’s future.”

Khan sighed. “I do hope that they will be able to live free within the Federation one day, but given Eathern history, I don’t know if this wish ever will come true.”

“Men went a long way from their warlike thinking to today’s more peaceful one, yet Humans are
creatures of emotions and often they have difficulties to forgive or to offer someone a chance. Yet times have changed. Humans are even tolerable enough to befriend other species – or to marry them. My former daughter-in-law was the best example for it, and I’m certain she would find better words for you to calm your worries, but she fell with Vulcan. Another soul to mourn.”

For the first time Jim realized that T’Pau must have really liked Amanda Grayson. Again he was sad that he had never had the chance to meet her.

The old Vulcanness collected herself and looked straight at Khan. “If the public is on your side, they will accept your family. Therefore we have to show them that your people are no danger for the Federation, but a valuable addition.”

Nien lifted both brows. “How so?”

“It will last weeks until your people have gathered all the knowledge they need to live in the Federation – weeks we will integrate them among our people. As far as I have come to understand, Augments are not only enhanced in body, but also in mind – meaning your way of thinking quickly, straight and logical is not unlike how we Vulcans do. Therefore your people will certainly have no problems to adjust to our colony – something that will not go unnoticed by the Federation Council. This in addition to the fact that they will be accepted as their own sentient species will give them the chance in the end to move freely within the Federation.”

Khan had listened closely and pursed his lips finally. “You want to teach first and to introduce them afterwards to the Federation.”

T’Pau made a slow affirming gesture. “Yes, but given the fact that many humans still have bad memories of those Augments who abused their enhanced nature, men should be made aware of your people’s presence carefully.”

“Like making the people first see that buffalos aren’t the big danger they always thought they were before environmentalists used the old conservation program back in the 20th century and reintroduced the buffalo in the Great Plains again,” Jim piped up.

He was rewarded with a confused gaze – T’Pau – and an amused one – Khan.

“I do hope you don’t compare my people with a flog of buffalos,” Nien said.
Kirk rolled his eyes. “I don’t mean it literally, but as an example, honey. You have to show the people that the so-called ‘danger’ isn’t one before you can make further steps.”

“James is right,” T’Pau cut in. “Before something new can be established you have to convince people to accept it. The question is: Will your people agree to being a part of our colony for some time?”

Nien pursed his lips, before answered slowly, “To tell the truth: We have no other place to go at the moment, so they will agree. When they learn that they are safe here – accepted – they will cooperate. We already assumed that we would have to win a new place to live when we left Earth, and even if the most of us thought that meant to re-gain our right to live on Earth one or two decades after launching the Botany Bay, they will adjust to the new situation.” He took a deep breath. “And this solution comes with a further big benefit. To move freely without any danger of being arrested or killed is more than we had the last weeks on Earth before we took off from the planet. It was months before that that we could roam the streets without the risk of getting attacked or eliciting new uproars among those who didn’t understand but feared us. To find peace here will convince my crew more than anything else.”

T’Pau made an affirming gesture. “Then it is decided. Your people will live among us until the Federation – Earth! – is ready to accept them. Concerning your personal case you can rely on my support. Even if we Vulcans are able to control the rest of our emotions, the principle of ‘running amok’ isn’t unknown to us. There are… circumstances even one of us can lose all control and isn’t sane anymore. Not condemning, but helping to heal is the right way – a path James was able to make you walk. That this path does not end in dark times again is something we will work on.”

Khan hadn’t anticipated such a kind of support. Yes, Jim – and Spock – had mentioned that to let the other Augments stay on New Vulcan until the way was clear for them was the best solution, but that his people could live among the surviving Vulcans for a longer period of time, was something Nien hadn’t thought possible. Right, the outer environment wasn’t the best one given the higher gravity and the heat, but the Augments had been built to be stronger and better. They could adjust easier to everything than casual humans. And if Jim and the others lived here for days now without any serious problems, the Augments could do it, too. Hell, Spock’s mother had lived on the original Vulcan for almost three decades without any health risks – even if she had to take this ominous tri-ox McCoy had given Otto yesterday, too (and Khan was certain that the same stuff was among the medicine that was pumped into his body by the IV’s). There was no reason his people couldn’t adapt to this place.

“Thank you, Ma’am,” he said softly. “Your help gives us the first real chance to find a new place to live on – and to live for. We are not ungrateful, rather the opposite. I’m certain that my people will be more than willing to assist you with building this colony. And even if their knowledge isn’t up-to-date, I’m sure they are going to learn quickly and can be of help afterwards.”
\[\text{T’Pau lifted a brow. “We don’t expect anything in return for our hospitality, Mr. Singh. The asylum was granted because it was the right thing to do – and to help other sentient beings is one of our most important laws. Life is sacred, Mr. Singh – something we are more aware of than ever before.” She cocked her head. “Yet, given the current situation, every assistance is appreciated. If some of your people do want to support us, it will be welcome. But, as I said, it’s not demanded as repayment.”} \]

She leaned back in the chair.

“Given the fact that your people will believe you the most and have to rely on your own experiences within the 23\textsuperscript{rd} century, the regaining of your health is of most priority. If you in need something, do not hesitate to speak of it.”

Khan hesitated. He was more than grateful for the old Vulcanness’ support, especially concerning his family. There was nothing he could ask more for, yet there was a tiny, personal problem she could, indeed, help him with.

“Ma’am, there is indeed something I want to ask of you.” As he saw her lifting one brow in a silent question, he continued, “It’s about the healing progress I make.”

A short tilting of her head was the only hint that the old matriarch was surprised. “Is there something amiss with Healer Sorel’s or Dr. McCoy’s medical care you want to improve?”

The Augment quickly shook his head. “No, Ma’am. Healer Sorel and Dr. McCoy are excellent physicians and I couldn’t be in better hands.” He took a deep breath. “But, you see, I’ve been stuck to this bed for days now and… I fear that I get cabin-fever.”

For a second confusion clouded the matriarch’s aged face. “I guarantee you, Mr. Singh, that these rooms are clean and that this particular room is disinfected every day to prevent from pathogens slowing down your healing process. There is no reason you have to fear germs within these walls that could provoke a new fever in you.”

Khan stared at her; not knowing if this was another example of Vulcan humor, or if the old lady really hadn’t heard that idiom before.

Jim, who had stayed quiet until now and had simply listened, felt amusement rising in him and he
needed all his composure to suppress a snicker. That he didn’t do a good job on it was proved T’Pau’s reaction as she turned her head towards him and lifted a demanding brow. “Yes, James?” she asked.

Kirk felt himself blushing – hell, the old lady had a way to make even a starship captain flush – and cleared his throat. “Ma’am, what Mr. Singh refers is the following: He has been bound to bed and to this room for several days and feels himself really cooped in by now. And given the fact that his broken leg will not be able to carry him within the next days, I think he wants to ask you for a desk-chair or something else that is placed outside on the terrace he can use to obey Dr. McCoy’s medical orders by lying down, but also to be out of this room for a few hours.”

“I do not know if the temperature will be healthy for Mr. Singh,” T’Pau thought aloud. “As far as I learned when dealing with Terrans you prefer lower temperatures.”

“Yes, but there are shadows on the terrace – and Mr. Singh comes from a land where the temperature doesn’t differ that much. India is rather hot and his body will remember it.” He gave her his best tested brilliant smile, combined with a puppy look. “My grandfather always said that fresh air is the best. I think Mr. Singh’s health will improve if he can leave this room for a few hours and can get some fresh air. It’s healthy for his mental state.”

T’Pau considered the words, before she asked, “Would it better for you too, if you were in his place?”

She couldn’t fool Jim; she was curious about this special Terran streak.

“Yes, most humans would prefer to lie outside with warm, nice weather to get fresh air than to be stuck in a room. I read in one of McCoy’s medical magazines that our subconscious feels left out when we’re bound to bed, while around us life continues. To leave the sick-room from time to time makes us part of the world again – and strengthens our hope of a quick healing. It encourages us and improves the healing process like this.”

The old Vulcanness watched him closely, then she nodded in understanding. “Social embeddedness seems to be important for humans like it is for us. I’ll take care that a lounger will be brought to the attached terrace and that Mr. Singh will be carried to it.”

Khan felt his cheeks heating up. Carried – like an infant! On the other hand there was no other option if he wanted to get out of this damn bed and room. And superior or not, his desire to be away from these four walls was almost irresistible. “Thank you,” he murmured; his voice a croak.
Jim looked at him – fond but also amused. Of course Kirk knew what was going on with his bondmate. The wish to get away from the sickbed for a few hours was something he could understand far too well, as well as the humiliation of being carried like a child. Well, where light was, there was shadow – nothing came without a price.

“Cheer up, sweetheart, you can rest outside, all tucked in and comfortable, while the others have to work.”

“I was never a man to be lazing around and let others do my work. To be reduced to watching is… difficult enough.”

Jim bent forwards and took his hand; squeezing it. “In a few days you’ll back on your feet and then you can outshine us all with your new found energy.”

“Can’t wait for it,” Khan mumbled; but he calmed down as he felt the gentle love flowing over the shared bond with the younger man.

“I suggest that Mr. Singh will rest outside until the early midday,” T’Pau interrupted them; ignoring the two men holding hands – something that was close to making-out in the Vulcan way. “Or until the temperature gets unpleasant for him.” She looked at Khan who was about to protest. “You can always return to the gardens in the late afternoon when the heat ceases a little. I do understand that you come from one of Earth’s warmer regions, but don’t underestimate our climate here. You are not adjusted to it, and given your state of health you shouldn’t take any risk. I don’t want to explain to McCoy why one of his patients got worse while under our care.”

She rose and instantly Jim followed her example. Familiar with this custom of Earthen gentleman behavior, she tilted her head slowly. “James, Mr. Singh,” she bid her fare-well.

“Ma’am,” Jim bowed, while Khan lowered his head; saying the same thing at the same time.

Just giving the two Terran males a short look of something close to amusement, the old Vulcanness left the room. And as she reached the door to the next hallway she heard the Augment sighing in relief, “Thanks to all higher beings which maybe do exist. I’m about to leave this room!”
“It was a very pleasurable evening!” Carol Marcus sat vis-à-vis of McCoy in the officer’s mess and lowered her cup of coffee. She had been surprised as she heard the CMO paging her via intercom aboard the Enterprise, and was happy as he told her that he was aboard and asked her to join him for breakfast in ten minutes. Half an hour until the shift started – that was enough time to have a decent breakfast and to speak with Leonard again.

Leonard simply smiled at her. “Yes, it was,” he nodded; eyes shining. He had beamed aboard a quarter hour prior, had looked after Sulu – who was awake and happy with the surgery’s results – and had afterwards hailed for Carol. For a moment he feared that seeing each other again after the last evening could be awkward, but far from it. The second she stepped into the officer’s mess, warmth had risen in Bones, and given the tender, beautiful smile she offered him before she kissed his cheek, made it clear that she felt the same.

Marcus laughed quietly. “I don’t know what was the better one: The delicious dinner, the breathtaking sight of the lake or the walk on its shores.”

“I think the best was your company,” Leonard said; making her blush a little bit.

“Prince Charming,” she chuckled.

“Belle,” he grinned.

Carol had to laugh again. “Well, at least you’re ‘Prince Charming’ from the beginning and aren’t a beast that has to transformed back into his human form.”

“I wouldn’t mean the kiss that did the transforming,” McCoy said wryly; seeing to his delight how her cheeks flushed even more.

For a few seconds they simply ate their breakfast, before Carol chuckled, “Did you seen the two Vulcans at the shore?”

Bones looked up at her. “Uh… no?”

The young woman began to laugh. “They sat in the sand side by side and watched the stars, while
being far too close, invading each other’s private space. They didn’t even see us walking by until we were on the same level as them.” She grinned. “I never thought Vulcans to be romantic.”

“Well, look at our tight-lipped first officer and how he melts when Uhura only looks at him. I think there you get your answer,” Leonard joked, and both snickered, while they sipped at their coffee.

“I would like to repeat our evening,” Carol said finally quietly; flushing again.

Bones wasn’t aware that he grinned like an idiot. “Yeah, that would be great,” he nodded; beaming even more. “That means, if Wesley lets you off the ship.”

“I don’t think that he would have something against it. We’re stuck here for now and… there are rumors that the commodore is pondering to give some shore leaves. The crew has been through much and to have some fresh air – even hot as it is on New Vulcan – would do them good.”

McCoy shortly pursed his lips. “Hm, that gives me an idea. Geoffrey is in charge of the medbay at the moment with me being released from duty officially, but if he – as the current CMO – suggests shore leaves for the crew out of medical reasons, Wesley will certainly allow it. After all, the good commodore is turning the same idea around in his head, as you said.”

Carol had to chuckle again. “You’re almost like Jim. You always find a way to get what you want – even if you have to manipulate a commodore.”

Bones smiled. “Well, Jim did rub off me – somehow. That comes with spending a lot of time with him. His rather unorthodox methods and his firm belief that no-win-scenarios are successful can do this to a man.”

“Yes – and they bring him often into deep water. Just like now.” She sighed. “What do you think? Will this mysterious lawyer, Nyota told me about, be able to get you and the others off the hook?”

McCoy shrugged. “Selek seems to think so – and I have to admit that calms me.”

The young woman cocked her head. “Jim said that Selek is an old friend of his, which strikes me odd enough given the fact how young he is and how old the Vulcan High Minister is. And now even you trust this guy enough to put your fate into his hands. Are you really sure that the outcome will be as good as you all hope for?”
“What is sure in the universe, darling?” Bones sighed. “One little component can change whole star systems. I really have no answers for you in this case. There are only two possibilities left by now: One, we trust Selek and let the lawyer he chose handle everything, or two, we hire our own lawyer and see what he is able to do. And given the fact that Selek seems to know this guy and is utterly convinced that he is the best, I choose Selek’s path.” He lifted his cup of coffee again. “And, by the way, the guy has this sometimes unnerving tendency to always be right.”

“Just like someone we both know,” Carol teased. “Mr. Spock is the perfect ‘I-know-it-all’ and ‘Of-course-I-am-right’.”

Bones knew that he had to be careful now. “I think that comes with being a Vulcan. High intelligence, logic and all this do have some advantages.”

The weapons officer leant forwards in her chair and looked straight at him. “Yes, and despite the general belief they do have emotions – just like the Vulcan pair yesterday evening. I only ask myself, if a Vulcan calls his lady what you just called me.”

Confused McCoy frowned. “And what did I call you?”

A quiet laugh escaped Carol. “You just called me ‘darling’.”

This time it was Bones who flushed, and as her laugh grew louder – clear like a bell – he blushed furiously red, before he grinned sheepishly, “What shall I say? I always wear my heart on my sleeve.”

Still giggling, Carol reached over the table and took his hand; squeezing it. “And I have nothing against it.”

“What?” he asked; hearing to his horror that his voice was far too high. Clearing his throat, he specified, “What do you not mind? Me wearing my heart on my sleeve, or calling you ‘darling’?”

Her answer was music to his ears, “Both!”

ST***ST***ST
Khan knew that it was childish, but he couldn’t stop the deep sigh of relief and utter delight, as he lay back on the lounger one of the Vulcan priests had put him on only a minute ago. The Augment had waited until the priest had vanished, before he gave into his emotions; knowing that only Jim saw him grinning like a cat that got the cream.

The lounger was placed in the shadow of two trees at the side of the terrace that was vis-à-vis to the door of Jim’s and his room, and a side-table held a med-scanner as well as two glasses, a carafe with water and some fruits as refreshment. It was very warm, mind you, but the air wasn’t that different from some areas in India. And, above all, it was fresh air – not a conditioned one. He felt the wind stroking his face and combing his hair, while it gently rustled the leaves of the two trees. He smelled sand, soil and flowers – exotic yet not too strange for his nose. Then he heard murmurs from some Vulcans working around fifty meters away in the large garden, while beside him a deck-chair creaked as Jim sat down in it.

Free…

He felt free and far more alive than within the last days and maybe even weeks. Only when he was with Jim on Aldebaran in their little shared love-nest had he felt likewise. Maybe now he felt even more at ease; with his crew safe, Joaquin and Otto already awake and with the knowledge that his other siblings were going to join him in one or two days.

Relishing in his surroundings and in the enfolding peace, he closed his eyes, while he took several deep breathes. He could feel Jim’s fond amusement through their bond, then Kirk’s fingers entwined with his.

“Better?” Jim’s gentle tenor asked.

Opening his eyes again, Khan looked at him – his breath taken away from him for a moment, as he saw the sunlight that broke through the rustling leaves bathing his beloved in a gold-red shimmer; conjuring a golden hue on his skin and making his hair gleam.

“Very much better,” he said. “Thank you!”

“Don’t thank me, but T’Pau,” Jim smiled.

“You asked her.”
“Yes, but she gave her permission and detached one of her priests to be our private butler again.”

Khan chuckled. “I’m trying not to imagine him in black-white striped dress-coat with black trousers, waist-coat and bow-tie.”

Jim looked bewildered at him, then he remembered this kind of clothing in old-fashioned movies – and began to laugh. “Well, this would be a sight to behold.” He lowered his voice as two Vulcans glanced in his direction. “You’re looking better,” he said after a few seconds. “You’re not so pale anymore.”

“Fresh air does work some magic,” Nien nodded. “Just remember how quickly you healed on Aldebaran.”

“Yes – thanks to the superblood of yours and especially your tender care,” Jim sighed.

“‘Special care’, hm?” The Augment glanced teasingly at the younger man. “And there I thought you would repay me in the same way yesterday evening, but just then you had to decide to act reasonable for once.”

“Aw, I do remember how much I needed to persuade you before we two could forget everything that happened by driving each other mad with lust.”

Khan growled softly. “You choose these last words on total purpose, didn’t you?”

Jim’s glance found the swelling bulge in the Augment’s trousers; viewable even through the tunic. He snickered, “Ah, honey, waiting raises the anticipation.”

“Just wait until I drop a piece of soap in the shower and you come running.”

Again Jim only laughed softly, then both men fell silent – content and at peace. Being still exhausted and suffering from the TBI, Khan drifted off to sleep within minutes, while Jim read his PADD, before his own eyes closed. None of them knew how much time had passed, until they finally were woken up by a crash that came from inside the building. And not from anywhere, but obviously very near their room – or maybe it really came from their room.
Both males were instantly on alert and looked at each other; lifelong training in Khan’s case and Starfleet schooling in Kirk’s, they were from zero on hundred percent within seconds. Well, Khan couldn’t do anything else than sit up, while Jim had already risen; his attention fixed on the open terrace door. Again some noises were heard, and Kirk headed inside with a “Stay here!”. 

“Wisecracker – as if I could go anywhere at the moment,” Nien groused; cursing his condition again. He watched Jim vanishing in the house and despite any orders from McCoy and any rationality he tensed his muscles; ready to leave the lounger and to hobble after Jim should the tiniest hint be given that his beloved faced some danger.

With all senses on alert, Kirk crept towards his and Nien’s room, but heard that the noises came from two doors down the hallway – next to Joaquin’s and McCoy’s quarters. For a moment he pondered the chance of getting his phaser from his room in the case that he was going to face some robbers, then logic set in. There was no way to make a step into New Gol’s holy halls without passing the main-entrance or to come through the garden – and both were watched. No Vulcan would allow some scallywags to enter the building without rising alarm. And, by the way, there was as good as no criminality on New Vulcan and those who went against the law were outworlders – the latter also very rarely in New Gol except for T’Pau’s official guests or The Shadow-gang. And the latter would have called him if they wanted to visit.

Ergo, the chance that the somebody two doors down the hallway was a robber were very small. Yet Jim didn’t take any risk. Tiptoeing down the hallway he stopped beside the door that stood ajar and peeked inside the room. He couldn’t see much, but heard noises. So he pushed the door carefully open, stepped in – and promptly stumbled over something that was placed directly in the entrance path. With flying arms and cursing he tried to hold his balance and maybe he would have been successful, if it weren’t for a sudden movement in front of him that startled him mercilessly. The attempt to regain his forward balance and to jump back in one motion was something not even a Vulcan or an Augment would have been able to master. The result was humiliating and hurting in one.

James T. Kirk, savior of Earth, fighter for justice, hero of the Federation and fiercely loyal man towards his friends, fell over his own legs and landed anything but gracefully on his butt with a yelp.

For a moment the world seemed to have come to a halt – a moment in which he tried to understand what just happened. Then he heard a chuckle not far away from him and as he looked up – rather dumbfounded – he glanced directly into the face of a human man in at the end of his forties. Brunet hair starting to thin out at the temples and intense blue eyes sparkled with surprise and amusement in a tanned round face – a face that showed the first crinkles. He was rather short, but slender, and the high forehead spoke of a lot of intelligence.
“Well, young man, this I’m calling sportive histrionics,” the stranger said with a strong light tenor. “But I think the outcome of the stunt wasn’t planned like this.”

Jim knew when his leg was being pulled, and grimacing he sorted his limbs before he began to rise. His gaze found the reason for his ungraceful entrance: An open box. “What man in his right mind places a box directly in the entrance?” he grumbled while clapping non-existing dust from his clothes.

“Someone who thought to be alone while moving in,” The stranger chuckled and rounded two further boxes. “So, High Minister Selek’s description wasn’t exaggerated: You are a man of temperament.”

Jim frowned and took a second to look around. There were many more open boxes and books. No, not PADD’s or discs, real paper-books. A lot of them. And one peek into the box that had made him fall contained more books.

“What…” He began rather unintelligently and the other man began to laugh.

“Yes, I use real books, young man. Not these electronic knick-knacks. You should try them. Believe me, it makes the whole experience more vivid if you have real paper beneath your finger tips and smell the unmistakable scent of a used book. And, by the way, you can tamper with electronic files, but never a written word on a paper. And the latter is most important in my job.”

“And that would be? Librarian?” Jim cocked his head. “Are you here to help T’Pau with cataloging the remains of the Vulcan artifacts and documents which could be saved?”

The man snorted – half irritated, half humorous. “I’m here to help a young man and his friends to get their neck out of the hangman’s noose where they put it in.”

Realization dawned on Kirk. “You are our lawyer!” he blurted out and the man rolled his eyes in new amusement.

“Obviously. You know the rumor that a lawyer knows every written law is indeed nothing more than a rumor. To know where look up them is the trick.” He pointed at the books, before he offered his head. “Samuel T. Cogley,” he introduced himself.
Kirk’s jaw moved towards the floor. “Co... Cogley?” No, his voice wasn’t that high, was it? Yes it was, but shock could do something like this even to the strongest men. The man in front of him was one of the most famous lawyer in the whole Federation, and the success of is solved cases were legendary by now. “Sweet Lord, there is no way in hell or on Earth I can pay you!”

The lawyer laughed quietly, his hand was still offered which Jim finally took and shook. “Sorry, sir,“ the young captain added hastily. “James Kirk,” he returned the polite behavior. “But I think you already know.”

“Of course,” Cogley smiled. “Your face is well-known, Captain.”

“I’m no captain at the moment,” Jim corrected him; letting go of the older man’s hand.

“And we’ll make certain that this will change again. You, young man, do the Federation a far better service when sitting in the center chair of your ship, then sitting at some desk or in a penal colony.” He looked over Kirk’s shoulder. “The same goes for you, mister, but before we speak about a chair I would think it wiser if you would use first a bed. Don’t get me wrong, but you look like hell.”

Jim whirled around; his inner antenna knew instinctively who stood behind him.

“Nien!” he gasped. “Are you insane? You cannot walk!” he almost shouted. With two steps he was at his bondmate’s side and wrapped one arm around his waist; making sure to support him at the injured side without causing him more pain.

“I felt your... distress,” Khan murmured; eying warily the older man who now stood in the doorway.

“I’m okay, I only kissed the floor with my butt as I stumbled over a damn box of books,” Jim answered. “Please, Nien, lay down again. Come on, let’s get you back on the lounger – and we shouldn’t tell Bones anything about your little trip, or he’ll ban you to the hospital.”

“Only over my dead body,” Khan growled; still watching the stranger, who closed the distance to them.

“Khan Noonien Singh, I presume,” Cogley said; recognizing how the other dark-haired man tensed instantly. Of course, given the fact who this man was for real, Samuel could understand the wariness of his client. “I’m honored to meet the man who saved the population of a whole planet, prevented
the main-strike of a Klingon terror-act and helped to rescue our diplomats.” He offered his hand again. “Samuel T. Cogley – and before you ask, I’m here to get you through the trial they’ll make you face because of your rampage last year.”

The Augment still watched the other man carefully, before he accepted the offered hand. “I already heard from your conversation with Captain Kirk that you are our lawyer. Thank you for coming.”

Cogley smiled. “You already heard, yes? Well, your hearing must be indeed very good – but that’s no miracle given your nature.” He cocked his head and looked the enhanced man up and down; taking in the fading bruises, the fixed arm and the pale face. “My, my, I really don’t want to piss off Starfleet’s Elite if this is the outcome. And when I consider your strong nature, they must have been more than ruthless. Don’t worry, Mr. Singh, we’ll get them for what they did to you – a few days ago and before that as you were held captive by Section 31.”

Jim shortly pursed his lips. “Just how much did Selek already tell you?”

“Enough to wake my curiosity and to make me realize one thing: If I get you two and the others away from the trial with your reputations completely restored – free of any penalty – I can’t save myself from being bombarded with new cases I’ll have to take.” He grinned. “Your cases, gentlemen, are absolutely intricate, and even more so because they include machinations and deeds in Starfleet’s highest ranks and in the Federation Council. I LOVE such complicated cases, so don’t worry about payment.”

Kirk frowned. “I afraid I don’t understand, sir.”

Cogley smirked this time. “To get you two and the officers out of trouble is a payment itself. I only demand a base-fee and that is already paid by High Minister Selek.”

Jim gasped again. “Selek paid…” He shook his head. “He can’t do this!”

“Why not, Jim?” a warm baritone, rough with age, sounded from the door that led from the main hallway into the guest-wing.

Kirk looked up and found Old Spock’s eyes, while the Elder came nearer on silent feet. A dark long robe waved gracefully around his thin long frame.
“You already risked everything by giving us asylum,” Jim protested. “Hell, you risked your life even! I cannot allow that you spend your money on me, too. We both know that you… have to build up a new life from nothing and…”

“Just like most of us surviving Vulcans,” Spock Prime interrupted him softly, “And money exists to buy things you need, otherwise it wouldn’t exist at all. There is no better way to spend my money than giving it for you and your friends.”

Jim felt himself blushing at the display of such devotion. Sweet Lord, his own Spock was fiercely loyal and held brotherly affection for him, but this was an even higher level.

Khan cleared his throat and looked at Jim. “At some time you have to tell me how exactly you won him over.”

Kirk shrugged helplessly. “I have no damn clue.”

“You won me over the years, Jim, and if once you win a Vulcan’s friendship, it remains until the last breath.” He looked at the lawyer and lifted his right hand into the ta’al. “Long life and peace, Mr. Cogley. My secretary informed me of your arrival. I am grateful that you could make it this quickly. Welcome to New Vulcan.”

Samuel returned the Vulcan greeting gesture, while he bowed his head. “Long life and peace, High Minister Selek, and thank you for the nice welcome. I’m pleased to meet you in person finally. May I say that I enjoyed our talks via communication net?”

“Your compliment is unnecessary, yet appreciated, Mr. Cogley. Did you find everything to your satisfaction?” He gestured towards the guest room.

“Yes, I was about to settle in as Captain Kirk stumbled into the room – literally.” The last word was accompanied by a wink at Jim, who grimaced and flushed again.

“Don’t tell me you really fell over this box?” Khan said; surprised.

“Yes, I did,” Jim sighed; grumbling in his throat as he felt Nien’s silent laughter through the bond and saw amusement shining in Selek’s familiar eyes.
“He came running after I dropped a box with books but didn’t see the hindrance in the entrance,”
Cogley explained to Khan and Selek. “Regrettably it’s not usual today that someone so young shows such a polite behavior. I was taught by my parents to help others if they are clumsy enough to let something fall, yet it isn’t the norm anymore.”

Jim’s eyes widened. “I thought you were a burglar.”

“What?” Cogley looked baffled at him.

“And you came to the rescue of New Goli without a phaser,” Selek all but sighed, before he lifted a rebuking eye-brow. “Really Jim, your recklessness is even stronger than I remember.”

“Hey, I thought the worst and I’m a trained Starfleet officer who can overcome a burglar. Of course I would protect my hosts instantly, who are only priests and aren’t schooled to fight.”

Selek cocked his head. “Who told you that?”

“What?”

“That Vulcan priests are unable to fight?”

Jim blinked several times. “Well… They are adepts of Surak’s ways and…” He shrugged.

Something close to a smile ghosted around Old Spock’s lips. “Most priests are masters of Ashumi, the…”

“The infighting sport of defense,” Kirk nodded. “Spock has been teaching me for a few weeks now.”

“Very good,” Selek nodded; remembering his sessions with his own Jim Kirk all those decades ago, when he taught him this kind of melee.
“And the priests here are practicing Ashumi?” Jim asked, curiously.

“Yes – and other battle ways, mostly traditional ones, yet not less dangerous to eventual opponents.” Selek’s gaze found Khan and took in the deathly pale face and the sweat on his brow. “But first, you, Mr. Singh, belong into the next bed available. I do hope for your sake that Dr. McCoy will not learn of your little adventure here.”

“He’ll have my head, not Nien’s,” Jim grumbled before he looked tenderly at his beloved. “Come on, tiger, I’ll get you back to the lounger outside.”

Nien nodded; already feeling his whole body tiring, while his left leg hurt, even if he had put most of his weight on the right one. “Deal,” he mumbled and with Kirk’s help carefully turned around. He limped for two steps down the hallway towards the open terrace door; pressing his lips into a thin line. Yet something must have given him away – or Jim’s worried expression did. In any case he suddenly felt a pair of long, thin yet inhumanly strong arms going around him and a moment later he was lifted.

“Allow me, Mr. Singh, it’s easier and the risk of harming yourself again is far smaller,” Selek said while carrying him towards the terrace.

Khan was too shocked to react at all – at least for the first seconds, then he protested, “I can walk on my own!”

“Yes, I clearly saw that,” Old Spock deadpanned and tightened his grip as the Augment began to struggle. “Please, quit this nonsense. You’re worse than Jim.”

“Oh, I do imagine you carrying him through the Enterprise’s hallways to medbay,” Khan hissed; shooting the old Vulcan a fierce glare.

“Yes, many times – whenever Jim managed to get injured during landing parties or when we were in battle ship-to-ship,” Selek answered in a whisper; making certain that Cogley couldn’t hear him. “And I also offered this service to other friends and comrades, whenever it was necessary. So to carry you isn’t a ‘big deal’, like Leonard would put it.” They had reached the terrace and the lounger, where he laid the Augment gently down. “See, it’s better like this,” he added; watching the enhanced human with a mixture of amusement and exasperation. Khan and Jim really were a lot alike.

“Thanks,” the former dictator grumbled; clearly embarrassed. “I heard Jim yelp and felt his distress,
“So you did what I would have done being in your place: Throwing all caution out the next airlock and limping to the rescue, even if it would be you who would be in need in protection because of some injuries.” As he caught the baffled gaze, he added, “Leonard *did* rub off me with his phrases after serving at his side for almost thirty years.”

“Well, if it loosens your younger self up just like it did in your case, I do not mind,” Khan sighed; feeling indeed relieved to lie down again.

Jim and Cogley stepped to them. “You all right?” Kirk asked concerned and Khan smiled up at him.

“I’m fine,” he reassured his bondmate.

Selek straightened his frame. “I’ll organize two seats and some refreshments. I think, Gentlemen, we’ve a lot to talk about.” He stopped before he was two steps away and looked back at Jim. “Did Leonard tell you when Mr. Hoffmann will be strong enough to assist him while waking up the other Augments?”

“Bones wants to check on him and will inform me, when he thinks the time is right. Did he speak with you about it?”

“No, but given the fact that Mr. Hoffmann visited Mr. Singh already yesterday, as I learned from T’Pau, it’s only a question of hours until he is fit enough for the task,” Selek answered. Then his glance found Khan, who had tensed up again. “Don’t fear for your crew, Mr. Singh. They will be in good hands.”

Nien nodded. “Thank you, Selek. I do not doubt it.”

While Spock Prime vanished into the house to get two chairs and more to drink, Cogley looked back and forth between the two younger men; recognizing the deep feelings as they gazed at each other. There was only one explanation for what he saw.

“So, how long have you been a couple?”
Bones let his med-scanner sink and looked questioningly at Daniel. “What is your opinion, colleague?” he asked; being in a good mood like not in a long time.

Corrigan smiled, while his attention drove to Otto Hoffmann. “Our patient has regained more than 80 percent of his usual strengths, if Mr. Singh’s and Mr. Weiss’ vital data are a base of Augment biology. I do think he’ll be able to be up for a few hours by now.”

Otto remained tensed. “Meaning, we are beginning to wake my wife and the others up?” he asked; voice hoarse suddenly. On the other bed Joaquin bit his lips in anticipation.

Bones grinned at him. “Yes, I think the time has finally come!”

“M’Rek demands WHAT?” Richard Barnett was famous for his self-control and his ability to remain calm even in the most stressing situations. But in this case his slip of composure was understandable.

He stood in front of the president’s desk in the Federation Seat of Government in Paris. Here it was midday, in San Francisco – where Barnett usually lived– it was deep night and accordingly he was tired as he received Robertson’s call. By now he was wide awake and every remaining trace of tiredness had been chased away by the news he just got from the president.

Robertson leaned back in his chair and sighed deeply. “I know, Richard, that this is a surprise. I have calculated a lot of outcomes of the Klingons’ counseling they did over the last days, but this…” He nodded towards the computer screen on which the frozen face of M’Rek was still showing. “I received his message only an hour ago. The Klingons are still interested in a conference concerning upcoming peace talks, but they demand full elucidation concerning the incident with the Klingon renegades which were hired by the former Chief in Command of Starfleet, which disgraced one of their finest warlords – the last descendant of the Klingon emperor. They also demand answers as to who is really in charge of Starfleet now and if the Federation Council is still the true government of the star union. Well, I can live with that – after all the mess Luengo and Section 31 left involved the Klingons a big deal. But the other demand…”

He shook his head and looked at Barnett, who finally sat back on the visitor’s chair he had occupied before Robertson’s information drove him off the seat.
“Did I get that right, sir? M’Rek demands that our delegation will be escorted by the Enterprise under the command of Jim Kirk?”

The president took a very deep breath. “Yes, that’s exactly what the Klingon chancellor requires. He wants to meet Kirk – and the dark warrior, meaning Khan.”

Barnett felt sweat breaking free on his forehead. “For what purpose? Kirk is sentenced to death in the Klingon Empire and if they really know who Khan is, they’ll sentence him, too.”

Robertson shrugged. “The peace conference will take place in a neutral place, outside of the Klingon Empire. And there was no hint that M’Rek knows that Khan was the one who brought down the two Klingon squadrons on Qo’noS last year. But Khan did hinder Koloth from being successful on Aldebaran, did free Kirk from a Klingon prison, and did run interference with the planned Klingon attack against Tammeron. From the military point of view, I can understand that M’Rek is curious about the two men who stopped some very important Klingon attacks and messed with their strategies – forcing the Klingons to the table of the conference like this. What worries me is the fact that Kirk, his senior officers and Khan will not be available to go with M’Rek’s demands because of the upcoming trial.”

“And M’Rek insists on Kirk and the Enterprise,” Barnett groaned. “Superb! What now? We can’t let Kirk and the others off the hook like this, even if I would welcome it after all they did for the Federation and the delegation. Our lawyers have already formulated the charges which will be pressed against them.”

Robertson nodded. “We have to court martial them earlier than thought. I really regret these circumstances, but we have to hurry if we don’t want to lose any chance of peace-talks within the near future. And, don’t get me wrong, but I pray to the Lord that Kirk’s and Khan’s lawyer is a really good one, or I’ll have to explain to M’Rek why the Federation and Starfleet are insane enough to condemn their own heroes…”

TBC…

Chapter End Notes
Every time Barnett and Robertson think it can’t get any worse, it comes worse (snicker). Now even the Klingons are regarding Kirk in a different light, and court material seems to be less and less a good idea, yet it has to take place – after all law is law. Yet (eventually) M’Rek’s demand can play Jim and the others in the hands. And especially Cogley can use this circumstance, even if he has already an own plan how to get our boys and their friends out of the deep water.

I loved the old original episode “Court Material” in which Cogley showed up for the first time. And I loved even more him spreading all his books over Jim’s quarters about the spacestation and lecturing him about computers and books (even if Jim of the first timeline loved real books, too). Yet Cogley is younger in the Kelvin timeline than original, and therefore I wrote him more ‘loose up’. And Jim – well, he does have a little tendency to fall with the door into the house (literarily). I hope, you liked my introduction of the lawyer who holds our boys’ fate in his hands.

I also liked to write the scene with T’Pau – after all the Augments really will have to live on New Vulcan first. And, by the way, it was the first time she and Khan met in person. And that Bones and Carol had a nice evening was something I didn’t want to stretch too much, yet they are another pair of lovebirds so to say.

I hope you liked the new chapter.

The next one will come after my vacation, but please don’t let my holiday stop you from leaving feedback (laugh).

Have a nice start into the next week,

Love

Yours Starflight
Hi, my dear readers!

Sorry for the new delay. After my vacation there was so much to do in my shop and at home, I barely found some time to write the new chapter. But finally I’m done, my dear beta-reader did a great job again, and I’m able to publish the next installment.

Thank you so very much for all the feedback, and I hope that your expectation of the new chapter will not be disappointing. Sarek meets Otto, Katie wakes up and learns about her location of being on an foreign planet in a special way, and you learn about the ‘big plan’ Cogley, Jim and Nien agree on to face trial soon.

Have fun

Chapter 95 – Waking up and Meetings

“Scotty will beam down to the hold with the other cryotubes, and will make certain that the right ones will be beamed over,” McCoy said and closed his communicator. His gaze found a tense Otto, an expectant Joaquin and a curious Corrigan. Sorel had gone to another examination room after he was informed that Sarek had arrived for his ordered check-up, but had promised to return shortly.

“How long until we can start?” Hoffmann asked and Bones smiled at him.

“A quarter hour, or so. Scotty has to come down and Elder Senak has to arrive, too. He’s the one who built the force-field around the cryotubes to keep them safe from Norton’s and Section 31’s grasp, and he’s the one to switch it off without some computers lightening up in alert like a Christmas tree.” He sighed, as he watched as Otto gulped. Full of sympathy he laid a hand on the Augment’s arm. “Stay calm. Everything will be fine.”

“Hopefully. At least I’m…” He stopped as the door to the room opened and three Vulcans stepped
in. One was Sorel, the other one was Kirk’s first officer and friend, Spock, and the third one… was an older Vulcan with the first grey in his dark hair and who held a certain resemblance to Spock. He assumed who the stranger was, and his assumption wasn’t wrong.

Sorel stopped behind the two other Vulcans and it was Spock who rose to speak, “Father, this is Otto Hoffmann, a close friend of Mr. Singh and his right hand. Mr. Hoffmann, this is Sarek cha’Skon of the House of Surak, my father and the ambassador of Vulcan to Earth.”

Sarek lifted his right hand into the ta’al – a greeting Otto hadn’t mastered until now, so he bowed his head deeply; remembering that Khan wanted him to work together with this Vulcan, even if the ambassador and the former dictator hadn’t met in person until now. As it seemed, Spock’s word and Kirk’s belief were enough for Khan to listen to them. That his leader trusted non-Augments that deeply was a circumstance Otto still had come to terms with, even if he liked Kirk and his friends.

“Welcome to New Vulcan, Mr. Hoffmann.” The ambassador’s deep voice wasn’t as strong as Otto had expected, but given the fact that the man had a cardiac surgery only a few days ago, it wasn’t a wonder. Hell, even an Augment would need time to heal and to regain strength after such an operation.

“Thank you, Ambassador,” he answered. “And my sincere gratitude for offering my people asylum. I learned of your surgery, sir. I hope you’re feeling better.”

Sarek – familiar with general Terran customs – lifted a brow. “My condition is satisfying, Mr. Hoffmann, thank you for your concern.” Then he came straight to the point. “My attention was brought to your and your people’s situation, Mr. Hoffmann, and that you all will be our guests for an unknown time until all ambiguities have been removed. My government as well as some other people with influence will do anything in their power to make the Federation accept you as your own species in her folds, but until everything has been clarified, your people will live among us. I offer you my support as an intermediary and handler so that your people are supplied with everything they need and learn to come to terms with this century.”

Otto had watched the Vulcan diplomat closely. Right, he wasn’t that good in reading people like Khan was for example and given the fact that this man was an alien made the whole thing even more difficult, but he was capable of recognizing if someone was making a foul play, and this man – Sarek – was honest through and through.

He and Khan had talked about the upcoming visit of the Vulcan ambassador and he knew what Noonien expected from him. But that wasn’t the only reason why Otto was ready to agree to Sarek’s suggestion. To accept help from these peaceful people to gain a foothold in this strange, new world was only logical. And, by the way, it was good to have people around them who were superior in mind and body just like Augments.
Therefore he took a deep breath and replied, “I know that I can speak for my people without even asking them, and I can tell you that we all are grateful for your support. Yes, Captain Kirk and Dr. McCoy tried to help me adjust to this world, but it’s clear that there is still a lot for me to learn and the same will go for the rest of us. Any help will be welcome.”

Sarek nodded slowly. “Then it’s settled. As soon as all of your crew-mates have been woken up and learned of their current situation, I suggest a meeting between all of them and myself. There is a lot to do – for example to make living arrangements. The hospital will offer you all quarter until your bodies have adjusted to our climate and gravity, afterwards your own place to live is surely preferable.”

Otto took a deep breath. “I learned from Captain Kirk of the cruel fate that has befallen your people, Ambassador, and that you all are still building your colony. So please no extra services for us, sir. We need a simple place to live, maybe all together in one house. We often shared one building when we were younger, so there will be no problems. If we can support your people by preparing this house, we’ll do it instantly. I also want to offer you our help in return for your hospitality. We’ve two architects among us and one specialist for structural engineering. Of course, our knowledge is antiquated compared to today’s standard, but if you supply us with documents with which we can learn, we certainly will be able to help this colony to grow.”

Sarek was the third Vulcan Hoffmann met, but he already knew that it was best to speak with these people straight and in clear terms, instead of beating around the bush. It was the way that most Augments preferred, too, and for Otto it was almost a relief to talk plainly about important matters instead of packing them up in nice catchwords.

“Your offer wasn’t expected,” Sarek replied, “but is appreciated. I am certain that you and your friends will catch up with history and today’s technology quickly which will the base for all further actions.” He looked at McCoy.

“Sorel told me that you are about to wake up the first friends of Mr. Hoffmann.”

Bones nodded. “Yes, sir. We want to start with Mr. Hoffmann’s wife.”

Understanding shimmered for a moment in Sarek’s eyes, while he glanced back at Otto. “Vulcans don’t ‘hope’, yet I’ve learned that a lot of strengths go hand in hand with faith. I hope everything will run smoothly and that your wife will be in a good condition. It’s… difficult to function well when a close one is ill, in danger or dead.”
Otto smiled ruefully. “I learned of your wife’s demise. I’m sorry for your loss, sir.”

Again, Sarek showed that he was familiar with Terran politeness. “Thank you, Mr. Hoffmann. As far as I know your people and mine share a similar fate. We both lost not only family-members, but also our whole home. In your case there is still the chance that you’ll find a place on Earth again; our planet is gone. Yet we don’t give up – just like Mr. Singh, you and the others.”

Cocking his head Hoffmann watched the man. The Vulcan’s face remained expressionless, yet Otto could see some emotions lurking deep in the dark orbs. And he remembered Kirk’s words as the captain explained that most Vulcans still suffered from mental trauma because of the torn mental bonds they shared with spouses, family members and friends. For a moment he tried to imagine how the Vulcans had been before the holocaust. He guessed that they had had an aura of arrogance and that most thought to be superior because of their high intellect and flawless logic. But nothing of this had survived – at least not in the ambassador or Sorel. The people here carried on but it was clear that the pain and shock would last for the next generations – and Otto felt compassion wakening in him. Sarek was right. They both – Vulcans and surviving Augments – shared a similar fate.

“As long as you live there is hope for more,” he said quietly. “You yourself said that hope gives strength. Maybe this is a path that will help you to cope with your loss one day.”

Sarek bowed his head; recognizing the man’s words as an attempt at comfort. Yes, comfort was illogical. What is, is. Kaiith. Yet Vulcans were not immune against it; they tried to give it to family members and friends in their own way.

Alas, Sarek remembered very well the moments when he had tried to comfort his little son whenever Spock had suffered because of his peers – or when he had defended his mother’s honor with fists. Sarek had never admitted it, but a part of him had been proud that his son stood up for his mother (and father) and had shown his classmates that illogical behavior (their offences) would lead to not satisfying outcomes (Spock beating ‘the daylight out of them’, as a human phrase went). Sarek had seen Stonn and the others afterwards. His son had given them a good beating – even if Sarek had to have some uncomfortable talks with the other boys’ fathers’ days later.

Remembering little Spock’s grateful eyes whenever his father had shown some sympathy, or the strength he himself had drawn from Amanda’s comforting touches whenever he had faced messy situations, he allowed himself to take the Augment’s words ‘to heart’. And, to his surprise, some of the burden seemed to be lifted for a few seconds. To know that you aren’t alone in dark times is always a balm for the soul.

“The loss will never be forgotten, but the pain will lessen. This is something I learned from my wife as she lost her sister because of an accident. And she, too, spoke of the light of faith. I learned that my wife’s wisdom was a strange concept for a Vulcan, but she was often right and so I allowed
myself to trust her judgment. Your words are almost similar. I don’t know if this way to cope with loss and mourning is typically human, or if it is a way that higher intellectual beings see more clearly than others, but in any case, this point of view always helped. Just like your words did. I thank you for your true sympathy in the name of my House and my people.”

Otto smiled – a little bit. And he thought he saw the Vulcan’s face losing some of its sternness.

“I don’t want to take more of your time now,” Sarek skillfully changed the topic. “I know that you have to be eager to be re-united with your wife — and I have to take some rest, as Healer Sorel made it very clear.” He gave the other older Vulcan a short glare that was simply returned with a short inclining of the head. Lifting his right hand in the ta’al, the ambassador added, “Long life and peace, Mr. Hoffmann. Sorel and my son will keep me updated about the proceedings here. I’ll return as soon as all of your people have been woken up and have come to terms with the fact that they slept for more than 250 Terran years and are on an ‘alien’ planet now.”

Otto could be mistaken, but he thought he saw some amusement gleaming in Sarek’s eyes at those last words. But it vanished so quickly, it could have been his imagination.

“This would be very kind of you, sir. Once again my gratitude for your willingness to help us.”

“I’m the ambassador to Earth, Mr. Hoffmann, and you come from Earth. Your biological nature is of no consequence for me, only the fact that you — as Terrans — are in need of support. In other words, this is my job and I’m honored that you accept my offer. Good day, Mr. Hoffmann.” He turned and headed for the door.

Spock hesitated and looked at McCoy. “Is my assistance required, Doctor?” he asked.

Bones smiled; realizing that Spock was torn between the duty to bring his father home and his curiosity to remain here when the next Augment would be woken up.

“I don’t think it would hurt if you learn about the original way to end the Augment’s cryosleep. A further pair of eyes could turn out to be helpful. If your father agrees…”

Sarek looked back. “There is no need for you to drive me home, Spock. Remain with Dr. McCoy and…”
“You are in no condition to drive by yourself,” Spock dared to interrupt his father.

“I am capable of driving, Spock,” Sarek answered sternly.

“Yes, you have a driver license and decades of practice. Of course you are capable of driving – but not in your current condition.” The younger Vulcan raised his voice as he continued before his father had the chance to reply. “You would not only endanger yourself but also other traffic participants, which would be illogical.”

Father and son only looked at each other now – and Bones began to snicker. “I remember that I had a similar discussion with my old man, using the same arguments,” he said to no-one particular. “He didn’t give in – stubborn like a mule. I’m curious if the Vulcan superior intellect will succeed where human pigheadedness failed.”

He had spoken quietly, yet he knew that the keen Vulcan hearing had caught his words. And they had the wanted result.

“Your logic is flawless, Spock, I’ll take a cab,” Sarek stated, before he looked at McCoy. “Your attempt of convincing me in your own way is recognized, Doctor, but was unnecessary. Of course my decisions are made by following logic.”

With utter innocence Leonard smiled at Spock’s father; not surprised that Sarek had looked through him. This special streak seemed to live in the family. Nonetheless McCoy said, “I don’t know what you mean, sir. Your talk with your son was indeed similar to mine with my dad six years ago.”

Sarek only lifted a brow. “If you say so.” He nodded shortly at the two humans. “Good day, gentlemen. Spock.”

“Father,” the younger Vulcan acknowledged and watched the ambassador leave the room. Turning to McCoy he lifted an elegant brow, before he softly said, “Thank you, Leonard.”

Bones grinned at him. “I’ve learned a trick or two to get through yours or Jim’s thick skulls when you two are unwilling to listen to reason. Why shouldn’t it work with your father?”

For a moment amusement glinted in Spock’s eyes. “I’ll be warier in the future when you add some ‘useful’ comparisons to discussions.”
McCoy began to chuckle. “A challenge? I’m on it.”

The two officers, who had become friends despite their many differences, glanced at each other; both still ready to keep each other on their toes.

Sorel had listened to the whole little exchange with interest; deep down amused how similar father and son were and how well the human CMO knew how to handle them. Now, after Sarek left the room, the healer’s attention was driven back to the current task of waking up another Augment. He turned his head towards Otto.

“What, Mr. Hoffmann, if you are ready I’ll contact Elder Senak so that we can start the procedure of waking up your wife.”

Otto couldn’t help himself; anticipation, fear and joy mingled with each other and made him gulp.

“Yes, this… would be fine by me,” he whispered.

Selek went down the hallway to T’Pau’s office – leaving the gardens. He was satisfied with the outcome of the first briefing between Jim Kirk, Khan and Samuel Cogley. The lawyer’s reputation seemed to keep its promise: The man was dramatic but brilliant.

Cogley was more or less already familiar with Kirk’s and Khan’s cases – those which were woven with each other and the separate case concerning Khan’s captivity in Marcus’ and Section 31’s hands and his amok run later. There was still a lot for the lawyer to learn about the details, yet he concluded a lot of them on his own without his two clients having to point them out. And he was no-one who tried to blind others with false hope. The chance of getting Kirk and his officers out of the hangman’s loop would be difficult, to get Khan out of it would need something humans called a ‘miracle’. Even if Old Spock’s strong sense of justice and his morality wished that the Augment wouldn’t end up in a penalty colony – at least not this version of Khan – logic dictated that the chance of freedom for Khan was practically zero.

Yet Cogley had already a plan – a plan that went almost the same path T’Pau had suggested and also went along with Jim’s own thoughts on how to proceed from here on to get Nien out of the mess, and, by the way, his officers and himself, too.
Khan’s only chance: The judge had to show mercy because of the Augment’s torment and his later good deeds. And to manipulate the Starfleet judge and the Federation Council into bending the law was something that could only be warranted by public interest. And said interest had to be increased because it referred to two men who had served the Federation a lot.

After the destruction of Vulcan and the threat Nero had presented for the whole Federation, after the mess with Section 31 and now after a war with a cease-fire at stake, the public was hungry for heroes – for men and women who would stop at nothing to defend and protect civilians and comrades alike. As illogical as all this was in a Vulcan’s opinion, the belief in a superhero who would turn everything to the best was not a phenomenon only restricted to Earth. Most races had the same weakness. Well, when Selek was truthful, even Vulcans weren’t immune against it; not really, seeing how a lot of surviving Vulcans regarded his younger counterpart with respect all of sudden.

Jim Kirk already held a hero’s place in most Federation people’s minds and hearts. After defeating Nero and saving Earth, after him debunking the machinations of Marcus and Section 31, and after all he endured and did during the war, James Kirk’s name was well-known on every planet and in every colony, together with that of his first officer. The second man who was on the top of topics at the moment was ‘Sunrise’ – the mystery man no-one knew in person and who always came to the rescue when even hope had died. He was to the public the great mystery, the man without a face, the dark knight in the shadows – someone who was perfect to build stories and weave poetry around him. Selek knew humans well enough to assume that the Augment had already given wings to many female and certainly also male romantic fantasy.

And this was exactly the spot to tackle the path that maybe would lead to Khan’s freedom.

The public shouldn’t only learn about his true fate that had led to his breaking point, but foremost they had to learn about everything good that he had done and about his character. His true character. The latter was something Cogley had put into play. And his reasoning was so plain and logical even the Elder had to compliment him about it. The people had to trust Khan and his crew that they wouldn’t use their superior strengths – both in mind and body – to harm them. To harm someone on purpose was deeply written in the character of someone – in his psyche and genes – and if they could convince the public of Khan being a man of a good and noble character they would give him and his family a better chance; and would rather demand his release from any arrest than demanding a penalty.

The public was the tip of the scales, so to say, but Cogley, Selek and the others had to be careful not to antagonize the Federation Council or the members of the court martial if they realized that there was the attempt to manipulate them. This whole thing was a ‘walk on the tightrope’ – an idiom Selek could understand – and it was up to him and some other men to make the whole thing work.

“First we need someone who will publish the whole truth,” Cogley had said, while sipping at his third glass of cold tea. “Someone of the media, yet we have to choose this one carefully. This one
should interview Captain Kirk and Mr. Singh – including visual recording.” His blue eyes had found the Augment – clear but also with silent compassion. “I know that these wounds you received should be no subject of strategy, but – as cruel as it sounds – it will play in our cards. When the public sees – actually sees! – what happened to you, you’ve won the first round.”

Khan had glared at him. “I don’t want their pity!”

“No, but you need their understanding.” Cogley had countered. “And when they realize that this pales in comparison to what you’ve been put through, they will realize why you really ran amok. Amok sounds better than revenge, even if both are linked to each other in your case. Amok runs are old as time. Sometimes they happen because people want to make others see them for once, others are lashing out because of unbearable pain and cruelty that had been bestowed on them. The latter was the matter in your case – and we have to make the people see this; see you! You, the former emperor, yes, but also the man who uses his superior nature to help, to protect and to shield others. The man who risked his own life not only to defend his own people, but also strange ones – members of alien races he never met. And, as far as I understand, in your first life during the twentieth century, you were always the defender, never the aggressor. That people were too stupid to see the difference wasn’t your fault. Hell, if I researched history correctly, it was you who stopped several of your fellow Augments from genocide and other war crimes. This is the side today’s public has to learn of. Combined with what you did within the last weeks and how you still became the victim of this bunch of Judases, you’ll win the people over.”

Cogley’s words had been accompanied by impressing and almost theatrical gestures – a behavior Selek remembered very well from the Cogley of his own time-line when Jim had been accused of carelessness aboard ship that ended with a crewman’s death. The whole thing had turned out to be a bad piece of theatre in the end, and Jim had walked free, yet the old Vulcan still shook his head inwardly because of the dramatic way the lawyer had led the trial. This version of the brilliant man wasn’t any different, but Selek had matured and by now the man’s behavior almost amused him.

After Jim also spoke with Khan about this way of handling the whole mess, the Augment had given in. Now the next steps had to be made and they had to be discussed with the other senior officers; after all they were in the same boat with Jim and therefore with Khan. But knowing that younger Spock was with Sarek at the hospital for the ambassador’s next checkup before Sarek would get into contact with the Augment Otto Hoffmann, and also being aware that McCoy was busy at the hospital, too, Selek suggested delaying the next talk to the other day.

This way he also made sure that Khan got some rest. Despite the Augment leader’s pride and denial of being tired, Selek had only needed one good look to realize that Khan was exhausted, yet Nien didn’t want to retreat into his and Jim’s room despite the heat of the early afternoon. He felt content where he was and obviously enjoyed the warm temperature that reminded him of his home country. He was still unsettled because he hadn’t received some word from Otto or McCoy, nevertheless he fell asleep only minutes after Selek had gone.
Cogley, with a lot of old-fashioned handwritten notes in his hands, excused himself and went back into his room to finish unpacking his things and to do some very needed research. It was obvious that he was eager to get to work. Jim, on the other hand, had nothing else to do than to sit beside Khan, watching him sleep, sweating in the heat and doing some brooding. So, he was indeed glad to spy one of the Vulcan priests still working in the garden, and therefore he went to him and asked him about the plants; learning that not all of them were native to the planet, but also were original Vulcan plants which had been in greenhouses in other colonies. He remained with the Vulcan, who was surprisingly talkative, until the heat got the better of him and he returned to the terrace, emptied a large glass of cold tea and sat down in the shade again – not realizing when he finally drifted off.

Selek went to T’Pau to update her, before he contacted the seat of government, asking his secretary if his presence was required. Satisfied that the colony could go on without him for some more hours, he decided to meet Otto Hoffmann finally.

And, Old Spock had to admit, he was curious. Very curious concerning Khan’s crew and how they would react in this time-line.

ST***ST

Otto held his breath, as in front of him the sparkling light and the bell-like sounds vanished, only to reveal the first cryotube. One look proved that it was in full working order; the monitoring lights were completely on and his keen ears caught the soft humming of the cryotube’s function. Yet he was unable to control his breath or to suppress a shiver as he stepped quickly beside the tube and looked into the view window.

“She is in it, believe me. Khan and I made a list of which cryotube holds whom and numbered the tubes,” McCoy, who stood beside him, said with sympathy.

Otto didn’t respond, but his gaze was glued to the view in front of him.

There, beneath the thin web of frozen crystals, he spied his beloved wife. Her hair, now shoulder-long, was still the deep midnight color he had fallen in love with at first sight, not to mention her angelic features and the full lips, which were usually cherry-red, now pale and blue from the cryosleep. ‘Snow White’ had Joaquin always called her when he wanted to tease her, and just right now she indeed looked like Snow White to Otto; waiting for the moment to return to life.

Without his own doing he reached out and laid a hand on the view window. “Soon, my angel,” he whispered. “Soon we’ll be reunited.”
McCoy closed the distance to him; medical tricorder in hand. “Everything is fine with her,” he affirmed Otto’s silent asking glance. Spock, Joaquin and Sorel stood at the other side of the cryotube that had been beamed into one of the rooms which held the stasis chambers. If something should go wrong with the original wakening process, Katie Hoffmann could be put into stasis immediately.

“If you are ready, Mr. Hoffmann, you can start the wakening process,” Sorel said.

Otto took a deep breath. That was the moment he had hoped for since he climbed into his own cryotube – for him four days ago, in truth two and a half centuries ago.

He realized that Spock stepped to his other side, obviously to learn of the correct way to start the wakening process, but for once he ignored the Vulcan. Remembering the sequence, he had to use, Otto pressed several buttons and instantly the soft humming of the tub changed. The icy web beneath the glass began to melt as the temperature in the cryotube began to rise.

“Heart rate increases steadily,” Bones murmured; never taking his eyes from the med-scanner. “18, 24, 30, 36…” He cocked his head. “Breathe increasing, too, brain function rising.” He glanced at a very tense Otto. “This looks very good,” he smiled, before his attention was driven back to the med-scanner. Still the read-outs were nothing to get nervous. Rather the opposite. The data he received became more and more usual for a healthy human woman.

A low hiss was heard as the cover’s sealing was unlocked; the tube could now be opened any time without risking the inhabitant’s health.

“Pulse at 63,” McCoy informed Otto, who stood there, tense like a bow ready to send an arrow flying. At the same moment the young woman in the cryotube began to move – and with lightning speed Hoffmann bent forwards and pressed the button that opened the cover.

The woman’s eyes flew open – large, blue orbs looked first disoriented and then panicking to the ceiling. Gasping for air she tried to sit up, but her muscles – unused and frozen for so long – didn’t obey her. The next second Otto had her in his arms and lifted her out of the tube; calling her name softly and pressing her gently to him. Katie was trembling like a leaf in the wind – the coldness of the cryosleep was still deep in her cells.

Sorel was at the two Augments’ side with a few steps, and while Bones took new readings with his med-scanner, the Vulcan Healer did something that almost shocked McCoy after he became aware of Sorel’s doing. The Vulcan laid a hand on Katie’s temple, closed his eyes and remained like this
for several seconds, while the young woman became more and more relaxed. Leonard stared at his
colleague with surprise written all over his face. It was obvious that the Vulcan healer sent some
calmness to the young woman by lowering his own mental shields and touching her near the meld-
points of her face. Knowing how much Vulcans valued their privacy and avoided physical – and
therefore mental – contact with any stranger, Bones felt a rush of gratitude that Sorel endured this
certainly uncomfortable process only to help his patient.

As Sorel stepped back and opened his eyes, he caught the Starfleet CMO’s baffled gaze and lifted a
brow. “Is something wrong, Doctor?”

“No, but… sorry, sir, but don’t Vulcans usually avoid such kind of contact?”

“Usually yes, but I’m a healer and a healing process often includes the healing of the mind, too.
Therefore, we are trained to support patients this way.”

Bones gulped and looked at Spock. “No wonder that you aren’t that fond of my work as a doctor. I
lack of a certain detail a Vulcan healer could give you,” he murmured. “Maybe I should ask Uhura
or Jim the next time to hold your hand. Maybe this would help you better.”

“To ‘hold a hand’, Doctor, is similar to ‘making out’, as you would put it,” Spock explained wryly,
as he took a thermo-blanket and wrapped it around the young Augment woman as far as Otto’s grip
on her allowed it. “I don’t think that this would be the best solution – especially when you want to
involve our captain. I may be his T’hy’la, but I think Nyota wouldn’t appreciate it if Jim would ‘hold
my hand’.”

Bones rolled his eyes, while he took another scan of Katie. “I really don’t want to think of what you
just said, Spock – especially when it concerns you and Jim in that way. And, by the way, Khan
wouldn’t be too amused, either.”

Daniel Corrigan, who was also present, suppressed a chuckle, then his concentration drove back to
the two enhanced humans. Everyone could hear Katie’s teeth chattering, while she tried to move
closer to the warm source her husband was for her. With great effort she lifted one hand and clung to
him; face buried at his throat.

“Bio-signals still a little weak, but perfectly fine given her situation,” McCoy breathed in relief,
before he looked at Otto. The large German Augment’s eyes held some moisture he rapidly tried to
blink away – to no avail. One spilled over, and Bones realized that this was the very moment the
world had become mostly all right for Hoffmann again. For the man only a few days had passed
since he and the others had to flee, fearing for their lives; not knowing if they would survive the new
technology Khan had developed, yet using it as their only way out. Now they were on a strange planet among peaceful people who offered them shelter and he held his beloved wife in his arms. Leonard, always more empathic then anyone gave him credit for because of his grouchy moods, could fully understand what had to go through Otto’s mind and heart.

“Come on,” he said gently. “We’ll take her to the room where you woke up first and give her the chance to get warm under some covers. Maybe it would be for the best, if you shared your body-heat with her. Proximity is very important for your people, after all.”

A smile – a bright one – curled Otto’s mouth, before he followed McCoy out of the room; Joaquin in tow. Corrigan, Sorel and Spock remained behind to switch off the cryotube and to let it beam back into the cave. It would be the best if New Vulcan would store the no longer needed tubes until the Federation Council decided what to do with them. Even if the technology was antique, there was still a lot to learn about it – after all, these were the only cryotubes of this special construction which ever existed.

Otto moved with long steps down the hallway and finally entered one of the two large rooms which had been prepared to offer his brothers and sisters a place to regain their strengths and to come to terms with the present. Not hesitating a moment, he placed Katie on his own bed; knowing that his scent that still lingered in the pillows and covers, would comfort her. Only hesitantly did she let go of his shirt, while her eyes opened again – still fearful but clearer by now.

Sitting down on the bed’s edge, he combed his fingers through her thick dark hair and massaged her temples. He heard the monitor of the bio-bed coming alive; reading his wife’s condition and displaying it for the doctor to see, but he did not care. All that mattered was the feeling of being whole again – now, as the bond between them sprang alive again and he thought that his soul could breathe again. He met Katie’s big blue eyes and saw her lips move without a sound coming from them.

“Easy there,” he said softly. “Give yourself a little bit time to wake up. That was a hell of long beauty sleep you got.”

She snorted and coughed a moment later, as tongue and throat – dry from the cryonic – uttered the first sounds.

Bones – holding Joaquin back with one stern gesture – quickly filled a glass with water and offered it to Otto; assuring him, “She woke up the proper way. Even if her organs still have to come to terms with everything, I think a few sips of water aren’t a problem. Just take care that she drinks slowly and not too much in the beginning. We don’t want to ruin the sheets.”
Otto smiled at him; feeling more and more at ease. Carefully he lifted his wife’s upper body and wrapped the blanket more firmly around her, before he took the offered glass and set it against her trembling lips. For a few seconds she sipped slowly at the water; sighing in glee as the fluid soothed her aching throat, then she became more and more aware of her surroundings. The air smelled foreign and somehow everything felt very heavy. Her glance found the man whose voice she had heard and who was an utter stranger to her. Stiffening she looked at him – edging nearer to her husband.

“Don’t worry, my dear,” Hoffmann murmured tenderly. “You are among friends. This is Doctor Leonard McCoy – a new friend of Khan and one of our saviors.” He turned his face towards Bones. “Doctor, may I introduce my wife to you?”

Bones, always the Southern gentleman, bowed and offered her one of his most charming smiles. “Welcome to our world, Ma’am. I’m glad to see you finally awake, and hope you’ll find the peace here you sought for so long.”

Slowly putting a hand on the fingers of her husband which held the glass, she tried to push it away – signaling like this that she had enough water for now. Still feeling like she was sitting naked in the middle of a snowstorm – well, she was nude beneath the covers – she snuggled closer to Otto and regarded the other man warily. He was a casual human, no Augment. This much she could tell immediately, yet the man smiled at her with warmth in his brown eyes.

“Thank you,” she rasped; her own voice sounded strange in her ears.

“You husband is right, Mrs. Hoffmann. Your body, enhanced or not, needs some time to adjust to the new situation. Just give yourself a little time to recover.”

So, the man knew of what nature she and the others were, yet there was no fear or aggressiveness in his behavior or eyes. And his words about her finding the peace she hoped for made it clear that he knew of hers and the other’s past, but he remained friendly.

Curious! Odd even!

Her glance wandered around and tried to catch as much as possible, but except for the stranger – McCoy as she had learned – a row of beds with monitors on the wall and a pleasantly dimmed light she couldn’t see much. Yet one thing was very clear: This was not the Botany Bay!
“Where are we?” she croaked and looked up at the beloved face of her husband. “Where are the others?”

“Most of them are still asleep, but will be woken up within the next hours and days,” Otto explained. “We slept longer than intended,” he added carefully. “Many years have passed since we launched from Earth.”

“How many?” Katie asked; catching McCoy’s perplexed gaze. What baffled him?

“She is definitely fully awake quicker than you,” Bones said to Hoffmann. “Or than Joaquin and Khan.”

“Noonien….” Katie whispered; realizing her leader’s and brother’s absence. “I… can feel him, but he is not near.” She looked questioningly at Otto, who sighed,

“He is occupied elsewhere, and…”

“Occupied – while the most of us are still asleep and about to be woken up?” Disbelief lay on her pretty face.

Hoffmann didn’t know what to say at first. He didn’t want to confront Katie with everything that happened so shortly after her waking up, yet some information couldn’t stay hidden.

“Noonien was injured – but he is doing better by now,” he added quickly, as his wife gasped; worry in her eyes.

“If he would be that better, he would be here,” she replied. “Nothing would keep him away from us in this situation.” She knew exactly how stubborn her brother could be when he wanted to – especially when his family members were at stake.

“He is doing indeed better by now, yet I ordered him stay in bed,” McCoy cut in. He caught Katie’s astonished gaze and assuming what surprised her, he continued with a smirk, “Yes, he indeed obeyed my order, because it was the only reasonable thing to do. He broke his left leg and his left arm. The bones are mending pretty well, yet you can’t hobble around on one leg and crutches are useless when you have only on hand to hold them.”
Katie stared at him; becoming more and more awake with every passing minute. “How did he get injured?”

“He was involved in a fight,” Otto said calmly; driving his wife’s attention back to himself.

At the same moment McCoy heard the door opening and as he turned his head, his gaze found Selek. Alas, Katie didn’t know about being on a foreign planet until now and she knew even less of hers and the other’s host. Trying to warn Selek, he gave him a warning glance, before he looked pointedly down at Katie and back.

Spock Prime understood instantly, stopping where he was and nodded slowly at Leonard; signaling that he got the surgeon’s hint. He saw Joaquin bowing towards him and lowered his own head in a silent greeting, before his attention was called back to the scene in front of him. Curious he watched the two Augments on the bed. He recognized them without hesitation, yet where in his time-line the woman had looked with icy determination at him and the man – Otto Hoffmann – had threatened Sulu, the two enhanced humans were calm and showed even gentleness towards each other.

“Noonien was in a fight?” Katie asked startled. “He loathes fights.”

“You know how he is,” Hoffmann replied; sighing again. “If he thinks the reasons are worth it, he has no problems with joining a combat. Regrettably he wasn’t able to avoid injuries, and stays now in a facility where he can heal properly.” He stroked one of her cheeks gently. “Therefore, he assigned me to wake up you and the others, while Joaquin…”

“Joaquin is here?” she asked; trying to stretch to get a better look at her surroundings.

“I’m here!” a youthful voice said cheerfully. Weiss, who couldn’t stop himself anymore, rushed to the biobed, stopping at the other side, knelt down on the mattress and wrapped his arms around Katie as far as he was possible with Otto still holding his wife.

“Hey, Snow White,” he whispered; giving her a brotherly kiss full of affection on the still icy cheek.

“Hey, Bandar,” she whispered back – and Otto rolled his eyes as he heard his wife calling Joaquin ‘little monkey’ in Hindi again. Yes, little Joaquin had clung to Khan like a monkey after they had rescued him from the labs – and many days afterwards. And just like a young monkey Joaquin rarely sat still, was always bundled up with too much energy and had funny ways to reach a goal. So, as
the boy had been still very young, the nick-name had fitted, but now…? Well, it was their decision how to call each other. And as he saw, how Weiss began to laugh before he pressed another kiss to Katie’s cheek, he realized that the young man was stuck with the nick-name maybe for forever.

Selek lifted a brow. That was a side of Khan’s crew he never thought to see, and not for the first time he asked himself what went wrong all those decades ago in his universe, as Khan Noonien Singh and his crew became Jim Kirk’s most deadly enemies with no sense of mercy, but filled with insane hate.

“How are you feeling?” Joaquin asked; regarding his ‘big sis’ with love.

“Cold,” was the only reply, before Katie shivered even more. Good God, she couldn’t remember ever being that cold.

“Yeah, I know what you mean. Noo said that this is normal. I froze like a puppy first, but here you’ll get warm quickly. Just step outside for a few minutes and you wish you could get back into the next fridge,” Weiss joked, before he looked guiltily at Selek. “Sorry, sir, but… the heat really differs from India. At least from India near New Delhi.”

The Elder realized that now would be the best time to reveal himself and therefore his race to the Augment woman, and answered calmly, “No apology is needed, Mr. Weiss. It’s well known that humans have problems with our climate – here and back on our real home world. Last but not least because of the higher gravity and the dry desert air of the planet.”

Katie frowned. ‘Humans’? ‘Home world’? ‘Higher gravity’? ‘Dry desert air of the planet’? Of what was the other man speaking? And who was here in the room besides McCoy?

Otto felt his wife tensing and before he could react she lifted her head, stretched herself and looked over his shoulder – straight at Selek.

The woman’s blue eyes went wide as saucers as she took in the slender, tall man, clad in bottom long robes; with icy grey hair, a pale yellow like complexion on the ascetically face that had… slanted brows and… Were that pointed ears?!

She looked again, took in the calm yet straight stance, the long robe and the slender long-fingered hands, which were folded in front of him. Eyes, dark as the night, held more wisdom than a man could possible gain in one life time. He seemed to rest in himself; perfectly in harmony with his
It couldn’t be true, yet she uttered the first thing that sprang to her mind.

“An elf?” she gasped; tensing up as far as her still cramped muscles allowed it.

McCoy sighed, while he was under the impression that even Selek asked himself how often he would hear the comparison between his people and some Terran mystical creatures within the next days.

“No, Mrs. Hoffmann, I am not a being of Terran legends or fantasy novels. I am a Vulcan,” the Prime Minister answered patiently.

Otto sat up to give his wife a little bit more room and turned around. His gaze wandered over the old, unknown Vulcan, who stood a few meters away from him – relaxed and proud in one. And his features… Well, Otto thought he had already seen them – or at least this Vulcan resembled someone he met not long ago.

The stranger lifted a brow, as if he knew what Otto was thinking. Lifting his right hand and spreading his fingers into a ta’al, he said, “Long life and peace, Mr. Hoffmann. I’m Selek, Prime Minister of New Vulcan.”

Hoffmann gaped at him. Selek – the counterpart of Kirk’s Vulcan friend from another time-line. Dammit, now he knew whom the old Vulcan reminded him of. He was Spock, only very much older. There was really no doubt about it.

“Sir,” he greeted, “thank you for the hospitality your people offered us.” He watched how Selek simply nodded, before he turned his attention back to his wife. He saw the bafflement on her face, captured her slender hands in his large ones and squeezed them gently. He felt her disbelief, even shock through the bond and said softly, “Katie, that’s what I was about to tell you. We slept long. Very long. For more than 250 years.” He felt her alarm rising, while she stared at Selek; her quick mind already realizing that she faced a true alien. Soothingly Otto tightened his hold around her fingers even more. “We are on New Vulcan, a befriended planet of Earth for almost two hundred years now.”

With effort Katie tore her glance away from the alien man and looked at her husband. “Are you trying to tell me that we are, indeed, on a foreign planet just right now?” she rasped; her voice
heightened despite the poor condition of her throat.

It was McCoy, who answered her, “Mrs. Hoffmann, Earth made first contact in the middle of the 21st century – rather it was the other way around. The Vulcans’ attention was driven to us as we developed a faster than light speed drive. Our people became friends, so please don’t worry. I know this all has to be frightening for you, but no harm will befall you and the others here. You are safe now.”

Katie gulped and felt, how Joaquin stroke soothingly over her bare back, before he pulled the covers higher around her. “The doctor speaks the truth,” he murmured. “You, Otto, Noo, me, the others… We are finally safe and among friends.”

The woman’s blue eyes wandered to him. Joaquin was utterly relaxed and joyful – well, the latter was an almost usual mood for him. Of all Augments he was the most ‘jolly one’, like Paolo once put it.

Selek came nearer and his quiet steps caught Katie’s attention instantly. Over her husband’s shoulder she watched him closing the distance to the bed with graceful movements as if he would soar. She caught his strange scent, but it wasn’t unpleasant, and she also realized that his heart beat was far quicker than that of humans. Interesting!

“I understand that you have many questions, Mrs. Hoffmann, but I think it would be wiser for now for you to lie down and let your body get adjusted to the new situation. Rest is the best for you now. Dr. McCoy and I will answer your questions afterwards.”

Leonard spoke up again, “Do you want your husband to remain here, or shall we proceed with the procedure of waking up more of your people?”

Otto looked up at him. Sure, the CMO had suggested that he should lie down together with Katie to give her some reassurance; on the other hand, time was an important urgency with no-one knowing really when the next cryotube’s battery would run out of power.

The same moment Bones’ communicator beeped. “McCoy here,” he answered the call.

“Scott here, Doctor. Everythin’ all right after we beamed the lass in her icy bed ter the stasis chamber?”
Contrite for simply having forgotten to inform Scotty, who was still down in the cave, about the success, Bones answered, “Sorry, Scotty, it slipped my mind to call you back. Yeah, Mrs. Hoffmann is fine, awake and re-united with her husband.”

“Glad ter hear it.” The engineer’s smile was clear to hear in his voice. “So, do we continue or shall I return ter the Enterprise? The poor lady is still in bad shape and needs me.”

McCoy threw an asking glance at Otto, who took a deep breath. But before he could reply something, Katie croaked, “Go! The others need you. Joaquin can keep me company and certainly can answer my questions.” She looked at McCoy. “I’ll stay in bed and try to get warm,” she promised.

Leonard looked surprised at her. “I’m baffled. You’re the first who actually listens to me without complaining.” He pointed at Otto. “He may be not so bad, too, but Khan and Jim…” He shook his head. “I really ask myself sometimes how these two have survived so long.”

“Ah, the cap’n and Khan ’re not that bad, doc,” came the voice with the Scottish accent through the futuristic mobile-phone that held Katie’s interest for a moment.

“No, they’re worse – together with Spock,” Bones groused, before he turned serious again. “Okay, let’s beam over the next tube.” He glanced at Otto. “Whom?”

Hoffmann took a deep breath. “I think the best would be if you wake up Pablo and Rodriguez. They are familiar with cryonic, too, and can assist you, Healer Sorel and Doctor Corrigan.”

McCoy raised his voice and spoke into the communicator. “Did you hear that, Scotty?”

“Aye! I’ll compare the list and instruct Chekov ter beam the two gentlemen over. Remain on standby, Doctor.”

“I’ll do it,” Bones nodded, before he headed to the door. “You’re coming?” he asked Otto over his shoulder, before he addressed Selek. “Do you want to join us?”

Old Spock inclined his head. “With pleasure, Leonard.” He glanced back at Katie, who couldn’t
help herself but looked again with big eyes at him. “Mr. Weiss and Doctor McCoy are correct, Mrs. Hoffmann. You and the others are safe here. I do understand that this whole situation must be unnerving for you, but I assure you that no harm will come to you here. When you feel better, we’ll answer your questions. Maybe it will be even better when we explain not only to you, but also to a few of your other brothers what happened.”

“It saves time,” Joaquin half joked, half stated.

Selek lifted a brow. “A logical conclusion, Mr. Weiss. Maybe in the meantime you can tell your sister about the world she woke up in. I am sure that a little bit more knowledge will calm her.”

“Okay,” Joaquin grinned, sat down beside Katie, pulled the covers higher over her and took her in his arms.

“Usually it’s me who comforts you,” she murmured, while her gaze still rested on the alien man – that ‘Vulcan’. Selek’s mighty, yet peaceful presence mesmerized her.

“Yeah, and now it’s the other way around for a change,” Joaquin grinned.

She tore her eyes away from the tall figure that left the room together with the others, and who reminded her so much of a character in one of her favorite books. “An alien,” she whispered, while she looked at Joaquin. “It is true? We slept that long and are now on a foreign planet?”

Weiss nodded with a large smirk. “Yeah – and this new world is really cool. I already made friends and… And just wait until you meet Noo. I think, you’ll face a big surprise.”

Rolling her eyes, Katie punched him softly on the upper arm, before she snuggled back into the blankets. “Just tell me about this new world and those Vulcans. They seemed to be… nice.”

Chuckling Joaquin began to speak; telling her about the Federation, other planets and their inhabitants and of a certain ‘spaceship’ that was in orbit…

ST***ST
“I am sure that everything is fine, Nien. Otherwise Bones would have called us.” Jim didn’t know how many times he had uttered those words and he was really convinced of them, but regrettably Khan was not so trusting in Jim’s confidence for once.

“Why don’t they call – at least Joaquin? I know that Otto will have only eyes and ears for Katie, but the boy could give me some information at least!” The Augment leader still lay on the lounger outside in the gardens. The heat hadn’t lessened, not even in the early evening, but the wind that came from the lake was fresher now.

“Maybe they all have their hands full – and you know Jo. When he is distracted he forgets time.”

Khan only growled. “I can feel them. Not only Otto, but also some more of us. Why…”

“There you go,” Kirk smiled. “Then the first woke up and they are okay, otherwise you would sense it.” He reached for Nien’s hand and clasped it in a gentle grip. “Stay calm, honey. I’m sure that they are all right. Bones would have called otherwise and…”

Steps drew nearer; grit scrunched under shoes. Looking in the direction, Jim began to beam as he recognized Spock and McCoy coming nearer. Khan must have identified the two by the sound of their steps, because he sat up quickly and asked before he even turned around, “How are they, Doctor?”

Bones glared at him. “What are you doing out of bed? How did you…”

“Doctor, my patience isn’t the best at the moment!” Khan interrupted him; his eyes seemed to burn as he glared at the CMO. “How are my people!?"

Spock took the matter into his own hands; knowing that it would be far better to give the Augment first the information he desired before McCoy could start his lecture. “Mrs. Hoffmann and four of your other brothers were successfully woken up,” he said barely as he and Bones had reached the two love-birds. “They are going by the names Pablo, Paolo, Rodriguez and Chang, and their minds are clear and fully functional. Obviously, the original waking-up-process is far more appropriate than the method that had been used on you or in Mr. Weiss’ case.” He lifted a brow. “They are all a little bit disoriented and feeling cold, but they are fully awake, resting in prepared biobeds and trying to comprehend that they slept crucial longer than thought and are on a foreign planet.”

“And they were still bombarding Selek with questions when we left,” Bones added with a grin. “I
know how patient Vulcans can be, but I’m really impressed by Selek’s endurance.” He looked at Spock. “He’s even more patient than you.”

“Selek has the experiences of decades he spent with emotional loaded and irrational humans like you, Doctor. I think the Augments demand less of his patience than your counterpart ever did, because their minds are more logical.”

Bones gaped at him, before he growled. “Just give me a minute and you’ll get an answer to that!”

“I fear so,” the first officer deadpanned and clasped his hands on his back. Somehow, he was able to look exasperated and bored in one without any expression on his face.

Khan hadn’t any ears for the familiar banter between the two unlikely friends. He couldn’t repress the sigh of relief, while his eyes closed on their own accord. Feeling like a marionette whose strings had been cut off, he sank bank onto the lounger; fighting a sudden lump in his throat.

Four of his brothers and one of his sisters were awake now. Five more of his siblings were finally out of danger – safe and secure in the good hands of healers. The wakening procedure was successful; it didn’t risk their lives. Soon he would be re-united with his family.

F-i-n-a-l-l-y!

Jim’s hand squeezed his, while he sensed his bondmate’s joy and love. “Told you so,” he whispered. And as he met the slightly moistened eyes and caught the gaze full of relief, faith and happiness, he rose, closed the short distance to Nien’s loungers, bent down and caught his beloved’s lips with his own. Khan’s good hand raised and cupped Kirk’s neck in a lovingly grip; needing his bondmate close.

“Uh, boys, you’re not alone!” Bones protested. “What shall the poor Vulcans think who are working over there?” He pointed towards the priest Jim had talked with a few hours ago, and to another male Vulcan who was helping to remove the garden tools.

“They think what every Vulcan would think being confronted with such a situation,” Spock stated wryly. “Humans! It’s a miracle that they made it so far.”

Bones frowned. “If I remember correctly the history-lessons at school and later in xeno-culture at the
Academy, you Vulcans were far bloodier and more warmongering than we ever were.”

“Yes, but contrary to your people, Doctor, we learned from our mistakes and actually listened to the teachings of a wise man who brought peace and salvation to us.”

“What you are implying? That…” He didn’t continue, because of Jim’s very loud groan and Khan’s barely suppressed laughter. Looking at the couple, Bones met the almost frustrated glare of Jim and the through and through amused glance of the Augment.

“Like cat and dog,” Nien chuckled.

“Yeah, and I don’t know if it would help to empty a bucket with cold water over their heads to make them stop fighting.”

“We do not fight, Captain, we rather discuss some topics,” Spock pointed out.

“Dare to go through with your threat, Jim, and you’ll regret it during your next main examination.” McCoy began to grin, “That is, if you’re able to find a bucket with cold water in New Gol at all”

“Oh, no problem” Jim replied with an evil smirk. “I’m certain that Sukat over there will provide me with a hose pipe full of cold water if I ask him.” He gestured towards the two priests, of which one was watering the garden now.

McCoy’s eyes widened. “Don’t you dare!”

“Dare me,” Kirk grinned.

“It would be a waste of natural resources – and that on a desert planet!” the CMO warned.

“Wow, at least you begin to think logically,” Jim threw back; eyes sparkling with mirth.

“It’s Spock. He begins to rub off me,” Bones defended himself; flicking a thumb at the Vulcan.
“I am certain that this is not the case, Doctor. If you would listen to me only a little bit, interaction with you would be far more stress-free.”

“You admit to suffering stress?” McCoy turned fully to the first officer. “I’m worrying here, Spock. Shall I give you a checkup?”

“Doctor, it is common knowledge aboard that your methods are sometimes more than odd and old-fashioned. So please spare me another demonstration of your shaman hocus-pocus.”

“Shaman…” Again, Bones could only gape at him, before he growled, “You don’t complain about my methods when I have to patch you up. Then you’re good and obedient, but barely once you’re doing better…”

“Ah,” Spock interrupted him; both brows raised for once. “So, you admit that I’m a willing patient who endures your treatment without giving you ‘trouble’?” His lips curled for a second; smugness mirrored in his eyes. “I knew that you would someday admit the truth and that your own complaining was highly overstated.”

“I admit nothing, you damn hobgoblin. Don’t try to turn the words in my mouth, or…”

Jim’s laughter interrupted them. Sitting back in his chair and wrapping both arms around his belly, he had no chance to suppress the laughter and snickers which escaped him, while Khan had closed his eyes and shook his head.

“Someday they will grow up, Jim. Just be patient,” he said; amusement plain to hear in his voice.

“I hope so,” Kirk answered; feeling a lot of tension draining away, while merriment still bubbled in his belly.

Then he saw movement in the corner of his eyes and as he turned his head, he saw Cogley leaving the building and heading towards them. Smiling Jim rose and said, “Bones, Spock, meet our lawyer: Samuel Cogley.”

While Spock simply lifted a brow, McCoy’s jaw dropped again.
“The famous lawyer?” he gasped. “Sweet Lord, Jim, how were you able to hire him?”

“I didn’t. Selek did,” Kirk revealed.

McCoy looked at Spock. “You really would do everything for the kid here, wouldn’t you?”

The Vulcan sighed soundless. “Doctor, as I tried to explain you many times, Selek isn’t exactly me.”

“Bullshit! When it comes to Jim, I do not know which of you two is worse.”

“I’ll take that as a compliment,” the first officer deadpanned.

“Of course you do,” McCoy groaned, then they fell silent as the lawyer drew nearer. Both knew that the late afternoon would be filled with a lot of talking…

TBC…

Chapter End Notes

I hope you liked Katie and the re-union between her and Otto. It also made a lot of fun to write her first meeting with Selek (guess to whom she compares him; snicker), and the meeting of Sarek with Otto.

Well, ‘Spock Prime’ of course remembers perfectly how Khan’s crew reacted all those decades ago in his time-line, and I think it’s a good way for him to re-think everything. The change of the time-line has no influence on the Augments, only on Khan, and that Old Spock watches them interact with each other in a way that makes him realize that they are ‘human’, too, is certainly something that will busy him a lot.

In the next chapter, Wesley will be involved into the ‘big plan’, more of the Augments are woken up, Nien will be re-united with his most beloved sisters and brothers, and between him and Selek will be an interesting talk.

Have a nice weekend – and, like always, I’m curious what you think of the new chapter.

Re-united

Chapter Notes

Hi, my dear readers,

Thank you so much for the many comments you left. I know that you all are eager to read about the re-uniting between Khan and at least a few of his crew, and I can promise that this will happen within this chapter.

There will also be some more about the defense our friends will have to build for the upcoming trial, and Jim tries to get Wesley into the boat, so to say.

I'll hope you have fun.

Love

Yours Starflight

See the end of the chapter for more notes

Chapter 96 – Re-united

It was late in the evening when Spock finally returned to his father’s flat. He had contacted Sarek shortly after he and McCoy had been introduced to Samuel Cogley to inform his father and Uhura about his delay for dinner. It was clear that the talk between them all would need some time.

Now, as he opened the door, he saw Nyota and his father sitting at the dining table that was in order except for a set of dishes which waited to be used by Spock.

Uhura rose instantly, while Sarek turned around. It was obvious that they had been talking in a relaxed atmosphere seeing the casual posture of the ambassador and Uhura’s sparkling eyes. Spock was glad that his father and his future wife got along that well.

“Good evening, Nyota – Father,” he greeted. “I apologize for the delay, but it was necessary to discuss with our lawyer some ideas and first steps to build our general defense for the court martial.”

The communication officer was at his side with a few graceful steps and brushed her right index-
middle finger against Spock’s hand, while she also gave him a human kiss on the cheek. “No apology is needed,” she said softly. “After all our future is at stake.”

Sarek remained seated; his dark eyes watched the couple in front of him. Nyota Uhura may look different from Amanda – last but not least because of their different Earthen heritage – but still she and Spock reminded him of Amanda and himself. Something stung in his side where his heart beat and not for the first time he understood why humans spoke of ‘heartache’ even if it was common knowledge that the heart muscle hadn’t nerves which could ‘ache’. Sarek knew that he would have to take another wife sooner or later – after all Pon Farr was a life-threatening matter for Vulcans until they reached a very old age, and Sarek was far away from belonging on the scrap heap. But he also knew that Amanda would hold a special place in his *katra* (and heart) ‘til the day he died.

Realizing that his son had come over to the table, Nyota beside him, he inclined his head. “Spock,” he greeted. “I trust the talk went satisfying?”

“Yes,” Spock nodded, while he sat down. “Mr. Cogley already constructed a strategy with Captain Kirk and Mr. Singh during this midday and afternoon, and together with Doctor McCoy we canvassed everything once again. It should…”

“Noon?” Nyota interrupted him; eyes wide. And even Sarek lifted both brows.

“Are you speaking of Samuel Cogley, the lawyer who earned himself a certain reputation because of the many successful cases he won?”

Spock lifted a brow. “Affirmative.”

Nyota did her best to stop herself from gaping. “Sweet Lord, how did Kirk manage to hire this man?” She gulped. “How is he going to pay him? Yeah, he doesn’t earn a bad living as a Starfleet captain, but this…” She made a fleeting gesture with one delicate hand. “This must cost him three years salaries or so.”

Spock sighed quietly. “Selek hired Mr. Cogley – and paid him.”

Sarek stared at him intensely. “This sounds indeed like you,” he deadpanned.

“Father, Selek is not me,” the younger Vulcan said; exasperation shimmering for a moment in his
eyes.

“Yes and no – and when it comes to your friends, and especially to Kirk, you stop at nothing.” Sarek lifted a hand as his son wanted to protest. “And that’s absolutely all right. One of the most important parts of friendship is loyalty, and this is displayed not only by you – or Selek in this case – but also by your comrades and friends towards each other and to you.” He took a deep breath. “With Cogley as your lawyer the chances have risen. On what kind of strategy did you agree?”

“One you and Nyota will certainly label with ‘typical Kirk’: Grabbing the bull by the horns.”

“A procedure you hopefully do not intend to do literally. These animals can be quite dangerous,” Sarek murmured; showing his very own kind of humor.

“It’s a win or lose-scenario, but one that promises some successes,” Spock said, while he helped himself to some water from the carafe; not taking something from the salad that still waited for him. As Nyota shoved the bowl nearer to him, he gave her a warm glance. “Later, my dear. First I want to explain our plan.”

ST***ST

Several miles away, Jim and Nien lay together on Khan’s bed in New Gol. They had eaten a light dinner, before Cogley bid them good night and Bones also went to his own room. Joaquin would spend the night again at the hospital; certainly answering the questions of his brothers and sister, while trying to avoid the whole topic concerning Khan and his upcoming trial.

Jim had switched off the light and only the light of the moon still illuminated the room where the curtains at the windows weren’t fully closed. Being nude except for some boxers, he lay beside his bondmate; holding the older man in a tender embrace. Both longed for more intimacy than only a few shared caresses and kisses, but Nien wouldn’t be in any condition for their love games within the next few days, and Jim was for once too reasonable to risk any relapse of his beloved.

So they simply snuggled against each other, relished in being in each other’s arms and enjoyed their proximity. Yet neither of them could sleep. Khan was tired beyond measurement; his enhanced healing abilities demanded their toll, but he was too restless to give into his body’s needs.

First there was the knowledge that four more of his brothers and his dear sister Katie were awake in the hospital of New ShiKahr. He could feel their presence in the back of his conscious, and his soul and heart were too excited and relieved to give him any rest.
But that was not all. There were also the talks with Cogley and the others which spooked through his mind. Yes, he agreed with the planned strategy to make the public their ally, but this would also mean being exposed to the world. And it wasn’t the fact that he was Augment that made him inwardly cringe to tell the public the truth. He was what he was, end of story. No, what really would cost him a lot was to tell others – utter strangers – of what he had endured in the hands of Marcus, Luengo and Section 31.

Khan Noonien Singh was no-one who traded on sympathy. Always he had hidden pain behind a mask of strength and had only allowed himself to suffer when he was alone. Now he would have to reveal his personal hell to every man, woman and child in the Federation – and beyond her borders. Of course the Klingons would learn of everything, too. You didn’t even need a good functional intelligence to gain knowledge about someone as soon as the Media were involved. He couldn’t evaluate the position he, Jim and the others would maneuver themselves with such a method. And, by the way, he feared that Starfleet Command would blacklist Jim and his officers if they confronted Command like this. On the other hand, Khan had to agree with Cogley. To involve the public was the only way to hinder Command sweeping most of the things under the nearest rug, and – as Khan had to admit – Jim Kirk was the favorite of most people by now and the public would defend him with claws and teeth because of everything he had done within the last two years.

This was a dilemma that Khan loathed; especially because he hadn’t any real choice. Of course he wanted to avoid prison or a penal colony, but his priority lay with Jim – that this crazy madcap could keep his ship. And if this stupid strategy was the best way to gain that goal, then Khan would grit his teeth and play along.

As said: He didn’t have any real choice in this matter.

“You’re not happy with the plan Cogley and I came up with.”

Jim’s soft voice tore Nien out of his thoughts, and the Augment leader sighed. “Well, it is a plan after all. And if the people of today are thinking like the people of my days, then we maybe will be successful.”

Kirk snorted. “There speaks the politician. That was the utter ‘yes’ and ‘no’ in one little statement.” Jim’s hand carefully caressed the other man’s back. “You dislike the idea of telling others of what you’ve been through.”

Khan grimaced. “You know me too well.”
“No, it’s simple the fact that I don’t look forward to it, too. I mean, usually I deal with bad stuff on
my own and try to not pull my friends into it. If I fuck up something it’s up to me to make it all right
again, without complaining in public. But not this time. Now I have to play the people to get you, the
others and me out of deep water, and that is something I’m going to loath.” He sighed. “But on the
other hand, if it means making certain that those bastards get what they deserve, then to hell with my
pride.” He kissed Nien’s nose. “And a nice side effect will be that Command will be forced to clean
up the internal mess. Yes, Barnett will do everything in his power to clean the house, so to speak, but
I’m absolutely certain that he and the others also plan to keep some very shitty things to themselves.
And these things are attached to our cases, so we cannot allow them to hide anything.” He groaned.
“What a mess!”

“Just wait until your dear friend Bob Wesley learns of your plan. I think there will be only two ways
he’s going to react: One, he calls for the nearest doctors and puts you into a straitjacket…”

“You, Spock and Selek would protect me,” Jim chuckled.

“You’re worse,” Khan growled, before he bent forwards and brushed his lips over those of his
bondmate’s. “And for that I love you so damn much,” he whispered, before he caught Jim’s mouth
with his.

And then there was nothing to hear for a longer time beside the soft, tender noises of a pair lost in
loving kisses.

ST***ST***ST

“You want me to meet whom?” Wesley had lost track of how often he had asked himself within the
last few weeks if he maybe was still in bed and dreaming, instead of sitting at his desk and having a
talk with Jim Kirk via transmission.

On the screen his protégée grinned that infamous boyish grin at him, while he repeated, “I want you
to meet our lawyer, Samuel Cogley. He, Nien, Selek, Spock, Bones and I agreed on a strategy, but I
think you have to be informed, too.”
Bob blinked a few times. “Samuel Cogley, the star-lawyer?”

“The one and same,” Jim nodded. “And before you ask: Selek hired him.”

“Of course he did!” Wesley groaned. “Who else would get you out of trouble if not Spock – in every form and universe this Vulcan may exist.”

“He’s my friend,” Jim said simply.

“He’s absolutely devoted to you,” Wesley snorted. “I even don’t want to start listening to how often he’s walked the thin line between insubordination and hero-deeds within the last weeks to get your ass out of trouble.” He shook his head and took a deep breath. “All right, I’ll beam down in two hours and meet with you, Khan and Cogley. And afterwards I really want to visit the hospital to have a look at this Otto and the other Augments. Mr. Scott told me, five were woken up yesterday?”

On the screen Jim nodded. “Yes, and Bones is already back in the hospital to wake up the next ones. Scotty has beamed down, too and…”

“Mr. Scott already left the Enterprise?” The Commodore bent forwards. “Brimstone and gall, Kirk, do your officers always do as they please?”

Jim looked very innocent. “Bob, alpha-shift hasn’t started until now and… Don’t gape, of course I track the ship’s time, even when I’m down on New Vulcan and here it is so early in the morning that you can practically call it ‘still night’.” He cocked his head. “As I said, alpha-shift hasn’t started and I’m certain that Scotty checked out with the current officer in command, before he beamed down.” He smiled again. “And, by the way, you already gave your permission to let him support us in this matter. So he didn’t break regulations.”

Bob stared at him, before he growled. “I really ask myself why you need a lawyer. Your talent of twisting regulations should be enough to talk you off the gallows.”

“Thanks for the compliment, but even I have my limits. Cogley is our man, and I’m glad that he is here. Just come down and meet him in two hours. I’m sure you’re going to like him.”
Yes, Bob liked Cogley. The man was dramatic but a genius. This much the Commodore learned within a few minutes. What he didn’t like was the plan.

“Have you lost your mind?” he gasped; staring wide-eyed at Kirk after he had learned from Cogley of the ‘super strategy’ the advocate wanted to use. “They will skin and grill you alive!”

“That would add oil into the public’s flame of anger as soon as everyone learns of what really happened,” Jim smiled. “We simply have to be quicker than Command, then we’ve the advantage on our side.”

“Quicker!” Wesley shook his head; thinking back at the message he received from Barnett several minutes before he beamed down. “I think you’ll have to be very quick, Jim, because I guess the whole theatre will begin sooner than thought.”

Kirk stared at him, as Khan did, while Cogley frowned, “What do you mean, Commodore?”

Wesley pressed his lips into a thin line for a few seconds, before he answered, “Barnett hailed me shortly after our talk, Jim. He asked me about Mr. Singh’s condition and how soon he will be healthy enough to travel to Earth.” His gaze found the Augment. “And I think he didn’t ask only because he indeed cares what happened to you, but also for another reason. I can be wrong, but I think they want to start the court martial as soon as possible – preferably yesterday, so to speak.” He glanced back at the lawyer. “I have a good friend in HQ, Commodore N’Rahl from Andoria. He is in the legal department and belongs to the advisor staff. I contacted him before I beamed down and asked him if he has a clue when the court martial will take place. He promised to keep eyes and ears open and to call me back as soon as he gathers some information.” He leant back in his chair. “I have a bad feeling. One that tells me that there is something cooking and I don’t think we are going to like the taste of said ‘cooking’.”

Kirk crossed his arms in front of his chest. “What do you think could they be up to?”

Wesley shrugged. “I have an idea, but I don’t know if I’m correct. Maybe they want to antedate the whole thing, for whatever reason.”

“They want to deal with it before we can react, and be done with it,” Khan growled. “But not with us!”
“I agree,” Cogley nodded. “We have to act now and…”

“And what do you want to do?” Bob interrupted him. “As far as I understood your plan it depends on time! Time to win the public, time to build the strategy you want to use at the trial. And time is something you obviously will not have.”

Jim narrowed his eyes. “Nien is too injured to travel to Earth and to face trial. Bones, Healer Sorel, Dr. Corrigan – they all will confirm this.”

Wesley nodded. “Yes, they will confirm it – and it will save you a few days. Given Khan’s enhanced nature everyone knows that he will be fit far sooner than any other human.” He looked at Nien. “Right, you maybe can win some more days by simply staying ‘weak’ – something you certainly loath. But in the end, you are going to have too little time to prepare everything for the trial.” He sighed. “I think you’ll have to think of another strategy. One that doesn’t need weeks to get the whole thing going.”

“In other words: The sooner as we start the better,” Kirk said determined and bent forwards; fixing Bob with an intense glance. “Are you going to assist us?”

Wesley grimaced. “Even if I would be so tired of my career as to kill it by helping you by going against Command, I don’t know how I could help you two with this crazy plan. I’m almost in the same boat as you, Jim, because I covered for you and Khan. I…” His communicator beeped and with an “Excuse me!” he answered the hail. “Wesley here!”

“Enterprise here. Commodore, I got a call from the HQ, Commodore N’Rahl wants to speak with you. He said it’s urgent,” a female voice replied.

Jim felt adrenalin spiking his blood pressure and one look at Khan, Cogley and Wesley told him that the other three men were reacting the same way.

“Put him through, Lieutenant,” Bob ordered and waited until a silk-soft voice called,

“Bob? N’Rahl here.”

“Yeah, it’s me,” the Commodore replied. “I didn’t think to hear from you this soon.”
A gentle sigh was heard, followed by the words, “I don’t know if I have good or bad news for you, my friend. Barnett was here only ten minutes ago and ordered us to push the Kirk-boy’s and the Augment’s case forwards. I tried to elicit the reason for the sudden rush from him, but all I learned is that it’s somehow connected with the Klingons and their wish for another attempt at peace-talks.”

Wesley bit his lips and exchanged a glance with Kirk and Khan, who both looked tense at him.

“Is there any chance you can gather some information about it? If the Klingons have connected the peace-talks with any conditions concerning our two heroes it only can be a bad thing.”

“I’ll try to gather some more details, Bob, but I can’t promise you anything. Fact is that Barnett was almost nervous – and that makes me nervous. Usually there isn’t much that can make him react this way.”

Bob sighed. “Okay. Anything you get will help us, so please try to be a fly on the wall.”

Silence. Then, “You know that there is no way for me to change into an Earther insect – even if I have two antennas. So how should I…”

Wesley groaned. “N’Rahl, that is an idiom for gathering information without anyone learning what you’re doing.”

“So why don’t you say it?” came the surprised question, but before Bob could answer, the Andorian added, “You Terrans and your idioms! You never cease to surprise me.”

“Not that Andorians have colorful idioms, too,” Wesley mocked.

A quick laugh was heard, before N’Rahl continued, “I’ll try to ascertain more and call you when I’ve got something. Bye!”

The link was broken before Wesley could say something more, so the Commodore closed the communicator and pocketed it, before he looked at the three other men. “This I’m calling a very big messy shit!”
Jim nodded, while Cogley pondered, “There is only one possibility for the Klingons’ intervention, because that is the only reason why Admiral Barnett wants to rush everything. The Klingons demand Captain Kirk’s and Mr. Singh’s delivery and when they’re in the middle of a trial, Command has the best excuse to decline said demand. Maybe some of those who still think in secret like Section 31 will use the Klingons’ demand to do anything in their power to get rid of you and your friends, Captain. If the Klingons only agree for another attempt of a peace-talk conference when you and Mr. Singh are delivered to them, you can guess how Command and the Federation are forced to decide.”

“Barnett would not allow this,” Jim shook his head. “I’ve faith in his morality.”

“Enough to risk your friends, yours and my freedom and life?” Khan asked.

Kirk stared at him and groaned. Yes, he trusted Barnett, but what if Nien was right. To sacrifice two men – or three or four – was a little price for peace.

Wesley took a deep breath. “I have to agree with all three of you, Gentlemen. Barnett is trustworthy, yet factual constraint could force him to make a decision he loathes. The need of the many outweighs that of the few or of one. Plain and simple. And this new situation alters a lot.” He straightened his shoulders. “We have to hurry to prepare both you and your officers, Jim, and the more I think of your original strategy, the better I understand your plan. And I think I can be of some assistance.” He had the other’s full attention by now, bent forwards, braced his elbows on his thighs and said slowly, “You need someone of the media who publishes everything and pulls the public on your side. And I know someone who owes me – and especially you, Jim – a big deal.”

Kirk cocked his head. “Who do you mean?”

“Remember that the media brought the Klingons attention to your evacuation mission at Turkana? The result was that the Klingon Admiralty sent a whole fleet to Turkana which forced your ship to flee without you and you ending in up Klingon captivity. You only escaped thanks to Khan. The reporter, who started the whole mess by publishing a ‘good story’, goes by the name of Alec Armstrong. I contacted him after his live-report from Risa; wanted to know which asshole had provided him with information about secret missions of Starfleet. He didn’t answer that question – only that he had some sources and there is indeed no reporter in the world who would name his sources.”

“Logical,” Khan commented.
“Yet I don’t know why you bring this stupid idiot up,” Kirk growled.

Bob smirked shortly, “Just wait, son. I tried to make it clear that his report could endanger our flag ship, because if the Klingons got wind about your mission they would move earth and hell to get you – which happened in the end. I was about to send him to jail, but his boss begged me to let the charges drop. Armstrong was devastated when he learned his report made the Klingons fly to Turkana and what happened to you. I let him off the hook, but promised him a career in prison if he dares to spill out planned Starfleet missions in the middle of the war ever again. He was more than grateful that I let him go. In other words: The guy owes me – and he owes you for everything his damn report did to you. I’m sure that he will be more than willing to do us a favor. A favor that also means a big story for him that can make him famous.”

Samuel Cogley leant back on his chair. “You want him to be our media speaker, so to say?”

Bob nodded. “Armstrong is good at his job – overeager, but good. And he has a lot of connections. I did some research before I contacted him to give him the lecture of his life and to point out that to spill out secrets during a war has nothing to do with freedom of the press. He has an excellent career, is always up-to-date and seems to have a lot of contact people which supply him with information. And he belongs to one of the biggest media companies within the Federation. To have him as our mouthpiece will win half of the battle. It will be in his best interest to work with us together, because after the mess he caused he got in a lot of trouble with his bosses. If he now comes with the exclusive story about ‘Sunrise’ and James Kirk, he’ll be rehabilitated within his company and his name and face will be well-known Federation-wide – a bonus he certainly won’t want to miss.”

Jim cocked his head and pursed his lips. “And you really think he would be the best choice.”

“I agree with Commodore Wesley,” Cogley cut in. “Command will try to gag the press as soon as the story is published, but nothing is stronger than a bad conscious and the prospect of amends connected with a career leap. All those qualifications are accomplished by Armstrong – and he has connections which comes in handy. Command will not be able to stop him easily, and if his report is published, the whole thing is a sure-fire success. You maybe can try to silence the press, but never the public’s opinion. And given the fact that you two, Gentlemen, are war heroes, Command would be shooting itself in the foot if they complain too strongly about you.”

Taking a deep breath, Kirk nodded slowly; Bob, Samuel and Nien could see the wheels turning in his head. “I have to thank this idiot for the torture I went through, but if he’s able to help us with the upcoming trial then my torment wasn’t futile.” He glanced at Wesley. “Right, try to find him. The sooner he can get to New Vulcan the better. I’ll inform Selek about Armstrong’s arrival so that Vulcan Security will let him pass through.”

Wesley rose. “Right, I’ll beam back and get everything under way.” He looked at Khan. “I want to
visit your woken-up crew this afternoon. Are you okay with it?”

Nien hesitated. “Except for Otto no-one of them knows what happened to them and to me within the last two and a quarter years, Commodore. I’m certain they don’t even know more about Starfleet then that it is a para-military group that explores space in peace times. Maybe it would be better to give me and Jim the chance to explain everything to them before they meet you. My siblings haven’t the best experiences with military and maybe will have some problems first in regarding you as what you are: An ally.”

Bob rubbed his neck. “So I shall wait a day more?”

“I would appreciate it,” Khan affirmed.

“They have enough stuff they have to deal with first,” Jim supported his bondmate’s request. “Give them a little bit more time to come to terms with the fact that they are more than 250 years in the future on a foreign planet and have to face ‘aliens’. They will learn about the whole mess Nien is in soon enough – and then they’ll be grateful that you are on Nien’s side.” He bent forwards. “Did you inform Command that the Augments are being woken up now?”

Wesley grimaced. “Barnett didn’t ask me about them and so I ‘forgot’ to mention it this morning. I want to inform him combined with my report that Mr. Singh’s family contains friendly people who aren’t any threat for us.” He looked at Khan. “Don’t get me wrong, but some staff officers certainly will get nervous when they learn that your siblings are no longer frozen, and I want to prevent any unpleasant reactions.”

The former dictator lifted both brows. “A logical decision.”

Jim rolled his eyes. “Does Spock rub off on you, what is with you and ‘logical’ this morning?”

An almost evil smirk played around Khan’s lips, as he replied, “Logic isn’t something you can be infected with, but a certain way of thinking. Maybe you should try it from time to time?”

Promptly Kirk stuck his tongue out, which made Cogley stare in utter surprise, Wesley groan and Khan chuckle. “Love you, too,” the Augment said – and this was the point that Bob decided to say good-bye.
As Selek entered the large room which held the already woken Augments, he instantly felt that the
air was tense enough to cut with a knife as an Earthen idiom went. Six more Augments had been
woken up and lay – or sat – on biobeds; obviously listening close to Otto Hoffmann. The Elder saw
worry and anger on their faces, and also concern in the eyes of those who had been brought out of
cryosleep the day prior. Only Joaquin and Otto seemed to be still calm.

The new woken Augments were currently distracted from their discussion with Hoffmann, as they
looked at the Vulcan High Minister – curious and wary in one.

Otto took it in his hands to introduce Selek and the six new woken Augments to each other, before
he said to Selek, “I had to tell them all about Khan’s injuries – that he was wounded in a battle a few
days ago. That led to more questions I cannot answer. It’s not my place to do so, but Khan’s.”

A pale man with white-blond hair sat up from his lying down position. “Otto informed us that Khan
stays in a kind of abbey not far away from here and is on the road of recovery. We want to see him.”

Selek sighed inwardly. He had seen this coming. “I can understand your worry for your leader and
brother,” he said softly. “But you are on a foreign planet, with foreign elements in the air and with a
higher gravity than you are used to. It would be advisable to allow your body to adjust before you
expose yourself to this new world.” He glanced at the other Augments who had joined the world of
the living the other day. “The same goes for you. You may be longer awake than your brothers, yet
your body has stayed so long in cryosleep that you should avoid exertions.”

“We appreciate your concern, sir,” Pablo replied, “but our enhanced nature has already kicked in.
We have no problems with the higher gravity anymore and I’m certain that the air of your planet will
not harm us. Dr. McCoy and Dr. Corrigan are both casual humans and they move freely here
without any obvious health effects. I’m certain that we are able to visit Khan without giving the
doctors more work to do.”

Katie, wearing loose fitting trousers, a blouse and light shoes, stepped towards Selek; his strong
warm presence still fascinated her. “Please try to understand us. For us only two days have gone by
since we fled from New Delhi to Australia, hoping to escape the madness that had spread through
the world and brought so much blood shed. We saw good friends – brothers and sisters – dying;
sacrificing themselves to give us the chance to escape. Kabir, one of Khan’s closest friends, stayed
behind to ensure our flight and we saw him fall. We not only lost our home, but also people who
were most dear to us. The pain is still fresh, there was no time to mourn for them until now. And then
we learn that the man who sacrificed everything to keep us safe was hurt within this new time we
woke up. In a battle, no less. We have to be close to him now. He needs us in a way you maybe are
not able to grasp.”
Spock Prime cocked his head. There was no trace of the icy behavior he had witnessed this woman displaying aboard his own *Enterprise* all those decades ago. This here had to be her true self, the sensitive being that lay beneath the merciless warrior he had come to face in his own time-line. All he saw was a soft pleading in her eyes, paired with strengths but also with sensibility. He had learned more about Augments in those few days than he ever thought to be possible.

“I do understand your need to be close to Mr. Singh, Mrs. Hoffmann – and of his need to have you all around him. I’m well aware of the latent mental abilities your species developed, certainly caused by your enhanced higher brain functions. I know about the family ties which have been secured between you all and that they have to be re-strengthened after all you have been through.”

Paolo frowned. “You know about it? How?”

Selek’s gaze found the other Augment male. “Mr. Singh and I mind-melded a few days ago and from this I learned about his ability to build mental bonds between himself and those he loves. He also affirmed this detail, and Captain Kirk and his officers learned about it as Mr. Singh was able to detect your presence despite some certain distance.” He clasped his hands behind his back. “Besides, Vulcans develop similar bonds with their family and their betroths. Therefore I’m quite able to understand your urges.”

“What is ‘mind-melding’?” Chang wanted to know. “This is certainly not literally meant.”

Raising again an ice-grey brow, Selek replied, “Yes, it is meant like it sounds. Vulcans are able to meld their own mind with that of others. It’s a very personal and intimate procedure, preferably only done with family members or close friends. Sometimes it is also a way to exchange information within seconds without needing hours to talk about certain topics. Mr. Singh agreed to a mind-meld with me when he arrived here. Be sure, I know about his pain and his desperate wish to be re-united with you all, but he also wants you to come to terms with your new surroundings first before you can leave the hospital.”

Joaquin, who sat on his bed, piped up, “Maybe they can just take a stroll over the campus and Dr. McCoy and Dr. Corrigan can accompany them. If they are all right with the heat and the air, we all can visit Noo.”

He ignored the glances of his older siblings – or Rodriguez’s frown. Really, since when did the boy speak for them?
“An acceptable suggestion, Mr. Weiss,” Selek said slowly. “Dr. McCoy wants to wake up five more of your friends, so I think it would be the best to let him first end today’s scheduled processes and afterwards he can watch your bodies’ reaction to New Vulcan’s atmosphere.”

Katie smiled at him. “Thank you, sir.” She pointed at the window whose cover had been removed the evening before. Seeing how clear thinking the Augments became within the shortest amount of time after waking up there had been no need to spare them any psychic stress in having a look on their current foreign home. “Is it really as hot as it seems to be?” Mrs. Hoffmann asked and Selek cocked his head again.

“I want to formulate it thusly: Imagine Earth’s Sahara in the middle of the day and you get an assumption of our climate.”

Katie sighed. “In other words, we’ll stop being cold within a minute after we step outside.”

“Correct,” Spock Prime nodded; amused. “Dr. McCoy always complains of being in an open frying pan whenever he leaves the temperature controlled rooms of the hospital.”

“Well, the comparison forces itself down my throat!” Bones entered the room, wiping his forehead. “And even temperature controlled it is still damn warm here.”

“I would have nothing against some more warmth,” Chang grumbled. “I’m still cold as though I’ve been in a fridge for hours.”

“You were in a biological freezer for over 250 years. This place can do that to a guy.” Bones deadpanned, before he looked back at Otto. “We’re ready to wake up five more of your siblings. Are you coming?”

Rodriguez cut in, “Doctor, we want to visit Khan as soon as possible. Maybe it can be done in the later afternoon?”

McCoy frowned. “You are all in no condition…”

“Leonard, they are,” Selek interrupted him softly. “At least the lady and the gentlemen you woke up yesterday. I can understand their urge to see their leader and brother. Their needs are similar to what we Vulcans have to endure at the moment.” He looked the younger vision of his old friend deep in
the eyes – eyes which had, like Young Jim, the wrong color, yet the man was still the same he had befriended and trusted more than the half of his own life.

Leonard held the intense gaze for a few seconds, then he realized to what Selek was referring to, sighed deeply and nodded. “All right.” He turned around and pointed at the Pablo and the others. “But don’t kvetch if you tire down quicker than you thought possible, because a walk through the Sahara would be easy compared to that damn heat outside.”

“It isn’t that bad,” Joaquin grinned; chuckling at the CMO’s grouchy mood. “You can adjust to the climate nicely given some time.”

Bones gaped at him, then he rolled his eyes. “Rrright, enhanced biology.” He shook his head. “Nevertheless, I’ll give you some tri-ox before you can make a sick-bed visit. Augmented or not, you’ll be happy to get the stuff. Be sure of it.”

ST***ST

Khan lay on the lounger in the garden of New Gol; resting. At least, he tried to rest, but after so many days of doing nothing else than staying in bed-like furniture, he was ready to crawl up the walls – even after he wasn’t stuck his room anymore. And he was absolutely certain that his back was about to break in two. Hell, even the backside of his legs and his butt hurt by now, and despite the fact that McCoy injected him with something to loosen up his muscles he felt stiff as a stick.

But that was only the tinier part that turned his mood sourer and sourer.

He was bottled up with a lot of frustration – frustration big as Mount Everest as Jim would have put it if he had voiced it at all; which he didn’t. Kirk knew when a tease was welcome and when not; well most the time, mind you.

There were so many points which put oil on the flames that the Augment was surprised that he hadn’t exploded by now.

There was the upcoming trial and, of course, the strategy he had been forced to agree to.

Two, he couldn’t be present when his siblings were woken up. That was currently the biggest part of his frustration. For over two years he had waited for those few days in which he could wake up his
family and be re-united with them – in freedom and without any danger. And now, when the time had come, he lay here on this damn lounger and had to let others do his job. He was useless at the moment, and this detail especially built his anger up for days now.

And Jim wasn’t here to lighten up his mood. His bondmate was with Cogley in the lawyer’s room to give more information concerning his personal case. Yes, of course that was more than important. Everything that could help Jim to stay out of prison and maybe lead to him keeping his ship, was for Nien more important than his own case. Yet Kirk’s absence bothered him, because Jim would keep his mind occupied and would make him stop brooding too much.

And since when did he need someone to get his own feelings and mood under control? Alas, just look how deep the mighty fall once they were caught in the net of love!

He felt a wave of warmth, understanding and love washing over his senses and realized that Jim must have detected his sour mood. The gentle attempt of his bondmate to calm him was met with a groan, followed by a deep sigh. It didn’t cease to amaze him how good this bond between them was for him.

Family-ties…

Family…

Hell, why didn’t anyone call him to keep him updated of how everything went in the hospital? Hadn’t he already rebuked Joaquin the last time as he – Khan – waited impatiently for some news about Otto? Hadn’t he told McCoy yesterday that he had also waited for news regarding Katie? And now they were doing the same: letting him wait.

He hated to wait – at least when there were other options.

Communication devices had been developed at the end of the 19th century, for God’s sake, and today they were even easier to handle than back in his own time. Why could no one just call him? Yes, he could make a call himself, but hell alone knew what was going on at the hospital and if his call wouldn’t interrupt some important measurements.

Alas, maybe this was the case why no-one called: Something bad happened and they tried to lessen a catastrophe. Maybe…
It gripped his subconscious and bloomed into knowledge: The presence of Joaquin – and others of his siblings.

They were near – here, somewhere!

Using his good arm, Khan tried to get into a sitting position and turned around as he heard soft footsteps drawing nearer. His eyes widened as he took in the figures, which just left the building through the terrace door. The first was Joaquin, pointing nonchalantly at him with a big grin before he glanced back over his shoulder with a, “There he is!”

The rays of the late afternoon sun bathed the beloved faces of Katie and Otto, Rodriguez, Paolo, Pablo and Chang in a deep orange light, while their familiar voices reached Nien’s ear. A relief and joy so intense he became dizzy for a second, engulfed the Augment leader, as his mind and heart called only one thing: They are here! They are safe! They are well!

He wasn’t even aware that his eyes moistened as Katie stormed forward, raced down the few steps of the terrace and headed toward him; hurling both arms with a squeak of glee around him as soon as she had reached him. Ignoring the short pang of pain in his rips and his left arm, he lifted his good one and hugged her back; drinking in her so deeply missed presence, her familiar scent, the beating of her heart and her quick breath.

She was alive and well! One of his most dearest sisters, who had been at his side since he turned four years old, was finally no longer endangered and with him again!

Katie hugged her brother and leader; trying to be gentle but also unable to stop herself from squeezing him. The last time she had seen him, he had nodded at her from his position at the controls while he initiated her cryosleep; not knowing if she would wake up ever again. The horror of the flight from New Delhi and the witnessing of Kabir’s death were fresh in her mind as the icy sleep overwhelmed her. And now she was awake, on a foreign planet with kind aliens, with her siblings partly already woken up and re-united with her dearest brother. And they all were safe! They had left war, pain and sorrow behind!

The Augment woman was drunk with relief.

“Just let the man live. He’s still needed,” Paolo’s deep baritone grumbled with amusement beside them and as Khan looked up over Katie’s shoulder, his eyes found the deep brown ones of his Italian brother. Behind him Pablo, Rodriguez and Chang grinned broadly at him, while Joaquin leaned
against the trunk of a tree and smirked the most impish smile Khan had ever seen on the boy’s face. Weiss mouthed a “Surprise!” at him and he rolled his eyes. To let him dangle for hours only to surprise him afterwards was so typical for the rascal, Khan was about to scold himself that he hadn’t thought about that possibility instead of worrying his head off.

“I’ll get you for this,” he growled, which made Katie lose her grip around him and Joaquin laugh out loud.

“I did nothing,” Katie said with her most innocent battering of her eyelashes.

Khan grimaced in amusement. “That would be the first time, dearie, but just right now I meant the boy over there.” He glanced at Weiss. “Didn’t I tell you to call me?”

“Yeah, but there was so much to do…” Joaquin shrugged.

“Yes, obviously,” Khan grumbled, then he gasped as he was embraced from behind; knowing instantly that it was Rodriguez.

“Hey there, tiger,” the Spaniard said softly into his right ear, and Nien found himself leaning back into the strong arms of his brother, while Pablo bent over Katie and ruffled his hair as if he were a five year old churl.

“You cut it,” Pablo mused and the former dictator rolled his eyes.

“Very observing, brother dear,” he chuckled, while he offered his good hand towards Chang, who took it, while Paolo pushed Rodriguez aside to press a kiss on his leader’s temple. Khan couldn’t help himself. His eyes closed in contented delight to have at least six of his brothers and one of his sisters with him.

Katie sat down on the lounger’s edge; her butt pressed against Nien’s left thigh, while she wiped her forehead. As she caught his questioning look, she sighed, “We have been warned, but the warmth and the higher gravity is really something you have come to terms with.”

Khan nodded. “Yes, it needs some time – even for us. But you’ll have all the time in the world to adjust to this century and to our current location.”
“It’s a desert planet, isn’t it?” Paolo asked, pulling a chair closer and sitting down.

“Yes, mostly. Here, around the lake, is the more pleasant area, but I’ve been told that on the other side of the mountains a large desert extends. It’s not unlike the planet that original bore the Vulcan race.”

“Well, at least it’s habitable and the people here are nice.”

Khan snorted. “Nice isn’t the word that comes first to my mind when speaking of Vulcans, because they really can get on your nerves with their damn logic, but they are peaceful. That is a lot more you can state about humans – even if they have changed within the last century or so.”

Pablo looked around. “At least they understand how to create a nice garden.”

“I agree,” Chang said. “The plants are utterly foreign, yet everything fits together and builds a nice picture.”

Nien smiled; knowing that those two would be interested in the plants immediately. He gazed at Katie. “And what do you think of your surroundings?”

A soft chuckle escaped her. “Well, I imagined Rivendell being different from this here – more green and with more water. But at least it is indeed a ‘Homely House’, offering shelter to those who are in need for it.”

Otto and Khan groaned, while the others began to snicker. All of them knew about Katie Hoffmann’s weak spot for classical fantasy literature.

“Hey,” Katie protested and nodded in the direction of the house, where the tall frame of Selek stepped onto the terrace this moment; a young man with blond hair at his side. “He does resemble Lord Elrond a little bit – with the gentle behavior, those long robes and those pointed ears,” she defended herself; anything but serious.

Khan looked over his shoulder, and saw Jim and then Selek who lifted a brow. The Augment leader sighed deeply. “Sister-dear, you should know that these ears not only look like those of an elf, they
are also likewise as keen.”

Katie’s eyes widened. “You think… he heard me?” she gasped.

The former dictator nodded slowly. “Definitely!”

The Augment woman blushed and rose hastily, as the young man and Selek approached the little group. “High Minister, I apologize. I didn’t mean to offend you,” she said quickly; embarrassment plainly written on her face.

Spock Prime sighed inwardly – this comparison again! But, like before, it amused him to a certain degree. “Mrs. Hoffmann, I’m familiar with the works of J. R. R. Tolkien, and also know of the fictional character of Lord Elrond. I take your comparison as a compliment, because Elrond was scientist and healer in one and I was in my younger years a scientist, too. And, by the way, it fits a little bit. As far as I remember Elrond was called ‘Half-Elf’, because he had human blood in his veins. The same goes for me, so your simile is not wrong.”

Katie’s cheeks remained red, while she smiled at him and bowed her head. “Thank you, sir.”

The young man, who was remarkably handsome, looked with striking blue eyes at the Vulcan and teased, “At least ‘elf’ sounds nicer than ‘hobgoblin’.”

Selek’s face remained expressionless, yet there laid a mixture of fond exasperation and melancholy in his eyes. “That depends on the point of view, Jim. Leonard loved to call me a ‘hobgoblin’ and seeing that these creatures could be helpful sprites as long as you treated them with respect, I was sometimes indeed like a ‘hobgoblin’ for him.” For a second mischief appeared in his eyes. “And if he treated me with disrespect he got his payment.”

Kirk began to laugh; remembering the quarrels between his own Spock and Bones far too well. “I know what you mean. Spock also gives Bones back as good as he gets.”

“I am pleased to hear this,” Selek nodded satisfied, while Khan and Joaquin snickered.

Then the Augment-leader turned serious. “Jim, it’s good that you came.”
“Selek informed me quickly of your siblings’ arrival and I didn’t want to miss the chance to say hello,” Kirk answered; looking curiously at the men and woman he hadn’t meet before. And even enhanced as they were they watched him with the same curiosity.

“Jim,” Khan continued, “please meet my sister Katie, and my brothers Chang, Rodriguez, Pablo and Paolo.”

“Welcome to this century milady – gentlemen,” Jim smiled and nodded towards them.

“My friends,” Khan added, “please meet our savior and protector James T. Kirk, captain of the starship Enterprise that is currently in the planet’s orbit.”

Rodriguez was the first who offered Kirk his hand. “We already heard about you. Nice to meet you, Captain.”

“Indeed,” Pablo said, while he shook Jim’s hand, too. “Your officers think highly of you.”

“I would be nothing without them,” Jim played down the issue.

Katie offered her hand too. “Nice to meet you, Captain,” she said kindly. “May I ask what the ‘T’ stands for?”

“Trouble!” Khan deadpanned before Jim was able to answer.

Joaquin began to snicker again, while Kirk groaned, “Really, Nien, I am not that bad!”

The former dictator gave him a very special sweet smile. “You, Kirk, draw trouble like light draws the moths.”

“Look who’s talking,” Jim teased back. “I don’t want to start counting when and where you’ve elicited trouble.”

“Yes, mostly because I had to save a certain troublemaker’s neck,” Khan smirked. “When your dear
Vulcan brother isn’t near it’s up to me to get you out of the deep water you land yourself in.”

“And you love it!” Jim joked.

“What, that you’re a magnet for trouble or that I have to rescue you?”

“Both,” Kirk grinned. “Just admit it!” He pointed a nonchalant finger at Khan, who rolled his eyes, before he carefully reached with his injured arm towards Kirk, who gently took his hand.

“You know that this is not all I love,” the Augment leader grumbled.

“That’s good to hear,” Jim answered softly; winking at his lover.

The other Augments – except for Joaquin and Otto, who already knew about the two – stared with big eyes at their leader and the young captain. Here was something going on, this much was for certain. But it was Katie who concluded the truth first.

She took at the loving gaze her brother gave the younger male, looked at the entwined hands and then at the tender expression of the captain. “You two are a couple!” she blurted out.

“What?” Rodriguez was certain his hearing had failed him.

Pablo gasped, while Paolo blinked in confusion at Katie. “You think so?”

Chang cocked his head, watched his brother and leader, pursed his lips shortly – and broke into a broad grin. “You finally decided to be done with the single-life?”

Nien smiled up at him. “Jim caught me good.”

“Rather he caught me first, literally,” Kirk explained. “And then we realized that we are far better off without trying to kill each other, I let him go, he saved me later, and then… well…” He shrugged. “Passion turned into more.”
“‘Into more’?” Rodriguez wheezed; staring again at Khan as if he was seeing a ghost.

Nien nodded seriously. “Yes, Jim and I are bondmates.”

“Bondmates?” Katie clapped her hands and whirled around to Otto. “That is the surprise you spoke of! Noonien finally found someone for himself and they are already bonded.” As her husband simply smiled at her, she began to laugh, bent down and pressed a kiss on Khan’s forehead. “Congratulations, brother-dear. It was about damn time!” Before he could reply something she straightened her slender frame and turned towards Kirk. Their gazes met. “Well, when you’re Noonien’s bondmate, formalities are no longer necessary.” She stepped towards him and gave him a quick peck on the left cheek. “Welcome to the family, James.”

Kirk, a little bit caught off-guard, grinned at her. “Thanks. Please call me Jim.”

She nodded. “Gladly. Just call me Katie.”

“With pleasure,” Jim replied, bowing his head.

Pablo and Paolo were the next who closed the distance to the young captain. “Alas, I never thought to see the day when someone would be able to catch Noonien in this way,” the Italian said; still baffled but smirking now. “You may be a casual human, but after all I’ve already heard about you, you have to be someone special. And you are Noonien’s bondmate. That’s good enough for me to agree with Katie. Welcome to the family.” He pulled the younger man into a rough embrace and Pablo followed the example.

Chang and a still gaping Rodriguez joined them. “Don’t let Noonien ride over you roughshod. He can be very commanding,” the Chinese joked; flicking a thumb at a thunderstruck Khan, who protested,

“I’m not ‘commanding’!”

“Oh, your brother has a point here,” Jim teased his beloved back. “It’s fortunate that I’m the one in command, so…”
Nien gasped for air. “Aboard your ship, but here…”

“Here it is Bones who commands you around,” Kirk snickered; clearly enjoying the bickering.

“My ass,” Khan growled. “And, by the way, he lectures you often enough, too.”

“He is my CMO; it’s his duty to drive my attention to certain things where the health of the crew is concerned.”

“Ha, most times he complains because you run with open eyes into the next danger. And now we’re back to the topic that it’s up to me to get your lovely butt out of the mess.”

Jim bent forward and he whispered to Chang. “But at least he loves my butt.”

The Chinese began to laugh, before he answered, “Don’t bother with Noonien’s grumbling. It’s his way to show that he cares.”

“I know, my friend. Believe me, I know!” the young captain chuckled.

Rodriguez had finally overcome his surprise and looked Kirk up and down. “I get the feeling that there is more to you than good looks, wits and a title.”

“Aw, thank you,” Jim smirked back; his blue eyes flashed with a silent challenge. “That shows the trust you have in your brother’s choices.”

Khan groaned, while the others laughed again.

“Don’t get yourself into a combat of wits with Jim,” Nien advised Rodriguez. “The chance that you’ll lose is really high.”

The other Augment pursed his lips shortly. “Maybe,” he said, before he offered his hand. “Noonien chose you, so… welcome to the family.”
“We chose each other,” Jim replied, while he shook Rodriguez’ hand and held his gaze firmly.

The man nodded. “Of course,” he grumbled.

Selek watched the scene carefully. Rodriguez was difficult; this much he realized. But at least the other Augments accepted Jim, and the old Vulcan was relieved. Maybe in this time-line Khan’s crew would really fit into this century…

TBC…

Chapter End Notes

Yeah, that was the more happy side of the re-union, but this will change when the others learn what happened to their beloved brother and leader…Especially Rodriguez is going to be difficult. He is the oldest of the Augments and even if he has accepted Khan as his leader, his protection instincts are very strong towards him.

I loved to bring up Katie’s comparison between Elrond and Spock Prime, and New Gol / New Vulcan and Rivendell. I imagined these scene weeks ago, and it was fun to write it. I hope you liked it.

I also planned since ‘Turkana’ to bring the reporter in person into the story concerning the court-material. For me the way of defense was clear from the beginning and that would need a man from the media to support our friends. Well, indeed he has to make up for what his reportage did…

In the next chapter the more dark part of the re-union will take place, but without too many details – after all we all knew about it. But there will be other twists which come up.

Parallel there will be fun later, because Wesley finds Alec Armstrong and he doesn’t come alone to New Vulcan. And the Augments are going to meet The Shadow-gang…

As always I’m curious what you think of the chapter.

I wish you now a nice rest of the weekend,

Love

Yours Starflight
The question of all questions

Chapter Notes

Hi, my dear readers,

I really wanted to post the new chapter at Halloween, but I found no time to re-read it and to publish it, because our plans for Halloween were altered, as at our friend’s house (where we wanted to have the party) a water-pipe burst was about of flushing the party away, and so we changed the plan and had the party at our house. Yeah, our friends came to help decorating and to do some cooking, yet it was a little chaos (laugh, it fits).

But now, at least, I found some time to re-read the chapter – thanks to Cerridwen again for her super job of beta-reading – and to put it online.

One little thing in advance: The meeting of Khan’s crew and The Shadow-gang will take place in the next chapter; in the actual one the questions of all questions will be asked. I can promise you a very romantically and sweet scene – after the big clash of feelings in the beginning, as the other Augments learn of Nien’s fate.

I wish you fun,

Love

Yours Starflight

See the end of the chapter for more notes

Chapter 97 – The question of all questions

The Augments, Jim and Selek spent half an hour more in a comfortable atmosphere – last but not least because Khan avoided certain questions concerning the two years he was already awake. And there were other topics to speak about – like the Federation, Starfleet and New Vulcan.

And because of the latter, they finally reached the point to which Khan couldn’t keep them anymore in the dark. After all, Nero’s arrival from the future and him destroying Vulcan had been the reason for Marcus to explore deep space more, where he found the Botany Bay. As the talk reached this point, Khan took a deep breath, exchanged a knowing look with Jim and said quietly to his siblings,

“You may think that it was luck under the given terrible circumstances that Marcus found our ship and realized who and what we are. But believe me, that we are all here and the last of us are about to
be woken up, is not his merit. Far from it. It turned out that he was our enemy – one of the worst I ever encountered. And we can thank Jim that you all and I are still alive.”

Katie, who had placed herself beside him on the lounger where he had first made room for her, cocked her head. She had sensed that something nasty was going on – and that Khan, Jim and his officers where in the middle of it. “What happened?” she asked. “Has it to do with the fight you were in and where you got hurt?”

Noonien grimaced. “This here,” – he lifted his left arm – “and the other injuries are minor compared to other things.” He felt and saw the other tensing up even more, and braced himself for what would come next. “I’ll tell you why it needed more than two years until you finally were woken up – and why I’m facing a trial within a few weeks.”

Rodriguez frowned. “A trial?”

Khan nodded. “Yes, trial,” he confirmed. “And before you protest or make up any decisions without hearing any of the closer details: it’s justified to bring me to court. At least, this time it will be a real one – with a damn good lawyer on our side.” He saw the shocked faces and moistened his lips. “What you will hear now will certainly enrage you, but please hear me out before you do something we all would regret later. I’ve got a second chance to set everything right, and I don’t want to lose it, so please stay calm while I explain everything.”

Pablo, Paolo, Chang and Rodriguez, who sat – like the others – on chairs which had been brought by several priests half an hour ago, crossed their arms in front of their chests like one man, while Katie suppressed a shiver. Her fine instincts sensed her brother’s inner turmoil, and if something stirred Khan’s emotions like this even after two years, what he was about to tell them had to be bad. Very bad!

With a calm, almost emotionless voice the former dictator told them of everything that happened to him and therefore later to Jim and Federation within the last 27 months. He didn’t want to hurt his siblings by telling them cruel details, yet he couldn’t spare them. He told of his amok-run in London and San Francisco – of him going more or less insane when he thought he had lost them all aboard the Vengeance. He spoke of the fight between Jim and him aboard, and how he wanted to take revenge on the younger man after he escaped Section 31 for the second time, only to give into his already long-living, foolish desire for the stubborn, proud, courageous and handsome captain after he smelled his own blood in the veins of the younger man.

And then how everything changed as he learned that his family was still alive and that Kirk had died protecting his ship, his crew and the Augments; only revived by McCoy trying the impossible by using Khan’s blood on him. This knowledge had heralded the start of something new – which changed everything. He told his siblings about his flight from Earth, from him joining the gang of
some crazy but genius warriors who fought against Orions – alien pirates who were worse than the pirates of Earth history. He spoke of the war and how he couldn’t help himself but try to protect those who needed help. He explained how he and Jim communicated in secret, how Kirk was caught by the Klingons and how he – Khan – threw all caution out of the next air-lock and came to the younger man’s rescue.

At this point he asked his siblings for forgiveness, because with him risking his life like this he had also risked theirs. Murmurs like, “You did what you had to do,” or “You followed your heart; that’s nothing new’” were the answers, while Chang grumbled, “Well, you knew how much the captain was needed to gain advantages against those Klingons – and you needed him to find us, so no offense taken here, Noonien.”

Khan frowned. “I have to admit that it wasn’t those thoughts which drove me to Turkana to get Jim out of the hell he was captured in. It was because the mere thought of losing him… scared me.” He lowered his head. “I only realized how deep he was under my skin when I learned of his upcoming fate and… reacted on my feelings.” He glanced up. “I knew that I was risking you all with my decision, but…” He swallowed. “I’m sorry, but I couldn’t let him down. I couldn’t let him die without…”

He felt untypically shy and bit his lips – something that told the others how much this dilemma still haunted him. Katie, who was pale as a tablecloth after everything she had already learned, laid a soft hand on his arm and said gently, “You couldn’t let Jim die without at least trying to save him, no matter the costs. Some of us were on the same receiving end of your love only weeks or a few months ago – at least it still feels like we only went into cryosleep yesterday.” She took a deep breath. “You don’t stop at anything if someone, who is dear to you, is in danger. And for this we love you.”

Nien felt relief and anguish in his chest, mixed with regret and an odd kind of helplessness. He had put Jim above his siblings in those moments. His sister and brothers were a little bit shocked about it, but they weren’t angry with him. This much he could see and feel.

“As, thanks,” he croaked and quickly cleared his throat, before he continued his tale. He told them about Aldebaran, of his time with Jim there and how they became real lovers. During this part Kirk threw cautious glances at Selek, who simply listened with a stoic expression, yet his eyes were warm as he looked at the younger version of his T’hy’la. His own Jim had never found the one true love to share his life with; those whom he would have chosen were killed or left him. Old Spock couldn’t help himself, but as he once again witnessed the deep feelings the Augment leader held for Kirk, the Elder was glad that at least one thing went better within this time-line.

As Khan told about the incident with Koloth, Jim began to join the tale, and both let the other Augments in on everything that happened afterwards. They spoke of Jim’s friends and how they rescued but also found out about them; of Bob Wesley, the Commodore who risked court martial too
by covering for Khan after he learned about the cruel fate the Augment had faced; of Selek who agreed on helping them – and they told about the last battle after said Commodore had rescued the admirals and the delegation; revealing the still on-going betrayal within some ranks of Starfleet.

The sun was setting as the two men came finally to the end. They had told them everything, even the current status of the defense they had agreed on.

For almost a minute the five Augments, who hadn’t known of Khan’s martyrdom until now, didn’t say a word. Numb with shock and fury they simply looked at their leader and brother, before Rodriguez whispered, “They tortured you, abused you – us all – as lab rats, killed eight of us, hunted you like an animal – and they dare to put you to trial? Even after they learned of what really happened to you?” Rage shimmered in his eyes, while his balled fists trembled.

Khan sighed. “I did kill a lot of people, Rod, even if it was within an amok-run. The outcome is the same: I killed! Good people who didn’t even know about me or what Marcus was up to in reality. Yes, Marcus and his fellows drove me thus far, yet that is no excuse for what I did. We are enhanced – superior. I should have able to control myself, but I didn’t. Two times I lost control – and it resulted in death and bloodshed.” He shook his head. “I failed our purpose – I failed you.”

“You didn’t fail us. You endured this hell to keep us safe,” Paolo said quietly; pale and shaken. “What happened is not your fault.”

“It was – partly at least,” Khan replied softly.

“Don’t blame yourself for what they did to you. They made you snap and had to pay the price for it. Hell, it’s them which should be arraigned, not the other way around!” Rodriguez snarled.

“And trial they will face,” Jim cut in; not able to keep silent anymore. “At least those who still live will have to answer to justice. Not one of them will be spared – and the charges are grave. In Nien’s case they include unlawful detention, slavery, torture, blackmail, running of illegal experiments, abuse, murder of eight of his crew, and a lot more. And that’s not all. Luengo, Norton, Styles and their fellows are accused of attempted genocide and high treason – something that can indeed end in a death penalty. There are only a few crimes left which are sentenced with death. High treason – and above all in the middle of a war – is such a crime.”

“And you think they will indeed show real justice to Noonien?” Rodriguez snapped. “The trial will be on Earth, led by humans. Do you really think they will judge him like they would judge on of their own?”
“You and the others are humans, too, Rodriguez, don’t forget it,” Jim said firmly.

“Wasn’t it you who made us into a completely new species?” the Augment growled. “Or did I misunderstand something of your tale?”

“You understood it only partly correctly. It was Marcus’ successor who stripped you all of being counted as humans – but you are sentient beings, which fulfills the frame of being an independent race. This way Selek could grant you asylum so that no one, not even the Council, can lay a hand on you. It also gives you all a chance to build a life of your own and to be accepted within the Federation as a sentient race that is endangered – which gives you a special protection status. You and your siblings are free to move and to live wherever you want as soon as your people are acknowledged as your own race. And until then you are under the protection of the Vulcans – and no-one in his right mind will try to make you leave by force.”

“Yeah, we just heard how smoothly that ran as this Norton-guy attacked the Vulcans’ government to get Khan, you and the others.” He glanced shortly at Selek, who simply lifted a brow but remained silent. The old Vulcan knew from experience that it was better to let Jim Kirk handle an overemotional dialog partner, instead of joining the discussion. Jim was the better candidate to put oil on the troubled water, as an Earthern idiom went.

“I said, ‘in his right mind’,” Jim replied. “Norton knew that he was about to lose everything and that made him crazy enough to break dozens of laws, for which he will pay. He, and those who hurt you. Yes, there may be some other people who think you all are dangerous or want to gain power and might by playing foul, and these people have and will always exist. But this will not stop others from being open-minded and defending the rules and laws. And they are good laws. They pledge tolerance, equality and freedom. Every man and woman despite their race and heritage have the same rights within the Federation, and still can follow their own ways, traditions and religions. The rituals of other planet’s original habitants are accepted, like marriages and partnerships. The planets remain sovereign with their own governments, free to live like they want, yet they are all under the protection of the Federation and benefit from free trade and exchange of culture and knowledge. Some of them have their own defense forces, others are under the protection of Starfleet – the real Starfleet, not that heap of insane guys which tried to change the fleet’s purpose into militarism. We not only speak of liberties, freedom and justice anymore, we live them! And I want you to become a part of this – to be an addition in the big family. And as far as I understood Nien, this is something you always wanted: To be a part of the world. Here you get the chance – but you have to realize and to take it!”

His voice was strong and powerful – the sort of voice that was convincing and spoke of the deep persuasion within Jim Kirk concerning the Federation and her system. Selek pursed his lips as he listened to the passionate speech of the young man; remembering far too well a situation in his own time-line when his Jim had spoken this way to a bunch of natives on Omega IV, which followed a path of honor and belief almost similar to the American Natives. Kirk had citied fiercely the preamble
of the Constitution of the United States of America. The belief of the right of voicing opinion freely, the right of tolerance, acceptance and equality for all people and not only for the ‘chiefs’, was deeply rooted in James Kirk. It was a spirit that came from his ancestors and drove the man’s decision over and over again. Just like he did with Khan in this time-line, just like he did now as he tried to convince the Augments to have trust in today’s justice. This firm belief had made Old Spock’s Jim Kirk go on and on, no matter what. And this same strength was in this younger version.

Khan had listened to his bondmate’s passionate speech with a mixture of interest and awe, even if Jim’s point of view and belief in the Federation’s goodness was nothing new for the former dictator. Jim Kirk was an idealist, someone who wasn’t easy to convince, but the moment you won him for an idea, a goal or a path, there was no going back for him. It made him something that was called a ‘good man’, someone you could trust utterly – and for that Khan loved the younger man even more.

“Jim is right,” he joined the discussion between Rodriguez and Kirk. “I’ve lived for two years in the Federation and it’s a good regime. It is based on true democracy and allows its members to live their own ways of life, offers protection and accepts even the strangest beings as long as they don’t try to threaten the Federation. It’s something politicians spoke so often of in the 20th century, but they never managed to come even close today’s standards. And justice is a great part of all this – a justice that considers the idiosyncrasies of the different races and is based on respect.”

Khan rolled his eyes. “You can’t make a whole world responsible for the deeds of a few people, Rod! It would be exactly what those butchers did back in our time when we were forced to flee. Yes, Section 31 and those scientists abused most of you and did unthinkable things to me, but they are criminals. And as such they are treated now. They not only harmed us, but were ready and partly did sacrifice their own colleagues and even whole populations of other planets and colonies. They provoked a war against a warlike opponent only to manifest their own power and might, and even wanted to eliminate the enemy completely by developing a pathogen that would be immune to almost everything – using our DNA for it. It would have cost billions of lives within the Klingon Empire, and just imagine what would have happened, if this cursed pathogen would have spread further – into the Federation and the other regimes like the Romulan Empire. Trillions of innocent people would have died. As cruel and bad as it was what those people did to us, it pales in comparison what they planned to do with the knowledge they tried to gain by using us as lab-rats.”

Rodriguez bit his lips. “I don’t deny this, Noonien. To hear what they planned and what it would have taken on in the dramatic scale in the end, makes me sick. But we aren’t speaking about those insane guys, but about you – what will happen to you?!?”

Khan almost smiled. Rodriguez was always the protector – the big guy who wanted to keep his siblings safe no matter what. Yet this topic was too severe to mix it with private fondness. So, he took a deep breath and answered, “As I told you: I have faith in the Federation’s real justice – and I
will accept whatever they decide.” His gaze wandered over his other siblings. “And no matter what will happen to me, you go on with your lives!” He raised his voice as some began to protest. “You heard me! We escaped Earth to find a new place to live in peace – or to return when the times had changed. Both have happened now. The Federation offers a place to live in acceptance, and the times have changed. More than 250 years can do this, and I don’t want you to waste your chance. I didn’t develop and constructed the cryotubes and the Botany Bay only that you hurl the first real given chance to live a worthy life out of the next airlock.”

“You are our brother – our leader,” Pablo said softly.

The former dictator nodded. “Yes, and as such I acted and overreacted, for that I will take responsibility. That has nothing to do with you. Of course, you can cross your fingers during my trial, if you think that helps…”

Some chuckles were heard.

“… but come fire or high water, you will do nothing to intervene! I fought for two years to get you out of the frying pan you were in without even knowing it. I endured all this only to get you to safety and to protect you. Don’t let my pain be in vain, because you dump the chance I finally gained for you.”

Jim didn’t need to be an empath to see the other Augments fighting inwardly with their deep love and loyalty towards Nien, and the stern logic of his demands. If he would be in his beloved’s place he would say the same to his friends – would order them to take the given chance, yet he knew that neither Spock, nor Bones, Scotty, Uhura or the others would let him down. And herein lay a certain danger, because if the Augments would rather sacrifice their own happiness for their leader, everything would be over for them. And for him and his officers, too, because if he – Jim Kirk – had taken Khan and the other Augments under his protective wing only to set a bunch of vengeful superhumans free, Command and the Council would have his head for it.

“Guys,” Kirk said softly, “I know how you feel.” Instantly he was the focus of everyone. “I know that your love for your brother demands that you defend him, but he is right. There is only one path left – for him, for me, for my officers: To face justice. The other path would be to flee and to hide for the rest of our lives. And if we would choose this way, your entrance into this century, into this world, would be far more difficult – full of stones and borders. Authorities would observe you, waiting for Nien or me to contact you. If we don’t face justice, there wouldn’t be any peace – neither for you, nor for us. I rather fight for my freedom than gain it by running away and hiding. And I think the same goes for Nien.”

“Absolutely,” Khan nodded; fire in his eyes. “I’ve been forced to run away three times in my life, and it turned out to taste bitterer and bitterer. The first was as we fled the labs in New Delhi, the
second time was as we were forced to escape from Earth and the third was as I had no other choice than to flee from Marcus’ secret station near Jupiter; thinking that you all were dead.” He looked sternly at his siblings. “You all know me. I’d rather fight than run away. I always fought for some or all of you. This time the battle will be for me and me alone, because if I go to trial I have the only real chance to someday be a free man again and to live at Jim’s side. Don’t ask me to throw this chance away.”

His siblings looked silently at him; understanding his motives. Then Katie touched his hand.

“Do you really think they will treat your fair?”

“Yes,” Khan nodded. “Jim and I will make certain that they have no other way than to play by the written rules.”

“How so?” Paolo asked quietly, who loathed the idea of watching his beloved brother on trial for something he wasn’t really to blame for.

“We got the best lawyer possible,” Jim raised his voice to speak. “He is someone every judge will have a tough time with. He’s already worked out a strategy to get Nien, my officers and me away from the gallows, so to speak. And we have mighty supporters, whose words weigh a lot.” He glanced from one to another. “Have some faith. Today’s justice isn’t comparable anymore with what you knew in your time.”

At the same moment Jim’s communicator beeped and with an “Excuse me,” he pulled the little device out of his trouser pocket and opened the frequency.

“Kirk here.”

“Wesley here. Jim, I only wanted to inform you that I reached Armstrong. He is on Aldebaran at the moment, working on a report about yours and ‘Sunrise’s’ fight against the Klingon aggressors. He was happy to learn that he can speak with you, because he still has a damn bad conscious. And when I told him that you wanted to give him an exclusive interview and that it would be him who reveals the real face of ‘Sunrise’ to the public, he was in flames. He said he would hire a charter craft and will come to New Vulcan as soon as possible.”

Jim grinned. “Excellent! Thank you, Bob.”
“No problem, son. I’ll inform Selek and…”

“Not necessary. Selek is sitting a few meters away from me and heard everything.” He looked askance at Spock Prime, who simply nodded, before he raised his voice,

“Commodore Wesley, please inform my staff of the charter craft’s ID-number and name as soon as you learn of it, so that Security lets Mr. Armstrong pass through.”

“Of course, Prime Minister,” Bob called back.

Kirk smirked again and winked at Khan, who smiled back. “All right, Bob,” Jim said into the communicator. “Thanks for the news. How is my ship?”

“Mr. Scott still ‘nurses’ it, as he puts it and your crew functions flawlessly, yet the mood is dark because they’re worrying for you and the others.”

“Tell them, Uhura, Spock, McCoy and I are well and that Nien is doing better. I’m sure that will lift the mood.”

“What do you think I already told them? But it doesn’t change much. Heck, my crew is loyal, but yours is crazy,” the Commodore sighed. “So, have a nice evening and greetings to Khan. Wesley out!”

Closing his communicator, he looked at Nien, who snorted, “One thing more, we have in common: Both our crews are crazy.” He glanced fondly at his siblings, who grimaced or shot him exasperated glares.

“So, any further questions?” Jim asked and it was Paolo, who cleared his throat; obviously trying to change the topic to give them all time to calm down.

“Well, we already used it to get to here, and it wasn’t unpleasant, but care to explain again how exactly this odd transporter-beam-device works?”

Joaquin began to laugh, while Otto grumbled, “Believe me, you don’t want to know.”
The Augments returned to the hospital half an hour later; still shaken, furious of what had happened to Khan, and rattled despite their enhanced nature. Nien was glad that Joaquin went with them to stay another night with them; knowing that the boy could tell good things about this new world which hopefully would calm them down some more.

Selek accompanied the enhanced humans, spoke quickly with McCoy to learn about the status of the other Augments which would have been woken up in the meantime, and finally returned to his office to get the daily updates of the colony. Bones arrived in New Gol in the evening – tired but also curious about how the visit went. Of course, he had sensed Rodriguez’s and the others’ inner turmoil, and so he wasn’t surprised as Jim and Khan told him of the more difficult part of the talk.

Cogley, too, joined them for a few minutes, before he retreated to his own room to do some more research. Kirk asked him what details were still unclear, but the lawyer only smiled and answered that preparation was everything in such a case.

The night went by uneventful, except for the fact that neither Nien nor Jim slept well. Too much was on their mind – in Khan’s case good things like the re-union with some more of his siblings, but he dreaded the prospect that he would have this discussion still more times until all of them were informed.

Jim, who felt his beloved’s unease, was simply there for him; pulled him into his arms and tried to project love, safety and comfort through their shared link; the faith that everything would turn out well in the end. Words weren’t necessary this time, and after two hours of simply lying there, Khan finally fell asleep. Kirk, always the one who took responsibility even into his well-earned sleep, followed him at last, too.

The next morning Bob called again; telling them that Armstrong was on his way since the prior evening and would reach New Vulcan within four days. It was impossible that Command would set the trial until then, especially after Wesley got the official inquiry of Khan’s condition and Healer Sorel and Dr. Corrigan gave a quick statement that their patient wasn’t even able to walk one step alone at the moment; the suffering from the TBI didn’t even need further explanations. Well, the latter was highly overstated, but Sorel ‘overlooked’ this detail in Corrigan’s report and sent it to the Enterprise, where Wesley was ‘very busy’ so that he could only pass the massage to the HQ hours later.

Spock and Uhura visited the two bondmates in the late morning and stayed for almost two hours. Nyota was excited, because her family would arrive two days later – earlier than thought, and Jim
was glad for her. He and Spock spoke about some further details concerning the official bonding-ceremony, and this way Kirk learned that Sarek’s brother Silek and his wife T’Ylle were on their way to New Vulcan, too, and would arrive in three days.

“Hmm, family-reunions seem to be trendy at the moment,” Khan chuckled, who listened to the talk while lying – again – on the lounger outside in the garden.

Nyota grinned at him. “If this continues, New ShiKahr is going to need another hotel.”

“How went your first reunion with your family members, Mr. Singh?” Spock wanted to know, and Khan took a very deep breath.

“First it was happy, then they learned what happened within the last two years, and I think it was Jim’s hell of speech about the Federation and today’s justice, and my command to stay calm that held them in control.” He grimaced. “We are very protective of each other…”

“Tell me something new,” Uhura sighed.

“… and especially Rodriguez thinks he is still the big guy who has to shield his little brother – me – from the big, bad world.”

“At least he came to terms with us both being bonded,” Jim said, and Uhura looked curiously at him.

“I really would have loved to see their reactions as they learned about you two.”

“Katie was all ‘yeah, finally’, the others congratulated and Rodriguez reacted like a father who had to face the fact that his ‘little boy’ was taken with another one, but then he accepted it,” Kirk explained.

Spock nodded slowly. “Something like this was to be expected. Mr. Singh displays open tolerance towards ‘casual’ humans, but I think some of his family-members hold some grudges against them. Understandable after all they have been put through.”

Surprised Khan looked at him. “And how do you know what my family and I have been put through
during the last weeks on Earth?"

The Vulcan’s dark eyes met the ocean-colored ones of the Augment. “Have you forgotten that I mind-melded with you, Mr. Singh? Directly after your surgery you were so far gone that Dr. McCoy got a flat-line from you and the resuscitation attempts more or less failed because you had given up. I found you lost deep in your own mental landscape after I had to cross a labyrinth of hallways of a lab in which you and your siblings obviously had grown up. After I convinced you to accompany me back to the land of living – to Jim – we had to walk back the same path, and there I saw what happened in the last hours before you fled India towards the Botany Bay. I saw the palace in flames, heard the screams and watched the butchery that took place there. So, I have, indeed, some knowledge what you and your siblings had to endure.”

Nien watched him closely and saw for just a second remorse and loathing in Spock’s gaze which were meant for the ‘liberators’, not for the Augments. And he remembered all too well the Vulcan’s presence in his mind, even if he had ignored this special experience until now. “It was dark times,” he murmured.

Sarek’s son nodded. “Yes, not unlike the times on ancient Vulcan before Surak brought peace and logic to us. Yet the insanity of raging hate, of losing everything your race calls ‘humanity’ never ceases to surprise me.”

“And yet you experienced something likewise during our first encounter,” Khan murmured.

Spock took a deep breath. “Yes,” he said calmly. “Ripped bonds can do something like this.”

The former dictator cocked his head. “As I already pointed out: You do understand why someone is pushed so far that he runs amok. It happened to you, too.” His words were not meant to poke in an old wound or to hurt otherwise. Spock knew that Khan simply stated facts.

“Yes, to both,” he affirmed. “And I plan to testify this at the court martial.”

Uhura and Jim stared wide-eyed at him, while Khan lifted both brows. “You would admit to the whole world that emotions got the better of you?” he asked, disbelieving.

“It would be illogical to keep facts a secret when there is the chance that my statement could support our defense. And, as far as I understood Jim and Mr. Cogley the day before yesterday, a part of the strategy is to take away the people’s apprehension concerning you and your people, Mr. Singh.”
When a Vulcan can ‘lose it’, then why not an Augment, too, even if we both belong to ‘superior species’ – no offence, Jim, Nyota.”

Kirk only shook his head with a grin; lifting both hands in mock surrender. Uhura simply rolled her eyes and murmured something like “At least not in bed,” under her breath, which made Spock’s ear tips tint green and Khan had to chuckle.

“I don’t think that was meant for our ears,” he said to Uhura, who blushed a little bit beneath her chocolate skin.

She cleared her throat. “Well, he can be a storm, don’t think otherwise. Silent waters are deep.”

Spock shot her a glare, she answered with a sweet smile. “I have to agree with Mr. Singh, Nyota. This is private and Vulcans…”

“Are tight-lipped.” Jim smirked; winking at his friend who suppressed the urge to throw a look towards the skies. Then Kirk turned serious again, “So, concerning our defense, maybe we should…”

He stopped himself as Spock and Khan turned their heads simultaneously and looked back towards the building. Samuel Cogley stepped out on the terrace, spied them, waved and neared with large steps. “Good day, all together,” he greeted, before offered his hand to Nyota. “We haven’t met until now. Samuel Cogley, at your service.”

“Nyota Uhura, chief communication officer of the Enterprise – on relief actually,” she added; smiling at him.

“A pleasure,” the lawyer answered; giving her a formal hand kiss.

Uhura felt amusement rising in her. Old-fashioned and dramatic – right!

Cogley drove his attention towards Spock. “So, this is the lovely lady you’re going to marry in a few days. Congratulations. I always knew that Vulcans appreciate beauty in their own ‘logical’ way.”
To his horror Spock felt anew his ear tips heating up, and as he saw from the edge of his eyes how Jim pressed his lips in a thin line to suppress laughter, eyes dancing with mirth, the heat spread even to his cheeks. Surak be with him, he was blushing like a boy before his Kash-whan!

Either Cogley decided to ignore the Vulcan’s reaction or he simply overlooked it – either way he continued with his topic. “The marriage is most fortunate. Whatever the judge will decide, he can’t separate you two. Vulcan bonding rituals include mental links and therefore they are liable to special protection due to Federation law. You two will stay together, no matter what.” He frowned and looked at Jim and Khan. “You two are bonded, too, right?”

Kirk nodded, while Khan cocked his head.

“But not officially.” It was a statement, not a question the lawyer voiced.

The enhanced man lifted both brows. “What is your point?”

“You two are bonded in the Augment-way, but regarding the fact that your race, Mr. Singh, isn’t officially approved even now, I doubt that justice will take consideration of your status should it come to the worst. An official marriage would prevent any attempt of separating you two – especially if New Vulcan will approve the mental abilities of your people, Mr. Singh.”

Silence.

With a few words Cogley had been able to let a bomb drop none of them had seen coming.

“You think we two should marry officially?” Jim asked; pointing at himself and Khan, who looked as baffled as Kirk.

Samuel nodded with a joyful smile. “Yes. There is no way that your relationship can stay hidden. Then it’s just as well you make it official – and it would bring you a lot of advantages.”

Jim still gaped at him, before he closed his mouth with an audible ‘click’. “But… if we don’t mention it no-one…”
“Oh, come on, son! You two are so smitten with each other that you have to be blind not to see what you two are to each other,” Cogley sighed.

“Even Admiral Barnett realized the true nature of your relationship, Jim. One look at you as you sat at Mr. Singh’s sick-bed was enough to tell him everything.” Spock agreed with the lawyer; looking at Kirk.

“See?” Samuel nodded. “That you two are lovers is clear as the skies at midday, and I’m sure that the prosecution will try to use this against you. Emotional compromise and all that nonsense. But if you two are married it will show everyone how damn serious your relationship is – that it is not a short affair that gave both of you advantages during the last weeks. And that Mr. Singh has latent mental abilities which binds you two to each other will result in the fact that they can’t separate you once you are officially married.”

“But it can also be interpreted otherwise,” Khan mused. “For example, that I influenced Jim by using mental powers – that he didn’t act on his own free will.”

“Did you?” Cogley asked bluntly and watched with interest how the eyes of the Augment began to flame like a wild fire.

“No! Of course not! I despise such humbug!” Khan growled. “And, by the way, I love Jim too much to do something like this to him.”

“Yes, but you didn’t love him from the beginning. As far as I understood you two hated each other, which turned into passion and then into more. And before this ‘more’ you had plenty of opportunities to use your abilities to manipulate the captain.” He lifted a hand as Khan was about to shout at him. “Don’t get me wrong, Mr. Singh. I do believe you, but the proxies of the prosecution will ask you exactly those questions. You have to be prepared – and have to stay calm.”

“They could try to use everything that happened between us personally against us,” Jim grumbled, and Cogley nodded.

“Exactly. And this is the reason why we have to be prepared. We must find a way to force them to meet us on our level and for that we have to create precedents – like, for example, the approval of the Augments’ latent mental abilities. That leads me to the next point. If this fact is officially acknowledged, it will support our defense concerning Mr. Singh’s amok-run.” He looked at Khan. “You told me that you have a thin link to your siblings – that you are able to detect their presence. That faded as you fled the secret space station near Jupiter, having heard prior how Marcus ordered his subordinates to kill your crew. This is why you were convinced that your brothers and sisters
were murdered. This pain combined with the shock of severed bonds drove you over the edge.” He glanced at Spock.

“Mr. Spock, I regret to stir up a not really healed wound, but please tell me: As Vulcan was destroyed, did you feel the loss of family members – besides that of your mother?”

Jim saw how his Vulcan friend tensed and his expression closed, yet Spock answered calmly,

“There is not one Vulcan, who hasn’t felt family ties being torn apart. Many of us died in the aftershock, others are still being treated because of it.”

Cogley nodded; his eyes were full of sympathy. “Thank you, Mr. Spock – and I’m sorry for bringing this topic up, but it had to be done.”

“There is no need to apologize, Mr. Cogley. I know to what you are up to. You want to compare Mr. Singh’s loss with what we faced the moment Vulcan was destroyed. He was in shock, which explained his amok-run, even if the latter came days later.”

Samuel smiled slightly. “Yes, that’s my intention. Everyone reacts differently after such a mental shock. Some hide, others rage. And some hide first and lash out later – and that was what Mr. Singh did.” He looked at Khan again. “Was Admiral Marcus aware of your family ties?”

“We never spoke about it, but he was highly intelligent. I think he assumed something like this,” Nien answered quietly. “And, by the way, his scientist tested and monitored me for weeks. Dr. McCoy recognized my higher brain activities immediately and deduced that my instinctive reaction towards Jim, despite us both being unconscious was the result of it. That there was already a bond between us. No offense against Dr. McCoy, he is an excellent surgeon, but he is no scientist. If he came to this conclusion, Marcus’ staff must have realized it, too.”

“So, we can say he tortured you in a double way by killing eight of your crew and watching you suffer not only because of the mourning but also because of ripped bonds,” Cogley nodded. “In Xeno-biology as school kids we learn that you have to treat species with telepathical abilities carefully. I think they also teach a little bit about Vulcan family ties and that a Vulcan goes in shock if he or she loses a bondmate?” He looked questioningly at Jim, who affirmed,

“Yes, this topic was introduced at school. And in the Academy, it was enlarged.”
Samuel smiled again. “So, Marcus knew what he did – which makes it even worse, but also explains Mr. Singh’s reaction. So, a part of our defense lies in the official approval of the Augments’ mental abilities.” He glanced at Spock. “Any chance that High Minister Selek or the Lady T’Pau can be involved in this procedure?”

The first officer lifted a brow. “Selek and I mind-melded with Mr. Singh and can affirm that at least he has some small telepathic abilities. Dr. McCoy and I also witnessed at several occasions that both Mr. Weiss and Mr. Singh sensed the other one’s feelings – especially in hazardous situations or when one of them was emotionally stirred up.”

“Perfect,” Cogley grinned; rubbing his hands. “This all shows that the main fault lay with Marcus, and not Mr. Singh.” He cocked his head. “And referring to you two, Gentlemen, you really should think about a true marriage. Though by your people’s standards you’re already married to Captain Kirk, aren’t you?” he asked Khan, who sighed,

“What we share is even more than a simple marriage. We are bonded to each other – a link only death can sever.”

Cogley nodded enthusiastically. “Superb! And congratulations, by the way. But your status has to be officially acknowledged by the authorities, only then it can be taken into consideration by the court martial.” He pursed his lips for a second, before he mused, “Hell, if the Vulcans can testify to the mental abilities of your people, Mr. Singh, and also the special connection between you and Captain Kirk, then they could also marry you two – under Vulcan law.” He glanced at Spock. “I think I have to speak with High Minister Selek about it. As far as I understand, you all are staying under his special protection. He would know who to involve implementing all this.”

Jim groaned. Old Spock had already done so much for him, he didn’t want to ask more of him. On the other hand, Cogley was right.

Uhura had listened closely to everything, before she now raised his voice. “All advantages aside, this is something you two shouldn’t do out of rational reasons. The question is: do you two want an official wedding at all?” She looked at Kirk. “Please do not misunderstand me, Jim, but you never struck me for the guy who does monogamy.”

The young captain rolled his eyes. “To tell the truth, I used to think of myself the same way, but everything changed after Nien and I got together. He’s all I need and I can think of.” He looked at his beloved – the man who had stolen his heart and was firmly anchored in his mind and soul. And then the words tumbled out of his mouth without his own doing.
“I cannot imagine a life without you anymore,” he said softly. “You’ve become everything for me, and… we are already bonded. A marriage would only officially confirm what we are already for each other.” He moistened his lips. “I… I never thought to be at this point at all someday. I never had a real family, and any relationship I had ended sooner or later. I thought I wasn’t born to be a husband one day, but you proved me wrong. You showed me that I can be bonded and still be free, and… I cannot bear the thought of losing you. And…” He chuckled nervously. “And it has a nice sound; husband. So, yeah, I would love to marry you – if this is what you want, too.”

Khan couldn’t help himself. Even his enhanced mind and nature couldn’t prevent that his heart had begun to beat faster. Technically he and Jim were already ‘married’, but to make it official with a ritual… Alas, this fluttering in his belly couldn’t be butterflies, but it damn felt like those pretty small insects had found in his stomach a new home!

“Have you just asked me for my hand in marriage?” he asked; his voice suddenly hoarse.

Jim shrugged, nodded, smiled, rubbed his neck, smiled again – and was lost for words.

Spock was about to turn around and to lead the others away to grant Jim and Khan some privacy, but Nyota prevented it the moment she threw her head back and groaned, “For God’s sake, boys, just do this special moment right! Hell, even Spock went down on a knee, so…” She made a fleeting gesture with her right hand and nodded invitingly to Kirk, who blinked uncomprehendingly.

“What?”

Uhura sighed. “For a genius you can be really dumb, Kirk. Hell, you began to ask him so bring it to a correct end. And because you are the only one of you two who is in the condition to be able to do this whole ‘kneeling-thing’, so go for it.”

Still Jim stared at her in confusion, then it hit him. Almost hastily he rose from his chair; cheeks flaming red. His own heart seemed to thunder in his ears, as he realized what he was about to do – that he was proposing to the one being he loved with everything he was. Gulping, he closed the distance to his beloved and bent one knee; gripping Nien’s good hand in the process.

“You wanted to know, if I just asked you to marry me, and the answer is ‘yes’.” He gulped again, as he watched his bondmate’s eyes beginning to shine with an inner light he hadn’t seen before. And… were those tears which welled up in the ocean-colored depths? Yes, obviously. And they were Jim’s undoing. The next words came over his lips without further thought. “I love you, Nien. I never thought that I could love someone the way I love you. You are the other half of my soul. You make me whole – and I would be the happiest man alive to call you ‘husband’. So… would you marry
Khan Noonien Singh had often heard those words – among the people in his palace, on the streets, one time even among his family as Otto asked Katie to marry him. In secret dreams he had longed to hear those words meant for him, too. That someone would want to share their life with him not to gain advantages or power because of his nature and status, but because out of love. True love! He knew that some lovers he had taken to his bed had hoped for him to utter these words, but he never had felt attached enough to someone to choose him or her as a partner for life.

But this had changed now – because of this beautiful, fierce young man in front of him with the eyes of the skies, the hair of the sun and a heart made of gold.

Jim Kirk was different than any other one Khan had ever met.

This proud young man had caught him with his ability to see behind façades and his drive to do what was right; no matter what. The moment he first had laid eyes on Jim – out of breath, holding a phaser rifle and having just check-mated Khan’s vessel at the HQ – he had felt an odd connection towards him. Their gazes had locked only for two or three seconds – seconds in which Khan had felt for the first time something new after the terrible pain his belief of his family being dead had brought him. There had been an odd challenge, paired with something that drew him to his opponent. As he saw him again on the Klingon homeworld he had realized that this young man was just like him: He never quitted – and he loved as deeply just as Khan loved: With everything he was. The blows Nien had received had hurt – of course – but somehow, he had sensed that he had earned them. He had seen the same pain in Kirk’s eyes that haunted him for days now.

It was the understanding of this special pain that brought them together in the end. It hadn’t been the fact that Khan’s blood flowed now in Kirk’s veins or the passionate minutes on Kirk’s bed as he had seduced the younger man against his will. No, it had been the moment Jim reached out to him as the anguish had become too much, and the silent offer of sharing a drink – something that held a special place in the Indic culture Kirk certainly hadn’t knowledge of.

It had been the first step, followed by their crazy love-making afterwards. Jim had accepted him in those hours as a lover; forbidden or not. Later he had lied for him to cover for him – and then, after Turkana, Khan had fallen prey to the incredible charm, warmth, humor and above all forgiveness the younger man showed.

They were so alike in many ways – and still there were differences between them that made them hold each other on the tips of their toes.

Jim was brilliant; a genius in his own way. He was clever, loyal to the death, stubborn like a mule and generous even towards his enemies. He could be a fierce warrior, but also an overgrown boy
who teased, joked and drove his superiors almost nuts. Like a storm Jim Kirk had ripped into Khan’s life, had tumbled it upside-down, had gotten hold of him and had pulled him with him – straight into this crazy world full of stars, strange beings, dangers and liberty. He had made Khan do things the Augment had never thought to be possible. Alas, he had even accepted Kirk being his captain aboard the Enterprise – and it had felt right. Still did! On the bridge Jim was his commanding officer – someone he would follow and protect without second thoughts. In private they were equals, never trying to order the other one around but willing to listen and to tolerate the other one’s opinion.

Jim Kirk had shown him a life worth living, risking his own freedom for it. Now they were bonded – their souls entwined ‘til the day of death, and nothing felt as right as this. So, to make the latter official – to show the whole world that they belonged to each other – was something Khan had not dared to hope for, but it was now offered. And it made his heart, mind and soul sing in joy – enhanced or not. How should he put this offer down? Never, of course.

Reaching out carefully with his broken arm, he cupped Jim’s still heated cheek with his hand; his thumb drew gentle circles on Kirk’s sun-kissed skin.

“You were the first who treated me as a human being in this world. You reached out to me to sooth my pain, covered for me and stayed with fierce loyalty to us. You showed me how misled I was, took my hand and led me back to the light – away from the icy darkness life had become for me. You gave me new hope and showed me the true meaning of love. Your tenderness wiped away the cruel scars I received from Marcus and the others; your love chased away the demons which possessed me. You changed me into something better and tamed the monster I was about to become. You woke something in me I thought I had lost: the ability to trust and to love someone besides my family.” He bent forwards and pressed his forehead against Jim’s; smiling as he saw a single tear running down his beloved’s cheek. “Yes, I want to marry you in the human way – or the Vulcan way, or whatever it takes to make the whole world see that we are one in two bodies and that no-one can ever tear us apart.”

To his horror Jim had felt his throat tightening at Nien’s first words, and then the lump in his throat almost hindered his ability to breathe. Nien’s gentle admission of love brought tears to his eyes and he knew that he couldn’t utter one sound in the moment except for a sob, so he tried to stay silent. He succeeded only partly and he knew that the others heard him, but he didn’t care. All that mattered were those lovingly blue-green eyes in front of him, the gentle rumble of Nien’s baritone and those words which changed everything again. Their lips found each other in one single, swift movement and the bond between them flared up. Their breaths mingled with each other, their proximity was the only thing that mattered, while Jim slipped his arms around the man he loved and held him close. The kiss wasn’t made of the fierce passion that engulfed them so often, but was a child of the deep feelings they had for each other.

Spock – feeling a little bit awkward to witness something so private and sincere – looked away at Nyota, and lifted a brow. She had pressed one delicate hand on her mouth and her eyes were wide and teary. As she felt his gaze, she glanced at him; her gaze full of emotions he partly couldn’t name. He knew that her sensibility that bordered at empathy was getting the better of her; her ‘heart’ going
out for her friend and captain, and certainly for the Augment too, who had gained their respect and comradeship within the last weeks.

Beside him Cogley rubbed his neck; half moved by what he saw and heard, half embarrassed to watch the two lovers in front of him. This moment was theirs alone and he had the certain urge to go away to give Kirk and Khan privacy, but he knew that he only would disturb them, so he stayed. He looked up to the tall young half-Vulcan beside him and tried not to stare as he saw deep in those dark eyes something akin to joy and fondness. Yes, the rumors that the son of the Vulcan ambassador and the youngest captain of Starfleet had become close friends were true – seeing the fact that Kirk’s happiness elicited an almost emotional response from Spock.

The latter leaned back in his chair and looked away from his *T’hy’la* and Khan, which still were locked in a tight yet tender embrace and whispering to each other quiet enough that not even his keen hearing was able to make out the words. And, besides, it would be highly impolite to eavesdrop. A second later his attention was really driven away, as Nyota – who sat beside him – leaned her head against his shoulder; closing her eyes. Hesitantly he wrapped his arm around her shoulder; displays like this in public were unusual in the Vulcan culture, yet they were for once alone in the garden and, as he told himself, Nyota was human like a part of him was. So, there was no reason to deny her and himself the pleasure of some innocent touches.

His gaze wandered back to Jim and Khan, and this time he felt the very un-Vulcan urge to smile that he suppressed only half successfully. Both men had buried their faces at each other’s throat and still held each other – a picture of utter closeness, content and love.

And for just now the world was all right…

TBC…

Chapter End Notes

Yes, I couldn’t resist to let them propose to each other – to herald an upcoming wedding of our two boys. Yeah, romanticism pure (laugh). I gave a lot of thoughts about this special matter, because an official marriage would protect both in a special way by law – and their love would be shown to the whole world.

That Rodriguez and the others would be outraged was something you certainly already expected and I hope I found the perfect way between their wrath and their rationality – including a good scene to show again Jim Kirk’s unique character and strong patriotism
we often saw in the original series. I hope you liked it.

The meeting of Khan’s crew with The Shadow – gang comes in the next chapter, including an unexpected re-union, and you also going to meet Uhura’s family (and Spock’s uncle).

Like always I hope you liked the new chapter enough to leave some feedback (smile).

Have a nice rest of the week,

Love

Yours Starflight
Chapter Notes

Hi, my dear readers!

Thank you so very much for the many comments you left and the kudos. I’m happy that you liked the last chapter so much and that you were so smitten with the big proposal. Well, and after the proposal several calls and arrangements have to be made. Therefore our friends have a lot to do in the new chapter, including a certain talk with T’Pau. Oh, and Otto, Rodriguez and the others are going to meet The Shadow-gang (be ready for a lot to laugh).

So, no more prelude.

Have fun

Love

Yours Starflight

Chapter 98 – Of marriages and other plans

The prior evening McCoy had instantly known that the shit had hit the fan the moment the Augments had beamed back from visiting Khan. He didn’t need to be a genius to conclude what had dropped their mood. The evening had been tensed and he had had to answer a lot of questions they bombarded him with – especially regarding the health of their leader and what the scientists had tried to gain by abusing them all as lab rats. Bones had been glad when he finally was able to beam over to New Gol; knowing that the next day wouldn’t be any better.

Of course, he could understand them. He had been outraged about these things for weeks now, yet it was an almost eerie feeling to watch the anger building and ebbing away only to rebuild every time another enhanced man or woman was told what happened to them and Khan.

The next morning wasn’t any better, yet – at least – Rodriguez had calmed down. Finally. Last but not least because of Joaquin, who sat with the oldest of the Augments on a bed like two children during a pajama party. And they weren’t alone. In front of them sat a slightly tired Pavel Chekov, who had beamed down to visit his new friend – and found himself in the focus of two dozen enhanced men and women who watched him with obvious curiosity.
Being the sunny guy he always was, he tried to lighten up the mood. His warm behavior coupled with this boyish innocence and his genius brain, won one after another of the Augments. And as Bones looked in on them in the late morning, he saw Chekov and Rodriguez talking with each other as if they had known the other one for years now.

Inwardly the CMO shook his head. Pavel and his boyish charms really could do some magic. His gaze found Joaquin, who grinned at the young Russian; obviously happy that his friend had been able to brighten the atmosphere at least a little bit.

Smiling to himself Bones was about to leave again and to wait for the next four Augments to be beamed to the room where the stasis-chambers were placed – as was still for all cases they were woken up there – when his communicator beeped.

“I know by the ringing-sound that it’s you, Jim,” he grumbled into the little device as soon as he had answered the hail.

“Yes, it’s me,” Kirk’s joyful voice sounded from the tiny speakers. “Do you have a moment?”

Bones shrugged, even if his friend couldn’t see it. “Yeah, why not. Scotty is about to beam the next Augments over in ten minutes, the last four are slumbering in the second large room and your sweetheart’s siblings, who visited him yesterday, have come out of their foul mood – mostly.” He returned the challenging looks of said siblings without blinking, before he looked at the ensign. “Thanks to our sunny Pavel Chekov and the everlasting enthusiasm of Joaquin Weiss.”

Jim sighed. “We already assumed that Nien’s crew wouldn’t take the news easy. I’m glad that they calmed down by now.”

“Yeah, they did.” Leonard affirmed and stepped into the detection area of the door sensors, which instantly activated the doors to slip open.

Kirk cleared his throat. “I called to ask a favor of you. Are you free in five or six days – say, in the morning?”

McCoy frowned and halted on the threshold. “All of the Augments will be awake by then and… yes, if there are no complications I can spare some time. Why?”
“Well, I need you as my best man,” Kirk answered wryly.

Bones nodded. “Sure, no problem. Of course I can… You need me AS YOUR BEST MAN?”

Two Vulcan nurses and a healer, who had just walked down the hallway, stopped in the middle of their tracks and looked at him with the typical ‘there-is-no-need-to-scream-you-illogical-human’-look. But just right now McCoy couldn’t care less. He returned to the large room and the doors closed behind him; keeping the talk away from the official hallways.

“You… you are going to… You need me as… When has this hap… You are going to be mar…,” he stuttered; not realizing that all the Augments in the room and Chekov looked with surprise and partly big eyes at him.

At the other end of the line Jim Kirk began to laugh; sounding as happy as a boy under the Christmas tree.

“Yes, I’m going to be married. Officially! I proposed to Nien a few minutes ago and he accepted.”

It slipped McCoy’s attention that his jaw was hanging open and that he wore the most perplexed expression Rodriguez and the others had seen in a very long time.

Joaquin lifted a triumphal fist into the air and let out a loud whoop that was certainly heard even outside on the campus.

It seemed to be a kind of starting shot, because all of sudden most Augments began to whisper or to talk to each other. Those of them who had only learned hours ago of what happened in the last two years and that their leader was bonded to a casual human who was the captain of a spaceship, asked more questions; demanding to meet this ‘extraordinary man who had been able to win Khan Noonien Singh’. Katie clapped her hands and embraced two other enhanced women, who instantly began to talk of ‘about damn time all this was for Khan’. Rodriguez seemed to be torn between rolling his eyes and a grin, while Pablo, Paolo, a still very groggy Juan (a Spaniard who had been woken up the last evening) and a wide beaming Chang began to make plans for the wedding. Colin McPherson, an English Augment whose DNA was rooted in a Scottish man, sat carefully up in his bed; unable to hide the shock-like surprise that his beloved brother and leader was about to wed – and to a ‘normal’ human above all. Pavel Chekov, whose jaw, too, had almost hit the floor, began to smirk and screamed a “Congratulations, Keptin!” at McCoy’s direction, before he and Weiss embraced each other as if they were brothers.
“BONES!”

Kirk’s impatient voice tore McCoy finally out of the dazed state he had been lost in, and it was clear that his friend must have already called him a few times.

“Yeah?” he asked hoarsely.

“You’re still with us or shall I call Sorel to have a look at you?”

Leonard closed his mouth with a clear click, before he cleared his throat and croaked, “Did I hear you just right? You and Khan are going to get married?” He had to raise his voice because of the noises around him.

“Yes, I just did,” Kirk affirmed. “And from what I hear of the entire racket in the background, I think Nien’s siblings have heard the news, too.”

Bones looked around and for a moment the doctor and scientist awoke in him. There they were: Enhanced men and women, three times stronger than a casual human, more intelligent than Einstein, superior in so many different ways, warriors of their own – and they behaved like a class full of children who had been told that school was over for the rest of the week. McCoy couldn’t help himself: He had to smile.

“Yes, they heard you – and they are happy.” He began to chuckle. “You should see them. I don’t think one of them will miss the opportunity to see Khan getting married.”

Kirk sighed. “Well, I thought so – and this gives us a little problem. Where shall the ceremony take place? With 71 Augments, a few Vulcans…”

“Half of the crew,” McCoy threw in ‘helpfully’.

“Yes, and… WHAT?” This time it was Jim, who almost squeaked. Some Augments began to chuckle; recognizing the humor in the whole talk between the doctor and his superior.

McCoy grinned. “You don’t think that you can run off to get married without your crew taking
notice of it and wanting to join the fun?" He began to snicker. "And just imagine Barnett – or worse, Komack! – when they learn that you married and whom." He had to laugh now. "Sweet Lord, I would spend a whole month’s salary if I could see their faces."

At the other end of the line, Jim Kirk groaned. "Maybe we can marry in secret?" he asked no-one in particular, but his hope was destroyed by Chekov, who shouted in the CMO’s direction.

"Njet, Keptin! No chance! I’ll tell everyone zat you’re getting married."

"One word, Ensign, and I will call on discip…"

"You’re off duty, Keptin, so you can’t discipline me," Pavel almost singed and he wasn’t the only one who laughed, as Kirk growled something about ‘impertinent youth’.

Some of the Augments, who had been woken up only hours ago, listened curiously but also fascinated by the interaction; wondering about the casual tone between a superior officer and a junior officer. As it seemed, there was a lot for them to learn.

"Well, just wait until I’m back this evening," Bones smirked. "I want to have details. All of them!"

"There are still a few weeks until Christmas, Bones, so your wishing list has to wait," Jim snickered back.

"You know the doctor, Captain. His grumpiness can only be outdone by his nosiness," sounded Spock’s voice from somewhere nearby Kirk.

Bones gasped. "Don’t tell me you informed the hobgoblin earlier than me!" he all but pouted.

Jim chuckled again. "Actually, he and Nyota were here as I proposed to Nien – but I’ll tell you about it later."

"He stayed while you proposed to Khan? Where is this Vulcan priority of keeping private matters private he so loves to point out? Or doesn’t it count for our overgrown elf when you’re involved?" McCoy grumbled; imagining the Vulcan lifting a brow in irritation.
Kirk laughed again. “As I said, I’ll tell you later.”

“You’re damn right you will!” the CMO groused. “Be sure of it, kid.” Then he lowered his voice and turned around to at least get the feeling of speaking privately to Jim. He was all too aware that the enhanced men and women behind him would catch every word he may whisper.

“Congratulations, Jim. If you ask me, it’s the best step you two can make. Give Khan my greetings and congratulations, too.”

“With pleasure, Bones – and thanks! We’ll speak this evening. Kirk out.”

McCoy closed his communicator, pocketed it, turned around again, watched the Augments and rubbed his face. “I need a drink,” he mumbled. He met Chekov’s amused gaze and sighed deeply, “I really do!”

ST***ST

Having informed Bones as the first of the longer list he would have to contact, Jim called Scotty in the cellars of the hospital; learning that the next four Augments were beamed over and were successfully woken up. Understanding his captain’s reasoning concerning the delay to inform Bob and therefore Starfleet of his intentions to marry Khan, the chief engineer agreed to stay silent about it; promising to have a word with Chekov before they would beam up in the later afternoon.

Next, he contacted The Shadow-gang. With Galven still aboard the Enterprise, helping in Engineering, Kirk was glad that it was Caviw who answered his hail so that word of his upcoming marriage wouldn’t race through his ship quicker than light. Yes, he would inform Bob about the news, but later – when everything else was settled; like, for example, the Vulcans officially announcing the Augments as a separate species.

Of course, the Caitian was squealing and squeaking in joy as she learned of Jim and Khan getting wed within the next days, and promised to come by as soon as possible. She also accepted Kirk’s request to inform Galven only after his beaming down from the ship and quickly told her his reasons for it, which got him another outburst of excitement. As Jim finally cut the link, his ears were ringing. Who had thought that Caitians could make such shrill noises? He looked at Nien, who only sighed and rolled his eyes, while Spock looked like he was following a really fascinating experiment. Obviously, it was his best option of dealing with the overjoyed reactions of Caviw.
In the meantime, Joaquin called Nien; congratulating him and then the communicator he had went from one Augment to the next. This way, Khan not only spoke to his siblings he already met the day before, but also to those who had woken up just now. And it gave him another piece of peace, relief and joy. Some of them were still groggy, seven were still lost in natural sleep, others were already clear enough in mind to comprehend what was going on and bombarded him with questions.

Samuel Cogley had tactfully left the scene to grant his clients some privacy; inwardly smiling that his simple suggestion had such a good outcome. He almost pitied the Enterprise’s first officer, who sat on one of the chairs and looked a little bit lost by being confronted with so many emotions around him. He had been the first who congratulated Jim and Khan after the proposal; laying a hand on the captain’s shoulder and wished him happiness with a strange shimmer in his eyes which Samuel had acknowledged as ‘natural moisture’ – meaning tears.

He knew the young half-Vulcan would rather die than to admit it, but his loyalty towards his friends – and particularly Kirk – was based on the deep feelings of friendship and affection. And after all he had been through within the last three years, the trauma of losing his home planet still living in him, his control showed cracks here and there. And to congratulate Jim was one of those moments. Cogley remembered half amused, half moved, how Spock also congratulated Khan; offering his hand in the human way on full purpose to show his acceptance – something the Augment realized and accepted. Both men had shaken hands for a few seconds; making another step like this on their path of peace towards each other.

Uhura had given into her happiness for her captain and the Augment leader she had come to regard as a comrade. Simply pulling Jim into an embrace and giving him a kiss on the cheek she had wished him happiness, before Khan got the same treatment which made him first lift both brows in wonder, then he had returned her gesture with his good arm, thanking her. And that his gratitude wasn’t only referring to her congratulations, but also to her utterly accepting him into the circle of Kirk’s little Enterprise-family, was obvious.

Now, first officer and coms officer sat on their chairs and listened to the communicator talks around them – Spock a little bit uncomfortable to ‘disturb’ something so private with his presence, Uhura happy for her friends and smiling brightly.

With a last look at the four people in the garden, Cogley made a short walk through the gardens; knowing that the four needed some time for themselves now.

After Jim had made the calls, he spoke with Spock about the next steps – especially concerning Cogley’s suggestion that the Augments would be introduced to the Federation as an acknowledged separate species; officially recognized by the Vulcans.
Selek wasn’t available until the later afternoon, as his secretary told Jim when the captain tried to reach the older version of his Vulcan friend. Colony-matters had taken the Elder’s full attention, and somehow Kirk was even glad that fate prevented him from asking Old Spock for another favor. Selek had already so much done for him, Jim really would have felt bad to ask him for more. That left only one other high-ranking official who would be able to take the legal action, and whose word would never be doubted by any judge or member of the Federation Council: T’Pau.

And because time was important by now and Jim Kirk was not one who put something on the shelf, he found himself together with Spock walking towards the matriarch’s office only a few minutes later. Cogley was ready to join him as soon as Kirk would call him, but in the meantime the lawyer remained with Khan to ask him for more details; Nyota stayed with them – something the former dictator appreciated, because Uhura was not only highly intelligent, but her different point of view could be a helpful addition to the pow-wow the talk with Samuel always became.

Spock threw a short glance at his captain and friend. He knew that T’Pau more or less intimidated most people who met her – even Vulcans – and Jim Kirk wasn’t any exception, yet he walked with the straight posture and the determined expression of a man with a mission who would stop at nothing. Well, if you can say one thing about James Kirk, it was that he never stopped at anything once his mind was set.

Being T’Pau’s grandson was indeed an advantage, because only a minute after they arrived at the anteroom they were led into the high priestess’ office before her secretary closed the door behind them.

Spock lifted his right hand into a ta’al. “I come to serve,” he said the traditional greeting towards an Elder.

Jim, still practicing on optimizing the so easy looking but complicate executed hand-gesture, mirrored the ta’al and additionally bowed his head; repeating Spock’s words.

“You please me with your presence, Spock,” T’Pau answered in Standard. “The same goes for you, James.” She leant back in her chair. “How can I offer my support?”

Jim’s face betrayed some surprise, while Spock’s remained stoically calm. The old woman watched the young human male and for second the left corner of her mouth seemed to curl a millimeter. “Why else would you be here for a briefing with me without requiring it first?”

Kirk blushed. “Sorry, Ma’am, if I went against protocol by coming to you without any preannouncement, but… it’s really urgent.”
T’Pau’s gaze shifted to her grandson. “It isn’t against protocol. Otherwise Spock would have told you so. Yet it is… unusual.” She cocked her head and made a short gesture towards the visitor’s chairs. As soon as the two men had sat down, she asked, “With what can I help you?”

Jim glanced at Spock. To tell the truth, he hadn’t given any detailed thoughts on how to proceed from here, and he was relieved as his friend rose to speak.

“As James Kirk’s T’hy’la I politely want to bring to your attention that he has proposed to his already bonded mate and wants to marry him officially – by Vulcan law.”

Jim’s eyes widened. Well, that was straight to the point – typical for Vulcans. And somehow, he had the feeling that Spock had just let drop a bomb. He looked at T’Pau and for a second he wished he would have brought a camera with him, because the old lady looked as perplexed as a Vulcan could. After a moment her control was back in place, while she lifted a brow.

“You want marry officially Mr. Singh, James? Then, by human tradition, I think congratulations are in order, but allow me my question, why you want a marriage under Vulcan law?”

“Because of Mr. Singh’s small, yet undeniable psionic ability,” Spock took the liberty to speak for Jim again. “Both men share a mental bond, as my older counterpart and I detected as we mind-melded with Mr. Singh. Vulcan bonded couples come under the special protecting law to never be separated, neither by the taken job nor by trial. In Vulcan cases it is necessary out of… some natural matters. In Mr. Singh’s case a likewise necessity is given, because we have proof how much it affected him to be separated from those he shares a family link with. We have no proof of how a separation between him and his bonding-mate for a longer time will affect him, but I dare to guess that it would be worse than being away from his siblings.” He glanced at Jim. “And seeing that Captain Kirk is a non-telepath yet developed the bond with Mr. Singh gives me reason to assume that a too long separation from his bonding-partner will hurt him – even damage him.” He looked back at T’Pau. “So, if they marry under Vulcan law it will fulfill the requirement of being placed under The Vulcan Bill of Rights that is a part of the Common Laws of the Federation – in other words, no-one can separate them.”

T’Pau watched both men for a few moments. “Your logic is flawless, Spock – almost. Because there is one detail you haven’t thought of: Mr. Singh and his people are not an official recognized species and in here lies the problem. The Federation Council could declare the marriage as null and void under these circumstances.”

Jim could be wrong – had to be wrong, after all Spock was Vulcan – but he thought he saw for a fleeing second a smug expression on his friend’s face, before his first officer answered.
“Of course, it was thought about this detail before we came to you, T’Pau. With the given authority of a Starfleet captain, Jim already declared them as their own species, after Admiral Allistor, Admiral Barnett’s predecessor, stripped them of human status and declared them as non-sentient beings – a fundamental error in judgment that has to be rectified. And given the whole circumstances and the tiny but definite difference between the casual humans and the Augments – the Augments’ psionic ability, for example – to recognize them officially as their own species will be the best solution. It will put them into a better position when the time comes to be introduced into the Federation. It also will place them under full protection, because when they’re recognized as their own race you also have to consider their low number which will automatically give them the status of an endangered species. Mr. Singh’s crew would be utterly safe. And Mr. Singh’s fate would be moderated if he and Jim were protected by the Vulcan Marriage Law, no matter the outcome of the trial.”

T’Pau had listened closely and thought for almost a minute, before she looked straight at Kirk.

“You want me to acknowledge officially the Augments as their own species.”

Jim almost sighed. There was really almost nothing you could hide from a Vulcan – especially from this old lady.

“Vulcans can confirm the Augments’ mental abilities because they are touch telepaths. And a Vulcan’s word weighs a lot in the Federation – especially yours, Ma’am. So, yes, I want to ask you if you could make the legal steps to recognize the Augments as their own race.”

“They are coming from Earth – they are humans, James, despite their engineered nature. To acknowledge them as their own species will be difficult.”

Kirk cocked his head. “There were further human species on Earth, who didn't belong to the Homo Sapiens, but mixed with him over the thousands of years, Ma’am. The Aborigines of Australia, for example. They are humans, but their DNA differs minor from that of the modern humans – meaning the Homo Sapiens. The same goes for several other people which still live in the South Asian area. They are humans but their DNA has still some minor yet clear differences from our one. Their ancestors are called the Denisovan-humans. The Neanderthal-humans belonged at the beginning to this group, too, before their paths parted and the Neandertalers diverged before they died out. And that’s not all. There were other people who were related with the Homo Sapiens, yet had some differences within their defining DNA. They mixed with the Homo Sapiens during the evolution until only a few percent of their DNA differs from ours today. The Denisovan-humans and we are all called hominoids and we all came from the same prehistoric man - the Homo Erectus – only the evolution went different paths and the Homo Sapiens became prevalent in the end”
T’Pau had listened carefully. “An interesting detail I just learned about your planet and its original habitants, James. And I think I know to what you are up to. You want to get the Augments recognized as a further hominoid species.”

“It would the most correct one,” Jim nodded. “Okay, the differences between the Augments and us are based on modern engineering, yet those scientists 290 years and more ago created a separate race of humans – and as such they should be accepted. It would give them the same rights all the other hominoids have but also puts them under protection because of their low number.”

The Vulcanness pursed her lips. “This could be a solution. The main differences between the Augments and the ‘casual’ humans are their physical strength and their psionic abilities.”

“That’s not all. They are far more intelligent and adaptable to situations. And there are some further abilities which normal humans lack,” Kirk added. “For example, the Augments heal very much quicker, their immune system is more or less insuperable, their senses are stronger – not to mention the fact that their blood can cheat death.”

T’Pau lifted a brow. “I don’t think the latter should be made official knowledge – or neither Mr. Singh and his siblings, nor you will ever find any peace. Yet the other points could be added to the documentation why the Augments should count as their own group of hominoids.” She was lost in thought for a minute, and none of the two men dared to interrupt her pondering.

Finally, she murmured, “Selek had already mind-melded with Mr. Singh and confirmed the man’s low but existing telepathic skills. And I mind-melded with the boy – Mr. Weiss. I also felt the family tie between him and Mr. Singh – a kind of bond normal humans are unable to develop. That speaks for itself, yet we have no proof that all Augments have those skills. I would have to touch the mind of all of them to declare them officially as a telepathic species which puts them under further protection laws.”

Jim understood what she said between the lines. It would be difficult for her. As strong as she was, to touch the mind of so many humans would be pure stress for her.

“Maybe Sorel, Selek or Sarek could assist you,” he suggested. “They all are exalted representatives of New Vulcan – two of them are even Elders. Their word is as good as yours.”

“True,” T’Pau answered. “And it would solve several problems we already talked about together with Mr. Singh three days ago.” She came to a decision. “I’ll contact Sarek. He, Mr. Singh, you and I should talk to some of the Augments who hold a higher-ranking position in Mr. Singh’s crew. They have to agree to your idea.”
Jim suppressed his urge to grimace. To tell Rodriguez that someone was going to poke into his head would be so much fun! Yet there was no other way. Maybe he could first win Katie for his plan. It hadn’t slipped his attention that she was absolutely smitten with the Vulcans. Well, if you compared them to some Elven characters of Tolkien, whose books Kirk had read too, he could understand the enhanced woman. There were moments he could swear Spock – or T’Pau – could read his mind without touching him or had a foresight into the future.

“I’ll ask some of Nien’s siblings to come to New Gol to discuss the whole thing. Otto Hoffmann and Rodriguez seem to be Nien’s confidants, together with Chang, Paolo, Pablo and Mrs. Hoffmann. I have the feeling that’s half the battle when they agree.”

More or less familiar with those phrases, T’Pau knew what Kirk meant and simply nodded. Then she folded her hands on the desk-surface – a gesture Jim became familiar with by now.

“Regarding your upcoming wedding, James,” she switched to the other important topic, “you do know that you – how is this human phrase going? – will put Starfleet Command’s nose out of the joint by marrying Mr. Singh officially? You already have to face trial because you covered for him and he is accused of several serious crimes – even if he was driven to act like he did. You could get into even more trouble by choosing this way.”

Kirk shrugged. “Admiral Barnett is aware of Nien’s and my relationship. To make the whole thing official will tell him – and others – that our relationship isn’t an extended one-night-stand, but that we’re damn serious about it.”

Again, the old Vulcanness made an affirming gesture. “Logical,” she murmured. Then she lifted a brow. “You said you want to marry under Vulcan law. This would be possible if there wouldn’t be one fact that makes your intention almost impossible. Neither you nor Mr. Singh are Vulcans.”

Jim stiffened and his mind began to race. “Yes, we are not Vulcans, but… Nien has mental abilities and so…”

“There a many species who have some telepathic skills, yet there has never been the case that they bonded under Vulcan law,” T’Pau interrupted him. “Our laws were made from us for us.”

Her voice was not unkind but stern.

Kirk felt his stomach drop for a moment, but he wouldn’t give up. Never! “Spock’s mom…” he
“Amanda Grayson married one of us, but – as I said – none of you both is Vulcan.” Her gaze held his for several seconds, before she leaned back in her chair. “But Sarek and I welcomed you into our clan as Spock’s T’hy’la and we promised you the protection of our family. I do think that under these special circumstances our traditions’ demand is satisfied. Your request of being married to your already announced bond-mate under Vulcan law is herewith accepted.”

For a few seconds Jim could only stare at her. First, she said why Nien and he couldn’t marry by Vulcan law and moments later she found an excuse to circumvent the rules? Dammit, if this wasn’t a demonstration of a dry sense of humor! And of rebellion – just like Spock rebelled as he turned down his place at the Vulcan Academy or Sarek as he married Amanda. He couldn’t help himself: He had to grin.

“You just got me worried there,” he mumbled; his grin turning into a wide smile. “Thank you, Ma’am!”

An odd expression of satisfaction rushed through her eyes, before the matriarch became businesslike again. Yet there stayed a certain gleam deep in her gaze that made Jim wary. She wasn’t done with him; this much was clear. Her next words proved it.

“You’re going to need an adept or a priest who will affirm your mental bonding and declare you as husband and husband. Do you have someone in mind for it?”

Jim turned serious again and gulped. Well, he hadn’t thought about it, but… “Maybe you can recommend someone?”

He was absolutely certain that he heard the old matriarch sighing, yet he managed to give the impression that he hadn’t heard it at all.

“Neither Starfleet Command nor the Federation Council will acknowledge something that important without being convinced that everything went by law and order. We have to make them accept your marriage by giving them no reason to doubt its legality or the Vulcans’ acknowledgement of you two being mentally bonded. As you said, my word counts a lot, so I think it would be for the best when I lead the bonding-ceremony.” She stopped and again pondered something for a second, before she looked at Spock.
“You and James are T’hy’la. In this regard it isn’t unheard in history of a double-bonding ceremony. There are plenty of legends which speak of T’hy’las getting bonded to their intended side by side. The times of those warriors have long been over, and for many hundreds years there haven’t been acknowledged T’hy’las among our people, so your brotherhood not by blood but by mind can be called unique which leaves us with some latitude. And seeing that you are going to marry a human woman – just like your father – and that you’re T’hy’la with your human captain, the upcoming bonding-ceremony is already unusual. So, if you are willing, I will first bond you and Nyota and afterwards James and Mr. Singh.”

Jim didn’t even realize that his jaw hung open, while he looked with eyes as large as saucers first at T’Pau and then at Spock. Only as he caught his friend’s pointed glare did he close his mouth with a click. And with this his brain began to work again.

“Uh… Spock,” he began lamely; feeling his ears heating up. “This is your big day. Nien and I can marry later, so…”

“Jim, I know that you want to stay back to give Nyota and me a ‘special day’. But, as T’Pau already said, it is not unheard that T’hy’las marry their own mates at the same ceremony. In earlier times and even now it doesn’t lack for logic to marry at the same time at the same place. All those who have to attend the ceremony – the family members and the friends – are present, as well as the priests, the dignitaries and the witnesses. The Large Fire will be lightened up only once which will spare resources and – what is most important – both T’hy’las will make the same step in the same moment. None of them will stay behind – something that has a certain importance within our culture.” He placed a hand on Jim’s underarm; deep in his eyes lay warmth. “I would be honored if we both would be bonded to our intendeds side by side.”

Kirk gulped; feeling a little bit overwhelmed. “And Nyota?” he asked quietly. “Don’t you want to ask her first?”

“I’m certain that she goes along with T’Pau’s and my suggestion. Don’t forget that Nyota has a very rational mind.”

“Yeah, but when it comes to love we all lose rationality.”

Promptly Spock lifted both brows. “I do hope you don’t include me into that ‘we all’, Captain. I always keep my rationality.”

Kirk wriggled his brows. “Have you just admitted between the lines to feel love?” As Spock simply stared at him, Jim teased him further, “And concerning keeping your rationality, just ask Bob when
you left the battlefield to come to Nien’s and my aid during the Aldebaran-crisis – or when you
steered the Enterprise back into the Borderland to rescue me.”

“Both moves were acknowledged by Commodore Wesley, sir,” Spock answered almost stiffly.

Jim’s grin was wide enough to make his face hurt. “Yeah – after you made your moves. So, even
you said ‘bye-bye’ to rationality in those moments.”

This time the first office allowed himself a small sigh, while he looked to the ceiling in the more than
obvious silent prayer ‘Why me?’. Then both remembered where they were and turned their attention
quickly back to T’Pau, in whose eyes Jim thought to see another spark of amusement.

“If I wasn’t Vulcan I would worry now that you two are commanding Starfleet’s flagship,” she
deadpanned – and Jim had to laugh. He quickly tried to suppress it, but he was only half successful.
The old matriarch looked at her grandson; ignoring the young captain’s lack of control. “So, you
agree that James will be bonded to his own mate beside you?”

Spock made a short nodding gesture. “Yes, I do agree, T’Pau. As I said, I’ll be honored.” He still
heard Jim’s barely controlled chuckles and understood for the first time McCoy’s urge to kick Kirk’s
shin under the table on several occasions. If it wouldn’t be too human he would do the same just
right now.

Yet his grandmother surprised him again by simply giving Kirk a mild gaze that – o wonder – made
him restore his composure.

Clearing his throat, Jim bowed his head. “I thank you, Ma’am – also in the name of Khan.”

T’Pau straightened her small frame. “Then it’s settled. I’ll bond you two to your chosen mates in five
days.” She lifted a brow. “And now I have to make several arrangements concerning the new tasks
you two gentlemen just left me with. If you would excuse me, please?”

It was a polite booting out and both friends understood it as such. Quickly rising from their seats,
both gave her a ta’al and Jim also bowed. “Thank you for your help, Ma’am,” he said sincerely.

“The human return would be ‘you are welcome’,” T’Pau answered. “Before you go, James, I want
to give you some advice. Don’t inform Admiral Barnett too late about your intentions concerning
your wedding. Even I know that you have to inform Command contemporary about your decision of changing your personal status and I know Barnett as a man of honor. He is on your side, as much as I understood Selek. Don’t risk his patronage by showing him distrust.”

Jim frowned. “You yourself said that it would be the best if we publish everything Luengo, Marcus and Section 31 did. I don’t think that he is going to like it, so…”

“He will not ‘like’ it, but it gives him the chance to ‘make a clean sweep’ with everything, like you humans say. He’s in your and Mr. Singh’s debt which gives you an advantage. But you will gain more from it if you make him your true ally.”

Spock lifted a brow. Who had thought that his grandmother could be such a diplomat – or conspirator? The latter, of course, in a positive way.

Jim pursed his lips. “You think I should inform him about my intention of marrying Nien under Vulcan law and that the Augments are going to be recognized as their own species by your people?”

“The latter should be mentioned after it is done,” T’Pau stated. “It will cease any protest that maybe be risen from the Council. What is done, is done. Yet you shouldn’t keep him in the dark about your personal decision. If you want him to trust you to let you keep your command despite the fact that you covered, hid and protected a wanted man, you have to show him your trust in him and his person. I’ve learned that something like this makes all the difference in the end when it comes to humans.”

Kirk thought about it for a moment and had to admit that the old Vulcanness was right. They needed Barnett on their side and to inform him about the upcoming wedding was certainly a demonstration of trust. “I’ll speak with Nien. If he is okay with it, I call Barnett in person.”

“Very well,” T’Pau nodded. “You can use our communication unit for the call. Simply ask my secretary and she’ll connect you to the admiral. And now, Gentlemen, good day.”

They left the office and the anteroom, before Jim sighed deeply in relief. Looking at Spock he saw the Vulcan’s face softening. “That went well,” Kirk said and his first officer bowed in head in affirmation.

“I’m again surprised about your diplomatic skills, Jim.”
“Nah, it was you who gave the big prologue speech.” He smiled at him. “Thanks!”

“You are most welcome,” Spock answered, then he hesitated. “How shall we tell Nyota about the changes concerning our marriage?” he asked carefully; clearly not to certain of his beloved’s reaction to that news.

Jim realized some concern in the deep brown eyes, and smirked encouraging. Clapping the Vulcan on the shoulder he said, “No problem. As you said, she is rational.”

“We will have what?” Uhura stared wide-eyed at her fiancé, then at Kirk and finally at Khan, who had lifted both brows, and then back at Jim again. “Don’t tell me that was your idea!”

“It wasn’t, I swear,” Jim defended himself; lifting both hands in mock surrender. “Look, I already tried to tell T’Pau that this is yours and Spock’s big day and that Nien and I certainly won’t disturb it, but the old lady got all ‘logical’ on us how it would spare time and resources. And with Spock and me being T’hy’las and because of some old legends how warrior-brothers married their spouses in one and the same ceremony, she more or less insisted on it,” Kirk explained further. He knew this gaze from his comms officer. It was a silent accusing that he had done something wrong.

“Warrior-brothers?” Nyota asked dryly; glad that Cogley had drawn back into the house to work on his notes. This really was very personal, so she preferred to speak only with Spock, Kirk and Khan.

“Given Mr. Spock’s tendency to remember his ancestors’ more fierce behavior when it suits him, and seeing that Jim is indeed a fighter, I think the term ‘warrior-brother’ fits,” Nien commented wryly; chuckling as his words got him a short glare from Spock.

How did he think about a double-marriage? He wasn’t a fan of drawing general attention to his private life. And to marry Jim was certainly the most important step in his personal life ever – something he wanted to enjoy and to relish in. On the other hand, this whole wedding – with him being an Augment and Kirk being a casual human – was already uncommon enough. And to marry him under the law of an alien race on a foreign planet was even stranger. So, why not a double-marriage at the side of an important son of the spoken culture? If he understood the whole family-
structure of Spock’s clan then he came from royalty so to speak – the heir of Vulcans’ most important reformer. This was an advantage regarding the future, no doubt about it. And, by the way, he knew how much Spock meant to Kirk – that they were brothers in soul. And he, Khan, had also come to respect Nyota Uhura a lot. She was brilliant, a language-wonder and a genius on her own, not to speak of her really good looks and her fierce combat skills.

Yes, a marriage beside those two sounded better the more as he thought about it.

“I wouldn’t be averse to taking Jim as my husband at the side of you and Spock. As the Lady T’Pau obviously pointed out, it is only logical. After all it will save time and resources. The Vulcan colony is still under development and after the whole shock and trauma these people here went through, the priests and healers are certainly more than busy helping those who still suffer from the loss. So, we shouldn’t take more time from them as necessary. And, as I have to admit, I regard T’Pau’s offer as an honor. Spock is her grandson, so to lead his wedding ceremony is maybe common. But that she also offers to marry Jim and me – two non-Vulcans – is generous. I don’t want to offend her by rejecting her proposition. And, by the way, if she is the one who leads the ceremony there is no-one within Command or the Council who can repudiate our marriage.”

Spock lifted a brow and cocked his head. “Fascinating. You almost named the same arguments as T’Pau did. Your logic is nearly flawless.”

“That coming from you is a big compliment,” Khan deadpanned.

“I rather stated a fact,” Spock corrected him.

Kirk and Uhura exchanged a glance and sighed. As if it wouldn’t be enough that Spock and McCoy were bantering at any possible chance, now it was also Spock and Khan – well, the latter went on for some time now. And just like the everlasting teasing-battle between first officer and CMO, this one here was also done with respect and without hurting someone on purpose.

“I do hope, you two will learn to behave ’til our wedding-day and stop this silly mocking for once,” Uhura said; looking firmly back and forth between Spock and Khan. And why Nien suddenly felt like a youth rebuked by his mother, was beyond him, but just like Spock he simply bowed his head in affirmation.

Jim showed the more sensible part in the discussion by asking her, “Nyota, this is your marriage, too. How do you feel about it?”
Crossing her slender arms in front of her chest and pursing her lips for a moment, she watched him closely. He was uncomfortable with the concept—out of consideration for her and for Spock. The latter was okay with the suggested double-marriage, so…

“Will our team attend the ceremony?”

“I don’t think even a shipload full of Klingons could stop Scotty, Sulu and Chekov from coming. And I assume the same goes for Kevin, Keenser and some other of the officer staff—everyone Bob can do without for a few hours.”

“And McCoy will be your best man,” she mumbled, “As my sister will be my maid of honor.” She looked at Khan. “It would only be correct if one of your siblings would be your best man, too.”

“I thought we wed under Vulcan marriage law. Are there witnesses, too?” Nien asked curiously.

“The bonding ceremony is attended from the groom’s and the bride’s closest friends or siblings, which make certain that the wedding is rightful,” Spock cut in. “This tradition doesn’t differ so much from human marriage rituals. So, yes, of course one or two of your siblings can serve as wedding witnesses.”

Khan nodded slowly, before he looked back at Uhura; a hue of a gentle smile played around his lips. “May I interpret your comment and your questions that you are okay with a double-marriage?”

Nyota sighed deeply and threw her hands up. “Yes, of course! After all, it’s logical—and Jim and Spock are always joined at the hip, so why should this change all of sudden?” She lifted both brows. “But you wanted to be Spock’s best man, Jim. So how…”

“T’Pau will first marry you two and afterwards she’ll marry Nien and me.” He shrugged. “Vulcans are rational, as you know.”

“Interesting that you suddenly admit this,” Spock replied; giving him a pointed glance. “Only nine-point-three minutes ago you denied us to be rational under certain circumstances.”

“Spock, I teased you about throwing rationality out the next airlock if certain people’s welfare is at stake. That…”
“This I would subscribe to instantly,” Khan showed his dry humor once again. And while Uhura began to groan and Jim snickered, Spock only took a deep breath and wore his most bored expression to mask this odd mixture of irritation and amusement. Humans and their illogical but sometimes so quick minds! He should have listened to the warnings of his father!

“Rrrright,” Jim chuckled; fighting the sudden urge to embrace the two other males, because – really – just right now they were so damn cute. Clearing his throat, he turned sober again. “There is another topic Spock and I have to discuss with you, Nien. We spoke with T’Pau about your people and giving them the status of their own race.” He watched his beloved stiffening and took Khan’s good hand into his own. “Stay calm, honey. I think I have good news…”

ST***ST

The moment Khan called them, Otto and Rodriguez knew that something else than the upcoming marriage between their brother and Jim Kirk was going on. They simply felt it. Khan’s demand of them, Katie, Chang, Paolo and Pablo to come to New Gol in the afternoon would have even alarmed them, if they hadn’t sensed the calmness in their leader. Whatever the reason for this sudden request was, it wasn’t something bad. Joaquin would accompany them. First, he wanted to congratulate his older brother in person and then he had his own appeal to make.

So, as McCoy was done for the day – twelve more Augments rested now in the next room, all healthy yet groggy – he led Otto, the others and Colin McPherson, who demanded to accompany them to see his beloved brother and leader with his own eyes, to the transporter room of the hospital and beamed over with them. He heard Otto cursing as they re-materialized and he smiled in sympathy. At least one man who disliked transport-beaming just like he did.

For McPherson this wasn’t only his first visit of New Gol, but furthermore, it was the first time that he had a view at his surroundings outside of the hospital. Despite the heat and the higher gravity, he glanced around with large, curious eyes. The air was dry and smelled differently from what he knew from Earth. His look wandered over the nearby mountains – red and orange in color – over the sand-colored sky and the strange plants which bearded the desert landscape, and all of sudden it hit him with the strength of a truck: He was on a foreign planet – far away from Earth. Alas, he had never thought that he would live to see the day that something like this was possible. His glance found the elongated building that was the seat of the Vulcan’s priests as he had learned, took in the foreign yet pleasing architecture and smiled. Yes, he was certain that he would like to live in this world – despite everything that happened prior to his and the others’ waking up.

Greeting one of the Vulcan adepts at the entrance, McCoy led the others to the wing where he, Joaquin, Jim and Khan – and for two days now Samuel Cogley – lived and from there out into the gardens. Colin McPherson whistled in respect as he took into the large area with the strange trees, the
cactus-like plants, thin grass and interesting bushes. Several paths crossed the gardens and different terraces lay beneath large trees which offered a way-out shelter of the murderous sun.

He saw not far away two desk chairs, some folding chairs and a table, where he recognized a younger man with blond hair and… Khan!

“After you,” Bones invited him and the others, and followed them as Joaquin now took the lead and dashed forwards.

“Noo!” he called cheerfully and Khan barely had time to brace himself as he found his good arm full with an overjoyed Joaquin. “Congratulations, big-bro! I’m so happy for you.”

“Tell me something I don’t know,” the older Augment teased; ruffling the youth’s hair. Yet he couldn’t deny that his heart beat quickened by the mere thought of the upcoming wedding. And as Otto and the others stepped into his range of vision, he couldn’t suppress the wide smile that tugged at his lips.

Katie simply leant over Joaquin and pressed a kiss to Khan’s forehead. “I too, am very happy for you. I hoped that you two would make this final step, but that you will do it so soon is really awesome.”

McPherson stayed back, while the others congratulated Khan. Yes, he wanted to embrace his brother; convincing himself that Noonien was healing and insofar well as it was possible after all he had been through, yet he gave the others the advantage. Then those blue-green eyes which were so familiar found his brown ones and Khan gasped.

“Colin!” he whispered in awe to see all of sudden another of his siblings. Pushing Joaquin gently aside he sat up as far as it was possible and reached out to the other Augment with his good hand. A moment later, McPherson embraced him carefully so as not to hurt him. Yes, there had been times Noonien had been injured, too, but he had been told that the assault on his brother had been nine days ago and that Khan was still in such a bad shape spoke volumes of the damage that had been done to his body.

“How are you?” Colin asked quietly. “They told us what happened to you, but…”

“I’m very much better,” Khan interrupted him gently. And as McPherson backed away from him just enough to look him straight into the face, the Augment leader added with a smirk, “You should see
the other guy.”

“Guys – plural, if I understood Otto, Rodriguez and Dr. McCoy correctly.”

“Yeah, but the bastard who was responsible for it suffers now a broken jaw and nose, some serious bruises on his back and his lower half, broken rips and some things more that makes his life hell. And I’m certain that the Vulcan nerve pinch-grip still makes his nervous-system crazy. Spock, my first officer, was anything but gentle with him as he checkmated him.”

The man who spoke had a pleasant tenor and as McPherson turned around, he met impossibly blue eyes which looked curiously at him from the handsome face of the younger blond man.

“We haven’t met until now,” the male continued and offered him his hand. “James T. Kirk, usually captain of the Enterprise,” he introduced himself.

“Ah, our savior – and the man who captured Noonien’s heart.” The Augment took the other man’s hand. “Colin McPherson, Captain.”

“Please call me Jim. As I heard I’m now part of the family.”

McPherson’s eyes widened for a moment, then he nodded slowly. “Understandable. I can smell Noonien’s blood in you – and you’re already bonded to him, so you are indeed part of the family now.” He smiled. “Call me Colin.”

“With pleasure, Colin,” Kirk answered; bowing his head slightly.

Katie sat down beside Khan on the edge of the desk-chair. “So, you decided to make the big step,” she grinned at him. “I would have bet my last shirt that it would come to that.”

Nien sighed and looked at Jim, who was receiving congratulations from Otto and Rodriguez this moment. “Well, his proposal was… the most loving thing I’ve ever heard and there was no other choice than to accept.” Tenderness shone in his eyes and echoed in his voice, while he watched his bond-mate. “And, by the way, it only makes official what already happened in private.”
Katie chuckled. “Which wedding will take place first? Yours or Commander Spock’s?”

Khan smirked. “Oh, first Spock and Uhura are getting married and afterwards Jim and I – several minutes later, as it is.”

Mrs. Hoffmann stared at him. “A… double-marriage?”

“What?” McCoy gasped and whirled around to Jim. “You and Khan will marry together with Spock and Nyota?”

Kirk shrugged. “T’Pau more or less insisted on it. Nien and I marry under Vulcan law to fall under the protection of the Bill of Vulcan Rights that forbids anyone – judge or Command – to separate us. T’Pau in person will wed us. And because to spare time and resources, we two couples marry side by side.”

Bones only stared at him for a few seconds more, before he groaned. “Of course!Joined at the hips – even then. How should I assume otherwise?” He shook his head, but it was obvious that he had to suppress the grin that threatened to spread over his face to hold up his grumpy façade.

“A double-marriage?” Rodriguez blinked in surprise. “And you marry in consideration of these people’s traditions here?”

“Vulcans are touch-telepaths and have telepathic links with their mates – not unlike the bonds we have,” Khan explained. “If we wed under Vulcan law this bond is officially recognized as a psionic one, and Jim and I can’t be separated. It’s only logical.”

“Logic,” McPherson sighed. “It seems these giant elves here are only live for it.”

“It makes things easier for them. Their past was even more violent than that of Earth, and because Vulcans have very strong emotions – not unlike ours – they chose the path of logic. It ensured their survival – even if it means that they suppress their feelings until you think they have none.” Khan leaned back on the desk chair. “And the fact that we and the Vulcans have several important things in common is the reason, why I called you.”

“Sorry, Noonien, but these Vulcans may be peaceful and highly intelligent, yet their biology is very different from ours and…”
Rodriguez was interrupted by Khan, who smiled, “Believe me, dear brother, there are species which really differ from any hominoid. Compared with them, Vulcans are more human than…”

Katie gasped at this moment and her eyes were about to pop out of her head while her gaze hung at the door that led from the building into garden. The others followed the direction in which she was staring, and in the same moment Khan heard a familiar oinking voice,

“No problem, Master Vulcan, we already found the way. We’ve been here before, so don’t put yourself out on our account.”

“What in hell…” McPherson whispered, white as a sheet, while Otto gulped,

“Who was this odd comic-person back in our time the children loved so? Porky Pig?”

“Yeah,” Pablo nodded. “And they’re coming in double-package.” He cocked his head. “And… is this guy next to Porky Pig on the war-path or why does he have painted his face with stripes like that?”

Paolo whistled. “The girl is hot, to doubt here and… Does she have a TAIL?”

Khan closed his eyes; half exasperated, half amused, while Jim and Bones began to snicker. “This fits the topic perfectly,” Jim whispered; laughter bubbling deep in him. To watch Nien’s siblings’ reaction to the view of The Shadow-gang was more than funny.

“Hello all together,” Galven oinked cheerfully as soon as he had reached the group. Then he stepped to Khan and clapped him on the shoulder. “Hey, buddy, congratulations! We insisted on congratulating you and our sunny-boy here in person.”

Chang and Otto took a sharp breath as they heard how their leader was addressed – and that he didn’t seem to mind it.

Ritek shook Jim’s hand, while Caviw stepped to the other side of the desk-chair, bent down and pressed a kiss to Khan’s cheek. “I’m happy for you, white tiger,” she smiled.
“Thank you,” Nien answered, before he found his good hand captured by Jeff, who shook it like a pump handle.

“Congratulation, my friend. I hope you and Jim will have a happy life.”

“Tell this to the judge we’re going to face soon,” Khan grumbled; returning the gesture.

“It’ll be okay,” Galven smiled; his long nose twitched. “After all you got this super-lawyer. I don’t know how often he called Ritek or me within the last two days…”

“Or Jeff and me,” Caviw nodded.

“It really was a lot he wanted to know,” Gav nodded.

Khan frowned. “Why?”

“Because we had a part in the big issues you and Jim did within the last weeks,” Ritek smiled; offering his hand now too. “Congratulations, Khan. I’m happy for you and Jim.” He grinned over his shoulder at Kirk, who smirked back.

Khan finally realized that his siblings were still staring at the members of The Shadow with big eyes and partly open mouths. “Oh, may I introduce you to some of my siblings?” he addressed Galven and Ritek, before he turned his attention back to the other Augments. “Brothers, dear sister, please meet the command-team of The Shadow – the group that took me in and became true friends.”

Otto found his voice first. “You are the gang Noonien hung out with?”

Joaquin burst out laughing. “Haven’t I told you that they are funny guys?”

Caviw gave him a toothy grin. “Hi there, little lion. Everything all right?”
“Yes, of course,” Weiss smirked back.

“‘Little lion’?” Khan asked; lifting both brows. “Don’t spoil the boy too much.”

“He is the ‘little lion’,” she answered with a shrug. “The name ‘white tiger’ is taken by you,” she teased and ruffled with the tip of her tail through his hair, which elicited a further gasp from Katie and a throaty sound of utterly bafflement from Rodriguez and Pablo.

Shaking his head, Khan gripped Caviw’s tail with the speed of light and pulled gently at it, which brought him a playful growl followed by a hiss from her, while she showed her sharp teeth. “Easy there, pussy cat,” he chuckled; feeling more than comfortable in the presence of his former companions.

“Do you have a death wish to call me ‘pussy cat’?” she asked with a toothy smirk.

“Don’t forget: Tigers are stronger than little cats,” he retorted amused.

“Yes, but we are quicker!” With those words she jumped over the desk chair and Katie with one elegant looping in the air, landed gracefully on the balls of her feet, straightened her shape, turned around again and grinned at Khan; her tail whipping through the air. Then her eyes found the dark-haired woman who sat beside the enhanced man and gaped at her. The Caitian’s fine senses instantly recognized the predator and smiling she offered her hand. “Hi, I’m Caviw. And you are one of Khan’s sisters, right?”

“Yes, Katie Hoffmann,” the Augment-woman said hesitantly; still absolutely thunderstruck how easily these strange creatures behaved towards Khan. Then she remembered common behavior and accepted the offered hand. She felt how sharp those long nails were, but she suppressed any reaction towards it.

Jim and Bones watched the scene, took in the almost shocked faces of the Augments and had to laugh, before Kirk addressed Nien’s siblings, “As you see, there are a lot more sentient beings than humans and Vulcans. These here – he flipped a thumb at The Shadow – “are representatives of only a few species which belong to the Federation.”

Otto tore his gaze away from the odd people who surrounded Khan who obviously was glad to see them, and gulped again. “I have to agree, Jim. There is indeed a lot we have to learn.”
Chapter End Notes

Well, they indeed have to learn a lot – but the same goes also four our two couples concerning the upcoming ceremony (or when it comes to show Barnett some trust).

It was a lot of fun to write the scene of Khan’s crew meeting The Shadow-gang. Right, they had come to know some Vulcans, but if you latter compare with the Tellarits or the Rigelians… No wonder that Rodriguez and the others were about to faint (snicker). I also loved to write the scene with T’Pau and I hope I got the whole thing with the different human races from Earth right. I learned about it several years ago and did some researched in the web concerning hominoids which aren’t related to the Homo Sapiens – what also gave me the idea in which way Jim and the others can take action how the Augments can be recognized as an own species.

In the next chapter you’re going to meet Sarek’s brother Silek and Nyota’s family. Jim will call Bob and Barnett, the Augments learn of the friends plan to be acknowledged as an own race, and many things more.

I hope you liked the new chapter and – like always – I’m curios what you think of it.

Have a nice week

Meetings

Chapter Notes

Hi, my dear readers,

Shortly before Christmas I finally got the next chapter done, Kat did once again a fantastic job on beta-reading it and at last I found some time to read it through once again, before I publish it now.

Thank you so much for the comments you left and I’m really happy that you’re still so smitten with the story.

One little thing in a private matter: I got a really big problem with my Microsoft Outlook program and lost a lot of contact addresses. So, Darry and Rhiannon, if you two read this chapter, please contact me at my known e-mail address so that I can write back. Just right now I haven’t any contact left which I could use to write to you.

For all the others: Enjoy the next chapter – there are waiting a few surprises for you.

Love

Yours Starflight

See the end of the chapter for more notes.

Chapter 99 – Meetings

“So, to get this straight: One of those elves lays his fingertips on my forehead, peeks into my mind, checks for some mental abilities and that’s that?” Rodriguez looked from his leader to Kirk and then to McCoy. “That’s crazy!”

“We’re talking about Vulcans here,” the CMO muttered. “‘Crazy’ is the secret name of these people.”

“Bones!” Kirk chided and shot him a glare. “I don’t think that your humor fits in the moment. Rodriguez and the others don’t know as much about Vulcans as we do, and are, of course, wary. Give them at least a chance to learn about them before your comments can be misunderstood.” It was a soft rebuke, but a rebuke nonetheless, and Leonard nodded with a grimace.
“Sorry.”

Jim sighed and looked back at Rodriguez; well aware of the other Augments’ gazes. They were all still coming to terms with the foreign appearances of Galven and the others, which had bid their farewell only ten minutes earlier; promising to help with the wedding-preparations if it was wanted and to attend the ceremony in five days.

“Nien and Jo already know what happens during a mind-meld…”

“A strange but not unpleasant experience,” Khan cut in, who had lay back on the desk chair and looked comfortable. “If the mind-meld goes very deep, like in my case, you may feel some nausea afterwards, but if the meld is only at the surface, you have no problems.” His gaze found Joaquin. “At least that’s what you told me.”

The boy made an affirming gesture. “Yeah. The old lady helped me with it as I was unsettled after all the mess with Norton and so on. It felt strange, but also calming. It’s nothing you have to fear.”

“Vulcans value privacy as much as the path of logic. Being a touch telepath brings something like this in its wake. Neither T’Pau nor one of the Elders would pry. They will only check the strength of your psionic for which only a superficial meld is needed. And you alone will decide how long it will last – or if you permit it at all,” Jim explained.

“Yet I would prefer if you grin and bear it,” Khan added. “If we’re recognized not only as our own race but also as a race with psionic, we – indeed – are protected by several special laws. Given our small number, our history with most humans and the partly still existing prejudice, it will put us in a far better position if those rules are applying for us.”

Otto sighed and leant back on his chair. “I do understand you, Noonien, but to imagine that someone looks into my mind is… troubling.”

Katie, having taken a chair for herself now too, cocked her head while she glanced at Joaquin. “You said, it is calming?”

Weiss nodded. “Yes, it is. How can I describe it? For a few moments you have the feeling as if you would never be alone again – just like the moment when I sense Noo, but stronger. It was warm and comforting. The Lady T’Pau is old and… you really can think she bears the wisdom of hundreds of years that whispers somewhere at the edge of your mind, like a touchless fondling. It makes you feel
as if you would be in the arms of a mother."

“I am surprised but also pleased that the mind-meld was a good experience for you, young one.”

The feminine, obviously old voice sounded from directly behind the group, and there wasn’t one of the humans – enhanced or not – who wasn’t startled.

Wide-eyed, Otto and Rodriguez sprang from their chairs, while they, Pablo and Katie gasped simultaneously, “Shanie?!”

Kirk and McCoy had quickly stood up, too, and bowed in respect, while Khan and Joaquin exchanged an amused glance about their siblings’ outburst – even if Nien asked himself how the old Vulcanness had been able to sneak up on them like this.

T’Pau looked from one to the other Augment; eyeing them. On the outside there was no difference between them and casual humans, even if they all were aesthetically pleasing to look on. Yet the High Priestess felt the unusual aura – a mixture of superior strength and arrogance, coupled with high intelligence that shone in their eyes and wariness. The latter was understandable. Even a Vulcan would be careful if he or she would wake up in another century on a foreign planet, surrounded by strange people.

And when one of these people held some resemblance to someone from the past, the wariness, of course, increased.

“I have already learned from Mr. Weiss that I resemble a foster mother from the days when you hovered on the threshold to adulthood,” she said calmly. “But, as you certainly realize, I am not the woman who showed you human warmth for the first time and took the youngest of you under her protection.”

Rodriguez recalled his position as the oldest of the surviving Augments and took a deep breath of the still hot air, even if the evening was near. “Ma’am,” he greeted; bowing his head. “I apologize for our lack of control, but… indeed you could be the twin of the lady who was something like a mother to the youngest of my siblings.”

“I know – and apologizes are unnecessary.” She looked at Khan. “Even your leader needed some time to calm his surprise, and he was forewarned.”
“Thank you for leaving out this detail,” Otto grumbled into Khan’s direction, who tried to suppress a smirk with little success.

“Just grant me some fun here,” he answered; winking at him.

Jim cleared his throat and stepped up to the old Vulcanness. “Ma’am, may I introduce some of Nien’s siblings to you.” He turned around. “Guys, please meet the Lady T’Pau, High Priestess of New Vulcan, Head of the Vulcan High Council and Clan Mother of the House of Surak.”

T’Pau gave him a pleased look. Kirk learned quickly, this much she realized once again.

One by one Jim introduced Katie and the others to her, and with everyone she exchanged a few words. Kirk knew that she tried to get an idea of the engineered humans she was about to declare as their own race, and he was relieved that the short talks went smoothly and well. It also baffled him how easy the Augments adjusted to the formal way T’Pau behaved and talked, and once again the young captain realized that there were indeed some defining differences between Nien’s people and the casual humans.

Afterwards she exchanged a few words with Khan concerning his well-being, and with McCoy; asking him about the process at the hospital and that she wanted to speak with him in private about the upcoming bonding-ceremony of Kirk and Khan – after all, Bones would slip into the same role Jim would take during Spock’s wedding.

Then she looked at Kirk and Khan. “I spoke with Selek about both your and Mr. Cogley’s idea concerning recognizing your people as their own species, Mr. Singh. Selek agrees with the plan, the same goes for Sarek. Given the fact that my youngest son, Silek and his wife T’Yle, will arrive tomorrow at the colony and that also my grandson’s intended’s family is expected, too, I think we should start with the analyses of your people’s psionic the day after tomorrow.” She glanced at McCoy. “When will all be awake?”

“If everything runs as well as it did until now, the last will be woken up by then. Some of them may be still groggy, but…”

“We will check them at last,” T’Pau interrupted him. “I also want you and Sorel to be present to monitor the vital signals and brain activities of Mr. Singh’s people. Humans tend to react with defense to a mind-meld which could lead to stress for the body – despite engineered biology. I don’t want to put anyone of them at risk.”
“So, there is a risk?” Otto asked.

“The mind-meld is a very… intimate and personal experience, even if it is only done superficially. People, who aren’t used to sharing their mind with someone else and above all have never learned to shield themselves, may regard the process as an intrusion in their privacy and personality, and react on it.”

Katie cocked her head. “So, we have to stay relaxed. Maybe you or one of the gentlemen you mentioned, can give us some advice before the meld begins. A meditation could help, couldn’t it?”

T’Pau lifted a brow and Jim was almost certain to see a flicker of being impressed in the old woman’s eyes.

“Meditation is the perfect preparation for a mind-meld. Your people practice mediation on a regular basis?” She gave Joaquin a short glance. “Because Mr. Weiss needed some assistance to reach the level of calmness that allows a meditation.”

“I was unsettled because of everything that happened – and because I feared for Noo,” the young Augment replied.

“You told me that you often have problems to gain the first step of meditation. I will ask one of our adepts to increase your technique and mental control to slip easier into meditation – if you want it, of course.”

Joaquin couldn’t help himself. He smiled at T’Pau. “That would be very nice, Ma’am. I know the advantages a meditation offers, yet… I never mastered it completely.”

“You are at New Gol. This place is not only an abbey, but also a place to find health by using your own psionic. Suna, one of our adepts, will help you,” the Vulcan matriarch decided.

“Then it’s settled?” Kirk asked, looking from one Augment to the next.

Rodriguez shrugged. “If this is the only way to be declared as our own race which gives us the advantages you and Noonien spoke of, so be it.” He glanced at Otto, who nodded,
“I have nothing against it. Maybe Ambassador Sarek can speak with the others and can answer their questions.”

“...”

“My son will visit your other siblings the day after tomorrow,” T’Pau affirmed. “Tomorrow he’ll be busy with family matters, which cannot be delayed.”

“...”

“Yeah – the double marriage,” Pablo grinned and looked with a teasing glint in his eyes at Khan and Kirk. “So, who will be the bride?”

ST***ST

The evening went by easily. After the Augments had beamed back to the hospital – except for Joaquin – McCoy bombarded his friend and captain with questions about details of the proposal. Jo, who remained with them, snickered here and there; happy for his older brother and the young captain he had come to regard as a friend, too.

After dinner, the young Augment decided that it was now the best moment to speak with Khan about something he had wanted to do for two days now.

“Noo?” he asked quietly, while Jim collected the dishes and placed them on the tray one of the Vulcans would fetch within the next minutes.

Khan looked up; questioningly. “Yes?”

“...”

“Uhm... Can Suzan be the next to be woken up?”

The former dictator frowned shortly. “Is there anything against it?”

Joaquin sighed. “...” He shrugged and gave his older brother his best tested puppy look – which almost always was successful. And this time wasn’t an exception.
“Doctor, please make certain that the young lady in question is the first who will be woken up
tomorrow.”

Bones grinned at Khan and Joaquin. “So, do I have to be prepared for another couple of lovebirds?”
he teased.

The older Augment sighed. “It seems so.” Then he turned serious again as he addressed Joaquin
again. “But Suzan’s presence will not distract you from your duties. She won’t be the only one who
will be unsettled after waking up and realizing that more than 250 years have passed by. Otto told me
that you did a good job of calming the others – you and Jim’s young wonder-kid. So please don’t
forget to be there for your other siblings when the young lady battens her lashes at you.”

“Suzan doesn’t ‘batten her lashes’ at me, Noo,” Weiss bristled. “We already left that behind us.”

Khan frowned. “How far has this liaison already gone?”

The boy blushed. “Not as far as you obviously think.”

“And what do I think?”

“Oh, please. I have already had enough with this mind-reading-thing from Spock when it comes to
Jim. I really don’t need more if that stuff.” McCoy groaned, which earned him an eye-roll from Kirk,
an exasperated glare from Khan and a chuckle from Joaquin. “Apropos ‘mind-reading’. When I’m
your best man, Jim, and you marry under Vulcan law, do I then have to dislocate my tongue and rip
my throat with the noises the Vulcans call a language, too, or can I speak in English?”

An evil smirk appeared on Kirk’s face. “Oh, I’m certain that we have to follow the ceremony in
detail to give the Federation Council no chance to enter caveat against its legitimacy.” He flopped
down on his chair beside Khan’s biobed. “So, you can already start with the practice. I’ll copy you a
memo Spock gave me for his ceremony.”

Bones stared at him – and groaned loud enough to let it sound like a growl of an angry bear. “Why
did I sign up for the five-years-mission again?”

“Because you love me?” Kirk snickered, and this time McCoy didn’t bother with an answer, but
only looked with frustration at him.
When the two lovebirds were finally alone, Jim asked Nien about his opinion of informing Barnett with a personal hail about their soon be changed status. He wasn’t really surprised as Khan thought of the same arguments as T’Pau did. As it seemed, Augments and Vulcans had the same sense of logic – and of strategy, because Khan pondered about making Barnett their true ally for exactly the same reason the Vulcanness had spoken of.

But first they had to tell Wesley – after all he was Jim’s direct superior and, what was equally important, his friend and mentor. It would be bad form to keep him in the dark while telling the brass that Starfleet’s flagship captain was about to get married.

Because Khan couldn’t get to one of the offices to use a larger communication unit with screen function, they decided to use Jim’s PADD, what wouldn’t be as flawless as using a real com-unit but at least they could visualize the talk.

It was already late evening aboard the Enterprise and so neither Jim nor Khan were surprised to find Wesley clad in a lose sweatshirt as he answered the hail in the guest quarters he lived in at the moment. Surprised he glanced at his protégée and the Augment.

“Jim, Mr. Singh! Up to some bed-time talking or to what do I owe the pleasure of the late call?” he teased as he realized that the former dictator sat in his biobed with Jim at his side.

Kirk smiled the best-tested charming, irresistible, innocent smile he could muster – and which instantly woke Bob’s suspicions, as his next words proved, “What have you done now, son?”

Jim sighed – obviously he couldn’t fool Wesley. “I want to invite you to our wedding,” he said bluntly, to which Khan commented with a groan and shot a glare in Kirk’s direction.

“Very sensible, Jim,” he scoffed. “Do you always go like a bull at a gate?”

The young captain rolled his eyes. “You just heard that Bob already assumed that something extraordinary happened.”
“Yes, given the time you’re calling him, I think everybody would guess that something big is going on.”

Jim frowned. “Hey, you first approved with it.”

“Just a moment!” Wesley interrupted the easy banter. “Did I hear you right? You two are getting married?”

Kirk beamed at him. “Yes! I proposed to Nien this midday and he agreed.”

“We’ll be married under Vulcan law – more or less side by side with Mr. Spock and Miss Uhura, so it would our pleasure if you could prolong your visit of Mr. Spock’s bonding ceremony and would remain until Jim and I are wed, too,” Khan added politely.

Wesley simply gaped at them and only closed his mouth a few seconds later, as Jim’s smile turned into a big smirk. Gulping and sorting his thoughts with little success, he blurted out, “Do you think that’s wise? I… I mean with the upcoming trial and so on.”

Kirk only continued to smile. “It’s the best idea of all, Bob. Nien and I already share a mental bond. The Vulcans will recognize it officially, the relationship will be acknowledged – and no judge of the Federation can separate us.” He leaned back against Nien’s unhurt shoulder. “I have absolutely no problem with telling the whole world that I love this crazy guy here.”

Khan only sighed, “Ditto.”

“Do you mean that you love yourself or do you mean that I’m crazy?”

“Both – but especially the latter,” the Augment smirked for a second, before he turned serious again and addressed Wesley, “Commodore, have you informed Command of my siblings being woken up?”

Confused for a moment because of the quick change of topic, Bob pondered the answer, before he said, “I was very busy with putting the ship back into one piece, so I haven’t found any time to send the report. Officially! In truth I first wanted to meet a few of your crew before Command will bombard me with questions.”
“Just tell them they can ask Sarek – or Sorel or T’Pau,” Jim chirped in cheerfully. “I’m sure that those three will answer Command questions absolutely satisfactorily.”

“Yes, with Vulcan charm,” Bob scoffed amused. Then he cocked his head. “Why the sudden hurry in informing Command, Jim? What are you up to now?”

Taking a deep breath, the young captain replied, “Cogley, T’Pau and I came up with an idea how to protect Nien’s crew in the future from eventual stalking issues from shysters and misguided security freaks.” He sobered up completely and switched easily into his captain behavior, as he informed Bob about the plan within the next minutes.

Wesley listened silently until Kirk ended, and nodded slowly. “This could be indeed a solution of how to introduce and to integrate the Augments within the Federation. Clever move, Jim,” he added with a smile. “And T’Pau is okay with checking Mr. Singh’s crew thoroughly like this?”

“Yes, she and Sarek will mind-meld with them – and maybe Selek, too, if he has time for it.” Jim bent forwards. “Bob, please keep silent about this. T’Pau – and Nien and I – think it better if we confront Command and the Federation Council with the facts so that they can’t interfere in any way. To place the Augments under the protection laws of endangered and psionic species is the only chance to keep them really safe.”

Wesley grimaced. “You know that the whole thought of keeping something like this from Command gives me belly ache?”

“Yes, I know – and I’ll stand you a good Saurian Brandy the next time we make it to a bar. To sooth your belly ache, of course.”

“Hmm, you can stand me one at your wedding, son,” Wesley grumbled, before he took a deep breath. “Congratulations, you two. I never thought I’d live to see the day you of all guys get married.” He looked at Khan. “Are you absolutely sure that you want to stick with this crazy churl for the rest of your life?”

Nien smiled shortly. “I’m already stuck, Commodore, and I don’t want to have it any other way.”

“Isn’t he sweet?” Jim chuckled – and Bob rolled his eyes.
“Please, boys, no love-scenes for my sensitive eyes and ears.”

“And this from a man who is married for a good many years,” Kirk sighed.

“Well, we don’t see each other often, maybe this is the reason why our marriage goes well,” Bob deadpanned.

“Hmm, so much for being an old-fashioned romantic gentleman,” Jim shook his head with mock sadness.

Wesley only laughed quietly, before he asked, “So, let me guess, you want to have your team with you when you say ‘yes’ to your honey.”

“I thought so,” Wesley groaned. “I see what I can do to give them some time off.”

“Thanks, you’re the best,” Jim beamed again at him.

“Yeah, and the mass of grey hairs which grew within the last four weeks are because of you, son, so don’t push your luck any further.” Then he smiled at the two younger men. “Have a nice night – and behave!” With pointing a warning finger at them he cut off the link and the screen of the PADD went dark.

“That went well,” Kirk said relieved.

“Yes, to tell Commodore Wesley wasn’t a real challenge, after all you’ve the poor man wrapped around your fingers. But to tell Barnett about our upcoming wedding, will be something utterly different,” Khan said seriously.

Jim only smiled at him. “No problem, I’ll tell him with tact and consideration.”
“Like you told Wesley so bluntly?” Khan teased, and Kirk rolled his eyes.

“Nah, far more sensible.” He laid the PADD on the nightstand and turned completely towards his beloved. “And I know a way to loosen me up and to give me strength for the talk tomorrow.” He bent forwards and brushed his lips over Nien’s.

“A very clever way, Pyāra,” the Augment murmured and captured the younger man’s mouth with his.

Admiral Barnett was a morning-person, so to say. Even as a young boy he loved the early hours when everything was still calm and peaceful. The sunrises were his favorites – especially when he stayed with his grandparents at their loggia in Tanga. With the loggia built outside of the town at the edge of a protected nature resort, he often had watched the elephants seeking out the river or the giraffes taking their first meal by plucking leaves from the trees.

Since he entered Starfleet there had been less and less opportunities to enjoy a decent sunrise – or a peaceful morning. It changed for the better after he wasn’t commanding a ship anymore and saw space only when he was in the orbital station of Earth, Starbase 1. His office in the HQ, on the other hand, provided him with a beautiful sight over San Francisco Bay, and often he arrived in his office before official duty began, checking a few mails or simply watching the town coming alive while sipping a hot coffee. These minutes were the calmest ones of the day, and whenever he had the chance for it, he relished in the quite scene.

This morning was the same. After endless days of interviewing Luengo, Norton, Styles, their allies and the scientists, after conferring with the Federation Council (the members which weren’t accused of having a part in the conspiracy) and speaking with the president at least four times per day, Barnett was only too happy to have a few hours for himself. Right, one look at his desk and the blinking number of incoming reports, mails and records told him that these few hours – until the next conference would start – were simply too few to catch up with actual work and that he should start working now than in a minute, yet he forgot duty for once.

He hadn’t found any time to come to terms – and to work out in his mind – what happened to him and his colleagues. Whenever he closed his eyes he saw still the shuttle crashing on the moon – over there in the Borderland. He still felt the cold of the cells he and the others had been held, and he still felt the dread as he, the other admirals, Sarek and his assistant were led away to be carried to the Romulan Empire. He knew that he should accept professional help to overcome the trauma he had suffered, but there was no time for it. He knew, when everything was over – the damn upcoming
court martial, the maybe continuing peace talks and hopefully the end of the cursed war – he would break down like a fallen tree and would need a few weeks to regain strength. But until then he would cling to stubbornness, sense of duty and the blood of his warrior-ancestors, who never gave up despite everything they had to face and to suffer.

Sighing he sipped again at his coffee and watched how the sun rose over the horizon – bathing the Golden Gate Bridge into a warm red light.

The tracks the crash of Vengeance had left were still like an open wound within the city’s landscape – they were even visible on Alcatraz, whose once high-security-prison turned into a museum had been razed to the ground as the mighty warship grazed the island. Officially it had been a tragic accident as the warp-drive of the new proto-type had malfunctioned which resulted in an explosion; crippling the already battered ship. It was a better explanation than admitting that a splitter-group of Starfleet Command had been able to build a ship in secret, was planning on hurling the Federation into a war to establish their own power and that an Augment from 250 years ago had had a part in the whole mess. Especially Khan had been kept a secret – and if everything would be like he wanted, this secret would remain one. Yet there was no chance for it. Not after what he learned from Bob Wesley’s last message.

It had been a tiny shock for him as the Commodore’s report about the Augments being woken up reached him the late evening prior. Somehow it had ‘slipped’ Wesley to inform Command earlier, because of the many repairs the Enterprise had to go through.

‘Bullshit!’ had been Barnett’s first thought. ‘You simply wanted to wait until it became clear how these guys tick.’ Then he had sobered up. Of course, Khan’s crew would be woken up at some point. The Vulcans – and Kirk – had been very clear about it. It only rankled Barnett that no-one had thought to inform Command before the superhumans were released from their beauty-sleep. On the other hand, it was up to the Vulcans to decide what to do concerning the Augments – after all Selek and T’Pau too had taken them under their protective wings. Yet he would bet his last shirt that the delayed informing had been not only Wesley’s but also Kirk’s doing. The young captain was more protective of Khan and the superhuman’s crew than a lioness of her chubs.

‘Love and what it could do to a man;’ he thought with some amusement.

Then his morning brooding was interrupted by an incoming call. Curious who would try to reach him this early in the day, he placed the coffee cup beside his terminal and answered the hail. It was the communication center of the HQ, because Barnett’s secretary had still an hour until duty would begin.

“Good morning, Admiral,” a young Rigelian in the grey uniform of ground staff greeted him. “I received a personal hail for you from New Vulcan. Captain Kirk requires to speak with you.”
Barnett’s eye brows shot upwards in surprise, then he schooled his features again and nodded, “Thank you, Lieutenant, please put him through.”

“Yes, sir.”

A moment later the Rigelan’s upper body was replaced with that of Jim Kirk; clad in civil attires, blond hair a little bit longer than regulation allowed, his skin tanned from New Vulcan’s sun.

“Jim, this is a surprise,” Barnett said, nodding pleasantly at his youngest and most troublesome captain – captain off duty, as he reminded himself firmly.

“Good morning, sir,” Kirk greeted him with a short bow of his head. “I just learned how early it still is on Earth. I hope I didn’t interrupt your morning routine.”

Richard chuckled. “You know that I was always the first in the office during my time as Head of the Academy, and this hasn’t changed. How are things on New Vulcan?”

“If it wouldn’t be for Spock’s upcoming bonding-ceremony I’m helping him with, I would be bored to death. The most fun is aboard my ship – even if I’m sort of glad that I’m not there to listen to Scotty’s endless rambling about how I dared to turn Engineering upside-down.”

A soft laugh escaped Barnett. “Yes, your chief engineer is a genius, but his temper is infamous.” He cocked his head. “Yet I’m surprised that you’re bored. After all, to welcome Khan’s people in this century is certainly a difficult job.”

Kirk’s face gave nothing away if he knew that Barnett had only learned the prior evening of this change of status concerning the Augments, or if he assumed that Command was informed for days now. He simply said, “They’ve come to good terms with the fact that they slept for more than 250 years and that they are on a foreign planet. What gives them trouble is the knowledge of what happened to their leader and friend – and that they were abused as lab-rats during their cryosleep. Thank the Lord for Khan’s calming influence on them and Dr. McCoy’s human heart. At least they don’t feel alone in this whole mess, but have learned that they have allies who support them.”

Barnett had tensed. “I already anticipated that this part would be the worst one – when they learn what happened within the last two years to them and Khan. But you said they stayed calm?”
“More or less – but they are willing to listen and to learn. And they are grateful for the Vulcans’ assistance. Ambassador Sarek’s diplomatic skills are coming in quite handy concerning all this.”

“Sarek is involved?” Richard asked curiously. “So, he is doing better?”

“Yes, but he is still released from any duty. The surgery wasn’t an easy one, yet he uses the chance to speak with the Augments whenever he comes to the hospital for the needed check-ups. He has offered to be a middle-man between the Augments and the Vulcan High Council, and Mr. Hoffmann – Nien’s second in command so to say – agreed to it. Bones and Spock are doing a good job, too, by introducing the Augments into this world, as well as Healer Sorel and even T’Pau. She stopped by yesterday evening and spoke in person with several Augments who came to New Gol to pay Khan a sickbed-visit.”

Barnett suppressed the urge to whistle. T’Pau herself ‘stopped by’? Well, that was indeed a huge step into casual human behavior for her. Then his attention was driven to the next important topic.

“Speaking of Khan – how is he?”

Kirk’s gaze became stern. “He’s doing a little bit better, but he still has to stay in bed and is healing slower than it is usual for his people. Healer Sorel thinks the reason lies in Khan’s utter mental exhaustion. And, by the way, his body has been put through so many nasty things that even his engineered nature demands its toll now. I only hope he’ll be able to sit in an antigrav-chair in four days.”

“Is there something special going on in four days?” Richard wanted to know; listening between the lines.

“Yes, it’s Spock’s and Uhura’s wedding day, and they invited him. And that’s not all.” He took a deep breath. “Sir, my call is also half official, because per regulation I want to inform you of a changing status of my person.”

Barnett frowned; a sinking feeling in his stomach. “You don’t want to leave the fleet, do you?” he asked warily.

The younger man looked thunderstruck at him. “Why do you think I would give up my ship and my crew? As long as I have the tiniest chance to keep them, I’ll fight with teeth and claws for them.” He shook his head. “No, sir, as I said the nature of my information is personal.” He drew in another deep breath. “Sir, I want to inform you that I’m going to marry in four days – and that my personal file has
to be changed because of it.”

Silence.

Barnett could only stare with big eyes at Kirk, who waited patiently for several seconds, cocked his head and fought without success against one of his boyish grins. “Admiral, are you well?”

“You… you are going to marry?” Richard was finally able to utter. “Sweet Lord, this all of sudden? Whom? And…” He stopped. “Don’t tell me that you ditched Khan. I’m sure that would lead…”

“Sir, how does it come that you assume I would ditch the best thing that ever happened to me?” Jim’s grin turned into a warm smile. “I proposed to Nien yesterday – and he accepted. We’ll be bonded by Vulcan law side-by-side with Spock and Uhura.”

The cat was out the bag – and you could hear a needle drop in Barnett’s office, before the older man blurted out, “You and Khan are marrying?”

Kirk nodded with a wide beam. “Yep, in four days. I would like to invite you, too, sir – if you can save some time to come to New Vulcan, that is.”

Barnett had the certain feeling that someone had let a water-bomb drop on his head. “But… Jim, Khan is a wanted man and you…”

“We both are going to face a trial as soon as Nien’s health allows it, yes. But that’s no reason not to marry him.”

Richard bent forwards and braced his elbows on the desk surface; rubbing his temple. “Son, you do understand that this could be used against you?”

“Why? Because someone could come up with the idea that I’m emotionally compromised? Well, that fits for everyone who is in a relationship – officially acknowledged or not. That goes even for married couples, so no big deal there. I rather think a wedding will turn out to be an advantage in this case. It will show that this isn’t some crazy, hormonal passion that will end sooner or later, but is a real thing. Nien and I love each other – real love, sir. To marry him is the logical thing to do.”
“Tell that to a Vulcan,” Barnett grimaced; rolling his eyes.

“Oh, even Sarek married out of the same reason, like Spock told me once, so I’m in the best company,” Jim smiled.

Richard leaned back again in his chair; worrying his lip between his teeth, before he murmured, “Are you absolutely sure that you and Khan want to stick together for the rest of your lives? You said you marry by Vulcan law – and that means for a life-time.”

“Yes, I’m absolutely sure – like Nien is.” Kirk had turned serious again, and the Chief in Command sighed.

“Well, if you are that sure I’ll integrate your changed personal status in your file.” He lifted a brow. “Does Wesley know?”

“I informed him a short time ago. He offered to send you the news with the next status report, but I declined. I wanted to tell you in person – after all you did for us.”

Again, a frown appeared on the admiral’s forehead. “What did I do for you?”

“You saved the lives of my officers and mine as you stormed the Vulcan seat of government. Your encouraged intervention gave my team and me the chance to rescue Nien in the last moment. And you didn’t throw us into jail but only released us temporary from duty. Yes, we have asylum on New Vulcan, yet we left the given refuge as we returned to the Excalibur. You could have arrested us, but you didn’t. And, by the way, I know that you are trying to get us out of the deep water we’re in. To inform you in person about my upcoming marriage is really the least I can do.”

“If you put it that way…,” Barnett grumbled, before he eyed the younger man. “I don’t want to press the issue, because I know that Khan is still healing and his injuries are serious, but . . . we’re running out of time, Jim.”

Now it was Kirk who frowned. “I don’t understand, sir?” Of course, Jim knew that something was up – after all Wesley had gotten some information from his ‘source’ – but what was really going on was still unknown, and he hoped to learn more about it.

Richard pondered his choices for a moment, before he said, “I want to be open and honest with you,
Jim, because call me insane but I have a soft spot for you, you crazy bastard. The Klingons want to
give the peace-talks a second try, but they imposed a condition.”

“A condition?” Kirk shook his head. “With what right?”

“When Luengo and Styles hired this Klingon renegade who used Lord Kor’s identity, it offended the
Klingon Council and the Klingon nobility because the wrong image was given that the Empire didn’t
stand to its given word. Of course, they understand that Luengo and his people are criminals, yet you
know how easy they are miffed.” He lowered his voice. “They demand that you will take the
delagation to the conference.”

“Me?” Kirk blinked; surprised about the real reason neither Cogley nor he had thought of. “For
heaven’s sake, why?”

“It was you – and Khan – who foiled most of their plans, and that gained you their respect.
Chancellor M’Rek wants to meet the men who were able to stop parts of the Klingon Fleet and
tricked the Klingon officers several times. He wants to meet the man who escaped Kor – or the man
who was able to break into a Klingon prison, killed seven Klingon warriors within a few seconds by
using their own weapons and stole their prisoner directly from under their noses. He also wants to
meet Wesley – the man who allied himself with a Klingon warlord to save their own people.” He
took a deep breath and shook his head. “From his point of view, I can understand him, yet his
demand gives us a chicken-and-egg situation.”

“Because we’re released from duty and are waiting for a trial to take place,” Jim nodded slowly,
before he asked quietly. “Do the Klingons know of Nien’s nature?”

“Wesley had no other choice than to confirm that Khan is an Augment. He also told Kor that Khan
comes from Earth’s past, yet he stuck to the same story you told Kor about a ‘criminal’ you wanted
to catch on Qo’noS and who died as the dark warrior, as the Klingons call Khan, came to your aid.”
Barnett grimaced. “We will stick to this story, yet we have to be careful, because Khan has to answer
to a real trial soon.”

“This all places you between a rock and a hard place,” Jim murmured and Richard threw his hands
up.

“The peace-talks have to begin – the sooner the better. And you can only escort the delegation to the
conference place, when you are still in the command seat of the Enterprise.”
With big eyes Kirk stared at him. “So… the trial will only be a farce?” he asked; not knowing if he should be pleased or angry.

Barnett sighed. “No, it will not be a farce. Command is not Section 31. And after all the stunts you pulled, Command and therefore the Federation Council are forced to court martial you and your officers. And Khan still has to be brought to a real trial. And don’t bring your hopes up that the outcome is already decided because of M’Rek’s demand. We can’t allow that the Klingons influence our right of justice.”

“Yet if this is a condition for the peace-talks, we always can escort the delegation to the conference place and the court martial happens afterwards,” Jim pondered. “We won’t run off with our ship, you know.”

“Yes, I’m aware of it, Jim, but the correct ways have to be considered, no matter what. Too much depends on it – not only yours, your officers’ and Khan’s fate, but also the fact that your trial will also be a part of the court martial against Luengo, Norton and the others. And the public have been demanding answers for days now.” He shook his head in frustration. “If everything would go to my liking, I would officially tell the truth, deal with the traitors and be done with it, but there are enough politicians who are already clamoring about the damaged image of Command and the Council – as if the truth would change this fact.”

Jim on New Vulcan pursed his lips. Barnett had entrusted him with a lot of information – things which certainly wasn’t meant for his ears. So, the Chief in Command was really on his side and tried to help, but – as it seems – partly his hands were tied. Politics were always a dirty thing, and the mere thought that several facts would be swept under the rug again to let some of the politicians sleep better, made Kirk’s stomach clench.

What had T’Pau advised? ‘Make Barnett your ally by showing trust’? Well, Barnett had made the first step – and Jim’s belly told him to make his own big step now, too.

“Sir, maybe I have a solution for your dilemma concerning telling the public the truth – a truth which has to be told, not only to clean up the mess within Command and in the Council once and for all, but also to help the Augments to settle down within the Federation.” He saw Barnett cocking his head in a silent question, and took a deep breath. “What I’m telling you now could decide the fate of my officers, Khan’s and mine, so… I ask you to keep this a secret. And maybe you can use it to your advantage concerning the cleansing-action you want to make.”

Richard frowned. “What you are up to, Jim? I know you a little bit – and you’re wearing your poker-face. That always gave me a bad feeling.”
Kirk chuckled quietly, before he said, “Sir, our lawyer advised us to go public and tell them what happened. It will force the Council to react on it – and those, who are still loyal to Luengo in secret, will betray themselves or will realize that their last chance of succeeding is over.” Jim had to suppress a smile as he caught his highest superior officer gaping at him.

“You want... You will…” Barnett closed his mouth for a moment, before he gasped, “They will grill you, son!”

“I don’t think so. The public has a big influence – and they have taken a liking of me and my officers, and they are already telling tales about ‘Sunrise’. We can use all of this to our advantage – and you can clean up the mess without any concern, because when everything is already published you don’t have to be careful not to irritate some politicians.” He lowered his gaze for a moment, before he added, “And, by the way, the Klingons are going to learn that we’re damn serious about the peace-talks, but that we also respect their points of views and try to bring to account those who offended them first-hand.”

Barnett stared at him for a longer time, before he growled, “Dammit, Kirk, you should change your job and should go into politics.”

Kirk quickly shook his head. “Never! My place is aboard my ship – on the seat on the bridge. This is all I need to be happy – well, at best with Nien beside me and with my friends around me.”

“Don’t become greedy, son. Your freedom hangs on a hair’s width, you know.” Barnett rubbed his temples. “Well, I already know that your plan will cause an outcry from a lot of people within Command and the Council, and they will give you trouble, but I know that won’t stop you. And I think you are right. It gives me the chance to use the big broom for the spring-cleaning that this cursed mess needs in order to be eliminated.” He fixed his gaze on Kirk’s face. “You do realize that it also bears the risk that the public will think that Mr. Singh’s people are dangerous?”

Jim only smiled. “They will learn about the Augments in a positive way. Don’t forget that Nien is ‘Sunrise’ – the secret super-hero who saved Tammeron, the capital of Aldebaran, messed the Klingons up and didn’t think twice of risking his own life while protecting people. History also tells that Khan Noonien Singh was the only Augment-leader, who wasn’t an aggressor but only protected his borders and helped the people within his realm a lot. If we put this all onto the plate, the public will give him and his people a chance – after all, men have changed a lot.”

Barnett pondered that for a moment. “This is a whole win-or-lose-situation, Jim. I hope you calculated the risk correctly.”
“I’m not Spock, he’s the one who could give you a detailed number, but even he agreed to this plan.”

“Of whom of the two versions are you referring to?” Richard almost joked. “Let me guess: About both.”

Kirk only grinned. “It’s really funny to have two of them, isn’t it? The younger is my best friend besides McCoy, and the older one is something like a father and grandfather in one for me – even if Selek really differs from Grandpa Tiberius.”

“Hmm, somehow you have the ability to catch the most different peoples’ attention and make them develop big parental instincts for you. Hell, even Wesley forgot some regulations to keep you and your honey under his protective wing.”

Jim wore the most innocent expression possible, before another thought struck him. “Concerning Bob – will he face trial, too?”

“At least he will have some very serious hearings when he returns to Earth. Not only that he interpreted the rule book here and there more than casually, he did break some rules – even if it was necessary to stop the conspiracy, to prevent a genocide and to rescue the delegation in the end; me among the latter.” He shook his head. “And there I thought the adventures of Admiral Archer were worth writing books about. You put him into the shade, no doubt about it.”

Shrugging one shoulder, the young captain answered, “That was never my intention, after all Archer is a hero himself. Someone, even T’Pau remembers with her very own kind of gratefulness. I rather think he and I are simply doing what have to be done to protect the Federation’s ideals, no matter whose uniform, rank or title stands in the way.”

“Hopefully you can make the admiral understand this. He had his own share of history concerning Augments, and he is one of those who are against wakening them up – something that doesn’t matter now anymore, as I learned yesterday evening. But be sure that he’ll give you and Khan’s people trouble.”

“I’m certain the admiral is able to differ between the incident all those decades ago and Nien’s people now. Racism isn’t something I would take him for.”

Barnett sighed for the uncounted time. “I hope you’re right. I talked the day before yesterday with
him, and let me tell you that his advanced age increases his stubbornness. Of course, he was outraged to learn that the Augments were used as lab-rats by Section 31, and he also agrees that Khan should face a fair trial, yet he was anything but happy as he learned that the Vulcans want to wake the other superhumans up. He thinks that they will give the Federation trouble – or will destabilize her.”

“Bullshit! You met Joaquin and…”

“He’s a nice boy as far as I can tell, yes. And he appears to be very peaceful. But neither Archer nor I have any clue how the rest of Khan’s crew…”

“They are people like you and me, Admiral. Yes, their feelings seem to run deeper than ours and they learn with a speed that would make you dizzy simply watching it, but otherwise they are absolutely normal. Katie loves musicals, for example, and ‘Lord of the Rings’. She compares Selek with the fictional character of Lord Elrond. Can you imagine Selek’s face as he learned about it and her reaction afterwards as she realized that he heard her? I needed all my control not to laugh my head off. Then there is Otto, Katie’s husband. He’s really okay. Then there are Chang, Rodríguez, Paolo and Pablo. Some of them are absolutely smitten with the plants or architectures on New Vulcan, while Thomas is curious concerning ‘all the aliens’.”

“Of course, they want to know more about the world they woke up in,” Richard nodded. “It has to be for them like being thrown into a science-fiction movie.”

“Yeah, something like that,” Kirk nodded, before he took a deep breath. “Sarek talked with them two days ago and Spock informed me that his father thought the discussion was very positive. Right, after they learned what happened to Khan and to them, they were furious, yet Nien could calm them down – and later Bones and Joaquin did the same. They are worried for Khan’s fate of course, and after all they experienced on Earth before they fled, they are very wary concerning today’s justice. The latter is a chance for us all to show them that justice is simply that: Justice – without preconception. And the Vulcans already offered them to integrate them within their community until they find their own place – or they can remain on New Vulcan. To realize that they are accepted for once helps them a lot.”

“And knowing you, you already made friends with a few of them.” Richard allowed himself a short smile, as he saw Jim frowning. “That was a compliment, son. You have a way of making people trust you – one of the reasons why I agreed to give you the Enterprise. We need such officers out there.”

“Then let us pray that the judge thinks like you and doesn’t give me a vacation at the next penal colony for a few years,” Jim grumbled, which made Barnett chuckle,
“I hope for the same.” Then he sobered. “Your plan to publish everything is crazy and risky – and I’m insane enough to agree with it. You only should think twice what you tell the press concerning your mission on Qo’noS and how Khan fits into the picture there. When the Klingons learn that there wasn’t a second criminal that brought you to the Klingon homeworld but that Khan was the one who was hunted, then they’ll realize that you lied – you, Wesley and all of us. And this will influence the peace-talks in a negative way.”

“Officially I’ll stick to the made-up story, sir. It’s up to Command and the judge if this detail shall remain altered or not. But everything else will be told to the public. We have to get them on our side, sir. It will be the best for you, Command, Nien and his people, my officers and me.”

Barnett made a slow affirming gesture. “All right. But be careful, Jim. There will be staff officers and Council members who will try to grill you for it. And officially I have absolutely no knowledge of your plan until it’s realized. I’m going to be annoyed and cross that you informed the public without any warning, before I present my colleagues the chance your strategy gave us: To clean-up the whole mess within the HQ and the Council.”

“So, it’s a kind of game,” Kirk murmured, and Barnett snorted,

“Yes, a game – a very dangerous game, Jim. One I wouldn’t dare to play if it wouldn’t be you who starts it. You are a man of honor who doesn’t shy away from playing dirty if it protects those you vowed loyalty to. Your goal is always to make things right, to undo unfairness and to protect the Federation’s and Starfleet’s ideals. So, go for it Jim – but remember: Officially I’ll be outraged first, so don’t take my words and statements seriously, okay?”

Promptly Kirk grinned. “So, in secret we’ll swing the broom for the big spring-cleaning together?”

“On this you can bet your last shirt,” Barnett nodded and reached for the switch-off knob beside his screen, but hesitated for a further moment. “Give Khan my congratulations. I see no chance to come to New Vulcan because of the mountains of work I have to do. But you two have my blessing when you say ‘yes’ to each other.” He shook his head in amusement. “I just don’t know if you should stick to the Earthern tradition of ‘kissing the bride’.”

“Because you don’t know who the bride is?” Kirk teased, and Richard laughed softly, before he answered,

“No, because you marry by Vulcan law and I already imagine dozens of risen Vulcan eye-brows and scandalized gazes, if you two kiss each other in front of them.”
Kirk snickered. “Well, Spock and Uhura do this two-finger-thing a lot in public, what is the Vulcan equivalent of kissing. So, no problem if Nien and I do the same in the human way.”

“Don’t unleash an intergalactic scandal, Jim;” Barnett rebuked not very seriously. “The Vulcan High Council is already peeved enough because of Norton’s drastic measures he used as he tried to get you and Khan in his hands.”

“I think, even Vulcans differ between a romantic gesture and an ambush,” Jim smirked, before he saluted. “Have a nice day, sir.”

“The same for you, Jim. And give the other couple my greetings, too.” With that he switched off the connection and leaned back in his chair. “Using the public to steer Command and the trial. You did the same thing like you did during the Kobayashi Maru: You change the parameter to turn a no-win-scenario into a win-situation,” he murmered; looking straight through the real background of Kirk’s strategy. Damn, this cursed, adorable farm-boy was brilliant enough to make the whole universe wary of him. “You really should get a commendation for original thinking, boy – and hell would have to freeze over, before I don’t get your ass out of the deep water you’re in. I need captains like you to gain Starfleet a good name again!”

ST***ST***ST

Six hours away from New Vulcan – measured by the time a long-range shuttle would need at Warp 2 to reach the planet – a smaller and a larger shuttle hung in space; only stabilized by their navigation drives. They were docked at each other which allowed three passengers to change over. This wasn’t a usual maneuver but in this case, it would spare the smaller shuttle a lot of time. Three of its passengers changed over to the larger shuttle that was a liner and anyway was scheduled to the three passengers’ destination. What cost time was bringing the luggage aboard, because the three people didn’t travel with one or two suit cases, but with larger boxes which held science equipment. Therefore, the time of arrival would be delayed, but none of the crew or the passengers aboard the larger shuttle complained about it.

Last but not least, most of the passengers were Vulcans, exactly like the three newcomers. Vulcans never complained, at worst they would voice a negative statement, but even this wasn’t the case at the moment. What is, is – Kaiidth! And even if there were a man or woman among them who would gain disadvantages because of the delay, he or she would never say something about it – not in the presence of ‘outworlders’.

In the lounge area, near one of the picture windows, sat a few humans – adults and two teens. They all were curious why the liner shuttle coming from Earth and heading to New Vulcan, dropped out
of warp a few minutes ago and the captain’s announcement via intercom that they would have a rendezvous with another shuttle to take over some passengers did nothing to satisfy their curiosity. Yet out of consideration for the Vulcan people aboard, they stayed calm and only talked with hushed voices, even if they were aware of the fact that the others could still hear them. Yet their thoughtfulness of the Vulcan culture had been rewarded with polite respect and two Vulcan gentlemen had a longer talk with the old and the younger man of the human group the evening prior.

Finally, as the shuttles separated again and the liner fell into warp, the door opened and revealed three more Vulcans – an old man, a male in his middle ages and a Vulcanness who was about to reach her middle age.

Most Vulcans looked up – and then the humans witnessed something very interesting. Some Vulcans looked at the middle-aged man up and down and turned briskly away, others greeted him with a respectful Ta’al or with a short nod.

Zahir Uhura, grandfather of a certain language genius within Starfleet, bent forwards to his son Alhamisi. “Curious. And there I thought Vulcans are above something like this.”

The younger man shrugged. “Nyota always says that they are people like you and me, they only hide it better.”

“Foreign cultures have foreign traditions. Maybe the gentleman over there did something wrong or overstepped boundaries,” the old woman beside Zahir said. Her snow-white hair and the wrinkles on her face betrayed her age, yet Imara Uhura held herself with grace and pride, while her dark eyes sparkled with an inner fire.

“They are endangered now. You should think that such a catastrophe would forge them together,” M’Umbha, Nyota’s mother, muttered.

Her youngest daughter and her son whispered to each other and looked a few times over to the newcomers.

“Don’t stare! That’s highly impolite!” their father rebuked them instantly, but his daughter Uaekundu whispered,

“He looks like Nyota’s honey.”
Alhamisi frowned. “What?”

His son Malcom nodded and showed his father his PADD. “Here are some holo-photos Nyota sent of Spock. Just have a closer look. The Vulcan gentleman over there resembles him a lot.”

Critically Alhamisi and Zahir watched the photos and risked a careful gaze over their shoulder at the younger of the two male Vulcans who had just arrived. “Hmm, maybe,” Alhamisi said and turned his attention back towards his children. “But it’s difficult to differ people of other species. Yes, the features of Spock and him are similar, yet…”

“He is coming over to our table,” Malcom interrupted his father with a quick whisper.

Turning around, Alhamisi watched the Vulcan in question arriving at their table and rose to greet him. “Sir,” he said, trying a Ta’al.

“Greetings, ladies and gentlemen,” the Vulcan replied with a warm baritone. “I heard you mentioning the name ‘Spock’ a few times. May I ask what business you have with my nephew?”

“Your nephew?” Alhamisi asked perplexed.

“You are Spock’s uncle? No wonder that you two resemble each other this much,” Uaekundu burst out which betrayed her young age. She blushed beneath her chocolate skin as she found herself in the focus of those dark eyes which looked at her with interest. “Sorry,” she added hastily.

“There is no need to apologize, young lady. I take your statement as a compliment. My nephew and I have many things in common, not only the outer resemblance.” He cocked his head. “Regarding some of the spoken words prior: I also have problems differing between humans of the same heritages, yet I do realize that you look a lot like my nephew’s betrothed. I figure that you belong to Nyota Uhrua’s family?”

“Yes, Nyota and Uaekundu are my daughters,” Alhamisi said. “I’m Alhamisi Uhura, Nyota’s father,” he introduced himself.

“It’s a pleasure to meet you, sir. I’m Silek, Son of Skon.”
“You already know my daughter?” M’Umbha asked and the Vulcan shook his head.

“No, but my brother Sarek sent me a few photos. She is esthetically pleasant and my brother praised her high intelligence and sensibility, as well as her knowledge of many languages. This coming from him says a lot.”

Zahir smiled before he rose to speak, “I don’t know if this is against Vulcan traditions, but regarding the fact that two younglings of our families have brought us together, I – as the oldest – want to invite you to our table.”

Silek bowed his head. “There is no tradition that forbids something like this. I’m honored. I will tell my wife T’Yle and my father-in-law Stann of your invitation and bring them to your table. Please excuse me a moment.”

As he walked away, Uaekundu murmured, “Never let it be said that Vulcans are cold and sullen in company. This one is really nice – and almost casual.”

She had no idea how ‘casual’ Sarek’s younger brother had been for real in earlier days…

TBC…

Chapter End Notes

So, my dear readers, I do hope you enjoyed the new chapter and the few twists in it. Sometimes things almost work out on their own, sometimes new stones are thrown into the path. What goes for our lover-boys and Barnett after his and Kirk’s revelation has to be seen. I also hope you liked the talks and the introduction of Nyota’s family and Silek.

In the next chapter, Spock will meet his uncle for the first time, Uhura will see her family again, Jim and Nien are going to have their own lot of work to do for the upcoming wedding – and there will be another reunion.

I don’t know if I manage to end the next chapter before New Year’s Eve, but I’m trying. Yet this chapter is definitely the last before Christmas.

So, I want to wish you all a Merry, Happy Christmas,

Thank you so much for your loyalty by staying true to this very long story,
May Santa brings you some nice gifts

And may the light of Jesus bring some peace into this crazy world.

Love

Yours Starflight
Family

Chapter Notes

Hi, my dear readers!

Finally, after vacation, a nasty flu and a lot of catching up within my job, I was able to complete the next chapter. The 100th! Sweet Lord, I never thought the story would run this long, and I’m still astonished that so many readers are staying loyal to it.

Even if it is end of January, I don’t want to miss to wish you all a very late Happy New Year, and I hope you all had a good start into 2018.

In this chapter, family will occupy center stage. Nyota will be reunited with her family, Sarek meets his brother again (and Spock his uncle), Joaquin will have his beloved back and Jim will have a talk with his own family (guess, how this goes).

Thank you so much for the many reactions you left; I’ll try to answer the comments soon.

Have fun with the chapter,

Love

Yours Starflight

See the end of the chapter for more notes

100 - Family

“Is this the young lady you’re so smitten with?” McCoy couldn’t help the smirk that formed on his lips while asking Joaquin the question. It was later morning again, and while a certain liner shuttle from Earth with three added passengers neared New Vulcan, Bones, Sorel and Corrigan woke up the next Augments. Scott was, like the three days prior, in the cellars; overseeing the last transports. Only eight Augments more, and Khan’s whole crew would be back in the world of livings.

Joaquin looked into the cryotube that just had been beamed from the cellars via the Enterprise into the room with the stasis chambers that served for the same purpose for days now. A smile, accompanied by a tender gaze and a deep sigh were answers enough for the CMO, who rolled his eyes.

“The whole world is crazy with love, as it seems in the moment,” he mumbled and nodded at Sorel. “Right, let us wake the little princess up.”

Joaquin beamed at him; his eager look gave away his youthful impatience. “Thanks, Doc,” he said, before he tensed up as Sorel deactivated the cryosleep and initiated the wakening sequence. The humming tone of the cryotube changed, two lights flickered to life and then the wakening process started – only to change into a shrill sound of alert.

“What the hell…” McCoy gasped and hectically checked the cryotube’s status.
“Heart rate at 12, not increasing,” Sorel said calmly. “The same goes for the blood pressure.” He quickly crossed the room. “We should move her to the stasis chamber.” With Vulcan speed he programmed the medical equipment, while McCoy and Weiss unlocked the cryotube.

“She… she jerks,” Joaquin called; fear edged his voice. Beneath the view window the Asian girl began to move on her own accord – eyes still closed, yet her body began to convulse.

Bones didn’t hesitate a second longer. Opening the cryotube he slipped his arm beneath the ice cold slender body of Suzette Ling and lifted her up. With two large steps he was at the stasis chamber Sorel had just opened, put the young Chinese inside and watched as the chamber closed and instantly began to work. The blue light engulfed the female Augment with the long black hair, and gave her an almost mystical appearance – like one of the sirens just coming from the depth of the seas. He felt Joaquin stepping beside him and wrapped a comforting arm around the young man’s shoulder; giving into his fatherly instincts.

“Vitals?” he asked no-one particular.

“Heart beat at 15, 17, increasing. Blood pressure rises, too. Lung function starts,” Daniel Corrigan read the display. “All vitals are correct.” He looked over his shoulder. “This I’m calling luck that we woke the young lady just in time.”

Sorel turned away from the stasis chamber and looked at the cryotube. “Or the wakening process triggered the mal function. I suggest that Commander Scott should check the tube out.”

Bones nodded. “No problem, I tell him – even if he won’t be too thrilled. After all a whole starship waits in the orbit to get repaired.”

“I’m certain that the other engineers of Starfleet’s flagship are able to replace Mr. Scott for a few hours more,” Sorel deadpanned with the typical Vulcan logic. “And if there are problems they always can contact him via communicator.” He walked to Daniel and watched the read-outs. “Blood circulation and heart beat are within the expected parameters. She’ll be ready to leave stasis within the next hour.”

A loud sigh of relief was to hear, and all three healers looked with sympathy at the young Augment, who sat down on the next chair and rubbed his temples; murmuring something none of them understood.

“I would offer you a Saurian Brandy, Jo, but it’s too early for it and you’re still too young,” Bones tried to cheer him up.

Dark eyes looked at him. “Alcohol has no effect on us, Doc, and, by the way, I doubt that you find some alcohol to consume within the hospital.”

“You are right,” Sorel nodded solemnly. “Vulcans don’t need poisoning substances to get themselves under control. I even learned that alcohol make humans lose their inhibitions and control – if they possess latter at all.”

McCoy grimaced, but said nothing. He knew that there was no way to have a discussion with Sorel like he often had with Spock. Where Sarek’s son seemed to have developed a kind of pleasure to have arguments with McCoy, Sorel remained calm and outdid everything with cool logic. Leonard sighed. Within the last two weeks he had come to recognize the small but defining differences between the full Vulcans and Spock – and he had to admit that he preferred the first officer’s dry but at least existing humor.
The same moment Bones’ communicator beeped and without wasting a glance at the caller’s ID, he opened it and said, “There was a small problem with Miss Ling’s cryotube, but she’s in stasis now and her body vitals are increasing perfectly. So no need to send the cavalry, Khan.”

For a moment there was silence on the other end of the line, before the Augment leader’s voice asked, “Have you become a foreseer now, Doctor?”

Bones grinned without humor. “No, but I know you by now – you and your crazy family ties.” He glanced at Weiss. “Jo got a little bit nervous, but he’s fine now.”

“What happened?” Khan asked, and McCoy launched into a detailed description; barely taking his attention away from the stasis chamber’s display during the talk. Then he gave the communicator over to Joaquin, who also spoke quickly with his brother, before the link was closed. Sighing, Leonard hailed Scotty. As it seemed, their precaution to wake up the Augments as soon as possible had been a wise decision.

ST***ST***ST

Uhura really wished for a cool breeze as she crossed the street to get to the entrance of New Shi’Kahr’s space center. The long dress she wore was thin and protected her against the sun, but it did nothing to cool her down. She was only glad that she had pinned up her rich long hair into Vulcan style, what let at least her neck free exposed to the one or other wind. It was almost midday, and the heat was nearly unbearable – even for Spock and Sarek, which walked beside her. Of course, both men didn’t show that they felt uncomfortable, yet Nyota knew her future husband too well. A soft green hue shimmered on Spock’s face and the same went for Sarek. The Vulcan ambassador allowed himself even a quiet sigh as they finally entered the building and the climate regulation banned the heat to the outside.

Spock looked at the large screen that told about times of arrival of today’s expected shuttles and other spacecrafts, but was unable to find one of the two shuttles they had come for. He lifted a brow. “The liner shuttle has a delay of 26 minutes,” he said, before he frowned. “But Silek’s shuttle is not mentioned.”

Sarek nodded slowly and walked towards the information station; his son and future daughter-in-law on his heels. “Greetings,” he said to the Vulcanness behind the counter. “We expect a private shuttle that comes from Hydrilla. It was announced for an arrival in approximate 1 hour, yet it isn’t mentioned at the information screen.”

The Vulcanness nodded and checked something at her terminal. “Shuttle A-1936 from Hydrilla to Terra Nova via New Vulcan,” she nodded. “The shuttle’s arrival has been deleted, Ambassador Sarek,” she told him; knowing the older man’s face from public reports.

“Deleted?” Sarek lifted a brow and felt Spock stepping beside him.

“Yes, we received a message 4.638 standard-hours ago that it changed its heading directly towards Terra Nova. Parallel we were informed that three passengers switched from it onto the expected liner shuttle E-2347 during a rendezvous midspace.” She glanced up again. “I can contact the liner and ask if the persons, you expect, are aboard, sir.”

“Three passengers, you said?” Spock asked, before he looked at his father. “Silek and T’Ylle are only two. Maybe someone accompanies them?”

“Possible, yet I wonder why Silek didn’t inform me about the changes of his travel,” Sarek murmured, before he addressed the Vulcanness again. “Your help is appreciated.”
“To serve is my duty,” she replied politely and watched the ambassador and his famous son walking towards the Terran woman with the dark skin, who was clad in Vulcan clothes in the lady-style of a high presented house. Curiosity was something no Vulcan was immune against, and so she observed the three persons for some minutes more; realizing that the Terran woman was attached to the ambassador’s son. Obviously, Spock followed the steps of his father and was about to take a human female as wife. Asking herself what was so appealing to be married to an emotional and irrational being, she drove her attention back to incoming information at her terminal; taking her mind away from the three visitors.

Realizing that they had some time to spend, Sarek invited his son and his future daughter-in-law to one of the restaurants within the spaceport. The thought of an iced tea was more than tempting.

ST***ST

“Do you really think this is wise?” It wasn’t the first time Jim Kirk asked this question. To specify it, he had voiced his concern in this way already three times prior – and the fourth time had the same result: None at all.

Well, almost, because this time he got at least an eye-rolling for an answer, and then – finally – a pressed “I have to try it at least.”

Jim sighed deeply and continued to steady Khan, who stood beside the desk-chair and tested his injured leg again and again. He was pale, and his set yawn and his pinched expression told volumes, but just like a certain young Starfleet captain the Augment was stubborn like a mule.

“The muscles have to bulk up. The bones are mended, as McCoy told me this morning after the quick check-up he gave me. And…”

“He also told you that the muscles and sinews are still stricken and that you have to be careful,” Kirk interrupted him.

Sea colored eyes met sky blue ones, before it was Khan who sighed now.

“Jim, our wedding is in four days. I will NOT attend it in a wheelchair. Therefore…”

“We’ve no wheelchairs anymore today, honey. They are anti-grav chairs and…”

“Stop this hair splitting, Pyāra. The principle is the same – and I will not be wheeled to my own wedding,” the Augment snapped; cranky because of the pain and the frustration that he was still so damn weak. “So, are you helping me or not?”

Jim glared at him. “What do you think I’m doing here?”

“Arguing,” Nien deadpanned – and then both men were startled as a familiar deep, aged voice in their back spoke with obvious amusement,

“To use a human phrase, Jim: How does the own medicine taste?”

Both men looked over their shoulders and straight at Selek, whose eyes twinkled with mirth while the right corner of his mouth curled – the Vulcan equivalent of a laughing fit.

“Oh god, why can’t you Vulcans cease to creep up on me?” Kirk groaned. “You should wear a bell so that other people are warned.”

Selek made a noise that sounded suspiciously like a muffled laugh, yet there was some melancholy
added to the amusement in his eyes. “I don’t know how often I’ve heard that sentence back in my time. Not only from the other you, but also from ‘my’ McCoy.” He cocked his head. “I’d lost count how often I’ve listened to discussions akin to what I just heard.” He looked from Kirk to Khan. “There wasn’t a single time my Jim spent in sickbay without arguing with Leonard about his condition and that he was ‘fine’ to walk on his own, to leave, to take back command – or whatever Jim thought to be most important at those moments. And if Leonard didn’t give in, he pouted just like you do now. So, how does the own medicine taste, Jim?”

Kirk was very tempted to stuck boyishly his tongue out, but thought better of it. Old Spock was, after all, the High Minister of New Vulcan, and even if he was also his closest friend in an older vision, there were certain things even Jim Kirk didn’t do. So he only glared at Selek, while Khan grimaced.

“Happy to amuse you,” the Augment grumbled, what elicited another humorous sound from Old Spock. Then the Elder turned serious, while he stepped nearer. “I can understand that you try to regain your mobile abilities to walk to your wedding, Mr. Singh, but don’t overdo it. The gravity of this planet is higher, and your injuries were gravely.”

Nien pursed his lips for a moment. “You’re indeed concerned for my welfare.”

“Of course. You have proven to be a real friend to the Enterprise’s crew, you are Jim’s mate and you are a formidable warrior with his honor still intact. I’m… glad to have the opportunity to see you like this.”

Khan cocked his head. He had the certain feeling that there was more to the old Vulcan’s statement that the eye met, yet he thought it better to keep this to himself. And for the first time he asked himself, if in the other timeline the Enterprise-Crew and he had met, too.

Selek watched him for a moment, before he turned his attention to the topic that brought him originally to New Gol. “I came to inform you that I’ll join the short psionic tests of your crew, Mr. Singh. I’m doing this not as the High Minister, but as a friend. I know how human minds work, and so it will be easier for them to meld with me.”

“Our minds work different,” Khan mused, “yet you are right. There are differences between Vulcan and human minds, even if latter are advanced.”

“I recognized it during our meld,” Spock Prime confirmed. “Especially concerning the discipline. We also should continue to work on yours and Jim’s mental shield-technics. Seeing that you both are going to marry in four days and that you are busy with the preparations, I suggest that the next lessons will take place after your both’s and Spock’s and Nyota’s bonding ceremonies.”

Khan pursed his lips and nodded slowly. He had a certain gut-feeling that to learn how to shield his mind would be handy during the upcoming court material.

“Good,” Selek nodded, then he lifted a brow as he saw how the Augment began to waver and quickly helped Jim to sat Khan back on the desk-chair.

“You all right?” Kirk asked in concern and the former dictator sighed.

“YESSSSS, Jim. And if you ask me this question one more time…”

“You’ll shut me up by kissing me,” Jim said cheerfully; winking at his soulmate.

“Allas, you’re cockier than a seven-year-old churl,” Nien grumbled; suppressing a relieved groan as he lay back. It irked him to no end, but he had to admit that he really should take it slowly.
“Oh, you should have seen me then,” Kirk grinned. “Sam and I liked to play some pranks – and Mom got fits on regular base.”

“I can imagine that very well,” the Augment deadpanned.

“Jim,” Selek cut in. “Speaking of your family: Will your brother or your mother attend your wedding?”

From one moment to the next, the laughter left Jim’s eyes and his expression turned gravely. “No,” he said quietly.

Frowning, Spock Prime lifted a brow. “I do understand that in this time-line you and your mother have some… serious problems. But you marry under Vulcan law, what means for a life-time. So this is an one-time event. Is the grudge this big that she doesn’t come to her own son’s wedding?” He met Jim’s defiant eyes and added gently, “I don’t want to pry, old friend, and I know that this is very personal, yet I ask because I don’t want to see you sad.”

Kirk bit his lips. Of course he had thought about his mother – or Sam and his family. Yet the mere thought of calling his mother and telling her that he was going to marry a man who was accused of several serious crimes, gave him belly ache. He simply knew what she would say – that something like this was typical for him, and that she had thought that being a Starfleet captain would have cured him of making rash decisions. She would point out that he was still the impulsive boy who didn’t think twice – that he would throw his life away because of some hormones he wasn’t able to control. She wouldn’t understand the deep love he felt for Nien. She had forgotten on purpose how it was to love like this. He had learned that the hard way.

“You haven’t informed them until now,” Khan’s words interrupted his dark thoughts.

Jim took a very deep breath and sighed. “No, I haven’t.”

Sitting up again, Nien watched his beloved attentively. “You think she will disapprove with your choice.”

“She disapproves with almost everything I do,” Kirk snorted. “Her only reaction as I was promoted captain, was a deep space call from some science vessel she served on, a ‘congratulation’ and the comment that at last I’m beginning to walk towards my father’s steps. Hell, when I was in hospital after… the warp-core incident last year, she stopped by only several days after I woke up, and I was two weeks in coma prior. Some sweets and some ‘I’m glad that your injuries are not that serious’ was all I got to hear. ‘Injuries’. I was DEAD, but this part she didn’t understand.” He shook his head. “And as she left two days later, she advised me to listen to the doctors and that I should think first before I act in the future, because one day I wouldn’t be ‘that lucky’ to be patched up again like now. If I would have pondered every pro and contra those minutes before the Enterprise hit the Earth’s atmosphere, my whole crew and yours would be dead now – without any chance of retrieve them. But that she didn’t comprehend, too.” He stared into distance. “Sometimes I think she and I are living in two different worlds – in a sort of parallel universe, because she never gets what really is going on with me or understands what I tell her.”

He felt a warm, thin hand on his shoulder and as he looked back, he saw that Selek had closed the distance to him. The old Vulcan’s eyes shone with comfort and warmth, but also with melancholy, as he said,

“I do understand your hesitation to contact your mother, Jim. After all, I saw some of what you’ve been through during your childhood while we melded on Delta Vega. But she’s your mother. And she is still an active Starfleet officer. We both know how quickly death can come out there in the
galaxy, and then it will be too late to give your relationship another try. You are a grown-up man now. Even she has to see and to recognize it, and maybe she sees your upcoming wedding as another sign that her ‘little, stubborn boy’ has matured. You are going to start an own kind of family. At least you should inform her about it.”

Kirk grimaced but remained silent.

Selek’s voice became even softer. “And concerning Sam: I don’t know what happened that you and your brother have drifted apart, but I know from my time-line that you loved him dearly. Yes, your contact was rare because of you being out there in the galaxy and he was on Deneva, yet you were still close.” He hesitated; uncertain how much he could reveal. “But even on a planet like Deneva, nasty incidents can happen and… people can demise. You shouldn’t keep your distance from Sam, Jim, or you’ll regret it one day. Believe me.”

Kirk had turned fully around to Old Spock and saw deep beneath the warmth, compassion and the echo of bad memories. And, of course, the young captain’s quick mind came to conclusion. “What happened in your timeline?” he asked quietly.

Selek took a very deep breath and sighed, while he lowered his head. “You know that I swore never to reveal too much to you and the others to give you the chance to walk your own way, but… contact Sam, Jim. And… when you two speak in private, you… you should tell him that he and his family should leave Deneva within the next three or four years.”

Kirk felt a sinking in his stomach. “Will something happen?”

Again the old Vulcan didn’t look at him, while he answered, “This is the only warning I can give.”

“And maybe you should indeed speak with your brother,” Khan joined the talk softly. “Call him, Jim. You know that Spock here can’t tell you more, but I understand his words as a warning that will spare you sorrow if you listen to him.” He took a deep breath. “Your family should learn about everything from you, not from the media, because when this reporter arrives, he’ll publish our ‘happily ever after’ within a blink of an eye. Whatever happened between you, your brother and your mother – they shouldn’t become aware of something important like this by listening to the radio or by watching TV.”

Biting his lips, Jim looked first back at Old Spock – whose eyes had an almost pleading intensity – and then back to Nien. And this little voice deep in him that always spoke up when his gut took over, told him to follow the given advise. Nien was right. He, Jim, hadn’t broken up completely with his family. Some loose ties were still existing and he didn’t want to damage those ties more; especially concerning Sam.

Sam…

Something would happen to him, if he – Jim – wouldn’t speak with him. Something that lay a few years ahead, but seemed to be gravely serious. And Kirk didn’t want to think of the risk Selek just took to give him this warning.

“You always led me on the right way,” he said gently; laying one arm on Spock Prime’s arm, before he glanced at Khan. “And your advices were always for my best – well, at least after the mess last year.” He sighed. “Okay, I call them.”

There was relief in the Elder’s eyes, before the Vulcan mask was back in place. And Jim knew that he had to convince his brother to leave Deneva. The older vision of his first officer hadn’t given away any details, but Selek’s reaction spoke volumes. Something very, very bad was going to
happen in a few years on this planet, and Jim didn’t want to think of what this could be – if it would not only be dangerous for Sam and his family, but also for other people, too. Wouldn’t it be Selek’s duty then to give a proper warning for all who were involved? On the other hand, Jim knew how dangerous it was to mess with a timeline. Old Spock just had broken a dozen rules and more to warn him concerning Sam. Jim couldn’t demand anything more from the Elder.

Sighing again, he sat down on the empty chair; looking all of sudden tired. Nien reached out and took one of his hands in his own and squeezed his fingers. “You’ll find the right words,” he murmured; anticipating why his beloved dreaded the call so much.

“Yeah, but to tell someone to leave everything he built up behind only because of some evidences isn’t much of conviction.” He grimaced. “And concerning Mom… I already know how she’s going to react.”

“And again: You’ll know what to say to both of them,” Khan smiled reassuringly.

“I have to agree with Mr. Singh. The day you don’t find the right words to convince someone is the day Earth’s moon starts to orbit backwards,” Selek deadpanned – and Jim began to laugh.

“Bones should have heard you using such a phrase.”

Something close to a smile curled Selek’s lips. “Leonard would be hilarious, of course. But sometimes it’s good to grant someone a little triumph.”

Khan snorted in amusement. “He’s a sly dog, your first officer – that goes for both visions of them.”

“Yeah. Can you imagine now what I have to endure?” Kirk grinned.

“My compassion is very limited in this case, Jim,” Nien chuckled.

“And once again I have to agree with Mr. Singh,” Old Spock commented wryly; content with the two younger men’s bickering. Then he turned serious again. “I not only came to inform you of my decision to have a part in declaring your people an own human race, Mr. Singh, I also came to prepare you two for your upcoming bonding ceremony.”

Jim looked with big eyes at him. “You what?”

The familiar brown eyes with too many crinkles around them smiled in their own way with love. “Usually that would be Young Spock’s duty, because he’s your T’hy’la, but seeing that my counterpart is busy with his own preparations, I take his place – if you agree.”

Promptly Kirk began to smile widely. “Yes, of course I’m okay with it.” He glanced at Khan. “Nien?”

“It would be an honor,” the former dictator replied; bowing shortly his head at the old Vulcan.

“All right,” Selek nodded and sat down beside Jim at the second chair. “Your bonding will not only be with words and vows, but also with some psionic events. Traditionally, the priest – in this case T’Pau herself – would help you to change the small link into a full bond. Seeing that you have already developed a full bond, she’ll simply confirm it. Yet she’ll will meld with both of you parallel, what is a very intimate process. And you should be prepared for it.”

Jim smirked. “And by the way you can teach us some more tricks how to shield, and how to handle our bond.”
Inclining his head, Selek said quietly, “Correct.”

Khan sighed. “Well, I knew that the next lesson would be about that.”

“You’re never too old and too wise to learn new things,” Old Spock added seriously, and Khan nodded while rolling his eyes.

“It’s a wise motto,” Jim agreed. “I just learned this morning that sometimes trust has to be shown before you get it.” As he caught Selek’s asking glance, he began to tell him about his talk with Barnett.

ST***ST

“There they are!” Nyota couldn’t help the excited smile that spread over her face as she saw her family leaving the security area of the arrival terminal. Wearing mostly modern business clothes but mixed with colorful scarfs in tribal style, they did drive some attention towards them, yet they moved casual and self-conscious as if it would be the most normal thing on the world that six Terrans of African heritage, carrying large luggage and chattering, walked through the New Vulcan spaceport.

Uhura stole a short glance at Spock, who had schooled his features into the expressionless Vulcan mask, yet she saw curiosity shimmering in his eyes, while he watched his intended’s family with interest. And one look at Sarek told her that the ambassador was slightly amused, yet curious, too.

Taking a deep breathe she headed towards them; taking care that she didn’t walked too quickly even if all she wanted was to run.

Her sister lacked this kind of control and barely she had seen her, stormed forwards with a joyful “Nyota!” A few moments later Uaekundu threw her arms around her sister in a bear hug; squealing in delight. Far too happy to meet her family again, Nyota refrained from rebuking her sister and returned the embrace with a suppressed laugh. Only seconds later her brother Malcom was there and wrapped both females in his long arms.

Words of “Look at you! All dressed in Vulcan’s finest!” or of “Love suits you, sis!” were exchanged, replied by Nyota with “Heavens, have you grown!” and “You have a different haircut, Malcom!” And this all in voices you really can’t call quiet.

Sarek and Spock stopped several meters away from the spectacle to give Nyota some room to welcome her family; both observed the display of big human emotions with interest but also with amusement. Not for the first time the ambassador asked himself how men had come that far with this lack of any control.

Uhura’s parents and grandparents joined the siblings and then the greeting became less noisy, but not less intense. Nyota embraced her parents as if there would be no morning, the same went for her granny while she greeted her grandfather with deep respect, before she also threw her arms around him. Her sister didn’t leave her side; speaking the whole time with unstoppable enthusiasm.

Finally, after many words, kisses and embraces (and after driving a lot of attention from by-passing Vulcans who all of them gave them the eye-brow), Nyota remembered that she hadn’t come alone. Taking her grandfather’s one hand and the other one of her father in her fingers, she led them towards the Vulcan ambassador and her spouse; the others followed her immediately.

“Sarek, Spock, may I introduce my family to you? My grandparents Zahir and Imara Uhura, my parents Alhamisi and M’Umbha, and my siblings Uaekundu and Malcom Uhura.” She looked at her family. “Please meet Ambassador Sarek of the House of Surak, and S’chn T’gai Spock cha’Sarek –
my intended."

Bots Vulcans lifted their right hands into the Ta’al, and Nyota felt some warmth mingled with pride as she watched her family returning the traditional gesture almost perfect. ‘They’ve practiced!’ she thought. ‘Sweet Lord, who had taught them?’

“Welcome to New Vulcan, honorable members of Nyota’s clan,” Sarek said. “It’s a pleasure to meet you.” He let his hand sink. “My House is grateful to call Nyota a daughter, and spouse to my son.”

Alhamisi bowed. “We come to serve, Ambassador, and in the name of my family I voice our gratitude to invite us and to have Nyota welcome in the folds of your clan.” Then he looked at Spock; smiling. “So, this is the young man who stole my oldest granddaughter’s heart?” He cocked his head; his dark eyes shimmered warm before he glanced at Nyota. “You have quite the catch here, my dear. After all I heard about him and his captain, you’re going to marry a hero.”

Uhura blushed and Spock felt – to his horror – his ear tips turning hot.

It was Nyota’s mother M’Umbha, who stepped in before the situation could become embarrassing for her future son-in-law. “I know that it isn’t usual among your people to show affection in public, but I’m nothing more than a casual human mother, who meets the first time the man who will take her girl from her, so…” She stepped forwards, and with a “With your permission, son,” she took him in his arms and squeezed him gently.

Spock didn’t know how to react. For a moment he was thrown back in time, as his own mother still lived and she embraced him whenever they met after he left his father’s house to join Starfleet. Yes, Amanda had been more slender and taller, but even with his inner shields risen he could feel the motherly warmth the woman radiated with. Parallel he sensed her honesty and could smell the pleasant scent of her perfume. And simply acting on the human side of his instincts, he carefully wrapped his arms around her and forced himself to relax.

“Welcome to our family, Spock,” M’Umbha whispered. “Whatever the future holds for you and Nyota, always remember that you have now a place on Earth you can go to and can call ‘home’.” She squeezed him one last time, before she stepped back. She recognized the surprise and confusion deep in his eyes, and realized that Nyota hadn’t underestimated as she told her that Spock had been lonely the most time of his life. He wasn’t used to be a part of a group, to be welcomed in group – or into a family – and she also remembered that this young man had lost his mother only two years ago.

Nyota had told her that Spock’s mother had been the only one who had accepted him like he was, until the half-Vulcan met a certain young communication genius. And M’Umbha was glad that said half-Vulcan had made further friends in the meantime. It was an open secret by now that the youngest captain who ever commanded a Starfleet ship and the son of the Vulcan ambassador had become close friends, and she was curious to meet the rest of the famous gang of the ‘Starfleet-kids’ how she had come to call the young officers around James Kirk.

Spock cleared his throat; ignoring some scandalized gazes other Vulcans threw in their direction. “Thank you for your kind offer, Mrs. Uhura. It will be a pleasure for me to visit your home one day.”

The older woman began to laugh. “Honey, we’re as good as one family. Call me M’Umbha.”

“The same goes for me, Spock. I’m Alhamisi for you,” Nyota’s father said with a big smile, but he ceased of touching the future husband of his daughter.

“I’m Malcom,” Nyota’s brother said; nodding at Spock. “If my sister gets on your nerves too much, do not hesitate to call me. I do know a thing or two about it.”
Promptly his sister’s fist landed on his arm, while Spock replied, “Nyota is a very well-adjusted person and we share many interests, so I never tire to discuss topics with her.” He glanced shortly at his betrothed with warmth in his eyes, before he added, “Yet I thank you for the offer. Maybe you can give me the one or other advice concerning human behavior in general.”

“Believe me, nephew, you can become old, grey and wrinkled, yet you will not be able to solve completely the riddle called ‘human’,” a male voice from behind the little group said.

Despite still being weak from the surgery, Sarek demonstrated how quick Vulcans could move as he side-stepped Nyota’s family and looked with slightly widened eyes at the three persons which had stopped in the back of the Terrans.

“Silek!” he said; surprise edged for a moment in his voice, before his face became softer.

The Uhuras parted and made room for the three Vulcans to pass through, while Uaekundu murmured towards her brother, “See, I was right! Silek does resemble Spock a lot!”

And she was right. Nyota cocked her head and watched the older Vulcan coming nearer. His slender face with the high cheekbones, the lips and even the way to move was almost identically with Spock. Only his eyes were more almond-shaped and they bore the typical Vulcan straight look, while Spock’s eyes were more human. He also was slenderer and looked younger than Sarek, yet you couldn’t deny that the three Vulcan males were from one and the same family.

“Fascinating,” she whispered.

Ever so quietly Spock cleared his throat and gave her a pointed look that woke her amusement, then the Enterprise’ first officer watched the three newcomers with interest. He had never met his uncle, yet he knew that Silek had been a rebel within the clan – just like Spock as he vacated his place within the Vulcan Science Academy and joined Starfleet. Like him Silek had rebelled against his own father – Skon – and had chosen a different carrier then his family planned for him. He went to Earth to become a teacher and taught students there Vulcan linguistic. Skon, Sarek’s and Silek’s father, banned him from the clan – something that had a familiar bitter taste for Spock. But, surprisingly, Sarek didn’t obey his father concerning his brother and stayed in contact with him. As Sarek later became a member of the embassy, the two brothers met often – and Spock had heard one time that it had been Silek who introduced Amanda Grayson to Sarek, who was in need for a teacher who taught him better English and human traditions.

Later, after Skon’s death, T’Pau made use of her right as the clan’s matriarch and welcomed Silek back in the folds of the family, yet Silek didn’t return to Vulcan permanently, but attended a project on Hydrilla; marrying the daughter of a Vulcan follow scientist before he settled down there.

It was quite a paradox: The traditional Sarek married a human woman, and the rebel bonded with a Vulcan lady. Sometimes the paths of the universe were difficult to understand. And it didn’t slip Nyota’ attention that Sarek’s stance and behavior was stiffer than that of his brother – even if the ambassador gave into his obvious inner unrest for his younger sibling.

With a few steps he was in front of his sibling. “Welcome brother,” he said; lifting his hand into the Ta’al, Silek instantly replied, before both Vulcans wrapped their hands around each other’s wrists. “We were concerned as we learned your shuttle had canceled its arrival here,” Sarek continued.

“Told you, we should have called the ambassador to tell him about the changes,” Zahir said to his son.

“The commanders of the hired shuttle and the liner shuttle saw the logic in having a rendezvous in
space to spare some time the other passengers of the shuttle that came from Hydrilla,” Silek
answered. “And then we were occupied with the fine family your son’s intended belongs to.” He
nodded almost kindly at the Uhuras, before he turned toward his two companions. “Please meet my
wife, T’Ylle and my father-in-law, Starnn.”

Sarek’s, Spock’s and Nyota’a attention was driven to the Vulcanness, who watched them with polite
interest. She was a slender, tall woman in her middle age with dark hair that was cut on shoulder-
length. She instantly closed the distance to her husband as he lifted his right hand; index- and middle-
finger straightened, the other fingers folded into the palm. She returned the gesture with her own
right hand.

“Sarek, it’s an honor to meet you,” she said before her eyes found Spock. “Long life and peace,
Spock.”

The half-Vulcan lifted his hand into the Ta’al. “The same for you, T’Ylle.”

Then the old Vulcan stepped forwards. His hair was already snow white, his face full of crinkles and
his voice was high and hoarse from age, yet his eyes were full of life, as he greeted the others.

The same time two younger Vulcans headed into their direction; moving antigrav-baggage carts
beside them.

“Ah, our luggage,” Silek nodded and turned towards his brother. “Where can we store them until
we’ve found a flat to live in?”

To say that Vulcans were always in control was a lie, like Sarek clearly proved as both his brows
almost vanished beneath his grey-black peppered bangs, while his eyes widened. “I… beg your
pardon?”

Uhura didn’t believe her eyes, as she watched Silek’s lips curling into an almost-smile.

“Haven’t I told you?” Silek asked with clear faked innocence. “We’re moving to New Vulcan to
stay here.”

For two seconds Sarek’s mouth hung open – and Nyota could have sworn that she saw mischievous
humor in Silek’s gaze. It was clear that Silek had just pulled his brother’s leg in rarely display of
humor. She threw a glance at Spock, who obviously didn’t know what to think of the openness his
uncle showed.

The Enterprise’s comm officer hid a smile. Now she knew that the humorous streak Spock showed
here and there wasn’t only a genetic devisee from his mother, but ran also in his clan.

‘This is going to be an interesting time within the next days,’ she thought with amusement.

ST***ST

‘This is going to be such fun!’ This thought wasn’t born out of amusement, but was sheer sarcasm.
Jim Kirk sat at the same communication terminal he had occupied in the morning to talk with
Barnett, and waited for the connection to Deneva. The last he had heard about his mother was that
she was visiting Sam and Aurelan on Deneva, but that had been a three or four weeks ago and he
doubted that she was still on vacation given the damn war – despite the momentarily cease-fire.
Therefore he assumed her back in space. Maybe Sam could tell him on which ship she served in the
moment. He didn’t like the thought to contact Bob and to ask him for another favor to find out where
Winona Kirk was.
The screen sprang alive and Jim looked straight into the brown eyes of his older brother. Georg Samuel Kirk held a big resemblance to his sibling, yet he looked more matured – last but not least because of the moustache he wore. The blond-brown hair was combed side-parted and his skin was tanned from Deneva’s sun.

“Jim!” he called; bafflement and joy in his gaze. “That’s a surprise! Long time not heard from you.”

Kirk grimaced. “Well, we were at war, Sam, and several nasty things happened which prevented me from making social calls.”

Sam sighed. “Yeah, we heard about this conspiracy within Starfleet in the news and that you had a part in revealing it. Mom and I tried to contact you via Starfleet, but we were told that you were off duty in the moment and have asylum on New Vulcan. Guess how Mom took the latter.”

This time it was Jim who sighed. “I can imagine it,” he grumbled.

His brother turned serious. “Jim, I was told you were off duty and have taken refugium on New Vulcan – and seeing you in civil clothes instead of uniform and the fact that I received your call from New Gol tells me even more. Are you in trouble? Mom tried to get some more details, but the whole staff at the HQ is tightlipped. What happened?”

The younger Kirk groaned. “Section 31 happened – again. The Klingons happened. The…”

“Section 31? Never heard of it.”

“Yeah, of course not – after all it was a secret department within the SBI that thought it to be a good idea to start a war with the Klingons to gain more power and to militarize Starfleet. And for that they tried to use me last year and now they tried to eliminate all those who could reveal them – meaning my officers, me and Khan and his family.”

Sam cocked his head. “That are big accuses you’re making, but after all I heard in the news I think they told us only the top of the ice-mountain.”

“You have no idea,” Kirk growled. “But you’re going to learn everything about it, mark my words.” He took a deep breath.

His brother watched him. “There are rumors that you were captured by Klingons prior to your crazy stunt on Aldebaran. Are you okay?”

“Yeah – thanks to Nien. He freed me from this hellhole and healed me.”

Sam blanched. “You were… tortured?”

Jim made a face. “Sentenced to death by torture – and Nien only got me out hours later. I tell you, it was no walk through the park.”

The older of the two Kirk-brothers bent forwards. “But you’re okay now, are you?” Concern shimmered in his eyes.

“Yes,” Jim nodded. “I’m healed – something I can’t say about Nien. He got it hard during the last fight.”

Sam shortly pursed his lips. “Who is this Nien? There are rumors that you and this mysterious super-hero Sunrise worked hand in hand. Is this his name? Do you refer to him?”
Yes, not only Jim Kirk had a quick mind and was able to connect given details to a whole picture within minutes. Sam was the same.

“Yeah,” the young captain affirmed. “It was him – and still is him.” He braced himself. “Sam, I not only called to let you know that I’m okay, I also have big news. I’m going to marry in four days.”

Bang! The cat was out of the bag – and Georg Samuel Kirk stared with open mouth had his brother on the screen.

“You… what?”

Despite the fact that the two brothers had drifted apart after Sam ran off all those years ago and left his little brother with the hated stepfather behind, there was still some of the once shared brotherhood intact. Jim grinned at Sam.

“I’m marrying in four days and…”

He couldn’t end his sentence, because suddenly Sam was pushed aside by a slender hand, and the blond head of Winona Kirk appeared on the screen. Her deep blue eyes bore in those of her youngest son, while the long blond hair fell over her shoulder.

“Jim! Sweet Lord, finally! The brass didn’t answer any questions I had concerning you, and only stated that you off duty and on New Vulcan in asylum.” Her momentarily worried look raked over his face, before her gaze changed. “What have you done now that you have to take refuge on New Vulcan?”

This time Jim groaned loudly. That was exactly the reaction he had seen coming. “Oh, I did nothing – except for revealing a conspiracy, kicking some admirals’ asses which rot in custody now, and protecting a man and his family of falling prey to genocide named admirals ordered. And to keep me save High Minister Selek granted my officers and me asylum until everything will be cleared at trial.” He shrugged. “So, no big deal here.”

Winona stared at him. “No big deal?” she repeated. “You are to be… court materialled?”

“That’s the normal way when you disobey an admiral – who is, by the way, responsible for the attack against the Excalibur and those who didn’t survive it, tried to murder Nien and his people, and didn’t move one finger as I was taken captive by the Klingons. If it wouldn’t have been for Nien, I’d be dead again – this time without a ticket back to the world of livings.”

His mother rolled her eyes. “Don’t exaggerate the incident last year. Nuclear poisoning can lead to death, yes, but…”

“For the last time, Mom, I was dead for more than a half hour! And I only survived because Bones put me into cryosleep and feed me some of Nien’s blood!” Kirk shook his head. “You never got this part, didn’t you? I was dead – declared dead and zipped into a body-bag. End of story! And then I was retrieved. But believe me, to feel your own cells overheating and melting, because you are nuclear poisoned, cut off from any company and dying alone is something I wouldn’t wish at a snake!”

Winona stayed silent and it was obvious that she somehow still denied the knowledge to settle in. Jim had the sudden assumption that this was a kind of self-protection her mind came up instinctively.

Sam cleared his throat. “Mom, Jim is going to marry in four days,” he carefully changed the topic.

That brought life into Winona. “WHAT?” she shrieked and glanced back at her youngest son. “You
are going to marry?” She threw a short look up to the ceiling. “Lord I thank thee, he has grown up finally!” She waved her hand as Jim opened his mouth to give a fitting reply – after all he was a Starfleet captain, dammit! “Who is she? Is she there? I really want to meet the woman that was able to tame you. Is it this nice comm officer you have? Or the Marcus-girl? I heard that…”

“Mom!” Jim interrupted her sternly. “There is no ‘she’. It’s a ‘he’. I’m marrying officially my already acknowledged bondmate and he is male.”

That stopped Winona’s speech. With big eyes she looked at him. “Oh… well… I never took you for a bi, but…” She shrugged. “Hey, it’s all right. If he is a nice guy and you two are certain about the marriage, then… why not.” She smiled, but it was forced. “So, who is it? One of your two friends? I tell you, this doctor and your Vulcan officer hovered around your bed last year like two mother-hens.”

“Yeah, they are like mother-hens – and they say the same about me when the situation is the other way around,” Jim answered calmly. “But, no, it’s none of them. Bones is done with marriage, and Spock is going the wed my ‘nice comm officer’ in four days. It’s a double-marriage under Vulcan law: Spock and Uhura, and Nien and I.”

“Nien? As in ‘Nien’ whose blood cured you?”

“One and the same,” Kirk nodded. “And I don’t marry him because his blood saved me, but because we fell in love – real love!”

“Mom, Nien is this mysterious Sunrise,” Sam cut in. It was obvious that he was baffled about the revelation that his ‘baby-brother’ was about to marry a male, but he had no problems with it.

Winona was also open-spirted concerning same-gender-relationships and marriages, yet she knew that her youngest son loved to hunt skirts, and then a man captured his heart. Typical Jim. When there was one thing certain about him then it was that you couldn’t calculate him.

The woman bit shortly his lips. “Sunrise… Quite the hero you got yourself there.” She cocked her head and stemmed her fists on the hips. “You knew from the beginning who Sunrise is and you didn’t tell?” she all but demanded.

“If you’ve watched the conference with the media and President Robertson a few days ago, Mom, you would know that Sunrise doesn’t want to reveal his identity, and I respect that.” Jim crossed his arms in front of his chest. “Nien and I are already bondmates, and…”

“Bondmates? He’s psionic?” Winona concluded.

Kirk nodded again. “Yes, sort of. And our bond will be officially acknowledged by the Vulcans.” He took a deep breath. “If you, Sam, Aurelan and Peter want to attend my wedding, I… would be pleased.” Well, he would be pleased to meet Sam and his family again. And if this meant he would have to endure his mother’s presence, too – well, by all his means then she could come.

Sam sighed and looked sorrowful at his brother. “Heavens! Jim, I would love to, but… Aurelan is about to give birth to our second child within the next two or three days.”

“What? The time is already up?” Jim asked baffled; ignoring his mother rolling her eyes again. “I thought she has two or three months left.”

His brother chuckled. “Time flies by when you have a lot to do. The birth will take place in two or three days – the baby is already turning in the womb.”
“Well, then give her my best wishes – and call me when the little one is born. What will it be? A girl or a boy?”

“A girl – and Peter is head over heels already.”

Jim laughed. “Yeah, I guess.” He glanced back at his mother. “So, you are there to help Aurelan?”

Winona nodded. “Yes, I took my whole annual vacation to stay on Deneva to help Aurelan with Peter.”

“At least you are one time there when one of your sons need you,” Jim replied hard.

Again Sam raised to speak before his mother had a chance to answer the verbal blow “The pregnancy isn’t an easy one this time and Aurelan had a lot of problems within the last weeks. She barely could leave her bed.”

Jim liked his sister-in-law and so the news touched him. “I’m sorry to hear this, Sam. Is she okay?”

“She’s already in hospital. The doctors want to watch the last days of her pregnancy to act instantly should it be necessary.” He took a deep breath. “I’m sorry that I’ll miss your wedding, Jim, but…”

“Hey, no problem,” the young captain assured him and meant it. “My wedding is a little bit sudden and, to admit it, I already assumed that you didn’t have time. I simply wanted to inform you about it before you maybe learn it from the media.”

Sam grinned. “Don’t tell me you called the press.”

“Oh, something like this – but not because I think my marriage would be interesting for public. There is more to it.”

“Why do I have a bad feeling about it?” Winona asked; narrowing her eyes.

“Because you never placed any trust of faith into me,” Jim deadpanned. “No matter if it concerned some silly children pranks or serious stuff.”

“You can’t deny that you were anything but the nice boy,” Winona stated.

“Yeah, guess whose fault this is,” Jim said bitterly. “Sometimes children see no other way than driving not existing attention to themselves by disobeying the rules. Thank the Lord that I now have a kind of an own family – friends, who are there for me and accept me for what and who I am, and a mate who loves me dearly and didn’t hesitate to risk his own life to rescue me from Klingon prison where I faced death by torture.”

At the last part of the little tirade, Winona paled. “You were… tortured?”

“You are long enough in Starfleet. I’m certain you know what happened to her officers when they’re captured by Klingons – not to speak of those the Klingon Empire regards as a kind of personal enemy and sentence them to death.” Jim’s voice gave nothing away just like his face in the moment. Bones would have called it the ‘Vulcan mask’, but in this case it wasn’t a mask at all. Jim really didn’t care if his mother was shocked about his almost-fate or not.

Sam’s reaction was more valued to him. “Jim, how bad was it?” he asked quietly; eyes full of compassion but also anger – anger that was directed at those who had hurt his younger brother.

“Bad enough to give even Bones the chills. Klingon pain sticks should really be forbidden – or
Klingon knives.”

Winona gulped, while Sam swore under his breath. “Any damages left?” he asked quietly. As a biologist he had heard a thing or two about the Klingon pain sticks and how they worked.

“No – besides that this hellhole brought Nien and me together.” Jim unfolded his arms. “Well, guys, I hope everything will be okay with the little lady – and don’t forget to call me at New Gol when she is born. I tell T’Pau that you’re going to call so that you’re piped through to me.”

“You are… at New Gol?” Winona asked; thunderstruck.

“Yes, Nien, Bones, Jo and I are living here in the moment. T’Pau is really a very considering and caring host.”

“T’Pau,” Sam said; scratching his head. “Simply like that. She is… What? The Vulcan matriarch?”

“Sort of – and she’s Spock’s granny and because Spock and I are T’hy’la – soulbrothers – she welcomed me into her clan. So no big deal to ask her for the permission to receive some calls.” He grinned at the perplex faces on the screen. “Bye!” He reached for the button to cut the connection, but Sam called,

“Jim! Tell Dr. McCoy to take some photos! I so want to see you in robes.”

“Robes?” Winona asked astonished.

“He marries under Vulcan law beside Spock. So, yeah, Jimmy is going to wear robes.”

“Silke ones,” the young captain confirmed with a grin. “Spock chose them – and they really look nice. See ya!” With that he shut off the link and leant back. Well, despite his mother’s typical reaction the whole talk wasn’t that bad as he had assumed. And he had to admit that he wasn’t too sad that his mother wouldn’t attend the marriage, yet a small part of him was sorry that Sam wouldn’t be there. But the little lady was more important in the moment, so he could understand his brother’s absence.

Sighing he raised; happy that the call was over. Then he stopped in the movement. He hadn’t told his mother and Sam about Nien’s true identity. But knowing Winona she promptly would tell everyone who listened – or not listened – about the ‘Augment from the past’.

No, let them learn about like anybody else: From a detailed and clear report within the media, including everything that really happened.

Feeling more at ease Jim left the office; looking forwards to the next days…

TBC…

Chapter End Notes

So, there were many reunions in this chapter, and this will not be the last reunions. In the next chapter, you’re going to meet Suzette, the psionic-test with the Augments will be done, Khan has an interesting talk with Selek concerning the other time-line and then
Jim and Spock will go shopping to get Nien an own wedding-robe (Vulcan style, of course). And this shopping tour will not be an easy one, because some of the bullies Spock had to endure during his school-time have survived.

I hope you liked the new chapter. In the Kelvin-timeline Winona Kirk is often portrayed as a woman who had changed drastically after her husband’s death, leaving her sons in the care of her second husband who was a bastard. And hearing his voice and how he talked to little Jim in the first movie seems to speak for such a background story, not to mention the book to the movie in which Jim’s unhappy childhood was told. Therefore I decided to write Winona like this. I also thought that it would be a logical reaction from her to simply deny that Jim had been, indeed, dead. Some people protect themselves from further mental pain by denying new losses. Okay, Jim was retrieved, yet I can imagine that it would have broken Winona completely if she would acknowledge that her son, who resembles his father so much, had died to save his ship just like Georg did. I hope you’ll like my writing of her.

Now I’m just curious what you think of the new chapter.

Have a nice rest of the week – and the next chapter will come quicker than the last one.

Two roads diverged

Chapter Notes

Hi, my dear readers,

At first a very BIG thank-you for all the comments you left. I’m really happy that you all are sticking true to the story, even if the next updates are often delayed. The more I’m glad that I can present you the next chapter sooner than usual. And I can already promise a big emotional rollercoaster.

Sorry, the scene in which Jim proofs that really no-one should mistreat his T’hy’la comes in the next chapter, but I think the last part of the actual chapter will compensate you.

Now have fun with the next installment,

Love

Yours Starflight

See the end of the chapter for more notes

Chapter 101 – Two roads diverged

At the same time the Uhura-family as well as Selik, T’ylle and Starn checked into the hotel Sarek had booked for them, at the hospital Joaquin sat at the edge of the bed and watched Suzette sleeping deeply and peacefully. She had been removed from the stasis-chamber only two hours ago and regarding the experiences they had had with the other Augments during the last three days, Suzette could sleep even a few hours more until she woke up. Nevertheless, he yearned for the moment she would open her eyes.

He looked up as McCoy stepped beside him, checked the monitor of the biobed and smiled down at him. “Our sleeping beauty still need some time, but her readouts are normal. So, what do you think of some lunch?”

Weiss shook his head. “Thanks, Doc, but I really cannot eat something until I’ve spoken with her.”

Bones rolled his eyes. “Sweet Lord, one worse than the next. So…” He stopped as the young Asian woman began to stir.

Hastily Joaquin bent over her and touched her still cool cheek. “Sue,” he whispered.

Her long lashes fluttered and with a deep intake of breath she opened her eyes. Almost instantly a shiver ran through her body which showed that her body – just like that of the other Augments – remembered very well the coldness it had endured for so long. With a groan she tried to roll into a ball to warm herself, but her muscles didn’t obey her immediately. Something close to panic woke in her eyes, but before the fear could really set in, Weiss simply gathered her in his arms.

“Sue, it’s okay. You’re safe. It’s me, Joaquin. Take it easy, love.” He pressed a kiss on her temple. “Just take it easy. We’ve slept very long. Give your body time to adjust.”
She coughed quietly and croaked something even the young man couldn’t understand, but at least she leant into him.

“Sh-sh, everything is all right, sweetie,” he murmured and looked up at McCoy, who had a soft smile on his face.

“Yes, she’s okay, m’boy. She’ll have the same tiny trouble you all have experienced, but tomorrow she’ll be able to move better.”

Suzette Ling listened to the words without really recognizing them. Her mind was working only slowly, but one thing was certain: She could sense familiar presences near and the one who held her was… Joaquin.

Feeling new tiredness rising within her she tried to comprehend what was going on, but she couldn’t understand anything except that she felt calmness and peace around her. Giving into her urges she fell asleep again.

“Give her time, son,” Leonard said gently. “You’ll see, in the evening or during the night she is going to be more awake. You weren’t any better as you raised from your beauty-sleep the first time aboard the Enterprise.”

Weiss sighed deeply. “I know – I watched the same reaction with most of the others of my siblings, still…” He pressed his lips in thin line, while he tenderly placed Suzette back on the pillow; covering her with the thermo-blanket before he stroked through her hair.

“Yeah, impatience is the prerogative of the youth,” McCoy grimaced with a mixture of amusement and sympathy. “So, come one, Romeo, have some lunch with me.”

Grumbling something, Weiss left Suzette’s bedside only reluctantly, but he followed the CMO out of the large room and accompanied him, Otto, a smiling Katie, Rodriguez, Paolo, Chang and Pablo to one of the restaurants on the campus. It was about time for his older siblings to get adjusted to the planet they would live on for some time.

ST***ST

The afternoon went by like time was flying. While Sarek had a longer talk with his brother, T’Ylle and her father settled in. Spock took the Uhuras together with Nyota on a sight-seeing-tour. He had to admit that he was impressed by the humans’ behavior that stayed controlled whenever they were in public, yet none of them lacked the warmth the young half-Vulcan had been captured with since he and Nyota had become closer. His future mother-in-law was kind-spirited, exactly like Malcom, while Nyota’s sister seemed to be curious about everything. The two older males had a wide common knowledge and Spock noticed himself that he liked to speak with Nyota’s grandfather. Yet he felt some relief as he took the Uhuras back to the hotel where they could freshen up before they would be picked up again to visit the same restaurant, McCoy and Carol Marcus had visited only a few evenings prior. Selik and his family would join them, and Spock felt some concern for his father, because the whole day had been very busy for Sarek.

And the next day wouldn’t be less stressful, when T’Pau, Selek and Sorel would test the Augments’ psionic to declare them their own telepathic race in the end.

While Spock was occupied with strict family-business, Jim remained in New Gol; learning new Vulcan sentences with the help of a young adept, and getting instructions concerning his and Nien’s upcoming wedding.
Khan also had to learn the traditional words and once again Kirk was impressed how quickly his beloved’s enhanced mind was able to adjust to the complicated language. While Jim still thought he got knots into his tongue by uttering the sentences, Nien’s pronunciation sounded almost smooth after the third or fourth attempt which earned him a Vulcan compliment.

As the evening came, Bones returned to New Gol like always, reported to Khan about his family’s condition and was glad to tell the Augment that all his siblings were now out of their cryotubes and put into ‘nice, warm, cozy’ biobeds. Joaquin remained at the hospital, which surprised none of the men. Hearing that Suzette Ling had been awake for a minute and was now back in dreamland had to glue the young man to her side.

Khan didn’t find any rest easily. Too much was at stake the next day, and even his logical mind – and Jim’ reassurance – told him that he and his family didn’t have to fear any other outcome than the official recognition as their own psionic human race by the Vulcans, a slight risk remained and so Nien was uncharacteristically nervous. It was up to Jim to calm him down with some cuddling – and some tales about the pranks he played as a boy – until the former dictator felt enough at peace to fall asleep finally.

At the same time Joaquin lay beside Suzette on her biobed, having wrapped himself around her and had dozed off. Of course, he had received some amused glances from his other siblings, two risen eye-brows from the Vulcan nurse and Healer Sorel, and a low chuckle from McCoy before the good doctor left to return to New Gol, but Weiss didn’t mind those reactions. He was only glad to be reunited with Suzette and to feel her even heartbeat and breathe.

Sometime during the later hours, he must have fallen asleep, because he woke up as someone carefully shook his shoulder and quietly called his name. Groggily he opened his eyes – and was gifted with the most beautiful sight he’d had within the last days. Suzette’s face, barely visible in the darkness, hovered a few inches above his own and her long hair tickled his cheeks and throat. Then his gaze cleared, and he saw that her almond-shaped eyes were wide and confused, with a hint of anxiety in them.

“Where are we?” she whispered. “Where are the others?”

Frowning, Joaquin lifted his head. Only the night-time illumination from the floor outside and the dimmed lights of the monitors banned some of the darkness within the room, yet the silhouettes from the biobeds and the sleeping Augments were visible.

“A part of us are here, the rest are in the next room,” he murmured as he lifted a hand and cupped her cheek. “Don’t be afraid, love, we are among friends and everything is okay.”

A quiet noise from the door woke both young people’s attention. In the light of the floor a tall, slender person stepped into the room, looked around and came nearer; the doors closed again. A hand-lamp illuminated the way the newcomer took and for a second Suzette was blinded as the lamp was directed at her.

“Miss Ling woke finally up,” the male voice said quietly, while the man stopped beside the bed. “How are you, Miss? Any problems or afflictions after the long cryosleep?”

Suzette tensed. The man spoke fluid English, yet it held a strange tune – one that would slip any casual human’s attention, but Suzette’s hearing was extraordinary (even for an Augment), yet she couldn’t place the accent.

“I’m… cold and stiff, but otherwise…” She stopped, while she carefully turned around on the mattress to look at the visitor. The same moment her nose caught a foreign scent, one she had never
smelled before, and the heart-beat of the stranger sounded… different. She looked up at the tall man and her eyes, adjusted to the semi-darkness, raked over the features… features which were slender and strangely lean, yet foreign. And then her gaze found the slanted eye-brows and the pointed ears, while her fine hearing realized that the male’s heart beat was at the side of his body, and not in the middle.

This only could mean one thing: The man was no human, but…

Bolting into a sitting position, Suzette Ling did something some other young women maybe would have done, too, being in her place: She opened her mouth and screamed.

ST***ST

Khan had slept for maybe two hours when he woke up because of a sudden inner turmoil. Something happened. Something that had to do with Joaquin and…

He remembered the first lessons Selek had given him concerning some mental techniques. Instead of jumping to conclusions which could be wrong, or taking action, he concentrated and listened into himself. Yes, it was Joaquin he felt – and the boy’s confusion changed into big amusement.

What the hell was happening at the hospital – in the middle of the night?

Untangling himself from Jim, who used him as a kind of personal teddy-bear, he carefully sat up and reached for his communicator that lay on the night-stand. Opening it he chose Joaquin’s frequency, yet he had to wait more than a minute until finally the boy answered him.

“What’s going on?” Nien demanded in a whisper.

Joaquin’s chuckling voice answered, “Suzette woke up and met her first Vulcan – unprepared. I swear, she screamed like the famous damsel in distress.”

“I’m NOT a damsel in distress – and wipe that gleeful grin from your face, Joe! I’m certain that you were as shocked like I am now!” the angry voice of the young woman was heard. “It’s not every day you’re meeting an alien.”

“Don’t fret, little one, Katie reacted the same way.” That was Otto, and Khan could hear the hidden laughter in his brother’s voice.

“I did WHAT?” Katie’s indignant voice sounded from afar.

“Whatish’n?” In the light of the communicator Nien saw Jim lifting his head, still more asleep than awake.

“Suzette met her first Vulcan – and panicked.”

Kirk looked at him as if he hadn’t understood one single word – his still sleep clouded mind didn’t work as it should. Then he shrugged, mumbled something of “She getsh ushed to shem” and returned to Morpheus’ realm.

Amused and with deep tenderness Khan watched his mate, while he listened to the bickering at the other end of the line, called finally a “Good night, Joaquin”, closed the communicator and lay back beside Jim. And only then he realized that sitting up hadn’t so much pained or had given him trouble like it did in the last days.

ST***ST
The next morning was the ‘big day’, like Jim called it, and he was torn between accompanying Bones to the hospital to be there when T’Pau, Selek and Sorel would test the Augment telepathical abilities, or to stay with Khan. In the end he watched Bones get into a large hover-car together with T’Pau – “Spock’s granny is giving me a ride, so for once my molecules will not be squirreled through a damn transporter”, had been McCoy’s statement before the departure – and returned to Nien’s and his room.

He received a short call from Spock who informed him that his father would attend the test at the hospital. Spock would drive him to the hospital within the next half hour. And then another topic became important: Khan’s formal robes.

As only a guest at Spock’s wedding, casual Terran clothes would have been enough, but as one of the bonding-partners within the ceremony, formal robes were in order. Given the fact that Khan was still in no condition to go shopping and considering the day’s pending decision concerning the Augments, Spock suggested that he and Jim would do the shopping the next day in the morning when the temperature was still comfortable for humans. Nien slated that he and Jim should wear the same robes, which also covered with some traditions from pre-Surak times when T’hy’las bonded officially, as Spock explained. He offered to contact the shop where he had bought the other robes to reserve the clothing.

Moving from the room out to the terrace, Khan managed to walk the whole way, even if it irked him that he had to make a pause one time. Yet it was obvious that he was strengthening from day to day, and Jim was convinced that this process would proceed once his people were protected by being declared their own race. Relief could work magic, as Kirk knew from his own experiences.

Then the waiting began – and after the first two hours it was unclear who of the two men was readier to climb the walls. When Nien concentrated he could feel the tension in a few of his siblings, and he knew how much it costed several of his brothers and sisters to trust those ‘aliens’ enough to let them touch their minds – their very thoughts. Only the knowledge that T’Pau’s appearance woke the memories of Shani within his family members and that this would calm them, gave Khan a little peace. Well, and he also was glad that Selek was with them. As fierce as Spock in any version and age could be, he was gentle when it came to the well-being of others. And Selek’s warm, yet powerful aura would certainly play a part in giving the Augments some assurance that they were safe.

Odd!

Since when had Spock become someone he compared with comfort?

‘Since he brought you back from the dreamland your mind had fled to – saving your life like this and sparing your mate a lot of sorrow. Oh, and you have come to know him better,’ his inner voice told him helpfully. Khan groaned inwardly. Yes, he not only learned to respect Spock, he also was about to take a liking to the Vulcan, who could be naïve and gentle as a little boy, and fierce like an ancient warrior, paired up with high intelligence and disarming logic. ‘Given time we’ll be buddies,’ he thought with a hint of sarcasm; imagining Spock’s eye brow vanishing under the black bangs if the first officer could hear those thoughts.

“Earth to Nien, someone in there?”

Jim’s amused tenor brought him out of his pondering. Askingly he looked at the younger man, who grinned, “I addressed you three times, but you were lost somewhere in dreamy-land.”

Kirk had talked to him and he hadn’t recognized it? Alas, so much for being an enhanced being. Making a face, he answered, “I was thinking of what is happening at the moment in the hospital.”
Jim, who sat on a desk-chair that was placed beside Khan’s, bent forwards and laid a hand on his beloved’s arm. “I know, honey,” he said gently. “I know that those hours must push you to your limits of patience. I’m tense, too. But have some faith. The Vulcans have…” He stopped, as his communicator beeped.

Both men almost jumped out of their skin and Jim almost dropped the little device in his haste to answer the call. “Kirk here!”

“Spock here, Captain. I’m at the hospital to pick up Sarek, who just told me that the tests were positive.”

For a moment Khan could only stare at the communicator in Jim’s tanned hand, then a deep sigh escaped him while he almost collapsed into himself like a puppet cut off at the strings.

They made it! Finally, after all those ups and downs, fears and hopes, despairs and fights, his people were acknowledged as what they were: their own race, rooted in human heritage, yet different. Different enough to get their own status – one that would protect them.

He closed his eyes in soul-shaking relief, while he listened Spock’s voice continuing.

“The older Augments have all psionic abilities comparable with those of Romulans or ancient Vulcans. Mr. Weiss is the only younger one, whose psionic is equally strong, yet Mr. Singh’s other younger siblings have undoubtedly some telepathic streaks which would increased when taught how to use them. Also, the medical and biological examinations have proved that the Augments have some fundamental differences within their body functions and in the genes compared to those of the casual Earthen Homo Sapiens. Therefore T’Pau, Selek and Sorel have recognized them as their own psionic race with Terran roots. And given their low number, the Vulcan High Council will also acknowledge them as an ‘endangered species’. The official statement will be made within a day.”

Jim couldn’t help himself: He let out a loud sigh of utter relief. “Thank the Lord! That was the message I waited for.”

“I know, Captain. For this reason, I called you and Mr. Singh – to stop your worry. Selek will come over to New Gol together with T’Pau and some of Mr. Singh’s siblings in a few minutes. I’m certain that they can answer all your questions.”

Kirk knew that he looked like an idiot, but he couldn’t stop the wide grin that was about to split his face. “Thanks, Spock! Thank you so much – you’re the best.”

“I know,” came the calm answer, which sounded far too smug.

Khan, finally able to find some his usual composure, felt laughter bubbling in his belly, while he smirked, “Vulcan modesty never ceases to surprise me.”

“We are not modest, Mr. Singh, we simply state a truth,” Spock replied through the communicator.

“And truth is the interpretation of facts,” Khan smirked, which made Jim laugh out loud.

“Oh, God help me! Two smartasses are too much for me.”

“Admit it, Pyāra, you love challenges,” Nien smiled; still half dizzy with relief and therefore in high spirits.

“I have to agree with Mr. Singh, Captain. Your streak of searching for challenges has gotten you several times… how do you humans put it? Into deep water?” Spock sounded far too innocent, and
Kirk imagined his friend lifting both eyebrows and having this little spot of mirth dancing deep in his eyes.

Jim shook his head; chuckling again. “Are you two allying up to tease me?” he asked; his gaze bright with fun and joy. “You’re going to be total friends one day.” That shut both up, and Kirk lifted one fist in victory. “Yeah, muzzled! Finally! Now I know how Bones feels every time he gets the last word.”

“Which is seldom the case,” Spock reminded him; his tone light. Then, suddenly, his voice changed. “Captain, my father just left the examination room. I’ve to drive him home. If it is all right with you, I’ll pick you up tomorrow in the morning.”

“How is it going with all the family gathering?” Jim asked, and he thought he could hear Spock sigh.

“Unknown. I still… come to know them – my uncle and his family, and Nyota’s clan.”

Jim grimaced. He himself was no fan of family-gatherings, to put it mildly. And knowing his first officer, Spock felt uncomfortable at the moment, too. “We’ll talk tomorrow, okay?”

“Affirmative,” the Vulcan answered, but it sounded more than a vow. Jim smiled in sympathy.

“Keep a stiff upper lip, Spock. I’m the big suggestion box for you tomorrow.”

“Why should I stiffen up my lip, Captain? And what is a ‘suggestion box’?”

Khan groaned, while Jim snickered. “The first means to hold on and the second is the famous shoulder to cry on. And before you complain that ‘to cry on your captain’s shoulder would be highly illogical and unfitting’, just keep in mind that I’ve an open ear if you want to talk about everything that stresses you at the moment,” he added hastily.

The next moment he heard Sarek’s voice calling something in Vulcan, which Spock answered with his own stream of words in the guttural language, before he switched back to Standard. “I have to go now, Captain. I wish you and Mr. Singh a nice rest of the day.”

“Yeah, ditto. And give my regards to your father and Nyota,” Jim smiled.

“My thanks for your consideration to let us immediately know about the test results, Mr. Spock,” the Augment said with raised voice in order to be heard at the other end of the line.

“You are welcome, Mr. Singh. Jim.” With that the connection was shut off, and Kirk put the little device back into his trouser pocket. Only then he and Nien looked at each other – and moving like one man, Nien spread his arms and Jim wrapped his around him immediately. Both could do nothing more than cling to each other for several seconds; relieved and happy above all measure.

“We did it,” Jim whispered; his face buried in Nien’s neck; breathing into his mate’s scent. “Your people are safe now and have a chance to build up their own lives.”

“Yes,” Khan murmured; his eyes tightly closed. “Because of you! Because of you and your friends. You not only gave me hope and strength to carry on, but made certain that my family survived and finally found peace.” He gulped, while he felt his throat tightening. “There are no words in any language which could express my gratitude,” he added; his voice choked. And this time he wasn’t ashamed of the tears which burnt in his eyes. They were tears of joy, of salvation, of happiness. He didn’t care at the moment what would happen to him. His brothers and sisters, the people he had grown up with or had taken under his protective wing, who had never let him down and had put all their faith in him as they accompanied him into the unknown of cryosleep and space, finally had a
real future.

His emotions flared high; his enhanced nature feeling everything stronger than any casual human was able to grasp, yet Jim sensed them. They brimmed along the shared bond, echoed deep in his mind and soul, spread like warm wind through his body, and giving into them he tightened his hold around his beloved – the man who had endured unthinkable cruelty, icy darkness, agonizing pain, hopelessness beyond imagination and terrible fear. Yet Khan Noonien Singh was still able to love – to love completely! – and to put faith in someone who didn’t belong to his family. Was there really still any question unanswered, why he – Jim Kirk – had fallen for the Augment that hard?

They held each other for a while; bathing in the shared joy, the bright love and peaceful warmth that enveloped them whole. And when a quarter of an hour later through the door to the terrace spilled a dozen Augments, Selek and Bones, the two lovers sat still on one and the same desk chair, hands locked.

“Aw, aren’t they cute?” McCoy teased, which earned him a lifted eyebrow from Selek and some chuckles from Otto, Paolo, Rodriguez and Chang, while Katie and Joaquin giggled.

Jim instantly rose to greet them properly, while Khan somehow managed to stand up on his own; ignoring the wobbling in his knees and the sting in his leg and back.

Otto was the first to reach them and slapped Jim with a grin on the shoulder, before he went for his brother and embraced him. “We did it,” he murmured, and the relief he felt was plain to hear in his voice.

Hoffmann was glad that the ‘test’ was over. It hadn’t been really unpleasant to feel a soft pressure within his head before he had been suddenly no longer alone in his mind. He had sensed a foreign presence, not unlike a thin connection he knew from the links with his family, yet it had been utterly different. Curiosity had out-won his resolve and with growing hunger for knowledge he had allowed Selek to deepen the meld. And then he had realized that there was indeed the mind of another person in his own – and he had shied away from it. Selek had sensed it immediately and sent warmth and peace towards him before he had backtracked and ended the meld. What had taken Otto by utter surprise was the feeling of loss afterwards; he had missed the strange contact.

And he learned from Paolo and Katie it had been the same for them. The latter especially had been deeply moved from the mind-meld. Katie had watched Selek with warmth and tender curiosity before, now she was openly adoring him. If Otto hadn’t been so sure of his wife’s love for him, the German Augment would have become jealous.

All this shot within seconds through his thoughts, while he embraced his brother and leader, whose relief he felt in the returned clinging.

Jim watched the scene, shook several hands and grinned like mad, as Katie whispered conspiratorially into his ear, “And I stand by my first comparison: Selek IS like Elrond – especially after I learned now that he also has this healing mind-thing.”

Chuckling Kirk looked at the older version of his T’hy’la, who obviously chose to ignore the murmured comment his sharp hearing had – of course – caught. Therefore, he didn’t mention it but chose to address another topic, “Where is T’Pau?”

“She parted from us in the hospital and decided to return immediately to New Gol. She… was in need for a longer meditation.” To admit something like this was certainly unusual, but Selek was Spock, and had therefore no problem with speaking with Jim about it.
“Yeah, I see,” Kirk sighed. “Of course, it must have cost her a lot to touch so many human minds – even if they are enhanced.” He cocked his head. “How are Sorel and Sarek doing? How are you doing?”

There was it again: This tiny half-smile Spock – in any version – had only reserved for him. “I’m well, Jim, don’t worry. And Sorel is a trained healer, while Sarek is used to the illogic but also fascinating dynamics of a human mind.” Something like sorrow shimmered for a moment in his eyes, and Jim realized that Spock Prime had lost his mother not one, but two times – even if he hadn’t met her in this timeline.

Reaching out, he laid a hand on Selek’s arm and squeezed it gently in mute understanding. Then he looked at Rodriguez who was a little bit pale around his nose. “You’re all right?” he asked and the other man sighed,

“Well, it really was strange to have someone sticking around in your head. I mean, T’Pau does resemble our Shani a lot, yet she isn’t her. The whole thing felt as if her fingers were dug into my skull.”

“I assure you once again, sir, that our fingers don’t break through the head-bone during a meld,” Selek told him with a hue of exasperation.

“I know – still it felt this way,” Rodriguez grumbled.

“So, what now?” Katie piped up, after she had given her best try to break a few of Khan’s ribs in the bear-hug she gave him.

“The Vulcan High Council will check T’Pau’s, Sarek’s, Sorel’s and my report and will acknowledge you as your own race with psionic abilities,” Old Spock answered, while he watched a few adepts bringing some chairs out on the terrace. Then his attention moved back to the Augment leader. “You have to think of an official name for your people – one that contains your Terran roots but also emphasizes the difference between you and the casual humans.”

Jim rubbed his sweaty neck – God, it was hot here! “What do you think of Homo Sapiens Augeretis?” he asked and found himself instantly in the center of everyone’s attention.

“Come again?” Khan replied; baffled.

Shrugging, Kirk repeated, “Homo Sapiens Augeretis. You all are rooted in Homo Sapiens, yet you’ve been engineered – enhanced, augmented in many ways. So, yeah, I think this would be a fitting name.” He looked from one to another.

“Fascinating,” Selek commented; clasping his hands behind his back. “Simple, but a very good idea in my opinion. This name would really cover everything you came from and are now,” he said to Khan, Otto and a wide-eyed Rodriguez.

Nien pursed his lips and exchanged a longer glance with his two brothers, before he looked at Paolo, Chang, Katie and finally Joaquin, who lifted his hand as if he would be at school.

“If you ask me, big-bro, I think Jim and Selek have a point here. This name would still link us to Earth and the casual humans, yet we are further developed – just like the Homo Sapiens came from the Homo Erectus.”

“As long as you don’t compare us with Neanderthals,” Bones grumbled good-natured.

“Na, you and Jim are better looking,” Weiss deadpanned.
“As if this would be the only difference,” McCoy groused, but he wasn’t serious. This much could be told.

Khan, Otto, Rodriguez, Paolo and Chang looked again at each other, before Nien answered slowly, “It is indeed an idea, but we should ask the others. A vote would be the best.”

“I think the others want to have a word in it, so, yeah, we all should discuss and find an agreement concerning the future name of our people,” Paolo said.

“All right,” Khan nodded. “Then you should discuss this during the day with the others after you’ve returned to the hospital. I await your decision in the evening and accept with whatever you come up.”

Rodriguez and Otto stared at him. Yes, Khan had always valued their opinion and had given his family free choices in several matters, but never before with such an important topic. As it seemed, his life within the Federation and especially aboard the Enterprise had changed him in many ways.

“Okay, this is reasonable,” Jim smiled; rubbing his hands. “So, anybody up to get something fresh to drink?”

Chang began to laugh. “Are you always so quick with jumping from one thing to the next?”

“You’ve no idea,” McCoy groaned; flicking a thumb at Kirk. “He drives us all crazy like this.”

“Crazier then you’re already are?” Jim asked with feign innocence, and almost instantly the bickering between the two officers began. Yet it was soon interrupted, because Joaquin pointed to something out in the gardens; his voice excited.

“What is that?” he asked, and everyone turned around.

Selek followed his outstretched index finger and lifted a brow. “A Ch’ana-a,” he said. “A native lizard species of this planet, not unlike an Earthen iguana. But this animal can change its colors utterly if necessary – and they take an intense blue and purple color when they try to woo an eventual partner.”

Khan watched the animal that was about one meter long, and really looked a little bit like a too tiny dragon. “Interesting,” he murmured; always hungry for new knowledge.

“Is it dangerous?” Jim asked; watching the lizard with fascination.

“No,” Selel shook his head. “No poisonous fangs or claws, no poisonous salvia, no sharp teeth. They are lazier than an iguana, and…”

“Lazier?” Katie laughed quietly. “Iguanas are lizard-like sloths in my eyes.”

“Yet they can move quickly if needed,” Selel replied. “Contrary to the Ch-ana-a. They always move very slowly, no matter what.”

“Understandable, considering this damn heat,” Bones groaned, while he rose and rubbed his sweat-wet neck. “Excuse me, please, I’ve a rendezvous with the shower.” He headed towards the building entrance. “A cool, wet, nice, long shower!”
Jim chuckled; understanding perfectly his friend’s need. Then his attention returned to the lizard that still held the others’ interest.

“Come, let us have a closer look,” Joaquin said to Katie; pulling her along.

“Of course,” Khan sighed; watching his youngest brother and his sister with fond exasperation. “Why I’m not surprised?”

“Because you know those two,” Otto smirked, before he looked back at the animal. “But I have to admit that I’m curious, too.”

“Well, then let us do some Ch-ana-a-watching,” Jim suggested, and he was not surprised that – except for Nien – the other Augments followed him.

Khan watched his siblings going with Kirk; chatting with him as if they had known him for years now. Sitting down on the desk-chair again, he pursed his lips; once again astonished at his mate’s ability to win over the most different kind of people.

Selek, who had occupied one of the chairs, observed the Augment nearby. He took in Khan’s fond look he gave his siblings and Jim, and how relaxed the former dictator was. ‘He had found indeed his place in this world,’ he thought. ‘At least in this timeline his way is a better one.’

Khan listened to the quiet voices of his brothers and sister, who asked Jim some more questions about other lifeforms he had met during his journeys, and Kirk showed again that he could be very patient, while he crouched in front of the lizard. How easy the young captain handled the Augments, and how relaxed they were around him. It was a little miracle after all they had been through on Earth, and Nien was – again – grateful that fate had led him to this particular man.

“He is amazing,” he murmured. “His selflessness and his empathy never cease to surprise me. I rarely met a man – or woman – who has such deep tolerance and is open-hearted like Jim Kirk.” He sighed. “I asked myself a few times by now, how everything would have played out if it would have been Jim, who found us, and not Marcus.”

From the edge of his eyes he saw Selek stiffening, while his dark eyes narrowed ever so slightly. It was only for a second or two, then the old Vulcan visibly forced himself to relax. And this reaction told more than thousand words. It was practically screaming ‘alarm’ – or it was the feedback to a very bad memory; one that maybe had been buried for a long time but was still nasty enough to elicit such a visible response from Old Spock.

And a grave idea woke in Khan’s mind.

“It happened in your timeline!” It was a statement, not a question, yet it demanded an answer – but Selek remained silent. Only his face had hardened.

Khan straightened his shoulders, while he bent forwards. “Mr. Spock,” he addressed the Vulcan High Minister on purpose by his true name. “Did this happen in your timeline? Did Jim find the Botany Bay?”

Selek avoided looking at him; his gaze drifted off to nothing, while the old tension surged through his body. A tension that had never really left his subconscious and returned every time he was forced to face this particular part of his past – of his and Jim’s.

He had learned during the last weeks to accept that this Khan Noonien Singh was different; that the Augment’s fate had taken a complete different path than his alter ego in Spock’s own timeline, and had changed him utterly. Spock Prime had even come to regard the superhuman as an honorable
man, who ran amok one time – yes – but otherwise was the victim, not the initiator. He had realized how much this Khan loved Jim Kirk and the other way around, and had admitted to himself that this Khan had earned a second chance after all the good he did.

But now Spock Prime was forced to encounter the old memories again – the memories of a Khan Noonien Singh who tried to kill them all not one but two times, and whose madness had shaken half of Starfleet, had cost Jim his beloved ship and his son, and had cost him, Spock, his life. If it hadn’t been for Jim Kirk’s crazy recovery mission that stripped him of rank, he – Spock – would have died again on this young planet called ‘Genesis’ that had restored first the life to his body and the was about to destroyed itself what would have taken him with it.

He took a deep breath to calm himself and looked finally back at the Augment, who still watched him intensely.

“Your silence means yes,” Khan said quietly. “Jim did find us in your timeline – but there were problems, too?”

Selek pressed his lips into a thin line. He had vowed to himself not to reveal any details from his own timeline. To mess with time was too dangerous as Nero’s influence had cruelly proven. Yet Selek had done so only yesterday as he gave Jim hints and warnings concerning the fate of his brother Sam. He had done so over a year ago, as Young Spock had contacted him, asking for details about Khan. He had done so as he talked to his younger version in the hangar after the Nero-Incident, speaking of the strong friendship with Kirk that would defined them both. And he had done so within the last weeks as he hacked into HQ and in Starfleet’s most secured databanks to help Jim; knowing that Starfleet Intelligence would sooner or later find tracks of his actions, revealing enhanced computer knowledge.

So, to speak of something that had already happened here differently than in the other timeline wouldn’t do so much harm. Maybe it would be even a warning for Khan what could become of him and the others if he would ever again fall for the dark demon called ‘revenge’.

Taking another deep breath, Selek looked the superhuman straight in the eyes. “Yes,” he said gravely. “In my timeline it was the Enterprise’s that found your ship.”

Nien frowned. Something was clearly off here. “But… that had to be a good thing, hadn’t it?”

For a short moment Old Spock had the urge to laugh – a grim, dark laugh without any amusement. “No, Mr. Singh, the outcome in this timeline is far better.” He saw shock spreading over the Augment’s face, accompanied by outrage. Selek bent forwards as he realized what Khan had to read in those words. His gaze was firm as he added, “Don’t misunderstand me, Mr. Singh. I do know that you went through hell within the last two years, and what Section 31 and those scientists did to you and your family is unforgiveable, yet what happened in this timeline is far better in the end for all who are concerned.”

The former dictator didn’t know what to make of this statement. “But… it was Jim who found us. Jim would never have treated us like Marcus did. He would never have tried to abuse my nature. He’d never would have tortured me or…”

“Yes, Jim would never do such things, yet everything went down the hill, like humans say. You did not learn to love Jim, but to loath him – hate him beyond imagination. In the end you were even insane with hatred for him.”

“What?” Khan didn’t trust his ears. He couldn’t imagine a world in which he hated Jim like Selek hinted. Alas, even his former fury for the young captain seemed to be a part of another life by now.
And in Old Spock’s timeline he, Khan, had hated Jim this much that he went mad? It was… unbelievable. “What... what happened?” he all but whispered.

Again, Selek hesitated for a moment, and pressed his lips shortly into a thin line, before he began to speak; relieving his katra from the pressure that had returned after he knew of Khan being awake in this timeline. “We found your ship drifting with no engines at work any longer. We beamed over, Mr. Scott activated the lights and therefore the wakening process of your cryotube. But something went wrong, and it was Jim who smashed the glass of your tube and pulled you out of it before you could die. You were beamed over to the Enterprise’s sickbay and survived. You were welcomed on the ship, Jim even gave you access to our databanks so that you could catch up on history. You also met one of our lieutenants who was a scientist of history, Marla McGivers. She was fascinated with you, and you with her. Then we found out who you were for real. History judged you positively – an Augment leader who kept peace within his borders, set up a better life for the people in the countries he ruled and never was the aggressor. Jim was wary of you, but also curious. Still after you learned that we knew of your true identity, you felt instantly threatened, talked Lieutenant McGivers in helping you, beamed over to the Botany Bay, woke up your people and took over the Enterprise. You threatened to kill Jim if we would not cooperate with you.” He watched Khan’s eyes widening in disbelief.

“But... why? Why should I try to kill him? I would never...”

“You didn’t hesitate for a second to put him in a depression chamber and made us watch how he suffered, blackmailing us with his torment and life,” Selek interrupted him harshly; the old anger he suppressed for so long flared up again and tore at his Vulcan control. “That Jim survived was only because Lieutenant McGivers freed him in the very last second. We took your people by surprise by using sleeping gas within the ship, yet you escaped to engineering, trying to blow up the ship. Jim followed you. You and he fought – he won.”

Khan had listened with appalled horror. In this other timeline he did what Marcus had done to him? He had used the Enterprise crew’s love for their captain to force them to yield? Yes, in this world he and Jim had fought, too, as they met for the first time and then later on the bridge of the Vengeance. He even had seen an enemy in the young man who had dared to challenge him, yet he had felt drawn to him the moment he had laid eyes on him. This obviously didn’t happen in the other timeline, but he had felt drawn to this woman. Well, he never preferred a gender. For him, intelligence, character and even appearance were more important. But what shocked him was the fact that he obviously had rampaged without a real threat. Yes, he also had felt alarmed as he learned from Marcus that the admiral knew who his ‘guest’ was for real, but Jim was a completely different matter. Kirk had high morals, he was honorable to an extent that could even be dangerous for him, and he always did what was right, no matter what. He wouldn’t have mistreated Khan and his family; abusing them for own purpose. So, how had it come that in the other timeline everything went so wrong?

Movements at the edge of his sight distracted him for a moment and he saw his siblings and Jim looking at his and Selek’s direction; confusion and alert on their faces. Of course, his mate would sense his turmoil, and the same went for a certain degree for Joaquin and the others. Waving them off and signaling them that everything was all right, he looked back at the old Vulcan. He wanted to know everything that happened in this strange other timeline without Jim Vulcan. He wanted to know everything that happened in this strange other timeline without Jim mother-henning him, or Rodriguez falling into overprotective mode.

He moistened his lips. “Jim and I fought – he won,” he repeated; almost not daring to voice the next logical question. “So, that means, he killed me?”

Selek looked astonished for a moment, then the Vulcan mask was firmly back in place, before he
answered, “No, of course not. Jim would never kill even an opponent if there is the tiniest option to spare him or her.” He sighed quietly. “He gave you and your people a second chance by dropping you all off on a M-class-planet that was habitable, but with no intelligent lifeforms. It had a harsh, but livable climate – and you accepted it with gratitude, because it gave you the chance to rule over your own planet. Jim provided you with everything you would need to build a settlement and with enough nourishment until you would be able to have a successful agricultural replacement.”

The Augment could only stare at him; utterly baffled. “That… is so typical for him and it was more than generous. To attack a Starfleet-officer is a crime within the Federation. Yet he didn’t bring me to justice but gave me and my people our own planet to live on?”

“Yes, but his decision wasn’t only selflessness generosity. He thought that you and your people were too dangerous to introduce you to the Federation. So, he used his right as a captain to exile you on a planet – providing you with everything you needed to survive.” He lowered his gaze for a second, before he added, “Lieutenant McGivers accompanied you. Despite the fact that you lost your ‘battle’ because of her, you were… already too attached to her to judge her – and she had fallen in love with you. So, she went with you.”

Khan watched him closely. A part of him didn’t want to ask for more details, but his always curious and working mind was hungry for more knowledge. “But this wasn’t the end,” he assumed, and Spock Prime sighed again.

“No, far from it.” He shook his head slightly in a far too human gesture. “Six months later the neighboring planet exploded which shifted the orbit of… ‘your’ planet, Ceti Alpha V. It was a giant environmental catastrophe that changed the planet into a large desert with ion storms and became hostile for life. Yet no-one knew that it had been the neighboring planet Ceti Alpha VI that exploded, because planet V took the orbit of VI. Therefore, we all thought you and your people had perished.”

He lowered his head again.

“When Jim learned about it, he was horrified. He thought that he had sent you and your people to death, and blamed himself for it. Yet no-one could have known that the star system was unstable. I checked everything with our sensors before I suggested that this planet was habitable.” The old eyes which held too much knowledge found again those of the aghast Augment. “I was at fault just like anyone else who was concerned with your… case.” Selek sighed. “18 years later we learned that you and the most of your people had survived – but not Lieutenant McGivers who you had taken as your wife. By accident you were found when an explorer ship mistook Ceti Alpha V for Ceti Alpha VI. You and your people escaped, hijacked the ship and then you declared war against Jim; trying your best to kill him.”

Khan could only shake his head. He knew that he had streak to overreact if someone had hurt his family or him, but this…

“Jim gave us a second chance. He…”

“Mr. Singh,” Selek interrupted him; his glance was sternly fixed at the enhanced man’s face. “You made him responsible for the death of your family-members which were killed during the planet catastrophe and afterwards. You blamed him for your wife’s death. You hijacked a Starfleet ship and attacked the Enterprise, which had become a training ship then. Your attack killed almost the half of the young cadets which were aboard, including Mr. Scott’s nephew. You tortured and killed the staff of a science station only to gain knowledge about a project you wanted to use against Jim. And you sacrificed first the rest of your whole crew – your family – and then yourself to destroy the Enterprise.”

At these words Nien leaped on his feet; swaying ever so slightly as his still weak left leg tried to cope
with the sudden movement. “NO!” he all but growled. “I would NEVER endanger or sacrifice my family for selfish reasons!”

“You did,” Spock Prime told him mercilessly. “Your hate was great enough to overrule your brilliant mind and to strip you off all affection and love you still maybe had stored for your crew. In the end they were only tools for you to still your hunger for revenge.”

Quick steps drew nearer, as Jim headed towards them; shouting over his shoulder. “Stay here, please. I’ll check what those two are arguing about.”

Selek lifted his hand in an almost priest-like manner. “Jim, stop please! This has nothing to do with you or Mr. Singh’s people.” Well, it wasn’t exactly a lie, yet it wasn’t the whole truth. Spock always had a way with words to speak between the lines and to put another expression to facts.

Jim slowed down but didn’t stop. “What’s up?” he asked – demanded, would name it better.

“Selek and I are discussing a… different way things could have happened,” Khan said carefully; giving his beloved a pointed look.

Kirk frowned – and understood. Stopping, he glared at Selek, then back at Nien, whose unsettling he felt like wild waves rippling over their shared link, yet the Augment was in control.

“We’ll talk later,” Khan said, and hesitantly – after giving both men another sharp glance – Jim turned away and walked back the way he came. He trusted Selek wholly, and the same went for Nien. If the latter said that they would talk later, he knew that he would learn of what this all was about at some point in time.

Khan watched Jim returning to the other Augments and gave them again a wave of his hand to stay away, then he returned his attention back to Old Spock. The short interruption had calmed him somewhat, yet his unease began again as he took up the thread. His belly clenched as he asked,

“You told me that I sacrificed my crew – my family – on full purpose only to gain the goal of revenge?”

“You did,” Selek replied expressionlessly.

Khan violently shook his head. “No, I would… I never could do something like this. They are my siblings, my family! I did everything for them. I…”

Spock Prime reached out and laid a hand on the Augment’s arm – gently increasing the pressure to signal the enhanced man to sit down again. Eventually Khan complied and he lowered himself back on the desk-chair, yet his gaze fixed Selek’s.

“No-one knows what hate can do,” the Vulcan Elder continued more softly; realizing the other male’s turmoil. “No-one can say in advance how much hatred can change a person. You already gave an example for it.”

The former dictator stiffened even more. “This was not…”

Khan’s protest went under as Selek stated with sudden ancient fire in his eyes, “I’ve seen what you did to Starfleet Headquarters. I saw what you did in London. I saw what you did to the Enterprise – and I know what you were up to as you escaped the labs of Section 31 several months ago. Revenge was always the answer for you to everything that went wrong. And if I wouldn’t have acknowledged your deep love for Jim in this world – or your selfless doings during the present war, saving millions of lives risking your own existence – I would put you down by myself; shooting you
on the spot simply to prevent any pain and suffering you could bring Jim like you did in my timeline.”

He saw Khan paling, while his eyes widened in acknowledgement. For someone so peaceful – for a pacifist – it said a lot when this someone was ready to take a life without being directly threatened. And somehow Nien didn’t doubt that his chances against this man were equal at best. Selek may be old, but his experiences outdid the speed and strength of his youth. The realization, how close he had been to not only be denied Selek’s support – and therefore for his people – but also being killed hit him like a starship at warp. He was only spared because he had chosen the path of love, not of hate.

“Have I lost it so deeply that you would even kill me without the same events having happened here, in your timeline?” he all but whispered.

Selek took another deep breath. “Your madness in my time not only costed more or less my life, primarily it costed Jim his son…”

“His son?” Nien gasped.

“In my timeline Jim and Dr. Marcus met, too, and their relationship built beyond a professional one that led to a son. Yet they separated, and Jim only met his son for the first time during the crisis I’m speaking of. But they only had a few days with each other before your madness resulted in the death of Jim’s son. And he lost more. His ship and his rank. I’m a Vulcan. For my people violence is never an option, never an answer. Yet there are exceptions. Be warned! Jim was, is and always will be my T’hy’la, no matter the year, the universe or the timeline. And I will protect him against everything and everyone that or who is a threat to him.”

Khan’s gaze roamed over the face in front of him. There it was it again what he had witnessed in Young Spock, too: The fierce passionate devotion and unbreakable urge to protect where Jim Kirk was involved. Even old, wrinkled and past his best, Spock son of Sarek would always be there for his captain and soul-brother. This was a constant he, Khan, would have to live with.

And something that had gnawed at the edge of his mind finally clicked into place.

“You love him.” It was a clear statement, free of any accusation or anger.

Old Spock looked away, before he straightened his shape and glanced back at Khan – proud, yet sans any possessive aggression. “Yes,” he replied simply and plainly. It had cost him years, almost a decade even, to admit this to himself, but he would never deny it again – not now, not ever.

This time it was Khan who needed a lot of air in his lungs to keep himself focused. He had known it – somehow. Spock’s drive to shield Jim, to keep him safe and close, had only one answer: The half-Vulcan loved his captain. But there wasn’t physical desire involved. The love ran deeper on a level Nien was only barely able to grasp. He had experienced the Vulcan race’s complex way of seeing – and feeling – things. That Spock, half human, half rooted in a species that held stronger emotions than any Terran could ever comprehend, was able to love with every fiber of his being, shouldn’t shock Khan. And on some level it didn’t, yet he got warier then he had in a long time.

And then Selek’s next words took the tension away – at least for a moment.

“I have and always will love him,” Spock Prime confessed. “Not in the way you do, but my devotion to him – my affection for him – isn’t smaller than yours, only different.” The melancholy that had played in his eyes for a second vanished and made new room for sternness. “So, make no mistakes, Mr. Singh, because if Jim suffers because of your streak to overreact, I’ll hunt you down in person – and even if it happens after my death there will be other people who will take my place.
This is the only warning I will ever give you, but take it to heart. If Jim gets hurt because of you, your life is forfeit!"

Khan believed him. And oddly he didn’t feel threatened. It almost calmed him to know that there was someone in the universe who would stop him, if he ever would lose his sanity like he obviously did in the other timeline.

And the latter was what shook him to the core. The mere thought that, in another time, he had sacrificed his people who were most dear to him only to feed his greed for vengeance, was beyond imagination. He had suffered so much to keep them safe – to keep them alive – and then he went berserk enough to send them to their deaths only to sate his own desire to hunt down a man who had given them all a second chance? Was this madness, this insane darkness, really in him?

Selek was right when he reminded him of what he had done in London and to Starfleet’s HQ. Yes, he had made certain that there had been no people in the streets and no civilian workers in the so-called ‘archive’ as he set the secret facility of Section 31 aflame. But there had been victims. And concerning the HQ he hadn’t considered that some commodores, captains and commanders weren’t informed about him and his people as he attacked Starfleet’s Headquarters in San Francisco. Worse, he had ordered the Vengeance to fly straight to the HQ when he thought his people dead – hazarding the consequences that the initiated crash of such a large space vessel at the edge of a metropolis would leave behind. Yes, he had tried to change the course of the doomed starship as he realized that it headed for Sausalito and therefore for the schools, universities and academies, but in the end, it had been his mad pain that had forced the first fateful order for the ship out of his mouth. And it had costed hundreds of lives.

So, was Selek right to warn him of the outcome if he didn’t learn to control himself? Was Selek’s concern legitimate where his – Khan’s – mind was concerned? He did lose composure easily when challenged. He had a streak to overreact when he thought those who were in his charge were threatened. His emotions flared up when those he loved were in danger. Was there really the chance that he would lose mind completely when he mourned too much?

For a moment he thought back to the minutes he had found Jim in the Klingon prison – torn, bloody, hoarse from screaming in pain, eyes dark with agony, body covered in bruises, sweat and more blood. He, Khan, had seen red. Literally. He still had no clear memories how he killed all those Klingon warriors within less than a minute. His so-called ‘enhanced mind’ had been switched off and only his augmented reflexes and deep instincts had driven him. Was this the tendency he had to fear? If something would happen to Jim, would he react again like this; endangering everyone around him because of his loss of control?

Well, he had already experienced how it was to see Jim in danger afterwards and trying to protect him – aboard the cursed secret facility his family had been imprisoned. He remembered how he had wanted to tear Finnegan apart for threatening Jim, yet he had been able to hold himself back. Somehow, he, Khan, had always been able to keep himself in check when Jim was involved.

Maybe this was his path – to learn to contain himself to be the better man Kirk deserved. And maybe he did need some help with controlling himself – to keep this fury and urge to lash out at bay. Not only for his own sake, but also for his mate and the people around him.

And the answer was in front of him: Spock – the man he first loathed, then hated, now respected, and even had come to like. And it didn’t matter which version of this remarkable man was concerned.

“You spoke of controlling the mind; of shielding,” he said slowly. “Perhaps I can learn from you Vulcans more than I thought.”
Selek recognized the statement for what it was: For a plea for help. “There are methods to rein in emotions by first accepting, then analyzing and finally restraining them. Those methods go hand in hand with mental discipline and learning more about yourself. If you accept me, I can teach you.”

Khan lowered his gaze, as for a moment his superior mind tried to rebel against such a suggestion. Then rationality kicked in. He was better, he was enhanced, he couldn’t accept his instincts to rule him when there were more logical solutions to solve a problem.

Lifting his head, he looked straight at the old Vulcan; his decision was made. “It would be an honor,” he said. And for a second, he thought to see Spock Prime’s mouth curl into the tiniest version of a smile…

TBC…

Chapter End Notes

Well, one day the truth of Khan’s fate – and therefore what happened to the others – in the first timeline had to be revealed. The thought of having Selek tell about it was in my mind for months now, and I hope I got the right atmosphere for something so tragic. This part of the chapter was more or less from Old Spock’s POV, in the next chapter Khan will have a lot to think about to make own conclusions. Yet last but not least he realizes the dark potential that still slumbers in him and even his enhanced intellect has to be schooled. And I think Selek will be the perfect teacher for him (smile).

And maybe the other Augments will need some training, too – now, after they’re declared an own species what will clear the way for them to set up an own life within the Federation.

In the next chapter comes the promised incident in New Shi’Kahr with Spock, Jim and one of Spock’s old school comrades, who proofs that there indeed existing louts among the Vulcan people. You also will meet Silek again. And while Jim and Spock are showing that it is really not a good idea to offend or even to threaten one of them, Khan will get visitors…

I hope you liked the new chapter, and – as always – I’m curios what you think about it.

Have a nice weekend

Love

Yours Starflight
Troublesome hours

Chapter Notes

Hi, my dear readers,

Yes, the next update is already published and I try to shorten the distances between the edites.

Thank you so much for the feedback; you’re the best.

Because the new chapter holds a lot of rollercoasters and surprises, I don’t want to rob your time by writing a longer prologue.

Have fun

Love

Yours Starflight

Chapter 102 – Troublesome hours

To say that Khan relaxed easily after his talk with Selek would have been a big lie. Even if he kept an easy face and waved the worries of his siblings – and Jim – off, there was no doubt that the Augment leader was shaken to the core. Yet Otto and the others, as well as Kirk, knew better than to press the issue after it became clear that Khan was tight-lipped of whatever had transpired between him and the old Vulcan. Therefore the atmosphere was more or less tensed and it didn’t get better after Selek bid his good-bye to meet with the Vulcan High Council in the evening to get the Augments official acknowledgement as an own race to work. Only than Jim would inform Starfleet and Bob officially about the Augments’ new status.

Joaquin, Otto and the others returned to the hospital to discuss the suggest name of their race, while Bones beamed up to the Enterprise to check on Sulu. Well, Jim had the big assumption that his CMO had further reason to return aboard – a reason with two long legs, blond hair and a lot of female attitudes. Yet, this time, he refrained from teasing Leonard. His friend had done so much for Nien’s family within the last days that he really had deserved some time for himself.

They eat their dinner in silence – better to say, Jim tried to converse with Nien, but the older man’s answers were taciturn and after a while Kirk gave up. He knew Khan enough by now to give him some space when he was obviously that troubled. He helped Nien to get clean before he took his own shower. While the lukewarm water sprinkled down on him, Jim decided to get his beloved into talking. Khan and brooding was never a good connection, and he really wanted to know what his mate has shaken him that much.

Drying himself, brushing his teeth and going without any pajamas like the last nights, he finally left the bathroom. Nien sat on his bed just like Jim had left him – gaze fixed on nothing and deeply lost in thoughts.

Jim stopped at the foot of the bed, stemmed his fists on the hips and cocked his head. The moment
the Augment recognized his presence and his glance focused in him, Kirk took a deep breath. “Okay, spit it out!”

Khan lifted a brow in a very Spock-like way. “That would be highly improper. And, by the way, I’ve nothing in my mouth that could be ‘spat out’.”

That made the young captain frowning. “You’ve talked too long with Selek. You already sound like him, but that’s beside the point. You talked a lot with him – and it ended in you having a dark mood and far too much worry circling around your head.” As Nien only continued to look at him, Jim sighed and let his hands sink. Stepping around the bed, he sat on its edge beside his mate and cupped one of those sharp shaped cheeks with his right hand. “Honey, what is troubling you so? What is it that Selek spoke of what more or less sent you over the edge.”

Khan shot him a glare. “I’m not ‘sent over the edge’. That would look worse – a lot of worse, as it seems.” Bitterness swam in his voice what made every alert bell ring in the younger man. Inwardly he reached for the shared link and an echo of shock, horror, self-loathe and anger seemed to bring over the bond.

“Okay,” Jim began slowly. “If you don’t want to tell me, then I’m telling you of what you and Selek maybe spoke that changed you into a bottle of sour vinegar – figurative speaking. During our two first meetings, as we were aboard the Vengeance, my Spock contacted Old Spock and learned that we two had met you in the other timeline, too. Afterwards my Spock gave me only hints – such as that the meeting in the other timeline wasn’t a nice one and that you gave us a very hard time. And later, when I talked with Selek three weeks ago of you having escaped and being my friend now, our old Vulcan got quite the shock. Then him being adamant that he mind-melds with you, saying afterwards that your feelings for me were true, and I swear that Vulcan-Daddy was enormous relieved. The way he acted afterwards spoke volumes. This all let me make only one conclusion: The alternative meeting of you and I ended in a catastrophe, and Selek told you about it. And now you’re shocked what you have done then and are afraid that it can happen again in our time. Have I hit some marks?”

He smiled tenderly as he watched the Augment gaping at him for a moment, before Khan shut his mouth quickly – averting his gaze. “You’ve no idea to what I’m capable if the beast in me awakes,” he murmured. “As it seems I’m even able to sacrifice my family only to get my way.”

Jim pursed his lips; realizing the opening in the stubborn silence Nien had practiced the rest of the afternoon and the whole evening.

“Sweetheart, you do understand that – whatever happened in the other timeline – differs a lot from what is going on here? That not only the whole time has changed, but clearly you too?”

Khan snorted. “Are you that sure concerning the latter?”

Jim slipped onto the mattress and wrapped an arm around his beloved. “If I understood Selek correctly – and his words were very distinct – then you and I remained enemies in the first timeline. Mortal enemies! Now we’re more than lovers. We are soulmates and are going to marry in three days. Farther couldn’t any paths differ like ours do now.”

Nien lowered his head. “So you knew that we met in the other timeline, too.”

“Yeah,” Kirk answered softly. “And the little details I learned from Selek showed me that in our universe everything was different enough to not bother with what happened then in there. Yet he thought it to be necessary to tell you about it, for what reason ever. And so…”
“It was a warning,” Khan interrupted him. “A warning what could become of me if I do not learn to control me better or when I allow the monster in me to rise.”

At this the young captain stiffened. “You are no monster, Nien! Whatever Selek told you, you are no monster!”

Again, a snort escaped the Augment. “Obviously it is in me – or how would you explain the fact that I sacrificed my family only to get a chance of killing you?” He looked straight into those sky-blue eyes, which widened a little bit. “Does this shock you, Jim? Yes? Understandable. It shocked me, too. I developed such hatred for you that eighteen years after we first met I attacked your ship that was a training-ship by then, full with young cadets of which many died. I also murdered the crew of a space station and finally abused my beloved family as tools to get my hands on you. I went insane, stripped off any humanity. And when I remember that I – indeed! – ordered the Vengeance to fly to the HQ in this timeline, knowing the ship would crash, I don’t think that his other me and I differ so much.”

Jim narrowed his eyes. “You did everything in your power to steer the ship away from Sausalito, saving thousands of students like this. And that after all you went through only needed one more push to tumble over the edge, doesn’t transfer you into a monster, but shows that you’re simple and plain human. Whatever the reason was why you remained hating me in this other timeline…”

“You exiled us on a livable planet after I tried to steal your ship. A planetary catastrophe happened what killed some of my family and my wife – and that drove me to insanity,” Nien said flatly.

Jim watched him carefully. “That was the short vision, I assume. And you had a wife?”

“Yes, one of your officers – a historian,” Khan mumbled. “Alas alone knows why I fell for her and not for you.”

“Maybe I wasn’t that charming in the other timeline like I’m now,” Kirk suggested, wriggling his eye-brows – and promptly Khan groaned.

“Jim, please, this is nothing to joke about.”

“I know,” the younger man replied; turning serious. “Please, tell me what happened.”

Again, those sea-colored eyes found his. “Are you sure?” he asked quietly.

Kirk squeezed tenderly his shoulders. “In good and in bad times – even if the latter never happened here. But it troubles you, and you now the saying: A sorrow shared is a sorrow halved.” He pulled his beloved closer to him. “You know you can tell me everything, honey.” He thought that he would feel a wave of anxiety making the bond between them trembling and realized the reason for it. “I will not judge you, Nien. Certainly not for something you haven’t done, but an alternate self.”

“It is still me, Jim. If I wouldn’t have chosen the path of love and had stuck to my hatred, I would be exactly what became of the other me.”

“But you did make another choice,” Kirk said firmly. “That is the point. You chose a different path and became another man because of it.”

“Really?” Khan sounded miserable. “I lost it as I found you in the Klingon prison. I haven’t even clear memories how I managed to kill all those Klingons within seconds. I’m… so full of anger when those I love are threatened or when trouble occurs. I…”

“Do you think I’m not furious when something is about to happen to you – or to Spock, Bones and
“Because of your love,” Nien murmured.

“Love has to be returned to bloom to its full extend. If you wouldn’t be able to love me back, all my love would have been meaningless. But look at us. Together we’ve become stronger, better – we embrace life now. I don’t know much about the Jim Kirk of the other timeline, but I think he never had such a fulfilling relationship like I have with you now. And whatever a clever guy he may have been, but I don’t want to switch places with him, because I can’t imagine an universe in which you’re not my mate – my soon-to-be-husband.”

He saw moisture shimmering in those blue-green depths, bent forwards and captured Nien’s lips with his own. It was a warm, tender, sweet kiss – made more of assurance and comfort than of passion. Wrapping his other arm also around the older man, he whispered, “Come on, baby, tell me. You feel better afterwards – and I can decide if I have to kick Selek’s butt tomorrow or if a stern talk to him will be enough.”

“I don’t think you mean this literary. Even old as he is, Selek is stronger than you,” Khan murmured.

A chuckle escaped Kirk. “And he will never use this against me.” He stroked gently over Nien’s cheek and waited.

For long seconds Nien only looked at him, then his shoulders slumbered like in defeat. “Very well,” he mumbled. Then he began to tell Jim what he had learned from Selek. He didn’t skip any detail, and even mentioned that the Jim Kirk of the other timeline had a son together with Carol Marcus – a son he lost in the aftermath of Khan Noonien Singh’s rampage.

As the Augment finally ended, Jim was quiet – and deeply lost in thoughts. There had been so many things gone wrong in the other timeline, Kirk was not sure what to make of it. As it seemed, he and Nien had torn each other apart – with Jim being the winner, but for which price? He had lost his ship and his son, had been stripped of his rank and… And he obviously had lost Spock. Whatever trick the Vulcan had pulled to cheat death, he – Jim Kirk – had been convinced that he had lost Spock. A thought that pained him deeply, and he only knew the half-Vulcan for three years and a few months now. How close would they be after twenty years?

‘Inseparable,’ as McCoy already called them now. Well, that was the other side of the coin when you fell in love or have a very close friendship: If something happened to the other, the sorrow was terrible. Well, there was no sun without shadows.

Then there was the fact that he had a son in the other timeline – with Carol Marcus. This was something Jim would have to think about, but the really important part of this ‘tale’ was what happened between him and Nien. Every decision, every word, every detail that led to more and more distrust that finally peaked in a disaster that was the seed for the catastrophe in the end.

“Why didn’t we reach this consent we did here?” he mumbled. “Why… went everything so wrong?”

Khan looked with unusual big eyes at him. “Is this what worries you the most?” He shook his head.
“Jim, despite the timeline, this was still me. I’m capable of such darkness that it can drive me insane and…”

“You had your share of madness, honey, and yet you became stronger of it,” Jim interrupted him softly; moving his cheek against Nien’s. Then a thought struck him. “Maybe there was something in the atmosphere of Ceti Alpha V after the planetary catastrophe that influenced you and the others,” he mused.

Khan frowned. “You think that…” He made a fleeing gesture with his right hand, Jim nodded slowly.

“I mean, Otto, Katie, Pablo, Rodriguez – they all love you dearly, but I do think that they would try to stop you if you ever would ‘lose’ it. Yet they obviously didn’t. They didn’t even interference as you – I mean, the other you – turned into a murderer and tormentor. Something you and your siblings would never do as long as you’re sane.” Jim fixed him with a firm gaze. “Maybe something in the changed atmosphere was the reason for the mess. Look, the other me gave your other you the chance of building an own life on a planet, and you agreed to it. Selek told you, your other you were even grateful for it. And then the big shit happened and you all went crazy. Selek also mentioned to you that there had been ion storms and that the air wasn’t breathable without oxygen masks. All of you – the others all of you – certainly got lots of poisoned air into your bodies and that maybe changed your bio-chemical vitals, enhanced nature or not. Perhaps in the end it robbed you all, step by step, of your sanity.”

“You can’t know this,” Khan murmured.

Jim shrugged. “I can ask Spock to run a simulation with the computers. I don’t know how much is in our databank about Ceti Alpha V and VI, but maybe the data is enough to build a likewise scenario of what happens within the atmosphere of no. V if it is shoved in the orbit of no. VI. And, by the way, as VI exploded it certainly send a lot of emissions towards its neighbor planet. Often only this is enough to change a planet to the worst. If it will calm you, I ask Spock to check this assumption.”

Khan carefully entangled himself from Jim and rubbed his forehead. “This all isn’t about the reason why I went mad in the other timeline, but the fact that I can be pushed so far. Selek warned me what could become of me if I don’t learn to control me. And he warned me not to harm you.”

Jim rolled his eyes. “Selek is the worst mother-hen of all, so don’t fret.”

“I do not fret, Jim, I simply ponder what danger I could pose to you, the others and the Federation if I ever lose my mind,” the Augment all but brooded.

“I think, you be as dangerous as any other genius that becomes a bit batty,” Jim said calmly. “But it isn’t said that this will happen to you – after all, there are enough people here to set you straight if your temper flares too much.” He again wrapped an arm around Khan’s shoulder. “Don’t read to much in the behavior of the other you, Nien. This man doesn’t exist in this timeline – not this kind of man at least.”

“But it could come to that,” the former dictator whispered, before he took a deep breath. “Selek offered me to give me Vulcan training – to show me how to control myself better and how to deal with the strong emotions I have. All of us have!”

“You accepted his offer,” Jim assumed, and Khan made an affirming gesture.

“Yes. Selek once told me that we Augments remind him of the Vulcans before Surak came, and maybe he isn’t so wrong with this comparison. We are from different planets and my race only
existed for a few decades, but… there are parallels which can’t be denied. Surak taught the Vulcans how to overcome their aggressiveness and how to control their feelings. I do think that… it would be the best for us to get some likewise training, too.”

Jim couldn’t help himself; he smiled. That was typical Nien. Problem recognized, problem solved – well almost. After all…

Khan’s communicator beeped and he reached to the nightstand to get it. “Khan here,” he answered the hail.

“Otto here. Noonien, I wanted to let you know that the others agree with Jim’s suggestion about our official name. Homo Sapien Augeretis fits perfect in our opinion.”

Nien smiled. “Good to hear. I inform Selek so that the official acknowledgement can be released. Have a good night.”

“You too. Um… are you okay?” There was real concern in Otto’s voice, and the Augment leader rolled fondly his eyes.

“I’m okay, Otto. Really, I am. Give the others my greetings. Good night.” He closed the communicator, and saw how Jim took his own.

“I call Selek – and afterwards he gets a piece of my mind for worrying you so much.”

A long, pale strong hand was lain on his arm. “Jim, don’t,” Nien said softly. “I don’t know if it is my place to tell you, but… you should know that he, indeed, loves you.”

Khan grimaced. “Not in this way, silly, but as a brother or son. I said it to his face that he loves you and he confirmed it, but not like we love each other. And when I watch Young Spock I think he adores you in quite the same way.”

Jim blushed. “Well, maybe I can remind him of his affection for me every time he cites the damn Starfleet rules whenever I’m about to solve a problem without going by the book.”

This time Nien chuckled. “Don’t demand of him to change that drastically.”

Kirk grinned and hailed Selek; affirming the official name the Augments had chosen. Like this he learned that the Vulcan High Council had only waited for that information to finish the official acknowledgement, and that the Federation Council and Starfleet would be informed about the ‘new recognized race’ the next day.

Highly satisfied, Jim hailed Wesley to inform him in advance. After everything Bob did for him, Khan and the others, it would be really bad form to let him learn of something so important on the official way.

Only then he also hailed Bones to give him the good news. He had to wait a moment until his friend answered his call, and Leonard sounded… distracted, to put it mildly.

“So, it’s finally done,” Leonard grumbled as Jim had ended his little speech. “Congratulations!”

In the background soft music played, and Jim got a wicked gleam in his eyes, as he said, “I just wanted to let you know about it in person. Don’t let me keep you away from your duties. Oh, and give Carol my greetings.”
“What?”

Kirk began to laugh. “Don’t think I wouldn’t know what you’re doing in the moment, Bones. So, have fun – and make certain Carol doesn’t come too late to her shift tomorrow.”

“You are impossible, Jim!” sounded the female voice from afar.

“Gottcha,” Kirk snickered.

“Good night, Jim!” McCoy said firmly before the connections was closed. Still chuckling, Jim put is communicator on the nightstand, and met Khan’s thoughtful gaze.

“What do you think of it?” Nien asked, what took Jim by surprise.

“Of what do you speak?”

“That you and Carol Marcus had a son in the other timeline.”

Kirk pursed his lips, before he slowly said, “I don’t know. I mean, I like Carol and in the beginning I did flirt with her, but somehow there was something missing. And… Well, even if it isn’t fair to her, but after all her father put my friends and me through, I… lost the interest in her in a personal way, you understand? I don’t know how her and mine story went in the other timeline, but in our world here she is nothing more for me than a friend.” He cocked his head. “What do you think of the woman you took as your wife in the other timeline?”

Khan shrugged one shoulder. “She had to be very impressive to catch my interest in that way. Yet… I can’t imagine loving someone else than you.”

Jim smiled and took Nien’s good hand in his own fingers. “Then we are, again, on the same page here. In other words: Let the other timeline be whatever it was, we live our own life here.” He grinned. “And that means that a lot lays ahead for us.”

“Yes – our marriage among other things,” Khan nodded; smiling for the first time in hours.

“Yeah!” Again Kirk kissed him gently. “I’m so looking forward to those moments.”

For a second a wicked grin appeared on the Augment’s face. “But until then, Pyāra, you’ll have to work on your pronunciation of the Vulcan sentences you’ve to speak.”

Jim frowned in mock hurt. “Honey, don’t tell me that you can speak Vulcan better than I do – after all I train those damn words for days now, and you only for a few hours.”

The smirk on Khan’s face widened. “What can I say? I’m better at everything, as you know.”

Kirk’s reaction was so quick that even Nien’s enhanced reflexes were too slow. A moment later he had a pillow in the face he pushed away, only to find his arms full with a snickering captain, who straddled his lap – careful not to hurt him. “What do you think of a contest, honey?” He asked sweetly.

“What contest?” For once the Augment was at loss.

“Who kisses better,” Jim grinned with triumph, and Khan wriggled his brows.

“This is a challenge I accept!”

And then there was for minutes no other words spoken…
The next day was sunny and warm from the beginning like all the others prior. Even in the earlier morning, right after breakfast, the promise of heat crept through the streets of New Shi’Khar.

Kirk stood on the pavement in front of the hotel where the Uhuras resided in the moment. He had a hard time to suppress the grin that threatened to break through as he watched Nyota Uhura’s obvious exasperation with which she glared at her younger sister, who all but ogled at Jim. Beside her stood her brother, who seemed to be unsure if he should smirk or groan at his younger sister’s behavior, yet Kirk had caught him staring with admire at him several times. Usually that would have made the young captain flustered, because even after all he did during the last years he wasn’t someone who regarded himself as a hero. He did what had to be done to protect his crew, his ship, his friends, other people or the spirit of the Federation. He didn’t trick, fight or risked his neck to gain a good reputation, but to set things right, no matter what. So, facing such open admiration was something that awkward for him – if it wouldn’t have been for Nyota’s reaction towards her siblings.

Her parents and grandparents beamed at Kirk, too, but in a more casual way and Jim had almost instantly taken a liking to Nyota’s mother. She was everything his own mom wasn’t, and as she clapped him on the back with a good-natured “At least someone who can keep my daughter under control” he had to laugh.

“No, Ma’am. It’s the other way around. To spill a secret: It’s Nyota who is the real captain, because none of us boys up there dares to infuriate her.” He flicked a thumb skywards and winked at his communication officer, who stemmed her fists in the waist and glared at him. “See, that’s what I mean,” he added in a conspiratorial whisper towards her mother, who chuckled.

“And there I wanted to be nice to you, Captain, and wracked my brain how to help you with getting a better feeling for the Vulcan language you’re going to need in two days,” Uhura growled, yet there was a teasing gleam in her eyes that took the harshness of her voice away.

“Who says that I’m not better in speaking the needed sentences?” Kirk asked innocently.

Uhura rolled her eyes. “Your first attempts spoke volumes, Jim, and Spock also confirmed yesterday evening that you’ve still trouble with it.”

“Traitor,” he pouted towards his first officer, who stood beside Uhura and watched the whole meeting with the interest of a scientist who got his hands on a new species of insects. Not only that they were out in public, no, a lot of Vulcans had passed them by and their reactions to the joking humans ranged from indignant ignoring to barely hidden disbelief. Latter confused Spock, after all everyone knew that humans differed a lot from Vulcans, especially in the way of thinking and behaving. So, what were they staring at? All right, maybe the meeting shouldn’t have been in public, but the Uhuras had already been outside of the hotel as he and Jim reached it several minutes ago.

The meeting hadn’t been part of their scheduling, yet he hadn’t been able to deny Nyota’s family the chance to meet Jim Kirk before the wedding would take place.

So he had picked up Jim from New Gol, drove him to the hotel in New Shi’Kahr, and now he really hoped for the ending of this meeting. He was used to the emotional display of his comrades and the Uhuras were kind-spirited and warm-hearted, yet he sensed Jim’s embarrassment he indeed could understand, and wanted to end it.

But just right now Kirk and Nyota were engaged in one of their friendly quarrels and knowing from experiences this could last a while.
Uhura looked with barely hidden mirth at her commanding officer and friend, who all but huffed at Spock, and continued, “As I said, I thought a lot how to help you to get a better feeling for the Vulcan language in the next two days, before T’Pau and the other dignitaries getting the imagination you would speak Vulcan with a hot potato in your mouth.”

Jim rolled his eyes. “I’m not that bad.”

“No, you’re worse,” Nyota deadpanned, what made her sister gasp and her brother snickering.

“Do you really think this will be good for your career if you snap at your captain like this?” Malcom teased her, what earned him a smirk.

“Jim knows me – and that I only have his and the others’ best interest at heart.” She opened her handbag she had slung over her light summer dress she wore today and pulled something out. Smiling she offered him a tiny one-ear-head-set and the dwarf-vision of an universal translator. “Here, it is programmed with the four Vulcan dialects which are spoken in this colony. When you wear the one ear-plug you can hear what the Vulcans say in their language while you get the translation with a time delay of a few seconds. Like this you maybe get a better feeling for the accentuation and the speech melody.”

Jim grinned openly at her and took the two items from her. “Thanks, Nyota. That is really thoughtful of you.” Quickly he stuck the plug, switched on the translator and put it into his trouser pocket. Still smirking he addressed Spock, “Say something in Vulcan.”

The first officer sighed soundlessly, before a stream of words left his mouth the little device translated a moment later into, “If we remain here for longer we’re not done with shopping before the heat becomes intolerable for you.”

Because only Jim had heard the translation, the others – despite for Nyota – looked puzzled at Spock, who wore his most innocent and bored expression. Uhura laughed quietly. “You’re the first man who is eager to go shopping,” she teased her future husband. “No wonder that I love you so much.”

Spock stared with risen eye-brows at her, realized that his leg was pulled, and answered regally, “As the captain’s first officer it’s my duty to make certain that he doesn’t get hurt. So…”

“Bullshit, you boys simply want some time for yourself to do some men-talking,” Uhura snickered and gave Spock a gentle push. “Off you go, you two. I’ll show my family the new museum in the meantime.”

“Don’t you have better things to do two days for your marriage?” her sister asked with big eyes.

“Na, everything is prepared and planned with Vulcan sustainability, so the bride has some time for herself.” She waved at her two commanding officers. “Bye, gentlemen – and don’t do anything I wouldn’t do.”

Shooing her family away she walked down the pavement, while Spock allowed himself the tiniest vision of a frown. “What does she mean with ‘don’t do anything I wouldn’t do’?”

Jim snickered amused. “It means, we shall stay out of trouble.” He walked towards the borrowed hover-car. “Come on, let’s go shopping.”

Spock still pondered Nyota’s words and shook finally his head. “We’re on New Vulcan. There is no
‘trouble’. That would be illogical.”

He couldn’t assume how wrong he was.

“ST***ST***ST

“The… the Vulcans did WHAT?” Richard Barnett looked with almost boyish wide eyes at the screen that showed the face of President Robertson.

“You heard me clearly, Richard,” the Federation’s mightiest man said with a sigh. “I received a report from the Vulcan High Council that they have acknowledged officially the Augments as an own psionic race, Homo Sapiens Augeretis. And because of their low number they are also declared as an endangered species. Both attributes put them under special protection per Federation law. Therefore the people of our special friend ‘Sunrise’ are legally sheltered now, not only on New Vulcan, but in the whole Federation in general.” He bent forwards and cocked his head, as he saw the admiral gaping at him. “You didn’t know in advance,” he realized, and Richard hurried to click his mouth shut again, before he collected himself.

“No, sir, I hadn’t a clue that the Vulcans would make such a step,” he murmured; wracking his brain if Kirk had informed during the talk two days ago, as he told him about his planned marriage with Khan.

Barnett sighed. “I can’t help myself, but I have the certain feeling that a special young captain from Iowa is behind this all. He is protective of Khan – he loves him – and now the Augments are declared as an own species by the Vulcans, no less. I would bet my last shirt that Selek had a part in it, too – and we both know who he is for real. He would move hell and earth for Kirk. And if it wouldn’t be for Kirk’s courage, cleverness and intelligence he used again to push fate into the direction of his liking, I would curse the boy.”

“Mr. President, don’t forget that Captain Kirk…”

“Yes, yes.” Richardson waved a casual hand. “The boy saved Earth, several other planets, my vice-president, you and the others, showed the Klingons their limits… I can go on and on like this – and I don’t know if I should become wary of him or should put him on a pedestal.” He sighed in defeat. “Latter would be the only right thing to do, yet…” He shook his head. “At least like this he spared the Federation Council long discussions what should become of the Augments. With the Vulcans’ intervention they are free to move to every place they want – after all they are now an accepted species within the planet-union.”

Richard dared a smile. “Well, so this is the best outcome for anyone.”

“You think so?” asked the president. “I’m the last who does pre-justice, but the Augments did make a mess in Earth’s history and they are dangerous when losing control.”

“Khan and his people belonged to the peaceful Augments, sir. And after all I learned from Kirk, they are normal men and women who want nothing more than a place to live their lives.”

“Kirk sees everything connected with his beloved through rose-colored glasses,” Robertson grumbled. “Not that I can’t understand him. Love does those things to people. Besides, the pictures I saw from Khan show him as an attractive man. And what the Augments had been forced to endure is bare any humanity, so I can acknowledge that Kirk and his officers want to know them save. Yet I will contact Selek and will have a word or two with him. I need his assurance that the Augments hold no potential danger for the Federation.”
Barnett groaned inwardly. “Sir, due all respect, but to ask the Vulcans if they didn’t make an error in judgement will maybe offend them. And after everything Norton did, I think one drop more would make the barrel flow over.”

Robertson smiled shortly. “We are talking of Vulcans here, Richard. Offence would be an emotion.”

“One they have perfected in not-showing but acting on in the subtest way. I know of what I’m speaking. Even Young Spock can make someone like me squirm with this indignant gaze and lifting of an eyebrow if he thinks he’s offended.”

This made the president chuckle. “I know – but Selek has the wisdom of almost a whole Vulcan life contraire to his younger counterpart. And he understands us humans well. He will not take my concern the wrong way.” He bent forwards again. “Has Commodore Wesley already spoken with any Augments besides Khan?”

“I don’t think so. The Vulcan healers asked him to wait until the Augments have acclimated themselves to the foreign environment and the fact that they have slept for almost two and a half centuries.”

Robertson nodded. “Understandable, but they are awake for days now. Let Wesley check on them. I want his neutral report within one day. I need something to work with when hell breaks loose in the form of the Federation Council and some of our staff officers – especially Admiral Archer. It won’t be long until I’ve him in the line after the newest addition of the Federation-family comes officially known, mark my words.”

Richard groaned. “I speak with him first and try to keep him calm. Would you please let me know of the result of your talk with Selek?”

“Of course,” the president nodded. “I send you a short note you can work with, too. Until later.” The screen became dark, and Barnett sighed deeply. His gaze found the empty cup on his desk and he rubbed his head. He needed a new coffee – a strong one, preferable with a shot of whisky in it, but for something like this the day was still too young.

“Blast you, Jim! Why didn’t you tell me to what the Vulcans were up to? But, of course, you had to protect your friends – again. There is no going back now after they are officially recognized as an own species.” He shook his head. “I knew you meant trouble the day Pike accompanied you to the Academy and I saw you stepping through the door of my office.” Despite his frustration a smile began to curl his lips. “And boy, I can’t do anything else than admire your courage.”

ST***ST***ST

Jim smiled inwardly as he heard his first officer’s and friend’s rambling. Well, it wasn’t exactly a rambling the way humans understood it, but for Spock it was really unusual to speak more than four minutes now about the whole ‘family-reunion’ with something close to confusion mixed with exasperation. Yes, Nyota’s parents were nice people, her grandparents were wise in their own way and her siblings were… well, young humans. And regarding Spock’s own family… Well, Silek was a big riddle to Spock, who had never met a full Vulcan who had a thing for teasing others and who ‘wore his heart on the sleeve’. T’Ylle was a Vulcan lady through and through and her father was a scientist Spock was comfortable of to speak with, but all those strangers in the middle of the wedding preparation were unnerving – well, unnerving if he wouldn’t be a Vulcan.

And alone this choice of words told Jim everything while he walked beside his T’hy’la down the street towards the shop; having left the car on a parking lot two blocks away. Spock needed a time-out, as much as he would deny it, and Kirk was hell-bent to give his friend exactly that.
“What do you think of having lunch with me in one of the restaurants down at the lake?” he suggested, and Spock lifted an asking brow.

“What?”

Jim shrugged. “We’ll be done with the shopping in an hour, then we’ve some time left that you can show me the lake and then I invite you to lunch.” He lifted one hand as the Vulcan began to protest. “Just let me do this for you, Spock. Despite that your time is limited you first provided Nien with clothes, then you bought me my wedding-robe, now you’re going shopping with me for my marriage. Originally, I should assist you, not the other way around. So, to buy you lunch is the least I can do. And, by the way, we both have a break for once.” He beamed at Spock expectedly and excited – and this face with those hopeful warm eyes was something Sarek’s son was unable to say ‘no’ to.

“I think the correct answer would be ‘thank you’,” he said, and Kirk’s smile widened into a full-blown grin.

“You’re welcome. On Earth there is the tradition that the groom has a bachelor party. I know that this isn’t usual in your culture, so a little time-out with a nice meal and spending some private time with the best friend is a good alternative. And besides, you’ve a good explanation to Sarek and the others, why the shopping trip lasted longer.” He winked at Spock, who suppressed a sigh.

“I don’t need an excuse to spend time with my T’hy’la, Jim. Even my father understands that. And, by the way, he does some shopping with Silek this morning, too, so he wouldn’t miss my arrival at all.”

“Fabulous,” Jim smirked and rubbed his hands, before his attention was driven to the door of the shop they had walked to. “There we are. I hope we get Nien’s size right.”

“I ordered the robe the same size I bought the other clothes for Mr. Singh,” Spock stated simply and followed Kirk into the shop. Although the day was still young and the sun was two or three hours away from reaching the zenith, it was already very warm, and Jim took a deep breath as he stepped into the temperature-controlled salesroom.

Five minutes later they had already chosen the shoes and a few things more Khan was going to need for the wedding, while the reserved robe lay already packed at the counter. Jim’s own outfit had some additions, too, of which Spock had made him aware.

“And you think I really need the sash?” Kirk asked quietly, while behind them another customer entered the shop.

“It’s traditional, Jim,” Spock answered.

“So, the couple wear the same sashes. And the third sash? For what is it used?” Kirk wanted to know.

“It’s the symbol for the bond that will be strengthened and confirmed during the wedding ceremony. The partners take each other’s right hand and the sash will be wrapped around them, portraying outside what is happening within the minds.”

Jim smiled. “I didn’t know that Vulcans can be romantic.”

“This particular ceremony roots in the pre-Surak times, and is therefore… more symbolic than other, more modern ceremonies.”
“The old ceremonies are still holding rests of the emotions full Vulcans have learned to shed off,” an unknown male voice sounded in their back. “It’s no wonder that you prefer them, Spock, after all we both know that you’re anything but a full Vulcan.”

Jim felt Spock stiffening beside him, while anger flared up in the young captain at those words which he instantly recognized as an insult. Both officers turned around, and Kirk saw a tall Vulcan who was maybe in Spock’s age. He was almost bulk built, yet slender, and his almost expressionless face held an arrogant streak. His dark hair was short with a side parting and there was a gleam in his dark eyes that made Jim wary.

“Stonn,” Spock acknowledged the other Vulcan coolly; his face gave nothing away. But Jim knew his friend well enough. Spock was on alert, this much was for certain, which in turn made the inner alarm bells of Kirk ringing.

Stonn, as Jim had just learned, pointed at the sashes and asked flatly, “Don’t tell me that you found someone who is ready to bond with you – not after you sent your intended bondmate away.”

The last part of the sentence was uttered in Vulcan. It was unusual to speak about private matters in the presence of strangers – especially offwordlers – and therefore Stonn’s decision followed its own logic. He couldn’t know of the translator Jim still had switched on and given the fact that the hot wind outside had messed up Kirk’s hair enough to cover the little plug, Stonn had no chance to even assume that his offences were understood by the human.

But Spock knew it, and trying to prevent any trouble that could arise, he replied calmly, “T’Pring and I agreed that the arrangement our parents made as we were still children wouldn’t have benefited us, so we separated. But I don’t see why this should be of your concern,” he answered in his father’s language, following along with unwritten rules of his people.

“Wouldn’t you rather say that she was in your way as you decided to run off to Starfleet?” There was a low sneer in Stonn’s voice.

Kirk frowned. He didn’t know who this T’Pring was, but if he had understood the short exchange correctly then she had been something like an intended for Spock, and both had broken up. Yet this wasn’t the main thing that caught the captain’s attention. Even if Jim wouldn’t understand what both men were saying, the undertone the larger Vulcan used was clear to him – no matter the specie. Stonn was taunting Spock, and that increased Kirk’s anger. Instinctively he straightened his shape, ready to interference. Whoever treated his first officer – his friend! – disrespectful and even attacked him verbally, would have to deal with him.

“What do you think you know about it, Stonn? You haven’t been there.” Spock answered; still expressionless, still calm.

“She told me, Spock. T’Pring and I grew close after you left, but you are right. Your both decision to cut the link was made in agreement, and this is the only good outcome of it. Your unsorted, emotional loaded mind was a burden for her.”

That was a low blow – one of those Spock was used to when he was still a small boy. Being at the receiving end of his peer’s never-ending mockery and taunting was nothing new to him. Their cruel behavior had even elicited a raging-fit out of him that ended with Stonn being beaten into a bruised heap, while he – Spock – had been left alone afterwards for several weeks. Yet he hadn’t been proud of his victory, especially after his talk with Sarek. Then the bullying had started again until general school was over. And, as it seemed, Stonn was still up to the old ways.

In earlier times it stung, despite Spock’s Vulcan control, but not anymore. His bickering with McCoy
had taught him how to respond – even if this here wasn’t one of the unending discussions between
the CMO and himself. Leonard never threw verbal punches like this; he always showed respect,
even if he tried to provoke Spock to give into his emotions. And the half-Vulcan knew by now that
McCoy only tried to show him that to suppress one side of his being was wrong. So, you could say
that Leonard tried to help Spock.

But not Stonn. The other Vulcan’s intention was to hurt him – plain and simple. And Spock
wouldn’t give him the satisfaction of succeeding. Rather the opposite. The verbal quarrels with
McCoy had trained him to ‘shot’ back without violating the Vulcan way. As a child Spock always
had tried to ignore Stonn – despite the pain his schoolmate bestowed him with – but the small hurting
boy was no more. Spock was a full-grown man who had found his own place in the world, with
friends who cared deeply for him, and with a beautiful highly intelligent woman who was about to
become his wife.

There was nothing Stonn could say of making him think of himself as a lower being ever again.

“Your body has matured, Stonn, but your words are still those of the spoiled child I was forced to go
to school with,” Sarek’s son replied icily, while behind the counter the salesman had gone rigid. He
also could feel Jim’s tension without even touching his friend, and hoped that Kirk wouldn’t do
something stupid like intervening. Fixing his concentration on Stonn, he added, “You are not well
raised enough to value our culture to let logic leading your thoughts and to comprehend the wisdom
Surak taught us by seeing the benefit in differences.”

Jim wasn’t so compliant with the Vulcan culture in detail, but that Spock had given back just as he
had received, Kirk realized instantly. Inwardly he applauded his friend, who met the other Vulcan’s
arrogant and scathing behavior with cold logic.

Stonn stared at his former schoolmate; his nostrils flared for a moment. This half-breed dared to
doubt his Vulcan schooling and upbringing? He, who wasn’t even a full-blooded Vulcan but the
result of a biological experiment that should have been forbidden from the beginning? He raised his
chin by an inch. “As if you would always follow the way of logic, Spock. We both know that your
emotions are too strong for it.”

‘And how is this a disadvantage, you snob?’ Kirk thought; feeling the urge growing to tell the guy a
thing or two.

Again, Spock only raised a brow. “As you never stop to point out, Stonn, I’m only half-Vulcan. So,
of course, I have some emotions which I have learned to control. What is your excuse for letting your
obviously not trained feelings getting the better of you?”

This time Jim had a hard time not to grin. Spock was really good in dishing it out.

Stonn fixed Spock with a not-existing, yet clear sneer. “And there is the error in your words. Full
Vulcans don’t have any feelings which could get ‘the better of them’. But, of course, being infiltered
partly with your mother’s genes you can’t know how it is to have no emotions.” He came one step
nearer. “And maybe this is the reason why you failed to save her in the end. You were too afraid of
our collapsing world around you to take her to safety.”

Jim felt himself gaping at these effronteries. Spock and frozen of fear? Spock too shocked to react at
all, especially when someone he loved was at stake? That beat everything! This bastard in front of
him didn’t have the tiniest cue of Sarek’s son courage. And then Stonn’s next words took Jim’s
breath away,

“Or did you finally acknowledge her for what she was and decided that it was better when she is no

more? Then you would have done your clan a favor of removing this wh…"

“It would be very wise to cease your speaking just now, Stonn!” Spock’s tone was hard enough to cut through steel as he interrupted Stonn before the insulting word could leave the other Vulcan’s mouth. He struggled not to ball his hands into fists, to stay in control, even if his pulse began to thumb in his ears. “To speak low about the deaths is unworthy of everyone, let alone someone who is so proud of being a ‘full Vulcan with no emotions’. Because your whole behavior, your whole words, are nothing else than a display of loathe – and loathe is an emotion, don’t you agree?”

“I speak in that way so that you can understand me, half-breed. After all…”

“This is quite enough!” Kirk’s sharp voice rang out, as he couldn’t stand it one second longer. This bugger had not only offended the gone Lady Amanda, but also treated Spock like he was scum. And Jim, who was more protective of his Vulcan friend than any mother-hen of her fledging around the world, would have nothing more of it!

He stepped beside Spock, who looked with widening eyes at him. Of course they defended each other whenever necessary, but never before had they been in a situation that was this kind of personal and private. As he was a child – and later a teenager – no-one had stood up for him to shield him against his peers’ taunting and mocking, but here and now Jim did exactly this. It was a whole new experience and out of no-where warmth spread through the coldness that had begun to engulf Spock the moment Stonn had spoken up.

Kirk seemed to be taller than usual as he stood beside Spock, while he glanced at Stonn with the special glare he had only reserved for someone who threatened his friends and his crew. “I never thought that there are Vulcans who have the foul behavior of a Klingon, but the universe never ceases to surprise me. Obviously there are Vulcans without any manners!”

Stonn looked him up and down as if Kirk was a disgusting insect; giving nothing away if he was surprised that the Terran had understand every word. “Stay out of this, human,” he said arrogantly in Standard.

“In your dreams,” Jim replied with a low growl in his voice. “You’ve just affronted my first officer, his dead mother and…”

“First officer? You are Captain Kirk?” As Jim only fixed him with another deadly stare, Stonn continued with clear accuse in his voice. “So, you are the man who tried to save our homeworld and failed so miserably?” He turned towards the salesman, who looked as horrified as a Vulcan could be. “Since when do you tolerate failures in your shop, Sulter?”

The addressed Vulcan came out of his shock, stiffened and answered icily, “I advise you firmly to stop this intolerable way of speaking, Stonn. The House of Surak and a Starfleet captain will not be insulted in my shop!”

“The House of Surak fell from grace the moment the traitor Sarek took this human whore as his wife and above all created such a…” He gasped, as the hand he waved into Spock’s direction with the last words, was gripped with surprisingly strong, cool fingers. A wave of disgust and pure fury crashed against his inner shields, as the human’s emotions were transferred to him through the physical contact.

“One more word, mister, and I wipe the floor with your sorry ass,” Kirk hissed; his blue eyes flashed dangerously.

“Jim, he isn’t worth it,” Spock tried to calm his friend, despite the fact that gratefulness waved
“A Starfleet member who attacks a Vulcan citizen,” Stonn stated bluntly, freeing his wrist from Jim’s grip. “How interesting. This is nothing else than what your admiral did two weeks ago and…”

“I beg to differ. Admiral Norton assaulted your government – I defend the honor of the House of Surak,” Kirk snarled; feeling a strange desire to protect Spock’s clan. A clan, he somehow belonged to now.

Stonn watched him with something close to mockery for a second, before he answered, “You’ve no idea of what you’re talking, human, otherwise you would know that you have no right of ‘defending’ the honor of any House. So…”

“And again you speak of things you have no real knowledge of, Stonn,” Spock interrupted, and for a moment the other Vulcan was taken aback by the fiery sparkling in his opponent’s eyes. “James Kirk has been welcomed within the folds of my clan, and as my T’hy’la he has every right to intervene when members of our clan are harassed.”

“T’hy’la?” Stonn replied; disbelieving. Then he shook his head. “You’ve really no inhibition of trampling on Vulcan culture, Spock. Such a lower psi-null being can never be…”

“Stop speaking of my captain in this way,” Spock ordered with a voice that usually made even other officers running. “Your behavior dishonors our people!”

“You’re giving me no commands, half-breed,” Stonn all but spat. “Spare that for your Starfleet cum and…”

“Mr. Stonn, no more affronts against Captain Kirk and Commander Spock in my shop!” the salesman said sternly, leaving his place from behind the counter. “I do not tolerate any further insults!”

“This is private, Mr. Sulter, so remain where you are,” Stonn answered over his shoulder.

“Speaking like this in public is anything but private,” Kirk growled. “It is rather a stupid way of trying to revile a family whose generosity and respect you will never be able reach.”

“A family that consists of traitors, men who abandoned Surak’s way, a whore and a biological abnormality that…”

Kirk stepped half in front of Spock; knowing that his friend’s control was a hairbreadth away from snapping. There were only a few things which could make Spock seeing red – or green in his case – and insulting his mother was on the top of the list. Jim wouldn’t allow Stonn to provoke Spock into such a behavior that would, indeed, bring shame over Sarek’s son.

“You xenophobic bastard!” he snarled; feeling his own control breaking. “Spock is more worth than thousands of such scumbags like you. You’re so jam-packed with jealously that you even act against everything Surak tried to teach your people. Maybe you really…”

Stonn pushed him with his right arm aside. “Remove yourself from my eye-sight, human, or…” The rest of the sentence ended in a shout of surprise and maybe even pain, followed by a dull bang.

Jim had acted – out of pure instinct as he thought himself being assaulted, or out of his urge to keep Spock out of the escalating situation. Maybe it was a mixture of both. He gripped Stonn’s arm, side-stepped, ducked, kicked parallel with his right leg against the taller Vulcan’s shin and used the drive to hurl the other man through the air. Spock’s shout of bafflement and alarm went under in Stonn’s
outcry as the full-blood Vulcan landed on the floor. But Stonn’s reflexes were fast. Rolling aside he regained his feet within a width of a second and attacked.

Jim, who had pushed Spock aside and was purchasing Stonn, dropped instantly into fighting stance – slightly bent in his knees, fists lifted. Stonn threw two punches Kirk more or less was able to block, before the young captain received a blow to his temple that made him stumble. But before he could even start a counter-attack, a roar filled the air, followed by, “Leave him alone!”

The next moment Spock took hold Stonn’s upper arm and whirled him around; his fist connected with the other male’s yaw. Stonn’s head snapped back because of the strong impact, and Spock used the chance to reach for his opponent’s shoulder to use a nerve-pinch. Again, Stonn’s reflexes were superb because he turned away in the very last moment and faced him, throwing a hard punch. Spock ducked as Starfleet training kicked in and gripped the other Vulcan’s arms. Letting himself fall backwards he pulled Stonn with him and hurled him over, using the Ashumi-technic.

For the second time Stonn learned how hard a floor could be, but this time he hadn’t a chance to raise again, because Spock was on his back with the speed of a le-matya. Yet again the taller Vulcan was able to avoid to be nerve-pinched by squirming beneath his opponent and tried to throw him off, but Spock straddled him firmly; a snarl left the Enterprise’s first officer’s throat. The old anger had mingled with new rage as Stonn attacked Jim, feed by the fury of hearing his former schoolmate insulting his parents like he did. It was about to shatter Spock’s control utterly.

“Kroikah!”

The ancient command made both Vulcans stop like someone had pulled the plug. Jim, who tried to ignore the pain at his temple while he fought for balance, turned around as he heard the familiar male voice in his back – and froze.

Between entrance and counter stood no-one else than Sarek. And one look at the ambassador told Jim that they all were in deep, deep trouble…

TBC…

Chapter End Notes

Oh-oh, of course Sarek had to step into the same shop the big mess is happening. Yet, maybe, it’s a stroke of luck in a certain way before everything becomes out of control.

I loved to write Stonn into the story, because even if the bully of Spock in the first ST-Kelvin-movie wasn’t mentioned with name, I (and maybe some people more) automatically thought of Stonn. In the original serial he struck me as one of those schoolmates who ‘loved’ to taunt Spock because of his heritage. And in the next chapter you will learn why he reacted in my story the way he did.

It also was fun to write some reactions of the president and Barnett as they learn of the Augments being declared an own, even psionic specie. I also mentioned Jonathan Archer, and I can promise you that he will appear in the next chapter I hope to poste before Eastern.

What really had to be looked back on and reappraised was what happened to Jim and Khan in the first timeline and how Nien reacts to this knowledge. It was an emotional
and delicate topic – one that could give awkwardness or would forge our two love-birds even more together. I hope you liked the outcome.

As I already mentioned above, in the next chapter you’ll learn why Stonn behaves to completely out of the Vulcan way, you’ll meet a very old Archer (and T'Pol) and there will finally the re-union I spoke of two chapters prior.

Please let me know how you liked the new chapter – like always, I’m more than curios.

Have a nice rest of the week,

Love

Lessons from the past

Chapter Notes

Hi, my dear readers!

And once again I only can say ‘thank you’ for all the reactions I got for the last chapter. I knew that Stonn’s arrival and his behavior would take you on a rollercoaster – and I had to grin at your suggestions what will happen to him or how the others will react. And it made me more or less happy that no-one of you thought of the explanation for Stonn’s un-typical behavior I came up with (*smirk evilly*). Just wait until you read it. And concerning Jim – well, Sarek, Silek and the poor shop’s owner will get a very strong demonstration of our captain’s loyalty not only towards Spock, but also to his whole clan and towards Starfleet. In other words: Don’t mess with those who are close to James T. Kirk. Our dear captain can turn into a furious dragon who protects his treasure (even if latter isn’t made of gold and gems, mind you).

In the new chapter you will also meet two characters from another Star Trek-serial and I hope I caught them well. And there will be another re-union some of you already anticipated.

Have fun,

Love,

Yours Starflight

See the end of the chapter for more notes

Chapter 103 – Lessons from the past

„Homo Sapien Augeretis???? What… What has gotten into the Vulcans? Where is this brilliant, logical mind of theirs when it is really needed? Have they lost it – or is it only Selek and another few of the Elders who suddenly went insane?”

The voice that spoke with undeniable disbelief and anger had once been a smooth tenor, now it was rough and high with age. Yet the dark eyes encircled with a lot of deep wrinkles were still full of life and at the moment even fierce. The thin face that wore the spots of age was framed with a shock of white hair that had thinned out, and the bony fingers which held to the armrests of the hover-chair were trembling, but nevertheless there was no doubt that the old man was still sane and surprisingly healthy for the many years he had lived.

“High Minister Selek and the High Council certainly weighed all given information and facts before
they came to their decision. The Vulcan way doesn’t allow any other option, as you should be well aware,” came the gentle yet firm rebuke, spoken by a calm and soft female voice.

Richard Barnett sighed inwardly, while he looked back and forth between the two people in front of his desk, who were living legends by now: Jonathan Archer, former captain of the first Enterprise within Starfleet more than hundred years ago and later President of the Federation, and T’Pol, the first Vulcan who ever served aboard a Starfleet ship. Thanks to her job as counselor within Starfleet’s admiralty she hadn’t been on Vulcan the day Nero destroyed the planet, yet she hadn’t suffered any less. Even more than 16 light years away she had felt relatives die, and Barnett had heard that it had been Archer, with whom and some further admirals she conferred with because of the crisis, who caught her and stabled her mind by simply holding her close on his lap as she lost balance because of the mental shock. They both had shared several mind melds during their active duty days and both were close. Some people assumed that they were very close, but there were no proofs. Fact was that Jonathan had kept her sane as she realized of her homeworld’s destruction even before the official reports from the Enterprise NCC 1701 reached them, and Richard was still impressed how the old man had obviously reacted to shield and to comfort his friend.

Jonathan Archer was 148 years old – an age his ancestors of earlier centuries would have damned as ‘demon’s work’. Modern medicine gave him the chance to live a life in sane mind for so long. Yet it came with a price. His legs didn’t carry him anymore, his backbones had to be strengthened with some injections every month and his hands trembled almost without stop. But his spirit was still that of the determined explorer and protector he had been a century ago.

Contrary to him, age had been gentle with T’Pol who had stood at his side for so long and was still there. Even the first strands of silver in her short dark hair and the first crinkles around her large, brown eyes couldn’t change the fact that T’Pol was an unusually soft looking Vulcanness; with full, pouting lips and pleasant features. Yet Barnett knew the clear sharp mind that hid beneath the beautiful, somehow innocent appearance that reminded him of the images of fairies of the northers countries of Earth. It would be a big mistake to underestimate this woman, who displayed in her own way the same loyalty towards Archer that Spock did towards Kirk. And, exactly like Sarek’s son, she had no problem pointing out the illogic of an emotional statement; rebuking her old friend in this gentle way.

Archer looked from his hover-chair up to her. “You know that I don’t mean it literally,” he grumbled. “But… REALLY!” His thin hands flew up in a gesture of pure frustration. “I first thought it to be a bad joke when I received the memo from Robertson this morning but had to realize to my horror that it is anything but a joke. What devil drove your people to give AUGMENTS the status of their own psionic race; putting them under special protection laws like this?”

“The report gives you answers enough, Jonathan, you just can’t accept them. T’Pau herself tested the Augments and recognized their psionic abilities. And given the biological differences between them and the casual Terran human race they are indeed their own species. By the way, the Latin name is well chosen in my opinion.”
Archer groaned and grimaced. “Have you forgotten what happened when Soong raised Malik and the others? I still…”

“You begin with a false assumption, Jonathan. Malik and the others grew up alone after Soong was arrested when they were still children. The Augments we’re speaking of now are originals from the 20th century of your planet and belong to the more peaceful superhumans.”

“Yeah, this was clearly seen as this guy blew up the London Archive, attacked HQ and…”

Archer’s sarcastic reply was interrupted by Barnett. “Jon, with all due respect, but you and the other staff officers were informed in detail of what Mr. Singh had been forced to endure. He snapped - something I can understand. We all, including you, have our breaking points – and he was driven beyond it several times. And despite the way he was treated until a few weeks ago he used his strengths and intelligence to help us out during the damn war. Please don’t forget that the whole Tammeron population, most people of Aldebaran’s capital, our delegation and a lot of Starfleet members are owing him their lives. He freed Kirk from the Klingons and…”

“I know you are smitten with the Kirk-boy, Richard, and I have to admit that his cowboy-behavior does have some advantages. I wasn’t that different when I was young…”

“You can say that,” T’Pol muttered under her breath.

Archer shot her a short glance, before he continued, “… but it never occurred to me to hide a wanted criminal on my ship – or to turn a blind eye on the danger Augments possess, only because of a crazy friendship. I admire Kirk’s fighting spirit to never quit no matter what, but you have to agree that the whole command crew is a bunch of crazy individuals. Geniuses in their own ways, yes – even this mad Scotsman who used my dog to test his idea about a transwarp device…”

“It functioned in the end,” T’Pol cut in, but Archer waved her words away.

“… but if you regard it from a sane, neutral point of view these overgrown teenagers are overstepping boundaries and rules a little bit too often.”

Richard felt an almost fatherly urge to stand up for Kirk and his friends – after all, those ‘overgrown teenagers’ had already a long list of heroic deeds more experienced officers would never reach. He
cleared his throat. “Well, I do remember some tales in which you didn’t go by the book, too, Jonathan. You…”

“That was different!”

“A very often used statement from people who deny parallels they don’t like,” the Vulcanness commented; replying to Archer’s glare calmly with a raised brow.

“The times I went against rules can be counted on one hand,” Archer defended himself.

“I think age messes with your memories because you certainly went against rules more than five times,” T’Pol stated wryly.

“Be that as it may,” Archer grumbled. “When you’re out there in space you have to improvise sometimes. But when I read Kirk’s reports I get dizzy. I ask myself why he has a Vulcan as a first officer. Shouldn’t Spock prevent such insanity?”

“Spock cha’Sarek certainly accepts the captain’s own logic behind his decisions and trusts him, just like I did all those years back and still do concerning your style of command, even if I questioned it in my mind on a regular base,” T’Pol pointed out. “And if Captain Kirk speaks up on the behalf of Mr. Singh and the other Augments after he worked together with Mr. Singh for weeks, then he certainly has good reasons for it. I also want to drive your attention to the fact that no member of the Vulcan High Council would bend to his suggestion of recognizing the Augments as their own species if it wouldn’t be necessary.”

“Yeah – the necessity is to give them extra protection,” Jonathan groused. “Soong was convinced that Augments could be live among us if they are only raised as normal children but see what happened. Aggression is in their genes and…”

“Like it is in your whole species, Jon. Don’t forget that the Augments are enhanced *Terrans*. The gene material comes from your people. Yet, as far as I understand the report, the Augments which are on New Vulcan at the moment, have adjusted fine to the society and are acting peacefully – despite the fact that their leader has been tortured, abused and kept captive for many months. Given the usual reaction you could expect from them after being confronted with this knowledge, it speaks for them that they stay calm.”

Barnett leaned back in his chair; knowing that such similar discussions were being held in other
offices, after Richardson had informed the admiralty and the Federation Council of the Vulcans’ newest ‘development’.

“\n“I have to agree with T’Pol. I talked with Kirk a few times and I met one of the younger Augments on New Vulcan. Jim is convinced that they are going to take their given chance very seriously and will do their best to fit into the Federation. And if the young man I met is an example for his siblings, I’m drawn to agree with Kirk. We shouldn’t judge them because of what happened a century ago. This here is a complete different situation with different people.”

“It is not that I want to condemn them in general,” Archer sighed, “but what if something doesn’t go to their liking? What if their leader feels threatened again and goes berserk? You can’t stop them. Hell, you can barely \textit{kill} them and…”

“As I said, Mr. Singh’s crew differs from Malik and his fellows,” Barnett interrupted him. “They were introduced into this world by people who care for them. Khan trusts Kirk utterly and the other way around. This friendship shows them that they aren’t confronted with prejudice. Kirk already befriended a few of them, showed them the world they woke up into. T’Pau and Selek both assure that the Augments can be integrated into the Federation. We can’t just damn people because their abilities are differing from ours. After all the Federation consists of many different species, and we all swore to protect those differences because that is the essence of our union.”

“I know, Richard. I was the president for a few years, as you know, and I do remember very well the damn responsibilities that weighs down you with every new development that is made. I was an explorer for decades and loved every minute of it, and I certainly trusted new people several times too quickly and too often instead of playing it safe. Regarding my weakness when I was younger I can understand Kirk’s decision to protect the man who was a victim of Section 31 and to include the man’s people in said protection. But he hasn’t the experiences with Augments like I have, and…”

“I beg your pardon, Jonathan. I don’t want to step on your toes, but your ‘experiences’ with Augments was you chasing them through Klingon space and having some communications with them for a few days. On the contrary, Kirk has worked with Khan for a few weeks side by side, hand in hand. He has come to know Singh very well and he speaks kindly of Khan’s crew – ‘siblings’ is how Khan calls them. I talked with Selek before I called you, and Selek informed me that Sarek also shares the opinion that the Augments will fit within the Federation. By the way, Sarek is the middleman between the Augments and the Vulcan High Council.”

\textit{“Sarek agrees to this… insanity?” Archer demanded, shocked.}

“Sarek regards them as highly intelligent, reasonable people who want nothing more than to find a place where they can live in peace,” Barnett nodded. “Don’t forget what they’ve been through before they fled Earth. They had to face genocide, lost dear ones, were forced to see humans
butchering their people and even normal humans. The whole planet was caught in the most brutal blood-shed possible. Khan lost a brother during the escape, as Kirk told me. They all are traumatized, yet they adjust well to the new situation they find themselves in. The time they left Earth, ‘aliens’ were pure fiction. Other planets were pictures on a screen and numbers in observation labs. Khan’s sleeper-ship was the first of its type. None of them could know if they would wake up again at all, yet they took the risk, because it gave them a very tiny chance of survival. How desperate do you have to be to make such a step? They escaped – only to be faced with the same prejudice and loathing they tried to avoid all those centuries ago?” He shook his head. “No. This is not the way of the Federation. And if it comes to a hearing I would even tell exactly this piece of my mind to the Council.”

Archer sighed and leaned back in his hover-chair; pondering Barnett’s words. “Seeing it from the human side I have to be heartless not to agree with you. But… I’m still not convinced that this will all turn out in a good way.”

“The same concerns were discussed among our people after we had the first contact with you humans, yet a few Vulcans, who lived by the IDIC-principle, spoke up on your people’s behalf and suggested to give you a chance – to assist you while you were still struggling with the outcome of your third world-war,” T’Pol added of consideration. “And look where it got you. Do you really think Terrans would have made it so far if it wouldn’t have been for the trust we provided you with despite the doubts many of us had?”

Groaning again, Jonathan closed his eyes for a moment before he glanced upwards at her. “One thing will never change. You were and always will be my Jimmy Cricket.”

Rising both brows, T’Pol cocked her head. “I don’t know what my logical argumentation has to do with the fictional animal character of a fairy-tale concerning a puppet that turned to life.”

“Jimmy Cricket was Pinocchio’s conscious, as you are well aware,” Archer sighed.

“Yes, I’m familiar with this tale, yet I ask again why you compare us with those two fictional characters. You do have a conscious, as I’ve witnessed more times then I’m able to count, and you are certainly no wood-puppet turned to life. By the way, this story is highly unrealistic and therefore utterly illogical. I don’t understand why it is told to children.”

Jonathan looked at her and threw his hands up. “I give up!”

Barnett couldn’t help himself: He had to laugh. “I ask myself if Kirk has the same problems with Spock like you two have. Yet still I’m convinced that a human-Vulcan mixture command-team is the
best that could happen to Starfleet and the Federation.”

“That depends,” Archer murmured which earned him a stern glance from the Vulcanness, one he returned with one of his typical half-smirks. And as he saw the gleam that shimmered deep in her eyes he knew she understood his teasing. He asked himself, if Kirk was able to read in his Vulcan officer’s eyes like he, Archer, was able to do in T’Pol’s.

ST***ST***ST

Jim Kirk gulped, as his gaze roamed over the face of Ambassador Sarek who was the living example of a really NOT amused Vulcan. Spock’s father had one eye-brow raised, his face was expressionless, his eyes were cold – at least at the first look. But Jim had learned to read Spock, and his friend had inherited a few streaks from his father. Deep in those dark eyes Kirk recognized the anger the ambassador hid so well. And somehow Jim assumed that said anger wasn’t directed at Spock, Stonn or him, but at the whole situation.

A movement beside Sarek drove Kirk’s attention to the second male, who came to stand beside the ambassador. For a moment he thought it was Selek, but he realized his mistake a second later, because the Vulcan in front of him still had dark hair with the first silver at the temples, and his face – which resembled Spock a lot – didn’t show the deep crinkles Spock Prime sported. Jim assumed who this man had to be.

At hearing his father’s voice, Spock loosened his grip on Stonn. Catlike he rose and turned around; his uneven breath hitched for the tiniest moment as he saw his father and his uncle, before he brushed out his tunica, straightened his frame and clasped his hands on his back; Vulcan control firmly in place. “Father, Silek,” he greeted politely as if nothing had happened.

Stonn rose, too, yet not as elegantly as Spock. Giving the half-Vulcan a death-glare, he finally found his composure, straightened his clothes and looked at the newcomer. “Of course,” he grunted. “You always need a back-up, don’t you, Spock? First your captain, and now daddy comes to save the day.”

“In case it has slipped your incredible, formidable mind, you idiot: Spock had a good grip on you, and Sarek saved you in this case,” Jim growled – face flushed, narrowed eyes shooting daggers at the tall Vulcan, his body still strained to act if needed.

“Shut up, human! Your attack of a Vulcan citizen will be brought to…”
“Silence!” Sarek’s voice could freeze over hell.

Silek watched his nephew, the young human male at his side Sarek’s brother recognized as the Federation’s newest hero, and the other younger Vulcan whose attempt to stay in control was anything but perfect. “Interesting way of settling differences. Is this common now on New Vulcan?” he asked, and even if his face gave nothing away, Jim could hear the dry amusement in the man’s voice.

What had Spock said? That his uncle showed an almost scandalizing habit of teasing and ‘wearing his heart on his sleeve’? If Kirk had any doubts before who the second Vulcan in his middle age was, those doubts were dispersed, because even if Spock sometimes proved to have a wry sense of humor, this Vulcan here outdid him by a length. Jim knew that he faced Silek, Sarek’s younger brother, and as he met those sparkling dark eyes, he instantly took a liking to the man.

Sulter bowed in front of Sarek; greeting him with the ta’al. “Ambassador Sarek, it’s an honor to welcome you in my shop – even if the circumstances are less pleasant, because of the misbehavior of one of my customers.” He turned around and his gaze set sternly on Stonn. “Mr. Stonn, you not only insulted the House of Surak, Commander Spock and Captain Kirk without being provoked, you even attacked the captain. I bar you from my shop. Should you ever set foot into my house again, I’ll press charges against you.”

“As I said before, Sulter, this is private between Spock and me, so don’t inter…”

“I made myself clear, Mr. Stonn,” the shop’s owner interrupted him sternly. “When the situation is cleared by Ambassador Sarek you will leave my shop and never return. Otherwise there will be consequences.”

Sarek had listened wordlessly to the short exchange and there was no doubt what happened here. Stonn had insulted Spock, Kirk had stood up for his friend, the situation escalated and finally Spock had been forced to subdue Stonn to protect Kirk. One look at the young human proved his theory to be true, because Sarek could see the already blooming bruise on the captain’s temple that Kirk could only have received from Stonn. And, of course, Spock had acted to keep his captain and friend safe.

“Have the young gentlemen been infected with some unknown pathogen that they behave like a bunch of Klingon teenagers?”

Jim didn’t back down at Sarek’s cold voice but used the ambassador’s words to add fuel to the fire. Turning towards Stonn, he said, “See? I already told you that you have the impolite behavior of a Klingon.”
“And I advised you to stay out of it,” Stonn replied harshly.

“After insulting my first officer, his dead mother, his honorable father and even the whole House of Surak? No chance, buddy. Who ever dares to mess with Spock has to face me for it!”

With another almost-sneer Stonn turned towards Spock. “And you are calling yourself a Vulcan? A Vulcan who needs the ‘protection’ of a weak human?”

Spock simply lifted a brow. “Strength has many faces, Stonn, especially when it refers to the intellect and mind – but we both know that your strength lies more in the physical way. At least that was what I thought until a Standard minute and fifty-seven seconds ago. Captain Kirk and I spar a lot aboard the Enterprise, yet he hasn’t managed to hurl me through the air until now – contrary to his short fight with you. Obviously not only your intellect, but also your body is weaker than the first sight makes anybody believe."

Stonn made a threatening step towards Spock, which prompted Kirk to move quickly between them; shielding his T’hy’la again.

“Gentlemen!” Sarek warned while he walked closer; Silek at his side. The three young men stopped and looked at him – one pair of dark eyes angry, one calm and one blue pair of eyes expectantly.

Sarek’s glance remained on Stonn. The Vulcan ambassador knew of the strong dislike this particular Vulcan held for Spock and remembered the day he was called to school because Spock had ‘beat the crap out of Stonn’, like Amanda had pointed it out with some badly hidden pride. A part of Sarek could understand that his son had snapped at one point, after all he was partly human and all those years back he had been a child – just like Stonn. But now the latter was a grown man and that he obviously was still up to throwing insults strong enough to make a Starfleet captain act on it, was simply inacceptable.

“As far as I know I’m facing three adults – and to act childish like this isn’t tolerable.”

“Tell that this guy, who came into the shop and started throwing nasty insults on your whole family without Spock giving him the tiniest reason for it,” Jim said; returning Sarek’s stern look with his own ‘captain-glance’ as his crew called it. The same moment he heard his communicator beeping but ignored it for once. He knew that it was Nien who must have sensed his fury through their shared link, but just right now Kirk had no time to assure his bondmate that he was okay.
“Captain Kirk tried to reason with Mr. Stonn, but was attacked by him,” Sulter informed Sarek. “And as far as I know to attack a Starfleet officer is a crime.”

“I tried to move him aside, that was all. He should have stayed out of the differences between Spock and me,” Stonn growled; narrowing his eyes at Kirk, who lifted his chin in silent challenge. Behind him Spock tensed; ready to push Jim out of the line of fire and to protect him.

“Stop!” This time the ambassador used Standard, but it’s effect wasn’t any less than before as he called the ancient word. Attentively he watched his son’s old rival, saw the slightly flush on the cheekbones, the widened pupils – and a certain suspicion woke in him. Switching to Vulcan, he asked,

“Stonn, are you bonded?”

Spock frowned for the length of the blink of an eye in confusion, while Kirk’s face betrayed his bafflement at this question the still hidden device in his ear had translated instantly. What, the heck, had a bonding to do with the impossible behavior of this idiot?

“No,” Stonn answered. “Thanks to those two losers not only our homeworld but also my intended fell prey to the holocaust.” His expression betrayed the barely hidden mockery mingled with satisfaction that suddenly shimmered in his eyes. “I think you know her, Sarek. It was T’Pring – the woman you chose for your son but who couldn’t stand his chaotic mind.”

“If Spock’s mind is chaotic then I really want to know how yours can be described,” Jim growled. “’Catastrophic’ is the first word I can think of.”

Sarek looked surprised at him; asking himself how it came that Kirk suddenly understood Vulcan. Then his gaze found the tiny ear plug and he understood that the young captain was using a translator. In other words, Kirk had listened to everything Stonn had said to Spock, who certainly used their native tongue for the verbal quarrel. Knowing how protective Kirk was of his friends – and especially of Spock – Sarek didn’t need to ask why the situation had escalated as it did. And he didn’t want a repeat.

“James, please,” he said calmly; seeing Stonn’s nostrils flare. “This leads to nothing.”

“You said that T’Pring didn’t survive Vulcan’s destruction,” Spock spoke up. “If she was indeed
your intended, Stonn, then I ask myself why you are standing healthy in front of me, while she is
dead.” The first officer knew that it was a mistake to provoke Stonn, but his control showed several
serious cracks and his human side demanded fiercely to give as he had been forced to receive.

“A good question,” Kirk nodded, before he glared at Stonn. “Did you run quicker and reached a
shuttle, while you left her behind?”

Stonn breathed deeply in and out; fighting for control. “If you and your Starfleet-weaklings would
have been quicker – and more efficient – our homeworld would still exist.” He stared at Spock. “But
just like the biological mistake you are, you were not able to do anything.”

Silek took in a sharp breath; frowning. He felt tempted to give this Stonn piece of his own mind. Not
only that the insults concerning Starfleet were complete nonsense and unacceptable, the affronts
concerning his nephew were enough to tempt his Vulcan control to a measurement that would
demand meditation later.

Jim felt his anger turning back to rage. The same moment he heard Spock shifting and instinctively
he reached out behind him; pressing a flat hand against his friend’s belly to hold him back. Yet
despite his rationality that told him to prevent the resumption of an open fight between the two
Vulcan rivals, his temper was too strong to be kept in check. “At least Spock was able to save the
Vulcan High Council, the Elders and a lot of artifacts which are essential for your culture. And
concerning us ‘Starfleet-weaklings’ – more than 10,000 Starfleet members died that day to protect
your homeworld, half of them still cadets. Young people, with their whole life in front of them, who
sacrificed themselves by coming to your aid, and you are daring to call them ‘weaklings’? You, a
coward, who fled without his intended?”

“You know nothing of what happened that day!” Stonn spat.

“Stonn, be quiet before…”

Sarek’s sharp voice was interrupted by Kirk, who hissed, “‘I know nothing of what happened that
day?’ Then let me tell you a tale, you moron. I smuggled aboard the Enterprise to help Vulcan,
jumped from space through your atmosphere on the drill, fought off some Romulans, jumped after a
colleague who was about to fall to his death, was marooned on an ice-rock, let my atoms be hurled
through space by the first transwarp-beam that ever transported a human, not knowing if I would
make it in one piece, boarded the hostile vessel and fought side-by-side with Spock against those
Romulan madmen.”

Stonn opened his mouth to reply something, but Jim didn’t give him any chance. He seemed to grow
even taller, as he forcefully continued, “And while Spock still had to fight the mental shock of losing his planet, family members and above all the parental link with his mother, he still was able to evacuate hundreds of your people, commanded Starfleet’s flagship and destroyed Nero and his ship, ready to sacrifice himself in the battle. And what did you do? You ran to save your own life, and analyzing your character, you sure as hell didn’t look back and maybe even fought your way onto an evacuation shuttle – without giving a damn who was forced to stay behind in your place. I know guys like you. Once a bully, always a bully. And today the only thing you can do to sooth your bad conscious is to cling to the old childhood grudges you were never able to outgrow. And above all you lash out at everyone and everything because the legendary Vulcan control is possible for every Vulcan except you. So, who is here a ‘biological abnormality’? A half-Vulcan who follows the ways of Surak to the point of the book and shows more control than a Vulcan adept, or a full-blooded Vulcan who has nothing better to do than throwing insults and steaming like a bull seeing a red flag waving? A little hint from me to solve the riddle: Spock isn’t the one with the ‘abnormality’.”

To Jim’s astonishment and to the other Vulcans’ alert, Stonn was trembling now; his fists balled and opened over and over again, while he glared at Kirk, eyes wide. Spock laid a hand on Kirk’s shoulder and tensed his muscles. He knew that Stonn was the blink of an eye away from losing it and attacking Jim, and Spock was ready to shove his T’hy’la out of the way and to resume the fight to protect not only Kirk, but also his father and his uncle. A Vulcan out of control presented a great danger, even towards his own people.

It was Sarek who calmed the situation by stepping beside his son’s old rival. “Stonn, what Captain Kirk tried to make you see in his human way is that you are emotionally compromised. And I think we both know the reason for it.” His voice was low and almost gentle, while he ceased to switch back to Vulcan. With Kirk being the only non-Vulcan in the shop but wearing a translator, there was no need for it. “I advise you urgently to see a healer, because it is clear what triggers you to behave in such a dishonorable way that has nothing to do anymore with anything Surak taught us. I will tell Healer Sorel to expect you at the hospital. He knows addresses where you will find help.”

Stonn looked abruptly at him. “Don’t you dare to tell me what I’ve to…,” he began to protest, but the ambassador cut him off sternly.

“If you don’t check in with him, I’ll report you to the Elders. You not only attacked a Starfleet officer, but also a personal guest of High Minister Selek and Lady T’Pau. I don’t think you want to face the consequences which would follow. And given your personal situation an official rebuke from the High Council would deny you any social assistance you are going to need without delay.” His voice softened again. “Believe me, this is the best way for all of us. You are in need of… biological attention, and if you don’t submit to it, the outcome is well-known among our people.”

Kirk didn’t have the tiniest clue of what Sarek was speaking about, but it seemed to tell the others a lot if he interpreted Silek’s and the shops-owners stiffening and Spock’s sharp intake of breath correctly.
Sarek wasn’t done with Stonn. “And by the way, your current condition is the only explanation I will accept as an excuse for your shameful behavior within the last minutes.”

For a few moments they only looked at each other – a battle of wills, which Sarek won as Stonn shortly lowered his head. “As you wish.” He turned towards the entrance, but another voice stopped him.

“Don’t you have anything to say to my nephew and Captain Kirk?”

Jim was surprised how much Silek sounded like Spock – and even looked like his first officer: Hands folded at his back, head cocked slightly to the right side, one eye-brow risen. It was almost eerie.

Stonn glanced back at the two officers and took in their stance – Kirk still half in front of Spock, still glaring at him; Spock the living example of a controlled Vulcan, yet in his own way also human by having his hand laid calmingly on Kirk’s shoulder. Two different men, yet they seemed to be made from one and the same piece of wood, like a Terran saying went he once heard.

“Apologies are illogical, yet my behavior wasn’t correct. Live long and prosper.” He nodded shortly at them, before he left the shop without another word.

Jim let the breath he had held, escape, before he grumbled, “What an arrogant asshole.”

Spock cleared his throat and gave him a pointed look as Kirk glanced over his shoulder backwards. “What? I’m right, am I not?” Jim defended himself, and for a second Spock’s left corner of his mouth curled while amusement flashed in his eyes.

“I wouldn’t have voiced it that harshly, but in essence you are correct,” Silek spoke up, before he addressed his nephew. “Was this one of your former schoolmates?”

“Unfortunately,” Spock nodded, while he removed his hand from Kirk’s shoulder. Then he turned his attention shortly towards Jim. “Captain, if you would please let me go?”

Jim realized only now that he still had one hand pressed against Spock’s belly and snatched it quickly away. “Sorry,” he said; grinning a little bit sheepishly.
Spock suppressed a fond, yet exasperated sigh, and stepped beside him, before he glanced at his uncle. “Silek, may I introduce Captain James T. Kirk to you, captain of the Enterprise and my T’hy’la.”

Jim lifted his right hand into a ta’al just like Silek did, while Sarek’s brother answered, “There is absolutely no doubt that you two are T’hy’las. This was a fine speech of defense that you put up on my nephew’s and Starfleet’s behalf, young man. Even if Stonn wouldn’t have been… compromised I don’t think he would stand a chance in argument against you – despite your lack of logic.” The last part was spoken in an almost teasing manner, and Jim smirked at him.

“Sometimes logic mixed with illogic is most successful. I’ve been able to beat him in chess a few times this way.” He flicked a thumb at Spock; winking at him. Then he turned serious again. “And referring to Stonn’s offending choice of words and accusations; I already told your honorable mother that anyone who dares to treat Spock bad, will have to deal with me.”

Silek lifted a brow in surprise. “I can imagine her reaction to such a fierce statement.”

“I think she approved of it – in her own way. Spock is my closest friend and I’m always there for my friends, no matter what. And I certainly don’t stand by and do nothing when such a stupid bastard attacks Spock with such hurtful words.” His glance moved to Sarek. “But Stonn not only insulted your son, he also affronted you and your clan – and this is something I wasn’t able to tolerate any longer.”

“By fighting with Stonn?” the ambassador asked; astonishment echoed in his voice. “He is three or four times stronger than you.”

“It was rather the other way around,” Sulter explained. “Stonn pushed the captain aside as the captain tried to talk some sense into him, and Captain Kirk’s reflexes kicked in.” He glanced at the human; almost impressed. “But Ambassador Sarek is right. Vulcans are stronger than Terrans. You indeed took a great risk by accepting a physical fight with Stonn, yet you overpowered him. Your use of Ashumi was… different than a Vulcan would handle it, but it was most efficient.”

Jim shrugged. “I felt his arm colliding with my belly, saw his eyes while he glared at Spock and… well… The first thing you learn during the self-defense courses at the Starfleet Academy is to analyze a situation and try to prevent harm befalling yourself, your comrades and those who are under your protection. So, I thought it better to use the moment of surprise by bringing Stonn down before he could use his whole strength and maybe hurt Spock or me.”
Spock looked at Jim; knowing that this was a very interesting way of describing the ‘gut-feeling’ that had made his captain act, yet he kept silent about it.

Taking another deep breath, Kirk asked while pointing at the door, “So, you let him go and he only has to seek out a healer?”

Sarek only stared at him, just like Silek did. Confused Jim glanced at his first officer. “Spock?” he asked.

The half-Vulcan shifted his right foot and answered hesitantly, “My father recognized something that slipped my attention concerning Stonn. He faces… some biological difficulties at the moment which make him behave… atypical.”

“You mean, he loses control.”

“Sort of,” Spock replied uncomfortable.

Jim frowned. “The things he beat around your head were old topics, and for me this all sounded like something he tried to hurt you with all those years ago when you two were still children. Silek mentioned that Stonn was your schoolmate, and I know a thing or two about schoolyard bullies to recognize one when I see him. So, he more or less fell back into his days of childhood – very uncharacteristic for a Vulcan, don’t you agree?”

“This loss of control can have many faces,” Spock answered evasively.

Kirk cocked his head and looked at Sarek. “You spoke of ‘biological assistance’ Stonn needs without delay. Is he ill? Is there something Dr. McCoy can maybe assist him with?”

Silek lifted both brows. “You would try to help someone you just had a quarrel with?”

Jim shrugged. “If I understood you correctly, some kind of illness made Stonn behave in such an un-Vulcan way. And besides, he isn’t an enemy but a citizen of the Federation. So, if he is in need for medical attention, of course I would try to get him some help. Hell, I even would offer an injured Klingon help. I may be an illogical human, but no savage.”
Spock nodded slowly. He hadn’t expected anything else from Jim Kirk. But the words of the young captain surprised the three other Vulcans, as their lifted brows and widened eyes proved.

Then Silek cleared his throat and deadpanned, “You have indeed a good character, James Kirk. But I don’t think that your CMO whom you are obviously speaking of, would agree to the kind of assistance Stonn needs.” He ignored the stern and almost scandalized glances he received from his brother, his nephew and Sulter.

The young captain scratched his head. “So, this is no illness in the common sense.” Again, silence was the answer. Frustrated he demanded, “Could somebody please tell me in clear words what the hell is going on? I’m a little bit at a loss here by now and…”

Again, the communicator beeped and letting his head fall forward he groaned, “Yeah, yeah, I’m coming.” Taking the little device from his pocket he said, “Excuse me, gentlemen, but if I don’t answer this hail my future husband will send the cavalry in form of his siblings and half of my crew.” He flipped open the communicator, and said quickly, “Nien, I’m okay. No need to come to the rescue.”

“For Shiva’s sake, James, why didn’t you answer sooner?” Khan’s voice betrayed his worry, his impatience and his anger. “You were in a fight – and don’t deny it. I felt it the moment you got hit.”

Silek threw an asking glance at his brother. He had heard from him about the augmented Terran man who was going to marry Kirk, but this kind of bond was highly unusual between humans – enhanced or not.

“A little bruise, nothing serious, so don’t get your knickers in a twist,” Jim tried to calm his beloved, but used, of course, the wrong choice of words.

A growl was heard, followed by, “Can’t you stay out of trouble for once? Where is Spock? Dammit, shouldn’t he keep you safe?”

“I’m a grown man, Nien, so I don’t need a babysitter.”

“I want to cite an Earthern saying, Mr. Singh,” Spock spoke up. “You could herd cats easier than keeping the captain out of trouble.”
“Hey!” Jim protested with feigned hurt. “I’m not that bad!”

“Your streak of getting into trouble sets new standards for safety protocols,” Spock all but deadpanned.

Giving into a very childish urge, Kirk stuck his tongue out to him, before he turned his attention back to the communicator; ignoring the barely masked baffled looks of the three older Vulcans.

“I’m okay, Nien. Spock met an old goony, who had a fall back into his days as child, I disagreed with him, he flew through the air, Spock did the rest and then Sarek intervened and saved the day. So… we’re okay and I’m coming home later, honey. So please remain where you are, follow the good doctor’s order and don’t overwork your muscles; you are still healing.”

“Jim, you…”

The young captain cut off Khan’s irritated yet still concerned voice. “Love you, sweetheart. Until later. Kirk out.” He closed the communicator; knowing exactly that he would get an ear full from Nien as soon as he was back at New Gol.

“You do know that Mr. Singh isn’t satisfied with this kind of explanation and ending of the communication?” Spock topped Jim’s thoughts, who grimaced,

“Thanks for stating the obvious.”

“You are welcome, Jim.”

Kirk looked at him and rolled his eyes at the dry comment before he snorted in amusement. Typical Spock!

Silek watched him with clear fascination. “Your leadership style is interesting. I didn’t know that such a casual tone is usual now within Starfleet.”

“It is rather interesting that those two are commanding Starfleet’s flagship,” Sarek stated wryly; not knowing that he almost said the same as T’Pau did a few days ago.
Spock and Jim exchanged a knowing look, then the first officer stiffened. Concern shimmered for a moment in his eyes. Rising his hand, the young half-Vulcan reached for his captain’s temple but didn’t dare to touch him.

“You are indeed hurt,” he said quietly.

Jim brushed over the bruise and winced before he pulled his hand back to examine it. “At least no blood. I so don’t want to go to my own wedding with a big bruise.”

“Dr. McCoy certainly will give you the best treatment so that no bruise will be seen,” Spock stated, and Kirk’s eyes widened in alarm.

“Oh God, Bones is going to kill me that he has to patch me up again,” he sighed.

“Have it occurred to you that Dr. McCoy will make me responsible for what happened to you, just like Mr. Singh?” his first officer asked. His voice didn’t give anything away, yet it sounded a lot like complaining to Kirk.

“Well, Stonn is to blame, not you or me. I’ll explain it to them.” He sighed. “God, I already hear Bones grousing. ‘You can’t even go shopping without getting into trouble.’ I already hear him. Mark my words.”

Khan closed his communicator and laid back on the desk-chair; swearing under his breath. Selek, who had come to give him the official document that declared his people officially as their own species, had lifted a brow and looked at the little device in the Augment’s hand.

“Typical Jim,” he murmured; amusement in his eyes that began to replace the concern he had felt as Khan had shown all signs that something wasn’t right with Kirk. And as the young captain didn’t answer the hails Khan was sending, Old Spock had been ready to alert Security to search for his younger counterpart and Jim.

Odd – illogical! He should have waited until he had gathered more information before he reacted, yet
if he had come to know something about himself within the last years then it was the fact that his emotions weren’t any more controllable then in earlier times when he was younger. And now, after he met another vision of his T’hy’la, his Vulcan logic failed him often enough to give him seconds thoughts about his sanity. On the other hand, if there had been one being in the whole universe that could tear down his inner barriers and walls with a few words, one look or being in danger, then it was Jim Kirk. So, in its own special way it was ‘logical’ that he was ready to send the ‘cavalry’ when there was the tiniest hint that Jim was in distress.

“Well, Kirk certainly has a way to muzzle someone,” Otto chuckled, who sat on one of the chairs at the table. He, Pablo, Rodriguez, Katie and Chang had beamed over to New Gol a few minutes before Selek arrived, while McCoy was giving training sessions those Augments who had woken up recently – among them Suzan. And of course, Joaquin had stayed with her.

Khan shot his brother a glare; knowing full well that his Jim only had wanted to delay the rant Nien would give him.

“Sometimes it is the best to let someone calm down before you face him,” Samuel Cogley said, who occupied a chair besides Otto, and still studied the documents Selek had brought Khan.

“I am calm,” Khan said and rolled his eyes as his siblings, the lawyer and Selek gave him a certain look.

“Sorry, brother dear, but you are ‘calm’ as a stallion after an earthquake,” Katie commented wryly; ignoring Nien’s sharp glance.

“Spock met an ‘old goony who fell back into days of childhood’?” Pablo repeated Kirk’s ‘explanation’ and looked at Selek. “What does it mean?”

“It seems Commander Spock met an old school comrade and it came to a dispute. Even among Vulcans something like this is possible.”

Khan looked with wakening interest at him, knowing that the Elder concealed something. And the Augment leader assumed that it had something to do with Old Spock’s childhood which had to be identical with Young Spock’s – after all Nero’s intervention only became really serious after Spock and Kirk were already young adults.

The same moment Selek’s communicator beeped and answering the hail, the High Minister listened
patiently, before he answered something and closed the device again. Looking straight at Khan, he said, “I just was informed that the reporter has arrived. I gave the order to beam him directly to New Gol.”

Nien frowned. He didn’t like the thought of facing the man, whose thoughtlessness had led to Jim being captured by the Klingons, without Kirk. Of course, he and the others needed the man to follow the strategy they had agreed on, yet he knew himself well enough to assume that his dislike would be recognizable – even to this complete stranger.

“Shouldn’t we contact Jim and Spock to come over?” he asked; feeling himself a little bit like a small boy asking for his big brother’s assistance.

Unacceptable! Laughable even! Yet what was the old saying? If you acknowledge your mistakes, don’t ignore it but work with it. Well, it sounded a lot like the whole ‘control yourself’-speech Selek gave him yesterday.

“Maybe it would be better if I speak with the man first,” Cogley said. “We could…” He interrupted himself as they all heard the calm, cool voice of a male Vulcan sounding from the terrace directly outside the building, “You will find High Minister Selek, Mr. Singh and the other gentlemen over there.”

Selek turned around and saw a Terran male in the middle of his thirties. He had brunette hair, clear bright eyes and wore typical casual travel clothes, while he carried a large bag over his right shoulder.

And he wasn’t alone. Beside him stood another man of human heritage – a very large individual, Old Spock acknowledged. But before he could make further studies, the man’s gaze found Khan and without hesitation he began to jog forwards – yelling through the garden a cheerful, “Hey, amigo!

Otto, Pablo, Chang, Rodriguez and Katie didn’t even realize that they were gaping, as Khan sat up on the desk-chair and began to smile. The same moment the giant reached the little group, passed by Selek with an “Excuse me, sir!”, let his sea bag slid off his left shoulder and bent down over Nien – pulling the Augment into a bear-hug.

“Santa Maria, amigo, I can’t let you guys out of sight for more than a few days, can I?” he laughed. “Got mixed up, you two – like always. And where does this leave me? I’ve to worry for you boys!”
Khan chuckled and returned the embrace carefully.

Otto and Pablo exchanged a baffled look, while Katie closed her mouth with an audible ‘click’. What the heck…

The giant stepped back a little bit and examined Khan from head to toe before he groaned. “Just look at you – still all beaten up, even after almost two weeks. And this despite your enhanced nature. Dammit, those guys really got you bad. They can call themselves lucky that I wasn’t there when it happened. Would have punched them into the next week, mind you.”

Nien couldn’t help himself; he had to grin. “You and which army?”

“Galven and the others, of course,” the giant answered, before he simply reached out and ruffled the Augment’s hair as if he was a toddler. “Be careful the next time, amigo. I got grey hairs when I received Galven’s call and learned what happened.”

Behind them Rodriguez began to cough; his eyes wide as saucers. The giant looked at him and the others, cocked his head, took in their handsome appearance, began to grin and winked at Khan, “Your siblings?”

“A few of them,” Nien confirmed. His glance found the others and he had to laugh quietly as he saw their thunderstruck expressions with which they stared at the tall newcomer and their leader. No-one had ever treated Khan like this! The other Augments simply couldn’t believe their eyes – and Nien realized it with rising amusement.

“My friends, may I introduce one of mine and Jim’s supporters? Diego de la Vega-Martinez, one of the best engineers and tinkerers I’ve ever met.”

“Diego Carlos Franco Esteban Juan Soto de la Vega-Martinez, to be correct, but just call me Diego,” the Chilean grinned broadly. He flicked a thumb over his shoulder at the younger man who had closed the distance to them. “And this is Alec Armstrong – the guy who got Jim into trouble and has a lot to make up for.”

“I just told you how sorry I am,” Armstrong said; looking at the man on the desk chair with curiosity. He was indeed ‘beaten up’, even if the injuries were healing well. But given the fact that this man was an Augment the status of the wounds even after two weeks spoke volumes. Starfleet’s Elite had done a lot of damage – and to tell public the truth about it was only one detail that would lead to a
whole picture of this man’s fate. Commodore Wesley had told Alec everything he needed to know, and the reporter had a certain feeling that this was only the tip of the iceberg so to say.

“We all make mistakes – and you are in the lucky position to make yours right,” Cogley said and rose. Offering his hand, he introduced himself, “Samuel Cogley, Mr. Singh’s, Captain Kirk’s and his officers’ lawyer. Welcome to the club, young man.”

“Samuel Cogley?” Armstrong asked; almost shocked. “THE Samuel Cogley?”

“Yes, no need to turn into a pillar of salt. I’m of flesh and blood,” the lawyer joked, before he turned serious again. “May I introduce you to our host? High Minister Selek of New Vulcan.”

Armstrong quickly turned around to the old Vulcan, tried a ta’al – which failed – and bowed deeply. “Sir,” he greeted politely.

Diego looked with curious eyes at Old Spock and offered him the traditional Vulcan salute, before he grinned, “It’s an honor and pleasure to meet you, sir. The nice commodore up there- “he pointed towards the sky, “already told me that you are the one who is trying to get our boys here out of trouble. As it seems we two have this in common.”

Selek simply lifted a brow. So, this was the man with the shipyard who got the spare parts not all of them by official ways – the same man who lent Jim and Khan his cottage as refuge and a place to heal. The same man who fought side by side with them aboard the space station, saving a lot of people. ‘Jim Kirk, you always had and always will have this special talent to win the most extraordinary people for you,’ he thought, while returning the greeting with a calm, “Welcome to New Vulcan, Mr. de la Vega.”

Then his gaze wandered over Cogley and Armstrong. Two men who couldn’t be more different – and it came to Old Spock’s mind that these two males held the fate of Kirk, Khan and the others in their hands…

TBC…

Chapter End Notes
Yeah, Diego just appeared to be part of the big show that will start in the next chapter. I already imagined him mother-henning and treating Khan like a little brother in front of the other Augments, and how they would react to such a demonstration of casual friendship none of them ever experienced with ‘normal’ humans. I hope you liked it.

Jim’s speech concerning ‘The Day’ and that there were thousands of sacrifices besides the Vulcan loss was something that had to be written. I can imagine that this all not only traumatized the surviving Vulcans, but also those who were involved in the whole mess and tried to help. Stonn himself is traumatized, too, and then his upcoming pon farr… Well, of course Jim will not cease probing what the matter is with Stonn until he learns the truth. But I will not reveal who will tell him the truth in the end…

In the next chapter Alec Armstrong will start to make his report – and the big bomb will drop on the public when everyone learns of what really happened. Barnett is the only one outside of Jim’s ‘gang’ who knows to what Kirk is up to, and the shock for the others will be big (smile)…

I hope you liked the new chapter, and like always I’m curious what you think of it.

Have a nice weekend,

Love

Yours Starflight
Hi, my dear readers,

I’m so sorry that you didn’t hear from me within the last weeks and that I only found time now to write to you.

Please, don’t fear – I’ll NEVER abandon this story. I’m simply forced to take a short break out of several reasons:

First it’s because of my job. Another shop of a chiropodist closed in near area and I undertook a lot of her patients and customers, who are in need of my service. Additional to this circumstance, many ladies who want to have ‘beautiful’ feet during summer have come back to my shop (they appear during April and vanish at the beginning of October latest), and especially (now at the start of summer-holiday) everyone wants an appointment ‘yesterday’.

Additional to my shop / praxis, I also have a duty to a big rehabilitation center in our town, who attends mainly to stroke patients, and they opened further wards three weeks ago (with 72 more rooms). The larger quantity of patients within my own praxis and the Rehab.-Centre are ‘eating’ all of my time.

And – as a top – my Mom had a surgery on her right feet only four weeks ago and because of some complications she won’t be able to walk properly for three or four weeks more. My parents are both over 70 years old, have an own house and a large garden – and of course I’ve to support them.

This all put together I’ve almost no spare time left for myself – or my hobbies. Therefore I’ve to give my beloved writing some rest and hopefully will resume it during autumn.

Please believe me: I will NOT quit to write this story, but please understand that in the given circumstances I’ve no other choice than to put my hobbies into the background.

Maybe I’ve a little consolation for a few of you before I can re-start the actual writing.

I wrote a story of ‘Hogan’s Heroes’ a few years ago that was never published – but I’m publishing it
now during next week. Maybe a few of you remember this great comedy serial that tells the story of a farraginous gang of POWs during WW II, which act up with their German jailors and fought for the end of the war.

The main-character is / was Colonel Robert Hogan (brilliantly portrayed by the far too early gone Bob Craine), who had a bunch of other POWs who were not only his underlings, but also dear friends – a team that was unbeatable. His German counterpart, opponent and even strange kind of friend was the human but also very incompetent Oberst / Colonel Klink, who didn’t realize that the Allies had built a whole circle of espionage, refugium and sabotage-team right beneath his nose. Hogan’s real enemy was Major Hochstetter, officer of the Gestapo and SS, who gave the ‘Heroes’ as hard time and was several times very close to reveal them as Underground-agents.

One consistence of the serial was the endless bantering, discussing, pouting but also helping each other between the two opponent colonels. It gave me the idea of a story that also contains a lot of action, hurt, angst, friendship, brotherly love, but also slash (guess who falls for each other).

As I said, I wrote this story years ago and my dear beta-reader Kat was kind enough to offer me her service despite her own short spare time. Maybe you like to read this fanfiction as a ‘little consolation’ till I can continue with my beloved ST-story.

For those who give this old fanfiction a try: Thank you. For all the others – please keep in mind that I’ll return within the next two or three months, and I will let you know when I’m back.

I also hope that you’re not too angry and understand my current position.

On that note: Have a nice summer,

Love you all
