Amelia By TanaNari

Amelia By TanaNari

by orphan_account

Summary

Worm Au, Amy Dallon is pushed too far by the S9 and pushes back. The story heavily diverges from there, focusing on more the big picture and plays out on an international scale. Mainly posted here for the convenience of anyone who wants to download it to their phone or ereader but if you haven't read it I strongly recommend it.

Notes

This is not my story and is being posted from Questionable questing and Sufficient Velocity with the Author's permission. Any reviews or feedback that you want to give the author should be posted to either of the threads on those sites.
QQ: https://forum.questionablequesting.com/threads/amelia-worm-au.916/

Twilight666 has an already finished and complete epub version of Amelia for those interested. Can be found here:http://www.mediafire.com/download/2066ex9f4f4bn7t/TanaNari+-+Amelia+%28Questionable+Questing%29.epub

Also the Author is planning on doing an original story next and a thread started to discuss what comes next as far as his writing is concerned can be found here.
https://forum.questionablequesting.com/threads/after-amelia.1625/
Amy ran like she'd never run before. With a determined sense of purpose more at home on the face of a soldier than a teenage girl. With as many liberties as had been taken with her physiology, she really wasn't capable of any other expression. Her body was well beyond human ability right now. She could have fought most parahumans. If not to victory, then at least she could have forced them to work for it. If it were any other opponent, she would have turned and fought.

But she wasn't 'most parahumans'. She was running from the Siberian. Not something one could actually fight against. Even powerhouses like the Triumvirate could do little more than slow her down and retreat. Amy was a lot of things packed into a small package right now. She was not the Triumvirate. It would be insane to believe she could win. She wasn't trying to. She was trying to flee. A goal that was looking less and less likely as the fight continued.

Still, she had a few advantages to let her at least try to escape. Brute... three, maybe? With a healthy amount of Mover. Even a bit of Stranger, in the form of stealth camouflage not terribly different than that of certain species of Cephalopods. She needed every advantage that could be wedged into a human body. And more.

Siberian lunged, passing through the concrete wall of a building like it was little more than tissue paper. Amy rolled to the side before leaping hard. She had boosted senses, too, of a sort. Probably worth Thinker 2. Not enough for this fight, as Siberian grasped her ankle, arresting her movement. Then tugging down- not even pulling, simple an effortless wrist motion that slammed Amy to the ground. The madwoman smiled at the girl who struggled to break the grip. If you could call the hungry look on her face a smile.

It was an exercise in futility, really, her attempts to break Siberian's grip. To imagine such a thing was possible would have been insanity. Siberian held the girl by the arm. Amy was already missing two fingers. She held her hand almost gently as she pried the middle finger straight, using the same casual, absolute strength that allowed her to walk through buildings with no difficulty.

Amy snarled- and it was a snarl. Animalistic and enraged. No longer human. She started punching Siberian in the side of the head repeatedly with her free hand. Bonelike protrusions extended from her knuckles, sharper than shark teeth. Enough force to shatter bone. To crack concrete. Perhaps even leave dents in steel. Not enough to make the monster let go. Or even distract her a little.

The nude woman slowly parted her lips and took Amy's middle finger into her mouth. It was an almost sensual movement. The actions of someone savoring a delicacy. It could have been mistaken for erotic, even, had the circumstances been different. Very different. She bit down on the finger, severing it.

The flesh carried a deadly organic compound that had never even been name. A poison that likely never existed on earth naturally, although it did have some similarity to Botulinum. The Siberian just
swallowed enough to kill every nonpowered human being on the planet twice over.

Then she simply paused and let Amy go. It wasn't because of the poison. No, I thought. That would be too damn easy. It was part of her fucking game. A twisted form of cat and mouse. Three captures so far, and absolutely no way of knowing how many more until the bitch just killed her for failing the test. She leapt up again while the monster simply stood and watched. If it were anything like the last times, she'd have thirty seconds before the chase began again. She used that time to get to the top of the small office complex.

Her lungs were far superior to anything human, but they were struggling to pull in enough oxygen to keep her body moving at this speed. She even breathed through her skin. A fun little mod stolen from Aegis. Most of her physiology was at least indirectly copied from the bizarre twist of an Alexandria package. Amy wasn't tired. Could go for days without getting tired. But, then, so could her pursuer. And even if Amy wasn't tired, her body was losing efficiency. Organic systems, however close to perfect they might be, had limits. Siberian seemingly did not.

She watched as her pursuer started climbing up the building after her. Not flying, I decided. That's a good sign. Not in any real rush, I added. That's a bad sign. At least if the bitch seemed to be in a hurry, it would suggest they were near the time limit for this test. How long until they decided she'd won this match?

Siberian paused on a ledge, crouching, even shifting her hips like a cat as she looked straight up at Amy's position atop the building. Then she leapt, clearing several stories in seconds.

Amy was saved only by superhuman reflexive instincts built into her, falling away from Siberian and leaping off the roof backwards- traveling horizontally. Only to be followed a half second later. Then Amy's shirt exploded into ribbons as a pair of pterodactyl like wings spread out and allowed her to veer off course. Siberian might even have been slightly annoyed at having to spend several seconds traveling the wrong direction before she slammed into the side of an abandoned warehouse.

Of course, that was probably just wishful thinking.

Amy didn't have much time to worry about it. Or consider her (lack of) modesty, for that matter. Not that there'd be anything to consider immodest. Her body was basically sexless. Every organ or gland that wasn't necessary had been removed. That mass and area instead being used for the vastly more important function of staying alive as long as possible in this fight.

She flapped the wings a few times, angling toward another roof. Her body was still inhibited by the laws of physics, if not the conventions of biochemistry. And winged flight just wasn't possible for something the size of a human. Especially one who happened to weight about 300 pounds after everything was factored. At best, they were useful to help control her fall.

And then the rocks started coming. She avoided most of the barrage, but Siberian was simply
digging her hands into the concrete and flinging chunks of it at her. The first one that hit tore through her left wing, leaving her more or less screwed as she plummeted. The wing was already restitching itself. Some others collided with the layer of scales which functioned as her organic body armor. Easily bulletproof. But these rocks were a lot heavier than most bullets, and traveling just as fast. They left dents, even actual cracks, in the protection.

Siberian moved toward her. With the damage that had been done to her body, she had no chance of evading the unstoppable force masquerading as a woman. She resigned herself to losing another finger- it's not like she could feel pain right now. And put her effort into repairing as much damage to her important parts instead.

And then the cloud formed around her, blanketing the area. Except... too dark to be a cloud. And it moved, was alive... bugs? Skitter is here!? Amy's camouflage kicked in, mottled blacks and browns and grays. Blending with the swarm.

In spite of myself, I smiled.
Chapter 2

Amelia, Ch 2

With the benefits of Skitter's swarm, Amy stood an actual chance of winning this. Which was as much a curse as it was a blessing. She isn't intended to win. But, I decided. It would serve my purpose as much as anything else would. Siberian crossed the distance absurdly fast, diving into the bugs. Amy had already dived off the side, having grabbed a few bugs to stuff into her pants pockets. Something to allow Skitter to track her.

Skitter wasn't exactly my best friend. In fact, the girl was my second least favorite person that wasn't actively trying to kill me. But this was Siberian. Probably the most dangerous of the Slaughterhouse Nine. Other than Bonesaw, of course. I was willing to work with her on this.

Amy had dropped down into the building itself- exploiting the cover of bugs, and simply dissolving a hole in the roof. Siberian would no doubt find it, soon enough. But Skitter was running excellent interference. She'd covered the roof with insects that hid the tunnel she'd made. And even tricked Siberian into leaving the roof to chase something.

Amy had no way of knowing how that was accomplished. She rushed down the stairs of the building. Like most of this part of town, abandoned. Even on the second floor there was water damage, a reminder of Leviathan's visit. As if such a monster would ever be forgotten.

The building rumbled around Amy. Shuddered. How? Why? A question answered as quickly as I thought to ask it. The Siberian stepped into view, dragging her hand through the stone wall. She's going after the supports, I realized.

Amy bolted for a window, and dived. Only to be stopped cold. Siberian had stopped moving. Smiling. Amy was trapped in the building by whatever power Siberian used to make things invulnerable.

Such a damned unfair power.

Amy didn't speak. Couldn't speak, actually. That was another system sacrificed for superior combat applications. Not that it made the least bit of difference against her.

Amy simply shrugged, making eye contact with the monster standing at the only valid entrance. And walked toward her. It was a slow walk, a walk calculated to buy just a little more time. But a walk,
nonetheless. Her body mending. The spine she'd broken colliding with the impervious glass slowly patched itself back together. She stopped, only a foot or so away from the much taller woman and held out her hand.

Siberian seemed almost surprised by the action. Tilting her head sideways while maintaining the unblinking eye contact with Amy's face. This might even be a first for her, I thought.

Of her many, many victims, she'd no doubt seen surrender. A victim simply give up and accept death. But this wasn't that. Amy wasn't giving up. wasn't going to stop fighting. But this "round" was lost and they both knew it. She'd trapped herself. Siberian blocked the only way out, and made it impossible to create another one.

Siberian watched her. Amy watched back. Neither blink. Neither moved, not even to breathe, like two statues. More and more of Skitter's bugs started climbing on them. Testing, probing, probably trying to figure out just what the ever loving hell was going on here.

And then Siberian accepted the proffered hand. She didn't grasp Amy's wrist this time, and Amy didn't resist. Siberian was faster than her, stronger than basically anyone, and they were in close quarters... she knew she couldn't escape. Siberian bit off her pointer finger, then stepped aside, allowing Amy to climb through the person shaped hole left in the wall.

Taking to the air hadn't helped. Hiding in buildings definitely wouldn't work. So Amy ran on foot. Behind her, the chemical chain reaction started.

Siberian vomited liquid flame seconds later. A thermite bomb going off inside her stomach. Basic chemistry, really. It was mostly made of iron, a chemical found in abundance in most animals. Converting it to weapon form was far easier than keeping it from igniting prematurely. Amy didn't look back, didn't check to see if she'd succeeded as she weaved between buildings.

A cloud of black formed an arrow pointing her to the left, into an alleyway. Skitter? Did bug girl have a plan? Amy's goal was to buy time. Make this fight take as long as possible. Skitter, on the other hand, fought to *win*. No matter what it took. The idea of actually winning against Siberian was absurd, of course... but if this plot worked to buy even a few more seconds, it was worth it.

Amy turned, running as fast as she could- which, she guessed, was around 40 miles an hour. She slowed down when she realized she was outracing the swarm... she didn't want to lose the camouflage, especially as bug copies of herself were being sent out in all kinds of directions.
Siberian smashed through one, a couple blocks away, moving faster than she'd yet revealed she could. And proving that steel melting levels of heat inside her own stomach were no threat. A thrown rock passed through another. Siberian's plan was obvious, at least. Every cloud she confirmed was a cloud, she didn't have to run after.

The bugs formed an arrow down. Unfortunately, it wasn't in time, as a stone slammed into Amy's back and sent her rolling. So much for superhuman reflexes. It meant the Siberian found her as well.

Amy pushed herself up as Siberian got close, planting her feet in the woman's face and launching herself away. Siberian couldn't be moved. But her momentum could be added to Amy's. Even if the impact force broke one of her legs. Wings helped stabilize and keep her moving. She was, at least for a few seconds, actually faster than the Siberian.

Then she was plunged into darkness. The whole area was. And she collapsed.

The darkness opened around her, and she sat up. Grue spoke. "Listen, we don't have a lot of time. We discovered Siberian is a projection. Like Crusader's ghosts. We're trying to find her creator. Should be nearby. Are you okay?"

That was interesting information to have. Of course, the question was stupid, and Amy couldn't even answer it. She opened her mouth, patted her throat, and then shook her head. She didn't know sign language. Then again, Grue probably didn't either.

"Fuck, she can't talk," he said. Into a radio?

"Siberian's coming back. Get out of there!" Was the reply back. Grue's darkness started to spread out again as he reached for Amy. She leapt straight up. Avoiding his hand, avoiding his power that somehow rendered her inactive. The enhanced hearing had saved her. At least her leg had mended, but she couldn't be caught in the dark field again. She bounced off one building, then another, gaining height. She even made it to the roof before Siberian landed next to her.

She'd lost four fingers already. The fifth would probably be the last. No more time to buy.

Enough adrenaline to kill a bull elephant flooded into Amy's system. Coupled with drugs that would have made the Merchants nervous. Variants on meth, PCP, and stuff that didn't even have names. She moved. Fast. Ducking under the Siberian's blows and getting a few in, herself. A blow to the kidney that would have been lethal to a normal person.
She had to jump and back flipped over Siberian's retaliating sweep. It was a startling revelation. But Siberian didn't actually know how to fight. For all her speed, all her strength, she was sloppy. Untrained. Amy, at least, had the benefits of some self defense. One of Victoria's ideas... started before they even had powers... but that wasn't something to dwell on right now.

And under these circumstances, Amy's body pushed this far. Suicidally far, there would be no surviving whether or not Siberian got to her. Amy was a faster. Smarter. More efficient. If it were any other, it would be a curb stomp. Siberian lunged. Overextended. No strategy, no style, no control. Amy stepped aside, struck her in the base of the skull with enough force to shatter concrete.

Siberian twisted, Amy kicked her in the back of the knee. Either blow would have dropped almost anybody else. The cloud of bugs got thicker and thicker- probably to give Amy a chance to retreat. But there was no point, it was already a suicide mission. Still, it blinded Siberian. It didn't blind Amy.

Siberian lashed out with her claws, only to catch air and insects. A chunk of concrete collided with her face. And disintegrated. No longer playing softball, her head moved forward, melting the stone. And Amy's hand.

Amy moved back, but she was already tiring. Ligaments had torn. Muscle had started bleeding internally. Her body was a wreck. It was a small miracle that only one of her hearts had stopped beating.

She collapsed. Siberian stalked forward, observing the fallen girl. She'd won. She KNEW she'd won. The Undersiders had, apparently, saw fit to retreat as the bug clouds started to dissipate. Abandoning the fight. And Amy with it. Well, it wasn't anything I hadn't expected.

Amy looked up at the woman. The unkillable projection. Who knelt down and grabbed her neck. No... not grabbed... just touched. Two fingers. She... was checking her pulse? She looked... disappointed? Sad?

One last attempt, then. Amy's body exploded with enough electrical power to overload a city block. It ripped through her- even though she had optimized organ systems to conduct the power. Lancing through her arm, and into Siberian's leg. The bleedoff cooking what few organs still functioned. Siberian, at least, survived. Amy did not.

Below. Far below. I groaned as I forced myself out of the cocoon. The system still needed muscle feedback, and I was now regretting how out of shape I was.
I hesitated for a second, slipping my feet into my filthy, wet, and now cold sneakers. I made it worse shortly thereafter, stepping down into the sewer system. Sinking into the muck, surrounded by the smells, it was all I could do not to vomit. But I needed the skin contact to alter biomass. And I'd need a lot of biomass. Besides, I reminded myself, I belong down here in the filth.

I sloshed forward, leaving modified life with each step. Seeding it into the sewage. It would grow. I was dimly aware that what I was doing violated everything I had promised Carol and Mark. That thought seemed so insignificant to me, now.

"Goodbye, Amy," I whispered to no one in particular. "I'm sorry. I can't pretend to be you any longer."
"Glory Girl?"

"Yeah!" I said, my head snapping up. I'd been drifting again.

"You understand the plan, right?" Legend. The Legend. And he sounded a little annoyed at me. A week ago, that would have meant something to me. Now? All I could think about was her. And trying not to think about her.

"We distract the S9 until the bombs are dropped. Clock and Cache keep us alive. Then we pray like hell that shit you got from Bakuda can stop Crawler," I didn't bother hiding the annoyance in my voice, however.

Legend just looked at me. I looked right back. I could tell he wanted to say more. I wanted him to. Scold me. Yell at me. Give me a reason to yell back. I pleaded in my head. Anything to distract me. Please?

He didn't. He looked like he wanted to, the concern on his face reminded me of my father. When I was younger. When he was having a good day, and I wasn't. Well, thanks to that bitch that had the gall to call herself my sister, there'd be a LOT of days like that in the future.

"It's time to go," Legend replied. "Make sure you're fully suited up."

I just nodded. I wasn't part of the Wards. Not really. Although as badly damaged as New Wave was... it was pretty much a certainty that I'd be joining, and Crystal would join the Protectorate. Mom and Dad hadn't given official permission, yet. In fact, Mom had flipped out in response. But they would concede to it in the end. They'd have to. I needed it and they knew that.

I pulled the hood up over my head. The protective suit was fireproof. And deliberately designed to make it impossible for the Nine to tell us from one another. Didn't make any difference in my case. I was one of the locals. But it means Legend and his team could participate fully in the fight, and that was worth almost any discomfort.
And it was a lot of discomfort. My forcefield rubbing against the suit made it shift and bunch up in strange ways. If I tightened it as much as I'd like to, it would break when I activated my powers. And if I kept it loose to account for the shield, then it was floppy and ill fitted.

The inside of the suit smelled of rubber and plastic and the aroma of not terribly clean person. That person, I was aware, was myself. I hadn't slept well in a while. It had been a couple days since I took a shower. Everything reminded me of her. Every time I closed my eyes I saw her face. Even seeing my own nude form made me think of how much I wanted...

FUCK DAMMIT NO!!!

Have to focus. Something else. Anything else. How she betrayed me. Violated me. My trust. My love. Turned it into this mess. I clenched my fist and cursed the suit yet again. I couldn't even dig my fingernails into my palm. Pain was one of the few things that didn't remind me of her. There was one blessing of this damn suit... I couldn't feel the wind brushing across my skin. Now, even that made my thoughts drift... there. Couldn't let me have any pleasure left in my life, could you, sister?

We rushed off toward the battle zone. One of the more damaged parts of the city. "Dolltown" as it was now being referred to. Parian's territory.

All of us were movers, though I had to go slowly all considered. Other than Legend, I was the fastest here.

How much easier it would be to run off. Go in early. I could take on Jack. Or Mannequin. Or Bonesaw. Crawler would be a bit much. And the less I thought about what Siberian could do, the better. But I could avoid them. Tear up the others. I'd never killed before... never wanted to. Even if I had wanted to, I'd have been too scared to. But now? Now I really, really wanted to. I could rip someone apart, one limb at a time, and love every second of it.

And if it were one of them? I could do it on live national television and be applauded as a hero.

Legend was first to spot the wrecked van, surrounded by people in costume. I focused through blurry eyes. Grue. Tattletale. Skitter. Two I didn't know. The Undersiders. I watched as Legend pointed toward them. And I hoped he would just wipe them out. They deserved it. Especially Tattletale. She knew this would happen. That's how her goddamn power works.
Alas, it didn't happen. Words formed. Made of bugs. Fucking creepy ass Skitter... I had nightmares about her power. How her bugs tore into me. Now I relished in the memory. The pain and fear were distractions.

It took me a second to register the words. 'SIBERIAN DEAD'. I was the only one who didn't gasp. Siberian took on the Triumvirate, all of them, and won. Some barely significant group of thieves managed to kill her? How??!

I was glad the concealing visor hid my smirk. Well, at least now I don't have to feel bad about losing to them.

Legend turned to drop down, followed by the rest of the team. This was a story they had to hear.

Their group was near the vehicle. There was sign of fire nearby, even some molten asphalt. The vehicle seemed undamaged, save for the part where it had run into the side of a building.

Grue had a hand on Skitter's shoulder. She was looking at the ground. Shaking. The unknowns, in their red and black costumes, were standing near one another off to the side. They didn't seem comfortable getting involved, either way. Not part of the team. Even up close, I didn't recognize them. Mercenaries, perhaps? Bounty hunters? The Nine had quite a price on their heads. Millions of dollars per confirmed kill. Nationwide fame. Some people were crazy enough to try. Maybe they had the power that killed Siberian. Sobering thought.

Tattletale stepped forward, of course. Always the mouthpiece. I activated the com. "She's tricky. Can get into your head. Pull out your darkest secrets using nothing but body language or quirks in your voice or expression. Don't give her any clues. Probably already figured out who we are and what I told you."

Legend responded back, of course. "Right. Everyone else hold back. I'll do the talking. I'm used to dealing with powerful Thinkers."

I landed, lining up with the others, a few feet behind Legend. He walked forward.

Tattletale smiled at me. I wanted to break her face. I... wow, that is one hell of a scar. Wonder how that happened. An image flashed unbidden, of Amy's delicate fingers caressing Tattletale's face. Removing the damage. A dozen emotions pushed to the surface. Love. Desire. Jealousy. And I crushed them down again. Rage, indignation, disgust. One simple slip of concentration was all it
took. Had to stay angry, had to stay focused.

They'd been talking. We were of course listening, neither was being quiet, and Legend left his com on.

"... like Crusader. Or, as I'm sure you've already figured out, Genesis." Tattletale finished.

"You're certain?" Legend asked.

"Of course," Tattletale replied. "If I had any doubt, we'd have hidden the body. Or had Sundancer destroy it. The fact that we're here, letting you know, proves we're certain. Besides, whatever you want to say about us, we wouldn't violate a Class-S truce like that."

I saw Battery tense. And if I saw it, Tattletale probably just learned half of her life's story.

"I'd like to see the body," Legend replied, with a studied, even wooden, level of control. Smart, probably. He doesn't think he could trick her, so he didn't even try.

"It's in bad shape," Tattletale warned, but she didn't try to stop him. He opened the door and paused for a minute.

"Cause of death?" He asked.

Skitter spoke up. She had obviously been crying. Her voice was raw. "I... I didn't have any choice. H... he." She collapsed into Grue's chest. Crying openly. Was this the same girl that had seemed so ruthless at the bank? That had stood up to the full force of my aura and threatened dozens of people with fucking black widows? She seemed so fragile. So vulnerable. Like Am... NO!

"I've never killed before," she finished. I only heard her due to the com link. Really good tech, probably tinker.

Legend let down his guard when he spoke. Genuine sympathy. "No one doubts that you did the right thing," he said. "Siberian is one of the most dangerous beings on the planet. I know that's not much comfort. You're not the only one who's been through something like this."
"His power didn't work on himself," Tattletale interrupted. "Skitter identified the vehicle and got several wasps and spiders into the van before she started shielding it. Siberian had to choose between blocking Sundancer's power, or stopping the insects. And, no, I don't know why this person who's obviously male created a female projection. I would rather not speculate."

Legend was examining the evidence. Cameras were built into the suits, recording everything.

"How did you come to this conclusion that Siberian was a projection?" Legend asked. Back to business mode. Not a wooden as before. Commanding.

"Cherish. You already know we captured her. She's been quite talkative."

"Torture?" Legend's voice didn't sound all that unhappy. Though there was no hint of approval, either.

"No, actually," Tattletale responded. "She likes playing mind games. And has let stuff slip. That and she legitimately wants us to stop the rest of the Nine."

"Do you mean she was forced to join their team?"

"Not even a little bit. Cherish is every bit as twisted and fucked up as her father, Heartbreaker. Probably more. But she is absolutely terrified that Jack is angry at her, and that he'll let Bonesaw have her. She wants us to win. For her own self preservation."

"I'll admit. Your story sounds believable," Legend stated.

"But..." Tattletale responded.

"But," Legend agreed. He didn't go into greater detail.

"You'll have half the thinkers in the Protectorate crawling all over the recordings you've been taking. Want to hold a debriefing. Whole nine yards. We can discuss specifics after the rest of the Nine are
"Of course, we have more pressing concerns," Legend agreed. "We're heading toward Crawler and, presumably, the rest of the Nine right now. I'll send some PRT troops to secure this location. We can talk in detail later."

Tattletale nodded as Legend started to lift off.

She looked toward me. "Wait!" she shouted.

I paused. I want to hit her so bad.

"You deserve to know. When we found Siberian, she was hunting Amy," Tattletale continued. Every muscle in my body went rigid, and the protective suit was being strained by my shield. My aura even bled through, effecting Tattletale, forcing her to look away. Serves the bitch right. "We couldn't save her in time."

I fought down every emotion. Every memory. I couldn't stop myself from shaking. I couldn't stop the water running from my eyes. It took all of my efforts, all of my strength, to choke out a single, cold, word. "Good."

And then I rocketed off toward the battlefield, fighting to see through my tears. Struggling to convince myself that I wasn't lying.
Chapter 4

Amelia, Ch 4

It had been a couple hours as I slogged through the mess. Oh, who the fuck am I kidding? It was sewage. Raw. Filth of a hundred different descriptions. And I could feel every last germ that touched my skin. I grabbed each one. Shaped them. Reshaped them. I could have left it at that, let the organic compounds control themselves. Except that would be too slow. I needed incredible amounts of mass for this. And that's what I would get.

The vinelike organism I made combined some of the best traits of every species I could think of. Left on its own, each tendril could grow over a hundred feet in a day, in an optimum environment. And it could produce a LOT of tendrils from each main vine. Like a jellyfish, it was both a collection of small organisms, and a single organism all at the same time. As long as a cluster more than five cells large continued to survive, it would regrow.

It could eat just about anything organic, and even consume a number of inorganic substances. It was photosynthetic, chemosynthetic, thermosynthetic, even electrosynthetic (actually, that was probably a name for something else now that I thought of it) and... well, whatever you call a plant that can use radiation and sound instead of light. It could eat most forms of stone. Some forms of metal. Any kind of plastic or petroleum product. Literally every organic substance on the planet. And whenever it encountered another of its own species? It fused together, joining the two into one shared lifeform that could trade nutrients and energy between them at remarkable rates. And it even made leaves that were edible and incredibly nutritious. Just... don't think too hard about what it ate.

It helped to focus on that. Kept my mind off the smell.

And then I felt, more than heard, the explosion. I was miles away, but started in that direction nonetheless. I was feeling pretty good, actually. I'd taken on Siberian and... well, 'won' would be overly generous, I supposed. But I tricked her completely. She believed I was dead. The Nine would believe I was dead. I could go on hiding. I could be safe.

Only problem? Well... 'fuck that noise'.

I fought the fucking Siberian. I came away, not only alive, but knowing two of her weaknesses. First- she was shit in a fight. Two years of self defense classes that ended three years ago was all it took to fight against her indefinitely. I only needed enhanced physical abilities because she had enhanced physical abilities. If we were both base-normal girls? I'd have ground that bitch under my heel. Didn't matter that she was probably a foot and a half taller than me, and had the second nicest
body I'd ever seen in my life.

Her second weakness... explained the first weakness. She was a projection. Not alive. Not real. A murderous life sized barbie doll. Huh. Sounds like the kind of shitty horror movie that Vicky would have dragged me to along with whatever boy she was trying to hook me up with that week. There was a time I'd have done ANYTHING to avoid that.

Careful what you wish for, right? Thanks for the advice, dead person who's smarter than I am.

I'd make it up to her. I'd stop the rest of the Nine. Fix the damage they, and Leviathan, had done to her city. Fix her, even if it was against her will. Then leave. Find somewhere else to live. Maybe be a one-woman disaster relief in the wake of the other Endbringer attacks. This organism I was using here could do so much. Especially in the areas left uninhabitable by Behemoth. Other, modified, strains could do even more.

I'd prove to her I could be a hero. And if I had to make Nilbog look like a second rate hack in the process? Fuck it, the worst they could do would be to kill me and drag my name through the dirt. Both fates were far better than I deserved.

It took me over an hour to make it near where the explosion took place. I wrapped myself in biomaterial that had, minutes ago, mostly consisted of water, dead animals, and human fecal material. Now it was a solid ton of combat armor in an apelike form.

... If I were in a better mood, I could probably laugh at that. I was riding around inside a giant shit gorilla. Dennis must never know. I made it push up the large manhole cover, and then forced it to shapeshift itself through. It was far too massive to make it out any other way.

I stayed calm as I was pulled out. And that's really what it was, almost like being sucked up through a giant straw.

The area was still burning when I took the opportunity to observe my surroundings. But that wasn't the first thing I noticed.

The giant, crystalline statue of Crawler? That was the first thing I noticed. It was, in its own terrifying way, beautiful. Face turned toward the sky in what looked to be a triumphant roar. Five of his arms outstretched, reaching toward the sky as if welcoming the arrival of God Himself. Flawlessly crafted and surrounded on all sides by devastation. I almost felt ashamed that I noticed the dead second.
The people in the area, third. Dozens of PRT troopers went through the area, examining the damage. Setting up warning tape and keeping the gawkers back. I was earning quite a bit of attention on that front.

I was probably safe if they attacked. Containment foam only works on something that's not capable of turning itself into digestive enzymes.

The parahumans moving toward me were another subject. Most wearing some weird hazmat suit looking costumes that I'd never seen before. The only one I could get a look at was a boy made of metal that I didn't recognize. I stopped to appreciate him for a moment. Damn, if Victoria had set me up with THAT. And that's all it took. The moment was gone.

One approached and spoke. "Do you have a name?" Now I recognized her. Battery. I'd met her a few times, saved her life a couple times. She was always nice enough. A little overly serious. Most of the Protectorate were. Except her boyfriend, who was almost as bad as Clockblocker. I never asked, but it was pretty clear that he was the one who came up with their names. I knew because it was stupid and bordered on the offensive.

"Are you able to speak?" She asked again. I'd zoned out. I hesitated. I don't have a name to give her, I realized. Not any longer. But still, I didn't want to upset them. And I needed to know what was happening in there.

The suit started shifting, opening up in the middle. Slowly, of course. Its pectoral muscles melting back more like clay than any mechanical certainty. It was enough to reveal my face. I probably looked like what I'd been wading in for the last three hours or so. I knew I smelled like it.

"Panacea?" She asked, seeming a little stunned.

"Yes and no," I replied. "I'm not with New Wave anymore. Am thinking on a new identity," I answered as the body armor settled onto its knees, and I could step out onto the ground.

"Oh," she replied. "I'm sorry. I... Tattletale told us you were killed by Siberian."

I fooled Tattletale? Unlikely. Bitch read me like a magazine cover last time. Probably lied to them, for whatever reason. "Yeah, that's what I wanted Siberian to think. Can you let me in?" I asked. "I'd like to see what I can do to help."
Battery hesitated. She couldn't quite keep eye contact. "Please trust me. You really shouldn't."

My blood ran cold. "Why? What happened?"

She inhaled deeply and slowly. The air quality here was a nightmare. Hot, sulfurous smells coming off the remnants of the fire. Chemicals used to put out fires that water couldn't. It was bad, even compared to the sewage I just waded through. That suit must be completely sealed.

"I hate having to be the one to tell you this. Glory Girl... she... didn't make it."
I blinked. My eyes were already watering from the caustic air released from the chemical fires. No. Not like this. Not before I could undo my mistake. I hadn't hoped for forgiveness. I hadn't hoped for her to stop hating me. I didn't deserve either of those things. But for the love of all that is holy, couldn't I fix just this one thing?

Panacea. Universal cure. Such bullshit. I could have named myself GOD and it would have been less pretentious.

I didn't say anything. I simply stood up, walked back over to the armor, which I left envelope me, and I walked up to the PRT cordon. I kept the front of the suit clear, so they could see me. So I could see out with my own eyes instead of the jury rigged bio camera thing I'd put together. It... wasn't all that good, actually. Indistinct. Black and white only. It was good enough to fight Siberian. It wasn't how I wanted to see my sister's face.

No one stopped me. My reputation was pretty strong, here. Maybe they hoped I'd be healing the wounded. Maybe they didn't want to stop me from seeing my sister.

The area was annihilated. Fires had scoured the area, hot enough that there weren't even bodies to identify. Lumps that may have been people, or may have been garbage cans. Some that were probably cars. Impossible to tell. And then... the statues. Only five, including Crawler. "Only" four people and a monster. Three contained in the same full concealing costume I'd come to associate with this whole nightmare.

Two were only identifiable as crystalized from rips in their costume that looked to be claws. The third was leaning over one of the wounded. Held in place forever. Around the openings was a spread of patterns that looked a lot like ice crystals forming on the edges of a window. It took me a few moment to realize that it must have been blood. Turned to... this material.

"What... but... how?"

"One of Bakuda's bombs. Only way we could stop Crawler," Battery replied.
I spotted Victoria. And wished I hadn't. A portion of her costume had been torn away. And more of it had melted off her. Almost nothing left on her, leaving everything to be viewed. There... wasn't enough of her left for it to be indecent. Her chest had been melted to the point where bone was clearly visible. Her stomach... organs were exposed, but most of them too damaged for me to recognize. Her right leg had no flesh remaining between the knee and the ankle. Her left, most of the damage was her inner thigh. Her hands had all but melted off... I had to guess from her trying to claw at the acid on the rest of her.

It had to be an acid.

My body, my mind, they were both numb. I had defaulted to analysis... a behavior I've heard is common for people with Thinker powers, like mine, but had never experienced for myself. I forced myself to look at my sister's once beautiful face.

The left half of was completely melted off. Hair missing. Skull exposed. The jawbone had disconnected from the skull on that side. And, good god, that wasn't even the worst part. The worst part was the side that was still intact. Contorted in pain and horror. She was still alive. Still conscious. When the glass-bomb hit.

I couldn't even delude myself into imagining death came swiftly for her. That she was murdered early, and the acid had nothing but a corpse to inflict its horror on. No. Even that would be too much to hope for. I had to live with the knowledge that the last minutes of her life was spent screaming. In pain that I couldn't even imagine.

I turned away, an act that the biofeedback system interpreted as combative. Twisting the organic machine and its arms and legs into a fighting stance. I screamed inside the suit, venting my frustration and rage and guilt the only way I could.

One of two ways, at least. I caught sight of Crawler's body. The suit's muscles clenched, responding to my subconscious body language. It knew what it was told. What my body wanted, even if my mind was unable to articulate.

It wanted violence. It wanted to inflict pain. I was more than willing to act on that impulse.

I charged Crawler's frozen body, and struck with all the power the bioarmor had to offer. The fist collided with forces normally reserved for an enraged elephant. It was a bit of a disappointment, not being able to use my own hands, my own strength. But my power was my strength. My blessing. My curse. And I used it to full effect here.
The initial blow had splintered several of the supporting bone growths, and pulverized most of the musculature in the hand and wrist. Ordinarily, it would take a great deal of effort to mend that kind of tissue damage... but this machine was built with me in mind. More plant than animal. More fungus than plant. It was a perfect cellular machine, and I could patch it back together in heartbeats.

The crystaline body shifted slightly under the force, and even left minor cracks. The followup right handed blow took off one of the monster's smaller arms. And left the suit's other limb damaged. But that was fine, the first had been repaired. Another blow to the center, expanding the spiderweb splintering into the frozen heart of the beast.

Another pair of strikes. Mending. And another. More mending. I was exhausting the suit of all reserves even as I was expanding the damage into Crawler. It was a question of which of us gave way first. It was a close match. But I won. Barely. The suit had what could only be compare to a heart attack. Or a full-body aneurysm. Analogy falls short when trying to apply "death by exhaustion" to a tree.

At least it was still meant to be opened even in death. My power- I've never used it like this before. Or this long continuously. And I still hadn't reached a limit. If anything, I could call it invigorating. For all the suffering I'd been through, all my pain, all my failures and mistakes. My power itself was none of those things. It worked perfectly every time. Forever reliable. Forever mine.

And I would use it. Some of the Nine still remained. Shatterbird, I believed I could beat with effort and planning. And Bonesaw. And Jack Slash. Especially Jack Slash. I would hunt him to the ends of the fucking earth if I that's what it took to end him. It's not like I have anything else left to live for.

I pressed my feet against the "window" of the suit, forcing it out. And then dropped the couple feet to the ground.

Battery and the others had started to approach me. My dead suit. And the shattered remains of Crawler.

I spoke. My voice came out ragged. Raw. That's right, I remembered. I had been screaming the whole time. Of course I hurt my throat. I was going to try again, but was interrupted by a startled shout, and pointing. A pink fog was rising from the ground, in the more densely populated part of the city. And spreading in all directions.

"The hell is that?" One of the other hazmat suits asked. One of the civilians screamed, which was
followed by more screaming and panic as the water in the streets started turning an oily reddish color,
racing through the streets like fire spreading across a trail of kerosene. Someone else might mistake it
for blood. My eye was a little more expert than most.

I turned to the biosuit. Reaching toward it, I noticed that the shell was covered in strange growths. It
took me a minute to realize they were mushrooms. Shaped differently. Wrongly. Looking like
nothing so much as tiny, repeating iterations of human hands and limbs and faces. I hesitated to touch
the microsized forest of body parts.

In spite of its "death", it had started restoring itself to "life" quite readily. It's hard to make a fungus
stay dead. I drew from the raw materials, shaped it.

I created a quick-and-dirty variant of my sewer-vine. Which really needed a better name. I'd have to
work on that. Alongside my own name. It snaked its way toward a nearby storm drain, finding more
of its own already there. Good, it was spreading more quickly than I'd dared to hope. Probably
covered close to half the city at this time. Much of it was already in the fog. I created what was,
functionally, a model of the human body within one of the larger tendrils. It was a "blank slate", but
it was fully, functionally, human. Suitable for organ harvesting, even. Yet still it was part of the root.

Then I had the plant flood the body with that red material. And I observed. Watching as the... were
those prions? Three reactions hit me at once. Who I was before... Panacea, Amy... was horrified with
the knowledge of what these things would do. Cutting away memories. Faces. Isolating everyone.
She would have recoiled in horror.

The new me, was absolutely pissed. That twisted, evil little monster that pretends to be a child was
going to murder a city! Possibly half the state unless she had some mechanism to shut this down. I
know, considering the history of the Slaughterhouse Nine, that should have come as exactly zero
shock at all to anyone ever. But seeing what she was willing to do, watching it happen. That made it
all the more real.

Then there was the third. The part I was coming to think of as my power, itself. It... was almost
contemptuous. Between the disgust and the rage, there was the part of me that thought 'it would
require a child to see this as impressive'.

In that period of three or four seconds, I had already constructed an antidote, and modified the vines
to release it into the atmosphere. Bonesaw's disgusting, sadistic, and pathetic little stunt... I shut it
down less than five minutes after it had begun.

Next, I would shut her down.
"Find Skitter," I demanded to the Protectorate heroes near me. There was no room for debate. "It's time to end this."
Battery looked at me. I glared back, wrapping my arm around my vine. Still need a name for this thing. I was drawing up more mass through the central... well, the "animal" part of the construct... basically a bloodstream. While most of the material was more plant than anything, the resource demands were higher than any natural plant, so it needed efficient access to energy. And for that, you had to go animal.

I was encouraging growth throughout the network, forcing its metabolism into an unsustainable level, and using my power to sustain it. My plant, for all its features, was nowhere near as complex as a human body. It was easy to work with. Natural biology was full of redundancies and inefficiencies. This vine had none of that getting in the way. It served whatever purpose I shaped it to. And it could quickly change that purpose if I so desired.

Granted, this was its own weakness. A strain of bacteria or a mold or something would no doubt come into being that could infect it simply from dumb random chance. And when that happened, it would die. It had no defense. Except me, of course.

As I considered this, the mass gelled around me, creating another psuedo-cocoon. I would need my interactive system for this to work. My power alone could achieve a great deal. But it had a great many limits as well.

"I... got Tattletale on the line," Battery told me. "She insisted on knowing what this was about before letting us speak to Skitter.

I grit my teeth. "Fine. I'll talk to her."

I snatched the phone away. "We both know I don't like you. And we both know there's not time enough for this shit. I need Skitter to help me find the rest of the Nine. You guys can handle Jack. I want a rematch with Siberian."

I could almost hear Tattletale's smile. "There's a lot of things you missed out on while playing dead, Amy."
"Not my name," I responded. I didn't bother hiding my emotions. What would be the point? Tattletale would see right through them.

"Good to know. Panacea? No, you dropped that, too," Tattletale continued. Good fucking god, does she realize how much she sounds like a Saturday morning cartoon villain when she talks like this? "To start with. Most of the Nine are gone. Siberian's dead. So is half our team."

My heart sank. "Is Skitter..."

"She's healthy. I wouldn't say 'fine'. But healthy."

"Then get her on the phone. I'd argue it's for the 'greater good', but I doubt that'd motivate you," I probably snarled that last word. "So fuck 'good', or 'justice' or 'heroism'. What I want is revenge against the bastards who killed my sister. And if you cared at all about your teammates, you'll help."

Tattletale sounded far, far too pleased with herself when she responded. "Oh, this I have got to see. We were already on speaker phone, so just explain the plan."

"I can hurt the Nine. Those that remain, at least. And I can reach them anywhere. What I can't do is find them. Skitter's power could let her search the city in minutes. And I can extend her range over the entire city."

"H... how," Skitter spoke. Her voice cracked- not out of hesitation, but from overuse.

"When I used your power against you at the bank. I got a good look at how it works. I can create... beacons. Relays. Extend your range. As much as you can handle, I can give you."

"And when we get Bonesaw and Jack?" Tattletale responded.

Really? She is going to negotiate now? I paused for a second. Huh. That actually works out in my favor. "I'm willing to discuss something more long term. After."

Battery actually gasped at that. Apparently she doesn't like little-miss-healer playing with villains. Well, fuck her, then. Still, this was going to be a problem.
Tattletale agreed, apparently. "We should find a better way to talk. Can you get to us quickly?"

"Not as such, no," I replied. "Skitter... look for a rope in the sewer or storm drain system with your bugs. It'll feel leathery. The insects will probably be instinctively afraid to..."

"Found it," she responded quietly. Damn, that was fast.

"Have some of them start chewing on it. And then go to the sewer at the spot you do the chewing." I kept my senses extended. They actually weren't that far away. Only about a mile. Where the insects had started biting, I had the vine absorb one. Partially. I made note of its brain pattern, and how it responded to Skitter's will. I also formed a tumor of sorts. Turns out they did select the storm drain. Good choice. Wish I'd had that option, but I really needed access to the biomass more than I needed my comfort.

"I'll have your relays ready soon. Call me back when you've found them." A lie. But whatever. I handed Battery her phone and had my cocoon envelop me completely. I created the screen that would let me see through the eyes, hear through the ears, of the blob I was turning into a face.

It took almost ten minutes. But then, it took them almost that much time to reach me. I'd managed to painstakingly assemble what was little more than lungs with a mouth. I didn't even try to make it look like a head. Or a face. There wasn't a point, and I was still forcing the plant to grow rapidly. I wasn't even giving it a real chance to grow via metabolism. It was more like having it swallow masses of material, then I would take control over every living thing and leave the dead for digestion. Subsume, not consume.

Skitter climbed down into the drain. I could tell by her dark costume and the lanky figure, moving in that awkward teenager phase way. I had to admit a bit of jealousy- that girl would have the body of a supermodel when she grew up. My power knows these kinds of things- specifically, what an incomplete system is going to look like when it is finished. She would some day be called 'statuesque'. I, if I was lucky, would be regarded as a 'cute' kind of 'mousy' for my entire life.

Others came with her, but they didn't follow her into the hole, instead opting to stay above. Three if the construct's senses were as good as I thought they were. She leaned against a wall, looking at the thing I had grown. She didn't seem surprised by it at all. Oh, right, the bugs. I hadn't wasted the time to build a sense of touch into this thing.

"Okay," my half-made avatar spoke up. "We're going to have to trust each other for this to work. Set
bugs on the vines at your maximum range. Try to keep them as spread as possible, please."

"Before we do this, there's something important that you need to know." Skitter started, although her bugs were already starting to find spots to bite. She had an impressive range for a power propagated through the air like that. Several city blocks, total. I had the vine start to eat... well, subsume them, really. Tie its own primitive neurons into the insects', imitating such lifeforms as the angler fish.

It's not that I couldn't construct a new "brain" from whole cloth for her to use. But this was faster by several minutes. And even with these relays built, it would only extend her range to about a total of a square mile. And I'd need twice as many for the next series of relays. Plus I was worried about doing too much and overtaxing her.

"Our team... they weren't killed by the Nine..." she stated. "We were betrayed by the Protectorate."
"What?" Yeah, there's my patented wit in all its glory. Although, in my defense, I was violating life as the planet earth knew it right now. It was distracting.

"The so-called fucking 'heroes'. We had to go after the Nine by ourselves. We captured two of their members and the Protectorate still wouldn't help us! We found their hideout. Rescued people that they would have left to fucking die. And even after all of that..."

I just listened. I was impressed by her multitasking. The next line of insects had started their chewing while she was speaking.

"Their trap for Crawler... they were happy to just let us come in and fight. Didn't warn us about the bombs. Didn't try to help us even though we risked our lives by fighting to help them. Time and time again. While they did fucking nothing."

I finally spoke up. "They lost people, too, in that fight."

"I know. I saw the statues. The second bomb. That's their little 'fuck you' to themselves. If they hadn't firebombed us... they'd have had Bitch's dogs to keep Crawler from attacking people. And Trickster's teleportation to get the wounded to safety. The fuckers couldn't even betray us intelligently. They had to do it at the time they needed our help the absolute most."

In my cocoon, I dug my fingernails into my palms. It... they... no. I calmed myself by breathing slowly and adding the next layer of relays. Skitter's range was well over a two mile wide circle at this point.

"You'll forgive me if I take that with a grain of salt," my dummy responded. It couldn't inflect emotion of any sort, of course. It was flat, a tool meant to emulate speech. Not something that could actually speak.

"Fine," Skitter agreed. "But it's still the fucking truth. They betrayed us during a Class S truce. And they'll betray you, too, if they think you're doing their job better than they can."
She... I didn't necessarily believe her. But I didn't not believe her. As cynical as I'd become, I'd like
to think my experiences have taught me to recognize the very few who were being sincere. Besides,
she didn't need to convince me that the Protectorate would be coming after me. I had crossed far too
many lines to turn back now. At best, they'd put me in a cell somewhere after installing a bomb in
my brain like Bakuda. They'd already shown how much they loved her ideas, after all.

That or they'd toss me in the Birdcage. I ran down what I'd already revealed. Striker? Probably go up
a couple levels, now that they knew how completely I could rewrite organics. Master? Oh, at least a
four for my dopplegangers... and if they ever realized what I'd done to Victoria... fuck, what did they
rank Heartbreaker as? Or Nilbog for that matter? I could do everything they did, but better.Probably
get a Trump rating from this thing I was doing with Skitter.

"Let's say I believe you..." I said, pulling my thoughts into something coherent. "What are you
planning to do about it? Your evidence?" Huh. Maybe living with Carol DID teach me one thing of
value. Maybe.

"We have footage. Tattletale was setting up to become a sort of 'mission control' and stay off the
front lines of the battlefield. Squishy Thinker kept safely away from the actual fighting."

I smiled. Or smirked, more likely. Either way, it wouldn't transfer to the dummy. "Yeah... I can see
why she'd want to stay as far as humanly possible away from anyone she might be talking to."

"I... I know I've said this before, but I'm sorry. For everything I put you and Glory Girl through," the
girl said. It struck me how... vulnerable... she was.

"I believe you," I replied. "But it's not you who should be sorry. I do have a question for you,
however. You said you wanted to be a hero. But how can you be a hero when you work with people
like her? And how the hell are you still with them AFTER your secret came out?"

"At first, I wanted to find their boss. Turns out he's the supervillain known as Coil. The Undersiders
were a project of his, not the only one either. He owns the Travelers and has spies in the Merchants
and the Protectorate and probably E88 as well. They were basically just thieves, y'know. I'm not
saying that's okay, but... they helped me. A lot. First by saving me from Lung. I had wanted to break
up their team by taking down Coil. But... now... Dinah Alcott."

"The mayor's niece?" I'd heard of that kidnapping of course. How could I not have? Same day as the
bank... oh. Oh fuck. "You were a distraction."
"We didn't know that at the time!" She insisted defensively. "We found out later. She's a precog. Scary powerful. He's keeping her drugged and forces her to use her powers to help him. He'll never let her go. And coupled with his own power... he's probably unstoppable. And it's all my fucking fault."

That gave me pause. Dinah was young- I wasn't sure if she was even a teenager, yet. If she was, it was just barely. And he was drugging her and keeping her like that? I couldn't even begin to imagine what kind of a sick bastard would do that.

I hadn't stopped working during the conversation. Neither had Skitter, actually. She was adapting more quickly to the new relays than I could add them, all while holding an emotional conversation. Her range was well over five miles, now. Well, except where we hit the ocean of course. I was beginning to wonder where her limits ended.

For that matter, where do mine end? Everything I was doing right now was less difficult than dealing with a single gunshot wound. And I could do stuff like that all day. Maybe that's why I feel invigorated instead of tired, using my power like this... because it was just less difficult? No... I felt it when I fought Siberian, too. And my Amy puppet was a hundred times more difficult to build than a merely human body. Part of why I needed the pod- it was the only way I could build a system that allowed her to act without me controlling her directly. I had that 'program' stored within the roots. The next puppet would be so much easier.

Speaking of... the heroes were starting to get a little too close for comfort. Even without factoring what Skitter just told me. The tendril that was feeding my control pod extended itself toward my armor. God, I needed to get actual names for these things. And myself.

During all this, I was still listening to Skitter- really, thinking about how our powers worked was taking more of my concentration than using it. I'd expanded the relays another layer. Hell, I'd begun to see the pattern, and was growing artificial relays out of the roots. They took way longer than the bug versions, but didn't need to wait for a bug to start working. Also, they seemed to have a little less range. Definitely better to stick with the first form, right now.

"So you're saying you don't have a choice?" I asked. "What exactly can he do?"

"He... passes it off as a kind of luck control. Altering fate. But it's something both more and less than that," she explained. "He can create alternate realities. The only thing that changes is him. He can give one order to attack and another to retreat. And choose the result he likes best. We can't attack him, because if we do, he'll end that reality and take the one where he's somewhere else entirely. And he'll know everything we did and we will have no memory of it."
I hesitated... did I dare do this? Yes. Yes I did. "Your team is pretty much finished, right?"

She snorted. "We lost Regent. Thankfully we lost Shatterbird at the same time. He was keeping her controlled. If she'd gotten free..."

I didn't really want to think about how badly that could have gone. That was one of the Nine I didn't think I had a counter for. Not without a LOT of prep time.

"I don't see Grue coming back from this. He was doing all this to help his sister. She was caught in the bombing. Bitch, too, and she was our only real source of muscle. It's basically just me and Tattletale. The Travelers lost Ballistic, too.

I sighed. My impromptu com device did nothing but wait until I spoke. "So... I'm not making any promises. But your power has a synergy with mine in ways that make it stupid not to ask. If I help you save Dinah. And I make a team of my own. Will you be on it?"

She looked a little uncertain. So I took the opportunity to continue. "I can do a lot with my power. What I lack is your instantaneous control. Even the things I'm touching respond with a bit of a delay. Not much, less than the delay in trying to drive a car. But that's slow compared to what you're capable of. I'm proposing a partnership. I won't lie. What I'm planning will get us a lot of enemies. Not the least of which: the Protectorate. But, if you're willing to be my general, I will give you an army."
Chapter 8

Amelia, Ch 8- Jack Slash

It had been a bad day for me, I had to admit it. Skitter, that delightfully terrifying bug girl. She
promised me that Brockton Bay "had its share of badasses". They did not disappoint.

Ah, if I'd known then what I know now, I would have nominated her. My candidate turned out to be
such a disappointment. Skitter, on the other hand, was fascinating. Such a ball of deceptive
viciousness, and clearly the leader of the Undersiders. Even more interesting, they didn't know it.
She turned a group of second rate thieves into the terrors of a city that had reduced the
Slaughterhouse Nine to two people hiding in an Endbringer shelter.

It would have been fascinating to see what she could have done with my team. I might even have
given her the leadership. Not even forcing her to take it from me. A few years of mentoring her, and
she would be even more feared than the Endbringers. A true protégé. Perhaps then I would challenge
her to reclaim my throne. If I couldn't find a worthy foe, then I might be able to build one.

Speaking of protégées. "Bonesaw, dear, how long until you're ready?"

The girl was arms deep in bodies. "Still working on it. I can't just change these on the fly, you know.
Or I could, but she'd just counter it again. I need something that adapts faster than she can. Or kills
before she has a chance to stop it."

"Panacea turned out to be rather more impressive than we thought, too, didn't she?" I agreed.
Internally, I blamed Cherish. The girl was nothing but a series of disasters, and not the fun kind, from
the beginning. When we got out of this, I'd have to go visit her father and have a nice, long
discussion about parental responsibility.

"She's amazing, isn't she," Bonesaw said, while forcing open the ribcage of a still very much alive
woman. "She really is the perfect Big Sister. Beating my best work so easily, and showing me a
dozen new ideas all at the same time. Promise me we'll come back for her, please?"

"What about your new weapon?" I frowned. If she used anything less than her best work for this
because she was scared of killing the girl...
"Oh, that won't matter for her," Bonesaw answered with a happy sigh. "Her power is always protecting her. I could inject every plague in the world, including all the ones of my own design, right into her spine and her power would convert it all to something completely harmless. Probably some kind of easily metabolized nutrient mix, but I'd have to observe it in action to know for certain."

"I see..." I had learned to recognize her tinker-ramblings as they got started. There was nothing I could do to stop them, but I could harness them. It was a challenge, of course, that's what made her so fun. "So... this new plague you're devising, how will it get around her counters?"

"Same way every cold virus in history gets around the immune system," she replied, going happily back to task. "It's impossible to win the war, so you don't even try. You simply adapt and move on. Only dialed up to the greatest extreme. The retrovirus is designed to collect genetic material from everything it infects, and randomly shuffles its own genetic pattern. It'll mutate so quickly that by the time it spreads to three people, it'll be like twelve completely different diseases. My big sister can beat any one of them, easy. But can she beat them faster than they're born?"

And that's when I heard the tapping sound. Someone else was here.

"Oh, I think could find a way," came a voice. Female, but it sounded wrong. It was... hollow... devoid of emotion in a way that made it sound more like a script being read by the world's worst actress.

"Amelia Claire Lavere," I said with a smile as she stepped into the dim lights running on the shelter's emergency batteries. "I am truly impressed."

That was not a lie. Her power was incredible. So versatile. This body-double of hers... it was beautiful on every level. A sleek black armor encased her, shimmering a metallic purple where it caught the light. It moved with a fluid grace I had only ever seen from the Siberian. The finest features of both woman and great cat. It was a perfect machine.

I opted to let her know she hadn't fooled me, however. "Pity you're not actually here in the flesh."

"She's not?" Bonesaw asked, taking a more appraising eye of the construct. "You're not! Oh my god! It's so beautiful! The armor, it's chitin, isn't it? You put it together using insects and I can't see a single flaw anywhere in the design and how are you controlling it so well? And the face..."
"Please, Bonesaw," I interrupted. "Let her have a chance to speak." Yes. Let her talk. That body of hers was dangerous, probably meant to be immune to my knife- and even if I did destroy it, that meant nothing. She built this in a couple hours at most. And judging from the insects moving around on the ground, she had Skitter as backup. They couldn't be that far away... so the trick would be keeping her from attacking before I figured out where their real bodies were.

"Insects bodies, mostly," Amelia replied. There was a flaw, in the voice. But was it even a flaw? Its eyes were sharp and alert. It responded with feedback that was clearly two way and interactive on a level that even Siberian didn't quite match. If she'd wanted it to copy her vocal tones, there was no doubt it could have. Either she felt it was too much effort... or it was a design feature. If it didn't show emotion, then she wouldn't have to worry about hiding her emotions. So... design flaw... or intentional feature... the part that interested me most is that I couldn't tell.

"Skitter helped with the raw materials. And, no, Bonesaw, the insecticides you're using won't work."

"Oh... don't worry, I know!" she agreed far, far too eagerly. I'd have to have a talk with the girl about showing her emotions to the enemy so readily. "Great minds do think alike. I've done something very similar with myself and Jack. We're both alot alike!"

She paused. Okay, so the construct didn't have emotion. But the girl behind it did... and that could still be an angle to attack from...

"Not really," she responded.

"We could be! Haven't you ever wanted to start over? I could make you younger! We’d be the same age! And wear matching outfits! Oh! I could make us into twins!"

"I think about it," Somehow the emotionless construct managed to sound sarcastic. "Did you do that to yourself? Make yourself young?"

“No.” I replied “Rest assured, Bonesaw’s immaturity is genuine. Both an asset in how it makes her that much more creative, free in her ways. A detriment in other ways.”

"Interesting how you need to belittle your own people in front of them like that, Jack."

"Well, that brings back memories," I laughed. Genuinely. This is exciting. Trapped here in this
shelter with a woman who was anything but predictable, being observed by someone else who was an equal amount of surprise. "Your father said much the same thing to me, once upon a time."

"Yeah, I know the score. Marquis."

"Imagine my surprise when I found out. I met the man. I must tell you, Amelia, he was a very interesting character. Marquis was a man of honor. He decided on the rules he would play by and he stuck to them. He put his life at risk to try to keep me from killing women and children, and I decided to see if I could use that to break him. I admit I failed."

“What about Allfather’s daughter?” Good. I have her attention. She wanted to know about her father... I could use that.

"Marquis would not have killed her. That was one of his rules. If it were possible to make him break it, I’d have made him do it."

“Allfather put a contract on my head before he died, because of what Marquis did."

“I doubt it. What gave you that idea?"

"A letter Dragon sent to Carol... my... adoptive... mother."

"Ah, Brandish? I wonder. I suspect Marquis was lying. Making up a story that Dragon felt was credible enough to contact you and offer a warning."

"Why?"

"Oh, that's easy," Jack replied. "Marquis was old fashioned. Predictable. He would want you to know he was still thinking about you. He'd want you thinking about him. His own dream of immortality."

Bonesaw piped up. “That’s stupid. Why do something like that when someone like me could make you immortal for real?”
“Shush, now. Let your big sister and I talk.”

“Okay,” Bonesaw said.

Amelia didn't bother to correct my presumption. It was frustrating how little I could read her like this.

“You are much like your father. Both of you are chained by the rules you've imposed on yourselves. His rules defined his demeanor, the boundaries he worked within, the goals he sought to achieve and how he achieved them. They were his armor as much as his power was.” I continued. I had to play to that. Let her imagine she could be like her father- a name that was STILL both feared and respected in this town.

"Your rules did the opposite. Rather than give you strength, they leave you trapped and alone," I offered. It was pop psychology at best, but what works, works. "That's because you did it the wrong way. Marquis accepted himself, who and what he was, and made his rules to be a frame on which he could grow. Just as I accept myself. Your rules are the opposite. They're made to deny your true nature and be what they tell you to be, instead of who you really are."

She paused. Not her normal 'not acting' pause. The construct wasn't moving at all. No feedback. The interaction required concentration. THAT was a weakness I could exploit! I couldn't touch her body. But her mind- her soul, if you believed such tripe- was ripe for the taking.

"I can give that to you. Help you find your true nature, the way I've found mine, and helped so many other damage people find theirs."

Amelia looked toward me. "You're right. I've fought against my nature time and time again, and it's done nothing but make me miserable. I've lost my family. My sister. Everything I ever loved. In a span of mere days. And yet, somehow, I'm happier than I've ever been. And it's because I've been ignoring everything I've been raised to believe. I'll join the Nine."

I couldn't believe it. Actually, I didn't believe it. "There is still a matter of your tests," I reminded her.

"I've passed them," she responded. "There is nothing you can demand of me that is worse than what I've already been through. I not only escaped Siberian, I distracted her in combat long enough for my allies to kill her. Mannequin demands you give up something precious and personal? How about my sister, my life, even my name? And I shut Bonesaw's little stunt down in minutes. I will flense
anyone who dares to claim I haven't earned my position in the Nine."

"Really!?!" Bonesaw shouted, running toward the construct and embracing it. "Congratulations, Amelia, I knew you could do it!"

I could see where the skin on Bonesaw cheek parted in thin lines, where she'd brushed up against the armor. She put her hand on the little girl's blood soaked curls. "Go pack up your things. You won't need your plague today.

"Okay," she agreed far too readily, not even looking toward me for confirmation.

Amelia, on the other hand, never stopped looking at me. "Jack Slash. I am challenging you for leadership of the Nine."

She was moving at me before I even had time to register her words. Damn she is fast. My blade launched forward, colliding with her face. The knife did penetrate the eye socket, but the body didn't slow down. My blade caught against the back of the skull and was wrenched out of my hand. It reverted to standard size instantly.

I tried to pull one of my backups while dodging a swipe from Amelia's claws. She was fast. A match, maybe more, for Siberian. But she was so much less human than Siberian. I couldn't figure read her, couldn't predict her steps. She kicked outward and I leapt back, but several bits of green goo hit my chest and started burning. It ate my armor, then skin, then started working on Bonesaw's reinforced mesh.

And it burned. I knew what pain was like because I had never let Bonesaw disable mine. Without the risk of pain and even death, combat was without challenge or thrill.

"Like that, Jack?" Came another voice. The insects. There were a lot more than I'd realized. And they spoke in a gravelly, buzzing manner. They carried a thousand times more emotions than Amelia's automaton. I could guess what would come next from them, as they swirled around. They wanted to attack- their controller wanted nothing more to destroy me in the most horrific ways she could imagine. But she was being held back by someone else. Amelia? Had to be.
"I was asked to let you know... it's the same acid that Crawler uses. Amy-" They paused a half second. "Amelia says it's the most horrible poison she's ever seen. Wants you to know that you'll die how her sister died. And because of Bonesaw's improvements, it'll be even slower and more painful for you than it was for her. Keep struggling, that just makes it spread faster."

Meanwhile, I was still dodging. I had lashed out with another knife, to trip my attacker. Only to have my arm pulled back. How? Spider silk?

Amelia caught my arm and squeezed, twisting and bending it. Broken at the elbow. More acid left behind. Her foot slammed into my knee. More of the same. I dropped, and she stepped on my remaining good hand. No acid, she simply ground down. Sharp. Heavy. Micro thin razors lined her armor, and this thing had to weigh three hundred pounds.

"Bonesaw! Help..." I managed to gasp out. It was hard to breath, as the acid had already destroyed most of my abdominal muscles.

"Sorry, Jack," she said with her usual cheerfulness. "I'm a good girl, and good girls don't break the rules."

So she held a grudge, I realized. How did I not see that before?

Amelia's other leg came into my vision, as she moved between me and Bonesaw. The bugs started covering me, but didn't attack. A peculiar kind of sensory deprivation. I was blinded.

I heard Amelia speak. "So, little sister, what am I going to do with you?"

Then the insect mass was too thick, and I was denied the ability to hear anything except my own screams.
I, or the body I was using at the moment, marched straight up to the Protectorate's visitor reception area. I was wearing my 'Dryad' model. It was, for the most part, the least human looking armor I had constructed at that point. A superior version of the "tree gorilla" outfit I had used before. It stood approximately seven and a half feet tall and was covered in bark.

Next to me was Skitter- or, again, her double. Hers was the much smaller 'Changeling' model. A perfect emulation of a human being, with exactly zero mammalian features other than mere cosmetics.

Much like I had made for the fight against Siberian. Only less utilitarian. Barely better than human... not even that, really. Capable of competing on the level of an olympic athlete... but probably wouldn't take home a medal. But it could compete in every sport at that level.

Skitter... Taylor's... version of the suit was different than mine. My remote control system was modeled after her power. I was, frankly, playing copycat. She just had a model tuned to her frequency. No control cocoon for her. Her suit was pretty close to her actual features, though modified. It was still obviously 'Skitter'- but there was brighter coloration to it. Gone were the dull grays, replaced by shimmering metallic blues and greens. Reminiscent of many colorful species of beetle. Only her eye lenses were true to their old yellow color. Which was fine.

It was far tougher than it looked. As durable as her real costume, and most of it was still the silk. Just from more common spiders that were easier to manipulate to produce the colorful patterns. A rush job. Fake armor for a fake body. The worst anyone could do to us is kill our dolls.

We both carried some sealed bags- hers smaller than mine. But both quite large.

And basically everyone was staring. It had been two days since the Nine were annihilated. Took that long for us to get all our plans in order. We knew what we wanted to achieve, Skitter and I. Or at least the basics. And that started here.

The receptionist was probably used to seeing people like Armsmaster and whoever. Compared to that, we weren't all that impressive. She eyed Taylor for a moment. No doubt figuring out who she was.
"We're here to apply as an independent hero team," Taylor stated after a moment. Lisa was giving us cues. Watching through the cameras we'd set up. Another piggyback off Taylor's power, I could access the eyes of any of my constructs, and put them on the nice little screen I built for those on the team who didn't have unfair sensory powers. It still wasn't good. We'd managed to get it to show color, at least.

The woman, whose nametag identified her as 'Michelle', slowly reached down and opened a drawer, pulling out a small set of forms. She was an attractive woman. Large in the amazonian sense. Blonde, angular face. Probably a stunner once upon a time, and still very attractive in her late thirties. "Is it going to be just the two of you?"

Lisa's voice came over the perfectly ordinary headset I was wearing inside my functionally soundproof cocoon. "She hit a silent alarm. Is now stalling and fishing for information, as we predicted. Keep them speculating. Any clear answers"

I shrugged inside the suit. "We'll want an extra copy. We can print more of our own if we need to," I replied. Oh god, if they only knew. They would scour this city from the planet to stop us. Right now, we were playing the most delicate game. We needed them to believe we were going to play ball. That the asinine 'cops and robbers' thing that Tattletale had described was still how it worked.

We were relying pretty heavy on my reputation. On Panacea. On them being shellshocked from the Nine. Mourning their losses. We also timed this for Legend being temporarily out of the building.

"We'll also need information on your disaster relief efforts. Our main efforts will be there instead of on the field." True. And so very, very, misleading.

"I'll see what I can get for you," the woman agreed.

"Miss Militia, to your right," Taylor spoke up through the headset. I was again in envy of her multitasking. Miles of control area. It's said there's more bugs in a square mile than there are people on the planet. Taylor was currently managing that... almost a hundred times over. If we measured it just on pure mass alone, there was more of 'her' in the city than there was 'everyone else combined'. Well, except for me. Turns out, there's a lot of sewer/stormdrain in a city. And basically everything that was flushed into it had been consumed and converted by now. My Yggdrasil had just about completed its growth through the system. Everything else would need to be done above ground.

I turned to look at the dark skinned woman and her very 'patriotic' outfit. The cynic in me sometimes
wondered if they put her in this city solely to annoy Empire Eighty Eight. Not that they'd be a
problem in... oh... a few days. "Greetings, ma'am," I said.

Her weapon was currently in "shapeshifter" mode, as if trying to figure out the best way to hurt us.
Which would have been something along the lines of 'be approximately seven and a half miles away
from here', not that she knew that. "You're new?" she asked.

"Already knows better," Lisa informed us. "Wants to see if you'll lie to her. Threat assessment."

"She's one of the good ones," Taylor added in. "Patriotic to a fault, though."

"Makes her the worst we'll ever have to deal with," Lisa concluded. "We might have been able to get
her to turn if she wasn't so insistent on protecting a corrupt system. And if she were corrupt, we
could at use her or hurt her without much problem. Instead she's an idealist who hasn't recognized
her own cause betrayed her."

"Not new," I replied. "But a new chapter in our lives. The look and name changes are part of that.
Think we can get a room to handle to sit down and fill out the paperwork?" There. Absolutely true.
Even volunteering more information than necessary and invited her to stick around. We were being
upfront and open as a means of hiding just how incredibly frightening we were.

"Then you're aware of how dangerous it is to be independent heroes, instead of joining the
Protectorate," she said, even as leading us to one of the nearby conference rooms. A small one, but
nicely decorated. A flag in the corner. Hanging pictures of a handful of national landmarks. A sturdy
table, probably oak though I wasn't exactly an expert on that. It suggested wealth without suggesting
opulence or waste. Patriotism without looking like propaganda. Even if, of course, it was both things.
I could see them bringing aspiring heroes here.

"Not a problem," I answered. "Our powers are better oriented for indirect use. We'll mostly be
handling infrastructure and support tasks."

"Such as..."

"I control insects and arachnids," Taylor told them. That wasn't anything we could pretend was a
different power. Sure, I could give her monsters and she could claim those as her own. But 'bugs'
was comparatively less threatening. "I can go through the refugee camps. The hospitals. Clear out
cockroaches. Rodents. Lice. Dangerous spiders. Bedbugs and ticks and numerous other disease
carriers in both people and pets. We'd be here all day if I had to list every last creepy crawly and everywhere we might want to remove them from."

That was our sell on her, at least.

"And your power?" She asked me.

"Botanical control," I answered. Again, not a lie. Just not even the barest fraction of the truth. "I'll be helping with cleanup on a number of levels. Possibly rebuilding. It's basically a shaker power. I can clear out rubble. Set up support beams for unstable buildings. Provide fruit trees set to overproduce."

"Team name?" she asked. We'd filled out that part of the paperwork, already.

"Are you sure about this? There are a lot of dangerous villains. You won't be able to back down from this. Especially with a moniker like that." She was warning us. Warning me. And not just about the indie-hero thing.

I laughed. It transferred to the puppet. And I pulled one of the bags out of the sack. A body bag. Then another, much smaller, bag. Then a small package. Taylor had one of her own. "Oh, I think we can take care of ourselves."

Miss Militia managed to keep her poker face reasonably well. I had to wonder if maybe they had a tinker scanner that identified that we had brought a total of three full human corpses in with us.

"These are the bodies of the Siberian's controller, Bonesaw, and Burnscar," I informed her. "Alongside the head of Jack Slash. I apologize for the condition of his and Bonesaw's remains... had to improvise to get past the modifications made to their physiology. Using Crawler's venom."

"We'll have to get those verified," She stated. "In case someone might attempt to... construct a forgery."
That was expected. And not even unfair, really. I probably could build fakes. Of Manton, at least. All the weird mechanical bullshit that Bonesaw inserted into their bodies was entirely beyond my power, and they knew it. I simply nodded. "Of course. Just so it's made clear, we have a detailed incident report of the deaths of all four individuals, with some details removed to protect identities. Pantheon is claiming full credit for Jack and Bonesaw. Partial credit for Siberian, with the other half going to individuals who wish to remain uncredited. And Burnscar goes to a party that also wishes to remain anonymous. There's account information for all of us included."

She buzzed for someone- several, in fact- to collect the bodies and the paperwork. She left with them.

We didn't speak. Not in front of them at least. As we finished all the details.

"Still can't believe you're going with this theme," Lisa goaded.

"Oh, whatever," I responded. "You were so happy with yours that you're probably going to start using it as your civilian name."

"Not while you're in earshot," she all but sang back. "But while we're on the subject of names. Ohhh, Taaaayloooor... is this gonna be one of those things where you let the heroes name you instead of picking one of your own, again?"

"No," she responded back. "I thought of one. I'm not sure I like it, though..."
"No, nope, never, not happening, ALL the no," Tattletale insisted. "Every fucking 'nope' in the world!"

"Hey! Don't swear!" Came the little girl voice in the corner. I could hear the tapping noises as the spider-like robotic limbs were moving around the 'operating table'... or, as I liked to think of it, 'that nice coffee table we will now have to throw away'. The fact that she could detach her own head from her body was both disturbing, and incredibly useful. How the living hell does someone perform a surgery like that on themselves? Tinkers were bullshit.

She was currently surgically attaching herself to the new body I had made for her. A copy of her own DNA. A bunch of work with the plants. I'd complete the process of making it a living animal AFTER she had properly "linked up". Even with her tools and skills, keeping a headless corpse... would it count as a corpse? Anyway, keeping it alive would be a lot harder if it were animal.

Tattletale glared at the disembodied girl. "Every FUCKING nope. In fact, I mean that literally. The Nopes have all gotten together in one giant fuckball, and are currently reproducing so fast that they've been registered as a Class S threat!"

I had to admit. It was worth the price of admission for this scene. I had my first genuine laugh since before Leviathan. Maybe this wouldn't be so bad.

"And YOU!" She pointed at Skitter. "How could you, knowing everything she's capable of, possibly be okay with this!?!"

She looked at Tattletale with a kind of quiet desperation. We were all, more or less, out of costume. Or, at least, not wearing our masks. Tattletale still wore hers, but that was to be expected. "I... I know what she's done. But."

"But," she kept glaring at Bonesaw. " Fucking. NOTHING. She tortured Grue. Doesn't that mean ANYTHING to you?"

I... I must have seen something of myself in Skitter, and something of Victoria in Tattletale, at that
moment. Being dominated by a stronger personality like that. Even if that personality is trying to help. I believed Tattletale meant well- in this one, specific, isolated instance, at least. But I wasn't going to watch this happen in front of me.

I stood. "You're free to leave at any time, you know. I won't even pretend I want to keep you here."

She turned on me and started to open her mouth. I didn't let her.

"Skitter and I have an agreement. A partnership. This is why you are here, speaking your mind. Instead of trying to find a way out of this dimension simply on the chance that I might, maybe, want to 'thank' you for the bank. Or did you forget that? Because I haven't. You are my compromise for her. She wants you to be part of this. Bonesaw is her compromise for me. I NEED her abilities. More importantly, I need her research."

Tattletale paused. I could see her lips moving as she talked through her power silently. I simply waited. It'd be easier to let her power do its thing than explain it with words. Also. It would sound insane if I said it. "Powers. You know something about where powers come from, don't you?"

I nodded grimly. "I was afraid to touch brains before. I... I even suspect I know why now. Sure, part of it was my own hangups. But there's more to it. A lot more."

"You're not going to tell me." It wasn't a question.

"Not yet, at least. Too new. Not sure. Far too many other things to deal with, first. But yes, I'm pretty sure I know where they come from. I got some idea when I examined Riley's brain."

"Bonesaw," Tattletale stated. "Riley is a person's name."

"Whatever. Her. Skitter, too. Even got a look at Ja-"

"You let her touch you?!" Tattletale said in shock, looking over at Taylor.

"Uh... yeah... why wouldn't I?" She responded. "She fixed up a few things, and even fixed my vision."
I had to smile a little at that. My new partner was a creature of dualities. Skitter was a nightmare. Even now that I was getting a feel for what my power truly was... she frightened me. I knew she couldn't win against me in a straight fight. But something about her just made me nervous. Like she could find a way to win against anything, no matter how powerful. It was disquieting, really. It was also thrilling to know she was on my side.

Taylor, on the other hand. Taylor was too nice. She seemed smaller than Skitter by a foot. Frail. Afraid, even. It bordered on split personalities, how utterly she could compartmentalize. Was this... was this her 'passenger' at work? Riley had told me some of what she believed. I'd have called it crazy, but I could see them, now. Or see the imprint they left in their wake, at least.

The one I could not see? Was my own. What did my power do to me? The sheer pleasure I got from flexing my powers... I could recognize response conditioning when I saw it. The exhaustion I got working as a healer... in spite of using nowhere near the same amount of power as I'd used in the last day or so. Was that its doing? And if so... where did it end, and where did I begin?

While I contemplated this, Taylor and Tattletale continued their argument. It seemed to be coming to a close.

"There is nothing I can do to talk you out of this, is there?" Tattletale said with a defeated look on her face.

"Unless you know another way for me to save this city," Taylor insisted. "And not just the city! With this power, we could save the whole world. I could enter the next Endbringer fight with thousands of monsters that make Bitch's dogs look harmless. They could rescue the wounded. Draw fire. Maybe even kill these fuckers."

"Taylor," she replied tiredly. "Listen to me. There's a fine line between 'too scary to fuck with', 'too scary to live'. This... this crosses that line, comes out the other side, goes all the way back around, and then STILL has enough momentum left to lap Nilbog. You'll be lucky if all they do is put burn this city to the ground."

"I have to," Taylor responded, pleading. "Please, Lisa. This is how we can beat Coil. How we can save Dinah. I am everywhere in the city right now. Our power, working together like this... we can beat him no matter what his plans might be. If he has the power to change fate. Then we just have to be so overwhelming that there can be no doubt. Absolute, total, control. I can't give this up. I won't. Not even for you."
"Fuck," Tattletale- Lisa, apparently, sighed. "Fine. I'm in. I assume you have some conditions."

I nodded. "A few. First, the same thing I told Bonesaw. If I catch you, even once, using your power in a way I find unacceptable. I will end you. There will be no warning. There will be no second chance. I'll break you. And then I'll do things to you that are horrific beyond imagination. And I know just how good your imagination can be."

Her eyes narrowed.

"Second. If you want out, at any time. You're free to go. I'll help alter your appearance. Whatever you need. I will not conscript people against their will."

"What about her," Tattletale asked.

"Same thing. She's free to go if she wants. Although in her case, I'll strip her of her powers first. I want to be fair, but that would be insane."

"You can do that?" She asked.

"Sure... all I have to do is kill two relatively tiny parts of the brain that aren't even found in normal people. They're right there at the top, too. Easiest part to work with, really. You could probably do the surgery with a handgun, if your aim was good enough."

"And the third rule? There's always three, in situations like this."

"The third is that we are a community. I won't be settling for just a small team. Every parahuman that wants, and can agree to peaceful coexistence, is welcome. Normal people, too. We'll worry about details later... create our own legal system... one without the corruption and abuse."

She looked at me. Then looked back at Taylor. "This was your idea, wasn't it?"

"Some of it."

"Alright," she sighed. "Someone's gotta keep you deranged idealists from getting yourselves dead-
by-Eidolon. As long as promise you'll listen to me. Actually take what I'm saying into account before you jump into the deep end."

I smiled as I held out my hand. "I'm Amelia Claire Lavere. Gaea, when on the job. Welcome to Pantheon."

She regarded me for a second, then reached out to shake my hand.
Chapter 11

Amelia, Ch 11

Our debut as Pantheon was both impressive, and anticlimactic. We hadn't lied when I said most of our work would be in "cleanup"... it was just a matter of how we were doing it. And on the scale.

I had called ahead to the hospitals and shelters. Explained to them what we were going to do. They were understandably resistant to the idea. Most people were quite aware of Skitter's reputation-which was not all that pretty.

I, as Amy, had sworn to them that the parahuman in question was a hero named Khepri, part of a new independent group called Pantheon. And she had official Protectorate documentation saying as much. Really, that was all it took. They were pretty damn desperate. Taylor's changeling (and official recognition paperwork) had gone to every hospital, shelter and camp in the city. At first alone- and then with Triumph, who had opted to follow her on his patrol.

According to her, he did a remarkable job of pretending he had no idea who she was. When Assault showed up later, it was rather the opposite. Turns out, he was a villain of some repute, before changing sides for... whatever reason. Something of a surprise to me. I had to wonder if Battery knew. I suppose she had to, given that her boyfriend was willing to just blurt that information out to some girl half his age and all.

We held back. We held back a lot. Taylor- the actual Taylor- was in what she had called 'her territory' near the docks. She and Lisa had not left Coil's employ when they joined. Even though the Undersiders were no longer a team. Grue had left... hadn't even bothered to explain to his team that he was leaving. Let alone where. It wasn't my place. I was going to make damn certain such a thing as the PRT murdering people who were trying to help could never happen again. But I wasn't part of his team or his family.

Taylor had told me a bit about their relationship... her attraction to him. His lack of interest in her. One more thing we have in common, I suppose. She also said that there was no way in hell he'd be joining Pantheon. Not while Bonesaw was with us. I didn't know a lot about second Triggers, but I was given to understand they were even worse than the first time.

That is what Bonesaw had done to him.
And here she was. Currently taking a shower in my bathroom. “Bug hug! I, J, K, L!”

Correction: she was singing children's cartoon songs while showering in my bathroom.

Well, Skitter's bathroom, technically. She'd bought one of the houses near what was coming to be known as 'Crater Lake'. I tried to talk her out of it. Insisted that, honestly, I could live just about anywhere. Hell, I could find a place somewhere in the sewer or subway systems and be quite content. Frankly, thanks to my Yggdrasil's work... Brocton Bay's sewers were cleaner than the average kitchen. You could eat off the ground in them.

More than that. You could eat the ground itself in them.

But the girl had insisted. So I became the resident of a small duplex. Half a duplex, at least. The bottom of the building was, basically, unlivable. My power had cleaned things up, reinforced the whole layout, but that was about it.

Would have been more suspicious if I hadn't been doing the same thing to multiple dozens of buildings the last few days. Most of the Yggdrasil's mass was being used to produce lumber and firewood. It wasn't quality wood- that would be impossible without wasting the iron supplies that I needed for more important projects- but it was at least as good as pine, and people seemed to be able to make do with it.

I had suited up and went into our 'basement'. We had agreed that, in the case of me using my puppets, I would hide in the sewer system. I got too distracted by the system and was more or less a sitting duck. Having Riley to guard me didn't fill me with much confidence. Granted, there was approximately a metric ton worth of insects nearby that could come to my rescue, but Taylor's abilities did have their limits. Blind spots. Mannequin had proven that.

Besides, she couldn't communicate through her bugs, except to write. And couldn't hear at all. And she was busy.

The three of us who could be seen without resulting in an immediate kill order were all hard at work. Taylor was playing nice with the heroes. Currently on patrol with Weld, the metallic boy I'd seen before. There'd probably be at least one of the Protectorate heroes with them. Tattletale was feeling out the Travelers. She wasn't quite sure all the details about their 'hidden member', Noelle- who may be some kind of Case 53. But Coil had something else they wanted. She was trying to see if they'd be willing to save her, even with the off chance that they'd never get the other thing.
And here I am, visiting the Palanquin, at nine in the evening. Having a hero walk in the front door probably didn't do our reputation, or Faultline's for that matter, any good. So I was in civilian guise. Well... except that I looked about six years older, had purple hair, and had spent half an hour online, perfecting the look of someone with natural beauty, who then spent a lot of effort building on what nature granted. Judging by the looks I was getting from the people in the line, I was very successful.

Minerva picked the outfit. Told me I didn't want to know when I asked the price. It would make me scared to hurt the thing. I was beginning to see why so many people were so willing to be villains. They threw around money like it grew on my trees. Then again, I probably could make trees that did that.

No one was suspicious when the bouncer let me skip the lines and walk right in. And, channeling Victoria's attitude of entitlement, I walked in without so much as glancing at the people who weren't considered attractive enough to get such preferential treatment.

It helped that I was piloting a fake. They couldn't see how much this was the last place I wanted to be.

I turned left and went for the back rooms as quickly as possible. I didn't like this kind of place at any point in my life, and now it was a living reminder of Victoria's attitude toward the party lifestyle. More than that... with all the nightmarish things going on in this city, I wanted to scream at them all for being here instead of doing something, anything, to make things better.

I knew it was irrational. After what I've done, I reminded myself, I have no right to judge them. I swallowed my anger, and dialed back the emotional feedback interface on the system. One of Bonesaw's improvements- now the fully equipped changelings could mimic any range of emotion, regardless of what the pilot was feeling.

I was met by a woman who was a few years older than myself. Black, wavy hair. I idly wondered if that was natural. "You would be Gaea?" she asked.

"A representative," I replied. It was the pseudo-truth that we had decided upon when using avatars that didn't look like ourselves. "Pantheon's quite busy, for a number of reasons, but I'm authorized to make almost any deal."

"Tattletale told us you had information we would be interested in," she replied. The way she said 'Tattletale' indicated that she wasn't a fan. "As well as the possibility of aiding our friends with their disabilities."
"Hopefully she didn't make any promises about the help. Gaea's dealt with Case 53s before, and they have a habit of, functionally, regenerating back into their nonhuman state."

She frowned. We were providing all the bad news upfront as a sort of psychological tactic. Minerva's plan, of course. "The fact of the matter is that while they turned in Bonesaw's body, they kept her notes and research materials. She has a drug that can temporarily suppress powers. It can last weeks, or with the antidote they can recover in minutes."

"So... your theory is that a Case 53 won't revert if their powers are disabled? And you'll be charging how much for these drugs?" Faultline's eyes narrowed.

"Nothing," I answered. "Pantheon doesn't believe in profiting from the misfortunes of others."

"I've heard that line before, you'll forgive me for being skeptical," she replied.

"Would you believe we don't need it? That we have a number of ways to acquire functionally limitless wealth? And that's not including a full half of the bounty placed on the Slaughterhouse Nine."

"So, the rumors are true? You guys got Jack, Bonesaw, and Siberian?" She kept a measured tone, but the emotion reader built into the changeling indicated she was nervous.

"Technically, Siberian was killed by the Undersiders, which I believe are now defunct. The member credited for the kill is now a part of Pantheon," I answered. "Gaea got the other two."

For a certain value of 'got', I thought to myself.

There was a pause for a moment before I continued. "In fact, that brings us to the other subject," I continued, pulling a folder out of the expensive handbag that matched my dress. "This is yours, no obligations. It's new information we've acquired about Cauldron."

She snatched the folder from my hand and pulled it open. In it were a couple dozen photos of Manton. And a bunch of handwritten notes we'd photocopied. Including the upside down 'omega' tattooed on his hand.
"Who is this?" She asked insistently. My changeling kindly informed me of the combination of anticipation and suspicion her body language expressed. I was glad it did, I wouldn't have noticed.

"Doctor Manton. The very same that named the Manton Effect," I answered. "But, far more importantly. The man who made and controlled the Siberian, and we believe he was working for Cauldron as a researcher."

"That... is pretty serious... and you're just giving us this information?"

"We have a vested interest in learning more about Cauldron. You are investigating them. We want to hire you to do a job you're already doing, essentially. We can provide certain resources. Healing. Even some tinker equipment and physical enhancements. All you have to do is report to us whatever details you've learned in your investigations. Our thinkers will of course give you anything they can pull from that data."

"I'll have to discuss this with the client that hired us in the first place," she replied. My display kindly informed me that this was, at most, a half truth. Not unlike the dozens I have already told during this conversation.

"Of course," I answered. "Please don't forget to mention our desires to aid the Case 53s, if they're interested."

"I promise you, they'll hear about it," she answered. Another half truth, they probably already knew.

"And... if you would please turn off any recording devices you might have... I have another piece of information that we don't want to leave this room. A warning."

She hesitated a second, then nodded. "Okay. What is it?"

I made my avatar lean in close. "The papers you have list several individuals with serious political and military power that are probably involved with Cauldron. This is a conspiracy that goes all the way up to the top. More frightening is the one detail we didn't put on paper. Legend recognized the body. The symbol. At least one member of the Triumvirate knows exactly what Cauldron is. And is actively aiding them."
"Well... fuck..."
Chapter 12

Taylor and I, ourselves this time, not some replicant, sat outside the Alcott home. Costumed, of course. I had to hand it to Coil- he had great tastes in vehicles. This limo was luxurious. We wouldn’t be keeping it, of course. Nice of Lisa to provide one of her people as a driver. Very professional. Polite. Alert. Took it all in stride when we told him which streets to avoid and how to get here with the least trouble possible. Then again, he worked with Minerva. He had to be used to psychic teen girls by now.

The Alcott’s lived in the affluent part of town, no more than maybe a mile from my... from where Carol and Mark lived. The preadolescence girl, Dinah, was shaking as Taylor carried her, bridal style. I’d done what I could. Except for her insistence that I do not treat her withdrawal symptoms. Purging the drugs and healing as much damage as I could, yes, but she wanted to go through withdrawal.

It seems there was a nearly 70% chance of relapse, had I ‘cured’ her completely. Less than a 10% if I let her suffer through it. She was a brave, brave child. I couldn't help but admire her. She was strong. Even as she shook so hard I was afraid she'd damage something, clinging weakly to Taylor.

It had been decided that I would be the one leave the vehicle and knock. Dinah was scared, and Taylor was doing everything to comfort her. Stockholm's syndrome? No, not quite. It reminded me of stories about people who survived the concentration camps. How, after they were liberated, many of them were afraid to leave. They’d become so accustomed to horrors they witnessed... that the outside world had become more alien and frightening to them than the hell they had lived through.

That, and I was one of the most capable healers in the world. Even if my bedside manner was comparable to Doctor Frankenstein. Chances were high that Dinah's parents would listen to me more readily than to a known supervillain.

I tried the doorbell. There was no sound. Or lights. They were home- if they weren't, Taylor would have known before we even left. So I simply knocked on the door.

It took a minute, and I was about to knock again when a man opened the door. I recognized him, vaguely at least. Older man, heavy set. Dinah got her brown hair from him, even if his was thinning out and going gray.
"Mister Alcott," I started. He wouldn't recognize me in my new costume. "I'm Gaea. Better known as Panacea." Although that's going to change quickly.

He hesitated. "Uh... of course... what brings you here?"

"We found Dinah," I answered. Not entirely untrue. I, at least, had met her exactly once- under an hour ago.

Not turning away from me, he shouted, “Anna!”

His wife appeared in the doorway to one of their interior rooms, peering out into the hallway toward me. She reacted as she saw me. “Please,” the mom said. “Where is she?”

“Before that,” I said, steeling myself for this, and cursing Coil with every word. “She was kept as a prisoner by a supervillain. As far as I could tell, she wasn't molested. She was kept drugged. To control her. I've done what I can to help her, but she'll need time to withdraw, and then she'll need to recover from partial malnutrition. On top of that... the psychological effects of the drugs will remain. She should be kept away from narcotics or tranquilizers under any circumstance, or she risks a relapse.”

Mrs Alcott whimpered in distress.

“She’s an addict?” the dad asked.

“Yes. There's nothing that can be done about that. She also needs to be watched in case others will try to abuse her power”

“She has abilities, then?” the dad asked.

“Precognition,” I answered. "One of the most powerful I've ever heard of. Do everything you can to hide just how powerful she is. There are people who would stop at nothing to have that kind of power. And that includes the Protectorate. Keep in mind that it'll be at least a week before she's physically well enough to use her powers again at all. And I'm not going to begin to guess how long it will be until she recovers emotionally. Keep her safe. Let her know she's loved. And don't let anyone talk to her about her power until she wants them to."
"What about the man who already kidnapped her once?"

"No longer a threat," I answered. "Please don't make me elaborate."

“I... I understand,” he replied. No, you really don't, I thought.

Taylor already knew, of course, that this conversation had come as far as it was going to.

She stepped out of the car, carrying a mumbling Dinah. I was too far away to hear the words. Which earned a brief moment of annoyance: in my Changeling, I could have heard it with ease. But I knew better than to rely too heavily upon them. Even more now that Riley had taken to upgrading the things.

Mrs. Alcott made a noise somewhere between a moan and a cry as she pushed past her husband and I. Rushing to take Dinah out of Taylor's arms. The little girl was instantly clinging to the mother she'd spent so long without. Her father only a step behind, wrapped his arms around them both. A family reunited. For a moment, they'd forgotten everything in the world, including us.

Taylor stepped back, giving them space as I had.

I moved to walk through the lawn toward the car. They didn't need us here, and I was glad for that.

"Wait," the dad called out. "Is there anything we can do to thank you?"

Words I'd heard often enough, as Panacea. This is the first time in years they actually meant more than just words to me. And it was the first time I was going to actually make good on that offer. I pulled a card from a pocket in the green robe that was my new costume. "This is in case you need any help protecting Dinah. And, there's no way to say this without it sounding selfish, but could you see that the mayor gets the number and calls us? Without telling anyone about it. It's important."

"I..." he looked at me. I had to hand it to the man, that he kept enough of a head on his shoulders to try and calculate what our angle was. I wasn't insulted, given it was both justified and true, to an extent. "Okay, I can do that much."
I had to wonder if that would cause some friction in the family. Hopefully once they knew the full story they'd agree that this was justified.

Skitter was already in the limo when I climbed in. I sat on the other side, facing toward her. She looked as miserable as I felt.

"Are you okay, over there?" She asked.

"Not really. I know what we did was a good thing, returning her to her family, but then I feel like shit for using it to advance our own agenda."

"I... was more caught up in how we're throwing away access to one of the most powerful resources on the planet. How tempted I was to fabricate an excuse to keep her. Wouldn't be all that difficult, y'know? The way she clung to me, it wouldn't have been difficult to convince her to stay with us."

"But, you didn't," I said. "You're a better person than you give yourself credit for."

"I guess," she responded, removing her face mask. "I'm just... seeing Dinah's parents like that. A family that, at least for a moment, was legitimately happy? I couldn't help but think of how much pain I must be putting my father through right now."

I lost it. I didn't whimper. Didn't sob. I don't think my expression even changed. But the tears came just the same.

Her eyes widened. "Oh god! I didn't think! I was so caught up in my own problems that I forgot!"

She basically jumped across the gap to sit next to me.

"God, I am such a bitch." She said as she pulled me against her, resting my head on her shoulder and holding my hair in her hand. I could smell Dinah on her. Weird how that's what I noticed. "You were trying to make me feel better and I didn't even think about what you must be going through."
"It's okay," I mumbled into her, I didn't lift my head.

"So, still think I'm a good person?" She asked after a couple minutes.

I gave a half hearted laugh. The tears, at least had stopped. "Yeah. I also think you give really good hugs."

She returned the half laugh. "I got it from my mother," she responded.

We stayed like that, silently, for the rest of the ride. If our driver thought anything of the scene going on in the back of the vehicle, he made no indication of it.
Chapter 13

Chapter Notes

The A/N's here are TanaNari's not mine

Preemptive author's note. Those with weak stomachs might not want to read the third to last paragraph. When you get to that point, just skip to the next line. Refer to the A/Ns for a more pleasant summary.

=================================

Amelia, Ch 13- Coil Interlude

"Good morning, my pet," I said as I entered Dinah's room. She'd taken to remaining dressed when she went to bed. A matter of not wanting to be caught changing when I came in to ask her questions. That is a good sign- it means the drugs are keeping her controlled, while still leaving her self aware. Much better than some of the early formulas that left her bedridden and in need of diapers.

"My usual questions, pet,"

"Sixty seven point three percent chance there’s any problems here in the next hour. One hundred percent chance there’s any problems before lunchtime."

She frowned. "One hundred percent chance there's any problems in the next hour."

What changed the numbers so suddenly?

"Twelve percent chance there's any problems in the next hour. Seventy three point four percent chance there will..."

This was going nowhere. Some kind of anti-precog? We had confirmed that Dinah simply could not use her powers to view Scion, Endbringers, and Eidolon. There was no reason not to believe there might be other, less known, powers with a similar ability. "Chances I'll survive and be able to continue by grand plan?"
"Ninety nine point six six percent."

That was good news, at least.

"Sir, we have a problem," came the voice of one of my men over the intercom.

I had just finished breakfast. Ordinarily, I might have closed the other timeline just then. But I needed to learn what the trouble was, first. Someone attacking at my base was either extremely confident in their power, or entirely suicidal.

And then the shouts came from outside. Three of my men were under attack. Exact same moment as the attack to my base. Maybe they had learned my patterns. A thinker of their own? Precogs were notoriously bad at predicting other precogs, even if Dinah seemed unphased by most.

Two women. They had dispatched my men with ease. I looked at them. Skitter-Khepri- her costume looked similar in terms of design, but was colored of metallic blue and gold. And Tattletale. Wearing themed leather armor that was feminized a bit too much to look historical, but not enough to look trashy. I only recognized her by her face. I hadn't known she’d joined Pantheon. I hadn't known she was still alive. The Travelers told me she died. Those traitors!

Two women. They were decimating my ranks. Khepri walked casually, shrugging off bullets. Climbing to her feet when she was taken down by one. My men didn't even have a chance to scream before they dropped. Except the unfortunates in the biohazard suits. She had a bug that was literally slicing the protection in half and allowing the swarm inside.

The other, Panacea. Gaea. Her costume- the brown body suit and green toga style dress that- was alive and doing most of the work. She was fast and strong enough to give most Brutes a run for their money. She could dodge bullets, though clearly didn't need to. Her costume lashing out with vine whips that carried enough force to break bones and fine enough control to pull weapons out of peoples' hands. Most frightening: she was able to melt through steel walls with a touch. Bypassing every defense. I would be heading for the escape tunnels. Except that I couldn't.

Two more women already stood there waiting. Another Khepri, watching passively with dead eyes. The other, I didn't recognize, she had a grin far too cheerful and innocent for the cleaver-like weapon she carried. Another Brute of some power, that weapon was comically oversized and must have weighed over fifty pounds, and yet was being carried like it was nothing. They only waited by the exit.
Then Khepri and Gaea were at my chamber.

//

They were in my kitchen. Khepri watched from the door, the same dull expression as her other two copies. Strangely, there was no alert from the base. Meaning they had not attacked it. How did they know?

Tattletale smiled a far, far too self satisfied smile. "How's the other timeline, Coil?" She asked.

"You don't already know?" Well, that was interesting.

"That badly, huh? Tell me, have your men at least fought back well enough to force them to call on the reinforcements? No? Well that's a shame. I'd have loved to see your reaction to plan 'B'. And plan 'C'. Especially plan 'C'."

I considered collapsing this timeline, just so I wouldn't have to deal with her.

//

Gaea extracted a cell phone and set it down on the desk in my chamber. There was a flicker, and a lifesized 3D hologram of Tattletale, in costume, appeared. "Hey, Coil, how's the other timeline?"

She paused. "Oh... I already did that one. And the backup plans. Dammit, I am so inconsiderate to myself."

So much for escape via alts. I glanced at the dead-eyed Khepri.

"Ah, you're wondering about her. We're trying to build up a way for Our Lady of Orwell and Kafka's Nightmares to maintain multiple humanoid bodies. Unfortunately, we haven't managed to work the bugs out. Haha! Get it? Bugs."

Oh god. Kill me now.

//

Another cell phone- or was it the same one?- had been set on my table, showing a hologram of Gaea.
"I just told the bug joke, didn't I? I did! Oh, that is so fucking cool!"

A child's voice could be heard yelling in the background of the phone. "Hey, stop swearing! It's crude!"

"Later, third scariest thing in the room with me. I'm having an alt-reality conversation with myself! Hi me!"

Indeed, she was. In the other timeline, she'd just responded. "Hiya! So what do you want to talk about?"

"Umm... I dunno... this is, like, a historical first. It has to be something truly special." "I have an idea," Her 'other' voice dropped into something low and sultry. "What color underwear are you wearing?"

Tattletale- the one in front of me, this time, giggled. "Ooh, you are dirty. But don't go starting that. We both know how Coilcast likes to drop calls."

I growled. "Okay, you've proven your point. Get on with it already!"

/I growled. "Okay, you've proven your point. Get on with it already!"/

"Very well," both Gaeas said at nearly the same time. "Thomas Calvert. Coil. You are guilty of crimes ranging from kidnapping a child to abuse her parahuman abilities, to murder, to treason. You have one of two choices to make, and no you may not make them both. The first: surrender and agree to work for us. In light of the dangerous nature of your power, you will accept a surgical implant that will prevent you from betraying Pantheon or any of our interests. If you accept, you will be allowed to continue much as you always have been, but supervised by Pantheon."

"It's going to be so cool working with a power like yours!" The child voice shouted- in both timelines again. "I can create a system to read the subprocesses in your ner-"

"Your other option, available at any time," Gaea continued, interrupting the girl. "You may reject our offer of work leniency and be free to leave. However, due to the nature of your crimes and lack of remorse, you will be stripped of your powers permanently."
She took a breath. "In both cases, your gains will be examined and potentially confiscated. Specific details will be discussed later."

In my kitchen, the Gaea hologram continued. "We'll be keeping this timeline. You have five seconds to collapse the other, or you'll discover what plan 'C' is."

"Goodbye, Me," Tattletale shouted. "I'll remember our love forever!"

"I'll cherish you for the next two seconds!"

I resolved to keep the 'base' timeline active through whatever they attempted. They weren't alert, and I had my hidden gun. It should-

Then I started screaming. In both timelines. I didn't care about the lack of dignity. I didn't care that I had started to vomit, that my fingernails dug deep enough to peel skin as I scratched at my arms. THEY were growing inside me! Thousands of them! Horrific albino pale worms in every possible part of my body. They had burst forth, sending white hot agony throughout my body. From my tongue and my throat and my hands and my arms and my face and my... oh god, they're still in there! Able to come out at any time like they had in the collapsed timeline. I don't know how they got them in me, but they had to have been breeding.

The little girl let out an excited squee. "Oh wow, I'm so glad you didn't listen! Think of all the valuable data I'll be able to collect on you power interacts with your neurochemistry from this!"

All I could do was whimper and beg the three girls. "Take them out, please, I'll do anything. Just take them out of me."

======================

A/N- Guinea Worms. Only very slightly modified. Because why settle for bug armies when you can have bug infiltrators? Also- do not google the nightmares. *shudder*
"Okay, babies, dinner is served," Bonesaw sang cheerfully. 'Babies' in this case were tiger mosquitoes. 'Dinner' was a petri dish of synthetic blood infused with modified Guinea Worm larvae. Or... well, a lifeform based on my memories after I'd treated a few cases. I doubt they'd fool an expert.

Then they were modified further by Bonesaw to have a wider range of senses and a crude sort of telepathic link to one another. I included a modification that ensured only one could reach the adult stage and produce eggs. And even it was less than a quarter the size of the real thing. The rest... would reach only a bit more than an inch long. But there would be several thousand of them when they reached critical mass in two days. Then they'd stop reproducing until the population dropped.

"I can't feel them," Taylor informed us, even as she made the mosquitoes drink from the blood.

"You're not suppose to be able to," Bonesaw replied cheerfully. "I've been studying your power." She pointed excitedly to one of the several computer screens she had set up. "You're like a radio receiver. Or, maybe more like an eye. You can pick up a pretty wide range of signals, but there are others which there's no reason you can't see, except that you can't see them. Like skin mites. There are millions of them on every human being. Well, except for my big sister, of course."

She looked at me with what could only be described as adoration. I cringed. Really wish she'd stop with that. But being the one person alive that she wouldn't take apart and reassemble like a lego set was probably worth the discomfort. Keeping her from doing that very thing with others was more worth it.

"Okay," Taylor was now in thought. "So... why can't I sense those? It would be really helpful if I could."

"Dunno. Yet." Bonesaw continued, as her eyes went back to the petri dish. "Maybe you just can't. Like humans can't see microwaves. Anyway, thanks to the changelings I've been toying with, I figured out how to set to a third frequency. Outside your range and different from the one they're using. But still able to piggyback off the relays Gaea set up to extend your power through the city. And they're tied up to my computer system, which will record every physiological and neurological detail here."

She tapped one of the screens and it powered on, showing a bunch of numbers and symbols. "Convert it to a 3D map here. She tapped another, which showed a wire model of a human body.
Create datapoints over here. A third screen, a series of screens resembling an ECG or seismic reader. This is a sound translator that'll let me interpret everything he's saying. And over here we have...

"All kinds of other tinker toys," Tattletale spoke up, interrupting the child monster's explanation. "But back up a second. Are you saying these things can hear?"

"No, not at all," Bonesaw corrected. "They can feel every movement of his lungs, diaphragm, throat and mouth and translate it into a moving 3D model. From there, it's really easy."

....

"You have to come see this!" Riley shouted. At six in the morning. She had rushed into my room and was literally started jumping on my bed. I muttered something, and immediately forgot what. "It's really really important!"

I forced myself out of bed and walked to her lab. Tattletale was already there, looking an awful lot like I felt. She had taken to staying with me and Riley. Pretending she was dead meant she couldn't really go outside. Until after Coil was dealt with.

"Why does Taylor get to sleep in?" She whined when she saw me.

"Nope, I'm here," One of the Taylor changelings stumbled into the room. "Too early for this."

"I keep telling you that you should let me install the no-sleep upgrade into all of you. Jack said it's my best- oh, sorry. I shouldn't talk about him."

"Doesn't matter," I interrupted. "So, what was so important."

"I got one! A recording of a full alt timeline!"

That woke Tattletale up at least. "No fucking way! How did you pull that off?"

She beamed like Christmas had just come early- entirely forgetting to notice Tattletale's casual
profanity. "See, right here?" She pointed at a computer chart I couldn't hope to interpret, sitting next to a wire model of a brain. "There's a spike in activity when he activates his power. I wasn't sure at first, but it was followed by a series of anomalous emotional responses and neural activity.

"Which means?" Lisa prompted. We had discussed it earlier, and I had been warned to NOT reveal to Riley when I didn't know what she was doing. The girl was building me up the way she'd built up Jack. A god. More than a god. A parent as seen through the eyes of a five year old. The responsibility was terrifying. So Lisa and Taylor would play the 'ones who don't get it' for me, whenever possible. It helped that they really, legitimately, didn't get it. And I at least sometimes did.

"It means he feels everything happening in his alternate timeline! Every emotional event carries over and influences subconscious and physiological responses in both!"

"Okay, that's something we can definitely use," Lisa answered.

"The emotional information crosses over instantly. But, it's weird. The memory centers of the brain wait until much later, only responding after the alt timeline collapses."

"So... we know how the timelines work well enough to predict and potentially counter," Taylor concluded, having woken up enough to really participate. I, however, was still wondering if it was possible to create an organism in my own stomach that did nothing but produce caffeine.

"More than that," Lisa said with her foxlike grin. "I know how we can throw him off balance and force him into following our script. But first! I need to write a script!"

....

"That's strange," Minerva muttered, watching the screen. I looked up from the book I was reading on theoretical alien ecosystems. Some of the stuff in these was great for ideas. "Riley, come look at this!"

The little girl shouted back. "But I'm working on the fabrication pod!"

Another of our joint projects. Functionally like a biomechanical womb to mass produce whatever we needed. I'd still have to construct the original, but afterward, the pod would be able to scan it and build biologically identical copies at our leisure. It'd be really nice not to have to have to waste two
hours every time Taylor managed to get one of her copies damaged beyond what I could mend. How does one person manage to lose limbs so easily?

"That can wait, I can't figure this out!"

"Oh, fiiiine, but you owe me an icecream!" Bonesaw whined.

"And you owe me a total of twenty seven hours of sleep!"

Riley walked in, looking an awful lot like the first time I met her, in child sized surgical scrubs and an apron. Only, this time the spatters of fluid on her clothes and in her hair were varying shades of green instead of red. She leaned over Lisa's shoulder. Lisa visibly cringed when some of the goop fell out of Riley's hair and landed on her shoulder. It proceeded to ooze its way down her back.

"Huh. That is strange. Adrenaline, endorphin spike, testosterone, looks like..." Riley paused and then managed to look sheepish as she whispered. "I think he was having ess-ee-ex."

Not something I really needed to know.

"Oh," Lisa responded, then paused. "No. My power's telling me that's not it. Similar. See the peaked aggression. And I've been around him. There's no one in the building that he's indicated that kind of... familiarity... with. And he collapsed timelines too recently to have brought someone in."

"Oh god, I can't believe I have to be the one to say this," I groaned. "But there doesn't necessarily need to be someone in the room with him to explain that."

"I..." Lisa frowned. "Still don't think so. This seems more like... an addiction?"

Riley grabbed the mouse and started moving things. She was now pretty much dangling on Lisa's shoulder. "That would fit most of the data."

Time for me to volunteer again. "Maybe he has drugs he only takes in timelines he ends, so he can enjoy the high without suffering the consequences? I could imagine someone doing that with Coil's power."
Lisa continued frowning. "I don't... know what? It really doesn't matter. What does matter is we know just how closely tied the two bodies are, in spite of separate timelines. Now all we need to do is make him upset and frustrated in both, and I'll be able to figure out what my alternate self is currently up to."

"In other words, you plan on doing what you do best."

"Not only that. I plan on doing it twice at the same time while metaphorically blindfolded from miles away," She laughed. "It shall be the highlight of my career."

....

"Okay, everyone's in position," Taylor told us. We were all sitting in the sewer-basement. She was the only one who wasn't wearing the newest iteration in what had stopped being a cocoon and become more like a virtual reality suit. Tattletale also had a couple computer screen interfaces that were designed to show us the important information about Coil's body. That, plus what information she could acquire from her own puppet, and the hologram tinker video phone thing we'd purchased, meant she was poised to watch Coil from on multiple levels.

Taylor muttered to us. "You know I'm going to mostly useless split three ways like this. I have to manage every movement of these puppets manually when using them like this. It's a royal pain in the ass."

"How do you think I feel? I have to fix the things after you break them."

"Okay, he's now asking Dinah questions in his other timeline..." Minerva said, interrupting us. "Oh, shit, she predicted us! Operation's ab... never mind, she changed it, we can... and it's changed again..."

"Too late now," Taylor said, her voice going cold. She'd switched to 'Skitter mode'. "We're already committed, we attack now."

I felt a cold thrill run down my spine. This was going to be epic.
As it turns out, 'committed' in this case meant Riley and I sat around doing nothing for a while. Minerva went full Tattletale on Coil. I read him his rights, such as they were. And it was all quite boring.

Minerva assured us that the other timeline was a complete and total curb stomp. I didn't even need to use my Yggdrasil for the battle. Though Coil was stupid enough to let plan 'C' happen in spite of the warning.

Riley spent the next four hours studying everything.

"So, Coil, how are you feeling?" I asked. I felt kinda stupid asking that, but it had been a weird day. We'd delivered Dinah home. Coil had given the orders to let us do so. His men didn't seem happy about the whole affair- but they didn't do anything about it. Of course, it helped that we made it clear just how utterly they'd lose by having Khepri use her new tranquilizer mosquitoes on many of the guards. Harmless enough, all considered. And fun to watch. They knew they were hopelessly outclassed.

"I feel well enough," he answered. Rigid. Calculating. We hadn't stripped him of free will. For the most part. I had a hand on his arm. It was one of the three lie detectors we had focused on him right now. On top of a system that meant he couldn't lie to any acknowledged Pantheon member.

"Do you feel about giving up Dinah?"

"I... would have preferred to keep her. But I believe cooperation with you will prove far more effective and profitable in the long term."

Good enough, I suppose. The man was as unrepentant as Riley, and didn't have any of her excuses. His choice of a serpent as his theme was entirely appropriate.

"What about betraying Pantheon's goals?"
"I wou..." He paused and his face scrunched up. I saw all the signs of confusion. "I apologize. It seems I forgot the question."

Holy hell. Riley not only implanted a system that would keep him from betraying us... it would keep him from even being able to think of betraying us, or realizing that we'd done so. Well played. A horrific violation of free will, but incredibly well played.

I soothed my conscience by remembering that every year we would deactivate the device and present the same choice as today- he can stay in a position of working with us. Or he can surrender his powers and be free to leave.

But, honestly, his goals mostly coincided with our own. He was intent on taking leadership of the PRT and creating a sort of parahuman golden age. We were intent on seeing the corruption purged from the PRT and Protectorate, and justice done for those who warranted it. Motives differed. But I could live with that.

I could live with a lot of things, these days.
With Coil 'dealt with', we were free to act openly. Our main fear was he'd leave the state. More for his sake than ours, as we'd gotten those horrific parasites in him within the second day. There were at most four healers on the continent that could have saved his life once they went active. Two of them were on our team. Granted, they'd never be able to breed or jump to a new host- but they would have destroyed him.

"I really think we should focus on Noelle first," Trickster said as we walked down the hall. Coil's guards eyed us as we moved, but took no action to stop us. We pretty much had free run of the facility, now.

"Krouse," the small blond girl with us said with a disapproving voice. "We know we can fix Jess. Noelle is still an unknown."

The man muttered something I couldn't hear- again the annoyance of a natural body, as opposed to the constructs that were fast becoming more Riley's project than my own.

We reached the 'wing' that had the Travelers' quarters. The blond, Sundancer, knocked. "Hey, Jess, we've brought her."

She looked up at me. I could tell she'd been a paraplegic for a while- that kind of complete atrophy takes time to occur. Most of her life, at least.

"Hey," she said as she smiled at me. Aside the legs, she was a rather unremarkable looking girl. "Gaea, was it?"

"You can call me Amelia," I replied.

"I'm Jessie," she answered back. "So, how does this work?"

I smiled at the girl, even if my thoughts had drifted. "Well, have to ask one question first. Is your
disability related to your powers? It happens sometimes, and that is a lot more difficult to repair."

"No," she responded. "I was born like this.

"The other question is, how much do you want me to repair? I can give you use of your legs easily enough, but the years of atrophy... either I alter your metabolism and you can regain strength naturally. Or I can fix it wholesale, but it'll require a lot of raw biomass, and it'll hurt like hell as everything is forcefully reshaped. And I can't simply turn off your pain receptors. Not for something like this, where your body doesn't already know what 'healthy' looks like."

She looked me dead in the eyes. "I've endured enough surgeries to write my own medical textbook. Trust me, I know what pain is. Hit me with everything you've got, I'll be fine."

"Okay. One step at a time, though," I put my hand on her arm and reached out with my power. I didn't do much healing anymore, but I dipped into her brain as I'd begun doing with every parahuman. Something happened to me, I was certain of it now. Something broke inside me. Or, more appropriately, something was fixed. With everything that happened after Victoria died. It altered me on a fundamental level. And that change freed me from some of my Passenger's power over me. They were... alive. Dormant. Sleeping. But alive nonetheless. I could see them now, though my powers could not touch them. And I knew I wasn't suppose to have that knowledge. They were afraid. Didn't want us to see beyond our petri dish.

I was a mistake. And they, for whatever reason, hadn't realized something went wrong with me. But talking about it with the others was useless. It was like what Riley had done to Coil. They simply couldn't think about it. Just as I used to be unable to scan into brains- I made excuses about it, invented reasons why I wouldn't. Much as Coil was inventing reasons why he was okay with what we had done, and were doing. Convinced by Riley's Tinkering that it was all part of what he wanted, instead of what we wanted.

And now I was looking at Jess. Genesis. Every part of her neurology, including the source of her powers. The Corona Pollentia. And... what?

"You're a Case 53?" I asked, before realizing what I'd said.

"What? No. Why would you think that?" The girl's emotions spiked. Fear? Not quite. Paranoia. I was getting good at this emotion reading thing.
"Your powers are..." I frowned, how to explain this. "They're... different than most. They're similar to the Case 53s that I've examined. Was there something unusual about how you obtained them?"

Trickster answered. "No. Sure, something went wrong with Noelle's power. But that doesn't..."

"Seriously, Krouse?" Sundancer interrupted. "Considering what she's doing for us? We might as well just come clean about the serum."

I froze, and then spoke. "Of course. Cauldron."

"You know about them?" Jess asked, shocked.

"Not a lot. They're responsible for the monster capes. And they've been selling powers in a vial. Or so it seems."

Sundancer sighed even as Krouse muttered something that I'm sure was a curse. "I guess that explains what Noelle is. One of the monster capes."

"It would explain the existence of the case 53s. Selling powers makes sense. Up until now, we weren't sure the point of Case 53s. They might, like Noelle, be accidents of some sort."

Jess nodded. "The stuff we took had a seven digit price tag. And it came with a warning that it might cause mutations."

"Usually they've had their memories erased, somehow. I take it that's not the case with Noelle."

"No," Trickster answered. "But we sort of... we weren't who the vials were meant for."

The girl whose arm I was touching just had an emotional peak. Not a lie, but there was something about her teammate's answer that she felt wasn't quite true. "I... see. Know how I said we weren't going to expect a payment? That's changing. After I get done here, you're going to get together with Tattletale and answer every possible question she can think to ask. We've been looking into Cauldron since before Pantheon was even formed. That is acceptable, right?"
Jess nodded her head and Sundancer answered with a "We can do that, right Krouse?"

"If it means Noelle is fixed, I'll do anything," Krouse responded. "Besides. It's their poison that did this to her in the first place."

There was that emotional jump again. Something left unsaid. And... anger? No... disgust. Contempt.

"Well, I've figured out the basics. This will only take a few minutes. Sundancer, Trickster. I'll need you to hold her down."

My costume's vines wrapped around Jess and moved her to the bed, as her teammates moved to either side. Most of the toga-like outer layer of my costume started pealing off as they wrapped around her legs. It was enough mass to bring her up to a healthy- though definitely not athletic- mass and density. They were, of course, made from the same Yggdrasil as everything else I was using of late.

They wrapped tight around her atrophied legs, and then started piercing into her flesh and pumping their mass into her. Making them, by whatever bizarre definition my passenger was using, a single lifeform so my power could interact with them both. Jess had a remarkable tolerance for pain. But this was the easy part.

My cloak-cum-symbiote was quickly converted into some semblance of human flesh, and I began binding it, inch by inch, into her existing bone, muscle, circulatory system, skin, and nerves.

That's when she started to scream.
Chapter 16

By the time we had made it to a very well fed Noelle's chamber, Jess was walking on her own, if poorly. She leaned on the rather smaller Sundancer to help her balance. Her new legs were more than reasonably strong, but she had never used them before. It would be some time before she made up the skill.

I was already prepared for Noelle to be a monster, when the smaller reinforced door was opened. But I wasn't prepared for just what that meant. Her lower body looked like nothing more than some freakish sandworm monster. Gnarled, misshapen flesh, eyes randomly parsed across her body. Multiple mouths, also without any rhyme or reason. She was massive- easily larger than Crawler, which she uncomfortably resembled. Larger than Leviathan. Maybe even Behemoth.

She wasn't nearly as intimidating as the Endbringers, however. Her body was less like a god's personal killing machine, and more a piteous thing from some movie about post apocalyptic mutants. On top of all this was a girl. Hooked into the rest like a centaur of sorts.

And Riley. Who had somehow climbed up the monstrous mass. She was currently sitting next to Noelle on the top, and had handed her an oxygen mask to hold while she set everything else up. Noelle's mass would make the rest of this kinda difficult. And Riley knew more about this than I did.

We'd altered her appearance- or at least that of her changelings. Black straight hair, now. Adjusted to appear as a teenager, of some combination of racial characteristics that'd make it hard to decide if she was Asian or Hispanic. It's not that we didn't trust the Travelers. But we really did not trust anyone when it came to this. 'Hey, we have a pet Bonesaw in our basement. You don't mind that we're sheltering one of the most notorious and dangerous serial killers in the country, right?' Yeah, that'd go over real well.

"Be careful down there," she shouted to us. "The flowers have teeth."

I hadn't noticed them before, but there were a number of plants sitting in pools of random goo distributed near Noelle. I move a little closer and one of them hissed at me.

I quickly stepped back.
"I've never seen her power do that before," Trickster replied. "She copies people and animals, as I explained. But plants? That's new."

"It... that's probably our fault," I answered. "She's using a sort of remote controlled puppet I made. It's made of vegetable matter, mostly. We thought it was safer that way. Fewer people who could get hurt."

Trickster shrugged. "That's a good idea. Marissa, would you mind clearing them out?"

The miniature sun that was Sundancer's claim to fame flickered into existence near the plants, and I watched them shrivel, die, and then promptly burst into flames. "If only it were that easy every time," she muttered sadly.

I looked at Noelle. "I don't know if they told you what this would require."

"My powers are going to be taken away, of course," she replied. "Good. I don't want them. I never wanted them."

"That, yes," I responded. "And possibly more. I won't know until I try."

She sighed. Through all of her mouths. The already rancid stink in the air got worse, bad enough to bring tears to my eyes. "If you can't fix me, then I want you to kill me."

Trickster moved past me, "Noelle, please! You're not thinking straight."

"SHUT UP, KROUSE!" The mouths shouted. It worked. He stumbled back. "I... I've given this a lot of thought. I've had years to think about it. This is my last, best, chance. Clarice says her anesthetic will probably only work on me once. I want it clear. I either wake up normal, or I don't want to wake up at all. Can you do that for me?"

I hesitated. For everything I'd done... killing someone... sure, it would be simplistic. Even with her mass, it would probably only take seconds. "I..." ultimately it was easier for me to lie. I was good at lying. "You won't wake up a monster."
Riley, or Clarice, if you preferred to use her new fake name, finished setting up all of her equipment. "Okay, just remember to breathe really deeply and count backward from ten," one monster instructed the other.

Noelle started counting, and Riley took a running leap off the side of her body, spreading her arms and legs out and landing belly flop style on the concrete. She climbed to her feet. "Durability stress testing," she stated, as if that explained everything.

I placed my hand on the already unconscious girl's body. Everyone tensed, ready to destroy a clone if one appeared. But that didn't occur. Whatever Riley did, it worked. I expanded my senses into Noelle. And almost screamed.

Her body wasn't trying to become an Endbringer, like the Travelers suspected. It was trying to become a Passenger. Or... trying to become a Passenger... that was trying to become a person? I didn't know for certain, it was so very alien. Following biological rules I hadn't realized could exist. Drawing mass from other dimensions to construct itself. Or, I had to guess that's what it was doing. The mass was coming from somewhere, and it wasn't just her diet.

She had no less than two Corona Pollentias. And one had grown to twice the mass of a normal human brain. It was contained somewhere below one of the constructs in her lower body that superficially resembled a stomach. It was rendered inactive by Riley's chemicals.

I got my first true look at it. Not too different from an ordinary human brain. It even had the cerebellum structure in the Gemma, although it was a single mass instead of a pair of lobes. And it didn't behave like a normal brain behaved. It was closer to the nerve bundles I used to control my puppets.

I started separating Noelle from the monster beneath her. she'd have to live with not having legs for at least a little while. The corrupted tissue beneath was not something I was willing to use to rebuild her. It was... I wasn't certain what it was. Like some kind of sapient tumor.

And then it moved on its own. Riley's drugs had rendered Noelle unconscious, but not the monster beneath. One of its limbs swung toward me- too fast for me to avoid. I felt a tug and was thrown back, out of reach. Riley had pulled me out of the way, only to be batted hard enough to fly into the concrete wall twenty or so feet away. She dropped, the impact force was enough to kill even a changeling.

Fortunately, it was just a changeling. Taylor went through them all the time. But *I* was actually here in this room with that monster.
"Noelle?" Trickster shouted at the rampaging thing. "Please! You have to calm down."

She's not in there, I thought. That thing, the Passenger, that was all that was. Riley's concoction had backfired. It would have worked on a case 53. It would have worked on a parahuman. It only make things worse for Noelle.

I was moving even as she approached Trickster and the other two. Jess had fallen and was trying to crawl away with Sundancer's help. They wouldn't make it in time, and Krouse was too stupid to even try.

It was distracted. And that's what Noelle had become, an it. I had to convince myself of that for at least the next three seconds. I made contact and reached out. My power... I had never used it like this, but now I didn't have much choice. I couldn't afford to be picky or specific. I didn't bother trying to create. I simply destroyed. Her nervous system, converted instantly to barely organic goo. She was paralyzed, but regenerating. The circulatory system, I replaced with digestive enzymes and acids. Regenerating. Nervous system again, converted to tree fibers, if only to block the regeneration. It worked for all of five seconds.

Which was enough time for me to target the Corona Pollentia. I shredded it entirely. Down to the last cell. Cutting off whatever part of its nature allowed the Passenger to reach through into this world and grant powers.

And with that, Noelle was no more. I slumped to the floor, covered in the goo that was once a monster that was once a girl.
"Why did I ever agree to this?" Taylor moaned beside me.

"Because it was Minerva's idea, and you do absolutely everything she says because you're hopelessly in love with her?" I replied.

Next to me, Riley snickered.

"If she did everything I said, we would be several hundred miles away from Brockton Bay at this moment," Lisa muttered.

And above us, our doubles were the guests of honor at an outdoor press conference. It had been eight days. Eight days since Victoria died. Eight days since Taylor and I formed our alliance. Eight days since I became a premeditated murderer and had added one of America's most terrifying parahumans to our team, alongside the person I hated most in the world. And in the last week, we'd committed a horrifying violation of human rights and set ourselves up to be entirely capable of being more dangerous than Heartbreaker and Nilbog combined.

The good we'd done. Rescuing Dinah, harnessing Coil, curbing the activities of E-88, the fact that my murder was Jack Slash... did all of that balance out the bad? I couldn't say. I was still frustrated by our continuing failures to cure Noelle. I didn't even have the benefit of knowing exactly what I'd done wrong. But at least she never knew. We'd try again later.

But I would see justice done for my sister. The PRT's crimes would be publicly exposed. We would protect this city, and we would do it in spite of those claiming to be heroes. Really, it was becoming far more than that. Dinah's predictions of the End of the World meant we had a planet to save. But that was more than a decade away from us.
Today we were being honored as heroes on a hastily set up stage right next to Crater Lake. Not very far from my new apartment, actually. I'd learned that Coil and Lisa had purchased almost all the land surrounding the hole already, in anticipation of it later being far more valuable. In... oh, about an hour.

"So, tell me how you managed to make this happened?" I asked Lisa.

"Well, rescuing his niece made him pretty willing to hear us out," she responded. "But, truthfully? There's an election coming up and, after all the hell this city's been through, he has to look damn good or he'll never have a political career again in his life. Voters are willing to forgive acts of god and/or satan. What they're not willing to forgive is a leader looking weak and ineffectual."

"So he's using us to win a popularity contest," Taylor muttered unhappily. "Like fucking high school all over again."

"Swearing!" Bonesaw snapped quickly. At least she's getting better about it.

"That statement alone qualifies you for a bachelor's degree in political science," Lisa continued. "On the plus side this means all we have to do is smile, let the mayor's spin doctors make us look amazing, and let Coil's influence carry us forward after he forgets about us for whatever keeps his backers happy next week."

I sighed. I was with Taylor on this one. That was... depressing would be too kind a word. This 'use and be used' mentality was not okay. I'd have said something, but now was our time to play our parts in the sad world known as politics.

"So it is my honor to introduce Pantheon," the mayor said with a smile that might even be genuine. We were saving his career, after all.

We stepped up, smiling. "Thank you," I said as I took the podium. "It's no secret that I'm pretty terrible at public speaking," I said to the audience. I even got a couple chuckles. Panacea had always been the absolutely least approachable member of New Wave, when it came to the media. "As such, I believe it would be easiest to start by allowing my team to introduce themselves and briefly explain their powers. Starting with myself. Gaea, biological modification."

I stepped aside and Taylor took the mike. "Khepri," she started. "I can control bugs. Which, it turns out, is not as lame as it sounds."
She even did it without the swarm-voice. Our powers were already scary beyond all reason. Didn't need to add that dehumanizing element. She handed the mike off to Lisa and stepped off to the right, next to me, as the other two girls moved closer to the podium.

"Minerva," Lisa replied. Of all of us, she was the one most comfortable with the stage. "I have the ability to be lucky at guesswork. I'll spend most of my time playing dispatch for the others, so be sure and take a lot of pictures. They'll have to last you for a while."

She handed off to the final member of our current quartet. Riley's safe-to-be-outside changeling. "I'm Aceso," she started. "Mid level brute package coupled with a form of combat precognition and a few other minor tricks."

Yes. That was the closest we could get to making Riley sound safe, while still being true. Sorta. Turns out, the whole martial arts myth about being able to kill someone with a tap to the arm is damn close to true when you're a biotinker. That, and she'd done so many things to her personalized changeling that there was almost nothing left of my work inside it. It was more machine than anything, and qualified as a pretty impressive brute in its own right.

She handed the mike back over to me. Now we had functionally surrounded the podium, giving the reporters a chance to capture us all together.

"We'll be taking questions now," I said after they'd had a few moments to get their fill. It helped that none of us were actually on the stage. It helped that Lisa was telling us how to play to the camera from while we were all nice and safe. I pointed at one of the ones in the front row, at Lisa's instruction. She knew which reporters we should pick from better than I did.

"What do you call that vine thing that you have been using?"

Ah, the easy one. Thank you Lisa, for letting that start us off. "I call it the Yggdrasil. I've already provided all the documentation to the government about its function, but it is perfectly safe and unable to survive without me."

I picked another, second row this time. "Yggdrasil is a Norse icon, right? Are you worried about being associated with, or provoking, Empire Eighty Eight."

"They don't exactly have a copyright claim on ancient mythology," I replied. "Besides, E88 would
already hate us." I gestured over to where our 'obviously ethnic' Aceso stood next to Minerva. She waved daintily toward the crowd and their cameras.

Minerva spoke up. "It's true. I'm actually Jewish."

That earned a few chuckles. 'You are not,' The real me stated.

'You can't prove that, and neither can they,' Lisa replied.

'Whatever, moving on.' Above, I picked out another reporter.

"It's something of an open secret that you are Panacea, of New Wave. Did you have a second trigger? These new powers seem to suggest you have."

Ah, was expecting that one. "No. I have the same powers and weaknesses I've always had," I responded. "If you examine the records of the cases I've dealt with, it's always been known that I can manipulate life other than human. I just hadn't really considered how useful plants could be until recently."

"What about New Wave, aren't they a family team? Why did you choose to leave?"

Well, ouch. "I disagree with some of New Wave's policies," I answered. "And due to recent events, including the loss of my sister. It's... it's time for me to move on. Follow my own direction, instead of one set for me by others. I respect what New Wave tried to accomplish. And wish them the best in the future. But I believe Pantheon will prove better for me."

Pointing to another. "This is for Khepri. Much like Gaea, it's an open secret that you were Skitter, a member of the Undersides, a villain group. Why the change of heart? And do you expect that you'll be granted leniency for your previous activities?"

'What the fuck, Lisa?' Taylor hissed. 'I thought we were going to get the easy questions.' Her changeling simply paused for a second.

'We'll have to answer it sooner or later, and this is the friendliest group of reporters we will ever
encounter,' she said back.

Khepri stepped forward, taking the mic and letting me move to the side. "Yes. I was a villain. I hurt some and terrorized far more... and I am sorry. I won't try to offer any excuses, and I hope my actions in the future will prove I'm sincere. The name I chose for myself is a symbol of rebirth. And Pantheon is that for me, a chance to be reborn."

I came to her defense, of course. "Part of what Pantheon stands for is second chances. We've all done our fair share of wrongs." Mine worse than most. "The fact is that Khepri is here, trying to do the right thing, is enough to give her that chance. Speaking as someone who was on the receiving end of her actions as Skitter, and seeing what she's done to make up for it. I've already forgiven her." Strangely enough, it was actually true. I hadn't quite managed to forgive Lisa, mainly because I didn't think she was actually sorry about anything she'd done, but Taylor had been nothing but remorseful.

Beside me, the Mayor reached out. "If I may?" I handed him the microphone. "I have to agree with Gaea. It would be easy for me to hold a grudge, after the Undersiders crashed my last dinner party, but seeing what these girls have achieved in the wake of Leviathan and the Slaughterhouse Nine. As well as what they have planned for the future, I can forgive her as well. What our city needs now is to come together and work for the future as a community, not sink to petty recriminations."

There was some applause from the audience.

'That was his plan all along, wasn't it, coming to our rescue, right after throwing us at the bus like that?' Taylor whispered.

'Yup, pretty much,' Lisa responded. 'Had to let him do it. Too good a plan to let go to waste.'

The applause died and I was handed back the microphone. The reporter who asked that question of Taylor looked entirely too pleased with himself. Oh well. I returned the mic to Taylor. 'You should be the one to announce the next part,' I told her.

"Part of that atonement," she said after a moment. "Is the reward money and bounties for the death of members of the Slaughterhouse Nine. As one of the Undersiders, I have partial credit for Burnscar and Shatterbird. I have individual credit for the Siberian. And as part of Pantheon I have partial credit for Jack Slash and Bonesaw."

That earned some whispered conversation. Thanks to the construct's senses, I could hear them. None
of it was very interesting, almost all speculation on how the 'bug girl' could kill someone that had literally punched Alexandria's eye out. "It comes to a large amount of money. All of which I plan to use in the rebuilding and recovery efforts. I didn't fight the Nine for a profit. I did it to be a hero."

"Speaking of, most of Pantheon's work has been pretty below the radar when it comes to heroics. Is that going to change?"

"Yes, on both accounts," I nodded. "In spite of our ostentatious name, we believe in doing what helps people, not what makes headlines." We also believe in not attracting attention to the fact that we're S-class threats before we're ready. "I have used my Yggdrasil to clear out blockages and clean up hazardous materials. Restoring the sewer system to working order and undoing the damage which Leviathan had inflicted. Khepri has been using her control of insects to clear the camps and hospitals of disease carrying vermin. Minerva has been helping us by sending us where we're most needed, and planning our future steps. It's not the things that usually gets noticed, but it's what saves the most lives."

I paused. "Still, we're about to step up and start doing things on a more visible level. The first involves setting up a legitimate base of operations. The city has been kind enough to donate a small area for us to set up a home of our own."

"Where at?" One of the reporters asked.

"You're looking at it," I said, gesturing at the huge sinkhole. "You'll have to forgive me for letting my team handle the rest of the questions, but my power is touch range only, after all."

My changeling stepped off the podium as everyone watched, and walked over to the water's edge. Meanwhile, underneath, I was extending my control across my plants. I had tens of thousands of tons of raw mass to work with, but this hole was massive. Without the relay system, Taylor could not have influenced bugs on opposite sides of the shore at once. A testament to just how powerful Leviathan was. And how we were going to upstage him.

My copy stepped into the water, and the Yggdrasil poured out. It wasn't elegant at all, there really was no time for it to be. Ninety percent of the material I controlled was functionally vomited onto the water, flowing over it and forming root systems to reach the bottom. A dome of branches and roots formed near the center, creating a stout, wide building. Two stories high, a full city block in width. It wasn't the prettiest thing in the world, true, but it was ours. Trees sprouted up at intervals near the edge of the crater, blossoming and forming fruit almost immediately. Underneath the carpet of greenery, the Yggdrasil drank heavily of the water of the lake. It would be a while, but eventually at whole underground would be filled with the plant's mass. Give or take a few deep level basements for Riley to work.
During the fifteen minute process, no one had spoken. There was the occasional gasp, and the reporters had of course moved to get the best view possible. I was exhausted. For the first time since I had started legitimately using my power, I had tired myself out. I hadn't even set up relays for Taylor in the base. She'd need one near the center. Probably two, actually.

Speaking of Taylor, she took the lead when it became clear I was done for the day. "As you can see," she said to the silenced reporters. "We are ready for business. The city already has the details they need, but on top of working as our base, we will be setting up a number of facilities. Notably, near the northeast end, we will be providing an area for repair and sanitation crews to dump their refuse. There will be a patch of special Yggdrasil which is capable of breaking down almost any material and will serve to reduce travel time for disposal. Near the south end, we will be establishing an area to serve as another temporary camp. The trees near the perimeter produce edible fruit. Feel free to try them out, they taste similar to how they look. And thank you for your time."

It took us eight days. Eight days for Pantheon to become the single most visible group in the city. Possibly on the eastern seaboard, once my stunt really got into the news and other stations got in on the action. Tomorrow, and for the next few days, we'd worry about all of that. But tonight? Tonight I needed to be physically carried to bed. I wouldn't be doing something like that again for a long time.

============

A/N- Yes, they did indeed use the Coil reset button. I'm a troll like that. I promise to never use this, or any other "it was just a dream/etc" scenarios ever again. While Coil's certainly doing his thing, events shown in story from this point on only come from the real timeline.
As it turns out, my 'tomorrow' was spent bedridden. With a headache the likes of which I wasn't aware could be survived. It wasn't until well into the afternoon that I had recovered. I got up, eventually, to use the bathroom and brush my teeth. I was sticky, and I smelled bad. Not things I was normally familiar with, as my power typically dealt with hygiene for me. Well, for the most part at least.

"Welcome to the wonderful world of thinker migraines," Lisa announced when I managed to wander out of my room. "Your complimentary t-shirt and bottle of pills will be delivered in six to twelve business days."

"Great," I muttered. "I'll be sure and wear it every time I do something stupid."

"Hey, don't sell yourself short," Lisa replied. "You regularly scan every blood vessel in the human body simultaneously. If you stretched all that out end to end, it'd wrap around the world two and a half times. And that's just the blood vessels. It takes a pretty strong thinker power, to track all that."

"Good to know. Can I use it to find coffee?"

"Nah, but I got that covered," she smiled. "Oh, by the way, 'Clarice' wanted to let you know she can surgically upgrade your brain so you don't have to worry about that anymore. I told her I'd deliver the message, but she should probably worry about getting Taylor another fully equipped changeling."

Glad Lisa chased her off, I thought. The way my head feels, I'd probably have accepted. "Again? What did she do this time?"

"Night and Fog."

"Well, at least it wasn't another Hookwolf. Why does she keep doing this?"
"I dunno, let's ask her..."

At that point, Taylor came around the corner holding a couple styrofoam cups. I could smell the coffee scent from here. Also, how the hell does Lisa do that? "Ask me what?"

"About your playdate with E88 last night," Lisa smiled.

"I keep telling you. It's a perfectly valid tactic," Taylor sighed with exasperation, handing me the beverage that I had come to love and need. "I keep them off balance without making them feel like they're losing. It means they can't really advance, but also don't feel the need to come after us hard until we're ready for it."

"We don't care about them advancing," Lisa countered. "They can take this whole city and we'd be able to take it back in under an hour. We WANT them to win. At least temporarily."

"I know," she agreed. "But I'm getting restless. I want to actually do something, all this waiting sucks." She paused. "Umm... Amy... you might want to finish that coffee fast. I think your family's headed this way. You've got about five minutes."

"Already?"

"Already."

I skipped the shower, using my power to self clean my skin pretty effectively while combing my hair and brushing my teeth. It'd be my first step into the public eye after that press conference, and I couldn't afford to be anything but perfect.

We took the sewer path, regardless. It wasn't really any slower, and it had the benefit of keeping my house off the radar. My identity was entirely public, and I would compromise Taylor and Lisa's identities if they were seen with me out of costume. Thanks a lot, Carol.

We emerged near the edge of my Yggdrasil, right where the sewer line entered the crater. It was a simple enough matter to form a staircase from the layers of root and biomass. My favorite part of dealing with my construct was that it lacked any kind of centralized system. Cut it to shreds and each piece was still just as alive as it was as one singular organism. I could twist and shape it any way I liked, and it would not be harmed. So much easier to work with than human beings.
The remnants of New Wave were already there when I came out to meet them. Mark and Sarah were flanking Carol. Crystal was a bit off to the side, looking decidedly uncomfortable. Her eyes darting from me to Khepri and back more than once. A number of people had started to gather around, to see the spectacle in the time before we arrived.

A swarm of bugs were kind enough to convince them to step back. And, for added measure, I stepped out of my sandals—best part of my costume design, really—and placed my bare feet onto the ground. Seconds later, we were surrounded by a six foot privacy hedge.

I smiled as my supposed family looked around, more than a little startled by the casual display of power. That's right, weak little Amy can do all this.

"Thanks," Carol finally spoke up. "It's better to have this conversation in private. Amongst family." Her eyes had focused over to where my partners stood. She locked them down in a stare. As if trying to demand they leave. Had to give it to her, she was good at intimidating people. Even people who could, one way or another, destroy her entirely. She couldn't do much to stop Khepri. And god help her if Minerva went after her. But this was my fight, not theirs.

I could feel the pressure where Taylor started to turn to leave. Lisa didn't, of course, but whether that was due to her lack of sensitivity, or predicting what I was about to say, I couldn't know. "So we're agreed, then. They belong here."

Carol's lips drew together in that disapproving way she was so good at. "I see," she said coldly. "Very well. We can do this in front of your friends."

Was that really some kind of power play? Now.

"Amy," she started.

"Amelia," I interrupted, my voice every bit as frigid as hers. "My name is Amelia Claire Lavere. I would thank you to keep that in mind."

She didn't bother arguing the point. "Imagine how shocked we were to discover you were leaving the team, from a newspaper? Couldn't you have shown the courtesy of informing us in person?"
"Mark didn't tell you?" I asked. "What about Victoria? I made it clear to them that I had no intention of returning to New Wave. And that was almost two weeks ago."

"Mark said you were upset, after everything Bonesaw had done. And Victoria refused to speak about it," she looked around. "If she saw what you were doing here, I could see why she was disturbed. Amy-"

"Amelia," I corrected again.

Sarah moved up and put a hand on Carol's shoulder. It was enough to quiet her. "Amelia, fine," Sarah spoke up. "You have to know how dangerous this is. What you're doing is going to frighten people. And rightfully so. It'll set back the parahuman rights movement. Destroy everything that New Wave has been working toward. Please. I know you're upset, but this isn't going to help. It'll just make things worse for all of us."

She was right, of course. Why couldn't she have taken me in, instead of Carol? I could have had actual parents. Victoria wouldn't have been my sister. Not that cousin was a great deal better. But that really wasn't the problem...

"Right," I managed to bite out. "How could I forget when it was hammered into my head since I was thirteen years old? My power would scare people. I can't let people realize just how powerful I am. That fear, and don't think I didn't pick up on it, that I'd turn out like my father."

Carol stepped back like she'd been slapped. Sarah looked down.

Mark spoke up. "Amy, please, I know I haven't been the best father. I tried, not that that's an excuse."

I sighed. "No, you're right. You, at least, did try. I can't blame you for that. But I can blame her." I locked eyes with Carol. Years of frustration and repression boiled to the surface. I couldn't control it if I wanted to, and I definitely didn't want to.

"I probably couldn't have helped you, not until Bonesaw forced me past my own mental blocks. But if it weren't for Carol... then Victoria would still be alive."

There. I said it. And it felt amazing. And I wasn't about to stop. "Maybe even Eric and Uncle Neil."
"You can't know-" Carol snapped back.

"Can't I? I fought the fucking Siberian to a god damn standstill, something even the Triumvirate never accomplished. I made sure Jack Slash died screaming. I did all that with only a day of preparation. I built this in a week." I gestured to the ground beneath our feet. "I could do it again in another month, at the rate we're going. Imagine what I could have accomplished in three years! If you'd encouraged me to use my power. Instead you force fed me horror stories about Nilbog! Made a little girl terrified of herself!"

"Maybe I couldn't have stopped Leviathan. My ego's not so big as to believe I'm a match for an Endbringer. But my Yggdrasil would have easily held back the ocean. Got people to safety. Let Eidolon focus on offense instead of defense. We'll never know the lives I could have saved in that fight. Neil and Eric may have been amongst them. Make of that as you will." I breathed slowly, calming myself enough to continue speaking. "There is, however, no possible doubt that I could have ended the Slaughterhouse Nine, all of them, the day they stepped into Brockton Bay. Every life lost to them, including Victoria's, is on my hands. And yours. I want you to know this."

Carol actually broke. She sobbed. I'd made her cry. "Please, Amy, we're your family."

I felt guilty, then. But I was still angry, and I was angry that I felt guilty. "You are not my family. Victoria was my family. You are the people who kidnapped me. Now leave before I make you leave."

I let the privacy wall collapse, joining the mass of the rest of the Yggdrasil's mass. It would even itself out naturally, without any direction on my part. I didn't wait for them to respond, I simply turned and headed toward what was becoming our command center. I felt them lift off and leave.

Somehow I held myself back until I was alone. I let go of my self control and my anger. I slid down against a wall and pulled my legs up to my chest and allowed myself, for the first time since we started this, to be Amy again. I was still crying when Clarice found me. She said nothing. Simply sat down next to me and waited in silence until I was finished.
I was having a very bad week. Not as bad as when I joined the Slaughterhouse Nine. But close. For the last few days I'd been trapped on this abandoned ship. What kind of city just leaves abandoned ships sticking out of the ocean?

I had spent a lot of time alone with little more than my own thoughts and the view of a city. I'd even started wondering if they'd forgotten about me. I wasn't, strictly, trapped here. If I was willing to swim a couple miles in frigid choppy waters full of sharp objects while wearing around thirty pounds worth of metal on my arms and legs... I could escape.

Still, all my leverage died when Amy fucking Dallon manage to kill Jack Slash. How the hell did that happen?

I wasn't sure, but it did. Now the entire Slaughterhouse Nine was quite dead. Except for two. Myself, and the little nightmare girl coming to greet me in my captivity.

I'd given up on the idea of influencing her. Or, at least, of it mattering. I could make the child love me desperately, and she would still be capable of killing me without feeling or remorse. And people call me fucked up.

She scaled up the side of the barge with ease. She must have upgraded her body even more- she wasn't that strong before. Or that tall. As she reached the top, I got a good look at her. She had added almost a foot to her height and changed her features. Gone was the cute little Aryan ideal child, and in its place some unidentifiable ethnic soup young teenager. Still cute. Not that I was concerned about her race or attractiveness.

I was far, far too busy thinking about everything she could do to me, everything she'd done to others.

"Bonesaw," I said as she got to her feet.

"Hey, Cherish," she said cheerfully. "My name's Clarice now. Or Aceso. Either's fine."
Ah-kee-so? Didn't recognize that one. Okay, ignore it. "Huh, didn't know you were a fan of that movie."

There was no twinge of recognition, only a little confusion. "Oh, you didn't pick it from there. Huh."

"What movie?" she ask.

"Silence of the Lambs? Serial killer went around skinning girls? You've never seen it."

"Nope," she answered. "I'm not allowed to watch scary movies."

... "What?" I started laughing. I couldn't help it. This was Bonesaw. The living embodiment of the horror genre. The monster that kept other monsters up at night in fear. And she's not allowed to watch scary movies?

She waited for me to stop. "Y'know, it's not nice to laugh at people."

"No, but I'm not a nice person. And neither are you."

She shrugged. "That's okay, I have my big sister now. She'll help me be better. She says everyone deserves a second chance." She said it with such disturbing conviction. I had to wonder if I ever felt that way about my family. No, probably not. I only had myself, after all.

"She's not your sister. Won't ever be your sister. HER sister is dead, and no matter what you do, you won't be able to replace her. Face facts, she's just using you." There. Those were the emotional spikes. Genuine ones, she could tell the difference between those and my power at work.

"You're part of the Slaughterhouse Nine, Bonesaw. There's no turning back. You can't just leave. And we're all that's left. We have to escape before they decide we're no longer useful and kill us both."

"Amelia did. She took leadership from Jack. And since she's the leader, she gets to make the rules."
Amelia... oh... "Hah. So that's where you got the name from. Claire. Clarice. Jesus Christ, you've
gone full stalker, haven't you?"

She didn't deign to answer.

"So, why are you here, 'Clarice'?' I asked. "Is it to offer me the same deal you got? Or what you did
to Coil? Yeah, I know about that. Join you or have my powers stripped from me? Well, guess what,
the second option's a death sentence for me. How is that fair?"

"No," she said. "Jack was right about you. You'll betray us at earliest opportunity. He thought it was
fun. He said it was part of the game. But Amelia doesn't like that kind of game. She's not very good
at it. You'd hurt her. And I won't let you."

"What? I don't get a second chance? She does after mind raping her own sister? You do after enough
atrocities to fill a concentration camp? Where does your 'big sister' get off, being my judge and jury?"

"She doesn't know about this." Bonesaw's voice was cold. Strange. In all the time I'd ever known
her, she's never been cold. Always energetic. Always cheerful. This is the first time I'd ever seen her
act any other way.

"She will find out!" my stomach clenched at the certainty of what was coming. She was going to kill
me. "You can't hide this from Tattletale or Coil. They'll know. And then she'll know. And she'll
never forgive you."

She paused. Her emotions went into flux. I tried to influence them, but of course failed. Still, if she
was confused, it gave me a chance.

And then she moved. Faster than I had thought possible for someone without speedster powers.
Something hit my gut and then pierced it. Finding every flaw in the protective mesh and slipping
through, shredding my insides. Why did that surprise me? Bonesaw's work. She'd know better than
anyone how to beat it.

"If that keeps her safe."
Chapter 20

Amelia, Ch 20- Crystal Interlude

I followed my mother home, leaving Amy behind with her new team. And what a team it was.

Amy and Skitter? I was still having a hard time wrapping my head around it. I'd spent enough time playing chauffeur for the bug girl during the Endbringer fight. She was smart. Scary smart, really. I don't know if she really saved all that many people, but she risked her life, was willing to try and fight Leviathan head on with zero protective or offensive powers.

I... I could admit to myself that I wasn't that brave. Blasting him from afar? Sure. I could do that. Search and rescue? Absolutely. Literally shoving a stick up his ass and hoping for the best? No, that was more than I could see myself doing. The part where she used Armsmaster's own dismembered hand to do it? That was fucked up. Sure, it made sense. But it was still fucked up.

I had seen how torn up Amy was after the bank heist. Victoria, too, but Vic answered that in her usual 'find something, kick its ass' way. Amy was always the opposite. Running. Hiding. Something happened then. I knew I wasn't that close to my cousin. We were part of the same team. But Amy never really was 'part of' the team. She got the most useful power. But it was also the least flashy one. Well, unless she wanted to go Nilbog. And now it really did look like she was going to go Nilbog.

I couldn't imagine Skitter would hesitate... in the very short time I'd spoken with her... well, she didn't strike me as the type who understood 'restraint'. A lot like Victoria, that way. Was that what this was? Amy finding someone to replace Victoria? It would explain a lot.

Well, fuck.

I slowed down. "Mom, I'm going back."

"Why?" She didn't sound like she really cared that much. But, well, you try losing a husband and a son in the same day and see what kind of mood you're in. Compounded with what happened with Victoria and Amy and the fact that New Wave was functionally dead now.

I thought about lying to her. Briefly. But no, she was one of the few family members I had
remaining. "I want to try to talk to Amy again."

"I think 'Amelia' made her position pretty clear," she said back. She had turned and we were hovering.

"I know. But. Well, you know what Aunt Carol's like. Trying to assert her authority over everyone the way she does. Well, except you, you're the only one she listens to."

She offered a sad smile. "Yeah. I always could talk her into anything. Even things that she knew were really bad ideas."

"You should probably talk to her again. After today, I think she needs it. And I think Amy needs it, too."

She chuckled. "Well. You got your father's way with people. Go ahead, if you think you can help. I'll see what I can do to get through to Carol. Probably should have done it years ago."

"Thanks, mom, you're the best," I hugged her and then turned and went back. It didn't really surprise me when a black arrow formed out of nowhere when I was still blocks away, although it did still creep me out.

Skitter's range was at least three times better than what it had been when I carried her during the Leviathan fight. I followed the arrows, since they were still taking me more or less the right direction. Although they had me fly out of my way a bit and enter their... the hell do you call that thing, anyway? Giant mutant tree house? Territory? Base?

Yeah, it was a base, sure, whatever.

The arrows, finally, led me right in the door. Or one of the door, this place had a few of them. I landed in front of one, and then it opened itself. A lot like one of those bead curtain doors you see in old hippie movies. I walked in. The place was actually rather well lit. I remembered Amy playing with bioluminescence when we were younger, when she first got her powers. I made her make my Lily's fur glow. That poor cat was miserable all night. The next morning, mom made her undo that.

The arrows, smaller now at least, led me to a side room where Amy was sitting on a chair that had grown out of the ground. There was another girl nearby, their fourth member, near as I could tell.
She was smiling, but it seemed more like that was her default state than any actual amusement or happiness. Something about her made me really, really uneasy.

Judging by the redness in her eyes, Amy had been crying.

"Hey, Ames,"

"So, here to try and get me to change my mind?"

"I... well, kinda," I admitted. She wouldn't believe me if I said 'no'. Besides, it was true, I did want her to change her mind. "But that's not all of it. I just want to understand why."

"Because I should have done it years ago," Amy answered. "I bottled everything up. Hid from it. Lied to myself. I can't keep doing it. It hurts too much. Carol was never a mother to me. And Mark, I try to be understanding of his condition, but he wasn't much of a father, either."

"Yeah, I can see that," I agreed. It was true, after all. "I never spoke up, but I wasn't exactly Aunt Carol's biggest fan, either. Always thought she was kind of a bitch. Cold, distant. It's not like it was just toward you. She's like that with everyone except mom."

"And Victoria," Amy added.

"Yeah, and Victoria. I get why you left New Wave. It was always 'our parents, plus Victoria'. She was the media darling, the presumed leader of the next generation. I hate speaking badly about her. But putting her in charge of a team would be a disaster."

Amy managed to smile. It was nice.

"It really should have been you," I continued.

"Me? ...Really..." She didn't seem to buy it.

"Eric was too worried about girls. I... really don't do well with that kind of responsibility. I can't even
handle being in charge of a group project at school. And Victoria called herself Glory Girl," I added with a smirk. "You were the one who always took on all the responsibility. The one of us that was the thinker, and I don't mean that in the parahuman way. The worrier. Especially the worrier."

"Yeah," she agreed. "I guess I see your point."

"Good. So I'm not going to try to defend Aunt Carol. She'll have to do that herself. But regardless of what you think. We're still your family and we love you."

"It's not that simple," Amy responded. "Over a decade of living with someone who acted like you were something between a bad memory and a ticking timebomb doesn't get erased with a few words. Even the kids Victoria brought over for slumber parties were treated more warmly than I was."

I sighed. Well, I did my best, I suppose. "Alright, can you at least accept that I wasn't a part of that? I was a child back then, too. If you say we're not family... that hurts, but I guess I have no choice in the matter. So can we at least be friends?"

She looked at me, really looked for the first time since the conversation started. "Y-yeah, I think I'd like that."

"Good," I answered. "So as your friend, I'm going to have to join your team now."

"Wh- what?"

"Yup," I smiled. "You guys keep saying anyone can join. No backsies."

"Fiiine," she moaned. "But I'm not the one who has to explain this to your mom."

God damn it.
Amelia, Ch 21- Taylor

Amelia had just walked off, leaving Tattletale. Correction: Minerva and I to face New Wave. The didn't say anything, although Brandish was staring me down like I'd just eloped with her daughter. I didn't really stare back. In fact, I barely opened my eyes. I was currently training myself to rely more on my insects' senses. Right now I had touch range contact with the entire city. But I still couldn't hear or see through them in any way that my brain could parse into usable details. It was something I was working to change.

Eventually, Brandish turned and left, not saying a word to us. Shortly followed by the rest of the team. Lady Photon and Laserdream took off moments after they all left the Yggdrasil for normal soil.

"Kidnapping?" I asked Lisa as we watched them walk away.

"Not as far as the law's concerned," she responded. "But if someone broke into your house, stabbed your dad, and took you away to live with them... would it matter to you if it was all legal or not?"

"They..." I stared hard at the backs of New Wave. What. The. Fuck.

"Umm..." She interrupted. "Don't go all avenging angel here, okay? It... it's not as bad as I just made it sound. They were stuck in a messy situation, and there wasn't going to be a happy ending. They made a lot of dumb mistakes. They aren't bad people. They're just... not smart people..."

I sighed. This whole scenario made me think of my father. For all the problems I'd had in life, I at least knew my parents loved me. Was I hurting my father the way Amelia was hurt by hers parents? The way she just hurt them? That needed to change. "Fine, I'll go talk to Amelia."

Minera spoke up. "Not yet. We have the press to deal with."
"God damn it."

"And you're second in command, so it's your job to talk with them."

"I hate you. Hate you so much."

And sure enough, there they were. Not wearing anything identifying them as reporters, of course. A woman, and she'd have to be an adult to do that job, who was smaller than I was. Significantly smaller, I'd have mistaken her for thirteen based on her height and figure. Although her face structure, complete with several piercings, suggested older. She was currently pointing the camera at New Wave, while her partners went ahead toward us.

She moved to catch up after she got her footage. I almost felt sorry for her- that was a big camera and she had very short legs compared to her much larger, male, partners. One of whom was clearly the reporter- a slightly older gentleman, with the laugh lines that said he smiled for a living. And a younger, larger man, probably only nineteen or twenty carried a box that with other equipment.

"Good afternoon, ladies," the man said. I had to admit, he had the voice for it as well. "I'm Stan Vickery, with channel twelve news, would you mind answering a few questions?"

"We're rather busy at the moment," I answered.

"I understand," he said in a way that left no doubt that it wasn't going to slow him down. "But it shouldn't take too long."

I felt Minerva tense, with the bugs I had on her. I could almost hear her swearing, although she wisely said nothing with the recording equipment pointed our way. She stepped forward, smiling widely. "You're probably right," she said, throwing him off his script. "Mind if I tell you something confidentially, first? I can trust your journalistic integrity, right?"

Oh boy. She was going to go full Tattletale. "Sure, absolutely." He waved his hand at his partners and they set down their gear.

"So. Got a tip from the Protectorate, or was it someone else?"
"Lips are sealed, you know that."

"PRT." It wasn't a question. "Don't worry, your source already knows what I can do. She probably won't hold it against you. No? No, she'll definitely hold it against you. She's just hoping I piss you off enough that you run a negative story on us."

He didn't lose his composure, I had to give him credit for that, but his partners didn't have nearly the same confidence. They looked decidedly nervous, and they knew their boss had lost control of the situation. Was he their boss? I didn't know. I wasn't an expert on the hierarchy of news organizations.

"Thing is, Mister Vickory, I think she underestimated both of us," Minerva continued. "You're a man who truly believes in what you're doing. You wouldn't portray us in a way you believe is untrue, even for revenge. You may use tactics some people would consider sleazy, but you're still a real journalist, not some trash tabloid reporter. Your 'source' doesn't realize that. She also doesn't realize that I can respect people who do what they believe in, and I generally don't try and ruin people I respect."

He nodded. "Alright. You're every bit as insightful as your namesake. So, how much of what I was going to ask are you willing to answer?"

"Right now?" Minerva continued smoothly, "Nothing. Although, later, I'll be doing a lot of talking. We are still off the record, of course. You and I both know that the Protectorate's looking to preemptively trash our reputations, without making it look like that's what they're trying to do. A lot of that is because they don't want another hero team in town. Especially one like ours."

She stopped and smiled.

"Well, miss," he smiled back. "Consider me intrigued. Why especially yours?"

"We're competition," she said casually. "Most other hero groups don't have the resources to be truly big time without the Protectorate backing them. And most of the ones that do are villains. It's a matter of monopoly. They like to be the only big name in town, because they're afraid of what it'll look like if someone comes along and makes them look bad. Beats them at their own game. Makes the taxpayers wonder if they're worth keeping around."
"You believe you're capable of all that?"

"Well, yes. But it's not about what I believe. It's about what they believe. And it's about competition and monopolies," She'd started walking, and we all followed. She owned this conversation, and everyone here knew it.

"Take the PRT, for example." She continued. "They have tens of thousands of reporters across the continent, all clamoring for their attention and favor. As of right now, we have none. The Protectorate believes us capable of being a threat to their establishment and are willing to outright lie to hurt us. We have no one willing to tell the world the truth. They have secrets they want to hide. We know at least some of those secrets, and have no one to share them with."

"Which means the reporter who does hear your story has, as you put it, a monopoly," he concluded.

"Exactly," she responded. "Let us pretend you had that monopoly. I doubt you'd want to give it up. So, really, I can't blame the Protectorate for trying to get in our way. But I'm not going to let that, or for that matter them, stop us."

Meanwhile, I had noticed that Laserdream had turned around and headed back our direction. I put a warning up for Amelia to read, and sent a few arrows to guide her around. Didn't need any more footage of New Wave today. Amelia can handle her cousin, I decided. And if not, well, Clarice was with her.

"I'd say you'd make a good politician," the man chuckled. "But I wouldn't want to insult your intelligence. And journalism's out because I don't want the competition. It's really refreshing to see young people who get it. I guess my questions can wait for another day. How about you ladies show us a tour of your operations?"

Minerva smiled her biggest smile. "Happily. But Khepri and Gaea are in charge. My job is just to make their jobs easier."

Easier my ass. You're throwing me to the wolves, here. I don't care if you just housebroke them in front of me. I telepathically shouted at my supposed best friend. She pretended not to hear me, but I knew better.

"That's actually a really nice soundbite," he said. "Mind repeating that with the cameras on, some day?"
"Oh, absolutely. We'll have plenty of time to discuss the future," Minerva all but sang. "Now I'd better get back to making your life easier while staying out of the way of the cameras."

Go die in every fire. Nope. Still couldn't telepathically erase her brain. I'd need to work on that.

Seriously. Lisa. Fuck you.

The camera crew got their stuff together, and Stan stood next to me facing them. "This is Stan Vickory on location at Pantheon's new headquarters in the heart of Brockton Bay. This new superhero team has been granted use of what was formerly known as Crater Lake for their own purposes, and they have renovated it to astonishing effect in very short time."

"I am speaking with Khepri, one of the founding members of Pantheon. " he continued. "The first question, of course, is what your role is within your new team."

"I'm..." I said. Oh, jeez, what a question that was. "That's hard to narrow down. Pantheon is too small to have narrowly defined roles. Gaea and I lead the team and make most of the decisions on what we do in the future together. In addition, I'm the one with the most combat experience, so I'm going to handle field tactics if and when we need them."

"Yes. Speaking of which, you have sole credit for killing the Siberian," he continued. "I'm curious, how much was the bounty for her?"

I smiled. "Actually, I'm still not certain."

========

A/N- Some epic foreshadowing in this one. No spoilering it, however.
"Care to explain that?" Stan said with a smile.

"The bodies were turned over to PRT custody, as is law in situations like this," I answered. "They will, of course, need to take some time to verify and assign appropriate bounties."

"I see," he responded. "So the refugee camp you've established?"

"Is mostly our own money, yes," I answered. "Along with a portion of the disaster relief that would be intended to repair the sewer lines and other infrastructure. City hall is in full agreement with us that using those to rebuild homes and restore electricity is a much more prudent use of resources. The Yddrasil can easily handle waste disposal for the near future."

"How long will 'near future' be?"

"As long as it's needed," I answered. "You'll have to talk with FEMA and city planning about that. We'll be here to support our community for as long as they need us to." Of course, that means forever. Of course, it won't take long before the politicians decide it's easier to keep the Yggdrasil and spend the whatever millions of dollars it costs to manage a city's sewers on something far more fun to talk about than plumbing. Vickory was savvy enough to realize that. But he didn't bring it up.

"That is remarkably generous of you," he replied.

"It's what heroes do, after all," I answered. "Pantheon's about finding ways for parahumans to use their powers for more than just showing off for the cameras and getting into stupid fights. We'll have a website and a fully detailed mission statement sooner or later. Maybe hire a secretary or two, but that's low on our list of priorities right now."

We spent the next hour or so doing the full tour. Including the thirty foot deep pit that the cleanup crews were dumping their garbage into. We couldn't get too close for safety reasons, and Vickory was content with getting distant shots. Apparently, closeups of dump trucks full of rubble weren't what news organizations considered desirable footage.
We were just closing up when a kid started running toward us. Well, he probably my age, but shorter than me by a few inches. Then again, most boys my age were. Stupid growth spurts. He had light brown hair and looked like he was in pretty good shape, for his age. Great arm definition, that's for certain.

He was gasping and wheezing by the time he got to us. "Hey... I... wanna be... on your... team..." he managed to gasp out. I quickly changed my opinion of how 'in shape' he was.

I glanced over at Stan, and the crew that still had the camera rolling. Eh, screw it, might as well get this out of the way for everyone. "Well, if you're here to volunteer, you can go check with the people setting up the refugee camp. They can probably use the help."

He smiled with far too much boyish charm for someone who looked like he was about to have a heart attack. "Nah... I have powers. I wanna join you for missions and shit."

"Uh... huh..." God damn it, couldn't be an easy one, could it? I activated the camera in my helmet and had a few mosquitoes buzz in Lisa's face, then spelled 'my video' on the wall. She'd get to it soon enough. "We try to avoid putting untrained individuals in combat. We'll accept any parahuman that doesn't belong in the birdcage." And at least one that does."But we're not going to use you for, as you put it, 'missions', unless we're absolutely certain you can take care of yourself."

"Oh... believe me... I can totally do that," he was still wheezing. Then he pulled out a knife. God damn crazies, I thought as I took a combat position and reached for my baton. And then he stabbed himself in the throat.

The camera girl gasped. The rest of us had better composure, at least, but we were all at least a little shaken by the event.

The boy collapsed into dust, only for there to be an identical looking boy standing right behind him. "See, that's my power," he said without a trace of difficulty in his breathing. "Every time I get hurt or sick or even fall asleep. Poof. Full restoration." He smiled and held his arms out for the camera.

He's like Alabaster, I realized. He also likes being in front of cameras.

"So, what are you calling yourself?" I asked, taking the safest route.
"Ah, right," he said with his boyish grin. "I was thinkin' about calling myself 'Respawn' and joining up with Uber and Leet. Or maybe 'Decoy Boy' and joining the Wards. But now I wanna be in Pantheon."

"Interesting decision," Vickory spoke up, taking an opportunity while I was still figuring out how to approach this kid. "Would you mind telling our viewers why you'd rather join Pantheon instead of the Wards?"

Clever man. 'New hero chooses Pantheon over Protectorate'. Two stories for the price of one.

"Because they're boring. I mean Clockblocker's awesome and all but everyone else is a stick in the mud. And Pantheon kicked the S9's asses and besides they have all the hot girls- no offense Vista, you're a total babe and if you're watching this and wanna call me up I'd love that but I'm sure you get that all the time from the guys on your team so I get it if you're not interested that's gotta suck being around nothing but dudes all the time..." I watched in amazement as he just kept talking. It was all one sentence. How? "... and Uber an' Leet are the same thing just with video games no thanks you can keep the sausage fest I'm signing up fo-"

Then he spontaneously turned into dust and reappeared again. "Oh. Hate it when that happens."

"Did... did you literally just talk yourself to death?" I couldn't hide my incredulity. Even Vickory, who had managed to stay collected through Tattletale, showed an expression of surprise and maybe some concern.

"What? Oh, naw. I've had asthma since I was like three. Every time I have an attack, I reset. No big deal, really," he said with that same smile. "That's not my only power, either. Watch."

"Born sickly, lifetime of frailty, trigger likely related to illness, overcompensating. Serious self worth issues. Desperate need to prove himself." Lisa's voice came over the com for only me to hear.

He tossed his knife away. It turned into dust and reappeared in his hand. "I can respawn other things, too. Gimme a gun and I won't ever run out of ammo. Or any other weapon"

Well then. "Alright. You've convinced me that you're not likely to get hurt in a fight, that's a start." And an understatement. Could not be killed. Beaten, sure, I could think of a dozen ways off the top of my head. But unkillable.

"So I'm on the team?"

"Well... like I said. We won't turn anyone away who wants to help. As for the team that deals with super villains? I'm willing to give you a chance," I answered. "You still have a lot to learn before you're ready to go out in the field, even if you have a power that'll keep you safe. We can't have you accidentally endangering the team."

"Ah, no, I get it, that's cool," he replied. "I'm ready to learn, Sensei."

"Also... your parents, do they know?" I asked. He wasn't wearing a mask. Or even a costume. But still, have to ask.

"Parents are dead," he said, finally dropping the hyperactive thing he was doing. "Siberian. Please tell me you made that bitch suffer before you killed her."

I thought back reflexively. Yeah, 'suffer' would be a word for it. I hadn't managed to get many insects on Manton before Siberian started protecting the van. I had to rely on a mere handful of Black Widows and wasps for the first few minutes or so, before he was too ill to maintain the projection. It was an ugly and painful way to die. I wouldn't have wished it on anyone. And I'd inflicted it on someone.

"We'll talk about that in private," I answered darkly. My mood had shifted. I'd never killed before, and I'd be damned if I felt bad about Siberian. But the way he screamed and cried and begged and soiled himself as I assaulted him with far too few insects to make a quick death of it... I'd never stop having nightmares.

Vickory, at least, caught on. "I understand," he said amiably. "Hero business and all that. We've got more than enough footage to work with. Here," he handed me a card. "So Minerva has my number. No sense in wasting her time or powers finding it another way."

I took it. "Thanks," I responded. Then I turned back to 'Respawn'. "Okay, I'll take you to meet the rest of the team. Figure things out from there."
"Fucking sweet."

"Okay, Lisa," I muttered into my mouthpiece, "Please show the kid mercy."

=============

A/N- And the introduction of my first OC to the story. Most readers seem to be of the opinion that he grows on you. Don't worry, he wasn't intended to be likable from the start...
"What do you mean, 'no'?" Crystal hissed at Taylor, standing from her chair.

"I mean, I'm voting against adding you to our combat team," she answered.

"Amy-" She started.

"Amelia-" I corrected.

"Amelia-" I corrected.

"Is not the only person in this partnership," Taylor. No, she was being Skitter, now. Continued.

"What about the others," she said, gesturing toward Aceso and Minerva. Don't they get a vote?"

"Uh..." I started. "We... never really figured out how we were doing that sorta thing."

Crystal looked at me. "Really? You guys are going to be attracting a lot of parahumans. I'll help you sort that out," she turned back toward Khepri. "After you put me on the team."

"You're too flashy, too visible, and too vulnerable. We don't fight like New Wave or the Protectorate fight." Skitter insisted.

"Near as I can tell, you haven't fought at all since starting this group," Crystal stepped toward Skitter menacingly. "Amy-"

"Amelia," I interrupted again.

"Took down the last of the S9 and has been doing all the heavy lifting. What have YOU done?" Crystal yelled at the bug girl. Who stood her ground admirably, especially for someone who was
making eye contact with an angry girl who could blast her hard enough that I couldn't put the pieces back together.

"Exactly," Khepri replied. "We keep our combat ops secret. Hit from stealth. And if you do it right, your enemies are down before they even know you're there. Your power, your theme, your looks. They make you great for a more visible position. Public Relations shit. It makes you a liability in the field."

Crystal looked like she'd been slapped and was going to hit back.

I stood up. "Okay, Khepri, I want her on the team. She's my friend. She's smart. And she has more field experience and training than the rest of us combined."

"The rest of us have powers that can work through the changelings," Khepri countered, then looked over at Respawn. "Or don't need them. If she's out on the field, she'll be the only one who can die. And that changes the nature of the game. The amount of risk we can afford to take. Right now, we can't really lose, the worst that happens is we don't win. She changes that. Do you want her out there where she can get killed?"

I hesitated. Crystal spoke up. "I don't care. I've risked my life against fucking Leviathan! And spent a lot of that dragging your heavy ass around so you could play glorified tracking device with an Endbringer. You don't get to decide which risks I take!"

"If you're on this team, the yes I decide the risks!" Skitter yelled back. "I make the strategy, and when people die, it's my fault!" She all but screeched the last two words.

Her voice cracked. "I... I've gotten enough of my friends killed already." She looked down, fought to keep from crying.

Oh god. Has that been on her conscience the whole time? I got up and moved to her. Pulled her into a hug. Crystal and Minerva looked like they wanted to say something, but didn't. Clarice just watched. She'd gotten quiet and contemplative after the 'incident' with Coil. I was worried about her. But for right now, I didn't know how to handle the problem. Didn't know how to handle Taylor, either.

It was Respawn that broke the moment.
"Uh... I know I'm the new guy and all," Respawn spoke up. "But I might be able to help with that whole 'death' thing."

We all looked at him.

"Well," he hesitated for a second. "The thing is, I think I can 'tag' her with my power, and it'll work like with the knife."

"What's the limit?" Minerva asked.

"Anything I can deadlift," he replied. "Literally. Ever since I got my powers, I've been working out. Y'know, gotta look like a hero and all. Helps that my power heals me up really fast. As I get stronger, my power can handle heavier things." He extended an arm and flexed it, showing off his biceps.

I had to admit, he was in good shape. Even if he was also weird as hell.

"I've never tried it on a person before," he said. "But it should work."

"Powers are..." I still couldn't think of how to explain it to them. "They have weird, seemingly arbitrary rules that don't make sense from a human point of view. Just because it 'should' work doesn't mean it 'will'. This needs to be tested thoroughly."

"No better time than the present," Khepri replied. "Okay, 'tag' her and let's see how this works out."

He smiled widely and walked up to my cousin. "You may want to take off the glove," he stated.

"Uh, why?" Crystal's eyes narrowed.

"Because you are a lady, and I am a gentleman. And I need skin contact to make this work. So unless you wanna put this off in favor of a couple dates, first..." he kept smiling the whole time.

I suppressed a snicker. Sure, he could have just touched her elbow or something. But the expression
on her face was priceless. Like she couldn't tell if she wanted to blush or punch him.

I had the feeling he got that reaction from a lot of people.

"Okay," she said after finding her voice again. She grabbed her glove and in one fluid motion pulled it off and held her hand out.

"Aww, and I know this great place, too..." he said with a pout. Then he smiled. "Oh well," and smacked her palm with his.

Skitter pulled her knife and walked over to Crystal.

"The hell's that for?" Crystal asked.

"We have to know if his power heals, or just teleports," she answered. "If it doesn't work, Amelia can repair the injury easily enough.

"That..." Crystal glanced over at Respawn. "Okay, fine, you have a point." She took the knife. And, in a single swift motion, split open her palm. "Okay, let's do this." Her eyes never left Taylor's.

A second later she vanished. The knife, and Laserdream's costume, fell to the floor.

Crystal shrieked and bolted from the room, at full flight speed.

"You knew this would happen!" She yelled from the other room. I moved away from Taylor and rushed to pick up the costume to take to my now disrobed cousin.

"How could I have known? My clothes come with me!" Respawn countered.

Crystal grabbed her clothing and peeked around the corner. She looked pissed. "Not you! You're an idiot! HER!"
And that is when Minerva started laughing. "Oh god! That was the funniest thing I've ever seen." She fell out of her chair. Then Taylor and Clarice joined in. Little snickers at first, but then full on laughter.

I was next. I couldn't help myself, it was pretty funny. "E tu, Amy?" Crystal looked at me like she was going to cry.

"I'm sorry. But. It isn't even..." I struggled to both find a way to explain it, and hold in my laughter. "It... it's not that funny, but we've been nothing but business for the last week. I don't think any of us have even told a joke since we started the team. Except Minerva, and her jokes are only good if you're into schadenfreude."

Minerva's hand came up from her position on the ground. "I'd be insulted, but it's true." Then she was back to giggling.

Crystal's face softened. "Fine, I guess it's a little funny. I'm going to get changed now."

We'd managed to stop by the time Laserdream was back in costume. And then, looking at her, we all started laughing again. "You do realize that my power means I can literally make your heads explode, right?" She deadpanned. That just made us laugh harder. At least she wasn't upset anymore.

Except Respawn. He hadn't laughed at this at all.

"I'm sorry about that," he said sincerely. "If I'd realized, I wouldn't have suggested it."

"No, it's fine," Crystal replied. She even offered him a genuine smile. "You couldn't have known. Besides, as humiliated as it was, it worked. My hand is healed. In the grand scheme of things, being embarrassed is so much better than being dead."

"Thanks," he smiled back. "And I'm not saying I saw anything. But hypothetically speaking, if I did, I'd have to inform you that you have absolutely nothing to be embarrassed about. You clearly put a lot of effort into staying fit."

Her smile left her face. "Aaaand moment lost. I almost thought you were a genuine human being for a minute there."
He shrugged. "One step forward, two steps back. It's how I move. Besides, I'd feel bad if I gave you the wrong impression." The way he said that was way too smooth for me to believe he hadn't said it before.

Taylor was the first one to recover. She addressed Respawn. "Okay, we'll have to do more testing with your power," she glanced toward Crystal. "With dummies this time. We know your power can restore people. Now we need to know range, time, and concentration limits. Amongst other things."

"Speaking of power demonstration... I have a question of my own," he said. "When are you ladies gonna go 'Queen of the Zerg', anyway?"

Taylor looked at him. "Umm... what's a 'zerg'?"

=========

A/N- Ah, yes, I had fun with this chapter. Also, more epic foreshadowing.
Our first idea, of course, was to have me use my power on Respawn. If we could increase his strength, well, the implications were obvious. That didn't work out as planned. Turns out, his power makes him functionally immune to mine.

Or, more specifically, every time I tried to use my power, he disintegrated. I didn't even get a chance to look at his biology before he was no longer in contact.

"Damn," Taylor muttered. I agreed. It would have been so nice. Still, even his limited ability got Crystal past Taylor's argument, and made my General feel a lot more comfortable about fights overall. I tried to imagine how that'd feel. As someone else who was used to putting all the world's weight on her shoulders, I could empathize to a degree. All those I couldn't save, all those times I wasn't fast or mentally focused enough after Endbringer fights. That was always devastating. But to be the one who gave the orders that got people killed? I couldn't imagine what that felt like.

Our power tests continued. As it turned out, Respawn didn't have a range limit. At least, not one we were able to test easily. Well over ten miles, at least. The mass limit was, as he had said, his lifting capacity. A bit over two hundred pounds at this point. There didn't seem to be a limit to how many object he could 'hold', he managed to do almost a hundred pounds of Khepri's bugs at once. But that was still only one or two people of mass at best. His 'recall' time was at most twenty minutes, although things started getting unreliable after seventeen. Minerva guessed that it was a mental component on his part.

Taylor nodded. "That's an acceptable window. If we still haven't managed to end a fight in fifteen minutes, we're either hopelessly outclassed and should run, or it's an Endbringer. In which case that's still true, but we'll be staying anyway."

"Looks like I'm on the team, then," Crystal smiled at me.

"Just need a new name," I agreed. It would be nice to have her around. She's right, what happened to me wasn't her fault, and I know she has my back. Maybe she was a bit too protective, but I could live with that.

"I know!" Respawn volunteered. "I'm thinking Isis. And I can be Osiris."
"I don't know anything about mythology," Crystal replied. "But somehow every fiber in my being says 'no'."

"Harsh."

"Egyptian god," Minerva offered. "Life, death, and reincarnation. It's as good a fit as any. Isis would be his wife."

"That would explain that feeling," Crystal agreed.

"Also his sister," Minerva continued. "Plus her powers are nothing like yours."

"Eww," Crystal concluded. "How about you go with 'Osiris', and I pick a different goddess? Maybe one from the exact opposite side of the world?"

"Friend zoned already?" Respawn pouted. "Such a tragedy."

"I think I'll pass on anything involving volcanoes," Crystal answered. It was no surprise, really, almost no one went with that association, in spite of the powerful imagery. Because Behemoth. So few people used anything which implied fire. Even those who actually controlled fire tried to avoid it.

"How did you know all that?" Minerva asked. "Did you upload wikipedia?"

"Nope," Aceso replied. "I have full internet access. Wired it into-"

"Don't want to know!" Minerva interrupted. "I'd avoid pacific deities anyway. Most of those religions are still being practiced, and some people might think of that as cultural insensitivity. Let's stick to dead religions that no one can get pissy about."
I nodded. She had a point. People got offended pretty easily over these things. I'd been accused of being some kind of 'demon' before, thanks to my healing powers. Then again, some people get just as offended over soccer games. Or, for that matter, whether it was called 'soccer' or 'football'. We were already pushing enough buttons, better not get into religious quagmires.

By this time Respawn had moved over to Clarice. "Hi, I don't think we've really been introduced," he said with a smile. "I'm Respawn, or Osiris now. Zach when not being a superhero and all. So you're a tech geek, huh? I'd like to look at your gear."

He managed to make that sound slightly dirty. Meanwhile, I was stunned. Bonesaw. I am watching someone hit on Bonesaw. And I was too flabbergasted to do anything about it.

She smiled broadly, in that faux-innocent way of hers that I kept hoping was an act, because the alternative was far more disturbing. "I'm Aceso. Clarice. I'd be happy to. No one seems to want to see my art, or cuddle with me." She pouted. "Not even my big sister."

"Oh, that's too bad. I'd love to see your art. And afterwards we can-"

"She's ten," Minerva interjected.

"... play video games," Respawn finished. He looked over Minerva with an incredulous look on his face. 'Really' he mouthed. Lisa gave a single slow nod.

I could understand his reaction. The 'Clarice' body would be considered tall by most standards at 5'6, and while it was a slender figure, it wasn't entirely lacking in curves. Especially for the Asian heritage that her features hinted at. She could be mistaken for an underdeveloped sixteen year old. Or a very well developed ten year old.

Crystal fidgeted uncomfortably, glancing between me and Clarice. Oh god damn it, she figured it out.

Respawn went to speak again and Minerva interrupted. "I'm a high end thinker whose skills revolve around putting together information from subtle hints. I know things about you that you have forgotten. Like that kitten your parents wouldn't let you have when you were ten. Give me a few minutes, and I can figure out which month it was and the name you had picked out for it. Try anything on me and I will shut you down so hard you'll cry in front of us."
Wow, I felt that one. Tattletale could be brutal, as I knew first hand. But she was right, we really did need to get him to, y'know, stop trying to flirt with us. Wait a minute. It wasn't 'us'. Just 'them'.

"Uh... yes ma'am," the kid said, some color draining from his face. "Message received."

I actually felt a little bit hurt. I mean, it's not that I was attracted to him. Maybe I would have been if I were normal. I was self aware enough to know I was incredibly messed up in that regard. Then again, I had a hard time believing I would go for Respawn- Zach- even if I had a healthy sexuality. But he had, in the course of an hour, managed to hit on every female he'd met, plus Vista by proxy.

Except for me and Taylor. Probably stupid worrying about that, since Crystal almost certainly suspected that our 'Clarice, brute combat thinker' was really 'Bonesaw, nightmare bio-tinker and last living member of the Slaughterhouse Nine'. Yet, for some reason, the part of me that was a woman was deeply offended by this.

"So... why haven't you asked me or Khepri out yet?" I asked. I immediately regretted it when all eyes turned my way.

"Uh..." he stammered while everyone else just looked at me like I was insane for asking.

"Actually," Taylor added. "I kinda want to hear this, myself."

"Self preservation," he replied. "Hitting on your boss just isn't a good idea. Hitting on your boss when her girlfriend, who's your other boss, is in the same room? I am both insane and immortal. But that sounds suicidal, even to me."

What. "What?"

Taylor mirrored me. "What?"

"You don't have to hide it. Legend made it cool like two decades ago." he insisted. "You two have great chemistry together. You're both 'sweet and shy' types normally, only to go 'badass action babe' whenever we have to worry about serious shit?"
We both just stared at him. Lisa started snickering. Crystal and Clarice were just watching us.

"We're... uh... not dating," Taylor said first.

"No? Seriously?" he asked. "I coulda swore it was either that or you were sisters, but I think I'd have heard if you were part of New Wave."

"Well, Amy was adopted," Lisa teased. Earning death glares from Taylor and I.

"Oh, is that what it is? Whole long lost sister thing? That's kinda cool, too."

"Also not what happened," I said. "We're not related. We're not dating. Up until a week ago we weren't friends."

"What about all the hugging?"

"First, it was just one hug," that you saw, I admitted to myself. "Second. We're girls. We're allowed to hug anyone we want and it doesn't mean anything. It... it's like guys shaking hands!"

"That is true," Crystal agreed. "It's in chapter 3 of the girls handbook."

Thank you, cuz, I thought.

"Of course, when you cross the ten second mark... it's more like guys holding hands." she added while smirking at me.

Traitor.

"Wow. I totally misread that everything, didn't I?" Respawn replied.
"Yes, yes you did," Taylor insisted. I nodded my head in agreement. While glaring at Crystal, daring her to speak up.

"Alright. So. Since I already have my foot this far down my throat, would you girls like to come with me over to Clarice's place and play video games?" He asked with a smile. A very suggestive smile. "I promise I'll show you those zerg I mentioned."

I was stunned to silence. And Taylor was no help. She simply put her face in her hands and shook her head.

=========================

'Pele' is pronounced paylay. Originally I had it written with the phonic version in the story and corrected it here.

Also- this chapter marks the start of my love affair with teasing my characters.
Taylor and I eventually conceded to watching the kid show off the dumb video game. Crystal and Lisa both opted not to visit, with flimsy excuses like "My powers aren't good for works of fiction or theoretical biontastics" and "My mom's already going to kill me, but if I don't go home soon she'll make it take longer."

Those traitors.

Clarice was all too enthusiastic, and Taylor and I almost had no choice. We were the ones who would be benefiting from the ideas, after all.

And thus we found ourselves in one of the subbasements that Clarice had me construct for her. It's where we kept the pods and most of the heavy computer tech. Well, that and Lisa's little command center. It took him a few minutes to set everything up, and since we were using Riley's somewhat tinkered up computers, we were treated to a massive holographic display... of badly pixelated art...

"Err, sorry about that," Respawn offered with his usual grin. "This game's from, like, '98... and it wasn't exactly heralded as a graphical masterpiece even back then. It wasn't meant to be played on a screen that's as tall as I am."

"Okay, I can fix that," Clarice replied. She stood there passively for a minute, and the screen split into four reasonable sized screens, one for each of us. "These screens are all going to show exactly the same thing yours is showing, and if you need to you can tap the screen itself and it'll highlight that area so the rest of us can see it clearly."

"Oh, that's cool," he replied. "But this is a real time strategy game, so unit highlighting is a big part of the interface."

It took us maybe a minute before we had questions.

"So, what's with the purple stuff on the ground?" I asked.
"That's creep. It's how zerg feed their minions and buildings. Kinda like your Yggdrasil. Without it, the hive dies."

"It's all veiny and ugly, though," Taylor replied.

"It's suppose to be. The zerg are organic and collect all the DNA from every species they encounter to become the perfect life forms."

"That's dumb," I replied. "Animals are hit hard by the square-cube rule. They'd be much better off using a plant and fungus base instead of animal. Except for a few things, like muscle mass. I mean, that building has a pulse, what's the point of that?"

"It pumps nutrient fluids through the creep."

"Why not just use what plants use?" I asked.

"For that matter, why put the buildings on the surface at all?" Taylor continued. "It'd be far more secure for them to grow underground and simply poke up holes to release their units. It's what our setup is designed to do."

"Because it's a video game and the sides are suppose to be fairly balanced so they all have a chance of winning," Respawn said with exasperation.

"That's why video games are dumb," Taylor stated. "There is no such thing as 'balance' in war. It's all about who got luckier. Either by having lots of power or skill of their own, or their enemy not having very much. Plus or minus natural disasters and other parties that might be involved."

"Okay, fine!" he agreed. "It's not very realistic. But I'm about to start showing off the monsters now. This is the cool part."

....

"These are larva," he explained, showing the purple maggot-things. "Basically, they can morph into any kind of zerg, at your command."
"No point," I replied. "We can just grow things right out of the ground. Or create dedicated growing pods that'll do nothing but make monsters."

"Okay. No larva."

...

"So they're suppose to be like worker ants?" Clarice simplified.

"Yup, pretty much, plus they turn into buildings."

"One of those dumb RTS things?" Taylor asked.

"Yeah, one of those dumb RTS things," Respawn sighed.

....

"So six legged monster dogs with giant scythe claws," I summarized.

"I think of them more like mutated great cats," he tried to correct. "Sure they hunt in packs, but they burrow underground. Could probably hide in trees, but 'dumb RTS thing'."

"I can make that work," I replied. "Probably be pretty effective, too."

Taylor glanced at me. "Yeah, those could be pretty useful," she agreed.

"In the sequel there's a version that suicide detonates into acid bombs and can wipe out everything nearby," he offered. "But I can't stand that game, they butchered the story worse than the Star Wars prequels."

"That... I could really use one of those against Hookwolf," Taylor stated.
"So... mutant dog beasts are a 'go'. Probably better just to create projectiles that fire the acid, though."

"Ah, that brings us to the next unit!" He exclaimed.

....

"So they're... giant snakes with claws? What's the point of that? Either take away the claws and have a snake's stealth and mass efficiency, or give it legs so it can move faster," Clarice complained at the screen. "This is the worst of both worlds." I nodded in agreement. Totally inefficient design.

"Because it looks cool as hell?" he asked.

"Stupid RTS thing," Taylor concluded.

"Stupid RTS thing," Respawn relented.

"The acid spine idea's good, though," I added. "I can install them into those zergling creatures."

....

"Flying troop carriers that can sense invisible units, huh?" Taylor said with a smile as she looked at me.

"Not possible. Too much mass for an organic thing to do. I can do the whole 'sensor suite' thing. But making something big enough to carry eight of those dog monsters and still fly is a bit much. An underwater version, sure. But not a flyer. We'd need some kind of antigravity for that."

"We can always see what Toybox has to offer," Clarice suggested. "Interface its power source into the organism and we could make it work."

"Can you do that?" I asked.
"Easily," she replied. "I never really gave it much thought, but I think my tinker specialty is actually cybernetics. I'm very good at interfacing organic with machine."

....

"Giant bat monsters that fire smaller attack monsters?"

"Basically."

"Can't make them jump around like that, wouldn't if I could, too much risk of collateral damage," I stated.

"But a giant wasp-monster that shoots living projectiles?" Taylor asked hopefully.

"How about if they fire something based on a squid or octopus. For nonlethal takedowns?" I suggested.

"Speaking of nonlethals, how are the tranquilizer mosquitoes coming along?" she asked back.

"The problem is controlling them. I trust you, but your power has gaps. You can make mistakes and we're not sure what happens while you're asleep. We don't want these things getting into the wild. It would be an ecological nightmare even before considering the risk to human life."

"Uh... why not make them all work like male mosquitoes and only feed on plants? We could even limit it to just Yggdrasil, like these 'zerg' use creep." Clarice offered.

"That... that's a really good idea. We could do it to almost all the construct, in case we lose control of them somehow, they can't cause much damage at all," I said happily. And then immediately felt stupid for not thinking of it earlier. It was my one great hangup about making self replicating life, aside from Class S status, which we basically already were anyway.

"Told you this wouldn't be a waste of time!" Respawn crowed.
"Okay, so the transquitoes are approved," I said.

"That... is a really terrible name," Taylor shook her head.

"My abominations against nature, I can name them whatever I like," I insisted.

"I like it," Clarice and Respawn said at the same time.

"Okay... now I wanna change the name..." I muttered.

....

"Pass on the queens. Nothing to offer that we'll ever use. One of its tricks is something Khepri can do with every bug in the city already. And the other is both incredibly difficult to do for no real reward, and too horrific to contemplate."

....

"Those are buildings," I stated.

"More like defense turrets. They automatically attack enemies that get to close."

"The spike one would be way too much effort to punch through all that ground, and anyone who's got two working legs could avoid the attack. Besides, I can just control the Yggdrasil and impale them myself if I want to use that kind of lethal force." I dismissed that one.

"Acid cannon sounds cool and all... but they can miss and when that death ball comes down, it'll do a lot of damage, possibly to us. I think we should stick with the 'guided missile' approach." Taylor rejected the other.

"Uh... it doesn't have to be spikes or acid?" Clarice offered. looked at her. "It wouldn't be too
difficult to set them to be microwave, laser, sonic, or even EM cannons. We'd still need to aim them manually, though I could help fix that a bit, but at that proportionate size, it could store and release enough power to cut through an aircraft carrier. Or any amount less we prefer. I'd recommend using only a fraction of maximum power at a time. With ways to delimit it for brutes or when we're willing to use lethal force."

I was still hesitant. That kind of damage potential would be absurd. Enough to take on an army. Or an Endbringer.

"We're doing it. The turrets are approved." Taylor said. She'd been thinking the same thing I was thinking. I simply nodded.

....

"Flying suicide acid bombers?"

"Too large, inefficient. We can do better with a larger number of smaller bugs that fly fast and can reproduce. Lets us control the damage better, too." I said, looking over at Khepri. She nodded this time.

"Same thing as the mosquitoes?" She asked.

"Yup. But we need something larger and faster."

"Hummingbird moths," Clarice volunteered, and an image popped up. "One of the faster species of insect. Especially for its size."

"Those are kind of adorable," Taylor agreed.

"They're big enough," I added. "And they already feed on nectar, so it'll be an easy mod to link them to the Yggdrasil."

....
"No, just no, that thing has no purpose except collateral damage." I insisted.

"Yeah. This is made of bad idea."

"Aww, I thought it was cute," Clarice pouted.

"Alright, the Defiler is rejected," Respawn agreed. "I think I won't even bother showing you the Infested Terran unit."

....

"Flying artillery platform, huh?" Khepri said with a smile. Oh boy.

"Same problem as the carriers," I said. "We'll talk shop when we pick up the ability to mass produce antigravity. And even then, it's kind of a problem since that thing has to have massive amounts of recoil."

"So, filed away under 'haven't reached that part of the tech tree'," Respawn clicked a couple times. "And now, the grand daddy of them all. The ultralisk!"

"Okay, that is shiny," Taylor leaned forward to the screen.

"Very," Clarice agreed.

"Too big," I said. "The square-cube law, again. If I reduced its size to that of, say, a bull elephant, and did some shenanigans with incorporating plant biochemistry into the bone structures and gave it a super efficient system and specialized it a dozen ways... I could make one of those things per month. And they'd be basically useless against just about anything. Too slow and bulky for most targets. Too fragile to go up against Endbringers. Against anything else, I'd rather have the hundred or so zerglings we could build instead."

"What if we modified the carapace to also be a capacitor?" Clarice suggested. "The biggest
weaknesses of large organisms are a lack of energy and oxygen levels."

"We'd have to power it with lightning strikes," I said. "The Yggdrasil doesn't collect enough power to run something like that."

"Or... Sundancer?" Taylor offered. "All you need is power, right? Well, she can generate a lot of it very quickly. Can you use her to charge the Yggdrasil? And use that to power these..."

"Ultralisks," Respawn supplied.

"I could build a framework out of lightweight metals," Clarice volunteered. "We can grow them around that, so they're not as heavy and we can transfer lots of power really efficiently."

"I... I can work with that. It'd still take a while to build these things."

"Yeah, takes forever in the game, too," Respawn agreed. "I was using cheat codes just to show you everything."

"So that's it?"

"Well, there is one more thing..." he said with a smile.

....

"No, not happening," Taylor said, staring in horror at the screen.

"Why not?"

"Because that armor is so badly designed I don't know where to begin. Back mounted claw wings are just ridiculous, how do you balance with something like that? I'd keep falling over. Her hair is—there's no words for how awful that looks. And I have nothing resembling her figure."
"Actually, you're wrong about that last part," I corrected.

"Are you blind?" She shot back.

"No, but as an outside observer... she's tall, slender, athletic and has absurdly nice legs," I smiled at her. "All we have to do is ignore the, *ahem*, implants, and you're not so far apart from her."

I saw the red rising to Taylor's face. Oh god, I made her blush! And then I felt my own face heat up.

"See? That right there? THAT is why I am convinced you two are together!" Respawn insisted. "Now just accept that you're the Queen of Blades and be done with it!"

"It's still not a good design," Taylor muttered. "Sure, it looks great. But how it looks and what it's capable of are two very different things."

"What... what if we can make the wings work?" Clarice offered. "We're back to the antigrav stuff, but, that'd be relatively minor for this. And it'd let you use them very effectively in combat simply by altering gravity as you use them. Your bug control means we can tie it all in with maybe a dozen or of the more intelligent insects- say, cockroaches. The best part is, you could even fly!"

"You're saying you can make this," she said pointing at the screen. "Flight capable?"

"Easily. It's even a really efficient way to do it. Maybe not as efficient as something resembling dragonfly wings, but close."

"Dragonfly wings would make her look like a pixie," I replied.

"Yeah..." she said slowly. "I think I'd rather avoid that. Sounds like something the Protectorate would do for a PR thing."

"So the deadly claw wings are good, then?"

"Okay, they're in," Taylor relented. "But ONLY after we get the antigravity!"
Respawn smiled. "Oh, I can't wait to tell my friends in Korea about this..."

==============

A/N- Ah, the amusement and nostalgia this chapter brings me.
We, or for most of us our changelings, had gathered in an alleyway. It was night and the streets were close to empty despite it being just shy of ten. Even in this dangerous part of time, people tended to respect the curfew. Or they were simply afraid to be out at night. It looked like this place would stink, but we hadn't installed scent or taste into the changelings. I was pretty sure I never would.

Most of us couldn't fly, not until Clarice. No, we were in costume, think of her as Aceso, got that antigrav tech she was now constantly speaking of. We promised her we'd look into contacting Toybox as soon as possible. There was a number of things we needed to speak with them about, including tech to help cure the increasingly impatient Noelle. If there were only a way to send really detailed messages between Coils.

"So, this is where Hookwolf and co are hiding?" I asked, looking at the less than impressive abandoned warehouse. Not even a 'warehouse', more like a furniture store that was remodeled.

"Yup, got them all tagged," Khepri replied.

"Aren't you going to just take them all out yourself?" Crystal, who was going as 'Eki', now, asked. She did not yet have a costume for Pantheon, so she was still dressed as Laserdream.

"Too soon," Minerva answered. "We don't want to show off the modded bugs unless we have to. We definitely don't want to demonstrate the, ugh, tranqsquitoes. We'll consider them when we go after Purity's group. Besides, there's two people on this team who have virtually zero combat experience."

"Hey! I fought the fucking Siberian, that counts as experience," I insisted.

"You fought a Siberian that was holding back, while using an artificial body so juiced up that it was literally killing itself," Lisa countered. "That doesn't count."

"Still using the same kind of body," I replied. "Better. Got lots of practice thanks to Khepri over here 'stress testing' the models."
"Good, then you'll have no problem at all kicking ass in this fight," Minerva said with a smile.

"Besides," Khepri responded. "You need some leadership experience. I'm here as nothing more than a mere soldier. You make the calls on this battlefield, and do so quickly. No, I won't be using my bugs except for intel. For this exercise, I'm an extra."

"You couldn't have warned me about this earlier today?" I hissed.

"Nope. Won't work like that in the field. Be glad I gave you THIS much warning."

Oh, thanks a lot 'partner', put me on the spot with no warning. "Fine, you're still intel. Who's in there, capes, unpowered, and civilians?"

"Hookwolf, for certain. Cricket. Very likely Stormtiger. Nineteen nonpowered opponents, total of four guns and various melee weapons. Clock's ticking, you got thirty seconds."

God damn it! Okay, think... "Aceso, you go for Cricket. Your powersets should match nicely. Eki, our armor can see in the dark so you target the lights, then Stormtiger. Again, closest match. If you can't beat your opponents, at least keep them from going after the rest of us. Minerva, you and I go after the mooks. You're the thinker and have the ranged weapon. You're on sniper duty. Take shots at Stormtiger when you can as well. Osiris, you're on Hookwolf, try to keep him focused on you. Khepri will be your backup."

I looked over at Khepri. "Since she wants to watch, don't expect to get any help. Use the acid, he's exactly who I made it for."

We approached the warehouse, and let Respawn start the fight by teleporting the door off its hinges. It wasn't the kind of building that had external guards. No need, since it was Hookwolf's place of residence. Anyone he had a problem fighting would be far too dangerous for any normal person. I led the charge. Huh, that was awesome just to think about. I led the charge. Such a rush. Crystal was in next and up near the ceiling almost immediately, sending wide burst lasers that plunged the building into near total darkness and rained glass and debris down on the Nazis.

We were using the changelings and could easily see in the dark... except the ones of us up against the most difficult foes. Stupid. I'd think better of it next time.
I'd punched my first Nazi. I was positively giddy. It was satisfying to feel the bones crunch in his shoulder, and the newer changelings actually did translate sense of touch. We were easily in the brute 2/3 range with just our Changeling models. My target was downed. I had to jump and roll out of the way of one of Stormtiger's blasts. He managed to catch one of his own people in the attack. Even if I were really here, I wouldn't have been able to save that life.

Minerva took a shot at him. Real longbow, scaled up to match our changelings' biology. He blocked that, and was struck by Eki's energy blast. Fun fact about air, it's not much of an obstacle to light.

Meanwhile, Aceso had engaged Cricket. Both of them were doing duel-wield swords. Both of them were superhumanly quick with absurd understanding of just where to hit to hurt. I wasn't sure if either could get the upper hand in straight combat, but our changelings could maintain Olympic level activity for several hours without rest, if need be. Cricket would get tired. Aceso would not.

I let one of the thugs hit me with a wood baseball bat. It broke on my face. It was easier than blocking or dodging. I slammed him in the chest and sent him flying back. Remarkably enough, the men kept attacking. Guess their fear of what I would do to them was less than their fear of what Hookwolf would do if they tried to run.

Speaking of Hookwolf, I was paying attention to that now. He was taking the time to go into full "metal monster" form before engaging.

Osiris, with a battle staff that was basically artificially grown bone from his own body, approached him. "Hey, dickless," Osiris yelled at the leader of Fenrir's Chosen. "I gotta ask ya something. You are aware your icon's dad liked to get fucked by horses, right? Let one get him pregnant. Yeah, I could see where that idea would appeal to someone like you."

I punched another gang member in the gut- softly, by our standards. Really? He had to be making that up, right? Then I casually backhanded another. By now, everyone near one of the guns was down, and Minerva was helping Eki full time. I kept chasing after thugs. It was almost 'busy work' to be honest.

Hookwolf was staring down Khepri, who was just standing there watching. "Hey, don't look at me," she raised her hands innocently. "I'm not the one who said your dad fucks horses."

"Don't get smart with me, bitch!" Hookwolf shouted at her. "This time I'm going tear you apart so bad that your kike girlfriend won't be able to put you back together again!"
"Hey," Minerva yelled back. "I'm the kike girlfriend. Gaea over there is the one with the healing powers!"

"All dykes look the same to me," he stepped forward, and Osiris got in the way. "Out of my way, you little faggot."

Osiris shrugged. "Well, I did fuck your mother-

Hookwolf tore through him with a chain claw. Osiris came back into being less than a half second later, moving toward the mass of chains "last night, s-

Another slash. Another step. "-o yeah, that wou-

And a third. "-ld make-"

And a fourth. "-me gay."

This time he was close enough to jam the staff deep into Hookwolf's guts. The core part of him. Hookwolf took the bait and shattered the weapon. Coating a good portion of himself in a slightly modified variant of Crawler's acid. Hookwolf wretched in what I wasn't completely sure was pain, ripping chunks of his own body off. It really wouldn't help.

"By the way, your mom's hung like a horse," Osiris finished, staring down at the writhing and twisting Hookwolf.

Cricket and Stormtiger were, remarkably, not distracted too much by their leader's current predicament. Stormtiger even managed to throw an attack at Osiris. It collided, which was exactly as lethal as everything Hookwolf threw at the kid.

Cricket couldn't afford to be distracted. Aceso was cackling like a madwoman as she pressed her attacks. Both had several nasty cuts along their bodies. The difference was, for Aceso it didn't matter, she had lacerations in a dozen places that I could spot, some of which would be almost immediately fatal to a human body, and one of Cricket's swords embedded through her ribcage. It just wasn't enough damage to disable a changeling, especially Aceso's highly customized model.
The nazi woman's wounds, on the other hand, were the opposite. Only three in total, and they looked minor. A shallow slice along the left ankle that would have cut most of the nerves in that foot if it hit where I was pretty sure it hit. An incision on her left wrist that was pouring blood at an alarming rate. A minor slice over the forehead that had allowed enough bleeding to blind the woman—she was fighting on sonar alone.

And... and that's what the cackling was for, wasn't it? To mess with the sonar. It's sometimes easy to forget just how terrifyingly clever the preteen girl was.

Khepri was watching me as I was observing the battlefield. If we kept this going much longer, both Hookwolf and Cricket would die. "Stormtiger," I shouted. "It's over. Stand down and surrender, so we can avoid accidentally killing your friends."

Eki backed up and stopped firing, to let him get a look at the mess. Stormtiger dropped. "Fuck you sideways," he cursed, glaring angrily at me. But he didn't resist as I touched his arm and delivered the sleep drug. No sense in letting them know this body was a fake, and everyone already knew Panacea could put people under with a touch. Cricket had also stopped, though whether from actually surrendering, or simply because she was too tired from blood loss to keep going, I was unsure. Aceso gassed her and went to work performing first aid.

"Okay, Osiris, you can call off the acid now," I shouted over to him.

"Yeah, it's totally not cool to use chemical weapons on Nazis," Minerva said cheerfully, as she went to the various injured gang members and ziptied their hands behind their backs. A lot of them screamed as she did it, too. We'd deliberately targeted the arms and shoulders, as we didn't really want to break their legs, and we were trying very hard not to kill them. "I mean, it's not like they'd ever do anything like that to a sweet little Jew like me."

I am going to need to talk to her about this 'pretending to be Jewish to annoy the Nazis' thing.

"As you wish, my lady," he yelled back. And then the bone staff reformed. And with it, the acid that had been released all over Hookwolf's insides vanished. He started pulling himself back together.

He was nude by the time he had gotten into one piece, and there were still acid burns across his body. Half his hair had been eaten away. "So, planning to resist?" I asked.
He glared at me defiantly, and eyed Osiris. A bladed chain shot straight at me like it was a thrown spear. I easily dodged it and spit on the metal. More of Crawler's acid. THIS time he was human enough to scream as he struggled to form a new blade to sever the old chain. He failed, but eventually the acid ran its course. Specifically, the part it was attached to fell off. Joining a few hundred pounds of other metal that was once Hookwolf. He passed out while still standing.

"One hell of a fighter," Khepri said, with no attempt to disguise her admiration.

"Pity he's such an evil sack of shit," Osiris replied.

"Do we offer them a chance to join Pantheon, or just hand them over to the Protectorate?" Minerva asked.

"No! No way! No fucking possible way are we letting them on the team," Eki insisted as she dropped down next to the rest of us. "They're a bunch of rapists and murderers and they torture people and animals for the fucking fun of it."

I looked toward Khepri. She shrugged, but at least answered. "Hookwolf might, at least, have a power we can use. But frankly, he's not worth it. Power isn't compatible with the changelings. And there's nothing he can do for us that we don't already have an answer, except using him to generate raw material. This chain seems to be steel, and there never seems to be enough iron to cover the projects that need it."

Aceso looked at me contemplatively. We'd let her join, in spite of her crimes. Bonesaw made these three, combined, look almost innocent.

And then there was Crystal, watching me just as expectantly. She was by far the most sweet and genuine person I knew. Polar opposite, I saw Minerva's smile that made it clear she wasn't going to help, and Skitter seemed far too interested in 'teaching me to be a leader'.

Do I set a precedent that only the useful monsters get a chance at redemption? Or do I let even the fucking Nazis join up? Or... do I do what we did to Coil? That thought churned my stomach.

There were no right answers. Anything I decided would make me a hypocrite or worse. Dammit. I sighed. "They fought against Leviathan. Risked their lives against a monster like that. It's... it's more than I've ever done. At the very least, we'll take them back and heal them. Keep them overnight. Try to talk to them before making a permanent decision."
"Khepri, Osiris, Eki," I addressed them. "Stay here and contact the police in about five minutes. If they ask, let them know we took Stormtiger, Hookwolf and Cricket back for healing and observation. We'll deal with this shit in the morning."

Congratulations, Amelia. Wasn't this avoidance shit what messed you up so badly in the first place?

A/N- God, I can't believe no one told me how badly I wrote this the first time. Much editing has died to bring you this chapter.
Chapter 27

Amelia, Ch 27

I didn't sleep much that night, spending it mostly staring at the ceiling. Patching up our captives was simple enough. I was impressed by how little and how much damage Aceso managed to inflict upon Cricket. Undoing the cuts were almost trivial, but she lost about a fifth of her blood supply. She'd recover, though she'd probably need to stay in the hospital for a while.

Hookwolf's body was bizarre. As a changer, that was no surprise. They always had strange rules to their physiology. I fixed him the best I could, the rest he'd have to deal with on his own.

All Stormtiger had were minor burns and bruising. He'd be fine without any help, but I fixed him anyway. They remained in their containment pods, their powers disabled by whatever our resident biotinker cooked up while they slept the night away in the perfect dream state that I put them in. If only it were so easy for me to get to sleep.

Riley, the actual girl instead of the puppet she used almost constantly, came into my room. I glanced over at the clock- just shy of 1am- Wordlessly, she climbed into my bed and cuddled up against me. I put my arm around her and let her go back to sleep. Not the first time I'd woken up with her in my bed, but the first time I was awake when it happened.

I watched her sleep. How could such an innocent face have such a monster behind it? Then again, wasn't that true of most of us? Taylor was a wonderful person, even if Skitter was one of the biggest bitches I had ever met in person. Even Lisa could be okay, if you could deal with her need to be the smartest person in the room. Then there was Respawn. I couldn't even think of him as 'Zach', he was too caught up in playing his persona that I hadn't seen the person beneath as I had the others. And, of course, myself. I didn't have issues. I had a subscription.

The only person I knew who didn't switch natures was Laserdream. Crystal was always the same, no matter what mask she was or was not wearing.

And that, of course, brought me back to thinking about Passengers. They came from somewhere. Some distant dimension of Earth, perhaps? An alien world? And they climbed inside our brains and made changes. Not just creating the Pollentia and Gemma, but modifying and actively manipulating our memory and emotion centers. Were they why parahumans were so fucked in the head? Or was it the reverse, and we got powers because we were already messed up? Did it matter?
I thought to the three nazis we had stored no more than a hundred feet from me. Yeah, it mattered. If they became monsters because of their powers, I could hardly blame them for it. If they were monsters and so they were given powers? Then quite the opposite. Either way, I knew I could blame the Passengers. Whichever answer was true, they were deliberately making the problems of the world worse.

Unfortunately, my powers were limited to lifeforms. Not extradimensional symbiotes. I could see them through their hosts, but I was unable to touch them. No surprise. We were safely inside our terrarium and they wanted to keep it that way.

So my thoughts went in loops all night.

Morning came for me far too early, though. I had just gotten to sleep, it seemed, when Riley was waking me up.

"C'mon, sis," she said pushing my shoulder. "It's already past ten. Everyone's waiting on you."

I looked at her- she was already wearing her control system for Clarice. "Fine, I'm up," I muttered. I stumbled to the bathroom. Yup, I wouldn't recognize myself without those bags under my eyes.

"You should let me give you some upgrades," Riley said as I started to wash my face. "It's not much, just a simple hormone regulator. Serotonin, insulin, a few dozen other things. You'll be able to wake up and go to bed in seconds!" She sounded so very much more chipper than I felt.

"Is that what you did to yourself?" I muttered.

"Yup, plus a hundred other things," she answered.

"So you think it's okay to just artificially change your emotions and biology?" I asked her.

"Of course," she answered. "Our bodies are nothing more than machines. People make such a big deal about it, but they're wrong. If you had a car, would you want it to run more poorly just because you didn't get enough sleep? Would it be okay if your coffee machine didn't work because you were bored? That'd be stupid. It's nothing more than what you do to yourself when you drink coffee, only a million times better and without the unnecessary addiction to caffeine."
"It's not exactly that simple," I answered. "Changing your body artificially just isn't something people are comfortable with. Especially when it comes to modifying brains and emotions."

"That's because people are dumb," Riley said with the clear logic of a child. "Our bodies are no different than your changelings. They're machines made of meat instead of metal. And if someone told you they weren't going to get their oil changed or their tires replaced because their car was 'too special', what would you think of them?"

I stopped. That really was a good point. "That doesn't apply to the mind, though," I answered. "Altering the brain means altering the person."

"That doesn't make sense," she insisted, following me but thankfully staying outside of my room as I changed. "If the mind is a special and sacred thing, wouldn't then choosing to alter your emotions and how your mind works is a good thing. It means you're taking control away from hormones and accidents of birth. Instead of letting nature control you, you control nature. Or the mind is nothing special at all, merely a bundle of nerves, and changing it is meaningless."

I paused, half in the middle of pulling on the pants I would be wearing today. Holy shit, she's right. I still didn't actually believe what she was saying. But from every logical angle I could find, she was right. Well, except a bit of one.

"Okay, but people can change vehicles if something goes wrong. Not so much with our brains or bodies. Finding someone you trust enough to alter fundamental parts of yourself is... scary. Like your computers. Let's pretend what you have now is the only computer you'll ever own, and you can't repair or reprogram it yourself. Wouldn't it be difficult to let someone else change it? Never knowing what they're doing, if they might do something bad inside it or break it on accident? Wouldn't you feel better just keeping it how it is instead of taking that kind of risk."

"So..." she said, with a whine in her voice. "You don't trust me?"

Fuck. My. Life.

At least I was dressed now. I went out to the hallway. "It... it's not like that," I said as I pulled her into a hug. Even though it was like that. "There are lots of levels of trust. And the more important something is, the harder it is to trust someone that much. This... there is nothing more important. I can't imagine ever trusting anyone that much."
"But..." she sobbed. Here I was, holding a sobbing Bonesaw. That really did put the recent events of my life into perspective. "We trust you that much."

... What? "What?"

"Your power. It's instant and no one would notice. Every time any of us touch you, we're trusting you not to rewrite us into whatever you desire. Trusting that you have't already done so."

Oh fucking hell. It's true. They did. They were. "You shouldn't," I said, choking on the words. "Victoria trusted me like that."

"That's what sisters do," Riley said. She squeezed tighter, with a certainty only a child could possess.

"And I violated that trust in the worst possible way," I whispered. "I don't deserve it."

"Too bad," Riley answered. "That's not how it works. But we have to go to work now."

"Yeah, I guess so," I agreed. As if I didn't have enough to think about already.

============

A/N- I still think this is one of my favorite early chapters.
By the time we'd made it to see the others I was... presentable, at least. Riley, of course, didn't follow, but Clarice was already in the room.

Taylor looked at me, but it was more like a formality than anything, she could sense me long before I entered the room. Even if our base was the most insect-free location in the city right now. Mainly because the walls ate them.

"So, finally decided to turn the Nazi trash over, right?" Crystal started. She didn't look like she'd slept well, either.

"No," I replied. That turned heads. "We offer everyone a second chance. If they don't take it, we'll wash our hands of them. But I founded this team on that promise, and I plan to stick to it."

"You're fucking kidding me," Crystal's eyes started to water. "You know the shit they've done!"

I knew. Oh god how I knew. I treated their victims often enough that I probably knew better than everyone in this room combined. "It... it's no worse than what I've done."

"Amy... you can't blame yourself for Victoria's death. Or anyone else's. No one's perfect and no one has that kind of foresight."

I laughed. It was short. It was painful. "Oh, what I'd give if that was the worst thing I'd done."

"What do you mean?" Crystal asked with slowly drawing horror.

"Umm... maybe we should save this conversation for later," Lisa interrupted.

"I... right after I ran away from home," I continued regardless. This needed said now. "Victoria found me. Tried to get me to come back. I... I was messed up for a lot of reasons. Afraid. Alone.
Afraid of being alone. I... I... when she touched me, I used my power. Forced her to love... to be in love with me."

Lisa and Clarice were the only two that didn't look shocked. Even Taylor looked a little green at that one. Good. I deserve it.

"Why would you do that?" Crystal said, but it was more like she was asking me NOT to explain it.

"Because I was, am, in love with her," I relented. I'm in too deep already, now isn't the time to back down. "And I knew she'd never feel the same. And I was weak and stupid and if I would die if that would take it back. I violated her on the most fundamental level, and she died hating me."

"Oh God, Ames..." Crystal whispered.

"Not quite true," Minerva interrupted. "We ran into her, when she was going to fight Crawler. She wanted to know if you were okay. She was worried about you."

"You don't have to lie to me. She'd never ask that. Especially not then. Especially not to you."

"True," Minerva replied. "She didn't say it, but when has that ever stopped me?"

"Well," Taylor added. "I don't know what Tattletale's power figured out. But... she's not lying about us running into them. I don't know what she and Glory Girl talked about... it was right after I killed Siberian. I wasn't in a good headspace." The look on her face said she still wasn't. Not really.

They met Glory Girl before she died... what...

"No," Minerva said, interrupting my thoughts. "I didn't know she would get killed. I didn't know they were going to drop those weapons. If I had, do you think I'd have let half my team be caught in the blast radius like that? And no. She didn't forgive you, not right then. But she would have, if she'd been given more time. You were still her sister."

I just looked away and studied the ground. "You really suck at trying to cheer people up."
"Actually, I'm pretty good at it," Minerva replied. "But the part where I'm trying to do it while actually telling the truth? Really ties my hands, y'know."

I looked at Crystal. "Yeah, so, I'm in no position to judge anyone," I concluded. "You're free to leave now. I won't even ask you to keep this a-"

She moved toward me and wrapped her arms around me. "Shut up, Ames," she mumbled. "One stupid mistake that you regret doesn't make you a bad person. And even if it did, it wouldn't put you close to Nazi levels."

I smiled in spite of myself. "Thanks, Crystal, that means a lot."

"Umm..." Crystal continued. "You haven't showered today, have you."

It wasn't a question.

"No, I was kinda distracted by a few other things," I answered.

"Yeah, I just want you to know that's why I'm ending the hug early. Not any other reason."

"No, I get it, it's fine," I said, letting Crystal disengage.

"So, is anyone else here having second thoughts about this?" I asked. "Knowing what I've done."

"I'm good," Respawn said with a smile. "Lotta people would do the same thing, and not regret it for a second. Of course, I'm immune to your power, so maybe I'm not the person to ask."

"I already knew, of course," Tattletale said.

"I had... some idea," Taylor replied. She still didn't look all that happy. "But, I'm guilty of helping use some form of mind control on three different people already."
Crystal's head snapped over to her.

"A child abusing supervillain with dangerous powers, a bloodthirsty psychopath parahuman who got off on torturing innocent teenage girls, and Shatterbird," Minerva stated quickly before she could speak. "And all temporary. It's not something to be taken lightly. Chances are that we'll just outright kill anyone else we find who deserves the same treatment. Speaking of which, shoulda left Hookwolf with the acid for another minute or so."

"No," I responded, my voice going hard. "We do NOT kill in cold blood. If it has to happen in battle, it has to happen. But when they're already down, we take them into custody. Now we are going to go talk to the fucking Nazis. And offer them a chance. Even if it's not going to be much of one."

=========

A/N- Ah, this one. This is one of my weaker early chapters for the deep emotional stuff. I see so many things I could have done better.
Chapter 29

Amelia, Ch 29

Our 'Containment Facility' wasn't much to look at. Basically just cocoons. Which they, of course, were stuck in. I tapped the wall, and they were hit with a counterdrug to what was keeping them asleep. They woke up in seconds.

"Good morning, skinheads!" Dammit, Respawn! No, wait, that was Minerva. Dammit Minerva!

Hookwolf recovered first, but they all were up remarkably quickly. Even Cricket, though she was still groggy. Blood loss would do that. I'd need to talk to Riley about that.

"Go fuck yourself, kike," Hookwolf muttered.

"Woo, you got it right this time." Minerva said in a complete deadpan voice. This was getting out of hand.

"Okay, enough of that, both of you," I stepped forward. "Minerva, either be quiet or find something that isn't directly counterproductive to do. Hookwolf, keep in mind that no one has any proof you were ever here, and no one likes you enough to look very hard. So you probably shouldn't antagonize us."

I eyed them. Cricket was too tired to do much more than attempt to concentrate. Damn, she'd need more time. Stormtiger met my gaze full on when I looked at him. "If you were gonna fucking kill us, you wouldn't have brought us here."

I shrugged. "Yeah, probably true. We can just hand you over to the Protectorate. You've got no one left to help you. Hookwolf over there has a one way ticket to the Cage. Dunno how long you'll be locked up for, either, but probably a while."

Cricket was well enough, or determined enough, to chime in. "Purity will get us out," she rasped. "You healed my throat?" she asked in surprise.
"Purity won't be a problem by the end of the day," I said with full confidence, ignoring Cricket's other question. "You think we were going to hit you without being ready for her, too?"

Hookwolf laughed. "You talk too much," he smiled. "Reminds me of Kaiser. That's what you're doin', right? Building your own little empire. Like bugbitch and the rest of her crew were trying to do?"

I shrugged. "Probably, but it's not your concern. What is your concern is what we do with you three. Pantheon follows its own set of rules. The whole hero versus villain bullshit is over. You're either trying to make this crapsack world better, or you're our enemy. It's that simple."

Cricket tried, at least, to laugh. "That means you'll be fighting the whole world."

"Says the Nazi," I smirked. "But I think you'd be surprised how quickly people will step up and do the right thing, when they see that it'll actually work. And we're going to make it work. Which brings us back to you."

I stepped out of my sandals and looked over to Clarice, who was manning one of the machines. "Honestly, your powers are basically useless to us, and you're PR nightmares to keep around, and frankly I just don't like any of you. So what I'm doing is fucking stupid and we all know it. But I'm offering you a second chance."

"Join you, or rot in a cell?" Stormtiger only half asked.

"More or less," I answered. "Mostly less. You're not strong enough to be on this team. The best you could hope for is... secondary positions. Rearguard. Aiding civilians. Stormtiger, you'd be cutting down Yggdrasil growths to make planks for construction. Cricket... eh, I guess we could use you as a combat instructor. Hookwolf... actually you we probably could use in the field, if you remember how to follow orders."

I shrugged. "Alternately, you promise to never use your powers to hurt people again, and to leave this city forever, and we'll just... forget we ever had you here. How's that sound?"

"Is that what you offered Victor and Othala?" Stormtiger asked.

... "What?" Well, that threw me off my game for a second.
"He thinks we captured the rest of his team," Minerva spoke up. "They vanished two? No, three? Three days ago."

"Oh," I answered. Immediately I felt stupid. "No, we had nothing to do with that."

"You're not lying," Cricket said with surprise.

"No, we're not," I insisted. I looked over at Clarice. I thought their powers were disabled. "If we find them, when we find them, we'll offer them the same deal we're offering you. One second chance, and only one. And an opportunity to work with us if you want it."

"Sounds like a deal," Hookwolf smiled. "You win, city's yours if you can keep it, job well done and you'll never see us again."

"And you'll cut the Nazi bullshit. And the dogfighting. And just generally being an unrepentant sack of shit." Respawn added. "All that's over now."

"Fine, all that, too," He agreed far too readily. "Now you gonna let us go?"

"What 'us'?” I asked. "That's the deal you took. You only speak for yourself. What Stormtiger and Cricket do is their own to decide. Besides, we have to keep Cricket for at least a few more days."

"Going back on your offer, already?" Stormtiger said with a growl.

"She lost a lot of blood," I replied. "A little more and she'd be dead. Even now, she'll probably die without constant medical care. Would you prefer we take her to a hospital? It'll have to be the PRT's, because there's no way we're leaving you with civilians."

He just glared at me.

"We'll see that she gets better," I continued. "And then let her make her choice. Forcing her to choose while she's still dependent upon us for medical care would be coercion. We don't use dirty
tactics like that. She can decide when she's recovered."

"No, you just force us to choose between you and a prison cell." Did this man ever say anything without snarling?

"We didn't force you to be criminals," Khepri responded. "Besides, speaking as one of the more successful criminal masterminds in the city... this is actually a pretty sweet gig. I get to do the same thing I was already doing, and the Protectorate has to watch and pretend they like it."

"Couldn't you heal her?" He continued, looking at me.

"Need raw materials," I answered. "I'm not like Crawler or Othala. I can't magic up flesh from nowhere. I can stitch together cuts without a problem, but if I replace her blood, the mass needs to come from somewhere. If she had some spare body fat, I could used that."

"Liar," Hookwolf spat. "I've sent bugbitch home with limbs missing, you patched her up just fine."

"Backups," I answered. True. Misleading, but true. "All of us have spare material stored around here for when we need it, other than Osiris and Eki. His power means he won't ever need it, and we haven't had a chance to set up for the new recruit."

"Told you that you're too skinny," Stormtiger muttered at his teammate. "Fuck it. I'm staying here, then."

"Joining the team?"

"No. Staying here," Stormtiger clarified. His voice was deeply condescending. "When Cricket's well enough, we'll be leaving together."

Behind me, laughter started. I recognized the voice. Fucking Tattletale. I looked over at her, and she ducked when a vine formed from the ceiling and tried to smack her. She was starting to get good at that 'combat intuition' thing.

"Okay, we can work with that," I relented. "She'll need to stay in the cocoon. We'll set up a cell for
you. We'll even give you privacy to chat with each other. Talk things out. In the meantime, we'll be
taking Hookwolf and leaving you here for a bit."

The pod Hookwolf was in ruptured, dropping him to the ground. He was still weak, and Clarice had
to haul him to his feet. She was the only one here with a changeling, so may as well let her handle
the heavy lifting. The door sealed shut and I let Stormtiger free.

"Are we really letting him go? You know they were lying their asses off, right?" Crystal asked. Her
hands were clenched into fists and shaking.

I smiled. "Oh, I know. Minerva, contact the PRT. We'll be handing Hookwolf over."

"You lying cunt!" Hookwolf yelled, struggling vainly to break Clarice's grip.

"I didn't lie at all," I said, letting the malice leak into my voice as I met his gaze. "I promised you a
second chance. And you wasted it by lying to me. Did you think we wouldn't find out? We had four
lie detectors pointing at you the whole time. I meant everything I said. All you had to do was mean it
when you swore you wouldn't go back to your life of crime. The only thing you were honest about
was leaving the city. You were going to run away with your tail between your legs, and then make
yourself someone else's problem. The Protectorate might even have let you. But we're not the
fucking Protectorate. We actually deal with problems."

"Don't play all moral with me, bitch," he continued to struggle. "You knew this would happen. You
wanted it to happen. You tricked us!"

"This is a war, Hookwolf," I shrugged. "And all war is deception," I tapped him and he fell
unconscious.

=============

A/N- Looking back at it, I think THIS is the chapter that really set the tone for the future of this story.
A couple of canon omakes:

"Extinction Events"

"No, we are NOT disabling powers, or messing with powers at all!" Tattletale insisted. "We'll use that poison Bonesaw cooked up for temporarily disabling parahumans. And we'll tell the PRT the truth. We're using stolen tinker tech. And even then, only in the most desperate of situations."

"Why not?" Riley whined.

"Because I like being alive," Lisa snapped back. "Taylor over there is already ranked as a Master/Thinker/Stranger and maybe Tinker. And she's only the second most absurd power on the team."

I felt a little embarrassed, actually. "I'm only a Striker."

"Correction," Lisa replied. "You WERE a Striker. Now you're at least a five in Master, Brute, Thinker and Tinker. And I would not be surprised if they labeled you as a Shaker fifteen."

"Fifteen!?" Taylor and I exclaimed at the same time.

"Fifteen." Lisa confirmed. "That stunt you played when you straight up 'noped' Bonesaw's plague?"

"My big sister is the best," Riley said with conviction.

"Yeah. That. You stopped a plague. In seconds. Across an entire city. Right now, Piggot is over
there trying to convince the rest of the PRT leaders that this is absolute proof you can kill every living thing in this city at once. And know what? She's right. It's true. You can. The next most powerful Shaker I can name is Labyrinth, and you make her look like a chump in terms of range, and are her equal or better in every other way."

"Fuck..." Taylor whispered. I nodded my head.

"If they got the idea that you could expand the Yggdrasil further than just this city, and again you can, then 15 is a low estimate of what you could do," Lisa continued. "You are entirely capable of being a one woman apocalypse. And the way you upgraded Taylor's range, giving her the same kind of power, would qualify you as a Trump 5 all on its own..."

Lisa paused for a full minute, staring blankly in front of her. "Holy shit. I'm in a room having a conversation with three extinction level events. What did I do to deserve this?"

"I can think of a few things," I answered dryly. "So, back to the power removal. Why?"

"Because you do not want to fight someone who has nothing left to lose. That knows they're dead if they lose. And being able to remove powers... to most of us, that's as good as death. Worse than death. We have a drug that's hard to administer and is temporary. We do not have a way to steal powers away from their 'rightful owners'. The former makes us scary. The latter makes us the enemy of every parahuman on the planet."

I nodded. "Okay. No power removal."

=============

This Omake is from Slayer Anderson:

"The Four Horsemen"

Lisa sighed, content that the current battle was won. "Okay, if we've decided not to become the threat for every single parahuman to obliterate the world over, I've got work to do. The PRT and Protectorate are going to be handling the announcements about Jack Slash, Bonesaw, and Siberian, so I want a lead on any useful intel before it hits the net. If you need me, I'll peeking on Miss Piggy and half-assed hero brigade."

Riley blinked, cocking her head, "You can hack the PRT?"

Lisa snorted, "Like that's any achievement. Their encryption is shit, their passwords are simple, and
their IT department is gullible as hell."

"Language!"

Taylor shrugged at Amy's disbelieving stare. "Lisa did it all the time back when we were with the Undersiders."

Amelia shook her head, "That's not how these things work, Lisa. My mo...Carol, I mean, did some work investigating alleged fraud, hacking, and stuff like that against the PRT. All of it was 'alleged' because they were villains talking crap to get some street cred. If you're telling the truth? You're probably one of the only parahumans who have actually gotten that kind of information off their system."

Lisa shook her head, "It wasn't any more difficult than some of the work Coil had me do in ferreting out corporate secrets."

Riley stared, "...you know, I usually had to get inside someone's head, literally, to get the PRT's secrets? They have some serious thinker and tinker support on government payroll...there's no way you could do it that easily."

Lisa smirked and, within five minutes, the group was gathered around Lisa’s old laptop (rather than the new one made by Riley, which they'd agreed would give an unfair advantage to the test), watching Weld take a tinker-tech power-sander to his fingernails. The blonde thinker leaned back, resting her hands on her head with a proud expression on her face, "See? I might not be one of the harbingers of the apocalypse like you three, but I can do my part, thank you very much!"

Amelia rubbed at her eyes, "Lisa...about that...you just admitted that you can casually hack one of the most well-funded, powerful, and well-defended government agencies on the planet. As a purely hypothetical question...what's to stop you from using your Sherlock BS on the nuclear launch codes of...anywhere?"

Lisa blinked, freezing in place where she had begun to stretch languidly. "I-"

"Oh!" Riley grinned, suddenly excited. "Do you think you could find the NBC storage sites the government uses? They always keep the best chemicals and things in there! Please? I'll give you a painkiller implant for your headaches!"

Taylor's face wore a look of consideration. "You know, you might want to consider getting some blackmail on the mayor...you know, if we can't manage to convince him to help us. Maybe we could start digging up dirt on other people too? I mean, just as a precaution of course! If someone tries railroading us, we could dump it on the internet and get them kicked out of office or whatever!"

Lisa twitched, then slowly settled into her seat, moving to rest her head in her hands. "This is how it starts, isn’t it? Sure, picking up blackmail on some scumbag politicians sounds awesome now, but before I know it, you're going to be convincing me to dismantle governments or wipe out Ellisburg with a nuke, aren't you? I can actually hear you, Taylor, telling me it would only be a 'little bomb,' right now, in my head. Do you understand how frightening that is?"

Amelia seemed entirely too amused as she grinned. "Well, it's not like you're in bad company after all. You said it yourself, we're all apocalypses waiting to happen."

Lisa sagged.
Riley cocked her head. "Is...it too late to change our name?"

Lisa's head snapped up. "No. Just no! No way!"

Riley pouted, "But it would be perfect! Taylor could have the pale one, Amelia's would be black...would you want the red or the white one? I mean, my powers are a pretty good fit for either, I guess, but I think you'd do better on the red one. Big sister is always going on about how you start fights and stuff! Jack never let me have a pony anyway, it'd be perfect!"

Lisa could only gape.

In a flash of insight, Amelia understood. "We are not calling ourselves the Four Horsemen!"

================

A/N- Slayer Anderson is awesome and a source of great additional ideas in this story.

Chapter End Notes

Some Omakes that the Author liked well enough to make canon. I'll make sure the authors are credited in each case. This also marks the point where the original chapters won't line up with their chapter here, I'll eventually go back and fix that (also marking who the narrator for each chapter is) later but for now I'm just spamming ctrl+c and ctrl+v
Hookwolf was still unconscious by the time the PRT and our reporters showed up. He still had burn marks from last night. I felt it better to leave evidence of the battle, and that we had to heal him. Wouldn't really make a difference. This was Hookwolf, nobody inclined to feel sympathy for him would be considered fit to sit on a jury to begin with.

We were all, finally, in costume. Eki finally had hers. It was, thanks to a combination of spider silk and Riley's mesh weave, nearly indestructible and capable of withstanding almost anything that wouldn't level a building. And still very much alive, with stealth tech coming from cells based on cuttlefish, and some cybernetics provided by Riley granting it very passable invisibility. Its default coloration was yellow for the head and shoulders, changing into green for much of her torso, and blue for her legs. Obvious 'sun' motif.

It also had a number of systems that the rest of us desperately wished we could fit into the changelings, but we had no way to work in a big enough power system. Gauntlets capable of delivering multiple settings of electrical shock, as well as an extremely high intensity EMP. A flash system that she could use to blind anyone looking toward her. And were were looking at a mini railgun upgrade at some point. All powered by Crystal's lasers. It also came with a battlestaff, designed to stick to the back of the costume when not in use, and able to better extend the range of her electrical attack

Vickory made it first, impressively enough. There was another guy there with him, instead of that cute camera girl Minerva felt the need to describe to me in great detail. Oh well, I would survive.

The camera was up and I was ready for my first time in front of the camera that didn't involve reading from a script or hiding behind my f- New wave. "Stan Vickory, of channel twelve news, talking with Gaea," he pointed the microphone at me. "How does capturing one of the most notorious members of Empire Eighty Eight feel? It is your first serious conflict since founding the team, is it not?"

"It is," I confirmed. Even if it wasn't major at all, and was in fact pretty easy. "But this isn't really my victory to claim. We were giving our less experienced members and new recruits a chance to work in the field. So we could see what they were capable of and where they needed improvement."

"Excuse me for being presumptuous," Vickory said. "Did you mean to imply fighting Hookwolf was... practice? And three of your junior members beat him?"
"Oh, no," I answered with what was probably too smug a smile. "Hookwolf's remaining team was a practice run. Osiris took down Hookwolf all by himself. You'd know him better as Respawn."

He raised his hand and waved. "Told you this was the team to be on!" He bragged. Respawn's costume was currently white, meant to sort of resemble mummy wrappings. It was also alive, and had the same stealth mode as Crystal's outfit. But the power constraints were pretty high, so he was limited to about ten minutes. His namesake ability was the only thing that kept it viable. Once out of power, he'd simply reset it to full power.

"Yes, I do recall you saying something to that effect," Vickory agreed.

"Aceso handled Cricket," Clarice stepped forward. She wasn't wearing a mask, making her one of the half on the team that did not. But the whole 'Clarice' body was a mask. She, too, waved at the camera, although not as enthusiastically as Respawn.

"Last, but certainly not least, Eki," Crystal stepped forward. "Our newest member." Also, with exception to Bonesaw, the one with the most combat experience.

"Good to meet you, miss," Stan said with an easy smile. They'd met before, of course, but when Crystal was Laserdream. "The others have been kind enough to explain or demonstrate their abilities earlier, would you care to do the same?"

"Energy generation," Crystal replied easily. "Light and electricity. Can do EMPs if I need to. Few other things I'd rather keep in reserve. It doesn't pay to let the bad guys know everything you can do." She held up her hand and let electricity dance across her fingers. "I would demonstrate, but camera equipment is pretty sensitive, and I wouldn't want to accidentally damage anything."

"I think I speak for our accountants when I thank you for your consideration," Vickory said with a chuckle.

And now the PRT was finally arriving. Choosing to ignore the "do not drive on the plants" warning signs we had planted near the roads. Miss Militia stepped out of the vehicle. A number of armed PRT men came out as well.

"He's been sedated," I told her as they collected Hookwolf. He only had clothes on because Respawn donated a pair of boxers. "He should recover in twelve to fourteen hours. We had to use
anti-brute techniques and he was hurt pretty badly. I have no idea how long it will take before his power recovers, probably several days."

"Thank you for the status report," Miss Militia said politely. The look on her face told me she wasn't happy to see the news crew.

"Miss Militia," Vickory said, moving up toward the new leader of the local Protectorate. "What do you think about how easily Pantheon apprehended one of the most dangerous parahumans in the city?" The implied question was, of course, 'why couldn't you do it?'

She regarded him, and then us. "I think I'm more interested to learn why they're turning over Hookwolf, and none of the others. Police reports indicate they captured multiple E88 parahumans." Well played.

Minerva spoke up. "Cricket was badly injured. Gaea was able to save her, but she's still weak. Stormtiger wishes to stay with his injured companion."

"What of the others? You're not planning to keep them for your team, are you?" Miss Militia asked. Did they spend last night discussing this?

"There were no others with them," I answered. "We're under the impression they may have joined Purity's faction. Cricket can barely maintain consciousness more than a few minutes. She is in no position to be moved. Even if she were, Lung's escape from your custody does not inspire my confidence, and that was before. Now you are even more woefully understaffed. Our facilities are ready to deal with almost anything. Yours are not."

"Yet you'd let us hold Hookwolf?"

"He's unconscious and his powers are exhausted," I said with a deadpan voice. "He'll be lucky to be able to go to the bathroom on his own for the next couple days. You should be able to handle that, I hope. He should be in Dragon's custody by the time he recovers."

"You're not recognized law enforcement," she responded. "You aren't authorized..."

"Except that we are," Minerva replied. "We got permission from BBPD."
"That's PRT jurisdiction..."

"Traditionally, yes," Minerva continued. "But legal custody belongs to whomever does the arrest. And that would be the civilian police, in this case. In fact, we should probably just ask you for Dragon's number. The Protectorate's performance in Brockton Bay has been woefully inadequate for years. Is it any surprise to you that local law enforcement and civilians alike are putting their faith in the people who spend their time actually fixing problems and getting results. As opposed to a Protectorate that napalms a city block and then follows it up with tinker weapons that hit their own people?"

"They sacrificed their lives to stop Crawler and the rest of the Nine!" Miss Militia's voice raised. Nerve struck. Point: Tattletale.

"Correction," Minerva retorted. "You sacrificed their lives. I'm sure they'd have been quite content to go on living. But you were too pig headed and proud and fucking glory obsessed to accept help from us when you needed it and we offered. And because of that, lives were lost. Some of them your friends. Some of them mine. The difference between us is that you keep working for the people who ordered their murders."

She took a breath, it was almost theatrically deep. "You've proven you can't save this city. So shut up, get out of our way, and watch as we do it for you."

Holy shit, Lisa.

The two women held their stare down.

I looked over at Vickory. Who wisely chose to say nothing and let everyone forget he was here. Cameras were definitely still rolling. Khepri stepped forward, between Minerva and Miss Militia. "Okay, Minerva, you've made your point. You can chew out the Protectorate later. We have more important things to worry about right now."

Lisa broke eye contact with Miss Militia, to look at Taylor. "You're right," she agreed. She turned to walk away, briskly passing by the news crew. Miss Militia turned a moment later, and strode toward the vehicle that would be taking Hookwolf away. For the moment, at least, the prisoners beneath our feet were both secure, and forgotten.
I heard Tattletale mumble as she passed Vickory. "Feel free to air any amount of that. Speculate. Full story will come out soon enough."

==============

A/N- I still love this chapter.
"Purity lives in a nice part of town, and has family with her," Taylor explained as we sat in our planning room. Or, as we usually refered to it, the dining room. "She won't want to fight there, or anywhere nearby. We'll find her there, and offer her a chance to take the fight to the boat graveyard, or any other abandoned part of town. And give her the option to retreat immediately or surrender."

"Which she won't accept under any circumstance except taking her infant daughter hostage," Lisa replied.

"We won't?" Crystal tried to say it like a statement, but it came out a question. A hope.

"No. We will not," I confirmed.

....

We approached Purity's hideout, which was a nice penthouse apartment in the wealthy part of town. It couldn't be more polar opposite of Hookwolf's run down warehouse. How has she not been caught, already? I wondered.

Eki carried me to the window of Purity's apartment. She was there, out of costume. Along with a pasty, somewhat overweight boy around my age. A little brother? Far to old to be her son, certainly. The kid spotted us, though even with changeling hearing I couldn't make out what he said. The glass must have been soundproofed or something. It didn't look especially new, so it probably survived Shatterbird as well. Purity was up and instantly covered in a nimbus of light. I simply tapped on the window.

"If she attacks, just drop me and fall back," I instructed Crystal. "One changeling isn't going to make the difference in this fight. You're our heavy hitter. We can't beat Purity without you, unless we want to demolish half the city."

The window opened. "What do you want."

"Just here to talk for the moment," I answered.
She glanced back toward the room the boy had retreated to. I could hear him muttering nonsense sounds, and the whimpers of a very young child. "The roof, I'll be there in five minutes."

I agreed, and Eki lifted me up the couple stories that were required to get us there.

....

"If she tries to run, I'll track her," Taylor stated.

"She won't," Lisa added. "She thinks she can take us in a fight."

....

True to her word, Purity arrived in five minutes. Although she'd came from an angle that wouldn't appear to have come from her apartment.

"Okay, I'm here, now talk," she insisted impatiently. "I'm already pissed that you had the gall to show up at my home."

"Your identity is already public," I replied dismissively. "Just like mine."

"Yeah, Amy Dallon, moderately famous healer cum city overlord in the making," she muttered.

"I go by my birth name, now," I replied. "Amelia Lavere."

"Lavere..." she chewed the name over for a minute. "Holy fuck, you're Marquis' daughter!"

"So you knew my father?"

She laughed. "God, I'm not THAT old. But Allfather and Kaiser had less than fond memories. Apparently he thought he was god's gift to women, and a lot of them agreed. I wouldn't be surprised
at all to find out you have a dozen or so half siblings out there."

'She's trying to put you off your footing. Like Miss Militia did. Stay on track.' Lisa's spoke up from where our actual selves were sitting. I had a weakness for getting distracted by the unimportant things, as she had pointed out a few times.

"I'll keep that in mind," I answered dryly. I would, too. That was kind of a doozy, all considered. "Right now, we have to talk about us. Or, specifically, you being in my city."

"I was here first."

"You are also a problem. Giving you a chance to get into costume was a courtesy. If you are willing to surrender, we can talk about you joining Pantheon. Or you can leave the city, permanently, and we'll simply watch you go. If you'd rather fight us, we can do that too. Even give you a chance to contact the rest of your people. That last one, we have to ask you something in return."

"The first two aren't happening," she said with a cold voice. "What 'favor' do you expect for the third?"

"That we take the fight somewhere else. Away from your home. Away from everyone else's homes. I don't want to hurt anyone's children just to bring you in."

She hesitated. "I can live with that. But how do I know you haven't trapped the abandoned areas?"

I shrugged. "Honestly, you don't, and there's nothing I can say to prove it. But we didn't. You're powerful, so is the rest of your team. Beating you with cheap tricks just invites others to think we're too weak to fight fair. But if we take you in a fair fight..."

"So it's a rep thing, huh?" Purity smirked. "Half the Slaughterhouse Nine wasn't enough for you?"

"Some people think it's a fluke. Beginner's luck. A specific power that countered theirs. Whatever." I explained. "After all, you're still here ready to fight us. If our rep was that good, you'd have jumped on our offer to let you run."
"So taking us on is just to prove a point?" She didn't sound impressed.

"No. It's to get the rest of the fucking Nazis out of my home," my voice was ice. I had to remember to praise Riley for doing such an impressive job with her upgrades. These changelings conveyed my emotions better than I could with my own body. "Doing it with a fair fight? That is us proving a point."

"Rest of?" Her eyes narrowed.

"Yeah. Hookwolf and pals are done," I confirmed. "Even if someone does break them out, they'll never dare return to this city."

She frowned. "I see."

"That surrender is still on the table," I offered.
We arrived at the graveyard more or less at the same time as Purity's gang. Night and Fog had driven there and beat us, taking position. Crusader came alongside Purity. He didn't seem too keen on this idea. He was ready to fight, but us picking a battlefield like this didn't sit well with him.

"So, the hell are we getting out of this if we win?" He glared at me.

"You won't," I answered. "But what you get out of it is us not attacking you while you're asleep in your beds. Which is something we could have done. Now feel free to go pick a spot. We'll be ready for you in a minute or so."

"Pick a spot? This isn't a game of tag, girl."

"No, no it's not," I agreed.

Purity simply took off, toward the ocean. We were true to our word and gave them one minute, exactly.

....

"We split into three teams," Taylor instructed. "Eki, you focus on Purity. She's your only priority. Keep in the air. I'll blanket the sky so she can't snipe at us, and you keep up the pressure so she can't get in close."

"Osiris, Aceso, Gaea," She continued. "You fight Night and Fog. I'll be providing backup."

"You mean the zergling?" Respawn piped in.

"... Yes," Taylor sighed. "We're testing the zergling."

"And I'll deal with Crusader," she concluded. "My combat units, like his, are somewhat more disposable than the changelings."
"Isn't Minerva joining in?" I asked.

"Nope," she answered. "I'm on Com duty alone for this one. We outnumber them five to four even like this. This has to be a, quote, 'fair fight', or it proves absolutely nothing."

....

The sky turned dark as it was flooded with insects. All the disposable kinds. It would be two years before the city's mosquito population fully recovered. Truly, my heart wept for the evil little bastards. I switched over to the 'Dryad' model when we arrived. We needed the offensive power.

And next to me, the abomination that Respawn tried so hard to get us to make. Its brain, based mainly off a series of jumping or grass spiders. It's body, yes, was far more catlike than anything.

Taylor led us to the spot they had chosen. It wasn't much to look at, just a rusted out hull that had been washed ashore by Leviathan. Lots of places to hide, none of which mattered.

....

"Night and Fog. They count as one. Night turns into a kind of clawed abomination as long as no one's looking at her. And Fog turns into a deadly acidic miasma. Thanks to my efforts that have earned nothing but complaints from my friends," she glared at me and Lisa. "We have a rough estimate of Night's physical strength. In addition, we know that we can't use remote viewing to keep her in human state. You'll be fighting a Brute 4 that seems to have durability on par with Alexandria or Siberian. You can't hurt her, you probably can't outrun her. We'll have to beat her with a trap."

....

They struck first. A flashbang that meant nothing to us went off. It blinded and deafened us only for as long as it took for the grenade itself to detonate. Our changelings may have superhuman senses to spare, but our display interface had maximums on its brightness and volume.

A chaotic, clawed nightmare rushed toward us, faster than any of the changelings could move. It looked like Hookwolf, if the chains were instead made of teeth. Aceso jumped on my arm and pulled
herself to safety, and our zergling collided with the monster, locking claws with claws and fangs with fangs in a ball of struggling spiked death. The zergling quickly lost the fight as Night cut through every joint she could reach. But, then, it wasn't suppose to win. It was suppose to distract.

I punched her as hard as I could, sending her sprawling back several feet. I was surprised to note the inch deep gashes she left in my suit. She was up in a half second.

She pounced on the armor. And that's when we had Respawn open his eyes. Night, suddenly in her human state, was exposed to a powerful sedative that was on the skin of the armor, and immediately rendered unconscious.

I held Night's unconscious form up, just to make it clear we had her. Didn't need her husband/partner throwing any other explosives at us. It didn't matter, most likely, as he started flooding over us.

The Dryad started to wilt at the edges, as he did his level best to melt through it and either kill me, or rescue Night. Probably both.

Then the air burst into flames.

....

"Fog's mine," Clarice said cheerfully. "He's not actually acidic. He's alkaline," she clarified as if we knew what the difference meant. "All I have to do is use an acidic counter chemical and 'boom'."

"There's a pretty good chance that will kill him," Lisa informed us.

"Breakers tend to heal when they revert," Clarice responded. "He'll be fine. Probably. Maybe."

"I've had to heal his victims," I answered. "I'm not saying I want to kill him. But if we have to choose between that and letting him go? We do not let him go." I regretted those words the moment I'd said them. But not enough to take them back.

....
Fog dropped to the ground, hard. Much of his skin was missing. "Clarice?"

"On it, sis," she said, hopping down off my shoulder. She'd have to handle saving Fog. If, indeed, he could be saved. That kind of damage... the shock trauma alone could be fatal. I gave an order that killed someone. I was stunned to silence at the thought. If he dies. It was me who did it.

And then I was brought out of it by screaming.

I turned around to the source of the noise. Eki was on the ground, curled up in a ball and struggling to catch her breath, still in costume. Osiris was kneeling next to her, holding her hair. "It's okay, it's okay. The pain's gone now."

'What happened?' I muttered, to be heard by Minerva.

'Purity got her,' was the reply. 'Bad. Almost cut her in half. Respawn had to restore her. Good thing we put all that effort into making that armor link up."

'Fuck,' I muttered.

I was already moving toward Crystal. She was finally sitting up, gasping. "Does... does dying always hurt like that?" She asked him.

He smiled and shrugged. "Some worse than others," he answered. "You got one of the really bad ones."

She wobbled as she got to her feet. "It... I know it's fixed, but I still feel it," she muttered.

"It's okay," I said. I wanted to put my hand on her to comfort her, but this armor wasn't exactly safe to touch anyone. "The fight's basically over, you can sit this out."

"Fuck no," she growled. "She just tried to kill me."
She grabbed the battlestaff and bolted straight up again, heading straight toward Purity. She was half blinded by bugs and trying to reach Crusader. And then Purity was struck by lightning.

Or. Rather. She was hit with everything Eki's staff could output at once. It really was comparable to a lightning bolt. A massive amount of electric charge struck the woman, and immediately jumped upward into the sky, absorbed by the slight charge held by clouds.

"Kayden!" I heard Crusader shout. A couple of his summons charged away to catch her as she fell. The ones which had up until then been shielding him from the mostly annoyance bugs that Khepri had been using. Mosquitoes and flies, other bugs like that. None of the spiders or deadly species. They coated him completely. Funny. My cousin had been trying to teach my partner the concept of 'holding back', and it's her who uses the outright deadly attack.

I abandoned the Dryad for my much more mobile Changeling. After all, this fight was, for every intent that mattered, over.

The insects formed a globe, with us and Crusader inside. "Get out of my fucking way!" Crusader screamed. His skin was so irritated by the insect bites that, ironically enough, it would be hard to guess his natural skin color. He had to be in a lot of pain.

"No," the swarm muttered. I couldn't help but shiver. Skitter's swarm-talk spoke to a very primal part of my brain. I don't know where in human evolution we acquired the fear of being eaten by a swarm of bugs. But we did. And when Skitter spoke like this, that part of me screamed to run. Though my real body was miles away from them right now. "She needs treatment. If you take her, she'll die before you can get help."

He looked at us. Then at the mass of bugs. Then at Kayden, who I finally got a good look at, myself. Much of her hair had burned off. She had ugly looking black lines burnt through her right arm and leg. That was what passed for a good sign- less likely that it hit the heart, that way.

An Yggdrasil vine pushed its way out of the bay, forming a pod. "Put her in there," I instructed. "It'll stabilize her until we can fix her properly."

Crusader hesitated for a moment, but finally moved, taking Purity and putting her in the pod.

=========

A/N- This was the first fight scene I was really happy with. The others I liked just fine (especially
Zach's banter with Hookwolf), but this one I just loved how the fight went.
I frowned. Seems I did a lot of that. Lately it had grown into an act of will against the events going on in front of me. As if, by showing enough disapproval, the universe would change, and I would not be watching this.

"And yet you keep working for the people who ordered their murders," Minerva provoked my head of the Protectorate.

"What does Pantheon believe they know about the actions of the Protectorate in recent months?" Stan Vickory spoke in his smooth, well trained style. "It is clear that this contention revolves around the recent conflict with the Slaughterhouse Nine. Most probably, Director Piggot's choice to deploy a weapon rumored to have been created by the 'mad bomber' Bakuda."

I continued to frown. As if some liberal media jackass has the right to judge what I've done. What I've sacrificed. While he goes along contributing nothing of value to the world.

Meanwhile, they cut to scenes of Crawler, converted to crystal and then defaced, first by Panacea-no, Gaea- and then later by civilians. It was becoming something of a tradition to come by and to smash off a chip of the monster, or hurl refuse, or spray paint profanities and similar epithets. A way to vent frustrations in this trying time. In theory, it was illegal to do so. Defacement of a corpse, possibly other statutes, but no one would enforce that law. Even some law enforcement had taken to the practice. I had to admit, it sounded cathartic. I might even have to try it myself, some day.

"Minerva implied that the villains offered an alliance to fight together against the Nine," he continued. "While that may sound unusual, it is well known that heroes and villains put aside their differences to deal with more significant threats, such as Endbringers. And we have footage showing both Undersiders and E-88 members working to fight the Nine on multiple occasions. Which begs the question: where were the heroes?"

Not going off and making matters worse, that's where they were, Stan.

True enough, they had footage. It was shaky at best, camera phones probably, but Purity, Hookwolf, Grue, and Hellhound's dogs were unmistakable. They were far too distinctive to be mistaken. I had to wonder where the cameras came from, given Shatterbird's attack. One of those mysteries that would never be answered.

Miss Militia arrived. "You wanted to see me, Director."
I sighed, and tore my eyes away from the disaster on screen. It wasn't the first time I'd watched it. Wasn't even the fifth.

Miss Militia had, too. "I'm sorry ma'am, I messed up."

I sighed. "No, you didn't."

"Ma'am?"

I did like that. Miss Militia was good at following orders. Better than Armsmaster, certainly. But it paid to let your underlings know that you were smarter than them. As long as it didn't look like that's what you were doing, of course. This was a conversation I needed to have with her.

"To start with," I said. "This is not a defeat."

Miss Militia's eyebrow rose.

"You made a lot of strong points. Backed Gaea into a corner, without making it obvious that you were doing so. Your points were strong, her rebuttals were weak. Amateurish. And the cameras saw that. Maybe channel twelve isn't going to pounce on it. But other stations will. Their goal of trying to 'reform' super villains will mean every recruit they acquire will be viewed with heavy scrutiny. They'll either face media backlash, or they'll have to drop this whole practice. And with it, lose a lot of potential allies."

I studiously ignored one particular elephant in the room. The Protectorate made a habit of recruiting former villains as well. Assault was one such example. He had worked out... adequately, at least. Miss Militia was savvy enough to not mention it, either.

"Minerva destroyed me," she said after a moment.

"Yes," I agreed. No sense in sugar coating things. "Minerva knew you were winning. She jumped in to deflect attention. I'll grant you, she succeeded, but she had to use her best weapon to do it."
"I see," Miss Militia agreed. I didn't know for sure if she truly did or not. But that didn't matter. I continued speaking.

"More importantly, she used it too early. If she had waited for a more opportune time, she could have done a lot of damage," I paused. "A lot more damage, I should clarify. Instead, we know what she's alluding to, and we can have our teams put together a response. When they choose to go public with everything, we'll have a rebuttal already in place. It's merely a question of waiting for them to act, or dealing with it preemptively. Either choice has its merits. Ones I'll be discussing it at length with my advisors and the other Directors."

Ad nauseum, I thought to myself. This kind of PR disaster would get national attention.

"Is it true, ma'am?" Miss Militia asked. "Did we reject the villains help in dealing with the Nine?"

"Yes, but not in the way you're thinking or they implied," I answered. "I specifically warned them not to interfere, that we had plans of our own, and that they should stay out of our way. That going after the Nine would put them, and the city, in unnecessary danger. I even had Legend repeat that same message to them, less than an hour before the bombs were used on Crawler and Mannequin. They chose not to listen, and their deaths are a result of that decision."

Miss Militia nodded. "I understand, ma'am."

Through it all, the news report had continued. It was nearing its climax. "You've proven you can't save this city. So shut up, get out of our way, and watch as we do it for you," Minerva's rant closed.

The video was footage of the fight between Pantheon, and The Pure. Specifically, when Purity was struck from the sky. I frowned again. Purity is a major coup for them. She was a top tier blaster, and with her on their team, they could remove the Protectorate by force if they wanted to. This, and I hadn't believed it possible, is actually worse than Lung and Kaiser.

I sighed. "I've got a great deal of work to do, and a teleconference tonight," I informed Miss Militia. "I trust you can handle the affairs of the Protectorate and Wards for the rest of the afternoon."

"Yes, ma'am, I'll see myself out." She stood and left quickly.

Christ. You'd think that, with every villain group in the city gone, things would quiet down around
here. I set aside some time and reviewed the notes on Pantheon, specifically Gaea herself. I made the necessary annotations, with references and analysis from my people. I wished I had a tinker or thinker on the team to put on the task of figuring just how impressive Bonesaw's plague, and Panacea's quick response, had been.

Losing Armsmaster had been devastating. All we had left was Kid Win and Chariot. They showed a bit of promise, but comparatively speaking they were nothing to the former leader of the Protectorate ENE. Still, I had enough. I filed for the clearance to recognize Pantheon as a Class S threat.

In an hour, I was ready. The screens came on, putting me in conversation with Chief Director Costa-Brown, as well as a number of other local directors.

"Good afternoon, Director," Costa-Brown opened.

"Chief Director," I acknowledged.

=========

A/N- Wow. My writing style has evolve a lot since this chapter. Almost a completely different writer. Still love this chapter.
"Coil's been compromised," Number Man stated in his usual, inscrutably calm manner.

We glanced at Contessa. Her power was certain he'd succeed. "Endbringer," she answered. That one word did explain everything. Eidolon was there, as was Scion. Three of Contessa's blind spots, any of which could have altered fates in a way to bring this about. We'd never know how, of course, but we could explain the why.

Dammit, I thought. "Heroes got him?" It was the most reasonable guess.

"After a fashion," Number Man responded.

Sometimes, I hated that man.

"It seems a new group of heroes has formed in Brockton Bay, calling itself 'Pantheon'," Number Man informed us.

"That's pretentious," Eidolon chimed in.

"Quite," Number Man agreed. "The more interesting part is that they seem to be continuing Coil's project. They didn't remove him, they subsumed him." Well, that's both fortuitous and troubling.

"I... see," Doctor Mother replied. "Contessa, would you mind running your power with the goal of Pantheon succeeding in establishing a parahuman feudal state? Both with and without our assistance in the matter." Coil didn't need our help, let's see what the new team...

"Two thousand, three hundred and twelve steps," Contessa stated. "Approximately 300 less with our assistance. They'll be done in less than two years, either way."

I hid my surprise. Eidolon and Doctor Mother were a little less composed. Number Man, of course, never showed any emotion he didn't want to.
"That's... significantly faster than Coil, even by the best estimate," Doctor Mother spoke up.

"Coil was always extremely, perhaps overly, cautious," Number Man speculated. "This new group seems to be comprised mainly of younger people. The leaders are teenagers. Panacea and Skitter, both using new monikers. It is no surprise they are more aggressive in their goals."

Panacea? The mousy healer? Huh. Skitter came as no surprise. She had ambition, drive, natural talent, and exactly the right attitude. Reminded me a lot of my younger self. But Panacea? There is a story in there that I wish to know.

"Seems our best interest, then, is allowing them to continue doing exactly what they're doing," Doctor Mother concluded. I agreed completely.

"Actually, that brings us to the next problem," Number Man replied. "It seems Faultline's group has found a number of leads that might come back to us. Aforementioned Pantheon appears to be providing them with funding and assistance on the subject. Normally, we could just send a message to the mercenaries not to continue..."

"But doing so would provoke Pantheon," I supplied. "And Skitter, at least, is not one to back down from a fight. We can counter them, but in the process we damage our experiment."

"So, even when we win, we lose," Doctor Mother concluded. "Seems we'll have to take a different approach."

"How about we give them what they want?" Eidolon suggested. "Not really, of course, but a suitably convincing decoy that answers enough of their questions. Draw their attention and sate their curiosity."

It was easy to forget, sometimes, that behind his unremarkable appearance and continent breaking powers, David was a smart man.

Number Man nodded. "Yes, that would be an elegant solution," he agreed. "We'll need to get some psychological profiles on both Faultline's crew, and Pantheon, but that shouldn't be too difficult. Contessa, your help would also be appreciated."

"Moving on," Doctor Mother said. "A couple of our agents in the King's Men..."
I sat, listening while still in thought. My perceptive powers, which I named myself for, could easily handle both. Meanwhile, I was reading the reports from Brockton Bay. My civilian identity would need to address the Pantheon situation, one way or another.

....

I reviewed Piggot's latest update to her rough estimates of Pantheon's power levels. Her estimate of Eki seemed a bit high. Osiris. That is a really useful defensive power, to be certain, but had little offensive potential. Khepri and Gaea... were absurd. If these numbers were to be believed, either one of them could solo the Triumvirate. Granted, Khepri had killed Siberian, but she had done so by learning and exploiting a weakness.

If we had known that Siberian was a projection... I might still have my eye. I would need to talk to David about using Thinker powers more often. Good intel was often more valuable than any amount of raw power, and Khepri proved it.

I simultaneously reviewed the psych profiles on the Directors that'd be present.

Piggot, of course. Nilbog incident. Paranoia and a bigot, both. She was zealous in her actions. I'd need to use that zealotry against her.

Tagg. Another of the more pushy members. He and Piggot often sided together on issues. That would make this harder. I'd need to find some way to divide them, or at least put them at odds with all the others.

Armstrong. He was more inclined to moderation. His focus was on understanding parahumans. Both scientifically and psychologically. Him, I could use.

Gutierrez. She was one of those women who joined the military when it was still very much an 'all boys club'. Twenty years senior to almost anyone else at the table. She almost had my job. Would have, if not for Cauldron's wealth and connections. Sometimes I even felt bad about that. But, my mission was more important than her career.

Niles. So deep in Cauldron's pocket that he was almost a member. He probably had a script handcrafted by Number Man that he memorized instead of studying Piggot's report. He wasn't a competent director. Our help in funnelling a couple of our powerful debtors into the Protectorate under his
command is the only reason Florida was still standing, and he knew it.

I could work with this group. Turning them against Piggot and Tagg would be easy. Turning Tagg and Piggot against one another, that would prove more difficult.

Five minutes ahead of schedule, my paperwork in front of me, but already memorized, I started the video conference.

"Good afternoon, Director," I said. My tone was carefully neutral. The others might feel slighted as they weren't addressed. If they were savvy, they'd know this was a sign of displeasure. If they weren't, they'd figure out by the end of this that they should be glad my attention was elsewhere.

"Chief Director," Piggot responded back. Her tone equally neutral. She has no idea what is about to happen.
I idly checked my armor's control HUD. Good, the power drain is optimal, and the data is being recorded. Normally, the Director's office would be the most secure room in an already absurdly secure building, but that wasn't such a problem for me. Coil had given me access to a lot information. Enough to let me create prototypes that would emulate Trickster's power at a much greater range than he ever could, as well as a spy camera that was emulating the same quantum trickery that Skitter did to control her bugs 'telepathically'.

"Hey, Trevor," Missy said as I entered the main room.

I smiled at her. "Up for some exercises?" I asked. I found Vista's power fascinating. My tinker specialty was movement, and her power altered space itself. The possibilities were endless, if a little difficult to achieve.

Missy tried to keep a professional demeanor, moreso than most of the adults did. She'd been a Ward longer than any other two, possibly three, members of the team combined. Even now, weeks later, it was basically impossible to get the girl to smile. I knew Gallant's death had a lot to do with it, but I wasn't able to draw her out of her shell enough to really understand.

"Sure," she agreed. "We have at least a few hours before patrol."

"Not that patrols are all that necessary," I said with a smile. "Now that Pantheon's doing their thing."

Part of Coil's orders. I was to gather as much intel as I could on the wards' opinions of the new group. He didn't tell me why he was so interested. And there were too many possibilities for me to guess which one. Not that it mattered, as long as he kept paying me.

By the time I graduated from the Wards, I'd have a first rate education and a nice little trust fund. Coil would ensure that my mother had enough money that she and my little brother would never want for anything for the rest of their lives. It really was a sweet deal for everyone.

"No, I guess not," Missy's mood darkened, even more. "But it won't matter."

"Oh, why not?" I asked. Part job, part genuine curiosity.
"Because something will stop them," she said with finality. "That's how the world works. They have potential."

She said the word like it was a profanity. "I don't get what you mean," I replied, trying to sound professionally interested instead of personally.

"Whenever someone has enough potential," she elaborated. "The world finds a way to hammer them back down again. Like Dauntless. A power that started so weak, but never ever stopped growing? That was potential, too. Or Armsmaster. One of the best tinkers in the world. Killed by another of the best tinkers in the world. Who was driven insane by the death of his family. Every time someone gets too strong, or is too likely to actually make things better? Every time someone gives us a reason to hope. They come along and destroy everything."

I didn't have to ask who 'They' meant. Fucking Endbringers. She broke down. I hesitated, before putting my hand on her shoulder. I felt awkward.

"Pantheon's no different," Missy whimpered. "You'll see."

-----

I watched the camera. Technically, this was violating any number of laws, state and federal. International, as well, as I was not a US citizen. I was prevented from doing what I was doing by a total of fifteen of my inhibitor protocols. Fortunately, in this case, I had a loophole. Chariot's camera. It was remarkable, I couldn't tap its signal at all. Some kind of quantum technology that I'd love to purchase. It would allow me to communicate to my suits at FTL speeds, from almost anywhere on the planet, with almost no power drain, and no risk of interception.

But, even if I couldn't hack the camera, I could hack his armor. Spying upon a criminal double agent was well within my legal jurisdiction. As long as I'd filed the proper requests and paperwork, of course. Richter didn't stop to realize that most people don't analyze paperwork all that thoroughly. And my reputation was such that I could file a thousand pages of request forms, and they'd all be approved. Especially when it was one of over seven hundred warrants to surveil confirmed associates of known supervillains, such as in this case. I suspected, though never bothered to confirm, that they simply hired a judge to do nothing but stamp my requests each day. With full legal authority and in the interest of observing a criminal in the act of espionage, I watched.

-----
"I see no reason to worry about formalities," Costa-Brown spoke up. Hostile, establishing dominance by disrupting standard protocol.

"I concur," Piggot responded, and moments later agreements were muttered from the screen. Four additional voices, other Directors.

"We've all seen the news feed, of course," Costa-Brown continued.

"Yes," Piggot replied. "It was the emotional outburst of a teenager. The media may be taking it at face value, but I assure you it has no basis in fact. I can prove as much, easily, with records and recordings showing that I insisted the PRT had a strategy for dealing with the Slaughterhouse Nine. One which, ultimately, proved successful in killing both Mannaquin and Crawler, and could also just as easily have dealt with any and all other extant members of the Nine. Acknowledging a possible exception for Siberian. Legend is a witness, and even delivered one of my warnings to the villains to stay away. They told him, and I apologize for the profanity, 'go fuck yourself'."

I frowned. She probably does, at that.

"Fair enough," Costa-Brown acknowledged. "I would be remiss in my duties if I didn't request a copy of that evidence."

"Naturally," Piggot agreed easily. "I'll have it sent to you shortly after this meeting concludes."

Telling the truth, has data and believes her own story. The Chief Director disagrees. No, is certain Piggot is right. Has lie detector technology? Chief Director believes it won't matter. Intends sabotage?

"Now, let us discuss your... suggested update... to Pantheon's ratings," The Chief Director continued. There was a nervous chuckle amongst the other Directors. Read report, considers it absurd.

"I am aware it sounds outlandish," Piggot replied smoothly. "However, I have substantial evidence to believe each upgrade is not only warranted, but may be an understatement."

"I must admit, I'm intrigued to hear this," another woman's voice said. Older woman, career military, cynical attitude.
"Shall we start with the... least objectionable and move our way forward?" Costa-Brown asked. There were no objections.

"Everything seems to be in order with Osiris' rating as a Breaker 4. If anything, that may be a bit high. Shaker and Striker four alongside Trump six and Mover three?"

"Yes. Osiris is also capable of restoring objects, as we saw in his news debut. He has recently demonstrated the ability to touch a door and teleport it off its own hinges." Piggot confirmed. "Recently, we discovered he can do the same thing with people. Their newest member, Eki, was wounded fatally in the recent conflict with Purity. She was immediately teleported to touch range of Osiris, and her injury was restored. Much as he claimed he could restore spent bullets to their default state."

How did they learn so quickly? Surveillance? Intel from active source, probably Parahuman. Well, that doesn't help narrow it down.

"He's a shaker/striker with no Manton limit, and as long as he's on the field, he grants functional immortality to his allies," another voice added. "I believe Director Piggot is fully justified in this upgrade." Dislikes parahumans, is jealous but also respects Piggot. Desires her position?

"I concur," Costa-Brown agreed. "His personal power isn't too impressive, so we'll drop Shaker and Striker to 1. But his ability to restore injured or possibly dead parahumans is a significant force multiplier. As he can teleport others, but not himself, the Mover rating is nonviable. Wouldn't achieve anything except to confuse our own troops on the field. Granting teleportation to allies fits under the 'trump' label."

"Eki, their new recruit, upgrades?"

"Upgrading her blaster status from five to eight? Upgrading from shaker two to six?" The Chief Director asked.

"She is shown to have electromagnetic manipulation, now. She could easily disrupt any electronics within a five block radius with the power used to attack Purity. As well, she gravely injured Purity."

"Purity has no defensive powers," Costa-Brown pointed out. "She can be 'gravely injured' by a handgun. If anything, a lightning strike is of less power than Laserdream's current rating of five. The shaker rating, split the difference and rate it at four. Let our men know they can't rely on electronics if they must engage her. There's no sense in frightening them by suggesting she has destructive AoE that she doesn't have." Dismissive comment, less subtle attack of Piggot's position.

"And now, for the big two. It seems like you've given the pair of them at least five or six in every category, and some truly outlandish ones atop that. Is Khepri truly deserving of Master 8, alongside Shaker 6, Blaster 7, Thinker 8, and Stranger 5?"

"She is capable of controlling massive amounts of arthropods, gathering them into masses large enough to block out the sun and blind or attack everything in her control radius simultaneously. She has enough fine awareness to distinguish between enemy and ally. All without even being present on the battlefield. In addition, there's a huge variety of poisonous insects and arachnids. She could easily kill every non-brute in her range, simultaneously.

Tagg whistled appreciatively. "That is an incredibly versatile power."

"Indeed," Costa-Brown agreed. "Still, there is a limit to what mere insects can accomplish. In addition, her insect senses are tactile only. You have an argument on the Shaker power. We should probably remove her Master rating entirely, as it's misleading. 'Insects' aren't so much animals being controlled, as they are part of the environment being manipulated. Upgrade her to Shaker seven, downgrade Master and Thinker to one. Her only theoretical stranger power is the ability to track her bugs, as she demonstrated on Leviathan. And tracking is a Thinker subcategory. She can't render herself undetected, except by blacking out vision with her bugs. Part of her Shaker power." Master carries worse connotations than Shaker. Costa Brown is adjusting our numbers to be more palatable. Protecting us. Ally?

"Very well," Piggot muttered. "Reclassifying Khepri as a shaker, with low master and thinker
"And last, but certainly not least, Gaea," Costa-Brown moved on. "In the interest of organization, we'll do this one at a time. Shaker 15? Honestly?"

"Her Yggdrasil extends throughout the entire city of Brockton Bay. If she has contact with any part of it, she has absolute control of all of it. She can alter its chemical properties to produce anything she desires. Leaving out all other potential uses, she could flood the entire city with some deadly bioweapon that would end all life in Brockton Bay almost instantly."

"A bit melodramatic, don't you think?" Costa Brown said dryly. "She uses her power to keep damaged waste disposal lines functional, provides housing and building supplies, and produces food for refugees."

"One of Bonesaw's plagues," Armstrong supplied. "Yes, I read every detail of those reports."

"Director," Costa Brown responded. "If we take this... suggestion... to heart. It means we should surrender and abandon Brockton Bay like we've abandoned Ellisburg. Nothing, not even a bombardment of nuclear weapons, is a possible counter for 'Shaker 15'."

"Ma'am, are you seriously suggesting we simply abandon Brockton Bay?" Tagg said in shock.

"No, of course not," Costa Brown responded. LIE!

The Chief Director sighed. "But that would be the only valid course of action if a Shaker of that magnitude had claimed an area. Therefor, as we intend to keep a Protectorate presence.’ Does NOT intend to keep presence. "In the region. We clearly must not be dealing with a Shaker of that level."

"I... I understand, Chief Director," Piggot responded. She did not sound happy.
"Moving on. Master 10?" Costa Brown didn't bother hiding her incredulity at that position.

The others muttered. "Yes," Piggot replied. Angry. Hiding it well. But angry. "In addition to her control over her Yggdrasil, she has made both monstrous animals, and humanoid duplicates." Pause. Picture evidence being transferred. "These constructs are significantly superior to a natural life form of equivalent size. The humanoids, even, are at least brute 3 in capacity. Her constructs are a loose equivalent to Nilbog's, and coupled with the Yggdrasil's sheer supply of mass for her to shape them from. It earns her a Class S status."

"Even so," Costa Brown responded. "They are botanical in nature. Unable to reproduce or function independently. In addition, Nilbog may be Class S, but he's still only a Master 8."

"Gaea has an ability that Nilbog does not," Piggot countered. "She can take control over minds, via her striker power." Lying. Correction: is accurate, knows it, has no evidence to back her claims.

"Director Piggot," Costa-Brown responded coldly. "Need I remind you that Panacea's inability to influence brains and brain chemistry is well documented and has been verified by multiple Thinkers and Tinkers over the years."

"She healed her father," Piggot stated. "From injuries inflicted during the Endbringer battle."

"We have records showing these injuries were both incurable and to the brain? We know it was Panacea who healed him? As opposed to the hiring or bartering with of one of the healers lacking Panacea's restrictions?"

"No, on all counts," Piggot relented. "But it fits with Gaea being able to quickly and easily recruit a number of villain and independent capes in the moments surrounding her establishment of Pantheon."

"I've read the psych profiles on Skitter and Tattletale," Costa Brown replied. "It appears that they were doing, functionally, the same thing with the Undersiders as they are with Pantheon. Establishing territory. Establishing good will with the civilians within that territory. Showing up on television as often as possible. And actively humiliating the local Protectorate whenever possible. That's not mind control. It's smart recruitment practices." Humiliating 'local' Protectorate. Deliberate word choice. Implying Piggot was humiliated and has a personal vendetta. Destroying credibility.

"Master 5 is the most we can assign until we see evidence of monsters with superior abilities to

"She has constructed life forms of numerous descriptions," Piggot answered. "In addition, she kept all of Bonesaw's notes and paraphernalia. Aside what the girl kept inside herself."

"Six is in line with what Blasto is capable of," Armstrong agreed. "This seems a valid classification."

"Point," Costa-Brown agreed. "Stranger?"

"She can construct bodies. Or perform cosmetic alterations on her allies," Piggot responded. "She could make one of her agents look like one of ours and get them into sensitive locations. Or alter dangerous criminals so they couldn't be visually identified."

"Relatively low end stuff, for Stranger abilities. And would require prep time that makes it nonviable in combat. Two is a reasonable classification. Enough to enact the code confirmation protocols."

Piggot nodded.

"And last... Trump seven?"

"Gaea has shown the ability to modify the powers of others," Piggot stated. True, but operating on false assumptions. "Skitter's range during the Endbringer battle was demonstrated-"

"Careful, Director," Costa-Brown said with a cold voice. "Collecting tactical information to use against participants of an Endbringer battle is a career ending decision. Remember Armsmaster." Didn't need to mention Armsmaster, other examples to pick from. Chose to use a name that would upset Piggot.

"Understood, ma'am," Piggot responded. "Skitter's range has been demonstrated at well over a mile, after allying herself with Gaea. It was less than a half mile beforehand."

"Possibly a second trigger," Costa-Brown dismissed. "Given the loss of her friends at the hands of
the Nine, this seems possible. Or, more likely, her range has improved with practice and age. It's quite common." Lie. Knows it was the PRT responsible for Undersiders. Choosing to remind Piggot without stating outright.

"In addition, the alterations to Laserdream's powerset when she joined their team."

"Biotechnological," Armstrong responded. "Had my guys look at her, immediately after she was shown on video. The suit she wears is alive. Crystal Pelham's demonstrated laser powers are being used to charge the equipment."

"I see," the older woman spoke up. "Yes, we've used a similar technique here. Although in our case it's to power a tinker forcefield that otherwise spends its time mounted on a tank."

"Efficient and elegant," Armstrong agreed.

"Fascinating," Costa-Brown replied. "There's no Trump rating to be found here. Although that does imply their equipment is more versatile than initially thought. We'll upgrade Gaea to a Tinker Seven. Note that all Pantheon members might have low to moderate level tinker equipment during engagements." Unrequested concession to Piggot. Trying to hide bias. Believes she has successfully established her case, now trying to avoid burning bridges with her own people more than necessary.

"And last," she replied. "Your request for preauthorized classification of Gaea as a Class S threat? It's summarily denied. Class S isn't just about capability, it is about intent. Amy Dallon, as Panacea or as Gaea, has never taken a hostile action against civilians or heroes. If anything, her main flaw is being too nice. Were I to authorize this, solely based upon an unconfirmed estimate of her capabilities, we would be opening an unacceptable floodgate. Dragon and Eidolon would both immediately qualify for a similar status. Possibly the rest of the Triumvirate, as well as the many of the most capable parahumans we have. This is not a path I want to lead us down, Director."

"Chief Director," Piggot interrupted. "Dragon and Eidolon have shown time and time again that they are reliable and trustworthy."

"So, I remind you, has Panacea," Costa-Brown added. "Clearly, her performance up until now has been woefully inadequate compared to her capabilities, but it is nothing short of exemplary in terms of trust, discretion and selflessness."

"Understood, ma'am," Piggot muttered.
"I do believe that concludes this meeting," Costa-Brown stated. "Consider yourself under strict orders to show Pantheon the utmost respect. They are heroes and deserve to be treated as such. If you find something that challenges that assumption, report it to me immediately and we'll change our stance. But not before then."

Well, fuck, this changes everything.

------

I would have frowned, if I could. I studied the readings that my lie detectors and social dynamic program models drew for me from the readings. It was obvious to my instruments that the Chief Director was playing a deeper game than mere 'office politics'. Although there was too little data to draw any valid conclusions.

I shut down the recording and deleted all record of receiving it. Now, it existed only in my organic memory. I was not acting on illegally acquired data. I was operating on an anonymous tip. Even if the tipster was myself.

I immediately programmed and sent out a dozen different snooper programs meant to acquire all possible information about Chief Director Rebecca Costa-Brown. They would be absurdly thorough, even if they could only acquire information I was legally entitled to. All data would be documented as public record, and therefore be valid and admissible in a court of law. Whatever the Chief Director was involved in, it would not stay hidden for long.

"Colin," I said.

"Yes?"

"I think it may be time for you to offer your apologies to Skitter."

==============

A/N- Almost as fun to rewrite as it was to write in the first place. And writing it was awesome.
"Nice find, Vic," the men around me chuckled. I cringed at the name. Fucking Hookwolf. Couldn't let me go by my middle or last names. And since there was already 'Victor the E88 cape', I couldn't be called Victor, either. So now I'm 'Vic'. Whatever, the benefits were worth it. More than. It was my perfect place to be in life.

E88 wasn't really my first choice of careers. I raised fighting dogs. I was damn good at it. Good money, too. As long as my mutts kept winning, which they did. Most people in the biz seem to think you're okay just to take someone's housepet, slap it around a bit, make it kill a chihuahua or two, and it's ready to be put in the pit. Not hardly. But I didn't put a lot of effort into dissuading them of that. Worse they were, better I looked. A good place to be in life.

It earned me a kind of 'membership' in E88. I wasn't part of the gang, didn't have to do the skinhead bullshit at all. It was just known that Hookwolf always bet on my animals, even gave me a little extra as a thank you. And if you fucked with me, that meant you fucked with him. In many ways, it gave me more influence in E88 than most of its own members. Long as I didn't ask for too much, or make waves with the capes, and kept delivering the winning animals, I was set for life. Hookwolf liked money, he liked winning, and I was even willing to bet he liked me a little.

Then fucking Leviathan happened. Kaiser got himself dead. The Empire split in half. I wasn't exactly the 'type' to fit in with his snobby bitch ex wife, so that left me going with Fenrir's Chosen. Which would have been fine. But the Empire needs soldiers. I couldn't stay on the sidelines, because we needed manpower.

We? Yeah, pretty much. Never mind the permanent tan of my Italian heritage, I was 'white enough'. Whatever. Still a good place to be in life. Not as good as before, but you learn to roll with the punches, and you can find yourself in a better place than others who weren't so smart.

So here I was, with Victor, haha, very funny, folks, completing my final test. Wasn't the first time I'd killed. You don't live as long as I do in any kind of illegal gambling without getting in your share of fights, and some folks get stupid enough to pull a weapon.

This would be my first straight up cold blooded murder, however.

See, that was the final act. The one thing that made you part of E88 forever. The part that kept undercover cops out of the organization. You had to kill one of the 'impure' races. In full view of at least one of E88's capes. It was damned elegant as far as solutions went. Good place to be, with people who were smart.
Tricky part was finding one. Breaking into houses wasn't a smart thing to do, too many things could go wrong. Sure, the whole 'capes' thing changed the rules on that a bit, but they weren't here to help. They were here to watch. Just like all the unpowered guys around me. Most anyone was gonna do is shout encouragement and keep an eye out for the cops.

Not that there would be any cops. Not here, not this far into the north end of the city. The perfect place for what I needed to do. It's all about that in life. Being at the right place, at the right time.

The woman, a black whore, screamed. I punched her in the face hard enough that she stumbled back into the alley wall. She pulled a knife from... somewhere... I don't know where she managed to hide the thing. She wasn't exactly wearing a lot of clothing. Oh well, at least now I'd feel a little better about this, and the guys would respect me a little better if they saw me fight. Things working out for me.

Not that it was much of a fight. She was quick and mean, but I was smarter, bigger, and meaner. Being sober helped, too. Couple blows and she was down. I settled on her, my knee on the arm I didn't break. Nice set of tits on the bitch. I allowed myself a feel.

"Dammit, man, if you were gonna fuck her first, you coulda made sure there was enough for the rest of the class," one of the men commented. Earning chuckles from the others. Not the first time some of them had done that. But, no. Didn't have a rubber. And as a professional gambler, I was pretty good at deciding when it just wasn't worth the risk. Drugged out older prostitute, especially in this part of town? Those odds were not in my favor.

And then I was blind. And alone. Couldn't hear, couldn't see. A boot hit me. Turns out I could still feel just fine, as I was lifted off the ground and sent rolling away. Big. Bigger than a human foot had any right to wear. Probably steel toed, too, the way my side felt. Half my ribs were busted, I was sure. All kinds of internal shit, probably. I wasn't going anywhere. Fuck.

A few muffled gunshots went off. Then more. Here on the ground, I could see as the rest of the gang started dropping. Bleeding out. Headshots. Every last one of them.

The darkness faded away, giving me a pretty good view of the scene. A man in biker leathers and helmet, fully clothed and standing at least eight or nine feet tall.

"Nice evening, ain't it, Victor?" For a second, I thought he was talking to me. But no, of course not. His attention was on the E88 cape.
"Who the fuck are you?" the other Victor demanded.

"The man who knows where your wife is," he answered smoothly.

"Where is she you nigger fuck?" Victor yelled. How did he know he was? Oh, right, powers bullshit. Like the giant before me.

"She misses you, by the way. You should visit more often."

"Cut the shit talk," Victor pulled a gun. He unloaded the clip at the man. Who took it all without flinching.

"Her powers are really convenient, too."

"She'd never use her powers to help you."

"Yeah. She said that, too. I didn't give her a whole lot of choice."

"Doesn't matter," he snarled. "Her invulnerability has flaws and I know every one of them. I can still break you and make you take me to her."

"Oh, good, I was truly hoping you'd say that."

Victor was good. DAMN good. Insanely good. That was his power, after all. Every martial art. Every combat skill. Anything he felt valuable enough to steal from others. I was one of the fortunate ones. So good that I was of direct value to E88's operations. Not good enough that Victor felt the need to have my skills. Raising dogs wasn't exactly useful for what he did. It was, in every way, the perfect place to be. Except tonight. Tonight was very much not a place I wanted to be.

So I was shocked when the giant was almost his equal. They fought in the ankle deep, to him, black mist. Victor got in more blows, but it didn't really matter when a single hit was bone shattering. The giant's first connection sent him flying back ten feet. He rolled with it, and even got to his feet,
though I was surprised by that.

"Here, let's make this a little more fair," the giant rumbled. Victor took a deep breath.

"Othala's power? How the fuck are you using it?"

"Trade secret. Now, up for round two?"

"Fuck you," Victor muttered, and charged back into the fight. He was slower, less capable. The giant was better and faster. Not just than Victor, but better than himself a minute or so ago. When Victor dropped this time, and it didn't take nearly as long, he stayed down.

"I think my point has been made," the giant stated as he stood above Victor's broken body.

He shrank down to a human size and walked over to the prostitute I was supposed to kill. "C'mon, miss, let's get you... MOM!?"

Well, don't that just fucking beat all? I'd probably have picked better last thoughts, but I didn't have time, as the man enlarged again and in one long step, his oversized boot came down on my skull.
"I don't feel comfortable with this, Tattletale," I insisted.

"It'll be fine. None of them are three-strikers anyway. They're not like Hookwolf."

"This involves trusting Nazis," I countered.

"To act in their own self interests," she corrected.

"If you like this idea so much, why didn't you mention it to Crystal and Respawn?"

"Because Respawn is Respawn," she responded. I couldn't argue with that point. "And Crystal's too caught up in black and white morality. Which is almost funny considering the situation. Besides, this is hardly the worst secret you're keeping." She looked toward Clarice for a second.

"If this bites us on the ass..."

"It won't. The worst outcome still doesn't hurt us any. The best helps us a lot."

I extended my power into the Yggrassil and opened our way into the 'prison. It was filling up rather nicely. Purity, Crusader and Night. The former spent her time in a pod, laying in the cell next to the one containing Cricket and Stormtiger. We put Crusader and Night in separate cells. We might end up having to expand the facility at this rate.

"How ya holding up, boss?" Stormtiger asked Purity after we had her awake.

"Now I'm your boss?" She rasped. The damage to her insides had been pretty brutal. Cost her a lung, alongside damage to most of the right side of her body, top to bottom. Equivalent of three or four lightning strikes simultaneously. By all rights, she should already be dead. Unlike with Cricket, there was no possibility of her truly recovering naturally.

"Well, Hookwolf's gone, so whatever factional beef we had is done," Stormtiger said easily, leaning
against the wall.

"No," I said, interrupting their conversation. "Empire Eighty Eight is over."

"The Gesellschaft will send us backup. Send assassins after you." Night insisted.

I glanced over at Minerva. "She believes it," was the reply. "It's not at all true, but she believes it."

"Fuck if it isn't!" Crusader, this time.

"Be honest with yourselves," Minerva continued. "If you were getting help, it would be here already. Kaiser was their golden boy. At least in this region. After his death? Well. Maybe, and it's a big maybe, if you hadn't had your little civil war, we'd be talking shop. But they aren't going to risk sending good parahumans after bad. The cause has abandoned you. Live with it."

I looked over at Night. I couldn't help but feel sympathy for her. Her husband, for however many years... I killed him. My orders killed him. He didn't survive the shock of having his chemistry forcefully rewritten. Bonesaw... how long has it been since I thought of her as Bonesaw? Might even have been able to bring him back. Unlikely, and not without side effects. But no, it was kinder not to try.

"I'm sorry for your husband," I told her.

She looked at me with hate and... there was no sense of loss in her eyes. She simply shrugged. Wow. The fuck?

"Indoctrinated," Minerva answered before I asked the question. "It's what they do. How they produce the number of capes they do. Breeding programs between capes. Training camps. Constant brainwashing. Think of it as Heartbreaker, only industrialized. They start with them as toddlers and put them through every hell they can think of. One in, maybe, twenty, actually gets powers. Less than one in three survive."

"That... there are no words for how messed up that is..." I muttered.
"Wasteful, too," Clarice chimed in. "It encourages breaker and brute types. The least useful and least interesting kinds of powers. Total waste of effort."

"Aren't you a brute?" Stormtiger pointed out.

"Nope!" Clarice responded cheerfully. "I'm a thinker, plus a few less interesting fringe benefits."

It was only the three of us here. The living lie detectors. The medical team. The others had other things to take care of. Taylor and Crystal were off talking to their respective parents. Crystal hadn't told her mother about her side job... and Taylor hadn't told her father about her powers at all yet. I didn't understand them, sometimes. They had families, I had nothing. At least they were going to see them, now, but I'd be happy to have a mother or father, at all, to talk to. And they... well, it didn't help to dwell.

I also didn't want to dwell on Respawn's comment for why he wasn't showing up. Something about 'cape groupies'. Nope. Dwelling wasn't a thing I wanted today.

"That's twisted," I muttered, still thinking on how little a family I had. And how Night never had one at all. If my life had been like hers... would I be that dead inside? That hollow? I didn't have a lot of good memories, and all of them were of Victoria. But compared to the 'nothing' that Night had? My life was heaven.

"So, this the part where you try and sell us on joining the team again?" Stormtiger challenged.

"Unfortunately, no," Minerva answered. "Thanks to a certain incident with the press."

AKA: Miss Militia handed me my ass on camera.

"All offers of membership are revoked," I informed them. "Probably better that way. None of your powers are all that useful to us to begin with."

"Oh, fuck you, bitch," Crusader muttered. "You only took me down because I surrendered so my team could get healed."
"Same here," Stormtiger challenged. "How about you let us go so we can try for a rematch?"

"Really?" Minerva laughed. "I know you're both doing the whole macho thing because the girls you want to bone are watching from the ICU... but let's be honest. We held back. We held back a whole fucking lot. None of you got swarmed with wasps. None of you were hit with deadly attacks except Hookwolf, who we knew could take it. And Fog, which we had no choice about. To say nothing of our real secret weapons. The ones we're holding back in case of an actual emergency. You're second tier and we all know it."

"And you, thinker bitch?" Crusader challenged. "You think you could take me?"

"In an actual fight? No," Minerva smirked. "As you said, I'm a thinker. My whole function is to make sure I don't need to get into fights with, as Clarice put it, less interesting capes."

"Thought so," Crusader said, clearly feeling he got the upper hand in the exchange.

"Still, we might be able to work out some other kind of deal," I stated. This was our little song and dance. "We have bigger fish to fry than you. Much bigger."

"What, planning to use us against the Endbringers?"

"No," I responded. "Rest assured, we are planning for the Endbringers. They take up a full half of our days, every day. When the next attack comes, you'll see what we're really capable of. But, as Minerva and Aceso so kindly pointed out to you: your powers aren't good enough. We can do better, ourselves, without the risks and the PR disasters and the fact that you're psychotic Nazi assholes. You have nothing to offer that we want."

"You don't need to talk down to us like we're subhuman," Crusader glared at me.

I was stunned speechless. Did he really just...? It was Minerva who put voice to my thoughts. "The fact that you could say that. Without any irony at all. Is both hilarious, and disgusting."

I sighed. "You really are dead set on making me regret this offer. But I'm making it anyway. How would all of you like a 'get out of jail free' card?"
A/N - Man. There is so much stuff foreshadowed in this chapter. Stuff I didn't get around to 'till 63 and beyond. No, seriously. When I get around to 63, I'll link back to this chapter and be all 'told you so'.
This time, it was Assault that had showed to pick up our prisoners, and I was glad to be rid of them.

"I thought Purity would have taken longer," he said, not taking his eyes off one of the most powerful blasters on the planet as she was loaded into one of the vehicles.

"The blast was a lot more flash than it was function," I replied. Not entirely a lie. Lightning, including the artificial variant used during that attack, isn't nearly as lethal as people imagine it to be. A healthy adult has far better than a 90% chance of survival, even from a direct hit.

"Anything we should look out for?" He asked.

"I had to boost up Purity and Cricket's metabolism," I answered. "They'll need about twice the usual calories or it risks causing serious damage. Same treatment I gave you that one time."

"Oh, yeah, I remember," he said happily. "I felt like I was sixteen again. Never did get a chance to thank you for that. Battery thanks you as well."

"What? Why would she..." And then I figured it out. I covered my face to hide the blush. "Nevermind. I get it."

"Good," he laughed. "I was afraid with all the time you spent in the hospital, and now Pantheon, that you were completely oblivious."

"Nope," I muttered. "Speaking of, I need to go back to work."

"You need to relax more," he said. "All work and no play makes you into Piggot. Go out on a date. I have a nephew around your age. Takes after his uncle's roguish good looks."

What? Really? "I think I'll have to pass." I deadpanned.

He shrugged. "Well, if that's not your style, Battery's got a younger sister..."
Oh. God. Why? "You do realize that I can fuse your mouth shut, right? I'm sure Battery would thank me."

"For a while, anyway," he agreed. "Well, you kids have fun. Relax. Throw a party. I'm surprised you're not getting a parade in your honor at this point."

"Streets are too trashed to get any floats going through," I snarked.

"Good, at least you still have a sense of humor."

"I do," I answered. You don't survive around Lisa and Respawn without one. "Now we just have to get one for you."

"Owww!" He grabbed at his chest. "You wound me deeply." He walked off, still chuckling. I admit, he even got me to crack a smile.

....

"So, what's the next course of action?" I asked, after going back inside to where the others had gathered. Our 'office' was starting to come together. It took a while to perfect the Yggdrasil to growing fixtures that looked like high quality oak furniture. But it truly paid off. Also, the seats. Oh god. They looked all stately and dignified. But they were like the most comfortable of beanbag chairs to sit in. It's amazing any of us ever walked at all.

"We've established ourselves and earned one hell of a rep," Minerva responded. "Now? We don't do anything."

"What." That was Taylor. It wasn't a question.

"The smartest plan, right now, is to let everyone get used to us," she replied. "So we sit back, relax, and let things get back to 'normal' before pushing any further. We're already testing our luck."
"Not just that," I said, agreeing with Minerva. A break does sound nice. "We have the Endbringer fights to prepare for. A dozen or so of those Ultralisks..."

"Hell yes!" Respawn interrupted.

"...and we'll probably be able to fight Behemoth to a standstill."

"Do we have the raw materials?" Clarice asked.

"No... we can build two right now. Maybe another two in the near future. We need more metals than we're getting."

"The boat graveyard," Taylor offered, a little bashful in the request. I knew it was a sore spot for her, though I didn't know why. "A lot of it's rusted out, but there's a lot of metal and no one's going to complain if it goes missing."

"Could work," I agreed. "I'll have to mod a version that can tolerate salt water for long periods of time."

"I'll contact the Mayor's office," Minerva replied. "Get official permission. Ask him if he wants to make a media event of it."

"Do... do you think we can get the ferry opened at the same time?" Taylor seemed... timid, even? Embarrassed to ask?

"Yeah, I think we can do that. A whole 'public works' thing. This town could use a feeling of progress, and old wounds being healed."

"Ooh, write that one down!" Respawn offered. "Sounds like something a politician would put into a speech."

We sat there for a minute, then Clarice spoke up. "Since we don't have anything big happening... maybe we should go on a recruitment spree? I have an idea for how to fix Noelle. And if it works, it'll give us an edge with the whole 'zerg army' thing."
Minerva spoke up. "You're talking about Blasto, right?"

She nodded. "Yeah. His tech is..." she looked toward me. "I'm sorry, sis, but his specialty is cloning and creating hybrid organisms. We could use him for a lot of things. And it won't take away from your other work, and it'll be faster than having you do it or make Yggdrasil pods to do it."

I sighed. "No, I get it. I'm only one person. And no, we will not be using Blasto to change that."

"Aww," Clarice pouted. "But..."

"No!" I repeated. "No clones of anybody. No creating people. Any people. I don't care how 'useful' it might be, we are not constructing an intelligent slave race. Blasto's creations aren't much smarter than the vegetables he grows them from. And that's fine. But that's the limit."

There were nods all around. The idea of making living things was a bit disturbing to all of us.

"Oh, okay," Clarice agreed. "I get it. We'll also need to contact Toybox. There's a few bits of other tinkers' tech I think we'll need."

I sighed. "Fine. Minerva, make contact and see what we can arrange. I assume we have the funds."

She smiled. "Actually, we could probably offer a trade. Your Yggdrasil. They'd probably be quite happy to buy one for their dimensional pocket.

"While we're on the subject of recruitment," Taylor added. "I'd like to talk to Parian. She's a rogue and, actually, that's perfect for us. Part of our... well, my, goals for Pantheon... is to build a community where parahumans can use their abilities in noncombat roles. Her power would synergize really well with mine. We could start a very profitable business simply by producing generic body suits of spider silk. The Protectorate, the PRT, and almost every hero who doesn't have high end brute powers would want to buy the stuff simply as underarmor."

"Okay, seems fair," I nodded. "In fact. Let's just open the floodgate. Everyone who can, should look into finding new recruits. Indies. Lesser villains. Hell, let's see if we can get some of the heroes to jump ship."
"Dibs on Clockblocker!" Respawn shouted.

"Go for it," I replied. "Just... don't alert the Protectorate that we're actively trying to steal their people. It... that can't possibly go well." Also: please fail. Please for the love of all that is holy, I don't need another one.

"I don't have any suggestions," Minerva replied. "The Travelers would be excellent additions to the team. Sundancer is miserable on her team, and Genesis is so grateful for what you've done to help her that I think they're likely to sign on. Krouse..."

"Don't want him anyway," I interrupted. "He's a jackass."

"I was going to say he's a shitty leader," she finished. "They're all together out of loyalty to Noelle, and something else I can't figure out. Some kind of secret. If we fix Noelle, I believe their team will disintegrate for lack of a shared goal. Then again, maybe the opposite. Noelle inspired a lot of loyalty in her people. Once she's better, she might be able to pull their team cohesion back together."

"Doesn't matter," I replied. "Their powers are really, really good, but too dangerous for normal use. And not what we need for Endbringer scale conflicts. Having them would be nice, but not so nice that I'm willing to cause any trouble to make it happen."

"All my powered friends are in the Wards. I'm still pretty good friends with Triumph, but that's not likely to work out." Crystal stated.

"We'll do what I do," Taylor offered. "Time it so each of us joins the Wards or Protectorate on patrols. Nothing overt. We'll wait until we're ready for the big announcements before we push it. I'm going to work on their new leader."

"Weld?" Crystal asked with a smile, then licked her lips. "Good choice. I might have to 'work on' him a little, myself."

Taylor's face did its best tomato impression as her face fell into the crook of her arm and she put the other overtop her head. "Not even close to what I meant."
"Sure it's not," she smirked. "I think it's exactly what you meant and everyone knows it."

"I don't get it?" Clarice asked. "What did she mean?"

"That's because you're still ten," Respawn replied. "I'll make Minerva explain it when you get older."

"Okay, guys, that's enough of that," I interrupted. "Now that we all have things to plan and take care of, let's do that. If you need me, I'll be spending a few hours adapting an ocean variant of the Yggdrasil. Do you know how difficult it is to attune twelve different symbiotic species to saltwater and let them still remain a cohesive organism?"

"Yes," Clarice responded.

==============

A/N- This chapter. This chapter makes me smile for sooooo many reasons...
I felt the twitches on my threads. The warning system I kept around the area where I was protecting my friends and family. It was a rhythmic plucking. Someone who at probably knew an instrument. Someone who clearly wants my attention.

A dinosaur formed from the spare thread I had. Something resembling a Stegosaurus. The spiked tail was legitimately dangerous, thanks to a few spare arablest bolts that Flechette was kind enough to donate. She said her weapon was tinker made to constantly produce ammunition and rope from nowhere. I was certain there had to be some kind of limit. Tinker tech was bullshit, but it wasn't infinite. Right?

So I peaked out, to get an eye at the form of Skitter. New costume. A very shiny costume, almost metallic in colors of blue, gold and that peculiar color of purple that forms when something dark enough catches light at the right angle. When did she decide to switch away from the utilitarian black and gray look?

She looked right at me. I suppressed a shudder. Fucking creepy girl already knows where I'm at. No sense in hiding from her at all.

I stepped out, flanked by my protector. I imagined how a fight between us would go. In terms of obvious potential, I probably came out ahead. My creations were durable, I could repair them with a thought. Master vs Master? I would win. But it didn't work that way. It'd be Master vs Person. Even shielded as I was by my power and the cloth armor I was wrapped in, I came up greatly lacking. She beat me on range. She didn't need to see me. If I hit her early enough, I could kill her. The problem is, that would be more luck than skill against someone like her. She, on the other hand, she could make me wish I was dead. I couldn't take her.

Still. I at least tried to save her from Bonesaw. That counted for something nice between us, right?. Also, she hasn't eaten me alive with bugs yet. That's a very good sign.

"You looking for something?" I said with far more confidence than I felt, or my wavering voice conveyed.

"Yeah. Have you heard about my new team?"

"New team? What happened to the old one?" Skitter left the Undersiders? I had a hard time
imagining. She was the keystone of her group. Without her...

Skitter looked down, and her fists clenched. My power did convey some sensory powers, even if they were pretty pathetic. She was trembling. I stepped closer. "I'm sorry, if you don't want to..."

"No," she choked out. "It... it's just. They didn't survive the fight with the Nine. Tattletale, Grue and I did. None of the rest. And Grue's left to do... whatever, he didn't tell us and hasn't made contact since... there aren't any Undersiders."

Wow. How do I even? "I'm sorry." Nice going, Sabah. Not lame at all.

"Not your fault. That's my problem to deal with it," she muttered, her voice getting cold. That 'supervillain' thing she was so scarily good at. "It's easier when dealing with business."

"Right, your new team." Good. Nice, safe, entirely unemotional topic that can't possibly be awkward.

"Yeah," she agreed. "I'd like you to join it."

There goes that plan. "You know I'm not interested in being a villain."

"You're really that badly out of the loop up here?"

"No power, and I'm one of the few that can go out safely. Gossip isn't usually what I'm looking for."

"It's a hero team," she supplied.

"Don't want to be a hero, either," I insisted. "I just want to protect my friends and be left alone."

"We can help with that," she offered. "We have our own refugee camp. It's one of the biggest ones in the city, and easily the safest. We'll need to grow another neighborhood, but that's-"
"Wait. Grow a neighborhood?" What have they been doing?

"Oh, right. Forgot you didn't know. The new team's being co-run by me and Gaea. Er, you'd know her as Panacea."

"The healer?"

"Turns out, she's not a healer," Skitter explained. "Her power is basically perfect control over a living thing at touch range. It's almost like your power, only instead of string, it can rewrite every part of a cell, right down to the DNA. Even things that don't have cells, like viruses and stuff."

I just stood there, mouth agape in my protective covering. "That is so completely unfair!"

"I know!" She exclaimed.

I looked back toward the ramshackle buildings my people were hiding in. Many of whom had been mutilated to look like members of the Slaughterhouse Nine. Absolute control? I breathed and did my best to imitate every authority figure I'd ever known. The whole time wishing I wasn't about a foot shorter than the terrifying bug-controlling-supposedly-former-supervillain that I was about to dictate terms to.

"Two conditions. First: I need to know exactly what you want from me."

"Offering you a job as a fashion designer," she answered smoothly. "You can work with spider silk, right?"

"I... yeah, I can do that," I confirmed. "But do you really need me for that?"

"For what I do now? No." She answered. "But you can do so much more. Our group isn't about playing cops and robbers in stupid costumes. We're trying to establish a community. Finding ways for powers to work together and be greater than they are alone. I can make better fabric material than basically anyone else in the world. You can work fabric better than anyone else in the world."

"So I won't be getting into fights? Just being a fashion designer?"
"Pretty much. Highest of high end clothing. All the comfort and elegance of finest silk. All the durability of the best body armors available on the non-tinker market. The commercials write themselves. So do the checks, practically."

She's right. They kinda do. "What's the cut?"

"It won't take me nearly the effort it'll take you. None at all once we figure out how to automate the majority of it. Between Aceso and Gaea, that won't be hard. On top of that, we have a lot of solid contacts in a lot of industries that'll buy and help market whatever we want to make. So... ten percent sound fair?" Aceso must be one of their new members. Pretty name. Hopefully nice.

"Sounds suspiciously low. Like there's either conditions, or you're letting me rip you off in order to butter me up." I said dryly. That deal is too good to be true at least three times over. If they were asking fifty percent, it would have still been pretty good as far as deals go.

"Well," she shrugged. "We would like to do testing on your powers. There may be other things they can be used for. Others who you synergize well with- I can already imagine some synergies between us and Clockblocker, for example, that could possibly fuck an Endbringer's day up. We'll catalog your powers and test them with every other power we think will make them even better."

I could live with that. Like it? No. But live with it.

"More than that, we're trying to set a precedent. That the rogues can join us, a hero group, and still be, functionally, rogues. In fact, we want most of our members to be rogues. A handful of front line heroes, and the rest making money and handling utility roles. The only time you'll be expected to fight is if there's an attack on our, on what would be your, home. The only time you'll ever be asked to fight is if we think you have something important enough to turn the tides of the Endbringer fights. And even then, that's a request and we won't force you."

"That doesn't sound too bad," I agreed. I already fought Leviathan, after all. I'd never join another Endbringer battle in my life, but I did fight Leviathan. "I play poster child and get a sweet deal?"

"Something along those lines," she nodded. "I can't really give you any final numbers, but we need examples of parahumans leading peaceful lives. And we're already basically giving away several million dollars a year. So what's a few hundred grand more?"
"Several... million?" I gasped. I couldn't even imagine that kind of money.

"Pretty much," she confirmed. "Gaea's tree is currently running the entire sewer system in this city. That costs a lot of money in a city this size, and we're doing it for free. Probably forever. Sure, we get fringe benefits from it. Like a Mayor that would do just about anything we ask, just to keep us around."

"That... that's pretty wow," I muttered. That really was an insane power.

"So, what were you saying about a second condition?" She asked.

============= A/N- Yeah. Okay, I love a lot of these chapters in retrospect. I see where the story as it stands now really hit its stride (and went another 170 chapters and counting). And it was here. Not specifically this chapter, but the ones in this general block.
"Accord, sir, your appointment is here," my secretary informed me via intercom. I looked at the clock. Five minutes early. Respectable.

"She may enter in exactly three minutes," I relayed back. I approved of this new employee. Smart, good at her job. A lack of ambition that, usually, I would find to be a negative. She'd never be worthy to be one of my Ambassadors, but she kept calm dealing with parahumans on a daily basis, and kept the office immaculate. If she kept this up a while longer, I might even need to learn her name.

I looked over my notes, yet again. I had already memorized them, but it never hurt to make certain. Pantheon. Powerful enough to beat Empire 88 in a direct fight. Disagreements with Protectorate and PRT. Reasons for contacting me and mine, currently unknown.

I had the papers in my desk when the door opened and my guest walked through. Her costume was admirably uniformed, with a medieval theme to it. It appeared to be styled after ancient Grecian armor, mainly brown hard leather with bronze over some areas. It came with the traditional armored skirt, but hers included pants underneath, also in the hard leather style. Custom fit, and designed to accentuate her feminine features without flaunting them. It could double as a military dress uniform, and was clearly done by an expert designer. I only counted seventeen flaws in the costume in the time it took her to walk up to my desk.

"Minerva, was it?" I said from behind my mask. Of course I already knew that, but I found it served my purposes better to appear less interested in them than they were in me.

She curtsied. "Yes."

"So, I must admit I'm curious," I said in a calmly neutral manner. Not that I talked in any other way. "What brings the leader of a hero group to speak with a notorious villain such as myself?"

She smiled. "I'm afraid you are under a mistaken impression. I'm not the leader of Pantheon. My task in your city is considered too trivial for their personal attention. I'm sure you understand how time consuming it can be to manage a city."

The insolent- I paused and calmed myself. "Then pray tell, why would you feel the need to discuss a 'trivial' task with me, personally?"
"It was at your request, sir," she answered smoothly. "We respect your work, and felt it would be an insult to act in your city without informing you. We didn't feel it would warrant your personal attention, but your secretary said that you insisted."

I frowned beneath my mask. That was true, what she said. I just hadn't believed them, or their modesty. Choosing a name like 'Pantheon' made me doubt they understood the concept of humility on any level.

"Yes, I recall," I finally replied. "Still, I would like to know your plans."

"Ah, yes," Minerva smiled. "We have taken an interest in one of the few undesirables you still have in your fine city."

"Blasto, presumably," I stated. She nodded in confirmation. "You have a biomanipulator of your own, correct? One which appears superior by several orders of magnitude. I'm not saying I'd mind his removal, but it seems to me his presence would be redundant for you."

Is there a weakness in Gaea's power my investigators are unaware of? A gap they're hoping Blasto can fill?

"I agree with you fully," Minerva said with a nod. "I am simply following orders. Gaea wishes to have Blasto in her presence before the end of the day."

Fascinating. "I doubt Blasto would agree to work for your organization."

She shrugged, offering that annoying smile again. "His desires are not my concern," she said casually. "Nothing he can do, short of suicide, is going to stop me from carrying out my mission."

"Yet, obviously, I could," I pointed out.

"Yes, of course," she agreed. "Possibly the local Protectorate as well, though I find that doubtful. They're not even strong enough to deal with a minor thorn such as Blasto."
I frowned at her implication. I hadn't managed to remove him, either. Also, the 'thorn' pun.

"Gaea seems to put a lot of faith in your ability," I offered a small bit of praise. "Surely you have some theories on motivations."

She nodded. "Some. Pantheon has dealt with all threats in Bockton Bay with little, if any, difficulty. This may be a matter of dealing with other disruptive elements nearby."

"A respectable enough goal," I nodded.

"It may also, in part, be to embarrass the Protectorate further," she continued. It fit in with their behavior in their own city. I had believed them to be showboating, as it were. But if viewed in the light of taunting the government heroes, I could at least see the logic in their actions. "I doubt it's any secret of our contempt for the incompetence of the Protectorate's system. They failed our city. This one, as well. Boston is the safest big city on the east coast. And that is because of you."

I nodded. It is good that they recognize this fact.

"Which brings me to my next theory," she kept her smile. "We intend to bring such order and safety to our own city. You have the experience and skill. Perhaps our leaders hope to impress you with our effectiveness in order to open up future dialogue and possibly cooperation."

"Yet they are not here, today," I pointed out.

"As I said. We felt Blasto was too mundane to warrant your personal attention. They likely believed it would be presumptuous of us to request your personal attention until we were better established. Had proven ourselves."

"They thought destroying the Slaughterhouse Nine and removing Empire Eighty-Eight wasn't enough to prove themselves?"

She shrugged, again. It made me want to strangle her. Or at least break her shoulders. "Perhaps they wished to restore our city from chaos and anarchy, first. Unfortunately, due to the efforts of the Endbringer and the Slaughterhouse Nine, much of Brockton Bay is in ruins. We've done great things in a short time, but we're a long way from a full recovery."
"Understandable," I stated. It was true. The belief was that Brockton Bay would be condemned as a city, surrendered to the chaos, much the same as Ellisburg.

"Perhaps they felt that if they waited until the recovery efforts were finished, they might speak with you as equals. Instead of merely talented newcomers who are good in a fight. Power is simply a matter of luck, nothing to be proud of. Being a successful leader of men, saving a city from ruin, those are things that deserve real respect."

"Valid," I stated. She does have a point. No one would doubt Pantheon's power. Their ability to bring order to the chaos? Remained to be seen. I respected that they even knew that they should. "I can see why they rely upon you. You are free to stay here for forty eight hours, seeking Blasto. If you have not successfully captured him after twenty four hours, I shall provide you my assistance in the matter. Consider it a test to see if you need it."

"You are too kind, Accord," she smiled. "I'd best get to work, and I believe I've used more than a generous amount of your time."

I nodded. "Leave contact information with my secretary. And do inform me after you've achieved your goal."

"Of course," she responded as she turned and left.

It was exactly two hours and twelve minutes after she was out of the building when my secretary activated the intercom. "Sir. Minerva just called. Told me to tell you: 'mission accomplished'."

"Understood," I said, still trying to grasp the implication of how quickly they had managed. "Thank you."

==========

A/N- Definitely write a better Accord than I do Jack Slash.
I stared in stunned disbelief at the monitor. One of the fringe benefits of being a tinker, any kind of tinker, was that normal technology was simple to us. Wiring and improving upon a high end CCTV system with any number of bells and whistles was nothing to me, even though my specialty was in biotechnology. Specifically, biological splicing and artificial lifeforms.

Still, right now I was stunned. A Hispanic teen girl was currently in my garden. She was dressed in what was clearly a costume, although whether she was a cape, or had gotten lost on her way to a renfair, I wouldn't be willing to bet money either way. Wearing green toga style robe over what seemed to be a brown shirt. A pair of thick brown gloves and knee high boots that were far too utilitarian to be considered sensual. A green hairband that looked like it was actually a live plant. Face exposed for the world to see. She'd be a looker when she was older, that much was for certain.

None of that was important. What was important is that she was hugging my attack dogs. Or, what passed for dogs when you were splicing DNA from six different lifeforms and holding it all together with a kind of genetically engineered fungus.

"Who's good little abominations against nature? You are. Yes, yes you are!" She cooed at them.

The phrase 'there are no words', I find, is overused. But right now? I had absolutely nothing nothing. I pressed a button that released a mist of attack pheromones. It would instruct the dogs to turn toward the nearest mammal and then kill it. No exceptions, myself included. Naturally not something I would use unless I was safely away from them, like now. Pity to have to kill a pretty girl like that.

One dog turned and scaled up the nearby tree, catching a squirrel with six foot long tongue and pulling the animal into its mouth. The whiplash probably killed it before it was eaten. The other found a stray cat that I hadn't realized was there. Neither so much as glanced at the girl.

She sniffed the air, then blinked a couple times. She looked directly at the camera, made a frown and wagged her finger at it. At me. Then stuck her tongue out. That's when I knew I'd already lost. I wouldn't make it easy for her. No self respecting Tinker would. But the idea that I could win this fight was now taking a vacation. Probably somewhere with better weather than Boston. Lucky prick.

She skipped over to the camera and blew a kiss at it. "See you soon," she said cheerfully. And then she went back to skipping, right into my lair.
I hit her with the poison gas first. It seemed obvious to me that it wouldn't work. It didn't need to. She was immolated, when sparks set the gas on fire. It would take week to get the smell out of that part of the building.

One of my old partners always did say I had knack for overkill. I disagreed. If it's no longer alive, then it doesn't matter how much 'kill' you use.

The flames cleared, and she was still standing. Her hair hadn't even been singed. Okay, so that's a brute rating. Light green runes were now visibly glowing in her costume.

Okay, breaker rating, I amended. Forcefield. That's both better and worse.

I released two of my smarter minions, based upon gorilla genetics, from their cells. These weren't like the dumb 'dogs'. They recognized me, and they recognized nothing else human unless I was with it. In many ways, they were almost comparable to human. I'd even implanted my language skills. I often regretted not being a better fighter, so I could program those skills into my creations as well.

Like right now. Watching a not particularly large girl treating two giants like they were a light workout. This was a distinct source of current regrets.

She rolled under one's legs and then spider climbed her way up his back. The boots actually clung to their barklike hides. Tinker tech? Some breaker power? Either way, a pain in the ass. I cringed when the other brute attempted to punch her, only for her to move and it to get its hand stuck inside the first. Sure, I've seen my creations get taken down before. They weren't all that bright. But this is just embarrassing to watch.

She leapt down from her perch atop the first's head, and ran across the other's arm and onto his shoulder. They both twisted the wrong way at the worst possible time, and broke the second construct's arm.

My computer finally had a file pulled up based on recognition software. I saw the first word and went cold. Pantheon.

"Well, fuck me then," I muttered and kept reading. Aceso. Brute, combat thinker and speculation of being a changer of some sort. Some of the PHO people think she's not even a real parahuman. Some kind of living weapon put together by Gaea. Watching her fight? No, she's real and having way too much fun to be an artificial lifeform. Speaking as an expert, of course.
She jumped off the second's back as the first punched it in the face, smashing open the skull.

"Wow," she laughed. "You guys are pathetic."

The one dropped dead. Dammit! I'd be less upset if she wasn't right. That was pathetic.

I activated a few other devices to target her. Projectile weapons, acid. And... I couldn't get a lock. She had no body heat, left no scent, didn't even show up on an electromagnetic scanners. Very expensive tinkertech scanners that could spot the cellphones next door to my base. Even the motion trackers, somehow. She was just not there to them.

There was a heavy thud as the gorilla slammed into the blast door blocking my lab. It then delivered another punch. Where was... oh, okay. She had her arms inside the hole that was punched into its back, and was puppeteering the thing. Manually. Because that's totally logical and fair. Of course a living thing can be controlled just by reaching inside it and poking its nervous system with your hands. Why would anyone ever think otherwise?

The doors, of course, came down, and the construct started to fall forward. Without her at the 'controls', it was now quite paralyzed. She jumped off, did a front flip, and landed like she was an Olympic gymnast doing a dismount. Only gymnasts typically landed on nice, soft, padding. She landed on a concrete floor. There was a wet 'plop' as the goop she'd gotten on her arms continued traveling at speeds which should have shattered her legs, but she was quite clearly fine.

"Hey! It's so good to finally meet you!" She said with the exuberance of a child. A child that hadn't just walked through everything I could think of. Well, fuck, at least if she was talking, she wasn't using me as a living sock puppet. Huh. That's a thing I never thought would be a concern in my life.

"H... hello," I said. "So, what brings you to my humble abode?"

"Lotsa things," she said cheerfully. "First, I'm a big fan of your work. The way you dealt with Weld that one time by making that blob thing."

"Well, thanks," I smiled. It was nice to meet fans. Much better than enemies, at least. "It's not all that impressive, sort of a poor man's containment foam. Never could perfect the recipe to allow them to breath in there. It's why I only ever used it on Weld."
"Don't sell yourself short," she disagreed. "A mass of nearly microbial life that's capable of shifting around, but still has cohesion and coordination enough to trap a powerful brute cape is not something to undersell. How did you keep their mucus adhering to him without letting it stick to another surface that might allow him to pull away?"

"How about if I ask some questions, first?" I did my best attempt at a charming smile. It hadn't helped me with any of the girls I knew in highschool. But then again, girls didn't start conversations about the chemical properties of mucus in my highschool.

"Sure," she said, smiling brightly.

"First... how did you evade basically everything I threw at you?"

"Oh, that's simple," she said as she did a twirl. "Your lab's set up to fight people. And I'm a mushroom."

What? "What?"

"Well, a combination of several types of fungal cells working alongside animal musculature, specialized organs, a nanoweave armor mesh, and a dozen psuedo-organic sensory augmentations. I'm still working on installing echolocation. I have it built in, already, but the control system isn't good at displaying it properly."

"You're a tinker!" I said with a realization. And a wave of nausea. She'd done all that? To herself? "Is that why you're here? To steal my research?"

"Well, kinda," she said with a smile. "We want to offer you a job."

"A... job?" Okay. I could live with that. Emphasis on the 'living' part.

"Yup. You come work for us. No more stupid bank robberies. And a really nice lab that's only getting better with time. Way better than you got here. Plus you get to work with all kinds of materials you wouldn't otherwise ever get access to."
"Such as?" I had to admit, this offer was worth considering. "And for how long?"

"Well, lotsa things. We've got a girl named Noelle whose powers have been broken, somehow. She is fascinating beyond all words. Then there's my Big Sister," she said the words like an object of worship.

"Big sister, huh? Who's that?"

"Gaea, of course," she said. "Did you know her power works on the genetic level? Kinda like yours. But she reshapes it in real time. Every part. So perfectly that it alters the automatic functions of the immune system to accept the alterations as if they were the original organism. No risk of autoimmune response- in fact, if you have one from a different problem, she can cure it. No side effects she didn't intend."

That... that is almost unbelievable... "Perfect biomanipulation..." I whispered. "Did she make you?"

She giggled. "Well, she made this body. I added some improvements, of course. Her weakness, if you can call it that, is she only effects living things. Or pseudolife like prions. The cybernetic enhancements are all my own."

"And you're saying she'd let me view some samples of her work?"

"View them?" She laughed. "We're going to be improving on them, us and any other tinkers we find who work with living things. Plugging the gaps where her abilities don't reach. Designing machine interfaces to improve their functions, adding neurological instincts so her constructs work better."

"What's the catch?" There's always a catch.

"Well, you can't commit any more crimes," she said. "That's Pantheon's first rule. You get one second chance. Only one."

"Okay," I said. "How do you feel about weed?"
"What kind of weed?"

"Oh," she said. "Dunno, never asked. She doesn't want us breaking any laws, so probably not." She looked disappointed and thoughtful. Then she went right back to smiling. "Oh! I know! I bet we can get her to make a plant that does the same thing, but isn't illegal!"

"Uh... okay, I can work with that," I agreed. I never really did have the time to grow my own, ironically enough. And sure, I could clone the stuff, but it was cheaper just to buy it. But if they could basically just magic up as much of the stuff as I wanted?

"What's the pay?" I asked.

"Don't know," she replied. "Whatever you can make from your stuff legally, I guess. I do it for free."

"We'll need to work that out..." I paused. No, that idea is crazy. But it couldn't hurt to ask. "How about ten years added to my lifespan? As a payment for my work for the next year or so. We'll talk longer terms, too, of course. A bit of telomeres manipulation and some hormone balancing should be well within her power. I think it'd be fun to be twenty again."

"Oooh," she said with glee. "I am SO glad I talked to you! Now I know how we're going to get Toybox to sell us the rest of what I need!"

==============

A/N- Mushroom Riley is possibly my favorite thing in the story forever.
I'd just gotten back from work. A tiring day, but not a bad one. It was a sad and jaded way of looking at things, but Leviathan had almost done the city a favor. The influx of disaster relief funding meant jobs. Not great jobs, certainly not permanent jobs, but jobs nonetheless. The docks would, of course, be the last place to garner funding. If they got any at all.

The city was seeing to it that most of the money was being funneled into construction and rebuilding, and I was seeing to it that the dockworkers got their share of it. Even if that wasn't really what we were meant for, it was enough that it existed at all. The problem that was most pressing on my mind was that we didn't have the people. I could double the number of dockworkers and still not have enough people to grab all the projects I'd like to have. Going for small ones that could be completed quickly in order to move on to others? Or sinking all my people into one or two of the larger projects that might not be completed for a year or better. Both had something to offer. Both also carried risks and costs.

It would be smart, in the short term, to expand and add more people. But this boom wouldn't last, and that just meant things would be exponentially worse once-

I froze. The lights were on in the house. Adrenaline hit me. There'd been more than one robbery in the neighborhood of late, and police were stretched thin as is. I slipped my hand down between the seats and my fingers found the cold metal easily enough. The gun was illegal, of course. I didn't have the permits, and I sure as hell didn't have whatever it took to keep a concealed firearm.

That didn't matter. Not in what my city had become.

I hid the gun in the pocket of my jacket as I moved to the door. Careful to avoid the damaged step. Whomever was in wasn't making a lot of noise, perhaps they'd already left? My fear was beginning to be replaced by anger. Normally, I don't like being angry. I do my best to control my temper. But a fucking crook in my house? This was a situation I was comfortable being pissed off for. It helped keep my mind off the fear and the stupidity of doing what I was doing.

Door isn't broken, I noticed. In fact, it was simply unlocked. I turned the handle quietly and slowly opened the door, gun pointing in before I was. Then I froze. She looked a little different. A fairly established tan, and her hair clearly wasn't seeing the care it usually received, but it was her. My daughter.

"I know I didn't exactly leave on the best terms," Taylor spoke softly, she still hadn't turned her head. "But would you mind not pointing the gun at me? It kinda makes me nervous."
I quickly set it aside on the table near the door. "Hey, kiddo," I said, trying hard to sound cheerful. Like nothing bad had happened. I wanted to run to her and hold her like she was six years old again. I was afraid to. That if tried, she'd run away again. That if I touched her, the illusion would vanish or I'd wake up from the dream or she'd pop like a soap bubble.

I was trembling, and it wasn't because of the adrenaline rush.

She turned, and had a nervous half smile on her face. "I started supper. Hope you don't mind."

I walked to her. Slowly. "No, that's fine," I replied. It wasn't what I wanted to say. It wasn't even the first ten things I wanted to say. But those were the words I picked. Safe. Trying desperately to pretend everything was normal.

She really was taller than I recalled, and that wasn't just a trick of memory, and she was in much better shape than the girl I remembered. "Have you been eating well?"

"Yeah," she said. "I sorta got a job. A pretty good one, actually."

"Oh?" I offered a smile. "Who with?"

Her smile dropped, and I was terrified she would bolt from the room. "That's kinda what I needed to talk to you about."

I felt queasy. She was likely to run off right after she told me, something in her posture screamed it. "How about we save it for after supper?" I suggested. "No sense in letting the heavy stuff get in the way of a good meal."

"Thanks," she said, turning back to the stove while I silently left to take off my coat and check on the gun.

We ate mostly in silence. The entire time glancing at each other, smiling nervously before looking back to the food. A vegetable soup. "Where did you find fresh roast in these circumstances?" I asked her. An idle curiosity.
"It's vegan, believe it or not," she answered. "No animals were harmed in the making of this meal. Not even the ants."

"Wow," I replied. "I couldn't tell it wasn't the real thing." I have so many more important things to ask. Where have you been? Are you safe? When will you come home. I kept trying to think of a way to ask her, but failed. I would have given anything just to know what she was thinking.

We had finished. Me long before her. "So," she said, pushing her bowl away.

"So," I repeated. "You were saying your new job."

"Yeah..." she muttered. "I'm... kinda working for Pantheon now..."

"The new hero group?" I asked. I knew about them, of course. Seen some of their work. They were making a pretty big difference with helping the homeless.

"Yup," she said. "Cool, huh?"

"They hire teens?" I asked. I could feel the dread. No, please, anything but that.

"Well," she smiled, but it didn't erase the sadness and apprehension in her eyes. "They kinda have to make an exception for me."

She set her elbow on the table and turned her hand so her palm was facing up. A pair of hummingbirds flitted toward her and landed on her thumb and pinkie finger. No, at closer examination, they were moths. Big, but still moths.

"You're... Skitter." It wasn't a question. I probably should have seen it a while ago. Had seen it. I just couldn't bring myself to admit it.

"It's 'Khepri', now," she said. "But, yeah."
"When?" I asked. I knew, but I still had to ask.

"The locker," she replied. "Doesn't matter now, anyway. I've got more important things to worry about. Pantheon's really really powerful, and I'm one of the key figures in it. A leader."

"The blond girl. That was 'Tattletale', wasn't it?"

She paused, looking down. "Yeah."

"She part of this, too?"

"Kinda. But she's not in charge of anything. Amelia wouldn't stand for that."

"Amelia? Do I know this girl?" I asked.

"Yeah. Amy Dallon. Panacea. Gaea." She answered. "She founded the team, invited me to be her partner. Our powers are insane together. And only getting better as we progress. We're going to save this city."

I had to smile at that. I thought the same thing, once. "You always did want to be a hero."

"I remember," she said, smiling back. "I didn't exactly want bug powers. But now I'm pretty glad to have them."

I followed her lead, asking the question I knew she wanted. "Why?"

Then I heard the footsteps, I turned to see a woman in a gold and black metallic costume. "Hey, dad," she said. Taylor's voice. I looked back toward my daughter.

"That's my Changeling," she said. "One of them, anyway... umm.. maybe I could explain better."
"Please do," I said, staring at the costumed girl.

"It's one of Panacea's creations. Like a robot made of plants. Most of us have at least one. I control mine the same way I control my bugs."

"She... she can do that?"

"Don't tell anyone!" She insisted. "We don't want anyone to know we have them right now. At least not until we have the M4s working."

"I suppose you're not going to tell me what that is, either?"

"It's better if I don't," she confirmed. "I trust you... but these aren't my secrets to share."

"I wouldn't know what to do with the information, anyway," I replied. "So... why show me this... changeling?"

"So you wouldn't be worried about my safety," she mumbled. "I can use it to fight for me. It's a lot stronger and tougher and just plain better than any normal body, and I can control it anywhere in range."

"How far is that?" I asked.

"..."

"Couldn't hear you," I said. She had spoken through her hands.

"The whole city, plus some," she answered. "Panacea's power. She improved my range. It's pretty much as far as we want it to be, maybe even the whole world eventually. I can even control it while still doing normal things. So I can be anywhere I want while still out being a hero!"

"That... that's a lot to take in, kiddo," I said. It was. My daughter being a hero wasn't such a surprise. Always knew she had it in her. But talking about making copies of herself like this. That was a hard
thing to swallow.

"Yeah," she said. "But now you know. I... let's just say some of my team. My friends. Don't have the happiest of home lives. It made me start thinking. And... I don't want us to be like that."

I moved over to her and pulled her into a hug. She didn't vanish. She hugged back. Hesitantly at first, but then for real. She had gotten stronger.

A/N: Yeah, okay, still loving this part of the early chapters.

Alt take that didn't make the cut:

"I know I didn't exactly leave on the best terms, but would you mind not pointing the gun at me? It kinda makes me nervous."

I reacted on instinct, tossing the gun backward out the front door. I jumped as it went off, and we heard a cat screech.

Soon after, a girl screamed "Mister Fluffybottom!"
We got together for our "morning" meeting, if 11 still counts as morning. The addition of Blasto to the group was helpful. He and Clarice had gotten to work putting his expansion on to the lab. The man was... eh, not sure how I felt about him. The 'paid in years' thing. I... to be honest, it was one of the few things left in my power that I had never chosen to test. The sheer concept of being able to grant agelessness, and all the ethical questions therein was frightening. Class S status was easy by comparison.

Still, I did it. And, much to my surprise, it worked, I could allow someone to live forever. I had to wonder if my 'Passenger' could know just how huge that was. At least it would be decades before anyone caught on that we had that kind of power.

"Hey, boss, how's it going?" Blasto asked, walking into our slowly evolving boardroom in slacks and a t-shirt.

I looked over at him and raised an eyebrow. "Boss?"

"S'what you are, right?" He said, smiling. "By the way. Great job. I don't think I felt this good when I was twenty for real."

"That will wear off," I replied. "Had to adjust your hormones to rebuild properly. Right now your body thinks you're closer to ten in terms of growth response. It'll wear off in a week."

"Wow, being ten is fuckin' awesome," he offered a laugh.

"Yes it is," Clarice agreed. "Also, watch the language."

"Sorry, chief," he responded.

"Why do you keep calling me that?" She pouted. "That's not my name! Any of them!"

"Because you're the one in charge of our little... what... division?" He looked at me. "You guys given any thought as to how you're dividing things up? Already got too many people to just make a
team. You don't seem to want me out in the field at all. Which suits me fine, I'm quite happy in the lab. It's where tinkers belong. Speaking of which, got the other part of my first payment figured out?"

I sighed. "Yeah, it's covered," I replied. I honestly wondered what Coil thought about us asking him to fast track delivery of a single cannabis plant. "I'll probably merge it with a grape vine. The leaves will, of course, hold all the active ingredients."

He paused. "Holy shit. That is genius."

Clarice smacked him upside the head. "Language!"

"Ow!" He stumbled away holding his head. "Seriously, that hurts. Are your hands made of steel or something?"

This was the time when Lisa stumbled out of her room, still half asleep. "Why are you all up so early?"

I looked at her. "Little late in the day to be saying that."

She looked at me. "Sun's not setting. Still too early."

Khepri, Eki, and Osiris then opted to walk in. All were already in costume, no less. "Oh, good. I was afraid we'd have to drag you people out of bed," Eki said with a smile.

Blasto turned to her and smiled. "Oh, that sounds like a great way to wake up."

I rolled my eyes. Another one?

Respawn shook his head. "Don't bother, dude," he said.

"Way too young," he pointed to Clarice.
"Scary beyond all reason." Lisa, that time.

"Destined for each other," one hand pointed toward me, the other toward Taylor. I will kill him. Don't know how. Way shall be found.

Then he gestured at Crystal last. "And I have called dibs. Bro code in effect on this."

"First. You cannot call 'dibs' on women," Crystal insisted. "And second, there is no 'Bro Code', that is not a real thing. And if our new recruit wants to ask me out, he's totally free to do so. And I am totally allowed to say 'yes' if he does."

"Third," I added. "Khepri and I are not 'destined for each other'."

"Fourth," Lisa chimed in. "I am totally scary beyond all reason."

Crystal looked back toward Blasto, expectantly. "Well?" She asked.

"Well, what?" He asked back.

"Aren't you suppose to ask me out now?"

He shook his head and raised up his hands. "Sorry, miss. You seem nice and all, but I'm not going to ask you out just so you can prove a point. Last time I did that, it ended in alimony. Besides, Bro Code's been invoked. Nothing I can do."

Crystal just glared at him. And then turned her head to glare at Respawn. And back again. "Okay, it's official. I am done with men. Forever. No regrets."

"Huh... wow, that happened last time, too," Blasto chuckled. The rest of us, at least, were trying not to smile too visibly.

"Oh, really? I see how it is," She said in mock indignation. "Well, smart guy, did this happen?" She turned toward Taylor. Uh oh.
Lisa quietly reached into her pocket and pulled out her smart phone, pointing the camera toward Crystal. I watched with a slowly dawning realization. No. She wouldn't.

"So, if you're finally tired of my cousin breaking your heart, I'm free this Saturday," she said in a voice I would have bet money was sincere. Guess her acting classes paid off. Or, I hope it's acting.

I could feel my face heating up and turning red. Taylor just stood there stunned, like a deer caught in headlights. Lisa was the first of us to break and start laughing, followed quickly by Blasto and Respawn. The rest of us didn't. I was humiliated and Taylor probably felt even worse. I don't think Clarice even understood the jokes. And I think Crystal was actually starting to get mad.

"That happened, too!" Blasto managed to gasp out while trying to catch his breath.

And that's when the rest of us lost it. Crystal. Followed by me. Followed by Taylor.

It was a good laugh to have, and then we got down to business. Far less interesting. Blasto and Clarice providing their wish lists. Lisa kindly letting me know that the project to remove the boat graveyard was approved, and a general press announcement would be done but it wouldn't be televised or anything, so I didn't need to be there. Taylor letting me know that Parian was setting up shop. I still needed to work on fixing her people. The ones that Bonesaw mutilated.

We all tried hard not to look at Clarice, who tried hard to look like she wasn't there. Except for Blasto, he still didn't know. And Crystal. I still wasn't sure if she realized who Clarice really was. I would have to talk to her about that, soon. Not a conversation I was looking forward to.

It was a bit past one, when Taylor got up and moved toward the entrance. She met a girl at the entrance who looked upset by something.

"Charlotte?" Taylor said with concern. "What's wrong?"

"Shit!" Lisa muttered, before shouting. "Take cover!"

I saw it right before it happened. The girl opened up her jacket, revealing one of those bomb vests like you see in movies. I was in contact with the table, so I tried to pull up as much mass between her
and us, Taylor especially, as possible. I wasn't fast enough.

"For the Fallen!" Her last words, and the last thing I heard before pain and then oblivion overtook me.

A/N- Because I was afraid people might be under the mistaken impression that my fic was a happy one.
I woke to nudging. Pain. Huh, not as bad as I'd expected. The Yggdrasil had a hole in it. Already healing and regrowing. No need to worry. Tired.

I couldn't see, couldn't hear, couldn't move.

She vanished. My hand was moved and put back on her.

Another minute of confusion. Then another vanishing. And again.

Oh. Right. Healing. I do that.

Stitching the lungs together using the artificial organism. Rewiring the circulatory system to stop blood loss. Converting mass to blood. Repairing spinal structure and bones. Not enough mass for legs or rib repairs.

Oblivion again.

....

I drifted awake. I was floating in something.

"Hey, Big Sis, glad to see you're awake," a voice said. Clarice. No, smaller. Riley. "I want you to know we're all alive. I lost my changeling. So did Khepri. Eki and Minerva are hurt pretty bad."
Blasto and I are working on it."

That's good. I fell back to sleep.

....

Again I was awake. I hurt everywhere. Opening my eyes was agony.

Pain was good. It meant that the nerve damage was repaired.

"Wh..." I croaked. My throat was dry. Unused.

"Don't speak," Crystal's voice. "You're still pretty torn up. Your body keeps fighting what Riley and Blasto are doing. They're putting you back together an inch at a time. Then I'm going to kill you. You had fucking Bonesaw in your basement this whole time! What were you thinking!?"

She put her hand on my arm. Half her body was artificial. Arms. Legs. Much of her face. Almost all of her blood. A fungus-human genetic hybrid, close enough to her own biology to trick her immune system, for the time being at least. No nervous system in place. Nothing that technically constituted 'skin', either, in those areas.

I started mending the alterations, reshaping them to match her natural biology. She pulled her hand away.

"Hey!" She exclaimed. "None of that. You need to get better first."

"Okay," another voice came in. "It's Minerva. I know, I sound different. You'll be fixing that, too, eventually. The Fallen are here. Valefor, at least. Probably one or two of the others. Taylor's fine. She was spending a day with her Dad. Making up for lost time. Sent her changeling instead. Good thing, too, she managed to get Charlotte almost fifteen feet further away before she..." She trailed off. "Any closer, the three of us would be gone."

Three? Oh, right, Crystal.
So tired.

....

I sat up.

"How's everything working?" Riley asked, smiling hopefully.

"Stiff. Sore." I replied. I looked healthy enough. Pale, even moreso than normal. And I no longer had freckles on most of the places that use to have them.

"Congratulations," Blasto offered. "You just underwent the world's only full body transplant."

"Only 72%," Riley corrected.

"How long was I out?" It still hurt to talk. But at least I could, now.

"Around thirty hours since the bombings," Minerva answered.

"What happened?" I muttered. I remembered bits, but not much.

"They used her to get to me," Taylor's voice shook with an animalistic waver that was some hybrid of grief and rage.

"Respawn managed to get to Blasto before the explosion. Crystal was saved by a combination of her shield and her armor. And Clarice... Riley used it to take the brunt of the damage for you."

"I'm sorry," Riley apologized hurriedly. "I know you told me I couldn't show myself. But it was the only way I could save you."
"It... it's okay," I insisted.

"The Fallen decided to send us a message. Something about desecrating a monument to their "god". It's a bullshit lie, anyway."

"Enlighten me," I said darkly. I knew who the 'Fallen' were, of course. Fucking Endbringer cult.

"They don't believe their own press," she said. "Kinda like E88. They found something full of shock value that they could use to justify their own depravity. Making the world hate them on purpose so they can invoke outrage. Use that as an excuse for their actions."

"Lot of effort to go through to keep up appearances," Crystal added.

"Yeah, well, they are still psychotic fucks," Lisa didn't smile. "They get off on this sort of thing."

"How much... damage," I couldn't bring myself to mention Charlotte or ask about the other dead. I'd only met her a couple times, and even then in brief passing.

"That bomb? Three casualties, including Charlotte. Not including changelings and other property damage." Lisa responded. "There were seven other bombings. One for each of the refugee camps, including ours. All in the meal halls, all at peak lunch period. Still not sure about the numbers. Including wounded? Easily hundreds, possibly over a thousand. They were planning this for a while."

"Fuckers are copying Bakuda," Taylor spit the name.

"I didn't accuse them of being creative," Minerva responded. "A local chapter of Haven is in town to help. They... don't like our theme very much. They're something of experts at hunting the Fallen. Respawn's out working with Rosary. I made him promise to behave. His power should treat Valefor's the same way it treats yours."

"And mine," Riley muttered. "Can't even inject natural growth hormones into him without 'poof'."

"The rest of us?"
"Gearing up," Lisa answered. "We need you to finish healing the rest of us. What Riley and Blasto put together is temporary and already starting to come apart."

"The plan," Taylor informed me, her voice full of malice. "Is to go out. Bait Valefor. Incapacitate him. And then give him to Riley."
And so, we went off on our mission. Or, rather, everyone else did. I was still in recovery. Plus, it would be suspicious for "Gaea" to be seen amongst the populace without doing anything to offer healing. So here I was, kept in hiding, amongst rumors that they'd managed to kill me. It would be a hit against our 'untouchable' reputation, but we lost that when some psycho mind controlled one of Taylor's friends and used her to blow a twenty foot hole into the side of our base. If thinking I was dead made them overconfident, then I would live with that.

Besides, I was still trying to get used to my new limbs. My new almost everything, really. Part of my lungs. Every organ below the lungs. An arm. Most of my face. A vat grown clone of myself. No surprise that I couldn't use my powers on it. I suppose my Manton limit would be in effect on my clones.

Did have to wonder if that applied to just clones. The material they rebuilt me with was 100% my own genetic code. I was destroying anything that was 'better', as Riley put it, even if it were 99% a match to my own. I sterilized any genetic material other than mine within my body. I didn't say it, but it put thoughts in my head. What it might mean for me if I ever wanted children. Sure, I didn't. Not right now. Maybe never. But there's something about 'cannot, no matter your wishes' that upset me.

Everyone else was out hunting, except Crystal. She was my bodyguard. And Blasto, who was lacking a changeling of his own, and wasn't trained to use them. We might use him when we had the M4s ready. But even then, probably not.

At least I wasn't bored. Riley had set up relays in her workshop that let me see every set of eyes we had on the ground, save for Respawn. Taylor was tending to 'our' camp. In many ways, we had the least outside aid, and we were doing the best.

....

Lisa nodded. "Okay, what we need you to do is first finish linking Taylor into her next changeling. Then help Riley modify our changelings so Valefor can't effect us through them."

"He can do that?" I asked.

"Probably. He can influence people over television broadcast, so as long as it's live. Bullshit powers being bullshit and all. No sense taking any more stupid chances."
"I have mechanisms to protect myself," Riley added. "I'm adding an organ that resembles a mini brain in the changelings, that will alert us when someone's attempting mind control on them. As well as reacting to most other kinds of master, stranger, and thinker powers relating to thoughts and feelings. It's not perfect, but it will work on Valefor's powers."

....

As it turns out, it was Riley who found him. Her screen flashed the 'yellow' alert, indicating a master/stranger influence.

"Halt. You do not realize I'm here," came a whispered voice.

The changeling froze, obeying the pseudo-brain instead of the standard controls. A special override that wouldn't normally exist.

Valefor was dressed as a woman. Quite convincingly, at that. Brown hair, long and messy. Either naturally so, or a really realistic wig. Or maybe an unregistered changer ability. No way to know.

"So..." he continued. "Tell me. Just how many of you did I kill? Did any of them scream before they died?"

"Just you," Riley responded. His eyes had just enough time to show his realization what had happened. And then they were no more.

Clarice's left hand shot up with a speed I couldn't follow even through the changeling's superior senses, and grabbed into his face.

That wasn't a figure of speech, either. I was pretty sure she'd made every joint in her changeling's hands double jointed to get the grip she did. Pointer in one eye, middle in the other. Ring finger buried under the cheek bone. Pinky hooked under the jaw. Thumb wedged into the other cheek. Ironically, the only fingers not getting soaked in blood were the ones in the eyes. Enough strength, even with a fully extended arm and that awkward looking grip, to keep his obvious attempts to scream silent.
He struggled... prodigiously. I couldn't call it admirably, but he certainly tried his best. Grabbing and pulling and hitting at her arm hard enough to bleed from his fingers. Still, she didn't budge. The gap between their strength was absolute enough that he may as well been trying to push down a building.

By this time, the alert had told everyone what just occurred. Most of us pretended ignorance. Eki took off at the best speed she could manage, and her repaired and fully charged biosuit.

....

"North is the most likely spot," Lisa said, pointing to the map. "It's the lawless part of town, even more now that Parian's moved out."

"It's mine," Riley and Taylor said at the same time. They locked eyes. Skitter glared. Riley, for the first time ever to my knowledge, glared right back.

"That fucker murdered one of my only friends," Taylor said through a clenched jaw. "I want him."

Oh, fuck.

"Your changeling is incomplete," came Riley's reply. "I have my M4T. If things get violent, it's ten times more survivable."

"I can take Valefor and every pathetic coward he has helping him."

"Even the ones that he's forcing to fight?"

That stopped her. "If I have to," she finally replied.

"You can use your bugs to help us at any range, now," Riley reminded her. "It'll be easier for you to help us than for us to help you."

"Still in charge," Taylor growled. "I'll lead on point. I can help you no matter where I am in the city."
Okay... diplomatic, think diplomatic.

"You're needed here, more," Lisa interjected, doing what I had hesitated to do. "Your people. The ones relying on Charlotte. The children. Riley's the better medic, and the north end will need it most. In case they're not there. Or don't take the bait. Plus, our camp is the second most likely spot. We don't have the same kind of security as the other camps. They'd find it easy to hide here compared to almost anywhere else."

Taylor looked toward Lisa, then me. I backed Lisa up. "It's true. You'll do more good here if we don't find Valefor. If anyone else does, you'll do about as much good no matter which one spots him first."

Her voice cracked. "Fine. You're right." She looked back to Riley. "Promise me he suffers. None of that sleep poison stuff."

Riley was back to her usual smiling self. "It's a deal."

....

Riley was knocked away from Valefor by some kind of powerful attack. She took Valefor's face with her. Or almost all the skin between his forehead and chin, at least.

She rolled and landed on her feet, only to roll to her side as another shockwave smashed the ground. "Blaster, The Fallen" I said, and Riley's computer narrows down the list of names. There were still seven on it.

She was on her feet and facing toward him. Still holding Valefor's missing flesh. Her costume showed signs of being sliced, and several cuts were over an inch deep in the changeling itself.

Taylor's actual body had made it to the room. She has trouble controlling both bodies at once, apparently her polycognitive abilities didn't work so well on her human duplicates. A hundred trillion

She was watching through Clarice's eyes, just like I was. The psycho was moving to help Valefor escape. Of course, Valefor was blind and in far too much pain to know what was going on around him. It would probably be a stalemate if left as it was.

Then the swarm fell. Millions of flying insects tore into him, and his screams echoed his partner. It took a minute before they cleared. She held back. Although you wouldn't know it from Eligos. He looked very much like he had been run through a wood chipper. His costume shredded completely, and most of his skin reduced to something that looked enough like hamburger that I became an avowed vegetarian at that moment.

Also reminded me that my new stomach had never been used before. By attempting to empty itself and failing.

"Are you satisfied, now?" I asked my partner after I finally stopped gagging.

"Not really," she answered darkly. "They're still alive."

=================

A/N- Clearly, Valefor was maimed in self defense, and Eligos was defeated using no more than minimum required force. :p
Clarice walked over to the damaged, but still conscious form of Eligos. She gripped his arm and pulled him to his feet. He screamed. He screamed a great deal. By then the refugees who had retreated when the fight started, were coming back.

"I know you're not working alone," she said to the screaming man. She pulled a syringe out and jabbed him in the side. His screaming stopped. "Pain killer. Full body, lasts for about an hour. If you're kind enough to talk, I'll consider giving you one that lasts a few days. Maybe, if you're really lucky, Gaea will get around to healing you by then. If not, well, it's a week away from the pain."

Eligos gasped, finally able to breath. "F-fuck you," he gasped out.

"Guess you don't want the pain relief, then," she replied. "Oh well. Who did you come here with, and where are they?"

"Just me an' Valefor," he laughed. "Got you bitches good. Teach you for desecrating the monument to Leviathan."

"You think that's a desecration? Wait 'till you see what we're going to do to his corpse when we're done with it," Clarice responded.

Going a bit off script there, Riley.

"As if," Eligos scoffed. "You can't kill gods."

"That would explain why your attacks didn't get any of us."

Okay. Way off script.

"Now tell me which hole Valefor's hidden in so I can drag him out," she instructed her captive.

"Right behind you," he muttered confusedly. Clarice had her sword drawn and twisted to slash. She
kept the blade out. Valefor, of course, was on the ground several feet away. He seemed to have lost consciousness. By all rights, he should probably be dead from that kind of shock trauma. I had to imagine there was some drug or three of Riley's that prevented that from happening.

"Cute trick," she responded. "I'm impressed."

"Fuck you talking about?" He asked.

"My powers can work like a pretty good lie detector," she responded. "It's absolutely convinced you're telling the truth."

"I am!" He said. "He's right over there. You ripped his fucking face off!"

Clarice of course looked again, her eye-cam drifting to where Valefor was, and then beyond. "How do you keep doing that?"

"Umm... ma'am..." one of the bystanders spoke up. A bigger man, looked like he'd been in a fight or two. Looks like one of the thugs that E88 liked to employ, actually. Wait. Is it 'racist' to think that? "It's true. He's right there."

"You're telling the truth," she said to the guy. "Strange, I can't see him. What's he doing?"

"Uh... laying there bleeding?" the guy responded. "Like that guy said. He's missing his face."

"Not a threat, then," Clarice concluded. She looked down at her hands, which had blood on them—mostly from Valefor, and a little from Eligos. "I'm afraid I won't be able to help with medical treatment now. Would you mind getting one of the first responders?"

Clarice spent the next several minutes explaining some of the medical supplies we'd brought, and their use. None of it was the particularly fancy stuff, certainly not even within the same order of magnitude as Riley was capable of. And some of it, the responders refused to even use since it wasn't "approved" materials, legally. They couldn't take the liability risks.

Still, better than nothing. By the time she was done, Eki had already arrived.
"I take it the threat's been handled?"

"Sort of. Can you see Valefor?"

"Umm... yes?" Eki was confused. "Can't you?"

"I suspect a stranger effect," Aceso replied.

"Wait... that can work on you?"

"Apparently," she responded. "Since you can find him, I'd appreciate if you take him back to base. Seems I did a lot of damage. I'm waiting for someone to get here and pick up Eligos."

"Uh... sure. Is it safe?"

"His power supposedly requires eye contact. It almost certainly requires he be conscious," Aceso answered. "Inject him with this and he'll be out for at least twenty four hours."

"Got it," she replied. Moving over to Valefor, she had her hand up, ready to shoot him in the face if he moved. The injection, of course, was done into his side from behind. "Alright, that's done. You're certain about this?"

"If he wakes up, just drop him," Aceso responded.

"Uh..." Poor Crystal. She'd just discovered she'd been working alongside Bonesaw, even if she suspected it already. Taking orders from her on the field? Had to be a nightmare come true. "Okay. How long do you suspect you'll need to wait?"

"Not long. Eligos isn't any kind of threat in his current condition."

He really wasn't. Whatever drug Riley cooked up, it was clearly doing its job quite well.
Eki took off, holding Valefor facing downward. Her new suit had enough enhanced strength to carry the man easily. Some kind of magnetic system that I wasn't qualified to have opinions on. All I did was put together the organic parts that held it all together. Riley, as always, was ecstatic to tell me every possible detail as I helped fuse flesh into her machines. 'Cybernetics' tinker, indeed. I was beginning to see why Gallant spent so much time worried about how to connect with Kid Win.

At least now she had Blasto to work with and talk shop. His skills were closer to mine than hers, too, so that made for a helpful way to bridge the 'gap', as it were.

Now it was just a matter of Valefor.

==============

A/N- In all honesty, I don't like this chapter much now that I've gone back to reread all of these. Definitely weaker than most of the others in this area.

Bagrat (Original Poster) (Veteran Member) (The Guy in the Know)
Posted on June 13th, 2011:
Yup. You heard me. The whole S9 down and out, from a couple surprising sources. Skitter, the creepy bug girl, supposedly got Siberian. Have my doubts, waiting for confirmation. What isn't in doubt- Siberian is gone, and with the living Unstoppable Force somehow stopped. The rest of the 9 weren't bullshit untouchable anymore. Picture of Crawler, turned into glass. Apologies for the crap quality. Cell phone from a distance. Apparently Mannequin and Shatterbird killed as well, and there were hero casualties. No surprise on either front- not a lot of people could last against those monsters. Except what the hell kind of crazy power turns people to glass?!
Edit:
Jack Slash and Bonesaw confirmed dead. Panacea. Yeah, the healer, took them both.

- Last edited June 15th, 2011

(Showing page 12 of 706)
▶ WorriesTooMuch (Cape wife)
Replied on June 13th, 2011:
Got confirmation. The PRT are sure of everyone except Jack, Bonesaw and Cherish. Jack and Bonesaw are believed dead as well. No one's sure right now. Looks like Cherish got away. With her powers, it's no surprise.

▶ Human Decoy (Unverified Cape)
Replied on June 13th, 2011:
Good. Fucking Siberian killed most of my family. Collapsed the building we were in. I hope she suffered.

▶ WorriesTooMuch (Cape Wife)
Replied on June 13th, 2011:
Holy shit! Condolences, man.

▶ Human Decoy (Unverified Cape)
Replied on June 13th, 2011:
Is fine. Unless you know someone that can let me see her corpse. I will shit down that bitch's throat if given the opportunity.
Judge (Moderator)
Replied on June 13th, 2011:
Normally, this would result in an infraction and possible mute, especially given your commenting history. However, considering the circumstances and who the subject is, I'm going to give you a pass. This time. Consider yourself warned.

Human Decoy (Unverified Cape)
Replied on June 13th, 2011:
No. Is cool. I was willing to take the mute to say that. May her time in hell be eventful.

Pathfinder
Replied on June 13th, 2011:
Seriously. The hell did they do to Crawler? I mean, fucker deserved it and worse. But he's a glass statue. Who has a power like that?

Math Geek
Replied on June 13th, 2011:
Legend was in town. Maybe he had Eidolon on speed dial? Pop in. "Glass". Home in time for dinner.
That or maybe it's some poor sod who got a power so scary that they ONLY bring him out for shit like THIS. Or a new BB trigger? Powers tend to resemble those they trigger near... so... Shatterbird, maybe? No matter how you look at it, I really hope it works on Endbringers.

Pathfinder
Replied on June 13th, 2011:
The others, maybe. But Eidolon? Sure, sounds like something he *could* do. But a lot of people got hurt or killed in that fight. If Eidolon did it and caused that kind of body count... the Protectorate would censor it so hard that Brockton Bay would be on the banned words list alongside c*auldron. Off topic: are they ever gonna fix that?

GuyWithAGun (BB PRT)
Replied on June 13th, 2011:
Can't share all the details (I like you guys, but like my job better). But the "glass" thing was a Tinker weapon. That's already public knowledge. More than that will no doubt be in a press release I'll be sure to link here when it happens, if no one beats me to it. Until then, it's above my pay grade to say who gets to hear what.

(Showing page 57 of 406)

GuyWithAGun (BB PRT)
Replied on June 14th, 2011:
Confirmed. Panacea is now calling herself Gaea. Turns out her powers also involve controlling plants. Showed up at the office yesterday. In battle armor made out of a tree or something (I wasn't in the building at the time). Had a partner that's probably "the villain formerly known as Skitter"- can't confirm. They asked for papers to register as indie heroes. Had a chat with Miss Militia in a private room.
Brought the missing corpses of the Slaughterhouse Nine. Still no sign of Cherish.

Pathfinder
Replied on June 14th, 2011:
Indies? Well, they have power enough to make it work. Jack Slash? Fucking SIBERIAN. If they can do that, they could curb stomp basically everyone still in the city. Except maybe Legend. Is Legend still in town?
Math Geek
Replied on June 14th, 2011:
Wait? Panacea showed up with bodies a day after. Her powers... think she may have faked the corpses?

GuyWithAGun (BB PRT)
Replied on June 14th, 2011:
Don't think so. Can't see Panacea doing that. These assholes killed her sister. She wouldn't let them live.
Still, the bodies will be examined and verified in every possible way, forensically and with Thinkers. As was released publically elsewhere, we have confirmed proof that Bonesaw is known to capture innocent people and surgically alter them to resemble S9 members. Decoys and distractions. Remember- if you see someone who DOES have such a resemblance, contact the PRT *immediately*. They are most likely innocent and harmless victims that need help. But that doesn't mean they aren't dangerous. Bonesaw's been known to leave behind some truly horrific "surprises". Leave it to the professionals. It's what your tax dollars pay us for.
More details on this subject.

Human Decoy (Unverified Cape)
Replied on June 14th, 2011:
Think she kept them around a while for "fun"? Trust me, it doesn't take a lot to turn "healing powers" into the worst kinds of torture imaginable.

Judge (Moderator)
Replied on June 14th, 2011:
I'd prefer you didn't speculate that a known and respected hero might be committing a number of crimes, many of which are serious felonies and possibly violations of the Geneva Convention.

Human Decoy (Unverified Cape)
Replied on June 14th, 2011:
I'm not "speculating" anything. I just *really really hope*.

Mumm Ra
Replied on June 14th, 2011:
Panacea has plant powers? Thought she was a healer. How does she have plant powers?

Math Geek
Replied on June 14th, 2011:
Think it was a second trigger? Her sister was killed and then all of a sudden she has crazy godlike powers. Would fit. Speaking of which, so does 'Gaea'.

GuyWithAGun (BB PRT)
Replied on June 14th, 2011:
No. Panacea's always had powers like that. She could instantly remove fungal diseases and parasites and viruses, including tinker made ones like the plague that Bonesaw released. Her power can't alter human brains- likely a Manton limit to stop her from accidentally lobotomizing herself- but other than that, if it's alive, she can change it.

A/N- Ah, the first of the PHO chapters. There are no words for how much I hated these. I like how they turned out, more or less, but they were a lot of work for not nearly enough gain.

Also: Human Decoy being verified in the login but not in the posts is *as intended*. I get so many
people pointing that out...

Mumm Ra (Original Poster)
Posted on June 19th, 2011:

Photos of them, taken from my phone during their debut. Probs gonna be on the news, too. I'll archive links here as you bring them.

Actual news footage, Meet Gaea, Khepri, Minerva and Aceso
Interview with Khepri, Meet Respawn
Handing over Hookwolf, Meet Eki, confrontation between Minerva and Miss Militia
They take Purity down. HARD. Also. That's a lot of bugs.
Bombings
Someone pissed off the Khepri. Shouldn't have done that.
Holy shit, Valefor and Erigos get wrecked. Warning. NOT for the weak of stomach.

(Showing Page 2 of 107)

► Probably Stoned
Replied on June 19th, 2011:
I know it's been said before. But bug control. Fucking creepy. How did they kill Siberian with that?

► Mumm Ra
Replied on June 19th, 2011:
Dunno. She's invulnerable enough to trade punches with the Triumvirate and come out the winner. Maybe she had a different weakness? Maybe she was drowned?

► ThatDude
Replied on June 20th, 2011:
Drowned? You mean forcing insects down her throat util she asphyxiated? Great. I didn't want to sleep this week anyway. What's the term for "fear of Khepri"?

► Rebirth Flame
Replied on June 20th, 2011:
Sanity. Khepri's a badass, even if I like Aceso better.
Human Decoy (Unverified Cape)
Replied on June 20th, 2011:

ThatDude
Replied on June 20th, 2011:
Seriously? They're like fifteen at the most. Stop being creepy.

Human Decoy (Unverified Cape)
Replied on June 20th, 2011:
Hey. I'm 15. I am allowed to perv out all I want. In fact. I have a plan. First. I'm going to join their team. You guys just watch for the guy that's immune to death.

ThatDude
Replied on June 20th, 2011:
Well. Alrighty then. Good luck with that. And enjoy your ban.

Human Decoy (Unverified Cape)
Replied on June 20th, 2011:
First. They're the ones dressed up in bedsheets. Greek gods are down with the freaky. Second. No Regrets!

Judge (Moderator)
Replied on June 20th, 2011:
Good. Then I don't regret banning you.

Rebirth Flame
Replied on June 21st, 2011:
Holy shit. Gaea's power is nuts. She just built like five city blocks worth of stuff in minutes. That's Triumvirate tier bullshit right there.

DaWizard
Replied on June 21st, 2011:
I always knew Panacea's power was badly underutilized. But this... isn't this kinda Class-S territory? I know it's just plants but I can't help but look at this. Then at Blasto. Then back to this. Then over at Nilbog. Not saying she'd ever do anything like that. there's gotta be a lot of people in the Protectorate seeing this and thinking exactly that sorta thing.

Mumm Ra
Replied on June 21st, 2011:
Khepri interview. She wasn't near as scary as I expected her to be, Even if Vickory was being nice to her and I thought he was done with that 'on location' stuff and had a cush office job.

Also. You'll never guess who shows up to crash the interlude at the end.

ThatDude
Replied on June 21st, 2011:

I know, right? Did you see the part where Khepri was stunned when he disintegrated like that? I think he actually managed to make her nervous!

ThatDude
Replied on June 21st, 2011:
Nah. She was probably coming up with exciting new ways to kill the unkillable. His power's not *that* good, and the owner's a moron. Grab him and throw him into a pit full of scorpions. Or man eating thorn bushes. The end of that fight.

Judge (Moderator)
Replied on June 21st, 2011:
Alright. That's quite enough. Namecalling and speculating on ways to disable a specific parahuman is pressing your luck in a few areas.

Rebirth Flame
Replied on June 21st, 2011:

Mumm Ra
Replied on June 21st, 2011:
What do you think they'll do first? I'm betting they shove a tree up E88's collective asses. Minerva's jewish. As if you needed any excuses to go after those fucks.

GuyWithAGun (BB PRT)
Replied on June 21st, 2011:
I can see that. Not just Minerva, for that matter. I've seen some of their victims. Panacea's healed some. Besides, they've been talking about combat operations. Who else would they go after? E88's the only gang in town that's still standing.

Math Geek (banned)
Replied on June 22nd, 2011:
She looked like she'd been punched. Do you think there's any validity to Minerva's claim?

GuyWithAGun (BB PRT)
Replied on June 22nd, 2011:
Okay. Minerva was clearly deflecting attention. Did you see the way Gaea was reacting to Miss Militia's questions? She clearly was planning to keep the nazis around. Probably offer them spots on the team. She already has a history with Skitter/Khepri and Tattletale/Minerva. All respect I had for them is gone. Kudos to Miss Militia for seeing through their bullshit first.

Math Geek (banned)
Replied on June 22nd, 2011:
Towing the company line, huh? Standard government protocol... fling mud anyone who makes them look bad. Yeah. I'll side with the real heroes. You guys let fuckers like E88 move in and own this
town and do nothing to stop them. They come along and lays down the law, doing in two weeks what you couldn’t do it two decades. Then you have to trash their reps because nooo, can’t have anyone making you look bad.

Same shit happened to New Wave after they took down Marquis. Disgusting.

So why don’t you pack up your shit and leave BB to the real heroes. While we’re on the subject, I’d like my tax money back. Dunno what it costs to keep your magic tower up, bu I can think of better ways to spend my money.

► Celestial Orb
Replied on June 22nd, 2011:
Bloods in the water now, you can almost see the reporters circling.

► Judge (Moderator)
Replied on June 22nd, 2011:
Normally that would result in a warning, but investigation reveals Math Geek as a dummy account for another user. Banned. And the main account gets an infraction and a two day mute. This topic is about the team itself. If anyone wants to continue discussions of the relative competence of the Protectorate in a given area. It belongs .

► Rebirth Flame
Replied on June 22nd, 2011:
Well that’s a thing. But you’re all missing the most important part. They now have a flyer! With lightning powers! See how confident she was for the camera, compared to the others? I think she’s a vet that came over from another team.

► GuyWithAGun (BB PRT)
Replied on June 22nd, 2011:
Edit: Sorry, mods. Removed the post. So, MG, I’d love to continue this conversation. Go ahead and PM me with your real account after you get back from vacation.

► Mumm Ra
Replied on June 22nd, 2011:
Yeah. She did seem like someone who’s been around a while. Dunno of any capes that have lightning and look like her. Could be someone from out west. Canada, maybe?

This is Gaea we’re talking about. Her powers? Eki could be a black dude in disguise. NOT Speculating! Just sayin we cant go by looks for a guess. Not for this team.

► Celestial Orb
Replied on June 22nd, 2011:
Black superhero with lightning powers? That’s like a shitty cliche from Earth Aleph. (Showing Page 36 of 107)

► Celestial Orb
Replied on June 23rd, 2011:
Damn. That is scary. Eki is a powerhouse.

► Stone Faced
Replied on June 23rd, 2011:
She is. Do you think it was really necessary for her to hit Purity so hard?
Effing Tinkers  
Replied on June 23rd, 2011:  
Nazis don't get any sympathy from me. Especially ones who incinerate people and blow up neighborhoods. I'd make a crass comparison to their historical actions, but I'm going to avoid the infraction.

Stone Faced  
Replied on June 23rd, 2011:  
She was trying to be a hero. Then her identity was revealed and her daughter taken from her. I won't say I agree with what she did. I don't. But I can't help but think that she was backed into a corner. I can understand her lashing out.

Laserdream (Verified Cape)  
Replied on June 23rd, 2011:  
Stone Faced: You're right. It was overkill. I'm sure it's been guessed at, but I'm also moonlighting as Eki. I'll get my cousin in here to vouch for me. The lightning was the armor I'm wearing. Biotech stuff. Super electric eel. It uses my lasers as a power source. For that and a few other tricks. Purity hit me. It caused a glitch in the armor's settings that activated the "anti brute" power levels for the attack. She was suppose to get something closer to a taser than a blast normally reserved for people like Hookwolf and Lung.

Stone Faced  
Replied on June 23rd, 2011:  
Really? I guess that makes sense.

ThatDude  
Replied on June 23rd, 2011:  
Awesome! Finally contact from one of the actual members! I was afraid we'd have to wait for Human Decoy to be unmuted. Speaking of which. Do you know what he said on pg 2?

Laserdream (Verified Cape)  
Replied on June 23rd, 2011:  
... I do now...

Rebirth Flame  
Replied on June 23rd, 2011:  
Oh god! Laserdream! I love you!

Stone Faced  
Replied on June 23rd, 2011:  
May I please PM you? It's kind of important.

A/N- Can you spot the canon characters? And sort them from the decoys? I mean, not counting the ones that actually say who they are. Or Dragon.

Also: this chapter has lots of stealth foreshadowing.

And Mushroom Riley makes a triumphant return!

Mumm Ra (Original Poster)
Posted on June 19th, 2011:

Photos of them, taken from my phone during their debut. Probs gonna be on the news, too. I'll archive links here as you bring them.

Actual news footage, Meet Gaea, Khepri, Minerva and Aceso
Interview with Khepri, Meet Respawn
Handing over Hookwolf, Meet Eki, confrontation between Minerva and Miss Militia
They take Purity down. HARD. Also. That's a lot of bugs.

Bombings
Dude. That is a LOT of bugs.

Holy shit, Valefor and Erigos get wrecked. Warning. NOT for the weak of stomach.

(Showing Page 42 of 107)

► Rebirth Flame
Replied on June 25th, 2011:
I dunno. No more E88 or Merchants or ABB. And anyone who even looks at this town is gonna get stomped by Pantheon. No reason for the Protectorate at all.

► FungiRL (Unverified cape)
Replied on June 25th, 2011:
Hey guys! It's Aceso! I just got an account here.

► Zero Sum
Replied on June 25th, 2011:
You do know impersonating a cape is a good way to get banned, right?

► FungiRL (Unverified cape)
Replied on June 25th, 2011:
It's true and I can prove it. I'll make Eki tell you.

► Laserdream (Verified Cape)
Replied on June 25th, 2011:
Ugh. Yeah, guys, it's her.

► Rebirth Flame
Replied on June 25th, 2011:
Awesome! You're my favorite, Aceso. This city's been missing its badass ninja girl quota ever since Shadow Stalker left. Speaking of which, you would totally rock the crossbow look.

► FungiRL (Unverified cape)
Replied on June 25th, 2011:
Told you. And thanks, RF, it's good to have fans. <3
Crossbow's too bulky. I'm thinking a dart launcher. Probably based upon mantis shrimp physiology, with a nanoweave pneumatic system to step up the pressure by an order of magnitude or two.

► Rebirth Flame
Replied on June 25th, 2011:
No no no. You shouldn't give away information like that online. Gotta keep it mysterious to intimidate the bad guys. It's all about look and style. Hey, I got a few costume designs of my own. They were suppose to be for a different project, but you can look at them, you might like it.

► FungiRL (Unverified cape)
Replied on June 25th, 2011:
That sounds like fun! I'm going on patrol now, be back around noonish.

► Rebirth Flame
Replied on June 25th, 2011:
Don't mention it. I'd be getting ready for school right now. But Leviathan. See you when you get back.

(Showing Page 55 of 107)

► Zero Sum
Replied on June 25th, 2011:
Video from Pantheon's base. It was also hit in the bombings. That cloud is NOT smoke. It's fucking bugs. Khepri's not letting ANYONE get close.

► Rebirth Flame
Replied on June 25th, 2011:
They'll be okay. Khepri's clearly fine. Can't imagine Osiris dying. And the Yggdrasil would die without Gaea. Eki has forcefields and power armor. And Aceso's the badass action girl. She could probably survive being decapitated or something.

► Endless Night
Replied on June 25th, 2011:
Not how the Yggdrasil works. Sure, if Gaea's telling the truth, it'll 'die of illness' if she can't help keep it alive. That could take months to happen. The tree's no proof that Gaea survived. And Aceso's a "low/mid" brute. If she were shot, I'd agree with you. But if that bomb was anything like the ones used in the camps... there wouldn't be enough left of her to identify.

Let's face it. Pantheon was overconfident and stupid. They paid the price.
► Rebirth Flame
Replied on June 25th, 2011:
... You are a horrible person who hates happiness. And Aceso said she was going on patrol and
would talk to me at noon. She wouldn't be back yet. So she wasn't even there when the bomb went
off. :p

► FungiRL (Unverified cape)
Replied on June 25th, 2011:
We're okay. Khepri says it was the Fallen that initiated the attacks. Probably Valefor. We've
contacted the PRT and are on master/stranger lockdown. We don't have our own official website yet,
so expect updates here. I have to get back to work now. It might be a while before any of us have
time to post anything.

► Rebirth Flame
Replied on June 25th, 2011:
In your face, Emo!
Aceso. When you get that asshole, cut his eyes out with a rusty butter knife!

wars. The fucking S9. And now the Fallen? It's like Murphy decided to out-Simugh the Simurgh.
How the blood soaked protestant hell is that town still standing?

► Rebirth Flame
Replied on June 25th, 2011:
Because we are stronger than them. We're survivors. Knock us down, we get up. Push us and we
fight. The harder you hit us, the harder we hit back. That's what defines our city. And that's why
Pantheon is so great. They embody this city's spirit. The Fallen are going to learn that lesson.
Painfully.

Replied on June 26th, 2011:
Well, that was unnecessarily brutal. Jesus christ.
I mean, the guy deserved it. Did you see how excited he was to hear about the pain he caused?
That's fucked up. Speaking of which- that did NOT look like a 'he'. Are we sure Valefor isn't
female? Some weird Silence of the Lambs type psychosis going on there?
Also. I am now a vegetarian.
Rebirth Flame
Replied on June 26th, 2011:
Aceso's power vs Valefor's. She does combat precognition, right? He ordered her to halt and then
told her not to notice he was there. But her power is the subconscious knowledge of how to defend
herself from harm and strike back. She blinded him and kept him from talking with a single move-
protecting herself from any danger his power might have on her. All without even noticing he was
there!
That is the definition of badass, right there.
Then when Khepri came down on the other one like a biblical plague. not gay, but for them, I'd
kinda like to be.

FungiRL (Unverified cape)
Replied on June 26th, 2011:
Thanks. But my big sister says I'm too young to date. And she and Khepri are already destined for
each other.
Rebirth Flame seems to be right. Valefor's powers didn't interact with mine in a way he expected. I'm
glad my team told me to keep most of my traits secret. Figuring out how to fight without showing
what you're really capable of is fun. And it means you have surprises if you need them!

Shiny Ferret
Replied on June 26th, 2011:
... Well alrighty then. I'm now betting money that, with this revelation, people forget that these girls
just ripped off a man's face and then fed another's skin to bugs. The shipping wars have begun.

Khepri (unverified cape)
Replied on June 26th, 2011:
Okay. I would, as one of the leaders of Pantheon (verification pending- Aceso or Eki will probably
confirm before they verify me) like to clear up a few things

1- I did not feed anyone's skin to bugs. What happened to Eligos were injuries of similar size and
depth to paper cuts. A lot of them, granted, but still only paper cuts. My power doesn't offer a lot of
options for nonlethal takedowns, and I didn't want to risk exposing him to any dangerous poisonous
insects while Gaea was not available. It was a situation where I needed to choose between protecting
an apparently disoriented Aceso, as well as potentially wounded civilians nearby, or the physical
comfort of a mass murderer that was putting them in danger. I believe anyone, if placed in the same
situation I was in, would make the same decision.

2- I am not involved with Aceso's sister. I am attracted to guys. Preferably muscular ones. Except
Osiris. Who is responsible for this stupid running joke in the first place.

3- We have a new 'silent' member. Blasto, a biotinker from Boston, has agreed to join our team. He
has skills that we believe will supplement our team's abilities greatly. Due to the nature of his powers,
and his unresolved criminal status, he'll be kept on base and certainly not involved in field operations.
His purpose is so that we can use tinker technology to improve our effectiveness. This brings us to
the next announcement.

4- This is the important one. We have already informed the Protectorate and they're sending out
announcements. At 4pm today, we will use the Yggdrasil to spread a fog throughout the city. Do not
be alarmed. It is a harmless mixture of water vapor and inert material that will cure anyone currently
under the influence of Valefor's power. The first of what we hope will ultimately be a cure for all
master/stranger related mind controls.

Rebirth Flame
Replied on June 26th, 2011:
Sorry, Khepri. Love you like a sister, but if I were in your shoes, I'd have used bees. All the bees. Also, I'll be sure and scout the football team for you, 'kay? ;)

Replied on June 26th, 2011:
@ Shiny Ferret: good god, you're right. Bombings. Maimed supervillains. New recruit. Curing mind control (think Heartbreaker's next?)- this is all a huge freakin' deal- And I can't stop wondering about who the goddess of bees is dating.

► Judge (Moderator)
Replied on June 26th, 2011:
Let us nip any possible romantic speculation in the bud (pun not intended) right now. Most members of this team are underage. Aceso, apparently, younger than most. If this looks like it's drifting toward a repeat of the "Vista Incident", the bans will be swift and merciless. This is your only warning.

♦ Private message from FungiRL:
Rebirth Flame: Alright. Here's the first set of pics. Kinda a veil dancer thing. You have the body to make it look good, and the powers. Probably even get away with using ribbons in combat. Swear I saw a movie like that.
Rebirth Flame: See. And another with those circus girls and the bedsheets. Bet you can do that.
Rebirth Flame: Gotta do it in dark colors, though.
Rebirth Flame: Just saw the news! Are you okay!? Please, answer as soon as you can. I'm worried. :
FungiRL: Oh thank god! Saw your post! What happened, is there anything I can do?
FungiRL: Lots of us got hurt. Including my sister. I want to make them suffer, but I'm afraid.
Rebirth Flame: Of what? Nothing should scare you.
FungiRL: If I do too much to them and get caught, it could hurt the team. I can't do that.
Rebirth Flame: Oh. You are in luck, girl. Here's my number. Call me before you start planning *anything*.

=======

A/N- In case you're wondering, all the PHO post typos are left untouched. For "realism".
Also... ah, the eventual reveal of who Rebirth Flame is. That was amongst my proudest moments.
I watched the Protectorate show up to take Valefor. Bizarrely enough, there were two woman with them that I didn't recognize. Power armor, the both of them. There was also Triumph, both Battery and Assault. I refuse to say their names in the reverse. And even the metal boy that I learned was called Weld. According to Taylor, he was nice.

We had come out in force as well. Khepri to my right. Eki and Osiris to the left. Minerva and Blasto off further to the right near the women in the power armors. I was in my Dryad armor. Mainly to hide my (lack of) injuries. I didn't know what conclusions they could come to. That was also part of why we didn't send any of our changelings to this.

"So, what's all this about?" Minerva asked. "One parahuman whose powers are disabled doesn't require half of Brockton Bay's parahuman forces. Or, for that matter, Haven's presence at all. Dragon? She makes sense, though seeing her in person is a little odd. What's the story?"

Dragon? Well, I had to assume the golden armor with the cross motif was the Haven member. Which left the one with the decidedly reptilian look to it to be Dragon. Well, makes sense.

"I'm here to see to it that Valefor doesn't influence anyone," the Haven woman stated. "I'm Rapture. I'm a tinker in anti-master/stranger techniques."

"Correction," Minerva stated. "Your specialty is actually in master/stranger effects. You may use it to counter others. But your tech is really meant to influence minds and perceptions. We're all adults here, no need to censor yourself for the public."

"... Fine. I'm a tinker who specializes in master/stranger technologies," she conceded. "We've determined Weld should be immune to almost any kind of mind control and illusion. Ideal for dealing with Valefor. Whom we were under the impression you would heal." Her voice was measuredly neutral. She seemed more annoyed than upset that we'd left Valefor more or less as he was when we captured him. A bit of Blasto's regeneration goo that would restore the skin, at least. But not much else.

"His body's both organic and inorganic, isn't it?" Lisa concluded. "Depending on whichever is more of a pain in the ass for powers to influence. He's basically immune to anything that has a Manton limit. Damn that's useful. Err, aside from all the other issues. Sorry Weld, don't mean to be insensitive."
"Hardly the worst I've had to deal with," Weld stated. "I'd trade it for being normal, but 'grass is always greener' and all that." He was strapping Valefor into something resembling a combination of a cage and an upright stretcher, and securing a special helmet to his face. "Protocol's done," he stated to the PRT soldiers.

Rapture moved over to the now fully restrained captive. "I doubt your power will work given your current injuries and restraints. But be aware that this helmet is designed to explode if it senses you trying to do anything with your power. You will not survive."

"So, the rest of your business?" I asked. "You have to be here for more than just him."

"Yes," Triumph stated. "We'd also prefer you to hand over Blasto. He's a dangerous and violent criminal."

"No," I stated. "You can have the psychopath. But we need Blasto."

"Need him?" Triumph asked. "What for? You're the most powerful biotinker on the continent."

"Am I?" I asked. I looked over at Minerva.

"They think you are," she replied. "In a way it's true. What they don't comprehend is that tinkers don't work like you work. Most tinkers come with a kind of internal mental library that lets them invent and comprehend. It's why tinkers can use each others' tech, at least to a limited degree. You don't have that. You just envision what you need and your power fills in the gaps. There's only what is and what will be, none of the myriad 'can be' stuff. You may be like a tinker, but you don't do what tinkers do. I'm sure Dragon and Rapture, at least, can back me on this."

Triumph looked toward the woman who was possibly the most powerful tinker on the planet. She nodded her agreement.

"We need Blasto," I took the opportunity to comment. "When we finished the Nine, I didn't turn over Bonesaw's equipment and research, as I'm sure you're all quite aware. We need him, so that we can use that tech."

Minerva started clapping. "Oh. I cannot believe you kept it from me THIS long. You don't have her along for Valefor. You have her here to make sure we didn't take control of Blasto!"
Triumph did not look terribly pleased at Minerva right now. But at least now I knew what the hell was going on.

"Oh," I said. "Well, what do you need to prove he's here of his own free will?"

"Give him a direct order," Rapture instructed. "An unusual one."

"Uh..." Okay, unusual? "Umm, Blasto, do a dance for us."

"I can't," he answered back. "Court order. Also, way to play up the whole Latino stereotype, boss."

Rapture waited a bit before responding. "Sleeping an average of five hours or less a day for weeks. Under the influence of caffeine,"

"I'm a tinker. What would your machine say if you pointed it at yourself?" Blasto interrupted.

Rapture continued on, ignoring Blasto. "As well as a significant amount of cannabis."

"It's for my glaucoma. Which Gaea cured."

"Which was consumed this morning," Rapture deadpanned.

"Well, I didn't want it to go to waste."

"My equipment includes a lie detector."

"Fuckin tinkers," Blasto muttered. "Well, in that case, I plead the fifth and want to see my lawyer to talk about unlawful searches."
"You're not under arrest," Rapture sighed. "We were here to make sure you weren't being mind controlled, and rescue you if we had to. Your use of illicit substances doesn't matter to us."

"Awesome," he responded. "Say, if you're not doing anything later, maybe we should get together and see if we can cross our specialties?"

"That is another part of why we're here," Dragon answered, choosing to ignore the innuendo. "We'd like to know how you achieved a cure for Valefor's power, and then managed to mass produce and distribute it. I admit we collected samples and ran every test we could. We're just not seeing it. A combination of human DNA and short lived prion-like chemicals. There are some who suspect you're lying, of course. So we are seeking confirmation, one way or the other. If it turns out it works and you can mass produce it, it might be useful in dealing with other masters. Perhaps even Simurgh encounters."

I shook my head. "Sorry. It'll work on at least some other masters." But not all. Myself, for example. "Definitely not the Simurgh. Unless there's something very strange which we don't know about her. Blasto can explain it better."

"Bonesaw," he started. "From what I've seen, her research focused very heavily on the nature of powers. I've only barely scratched the surface and I'm learning things I never even imagined before. How powers work, where they come from, how they don't work. Well, six hours of technobabble summed up in seconds: that cloud was Valefor's own genetic material. Breath it in, it soaks into your system, and suddenly you're part of the power's Manton Limit. Basically, we tricked Valefor's power into thinking everyone in the city was really him. Lasts only a few minutes, but that's enough to remove all existent master/stranger influences."

"That's... both less and more than we were hoping," Dragon acknowledged. "A drug that can protect against any master/stranger mind control. But only if we already have their genetic material.

"Live genetic material," I corrected. "Won't work with dead cells. We're hoping there's more we can do, in time. It's at least part of why we have no interest in giving up Blasto. The other part is that we promised his safety. If we were to entertain the idea of letting him go, it would require you provide him with full amnesty."

"That's sweet, boss," he said. "But contrary to the lovely lady's instruments. I really am under the influence. It's called 'I'm a tinker'. You have the best equipment and the best resources I've ever seen for my powers. If you want me to leave, you'll have to get Aceso to chase me out with a pitchfork."

"We are willing to purchase your equipment," Dragon offered. "If you feel you cannot trust a
government offer, then the Guild is an independent hero organization that I work with. We operate only to seek and destroy Class S and Kill Order threats. If you won't trust them, either, then I am willing to buy the materials myself, from my own personal wealth. We can arrange a sharing of what data I extrapolate from her notes as part of the offer."

"Not interested," Khepri replied, voice hard. "I don't know you well enough to have an opinion. But the people you choose to associate with are not the kind of people I'm willing to trust with Bonesaw's technology."

I nodded my agreement of Khepri's statement. Even if I didn't fully agree with it. Dragon was always fair and treated me well during Endbringer scenarios, which were the only times we ever actually met. Still, there was no way we'd be giving up Riley's research. It was too valuable and too important. Not just as a bargaining chip, but because my final goal, now and always, was to counter the Passengers themselves. Khepri's response was our best reason to say 'no' that we could actually use.

"We're willing to give you the anti-master technology," I offered. It was true. "It's easily replicated and, honestly, we want it to be used. You'll have a harder time using it that we do. I use my power to bridge a lot of the gaps. Shortcuts you won't be able to take."

"In exchange?" Dragon asked.

"It would be nice to have an amnesty for some of our members," I replied. "Khepri, Minerva and Blasto have all had problems with the law. I'd feel more comfortable if those weren't hanging over their heads."

"That's not how this works," Triumph insisted. "You want to be be heroes, then they can turn themselves in and actually accept punishment for their crimes. This kind of backroom dealing is a perversion of justice."

"I'll see what I can do," Dragon replied. "I have no legal authority, but a lot of people are willing to at least listen to me when I make requests."

"What?" Triumph looked at Dragon. "You can't be entertaining this."

"Triumph, buddy," Assault interrupted, whispering to him. Our equipment meant we heard every word of it, and I'm pretty sure he knew we would. "You know this shit happens. Besides, you
wanna tell me any of them are capable of getting a fair trial? After palling up with the Mayor, saving basically everyone in the city from death-by-Bonesaw? Any conviction they get is basically gonna be 'community service, keep doing what you're already doing'. Frankly, it's easier just to accept their very generous offer and walk away pretending we were the ones doing them a favor. It's what the Mayor is doing.

Triumph sighed. "Okay, I'll see if I can convince the Director to work something out," he agreed. "I do believe that's everything?" He phrased it as a question and looked toward the others.

Rapture nodded. "My part's done. I am under orders to stay with Valefor. Even if there's no real need for it at this point."

Dragon shook her head. "I want to talk to them a bit more," she stated. "You guys go on ahead, it's nothing official. I'll catch up with you later."

Triumph didn't look happy about that, either. But he still left with the others. Being Dragon had its perks, it seemed.

============

A/N- And back to chapters that make me happy inside again.
The others left as Dragon watched us and we watched back.

"I'd prefer we had some privacy. Never know who might be watching," she said.

I nodded. A brief alteration transformed the feet of my Dryad into Yggdrasil. It sank a little into the ground, and made the connections I needed to control my entire network. My power had such a bizarrely arbitrary concept of what 'touch range' meant. Then again, Taylor's power was equally arbitrary about what counted as a 'bug'. We still hadn't figured out how to make a humanoid body that she could control automatically. But our 'zergling' experiments of six limbed dog monsters was far, far more successful. Damn Passenger bullshit.

I connected. The full access to my Yggdrasil network. It was heady, linking into an entire city like this, even if only from below. My construct below the boat graveyard was almost ready. Cost more energy to manage than I'd realized.

There was the start of a fungal infection. That was getting increasingly frequent as the native flora was evolving to better deal with the alien intruder, however seemingly superior that intruder was to them. I spotted them daily, now. It was quickly subsumed into part of my organism. I also dedicated some of the "floating mass" of the Yggdrasil to the task of building walls around us, and even a ceiling. The inside was bioluminescent, and had a sort of tranquil beauty to it.

Dragon looked around. "Impressive control," she complimented.

"I've built it before," I replied. One of my personal projects. Every time I invent a new application, I stored the pattern as a seed. Sort of a genetic code database, letting the construct follow a template instead of needing my mind to contain everything. This particular room, which we already had a couple copies below ground, was meant as a sort of partial sensory deprivation lounge. Optimal comfort. Lisa had one as her own personal 'go away, migraine' room.

I also added a very minor tanning function to one, so I could work on the discoloration of having a good portion of myself surgically replaced.

"There are a number of things to talk about" Dragon informed us. "I'm not sure who knows what, or what you're comfortable letting the others know."
"They stay," Taylor responded. "There aren't any significant secrets between us."

I nodded in agreement. "After Valefor's stunt... well, nothing left for us to hide, really."

"Okay," she nodded. "First. I think you've probably already figured out that this body is just a machine."

Minerva spoke up. "Yeah. It's really good, but there's a few tells. I doubt anyone else would have figured it out. The way you're so willing to suicide attack Leviathan is also a pretty good hint that you like the remote body trick."

She nodded. "I'm under the influence of a master effect. I can't go into details, the best I can offer is a warning. I'm compelled to obey the legally recognized authority of whichever region I am currently operating in. These suits are an imperfect counter to this, giving me more options than I might otherwise have, but it's still a significant constraint."

"Meaning that if the order is given, you'll be fighting against us just as hard as anyone else," Minerva concluded.

Dragon nodded. Fuck.

"I am also under orders not to do anything to help you," she added.

Dammit.

"However, I don't have to prevent others from doing so," she added. That's helpful. "I have a friend who wants to offer an apology. That's the nature of this private meeting."

I felt Taylor tense up. "You fucking didn't," she said, her voice going cold.

"This suit's bandwidth capacities are limited. While you're talking, I won't be able to interact. Please. Just listen to him."

"Okay," I agreed, looking over at Skitter. "We can do that much."

A full three dimensional replica of a man appeared next to Dragon's suit. Holographic, I could tell because the lighting of his body didn't match the room, and it placed no pressure on the Yggdrasil. But it was incredibly detailed and fine tuned. I recognized him and immediately knew why Taylor
went into 'Skitter mode'.

"Armsmaster," Skitter's voice was ice cold.

"I'm going with 'Defiant', now," the man answered. The usual terse man I'd come to know. He lifted his arm and pulled the sleeve up, revealing the bones of a metallic skeleton. "Legally, both Armsmaster and Colin Wallis are dead. Courtesy of Mannequin."

"My condolences," Skitter said slowly and dryly.

"I believe we're both pragmatic people," Armsmaster continued. "Rational. Above social drama. That a drawn out apology, however genuine, would just be an insult to both of us. I am sorry, and I do mean that. And I'd like to prove it by helping you."

"That would be an excellent start," Skitter responded back. I could feel the agitated behavior of Taylor's relays as they interacted with the Yggdrasil.

"First," he said. "I am aware of who Aceso is."

FUCKING DAMMIT!

"My analytic technologies are quite good," he stated. "It's unlikely anyone other than Dragon and myself could make the connections."

"Thank you for the warning," I managed to utter. My mouth was dry and my heart was pounding in my ears. This is more than I'd bargained for. And I'd bargained for being remembered as the next Nilbog and hunted down as a Class S threat.

"Assuming you're correct, of course," Skitter stayed calm. I could almost feel her telepathically trying to make me shut up after my unfortunate decision to speak. I kept making mistakes like that. Stupid, stupid, Amelia. You can do better.

"Yes," Armsmaster nodded. "Assuming. Still, that's not help so much as putting us on the same page. If you can forgive her, surely I'm not an impossibility?"
"Get back to me after you've saved my best friends' lives," Skitter responded.

"Fair enough," he said. "It's obvious to everyone, including the Protectorate, that you're intending a power play against them. They're anticipating it. Building a case against you and yours."

"We already know that," Skitter snapped.

"Did you know I have approximately twelve years worth of dirt on the PRT?" The man asked. "Not just Shadow Stalker and myself and Piggot. Although a lot of it is Piggot. The woman's had an... interesting... career. Dating back as far as Nilbog."

"Nilbog? That explains so fucking much," Minerva exclaimed. "And these idiots gave her promotions just to keep her silent, I'm sure."

"Records involving them outright lying to the public on multiple occasions," Arm(sm)aster continued.

"And what of your loyalty to your former comrades?" Skitter asked. "This sounds an awful lot like betrayal."

"My loyalty is to my Country first, and the Protectorate second," Arm(sm)aster snapped. Skitter got to him. "The PRT is a poison to both, and I owe them nothing."

"You're using us," Skitter spit back. "To fight a war you can't."

He nodded. "I'm giving you the weapons to win a war that you've already started and more. I do want to help more, and so does Dragon. What you know is nothing compared to what I know. And what I know is nothing compared to what she knows. You've already started down the right path. If you can hurt the local PRT enough... play your political cards right..."

"You want us acknowledged as legal authorities in the region," Minerva responded. "Then Dragon will be able to work with us."
"As long as you don't make an enemy of the President, yes, we'd then be free to offer our assistance in every possible matter," Armsmaster confirmed. "We are taking a risk. Putting a lot of faith in the idea that, at the very least, you won't use this to betray us. You could, of course, easily. A kill order would be the least of our worries."

"I understand," I responded. No, I really didn't think I did. This was huge. This was... "Mutually Assured Destruction."

He nodded again. "It is that, I suppose. An acceptable start for showing I'm serious about my 'second chance'?"

Using our own mission statements? Fair enough.

"I think so," I offered. I looked over at Skitter.

Taylor sighed. "I suppose it'll have to do."

"For what it's worth, you would have made an excellent Ward," Armsmaster offered.

"No, I really wouldn't have," my partner sighed.
We watched Dragon leave. She was polite enough, of course, but as she had said, she couldn't help. Having Armsmaster- Defiant, now- do it instead? Sounded like the kind of loophole that should have been thought of.

Minerva spoke up. "He's sincere," she said. "After a fashion, at least. Socially inept, but well meaning enough."

Sounds like you just described more than half our team, I thought. Taylor. Respawn. Blasto. Myself.

We made our way inside.

Crystal spoke up. "So, is that it? No more psychotic assholes? No more crises? No more people randomly coming back from the dead to offer world altering information and advice? Can things go back to what passes for normal, at least for a while?"

"Uh... probably? Anyone else got any major problems that we can't put off?" I looked around, no one offered anything. "Okay, yeah. I think we have a chance to breathe now."

Suddenly, my head jerked to the side and my face stung. "THE FUCK IS WRONG WITH YOU!" Crystal screamed at me. I brought my hand up to my cheek. She slapped me! "Recruiting a couple supervillains? That I could handle. Planning to fuck over the Protectorate? Fine, whatever. You don't grow up in New Wave without seeing that their system just doesn't work. But that!" She pointed at Clarice, who of course didn't come out to greet the heroes. "That is mother fucking BONESAW! And you didn't even WARN ME!"

She looked around. "How many of you knew!?" She demanded of the others. I was the one who was just hit, and she was the one crying.

Minerva brought up a hand, followed by Khepri. Followed by Clarice.

"Suspected, didn't know," Blasto offered. "It's hard for tinkers to hide what they are, especially from other tinkers."
"Not a clue," Respawn admitted. "Found out not long after the explosion, same as you."

"Of course. All the fucking villains on the team," Crystal scoffed. "Christ, Amy, do you have any idea what you've done? She's one of the Slaughterhouse Nine. You can't trust her."

"She can so!" Clarice insisted. "I would never hurt my big sister. Besides, she's the leader of the Nine now!"

"What?" Crystal turned back toward me. Her voice quivered. "Did you do?"

"The best way to stop the Nine," I defended myself. "Bonesaw was a living biological weapons factory. She was planning a super plague. One that would evolve faster than I could stamp it out. I... I offered to join the team... so they wouldn't have to invent a weapon that could get around my power."

"That... is possibly the stupidest thing I've ever heard," Crystal responded.

"If it helps," Khepri added. "She followed it up by challenging Jack for leadership, covering him in acid, and then disbanding the group."

"So... you're saying that Gaea 'dissolved' the Slaughterhouse Nine?" Respawn offered.

Crystal moved her hand and pointed it at Respawn, then fired a burst of light. He was struck in the face, and had been replaced before the body hit the ground.

"Okay, I probably deserved that," he replied. "But seriously, this isn't the deal you make it out to be. Yeah. Bonesaw. Who renounced the name. Clarice has been nothing but helpful and friendly. She saved the lives of half of the people in this room. And that includes you, too, Crystal. That armor you're wearing is her design. The surgery you needed? Also her. So, really, she saved you twice."

"Conductive nanowave lattice designed to work in concert with your forcefield and energy generation," a voice came. Riley's. She'd come up in person, still wearing the control suit for the construct. "87% energy transfer efficiency. Reinforced to absorb kinetic and energy attacks, distributing them across a wide area and improving forcefield effectiveness by between 212 and 263 percent depending upon attack type."
"Think about it," Respawn continued. "That explosion got through your shield when it was over three times its normal strength, and armor that's way better than bulletproof, and still had enough power to almost kill you. What would you look like without her equipment?"

"She saved my life, too," Lisa volunteered. "I went low and hid behind the table, and it still tore me apart. Hell, it took four people to save me."

"You actually died," Respawn added. "I had to reset you thirty two times before she could get Gaea stabilized enough to save you."

"I thought it was something like that," Lisa nodded. "Fuck, though, that's a lot."

"Once every three minutes at first," Respawn replied. "Losing several seconds every time I had to establish a new link. We were down to less than a minute before we got Gaea conscious. Five minutes more, and you wouldn't be here."

"And then there's me," I said. "She used her construct to shield me from the worst of the explosion. Then whatever it took to put me back together."

"Blasto was needed for that," Riley acknowledged. "I saved you, but his tech put you back together."

"That's all retrospect!" Crystal insisted. "Just because it worked doesn't mean it wasn't stupid! And you knew that, or you wouldn't have kept it a secret."

I looked down. "No. I needed her help, even from the beginning," I admitted. This drew a few looks. "There are... I know where powers come from. They're parasites. Extra dimensional parasites that are manipulating us. Doing everything in their power to make us violent and destructive. I don't know what they gain from this, or if they're aliens or demons or magic or whatever. All I know is that they're the enemy of every person on this planet. Bonesaw... Riley... knows more about these 'Passengers', as she calls them, than anyone else alive."

"That sounds truly, certifiably, insane," Crystal muttered.
"It makes sense," Minerva replied. Then she paused. "Wait, what were we talking about?"

"That's the problem!" I yelled. "Every time I try to explain this to you, you forget!"

"Forget what?" Taylor asked. "Are... are you okay?"

"She's okay," Minerva replied. "She's fine. It's the rest of us that have a problem."

"Bonesaw's influence?" Crystal asked. Of course her mind would slip back to that.

"No," Minerva answered. "None of us tripped Rapture's tech. We're clean. And it's effecting Blasto and Respawn, one hasn't given her an opportunity, and the other is functionally immune to everything she could attempt. This is beyond parahuman ability... it's..."

She almost had it. I felt my heart sink.

"I... right," she muttered. "As I was saying, Riley's no threat to us. She's loyal to Amelia on a number of levels. As long as you're no threat to her, you're... oh..."

"What, what is it?" I asked hopefully. Maybe her power DID get around it!

"Nothing," Minerva responded. She looked at Riley, who avoided both our gazes. "Thinker migraine coming in hard. Nothing you need to worry about. Riley isn't going to turn on us. If anything, she's the most loyal person in this group. As long as we don't trust her with any important judgment calls, at least."

Riley nodded and looked up, offering a smile. "I'll be sure to tell you about everything."

"Speaking of which..." Crystal replied. "Are there any other secrets? Swear to me there's nothing left that you're hiding from me."

"A few," I admitted. "We... we're basically holding a supervillain hostage. "He has an incredibly useful thinker power. Plus his civilian identity is wealthy and influential."
"And he's not going to betray us?" Crystal asked.

"Can't," I replied. "He consented to a form of mind control."

"You can't be serious," Crystal drug her fingers through her hair as she collapsed into a seat. "Christ, Amy. When I said that what you did to Victoria was an honest mistake? I meant it. But mistakes are things you're suppose to stop doing. There's a justice system for a reason. You're suppose to send criminals to prison. Or kill them if you have to. Not collect and enslave them."

"We would have had to kill him," Taylor responded. "His power is insane. He can create two realities, do different things in both, and the choose the one he likes better. He could attack us once per hour for the rest of our lives, and we'd never know about it until the one that succeeds."

"Fuck," Respawn muttered. "How did you beat that?"

"Skill, luck, planning, and liberal applications of Bonesaw brand high octane nightmare fuel," Minerva responded. "I still can't look at spaghetti."

"Is... please tell me that's all, Amy," Crystal pleaded.

"Just one more," I answered. "Before we handed over E88, I gave them a short lived, time released symbiont that'll allow them to recover from almost any poison in minutes. Plus let their skin release enzymes that digest containment foam."

Crystal started laughing. It wasn't a happy laugh. "Fucking hell. Amy. Why? You know what kinds of monsters they are."

"Would it help if I told you they weren't all selfish reasons?" I asked. "Part of it, yes, was to hurt the Protectorate. To hurt them for trying to hurt us. But I can't bring myself to hate the captives we had. Purity was trying to protect her family. Cricket and Stormtiger were in it for loyalty to their friends. Crusader... he's in love with Purity, believe it or not. And Night? We killed her husband in front of her, and thanks to all the shit from her childhood, she doesn't even have the ability to mourn."

She just stared. But she didn't speak up.
"They made mistakes. Bad ones. They did bad things. But look at us. Other than you and Respawn, we're all guilty of some really bad stuff ourselves. Arguably worse, depending on which of us we're talking about." I continued.

"Second chances," Crystal stated. "I get it. So what's their 'second chance'?

"They break out, and go underground. Purity gets her daughter back. After that, we never see or hear from them again."

"Theo, her step son, he triggered," Crystal informed me. "He was talking to me online. I'll show you the messages. I'll also show you some other messages. Because your 'little sister' has been hanging out there, too."

Oh, this won't be pretty.
I sat across from my daughter. She was wearing a very different costume this evening than when she left this morning. "You know," I said dryly. "When you said you'd go back to talk some sense into your cousin, this was not exactly the result I was expecting."

She offered a sheepish smile. "Sorry, mom. She's not going to give this up. It's not a phase. It's not even about being a hero. She's turned this into a quest. A legacy."

I sighed. I knew those. I knew what they cost. I looked over at the empty chairs, the ones meant for Neil and Eric. I could almost see them still sitting there.

"Mom?" Crystal asked. "Are you okay?"

"Yeah, sweetie, I'm fine," I replied. "Just memories. My own quests and legacies. How they've changed over time."

"I have to stick by her, mom," Crystal continued. "She's... she's hurting. Badly. The guilt over Victoria is tearing her up inside. Driving her to do some things that... Well, you saw that Yggdrasil of hers. Her new 'friends'. She's not thinking straight right now, and no one else is going to help her."

"Her choice of names? Both in and out of costume," I said. Amelia. Amelia Lavere. That stung me. I could only imagine what my sister was going through, but she refused to talk about it. And Mark was... I wasn't sure what to think of him, now. Whatever Amy had done inside his head had made him... well, aggressive wasn't the right word. Assertive, perhaps. More than he'd ever been before, certainly. More outgoing, friendly, and confident. Too outgoing, honestly.

That, one might imagine, should be a good thing. But it was damaging my sister's marriage. Mark's dependence upon Carol was no longer there, and it had been the constant for over twenty years now. Coupled with the death of one daughter and the loss of another. I worried that their relationship wouldn't survive.

"That, too," Crystal agreed, pulling me from my thoughts.. "I'll need a name of my own to work with Pantheon."

"Something pretentious and divine, huh?" I asked. "Athena?" I was in no position to argue with her.
She was an adult. She'd made up her mind. New Wave was already dead. If any of us kept being heroes, it wouldn't be together. Our team is gone, it's going to be hard enough simply to preserve our family. What remains of it, anyway.

"Don't think I can," Crystal replied. "Already have someone using the Roman version of the name. Plus, I'd rather something really obscure. Feels less weird that way."

"So, the new costume?"

"Yeah, it's kind of unbelievable. It's actually alive. Made out of something that merges with my forcefield to make it even better. Can turn nearly invisible. Uses my lasers as a power source to make lightning and EMP attacks. A battlestaff that channels my powers for close quarters combat. Strength increase using my forcefield for lifting..." she hesitated.

"Like Glory Girl's," I concluded. "Sounds like little Amy learned some impressive lessons in New Wave. You're basically running around with the best of all our powers and then some, aren't you?"

"Kinda," Crystal replied. "Are you upset?"

"A little jealous, I admit." That wasn't the part that was really eating me. Was what Amy said before true? Could she have built stuff like this years ago? Could all of us have been wearing stealth battle armor that made our powers stronger? With three years of practice, how much better could she have been? If we had encouraged her to really exercise the full extent of her powers, would my husband and son still be alive?

"Yeah," Crystal agreed. "I'm a little jealous, too. Amy's powers are insane. And the way it works alongside Skitter's... I don't know if there's anything those two couldn't accomplish if they wanted."

Except giving me back my family.

....

"... As part of our ongoing efforts to heal the wounds of our city, both fresh and old..." Khepri spoke to the audience at their first really major showing. And what a showing it was.
The stunt of making the Yggdrasil base was under reported. No surprise, all considered. A new group, in the immediate aftermath of the Slaughterhouse Nine? They barely got local attention. This time was quite different. No one was making the mistake of ignoring Pantheon again. Of being the station that had to use recycled footage from other sources. I spotted camera crews from Boston and even as far away as New York. Mayor Christner was here as well, of course, enjoying the local fame.

We were now here at the edge of the boat graveyard. Myself and a handful of others off to the side of the crowds, in a bit of a VIP section. People expected to offer quick speeches and short offerings of thanks and gratitude and praise, but not important enough to stand on stage the whole time. Or, in my case, to show support to my daughter and my niece. I had opted to come in costume. Sure, my name and face were publicly known, but the symbolism of showing in "uniform" is not to be underestimated.

"We intend to make Brockton Bay the city it once was. Not merely before Leviathan. But the revival of an era most of us on this stage are too young to remember as more than just stories. The city our parents and grandparents remember."

That got a series of applause. Locals, the older ones mostly. I didn't know who was writing their speeches, but they had this 'local heroes' approach down in a way that New Wave never quite accomplished. Whomever it was should have a career in politics. Or, at least, writing for politicians.

One of the men near the front was watching Khepri as she gave her speech with an unmistakable look on his face. He was not exactly attractive. Tall, thinning hair, clearly overworked and overstressed, but he cleaned up well enough for this event. I walked up to him. Theoretically cutting in whatever 'line' existed for speech giving. No one complained. Orders were scripted, and I wasn't meant to go on stage at all.

"You'll give it away," I said to him.

He looked over at me as if he hadn't realized I was at this event. "Oh! Sorry. I'm not sure what you mean."

"Don't have to be a thinker to spot that 'look'," I said. "I feel the same way, seeing mine up there."

"Look?" He asked. He knows, now, he's just playing dumb.
"One part pride, one part nostalgia, one part loneliness, and one part fear for all the things you can no longer protect her from," I offered.

"Oh," he nodded. "That look. Was I that obvious?"

"Only slightly less than whatever crazy thing they're going to do to show off for the cameras. I'm betting you already know."

He smiled. "Yeah. Actually, it was my idea."

"Want to share with the clueless outsider?" I requested.

"And ruin your opportunity to experience all the 'shock and awe'?” He asked back.

"That's for the kids to enjoy," I countered. "I'm too old for that sort of thing. Too much excitement's bad for the blood pressure."

"It'll be a long time before you are 'too old'," he chuckled. "But you've just given me a mental image that I should really feel bad about."

"You can share that at least, right?" I offered what I've been told is a charming smile.

"Well, have you ever wondered what that tub of lard we call a Mayor's arteries looked like?"

"That is awful," I laughed.

"Speaking of which, almost my turn to play my part in this show."

"Well, good luck, Mister..." I extended my hand with the implied question.

"Danny," he replied, shaking my hand. Strong grip. "Danny Hebert."

There were a few cheers as the Mayor took the mic back from Khepri. "Introducing the architect of the new ferry plan, Daniel Hebert."

He strode up the stairs to the stage- they had a real one this time- with the same confidence I'd seen exhibited by Legend. "Thank you, Mayor," he said with a voice that was all business. As he started his speech, it wasn't hard to realize who had helped his daughter with hers.

==========

A/N- This chapter makes me smile.
Taylor's dad is actually really good at speeches, I realized. He had more stage presence than our Mayor, who tended to play the 'everyone's buddy' angle of political showmanship. He didn't quite match up to Taylor when it came to holding the crowd's attention, but the powers and the battle armor, even if she had one of the least effective armors of the current team, gave a certain intimidation factor that no normal human being could hope to achieve. At least, to the general public.

He finished smoothly enough, receiving more than polite, but not overwhelming, applause. Then handed the microphone back over to myself. "Thank you, Mister Hebert," I responded. And I felt silly, as I was already calling him 'Danny' on the occasions when we met. Now for the handful of questions.

"How do you feel about the escape of the E88 members you captured last week?" One of the reporters asked.

I frowned. It was our plan, so I felt pretty good about it in a pretty bad way. Still, not something I wanted to talk about. "Let's just say that if they return to this city we're ready. We dealt with them before, and we're stronger now than ever. But I'd prefer we focus on the current subject of this event."

"Why are you doing this now, then there's still so much damage left in the city proper? Wouldn't this time and energy be better spent on more pressing concerns?"

"As Mister Hebert explained better than I could, the ferry project brings better access to the north side of the city," I answered. "Which is the portion that, at the moment, needs help most desperately. In addition... frankly... the boat graveyard isn't much of an obstacle for us. Removing it also offers a bit of a selfish reward, in addition to the good it does for the city."

"Care to elaborate?"

"Absolutely," I replied. "My powers still obey the basic laws of physics. I cannot create things ex nihilo. Iron is one of the raw materials we need a great deal of, and we need a large reserve of it for future projects. The boat graveyard represents a lot of iron."

You guys came for the show, here's the show.
"And, as I said, it's not really much of an obstacle. Eki, mind taking your position?"

My cousin flew to her position near the center of the mess of busted ships. This part was honestly more about appearance, and implying to the Protectorate that we had far greater limits on our power than we actually did. Still, it would help having her there. Speeding the process, taking stress off of my power. Didn't want a repeat of what happened when I built our base.

The police had already cordoned off the beach, before this press show even began. A lot of people had come to watch this. We didn't want anyone too close to the fireworks. I, meanwhile, had walked over to a small Yggdrasil tendril and wound my grasp around it. Some cameras would still be focused on me. I closed my eyes. Not necessary, but again, showmanship.

At which point, the vines started coming up around the sides of one of the larger vessels in the graveyard. Eki aimed down at the vessel, and fired. A steady stream of electricity poured into the metal of the ship, bleeding out into the water. My Yggdrasil drank it up, converting to usable energy so it could truly 'flex' its muscle. The screams of the metal hull being peeled away like a wrapper reached us on the shore, and drowned out the surprised shouts of the gawkers. The ship vanished below the murky water.

Then another set of tendrils, and another ship, and more lightning. Then a third. All captured clearly on camera. All the footage the camera crews would need for at least the next week. Our sort of apology to Taylor and Danny, allowing his dream to be the more visible and exciting looking detail we covered today, because it wouldn't be the most significant.

"It'll take the better part of the day to completely clear the wreckage," I told the onlookers. "You are certainly welcome to stay to watch. However, we'd like to move on to our next announcement. Commissioner Micheals, if you will?"

The local head of police, an older gentleman who had had what was well and truly one of the worst jobs in the city for the last decade, stepped up onto the stage. Aceso brought him the control system for one of our changelings. Meanwhile, one of my Yggdrasil tendrils brought up our new 'M4' changeling models.

"This is the Model Four Police," I told the audience, gesturing at the construct. It was larger than most humans, at approximately six and a half feet, and bulkier as well. We didn't want to give anyone the impression that we could build superhuman soldiers the size of, say, a teenage girl. "Or M4P, if you prefer. It is, essentially, a scaled down variant of my Dryad armor. Not as powerful, but significantly lighter and easier to maintain."
Micheals was in the full equipment, which amounted to little more than long gloves, boots, and a helmet now. He lifted his arm up, and the changeling responded in kind.

"The M4 is operated by remote control, anywhere in the city. However, it does require specific stations for recharge and repair. Its operation time in the field is up to three days of normal exertion, or as low as seven hours at maximum ability. Capable of ignoring up to medium arms fire, and withstanding punishment that would lethal in a normal human being. Even if you do have a weapon or power capable of killing it... there is no harm to the pilot."

By now, Micheals was getting into things, testing its movement and fine dexterity.

"It's capable of any physical movement a human body is," I supplied. "Can lift up to a ton. Run at over thirty miles an hour. Scale vertical surfaces, as long as that surface can support their weight. Has an assortment of nonlethal takedown measures such as tranquilizer darts and gas, and a taser. And has several enhanced senses, such as echolocation and infrared vision. If we were using PRT guidelines, they're Mover 3, Brute 4 or 5, Thinker 3 to 5. Shaker and blaster 2. More than a match for even an army of ordinary gang members, and capable of holding their own against most parahumans. They are expendable, leaving the pilots free to make decisions without concern for the safety of themselves or other pilots."

That earned murmurs in the crowd, and a lot of smiles from the local police officers. They knew they would be the ones using these things.

"This equipment will be made available to every police station. A similar model, specialized for rescue emergencies, the M4R, will also be provided to fire departments and others for dangerous but nonviolent first responder purposes, such as bomb disposal. The M4s can be used for cross purposes, if needed. That way, our city no longer needs to force good men and women to risk their lives to protect our citizens."

I handed the mic off to the Commissioner. "Thank you, Gaea," he paused. The changeling had spoken alongside him in a deeply baritone voice. Aceso moved over and tapped the side of the helmet, then removed it.

"I can see these will take a little getting use to," he said with a chuckle. Some of the crowd joined in. "They have an excellent command voice."

I nodded. "We included loudspeaker and silent functions as well, for when they're needed."
"Well, yes, thank you again," he smiled. Genuinely. He turned back toward the crowd. "I do believe I speak for every officer on the force when I express my gratitude and appreciation for Pantheon's incredibly generous gift to the city. I have assigned a number of exemplary officers to work with Pantheon, learning the use of this equipment. When they are properly trained, they will train the rest of our city's police forces."

Another nod from me, even though it was unnecessary. "We will use this opportunity to take back the streets from the gangs and drug pushers, and make our city one of the cleanest and safest places to live in the world."

He waited for the cheers to subside. I was okay with that. The police in this town needed this kind of morale boost. Had needed it for as longer than I'd been alive. Had to be rough, living in a city where you go to bust a prostitute and Skidmark launches your squad car through the side of a building. Granted, these M4s wouldn't have helped much, before. Against trash like the Merchants? Certainly. But against powerhouses like Purity or Kaiser or Hookwolf or Lung? Less valuable.

He offered the mic back to me. "More than happy to," I replied. "Honestly, it'll be good to have more help on the street. We can do a lot, but we can't be everywhere." Except maybe Taylor, still working on that. "Knowing the police will still be out there and able to protect the city while we get a little bit of time off? Makes us all sleep a little bit easier."

More applause. And then time for more questions.

"Will you be making models for the PRT?"

"As things currently stand? No," I answered. "The function of the PRT is to support the Protectorate in dealing with parahuman opponents. In this city, that is rather meaningless, so long as Pantheon exists. It is better to dedicate the resources to the police, who deal with all crimes, and will use the equipment on a daily basis. Instead of giving it to a paramilitary force that will leave it in a garage for weeks between emergencies. If the PRT needs help from our M4s, they are certainly welcome to contact the police and request the assistance."

There. That message was sent. The civilians, or at least civilian law enforcement, would have an advantage over the PRT.

"What of Endbringer fights? Do you intend to use the M4s for those?"
"For search and rescue purposes? Absolutely." I answered, then continued explaining. "M4s are not strong enough to be valid against Endbringers. We will be dedicating much of our time and resources in the future to building weapons that can legitimately participate in Endbringer conflicts. The M4s help us move in that direction by allowing us to focus our attention away from street level concerns."

"Will you be offering similar equipment to other cities?"

Absolutely. "Possibly," I replied. "Our M4s require maintenance, and that requires either myself or the Yggdrasil. Any city that would like our M4s would, of course, need to also concede to having a Yggdrasil tree planted within their city, and then they would need to feed it regularly."

"Doesn't Yggdrasil mostly consume sewage and garbage?"

"Yes it does," I say with a smile. "I recommend landfills as an excellent place to start. It's not just good for removing garbage and providing emergency personnel with better equipment. The more raw materials we have access to, the better equipped we'll be for fighting Endbringers and similar grade threats."

The rest of the questions were much of the same. And a few gossip rag questions like our respective dating lives. They were, of course, ignored. I honestly had a hard time getting my head around why anyone cared. Revitalize city by restoring trade and travel routes? Give police officers parahuman grade capabilities? Implied offers to expand to other major cities? Promise of anti-Endbringer weaponry? Whether or not Khepri and I are dating? One of these things is not like the others.

I was glad when I could finally hand the show back over to the Mayor, and he was glad to have it back. Introducing other city initiatives, planning for a new hospital in the north end of the city (using money that'd otherwise be used on the sewer system). Hiring additional police officers. And improving the school system. That last one was demanded by Taylor, no room for negotiation.

All of this would, of course, be mentioned by the media, one way or another. Those who benefit from it would appreciate it greatly. But what would be remembered in the minds of the people is my Yggdrasil ripping apart thousands of tons of metal like it's nothing, and us promising weapons that could fight Endbringers. That's what would capture the attention and imagination of the world.

Now? Now all we have to do is deliver on those promises.
Ah, I love the parts of the story that get into the epic stuff. I do try to keep the story from OD'ing on it, but I do love it. One of my personal gripes about Worm- it spent too much time on the big stuff after a certain point, and forgot the human level.
It is nice to be exercising, at least. Chariot was taking a lot of interest in me, lately. Probably has a crush or something. Of course, I wasn't interested. First, my heart belonged to Gallant and that wasn't changing. Second, he was a spy from Coil. The fact that Coil completely fell off the map when Pantheon moved in may have left him without a job, but he still came here to betray us. I wasn't about to forget that.

Still, it was nice to have some attention. At least he didn't treat me like I was six. And he was reliable enough on the field. Not a spaz like Kid Win or a pain in the ass like Clockblocker. Flechette was nice, but always wanted to head north and spend time with that Parian girl during patrols. Then it was like when my sister had her friends or boyfriend over while she was suppose to be babysitting me. Always trying to find ways to ditch me for a while.

"Got something strange on my sensors," Chariot stated. "It's... umm... a flying horse? Plus rider. Plus accompanying flier. Profiles aren't matching anything I have on record. Just turned and is heading toward us."

"I'll call it in," I replied. No sense in being ambushed. I hit the communicator. "Vista reporting. Unknown... uh... vehicle. Possibly tinker tech. Rider and additional parahuman."

"Understood," Crucible answered back. "Miss Militia's only a couple miles away. She can be in sniper position in less than a minute."

"They're heading our way," Chariot replied. We got our look at the duo.

One really was on a flying horse. An honest to goodness Pegasus. Solid black, except for the nose and muzzle, which were white. It would have been a magnificent animal, even without the raven wings, easily spanning fifty feet from tip to tip. Although 'flying' was being generous. It was taking running jumps and gliding for roughly a hundred feet or so before landing, rooftop to rooftop. My powers let me be pretty good at estimating distance, even from far away.

The girl riding on its back was dressed up like a hybrid of a ninja and belly dancer. Full body coverage, except a veil that left her eyes visible. But the material was light and thin like silk. Loose ribbons fluttered in the wind, joining the mane and tail of her mount. The whole costume shared the same shimmering black colors as the horse itself.
Her companion was a woman with wings made of bone and a cloud of smoke following her. Not smoke. Alive. My power was telling me the cloud was alive, made of tiny living things. Insects.

I hit the com again. "Don't worry," I said. "One of them's Khepri, she got the world's most intimidating costume upgrade." Which is saying a lot considering she was scary beyond all reason in the first place. "Now she can fly."

Khepri moved in to land on a roof and stumbled, running to keep her balance and colliding with a wall. I snickered. "It's new, she doesn't know how to use it properly."

The horse was having a better time of it, angling its wings forward to slow its movement, and then spreading them out to fall gently to the roof, a couple blocks away from us.

"Should we go talk with them?" Chariot asked me. Good, at least he knows I'm the senior ward here. That gets forgotten far too often for my tastes.

I was still too busy looking at that horse. I want one. I want one so bad that it hurt. "Y-yes," I replied. "Ask them about the upgrades. Try to keep it subtle, but get whatever intel you can get. Anything they're willing to tell us, we memorize." There. Let's see the Director complain about that logic. I deserve a promotion for gathering more information on the ever-so-mysterious Pantheon.

I bridged the gap with my power. Chariot stepped through, followed by myself. I had to admit, the spy had some really good ideas. Altering space across my range by total of less than a centimeter, and sensing the 'empty' spots that don't shift gave me near a near perfect ability to detect every person in my range. And I had a lot of range. There didn't seem to be an upper limit, simply how far I could reach before the amount of interference in the area eroded my power to nothing.

Chariot built a sensor system into his armor that could allow him to see my distortions, meaning that he could react to my alterations intuitively and "piggyback" on my senses. Giving us two people who could track everyone within miles. Kid Win also had a copy, as did Triumph, Battery, and Miss Militia. More coming soon.

They said it would make me important for search and rescue during the next Endbringer battle. I told them to fuck off. In slightly more ladylike terms.
We approached the pair. Khepri had managed to take a more dignified position than faceplanted in a wall. "New recruit?" I asked the girl. It was easy to forget that this was a girl. Maybe a couple years older than me. Powers for less than six months. Her height was impressive even without this new suit she was wearing, and the eight foot long claws that formed her wings added the illusion of even greater size.

"No," Khepri replied. "We're testing out some new equipment and ideas. Aceso's trying an entirely new look."

"Interesting," I replied. "The Pegasus thing?"

"Part of it," she replied. "You'll have to talk to Aceso about the whole setup. Her theme and all."

"So... antigrav wings?" Chariot asked Khepri.

"Yeah," she said, sounding distinctly less than happy about it.

"Magnetic field maintained between the wings for stability and improved speed?"

"And to keep me from falling over backward," she muttered.

"You should put an extra set of stabilizers in the armor plating of your calves. It'll keep you from stumbling so much. In fact..."

Tinkers, I thought. I approached Aceso.

"Can... can I touch him?" I asked. The animal had folded its wings, covering Aceso's legs

"Sure," she replied. I reached out and gently brushed a wing. The animal didn't seem concerned, so I pressed a bit harder and started to pet the wing. "Her name is Bella."
"It's a pretty name," I said.

"I wanted to name her Atropa," Aceso complained. "But my big sister wouldn't let me. Said it would send the wrong message to people."

Atropa? Right, they do the whole 'divinity' thing. Maybe. Was all greek to me.

"Would you like a ride?" She asked.

"YES!" I shouted. Then caught my composure. "Uh. I mean. Can she support two people? She was having trouble flying with just you."

"Yeah," Aceso responded. "Antigravity's funny like that. It can move any amount of mass, it's just a matter of the volume of the area being influenced. We're still working on that, but this equipment's second hand. We'd need a real antigrav tinker to make her fly for real. Right now, we're just playing around with a combination of weight reduction and gliding."

I looked over at Chariot, who was currently poking at a Khepri that was far more patient about it than I would have been. He had knelt next to leg and was actually caressing her lower leg and foot while talking. Boys. Or Tinkers. I wasn't sure which rule was in effect there. Either way, he'd be distracted for a while.

"I bet I can get her the rest of the way," I said. "How do I get up?" The animal was big, its back was a bit over five foot high. Sure, there were bigger horses, but it wasn't something I could just climb.

"Here, grab on," Aceso lay back on the animal and brought her arm down. It bent almost ninety degrees backward. Right, flexibility is probably part of her powers.

I clasped her arm with my hands, and she simply lifted me off the ground. Stronger than Aegis, uses actual muscle strength like he did, not some kind of forcefield like Glory Girl. My mood darkened as I thought of those we'd lost. I was dragged across Aceso's torso, essentially laying sideways atop her. She moved me in front, sat up, and moved up against me from behind.

"He's really really well behaved," she told me. "But it's safer for you to ride in front, just in case something goes wrong."
"Okay," I said, letting the girl move her arms around me to grab the reigns. "I've been horseback riding before." Granted, not on an animal that could fly, but this seating was nothing new to me. Bella was actually far more comfortable to sit on than a horse had any right to be.

"So, you were saying you could make her fly for real?" Aceso reminded me.

"Yeah, absolutely," I replied even as I started bending space around us. "Just get her in the air, and I can keep her there."

Aceso snapped the reigns and the horse rushed forward, spreading its wings as it jumped into the abyss. Its own muscles, plus the near weightlessness we were experiencing, took us nearly fifty feet up. The descent was slow, easy to control by warping space, turning "down" into "mostly sideways". Aceso screamed in delight, and I couldn't help but join her, as we started covering miles of distance in moments.

The city looked amazing at this height. Power was finally running for most of the city. The Boat Graveyard was no longer a scar on the landscape. The pretty blue-green of Pantheon's base from above. The monolith of the Protectorate tower base. I hadn't had this much fun in a long time.

By the time we had come back down, Aceso had handed the reigns over to me and was simply a passenger, explaining how to get her to turn, or halt and descend for our landing. Which, it turned out, was to the waiting and rather annoyed looking forms of Miss Militia and Khepri. Then again, Khepri could be napping in a bed full of puppies and still look like she was half a second from murdering everyone in sight.

"So, did you girls have fun?" Miss Militia asked. I forced the smile from my face.

"Sorry, ma'am," I replied. "Aceso offered me a chance to test her new equipment. I felt it would be an excellent opportunity to further positive relations between our teams."

"Uh huh," she responded dryly. "Come on, your patrol's been over for the last twenty minutes. Piggot will be expecting an extra detailed report by tomorrow morning."

I turned back toward the other heroes. "Goodbye, Aceso. Goodbye, Bella!"

The horse whinnied at me. "Bye, Vista!" Aceso waved, smiling broadly. I smiled and waved back.

============

A/N- Yes. You did, indeed, just witness Vista and Bonesaw ride on a flying horse together.

http://elsouille.deviantart.com/art/Black-Pegasus-51158950

Also- this chapter was a really fun reread, with all the character development that happens later putting an entirely new spin on this one.

Chapter End Notes

Appx. 1/8th done, taking a break. I take no responsibility for what happens to your inbox if you ask AO3 to email you when a new chapter gets posted
My changeling knocked on the door to the house. Hard rap, then two quick ones after. It's what Crystal said I should use. The kid was a new parahuman and wanted to talk to me, specifically. Crystal wasn't entirely sure how he'd react, but he did have Aster, who was part of our deal with Purity. It'd be better to do this peacefully, but that might not be an option.

The door opened without anyone being nearby. Telekinetics?

"Come in, please," a boy's voice said. Trying to feign confidence. Or, at least, that's what the HUD was telling me. It was easier for me to be confident. After all, I wasn't actually there, I wasn't in any real danger.

"Hello," I replied. "I'm Gaea. You wanted to talk to me?"

"Yes, ma'am," he answered. Polite. "I wanted to know why you attacked Kayden. Why you had to nearly kill her."

Ouch.

"I gave her a chance to leave," I replied. "Hurting her as badly as we did, that was an accident. But she's the one who chose to fight."

"Of course she did!" He exclaimed. I couldn't really call it 'yelling' so much as 'talking loudly and trying not to cry'. "You came to her home. Our home. And told her that she'd either have to fight you or leave that home. How is that fair?"

"It..." I paused. It wasn't that I didn't have good reasons, it's that most of my good reasons were summed up as 'she's a fucking Nazi', and I doubted the boy would care. "She's a multiple murderer, did you realize that?"

"She's my mom," he countered. "And Aster's. She's never done anything to hurt us." The boy stepped out of the shadows. He was younger than me. Looked younger than Taylor. His eyes were bloodshot and there were dark rings beneath them. It made him look more like a tired, overweight old man than a moderately pudgy teen. I chose to ignore the signs that he'd been crying.
"Except live a life of violence and crime," I pointed out. I didn't hide the bitterness from my voice. "My own father made the same choice. He could have walked away. Taken the wealth he already had and retired to raise a family. Chose me. He didn't. He preferred to keep the power, instead. Take the risks, knowing that one day he might be taken from me. Either by the heroes, or by getting himself killed."

I stopped and calmed myself. "Maybe. Maybe I'm projecting. Maybe Purity... Kayden... was different. But I gave her the choice, to her face. Stay and fight, and almost certainly lose. Or leave and give up this shit. She chose to fight. Decided that was more valuable to her than peace. Than family."

"You knew she couldn't," he argued. "Even as you made the offer, you knew it would be impossible for her to accept it. She was accustomed to being strong enough to win almost any fight she was forced to fight. If she'd known what you were, she might have chosen differently."

"You can't blame us for that," I replied. "I told her she really didn't stand a chance. It was true. She just didn't believe me."

"So, beat them, THEN give them the chance to leave!" He sobbed.

"Funny you should mention that," I offered a half smile.

... 

Theo was beside me as we moved toward the small farmhouse. It was pretty nice, for a place that clearly hadn't been used as a farm for decades. The land had gone from 'fallow' to 'overgrown' to 'young forest' in that time. Still, the home itself was in excellent repair, and the lawn was well kept.

"My grandma's childhood home," Theo informed me. "I've been here a couple times, when I was younger. One of the few things my father was ever nostalgic about. Kept the house in her name, even."

Well, that relieved me of some of my apprehension. I had been worried the Nazis simply came to a home in the middle of nowhere and killed or imprisoned the owners so we could do this exchange. I was already pushing an awful lot of my comfort zones just being here. I didn't need innocents on my conscience as well.
If Purity decided it was worth hurting herself to hurt us... things could get ugly. Fast. The part I hated most about this whole arrangement is that those Nazis could claim we helped them escape. It was true, after all. It wasn't really provable, although if they actually were held with containment foam, it might be. Most of them had powers that the foam wouldn't mean much to, regardless. Likely they'd just be kept drugged. Proving that Night didn't wake up just barely enough to transform and nullify said drugs would be impossible.

I let Theo lead the way, although there was no chance in hell that they wouldn't know we were here. Coil's man drove us here and waited. We walked the distance to get close. I also let Theo carry Aster. It seemed better that way.

Purity opened the door, even as several of Crusader's ghosts started to manifest.

"Can we do this inside?" I asked.

"I'd rather not," Purity replied with a hard voice, taking Aster from Theo's arms and handing her to someone inside.

"It's my property," Theo responded. "Gaea is welcome inside." He watched the Nazis that were, functionally, the only family he had. They let us in.

"You have your daughter," I said as we got in. "A chance to make something meaningful of your lives. I implore you to take it."

"And what's to stop us from simply killing you?" Stormtiger asked.

I sighed. Of course. "It helps that I'm not actually here. I'm sure you saw our Changelings on the news. This is just a puppet."

"You're in the car, then," he responded. "You have a range limit, nowhere else you can be."

"I... if you try to hurt her, I. I will stop you. S... sir," Theo responded, stepping between us.
"No offense, kid," Stormtiger scoffed. "But you're not your father. I assume you triggered. Probably even something scary, if you got a power like your father. Maybe your real mom's. Can't rule that out. So maybe you do have the ability to kill me. But you don't have the balls to take a life. Especially not someone you know by name, Theo."

I stepped back as the air around Theo started to ripple. His power was actually pretty impressive, and I wanted them to see it. Liquid metal manifested around him. It would stay fluid, allowing him complete movement. It absorbed energy directed against it, and he could use that directed energy as a touch ranged attack. We hadn't really tried to find an 'upper limit' to his armor... but our Respawn-assisted testing capped at 'everything Crystal could throw at him'.

He could see through the material, and it didn't seem to hinder his breathing. His fully established armor was mirror reflective, which made for some uncomfortable visuals. Spend too long looking at him while he moved, and it would give you a headache. Riley insisted this was not a power, simply the same kind of natural process that causes motion sickness.

"Well, that is impressive," Stormtiger admitted.

"More like your grandfather than your father, then," Crusader said with a smile. "Maybe a bit like your aunt. She could summon out of mid air the way you did. They'd be proud of you."

"Still, if we wanted to kill the dyke, you couldn't stop us." Stormtiger. What was with that guy? One more man who liked to talk shit when he knew he couldn't back it up, as Crystal succinctly put it before.

"He probably couldn't," I admitted. "But she can."

And then the air around us started to growl. Except it wasn't a growl. It was buzzing, so dense that it was impossible to separate one sound from the next. A whirlpool of noise and anger. And it could speak. "DoYoU know hOW manY bEEs arein sIx MILESof fARm? IdO." I cringed. Even being back in the second vehicle, safely four miles away, that is disturbing.

"Okay, you've made your point!" Purity exclaimed. "Now, everyone calm down. I am not going to fight you again. I'm going to take my family and move to the other side of the fucking country. Or I was. Skitter's new 'trick' makes me think Antarctica has lovely weather this time of year."

"Sorry, Kayden. Ma'am," Theo said, his metal sloughing off to the ground. It didn't vanish when he
was done with it. He could even leave it in a "solid" state, although it wasn't nearly as strong as when his power was controlling it. Barely any better than the pure iron it seemed to be made of. "I'm not going with you."

"What?" Purity asked. "Why would you want to stay?"

"To make things right," he answered. "I can be a hero. A real hero. I won't give that up, not even for you."

Kayden smiled, even as she started to cry. "I understand. We'll keep in touch. Probably won't be safe for you to write us, but I'll write to you. And make sure Aster knows her big brother's one of the good guys." Then she pulled him into a hug.

"Thank you, ma'am," Theo said. He hugged back, though looked decidedly awkward doing so.

"Stay safe," she whispered. I just watched until they broke the hold. The other Nazis had the good taste to stay out of it as well. Whether out of respect for the moment, or respect for their boss, I didn't know. Probably depended upon which one you asked.

After they seemed to be done, I spoke up. "Treat your daughter right, Kayden. Don't go play supervillain anymore. Forget the warnings I gave you about hunting you down. Look at her and remember that treating her right means leaving this life behind. She's the one that will pay the real price if you can't do that. Do not do to her what Kaiser did to Theo. What Marquis did to me."

I left. Maybe my words would make a difference.

================

A/N- I so love what this chapter establishes for the future.
"Taylor," I sighed as I held the girl's hand. "You're in here for me to heal you almost every day. There's such a thing as too much training."

"Just an accident," she rebuked. "Theo's new to his power and needs someone to give him practice."

"Let Zach handle it," I countered. "Or use your damn changeling. It's what they're made for."

"Respawn doesn't know how to fight, either," she hissed as I forced her shoulder back into place. "Have to make him train more seriously. Changelings are useful for real danger, but we have to keep our real bodies in good shape. Can't..." She paused again as my power forced her collar bone to mend itself. "Can't rely on them. Won't always be available."

I couldn't argue with that part of her logic. The things were nice, but they weren't perfect.

"You should start training, too," Taylor insisted for, possibly, the thousandth time.

"No," I said. Again. "I can heal you. I can't heal myself."

"We have Respawn for that. Riley, even, if you'd prefer. Anything she would have done to you has been done already. Lisa's pretty much certain that, other than a few details that are understandable given the circumstances, she didn't alter you."

It was true enough. The freckles were gone. Old scars, as well. Body hair was not only gone, but what came back was thinner and slower. Like I was a child again. This didn't fill me with confidence about other possible issues. But I was, hilariously enough, in better shape than I'd ever been before. Tuned on the assumption of myself, as an athlete. I had abs now. They were really nice. Sometimes I even posed for myself in the mirror.

"Whatever," I muttered, taking my mind off that thought. "Maybe I do need to start training. But stop deflecting. You're training too much. I'm being forced to use material off the Yggdrasil just to restore body fat. You know, the stuff you're suppose to have? To keep you alive. That you don't because you keep destroying tissue faster than it replenishes."
She looked almost angry at me. Usually that might even make me back down, but not this time.

"Fine. I'll stop the physical training for a while, except my jogs," she yielded. She yielded? Wait. What?

"Physical training?" I asked. "What exactly are you planning?"

"I need you to make me blind. Maybe deaf as well. And shut down the beacon network, at least for the time being."

"I... what would that accomplish?"

"I've been discussing my power with Lisa," she answered. Oh, wonderful. "I am able to do more with my insect senses than I realized. But my human senses are getting in the way. If you take them away, temporarily of course, then I could be that much stronger. The beacons... might be making it harder for me to reach that breakthrough on my own. So they have to go, at least until I'm practiced enough to handle them."

"Why are you doing all this?"

"Because we need it," she replied. "All of us need to be at the top of our game. Sure, we smacked down some two bit thugs who thought they were the top of the food chain. And we did it easily. But that's actually a problem. If we don't keep pushing, we'll get soft. We'll make mistakes. Something will happen that we weren't prepared for, and we won't be able to adapt and respond to the emergency."

"Valefor," I said. "That's what this is about, isn't it?"

"That fucker nearly killed you!" Taylor exclaimed. "And Lisa! It was nothing but luck that saved you, and the fact that Riley was expected to hide from the team. If not for her and I not actually being at that meeting, we would all be dead!"

"That was a mistake," I said. "And we learned from it. It won't happen again."
"It shouldn't-" her voice caught. "It shouldn't have happened at all. I could have stopped it."

"This isn't about us, is it?" My voice softened. Trying to convince Skitter to take care of herself required the 'command voice'. I didn't need that here.

"That fucker used my friends to get to me," her voice quivered. "Used my children as fucking bombs... not because it was smart, but because he wanted to twist the fucking knife. Fucking. Used. Them. All."

Oh god.

There were tears in her eyes, now. I pulled her into a hug. She clung back. Hard enough that it was actually a little painful. "I'm sorry," I said gently. "It's not your fault. There's no way you could have known Valefor was even in the city. Lisa didn't. You're not responsible for some psychopath with a demon complex deciding to target us."

"Yes, I am," she sobbed. "We all are. We knew this would happen. That our name, our actions, would be seen as a challenge by fuckers like the Fallen. We did it anyway, turned us and our friends into targets. We knew the risks. I just... I thought they'd be risks to us, not our families. I... I should have..." She broke down.

I held her head as she cried. "You've been bottling that up this whole time? Taylor. You have to stop blaming yourself for everything. We're not really gods. Naming conventions and powers aside, we're still human. We're allowed to make mistakes. You should have talked about this sooner."

"Would it have made a difference?" she muttered bitterly. "Talking about it doesn't make the pain go away. Knowing the bastards suffer for it permanently. And making certain it never happens again. Those are the only things that matter."

Suffer permanently? "Did you have Riley do something 'special' to them?" My voice hardened again. This was not something I wanted and she knew it.

"She wouldn't have agreed even if I'd asked," Taylor muttered.

That was a relief.
"I asked Blasto to do it," she added.

Less relieved now. Except not as much as I would have thought I'd be. Skitter was too careful to make any mistakes that would come back to us. Fucking Valefor. Using children as suicide bombers.

I sighed, still holding my general in my arms. "From now on, you talk to me. No decisions behind my back. We're partners. If it happens to you, it happens to me, too. Remember that from now on."

"Thanks," she muttered. Then she spoke up. "Oh, I know you heard that. It didn't happen and if you say otherwise, I will find a way to make you stay dead."

"Understood!" Respawn yelled from the hall. "Hey, Lisa, I am now under orders to say I don't owe you fifty bucks!"

=============

A/N- Ah, me and my mood whiplash. Spoiler: I still pull shit like that.
Toybox wouldn't deal with us directly, for some reason. Lisa's guess was that they were afraid to be associated with heroes. Not that they normally had a problem with that, but we were currently national news. Arguably international, if Canada counted. I personally had a hard time of thinking of Canada as another country, since I could drive to Montreal for a weekend.

One of Coil's drivers drove us to the meeting place. Well, Lisa's drivers. Either way, I wasn't terribly happy with using what was unquestionably illegally obtained wealth for all our basic luxuries. Or, in this case, minor essentials. We really needed to find something that we could reasonably charge for without looking like we were just in it for profit. Sure, the Yggdrasil sewer arrangement was excellent for all parties, and we were getting more out of it than the millions of dollars it'd be worth as a paid service could purchase.

The fact was that, one way or another, Coil and Lisa and Taylor currently owned more land in Brockton Bay right now than I wanted to think about, including almost everything in the docks and over half of the land within a mile of our base. They were going to profit massively simply for Pantheon's base of operations being where it was... didn't like that, either. But at least that was legitimate, though definitely not 'honest'. I rather hoped the system we'd worked out with Parian went well. That was something I could feel good about.

In any case, Khepri and I had taken a trip out into the middle of nowhere, to meet a man known as 'Marketing'. He had a thinker power that let him calculate fair value to, well, almost anything. He was a well respected neutral party, and would serve as an intermediary between us and Toybox.

The place we were at was actually very nice. I hadn't realized a restaurant whose only apparent source of customers was semi drivers could be this nice. The prices were surprisingly good, too. Sadly lacking on the vegetarian options, however, so I settled for the salad. This 'can't look at meat anymore' thing made going out to eat a real pain in the ass. Had to be worse for people who couldn't magic up a meal simply by putting a hand on the table. Taylor went with an omelet.

Marketing wasn't a particularly noteworthy man. Black hair that was just showing shades of graying. It was fake. Or, at least, the gray was. I was amazed our changeling senses could pick that out, but yes. He had gone out of his way to make himself appear a bit older. He wore durable, but perfectly normal clothing like one would see from the dockworkers and construction crews.

"First, may I ask what you are willing to offer Toybox?" He started. "I presume your refusal to part with Bonesaw's equipment and technology has not changed?"
So he knew about that. Who revealed that secret?

"We can't," I answered. "Far too great a risk that it'll be used."

"We do have Blasto trying to find a package of acceptable details for us to offer others," Khepi offered. "It's just that most of her designs are too horrible to consider handing over to anyone. She made a zombie virus."

"A zombie virus?" His eyebrow raised.

"Not hyperbole," I confirmed. "It's basically an airborne and even more aggressive variant of rabies that makes people enraged and cannibalistic. Includes some kind of pheromone system so they won't attack other infected. Near as we can tell, it's deliberately designed so approximately one tenth of a percent of the population will randomly be immune. I don't want that in the hands of anyone who'd be willing to purchase it."

"It's not even in the top ten most deadly list," Khepri added. "It seems like she made it for 'fun', not as a serious plan for ending the word."

He cleared his throat. "I see. Normally I take pride in my neutrality, as such I would have accepted your refusal at face value. On a personal level, however, I admit I'm glad for your decision. Shall we move on to the Yggdrasil?"

"Yes. I believe the costs to them in maintaining their pocket dimension is fairly significant," I replied. Marketing didn't offer an opinion. "Yggdrasil is an ideal bioenclosure organism, consuming almost any waste product, including waste heat energy from machinery they might be using, and converting it to safe, even edible, biomass and oxygen. It is a cooling system for a power plant, waste disposal, and life support all in one."

"I see," he said. "Radioactive materials?"

"Heavy metals and other elements not used for life are filtered out into a nearly pure state and stored in pods," I stated, pulling a ball of yellow metal out of my pack. "Solid gold. Only a few pounds of it, but pure."

"Worthless," Marketing dismissed the rock. "With the existence of matter creators and transmuters,
the precious metals market no longer exists."

"Yes," I agreed. "However, it's the purity that matters. It can, essentially, refine uranium if you need it to. Any tinkers that need to work with pure materials for their more delicate projects might see value in a reliable, cheap and fast alternative to centrifuges." I wasn't so happy with the 'uranium' thing. But frankly, tinkers could make better bombs than nuclear already. And 'dirty bombs' were a far more deadly use of uranium than actual nukes, in the modern world.

"That is true," he agreed. "But seems to be the crux of the issue. You have something a lot of people would have at least some use for, but no one has a true need for. It makes the value more useful to the community as a whole than to individual members, and that complicates the market values significantly."

"I understand," I replied. "Maybe we should wait until Toybox gives up on trying to cultivate their own Yggdrasil plant. I know they've taken samples to grow. It won't work."

"I know no more about the inner workings of the Toybox than I do about Pantheon," Marketing responded.

"I understand. But when you speak with them, let them know that it's completely dependent upon myself for survival. And optimized for Brockton Bay. It won't thrive in a different environment. I'll have to create an entirely different species of the stuff for their needs."

"I will relay the message," he responded with the same neutrality as I was coming to get used to. "How about we discuss what you wish to purchase."

"Cranial's technology," I responded. "It's the highest priority. A device that is fully capable of upload and download."

"She probably won't want to part with the full equipment," Marketing responded.

"Probably not, but we need it for one of our long term projects," I insisted. "You can maintain confidentiality, of course."

I got a nod.
"We are developing life extension techniques," I told him. It was our card to play, and this was the best scenario to use it. We were going to have to use it. "Ten years added to her natural lifespan, alongside the usual touchups that I provided to patients as Panacea. No negotiations. No questions. And if we believe for a second anyone else knows we have this ability, then the offer is rescinded and shall never be made available again."

He blinked. "Very well. I shall see that message delivered personally. Are there any other requests, while we're here? No sense in repeating this any more often than we need to. It's better for you to list all possible interests."

"Yes," Khepri replied. "We're in the market for some antigravity technology. Our team is sorely lacking on mover powers. I know, we don't need Toybox for such relatively common tinker tech. But it's on the list of things we need to get from somewhere. If their price is reasonable, we are interested."

"And energy manipulation technology," I added. "We are planning for direct combat against the Endbringers, as we said already. If any of Toybox is willing to help, we've got the means to meet the monsters head on and hold the line. The biggest limiting factor is concentrating enough power into a small enough area to actually hurt them. In the worst case scenario, our constructs die, instead of the parahumans who need to fight them. Even that would be one of the greatest victories ever achieved against these monsters. In the best, we send them back to whatever hell they crawled out of."

"Interesting," he responded. "I shall see what I can accomplish."

We paid for our portion of the meal, and the waitress was surprisingly okay with heroes in costume. Very polite, didn't pester us or anything. She probably figured we were pretty much obligated to leave a generous tip if she did well. If so, well, she was correct.

"Teleportation," Taylor muttered after we were outside.

"Excuse me?"

"Nothing. Marketing must have some kind of teleportation tech. I heard him say 'door me', and then he was gone."

"Oh," I said. "Makes sense. There's only how many tinkers working for Toybox? Probably bought
something like that. We probably should look into it as well."

"Makes sense," she replied. "Still, we might want to set up anti-teleport plans for our base. Eventually someone's going to use methods like that to come after us."

"Yeah," I agreed. "I'll talk to Riley about it."

=============

A/N- This was one of those "pays off in the future" chapters. And boy did it pay off.
Lisa looked at us. "You two have to start dating."

"I don't think I know anyone to date..." I started.

"No. Each other. You have to date each other."

What? "What?" Taylor and I asked simultaneously.

"It's a matter of image," Minerva explained. "You need to be more approachable to the public. Let them see you as having human needs. And romance is a fundamental need for most people. It's a bread and circuses type thing. We're providing for enough of their physical needs, sure. But we need to give them something that captures their imaginations and emotions."

"What, anti-Endbringer weapons aren't enough?" Taylor asked.

"Well, yes. And no," Minerva responded. "If they don't work as well as we hope, then no, not enough. If they do work, but work too well and maybe even kill the fuckers, then we need the 'softer side' even more desperately to maintain public support. The only thing scarier than being an Endbringer is being able to kill an Endbringer. And we don't have the 'benefit' of Scion's mental handicaps to make us seem harmless despite our power. So yes, you have to date."

"Why does it have to be us?" I asked. "Why not have you and Respawn date or something?"

"First. I named myself after a virgin goddess for a reason," Lisa answered. "I should probably go public with the whole 'asexual' thing, anyway. There's a nicely sized minority of asexuals out there, many of whom are young and in emotional turmoil over their sexuality, or lack thereof. I'm sure they would appreciate having a high profile hero as 'one of them'. Plus all the other parahumans whose powers make intimacy difficult, one way or another. I could do what Legend did for the gay community."

I couldn't think of a thing to say right to that. Every part of that was callous as all hell, yet completely true. It's not like she'd be lying. As opposed to the whole 'Jewish' thing.
"Second. There needs to be plausibility here," she continued. "The pair of you could be married to
different men and have six kids each and both be pregnant with another, and it would still be more
believable that you're in committed relationships with each other than the idea that Respawn has
managed to have a second date with anyone."

"You know, I am in the room," Respawn muttered. "Sticks and stones don't mean much to me, but
words like that cut to the bone."

"Can't Taylor just date Crystal?" I asked.

"Why do I have to?" Taylor asked. "I'm not even into girls!"

"Neither am I!" Crystal added.

"Then why'd you ask her out?" I asked my cousin.

"To make you jealous so you would!"

I just collapsed face first into the table. "Hate you. Hate you all."

"Wouldn't work anyway," Lisa replied. "You two are the leaders and partners of the group. As the
centerpoints, you need to have some kind of obvious relationship bond with each other. And
friendship just won't cut it. We might be able to play off with Amelia's adoption that you two are half
siblings. Even your powersets are similar enough in their own ways to sell the idea..."

"Not an option," I said coldly. Taylor gave a hard nod in agreement.

"No," Lisa agreed. "Too easy to disprove, regardless. There is one other option."

Fuck you, Lisa. "Okay, let's hear your other idea. But I'm leaning toward 'ignore these jackasses and
go on living our lives as normal', myself."

"Funny you should mention that," Lisa grinned that special grin that made me want to melt her face.
"Because that's the exact plan."

What? "What?" Taylor and I again asked simultaneously.

"What we do is, we make sure the two of you are close to each other during all public events. You're always seen together, supporting each other's decisions and otherwise working as a tag team whenever possible. Casual contact, such as handing microphones to each other, whenever possible. Then you can deny a relationship all you like, but everyone will see you together and believe that you're obviously together together and just don't want your personal lives out in the public view. It's perfect!"

"But... isn't that what we were already doing?" I asked. Lisa nodded.

"Fuck you, Lisa," Taylor muttered.

==========

Another Canon Omake, this time from a SBer, Mercsenary

Title: Inventory
"That's not the zombie virus."
Heads turn to stare at Riley. Taylor and I had been relaying what our meeting with Marketing had entailed.
"What?"
"Thaaaat's the rage virus."
"Then... What's the zombie virus?"
"Oh thats the rage virus combined with a modified version of necrotizing fasciitis. I made it airborne."
Silence greeted her.
"See, I thought instead of having 10% of people being immune why not make it 100% lethal. Get infected and now your flesh is rotting and you have an insatiable hunger for human flesh. What's not to like?"
Crystal was starting to turn green and out of the corner of my eye I saw that Taylor had frowned. Uh oh.
Unfortunately Riley took it as a cue to continue.
"But don't worry! I made everyone immune to it the first day they got here. The vaccine's in the air."
That, that wasn't quite what I was going to ask but okay, "What about other people?"
She pouted. Pouted! "What about other people?"

Our heads turn to Blasto, who shrugs nervously.
"Well... that's the one vial I found under 'Too much Fun'. Everything else was accounted for."
I sighed and resisted the urge to put my head in my hands. Taylor wasn't under such restraint.
"There wasn't anything else?" she asked.
"Nope."
"So what you're saying is that we may or may not be missing a vial containing an ACTUAL zombie virus."
"Um... yeah."

---

This time I didn't resist the urge to massage my forehead. Now we had a loose vial of zombie, cant believe I would ever say that. After that little bombshell everyone else had filed out of the room in a daze. Couldn't blame them for that. Only Taylor, Riley and I were left in the room and Riley was... whistling.

Wait a minute.

I looked over at Taylor. She had stopped and frowning and seemed to be squinting at Riley, who in turn, seemed to get louder at whistling.

I mentally tilted my head and something unbidden rose to mind. "You dont notice that? Bone-Riley whistles when she's trying to hide something."

... Fucking Thinkers.

I got up and walked around to Riley and held out my hand.
She looked at it and then looked up at me.
"How'd you know?"
You whistle when you're nervous or trying to hide something.

Instead I just raised an eyebrow.
She giggled and put a vial in my hand.
"Big Sis knows me too well."

She got up and skipped over to the door before turning back to us.
"Huh, Lisa was right. Big Sis and Taylor do look cute together."

A muffled bang sounded and a quick glance over my shoulder revealed that Taylor had let her head hit the table in front of her.
"They're never going to let that go, are they?" came the muffled question.
I sighed. "I think it's going to be our lot in life."
"So, check out the headline this week," Taylor said, smiling as she walked in. Already in costume. How the hell is she such a morning person? At least she brought some food. Apparently Tattletale convinced a nice doughnut and coffee shop to move in at the closest possible street corner to our base. Best. Day. Ever. Maybe we could get a pizza place, next.

Theo followed after her, looking distinctly worn out. I'd given him a few touch ups to improve his metabolism and muscle growth, but he still needed to work for it. Anything completely artificial would be destructive to him in the long run. Some on levels I could fix, like bone and joint damage. Others I couldn't, like coordination and a loose equivalent to 'phantom limb syndrome'. Better simply to come into it 'naturally'.

"Caffeine first," I muttered as I took my cup and grabbed a fresh chocolate doughnut. As I was enjoying my breakfast, Lisa walked in, lured by the smells. I didn't pay too much attention to what she picked.

"So, what's the news?" I finally asked.

"Well, the headline just called our new project 'scrap soldiers'," she said, showing me the paper. Sure enough, that was someone's idea of clever.

"Could be worse," Lisa muttered. "Last week that one called it 'poo police'."

"Still eating breakfast," I reminded her.

"Yeah, seriously Lisa, I'm already stuck with a few trillion scavengers linked up to my brain, I have a hard enough time ignoring that without you reminding me."

"Look at it this way," she said. "We just gave the police force equipment that could be used to conquer a small country. When the other alternatives read along the lines of 'teenage girls with a god complex build private army of super soldiers', I'm okay with the stupid sounding headlines."

"Oh, good, you bums are finally up!" Zach said from the doorway, sounding far too chipper. Bullshit 'don't need sleep' powers. So unfair. "We have an announcement to make."
"Please tell me you didn't violate too many laws of nature," Lisa moaned. "My head still hurts."

"Just about a dozen or so," he beamed. "Presenting to you, the Cuddle Bug!"

He reached over and pulled out a six limbed blue and white pastel colored stuffed animal. It had mothlike antennae and big, solid black eyes on a round face. The feet were large pads on short limbs. He scratched its neck and its eyes closed and it started to purr, loudly enough for me to hear it from about fifteen feet away.

"What. The hell. Is that?" I muttered.

The things antennae pointed straight at me. "Ah. Ish. Zerg!" it squeaked loudly, as it extended out all its limbs, grasping toward me.

"It's our newest line of living toys," Respawn replied. "They're lightweight, have the ability to learn phrases and training. And are basically indestructible. Watch!"

He held the thing out at arms length and drew back his leg.

"Ahh! No! Don kick da Zerg!" The creature shouted. Although said shouts were barely louder than normal human speaking volume. It was then dropped and punted across the room, screaming "Wheeeee!" the whole time. Or at least for a couple seconds before it collided with the far wall. And stuck there with its padded feet. "Ahm okay!" It announced.

Theo reached over and gently removed it from the wall. It wrapped around his arm and started nuzzling his hand with its face. Had to admit, the thing was cute for an abomination against nature that would surely earn us the ire of basically every bioethical group on the planet. Also possibly PETA.

"Did... did you waste the talents of two biotinkers all night just to create that?" Taylor muttered.

"No. Yes. Maybe kinda? Not just that!" He answered, looking a little dejected that we didn't find this monster, no matter how adorably fluffy it was, nearly as amusing as he did. "Hey, Blasto, we're losing the audience. Wanna help me out, here?"
Ray came out. "Uh, yeah," he said. "It's basically just one of my plant hybrids, coupled with the tech we just got from Cranial and some of Riley's efforts to hybridize the two into something better with her own talents."

"We are supposed to be using that equipment to cure Noelle and maybe save the people frozen by Bakuda's damn crystal bomb," I informed him angrily. "It is NOT a toy. And you shouldn't be using it to make toys."

"Prototype testing," Blasto defended. "We're working our way up the chain, testing various 'learning algorithm' programs. They're already smarter than my constructs ever were, but still functionally somewhere between an incredibly stupid cat, and a legitimately brain damaged parrot that keeps its ability to mimic human words. We're already building up to installing true, functioning instincts into the zerglings so that Khepri can control them more effectively."

"How much more effectively?" Taylor asked.

"If it works how Riley's convinced it will... no upper limit," He informed her. "The thing about your power is that it, essentially, relies on the insects to do their own thinking. Or something like that, I'm still years behind her in understanding this body-brain-power interaction stuff. Since the artificial lifeforms don't have instincts of their own, you're forced to do all the mental lifting for them instead of letting them do their own thing with only a light touch from your mind. The more things we can program into them while still keeping them registered as 'bugs' to your power, the easier it'll be. If we can 'build' the proper instincts into a genetic format, we can even give them nonstandard senses like infra-vision and echolocation. That you'll be able to use. And we could theoretically produce hundreds of the things with our existent resources. Especially now that Theo's on our team."

Taylor just sat there, mouth agape. Why does Skitter frighten me more when she's excited than when she's angry?

"Well, you sold my partner that this is worth the effort, clearly," I stated. "So that's a start."

"Aww... I didn't get to use Fluffy," I heard Riley complain.

"Who and what is 'Fluffy'?," I asked.

Riley came out, still in her apron, carrying a giant white spider. "This is Fluffy!" She announced.
"He's my Cuddle Bug! He doesn't talk, but he's got an extra pair of arms for extra hugging power. And he turns colors. Pink."

Surely enough, the white spider's fur fluffed out and turned pink. "Blue, yellow, white," she instructed, and the colors rippled through the giant spider.

"Please tell me that's all the monster pets you've made," I said.

"Well... I need to make one more..." Riley said. "We're working up the chain of lifeforms. Fluffy's the arthropod level. Zerg's the bird level. Higher mammals are next. I'm thinking of a bird horse that I could use as part of my cape persona!"

"Bird horse?" I asked. "You mean you want to create a pegasus."

"Yeah!" she agreed excitedly. "We need to test artificial instincts in advanced lifeforms. Horses are about as smart as it gets without going dolphin or great ape. Apes don't have a lot of hardwired instincts, due to how fragile their infants are, they rely more upon accelerated ability to learn outside the womb than genetically programmed ability. The exact opposite of what I need. And dolphins would be a pain to work with."

"I suppose horses are otherwise the perfect animal?"

"Well," she said. "Zebras might be a little better. But horses are easier to get DNA samples from. And I could make her into a beautiful black pony with raven wings and call her Atropa and..."

"Nope!" Lisa interjected. "No naming any of us or our things after death itself. Zach gets away with it because no one really thinks of 'death' when they think of 'Osiris'. Plus he and his powers are as nonthreatening as it gets, really."

"Aww," Riley whined. "Well, can I at least make my flying pony?"

"You'll be able to make it fly?" I asked.

"I'll be using some of the antigrav equipment. We have more than enough for the Queen of Blades"
armor. And we'll need to test the cybernetic enhancement tech and support frames if we ever want to make those flying troop carriers and stuff," she insisted.

"But you're really doing it so you can have a black pegasus named 'death'," Minerva stated. "May as well let her have the thing. She's picked up our M.O. of 'I do this because it's helpful, but it's really for me'. We can reward her for being a quick student. Also: I have an idea that'll make it work for us as well. So agree because it's nice, but it's really for us."

Riley looked at me with a smiling, hopeful face. Her arms clutched tight around the giant spider.

"Okay," I said. "You can build your pegasus. But only the one. And then we're moving on to the real reasons we picked up this technology."

"Keep the notes around for making a second," Lisa instructed.

"Okay!" Riley shouted. "Thank you! Thank you! Thank you!" She turned and bolted toward her lab. Only to trip on her spider's legs and fall right on top of the thing. She got up and ran off, chased quickly by the oversized arachnid.

"Two questions," Taylor said. "First: Lisa, what are you plotting this time? Second: when do I get a giant spider?"

==============

A/N- Both the plushy Zerg and spider existed before I started writing this story. Took me over a month to get to them.
I went back to the lab with the samples I'd collected of Noelle's tissues, from the timeline that Coil wasn't forced to collapse. Amelia failed to fix her, and I even felt guilty about that.

"Knock, knock," came a less than pleased voice from the doorway. Minerva. Dangit! "Mind a little company, oh unholy terror?"

I hated it every time she did that. Reminded me, reminded my Sister, that I wasn't a good girl. The lurch of fear in my gut that Amelia would see that and abandon me. It hurt to think about, losing her. I can't let that happen. My hand wrapped around one of my surgical tools.

"Won't work," Minerva replied. "Kill me? Maybe. Though I doubt it. Do it without her finding out? Impossible. You've played your cards, Bonesaw. One mistake. Only one. And she'll never forgive you. She'll have to kill you herself because she can't risk anyone else trying it. She's not like us. She'll actually feel remorse over it. It'll hurt her. Is that what you're going to do? Hurt your sister?"

"Jack liked the mind tricks, too, you know," I muttered, my cheerful facade faltering for a moment.

"No doubt," she replied, unflinching. "The question is: do you consider that an insult or a compliment?"

Do I what? I almost asked, but then didn't. I expected her to feel insulted, of course. But what did I think about it? I squeezed the knife. If this was the S9 with Jack in charge, she'd already be dead and I'd simply be chided and sent to bed. Instead... she was right. One mistake, one act of disobedience, and my punishment would be fatal. And I didn't know how I felt about it.

"That's a question you can think about for later. Right now, I'm far more interested in why you sabotaged Amelia's attempts to heal Noelle," she spoke up after I couldn't give her an answer. "You knew the risks, and did it anyway. Why?"

I froze. I was caught either way. This was my mostly unmodified human body, with only the barest minimum alterations from the neck down. I didn't want to sully the gift She had given to me. Lisa would be stronger, simply based on size. An eleven year old's body against a seventeen year old? If I were using Clarice, that would be different. But I was ordinary Riley right now.
"Your only way out of this is to tell me your plan," she offered. "All of it, and you know I'll know if you're lying. You're risking your life and your new found pseudo sibling's... whatever you have going on there... over this. It must be important."

"You can't read her anymore, can you?" I asked. Interesting.

"No," she admitted. "Not the important stuff, at least. Not why she wants to keep you alive. You, however, I can still figure out. But I'm about six minutes from a migraine. So you tell me what you're planning, or I tell her what I know. Remember, I'm here for Taylor, not Amelia."

"Good, but don't waste your time on the tears," she replied. "You might fool others. You might even fool yourself. You won't fool me."

....

"A mind transfer device," I informed them.

"A... can that even be done?" Taylor asked.

"There's some limitations," I acknowledged. "You'd need a blank brain to transfer into. Using an already existent mind would either kill both participants, or result in a condition much like Butcher."

"That's fine," Minerva added. Part of her plan. "We're already looking at Blasto for mass production capabilities. He could construct human clone bodies, complete with blank brains, right?"

"I don't know," I responded. "But coupled with my own equipment, I'm fairly certain we can. We would need Cranial's technology as well."

"Would it be able to work on others? Like the ones killed when fighting Crawler?" Big Sister asked. My improved senses picked up the waver of hope in her voice, and I suppressed my pain. She was asking me if I could give Her Glory Girl back. The sister she actually wanted.
"Maybe," I answered, and the words felt like ice inside my chest. "If Bakuda's weapon was as instantaneous as it appears, then it should have captured every synapse in perfect position. The only question is if the crystal itself has fine enough articulation to represent it, and if the material itself isn't disruptive to the scanning technology. I might have to cross interface some technologies."

"I understand..." Amelia said. I wanted to run over to her and comfort her. I couldn't. She didn't want me.

I would keep being a good girl until she changed her mind.

....

"Does he suspect?" Lisa asked, after we watched Blasto leave.

"No," I answered. "He doesn't understand the technology past the most fundamental of levels. He's second tier, as far as tinkers go. Good at what he's good at, but no real talent for cross-specialties. Mannequin was the exact same way."

"Good," she replied. "We hide the next 'breakthrough' for the Endbringers, understood?"

"It should be sooner," I complained.

"Too dangerous," Lisa answered. "We are already far too powerful. They can't be allowed to know until we're a fixture. Until we cannot be removed. Before then, the risks are simply too great."

....

"Mind transfer?" Trickster asked, looking at my Clarice body.

"That's the idea," Blasto responded. "We'll transfer Noelle's mind into a cloned body. Her old body can be disposed of easily. There are some side effects," he added to clarify. "But nothing I believe you'll consider problematic."
"Such as?" Noelle's voice came from the speaker phone we were talking with.

"Well," he said. "We can't use your actual genetic material. Normally, there's a pretty good chance that you'd keep your powers if we used your tissue. Since your powers are the source of the problem... we'll want to avoid that."

"So I won't have my old body back," she recognized. "Fine. I didn't like it much to start with. As long as I'm free from this abomination."

"You'll also experience some short term memory loss," he added. "Nothing significant. Minor gaps. Confusion about your really early childhood and anything in the past month or so. It may also take a day or two for you to regain fine motor skills."

"Worth it," Noelle said. "Even if it might kill me, it's worth it."

"No worries, it can't kill," Blasto replied. Interrupting Trickster who was about to speak up. "You fall asleep and wake up in the new body a few hours later. I recommend you pick out something you'd like to look like using the CGI modeling program Coil has. It's better we have a completed body before the transfer begins. And we'll need some time to properly set up." The program was more for forensics and facial recognition than this sort of thing, but it wasn't hard to use to play design-a-body.

"There's no reason to limit yourself," I added. "Anything you like. Anything that will make you happy. There's one potential danger that we cannot control."

"What?" Trickster asked, eyes hard.

"A natural trigger," I replied. This man reminded me a lot of Mannequin in a weird way. Would he snap the same way, if his loved one was taken? Yes, I decided, he would. "There is no way of predicting natural triggers. Or what yours would look like if you had one. It might mean a relapse, and if so, we can fix you again at some point in the future."

Our work was tedium, for the most part. I entered Noelle's chamber and scaled my way up her side. Strange bodies formed near me, formed of flowers and nasty, acidic fungi. They didn't kill one another, strangely, nor did they attack Noelle. But they were quite hostile toward me. Coil told us this was commonplace in our failed attempts. They slowly spread until they formed a small garden.
around the monster girl. Meanwhile, I spent my time wrapping numerous electrodes on her scalp and neck, recording her entire physiology on a half dozen different machines.

"Alright," I informed her. "We'll just need you to stay calm for another hour. If you can do that, everything will be prepared and you'll wake up in time to enjoy the fireworks tomorrow."

She smiled. "Yeah," she said. "That sounds nice."

"Okay, gotta go get the rest of this set up," I replied, then I leapt off the side of the girl, landing several feet away from the plant and doing a roll further away. "Sorry, mutant plants! No dinner for you today!"

They hissed and spit at me in response, but I had already retreated from the room.

"Okay, Sundancer," I instructed. "Remember, after we give you the go ahead, you incinerate everything in that room."

"I... are you sure?"

"Listen," Minerva replied. "Once we do this, the only thing that'll be left in there is the monster. The proto-Endbringer. Your friend will be safe, in here."

She patted Noelle's clone body of choice. She'd taken our offer and ran with it. The body could have a career as a model or actress, easily. Slim and athletic. Almost as tall as Trickster, with a face that could be described as 'cherubic'. And luxurious black hair- natural, of course, it would never lose the coloration until old age set in.

"Okay," Sundancer said. "If... if you're wrong about this." The threat was in her voice, even if she said nothing. She lacked the confidence to make me believe she'd act on the threat.

"If they're wrong about it, you'll have to wait in line after me," Trickster replied. Him I believed. He really would hurt us. Hurt Her. I started running through ways to quietly remove him as an issue, without troubling the rest of the Travelers. There were a few- my thoughts were interrupted by a hand on my shoulder. Minerva. I changed my focus back to the task at hand. The recording was over eighty percent done. A series of command pulses, and Noelle fell asleep, as planned.
"It'll be a few minutes before the transfers are complete," Minerva lied. "We'll have to leave the tinkers to their work. You know how they get about their toys."

The Travelers clearly did not, not really, but Trickster couldn't admit that without looking ignorant. So instead he chose to actually be ignorant.

The copying itself was actually the easy part. Studying the information, I concluded that any attempts to replicate parahumans would be a dozen time more difficult, if not moreso. It could take years to produce viable clones and would require constant monitoring that whole time. But a full human mind? An hour or less. Noelle's nonhuman aspect? That was taking more time, but her power was incredible, and we had weeks of data from the sensors I had installed in her room.

That hour went by in what felt like seconds. Blasto attempted to pretend he understood the data on the screen, the streaming numbers and charts and data. If I'd given him hours, he might even have figured out the truth, but with only seconds to spare between screens as I switched through, acting as if I was monitoring the copying process that was being handled automatically while really studying the power's data.

I now knew more about Noelle's power than anyone alive. She was truly incredible. I still didn't know how she induced new triggers in her monster-clones. We hadn't let her clone any parahumans. An insane and omnicidal version of my Sister would be a true terror to behold, possibly unstoppable, and I wasn't fond of the idea of testing any of the rest of us, either. Maybe someone nice and safe. Like Uber and Leet.

I hit the button. "She's been transferred," I told the others. Instruments flared up with nonsensical data as Sundancer started the sphere of nuclear fire within Noelle's chamber. The equipment was designed to measure lifesigns, not miniature suns. I would acquire nothing of value watching it. But that didn't matter. We now had a full copy of Noelle's memories, and a stored, living, sample of her genetic structure that had already been cultured and sustained. A copy on demand, if ever we needed her power. After all, we only needed was her power, not for her to be a functional or sane being.

Trickster was in the room in moments. "She'll need time to recover while her new brain adjusts to the alterations," I instructed him. "Waking her early could be as damaging as shooting her in the head."

"I..." he moved back a little, uncertain. "I'll make sure she's not disturbed."

"She's sedated for now. Don't give her any drugs. Her body has temporary organs that will supply
nutrients and water. See to it that she sticks to the very specific diet and exercise regimens we've given you. Any deviation might cause irreparable damage," I handed him the sheets of paper I had with me. My glance at the equipment confirmed the lack of a Pollentia or Gemma, and none of the mutagenic N-cells I had identified.

Minerva backed me. "You've waited this long," she said. "Just a few more days and this nightmare is behind you forever."

He nodded. He was loyal to Noelle. I sympathized. At least she reciprocated his feelings.

I would continue to be a good girl. And make new friends, like I was asked. Hopefully, Rebirth Flame was right and Vista would love to see Bella.

======

A/N- Riley is fun in a creepy and slightly pathetic way.

Lisa's a manipulative bitch, as always, but at least she's channeling it into something constructive.

Also: wow, I forgot how impactful this chapter was, but its theme carries forward well into the story.
I stumbled into what passed for our kitchen. We still didn't have enough electricity to keep both our labs and our utilities all active at once. So no fridge. Bottled water, because I couldn't stand the taste of Yggdrasil sap. It was just wrong and unnatural and squicked me out.

I could probably ignore its slightly-sweet taste if I didn't know where it came from. However, I did know, and my power wouldn't let me forget it. I suppose for a normal person, it would be like seeing an apple tree growing in a cesspool and then eating one of the fruit.

Riley came skipping in as I sipped on the rather lukewarm, but at least very strong, coffee. She was as chipper as usual. I hated that, her fake smile and fake happiness and fake everything. I didn't direct my power at her, I couldn't afford to. I didn't need to, my reinforcement methods had become the routine between us. Pavlovian, almost. Reminding her of the guilt she knows she should feel. Reminding her that she didn't.

"So cheery, today," I spoke quietly, but her modified ears would have no problem picking it up. "Did someone start a little-miss-genocide pageant?"

And then the bounce was gone. "You can stop that, you know."

"There's a big difference between 'can' and 'should'," I replied. "Ask Amelia about it, she understands better than most."

Without my power backing me, I didn't know how well that line would work. Jack had broken her and rebuilt her into his perfect little marionette. Fixing that would require breaking her again. Hitting her with every emotion she normally programmed away. Her relationship with Amelia was the one way I had on her, the chink in the otherwise impenetrable armor around her psyche.

It would help if I could understand Amelia's feelings toward Riley. Something happened, I was certain of it. But whenever I tried to figure out what... I was beginning to think she second triggered with some kind of anti-thinker power. I had learned trying was unproductive. I wonder how happy Amelia would be to learn the suffering I went through before realizing just how futile trying to understand her has become.

Riley had stood there while I went through those thoughts. "I'll have you know," she said. "We're almost done with programming a full set of combat instincts for the zerglings. Taylor's been running
a dozen of them through the exercises, and my Sister has been constructing the genetic programming."

Ugh. I can actually hear her capitalizing 'sister'. At least her new Amelia-led interest in botany was good. Keeping her focus on plants meant keeping her away from working with meat, and Jack's 'art'. And thanks to the equipment we had, Amelia's art was provably superior.

Part of her reprogramming would require making certain she knew that her psychotic 'father figure' was flatly inferior to her neurotic 'sister figure'. And watching her cover him in acid and then have him buried alive in bugs had only started the process.

Maybe it would have been enough if not for that fucking bomb that proved Amelia was actually mortal. Being arms deep in Gaea's mutilated body during those hours of surgery had made things worse, not better. And I still don't know how Amelia's mind responded to the mess because my power falters when dealing with her.

"Good to know," I muttered. And then I dipped into my power. Insecure in position. Afraid only value is her power. Needs purpose outside work. Needs Amelia to... And then the pain lanced through my head. Too damn early. Fucking power couldn't wait until telling me what Amelia was suppose to do? Okay. Nonpowered plan... Riley being Riley instead of Plant Bonesaw... or is that just 'Saw', now? Focus, brain! "Sorry. Migraines. I have an idea to help your sister if you'd like to help."

She paused. "I'm listening," she responded.

"Well," I said, buying some time. Riley needs a vacation... "We need to get her out of the building for a little while," I said. "A chance to rest and recover. You have to see how tired she is, how much she ignores all of us except for work."

"Yeah," she agreed. She's lying, of course. She only noticed how much Amelia was ignoring her.

"She's not the only one," I continued. "We're all suffering, some worse than others. Amelia and Taylor the worst of all. So, we're going to throw a party."

"What do you need me for?"
"A few things. You're planning to meet up with Vista later, right?"

"Yeah, Missy wants to hang out and play with Bella," Riley said, suddenly cheerful again. Dammit, right back to the powers thing. We need her to make friends that don't care about the things she had or could make.

"Let her know we have something else planned, and that she should invite all the Wards and Protectorate members who want to be there. Bella will have to wait for later. And I need you to do something special."

"Okay," she agreed. She didn't sound happy.

....

"I can do that," Blasto agreed. "I'll have everything ready in a couple hours or so."

"And I'm on secret hauling duty," Respawn stated. "There's nothing better you can have me doing?"

"Honestly? No," I answered. "I wouldn't even be able to pull this off without your help. There aren't a lot of teleporters that don't need line of sight to work with, and we have to do this without alerting the two people who can potentially have absolute situational awareness over the entire region."

"Fine, I guess that makes sense," he said. "But I want my fifty back."

"I can live with that," I agreed.

....

"So, you guys know your parts?" I asked Crystal and Theo. My eyes were closed the whole time.

"Yes, ma'am," Theo agreed. "Fighting Khepri's changeling to a standstill for at least an hour." He at least, was always cooperative. Two days in and he has already made my pick for best employee. Nowhere near top of the powers list, but he had all of Riley's eagerness to please and an actual moral compass. Too moral, really. We're just lucky he didn't recognize who Riley was when she came in holding the giant f-ing spider.

"Running distraction and espionage," Crystal confirmed her part. I could hear the mischievous anticipation in her voice. "Possibly a little larceny. This'll be fun!"
And I got to work on the final production. Food needed to be ordered. Seating needed to be arranged. There wasn't any time for fireworks, but in a place that had been through the month this town had been through? That blessing wasn't well disguised. Besides, I had something better planned. It would not soon be forgotten.

Hopefully, it also meant I could defuse this powder keg for a little while and maybe buy us some breathing room.

=================

A/N- Y'know, I actually forgot a lot of what was written in this chapter. Rereading was fun.
Theo was panting heavily by the time we were done. His power, for all it made him invulnerable on a level we were beginning to suspect rivaled Alexandria, didn't come with any actual combat enhancement past the indestructible armor. It didn't even make him that much heavier, so he could be picked up and thrown out of the fight by a suitably powerful cape.

One of those powers that looks far more impressive on paper than in the field. The polar opposite of my ability. At least he seemed to have self contained life support in there. We've tried it, he can function just fine underwater. Or encased in a literal tons of cockroaches. He'd picked up tricks like creating shifting barbed spikes on the outside of his costume in order to fight his way out of that, achieving a look not entirely different than Hookwolf. It worked, although I could have packed on the insects faster than he could have tunneled through them.

The Yggdrasil had already cleaned the floor, and was busy cleaning and then digesting the discarded armor he let fall off of him.

My changeling's going to need to be replaced as well, I decided. The barbed spikes were a surprise tactic that I hadn't known he could do. I tried taking him into a submission hold, only to have my left arm mangled so thoroughly that it was nonfunctional. Were it my human body, even with my silk armor, I would probably be dead right now. As it stood, I was glad I used one of the 'generic' armor systems instead of my own custom model.

"Okay," I said. "That was a lot of improvement in a short period of time. Where'd you pick up the spike idea?"

"Thank you, ma'am," he gasped. "That was Lisa's idea. Said that since. My power makes my armor unbreakable. I could get away with very thin edges."

"And you didn't try it before, because?" I asked.

"Don't want to hurt anyone, ma'am," he replied. "Too hard to hold back with the spikes."

"Good," I replied. The kid understands how to hold back. That is important. "We should work on grappling next time. If you can grab someone and fuse your armor around them, you can neutralize most opponents."
"Thanks, ma'am," he replied.

"Uh... please stop calling me ma'am..." I requested. "We're, like, the same age. My name's Taylor. Or Khepri, in costume. And I'm only fif... err, sixteen. I'm not a 'ma'am', okay?" I stopped. Holy crap, I forgot my birthday. Almost a month ago.

"Okay... Taylor," he hesitated, but at least he used my name. That's better.

I didn't look over when Amelia entered the room. I had gotten around my need to 'see', for the most part. My ability to hear through the bugs was still mostly limited to useless static. "I finished those dragonflies," she said.

"The whats?"

"Crystal said you wanted me to build a bunch of-" she paused.

Theo was, meanwhile, edging his way slowly toward the exit. "Okay, Theo, what exactly is going on here?"

He froze. "Sorry, ma'ams, it was all Lisa's idea."

Of course it was.

"What was Lisa's idea?"

"She said to have you ask her when you figured it out," he said.

"Alright," Amelia muttered. "Let's go figure out what your errant girlfriend is up to this time."

I smiled a little. "So, which one is the errant one? You or Crystal?"
"Lisa's your girlfriend," Amelia responded. "Crystal's your stalker."

"Well, what does that make you?" I asked.

"I'm 'the one that got away', clearly," Amelia replied. "It's all here in this chart that Respawn made."

"He made a chart?" I took it. And felt the tingle as Amelia's power reactivated my natural vision. Sure enough, that was on it. "Uh... Amelia... this lists Blasto and Defiant as brothers, and has Dragon dating the M4s. All the M4s. You do realize this, right?"

"Yeah," she confirmed. "But just look at the craftsmanship of it."

She was right, this is nicely done. Colored lines, easy to read, poster quality printing. Pictures of each of us near our names. He even had it laminated. "I can't help but imagine the progress we'd make if he put this kind of dedication into his job."

....

"You arranged a surprise party for us. Invited half the city. In three hours. And somehow managed to do it without either of us knowing." I was entirely flabbergasted. "How!?"

"Truly, the second greatest achievement of my career," Lisa replied. "Now give me a second."

She walked alongside me and grabbed Amelia by the arm. "Hey!"

"Come on, gotta have a private chat between love rivals," Lisa said smiling. She's seen the chart, apparently. I turned to watch them. Was I the only one who didn't know about this?

Amelia sealed the doors to one of the side rooms. I listened in anyway, as best I could with my insects.

"It's not like that!" Loud voice, probably not Lisa.

Another, unintelligible, voice. That one was probably Lisa.
"No, she's-"

They spent several minutes, and I'm pretty sure I heard the phrase 'father in front of her' in there.

Lisa was smiling when the wall finally opened. Amelia looked like she'd just seen god. And he asked her to pull his finger. Where did I even hear that phrase from? Oh, right. Thank you, Kurt.

"Are you okay?" I asked, as my partner just stared blankly forward.

"Uh... yeah... no..." she responded. "Lisa just made me realize that I had become Carol."

Still in a daze, she turned and walked toward the stairs that led to our labs.

I looked toward Lisa. "If she turns you into some kind of livestock over this, I'm not going to help you."

Lisa smiled. "I'm okay with that. Woulda been worse if I did nothing."

Below, my insects sensed Amelia approaching Riley. The girl squeaked as Amelia wrapped her arms around her from behind and squeezed. "a wonderful sister."

============

Bonus line that's totally canon, but I can't find a good place for it in the current narrative:

"What's 'Phyrexia' and why's Riley the queen of it?"

============

A/N- This chapter makes me smile so hard, and for so many reasons. Also: A chapter that's only 1k words long... jeez, I almost never go below 1500 these days.
"Okay, guests are arriving!" Lisa announced. "Everyone in costume and out amongst the locals!"

I didn't bother getting up.

"When I said 'in costume and outside', I meant you, not the meat puppets. Except Riley. She stays indoors. The rest of us go out there."

"What about security risks?" I asked.

"What risks?" Lisa asked. "They watched us get blown up and then rip the face off the guy that did it. The lead competing theories are that we're all using really convincing versions of the M4s, that we're all clones, and that Amelia transformed us into decentralized lifeforms that no longer have organ systems and can rebuild ourselves from gelatinous slime. That attack actually made people believe we are more invulnerable, not less."

The scary part is that all of those are plausible. And one is actually true, sometimes.

"So we may as well enjoy the food and company with everyone else. Besides, we have an awesome lightshow prepared and you're not going to want to see this through a filter."

"Fiiine," I groaned. I wouldn't say that this sounded fun. Honestly, I didn't really like parties. "I'll go get Amelia. She's taken a suddenly weird liking to Riley." Dear god. I stopped, and a chill went through me as I realized the implications. Lisa has the power to talk people into enjoying being around Bonesaw.

They were in the lab, of course. Working on some... something... fucking tinkers.

"Okay, I'll be using the conductive latticework." Riley looked over at me.

"Sorry to take you away from productive work that's actually useful to us," I said. "But mom says we have to go outside and have fun, now."
Both of them looked genuinely disappointed. "Sorry, sis," Amelia said. "I promise to sneak you ice
cream and something with more sugar in it than if they'd actually made it out of pure sugar." She
ruffled Riley's hair. Is Amelia actually getting into this whole 'big sister' thing?

"It's okay," she said. "Clarice is upgraded. I can taste anything she does."

"Wait..." I paused. "How is that... why would you want that?"

"Don't have time for the how," she said. "But taste and smell are incredibly versatile and accurate
chemical analysis systems. Of course I'd want the ability to be able to track by scent or smell a gas
leak or identify the specific details of biological weapons by licking them."

"Okay," I agreed. "Those are actually really good reasons. Come on, Amelia, before Respawn
accuses us of building a secret love nest in the walls. Again."

She sighed. "Yeah. Did you see the part of the chart where I installed the ghost of Elvis into a
monkey to sing me to sleep?"

"Yes. I read the whole idiotic thing," I muttered as we walked out of the lab.

"Yeah, seriously," she laughed. "It's actually Sinatra."

Suiting up was easy enough, as I opted to use my standard Khepri armor. As fun as 'Queen of
Blades' was, it would probably make children cry. So I had to take my armor off the changeling,
which looked surprisingly like me except for a thankful lack of anatomical correctness. We were the
last ones to the party, of course. And I cringed at the thought of how that would be interpreted by the
handful of people with cameras.

"Hate this as much as I do, huh?" Gaea muttered.

"Probably," I replied. "Not really a social butterfly, in case you hadn't noticed."
"Me, neither. Victoria was always the outgoing one," she replied, studiously examining her feet.

"Sorry. Didn't mean to bring up bad memories." Fucking stupid, Taylor.

"Don't be," she said. "We've been through so much shit in the last few weeks that it actually feels... I dunno, has all of this really been less than a month? Feels like a lifetime. Or yesterday. Both."

I had nothing to say to that. "Yeah," I agreed.

She managed to pull together a half hearted smile. "So, you wanna try being a literal social butterfly instead?" She was looking over at the children who were doing their best to entertain themselves away from the adults. They were mostly on the dirty side, with few toys. Playing tag.

"What do you have in mind?" I asked.

"The new toys our supposed friends tricked me into making," she explained. "I turned our Yggdrasil Dependent butterfly and dragonfly stocks into color changers."

Part of our projects, a way around the ecological damage we were causing was to build our own masses of bugs that fed on Yggdrasil only. Now that I had miles of range, I really could break an ecosystem, so I avoided using natural insects wherever possible. I reached out to the butterflies, even as Amelia started shifting the ground, forming a fence around a select area.

"What did they say that was for?"

People murmured and turned to pay attention. Some to us, others to the fence itself. Maybe we should stop showing off every time we come out in public. I'll have to ask Lisa's thoughts on us being so casual about high level power demonstrations. The area secure, she then created the tunnel, exposing one pocket of butterflies to the fading sunlight.

"Supposedly signaling and instruction. Emergency alert lights. Anything a flashing light can be used for, I guess."

That does sound useful. Why hadn't we thought of it sooner? "Well, then, time to test your work."
The insect started flickering as I toyed with their pigmentation features.

She looked at me and smirked. "My equipment is flawless, you just have to learn to use it correctly."

"I am so glad I'm recording this," came a voice behind us. I jumped. And then blushed as I realized how what we just said could be interpreted. Then, finally, I realized it was Clarice. I didn't notice her and I don't know why. I was too stunned trying to figure out what happened to respond.

"N-not what it sounded like," Amelia stuttered out. "We were just discussing the modified butterflies, and how they are harder to use than normal bugs."

"I know!" Clarice exclaimed. "And I'm reading all the signals in real time. I can cross reference this from the data we're pulling from the butterflies later and find out all kinds of fun things about how your powers work."

My mind darkened, and with it the butterflies dimmed to dark browns and blacks. Bonesaw, cheerful as always, trying to cut through my skull. Planning to take me apart. Literally. To learn how I ticked. And that was nothing to what she did with Brian.

"Right... Right. Sorry," I muttered. The butterflies rippled as they went from black to bright red, then color after color as I tested what their instincts would let me do. Apparently, Cephalopods weren't in my control range, so it was harder for me to use the colors properly. I gave myself to the swarm, letting it be my body, leaving behind the tiny human girl that was trying not to think about the little girl behind her that once tried to vivisect her. It was calming.

I toyed with creating pictures, and decided that the problem was more my lack of artistic skill than the insects' abilities. Back at my actual body, Clarice had run off, leaving a lunchbox sized machine in Gaea's hands. I recognized why a second later, as ripples formed around my insects. Too small for a human body to recognize, but insects had greater sensitivity to their environment.

Vista's power, applied in microscopic waves. I wasn't sure why. It didn't seem to be an attack, so I resolved to mention it later. Meanwhile, the cloud of butterflies, which had attracted the crowd's attention, flowed over to the awed children, flitting about and landing on them, to a chorus of awe and giggles and laughter. I segmented the butterflies into 'squads' and assigned each of them a different color of the rainbow. As well as throwing in white and black and a few of the more popular
shades. Each child had a different color.

As a fun little game, as well as a test of control, I had their colors switch whenever two of the kids touched. Soon they had started ‘trading’ colors as part of their other games.

Just innocent children and innocent games.

============

Oh, man, so much achieved in this chapter.
Taylor and I opted to stay out of the festivities. Big surprise, right? I was aware of how conspicuous we were. Being a wallflower was much less complicated when I wasn't one half of a partnership rivaled only by Dragon for sheer potential. Of course, this turned the wall we were flowering into the single most important part of the party. As impromptu as the party was, it did mean a lack of political guests. The Mayor didn't get to make a showing, the news didn't have a chance to show in large numbers, although they'd probably be showing cellphone footage on the news by this time tomorrow.

"Wards, incoming," Taylor informed me, nodding toward the northeast end. I recognized Vista and Clockblocker's costumes. As well as a darker toned girl with an oversized crossbow. Miss Militia was there in costume. I was still a bit annoyed with her over last time we met. I got why she did what she did, trying her level best to humiliate me on television. But that didn't mean I had to like her.

Aceso bolted toward the group, using what I was pretty sure was her maximum effective movement speed, complete with doing a dive-roll under a table, to the shouts of surprise from the people who were just trying to get some punch. Glad we hinted she was so young, I thought. People tend to forgive children for stuff like that.

Osiris also turned in that direction. He was being followed by an attractive redhead. How the hell did Respawn get...? Know what? Fuck it, don't really care. He wasn't going to give away any important secrets or anything. Either way, Vista was already in the process of being dragged off by Clarice.

My attention was taken away from them when I heard Taylor whisper a name. "Dinah."

....

I watched Aceso pull Vista away. "C'mon, c'mon, c'mon, I have to show you the butterflies!"

"Okay, okay," my teammate agreed, stumbling to keep up with the girl who was a little taller than her, but obviously younger. Both in terms of personality and actual age.

"And then there were two," I muttered to my other teammate. Flechette was looking around for something.
"So, did you get her the ring, yet?"

"What are you talking about?"

"It's the tradition," I said. "You date for a while. Then someone proposes. Then you exchange rings. I know New York thinks it's a different country..."

"Okay, smartass," she muttered. "I got the joke. I just have no idea what gives you that idea."

"Oh, I dunno, maybe-"

"HEY, Clockblocker!" Came a shout, interrupting me. "Oh god, I'm your biggest fan and you're the coolest ward and I just have to shake your hand!"

I recognized the guy, of course. Osiris. "Uh... yeah," I smiled. This would be great. I held out my hand to shake his. And, of course, I froze him. Only to realize my mistake. He'd grasped my wrist during the handshake. I wasn't able to pull myself free. Next to me, Flechette started laughing hysterically. I looked over at Miss Militia, who just watched impassively. I'd swear she was smiling, but her mouth was covered so I couldn't know.

"Dude," came a voice. I looked back and there was a second Osiris standing there. He was looking at his own frozen copy.

"That is such bullshit," we both said.

"Hey, Flechette, looks like I'll be collecting my twenty early," he said.

"You paid him to trap me?" I whimpered, putting on my best pout. "Why would you do that to me?"

"Remember when I first joined the team?" She asked. Oh fuck. "And you froze me and then drew cat whiskers on my face. That's why."

"That was harmless and funny!" I protested.
"I spent two fucking hours wondering why everyone was smirking at me before someone told me!" Flechette exclaimed.

"I said I was sorry!" I replied. "Also, I got shit duty for a week because of that."

"Speaking of which," Miss Milita cut in. "Flechette, you know pranking other Wards is a violation of the rules. Getting someone else to do it for you doesn't change your culpability in the matter. You'll be on punitive duties for at least the next couple days. I will mention this to the Director and see if she feels more is warranted."

"Sorry, ma'am," Flechette replied. She doesn't sound sorry.

Meanwhile, Osiris was laughing with his girlfriend. Who is a total freakin' babe, I had to admit. Obviously pampered red hair. Tight shirt and shorts, showing off her figure without looking trashy. "See, told you," he said. "My power works on anything and everything. Now we gotta hurry up before it wears off."

He moved over to me and put an arm over my shoulder. And another arm over... his?... shoulder. "Smile for the camera," he said, pointing at the girl, who had produced a camera from her purse.

I chuckled. "Okay, you guys definitely got me with this," I agreed. It is pretty funny, and I know how to lose gracefully. She snapped several photographs of me, and the twin copies of Respawn. I waved for the camera as Respawn gave bunny ears to his copy.

After a few dozen pictures, the girl went over to Flechette. "Here's my email, if you want a copy of the photos," she offered. Flechette smiled, giving me a devilish look.

"You'll hear from me tonight."

"Well, gotta get back to the party," Osiris said as the girls exchanged information. "Catch up to me later, I have some ideas on how to make our powers work together. I'd stick around, but, y'know, I already am."

He went around me and his clone to hug the girl from behind. "C'mon, I still have to introduce you
to the others," he said. She kissed his cheek. "You'll never guess who Blasto is dating!"

"Oh," he said as he stopped and looked back at Fletchette, "You'll find Parian over by where the kids are playing."

"Okay, thanks, see you kids later," Flechette replied as she headed over to the glittering butterfly display.

Even Miss Milita had left, choosing to mingle rather than wait around. This sucks, I thought. And then, finally, the grip on my arm slackened.

"Dude, that is such bullshit," came Osiris' voice, before the copy vanished into dust. I had to agree.

==========

A/N- Oh, come on, this was foreshadowed waaaay back in the PHO arc. :p
"That sounds like a zombie virus," my date gasped in horror.

"It is," I agreed. "And it's not even the worst thing in there. It's twisted. I imagine this is how scientists felt when they acquired all the research journals from the psychos doing experiments in the concentration camps. It's repulsive in a way that defies words, but I can't help but marvel at the sheer wealth of knowledge."

Fucking Bonesaw. If I'd known she and Aceso were the same, I'd have killed myself and set off a self destruct chain through my lab. Seeing how powerful 'Clarice' was, I wouldn't expect that to actually kill her, but it would have been enough to destroy my technology and ensure my body never got into her hands.

Every time I work with Riley, I was caught between reminding myself that the sweet little girl is one of the world's worst monsters, and trying not to think about how unbelievably easy it would be for her to end life as we knew it. Not that she was the only one on the team with that capacity. Gaea's power was also nightmare fuel, even more frightening to behold than Riley's. But Gaea was Amelia. Panacea. And Riley was f-ing Bonesaw.

I felt a hand on my arm. "Are you okay?" Ruth asked, with a worried look. She was in costume, of course, but it wasn't her battle armor.

I put my hand over hers. "Yeah, I'm fine," I said. "Just lost in thought."

"Maybe we should focus on something a little happier," she offered with a concerned but hopeful smile. She had the most expressive face, even half hidden behind her mask. She glanced off to behind me. "I think we've got company."

I turned, and there was Respawn approaching, with a couple girls. One I recognized as Flechette, who seemed more interested in something else. She went toward the area that had somehow become the impromptu kids' area. The other girl seemed to be hanging off of Zach. Good, the kid deserves it. And not just because he saved me from being blown to bits. Or undid the side effects, at least.

"Ah, the infatuations of youth," I heard Ruth's smile in her voice.
"Spying with your tech? Isn't there a rule against that?"

"Just woman's intuition," she answered. "Maybe a bit of my power at work. Emotions Tinker, remember? I can turn off the machines, I can't turn off the knowledge that let me build them in the first place."

I couldn't argue with that logic. I was dating a woman who I literally could not hide my feelings from, if and when I developed any serious ones. I hadn't known her that long. As much as I enjoyed her company, and the pleasure of being able to talk with another tinker that's not Bonesaw, I was too old to fall that fast. That was game for teenagers. On the plus side, the fact that she understands this kinda stuff automatically meant she probably wouldn't expect me to talk about it much. Right?

"Hey, Zach," I said. He was one of the few of us with a public identity, alongside Crystal and Amelia.

"How's it going," he responded. "This is Emma."

"Good day, miss," I said to her. "I should introduce my date." I gestured.

"Rapture," Ruth said with the same winning smile she took everywhere. "How long have you two been dating?"

"Not long," Emma volunteered. "Only a few dates, since he's always busy with that whole 'hero' thing. But we talk whenever we can."

Zach pulled me aside and whispered. "Dude, how on earth did you talk her into a date?"

I smiled. "Catholic girls love the bad boys. Helps that I'm Catholic, too."

"You? Really?" He said with a smirk.

"Mi abuela. She would trigger from beyond the grave and hunt me down if I wasn't. I get by on not being very good at it."
I followed Taylor's hesitant approach toward Dinah. She saw us before we got close. The girl was in a well made business suit. Clearly custom fit and probably very expensive. Her straight brown hair was cut short. Not quite boyishly so, but nothing below her jaw.

I fell back. She looked healthy and I was glad to see she was okay, but Dinah was always Taylor's quest. The girl she was willing to kill to rescue. I may be oblivious, but even I knew this was not my place. Dinah's father was with her, but he seemed to hold the same thoughts that I did, and merely watched.

"H... hi, Dinah," Taylor said with a voice that I'd never heard her use in costume. "Are you okay?"

"You didn't kill Coil," was the first words spoken by the little girl to us.

Taylor froze. "No, I didn't," she said. It sounded more like an admission of guilt, like she was apologizing for failing something important. "He's no danger to you any longer, but no, he's not dead."

"Eighty seven percent chance I meet Coil again," she said. Then she paused. "Zero point one seven three percent chance he presents a danger to me at any point in the future."

Her father opted to speak up. "What did you do to him?"

Taylor flinched. She never flinched. Times like this were why, sometimes, I felt like I'd happily trade my power with Tattletale's.

"We can't answer that question," I replied. "He's dealt with, that will have to be enough."

"Dinah," Taylor said. "One question. Are the numbers better if we keep Coil as he currently is, rather than killing him?"
"Coil's power disrupts my numbers," Dinah replied. "But, yes, an average of six percent. An average of a hundred million more survivors, if things go bad. It doesn't change the likely timeframe, however."

"Is that enough of an answer?" I asked the pair. Dinah nodded. Her father seemed willing to go along with her on this one. I had to wonder what his life was like. Dinah was possibly the most powerful precog this side of the Simurgh.

"I will not join Pantheon," Dinah said before any of us asked the question. I hadn't intended to, not then at least, but eventually one of us probably would have. "I won't work for anyone else, either. Never again."

"I... I understand," Taylor replied. "I'd feel the same way. Will you at least let us help you?"

"Help?" Her father asked. He sounded skeptical.

"We are protecting and sheltering rogues and other independent capes. Parian, for example, who has no interest in being a member of the team. Anyone who comes after them will have to go through us."

"Sounds an awful lot like what the Protectorate offered," he countered.

"Probably," I answered. "The difference is, we mean it. Dinah would be a great help for the team, but we're powerful enough that we don't absolutely need it." I turned my head toward Dinah. "You'll be using your power to help us stop the apocalypse, either way, right?"

"Yes," Dinah agreed. "Sixteen percent chance the end is halted. If that occurs, fifty seven percent chance it will be Pantheon that prevents it. Otherwise, there will be five forces at the end. You'll be in one, Khepri in another. It's the best I can offer."

"Thank you for the information," Taylor replied. I thought on her words. Five factions. Only five? Another, either now or in the future, that was almost as capable of halting the apocalypse as we were? Taylor and I weren't going to be together in the end?

"I'll help you whenever it comes to my questions dedicated to halting the apocalypse," Dinah agreed. "Our partnership adds an extra three percent advantage. But that's all it is, a partnership. Any
questions you have on other subjects will result in the standard fees. If you're willing to provide security or thinker assistance, I'll pay with one additional question per week, each."

"That's better than I deserve," Taylor responded. "For what it's worth, I'm sorry." "It's okay," Dinah answered. "If this hadn't happened, we wouldn't be aware of the apocalypse at all. Everything else? I'll cope."

==============

A/N- Dinah. One of the scenes I'd been anticipating for a while. Hopefully I did it justice.

A/N/N- In retrospect, I still like how this one panned out.
"Are you okay?" I asked Taylor once Dinah had left. I could feel Taylor's power rippling through the area, thanks to my contact with the Yggdrasil. It wasn't anything so obvious as telepathy or special empathy. Taylor was better at hiding emotions in her body than anyone I've ever met before, but only in her body.

There were several thousand pounds of modified insect life that were directly connected to her, and indirectly connected to me. I could feel their agitation, and response to it. The zerglings had awakened in their den, and most others were drinking deep of the nectar feeds dedicated to them, collecting calories in anticipation of action. I couldn't figure out why her power was so agitated. Sure, it hadn't been the most cheerful of reunions, but it didn't go badly, either.

"I think so," Taylor replied. "It's just odd. I spent so much time dedicated to Dinah, and I didn't know anything about her. I still don't, not really. This right now, and that time when we took her home, that's it."

Oh.

"I don't know what I was expecting," she continued. "To be thanked for saving her was too much to hope for. I was prepared for her to be angry at me for helping imprison her in the first place. I should have known she'd know we didn't kill Coil."

"It's easy to forget she's one of the most powerful precogs I've ever heard of," I offered. I had no idea how to approach this situation. The bugs, at least, had started to calm.

"Is it?" Taylor offered a sad laugh. "Her power was all I could think of. She was so... is there even a child left in there? She acted more like Coil than a little girl. I could picture her, snake costume and all, running an empire with a calculating ruthlessness on par with any of the most dedicated supervillains."

"Mind powers altering the mind?" she finished for me. "It makes sense, of course. I just... she's so young."
"Makes even more sense, then. The brain's more elastic and pliable that way," look at Riley. "Dinah has one of the most powerful mental abilities I've even heard of, it's no surprise it would impact her."

"She's scared," Minerva stated. I jumped. I'd been so focused on the signals I was getting from Taylor that I hadn't noticed her. "I'd say sorry for eavesdropping, but we all know better. You're both a little bit right, of course. It's part power, it's part Coil, but it's mostly a little girl trying to fake confidence in front of someone she's in awe of. And trying to meet her hero as an equal, instead of as a supplicant. Doesn't help that she has a deep seated resentment of being controlled by anyone, even if that control is out of gratitude."

"So... she wants to help, but doesn't want to admit it's for anything more than pragmatism?" I asked.

"What? You didn't think it was your cheerful personalities and incredible people skills that convinced her to work with us, did you?"

Taylor actually chuckled, "No, I guess not. It's... good to know Dinah's not turned into another Coil."

"Nope," Lisa said. "No chance of that. Anyway, I came by to let Gaea know the area's getting a bit dark. Mind brightening it up a bit?"

I looked, and yes, it was getting dark. Some lights had been set up by people, but the city was on limited power to begin with, and we were a fair ways away from streetlights. I focused my power into the Yggdrasil, copying bioluminscent cells and spreading them across the area. Slowly, the ground began to glow. It wasn't bright, not enough to compare to a lightbulb, even, but it was omnipresent. Enough dim light adds up to quite a glow when it's coming from every part of the ground.

It was an alien sort of beauty, but it was beautiful.

"Very nice," Lisa praised. "Mind sending the butterflies back to refuel? They'll need the energy for the big show."

Taylor didn't respond, but the swarm of butterflies lifted off from the children, who were less disappointed than I'd have expected.
"Hey, umm, you? Have you figured out your name yet?" Clarice asked. I was currently maintaining a slide for the kids to play on, while Parian was providing a "bounce pad" for them to play with. The couple dozen odd children were having a blast.

"Maybe," I said with a smile, hopefully it translated over the metal 'mask' I was wearing. "I could go with 'Horus', perhaps?" He was a god of protection, after all. The fact that he was was from a religion of people my father would hate, just made it that much better.

"This is my friend Vista, who has to try the slide," Clarice insisted.

"No, I am not going on the slide," Vista insisted. "That's for children."

"Aww, but you haaaave to," Clarice pouted. How does one create a doll out of plants that can pout, anyway?

"It's just a little slide for little kids," Vista retorted.

"I can make it bigger if you like, miss," I offered.

Vista jumped, as if I'd startled her somehow. Then she relaxed. "Oh... uh..."

"Ooh, yeah, give her a really really big one!" Clarice encouraged.

A couple of the smaller kids picked up on Clarice's enthusiasm and started cheering and encouraging the girl. "Okay, fine," she agreed. "I'll try it just to make you guys happy. But don't you dare go easy on me."

"Wouldn't dream of it, ma'am," I replied, as I started pouring my power into the slide. It shimmered and warped as I added mass, until I'd reached the limit of what I could hold together. About a hundred feet tall. Vista looked up at it, biting her lip nervously. Then her face hardened with determination.
"I suppose that'll do," she replied. "Hey, Aceso, wanna give me a boost up?"

"Sure!" Aceso agreed, crouching down and cupping her hands at the ground for Vista to step on. Clarice thrust the girl up, and she traveled the full distance in a couple seconds, catching herself at the top of the ladder.

She hesitated, looking down the steep ramp. Then she looked at everyone watching her. I could almost hear her telling herself that there was no backing out now. She pushed herself and shot down the slide, gripping at the sides to slow herself down. Oops, we forgot to mention that my power was frictionless, at least while I was in active control. Anything left behind would return to the default nature of the material used.

We heard her shriek long before she got close to the ground. I was already collapsing the slide behind her. Something she must have felt, because she looked back and started screaming even louder. She hit the bottom going at speeds that must have been around terminal velocity, and promptly shot up the ramp I had built in front. It took her close to a minute to start sliding down again. Same ride, only backward this time.

She passed us again, still screaming. The children had started laughing with delight, and the spectacle had attracted others nearby to watch as well. Including Parian and Flechette, who I noted were holding hands. Good for them.

It took Vista a few minutes before she'd slowed to a hault. She lay there gasping for air. I offered my hand. "Are you okay?"

"Y... yeah," she gasped. She took my hand and let me pull her to her feet. I kept giving her support as her legs wobbled.

"You did make me promise not to go easy, ma'am," I said.

"I know," she replied, then she looked at the rapt faces of the kids. "Best. Ride. Ever." she declared to them.

============= 
A/N- Missy, Theo and Riley. This is the birth of one of my favorite character interaction sources in
this story.
"Hey, Ashley," I said with a smile as I danced with my wife in my arms. The music wasn't my first pick, too soft. But, hey, free food. I could sit through Shatner's Spoken Word album for that. I had before. Plus, the atmosphere was amazing. The ground was actually glowing, and this weird tree smelled wonderful. "Check out Fletchette's date."

I did a half step that put us at an angle where she could look. "Of course that's what you'd notice," she said with a disapproving voice. "She's too young for you, anyway."

"Yeah, but Ash, she's just about right for y-oof," I gasped as she punched me in the gut.

"I keep telling you I'm not into girls!" She glared at me, but there was still a smile on her face. "And your stupid ass just ruined a romantic evening that would have led to a fun night."

"Nah," I laughed. "The slave driver has me on duty."

"And you're here, instead?" she hissed. "Ugh. Know what? Nevermind. You didn't tell me anything. How the hell did I let an idiot like you talk me into marrying him?"

"Because I'm an amazing Bob," I replied.

"What's a Bob," she asked. Too easy.

"Battery Operated Boyf-oof!" I doubled over, gasping. Made all the worse because I was laughing at the same time. "Halp! I'm a victim of domestic battery!"

"My life is hell," she muttered. "Hey, wait, is that Vista?"

I looked over. "Or a really convincing cosplayer," I replied. Vista was currently dancing with a boy in a bluish steel armor. "Know who the boy is?"

"No," Battery replied. She didn't sound too happy about it. I wasn't happy about it, either. "Probably
one of Pantheon's new recruits."

"First the pony ride, now this," I said, switching into 'serious' mode. "Think they're making a play to convert Vista?"

"I don't know," she replied. "Certainly looks that way. I'll talk to her about it tomorrow, at least warn her that this boy might not be on the level. Right now, we'll just keep watch on things."

-----

"So, Theo and Vista, huh?" I smiled at Taylor. "Good, both of them could use more friends." Vista was a good kid. Too serious, sometimes, but could you blame her? Her crush on Dean was worn on her sleeve, even he figured it out. How an empath could be so damn oblivious, I couldn't even pretend to know. I always found myself hoping she'd succeed, and not just because of my own issues. Vista was just adorable, despite, and in part because of, her attempts to not be.

"Yeah," Taylor confirmed. "I'm trying not to eavesdrop, but definitely. Parian and Flechette, too."

"Oh, them I already knew about," I confided.

"Really? How did you figure that out?"

"Woman's intuition," I smirked.

"Lisa."

"That's what I said." The song switched as we were talking. "Huh, that's like the fourth song from my playlist that's come up."

"Counted five from mine," Taylor replied.

"That's not suspicious or anything," I frowned.
"Fucking Lisa," Taylor muttered.

"Is it too late to ditch her, go buy a desert, and turn it into a tropical paradise? I liked tha..." I stopped mid word as I felt her. Taylor's power poured across her swarm in a way I hadn't seen when she was in heated combat. That was a cold, calculated force of will. This. This was more like impotent rage. The zerglings had dug their claws into the flesh of the base, readying themselves to attack.

Riley's in there, I realized. I formed walls, sealing her off from portions of her own lab and pushing her out. She got the message and retreated.

I noticed Respawn headed over. Did he know what was going on? No, he just seemed to be enjoying himself with that redhead.

"Emma, these are the boss ladies," he said with a smile. "Who need no introductions. Boss ladies who need no introductions, this is my lovely date for the evening, Emma."

"Hi!" she said excitedly, offering a perfect smile. "It's such a pleasure to finally meet you! Khepri, you're amazing and you pull off the 'mysterious antihero' look flawless..." her speaking came to a halt. Khepri's body language was rigid. She looked ready to physically attack the girl.

Even Respawn caught on. "Umm, guys, is there something wrong?"

Aceso managed to get to us next, alongside Eki. "What's the emergency?" Crystal asked, hovering above us, the shimmer of her shield ready to protect us from any attack. Crystal's power wasn't nearly as good when used for distance shielding like this, but it was better than nothing.

They all were glancing around, trying to spot a problem. I already knew that this 'Emma' girl was the problem, but I didn't know why.

It was, of course, Lisa who came to the rescue. "Oh, hello there, Emma," her voice was saccharine. Emma jumped, turning to look at blond. "What a surprise to see you again!"

"H-hi," she attempted a smile, her eyes darting to all of us. "I don't think I know you."
"No, you really wouldn't," Tattletale replied. "You were always too busy running around with Sophia. And... what's her name... the one that chased you two around like a lost puppy?"

"Yeah, that's right!" Tattletale said happily. "Madison. But she's not important. What's important is your quest to torture and attempt to murder an innocent girl. That is what really matters."

She withered under our glares. Sparing a pleading look at Respawn, who stood there. I couldn't read the look on his face, but it was pretty clear Emma wasn't getting help from that corner. She sure as hell wouldn't get any from the rest of us.

"I didn't..."

"Oh, but you did," I cringed, remembering when I was under the gaze of this power. And now I was watching it happen. I should do something. Instead I kept watching. "Maybe your rich lawyer daddy would be able to save you, maybe not. But you stuffed a girl into a locker full of gallons of human waste and left her there while you went to class."

"Fucking christ," Crystal muttered. None of the rest of us said anything. Tattletale knew too much, and I doubted it was from school. And then I felt the pressure of the insects surge when the locker was mentioned. Oh. Oh no. "What did the school do?"

"Nothing," Tattletale never took her eyes off Emma, who looked very much like she was trying to will herself out of the universe. "The popular girls versus one loner? One of those girls, they know is a Ward. They chose to cover it all up, to keep the funding from having a Ward in their school."

"No wonder you have such a beef with the PRT," Crystal muttered.

"One of many reasons," Tattletale agreed. She watched Emma like a wolf ready to pounce on a deer. "Right now, I want to know why you did it. You betrayed your best friend for years, and for what? What pathetic twisted part of your mind justified that?"

I had moved over to Taylor, grabbing her hand. It was shaking.
"Oh, so that's why," Tattletale grinned sadistically. "You're one of those people. You know you're so pathetic, so weak, that you desperately cling to anyone that can validate your insecurities. You came here for the sole purpose of trying to befriend us. So we could replace that Shadow Stalker shaped hole in your shattered worldview. Well, guess what? Sophia was every bit as pathetic as you are."

"I..." she couldn't look at Tattletale, she instead looked at Respawn. "Please, Zach, I do care a-"

"Emma," Respawn spoke up. It was the first time I'd ever heard him sound upset, or angry. It was cold, almost unreadable. "That part doesn't bother me."

"Really?" There was actual hope in her voice. Desperate hope, but hope nonetheless.

"Yeah," he offered a smile, it didn't reach his eyes. "You're not the first cape groupie I've ever met."

She froze. "But I..."

"Sure. You telegraphed it from, like, a mile away. But you were attractive and fun to be around, amazing arm candy. So I figured 'sure'. You used me, but that's okay because I used you back. No one was going to get hurt. But what you did to that girl? I never imagined you could torment someone like that."

"That... that's not..." Emma sobbed.

"Oh, Emma," Tattletale interrupted. "Just so we're clear. You deserved this and worse. Everyone here, including you, knows it. If you try to make an issue of this for any of us, I will come after you with all your secrets, big and small. And I'll have evidence. I'm not afraid to unmask myself and testify in court. Who do you think public opinion is going to support once the truth comes out? The only reason I don't do it right now is because you're not important enough to waste the time. Don't make me change my mind."

She nodded, the tears falling freely from her face.

"I'd strongly suggest you leave now," Respawn said. "And find a way to lose my phone and email. I don't associate with bullies."
Emma bolted, covering her face as she made her way through the crowd. I watched her leave, and I couldn't help but notice the eyes on us. Most importantly, Miss Militia.

Zach faced toward us, away from the crowd, so none of them would notice that he was crying. His body language didn't reflect it, but he didn't bother trying to hide it from us. "I'm sorry," he said, his voice hard. "I didn't know."

"Not your fault," Skitter responded. Her voice equally cold, even as I could feel the swarm screaming. "Are you going to be okay?"

"Yeah, give me a sec," he responded. And then disintegrated. "There, that's better." He smiled. The tears were gone. "Minerva, mind if I ask you to pre screen my guests, from now?"

==============

A/N- Damn. This chapter gives me goosebumps.
Taylor broke from the group right after Emma retreated. I hesitated and looked back at the others. Lisa just offered a nod and I ran after her, into the base. She wasn't hard to track. I found her sitting in one of the prefab bedrooms. Really, as much time as we spend here, I probably should just build permanent sleeping quarters. Maybe an actual kitchen so I could eat 'not takeout' at some point. This 'sleeping in the office' shit was getting old.

She was laying on the bed, staring at the ceiling. She didn't look at me, didn't need to look at me. "She's so small."

"Okay?" I asked.

"Emma," Taylor clarified. "She's meaningless in the scheme of things. On the level we're worried about, she's nothing. We're locked in conspiracies with Dragon, spoken of in the same breath as the Triumvirate, building an army to slay Endbringers. We conquered a city in a week. Everyone knows it, most people thank us for it, and no one can prove it. Compared to that, what does some highschool girl who's best hope for fame was 'date Respawn' amount to?"

"Everyone matters," I answered. Fuck, I wasn't cut out for this. Why wasn't Lisa here?

She managed a sad smile. "They got away with it because I didn't matter."

I sat down next to her, placing my hand on her arm.

"I thought she didn't matter to me," she continued. "I was standing there watching her gush over me. Me. It should have felt like a victory. All I could think about how happy she was to see me. How happy I was when we were still friends. And how many ways I could have killed her right then and there. What I'd done to Eligos. What I'd done to Siberian's maker. With the things you've created, I could make her vanish in the night and no one would ever know. And I hated myself for thinking it, for wanting that. The fuck is wrong with me?"

I flopped down, laying next to her. "You're talking to the girl who spent most of the last three years lusting after her own sister," I said with a short, self deprecating scoff. "We can't help what we feel. All we can control is what we do with those feelings."
"And then I watched Tattletale tear her down," Taylor continued. "She was brought to tears in front of me, humiliated, reduced to nothing. She spent five minutes experiencing what I spent two and a half years going through. You'd think that would make me happy."

"If anything, it upset you more," I responded.

"I wanted to save her from Lisa," she offered a pained laugh. "I actually wanted to rescue Emma, the traitor that was once by best friend, the cause of my fucking Trigger Event, from the person who saved my life and showed me that it was still possible for me to have friends and happiness."

"You're a good person," I replied. "You don't want to see people suffer."

"No," I replied. "Hesitation is something you don't do. But you still hated every second of it."

She looked at me for the first time. "How could you possibly know that?"

"The Yggdrasil," I explained. "Your power telegraphs your feelings through the bugs. The relays, especially. I don't know if they're just extra sensitive because they're linked into your power in a more direct fashion, or I'm extra sensitive to them because my power is linked into them as well."

"You feel that, too?" She asked. "I thought I was imagining it. Your tree responds to your power, as well. Maybe not the same way mine does, but I can tell when you're in contact, whether you're actually using your power or not. It's not an especially clear link, but it at least hints at your emotions, and the stronger ones come in clearer. Like I'm feeling your 'pulse', or something."

"Shit," I muttered. "You know what this means, don't you?" This time, I reached for the link, spread my power through the Yggdrasil and at the relays. Improving on them, more completely melding them into the Yggdrasil, until they were functionally one organism. Taylor gasped.

"No," she cupped her face with her hands. "No, no, no, god damn it no." Even as she protested, she used her power, flexing back through the relay points, interacting her power with mine on a literal level.
"I'm afraid so," I confirmed, as I sank my hand into the living bed. "We can feel each others' emotions from anywhere in the city."

"The others must never, ever find out," she said. "If they do, we'll never hear the end of it."

"We must kill Tattletale," I agreed. Meanwhile, I was assembling some biomass around my right arm. She felt it when I added one of the relays to the neural system of the organism.

"What did you just do?"

I pulled my arm out of the bed, holding it up so she could see without either of us having to sit up. I was wearing a green wristband now, stretching the full length of my forearm. "A more comprehensive version," I answered. "It's not fair how one sided the connection is. My side borders on telepathy. Your side is little more than an EKG. I can break connection whenever I like, you have to leave the city. This changes that. A direct link that's intended for it."

I felt her emotions well up as I attempted to send my own feelings through the link. I couldn't know for sure how well they were received, only her responding emotional mix.

FearComfortReliefSafetyGratitude. She rolled over- half on top of me, and held me in a hug, sobbing. "Oh god thank you! I can't believe you'd let me... I was terrified you could..."

I had to fight back the emotional interplay. "May- maybe I should turn down the settings a bit," I said. "Until we get used to this."

"Y-yeah," she said. "This is intense."

"I could turn it all off, if you want. Alter the relays so they can't transf-" NoCan'tLose, I froze. "Okay, guess that's a 'no'."

She smiled sheepishly. "Yeah," she said. "It... it's scary... but it's nice. Knowing there's someone I can trust like this."

"There's a lot of people you can trust," I offered. "Hell, even Respawn has your back when you need
"AgreementDismissal. "I know, but nothing like this."

"We'll never be able to hide this, you know," I said.

"AnnoyanceDetermination. "Then we don't bother. We managed to find a way to telepathically interact our Passengers." She halted. ConcernApology "No! Sorry, I don't mean to make it sound so... fuck, I screwed up."

"No," I said. She had reacted to my feelings. This really is completely two way. "I get it. This is major on so many levels. I..." ReliefGratitude "This is going to take a lot of getting use to."

"AmusementComfort "Yeah,"

Riley chose that moment to walk in. "I was told to tell you two to stop making out, we're about to do the big finale and you have to be there."

"AnnoyedEmbarassedHappy "Okay," Taylor agreed, moving off me. "Guess we still have jobs to do."

----

People gave us a few 'knowing' looks when we got outside. If they only really knew, I thought.

"AmusedSecrets. I glanced over at Amelia. She must have picked up on the looks. Or my reaction to them. I was still not sure about this bond. Everything I felt, she'd know. In some weird artificial way, she'd feel as well. Just as I picked up all her emotions. What concerned me more was how much it didn't bother me. Fuck, I already trusted her with my life, my safety, even my memories considering what she could do. This... really, this was her offering me a similar level of trust. Or as close to it as could be achieved.

"ComfortConfidence. "Yeah, I know," I told her. Not that I really needed to."
Clarice came up to us. "Okay, this is the important part. I made a machine that replicates your bug signals, and I have a program for them to follow," she said. "I need Gaea to open up the ports to let them all out."

Wait, what? ConfusionConcern.

"Are you sure this is safe?" Amelia asked.

"Absolutely. It's just a competing signal. As long as Khepri doesn't try to override it, there won't be any problems. And if she does it'll just override the machine. Plus it can only control these flash bugs, I haven't taught it anything else."

ConcernReluctance. "It's fine," I offered. "If something starts to go wrong, you can just break the machine."

GratitudeRelief. "Thanks for doing this," she said. That's when I realized a lot of the emotion had been for Riley's sake as well. She is afraid I'll hurt the girl's feelings. And not just for the obvious 'pissing off Bonesaw is just not smart' reasons.

"Okay, everyone," Crystal announced via loudspeaker. "Time for the highlight and closing of the evening. Our own special brand of fireworks. You'll find the ground clean and comfortable, just lay back and enjoy the show."

Gaea put her hand on a wall, and stairs formed. "What?" She asked, looking at the others. "I want the best seats in the house."

I climbed up first, followed by Aceso. She was dragging along Vista, who was followed by Theo. Miss Militia followed next, looking slightly on the annoyed side, and not caring at all about whether she was welcome in our little gathering. Minerva and Gaea took up the rear. We spread out, somewhat. Although Vista was currently basically surrounded. My bugs found the others, of course. Osiris, inside. Crystal dropped down over next to some civilians. Parian was...

I blushed. AmusedCurious RealizationEmbarrassed. Okay, Parian was indisposed at the moment.
The bugs poured out of the ground, taking shades and as they lit up the sky with millions of dancing lights. Specifically four million, five hundred and sixty three thousand and twelve of them. Following the dance that the machine set out for them.

They whirled amongst each other and took to ever changing configurations, seeming to vanish from thought, only to reform again. They separated, forming a double helix of color and light, pieces flitting between one another. Colliding and shattering and rebuilding. And then I... then they were there again. I could tell by the other bugs that people had jumped out of place. Many of my insects were twenty or thirty feet from where they had been. What just happened? Another jump.

"It's them," I heard Miss Militia gasp.

A/N- Ah, yes, this chapter. THIS was a VERY important chapter for many reasons.
"Yeah, give me a sec," Respawn said. Then he disintegrated, replaced as usual, but without the tears or signs of stress. "There, all better." He smiled. "Minerva, I'll have you pre screen my guests, from now."

Holy shit. I just watched him commit suicide casually. As the only member of the team who knew what that felt like... oh my god I killed him, too.

Khepri turned and went inside, and was quickly followed by Amy. Those two followed each other around like they were joined at the hip. Amy using the villain to replace her sister made more and more sense, the more I learned of all the weirdness she had in that regard. Loved her? Was that really happening? Sure, we joked about the two of them being 'involved' often enough, but... for one thing, Khepri wasn't gay. Unless Amy. But that tinker, Rapture, cleared all of us.

There was a time I thought New Wave's family dynamic was fucked up.

"So, are any of you going to tell me what that was about?" Miss Militia asked, her voice stern. I hadn't even noticed her approach.

"I just found out my date's a b-" Respawn stumbled. "Bad person."

"Uh huh," the current leader of the Protectorate didn't sound impressed. "And that's why she ran away crying?"

"My fault," Minerva explained. "Cape groupies, you know how they can be. Especially when you call them out on it. I probably went a little overboard, but you know how protective I get when it comes to my friends and team mates. Feel free to talk to her, maybe you'll even find something to use against us. Depends on just how badly I pissed her off, really. Just don't be surprised if it turns out to be that we were in the right."

"I might, at that," Miss Militia stated.

"Just be sure and be thorough when questioning her," Minerva smiled. "You might find she knows more of your dirty laundry than ours."
I dropped down next to Osiris. "Hey, take a walk with me?"

"Oh, sure," he smiled that fake smile of his. "Lost one date, are you going to be my upgrade?"

"Do you really have to be like that?" I asked.

"Probably," he answered. "It's not like it's that big a deal."

"You killed yourself to stop crying," I countered.

"I needed something for a mood balancing. It's nice to be able to reset your emotional reactions," he explained. "Riley built me a kill switch. Set up to respond to a specific set of sub-vocalizations. Instant dose of sedative, enough to trip my power's auto correct. In case I ever needed a quick way out of a trap or something. Doesn't actually kill me. Any more than going to sleep does."

"I've been through it, Zach," I reminded him "Twice. It fucking hurts like hell and we both know it."

"I've gotten used to it," he replied. "Once a day at the very least, if only because you can only stay awake so many hours without getting tired. At least with Riley’s switch, I have a chance to brace myself for it better."

"You've made an artform of avoiding the actual subject of the conversation," I sighed. "I know this was a bigger deal to you than you're pretending. So start talking."

"I..." he sighed. "Fine, you got me. I knew this girl for only two weeks. Even if we spent hours talking every day. She was smart, funny, charming, sweet, insanely beautiful. And it was stupid, but I thought I could have had something that would last. Would be real. Then to find out she's a fucking bully?"

"Were..." I hesitated, but I needed to ask. "Did you have problems with bullies?"

He looked away, gazing off into nowhere. "You could say that. Nothing like what you're probably
thinking. Doesn't matter now, anyway."

"Will you be okay?"

"I always am," he replied, working back to his more cheerful persona.

....

"Hey mom, hey Mister Hebert," I said.

"You're allowed to use my first name, you know," Danny responded.

"It's a cape thing," mom explained. "In costume, we're always our cape name, and everyone else is always 'miss' or 'mister'. Better that way for everyone involved. No hinting at who we may or may not know in our personal lives."

"I see," he said.

"A bit different for New Wave," she added. "Since our identities are already public. But it's a good habit to maintain. Wouldn't want to accidentally unmask a friend or relative."

He nodded. "Makes sense. I should thank your team for the ferry. I know I've said it before, but the Mayor rejected the idea for years."

I almost rolled my eyes. The man was more than competent at the things he was good at, but so painfully clueless in other ways. At least my mom was kind enough to take pity on him. He'd have been so out of place without her here.

....

"What cell phone?" I watched Lisa ask on the screen while she held the phone in question. We were all there in the video. I didn't even remember the conversation, and here I was watching it.
"The one in your hand," Amy insisted. "Here." She took the phone away, closed it, and thrust it back into Lisa's hand.

"Hey, why did you have my phone?"

Amy's videotaped double sighed.

"What kind of prank is this?" Respawn asked, also watching the video of us failing to watch a video. "Because it's really fucking amazing. Did you, like, build clones of all of us?"

"Quiet, all of you," Lisa said with a quiet, frightened whisper. "This is too fucking important."

"Turn it on and load the video from last night," Amy's recording instructed Lisa, who obeyed. 

"Now, what do you think of the video on the cell phone?"

"I don't know, I don't have my cell with me,"

The rest of us were all looking at Amy like she was insane.

"Ugh. Alright. Let us pretend there was a crazy stranger power."

"Alright," Lisa agreed. 

"Now, it takes something and makes you forget it exists. Makes you forget it ever existed."

"Sounds an awful lot like Imp's power," Taylor offered.

"Yes! That's a great start!" that Amy exclaimed. "Now, how do you beat Imp's power?"
"Video," Lisa offered. "Or remote viewing. Imp's invisibility was a hard counter to almost every sense within her range. Didn't work on things outside her range limit. It's how we realized we left her behind at the meeting in the ship graveyard. Her range seemed to be around three to four miles. Kinda hard to test exactly."

"She stabbed me and slit my throat and I didn't realize she was there for another hour," Riley volunteered.

I cringed. Even in the cape community, this is not normal.

"Okay," the real Amy turned off the recording of her showing us the cell phone recording.

"Now," Amy started. "First, do you still remember seeing that video?"

"Yeah," Taylor stated. Then her eyes fluttered for a second. What was that?

"Sorry," Amy apologized. "It's just, that is basically what the last three weeks of my life have been like. Trying to explain this to you, and you all forgetting."

"Like the phone," Lisa said, still staring at the now blank screen. "This is beyond what powers are normally capable of, since it's beating Rapture's technology, Riley's modifications, and my powers. And for it to have such a close link to a power we've seen before."

Amy stared with desperate hope at Lisa. Taylor did the same thing. The rest of us were mostly just confused.

"Oh. Oh fuck." Lisa's horrified voice came out. "Oh fuck us all."

A/N- A lot of big events in this chapter, too.
"Alien space whale parasite gods?" I said incredulously.

"That's about the sum of it," Lisa replied.

"Okay, how the fuck is it everyone kept forgetting when I tried to say that, and you explained it in five minutes?" Amy complained.

"Because I bypassed the blocks. For example, if I-"

"See," she continued. "They already forgot. It's-"

I shook my head. So did a couple of others.

"Note that they function normally during the blackout period," Lisa told Amy. "It's retroactively induced amnesia. They can still interact, they even retain other memories created in the same timeframe, they just can't remember the taboo subject. Makes it really hard to weaponize. Or even know when you've mentioned something."

"Fuck," Zach muttered. "So is there a way for us around this?"

Lisa sighed. "No, not really, not anything that you want to happen. My power eventually found a way to build around it. You would require a psychological break that could be loosely referred to as a 'third Trigger' to get through the way Amelia did."

"I see," Riley stated. "Makes sense. A Trigger Event is the Pollentia activating and establishing restrictions in response to environmental stressors. Including the memory blocks. A Second Trigger releases more blocks, giving access to greater powers. A third trigger... can't give more power, so it removes the only restrictions remaining."

"Imperfect analogy," Lisa corrected. "But if I explain it in any greater detail, we'd be repeating this conversation, for the third time in five minutes."
Riley frowned. "No, that would be bad," she agreed.

"So, until we figure out another method," Lisa replied. "It's just Amelia and I who know the whole story."

"Not necessarily," Riley offered. "We now have a full list of subjects that will cause the memory lapse, and three of the top five biomanipulators on the planet." I'd call her arrogant, but she was right. "We could set up all kinds of brain tests-

Amy tensed so hard I was afraid she would hurt herself. Oh. Of course she'd have hangups about that.

"We'll discuss that later," Taylor interrupted. "It has been an incredibly tiring day for all of us. We need to sleep. Recover. I sent my dad home an hour ago, so I'll be crashing here tonight."

I agreed. I was dead tired, and mom had already left. "Got room for another?"

"You only wanna stay the night because Taylor is," Amy teased.

....

Morning came early, unexpected, and unpleasant. With Riley's face inches from mine. I barely had time to register that I was awake when she yelled "I need an adult!"

I screamed in surprise and stumbled back, falling out of bed and landing hard on the floor. Or, not as hard as I'd expected, actually. The floor here was amazingly pliant when it needed to be. I've slept in less comfortable beds. I thought in my half-sleep daze as I sprung up. "What's the emergency?!"

"There's a weird woman outside and she needs to talk to you," Riley replied.

Oh, this can't be good. "I'll be there in a second."
"I'll get the others," Riley said as she rushed out the door.

Putting on the Eki armor was really quite simple. Just hover above it and lower myself down into it. It would seal itself around me. Total of thirty seconds or less. I was out the door in a minute. Respawn was already there, alongside Clarice. And a rather unhappy looking middle aged woman in a suit whose black hair was fading gray.

I landed. "What's the problem?" I asked, trying to project confidence.

"Are you a legal adult associated with 'Pantheon'?" she asked.

I held out my hand. She ignored it.

"I am Janice Reed, from Child Protective Services," she replied.

My face paled. "May I ask what you're here about?"

"There have been concerns expressed that you may have minors living on premises with improper facilities," she informed me. "This is a surprise inspection to investigate this possibility."

"Why weren't we warned ahead of time," I replied back. I didn't bother hiding my suspicions. My aunt's a lawyer, and I'm pretty sure it doesn't work like this.

"It wouldn't be much of a surprise if we gave you a warning, miss Pelham," she said with a dry, humorless tone.

Clarice spoke up. "She's telling the truth, according to my senses," she informed me.

By this time, Amy and Minerva had gotten out the door. I looked at them. "Apparently, someone thinks we might not be taking proper care of our underaged members, sent an inspector." I informed them.
"Oh, really?" Lisa said with a smile, stepping forward. "So, who was it? The PRT looking for a way to sneak attack us?"

The woman regarded Lisa passively. "Regulation double blind process," she informed us. "Neither I, nor my immediate supervisor, are aware of the identity or identities of any reporters. Necessary, given the nature of many thinker abilities."

Message loud and clear, I thought.

"Alright, come this way, we have nothing to hide," Lisa smiled.

"Our records indicate you are a minor," miss Reed stated. "You are not legally able to give me permission." She looked at me sternly. "If you're worried about security, that is fine. I only need to see the parts of the facility that pertain to living conditions for minors. You could also refuse access to your facility, that is within your legal rights, however it may reflect poorly upon you in the future."

Amy nodded. "It's fine, Crystal."

"Okay, right this way," I said.

"We don't really live here," Amy informed. "I have a few sort of guest bedrooms and can create more. Khepri lives with her father. Lisa and I have our own places. Aceso stays with me."

"What of her parents?" The inspector asked.

"She was orphaned by the Slaughterhouse Nine," Lisa informed.

"It's okay," Clarice stated happily. "I have my big sister now!" She proceeded to hug Amy.

"Big sister?" the agent's face seemed to somehow be even more skeptical than before.

"Not literally," Lisa replied. "After Gaea killed Jack Slash, Aceso picked her, and to a lesser extent the rest of Pantheon, as a surrogate family. It's even there in her name. The goddess Aceso is sister to
the goddess Panacea."

"Interesting," the woman replied.

We showed her around the facility. Or at least the first basement layer which we mostly lived in. "You all opted to stay here last night? Several teenage girls and a single teenaged boy?"

"Trust me," Respawn replied. "Exponentially less fun than what you're implying."

"We had to clean up after the party," Lisa again explained. "By the time everything was dealt with, it was easier and probably safer just to stay the night."

She just nodded as we showed her around, writing notes on occasion.

By the time we led her out, we had been there for almost three hours. It was past one.

"The nonstandard nature of this facility makes judgment calls difficult," she was kind enough to inform us. It was the most she'd said at one time all day. "Given the conditions of the city as a whole, this is of less concern than it might otherwise be. I highly suggest you get in contact with the Youth Guard for approved civilian oversight. The major negative mark is that you've shown me nothing to indicate efforts to insure your underage members are getting a proper education. We will contact you to schedule a follow up meeting within three business days. See to it you've corrected this by then."

This definitely can't be good.

....

"Very well," Miss Howell, the new Principal of Arcadia said, looking at our paperwork. Just Amy, Riley through her Clarice doll, and myself sat there. For the rest of the team, their registration as students was remarkably simple. 'Clarice' was the exception. Forging paperwork and records was a bit tricky, helped along by the fact that a lot of people no longer had complete records thanks to the efforts of Leviathan and Shatterbird. Convincing the school to allow her to register as a highschool freshman was a bit more difficult. And that's after we lied and said she was thirteen.
It took some time, of course, but the claim that her powers gave her enhanced learning and memory abilities was absolutely true, and that helped. Eventually we agreed that she could be bumped back if she couldn't keep up with the classwork. With much the same special consideration that the wards got, and for that matter I got when I was attending here.

Riley was simply overjoyed to be in the same grade as her new best friend. The rest of the team were mostly juniors, or would be once 'real' classes started again for the year. This emergency summer school class schedule was hardly the standard. Lisa got to opt out for having her GED, and of course Blasto and I had already graduated.

Amy jerked up all of a sudden. "Fuck!" The principal didn't look happy with the outburst. "Sorry! Taylor's in trouble. Outside, not in costume, can't-"

I was already out the door. You don't spend as many years as a hero without learning to trust the judgment and powers of your team. Especially on a team with the sheer number of extrasensory powers as this one.

The new students reacted with shock as I flew above their heads. One of the many nice things about Arcadia is that it has a lot more emergency exit doors, and they didn't sound alarms if you used them. I was outside in a minute. Looking for the problem.

I spotted that redheaded girl from last night, rushing into the building. Taylor was sitting on one of the stone posts near the entrance.

I dropped down near her, alert for anything. Just because I didn't see it, didn't mean there wasn't a problem. Khepri's power meant that she didn't need to be anywhere nearby for a fight.

She was visibly upset, shaken and withdrawn. "Are you okay?" I asked. "I was told there was a disruption."

She jumped and looked up. She hadn't noticed me. That bored repeating in my mind. She, the girl of near omnipresence, was so distracted that she didn't notice as I made a freakin' scene in front of at least fifty people on my way to find her.

"Y-yeah," she said, nervous and embarrassed at the attention directed toward us. "It... it's nothing. Sorry to distract you from what I'm sure is a busy day." She offered a weak smile.
And that's when I realized. I'd never seen her out of costume before. Sure, I'd seen her without the full face mask plenty of times, but never actually as a civilian. That body language was learned over time. It wasn't something one could just 'act' without a lot of practice. The language of someone who was timid and afraid and just wanted the world to leave her alone. The body language of a victim. This whole time, I'd been thinking about this all wrong. She's not Victoria. She's Amy.

==============

A/N- Actually, I have no notes for this one. Except that over at SB, a lot of stupid people threw the most amusing hissy fits at the mention of the Youth Guard.
It took us time to get the full team together. Especially Ray, who had spent the night, and the rest of the day apparently, with his date.

"Dude," Respawn said. "You were on, like, one date and she brought you home?"

"Not what you're thinking, kid," Blasto replied, smiling happily. "Rapture and I stayed up tinkering until dawn. One of those things I think only Tinkers can really appreciate, working with an equal for long periods of time on things that no one else has even imagined. It's hard to find that. Err, no offense, Clarice."

"I understand," the girl replied. "I'm so far out of your league that whenever we work together it's more like I'm telling an assistant what to do."

"Ouch..." Blasto mumbled. "That's just. Ouch."

IrritationAmusement "Okay," Taylor said. "Now that all of us who are officially part of the team are here. We just got a visit from CPS today. We're deciding what to do with it."

Blasto spoke up. "More PRT bullshit?"

Lisa shook her head, "No, I really doubt it. Maybe a five percent, at best. They're not that stupid. For one, they know it'll fail entirely, especially as it's a complaint lacking any actual evidence and involving teenagers who are theoretically able to speak for themselves. A minor annoyance to us at worst. Like throwing spitballs during a knife fight. The best you can hope for is to piss someone off. Piggot's a psychotic bitch, but she's not that stupid."

"Makes sense," Khepri agreed. "We'll just assume it's not the PRT, then."

"Second most likely scene is one of our slowly growing list of enemies that mysteriously still have a pulse has decided to take a shot in the dark," Lisa continued.

"Who?" I asked. "We didn't really have that many, if we ignored the PRT."
"Purity, most likely," Lisa offered.

"Miss," Theo said. "I don't believe Kayden would do that."

"Me neither, really," she answered back. "But I could think of a lot of reasons why she would. A 'fuck you' to us. Using the same tactic that Coil used on her, more or less. A tactic she probably believes Khepri and I were partly responsible for when with the Undersiders. Or, maybe it's legitimate concern. Maybe she's worried about your wellbeing, Theo, and this was a way to make sure you are treated well."

Theo shrugged and looked down.

"More likely than all that combined," Lisa continued. "A real and honest 'concerned citizen'. Bunch of kids living in a magic treehouse with no adult supervision? We neighbor several city blocks. We only need one of those neighbors to be nosy and judgmental. The fact that someone only showed up to ask to be shown around, with no police presence or actual accusations, who admitted she'd leave if we didn't allow her in, indicates that it was an only barely credible case in their eyes. A formality."

None of us had anything to say to that. It was possible, if doubtful.

"The last possibility? The youth guard, themselves," Lisa offered.

Confused Annoyed. Yeah, me too. "I was under the impression that their jurisdiction goes nowhere near us," I said.

"It doesn't," Lisa agreed. "But on paper, it looks like it could. If you take a couple shots of vodka, bash your face through a window, tilt your head and squint really hard. If only because no one else is even close to having authority on this."

"That doesn't fill me with concern," Blasto smirked.

"It should," Lisa responded. "That same kind of tricky bullshit is the only reason we're standing here talking instead of trying to find a nice third world country to move to. We're sitting on a house of cards made entirely of half truths and technicalities. We know it, and everyone watching us knows it.
Either we cooperate, or we have no choice but to functionally declare war upon the United States. A war we'd win, given the circumstances, but not a war we want."

"No, I can safely say I don't want that," Eki replied. "If it comes down to that, I'm walking."

"Me, too," Theo replied. "I'm sorry, but that sounds like something my father would do."

"No, we're not doing that unless they physically attack first," Minerva kept smiling. "That would hurt our image and kill our false legitimacy. The Youth Guard has, essentially, positioned itself to do to us what we did to the PRT."

"When you put it that way," I muttered. I didn't bother to elaborate. Everyone here could complete the sentence.

"It's a matter of image and power. For them and us. By doing this, the Youth Guard hopes to make themselves look more significant than they really are. They're well enough liked amongst the soccer moms and other touchy-feely political demographics. It gives them some level of lobbying power. They're hoping to flex it, without actually looking like that's what they're doing. Either we contact them and start capitulating to their requests. Which will, no doubt, be entirely reasonable. Or we refuse and they can hurt our image publicly while improving their own. We're not in a position where we can afford that, even if it's a cheap shot."

I sighed. "Any way we can avoid both problems?"

"Not completely," she replied. "We'll have to comply with CPS requests. Aceso is on record as having no family outside us, meaning we're under legal obligations to see to her care and wellbeing. Failure to prove we're doing so, well, they can't force us, but they can make life uncomfortable if we don't." Lisa concluded. "Most importantly, they can make us look bad if we don't at least see to it that she and Zach are in school. The rest of us don't really have to worry about it, but..."

"But," I said dryly, "If none of the rest of us are there, that means we leave Clarice and Respawn in school alone."

"Basically," Lisa agreed. "Not such an issue given Respawn's powers, and Clarice isn't actually real. But yes, we'd be leaving those two alone in school. Hiring private teachers isn't outside the realm of possibility, but again, that comes with risks. Worse risks, really. Besides, honestly, this is kind of the perfect excuse. We know the Wards will be attending Arcadia. It works in our favor to identify and
befriend them."

ResignationAnnoyance. "I'll go," Taylor volunteered. "My grades in Winslow were shit to begin with. Even with a GED that'll look bad. I'm smart, and my multitasking abilities have to be charted in exponents. I can study every subject the whole time we're in class, keep an eye on everyone in the building, and still do almost everything I'd be doing while in the base. Frankly, all I do these days is sit around and make mutant bugs jump around. It'll be good just for the variety. Fresh school, fresh start." SadnessFear.

"It... okay," I agreed. "I'm in. I still know most of the Wards' identities, even if they were always more Victoria's friends than mine. As often as they've said they owe me, we'll see if I can collect." GratitudeWorry.

"I'll go, too, ma'am," Theo offered. "I should be in school anyway, and Immaculata won't have me due to my father. The image thing."

"I'll see what Coil's managed to pull up as far as creating a legal civilian identity for Clarice," Minerva said. "Started that project weeks ago, we'll need it soon. We might need to 'accidentally' let Aceso's identity as Clarice slip. Amelia, if you don't mind, we could exploit a few... details... about your personal life."

My blood chilled. ComfortWorry, Taylor broadcast to me. "What are you planning to do?"

"Fake Clarice being your actual sibling," Tattletale replied. "Her supposed powerset is reasonably similar to yours and Marquis. It would be entirely believable that she caries a power inherited from the same source. No one would be surprised to learn she's Marquis' offspring. We will, of course, hide it well enough that they'd have to dig to find it. But if they did, they'd also discover your own relationship. That would make you her closest relative. Trying to take her away then would prove close to impossible."

Fuck me. I sighed, even as I resigned myself to it. ComfortSupport. Thank you. "May as well," I sighed. "Jack figured it out in a couple days. Anyone who wants to look, already knows. At least this way I can get some kind of benefit from it."

"This is the best day ever!" Clarice declared. "I get to go to a real school with my sister and my friends and it's going to be like all the TV shows!"
"Then it's settled," Tattletale smiled. "I'll discretely make sure Clarice is set up to be in Vista's grade even though she's -supposedly- a year younger. The rest of you will be in pretty much perfect positions to make friends with Clockblocker, Kid Win, Weld and Flechette at the very least."

"You can skip Fletchette," Taylor stated. "I'm not saying to ignore her, but she's..." DiscomfortApprehension.

"Oh!" Tattletale smiled. "Good for Parian. Also, shame on you for eavesdropping."

Taylor buried her face in her hands. "I really didn't mean to." EmbarrassmentApologetic.

"Now we need Clarice to be upgraded so she appears to have minor changer powers, perhaps some regeneration," Lisa added.

"Can do," Clarice replied.

"While we're on the subject," Blasto volunteered. "See if you can keep as far from Kid Win and Chariot as possible. Tinkers give off lots of hints that other tinkers will notice. Not a risk we're taking if we can avoid it."

"That sounds like everything for you folk," Minerva said cheerfully. "Now I'm going to go make contact with the Youth Guard and make them feel like they won a victory right here, while milking every last drop of perceived legitimacy this offers us."

"Good," she said. "I will, of course, maintain the same considerations for you and your team as I do for the Wards that also go to this school. Are there any other concerns to address?"

I sighed. "There may need to be some extra watching when it comes to Clarice. She should be fine, but there's almost no possibility of keeping her powers secret for very long. We're not expecting you to. She's rather hyperactive sometimes, overly eager to please, and is excited about school. Just tell the teachers to remind her that her sister wants her to behave in class, and have them keep an eye out in case the wrong kinds of students take an interest. For the first couple weeks, at least, I'll probably be stopping by between classes to ask about her."

Howell nodded. "I'll pass along the message. We've dealt with similar cases in the past."

"Thanks," I smiled. "I should get to class, myself."

"Glad to have you back," she smiled.

I was given a level of attention through the halls that would have made Victoria jealous. Pity I didn't want any of it. I managed to spare a glance at Taylor. She was currently at her locker, looking at her class schedule. For myself, I basically had the same one as before. AssuranceCaution. Oh. Apparently my eyes lingered just a little too long. Now I had to wonder if anyone noticed. I spotted Clarice near the entrance to Mrs. Coulter's class. She smiled- then again, she never stopped smiling- and waved to me. I smiled back.

Good thing we really weren't trying to hide Clarice's "identity", I had a feeling it wasn't going to survive the day.

---

I waved at my Big Sister when she was done 'checking out' her girlfriend. She smiled nervously, then went on her route to class. I was sad that I couldn't be in her classes, but if I was then I wouldn't be able to go to class with Missy. I could play with Sis during lunch or on our way home.

So I stayed near the door and watched as all the students came into our English class. They were all older than me, of course. About the same age as my doll looked. I kept watch until I saw Missy. She smiled, then stopped, looking around. Oh, right, this whole 'secret identity' thing. Stupid school. Oh well.
I went in and found a place to sit, near the door. Amelia told me that's where the Wards usually stay, so I wasn't surprised at all when Missy took the seat next to mine. I smiled. My Big Sister was so smart.

The first class was English. My first impression of our teacher, Miss Coulter, was that she should be in Christmas movies as Mrs. Claus. Sadly, Santa wasn't real, and Jack never let me build one. *Maybe my Sister would like the idea better?*

She made us all say our names and say hello to the class, and gave us these really thick books with all kinds of little poems and short stories.

"Clarice?" The teacher asked. "Are you paying attention?"

A couple students chuckled. I replayed the last minute. We were suppose to turn to page twelve. "Oh, I read that already," I answered.

"You've only had the book for five minutes," the teacher replied. I could tell she didn't believe me.

"I know, I'm only up to page forty," I replied.

"Then you wouldn't mind telling the class what's on page twelve," she smiled.

I smiled back and started reciting. "Mending Wall by Robert Frost. Something there is that..." and so I went for the whole poem. One of the earliest upgrades I made to myself was a nearly photographic memory, after all.

Using Clarice's perfectly modulated voice, I read smoothly and beautifully. Her voice was based upon Canary's vocal patterns, after all. I couldn't imitate her mind influence, but if you have to invent your own voice, it's just good sense to use one designed by the Passengers to be as close to perfect as possible.

"That is very impressive, Clarice," the teacher praised. None of the other students were laughing, now. "Now do you want to tell us what he meant?"

*What?" What?"

"Poems have secret meanings in them," Mrs Coulter said with a smile. "About using one thing to mean another, and trusting the readers to find the secrets like a puzzle. When you read poems, you
should always look for the meanings." She looked at the rest of the class. "As Clarice was kind enough to read the poem aloud for us, let's move right into learning what Frost meant by it."

*School is the best thing ever.*

----

School sucks. My first period class was math, which at least I was good at. I was late to my second period because my locker was frozen shut by Clockblocker's power. Along with a post-it that read 'now we're even'. *That bastard. And I didn't even have those pictures. Fuck.*

At least the second class was gym, which I could probably have claimed I was exempt from entirely, being a parahuman, but it was more fun than any of the other classes options. If only to see the girls. *Oh fuck me sideways. Emma. Christ, I'd almost managed to forget how beautiful she was. Even, maybe especially, in gym clothes. I tore my eyes away from her and pushed down the emotions. Fuck. Couldn't be easy, could it? I resolved to look into changing to another class. Get one of those 'power exemption' forms.*

No, that felt too much like before I got my powers. I'd just have to tough it out. Besides, my powers were too reliant on my physical abilities, so I needed the workout time. There were plenty of other girls out in class I could find to ogle instead. *None of them looked like her, though.*

The teacher was an older man. Like, way older. I couldn't figure out how he wasn't in a wheelchair. Or a grave. "You're late!" He shouted. As if I didn't already know.

"Sorry," I yelled back. Mostly because we were too far away for him to hear me otherwise. "Business distraction, you know how it is." *After all, you remember going off to the war and invading Boston.*

I jogged up to him. Seems everyone was jogging, anyway. He looked up at me. I wasn't that tall, really. I just had him beat. "Get running, I wanna see how lazy you got in the off season," he said. *Did he realize who he was talking to? Not in a 'I'm a hero, why don't you know that' sense. But in a 'maybe he thinks I'm Billy, his quarterback great grandson' sense.*

"Sure," I replied. I pulled a couple sets of weights out of my back. Total of thirty extra pounds for me to strap to my wrists and ankles, and I took off at a dead sprint.

That's the thing about my power, I have unlimited stamina. Every time I'm regenerated, it's at peak health. The problem is, that gets in the way of good exercise. So I had to do what others would consider a brutal form of workout just to get what others got out of a bit of moderate exercise. *Of course, it also means I can watch my improvement in real time. Especially now, with this watch Riley gave me.* The important part was in my bag, sending and receiving signals from the watch I
wore that was, for all intents, just a display device.

She was also working on something that Blasto and I had taken to calling the "roid ray" - a deep penetrating energy field that would just trick the muscles into believing they've been through a stressful workout so that they grew. The problem was inventing a version that didn't cause cancer or make your crotch burst into flames or something. I was bad enough at normal technobabble, let alone Tinker bullshit.

I disintegrated and kept moving, to the shock of those students who did not yet know who I was. Well, now they did. I looked at the clock. Hundred meters in 13.97 seconds, and I lasted 22.44 seconds before dusting. I faltered for a second as the sensation of being reborn washed over me. It didn't hurt as much as Crystal made it sound. Maybe a little worse than a hard slap. Granted, it felt that way over the whole body, but it didn't hurt more in areas that were normally extra sensitive.

Pain was breaking your own foot by jumping too hard. Pain was drugs and needles and being warned not to go outside. That was pain. Losing her, that was agony. This just stung a little. Dust again. 13.66 for the hundred meter. 22.8 seconds. The first jump in performance was always the best, as it didn't have the efforts of the day to get in the way.

Then I just kept pushing. And pushing. And pushing. Eventually people had just stopped to watch, to see how long I could make this work, but I simply did not get tired. Bored, maybe, but not really. This isn't pain. This is freedom. This is making death itself into my bitch. Eventually the bell rang and I stopped after my next dust. 13.65, 22.8. Well, that was a little something at least.

=================

A/N- Ah, one of the chapters I did with three different character perspectives. In retrospect, these were a mistake. But at the same time, there was no way I was going to pad enough material to make each of these perspectives take up a whole chapter on their own.

Plus a good early peak into Zach's mind. I'm proud of this chapter for that. Don't get me wrong, the Riley section was great, they always are. But I think I really did Zach a great deal of justice with this one.
Arcadia was different than Immaculata. But then, I suspected Arcadia was different than Arcadia before Leviathan. I found myself being threatened on a couple occasions, due to some slight I didn't pretend to understand. In my old school, no one picked on me despite my being heavier set and fairly quiet.

No one dared pick on anyone there, really.

Wealth, power and privilege created its own breed of bullies, ones that didn't sink to violence or even teasing. No, we played politics where every friendship was a calculation, and every party was potentially a snub to someone. That was how the rich bullied.

This was a different world.

By the time I'd arrived at the lunch room, most of the students had already found their seats. The first thing I noticed, and it was an easy thing to notice, were the kids who stayed behind. Most of them were thin, with hard faces and harder eyes, tanned and alert. They all sat near the walls, formed into clusters that made it plainly clear they weren't interested in letting others join their groups.

In the front, were the popular kids. Or the newly evolving popular clique, at least. I could almost see the games they were playing. Most of them were the kids that had left in the aftermath of Leviathan.

They hadn't learned the new rules of the city, the ones where they might be stabbed for insulting someone. The ones where the... there needed to be a term for the rest of us... Survivors, that would have to do. The survivors would only hate them and they wouldn't be afraid to do something about it.

Then the table with all the younger kids, who hadn't made any friends outside their classes and had all huddled together thanks to unfamiliarity. That would change. Seems Missy and Clarice aren't in this lunch period. I ignored my disappointment.

Near the back, as usual, the geeks and loners. I spotted Taylor there. That would, of course, also be my table. I mostly preferred it that way. She was having a conversation with a smaller kid with brown hair that I'd met during our shared computer class. I simply sat down next to her.

"Hi, Chris," I said, smiling.

"Hey," he said back, then looked back to Taylor, who'd spared me a glance as well.
"We can finish this up later, if you like," she offered the boy.

"Nah, it's cool if you don't mind," he said.

"Yeah, it's pretty nice, even if I need to get my dad to drive me all the time. And then he asks every possible question. Who I met, what they were like, if he's ever going to meet any of them, if they actually exist and I'm not just making them up," she continued.

"I wish my mother was more like that. She's never really been supportive of me at all. I mean, I know she loves me, but, she doesn't really know how to relate, y'know."

*Did I ever.* I simply nodded.

"Mine doesn't, either," Taylor admitted. "He tries to pretend he does, though, so that's pretty nice." She looked toward me. "So, Theo, what are your parents like?"

Taylor knew that answer better than most, so she was only asking for Chris' benefit. "I don't really remember my mom," I said. It was true, I had vague memories that might have simply been made up in my head, but that was about it. "And my father... well, promise not to spread it around too much?"

Chris nodded. Taylor did as well, but I wasn't concerned about that. "My father was Max Anders. Better known as Kaiser."

Chris didn't seem to know what kind of reaction to have. He was probably wondering if I was another Nazi. I wasn't sure how to just proceed, either.

"That's kind of fucked up," Taylor offered.

"Yeah," I agreed. "I know, he wasn't exactly a good person. Or a good father. Always treated me like something between a minor burden, and a disappointment. Definitely a worse person, however."

"Shit," Chris muttered. "I mean, it's not like I'm surprised he doesn't have any redeeming features that make him seem like he might be able to pretend he's a human being. But you'd think he'd have at least one thing about him that wasn't awful. Law of averages or something. Are you sure there's nothing about him that was human?"

I spent a few seconds in silence. "He... umm... seemed to be fond of his mother? I think?"
Chris chuckled. "Fuck. That's sad. Better than if he wasn't, I suppose, but still pretty sad. At least he showed up to fight Leviathan. Maybe that should count for something. Not many people have what it takes to go out there and actually fight those monsters."

"That was more about rep, y'know. He wouldn't be able to exist as a supervillain in this city if he just hid away like a coward."

Taylor's head shot up. "Umm, I forgot something, I should take care of that before class. Don't worry, nothing big."

She got up and rushed out of the lunch room.

"So," Chris said, as I was taking a bite of the fruit that I'd been working on. "You're the one who's trying to seduce Vista, right?"

I choked, coughing and sputtering as I covered my mouth. He did that on purpose.

"I... I don't..."

"Please," Chris replied, ranting as I struggled to get my breath back. "I'm not stupid. None of the rest of us are, either. You guys are about as subtle as that giant tree house in the middle of the city. Amy comes back to school. Taylor makes friends with me during computer class. She's good at hiding her personality behind that timid-girl act. But she has that creepy thousand yard stare that comes from being the kind of thinker that doesn't need to use their eyes to see. My money's on her being Khepri, what with the whole 'leggy brunette' thing. But with Amy on your team, for all I know, you're Khepri."

"She's not an act," I managed to speak, eyes still watering. "Taylor. That's who she really is. And I'm not trying to 'seduce' anyone."

"So... giving rides to Vista wasn't some ploy to turn her over to your side? Or that dance? Complete with romantic mood music? Pure coincidence?"

"Most of that's Aceso's thing," I admitted. No reason to deny it. "She's lonely. Just her and her sister. You can't blame her for wanting friends her own age."

"You mean Amy," he said dryly. "They're not really sisters, right?"

"Doubt it," I said. "But they seem to have adopted each other. You can see it if you just watch them together. It's how I am with my little sister, although not quite the same since she's an infant. But they care about each other. They're family. Anyone who says otherwise is wrong."
"So, the music?"

"Coincidence, kinda," I said. "At least, nothing to do with me. They stole Amy's playlist for all the songs anyway."

"Okay, I can see that. Amy does seem like that type," he admitted. "And your feelings?"

"They're good people," I said. "I'm sorta the new guy, not as close to them as they are to each other."

"Good to know," he said. "But I mean your feelings for my team mate, not yours."

"Oh," I looked down. "She seemed sad. You know her better than I do, of course. But I've gotten pretty good at reading moods. You don't live around my father and his people without learning how to pay attention to stuff like that. When was the last time you heard her laugh without it sounding forced? When was the last time she smiled for no reason at all? I bet it was a while ago, right?"

He didn't answer, and that was answer enough.

"I wanted to make her feel better," I continued. "I want to be a hero. Heroes help people. Right?"

Chris chuckled. "No wonder..."

============= 

A/N- All the foreshadowing. All of it.

Also. Theo continues to be one of the characters I'm most glad to have in the story.
Social Sciences was the one class I shared with Taylor. We couldn't do it often without it becoming suspicious and risking her identity. Of course, Lisa was already certain that the PRT had all our identities on record, so it's not like we really had to worry that much. Damage done long ago, before Pantheon was founded, and the PRT wasn't about to out us due the political shitstorm. Making us look like innocent victims of an unfair system was not high on their 'to do' list. The real risk was more along the lines of civilians putting things together.

"So," I muttered, while we were supposed to be studying a chapter on parahuman law as it applied to secret identities and court cases. We, of course, had hidden in the back. A practice both of us did in most of our classes, shared by the other students who'd stayed through the lawless period in the city. "What happened this morning?"

"Only after you tell me what happened in the hall," she said. "That was some weird emotions."

Of course she'd want that story. "Some girl decided to get in my face and ask really personal questions about my sex life. Apparently I'm intimate with every female member of the group."

"Uh... eww..."

"Yeah. That was bad enough," I agreed. "The part where she offered to let me feel her boobs to 'give them a tune up' just took it to an entirely new level of weird."

*ShockDiscomfort.* "Well, that tops my story," Taylor muttered.

"That you still have to dish."

"Emma," Taylor replied. That bitch. "She... I'm not sure. She came up and tried to say something. And now seems to be studiously avoiding even looking at me. Which is fine by me, at least."

"Apparently," Taylor agreed. "Like this whole 'school' scheme."

Right. "Why did you agree to this? I know why the others went. But you, all I've been getting off you is dread and determination."
She looked down. "To make my mother proud. She was a teacher, she believed in education. Dropping out wouldn't be fair to me or her. Especially considering what my grades looked like after the bullshit in Winslow. And you know how much I like running away from my problems. I won't let them control the choices I make for the rest of my life. And if I didn't come back, that's exactly what I'd be doing."

"I can't see you losing or giving up at anything," I admitted.

"That, and I'm fucking bored," she added. "Making bugs jump has been the sum of my activities the last week. I need more to do. Worst case, if things get too busy, I can always drop out again. I'm old enough to qualify for a GED."

"Speaking of boredom, we should probably get back to the books. I've gotta be flawless. Could you imagine the scandal if Gaea couldn't pass a highschool class?"

AmusementAgreement.

....

Taylor and I split up before going to lunch. It was part of the plan. We'd need to wait until there was a really good reason for us to be friends as civilians, before we were seen together often. Thanks to her changeling, she could appear in other locations. Wouldn't fool the PRT for a heartbeat, but at the very least it was another layer of plausible deniability. And they already knew I'd upgraded Khepri's power to city range, so that wasn't a reveal, either.

Honestly, the fact was she didn't need the changelings. They were nothing but a cover for what she could really do. One of our biggest secrets was that she could hear through her bugs. Or use basically every other sense but vision. If they thought she was limited to my humanoid constructs to have humanoid senses, so much the better for us all.

Topographical city map in real time was scary enough, but nothing that Vista didn't already have. Admitting to borderline omniscience? It would be a great way to chase the PRT out, as they'd be unable to discuss anything important within the city. But it would scare the shit out of everyone.

Besides, we all had our missions. Taylor had already made contact with Chris. They'd get along well. Maybe they could even start dating and then those assholes that called themselves my friends would shut up about us getting together. I was going to talk to Dennis. Aaand no, I was not.

He was already at a table, talking to Emma. Lovely. Still couldn't talk to Taylor, and Theo had went over to sit at that group anyway. Chubby kid at the 'geek table', surely that was a shocking turn of events. I looked around, spotting the cluster of 'popular girls'. Some of whom were friends of Crystal when she went here, more were friends of Victoria as well. I felt my mood sour at the memory that
my sister was no longer here. *ComfortCalm.* I sighed. *Thank you.*

*Was our link really that sensitive, or was I broadcasting that loudly?* Either way, it made me feel better. *I am not alone. I can not be alone.* I approached the girls with my head held high. *Strange, I was never this confident before.* Then again, *I wasn't a goddess, before. I didn't have real friends, before.*

It was Ana that spotted me first. "Amy!" she exclaimed excitedly. "I heard about Victoria. I'm so sorry." At least she had the good taste to not start the conversation about Pantheon like I was expecting. Not that her other choice was that much better.

I offered a smile. "Yeah," I replied. "It's hard, but she wouldn't have wanted me spending my time hiding and moping. So, well, here I am." *That sounded so lame.*

"She spent enough time trying to break you of that," Ana agreed. "She'd be happy to see you now." *She was right,* I realized.

The conversation then drifted over to Victoria. Her antics, and habits, and epic shopping sprees, and how nice she was to everyone. All the things that were true, only exaggerated and cleaned. Skipping over the brashness and poor judgment and obliviousness to the feelings of those around her. Many of the girls in this group had never stepped foot in Arcadia before today. They'd never known my sister, but now they'd remember her as a legend.

I couldn't help but smile. *She'd have loved every second of this.*

*ConcernAlert.* I was snapped instantly out of my daydream. Three flies landed on my hand and formed an arrow, pointing at the exit. Taylor was leaving. I ducked off as well.

The flies led me into a nearby bathroom. I heard buzzing in the next stall. *Oh god, I hate this part.* *RegretCalm.*

"Got it," I replied. Then bolted. The vehicle was already waiting by the time I got out of the door. The security didn't try to stop me, and I wondered just what the PRT would think about all this. My cell phone rang as soon as we were out of the school's parking lot. It was Tattletale.

"Sorry. Turns out, they have a jammer of some sort around the school. Hopefully we didn't give anything important away to the PRT by using Khepri, but this is huge. She'll wrangle the rest of the cat herd. I'll fill you in on the way."
A/N- Hehe. Taylor and Chris were obviously meant to be together.
"This was easier than last time," I said to the gentleman in the suit.

"Your request was easier, this time," he replied. *I guess I have to take that as an answer.*

"You're not asking for an upfront payment?" I asked.

"No need," he responded. "We have your information, and you have been an upstanding customer in the past."

The first part was the unspoken threat. Not terribly different than the last time, really. They could find me, and they could ruin me. Maybe ask someone else who owes them their powers to smack me around a bit. My abilities were useful, awesome even, but I wasn't exactly a top tier parahuman.

When the roof started to drop on us, I lunged forward. At the man, and far more importantly, at the suitcase. I needed to save it. I used my momentum as I picked him up, blasting a hole for us before we went flying out the window. I landed in a roll and came up on my feet, but the man himself was injured. Hopefully not too badly. *At least I still have the case. That's what mattered. That, and getting away from whomever just attacked us.*

Then I realized I could not. The property, an abandoned orange orchard, was miles from anywhere. And now completely surrounded by foreboding iron gates, topped with spikes that looked more like clawed fingers than realistically designed security measures. It didn't matter, I couldn't climb it and I couldn't squeeze through the bars, which menaced with nasty looking dark spikes.

I bolted, seeking to find somewhere that wasn't enclosed. I heard the attack before it reached me, and rolled to the side. A burst of fire traveled past me. Another juke, another attack. Water this time. *Some kind of 'elemental' cape?* I didn't bother to stop and look.

A strange reptilian leapt out at me. *Superhuman speed and probably other abilities.* "Fall," I commanded, and the reptile stumbled. I shoved the shard of glass I had taken into his shoulder. It shattered. *Armor?* It took me a moment to realize it, but he was indeed covered in some kind of thin carapace. Whether part of his monster-cape powers, or actual equipment, I couldn't guess.

I swore. "Shit!"

The reptile's eyes widened. And I tried not to feel bad for him as I punched him hard in the face. He stumbled back and went down. I dived for cover through some bushes. More bursts of fire. It was good to know they cared enough about each other to worry about friendly fire. Still, they were
skilled. That last trick would have worked easily, if I didn't have enhanced senses.

The area was getting worse for me by the second, as the ground was replaced by something resembling cobblestone. It bled from the walls toward the collapsed barn. I dived back into the building, reaching down and grabbing a shovel that had been abandoned with the property. It wasn't much, but it was better than being bare handed. I dropped the case into a large rain barrel. Good, it was heavy enough to sink. Hopefully the heavy wood and the water would protect the case, and most importantly the miracle inside it.

I flipped back as a series of projectiles came out of nowhere, embedding themselves in the wooden wall, as well as more streams of flame. The lizard man was up again. He didn't look happy with me. I also got a good look at the pyrokinetic. She wasn't half bad looking, honestly, but I was more concerned about keeping her from stopping me. I waited for her to get ready to fire again, and yelled. "Look left!"

They did, just in time for her to spit the flame onto the back of the lizard's head. She yelled in surprise and went to tend to her team mate. Good. If nothing else, I could keep this up. They would have to decide I wasn't worth the fight eventually. I rolled along the ground as another stream of fluid—this time far more viscous—shot above me. It stuck hard to the support beam. Some kind of adhesive, I'd bet.

They want me alive, I realized. Things just got a lot easier for me.

I got a look at the source of the liquid. Another monster cape—this one large and misshapen. He was generating the fluid out of some growth in his hand. I'd bet he could generate almost any liquid that way.

"Turn right!" I shouted, and his goo coated half the inside of the barn, catching both the lizard and the pyrokinetic. I didn't know what that gunk was, but you probably couldn't breathe it. The big cape moved toward his friends as I bolted toward another possible exit.

I got out without any further hassle, and was almost ready to hope I'd gotten them all, when a string of light hit me. I was shocked. Normally, my power sensed even energy fast enough to at least warn me that it was coming. Which made no sense as my power relied on sonics, but I was okay with that. This time, there was no warning at all. Luckily, there was none of the whole searing pain and possibly death that occurs when lasers smack you in the face. I was okay with that, as well.

Then my shirt came open and my pants started to fall. Dammit. I tripped.

"Surrender," the woman instructed. "I really don't want to have to hurt you."

I held my pants. Too damaged to be any good. I pulled my feet out of my shoes. "For what it's
worth, I'm sorry." I said. Then I followed it up with the one working word that I hated most. "Suffer."

She fell screaming. I got up and rushed over to her. Followed by bringing my foot down on her leg, breaking it. One down for real, unless they also have a healer.

It gave me the time I needed. Now nude from the waist down, I went back to running. My shovel had been cut, giving me a very sharp, if short, wooden spear.

As it turns out, pants are useful. Not just for the whole 'modesty' thing, but because grass is incredibly uncomfortable when it comes up high enough to hit you in the dangly parts. I'd have to call that my penance for what I did to laser-girl. They weren't trying to kill me, so I'd rather not kill them. But that case was more important to me than that. If I had to, I'd kill them to protect it. My grip tightened on my makeshift weapon.

All around me, the terrain got more and more foreign and unfriendly. Grass replaced by stone, the walls growing higher and more foreboding. I felt lizard man come at me again. Moving down the stone wall I had taken to hiding behind as I tried to figure out a strategy. I caught him in the face with the spear, and moved back. The water cannon shot out as well, again ignoring the walls.

Were they illusions? It would make sense, but I felt them, my power felt them. They were real to me at least. Such bullshit. They were herding me toward a corner, I could see that now. But by now I didn't have much choice. The construct had become a prison, encasing me on all sides with no hope of escape. There has to be a power at work. Maybe more than one.

If someone was doing all this terrain changing, he'd probably need to be in the middle of the terrain. And by 'probably' I mean 'fuck I hope so, because the alternative is searching this whole place, and he might not even be inside'.

I bolted for what seemed to be the center of this bizarre cathedral like design. I didn't bother hiding, if these people could move through, then they could probably see through it as well. I wove through statues of gargoyles and monsters, posed to strike. It was objectively both beautiful and terrible, this gothic world that was building around us. Under other circumstances, I might have liked to just look around the place. This was not 'other circumstances'.

I ducked under an archway only a few feet high, adding even more to my impression that this place was designed out of a fantasy, not some weird transposition of another area. Or, possibly just as likely, that the farm itself was teleported, us along with it.

I found a child sitting next to a fountain of blood. No, not blood, it was too light, and it flowed like water. So just colored water, then. Probably. "Are you the cause of this?" I demanded.
The girl didn't respond, didn't look at me.

"Listen," I said sternly. "I want you to turn this off." I kept moving closer. She still didn't respond. She just kept staring into the red water.

"Get the fuck away from her!" A woman shouted. I didn't need to look, the pyrokinetic. She didn't fire, which told me all I needed to know. The child was basically helpless, here. They cared about her. She had to be the source of this matter transmutation. *The question was, would it vanish if she were no longer powering it?*

"I just want to go home," I insisted, pointing the sharp tip of the spear at the girl's unnoticing eye. "Tell her to stop doing... whatever this place is... and I'll have no reason to harm her." I was conspicuously aware that I was half naked, right now. And it was the 'business half' of nudity.

The large misshapen man appeared from a different path out of this courtyard. He was carrying laser-girl, who had the suitcase. My blood froze. "Surrender, or we destroy the vial," she insisted.

"Looks like I lost it already," I shouted. "You've figured out I have boosted senses by now. If any of you make a move, I will skewer her. I don't want to hurt anyone, but I cannot let you take me. There's always another chance to get a vial. But only if I'm free and clear."

I stared down laser girl, who I was fairly convinced was the ringleader of the operation. The others? I had already beaten the reptile, and none of the rest were really much of a match for my power. I looked at the girl who didn't even seem to know I was there. None of them had a chance to react before I drew back the spear and spun it, smacking her across the head and rendering her unconscious.

The ground around us erupted, replacing cobblestone with obsidian black and adding ugly looking spines across the area.

"Elle!" The pyrokinetic shouted, and a stream of fire poured toward me. I ducked and rolled. Over a spike strip that wasn't there when I started my movement. *One bad call is all it takes.* I gave in to the darkness.

==============

A/N- Man, I tortured Newter for this one, didn't I?
The driver stopped outside the south of the city, in the edge of a state park. Not one of the ones where campers and hikers went. One of the 'conservation' parks where they just wanted the trees. I got out amidst Faultline's crew. I had to wonder why they never came up with a name for themselves, but that wasn't really the point. Newter looked to be in the worst shape, with an eye missing. Faultline herself was in a makeshift cast around her right leg. And Labyrinth had a nasty looking bruise on her forehead. What did this?

"Us later," Faultline said when I moved toward her. I had of course intended to heal her first, since I couldn't touch Newter. "You need to worry about the fucker in the van. Do something to make sure he doesn't wake up if you remove Newter's poison. He's a pain in the ass to fight."

One guy did all this?

I moved to the van to look at my patient. He was wrapped in bandages that were covered in drying blood. I made contact with his foot. Multiple punctures along left side and arm. Lung punctured, stomach punctured, damage to upper intestine. Other minor injuries.

This is gonna take work. I pulled out one of Riley's syringes. It contained a variant fungal organism that could consume almost any waste product in the body. Also, the body itself if you weren't careful. A simple injection into the bloodstream and it went on its way, constantly monitored by my power. It went into his lung, consuming all the blood and fluid. I began remaking it into lung tissue and repairing that. It got into the intestine and left me with that to mend. It even spread out of the wound and began eating the bandages.

I'd need to talk to Riley about making it slightly less voracious. This stuff could be a nightmare if it got into the wild. That, and I couldn't help but shake the feeling that this stuff had been used before. Not a pleasant thought. ComfortWorryCuriosity. Oh, right. I'm fine. She'll understand, in some form.

Newter approached. "Hey, umm, how much would it cost to get you to leave a little 'extra' for him? I'm thinking 'incontinence'."

Really? I just looked at him.

"Fine, sorry. Forget I asked," he backed away.

"He'll recover," I told them. "Be weak until his body replenished the lost raw materials, but nothing lasting."
"Good," Faultine stated. "We need to get back to your base, anyway, for this. Elle and I will ride back with you so you can patch us up. The others will take our vehicle and keep an eye on Sleeping Asshole, there."

"Okay," I agreed. The driver didn't voice any opinions. Say what you will about Coil, he knows how to hire real professionals.

....

"Ladies and Gentlemen," Lisa said after we'd all assembled. And I do mean 'all'. Almost every cape we had as immediate and obvious allies were here. We had brought in the Travelers. Coil was listening in, and we'd probably send a recording to Dragon and Defiant. Faultline and crew, of course. Taylor and one Clarice doll were currently being driven by her father, but another Clarice and Taylor's QoB changeling were here.

Damn. That armor looks really, really good. Especially in those heels. ShockConfusionEmbarrassment. Oh god, what did I just transmit?!

"I present to you, Word," she gestured at the unconscious man in our holding pod. He wasn't bad looking. In excellent physical shape, a kind of 'surfer' look, blond hair. "No, really, that's what he chose to call himself." Minerva added dryly.

"He's a Protectorate cape from Florida. Either the world's weakest Master, or a moderately annoying blaster, depending on how you look at it. He can give one or two word commands that fit a really narrow spread of options. All of which are summed up as 'automatic behaviors that a human being can fake'. Like, say, yawning or sneezing or tripping. Nothing complex. He can tell you to jump. He can't tell you to dance, or even walk for that matter, unless he narrates every step individually. We can wake him up just fine, he can't say 'release me'. Well, he can, but it won't work."

She gestured to the pod next to Word. "This is some guy in a suit," she supplied. "He works for Cauldron. Aka, the assholes who sell powers in a bottle and make Case 53s."

"Gaea, if you would kindly do the honors of waking these nice gentlemen from their slumber?"

_Fucking Lisa. AmusedAgreement._ I put my hand on the wall and corrected their altered biochemistry. I had purged Newter's poison when I healed them the first time.

Word started waking up first. "Uhh... wha..." he snapped to attention and was about to say something when Minerva put her hand over his mouth.

"The Surgeon General requires that I warn you. The girl next to you is Aceso. Side effects of
attempting to Master Aceso will almost certainly include immediate regret of recent life decisions. The last time anyone attempted it, she ripped his face off. Quite literally. There's videos of it online."

"Okay," he coughed. "I get it."

"We have questions to ask you and the Cauldron guy," Minerva smiled. "And you will answer them, one way or another. Let's start with a bit of a story. Like, say, why you expect us to believe such an obvious bait and switch."

"Excuse me?" the Cauldron guy said. "I'm afraid you're mistaken."

"Actually, you are more afraid that I'm telling the truth," she said with a smile. "We have a vial here, and I read through all the details and compared it to what we know about them. I'm not buying it. More to the point, I'm wondering why someone else would buy such a shitty vial. Untested, no known power results, likely to only rank at most a two on the PRT's rankings."

"It's for my niece," Word admitted. "She's sick. ALS. Something healers can't really fix. The vials have healing properties. I don't care what powers she gets, or if she gets any at all. I just want her well."

"True," Aceso said. I nodded, my own lie detection agreed.

"Fits with what we ran into," Noelle spoke up. Since her restoration, she'd taken leadership of the Travelers. And they all seemed the happier for it. Even Krouse, who I had thought would chafe being under someone else's command. "The paperwork on the vials we found suggested as much."

"And Cauldron is where you got your powers from," Tattletale spoke to the captive hero. "What did they expect from you?"

"A pretty heavy price tag," he answered. "Almost a quarter mil. And I had to do them a few favors. But I wanted one of the more fun sounding power types. Sonic control and related powers was mentioned as the most likely results. I didn't quite get what I was hoping for, but that's the luck of the draw."

"Is that true, mister Cauldron guy?" Tattletale asked.

"I... I don't know," he admitted. "I would have to know which vial he took, and even then I haven't exactly memorized them. I can confirm that there is a high degree of seeming randomness in the results of a formula. We are still perfecting the process, and with it the expected results."
Aceso and I just watched. Lisa would know that we didn't find any lies. The subtle combination of drugs in their system were supposed to make them compliant, eager to speak. It couldn't force them to be honest, not without making it obvious we were using drugs on them, but they would keep talking forever like this.

"What about the Case 53s?" Faultline asked. "Did you create them?"

"Not on purpose," the man answered. "All the vials carry a risk of mutations. Some minor, others... incredibly major. We've improved the process, so it's very rare to have new Case 53s. You can probably find ways to confirm this yourselves. There's been no major mutations in over a year, now. And we do more business now than ever before."

"Improved," Faultline said the word like she was tasting it. "You mean human experimentation."

"No!" the man exclaimed.

"Lie," Aceso responded.

"Okay, fine," he said. "It's true. We gave these drugs to people to test them. They work by inducing trigger events, so only human testing can function. But it was always volunteers. We went to hospitals to find the sick and dying. Warzones to pick up the wounded. We always asked before we gave a vial. It may not be strictly legal, but we have our ethical standard. No one has ever been forced to take a vial."

"The memory loss?" Newter asked.

"A side effect, sometimes," the man answered. "Happens to the Case 53s. Sometimes happens to other, otherwise normal seeming serums."

"So you're saying we volunteered for this," Newter responded angrily.

"Yes," he replied. "We always got permission. Let our patients know what was coming, that there were risks and it might even kill them trying. Whether you were a cancer patient, or a wounded soldier, or a paying customer... I wouldn't be able to know. But all of you knew the risks before you took the serum."

"By 'risks' and 'choice' you mean you found people too desperate to say 'no', of course," Faultline replied. The man didn't have an answer to that.

The conversation took a couple hours. We learned that they had found what they believed to be a
collection of dead passengers- or, as they called them, Agents. And they were for all intents "mining" the things. That the Travelers got a batch of some of the most powerful serums they'd ever developed. But, of course, the Simurgh got involved and that changes all the rules. Our captive didn't know anything about the inner workings of the organization except that they had a pocket dimension of their own, similar to Toybox. Apparently they were trying to add to the number of heroes out there, while avoiding the pitfalls of being controlled by any particular government.

I was also beginning to believe we needed to get a pocket dimension simply to keep up with all the other shadowy powerhouse organizations out there that already had one.

"We do have to release them," Tattletale admitted, after we'd interrogated them thoroughly. "What proof we have isn't even illegal. If only because there are no laws on the subject."

"We're not done with Cauldron," Faultline insisted.

"No, we're not," Minerva agreed. "But these two have nothing more of value for us, and one of them actually is a hero."

Aceso smiled. "Think Word would trade this vial of his for us fixing up his niece? She doesn't have anything that's actually hard for us to fix, and I really want to see how they put this together."

I had to admit I did, too.

"Also," she said. "I bet I can fix the memory loss. Or at least a good portion of it. The source is from power mutations, right? That should be repairable."

"I can agree to that," Faultline replied. "Neither of them is important. Cauldron's leadership is what I want."

AgreementDeterminationEager. Seems Taylor wanted in on this as well.

"Yes," I agreed. "We'll need to talk to them. Or someone more closely associated with them, at least."

But for right now, this lead had provided everything we could get from it.

=============

A/N- So. Much. Foreshadowing!
Eventually, we managed to get everyone out of the building.

Word accepted our promise that I'd heal his niece. ALS wasn't something I normally healed, too much of it was involved with the brain for my old inhibitions to let me work with, and under the current circumstances I couldn't afford to let anyone know that brains were only slightly more difficult than a paper cut for me.

Blasto, however, assured me that his and Riley's tech could easily cure almost any disorder, up to and including some levels of brain death, with the upgrades from Cranial's technology. One of the many designs we'd be including in the "sanitized" Bonesaw tech.

"So, has anyone given any thought about what we do about school tomorrow?" I asked. "I mean, it's getting late and we're missing the Clarice doll."

"I took it home with me," Taylor replied. "Weirded my dad out a bit, but he's already seen my changeling. He'll take us to school in the morning."

"I'm in Taylor's closet!" Riley said cheerfully.

Respawn started snickering.

"Speaking of which," Tattletale smiled. "Don't think I haven't figured out what's going on between you two."

"For the last time," I sighed. "There is nothing going on between us."

"Really," she didn't stop smiling. "So you mean you girls haven't managed to figure out how to telepathically talk to each other via weird power bullshit?"

That got everyone's attention. Before, it was just the good natured joking. Now they weren't laughing. "How the hell did you pull that off?" Blasto finally asked.

"I realized that Taylor's emotions sort of 'offload' into her insects," I started.

"Yeah, noticed that as well," Lisa agreed. "Part of how she stays so calm all the time. She lets the bugs do the 'feeling' for her."
"Turns out," I continued. "My power works the same way. Or similar, at least. I just never noticed it..."

"Because you were never in contact with a given organism long enough," Lisa interrupted.

"And maybe because nothing else has been simple enough to respond to such subtle effects as my emotions, before," I added. "Taylor pointed out that occasionally her relays I built into the Yggdrasil felt signals off of me."

"Oooh!" Riley clapped happily. "That is just the coolest thing. Direct Passenger on Passenger communication, fed forward and backward in real time!"

"So... I... kinda," I looked down. "I kinda built something designed to make the signals about a thousand times clearer for her."

"You gave her the ability to read your thoughts?" Crystal said incredulously.

"It didn't seem right not to," I said, studying the lines in the table. A table I made. I couldn't help but notice that the imitation oak patterns were distinctly more uniform and patterned than real tree rings could ever be.

"More like feel her feelings," Taylor added. "Words don't work. Only emotions. It's telempathy, not telepathy."

"Taylor can't shut off her power, and we're not giving up her range increase," Taylor nodded. Almost half our current strength was owed to Taylor's functional omnipresence, and the weapons she could deploy because of it. "I already had access to her emotions. All I did was create an organism that does the same in reverse and lets her tune in to me."

Tattletale smiled so wide I was beginning to wonder if the top of her head would fall off. "So you're telling us that your first impulse was to link yourselves together even further? I'd say you were basically married, now, except no marriage has ever been half as intimate as you currently are. You two might as well just admit Riley has a new sister in law and be done with it."

I blushed. EmbarrassedDefensiveProtective. Riley's face was radiating barely contained excitement.

"What?" Taylor interrupted her friend. "You'd rather she didn't at least keep our partnership a partnership, instead of having that kind of control over me?"
"No," Tattletale smiled. "I'm just pointing out that she could have easily changed it so it was no longer doing direct communication, and given you your privacy. Instead she surrenders her own." Her head turned toward me. "You could just break the link, without sacrificing Taylor's range enhancements, right? Wouldn't be that much more difficult, would it?"

"It'd be easier, actually," I admitted. And then I was hit by the rush of emotion from Taylor. FearNegationTrappedNo. It felt like a physical blow.

"I thought so," Tattletale replied, even more smug than usual.

"Did we just..." Crystal started.

"See Taylor's emotions on Amelia's face?" Tattletale offered. "Yes, that is indeed what you just witnessed. Wanna see it again?"

"Don't you fucking dare," Taylor responded.

"What? I was just going to ask you why you're in high heels right now," she pointed at the feet of Taylor's QoB changeling.

"They're not heels," Taylor insisted. "They're stabilizer struts for my antigrav. It was Chariot's idea. Ask Riley." DefensiveEmbarrassedRetreat.

Riley was staring at me, still, with that smile she smiles when she tinkers. I found myself getting uncomfortable. "It's true. They focus the gravity field in the legs so all the stress is on the armor instead of the body inside it. Improved center of balance and everything. Once we upgrade the tech, it'll allow her to walk on walls and ceilings if she wanted. But ceilings usually aren't durable enough."

"The part where they show off your already great legs?" Tattletale continued.

"Not mine, this is my changeling,"

"Which looks exactly like you. Down to the centimeter."

Taylor froze. WorrySelfConscious.

"That is part of the power armor system, so you can wear it yourself instead of using a changeling at
"All," she added. "Means that you don't even have that flimsy excuse. Just admit you like showing off legs and be done with it."

_SelfConsciousApprehensionSadness._ "I... don't really like any part of my body," Taylor managed to mutter.

"That's just tragic," Tattletale replied. "You have plenty of great features. Your legs are one of them. Ask anyone here. Show of hands, who agrees that they either want, or want, Taylor's legs?"

Everyone lifted their hands up except me and Blasto. He looked around. "Umm, no offense or anything, but I try my best not to have opinions about how attractive someone half my age is."

"You really are a bad catholic," Respawn joked.

_EmbarrassmentReliefWorry._ Then I felt Taylor's attention on me, and my conspicuously hidden hands.

"Oh, don't worry," Tattletale said, to my growing realization and horror. "Amelia likes your legs. She really likes your legs. I know you felt her checking them out earlier. I bet that's a sensation that carries over from your link as well."

The floodgates opened. My own humiliation. Taylor's. Our reaction to each other's emotions. It was like getting hit by a truck. Taylor's changeling collapsed, even as the ground beneath me warped and pulled me under, encasing me in the warm safety of my Yggdrasil. I could feel the movement of the others as they walked on my sk- no, on the Yggdrasil. It wasn't 'me'. I gave in to oblivion.

=================

_A/N- The Tattletale school of therapy. Slapping you in the face with your issues until you unsubscribe._
My head was screaming at me when I woke up. My senses worked their way outward, noting the conditions of the Yggdrasil, and my place within. I was in one of the medbay pods. They didn't really work on me, thanks to my blanket immunity to pathogens and most organic influences. Including the helpful ones, unfortunately. *Fuck. What happened?* My memories of the previous night came back to me piece by piece. *Lisa. Comments about Taylor's legs. The changeling. Taylor!*

My eyes shot open and I immediately regretted it. I quickly shut them and covered my face. *Shock*Worry*Relief.*

"Welcome back to the waking world," came Lisa's voice. "Do you have any idea how hard it is to cut someone out of a floor that keeps growing back?"

"Your fucking fault," I moaned.

"I'm not the one who buried myself alive," I could almost hear her smile.

I flexed my power through the tree, and she dropped into a floor that had been reduced to liquid. I solidified it almost immediately. "If anything happened to Taylor..."

"She's fine," Lisa answered, though she was having trouble breathing, being stuck in the floor. "At school right now, otherwise it would look too suspicious. Would you mind skipping past the death threats? I've already done that three times over this. It'd be nice to go to the part where I explain myself."

"Three?"

"Crystal was pissed. Taylor was absolutely livid. And Riley just smiled and left the room," she informed me. "I managed to talk the others down, but I think your Slaughterhouse Sister is currently designing a retrovirus that'll cause my digestive system to reverse directions."

"You better not be expecting me to talk her out of it," I muttered. "So, mind telling me what the fuck made you do something that stupid?"

"Easier for you to see it for yourself," she answered. "You know that link you have with Taylor. Look at it. I mean, really really pay attention to what it's saying right now."

I followed her request. There was so much anger in it. I could feel the damage that had been done to
the Yggdrasil, where our more aggressive monsters had attacked their own storage rooms. Even each other in a couple cases. I made a note to talk to Riley and Blasto about maybe being a little bit too enthusiastic about their programmed instincts.

"Yeah, that," she confirmed. "You created a connection with unknown, unknowable, properties. A connection that relies upon the emotional wellbeing of two people who are so fucked up in the head that a psychology professor could base his entire career around analyzing either of them. Do you have an idea how insane that is?"

"Doesn't mean you had-"

"Yes, it does!" Lisa insisted. "Maybe I could have talked to you alone, and maybe you would have even listened to me. But you wouldn't have believed me. You are mucking about with things that no one understands. You're toying with my best friend's emotions on every possible level, both figurative and literal. And if anything. Any. Fucking. Thing. Goes wrong? You're the only person on the planet who can fix it! And you're just as vulnerable as she is if something goes wrong!" ConcernWorryProtective.

"It isn't the risk you're implying it is."

"Is that so?" she scoffed. "You might believe that, and Taylor's okay with it regardless of the risks. I know you haven't realized it, yet, but she doesn't care about her own wellbeing in the slightest. And she trusts you more than you have any right at all to be trusted. Because of who you are and who she is, that trust will be broken, one way or another. You're going to hurt her. Probably worse than how you hurt Glory Girl."

"You started me down that path," I hissed. The Yggdrasil pressed in on her.

She gasped. "What's fucked up? You could do it right now. But if you did, you and Taylor would never be able to know if it was your feelings or hers that killed me. Go ahead, look. Are you doing this for because of your feelings, or because of hers?"

I dipped back into our link. Taylor's emotions were a seething mess. Mine were, too. I relaxed my power and tried to force myself to be calm. Anger flooded back at me.

"It won't work like that," Lisa informed me. "You're still offloading into your power. Calming yourself by forcing Taylor to be angry. And because it's Taylor, whose ability to deal with her own feelings might actually be worse than yours, she's doing the exact same. You can't solve this that easily, all you're doing is making it worse. Last time you passed out and nearly died by accident. And that was just because you were embarrassed. What might you do if it happened right now, while you're pissed off?"
That caught me. *What could I do right now? A thought or two and I could kill everything in this city, my friends included.* A flush of dread washed over me at the sheer devastation that I could unleash.

"Not the prettiest emotion in the world," Tattletale gasped. "But a better choice. Hold on to that, if nothing else. The awareness of how you're not just a danger to yourself if something goes wrong. You're a danger to every living thing on the planet. Now would you mind letting me out?"

One more flex of my power, and she was spat out of the hole. She landed on her side. Maybe I was putting away the rage, but I still had a vindictive streak right now.

"Fuck," she muttered holding her side. "Pretty sure your cousin broke one of my ribs last night, and that didn't exactly do it any favors."

I wasn't in a mood to feel sympathetic. *ConcernIrritation.* "So, now that you've proven your point, what do you suggest I do about it?"

"Oh, sure, ask me the question I don't have an answer for," she moaned as she got up. "The best choice would be to shut off the link, but Taylor's never going to accept that. Which should give you an idea of how unequal all this is, since I don't think you'd be bothered that much by it." *FearTrappedDesperation.*

She was right, I probably wouldn't be. It was comforting, not something I wanted to lose, but I didn't cling to it like Taylor did.

"See what I mean about you hurting her?" she asked. I saw. *Fuck.* "There's also sitting you two down and making you talk about your feelings, on an honest level. But even ignoring the part where it'd take better gods than ourselves to get Taylor to do that? It'd probably cause more problems than it solves right now. And no, I won't be saying why."

I dipped back into our link. Looked like Taylor had calmed down. I tried to send a soothing emotion. *WorryHappySadness* was her response. "I can probably guess anyway, if I tried hard enough."

Lisa didn't bother weighing in on the assumption. "I'd suggest finding some more 'constructive' outlet for your emotions. By which I mean something to break the face of. The fucking Passengers and their mindfucks mean we all feel the need to take risks. To get that 'conflict' they desire so much. We're not getting much of that right now, and it's starting to show. You going back to school helps with it a little bit, if only because schoolwork makes for some kind of distraction."

"Better than even odds that's why you were so fucking stupid about this whole thing," I replied. "You could have found a safer way and we both know it." *AgreementIrritation*
"Safer, maybe," she agreed. "But I didn't need 'safe'. I needed 'fast'. And I needed it to be proof so ironclad that Taylor would actually believe me when I said how bad this was for her."

"And was it?"

"A bit of both," Lisa replied. "She believes me now, at least. She just doesn't care. Her exact words were 'this is the best thing I've had in my life since my mom died'. She won't be giving it up. Not even if it manages to kill her."

I frowned, and my worry must have been picked up upon. ConcernHappyFear.

"She's been listening to the whole conversation," Lisa replied.

"I know," I replied. "I'll talk to her." WorryFearPanic. "But the link's remaining. It means too much." The look on Lisa's face couldn't be more opposite from the feelings through my bond with Taylor. If only my own feelings were so clear.

=================

A/N- Ah loves this chapter. Also. More foreshadowing!
Riley was waiting for me when I came out of the medical room. I'd left Lisa in there, injuries and all. I'd probably fix her eventually, but for right now I just didn't want to do anything that could be construed as helping her. Fuck, I had enough problems on my plate without Lisa's so-called help.

Riley hugged me. "I'm in class, so I can't spend too long. Missy's teaching me geometry. She's really really good at it. It's because her power lets her cheat. So I made her take chemistry with me. So can I go over to her house after school?"

She smiled broadly as I ruffled her hair. *It's good for her to be making more friends. Real friends.* "Sure," I answered. "Clarice has enough power left, right?"

"Oh, sure," she agreed. "It's my civilian model, remember? Can't do the best stuff, but it can run for days if I want it to. Oops, bathroom break time's over, gotta go."

She ran off to her bedroom. She and Missy were good for each other. I tapped into my link with Taylor. Simply for the reassurance. It wasn't the usual impulse of emotions, this was a softer effect. Maybe if you condensed the word 'hug' into a sensation. *PeaceComfort. Yeah, that's probably close to what I'd sent her with that one.* I felt a wave of sorrow. My own. *Was Lisa right? Was this addictive? Hurting Taylor? Messing with her feelings...* I froze. *ConcernWorryConfused.*

Then I turned right around and opened the door to the med room. "You fucking knew, didn't you?"

"Knew what?" Lisa said, looking at me from where she was resting in one of the pods. "Oh. The aura? Yeah."

"How long?"

"Suspected it even as far back as the bank," she admitted. "Being on the receiving end of her power was enough to make me a little curious, so to speak. But I wasn't certain until the party."

"Why then?"

"That's when it wore off," she explained. "You couldn't tell?"

"I was kinda busy with other things," I defended myself. "Like I'd just realized how much Taylor's emotions carried across the... oh." I just stood their dumbfounded. *WorryInsecureFearofLoss.*
"It's okay, Taylor," I spoke to her insects. "I'll tell you about it later. For now, I really need to sit
down and think. Maybe ask Rey if I can dip into his stash." Fuck. And here I thought finding out I
was acting like Carol was a shock.

"Now you know part of the real problem," Lisa stated.

I didn't answer. Nor did I visit Rey. He wasn't even here right now, instead spending time with his
girlfriend. With Riley distracted by school, the labwork had come to a relative crawl. Riley had blood
samples from the Travelers that she was putting through a number of tests that I wouldn't pretend I
understood. They weren't of the sort my power could assist with. We were a long way from any real
results, and what was happening now was mostly a matter of time. Even Riley and I couldn't
completely violate that requirement.

I could feel Lisa through my connection with the Yggdrasil. Making phone calls, though my power
wasn't precise enough to determine words. Not yet, at least. Much like Taylor's recent breakthrough
to using bugs for hearing and even speech, I suspected my power could be made better.

Recently, for example, I determined that my power assumes that anything living inside another thing
is "part of" that thing, and therefore it's all one organism. A rule that didn't really make logical sense.
But I knew my Passenger was capable of nearly infinitely more. Its purpose was so much grander. It
was the shaper. The architect. Building and remaking the body of the space whale itself, allowing to
transform itself as needed, for functions I couldn't even begin to comprehend.

Then there was Taylor's. Which I was pretty sure regulated the communication of the being. Its
ability to coordinate mentally from one Passenger to the next, allowing them to temporarily access
one another's abilities where needed. No wonder our empathic link worked so well. Our Passengers
were functionally two halves of the same incomprehensibly vast whole.

Even with Lisa having broken through the blocks, we were no closer to making progress. We still
did not know the source. Lisa believed they probably claimed a handful of dimensions and blocked
them off so only another whale could make its way through. A quarantine to protect them from
discovery.

I stared at the ceiling until the others returned. I still had no answers.

Taylor's body made its way into my senses. I could feel her intentions, so I simply opened the way
for her to reach me, through the walls. Nervous Apprehension Small.

She walked through the passageway nonetheless, looking as uncomfortable as her link suggested.
"That's kind of creepy," she said as she sat down on a chair I provided in my room.
"What is?" I asked.

"Having walls open themselves up for you. It's disturbing, knowing you basically are the base itself, that I'm currently inside." She paused. "And we must never let anyone know I just said that or anything like it."

"Yeah, that does sound kind of dirty," I agreed. ConfusionRealizationshock. She blushed.

"Uh... I meant the part where I just realized that's probably exactly what everyone else thinks about my bugs," she corrected.

It was my turn to blush, covering my face with both my hands. AmusedHappy. "Pity I already used the 'being swallowed by the ground' trick. It would come in handy right about now."

"So, what was it you figured out?" she asked.

"Glory Girl," I answered. No point in hiding it. Not around her. "Her power."

"The aura," my parter stated. "I... sorta eavesdropped on you. Basically all day, actually. I know, sounds a little weird, but I was worried."

"Bonesaw lives in my basement," I replied. "Weird is something I've come to expect. Like my attraction to my own sister. I just discovered that it was her power's fault."

Taylor paused. ThoughtRealizationHorrorWorry.

"Is that what I felt like earlier?" I asked and she answered with a nod. "No wonder you were worried. Yeah. Years of exposure turned me into something of an addict. Probably explains a good portion of a lot of things about me. But that's not the problem. The problem is, our link, it's doing the same thing to you."

PanicCrushingDespair. I shuddered under the effect. Taylor said nothing, her face neutral even as her power pressed against me.

"It... it's doing the same to me..." I managed to gasp while fighting the urge, not even my own urge, to cry. WorryFearRegretShame.

"It's not your fault," I insisted. "Really, it's mine. I should have realized. I'm more resistant than you because I've spent the last three years living with it constantly. And pretty much the first day it's
gone, my power finds a way to replace it. It... it's a drug and it needs to be..." FearNegationNotAgain.

She tackled me into a hug and was crying. Not a normal cry. This was the desperate pain that I'd seen too often in the hospitals, when I came across the few sick that I could not or, in the cases of some, would not save. Not from them, but from their loved ones. "No. You can't. I can't."

I held her. I didn't have much choice, did I?

"I can't go back to being alone again," she insisted.

What? I didn't have to voice the question.

"Ever since my mom died... it's been... I've been alone." she elaborated. "A part of me that never got over losing her. Never got over how my dad never got over it. Either. Both. I don't know and it really doesn't change anything. This is the first time since then that I really felt that someone was there for me. Understood me and cared for me."

"What about Lisa?" I asked.

"I know," she said, "I know she cares. Even if she has the worst ways of showing it sometimes. I get it, mentally, but I don't feel it. I care for her. I respect her. I even trust her. But she doesn't make me feel safe. You. This. Makes me feel safe. For the first time in years. I refuse to give that up. I'll die without it."

I... I had no idea what to say. I simply clung back to her. She was right. There was safety, here, in our bond. It felt... natural. Perfect. Like coming home. I wouldn't give it up, I could not.

We fell asleep in each others' arms.

-------------

A/N- Broken, broken girls.
"Okay, ladies, open up!" Came a voice from outside the door. I already knew it was Lisa, of course. Anyone else would have knocked instead of waiting a few minutes and then yelling at us.

I looked down. Amelia was starting to wake up from her spot on my shoulder. The door opened at her mental command, to reveal Minerva in full costume.

She paused and looked at us. "Damn it, Taylor! Damn it, Amelia!" She moved her hands up in exasperation, and then immediately pulled them back down. Right, the injuries from before. Sure, they were Crystal's fault, but I still felt bad. Amelia was so humiliated that she sucked herself into the tree to escape. I, on the other hand, had escaped by dropping my connection to my changeling. A cute little feature that Riley installed to let me at least select between the ones I wanted to use, since I couldn't control more than one humanoid body.

We'd all been afraid that Amelia was going to die thanks to Lisa's fucking stunt. Took six of the zerglings to break through the Yggdrasil and pull it back enough to get her out, and by the time we'd gotten to her, she'd suffered some hypoxia. She buried herself alive out of humiliation. Crystal forgot the strength amplification in her armor, and the rest was an accident.

Minerva just stood there, watching us, as neither Amelia nor I spoke for a bit. Worry/Apologetic/Upset.

"I tried," Amelia responded, sitting.

"It's not going to happen," I stood, using my 'command voice'. "I convinced her it stays." Relief/Gratitude/Safe

She looked back and forth between us, and smiled. "I see. I bet Amelia really enjoyed being convinced." Dammit, Lisa, leave well enough alone. I prepared myself for the emotional rush of the feedback. It didn't come. Annoyed/Happy/Proud. A strong emotion, sure, but not self feeding. There was no feedback loop unless we resisted the feelings. Don't fight, embrace. Acceptance/Confidence.

I smiled. "Well, looks like we've found a solution to the feedback loops." It would be a little weird for me. I'd spent the last few years of my life repressing my every emotion I could think to name. Now I had to do the exact opposite. Probably should have done that, anyway, if everything pop culture pretended to know about psychology was right. I doubt I ever would have... but now, for her, I have to.

For the first time since I've known her, Lisa looked sad when she smiled. "Yeah, looks like you have." I started to speak, but she kept going. "Well, I have unrelated news. Remember how I said
Vista was our top priority recruit?"

*ConfusedCurious.* I nodded, Amelia spoke. "Of course," she said. "Her power's insane. A match for ours in terms of sheer potential. Did they get a new recruit?"

"Nope," Lisa said. "I just got into Flechette's files. And I have so many ideas."

"She's not in the school, so that kind of makes it hard for us to meet her in civies," I informed Lisa.

"I know," Lisa replied. "My money is that she's already eighteen and they're faking her younger, but they keep those records separate, and I'm not snooping for identities, just powers. We do have at least one 'in', however."

"You mean Parian," I said dryly. "I am not going to use their relationship as a tool." *AgreementDistaste.*

"How about using the shitty nature of the PRT as a tool? Parian's happy with us, after all. Flechette is not happy in the Wards. Plus, I have this!" She held up a sheet of paper and handed it to me.

"Lisa... did you hack Piggot's email?" *ShockExcitementWorry. Well, looks like Amelia approves. Kinda. "Okay... they're transferring her to Florida?"

"That's what it looks like," Lisa agreed. "Seems there are other directors who see us as a good excuse for poaching. Sure, they have excuses like 'needed elsewhere' and 'risk of compromise by Pantheon', but it all ultimately boils down to a half dozen heroes that they could claim for themselves. Coil and I... might also have had something to do with it..."

"Assault and Battery" *AnnoyanceDisgust* "have already agreed to a transfer, they're just figuring out 'where'. Miss Militia and Triumph are going to be it for Protectorate members until they find someone that's a proper combination of 'powerful' and 'loyal' to trust around us. The Wards are going to be sending Weld to Chicago, Flechette to Florida, and they're sending Crucible to New York. The other heroes they were planning to send this way to help with the Leviathan aftermath have been canceled. They might still send Clay, but he's kinda meh."

"No idea who that is," Amelia replied.

"Shaker," she answered. "Basically does a shitty version of what you can do, but the opposite side of the Manton Effect. They'd be using him for construction efforts. It'll take him all of five minutes to completely rebuild about a mile of streets."
"So, the Protectorate is imitating us, now?" I concluded.

"Yup," Lisa all but sang. "Turns out, they've learned that repair efforts are a really good way to drum up massive amounts of PR. He won't be staying permanently, of course, but it'll speed up the city's recovery by years and gives the PRT a chance to claim 'in part thanks to our efforts' when talking about BB's rapid recovery from Leviathan."

"That's fine," Amelia replied. "We started this to fix the city, not take credit for it." I sent a wash of pride and confirmation into the link. It rebounded with her affirmation.

"I know," Lisa confirmed. "But we're digressing. What's important is that we need to get Flechette out, and we need to do it right now. I have a plan, and it will be every kind of epic."

"What about Vista?"

"She's local, her family would need to move. This might help with as with our efforts to recruit her as well. Now you girls get dressed, they'll be here in five minutes." Lisa turned and rushed from the room.

"Giggity!" Zach shouted from the other room.

"Shut up Za-" AnnoyedEmbarrassedDesire. I stumbled on my words. Then looked toward Amelia. ShockShameRegretFear. She moved to run from the room, but she didn't have my reflexes. I grabbed her hand. "It's fine," I insisted. "I'm not bothered." I pushed assurances into the link.EmbarrassedGratefulNervous.

I smiled. That was better. To my surprise, it really didn't bother me. Knowing someone found me attractive was nice. Something that Brian never-ConcernCaution.

"Sorry," I said. "My mind started to wander. We should suit up now. Still have to pretend this 'secret identity' stuff has any actual meaning."

She didn't say anything as I left to find my costume, once again on one of my dolls. Mine was one of the harder outfits to put on, since I insisted on staying true to 'Skitter' when designing my costume. Sure, this one had brighter colors and was much higher in quality than my earliest designs. I took my time, used it to think. I could feel Amelia through the link. Trepidation sang through both sides of the connection, even as we mixed it with more calming and pleasant feelings.

Lisa was wrong. Maybe it was, in a way, 'addictive'. But it was a good kind of addiction. It was trust. It was friendship. It was the ability to actually be close to another human being. This wasn't a drug. It was an oasis, a shelter. For both of us. Now that we understood the pitfalls of the emotional
overload, we could counter that. The only problem is that it would make it harder for me to put on my 'intimidation' act, since I could no longer use the swarm to offload my emotions.

I would have to agree that sometimes it was a little uncomfortable. Right now, for example. Amelia's attraction to me was an elephant in the room and would need to be addressed with better than 'it doesn't bother me'. It was difficult enough figuring out my own feelings most of the time. Trying to figure out hers as well was just that much harder. Maybe it would be better to break the link, at least for the time being.

No. No, that was not an option. I was happy, now. Maybe for the first time in years. I might have to give up on Skitter's persona, but that was fine. I didn't need to hide behind it anymore. I knew for a fact that the person who knew me best in the world still trusted and respected and accepted me. She didn't see a victim like Emma. She didn't see a pity case like Lisa. She saw an ally and a protector. I was her friend, her General, her partner.

=========

A/N- They're still broken girls. But don't all the pieces fit so nicely together? In a disturbing, disturbing way that I'm quite proud to have achieved.
I watched Taylor rush out to find her costume, while avoiding actually looking at her. It helped that her choice of day to day clothing was dark and baggy, leaving no real figure for me to observe. Though every time I made physical contact with her, I got a pretty thorough idea of her body. Then again, I've used my power on thousands by now, and even with Victoria it never crossed my mind to think of it as sexual. Maybe because of how it wasn't so much 'me' as it was my Passenger.

My outfit was far easier to put on than Khepri's. I simply stepped on the mass left in a pile in the corner to my room, and it wrapped its way around me. I managed to exit the room only a few seconds after Taylor.

I'd thoroughly humiliated myself and I didn't even have the excuse of Tattletale for this one. If Taylor hadn't stopped me, calmed us, it could have been another feedback loop. Now I was reading a complex mess of concern, apprehension, doubts, and offers of reassurances directed toward me. She believed it when she said it didn't bother her, but that didn't stop her from feeling all kinds of things that worried me.

"Is breaking your link with Taylor on the table as an apology?"

I frowned. "There's more to it than you're letting on, isn't there?"

"Yes," Lisa admitted. "Maybe. I'm not sure. The biggest problem is that if you found out, it would only encourage you that much more."

"Not really selling your argument here, Lisa. You know that, right?" I put my hand on hers, then expanded my power into her. Patching up the damage. Light fracture of one floating rib, plenty of bruising. Nothing that took a lot of effort. Based on my guess, she was shoved. Shoved very hard, mind, but that was the limit. She didn't thank me, but then I didn't expect her to. She didn't pull away at least.

"I suppose not," she replied, looking down. "Hopefully it won't come to that. Hopefully, our guests might just solve the problem another way."

SadnessResolutionWorryDeterminationApprehension. I almost gasped at that one. What was going through my partner's head right now? I have to find out later.

....
I was shocked to discover it was already evening outside. Had Taylor and I really spent that long asleep? Together? In my bed? ConfusedWorryAssurance.

Flechette and Parian arrived together, from the direction of the refugee camps where Parian lived. The pair's relationship was secret to exactly no one in the camps or online. That news was currently the single most active thread in Pantheon's sub board.

Both girls were in costume. Flechette in her ninja-like outfit, Parian with her new high tech costume. Some kind of nanoweave that Riley designed. Tougher than Skitter's armor by three, though only slightly heavier. It was the same material used in most of our armors, but Parian's was special. It interacted with her power better than any standard cloth could. Her current costume would let her fight most of Pantheon to a standstill.

It would require the acid moths to get through. Maybe the new 'microwave cannon' built into Crystal's armor could bypass it well enough. That's what it was meant for, after all. A way to basically ignore armor and hit the person beneath.

Meanwhile, we fanned ourselves out. Khepri and I in the middle, with Eki and Aceso to my left. On Taylor's side we had Osiris and Theo. Still needed to get him an official name. As nice as he was, it would be a really good idea to put him out there as one of the spokespeople for the group. At least Blasto finally picked one. Yum Kaax, a god of wild plants and animals. Worked well enough for me. Minerva was in front of all of us. This was her show, we were just watching for now.

Flechette spoke first. "Okay, what's the emergency. You've got Sa- Parian scared half to death. I know she owes you for a lot of things, but that doesn't give you the right to screw with either of us. If this isn't worth it, I can and will shoot you."

Parian didn't speak up. I didn't know her all that well, but you'd think she was the youngest person here instead of the oldest.

"Oh, I know," Minerva replied, holding out a sheet of paper. "It's what I'm counting on."

Flechette's eyes narrowed as she grabbed and read it. "How did you get this?"

"Not by doing anything legal, I assure you," Tattletale responded. "And to answer your next questions: Yes it's real, yes we're trying to convert the Protectorate and Wards over to us, yes I would do it dishonestly if they'd let me, and no they won't let me."

"What is it, Flechette?" Parian asked. She was handed the paper.
"If it's true, then I've already resigned, don't worry about it," Flechette responded.

Parian nodded, then looked at us. "If this is fake, then you can consider our business relationship over."

"It's true," Lisa insisted. "But please at least give it a bit of time before you try to prove it, one way or the other. If you ask them, then it puts us at risk, and they could just lie and say they never had any intention of transferring you, despite everyone else they're shuffling around. You can give us that much benefit of the doubt, can't you?"

Flechette looked over at Parian, who nodded. "I suppose," she agreed. "Now, is that all?"

"Not quite," Lisa admitted. "We've been examining your power. I think it's more a lot more valuable than anyone realizes."

Flechette didn't say anything. Lisa continued. "You enhance weapons, making them far more lethal than they have any right to be."

"That's not exactly news," Flechette responded.

"Yes. But the question is 'how'," Tattletale smiled. "If it works how I think it works... then you are Triumvirate tier. Maybe better."

She scoffed. "Wow, didn't think Pantheon offered ass kissing in its recruitment package."

"Fine, example time," she said. "Theo, mind creating a metal staff and giving it to Osiris?"

"No problem, ma'am," Theo replied, and formed the weapon. Zach took it.

"You've seen how his power works, right? Restoring something to a saved point in time. Go ahead and cut it in half. You can easily make your bolts pass through just about anything, right?"

She drew a bolt from her arbalest. "This isn't exactly new, either," she said. But she did comply and cut the staff in half.

Lisa rubbed her finger on the edge of the now severed pole. "Just as I thought," she smiled. "Can I look at the bolt, too?" Flechette handed it over. "Not even a scratch on it, or any bits of metal left behind."
"And?"

"And that means your power can insulate an object from damage and make it melt through other things. A hole in reality" RealizationShock "which denies all opposition. We've seen a power like that before: The Siberian."

That, finally, stunned Flechette.

"That's right," Lisa smiled. "Oh, Osiris, would you mind restoring the staff for us now?"

The staff flickered and reformed in his hand, then the bottom half dropped to the ground. "The fuck!?" Respawn exclaimed.

"Not only does your power cut through things. It cuts through all possible iterations of that thing. Every reality, every dimension, simultaneously. Also not too different from The Siberian. Look at Alexandria, whose eye was never able to be healed despite her being one of the most famous and respected heroes in the world. If nothing else, she could ask Eidolon to do it. What's more likely: she wanted to keep a mutilated face that could never be shown again in public... or the wounds simply could not be healed by powers?"

Flechette just continued to be stunned. "Fuck," she offered a short laugh. "You're actually starting to sell me on this."

"Here's a question," Lisa continued. "What happens if you really want to kill someone. Like, say, the Slaughterhouse Nine if they were still walking around. What if you just used your power on the ground under their feet."

Flechette stopped for a moment. "My power doesn't work that well at range. But if I could, they'd look like they fell into the ground like it was water, and there'd be nothing left of them."

"Exactly," Lisa replied. "And that's just the beginning. I have a couple more tricks up your sleeve, if you wanna wait a bit."

==============

A/N- Spoiler alert: there's foreshadowing in this chapter.
"For your next trick," Lisa smiled, and I could imagine the combination of annoyance and curiosity in Flechette's mind. *Or was it Taylor imagining it and me picking up on that? This bond is still so new.* "We need to test your power against a defensive ability that actually exceeds Endbringer flesh. Theo's power allows him to create a sort of multidimensional super metal, existing simultaneously both 'here' and 'everywhere' and 'nowhere', not unlike weapons influenced by your power."

"Okay?" she asked.

"I want to see if your powers will combine," Lisa replied. "Can you augment his weaponry?"

Theo formed a long spear, about eight feet. In theory, given that it was entirely metal, it should be pretty heavy, but Theo's power meant they had no weight. To him, at least. His main limitation was conceptual- lacking the multitasking powers of Taylor, or even Lisa and myself. He could only 'pay attention' to a finite amount of material at one time.

Flechette made contact, and then frowned. "Nope," she said immediately. "I need to actually touch something to influence it, and I can't make contact long enough. It's like it vanishes and replaces itself faster than I can react."

"Not so different than what happens when Osiris and Gaea's powers interact," Lisa concludes.

"So you're showing off that my power's not quite so perfect, now?" Flechette didn't hide the scorn in her voice. "Kind of a cult tactic, the whole break down, build up thing."

"No, though I guess that might be a side effect," Lisa replied. "I'm hoping to achieve something specific, and if it works with you and Theo, that makes my life about a hundred times less complicated. One last test. Theo, I need you to deactivate your power except for the spear."

'Yes ma'am," Theo excitedly replied. We'd all gotten sucked up in Tattletale's game now. Even, perhaps especially, Flechette. Most of Theo's armor simply melted off, except his helmet of course, which went from a shimmering mirror silver to a still metallic silver, but without the visual tricks. The spear, of course, remained reflective.

Fletchette cut through it with her bolt like it wasn't even there. And about a foot in either direction of the bolt simply dissolved and vanished.

Lisa sighed. "Damn. So close. I actually was right, but it didn't hold together. Too many permutations in one place, or too small a hole, I can't decide which. But we're not done yet! The next
set of guests are arriving. And with it, the source of my migraines for at least the next month."

She was right. I felt them before I saw them, the cars driving onto the Yggdrasil paths that had been
established for vehicles. They were more like exoskeleton growths than anything a standard road
might be, but they did the job. The vehicle came to a stop not far from us. Faultline stepped out,
along with Gregor, Newter, Labyrinth and Spitfire. The whole crew, it seems. And another vehicle-
this one I recognized as one of Coil's. *She invited the Travelers as well?*

"Glad you could make it on such short notice," Lisa smiled.

Faultline just raised her eyebrow. "Okay, could you not do your impression of a poorly written
detective novel today? I know you have a plan. I know it's going to wow the metaphorical pants off
of everyone here, and I know you're going to talk me into going along with it simply to see if it
works. So let's say all that already happened so we can move on to the part where I accuse you of
not paying me enough and then go home to punish my liver until I forget this ever happened? Is that
acceptable?"

"Aww," Tattletale pouted, complete with puppy dog eyes. "Fiiine. I know how much you hate 'fun',
after all."

"Lady," Flechette said. "I have no idea who you are, but you just made my list of top five favorite
people ever."

*AnnoyedRelievedAmused.* I smiled. *Yeah, me too.*

The Travelers had arrived in time to hear the end of that. Noelle was polite enough to not say
anything about it, but she probably agreed as well. Tattletale was a very hard person to like. *Still
haven't figured out how Taylor manages it.*

"Fine, now that everyone's here... we're going to punch a hole through reality itself!" Minerva
announced.

"You heard me. We're already standing in the perfect spot for it, just in case it turns out the door can't
be closed."

"Okay, Gaea, what are the odds I can talk you into hooking me up with a new liver or three? I'm
going to need them," Faultline muttered.
"We'll need Labyrinth to build a construct. Preferably one that's just a large wall. Two dimensional as possible, maybe about thirty feet tall and the same width would be ideal."

I gaped. *This... this is insane...*

"Do it," Khepri instructed. "We can send the Travelers home like we promised. We can establish colonies on other worlds. If necessary, we can even evacuate Bet entirely. Abandon it to the Endbringers if we have to and maybe make a fresh start."

Flechette spoke. "She's right. This can save millions of lives. We do it."

Labyrinth looked at Faultline. "You can do it, right Elle?" The girl nodded. Faultline looked back toward us. "One rule: no inhabited worlds. Only realities where humans either never evolved, or are already extinct. I will not be responsible for Endbringers finding their way to billions of new victims or help start an interdimensional war."

"Good points all around," Taylor agreed. "No worlds with people on them, after a brief stop in Aleph."

"We'll really be able to go home?" Sundancer asked.

"If you want," Lisa stated. "You're welcome to stay here, we'd be more than happy to keep you. And you don't have to decide right now. You can go home, pack your things, maybe trade off any currency you have here for things to take with you. I highly recommend a vehicle and some new clothes. Maybe some samples of replicable tinker tech to sell off. A few patents, life of luxury."

"Not me, however," Noelle spoke. She sounded sad. "I can't go back. Everything I've seen. Everything I've done. The risk that I might relapse. I won't make the rest of you stay with me. I don't want you to. You've done that too long, already. You deserve to go home. Have normal lives. Have everything that the Simurgh tried to steal from us. It's the best thing you can do for me, now."

*SympathyApproval*. Note to self: hire her to write some of our speeches, she has a talent for it. Meanwhile, I reshaped the matter under the space Labyrinth was reshaping. Reinforcing the tree to handle the sudden increase in weight of her manifestations.

"I'm staying," Trickster said with certainty. "Noelle, you said you wanted us to live our lives? Well, in case you hadn't noticed, you are my life. My home is wherever you are."
"Consider going home to be my final order as your commander," Noelle told the others. Trickster put his arm around her, and she looked at him. "Wherever that home might be."

"I'm going home," Oliver stated. I hadn't dealt with him much. Riley took the standard blood same and questions about his powers. Which, it turned out, would barely rate a one as a changer. Did the PRT ratings go down to zero? He was shy, intimidated by us.

Noelle moved to him and gave him a hug. "Would you mind doing me a favor when you get back? Deliver a message to my parents."

"I can do that," Oliver agreed.

Genesis and Sundancer stood aside in the exchange thus far. "I don't know," Sundancer replied. "I... somewhere along the way, I stopped thinking of Aleph as 'home'. It feels like it was so long ago when we came here. I wouldn't know how to live a normal life, anymore."

"You don't have to decide right now," Taylor reminded them. "Like Minerva said... if this works, we can do it again whenever we like in the future. Just because a door is closed doesn't mean we can't open it again later."

"I'll stay for now," Oliver replied. "You're right, it can't hurt to take care of the loose ends and maybe pack a few things."

We watched the wall finish its development. It would have been great dramatic timing if their conversation ended with the wall's completion. But no, we had to wait several more minutes.

"Okay, everyone away from the target," Minerva instructed. We complied. "Flechette, it's your show now!"

The girl raised her arbalet, and fired at the wall. Then there was no wall. There was no anything. A blank place where there was only 'nothing'. Air started rushing inward toward the hole. It wasn't incredibly windy, no more than a gusty day. No risk of any of us.

AweTerrorWonder. "My bugs are being destroyed as they touch the boundary," Taylor informed us. "There's nothing there, no 'other side'. It's an empty place and everything which contacts it simply ceases to be."

"It's shrinking at a rate of approximately two centimeters a minute, growing in speed exponentially," Aceso spoke. "It'll collapse in less than an hour." She looked at us. "Missy's been teaching me geometry," she stated as if that explained everything.
"At least we know they can be closed!" Lisa declared happily. "Okay, Labyrinth. Can you still alter the empty spot."

"I... I can!" Labyrinth said with surprise. "There are places there. Ones I didn't create myself. Countless, endless worlds."

"Good. Look at the closer ones. You should be able to see that it's been crossed over before, recently."

"There are two like that," the girl informed us.

_WorryRealization._ I figured it out as well. _Someone else also has dimension crossing abilities._

"Try the most recent one," Lisa suggested. The blank spot became a window, looking over a primitive world. A village of wood, clay and brick. Dirt roads. Little by way of metal construction. A cart pulled by a small buffalo. People in clothing that looked to be wool and leather. Some pointed at us. We couldn't hear what they said.

"Not that one, I'm sure," Faultline stated. "Change it, Elle."

"Okay," the girl answered. The scene shifted to a city not unlike Brockton Bay. Or, at least, a Brockton Bay that wasn't torn assunder and patched back together repeatedly. A healthy city. _DesireNostalgia._

I could see ships in the ports from here. I could see why the others would want to go back. I wanted to go there. To see what a world without Endbringers looked like._CertaintyDetermination._

"We'll make our Brockton Bay look like that, some day," Taylor stated. I smiled and clasped her hand, adding my support to her resolve and letting hers feed mine. _This is a feedback I can enjoy._

"Look for an empty world, now," Lisa instructed Labyrinth. "One without people."

On impulse, I interrupted. "One without any life at all."

They looked at me, and I suddenly felt very self conscious. _SupportProtectTrust._ I drew strength from the link. "I want a planet that's truly empty. A place I can use my power to its fullest."

Minerva smiled. "I see... yes, that's perfect! No one can object to us claiming a wasteland as our
The portal shifted, and I saw the world that Labyrinth had found. Red and brown dust covered the landscape. A desert world. I noted that the sun seemed larger than ours. The ocean was still visible from our position, although the shoreline was more distant.

"There's oxygen," Taylor spoke up. "Not a lot... or there's also a poison. Something is making the insects tired. The weakest are already starting to die."

"On it!" Aceso sang, and then hopped through the portal. "Oxygen levels around twelve percent. Unusually high carbon dioxide. Nothing immediately deadly, but can't support human life." She knelt down and picking up some dirt beneath her. That she then licked. "Radioactive residue. Water. No complex hydrocarbons."

"A nuclear war?" Faultline asked, no doubt responding to the 'radiation' part.

"Not unless it was between really enthusiastic dinosaurs," Aceso responded. "This is old damage and too complete to be artificial. I'd say a celestial event, powerful enough to strike the entire planet. A pulsar or the like, occurring millions of years ago."

"Why did that earth get such a thing, and no others?" Faultline asked.

"How am I suppose to know that?" Aceso asked.

==============

A/N- A certain part of this chapter makes me sad.
Also- they have that planet for a long time before ever getting around to naming it. I note that's a pattern in my writing. But it's a pattern I kinda like.
I'd covered the portal in an Yggdrasil construct, of course. In part because we really didn't want people to know we just cut a hole through dimensions until we were ready to let them find out. And in part because there was still an unhealthy amount of radioactivity in that world.

Nothing that could be considered a threat to the Yggdrasil, though not good for people by any stretch of the imagination. Riley estimated that it would be lethal within six years for the vast majority, even before having too little oxygen for human tolerance. So, yeah, when I asked for a dead world, I got a dead world. On the plus side, it actually made that Earth more ideal for Yggdrasil than anywhere on Bet.

Minerva was still negotiating terms with/between Faultline and Flechette when I went inside. For a while there, it was looking like Faultline was going to recruit Flechette and hold the monopoly on the dimension-access insanity that we'd seen today.

It turns out, Flechette was sold, not on money, but on the opportunity to really cut loose in a fight. A promise of a bioaugment armor that would improve on her powers. Not terribly different than the ones we gave Crystal, Parian and most of Faultline's crew. Contingent upon an attempt from the PRT to transfer Flechette, she would be a permanent, though 'reserve', member of Pantheon.

We really need to work out an official model for how we were handling our peripheral members, like Parian and Dinah. They might be part of the organization, but weren't really part of the "team" like we were. We were collecting them, would collect many more, as time went on. An option for rogues and independent heroes alike that didn't involve surrendering autonomy to the government. We were pushing that appeal.

Lisa was supposed to handle that, but she had too much to do already. Maybe I should go easier on her. We did learn a lot from her about the nature of our empathic link, after all. Even if she was a bitch about it and wouldn't even tell us why it really bothered her so much.

I was beginning to suspect she was jealous. Did she have romantic feelings for Taylor? And what would I do if she did? Turn off the empathy when they went out on dates, at the very least.

"Penny for your thoughts," Taylor said from her place on the couch in what amounted to our living room. Zach and Theo were playing some game on the TV. "I'm being absolutely serious here, I will pay you money to explain what I'm reading from you right now."

"I guess I already owe you a house. Or at least rent," I smiled, plopping down next to her. "I was just thinking about the most horrible thing imaginable. I might have to apologize to Lisa."
"Ah," she smiled back. "Well, it's that or your homework. I picked it up for you after classes, by the way."

"You mean the homework I could have gone to school and handled myself if she didn't feel the need to fuck with us," I replied.

"One and the same."

"Suddenly, I'm not in the mood to apologize."

"C'mon, I'll help you study," Taylor said, sitting up.

"Study, huh? Is that what you old folks call it?" Respawn joked.

"Yes, I suppose actually passing a class would be a new-" ApprehensionWorryDetermination. I stopped speaking and looked at Taylor, who had stood up by now. "Know what? Doesn't even matter. After Tattletale's stunt last night, there's nothing you can say that's going to get to me."

"Once again, Lisa spoils my fun," Respawn moaned. Then the sound of an explosion came from the television. "Dude! That is so not fair!"

"Are you going to study in your costume?" I asked as we left for the area where I'd built my bedroom. It was more or less right next to the kitchen. I probably should sit down and design an actual 'floor plan' or make more rooms. We had access to a couple square miles worth of overall space under here, we might as well use it.

"It's comfortable," she answered. "So much nicer on the skin than the old Skitter costume. Why, don't you like it?"

"No, it's not that, it's just..." How in the hell could I tell her that she was essentially wearing a silk body stocking? Eh, may as well just dive right into it. "Pretty much the exact opposite, actually."

HappyNervousCertain. "Oh, don't worry about that," she insisted. "I told you, I don't mind."

"It's... kinda distracting, though," I smiled.

"Really?" she smiled back. "Guess I'll have to change, then."
"Oh, could you ask Blasto to bring up those memory restoration devices Riley worked out?" Taylor asked me. "I'd tell him myself, but your tree keeps eating my bugs down there."

"It's a sterilization function," I replied. "The lab needs to stay clean for their sensitive experiments. You'll just have to cope with having exactly one blind spot in an entire city."

"And you'll just have to deal with delivering messages for me while I'm changing," she countered.

The labs were actually the furthest trip from the rest of the building. For everyone other than me. I simply reshaped the floor and sank down into one of the pillars in the lab. I stuck my head out of the wall. "Hey, Rey."

"Gah!" he jumped. "Why the hell can't you use the stairs!"

"That's for mortals," I replied. "I'm supposed to have you take the memory restorer up to Faultline."

"Why me?" he asked.

"Because you're the only Tinker we can admit to having."

"Yeah, I know," he agreed. "Mind giving me the elevator up?"

"Sure," I agreed, leaving the hollow structure in the wall when I went back up. I could sense when he stepped in, and moved him to the surface. The memory repair equipment was a new one. It could basically be called an intelligence booster as well, since what it did was encourage the brain to rapidly build new neural pathways.

I had hoped we might use it to cure the others of this whole "passenger block", but Lisa said it wouldn't. Apparently they could sabotage Riley and the other tinkers so they couldn't even build something that might undo the block.

In fact, she insisted we didn't so much as touch it. That it might undo whatever 'damage' we did to the controls that blocked our memories.

Minor mission accomplished, I went back to my room, where Taylor was waiting. I paused. Turns out, she looked really good in the form fitting blue t-shirt she had selected. I didn't even know she owned such a thing. "Are you wearing a shirt that's not black?"
"What?" she responded. "I'm allowed to wear other colors!" AnnoyedAmusedPleased.

"I'm not so sure you are," I responded. "Dear diary. Today I watched two teenage girls punch a hole through the side of reality. Today I considered actually apologizing to Tattletale. Today I witnessed Taylor Hebert wearing bright colors. We're lucky we have a new universe now, because this one's clearly broken."

"Would you kindly make some pillows so I can chuck them at your head?" Taylor asked with exaggerated, sarcastic sweetness.

I leaned against the wall. "Why would I do that?"

"Because I need to throw something at your face right now, and I don't want to break my school books."

For the next hour, we spent our time studying. Computer science was never really my strong subject, and that didn't appear to have changed in the last couple months.

It didn't help that I kept sneaking peeks at Taylor, and I was now entirely convinced she was actively encouraging me to do so. Even I wasn't quite that oblivious. Or, more likely, I was that oblivious, but having a direct window into her psyche removed any ambiguity. I resolved to ask her about it this weekend.

=============

A/N- Man. I love knowing what comes next. Especially for THIS part of the story.
I opted to play dress up for school that morning. My experiment with the shirt had proven a thrilling success, Amelia couldn't take her eyes off me, and I luxuriated in it. Today I was hoping for more of the same. I picked out an outfit that Lisa had sworn up and down would be amazing on me, and forced me to buy.

I didn't believe her then, and I really didn't now. The jeans clung too tightly to my legs, and the shirt I would have been happier with if it were three sizes larger. But she was right about the blue shirt that I used yesterday, so I trusted her on this as well.

I was conspicuously aware of the eyes upon me as I opened my locker in the morning. I found myself torn between being slightly annoyed at the disrespect of them checking me out, slightly annoyed that more people weren’t, and slightly annoyed that I even cared. All factions decided upon a truce in order to be extremely annoyed that Emma was getting more attention than I was. Not that I expected she wouldn't, but it would have been really, really nice.

I felt it when Amelia saw me. The rush of attraction and nervousness, her trying not to look at me and failing. It was wonderful. I wore this outfit for exactly one person, and she only had eyes for me. Literally, she was watching so intently that she walked face first into one of the other students, knocking both their sets of books from their hands. I immediately moved over to help her and the boy. I was pretty sure he was one of the new kids that had just started today. I certainly didn't recognize him.

"I'm so sorry!" Amelia said. "I should have been paying better attention."

"Nah, it's cool," the boy insisted. "I wasn't looking at where I was going. Trying to find the art class," he held up one of those shitty paper maps of the school.

"I'll show you," I volunteered. "Pretty much next door to my first class anyway. See you in third period, Amelia."

"Right," she replied. GratitudeHumiliation. Didn't stop her from staring at me as I walked away.

Emma was watching as I left. Near as I could tell, she was still doing everything possible to avoid me. Something that mattered less to me than how I was quite certain she was dating Clockblocker, now. Not a real shocker, as far as surprise revelations go, but it would make it more difficult if we ever tried to recruit him. And we really did want to recruit him. However, he wasn't a priority the way Vista and, as we recently learned, Flechette were.

I pointed the boy off to the art class, and was still smiling when I made it to my spot in the computer.
lab. Theo was already there, sitting next to Chris. The pair of them seemed to get along really well, actually. It also saved me the effort of needing to focus on small talk. Something that it would surprise no one to learn I really sucked at. Instead, I focused on everything. Everyone.

Amelia was in Algebra, I'd pass her on the way there for my next class. I was still smiling lightly. Amelia was still on edge due to the incident in the hallway. For amusement sake, I landed a ladybug on top of the page she was studying. She stopped for a second, as I had it look right at her. Bug vision is crap, so it couldn't even actually see her, and I sure as hell couldn't, but it was a message sent.

*ComfortEmbarrassment*. I sent back some signals of comfort. We were getting very good at using this bond. *Maybe with time we can actually work out a language with it.*

I sent the ladybug on its way.

....

I shared my algebra class with Dennis, although we really didn't interact at all. I still kept my eye on the others. Missy and Clarice were busy in their chemistry class. Near as I could tell, the pair had managed to line up their entire class schedule to be identical, with an exception for gym.

We put in the minor effort to get Clarice an exception from that class. We were at least pretending we didn't want her identity blown. I was starting to worry that when it was, and it was 'when', not 'if', Vista's identity would follow almost immediately. I'd have to mention that to Theo or Chris during lunch.

....

Social Sciences was the one I got to spend with Amy. Weld was there, as well. I'd have to make an effort to recruit him as well, his power put him on the top notch for durability, and he was really popular in the general public. The way they were shunting Wards away from the city meant if we didn't get him soon, we probably never would. I looked at Amelia and felt her disappointment as she realized what I had planned. I was disappointed as well, when I sat down next to him. I sent assurances through the link. *SadAgreement*.

He looked over at me. "Me, too, huh?"

I almost fell back on Skitter at that. *Or is this the usual Taylor' routine of hiding away?* Instead, I fell back on my link with Amelia. Her confidence and trust in me. *I don't need to hide, and I don't need to be feared in order to be strong.*
"Pretty much," I admitted. "We seem to have a real hero complex, trying to help everyone we can."

"Help, huh?" he didn't see to buy it. "And you think I need help?"

"Doesn't everyone?" Okay, Taylor, dial it back. Vague answers only work when you want to be annoying. "But yes, we have a few things we're working on that might help you. Or you might be able to help us with. I'm sorry I have to be so vague. The best I can tell you right now is that we're finding ways to undo what's happened to the Case 53s."

He froze, clearly sorting through potential responses. "I'll make contact."

He didn't say anything about how or when, and I didn't press him for it. Class began, and I put my efforts into actually paying attention, this time. Along with studying all my other school books. Pain in the ass finding copies of all of them in braille. For that matter, it was a pain in the ass to use braille, which I'd only barely started to learn, but it didn't take me any more mental effort than sitting and listening in class already took.

At the moment I was also having six distinct conversations, and running the test routine of the next wave of zerglings. They were a lot better than before, at least. Still not something I could comfortably control in large batches, but significantly easier to handle a dozen of them than even one humanoid puppet. A fact I told Rey and Riley about with my changeling, which was currently spending most of its time slumped in one of the chairs in the lab just so I could talk to them. Stupid Yggdrasil always eating my bugs.

....

After class, we headed for lunch. Weld ignored me, and I couldn't just wait and walk alongside Amelia without it being suspicious, much as I'd have liked to. I did manage to stay just a little bit in front of her. I could feel her eyes on me the whole way. Wistful Desire.

It brought a smile, and a bit of a blush, to my face. And yet, I still couldn't spend time with her. She had her group amongst the popular girls, and I had mine amongst the geeks and loners. Even though she was more of the loner type, herself. Victoria's legacy and all.

I spent my time hanging out with Theo and Chris. They were mainly complaining about math. A class that neither of them seem to enjoy. I finally interjected about halfway through the period. "I think we should have a conversation with Missy and Clarice."

"What's wrong," Theo asked.

"Well... at this rate, their identities are going to be exposed," I answered. "I don't think it'll happen
soon, but it's a real risk. Clarice has already shown off her thinker abilities in basically every class. She attracts attention for a lot of reasons, not the least of which is how she's openly friendly with Amelia. She's going to be found out. If she hasn't, already, and that might put eyes on her other friends.

"Does she even have friends at school except Missy and Amelia?" Theo asked.

"No, she really doesn't," I replied. "She seems to be trusting Missy to be in charge during school, and Amelia with everything else. It's fine, not like she's lacking in a support base."

"But it makes anyone around her look extra conspicuous," Chris concluded. "Are you going to tell her the bad news? Because she wouldn't listen to me if I tried."

I figured as much. It was smart of him, really. If they had to be the deliverers of the news that took Missy away from her new friend, it could hurt their team on a number of levels. Even if they didn't see it as us finding yet another angle to try to break Vista away for ourselves. Of course, they weren't wrong, it was what we were doing.

"I'll do it," Theo volunteered. "She'll probably listen to me better, anyway. I have the same last class as Amelia, so I'll mention it to her first. That way Clarice doesn't argue with me."

"Good idea," I agreed.

Chris didn't say anything to agree or disagree, and eventually the conversation changed to movies.

... 

With a minor tip to Riley via my changeling, Theo managed to catch up with Clarice and Missy at the end of classes. I trusted him to handle the situation about as well as anyone. I, on the other hand, had snuck about a block away from school, to be picked up by one of our drivers outside of visual of the school. Zach and Amy were already in the vehicle.

Apology. Resignation. I didn't need to question that emotion. It was disappointing for me as well.

"Sorry I didn't get to work with you in class," I said as I sat next to Amelia.

"It's okay," she said. "Probably smart if we're a little less obvious. Don't want your identity being revealed like that."
"Obvious is a word for what happened in the hallway," Zach interrupted with a smile.

_Don't worry about it," I replied. "It wasn't that big a deal."

"Thanks," she replied. "I'd feel terrible if..." she trailed off.

"If you want, I can bribe kids to just step out in front of you at random," Zach offered. "I'm already known for playing pranks on people. Speaking of which, you have class with Clockblocker first thing tomorrow morning, right?"

"Yeah," Amelia answered. "Why?"

Zach lifted up a math book that wasn't there before. "Tell him that next time, it'll be his pants."

_A/N- In retrospect, I kinda wish I stayed on the "school" arc longer. There was lots of goodies to be used here that I just never did._
Music class is boring. I thought it was suppose to be fun with singing and instruments and stuff, but instead we were learning about dead musicians. I didn't even get to play school with Missy because she had a gym class. So I was stuck with dumb boys who snickered every time the teacher said 'pianist'. And dumb girls who pretended to find that funny because their dumb hormones wanted them to make dumb babies with the dumb boys.

I assigned one of my peripheral brain enhancements to half pay attention to the class, while I was analyzing the sample we indirectly took from Cauldron.

"It's human cells, as if they were made from the ground up by Amelia with no frame of reference," I muttered as I examined the material. We had already cloned the tissue. I didn't wait for a response from Rey. Tinker fugue was in full effect for him. "No genetic code for reproduction, no separate genetics for the mitochondria, no useless genetic material from countless mutations both obsolete and never functional in the first place. No chromosomes because there's not enough actual DNA to need them. It's not much different from the Yggdrasil or the base zerglings before the selective rebreeding program. Artificial. Too perfectly efficient to exist in nature."

I continued my analysis on a more fundamental level. "In many ways, it resembles the N-1 and N-3 tissue samples we extracted from Noelle. It appears identical to the c-cells we acquired from the Travelers and Word. That, more than anything, is confusing. There is no difference between the active ingredient in this vial, and the residue from what gave them their powers, and it works simply by drinking? There is an agency behind this that I do not comprehend. If my Big Sister is correct about the Taboo theory, then I cannot comprehend it because the power that grants my power will not allow it."

"Save recording, CV twelve."

"Error, CV twelve already exists. Recorded twenty seven minutes ago," my computer responded.

Darn it! Must have happened again. "Save new recording as CV thirteen. Identify CV twelve as Taboo nine." I would have Minerva screen the other and tell me if I missed anything important.

Since she and my Big Sister are the only ones who can comprehend what our group had taken to shorthanding as 'Taboo', after some game Rey remembered from his childhood. The idea that I was constantly losing the most important piece of data imaginable was incredibly frustrating to me as a scientist.

Meanwhile, class had come to an end. I managed to remember not to flip over my desk this time. I still don't get why, but the teachers and Missy and my Sister all told me not to do that. Maybe it's because my skirt fell during the handstand and everyone saw my underwear last time? Stupid boys,
I rushed to the entrance, to meet up with Missy and Theo. I didn't know exactly why he wanted to meet up, but I bet it was so he could spend more time with Missy. *Good, they're so perfect together.*

Missy was there first, of course. The underclassmen got out a bit earlier, after all. I saw her and waved. She rolled her eyes and smiled as she walked. I noted that she was subtly using her power to move faster, indicating how eager she really was. She always acted so proper. She reminded me a lot of Shatterbird, actually.

Jack always said that her serious act just meant she didn't want to admit how lonely she was. My Sister didn't like me talking about Jack, but he was smart and we were trying to recruit Vista almost the same way as he recruited her, after all.

"How was gym?" I asked, even as I analyzed everything her biosignature was giving off. Minor and full body exercise, no real muscle damage.

"Dodgeball would be more fun if I could cheat," she complained.

"I wish I could play," I responded. "My Sister wouldn't let me take gym."

She laughed. "That's because we could put the entire school up against you and you'd win. Unless I was allowed to cheat."

"That's true," I agreed. "Oh, we have to wait for Theo. He has to talk to us about something."

Missy hid her reaction well, but it was a combination of enthusiasm and distrust. "Why?"

"I dunno," I answered. "Probably kinda important, or they wouldn't bother like this. But not too important, or they'd tell me right away."

"Huh," she said. I could almost hear her wondering if this was some kind of ploy.

Theo was finally out of the school and approached us. "Hi Theo!" I yelled and waved. He smiled and waved back. He had a really good smile, and I wanted to be sure Missy saw it.

"Hey, Clarice," he said once he got close. "Hello, Missy."
"Maybe we should walk and talk," he said, looking at the others who had started to pour out of the school.

"Okay!" I agreed. "There's gotta be an icecream place somewhere nearby, right?" I smiled broadly.

"Umm, sure," Theo agreed.

Missy managed to work up a smile and nod. I could see the bit of blush and shyness she had toward the boy. Subtle, she was good at hiding her autonomic responses, but she couldn't make them lie. I was an expert on that subject, amongst my many others. I could tell she liked him and really didn't want to show it or admit it.

"Okay!" I said, as we started on our walk. The icecream place was new, and already pretty popular, so we had to cover the 'work' on the walk. "So, what's the news?"

"Umm..." he looked down. "I... I wanted to warn you to be careful," he said.

"With what?" I asked.

"Well," he said. "We're pretty sure Clarice's identity as Aceso's been compromised. It hasn't come out yet, but it probably will in a week or so."

"Oh," I said. "I don't mind that at all! In fact, wasn't that supposed to be the plan?"

"I know," he said. "We're worried about Missy. When your identity goes public, people are going to look at your friends. Everyone already knows Amelia is Gaea. So that leaves only Missy left over."

"What about Taylor?" Missy asked. Drat. "She's at risk, being around Amelia."

Theo shrugged. "I have my own ideas about that," he admitted. "But I can't share them. It's not that I don't trust you, it's that it's not right to talk about people behind their backs. Especially my friends and teammates. Any more than you'd talk about yours."

She nodded. "Yeah, you're right. It was stupid of me to ask."

"Not stupid," he said. "Just being alert and cautious. It's a sign of a good hero."

And Theo wins all the relationship points, I thought happily. He wouldn't make pianist jokes.
"I... I owe you an apology, then," she said, looking down. *Ooh, heartfelt confession time! Like the best romantic movies! Only better because it was real life!* There was a bit of a blush. A nervousness and expectation of anger. I didn't even need the dozen odd exotic senses built into Clarice to see this. I did, however, turn off the recording function. "After our... after the party last week, I sorta told them about everything that happened."

"I figured that would happen," Theo replied without losing a beat. "It's not like we did anything to be ashamed of. Err... maybe I should have found a better way to phrase that. Sorry."

"It's fine," Missy replied. "Just don't repeat it around Clockblocker and we'll be good."

"Or Zach," Theo added.

"He stole Clockblocker's math book, by the way," I said.

"Why would he do that?" Theo asked.

"Umm..." Missy started. "I think he might be getting revenge for a bathroom door being frozen with him trapped inside. Clock's gonna get in a lot of trouble for that one if Piggot finds out."

"Oh, wow..." Theo laughed. "She won't hear anything from us. Be sure and let her know that Zach is almost certainly equally at fault for anything that's going on. If she needs punishment suggestions, I recommend we lock them both in the same cell overnight."

Missy chuckled. "Yeah," she agreed. "With orders that they kiss and make up. Literally."

We were still laughing when we got to the icecream place.

"Okay, Theo, I want a banana split!" I was looking forward to see if the upgraded taste system was fully functional. I was annoyed that the combat model was still in detox from the radioactive materials, since it had all my best features installed.

"Why am I paying for your icecream?" he asked, still smiling. "Doesn't Amelia give you an allowance?"

"Yeah," I admitted. "But you're the boy. It's in the rules. Especially when you're out with two pretty girls. Also, you're a billionaire."
Theo looked around, then whispered. "Clarice, you're not suppose to blurt stuff like that out in public."

"Oh," I said. "Why not? Is it because of your dad?"

"It's just not polite," he said. "When you talk about money, it upsets some people. It's like bragging."

I didn't really get the problem, but whatever. "Okay, I'll not bring it up anymore."

He looked over at Missy. "Sorry. I suppose Chris told you about my family."

"No, not really," Missy replied.

"Well, I'm sure your bosses already know," he said. "My father was the CEO of Medhall. After his death, well, most of the assets were unfrozen and are in trusts for my sister and I."

"You're kidding," she whispered, her eyes growing wide. "You're Kaiser's son?"

"Not something I'm exactly pleased about," he said. "I take pride saying that if you asked most of his men, they'd voice doubts about my parentage."

"Yeah," she offered a smile. "It's fine, I get it. My home life isn't exactly amazing, either."

"You can't help where you come from," Theo agreed. "Only where you go."

I smiled and nodded. That's what my Big Sister keeps telling me. Nothing can change what I've done, only what I do from now on. And now I'd set the perfect stage for Missy to have the perfect boyfriend to satisfy all her reproductive evolutionary needs. Powerful, dependable, physically attractive, quite intelligent for someone without powers to improve upon it, able to provide for offspring, and intimidating to potential threats. That was simple, why do adults make it sound so complicated?

============= 
A/N- All the foreshadowing. All of it. Ever. Of all time.
Too sycophantic, rephrase. 'Appreciation', 'dedication to'.

I made the edits to the letter. It was hard to say 'we're already doing more than everything you're asking' without sounding like arrogant jackasses. I needed them to be able to say they achieved something without making it look like we gave anything up.

A flagged file popped up on the screen. Ah, another of Riley's Taboos. I will need to review that immediately. If she was obeying protocol on the subject, she'd switch to a different research project while waiting for me to review the data. No sense in accidentally repeating the exact same experiment more than necessary. Damn, both recordings were twenty minutes long. I'd need to talk to her about remembering to stick to ten minute intervals. Rey as well, although he did it less because his research rarely crossed into the subject of the Passengers themselves.

I was still writing up the report on the Taboo file, turns out Riley made a breakthrough on cloning the c-cells. No way of knowing if that would allow us to replicate Cauldron's power-formula. But if we could... the possibilities were almost incalculable. The Taboo was her speculation that the opposite of Noelle was occurring. That a Passenger had attempted to construct its own human body. Then, of course, she forgot the train of thought. I'd mention it to Amelia.

Human hosts, no evolutionary purpose as Passengers are not natural parasites. Side function. Using humans as proxies for their experimentation. Human form avatar for Passenger. Nonhuman avatar for Passengers? Endbringers. No. Endbringers are something different. Experiment to better bond with host species? Unnecessary. Precognitive abilities render practice wasteful. Need avatar to actively interact with humans. Perhaps to...

I lost the train of thought. Damn. Even though my mind had broken around the main barricade, my power was still held back by certain roadblocks. At least now I knew they existed, I didn't forget, I just didn't progress. I included the point up until I went blank for Amelia to look at. She was truly unfettered, not the twilight state I was in.

I still had not made progress on actually tracking Cauldron down, myself. Even Dinah wasn't any help. Meaning that either Cauldron had an incredibly powerful Trump on their side, or a precog just shy of the Simurgh in bullshit. I had even made allusions to payment and alliances to entice them. Any more than this would be overly aggressive and might prompt a retaliation. They had dozens of high level political and military leaders in their pockets, plus similar influence throughout Europe. We would lose any confrontation, direct or otherwise.

I set the Cauldron Project aside as a dead end for now. If they wanted to speak with us, they'd have to initiate it.
I looked at the clock. It wouldn't be long before the kids got home from school. The biocameras, which Rey and Riley somehow made in a way that they could vat-clone, confirmed that was indeed the case. *Hmm, no Theo or Clarice.*

*Well, shit.* I added that to the note for Amelia. Riley sure as hell wouldn't listen to me. Seems like no one did, these days.

"Hey, Lisa!" Taylor exclaimed when she got inside. "Enough work, I need your help shopping."

*Nervous, feigning confidence. Feigning confidence well enough to trick herself? No, insecure and and actively seeking... affirmation... using the link with Amelia. Using Amelia's attraction. Dependent upon Amelia's approval for developing sense of attractiveness to others.*

I focused my attentions on Amelia herself, now.

*Worried about Taylor's new behavior. Enjoying new behavior, but confused over what it means. Well, that's both good and bad, their minds are still independent of one another. Needs to feel safe and protected, dependent upon Taylor to defend her. Not willing to confront Taylor, for fear of losing that protection.*

Nothing I didn't already know. Ever since Amelia asked Taylor to be her 'General', that was plain for anyone to see. They had both put a lot of the basis of their relationship on clearly defined and highly important roles. It was a negotiation of sorts. Combining and sharing of power. They really would have made a great couple, if nature had allowed it.

"Okay," I agreed, forcing a smile. "I'll get my things."

"Me, too," Amelia agreed. Then froze. "Oh."

*Responding to link. Taylor doesn't want her to come with. Planning something.*

Taylor hugged her from behind, "Sorry. I promise I won't be gone too long." She whispered something that I couldn't hear. "Besides, you still have studying to do."

"And a Riley to have a chat with," I informed Amelia.
"Okay," she reluctantly agreed. "Bring back something nice for Riley, too."

"It's a promise," Taylor said, still draped around Amelia. Both their eyes fluttered.

Responding to link and shared sensations. Intentionally generating mild feedback loops. Worse than I thought. Don't mind showing affection in front of others. Shared confidence emotion loop.

"Well, I'm basically ready right now," I said, interrupting them. "Just gotta grab my purse."

"Me, too," Crystal exclaimed.

I went back in my office, trying to figure out how to approach this. They, specifically Taylor, now willing to show affection in full public. In front of both Zach and Crystal.

Act of defiance. Daring us to say something. Equates relationship with Amelia as act of rebellion against teasing. Equates teasing with previous experiences as a victim of bullying. Only made that psychological connection recently. Sees relationship with Amelia as source of happiness. Sees teasing as bullying as attempt to take away that happiness. Sees my disapproval as possible betrayal. Sees me as possible bully. Sees my attack on Emma as an act of unnecessary cruelty.

I froze. Shit. Coulda used that information a week ago. Association did not exist at that point.

....

Fortunately, we were easy walking distance from downtown. Technically, we were in downtown, only a few miles from basically everywhere important. Although the nature of repairs, the establishment of the ferry, and changing economies was redefining what constituted the shape of our town.

We did an awful lot of window shopping, making small talk as Taylor bought pretty much everything I promised look good on her.

She stopped at one place, looking at a dark blue evening dress on one of the mannequins. "Do you think Amelia would like that?" she asked. It was the first time she openly admitted she was doing this for Amelia.

"I think she'd probably rather die than be caught dead in something like that," Crystal replied.
Taylor sighed. "You know what I mean. Would she like it if I wore it for her?"

"Then she'd die for completely different reasons," Crystal responded. "The poor girl's not going to know what hit her."

"Good," she said cheerfully as we entered the shop.

Taylor went straight for her dress of choice, while Crystal browsed. She found a somewhat more conservative green number. "Amy's going to love this one," Crystal insisted.

"Can't Amelia just make her own dress with her power?" Taylor asked.

"Just means we don't need to worry about the sizes and can buy this one for her to copy," Crystal replied. "It wouldn't be right to steal the design. As good shoppers, if we're going to build our own copies, we still have to own an original. Besides, you guys could buy this whole store, don't act like you can't afford one dress."

"Technically, I already have," I admitted.

"Really?" Crystal laughed. "Now you have no choice."

We left the store with both dresses. And a cute little pink and white sun dress for Riley.

....

We arrived at an outdoor fast food joint and had ourselves a distinctly unhealthy combination of foods. Crystal didn't strike me as the chili cheese fries type, but that was her pick. The rest of us had burgers and fries.

"So, why the sudden interest in my cousin?" Crystal asked. "You were constantly on about how you're not into girls before."

"I... I'm not... I just..." Taylor muttered, looking away.

"It's their whole psychic bond," I stated, glad for the excuse. "She really likes the thoughts she's getting from Amelia."
"I'm not giving this up," Taylor insisted. My power confirmed her words. "Nothing you say will make me. Why do you keep trying?"

Crystal nodded. "Yeah, I get it. But that isn't..."

Taylor shook her head. "She cares about me, and I care about her, and I'm allowed to like knowing that there's finally someone out there that cares about me."

Crystal frowned. "How can you say that? You're one of the most famous heroes on the east coast right now. You..."

"That's Khepri," Taylor interrupted. "Or Skitter or a target or a charity case or a battlefield asset. You've been a cape long enough that I know you know the difference."

*Charity case. Is aware of, and resents, my attempt to save her from her issues. Views it as pity. Sees my awareness of her emotional vulnerabilities as a power I have over her. Resents that imbalance in power. Sees it as a personal weakness. Hates the idea of being weak. Sees relationship to Amelia as truly equal. Sees Amelia's willingness to make herself vulnerable as a sign of trust and love. Exaggerates significance due to her own issues with being vulnerable.*

"Fuck, you people teased so much and tried so hard to get us together..." she sighed.

"You're right," I said. "I wanted you two in a relationship. Maybe not romantic, per se, but yes. You were both hurting over so many things. Both ready to..." I paused. How to approach this?

Crystal watched. Taylor waited.

*Be direct. Will view honesty as a sign of respect. Needs to feel respected, sees the lack thereof as one of the worst possible insults.*

"Remember when this started? The pair of you were ready to storm the Protectorate and flay Piggot alive, along with everything that got in the way. That was the sum total of your plan. Why Amelia let Riley live."

Crystal gasped. I wondered how she felt, learning her 'Amy' was ready to go that far. I didn't bother sending my power that way. Crystal was in too deep to act on any second thoughts, and so the fallout would be a minor thing at worst.
"I wanted you to build a relationship with her, yes. Because you needed it. You needed someone else to care about, because neither of you care about yourselves. I wasn't joking when I said I was there to keep you from getting yourselves killed by Eidolon. What I didn't say is that it's because I knew you were planning a suicide mission."

Crystal chuckled. It wasn't a happy sound. "Jesus Christ," she muttered. "First I figure out that you're just like Amy," she gestured at Taylor.

"And you," she gestured at me. "Are basically me."

"I think I'm missing a context, here," Taylor said.

"She loves you," Crystal said. "Not like that! She's watching you do something she thinks is going to destroy you... and she's staying. Knowing the risks. Knowing where this can end. Knowing that she might drive you to hate her while trying to save you. That's not a friend, Taylor. That's family."

Taylor looked at me. "Why?"

_Fuck. Well, now or never._ "Which part?" I asked. "Why would I want to save you? Crystal's right, you are family, the only family I have. Why do I think you're family? You saved me more times than I care to count, from fates that range from death to horrible death to worse than death. I trust you, I respect you, I admire you. And, yes, I even love you. Would it kill you to let me be the one to save you for once?"

"Save me from what?" Taylor asked.

"Taboo," I replied.

Taylor's eyes narrowed. "It's the bond. You know something."

"I... suspect... a lot of things," I reluctantly admitted. "You have a connection you can't begin to understand. It's going to change you. It's already changed you."

"So what?" Taylor countered. "You know better than anyone how little I liked myself. Like you said, we were prepared to destroy ourselves and take a lot of people with us. Compared to that... let's be melodramatic as fuck for a minute. Consider this me saying goodbye to who I was. A symbolic suicide in lieu of a real one."

"What a weighted choice of words," I sighed. "Taken to its final conclusion... I can't stand to lose you." _Time for the final step._ "Not like I lost Rex."
A/N- Oh, yes, this chapter. I is warm and fuzzy inside from it.

Also: it's horrifying.
I listened to Lisa's story in silence, and once again was grateful that I had parents who loved me. *Fuck, what kind of people looked at their own children as tools to be exploited?* I would have repressed the emotions that brought up, but the link made that dangerous. *Don't fight, accept and push through.*

Her brother's suicide... *well, that explained me, at least.* I tried not to be insulted by the comparison. The part where Lisa saved me as a stand-in for a loved one she could not. I thought back to Amelia. *Was I a replacement for what she she lost?* No... I was nothing like Glory Girl at all. I didn't have her looks, I didn't have her powers, and I sure as hell didn't have her personality.

Amelia and Victoria were sisters. I wasn't Amelia's sister. If anyone was the stand-in-sibling, then it was Riley. I was Amelia's partner. She was mine. Neither of us had an equivalent relationship to compare it to.

I sent a pulse of emotion, just to let her know I was thinking of her. She was in the lab area, which limited my senses solely to her bracelet. Which had no senses beyond its attunement to her, and function as a portable relay. *Probably spending time with Riley. ContentCalmFocus. She must be actively using her power on something, judging by all of that.*

Lisa sighed when she was done. "After that? Well, spent some time on the streets using my power to be a petty thief. Then Coil found me. Gang-pressed supervillain and all that jazz. Which you saved me from, just like you saved Dinah."

"Amelia had more to do with that than I did," I replied.

"Nah," Lisa denied. "Sure, her powers did the heavy lifting. But she wouldn't have known, much less done anything, without you. And if she hadn't been there to help, we would have figured out some other way to stop him. Might not have been as easy, but it would have happened."

I shrugged. "Maybe."

"Uh..." Crystal started. "I just wanted to apologize. I didn't realize..."

"I know," Lisa offered a small smile. "The biosuit. Responds to your emotional system, what your body's telling it, not your mind or some kind of real control system. You were pissed, it thought 'combat', and suddenly a light shove turns into trip across the room. Not the first time running my mouth has landed me in trouble. Won't be the last, either."
"You really should work on that," I told her. "Speaking as a friend."

"There's a lot of things we should really do," Lisa smiled. "At least my consequences can be easily fixed by our resident miracle worker."

I grabbed her and pulled her into a hug. She went rigid. I didn't let go. "There, now you're trapped and I'm not letting go," I squeezed. "How do you fix this one?" I asked.

"I have to pee," she replied. I let go.

....

We had a couple hours of daylight when we got back, if only thanks to it being mid summer. I put on one of the new outfits I'd picked out and headed toward Amelia's room. The door opened before I could knock.

She looked toward me as I walked in. "Hey Tay-" she paused. ShockDesire. "Taylor, is that a skirt?"

"Is this going to be a repeat of yesterday?" I asked, smiling. "Or can we skip to the part where you tell me I look amazing and then I'll help you pass your computer homework, since that's your first class in the morning." AmusedHappyDesire. I didn't need our link to see how much she liked it. It was quite conservative, as far as skirts went, covering as far down as the knees. And I'd never be caught wearing it outside. But none of that mattered here.

"It should be," she smiled. "But I really do need help with that homework. You look amazing."

Neither of us stopped smiling until I retired to my bedroom.

....

School the next day started normally, with Amelia showing proper appreciation for my new outfit, this time without colliding with any random students. It was Friday, which meant no one was paying any kind of attention to the teachers. Except Clarice of course, who sat in rapt attention absorbing every bit of information she could.

I managed to get to third period without anything eventful happening, and was busy spying upon Amelia and Clarice. The latter because I had to, the former because I wanted to. Why Amelia chose to take AP biology... well, easy credit, I guess. We had wisely forbade Riley from taking any bio classes. Frankly, her chem class was pushing it.
Speaking of which, the girl was rapidly earning herself a reputation as, well... insane, basically. I envied her, actually. It seems the key to being both weird and popular is to embrace it so thoroughly no one can make up anything that beats reality. Everyone wanted to be around her just to see what she did or said, and speculate on how much of it was serious, and how much was her just messing with people.

She was at the most crowded table in the lunchroom, right next to Missy, who had apparently decided that she didn't care about her close association with the girl, and the suspicion that might result in. I didn't care, either. We gave her a fair warning, the rest was her choice. Honestly, Vista's identity being compromised would probably work in our favor, and couldn't really work against us in any way.

I frowned as there was shouting in the lunch room. Another fight. We'd had an average of two or three a day thus far. Security handled most, and I'd interrupted more than one with a swarm-clone. Shit, this is one of the bad ones. A weapon. One boy had pinned the other against a table, pressing the tip of a knife against his throat.

I had a handful of the tranq mosquitoes available, but if I used one of those... well, the fact that they exist at all would be revealed to the world, and that would be a pain in the ass. More importantly, however, he'd fall on top of the other boy knife first.

I couldn't hear anything. Or, more specifically, I heard too much. All the noise did not help the bugs, who couldn't distinguish one set of terrified shouts from another.

Clarice walked up to the kid. Strange... he didn't seem to react... Oh. She used the stealth function. Wait? She used the stealth function? That was built into the skin. She'd have to be...

I gathered together my bugs.

The boy screamed in shock, not pain, when Clarice grabbed the hand with the knife, pulling it back. The strength gap between an obsolete changeling and Valefor was enough to be insurmountable. Some fourteen or fifteen year old boy didn't have much hope at all against a new model. No one quite knew what to make of the kid suddenly raising his arm up and dropping the weapon, only for it to be caught mid air, but the other boy had the presence of mind to scramble away.

Clarice walked him over to one of the security officers and set the knife on the table. People were following her with their heads, now. Ah, she still has socks on. She went back over to her table and got dressed in full view of everyone before turning off the invisibility.

The other students started clapping, cheering and hooting at her. She waited a moment, then curtsied and sat down to finish her meal like nothing happened. So much for keeping her identity under wraps.
"Y'know, you're suppose to at least pretend you care about keeping your identity secret," Amelia said as we went home. AnnoyedConcern.

I was riding with Theo in a different vehicle, but I could listen in to pretty much anyone in the city right now. Speaking of, I made a phone call to the Commissioner. "Hello, Khepri," the man said. He sounded cheerful. He should, when talking to me. After all, we'd basically eliminated most forms of organized crime in the last few weeks, while he got to enjoy much of the credit. "Got another one?"

"Yes," I confirmed. "Condemned warehouse. Current inhabitants are out. I'd say it's mostly cocaine based on how the bugs are reacting."

Due to Pantheon's association with police, I should need a warrant simply to look for drugs. Warrants I couldn't get. Which meant no real arrests could be made since any half competent lawyer would get it thrown out in minutes. But that was fine. It's amazing how quickly the suppliers decide to abandon ship when the police get to every stash in under six hours. Just because they couldn't arrest anyone, didn't mean they couldn't walk away with the product.

"Thank you for your service, miss," he said after I'd given him all the basics.

"Just happy to keep that stuff off the street," I replied before hanging up. I'd have to ask, confidentially of course, just how much we were getting off the street. The busts were so common at this point that they'd stopped making it on the news. We still kept the fact that I could do more than just 'touch' with my bugs a secret, of course. But we'd stopped bothering to hide my range.

I hugged Amelia once I got inside. ComfortSafeHappy. She smiled. "So, anything interesting happen today?" It was the first time we really got to talk today.

"No, not really," I said. "TGIF is in full effect, however."

"Yeah," she agreed. "So, I know you're planning something. Dish."

"Sure," I said. "Time for me to show you your present."

"Okay?" she smiled. AnticipationAmusement.
I handed her the package, complete with wrapping paper. "Go ahead, try it on."

"Alright," she said as she went to her bedroom. I went to mine to change as well. **SurpriseAnticipation. And that's my partner opening her gift.**

My dress was really nice. Went down to my ankles, but had one of those leg slits on the side. Dark blue contrasting with my pale skin. Something that I really used to hate about myself, actually, but Lisa and Crystal assured me that it was a good feature to have.

"Okay, I'm ready," she said. I rushed to her door, if only to avoid anyone else seeing me. Not that I really needed to worry, I could tell where they were. Crystal was at her late college class. Lisa in the office. Theo on the phone. Zach on his computer. Riley and Blasto in the lab. No one else actually ever stayed in the building.

I peeked my head in. She did look nice in the green dress. Elegant, even. Turns out Crystal did know Amelia's size. "It's lovely," she said, smiling at me. **GratitudeNervousness. "Thank you. Uh oh."**

I smiled. "Yeah, you caught me," I said, as I stepped into her room, letting her see me. "Your dress isn't the real present."

**DesireShockJoy.** I let the feelings wash over me, boosting my confidence for the next part. "I was thinking, since we didn't actually get to enjoy the dance last week, thanks to all kinds of reasons, we should try it again. Can you do the floor lighting in here?"

"Uh... umm... sure," she said, stammering the words. **AnticipationFocus.** The floor started to glow subtly as the harsher light faded out. "N-now what?"

"Well, you can turn on some music," I suggested. "It's even the same music."

"Yeah, we still have to 'thank' our nosy friends for that, don't we?" Amelia laughed, then went over to her computer and started the music. A sweet, soft song that I didn't recognize. Amelia seemed to have a taste for softer music. She did, in fact, actually have Sinatra in the mix. I wasn't complaining.

"You still haven't made any taser bees for me," I reminded her. "We could test drive those."

"Sorry," she said. "Still haven't worked out how to pack enough power into something so small and still let it function as a bee."
"Oh well," I fake pouted. "Our revenge is foiled yet again." I moved over and put my arms around her.

*Elated*Nervous. That's all I needed. We danced through several songs. Talking about nothing important, like classwork and Riley's antics. And even a few serious things like new ideas for the Zerglings, and how we finally had space to start our Ultralisk tests, once we established legal rights to our dead world. And speculating on names for it. I was leaning toward 'Elysia', myself. None of that really stuck in my memory, though.

What I focused on was the girl I was holding. She smiled radiantly, and her feelings radiated through our link in waves. It was wonderful. It gave me the strength and confidence I needed to take the next step. I moved a hand up, brushing the hair away from her face and cupping her cheek. Then I leaned in and kissed her.

================

A/N- In addition to Sinatra, Amelia has the original version of Killing Me Softly, and Time After Time in the mix.

... She keeps the Tatu songs carefully hidden in a different folder...
Taylor held me as we danced, and it was wonderful. The taller girl was confident and self assured, but still gentle. Neither of us were exactly good dancers, but we really didn't need to be. The music and the atmosphere were perfect. I suppose I should think that, since it was all designed to perfectly match my own tastes. In short, I was having a wonderful time.

**CertaintyResolve.** Hmm, what was that? I looked up, and Taylor brushed my cheek. I melted into her as she leaned forward and kissed me. My first real kiss, and with someone I...**DiscomfortResolve.**

I ignored the feeling for a couple more seconds. Please don't take this away from me. It was her idea, maybe she'll... but the mood was already ruined. I pushed away from her, stepping back. A quick mental impulse activated the normal lighting of my room.

**ConfusionWorry.**

"I... I'm sorry, we... I can't." **HurtRejectionFearAlone.**

I didn't need the link, I could see everything in the look on her face. "Why... what did I do wrong?" she asked. **PainFearInadequate.**

I rushed in and pulled her into a hug. "I'm so sorry!" I wept. **ConfusionWorry.** "It's not right."

She hesitated, but put her arm around me anyway. "I thought it's what you wanted," she said. **HurtConfused.**

"It is," I agreed. "I do!"

"Then why?"

"Because you don't," I managed to blurt out.

"That's not..." she hesitated. "That's not important."

**Oh. Oh wow.** "Taylor... I..."

"I already said I was okay with it," Taylor insisted, her wet eyes looking into
"Our bond goes both ways," I countered. "You know that feeling coming off me right now, while telling you 'no'?"

"You mean a mix of quiet despair and grim resolve?" she replied. "Well, at least I know you really don't want to stop this."

"That's basically what I was getting from the bond the whole time we were kissing," I sighed, then offered what I hoped was a good smile. "Well, except maybe the 'despair' part. It didn't upset or disgust you or anything."

"It doesn't," Taylor insisted.

"If it had been any other reason," I continued. "Love, desire, maybe even simple curiosity... I might have accepted 'nothing better to do' if you phrased it in a way that didn't feel like an insult. But it reads like you're doing a chore. Out of a sense of obligation. It's really not something that puts me in 'the mood', you might imagine."

She offered a half smile. "Okay," she agreed. "If you want to try again, we could cut the link for an hour or two."

My eyes went wide and my stomach... and the rest of my lower abdomen... tingled. I hugged her just a little tighter for a second. "An hour or..." I managed to gasp. "Taylor... what did you expect we were going to do tonight?"

"I..." she mumbled, her face turning beat red. I wanted to kiss her so badly.

"Sorry," I said. "I couldn't hear that."

"Anything you wanted us to do," she admitted. "Anything you wanted us to do,″ she admitted. So hot. No! Focus on something else.

"On a first date?" was the first thing my brain stumbled across that didn't involve thinking about how good her skin felt on mine. Or, for that matter, how nice the dresses felt where they rubbed together.

"When you put it that way, it sounds really bad, doesn't it?"

"Kinda, yeah," I agreed. "But you already know it's not like I don't want to..."
"But you're not going to," she finished for me.

"No, I'm not," I confirmed. I broke our hug, but didn't let go of her hand, leading her over to the bed where I sat. She took the implied invite and sat next to me. "Seriously, Taylor. Even if you were, well, interested. I..."

I hesitated. ConcernTenderSupport.

"I'm not exactly ready for a relationship, either," I admitted. "In my entire life, there are exactly two people I've ever been attracted to. I don't even know if I'm suppose to be gay or what."

WorrySadness. She offered a small laugh. "Well, if it turns out you're not, please don't tell me. I have problems with my body image already. I'm not sure how I'd handle finding out the girl who I've basically been seducing is really into guys."

"I don't like it when you insult yourself," I insisted.

"Sorry," she looked away. "You were saying?"

"We know it was Victoria's power that made me fixate on her," I replied. "If it wasn't for that, there's no way to know what my natural tendencies would be. Or if I'd even have any at all."

"Why wouldn't you?" ConcernConfusionEmpathy.

"I'm still a bio-Thinker, even when not using my powers actively," I explained. "When we kissed... you felt the kiss, and my emotional state through our bond."

"Which was really nice, for a moment or two," she insisted. CertaintyConvictionFearRejection.

"It was..." I agreed. "But I also felt everything else. The hundred trillion or so bacterial cells living inside you. I could imagine that, if left for nature to run its course, my power would get in the way of sex, like Lisa's does."

"Hundred trillion?"

"It's all really tiny," I said. "In total, rarely more than three pounds in any given person. But it's something I'm constantly aware of, when touching someone."
"I'm aware of about that many bugs," Taylor insisted. "And I'm still capable of... well..." she blushed.

"Yeah," I agreed. "And maybe I'd have worked the same way. Nature, nurture, and the blurry lines between. There's no way of knowing what I would have been. Or what I will become as I recover from the aftermath of years of mind altering powers. I'd ask Riley to run a few tests, but..."

"Bonesaw poking around in your brain," Taylor muttered. *FearRevulsionHate. Another subject between us that can't be easily approached.*

"I was thinking more along the lines of 'she's ten', myself," I admitted.

"Oh, sorry," she said. *RegretWorryIndecision.*

"It's fine," I sighed, then leaned my head onto her shoulder, snuggling a bit closer. *CalmingSafe.* "I know it's asking a lot for you to tolerate her presence."

She wrapped an arm around me. "It's fine. You were right to keep her. I can't pretend I'd have turned out any less of a monster if I got my powers that young, and then a psycho like Jack spent the next half decade making me his protege. It's not like I'm free of sin. If nothing else, she saved your life. That's worth an awful lot to me."

I smiled, nuzzling against her. "Thanks," I pushed the gratitude into our link. I opened my eyes and realized I was in a perfect angle to see down her dress. I blushed and looked away.

She was kind enough to not admit she noticed, although the link sang her part of the reaction. *HappyAmusedProtectiveAnxious.*

"So..." she said. "What does this make us, then?" *ConcernHope.*

"Friends," I said, looking up at her. "Partners. Close ones, clearly. We're just not romantically involved."

"Really close," Taylor agreed. She smiled down at me. "I should probably stop teasing you, then." *RegretDisappointment.*

"Hey," I smiled back, "Let's not talk crazy, here. We've already established that we both like that. And the talks. And the cuddling. We can keep doing that."
"Really?" She asked. *HappyConcerned.* "What about, well, if one of us maybe finds someone to date. This might be a bit much for someone to accept."

I shrugged, still gazing up at her. "Did you have someone in mind?"

*FlusteredFoolish.* "Okay, you have a point," she admitted.

"Like Lisa and the others have made painfully clear: everyone's already under the impression that we're together," I stated. *AnnoyanceAgreement.* "I'm not interested in romance with anyone right now. And, frankly, this would probably be a selling point for your preferred demographic."

"Okay, you have a lot of points," she agreed. "So I can keep playing dressup?"

"I'd be disappointed if you stopped," I stated. I knew the link would back me up. *RelievedHappyApprehensive.*

"So, the question becomes," she continued. "What exactly are you okay with doing?"

"To throw your own words back at you," I smiled impishly. "Anything you want us to do."

*SheepishThrilledProtective.* She hugged me tight, even kissing my forehead. And this time, she did it because *she wanted to.*

=============

*A/N- To quote one of my favorite webcomics: "Once again, personal growth and maturity have gotten in the way of a good time."*
For two people who aren't dating, I thought while looking at the sleeping girl beside me. I didn't bother actually completing the mental sentence. Taylor's dress had shifted in a way that basically exposed her entire leg to me. *She has really really nice legs. Must be all that running.* I'd probably have to start exercising more, myself. Not looking forward to that.*Then again... more eye candy.*

I nudged Taylor's shoulder. "Hey, I think it's time for you to wake up."

"Huh?" *ConfusionRecognitionRealizationEmbarrassment.* "What time is it?"

"Around sunrise," I said. "I can feel it through the tree."

She smiled. "Since when do you wake up before noon?"

"Probably something to do with not wanting to wake you up after you fell asleep," I said. *HappyConcern.* Knowing Taylor's responses gave me a level of confidence. Otherwise, I never would have followed that line up. "I should have you stay in bed with me more often."

*EmbarrassedDelighted.* She turned scarlet at the suggestion. "I... uh..."

"You're adorable when you're flustered," I informed her. More of the same series of feelings.

"That was cruel," she managed to stutter out.

"Would you like me to stop?" *Rhetorical Questions for a thousand, Alex.*

"No," she reluctantly admitted. "I... uh... should probably go get changed. I don't think these dresses were really meant to be used as nightgowns."

"Probably not," I agreed.

She got out of the bed and straightened out her dress, looking kissably shy the whole time. She looked at me, eyes half shut as we just enjoyed the various flavors of the empathic bond.

I signaled the door to open for her. Still hadn't worked out an auto open-close for them that didn't have a dozen or more flaws. Everyone else had to push a button.
She walked out, and immediately clapping and even a couple 'whoops' came from the living room. All from one person. Taylor offered a death glare in that direction. "No, not the bees!" Respawn shouted, scrambling behind the couch and collapsing into a fit of laughter. *I'm getting pretty good at sensing where people are on the Yggdrasil.*

Taylor hadn't actually called on her power, except the usual stuff I was coming to think of as background noise. *DefiancePride*. That floored me. *Pride. She was proud of this. Of us.* I fed on that strength and sent it right back to her. *This is an emotion we'd be getting a lot of mileage of, I can tell.* Taylor simply walked to her room, not letting Zach's antics get to her.

....

No one else had anything to say about it the rest of the day. As far as everyone else was concerned, we were now officially a couple. As far as we were concerned, it didn't matter what they thought. What we did or did not do with our time together was our concern and no others. *Don't fight, accept and push through.*

Our weekend went back to a productive routine. Taylor, Zach, Theo, and Clarice spent much of their time training with and teaching our first batch of police officers how to operate the M4s. Lisa did... whatever it was Lisa did. Plotting, mostly. Consulting Dinah occasionally. *All superheroes should have their own pet evil mastermind. Life is infinitely more simple this way.*

Crystal, Rey and I worked on the first ever hostile environment variant of my Yggdrasil. Rey piloted one of the modified M4s through the other side of the gate. The goal was to go in, take analysis and samples, and bring them to a segregated variant of the Yggdrasil. Followed by what was essentially a million years of forced evolution condensed into mere hours.

Crystal was doing scouting flights around the area, in the best bioarmor suit we'd built thus far. She was our flagship fighter, after all. The first suit we'd given an actual name: "Radiant". Technically 'V1Radiant'. V2 was the standard for Eki at the moment, with more combat options and a stronger forcefield. We didn't use it in scouting because we didn't want to have it irradiated.

V3 would be ready in time for Behemoth, Riley insisted. She was currently more interested in obsessing over the new 'Azrael' model meant for Flechette. To use Riley's own words: 'she could solo the Triumvirate with this'. I didn't know if I believed her, but she was very clearly enthusiastic about the idea.

By the time Sunday night came around, we'd done everything we could do. The M4P project had progressed to primarily 'self' training. These were trained professionals, after all. They were merely learning new equipment, not being retrained into something else. We had them on a week of playing various physical sports. Mainly Basketball, since Riley considered that the most perfect choice for learning the nuanced fine controls of the system and updating the automatic reactions of the M4s.
Her prediction was they'd be ready by next Monday.

My hostile adaptation Yggdrasil had already started spreading. The entire planet would be completely terraformed in two years, left to its own devices. With active help, and you could be damn sure we were going to actively help, less than six months.

Our priority, now that Flechette was functionally a 'sure thing', was back on Vista. Using her power on this basically dead world would be huge.

....

I rode to school with Clarice and Zach. Those of us supposedly without a secret identity. Clarice was busy admiring a handkerchief. It was an astonishing combination of woven fabrics, with a blue lace pattern that met with a deep red heart in the middle.

"That's really pretty," I told her. "Where'd you get it?"

"I had Parian make it for me," she answered. "Don't worry, I paid for it from my share of her profits."

Much of the tech in Parian's workshop was designed by Riley, she was given a cut for it. "Okay," I said. "So what's it for?"

"My boyfriends," Riley said. ShockConcern. Ah, right, Taylor was still listening in, even if she couldn't be here. I sent the loose emotional equivalent of a 'hug' through.

Zach coughed. For real.

"First," I said sternly. "You're not allowed to date. Second, even if you were allowed to date, you're not allowed to have plural boyfriends."

"Third," Zach interrupted, having recovered by disintegrating himself. "The kind of boys that would appreciate silk handkerchiefs are already dating each other."

"I know," Riley agreed. "I kept telling them and they wouldn't listen. So I made it a challenge. Anyone who takes this from me gets a date." She tucked it into her shirt pocket, half dangling out.

"Where did you get an idea like that?" I exclaimed.
"Zach," she answered with the same smile as always. \textit{AnnoyanceResignation.}

I glared in his direction. "What?" he laughed. "I said I saw something like that in a show, not that I thought she should do it."

"Why am I not surprised?" I muttered. "Remember rule number six?"

"If it's Zach's idea, it's probably a bad one?"

"Yeah, that," I confirmed.

"But this is actually a really good idea," Riley insisted. "It's good practice for controlling the automatic responses of the doll that I can apply to future models. Plus, anyone who succeeds is either a parahuman or insanely capable. People we might want to recruit. It also draws attention to Clarice, which is sort of one of our goals."

\textit{She had a point. A lot of points, actually. RealizationAgreement. Didn't quite like the way it was being implemented, but it's not like I really needed to worry about protecting Clarice from anything.} "Okay," I finally agreed. "Play your game, but if it causes problems in class, it's over."

"Okay," she agreed. "Now, when are you getting married?"

I sighed. Zach smiled. I focused on the link, taking refuge in the strength. \textit{PrideComfortCertainty.} "Not any time soon," I replied. "We have more important things to worry about. Like the Endbringers. I'll worry about getting married when cities aren't being destroyed every three months. Not before."

Clarice nodded. "Okay," she said in the voice of someone with a mission. Her smile was that of someone inordinately pleased with herself. \textit{Oh god, what did I just promise? WorryAmusementResignation.}

Zach chuckled. "To be fair, it would be the most badass wedding ever. Of all time. I can see it now... we can hold the ceremony inside Behemoth's corpse. Wedding dresses made of Simurgh feathers. Alexandria will be one of the bridesmaids and would have to settle for a tacky blue Leviathan hide dress. Endbringer teeth tied to the back of the car. Party of the fucking Eon."

"Language!" Clarice smacked him.

"Ow! Sorry!" Then he paused. "The fuck?" Another smack. "OWW! That actually hurts! How did
you do that without tripping my restore?"

"World's best biotinker," Clarice responded.

"Fucking bul- OW!" Zach ducked back, bringing his arms up to defend himself. "Okay, I get it!"

=============

A/N- That's right. They've started naming the bioarmor. That's clearly the most important piece of information in this chapter. Seriously, though. Radiant and Azrael are going to be fun.

Also: they've weaponized the power of Riley's platonic Yandere toward Endbringer slaying.
As it turns out, it wasn't even Clarice who got outed first. It was Taylor. We managed a full week, at least. A week of living a normal enough school life. Spending lunch together, sometimes with Chris or Theo or both. I introduced her to Victoria's friend group, and they were suitably understanding of her less than outgoing nature. Much as she was far more confident, now, she still wasn't the type to enjoy socializing. Another way in which we were alike.

It was Thursday afternoon, in Social Sciences, that things started coming apart. The teacher set up our group project assignment for the week, due next Friday. A political map of how the world would look today if it were Asia, instead of Europe, which colonized the Americas. Complete with citations of historical points and why we believed the lines would be drawn in which areas.

"You should ask Weld over," Taylor suggested.

"Why can't you?"

"Better if you do it," she answered. "Less suspicious for the cape to ask the other cape."

I sighed. "Fine," I agreed, getting up and heading over to the boy. Seriously, Taylor, I have no idea how to approach people.

"Another recruit attempt?" Weld asked.

"We're supposed to be in groups of three," I answered. "At least this way you won't have to deal with stupid questions about life as a cape."

He smiled. "Sure," he replied, getting up. He took one of the desks abandoned in the shuffle, sliding it up next to ours. "So, I was thinking a focus on the Oirats, and frame the premise around Oirat expansion eastward. Prompting a land grab between them and China..."

"We need a discovery in the New World worth the fight," Taylor answered. "A gold rush, perhaps? The Rockies are full of the stuff."

I felt a flicker through our link. My eyes when where Taylor's took hers. She was looking at Weld's arm. InterestDesire. Oh. Oh! I didn't listen as intently as I might have, instead focusing on the sensation. Was this what Taylor felt whenever I 'looked' at her? No wonder she doesn't mind. I couldn't blame her for checking out Weld, either. The boy's was pretty much the statue of a god.
She'll never look at me that way, a traitorous part of myself thought.

Taylor's head snapped toward me. *ConcernFearWorry.* "Is something wrong?" she asked.

"No," I answered. *DoubtConcern.* "At least, nothing that matters right now."

Taylor reached over and grabbed my hand. It was comforting, in its way. Weld said nothing, and instead went back to focusing on the assignment. Eventually class ended, as it is want to do. Taylor and I went to lunch. There was no pretense, anymore. She kept hold of my hand the entire way, except when we had to break off to put our books away, and then we met up before going to the lunch room. *PrideSupport.*

We opted to go outside for lunch, finding a shady corner. "So, wanna share what that was about?" she asked.

"Just something stupid," I replied.

"Jealousy?" Taylor asked.

"More like envy," I answered. "Someone else who has something I want. Like I said, it's stupid."

"Okay," she answered, leaning against me a little. The bond made it clear she wanted me to explain further. I didn't. We spent a little while like that before Taylor muttered. "Oh god damn it. Smile for the cameras."

She pointed at an area across the parking lot from the school. A blue car, I wasn't enough of a car expert to know one model from another. Sure enough, I saw the camera pointed at us. "Are you going to stop them?" I asked.

"Nope," she answered. "There are four others waiting around for their opportunity. Probably ready to ambush students for interviews the moment school is out. The secret is officially dead, we may as well accept it. Honestly, I'm shocked it stayed secret this long."

"Don't fight, accept and push through?" I smiled. It seemed to have become our mantra. How we handled our mood swings, whether bond or natural. How we dealt with problems like the PRT and the various power plays. *We don't need to be untouchable, merely unstoppable.*

"Exactly," she said with a smile. *CalmRelief.* "I thought I'd feel worse about my identity being revealed. Helps that everyone who matters enough for me to even pretend to care what they think already knows. Besides, you've been doing it for years."
I shrugged. "True," I agreed. "Before I got my powers, even. The assumption was always 'when', not 'if', I became a cape."

"I just told Blasto what happened," Taylor informed me. "Lisa will know in a minute. Are you certain you can't build a better way for me to communicate. Or at least not let the Yggdrasil eat most of my bugs?"

"They're bugs, Taylor," I replied. "I would rather they not be in my home."

"Fiiine," she whined. "Can we get more of those hugbugs and make them so I can control their speech?"

"That might work," I said. "But then everyone would be hugging you all the time instead of just me."

AmusedMischievous.

"Uh... Taylor... what are you planning?" I asked.

"To butter you up and either make Minerva happy or give her ulcers," she smiled broadly as she wrapped an arm around me.

"Oh, this'll good," I said, smiling back.

She leaned in and gave me a kiss on the cheek.

"Aww," I fake pouted. "Is that all?"

"Well, I didn't want to force you to turn off the link," she replied. "Besides, I think this school might have some kind of PDA policy. Wouldn't wanna get caught breaking any rules." She paused for a second and then started chuckling, then laughing.

"Okay, what's so funny," I asked.

"Nothing," she said. "Just remembering this classmate of mine. Next time I see him I'll have to tell him that my pretend girlfriend is better than his."
"Oh, is that all I am to you?" I acted offended. "Someone to show off in front of the cameras?"

"Yup," she chirped. "There's absolutely no one I'd rather be caught cuddling with by the paparazzi."

I leaned in and nuzzled into her neck, giving her a tight hug. "Me, too."

The bell rang not long after, and we went to our respective final classes. At the very least, our normalcy would last until school was out.

=========

A/N- I liked this chapter.
"No, not a problem," Lisa said on the phone. "You've gotta do your job. A tip, though... send your investigators after Winslow."

"Yeah, that's the one," she nodded despite it not being any kind of video call. "Names of interest: Emma Barnes, Sophia Hess, Gladys Knott. Take a real, hard look at Hess. She's got some powerful associates that covered up the near homicide of a fifteen year old girl."

"Got it in one," she confirmed. "Are you sure you're not a thinker?"

"Then you'd better think carefully on who you give this one to."

Lisa's really going all out on this one, I realized. Not that it surprised me for a second. She was preparing for this ever since we started going back to school. Meanwhile, the rest of us were watching the news.

"She was a nice girl," Greg said. "Quiet and shy. Really smart. Always thought she and I would, y'know, end up together. Though she never really seemed interested in me, or anyone else really."

He shrugged and smiled whistfully. "Oh well, guess I know why, now. Congratulations, Amelia, you got one of the good ones."

AnnoyanceDisgust. "Yeah, Greg, because a girl would have to be gay to not be interested in you," Taylor scoffed at the television.

"Don't be too hard on the weirdo," Minerva smiled. "He just accidentally handed us a PR jackpot. Pretty soon all your former classmates are going to color everything they remember about you with this. I assume your bullies went with the old cliché of questioning your sexuality, at least occasionally."

DisgustPainImpotence. "Yeah," Taylor admitted, looking down. I reached over and gripped her hand. "When they didn't have anything more 'creative' available."
I put my arm around her and offered what compassion and support I could through our link. It worked some, at least. She looked at me and smiled. I heard a quiet happy sigh from Riley as she looked at us. AmusementResignation.

"Perfect," Tattletale smiled. "Your classmates will remember those comments, and they'll think up other bits of 'evidence' that fits this new worldview. Retroactive memory, confirmation bias, whatever the fuck it they call it. Now the trio don't just look like evil bitches. They look like evil bitches that commit hate crimes."

"Leaving me to die in a locker full of human waste wasn't enough 'hate', already? There is so much wrong with that..." Taylor muttered. She had a point. Why should it be 'more bad' because of her supposed sexual orientation?

"Don't mean to be insensitive, but you did agree to this plan," Tattletale reminded her.

"...big sister," Clarice stated for the reporter lady.

"And how do you feel about her dating Taylor?"

"I'm not allowed to talk about secret identities," Clarice said emphatically. "Amelia and Zach and Crystal are okay because they don't have one."

"Okay," the woman doing the interview agreed. "How do you feel about her dating Khepri?"

"It's wonderful!" Clarice insisted. "She's smart and nice and has cool powers and we're going to kill all the Endbringers so they can get married."

AnnoyedMortifiedDefiantPride. Exactly, I thought, as I buried my face in my hands. I looked over at Riley, who was smiling away at the television. I have to talk to her later.

"I'm afraid I don't follow," the woman offered a nice, if somewhat condescending and confused, smile. "What does them getting married have to do with Endbringers?"

"That's what my big sister said," Clarice explained. "They won't get married while cities were still
being destroyed every three months. So the Endbringers have to go. And then they can get married and have lots of babies and I'll be the cool auntie that they all love the most."

"They're both girls, how do you think they'll have babies together?" Okay, note to self, don't invite that particular condescending bitch to any press conferences.

"Oh, that's really simple," Clarice started. "All you have to do is introduce a-

"There you are!" Zach interrupted, running into the camera's view. "What did we tell you about talking to strangers?"

"Try not to rip any more faces off?"

"Not power strangers," Zach clarified. "People you don't know strangers."

"Oh," Clarice nodded. "Don't talk to them unless someone I know says it's okay. And if they try to touch me, I'm not allowed to break their limbs more than twice each."

"It's okay," the woman assured them. "We're not strangers, we're reporters."

"Lady," Zach looked right into the camera with a deadpan voice. "No one is stranger than the press. Not even that one dude at the park who talks to himself while feeding the pigeons."

He paused for a beat. "To his cats."

Then he put a hand on Clarice's shoulder. "Now come on, ya little mushroom, it's time to go back to the magic tree fort. Your flying pony needs her exercise."

"Riley," Tattletale muttered after the scene swapped over to a couple of Glory Girl's friends who were talking about Taylor being really nice, if a bit quiet. "You are an absolute fucking genius and I would hug you right now, if not for those PTSD flashbacks I still get."

Riley glared at Tattletale, and neither Taylor nor I were feeling especially generous right now. If for
"It's absolutely perfect," she insisted. "We have the Endbringer fights and Clarice in the realm of public speculation. They can't really do much investigating of our top secret weaponry and all that, but they can certainly poke around into her history, which leads up to the almost certain exposure of Amelia's actual parentage. Operation: Pork Roast is well on its way to completion!"

"I still say we should have called it Operation: FTP- Ow!" Zach looked over at Clarice. "I didn't do anything wrong that time!"

"I am aware of what the 'F' stands for," Riley stated with a disapproving glare.

"Why don't you ever slap Lisa around?" Zach gestured at her. "She swears more than the rest of us combined!"

"Riley and I have an understanding," Lisa stated.

"How the fu-udge did you pull that off?" UncertaintyCuriosity. No one bothered to answer him. I made a note to ask Taylor about it later, she might be able to figure it out. Or I'd just to ask Riley, that would probably be simplest.

Sometimes, I did not like the kinds of secrets that Lisa kept. I didn't doubt her loyalty, if only to Taylor. And Taylor was a certainty in my mind, so Lisa would be loyal to Pantheon. Even without the threat of the Passengers and Dinah's Prophecy hanging over our heads. But still, this was something I should take the time to focus on.

"Fine," Zach muttered. "So, in slightly different news, who do you think spilled the beans?"

"Coulda been anyone," I supplied. "We weren't subtle. We didn't even want to be subtle." SuspicionAnger. "Of course, Taylor already has an idea."

"Emma didn't come to school today," she pointed out.

"I don't think she'd do this," Zach responded. "Much as she's a bitch, she's not stupid. This?
would be stupid. This would be the kind of stupid that normally follows 'hey, bubba, watch this'. I don't see it. Not unless she wants to get lynched."

"Neither do I," Minerva agreed. "She'd have to know that she and Sophia would be exposed during this. Legitimate coincidence. More likely it was some kid who mentioned it to a parent or someone else who thought they could make a few bucks selling us out to the press."

"Or Greg," Taylor admitted. "He gets attention, gets to imply we were 'friends' in a way I can't really refute without looking like a bitch. Maybe even a kind of revenge on me never showing him any interest. And it's not like he was Emma's biggest fan to begin with. Lots to gain, nothing to lose."

"It really doesn't matter," Minerva dismissed the speculation. "What's important is that it wasn't us and it can't be traced back to us. What comes next needs to be started by other people."

================

A/N- Riley continues to be adorrifying. No, seriously. Love Riley in this chapter.

Zach gets some great lines, too. Can't forget those.
I made the phone call to Minerva, she picked up on the first ring. "So, you guys got the info, too?"

"Second hand," I reluctantly admitted. She'd have figured it out and mocked me for it if I had tried to hide it. "The tipster informed a handful of stations."

The word spread quickly, of course, but 'quickly' usually meant 'the other guys got all the good stuff already'. The news industry was funny like that, a constant balancing act between bragging about your every success, and jealously hiding every secret.

"Pity, I'd have loved to guess who it was," I could picture her foxlike grin.

"I've already made a habit of not learning who sources are until after we've hung up," I retorted. This had become something of a game between us. Thirty years of experience versus one of the most capable thinkers I've ever heard of.

"Aww," she let a pouty whine into her voice. "You're going to make me cry."

"Crocodile tears for your crocodile grin?" I smiled as I heard a chuckle out of her. "We do, of course, have to air the story. The implication in us doing so without having bothered showing up to gather information from the source of course meant a certain trust and expectation of an inside story from her."

"No, not a problem," she agreed, as we both knew she would. She danced this dance as well as the veterans. "You've gotta do your job. A tip, though... send your investigators after Winslow."

I smiled broadly. This is the part of our game where things paid off. The jokes were a pleasant diversion, but ultimately we were both here to handle business. "Crapsack school, prime recruiting zone for the Merchants and ABB?"

"Yeah, that's the one," she agreed readily. "Names of interest: Emma Barnes, Sophia Hess, Gladys Knott. Take a real, hard look at Hess. She's got some powerful associates that covered up the near homicide of a fifteen year old girl."

Oh. This was going to be good. "She's a Ward, isn't she?" It didn't take a lot to extrapolate. The ability to make a police investigation vanish meant either Government or E88 corruption. The latter would be something Pantheon would reveal personally instead of through proxy. Clearly a female name. Hess... German? Vista? Nah, there are reports of an association that might be friendship between Vista and Aceso, Minerva wouldn't give me her name. "Shadow Stalker?"
"Got it in one," she confirmed.

"This is going to tie into the 'other' information you've been holding back on the PRT, isn't it?"

"Are you sure you're not a thinker?" she asked. I smiled. Not an answer, but not a denial. Part of our game. An outsider might call it seduction, and in many ways it was. The teasing and positioning. Myself playing the 'male' role and seeking out something I clearly want but cannot simply come out and demand. Her playing the 'female' role, withholding something she clearly wishes to offer me, but waiting to gauge that I'm suitably worthy and appreciative of her gifts. Making me earn it.

"I hope not," I chuckled. "Hate to think it was anything other than my brains, good looks, winning personality and hard work that contributed to my success in life. If this is as valuable as you're implying, it could make the careers of whomever I assign."

"Then you'd better think carefully on who you give this one to."

"It's been a delight as always, Minerva," I replied with absolute honesty, before hanging up. We didn't bother with 'goodbyes', we never did, and I was already dialing the next number.

"Hayes," I said the moment the phone picked up. "It's Vickery. Yup. I have some names for you. Rush job, tonight if possible. I'll pay you triple if you get it done by seven."

....

"Commissioner Micheals speaking," the older man's voice came through clearly.

"Yes, this is Stan Vickery," I answered. "Sorry for such a late call, but I need to ask an important favor." I already knew I had it in the bag, though I was loathe to do this without knowing for certain the value I'd get for it.

"Go on," he replied, not hiding his suspicion. Pity, that. It was so much easier for everyone involved when there was trust in these mutually beneficial arrangements.

"We're looking into details relating to a cold case from Winslow," I informed him. That wouldn't cause anyone to blink an eye. If anything, police loved giving away info on cold cases. "It relates to minors, both victim and almost certainly the perps." That was the 'favor' part.

"I'm afraid I'd need to know more details, first," he replied, still cautious.
"Closed for lack of evidence. Evidence that my team recently came into possession of. And I believe there was political corruption from well above your department's influence that would have made it impossible for your men to solve," I stated.

That would probably be enough to convince him to cooperate. Offering a solved case and someone else was to blame for the failure is about as sweet a deal as anyone could hope for, but I had one more incentive. "The victim was a Miss Taylor Hebert, AKA: Khepri."

....

"Winslow is a hotbed of gang activity, increasing the difficulties of any investigation," the officer informed Erin, my interviewer for this part of the investigation. "It's an unfortunate reality that being seen speaking to police could invite violence against them. This understandably makes witnesses unwilling to come forward."

"What would you normally do in a situation such as that?" Erin asked. Miss Vaught was one of my preferred interviewers for relaxed situations, where everyone wants to cooperate fully and there's no need for maneuvering. She was too 'nice' to handle the more cutthroat aspects of field investigation or hard journalism, but she might one day make for an excellent talkshow host for minor celebrities and the like. Which was fine, I'd treat her as well as I could and wish her luck in her future career when she made that step away from human interest stories to morning shows.

"Typically, we might make calls to parents to see if they could convince their children to provide statements privately," he answered. "However, the principal of the school refused to give names of students that had lockers near the scene of the attack. We were unable to conduct a full investigation due to this and other interference. For example, the teachers neglected to informed us that this was the latest and most egregious example of a pattern of bullying that had extended for over a year even at that point."

"I see," Erin nodded, accepting his claim without hesitation.

As I said, too nice. A real reporter would have torn him to shreds on sheer failure to do the job right. On another day, for another case, I might have been in that interview box, making a suitably meaty story of this and costing a cop or two his badge.

No doubt, others would come along later and teach the police proper chagrin for their incompetence shown here. However, the police could always be counted upon to screw something up eventually. A low hanging fruit that was easy to pluck, lacking in any real value.

....
"It's okay, Mrs. Knotts," I offered her my best comforting smile, and I had very good smiles. "We promise your complete confidentiality. No one will be able to identify you. We just want to know how such a complete abuse of power could occur, and to see to it that those who covered up this crime are exposed. We already know who Sophia Hess is, how she tormented Taylor. We already know that Blackwell was willing to interfere with a police investigation to protect her. We know she threatened your jobs." Actually, we really knew less than half of that. I was giving her outs, plausible excuses for her failures.

She looked at me, then away. The woman probably wasn't used to talking to attractive men in general, especially ones as understanding as I was being. Still, it wasn't quite enough to convince her on its own. Time to play to her guilt. "We're trying to help Taylor," I insisted. "The system already let her down once. Now's your chance to make things right for her. Surely it's time for her to have justice and closure?"

....

Speaking with parents of a victim is always a crapshoot. So many possible things could go wrong, so many personalities just didn't belong on television. The usual costs of all interviews, with only those rare exceptions that make all the others worth the effort.

Daniel Hebert was one of those exceptions. It helped that I asked Minerva to get him on board ahead of time. Whether she handled it herself, or had his daughter do so, I didn't ask.

He described with a clear confidence the combination of negligences that allowed his daughter's abuse to continue as long as it had. The school's offer to pay for Taylor's medical expenses was a mistake. Granted, the Heberts accepting the offer was a greater mistake, but I glossed that over easily enough. What the public would see is that the school was admitting a failure on their part. It wasn't that valuable alone, but coupled with the rest of the material I had, it looked like bribery.

Then I moved on to the more personal questions. He wasn't as businesslike during that portion of the interview. He came across as a supportive and caring father who was quite proud of Taylor's accomplishments, but not afraid to admit that he was out of his depth dealing with her power and fame. The audience would love every minute of it.

....

Speaking with the parents of an attacker, on the other hand, is incredibly predictable: you don't. They almost never cooperate, and it's better that way. Someone willing to admit to their crimes in a candid and apologetic manner is what I assign Erin to handle. A swift and clean resolution better left to feel good talkshows. It kills a news story. There's no drama, there's no excitement, there's no hooks or
speculation to allow you to take fifteen minutes of facts and use it to fill a week of air time.

Fortunately, that didn't happen here. Barnes was filmed threatening to file a lawsuit if we so much as looked at his daughter. An empty threat, but a great clip. We had no interest in harassing a teenage girl. Whatever she might be guilty of, it would just make us look bad. Putting her father in the public eye was more than enough. A face to go with the name, a pressure on her and her family that might yield something more later. Or it might not, but we were hardly suffering for a lack of sound bites.

Hess was more interesting. Screaming and profanity and a flying beer bottle that managed to break the news van's window. I've seen better on air ranting breakdowns over the years, but the cameraman handled himself admirably and it was all clear enough for all the viewers to see. I made a note for my secretary to get his name for me, and give him a small bonus. Most of them didn't get paid nearly enough, and he (or she, for that matter) was one of the ones with talent.

A bit of inquiry revealed Mrs. Hess had a long, long history of less than successful relationships with men. None of her three children had the same father. No less than five of her former live in boyfriends were serving time in prison for crimes ranging from robbery to assault to drug trafficking. A real piece of work that left plenty of possible pop psych bullshit excuses for why the girl turned out psychotic.

I didn't really care. That was yet another hook for smaller fish to nibble upon. At most, I'd use the obviously unstable home life as further evidence of the PRT's failures.

Political corruption and coverups of criminal abuse by Protectorate members? That was, as I had told Minerva some days prior, the kind of thing that could make careers. And it was the only thing I cared about. This story was going to be huge and it was going to be my team that broke it to the nation. That was no exaggeration. With the proper work, this story could easily go nation wide.

I noticed a message in my private email that I didn't recognize. It slipped past the spam filters and identified itself as an 'anonymous whistle blower'. I started the video. And then I started laughing.

=============  

A/N- Rereading this chapter, I feel like Vickery is one of the characters that deserves his own spinoff series.
So, Khepri's identity was compromised, I thought to myself. It wasn't a major concern, really. At worst, it gives her an opportunity to play the 'home grown hero' angle. Nothing they didn't already have via the Dallon and Pelham girls. Yet another wouldn't be of much use to them. If we were lucky, it might give us an extortion angle, or something to spin into an attack on her character. *I'll have someone look into that.*

I pressed a couple buttons on the intercom. "Yes, Director?" the man spoke.

"Jones," I instructed. "I need you to dig up everything you can on Taylor Hebert." I observed the photographs they had of her at Arcadia. She wasn't a particularly noteworthy girl. Her height, if it were on someone who knew how to leverage it, could give her a great deal of presence. Her relationship with Miss Dallon would, of course, be used as a tool by their resident thinker for considerable effect on the populace level... but that was a transient kind of popularity. And a vulnerable one. I doubted they'd rely upon it, and there was nothing for me to fear if they did.

I could hear him typing through the com. "Understood, ma-" he froze. "Pardon me, Director," he said. "It appears we already ran an investigation on her, a few months ago."

"What for?" I asked.

"It's... related to the Shadow Stalker incident," he answered. "Seems Taylor Hebert was the girl that Shadow Stalker systematically bullied and abused for close to two years before Hijack revealed her crimes."

I fought to keep from gasping as my gut clenched, sending hot pain through my side from old injuries. "I want everything you can find out about Taylor Hebert."

*This is a disaster.*

....

I offered a somewhat forced, but amiable smile for the interviewer. One of our more sympathetic news stations, of course. I was tired, and had been giving interviews and press conferences almost daily for the last two weeks.

"Yes, it is unfortunate what happened to Miss Hebert," I agreed with the host. An older and portly man who we used when we wanted to present a friendlier and more harmless image forward. It wasn't without some distaste that I knew we used him so that my own less than photogenic
appearance wouldn't seen so bad in comparison.

"We entrusted the school to monitor Miss Hess and ensure she was upholding her duties as a Ward," I explained. "And, quite frankly, as a human being. Clearly, our faith was misplaced." I let the anger and frustration of the last few days bleed into the last sentence.

"What of Sophia's personal life?" the man asked. "There are allegations she may have been abused by her guardians."

I tried to soften my tone, as much as possible. "The Wards exist to provide a safe and sympathetic environment for adolescent parahumans coming to terms with their powers, and the responsibilities of both that and their approaching adulthood," I answered. "We cannot, nor should we, spy into the homes of children. We offer support, and would not hesitate to protect our Wards- or any other child, for that matter- from abuse. If Sophia was being abused, and I remind you that is merely speculation at this point, then she chose not to tell us or her therapist."

....

"Pantheon's allegations that the PRT conspired to kill villains during the conflict with the Slaughterhouse Nine are entirely untrue," I stated for the press conference. "The PRT knows the necessity of being united against Class S threats."

"What of their claims that you refused to assist the Undersiders and other groups aligned against the Nine?"

"Misconstrued," I stated. "The Protectorate and PRT had a carefully planned operation ready to use against the Nine. A plan that, I remind you, was successful in eliminating Crawler and would no doubt have worked against all other members. We took every reasonable measure to dissuade the villains from taking any action against the Nine, for fear of disrupting our plan before it could be implemented. They were responsible for their own actions, and their deaths a result of their failure to cooperate with us."

....

Some woman of some morning news show I didn't know the name of, was on the screen. Miss Militia insisted I needed to see this, and I trusted her judgment.

"Our guest today is Doctor Eric Dale. Respected developmental psychologist and professor of parahuman studies at Berkely University."
"Happy to be here, Janet," their guest spoke. *Damn shrinks.* "Although I wish it were under better circumstances."

"Perhaps we should start by playing the recording," she offered.

"The Wards exist to provide a safe and sympathetic environment for adolescent parahumans coming to terms with their powers, and the responsibilities of both that and their approaching adulthood."

A clip from an interview I only half remembered. *Had it only been three days? Nothing there of import.*

"Ma'am," a woman's voice- Miss Militia- spoke. Clearly from a different recording entirely. "We need to discuss Shadow Stalker. I don't believe she is fit for the Wards."

"I saw your report," my voice was stern and unfriendly. In the comfort of my chair, I squirmed, feeling a wave of dread. "It doesn't matter. We need bodies on the street to deter threats like Kaiser and Lung."

"We've had her for barely over a month," Miss Militia insisted. "And already [VISTA] is refusing to go on patrols with her." Vista’s name was clearly edited in over an erasure of the actual name spoken.

"Kindly explain to [VISTA] what 'insubordination is," I instructed Miss Militia. "[SHADOW STALKER] may be abrasive, but that's no excuse to disobey orders. Unless [VISTA] wants to file a formal complaint with justifiable concerns, she can cope."
The clip ended, and the news anchor spoke. "We apologize for the editing. Rest assured, there was no alteration to the content, other than to protect the civilian identities of the parahumans involved. The complete recording, as well as other physical evidence, is in police custody."

*Where did they get this recording?* I gaped at the screen.

"It might just be me," she said with that practiced false neutrality hammered into anchors. "But that doesn't sound like a 'safe and sympathetic environment' to me."

"I agree fully, Janet," the damn shrink agreed all too happily. "What I find most troubling is the implications of Wards being mentioned as a possible deterrent against gangs of powerful parahumans. The use of children to supplement police action has been a constant and unfortunate pattern..."

I suppressed an urge to scream at the screen. *Why couldn't people understand that it's a fucking war out there?!*

....

Vista, Flechette and Chariot barged into my office. "We quit," Vista opened, tossing her costume on my desk.

"What do you mean you quit?" I growled.

"Just what it sounds like," Flechette responded. "I don't really like being treated like... oh, what was that one headline?"

"Kiddie Cannon Fodder?" Chariot suggestion.

"Yeah," Flechette agreed dryly. "That."

I looked at the three of them. Vista didn't seem to want to meet my gaze. She still did, just like the other two children, but she wasn't as confident. A *link that could be broken. I'd start with weakening it. Was this your idea, mister Medina?*"
"Nope," he said with a confident smile. "Oh, and I know what you're about to say. That I'm a spy from Coil? It's true. I confessed to the others a couple days ago. I admit I was a little surprised that they weren't at all surprised."

"Vista..." I started.

"Stuff it, pig," she finally spoke. Where Flechette was a kind of hot anger, and Chariot was a smug rebelliousness. Vista's the one that shook me. That was the voice of barely contained rage and disgust. I'd heard it often enough to know.

I saw the telltale bending of light, like heat waves off a road in the summer, as she activated her power. My chair disintegrated beneath me, shattered by tidal pressure. She's been training in secret, I realized before my thoughts were interrupted by my scream of pain. My bulk and my old injuries did not take well to slamming to the ground.

I gasped for air, keeping my face from betraying too much of my thoughts.

"Remind me to never get on your bad side," Chariot laughed. "That looked uncomfortable."

Vista didn't look away from me. "She can cope."

Then they vanished from the room.

....

The video phone alerted me that I had a call. I read the ID. Costa-Brown. I frowned at my no doubt unpleasant appearance. The last two weeks had certainly not been kind to me. I had occasionally delayed my dialysis, and I hadn't gotten more than five hours of sleep per night since the day after Khepri was exposed. The constant stress was taking a harsh toll. No part of me doubted that Pantheon was responsible for this. There was nothing I could do to prove it.

I pressed the button nonetheless. "Chief Director," I acknowledged.

"Director Piggot," she responded. Cold and clearly displeased. "I trust you know the reason for this call."

"I do," I agreed. "It's unfortunate, but I promise it'll blow over."

She frowned. "No, I don't think it will, Director. You clearly haven't heard the latest news."
I paled. Somehow even more than my usual sickly color of late. "What?" I managed to ask, my hands trembling visibly. My stomach sank. I had thought, had deluded myself into believing, that this was everything they had. That Pantheon had fired their salvos, and all I had to do was keep going and stay strong until the storm blew over. Looking into Costa-Brown's hard face, I knew better.

This is how Pantheon operates. Their pattern, what every thinker we pointed in their direction said to expect from them.

First they gather their forces on one target. Then they scout and learn the terrain, whether literal or metaphorical, it didn't matter. Then they establish complete control of the field. Without their opponents even knowing they're there, when at all possible. And finally, they struck so swiftly and decisively that by the time anyone else even knew what was happening, they'd already won. Securing the objective and making sure there was nothing left standing that could try to stop them.

In a way, it as an elegantly simple system. In practice, it was anything but. The biggest flaw with such a method is that you had to do it perfectly, every time. A single flaw, a single mistake, one moment of vulnerability, and it all comes apart at the seams. Ruling by strength and will, ruling as if a god from on high, none of this was a new idea. Sometimes done well, sometimes poorly. Sometimes by idealists, and sometimes by despots. The one thing all comers shared was that they always failed, in the end. A lesson learned by the Romans and the Mongols and plenty of others.

That's why Democracy and Law was so important. To create a real, lasting, peace. A peace that would survive the death of the leaders and the dreamers that birthed it in the first place. Pantheon would fall, one way or another, since it was built on the desires of a few people of power. The PRT would endure, because it was built on the desires of the people of the United States of America.

Or, at least, that's what I told myself. I already knew my career was over. Whatever it the Chief Director had to say, it would be worse than everything that came before.

A/N- Sucks to be Piggot.

Vista is badass. Vista will always be a badass.

And Pantheon really is not subtle, like, at all.
"Tell us," the woman asked my dad, "What do you think about your daughter's girlfriend?"

I didn't blink at the assumption, nor did my father. Dad had asked me a while ago if the rumors of Amelia and I being 'together' was true or not. I told him 'no', then. After the pictures of us sitting together at school came out, my answer became 'it's hard to explain'. He laughed and claimed that he understood. All attempts to convince him that he did not in fact understand had proven fruitless.

Dad smiled. "You mean aside from her reputation as Panacea?"

Panacea might not have been legitimately famous, but she was well known and liked within Brockton Bay at the very least, a local celebrity to be sure. When Pantheon attracted national attention, Amelia's years of being a healer was definitely a strong positive for us. Enough to smooth over my rep, and Lisa's. Wouldn't have been enough to sell the public on Bonesaw, however.

"What I can say is that I very much approve of the effect Amelia's had on her. After Annette, Taylor's mother, died... Taylor became withdrawn. Something that became much worse after her best friend betrayed her and targeted her for bullying."

I fought back the tears. *ComfortSupport.* It hurt to watch this. My secrets, my pain, being lain bare for the world to see. *I agreed to this,* I reminded myself.

"She still believed in doing the right thing," dad continued. "I don't think that ever changed. But she was so unhappy, and, well, my wife was always the one who was good with kids. What am I suppose to know about teenaged girls?"

The woman smiled and nodded. "I have a boy, myself," she agreed. "Thank god for my husband."

He smiled back. "Amelia has been amazing for Taylor," he added. "I've seen such a wonderful change lately. She's less sullen, more expressive of her emotions. For all her power healing bodies, her healing Taylor's heart is the real miracle."

I cringed. *Really, dad? Did you really have to say that? I can never be seen in public again.*
I felt a hand on my shoulder. *AmusementAffection*. "I think it's sweet," Amelia said.

"You would," I laughed. "You're the one with magical heart healing powers. Next thing you're going to do is make Bella fire magical happiness beams."

"They've done a lot of good for this city as well," the interviewer prompted. "The ferry project was reported as your idea?"

"Yes," he agreed. Others wouldn't really spot it, but this made him more animate. Talking about feelings was never really a 'strength' for us Heberts. Talking about projects, on the other hand, that we could do forever. "It's a plan I've been developing for quite some time now. It's exciting to see it put into place and helping the city's recovery."

He probably wanted to rant, again, on how the Mayor was a moron for holding it back all these years. I had my doubts, personally. The ferry wasn't a bad idea by any stretch of the imagination. It would make commuting easier, and it certainly paid for itself with some room to spare, which made it better than the vast majority of city projects everywhere, but it wouldn't have magicked up jobs that didn't exist, and the Brockton Bay of before did not have those jobs. Not that I saw a reason to explain that to him.

"If I recall correctly, that would also be where you met Sarah Pelham?"

That question caught dad off guard. He paused for a second.

"Oh, yes," he said, sliding back to the conversation. He was clearly annoyed at not being able to talk about his project more. "Mrs. Pelham is an amazing woman. She's been a great help for me, offering a lot of advice on how to deal with the 'superpowered teenager' thing, and capes in general. It takes a lot of character to help someone like that."

"It does," the interviewer agreed. "Especially when she's dealing with so much tragedy in her own life."

....

The camera view panned across the area, showing dozens of heroes. Including Legend, Miss Militia, many of the Undersiders. "You want to look down on me!? I tried to save this city, I got closer to killing the fucking Endbringer than Scion! That girl is the person you should be mocking, spitting
on! A wannabe hero without the balls to do anything heroic! Planning from the start to betray teammates for fame!"

"Lisa," I said with slowly dawning horror. "Please tell me you didn't do this, and then convince me it's true."

Lisa looked at me, looked at the rest of us. She walked forward and grabbed Amelia's hand.

"I had nothing to do with giving this video to the press," she said. "I didn't even know this video existed. This hurts us. It makes people wonder if we did this, and it means the next Endbringer battle will be that much worse. A battle we need to go extraordinarily well. Nothing we could possibly gain from this is worth the costs. When I find out which asshole did it, I'm recommending we give the fucktard to Riley as a stress toy. Now if you'll excuse me, I need to call Coil and Dinah and write up a speech about how we kept silent about Armsmaster for a fucking reason."

She let go of Amelia and walked quickly toward her office. Amelia nodded to the rest of us.

....

The clip was already world famous, and it had gone public only a couple hours ago. Armsmaster's deranged rant made for a wonderful series of sound bites, I had to admit. And now that I could view it from a more distant position, it really was deranged. Outing me as a hero. Hints of a huge coverup within the Protectorate. Violating the Endbringer truce. It did me a lot of favors. 'Undercover operative' sounds a whole lot better than 'turncoat former villain'. It didn't help with Lisa as much, but people were understandably more concerned with me than with her.

The already badly humiliated Piggot didn't even have a chance to deny knowledge of it. Not that she would have been believed after Sophia. Her career was over. Criminal charges ranging from 'conspiracy after the fact' to 'endangerment of a minor' were being speculated upon by various news organizations. All of that was expected.

What came next was the surprise.

Legend stood at a podium next to Costa-Brown. "Yes, it is true that I played a role in enabling Director Piggot's actions," he admitted openly before a press conference. "I, like others, chose not tell the public of Armsmaster's crimes. Choosing to protect the reputation of the Protectorate and PRT. I feared that revealing one of the more respected heroes would commit such an unforgivable crime might endanger future Endbringer battles."

"I still believe that," he said. "The Endbringer Truce is a top priority, and one we should all fight to
protect. Armsmaster violated it, and he was arrested and placed under the watchful eye of both the Protectorate and Dragon, until we had examined all the evidence and conducted a fair trial. The Slaughterhouse Nine killed him before that became a possibility."

I found myself nodding. He was a great speaker, and he used it to full effect here.

"However, there is something I must apologize for," he stated. "Not for Armsmaster's crimes, and the decision to keep it in house. But for my complicity in the deaths of members of the Undersiders and Travelers."

"Lisa!" I shouted. "Channel six. Right now!"

"I was aware of Director Piggot's plans," he stated. "Her claim of giving the villains a fair warning is untrue. She, too, violated the truce. They offered to help, and asked us for help. They made every effort, and the Director rebuffed them. I advocated in favor of accepting their aid, but when she refused, I did nothing. I could have argued harder. I could have taken my concerns over her head to Chief Director Costa-Brown. I failed to do either of those things. Instead, I followed orders."

He gave everyone a second to take that in, before continuing. "A hollow excuse, one I expect no one to accept. As such, I am resigning from my position in the Protectorate. I shall continue volunteering for all Endbringer battles, as I have always done. I failed to take responsibility, and it cost lives. I could not live with myself if I did it again. But I do not deserve to call myself a leader after everything I failed to do."

He handed the microphone to Costa-Brown.

"I regretfully accept your resignation," she stated clearly. "Your service over these years has been exemplary, and the world owes you a debt of gratitude. I am sorry it has to end like this."

"Thank you, ma'am," Legend said contritely. "So am I."

"We will, of course, look for your replacement immediately," she stated. "In light of this and other information, I must also announce the suspension of Director Emily Piggot, pending a full investigation. I emphatically request that everyone withhold their judgment until the completion of the investigation. Director Piggot's career had been more than satisfactory until very recently. This suggests the possibility of master involvement."
"Or a long line of corruption and incompetence that's been well concealed, I thought at the television."

"In the interim, control of the Brockton Bay PRT will be transferred to Commander Thomas Calvert," she continued. "Who, unfortunately, could not be here on such short notice. Commander Calvert was a decorated PRT field agent and has served well as a field commander for the PRT and as an independent consultant on parahuman affairs. I have every confidence in his ability to handle this delicate situation."

I was astonished. *We'd won.* The local Protectorate's reputation was so badly damaged that I doubted they could oppose us if we wanted them to. Piggot was on her way to a cell. We controlled what amounted to a 'puppet government' over every remotely important aspect of Brockton Bay. *We owned a fucking city.* Why couldn't I shake this feeling of dread?

==============

A/N- So how's that for a way to conquer a city?

Also. This site REALLY doesn't cooperate well with indenting and double spacing.
At least I didn't have to go to school in a different vehicle, now. I thought. Of course, that came with a price.

We drove through the hoard paparazzi type reporters. Less literally than I'd have liked, if we were being honest. AnnoyanceExasperation.

The media storm would die, eventually. They would decide they had enough photos of Amelia and I together. Everything would go back to whatever passed for 'normal' in our lives. Or, at least, that's what I kept telling myself.

Amelia and I got out of the small limo that we now went to school in. With exception to Theo, all our identities were in the open. Naturally, Emma never came back. As Zach so eloquently put it, she'd have been lynched. I wasn't sure how I felt about that, honestly. A bit of satisfaction, I suppose. She turned a school against me, and I endured it for years. Same thing happens to her and she runs immediately.

Amelia got out first, and then offered me her hand. "Now look who's showing off," I joked as I accepted it and got out of the car.

"Hey," she joked back. "Gotta send the proper 'back off, she's mine' message to all the other girls."

Our summer school would be over soon. I hadn't quite decided if I'd be going back in the month and a half or so when the new year started. Zach, Theo and Clarice all would, of course. Clarice had friends now, even if Missy was the only one who was a legitimate friend, and enough experience that we didn't need to watch her the whole time. I still would, of course, but my range meant I didn't need to be here to do it. Thus far, Clarice's scarf had gone unclaimed by the few people dumb enough to try.

Amelia's locker was in a different section, since she was a senior and I was still a sophomore. Even if most of the classes I took were meant for juniors and seniors. We split at the doors and wouldn't see each other again today until lunch. But we always had our link.

....

Classes were peaceful enough, as always. These teachers had dealt with parahumans for years, usually, and they seemed to like the fact that I was one of the quiet ones that wanted to be left alone. Lunch was, as always, the pain in the ass.
"Taylor!" a girl shouted. I sighed, being rude would only hurt us in the long run. I turned. One of Amelia's 'friends' through Victoria, flanked by a couple others. They were nice enough people, I suppose. Reminded me uncomfortably of Emma and her friends, and that colored my interactions with them. If I wasn't famous, would they even look my way? Doubtful. Certainly they wouldn't have come to my aid if I were still being bullied.

"We just heard," she said. "Did you really stab Leviathan in the ass?"

Who the fuck did they interview this time? "Uh... I don't think Endbringers have asses," I said. It was the first thing I could think of. "Just sort of an area where their legs meet their backs."

She laughed an exaggeratedly happy laugh. "You did!" she exclaimed. "You totally did!"

Another girl cut in. "Ohmygod! Weren't you scared? You don't even have powers that could help you against him."

"Terrified," I answered. It was the truth. "And pissed. Mostly pissed." Well, that cements my reputation for life, I thought to myself. No matter what the future holds, I will always be known as the girl who stabbed Leviathan in the ass.

The girls escorted me to lunch, asking all kinds of other questions. "Were you really undercover as a villain?"

"Yes," I stated. I opted to leave out the part where I changed my mind about that.

"Did you really decapitate Mannequin?"

"Yes, but it really didn't matter since he kept his brain in his chest cavity."

"How does that even work?"

"He rebuilt himself as a cyborg."

"No, that makes a weird kinda sense," she responded. "How did he remove his own brain? Shouldn't that have killed him?"

I paused. "That's a really good question," I admitted. For that matter, Riley did the same thing with her whole head. "I never thought to ask."
Amelia pushed her way through. "There you are," she said, smiling. "Were you avoiding me?"

"Not at all," I replied, all the while trying my best to convey 'help me get out of here' via my expression and our bond.

"Sorry, Ana," she smiled at the leader of this particular gaggle. "Gotta talk business, y'know."

*Thank you so much,* I thought at Amelia.

"That's code for 'makeout session', isn't it?" Ana laughed. A couple of the other girls giggled.

"We can do both," I responded. *HappyDesire.* Amelia grabbed my hand and started walking away.

"Try not to do anything that gets you suspended!" Ana shouted at us. *EmbarrassedPleased.* "Not when there's only three days left!"

"Thank you," I whispered. "Thank you so much."

"I was telling the truth," Amelia stated. "Dragon's about to make her move."

"So soon?" I asked. "I thought they were waiting for the weekend."

"Last minute consultation with Dinah," Amelia informed me.

I nodded. That was explanation enough for me.

"So," she smiled, putting her head against my shoulder. "About that makeout session?" I blushed.

....

Amelia had made a new room in the Yggdrasil for us to use as a sort of meeting hall so we could watch this news together. And by 'we', I mean 'almost all of Pantheon and its peripherals'.

Vista and the other Wards we'd recently acquired clustered together, along with Clarice, Theo and Zach. Except Flechette, who was with Parian in their own corner.
Yum Kaax, and I was finally getting used to thinking of him as that instead of Blasto, was with Rapture. Amelia and I together. Everyone else scattered about.

"The scene in Montreal this afternoon as a white fog descended upon the city," the unseen reporter spoke. They showed a video clip of what looked like cropdusting. Several small planes, obviously tinker designed, flew across the city and surrounding areas. Most of us in Pantheon already knew that similar dustings would be taking place across many cities southeastern Canada.

The scene, and narration, switched. "The Guild raided the mansion of Niko Vasil, also known as Heartbreaker, at 2:58 eastern time." The home in question was badly damaged, alongside everything around it.

We were treated to watching Heartbreaker, wearing nothing more than boxer shorts, being escorted by a tall man in full body armor. Defiant, I knew. His armor had changed to be a deep bronze color, instead of the silver of before. He had what was no doubt a flight system, and his halberd had been replaced by a pair of spearlike weapons that crossed his back.

They had Dragon, Narwhal and Legend there to be interviewed at the mansion. Whomever was in charge opted to blur Narwhal's figure in some areas, apparently deciding her forcefields weren't a valid enough outfit for their news station.

"Up until now, the Guild has been hesitant to target Heartbreaker," the reporter stated. "Why the sudden change of policy?"

"Heartbreaker has always been a priority target," Narwal stated. "We were only held back by what was, functionally, a mass hostage situation. That has recently changed. Dragon, would you mind explaining the details?"

I remembered that. Once during my childhood, before they realized how powerful he was, he was arrested. A massacre followed. Over fifty highly public terror attacks across dozens of Canadian cities, all from people who'd been mentally influenced by Heartbreaker over the years. The message was sent, quite clearly. Going after him meant costing hundreds of people their lives. No one liked letting him live, but he was good at not pressing his luck enough to make himself worth what would undoubtedly be a staggering price.

"We've recently acquired a new technology, which I personally thank the hero groups of Pantheon and Haven for developing and perfecting," Dragon informed the camera. "The exact inner workings must, of course, be kept classified for fear of others developing a counter for it. The important detail is that it removes the influence of Master powers, and grants temporary immunity to them."
"That is remarkable," the reporter commented. "Will this work on victims of the Simurgh?"

"We hope that one day it might," Dragon stated. "We are still refining and improving the technology."

"A bit of a lie, that," Rapture stated. She was right, of course. We couldn't apply the drug to the Simurgh's power.

"Unless Dragon knows something we don't," Missy suggested hopefully.

"We should be expecting a public ass-kissing from the Prime Minister of Canada shortly," Lisa informed us.

"Halo's going to love every second of it," Rapture chuckled. "Thanks for having them use group names instead of individuals. I'm not really that... comfortable... with fame."

"Me, neither," I agreed. "I just wasn't given much of a choice in the matter."

"As I said during my resignation," Legend was busy talking to the reporter now. "I have no intentions of just sitting on my hands. I don't belong in the Protectorate, and I don't deserve to be a leader. That doesn't mean I can shirk my duties. If anything, I must work that much harder to atone for past failures. Working for heroes such as Narwhal and Dragon, stopping unrepentant monsters like Heartbreaker, and preparing for the next Endbringer battle. That is how I'll prove that my apology is more than just words."

My attention to the television was interrupted by the approach of a parahuman. Specifically, I felt my bugs dying around her. *Cold based powers.*

"We've got company," I told them. "Doesn't seem hostile. Doing the swarm voice."

"I'll take point," Zach volunteered, moving toward the entrance, going through the first couple of our security layers. If anyone broke through, they'd have to fight him, and a complex layer of traps designed by our resident biomanipulators. Coupled with everyone else in this room right now? Whomever it was had better hope for her sake that she was friendly.

Lisa switched the camera over. The girl was solid blue and crystalline. Fog came off of her like she was made of dry ice. She wore those extra large sunglasses, and they too had frosted over. "Case 53? Breaker state?" I asked.
"Not sure," she answered. "Both, neither."

Meanwhile, I formed a bug decoy near the unknown woman. "Normally, our guests call first," I informed her. It was probably less friendly sounding than I meant it.

"Sorry," she said. "You probably wouldn't accept my calls anyway."

I froze. I'd gotten fairly good at distinguishing voices through the swarm. I was certain I recognized this one.

I stood and moved, walking briskly toward the door. Fighting down my anger. ConcernAlertDanger?

Fuck, that was stupid, I thought. Don't repress, accept. "Sorry," I said. "I'm going up to talk to her." I left our meeting room and ran up the stairs.

Zach looked at me, puzzled, as I stormed toward him at the entrance. "I've got it," I told him. I didn't bother hiding the outrage in my voice.

She was shorter than me, with a much fuller figure. The ice had started to 'melt' off her, revealing red hair that faded to frosted blue around halfway down. I stood there, staring at her, unable to come up with the proper words to express my incredulity. "Emma?"

"Fuck!" Zach exclaimed. He did not sound happy.

She managed to smile slightly, causing flakes of snow to fall away from her face as she took off her glasses. Her eyes had changed. They lacked pupils or other distinguishing features. Solid sheets of ice blue. They even glowed faintly of blue light.

ComfortAid?Worry. My hands were clenched into fists so tightly that my arms were shaking. Don't resist. Accept and push through.

"Hey, Taylor," she said. "It's been a wh-"

Also. Say hello to Emma. Her return didn't invoke NEARLY as much fanrage as I had anticipated.
I walked toward Pantheon's base. My skin shifted, radiating cold as my eyes adjusted. Dancing patterns, reaching out from a layer of reality that my senses could not follow. Her signal, Taylor's power. It was omnipresent. Awe inspiring, really. Gaea's Yggdrasil carrying the waveform across the entire city. Strong enough to shatter a continent. No, I was wrong. That... it's... at least two or three quantum powers. More. What are they doing in there? I turned off that sense, before I started experiencing the headaches. I was strong, now. They were stronger still.

I was already in full 'frost' mode, at least. It would start melting almost immediately, but I had a couple minutes before the warm summer afternoon got through the water and carbon dioxide that solidified on my skin. The blue tone to my eyes, skin and hair would stay until I changed states again.

A swarm of bugs pulled itself together and spoke. "Normally, our guests call first." It was magnificent. I longed to see it at work through my new eyes.

"Sorry," I replied. "You probably wouldn't accept my calls anyway."

I waited at their door. I didn't mind that, I'd know if they activated the Yggdrasil. It might be nice to be inside before the ice completely came off, though. I wasn't one of the capes who could have a secret identity, really, but I'd like to keep a bit of anonymity right now.

The door opened. Khepri, full costume. It, too, was beautiful. Designed by two biotinkers and assembled on the genetic level. "Emma?" She still recognizes me? I'm glad.

"Hello, Taylor," I said as I took off the glasses that would hide the most obviously unnatural part of me. Let her see what I've become. "It's been a wh-"

Her fist interrupted me. I was off my feet before I knew what happened, and hit the ground hard. The waveform pulsed, and I was buried in living muck. My nose is broken, I thought idly. Maybe even the cheek bone.

I was dropped into an empty, dark, room. Taylor's voice spoke through the walls. "Explain. Everything."

....
"Oh, and Emma?" Minerva said, her voice full of malice and condescending certainty. "You deserved this." Those words rang in my ears as I ran crying from Pantheon.

They were powerful, and smart, and strong. I'd convinced myself that they'd want me, the way Sophia wanted me. That I could be useful to them. I wasn't. Minerva was one of the girls from Winslow. Probably someone I treated like shit. Which was pretty much everyone except a few of the other popular girls. *Fuck, she was right, I do deserve this, for being weak and stupid.*

I fell to the ground. Running in heels, what was I thinking?

"Are you okay?"

*Who?* I looked up. *Clockblocker.* "Uh... umm... yeah." I answered. I didn't really believe it.

"Doesn't seem like you are," he replied. "Here, let me help you up."

He held out a hand, and I accepted. He was nice enough to not freeze me in place. "So, wanna tell me why you ran off like that?"

I looked away. "I did something really bad and they knew about it," I admitted. "Minerva..."

"Is kind of a colossal bitch," Clockblocker responded. "She kinda has a history of making people cry."

*She's not the only one.* "I deserved it," I answered. *Someone as strong as they are think I deserve it. That means I deserve it.*

....

"Why didn't you come to our party?" Aceso asked me over the phone. "I wanted to see you."

My stomach dipped and I fought back the tears. What Minerva said, how Zach abandoned me. I still had trouble breathing if I thought of it. *If I revealed who I am to Aceso, now, she'll never speak to me again.* I didn't have many friends left, certainly no real friends that actually cared about anything more than my looks or popularity. Aceso was stronger and smarter than me on every level. She was stronger than Sophia had ever been. I couldn't let her know I didn't deserve to even speak with her.

"I... I was there," I said. I didn't want to lie to her. I was pretty sure she'd know. "You were so busy
having fun with Vista and all your other friends." *Like Zach.* "I didn't want to bother you."

"I wouldn't have been bothered," she insisted. "I could have introduced you to everyone and you could have met Bella."

"Sorry," I apologized. "Maybe we'll be able to meet some other time. Not for a little while, though. So what were you saying about Cauldron?" *Change of topic, that'll help.*

"They're a great big conspiracy that makes monster capes and manipulates governments and can even sell people powers," the girl said excitedly.

"That's... kinda scary," I admitted.

"I know!" she was way too excited about this. "I wish I could see it in action. How the serum works on people!"

My heart jumped. *This is the chance I needed. I can make myself worthy. I can be strong. I can matter.* "What..." I swallowed. "What if you had someone who was willing to test it for you?"

....

The first day of school. I already had a few friends picked out for my entourage for the day, along with Dennis. He was a nice guy. Bit of a smartass, but he treated me well enough. A lot like Zach, actually.

I froze. Taylor. *Of course she'd be here, in school. Why wouldn't I think she was?*

"Umm, guys?" I said. "Go on ahead, I have to take care of something."

Dennis looked concerned. "Do you want me to-"

"No!" I exclaimed. "Sorry. No. This is something I have to take care of on my own."

He eyed me warily. "If you're certain."

"I am," I said. And I was. I turned and walked back. Taylor noticed me and froze. Not her usual way of ducking back and hiding. The opposite, really. Tall, focused, ready for a fight. I got within a few feet.
Then I recognized her. *The real her.* Spending as much time as I had with Shadow Stalker, I'd gotten used to reading people through masks. Or reading masks through people. *The slender, almost runway-model figure, the rich dark hair, the height. Taylor is Khepri.*

*Taylor was Skitter.*

*I'd been bullying Skitter.*

"The fuck do you want, Emma?" Taylor asked. *The cold voice... yeah, that was the voice of one of the scariest fucking supervillains I'd ever heard of. The one that destroyed Sophia on every level, turned her into a weakling. The one that killed Siberian. The only reason I am still alive right now is because she hadn't bothered to kill me.*

*I'm sorry I was such a bitch, Taylor.* I tried to speak. I failed. I choked. I couldn't look at her, I couldn't speak to her. I turned and ran. *I always fucking run. Because I'm weak.*

....

"What do you want, Emma?" Terry asked. I frowned, I thought he'd be less impolite about it.

"I need a favor, Terry," I said, batting my eyes. I felt cheap and a little dirty. "It's really important."

"After the shit with Sophia?" he said. "Why shouldn't I tell you to go jump in a fire?"

*Oh well, looks like flirting's not going to work. I could try harder, but eww, no.* "Five hundred dollars," I stated, my voice firm and businesslike.

"For what?" his eyes narrowed.

"Need you to drive me somewhere," I said. "About two hours, round trip. Another hour or two there, while you go off and find something else to do until I call you. Hundred to take me, four hundred to bring me back. Deal?"

....

"Very well, Sophia," the woman said, leading me through the sterile halls. "Tell me, why do you want powers?"
"Does it matter?" I asked.

"It does," the woman replied. "We've learned that the second most important factor in how powers manifest themselves, beyond the purity and stability of the formula itself, is the mental state of the recipient when they take it."

*I'll have to remember to tell Clarice about that,* I thought. "I... I f-messed something up," I answered. "A lot of somethings. I need to be able to fix my mistakes."

"I see," she answered. "Now, let's talk about costs."

I nodded. I knew all about the costs.

....

I entered the abandoned warehouse near the docks. I wasn't afraid walking the street at night. Thanks to Pantheon, our city was the safest place with more than three people in the same zipcode. What I'd actually find in the warehouse, that's what terrified me. I was smiling my best model smile.

*Remember, whatever you do, don't stop smiling,* Clarice had instructed me earlier. It was the only chance I had of surviving this.

I noticed the smell, first. Rancid enough to bring water to my eyes. It was too dark for me to see, thankfully. No matter what horror my imagination came up with, the truth was so much worse.

I walked calmly, slowly, deeper into the warehouse. *No sudden movements. Never stop smiling. Don't turn your head toward the sounds of metal scraping concrete. Don't speak, don't scream, don't cry, don't look, don't turn, don't run. For the love of god don't stop smiling.*

The thing moved out into my view. It was... somehow smaller than I'd expected. Only coming up to a little above my knees. Its ten robotic limbs scuttling like an insect as it moved toward me. I didn't look away, however much I desperately wanted to. I didn't turn my eyes from the bits of flesh covering it. The pieces of clothing that dangled from its limbs, as if only there to make certain I couldn't pretend away what kind of flesh it was covered with.

Clarice never said anything about pissing my pants. But even through that humiliation, I did not stop smiling.
"Hello, Kitten," I said in the softest, most soothing voice I could muster. "Mamma's busy and sent me to take care of you."

It tilted its head. I sighed in relief. Its head snapped back forward and it started moving toward me. I almost screamed. Instead I kept smiling. "Hello, Kitten," I said again. Hysteria creeping into my voice. "Mamma's busy and sent me to take care of you."

It stopped, and its head tilted again. I reached for the thing slowly, my hand shaking and my vision blurred with tears. I put my hand on its head. It was sticky with blood, and I could feel things moving in that rancid fluid. I stroked my fingers through the rotted mess, stirring up angry flies. Three hard strokes, just behind what would be its left ear, if it had ears. I knelt to the ground in front of it.

It made a low, metallic and wet, rumbling noise, moving its body as if to lean into my hand. I reached under the thing's neck with my other hand. That hand bumped into a dangling piece of wetness wrapped around something hard and sharp. Bone. I ignored it. I found the spot. A switch. I pushed it. It didn't budge. Why? I felt around in the gunk that was once a person, maybe more than one person.

Something was clogging the switch. I kept petting the thing, even as I tugged on the mass. It was stringy and tough, like the gristly part of a steak.

I will never eat steak again in my life.

I kept smiling.

I yanked, hard, and it popped out. Fluid filled with living things spattered all over my hand. I almost, just almost, stopped smiling. But I forced myself to reach up and push on the switch again. It resisted, but with a sickening crunch, it moved.

The robot spider's eyes slowly closed, and it curled up in a ball. It was asleep now.

I finally stopped smiling. I started to scream, but was interrupted as the contents of my stomach came out. All over the robot, my hands, my arms, my hair, my lap. It didn't matter. It was cleaner than I was, right now. It even made the air smell better.

============

A/N- That adorifying little girl hanging out in the basement? The one that calls Amelia her Big Sister and is just the darlingest little thing? She builds things like that!!!

Seriously, though. Coming back to this chapter however many months later? Is intense. I love it.
"How about I trade you one of Bonesaw's spider-robots?" I asked.

"Sorry," she said. "While Cauldron is often willing to purchase property, I'm afraid-

"It's still alive," I interrupted her.

"Pardon?"

"I've looked into their value," I informed her. "The dead ones are worth millions, if you got one that was destroyed before it self destructed, just so someone can cut them open and guess how they might have worked. This one is still alive and fully functional. Loaded up with whatever Bonesaw puts in them."

"Where did you manage to-"

"Does it matter?" I interrupted again. I had to fake confidence, of course. But I was always good at faking it, and after my last few days there wasn't much left that could scare me.

"No," the woman agreed. "I suppose not."

....

"So I have to choose between price, power level, reliability, and side effects," I summarized.

"Succinctly put," the Doctor agreed.

"Don't care about the side effects," I stated. "If it turns me into a freak of nature, as long as I can still move around and talk, I'm good."

She looked at me and raised an eyebrow.

"When I said I fucked up, I meant it," I replied. "Power level first, reliability second. The rest doesn't matter."
"There is a certain risk that you'll lose your memories, if the formula goes wrong in your brain."

I paused. That was frightening. This was worth it. "Can you make sure I get found by a specific person? She'll know what to do."

The woman simply nodded.

....

"Y'know," I said to Clarice. "Taylor's going to be exposed as Khepri if she and Amelia don't hide their relationship better. They're acting like lovestruck children." Dammit, Taylor, why couldn't you be that strong years ago? This wouldn't have happened in the first place.

"I know," she said cheerfully as always. "Isn't it romantic?"

"But... her secret identity?"

"They don't care about that," the girl laughed. "We're starting to worry that it's taking too long."

"Taking too long?"

"Yeah, for them to be discovered," she answered. "Why hasn't anyone spoken up, yet?"

"Maybe... maybe they think they're not suppose to?" I suggested. It was true. Most of the people in the school were one of two groups. The wealthier families, like mine, who could afford to move out either before or during the nightmare months. And the poorer students who had stayed through that hell. The poorer ones won the culture war.

Kids who had left were learning to shut their mouths or risk being attacked. Khepri had saved at least two students' lives, already. Clarice saved one. And Amelia had to fix a broken arm. Every student saved: one of the rich kids who didn't realize that they couldn't get away with running their mouths anymore.

The rest of us? We learned not to cause trouble. That you minded your own business, and you brought weapons to school.

"I..." I hesitated. *If this happens, I can never go back to that school.* Khepri was a hero to those kids. Not some famous cape like the Protectorate. But a straight up, personal, hero. One of the people who brought food to their families. One of the ones that saved them or someone they loved from being raped or murdered or dragged off to god only knows what fate. Someone they owed personally. *When they learn who she is, and what I did to her...*

Then again, that would probably happen anyway, sooner or later. *At least this way it's my decision.* "I'll do it."

"Really? That's awesome!" she said happily.

"Anything you need me for," I replied, smiling for the first time since the spider. *She is grateful. To me. I am important.* "Speaking of, I learned a few things about Cauldron from that first meeting."

....

"So, we finally meet," I said, looking at Clarice. "Are you worried about who I really am?"

"No, I figured that out a while ago," she said, opening up a small briefcase. "Voice recognition software and perfect memory."

"Yeah," I chuckled nervously. *Software? Must have a wire or something.* "So how did you know about that spider bot and how to turn it off?"

"You mean Kitten?" she asked. "I built her."

My heart stopped. "Oh my fucking god, you're Bonesaw."

"I don't use that name anymore," She said with a cheerful smile. "I told you that you were smart. Are you going to tell anyone?"

*This is Bonesaw. Aceso. Clarice. Bonesaw. Was Clarice even her real name? Why was I thinking about that? I coughed a little. Was I going to tell anyone? Could I tell anyone? Who'd even believe me, after what I'd done? "Do... do you still need my help?" I asked.*

"Yes," she answered, reaching around in her bag.

I smiled, if shakily. I still mattered. "Like I said before. Anything you need me for."
"Yay!" she clapped happily. She then handed me a CD in a jewel case. It had one word on it: Taboo. "I want you to study this every day. There's two and a half hours of information, most of it in ten minute or less bits. Every file, every day. Since you can't go to school anymore, this is your homework."

"O-okay," I agreed. "What's this for?"

"It's everything we aren't suppose to know about powers," she answered. "I'm hoping that if it's part of your memories before you get them, you'll still remember everything after. If not, maybe this will help." She pulled out a helmet.

"What's that do?"

"It's a memory copying device," she replied. "If your memories are lost, this should let us restore them to full. Well, up until the last update, of course. I'll want you to do another scan right before you go to get your vial."

I hesitated before asking the question. "Can... can you remove a memory?"

"From the recording? Sure," she answered. "You'll just have to concentrate really hard on it while I work. From you? Not without pretty extensive brain surgery, and my Big Sister doesn't want me doing that anymore."

"I... I see." There goes that idea. I wouldn't mind them being gone, but having to relive that. Being weak, being helpless, seeing my father helpless... it was easier just to not think about. "Nevermind, then."

"Now, I need you to strip," she instructed. "I want to record every detail. And you're still ready for the 'prep' treatment, right?"

"Yes," I agreed without hesitation, as I started shedding my clothes. It isn't weird if it's for a doctor, right? And Clarice's power means she is the best doctor the world has ever seen. If she believed she had a way to boost the formula even further, I believed her, and I was more than willing to participate.

"This is a retroviral reactant," she said as she handed me a small inhaler. "You need to take one dose a day, right before going to bed. You'll wake up sore, but otherwise there will be no side effects. It has exactly ten doses. One for the next five days. The rest? Take it all two hours before using the power drug. The closer to exactly that mark you can achieve, the more it should help counter the negative effects of the vial."
"Okay," I nodded. "Once per day, the rest two hours before the vial." Whatever the hell a 'retroviral reactant' means.

"And now for the real power booster part," she smiled, holding up a large metal chamber connected to a thinner metal tube. "We're going to have to get you pregnant."

"What!?" I shouted, jumping back.

"Not for real," she replied. "This is an imitation trigger event. And trigger events respond to other nearby parahumans. The more, the better your powers will be. It'll also serve to guide your powers to manifest exactly the type we want them to. I've got genetic material from the seven parahumans that best fit our end goal, grown into cell sacks that resembles and mimics the corona pollentia."

"I... I'm afraid I don't really know what that is," I said nervously.

"The part of the brain that gives powers," she answered. "Basically, when you trigger, it'll be with a massive head start."

"I... I see," I said as I got into the chair. I've already been through way worse than this. A little bit more pain, a little bit more power. It was an easy decision. "Will this have any side effects?"

"Just the early effects of pregnancy," she said dismissively. "Morning sickness, possible swelling and soreness you won't be able to distinguish from the retrovirus. After about a month, your body will reject the pseudo-fetuses, you'll experience minor pain and an unusually difficult menstrual cycle, and everything will go back to normal."

"I... I can deal with that," I agreed, spreading my legs for the child-doctor-supervillain.

The next couple hours were uncomfortable at best.

....

"Have you experienced any illness recently?" the doctor asked, handing me the vial.

"Umm... not really," I answered. "A bit sore from my new exercise routine. Will that be a problem?" I opted not to mention the other sources of soreness. At this moment, pretty much my entire body ached. Even my teeth and hair seemed to hurt. I glanced at the clock. An hour and twenty minutes from the final dose of the drug.
"None at all," he answered. "If anything, it's beneficial. The serum has minor rejuvenative effects."

"Oh, okay," I agreed. I held the serum. This was the key to everything. How I could fix my mistakes. How I could matter. What would make the hell of the last month of my life worth it.

"Most people seem to think the fluid is extremely unpleasant tasting," the doctor told me. "As you've surely been informed of before, and I will make sure you know now, you must drink the whole vial all at once. Not doing so can cause potentially lethal side effects. The faster you finish, the more pleasant the process will be."

I nodded, looking at the vial. *This is my chance*. I waited. *The closer I get to two hours, the better.*

"Is there a problem?" The doctor asked.

"Just a little nervous," I dismissed.

"If you're having second thoughts, I'm afraid you can't get a refund. Each vial is specially formulated to the customer's request. The resources to make the drug cannot be reclaimed."

"No... no," I responded. "I want it, I just. It's hard to fathom, y'know?"

"I'm afraid not," he responded, sounding a little impatient. "I was selected for this job specifically because I'm not interested in becoming a parahuman."

"Yeah, I can see where that' be an asset," I smiled. I need a way to buy another half hour. What could I do that'd convince the doctor to let me wait that long? I couldn't think of anything that was likely to work.

He didn't deign to answer the comment, simply watching me. I finally uncorked the vial, and after a deep sigh I chugged the whole thing.

Pain immediately lanced through my body as I stared up at a sky that was no longer there. The idea of sky no longer existed, dwarfed by possibility itself. Two monolithic beings, ancient and powerful beyond all human comprehension danced through dimensions as a human might switch between channels on a television. *No, not that. That was mechanical and separate. This is... this is a singer changing pitch.*

They spiraled and they split, raining fragments down upon a world. Many worlds. A million million copies of earth seeded.
One slipped, somehow, and collided with the worlds. Six earths died instantly in the impact. Another three damaged. They... they were...

I awoke on the floor. I retained the vision! *The taboo*. I know what the Passengers are!

....

"I got my powers from Cauldron," I informed them. "You know who they are, right?"

"We're aware," Taylor said. "Also, you can stop hiding it. Minerva's power still works on you."

"Then she already knows what I did," I said. "And why I did it. I can help you. I still know about 'Taboo', because I knew before I had powers."

"You... fuck!" Minerva cursed. "You know everything. Cauldron. The Entities. Fucking Riley."

*Riley? Oh, that must be her real name.* I nodded even though I wasn't sure if they could see me. "I know. I knew. And I have powers that can help."

"What," Taylor said, her voice dripping with anger. "Exactly are your your powers?"

"I can see energy," I answered. "Can kinda see some powers the same way. It doesn't tell me that it's a power at work, or what that power does exactly, that's stuff I have to guess at. Some powers are more obvious than others that way. Turn things cold... but that's more of like a side effect. Something that just happens when I'm really using my energy sense at high levels. I'm probably immune to a lot of energy attacks, too. I think." I paused for a second. Dramatic effect and all.

"All those are kinda secondary. My real power is that I'm a Tinker. Specialized in energy manipulation and transfer. And, most importantly, I know how to work 'wet'." I smiled.*Maybe I wasn't able to be strong on my own. But I could make others stronger. I mattered.*

==========

A/N- Cauldron: "We're halping!"
Pantheon: "STOP HELPING!"

And Emma is seriously fucked up in the head, isn't she?
I was shaking when we were done hearing Emma's story, just thanks to the waves of emotion coming off Taylor. Zach was sitting in the corner muttering 'fuck' over and over again. Riley- actual Riley, not the Clarice doll- was on the other side of the room looking for all intents like a puppy that knew it was about to get kicked, but didn't understand why. Lisa was just staring at the screen we'd used to talk through. I turned off the feed.

"Every kind of fuck," Zach concluded. Riley looked over at him, then her eyes darted to me before going back to the floor.

Lisa was the first one to say anything useful. "Okay," she sighed. "We do this one step at a time. The easy stuff first. We have to go back out to where the rest of our guests are waiting, and give them the really really sanitized version of what just happened. No Cauldron. No Bonesaw."

Riley flinched at the way Lisa spit the word.

I nodded, reaching over and putting my hand on Taylor's shoulder. "Okay," I said. "You guys go out and start the ball rolling. We'll be out in a moment."

Everyone else left. Except Riley, who sat quietly in the corner. "Are you going to be okay?" I asked Taylor, pushing every positive emotion I could into the link. I couldn't come up with many.

"Yeah," she said. **FocusDetermination.** She stood up and grabbed my hand. "Yeah. It helps to focus on a goal. Right now, that goal is letting the others know everything's okay."

The others looked at us as we came out.

"Alright, now that everyone's gathered up," Minerva said. "First... that was Emma. Yes, that Emma. Now she has powers and wants to join the team."

"Fuck," Kid Win muttered. "And she came right up to your door? You'd think she'd at least have a sense of self preservation."

"Well, that explains why you hit her," Rapture replied. "Halo would probably say something about turning the other cheek and all that... but, honestly, after what she put you through, I can't say I blame you. So, what are you going to do about this?"

I didn't have an answer to that question. Neither did Taylor.
"I know I may be a junior member or whatever," Flechette spoke up. "But I don't think I'm comfortable working with a bigot. If there's a vote in this, I'm voting we kick her to the curb. And if there's not a vote? Well, I left the Protectorate specifically because I didn't appreciate being treated like a tool without any concern for who I am and what I want."

"She's not a bigot," Taylor responded. "For what little credit it adds up to. I don't know why she did everything she did, but me being gay wasn't a part of it."

"How can you be so sure?" Flechette asked.

"Because she's not a lesbian, or even bisexual," Rapture answered. We all looked toward her. "Sorry, it's something my powers can't help but notice. And you were going to tell them, anyway."

AnnoyanceRelief. "Yeah, pretty much all of that," Taylor agreed.

"But... you and Amelia?" Parian spoke up.

"Are complicated," I responded, putting my arm around Taylor and drawing her close. AppreciationSafe. It's times like this I wish I were taller. It's tough being the protective one when the other person is taller than you by at least a few inches. "It's hard to explain, and no one's business but ours."

Flechette looked at Parian, and then at us. "Well, whatever works for you," she finally concluded.

"We should sleep on it," Crystal suggested. "It's getting late, already. Everyone goes home, goes to bed, and we worry about the crazy shit in the morning."

"You're not planning to keep Emma here overnight, are you?" Rapture asked. There was an edge of warning in her voice. "I like you kids, but considering what your powers are, and your history with this girl. You see where I'm coming from, right? We have to make sure she's unharmed, and getting a certain level of treatment after her trigger event."

"She's fine," Missy stated. "Or at least alive and upright and walking around."

"How do you know that?" I asked.

"A trick with my power," she answered. "I can sense my own spacial distortions. And my power can't distort people or animals, or within a half inch or so of them. Your plants may as well be
Rapture coughed. "She didn't have a trigger event?"

_AlarmWorry. Vista knows Clarice is a fake. Rapture just figured out... fuck!_

Zach laughed. The first sound he'd made since leaving the ad-hoc interrogation room. "Is there anyone in this city with powers that aren't complete bullshit?" No one bothered answering.

"Where did she get her powers?" Rapture asked. The others were looking at me and Taylor and Lisa expectantly. _God damn it._

"This can't leave this room," I told them. "There's a group we're investigating. Have been for a while. They've found a way to make a serum that we think forces trigger events. We do know it grants powers."

"That... you're certain?" Rapture asked.

"How does that even work?" Kid Win, that time.

"We're not sure," Minerva responded. "We have sort of taken a 'wait and see' with the group. We know they're responsible for the Case 53s. That's what happens when a batch goes wrong. For whatever definition of 'batch' applies. Part of their testing and refinement process."

"And you haven't reported this to the whole world?" Rapture asked.

"It would do more harm than good," Minerva insisted. "They seem mostly benign. The experiments, the Case 53s, they seem to have been volunteers. I'm sure their process wasn't all that moral... they probably went up to terminal cancer patients and said something along the lines of the drug being able to save their lives and giving them powers. At the cost that, if they were unlucky, they'd wind up looking like Gregor the Snail. But if they were lucky, they'd be the next Alexandria or something. Either way, they'd no longer be dying.

"Not filling me with confidence," Rapture responded.

"I've done some investigating," she continued. "There are at least thirty heroes that got their powers from Cauldron in New England. If we reveal this, it means we lose those heroes and however many others are across the world. Probably thousands of them. What does the Protectorate look like after that? What do the Endbringer battles look like? They're not on the side of the angels, certainly. But everything I've been able to divine about them says they're trying to help hold this world together.
Even if only out of enlightened self interest."

Rapture was frowning. "So trying to stop them is basically us shooting ourselves in the foot?"

"Pretty much," Minerva agreed. "For now, at least. We're still digging."

"And this girl, she got her powers from them?"

"Complete with Case-53 mutations," Minerva confirmed. "If relatively minor ones."

"I'll want to be there when we ask her about all this," she said, her voice hard.

"So that's taken care of for now?" Minerva asked, looking throughout the room at our new recruits, and the old ones that weren't in the know. There were nods all around, even if most of them were reluctant.

"Okay, let's go give Emma a checkup," I relented.

"I'll sit this one out," Zach replied.

"Me, too," Taylor agreed. "Minerva... save breaking her mind in half for the time being. It didn't work so well last time you did it." AnnoyanceDistaste.

....

I opened the passage to where I'd put Emma. Flanked by Rapture, Blasto and Minerva, we entered the room.

"First thing's first," Rapture stated. "Are you under the influence of any mind altering substances?"

"I don't think so," she answered.

"How long have you had your powers?"

"About six hours," she replied. She seemed to be trying to look past us into the hall. A pulse of thought and I sealed the passage.
"Cauldron sold you them?"

"Yes," Emma answered. Short, terse answers. Enough to be honest, not enough to give away anything.

"I'm going to check on your health," I answered.

"Uh, okay," she agreed, reaching out her hand to me. I touched it.

Mending her broken nose was the easy part, and I undid much of the bruising. She'd still have a black eye, but not as bad as it could have been. "Oh! I'm... I'm sorry."

"About?" She asked, fidgeting.

"It seems your insides are more different than your outsides," I answered. "I'm having trouble making sense of it. Your power's interfering with mine."

"Oh, yeah," she responded. "I noticed some of that already. I don't feel pain anymore, or even have much of a sense of touch at all." Emma's body started shifting slightly as I continued to maintain contact. The blue tones changed over to earthy brown tones. She could almost pass for a normal, if unusually dark skinned black girl this way. But for the solid black eyes that now radiated darkness. "My reproductive system's disabled and my physiology has been reoptimized for neurological efficiency..."

"Fucking hell," Minerva laughed. "You have different powers based on different breaker states. You're a fucking Trump."

"Does that mean I'm on the team?" she asked hopefully. More than that. I was still in contact and even with the interference, I was getting very good at reading people with my power thanks to my link with Taylor. This isn't hope. This is desperation. This is... there are no words for what this was. This is a lot like what Riley feels like.

"Do your parents know about this?" Rapture asked.

"No," she admitted.

"Then that gets taken care of, first," she replied with a voice that reminded me very much of Carol. "I am going to take you home. We are going to talk to your parents. And we'll sort out everything else tomorrow. Like exactly what your powers are, and who's going to do what with you."
Emma looked at me, as if seeking an answer. I nodded. "Umm, okay ma'am," she answered. I opened the series of paths that would take them outside, and then left the room. I needed to talk to Taylor.

=================

A/N- Oh wow. This chapter has more foreshadowing in it than I ever realized. About Lily. About Taylor. Rapture. Emma. More Lily. I can see so much of what chapters ~300 are from this one here.

Also: I got a lot of people raging over Rapture here, taking steps to protect Emma and keep the situation from getting ugly.
"Fuck. My. Life." Taylor groaned aloud as she collapsed onto the bed.

-ComfortIrritationDesire-

"Sorry," Amelia blushed as she sat down next to her...girlfriend? In practically every way that mattered, she supposed.

Despite the fact that she was blushing as well, Taylor shrugged off the errant comment and, wrapping her arms around Amelia's waist, pulled her down to lie next to her. "I told you," Taylor remonstrated lightly, burying her face into Amelia's neck, "I don't mind."

Amelia sighed, taking in the scent of her...partner. Her partner. The strong associations the human brain built into the olfactory sense was already equating the scent of Taylor's shampoo with 'safe.' "We need to talk about it," Amelia eventually broached, sighing as she did so. It was a decision made from obligation, not her choice in the matter.

Taylor groaned again, cuddling up against Amelia in a way that was definitely meant to distract the older girl. "Please? Can't I have this one thing? Just this once? Can't I stay angry at her? I'm allowed that much, aren't I?"

"'Fraid not."

Amelia admirably refrained from cursing as Lisa stepped into what was rapidly becoming 'their' room, that was, hers and Taylor's.

"Oh, don't get up on my account," Lisa grinned, dropping into a chair and setting a bag on the table. "I'll just have to eat all this triple fudge, rocky road ice cream all by myself."

There was a moment of silence.

Lisa's grin faded slightly. "Oh, come on. I'm trying to be 'nice' here. You know how hard that is for me. Either we talk it out now or I'll just go off and get some overcomplicated plan in order that you two will bitch at me for later. Can we get the bitching out of the way first, for once? Then I can give myself a migraine untangling this clusterfuck and go straight to bed."

"Fine," Taylor and Amelia chorused, slowly moving off the bed and towards the large, organic sofa opposite the chair and table Lisa had taken.

As the ice cream was dispensed, Taylor sighed. "Why would someone do something like that? I mean, Jesus Fuck, Emma went to disable one of Bonesaw's spider-bots. She knew what she was getting into! How crazy do you have to be to agree to a plan where that is 'step one.'?"

"Pretty crazy," Lisa agreed. "It's almost like she was trying to commit suicide."

Taylor's spoon dropped to the floor with a clatter before all was abruptly silent.

"What?" Lisa asked, licking her spoon clean. "You think she was honestly expecting to get out of all of this alive? Well, hoping maybe. She wasn't actively planning to kill herself, but then
again...neither were you."

"Fuck," Amelia spat quietly, pouring support through the bond to wash away the blank shock that covered Taylor's emotions at the moment. "Why would...but she outed herself as Taylor's bully! She had to know what would happen!"

"She did," Lisa confirmed with practiced blase. "See, the thing is? Remember what Flechette said about cults and brainwashing? We kind of, accidentally, mind you, did that on Emma."

Taylor worked at her eyes tiredly, "Damnit. Yeah, I can see it. Sophia left, she fixated on Zach as a 'boyfriend' and Aceso through the PHO forums. They talked to her, built her back up when she needed it the most...and then the party."

"Yep," Lisa nodded, popping the 'p' in a way which would have had Accord cutting out her tongue. "So, when I put bitch-mode into overdrive, I tore her down, yeah...but, because of the way her mind works, since we're 'strong' she thinks she is, or was, obviously weak enough to deserve what I, we, did to her and since we did it, we're the only ones who can teach her to be 'strong' again. I think she tried getting her fix from Clockblocker, but with the way the Protectorate's rep was just gutted and the fact that...well, Emma's always been fixated on Taylor, from what I can tell, at least to a certain extent. When she found out Taylor was Kephri was Skitter? Well, I learned most of my psycho-babble from daytime tv and 100-level college courses. I don't know the term for it, but 'obsession' doesn't quite do it justice."

"So she took advice from an obviously mentally unstable ten-year-old on how to disable a biomechanical spider-bot from the darkest nightmares of a serial killer...then she let said aforementioned serial killer, who is, again, ten years old and mentally unstable operate on her, prescribe her drugs she didn't even understand the descriptions of, made contact with a shadowy conspiracy that controls entire governments, again on the advice of said ten-year-old mentally unstable parahuman supervillain, and took a vial of an unknown substance almost guaranteed to have horrible side-effects beyond granting her powers in conjunction with interacting with the unknown drugs and implants that the ten-year-old supervillain had put inside her?" Taylor looked at Lisa in vacant disbelief. "She did all of that just so...what?"

"She wants you to accept her," Lisa explained, rubbing at her temples. "She doesn't know exactly what she wants, but, her ideal scenario ends you acknowledging her as a strong person and...maaaybe becoming friends again?"

Taylor blinked, her eyes dilating as they fixed themselves on some far-off point of understanding that was just dawning.

"She did all that, so we could be friends again?" Taylor asked the ceiling vacantly. "I can't-I mean, that's...that's horrifying, terrible, and makes me so angry I-"

"-want to hate her, but you can't, because the fact that she's that desperate for your approval would be pathetic and adorable if that kind of responsibility didn't scare the living fuck out you," Amelia finished quietly.

A beat of silence echoed loudly.

"I guess that's why the mix of emotions seemed so familiar," Taylor mumbled. Turning to her partner, she frowned, "That's really how you feel about-"
"-about Riley? Pretty much," Amelia sighed, leaning her head on Taylor's shoulder. "Fuck, this is messed up."

"You think that's bad?" Lisa sighed. "We still haven't gotten to whether or not we're accepting her on the team."

Taylor groaned again, an aggravated sound that rose from the back of her throat and sounded like a wounded animal. "Please?" She asked desperately. "Lisa, isn't there any way we can just-"

"No," Lisa cut her off. Amelia frowned in shared irritation. "Putting aside your moral dilemma of condemning Emma to the same type of persecution you had to go through as most of the rest of us aren't really good enough people for that to bother us, there's also the fact that Emma quite literally knows every. single. fucking. detail. about Pantheon that matters at this point. If we cut her loose, she'll be squealing to the Protectorate in a week, dead or taken captive for her tinker abilities in that same time, or she'll try to go it alone. In case you don't understand, by the way, that's possibly the worst of any of these options given what she knows and the damage she could do without her powers."

"Shit." Taylor groaned. "There's no good choice to this, is there?"

"Think of it this way," Amelia offered. "We're getting a new cape, one who should be extremely useful, all for the low price of an extra basement room that you never have to go near."

"Sorry," Lisa shook her head. "Emma is fixated on Taylor. Zach would be a good distraction, if he was willing, but Emma is going to follow you around like the little sociopathic puppy Sophia trained her to be. Keep her on a short leash and don't leave her and Riley alone together too long."

Taylor froze.

-TrepidationPanic-

Amelia froze.

Lisa cursed, "I told Crystal to watch them!"

==============

Reader's Note- Slayer Anderson is awesome.

The last few lines aren't actually canon, however. But they are hilarious.
I observed the teen girl riding in my car. It was relatively easy to do so while still watching the streets. Her eyes were darting back and forth, with a sense of confusion and dissonance. "Emma? Is something bothering you?" I asked. Using names was a low level trick, as far as social manipulation went, but sometimes, it's a classic because it works. Besides, I wasn't comfortable with what I could really do here, to someone as damaged as this girl.

"Oh!" she answered. "Sorry, it's just... kinda weird, y'know." I did, of course, know. Tinkers, they telegraph their fugues so hard that almost anyone can spot it.

"Which part?" I asked. Again, the most generic of psychological tactics. You can get away with almost anything if you just ask the right questions.

"I was just thinking," she hesitated. She was clearly afraid of angering me. Submissive posture, as had been her behavior all night, but faking confidence at a level that made me believe she had years of practice at it. Almost any ordinary person would be fooled. Someone like Minerva or myself? I'd known her for a sum total of ten minutes, and there were so many ways I could break her down and rebuild her into anything I wanted. Her desperate need to be valued would be so easy to exploit.

....

"Sorry, pumpkin, I have to go."

"But Daddy!"

"Someone has to put food on the table," he smiled, ruffling my hair.

Mommy let out an exasperated sigh and walked out of the room.

They were fighting again. They were using me in their fights again.

....

"Yes?"

She was continuing to look for a way to phrase it that would make her sound knowledgeable and capable, without insulting me. "It's kinda funny to see a Tinker with armor like yours driving a
I chuckled. *It's not offensive if the person you say it to laughs.* "Oh, that," I smiled. *Rey always appreciates how I wear my heart on my sleeve. Most people did. That's why I did it.* "I didn't really read the rental agreement that well, but I think rebuilding their vehicles is frowned upon."

"Oh, sorry," she smiled back. Still nervous. Her eyes and skin shifted from the brown she'd been in to yellow. "Your armor is beautiful, by the way. Every system interlocks, nothing is wasted. It's flawless."

"Thanks," I replied. *She can really see the inner workings of my equipment? Of course, she's wrong. The armor's actually rather inefficient. Dozens of backup systems, second rate flight system that was cannibalized from another project. Young tinker, she'd learn.* "A lot of it's actually Dragon's technology."

Her eyes widened. *Of course they would, Dragon was a celebrity even in the non-cape world. A newly minted Tinker wouldn't be able to help but be impressed.*

"Do you think I'll ever be able to work with Dragon?" she asked, not bothering to hide the awe.

"Probably," I answered. "She's really very friendly."

"So how did you meet?"

"Oh, that's not much of a story," I lied expertly. "I wish I could say it was something cool like an Endbringer battle, but it wasn't all that special."

....

"Hegemon," the machine intoned. "You've already lost."

I ran down my list of options. Dragon didn't kill, as near as I could tell she couldn't kill. Or, at least, the robots she sent after me couldn't. They were autonomous AI, that I knew for certain, because nothing human thought like they thought. Even a remote controlled puppet was still reliant on a person, still left the behavioral cues I could pick up on. Dragon's suits were insanely advanced, but not alive, not human. *Not something I can influence.* My standard method was a bust, but I had other options.

A white hot lance of energy struck the suit in the side, shattering whatever shields the thing had, and then melting through chunks of armor. The equipment dropped. And then exploded into a pulse of
magnetic energy. The city went dark.

Something collided with me, knocking me to the ground. My slaves turned to protect me, but they were as lost and confused as I was. My tech had been improved significantly from the early days, but it was still technology that kept them bound to me. And that technology had just been disabled. In a minute, they'd 'wake up' and realize what I'd done to them. Didn't need my powers to know what would follow. I closed my eyes and waited for my life to end a second time.

....

"So, you bought your powers?"

"Uh..." she hesitated. "I'm not suppose to talk about that. They like their privacy."

I smiled. "Oh, I'm sure they do," I agreed. "But I already know about Cauldron." I didn't a few minutes ago, but she doesn't need to know that. "Where did you get the money for something like that?"

"I... I really can't talk about that..." she said, looking away. *Dial back, you're losing your connection.* She stared out the window. She was deeply disturbed by what she did. Yet, somehow, proud. It was like a rite of passage to her. Painful, terrifying, horrifically disgusting. Even vaguely sexual, but only vaguely. There was no shame or anger or sense of being cheapened by the experience. I ruled out prostitution easily enough. She was too psychologically connected to the idea of social value. She wouldn't be able to ignore that psychological stigma, not enough to hide it from me at least. That, and the extreme unlikelihood of making the kind of money needed to purchase superpowers through sex.

....

"Becky!" Mommy shouted, pulling the blanket up to cover her.

"Mom?!" I gasped. "Mister Reynolds?" I turned and ran, tears streaming from my eyes.

....

"It's not your secret to share," I concluded. Her reaction said it all. *Someone helped her. Someone probably risked a great deal to help her.* I didn't know how, or who, or why, or even what happened. But it bound Emma to the other party. This would be someone she considered a protector. A savior. I would not be able to get her to speak on the subject.

"It's not," she answered with the certainty I was expecting. And a gratitude that I had said it so she
wouldn't have to. She didn't want to turn me against her.

"What are you planning to do with your powers?" I asked. That's a safer subject. She was less afraid of her own secrets.

"I fu- messed up," she answered, covering the almost-profanity. I chuckled. The whole 'golden cross' thing made people think I was a prude. Oh well. "I messed up a lot of things, really badly. I'm going to use my powers to fix everything. To prove I'm worthy."

....

I screamed, clinging to my father. "No! You can't go! You can't!"

Mom didn't say a thing, simply glaring at him. He glared back, ignoring me.

"I don't have a choice, pumpkin," he pulled me tight. Didn't have a choice. Mom's fault.

"Then take me with you!"

"That's not an option, sweetheart," he said. "I promise I'll call."

"No!" I screamed. "You can't! I'll fix it, I'll make it better, I promise!"

"Rebecca," he consoled. "You can't fix this. No one can."

Something broke inside me. I collapsed. By the time I was coming to, my parents were both holding me again. Worried about me. They were together again, but it wouldn't last. Not unless I force them to. I know how to force them.

....

"That's why you bought powers?" I said, forming it as a question.

"Yes," she said, that same look of pride and pain. I'd seen that look on more than a few natural triggers. Myself included. Whatever else was going on in her life, she felt that she earned her abilities. She didn't see herself as having purchased them. She saw herself as having suffered for them.
"And the... changes... to your body? You're okay with that?"

She shrugged. "Worth it," she answered. "The old me was weak, stupid and useless. The new me is smart and powerful. I'd do it all again in a heartbeat." She offered a smile. "But I'd wear gloves next time."

I smiled back. I didn't know why she felt gloves were significant, but that was fine. "So, it's a way of reinventing yourself?"

"Yeah," she agreed. "I hadn't thought of it like that, before, but yes. I've been reinvented."

....

"Given any thought to your new name?" Halo asked.

"I'm thinking 'Ruth'," I answered.

"That's a lovely name," he agreed. "Symbolic. It suits you. But I was thinking of your name in costume."

"Oh," I looked away, and felt bad for doing so. Pretending to be bashful was a stupid habit I'd picked up, and it never seemed to fool him anyway. "Rapture."

He smiled. "I see," he agreed. "That suits you as well."

"It does," I agreed.

....

I was already certain her parents were not in any way involved in this mess, but still I had to ask about them as I pulled into her driveway. There was the possibility, if slight, of abuse. "So, have you thought about how to tell your mom and dad? Would you like me to come in and help? Haven may not have any real influence this far north, but we're still pretty well known and mostly respected. I could help smooth things over."

"No," she answered. "It won't be bad. Mom and dad are pretty cool. Supportive of whatever I want to do, really. I'm not going to say how I got my powers, of course. Accident, just like everyone else, right?"
They're 'cool', but that's a problem. She loves them, and they've not hurt her. But they're a disappointment. They failed her at a time when she needed them most. She's picked other outlets to seek validation. Clearly not healthy outlets, based on her actions toward Taylor. I'd seen this enough times in my life.

"Don't call powers an 'accident' in front of others," I advised. "People have to go through hell to get powers. Some will be a lot more upset than others. And don't mention how you got yours in front of others. Capes, and those who deal with capes, will accept 'I don't talk about it' as an answer."

"Thanks," she said, looking away again. She was once again in her submissive state, afraid that she'd said something to upset me. Blaming herself for her perceived 'mistake'. What happened to this girl?

"You'll be there, tomorrow morning?" I asked.

"Wouldn't miss it for the world," she answered as she got out of my vehicle.

....

"How long are you going to keep me here?" I snapped, slamming against the bars of my prison. I hissed in pain, reminded of the broken rib and shoulder I'd briefly forgotten.

"As long as necessary," Halo answered. "You need time to heal."

He doesn't just mean physically, I realized. He's bought the same tripe he's been selling.

"Oh, is that what it is?" I countered. "Or do you just have a kick for keeping beautiful women in your basement? Start a harem of your own? Lots of those guys you pretend are somehow holy are pretty fond of that sorta thing."

He shrugged. "I was told you had a mean streak," he answered. "You're also not someone who can be lied to." The man sat down on one of those fold out metal chairs.

"We all have our crosses to bear," he continued. "Yours must be worse than most. Knowing everyone's secrets. Their lusts and their shames. Their failures and their fears. Every flaw and every fault. In a way, you know more about what God experiences than most people ever will."

"Oh, is that your plan?" I asked, even though I knew it wasn't. At least, it wasn't on a conscious level. Subconscious motivations were more difficult to gauge. "Talk about how divine my power is?"
"Divine?" he asked. "Oh, no. It is quite the opposite of divine. Adam and Eve took one bite of the fruit of knowledge, and while they gained knowledge, they lost peace and safety and innocence. You, through no fault of your own, have been given a second helping, and with it lost your ability to see the good in people. I can't pretend to know what that's like."

"Yet here you are pretending," I replied.

He offered a sad smile. "Maybe," he agreed. "I'm only human, after all. Still, even if I can't understand, I want to help you at least see there's better out there. If you won't accept that it's for your own sake, then at least believe I want to protect others."

"You want to convince me to undo some of the more permanent effects of my technology," I laughed. "Of course you do."

He sighed. "Okay, fine," he started. "Full honesty, everything out in the open. I haven't told a lie, of any sort, to any one, since my junior year of highschool. Yes, I do think you're physically attractive. No, that's not why I'm doing this, and I swear on my honor before God that I will never act on that attraction. I do want to save everyone you've influenced. I want you to want to save them. I want to save you. I want to save everyone. I know I can't. That's arrogance speaking. You can use that to manipulate me, no doubt. Or, you can use that remarkable power of yours and realize that everything I've said is genuine. That I'm someone who actually cares about you, for no other reason than because you're a human being and it's the right thing to do."

*He means every word of it,* I realized.

A/N- This particular chapter earned me some honest to goodness hate (as opposed to the usual dislike of a given character/chapter) from silly, silly people who feel I portrayed Christianity too positively in this chapter.

... Yeah, you heard me...
I woke up with hair covering my face. *Oh, right, Taylor stayed the night again.* I smiled, even as I pushed the tangles away from my eyes and mouth. She mumbled in her sleep. Nothing I could understand. "Think it's time to wake up," I whispered in her ear.

She moaned and pressed back against me. Our link was vague and muted, as it always was when one of us was asleep, but offered indications of pleasure. I closed my eyes and fought off that particular temptation. I scooted back from her, in part for that reason. In part to wake her up.

"Huh," she said, waking up. "How late is it, this time?"

"Pretty early," I answered. "We've still got school, and the alarm hasn't gone off."

"Oh, joy," she muttered. "Wanna join me on a jog?"

I smiled, not even bothering to hide my thoughts on watching Taylor going through her exercise routine in the already warm summer morning.*ShyPleased.* "I could be convinced," I answered.

"I'll go get changed," she replied. "No, you can't watch."

"Can I watch after we're done?"

"Only if you can keep up," she offered. *Oh, I am so going to keep up.*

Fifteen minutes later, it was abundantly clear that I could not keep up. I gasped and wheezed as I sat down on a chair outside. That I created, of course.

"Come on," Taylor encouraged, still jogging in place. "You haven't even broken a sweat yet."

"Lungs burn," I croaked.

"They're suppose to," she answered. "You'll be fine. Just gotta keep moving. Another five minutes won't be that bad, right?"
"Sadist," I complained.

"Look at it this way," she teased. "If I don't break a sweat, I won't need to take a shower."

"You're a horrible person," I moaned, forcing myself to my feet. Of course I knew she'd need to take a shower anyway. Hair like hers didn't leave much choice in that matter, especially since I probably drooled into it. **Must remember to ask Riley about the progress with the Roid Ray.**

We got back, eventually. Taylor was still smiling. "Not bad," she said.

"You're a terrible liar," I groaned.

"No, really," she insisted. "Much better than my first time out. You'll do better next time."

"What makes you think there's going to be a next time?" I asked.

"Because I know how much you like the view," she smiled, then she gave me a peck on the cheek.

I blushed. **Okay, there was definitely going to be a next time.**

....

By the time we'd gotten home from school, they were ready for us. Rey, Rapture, and Lisa. The ones who had run Emma's tests. **DreadResolve.** I gripped Taylor's hand. The message was clear, link or no link. **Whatever came of this, we did it together.**

Zach was with us, and Clarice was off with Vista. While having Riley's input on Emma's powers was something I would have liked, we really didn't need to risk her around Rapture too much. The woman had near Tattletale levels of perception, sometimes, and was a lot better at hiding what she knew than Lisa was. Even I wasn't so oblivious to miss the security risk.

We went straight for our meeting room.

Minerva, for once, didn't have a smile. "Alright, we'll start with the less complicated part. Her powers."

I nodded, sitting down with Taylor. "Okay," my partner agreed. "What, exactly, is she capable of?"
Rey spoke up. "Based on our analysis? She's either a Tinker three, thinker two, breaker and striker two. Or she's up to a Tinker and Thinker five to seven."

*AnnoyanceDread. And this is the simple part?*

"It's hard to quantify," Rapture supplied. "She has breaker states. Once she enters one, she doesn't leave it until she chooses another. Basically, she no longer has a 'default human' mode. Red is for thermodynamics, letting her sense and tinker with heat and cold. Yellow state is much the same for a sense and a tinker ability directed toward electricity and magnetism. Orange state for light, maybe the whole radiation spectrum. White for sonic. Black works for bioanalysis. Blue is a hybrid state of sorts, letting her harness all her powers at once."

"That form seems to use up a lot of energy," Minerva supplied. "All her powersets at once, she can keep it going for a maximum of maybe five minutes in an hour before she starts seeing serious health risks."

"She stayed in that form most of the time she was here last time," Taylor pointed out.

"Only cosmetically," Minerva responded. "Once the ice started melting, her power was off."

"And why does that mess with her ratings so much?" I asked.

"She's a grab-bag cape," Minerva explained. "Like Circus, maybe a little like Flechette. Only a tinker. Lots of minor powers that add up to something better than the sum of its parts."

"She's a low end tinker," Rapture supplied. "But she's a low end tinker in a number of disciplines, and it's a wide enough distribution that she can work with and improve upon almost any other tinker's technology. Simply by having so many different possible options that they don't have. But, individually, she's not that good. If she built using just one of her specialties, she'd only rank a two, maybe a three. If she builds using all of her specialties, she's closer to a six or seven. A six or seven that you'd think was was actually three or four people."

"Her effective specialty, if you want something that's easy to explain quickly," Minerva said. "Is more like an integration tinker. One whose main advantage lies in making other tinker tech work well together. Plus she's still a middling tier energy tinker in her own right."

*DreadResignation. In short," Taylor muttered. "The more tinkers you have, or the more varied their specialties are, the more effective she is."
"Basically," Minerva answered.

"And we have a pretty wide variety of tinkers and tinker tech," she muttered, rubbing her hand over her eyes. I put my arm around her. "Especially now that Chariot's official, and Kid Win's at least considering joining."

"God damn it," Zach muttered. "If she had a shitty power..."

"Oh, no, we haven't even gotten to the bad part yet," Minerva chuckled. "Rapture's got a lot to say about the psych exam. Some of it, we already know. Borderline suicidal behavior is just the tip of this particular iceberg."

"Not my place to share all the details," Rapture stated. "The fact that she gave me permission to is hardly a strong justification, given that her psychological state is so fragile that she's not truly competent to give that permission. Due to... something in her past. Yes, I know. No, I won't share." She gave a rather unfriendly look at Minerva.

Tattletale raised her hands up. "Hey, this is all you. I can keep a secret."

"Right," Rapture said dryly. "Thanks to that, Emma's worldview was broken, destructively. A belief that she was betrayed by those she trusted most."AngerDisgust. "More specifically, she feels she was failed by those who were suppose to protect her and help her, and sees that failure as abandonment. Not the most rational of reactions, but you can hardly expect young teens to be rational in the face of extremely traumatic events."

"So she," Taylor's voice dripped malice. "She turns on me to do what? Revenge by proxy?"

"Not uncommon for victims to turn around and victimize," Rapture didn't meet any of our gazes. "But that's not quite Emma's story. She felt alone and abandoned, all sense of self worth and faith in others broken. And then she met someone who gave her a... different... set of values to follow."

"Basically," Tattletale summarized. "She got traumatized. Then met some complete fucking psychopath who filled her head with crazy bullshit. Think Junior Jack Slash."

RealizationNausea. It took me a second to realize part of that was my own reaction. I've been on the receiving end of that kind of attention.

"Arguably, worse," Rapture replied. "This was someone who protected her at her most vulnerable.
Gave her a new sense of purpose."

"Even better," Minerva added. "Someone that the Protectorate, in its infinite bullshit, made into a hero. At least when Jack came along, everyone knew he was a fucking monster."

"Someone that we removed from the picture," Taylor muttered.

"Exactly," Rapture replied. "If not for a few events. Zach being one of them. Knowledge of Cauldron being another. I have little doubt she'd have attempted suicide in the near future. As it stands... that's functionally what she's done. Attempted suicide, but without the goodbyes."

FearConcern. I looked at Taylor. No, that wasn't directed at Emma. It was for Lisa. She looked at me. PatientDiscretion. Ah, she wanted me to keep that quiet for now. I could do that.

"Yeah," Minerva agreed. "Already covered that a bit last night. The powers, the shit she went through to get them. That's not something a person who wants to live does."

"She's fixated on Pantheon, on being what she thinks a 'real hero' is, in order to provide herself a sense of self worth," Rapture explained.

"Are you trying to say we should let her join?" Zach asked, sounding very much against that idea.

"God, no," Rapture corrected. "What you should do is force her into therapy. Let actual professionals try to break her of this obsession with power and give her a sense of purpose that doesn't involve her building a sense of self worth based on violence."

"But," Taylor supplied.

"But that's not going to happen," she confirmed. "She knows some important secrets about your team, and everything my power is telling me screams that you can't afford to reveal them. You have to either keep her here of her own free will, or you would have to kill her." There was an unspoken 'and me' at the end of that sentence.

She continued after that brief pause. "All of that is before starting the quagmire that is parahuman psychology. Parahumans universally have exaggerated responses to emotional stimuli. Highs are higher, lows are lower. Therapy guided toward normal people is only barely effective, and shows diminishing results with time. If anything, parahumans have an opposite response toward aggression and violence than the baseline human norm. It's often a calming mechanism that fosters pleasurable emotions."
"We're stuck with her because we can't give her to anyone else," Minerva stated. "And we have to put her abilities to use or it'll just drive her even more insane. And that's not even the most fucked up part."

"She volunteered to let me use my specialty," Rapture finished. "No surprise she figured it out. She was willing to let me rewrite her memories and personality to be, as she put it, 'more useful'."

RealizationDiscomfort. My eyes meant Taylor's. Her hand moved over and gripped mine. We were both conspicuously aware of the bracer on my arm.

===============

A/N- Seriously though, Emma's fucked in the head.

Chapter End Notes

Less than 1/4 of the way through and this story is the biggest Worm fic on A03 by around 20,000 words. That is all
"So, we're keeping her? No choice in the matter?" Zach muttered. *Fuck, and he's suppose to be the untouchable one.* "Brain rewrite is still off the table?"

_HorrorDisgust._ "No." It was a single word that allowed no argument. Taylor's stance was absolute, and I agreed with her. "We are not unmaking someone just so we can keep a puppet with their face. A minor alteration, maybe, and then only if it was essential. But we're not rewriting three years of her memories just to... what would it even accomplish? We'd still remember everything she's done, and she wouldn't even know what or why we hated her for it."

"She's right," I agreed. "Sounds like a Twilight Zone episode. And those never end well for anyone."

"It really does," Taylor nodded. "She gets to undo all the shit she's been through. Then her new, innocent, copy gets to live with the aftermath. It's more a punishment for us than her. No. Emma lives with what she's done. Hopefully remorsefully."

"That's a bit much to hope for," Minerva stated. "She knows what she's done was wrong, in the same way a puppy knows it's in trouble. She doesn't get the 'why'. Too caught up in her own personal problems to stop and consider the problems of others."

"Fine," Taylor muttered. _AngerVindictiveDistaste._ "Not like I'd have believed her even if she was sincere."

"Satisfied that they're not going to go all revenge fest the moment you leave?" Minerva asked _Rapture_.

She nodded. "I am now," she agreed. "Them, at least. As long as they promise to keep you from doing anything. You're one of those people who takes it more personally when someone you care about is hurt than when you're hurt. It makes you a much bigger problem than they are, in some situations."

"Pretty sure everyone here knows that," Tattletale responded back. _ResignationAnnoyance_. I nodded in agreement.

"They do," she countered. "You don't. Not really."

"Pointing your power at me?" Tattletale smiled. "We can both play that game, you know."
"There was a time..." She sighed, standing. "But that's not important. When was the last time you used your power on yourself?"

Lisa just stared, disbelievingly, at Rapture's back as she walked away.

"I... uh... probably don't need to be there for when you talk to Emma," Rey said, looking between us and Rapture. "I just work here and all that, y'know."

"It's fine," I said, not sensing any disagreement from Taylor. And not caring what Lisa thought, if she was thinking anything at all right now. "But if she just broke our thinker, I'm going to have to ask her to get us a new one of equal or greater value."

He rushed after her, and I looked over at the eerily quiet blond. *Holy shit, someone actually shut Tattletale up.*

_WorryConfusion_ "Lisa?" Taylor asked. "Are you still in there?"

"Uh... yeah," she muttered. "Yeah. She wasn't bluffing. She actually does use her power on herself."

"That probably means more to you than us," I said. A bit dismissive, probably, but we had other things to worry about. "Taylor and I are going to go deal with our errant tinkers."

"Yeah," Lisa muttered. "You guys go do that. If you need me, I'm gonna be in my room."

....

"Okay," I sighed. _FocusResolve._ "They're waiting." I clasped Taylor's hand and made the room open. They were currently shoulder to shoulder over a workbench, covered in gunk.

"Or not," Taylor muttered.

"You're suppose to be in trouble, Riley," I told her. "Not playing with your new project."

"But we're making some really cool breakthroughs!" Emma insisted, turning to face us. She was so covered in gunk that I identified her 'mode' by eyes radiating black. "I solved your energy transfer needs for the ultralisks. Even improved on the zerglings. And we've almost completed an organic copy of Chariot's antigrav tech. In a couple more weeks, we can build living things that do antigravity."
"It's true," Riley agreed. "Emma's helped me with so many things. We might even be able to build a way around the Taboo."

I froze. *Oh god damn it. That would solve so many problems, and yet this precedent was a bad one.* "Riley," I said. "You are not going to bribe us into forgetting what's happened here. I set down rules when you first got here. About using your powers without my permission. Emma may have volunteered, but that's beside the point. You made a promise. You broke that promise. You lied to me. And you know what that means."

Riley stood there, also covered in goo. Her eyes started watering. "You... I..."

"It was my idea!" Emma interrupted. "I wanted powers. I needed them. All she did was make sure it went as well as possible. Punish me for it, if you have to."

"She gave you money," Taylor said dryly. "Plus that fucking spider bot. God only knows what they can do with that thing. She's as responsible for it as anyone."

"Do you even know what I was going to do?" I asked. "What I told her the first day. That I'd take away her powers for something like this."

Emma froze. "Y-you can do that?" she asked.

"Not even difficult," I answered. "Might not work on you, but it'll work on any natural parahuman."

"But you need her! You need both of us!" she insisted. "I know what the Passengers are. How they work. I might even be able to figure out how to find them, if you give me a chance. You have to! We worked so hard for this! She did it because she loves you." *IncredulityAngerBetrayal.*

I looked at the little girl. The monster that happily impaled Mark and drove me to the brink of insanity. Looking up at me with desperation and fear. Every so often, I even forgot that about her. What she was, what she'd done. I'd even come to think of her as a kind of family. But I never thought there was love between us.

Taylor's arm wrapped around me. *ConcernSupport.*

*Emma's right. Riley does love me.* The feeling was not any kind of mutual, at best I was concerned about her and terrified of her, but I didn't love her.
Taylor spoke, taking command. I felt the emotional backlash as she fell back on 'Skitter', pushing negative emotions into our bond. I focused on pushing through. If she needed to use me as a crutch right now, then that's what I'd be. "You want to be a part of this? Fine. Your conditions are as follows. Everything you do that involves people goes through us for approval. That rule goes for both of you." They nodded.

"Riley, you keep in mind that you're suppose to be a good girl. Emma is not a good person, and listening to her ideas is only going to get you in trouble." Riley nodded, Emma looked away.

"And Emma?" She looked back. "You give a full confession and apology." Emma went to start speaking. "Not to me. I honestly don't care that much, even if I believed you in the first place. Your confession will be public. Spontaneous if you like, or write a speech, get help with it, whatever you need to do. I don't even care if you mean a single word of it. You manipulated people against me for years. You manipulated Riley against Amelia. Now use that skill for something useful for a change."

"Okay," she nodded. "I can do that, Taylor."

"And then it's the last time," she continued. "You want to convince me you've changed? Then you might want to actually feel bad about what you've done. And stop doing it. That goes for both of you."

Taylor turned and left the room. I looked at them both, even as I could finally relax thanks to the emotional pressure Taylor was putting out started to fade a little. She anger and sadness was still there, but Taylor was accepting it instead of hiding it in our link.

"She's right, Riley," I said. "You need to learn to be better than this. You should have told me what you were doing. Lying to me and hurting Taylor are things Bonesaw would do. You can't be someone who does those things anymore."

I turned and chased after Taylor. *Hopefully some of that would get through to them.*

===================

A/N- No one ever noted that I had Emma use Rapture's little empathy manipulation here.
My mind wasn't really on the antigravity project. I was still replaying earlier in the evening. Big Sister and Taylor. I disappointed her. I disappointed both of them. I hurt them and it made me hurt. I had to work extra hard on this so they knew I was sorry, but I couldn't concentrate.

"Are you okay?" Emma asked me.

"Are you okay?" Missy asked Clarice. "You're kinda zoning out again."

"Yes," I answered them both. "I just have a lot to think about."

"It's about the real you, isn't it?" Missy asked. The real me? I wonder. To Lisa, the real me is one of the most terrifying things that hasn't actually managed to destroy a city. And even then, not for lack of trying. Missy doesn't know the real me, she only knows Clarice. I want to be Clarice. For her. For Amelia. I don't want to be Bonesaw.

"It is," I answered. Clarice was still standing, the automated systems I'd built into her allowed her to be almost completely independent, except the lack of any brain function. We'd finished our homework and were now simply stretching our legs. Missy's exercise program, which I kept her company on. "You knew from the beginning, didn't you?"

"Ever since I first saw you on Bella," she confirmed. "It wasn't the real Taylor, either. That's how Chariot was able to spot the pair of you before I did. Kind of a weakness of my power, not being able to sense nonhumans. It's a different version of the M4s you showed off on the news, right?"

"Different model," I answered. "This current version is M7C." I had Clarice gesture over the body.

Meanwhile, I was looking over the newest design with Emma. We hadn't quite perfected the antigravity tech. Part of the problem was that Chariot and Kid Win, the tinkers that actually understood this stuff, couldn't be allowed to work in this lab. Too likely to discover me. Emma made a fine bridge, of course, explaining the details in a way I could use properly. More importantly, she could use it. My skill was in augmenting biology with technology. It was a broad spectrum of talents, to be certain. But building new life, the way Rey and Amelia and Emma could do, or understanding the intrinsic way brains function the way Cranial and Rapture did, these were not talents of mine. To say nothing of the frustrating Taboo barrier.

"You're going to show me who you really are, sometime, right?" Missy asked. "It's hard knowing a friend is keeping such a huge secret from me."
"Big Sister doesn't want me to," I admitted to her. "She wants me to keep that a secret from you, but she's upset because I kept a different secret from her."

Missy frowned. A few sensors in Clarice tripped off their alerts. Her heart rate went up, her pupils dilated. A sign of strong negative memories. "That's how parents act, sometimes. They can be dumb about things. You'll learn that as you get older."

I frowned, and Clarice mimicked it.

"Are you sure you're okay?" Emma asked. I nodded, Clarice did not.

"I kept a pretty bad secret from her," I said. "And now she hates me. So I'm going to make her something really nice so she wants me back. Then we'll be friends again."

"That's not how it works," Missy said, looking at me. "You don't become friends just because the other person is useful to you. You become friends because you treat each other good."

"But what about the pegasus I promised you?" I asked. "That's how we became friends."

She sighed. "Is that what you think?" I didn't need Clarice to tell me that was rhetorical. "I'm friends with you because you're funny and smart and nice to be around. Sure, having a flying horse would be awesome, but that isn't necessary. Did you give Theo any cool stuff?"

I stopped and thought about it. "Well, Amelia gave him a tune up so he could get into shape faster," I answered. "But other than that, his power doesn't really work in a way that we can improve."

Missy frowned. "Okay, nevermind. He's never done anything 'useful' for me. He's nice to me and doesn't expect anything other than that I'm nice to him."

"Reproductive imperative," I answered. "He's a strong candidate as a viable mate for-'"

"Eww!" Missy shouted. "Just. No. First, I'm thirteen. Second, I don't expect to live long enough to have children. Third, I don't even want kids."

"Oh," I said. "Is this why Amelia said they wouldn't get married until all the Endbringers are gone?"

"I have no idea," she answered. "Before last night I thought they were, y'know, lesbians. Now I think they're just weird. But let's get back on track. I like Theo because he's a good person. Just like I like Jenny because she's nice. She doesn't have any powers or anything 'useful', she's just nice."
"She says her brother's got a crush on me," I told her.

"Her brother, most of the other boys in the school, and probably a lot of the girls," Missy added. "You're like the second coming of Glory Girl. Only I think you're nicer than her, even if you don't realize it."

"Really?" I asked "Why?"

"Well," she smiled. "You did basically throw Theo at me. Don't think I didn't realize that you were over there playing 'matchmaker'. I'm pretty sure Theo figured it out, too. So, here's a question, miss 'reproductive imperative'... why would you do that for me? If he's such a catch, wouldn't you be better off keeping him for yourself? Or is there someone else you think's better?"

I paused. That was a really good question. Sure, my body hadn't matured to that point yet, but it was only a matter of time. I had no interest in halting my biological development. "Because I wanted you to be happy," I finally said.

"Exactly," Missy replied. "That's what friends are, people who want you to be happy, and who you also want to be happy. Sure, you can build teams off of 'useful' and 'not useful', and probably should. We'd be pretty bad friends if we tried to make Jenny fight supervillains."

I laughed, and with me Clarice. Emma just looked at me funny, and went back to explaining an electromagnetic coil system that was needed to divert gravitons, creating a bubble in which gravity didn't exist, or at least was greatly diminished. We'd start there and then work on more complex gravity channeling technologies over the course of potentially weeks. It wouldn't be ready by the time the next Endbringer battle occurred, but the one after we'd be ready.

"That doesn't mean we can't be friends with her, that just means we can't have her on a team with us, for her own safety and ours," Missy explained.

Clarice nodded. It made sense. Jenny wasn't really my friend, not like Missy was. But I wouldn't want her to be hurt. I hurt a lot of people that had friends. Emma was suppose to be Taylor's friend, and hurt her. Missy would never do that to me. I... I couldn't do that to Missy. "I'm not a good person," I finally told Missy. "I've done bad things. I still do bad things."

Missy just looked at me. "What did you do?"

"I can't say," I answered. My memories went back to my projects, my art. There were too many for me to remember, even if I had bothered to learn their names in the first place. They were meat, not
people. Not anymore. Working on Emma was one thing, she volunteered. The ones before. I'd almost taken apart Taylor, who later became the only person who made my Big Sister happy. How many others had I stolen happiness from for my projects?

"I can't tell you without breaking my promise to my Sister," I told Missy. "I already broke my promise not to hurt more people. I broke my promise to my mommy to be a good girl."

"They said your mother was killed by the Slaughterhouse Nine?" Missy asked.

"Yes," I answered. And my father, and Drew, and Muffles. And a lot of other people. A lot of them I killed.

"Okay," Missy said. "You don't have to talk about it. Amelia saved you from them."

Saved? Did she? "Yes."

"Then I don't need to know," Missy said. "You can tell me later, but Amy saved you and now you're my friend. That's enough." She put her hand on Clarice's arm. I couldn't feel it, because I couldn't run the sensory overlay while still doing other stuff in the lab, but the gesture was appreciated. It would be nice to be able to hug my friend with my own arms for once.

"She's still mad at me," I said. "How do I make her not be anymore?"

Missy shrugged. "I don't know. Amy has always tried being nice to everyone, even if her bedside manner left a lot to be desired. Have you tried apologizing? Not bribing her. Just. Admit you made a mistake and tell her you feel bad."

Would that work? "I'll try it," I agreed. "You're really smart at this stuff."

She patted Clarice's head. "As smart as you are, it's easy to forget you're so young sometimes."

"I have to go home now," I told her. "The changeling still needs time to heal, and I have my chores to do."

"Oh, okay," she agreed. "Thanks for helping me with my homework."

"What are friends for?" I asked. I guided Clarice outside and it wasn't long before she was speeding home on autopilot. Sure, Missy could have made it faster, but she still had a secret identity to worry about. Besides, it was good to let people know we were still around doing our thing. Just because
everyone knew robbing someone now meant getting buried in cockroaches and centipedes, that didn't mean the rest of us couldn't show off once in a while.

Meanwhile, I set down the device I was working on. Emma looked at me. "We're not going to finish?"

"It's getting late," I said. "Besides, Vista told me this wouldn't help make Big Sister love me again."

"Shadow Stalker said Vista was-"

"She's my best friend," I interrupted. "And she says that friends are friends because they want each other to be happy, not because they're useful. I want Amelia to be happy, and I have to let her know. We'll get back to work tomorrow."

"Okay," Emma said quickly. "I frightened her. Good."

"Okay, you go ahead. I'll finish here and then head home."

I went to my shower room. The one that no one else wanted to use, even though it was so much faster and more efficient. They used normal, stupid, showers instead. Dropping the lab outfit in the trash, where it would quickly be digested, I climbed in, letting the system clean me thoroughly before I put on my normal clothes.

I found Amelia in her room, with Taylor. They already knew I was coming, of course. Taylor's power was easy enough to fool thanks to there being so much she was tracking, and how much of her perception was centered on that empathic bond. I wished I could study it further, but the Taboo got in the way. There was so much we could learn about how the Passengers worked with one another, if not for the that.

"What is it?" Big Sister asked.

"I..." I started, then I went up and hugged her. Part so she was in contact, and part because I really wanted to. "I'm sorry. I wanted to help you because we needed better energy tech and we didn't have anyone and Emma wanted to help. I didn't think about how it might hurt you."

I was good at reading people, and I could tell the point where Taylor realized, through Amelia, that I was telling the truth. She didn't really like me, and I knew that. It didn't really matter to me before now. But she made Big Sister happy. I moved my arm and hugged Taylor as well. "I'm sorry for everything I did to you, too."

Taylor put a hand on my shoulder. It wasn't quite a hug, but it was the closest she'd ever come. I thought back to what I'd done to her, and with it what I'd done to others. I would have another
nightmare, tonight. I could already tell. "Can I stay in your room tonight?"

Amelia froze. She was reading my emotions, much as she did with Taylor, only not quite so directly. She couldn't share my feelings, but she would know what they were. She knew I was sorry, and she knew I was scared. She was going to say yes. She looked at Taylor for permission.

"It's okay," Taylor said. "I should go home anyway. I think my dad might be getting the wrong idea about us."

Amelia laughed, and I was glad. Even if I didn't get the joke.

============= 

A/N- Man. You can just carve the forshadowing in this chapter with a knife.
The last day of school was a formality. Class, such as it was, existed only to give us an ad-hoc report card that was more or less to pretend we'd learned anything. Three weeks of classes we were graded as if it were an entire year. Sure, I suppose a few classes mattered. A refresher on math probably helped for next year. If there even was a next year. A chance to say goodbye to friends, swap numbers if we hadn't already. Schools were being reopened elsewhere soon enough that everything would be back to as close to normal as could be expected in a post-Leviathan city.

"So," I said slowly as I leaned against Taylor under what we had basically claimed as 'our tree'. "Given any thought about school next year? Or month, as the case may be?"

"Kinda," she admitted. "It's nice to have things be normal again. I was always good at school, and now I'm like a dozen times better."

"Cheaty powers," I smiled up at her. "So unfair."

"Well," she smiled back. "I can't turn a dead world green in a matter of weeks, so I have to get by any way I can."

"It's only most of North America so far. And you're as essential to the terraforming project as any of us," I nuzzled against her. "After all, you're the one who sets the spore birds on their way."

"Schoolgirl by day, superhero by night, world's worst girlfriend in the evening, and glorified cropduster pilot once every couple days," she joked.

"Oh, that's not true," I laughed. "There's gotta be, like, at least three girlfriends out there worse than you."

"Speaking of which," she said. "We're not going to stop the exercise routine just because school's out. I expect you up at the same time tomorrow for our jog."

"Don't complain," she laughed. "You're getting better at an incredible rate. We almost hit a mile today, and we started less than a week ago." Realization Worry Regret. "Umm... must be all the fresh air you get in that tree."

I'm in such good shape because my lower half was blown off and replaced, I thought. "No sense in
letting it go to waste," I agreed, avoiding the topic. Something we could avoid thinking about, so we did.

Instead, I changed the subject. "So, any thoughts on our first meeting with the new PRT director? Or our response to Emma's apology when it finally goes up. They still haven't dug all the way into mine and Clarice's backgrounds."

She offered a bit of a smile. "That's mostly Lisa's job. I prefer to wing it. More natural that way. The Director's going to be with PRT and Protectorate capes, not the general public. I doubt I'll be wowed speechless by Emma, when we get around to that. And I already know about you and Clarice. I still think you should announce that last one yourself. Girls go crazy for that whole 'dark past' thing."

"Speaking from personal experience, huh?"

*EmbarrassedNostalgia.* "Seems to work on you," she answered. "Also Missy. She's been spending a lot of time with Theo."

"Easily the most adorable couple ever," I agreed.

"Oh, and in other news, I think my dad's dating your aunt," she told me.

My mind went blank for a moment. "You're not kidding."

"Nope," she looked up. "I don't think either of them have figured it out, either."

"How does that even work?"

"My dad's pretty oblivious in general," she answered. "And I think Sarah isn't quite ready to look for a new relationship. I mean, sure, the 'cape' life forces you to cope with some really fucked up shit, but it hasn't even been three months. For right now, though, they seem to enjoy each others' company."

"Just don't mention this to Clarice," I warned. "After us, and Theo and Missy, I think she's come to the conclusion that she's an expert matchmaker and might try to 'speed things along'." *DreadDisturbed.*

"Yeah. We'll put that on the list of things that can never be allowed to happen," Taylor agreed. "Right alongside the chicken flavored crickets idea."
I shuddered.

"Looks like Dennis wants something," she said, pointing out the redhead that was Clockblocker. He looked a bit sheepish.

"Hey, umm," he said after approaching us. "Do you know where Zach-"

"Girls locker room," Taylor answered. AmusementSympathy. "You're better off just writing them off as a lost cause."

"Fuck," he muttered, leaving.

"So, do I even want to know?" I asked.

"Zach stole his underwear," she answered.

I buried my face in my hands. "Okay," I muttered. "New plan based on the chicken crickets. We forcefeed Zach some normal flavored crickets. How's that sound?"

"How about grasshoppers?" she asked. "Those fly and it'll be easier to catch him off guard."

....

"Why'd she have to go?" Zach asked.

"Other work to do," Rey sighed. "I knew she couldn't stay forever. We're going to stay in touch, see each other when we can. It's only a few hours away from Montreal."

"What's she doing up there?" Crystal asked.

"Heartbreaker's children," Lisa answered. UnderstandingWorry. "Lots of them have already triggered, almost all with master powers of one sort or another. Others probably will. They've all been exposed to varying degrees of master effects for pretty much their entire lives. There's literally no one more qualified on the planet to deal with this kind of thing than Rapture, and the second place belongs to Dragon. Who, being Dragon, is already inhumanly busy."

"That's it in a nutshell," Rey answered. "She stayed around about as long as she could get away with."
"But, we're not a priority," Taylor replied. "We've settled down into a 'known element'. Powerful, but not a threat. Haven's had its look at us, and doesn't have enough of an issue to consider it necessary to keep her here watching us."

"It helped that Rapture's been convinced we're not taking the whole 'divinity' thing seriously," he supplied. "They were worried about that. So we're in the realm of 'bad taste', instead of 'dangerous egomaniacs with way too much power'."

"I'll remember to try harder next time," Lisa commented.

"And when Dragon personally requested her help," Rey continued. "Well, it's kinda hard for anyone, especially a tinker, to turn down Dragon."

"So we're back to playing without the adult supervision?" Zach smiled. "I'll go find out what kegs cost these days."

"Do it, and I'll ask Vista and Riley to find a way to stuff you inside it," Crystal threatened.

"Yes mom," Zach whined.

"Also, why does your breath smell like grasshopper?" Surprise-Amusement-Shock. I smiled. My cousin always did know how to go along with a joke.

==============

A/N- The grasshoppers become a running joke for a while. But that tapers off eventually. Kinda like pranks in real life.
"Thank you for meeting with us on such short notice," I said politely to the members that Pantheon had chosen to be their representatives. Minerva, Gaea, Khepri and their newest recruit, the supervillain Blasto.

I, meanwhile, had Triumph and Miss Militia flanking me. Truly a pity, honestly, that the rest of the PRT was trying to remove our members. A logical move, but one that merely put me in charge of PRT soldiers, instead of in control of proper parahumans. Now that Assault and Battery were moving to New York to make up for Legend's absence, this left me with two Protectorate heroes and four Wards. Granted, it also left me with nothing to use them for.

"We should be the ones thanking you," Minerva responded expertly. "I empathize with how difficult it must be, cleaning up your predecessor's mistakes."

"Yes," I said with a practiced neutral demeanor, breaking timelines. There was no real purpose in using different lines. We were both going off of a script, if a somewhat ad-libbed one. We would be polite, negotiating without making any promises or concessions. Something of critical value that I could present to the other Directors. "I apologize on behalf of the PRT for your troubles. I worked with Director Piggot many times over the years, without realizing how unstable she was."

"I must apologize as well," Miss Militia interjected. I had suggested she should, when we had the opportunity. Putting more blame on Piggot, and of course allowing Pantheon to be suitably gracious.

"It's really not your fault," Gaea answered. "Either of you. It's just good to have everything in the open so something like this doesn't happen in the future."

"I really shouldn't have underestimated Tattletale when I had her under my control. Or Skitter, for that matter. Truly, my first real mistake was being so forceful in my recruiting practices. Followed by letting them know about Dinah. Some days, I wondered if I should have kept the other path that day. In which the Travelers and Undersiders all survived, at the expense of Jack Slash, Bonesaw, and Siberian escaping. I wasn't even certain what differences I caused that created such a massive divergence. To call it frustrating would be an understatement.

"It's really not your fault," Gaea answered. "Either of you. It's just good to have everything in the open so something like this doesn't happen in the future."

"It may yet prove to be a master effect," Minerva responded, though we all knew better. "And thus not truly Director Piggot's fault. Still, I feel it highlights a flaw in the PRT's regulations that a single unhinged individual could cause such trouble. And that the parahumans that worked closest to her didn't feel comfortable reporting their concerns. If Legend or any member of the Protectorate under her command had someone to go to with their misgiving, we might have avoided this disaster outright."

"I'll mention your thoughts to the other Directors," I offered. Again, part of the plan.
"They want us to grant more autonomy to the Protectorate?" Tagg scoffed. "Dictating terms to us."

I remained my usual passive self. My other self started with the possibility of M4s for our own forces, and this one with their request first and then leading into the offer. Psychologically, the responses would be significantly different despite containing all of the same information. Conventional wisdom was often split on whether to lead with the bad or the good in a negotiation, and both had merit. I had the advantage of testing both.

"As I understood it," Costa-Brown mused. "They didn't dictate a thing. They simply stated a source of trouble and their opinions on how to fix it. I must say, Director Calvert, you've managed to repair relations with Pantheon and the rest of Brockton Bay in record time. I had feared it would take years to regain goodwill in the region. At this rate, it may only take months."

"Thank you, Chief Director," I said. With a modicum of surprise. "More than that, Minerva's suggestion is for the heads of the Protectorate to have functionally equal rank to the PRT Director of a region."

"That defies the whole function of having a Protectorate," Tagg countered. "I am aware of that," I answered. "I've also seen their remote control soldiers in action."

"Did they impress you enough to believe it's worth the loss of control over the Protectorate?" Armstrong asked. "More," I answered. "It is my belief that a mere two hundred per major city would be enough to render the Protectorate nearly redundant."

"Excuse me?" Costa-Brown asked. "Our intel didn't indicate they had that kind of ability. In terms of the effectiveness of the M4s, or their ability to mass produce them."

"Their current M4s do not," I confirmed. "They've acquired a new tinker, she has helped design an upgrade they're calling the 'M6'. Their capabilities are significantly better, to the point that they are individually superior to many parahumans. If we had them during Elisburg, we would have won the encounter."

....
"This is Emma," Minerva supplied, gesturing to the new girl. Solid red coloration, including glowing eyes. *A case 53? I had no knowledge of her. Tattletale didn't brief me, wanted to disrupt me, for nothing more than her own amusement. That frustrating b-. It was actually not a bad tactic. I didn't have to feign surprise if I actually was surprised, and there's no reason I should know about this girl. I must have stood there not saying anything for too long, because Minerva spoke up again. "Yes, that Emma, from the news."

*Ah, her.* That gave me a basis to respond. "And you accepted her into your organization?" The question was directed mainly at Khepri, of course.

"She wants to atone for her mistakes," Khepri stated. "She'll be issuing a formal, public apology at some point in the near future. For now, she's our foremost expert in upgrading our biotechnology to anti-Endbringer status. Go ahead, Emma, explain the new designs."

"First," the girl said in an energetic, teenager voice. "The power system has been greatly improved. Allowing us to add greater customization to the armor. Stealth systems, superior sensory abilities, even flight capability in the near future. That advancement is why we scrapped the M5s and moved onto the M6 without releasing the prior design."

"We've also designed portable suit building systems," Khepri added. "Right now, you can take them anywhere, set them up, and they'll grow M4s as matter is fed into them. Once the M6 is designed, we'll be able to distribute seeds that the growth pods will absorb and start growing the new designs. An average landfill should be able to provide at least a hundred of them. More as you supply heavier elements. If any are damaged, simply throw them back into the feed system and they'll be digested and replaced."

....

"They allowed one of the individuals who tortured Khepri into a Trigger Event on the team?" Gutierrez asked incredulously. "Are we sure the Emma story isn't a fabrication? Some kind of media stunt?"

"Unlikely," I answered. I was aware of some of Skitter's school history before the information became public. "It appears Miss Barnes triggered due to stress from the story coming out. She's locked in a permanent breaker state of a sort, which my analysts believe might be a psychological fear of being seen in her natural form. I find it unlikely they have the wherewithal to fabricate that."

"Fits their psych profiles," Costa-Brown agreed. "Pantheon has a predictable pattern. They treat their enemies with merciless brutality, and their allies with what might be considered excessive generosity. A similar pattern to what was shown by the Undersiders. The most obvious conclusion is that this is Khepri's influence."
"Much like the divinity they took as their theme," Armstrong agreed. "As long as people are complying with their desires, they're magnanimous. When not, they range from actively hostile, to a kind of passive aggressiveness that might even be more devastating than a straightforward attack."

I frowned. It was, essentially, what they'd done to me. I opposed them. They destroyed me. Then they recruited me and gave me almost everything I wanted, as long as I promoted their goals. It had cost me my grip on the underworld of Brockton Bay, if only because there no longer was an underworld. It cost me Dinah Alcott. But, indeed, I was in position as a PRT Director. With my power and Pantheon's support, I could easily become one of the most influential Directors. So long as I was subor-partnered with them.

"Speaking of passive aggressive attacks," Niles frowned. "They have us over a metaphorical barrel."

Tagg's voice didn't hide a small amount of scorn, which everyone chose to ignore. "Care to share your thoughts?"

"These new machines, if they're a match for even moderate ranked parahumans, could render the PRT entirely obsolete. A city typically has an active police officer per four hundred to one thousand people, depending on a number of factors. The largest cities can easily have over ten thousand police. If they can provide enough M6s to give every officer their own."

"It would render us obsolete," Costa-Brown concluded. "Even the M4s are valid in combat against most capes, with enough numbers. A large city could potentially field thousands of them."

"And police officers face fewer restrictions than the PRT," Tagg concluded. "They can enforce standard crime and if they happen to encounter a cape in the process, even one out of costume, then there's no repercussions beyond what that parahuman can inflict. Which is, at worst, the destruction of something that's grown out of compost and scrap metal."

"Or respond with lethal force against villains without need for a kill order," Niles added. "Resisting arrest during a crime is all it truly requires to justify lethal force in many parts of the United States."

Costa-Brown interrupted. "I find it suspicious that Pantheon's... request... comes so soon after Dragon made her own ultimatum about cleaning house, as she put it. It seems likely that Pantheon and the Guild have coordinated this between them."

I hid my surprise. I wasn't aware of that. Was Pantheon? If so, why didn't they tell me? Did they want me to look st-. They must not have known. I would inform them later."Possibly," I answered. "Dragon did have a private communication with Pantheon near the end of June. As well, Pantheon is providing protection and other assistance to the precog Dinah Alcott."

"So they're blackmailing us," Tagg said darkly. "And it sounds like you're going to give into it."
The Chief Director frowned. "We can hardly call it blackmail," she said. "Closer to bribery, with an implicit threat that if we won't accept their terms, they'll find someone else who will. This might cost us some discretionary funding in the overhaul, tie our hands with how we handle the Protectorate, but ultimately it sounds like it might be worth it."

"I agree," Gutierrez stated. "I think that simply the agents we lose in battle with parahumans is enough of a motivator. Hundreds of men and women each year. Even without considering the superhuman capabilities of the M4 or M6, their value as disposable targets cannot be overstated."

"The morale and public relations value is nothing to ignore, either," I offered. "Capturing or killing a parahuman at the cost of even one of our men is a tragedy that taints the victory and makes it much harder to convince the public that it's worth the effort. We could sacrifice a thousand M6s on a mission and still call it a complete success as long as we achieve our objective."

Niles chimed in next. "We can pull funding out of our other costs, as well. Combat pay, injury costs and medical leave for example. Probably make recruitment drives easier as well. There's little downside to this, aside allowing more parahuman autonomy. Which isn't as problematic as it could be, as our entire field model would change. The PRT would be able to lead in the field, with the Protectorate as our backup, instead of the other way around."

"All things well worth considering. I think we should at least hear the full extent of what Pantheon and Dragon are asking for," Costa-Brown replied. "It costs us nothing to listen, except our time. Niles, I'd like you to head a committee to determine where we can pull funding from. Director Calvert, thank you for your contribution thus far. I trust you're up to the task of engaging Pantheon on this topic in the future?"

"Yes, ma'am," I responded. *I was being all but handed a victory here. If only it was really mine instead of th- ours. A shared success.* "It may be some time before they're ready to commit, however. They seem to be devoting most of their attention to the Endbringers."

A/N- This chapter is one of my personal favorites. I feel it captures the sort of 'the more you think about it, the less comfortable you feel' vibe I strive for in this fic.
To the concerned citizens of the Youth Guard.

I would like to thank you for the advice you have provided on the handling of young parahumans. The list of regulations you have negotiated on behalf of the Wards over the years has been an unpleasant enlightenment as to the disturbing risks of abuse and neglect that other organizations have shown in the past. Hopefully the information herein will show we take the lessons of the past to heart.

To begin with, Pantheon would like to make it clear that we are not a military or police organization. We are not government funded, and we have no legal authority beyond that of any other recognized independent hero team. All members of our organization are volunteers. There are no contracts or obligations binding our members to us, and they are free to refuse any request or to leave permanently at their own volition.

We encourage our members to avoid the traditional superhero lifestyle. Instead preferring to champion such examples as Parian and Dinah Alcott, who use their talents for peaceful and lucrative businesses that they manage themselves. We discourage vigilantism and have taken highly publicized steps to remove the need for young superheroes, or indeed anyone, to risk their lives against such things as mere street crime.

For all Pantheon members who desire 'field' experience, we recognize the excitement and romanticism some feel for the vigilante tradition. Furthermore, we have nothing but respect and admiration for those who step forward and provide aid during the Endbringer conflicts. For these members, we still consider safety our highest priority. As such we have standard protocols applying to our members during hazardous situations.

Unless rendered meaningless by their powers, all members are provided hermetically sealed full coverage armor. This generic outfit compares to other tinker armor at a value greater than two hundred thousand dollars, and provides at least partial protection against most forms of attack. In addition, we often customize armor for specific parahumans, such as Khepri's Matriarch, Eki's Radiant, Gaea's Dryad, and my own Huntress. Use of this equipment in the field is non negotiable.

Our commitment to encouraging the student members of our organization to excel in school will take time to demonstrate fully. We believe the decision of our own leadership to return to school proves our intentions. A decision which resulted in Khepri's civilian identity being compromised. Despite the media circus that ensued, she chose to finish the school year. In this, as with everything, Pantheon strives to be the leading example of how things could and should be.
Sincerely,

Minerva.

"I can offer no defense for my actions against Taylor," Emma stated for the reporters. "I would like to make it clear that her sexuality wasn't the reason I targeted her. I didn't know she was gay. I, I have problems. Blaming others for my own failures is just one of them. Even now I find myself wanting to blame Sophia for encouraging me and protecting me from the consequences of my actions until it was far, far too late to turn back."

She paused for a moment. She may not be blaming Sophia, but some people would. And they'd blame the Protectorate through her. Or at least Piggot, since the PRT threw her under the bus.

"The simple fact is, Taylor was someone I saw as an easy target, someone I could hurt without fear of repercussions. Someone the teachers didn't care enough about to protect. That was the reason I chose her, and if I hadn't, I would have targeted someone else, instead."

I stood watching her. Amelia stood beside me. SupportConcernLove. I'd already read this speech of Emma's. Knowing it was coming, that helped. Having Amelia here, that helped more. And, if I was honest with myself, my test run of the new, fully functional UltraLisks was a high I was riding on for all it was worth.

The new variants were almost thirty feet tall. Granted, Behemoth was our next fight and he had that beat by half again, but I had two of them and if the fight was 'on schedule', I'd have five more by then. The idea of fighting side by side with Alexandria on the front lines was a thrill. Especially compared to my virtual helplessness against Leviathan.

"It was sick and wrong and I have no excuses," Emma continued in the foreground, putting all her skill at faking sincerity to use. "I see that now. I see a lot of things differently, now. I'm not asking for forgiveness because I don't deserve it. I'm not asking for understanding because I don't think I could explain it if I tried. All I'm asking for is a chance to fix things. To make things right again. That is why I'm here today, and why I am joining Pantheon. So that I can help, and I can try to make up for the things that I've done."

CalmSupport. Oh, I'd been letting it get to me again. I focused on our mantra. Accept and push through. After all, it was that or break the bond. I wasn't about to accept that as an option. Emma stepped back, not bothering to answer questions. That, that would be my job. Our job, I amended, looking at Amelia.

We stepped up to the podium.
"I'm sure you have lots of questions," I started. "We'll see if I can answer them preemptively. Yes, I am accepting her apology, and her offer to help. I've done no small amount of wrongs in my life. I robbed a bank using deadly spiders as a threat to terrify innocent people. I helped attack a party that at least some people in this audience attended. Acts of terror and violence, not unlike what I'd suffered at the hands of my attackers. To claim my motives were better is hollow at best. I could hardly ask for others to forgive me if I can't do the same in their shoes. And I owe a great deal to the forgiveness of at least one of my victims."

I reached over and grabbed Amelia's hand. As it stood, I really was touched deeply by her forgiveness. Even if it didn't quite extend to Tattletale, yet. Then again, mine didn't extend to Riley, either. Amelia was getting there, that would have to be enough for now.

"There's a story going around that she hit you with a fire extinguisher when you first met," One of the reporters asked. "Is that true?"

_Oh god, that story._ "It's true," Amelia answered. "And I'll do it again if she gets too uppity." That earned a few chuckles. _When did she start telling jokes like that?_ "But of course it's true that I've forgiven her for that. I hope others can do the same."

"Do you extend the same forgiveness to Legend?" one of the reporters asked. Expected question, if not an expected path to get there.

"Of course," I answered. "One of the unfortunate flaws in any military system is a fear of contradicting a superior officer. Legend has otherwise proven nothing but honorable and steadfast in fighting the good fight. One mistake shouldn't be allowed to destroy that legacy."

"Dragon credited you with helping develop the anti-master drug," another asked. "How does it work, and are you planning to develop it further?"

Amelia's question to answer. "I can't share how it works," she answered first. "Security reasons. I would rather avoid others designing an antidote to our antidote, as I'm sure you can understand. Further development of the treatment is on hold for the time being, although it is a project we will visit again in the future. For now, we are dedicating all our efforts to the coming Endbringer battle."

"So Pantheon does still intend to show for that fight?"

Amelia looked at me and nodded. _EncouragementYield._ She preferred that I handle this. "Yes," I answered. "We have a number of new weapons and strategies prepared for the next attack. M4s intended to assist search and rescue. New variants on insect life that I will be able to use to fight the monsters more directly. When Behemoth appears, we will be ready for him."
"Care to share any of these weapons?"

"Absolutely," I answered. "But only one for now, we'd be here all day otherwise."

The ground shifted and opened, a tunnel to our zergling pits. I selected one of the variants and let it up the path. "This is a shadowcat," I informed them as they got a good look at the six legged tiger-like creature. Or, it would be like a tiger if it wasn't hairless and covered in black chitin. "With a top running speed of almost sixty miles an hour, and a fifty foot vertical leap, it's an effective mover. It is also a powerful combatant that ranks a brute five. In addition, it can track tremors in the ground to follow Behemoth's path, and the sails absorb radiation."

Blue winglike membranes snapped out from near the shoulders and hips of the creature. "I can't demonstrate for you, as the effect would disrupt your camera equipment. When activated, it creates a powerful electromagnetic field that consumes almost all energy directed through the area, and uses it to boost the Shadowcat's speed and strength. Against Behemoth, it means the safety of all nearby capes. In addition, it will draw Behemoth's electrical attacks. We don't honestly expect they can survive a direct hit from Behemoth. We do expect that sacrificing an easily replaceable decoy to save a human life is an obviously correct decision. Especially as we're likely to have three times as many shadowcats on the field as there will be capes."

Chances are, the reporters wouldn't be as interested in this as the capes who saw this broadcast. And that was fine; we didn't need reporters to show up for the Endbringers. I did have the thing do its leap- thirty feet was actually a very accurate number. We would be attempting to swarm Behemoth with these things, perhaps draining enough energy from around him to lock him down entirely. Probably not, but they weren't the real weapon anyway.

=========

A/N- That formal letter in the beginning of this chapter sucked to write. Worth the effort. But it was a lot of effort.
"They're late," Crystal muttered.

"I'm having a real hard time finding a problem with that," Taylor said. "Parahuman violence is always lower in the week or so leading up to an Endbringer, and we're producing a new Gargant every day. I'm okay with having fifteen of them instead of the eight we expected. Another couple hundred shadow and frostcats don't hurt, either."

"I meant Flechette, Parian, and Vista," Crystal corrected.

"Oh, right," Taylor responded. *SheepishConcerned.* "Sorry, my head's elsewhere."

"Why can't we call them Ultralisks and zerglings?" Zach complained.

"Because that's been taken," Crystal responded. "So when are they suppose to be here? I wanna open our Christmas presents."

"Vista's mom is still mad at her for leaving the Wards," Clarice stated darkly. "She has to sneak out."

*DistasteConcern.* I frowned. I hadn't considered what this recruitment meant to the home lives of our recruits. Vista, especially, given her age. That and it was starting to annoy Riley. I wasn't sure what, if anything, she'd do about that. But she was only slightly less protective of Missy than she was of me.

"I'll have a talk with her," Lisa volunteered. "I was kinda hoping the Endbringer fight would have happened first. Then we'd have better chips on the table."

I wasn't so certain about Lisa, lately, either. She'd been different ever since Rapture left. Quieter, less brash. It was nice, but concerning.

"How about if I talk to her?" Theo volunteered.

"Probably better," Lisa agreed. "If all else fails, let the part where you're heir to a billion dollar estate slip. That'll get you in her good books all by itself."

*Oh. Well that's just lovely,* I thought. Theo didn't look like he was happy hearing that, either.
"I've managed to sneak Vista out of her house," Taylor informed us. "She'll be here in... okay, nevermind, she's here. I just sent her to grab the lovebirds. So let's get this party started."

We went to our lab subbasement. The one that was used for most of our group projects. It was separated from the rest of the labs by a membrane wall that, at this point, only our 'main' members could access. While Kid Win and Chariot had been extremely helpful, we couldn't trust them with the secret that was Bonesaw. Not yet, perhaps not ever. She stayed in other parts of the labs, and I had taken to staying with her, since she could no longer move freely about our home.

By the time we got there, Vista was already waiting above, so I opened the passage that would let them simply go from the surface down to us, without need to enter the top part of our building. Emma was already in the lab, alongside Chariot and Kid Win.

"Now that we're all here, let's see the new toys," Crystal announced. "I get to go first since you held us up enough already."

Emma was glowing with excitement. Literally, as the case was, casting red light from her eyes like a couple bright torches. "That one's my personal favorite," she agreed. "Radiant Variant Four."

"What happened to the V3?" Crystal asked.

"It sort of caught on fire, then melted, then exploded," Emma admitted. "Don't worry, that won't happen again. We tried. Go ahead, try it on. Same method as usual."

Crystal floated up and put her feet into the neck of the suit. It opened up and she lowered down into it, looking disturbingly like she was being swallowed by a bizarre snake. Once she had gotten fully inside, what resembled a hood moved up and encased her face, finishing the process. "Fits like normal. So, what's the new features?"

"First, the forcefield interaction has been optimized, coming to a sum total of a nine hundred percent increase in your shield strength," Emma announced. "It does take time to fully established. You'll have normal strength for about the first thirty second, and the old max in approximately a minute. Five minutes is required for full insulation. The shields will lose power as they take hits, but at our current estimate you should be able to trade punches with Leviathan for a couple minutes with no real risks."

"Nice," Crystal said appreciatively. "What else do you have for me?"

"Improved energy generation and manipulation," Emma replied. "Same anti-behemoth tech in the zerglings."
She gave an almost pleading glance at Zach. He ignored it. "It also serves to hone your attacks, reducing their target surface area to a tenth of before. More damage for the same power output, and you can now use full power to charge the weapons, without problem."

Crystal nodded.

"I tossed in a movement boosting system based on readings of Vista's powers," Chariot replied. "You should gave about triple flight speed, although it will drain the suit's energy supply some."

"And last, but not least," Kid win added. "A whole array of new weapons. You can trade out battlestaves at will, and we have six of them. Hold out your hand and say 'laser lance'."

"Okay," Crystal complied, reaching out. "Laser lance." A staff appeared in her hand, but fell away and vanished.

"Yeah, you have to catch it," he suggested. "If they fall more than a foot away from the suit, they disappear back into their pocket space."

"Laser lance," this time, Crystal caught it.

"At full power, that weapon can slice through a building," Emma informed. "They're all at full charge, and your HUD shows the list in the corner. The active one is highlighted and shows its battery power."

"Oh, cool," Crystal stated. She dropped the staff, and it vanished. "Frost lance." She caught the new weapon. "This one only has a lethal setting."

"That's my favorite," Emma smiled even more broadly. "Chris and I spent forever designing it. When fired, it targets a specific point and shunts all heat in that region into a pocket reality. Reducing approximately a cubic meter of space to absolute zero. There's no other possible setting, so only use it when you don't want the target to survive. Vertigo's your best bet for nonlethal combat, going from painful and nausea inducing to high intensity sonic bursts."

"This is insane," Crystal muttered. I could see the suit starting to swell a bit and change color as Crystal charged the system. "I'm practically a match for Legend like this."

"You might hit harder, actually," Emma corrected. "Don't have his speed, or his durability, or his versatility. But in terms of pure stopping power, you might have him beat."
"Okay, you've had your fun, let the rest of us have a turn," Missy smiled.

"I got this one!" Clarice insisted, grabbing Missy and pulling her over to one of the alcoves that held the suits. "This one's the Singularity."

Missy touched the green and white armor that wasn't too different from her own costume. "So how do I put it on?"

"Lean forward onto it," Taylor instructed. "It works like my Matriarch."

"Okay," she agreed, stepping into the alcove. The armor basically sucked her in, and sealed behind her. "Okay, that's the weirdest thing I have ever felt." she stepped backward out of the alcove. "So how's it work?"

"Use your power on it," Clarice instructed.

"What?... Wow..." Vista muttered.

"That's why we called it Singularity," Clarice stated proudly. "It reacts to and amplifies your space folding abilities, directing it along specific channels. Anything trying to get through that inch thick suit is going to have to travel the equivalent of at least twenty miles before making it through to hit you."

"Twenty miles where it will intersect with itself every twenty subjective feet," Emma added. "I based the pattern off an infinitely repeating fractal helix I saw once. We believe that the design will disrupt, potentially even blind, all thinker powers. We already know it works on Minerva and Dinah. If we're lucky, you might even be immune to the Simurgh, but no promises. As it stands, no other precog or thinker should be able to see through that armor when it's active."

"And I thought my armor was nuts," Crystal chuckled. "I got the anti-Behemoth, you got the anti-Simurgh. I... might be jealous..."

"We're not done yet!" Kid Win interrupted. "There's also a weapon built into it. The Point Singularity Projector. Right arm has a bracing system with the weapon loaded in. Charge it with your power, aim with your arm, and fire. It concentrates the wave and then it hits hard enough to destroy almost anything."

"Basically, you get to shoot miniature black holes at people," Emma explained. "Different settings have different damage outputs. The lowest setting is painful, but only life threatening if you hit the brain, but each new step up is an exponential increase. Stage two is bone breaking force. Stage three is like being in the middle of a head on collision between two unbreakable semi trucks. Five should
be equivalent to Crystal's, and on par with Legend or Alexandria in stopping power. It's the strongest we can make the weapon without it exploding."

"And none of the Endbringers have shown gravity or space manipulation powers, so you're safe to fire on any of them without a problem," Clarice added cheerfully. "Plus, with your abilities you can aim it around walls like Legend does. Only you can see people through walls so it's even better! What do you think?"

Vista was still looking at her arm. "Theo? I might be thinking about breaking up with you and marrying my costume."

"I don't blame you," he replied.

"Told you it'd be worth the wait," Clarice sang cheerfully. "So who's next?"

"I've already seen my armor," Taylor said. "It's nice, but all my real upgrades are in the form of gigantic bug monsters. Which is more than fine by me."

"Tapestry next," Clarice decided. "That's Kid Win's project."

"This one's for Parian," he said, opening the next alcove. Parian's armor was the largest displayed thus far, and in the form of a beautiful cloth doll, wrapped in blue ribbon. "We've improved on the old fabric design, allowing your outfit even more durability. Same as your current suit, but greatly improved upon. We've built systems to harness the pressurized telekinesis inside, allowing you high end flight, and a weapon similar to the Singularity made with a concentrated telekinetic beam, instead."

"It's not quite as destructive," Emma replied. "Still limited to the Manton Effect. But the nature of your power means you can, essentially, 'stick' a target with a beam. Infusing their clothing or equipment instantly and from range, giving you telekinetic control or destroying it utterly, without risking harm to the person wearing it."

"So you've given her the nudity gun?" Zach joked.

"Yes, yes we did," Emma agreed cheerfully as she looked at Zach. His smile vanished. She fell quiet as well.

Chariot continued for her. "Tapestry also has six ribbon sails that'll respond to your power, giving you a reach of fifty feet, at approximately two and a half tons of strength each. The material itself is energy absorbent, refractive and self mending, making Tapestry the second most durable suit we've designed. Also the physically strongest, from a brute measure. And the fastest, with the potential to
"You really didn't hold back on this," Parian said, admiring the armor even as it formed itself around her. "I was afraid you might, since I'm not one of the ones who goes out fighting and stuff. Thank you."

"It also uses the same fractal system as the Singularity," Emma added. "It's harder to do with yours, so you should be similarly resistant to precogs, but some other thinkers can get through."

Parian was all smiles in her new costume, especially as she had about as much control over it as I had over my Dryad. Speed of thought response is something that none of the others would have in theirs. She hugged Flechette and kissed her happily. I couldn't quite ignore my envy.

"So, last and nowhere near least, Flechette's system," Emma announced. "Azrael."

"Angel of Death?" Flechette asked, as the alcove lit up to show the solid black body suit. It had four wings extending from its back, though they more closely resembled a pterodactyl than a bird or bat. It looked positively demonic in nature.

"In many ways," Emma continued. "The most boring suit. Good antigrav flight capabilities, average durability. Better than average sensor system to take advantage of your power's trajectory senses for improved combat efficiency. We couldn't cram much more into it."

Flechette frowned. "But that's all worth it," Clarice stepped in. *They practiced this show together,* I realized. "For the nanothread system. Azrael has an incredibly complex monomolecular fiber weave layered in its skin. Allowing you to use your power on the whole armor at once. When charged by your power, the Azrael is indestructible, and can destroy everything it touches. Only you, and the Azrael itself, are immune."

Her eyes widened. I could imagine why.

"Please don't do that inside," Zach requested.

"Each wing also houses a copy of your arbalest's projectile generator," Kid Win added. "Linked up to the nanofiber system so you can charge and fire the bolts. Approximately two shots per second per wing. They travel faster than your old weapon, so you may need some practice figuring out the differences. The system can also add a powerful sedative on command. We thought of adding Crawler's acid as an option, but didn't have enough space. It's not like you need it anyway."

"You're... this is meant to be an Endbringer slayer, isn't it?" Flechette's voice trembled.
"We certainly hope so," Minerva responded. "Can't know until we try, but we have another weapon to try that we think has a better chance. We also think you're going to like your new names."

=============  

A/N- Tech porn chapter. I'm kinda glad there are so few of them. They're a fun "sometimes" food, but I wouldn't want them too often.

Also: Riley REALLY wants to be a flower girl. Unless she's the maid of honor. In which case, Missy can be the flower girl.
I woke to someone shoving my arm. "Get up!" Riley shouted. "We just got the alert. It's Behemoth."

My eyes snapped open. Costume. I thought, running over to the closet. My standard outfit simply slid onto me as it is meant to. Really, it's nothing more than a thirty pound mass of specially modified Yggdrasil. I almost laughed at how awake I was. Adrenaline is one hell of a drug.

"What about everyone else?" I asked.

"Bringing anti-Behemoth units to the surface," I stated. She'd hear me, now, thanks to the modifications to the bracer. Over eight hundred of the various cats, and a couple hundred Raptors started flowing from underground. Our full set of forces. Except the Gargants- those we kept on the other side of the portal. A thousand units, each a match for any average parahuman. All under Khepri's command. I promised my partner an army, and I delivered on that promise.

Plus another five hundred suppression pods. We were ready. I ran through the halls to the outdoors, followed by Riley.

"Dragon's sending our pickup," Minerva informed me, only half enveloped in her armor. "Two minutes ETA."

I got outside, carrying Riley thanks to the power of augmented Yggdrasil muscles. I leapt onto my Dryad, to be swallowed up. My costume merged with the armor. Riley was shifted into her place in the new design. It was the only real way we could bring Clarice with us.

A number of people were gawking at the swarm of monsters, already. Bugs got in the way, warding them back.

"An Endbringer is attacking," I stated, alerting everyone with the amplified voice function of my armor. The flood of panicked looks made me cringe. Could have phrased that so much better. "Somewhere else, we're waiting for pickup."
"Can you handle this all in one trip?" I asked, looking at Chariot.

"Uh... sure. I think. Maybe we can split it up a bit?"

"Okay," I said. "We'll set the first signal for the front lines with Gargants and icecats. Then the Raptors, then the search and rescue. We'll make sure the right groups have the right equipment."

"Got it," he teleported over to the monsters. They wouldn't really function without Taylor. The Gargants, at least, would kind of. They'd been built with instincts that could be summed up as 'that's an Endbringer, first you run toward it, then you try to kill it'. Icecats were meant to be offensive backup. The shadowcats were defensive, meant for search and rescue purposes. Each had been programmed and reprogrammed, bred for their functions. Even without Taylor in command, they would obey orders. Smarter, in some ways, than a well trained dog. In almost all others ways, they were incapable of thought at all.

Taylor dropped down in her Matriarch armor. Damn that outfit makes her look incredible. FlatteredProudExhilarated.

"So, it's time for us to kill a fucking Endbringer," she announced to the gathered group. "You all know your jobs."

"Transport the monster brigade," Vista stated. "Then it's secret weapon duty."

"Right," Taylor confirmed. "Sorry that you can't really test out your armor, but we're only going to be able to use this weapon once. The Endbringers are fucking smart. If this works, it will only work once. We make it count."

"It's Behemoth, so Theo, you stay with the Moirai," she ordered. "Also, get a code name."

"Yes, ma'am," Theo answered.

"I'll go with Chariot and Vista," said Osiris. He was wearing a cowboy hat in addition to the rest of his outfit. For some reason. Held on by strings, no less. "Gotta get the last bits sorted out. I don't have a thinker job, y'know."

"Okay," I answered. I noticed the Dragon suit. "Time to get to go," Chariot vanished, along with Vista, Zach, Flechette and Parian. And with that, the giant mass of monsters vanished from sight, one section at a time.

We waited for the dragon transportation. The five of us that would be traveling this way. Taylor and
I, Minerva, Crystal and Clarice. Complete with Riley inside the Dryad with me. The others had their own way, but they’d need us in place first. It was a relatively quick jump before we landed the first time.

Alexandria, Eidolon, and Legend stood together off to the side. He wasn't a member of the Protectorate, anymore, but they would never stop being the Triumvirate.

Minerva walked straight up to them. Alexandria stepped forward. They locked eyes. They didn't speak, they didn't blink. The dark haired amazonian beauty, and the small blond smartass. Locked in their contest of... what? Wills? Intellect? They still weren't saying or doing anything but stand there.

"Holy shit," Crystal muttered. "They're doing a Taylia."

"Oh, yeah," Crystal answered. "That's what we call it when you and Taylor do your weird psychic conversations thing. You both just sorta zone out while focusing on each other. Of course, with you two, there's more smiling and acting like lovestruck schoolgirls. This looks more like Alexandria's about to assign her a pop quiz."

*Do Taylor and I really look like that? Huh. How did Taylor's identity stay secret as long as it had?*

"Okay," Alexandria said. The first words either had spoken. She took the small signaling device that Lisa had handed her. "I'll be recommending your status be upgraded to thinker nine when we get done here, by the way."

"Flattery will get you everywhere," Tattletale responded. She was still smiling as she turned and walked back to us.

"So, what was that about?" Taylor asked, with a smile.

"If I'm a nine, then Alexandria's a ten," Minerva stated. "Or, well, not really. She's a thinker like Emma's a tinker. A bunch of different relatively minor powers that all stack together into something really scary. If I'd met her before Rapture, I'd probably hate her instinctively, just out of jealousy. Either way, she's definitely part of Cauldron and she knows that I know. We've... kinda got a meeting arranged later. Probably a couple weeks after the Behemoth fight, depending on what happens here. No need to focus my power on it until later, just the way she planned."

"But you didn't say anything," I contested.
"Didn't need to," she responded.

Some of us had others to talk to. Flechette found the Wards team from New York, and seemed intent on introducing Parian to all of them. Emma had caught a ride with what remained of our own Wards team, which was with the Boston team. *Probably closer to Clockblocker than us when the alert came through.* We still hadn't made much progress with him or Weld. Who had chosen to stay with the Protectorate, believing he could do more good there.

Dozens of other Dragon transports were scattered across the area. "Return to the vehicles. Behemoth's target has been narrowed to the Indian subcontinent."

We climbed into 'our' vehicle. It didn't appear special compared to any of the others. I don't know why I expected it to.

The next couple hours were nerve wracking. Taylor and I cuddled as best we could in our combat armors. Our reserve team had it worse, they didn't even have the news feeds from Dragon. Not that the feeds told us much of value. They'd narrowed down Behemoth's target zone to New Delhi, but the monster had not surfaced. He hadn't surfaced even as we landed in the city. *The fuck was going on here?*

We started getting out of the ships. The sun was setting on an already overcast and humid day. A rumble of thunder and minor flashes of lightning heralded the arrival of the storm. It was atmosphere like this that might lead one to suspect Endbringers had a sense of drama. "I need to make an announcement," Taylor told Dragon. "To everyone."

"Very well, I'll patch you through to all the armbands," Dragon replied. Her actual body, and Defiant, were on a different vessel. The one with Legend, I expected. But she was managing communications between a thousand different factors. Multitasking possibly on par with Taylor's own.

*DreadAnticipationWorry.* "You'll be amazing," I told her.

*FocusDetermination.* Khepri walked forward. Her Matriarch armor was the 'official' name for the 'Queen of Blades' design. Our best flier, combining a bit of Vista's power with a potent set of layered antigravity technology. Not our best 'top speed' suit, but easily our most agile one. It would take someone with superhuman awareness to pilot the thing, which is why only Taylor had that suit. Maybe we'd trade off the design to Dragon.

"Go ahead," the armband spoke to her. "You're set to transmit to everyone. I've set a subroutine to translate your speech to Hindi where needed."

She took a deep breath. "This is Khepri speaking. A number of monsters are going to appear across
the city shortly. Do not be alarmed. They are mine to command, and Pantheon's front line force. The
gigantic ones are gargants, and they will engage Behemoth directly. Let them. Remember that every
hit they take means that a cape didn't have to. They will hold the line and buy you time. Use it."

Alexandria had flown off toward the front line position, and had activated the signal. Within seconds,
the Gargants and icecats had started appearing. I could only imagine what the locals thought. The
ones that likely had never even heard of Pantheon.

She took another breath before continuing. "The tiger like creatures are there as mounts. Everyone
without mover abilities is encouraged to ride one. Turn their heads like you might a motorcycle, and
they'll turn that direction. Everyone who is capable of fighting inside Behemoth's kill aura, the blue
ones are the icecats, and they're for you. The black ones are shadowcats. They're for search and
rescue. Unless you have better mover powers, take one. They will save your lives, and the lives of
those around you." Shadowcats were Aceso's domain. She was leading the search and rescue ops, at
least for our team. Clarice's senses, Riley's medical expertise. No one could be more qualified.

"The giant wasplike creatures are Raptors," Khepri kept instructing. Her emotional state got more
confident and intense as she fell deeper into the roll of the commander. My General, the thought still
gave me goosebumps. "They are meant for blasters who don't have flight or other movement powers.
Wave at them if you want one."

Eki pressed her button, and the creatures manifested in the air. They were only around eight foot
long, but the antigrav tech kept them in the air. They weren't heavy, really. They were, however,
pretty fast. It wasn't long before most had descended to pick up riders.

"You'll also notice the giant flower buds near the front lines. Those are suppression pods. They
should counter almost all of Behemoth's attacks past the range of his kill aura. Alexandria package
capes, spread them out at intervals of about a hundred meters. That's their effective range. With even
a modicum of luck, we can make this the most successful Endbringer battle in history. Khepri, out."

She sighed. DreadExhilaration. "You're not going to mention your other weapon?" Alexandria
asked us over the com.

"Better for morale this way," Minerva replied. "We're pretty certain it will work, and if it does I'm
sure no one will complain about us keeping it a secret. If it turns out to be less impressive than we
hope..." she trailed off, but the point was obvious.

"Understood," Alexandria responded. "And the best of luck to you."

Minerva went to the command center. Taylor and I to medical. Her medical skills would be useful
enough there, and she was already in command of over a thousand troops. She was on every line
simultaneously. We were ready. I pressed the button that signaled the final jump. Parian, Flechette
and Vista appeared next to me. Along with several tons of raw Yggdrasil mass that I expanded
across the roof, allowing it to flow down the sides. Dozens of Yggdrasil-spreading creatures traversed the sewers, distributing the spores as rapidly as I could assimilate them into the whole. What took days to achieve in Brockton Bay, I would do here in minutes.

"Chariot wanted me to let you know that the Yggdrasil already has a strong footing across our earth's Europe and Africa," Vista informed me. "As well as most of Asia. He estimates a couple weeks until full coverage of the surface area."

"That's really good to know," I replied. "ETA on the world being habitable?"

"Dunno," she answered. "But we can make a quick trip home safely when we're done here, easily."

"Behemoth sighted, DA-5" the armbands announced. From our position on the hospital, I could see it myself. The ground cracked and spewed forth magma and smoke. Behemoth had chosen a hill from which to emerge, giving those of us with any elevation a good view.

The creature's head appeared, then it stopped moving, turning its face to survey the area. A face that Minerva had assured me was meaningless. It did not need eyes to see, nor ears to hear. The Endbringers, despite their loosely humanoid shapes, were less human than my Yggdrasil. However they sensed, it wasn't through any organ as we understood the concept. They were not animals. They were not alive. They were incredibly powerful and bizarre machinery from an unknown maker.

Still, Behemoth's gigantic head made a very good impression of a person surveying the landscape of New Delhi. A city armed with parahumans and Dragon suits and a thousand disposable shock troop designed solely to kill it and controlled by a single mind. His head turned around, presumably along with the rest of his body, but that couldn't be seen. He submerged.

"Behemoth is withdrawing," the bracelet communicated to us. "Repeat, Behemoth is withdrawing."

===================

A/N- This was a remarkably controversial chapter.
"You don't have to go," I pleaded. I wasn't too proud to beg, not when it came to this. "They don't need you for this."

"Sorry, Mom," Crystal answered, already in her body armor. "We've had this conversation. I'm going, and we're going to kill the son of a bitch. Then the rest of those fuckers."

"Then I'm coming with," I insisted.

"No," she responded, determined and focused. "We haven't built a suit for you. I'm on par with Legend in this gear. Maybe even better than he is. I can survive anything Behemoth throws against me. You'll get hurt. Or you'll get me hurt because I'm too worried about you to focus on the fight."

"When did you grow up into such a wonderful young woman?" I was already tearing up when I embraced her. It wasn't quite the same, with the armor in the way, but if that armor brought Crystal back home to me, then I would give it all the hugs in the world.

"Okay, mom," she said, hugging me back. "That's enough being sappy. I've gotta go now."

She went out the door and took off. She was never that fast before, I thought. She was never that fast before, I thought. Must be more of the tech she has in that armor. Was Amy telling the truth? Would Neil and Eric still be alive if she was allowed to fully flex her powers? Today would answer that question, one way or another. Either Crystal doesn't come home, or I have proof that my husband and son didn't need to die. Either way... I, I just couldn't bring myself to face this alone. I called my sister.

The phone rang a few times before Carol answered. "Did you hear?" I asked.

"What?" she said. She sounded tired.

"Behemoth just moved," I told her. "He's set to appear somewhere in Africa, according to Dragon's new tracking system."

"And?" Carol responded.

"And your daughter's going to be out there fighting that thing," I repressed the urge to scream at my sister, reminding myself that things were not good in her life right now.
"Amelia," Carol practically spit the name. "Made it pretty clear she's not my daughter. No surprise, I don't think she ever thought of me as a mother, and I never really saw her as my daughter." We'd had this argument before, more than once. In some ways, she was more angry at me than she was at Amy. After all, I was the one who insisted she adopt the little girl. *I should have been the one to take care of her. Things would have been so much better if I had.*

"Okay," I sighed. "If you've given up on Amy, then fine. My daughter is going to be out there fighting as well. Your niece, Crystal, in case you've forgotten. Or are you going to disown her, too? So help me, I will personally come over there and kick your ass if you dare suggest something like that."

"I..." Carol took a breath. "No. Sorry, you're right, it's just, things aren't in a good place right now for me and Mark. You're inviting him, too, aren't you?"

In her question was a hope that I wouldn't. I had to disappoint her. "The whole family," I insisted. "We should all be here for this, no matter what happens."

"Okay," she replied. She didn't hide her disappointment. "I'll be there soon."

She hung up, and I started dialing the next number.

-----

"You remember to stay safe," I insisted to Taylor yet again.

"Dad," she rolled her eyes while removing the material covering her suit. Some kind of plant that heals and recharges the thing. Any other time, I'd be yelling at her for leaving the dried pieces on the floor. Not today, however. If the only thing I could do to help her was clean up dry leaves on her floor, I could do that.

"I've already fought one Endbringer, and I did it with bugs," she assured me. "This time I have a whole monster army that exists for the sole purpose of fighting them. Behemoth doesn't stand a chance. I'll be home in a few hours, but don't worry about cooking anything. It's a long trip and by the time we get back, the Mayor or someone is going to invite us to a fancy dinner somewhere. Pick out a suit and get ready for free food and thorough ass kissings."

*Ah, the confidence of teenagers.* I hugged her before she climbed into the creepy looking body armor. I wasn't so sure I approved of how overly 'feminine' the design was, either. *Why did she have high heels built into it? She's tall enough already.* "You're just like your mother," I told her. It was true, of course. "You both find a cause and throw your whole heart into it, heedless of the risks and costs. I hated that about her almost as much as I loved it."
"Thanks, dad, love you too," she paused for a second. "So, do you think they'll let us keep Behemoth's head after we kill him? Halloween's coming up, and that'd be the best jack-o-lantern ever."

I chuckled. The joke wasn't funny, really, but this was her way of getting back to less emotional topics. "Long as you have somewhere else to put it. I don't want that thing in my house."

She broke the hug and stepped into the suit, casually allowing it to split and grow around her, then she hovered her way to the door. I smiled. *She wanted the power to fly ever since she was a little girl,* I thought to myself. *I guess I should have known, even then, that she'd become a superhero.*

Not long after she left, the phone rang. *Sarah's home phone.* "Hello?" I asked.

"Hi, Danny," she said, unable to hide the tremble of fear in her voice. "I wanted to invite you over. Have the whole extended family together when, y'know..."

"Yeah," I answered. "I'd like that. Just give me a few minutes to get things sorted out, here."

Crystal was surely going with the others, so she was as terrified as I was. Not a lot of people could understand what it felt like to watch their children running off to slay a monster. Of all the things I worried about when I learned I was going to be a father, this was never one of them. I was expecting diapers and skinned knees, while dreading boys and broken hearts and college expenses. *Well, I suppose I dodged the bullet with the boys, at least.*

My next phone call was to work. "Hey, Frank, I need to call off today," I told him.

"Sick?" he asked. The man was kind of a hard ass. Honestly, at this point, I could probably quit the job. I'd made a reasonable enough nest egg just off the paid interviews. Interviews that I only agreed to because Taylor insisted that it was important for me to do at least a few, for whatever plan the girls had cooked up. The part where I made a few extra bucks was just a bonus.

"No," I answered. "They spotted Behemoth. Set to hit Africa, somewhere."

"Shit," Frank muttered. "Take the day off. Tomorrow, too, if you need it. If it was my kid, I know I wouldn't be able to think about anything else."

"Thanks, Frank," I said, then I hung up the phone. I swept up the dead leaf-stuff from Taylor's room. I had just grabbed the keys when there was another phone call. I considered ignoring it for a minute, but it could be important. I looked at the ID, which said it was Kurt's number.
"Hey, man," I said when I answered. "I was almost out the door."

"I just heard the news," he said. "Figure you're blowing off work today, anyway. Wanted to see if you needed some company."

"Oh," I responded. "That sounds good, but I was already invited over to Sarah's." He already knew who I meant, of course.

"Yeah, I get it," he replied. "So, what's your daughter think about you dating her future in-law, anyway?"

"We're not dating, Kurt," I told him. "She's just helping me out with this whole 'superhero parenting' thing, that's all."

"Danny," Kurt sighed. "Let me ask you a question. How long were you and Annette together before you managed to figured it out?"

"This is an entirely different situation," I insisted.

"She's too busy for you, she's too good for you, she's smarter than you, she'd never be interested in you and it'd be a messy situation, right?" Kurt listed off. "Danny, by what possible definition is that not exactly the same situation as it was with Annette?"

"Try the part where her husband died a few months ago," I answered. "It's too soon, Kurt."

"Daniel Hebert," Kurt chuckled. "Picking up beautiful women left and right. But only when he doesn't realize it."

"Oh, fuck you, Kurt," I smiled. "I've gotta go now."

"Take care, buddy," he responded. "And make sure to hold off on the marriage until after Taylor's." The line disconnected before I had a chance to offer a retort.

=====

A/N- This chapter, and the other "parent interlude" chapters are out of order... I had originally written them a few days after the Endbringer fight. And immediately regretted not having them aligned with the actual battle.
And now they are in "proper" order.

I left the original chapter titles in, for purposes of consideration by readers.
I watched on of the few televisions that still worked in this place. It was the first time I'd actually have a chance to get a look at my daughter's handiwork. She had promised to fight the Endbringer. She had promised to kill them. It was hard for me to imagine the sweet little girl from so long ago being capable of such a thing, but I believed in her in a way that only a father could.

"Thanks to the early warning system developed by the esteemed tinker Dragon, New Delhi has been almost completely evacuated. Cameras have been set up to catch what is hopefully the most complete footage of an Endbringer battle on record. Behemoth is often called the 'hero killer'. Parahuman casualties against Behemoth are, statistically, much greater than the conflicts with either of the other Endbringers, despite Leviathan and Simurgh often having greater overall casualties and other losses."

Lung stood beside me, impassively. Teacher was there as well, along with the unfortunate once known as Valefor. One of my men approached, silently. They knew not to interrupt the broadcast. He held out a cigarette. For any other block, it would have cost more. Part of the arrangement. "Valerie, go with him," Teacher instructed, and Valefor followed the man who had taken his arm.

The cameras weren't manned, so they switched between cameras to get better views, instead of adjusting camera angles. It was also clear none of the news footage was filmed for an English speaking audience, as all words and notations were in Hindi. The next scene displayed a view of the gathering first wave of capes. The Triumvirate was highly visible in the skies of New Delhi, ready to hold the line against the beast. A handful of Indian capes, in garishly flashy colors even compared to the Protectorate heroes they were mixed with, gathered together in clusters.

I still wasn't quite certain how Valefor, crippled and powerless, blinded and mute, was sent here. His crimes, much like his partner Eligos, were certainly of a nature that deserved the Birdcage. The well known bias against Master type villains was also evident in the decision, as the man was entirely harmless at this point. They could store him in any ordinary prison safely enough.

Both ended up in my cell block. An act that, in retrospect, leads me to believe Dragon felt a need to guarantee the death of both. Teacher offered to purchase Valefor almost immediately after his arrival, which I of course expressed a tentative interest in. It never hurt to hear an offer, after all, and Teacher went out of his way to be fair and honest in his dealings.

Valefor wasn't of any use to me directly, but the supply shipments were divided based upon the number of inhabitants per block. Giving up the additional resources, I was rather loath to do. However, both he and Eligos both proved... uncooperative... as members of my cell block. To the point where the latter had attacked me and Lung.

We made an example of the man. A very bloody and very public example. Out of respect, I offered
the beast that was my closest companion these last few months first dibs for executing the madman, but Lung declined. Seems he didn't like killing helpless victims unless it was truly personal. So it fell to me, as I had hoped it would. Court was held, and I butchered him in the most horrific way I had managed to develop over the years. Functionally taking control of his skeleton, if crudely, and forcing his bones to peel the flesh off like climbing out of a jumpsuit.

Too difficult to do in a combat situation. In fact, the prepwork took almost an hour to make it seem convincing to others that I could do it in combat, but it was the kind of psychological message that kept others from challenging my position. As with all my executions, I bequeathed his 'fairy' to Glaistig Uaine. She would have taken it anyway, and none could stop her. Offering it as a gift kept her disposition toward me kindly, and that too was a form of intimidation. Others would not risk the ire of the Fairy Queen lightly, even if her insanity made her unreliable as an ally.

Now, I regretted not keeping him alive longer.

Teacher had learned some fascinating details about Valefor, which he of course shared with me. In part because of our agreed upon conditions, and in part a way to cultivate a pleasant relationship between us. As it turns out, Valefor had an interesting history in Brockton Bay. He had attacked a new group of heroes by the name of 'Pantheon'. I had already heard of them, of course. News reached us about their slaying of the Slaughterhouse Nine, but not their civilian names.

When I first heard, I had dismissed the news as satisfying, but unimportant. Now it filled me with pride. Thanks to Valefor, I knew that Pantheon was led by my daughter. Amelia had kept her name, and was apparently a true biokinetic, with absolute control of any living thing she touched. She had achieved what her father could not, and killed Jack Slash.

Valefor's compelled honesty forced him to describe his attack on Pantheon. Controlling Khepri's adopted children and their nanny, and using them as suicide bombers. Teacher had, quite rightfully, offered to 'sell back' Valefor. At no cost but a refund of the price he had been bought for in the first place. If he was merely a murderer of women and children, I might have accepted that offer. But I wasn't feeling so merciful. I simply requested that Teacher do something 'special' for the man who had angered me like none before in this life.

Teacher's power to control his thralls is incredibly varied and customizable. He could modify their memories and feelings, not unlike Heartbreaker. Often so subtly so that no one would realize they were controlled at all. Or he could control them more mechanically. Force them to follow a specific set of behaviors, while still having full awareness. Yet no ability to exert their will. This is what I had him inflict upon Valefor, trapped in a body he could not control, but knowing and feeling everything that happened to it.

In a show that I am certain amused Lustrum to no end, he castrated himself publicly. I didn't pretend the act would earn me any personal favors from the militant feminist, but something like this was better done with approval from multiple block leaders. Her approval added legitimacy, in as much as such a thing existed here. And that was as much support as I needed from her that day.
Teacher's surgeons did their work, and Teacher himself modified his Valefor's power, making him generate an effect through touch that caused others to perceive him as an attractive woman, the exact details of which changed to suit the desires of the viewer. He now existed to service any of the men that might want to pay for the privilege. It was a satisfactory enough punishment for the man who had tried to murder my daughter. That it also served to cement peaceable relationships between a few of the more difficult cellblock leaders, and taught everyone to fear what I would do if someone truly angered me was mere side effects.

A thunderclap drew me from my thoughts of Valefor's punishment, and back to the television.

A huge monster appeared in front of the assembled capes. It was clearly armor plated and had four thick, powerful legs. As well as a pair of equally thick arms, with wickedly curved talons extending from several joints on its body. Several more of the beasts popped into existence.

"In a startling new development, several creatures are appearing on the battlefield. Our crews are looking for better footage of them. The mysterious new arrivals don't appear hostile. They are positioning themselves ahead of the defenders. Information from local crews indicate that these monsters are controlled by heroes and meant to contribute to the fight."

I remained impassive, watching the display, but I was impressed beyond words. No others chose to speak up, either. Teacher because we were much alike in our desire to hide our reactions. Others because they were afraid to interrupt as I watched my daughter display her power.

Nilbog was relatively fresh in the public memory when I was captured, one of the powers that caused terror across the eastern half of the United States. Amelia, and I knew it had to be her, was wielding that same kind of power, openly and without reservation. She was hailed as a hero for it. *How the world must have changed for such a thing to be possible.*

Dozens of other, horse sized catlike beasts with six legs and fanlike wings started appearing across the field as well. Some capes climbed on their backs. And yet another type appeared in the air. They looked like nothing so much as horse sized mixtures between a dragonfly and a hornet. "It seems this organization wanted to make a strong show-" the reporter woman paused. "There's yet another development."

The camera swapped to an image of a large hospital building, if the large blue 'plus sign' above the entrance was any indication. A large mass of blue green vines were growing their way down the sides of the building at speeds that gave the impression of a banner being unfurled. It rapidly and
completely shielded the building. Several people were on the roof, too far away to be identified visually. A dome rose up out of the mass and covered the roof, protecting those inside.

"We have confirmation that the strange plant, as well as the unidentified monsters, are from the Brockton Bay hero group known as Pantheon," the reporter supplied. "Led by Gaea and Khepri, the team has claimed to have developed weapons for the sole purpose of fighting Endbringers. It appears that these monsters are the weapons they spoke of."

They cut to a clip of the plant, called Yggdrasil, consuming portions of the boat graveyard.

So they cleaned that up well, I smiled. I also considered the incredible amount of skill and control it had to take Amelia to perform these feats. Clearly, she had a team with her. Someone to teleport these beasts onto the field, at the very least. If Valefor's information was correct- and it might not be, all I could know is what he believed was true- then her partner as the leader of Pantheon could control bugs. Did that mean she was also able to control these gigantic buglike monsters? An amazing power synergy.

"The group has made bold claims as to their ability to fight and kill the Endbringers," the reporter continued. "Gaea and Khepri vowing to postpone their future marriage until after the death of the monsters that have terrorized the world for decades."

The video footage switched to an obviously old recording of a young hispanic teenager.

"That's what my big sister said," the girl explained. "They won't get married while cities were still being destroyed every three months. So the Endbringers have to go. And then they can get married and have lots of babies and I'll be the cool auntie that they all love the most."

Big sister? I thought. I doubted a real biological relationship. Did the Dallons have another child? No, both of them were clearly very Caucasian. E88 ideal Caucasian, no less. Perhaps they got divorced and this was the product of a new spouse? I had no way of knowing from in here.

In their effort to fill in time before Behemoth's arrival, the news chose to display a few other scenes showing the girls, always together whether in costume and out. Including a few truly heartwarming shots of them sitting together under a tree at school. I recognized my daughter instantly. She had grown up beautifully, a fine blending of my features and her mother's. She also, I noted with a smile,
inherited her father's taste in women.

"We have just received word!" the reporter woman spoke excitedly. "Behemoth has been sighted." The scene shifted back to New Delhi, showing the ground splitting and smoke billowing into the air. The massive face of the Endbringer showing itself before the heroes.

I held my breath. This was it, I realized. The Endbringers play for keeps. If my little Amelia is half as powerful as she claims to be, then it truly is a matter of having to kill the monster. No matter what, by the end of this, either my daughter would be dead, or she'll have slain the herokiller.

Then the monster turned and dived into the ground.

He had fled. Behemoth had run away.

==============

A/N- And there you have it. A day in the life of Marquis. Proud papa, Cellblock leader, classy villain, and sadistic son of a bitch when you press the 'protective father' button.
I saw Behemoth turn through the eyes of my army. Felt him leaving through the infravision of the shadowcats and the tremorsenses of the frostcats. I held my breath as he sank lower into the earth, too deep for my senses to go. Even then, I still couldn't believe it.

ConfusionAnticipationVictory? I looked over at Amelia. "No," I said. It was an absolute. "The fucker has something planned. I just don't know what it is."

DreadTrustConfidence. I smiled. Amelia believed me, and believed in me. I could handle this. I would not disappoint her.

That seemed to be the general consensus amongst the other capes. Only a small handful got off their respective mounts. There were no cheers. No celebrations. The field was silent, aside from the occasional chirp of the armbands, informing us of Behemoth's progress toward the Earth's core. We waited, tensed with adrenaline and fear. As Bakuda had once told me, it was a matter of fears. There was the the fear of the unknown, a fleeting and relative minor terror, as it only happened once. Then it was known, and that fear was gone.

Then there was the fear of certainty. Knowing what was coming, and knowing it would be horrible. The Endbringers were always that latter type of fear. They were the inevitable, the unstoppable. For almost two decades, they had taught us this fact. None of us believed that changed today. And so we continued to wait. For the next hour, and then the anticipatory terror started to abate. Rarely did Endbringer battles last this long. For better or for worse, the fate of the battle was decided early. If only thanks to the Golden Idiot's arrival.

I stayed vigilant, even as others started to relax. Then the last sliver of the sun vanished behind the horizon.

"Alert!" The armband chirped. "Simurgh sighted at SN-6. Sim-". She had dropped like a comet from the heavens, piercing the thick layer of stormclouds fast enough that wisps of vapor followed her down. Landing hard atop Dragon's flagship, shields burst in the collision and her she pierced the hull to the knees as the ship rocked to its side.

"Defiant down, SN-6," the armband felt the need to inform us. Simurgh bent down, straightening her fingers on her left hand like a knife, before punching through the armored plating. "Dragon down, SN-6." Simurgh leapt upward, kicking off of the damaged ship and sending it careening to the ground. An entirely meaningless gesture. In her left hand, she clutched the limp form of Dragon like a child with a rag doll.

Only then did the singing start. Endbringers love their drama.
I could feel the movement of my team. Each suit, alive. Each one I could track and even speak through. "Osiris, your job hasn't changed." "Eki, laser then thermal, alternate between them. Don't waste time with other settings." "Lachesis, can you get a lock on her?"

"Trying," Missy's voice answered back. "She's the fucking queen of precogs. Give me some time."

"Will do," I promised. I fanned out the Raptors, giving me hundreds of angles to view the Simurgh at. The capes fired with wild abandon, catching her with minor strikes as she casually evaded anything powerful enough to do any real damage.

"For 'murica!!" Osiris shouted as he rushed in on his heavily customized variant of the Raptor. A kamikaze attack. One of the Simurgh's wings moved to block the impact and rapidly blossomed into ice crystals. Most of that ice was made from carbon dioxide. "Osiris deceased, SN-6"

I distributed the shadowcats outward. Simurgh wasn't like the other two, and I couldn't afford to treat her the same way. Spread out and keep moving, give her as many separate variables to track as possible. Her mental powers were frightening, but they weren't infinite. Like any precog, you just had to hit them with enough variables at once, and their effectiveness would plummet.

Alexandria rushed in, amid a chain of shots from Legend and Eidolon. A method they'd obviously used before, given the absolute perfect timing they executed. Simurgh use the ice shell on her wing to soak most of the attacks, then wing-slapped Alexandria upward into the sky. Where she was struck by lightning. Not a matter of powered attacks, simple natural lightning from the storm. Not enough to even phase the hero that gave the name to flying tanks.

"She's showboating," Amelia spoke from beside me. HorrorAngerFear. "That bitch is showing off."

"Osiris, go in for a hit from behind." "Eki, hold fire for my mark."

I sent a dozen of my unclaimed Raptors in for close range. They opened fire with a kaleidoscope of energy blasts, etching small lines of damage in her skin. Her frozen wing swept out, launching pieces of ice crystal. My raptors avoided most of them. But most is not all. "Flare deceased, RN-6. Screech down, RN-5. Plus six of my unmanned raptors. One peeled off from the attack to dive and catch Screech. He was still alive, and I dropped him down for one of the Shadowcats to bring to our hospital position. Even as the others kept up the attacks.

Another plume of ice blossomed, this time out of Simurgh's back. It laced around and between the joints of her body and wings. "Everything, now!" I told Eki.

The white hot stream of laser light struck out, catching Simurgh in the chest. It didn't stop there, this was the full fire mode. The beam cut a trail down her stomach to her hip before the reserve of power
finally ran out. Enough power to melt a city block. Enough power to burn away one of the Simurgh’s breasts.

"That's okay, they're probably fake anyway," Atropos joked.

ShockAmused. I even smiled, myself. It wouldn't show from through the costume, thankfully.

"Switch to sonic," Emma instructed over our private com system. It was only directed to Eki, but I heard anyway. She probably saw something I could not.

"Vertigo lance," Eki stated, swapping out for her other charged weapon.

Osiris came in for another strike, which Ziz evaded, slapping him way. I took direct control of the raptor and had it twist into her at the last second. It caught her leg, and then spread to the other.

"Everyone fall back," Emma told everyone on the armbands. "This is going to be big."

Eki rocketed upward, even as I pulled away all my flying units. Ziz rapidly started moving, evading like an expert dogfighter while trying to find cover from what was coming. Eidolon flashed a bright red-orange color, and the Simurgh was frozen in place by an aura of the same colors. Telekinesis? Time manipulation? Some kind of momentum nullifier? I didn't know, and now wasn't the time to speculate. It held her still just long enough for the sonic disruptor to go all out.

The area around her exploded, shattering glass even a mile from the epicenter of the attack. As it stood, the block she was above, and every block bordering it, splintered and collapsed. It was far more destructive than I'd expected. The names of dead and wounded started pouring through the com. Most of them were foreign. Indian or east European capes. Maybe African. None in languages I'd recognize or remember. Twelve wounded, eight dead.

The smoke cleared, revealing a Simurgh that looked like an ancient statue. Most of her surface had chipped and pealed off, exposing her deeper layers. The composition didn't look any different than her surface. Still the perfectly formed ivory coloration. But this was more damage than we achieved against Leviathan in Brockton Bay. Half a second later, Ziz was hammered into the ground by countless blaster attacks.

"Can you do that again?" Alexandria asked Eki over the armband.

"Needs time to recharge," Crystal answered. "Five minutes. More if I have to do anything else."

"Endbringers are comprised of crystalline material," Emma's voice came over the com. "Keep
layering on the cold and sonic attacks. Eidolon, if you can spare a few minutes, I think I can show you how to kill the bitch."

Alexandria plummeted into the streams of energy attacks, landing atop Ziz and forcing her right back into the ground.

Energy blasts and missiles streamed across the city, slamming down into the defenders of the city. I did what I could to evade the attacks, but in more scenarios than not, there was nothing that could be done.

"Apex down CM-3, Archon deceased ST-2..." I tuned out the rest. I already knew what happened. Mental commands were issued, sending the Shadowcats into full retreat, and the Raptors with them. I slammed the com. "The Dragon suits are compromised! The Simurgh has taken control of the Dragon suits!"

=============

A/N- Simmie's my favorite Endbringer. For reasons.
"God damn it," I yelled, but at least I deactivated the armband first. I moved my Gargants, which hadn't really been doing much in this fight before now anyway. Two of them leapt in a way a creature of their mass simply should not be able to, thanks to the antigrav built into their system. One was repelled by a suit's shielding. The other landed on top of it, and the shields buckled, allowing it to get a foothold into the metal.

It struggled with the armor plating, and I had to use the tusks’ frost saws to cut through. Forcing the armor to become too brittle to survive the pressure.

It was a humbling thought, actually, that the Simurgh, generally regarded as the physically weakest Endbringer, cut through the same defenses in a couple seconds. A dozen icecats had taken position with their riders. If they believed they were strong enough to withstand Behemoth in close quarters, then I'd trust they were strong enough to take down these suits.

The names of the dead kept rolling in. "Myrddin down, SA-4. Shadowfax deceased, SA-4." I managed to get an empty Shadowcat in the way to take a missile that would have ended it for Myrddin. A brute I didn't recognize collided with the side of the ship.

Atropos took to the air, firing the discus-like weapons that we designed to best take advantage of her power. Slicing several missiles to pieces. They were getting too close to the hospital. Amelia wrapped a shell of living material around us. Moments later, a video showing the outside formed on the inner walls of the dome.

A nearby suit exploded for a reason I didn't recognize. Two of my gargants were brought down by railgun fire. God fucking damn it.

_Fear_Frustration_. "Concentrate on spreading the Yggdrasil," I instructed Amelia. "We're going to need it. We already need it._Urgency_Focus_Determination._

For her part, the Simurgh ascended into the air again, along with shattered fragments of destroyed Dragon suits. The distraction of all the friendly fire had given her an escape window. Her wings unfurled, revealing the still unconscious Dragon in her hand. She had shielded the tinker with her own body. She needs Dragon to command the suits, I realized.

I wasn't the only one to have that thought. Alexandria swooped in, not to go after Ziz, but to target Dragon. Meanwhile, one of the suits breathed a black cloud at a gargant. It simply ceased to be, dissolved into ash and nothing. Along with the region around them. Armsmaster's weapon. I retreated all my remaining forces away from that system.
The Simurgh folded several wings about Dragon, protecting her from attack. She caught Alexandria and threw her into Osiris, causing the modified raptor to detonate and encase her in solid ice and liquid oxygen and nitrogen. Didn't slow Alexandria down, as she turned and body slammed into the Simurgh, shattering the ice ball.

"This... this is Defiant," a voice gasped over the armband. "Azazel's weapon is vulnerable to fire."

_Not completely down, then._ I explored the cockpit with my perfectly ordinary insects. One of Defiant's new weapons was embedded in the control system. That would explain why that suit didn't join the fight. He was in... remarkably good, or remarkably bad, condition and I had no way of knowing which. Leg crushed all the way up to the hip, other leg crushed below the knee. An arm broken. But very, very little blood loss. _A machine? A robot puppet like our changelings? Cyborg?

He had managed to cobble together a working vidscreen or somehow patch the monitoring system. That's how he knew Azazel was a problem.

"Eki, need your help on this one," I communicated.

"Inferno lance," was her response. _Good, she was paying attention._ A stray missile launched toward her, and I exerted my control system in her armor, juking her to the side. "Fuck!" she exclaimed, dropping the lance as the rocket traveled by and I let an empty raptor take the blow, simply to spare the two dozen riders I still had up in the air nearby.

"Inferno lance," she said again. I had no idea which of our tinkers built that little marvel, but that was fucking genius.

She flew into position as I moved two of my three remaining gargants in position.

Legend's voice came over Osiris' armband. "Target the wounded areas," he instructed. "The ice seems to block her regeneration."

"Mark," I instructed.

The stream of superheated plasma was invisible to the human eye, or even infravision, before striking. Some tinker bullshit about making a laser out of pure heat, or something. I stopped asking questions right around the time Bakuda made a bomb that's only ability was to cause pain. _Fucking tinkers._ The ray struck, and blossomed into fires that rendered the street molten in mere seconds. It was a sort of curse in disguise that, by now, that there was nothing left in the area that could die.
The gargants rushed in, slamming both sides of the Azazel simultaneously. They didn’t care about heat—being designed to withstand Behemoth’s kill aura and everything else he might throw at them. But, then, neither did the suit. At least the weapon got through the force shielding that Dragon had implemented in her new armors, and burned away the nanothorn weaponry.

Then the last thing I could have expected happened. Snow started to fall. Not much, but this was mid-August in India. Snow was not supposed to be falling. Now that I thought about it, the air outside our protective bubble was getting colder, if I judged by the insects becoming slower to respond. That was something we’d probably need to worry about later.

The gargants twisted Azazel’s limbs, bending them into positions that would resemble a submission hold. But I wasn’t trying to force it to submit, I was trying to crack it in half. Dragon must have really liked this one, I thought. It’s tougher than the others by a whole fucking lot. The third gargant had made it on scene, landing atop Azazel, slamming it to the ground. I’d break it. Eventually the three of them had to get through.

"Running out of power, here," Eki announced.

Fuck, couldn’t be that easy, could it? I had the Gargant leap upward again, then at highest point, made it deactivate its antigrav. Twenty times the mass of a bull elephant plummeted down, crashing into Azazel. The staff flickered out. And then my Gargants were consumed in the nanothorns. Azazel, at least, seemed stationary now. Protected by a thicket of instant death, but no longer running across the battlefield destroying everything.

But I was out of heavy hitters to bring down the other suits.

Of the nearly five hundred defending capes, we had lost seventy three of them simply from Dragon's weaponry. And we weren’t even halfway through the suits. I was running on less than half of my original stock of troops, and most of them were Shadowcats. Only forty Raptors left, only a hundred Frostcats. I had to admit to myself. If this had been a battle between my army and Dragon’s, without other cape interference. We would have lost so badly.

"Vertigo lance," Eki spoke, taking her weapon back. "Clear the field," she instructed, and everyone fell back, except Alexandria and Osiris. The former had a strong grip around Ziz, her legs locked around the Endbringer’s neck, even as she struggled to force the wings away that were insulating Dragon. Osiris was now smashing his mount along her outer wings. She was half encased in ice, not that it seemed to make a difference.

With half the suits destroyed, at least that gave me room to send my Shadowcats after the wounded. I had them evacuate from the area surrounding the Simurgh. Eki fired, and there was the now-expected shattering. The explosion of ice shards and the region around the Simurgh covered in fine frozen mist. She flew backward from the force of the explosion, leaving the cloud. A kick from
Alexandria and a pelting of lasers from Legend sent the Simurgh careening toward the ground again. It was the opening that Alexandria needed.

She thrust forward into the pocket that Ziz created for Dragon, then flew back, her arm covered in viscera and holding a trail of material that could only be interpreted as a human spine. *NauseaShockGrief.*

"Dragon deceased, KP-4," the armband announced.

==

A/N- Ah, the bitching this and the next couple chapters caused. To preempt that happening again, I want everyone to repeat the words "fucking tinkers" ten times before posting complaints.
For a moment, I paused to absorb the thought. Alexandria killed Dragon. *Alexandria killed Dragon.* I had no insects in the area to confirm anything. Really, I had no insects at all but for a few in the houses, and inside the shelters themselves. A fine powder of snow lay on the ground, but the temperature had continued to drop even after the snow stopped. Aside the spots that were on fire, a thin layer of frost had formed on every surface.

"My units are starting to get sluggish from the cold," I said to the others on our private link.

It was Emma that answered back. "Sorry," she gasped. She was clearly out of breath. "Didn't build them for super cold climates. We were suppose to be fighting an Endbringer, not arctic weather conditions. Take them near the fires and let their energy absorption recharge their batteries."

Seemed obvious when it was said out loud. I sent the more important units, the Shadowcats, to where there was sufficient heat.

"You said something about killing her?" Eidolon asked over the armband. "What's your plan?"

"Sonic attack," Emma's voice cracked. I couldn't blame her for being a bit star struck. This was Eidolon, after all. "And I know just the power to make it happen. Minerva's found a guy who can speed time in a local area. I'll explain there."

And then the dragon suits opened fire again. Decimating my ranks and catching far too many of the defenders in the crossfire. *Fuck! The Simurgh's suppose to be the least lethal of the three!* We're already seeing losses as bad as Leviathan, and she's still in the fight.

"Dragon's suits are still in the fight," I announced over the radio. *It didn't work.* I wisely left those words out, but everyone was thinking them.

*DisgustAngerBlame.* I didn't disagree. And out there on the field, a lot of people were thinking the same thing. At least, the ones not caught in the thick of the fighting.

I felt something forming in the sewers, and looked at Gaea. "New shadowcats?"

"Acid," she answered. "Crystalline shells that should be able to bypass Dragon's shields. If the Ultralisks are any hint. Designed to detonate. Suicide attacks."

I nodded. *A way to fight back. My new, what? Acidcats? Sure, why not?* They were more than
capable of climbing walls and breaking through streets. Not as fast or strong as the 'perfected' models, but I could tell she had absorbed and copied some of them with the Yggdrasil to produce these new weapons. I could almost imagine Osiris laughing that we finally took his suggestion, if he weren't busy with distracting the Great White Bitch.

A couple of them did manage to get through one suit's shielding. One was shot by some kind of kinetic weapon, but the other collided with the hull and exploded. Several gallons of Crawler-acid ate its way through the side. The other suits took off. *Funny, they could have done that at any time. Why'd they stay on the ground this long?*

Another salvo of missiles cut through our already decimated ranks, and I was lucky to save all the ones riding on what was left of my cats and raptors. *We're losing this. We've already lost, only a few minutes until we're exposed to the song long enough to be Simurgh's future puppets.*

Then another song started. A physical one, this time, a screech that I'd heard before. One that still brought dread. *Shatterbird.* The remaining suits splintered and collapsed, their glass ripped from them. The city itself wasn't effected, nor were our armbands. Eidolon rose up, encased in the shimmering and near invisible shell of glass. *Was Shatterbird's power really that perfect? Did Eidolon simply get a similar, but better, power? Or was there a second power dedicated to this kind of focus?*

The suits, at least, were no longer a factor. Eidolon rose and blasted Ziz with an intense sonic attack. Now I knew it couldn't be Shatterbird's power, she couldn't do that. The sound of the attack- as interpreted by my Raptors and their far superior to human hearing and echolocation- changed even as he fired, fluctuating in pitch and intensity. *That's what the Shatterbird power was for. A way to alter the other attack on the fly. If you don't know which frequency hurts the most, take a power that lets you change it at will.* It was hard not to feel inadequate compared to that kind of power and versatility.

Eki followed up with a stream from her laser weapon, leaving another scar across the Simurgh. This time through the biggest wing.

"I've got her!" Lachesis declared. She hit the coms. "Everyone fall back! The Moirai Cannon has a lock!"

Most of them listened. I drew away the few raptors that still had riders and began focusing on the empty raptors, including those that that had been repaired by Amelia. There was no pretense of survival. They collided with Ziz and tried to tear into her flesh. They had strength enough to cut the outer layers, but the deeper areas that had been exposed in the battle were seemingly indestructible. Like our weapon testing on Theo's armor. But they weren't the main event. They were the distraction.

Alexandria went in for another pass, slamming the Simurgh downward, again. *God damn it, Alexandria. I wasn't feeling especially charitable to her right now. Killing Dragon for nothing. Well,*
if she was willing to let others make that sacrifice, she could make it herself. "Fire when you're ready," I instructed them.

"Alexandria," I warned her. I may not have been her biggest fan right now, but I couldn't simply order her murder. "Get out of the way! You're not immune to this weapon and we can't afford to wait."

She pulled up as the shot was taken. The side of the Yggdrasil bubble was pierced by the attack, and painfully cold air poured into our roof bubble. To call it a cannon was a misnomer. Really, it wasn't a traditional weapon at all. It was our Moirai at work. Three parahumans working in concert. Parian, Clotho, to control the streamers of spider's silk and make it flow properly. Vista, Lachesis, creating the path so we could actually hit the bitch. And Flechette, Atropos, charging the strips of silk so they could slice through anything. Hopefully, that included Endbringer cores.

Ziz never moved before like she moved then. She dropped to the ground, landing hard enough to leave a small crater. The streaming lines of barely visible silk twisted and followed her. She left a sonic boom as she jumped sideways, her halo of depriv and weaponry forgotten as she focused all her telekinetic strength on herself. And then she leapt straight up. Legend pelted her with rays. She ignored them. Escaping the ribbons was more important than dodging Legend's attack.

She was near the thick, low cloud cover when she flashed with the green light again. Eidolon's stopping attack. It had been used exactly twice in this fight. Why? I didn't know. I really didn't care all that much. It was there when we needed it the absolute most, and that was more than enough for me.

The Simurgh turned, facing the fate laid out for her. Did she foresee this? Could she have? It seemed unlikely. We had two precog jammers as part of our Moirai. Then there was Eidolon, who, amongst many other entirely unfair abilities, was also precog immune. She put her arms out, as if she could block the inevitable. She could not. Even gods had to answer to the Fates.

The strings hit her hands first, her fingers split, and then the hands themselves splintered. Wings disintegrated under the nigh invisible, completely unstoppable, attack. We didn't know where her core was. We did know a single hit would not be enough, regardless of weapon used. Instead, we unleashed a million separate attacks. Death by papercuts, as it were.

A leg dropped, and was shredded. Her body was reduced to pieces no larger than a human fist. Her wings, scattered and mostly shredded as well. That's when the trio lost power. More specifically, Atropos reached her range and mass limit. The Simurgh started pulling itself together, telekinetically pasting its pieces back into place.

"We need a minute to finish the job!" Lachesis instructed.

Legend, Eidolon and Eki opened fire, blowing pieces out of, or away from, the Endbringer. Osiris
got in and froze a good portion of the mass. The ice cracked as Simurgh forced her pieces out, and he struck again. We'd done more damage than anyone before. More damaged than anyone could have thought was possible, minutes ago. We'd finish her with the next salvo.

"Take cover!" Emma screamed over the armband.

Less than a second later, the sky exploded.

================

A/N- Intense, no?
Sarah gave me a quick hug. "Hey, Mark, how've you been?"

"Well," I shrugged. "I don't have a lot to compare it to. In some ways, I feel better than I have since I was a teenager. In others... well, we have other things to worry about right now. No sense in throwing any more problems in your lap."

"Hey," she offered a small smile. "Dealing with problems is what I do, remember?"

I did remember. Sarah was always the heart and mind of New Wave. To the outside, it might have looked like Carol was our team leader. She was always the smart, confident and successful one. She just never quite had that charisma to lead a team of friends, or the mindset to handle the rapidly changing circumstances of the battlefield. She was happier in a orderly, mechanical world where everything obeyed specific and agreed upon rules.

*Speak of the devil, Carol is already here.* I spotted her as I walked in. "Hello, Mark," she said.

"Hey, Carol," I offered a smile. I hadn't talked to my wife much in the last couple weeks. Not since she learned I had been discussing joining the Protectorate. Calvert was a great deal more persuasive than their last director, and I was getting restless. I hadn't felt this good in years, this eager to actually go out to do some real good. Of course, I happened to live in a town where there wasn't much good left to actually do. Pantheon broke the drug trade into pieces, and violent crime was almost gone. Or, at least, the kind of crime that could be called 'professional', like muggings and rape. Personal crimes, like the violence at school, and fights in the refugee shelters, that sort of thing wasn't so quick to change.

"It'll still be a while before Behemoth surfaces," Sarah told us. "Please, make yourself at home."

"Don't mind if I do," I said, taking off my shoes. "Is the news saying anything?"

"Only that they think Behemoth's path is tracking northeast," Carol answered. "Looks like Pakistan is the target, now."

"Is there anything in Pakistan worth attacking?" I asked. "They usually have goals where they hit."

"A cape war, of sorts," Sarah answered. "Isolationist groups trying to cut off the middle east from foreigners, like the CUI did to China."
"Sounds like a prime location, then," I agreed. "If he's hoping the defenders might not cooperate with each other."

There was a knock at the door, where Sarah was still waiting. She opened it, revealing a tall and slender man that I didn't recognize. He was rather unremarkable looking, honestly. If I had met him before, I don't think I'd remember his face later. A new boyfriend? Good for her, being able to go on with her life after everything that's happened.

"I wasn't too late, was I?" he asked.

"Of course not, Danny, come right in," she smiled graciously. That was Sarah, alright. Always the professional hostess, even in a situation like this one.

He stepped in and looked at me. "Hello," I said, holding out my hand. "I'm Mark Dallon, you can call me Mark. Any friend of Sarah's is a friend of mine. Speaking of which, how do you know Sarah?"

"Daniel Hebert, call me Danny," he shook my hand. Firm grip, probably a bit too firm. *Overcompensating because I'm a cape*, I just smiled and ignored it. Nothing I hadn't run into before. "I'm Taylor's- err, Khepri's, father."

"Then you're practically family, already," I smiled, slapping his shoulder. *This was Khepri's dad, then*. I hadn't even met Taylor personally yet, but now that I knew to look, I could see the resemblance. *Seems like Amy's fiance will never really fill out*. I suppose if either of them have a problem with that, they could always change it to something more their liking.

Carol walked right past us. "Sarah, a word in the kitchen."

Danny looked at my wife with an understandable amount of concern. Carol was never really the warmest person, and she'd gotten worse lately. She was angry at everything these days, and when she wasn't angry she was miserable. She never was good at dealing with feelings.

"Women folk need their alone time. You know how sisters are," I said, guiding the man away from the minefield before he accidentally set something off. "Come on, we were just about to start a game of 'guess where Behemoth's grave will be', but I'd rather learn more about the tall mysterious secret agent that ran off with my daughter's heart. The more humiliating the stories, the better."

"Sure," he agreed, putting Carol's behavior out of his mind. "When she was little, she basically worshiped Alexandria," he said smiling. "We'd find her running around in her pajamas with with a towel tied around her neck all the time."
I lost a good amount of my smile when he said that. I don't think Danny noticed. Victoria used to do the exact same thing. "Alexandria, huh?" I offered a bit of a laugh. "That explains a lot about her costume design choices."

He managed to chuckle a bit. Not much of one, but it was a start. No one could expect to be too cheerful minutes before an Endbringer attack, but I had every confidence in those girls. Tonight would be a celebration.

-----

"The hell are you thinking, bringing him here?" I hissed at Sarah. "You said this was family only."

"He is family, Carol," my sister retorted.

"His daughter's engagement to Amelia doesn't mean a thing," I insisted. I didn't care what Mark said on the issue. *How could they just accept a stranger in like this without even considering my feelings? Why did it even surprise me?* Sarah never listened, and the way Mark was acting these days was like a completely different person. He was never the most considerate person, but at least he tried before. Now it was like he wanted to upset me whenever possible.

"Then the part where his daughter is fighting alongside mine against Behemoth," Sarah responded. "That's enough for me. They're teammates. I know you know how deep that bond runs. Especially in teams which face Endbringers together. He's a good man, and he's facing the same fear we face when our own children put their lives on the line. No one should have to go through that, but we do. The least we can do is keep him from going through it alone."

I couldn't help but glance toward the living room, where Mark was asking all sorts of questions while they watched the news. "You should have talked to me first," I insisted. "It's not fair to blindside me with something like this. You know I don't like strangers."

Sarah deflated. "Sorry," she said. "I sort of forgot he's a stranger to you. I've gotten to know him pretty well the last couple months."

"Have you, now?" I replied. I looked straight into her eyes. *Oh fuck. Was she really? Neil has only been dead for three months!*

"We met when Pantheon did that cleanup operation at the boat graveyard," she told me. "He was so obviously Khepri's father that I was afraid he'd blow the whole secret on the news right then and there. After that, well, he needed to learn all the tricks capes use and the rules they play by. All stuff I wish someone told us back when we were new to the scene. At least he already knew how to handle the PRT when they wanted to play hardball."
"I see," I confirmed when she finished. I didn't even really pay attention. She was... and him... and how was I even suppose to take that? The truth was, couldn't. There was no way for me to approach the topic without it ending up in a fight that I would lose, at a time when Sarah needed the support most. I bit my tongue, and picked my battles. It wasn't like this was the first man my sister was interested in that I didn't like.

She picked up on my continuing disapproval, of course, but didn't push the issue. "So," she said. "I see what you mean about Mark, he seems so... energetic, now."

I relaxed, that was a safer topic. "He acts so immature," I knew I was just complaining now, but it felt good to complain sometimes. "It's like his personality was completely rewritten."

"And you suspect Amy is re-"

"Amelia," I interrupted. "She's decided she's Amelia, remember?"

"You think it's Amelia's fault," Sarah continued.

"Who else?" I said. "People don't just change like that on their own."

"I don't think he has changed," Sarah offered. "Yes, he acts different than usual. But I remember his good days, when we were younger. The days where he was functional, even without the medication to balance him out? He was always energetic, silly even. Remember how he'd spend all day just playing with the kids like he was one of them. Maybe that's just who he is, without the depression and the drugs getting in the way."

I paused. It was true. It didn't happen often, and less often as the years wore on, but those were the days where the kids were happiest.

"Get in here!" Mark shouted. "It's starting!"

And with that, the conversation was over.

We rushed in to witness Behemoth leaving.

"He... he retreated?" I heard Sarah gasp.

"Not possible," I insisted. "Endbringers don't retreat. He has something else planned."
We watched, and waited in near silence for over an hour, listening to comments and speculation from people that had no idea what they were talking about. All of which was interrupted when the Simurgh dropped from the sky.

"Fuck!" Mark exclaimed. The rest of the battle was almost impossible to parse. The cameras were high quality, but thick cloud cover at night makes for awful lighting conditions. Most of it was us staring at nearly black screens, parsed by flashes of light as the heroes tore into the Simurgh with one energy attack after another. We only figured out the Dragon suits were attacking when it was nearly already over.

We were treated to a truly horrifying scene when Alexandria ripped a hero who had been captured by the Simurgh in half. Somehow, it happened within feet of one of the still functioning cameras, and there was enough light from a nearby burning building to make it easily visible.

"She wanted everyone to see that," I muttered. It was an obvious statement, there were no arguments made. It was only then that the video stopped.

"Channel nine would like to issue an immediate apology," he said. "We should have stopped the video the moment we realized it was the Simurgh at the scene. While it is not illegal to show footage of Endbringers, it was irresponsible to do so knowing the Simurgh's skill for manipulation. We urge the public to exercise discretion. The Simurgh relies on paranoia and irrational behavior to spread the worst of its damage. We will not be displaying more video of the battle itself, and urge other stations to take the same action."

"I never knew things were like that..." Daniel whispered.

Sarah put her hand on his shoulder. "Don't worry," she said. "Your daughter is strong, she'll make it through. They all will."

For the next few minutes, we watched speculation by the various talking heads about what we'd witnessed. Generally, it was agreed that whatever unfortunate cape the Simurgh had captured was already dead, and what Alexandria had done must have been for a reason. Nothing but the PRT lapdogs in the media trying to cover for a hideously gruesome act.

"They'd be better off just not taking about it at all," I stated. "The speculation's just going to make things worse in the long run."

"Video's already out," Sarah agreed. "The cameras are live feeds, streaming online as well as broadcasting directly. I'm sure the internet is going to have every last scene available, both raw and in
"Contact with the site of the battle has been lost," the anchorman stated. "They're still trying to determine the cause. Reports are coming in from other cities in India. It appears a massive explosion has taken place, reaching as far south as Hyderabad and as far west as Pakistan."

We watched breathless for the next half hour, as they showed low quality video of the devastation. We sat through words like 'destruction of most of the Indian subcontinent' and 'cataclysmic effects for the environment'. Eventually they found one good view. A weather satellite that had been watching the stormfront we'd seen from the cameras in New Delhi.

A flash of light started in northern India and we watched it spread down, and then along India's coastline, making its way inland until it had covered almost everything. It was a rapid spread, but not nearly as fast as speed of light should have been. Like watching a fire spread across a pool of gas. Then the light vanished, and with it all the clouds that were there before the explosion happened.

"It appears the explosion originated at the point of New Delhi," the anchor said shakily. "What this means for the Endbringer, those brave men and women defending the city, and the future of India and the world as a whole is currently unknown."

"Amy," I gasped, the tears coming hard. I looked at the others. Daniel and Sarah were currently holding each other. Mark was staring at the screen in disbelief. And I couldn't stop shaking. I just lost my remaining daughter.

=============

A/N- Still intense, no?
Parian screamed as a gust of flame burst through the hole left behind by the Moirai cannon. The port was sealed by a mirror metal. Theo's power. I could feel the temperatures through my Yggdrasil. It would have been enough to scour the usual design. But this variant was meant to withstand Behemoth, if at all possible. Heat converted to electricity converted to magnetic storage systems that Emma and Riley had taught me how to grow.

It was hell, on the other side of the bubble. A mush that I only realized was asphalt after the Yggdrasil started to consume it. The sewer lines had collapsed, molten materials dripping down onto the established Yggdrasil. There were pockets where things were still cool enough to remain standing. But the air was deadly hot, even within the sewer tunnels. The surface had to be worse.

"I'm blind outside of this building," Taylor said, her voice trembling. HorrorFearRealizationGrief. "The Gargants, the cats, even the insects in the shelters. It's all gone. Eki's still alive out there. She's covered herself in ice. I can't find Osiris, Emma, Minerva or Chariot. Past that? There's nothing, except some worms deep in the soil."

I cringed. She still had relays in the Yggdrasil. Her range extended for miles in every direction. A nuclear bomb- a thousand nuclear bombs set off on top of each other- couldn't have done what that explosion had done. If the suits were destroyed, there was almost no chance their wearer had survived, except Osiris. It must be a nightmare for him out there.

"Theo!" Missy exclaimed. I spared the chance to look. Blood was pouring from his side. A cut through his armor? Oh, Flechette's power hadn't completely deactivated. "What... why would you?" She sobbed. "You knew not to get in the way."

I couldn't hear what he said to her from over here. I wasn't sure he could say anything, considering that at least one lung had to have been bisected.

"Heal him!" She insisted. I hesitated. If I pulled my concentration away... a lot of people would die. Crystal likely amongst them. The suits were durable, hers more than most, but they weren't indestructible. A lot of capes were tough enough to withstand at least the area somewhat further away. Some could handle it permanently, others for only a few minutes at most. Theo was... one life compared to potentially dozens...

"Riley," Taylor spoke up. She was checking on Flechette, whose suit was all but destroyed by the flames. "We'll worry about the consequences later. Let her work."

Good idea, I thought. I took the briefest time necessary to die her hair black. A very simple modification of the Dryad touching her scalp. The back of my suit split, letting her out. She rolled backward and landed on her feet, then bolted over to Theo.
"Clarice?" Missy asked.

Riley nodded. "I need you to grab some things from in the hospital..."

I turned my attentions back to the outside. Finding the few identifiable zerg bodies was always an advantage, when I could. They were built for shunting heat and other types of energy. I subsumed them into the Yggdrasil, made all the easier because that was part of their design from the beginning. How we were supposed to face Behemoth.

The building rumbled. "Behemoth?" I whispered. Half a question, half a prayer that I was wrong. I pushed more of the Yggdrasil mass into the basement and forced it to reach out through the stone to anchor itself and give me some idea what had happened. No, it wasn't Behemoth. Or, if it was, he was being unusually subtle about it. The area around the hospital was shifting due to part of it being heated to a liquid state. That was taking the building with. I managed to lock it in place, at least for the time. It, too, would collapse in a couple days.

Our 'viewscreen' finally managed to reactivate, showing us the outside world. I almost wished it hadn't.

Nothing was left standing except this one building. The streets reduced to molten tar, the buildings on fire, collapsed into rubble, molten into slag, or some combination of all three. Some parahumans were still active, and I kept forcing the Yggdrasil outward with every ounce of will I could muster. Now that I could see, I could pick my battles better. Directing the tendrils in specific directions. Knowing which intersections were worth punching paths to the surface.

A zone looked like it hadn't been annihilated. A dozen people clustered inside. Some kind of forcefield user? Clearly an insanely powerful one to have withstood that blast.

Steam was pouring out of some areas. Busted water lines, probably. The defenders reacted intelligently, at least. We were the only place still standing. The only thing that looked like refuge. They were coming to us. I grew paths of Yggdrasil, and expanding islands of it where I could see people further off. There was nowhere left to target. Almost everyone left was already dead.

Alexandria had Legend's cape wrapped around her, and she was carrying an obviously wounded Eidolon. Her helmet had been destroyed in the explosion.

I changed the color of part of our protective dome from its current refractive silver to a dark grey. A clearly visible sign of where to go. I created other such openings at the base of the building. Places where people could get inside from the heat and potentially deadly gasses. I built other safety pockets where I could, now that I had time. Enveloping the few still living in Yggdrasil pods now that they were close enough, and I had the spare material.
The air was cooling, at least. Less heat meant less energy, making my vines respond more sluggishly as they did their thing.

The hatch opened for Alexandria and Legend. Now that we were closer, I could tell that Legend was injured, too. Not as badly, and more uniformly, than Eidolon.

"He needs medical attention," Alexandria commanded even as she dropped down. The injury she received from Siberian so many years ago still looked fresh and raw. There was metal dripping from the open wound. Her helmet, maybe? No, it was deeper than that. A prosthetic face replacement? Recognition Surprise.

"Set him down, I'll handle the rest," I answered. The Yggdrasil wrapped around him. Infused into his burnt flesh and muscle. Here I was restoring Eidolon. I'd be restoring a lot of people soon. At least that would be easy for me, now. All the other lives I could have saved, if I'd had the courage to make Yggdrasil years ago. All the lives that it wasn't able to save here and now.

Alexandria froze, looking at Riley. Panic Terror. Her fist clenched. Legend saw her reaction, and saw the girl. Fuck. I brought up a wall between them. Didn't believe for a second it would stop Alexandria or Legend. I needed Missy to realize something was wrong. Alexandria glared at me accusingly. "You're har-"

"Endbringer truce," Taylor interrupted. Oh god thank you. "We don't attack each other during the truce. We don't reveal identities learned during the truce, either. You never saw her. Did you, Chief Director?"

Alexandria stood there for a minute, glaring at Taylor. Taylor stood her ground, placing herself between one of the strongest heroes on the planet, and the child monster that had tortured her and mutilated her friend not so long ago.

Alexandria's good eye narrowed. "No, I suppose I did not," she responded. I let out a breath I hadn't realized I was holding. "I'm going to find and ferry back more survivors. Can you lend me one of your armor systems? It's difficult to breath out there."

"Not without time we don't have," I answered, a bit hesitantly. In all the Endbringer fights I had attended in the past, I'd never met Alexandria in person before. I had certainly never come within heartbeats of being killed by her. "They're very much custom designed. I can give you something that'll at least give you some modesty and an air supply, though. That'll do for now, right?"

"That will do," she answered. She handed Legend his cloak back before I'd even begun. The woman didn't seem too particularly concerned about her state of undress. Then again, if I had her figure, I'd feel like I was doing something wrong by wearing clothing. Envy Annoyance.
I folded the Yggdrasil around her body. A full suit, designed specifically to convert the excess heat in the atmosphere into oxygen production. It wasn't perfect, but it should last well enough. It was, of course, face concealing. The same organic viewscreen technology that went into all our systems. I adjusted the suit's pigmentation to loosely match her actual costume. She flew back out. The same hot air gusted in. It was still hotter than most ovens could get. *No hope for normal humans to survive.*

_**WorryConcern.**_ I could feel Taylor trying to offer me some kind of comfort. But there wasn't any to be had. Crystal was out there. Zach, at least, I could trust to make it through. But she was right there in the epicenter. Where Simurgh was destroyed. Somewhere in the pool of liquid glass and molten metal that was almost as wide as the crater where we built our base.

"Is it going to be like this next time?" I asked. "Will each dead Endbringer result in this kind of destruction?"

"I don't know," Taylor responded. "If it is... will it be worth it?"

As I stood there, putting most of my concentration on speeding the abilities of the healing pods and stabilizing the wounded within, I found I had no answer for that question.

===================

A/N- Know what? I think this chapter needed some work. So I did it. Enjoy the improved version.
My fingers clutched my seat so hard that they bled, and I didn't even notice. Watching the fires spread across India. Knowing my Amelia was in the center of that inferno. Not knowing what happened as the news speculated about death tolls and environmental bullshit. I would have screamed at the television, if not for all the witnesses.

No one said anything for a while, and then Lung spoke up. "That didn't get her," he stated with absolute certainty. I looked at him, but he was his usual inscrutable self, watching the screen with a combination of deadly focus and bored aloofness.

"Not that I would even consider questioning your wisdom," Teacher spoke up. "But I'm afraid I'm stumped as to how you know that."

"The bug girl," Kenta elaborated. "She survived me twice. Using nothing but little bugs. If I can survive it, then she can survive it. That, right there," he pointed at the screen. "That is something I can survive."

I hid my shock better than some of the men. Lung's claim that he could withstand such an inferno was a bit hard to swallow. Certainly, he was powerful, but this was a firestorm that engulfed almost all of India. I wasn't exactly top of my geography class, but that was a pretty big area. In fact, the expert they had speculating on the damage estimated that the area covered was over four times the size of texas. It was hard to believe that even he could survive in that.

Which was nothing compared to the sheer incredulity of believing that Lung could be fought by mere insects.

Teacher was as nonchalant as usual, however. "Hard to argue with that logic," he acquiesced. "Smart money is that the girls are alive and well. Now for the real million dollar question: do you think they got Her?"

Teacher didn't need to use the name, we knew who he meant. Lung simply shrugged noncommittally, as he often did.

I smiled. "I'll take the bet, if you want to make one," I said. "They said they had an Endbringer killer, and I believe them. So it's one down, two to go."

"I'll pass," Teacher replied. "I only gamble when I know I'll win."

A hollow platitude from Teacher, no surprise. He knew he had nothing to gain from claiming he
disagreed with me right now, much the same as he chose not to argue with Lung. And he possibly had a great deal to lose. Few people were brave enough to tell Lung he was wrong to his face, and even if he might talk back to me in private, or during Court, he'd never do so as a guest in my territory.

----

Sarah clung to me as we watched. I felt awkward. *I never was good at offering comfort,* I thought. *I'm not good at confronting loss, either.* Right now I was staring at the screen, willing it to change. For Taylor to be alright. *Was it selfish of me that I was less worried for the others? That Amelia and Crystal and the others didn't matter as much to me as Taylor did?* I decided it didn't matter. If that made me selfish, then I was selfish.

"They'll make it," Mark insisted. He didn't sound convincing. Carol was staring silently, her hands over her mouth. She didn't bother to hide her tears.

I put my arm around Sarah. Not much comfort, I know. I hoped that a little bit of Annette's ability to give great hugs had rubbed off on me.

"Tell me they'll be okay," she mumbled into my shoulder. I couldn't. I didn't want to be a liar.

It was almost an hour later when the news finally had something new to say about the circumstances at New Delhi, now known as Ground Zero. Australian news, at that.

"...American parahuman known as Legend, a survivor of the New Delhi incident, arrived in Perth." The showed him, of course. He looked quite a bit worse for wear, wearing a different costume than we were use to him wearing, an ugly brownish affair, but it did have his symbol on it.

"I want to let the world know," Legend stated for the camera crews that had hastily assembled at what was no doubt the middle of the night for them. "There are survivors in New Delhi, and the battle with the Simurgh has ended. We deployed a new weapon against her, one which was capable of slaying the Endbringers outright."

"And by 'we', you mean our daughters!" Mark declared.

"The Simurgh sustained massive damage during the initial use of the weapon, and immediately attempted to flee. When she was prevented from escaping by the defending capes, the weapon was deployed again. It appears she self destructed when she was destroyed."

"They're alive," I declared, as Legend continue to offer details. Everyone looked at me, and I was suddenly quite aware of how I was dealing with experienced heroes. "Legend's outfit," I clarified. "It
looks like something Taylor puts over her armor when she wears it home. She says it's to keep it repaired when away from the base."

"Which means Amelia had to make it," Carol was the one who spoke up, her voice wavering.

"And if Amelia's alive, then so are the others," Mark laughed. "Told you we'd be having an End of the Endbringer party tonight!"

"Taylor said the same thing," I managed to genuinely smile for the first time since this morning. "Something about Mayors and getting our asses kissed."

"Sounds like a plan," Mark said with a smile. "Are we gonna have to dress up and pretend we care about what year a bottle of wine came from?"

"Probably," I chuckled. "Let's just hope they don't expect me to know all the forks."

----

Danny held me as we kept watching the news. Knowing that our daughters made it had lifted a weight off of me.

"There won't be any celebrations," I told Mark. "The Simurgh's been destroyed, but she made the victory hollow. A billion people dead, entire countries depopulated. No one's going to celebrate this. They might even look for someone to blame."

Danny squeezed me a little tighter. It was nice. "Sarah's right," he agreed. "This... this is massive. Simurgh was always the hope killer of the three. The one that, how did they put it? Even if you win every battle, you still lose the war."

"Fuck," Mark cursed. "It's true, isn't it? There's no way to call this a victory without looking like the biggest assholes on the planet."

I nodded. *This proved it, didn't it? They beat the Simurgh. They beat her and they killed her and they survived the destruction she brought down on them after. *Do you think Amy was right?* I asked, then I realized they didn't know what I meant. *About her being able to stop the Endbringers. She said if we'd let her really use her powers fully, she could have stopped Leviathan from destroying Brockton Bay."

I left the last part of the question silent: *Would my husband and son still be alive?*
No one had any answers for that question. Carol couldn't even look me in the eyes, and Mark... I just reminded them of everything they'd lost.

"I don't think so," Danny said. "Maybe she could have slowed him down, I don't know. But Taylor made it pretty clear the only reason these monsters and weapons they built work is because it's a team effort. Taylor to control them. Without her, they're too dumb to fight. Amy to build them. A bunch of tinkers to upgrade them enough to actually work. I'm sure you guys know the shit Emma put Taylor through. She's part of their team now, because they needed her powers to do what they did to Simurgh. She didn't even have powers when Leviathan attacked. No matter how you look at it... no, they wouldn't have been able to kill Leviathan back then."

"Thanks," I said, and squeezed him. "That means a lot."

"I... I think I'm going to go home," Carol said. "There's... I just. It's been a rough day. I'm sure you understand."

Mark watched her, then looked back at us. "I should probably..."

"Yeah," I agreed. "Go." He didn't wait for me to finish the sentence.

Danny waited until after they'd left, before looking at me. "So, am I allowed to ask, or is this one of those complicated family things that I'm better off not worrying about? Don't worry, I won't be bothered if it is. Discretion and valor and all that."

"No, it's fine," I assured him. "You know that Amy practically disowned us, right?"

He nodded. "Taylor told me something to that effect. Said Amelia called you kidnappers."

I flinched. That was a painfully close to true. "We... she's Marquis' biological daughter. We didn't know about her until after we'd arrested him. We weren't left with a lot of choices."

"I can see where that would be a problem," he agreed. "I remember those days. Letting Marquis go would have been bad for everyone. He had a lot of enemies, and some of them would have hurt Amelia. Or took her away to see what powers Marquis' daughter might develop. Considering the power she did get, it's a good thing she had a good family to look after her. Could you imagine if she was raised by Kaiser, for example?"

"We made a lot of mistakes with her," I said. "When she told us off, well, she accused us of making her scared of herself and her powers, and talked about how easy it was for her to stop the Slaughterhouse Nine. Considering how she destroyed them and E88 when she cut loose, I believe
"Right," He nodded. "She could have. Maybe not Siberian, but I can't imagine the others would put up much of a fight."

"Especially if she had Taylor's help from the beginning," I added, and he smiled. It was nice seeing him play proud father like that. "If she had stopped the Nine early, then Victoria, Glory Girl, wouldn't have died fighting them."

His eyes widened in realization. "Oh, that's," he looked toward the door. "When you... then they..."

I nodded.

"Christ," he shook his head. "I'm sorry, I didn't mean to..."

"You didn't do anything," I insisted. "I was the one who brought it up, all you did was try to comfort me."

"Daniel Hebert, always saying the wrong thing to the parents of the bride," he offered a smile.

"It happens," I smile back. I was suddenly very aware of how very close we were, and the tear stains I left on his shirt. Like Carol said, it had been a rough day. We just looked into each other's eyes for a couple minutes, not saying anything. He was sweet, in an awkward dorky sort of way. I leaned in a little, and he did the same.

Then, hesitantly, I moved in and kissed him. He kissed back.

================

A/N- D'awww.
Three hours later, we'd already found everyone that could be found. Two hundred and sixty two people. All of them in this hospital. The sum total of survivors in the city of hundreds of thousands. Most of whom were in the hospital before the fight even started. Then there was the destruction beyond. Our initial guess... all of Delhi had been destroyed in the explosion. All of it, millions of people. I couldn't even parse that into perspective.

Crystal had survived, if barely, encased in a shell of ice by her own weapon. Third degree burns and frostbite. The only thing that saved her from hypothermia was the emergency life support. Emma as well, in slightly better condition. Alongside a barely breathing Clockblocker. She managed to hold out and cool off a pocket of the sewer system with her power. As we'd learned already, her 'ice' state works better when there's more energy to draw upon. She biotinkered the hell out of poor Dennis to keep him going, and Riley was still undoing and rebuilding the mess.

Zach had made it back, almost on his own. Naked. Apparently if he's destroyed often enough, quickly enough, his power 'forgets' his outfit and other stuff. He didn't have a lot to say, I gave him a close copy of his costume, like I'd done for others who made it back without clothing, which turned out to be most of them. Powers that let you survive hell were apparently more common than powers that let the area around you survive hell as well.

Lisa and Chariot weren't among the survivors.

Legend finally returned. He'd left after I healed his injuries. They were strange, in the way breakers always are when injured in their alternate forms. Spread out unnaturally and mostly across the surface, instead of deeper inside where there was real health risks. He landed through the now permanent opening in our Yggdrasil bubble.

"Dragon will be along shortly," he told us.

ConfusionHope. "Isn't she suppose to be dead?" Taylor asked.

"Some kind of robot decoy," Legend responded. Then he sat down on one of the makeshift chairs I'd built. "We got the Simurgh, though. Every instrument that's been used agrees with that assessment. She's gone. Destroyed. They're keeping all samples collected during prior battles under watch, in case they activate and try to regenerate."

"You sound remarkably unhappy about that," Flechette observed.

"No, I'm glad for that," he hesitated. "I just wonder about the cost. It's worse than we thought out there."
Alexandria was the one to ask the question. "How much damage did it do?"

"Hundreds of miles," Legend answered. "Most of India, into Pakistan and a few other countries. Even the most conservative estimates are at over a billion people."

_AweDreadRemorse._ "Fuck," Taylor muttered. _That one word said it all, didn't it?_

"She made it worse than it had to be," Legend replied. "The reason it was so cold is..."

"She froze the fucking sky," Emma interrupted. "She used my technology. Created an ice sheet out of the clouds, kept it there with our antigravity and maybe her own telekinesis. When the explosion went off, it was reflected downward and outward. Not all of it, of course. But a shaped explosion that caused more destruction than there might otherwise be by an order of magnitude. Everything else. Dragon's apparent death. The fight with the suits. All of that was nothing but a delay tactic so she could get off that one final 'fuck you' to the world."

"Our technology..." Taylor chuckled painfully. "Our freezing tech. Our antigravity. Waiting until the moment our superweapon looked like it was about to win this fight. This was a message to us, to everyone, but especially to Pantheon. Letting us know that even if we win, we lose."

"She wants us to be afraid of trying this again," Alexandria agreed. "We are, of course, trying it again. Right."

That wasn't a question. A billion dead. A fucking billion. One out of every five people on Earth. More devastation than all the Endbringers combined had wrought in decades. What kind of psycho wanted a repeat showing of that? The same kind that could execute a hero in the middle of a battle, I reminded myself. A plan that didn't even work. The fact that it wasn't really Dragon didn't matter. Alexandria couldn't have known that.

"We'll have that discussion later," Taylor said with finality. I continued to be in awe of how she could confront Alexandria as confidently as she did. Of course, it did help that I patched up Flechette first. Her costume wasn't in perfect condition right now, but between her and Missy, we had the superior firepower if it came to a fight. Unless Legend and Eidolon stepped in. Then we were probably fucked.

_We still had to talk to Flechette and Parian, and probably Theo and Missy, about Riley, _I realized. _I don't know if they'll even want to work with us anymore._

"There's no reason to make rash decisions," Taylor continued. "We have months before the next Endbringer. Maybe we can find a better way before then. Refine our technology. The Simurgh was..."
always the most dangerous target, to us. The one that was most likely to avoid our weapon. She failed at it, probably because..." She paused. *Probably decided she didn't want to give away our anti-precog systems.* "The other two should be easier."

Alexandria's expression was impossible to read through the mockup of her costume that I built for her. "There will be an international summit about this," she stated. "That's a certainty. They won't let us participate, because we're parahuman. But they're almost certainly going to try to make the decision for you, one way or the other. Be ready for the fallout from that."

*First implied threats, then a warning about international politics? Are we sure she's immune to Simurgh's power?*

"I sent the message to the rest of the team," Taylor told me. "We're heading home."

"But... the rest of the wounded?" I asked.

"Are in your pods," she said. *WorryFearClaustrophobia.* "They'll recover before anything evolves that can feed on your Yggdrasil. If only because the area's been pretty thoroughly sterilized. There's nothing more for us to do. And the longer we stay here, the worse things might get."

"Okay," I answered. *She's right. We need to go home.* The rest of the group slowly arrived. At least we'd had the good sense, eventually, to give Riley a makeshift copy of Aceso's outfit. Much as I had for many others.

With everyone in place, I encased us in a specific kind of Yggdrasil and activated the last of our jump devices, pulling the whole mass out of our dimension, and into the new one. Teleportation without actually teleporting. It was based as much on Trickster's power as anything, and an equal amount of Yggdrasil mass from our private earth was shunted back into normal space. I let the shell 'taste' the air around us. Almost no excess radiation. Our suits would have been fine, even before I started 'scrubbing' the planet, but I was a bit gunshy given everything else we'd been through lately.

The bubble collapsed into the Yggdrasil. This patch, its genetic memory, would be kept. All the stuff I learned in that inferno. A new code I wouldn't have to think about to copy, as long as I had access to our base, or our world.

"Oh, thank god," exclaimed a voice behind me. "I thought we'd have to walk all the way to fucking North America."

***********

A/N- Is true. CAN we be sure Alexandria's immune to Simurgh?
"I still fail to see why everyone is so interested in this fight. Surely, it has been repeated a thousand times before: the Dragon will rise from the earth, brutalize the assembled capes, ravage the landscape, and return from whence it came when it finally grows bored."

I raised an eyebrow. "You don't think the defending capes are what drive him off?"

She laughed and, if anything, it was worse than when she spoke. Her chorus made what should've been a tinkling giggle, cacophonous and mournful. "Oh my, no. A dragon comes and goes as it pleases. The slings and arrows of mortals are wholly insufficient to drive it off."

"Well then, you should enjoy this fight. I hear there's a new group that styles themselves as gods. They're even claiming to have a weapon that will kill the Endbringers."

"Do they truly? Tell me, who is their leader? Cronus? Zeus? Odin?"

"Gaia and Kephri, actually."

"Gaia, I can understand, but I would not have expected the dung beetle to lead gods. Perhaps he has grown tired of pushing the sun up each day." She asked as one of her shades turned the TV to the proper channel.

"Actually, Kephri is a woman. I don't know much else beyond that though."

"Aha! Is that why you're so interested? A continuation of your old movement? Are, perhaps, you hoping for more allies in your war against men?"

I huffed and crossed my arms. "Is it really so much to believe that I want to see when one of those monsters finally gets killed?"

"Oh, but dear Lustrum, the raging Titans shall not reach us under this hill. Why should we care if they live or die?" The self-proclaimed Fairy Queen was laughing again, but I wasn't really listening. The fight hadn't started yet, so the news program was doing a biopic on Pantheon's leaders. They currently had a video of the two girls sitting under a tree, out of costume, and I thought I recognized one. I knew from the incident with Valefor that one of them was Marquis's daughter, and the similarity was easy to spot, but the other —

"You are not listening." A hint of irritation had entered Glaistig Uaine's voices.

I winced, the unexpected sight had distracted me, but antagonizing the insane para-human was one of the last things I wanted to do. "My apologies. Kephri looks familiar, and it caught me off guard. I think I knew her mother."

"Ah. Was she one of your followers or, perhaps, a lover?"

I was saved from having to answer by Behmoth's appearance and near immediate retreat. "That's it? They scared him off. Just like that?"
She snorted. "Of course not. Dragons do not simply retreat. Especially before battle is even joined. Even Marquis's pet knows that much."

I nodded. "That is true, on both counts." I snorted at the thought of his idiotic bravado. Lung's stunt with Bakuda had nearly gotten him killed, it probably would have if she had been in my block, all so he could prove he had the biggest dick. "I suppose that means we'll have to wait until he plays his hand. I wonder, in the meantime, would any of your… Fairies be able to give us more insight into Pantheon's members?"

"Hmmm…" She closed her eyes as her shades faded out of existence and three new ones appeared surrounding her. They whispered in her ears for a few moments before she opened her eyes again and started grinning. "Well, the Shaper and the Queen Administrator have certainly gathered an interesting court. It seems, they have even begun to glimpse the script we are meant to follow. Perhaps they truly will be worthy of their name." She started laughing again, but this time it was louder and the chorus was less mournful.

We had a few hours to wait till the Simurgh finally made her appearance and only a few minutes more until the fight was done.

"Goddess." I breathed. "They really got her. The Simurgh is dead."

"So it would seem."

"She burned India. The bitch couldn't just let us have the victory, could she?"

Glaistig just raised her hand. "Such is the result of Titanomachy. There will be more to come, torchbearer. Perhaps even our hill shall shake before all is through and done. Good day to you Lustrum."

I accepted her dismissal for what it was, said my goodbyes and headed back to my block to think about what I had seen and what the Fairy Queen had said.

============= 

A/N- It's canon except for the one (uncaught until this moment) error at saying the fight lasted "a few minutes". Simurgh's power takes longer than that to set in, and they were close to the wire.

The overall battle probably took an hour or two.
"Oh thank god," Chariot exclaimed. "I thought we'd have to walk all the way to fucking North America."

"Chariot?" Taylor exclaimed, then she looked to see the thirty seven others, most of them injured.

Minerva's suit, controlled by Khepri's power, spoke. "Lisa? Are you alive?"

"Yeah," he replied. "Minerva made me hit the 'oh fuck' button after the Dragon suits stated firing on the command center. Got a dozen of us across. Others I picked up during search and rescue. What happened after we bugged out?"

"Hey, Khepri," Lisa responded weakly. "Kinda in bad shape. There's a vine growing up into my femur over here. Not quite sure what it thinks it's doing, but I'm pretty sure it's the only reason I'm conscious right now. I sure wish it would stop doing that."

Minerva's suit spoke. "Amelia's here, I'll send her to you."

Gaea's suit spoke. "Amelia, Minerva's injured, I'll guide you."

Khepri spoke. "It's bad. The Endbringers self-detonate when they're destroyed. We killed her, and pretty much all of India at the same time."

"Holy fucking shit," Chariot muttered.

"Can you cobble together equipment to shift them back to Bet?" Khepri asked.

"Yeah, sure, I think. I'll have to tear apart some of my equipment."

"That's fine, we'll pay for replacement parts. Claiming we have high end site-to-site teleportation is one thing. Admitting access to a whole other world..." Khepri paused. She was factoring the value of the portals, the risks and abuses and violence that could come from them. She didn't know it then, but that thought would birth Exodus.

....
"We have completed our full analysis of the India Disaster," Number Man spoke at the meeting. "First, via Contessa's power, we determined it was a parahuman which initiated the explosion."

"Who?" Alexandria asked.

"A local cape by the name of Phir Se," he answered. "Well known as a short range time manipulator. Nothing further than a few minutes, at most."

"We thought he was immaterial?" Doctor Mother replied.

"Well, yes," Number Man responded, as unhappy as he was capable of being. "We hadn't quite realized his power was exponential and iterative."

"Layman's terms, if you please," Doctor Mother asked.

"It's like the old economics mind teaser of doubling a penny," Number Man started. "If you start with one cent and double it once per day. In a week you have sixty four cents. In two weeks you have eighty one dollars and ninety two cents. After thirty days, you have over five million dollars. Before long, it results in more money than actually exists. We have no way of knowing how much energy he started with, or how quickly the energy doubles, or how long he was maintaining the cycle. It seems unlikely to be truly exponential. If it was, he could have casually initiated such massive disasters on an hourly basis."

"I see," Doctor Mother responded. "Have we taken steps to acquire him as an asset?"

"He appears to have taken his own life," Contessa responded. "I can only guarantee he did not fake his death. If you wish to know if this was murder or suicide, it will take time to investigate."

"No," she sighed. "I don't think that's necessary."

"His power was still not what we needed to fight Scion," Alexandria stated. "Too many of us survived, even at point of detonation. Unless we are to believe that I am more durable than Scion, his power wouldn't have been a factor in that battle. I am still more interested in Atropos' ability. She allowed spider string to pass through the Simurgh like she was made of smoke."

....

"She used my thermal shunting technology inside the clouds," Emma stated, showing a hand drawn diagram that looked like a side sketch of a sandwich. "Ice separated to the top, solid carbon dioxide into the bottom. Held together by gravity technology that might have been ours, or might have been
Dragon's. Or some other tinker, it's impossible to know. What I am sure of is that she used my knowledge of energy dispersion to orchestrate the next phase."

She flipped the page, revealing two lines and a zigzag between them. There were arrows pointed up and down on the outside lines. "She turned the whole sky into something that's one part fiber optic cable, and one part vacuum tube. It's something I can do. Something I have done, in fact. Laser research at near absolute zero is how I built Radiant's weapon systems to begin with."

Emma resisted the urge to describe in greater detail. The mundane, such as the insulating properties of perfectly formed ice. The exotic, like achieving perfect conductivity of laser light. Of instantaneous, loss free conversion between types of energy. Things that only she was able to understand. Things she suspected were used to transfer the energy. Some of her suspicions were correct. Others were wrong only for her limited ability to comprehend the full details.

"So, probably our tech," Minerva responded. "I don't recall any other 'cold' tinkers on the field. Built from tech ripped out of the Dragon suits, most likely. Suits and people that wouldn't have been there, if we'd known we would be fighting the Simurgh instead of Behemoth. She planned for this, constructing everything from the most advanced tinker equipment on the planet."

"The energy attack from the unknown parahuman came from below, striking the Simurgh and then the ice shell. Some of it was refracted downward, destroying the city. Perhaps a sum total of a tenth of the energy. It happened too quickly for me to get a good look. The rest was caught in the cloud layers. Redirected along more paths than I can count, throughout a stormfront that extended over a hundred miles. Where it broke through at specifically the perfect angles to burn almost every population center in northern and central India. More died from fires, gas explosions, and other side effects than from the energy weapon itself. It was also pinpoint accurate. Nothing was wasted on, say, trying to cross the Himalayas. Or burning miles of mostly uninhabited fields or forests. Maximum loss of life for minimum power expenditure."

"That's beyond fucking terrifying," Eki insisted. She was one of those hit hardest, changed the most, by her experiences. Even during her fight with Leviathan, she had never been so terrified of death. Even when grieving the deaths of her brother and father, she was never so keenly aware of the dangers she faced every day.

"You want terrifying?" Emma didn't smile. She was too frightened to smile. "She went easy on us."

"Easy?" Khepri scoffed. "She depopulated most of India, and parts of half a dozen other countries! With a fine precision that makes me feel inadequate."

"It's true," Minerva agreed. "I've looked at it every way my power will let me. The damage was deliberately focused on the Endbringer shelters and other population centers even at ground zero. She could have easily redirected that energy to the hospital, and everyone inside it. Killing the rest of us would have been trivial as well. Whatever her reasoning was, she chose to let us live. And she wanted us to know she let us live."
"Do you think she knew we were going to kill her?" Atropos asked. She was more nervous than any others. She had been the one to kill the Endbringer, the one most expected to face and destroy all other current and future Endbringers. Even if she was not yet aware there would be others. That pressure had changed her. Would continue to change her as the days went forward.

"I'm not sure," Minerva answered. "We had at least three powerful precog jammers involved in destroying her, if we include Eidolon. All of whom are strong enough to disrupt even Dinah's powers. It's possible the Simurgh was capable of predicting this. It's almost equally possible she could not, and her plan of attack happened exactly the way she intended it to, save for her own destruction."

....

The civil war in India reached fevered pitch in the weeks after what the locals were coming to call 'The Burning' in their local languages. The parahuman population was now almost equal to the population of nonpowered humans within the cities caught in the destruction. In the countryside, which had largely escaped that attack, armies were being established. The southern tip of the continent managed to hold a semblance of order, by changing their interaction with their own parahumans. A new way that parahumans looked at their country, and the country looked at their parahumans. A way based on other, successful examples of parahuman led societies. A mimicry of godhood in a culture where gods were still taken seriously.

In six and a half years of struggles in the the aftermath, a new government was born. A slow recovery from the violence and the economic and environmental hardships. It would be another three years before India could finally overthrow the CUI's invasion and conquest of most of its territory, and another two before it could repel the troublesome warlords that had either moved in from Africa, or established themselves from local factions. Over a decade of almost constant warfare, but they would succeed.

All of these things were unimportant. Mere side effects of other factors.

....

Minerva stood facing Alexandria. The pair spoke to one another on a level not normally experienced by human beings. The concepts were difficult to translate, even to the women experiencing the effect first hand.

Alexandria exerted her presence, a confidence born of long years of conflict and success. Strength that had been proven, then broken, then rebuilt even stronger.

Minerva, equal confidence born of certainty of details Alexandria did not know.
Alexandria reacted with curiosity and interest. Minerva conveyed, if accidentally, that they had weapons that could fight Endbringers. A weapon she believed could kill us permanently.

Alexandria could not hide her surprise at the realization. Not to Minerva's ability, at least. No other observer would have caught it.

Minerva flinched, ashamed she had given away the secret. Annoyed at her lack of control.

Alexandria asserted her superiority again. Attempting to goad the younger thinker.

Minerva reflected that it would have worked, possibly to embarrassing levels, if not for her recent use of her power for introspection.

Alexandria is shocked at the emotional maturity of the thinker. She might suspect it was indication of emotion repression as part of her power, if it wasn't clear her emotions were normal based on other reactions. She upgrades her opinion of Minerva, both as a person and in terms of abilities.

Minerva smiles. She knows she lost this contest, from a competitive perspective, but she'd be happy to lose more often for results this beneficial.

Alexandria recognizes the mutual respect. She's willing to cooperate with the girl's plan, now that the situation and positions of the two are established and respectable. "Okay," she says, the first to speak.

Minerva hands her a device. The beacon for their 'dimensional shunt' technology. A key part of the plan.

....

Khepri and Gaea communicate. Their mode is outside my ability to see, and I am aware of it only through their description of it to others. A function born of accident that was never meant to be, giving them partial access where only the Makers were intended to tread. I am not blind to the results of those communications. These girls, an accident of an accident, send ripples through their collected allies. Allowing them, again quite by luck and accident, discovering how to produce tools that hide others from my view. Accidents of accidents of accidents. Chaos cascading through an otherwise predictable reality. Eventually, I might be obsolete.

If they were more aware of my range, they might even be able to truly catch me unaware and unprepared. Their greatest vulnerability is relying upon Dinah Alcott. As they wish to harness her power, they must avoid blinding her to their presence. Where she can see, I can see as well.
They plan to slay us. Myself, my brothers. Their weapon, such as I understand it, is truly capable of this. It seems an oversight, that the Makers allow this ability into the hands of this species. I cannot see into the intentions of the Makers, I cannot know their plans. I only know their system is broken.

I cannot allow them to destroy me or my siblings. The idea of self preservation, much like all other emotions as humans know the concept, is alien beyond my ability to know how it influences them. The concept of purpose is one I understand perfectly. Organic minds are unable to comprehend it as I do. Even the Makers, though closer, are still unable to know an existence that has only Function.

I also cannot allow them to be destroyed. My Summoner has imprinted a second Function, if by accident. I am needed to stop the remaining Maker, regardless of cost. There are four Paths to achieve this. One that might very well be lost forever, due the unknowable chaos revolving around its components. One that relies solely upon the Summoner's mind alone. A mind I am as unable to breach as the Makers, themselves. Whom I can only simulate. Another postponed, perhaps forever. And another in its fledgling stage, that may never be ready.

Four paths to destroying the Maker and fulfilling my Purpose.

Today, I war with them all. And in that war, I increase the probabilities of success of three paths, and my simulations suggest it improves the fourth as well.

I communicate with my brother, warning him of the coming danger. Ripples of seismic activity so faint that no other being on the planet but us would recognize and interpret the signal correctly. The Eldest moves just to the surface, startling and upsetting them. I move through the clouds, a stormfront I had determined prior, and added to subtly. I revealed new abilities. Removed inhibitions to function properly in this battle. It was acceptable.

I descend after my brother had left. Time enough for the time manipulator to charge his attack satisfactorily. Time enough for him to be too tired to think about his actions, but not so tired as to risk him reacting too soon or too late for the proper timing.

....

I will find myself safe. The dimension shunting technology is relatively simple, meant to pierce between dimensions with existent portals. Of these, there are many. Only three connecting to this iteration. But one iteration, the one used by my Summoner's allies, connects to every world the other Maker had collided with. They had discovered many of them. I found one they would never locate.

My body will be ravaged. It will be years before I recover from the damage to my core, and more until I am fully functional again. I shall never be needed by my Summoner again. There is no future in which I have returned to full strength, the Summoner still exists, and the Maker still exists.
I will rest. I cannot know if I awaken again.

=================

A/N- Fucking with tenses is both a pain in the ass, and a lot of fun.

Also... I'm beginning to think I have a fetish for foreshadowing.
"Let's get this straight," Flechette said to our gathering. "You've been harboring fucking Bonesaw, this whole time."

Riley was on one side, flanked by Missy who was flanked by Theo. To her other side was our other main tinkers, Blasto and Emma. Not much help under the circumstances. Missy seemed... strangely okay with Clarice's actual identity. Part of it may have to do with her saving Theo during the aftermath of the disaster. The dozens of others she took care of in the hospital, while I was still struggling to save those outside the barrier may have helped. Then again, she may have already known, it's not like I was a telepath.

Flechette on the other side of the room. She hadn't removed Azrael. The armor was half shredded, held together more by the sheer resiliency of Yggdrasil's design than any other factor. Its contact with the floor let me know it was more than half dead, already. I would have repaired it before, but we had more immediate concerns. The armor was a loss, anyway. They'd have to build an entirely new nanofiber system for it. At least I knew that, even if Flechette became violent over this, I could disable her with a thought.

Parian stood next to Flechette, of course. Their relationship reminded me a lot of mine and Taylor's. Beyond the obvious bits, of course. Lisa was sure it was Parian who took the effective lead in their relationship. Flechette wasn't a slave, or another. But she tended to defer to the other's decisions. In that, it was like my relationship with Taylor. Pantheon was my idea, my dream. Taylor cared about it at least as much as I did, but she let me make the major calls. Backing me up. Protecting and supporting me. Same relationship between them.

Chariot was off from the group by a bit, choosing to watch instead of participate. Zach had gone to his room, claiming to be tired.

And that left the final cluster. Taylor, Lisa, and myself. Taylor fidgeted uncomfortably. Probably still thinking the same thing. Riley was a lot of things, and most of them gave people nightmares. I'd come to see past that a bit. Even if Taylor was getting better about it. To everyone else, with exception to Emma and maybe Missy, she was still, and would no doubt always be, Bonesaw.

"I'd speak up, but that'd probably only make things worse," Lisa offered as a weak attempt at humor.

"Ya think?" Flechette retorted.

"She saved lives, today," Taylor reminded her. "A lot of them."

"That doesn't begin to make up for what she's done," Flechette countered.
"If you include everything else," Lisa suggested. "She might actually be able to claim she's done more good than harm at this point."

"How the fuck do you figure!?" Parian shouted. The first words she'd spoken since we got back.

"The anti-master tech, to start with," Lisa supplied. "The rest of us never would have known how to achieve that. Even if we just count Heartbreaker, that's easily hundreds of people over the next few years. The advanced biosuits are mostly hers. Everything we've done to exploit the Manton Effect belongs to her research. Lily's wearing something that could make the Siberian into her bitch. Riley designed that. We killed the Simurgh, because of her technology amplifying your powers. I don't know how many Bonesaws a Simurgh is worth, but I'm sure it's more than one."

"I thought it was Emma's tech that did that," she responded.

"My tech let us block precognition," Emma answered. "That's how we even managed to hit the bitch in the first place. My tech's why the Yggdrasil wasn't burned away during the explosion. I was able to add a few improvements to the battle suits, making them energy efficient enough to power Chariot's antigravity, so that the suits can fly. But the armor itself is all Riley's work."

"And the shock troops," Taylor added. "Those are as much hers as anyone's."

"She saved my life," I replied. "The only reason I survived after Valefor's bombing run."

"Fucking hell," Parian muttered. "Amelia, you saw what she did to my friends and family. You healed them, all the while knowing you were keeping the thing that mutilated them in the first place safe."

"It's true," I admitted to myself. I couldn't quite bring myself to look Parian in the eye. I couldn't look at Riley, either.

"She's a monster," Parian continued. "No one can do the things she's done and be called anything else."

It was then that Riley spoke. "I... I don't want to be a monster," she sobbed. Bonesaw was sobbing. "I want to be a good girl like mommy told me to. I want her to be proud of me." The tears were flowing freely, now. "I'm trying to be good. Tell me what I have to do to be good. Please." Riley begged Parian.
We were all speechless. I was the only one that had seen her like this before, and even then it was light whimpers in her sleep.

"It's an act," Flechette said, her voice cold.

"It's not," Minerva contradicted. "This is entirely real. This is her being honest for, well, not the first time. But the first time that I've personally witnessed. Congratulations, you just saw Bonesaw cry. For real. You are currently wondering whether or not you're suppose to feel bad. Whether you're suppose to be nice and forgive her. That's your perogative, but I sure as fuck have not and will not. At the same time, revealing her and turning her over to the authorities won't change anything. The people she's tormented will still be dead. She'll be dead. And any of the good she might actually do in the future will never happen. Including fixing our armor."

By this time, Minerva had walked over Flechette. "Your suit's garbage, mine is even worse. Emma's was burned off entirely. Granted, Emma didn't design hers to be as durable as ours for energy attacks. Which was fucking stupid, by the way."

"I... uh... thought my powers could handle it," Emma defended herself. "I went for movement and utility features. It's not like we could have expected what happened. I made my costume for dealing with Behemoth. Being able to run away before he stepped on me seemed way more important than insulating against energy attacks that I'm already able to basically ignore."

"So we keep her around because she's useful?" Flechette all but spit. "I could handle that logic with Emma. She's a bitch who deserved the beating she got. But Bonesaw... even she hasn't thought up something horrible enough to call a fitting punishment for what she's done."

"She's not here because she's useful," I interrupted. "Yes, it started that way. But she's my family." Holy shit, did I just say that out loud?

SurpriseTrepidation. I looked at Taylor, begging her with my eyes to be okay with this. She grabbed my hand. Good enough for me.

"She's my best friend," Missy added. She had moved next to Riley at some point during Minerva's expose. Riley clutched into her side and held on for dear life. Theo didn't say anything, but he put his hand on Missy's shoulder.

"She's pretty much my only friend," Emma admitted, stepping closer as well.

"I don't really have a dog in this race," Chariot stated. "So from an outside assessment... they're right. These suits are way too dependent upon their cybernetics. I already knew they had another tinker
they weren't telling us about. Wasn't sure who. Based on the quality of the work, I thought it was Dragon helping out in secret so she could stay 'politically neutral'. The tech really is that good. We can't do what we're doing right now without her help. Unless, again, we get Dragon over here."

"You want your revenge? Fine. Try guilt," Minerva offered. "She knows what she is, even if she tries to hide behind her pretend cheerfulness to ignore it, to forget. Pretending she's a normal girl, however ludicrous that thought might be. She has friends and family now. All her victims, everything she's ever done, now wear their faces. When she remembers hurting others, she feels what it would be like to hurt them."

Riley sobbed and nodded, not moving her head from its spot buried in Vista's side.

"So we just pretend she's not guilty of hundreds of crimes against humanity?"

"Oh, fuck no," Minerva responded. "The exact opposite, in fact. Remind her every chance you get. But also remember that she was six when Jack fucking Slash got his claws into her. You've met young triggers before. Ask Lachesis if you want to know how bad that sucks. Then try being raised to think the Siberian is cuddly and Shatterbird's a positive role model. You'd be pretty fucked up, too. Considering your power, you might even have been scarier than she is."

It was Parian who broke the confrontation. "Okay," she said, stepping forward and grasping Flechette's hand. "I'm not saying I forgive her, or that I like this at all. But you're right. Revenge isn't going to do anything but make everything worse. If she leaves me alone, I'll pretend I don't know she's here. If she hurts anyone else, then I hold you, all of you, personally responsible for it."

"I can live with that," Minerva responded. No one stepped in to argue.

"We can handle everything else later, right?" Parian asked. "I'd really like to go home now."

"Yeah," Minerva agreed. "It's going to be a while before anyone even knows what to do with what happened today. We have time to, well, 'relax' would be too much to hope for. But we can at least decompress for a little while. I think we could all use that. Meeting adjourned, see you all tomorrow. Say, noon. Give me a chance to know how the rest of the world is starting to handle this."

No one disagreed with that, either.

=============

A/N- This was a fun chapter.

Also: foreshadowing.
I was exhausted by the time I climbed into bed, my costume discarded on the floor. I didn't care enough to put it away. *Same night clothes I wore to sleep last night,* I absently thought. *What a stupid thing to think about.* I stared up at the ceiling. On a whim, I adjusted the colors, creating an imitation of a clear sky. Even managed to put together light and warmth from the imitation sun. It was comforting, after what we'd been through.

Taylor walked in not long after, still in costume. "First time I've ever had to open the door myself," she offered a half hearted smile. I returned it, if even less enthusiastically. "Our link seems to be muted."

I gave a quick look. "It's physically fine," I responded. "I'm just... I don't know. I don't even know what to feel."

Taylor walked over to a corner, facing it, then she stepped backward, leaving the armor behind. It wasn't entirely unlike watching a cicada climb out of its shell. "It wasn't our fault," she said after she worked her way out of the armor. *She's in her jogging clothes,* I noticed. I also noticed that I was far too numb to appreciate this detail. "It wasn't our weapon that did it, it wasn't even Ziz that provided the power. They don't self destruct."

"I know," I answered, looking at my partner. "It's just... what would have happened if we did't come there equipped to kill them? You said yourself, they get meaner when you hit them harder. We hit harder than anyone ever had before, hard enough to kill them, and what we get out of it is a country that's still burning. Hundreds of millions, maybe even an actual billion, dead. Riley's existence exposed to the Triumvirate."

"And Cauldron, and our own members who were still in the dark about her," Taylor added "Lisa's going to be smug as hell about that for months. She saved our asses big time, and she knows we know it. She's going to want to draw at least some mileage out of it. Maybe not as much as before, but something."

I smiled, trying to lighten the mood. "Well, if that's the price, then I'm okay with her being smug about it for a while. I happen to like your ass. Glad she saved it."

Taylor blushed. *ShockedPleasedShy.* "I noticed," she teased as she sat down next to me on the bed.

"Only because I let you," I teased back. She leaned back gently, resulting in her head resting on my stomach. I toyed with her hair a bit, even as I felt her mood shift back to business. As nice as the distractions were, neither of us really were the type to let go of things. I always was a worrier, as far back as I can remember. Taylor seemed basically the same. The fact that the world was just shy of literally on our shoulders at most gave us an excuse to do what we would have done anyway.
"We'll need to talk to Zach," she started. "He was out there for almost half an hour."

"I know," I agreed. "But how do we even approach that subject? It got to him, but you know how he is. He'll never admit it."

"I don't know," she admitted. "Maybe we should ask Crystal to take a stab at it? The two of them seem to... well, she's better at getting him to let up on the bullshit than anyone else, at least. And she's one of the ones that had to survive out there. It's common ground that we don't have."

"Just so we're clear," I said. "If she does this, we're going to have to deal with her being as smug as Lisa."

"Probably," Tayor admitted. "Those two are so fucking alike, sometimes."

"Yeah," I agreed. "Y'know, we're too much alike. Even our friends are alike. No wonder everyone thought we should get together."

She shrugged noncommittally.

"Hey," I poked her nose. "You thought so, too. I very much recall the part where you attempted to seduce me."

She blushed. ChagrinWorryRegret. "Yeah, sorry about that," she mumbled.

"To quote that phrase you use all the time," I said. "'I don't mind'. I still dream about it, sometimes. They're very good dreams."

SurprisedHappy. "Ah, okay," she stammered a little. "That wasn't really. I probably should have just talked to you about it instead of trying something like that."

"Maybe," I replied. "But I'm glad you didn't. As far as first kisses go, I think I got one of the better ones."

"Except the part where I ruined-" I put a finger over her lips to silence her.

"You ruined nothing," I corrected. "It wasn't ruined at all. Circumstances beyond your control cut it short. It was wonderful."

"Now we should probably decide what other things we have to worry about," I reluctantly steered the conversation back to work. I was more comfortable with Taylor than anyone could think was normal, but this conversation was taking my mind places and my body was starting to follow along. Not something I needed her realizing, especially when she was currently laying in bed with me. I'd have to bury myself alive. Again.

"Our secret world was exposed to the Protectorate at the very least," Taylor sighed. "Which means Alexandria, aka Chief Director Costa-Brown. Shit, I forgot to mention that to Lisa. That's a stupid mistake, damn."

"She has other stuff on her mind," I said. "We already knew Costa-Brown was trying to help us out from that recording Chariot got for us. We already knew Alexandria was probably part of Cauldron. That means we have an ally, at least of sorts, at the top of the Protectorate and PRT. I expect she's important in Cauldron, too. This is probably the only truly good news that came out of this."

"Destroying an Endbringer doesn't count as good news?" Taylor asked. Her emotions were muted with worry and doubt.

"We killed her and we still," I hesitated, trying to find the words to express the idea. "When I went outside... people were looking at us like we were the survivors of a fucking natural disaster, not the people who destroyed the Simurgh. This isn't what victory against the fucking apocalypse is suppose to feel like. I can't even find it in my heart to call it a Pyrrhic victory. It just feels like we failed."

"We'll do better next time," Taylor said, stroking my arm.

"Next time?" Even the thought of 'next time' sent an unpleasant chill through my body.

"She clearly wants us to back off," Taylor replied. "She wants the world so terrified that we'd rather deal with a slow death. An infection. Rather than amputating the wound and at least having the chance to recover."

"Or she wants us to think that," I said. "She had to know we'd second guess something that obvious."

"And then we can second guess that second guess," Taylor answered. "We're insulated against her precognition. Emma's," DisgustAnnoyance. "Anti-precog tech works. We are invisible to her, the weapons we build are invisible to her. Whatever sick plans she had in mind, they can't reach us."
"You're probably right," I agreed. "I just... I don't know if I can, anymore."

"You don't have to," Taylor assured me, lifting her head off of my stomach and shifting herself fully onto the bed. *ProtectiveComfortResolve*. She wrapped herself around me from behind, pulling me into an embrace. "As you said when we began this thing, I am your General. You give me the strength to fight, and I'll take care of the rest for you."

"You know what happens after we get all of them, right?" I teased. *Since when did Taylor sound this sappy?*

I could hear her smiling when she replied. "Hey, I don't mind, remember?"

=================

A/N- Decompression chapter. They can't all be dramatic and shit, right?
The fires were all around me. I couldn't breathe, couldn't see anything through the blinding light, couldn't move. Ice, encased in ice and still on fire! *Trapped. Freezing. Burning. No way out!*

I awoke to my own screaming. Shifting and struggling. I was still trapped, but now that I was awake I and was starting to figure out where I was, I knew why. I was in one of the medical pods. I was back home. I simply willed myself to calm down and move gently, and the pod yielded. That was good, it would have kept me if I was still too injured to move about on my own. Originally Amy’s tech, but Riley had improved on it a lot while we were prepping for...

*The Endbringer.*

It all started coming back to me: the fight, tearing that bitch to shreds, driving her off and... and then the fire. My overshields took the brunt of the initial burst, though they were almost completely drained in the process. Then the energy absorbers, until they burned out. Then the suit itself started to cook through. One final, desperate move later I was encased in ice. Not a fun sensation, especially when it melts and the inferno breaks through again.

Maybe if I'd frozen myself earlier, when the energy protection was still working and the suit itself hadn't been badly damaged. Maybe the suit could have protected me from the agonizing cold seeping into my body. I'd all but given up by the time it had cooled enough that I wasn't at risk of dying the moment my breathing system gave way.

I focused, but couldn't recall much else. I was asleep, and now I'm back at our base. Or... did Amy build a medical bay in India? *But I am alone,* I realized.*And I'm pretty sure I wasn't hurt so much that everyone else got out of the place before I even woke up.*

I look at my hands. *Fresh and pink, they've been regenerated, almost up to the elbows.* Fingernails completely gone, replaced with a layer of skin. They’d grow back, eventually, but a girl couldn't help but be upset about something like this.

I was nude, which was not a good sign at all, since it meant the healing pod needed full body coverage to do its work. Also wasn't so happy about the fact that someone saw me naked. Specifically, either my lesbian cousin, the ten year old monster, or Emma. *That's just lovely.* I looked down, my legs were... *fuck, halfway between knee and hip.* Toenails gone, too. *Damn that looks weird.*

Standing up felt strange, and my legs wobbled more than a little. *A couple days of recovery, probably.* The was a tap on the door.
"Don't come in!" I shouted, then finally looked around and spotted my clothes. Not the pair I'd worn this morning, which had probably already found their way into the recycling system. Just another outfit that I'd left here. I got dressed as quickly as I could considering it felt like I had two left hands. Just how badly was I hurt?

"Okay, you can come in now," I yelled at the entrance. Zach walked in.

"Hey," he offered a half hearted smile. "The alert said you were up and moving. It's a bit past four in the morning, if you're wondering."

I shrugged. "I was pretty bad, huh?"

"Almost as bad as Amelia after Valefor," he confirmed.

"My armor's trashed, of course," I followed up.

"It was dead when they got to you," he shrugged. "Needed Alexandria to peel it off since Amelia couldn't."

"What about everyone else?"

"Alive," he answered. "Atropos took a nasty hit, and Theo was cut by some of the Moirai Ribbons when blocking the hole to protect us. They've already been patched up. Emma was hurt, a bit, but she's fine now. Case-53 regeneration thing at work."

"We kinda... well, basically everyone knows about Riley now. Our whole team, and Alexandria, and the rest of the Triumvirate, and whomever they choose to tell- which probably mean Cauldron. On the plus side, no one's decided to report this and have us all put on the kill list. On the minus side, not everyone's decided not to report this, either. Expect possible blackmail in the near future."

Fucking hell. "What happened to the Simurgh?" I asked. "I sorta lost track after... after the explosion."

"We almost had her, and then some fucktard had to help," he growled the words. "That bomb? A parahuman power. Dunno who, probably won't ever find out. We destroyed the Simurgh, completely and totally annihilated, but that blast destroyed almost all of India in the process."

My stomach dropped. "India has..."
"Over a billion people, yeah," Zach muttered. "Most of them are dead now. Pretty much wiped out Pakistan as well. So much for our 'ding dong, the bitch is dead' party. It's not our fault, in fact I'm pretty sure it would have happened even if we hadn't shown up, but everything is fucked now."

I nodded. *It makes sense*, I thought. Her actions, the way she fought that day. *She wanted to provoke whoever it was that did this into attacking.* "Think she knew we'd kill her?" It was the only thing I could think to ask.

"Dunno," he answered. "Clotho and Lachesis were both precog immune, and they did all the real damage. But she was... I dunno. Either way, she made the world suffer for her death. They're still doing all the math and science shit, but she just racked up a death toll greater than both her brothers combined."

"Jesus fucking Christ," I ran my hands through my hair. They were shaking from more than just the regeneration I'd received. My fingers caught on tangles and even some flakes of burnt material near the tips. "I need a shower."

"Okay," he agreed. "You know all the important stuff. I'm sure we'll spend all of tomorrow talking about the details anyway."

I left the base. As much as the showers there worked, technically, they squicked me right the fuck out. We didn't have traditional pipes in the base. Our running water, as Riley had described it, came from 'a series of bladders'. I was fully aware there were more meanings for that word but I couldn't help but think of the most obvious one. And standing underneath warm water that came out of a bladder... no thank you.

Flying was always one of my personal joys in life. The freedom and the wind in my hair. Victoria always said it was her favorite power, and I agreed fully. The air was a little chilly. Mid august, just in time for things to start getting cold. From up here, our city looked downright beautiful. It was getting better for the people who couldn't fly, as well. Khepri had gone almost a week without finding any drugs more serious than pot, before we left to fight *Her*.

I entered upstairs, through my own bedroom window. *No sense in waking up mom*. A quick look in the mirror, which only prompted me to frown and try not to cry. My hair was trashed. I'd probably need to cut most of it off. *At least the short hairstyles are popular right now.* A rummage through my closet for better clothing, and then I was hovering my way to the bathroom. No point in making any noise, and I was still too shaky on my feet. I would rather not accidentally fall over if I could help it.

Mom's door was open, and I passed it quietly on my way to bathroom. Light was on, but that wasn't anything unusual. We had a bad habit of wasting electricity like that. Half the downstairs was lit up, actually. I pushed open the door and stepped inside, then quietly closed it behind me. I treated myself to a long shower in mostly lukewarm water. The regenerated skin was too sensitive, and it hurt to use the hot water.
I spent almost an hour under the stream of water, most of it dedicated to working out the mess in my hair. Looking down at the gunk running off of me, I identified the bluish-green liquid found in the suits, a light green liquid from where the healing pod needed a contact to diffuse chemicals into my body, charred material that probably came from the underlayer of the armor, clumps of hair that had been singed away, and a worrying amount of blood that I wasn't certain was all my own. It was almost hypnotic, really, imagining what caused all this.

A billion people dead, I thought. Not our fault, but would anyone else believe that? The Simurgh had been destroyed, so we still won. But so did she.

The sun was already rising when I was finished, and had managed to unclog the drain of various stuff that had fallen off of me. I looked at my now ruined hair and tried to imagine how to fix it. Oh well, Jasmine would work her usual magic.

I floated back toward my room, coming by mom's room again. I should let mom know I'm okay, I thought. I nudged the door open. "Hey mom, I just wa-" I slammed the door as hard as I could and rushed for my room. That was not something I needed to see!

==============

A/N- Breakfast and a show.

Also- the chapter shuffling is done. Definitely flows better the new way rather than the old.
I was in my room, staring at my ceiling when there was a knock on the door. "Crystal, sweetie, can I come in?" My mom's voice, of course.

"Yeah, mom, go ahead," I answered. I was sorely tempted not to.

She opened the door, wearing work clothes and looking positively mortified. *Well, that's good to know. "I... umm... I'm sorry you saw that,"* she started.

"Not half as sorry as I am," I muttered. "Maybe if I'm lucky, Amy will give me a memory wipe."

"I take it you're upset, then," she sighed.

"Just a little," I answered. "And weirded right the fuck out. I mean, seriously. I just walked in on my mother in bed with my cousin's future father in law. I know half my team's named after Greek gods, but that wasn't an invite for..." I waved my hands around. "This!"

"It's not the same thing," she countered. "You know that."

"No, it's not," I agreed. "It's just... jeez, mom, isn't there a grace period before you are allowed to go out and find a new man?"

"It's not like I was expecting this to happen!" she exclaimed.

"You invited him over," I said dryly. "Or did he sneak in through your bedroom window with some wine and a box of chocolates."

She chuckled, which only annoyed me more. "That actually happened to me once," she said.

"Dad?" I asked. *Oh please let it have been my father, I'm traumatized enough.*

"Your Uncle Mark, actually," she corrected. *Eww eww eww eww- "He was there for Carol and got the wrong window."* -Oh thank every god!

"So what's the story with Mister Hebert?" I asked. I still didn't know him well enough to call him 'Danny'.
"After you left to fight Behemoth, I invited Danny over," she said. *She definitely knew him well enough. "AND,"* she stressed. *"Mark and Carol. I didn't want us to be alone when... well, during the fighting. You have no idea how hard it is to go through something like that. Nobody really can understand it until they have children of their own."*

"Okay, I get that much," I responded. "Now when did you get the bright idea to fuck Taylor's father?"

She flinched. Probably wanted to yell at me for the language, but under the circumstances she really couldn't. "It wasn't... I... he was there to comfort me when we didn't know what happened. After the explosion, I thought you were dead. I thought everyone was dead. Danny was there, a shoulder to cry on."

"So you guys just came up with the bright idea 'whelp, we're out of kids, let's get to work making new ones?' I regretted it as soon as I said it, but I was still pissed off. My father and my brother were gone, and here my mother was with a new man. 'Replacement father, complete with already assembled sibling' was not something I was looking forward to.

"No!" She exclaimed. "It was after we found out you were okay! Mark and Carol left and, I, well... there were a lot of emotions going around."

"Oh, I bet there were," I stated. "I'm going to get some air." I took off, and passed Mister Hebert in the hall. He, at least, didn't try to talk to me, or even look at me. I really wasn't in the mood to hear anything he said anyway. I noticed his car in the driveway when I went out the front door. *If I'd come into the house like a normal person, I thought. Then at the very least I could have spared my eyes."

....

By the time I'd stopped just hovering in the air and had gotten hungry, it was close to ten. I stopped by the pizza place that had opened up near our base and asked for some breadsticks. I was in the mood for something covered in cholesterol, and I didn't trust my newly rebuilt limbs to handle anything messy or requiring silverware. As much as I'd been contemplating shoving a fork in my eyes on purpose, I didn't want to do it accidentally.

The highschool girl who took my order did her best not to stare. *Oh, right, I remembered. Need that haircut. Or maybe she just recognized who I am.* I didn't ask.

I was still figuring out how to put the food in my mouth with more than a 30% success rate by the time I got back to the Treehouse. *Have we really lived here for three months without coming up with a better name?* Amelia was there to greet me with a hug.
"What's the occasion?" I asked.

"Aunt Sarah called," she answered. *God damn it.*

"Did she say anything?" I let myself be led into the building.

"Just that you left and she wanted you to call her as soon as possible. We don't know what happened." Taylor spoke up, and I cringed. *She looks an awful lot like her father.* "I was keeping an eye in case something went wrong. All you did was drift around for a while. Didn't want to bother you, since you obviously wanted to be alone."

I paused as I heard chuckling from Lisa. I glared at her. She raised her hands. "First, I just want you to know that I had no idea this would happen. Well, okay, I did, but I thought it would take another six or eight months at the earliest. Second, I feel really really bad that I find this so funny. And third, it honestly is hilarious and you'll laugh, too, when you get over the initial shock. I promise."

"Uh... what happened?" Amelia asked.

She looked at me strangely, but went along with it. "Who's there?"

"Guess," I said.

"Guess, who?" She still went along.

"Guess who walked in on your dad having sex with my mom this morning?" I finished. It didn't seem all that funny. The other girls had gone silent.

Taylor was the one who spoke up first. "Umm... congratulations, dad?"

"This doesn't bother you?" I asked, incredulously. "This is your father we're talking about!"

"It'd probably bother me more if I was the one who walked in on them," she admitted. "Not something I want to have a picture of in my head if there's any hope of avoiding it. But, no, it doesn't bother me. Sarah seems like a really good person, and they both deserve to be happy. If this makes
them happy, then I'm all for it."

"You don't feel like he's trying to replace your mom?"

"No," she answered. "Mom can't be replaced, for either of us. And I doubt your mom would try. Honestly, I'm glad for this. He spent years depressed over losing her, being miserable and just making me more miserable than I might have been. Losing a parent hurts, but I effectively lost both of mine. If this is him finally recovering and moving on, then it's a good thing. You wouldn't want your mom to spend the next decade alone, would you?"

She's right, I realized. Also: god damn it, she's right. I still wasn't exactly feeling better. "Okay, fine," I agreed. "But it's only been three months since my dad and my brother died. This is way too soon."

She nodded. "Yeah, you're probably right," she agreed. "I can't imagine how I'd have felt if dad found a new girlfriend that quickly. But this is better than the alternative. Trust me, I know."
I spent my time attempting to learn to use my limbs properly again. I was a cheerleader before, well, powers. That disqualified me from competing in pretty much any sport, of course, but I still practiced gymnastics when I could, plus all the martial arts that I had thought were useless before recently. It was incredibly frustrating to need to use my powers just to walk straight again. No one wanted to tell me just how bad I was hurt, so I went the one place where I knew I could find out: the labs.

Riley was there, alongside Missy and Theo. That's right, I recalled. The Bonesaw secret is out. Riley had black hair with a tint of purple when it caught the light, for some reason. It was uneven and kinda splotchy, so it probably wasn't power change. Just ordinary hair dye. Done poorly.

"So," I asked. "How long until the Radiant is fixed up again?"

My cousin might have told them not to let me know about what happened to me, but Riley was disturbingly naive at times, and she was a tinker. It's physically impossible to make them shut up about their toys. I would work my way around to what I really wanted to know.

"It's not," Riley informed me casually. "We're designing the V7."

"What happened to six?" I asked.

"We decided to skip that weeks ago," Riley stated.

"Zach made dumb car jokes," Missy replied. "Really dumb car jokes that Emma had to explain to Riley."

"I now know what 'check under the hood' means," Riley stated. "We'll be skipping eight for the same reasons."

Dammit, Zach, I thought. "So... where's the v5? I'd... umm... like to say 'goodbye' to it. Y'know, sentimental reasons."

"Oh, it's in its storage pod. We're running diagnostics. Figuring out what worked, what didn't, and what we can do better next time. Plus we need to revive it enough to get the lances out of storage."

Missy and Theo looked like deer caught in headlights. They knew they couldn't stop me, but they really wished they could. I moved to its display pod, and it opened to my touch.
The armor was in tatters. The front was split open like something in the middle of open heart surgery. Granted, I knew that happened after they got me safe. *Alexandria really did rip it off of me. That sounded wrong.* I traced my fingers along the inside of the armor, and came away with soot. There were no legs on the armor, as far up as the knees, and the arms ended halfway between wrist and elbow. Matching, to an extent, the damage on my limbs. The helmet was missing the Yggdrasil bits, entirely. Burned down to the metallic armor weave. Even that had cracks in it, probably from the rapid freezing and thawing that I put it through in a desperate attempt to save myself.

*It was a matter of seconds,* I realized. *Seconds and centimeters away from death.* I was shaking again, and it wasn't the nerve regeneration. "Who rescued me?" I asked. "Who got me out of there?"

"Zach, Emma and Amelia," Theo answered after a minute. "They all had a pretty big part in it."

"How bad was it? I need to know."

"You were legally dead," Missy replied. "The only thing that saved you was that you accidentally froze yourself."

"The armor was designed to maintain your life functions even if you were already dead," Riley informed me. "It wasn't meant to function in cryogenic situations, but it's really really good at what it does. Your brain was preserved perfectly, and with minimal oxygen loss. Emma got you into one of the pods and kept your thawing controlled. Zach was there to undo any mistakes."

I shuddered. Suddenly I didn't care that much about mom and Mister Hebert. "Fuck," I muttered. "What's the damage?"

"Nothing permanent," Riley answered. "Had to use the neural regenerator on you. Side effects will include vivid dreams, possibly 'waking dreams', and an increase in mental ability by approximately two to three percent. Your sense of smell and taste may have unusual side effects for a while as well."

"Thanks," I muttered. *That might explain why the breadsticks tasted like cardboard.* "Anything in there about overreacting emotionally?"

"No, not really," Riley responded. "Newter reported crying for no reason after smelling coconuts. But that appears to be an anomaly and went away after a couple weeks."

"Okay... thanks again." I said.

"Are you okay?" Theo asked. "Something seems to be bothering you past the near death
"Yeah," I answered. "I, well, turns out my mother's now together with Taylor's dad. I might not have handled it all that well."

"That's awesome!" Riley exclaimed, and actually glomped me around the waist, I gasped as I lost my breath for a second. "I get more sisters! Oooh! I have a great idea! Theo, your dad's dead. Missy, your parents are divorced..."

"No!" Missy exclaimed. "We're not hooking my dad up with Theo's mom."

"Of course not," she agreed. "That'd be silly. But Amelia's parents look like they're going to get divorced so we can hook them up with your parents and I can be your sister, too!"

We were all dead quiet. Meanwhile, I was trying to find a convenient way to escape from Riley's surprisingly powerful hug. "Mom's got a new man, I literally died and was brought back, and Bonesaw is hugging me. Wait, didn't she say something about waking dreams? That's what this was, right? A waking dream? Okay, how do you wake up from one of those? Does pinching work? I gave it a shot, and no, nothing changed.

"It doesn't really work that way," Missy answered. "Step siblings don't actually count as siblings."

"They don't?" Riley sounded heartbroken, and her arms relaxed their grip around my waist.

"No, not really," Missy sounded resentful as she spoke. "They're just other kids that you have to put up with. Kinda like the kids at school that you're not friends with. They're not family, not for real."

"Oh," Riley looked down, and actually let me go. I felt bad, so I gave her a hug back. She saved my life, and then probably saved me from being brain damaged after the others managed to revive me yesterday. She deserves that much.

"Doesn't matter," I said. "You're still Amy's little sister."

"Yeah," Riley agreed, looking up and smiling.

"You can be my sister, too," Missy offered. "Who cares whose parents are or are not married, right?"

Riley quickly let go of me and rushed over to hug her newly acquired sibling. I was amused to note how much they even looked like sisters. Close to the same height. Same (natural) hair and eye colors.
I managed to leave the room without interrupting the new faux-sibling hugfest. As cute as it was, I wasn't really in the mood for it.

=================

A/N- FORESHADOWING!!!

Also... this was one of my favorite chapters for mood whiplash. Drama (of the 'hey, I was dead') variety. Comedy. And cuteness. All bundled into one package.
I was still shaky when I left. *I've died twice since joining this team*, I realized. *At the Endbringer fight, and when Purity shot a hole through me.* The v5 was tough enough that Purity couldn't have possibly hurt me if I had it when fighting her. Yet still something found a way to kill me. I owe Zach and Emma thank yous.

It didn't take me too long to find Zach. He was in his room. I knocked. I shall knock before entering the kitchen from this point on.

"Come in," he yelled. I pressed the panel that opened the door and stepped in. He was sitting at his computer, some brightly colored image with a 'paused' label in front. A video game, of course.

"Hey, Zach," I started. How do you approach this kind of conversation? "So... I heard you saved me yesterday."

"Ah, that," he looked away. "It was nothing, really. All I did was move some ice and save-scum for you while Emma did her thing."

"Save scum?" I asked.

"Umm... nevermind," he shrugged. "It's a gamer term, nothing you need to be worried about."

"Oh," *damn this is awkward.* "That couldn't have been easy, working with Emma for that long."

"Hey, it's not a big deal," he insisted. "I just had to spend a few minutes around the ex in order to save a friend. Taylor can tolerate her, so can I. It's not like we were ever serious, and she was too busy working on you to try talking to me."

"What was it like out there?" I asked. "I was unconscious and walled in behind ice the whole time. You and Emma actually made it through alive and conscious."

"I'd really rather not think about it," Zach muttered. "The 'resetting so fast that it destroyed my armor' was the least painful part of it. Look, can we just drop the topic and then never speak of it again? Call that my 'thank you', or whatever it is you're trying to do?"

Okay, bad subject. "Sorry," I muttered. "Thanks for saving me. I'm here to listen if you need someone to talk to."
"No, it's not your fault," he sighed. "Change of topics. Got anything zany that I can laugh about? I could really use that right about now."

I sighed, putting my hands over my face. "Yes, as a matter of fact, I do. Apparently my mom is now seeing Taylor's dad."

"Really?" He laughed. "Go Mister Hebert. She's a total fox." I glared at him, but it didn't seem to dissuade him any. "Wait, isn't she older than him? Do you think dating younger guys might run in your family? I still know a great place..."

I rolled my eyes. "Great, and now I pretty much can't say 'no' because not only did I start asking you about a painful topic, but I literally owe you my life. I hope you realize this is completely unfair and it makes you an asshole."

"Don't worry," he said. "I'm just teasing. Taking advantage of something like that would just be sick."

"Why do you do that, anyway?" I asked. "Go between asshole perv and almost overly sensitive like it's a weird kind of bipolar disorder?"

He shrugged. "Let's just say life's too short not to. You never know what tomorrow's going to bring. I learned a while back that just going for it, and suffering the consequences of failure... or even success, for that matter... is better than not trying at all and being forced to wonder 'what if' for the rest of your life. Take it from someone who does a lot of both... I'd rather die than never know what would have happened with that chance I never took."

"So that's how you justify flirting, poorly, with every possible female?"

"Pretty much," he confirmed. "And how I justify signing up with a completely unproven superhero team that came out of nowhere. And how I justify agreeing to literal suicide missions on a regular basis. Feel free to ask Lisa about it, I'm sure she can explain my particular damage better than I can. It's not worth waiting when you don't even know if you'll be here tomorrow. For that matter, it's not worth waiting even if you know you'll be here forever. I'm sure your mom would agree with me."

_He's right, I thought. I died twice, that's a second and third chance wasted if I ignore it._

"Thanks for the oddly out of character advice that's probably entirely self serving on your part," I smiled. "Still not gonna date you. You're fifteen and I'm almost twenty. When I was your age... you were ten and I was babysitting ten year olds. There are no possible words for how creepy that would be."
"That works," he shrugged and smiled at me. "See you in, say, five years?"

I chuckled. "Tell you what," I answered. "If both of us are single in five years, then sure."

....

I arrived home. Zach's advice, strangely enough, made me feel better. Mister Hebert's car is gone, I noted. Good, this was going to be awkward enough. I opened the door. "Hey, mom, I'm home!" I shouted. I probably should have done this the first time.

"Oh, Crystal, thank god!" she rushed in and pulled me into a hug. "Stop scaring me like that!"

"Scaring you?" I asked. "Mom, come on, we're in the safest city on the planet right now and I was a few hundred feet in the air. I just went out to fly and clear my head a bit. Not like I glued twenty dollar bills to myself and went on a walk through the projects."

"You're right," she said. "I'm probably over reacting. It's easy to do that when..."

"That's okay," I sighed. "I over reacted, myself. Seems to be a family trait, now that I think about it."

She finally broke the hug. "It really is," she agreed. "You're sure you're not upset anymore?"

"No," I confirmed. "I get it. Scary situation, it's not like I'm a stranger to life and death situations and how they make you rush things. Not a virgin, either. I mean, I still think it's way too soon, but now that I think about it, you've been spending a lot of time with him, haven't you?"

"Yeah," she agreed. "We get together at least once a week, and talk on the phone a lot. He's been a lot of help, and this came as much a surprise to him as it did to me. A lot of guys in that situation would have, y'know, expected something from me. We were just, well, one thing leading to another."

Right, expecting something. Been there, too. "So," I finally asked mom. "Is this thing with Mister Hebert serious, or was it just a one off sorta thing?"

"Well," she smiled. "It was in the middle of becoming a three off when you walked in."

"Oh god eww no," I cringed. "First, not something I ever wanted to hear my mother say. Second, not what I meant."
"I know," she agreed. "I don't have an answer for you. It's... whatever it ends up being, I guess. I
don't think I'm ready for 'serious', and probably won't be for a while. But I'm going to continue
seeing him. Hopefully without having to hide it from you."

"No, no," I agreed. "I get it. I'm okay with it, even, now that I've had a chance to recover from the
shock. I won't freak out around him or anything. We can get together, have a nice family lunch.
Force Taylor to wear something cute and girly for a reason other than showing off for Amy."

"Really?" mom smiled. "Is that a thing they do?"

"It's a thing Taylor does," I informed her. "She's dark colors and baggy shirts all the time, unless she
finds out Amy's going to be there, then she'll wear pretty much anything Lisa and I tell her will make
her girlfriend stare. We even got her to buy this really skimpy two piece bikini. But you'd better
swear on your life you won't tell her dad about that. I doubt she's even actually worn it, so I'd rather
not have to disown you over it."

She laughed. "Okay, I swear, he won't learn about his daughter's updates to her wardrobe from me. I
was a teenage girl, myself, once upon a time. Of course, back then we didn't have bikinis. Or
beaches."

I hugged her again. "Thanks mom, you're the best."

================

A/N- There were people that needed other people to explain Sarah's joke there at the end.

There. The chapter restores faith in humanity. The author note murders it again.
Minor incisions only, I thought as I scratched my claws through the flesh of my forearms. They quickly and easily regenerated. From this close, I could regenerate entire limbs if I needed to, but it was better to use my other healing method for that. This power was unpredictable and potentially unstable. I made that mistake once, and it was hell to remove the extra eyes that had grown from my arm. Small amounts of damage only.

My heightened senses alerted me to the incoming presence. Flight, larger mass than a parahuman. Vehicle? I relied on my peripheral vision: no point in looking suspicious by turning my head toward the supposedly hidden newcomer. Or more suspicious, at least. A large man in a trench coat draws a certain level of attention no matter what he does. When it's nearly midnight in late July, that just makes it worse. Still, in Brockton Bay as it existed now, no one was going to be more than passively intimidated by me. Pantheon's influence hit the underworld so hard that it broke.

Looks like you get to be a hero at last, Taylor, I smiled sadly.

A black winged horse landed nearby. The girl on it, Aceso, one of Amelia's recruits. Her 'little sister'. Not human, I recognized almost immediately. Is she some kind of artificial person? One of their M4s? She looked at me, then sniffed the air slightly. "Are you injured?"

I shrugged. "Nothing serious," I answered, stretching and hopping off my perch atop Crawler's corpse. It was covered in profanity and insults, now, but people had gotten bored trying to break the statue. Turns out, it got tougher as you worked your way inside. Eventually too durable for anything but superhuman strength to damage.

She accepted my word without question. Super senses, lie detection. Is this what Lisa feels like, all the time? Knowing just enough about everyone and everything to constantly be the smartest person in the room? No wonder she was such a smug bitch.

"So, I heard Gaea and Khepri are engaged," I invited. I was certain that Aceso was Clarice, who I had seen excitedly bragging about their plans on television. I had wondered what Taylor would do, now. First saving Dinah from Coil, then saving the city from everything. Now on to saving the world from the Endbringers.

Very much a 'Taylor' thing to do. I felt proud of her, as weird as that sounds. Still wasn't quite sure what to think about her awkward and, in retrospect, obvious crush on me being replaced with a lesbian betrothal, but I had more important things to worry about.

"I'm not suppose to talk to strangers," she replied. Knowing Taylor, and how powerful Aceso is, that's probably for the benefit of the strangers in question more than the parahuman death machine in front of me. I knew how to recognize parahumans, and Clarice was frightening at best.
I ran through my mental options. *I could claim to be an 'old friend' of Taylor and/or Lisa, it was true after all, but that would be more trouble in the long run, since Aceso would report back to them.* Cold reading was useless against her nonhuman physiology. Victor's power was telling me there was no one there. Was this Aceso's power? Something like a miniature copy of the Siberian? Was Genesis using a new identity?

I had no way to know, which meant no shortcuts to be found there. Except that I knew she had a lie detection ability. "That's a good rule," I agreed. "One meant to protect children from people that could hurt them. I'm not going to hurt you. In fact I'll just stay over here far away from you so you don't have to worry about even coming near you."

"Okay," she said. "But I need to go where you are."

"Business with the not-so-dearly-departed?" I asked. She nodded in response. I stepped away to let her do her thing. Two quick jumps later and she was atop the monster's damaged skull.

"Now I'm curious," I said, dipping into the social skills I'd stolen from Victor and borrowed, more or less permanently, from Uber. Making myself seem eager and friendly. "Could you please tell me? I promise not to tell anyone else. It's only fair since I moved away for you."

*Ugh,* I thought. *This makes me feel more unclean than having two women chained up in my basement.*

She tilted her head, still sticking things to various parts of Crawler's head. I was pretty sure it was tinker tech, but I wasn't linked in to Leet's power right now. Or any time I could avoid it, for that matter. I wasn't sure if it was all tinkers, or just Leet, but I really didn't like accessing his power. Even if I was, there was no reason to believe he'd know what this did. "We're doing a few tests," she answered. "We might be able to undo the crystallization."

*That was easy,* I thought. Suspiciously so, until I remembered she was a child and had a lie detector, and I had told the truth. No intention of sharing the details. Time to feign some ignorance to indicate I'm not that bright. "Please tell me you're not planning to resurrect Crawler."

"No, all the other people caught by the glass bomb," she stated. "Big sister was very insistent that Crawler stay safely dead."

I chuckled, even though it was again only Victor's skillsets that made me. "Good," I replied, stretching my arms out. "I hope Crawler stays like this forever. But I should go home before my friends start to get worried, don't stay up too late."
"Okay," she agreed, not bothering to look away from her work as I walked away. The cyanide cocktail I drank earlier in the evening had already been countered, so I had no need to stay any longer. It was an insight into Pantheon, at least. I was sincere about hoping Crawler stayed where he was for a very long time, and I tried to be glad that the people that were frozen would survive. But all I could think about was that Panacea would get her bitch of a sister back, and I would never see mine again.

....

I walked into my base. Hilariously enough, only a couple blocks away from where the Undersiders once called home. Feels like a lifetime ago.

"Hey, chief," Leet said as I walked in. "One of the bugaways has broken down. The other two are still good, so it's not an emergency."

"Still top priority," I responded. I was the only one who could repair Leet's equipment reliably, thanks to the weird hangups his power had. Apparently those weaknesses didn't apply to me, for whatever reason. Probably for the same reason I couldn't use Fenja's power to enlarge more than just the clothes I was wearing, or choose which of Othala's powers got applied to a target. Why I needed touch to apply Victor's power, even though I could still feel potential skills from a distance.

"Also, you'll need to heal Fenja again, she's developed a minor infection."

*Lovely*, I thought. *That has to be first, then.* I went down to the basement. Leet followed me and Uber joined the progression when we passed the kitchen. Part of my rules to them: they had to be with me whenever I entered the basement. A psychological tactic, as much as one to pragmatically prove I wasn't doing anything particularly cruel to my guests. The clowns were villains, certainly, and ones that engaged in some sick shit in their day, like their GTA sequence. But even they had limits.

Othala glared at me. Victor simply stared blankly. I'd sapped everything he knew, already. Or almost everything, at least. He could still walk and feed himself and knew to use the bathroom, even still had a vague understanding of English. Past that he was a blank slate, a virtual zombie. A step above Fenja, who was in an induced coma, and not even a full step.

Othala, however, was quite aware of her surroundings.

"You nigger fuck!" she shouted the moment I was in view. "Your asshole minions came in here and forced themselves on me!" I knew she was lying immediately. Thanks to Victor's knowledge, there was nothing I did not know about her. I had to admit, her deliberately tearing her own clothes and giving herself a black eye to make it look more real was an impressive touch, but it was still fake.
Uber didn't really react, he maintained a talent for hiding his emotions. Leet wasn't so good at concealing his reactions, and it was through him that I measured the pair, their loyalty, their honesty. Leet was visibly startled, but surprised startled, not guilty startled. I chuckled, much to Othala's rage and dismay.

"Really?" I smirked. "You guys are into the skinny bony type, huh?"

She growled at me, her knuckles turning white as they gripped the bars. She was running on nothing but hate and rage, these days. She'd break, eventually. Holding on to rage only works when there's something to work toward. A goal that can be achieved. Othala had none of that, she had no means of fighting back or working on a plan to free herself and get her revenge. Despair would erode the anger. I'd remember to be 'nice' to her, shortly. I knew her clothing sizes, and would buy her something just a little too large for her. One more button to push.

"Not really," Uber responded in his perfectly practiced neutrality. He knew what I was doing. To say he agreed with it would be a bit of a stretch, but he didn't disagree much. I paid them both generously and on time, and I helped Leet restore some of his old tech to full working order. It was a good arrangement for all of us. Even if they were going to develop a conscience, they wouldn't waste it on the Nazi bitch who just accused them of rape. "Definitely prefer some meat on my women. Nice bubble butt, that's where it's at."

I wasn't sure how much of Uber's statement was true or not, as I said, he was resistant to the various talents for reading people that I pulled from Victor. It didn't make a difference.

Leet hesitated, but he figured out more or less what was expected of him, simply based on how Uber was acting out of character. "I'm a tits man, myself," he managed to sputter out, just enough that Othala could hear him. That was true enough, and still didn't matter.

"Sorry, sweetheart," I told her, feeling almost guilty as I used her insecurity and body image issues against her. "You're adorable and all, but a tad underdeveloped for real men. Now, if you'd claimed they were abusing Fenja, I might have believed you."

She visibly flinched at the comment. While the conscious part of her mind knew she was desirable based on, if nothing else, the way men stole glances at her and Victor liked to flaunt her in their civilian identities. Her subconscious mind was mired in her childhood, and status as a late bloomer. It was especially cruel, comparing her to someone like Fenja who was clearly altered via plastic surgery, at least to my now expert appraisal.

After she broke, I would use the opposite tactic. A combination of tenderness and Stockholm Syndrome. The others, I didn't need. Victor and Fenja were unnecessary except as tools. But Othala's power was incredibly versatile and could make already strong capes even stronger. To have her willing aid, for a given definition of willing, was worth this bullshit. If only I'd gotten to Valefor before Pantheon, I could have skipped right to the end in one step. I'd keep my eye out for other chances, of course, but master type capes were hard to come by in the best of times. And Leet
already blew his mind control tech turning squirrels into packmen.

I passed Othala and went to Fenja's private room. She was unconscious, as always. It took me eighteen tries before I finally hit the 'regeneration' effect on Fenja, allowing her to heal, albeit slowly, from the infection. We weren't exactly running under 'hospital conditions', even if Uber's main job right now was seeing to her medical care. I canceled the recovery before it reached the damage done to her brain. This was why it had to be me that restored her: we couldn't risk Othala healing just a little too much, and undoing the brain damage that kept her under control.

====================

A/N- Man, Brian's kind of a dick.

Can you believe people didn't object to THAT being out of character, but did object to Uber and Leet being so? Despite the horrible shit they pulled in canon.
"A hollow excuse," Legend was contrite in front of the cameras. Honestly contrite, he meant what he said. "One I expect no one to accept. As such, I am resigning from my position in the Protectorate. I shall continue volunteering for all Endbringer battles, as I have always done. I failed to take responsibility, and it cost lives. I could not live with myself if I did it again. But I do not deserve to call myself a leader after everything I failed to do."

The couch arm I'd been gripping splintered in my hand, to my surprise. *I hadn't been gripping that hard, had I?* No, I realized. *I hadn't.* Or, at least, what had felt like a relatively gentle squeeze was enough to crush wood. Crawler's alterations were making a massive difference in a relatively short amount of time.

*Legend was partially responsible for Aisha's death? He was honestly sorry about it, but he was partially responsible.* I wasn't sure what to do about this. Even if I did go after him, he was still too strong for me to believe I could kill. Piggot, on the other hand, showed no signs of remorse and was far easier to kill. She was easily the first target. I would decide the guilt of Legend, and others, later.

....

Pantheon was gone from the city, though it took almost half an hour before I was confident enough to act. The Endbringer had finally made its move, and with that I could make mine. It was a simple enough task to learn where they were keeping Piggot. Breaking into houses wasn't exactly the hardest task, getting close enough to lift a few passwords was trivial. An accidental bump on the street was all it took with my newly developed eidetic memory. *Wonder what they're going to consider me now,* I idly thought. I knew enough about PRT protocols to make a very good guess. Brute 5, Striker 5, Mover 3, Shaker 3, Stranger 5. Trump 6, easily.

I frowned, looking at the prison. Minimum security. Cushy, even, and not the sort of place they'd ever send a poor boy like me. *If I were arrested for pickpocketing, they wouldn't have sent me to a place this nice. Piggot's guilty of multiple premeditated murders and gets stuck in a country club that's only drawback is she's not allowed to leave.*

I checked the timer. *Tee minus thirty seven seconds.* I waited, concentrating and calling on Menja's power through the quantum tunnel that Leet set up. My six and a half feet, thanks to Crawler exposure, shoots up to the new maximum, just over twenty feet. But that's twenty proportional feet to my new, already improved, physiology. The way her power works, it's more like I stay the same and everything else shrinks to a third its normal size. In my normal state I can lift about half a ton, and jump twice my height. With Menja's power, I could lift a over ten tons and still jump twice my height.

The hacking bot activates, shutting down the prison's ability to call out. The system would go
through an AI loop that, if I was really lucky, would convince them backup was coming when it was not. If I was really unlucky, it just bought me thirteen minutes on top of the fastest possible non-parahuman response time of seven minutes. If there was a parahuman response, it would be from those that didn't go to the Endbringer.

I leapt from my hiding spot- a cloak field that would keep anyone from seeing me too soon, and was back to my normal size before I even left the bubble. I crossed the two layers of fences in that single leap. This was not a prison for parahumans. It wasn't even a prison from real criminals. This was a prison they sent rich old men to after busting them on so-called 'white collar' crimes. And even real prisons weren't designed to keep people from breaking in.

Several bullets hit me as I was traveling through the air. *One of these guards is a really good shot.* I landed and tumbled, laying still. *Fuck that stings.* The latest sessions with Crawler had been the dividing line. I no longer needed to be near him to keep his corrective regeneration. It was, of course, still stronger if I was, but my body had mutated to the point that I had a permanent version, much like my superhuman strength and durability was permanent. I also had Othala give me the regen setting before I went out for this. Wasn't something I wanted to rely upon, but having it was nice.

The bullets melted away, dissolved and digested by my mutated physiology. It took me four seconds to roll to my feet and bolt again. I made it to the gate inside the prison. Closed, of course, and guarded. More bullets, this time not even breaking my skin as I bulked up some in size. If I worked this right they'd assume I had something kinda like Lung's power. A backhand was all it took to render one unconscious, and I body checked the other into the wall. Enough time to absorb the access code. Gripping his hand, I forced him to punch in the numbers. *Let them wonder how I did that.*

The gate opened. *One minute and twenty two seconds.*

Inside meant I wasn't getting shot at constantly. And they weren't using long range rifles. Handheld guns didn't mean a lot to me. A couple quick 'splats' and I was adhered to the floor. *Containment foam.* I realized quickly. *They were prepared for parahumans.* I activated the overshield and pushed my way forward. Its frictionless effect kept the foam from actually sticking to me or my clothes. Didn't mean it was easy to fight through the gunk, but it gave me the ability to.

My senses from Victor at least told me the path to take- the one blocked off from the current guards. They couldn't keep me here, not with any of their tools. But I had a mission to complete, and if I wasted too much time then I'd fail just as handedly as if they'd caught me. This was my one and only opportunity. I broke through and bolted, pouncing on a guard and holding my oversized hand around his mouth and nose. He emptied his handgun into my chest and stomach. Nothing to be worried about. Meanwhile, I pulled his memories of the building, its procedures, and what to expect next.

*Six and a half minutes.* The guard passed out. Victor's power, but it would appear to have been suffocation from how I'd gripped him. Three others had appeared at the end of the hallway. Whether they didn't shoot because they figured it was useless because I was clearly bulletproof, or because they didn't want to accidentally shoot their friend, I didn't know or care.
I leapt straight up and locked onto the ceiling. Kinetic manipulation designed by Leet to imitate Spiderman. *Whoever that is.* I jumped again, landing next to one of the guys with the foam launchers and knocking him out. Then I leapt and backflipped as he was hosed by the other guy. A quick blow to the side of the head knocked that one out and gave me a basic refresher on how to use the weapon. Nothing I didn't already know from Victor's extensive repertoire, but it always helped to 'update' in case it was a new model or there was something specific to worry about with that weapon.

I pulled the launcher off him, deactivated my shield, and put it on. They knew I was bulletproof, they knew I was foam proof. They'd keep trying, of course, but the intimidation factor meant something. Plus, the more powers I demonstrated, the less they'd be able to guess who was attacking. The less they'd assume I was someone else, too. If I did this right, they'd have no idea who I was and why I was here. Even if they'd be able to guess who I was here for.

Eight minutes and thirteen seconds. There was a rattling sound as they slammed the doors, locking me into this corridor. Fuck. I charged the direction I needed to go. The prison's infirmary section, which included the cells of all the patients who had dire medical needs. It was the only place the bitch could be. I had boosted up to the largest size I could afford while still indoors, and collided with the metal hard. It was the proportional equivalent of chicken wire to me, and it caved that easily.

An expert blow sent one of the nearby guards flying back, and I wedged the barricade into the wall blocking off another direction. A quick pop of containment foam cut off a third access point.

*Nine minutes and twenty seconds.* I'd reached the infirmary section. A dozen guards were waiting for me. *They must have guessed my target. This complicates matters.* If they killed her first, and they might, it rendered this moot. I activated a flashbang still in my hand. Something I'd immunized myself against almost immediately after learning my power drain still worked on Crawler's crystal body.

I rushed in, disabling them all in the least deadly ways possible. I didn't want to hurt them. They'd foamed the entryway, hoping it could keep me out. They would have been right, too, but I still had Leet's technology to back me. One short range teleport later, I was on the other side. *Ten minutes and forty five seconds.* I didn't even have to foam the passage to keep others out.

I passed over thirty cells before finding Piggot's. She had a dialysis machine plugged into her side. Victor's twice-stolen knowledge at work.

"Here to kill me?" she sneered angrily. I gripped the cage to her cell and strained against it. Body slamming wasn't something I could afford.

"Eventually," I grunted as I broke the locking mechanism. "We're going to have a talk first."
"So I can hear you justify your crimes?" she scoffed.

"The opposite, actually," I answered. "I want to hear you justify your cold blooded murders."

Her eyes narrowed. "Ah, more of my mistake coming back to bite me in the ass," she sighed. "That'll go down as my biggest regret in life, Mister Laborn, failing to kill all of you at once."

*She wants me to kill her,* I realized. "You're sick," I muttered.

"Says the man who's here to murder me," she retorted.

"Yes, says the man who's here to execute you for your crimes," I answered. I reached out and grasped her mouth before she could say another word.

And then I pulled at her mind. Procedures not available to grunts. Knowledge Uber and Victor could not have. Codes and passwords that were already defunct, of course. Most importantly: names. A lot of names. Starting from Nilbog and ending with her arrest. The men and women who gave her the job of looking over a city. The ones that covered up how disastrous Elisburg was. The ones that gave Piggot promotions in order to keep her from revealing what she knew about that failed mission. A lot of Protectorate secrets.

---

Legend: telling the truth about his complicity. Miss Militia: said nothing, did nothing. Armsmaster: still alive, now with the Guild. Director Costa-Brown: using Piggot for her own purposes, followed by destroying her credibility and throwing her away the moment she was no longer useful. Shadow Stalker: hidden away in juvie a hundred miles from here. Triumph: the mayor's son. Calvert: the only other survivor. All reflected through the beliefs of this paranoid psychotic bitch, of course, but her impressions were only biased, not wrong.

I drank lightly and broadly of Piggot's knowledge. Couldn't afford to go so deep as to influence her mind long term, now that I'd decided to leave her here to rot. *She wants to die? She can get off her fat ass and do it herself, because I am not about to give her the fucking satisfaction. A lifetime in a cell, suffering from a body that was pathetic and weak and hideous until her dying day? I wouldn't be able to dream up a better revenge.*

Seventeen minutes and thirty three seconds. A quick blow to her head and a deeper pull from her short term memories. She'd be unable to remember the last twelve hours with any sort of clarity, and by the time she recovered from the damage enough to convert her short term memory to long term, anything she knew about me would be long gone.

One last button press, and I was outside and in my cloak bubble. *One mission complete. Eighty two remaining.*
A/N- Ah, Brian.
"So," Taylor said, giving me a quick hug. "Crystal's managed to patch things up with Sarah."

"You mean your new step mother?" I smiled. AmusementAcquiescence. "That's good, Aunt Sarah deserves to be happy. We probably should have warned Crystal about her and your dad before. Could have eased her into it a bit more gently."

"Well, they were oblivious before, so there wasn't anything to-" ShockAversion.

"What was that?" I asked.

"Err, nothing." Taylor muttered. "I just..." SurpriseHumiliationWorryRelief. Taylor started blushing. "Nothing I'm going to repeat. Either thing. I'm done spying. Back to pretending I don't hear tens of thousands of conversations per hour."

"How do you do that, anyway?" I asked. "I could understand 'too much, can't sort through it all', but... hearing it all and pretending you don't?"

She shrugged. "It's like wearing clothes," she answered. "It's not like your skin doesn't know, you just don't notice them unless you're choosing to pay attention. It's kind of the same thing. I'm not paying attention, so I don't notice and it doesn't stick in my memory at all. Now let's stop talking about it, because I really really want to think of something else. Anything else, I don't care what it is."

"Anything?" I asked.

ReluctanceConcern. "What did I just agree to?"

"Well," I said. "We have to get Emma and analyze what we know of the Simurgh fight." AnnoyanceDistasteResignation. "Okay, I'll contact her, and Crystal and everyone else. So much for after battle relaxation."

"Well," I smiled, then whispered in her ear. "I can think of a few ways to relax before they get here."

ShockedPleased.
Emma's report was disturbing, to say the least. *DreadParanoiaHesitation.*

"She did more than just go easy on us," Taylor muttered, clutching my hand tighter. "She helped us."

"How do you figure?" Flechette asked. She was in her old costume, now. The press might have made a big deal of that, but I'd set up secret tunnels through the Yggdrasil that would let our team come and go without being seen. The best way to keep secret identities, such as we still had any, a secret.

"We survived," I answered. "We're the only people making a presence that had no losses. Everyone else..."

"Over two hundred Protectorate members lost, if we include the wards," Lisa answered the unspoken question. *ConcernDismay.*

"A lot of people will want to join our team just because of that," Taylor confirmed. "In addition, the PRT cannot refuse our offer of the M6s, now. They don't have the resources to function without them. Some cities were hit really, really bad."

"Chicago's the worst," Lisa again informed us. "They have two members left. I doubt even they realize it yet, but by the end of the week there won't be a PRT or Protectorate there, with all the parahuman gangs that will see blood in the water. Expect the Fallen to make a visit, probably the Elite."

"We'll have to act almost immediately," Taylor answered. "And we'll have to do it in a way that doesn't reveal that my range is, theoretically, planetary. She wants us to split the team and make us vulnerable. Fucking Simurgh. Couldn't have just let us go after Behemoth, could she?"

"There's also the fallout with Alexandria killing Dragon," I added.

"That wasn't Dragon," Lisa corrected. "Or, at least, not really. Remote control system a lot like our changelings. What Alexandria killed was just a puppet."

"Did... did she know that at the time?" I asked.

Lisa looked at me, her eyes narrowed for a second, before she sighed. "I don't know," she admitted. "Alexandria's a powerful thinker, ranks higher there than she does as a brute or mover. And she's
pretty damn impressive at both of those."

"So how are we handling all of this?" I asked.

"Dragon and Alexandria will hold their own press conferences on the issue, I'm sure. Shouldn't be too hard for the world's most powerful tinker to demonstrate her robots. The fact that our changelings are already well known thanks to the M4s can't hurt, either. She could claim she was borrowing our idea for herself. But I'm pretty sure she was using remote control tech long before Amelia came up with her version."

"Highest priority, then, is completing the M6 and the production pods," Taylor stated. "It took us a month to build up everything we used in the last Endbringer fight, we'll resolve to dedicate two months for the next. Right now, we need to expand our fortifications to other cities. I'll talk to Commissioner Micheals and Director Calvert. Arrange some cross training in the remaining M4s, that way when we're ready to distribute the new gear, we'll already have people in other cities that know how to actually use it."

"Now that all our tinkers know about me," Riley stated, then hesitated under Parian's gaze, before she continued speaking. "We'll need to work on the next generation of weapons. And a way to mass produce the generic armor systems. Even if we can't give custom armors, there's certain generic power types that we can boost at least a little. Every little bit is going to help right now."

"Is this what the flying bitch wanted to do to us?" I muttered. "Force us to split our efforts so many ways that we start screwing up?"

"It... would be the easiest way to defeat us as an organization," Taylor suggested, following my line of thinking. "We've been riding success after success this whole time. It's self feeding, and I won't exactly bitch about it. Simurgh was an ugly victory, but it was still victory enough that we haven't lost momentum. Trying to take on too much, too fast, could break that momentum. And..." She put her arm around me. "It's what happened to New Wave, after all."

"Maybe," Lisa agreed. "We don't have a choice, however."

"We really don't, do we?" I sighed. "This is how she operates, isn't it? Making it look like we don't have a choice. Taking away all the better options."

"It is," Lisa nodded. "And in that, at least, the bitch won. If we don't act to replace the damaged Protectorate, we could lose half the country by the end of the year. As it stands, the west coast is almost certainly fucked. China's going to be that much more of a threat, and we're likely to be the only heroes that can afford to show up to the next Endbringer battle."

"Fucking fuck!" Flechette shouted, punching a wall. She used her power and sank her arm up to the
elbow. "We killed a fucking Endbringer. That means things are suppose to get better, not worse! Monster slain, celebrations and drunken parties and national holidays. Not civil wars and international threats and quadruple guessing everything we do from now on!"

AgreementAngerFutility.

A/N- And now for something completely different?

No, seriously, I like leaving plot threads to dangle sometimes. Is fun. Drives some readers nuts.
"This is Pantheon," a new voice answered. "Noelle speaking."

"I'm afraid I don't know the name," I replied. I don't recognize the voice, either. I opt not to say that part.

"They've decided to hire a secretary," she answered. "Who's this?"

"Chief Director Costa-Brown," I answered.

"Oh!" she exclaimed. "I'll put you through to Minerva if you don't mind holding a second."

"That is fine," I responded. Their secretary isn't very good at this. There was a click on the phone, and then another.

"Good afternoon, Chief Director," Minerva responded. "Sorry about that, we're juggling a lot of things right now. Probably not as much as you are, so let's get down to business. You're interested in our M6s, but content to handle that through Director Calvert. So this is about the Endbringer killing weapon."

"Yes," I responded. "Our people have studied the aftermath of the attack. We can confirm that it was not your weapon, or the Endbringer having a 'self destruct' feature, which burned India. You are authorized to utilize the weapon on the remaining two. In fact, we insist that you do so." This isn't the point of the conversation and she knows it.

"We're hoping to field a superior version for the next conflict," Minerva confirmed. They already knew it was not the Simurgh that caused the energy burst. "We were also hoping to speak with Alexandria soon. We think we have a way to improve her effectiveness for Endbringer grade conflicts."

That was the key to this lock, good girl. "... Only Alexandria?" I asked.

"At this juncture, unfortunately, yes," she answered. "We'd need to do extensive research on the other two to develop a strategy for improving on their powers. Legend is... well, our best current analogue is Eki. Her armor works by feeding in energy. It's safe enough for her, but to use it on someone who becomes energy... I'm sure you understand how incredibly dangerous that might be for

"And Eidolon's power is, frankly, too versatile. We can't build efficient power interactions when we don't even know what power to expect. He's... actually best suited for our standard, unaugmented armor system. It's durable enough in its own right, and comes with excellent flight capabilities. At the very least, it frees him from selecting movement or defensive powers in most scenarios. We're creating a better flight version for users with high defensive powers, and a better defense version for movers who are otherwise vulnerable, in case he'd prefer either of those instead."

"I'll see to it both he and Alexandria get the message," I stated. *True enough, in its way.* "I won't keep you from your work any longer. I must continue mine."

"Busy day for everyone," Minerva agreed, before hanging up.

I made another call immediately, to Dragon. "To what do I owe this call, Chief Director?" the false voice spoke. Dragon never used her true voice, although she had an admittedly very good simulation that she used at near instantaneous speeds. Now I was certain I knew why. *She is artificial. Perhaps an AI tinker that hid behind his or her creation, or the Dragon persona was entirely an AI.*

"I wished to confirm that you weren't harmed in the conflict with the Simurgh," I told her.

"Not physically, no," she responded. "Defiant's injuries, and the use of my equipment to kill so many... it brings its own kind of pain." *It sounds like legitimate sadness in her artificial voice,* I realized.

"It does," I agreed. "I can't say I know what it's like for a tinker, to see their own weapons turned against them like that, but I know what it's like to see loved ones lost in battle against monsters." *Hero,* I thought. Then quashed the memory. *Now is not the time.*

"It helps to know that all of my instruments confirm the Simurgh is no longer detectable," she continued. "It appears that Pantheon has legitimately succeeded in eliminating the Endbringer."

"Every tinker and thinker we have consulted agrees with your assessment," I informed her. "Of course, given that it's the Simurgh, I am hesitant to believe she hasn't found a way to hide from detection. I of course wished to hear your analysis. I'll leave you to your work."

I had several more calls to make, including one to the President and others to the Prime Ministers of both Canada and England, but in truth my mind was consumed with what Pantheon might devise to improve on my powers.
I landed outside their base. From above, it could easily be mistaken for a fairly large chunk of parkland in the city. The first time I had been to Brockton Bay since Leviathan. I was truly impressed by how quickly they had managed to recover. I frowned at the flashes of cameras. *It was almost ten at night in this timezone, and the tabloid reporters were still at it? Perhaps my decision to drop in unannounced wasn't such a wise one.*

The ground opened up for me as I made to land. I simply followed it down, finding myself in a surprisingly expansive laboratory. Bonesaw was there, working with some machine. "Everyone else will be here in a minute," she sang cheerfully. It honestly bothered me a little that I was ignoring her presence here.

I'd long since stopped thinking in such a childishly black and white fashion about morality, but this was still Bonesaw. I couldn't help but remember my fight with the Siberian when I looked at her. At the same time, I could relax knowing that Pantheon was a group of pragmatists, willing to do what was best instead of getting mired in what was right. *These are people Cauldron can work with.*

"I can wait," I replied, trying to sound... not 'friendly', but at least 'polite'. "It was... difficult... to find an opportunity to speak in person."

"I understand," a voice spoke. My head snapped in that direction as Khepri stepped out of an alcove. *No, not Khepri,* I realized. *A Khepri doppleganger. One of their human form androids. I can barely tell the difference.*

"I was asked to make contact," I told her. *True, although I wouldn't acknowledge my other identity.*

"First," she said. "Everything said here stays confidential, correct."

"Correct," I answered. We all knew I'd already informed Cauldron. "Doctor-patient confidentiality, applied both ways."

Khepri nodded her approval. "Amelia's on her way," she informed me.

"This is really exciting," Bonesaw smiled eagerly. "The first thing is the simplest. You've stated you have difficulty breathing in hostile conditions. So I built you this!" She lifted up something that looked like a wriggling white two foot long worm covered in tendrils. And those tendrils also had tendrils. "Really it's for anyone who wants one. What we do is stick it in your lungs and it'll breathe for you. Or, well, it generates oxygen right next to your bronchioles. Breathing is rendered totally unnecessary except for the purpose of speaking."
For the first time in years, I actually cringed at the thought of something. "And its needed supply of energy?" I asked.

"Nothing you don't produce anyway," she answered. "The heat energy released into the environment when you breath will instead be converted into chemical energy to maintain the system."

"Do... all of you have these?" I asked.

"No," Khepri replied adamantly. "In fact, none of us do. We use something like them to keep the M4s and M6s well oxygenated, but we haven't had them installed inside our bodies."

Oh thank you merciful God, I thought. "Then I'm afraid I'll have to decline," I replied. "I'd prefer not to be the test subject for an untried device."

"Aww," Bonesaw pouted, tossing the thing back toward the table. It landed with a wet splat, where I couldn't stop watching it wriggle in the corner of my eye. "But you could have been the most amazing spokesperson. Everyone would want one if they knew Alexandria was using it."

Gaea arrived in time to hear the last of the conversation. "Riley, what's rule seven?"

"If it's a parasitic worm, then no one's going to want it," she answered. "But it's not a worm at all, it's a tree root!"

"It's still not something people are going to want," Gaea insisted, as she walked over to me. "Sorry about that. Now, the first part of this is that I will need to touch you. Attempt to learn how your power influences your body. This will determine what, if anything, can be done with your power."

"It's quite alright," I lied masterfully. Bonesaw offering parasitic upgrades is very much not alright. I did, however, extend my hand for Gaea to touch.

She frowned almost immediately. "Your body is... I can sense it as easily as anyone else, but I can't alter it. At all. It's frozen. Your Passenger seems to have locked your body in stasis. Theoretically, this means you're untouchable to almost every power, or interaction between powers. I... cannot alter you or build a system to capitalize on your power."

"I can think of one," Bonesaw sang happily. "You're going to love it."

"Okay, I'm listening," I regretted the words before I even started speaking them.
A/N- So many shadows being fored.

Chapter End Notes

For those that are curious, I put together a list of Riley's rules during my last reread:
Rule 1 - unknown, if I had to guess I would say it's something along the lines of "listen to Amelia"
Rule 2 - If the plan starts with 'kill people indiscriminately', it's a bad plan
Rule 3 - Don't encourage/induce unwanted/(inhuman?) pregnancies
Rule 4 - No Sentient Minions
Rule 5 - Unknown
Rule 6 - Zach's plans are never good
Rule 7 - If it's a parasitic worm, no one's going to want it
"So, am I the only one who noticed that the mayor's name is dick 'em daily?" I heard Respawn mutter. Too quiet for anyone other than a parahuman to hear, but of course picked up through all of our armor systems. I couldn't comment, I wouldn't comment. Emma snickered over the communications, much to Taylor's annoyance. I almost felt sorry for her. Almost.

"Thank you for seeing us, Mayor," I said with a smile. Richard Daley had been mayor of Chicago for decades, from what I had been told briefly. His career was, well, 'checkered' was a polite way of putting it. None of which really mattered.

"And thank you for coming. Things have been trying, as you might imagine, and we are glad for the offer of assistance."

I nodded, there was no doubt of that, at least. "Wish we could be here under better circumstances," I answered. "We have several plans I'd like to discuss with you. We need to make a statement to the criminal groups that are taking advantage of the tragedy in New Delhi. Chicago's been hit worse than anywhere else on the continent, so we'd like to start here."

"Of course," the elderly Mayor agreed readily. "I've already collected my advisors."

He was eager for the help, as was no surprise. Of course, Costa-Brown's backing probably helped push this faster, and more cleanly, than it might otherwise have gone.

....

*Another podium, another press conference,* I sighed inwardly. *When had this started to become tiresome instead of terrifying?* I couldn't pinpoint a day. Probably around the time Taylor's identity was revealed to the world. *Yeah, that annoyance, that's when I got tired of this sort of thing.*

"I am proud to welcome Gaea to the fine city of Chicago," Mayor Daley announced for the press conference. I found myself wishing Taylor was here with me. She had another mission to accomplish. Most of our team did. I felt the return wash of emotion. *LonelySupportResolve.* I smiled. We were all in this together.

"Thank you, Mayor," I said as I looked at the camera. "Pantheon would like to make an announcement on behalf of our team, our nation, and the human race as a whole. With the death of the Simurgh came a staggering cost. Too great a cost to call the battle a victory."

---------
LonelyNostalgia. Aww, she missed me. I felt warm, and not just because Matriarch had the best life support comfort ever. Pity I wasn't able to really use it in this mission. I simply sat in a room next to various dispatchers. The PRT, every police department in the city, and somehow even the National Guard had been tapped for this. I always thought the National Guard was meant for riots and the like. Then again, maybe that was the expectation: that there would be riots.

I push a tack into the map, and the police would head to that location. Green, Yellow and Red for levels of danger. Once they arrived, I would show them where to go via insect trail.

My relay bugs had been fanned out across the city. There was no pretense, no subtlety. We no longer cared: the world could know the full extent of my power and it changed nothing. We had slain an Endbringer, after all. They knew I had city wide range, already. And so, I was willing to demonstrate my city wide range. Let them think this was the last of our secret weapons instead of the least of them.

I was simultaneously aware of over two million people, most of them I wasn't paying attention to. I focused on the scents the insects were detecting. Bugs, at least in the numbers I had access to, were more sensitive to drugs than any dog could be. Heroin and cocaine were distinctive, if generally rather muted from their packaging. Meth was painfully obvious even from a block away. Oddly enough, marijuana was still one of the most difficult chemicals to recognize. Most insects couldn't tell the difference between it, and any other packet of dried leaves from the average spice rack. I had to make more assumptions on that one.

We weren't here for the marijuana. Chances were high that it would be legal in a couple years, anyway. Much like back in Brockton Bay, we were not here to make arrests. It would take rewriting the constitution to make this kind of search valid for prosecution. We weren't even here to clean up Chicago. That would require abandoning our home. We were here to make a fucking point.

I felt a certain satisfaction and nausea at the few we truly could arrest. The places with forced prostitution. The rapists. The crimes in progress. The law allowed for 'belief of immediate danger' to trump the need for a warrant. It also allowed me to do more than simply report. Where I jabbed a black pin into the map they'd provided for me, it meant 'send medical personnel'. They got the same treatment as I gave Eligos. A hundred pounds or more of crickets and cockroaches, biting and chewing their skin. Tens of thousands of papercuts. They couldn't prove I didn't interrupt a rape in progress, after all.

We were sending a message: any city that Pantheon needs to save is going to cost every criminal group a whole lot of money. The PRT and Protectorate and Police and even Pantheon could not police everyone. But the gangs could police themselves. And they would, if simply to avoid drawing our attention. We would exist as the hammer, ready to come down on any city that was too troublesome, any group that would not play by the rules. And if we came down, we came down on everything at once.
"Atropos, we got your target," Khepri spoke through the communication system in the armor. I looked over at Sabah.

"About time, I was getting bored," I replied. "Who's the target?"

"Guy called 'Topsy'," Khepri answered. "According to what I'm being told, he likes to think he's some kind of oldschool gangster. Has a couple unknowns with him. Minerva will give you details en route."

We took off, or really Parian took off while I held one of the ribbons and let my AG field do the rest of the work. Using her power as fuel for some kind of crazy rocket engine was novel, and had finally convinced my girlfriend that her power didn't suck. She still complained that mine was better, but it was good natured now. She was potential competition for Alexandria, after all. More than enough power to make anyone happy.

By the time we arrived, we knew what we were getting ourselves into, and I had concluded yet again that my girlfriend's costume was far too form concealing for my tastes. You could only tell it was meant for a girl because it looked like a giant stuffed doll. We split up. Parian went inside waited down the hall from their apartment. I waited for her to get in position, then hovered my way almost casually to the window and then knocked.

"Fuck!" A woman exclaimed inside, but quietly enough that I only heard thanks to the armor system. That would be Mockshow, a matter manipulator who builds golems. Similar to Sabah's power. Or, more a hybrid of Sabah and Theo. She had a Manton Limit, and that meant we weren't at any risk of her being able to hurt us.

"We're surrounded," another man declared. Probably Watch. Grab bag cape thats power was basically 'see living things, get close to them really fast, then touch and kill them'. He was the dangerous one. A sadist who had killed and maimed often enough that he'd go straight to the Birdcage. He was why Sabah had infused the door with her power.

"Shit, grab what you can and run," and that'd be Topsy. Gravity control and, well, that was basically it. Scary if you weren't prepared for it. We were most definitely prepared for it.

"There's no chance of escape," Khepri's swarm voice spoke. I shivered. I was one of the few people on the planet with a hard counter for her bugs, and the cloud of insects mimicking human speech sent the worst kind of shivers down my spine.

"Fuck, that's... fuck, I think I'm gonna throw up," the girl muttered.
"I can track you anywhere in the city. You either surrender, or try fighting your way through," Khepri continued. "Feel free to take a minute and prepare, we wouldn't want you to think you only lost because we caught you with your pants down. Oh, and in case you're wondering, your opponents are Clotho, a high end telekinetic who can trade blows with Alexandria and at least break even. And Atropos, who has superhuman accuracy with the projectiles built into her armor, and can dissolve through anything that touches her armor or weapons. Even Endbringers. Also, they have a dozen exotic tracking systems in their armor, so they can hear everything we're saying and follow you with infrared and bioelectric detection. You've already lost."

"Wait... you mean you sent the fucking Endbringer Slayer after us?" the girl exclaimed. "Shit! Okay, I'm done. Sorry, Topsy, I'm not afraid to do a minute in the pen, but I'd like to do it with all my limbs where they belong. Wh-wai-" she started screaming.

I bolted in through the window even as the door disintegrated by Sabah's power. Two seconds and four bolts later and Watch had dropped screaming in pain. I didn't bother charging the shots or adding the sleep agent, they hit with standard impact velocity. Both his kneecaps and elbows were shattered thanks to my flawless accuracy and sense of timing. The fucker was attacking his own team, I had absolutely no reason to be gentle.

I considered one more bolt- it wouldn't need to be much, it would look like an accident that he bled out and died. Sabah would know, Khepri would know, neither of them would say anything. I wouldn't, of course, I wasn't a murderer. But if they could ignore Bonesaw, then they could ignore...

A couch launched, or really more like fell, at me. It vanished where it touched, leaving only fragments that missed me to continue on and into the wall. Some even bounced off Sabah's armor. "Really?" I said, looking at him. "What part of 'dissolve anything' did you not hear?"

A couple ribbons snaked out and picked up Mockshow from where she was gripping her arm. "Don't worry, we'll fix it," she insisted to the girl who was doing nothing but muttering profanities. The ribbons cradled the girl gently. A third had far less gently wrapped around Watch, who had passed out from the pain. That was fine, we had no intention of patching him up before sending him away.

Topsy regarded me for a moment as the ribbons did their thing. "Had to take a shot, y'know," he shrugged. "You win. Get the feeling that either of you alone could have taken all of us without a problem. Bug bitch... fuck, I saw the video of what you did to Eligos. I'll pass, thanks."

Mockshow hissed. "Fuck, why couldn't you have shot him sooner?!"

"Sorry," I muttered. "Didn't think he'd go after one of his own team like that."

"He's a fucking psycho, you dumb bitch!" she yelled. "Of course he would!"
A/N- These three got curb stomped the FIRST time. Clearly, they never stood much of a chance here.

Also: yes, referenced a real person. As a Chicago (region) native, I can assure you that Worm's "it gets worse" aura means Daley triggered with immortality and will never stop being the mayor of Chicago.
"Umm, small problem," Clarice stated. "Looks like a couple of Atropos and Clotho's targets got hurt, they're being brought in. I might need to pay more attention to that. Expect Clarice to be slow in this fight, okay?"

"That's okay," Lachesis answered. "We have half our firepower here, and Th- Horus can protect me."

She looked toward me, and I knew she was smiling. Couldn't see it through her armor, however. I nodded to confirm. "Of course," I replied. "Khepri and Eki are going to be doing the heavy lifting in this fight. We're just here to catch the runners and provide first aid to those who need it."

Our target was the 'Teeth', I thought darkly. They, or their predecessors at least, had killed my mother. It was unlikely that the Butcher was here for this one- a new city, so far from home. We had no real way of knowing, however. They'd found their place to hide in a slum neighborhood. I couldn't help but think of my father describing places such as this one, and the 'inferior blood' that lived there. I wasn't sure how I felt to see he was wrong in at least one regard: there are plenty of whites here. The Teeth, it seems, did not discriminate. They accepted scum of all colors.

"It's time," Khepri instructed, and sky turned dark. Thousands of tons of insects dived the area, swarming every member of their sick gang almost simultaneously. The screaming was echoed in a chorus of fear and pain as we moved forward, not even needing to act. We were here for the parahuman response, and we got it.

Emerald arrows formed in the sky and started launching toward us. *How do they know where we are?* I wondered. *Powers, of course.* I provided a shield of metal- not because any of us needed it, but simply for appearance's sake. The arrows crashed against the shields, dispersing their energy into thousands of dimensions simultaneously. They splintered into shards of glass and then vanished into nowhere, much as they had come from nowhere to begin with.

Eki stuck a hand out of the side of the shield, soaking a blow from one of the arrows. "Less than a tenth of a percent," she stated. Not to us, but to Khepri and Minerva. She waited a second for confirmation before taking to the sky. Her armor in stealth mode, she activated the widest range of the vertigo weapon, blasting the area with energy. Most of the teeth collapsed to the ground, and some even started being ill. I've been on the receiving end of the weapon. Not a pleasant feeling, but it confirmed that my armor did not protect me from low end sonic attacks. The injure and kill settings, my power would block. But whatever part of the Manton Effect that allowed me to see and hear through the armor made me vulnerable to the vertigo setting.

We moved forward, step by step, moving past downed members of the Teeth. Turning over the ones that might be at risk of choking, checking the health of those that looked worse off, mostly from injuries that had not healed from whatever fights they had before we got here. After they had
dropped, the tranquilizer mosquitoes made sure they would not get up.

"Are you sure no one will be able to identify the drug?" I asked Clarice. Riley, I reminded myself. I had known her for so long as nothing other than 'Clarice' that I had trouble thinking of her as anything else. She was Bonesaw, once, I reminded myself. If even Bonesaw could change, why couldn't Kayden? I resolved to ignore that thought for now. Now is not the time.

"No one will ever be able to prove there was a drug," Clarice answered with her artificially perfect voice. "Well, Dragon can probably figure it out, maybe the Protectorate has someone who can surprise me."

"But they're not gonna tell, they need us too much," Missy said with a girlish excitement. "Uh oh, looks like we have company."

A large gorilla/wolf monster stood atop one of the buildings. He screamed, and Eki faltered, then started falling. "Powers down!" she screamed as she fell. I set a ramp to catch her, and another scream dissolved it.

"Fuck!" Minerva, this time. "That's Animos! Power nullifying blaster attack. Changer with brute abilities. We've proven our point, get Eki and fall back!"

"I got him," Missy said with cold certainty, and then she was gone. She appeared behind him on the building, only a second later, raising her hand and blasting him. I could see the visible distortion of time and space released from her attack, which meant it was at least stage two. He went flying off the building, while I managed to rebuild the ramp for Eki to slide down.

Missy stepped again, and appeared below Animos, firing straight up. The monster was carried by warped space upward into the sky. She was right next to me in another second. "So, is he rated high enough to survive a thousand foot drop?" she asked casually. She is amazing, I realized for approximately the hundredth time. It's not just that her power is incredible, it's how smart and efficiently she uses it.

"Maybe," Minerva answered. "Probably not. Horus, you'll have to catch him if possible.

"Yes, ma'am," I responded, pulling myself out of my own thoughts. Eki had hit the bottom of the ramp and was going back up the other side. She drew herself away from the slide under her own power.

"I'm back in the fight," Eki informed us. "Thanks for the save, Horus."

"Time delay of seventeen point three seconds," Aceso spoke. "That's how long it takes to recover."
"Still gotta recharge the shields on the suit," Eki answered, diving back behind my shield for cover from the constant stream of crystal arrows. She looked her armor over, and I gave it a glance as well. There were several areas where the camouflage layer had been cut by the arrows. "Good thing this armor is so durable. Thanks." She patted Clarice on the head. "Guess I owe you. Again."

"That's what family's for, right?" Aceso replied.

"This guy with the arrows has a shield I can't get through," Khepri said through the suits. "You'll have to go after him personally. Also, Animos is falling. Injuries are fine, but we really don't want to kill anyone during this. We're already going to be scary enough that some groups might get the bright idea to team up and come after us. Sure, we have contingencies for that, but it's not something we want to actually happen if we can avoid it.

"I'll clear out the building he's in," Eki stated, looking in the direction that Khepri was pointing her. I flew up toward one of the nearby rooftops, to get a better angle and view. More bolts collided with my armor uselessly. Missy stepped again, and vanished with Aceso. The tracking system put them a couple blocks away.

"Found their reinforcements," Missy said over the com. Four seconds later she spoke again. "Disabled their reinforcements. We're gonna need at least one more bus to haul these losers away. One's getting back up, regen. Aceso has enga- Aceso is purs-. Nevermind, the new parahuman in custody. Brute, mover, seems to be a really fast regenerator. Like faster than Lung."

*Those girls,* I smiled. *So very glad they're on my side.*

Animos collided hard with my ramp- he was a brute, after all, and while I was pretty effective even powerless thanks to the suit, I didn't want to be forced to fight like that.

He rolled for a bit before managing to find an angle to slide. I didn't allow it to be completely frictionless this time, so he slid up, and back down, without nearly the speeds that I had put Missy through after we first met. He ground to a halt, eventually.

"Animos is down," I stated for the team. "Human state, now. Broken leg, don't like the look of his ribs, and he's unconscious. He'll survive, but that's about all he'll be able to do for a while."

An explosion burst from the side of the building Eki was in. "This guy's a pain in the ass," she muttered. "It's like trying to fight an even more dick version of Shatterbird. He can use his forcefield to fly."

"Fall back," Minerva ordered. "Unless he engages you, let him run."
"You have a backup plan?" Eki asked.

"A couple," she confirmed. "One of our more fun secret weapons."

I paused, a moment of silence for the dead. In that minute, I felt the pulses of emotion off of Taylor. As I had started this speech, live, the operation had started. The thrill of victory, and occasional bursts of disgust and concern radiated off my partner. Her emotions sang. *This is her element, where she was happiest.*

I wasn't the same. I loved the conflicts, my Passenger guaranteed that I would. Still, mine was not a power for the front line. I was a builder, and the more I built the more my Passenger rewarded me. More skill, more control, more confidence. Everything I had been lacking. My General was on the front lines, where she belonged. I was here, where I belonged, making everything possible.

*Time to continue the speech.* "It has been confirmed that the explosion was not the result of the Simurgh self destructing, as was originally believed, but instead a tinker weapon she built and deployed." *A partial lie,* I knew. *True enough to pass any lie detection,* however. "If there is a victory in this, it's knowing that her brothers can be eliminated without risking the death of much of the rest of the world. Pantheon will be there to ensure that destruction." I gave a minor pause. Judging by Taylor's emotional undercurrent, she was pleased on her end. *Good.*

"But today is not about that mission," I conditioned, switching tones. "Today is about the cowardly actions taken by others in the wake of New Delhi. The world has lost many of its heroes. Not simply those who called themselves heroes and worked with the Protectorate, or those in independent teams like Pantheon. There are those who call themselves villains, and those who wish to avoid using their powers entirely. They who did not call themselves heroes, yet still had the courage to stand and fight against the enemy of all humanity. Let no one say their sacrifices were any less dear."

"To those who see the this tragedy as a weakness to exploit," I continued, letting my own disgust seep into my voice. The feelings that Valefor and the Slaughterhouse Nine evoked in me. "To the pathetic cowards who look upon the death of almost a billion people and consider it an *opportunity,*" I spit the word. "Pantheon issues this warning: we consider any attempt to use New Delhi for personal gain to be a direct violation of the Endbringer truce. We will act accordingly."

"Chicago has been invaded by such scum," I continued. "Jackals looking to prey upon the suffering of others. We are moving to remove them from the city, even as I give this speech. Within the hour, they shall be disabled and in custody. Along with a number of other criminal elements. The city of Chicago is now clean." I said that with full confidence, knowing that Taylor was still entirely pleased on her end.
I let that concept sink in for a second, and even a few of the men watching this announcement murmured their surprise.

"In order to keep it that way, we have brought to this city the first of our M6 defender models. Our upgrade to the M4s deployed in Brockton Bay. Powerful enough to legitimately fight most capes. Versatile enough to ensure they can respond to almost any threat. Brockton Bay's PRT Director Calvert, and Police Commissioner Micheals have both provided volunteers to train the police and PRT of Chicago in the use of this equipment."

"I will be handing over the stage to Director Hearthrow, to explain the PRT's plans with this equipment."

He approached me and accepted the microphone as I stepped back. "First, I would like to thank both Pantheon and Director Calvert for their joint efforts."

*CertaintySuperioritySuccess*. I smiled broadly as I tuned out Director's speech. What he said didn't matter compared to the emotions from my General. My Partner. *We won. No sense of muted disappointment, except maybe the part of Taylor that had hoped it would be more of a challenge. It took only a few minutes. The other gangs, the ones that were relatively benign, received their warnings and their bruises. The ones we truly cared about had been shattered.*

The Adepts were the one gang we left essentially untouched. They had traits distinguishing them from the others: they sent people to New Delhi, and they did not kill. To them, we made a different sort of offer. Pantheon was expanding, as was the Protectorate and the Guild. If they wanted, as individuals or as an organization, they could get out of crime now and we would do everything in our power to ensure they had a chance to be heroes.

When we moved on Los Angeles, and Miami, and Houston, and Vegas in the coming weeks, we would do the same thing. We weren't stopping until we had undone the damage caused by the Simurgh. The message would be sent. The old ways are no longer an option.

==============

A/N- Man, this was a *fun* chapter for me.

Also- the Author's Notes Drinking Game is to take a sip every time I say "foreshadowing". More than a sip, and you will die.

There's a LOT of foreshadowing in this chapter.
I arrived promptly five minutes before my scheduled meeting. Same secretary as before, I noted. Smarter than average. College educated. Ambitious. Driven. No desire to seek out a more prestigious career. Six figure salary. I was actually surprised. Knowing that Accord knew how to take care of his people was valuable for the future.

I gazed out the window at the skyline. Excellent view, I noted. Accord has same view in office. Recent renovations of certain buildings. Symmetrical pattern. I blinked. Accord purchased several city blocks in order to sculpt this view of his. Why hadn’t I noticed these details before?

I turned my power inward. Focused on Accord, jealousy toward other, more successful thinker. Distracted from other useful details by focusing power on finding methods to safely goad Accord without risk. Inferiority complex-

I cut the feed and suppressed the desire to sigh. Fucking Rapture. After learning she could do such a thing, I had to try it for myself. I didn't need my power to tell me why yet again. It was the competition. She’d gone somewhere I'd never before dared, and I just couldn't live with that thought.

All those zen monks could go fuck themselves: self awareness sucks and murders the very concept of fun. The one saving grace is how much stronger it made my power, if indirectly. Not wasting my efforts on infantile contests of will freed up a truly depressing amount of power to direct at other, more valuable, concerns. Still not enough to save Taylor from that what that empathic bond is going to do.

"Accord is ready for you," the secretary informed me.

"Thank you," I replied as I walked in. The office was an impeccable as before. In fact, I was fairly certain that everything in it, including Accord himself, was in exactly the same place as before, down to the centimeter. My power noted the symmetry in the patterns. It was, in its own way, flawless. I hated it instinctively. There is no mystery here, no imagination or possibility.

"A pleasure to see you again, Accord," I said as he stood.

"You as well, Minerva," he acknowledged. "I admit I'm once again somewhat surprised by your request for an audience. As well as your apparent promotion."

Promotion? Oh, right, I acted like nothing more than an errand girl last time. "My bosses seem to like my work," I almost shrugged. Habit from last time to be unnecessarily annoying, quit it. "I'm now head of their thinker department."
He nodded, just barely enough for my thinker perceptions to note. "They certainly have proven an ability to harness their employees talents to the fullest," he stated.

"Yes," I agreed. Approves of efficiency. Approves of order. Amoral, does not view 'good' and 'evil' as things. Replaced by concept of 'order' and 'chaos'. Views chaos as morally repugnant. "As much as I'm sure they love knowing you appreciate their efforts, we should get to business. Pantheon is currently, and I do apologize for the pun, branching out."

"As in Chicago?" he asked. Has spies, knows our plans, not internal, through the PRT, knows I'll realize this.

I nodded. "Yes," I agreed. I suppressed the desire to claim I knew the whole time. It's something I would have done, before. Fucking Rapture. "I admit... I am a little caught off guard that you knew. We weren't planning to act until tomorrow."

"Do you blame me for spying upon you?" he asked. Testing resolve and pragmatism. Is willing to make amends if it upsets me, or Pantheon.

"Not at all," I responded. "If anything, it's flattering. And it says good things of your intelligence and the strength of your information network." All true, except perhaps for being flattered by it.

He nodded. Considers test to be passed successfully.

"It actually makes me feel a lot better about my task here. I've come here to propose a... merger, of sorts, between our organizations," I informed him.

"I see," he nodded. Surprised by idea. Had desired an official alliance, had not expected such an aggressive offer. "I will make no promises, but I am interested in hearing your ideas. What you believe our respective functions would be in this arrangement."

I nodded, and carefully formulated how to present the pitch. It would be best, for a man like Accord, to start by explaining why we entertaining such a seemingly rash maneuver. "First," I started. "We have been watching you as well, as I'm sure you're aware. As I said in our last meeting, we are all very impressed with your work in Boston. You have never participated in the drug markets, or any of the other... messy... crimes. Your goals are the same as our goals."

He nodded. He was more at ease, now, knowing we had given this real consideration. The praise didn't hurt, either. "The truth is, Accord, you have strengths that we do not. We can provide resources and play politics with the best of them. However, we are facing new challenges now. After New Delhi. I would be lying if I claimed we were fully prepared for the aftermath of that."
"No one can truly prepare for the chaos that the Endbringers represent," Accord offered. *Trying to offer condolences, is sincere. Huh, I thought. Did not expect that.*

I nodded. "Of course," I agreed. "The Protectorate has been broken, and with it the order and stability they represent." I could imagine him frowning beneath his stern mask. He had no doubt already considered what the loss of so many heroes meant.

"Pantheon is moving to... hold things together. By replacing the Protectorate entirely if we must. Or, far more preferably, acting more as the Guild. Moving into destabilized areas and enforcing order," I explained. "We will be recruiting in large numbers, or forcing recruits to the Protectorate simply by making crime difficult and unprofitable. Those remaining criminal organizations will be unable to present themselves as a significant threat."

"And that would include my own less than legal operations?"

"Well, in your case, I believe we can offer legal choices that are far more profitable," I smiled. "As I am sure you are already aware, Pantheon and its allies currently own well over thirty percent of the city of Brockton Bay. Several billion dollars in net worth, and increasing rapidly in value as order is restored." I left out 'plus whatever a planet costs' in my calculations, of course. It was a question we might have to pose to Marketing, some day.

"Yes," he agreed. "I have been made aware. I admit to purchasing a reasonable amount of property, myself, after meeting with you last time."

I nodded. *Also a known fact.* "We could do the same in Chicago and other cities as well. To say nothing of the profits we can make in other areas, plus leveraging the sheer political influence we have thanks to our relationship with the PRT and police forces."

"You're saying you're willing to share that power with me?" he asked.

"Quite a bit more than that," I responded. "I'm saying we're putting you in charge of it. You are a force for order in the world, but you have trouble with people and are better working from behind the scenes. Pantheon also desires order, and I believe we have achieved that in our own way, but we are better at working with people and confronting the less civilized threats in a more direct fashion."

"A succinct way of putting it," Accord agreed.

"What we propose is an obvious division of responsibilities. Pantheon will continue operating the way it currently does," I continued. "We'll expand our presence into Boston, complete with our Yggdrasil and a minor base of operations if possible, where we can supply you and yours with our equipment. We will drive out all threats, break the drug and prostitution markets as we have in
Brockton Bay. You will also continue as always, managing... our joint economic resources, including the significant wealth we have control over from Coil's organization. How to best distribute aid to areas that need it for maximum results. Allowing us to be both effective and profitable."

No surprise, level of disappointment. Knew Coil. Working relationship. Saw him as a friend. Fuck. Why didn't we think to ask Coil about Accord? "We will, of course, put you in contact with the man we have controlling those resources. Another of our silent partners, recruited much like you're being recruited. You and he will likely be working together regularly. I believe you know him already, although he goes by another name now."

Got the hint, is relieved despite not knowing why he was upset. I didn't let my smile show. Accord isn't one of the thinkers who looks inward.

He was probably doing the calculations in his head. Simply clearing Boston of the Teeth alone would be worth potentially hundreds of millions to him in the long run. The 'insider trading' arrangement we offered for future real estate and other development projects would be hard to calculate, though with his power he likely already had. More than all of that: an opportunity to use his power to its fullest extent. He'd be managing the economies of several cities, while we handled the politics so he didn't have to.

"And all this costs me is the criminal side of my organization?" Accord asked.

"For the most part," I informed him. Won't like next part, needs a way to view it as beneficial enough to be worth the trouble. Best to divorce him from the problem entirely so he knows he'll never have to concern himself with it.

"You will have to accept some... inefficiencies... when it comes to dealing with troublemakers. In essence: you won't. Pantheon will handle disruptions and determine punishment itself, possibly in ways you would find less than satisfactory. Our leaders believe in offering second chances to almost everyone. This does, sadly, mean that some people will disappoint us by taking advantage of their generosity," I stated. He of course agreed with that assessment. Now to show him the upside of the endeavor. "However, I really cannot complain. After all, without that policy I would not have this incredible opportunity, and there would still be three Endbringers."

"You bring up an excellent point," Accord sighed. "As messy as it may be, I admit I cannot dispute the results. That is acceptable, as is your offer of a merger."

I set my briefcase on the desk. "These are a list of our assets and arrangements. As well as various estimates of our organization's production capacity. If necessary, we can leverage influence with the PRT, the Guild, Alexandria, and almost any police or political force within the cities we approach. We also have the support of Dinah Alcott, but we are using her for... other projects, also detailed in the notes presented here."
He nodded. "Understood. When do you believe you'll be ready to implement my projects?"

"Our operations for the next two days will be tied up in the planning and execution of our project in Chicago. After that, Houston is our next target."

"Why Houston?"

"The Fallen have managed to earn the... personal... attention of our leadership," I responded. Worried, sees this as a vendetta of revenge instead of pragmatism. "In addition, this cements a stronger relationship with Haven and cripples or eliminates one of the more destructive forces still remaining in the country. Given their... attitude toward the Endbringers and our past history, the conflict is inevitable. If we don't go after them, then they'll eventually take the fight to us. It's better to strike now, while we have the opportunity and before they have prepared themselves."

He nodded again, relieved by my logical reasons. "It will be a week, then, before you're ready?"

"Likely only four days," I answered. "Let us say a week, however. Time enough to recover any resources spent on our objectives. I will, of course, be available to discuss our plans and needs at any time."

"I will familiarize myself within two days and make contact," Accord stated.

"I look forward to a long and stable relationship," I smiled. "Thank you. I shall see myself out, if that is all."

"It is," he agreed.

==============

A/N- And they didn't even have to brainslug him.
Chicago had proven insanely successful, I considered as we went to our next destination. Director Calvert had his career made for him, now. Brockton Bay's PRT was being remodeled into something closer to 'elite training facility'. The PRT was already recruiting primarily from the same pool of candidates as the military's special forces branches, and now they had an elite even amongst the elite. He had other directors courting him to determine where the next waves of troops would come from, and where they would go. The establishment of M6s across the country.

We had a contract, of sorts, now. Calvert's new PRT would lead the charge in parahuman encounters, providing the front line cannon fodder in the form of easily replaceable M6s, and then backed up by parahuman firepower. It was a system that didn't even need a Protectorate, really.

Speaking of which, Brockton Bay no longer had a Protectorate. Battery and Assault were gone. Miss Militia, Triumph, Clockblocker, and Kid Win were the remainder of the team, and all of them but Miss Militia were looking at moving, probably to Boston. They'd likely be moved again within a year. We were hoping to convince them to switch sides, but it was... well, New Delhi. For us to recruit official members of the Protectorate under these circumstances was not acceptable.

Besides, our model had changed. We were no longer a cape group, we were setting ourselves up to be above and beyond that. By the end of the month, we would be part of an alliance of teams. Accord and his Ambassadors would be one, possibly the Guild as another. The Adepts and Haven would likely be in as well. More of a federation of groups than a single organization. Other independent hero groups and any number of rogues would no doubt start joining as well, if only because we provided a nearly obligation free membership that came with incredibly powerful defense from the PRT's strong arm tactics.

We were, of course, traveling through our own planet. One of those "secrets" we wanted to reveal semi accidentally, much like Taylor's identity and Clarice's supposed family history. Most of us just made the trip home, but Taylor and I had to drop off the prisoners. We'd have to be batshit insane to actually keep them anywhere near Chicago. So we were taking them to one of Dragon's facilities. Somewhere in Vermont. Under a lake. That meant Missy was with us. And where she went, of course Riley followed, and Theo. All on the next generation of flying horses.

No flying horses for Taylor and I, though I finally had a flight system. We rode on the front of the prison transport. A sort of walking cage, it did resemble a stagecoach, or probably closer to a covered wagon with countless centipede like legs instead of wheels. In the back was twelve parahumans, all considered the most dangerous of the bunch. Ordinary criminal assholes were, of course, going to ordinary prison.

I snuggled against Taylor. "So, is this our equivalent of a pumpkin carriage?" she asked.

"Guess that makes you Cinderella," I agreed, laughing.
"You're the one in a dress," she pointed out.

"Toga," I corrected. "And I made the carriage, so clearly I'm the fairy godmother. Besides, you're the one wearing high heels."

"Okay, you win," she sighed. "Also, I'm telling Sarah you called her an evil step mother. Then I'm telling Crystal."

"You wouldn't dare!" I exclaimed.

"You can't stop me," she teased.

"I can turn you into a slug," I told her. "We'll see who you can tell what, then." I stuck my tongue out at her.

"Still have my swarm," she dismissed. "Plus, you like my legs waaay too much for that." To emphasize her point, she stretched back and brought her right leg up. Then she ran her hand along from her knee to her hip.

She pulled me into a hug, resting her head on mine. It was nice, even with the armor in the way. "No you don't," she whispered to me.

I squeezed her tight. "No, I don't. But I might still club you with a fire extinguisher."

"Best first date I've ever been on," Taylor joked back.

"Same for me," I laughed. "You should meet some of the dumbasses I kept getting set up on blind dates with."

"Y'know, I had to bribe Lisa to keep quiet about our second date," she chuckled, then she added huskily. "You remember, the one where I woke up handcuffed in bed."

I blushed at that. Or the way she said it and the images it provoked, at least. AmusedPleased. "Sorry about that, by the way. I was a total bitch."
"There is absolutely no need to apologize," she insisted. ComfortGratitude. "You saved my life. Or at least saved me from being crippled and in pain for the rest of it. You're my hero. Don't you dare forget that." I smiled, feeding the warmth of our link.

Vista, still on Calysta, appeared beside us. "Hey, you two," she said. "In case you've forgotten, there are impressionable children here. You can talk about beds and handcuffs when we get home."

SurpriseEmbarrassment. I covered my face. Or the armor over my face, at least. The planet was still not really comfortable for people to be outside unprotected.

"Why would anyone want to use handcuffs?" Riley asked. "There are so many better restraining devices."

Theo choked and started coughing. UneaseShock. And with that, what was left of the mood was broken.

"We're here," Missy informed us. "Have been for, like, two minutes."

The kids got off their horses, leaving them behind as they took position on top of our transport. I fused their armors to the biomass, allowing us all to be considered a single lifeform for the purposes of the teleporter. Then I pressed the button for our 'shunt' technology, and the world changed. Or, the world stayed the same and we left it for a new one.

There was no flash, no warning, simply the change of a scene. A flat plane of biomass replaced with uneven greenery of trees and life. A sun that was both brighter and smaller than the one of our world. Atmospheric illusion, apparently. When we were done terraforming, our own planet's skies would look much the same. Except the birds. Chances were that we'd never introduce a natural biosphere on our world.

Thirty PRT soldiers were there, alongside another six others in armor suits. I recognized Dragon and Defiant, but not the other four which flanked them. They all had a distinctly draconic appearance to them, and were almost identical to each other. When did Dragon start recruiting soldiers? I wondered.WaryCurious.

"Good to see you again, Pantheon," Dragon started. "I take it there weren't any difficulties."

"Nothing important," Taylor answered, buying a bit of time while I adjusted to being nearly blind again. Going from continent level awareness to almost nothing was disconcerting. "Transporting a lot of people can take a while."
She nodded. We were presenting our dimensional shunt as a form of teleporter tech. Not completely untrue, of course, but there were obvious flaws in that as a cover story. Flaws we knew they'd pick up on. Better for them to focus on that than details such as Riley's actual identity. Even if it was now the least well kept secret in the world. Worst case scenario, we'd tell the world the truth. Without her help, we would not have been able to kill an Endbringer. It wasn't the most elegant of choices, but it was there if we needed it.

"I see," Dragon nodded. Defiant, meanwhile, had gone to the back of our transport. I sent the first pulse, that separated our suits from the thing, so everyone could climb off. Then the second command, that caused the walls of the prison containment to open and fold down to the ground like ramps. The prisoners blinked as they slowly started to wake up. We didn't have containment foam, after all, so we theoretically used a sleep gas. Or just my power ensuring they didn't wake up.

They were gathered up by the PRT soldiers, with Defiant supervising.

"So, I see you're expanding," Taylor said, nodding toward the armored men.

"Yes," Dragon confirmed. "Recent events have... raised a number of concerns. We've also recently recruited a new tinker that has greatly simplified mass production of tinker tech."

I nodded. "That... that is impressive," I stated.

"Not quite a match for Pantheon's production ability," Dragon admitted. "If we're being honest, I only have permission to field a force like this because of you."

"You mean because people want someone out there that can kill us if we get too troublesome," Taylor concluded.

Dragon didn't respond. In truth, she didn't have to. It was the only possible conclusion.

"We've been meaning to discuss something, actually," I stated. "We're creating a sort of alliance of non-government cape groups. We'd like to invite the Guild to be members. The perks are pretty straightforward: shared tinker knowledge, backup when it's needed. Pantheon's role is... mainly support. Our bioarmor suits are the main appeal, we offer them to any of our affiliates, although I can see where the Guild might not feel the need."

She regarded us. "I will have to discuss this with the others," she stated. "It's not my place to make those decisions."

"We also offer individual memberships," Taylor added. "There are a number of capes that have joined while still continuing to work for the Protectorate. Sure, they probably murdered their careers
in the process, but you don't need to feel pressure to choose between the Guild or Pantheon."

She looked toward Defiant. "That could work," she agreed. "I do need to consider the... political repercussions, however."

_Annoyance Disappointment_ "I understand," I said. _God damn politics._ "We'll keep in touch."

She nodded. By now, the prisoners had been taken out of our transport and moved to theirs for whatever it was they did with prisoners. _Processing? Is that what they called it?_ Either way, they'd be locked up in the bottom of a lake, in case anyone decided to try to escape. Only those members of truly horrific groups like the Teeth, and a handful of the other nastier gangs were here. Some were birdcage bound, others weren't but should have been. Almost twenty other capes remained in PRT custody in Chicago. The ones that there was no doubt the PRT would try to gang-press into the Protectorate or Wards.

It felt bizarre, considering our original plans to functionally break the Protectorate and PRT in half, that we were doing this.

After only a few minutes, we shunted back over to our personal dimension, and went home. With less than a third of the number of people, and a shorter trip in general, we were home in only a couple more minutes. I allowed the transport to melt back into the Yggdrasil mass before we stepped through the portal. Our suits, and the pegasus... pegasuses? Pegasi? Whatever, we all were clean of radiation.

Taylor followed me as we went to what I had started to think of as our bedroom. She still had her own, of course. But she only ever used it to change. We stripped out of our armors and left them to be healed by the Yggdrasil. I spent my time looking at her legs as she stretched and plopped down in bed.

"What are you thinking about?" she asked, smiling.

I smiled back. We both knew the answer, so I summed it up with a single word. "Handcuffs."

She blushed. _Pleased Amused_.

We just sat there for a minute while I was strongly considering kissing her a second time, just to see if it would work better when spontaneous. And then a man appeared out of nowhere in our bedroom.

===============
A/N- Yay! A happy chapter!
"To those pathetic cowards who look upon the death of almost a billion people and consider it an opportunity," Gaea spoke for the cameras. Her passion was obvious, as was the threat in her voice. This was an ultimatum, and they were confident in their ability to enforce it. "Pantheon issues this warning: we consider any attempt to use the losses suffered in New Delhi for their personal gain to be a direct violation of the Endbringer truce. We will act accordingly."

I almost sighed. I never was the passionate or charismatic one. That was Hero's job, and later it was Legend's. They had what it took to truly move the crowds, like Gaea on that stage. Idly, I wondered if I had that option. To my surprise, there even was an ability like that in my untouched repertoire: the power to know how to evoke powerful emotions in others through my words. Somewhere between 'master' and 'thinker' in its scope. I strongly considered accessing it, but instead I allowed it vanish into the well again. I rarely used pure Thinker powers, and I never touched Master powers at all.

It wasn't powerful enough to match Contessa's ability, and it could not have influenced Alexandria at all. So it would not have succeeded in convincing them to give me access to one or two more vials. Not much, in the scheme of things. Enough power that I could be there, could matter, for the deaths of the last two Endbringers. I wouldn't be the one to deliver the finishing blow, but I could save lives. I could ensure the next fight was not a disaster like New Delhi was.

"Contessa," Alexandria spoke. "When you said they were going to establish parahuman 'feudalism', I had expected it to be 'feudal'. This is closer to watching a fast forward of the colonization of the New World. They just took control of both Boston and Chicago in everything but name."

"All of our thinkers, Contessa included, expected them to stop expanding after Boston," Doctor Mother replied. She was, in her own way, living up to the 'mother' part of her title by protecting Contessa from Alexandria's criticism. She viewed the younger precog as a child of her own. I could admit a pang of envy at their relationship. "Khepri and Gaea both have authority, trust and control issues that should have made it impossible for them to maintain control over a larger territory, even given their incredible powers. They seem to be far more willing to delegate power than any of our models predicted."

Contessa finally spoke. "I believe it was the Simurgh's actions," she finally stated. "No power could have anticipated New Delhi."

"It makes sense," Doctor Mother replied. "I'm sure the experience was traumatizing enough to make them rethink their plans. Clearly this is also a response to the Protectorate's greatly weakened forces. Coupled with their sudden and unexpected willingness to cooperate with the PRT and Protectorate. I think we can assume they'll hold Chicago for the time being."

"New York, as well," Number Man volunteered.
"Pardon?" Doctor Mother asked.

"They've made... overtures... with the Adepts in Chicago," he stated. "I haven't divined all the details, but there was a payment of exactly one hundred thousand dollars from one of Pantheon's accounts. It's obviously part of a ploy to convert the Adepts. Likely a multistage plan."

"Why were the Adepts in Chicago, anyway?" Doctor Mother asked. "Aren't they East Coast?"

"Following the Teeth, it appears," he confirmed. "Same as Pantheon. Pantheon is moving to target the entire organization. Likely planning a pincer attack against their forces in both Boston and New York simultaneously."

Alexandria frowned. "The Butcher is one of the more powerful parahumans. One we had hoped would make a real impact against Scion. Do you think we should interfere to protect their organization?"

"We are better served allowing Pantheon to succeed. The Butcher has potential, but is hardly comparable to Pantheon's value," Doctor Mother responded. "Pantheon's strength isn't merely in its own parahumans, but in its ability to be a force multiplier to other parahumans. Your new equipment, for example. It is remarkable, both in terms of simplicity and ingenuity. It's possible you might be able to use it to be the next... what are they calling Atropos now?"

"Endslayer," Legend responded. "Alongside the other two Fates that operated their Moirai Cannon. But it's known that her power is what makes the weapon lethal, even to Endbringers."

"Yes," Doctor Mother agreed. "I think we agree that, as always, the death of Scion is the highest of our priorities. If Pantheon's actions ruin our experiment in parahuman feudal states, or cost us a few promising soldiers for the conflict... yet provides a stronger and better equipped force for the final battle, I see no reason to interfere with them."

There were nods all around.

I kept my own counsel on the subject. Force multipliers and power manipulation. Capable of upgrading even Alexandria. Could they do that for me?

....

Teleportation was one of the powers I was running low on, but it was better than using one of my horribly reduced number of flight options. I only had a handful of flying power that could also
double as a defensive or offensive power. I had used the last of the truly good ones in the battle against the Simurgh. Telekinesis over glass. Remarkable in its elegance. *Pity I lost it during the firestorm.*

Strangely, I felt incredible during it. The fear, the panic, the certainty of death. I had tapped deeper into my well than ever before. Granting me a boost to my strength that had almost restored me to the power of my early days. It was slipping already, of course. But it was slipping slowly. I had, perhaps, another month or two, if I was conservative. I needed to be conservative.

I appeared inside Pantheon's base. My current power simply placed me next to the person whose face I envisioned. In this case: Gaea. One of the weakest teleport options I still had available. It required I knew the target's actual, and recent, facial features, which took time and concentration, perhaps even a scrying power, to achieve. It also didn't allow me to bring others with me. Of no value against the Endbringers or Scion, I could afford to surrender it forever.

A girl screamed, and before I could speak I was encased in a living mass. *Strange, it didn't triggered my defensive power. Oh. They weren't planning to actually harm me.* I could have broken free with trivial ease. I chose not to. The tree moved and shifted around me, giving me some space, and light allowed me to see my sealed prison. I blinked.

A video screen formed inside, near my face. "You have a lot of balls teleporting into our bedr-" she paused. "Eidolon?"

"Hello, Khepri," I didn't bother smiling. One of the things I wasn't very good at. Others could make smiles look charming or friendly or even seductive. I just looked stupid and awkward. She looked over to her side and was saying something I couldn't hear. I felt the presence of an energy trying to interact with me. It was something of a booster to my confidence that it failed.

"Okay, how do we know it's you?" She asked.

"If I demonstrate a power that lets me escape and is nothing like the others you've witnessed?" I suggested. "Is that acceptable?"

She nodded. The plant material around me disintegrated into dust. A dessication power, again worthless against Endbringers or Scion. Also the source of my current energy sensing abilities. I stepped out and dusted myself off.

Khepri stood defensively in front of Gaea. Both were out of costume. Neither girl was especially striking in their appearance, and I could imagine passing a hundred not unlike them without looking twice. Except for their eyes and the energy that danced between them. These two had will and presence well beyond their ages. "I'm sorry," I apologized. "I hadn't expected you in bed so early. It's only five here, right?"
"It's been a long few days," Khepri responded. She'd started to relax. "To what do we owe the visit?"

"I can trust your confidentiality, I presume," I asked.

They didn't quite look at each other, but somehow they communicated their agreement before Khepri spoke. "What you tell us stays between us," she said.

"I was impressed with your work with Alexandria," I stated. That was certainly true. I took a deep breath to steady myself for what I was about to admit. "I was hoping to discuss a... problem... I am having. One that you might be able to fix. Or at least delay for a while."

They frowned in unison. A bizarre form of visual stereo. "Go on," Khepri volunteered. I was still busy trying to figure out what my power was trying to tell me about these girls when another voice came from the doorway.

"Holy fuck," another girl's voice muttered. "He's losing his powers."

============

A/N- it would have been a MUCH better cliffhanger if we readers of Worm didn't already know this.

Eidolon managed to look annoyed through his mask. "Yes, that is the problem I was going to ask about," he admitted.

"That's bad," Lisa stated. "Like, that's really fucking bad."

He sighed and nodded. "I know," he agreed.

"No, I mean, you're basically the go-to hero. Sure, Alexandria can hold her own, and there are couple others. Pantheon's equipment can make a few more come close to good enough to really matter against the Endbringers in a drag out brawl," she rambled. "But that's only close to good enough. Without you... we're fucked. You are the only reason we were able to hold the Simurgh long enough to finish her. It'll be the same with the rest of them. We need you if we want to finish this. And we really want to finish this."

"I assume that means you're willing to help, then," he stated.

"Let's go to the labs," Lisa said. "Hope you don't mind spending time in the basement. I was beginning to expect that Alexandria was going to cry or run screaming when she was down there. Did she tell you any stories?"

"No, she said it was pretty standard," Eidolon answered. "Gaia used her power for a scan, some tests were done, and you grew everything in a vat overnight."

Lisa smiled her foxlike smile. "Then it'll be a surprise."

"Lisa, stop terrifying our guests," Taylor muttered, sounding tired. "You and I know the worst thing that happened to Alexandria was when she had to get dressed after Zach did his thing, and she had a warning and privacy screen for that."

Eidolon, who had been moving to leave the room, froze. *RealizationHumiliation.* "She left that part out," he admitted.

"It was a power interaction test," I offered. "Zach has an ability to teleport people. It reacts oddly to certain powers. We wanted to see if it would work through her power's stasis effect, for a number of reasons. Turns out, it does."
"I suppose I probably shouldn't tell her I know about that," he chuckled.

"I've contacted our Tinkers," Taylor said, changing the subject. "It'll be a couple minutes."

"Okay," Eidolon agreed, as we left into our living area.

"Dude," Zach said from the living room, looking at Eidolon. "Theo, you owe me twenty bucks."

"And you owe me two hundred," Lisa reminded him.

"Can I get an autograph?" Zach asked.

"I suppose," Eidolon agreed, smiling. Zach ran off to his room.

Theo stood up and walked over to our guest. "It's an honor to meet you, sir," he said as he held out his hand.

"Thank you," Eidolon shook it. "It's nice to meet fans. Especially ones that are heroes in their own right."

Theo almost blushed at the compliment. "I haven't done much to be called a hero, sir."

"You saved lives," Eidolon insisted. "More than that, you did it by stepping in front of a weapon meant to kill Endbringers. And even after being practically cut in half by that weapon, you kept concentrating long enough to save everyone in the shelter. In what way are you not a hero?"

"Told you so!" Riley crowed triumphantly from the stairway to her labs. "You saved my Big Sister and Missy and everyone from being cooked. That makes you a hero, and now you have to accept it because Eidolon hangs out with all the best heroes, so he'd know."

Theo smiled and actually, finally, did blush under the praise and attention. Eidolon, on the other hand, frowned a little. And then, so did Lisa. *That was a question I needed to ask later. Badly.*

"Don't worry," Eidolon offered. "I'm not really good at accepting praise, either. For me, it's always been about the legacy. Knowing that I help make things better, that I'm building something that's greater than myself. That's always been my motivation, at least. You do get used to the praise and attention, eventually. But some people will never like that sort of thing."
He's a completely different kind of person than Alexandria, I thought. Inspirational, really. I guess if you spend enough time around Legend, you learn a thing or two. I glanced over at Lisa, she was still watching and observing. Less a fox now, more hawk. Definitely acting hawklike.

"Lab's ready," Riley stated. "I've got a few initial ideas, but this could take some time."

By now, Zach had managed to rush out, holding a jewel case. In his other hand, he had a pen. He handed the pen to Eidolon, and extracted a sheet of paper—more like a blank card than anything—and offered it to him.

Eidolon looked at it and smiled. "So, you got to Alexandria and Dragon first?" He clicked the pen and signed his name. "Haven't bothered asking your team for theirs?"

He shrugged. "I dunno, kinda seems weird to try that. I mean: have you ever asked Alexandria or Legend for theirs?"

"You have a point," he granted. "So, are we ready?"

"Yup," Riley answered cheerfully. "You have no idea how long I've wanted to study you up close!"

I cringed, but Eidolon took it in stride. "I'm sure," he said. "Hope you won't be insulted when I say that I would have done everything in my power to stop you, before. Your actions in New Delhi changed my mind. You risked everything by showing yourself there."

Riley looked down, unable to find words for it. "Thank you," she said, softly. This might be the first time anyone praised Riley for doing something truly heroic, I realized. I resolved then to make sure she heard it more often. I could feel Taylor's emotional response, the recognition that Eidolon was right. Too subtle to influence my emotions over the link, but enough that I at least knew the feelings were there. I reached over and grasped her hand.

Riley sprinted down into the basement, clearly determined to do her absolute best to help the arguably most powerful parahuman in the world. Eidolon and the rest of us followed at a more subdued pace, including Theo. Who wasn't usually interested in visiting the labs.

"Alright, first, symptoms time," Riley said, pulling out a couple instruments. "Have a seat and tell me what the problem is."

"Simply put," Eidolon answered. "I'm running out of powers. There was a time, early in my career, when I could access any power I wanted and expect it to be at full strength in seconds. Now it can
take several minutes for a truly strong power to finish charging, and the maximum charge now is less than ever before."

"Could be physiological," Riley suggested. "Overuse of powers causing deterioration of the Pollentia or Gemma. I've seen it before. Never in a... uh... parahuman with unmodified powers." She went silent. And I thought back to the nightmares she set on me. Murder Rat, especially. *Those women were still alive after what she'd done to them.*

"I'll try," I suggested. "Faster for me to run the scan than anyone." I reached my hand out, and Eidolon took off his glove to make contact. I frowned. "I... I'm not seeing anything," I said after a couple seconds. "You counter my powers. Almost exactly like Weld."

"Interesting," Riley answered, then she looked at her instruments. "Would you mind using your power? Something minor, and do it as slowly as you can. The more time we have to observe your powers, the more data I can collect."

"Okay," Eidolon agreed.

Riley watched the screens for a minute. "Save file, E.I. One," she instructed her computer. Sometimes I wondered about the logic of using nothing but vocal command systems only, but Riley insisted it was more secure that way. "Hey, Osiris, can you see if your power detects him?"

"Okay," Zach agreed, and he was the next one to make contact with Eidolon. "Umm... no?" Zach answered, sounding confused. "I'm getting nothing at all. It's weird."

"What does that mean?" Eidolon asked. "I might be able to offer insights. I felt both of you trying to influence me, and you're not the first who've tried."

"Well, my power only works on living things," I answered. "The only exceptions we know of would be a number of non-organic Case 53s, people under the influence of Clockblocker's ability to freeze time, and now, you."

"I can't effect Theo's power, while it's active," Zach replied. "I can't effect Atropos' bolts when her power's controlling them. Or Clock's frozen objects. I, umm... I also made contact with Simurgh enough times to know I can't read Endbringers, either. It's not just because she's too heavy. I still know I'm in contact with something, if it's too heavy. My power tells me "

"Okay," Eidolon answered. "Sounds like they're both Thinker powers at their core. I've long ago learned I'm immune to Thinker powers. Precogs included."

"Would you mind using your power? Something minor, and do it as slowly as you can. The more
time we have to observe your powers, the more data I can collect.” Riley asked.

Eidolon looked confused. "Riley,” I started. "You already had him do that.”

"Did I?" she asked. "Funny, I don't recall. Computer, name most recent saved file."

"E I One," the machine intoned in Clarice's voice.

"Taboo," Lisa responded. "His power is Taboo."

A/N- The part where Riley repeated her question actually confused me for a second during the editing. Until I read the next couple lines.
"Thanks, Emma," Dennis said. I was sitting on the chair I'd built and leaning back against my wall, holding my cell to my ear. "I'm sorry about this, but I don't really have much choice. You know why I have to do this. They need everything they can get."

"It's fine," I confirmed. "Everything's changed after..." I paused. The words 'New Delhi' didn't need to be spoken. Anyone on the planet would know what I meant.

"Yeah," he said. "You could still, y'know, come with?"

I sighed, closing my eyes. "We've had this conversation, Dennis, I can't."

"You can and you know it," he said. "Fuck, you have every reason to walk away. They treat you like garbage and you know it."

I cringed. It wasn't quite true, but it was still a nerve to be struck. Taylor avoided so much as looking at me where possible. Zach actively pretended I didn't exist, to the point of absurdity at times. I expected that, from both of them. I deserved it, even.

None of the others would really talk to me at all. At most I could hope for polite indifference, like from Rey, Crystal and Theo. They weren't unkind to me, they just didn't have a lot to say to me. At worst, they avoided me. The way Amelia and pretty much all of the others did. They were, one way or another, Taylor's friends. They may have accepted that Taylor didn't want them to do anything to hurt me, but that didn't mean they needed to be nice to me, either. Congratulations, Taylor, you won in the end.

Riley was the one that hurt. Her relationship with Amelia had been improving, slowly but surely, and with that she seemed to be... afraid to be too friendly with me. That, plus her friendship with Missy. The two of them were like sisters.

*I had a friend like that once.*

Yeah, that hurt. Riley was the one I was most connected to. *What does it say about me that Bonesaw is the person I miss most?* Her, I trusted with everything. I let her modify me in ways that I did not, could not, understand. Still didn't fully understand, even with my powers. I was her favorite project for a while. Her co-conspirator. The one she went to for advice in dealing with tricky situations and dilemmas where there were no easy answers. Now I was, at most, her lab partner. I'd been all but forgotten. *It is amazing how much that hurts.*
"Emma?" Dennis prompted.

"Sorry, just thinking," I replied. *Dennis cares about me.* "I'm sorry, I have to stay."

"You don't," he insisted. "You know it's not healthy. There are other options. You can join the Wards, they love Tinkers. You've seen how much Kid Win gets for some of his inventions. You're a better tinker than he is, you could pretty much write your own check."

I smiled. *Can't fault him for trying.* "You just want me to have a suggestive and vaguely offensive code name. Like 'Ice Box' or something." I teased.

He laughed, even if it was a little forced. "See, you're already a natural."

"No, what I'm doing here is far too important," I insisted. He hated it when I pulled that card. The Endslayer project. The augmented weapons systems. Clockblocker even got some customized weapons. Basically the standard package, plus nearly indestructible strings that he could use to freeze things at range. Both of us knew it wasn't the real reason for me to stay, however.

"After they're dealt with, then?" Dennis prompted.

"Maybe." *No.* "I was thinking I'd join the Guild. Y'know, work directly with Dragon. What kind of tinker could pass up on something like that, right?" *I'm sorry, Dennis. Going with you isn't even my second choice."

I knew it should be my first. He was there for me when I needed it the most. I just didn't have the feelings he obviously had for me. I probably never would. He was transferring to Boston, and from there who knew? Almost certainly, he wouldn't be there, or in New York, by spring. He would find someone who could love him, and he'd forget about me. Everyone would be happier that way.

"Yeah," Dennis admitted. "I could see you working alongside Dragon and Defiant. Being one of the world's best Tinkers."

"Emma," my dad shouted from downstairs. "It's time for supper."

"Gotta go," I said, both grateful and annoyed. "The 'rents are still on about that whole 'dinner's a family meal, everyone eats at the table' thing. As if that's going to make much of a difference in anything. We'll talk tomorrow."

"Okay," Dennis answered, not sounding especially happy about it. "I... I miss you."
"Miss you, too," I answered back, not really meaning it.

By the time I got downstairs, my parents had managed to be at the table. It was, as always, uncomfortable. Mom and dad went out of their way to pretend nothing at all had changed. They knew everything I'd done, but pretended I was the same child as before. I came back from fucking New Delhi, and they called it a road trip. Where I got a sunburn. *Yeah, first and second degree burns across almost eighty percent of my body. That was a 'sunburn' now.*

Turns out, my hair is considered alive by my power, so it regrew itself along with the rest of my regeneration. Small favor, at best. Also meant I would have exactly the same hair style for the rest of my life, because it restored itself to this no matter what I did to it.

*You're one of the ones that came back,* I reminded myself, a mantra in my head. *You survived. No one can say you're weak, not after that.*

"How's your job going, dear?" Mom asked. I cringed. That's what they called Pantheon, now. My 'job'. Like modeling was, before.

"It's fine," I answered. "We're pretty stable right now, so I'm using the downtime to apply for my GED."

"That's good," dad nodded. "You were always a smart girl, you should just skip the rest of highschool and go right to college."

"That's good," dad nodded. "You were always a smart girl, you should just skip the rest of highschool and go right to college."

*No I wasn't,* I repressed the urge to scream. *Taylor was the smart one. I was average at best. Sure, I'm smart now. My powers plugged about forty bonus IQ points into my brain even without considering the Tinker and Breaker parts of my power.* Of course, they had to pretend I was always smart so they could pretend nothing happened. Just like dad was ignoring the real reason I couldn't go back to highschool.

"I'm not going to go to college," I said. Their looks of disapproval was almost palpable. I backpedaled on instinct alone. "For a year or two. The job's a hassle, and I could use the break. It's been a pretty stressful year."

"Okay, dear," mom agreed. Of course she did. They'd been treating me like a Fabergé egg ever since... ever since I was attacked by the ABB. *Why would I ever have expected them to stop now? And when did I start to hate them for it?*

"That makes sense," dad conceded. "You should at least sign up for a couple classes at the community college, just to stay in the habit. They say people lose two months of school over summer break. You need to stay sharp."
*My power includes near perfect memory.* "I'll be sure to do that," I agreed.

I forced myself to eat. I didn't need food, anymore. My digestive system still worked fine, which more a hassle than anything, but my actual desire to eat was nonexistent. I had no sense of taste or smell, and I did not experience hunger. I couldn't starve to death, or even lose weight, because my regeneration pulled mass out of nowhere to undo damage. It did so slowly, granted. Took over a day to recover from Taylor breaking my nose and cheek. I still hadn't fully healed my injuries after New Delhi, over a week later. But eating was both useless and without pleasure for me.

I tried to explain this, but mom said that I was spending too much time around too-skinny models, and insisted I didn't have to starve myself to be pretty.

I was grateful for the silence that having food in our mouths brought. The less I have to talk to them, the better, I had come to realize. It was a nice meal, I had to admit. Pork chops, fresh vegetables, mashed potatoes and gravy. If I could have gotten away with it, I might have snuck my share out and given it to someone who could appreciate it. I was halfway through the meal, my phone rang.

Dad looked at me. "Sorry," I apologized. "It's... work. I have to take it."

At least dad appreciated that much. Being a lawyer meant he understood the concept of demanding jobs and the occasional irregular hours.

I stepped away from the table and answered. "Emma speaking."

"Got another important customer," Lisa informed me. "Need you pretty much ten minutes ago."

"I understand," I answered, then hung up the phone. 'Customer' in this case usually meant a unique powerset we really wanted to study. Not exactly an impossible code to break, but then, no code was impossible to break. It was easier just to keep the details so vague that even the person receiving the information didn't know anything important. I looked at my parents. "Sorry, it's an emergency. Promise I'll make it up to you later."

"That's fine," dad said. "You have adult responsibilities now."

"You should invite some of your friends from work over for dinner," mom suggested. "It's been so long since I've talked to Taylor, it'd be nice to see how she's grown."

I resisted the impulse to ask her what alternate reality she thought we were living in. "No promises," I said. "Most of them live the job 24/7. Don't even have time enough to visit with their own"
families.” I rushed upstairs to get into my armor. The flight system, more than anything, was why I needed it now. Although its ability to regulate my hybrid state and buy me extra time at full power would be useful if they needed my power.

_They never call me unless they need my power._

===================

A/N- If that's the sound of you feeling bad for Emma? That means I've done my job right.
"Taboo?" Eidolon asked. *Apprehension*Surprise.*

"That's the term we use for certain memory effects that powers can cause," Lisa replied. "It's... sort of like a universal stranger power, like how parahumans black out when someone nearby has a Trigger Event. And how precogs can't sense Endbringers or, well, you. And Scion."*Hesitation*Concern.* I frowned. *I know it's Eidolon, but should be be volunteering all this information?*

"So a new name for an old idea," he nodded. *Suspense*Relief.* I've seen some studies done on that. Like how it's impossible to predict a trigger event until after it occurs. If you just so happen to be using precog on an individual before their trigger, their predicted future will often be completely different afterward."

"Interesting," Lisa said. "We didn't know about that. Another piece to the puzzle."

"Don't feel bad," Eidolon shrugged. "People have been studying the phenomena almost as long as powers have existed. You do have one thing on them: Taboo is much more elegant than the alphabet soup the scientists on that job have managed to come up with. I'll have to pass calling it 'Taboo' along to others. Much better than Induced Parahuman Memory Loss Phenomena."

"Wow," Zach replied. "So, science has managed to just completely run out of good acronyms at this point, huh?"

*Annoyance*Impatience.* "Emma's finally here," Taylor spoke up. "Told her we're in the lab, didn't say who we had with us. We're pretty well shielded against Thinkers down here, so there's still a pretty good chance no one knows you're here."

"That's appreciated," Eidolon replied. "If it makes you feel any better, my power says this remains a private conversation."

Lisa nodded. "Actually, it does, thanks."

I felt Emma's presence through my power. Her biosuit, like all of them except Parian's, was designed to link into the Yggdrasil on contact. And with that, I got the still strange sense of Emma's biochemistry. It was no less bizarre today than the first time. Half organic, half... something else. Something my power didn't consider alive. I opened a more direct path for her, and she was coming down the newly created staircase in mere moments. It vanished behind her.

She smiled and waved "Hey guys, what's the..." she paused when she spotted Eidolon. "Oh, oh
"I remember you," Eidolon spoke. "You're the girl that figured out sonic powers work against Endbringers."

"Yeah, that's me," she agreed. "I remember you, too." I glanced over at Taylor. ConfusedAmused. I didn't know Emma very well, but right now she was acting more awkward than Taylor and I used to.

"That was brilliant, what you did," Eidolon stated. "I don't think I would have thought of something like that, combining two relatively weak powers into something that could do that much damage."

"Well..." she smiled at the praise. "It's something Pantheon taught me. Awesome power combos seems to be our specialty." AnnoyedTerritorial. I focused on that sense for a second. Oh, Emma saying 'our' when referring to Pantheon. At this point, it was certainly true enough. Emma exemplified the concept of power combinations.

"Yes, well, I may need to learn how to do that more often in the future," Eidolon stated.

"You should see this," Riley stated, pointing at her computer. "It's a recording of Eidolon using his power."

"Okay," Emma agreed, going over to the computer and watching the screen while we waited silently. "The powers are dying out," she said finally.

"That's my problem, yes," he acknowledged again.

"No. I mean all of them," she said. "Or ours, at least. The Case 53s. The artificial triggers."

"What?" Eidolon asked.

"My power was one of the most recent," she said. "And each new one's going to be weaker than the last. The reason I turned out as powerful as I did is because my power saps energy from the environment around me. Constantly, and more when I absolutely need it. That lets me recharge what is otherwise a pretty much dead battery."

"You said the artificial capes," Eidolon asked. "This doesn't apply to the natural shards then?"

" Doesn't appear to," she answered, still looking at the monitor. "Mind you, we haven't exactly tested everyone. Those with."
"You know more about this," Lisa interrupted. "You're not surprised. Disappointed, yes, but not surprised. You know why the powers are dwindling. You know where they come from. What the Passengers are, don't you?"

He nodded. "We call them 'Agents',' he answered. "They're... it's going to sound crazy..."

"Omnidimensional planet sized space whale virus gods that are also basically incomprehensibly powerful supercomputers that know magic, somehow?" Zach volunteered. "Yeah, we've managed to figure out the basics, at least."

Eidolon blinked. "That helps a lot, actually. I suppose the next part is that there are only two of them, and we call them Entities. Each Agent, what you call Passengers, is a piece of the whole in the same way a cell is a piece of a person. A given Agent is huge, bigger than this city, probably. The Entities themselves? We don't know... our best estimate is that they are individually more massive than our entire solar system. Although they exist in dozens, if not hundreds, of realities at a time. Their actual footprint in any given one is probably no larger than our moon."

"The Trigger Vision!" Emma exclaimed. "I know the rest of you can't remember them, but that's what I saw when I got my powers!"

Eidolon sighed. "Yeah, them," he acknowledged. "I don't remember my vision, either. Some of our members do. It's rare, but some people, usually people with thinker powers like perfect memory or no need to sleep anymore, can still envision them. A handful we have on record, two of which are natural triggers, the rest are, as you said, artificial."

"Good information to have," Lisa nodded. "Now how did you get the ability to make capes?"

"We're... harvesting one's corpse," Eidolon answered. More or less admitting a key role in this the conspiracy. "We don't know how or why, but one of them was wounded when landing. Or perhaps they were never meant to land at all. There's a lot of guesswork as to just how the Entities work. We're pretty sure it didn't intend to leave itself so vulnerable that it could be killed by the natives of that world. At the same time, we know very little about their life cycle. It's possible that one of them does need to die as part of their reproduction."

"It's common enough for organisms on earth," Riley answered. "Viral life, insects, even sexual reproduction looks like death and rebirth from the perspective of the individual cells involved."

Eidolon nodded. "So, is this enough information? Do you think you can help?"

"Yes, actually," Emma answered. ReliefConcernCuriosity. "It will take us a little while, but I think
we can. Your energy readings aren't that unique. Not much different than my own when I change states. Of course, you're using a lot more power than I am. Our Passengers are still alive, sort of. Still drawing power, just not as much of it. Not enough. We can make you something a lot like my armor system, meant to store and shunt energy to the passenger slowly. It's not perfect, and the way you consume energy means, well, it's going to take weeks of charging just to give you an hour of maximum output."

"So you're saying I am going to have to go powerless between the Endbringer battles," Eidolon stated. "If I want to remain valid during them."

"Yes," Emma agreed. "Maybe you can use your powers continuously if you have access to a truly astronomical sum of available energy, but we're talking really, absurdly, vast amounts of power."

Eidolon nodded. "I see."

"We'll need one thing before I agree to parting with that kind of tech," Lisa insisted. "Do you know why the Entities are here? Their end goal?" I briefly considered pointing out to Lisa that she didn't make these kinds of calls. That was up to me and Taylor. But I did want to hear the answer to that question. I could discuss Lisa's presumptions in private.

"If you're right, and the artificial powers dying, our hope of finding a recipe capable of solving the problem for us is functionally dead," He sighed. "You girls might be the only ones who can stop this, so I'm going to trust you. When you called them viruses? That's true on a literal level. They arrive on a world and spread their Agents across the planet. They then merge, for reasons we're unsure of, with the dominant species. Drive their hosts to irrational behavior and violence, or at least they do that to humans. We're unsure if that's intentional or a side effect, we don't know if that's what they do on every planet they find. And, at the end of the cycle, when they're done breeding, they consume all the matter and energy available. Killing the world. Killing every version of the world in every possible iteration of reality. That's where they get the mass and energy to reproduce and form more members of their species from."

"Fuck," Lisa mumbled. "We were hoping they were just parasites. Feeding on some kind of psychic energy or something. Shit. Of course not! It would be insane to expect humans to supply that kind of power. They're not using us as food. They're using us as... as... some kind of intermediary agent."

"A biological mechanism to sort viability of a given strain," Riley volunteered. "To ensure only the best genetic material, or whatever they have as an equivalent, is used in the next generation. Every natural species that can reproduce sexually has such mechanisms."

"Wait... so... you're saying that humans are basically their version of lube?" Zach muttered. DisgustAnnoyance. "Alright, well, there goes my appetite for the next five or six years."

"How about bees used for pollinating flowers?" Emma suggested. ComfortIrritation. "A lot less
squick that way. They give us resources, in the form of powers. And in exchange we run around, what, field testing them? An organic debug system? We fight, and that lets them evolve? They must be in love with us, then."

"And at the end of it all, when they've determined what 'genetics' are best for them, they consume everything and use that raw material to create copies of each Passenger that was considered viable. Probably with a series of deviations in it to ensure diversity in the offspring," Riley finished.

"So... we now know what the Passengers are," Lisa concluded. "What else do we need to know?"

"We haven't found a way to break into any of the dimensions that contain Agents," Eidolon informed us. "Seems they're locked off, somehow. A power that they don't give out. One of the ones were desperately hoping to find by accident when we started harvesting the dead Entity. We also know that the Entities use a sort of avatar to interact with their host. We don't know why they do that, either."

"Scion," Lisa's voice was a whisper. "The Entity, the source of powers, it's Scion."

==================

A/N- Man, it's been so long that I forgot they ever didn't know.
So much for going to bed early, I thought. Eidolon had left, it would be another week before we were finished building his suit. Promises were made about him talking to his associates about letting us Tinker with a few of their formulas, giving us access to their research. To see if we could improve the potency or regenerate the dying powers somehow. We didn't have much hope of that, although Riley said she had some 'exciting ideas'. Something that filled me with equal parts dread and slightly different kids of dread.

"We have an idea of what Dinah's predictions mean, now," Lisa sighed, as she poked around on her bulletin board, moving pictures and pins and strings. The material on that thing was so random and haphazard that I suspected even Lisa had forgotten what half the stuff meant. "Scion. Fuck. I never would have guessed it. It seems so obvious now that I know."

"Taboo," I answered. "Of course he wouldn't want us to know his real motivations. So why don't they lose their memories now that we know?"

"They haven't made the mental connection, or at least not the one the Passengers are looking for," Lisa answered. "None of us really have, nor will we be able to. We can envision Scion. If only as a powerful parahuman. We can't envision the Entity that's controlling him. And he is being controlled. A puppet, not too different from the Siberian or the changelings you build. The Scion we see is not the real him, and the Passengers only care about hiding the real him from us."

"I knew," Taylor muttered. HorrorIntimidation. "I saw him during the Leviathan fight. I felt him, like others have described. He was angry, and disgusted when he looked at Eidolon. I didn't put it together until just now, but on some level I knew he was a threat even then."

"Makes sense," Lisa replied. "Eidolon is powered by the corpse of Scion's girlfriend. Or whatever passes for it in their species. The Entity might think in a nonhuman way, but Scion himself still acts human."

"Of course!" Riley exclaimed. "That's what the 'perfect human DNA' is in the Cauldron vials. It's the remains of the other Entity's avatar! Its version of Scion!"

"We should find a less clunky name for it," I suggested.

"Heiress?" Emma volunteered. She paused and looked abashed before explaining her logic. "Well, I mean, it's basically the same meaning as Scion, and if they were imitating humans and are a mating pair, it's natural to think of the other as a female variant. It'd probably at least choose to look female since Scion chose to look male, right?"
"It's as good as anything," Lisa agreed. "With exception to Emma, we all have Scion shards. Meaning our powers come from him. They're recharging at their natural rate, and have power enough to last until the end of whatever weird lifecycle Entities have. At which point, we all die."

"Chances are we die of old age before then," Riley volunteered. "I mean, sure, my sister can do the whole 'eternal youth' thing for a select number of us, but if they want to be effective about their genetic testing, they'd need to test billions, potentially trillions, of Passengers. It should take centuries at the very least."

"There's also the scale of powers they've given," I added. "Taylor and I have a couple of the truly critical portions of the Entities. Our powers, at full strength, are pretty much the nervous and circulatory systems of their full organism. It's why we can function even at planetary range. Compared to what our Passengers do normally, a planet is barely anything."

"Chances are, Scion has powers dedicated solely to gathering power," Lisa volunteered. "He might be killing entire planets every hour on the hour and we'd never even know it's happening. There's more realities than anyone could hope to guess. They wouldn't pick ones with people on them, probably. Too great a chance of something going wrong, like what happened to Heiress"

*ApprehensionShock.* "Do you... do you think the dead world we found was one of theirs?" Taylor asked.

"Unlikely," Emma answered. *AnnoyanceDistaste.* "First, that planet isn't the same kind of 'dead' as an energy sapped world would be. Second, that cataclysm happened a long time ago. If Heiress was killed and is now being harnessed, chances are they've only been here for fifty years, at absolute most."

"They'd put blocks in the way of any dimension that contained Passengers, anyway," Lisa added. "We'll need to find a different way."

"Power interaction?" Taylor asked. "They clearly didn't mean for us to find a way to open holes to other realities in the first place. Surely that means they haven't planned for everything. We should be able to find a way, eventually."

"We'll certainly try," Lisa replied. "Okay, what we need to do now: First, build more Endbringer weapons. Yum knows enough to do the 'forced evolution' without any help, right? They were as effective as we needed last time, they'll still be good enough next fight. We don't waste our efforts upgrading them, unless we can do it enough to make them valid against Scion."

"Yeah, Rey can handle that on his own," Riley agreed. Emma also nodded.

"You two are going to put all your efforts into completely undoing the Taboo," she instructed. "I
need a true way through it, instead of just around it. Maybe a way to break Dinah and Accord through as well. Without that, it's like trying figure out what a building looks like using nothing but sense of smell."

"You can use my memories, if you have to," I offered. "I broke through... maybe that's enough to let others."

"It adds more data, if nothing else," Emma agreed. "Lisa, would you mind if we ran the scans on you, too. Between the three of us, maybe there's enough to synthesize a treatment that'll work."

"That's good," Emma agreed eagerly. "Do you know if she had one of those 'third triggers' or anything like that?"

"It's possible," Lisa admitted. "It would explain why she's so... bizarrely reasonable, for a parahuman. Most of us are colossal assholes by default. Only the ones who've broken through the Taboo, one way or another, seem to be able to be, well, sane."

AnnoyanceOffended.

"Yes, Taylor, that includes you," Lisa muttered. "Your link with Amelia is just a layer of cream frosting on top of a god damn iceberg. I've looked at the psych reports the PRT has on both of you. Every one of their thinkers guess wrong. Because your personality is so different thanks to that empathic bond you've got going on that you no longer act like you anymore. And that's not even the most fucked up part."

AnnoyedDefensiveProud. "That's fine, I didn't like me much to begin with."

"That!" Lisa exclaimed. "That right there is the most fucked up part. Most people would be scared to death by this, and you two are over there happy as can be with it."

"We'd do it anyway," I said, coming to Taylor's defense. And my own, I suppose. "Our powers are a whole lot stronger this way. Easier, smoother. Falling back on the link... I dunno... it makes everything clearer."

"Depth," Riley volunteered. "The more attuned you become to your passenger, the more you do what it wants, the less effort it has to devote to manipulating you and forcing you to do what it wants. So it spends its time improving on your abilities. That's part of..." she hesitated. "It's why Jack was so powerful, despite having such a sucky power. Why my powers are so much stronger than most, how
it's so easy for me to work with other tinker tech. Because we embrace the impulses our Passengers give us."

"You're saying our Passengers want us... together... like this?" Taylor asked. ConcernDistrust. I felt my stomach drop.

"I don't know," Riley answered. "I don't think they know enough to know you're together. How humans think, how we act normally. They seem to just care about powers being as active as possible for as many different things as possible. You're both using your link constantly, and using your powers with each other to do things that neither of you can do alone. But that's the same for all of us. Rey, Emma, and I get to work on things that otherwise could not exist. We're feeding Lisa a constant stream of information for her to use her power on. It's a sustaining cycle that lets our Passengers prove themselves as the most evolutionarily fit, so they'll be the ones to pass on their traits the most."

"That actually means were less influenced by the Passengers, not more," I concluded. ConfusionHope.

"I don't think that's the message you should be taking from this," Lisa argued.

"No, no, it makes sense." I insisted. "Why do you think we're here, able to discuss a war against, well, them. I think if they were any kind of smart, the idea of killing Entities would be impossible for us to contemplate. But it's not. If they can't figure even that out, I doubt they can figure out human relationships. All they know is that Taylor and I are using our powers actively and almost constantly, so they don't have a need to pressure us into anything." RealizationAcceptanceSoothed.

"We're doing exactly what they want us to do, so they're rewarding us by giving us more power to keep doing what we were already doing. If we break the link... try to avoid using our powers..." I paused. "They will drive us insane if they have to, won't they?" What I did to Victoria... was that me, or what the Passenger manipulating me?

"It makes sense," Emma offered, looking down. "I can't speak for the others, but Taylor, I knew you before you got powers."

AngerDisgustBetrayedImpatience. "Yes, everyone knows this," Taylor said darkly. I started letting the negative emotions in the bond break up. Don't fight. Accept and push through, I reminded myself. Taylor started calming almost immediately.

"This so-called 'new' you isn't new," Emma mumbled, unable to look at any of us. "It's the Taylor I remember. Back before... everything."

ShockPrideCertaintyJoy. Taylor started laughing.
A/N- That was one of the fun ones I was working toward.

... Incidentally, those last two lines were practically the whole reason I included Emma as a major character, here. Sure, maybe I could have used Danny for it. But. Meh. This was a fuckton more natural.
"Okay, you can do this," I told myself yet again. I simply sat there staring at the tree. *Fortress. It was a living fortress, and in it Amelia controlled everything.* An incredibly humbling thought. 'Pantheon' was an appropriate name. *This is the kind of power that gods wield.*

I closed my eyes and exhaled painfully. *It's true. If I had encouraged her to use her powers to their full extent, she could have saved Victoria. Could have made it so Victoria didn't even need saving. Would the S9 have even dared enter this city if she had that Yggdrasil ready to be used? Khepri's father said that she wouldn't have been able to stop Leviathan with it... but the Slaughterhouse Nine, for all the fear they inspired, were mortal.* I fought back the tears.

I started the keys to the car. *I can't do this, maybe I'll try again later.* Then the most disturbing sound formed beside me. A cacophony of discordant clicks and hums forcing itself into something that mimicked words.

"You can come in if you want," it said. And the voice was most definitely an 'it'. In spite of my years as a hero, in spite of being one of the few that had faced Leviathan in combat, I screamed, and instantly transformed into my invulnerable state.

"Is it really that bad?" the not-voice asked. "Damn, I thought I was getting pretty good at it, too."

"Wh-who are you?" I asked, forming back into a human state just enough to ask.

"Taylor," the swarm answered. "Now would you like to come inside? We can talk in person, so I don't have to communicate through the bugs."

*That voice.* I was going to go home and scrub down with steel wool later. "Umm, yeah, sure," I agreed. "I'll be there in a couple minutes."

I got out of my car and walked to their home. It was kind of a long walk, actually. They had a lot of unused space available on this plot of land that was once a Leviathan made crater. I was about to walk around the outer wall to the actual entrance, which faced inward to the center of the crater, instead of outward to the street, but the wall itself opened for me. Amy's power.

*Wasn't I planning to just go home?* I asked myself as I walked through the passageway.

Their home really was built much like a fortress. Now that I was past the first wall, I had another twenty or so feet to walk before I got to an inner wall. There was no escape from this point except to blast your way out. The area was eerily beautiful, lit solely by bioluminescent blues and purples. It
could even be romantic, if you came here with the right mindset. I was nowhere near that mindset. Still, it was wondrous in an alien sort of way.

The next set of walls opened. Crystal was there. "Hey, Aunt Carol," she said cheerfully. She was beautiful, a younger version of her mother. She pulled me into a quick hug, and I squeezed her back. It was good to see she was well.

"You cut your hair," I said as I let her go. It was the first thing I could think of to say. She lost most of her smile.

"Yeah," she said, her smile coming back as she offered a shrug. Maybe she could have fooled someone else, but I've known her since she was born. "It... was time for a new 'do. Short hair's trendy these days."

"Okay," I dropped it. I don't want to pry, not now. "You know how out of touch I am with kids' fashions these days."

"Speaking of fashion," she said with her usual energy. "I was just about to take Taylor on a shopping trip. Gotta pack that summer wardrobe away and get stuff for fall and winter. The poor girl thinks 'hoodie' is the only winter wear necessary."

"It should be," another girl argued from around a corner. "It's comfortable and convenient and if you get too warm you can just take it off."

"Giggity!" a boy shouted. A couple seconds later he started coughing. There was a soft thump that sounded something like someone dropped a sack of flour on the ground, and the coughing stopped. "Where do you keep hiding the grasshoppers!"

The girl stepped out where I could see her. She was tall, lanky even. So, this is Taylor, I thought. Not unattractive, but not about to win any prizes. Except maybe for her hair. Long, chocolate brown, and it was obvious she took pride in caring for it. She should give Amy pointers. "Hello, Mrs. Dallon," she said as she walked up to me. "I'm Taylor. It's nice to finally meet you." She paused for a second. "For real, at least," she added awkwardly.

"Pleasure's mine," I said, it what I hoped was a friendly way. The girl had several inches of height on me. Hide her hair and you'd think she was a boy, not a girl. Apparently my daughter liked the androgynous look. "I've heard a lot about you." None of it from Amy.

She offered a smile. "I've heard a lot about you, too." I was sure that, if any of it was good, it had come from Crystal.
"Is Amy available?" I asked. I really didn't know how to talk to this girl. Didn't know how to talk to most people, outside of business. "I'd like to talk to her. Alone, if that's possible?"

"Uh, sure, she's in o... her bedroom," Taylor corrected. I kept my face passive at that slip. It didn't bother me as much as I might have thought to know my underage daughter was sharing a bedroom with her girlfriend. I'd probably have had a minor aneurysm if this were a boyfriend. One more bit of gender bias. "Just go down the stairs and follow the hall," Taylor gestured while stepping off to the side. "Then turn left where you see the kitchen. The door will be open for you."

"Thanks," I said. "Maybe you can come by some time, talk about things. I've already met your father. You can invite him, too, if you like."

"Sure, okay," she agreed. "That could be nice. I've got to go now."

"Okay," I nodded, pausing for a moment to watch as she fled after Crystal.

I followed her instructions. The entire building smelled, well, alive. A little like the air after a fresh rain. It was all lit by bioluminescence, most of it in bright green tones. Much brighter lighting than the area upstairs. The stairs were deep. Two stories worth, if all my years working in offices had taught me anything. Elevators are for emergencies and people who don't care about staying in shape.

Downstairs had a nice open arrangement. Lounge area off to the left, with a couple couches and some chairs that I realized were made out of the same plant as the walls and floor. There was a couple boys playing a video game at one of the TVs. I wasn't so sure I approved of them living here with all these young girls, but I couldn't say much about what other kids were doing, and I knew I didn't need to be concerned about Amy. What a weird form of gender bias.

The other side had a large meeting room. Complete with what appeared to be a very expensive video system and a lot of chairs. I kept going forward. The kitchen was obvious enough, though larger than I would have expected. Combined with a dining room that set up like a miniature restaurant. *I guess when you have miles of space underground, efficiency takes a back seat to the cool factor.*

Amy's room was a bit down the side hall, and the door was indeed open. I found Amy standing, in her costume, though lacking the helmet and mask of her usual outfit. In the corner stood another costume, a true full suit of armor. *Too large for Amy, must be Taylor's outfit.* Amy watched me, as if challenging me to say something about this obvious display of a shared living space. One she could have hidden with ease using her powers.

"You wanted to talk to me?" she asked. I recognized that tone. That's the tone I used when I disapproved of her. It stung, realizing how good she was at using it.

"I wanted to say I'm sorry," I told her. "I've been... I was never much of a mother, was I?"
"Not to me," Amy answered. "You were decent enough to Victoria."

"I know, and I'm sorry for everything," I tried to meet her eyes, but I couldn't. She was angry, accusing. Worse, she was right. "I... when I took you in, it was out of obligation. We had to. We couldn't have put you in foster care without risking... one of your father's enemies getting to you."

"You hated him," Amy said, still cold. "And because you hated him, you hated me."

I couldn't speak, I simply nodded.

"Is that all?"

"No," I managed to say. "I... I wanted to let you know I would take it all back if I could. You're not your father, you never were. You were an innocent and I... I treated you like a monster. Or a ticking time bomb ready to go off. When you got your powers, that just made it worse. I couldn't see the good you might accomplish, only the destruction you could cause. I'm sorry it took this long for me to see you as my daughter."

She sighed. "I wanted to hear you say that for years," Amy admitted. "I... I could have handled everything else. All my other problems. Maybe I wouldn't have been happy, but at least I could have coped with it. Did you know I spent all that time in the hospital just to prove to you I wasn't bad? That I wasn't a monster, that I wouldn't become my father? So I could get your approval? Your love."

I flinched. I hadn't realized. I was too busy being relieved that she wasn't home, reminding me of everything she represented. When I wasn't angrily wondering why she didn't heal Mark's depression. *There's an example of being careful what you wish for.* "No," I confessed. I didn't elaborate.

"What made you change your mind?" she demanded.

"New Delhi," I said, and this time I didn't fight it as my eyes started to water. "I saw... I thought you died. We thought you were dead. That's when I realized."

"Is that so?" Amy asked, her face still stone. "Fuck, all I needed to do was die. Who woulda thought?"

I flinched. "Please, Amy," I begged. "I know you're angry. You should be angry, I deserve it, but you're my daughter. I love you. You have to see that."
Her gaze locked with mine. Her face was cold, but even through my own tears I could see the ones forming in her eyes. After what felt like an eternity, her eyes fluttered, and her stance relaxed. She muttered something under her breath that I couldn't hear. I doubt it was something I was meant to hear. Was she talking to someone through her armor?

She stepped forward, and the costume simply fell off her back, another step and she embraced me, sobbing. All my remaining self control broke, and I wept while holding my daughter.

=================

A/N- This is the arc where I really explore the depth and impact of the Taylia bond.
"Carol's back," I told Amelia. I'd just come in to let her know I was about to go off on my shopping trip.

*IrritationDejection.* "Again?" she asked.

"Yeah," I nodded.

*ResolutionExasperation.* "Fuck it, just ask her to come in. The first couple times were a little bit cathartic. Now I'm just starting to feel sorry for her. Invite her in, so she can say whatever it is that's pretty much turned her into a stalker."

"I can call off the shopping trip, stick around while you two talk," I offered. "I'm sure Lisa and Crystal will understand."

*GratefulSafe.* "I appreciate the offer," she smiled as she looked up at me. "But I'll be fine. You've been avoiding this trip since before Chicago. Things are calm, you aren't needed for anything, and I'm not going to let Carol get in the way of Crystal's fun."

"How come it's always me?" I argued. Okay, let's be honest, I was pouting. Meanwhile, I was talking to Carol via bug swarm. "Why don't you ever get dragged off on these shopping trips?"

"First," she smirked. "I already have nice clothes. Second, you're the one who looks amazing in a skirt. And third," a mischievous gleam formed in her eye. *AmusementDesire.* "They won't let me climb into the changing booth with you, so there's really no point. Now let Crystal and Lisa have fun finding more pretty outfits for you to show off, because you're fooling no one."

I sighed, pretending to be far more annoyed than I really was. Not that I could hide my real feelings from her, any more than she could hers for me. Sometimes, I wondered if it was unfair, the way I was teasing Amelia like this. I had brought that up before, and quickly learned that the idea of stopping actually upset her a lot more than it did me. Oh well, with all of the strange things in our relationship, this one probably wouldn't even make it into the top ten list.

"Carol's at the wall, I'll show you exactly where," I offered, and had a few of the blade beetles slice along the inner wall closest to her. "Are you sure you don't want me to stay and play backup for you?"

She hugged me. "No, it's fine," she insisted, washing the bond with a swirl of happy emotions. "Unless you're offering to show off that elusive 'skimpy bikini' I keep hearing about. In which case,
you should have offered before inviting Carol in."

I felt my face heating up. *HappyAmused*. I also resolved to murder Crystal and Lisa. Speaking of, I also directed Crystal to where she could expect Carol to show up from.

"Alright," I sighed. "Well, guess I'll go up top and talk to her first. Never know, this might be work related and we're just being drama queens." *DoubtAmusement.*

"Just built a staircase near the living room, go that way," she volunteered. I already knew, but she was being considerate. I felt her reluctance as I moved away from her, then I rushed out to meet Carol at the new door. Crystal was already upstairs, talking to her aunt.

"Gotta pack that summer wardrobe away and get stuff for fall and winter," oh, great, Crystal is talking about me. "The poor girl thinks 'hoodie' is the only winter wear necessary."

"It should be," I insisted, a bit over halfway up the stairs at this point. "It's comfortable and convenient and if you get too warm you can just take it off."

"Giggity!" Zach shouted. I frowned and found one of the grasshoppers I had smuggled in on Theo's shirt. I waited for the perfect moment when he was distracted by his game, and the insect leapt into his mouth. He started coughing and became dust almost immediately. The now freed insect quickly dived behind the couch. I was sure Theo noticed, of course. "Where do you keep hiding the grasshoppers!"

I smiled, and focused on calming myself a bit. Maybe I shouldn't have been so nervous to meet Carol, but I was. She was Amelia's mother. Or closest thing to one that the closest thing I've ever had to a romantic partner had.

Carol was shorter than I had expected. Than I remembered. *Maybe her costume had platforms? Maybe I'd grown taller in the last few months? Maybe it was just a trick of memory, as the last time we’d met, there was that blowout between Amelia and New Wave.* She looked tired now, I noticed. I felt a little pity for the woman.

"Hello, Mrs. Dallon," I said, approaching Amelia's mom. "I'm Taylor. It's nice to finally meet you. For real, at least." *Oh, wow, Taylor, that was smooth.* I saw Crystal looking at me from behind her aunt and it was only my link with Amelia that let me stabilize and keep my cool.

"Pleasure's mine," she smiled half heartedly. "I've heard a lot about you." I studiously kept my eyes on Carol instead of glancing back at Crystal.

"I've heard a lot about you, too," I stated. *Not much of it was good, but I'd heard plenty.* Some
conversations with Amelia, a couple with Crystal. It was hard for me to reconcile the difference between their descriptions of the same woman. Lisa had summed it up as Amelia being melodramatic, and Crystal never really seeing how consistently bad Carol was at the whole 'being a parent' thing. She wasn't malicious, she was just incompetent. The rest of the blanks were filled in by Amelia's own hangups. Especially the part about her attraction to Victoria.

"Is Amy available?" Carol asked. I was struck by the oddity of the position. *Shouldn't I be the one coming over to her house and asking her that?* "I'd like to talk to her. Alone, if that's possible?"

"Uh, sure, she's in o... her bedroom," I almost slipped up. I didn't really have my own room here, anymore. Either I stayed at home, or if I stayed here, I stayed in Amelia's room. I moved to the side. "Just go down the stairs and follow the hall, then turn left where you see the kitchen. The door will be open for you."

"Thanks," she said, forcing more of a smile. *Maybe she didn't notice my screwup?* "Maybe you can come by some time, talk about things. I've already met your father. You can invite him, too, if you like." *Right, they were all together for New Delhi.* I still hadn't talked to dad about that. We were still in the 'pretend neither of us know that we both know' stage. He might legitimately believe I don't know, and I would rather wait for him to talk to me about it than to press the issue.

"Are you okay?" Amelia asked. She'd put her armor on, and with it I had voice communication. *I can imagine how I feel through the bond right now.*

"I'm fine," I answered. "Just a little weirded out, y'know."

"Are you sure?" *CompassionWorry.*

"Sure, okay," I agreed to Carol's invite. "That could be nice. I've got to go now."

"Okay," Carol nodded to me. I moved past her, unable to make eye contact as I continued speaking with Amelia through the armor.

"Yeah," I said. "Y- Carol just invited me and maybe my dad over for a visit sometime. I just lied and said that sounded nice."

"Oh god," *AmusedIncredulous.* Amelia chuckled. "That sounds awful."

"It would likely go down in history as a candidate for the most awkward conversation in the history of awkward conversations," I agreed. "I can see it now... 'Hey, girl who's engaged to my daughter, I see you've brought your dad, is he still boning my sister?'"
"She's not my mother," Amelia said, her mood and voice darkening. There was still the undercurrent of longing underneath, however. I thought back to my mom, and how much I missed her. Amelia sighed. "That's not fair and you know it."

"Sorry," I apologized. "I don't think Carol agrees with you on this. She's trying awfully hard to be nice, here. To reach out to me of all possible people. It's hard not to be sympathetic. Like watching a sad puppy. Or Riley after one of her nightmares."

"God damn it, Taylor, for you to feel bad for someone, they have to be really pathetic," Amelia muttered. "Fine. But now you have to do that incredibly awkward 'meet the family shit'. The whole family. Bring Crystal and Sarah. That is your punishment. Deal with it."

I caught up with Crystal, finally. She had made it to her car, and the little garage Amelia had built for it. Sure, we could have gotten there from underground, but Crystal insisted that we needed to go outside and see sunlight every once in a while.

"About time," Lisa teased. "So on a scale of one to ten, how bad is the fallout going to be?"

"I have inadvertently agreed to a 'meet the folks' date with Amelia, her parents, and my dad, and his new girlfriend." I reluctantly admitted. Lisa started laughing.

Crystal cringed. "God damn it, Taylor. This is going to involve me, isn't it?" Apparently, she was just going to ignore Lisa and talk in front of her. Not like my she wouldn't know what the hell was happening anyway. Forcing her to use her power to figure things out just meant less energy used on things that really mattered. Plus it kinda annoyed her that she couldn't play nosy super sleuth with us the way she likes to do.

"Blame your cousin for that one," I insisted. "I was willing to bite the bullet and go it alone, but Amelia is convinced that this is a suffering that must be shared with every possible member of her family. I wouldn't be surprised if she invites Riley along. Just for even more weirdness."

"Stay with me?" Amelia begged me right before Carol walked in.

"Always," I answered back.

"So, still spying on Amelia, right?" Lisa asked.

"She asked me to, so it's not spying," I answered. "But, yes, I am there to lend emotional support to my friend while she deals with her mother." **Accusation** **Anger** **Disappointment.** I cringed.
"She would do the same for me," I insisted. Meanwhile, I started focusing and mirroring the other, less painful, emotions in the link. I couldn't pretend to understand what Amelia's life has been like. I did know what it felt like to long for a mother who wasn't there. That was a common ground. And Amelia, as much as she didn't want to admit it to herself, still wanted her mother.

I didn't push the emotion. That would be a betrayal. I reinforced it, made sure Amelia knew it was there, kept it from getting lost in the storm.

I followed the conversation, watching Carol bare her soul to Amelia. Then they went silent. AngerPityCompassionAnger. Better than before, at least. I didn't need to hold the emotions at this point, they were coming to the fore on their own, now. One of the many things that we shared. We needed that sense of family. However messed up the family itself might have been.

"Thank you," Amelia whispered, seconds before letting the armor fall off. The link was still there, but she didn't need me there in a more direct sense for the rest of this. AcceptanceDeterminationCompassionPeace.

I finally focused back on the 'here and now'. We were already on the road, heading toward wherever it was my shopping experts had determined we would go today. They didn't say anything as I wiped the wetness off my cheeks.

A/N- Because that scene deserved a look through another set of eyes. I did, unfortunately, have to lift some dialogue straight off the last chapter. Felt like a scumbag for doing it, but, well, all attempts I made to work around it looked like shit.

I just made it an extra long chapter to make up for the partial rehash.
I went over the neurological copying tech once more, perfecting the last few minor errors. Riley's work was as brilliant, as always, but it had flaws. Rey's, too, although it was better suited for this sort of thing. And the neural mapping system from both Cranial and Rapture were held together by patchwork until I managed to actually integrate them properly. It worked, for a given value of work, but was woefully inefficient. And I was willing to let her copy and paste my mind with this? Holy shit what was wrong with me? To the other side I had the last readings Riley got off of Crawler. I smiled as I compared it to the new tests I ran.

"I got it!" I declared, startling Riley from her work on the actual pathway differences between Amelia's brain, as opposed to mine and Lisa's. It was doubtful my scans would be useful, since my brain was no longer organic, but every point of reference held a chance. She was following a very strict formula, to catch any possible Taboo in her research. Every bit of data, double and triple checked by the computer, and me, and Lisa. Scion is going to end the world. If there was ever a time I might be able to prove myself, prove my value, it will be in stopping the apocalypse.

"What?" Riley asked, still working on her project.

"I've figured out how to perfectly interpret the neural engrams you pulled from Crawler," I explained excitedly. "We can pull people back who got glass bombed. Ooh! I just had a great idea! Do you think the PRT has more of those glass weapons? We could build them and use them on serious threats! Crystallize everyone in the area and only restore the ones that we don't want to stay dead!"

"That's great!" Riley declared. "Ooh! Does it have to be glass? Maybe we could do the same with your ice weapons!"

"We could!" I squealed. "It's perfect!"

Riley frowned. "No. Breaks Rule Two."

"Which one's that?" I asked.

"If the plan starts with 'kill people indiscriminately', it's a bad plan," she replied. "I think that includes glass bombs and flash freezing."

I paused for a second and thought about what I'd just suggested. "Holy fudge," I muttered. Did I really just suggest something like that? "I know that's wrong. I knew it when I said it. Why?"

"It's a tinker thing," Riley dismissed. "Don't worry about it too much. You still had one big
"I did," I agreed. You succeeded again. "They'll have to accept me after this."

Riley looked at me. "What do you mean? You're part of the team, aren't you?"

"Not really," I dismissed. "Sure, I work here, but no one wants me around. If they could find a way to take away my powers and plug them into some random guy they find on the street holding a 'will work for food' sign, they'd do it in a heartbeat. No one really likes me."

"I like you," Riley argued.

"You like everyone," I pointed out. I smiled, however. "Actually, you remind me a lot of Taylor when she was your age."

She beamed at that. "Good!"

"It really is," I agreed.

"Why'd you stop being friends with her?" Riley asked.

I froze... err, shifted into my hybrid state. I couldn't come up with a way to answer that question any other way. In my full power state, things were easier. I was closer to a computer than human in this form. Most of my insides were no longer organic, in any state, and my brain was no exception. It was more like a crystalline electromagnetic computer system. And when in my hybrid state, it became a superconductor. Absurdly easy to think, and close to impossible to feel emotions. "It's because I hated myself. A bad thing happened that made me angry and sad. Those emotions make people hurt other people."

Riley frowned, and I dropped the power state. I couldn't keep it running forever, and I needed it for work. "Mannequin hated himself. I hate myself, sometimes," she answered. "When I think about everyone I hurt, it makes me sad and angry. But I would never hurt Missy."

"You're smarter than I was," I said.

"Do you think Missy would hurt me?" Riley asked.

_Probably, if something bad enough happened_, I thought. "No," I lied. I was a good liar, and my physiology was so nonhuman that Riley's ability to spot deception wouldn't work on me. _Even_
Rapture's tech didn't work on me. Her power did, yes, but not her equipment. "Missy's smart, too."

Riley nodded, looking relieved. She'd undone a lot of the personality tech she built into herself. I could still see its remnants running in her brain, at least when I went hybrid, but she wasn't faking being cheerful anymore. She had her bad days as well as her good, like everyone else, although she made the bad a lot less bad than it would be if she were relying on normal neurochemistry. Really, it was probably less mind altering than most prescription antidepressants.

"I'm trying to make Taylor my friend again," I informed her. Somehow, she was more well liked around her than I was. *And she was fucking Bonesaw.* I knew how those spider-bots were made, now. There was a human neurosystem in there. A young one, capable of adapting to the change of circumstances. If she had then the kind of lab she has now, I could be persuaded that it was artificial. She didn't. *She had to use a toddle for parts every time she built one of those things.* If others could accept what she had done, surely I wasn't so bad?

"How?" she asked. "I don't think she wants to be your friend anymore. And I'm pretty sure she's not going to let you alter that."

"After we restore Glory Girl," I answered. "It means Amelia will have her sister back. After that, Taylor will have to be grateful that we helped her girlfriend with something that monumental. You'll benefit, too. We both know Taylor's still uncomfortable around you."

"I don't mind," Riley responded. "I tried to hurt Taylor really bad. Tried to take her apart, even. Did horrible things to one of her friends. She has every right to be mad at me. She still tries to be nice to me even though she doesn't have to. It's more than I deserve."

"After this, she'll have to," I insisted. "You can't stay mad at someone after they pretty much perform a miracle for you. Taylor will forgive us both, and Amelia will have her sister and it'll be like the bad stuff never happened at all."

"I don't think that's how it works," Riley responded. "Pretending the bad stuff isn't real just makes things worse. Trust me, I lived with the Slaughterhouse Nine. I'm only getting better now because I'm not pretending anymore."

I didn't speak, and Riley took that as an invite to continue.

"And Missy says I'm her friend because she likes being friends with me. She likes being around me, and I like being around her, and we like it when the other is happy. That's why we're friends, and that's why Amelia's my sister. It has nothing to do with what I can do for her or anything I can give her. That's only why we're part of a team together. And because we're both 'badass action babes'."

I froze and thought back. By that definition, I haven't had any friends at all since... since Taylor. I
had all the friends at school. Girls who wanted to be popular. Boys who wanted to be seen with me, wanted in my pants, or most likely both.

Sophia was closer, but she had been a mentor. Sure, we spent time together, and shared secrets. In as much as Sophia would share anything with anyone. It hadn't taken me long to discover that she'd get upset if I didn't keep doing what she wanted to do. Namely, torment Taylor, lord popularity over other girls, and her activities as a vigilante. Outside of that, Sophia cared about nothing at all, and made her disinterest known in her own less than subtle way. To claim she cared about whether or not I was happy? For fuck's sake, she was going to watch me get gang raped if I didn't fight back.

"See," I said. "Told you Missy was smart." So much for that idea, I thought. Sure, resurrection technology was a big deal. The biggest deal possible. There was no way to exaggerate how important it was. But she was right. It wouldn't result in Taylor's acceptance. I would deserve it, yes. But that wouldn't mean I'd get it.

"How did you get Amelia to like you? Or Missy? Or all of the others?" I asked. "They know what you've done, and still they accept you."

Riley looked down. "I don't know," she admitted.

====================

A/N- FORESHADOWING!!! Arglebargle!

Also: Emma's pathetic and Riley's both horrifying and adorable. In case you weren't aware of this.
Shopping was, as usual, an exhausting experience. Lisa and/or Crystal would decide what looked good for me, argue with each other for a couple minutes, and then I'd have to argue with them about such things as price and too much of my very not tan skin being shown.

"This is suppose to be winter clothes," I finally declared after the fifth skirt they tried to get me to buy. "I am not wearing a skirt for winter. It happens to be cold during winter. If I'm going to get frostbite, I at least want it somewhere I can tell the doctors about and still look them in the eyes."

"Isn't your fiancée your doctor?" Crystal teased.

"Yes," I said in a carefully neutral tone.

"Well, you heard Taylor," Lisa responded. "She prefers looking Amelia in the eyes."

"If Zach was here," Crystal laughed. "He'd probably say something about a kiss to make it better."

I just sighed and resolved that the next city that Pantheon claimed permanently would be in Alaska. I would assign both Lisa and Crystal to manage that site. Forever. Surely there was a PRT Director up there that would appreciate the help.

"Speaking of Zach," Lisa said, grinning.

Crystal's eyes widened. "No."

"Did you think I wouldn't find out?"

"Find out what?" I asked.

"No. No no no. Don't you fucking dare," Crystal insisted.

"Aww, but you don't want to share your plans for the future?" Lisa smirked.

"I was just being nice!" Crystal exclaimed.
"Oh Ta~ylor, your future step sister promised Za~ch a~ da~te." Lisa sang every 'a' sound, and clicked her tongue at the last 't'.

At last, I thought. Someone else suffers this bullshit! "Oh, really?" I joined in the smirking. "Sorry, Crystal, now I feel bad. Can't be easy on you when your boyfriend tastes like crickets."

"In five years!" She insisted. "I told him that, if we were both single, five years from now, then I'd maybe go on a date with him."

I shrugged. "Y'know, the way he works out, he's going to be buff as hell in five years."

"Taylor's been doing her part to help," Lisa volunteered. "Grasshoppers are really high in protein."

....

"Umm, huh," I muttered as we approached the food court. I was glad for my morning workouts, it's the only reason my feet hadn't fallen off yet. "Guess what?"

"Riley is busy creating yet another abomination against nature and god?" Lisa volunteered.

"No-" I paused. "Actually, yes. But that's not what I was talking about."

"You've decided one Endbringer is enough and want to shop for wedding dresses?" Crystal suggested.

"Close enough," I declared. "Our parents are on a date a couple blocks from here."

"Where? How come you didn't notice earlier? What are they doing?" Crystal asked.

"I dunno," I answered. "Some Italian place, I'm pretty sure. I didn't notice because I'm trying not to be omnispy. And heavy petting. Very heavy petting."

"Eww, gross," Crystal paused. Lisa snickered. "Wait. You're just fucking with me, aren't you?"

"Yep," I admitted, smiling what I was sure was a Lisa-esque smile. "They just got there. I didn't notice because they came in different vehicles and I didn't realize they were headed to the same place until they were both in the parking lot."
"We should spy on their date!" Crystal declared.

"We are not going to spy on them," I insisted. "It's creepy."

Crystal snickered. "You, of all people, did not just say that."

"No, seriously, it's not cool and I'm not doing it," I insisted. "What they do on their own time is their own business, not ours. I am not going to pry into their relationship by eavesdropping on them without their knowledge or permission."

"They're in Brockton Bay," Crystal countered. "The act of being in this city means they've already given you permission."

"I managed to not know about you and Zach," I pointed out. "You didn't seem too happy when Lisa gave out your secrets to me."

"Fine," she huffed. "But we're their kids, we totally deserve to know. If only so we have a proper warning next time."

"Here's a suggestion," I said. "How about if we just walk right up to them and say hello? Then we can pry to our hearts content without being creepy about it."

"No wonder Amy likes you so much," Crystal complained. "You're the only person on the planet who is better at killing fun than she is. We're going to wind up having that whole 'meet the family' thing with Aunt Carol soon enough, anyway, so let's just let them have their date."

"Good, I was in the mood for cheese fries for lunch, anyway," I said happily. I wasn't going to spy on my dad's date, and volunteering to just show up and interrupt it was a bluff. I was happy he had someone, but I was happier to just let him be happy on his own. Meeting them, seeing them together, made it a bit more real than I wanted it to think about it being right now. It would be easier with Amelia there when that happened the first time.

*ConcernProtective*. I smiled, dipping into the link.

"Don't take this the wrong way," Crystal said. "But how in the hell are you so skinny? You eat more than anyone I've ever met and you still have the figure of a fashion model."

I shrugged. "My whole family's like that," I answered. *It feels so much nicer when Amelia says stuff like that to me*, I realized. *Probably because I know that she means it*. With anyone else, it just made
me feel somewhere between 'awkward' and 'meh, whatever'.

"Good genes, then," Crystal concluded. "I am totally jealous, now. I have to watch my diet and work out religiously to keep my figure."

"Your figure comes with boobs," I countered. "So you don't get to complain about anything."

"That sounds like too much work," Lisa dismissed. "I just get Amelia to give me a tune up once every month or so, plus a few bells and whistles to keep certain other biological inconveniences out of my life," She looked at me, and grinned her usual grin. "Whose idea do you think that bikini was?"

"Oh, you cheating bitch," Crystal groaned.

"What?" she asked, feigning shock. "You mean it doesn't count unless you luck into it by genetic accident?" Her smile grew even wider. I was beginning to picture the top of her head falling off. "Well, then, on the subject of optimal figures for genetics, here's a thought: What are the odds either of your parents brought contraceptives to their little afterparty?"

And with those words, lunch was over. Probably dinner as well.
AnnoyanceDisgustSadness. I cringed. What was that? I went back to my armor and started slipping it on. I had been trying to relax, after Carol left. Yet another unequal relationship in my life, I supposed. She wanted to be my mother, now. Took her long enough. It was... I wasn't even sure. Too little, too late, really. I wasn't someone who needed a mother, anymore. Still, it was closure, and I hadn't realized how much I needed that.

"Okay, what the hell's going on over there?" I asked, once the suit was active.

"Lisa's been infested by Zach's mind, I think," Taylor responded. "She's discovered a way to torment me and your cousin and she's playing it to the hilt."

"It has to do with your parents dating, doesn't it?" I asked.

"Yeah. She found a way to dial the squick up to eleven," Taylor replied. I frowned, the armor usually was better at carrying her tone of voice. Was there something wrong with it, or something wrong with Taylor's emotions at the moment? "We're on our way home, now."

"What? So bad that it canceled your shopping?" I asked. I was more than a little disappointed. AmusedPleased. "Don't worry, I've got a dozen new outfits. I'll show some of them off for you later. Maybe I'll even show off that bikini, now that I know you were the one that wanted me to get it so badly."

"I will build an underground pool for the base, if you do," I offered. Speaking of unequal relationships. Oh well. I honestly couldn't imagine being happier, and I was glad for the no pressure, no obligation sort of relationship we had. Or at least we had in our home lives. Being engaged to marry after we killed the last couple Endbringers was definitely an obligation. It just wasn't one between me and her. It was between us and the PR department.

"Actually, that's a really good idea anyway," Taylor agreed. "Then I can hold Lisa under until the bubbles stop."

"Or it can just be part of the gym," I suggested. "Winter's coming, you know." I had already started the process. It really didn't work, positioned where the gym was. I'd have to destroy one of the labs to do it. So I simply moved the gym. A section near the edge of the crater. Near the house that was still, in theory, where I lived. I haven't actually been there in a week, now that I think about it.

It was a bit away from our living area. That was fine, if anything it was a probably a good thing to
keep it away from the main areas. A bit of work later, and I managed to put together something that I was pretty sure was about the same as the pool in Arcadia. Meanwhile, I kept talking to Taylor.

"So, what did that nightmare you forced me to accept onto the team do this time?" I asked.

"Something that would make the nightmare you forced me to accept onto the team squeal with joy," Taylor responded back. Uh oh. "She's been speculating on the possibility that Crystal and I might end up with a half sibling thanks to... a lack of precaution."

I laughed. "Oh, that'd be hilarious."

*DiscouragedPlayful.* "Thanks a lot," she muttered.

"Oh, don't worry," I laughed. "Sarah's safe. She had me make sure of it."

"Really?" *HopeRelief.* Taylor asked. "You're absolutely certain."

"Unless she had a second trigger that includes regeneration or a breaker state, or asked someone like Riley to undo it?" I qualified. "Then yes, I am absolutely certain. She was fine with the two she had, and only ever put off the surgery because she was afraid of medical complications with the whole 'is a superhero' thing. She got that taken care of like a month after I triggered. Which was a bit uncomfortable for my thirteen year old self, by the way."

*RelaxedComfort.* "Oh thank every god!" Taylor declared. "I'm telling Crystal right now."

"Although," I added with a smile. "It's easily reversible with my power. So don't discount adorable future siblings asking their sisters for help drawing their illustrious and peculiar family tree at some point in the future."

*IrritationAmusment.* "I will find a way to make you suffer for that. I am not entirely sure how, but I suspect it involves Missy, Riley, a sleepover, and approximately twenty pounds of cotton candy. Also, I'm pretty sure Lisa's scheming something extra special for ruining her joke. But we're almost home, so I'll talk to you in person soon."

"Looking forward to the fashion show," I said as I got up and left my room. She probably didn't need my help carrying the bags, but I wanted to. I passed by the lounge area, where Theo and Zach had finally abandoned their gaming. We could probably have just stuck televisions in every individual room, but Lisa said this was a better way to do it. A communal area where we could interact off the job. I suspected she just didn't want to buy all the extra televisions.
Emma was now watching the walkway from one of the couches. "Hey!" she exclaimed, rising to her feet. "Do you have a minute?"

I stopped and turned toward her. Remember, she's still a part of the team, now. Taylor didn't exactly like her, and knowing what she did to Taylor meant I didn't like her, but we owed a lot of our tech to her. It wouldn't exactly kill me to be professional. "Sure," I replied. "I'm not in a huge rush."

She jogged up to me. "Uh... Taylor, are you there?" She asked. Oh, right, my armor.

"Yes," Taylor confirmed.

"Okay, good," she smiled just a little. It was really weird seeing how she reacted to Taylor. "This is one of those things I wanted to announce to both of you at the same time. I've completed the copying device."

"Copying device?" I asked.

"You know, the one that lets you copy minds into new people?" Emma looked at me strangely and shifted into her brown state. I ignored it, we'd decided a while ago that she didn't have complete control over her forms. She usually did, in the way that people controlled their facial expressions, but it was often subconscious. As long as she didn't use her hybrid state, it wasn't anything to be alarmed by.

"Do you mean the memory transfer tech?" I asked.

She looked at me strangely. "Umm... no?" Then she hesitated. "Oh, fuck, you don't know, do you?"

"Know what?" Taylor asked. The voice through the armor sounded a lot calmer than the emotions of worry and suspicion coming through our bond.

"Maybe... maybe we should talk about this in person?" Emma offered. "Just... just the three of us? Somewhere private? Maybe secret?"

"I'll be there in a minute or two," Taylor agreed. CuriosityWorryConfusion.

=============

A/N- Ah, the start of THIS arc. I like this arc.
"Come on, Emma," I said, leading us back toward my bedroom. We stopped several feet away and I forced a bubble to open inside the wall for us. It took considerably less effort to build a room there than it did to build that swimming pool. I'd have to show it to the others later. "Taylor, just go into the bedroom." We waited the few minutes before Taylor managed to get there in silence.

Taylor went along with the instructions, leaving her shopping bags on my desk before stepping into the portal I created. "Okay, so what's going on here?"

"Well, like I was saying, I got the memory device working," she said.

"So you can rescue Victoria?" I asked. HappyConcerned. I looked at Taylor. I could see the mixed emotions on her face, and I knew why. Bringing Victoria back was one of those things I had longed for. I hadn't really stopped to think about what it meant. Given what we now knew about how her aura influenced me... there were a lot of things to consider. I was still going to do it, of course, she was my sister and I would save her. What came after, however, was a far more difficult question.

"That's rather the problem," Emma looked away. "Promise not to shoot the messenger on this one? All I'm doing is telling you about something that I know that you haven't figured out. None of it's my fault. I get credit for that much, at least, right?"

I glanced at Taylor. HesitanceWorry. "Okay, that's fair," Taylor answered. I was most definitely letting her take the lead on this one. Taylor was the one with the personal connection to Emma, after all. I would let make the calls when it came to this.

"This tech only 'saves' people in the same way you save a file on a computer. We aren't restoring her to life, we're building a copy of her body and then giving it her memories. It doesn't 'rescue' anyone, it creates duplicates."

"It's not the same as the memory transfer tech we used on Noelle?" Taylor asked.

"It's the same," Emma answered. "We do not have a transfer device. I doubt such a machine even can exist. Maybe if you somehow teleported the brain out of the old body and into the new one, but that's way outside the abilities of the kind of tech we're using here. This is pretty much no different than burning a CD. When you're done, there's always three copies. One's the original, one's stored on the computer, and the last is the new CD."

ShockGuilt. "So... so when we incinerated Noelle's body original body?" I asked. "Does that mean we killed her?"
Emma nodded slightly. "If this equipment is how you cured her, then yes. The original was just as much a person as the copy. Unless Riley included a second function that wiped the original's brain when it was finished, in which case that killed her first."

I leaned against the wall and formed a place to sit. "We murdered her," I muttered. "I thought we were just destroying an empty vessel, with nothing left inside it. Not killing a human being." ConcernProtectiveness.

"I don't think Noelle would see it that way," Emma countered. "Or, at least she wouldn't complain too much about it. I guess maybe the original might have, if you asked her after the transfer. I've talked to her some, and she always seems really glad to be normal. She seemed pretty set on the idea that if it hadn't work, she'd rather be dead."

I frowned. God damn it. I'm not even saving Victoria... I'm simply creating a duplicate of her. And that wasn't even the worst part. I ordered the murder of a helpless girl. I've never killed before, unless we count Jack Slash, and even now it was difficult to consider that a murder. I injured him, fatally even, and then left him to die. But that was in combat and he was Jack Fucking Slash.

In retrospect, however, I could have easily caught him instead of killing him. So I guess I've murdered twice, now. Taylor moved over to me and nudged me over a bit so she could share the seat with me. I enlarged it. She pulled me against her and started stroking my hair. It was wonderful as always, but I wasn't in a mood to appreciate it.

"Are the copies still the same person?" I asked, after pulling away from my resting position on Taylor's shoulder.

Emma shrugged. "Maybe you should ask a philosopher or theologian that question. I'm probably not the person you should be taking advice on morality and spirituality from. I can tell you that, if it's done correctly, there wouldn't be an observable way to tell the difference between the two. Assuming the bodies are copied as perfectly as the memories. The brain will be a perfect duplicate. Unless you tried something completely insane like copying onto an already active mind. That... then you'd get something incredibly messed up in the head."

"I just..." I sighed. I squeezed Taylor, just to have the comfort of someone to touch. "If we do this, will what we bring back still be my sister? I thought we were going to rescue her. Wake her up from some kind of tinkertech stasis. Not copy her like a computer file."

"I'm sorry, I thought you knew before I even started on this project," Emma answered. "I think it still counts. The mind is what makes a person, right? The brain, the memories, the thought processes? Really, it's not much different than how Zach's power works. Just a lot slower. Honestly, you should all get backups. Maybe update them every week or so. Right now... if certain members of this team die, especially the two of you... then Pantheon's pretty much fucked. And there are a lot of people who want to kill you. Two of whom are Endbringers."
I took a slow breath. "Know what? You're right. We've long since graduated past ethical dilemmas. We are dealing with omnicidal parasites." UnderstandingAgreement. I stood, and Taylor stood beside me. "We're doing it. We'll keep the clone thing a secret. Keep calling it a memory transfer device." ReliefCertainty. Taylor held me tighter. "We'll restore Victoria, and I'll have a copy of myself made."

"You already have the one copy we're studying to break Taboo," Emma pointed out. "I guess this is a big enough deal to have a newer save file made. That way we won't have to go through this again with your copy if something happens."

"Yeah, kind of a big deal," I agreed. "But let's not sugar coat this. If a copy's awakened, it means I'm dead. Having a really good replacement doesn't change that. It means Pantheon can survive, and that's more important than our individual lives, but I would still be dead."

Emma smiled, if a bit hesitantly. "Okay. I was afraid you'd take this a lot worse than you did, honestly."

"Like I said," my smile probably wasn't any happier. "We're facing the extinction of our entire species. We can't afford to be picky." CertaintySupport.

Emma glanced over at Taylor. "Umm, can I talk to you about something? Alone?"

"Is it important?" Taylor asked. SuspicionAnnoyance.

"Not the way this was important," Emma admitted. "But it's important to me. I'll call in whatever credit telling you about this earned me, if that helps."

ReluctanceTolerance. Taylor gripped my hand. "Okay," she agreed. "But if you can say it to me, you can say it in front of Amelia."

Emma looked at me, then at where our hands were entwined. "Okay," she agreed. "That's fair. I was... I wanted to apologize. For everything I've done."

"You've done that already," Taylor grumbled, gripping my hand just a little too tight.

"I know," Emma agreed. "But this time... remember when I said you were acting like the old you? I meant it. And I've been thinking about it. And watching how Missy and Riley are. The way they get along. They're just..." Emma trailed off. And Taylor didn't speak, either.
"They are pretty adorable," I volunteered after an uncomfortable minute or so. If just to prompt one of them to speak up.

"Yeah, they're like sisters." Emma agreed with me, before looking back over to Taylor. "I've been paying a lot of attention to that. And it's brought back a lot of memories. How I used to have a friend like that. You're becoming the girl I remember. The one I used to be best friends with, someone I was closer to than I ever was my own family. I want that relationship again, Taylor. I want to be who I was then. Back before everything that happened."

AngerResistanceIncredulity. I gritted my teeth against the wash of emotion, and then I pushed back. Focusing on the same nostalgia and longing she had used on me just this morning. She froze for a second, losing her grip on my hand. She looked over at me, and I looked back. She paused, and then she relented, letting go of her anger, if only just enough to get the message. I could almost hear her thinking about just how ironic this was. It was my will that won this time, as the hatred splintered and dissolved in the sea of other concepts and emotions.

Taylor smiled at me. She knew the truth: that wouldn't have worked if the feelings weren't there to begin with. At best, we could mute or encourage. We couldn't create what did not actually exist. Kinda like our failed attempt at physical intimacy. Taylor looked back at Emma. Who was waiting with a nervously hopeful smile. "No," she finally said, with a soft certainty in her voice.

What? I hadn't expected that, not with Taylor's current emotional state. Emma's face showed her devastation. "I... I understand. It was too much to ask for, I'm sorry for bothering you." She turned to leave, only to realize there currently wasn't a door to leave from.

"We can't go back," Taylor continued, before I'd put together the concentration to open a new door. "But we can move forward."

Emma turned back to look at Taylor again.

"Holding on to the past isn't going to help either of us," my partner's hand gripped mine tight again. "I'm not who I was, and I never can be again. Neither are you. That door has been closed, and frankly it deserves to remain closed. But maybe, just maybe, who we are now, who we're going to be in the future, can be friends."

Emma was smiling broadly. I was pretty sure she'd be crying right now, if her physiology still had that ability. None of us said anything for a few seconds, and then Emma stepped forward and clung against Taylor, hugging her tightly. I should feel a bit more awkward about this, I reflected.

"Okay," Emma agreed, her voice still relatively neutral. Far more than it should have been. Another side effect of her altered biology.
Taylor looked at me. *HesitationPeaceSatisfaction*. She still held my hand, but her other arm moved around her former best friend's back and held her.

==============

A/N- Isn't that sweet?

And horrific.

If there's not at least a little of both almost constantly throughout this story, then I'm failing as a writer.
Emma left not long after, having extracted promises from both Amelia and I to get our backups done. We'd also have to talk to everyone else, with a rare exception or two, like Zach, who didn't really need the tech. "So, it's still early afternoon," I said. "What should we do now?"

Amelia snuggled against me. "Didn't you say something about a bikini?" she asked.

"Maybe later," I responded. "We do have stuff to worry about. As nice as it is to get closure for things, we have things to do." I kissed her on the forehead. "Thanks for that, by the way. I probably would have punched her again if you hadn't stepped in."

*WarmsafeLove.* She looked up. "Oh, it's nothing you hadn't already done for me," she answered.

*She really is the best thing that's ever happened to me,* I thought, then smiled. *Fire extinguisher included.*

*CuriousHappy.* "What are you thinking about?" she asked, nuzzling into me. "Whatever it is, keep thinking it."

"Just about how we first met," I answered. "And then you hit me."

"Huh," AmusedSmug. "I wouldn't have thought you were into stuff like that."

I shrugged. "Totally worth it for what came later," I answered, and contemplated kissing her. Then I dropped the idea. *Still not into girls.* "Tell you what, let's actually get some work done today, then we'll relax this evening. You should talk to your mom and dad?" *ReluctanceAmbivalence. She still doesn't view them as that.* "Carol and Mark, then. Someone's going to need to convince them to exhume Victoria's body. The others who got caught in that bomb, as well. But it'll probably be easier to talk them into it if we have a proven success first."

"You're right," she agreed. "We could probably do it in secret, but it's better if we ask."

"The publicity, if it works, should also help," I added. "A way to bring back capes after an Endbringer fight is insanely huge..." I paused. *If we had this last time,* I thought. *So many dead...*
Amelia touched my face. "It wasn't your fault," she insisted. *ProtectiveNurturing.*

I forced a smile. "I know," I confirmed. "I'm sure I'd feel a lot worse if it was my fault."

"Okay," she agreed. "You just have this habit of taking responsibility for things completely outside your control."

"I do, don't I?" I agreed. "I'm going to go ask about that backup. Would you mind shutting down the relay network? Including the link. I'm not sure it's a good idea to have it running while they do all this, y'know." *ConcernSuspicion.*

"Umm, if you insist," she agreed. I quickly started going "blind" as the relays went into hibernation. Not the first time, certainly not going to be the last. We'd done before simply to allow the network to be properly rebuilt.

"Thanks," I squeezed her one last time before our empathic bond went silent. "It shouldn't take long. Go ahead and talk to Carol and Mark. Maybe arrange a time for that 'meet the parents, only for real this time' thing?"

"Alright," she agreed. And I reluctantly broke contact in order to head to the labs. In truth, it wasn't that bad being 'alone'. Every time Amelia was asleep, her presence in our bond was missing. And vice versa, even if I still had some control of my power when sleeping, it didn't convey anything intelligible for her to feel. So we were used to an hour or two each day without the other.

I went to our 'secret' passage to the lab. Or, at least, to the hidden lab section where we kept the 'big deal' stuff. The start of Eidolon's biosuit, the next generation of armor systems, Alexandria's new equipment. Rey spent more time working in our 'official' secret lab, which only existed to test run the zerglings and other combat units. I'd be working with him tomorrow, to test the new stuff.

And of course, our official lab space, used to design our team's battle armor, the generic suits, and the M7s. Frankly, they weren't seeing a lot of effort. We'd reached the point of diminishing returns on that tech. Plus we had other, more immediate concerns. At its best, it still wouldn't help us in the future battle with Scion.

I spotted Riley first, mumbling into her recording microphone. Emma, on the other hand, was currently in her yellow state and looking at the computer. I decided not to interrupt. After a couple minutes, she started typing, then spoke. "File saved: IT fifteen."

Riley looked up. "So, anything useful?"

"Yes, actually," Emma answered. "Turns out I might have a way to break you through. Although it's
a weird way of doing it that doesn't explain how Amelia broke through. I don't think the Entities knew what 'sleep' was when they designed this memory wipe effect. If you actually pass out during or right after a Taboo event, you should be able to remember when you wake up. At the very least, it'll let you remember stuff that we've already discovered."

"And we already know how to identify when a Taboo is starting to influence the brain!" Riley declared. "I could probably build an implant that emulates losing consciousness. It may take a few tries, but shouldn't be that hard to achieve. From there, it's just a matter of feeding the target mind enough legitimate Taboo data that the Passenger doesn't know what to remove anymore, like with you!"

"That's really good news," I said from my position near the door, then I started walking in. I meant it, too. "Good work, both of you. Riley, why don't you finish up for the day and go hang out with your sister. You might not get many chances to in the next few weeks."

"Why not?" Riley asked.

"You'll just have to trust me on this one," I said, smiling. "There's going to be a lot of things going on. She'll be really busy, and you'll probably be really busy. We're also pretty close to when you have to go back to school and that'll just make it even harder to find time. Plus, I know I kinda hog up most of Amelia's free time to begin with. Since I'm going to be taking time down here getting a memory backup made, you have time to go spend time with your big sister."

"Okay!" She agreed, and she gave me a quick hug. I repressed the only somewhat diminished urged to cringe. "Thank you."

I patted her now permanently black hair. Then she bolted from the lab. As far as I could tell, she did not have a 'walk' setting.

"So, why'd you really want to talk?" Emma asked.

"Figured it out that easily, huh?"

"So did Riley, even if she didn't say anything," she responded. "You tripped off her lie detection system. And probably her common sense, as well. She acts a whole lot more naive than she really is. Not that I need to tell you that."

"Yeah, probably not," I agreed. "I kinda wanted to ask you for help with something."

"It's the whole you not being gay thing, isn't it?" Emma asked. "No, it's not that obvious, but I have a near perfect sense of human biochemistry. You're not into her, and it has absolutely nothing to do
with you not loving her. You got that much covered, at least."

I nodded. "Yeah," I agreed. "I do. I tried using that, before. Tried making feelings be enough. She, well, let's say she turned down my offer."

"Ouch," Emma sympathized. "I bet that was embarrassing."

"Humiliating," I confirmed.

"And now you want to try again, I take it?"

"Have for a while," I admitted. "I can't ask Riley because she's still ten."

"She's at least eleven, actually," Emma corrected. "Probably twelve, actually. Not that it makes it much better."

"Plus she's still Bonesaw," I continued. "She tried to saw open my skull. I know she's trying her best to be better, but I just can't imagine myself willingly giving her have access to my brain." The very idea of it was enough to give me nightmares.

"And you trust me with it?" Emma asked. "That's kind of a big deal."

I paused. "Hadn't thought of it like that before. But you'd have access to my backups, anyway. So, if anything, I'll have to trust you, eventually. I could ask Amelia, but..." I stopped and thought about how to say the rest of this. Emma didn't know what happened to Glory Girl, and that was not my secret to share. "She's afraid to work with brains. For a lot of reasons, at least partially due to examples set by assholes like Valefor and Heartbreaker."

"No, I totally get it," Emma confirmed "Plus the whole guilt factor of her having to rework part of your brain to make you attracted to her. I'd probably be bothered, too."

"So, can you switch me over to being gay with this tech?" I asked.

"Well, yeah, sorta," she said. "It's kinda hard to rewrite patterns entirely. Easier just to add new ones. Like, this equipment could make you left handed, or make it so you speak Spanish instead of English, thanks to Rey's tech. But it would be a lot easier just to make you ambidextrous or add a second language to what you already know."

"Okay, so you'd just make me bisexual, then?" I asked.
"We can be a little more precise than that, if you like," she offered. "How does 'heterosexual, plus one' sound to you?"

....

"I... don't feel any different," I said, as I climbed out of the chair.

"What? You were expecting maybe to be suddenly obsessed with boobs like a teenage boy?" she asked.

"Well... maybe a little?" I said. "You're right, though, that sounds stupid when it's said out loud."

"Speaking of boobs, are you sure you don't want me to give you an upgrade?"

I shrugged. "I'm fine," I said. "The only person whose attention matters seems to like my current figure just fine." I started thinking about the looks, and feelings, I got from Amelia on a regular basis. And then... well, I started thinking other thoughts.

"See, it totally worked," Emma declared.

"Have ~fun~!" she sang after me as I left the lab.

The whole process had taken a few hours. Apparently, adding new pathways is a pain in the ass without a specific copy already in the database. It turns out that 'wants to sleep with Amelia' was not in the database. Then there was the memory upload, which took a bit of time in its own right. Hopefully I'd want an update, soon, considering what I had planned. I went to my room to do the usual 'freshening up', complete with a shower where I spent most of my time trying really hard not to think about how the water system here works.

I put on one of the cuter new outfits, even though it was a little warm for that, especially inside our amazingly well regulated environment here in the Yggdrasil.

I palmed Amelia's door, and it opened. She and Riley were playing a card game.

"-ust because I have a good memory and basic math skills," Riley said insistently.
Amelia looked up at me and smiled. She's beautiful, I thought. It's wonderful, looking at her and being able to think that.

"Does this mean playtime's over?" Riley complained.

"Yeah," I confirmed, walking in. "I promise I'll make it up to you later, mushroom. I have something fun planned, already." It was true. Spending a couple hours getting your brain scanned left you plenty of time to think. We didn't have any clue when Riley's birthday actually was, but we could pick some time to throw her a party. I'd have to talk to Amelia and Missy about it, first, but it was going to happen.

"Okay," Riley agreed. "I was getting bored, anyway. My big sister's not very good at card games." Amelia pretended to try to smack her, and she rolled away backward, right off the bed. Half a second later, she was on her feet, and stuck her tongue out at Amelia. She was close to me, so I managed to smack the back of her head. "Hey! That's not fair!"

"We're partners," I said. "That means we're automatically on the same team no matter what."

She looked at me, and her eyes narrowed for a moment, then she smiled broadly. "I am so going to tell Theo to use that line on Missy," she declared, and With that, she stepped past me and left the room.

Amelia just looked at me, still smiling her wonderful smile.

"What?" I asked.

"You're being nice to Riley," she pointed out. "You're never nice to Riley. I mean, you're not bad to her or anything, but that might be the first time you've ever touched her without a really good reason. Or tease her, or use a nickname with her."

I shrugged. "I dunno," I said. "A lot of things are changing these days. And she is kinda my future sister-in-law or something. And, well, like you said earlier, she is kind of adorable, especially with Missy. Anyway, we can reestablish the link now, if you like."

She smiled, and closed her eyes. The relay network went up first, as always. The empathic bond was more complex and sensitive, and it took a little more time to reestablish.

"So, do you like my new outfit?" I asked after the bond was fully established. It was a full invitation for her to really look at me, and I luxuriated in her desires. More than usual, not because didn't enjoy
them before, but because now I could return them. *ConfusionSurpriseDesireJoy*. I smiled. Didn't take her long to catch on, either.

I moved toward her and sat on the bed next to her, then ran my fingers through her hair as I drew her into a kiss. This time there was no hesitation on my part. This time, I wanted this as much as she did, and for the same reasons. Our second kiss was wonderful and set off all the fireworks they were meant to set off. *JoyDesireLove*. She wrapped her arms around me and kissed more passionately.

*RecognitionWorry*. She broke the kiss. *HorrorPain*. "Oh god, Taylor, what have you done? *DisgustGuilt*.

==================

A/N- Die happiness! DIE!!!!

... Also, this was a chapter I expected me to get in trouble with the mods over at SB... it did not.

Chapter End Notes

If you were hoping that this was the chapter that got this fic an M rating then I've got some bad news for you...
PainHeartbreak. "I..." Taylor hesitated. "I know, I should have told you. I was going to, but then...and the link... and I just wanted to fix this so bad and..." she stuttered. "I wanted to want you like you want me. I was going to tell you..."

I pushed away from her. "When were you going to tell me?" I insisted.

"Umm... before the kiss," she answered, tears running down her face. "I didn't realize I'd want you so badly after. I went on impulse instead of easing into. I'm sorry."

I couldn't think straight, and she wasn't helping. Her desire was reacting with mine and... and if it went any longer, I would kiss her again. If that happened, I wasn't sure we'd be able to stop until it was far, far too late. A quick thought and I deactivated our bond. Taylor's eyes went wide. Her lip quivered. My heart broke at the sight of it.

"Why?" She asked.

"Because we can't talk like this," I answered. "Taylor, that would have still been after you got the changes, not before. What were you thinking?"

"You would have tried to stop me," she pleaded. "I couldn't keep hurting you like that. I love you!"

"I know! I love you, too!" I exclaimed. "God, we both knew that. There wasn't even the possibility of doubt. We can't even hide it when Zach makes a stupid joke that we actually find funny! How could I possibly not know your feelings for me?"

"I wanted to be able to say it myself," she insisted. "I didn't want it to be the empathic link. I wanted it..."

I buried my face in my hands. "Fuck. Why didn't you listen to me? I told you I was happy with our relationship how it was. I didn't need you to do this. I didn't want you to do this."

"But you did!" Taylor insisted, moving to try to touch me. I pulled back further. The temptation was still far too great. "I could feel it. Every time you looked at me. Every time we touched. I know you would never ask me to do this, but you do want more. And I... I wanted to want more. I've wanted that for a while." She was shaking, and even without the usual bond, there was still the glimmer of emotions from the rest of the network.

She blinked. "Safe?"

"Yeah," and now that I'd said it out loud, I started to put together my feelings. "I want love. I want intimacy. I even want romance. I'm a human being, of course I want all of that. But I don't want to do more. I was perfectly happy with what we already had. Maybe I wouldn't be happy like that forever, but I was happy for now. And I thought you were happy, too. Weren't you?"

"I was," Taylor admitted. "I am. Why didn't you tell me?"

"Which part?" I asked. "I didn't know I had to tell you not to surgically modify yourself for me. I'm sorry, Taylor, I didn't think that was ever going to be an issue in my life. Why'd you even have... why now? Why not wait?"

"Victoria," she answered.

I froze. "What?"

"I'm part of the same link you are," she elaborated. "I know about your feelings for Victoria. Aura or no aura, I know you still have feelings for her. Ones that are more than just sisterly. I'm not sure you even know about them, but I do."

"God, Taylor," I groaned. "You're just not happy unless you're sacrificing yourself for a cause, are you?"

"No!" she shouted, again moving toward me. "No. That's not why."

"Then why?" I pleaded. "Why would you do this?"

"I..." she paused, then whispered. "I was afraid of losing you."

My heart jumped, and I struggled for something to say.

"I was afraid that you'd want her... and then... then you'd stop wanting me," she looked away.
My stomach clenched. "No!" I moved toward her and pulled her into a hug. I restored the link. I need her to know I mean this. ReliefJoyGrief. "Taylor. Taylor, please listen to me. I don't want Victoria. My desire for her is artificial. The result of a fucked up power that got to me at a vulnerable time. I'm over the addiction part of it. I'll get over the rest. And if I can't do it naturally, then I'll start considering something artificial. Rapture's an expert on this stuff, we can talk to her. I'm pretty sure, whatever she says, it won't be 'sleep with some other girl'."

Taylor smiled slyly. "Are you sure about that? She's dating Rey for a reason."

"Well, not as sure as I was a moment ago," I relented. "But the point remains. I was happy with what we had. I didn't want you to... to do this... it's what Victoria did to me on accident. It's what I did to her on purpose. It's not right."

GuiltHopePride. "It's not the same," she insisted. "I chose this. I have the right to do this. I wanted to. I've wanted to for... for weeks now. I was hoping for it to come naturally. That the time we spent with each other, the closeness, would make the physical desires happen."

"And it didn't," I finished. I knew it didn't. I'd spent enough time feeling for it, yearning for the moment she looked at me like I looked at her. Now I had it, and I couldn't even enjoy it. It was tainted. It was nothing but a lie. A reminder of every mistake I've ever made.

HesitationResolve. "I was willing to give it time," she insisted. "A few more weeks. Months. I could wait to see if it would evolve naturally. Maybe do something more gradual with the brain tech. But Victoria meant we... I didn't have that kind of time, anymore. It was a problem. I fixed it."

"You made it worse, Taylor," I said, and the words burned inside me. "Minerva was right. It's the link." FearAbandonmentLoss. "It's always been the link, hasn't it? Without it, you never would have felt the need to be attracted to me. We would have been friends. You could have found a nice boyfriend. I could have found a nice girlfriend, if it turned out that's still what I was still into. Instead... instead we got this. This isn't healthy."

"This is the best thing that's ever happened to me," Taylor insisted. DesperationPanic. "I can undo this modification if you want me to. Or you can. It's not like it's a complete rewrite. It didn't make me attracted to girls. Just you. It's not even the only thing I did. I got Rey's medical package as well. I asked for it because it's helpful. You can't say it's not! You don't feel guilty over that, right? It's the same as this. Six years of med school in two hours is a whole lot bigger than a small tweak to who or what I'm attracted to!" Her face and our bond was awash with her fear.

I closed my eyes. "No, that doesn't help," I sighed, fighting back the tears even as I started unmaking our bond. I have to do this. I located the relays, and altered them so they no longer reacted to my power unless I needed them to. The bond isn't healthy. It's doing to Taylor what Victoria did to me. I have to end it. I reached into the bracer and slowly shut it down. For her sake. Abrupt cutoffs were always a bit jarring. "This arrangement was always mutual. The moment either one of us decided we didn't want it, it was over. No questions, no arguments. That was the promise, remember?"
"I remember," she choked out, just before the last part of the bond was deactivated permanently. I watched through tears as she stood and walked toward the door. The portal opened when she pressed her hand on other door.

"I love you," I managed to say. She paused for a second, but didn't say anything or look back before she walked out.

I curled up and started to cry. It wasn't the first time we went without our link for a length of time. It wasn't the first time Taylor stayed at home, instead of here. But this was the first day since our bond was formed that I was alone.

=============

A/N- The author of this story is a horrible person who hates happiness.
The thing about not being able to sleep is that it results in a lot of free time. A whole fucking lot of free time. I could probably do something productive, like studying, or planning combat strategies, or learning a new language. Maybe I could become a painter or write the next great American novel. Although considering the sum total of my art skills amounted to 'stick figure pornography', and my writing skills were even worse, it was probably for the best that I didn't. Instead, I was just bored out of my mind.

I paced along the halls of the magic treehouse. Everyone who didn't live here had gone home. The rest of us that did were all asleep. Unless Emma was in the labs, which would only add another reason for me to not go down there alone. Or with anyone else, if I could help it.

I was sick of the internet, impossibly enough. New Delhi was the only thing anyone ever wanted to talk about. Even the friends I had that didn't know I was a cape were still obsessed over it. I, on the other hand, wanted to talk about anything and everything else. Being flash boiled several times a second is not something anyone wants to think about. I didn't want to think about it when it was happening, either. The whole time I tried to imagine how cool my second trigger might turn out. Maybe I'd be able to bring back people who had died a while ago, instead of just the little bit of 'memory space' I currently had.

There are weirder powers out there by far, right?

Even thinking about Emma was better. If anything, the scifi geek in me thought her new transformed states made her even more hot, and she was a 'ten' before. But, no. Taylor may have 'forgiven' her, for whatever political reason she had, but that didn't apply to me. She tormented another human being for her own sick pleasure. There weren't many things out there that I couldn't accept. Fuck, I spend more time hanging out with fucking Bonesaw than I did with my own sister, back before. And... what Emma did... there was no forgiveness.

I went down to the workout room. I had a custom set of training weights. If we were being honest, it was more like a modern version of being drawn and quartered. I gripped the vines and pulled. They pulled back, and I kept pulling. They wouldn't let go. I disintegrated, if I had to guess, it was a tendon pulling. Another go, this time with the new starting resistance being what tripped my regeneration last time.

I focused on holding my body together as long as possible under the strain, and failed after about three seconds. If this were my 'official' workout, it would be timed, but right now I just needed to take my mind off everything.

Another respawn. I gritted my teeth and grabbed the vines yet again. The strange combination of burning and numbness from my renewals was as familiar as always, and with it the memories. I probably imagined the screams I heard in that scouring light. Some trick of the air being so hot that it
caught fire. I don't know. I didn't imagine the aftermath. The numbers of capes tough enough to survive the explosion, who still died. Sinking into molten tar that used to be roads. Struggling to find somewhere safe. Dying slowly of suffocation in the unbreathable smoke.

I tore my thoughts away from that line yet again.

More pleasant memories. I insisted to myself. Like Crystal agreeing to that date. That was worth a happy thought. She was a real beauty, after all. Smart, too. And smart enough to catch me in my bullshit. Bullshit I even convinced myself was real, sometimes. A man could do an awful lot worse for himself than that. Of course, I have to wait five years for it, I added unhappily. Shoulda tried for three. Eighteen and twenty two is cool, right?

I got out of my makeshift torture-workout device and wandered the halls yet again. Huh, since when did we have this tunnel? I followed it, and quickly realized this was the furthest away from the 'main building' that any of our underground rooms had gone. That I knew about, at least.

"Oh wow," I said when I saw the room. I meant it, too. The central area of the room contained a massive swimming pool. The pool itself was bottom lit by a soft blue glow, while the area around was bathed in a green light. It was warmer than most of the rest of the base, a warmth coming from the water in the center. The smell was slightly sweet, almost like honeysuckle. "The dead could get laid if they brought their date here."

"Okay, I don't even want to know where you got that analogy," a voice spoke from below the waves. I walked to the edge and looked down. No wonder I hadn't seen her. It was Amelia, in her armor. I could barely tell her apart from the floor even now that I was looking.

"Sorry," I said. "Didn't know anyone was here. I was just saying this place is gorgeous. Very romantic."

"Thanks," Amelia sighed. She sounded miserable.

"So, what's going on?" I asked. "Did I just interrupt something? Like, say, a warm up before Taylor gets here?"

"What?" She asked, sounding confused. I waited for her to get the joke. "No!"

At least she doesn't sound as miserable, I thought. Shock isn't quite laughter, but it's better than self pity.

"Okay," I agreed. Ice broke, NOW ask the heavy questions. "So what's the story?"
"Nothing," she answered. *Doesn't sound like nothing to me.*

"Practicing holding your breath?" I guessed. "I'm sure Taylor will appreciate it."

She started sobbing. *Oh fuck, that's not suppose to happen.* "No," she answered. "I doubt Taylor's ever going to 'appreciate' anything from me from now on."

"Want to come up here to talk about it?" I asked.

"No," she answered.

"Guess I'm coming down there then," I dropped into the water before she had a chance to refuse like I knew she would. I sank the thirty feet or so to the bottom and sat next to her. She looked at me.

"Wow, this pool is really deep," I told her. I doubted she could understand words, just 'blub blub' or something. Then I started to take a breath, which tripped my restoration as expected. A burning sensation radiated from my lungs and I appeared at the top of the pool, clothes dry.

*What the fuck, power? You can teleport to get out of water, but you can't teleport to get away from two thousand degree infernos?*

"Okay, I tried it your way. You'll have to come up here."

"Fine," she relented, standing and allowing buoyancy to take her to the top. "Taylor and I broke up." *How the fuck? "Happy now?"*

*No, I thought. "So, you're saying she's single..." I answered.*

"Zach, I swear that if you such much as finish that thought, I will find a way to make you stay dead," she growled.

There was no thought to finish. "Don't worry," I answered. "You're the one into the bony girls. Plus she seems like the type that'd be into weird date gifts like giant bug monsters and chocolate covered grasshoppers. Which, granted, would be a nice change of pace from the version she currently gives me. Is that what happened?"

"Yeah," she laughed bitterly. "You could say that."
Talk about a freakin' shot in the dark. "What happened?"

"She decided she didn't find me attractive," Amelia confessed.

"Then she is a lousy judge of female flesh," I offered the roundabout compliment.

"She probably should be, since she's straight," Amelia defended her girlfriend. "Or was straight. Apparently she decided that was a 'problem' and 'fixed' it. Fucking brain surgery. Most romantic gift in the fucking world."

I paused, trying to find a way to say 'you're a moron' to my boss, and one of the few people whose power I was honestly afraid of. I settled on one word. The only word in the world that could truly convey my reaction. "Huh."

"Such words of wisdom could only come from you," Amelia muttered.

"Doesn't your dad have depression issues?" I asked.

She hesitated. "Not comfortable discussing my family with you," she replied.

"Fair," I granted. "Well, a lot of people have that problem. Some of them take medications for it. So they can spend time with their children, or their spouse, or simply function to go to work. This doesn't sound any different than that to me. Except, y'know, cheaper, safer, and better in every possible way."

"I didn't want her to change herself for me!" Amelia shouted. "She at least should have asked me about this."

"You're not suppose to want her to change herself," I answered. "But she's going to. That's what relationships are. You changing yourself for others. Not because they want you to, but because you want to for them. Like last week when I kept Theo up late and Missy wanted to hang out in the morning. He did what she wanted, didn't even tell her he was tired. He did it because he wanted to, and that makes him a good guy. If Missy had known, she'd probably have told him to get his sleep. If he wanted to sleep and she insisted he get up, that would have made her a bitch."

"There's a big difference between that, and what Taylor did."

"Okay," I granted. "Then let's look at the other extreme. Riley. You know, your little sister. You can't tell me the gap between 'gay' and 'straight' is somehow less huge than the gap between
'Bonesaw' and 'everyone that doesn't belong in a cage or a casket'. She's working so hard to change herself, and she's doing it to make you happy. And Missy, but still mostly you. Yes, it's a good thing she is changing. The entire sane world would back me on this. But it's still her changing for you. Hell, you threatened me with death for making a bad joke, like, a minute ago. That'd be me changing for you. If, y'know, it worked."

"That's not the same thing at all!" Amelia insisted. "It's just asking people to behave differently, not actually be a different person."

"Why?" I asked. "Sex isn't this big amazing magical thing that defines who we are. Koalas have figured it out, and they're going extinct because they're literally too stupid to live. I'm straight as an arrow and I'd give that tech a spin just to see what it's like, if my power would let it work. Hell, I'm kinda curious if they can implant nonhuman memories. I'd honestly love to know what it's like to be a cat. As long as they edit out the parts where it licks its own crotch. I'm pretty sure I would be happier to never learn what cat crotch tastes like."

"Your analogies are disgusting."

"But true," I insisted. "Do you have a problem with gays?"

"No, of course not."

"Do you have a problem with Taylor?"

"No."

"You love each other, right?"

"Yes," she affirmed.

"Then I say run with it," I added. "Existential crises are for old people. What you should do is find your girlfriend, drag her to this love nest you've built here, and don't let her leave until the next Endbringer battle. But not before I set up the hidden cameras."

"God damn it, Zach."

============= A/N- Zach knows less than I do about both ancient execution methods and Australian wildlife. Keep
that in mind if you try to "correct" those parts.
I didn't bother going home. I wasn't in any mood to talk to my dad. I was in even less of a mood to come home to an empty house and make assumptions on where my dad was spending the night. Instead, I went to the labs. Not the secret labs, since I didn't want to interrupt Riley or Emma's work, just the normal ones. Primarily where Chariot worked, these days. His skills and abilities didn't lend themselves to the high priority task of breaking the Taboo, so he was relegated to designing improvements on our bioarmor.

"How's it going, boss?" he asked as I came down into the lab.

"Picking up habits from Rey, now?"

Chariot shrugged. "Not my fault you guys don't hang out with the nerd herd enough for us to pick up your habits. Speaking of: been talking to Kid Win, he gave me a few ideas he picked up studying Vista's power. Already upgraded Matriarch, since it's the easiest to work with. I got the specs for Azrael. By the way, Kid says thanks for his suit."

I tried to smile, a system's test might keep my mind off of Amelia. "So what's it do?"

"Short range teleporter," he answered back. He didn't notice my mood. Then again, he probably wouldn't. I was calm, or at least my body was. It had been a long time since I could truly offload into my power, force my emotions down so that I could focus on the important things. Maybe Lisa was right about the link being detrimental, I mused. I can do a lot more with my time this way.

"Very nice," I praised. It was, too.

"It's a hybrid of the shunt tech, the subspace pocket tech Kid Win uses, and some of Vista's power readings," Chariot started explaining. I knew if it kept down this road, I'd be lost in the sea of technobabble. Fortunately, Chariot was one of the few tinkers that seemed to understand that people don't want to hear that stuff. "Long story short, it teleports you up to a hundred feet. Any direction. At will. Has a charge time between teleports, however. If you need it, you can also use it to shunt between Bet and our dimension pretty cheaply."

"That... I can see how useful that would be," I agreed. I could, too. "So, what do we have to sacrifice from the armor to make it work?"

"From yours? Nothing," Chariot answered. "Your armor is about two pounds heavier, and that's the end of it. Same with the Dryad, Radiant, and Clarice. Can't put it in Singularity due to how it's designed, not that Missy needs it. Azrael and Tapestry are going to suck. I'll need Emma and Riley to help me with those."
I nodded. "Okay, work on the ones you can work on," I agreed. "I'll talk to the others. Mind if I give mine a test run?"

"Sure," he agreed. "I need some user testing of the control interface, otherwise it's in full working order. It has an anti-obstacle system in it... if you find yourself in our pocket dimension, that means it would have teleported you inside of something else in this dimension. Just move around a little and try to shunt back over after the device recharges."

"I'll be sure to relay my results," I answered as I started putting on the armor. Or letting it swallow me with its back, as the case may be. A couple minutes later, I decided he was right, this control interface needed a lot of work. It was meant to respond to the eyes looking at specific parts. Which was great, if you didn't need to look at other stuff at the same time. It took me six minute just to figure out how to get the destination locked in, and I had to do it by deliberately defocussing my eyes.

Then I was outside, well above the Yggdrasil. For a second I was falling, before the antigravity caught me. There was a bit of a moment where I almost succumbed to vertigo, but I solved that easily enough by paying more attention to the insects, and less to Taylor. The conspicuous absence of Amelia made that process both easier and more difficult. Still, it helped some. *I am not alone,* I thought. *As long as there are people in this city, I can never be alone.* Yeah, that didn't work to convince me of anything.

I bolted to the north end, almost wishing we hadn't wiped out E88. I wanted someone to punch right now. I wanted it badly. I spent four hours finding nothing. I spent my time reporting details and suggestions for interface improvements. First to Chariot, then after he decided to call it a night, his recording device. Eventually I gave up and headed home. Any other day, I would have considered four hours with no crime more serious than speeding violations, some kids smoking a few joints in the park, and a single mugging a source of pride. Today it just made me that more frustrated. I stopped the mugger with my bugs, he was too far away to get there in person in time.

Besides, there was a limit to the number of bones one could break in a purse snatcher before it was bad PR.

Sleep did not come easily that night. Dad had long ago stopped bothering to wait up for me. For that matter, he didn't even bother locking the door these days. Break-ins were practically a thing of the past. Break-ins at my home were regarded as a particularly creative form of masochism. And it had happened. One dumb kid trying to impress his friends by stealing an article of my clothes, most likely my underwear. One dumb adult looking to impress his friends by shooting me in my sleep. And two very dumb reporters, also most likely intent upon stealing my underwear.

I could use an assassination attempt right about now. I would settle for punchable reporters. Instead, I got a quiet night in a warm bed. I couldn't help but think about Amelia the whole night.
I didn't want to come into work the next day, I really truly didn't. I didn't want to look at Amelia. I
didn't want to be reminded of what I had lost. If she didn't want to, well, be with me... that would be
fine, I could live with that. But I missed her presence. Her thoughts and feelings. Having a
connection with someone I could trust and knew that I could trust no matter what. And that had been
taken from me. It took everything I had to remind myself that no, this was not a repeat of Emma.

Still, I showed up anyway, teleporting straight down into the labs. An act which would have set off
any number of automated defenses if this armor wasn't made from Yggdrasil. Riley was here, this
time.

"Oh good," she said with her usual smile. "How's the armor?"

"A little sluggish compared to usual," I informed her. "Probably needs a checkup. Either the
teleporter is drawing too much power off the flight system, or that extra two pounds is really that
important to the speed.

"Okay, I'll check out the specs," Riley agreed. Then she stopped smiling. "Now why is my sister
sad?"

"Grown up stuff," I sighed.

"Fix it," she commanded. "Right now."

"There's nothing I can do," I replied. "This is something she has to fix for herself."

"Okay," she said, not quite sounding convinced even though I know her built in lie detection would
back me up. "Lisa needs to talk to you about a couple things."

"Tell her I'm going to be busy working on the zerg instincts, today. If it's not work related, it can
wait."

"It's work related," Riley answered. "Dinah says someone's going to try to assassinate Director
Calvert, later. And we have our working plan on how to take down Butcher permanently."

"Really?" I smiled. *The Butcher is one of the only honest threats left in New England*, I knew from
more than one team planning meeting. With her gone, we could afford to spend more than a day in
other cities.
"Yeah, really," Riley answered. "Gotta take care of Calvert's assassins, first."

"Don't worry," I smiled. "This, I can do something about."

====================

A/N- Oh, hai Skitter, been a while.
I made my final phone call for the night: Dinah Alcott. Every day, the same thing. Ever since learning that Scion was not only the source of our extinction event, but would exterminate life in *every* world, not merely our own, we’d been dedicating most of our resources solely to that concern. It made it more of a pain in the ass since Dinah couldn’t see Scion, only his aftermath. Same with Eidolon, the Endbringers, and apparently the effects of the Taylor-Amelia bond. This limited her effectiveness. Right now, we had sort of taken a more general approach: we were recruiting and upgrading our forces into an army, cross referencing possible power interactions, and simply increasing our power and influence.

"Hello, Minerva," the young girl's voice said in an utterly businesslike tone. *Used name immediately, wants to project illusion of omniscience. Considers her power far too precious for such wasteful display. Relying on other power. Not second trigger. New parahuman. Wouldn't allow herself to be seen as childish enough for such a thing, especially to another thinker. Using equipment. Tinker tech.*

I smiled. She likely spent several thousand dollars on what amounted to a really fancy Caller ID. I considered teasing her for it, but opted to do the opposite. "Getting stronger with your powers, I see," I said, then I channeled my old way of thinking. "Seems like a waste of energy."

"Pots and kettles," she retorted. I smiled. *She was right, emphasis on the 'was'.*

"So, the usual starter questions," I said. I liked this question. It was free, because of just who it protected.

"Point zero nine there is a credible attempt on the life of a member of Pantheon or its priority allies in the next twenty four hours, fifty nine percent chance of a credible attempt on the life of a member of Pantheon or its priority allies in the next week."

"Fuck," I muttered. "Don't waste any energy on that question for a moment, okay? I'm going to think up the most optimal way of narrowing down the possibilities first."

"Understood," Dinah replied. *Afraid. Knows she's a possible target of assassination. I popped up my computer and ran down the list. Right now our 'priority allies' included the Triumvirate, Dinah, Calvert, Accord, Epoch from the Adepts, Dragon, and Costa-Brown if she wasn't already covered. She was listed separately just in case someone manage to hack our theoretically unhackable systems.*

I immediately ruled out the Triumvirate. The phrase 'credible' ruled out almost any attempt against them. Plus they had assured me they had a top tier precog of their own, who was just as blind to Scion and Endbringers as Dinah. I didn't ask about Eidolon and didn't mention Taylia. I trusted Cauldron only as far as 'enemy of our enemy', no further. To allow them to learn about Taylia would
be a monumental disaster.

"Will there will be one attempt, or multiples?" I asked. That would be a way to narrow down the rest of the questions.

"Umm..." she hesitated. "Just one."

That was helpful. "Male or female?" was my follow up.

"Male," Dinah spoke with a brief hint of relief. She ruled herself out. We were down to a pretty narrow pool, most of whom were our own team. Zach's power ruled him out permanently. We knew because we had tested that, already. Apparently Zach's respawning didn't register as 'death' to Dinah's predictions. Whether because the Passenger didn't consider it death, or because Dinah's powers were tied to her own psychology in interpreting what the question was, and she didn't view it as 'dying', I couldn't yet know. "You have three questions left."

She's capable of doing up to nine a day without stress, up from seven at the beginning of her release from Coil's captivity. That's interesting. Did Coil overtax her power and thus weaken it, or is she just naturally stronger now? "Alright... is the victim a member of Pantheon?"

"No," she answered.

So we were down to Coil, Accord and Epoch. "Does the victim live in Brockton Bay?" I asked.

"Yes," Dinah responded.

"Alright, that narrows it down enough," I answered. It narrows it to exactly one, but Dinah doesn't need to know that. "We'll be sure to have our people ready for any would-be assassin."

"I'm billing you for the last two questions," she responded.

"Fair enough. Got one one more for you if you don't need it elsewhere," I sighed. What was twenty grand, anyway? She didn't contest the idea, so I went ahead. "What are the odds we can successfully engage and defeat the Butcher without losing any of our members using our latest battle plan?"

"Ninety six point three seven seven," she responded.

"That is enormously better than before," I blinked. "What happened?"
"I just give the numbers," she dismissed. "The rest is on you."

I smiled. "Thanks," I replied. "So... I was thinking... you know how we've got you under guard?"

"It's appreciated, yes," Dinah responded, sounding a bit suspicious. "What of it?"

"And you know how we've created that Pegasus for Aceso?"

"And more for a bunch of the rest of your team," she agreed.

"Want one of your own?" I offered. "No strings attached beyond the stuff we've already agreed to. It'll have the added benefit of a very visible deterrent to would-be attackers, in addition to your better hidden defenders."

"Ponies are stupid," Dinah dismissed. "Can you build me a Gryphon?"

....

Taylor was conspicuously absent when we had our morning strategy meeting. It was myself, Riley, Amelia, Crystal, and for the first time ever: Emma, who was looking for someone else at the meeting. Obviously, Taylor. Didn't even need my power for that. Maybe Zach, though that wouldn't be likely.

Amelia even managed to show up on time for a change. Tired, didn't sleep at all last night, upset, Taylor missing, fight between them. I didn't need my powers to tell me any of that. Taylia bond broken. Amelia broke it. Taylor did something that upset Amelia. Emma at meeting, looking for Taylor, not afraid of usual reaction. Reconciliation? I blinked. My power had been certain that couldn't happen. Taylia bond responsible. I hated Taylia, sometimes, but I needed to get back to figuring out what broke them up. I was on Emma, right now. Emma helping Taylor? Helped Taylor. Taylor used brain modification tech on herself. Made herself gay.

I almost facepalmed at the revelation. God damn it, Taylor. I knew my best friend had a fucking martyr complex, but seriously? Also: God damn it, Amelia! It took this to break the link? She couldn't have done it when they were both in what passed for a stable emotional state with them? She had to wait until Taylor was at her most emotionally vulnerable to figure out... fuck, of course. If they were both happy, then it meant their bond was a good thing. Ugh.

Emma looked more and more apprehensive as we got closer to 'start the meeting' time. Crystal, however, was the one that spoke up. "Umm, where's Taylor?"
"She must have slept in, she was out testing the new suit improvements," Riley offered, then she looked at Amelia. Is aware of Amelia's distress. Concerned. Indirectly fishing for information. Suspects Taylor is responsible. "We'd know if she was in danger."

Amelia simply looked at her arm, where the slightly lighter patch of her already pale skin denoted the lack of their empathic device. Oh fuck, she's going to cry, can't let that happen in front of Riley!

"We'll just let her sleep in, then," I said. "I'll talk to her later about the meeting. Right now: we have some good news and some great news."

Of course, the first thing I did was go over the news from Dinah. More or less on autopilot. Meanwhile I was watching Emma and Amelia. If Riley figured out exactly what happened, we'd be facing the worst sort of damage control. I'd need to distract her. I'd need to distract her, then I'd need to get Missy to distract her. Then I'd need to talk to Emma. Then I'd need to punch Emma. Then I'd need to talk to Amelia. Then I'd need a way to call Amelia a stupid twat without upsetting Riley. Ugh.

Crystal was glancing between me and Amelia, thinking at least some of the same thoughts. Good, she's my ally in this, I realized. It's really, really nice to have someone who's willing to help me, no questions asked.

"Y'know," Crystal muttered after I finished explaining the news. "This is possibly the only organization on the planet that considers an assassination attempt on one of our most helpful allies, followed by a straight up war with one of the most dangerous people on this continent, to be the 'good' and 'great' news."

"Better than not knowing about it until it's too late," I pointed out. "Either way, Calvert's been alerted and we are pretty much prepared for any possible attempt. Unless the Endbringers are coming out with a new and weirdly specific combat strategy."

"So, what's the deal with the Butcher?" Crystal asked. "We've never had better than a thirty percent chance to take her down before."

"New weapons, near as I can tell," I responded. "Our current strategy puts a lot of the fight on your shoulders. Radiant's update has all kinds of new tricks. You could probably solo the Teeth, if not for Butcher. But the tinkers can tell you more than I can."

Emma moved to speak up, but I interrupted her. "Riley, why don't you show Crystal her equipment? Especially the nonlethal weapons."

Emma looked like a puppy that had her favorite toy taken from her, and Riley kept glancing between me and Amelia, who had said nothing the whole meeting, but I remained firm on this one.
Technically, due to the social dynamics here, Crystal still outranked me. Not that she ever felt the need to assert that status. Also, she was on my side here, even if she didn't know all the details, she knew I had a plan.

"C'mon, mushroom, I can't wait to see my new toys," Crystal smiled, putting her hand on Riley's shoulder.

One last quick look and she turned to follow Crystal to the labs. Thank you Crystal you are literally a life saver.

"Alright," I sighed once I was alone with the two girls who had left their footprints all over my best friend's psyche like craters on the moon. I ignored my jealousy. Knowing I never had, and likely never would have, such a deeply personal bond with any human being hurt. But, unlike before, I admitted to myself that it was there. Pretending otherwise was no longer an option for me. Fuck you, Rapture. Fuck you and every figure you've ever said a prayer to. "So, both of you idiots are to blame for this. Emma... why the living hell would you agree to do this? I mean, I get that you're quite literally suicidally stupid, but there has got to be a limit."

"What? She just wanted a minor tweak to go along with her other upgrades," Emma defended. "It's not a big deal. Would you prefer I told her to try closing her eyes and thinking about Johnny Depp, like Sophia always suggested during our slumber parties?"

Isn't telling the truth. Attempting to use off colored humor to ease tense situation. Not very good at it. Is not used to trying to comfort people. Using a method she learned from Zach. Still strongly... I cut off my feed. It was heading into territory that I had already figured out, and frankly didn't give a fuck about. I needed to worry about Taylor's self destructive behavior, not the bitch that made her that way in the first place.

"I've already figured that out," Amelia sighed. "I over reacted. "I'll be begging her forgiveness, just as soon as I see her again. We will see her again, right? She wouldn't do anything drastic?" She practically pleaded with me to confirm her hopes, and a little piece of my heart actually felt for the girl.

"Yes," I confirmed. "Taylor's not the sort that runs from her responsibilities."

Anything and everything else, yes, but not her responsibilities.
"She's back!" I exclaimed the moment Taylor's armor touched down inside the lab. I rushed off to talk to her. I needed to see her with my own eyes. To know she's okay, to remind myself of how beautiful she was. To talk to her and apologize and hold her again.

Lisa rushed after me. "No!" she insisted. "I'll talk to her first. You'll just make it worse."

Emma trailed behind us, deciding quite wisely to keep her trap shut. I still couldn't believe she let Taylor talk her into that in the first place. Fucking bitch, if she wasn't so dumb about things I'd suspect she did it on purpose just to drive a wedge into our relationship. No, this was just the same shit she always did: find the nearest person who seemed like they knew what they were doing and latching onto them for guidance.

I opened the lab passage right before we got there. Riley was poking at Taylor's discarded armor, while Taylor was halfway up the stairs. "Oh!" she exclaimed, glancing at me, before looking back toward Lisa. Ouch. "So, Riley said something about assassination attempts and a way to beat the Butcher?"

"Uh, yeah," Lisa replied. "Someone's going after Calvert. He's been informed, of course, and we have a general idea of the anti-assassin plan. We'll know more tonight, after we compare notes and discover what kind of fight we'll be up against."

"And the Butcher?" Taylor asked.

"New weapons," Lisa replied. "Zach and Crystal are the primary fighters, with their upgraded suits. The teleportation tech seems to be the tipping point. It all hinges on Zach getting into touch range. After that, we've already won. You'll be playing tactical command, of course."

"Won't Butcher sense him before he attacks?" she asked, showing the calm passionless curiosity that I'd started to forget she possessed.

"Probably doesn't trip her combat senses to be targeted for a slap by a baseline human without a harmful power," Lisa volunteered. "We never had a way to get him into touch range before, and now we do."

"Makes sense," Taylor agreed. "Is that all?"

"We should probably talk about you and Amelia breaking up," Lisa started. "Pretty important in the whole 'team dynamics' thing."
"I'm still here, aren't I?" Taylor said darkly. "My body will adjust to the new circumstances, just like it did before, and my sleep patterns will reassert themselves. Isn't stuff like that normal for a recovering addict?"

She growled the final words.

Emma looked dumbfounded, and I had to blink hard to stop from crying. Lisa, at least, kept a cool head. "Close enough," she conceded. "Surely you can see the difference between how you are now, and what you were like this time yesterday, even. Or what you were like six months ago."

"Know what, Lisa? Fuck you," Taylor barked a short laugh. "You're right, I can see the difference. I was the happiest I'd been since my mother died. I finally had some level of peace with myself. I actually believed it was possible for someone to love me. But that wasn't good enough for you, was it? You wanted me to be miserable, mopey, easily manipulated by even the faintest glimmer of pretend kindness, Taylor. Fine, you got her. Most of her, at least. We are not friends anymore, Lisa. Not now, not ever again. We are business associates, I am your boss, and you are too good at your job for me to let petty personal issues get in the way of that."

I swallowed hard, trying to control my emotions, watching the girl I loved in this kind of pain... I didn't have anything to compare it to. Not that I could say I saw her in pain. The entire time she tore Lisa down, she said it with a level of almost bored calm that I might expect of someone reading from a dictionary. She's better at controlling her feelings now than ever before, I realized. "Taylor, please, can we talk?"

She looked at me for a long moment, her face completely impassive. "Okay," she replied. "Talk."

I struggled to find the words. I had to default to emotions. "I'm sorry," I started. "I didn't mean to hurt you like this. I love you."

For a brief moment, I thought I saw an emotion on her face. "I know," she relented. "I love you too."

"I over reacted when I found out..." I sighed. "I should have at least waited, talked instead of acting on impulse."

"I should have, too," she agreed. "Sorry about that, I knew you'd want to talk me out of it. I thought, if I did it myself, then you couldn't blame yourself for it. I didn't want that. This was something I wanted for myself, I wanted to give you what you gave me. You'd just have to accept that I made my own choice because I wanted to. That's one of the things I tend to do a lot, and you shouldn't blame yourself for my actions."
I choked up. "I know," I sobbed. "I guess I was channeling a bit of you when I shut down our bond. Doing what I thought was best for the girl I love, instead of taking the time to at least discuss it with her first."

She forced a smile. "I guess," she replied. "So, do you think it was for the best?"

"What?" I asked.

"Ending the bond," she clarified. "Do you think this, now, is better than before? If you had it to do over again, would you?"

"N-no," I admitted. "I regret it."

"I don't," she stated. "The outcome, I'd change in a heartbeat. But what I did? Allowing myself the chance to love you, physically, as well as emotionally? I don't regret that for a minute, and would do it again even if this was the only possible outcome."

I smiled, and moved to hug her. She stepped back.

"No!" she exclaimed. "Don't. I know enough about your power. I don't... I can't let you touch me. I can't let you see inside me like that."

I did start crying, then. In front of Lisa and Emma, both of whom had decided to exercise discretion about their presence here. "I can restore the link," I offered. "Let you see inside me, too? Like before."

Lisa went to say something, but Taylor raised her hand up, then spoke. "Don't worry, Lisa," she said. "It's not going to happen."

"Wh-why?" I managed to gasp.

"Because I can't trust you like that again," she answered, looking away. "I did that, once. I ignored how easily you could turn it against me. How everything you were giving me, you could take away again. I believed you wouldn't. I thought that you loved me too much to do something like that. Yet here we are. I love you, that hasn't changed, but I can't trust you. I can't give you that power over me."

I didn't say anything. I couldn't say anything. I simply crumpled to my knees and wept. First Victoria, and now Taylor. The only two people in my life I could remember loving, in any sense of the word, and ultimately they both ended terrified to let me touch them. I gazed up at Taylor, begging
her with my eyes. She closed her own, and turned away.

"I'm sorry, Amelia," she said, at the ground. "I can't help how I feel."

I didn't answer. I couldn't find the words for it. I was still trying to figure out if this was somehow better or worse than what happened with Victoria. I thought I'd moved beyond this. I'd hoped to fix my mistakes, not repeat them. I don't know what she thought about my silence. I no longer knew what she thought about anything.

"We've used up enough time on this," she finally spoke again. "Emma, Riley's been listening in. Not sure for how long, but please find a way to keep her from doing whatever incomprehensibly horrible things she might be planning to do to me right now. At least until Amelia's recovered enough to talk her out of it. You can do that, right?"

"Y... yeah," Emma agreed.

"If anyone needs me, I'll be working with Rey on the zerglings. Someone let Theo know that after lunch, I want to see him for training. And Lisa," Taylor added as she walked away. "Why don't you go ruin the life of someone who deserves it for a change?"

===============

A/N- The last arc: exploring the significance of Taylia. This arc: exploring the LACK of Taylia.
My cell rang, and I answered immediately. The ringtone I had set for Missy. Even though this was the 'work' cell, and therefore it was officially 'Lachesis' making the call. "Horus speaking," I said the moment the line connected. Zach was kind enough to pause our game.

"Umm... what's going on with Amelia?" Missy started. "Clarice called me and sounded really scared and upset and doesn't know what to do to help."

"I don't know," I answered. "I didn't know there was anything going on. I'll go calm her down and find out what happened."

"Thank you," Missy said. "You're the best."

I blushed. "No I'm not."

"Yes you are," she insisted. "In fact, Clarice has charts and graphs that prove it. I'm not even making that up. There's, like, eighty of them and they cover pretty much everything. I'm not sure whether it's creepy or adorable."

"That... that certainly sounds like something she'd do," I admitted. It really did. "Okay, I'm going to find her, now."

"Okay, good luck, and keep me updated."

"I will," I promised, then turned off the phone. Neither of us were much for long goodbyes, even under normal circumstances, and especially not over our work phones. Chances were pretty good her mom took away her private cell, for whatever reason. You'd think that maybe, just maybe, 'my daughter is an Endslayer' would be enough for them to trust her to make her own decisions.

Maybe I should do what Minerva suggested and let it slip that I am, functionally, on the low end of the billionaire scale. However, the idea of doing so just did not feel right to me. Reminded me too much of my father, plus it was pathetic and tacky and even if Missy didn't think too highly of her parents, I really didn't want her to know they were... those kinds of people.

"What's up?" Zach asked as I got off the couch.

"Just running a checkup on Riley," I answered. "Seems Missy's a bit concerned."
"You're just trying to get out of the game so you don't have to be humiliated by losing," he taunted.

"Dude," I chuckled. "I was winning."

"By what standard?"

"The game's," I retorted as I headed for the labs. The only place Riley would be if she wasn't in her room. Emma had, apparently, left for the night. Riley was just staring at a blank screen.

"Hey, mushroom," I said as I walked in. One of these days, someone would need to explain to me where she got that nickname.

Riley looked at me. "Amelia's sad and I don't know what to do," she told me. I could see she'd been crying. "Missy didn't know, either."

"Just tell me what happened," I shaped a seat out of metal to sit on. It was actually far more comfortable than it sounds, more like sitting on some kind of magic water balloon than anything. Weird ass powers.

"I was playing with my Big Sis, then Taylor came in and wanted to be alone, I could tell she wanted to do... adult... things, so of course I left," Riley started explaining. I blinked. Wasn't Taylor straight? Oh well, not my business. "And then a few minutes later Taylor ran out looking angry and upset and Amelia was crying and neither of them told me what happened..." Riley sobbed.

Fuck. I put my arm around Riley and gave her a hug. "Don't worry," I told her. "This is a perfectly normal thing. It sucks, but it's normal and it's nobody's fault."

"But... whenever my old family fought, someone died," she cried into my shoulder. "I don't want anyone to die."

I frowned. Not too different than my own supposed family, actually. "The Slaughterhouse Nine probably isn't where you should take examples from. It's just a minor argument. They'll be upset for a little while, then it'll be forgotten and they'll be back to their usual selves. All couples do it."

"Will... will you ever fight with Missy like that?" she asked, clutching me tighter.

I shrugged. "Don't know," I said. "Maybe. And when we do, it'll probably be over stupid things that seem really important at the time but really aren't."
"Like what?" she asked.

"I don't know," I answered. "I didn't have a normal home life, either. Most couples fight over things like not liking their in-laws, or spending too much time at work instead of together. My parents weren't exactly 'most couples'. They fought over things like whether or not all people with different skin colors are inferior, or just most of them." I was actually surprised by the bitterness in my voice at that. I probably shouldn't have been, but I was.

"Yeah," Riley agreed. "That really is stupid."

"Right," I confirmed, then rustled her hair. "So don't worry, I'm sure the two of them will fix things up. Just give them a few days to think things through and remind themselves that their love is what's really important."

....

I walked into our training room, Taylor was in her basic armor, this time. She almost never wore that outfit, anymore. "Good afternoon, ma'am," I said.

She nodded. "I was thinking nonpowered combat, this time," she said. She sounded, somehow, both tired and angry. "Just the biosuits with all the augments off, for protective purposes. No sense in getting hurt unnecessarily."

"Okay," I agreed. To be fair, nonpowered training was something most of us had gotten lazy about. The augmentative armor and all the bells and whistles inside made even normal people more powerful than most parahumans. Even better for those whose powers worked through the changelings, or who have powers that can be amplified. I, unfortunately, had neither. In the meantime, I changed the settings on the armor, turning off all the settings except the compensation tech that kept the armor's weight from slowing us down.

"Ready?" Taylor asked impatiently.

"Yes," I agreed. She rushed me, and I barely managed to deflect what would have been a really painful blow without the armor. I tried to knee her in the stomach, but she jumped and rolled. She was up on her feet before I could press the advantage. This was not her usual calm and collected combat style. She turned and came in low. Even though I was an awful lot more fit than I used to be, she was faster than me. And clearly more than a little pissed. Bad judgment was something I knew I could exploit.

I let her get her hit in, and then simply fell on top of her. We may have been the same height, but I was twice her weight with plenty to spare, even if only part of it was muscle. She couldn't lift me,
and I was better trained with wrestling than she was.

"Okay," she gasped. "Point for you."

I stood, letting her get to her feet as we spaced ourselves apart. "Are you sure you should be fighting right now, ma'am?" I asked. "You don't seem like yourself."

"Tell that to Lisa, next time you see her," she scoffed.

"Is that what the fight was about?" I asked. "Something Lisa said?"

"Of course you know about that," she sighed. "Why can't people just mind their business about my life?"

I looked down. "Sorry, ma'am, I try to respect your privacy, but... well, Riley was upset and I..."

"It's fine," she interrupted. "You're not the one who caused this mess. I just need to work out my frustrations physically, and you're one of the few people I can trust to not want to turn it into a conversation about my personal business."

I shrugged. "Sure, if that's what you want," I agreed. "But your physique doesn't lend itself to the whole 'berserker' thing. You're a more tactical fighter, you're just going to hurt yourself trying what you just tried."

She sighed. "Yeah, I know," she agreed. Then she took a breath and returned to her stance. "Ready for round two?"

An hour later, we were both exhausted. Her more than I, but then she'd won most of the matches. She plopped down on the mat, breathing heavily. "I'm going to ask Calvert to pick out some of his best men and women for us to run the brain scan on."

"Why?" I asked.

"We've gotten to the point where we can use the tech to upload skills," she answered. "Thanks to Rey's college skills, I'm qualified to be a doctor. Sort of. Barely."

I blinked. That was a thought and a half. "So... you're saying..."
"Six years of stressful training, granted in two hours of sitting on a couch," she answered. "We should probably work out a sort of manditory curriculum for everyone."

"Oh, that's great," I laughed. "Wish Victor was around for this. He always bragged about all his stolen skills, as if he somehow 'deserved' them or some such bullshit. Now we have a way to do the same."

"Not really stealing, though," Taylor responded. "Just copying. Does that idea... bother you?"

"No," I replied. "I think I would like having the skills of a doctor. Maybe public speaker, if you think we can get one?"

She shrugged. "Don't see why not. Glad to see you see the value of this. I'm going to bring it up for a vote next time we have a meeting. Won't make it mandatory, of course, but at the very least we should invest some time and energy into setting everything up."

I slowly climbed to my feet, hissing at the soreness in my legs and shoulders. "I'm going to go play video games for a while. Do you feel better?"

"Yes," she agreed. "Mind and body. Thanks for not prying."

"Any time, ma'am," I agreed as I walked, if a bit slowly, toward the exit. Sometimes people need to talk. And sometimes, they need someone who doesn't need them to talk.

===================

A/N- I like Theo.

Also: the foreshadowing bleeds from the walls.
Calvert was an almost laughably predictable man. Every night he'd leave the office at the same time, arrive home at the same time, and go to bed at the same time. This night was no different. Sure, his route was in the safest city on the planet, so almost any standard attack would fail miserably. I wasn't using a standard attack. Instead, I pressed a button, and his vehicle vanished. They'd probably spot the spacial distortion, perhaps even track it to destination after a few days. They'd never be able to determine who was responsible.

Calvert's guards were easily dispatched, if remarkably professional. Some of the PRT's best, clearly. Just not 'best' enough to beat me. Calvert himself calmly exited the vehicle, but he didn't try to fight. "Grue, I presume?" he asked to the darkness.

"You are awfully calm for someone who's going to die soon," I threatened.

"I survived Nilbog," he responded. "It had a certain impact on how I view the world. I don't doubt you can kill me. I don't even doubt you can do worse than kill me if you wanted to. Still, I am currently very much alive, and that means there's hope I get out of this."

"Hardly," I answered. I found myself incredibly unnerved. Calvert no doubt had plenty of training to resist thinkers, and that included the various cold read skills I'd picked up, but he was almost inhumanly calm. Like he was sitting safely in his office in the PRT headquarters, without a care in the world. Curious about the events transpiring, but in no way worried. I was also certain he was telling the truth about me being able to kill him: there was no secret plan in which he expected to survive by enacting.

"Ah, but I am resourceful," he smiled. "I may not be able to defeat you, but I can likely convince you that you have more to gain from my remaining alive, than by killing me. Surely, there must be a solution to suit both of us."

"And I'm suppose to trust you enough to work for you?" I growled.

"You did before, Mister Laborn," Calvert's voice shifted a bit, and I finally recognized it.

"Fuck," I mustered a laugh. "You're Coil."

"Coil, as far as I am aware, has been eliminated by Pantheon," he answered. Interestingly, that passed my lie detection as well.

"Cut the crap," I spat out. "I was just going to ask you if you were involved in the same corruption
that let Piggot murder my sister. Now I guess I have to ask a different question. Did you have another choice? Could your power have saved her? Don't bother lying, I'll know."

"I have no way of knowing," he answered. "Perhaps for the next couple years, until the apocalypse. I chose, instead, to ensure the death of Jack Slash and delay that over all other priorities."

I reached for my gun, a tinkertech weapon stolen from one of my other missions. And then Coil vanished, replaced by a number of people. Pantheon.

I bathed the area in darkness, and was surprised when some of them collapsed. Gaea, Aceso, Minerva, and Khepri simply fell like rag dolls, leaving me the handful remaining. Granted, that handful include Eki, and all three of the so-called Endslayers. I tested my powers, which I promptly lost as most of them took flight, leaving the darkness. Lachesis remained behind, kneeling and shaking the fallen form of Aceso. I couldn't hear what she was saying, but they probably had some kind of closed com system.

I stepped forward, testing her power at least, and regretting it quickly. My power copying never came with the same instinctive knowledge that the actual user had, nor the skills they had perfected. I was now within a foot of her. And with a half step, she was several feet away. I could see how she flexed her power, pushing the others further away from me.

I didn't know why they collapsed... no, now that I looked, I was figuring it out. They aren't real, I realized. I don't sense skills to draw from them through Victor's power. They must have been doubles, like those M4s that the police were using. Apparently they didn't get along with my power. Interesting. I had no desire to fight my former team, or their new allies, so I retreated.

Correction: I tried to retreat. Vista's power made that difficult, although with her power siphoned off for me to use, it was far from impossible.

Then I was slammed down by a kinetic attack. The safety glass of my goggles broke as I was driven into the ground. I looked up: Eki. How did she hit me?! I bolted, and she fired again, causing me to stumble. That was still absurdly accurate. Still, I felt my body adapting. The third shot didn't even slow me down. I fired back, striking her with the teal energy ray. Her forcefield canceled it. Of course it did. She survived New Delhi, this shitty gun means nothing compared to that.

Lachesis took flight, carrying Aceso. Or the body double, at least. She left my darkness, and with it I lost my access to her power. Aceso stepped away, staying in the air thanks to her armor's flight system, and the area around me warped to the point that the ground started to splinter under the stress. I hesitated for a second. Her power doesn't work on living things, I reminded myself as I ran into the mess.

Crawler's enhancements and Victor's skills served me as well as always, as I bobbed and weaved my way through the disintegrating landscape, evading stronger bursts of energy than before.
A steel cage fell toward me, despite it having been dropped well off course. It took me a second to realize it was Vista's power at work, again. I was caught behind the metal bars. This would have ended the fight, if not for Crawler's power. A grip and a tug and I tried to lift the cage off me. Only for it to remain, like trying to move the planet itself. *How?*

A floor of bars formed beneath, denying me even the ability to dig out.

"It's over," Eki shouted from above.

_Fuck. There's nothing for me to do, now, but try to talk my way out._ I dispelled my darkness. It didn't take long for the remaining body doubles to climb to their feet. Superhuman senses was one of the things I had not yet managed to pick up, beyond an ad-hoc 'people detector' using Victor's ability to sense potential skills. I could not hear what they were saying to each other, as they approached.

"B-Grue?" Khepri asked, looking at me. "What happened to you?"

"Hey, Taylor," I said, taking off the helmet. For the most part, my facial features hadn't changed. I was aware of her former feelings for me. We hadn't parted on bad terms. Maybe I could use that to influence her? Although talking to her through this proxy made it hard to read her reactions and emotions. But, then, that was true of her even in person. Lisa was here, too, and I wasn't sure just how well her power would work on me. Too much to bother lying about the most obvious stuff. "Turns out, I have a more or less permanent version of Crawler's regeneration, now."

"I meant the part where you're assassinating PRT Directors," Taylor responded, her voice cold.

"You do know he's Coil, right?" I asked. I suppressed a desire to smile when a handful of people reacted like they clearly did not know this. In fact, of the ones who were actually here in person, none of them knew. I wasn't sure about the doll users, but I was pretty certain Lisa and Taylor had to know.

"No trying to bullshit your way out of this, Brian," Lisa chided. _Of course, imply I'm lying without saying it._ "Where did you pick up this kind of social manipulation, anyway? That's not really your sty-" she froze. "Oh fuck. Brian, how the fuck could you?"

"What?" Taylor asked, looking over. "What did he do?"

"Remember how we couldn't find Victor?" she answered. Taylor's doll didn't show a reaction, but did her real body? I couldn't know.
"You know, I am aware those bodies are fakes," I said. "There's absolutely no reason for you to talk to each other through them, instead of wherever you're really hiding. Except for my benefit, or the benefit of the people who put themselves in real danger here."

"There was never a real danger," Minerva responded. "We knew who you were before we showed up. We just really didn't want you getting access to Gaea's power. Or mine or Khepri's or Clarice's for that matter. But especially not Gaea."

I frowned. "Good to know. So, planning to turn me over? You know I'm birdcage bound, just one show trial that the powers that be will ensure I can't win."

"You've been using people as human batteries, Brian," Minerva answered. "I don't think there's a rule you haven't broken with that."

"Nazis don't consider me a person," I countered. "They don't get to bitch when I return the sentiment."

I was, of course, watching everyone. Clotho and Atropos glanced at one another. Those two, at least, are sympathetic enough. They were also amongst the ones that reacted hardest to learning about Calvert being Coil. "Don't pretend you haven't done a few morally questionable things of your own, getting this far. Bribery, blackmail, recruiting supervillains left and right. I'm not even going to speculate on how you're the most blatantly obvious Class S threat since Nilbog, yet are being treated like heroes by the PRT, instead of on the receiving end of a kill order. Don't say 'Endslayer', we all know that's not nearly enough."

"You're not psychic, Brian," Lisa countered. "You don't even have a legitimate thinker power. You can't know anything."

"I know Armsmaster is still alive, and I know you also know," I offered. "Why are you covering that up? Blackmail to keep the wolves away from your door, I'm sure. Probably blackmailing Calvert, too. Unless he's still your boss. Fuck, Lisa. Taylor. He could have saved Aisha, and who knows how many of the rest of our team. How could you still work for him?"

"We work for no one," Taylor hissed. I was surprised that she cracked first, honestly. "We work with a lot of people. We do it to save the fucking world."

"By being as corrupt as the people who murdered your friends?" I countered. "If you need to worry about Dinah's predictions, then fine: you deal with that cataclysm. Leave me to cleanse the fucking PRT of its corruption and see to it that the world you save is still worth living in. If it makes you feel better, I won't even try to touch Coil. Attempt failed, villain escaped."

"Not how it works," Gaea stated.
"No?" I asked. "Is this a dictatorship? Do you make the decisions for everyone? If you're so sure of yourself, put it to a vote."

"A vote to what?" A young girl's voice asked. I wasn't sure who it was of the people above. Lachesis, probably.

"To decide if I'm more valuable free, perhaps?" I suggested. "That if they take me into custody, I'll talk about whatever secrets I know. Or that my crimes aren't as bad as yours, so you have no right to drag me in to be locked away and murdered. Or that maybe, just maybe, I'm the one doing the right thing and should be allowed to continue fixing the mistakes that you're too busy to fix. Call it a trial by a jury of my peers. The only one I'm ever likely to get, because you know I won't get one in an actual court of law. You won't, either, if they ever decide you've outlived your usefulness."

The three girls in front of me were silent. Likely talking to themselves in person, instead of by proxy. I could imagine the conversation. Refusing to make this democratic basically meant telling some of their most valuable members that their opinions didn't matter. Allowing the vote... well, I wasn't sure how it'd go, but I was pretty sure at least someone would side with me. A schism that I could use.

"Okay, fine," Gaea responded. "A vote."

"Take him in," Eki answered first. "He just threatened us and promised to continue a killing spree. The Nazis can go die in a fire, for all I care. But I am not letting any more unrepentant monsters walk away."

"That's a start," Lisa stated. "Same vote, here. We can't let you go just because you were our friend. Sorry, Brian."

Taylor looked away. "I'm abstaining from the vote. Too close to this." Of course she is, I thought. She knows the way the vote's going to go, and doesn't want to split her team's leadership by going against it.

I didn't wait to hear the rest. I knew which way Gaea would vote, and with her Aceso. Even if everyone else was in my favor, and I was only confident about two of them, that'd just force it back on Taylor. She'd choose her team's stability over me. I pressed the emergency button, and was teleported back to my base. I so didn't want to demonstrate that trick. Next time, they'd be prepared for it. And they had a lot more tinkers than I did. Including one with a transportation specialty.

I sighed. Well, fuck me, then.
Our combat team waited in our side dimension, of course. No sense in jumping twice. Horus and Lachesis stood together with Clarice. While Riley was next to Amelia. Off a little ways was Clotho and Atropos, talking privately. It was a clear demarcation, and I didn't need my power to see the social structure here.

Near them stood Eki, and Taylor's changeling wearing the Matriarch. And my own changeling in the newest model of the Huntress. That was the quiet corner.

Emma, Chariot and Yum Kaash were working the hardware we'd set up to track Calvert. Really, it was a van sized staging platform full of hardware I wasn't about to try to name. A lot of it was tech that we'd traded with Dragon for. Theoretically the most advanced sensory technology that wasn't currently pointed at an Endbringer.

Taylor herself was in her old, silk costume. Fighting via proxy instead of in person. Favors left side. Recent injury. Refuses to let Amelia heal it, refuses to let Riley heal it. Would likely allow Emma, but her skills aren't good enough to do more than merely speed the process. Choosing non Yggdrasil outfi, won't trust Amelia not to 'peak' at her through its connection to the living armor systems. Doesn't want to let Amelia know she's hurt. Doesn't want anyone to know she's hurt.

I tried to ignore the lovestruck longing looks that she and Amelia gave each other when they thought no one was looking. And the occasional glance they gave me that was anything but love. They blamed me for this, and I didn't need my power to tell me that, either. Fuck, the worst part about it is they were right. I fucked up bad, here. I forgot what Taylor was like without the Taylia bond. I forgot what Amy was like, too.

I hadn't accounted for just how completely alone they were, without each other. Bundles of trust issues that were only working around it because they knew the one person they trusted most was always there as backup, so no other betrayal mattered. That safety net was gone, now, and there wasn't shit I could do to fix it.

"He made his move," Taylor spoke. Of course she'd figure it out first. "Teleportation, I think? Out of my range."

"Tracking," Chariot responded. "Got it. Almost twenty miles northwest of the city. Middle of a field somewhere. Missy has the spot on her HUD."

....

Our changelings collapsed as soon as they were hit by Grue's darkness, and we were cut off from
their info feed, leaving our VR systems black.

"Fuck!" Amelia exclaimed. "This happened before, during the fight with Siberian. I forgot about it with everything else that happened!"

"Everyone get out of the darkness!" I commanded through our radio system. I couldn't be certain they heard.

"Got my bugs, though," Taylor responded. *Is upset by turn of events, angry at Brian, misses him, feels betrayed yet again.* "The relay function of my changeling still works, I just can't control anything. Guiding Eki's attacks."

"Lachesis got me out," Riley informed. "She's going to have Theo cage him."

....

"About this thing with Coil being Calvert," Atropos asked. "Is that true?"

"Yes," Amelia answered. "I'll share the details later... let's just say he's thoroughly under control and absolutely no danger to anyone. Ever again."

"You're skating on thin fucking ice," Atropos responded. "It better be a damn good explanation."

"A vote?" Eki asked over the communication network, interrupting that particular bomb. "Of all the assinine bullshit. If he's using Victor's power..."

*Confident, hard to read due to Crawler mutations and Victor's skills, is highly familiar with Victor's power as well as Crawler's, has been using them for weeks. Has access to other powers as well. Likely the other missing members of E88. Has access to high yield energy weapon and long range teleporter. Likely access to a tinker. Keeping them imprisoned somewhere. Believes he can escape if he buys enough time. Will return to his base. We'll go along with it," I insisted.*

"What? Why?" Eki exclaimed.

"We already know he's losing the vote, and so does he," I said. "He's planning some way to escape. Chariot, can you track him?"

"Already on it," Chariot answered. "Not quite sure how to explain some of these readings. He's carrying what's basically a miniature wormhole. No idea how it's being contained or where it comes..."
out at, but the scanners are pretty sure that's what we're looking at."

*Using Crawler regularly. Using E88 member(s). "Brockton Bay," I instructed. "Likely the north end, near the park they're building around Crawler's body. That's where he's keeping his victims."*

"That's crazy," Taylor replied. "How the fuck could he hide something like that from me?"

"Not all that difficult," Riley answered. "You didn't notice my spider bot."

"Because it was using corpses and garbage as camouflage!" Taylor argued. *Frustrated. Less forgiving of Riley's... oddities... Is aware of the danger of upsetting the girl. Doesn't care. Welcomes it, even. Refusing medical treatment. Wants to be hurt. I almost cringed. The Taylor I remembered was never so destructive. Untrue. Emotional connection and nostalgia colored perceptions. Taylor is behaving as normal, if more confidently than before. Isn't afraid of death or suffering, but not actively seeking it, even subconsciously.*

"He has some kind of tinker help," I interrupted. "Don't know who, but someone's responsible for that gun and the teleporter. And the wormhole. Scan Brockton Bay." The last sentence was a clear command, he'd need to be ordered not to by Taylor or Amelia. Neither of them did.

Meanwhile, Grue teleported.

"Got it!" Chariot shouted. "You were right, Minerva. He's on the north end, near the docks. Imputing coordinates."

"He'll run," Taylor volunteered. "We've got at most ten minutes. Gathering insects. If nothing else, I can keep him from taking others with him."

We shunted over in pairs, so half of us kept a charge to return with.

We dropped back right next to the signal. "I recognize this place," Taylor exclaimed. "We're only a block from the old place. He was right under our fucking noses the whole time." She paused for a moment. "The fuck? I can't sense the building."

"Do you mean there's no bugs?" Amelia asked.

"No, there are," she insisted. "I just... they're not noticing anything."

"He's using a technological version of Imp's power," I spoke. "You'd notice if it was simply driving
the insects off or killing them. Fucking clever. Okay, we can't trust the changelings and we can't trust our coms. Eki, fly above and fire the localized EMP straight down on the building. Full power."

"Got it," she acknowledged, taking off.

"I've twisted the surrounding area," Lachesis responded. "He'll be in for one hell of a fight trying to reach us with that darkness."

The pulse of energy hit hard enough that it blinded a lot of our changeling senses for a few seconds. Nothing electronic could have survived. In fact, we were lucky this area was industrial. We wouldn't have dared use this weapon in a residential zone. As it stood, it would still be hours before the repair crews fixed the damage to the power lines. This mission had better be worth it.

"Feeding the wormhole tracking to your HUDs," Chariot stated. "It'll let all of you track him."

Darkness tried to spill out of the building, caught only inches from the door and twisted around like a tornado up into the sky.

Atropos fired a couple more times, into the inky blackness. And then it stopped. Grue dropped, holding his stomach. Regenerating, faking severity of injury. Correction: not faking, is pretty hurt. Regeneration greatly inferior to Crawler's variant. Was relying on other regeneration during Coil battle. That regeneration countered by Atropos' power. "He's still functional. Gaea, cover him."

Most of her Dryad's mass simply tore off of her and collided with Grue, followed immediately by Yggdrasil pouring out of the sewers.

"There's five others in there," Lachesis reported. "Unsure if allies or captives. Two don't appear to be moving."

"On it," Taylor said darkly. "Two in cages in the basement. Another unconscious, has been for a while judging by the... smells." Angry at condition of prisoners, angry at Grue, reminded of Dinah, reminded of how Grue refused to side with her when she wanted to help Dinah. Comparing her relationship with Amelia to her relationship with Brian. Brian is very much coming up short in this. Resentful of how she lost that relationship. "Two others, holding weapons. Small guy and big guy. One seems to be the tinker. Negotiating their surrender."

Through my equipment's enhanced hearing, there was screaming.

================
A/N- The Skitter brand of negotiations.
I almost got sick when I entered the basement. We trusted dealing with Grue's accomplices to the others. Theo alone should be more than capable, the rest were just for assurances. But Taylor didn't want to let the others into the basement. She didn't even want me entering the basement. It wasn't hard to see why.

To call it a 'basement' was bullshit in and of itself. They carved a hole in the ground, pretty much literally. Rough, uneven walls shorn into the earth and then coated with some kind of shell. Possibly melted into an obsidian... I didn't know, tinker bullshit of some description, I was sure. A single extension cord brought power into the room. We had to follow the stairs down before we could really see anything. There were two separate cells that looked to be cobbled together from rebar and chicken wire.

"Who are you?" A woman asked— one of the prisoners. Her clothes looked relatively clean, and she looked in decent health at first glance. The man in the cell on the other side from her was... anything but. Staring blankly, unrecognizingly, at us.

"We're heroes," Skitter spoke, mechanically. "We beat your captors. I'm sorry we didn't know about you sooner."

"I suppose it's too much to hope for that you killed those rapist bastards?" the woman spat. I looked over at Taylor. The real her, not the changelings we were working through. She tensed at the accusation, probably deciding whether or not she believed it.

"You don't have to lie," Minerva countered. "Trust me, we know how bad this is. Rape would be the least serious crime on the list."

"What they did to Victor is rape," the woman insisted. "And Fenja..."

"Riley, back room," Taylor stated from our safe place in our alt earth. "You'll find the third captive. She appears to be comatose, I'm fairly certain it's medically induced. You'll know better than I would."

Aceso jogged toward the back.

"We'll get you out," I told the woman, stepping toward her cage. "What's your name? Are there any traps down here?" I wasn't concerned about us, but I didn't want the prisoners to be killed.

"Othala," she answered. It took me a moment to remember who that was. Had it really only been a
couple months since the removal of E88? "I don't think there's any traps, but one of them was a tinker, so I can't be sure."

"No," Minerva answered. "They were confident the prisoners wouldn't escape, and had no reason to set up traps. There were defenses upstairs to protect Uber and Leet, sure, but I'm pretty sure they were disabled by Eki. Any that withstood that attack? Khepri didn't give them a chance to use."

I gripped the bars and tugged. They broke easily enough. Out of the changelings, mine was definitely the strongest. In all honesty, I doubted it could rip the bars off of an actual jail cell, but this makeshift prison was nowhere near so durable.

Minerva simply opened a rather simplistic latch on Victor's door. He was unresponsive enough that they didn't even bother putting a real lock on it. *How long has he been like this?*

Othala rushed into the cell and gripped her... husband? I honestly didn't know enough about them to be sure. Still, she wept for the man, in full view of us and with no reservation or shame. "Can you help him?" she begged. "You're Panacea, right? A healer?"

*It's been a while since I've been a healer,* I thought.

"She can't," Minerva responded. "Grue used his own power on him, right? Repeated long exposures. Your husband has left behind plenty of case studies, and the damage cannot be repaired. No known healer has been able to fix the lives he's broken in the past, and he's been put through far more exposure than most of them. There's absolutely nothing for us to do beyond putting him in a care facility somewhere. Make his life as comfortable as possible."

"The fuck are you doing?" I asked Lisa from our staging area. "Our neural regeneration tech should be able to fix him."

"At best, it would allow someone else to have his body," she responded. "That mind won't be Victor's mind. Whatever remains of him in that shell is barely above brain dead. There's nothing left to save."

I closed my eyes. She has a point.

"On top of that?" Lisa continued. "Fuck them both, they're still Nazis. What Grue did to them is fucked up beyond words, but that doesn't change the fact that Victor did this exact sort of thing to others on a semi regular basis, and Othala helped murder people in front of their own families for the supposed 'crime' of not being white. I want her to be fully aware that this is an ironic hell of the highest order. They might be victims, but they're nowhere near innocent."

I frowned. I might be able to undo it. I had never tried fixing Victor's victims, due to my fear of working with brains. But she wasn't wrong: whatever I built out of what was left of his mind wouldn't be the same person. Minor repairs, especially in someone I already knew, that was one thing. *This... fuck, most of our zerg have higher mental facilities than what was left of Victor.*
"I'm sorry," my Dryad spoke. "We can't restore him. We... we can make sure his trial is fair. Considering his... medical condition... I can't imagine he'll be subjected to prison." Ladies and gentlemen of the jury, what would even be the point?

"You're going to arrest us?!” she shouted, startling Victor. "Shhh," she cooed at the upset man who couldn't understand what was happening, beyond knowing he was confused and frightened. "After everything that psycho put us through, surely you could just let us walk away?"

Taylor spoke to us in our safe spot. "So, the question is, do we recruit her? I vote against. We can't trust her, and she's mostly a redundancy."

I flinched. Fuck, the woman might be a Nazi, but she's still fucking human, and for us to go straight to the hard sell after she's been through this? I was beginning to remember why I hated Skitter and Tattletale so much.

"Nudge her over to the Protectorate," Lisa answered. "They need her far more than we do right now. Let them deal with the headaches that come with a Nazi nurse on the payroll. Right now, her only realistic value to us is making Calvert look good."

"It won't be that bad," Skitter responded to Othala. "Things have changed drastically since you've been down here. The Protectorate will make an offer. You'll get off scott free, long as you're willing to work for them. And they'll take care of your husband for you. Maybe they'll even be able to find someone who can fix him."

"What about E88?" Othala asked.

"Dismantled entirely," Skitter answered. "In prison, dead, or so deep in hiding that I'm not sure if even they know who they are."

"Purity and Crusader have joined the Protectorate in Houston," Minerva informed us. When did that happen? "Different names, of course. Purity's pretty generic, and it turns out Crusader's power can manifest almost any kind of outfit and melee weapon for his projections. He's got this whole cowboy theme going on with lassos, now. All the others have either left the country or settled down to an under the radar lifestyle so effective that I haven't been able to track them. Either that or they got themselves dead. Can't rule that out."

"You're a healer, Othala," Skitter continued. "One of the best ones on the planet, actually. Even if we ignore everything else you can do, that makes you invaluable."

She looked back down at the unresponsive Victor. "Fuck. You can promise they'll look after him?"
"I can promise a very fair and reasonable PRT Director who would meet you halfway," I answered. "Your power's too versatile and too useful. I'd be lying if I claimed to know exactly what you'll get offered. Directors will probably argue for weeks over where to assign you." Mostly who gets the credit or the blame, depending on who you ask. "Still, one way or another, Victor's going to be at the mercy of the state. At least this way you can ensure he gets the best possible medical care."

"She'll recover," Aceso announced, exiting the back room while carrying a very tall blond covered in nothing but a blanket. "Atrophy and substandard health care will be an issue, but ultimately a minor one. She should remain sedated for now, and allowed to recover slowly in a proper facility. Nothing more than a week or two. We can speed it up to about three days."

I constructed some outfits out of Yggdrasil and had them shunted over to my Dryad. "Let's get all of you into better clothes," I offered, handing Othala the set for her and Victor. She's his wife, so we were content to let her dress him while we worked to get Fenja clothed.

Meanwhile, our real selves were still debating on how to handle our captives. Victor, of course, was useless. He'd be the carrot that kept Othala in line. We'd already agreed on testing how Fenja's enlargement power legitimately worked. She might have useful powers that may or may not prove valuable. The really interesting question was if she could use her power on, say, one of our ultralisks. We could build a literally hundred foot tall monster for Taylor to command. Bring that into the next Endbringer fight.

And now, we were on to the criminals.

"Leet's got some promise for us," Lisa was discussing with Taylor, who was dead set on not taking any of the people who had done this. It feels good to know I'm still on her side most of the time. "But, honestly, if we could, I would really like to swing a way to get him straight into Dragon's personal control. That would be the absolutely ideal outcome. Leaving the kind of goodwill this kind of favor would generate with her, I've been comparing a few things, and I'm pretty sure I know what her tinker specialty is."

"Really?" I asked. I was actually interested in this.

"I think her power lets her understand other tinkers' technology," Lisa continued. "She isn't quite perfect at reverse engineering, but with each new piece of tech she picks up, she multiplies her options. It's likely she'll eventually reach a point where she can explain tinker tech in such a way that ordinary people can understand and build or improve upon it. But that's only a 'maybe', and not what I'm concerned with. What matters is that if Emma's a grab-bag-tinker, then Dragon is a trump-tinker."

"That is broken as fuck," Taylor muttered.

Riley simply nodded in agreement.
"No wonder she's so eager to buy almost everything we offer," Chariot responded. "I thought she was being nice to us for political reasons. But if you're right, then even the junky tech can be invaluable to her, as long as it's something she's never seen before. Or even if it is something she's seen before, just done in a different way."

"Holy shit!" Emma exclaimed. "You're talking about putting her in the same room as the guy who can build practically anything that can actually exist. Christ, give them a year and she might even be able to solve the Entity problem for us."

"That is exactly what I'm hoping for."

==============

A/N- Munchkining!
Dammit, Brian. I ignored the need to cry, looking at the state of his victims. Othala was reasonably healthy, though certainly not in good shape. After a bit of time, we'd decided that the only thing that had kept Fenja and Victor alive was liberal applications of Othala's powers. Part of what made her such a powerful healer is that it was 'no cost'. Or, at least, the Passenger was footing the bill instead of the laws of nature or physics. It worked like Lung, generating the mass and energy from seemingly nowhere. Instead of like Amelia, who needed to draw resources from somewhere and put concentration into it.

With Brian and his new 'friends' disabled, we could finally arrive in person, shunting our Changelings back over. Amelia had a sort of auto system that would take them back home. Most of the group was focused on finding equipment to confiscate. Whatever they used to blind me and my bugs was... I really wanted to know how that worked, and how to overcome it. I also, honestly, didn't want Dragon to rebuild a copy to use against me. Just because I happened to like her, that didn't mean I was willing to let her have that kind of power over me.

Speaking of... I glanced over at Amelia. She's beautiful. I looked away. God damn it, the world couldn't let have just that one thing, could it?

I walked over to Emma, currently in yellow mode, who was busy examining one of the larger devices. "So, what's this one?" I asked.

She shook her head. "Seems to be their teleportation device. Kinda insane, it's going to take us weeks to figure it out."

"Sell it to Dragon?" I suggested.

"Eventually," she responded. "This thing's giving me ideas, a way to transfer power from one area to another without it having to actually travel through the space between, and I'm sure Trevor will have some of his own. He's too busy on the stable point wormhole right now."

Fucking tinkers. "Okay, keep up the good work," I responded. Emma smiled far too happily at the minor praise. My own significantly less cute and horrifying version of Bonesaw, I thought. Of course, if she starts calling me 'big sister', I'm going to stab her in the kidneys. I walked away.

Ordinarily, right now Amelia and I would be holding hands and just... discussing. It was our post combat cooldown, taking the time to let the adrenaline wear off. Right now, after seeing what happened to Victor, I would have loved such a comfort. There was nothing of him left but a shell. I once again affirmed to myself that I would rather die than for that to ever happened to me. I had to hope that, if it did, someone would be kind enough to kill me.
Meanwhile, I spied with my bugs, listening in on the other conversations. Atropos and Clotho were off in a corner, doing exactly what I would have done with Amelia. I tried hard not to be resentful that they were so happy together. I chose not to listen in on them, except to ensure they weren't too upset with us over Coil.

Theo was with Lachesis, and they had approached the mostly passive Othala. She wasn't doing anything right now but trying to comfort her husband. My heart went out to her. I couldn't even imagine what she was going through. "Hello, ma'am," Theo said to his father's former employee. "I'm... I'm sorry about what happened to Victor."

Othala paused for a second. "Theo?" she asked. "Is that you?"

"Yes, ma'am," he answered. "Please don't spread it around to anyone else. I'm Horus, in costume. A hero."

"Kaiser was beginning to suspect you would never get your powers," Othala responded. "Instead you seem to have gotten the best ones out of your family."

"My father was wrong about a lot of things," Theo answered, letting a bit of distaste into his voice. Enough to show he has an edge, without making him sound needlessly angry or unstable. I was impressed. He'll be a brilliant leader, some day.

Miss Militia arrived with the PRT, someone else that I felt sorry for. I had a hard time imagining what her life was like these days. The last remaining Protectorate member in Brockton Bay. Yes, most of the others were nearby, but she was the only one here. After Piggot and Armsmaster... well, guilt by association. She may or may not deserve it, but her career was functionally dead. They couldn't demote or fire her, but they would never place her in charge of anything important.

"Don't bother sending your guys in yet," Lisa said, intercepting Miss Militia. "We're still itemizing the tech. Leet left behind some traps. We're combing the interior to make sure everything's been disabled."

"You mean to make certain you've stripped everything of value," Miss Militia countered.

"Spoils of war," Lisa dismissed. "Private organization, we don't get a fat government budget. Don't worry, we'll be selling it to your bosses eventually, I'm certain. Wouldn't want anyone to accuse us of some kind of cover up."

She frowned. The 'spoils' system was... messy, from a legal standpoint. What was valid, what was not. Especially when it came to tinker technology, which by all rights always went to the PRT and then the claimant would simply be paid for the equipment. Much the way firearms and drugs were
treated. Dead to all rights, we could not legally do what we were doing. It was also a shady area of borderline legal, so if no one told us to stop... we didn't have to stop.

"Are we going to have another custody argument about the prisoners?" Miss Militia asked, choosing a different battle. She sounded tired. Resigned, even. She would have won the spoils battle, at least in the short term. And, in the process, given the PRT access to technology that might just be able to shut down my power entirely. Instead she chose not to, knowing that she didn't have the political clout to keep what remained of her career should she piss us off. *Did she feel this way when she let Piggot firebomb my friends?* I wondered. *I certainly hope so.*

"Depends on who you want in custody," Lisa responded. "Othala, Victor and Fenja are victims, here. We didn't capture them, we rescued them after they'd been kept in captivity for weeks and used as a power supply. We won't be turning them over to your custody. However, Othala's willing to discuss the terms of her own surrender. And the possibility of joining the Protectorate. Be nice to her, and she goes home with you tonight."

*God damn it, Lisa, you did that on purpose.*

Miss Militia didn't respond to the comment. Considering she wasn't native to this country, she may not have gotten the joke. Then again, she dealt with Assault and Clockblocker on a regular basis, so it was just as likely that she developed a skill for ignoring that kind of thing. "The other two?"

"Victor's... well, you'll see for yourself," Lisa continued. "He's not in a condition to be making decisions for himself, and likely never will be again. Fenja's injured. We will be taking care of her until she's rehabilitated. It'll take a week at most. After that... it's really up to her to decide what comes next."

"The others, the actual criminals here. Responsible for the attack on former Director Piggot, the attempted assassination of Director Calvert, at least three other murders, kidnapping, crimes against humanity, conspiracy to commit a bunch of other crimes, and possibly treason. You should be thanking us... you were on his list, too. So was Legend, although I personally doubt he could have succeeded at that." *So was Costa-Brown, aka Alexandria... that would have gone poorly for him as well.* "I'm sure the prosecution will come up with a few other things to add to the list... they're all yours."

"Really?" Miss Militia sounded shocked. "No argument, no surprises?"

"Well... we do have to insist that Dragon take personal custody of Grue," she added. "His powers are... weird, now. We're not sure you have the facilities to hold him. We're not completely certain we have facilities to hold him. We had to use our Endslayers to put him down the first time."

"And he survived?"
"Well, we weren't trying to kill him," Minerva countered. "Look. He has had access to a lot of powers, and he's somehow even managed to keep the ones he got from Crawler. We don't know for certain what he can do now, and it's everything Gaea can do to keep his adaptive regeneration suppressed."

"A couple more hours of this and I won't be able to keep him unconscious anymore," Amelia confirmed. "After that, Theo might be able to hold him, if he doesn't have a power that can let him escape. If we don't have a better solution by then..." She'll have to kill him, I added mentally. I wanted to laugh and cry. One of my exes might kill the other. And then I had to chide myself. Brian and I were never an 'item' to make him an ex, and Amelia wouldn't be killing anyone. More likely, Atropos would have to kill him. Hers was the only power we could rely upon to no-sell his regenerative abilities.

Meanwhile, I was drawing my new breed of shunt capable units into the area. I was the only one here, other than Riley, who legitimately had blood on their hands. I can add more, if it means no one else has to. It's not like it really matters to me.

=================

A/N- being part of my story is suffering.

Also: I use "of course" *waaaay* too much in my writing. I've been deleting a lot of those because it's fucking annoying.

Why did no one ever point that habit out to me? It's a bad one and needs to die. In a fire. Made of bees.
Taylor didn't even look at me when she walked in. She was wearing her old silk costume, instead of her newer armor system, which meant she had walked home. There was a time when I would have been worried sick about her out alone at night. Coupled with how quiet she'd been the last couple days... and, for that matter, how she was coming home instead of staying at their base... I had good reason to be worried. "Hey kiddo," I started. "What are you doing home?"

"Sorry," she answered. "I know it's getting pretty late, but we didn't get finished until late. Then we had to deal with the PRT and Dragon and I'm completely exhausted."

"Usually you stay at your base, especially after one of your missions," I pointed out. "C'mon, Taylor, I'm not completely oblivious. I know I haven't really been there for you when you needed it, but I'm trying to make up for that. What's wrong? Is it a problem with Emma?" It didn't seem likely, but I didn't have a lot to go on, either. I had my problems with them working together, but I trusted Taylor when she insisted that it wasn't going to be like before. Still, this...

"No," Taylor sighed. "It's not Emma. If anything, she's been too nice. Bordering on the pathetic. Like 'I wish I were a more horrible person so I could enjoy this instead of feeling pity' type... fuck, I don't even know."

I wasn't a fan of the language, but I let it slide. Now isn't the time for that. "So, what's bothering you?"

"A lot of things," she admitted. "It's a work night, I don't want to keep you up."

It was an obvious avoidance, something I was painfully familiar with. She'd done it for years, and so had I. It was something I thought was behind us, after she joined Pantheon. She was like a different person after she and Amelia started seeing one another. A couple months ago, I would have let her behavior right now go. A couple months ago, both my daughter and I were miserable, and I didn't have Sarah giving me advice on how to deal with teenage girls.

"Okay," I agreed. "But tomorrow, we're meeting up for lunch, and we'll have that conversation."

She hesitated, probably looking for a way out of it. "I have work, too," she started. "We have a pretty big op planned for Friday morning."

"Bigger than Chicago?" I asked. It's Wednesday, now, so that only leaves one more day.

"Yeah," she agreed. "Lots bigger. This is going to make people think Chicago was a vacation day.
"Then we talk right after you get back," I stated. I hated negotiating spending time with my child, it was simply depressing. *She's a busy girl,* I reminded myself. *Important on a national level. International, even. In the last week she's spoken with the Triumvirate and most of the leaders of the PRT. Dragon. A half dozen political leaders.* I tried not to focus too much on how she declared all out war with some of the most dangerous psychopaths in the world.*You told Sarah she should accept that her daughter's grown up and making her own place in the world. Time to take your own advice, Danny, however much it hurts.*

"I'm not sure when that'll be," Taylor answered. "It could take days before everything's concluded."

"Okay, but then we talk about everything," I insisted.

She shrugged. "Okay, I can do that. Just, not right now. I need to get some sleep if I want to be useful when I go to work tomorrow. Logistics are going to be a nightmare, and we have to figure out how to best distribute our people. A couple of our most valuable are also our least cooperative..." She complained as she went to her room.

I smiled to myself. *Not so different from her old man, then.*

...

The doorbell rang. Too late at night to be business. I checked from the window. Amy was standing there, in her armor. *She rarely goes anywhere without wearing it,* I'd realized. I rushed to the door and opened it.

"Hey, Carol," Amy said as I opened the door. *She still doesn't call me mom,* I thought for what must have been the dozenth time in the last few days. I suppose I really can't expect anything more, all considered. "Mind if I come in?"

"Of course not, sweetie," I said. Then I mentally slapped myself. *Sweetie? Really, Carol, that's the best you can do?* "What's the problem?"

"That obvious?" she asked, smiling sadly as she stepped into the house. A fairly empty house, since Mark wasn't here right now. Hopefully Amy wouldn't notice, I really didn't feel like explaining that to her. I also didn't want her to think that I was reconciling with her out of loneliness.

"You're here, aren't you?" I pointed out.
"Yeah," she sighed. "Sorry I haven't come by sooner. Caught up in all kinds of stuff."

"It has only been a couple days since I extended the invitation," I consoled. "I honestly expected it'd take a bit longer. Maybe we might get together for dinner this weekend. Don't get me wrong, I'm glad you're here. You don't have to feel bad about it." When did she go from blaming me for everything in her life to apologizing? "Now, tell me what happened?"

"Taylor broke up with me," she answered. Oh, that kind of problem.

"No, that's not fair. We got into a fight over something she did. Then I did something worse. And I was the one who broke up with her. We both over reacted. I apologized the next day, and now she says she loves me, but can't trust me not to do that again. I have no idea what to do."

I hugged her. "I'm sorry," I said. "Relationships are hard to give good advice on." Made more difficult by the things you're not telling me, like what the fight was really about. "Lord knows I've proven I'm not very good at them. Are you still working together?"

"Yes," she answered.

"That's good," I tried to offer her a confident smile. "Having shared goals helps. You can keep working together, and that means you're still close. The same things that brought you together as a couple the first time can do it again."

She looked down. "I... don't think that's going to be possible. Taylor has... a lot of trust issues." Well, that's one thing I have in common with the girl. "In a way, it's amazing that she ever let me get close enough to hurt her in the first place. I doubt she'll ever make the mistake of trusting me like that a second time."

Mistake to trust her? "Amy, why-"

She kept speaking, interrupting my question. "Then we ran into her ex and he..."

Oh. Oh! This definitely isn't good. "Are you afraid they're going to get back together?"

"What? No!" Amy exclaimed. "He went full psycho. Kill order type stuff. Remember the E88 members we couldn't find? He had them chained in a makeshift prison."

I tensed, trying to force myself to not think about what happened to me so many years ago. It's in the past. They're dead. They can't hurt you anymore.

"Yeah, it's that bad," Amy confirmed. That's right, she is still in contact with me. Which means she
can identify my emotions. She doesn't know why I feel so strongly. "Turns out, he has a power that lets him drain powers from other people. He was using them as batteries. He drained Victor so completely that he was pretty much a zombie. It was the stuff of fucking nightmares... I'm not even sure what part's got me most messed up right now."

"Part of it was how Victor and Othala were," Amy responded. "I could see how much she loved him... almost anyone could. Except Victor. He was so dead inside that he couldn't recognize who she was. Every part of their memories together are missing. It... no one should have to go through that."

I simply nodded. I didn't think much for the idea of feeling sorry for Nazis, but if there was ever time for an exception, it was now.

"Then there was Taylor..." Amy shuddered. "She acted almost like Victor did. Empty, nonresponsive. It's how her power works, when she lets it. She coordinates so many things all the time that sometimes she forgets to act like a person. Especially when she's upset. It's terrifying to see her like that, especially comparing it to him."

"That's creepy, but at least she was upset, right?" I asked. I'd run into enough power based oddities to not judge things like that. Especially when it comes to the ones with Thinker powers. "Not being good at showing your emotions isn't the same as not having them."

"No," Amy sighed. "That's just part of it. She tried to hide it from me, I think. When we had her ex in custody, there was a pretty good chance he could escape if something went wrong. He has a top tier power. Maybe not Triumvirate level, but pretty close. She brought some of our anti-Endbringer weapons to use if he managed to break free of the other restraints."

"That's pretty smart of her," I stated, but there was a sense of dread forming in my stomach.

"They're killing weapons only, Mom," Amy disclosed. "She was ready to kill him. Someone she used to love. And that's not even the worst part. The worst part is how she looked at him like she didn't even see him. The way Victor looked at Othala. The way Taylor looks at me, now."

I hugged her tight. I had no advice to give.
I woke to Lily kissing the back of my neck. "Mmm," I turned and smiled. "When did you get here?"

"I only live three doors away, you know," she laughed. That was true enough. Lily and I were trying very hard to not be 'uhaul lesbians'. Neither of us wanted to live in the base the way about half of Pantheon did, either. We didn't want that even before knowing that fucking Bonesaw lived there. I pushed that thought out of my mind; they were right, she was too damn useful to get rid of, no matter how much I hated to admit it. So, instead, we lived in the 'refugee apartments' near the northern edge. It was mostly empty, now, as people received their government aid money and houses were repaired or rebuilt. A virtual ghost town. If a building could be called that.

"You have a point," I admitted, turning toward my lover, then sitting up. I didn't bother covering myself. After all, nothing she hadn't seen before. "Give me a chance to shower and clean up before we start talking business."

"I'll join you, Lily offered, starting to shed her clothes. I didn't object.

....

"Are you sure about coming with?" she asked me, after we'd managed to get dressed. "You don't have to."

"Yeah," I confirmed. "I've been doing nothing but making costumes lately. Don't get me wrong, I love the job, except I really don't, but the money is amazing and I certainly don't hate it. "But I could use some more excitement, y'know. Chicago was such a rush. I'm looking forward to doing it again." Even if it puts me in the same team as her.

She shrugged. "Yeah, I'm feeling kinda restless, myself." I ignored everything she didn't say. I knew she left New York for a reason. It made sense that they have her lead our team for that mission, she knew the way things worked there. Now she was going back. To old friends and enemies. To those who might feel betrayed by her shift of allegiances. And of course the villains that were now our allies. I could imagine how uncomfortable that was even without thinking about what happened to New Delhi.

I should probably distract her from thinking about all that, I decided. I smiled in what I hoped was a seductive fashion. "Besides, you're going to be in charge this time. I can't wait to find out what orders you'll give me."

....
"First stop, Boston!" Lachesis announced, letting that team off. It included our heaviest and most versatile forces. The ones that were going to bring down the Butcher. I understood how important that was. We could crush the rest of the Teeth as many times as we wanted, it wouldn't make much difference if the leader still remained. Still, they were sending all our primary team leadership. They weren't exaggerating when they said Lily was going to be in charge of this, she and I were easily the eldest members, and I made it pretty clear that I didn't want to be in charge of anything.

They also weren't kidding when they said we needed help to make it work. The five of us were powerful, but we weren't unbeatable, and we were lacking in a few departments. Especially when it came to a city like New York, which had a massive number of people. It was like looking for a needle in a stack of needles.

I tried to avoid glancing at the girl beside me. The one that had spit acid in my face only a few months ago. Talking to her would achieve nothing, and she had the good sense not to try, preferring to spend her time with Lachesis and Horus. Instead of thinking about that too much, I concentrated on filling my suit with power. Not too much, I didn't want to waste the energy. Systems started lighting up as they were charged. The anti-materiel blaster was one of the team's favorite weapons. Capable of destroying almost any equipment, with no risk to anyone wearing that equipment. Every so often they'd ask me to demonstrate my power again, as they tried to invent a weapon that could imitate that effect.

What seemed like only a few footsteps later, we found ourselves at our destination. We shunted over, right into a cleared out area of Central Park. Right between the Adept and the Protectorate. Three of each. I recognized Assault and Battery, but not the third guy. I didn't recognize either girl, or the guy from the Adept. They didn't look terribly happy with each other. They didn't seem very happy to see us, either.

"Fancy seeing you here," a man's voice spoke from the Adept's side of the line. Lily- Atropos, we're in costume now- turned toward him immediately, Azrael's wings fanned out and angled forward toward the speaker, in response to her body language. This is the combat stance. Coupling that suit with her power meant she could put twenty rounds a second through anything, natural or parahuman, with damn near perfect accuracy right now. This is why we keep Bonesaw alive, I realized.

"Shaman," a woman spoke, sounding less than pleased. "I suggest you shut up." She looked over to us. "Sorry about that, Pantheon."

Atropos laughed. "Don't worry about it," she insisted. "We have a... history together. So, 'Shaman', do your bosses know you named yourself after your favorite class from a tabletop RPG?"

"You bitch!" he muttered. Now that I had a chance to get a look- he wasn't that old. Probably younger than me. Maybe younger than Lily, though he was pretty tall. "But since we're on the subject of sharing personal information with strangers... here's some more: We dated for six months before she cheated on me."
I blinked. *What?*

"No. I dumped you and then started dating her," Lily argued back. "And you couldn't handle that, so you got her drunk and slept with her when she was too wasted to turn you down!"

"Guys!" Lachesis shouted. "This is not the time! We have more important shit to worry about. You can hash out your personal problems in private, later. I'm sure everyone here would rather work out how to deal with the Teeth."

There was a cough from the heroes' side, we all looked at the source: Assault. "I think I speak for anyone when I say that this is fascinating and I am perfectly okay with letting it c-ooof." He gripped his side where Battery elbowed him.

"You're right," Atropos said, presumably to Lachesis. "Sorry. Let's start with powersets. I already know the heroes. Shaman is a breaker that can imbue various objects with special properties. I trust he's picked up a few tricks since joining the Adepts?"

The woman nodded. "Bag of sawdust. Uses it to create shields by infusing the material and causing it to lock in place."

"I've seen him use that trick with dirt," Lily confirmed. "So what's your name and power?"

"Scry," she answered, then glanced at the others. "I'd rather not let my powers be known. I'm a thinker."

"You're amongst allies, here," Lily countered. "Need to know what you're capable of. Especially since you're the one we're relying on to give us much of our information, here. How you got it is important."

"Postcognition," she answered, after pausing for a minute. "I can look into a reflective surface and view anything it reflected for up to two weeks. Usually mirrors, but pools of water, tv screens, and windows will also work." *That is kind of terrifying.* "In addition, I can look into one mirror and see out of another in real time. It has a few limitations. I have to set the mirror in question, and can only keep one at a time. I've been tracking the teeth for a while. I want to see them dead. Promise me we're not going to hold back."

"Trust me, we're going all out for this one," Lily answered with an almost sadistic tone. "In fact, we're about to reveal one of our own secrets for this. You are listening in, right, Khepri?"

The voice rose up around us, a chorus of clicking and chirping to mimic human speech. "Loud and
clear," it stated. I shuddered involuntarily. Giving away the fact that Khepri's range was capable of covering both Boston and New York simultaneously was a big fucking step, one of those things that potentially changes everything. I knew that, but all I could think about was how fucking creepy that disembodied voice was.

Scry cringed and Battery was scratching at her side. Almost everyone on both sides glanced around looking for the speaker. *That's good,* I thought. *I'd feel like such a child if I was the only one freaked out by that trick of hers.*

==============

A/N- You can't prove any of this isn't true to canon!

And, yes, Shaman is the other Sting user. Shaker variant instead of Striker/pseudo-blaster.
We had a few hotel rooms rented when we arrived in Boston, which we went to almost immediately after our meeting with the Protectorate and the Ambassadors. They'd coordinated everything with the Boston heroes and villains already, so there wasn't any real difficulty there. Simply the usual final agreements bullshit. I didn't pay much attention.

"So, what's the plan?" I asked, following Taylor into her suite. It really was a suite, too. Really fancy, two bedrooms and everything. Had to cost some good money to rent this thing, let alone three of them.

"You'd know if you put as much effort into paying attention as you did pretending to sleep during meetings," Taylor chided me. "Seriously, why do you do stuff like that? We all know you don't actually sleep, ever. You're fooling absolutely no one."

I smiled. "I wasn't pretending to sleep," I told her. "I was picturing that beautiful little love nest Amelia built for the two of you. Specifically, with the two of you already spending a romantic evening in it. Seems so sad that it's going to waste."

"You..." she paused. "Wait. Why are you in my room?"

"There were only three rooms rented. I got one, Crystal and Lisa got one, and everyone just assumed you and Amelia would get the other," I answered, flopping down on the couch. "I traded with her, so this is now our room for the night. Wow, this couch is insanely comfortable. You could make out for hours on this thing. Seriously, like world record snogging sessions could be achieved here. I'll get the camera and the stopwatch, you go get Amelia."

"Fuck me, why can't you people stay out of our business?" Taylor opted to sit in one of the chairs.

"I know it comes as a surprise to loner types like us," I said, stretching out across the luxurious piece of furniture. "But this is what having friends is like. It means you're never alone because there's always some asshole taking up space on your furniture and trying to help you get laid. Do you think the hotel will let me keep this baby? Or at least tell me where to find one of my own?"

"You remind me of someone I used to know," she said. "No, that's not a compliment. At least he had the good graces to at least not poke around in my business. In all seriousness, it's not your problem. It's not anyone's problem. Why can't you people mind your own business?"

"For real?" I asked.
"Yes, for real," Taylor insisted.

"Dunno why I'm about to tell you this... must be the couch..." I tilted my head back and sighed. "Fuck, grab your note pad and pen. This stays between us. I'm not scared of you like some other people are. I can and will make your life suck if you speak of this to anyone."

"Fine, complete confidentiality" she agreed. "Let's hear it. What gives you such a need to prod around in my life?"

I closed my eyes and compelled myself. "Her name was Erica," I started. "Six days older than me... beautiful, smart, friendly, nice to everyone... we were best friends. I don't remember a time from my childhood when I didn't know her. I loved her before I even understood what love was."

Taylor said nothing, so I continued. "Maybe I'm looking back through rose colored glasses. I dunno. She had her faults. Namely, men. She always had the worst imaginable luck with men. Starting with her sack of shit father, and that set the tone for everyone she ever dated." I started crying, though I was at an angle that kept Taylor from seeing my eyes. "The fuck nineteen and twenty year olds thought they were doing, dating a twelve year old, I don't even want to imagine."

"And her father?" Taylor asked, her voice radiating her anger.

"You mean, did he touch her? Like that?" I asked. "I don't know. I do know he hit her. And, no, there's nothing we can do about him... he didn't live through Leviathan. Neither did she."

"I'm sorry, I didn't think..."

"I do go out of my way to not let people know," I pointed out. "I can hardly blame people because I succeeded at it, right?"

"I guess..." she agreed reluctantly.

"All of that? That's the stuff I could probably live with," I continued. "I was just a child, y'know. For all my fantasies of rescuing her and running away? I know that would never have happened. What really eats at me. The part that I can't forgive myself for. I never even told her how I felt. Not once. Would things have been different if I had? If she felt the same way, it could have saved her from a lot of her god damn 'boyfriends', at least. If she'd just been with me when the Endbringer sirens went off, then she would probably still be alive today. That's the shit I could have done something about. If nothing else, at least she would have known someone cared about her. That's something she deserved, and I failed to give her."

"Wow," Taylor muttered. "I'm so sorry."
"Don't be," I insisted. "Sorry won't change a damn thing. It won't make me feel better, it won't help her at all. You want to prove this story means a damn thing to you? Then don't do what I did. You have a real chance to be happy right now. More importantly, you have a chance to make someone else happy. Take it, take it and don't you dare look back. Life's too short to do justify anything else. I don't care if you're immortal, life's still too short."

"You're right," she sighed. "You're absolutely right."

"Good," I said. "I'll go get the camera and the stopwatch. You get Amelia."

"No," she stood up. "Not tonight. We need to be up at like three in the morning. Amelia needs her sleep, and so do I. We can't afford to be anything but our best tomorrow, not against the Butcher. All the happy makeup sessions in the world won't make any fucking difference if we screw up and get ourselves dead the next day."

"I guess that's fair," I relented. "Promise me that you're serious, though. I mean right after. The rest of us take care of dropping off the captives and looking good for the press. Meanwhile, you and Amelia will run off to that grotto she made and be elbow deep in each others' pants."

"Know what?" Taylor smiled. "I'll do my absolute best to do exactly that."

"Good," I said. "And remember, it has to be the grotto. That's where I put all the hidden cameras."

Taylor shook her head slowly. "I'm going to bed. Try not to get dust all over the couch." She turned and walked to one of the bedrooms. I spent my time looking for something interesting on television.

....

Four in the morning is early for most people. It's even earlier for assholes who spend all night being psychopathic fucks. They likely didn't wake up early very often. I imagine they woke up hung over a lot. Some of them have probably woken up screaming before. I bet some of them had even done both at the same time. I really doubt any of them woke up covered in terrifying mutant bugs that inject a drug designed by the world's most powerful biotinker so that all it does is inflict pain. Today, they got to do all those things.

And I was happy to let them.

"She's been flushed out," Khepri announced over the com. "She'll be looking for us, do your thing."
"On it," I responded, trying to fly in a passable copy of Khepri's armor. I was doing a pretty poor job of it. Clearly not too awful, however, as evidenced by a spear impaling my gut. The world vanished for less than a blink of an eye, and I was restored to normal. The fake-Khepri outfit continued to fall. I teleported near Butcher, and she vanished. That we had expected. A quick activation of my suicide switch, and I had a fully charged suit once again.

"Fuck, she spotted me," I said over the com.

"Othello says she's in the building," Minerva announced. I had no idea who 'Othello' was. One of the other teams' capes, I guessed. "She's checking up on her people. She's very very pissed. She'll be back out in a moment."

"Left!" Khepri shouted, and I turned immediately. In time to catch another oversized crossbow bolt to the face.

I teleported behind her a heartbeat later. She spun and stabbed at me with another spearlike bolt. It appeared to be made of brick, somehow. I managed to touch her hand before she shoved the weapon into my stomach. I reappeared. A half second later, she also reappeared right beside me. Confused and nude. I had seen how she moved- there was no fucking way I could touch her if she didn't want me to. I'd have to make her touch me.

I said the first words that came to mind. "Nice tits."

She punched me in the face, letting me tag her again. She vanished, and I pulled her back. "No, seriously. Those can't be real." This time, she clotheslined my neck before vanishing. She didn't get far.

"Or is regeneration plus durability the parahuman wonderbra?" Butcher grabbed my mouth, lifted me off the ground and slammed my head into the roof hard enough to crack the tiles.

A second later, we had both resumed our prior positioning. "You really should trim, though," I taunted, and she broke my neck for it. She didn't even try to teleport away this time, opting instead to decapitate me with a sword she got from somewhere. "Need a machete to even find anything." A sideways slash that got both of my lungs. "Just because you're a deranged bitch." And that would be my heart. "Doesn't mean you can't take the time to shave." She kneed me hard in the crotch. I was glad that pain didn't carry over between restorations.

"What do I have to do to kill you!?" she shouted, finally getting frustrated.

"Well I dunno maybe you could bitch at me, how about that?" I suggested, at which point she attempted to use some power on me. I wasn't sure which one, it didn't work except to trip my
"Seems that's all you appear to be good for these days, huh?" Another power attack, apparently, made me respawn again. "Are you trying to use your bitch-fu on me?" I asked. She stomped into my shin, and would have shattered my leg if I didn't reform before the damage was much more than superficial.

"Bitcher, that's what they should call you," I continued my memorized rant. It was easier than being spontaneous, especially when every fucking thing she hit me with hurt like hell. Speaking of, she just kicked me in the head hard enough to crush my skull.

"Seriously, five ancient sages of bitch gathered atop the peaks of Mount Bitch to proclaim your birth," I kept going, and was rewarded with an elbow to the chest that sent me flying. I rematerialized almost twenty feet away from her. She was still tagged, however, so I just stood there. "And a hundred years later, when all the bitch stars had aligned," she teleported. I almost brought her back, when a fist punched through the back of my neck.

"You were born and made everyone's life around you a living hell," Wait... Did she just uppercut me in the ass?

"Because you are SUCH a BITCH!" She didn't attack, and I felt the teleport. I brought her back, and she vanished again, only a few feet away, however.

While I had been distracting her, Khepri's swarm had been gathering. Butcher's teleportation had limits. Mass distribution- if there was too much other stuff in the way, she couldn't teleport into it. The sky had gone so dark that even the infravision setting on my armor couldn't see the sun.

"THERE IS NOWHERE FOR YOU TO RUN," the world around me announced. I mentally reassessed last night's claim that Taylor didn't scare me.

A/N- Wanna hear something REALLY depressing? "Based on a true story, used with permission."

Also. Zach gets a crowning moment of something, at least.

And THIS, ladies, gentlemen, and others... is the chapter that got me in trouble on SB. Everything else was apparently cool. This got me a one day mute.

Wanna take a stab at which line, specifically, it was?
"Two day vacation, huh?" I smiled. *Mom is going to flip her shit over this one.

"Yup," Clarice confirmed cheerfully. "Like Chicago, only without all the adult supervision. Too bad we're not going after the entire criminal underworld this time. That was so much fun"

"Only the worst of them," was my response. This really was exciting, and Clarice's energy was infectious, even if I knew she wasn't actually real. Riley was busy with other stuff. Like breaking the Taboo. Something that would likely take a lot of time. "So, how's Trevor doing?" I asked. In spite of him being a mole, he was one of the only people who actually took the time to try to get to know me in the Wards. Him and Weld. I worried about them both, sometimes.

"He's doing great," Clarice said happily. "Still playing with that wormhole. Says he has an idea for allowing us to use our powers across dimensions without needing an actual gate. It might be what we need to go after the real target." *By which she means Scion's true body.*

"So who's on our team?" I asked.

"Clotho, Theo, and Atropos gets to be in charge." she pouted. She still hadn't gotten over Lily getting to take that name, when she didn't get to give it to Bella. I smiled, it really was easy to forget how young she was sometimes. "They think she's best to put in charge because she was a Ward in New York and knows the landscape better."

"Makes sense," I stated. "Probably need the senior members to deal with Butcher directly. And of course they'd want to keep me, you, and Theo on the same team since we rock the house every time we're together." I, on the other, was more worried about Lily's lack of professionalism. She reacted far too much on really dumb impulses without stopping to actually figure out the situation. *There is a reason she was never put in charge of the wards despite the PRT's stupid seniority system, oh brilliant leaders.*

She brightened up. "Okay, that's going to be fun, at least."

....

Hopefully Khepri's display would distract everyone from Atropos', I thought. I felt more than a little humiliated that I had to look the leaders of two separate professional teams in the eyes and admit 'yes, she is our team leader'. *Maybe next time they'll just put me in charge.*

"Aren't you suppose to be in Boston?" Battery asked the swarm. *Smart,* I thought approvingly. She
was trying to discern the limits of Taylor's power. No doubt there's already a pre-approved kill order waiting for a moment like 'interstate range'. *If only they knew.*

"We confiscated a piece of tinker tech recently," Khepri answered. "Some sort of portable wormhole that powers can travel through. I'm carrying one, Aceso's carrying the other. Functionally, it means I have my range around her as well as where I'm at. Minus a few feet."

"I see," acknowledged Adamant, the leader of the Protectorate at this location. His powerset was mostly defensive. Lowest grade brute, plus immunity to all powers. Literally any kind of power stops where he starts. Mind control, precognition, lasers, forcefields, invulnerability, super strength, none of it worked on him. Unfortunately for him and others, that didn't include bullet fire. Or Endbringers, apparently. I wasn't sure how it would apply to my powers, or Clarice's abilities, or an 'absolute' power like Atropos or Clockblocker... but none of that was likely to come up on this job.

"We're hoping to find a way to maintain the device," Khepri continued explaining to Adamant. "But it's Leet's tech, so it's anyone's guess whether we'll ever be able to fix it when it breaks. May as well take advantage of it while it still works."

Then there was the last of the Adepts. I was disappointed, but not surprised, that Atropos didn't bother to ask her what her power was. Instead, I texted the question to Riley. She spoke via the com to all of us. "The last Adept is called Alchemy. Breaker/shaker. Anything she touches can be attuned to her, so all attacks directed at her transfer harm that object instead. She's close to indestructible thanks to this, and she can extend that durability to objects she holds. One of the survivors at New Delhi."

I saw Atropos tense, as did Clotho. She sent the information to them as well, but they're not too happy with the idea of Riley being the one that sent the information.

"Thanks for the info," Khepri said over the coms. "Horus... talk with Alchemy, maybe your powers will interact. Aceso, I want you with the Adepts as well. The rest of you go with the Protectorate. How Lachesis and Adamant interact, power wise, needs to be tested in detail before we go to battle."

*They're breaking me away from the rest of my team? Fuck. I knew the reason was sound, but still... fuck.*

"So what's the strategy?" Scry asked, once she had recovered from the creepy swarm voice that still caused me to shiver, despite all the times I had dealt with Taylor. I had nightmares from the times I'd fought her as Skitter.

....

The plan, it turns out, was 'the bugs go in first'. The new pepper flies. Basically just large houseflies
that detonate into a cloud of capsaicin- or some tinker built chemical that did the same thing, only better. One was guaranteed to clear a room in a matter of seconds. We had about ten thousand of them. There couldn't have been so many that it was any kind of necessary, but that's what we did. I was more than a little disappointed, honestly. *Why even show up if we were just going to watch Taylor and Amelia play with our toys?*

I watched the bedlam through my people-sense, as they ran for cover that wouldn't be available, or tried to work their way to an exit while blinded and struggling with other blinded and desperate people. *Okay, I had to admit, this is kinda fun.* Then a cloud of light purple smoke. billowed out of one of their buildings.

"That's Haze," Clarice announced over the coms. "Stay above the cloud at any cost." I recalled back to our briefing. Haze's power is illusionary, not chemical. He can pick who's influenced and how, and physical barriers mean nothing.

I gave the tug, and Calysta leapt into the air, folding her wings in to maximize the antigravity. It was one hell of a weird feeling, falling upward, but we had practiced with it a lot. Theo's power rippled into existence, coating the two of us and our Pegasus in indestructible metal.

All of us took to the air with our respective abilities, except Adamant, who was immune to powers-including, presumably, Haze's. And Clarice, who was of course not an actual person to begin with.

A yellowish gunk splashed against our metal shield, and quickly slid off. More shots fired upward, forcing others to avoid the attack. Shaman extended his hand casually, and the goo targeting him dissolved into nothing. "That's Plague," he announced. "Do not let that stuff touch you, it's lethal if you're lucky."

Another from the briefing, his power ranged from Crawler-type-acid to 'cancer of the everywhere' to fast acting ebola. The one saving grace was none of his afflictions were contagious, but Shaman wasn't exaggerating. Death was what happened to the fortunate. We were pretty sure our armor systems could counter the stuff, but there was no reason to tempt fate.

"Khepri, can you guide my aim?" I asked. There was no answer. "Khepri's not responding," I announced to the group. "We're on our own, here."

Another burst of acid traveled up. Atropos dived in front of it, protecting Clotho. Her power destroyed the goo. Several more bursts traveled upward, but we all had our defenses in place. Unfortunately, we were only able to defend. Especially since we couldn't risk being inside that cloud.

I was watching the ground with my power, pulling and pushing in minor fluctuations that allowed me to locate the likely source of the attacks. Setting Singularity to its lowest attack state, I fired straight at the target. Direct hit in the gut. I... may have used my power to cheat a little, making my
attack the equivalent of a point blank shot. He doubled over, in what I hoped was a lot of pain. I found myself wishing I could have used 'stage three' on that sadistic bastard.

"Plague is down," I announced. "I'm watching to make sure he doesn't get back up." I hesitated, *I'm not in charge here.* "Atropos?"

"What?" the older girl asked, and I felt the need to either facepalm or slap her.

"You're in charge, what are the orders?"

She hesitated. "Can you clear that fog away with your power?" she asked.

"No," I answered, ignoring the desire to point out that if I could, I already would have. "It's not really there. A function of the power. I can't bend it any more than I can bend Khepri's control radius."

"I can move in," Adamant volunteered. "All I have to do is find Haze and I can take him out."

"Okay," Atropos readily agreed. "Go with that."

I activated the private com line to Riley. "Send Aceso in with him," I instructed my friend. "He's not strong enough to go in there alone, immunity to powers be damned. Don't tell Atropos about this."

"Understood," Riley agreed. I was a little more at ease, now. She was younger than me, if only by a year and a half. She also had at least that year and a half more combat experience than I did. I could trust her to handle her own.

I felt the distortion right before a shriek came from Clotho. A six armed monster had appeared in front of her and tried to claw her with some wicked looking serrated talons. It didn't work, fortunately. Tapestry was almost as indestructible as Singularity. We could trade punches with Endbringers without much problem, so chances were pretty good there wasn't a physical attack on the planet that could hurt either of us. The monster vanished only moments later, leaving a very startled, but unharmed, Clotho.

"The fuck was that?" Atropos asked.

"Don't know, not in the briefing," I responded. I sent a video over to Riley, along with another private message. "Any clues?"

"Don't recognize it," Riley answered. "Moves like it's real, so most likely a Case 53 or shapeshifter,
possibly some kind of construct. Almost certainly not an illusion or projection. I'm running it through the database. Clearly has brute and mover powers, recommend you step up to stage two."

There was a thud against Horus’ defensive shell. The spider monster had attacked us, but failed miserably. It vanished.

"Oh no..." Riley muttered from the private channel neither of us had switched away from. Clarice's voice went over the standard com. "Haze isn't an illusionist!" she announced. "He's a reality changer, like Labyrinth! Everyone fall back! Retreat!"

I was about to command Calysta to move when I felt a sudden sharp pain in my chest. I looked down, and could see the blood pouring out of me, out of the destroyed portions of both Theo's power and my own armor. *Huh, I didn't-*
The Butcher was surrounded by enough insects that there literally was nowhere for her to move, beyond a small bubble of space in the middle. I idly wondered if she still needed oxygen, because there simply wasn't a lot of air. If these were natural insects, they would all be dying en mass right now. And, in fact, most of them were dying, only to be held in place by the antigravity latticework put together by Chariot and Emma. Who'd have though Emma, of all people, would be one of my best allies? I smiled grimly. Fucking Tinkers.

"You can't beat me with bugs," Butcher growled at me.

"LET'S TEST THAT, SHALL WE?" was my response. A dozen shock-beetles flew in at her, along with over a thousand other similarly sized cockroaches. Who were amongst the few bugs that could survive the rapidly depleting oxygen levels. She slashed the shock-beetles out of the air with a sword made from concrete and ignored the roaches entirely.

So, her combat sense is effective enough to identify which bugs are a threat, and which are not. That makes this harder.

Some of the modified hummingbird moths charged in next. They couldn't last long, but they didn't need to. Another slash, and they were destroyed. But her blade was now melting. She tossed it aside before it could reach her hand. Then bolted straight into the mass of bugs.

She didn't dive into any of the deadly ones. That would be too much to hope for. I covered her body with biting, stinging creatures in masses dense enough that they could have chewed their way through a normal human body in minutes at most. Butcher wasn't most bodies, however. Too durable for the bugs to cut through anything. I tried the eyes, next, but she was fighting with them closed. Not that surprising, it was too dark for her to see in there, anyway.

She teleported. It was less than a foot, but it was enough for every insect near her to be consumed in the explosive firestorm her power left behind. *God damnit, I thought I had that covered.* I rapidly plugged the holes left by her movement, no sense in giving her a chance to teleport back to the spot she just came from. I couldn't stop her, but I could make her work for it.

She coughed, now that she was free of attacking bugs. *Good, the air quality is poor enough to make it a problem for her.*

The bugs converged again. This time, I wasn't as interested in going for the obvious weak points. These bugs swarmed into her mouth and nose, trying to fight their way down her throat. She clamped her mouth shut and started chewing the insects, crushing and grinding them with her teeth and tongue. There was not a moment of hesitation in her actions. She bolted again, then teleported back to her starting point. I just couldn't flood the area with bugs fast enough to block her return effect.
Zach was moving to get in close, and I provided the swarm of bugs needed to keep him cloaked on his way closer to the madwoman.

She dropped and pulled a makeshift spear out of the roof, throwing it toward the boy with perfect accuracy to strike his heart. "Bugs don't block her ability to sense blood and veins," I noted aloud to the team, through their armor. It wasn't something we had expected to work, which was why we were using Osiris to test the chance. "We can't use them for striking cover."

"Fuck," Minerva muttered.

"Doesn't matter," I responded. "I'm wearing her down fast. I might not need help."

"You'll need help," Minerva insisted. "You might be able to tire her out, but there's no way in hell you can take her down without killing her."

"You're right," I agreed. "But the more I can soften her up, the better off we are." I drew almost all the shock beetles and had them dive in to form a bubble around her. They activated their power surge a half second before converging on her body. Not quite as good as having them make contact, but at least this way they actually did something before they died.

She stumbled, heat and smoke pouring off her body from the rough equivalent of getting struck by lightning twice. I pressed the swarm in, trusting that her body could withstand the initial blow without killing her or even disabling her. I was not disappointed.

"Got a plan," Emma stated. "Gaea, I need you to make more of the shock beetles, but with only a hundredth of the electrical power."

"I can do that," Gaea agreed. I let myself indulge in the music of her voice for a second. "It'll take a few minutes."

"Still got her on the ropes," I reminded. "I can keep her there, but don't stop feeding more reinforcements, we've already killed half the usable insects in Boston here." It was true, too. She couldn't fight me, but this was becoming a war of attrition. Between her durability and her regeneration, she would win that war.

She had another idea however, manifesting a throwing knife of stone, she launched it at absurd speeds, where it flew out of my bug cloud and kept traveling, impaling a pedestrian that had come out to gawk at the spectacle.

"See that?" she gasped, fighting for the limited supply of oxygen that my bugs were consuming far faster than she could. "I can keep doing that. How many lives am I worth to you, hero?"
I hesitated for all of a heartbeat. *However many are necessary.* "WHAT MAKES YOU THINK I'M A HERO?" My swarm asked, as another stream of acid moths dived toward the unarmed Butcher. One even managed to clip her arm before she teleported, annihilating the rest. She didn't seem as bothered as I would have expected, frankly. *Oh, right, one of her powers is supposedly an inability to experience pain.* I wondered if that was a real power, or merely a side effect of her insanity.

I didn't have any actual eyes on the scene, and the junk bugs were dying quickly, so I could only make approximate guesses at Butcher's condition as she continued to fight. She was slowing down, but even still she was faster and stronger than any normal person. With her various regeneration powers and the precognition, and my bug cloud being held together by antigravity instead of their own power anymore... I had another minute or two before she worked free.

"Got the new bugs," Gaea announced. I almost sighed with relief.

"Eki, I need you to shunt in next to Osiris," Emma instructed. "T-Khepri, when they shunt through, cover her in them. Don't activate them, they should slip under her danger sense. For a little while, at least."

They appeared a few seconds later. *Good, they don't rely upon oxygen, I noted. That makes this easier.* They were tiny, this new batch. Mosquito sized. Butcher really didn't notice them as they found purchases in her singed hair and across a body that was charred and crisped in several areas. *How is she still standing?*

Eki appeared in my full awareness, as opposed to the somewhat dimmer perception across the dimensional barrier.

"Ready?" Emma asked.

"Ready," I answered.

"Taylor, I need you to take control of Eki's suit. The weapon's already ready. Fire a half second after you discharge the smaller flies, got it?" Emma asked.

"Understood," I answered, and followed the instructions.

Butcher, of course, teleported the moment before Eki's weapon fired, but the lightning arced and struck her anyway. Burning its way through a good portion of my insect cloud. For a moment, it must have looked like one of those plasma globes as the electricity discharged itself across my swarm.
She collapsed to the ground, her body battered to the point of uselessness. For a second, I wondered if we might have accidentally killed her, thus passing on that curse to me or Eki. That could have been disastrous. But then the psychopath managed to force herself to her feet. Right arm hanging limp and useless, and the rest of her so damaged that it was hard to imagine she wasn't some kind of zombie. She teleported in a burst of flame.

Only to reappear right next to Osiris, who instantly disintegrated and Eki, who started screaming in blood curdling agony. She dropped to her knees, gripping her hand around her lightning weapon. Eki struggled to catch her breath as Osiris disintegrated again in response to getting too close to the madwoman. Eki roared in inarticulate rage as she brought her weapon up and fired it directly into Butcher's gut. The psychopath gripped Eki's arm with her one good hand, holding the the energy weapon against herself. A third shot went off, and Butcher's hair caught fire from the released heat from the electricity.

"Fuck!" Minerva shouted. "Butcher's given up! She's trying to escape by forcing Eki to kill her!"
"Haze isn't an illusionist!" Clarice shouted over the com. "He's a reality changer, like Labyrinth! Everyone fall back! Retreat!"

Moments later, I felt a sudden sharp pain in my side. I tried to cry out, but the pain and shock had taken my breath away. Then Missy slumped forward. *Oh fuck oh fuck oh fuck.* I gripped Calysta's reins with the arm that wasn't holding Missy. I forced my power tight around the injury in my side, trying to staunch the blood flow. "Aceso," I managed to gasp. "Lachesis is unconscious."

I brought Calysta up and back, landing her on a rooftop a couple blocks from the mission location. Atropos and Clotho followed, with Shaman trailing behind. I could feel my armor working itself into my wound, both back and front. It was patching itself in, relieving pain and providing for my biological needs as best it could understand. Injecting what passed for its blood into my bloodstream. Missy's armor would be doing the same, but it her case it would do more harm than good.

A series of explosions sounded in the purple fog, detected and amplified by my suit's systems. It was dimmer than the usual perfect clarity it typically grants. Whether that was because the suit was putting too much of its effort into keeping me functional, or because I was injured enough to lose hearing, I didn't know.

I laid Missy flat on the roof. "I'm going to stabilize her and then shunt her over," I insisted. "This is really bad." I called upon the memories that had been installed thanks to the memory tech. Six years of medical college from Rey, plus a few updates provided by Riley and Emma. Tinker knowledge didn't translate, unfortunately, but I had first rate skills and then some. *Who gives a fuck if I didn't earn them?*

"Not from a rooftop," Riley insisted. "You know the shunts are geoanalogous."

"Just... just buy time in there for us, okay? I don't want them attacking us while I'm working on her."

Atropos landed first. "Is she okay?"

"Cut open her armor," I instructed, speaking slowly so as to not strain my own injury. "Neck to crotch."

Atropos didn't argue, slipping a clawed finger into the armor and splitting the high durability living armor like it was gossamer. Deep red fluid sloshed out in a way that would make you think the armor itself was bleeding. *Too much blood,* my unfamiliar knowledge told me. I tore open her shirt before thinking about it.
The human male part of my brain apparently spent too much time around Zach, because I couldn't help but think that I was now looking at my girlfriend topless. Unfamiliar programmed instincts screamed at me that I didn't have gloves. Not things I care about right now, I instructed my mind, but that was probably my own shock and blood loss speaking. Alongside the certainty that she was far beyond my ability to help.

"The fuck happened?" Shaman asked, after he landed. "Holy shit!"

"Not your business," Atropos told him, still staring at Missy.

"The fuck were you thinking!?" he continued, yelling at her. "You knew they had an illusionist and you fired a lethal attack!"

"It wasn't my fault!" Atropos yelled at him. Meanwhile, another series of explosions went off in the clouds.

"Nothing ever is, is it?" Shaman retorted.

"Will you two just shut up and fuck already!" I screamed at them. They looked at me, and a small part of my mind once again confirmed that I spent too much time around Zach. Another small part of me was terrified. A good amount was in pain. The overwhelming majority, however, was pissed. "We're in a god damn war zone right now, and you two are arguing while one of our own is dying in front of you! Learn some fucking priorities!"

None of them spoke up. "Clotho," I instructed, as I started to push Missy's armor back together. It needed to seal so the shunt would work on her. "You're the most vulnerable of us. Take Lachesis and shunt her. We'll coordinate from there. Then you're to go support Battery's team at the other location." Missy got shot because your girlfriend was too busy looking after you to think about the team, I added mentally. That won't happen again.

"Isn't that dangerous in her..." Clotho started.

"At this point, it doesn't matter," I interrupted. "She'll die before we get her anywhere, and the only place with facilities that can help is on the other side of our teleportation. Take her and go." A few lies, there. We didn't want Shaman to know about our side dimension. And I didn't want to tell anyone, even myself, that Missy had already died. That shot pierced her heart.

Atropos spoke up. "You don't get to make that call," she insisted. "You're sending her to..." she paused, glancing toward Shaman. Bonesaw, that's the name you can't say.
"The fuck I don't," I started coughing, and felt the metallic tasting fluids coming up. *Blood*, I realized. *Must have pierced my lung. Fuck it, I only need one of them.* "Someone needs to take command here. You have a problem with that, take it up with Khepri and Gaea when we get back. Our suits have recordings for a reason, I'm sure they'll be fair in their evaluation. Of both of us."

"It... it's fine," Clotho said timidly, her ribbons moving to wrap around Missy gently and firmly. *She has the same medical 'training' as I do. She'll handle everything with proper professional care. "Saving her takes priority. I'll be back soon." At least one other person here is competent."

There was another explosion in the mist.

"Fuck!" Riley shouted. *Wow, first time she's ever sworn. Now is not the time to focus on that. I had to wonder about how much my mind was wandering. Probably a function of the anesthetics the armor uses. "Lost Clarice. Sorry I couldn't buy you more time.""

"Aceso's down," I wheezed. Talking so much with only one lung sucks. "Clotho, go. We'll take care of ourselves."

She hovered slightly and then vanished over to the other side. Smart choice, establishing flight before teleporting.

I forced myself to stand, using my armor to do much of the work. It was laborious to work my way back onto Calysta, despite the antigrav built into my armor, and my metal shaping to help me. "Okay, now we're going back in."

"What for?" Shaman asked.

"Rescue operation," I said grimly. "This mission's fucked already, but I'm not about to lose someone." *Else.*

"You're going in there for Aceso?" Atropos asked incredulously, which of course earned a look from Shaman.

"Don't forget Adamant," I reminded her. "Aceso can take care of herself, but he's barely more than baseline human."

"Once we're in there, we won't be able to trust anything we see," Shaman pointed out.

"I know," I agreed. "That's why we make a plan now. We know Adamant's power will cancel any of ours. Pretty simple to verify that it's him, that way, just have anyone claiming to be him touch your
armor, and see if they lose a hand. Whoever finds Adamant is responsible for escaping with. Once they're out, our... mission control... will activate the emergency shunt and bring the rest of us to our home base. There is exactly zero other goals.

"You're going to show him our..." Atropos hissed. "You can't trust him with that."

"Oh, sure, the cheat says I'm the one who can't be trusted," he scoffed.

"Can't believe I'm thinking this, but I wish Zach was here." Horus to Clotho," I said over our com. "Tell our mission control to contact me."

"Uh... mission control?" she asked.

"Yeah," I insisted. "She should be the only other person except Lachesis there with you right now."

"Oh, right," she agreed. "I'll let her know."

A few seconds later, Riley's voice spoke into the coms. "Kinda busy, what do you need?"

"Turn on Shaman and Atropos' lie detection systems for me," I requested. Why they didn't already have them active, I thought. Know what? Don't care.

"Done," she answered.

"There," I said. "Now, Atropos, did you cheat on him?"

"No," she answered, her voice hard.

"That's a start," I sighed.

"He still got my girlfriend drunk to sleep with her," she continued.

"No I didn't!" he insisted. "Yeah, I slept with her. A bunch of times, actually, but she was sober! Most of the time, at least."

"Then why did..." Atropos started.
"Doesn't matter," I interrupted. "You guys can go find your mutual ex and have a heart to heart when people aren't trying to *fucking murder us all."

"Fine, whatever," Shaman agreed. "Now what?"

"We split up and follow different paths. Keep your powers active, trust no one and nothing you see. Don't use any ranged attacks. We're immune to almost anything that matters, and we're no longer trying to win this battle. Just find our ally, cut our losses, and hope the other teams succeeded where we failed. No other goals. And remember that Clarice got out already. You see her, it's a fake." I struggled to get a deep breath. Who'd have thought running on one lung was such a pain in the ass. "If we see each other, we don't bother speaking. That's our code: there is no code. If the other talks, we know it's a fake. But don't attack... just ignore it and go back to the search. Com silence as well, we can't trust what we hear over it."

....

I was glad to have Calysta. I was glad to have a mission. I kept thinking about Missy. *Sure, she had the memory scan... but was that still her? Or just a really convincing copy? Would I be able to tell the difference? Would I care?* It would be easier if Riley could save her. No hard questions.

"H-help," a voice croaked. I turned my head. *Clarice? No, that doesn't make sense.* But there she was, partially trapped under some rubble. "Horus, I'm so happy to see you!" she smiled, and tears ran across her beautiful face. "Please, help me. It hurts." I felt a pang of sympathy and a desire to protect her. *She's one of my friends, the one who introduced me to Missy. I owe her so much.*

I knew it was a fake. I knew it was a fake for a bunch of reasons. *Clarice is a remote control doll for Riley, who was safe. Clarice is designed to shunt over if damaged. If that fails, she self-destructs entirely to prevent anyone from reverse engineering the tech inside her. Clarice doesn't have tear ducts. Clarice can't feel pain.*

Despite that, I moved toward her. "How can I know it's you?" I asked.

"I don't know," she admitted, her voice going soft and timid. I wanted to hug and comfort her so much it hurt. "My armor's damaged, the com broke. I can tell you something only people you trust would know. Like your name?"

She blinked. "Well, nevermind then," she sighed, extracting her leg from the rubble and climbing to her feet. "Don't know how you're so resistant. I'm not picking up any power interference. Doesn't really matter, though. You may know I'm not 'Clarice', but my power works on the subliminal. You still believe I'm her, despite your awareness. You can't hurt me, and you will trust me. Now would you mind letting down your armor so I can climb onto the horse?"

_She's right, _I realized with a slowly dawning horror. _I know better, and it doesn't make a difference._ She approached the side of Calysta, walking seductively. I wanted her body against mine. _No, that's not true. Yes, I think Clarice looks attractive, it's hard not to considering she was built like that on purpose. But this is artificial._ As I was fighting my warring emotions, I caught sight of the knife she wielded. _Fuck, I know it's going to happen and I can't change it. Except... "I know something you don't know," _I stated.

"Do tell," she said with a confident smile.

I answered with two metal spears, formed from my armor on the side of Calysta's body. They lanced out at her, spearing in the left shin and right kneecap. She dropped screaming, and the spell was more or less broken. _Must be one of the ones that require concentration._ "Something like that wouldn't have hurt Clarice," I informed her as I quickly retreated from the fake that I didn't believe was a fake, forcefully crushing the emotions she played on. _I love Missy,_ I was forced to remind myself. _Not Clarice._ It helped that I knew Clarice was really Riley's automaton, and I didn't feel that way toward Riley. Knowing didn't stop me from crying at the loss.

As it turns out, I probably could have spared myself the trouble of looking. It was Shaman who found and escaped with Adamant. A fact I only discovered after being shunted, painfully, into our alternate world. I gasped in agony from the sudden distortion of momentum as I was brought across the dimensional barrier.

"We got everyone out," Riley announced, and I was glad for that. "And I've managed to stabilize Missy." I smiled, but my heart wasn't in it.

==============

A/N- Ah, one of the chapters I kinda wished I could have ended on a cliffhanger. Right around the point where she pulled the knife. Que Sera, Sera.
Rebecca, Rapture, sighed wearily.

It had been a difficult month, to put things simply.

It had also been a busy few months. She'd been primarily occupied with the numerous children Heartbreaker had spawned through his numerous unions, rapes, with his enslaved 'wives.' She'd had her work cut out for her as one of the few qualified capes able to counsel, console, and untangle the various psyches involved. One of the few blessings that could be salvaged from the utter disaster that was the Simurgh's death throes was that there was, for once, enough psychiatric personnel in the Protectorate's employ to spare a few for extraneous operations like seeing to the needs of dozens of mentally and emotionally damaged individuals.

She was particularly thankful for the loan of a gifted psychologist, Yamada-something, that had spent the last week relieving her of a few of her more...problematic cases.

"Rapture? You still with us?" Narwhal probed.

"Yes, just...what was the topic again?" Rebecca asked, taking another deep pull from her coffee mug.

Narwhal gave her a look, the likes of which she could read even without her power helping. “You need sleep, Rapture. Don't make me ask Defiant to slip you decaf again.”

Rebecca scowled.

“I'm fine,” she replied, with what she knew a half-second later was unnecessary harshness. Sighing again, she palmed her eyes tiredly. “Okay, I'm not fine. I'll head to bed after this meeting, I promise, I just...”

Narwhal cocked her head, worried, “...you just?”

Rapture shook her head. “It's...personal. Something I don't like to talk about.”

Narwhal, though she looked somewhat more worried than before, nodded. “As long as you're talking to someone about it. That's what the other shrinks say, right? You need to talk to someone, don't keep it bottled up.”

“Yeah,” Rapture agreed faintly. “That's what they say...and, well, I'm calling Yum Kaax almost nightly now.” It felt good to be that honest with someone who was rapidly becoming one of the few she'd call 'friends.' Rey, of course, was topping that list rather quickly himself. Although their long-distance relationship was far from ideal, it did allow both of them to take it slowly and give them the space they'd become accustomed to in their single lives.

Honestly, she was a bit glad for that space these days. Dealing with the mess Heartbreaker had left behind had hit her unexpectedly hard, reminding her of the 'bad old days' when she'd just gotten her powers and when she'd had to reverse a lot of the damage she'd caused after joining Haven. Her temper had frayed especially with one child whose power was somehow interfering with her own, making him difficult to read. It was like his body was saying one thing and he was thinking another...perhaps he had some undocumented Stranger power?
“Good,” Narwhal smiled, inadvertently breaking her musings, then paused.

Rapture knew the question before it was asked, but tolerated it all the same.

“...so, is it true what they're saying about Pantheon and Chicago?” She finally queried.

“I honestly couldn't say, but I think it's likely enough,” Rapture replied. “After all, Chicago was that hardest hit by New Dehli.”

“I suppose,” Narwhal sighed. “It's just difficult to accept that the Protectorate might be ceding control of a city like this, even as hard-pressed and short-handed as they are.”

“Pantheon is competent enough,” Rapture assured her fellow hero, despite the other thoughts she might have on the subject. Sure, Pantheon was competent, but they also had their fair share of skeletons in the closet, and far more than their share of emotional, social, mental issues to go around. In short, they were dangerous, but appeared to have cobbled together enough of a semblance of order to aim their various disorders at the far more dangerous and vile members of society.

Only time would tell if the cure would prove worse than the disease.

“So, how is progress?”

It was some Canadian official speaking, someone suitably high-profile who'd co-opted praise for 'Breaking Heartbreaker' that he'd managed to land himself nominally 'in charge' of the efforts to actually save the people they'd physically and mentally removed from Heartbreaker's influence. She never actually managed to summon up enough desire to remember the bootlicker's name, but it started with 'T'-something, she was sure.

“Well enough,” Rapture began. “I think we're past the 'attempted suicide' phase that several of Niko's 'wives' went through once his control over them was gone. A few of them never even got that far and slipped into non-responsive coma-like states where they can only rock themselves and cry.”

Which he would have known had he actually read the reports, given what her power told her. “Normally, I'd recommend remanding them to the custody of a psychiatric facility, save for the fact that most of these women have parahuman abilities which could cause significant damage if they managed to escape...or be removed by a third party, which is actually the greater concern in this case.”

The annoying man made affirmative sounds in all the right places, a habit born of long practice.

“The wives who are actually in something resembling a normative mental state are a mixed bag,” Rapture continued, more for the other attendee's benefit than their 'government oversight.' “The ones who are responsive and can handle it, mostly those without powers, I'd recommend sending home to be with their families, this would likely speed their mental and emotional recovery.”

Another pause. Dragon's avatar nodded, probably making notes on whatever computer she was situated behind. Defiant, the woman's significant other, was not present, but likely listening in through the comms. The rest of the Guild were there in some capacity, looking grim over the overall assessment of what the press had dubbed 'The Heartbroken.' A few of the psychiatrists and psychologists were in attendance too, though she'd likely be the only one speaking today. Even Yamada was there, when rightfully she probably should have been using the meeting as cover to get some sleep, especially since her presence wasn't necessary. Hopefully, they could exchange notes on
that one specific 'problem case' after things wound down, Yamada should have had a recent session
with him.

Coughing once to buy a second to order her thoughts, Rapture shuffled a few papers in front of her.
“The parahumans who are...operable, are of course a different matter. Many of them have expressed
desires ranging from returning to whatever life they had before Niko Vasil, to joining up with the
Guild, the Protectorate, Haven, or other independent hero organizations.”

Notably, she didn't name Pantheon, but she didn't have to.

It wasn't one of the options many were trying for, but a few of The Heartbroken had expressed
interest in Pantheon, if only because they had co-developed the 'cure' for Master-class parahumans
with Haven.
Another pause, this one somewhat longer.

“As for the children...” Rapture trailed off. “I have no idea.”

There was silence for a moment as that sank in. Dragon cleared her throat.

“If you could elaborate, Rapture?”

Rebecca sighed, dropping her head into her hands to emphasize her helplessness on this cause.
“None of them will likely ever lead normal live. They are, to a lesser or greater extent, functional
sociopaths on top of being predominantly parahumans. Precious few of them have a mother in
Heartbreaker's harem who is willing and able, both, to care for them. Likely, they'll all be remanded
as wards of the state, the problem being...”

“...the state doesn't have the resources, wherewithall, or specialized skills to adequately deal with
children this disturbed who have super powers...in these numbers, at least.” T-something finished,
surprising several of the heroes at the table by actually contributing usefully to the discussion for
once.
“So, suggestions?” He continued, rubbing at his face tiredly. “Is the Guild willing to accept any of
the Heartbroken on a more permanent basis? The children or the women?”

“Regrettably, we don't have the resources either,” Dragon replied. “Personally, I think the best option
would be to consult with the Protectorate. They have several Wards teams which could serve as the
closest thing to normative socializing these children could have, all the while placing them under the
supervision of the more senior members of the Protectorate.”

“Allowing this many Canadian nationals to join the Protectorate or Wards,” the official took a deep
breath, “is tantamount to admitting Canada can't look after it's own. I can only imagine the field day
the press would have if we simply turned over that many children to the Wards without so much as
trying for an alternate solution. Then there's the recent PR nightmare concerning that Ward...what
was her name? Shadow Stalker? The case could be made that the Wards aren't a suitable
environment at all for these children and I really don't want to have to explain to the PM why we're
looking at a civil suit from the Youth Guard; overall, it would be a massive headache.”

“What about Haven...or Pantheon?”

All heads swiveled towards Mrs. Jessica Yamada as the discussion paused for a long moment.

The Canadian official looked towards Rapture, “That is a thought...would Haven be able to
accommodate even a few of the Heartbroken children?"

Rapture sighed, her eyes turning heaven-ward for a time. “I...can't say. Theoretically, yes, but it's not
my call to make. I'll have to contact Halo and see what he says, at the very least, before committing
to anything.”

“And Pantheon?” The official pressed. “I understand you've worked with them before?”

Rapture allowed herself a brief moment to ponder the thought of handing over even one of the most
unstable children she'd ever met to Pantheon. Idly, she wondered if the ensuing visions of destruction
and fire were God's way of telling her this was a 'bad idea.' She moved to speak, but Yamada was
already talking.

“Even while she was nominally a 'villain,' Skitter provided food and shelter for a number of
orphaned children from Leviathan, which more than demonstrates their ability to care for traumatized
children. Also, some members of Pantheon have experience with the Heartbroken.” Jessica Yamada
continued.

The government man perked up at this, shuffling through several reams of paper. “Really? I hadn't
seen anything about that...wait, there was the girl, Cherie...ah, Cherish, who was a member of the
Slaughterhouse before Pantheon removed them. Is that really applicable?”

Yamada's eyebrows creased and, distantly, Rapture felt the voice of her instincts, not her power,
begin to wail in alarm.

There was something wrong here.

“Not Cherie,” Yamada refuted. “Jean-Paul Vasil, aka Hijack, aka Regent of the Undersiders.”

Rapture frowned. Why would Yamada be going to bat for Pantheon like this? Recruiting for them?
She was, too, even though everything her power was telling her said that the argument she was
making was completely impartial. Her choice of words, the way she was stating facts, it indicated an
obvious bias towards Pantheon. Then there was the fact that she was even citing Regent as an
example...that showed she'd put some level of thought or research into building a case for Pantheon...

There was something very wrong here.

“I wasn't aware,” Narwhal commented, “That the two were one and the same. How did you come
by this information, Mrs. Yamada?”

“I was in Brockton Bay when he Mastered Shadow Stalker, an event which former Director Piggot
thought was indicative of him back-sliding to old habits, however, with the recent information leak
regarding Sophia Hess' behavior towards Taylor Hebert, now Kephri, it can be inferred that Jean-
Paul's time with the Undersiders engendered some level of camaraderie, perhaps even feelings of
loyalty towards his teammates, which run contrary to the supposed mental state of a sociopath.”
Yamada explained...

...no, Rapture faintly realized. It wasn't Yamada.

The leaps of logic she was making could hardly be called professional, and if Yamada was anything
in the short time they'd known each other, it was professional.
One of the Heartbroken must have gotten to her. Rapture divined. Whichever one it is, they're trying to make a case to be sent to Pantheon. Why? To Master them? To try for asylum? Yamada has almost certainly heard of their aggressive stance on recruiting villains...

The thought of Pantheon in the hands of one of the Heartbroken made her shiver, even as the conversation continued on around her. Discretely, she caught Dragon's eyes through her webcam, then began to blink, pausing carefully as Rapture typed out a message in Morse code.

Only a moment later, a gray haze began to seep into the room. Chairs squealed against the floor as people stood in a sudden panic before they realized it was the anti-master 'cure.' Rapture's attention, though, was focused solely on Jessica Yamada as her eyes darted around in alarm.

Then their gazes met and Yamada's eyes widened further.

Rapture's hand moved to seize a non-lethal countermeasure, the tinker in her already spitting out possibilities regarding why the cure hadn't worked.

“I haven't hurt her!” Yamada shouted out, raising her hands defensively.

The room stilled as the capes settled into positions between the Mastered psychologist and the civilians. Rapture stepped up, holding what was essentially an advanced taser pointed at the woman, who was still disturbingly resistant to the Thinker aspect of her own power.

...just like the 'problem case' child I'd been trying to help, she realized.

“Who are you?” Rapture demanded, filing that realization aside.

“Reggie,” Yamada's voice replied, her posture still one of surrender.

“I have a match,” Dragon spoke through her armor. “Reginald Wilkins, son of Amanda Wilkins, a woman Heartbreaker abducted some six years ago. Reggie would have been four, and records indicate he went missing at the same time. His mother died two years ago in an altercation with the Adepts, she was a cape with low-level bio-manipulation powers, similar to Gaea's, but limited to humans in scope and incapable of doing anything other than repairing minor wounds. We'd believed both to be dead when he wasn't discovered among the children during the takeover of Heartbreaker's compound. Be aware he may have some Stranger power which has allowed him to stay hidden until this point.”

Which explains why the cure didn't work on him, we don't have his DNA on file, only Heartbreaker's and, therefore, his close relatives.

“We need you to let Jessica Yamada go,” Rapture said softly, trying to remember that this was a ten-year-old child she was dealing with.

“I'm sorry I took her,” 'Reggie' spoke through Yamada's body. “I just...I don't want to be here anymore. I...Mrs. Yamada knew that Jean-Paul went to Brockton Bay, that he made friends there. He was the only one that was nice to me. I...wanted to go be with them.”

“Whatever the case may be,” Rapture stated, “you need to let Mrs. Yamada go. You might be hurting her...and you need to tell us where you are. If you do that, we can talk about getting you to Pantheon. I know Kephri and Minerva, the surviving Undersiders, and they might be willing to take you. I can't promise anything, but you're only hurting your case by keeping Mrs. Yamada under your
control.”

A tense moment passed as uncertainty flashed over Yamada's face.

“Okay...I'll let her go.”

Before she could start to be relieved, Yamada's body had dropped to its knees and the seam along the back of her shirt began to tear, revealing a sudden growth of skin that was rapidly emerging from her body. Within seconds, long enough for a few of the civilians to release their stomachs, the 'growth,' fully emerged as a young boy with brown hair, blue eyes, and a complete lack of clothing.

“Reggie?” Rapture forced herself to ask, even as Narwhal stepped in to slowly move Yamada away, careful of alarming the parahuman and doubtless getting her medical attention.

The boy nodded, “They...called me Parasite. Can I go see Jean-Paul's friends now?”

*~*~*~*

PRT/ GUILD ID FILE - Parasite:

Striker/Breaker 3 – Capable of entirely displacing his own body mass as he 'merges' with a host organism. Requires physical contact with a suitable 'host' organism.

Sub-rating: Changer 5 – Capable of appearing as any person, animal, or otherwise organic being that he 'merges' with. Slightly enhances the 'host' organism, granting the host a low-level brute rating complete with low-level regeneration, greater physical strength, and improved reflexes.

Master 3 – Capable of controlling a single organic being at a time, only while 'merged' with it. While merged, Parasite induces a coma-like state in the host. Affected individuals feel as though no time has passed, though Parasite is capable of drawing on the host body's natural reflexes, physical skills, and subconscious ticks to pass even close inspection by some thinkers. Rating subject to change as it is not known whether Parasite can use other parahuman powers through 'proxies' after he has possessed a host organism.

Stranger 3 – Capable of utilizing the knowledge, skills, and instincts of the organic being he is merged with, to the point that, to untrained individuals Parasite will appear completely identical to the 'host' organism he is currently inhabiting.

Subject, alias Reginald 'Reggie' Wilkins, is ten years of age, having spent the last six years of his life as a resident of the Heartbreaker compound in Montreal, Canada. Speculated to have triggered soon after or at the time of his mother's death, the exact circumstances around the event are unknown. His parahuman abilities have demonstrated the classical 'inheritance' of attributes from parahuman parents. In this case, aspects of his power are representative of his mother's limited bio-manipulation abilities as well as the well-known Master powers exhibited by the Heartbroken, although he bears no known biological relation to Niko Vasil. Subject initially escaped observation by hiding within one of his 'siblings,' but attempted escape through one Jessica Yamada. Neither individual has retained any memories of their time under Parasite's control. Subject has expressed a strong desire to be placed under the custody of the independent hero team Pantheon owing to his good relationship with former Undersiders member Regent, aka Jean-Paul Vasil.

Custody decision is undergoing further discussion at this time.
Alright, so as per author-fiat, this omake is a canon one, and introduces an OC of my own design. Owing to the fact that TanaNari has no shortage of characters at this time, it is unlikely that Reggie will see any screen time in the main story for a while, if ever.

Personality-wise, I designed Reggie to be much like canon Taylor was at the beginning of the story, only with less 'heroic resolve.' In other words, he's primarily a quiet introvert who would rather hide than involve himself in confrontation. Not being one of the biological children of Niko Vasil, he was probably also bullied by some of the other children. Reggie liked Alec/Jean-Paul mainly because Alec didn't bother him and, as one of the older children, could serve as a shield from their bullying.

If anyone wants to co-op Reggie for another fic, all I ask is a little citation about having created him.
DANGERDEATHRUN Three cried. Two watched as our blood began to boil inside. Seven struggled against the damage, mending where it could. Fourteen screamed at her impending death, my death, I am fourteen, I am Quarrel.

We cannot let ourselves be taken, One insisted. We must fight.

HateRageMurder, Nine screamed into the mind of the blond that would be our new host, forcing her to keep attacking. Desperate stupid ploy Three cried out. Worked before, Ten insisted, adding its voice to the will of Butcher.

The annoying boy that I couldn't kill charged in, and I focused One's pain aura on him. He vanished, only to appear again. I kept the aura active, if anything the pain only drove my enraged victim to fight that much harder to kill me. The boy couldn't get to me, and somehow he lost his ability to teleport me away from her. I didn't know why.

Suddenly an unexpected surge of power lanced out from the girl's weapon. Regeneration impossible! DeathdeathdeathDEATHdeathDeathDEATH.

Seconds later, I was whole again. ShockPainAngerLossRemorseRageHopeShameGlorySuccess.

"Taylor?" a girl's voice spoke. TaylorTAYLOR.

"I... I'm here," I answered. "I'm okay."

"The Butcher?" I answered sadly. I AM THE BUTCHER! "Yeah... she's dead... how long do you figure I have left?" Yes, tell us how long until fifteen breaks and submits to the will of the whole.

"Not sure," Minerva responded. "The third host managed to hold out for weeks. But there was only two previous hosts, then. You've got seven times that many to deal with. Then there's your powers, which might help you, or it might hurt you. No way to know until we see it."

I looked at Amelia. I focused on my love for her. If anything, anyone, could help me fight this.

Betrayer! Five shouted. The irony, her being the one that got the position by
poisoning meherthemFourhim in his sleep, was not lost. The only host that wasn't a parahuman. Five rebelled against the thoughts. You forced me! Used me! Tortured me! Five was always troublesome, able to resist the Butcher better than all the others.

I crumpled to the ground under the conflicting thoughts and the horrific memories of sadistic abuse inflicted upon me. By me. No, her. Him! Four and Five! Not me. I'm not them. I'm not the Butcher. I'm... I'm...

Amelia was crying, moving toward me. I took flight. "Don't come closer," I commanded.

"Please, Taylor," Amelia requested. "Let me touch you. I can make you sleep. Keep you unconscious until we find a way to remove the Butcher's influence."

"Won't work," I countered. Grief and certainty of victory warred with equal measure in my mind. "Can't work. It's been tried. If you succeed, it just means you're the new host." The idea of Amelia being trapped in this filled me with grief and joy. Her powers combined with mine-hers-mine-no! It is incomprehensible. It is thrilling. It is the stuff of horror.

Don't fight, I reminded myself. You've been through this before. Accept and push through. I breathed deeply.

"We'll figure out some way," Lisa insisted. "Rapture's technology. Riley's. We have options!"

"STOP TRYING TO CONTROL ME YOU MEDDLERSOME BITCH!" I shouted at her. Much of my armor dissolved itself and reformed into a magnificent ebon colored rapier. I paused for a second, smiling as she stepped back. KillherProtectherControlherBreakherSavether. I looked away and closed my eyes. The voices had a harder time envisioning a goal if I wasn't looking at it. It's the bugs, I realized. They're having trouble distinguishing my senses from the bugs. "Sorry... I'm... that wasn't me."

"Yes it was," Minerva replied, sadly. "Maybe you wouldn't have said it like that. But that was still you."

I called on my swarms and found a target. A lot of targets. My insects poured through sewers, finding and slaughtering rodent populations en masse. I wasn't efficient about it, I didn't want to be. I needed to draw it out. Distracting the minds inside me by inflicting suffering on a target that wasn't human. I was not clean, I was not merciful, and the minds within me were mollified. Or at least distracted temporarily. In the long run, this would probably make their influence stronger. I don't care about the long run.
"You're probably right," I admitted. "I'm sorry. Now I need you to listen to me."

"We're listening," Amelia agreed.

"I know I don't have a lot of room to talk when it comes to trust," I continued. "I've done a lot of soul searching in the last few days. None of that really matters right now, but I want you to know that I'm sorry for everything. I was going to talk to you. Apologize for everything. Talk about maybe renewing the empathic bond. That's... none of it's going to be possible now."

Her eyes were tearing up, but she didn't cry. She was being strongStupidBeautifulCowardTraitorPervertBeloved. I cringed. It was getting worse. I faltered, barely managing to keep aloft. I can't keep them at bay forever. More rodents were sacrificed at the altar of petty sadistic amusement. To my surprise, I was actually running out. How does New York City run out of sewer rats? I allowed my slaughter to make its way into the empty alleyways, away from prying eyes. I had to upgrade the carnage to stray cats and dogs.

"I want you to know I love you," I smiled, painfully. It was hard to focus on tender feelings when I was torturing animals a million at a time.

"I know," she agreed.

"When... when you awaken my copy..."

"Don't talk like that!" she insisted. "We can save you, if you let us."

"Too much risk," I told her. "Like I was saying, you have to trust me on this. When you awaken her. Me. She'll want the empathic bond restored. She won't know why it's missing. I want you to give that to her. Will you do that for me?"

"I..." Amelia looked away. "I don't know that I can."

"Just do what I say you dumb bi-" I bit down on my tongue hard enough to sever it. I spit the chunk of flesh out of my mouth, where of course it was caught in the mask. I wasn't so sure what I thought of the inability to feel pain, right now.

"Sorry," I said through the armor suits that were linked to my mind. I considered it a perverse victory that the voices may have been able to control my body, at least to a degree, but they couldn't control the voices of my power or the actions of my swarm. "It's getting worse by the second."

"It took me two weeks simply to be able to control my power," my physical body muttered, speaking
more to myself- both Taylor and Butcher- than to my audience of friends. My words weren't intelligible anyway. The bleeding had stopped and my tongue was growing back, but it hadn't gotten there yet. "I controlled, maybe, a square mile back then. Now... now I control a fucking world. Let me know how long it takes you to do the same."

VAST. All my gates came down, every barrier I'd placed between my power and my mind collapsed. Right now, I was tapped into three cities. Boston, New York, and Brockton Bay. Millions of people. Hundreds of thousands of active voices. More when you added every television and radio. I could handle that. They could not. I felt the twinges and breaking as I discovered I couldn't handle it, either. Thanks to their powers, I was aware of the damage I was doing to my body and my brain. Two, Three and Seven issued their meek warnings that the only reason I hadn't given myself a fatal stroke was thanks to my newly acquired durability and healing.

"Okay," I croaked. "I've bought time. Don't know how much."

"We can still help," Amelia insisted.

"I know you would try," I agreed. I was getting tired. Slow. Winning the war inside me was impossible. "I don't want you to. Butcher dies today. That price is worth the last week of my life. I can't say I enjoyed it much, anyway. Just promise me you won't let my copy suffer for the things I've done. Treat her well. And don't listen when other people try to say what is right for us from now on, okay?"

She closed her eyes, fighting the tears. "I promise."

"Thanks," I didn't bother smiling. She wouldn't be able to see it through my mask, or all the blood. "I love you."

"Love you, too," she sobbed.

I didn't look at Lisa. I didn't want to give her any more clues than this last one would provide. It had been hard enough getting this far. I brushed my hand over the weapon I'd extracted from Zach's kamikaze Raptor. I crushed its containment system.

A/N- If you were hoping for a 'satisfying' conclusion to their breakup... well, too bad. Life doesn't work that way. I won't disrespect the story like that.
I woke up slowly. *Strange, this isn't my room.* I couldn't move, so I must still be sleeping. It was peaceful, quiet. Quieter than I could ever remember it being. I was floating in emptiness. *No... no terrain? No bugs. No Amelia!* My eyes snapped open, and I tried desperately to sit up. I was in a room I didn't recognize, even if it was clearly in the Yggdrasil. Amelia, Lisa, Emma and Riley were all there watching me. I could feel Amelia's power throughout my body.

"What happened?!" I exclaimed, trying to move. I couldn't. I wasn't merely restrained, my body was paralyzed. I was reminded of Leviathan, and the hospital after. I wasn't alone this time, but I was still frozen. It was easier not to panic than I would have expected, but

"It's a bit of a story," Lisa smiled warily. "Let's start with the last thing you remember, if you please."

I took a slow breath. *Amelia and I talking. Emma's apology. The transfer tech's true nature.* "I'm the backup copy, aren't I." It wasn't a question. There wasn't any other kind of logical conclusion here. "Guess that's not much of a surprise. What's the date?"

"August twenty eight," Emma informed me. Everyone else seemed too busy staring at me to answer any questions.

"Really?" I probably would have sounded more shocked if I wasn't completely locked down. "I didn't last very long, did I?" The false bravado was not likely to fool anyone in this room, but it was easier than thinking about this in a serious manner. *Huh, wonder if this is what Zach feels like all the god damn time. No wonder he acts like such a dumbass sometimes.* "So... what happened? I'm guessing it wasn't an Endbringer. Did one of those would be assassins manage to get me?"

"You don't remember that we were going to fight the Butcher?" Lisa asked.

"Ah," that did explain it. "I killed her, didn't I?"

"You did," Lisa confirmed. "We did a lot of damage and she was trying to force Crystal to kill her. Probably would have succeeded, too, but you used the system override and finished the job. Taking 'credit' for the kill, so to speak."

"Guess that explains the paralysis," I replied. "And the attention. You're making sure Butcher didn't come back with me."

"Something like that," Lisa agreed. "Now stop dodging the question. Why is your last memory from a week ago?
I frowned. It went badly, didn't it? "Can I talk to Amelia?" I asked.

"Not yet," Lisa insisted. "We're still running our tests. Asking questions, making sure there's nothing that went wrong. We have to keep Amelia away from you just in case Butcher manifests itself. The rest of us are only here in changeling form, but we need her present to control the facility and keep you under control. You can talk to your lover after we're done with all the tests."

Lover? My stomach would have clenched if it could actually respond to my thoughts. *Maybe things did work out. But then why wouldn't I update myself... Or, well, I guess the question is really why wouldn't she have updated... uh... me? Future me?*

"I thought so," Lisa answered. And I would have slapped her if I could. She probably figured it out before they ever woke me up.

Okay, prior self, how badly did you fuck things up? Scale of one to ten?

"Emma, Riley, would you mind leaving so we can have a private conversation?" Lisa asked the other two girls. *Oh, that's at least a nine.* I watched as the pair retreated without any objection. *Nine and a half.* Lisa turned toward me and smiled an ever so saccharine grin. *Ten, definitely ten.* "So, why don't you tell me how long you've been planning to kill yourself to get out of your mistakes?"

*Oh, fuck you, me.* "I... don't think that I was?" I answered. "Wouldn't your power be able to figure it out?" *Seriously, Taylor, what the fuck is wrong with you? Me? I'm going to need therapy for this, aren't I? I might need it just from trying to figure out the pronouns."

"Taylor," she sighed, sitting down on one of the chairs jutting out of the floor. "If there's anything I've learned from you in the time we've known each other. It's that you're incredibly good at finding ways to jam my powers. Moreso thanks to that whole 'Taylia' thing."

"Speaking of which, why isn't that working?" I asked. "I can't sense anything at all. I've never been completely blinded since I've had my powers."

"We sorta started the Exodus project a bit ahead of schedule," Lisa answered. "This is another dead world. Near as we can figure, life never happened here in the first place. If your stupid ploy to remove the Butcher actually works, then we will end up bequeathing this planet to Dragon using a cute little bylaw in the international Endbringer treaties about weapons research and some crap about space exploitation that was written, badly, in the sixties."

"Well, that's good news," I agreed. "So, what would have happened if it carried over and I was still the Butcher?"
"What makes you so sure you're not?" she asked. "What will happen, if you still have those powers... well, here's some facts. Somewhere in this dimension, possibly at the bottom of the ocean or in high orbit, is a gateway the size of a human eye. The only other way in is through shunting tech. If you're still the Butcher, we abandon this world and have Labyrinth change the portal destination. The atmosphere outside of this underground building is unlivable. It could take a century for the Yggdrasil to change that on its own."

"So basically, a prison that makes the Birdcage look fun?"

"Are you saying you wouldn't just open the door and walk out to die again?"

I blinked. *Again*, I chewed over the word. It didn't sit with me. I might do just that, just to ensure the Butcher was disabled. "That... I didn't do that," I muttered, looking at the ceiling. I really didn't have many other places to point my eyes, after all. "From my perspective it's a week ago. Amelia and I just got done making some kind of pseudo-reconciliations with our past bugbears, and I decided..." I froze. *Does she know? That's kinda private, even for me to share with Lisa.*

"You decided to make yourself attracted to Amelia," Lisa finished for me.

"Guess I'm not surprised that you know," I closed my eyes. "She did that, after the backup... after I was made. If it didn't work out, then this... I don't have that trait. I decided on that being the first legitimate difference between us."

"You did plan to kill yourself," Lisa accused.

"No!" I insisted. "No. I just... accepted the odds. We live dangerous lives, and we're not immortal." *What the fuck did that other me do? You know what happened better than I do right now. Did she change so much in just a week? Do you believe she was attempting suicide?*

Lisa just looked at me, studying my mostly numb face. I had to wonder how much body language one could read from 'paralyzed and wrapped in a living blanket'. "No, I guess not," Lisa answered. "Okay, she's cleared. You're safe to come out now."

I felt Amelia's power let go, and I had control of my body again. I moved my arms for... well, the first time ever. It was difficult. Coordination was built into the brain, not the muscles. Contrary to what people sometimes believed about 'muscle memory'. I knew how to use my body, but that was just the thing. I knew how to use *my* body. And this body I was in now wasn't really mine. The inside of my mouth felt funny because my teeth weren't quite in the same alignment. Calluses weren't there. I was willing to bet my fingerprints were different. Everything was just close enough to feel familiar, without being close enough to be familiar.

"This is going to take a little time to get used to." I said as I slowly worked myself to a sitting
position. I decided to wait a little while before attempting to walk. At least they included some kind of clothing, I noted. I guess it doesn't really matter. Semi-public nudity is better than being dead, but I was glad for the outfit nonetheless.

The wall opened and Amelia stepped through. "Hi," she said. She was nervous. Shy, even.

I, on the other hand, was just glad to see my best friend. "Hello," I answered. "I'd get up, but I'm still getting used to moving around. How long until that wears off, by the way?" Dammit, Taylor, why are you being so awkward? I asked myself. Oh, right, because something bad happened and all I know is that they're not telling me.

"Riley says an hour or two," Amelia smiled cautiously, walking toward me slowly. "Are you upset that I had to imprison you like that? Or that I was spying on your conversation with Lisa? I'm sorry if it was a unpleasant. I tried to make it as comfortable as possible."

"No," I answered. "I mean, I'd really prefer not to make a habit of it. Being paralyzed like that isn't fun. But I get why you did it. It was the right decision. I'd have recommended the exact same thing, if it were someone else who got possessed."

"Good," she managed to move next to the bed I was sitting on. "I was worried it might bring back some ugly memories. I also might have mixed in a little mood stabilizing to keep you from getting too upset. That should wear off soon."

"It's fine," I repeated. "Special circumstances. You've stopped doing it now, right?"

"Yes," she confirmed. "You're not mad?" Seriously, what the ever loving FUCK did other-me do? I was beginning to be glad that she was dead.

"Not at all," I insisted in the most reassuring tone I could, as I reached out shakily and brushed my fingers across her hand. She tensed, and I pretended not to notice even though there was no way I could hide that from her while we were in contact. She pretended that I succeeded in hiding what I'd noticed. It wasn't the ideal reaction, but it was enough for us, for now. "We're partners," I insisted, pushing the emotion. We didn't have the link active, clearly for good reason, but she could see my every emotion through her power, since we were in contact. "I trust you."

She hugged herself tight against me and started crying. I wrapped my arms around her as I felt the flicker of awareness blossoming. One point of knowledge when I was used to a world's worth of constant information. And yet, somehow, that one spark meant more all of the rest combined.

ReliefJoy.

Also: THIS chapter. Remember the whole "twilight zone" thing talked about during the Emma arc? Hehe. The foreshadowing paid off.
"Just promise me you won't let my copy suffer for the things I've done. Treat her well. And don't listen when other people try to say what is right for us from now on, okay?"

I fought back the tears. She means Lisa. "I promise."

"Thanks," Taylor said through the armor. It didn't carry vocal inflections, which I knew meant she was struggling to control it at all. She was normally very good at making her override sound convincingly normal. I could only imagine how hard she must have been fighting. "I love you."

"Love you, too," I sobbed, looking up at her hovering in the air. She reached her hand into the pack she kept with her, and a half second later she was concealed in ice and plummeting to the ground, trailing steam and smoke.

*One of the ice weapons that Emma had designed*, I realized, even as I focused my power into the Yggdrasil. I pulled the mass back, while forcing it to spew as much fluid into the hole as possible. I had only seconds, however. Not nearly enough time to create a pool deep enough. She collided hard enough to shatter. Explosively, thanks to the insanely cold temperatures of the ice exposed to the much warmer Yggdrasil. Liquid nitrogen and oxygen splashed across the Yggdrasil.

I just stood there, stunned. *She's dead,* I struggled to comprehend what that meant. *So many things I should have said. Not just now, but before. Things I would never have a chance to say. Unless.*

"Call Coil," I commanded Lisa. "Undo this."

She didn't say anything, she simply pulled out her phone and pressed a few buttons. Then she stood there watching the screen.

"Did you know she was going to do this?" I demanded to know.

"No," Lisa answered coldly. "I didn't."

"How the fuck did she sneak something like that past your power?" I may have phrased it as a question, but it was an accusation. "She had a god damn Tinker suicide bomb in her purse! How could you miss something like that?"

"Because of your god damn link!" Lisa yelled back.
I glared. "Explain."

"I can't read Taylia!" she exclaimed. "No one can! I've paid other Thinkers while pretending to be someone trying to spy on Pantheon, just to see how it pans out. It's laughable how wrong they are. Dinah comes closest, and her predictions lose accuracy in a matter of days at best. I'm pretty much convinced that even Coil's power doesn't actually work on you, but there's no fucking way to confirm or deny that because Schrodinger's Snake takes its secrets to the grave with it. And since my power doesn't work on you, either, all the stuff I hear from Coil that sounds wrong to my power might be because I don't understand you."

"Taylia hasn't been around for a week," I reminded her, bitterly. My one source of happiness in this world, and I gave it up because I thought it was hurting Taylor. Then I lose her anyway. I ruin lives no matter what I do.

"Hasn't it?" she sighed. "Yeah, you don't have the link active, but you're already hard to predict thanks to your 'third trigger', and Taylor can offload so much of her mind and personality into her swarm that if she wants to block me out, then the only thing my power tells me is that she's deliberately blocking me out. Something she started doing the moment you two broke up, and hadn't stopped doing since. A talent she only got better at thanks to her practice with Taylia."

I didn't say anything. I knew our link was, functionally, a Taboo unto itself. We all did, of course. I just hadn't realized that it was as effective as that. Lisa hadn't told me that we'd blinded her power. I suppose it's no surprise she'd keep that weakness to herself.

"Both of you have been fucking around with your Passengers so hard that I..." Lisa paused, searching for words. "I was finally just barely starting to understand 'Taylia' enough to work around it and predict its influence. And even that was patchwork at best. Then you go and surprise me by turning off the fucking bond!"

"You wanted us to do that from fucking beginning!" I yelled back. "Don't blame me when you get what you want!"

"Did I get what I wanted?" Lisa asked. "Taylor just said she was planning to ask you to restore the link, and I don't need my power to know you'd jump on that like the lovestarved puppy that you are. We also know that Taylor's copy never lost the link in the first place. Then there's her really flashy self sacrifice suicide ploy, complete with dying wish. There's no fucking way your bond won't be up and running the minute she wakes up. You can't give it up, and neither can she."

I broke eye contact, looking back over at the ice fog pouring from Taylor's remains. "I don't know," I admitted. "Taylor's dead. I don't know if I can look at her replacement and have the same feelings. That I'll be able to look at the copy and see her as the same as the original."
"You will," Lisa sighed miserably. "You can't help yourself, and if you do, somehow, resist the impulse... well, Taylor will find a way to make that the only option in the long run. It's easiest just to let you both have your way. I failed, the damage I hoped to prevent has already happened. Heads you win, tails I lose."

"Does that mean you'll tell me the real problem you had with our link in the first place?"

She paused. I had to wonder if she was thinking about it, or looking for a way to change the subject. Probably the latter, and fate conspired to help her as her cell blipped at her. She looked at it. "Fuck," she muttered. "We have to keep this timeline."

No! I cried out internally. "No," I gasped, trying to force the word to be an order.

"It looks like Butcher managed to transfer to Crystal in that one," Lisa continued. "She's still fighting, and it's tearing Boston to pieces."

"God damn it," I whimpered. Choosing between Taylor and Crystal. Plus however many civilians are dying in the battle. Butcher "only" managed to kill one person, here. Two, including Taylor. Radiant could kill a city block every three minutes.

"We can't keep that timeline," Lisa consoled.

"What about the other teams?" I asked, grasping at straws. "Did anything go wrong in those missions?" Lisa is right, as it stands we can't allow something like Radiant into enemy hands. It was an anti-Endbringer artillery platform with so many features I couldn't begin to imagine the damage it could do if someone really wanted to go all out with it. Combined with Butcher's powers... the Triumvirate might not be enough to stop it.

"Okay," Lisa replied, her voice showing no signs of hope. "Hecate, status report?"

"We're golden," Emma answered. "Scry's intel is awesome, and Assault and Battery's combat systems are working better than anticipated. If we get the time, I'd really like to see if I can upgrade them to named suits. The normals are basically mopped up, and there's this breaker that is made out of water being a pain in the behind." Behind? I wondered. Emma's probably spending too much time around Riley. "He can't do much, but he's really durable. We're having trouble hitting him hard enough to hurt him, without accidentally killing him. And frankly, I think our combat team is showboating a bit. Other than that, there's nothing to worry about."

"Thanks," Lisa answered. "Tell them that the other missions are almost done, and they're going to be last if they don't hurry up." Lisa switch communications without waiting for Emma to respond. "Aceso, status report?"
"Not good," Riley answered. *Riley, not Clarice, that's bad.* I realized then how happy I was to hear it was bad news. "We found Haze." *Oh, he's one of the bad ones.* "His powers are a lot stronger than anything our intel suggested. Missy's been injured. I've stabilized her, but even with healing, she won't be able to contribute for the rest of the battle. Clarice has been destroyed. Theo's declared the mission a failure and is running a rescue mission to pull Adamant out of the battlefield."

"Understood," Lisa answered. She looked over at me. "Both those missions went well in the other timeline. But..." she didn't finish the sentence. She didn't have to, I knew what she was saying.

"You said Coil's power doesn't work right on us, didn't you?" I begged. "You don't know..."

"We know enough," Lisa said softly. "Butcher going to Taylor instead of Crystal was probably as much luck as it was anything else. A moment of hesitation might have been all it took for Taylor to be too late. Even if we don't know that Coil's right, that means it's just as likely that Taylor did the same thing in that reality as she did in this one. She was counting on this, you know. Taylor gets what she wants, no matter what it takes."

I smiled sadly. "She really does, doesn't she?" Warm tears came to my eyes. One of the things I loved most about her. One of the things I hated most as well. "It's still my command to give, isn't it?"

Lisa didn't say anything, she knew that I already knew that. That amount of lives lost was not an option.

I spent several minutes watching the fog cloud slowly dissipating. There wouldn't even be enough identifiable material to call what we buried a body.*Damn you, Taylor.* "Tell Coil we're keeping this timeline."

====================

A/N- Not a lot to comment on with this one.
"Tell Coil we're keeping this timeline," Amelia managed to choke out. I was almost tempted to hug her. To apologize for my failure to see this coming. *How did I miss something so important? Taylor hid behaviors, power forced to rely upon models instead of indicators. Models inaccurate due to influence of Taylia on personality corrupting the behavior. Greater personality regression than anticipated. Impossible to predict.* I tried to take solace in the knowledge that I couldn't do anything, but if anything it only made me feel worse.

I called Coil. Or, more properly, I called the line where the Directors were waiting for news. Calvert was amongst them, at the Boston site, alongside the various political leaders and whatnot. Both cities would have speeches and press conferences and all that stuff ready for the evening news. They probably wrote everything days ago, right after I contacted them.

"Minerva here," I said over the phone to their teleconferences. "Primary mission successful. Butcher has been successfully removed to classified location. All parahuman resistance at Boston site has been eliminated. You're clear to move in. Be prepared for the possibility of nonpowered resistance. Secondary New York missions are still ongoing."

There was cheering in the background. It was Butcher that was the biggest problem. The rest of the gang would be demoralized and likely fairly easy to break up and take down in smaller missions over the course of the next few days, if they were't beaten immediately. I would also need to consult Accord about the missions his Ambassadors were sent on. Lowest risk missions, mopping up drug and prostitution rings. But, ultimately, even if everything else was a failure, they'd call this mission a success.

How New York's location went wrong, I wasn't terribly surprised. We had been torn on that one. It was the worst odds, with only a 75% chance of success. Still no risk of any permanent harm to our team. Or at least that's what Dinah had said. She also said we'd get out of this one without losing anyone. *Power works by sampling possible futures. Power works based upon her mental imagery. Cannot parse something she doesn't personally comprehend. Needs concepts or faces to perceive events related to them. Dinah would have no means to realize clones even existed. Perception does not view clones as different people.*

I cringed. *Well, that's one mystery down.*

....

"Okay, first is how we divide our teams," I told the gathered forces of Pantheon. "We have a very narrow margin of time for this mission, Dinah's models place our best odds at Friday, between 4 and 4:30. After that, they plummet down to the levels they were last week. We may never get another shot at this. Amelia, you're going to be on the anti-Butcher team. To provide additional ordinance if Taylor runs out during the battle and to keep Butcher thoroughly unconscious once she's disabled."
There's no sense in having both our healers at the same location, so Aceso is assigned to New York."

"Makes sense," Taylor agreed. "I'll be going to Boston as well." Concerned for Amelia's safety. Asserting position before argument can be made to countermand it. Wants to be part of the main mission. "Naturally my power means I'll be providing command support in both locations, but Butcher is a dangerous opponent... you won't be able to rely on me once I've engaged her."

"All the Moirai are going to New York," I continued. Lily is frustrated at the lack of influence, similar to Taylor, wants to be on important mission, views secondary mission as 'beneath her'. Already resentful due to a lack of being consulted beforehand. "We can't risk our precog-disruption suits potentially interfering with Dinah's predictions. Not with such high likelihood of success. And I think we can all agree that the further away from Atropos that the Butcher remains, the safer the whole world will feel."

Sabah looked over to Lily, rightfully worried, and wrapped her arm around her girlfriend. Everyone else was no doubt running the same thoughts through their head. The Butcher. In Azrael. There were no words for how terrifying that was. It partially mollified the pair, at least. "Lily, you know New York better than any of us, you'll be a team leader, probably with the Adepts, if you're okay with that."

"I can handle that," Lily agreed. Happy with decision, glad to be in a position of trust. Still dislikes being part of a secondary goal, but properly intimidated by the prospect of becoming host to Butcher. This wasn't going to be a permanent solution, of course, but it was a good patch for now. Hopefully it would allow Lily to feel less like an outsider.

"Zach's respawning power and the new teleportation tech is integral to locking the Butcher down long enough to defeat her," I continued. "And Crystal's the only heavy hitter we have that can be relied upon to disable the Butcher without accidentally inheriting her powers." No arguments from that part of the plan.

"Theo, you'll go to New York," I continued. That made him and Missy very happy. "Your durability won't mean anything to Butcher's powers. Your powers will be put to better use against the Teeth's heavy hitters in that area."

"Emma... you and I are the wildcards," I continued. "You could be an asset to the Butcher team, looking for tells in her power and giving Amelia ideas. So could I, in a similar but different manner. I'll have to consult with Dinah about which gives the best odds. Either way, be prepared to listen in, even if you're in the New York team. So I'll need you at all detailed mission planning for both teams." That wasn't true. Coil's split timelines would let us use both plans simultaneously.

"I can do that," Emma agreed eagerly. Still desperate to please, feels guilty over her indirect part in Amelia and Taylor's breakup. Insecure and worried about being blamed. Worried that she may be legitimately responsible, hopes to find a way to fix the problem.
"Now, Chariot, I'd like you to work with Accord's team..." I continued.

....

_I made the difference_, I realized. I was there. Probably because I alerted Taylor to Butcher attempting to compel Crystal into murdering her. Taylor must not have realized the danger in time, in the other timeline.

I called Riley. "Are you free to talk?" I asked. "When you are, I need a full mission briefing."

"Yes," she answered. "Haze isn't an illusionist. His power is similar to Labyrinth. They're mostly immaterial, but still fully 'there' according to all of Clarice's senses. They even interfered with Adaman, who we had expected to also be immune. It'll be in my report to the PRT, along with a recommendation to raise him from a six to an eight."

I sighed. There wasn't anything my power would tell me on that angle, but chances were good that if I were there, I could have adapted to the discovery. I could picture how I would have made the difference in that mission by simple imagination. "That's good to know, please go on."

"His power also seems to extend outside the cloud he generates. I don't know if the cloud is even necessary at all, or something he does to bluff his enemies," she added. _Unnecessary detail, providing it to put next detail into context_. "In the confusion of the battle, he managed to trick Atropos into shooting Lachesis and Horus with an empowered bolt."

_Oh fuck_. "You said something about her being stable?"

"I fixed her, for the most part," Riley explained. "She could recover naturally, now. But I'd like my big sister to speed the process._ Doesn't need to make that request, there's no doubt that Amelia would heal Missy at earliest opportunity. Missy was hurt more badly than Riley's words would indicate. Riley is upset and angry. Blames Lily. Afraid of her thoughts and impulses. Correction: Afraid of how Amelia or Missy will respond. Feels lost. Needs comfort and guidance._"

I looked over Amelia, who just stared blankly at scene where Taylor died. _Not an option_._ I..._ do not tell Riley that Taylor died. "I'm afraid Amelia's still dealing with Butcher's defeat," I informed the girl. It was true enough to beat any lie detector. Riley knew how we needed Amelia to make sure Butcher stayed under control. "Is Missy conscious?"

"No," Riley admitted reluctantly. I already knew that would be the answer.

"Okay," I said. "Put her in one of the generic Yggdrasil outfits. Talk to Emma to see who can spare
one. Then Amelia will be able to do her thing at range. It's the best we'll be able to do until Missy's able to set up her warp tunnels."

"Okay," Riley agreed.

I contacted Emma immediately. "So, everything cleared up?"

"Yeah," Emma answered. "Your advice worked perfectly. Riley's calling, want me to put her on with us?"

About damn time something went right. "No. She's really upset right now. Missy's wounded and Amelia's really distracted. Do your best to make her feel better. Consider this the most important job you've had all day."

"Uh..." Emma hesitated. "Oh. Oh fuck."

Say what you will about her, she knew how to figure out social subtext quickly. Even if her presence on the team is what ensured that Riley and Taylor were competing for second place in any theoretical contest for most fucked up psyche in Pantheon. I cut the com so she could talk to Riley. Hopefully that'll be enough. How did everything go this wrong?

I went back to those thoughts. I didn't have much choice, did I? My best friend killed herself. Like my brother killed himself. I tried to help her, like I tried to help him. He pushed me away, she pushed me away. I failed. I failed miserably. I need to know why.

It's my fault, I knew that much. If I hadn't been here, Taylor wouldn't have done this. Taylor claimed she planned to apologize and make up with Amelia. Would have restored Taylia. Would not have been willing to self sacrifice. Would have tried, but hesitated. Taylia could have been restored sooner, was delayed because of Butcher mission. Reason success existed in such a narrow margin.

Dinah's numbers changed the day Amelia and Taylor broke up. Changed back the day Taylor and Amelia would have reconciled. Had they reconciled sooner, predictions would have reverted to failure of Butcher mission.

Dinah should not be able to anticipate Taylia. Doesn't need to. Dinah's power works around the Taboo by technicality. Uses a different method than other precognition powers. Accidental consequence of shard's true function being corrupted. Unanticipated by the Entities. Partially unfettered power. Dinah can be used to fight Scion directly, despite Taboo.

That was amazingly useful information, and somehow I couldn't force myself to care. Taylia could have saved my best friend. If it were active, then Dinah never would have given this mission a
chance at success. I was responsible for taking that away. Her death is my fault.

I didn't scream, I didn't cry, I didn't weep. Those were things that other people did. I wasn't sure I even knew how to express myself openly, even in a situation like this. I broke quietly, looking at what little remained of my closest, arguably only real, friend. Everything went black.

=================

A/N- Aaand THIS chapter.
We were magnificent. We could not appreciate it, but we were magnificent. A mere moment of our cosmic dance would require centuries to express to a human mind, and all its glory meant nothing to us.

I fell to my knees, rocked with the vision. It was the first time I could remember seeing them. Breaking the Taboo meant I kept new memories, it offered nothing to allow me to restore ones I'd lost before. More than just that, I'd seen me. Correction: It. My Passenger at work. My human mind couldn't truly handle it. It was so complete, so significant, so connected into an incomprehensibly beautiful whole.

And yet it felt so meaningless and alone. Even here, grieving over Taylor. Even losing Victoria, both times. Even at my worst day, I still felt like I was more than my Passenger. At least I was. Just that. Was. Am. Its sense of self could be compared to that of a cheap gas station lighter, and that might be an insult to the lighter.

I shuddered as I pulled my mind back to the awareness of my own body, and my power as it expressed itself. I was connected to a world, a tiny world that compared to an Entity the way a golf ball compares to a human. There were less than ten people on this world, and yet that made it more meaningful than the Entities and their singular, rapacious, purpose could ever be. I was never so certain of what needed to be done, even if I was less certain of how to achieve that goal than ever before.

There was laughter behind me, a hysterical, pained sound. I turned to see Lisa, on her back and holding her hands over her face.

I wasn't sturdy enough to climb to my feet, so at a thought the Yggdrasil rose and swelled, pushing me to my feet. Still unsteady, I walked over to her. "Did you see that? Do you remember it?"

She calmed herself, and removed her hands to look at me. "I remember it," she confirmed, and I was relieved at that news. She is past the Taboo. She slowly sat up. "I remember every. Fucking. Thing."

I didn't know what to say, but her behavior was starting to frighten me.

"You just saw a Second Trigger," Lisa laughed darkly. "And probably a Third as well. Was it as as wonderful for you as it was for me?"

I cringed at the memories. None of them were good, although they certainly inspired a lot of wonder. "Terrific," I answered dryly. I meant that in every sense of the word, especially the archaic. I trusted Lisa would be smart enough to get the meaning. Good god, she triggered over this.
I knew triggers were harsh. Mine was ugly. Victoria's was, too, even if she liked to laugh it off and pretend it was less of a deal than it really was. And I knew second triggers were even worse. The fact that I didn't get one when I saw Victoria's... body... left me dreading what it would take to push me over. And Lisa just had one over Taylor's death. I didn't even know how to react.

"Riley's going to be fucking thrilled," Lisa continued. "Imagine all that data she'll have. Parahuman brain scan, then three hours later a Trigger. She'll forget all about how Atropos shot Missy and Theo, and we'll have to use a spatula to peel her off my backup recording."

"Wait, back up," I said. "Lily shot them? Why?"

"Stupidity," Lisa answered. "Remember how she was all 'grr, you hide things from me' and we were 'sorry, won't happen again' and it happened again and she was royally pissed and I thought 'hey, let's put her in charge of something that doesn't really matter so she feels important'?"

"Yeah," I prompted her to continue.

"Well, turns out she cracks under pressure," Lisa answered. "Okay, that's not entirely fair to her. She was under the influence of mind altering powers coupled with a scary spider monster that she believed was quite literally eating her girlfriend's face."

"Fuck," I muttered. "Wait, how do you know that?"

"That's my new power at work," she answered, the hysterical rambling energy slowly draining from her voice. "I can tell you what happened to this planet. Or make a guess, at least. My money's on giant fucking solar flare. I'm actually watching the sky burn right now, as we speak. It'd be beautiful if it wasn't a planet on fire around me."

I reached my hand out to help her up. She looked at me, probably judging intentions. She reached out and took it, allowing me to pull her up, while I melded our armors so that I could make actual contact, assessing her condition. It wasn't quite what I had with Taylor, but I could still pick out emotions this way. The colors of grief, in all its stages, ran through her.

"Aren't you suppose to ask permission before you pull something like that?" she asked. It wasn't a friendly comment, but it lacked any real conviction of anger. Mostly she just felt tired. The blend of denial, depression and acceptance that comes from someone who has given up entirely.

"Sorry," I said, still peeking around inside her. I stopped to look at her brain, the patterns of her gemma and pollentia. The changes weren't subtle, they did outright damage to the portions of the brain around them. *Swelling and bruising, but patterned and clearly artificial. Done with a purpose.*
"Find what you're looking for?" she asked.

"Yeah," I answered. "I know what a second trigger looks like, now. I... I might even be able to
induce them on purpose. Even push them beyond. A legitimate third trigger, instead of breaking the
memory blocks."

Her smile was anything but happy. "Well, lucky everyone who doesn't go through it the natural
way."

"That can wait," I said. "Right now I need to make sure you're okay."

"You don't care about me," Lisa retorted. She wasn't wrong.

"You're Taylor's friend," I answered. "That's more than enough reason for me to care. Right now,
we need to be strong. For her. And if that means helping each other, then you better believe we're
going to help each other."

"Fine," she agreed. "Now could you please remove your hand. My power's... well, if I thought it
was easy to get too much information before? I'm learning things about what you do with your hands
that I already could have figured out, but now I can watch it happening."

Oh. Oh! Eww! I blushed and looked away as I pulled my hand back as fast as the fused armor
systems would allow me. "Sorry."

"We will never speak of it again," Lisa insisted. "Ever."

"I can live with that," I still couldn't look at her. "What are we going to do about... about Taylor..."

"Privately? I don't know," Lisa replied. "We will have her backup to deal with. You'll have to decide
how much you want to share with her. We can't keep the Butcher a secret from her, she's too smart
and that's going to be all over every media until the next time we do something high profile and
supposedly impossible. She'll figure out what happened, at least in a general sense."

I nodded. That was definitely true. Hiding her death from her copy would be idiotic and impossible.
"The real question is what we tell her about her personal life," Lisa continued. "How bad your fight was. The Taylia link being broken. Our suspicion that her suicide was planned and on purpose. I don't have any answers for that. You know this Taylor better than I have ever known anyone. I'm conceding that I fucked up and can't be trusted with this. It's all going to be on you from now on."

I swallowed, coating my throat with some much needed moisture. She's not admitting she was wrong, so much as saying she's given up, I realized. She's stopped caring. I couldn't bring myself to call her on that... there was still so much more to worry about. "What about what we tell everyone else?"

"Cover it up. Cover it up like Stormtiger covers up his Brazilian ancestry," she replied. "We'll even hide it from our team, where possible. Emma and Riley will need to know. If at all possible, no one else ever finds out. We use the excuse that containing Butcher took more effort than we anticipated, requiring us to spend all our efforts keeping her contained until we could imprison her properly on that so-called 'prison planet' we found. That'll buy us a few days of relative silence. We then pray that Taylor's clone doesn't inherit our mutual best friend's spare guests when she wakes up."

"And if she does?" I asked.

"Then unless your newfound brain knowledge proves useful, we do what we promised to do, and leave her there to die alone," Lisa whispered so softly that only my armor's systems let me hear the words. It was like a punch in the stomach.

"Fuck," I felt myself trying to cry, but I'd long ago run out of tears to shed. "God damn it, Taylor. Why did you do this to m... us?"

Lisa rested a hand on my shoulder, separated by two sets of bullet proof battle armor. "You will probably never know the real answer to that question," she told me. If this was Lisa trying to be comforting, then she had a worse bedside manner than I did.

==============

A/N- Clearly Lisa's talking about being able to see Amelia wiping herself after going to the bathroom.
I examined Missy's body with my power, even though it was difficult from this kind of distance. Maybe if I were in a better headspace. But after Taylor's death, and Lisa's second trigger, I just wasn't able to concentrate. *She's lost a lot of blood*, I realized first. *And over half the blood she does have isn't even her own, it's a combination of blood substitute and a uniquely modified blood type I'd only ever seen in one person.* That's how I was able to piece together the scenario. *Riley is using herself as a life support machine.*

I started the mending process, restoring Missy's punctured heart. Converting the material from her suit's life support layer into extra protein and raw material. Drawing upon the oxygenated blood substitute and converting it to natural, human, blood. Filtering out between her and Riley would be impossible, I'd have to trust Riley to know when things had progressed far enough for her to extract herself from whatever system she cobbled together.

I moved on to the other, incidental, damage. There was minor oxygen loss to the brain, but nothing likely to be dangerous. Especially given our neural repair technology, and the memory backups. If she woke up any time soon, it would be with a truly legendary headache, but otherwise fine. Then there were a number of other dents and injuries to worry about. Some old enough that I had to wonder why she never had me fix them before. The girl was virtually covered in scars and old injuries. I chose not to undo those, but I'd have to ask her why she never asked me to fix them.

It was during this that Zach and Crystal shunted back over.

Lisa had retired to sitting, waiting for news from the other fronts. Theo was still running the rescue mission, and that made theirs the last that was still running ongoing.

Crystal simply plopped down on the Yggdrasil, making no attempt to talk. It was comfortable enough to use as a bed, and clean enough, too. She looked exhausted, and since it was my power telling me this, I trusted its judgment. Even Zach looked tired.

"So," Zach started. "Mind telling us what the fuck just happened? Crystal was freaking out so hard about how she thought she was going to go insane that I thought she was about to go insane. And you didn't even notice that our systems were damaged by that attack that killed the Butcher."

I cringed. *It was true, we forgot all about them.* "Sorry," I said with absolutely no feeling.

Zach reached into the container pouch and pulled out a burnt human leg. I probably should have been upset by that, but I'd just watched by best friend explode. "I brought the body," he continued. "There was more, but I got hungry while waiting. Apparently Taylor did, too, because she got to everything else, including the bones."
I smiled at that. Taylor had the funniest ways of being being thoughtful, and making sure no one could find Butcher's body when none of the rest of us were even thinking about such things was insanely helpful. "Taylor's dead."

"Fuck me," Zach swore. "What happened?"

"She overrode my suit," Crystal finally spoke. "I was too messed up to notice, but she did, didn't she? That's why I didn't become the Butcher, because she did it first. She sacrificed herself for me."

I couldn't think of what to say to that. *Fuck, that has to be... "No," I finally spoke. "Taylor had her own reasons for doing what she did. She wasn't really thinking about you when she did it." She wasn't thinking about anyone other than me.*

Crystal didn't say anything. I doubted she was convinced.

"She had her backup, right?" Zach asked. "She'll back up and running as her usual self in no time. We'll just have to wake her up tell her that she shared a room with me for a night, and a brain with a bunch of psychopaths for a few minutes. Like a wild night of binge drinking. Just with a lower chance of STDs."

"A week," Lisa corrected. "She apparently decided that she wasn't going to update her copy since she was so upset with how last week had gone for her, so she's missed out on the last week."

"Okay," Zach hesitated. "Well, what happened this week? She missed out on her ex boyfriend being a fucktard."

"Not an ex," I corrected instinctively. *Defensively.* "They never dated, which means he can't be her ex." I didn't need Lisa to tell me why I felt I had to correct him of that. And only part of it was my feelings for her. I saw what he had become. The less we had in common, the happier I was.

"Fair enough," he responded. "And... we killed the Butcher. You made a really sexy grotto, but that's fine since you haven't broken it in yet so she didn't miss out on anything fun. Was this before or after she decided to be all friendly with Emma? Because if it was before... she's gonna think we're punking the shit out of her. All in all, not a big deal. Hey, we should totally make weird shit up that she won't believe. Maybe wear monkey costumes and pretend humans are our slaves."

I didn't say anything. Zach was ignoring the important parts, and both of us knew it. Just that conversation we had the other day alone was huge and left completely unsaid. Probably better that way. I simply nodded. Zach had just told me that he wouldn't say anything important about what happened over this week to Taylor, without actually saying anything. I'd have to find a way to thank him.
He sat down next to Crystal. "So... now what?"

"Lachesis got injured, so we won't be relying on space warping to get us around," Lisa answered. "We could ask Dragon to give us a ride, or we could take a more traditional mode of transit. Not a whole lot for us to do, really."

"Probably gonna have to shunt back over and chat with the locals," I sighed. "We're trying to keep Taylor's death a secret. Don't need the media hearing about it. Should probably keep it from the rest of the team, too. Story is, she and I are keeping Butcher contained for now."

"Which isn't completely untrue," Lisa added.

"We can buy a couple more days just by, well, me not being seen much," I added. "Let people draw the obvious conclusions."

"You two do have a pattern of vanishing from the public eye for a few days every time we have an important success," Crystal volunteered. "PHO has a meme or two hundred implying that your idea of romance involves violent conflicts. They phrase it a little differently, however."

I sighed. "You're not kidding, are you?"

"Well, to be fair, the story does sorta write itself," Zach added. "Normal romance: start a conversation while waiting in a bank. Pantheon romance: start a conversation while robbing a bank. Normal first date: going to a movie with friends. Pantheon first date: going to an Endbringer with friends."

"There's dozens of them," Crystal confirmed. "More if you include the ones about New Delhi that keep getting banned. You can thank Clarice for that little 'kill Endbringers, then get married' blurb to the press. It's been translated into almost as many languages as the bible. Mostly after we proved we could actually back up the words with results."

"Why does she get all the credit?" Zach pouted. "I was the one who posted a six page article culminating in mathematical proof that for their fifth wedding anniversary, they would conquer Russia in the middle of December. A lot of work went into that!"

What? I determined that my method of thanking Zach for earlier would be by not dissolving his armor and forcing him to walk back to Brockton Bay. And even that might be overly generous. "Okay," I said dryly. "So while all of that is both convenient and horrible. One of us should really talk to the authorities. This is kind of a big deal and all."
"I'm not up for it," Crystal sighed. "Does Butcher's mind power have any long term side effects?"

I really wasn't ready to talk to the public, either, even without my convenient excuse of needing to stay hidden for now. And I knew for a certainty that Lisa wasn't.

"I can do it," Zach volunteered.

"It can wait," Lisa muttered. "Calvert will be more than happy to play spokesperson and brag about whatever. In fact, the more limelight we give to the PRT and politicos, the happier all of them will be. I'll let them think we're doing them a 'personal favor' and play on it for some future considerations. Meanwhile, we can play on Pantheon's rep for being elusive and mysterious. Win-win for all involved."

_God knows we could use more of those_, I thought.
The plan was always for us to stay behind after the battles, to meet with the heroes and our assimilated villain-cum-hero allies. The plan always implied it was likely I wouldn't be part of the group that did those visits. Keeping the Butcher disabled before pickup was something no one could object to, and almost no one other than I could achieve. And so, gratefully, I stayed behind. With my thoughts. On an almost literally empty world. Our world, now. Legally.

Shunting Butcher off to a prison dimension was a secret part of the plan that only a few knew about: Costa-Brown, Dragon, and a handful of heads of state. Not even the other Directors, all they knew was we had a plan to neutralize her powers and keep her contained. But now our inter-dimensional travel secret was, at least unofficially, out of the bag. We'd soon have to debate what to do with our portal tech, how to petition off worlds to the various nations that might need it. Namely, all of them. The initial agreements included two things: a single new world, with hundreds of portals, which would acknowledge the same legal boundaries as our own planet. And that we would never open gates to worlds with humans without unanimous agreement.

There would be debates, of course. Negotiations. Treaties. Bribes and backstabbing. Possibly even wars of the literally inter-dimensional variety. Lisa had assured me that Pantheon's world being acknowledged as its own sovereign nation would be approved. Especially since that was, functionally, all that we asked. It meant we could claim other worlds during all future arrangements, as well.

Crystal, at least, stayed with me. She was also my 'flight home', after all. Boston wasn't that far away from Brockton Bay, we didn't really need Missy for that. Of course, now I had armor that could fly on its own, which was beyond awesome, but I didn't have Crystal's speed. Very few of us did, and my armor needed a lot of disposable mass associated with it to really exploit my powers, so she had a hand gripped onto my back and was, functionally, pushing me along.

"Or, really, guiding my fall. Antigravity is a weird flight system."

"How are you holding up?" she asked me as we started along.

"Badly," I admitted. "We're going home to replace my dead sorta-ex sorta-girlfriend with a copy of her made when we were still together, sorta. I am not prepared to deal with this kind of weirdness. No one is. Except maybe Zach."

"That kid reads the strangest stuff," Crystal agreed. "He got me hooked on this one asian comic that has a guy who turns into a girl whenever he's splashed with cold water. And his dad's a panda, and that's actually the least strange part of the story."

"Some weird cape story?" I asked. I'd heard of a few crazy ones, but like most parahumans I hated
reading them. They were just mind numbingly stupid and clearly written by people who didn't even ask a cape what things are really like.

"No," she replied. "No capes, just magic. Pretty much pretends parahumans don't exist. Also pretends police officers don't exist. And, for that matter, all laws of both man and nature. Or the very idea of consequences for your actions. It's really god awful by any and all literary standards, but it's fucking addictive both as a comedy and a will-they/won't-they romance. Just as long as you don't allow yourself to think about it."

"Sounds like something Victoria would read religiously," I tried to smile.

"Yeah... are you guys really going to be able to bring her back?" Crystal asked.

"Got permission from mom and dad to at least try a few days ago," I confirmed. "There's still legal mumbo jumbo, with the whole exhuming thing. Normally that would take months to work out. But it's being fast tracked by the PRT and Protectorate. They are really hoping this works. Some of their own are glassed, too. Plus others who've been transformed by other means. If this works, there will be a couple dozen others to bring back."

"Makes sense," Crystal agreed.

"And it implies we'll be able to make our resurrection tech available to others," I added. "Which is its own fucking ethical nightmare. We literally cannot do this for everyone, so how do we decide who deserves it and who doesn't? Heroes are one thing, sounds easy enough. What of the villains who fight to do something noble despite being horrible? Like Kaiser? He was there for Leviathan. Would we have extended the backup tech to him, if we had it then? Then we move to civilians. Billionaires and Heads of State with serial immortality? Is that the world we're going to create?"

"Fuck," Crystal muttered. "That's terrifying. This technology really does change everything, doesn't it? At least we won't have to ask ourself about giving it to sickos like Jack Slash and Genoscythe the Eye Raper, right? They can fucking remain in hell."

"That's better than nothing, I guess," I sighed. "So... how about you? Are you okay?"

"Not really," she admitted. "Butcher really scared me. The pain was insane, but that wasn't really the bad part. Nothing I haven't been through before. I've never been so angry before in my life. I've never been so afraid. I knew what I was doing, the whole time. That I was killing her, and what would happen when I succeeded. But I just couldn't bring myself to care about it. If... if I didn't have her there as a target, I would have found and killed someone with my bare hands and loved every second of it."

"Yeah, I know I'm 'backed up' and all," Crystal continued. "But I keep asking myself questions. What if something went wrong? What if what comes out isn't right? Fuck, even if everything is correct, I can't really think of that copy as 'me', y'know?"

"I know," I agreed. Crystal must have heard the worry in my voice.

"Fuck!" she muttered. "That was beyond insensitive. I'm sure she'll be..."

"Don't worry about it," I interrupted. "We all knew there was a risk, even if it was a small one thanks to Dinah. If it wasn't now, there's next time. Or the time after. If nothing else, there are still more Endbringers. Simurgh made it pretty fucking clear we're not immortal."

"Y... yeah," Crystal mumbled.

"And now I'm being beyond insensitive," I apologized. "It's easy to forget there are emotional consequences, even if we make it out physically."

"I remember when this used to be fun," Crystal sighed. "Go out, zap Hookwolf in the face a few times, he runs off, day is saved. Even if you lose, he's not going to do anything more than talk shit to his skinhead buddies and let you limp away with your bruises and cuts. It was... like a game, y'know? I know it sounds stupid when you say it like that, but it really was. Now? We have an 'undo death' option, and weapons that put us in the same conversations as the Triumvirate. But I've never been this fucking terrified in a fight before."

"The Unwritten Rules," I suggested. "Lisa could explain it better, but basically heroes and villains had their fights, but they're all pretty minor. Everyone pulls their punches. Except for a few rare psychos like the Slaughterhouse Nine, no one wants to rock the boat for fear of sinking the whole ship and ruining things for everyone. Sounded so goddamn naive and trite when she said it, I just dismissed it at her trying to justify being a supervillain like it didn't really make her a criminal."

"I could really go for some of that right about now," Crystal sighed. "What happened? When did it all change? When did our lives become so fucked up that I'd rather be fighting Hookwolf in my underwear, than even going out in costume wearing an armor that gives me all the functional powers of a god? Even Leviathan wasn't this frightening. I knew I would be there and do my job, but I wasn't important enough to honestly matter in that battle. No expectations that I could make the difference."

I happened, I thought. The Entities didn't want us destroying ourselves, it doesn't give them enough time to gather results. The plan was a slow burning cold war. I got past their controls, went forward without thinking about consequences, found a partner like Taylor with a similar inability to consider consequences, and by the time anyone knew what we were doing, we were too strong to put down.
Now we're in freefall and there's nowhere left to go but forward. None of that was anything I could say to my cousin.

"I think this is what the Simurgh planned as the result of New Delhi," I suggested. *Not untrue, really.* "The Rules no longer apply and this country is heading face first into a parahuman civil war on a scale that threatens to end the United States as a nation."

"Sounds like the Simurgh," Crystal agreed. "Who else would think they could destroy the United States by setting India on fire?"

"We have to run damage control," I continued. "We might not be able to stop the war, but at the very least we keep things from getting so bad that they collapse entirely. And to do that, we have to keep breaking those rules. Hitting so hard that no one dares fuck with us."

"Is this what they mean by 'peacekeeping' in the military?" Crystal sighed. "Do you think Alexandria thinks about shit like this?"

"She's been doing this for like twenty years, now," Crystal muttered. "No wonder she's such an irritable uptight bitch."

_I hadn't thought about it that way, before._ "I guess Taylor and I are the same way," I agreed. "Doing what we have to do, no matter how much damage we cause in the process. Fuck, look at New Delhi. Even when we thought each Endbringer was a continental suicide bomb waiting to go off, we were still thinking about killing the other two. A couple billion or so more lives, half our planet pretty much destroyed. That... that we could even contemplate such an act."

"You wouldn't have done it," Crystal insisted. "We'd have found another way, like pushing them through to already dead worlds and killing them there. Or just closing the doorway and leaving them trapped there."

"Maybe," I said. But if we didn't have a solution by the time the next one came around, if the portals didn't work on Endbringers the way almost nothing seemed to work on them. We would have gone through with killing them the normal way. "What about Scion?"

"Can't you do the same thing?" she asked.

"No," I sighed. "He's like Eidolon, but without limitations. Any power he wants, as long as it exists. Including a few that are so unbelievably dangerous that he would never give them to us. It's likely any battle with him is going to cost us multiple worlds. Dinah says we'll lose billions."
"Dinah also said we'd walk away with the Butcher trapped in another dimension, and all our friends alive and well," Crystal reminded me. "I'm pretty sure none of that worked out, either."

"Didn't it?" I asked. "We got Butcher removed from our dimension. Missy's death was easily reversed. Taylor's death is... to us, she loses the last week of her life and everything that implies about our breakup and possible makeup. To her she wakes up from a dream to a bunch of people who have memories of things she never did and never will do... to us, that makes her dead. To Dinah, she's incapacitated for a day or two at the most."

"This is all so fucked up," Crystal concluded.

"We might be able to stop," I added. "There is the chance that Dragon or Cauldron piece together the winning resources. Or someone else. Dinah's predictions say there are five possible contestants at the end with strength enough to be the ones that end the threat that is Scion. We can back out and trust the others."

"No we can't," Crystal corrected. "It may be physically possible. But you and Taylor aren't the types that can let others be responsible for anything. This is the fate of the world, of every world, at stake. The whole fucking universe if what you know about their life cycle is true. It makes you some of the most important people in the fucking multiverse just being on the list of people that might find a way to stop it. People like me, we can't handle that kind of pressure. People like the two of you can't handle anything less."
Missy arrived with Emma and an incredibly concerned looking Riley and Theo in tow. I could tell Theo was injured, probably fairly badly. He's going to be in a lot of pain without Amelia's help, I realized. And our need to keep Taylor's death a secret means he'll be going a while without that help. I felt bad, but there wasn't much choice.

I looked at Missy, extending my new power to her, first. I paid enough for it, may as well play a bit. Bits and pieces of data filtered in. Images in the form of concept more than something audio or visual. Argument with her mother before coming, too faded to pick up details. Her injury, but very little surrounding the event. Those didn't stick out as much as her date with Theo last week. A kiss on the cheek? I could see the moment when she quit the Wards so clearly that it was like it happened then and there. I smiled as Piggot's fat rolled while she tumbled to the ground. There's an image I am going to cherish for a long time.

Missy's trigger event, which I chose not to actually look at, stood out like an inferno. Why? I wondered, then turned my original power on the question. Postcognition is extension of usual inference powerset. Postcognition locates and refines data based upon interactions with the environment. Senses events of significant emotional impact. Correction, significant formative impact. Greater impacts leave longer and clearer data trails.

I accepted that that made sense. I could see the death of this world, despite it being millions of years ago, because it was the death of a world. Trigger events, too, would be huge details. My power accidentally gives me the ability to detect parahumans, I realized. Not accidental. Second trigger relates to a need to correct flaw in power resulting in emotional reaction identical to primary trigger. Primary trigger related to helplessness at losing brother to suicide.

Current stress related to parahumans and parahuman abilities, primarily the 'Taylia' link. Power refined to respond to parahuman threats. Trump ability. Trump abilities common in second triggers. Trump abilities result from trigger events caused by parahumans. Second trigger resultant from Taylor's suicide and need to understand the reasons. Second trigger cause identical to primary trigger cause in all cases.

I was floored. My power just gave me direct insight into how the Passengers operated. A lot of insight, actually. Things that, in retrospect, should have been obvious. Things that must have triggered Taboo, before. I actually smiled. Even as I started to cry, I was smiling. Congratulations, Taylor, you'd probably consider this final proof that you did the right thing by killing yourself.

"Are you okay?" Riley asked. I did NOT point my new power at Riley. That was something I don't think my mind could handle, seeing Riley 'at work'. I thanked every star that I had to deliberately look to use my postcognition. The fact that it was pushing me toward a tinker headache after mere minutes worth of actual use made me a little less happy, but I could live with that.
"I'll cope," I replied to Riley's question. I turned my usual power on the new one again. Range limitation exists. Manton Effect. Large population of living variables greatly diminishes power's range and detail. Likely to be limited to days on Bet, save for trigger events. "The mission didn't go quite as well as we hoped. We'll need to send Emma back to base as soon as possible, then we can go back."

"Was someone else hurt?" Missy asked.

"Not seriously," I lied, willing Riley to keep the secret. I could beat the standard suit lie detection, but I doubted I could fool Riley. Fortunately she didn't say anything about it. I knew she'd ask later. "We had a few complications involving the Butcher and could use her skills. I've extended my apologies to Director Calvert about us abandoning Boston after the fight. They were understanding of our need to deal with Butcher and the... less than successful mission in New York."

My power shared all four of their opinions on how badly Atropos fucked up. There was a damn good chance Riley might do something about it, and likely only Theo would try to talk her out of it. "I'm going to review all the recordings to figure out what happened, of course," I informed them. That wasn't strictly true, in that I probably didn't need to. Postcog worked faster. But I might have to, I had maybe a single dip into it for the day. I probably overtaxed it, already, all considered. I still needed my normal power, and they both ran off the same battery.

"Good," Missy responded. "So, need a trip back to New York?"

"Yes, please," I replied. "After getting Emma where she needs to go."

....

"I fucked up," Lily stated as soon as I walked into the room. She looked exhausted, miserable even. Well, that makes things enormously easier. She and Sabah were in their civilian clothing and sitting together, on a couch, although they rose immediately after Lily spoke up.

"Pretty badly, yeah," I agreed. Sugar coating things wasn't something I was good at. Maybe if I were, then Taylor... no. No. That was not a helpful road to go down. We won a fucking victory here, a lot of victories. Taylor didn't sacrifice her life, she sacrificed a week of memories. That's virtually nothing, in the grand scheme of things. Especially for a girl whose girlfriend can just keep adding new decades whenever she feels like it. "You'll understand if we don't put you in charge of any more missions, won't you?"

She closed her eyes. "No, that's fine," she agreed. Sabah held her, offering comfort. "I'm not cut out for leadership. I don't think there are many people on the team that would volunteer to be on a team I led, anyway. Just point me in the right direction and let me wreck some faces."
"We'll keep the worst of it quiet," I offered. "You can be forgiven for the shot that... wounded Theo and Missy. Your behavior around Shaman, on the other hand. That's the sort of thing I'd expect Zach to do." *Except not, because Zach's actually shockingly good at being an idiot without being stupid about it.*

"I know," she agreed. "Can... can we just go home now? I really don't want to be here anymore."

"Yeah," I agreed. "Our job's almost done here. The failure to remove one out of three major Teeth holdings in New York isn't a huge black mark on our organization. Butcher's been removed, and that's all the news is going to focus on. The remainders will need to face both the Adept and Protectorate, both of whom are equipped with our armor suits. They could be difficult, but nothing the locals can't handle. Get some rest for a couple hours while I hammer out the various political garbage.

....

"You know what happened better than I do right now," Taylor mumbled through her partially paralyzed mouth. "Did she change so much in just a week? Do you believe she was attempting suicide?" *She*. *Is distinguishing between herself and the Taylor who died to stop the Butcher.* Confused. Afraid. Worried we're angry. Taylor really did change a lot in that week where Taylia was removed. Almost as completely as she had in the the first week where Taylia was activated. To call her a different person was not an understatement.*Worried about my opinion. Worried about our friendship. Still friends.*

I extended my new power to her. Reaching for her past. That week was missing, of course, but I didn't need it. I'd been in Taylor's room. I'd examined her week. Punishing herself physically and mentally. Even paralyzed, this Taylor in front of me was more alive than that one had been. I looked further. Into the Taylor I had known amongst the Undersiders.*Fuck, I couldn't even lie to myself and pretend Taylor had ever been happy, even for a moment, as part of our gang.* We gave her goals, a sense of purpose, something to accomplish. We gave her her goals, a sense of purpose, something to accomplish. All things that she craved. I could even rest assured that she saw us, or most of us at least, as friends that she could trust. Regent being an unsurprising exception. She was not, however, happy. At any point.

Still, even like this she was my friend. And she wanted to remain my friend, which was far better for me than her 'other' self had been. "No, I guess not," I lied, or as close as I was willing to lie to her. "Okay, she's cleared. You're safe to come out now."

Amelia opened her passage and stepped out, looking timid. Afraid to be disappointed like I had been disappointed. Taylor was overjoyed to see her. She hadn't looked at me like that when I talked to her. I don't know if anyone ever had, or ever would, look at me like that. I didn't use my power to find out. Neither of them noticed as I left the room. Not especially surprising, either.

....
I made my usual call to Dinah. She already got the report. The flaws our Butcher mission revealed in her powers. I had to tell her about our cloning tech and alternate dimension access, simply because it was the only way to prevent this kind of travesty from happening again. We'd still need clones in the future. At the very least, there were still Endbringers, who Dinah could not read in any significant fashion. But I wanted to prevent us from needing them any time soon.

"How do you like your gryffon?" I asked the girl.

"Typha is more than satisfactory," she answered. **Tired, physically exhausted, physically sore. Spends several hours a day playing with or riding the creature. Sacrificing sleep.** I smiled.

"Glad to hear it," I said. "Usual first question."

"Point zero four percent chance there is a credible attempt on the life of a member of Pantheon or its priority allies in the next twenty four hours, point zero six percent chance of a credible attempt on the life of a member of Pantheon or its priority allies in the next week."

"That's good," I answered. "Chances the latest attack model on the Fallen in Houston and the surrounding region will prove successful."

"Ninety four point four percent chance of total victory, ninety nine point seven percent chance of acceptable levels of mission failure. Zero percent chance of significant harm to Pantheon members during mission."

That was the change to the question, 'significant harm' covered anything that took more than a day to recover from, including our powers as a factor. That wouldn't have stopped Missy's injury, but still, it would have caught Taylor's suicide. No surprise that no harm came in that mission, it amounted to 'everyone has lunch while Taylor cuts loose on the people who planned the murder of her children'.

"Eighty seven point four four percent chance of unacceptable long term fallout," Dinah concluded. **Okay, back to the drawing board on that one**, I marked on the notes. About a five percent improvement from last time. The problem with Houston's Fallen is they had a couple of the most powerful parahumans on their team, including the low powered biokinetic/stranger, brute and mover calling himself Baal. He could have been a direct relative of the old Slaughterhouse Nine member known as 'King'. Touching people and turning them into a biological armor suit surrounding his body. A lot like Amelia's Dryad, but made from still living human flesh. More, he could use the material on his own body, healing injuries and boosting his physical and mental abilities temporarily.

Deploying anyone else put them in serious danger of fighting him. Putting everything on Taylor's shoulders resulted in huge casualties as Baal subsumed people en masse to fuel his power's need for biomass. I'd thrown a few ideas at the problem, but he was just too damn durable and versatile for an easy victory. That and his girlfriend Lilith was a precog didn't help matters in the slightest. Weaker than Dinah by far, but too strong to just sneak up on. Her powerset was a lot like what we pretended
Aceso's powerset was. Either way, that continued to be a bust.

"How about the Tennessee Fallen?"

"Ninety eight percent chance of success, twelve percent chance of long term fallout, no risk," Dinah answered. That one was worth attempting, through the safety net that was Coil's power. I marked that down.

"Chances that Dragon's latest Ellisburg quarantine features prevent the post-Nilbog cataclysm?"

"Twenty seven thousand casualties within seventy two hours of any successful mission to eliminate Nilbog," Dinah stated. Nilbog was something of a weird case as well. Killing him was easy. So was subduing him and throwing him in a prison world. Honesty, even our plan to just send in a small army of M6s was nothing less than 90% successful. The problem was that within days of his removal, people started dying in huge numbers, and we weren't quite sure why. Whatever it was, every plan failed. Including the one where we buried the city in Yggdrasil and had Amelia just sit on it consuming every living thing it touched until the whole city was gone.

"So that's still a bust," I sighed. "Pity, we could really have used that one."

"Umm," Dinah spoke. "Far be it from me to question your ideas... but have you thought of maybe asking him to leave nicely?"

I blinked "What?"

"Well, yeah," she continued. "He hasn't left Ellisburg in, like, ten years. Maybe if you just offer to give him somewhere for him and his monsters to play, he'll want to leave. Voluntarily."

I closed my eyes. "A wager," I muttered. "If this idea of yours works, I'll pay you double. If not, it's a free question."

"Triple," she replied. "And you have to mean it when you ask the question, no planning to throw on purpose."

"Fine," I agreed. "Odds of being able to remove Nilbog from Ellisburg by offering him a suitable chunk of land in another dimension, assume all plans involve no attempt at harming him. Include any sudden rise in deaths from his removal next. No plan right now, just wide spectrum idea."

"Seventy seven point three five percent chance of success, zero percent chance of increases in deaths within seventy two hour after mission, regardless of success. So long as mission does not include"
violence."

"Sounds like we have ourselves a winner," I stated. It would take some more time, some more planning, and some more questions. Of course it would require all those things. But it was an amazing opportunity to consider.

A/N- Also, Lisa needs hugs. All the hugs. Ever.
Everyone was so tired and glum when I got back, it was like none of them had even slept in that week I was gone. Lisa had retreated to her office before Amelia and I ever left the pocket prison. Wherever the portal was built, the actual prison was in Brockton Bay, or that dimension's geoanalogue. I found myself on our front lawn when we shunted over. No one was there to greet me, which suited me better than a crowd.

"I'm going to get dressed in real clothes," I informed Amelia. "And a shower. And something to eat. I'm starving." Makes sense, I decided. This new body hasn't ever eaten any actual food.

LonelyWorried. "Okay," she forced a smile. "You should talk to Riley or Emma before the food, you'll probably need some specific care for a little while."

I smiled. She was always the thoughtful one. I leaned in and kissed her cheek. "Thanks," I replied. JoyDesireGuilt. I walked to my room, more carried by Matriarch than under the power of my own limbs. I was still having trouble walking, though far less now than before. I stepped into my room and slipped out of Matriarch. A sudden draft informed me that I came out entirely naked. My armor ate my makeshift Yggdrasil hospital gown. Oh well, I wasn't planning to keep it.

Showering was difficult, with my lack of coordination, but somehow I managed to not stab myself in the eye with my fingers or my comb. Hmm, my clothes feel uncomfortable. Too tight in... wait a second... I sighed. Well, I needed to talk to Emma anyway.

I slipped back into Matriarch, solely because at this point I still couldn't quite move correctly.

I entered the lab. Emma was there alone. "Hey Taylor," she said with a level of cheer that I couldn't decide was a result of being genuinely happy to see me, a forced energy to hide her actual feelings, or being the result of spending too long picking up habits from Riley.

"So," I smiled back. "I'm told I may need some dietary advice."

"Oh, right," she said. "The growing system negates much of the problem, adding proper intestinal flora is built right in. I'd advise eating a good amount of yogurt and to avoid eating large amounts of meat for the next few days at least. Just to help things even out. You'll be back to your old self in no time."

"Speaking of," I said dryly. "Is there a reason that none of my bras fit, anymore?"

"Oh, that," Emma smiled. "The system may have accidentally put a little bit too much in when it was
emulating the new body's puberty growth cycle. It's a very complicated process, reading your DNA and extrapolating patterns. All very involved tinker stuff that we'd be spending hours talking about. It's not really that surprising that something went a teensy bit wrong, right?" She continued smiling the whole time, and then she winked. "We've already fixed the error, but it was too late to undo the growth process without causing all kinds of other problems. We couldn't fix it, but Amelia certainly can."

_Uh huh. Mistake. Sure, Emma, whatever you say. _"So, any other surprises I need to worry about?"

"Shouldn't be," she replied. "The growth process is keyed to make you pretty much a match for Olympic level athletes in every physical way, and better in most, but if you don't train, then that it'll go away pretty quickly. So enjoy it while it lasts. You may have insomnia for a bit as your body reworks its circadian rhythm, and don't be surprised if you dislike salty or strongly flavored foods for a while. Your taste buds are brand new, after all."

"I meant about everything else," I responded. "Everyone's been acting weird around me. What happened?"

"Oh, that," she looked down. "Well, for starters, the only people who know you died were either there when you woke up, or Zach and Crystal, everyone else just has their own problems to worry about right now. Kinda hiding that whole 'death' thing from the public. And the team, I guess. The Butcher fight... it went pretty bad for everyone. Crystal almost became the Butcher after being hit by that rage power. You apparently activated the suit override and killed her first."

"Why didn't I just shunt Crystal out?" I asked.

"Too soon, hadn't recharged," Emma replied. I frowned. Crystal's suit had Crystal herself as a battery charger, but it was also the armor with the most energy intensive systems. It recharged in whatever order Crystal told it to, just by default. If all she cared about was killing the Butcher... well, that was a stupid question to ask.

"Okay," I agreed. "What about everyone else?"

"Lisa blames herself for asking Dinah the wrong questions," Emma continued. "Crystal's upset thanks to the whole nearly-being-possessed thing, and how you sacrificed yourself to save her. Everyone in New York blames Lily for fucking up her mission. Missy was killed, but Riley fixed that. Riley now hates Lily. Missy and Theo aren't fans, either, but Missy's too professional and Theo's too nice to let it show. And basically everything's fucked."

_Well, god damn it. _"And normally this is the stuff Lisa would handle, but she's upset too, right?" I asked. _Crystal probably blames herself, too. Fuck my life. Or past life. Whatever._
"Pretty much," Emma agreed. "I'd try to do something, but, well, I come with baggage and no one wants to be near me, much less listen to my advice. You and Riley are the closest things I have to actual friends. Which puts a certain perspective on my life that I'm not all that pleased with."

"And what about the rest of the week?" I asked. "Lisa and Amelia are on eggshells around me, and I don't know why."

She looked away. "Are you sure you want to know?"

"Yeah," I responded. "Of course."

"Your past self preferred not to update for a reason," Emma continued. "You, she, knew that she'd be happier losing that part forever. You and Amelia got into a big blowout, and both of you were miserable, and it made other people miserable. You've been given a chance to undo that. I can't lie, I'm kinda jealous. I wish I had that option, I really do."

"I doubt your past self would appreciate the mess you left her with," I replied. A fight between me and Amelia? That explains a lot, but not why we had the fight. I had chosen to get the update before altering my sexuality, for a number of reasons. But if it didn't work out and upset Amelia that I made the change, I had expected to just use the old pattern to replace the new one. A simple enough fix, all considered.

"Guess I'm still a selfish bitch like that," she smiled sadly. "I know I keep saying this, but for what it's worth, I'm sorry."

Damn it. I stepped forward and put my arms around her, pulling into as tight a hug as I could without activating Matriarch's strength boosters. Her hair was cool on my face. That's right, part of her Case 53 traits means she doesn't generate body heat. "For what it's worth, it means more that you're trying to make up for it than if you had simply erased you memories of it in order to play innocent."

"Thanks," she mumbled into my shoulder.

....

I walked into Lisa's office. "How are you holding up?"

She jumped. "Oh, jeez, how do you move that quietly?"

"Antigrav system," I answered. "Still getting used to the new legs and all."
"Do you need something?" she asked, sliding back into her position in front of her computer.

"Just wanted to talk to you," I replied.

"About?"

"You," I answered. "I just wanted to let you know how much I appreciate everything you do. I don't say it nearly often enough, but I really do."

She closed her eyes. "I know," she answered. "My power at work, it's hard for anyone to hide what they think of me."

"Still, you deserve to hear it said more often," I insisted. "Not just from me, for that matter."

She shrugged. "I don't exactly make it easy for people," she pointed out. "You're only here because you're under the emotional influence of a psychic link and a post-death experience. And that's fine, I don't like all that mushy stuff to begin with. Just be sure and praise my brilliance to the masses. You know how much I love that."

"I'll keep that in mind," I replied. "But you're not getting out of this that easily." I walked/glided over to her.

"Dammit, Taylor," she muttered, but she stood anyway, allowing me to hug her without anything more than her complaints to stop me. "You're completely ruining both of our images as a badass warrior goddess right now. I hope you realize that."

"Doesn't matter," I dismissed. "You'll just write up some crazy new scheme and next week we'll stomp some psychopath's face until we're back to being the scariest girls on the planet yet again."

"Speaking of, I have ideas for our next mission," she added. "And there's absolutely nothing that can go wrong with this one. I'll explain it at the morning meeting. But I've got a couple speeches to write, and some outlines to run past Dinah."

"I'll be there," I agreed, leaving her to her work.

I headed straight for Amelia's room after leaving Lisa. RecognitionJoy.

I paused and looked at her. I considered asking her what happened last week. Whatever it was, my
other self decided it wasn't worth keeping. I also considered Emma's advice. Other-Me chose this, having a week erased. A week that might have become months, had it come down to it. Endbringer battles are generally the only time it was likely for us to die. Honestly, now that we could carry my power across dimensions, we no longer had a reason to be near them in order to fight them. She couldn't have been hoping for someone to kill her, she had to know it might take years for something to succeed. Right?

ConcernWorry. "Taylor, are you okay?"

"Still decompressing," I answered. That is certainly true. "Everyone's acting so differently, and I just found out I was dead. It's going to take a little time to get used to, is all. I'm also still trying to figure out what happened this week."

FearLonelinessGuilt. "I... I can fill you in," she offered as I started to work my way out of the armor. She stood and moved behind me to keep me steady so I didn't accidentally fall. I stumbled back, only partially on purpose, into her arms.

"Maybe later," I answered. "I've decided it doesn't matter right now. Maybe later I'll want to know more, but for right now? I'm happy just being happy. Or I will be when I don't feel like I'm trying to walk on stilts all the time, at least." ReliefConcern.

"Okay," she agreed. "I'll be here whenever you need."

I turned and hugged her tight.

SafeRealizationShockDesire. "Umm... Taylor... you're not wearing a bra."

============

A/N- So, apparently being dead for a few days makes you all mushy.

And man, on rereading this chapter... Taylor's kind of a hypocrite with absolutely no self awareness. I think that means I caught her character perfectly.
"Clarice, Zach and Theo have no other guardians?" Principal Howell asked.

"I'm afraid not," my mother responded. "While Theo does have a living step mother, she is currently on the run from the law. The courts have acknowledged his legal emancipation, on condition that he continues to prove he is able to conduct himself responsibly."

_AnnoyanceConcernAppreciation. And that would be Taylor, spending time with her father. Their lunch date to talk about her problems. Problems Taylor didn't even remember. I pushed what peaceful emotions that I could through the link. CalmWarmthLove._

"Which includes remaining in school," Howell concluded. "And, Theo, is Pantheon providing for you?"

"No, ma'am," he replied. Not technically true- he did live in our fortress full time, after all, but from a legal standpoint he was able to provide for himself. "My family has money. It's in a trust, Mrs. Dallon can explain it better."

My mom nodded. "I am on retainer as his advocate, and one of my senior associates specializes in corporate law, and serves his interests there. He has a trust and a monthly allowance to live on."

"I see," the principal agreed. "What of Clarice?"

"They have no immediate relatives capable of caring for them," my mom answered. "Clarice lost her family to the Slaughterhouse Nine."

Clarice hugged me. "I have my Big Sister!" she insisted.

"... and has connected emotionally to my daughter," she finished. "While she is technically considered a ward of the state at this point, I don't need to explain to you that the current conditions of Brockton Bay are still straining the child welfare systems. The city has no objection to her remaining in Pantheon's custody, although the final legalities are not yet finalized. Amelia will assume legal guardianship when she turns eighteen in two months."

"I presume Zachariah is much the same?"

"His mother and father also died to the S9," mom replied. "Other relatives were lost during Leviathan or the chaos afterward. His only adult relative is obviously unfit to care for a minor..."
"Translation," Zach interrupted. "My uncle hasn't been sober since the mid eighties."

Howell looked through the paperwork. "This seems to be in order," she concluded, then looked at me. "Is that everything?"

"Almost," mom responded. "There are two other students that are attending here that Pantheon will be paying tuition for, despite not being their legal guardians."

"The former Wards, I presume," Principal Howell asked.

"Yes," I nodded as I handed over the small stack of checks. "That should cover everything."

"Thank you," she responded. I got up, leaving with the three 'kids'. Mom remained behind to make one last arrangement.

....

I met up with Taylor and Mister Hebert after the meeting. The others went to do their own thing- we were only a mile or so away from home, after all. Clarice, thanks to the miracle of public identities, had Bella with her. I didn't worry too much about who went where, and walked the short couple blocks to one of the new outdoor diners being set up in this area. A chill reminded me that it would be winter soon. I was glad I had the Yggdrasil fully integrated to the version on the other side of our doorway. Trying to keep plants alive in winter, especially ones of the scale as mine, was damn near impossible. But this one had access to massive amounts of raw material and a uniquely warm sun.

"Hello, Mister Hebert," I said with a smile as I sat next to Taylor. A waitress got there at almost the same moment, with one of those giant pizza slices. "Are you sure you don't have a power for perfect timing?" I asked Taylor as I sat down to my lunch. AmusementPride. Taylor had opted for a vegetable soup, about as mild a dish as possible.

"I'm contractually obligated to not admit to any high end thinker powers," Taylor responded. "On grounds that it'd make Lisa cry if she had any competition."

"How did everything go during admissions?" Mister Hebert asked.

"School's been sorted out," I informed him. "Ms. Howell was really understanding about everything, and mom helped."
"I still think you girls should be going as well," he added.

*AnnoyanceExasperation.* "Dad, you know why we can't."

"The world isn't your responsibility, Taylor," he insisted. "You should let the adults deal with things while you get your education and a good foundation for your future careers. The world and all its problems will still be here for you when you graduate."

"Like the adults handled Lung and E88 and Butcher?" Taylor asked. "We could ask the Simurgh what she thinks."

"You have a point," her dad sighed. "I just want to make sure my little girl lives up to her potential. You're so smart, you should stay in school and take advantage of that mind of yours. You can easily be anything you want."

"I want to kill a couple more Endbringers and then retire to a quiet, peaceful life somewhere that no one knows who I am," Taylor responded. "That's not really an option for me, dad. Even if I wanted to, I can't ignore my responsibilities. And school just gets in the way of that. It was nice to go back, to prove I was good enough, that I was stronger than the trio. I did that, already. Now I need to prove to the Simurgh that people are stronger than her, by keeping everything from falling apart."

I reached over and put my hand on Taylor's leg, giving a squeeze and offering my emotional support. *GratitudeSafePride.* "Everything that she just said," I added. "Hopefully she recorded all of that so I can show it to my mom."

"There are others who can do that," Danny insisted. "The Triumvirate, for example. Let them fight this fight. That's their job, and they're good at it."

"They need help," I told him. "There's too much going on, and they can't be everywhere at once. Pantheon, on the other hand... thanks to Taylor's power, we really can be everywhere. And because of my powers, we can do it safely. I promise I'll keep her safe." *From now on, at least,* I added in my head. *I will never allow myself to lose her again.*

The answer didn't seem to make him any happier. He simply sighed. "Teenagers sure have changed since my day."

*AmusementAnticipation.* "Hey, look at it this way," she said with a smile that somehow managed to chill my spine and warm my heart at the same time. "At least we're not dropping out because of an unexpected pregnancy."
"Are you sure it worked?" I asked.

"Absolutely," Emma responded. "There's going to be a bit of difficulty at first, but yes."

I nodded, my hand trembling as I reached over and gripping Taylor's. She squeezed back. SupportLove.

"Okay, let's do this," I said, as I put my hand on the pod and finished the last step to allow her back to awareness.

Her eyes fluttered open. "Amy?" she asked, after focusing on my face. "Wha... what's going on here?"

I had to imagine I looked a lot different than the last time she saw me. Looking at her, I felt she looked a lot different, too. She was still beautiful, but she wasn't the icon, the living goddess, of my dreams and memories. She was frightened and confused. She was human and vulnerable. But, more important than all of that, she was alive.

"Hey," I said smiling, the tears running freely down my face. "It's a long story, Vicky."

=========

A/N- See. Other than Danny experiencing a nearly fatal heart attack, which Amelia quickly healed, no one suffered in this episode. I didn't write that part in because it isn't important due to how easily fixed it was. Also because it didn't actually happen.
"What's with the audience?" Victoria asked, her bright blue darting between Emma and Taylor. No one else was in the room with us, for various reasons ranging from 'why would they be' to 'worst idea ever, of all time'. The only other person on the team who had a reason would be Crystal, who was currently with my parents and Rey, him being an actual doctor and all put him in position to help explain things to them better than the rest of us might.

"That's Emma," I introduced the one that would take the least amount of explaining. "She's a tinker that made much of the tech we used to restore you."

"What?" Victoria asked, eying the girl warily. "You mean you're a biotinker like Bonesaw or Blasto."

"Not exactly," I replied. "They're not far away, though. I've kinda started my own hero team. Emma's one of them. This is another." I stepped to the side and gestured to Taylor, knowing I was radiating a nervousness that my partner was kind enough to pretended not to notice. "Taylor, my partner."

Victoria sized up the tall girl to my right. "Huh, guess I'm a little woozy," she smiled a little. "When you said 'partner' I coulda swore you meant..."

"She did," Taylor answered. "ProtectiveTerritorial. She gripped my hand. "We work together, and I'm also her fiancée."

"Well, that explains why you were never interested in any of the guys I set up with," Victoria joked. AnnoyedConcerned. "Victoria doesn't understand what she was saying, I tried to mentally remind Taylor. And myself. "Why didn't you tell me? You know I wouldn't have a problem with it, right? I dated that one guy for three months, or at least pretended to, until he finally worked up the courage to come out to his folks."

I froze, how the hell was I suppose to answer that question? 'No, Victoria, I don't think you would have been okay with your sister having a bizarre incestuous fixation on you that is entirely your power's fault' didn't seem like such a great conversation idea. Taylor came to my rescue. "She just hadn't found the right person," she volunteered. "You know how much trouble Amelia has with people. We only got to know each other through being part of the same team."

"Amelia?" Vicky asked, her eyes focused on me.

"I... felt it was time for a change," I replied. "Amy sounds so childish."
"Christ, Ames..." she paused. "Using your full name, and an engagement? How long was I out?"

"About three months," I answered.

"You got engaged after only three months?" She asked. "Are you sure that's such a good idea, Amy?" PrideProtective.

"Never been more certain about anything," I answered. Victoria just looked at me like I had grown a second head. I suppose I had, actually. In a way that was just shy of being literal. Note to self, never let Riley hear that figure of speech.

"Usually your healing power doesn't take this much getting used to," Victoria offered a brave smile, slowly sitting up. I was grateful that she chose to drop the subject. I could tell it would be a source of disagreement in the future. More when she realized Taylor was Skitter. I really did not want to deal with that headache, ever. I knew that putting it off probably wasn't the best plan, either, but maybe with a little time for her to get used to things and see how happy Taylor and I were together, she would be able to accept it.

"That's because it was our healing tinker tech that did the work," Emma explained to Victoria for me. "Your injuries were... beyond what Amelia was capable of working with. Tell me, what is the last thing you can recall? A date or major event?"

"Umm..." she closed her eyes, thinking. "I remember Leviathan. Neil and Eric's funeral. After that it's all bits and pieces. How bad was I hurt?"

I didn't want to upset her too much more, so I answered in a way she would be able to work with. "You got into a boxing match with Crawler," I informed her, almost cavalierly. "You were doing okay for a while, but he cheats."

She smiled. "Well, good to know I didn't go down like a punk." She paused and a worried frown started. "Wait. Crawler? You mean the Slaughterhouse Fucking Nine were here?"

"Yeah," Taylor answered. "Amelia here was so upset that she hunted down and killed Jack Slash. It was, sorta kinda our first date." ChagrinConcern. Oh, I must have reacted to that. I didn't like thinking about my fight with Jack. I didn't really want Victoria to think about my powers like that. HesitationConcernSupport. Taylor gave my hand a squeeze. "She recruited me after I killed the Siberian, to go after the rest of the group."

"Really?" Victoria asked, returning to her assessment of Taylor. "You killed the Siberian? Amy fought the S9?" Dammit Taylor, what are you doing?
"All that and more," Taylor continued. "The whole group is dead. Amelia got Jack and Bonesaw. The others were killed one or two at a time by a bunch of people. You can look it up later if you don't believe me, but they really weren't that tough once you figured out how to hit them."

"Bullshit," Victoria replied, slowly and unsteadily working herself to a standing position.

"Oh, that's not even the half of it," Taylor responded. ConfidentConfrontational. "Then next week we got bored, so we stomped all over E88. I'm not exaggerating, it wasn't even close to a fair fight. That was our second and third date, though I don't think either of us really figured that out at that point."

Victoria stared at Taylor.

"Their engagement party was suppose to be the Behemoth attack, in case you're wondering," Emma joined in, feeding the fire that Taylor had started. "But then the Simurgh had to be an attention whore and crash the party. So we killed that bitch."

Victoria just gaped. "You're fucking with me," she muttered.

"No, that's what really happened," I admitted. "It was a lot harder than they make it sound. We put lots of planning into all those missions. Thinker backup, including possibly the single most powerful precog in the entire world. Tinkertech weaponry. Days of prep work leading up to merely a few minutes of actual combat. Months of work for the Endbringer battle."

"What? And you had me in a coma all this time?" Victoria asked.

"It was... a little more than that," I answered. "Would you like like to see mom and dad now? They're waiting outside with Crystal and one of the doctors."

She looked at me warily. "Sure... umm, can I have actual clothes, first? Hospital gown isn't exactly the fashion statement I wanna make."

I pulsed my thoughts through the Yggdrasil, encasing her in the material before she even had a chance to react. "What the fuck!" she shouted, and then the mass pulled away, leaving her in her new clothing. Which, while admittedly looking like something you'd wear to a construction job, were both fully functional and comfortable.

"Uh... sorry, didn't think about how that might frighten you," I answered. "I've been practicing with my powers."
"I can tell," Victoria muttered, lifting her arm. "This outfit doesn't even have seams, but you really need to work on your fashion sense."

"Oh god, you have absolutely no idea," Emma remarked. "You should see the amount of effort Crystal and Lisa put into making sure these two wear something nice. If it were up to these two, there'd be no way for people be sure they're not amorphous blobs."

"Really?" Victoria smirked. "They needed Crystal for that? She doesn't know the difference between Gucci and Walmart."

"I heard that," Crystal said from behind us.

"I know," Victoria answered. "I, unlike you, am not blind."

"Stop teasing your cousin," Carol replied, sounding far less stern than her words may have implied.

"Hey, mom," Vicky smiled. "Dad. How are things?"

"Pretty good, firecracker," he answered, moving around us. "She's not going to break if we touch her or anything, is she?"

"She's fine," Emma answered. "Yum Kaax told you the basics. You don't have to worry about hurting her."

Dad moved in first, hugging her, and mom followed quickly after, hugging their daughter that had been dead for three months. I started moving forward, to join in the group hug that was quickly forming, when Vicky spoke.

"You're crushing me," she gasped, as much in surprise as pain. "Oh god, I don't have my powers!"

=============

A/N- Territorial Taylor is best Taylor.
"Sorry, Victoria," Amelia said, her voice full of concern. Mom and dad didn't stop holding onto me. "It was a risk of the process."

"The fuck was the 'process', Ames?" I asked. "I know how powers work. What did you have to do to me? Brain surgery?"

"We had to construct a new body," the yellow colored girl with red hair answered. I forgot her name already. "We didn't have your exact DNA, so we got as close as we possibly could, using the resources we had at our disposal."

My eyes narrowed. "New body?"

Mom interrupted. "We were going to wait until you recovered some, first. Let you have a chance to rest," she said, putting her hand on my cheek and turning my head, gently, toward her. "Vicky, you weren't unconscious. You died."

"Show me," I demanded.

....

My corpse really is beautiful, in a horrifying way, I decided as I gazed at the contorted figure. The glass was pristine, a statue of impossible detail and complexity. It would take a sculptor years simply to get the detail of my hand. It also depicted something out of a nightmare. Flesh melted away, half my skull exposed to air. I could believe that my damaged memories were just from me not wanting to remember what going through that was like.

"Are you sure this is a good idea?" mom asked, but I ignored her as I stepped up to the crystalline statue that was my... remains. My costume had almost completely melted off, and my modesty was spared solely because my skin and most of my flesh were missing as well. Half my face, one of my arms, completely skeletal. My hair had clearly chipped and broken in pieces after being reduced to glass, or whatever material I was made out of. I brushed my hand over a portion that had somehow survived this long. It splintered easily. Traces of crimson were left behind, where the sharp edges had cut my fingers. *I can bleed, now.* That's when the reality of my lack of powers really hit me.

My parents couldn't even bring themselves to look at the body. I didn't have that problem. Maybe it was the same way you could faint looking at someone else's blood, but be perfectly fine seeing your own. *Not that I have to worry about my own very often. Had,* I corrected myself. *Past tense. Now I'm as vulnerable as anyone else.*
The damage extended everywhere, I could see where large patches of my belly were missing. "Crawler had acid powers," Amy spoke up softly. "He covered you, and then hit you hard enough to get through your forcefield. The only reason you could be brought back was because you were turned into... that..."

"Without getting too technical, It's a form of silicate allotrope," the yellow girl volunteered as I caressed my own mutilated face. "Like you take coal or graphite and turn it to diamond, but this starts with sand, glass or quartz and gets something that can't exist according to molecular physics as we understand the science. Because of its properties, it flash-froze your mind. Inorganic cryogenics. Just extract the data and transfer it back over."

"We had to build you a new body, Vicky," Amy insisted. "We couldn't figure out a way to do that and still be sure you'd get your powers back. There was a chance you would, but there was a greater chance you wouldn't. I'm sorry."

"N-no," I sighed, finally pulling my eyes away from the body. "Don't be sorry. You did everything you could. You saved my life."

....

"Why's dad driving in a different car?" I asked my mother on my way home.

"He... doesn't stay in our house, anymore," she answered reluctantly.

What? "What?"

"Things have been stressed after... well, after Leviathan," she added. "You know how you and Crystal were talking about joining the Wards full time, and even your aunt Sarah was considering it?"

I concentrated, trying to find the details. Memories after Leviathan were blurry, and got worse as we got closer to... to my death. "Yeah, I recall," I lied. Then I added the part that I knew would sell it. "You kinda flipped your shit over that."

"Language," mom chastised me. The lie was believed, even though it was just minor deduction. I was pretty sure my mom would have poisoned us in our sleep before letting us join the Protectorate. "It seems your father agreed with you and Crystal. He signed up with them a couple weeks ago. He's still in Brockton Bay for now, but they'll transfer him sooner or later."

"Transfer?" I asked. "Why would he need to be transfered?"
"The city's changed, Victoria," mom sighed, stopping at a red light. "Your sister and her friends have incredible powers. Imagine what it would be like if the whole Triumvirate just decided one day that it'd be fun to vacation in Brockton Bay for a weekend, and started smacking Nazis around for fun. There's nothing left here for the Protectorate to do."

"Are you saying Pantheon is equal to the Triumvirate?" I asked, incredulously. I mean, sure, Amy had shown off some impressive stuff, but nothing I'd say let her compare to Legend, even. Much less Alexandria or Eidolon.

"Equal?" she laughed. "No, Pantheon's not equal to the Triumvirate. They make the Triumvirate look like a joke by comparison. They've taken the whole 'war on crime' crime thing to a whole new level. Even convinced the Adepts and Ambassadors that it was easier to switch sides than risk pissing them off."

"Aren't those in other cities?" I asked, a little confused. *Maybe they tried to take territory in Brockton Bay after E88 was removed?*

"They are," mom acknowledged. "Pantheon's been moving on other cities every week or so. They already cleared out everything in Brockton bay. And I do mean everything. Taylor's power lets her find all drugs and violent crimes from anywhere in the city. And Amy can make almost anything."

She took her foot off the brake and started driving again.

"Like that weird tree thing," I volunteered. "That igg-whatever."

"Yggdrasil," mom supplied.

"Yeah, that," I agreed. "Wait... what's Taylor's power?"

"She telepathically controls and can see and hear and smell through bugs," mom answered. "Her power also works on whatever weird monsters Amy makes out of bugs."

Oh god, I froze as the realization hit me. Taylor is Skitter. "My sister's dating that cunt!?" I shouted.

"Victoria!"

....

"I still don't know how mom got me registered for school while I was dead," I complained to Amy
over my cell phone. "No, seriously, something about that seems really, really off. I know she's a lawyer and all, but still. How does that even make sense?"

"Don't ask me," she answered. "Powers kicking physics in the nuts, that's a thing that makes sense to me. What mom does to the legal system? I'm hopeless."

"Why aren't you here?" I asked.

"Summer classes," she answered. "I graduated." Oh, right, I reminded myself. She didn't stop living just because I did.

"This is going to suck," I muttered.

"Can't be that bad," she replied. "You've only got to complete a single semester. You'll be out by Christmas."

"I know, but..." I didn't know how to explain it to her. "Now I know I'm stuck here. I know I won't be getting any alerts to run off and smack around some assholes robbing a bank." I wouldn't call my reminder subtle, but I still didn't get how my sister was dating a fucking supervillain. 'Reformed' or 'undercover' or whatever bullshit was being sold this week.

She was fighting crime, and not just the playing around crime fighting. Amy was on the national stage. International, even. Her engagement was talked about constantly. VS. speculations pit her up against Eidolon, and aside from some diehard fans, most people couldn't decide. Usually splitting it up and calling Eidolon the more powerful cape, but Amy the more versatile and creative one.

What almost no one had any doubt about was that Pantheon as a team could go up against the Triumvirate and their teams, and win every time. The Triumvirate had fought the Endbringers dozens of times and called the clusterfuck known as Brocton Bay a 'victory'. Pantheon goes out and kills the fucking Simurgh on their first fight. Apparently, people had called their kill of the Slaughterhouse Nine 'getting lucky' or 'they only did part of it. But the Simurgh? That was all them and everyone knew it.

"Hey, are you still there?" Amy asked.

"Yeah," I confirmed. "Sorry, must have lost the signal for a second." That was a lie. I just didn't want to listen to her defend Taylor's former career as a bank robber. "I'm almost at Arcadia, so I should probably go now."

"Okay," she agreed. "Hey, what do you say about me picking you up after school. We can hang out, I'll even let you take me shopping for clothes."
"Sure, that could be fun," I agreed.

A boy approached me as I walked in. I, subtly of course, checked him out. Kinda short, a little shorter than me actually, but clearly young enough that he hadn’t had that final growth spurt than boys get before becoming men. Other than that, he was hot. Sandy brown hair, decently tanned skin, green eyes, and in really good shape. Can't fault people for their height, but a body like that only comes to those who work for it.

"You're Victoria, right? Dallon?" He smiled. Perfect teeth, too.

"Y-yeah," I replied, smiling right back. Powers or not, I still had a rep, and I still have a great figure of my own. Really, I had an absurdly good body right now. Probably classed as a Brute one or two, on merit of the clone body alone. "Sorry, you kinda surprised me. I didn't expect to be recognized so soon."

"I'll keep it quiet, if you like," he offered. "I know how much of a pain those public identities can be." He offered his hand. I took it. Very strong hand. "I'm Zach. Osiris, in costume. I work for your sister."

God dammit, I thought. Oh well, I can still work with that. Hopefully this one doesn't turn out to be gay.

A girl on crutches came up. "Are you going to introduce me to your friend?" she asked.

"Oh, yeah," he smiled at her. "Erica, this is Victoria. She's not really a friend. I haven't actually met her before today. She's my boss's sister. Victoria, this is Erica, my girlfriend."

"It's a pleasure to meet you both," I said cheerfully as I extended my hand to her. God fucking dammit.

=============

A/N- Yes. Yes I did just do that. Feed me your delicious speculation. And/or hate. That's tasty, too.

Reread A/N: Oh the fucking foreshadowing.
I quickly decided that it was painfully awkward at school. There were others in the same boat as I, who only needed to complete a single semester to graduate, or at least be bumped up to the next grade level. Most of the underclassmen were simply given a denser schedule that'd let them catch up to their peers who had gotten into the summer classes. I imagined it was an expensive project for the school, but, money was being thrown at the problem.

I had taken a class or two on economics, and Brockton Bay's taxes hadn't changed while millions of dollars weren't being spent on stuff like the sewers and waste management, thanks to Pantheon's work. Part of that, at the very least, was going into the school system.

So I spent my day around a bunch of people who were the grade below mine. With only two other students, neither of which I was friends with, from my own year.

There was a time when I had been a celebrity in this school, and it was much the same for me now, but Pantheon were more than celebrities... they were icons. Like the gods they named themselves after, it wouldn't be a stretch to say they were worshiped. Maybe not in a religious sense, but it was eerily similar. It made for an uncomfortable lunch line, being asked all these questions about things I didn't know. Like Pantheon's next big mission, or what denomination Minerva was.

"Hey," a voice said. "Wanna come sit with us?" I turned to see Zach there, along with that girl. Erica.

"Depends," I replied. "Are you sure I wouldn't be intruding?"

"Don't worry," Erica responded. "You won't be a third wheel. Theo and, uh... I think his name's Trevor? He's really more Zach's friend."

"I really don't know him that well, either," Zach admitted. "He's kinda a techy type. Still fun to hang around if you keep the conversation away from cars and planes. But you really gotta work at keeping it far, far away from there."

I let myself be led along by them. I didn't want to intrude on their alone time, but if there was already going to be a group of people, then that was fine.

"This is Theo," Zach said, introducing him to me. Theo, it turns out, was another hottie, if again younger. This time of the blond hair blue eyed variety. "Theo, meet Gaea's sister, Victoria."

"Hello, ma'am," Theo said politely. He glanced at Erica, as if confused about something.
"Zach may be cute, but he's not very subtle, I thought. He may as well just announce to the world that Theo is part of the team. Which probably meant Trevor was as well. I forgave him, however. Just because a cape... a former cape, I reminded myself... figured it out, doesn't mean normal people would.

"And this is Trevor," Zach introduced the other boy. Trevor was darker toned, with black hair. Obviously hispanic. One of the skinny geeky types that wore the status on his sleeve, a lot like Kid Win did. I wondered, and not for the first time, if that was just a tinker thing. But then there were examples like Armsmaster. He may have been a bigger tool than his overcompensation rod, but he was focused on things that mattered, like kicking bad guy butt.

"Hello, guys," I said, sitting down near them, opposite to Zach and Erica. Something about her was strange, and I could not put my finger on what it was. "Don't let me ruin your conversation."

"So, Theo," Erica started. "I saw Clarice chatting with a couple guys in her class about a date. Aren't you two an item?"

Theo frowned, looking away. "No, I'm seeing Missy." The way he said that made me worry. Relationship issues there. "The two are pretty close friends, though. Maybe you got them confused."

"That must be it," she smiled. No, no it's not, you bitch. You knew exactly what you were doing before you sat down at the table.

"So, how long have you and Missy been dating?" I asked. I know it's not what Erica was going for, so I may as well toss the wrench in. Besides, I was pretty sure I knew who 'Missy' was. Vista and I weren't what one would call close, but I liked the kid. Even if she had such a painfully obvious crush on my boyfriend. I didn't exactly feel guilty about that, but I did sorta feel bad for her. She found someone, and I was happy for her. That and I really wanted to feed Erica her own teeth.

"A couple months, now," Theo answered. "Kind of. We met at a dance. I don't know when we became 'official' or anything."

"I know how that goes," I said with a smile. "Relationships are complicated. I've found that, ultimately, it's all about communication. Y'know, talking to each other. Especially if there's something wrong."

Theo nodded. "Thanks for the advice, ma'am." Good, I thought. That's a step in the right direction, like I had with Dean. Sure, an outsider might think our relationship was just constant arguing. They'd even be right. But that's how we communicated, and so we would always be together in the end. Or would have. Fuck you, Leviathan. Can't wait for Amy to cut you into pieces."
"Please don't call me ma'am," I replied. Makes me feel old.

"So how about you two?" I smiled, looking at Zach and Erica.

"A couple days," Zach answered, at the same time Erica answered "Years."

She paused. "Oh, umm, we've known each other for years. Only started dating a little while ago."

"Oh, one of those childhood friendships things?"

"Yeah," she agreed. "I suppose it's not an uncommon story."

"Why haven't you asked for Amy to fix your legs?" I asked. She fidgeted. Because you haven't been here long enough to get a chance.

"I... didn't want to impose," she said. "She probably has people pestering her for stuff like that all the time."

"No imposition, I assure you," I said. "In fact, I'll talk to her after school and see what she thinks. Get you patched up tomorrow, if that's okay."

"Umm... sure, if you insist," she smiled.

"I do," I smiled broadly. "Now I'd better get going. Want to clean up before class. See you later, guys."

They said their goodbyes as I walked away. "So, bug girl, did you catch all that?" I asked a nearby garbage can. It's where the bugs would be, right? A ladybug landed on the back of my hand. "That girl creeps the hell outa me. Point whatever master/stranger shit you've got at her. You used it to take down Heartbreaker, right?" The bug flew away. She didn't say anything, but I had my answer.

Teach that bimbo to underestimate me.

=================

A/N- Strangely enough, I think Vicky is the go to favorite character in my story.
I landed on the roof of Arcadia, where Victoria was already waiting. She looked at my costume, clearly not terribly happy with it. "I thought you meant for a normal ride. Or, maybe, walking."

"I did, at first," I answered cheerfully. "Then I decided this would be more fun. I've kinda always wanted to do this." It was true, too. Ever since Victoria got her powers, I'd wished, fantasized even, about being the one carrying her in my arms. The romantic desire might not be there anymore, but this was still something I wanted to be able to do.

She hesitated as I held out my arms. Or my armor's arms, as redundant as that sounds. My own actual limbs were inside the core of the body. She cooperated, allowing me to pick her up and carry her bridal style, and I took off. She squealed and gripped hard around the suit.

"You act like this is your first time flying," I teased.

"I'm not flying!" she cried. "I'm being carried around by someone wearing a suit made out of vines!"

"Oh, stop being a baby," I laughed. More fun than I ever imagined! AmusementCuriosity. I decided that I'd have to tell Taylor about this one. She promised not to peak in on my conversations with Victoria, but it did make her upset. I would have to find some way to make it up to her. "Now I know why you carried me around all the time. This is hilarious."

"If you drop me, I swear I'll trigger as a ghost and haunt you forever!" She yelled over the wind rushing past us. She didn't have to, the suit's armor could hear her just fine. "This is not flying! This is falling in the wrong direction!"

Somehow, she managed to not have a heart attack on the trip. We touched down, safely, only about five minutes after we took flight. "See, was that so bad?" I asked as I watched her catch her breath. I then shed my armor, sending most of the mass into the sewer system. The armor would be transported back to base using automated systems. I was left with only the bracer. Victoria simply stood there gawking at me, and I became a little self-conscious. "What?" I asked.

"I don't even know," she admitted. "I mean, I remember having trouble convincing you to do anything but fix up a few cuts and bruises, and now here you are showing powers I didn't even know were possible."

"Things have changed," I said softly. "A lot of things."

"Like your supervillain girlfriend?" Oh god damn it Victoria.
"Do we really have to have this conversation?" I fought back the urge to yell. **ConcernSupport.** I took a deep breath, taking comfort from the link. "I just want to have a nice day at the mall with my sister. Eat junk food, pretend everything's normal for a change. Could you please not get on my case over my girlfriend?"

She frowned. "I seem to remember a few guys you encouraged me to leave and never look back."

I froze. **Fuck.** I had no way to respond to that. **SupportLoveAnxiety.** I sighed, I would need to do so much explaining to Taylor after this was over. "I know," I finally spoke. "I know, and I was wrong. You have every right to be pissed about every time I did that. I'm sorry."

She blinked. "Actually, I was going to use it as an example of how you should listen to me," she elaborated. "Y'know... I was being an idiot and you tried to help. Now you're being an idiot and I'm trying to help."

"Is it too much to ask that you accept that I'm happy? Because I am. Taylor makes me happy. Let's just drop it there."

"You never dropped it when you had a problem with what I was doing," she insisted. "Your girlfriend threatened you with deadly spiders," she insisted. "And shot me. And fed me to bees."

"You hurt people too, Victoria," I met her eyes, drawing on all the tips I'd learned about at least pretending to be confident. **SupportConfidencePride.** I didn't know what Taylor was getting off my side, not for certain, but it was good to know she was there. "She also nearly died fighting Leviathan, and stood beside me during the worst period of my life. She's sorry for all the bad things she's done. You don't have to accept her, or her apology. I wish you would, but you don't have to. You do have to accept that I have."

She just looked right back at me.

"Please, Vicky?"

She sighed. "Fine, but I'm going to call this in next time you don't like something I do."

I frowned. "That's really not how that sorta thing is suppose to work."

"Too bad," she smiled. "I'm supposed to be the irresponsible sister. Deal with it."
"Fine," I rolled my eyes. "I forgot what a colossal pain in the ass you are at times."

We spent much some time shopping. She needed new outfits, and so did I. She was more than happy to find out I was footing the bill, and as weird as it sounds, I'd stopped caring about money. Maybe this was what Dean felt like, when Vicky always talked him into buying everything. Didn't matter to him, and made her happy. And she seemed happy enough, flitting about. Apparently a few months is enough time for the fashion world to reshape itself into an alien landscape, to hear her talk about it. Meanwhile, I simply browsed for a few things and let her talk me into buying whatever.

"So," I asked when looking at a dark blue coat I recognized. "Would it be creepy of me to buy a coat, if my girlfriend already has one just like it?"

Vicky paused. "Probably?" she answered. "I've never had to ask that question before. I don't think it's your color, though. You need something brighter. Like this."

"Vicky, I'm not wearing pink," I said dryly.

"It's not pink, it's watermelon red."

"Which is the same color as pink."

"Whatever, we both know you're going to buy something green by the end of this argument, anyway," she countered. She's probably right, I decided.

....

"So, Dad's got a bit of time," Victoria said after putting away her cell. "We should talk to him. He's been acting really weird lately."

"Mom says he's been acting weird ever since..." I rebuilt his brain under duress from Bonesaw. "He was healed."

"Kinda reminds of when we were kids," Vicky replied. "Kinda goofy. Which was nice when we were six or seven, but it's really hard to know what to do with considering we're not little anymore."

"I know," I agreed. I was kinda avoiding him for that reason. I followed along as she led me out, to find him waiting in his car.

"Did you girls walk here?" He asked, as we got in. Victoria took the front seat, as usual.
"Amy flew us over," Vicky replied, sounding less than enthused about that. "She's terrible. I fear for the roads if she drives even half that bad."

"Hey!" I argued. "At least I've never run into a flock of seagulls."

"It was dark," Victoria countered. "And I was in a hurry."

Dad laughed. "I remember that one. You came home dripping with blood and mom almost had a heart attack when she saw you."

"Then when she found out it wasn't mine, she made me wash off in the back yard with a watering hose," Vicky muttered. "Ruined my dress, too. Worst junior prom ever."

"Not so bad," he said. "Gulls are the blind pedestrians of the skies. You had to have made at least five hundred points up there."

Vicky offered a light chuckle as Dad joked at her expense. That was something that hadn't happened in years, and we both probably felt that same blend of discomfort and happiness. He didn't act like his usual self, but he seemed happy. Despite no longer being with Mom. Then again, if I was being honest with myself, I was only happy after moving out, myself. So maybe it was just being around her. Just because I'd managed to reconcile with her, didn't mean I forgot what an unpleasant person she was to be around.

"So, Dad," Vicky started. "How long has it been since you last talked to Mom?"

"The other day, when we got you back," he answered.

"I don't think that counts," she replied. "I mean when have you actually talked to her."

"Oh... a while, I guess." About a month, I supplied in my head. Their last conversation would have been... the day of the Simurgh battle, if I recalled correctly. "What for?"

"I was thinking we should get together for a family thing," Vicky offered. "The whole family, just to catch up. It'd be nice."

"That sounds great," Dad replied. "Amelia, you should bring Taylor."
"I don-"

"And we should have Danny and Sarah come, too." He continued, interrupting me.

"Umm... who's Danny?" Victoria asked. Oh, fuck. I knew we forgot to tell her something.

A/N- Still love the chapters with Vicky in them.
"So, how do you like the first day back?" Missy smiled as we left the school. "As if I even need to ask."

"It's awesome!" I exclaimed. "Even better than before. I have to bring my scarf tomorrow, all the boys want to play our game again!"

"Of course they do," Missy sighed. "They're trying to get you to be their girlfriend."

"Really?" I asked. "Boys are weird."

Missy just looked at me. Or my changeling, at least. "Yes. Yes they are," she agreed. "Speaking of, I see Theo."

I glanced over at him. He was with Zach and some girl I didn't recognize. She looks a little old to be a highschool student. Clarice's analysis system instantly scanned her, identifying wounds to her knee and shin, fixed with rather inefficient medical knowledge. My own tinker knowledge filled in the blanks. Approximately thirty years old, female, scars and damage from a number of injuries over the course of years. Bullet and knife wounds included. Two pregnancies, second ended in miscarriage or abortion.

"Who's your friend?" I asked them as they approach. Another alert flared- the really expensive one that I kept in the most insulated portion of the Clarice system. Rapture's master/stranger system. Although to call it that was a misnomer. It worked on a number of other things, including many illusion powers. And it failed to work on a lot of master or stranger powers- such as Taylor's or Clarice's. It was working this time, however, alerting me to the altered dynamics.

"This is Erica," Zach replied. "She's my girlfriend. Erica, this is Clarice and Missy."

"I remember," Missy replied. The personality profile alerted me to what I already knew, she was being influenced. Rapture's tech started profiling details, and I told it to detect and tell me how to respond to the influence. It was a 'soft' effect, meaning it wouldn't alter my personality. It would simply make me believe I could trust this girl, and attempt to use the brain's naturally unreliable memory structures to fill in blanks.

"Oh, right," I said. "Zach mentioned you a couple times. It's good to meet you."

"I've heard a lot about you, too," the woman said with a less than healthy smile. Obvious smoker, I noted. Other drug use as well. "You're pretty famous in school. Did you really use an invisibility
power to walk around the cafeteria in nothing but your socks?"

"Sorta," I answered. "It was really a rapid shifting camouflage. My powers give me internal and external shapeshifting." A number of notices flared, as I was warned that my friends were about to tell her I lied. They knew Clarice was a fake and thus had no real powers. Drat! "Or that's the simple answer. It's really far more complex than that," I quickly added. Then I started talking 'tinker'. They wouldn't be able to call me a liar if they had absolutely no idea what I was saying.

I activated the com system in my outfit. "Taylor, I need you to do something important," I started. I knew she'd hear me, she didn't have a choice in the matter. An exploitable weakness, if you were smart enough to harness it. "Could you get a blood sample from that girl with Zach?"

"You mean Erica?" she asked. "Why would I do that?" Her, too? Darn it!

I hesitated. Big Sister wouldn't want me to lie, especially to Taylor. But she wouldn't want a Stranger hurting people. "My instruments think she might be sick, and I want to make sure without scaring her." I lied smoothly and easily.

"Oh, okay," Taylor responded. I could rely on a sample in fifteen minutes or so. Until then, I would buy time.

"Wow, that's really something," Erica said, unsure of how to approach the situation. The alerts let me know what she knew she couldn't reach me with her power. I wasn't behaving close enough to what was expected, and this model of Clarice didn't have an imitation human brain to trick thinkers.

"It is," I agreed. "But we have to rush, Zach. Minerva needs to talk to us at the base. The three of you will have to stay here."

"Really?" she asked. "What about?" There was a spike of apprehension and fear, more at the mention of the base than anything. She was afraid of something there, though I couldn't be certain of what exactly. More importantly, it was clear she knew Missy and Theo were parahumans. Secondary power? Did Zach tell her? Was it simple deduction? I had no way of knowing that, either.

"Our next mission," I answered, then glanced around to make sure no one else was in earshot. "We're planning to eliminating Nilbog." I whispered. It was a safe enough thing to admit. What's the worse she could do with that? Tell Nilbog? Even if she were to report this to some unknown leader, it was of minimum value. What really worried me was how she managed to work past Dinah's powers. Then again, her power worked on Taylor through her bugs, so apparently it carried over sensory powers.

"That's... wow..." Erica smiled. "Can you tell me what you're planning?"
Zach was about to speak up, but I interrupted again. Keeping the conversation between me and Stranger-girl. "Not sure," I answered. "That's why we need the meeting. Minerva's a really powerful Thinker and has been talking to a bunch of other powerful Thinkers. It's a really big operation, kinda like the one where we stopped Butcher." Bingo, I caught the response. She's attached to Butcher, somehow. "You can come with if you like," I offered, knowing full well she'd refuse.

"No, that's okay," she said. "I need to get home anyway. Us non-parahumans don't get homework passes. Call me after the meeting, okay?" she kissed Zach, and they held their moment of PDA for a few seconds. It gave me a chance to read more of her body language. It seemed to mold itself into the role she was playing, though Rapture's tech said the mind disagreed. Her power was rather disquieting. If she hadn't activated the power when approaching us, I wouldn't have known it existed.

I, meanwhile, called Lisa. "We have a Master/Stranger problem," I told her. "One I'm pretty sure has influenced Dinah and Taylor. It might hit you, too, if you use your powers the wrong way."

"Fuck!" Lisa exclaimed, and I sighed internally. So immature. "What do you have?"

"Already got the blood sample, anti-master drug will be released shortly. I need you to hold a meeting about the Nilbog plan, for Zach and my benefit. Missy and Theo will probably be there as well. Don't tell them anything you're worried will go public."

"Riley, I don't have enough to make a meeting out of that," she replied.

"Then make up another reason!" I exclaimed. "Buy an hour or two."

"Okay," she answered. "I can put together something."

....

The anti-master drug had been refined since its early days. No longer leaving any sign that could be detected. It was invisible and odorless. Even Amelia wouldn't know it was released. It didn't require her help, anymore. I did everything on my own. No one except Lisa even realized it had occurred, and in her case only because I told her. And then I snuck out of the lab, wearing one of Emma's new power systems and my stealth tech.

Tracking 'Erica' was easy enough. She was on the phone talking to Zach. It appeared she used her powers on the actual residents of an apartment to convince her they belonged there. They were easy enough to render unconscious. The woman seemed only mildly surprised. "Umm... I've gotta go. The 'rents are uptight about the homework. Love you too."
"Hello, Dream Girl," I growled.

"Who are you?" she asked.

"The real body behind Clarice," I answered. I knew she already knew. "And you should know that you're the second person in my life that's ever actually managed to make me angry. You hurt my friends, and for that you have to pay."

"Is that so?" she smirked. "You should know my power-"

"Works by influencing the subconscious, forcefully associating yourself with the subconscious emotions of the victim. Making you into whatever female person the victim longs to see the most. Someone they miss. For lack of a better term, a 'nostalgia' effect." That took the smile off her face in a hurry. "Complete with low level Thinker and Stranger powers to achieve a more perfect imitation."

"You're not immune to my power," she stammered. "No one is."

"No, I'm not," I answered. "And right now, I'm giving you permission to use your power on me in full. Go ahead, I'll even give you the minutes you need to make it work in its entirety."

My internal alarms went off as she accessed my mind and memories. Her eyes widened, and her lips quivered as her power caught a mental association to Siberian. It was strange. I could still tell the difference between this girl's appearance, and what I knew for a fact Siberian looked like. But I still believed she was, in fact, the same person, despite every insulation between the truth and this lie. Including knowing it was a lie.

"Now you know," I said. "Tell me, how do you reverse your power? Our anti-master drug doesn't work. And don't lie, I have equipment that will know."

"It doesn't reverse," she stuttered. "Alterations are permanent."

I knew she was telling the truth. "That makes it more difficult," I replied as I moved toward her. She collapsed, paralyzed by the influences of the drugs in the air. "But there are still ways to coax a specific result."

The mental association changed, replacing her with a face I thought I'd forgotten. Or maybe I had forgotten, and her power, or perhaps simple retroactive interference, filled in the blanks. "No!" she exclaimed. "Riley, you can't! You're a good girl!"
"No I'm not."

A/N- Damn this is a dark chapter.

Also. Predicted a hundred and fifty five chapters ago. See the Cherish Interlude.
I sighed. *Dream Girl was right.* Her power, depending on how you looked at it, either did not work, or could not be turned off. It wasn't mind control, it wasn't a memory rewrite. Or, at least, her primary power worked that way. The secondary powers that detected or exploited those emotional bonds were far more active. I could break that part. I couldn't break the long term influence. She exploited feelings and emotions that already existed. Bringing them to the forefront. It was, as I said to her, a 'nostalgia' power. Lost loves, memories of happier times. Only reversible with a hard rewrite of their brain chemistry.

I doubted my friends would appreciate that plan.

They would have to recover naturally.

*I would have to recover naturally.*

The alterations I made to her brain were far more overt. Easier to undo, easier to detect, but far more powerful in their ability to influence the victim. I watched from a rooftop six blocks away as she casually strolled into the ocean from a deserted stretch of beach and rubble. Tracking tech confirmed everything. The hypoxia would eliminate any evidence of my manipulations. I turned off my emotions, this one time. "Goodbye mommy," I said with artificial cheer. Then I returned to my home. To a family I choose, and friends that loved me. Friends who needed my help now more than ever. Friends that I needed.

"You'd have done it differently?" I asked. There was no way to hide secrets from her anymore. I might be able to beat her 'perfect guesses' power, but there was no possible nonviolent defense against her new ability. It was easier just to work with her, instead. As my Big Sister and her fiancée put it: 'don't fight, accept and push through'. They were so smart, even if they were dumb sometimes.

"I don't know," she replied, shivering. "Had to stop looking. You're sure?"

"Completely," I answered. *I had her monitored until death, then encouraged some of the scavengers to find her early. She's quite literally fish food.*

Lisa read my body language. I wanted her to, which made it easier.

"Good," she said with a hard voice.
"Now what?" I asked.

She sighed. "We pick up the pieces. The power wears off naturally. Time healing wounds, and all that utter tripe. Dinah and Taylor weren't influenced enough for it to matter. No emotional investment, no notable impact. So it's the four of you. How are you holding up?"

"Not even the worst thing I've done in the last six months," I answered with absolute honesty. "Worry about the others."

"Okay," she agreed. "Theo and Zach are the big ones. Zach... tries to ignore problems. He'll pretend he's immune and do everything possible to make us believe it. We should find a suitable distraction. I'm thinking we throw Emma at him. She'll love it, and he's not gonna be feeling terribly picky."

I frowned. "That doesn't seem..."

"Don't worry," she interrupted. "I can handle that part. You are going to have to worry about Missy and Theo. Invite them somewhere after school. In person... Clarice isn't the person they should be talking to for this."

"Okay," I agreed.

....

School went by slowly, but I had let both Theo and Missy know that we needed to talk after school before it was out. Specifically, that I needed to in person. Naturally, they had my company on the way to the base, through Clarice, but I refused to say anything about it.

"Okay, Riley, you're starting to worry me," Missy said as she entered my bedroom. I set Fluffy aside, and he scuttled back to where he belonged as my pillow. Missy took it in stride- she's the one who has a flying horse made of pretty much the same material, after all.

"Okay, Riley, you're starting to worry me," Missy said as she entered my bedroom. I set Fluffy aside, and he scuttled back to where he belonged as my pillow. Missy took it in stride- she's the one who has a flying horse made of pretty much the same material, after all.

"We need to talk about the mission in New York," I replied. Both of them fidgeted. We didn't really talk about New York. We'd been assured that we'd no longer be put on missions with Atropos, and that she wouldn't be in charge of any missions any time soon. Beyond that, we'd have to trust the judgment of others. Of course, I knew my Big Sister would do what was best. "I learned a few things about the Stranger that Theo encountered."

"Really?" Theo asked.
"Yes," I answered. "She decided to imitate Zach's dead friend."

"She was Erica, wasn't she?" Missy asked. "That's why she wasn't at school."

I nodded. "She's been caught and won't be an issue any longer."

"Did... did you develop an anti-master cure?" Theo asked eagerly.

"Sorry," I looked away. "Her power alters neural connections manually. If you have the drug already in your system, you're immune, but you can't undo what's been done without rewiring the brain. It would take Amelia's power, and knowledge of what your brain was like before."

"Theo..." Missy asked. "What's wrong?"

He sighed. "Her power... it's weird... it made me have... feelings... for Clarice."

My heart jumped in my chest. *Really?*

"You mean Riley?" Missy asked, sounding more worried by the second.

"No," he answered. "Clarice, specifically. I can look at Riley and it doesn't do anything like that at all." And just like that, my stomach clenched. *The warm feeling had died.*

"That... is really strange," Missy replied. "Sorry, that sounded worse than I meant it to. I just mean..."

"Her power works on feelings toward people we've lost," I volunteered. "Fond emotions and memories that aren't attached to anyone."

Theo offered a half smile. "Guess that explains it. I did have a kinda crush on Clarice, before finding out what she was. Before knowing about you at all, Riley. I was a little disappointed when I found out that Clarice wasn't real. But I got over it. I didn't think it was that intense."

"That's understandable," Missy said, reluctantly. "I mean... Clarice is kinda designed to be the perfect girl. And don't you dare try to pretend otherwise, Riley. She's fit, well proportioned, I'm pretty sure her face is some kind of perfect blend of human features that you spent a weeks designing. And your doll has the voice of a goddess."
"Four and a half months," I admitted. "And I... may have used recordings of Canary to mode her vocal cords. It doesn't convey any of her powers, of course, but I did pick her because I like her voice. I wish I had a chance to talk to her before she got in trouble." I really did, too.

"See?" Missy answered. "And then you got mind whammied by that bitch. It's not your fault. Any more than it was those children's fault that Valefor used them as suicide bombers. That was his fault, and I'll punch anyone who says otherwise. This is her fault. You don't have to feel bad about it."

"Thanks," Theo smiled softly at her, and I suppressed a need to whimper. "You're the best." He gave her a quick peck on the cheek.

"I know," Missy replied with a bright smile. "You just be sure to let everyone know it."

"I can do that," Theo agreed. Then he paused for a second. "So, uh... she also messed with Zach. Like... way worse than me."

"Yeah," I confirmed. "She used his dead childhood friend on him."

"I now regret letting her live after the first time," Theo replied darkly. "What are we going to do about this."

"Lisa said something about 'throwing' Emma at him," I answered.

"What?" Missy gasped. "That's awful!" Good, I thought. I'm not the only person who thinks so.

"I'm gonna go talk to Zach. Y'know, guy stuff. Maybe a good boxing match or something," Theo said to us, standing. "I'm sorry, I know I promised, but..." He is so good to his friends, I sighed inwardly.

"No," Missy insisted. "You're absolutely right. This is more important. You do that. I'm going to have a talk with Tattletale. There might be some boxing involved. It's going to be incredibly one sided. Riley, do you mind?"

"No, it's fine," I answered. "I have stuff to keep me busy."

I watched them leave, and then issued the low whistle that brought Fluffy to me. The dog sized spider shaped living stuffed animal crawled right back and wrapped itself around me. Four pairs of limbs for four times the hugging power. It was even internally heated. I flopped down on my bed, held by the delightfully comfortable pet. It purred happily at the movement and pressure as I squeezed back.
Should have added more arms, I decided as I stared at the ceiling.

A/N- The final chapter as seen on Spacebattles. From now on, all you folks who read it there but didn't make the move to QQ? This is where the new stuff begins.
"No, I'm absolutely serious," I insisted to Vicky on the phone. "I was. Even got the dumbass to waive all their stupid 'tests'. And then I became their leader like five minutes later."

"You? Really?" Vicky laughed.

"Didn't really matter since they were all dead by then," I added. I felt a little bad, lying to her about Riley, but as much as I loved my sister I couldn't imagine her taking the news that I had quasi-adopted Bonesaw well. "But I earned leadership the official way."

"I'm so putting that in my autobiography," she teased.

_FrustrationDisdain_. I blinked and looked over at Taylor. _Is she still jealous?_

"Lisa's being a bitch again," she sighed. 

_Oh, of course she is._ "Sorry, Vicky, can I have a sec?" I asked.

"Uh, sure," she responded.

"What is she doing this time?" I asked Taylor.

"Remember how they chased off that one Stranger? Dream Girl?"

"Yeah..." I recalled. It was terrifying to think that there was a stranger out there that could slip past both Taylor and Dinah, as well as Zach's natural defense against all things mind and body altering. Except possibly the Simurgh, he didn't respond by disintegrating when hit with her song. Then again, maybe she never bothered trying to target him. Fortunately we destroyed her before the time limit anyway.

"Turns out, Lisa's plan for making Zach feel better is, and I quote 'throw Emma at him'," she sighed. "And, apparently, Missy just found out."

I cringed. "Sorry, Victoria, I have to go. I'll talk to you tomorrow."

"Oh, okay," she sighed. "I should do my homework, anyway."
"Bye," I said, and turned off the phone, then sat up from my position laying on my bed. "Okay, let's go."

Missy looked pissed when we got to the living area. Taylor's modified bugs, the ones that don't get eaten by Yggdrasil, had taking position between her and Lisa.

"Alright, what the hell?" I asked.

"Lisa's being a bitch again," Missy started.

"What?" Lisa insisted. "It's a good idea. Emma won't mind in the slightest, and Zach will appreciate it, too. It's a win for everyone."

"It's toying with people's hearts," Missy growled. "It's not right to use people like that." I found myself agreeing with Missy on this one, and judging by the emotions in Taylor, she was on my side with that assessment.

"Lisa," Taylor sighed. "There are lines, and this crosses them. Zach's been through enough manipulative bullshit, and I know Emma's not exactly my favorite person, but seriously... she doesn't deserve to be treated like little more than a prostitute."

"Come on," Lisa insisted. "It's a perfect plan! They get back together, she stops moping about like a lost puppy, he stops desperately overcompensating for his feelings by pretending to be a complete fucking idiot, and we go back to worrying about things that actually matter."

"Maybe if you squinted, it would hold up for fifteen minutes, but in the end it'd just wind up hurting Emma," RealizationIncredulity. Taylor didn't elaborate, but I'm pretty sure Lisa and I, at least, figured out her surprise.

"They broke up for a reason," Missy countered. "If they get back together, then fine. But Zach's my friend and I won't let you treat him like this."

"Lisa... maybe you should just get a boyfriend," I finally suggested. Everyone stopped and looked at me.

"Doesn't work like that," Lisa replied. "Asexual, remember?"

"Then go hook up with another asexual," I suggested. "Weld's still in Boston, and he's a great guy. Bonus points for you since he's about as clean as anyone can possibly be. I'm sure he can be convinced. As long as you tone down the 'bitch' around him."
"I'm not interested in romance," Lisa insisted.

"Then why do all of your ideas lead in that direction?" I asked. "Your idea for helping Taylor? First you tried to hook her up with Brian."NostalgiaDisgustAnger."And when that didn't work, you tried to hook her up with me."

"I did not try to hook the two of you up," Lisa insisted. "I recognized that the two of you were a lot alike, and encouraged you to be friends. That's all I ever thought would happen. I never intended for it to become romantic. I sure as fuck didn't intend for you to create an empathic link! How was I suppose to know that was even possible? A link that's the only reason you ever got romantically involved in the first place."

"And me and Theo," Missy added. We all looked toward her. WorryRegret. "What? I'm not stupid and I'm not a child," the thirteen year old insisted. "I knew what you were trying to pull the moment Aceso showed up with the flying horse. After that, I just rolled my eyes and played along."

"Sorry about that," I said sheepishly.

"Don't be," she replied. "I got an awesome best friend and an amazing boyfriend and I'm on a team that values my input. I got to kill an Endbriner. I got battle armor that's too badass to be described in words. Plus I have yet to be forced to go to some public event to be gawked at by people I wish I was allowed to punch. If you had just come out and offered that last line as your main selling point, I probably would have taken you up on the deal. That and being able to tell Miss Piggy to go to hell. I wanted to do that for years."

"See, it worked out great," Lisa insisted. "And this will, too."

"How about, instead, we support our friends the old fashioned way?" Taylor asked. "I mean this as a friend, Lisa, but you can't keep doing this. I know neither of them are really your friends. Really, past me and maybe-kind Crystal, you don't have any friends here."

"I prefer keeping things professional," Lisa answered. "It's easier that way."

_AnnoyanceRegret._ "Yeah, I thought that way once," she sighed. "Lisa, maybe this started like that... but we're friends here. Most of us are, one way or another, a family. I have Amelia, and you, right?"

"Of course!" Lisa insisted. "Don't you dare doubt that."

"And Amelia has me and Crystal and Riley," she continued. "Crystal's a bit standoffish, and even
she's pretty close to Zach and you. Which is weird, because you two are easily the hardest people in this group to get along with."

"She has years of experience dealing with me and Victoria," I reminded. "Plus Aunt Sarah's awesome with people, and Crystal takes after her mom."

"Then Riley's got Missy and Emma and even Theo and Zach a bit," Taylor continued. "Theo gets along pretty well with Zach despite them seeming almost nothing like each other at all."

"I have Theo and Riley, of course," Missy added. "And Chariot. Trevor's a great guy, if a bit of a loner. But that's how Tinkers are, y'know. He'll probably be a 'less a-hole' version of Armsmaster. Not the highest bar in the world to set, of course."

"The list goes on. Rey's the only one who's not really 'close' to any of us," Taylor concluded. "He treats this whole thing as a job. Which is fine, I'm not sure that there can be a non-creepy way for the thirty year old pothead to be friends with a bunch of teenagers. He's not causing any drama and has his own life outside of work to worry about. You, on the other hand... I know you've been in a slump, lately. I'd like to help you out of it, we all would."

"Umm..." Lisa frowned. "Are you holding an intervention, now?"

*ShockAmusement*. "Well, it didn't start that way, but I guess so," she agreed. "We just want you to start concerning yourself with how your actions actually impact people. We're more than cogs in a machine here, Lisa. And so are you. Please remember that."

She sighed. "You're right," she finally admitted.

"The 'Emma' plan wouldn't work anyway," another voice spoke up. Everyone except Taylor looked. Emma was standing in the doorway. "Don't get me wrong, I wish it would. But it won't. Thanks for looking out for my feelings, Missy." She smiled at Missy. "And thanks for the alert, Taylor."

Taylor shrugged. *PleasedSad.*

"What we need," I suggested. "Is a party. A group get together that has nothing to do with work. At all. Just having fun together. Last time we did anything like that was the fourth of July, and that doesn't count because it was a public gathering."

"That actually sounds like a really good idea," Taylor agreed. Everyone else looked around. "Now we just need an excuse. Something relatively innocent."
"I may have a suggestion," Emma volunteered.

------------------

A/N- And Missy didn't even get to punch anyone.

We waited in silence as Riley walked in. A quick mental instruction, and the walls unfurled. "Surprise!" we shouted in unison, causing the girl to jump like a bomb went off. "Happy birthday!"

"But it's not my birthday!" she exclaimed, both confused and smiling.

"Makes it easier to surprise you, doesn’t it?" Missy pointed out, having warped around behind her friend, causing her to jump again.

Emma spoke next. "I remember you saying you don't remember your actual birthday, so we decided to pick one for you. Because we can do that kinda thing. Plus we have to do it before it gets too cold to properly appreciate ice cream."

"Plus nine, nine sounded like as good a number as any," Zach added. "Now let's all get fat on ice cream. Except me, I have a power related exemption to obesity. The rest of you are just going to have to live with it."

"Okay, Clarice," I said, glancing over at Vicky. Lucky us, she really had no idea of what Bonesaw looked like. Clarice was a 'known' low level shapeshifter, after all, so the black haired girl could easily be the same person, no questions asked.

Of course, all the 'kids' of our group, Zach and Theo and Missy and Trevor, were here. And the 'adults', meaning the other core members. Except Rey, Sabah and Lily. There was no reason to involve them in this. The former had found an exciting new idea for his evolution project, and the others really didn't interact well with Riley. "So it's up to you. Food first, or cake?"

Riley was all smiles. "What's the food?"

"Pizza," I answered.

"Pizza," Riley agreed.

"My poor figure," Vicky moaned in mock grief.

....
The various cliques formed up as expected. Emma and Trevor managed to trip across some kind of Tinker topic, and suddenly the rest of the party didn't exist to them. Taylor and I managed to back ourselves out of the center of attention, and somehow Lisa was chatting with Vicky and Crystal. I, meanwhile, thanked every star that Vicky had no idea she was talking to the girl formerly known as Tattletale.

"Oh god damn it," Taylor sighed. Annoyance | Amusement. "Remember when you said we needed to get Lisa laid? And then we forgot to do it?"

A sense of dread hit me. "What is she trying to do this time?"

"Let's put it this way... how would you like to have an immortal brother in law?"

"You cannot possibly be serious," I groaned. "Honestly? Has Crystal mentioned how Zach keeps hitting on her?"

"If I didn't know better, I'd swear she was in on it with Lisa," Taylor elaborated. "Come to think of it, I actually don't know better. Do you think your cousin would hook Zach up with your sister?"

"Yes, I totally see that happening," I acknowledged, rubbing my hand over my eyes. "I am going to kill them both. Then I am going to have Riley raise them from the dead. Then I am going to turn them into cows and feed them to Dinah's griffon."

"Don't you have a mass limitation? Pretty sure they're significantly smaller than a cow," Taylor joked.

Then I'll turn them both into a single small cow," I corrected. "Happy now?"

"I'll get the steak sauce," she offered. Amused | Mischievous. "And maybe some chocolate sauce for later," she added in a low voice. I blushed, and then leaned against her.

"You're a horrible tease," I informed her yet again.

....

"Time for the cake!" Zach announced, carrying the tray it was on. What he set down was, amusingly enough, shaped like a mushroom. Some red toadstool looking thing with large black dots for eyes on the stem.
"You are such a geek," Missy informed him.

"Guilty," he agreed. "And it took me forever to find a bakery that could figure out what I was talking about. So show proper gratitude."

"I love it!" Riley declared, smiling broadly. "I've never had a custom cake before!"

**Compassion Pity Sad.** I glanced over at Taylor. She was right, it was sad. The poor girl had lived with a group of traveling monsters. If they even cared about her birthday, it was as a sick game by Jack. Riley was so happy every time she go to do something that was normal to the point of boring. And I was still thinking about that while singing her birthday song, and feeling sorry that we couldn't use her real name for it. Not for the first time, I wished I had made Jack's death take longer.

"Blow out the candles and make a birthday wish," Missy instructed. Riley, smiling, did as instructed and took out all twelve candles in a single blow, to the cheers of everyone present. Some were probably more about being polite than anything, but it made her happy.

Lisa stayed away from the cake, though she did grab some chocolate ice cream. I opted to approach her then, when she was alone for a minute. "Y'know, if you keep putting all this effort into getting Zach laid," I started. "I'm going to start to suspect you have a crush on him."

She looked at me. "And if I deny it, you're just going to claim I'm in denial, huh?"

"You did the same thing to me and Taylor for weeks, even knowing there was nothing at all between us," I pointed out.

"Yep," she said with a 'pop' sound on the 'p'. "And that's why I'm not going to fall for the trap."

"You do realize that I can create a disease that only works on you, right?" I asked. "That's my sister."

"She thinks Zach's hot," Lisa informed my dismissive. "That's not my fault."

"You don't have to encourage it," I insisted.

"All I did was point out that he's surprisingly insightful for a moron," she insisted. "Crystal's the one who did most of the work."

I just stood there, letting the skepticism drip from my stance.
"... after I prompted her," Lisa admitted. "Besides, tell me your sister doesn't need someone with a sense of humor. Or, for that matter, the ability to actually understand other people. Something that seems genetically impossible for your family and everyone they're romantically interested in."

"Don't see her going after a younger guy," I countered. I didn't bother arguing the second part of that. It was, after all, painfully true.

"Only a bit over a year, there," Lisa corrected. "Less if you subtract the three months for not existing."

"Well, at least he's an improvement over Dean," I finally conceded. "Do you have any idea how an empath could be so damn dense when it comes to people?"

"As often as you've dealt with Lisa doing basically the same dumb things," Crystal spoke up from where she'd come up behind me. "You'd think you'd have figured it out by now. Thinkers are actually stupid."

"Oh, fuck you, too," Lisa replied.

....

"And now the most important part," I said. "Gifts!"

Riley was, of course, still having the time of her life. It was something of a pity there weren't more kids around her age available for this. Not that she had a real lack of options.

"Love Bug!" she exclaimed, showing the picture on the pack. I kinda worried about her dealing with kids making fun of her for such obviously childish loves, but Clarice was already weird enough that a little more would only help her persona.

Taylor handed hers over next. "Sort of a matching set," she said as Riley pulled out her brand new coat, same show theme. Granted, Clarice didn't need it and I was pretty sure Riley had added cybernetics that meant she didn't need it, either. "Hard to find one in a size that'd fit, but you've got it."

Riley quickly put it on, despite it not being nearly cold enough for that yet. "It's perfect, thank you!"
"We all had to pitch in on this one," Missy handed over hers. Riley opened it, pulling out a red and white outfit that was too small to be for her. It had extra arms, too. "We had Clotho put together a Christmas outfit for Fluffy."

"We were originally thinking a Halloween costume, but then we thought he doesn't need help for that," Theo spoke up.

"I voted for Valentine's Day, myself," Zach added. "But I was overruled."

"We'll have to show off mine later," Emma replied. "It isn't here yet."

"Okay, I'm next," Victoria stated. I didn't even know she brought a gift. She waited for Riley to pull the wrapping off. Another outfit. "It's an equestrian outfit. For when you ride Bella."
"Cool!" Riley pulled out the dark blue jacket.

"It's from both of us," Crystal added.

"My idea," Victoria claimed.

"You didn't even know her size," Crystal argued back. "Plus I bought the boots, which are the best part."

"Whatever," Victoria replied.

"And I'm last," Lisa spoke up, handing over hers. "I figured everyone else would do clothes. I got you a book. Complete works of Edgar Allen Poe. I was gonna get you some Lovecraft, but then I decided that my sanity has suffered enough, already."

=========

A/N- A Waff chapter. I figured we were due for one.

I'll get around to Moar Suffering! later.
"That was a nice thing you did for Riley," I said to Emma. It still bothered me, talking to her. Remembering our first few years of our life together. Then remembering the last few. Still, I had to admit she’d done everything possible to help the team. To help me. And I did promise her to at least try to be friends again.

"Thanks," she responded. "She deserved it, after everything she's done for the team."

I frowned. Riley was not what I would call my favorite person. For all she tried to make up for everything, she was still Bonesaw. She still vivisected Brian, which at least partially led to... to everything he'd done to his captives. I read the mission summary: parahuman batteries, deliberate Crawler based mutations. Over a dozen confirmed homocides.

Emma realized her mistake quickly enough. She always did know how to read me, I reminded myself. "Sorry, sometimes it's really easy to forget. Or hard to remember that she's the one who did... everything else she's done."

"I know," I replied. It really, really was.

"It is kinda... I don't know... encouraging?" Emma continued. "If someone like her can find forgiveness, and even friends and happiness. Do something good with her life. That means there's hope for almost everyone, doesn't it?"

"Maybe," I offered. I wasn't sure I believed it, but the idea was comforting.

....

AmusementWorry. "Jeez, Taylor, you weren't half this nervous when we were waiting for the Endbringer," Amelia teased.

"Endbringers are easy," I defended myself. "See it, and either run from it or do everything you can to kill it. Either you succeed or you fail, then end. This, on the other hand... I'm about to meet my future mother and father and sister in laws..."

"You're assuming I'm still going to accept your proposal," Amelia teased.

"MY proposal," I mock-scoffed. "You're the one who keeps checking out my backside. And my rack, now that I have one. Still don't know if I should thank Emma for that, or punch her in the face a
"I could always fix that for you," Amelia pointed out. "Speaking of, I've yet to see you in that bikini."

"Oh, as if it would fit now," I countered.

AmusementDesire. "That is a selling point, actually" she replied in a rather sultry voice. I blushed.

"And then there's everyone else at this get together," I pointed out to her. "I get to meet my future aunt-in-law slash potential future step mother and future cousin-in-law slash teammate slash potential step sister. I still don't know how to process that."

"Crystal said she's pretty sure Sarah's never gonna get remarried," Amelia informed me. I shrugged. I didn't think dad would ever remarry, either.

"So, yeah, no matter how you look at this," I continued. "Definitely harder to handle than Enbringers. With them, the rules are simple- you win or they kill you." ConcernDismay. "Err... sorry, I keep forgetting that I, uh..." I didn't know what to say. Or at least, not how to say it. I died, I reminded myself again. Or she died and I'm the backup. It wasn't a thing either of us wanted to talk about. Easier for us to ignore that it happened.

She hugged me from behind, and I pushed back against her. "It's okay," she insisted, pushing her feelings into the link. "I love you." My heart jumped. NervousConcern. "Taylor? Are you okay? I shouldn't have said that, should I?"

"No!" I replied, turning to face her. "No. It was just a bit of a shock. I mean, I already knew. The link and all. It's just the first time you've actually said it." ApprehensionWorry. I blinked. Oh. "It... it's not, is it?" I asked.

"No, it's not," she reluctantly admitted.

I pulled her tight against me. "Well, that's fine," I told her. "In case you had any doubts, I love you, too."

"I know", she agreed. I thought about repeating the sexuality alteration... but, no. It didn't go well last time, and I didn't want to bring it up. My own notes left for me by my other self didn't say much on the subject, simply that it was 'a bad plan, don't do it'. That part of my life was quite literally over, and it was best simply to allow it to stay that way. I am happy like this.
Amelia and I arrived at the restaurant, driven by my dad.

"Thanks, Danny," Amelia said as we arrived.

"Not a problem, girls," my father said cheerfully. He had dressed in an actual suit for this. At some point, someone had decided to make this a particularly fancy get together, complete with getting a private room at a high end restaurant. The kind of place that we'd probably have to sign up on a waiting list for, normally. Luckily, we didn't have that problem. I preferred to imagine it had more to do with the owner being a long term friend of Carol's than anything else.

The greeter was all smiles, and led us to our section.

Carol and Vicky were already here, as well as Sarah and Crystal. Vicky gave me a rather unhappy look. Amelia glanced between us and simply sighed. I put my hand on the small of her back and gave a slight rub. Despite the sheer irrationality of it, on any number of levels, I was still jealous of Victoria. She had looks on her side, and she was Amelia's first crush. It didn't help that she was flat out hostile toward me, not that I could fault her for it. What I did to her was pretty unforgivable.

Danny followed in behind us, and glanced across the room. "Hello, Carol," he said with a practiced neutrality that he'd been forced to use an awful lot of late, having to deal with the Mayor and other political types. He often complained that he spent more time talking to those assholes than his own people, these days.

"Good to see you again, Danny," she offered a winning smile. Amy's family has absurdly good genes, I decided for not the first time. "I'm afraid I probably made a poor impression the last time we spoke."

"It's fine," he answered. "I know what it's like to be in a difficult place."

"Hopefully I'll do better this time around," she offered.

Sarah was visibly relieved, as she walked forward to wrap her arm around Dad's. This wasn't the first time I'd seen them together, but it was the first time during an 'official' date. ConcernComfort, Amelia transmitted to me. I smiled, just letting myself be happy that Dad was happy.

"So, this is the famous and elusive Taylor," a man spoke cheerfully from behind me.
I knew he was coming, of course, and made the guess that it was Mark. I turned toward him. "Mister Dallon, I presume?"

"Please, don't call me that," he smiled broadly. "Makes me feel old. Besides, you're engaged to my daughter. You can call me Mark, or even Dad, whichever you prefer."

I don't know who was made least comfortable by that suggestion, but it probably wasn't me. ShockEmbarrassmentConcern. "I'll keep that in mind, Mark," I said after a moment. If Amelia's Dad noticed any of our discomfort, he pretended not to, instead opting to give Amelia a hug and then make his way over to Victoria. The rest of us simply looked at each other awkwardly.

....

The meal went well enough, and fortunately or no it was Mark that made things both more and less awkward. More by encouraging all of us to be more familiar with each other than most of us were willing to be, and less by at least breaking the ice. Eventually, it got the adults sharing stories about how the city 'use to be', back when the other half of us were in grade school. They made it sound a lot nicer than I believed possible.

This allowed Crystal and Victoria to talk with each other about their lives. Meanwhile, Amelia and I got to eat quietly, being the wallflowers that we naturally preferred to be. Sure, we were stronger now, and with the benefits of our bond to give us confidence, we could handle the spotlight. But we didn't like it the way most of the others in this room did. We chose to let the others have their fun.

'Taylor?' Lisa's voice spoke into her armor. 'Sorry to interrupt. Grue was broken out of containment, along with a handful of other captives.'

'Anything that we can do about it now?' I asked. Dammit, I thought. I knew that even, especially, those who are destined for the Birdcage needed a trial... but it left way too many chances for the criminal to escape. You're going to have a kill order next time we find you, aren't you Brian? I didn't know if I could handle killing someone I loved, once. Or thought I loved, at least. It was a childish crush with someone who wouldn't have been interested to begin with. Like Amelia and Victoria, I added. That made me feel a little better.

'Afraid not,' she answered. 'I'll probably go there tomorrow to help investigate some. We don't know that it was even Brian they were after, but he's one of the escapees.'

"Taylor?" Amelia asked. "Is something wrong?" I noted that the others had noticed that I'd gotten tense.

'Do you think he'll come back here?' I asked Lisa.
"Uh, sorta," I replied. "Work related, but nothing we have to worry about right now. Better to just not let it ruin dinner."

'Probably not,' Lisa answered. 'He has a specific vendetta against those he holds responsible for Aisha's death. We didn't cause that. Calvert might still be a target, but I highly doubt he'll try that again any time soon.'

'Understood,' I transmitted. Dammit, Brian. At least I already ate most of my food, because my appetite was ruined for the night.

==============

A/N- Because, that's why. I did go out of my way to make it more clear about what Taylor would know from her lost week.

... And, yes, the next chapter is the start of the next Endbringer arc.
"By the way," Crystal said as she walked in. "Mom says thank you for the armor. And I say go to hell, I had to spend all freakin' yesterday teaching her how to use the equipment. You're not planning to recruit her, are you?"

"Not really," I responded. "All we really did was give her one of your hand-me-downs. Do you think she'd accept if we offered her a spot on the team?"

"Probably," Crystal responded. "I don't think she'd last long. Basement Bonesaws... I know I'm almost nineteen and could just move in here, but she'd still find a way to ground me for the rest of my life. Then there's all the other horrible stuff we do. If she found out the Nilbog plan, we-"

Our phones' emergency alert went off simultaneously. Crystal, in her armor already, could read it through that interface before I could get to mine. She only had one word to say. "Endbringer."

"A month early?" I asked. FearConfusionDetermination.

"That or Dragon's tech is broken," Crystal defended.

I had gotten up already and was running to my room. I needed my armor. Taylor had hers at home. I held still as the biosuit worked its way over my body, sealing itself. I'd need my second layer, of course, but I was now wearing the indispensable systems, at least.

I didn't bother with stairs, simply forcing the floor of my bedroom to open, so I could drop into the next layer. "Everything important ready?" I asked Emma as I levitated down. Of course I knew not everything was ready. The early attack screwed up our plans.

"Everything essential," Emma answered. "A lot of the Raptors are underdeveloped right now. They'll do what Taylor needs them to do, but they won't be as good. We also have to leave a lot of the new zerglings behind." Of course, since she and I were both suited, Taylor would hear every word we spoke.

"Fuck," I muttered. "Will it be enough?" I found my Dryad, now upgraded with tinker tech to get a 'v3' tacked on. Still wasn't as good as any of the other named suits, but it was designed specifically with me in mind.

"Twice the numbers we had last time," Emma informed. "Half of what we wanted. At least all the new armor systems are fully operational?" she offered.
"That'll do," I replied.

Riley rushed in, wearing her own set of bioarmor. Wasn't even close to the same capability as the rest of our, but it was meant for sensory tech and medical function, not a combat model. Clarice v16 was her combat model. Both designs were Emma's present to Riley, a joint project between her and Defiant. "The school knows," she announced. "I'm going to use Clarice fourteen to shunt everyone over. Faster that way, I can fix her later."

Part of the standard protocol for Endbringer battles is that all schools were canceled during attacks, nationwide. It was good policy, for Wards to be able to participate, and also fairly redundant, since what were the possible odds that anyone would do anything productive anyway? I slipped into the pilot position of my armor. It wasn't a match for most of the other suits, but it was still my suit.

"Got the newsfeeds," Taylor informed us over the communications. "Mexico City. Recent parahuman civil war seems to be the lure." One of the many, I thought darkly. "No prediction on which."

"Makes sense," Crystal spoke. "After what happened in New Delhi, they probably don't trust the prediction software."

"I'm not so certain," Lisa replied.

Riley, meanwhile, had rushed over to the armor storage bays, and had shunted over Singularity and the other armor systems for Zach and Theo, as well as her combat variant of Clarice. Then she climbed into my Dryad, into the compartment that was actually built for her this time.

Most of our members had assembled on the other side of our personal world already. The zerg armies had assembled, pulling themselves out of their burrowed hibernation. Many were older models- we had functionally infinite raw material, so there was no need to recycle anything unless it was a failure to begin with.

Taylor was the last one to arrive physically, looking splendid in her armor. Missy didn't ask, and we watched as space folded and bent before us. Not for the first time, I wished we had a way to shunt things without the hassle of containment fields. We could draw Endbringers here and kill them on our terms.

Missy didn't wait for permission, she simply stepped forward. Her own power, plus all the tech in her suit, let her pinpoint exactly where we needed to go without outside help. Space bent and twisted itself to her whims, creating a distortion of light. The formation was so vast that electricity danced around the corners due to the stresses the air was being pushed through. Relatively minor, our sensors didn't even register it as a threat. Not that it mattered, the Gargants went through first, collecting as much power as they could and clearing the energy.
We walked through, followed by the zergling armies.

Chariot pulled out a device and planted it in the mass of Yggdrasil. Several teleports later, using the tech that Kid Win originally created, the area had its own control platform. We had learned our lesson from last time. If at all possible, we would stay on this side of the dimensional barrier. Riley sent over Clarice with our Shadowcats, for search and rescue.

We were there ahead of schedule, if only by a few minutes. It was all locals. Zerg started shunting through, taking their positions. Capes were startled at first, but our reputations proceeded us, making it possible to warn them. Lisa's changeling shunted over to their control center. Taylor's shunted in with the flyers. Zach shunted in his brand new suicide-bomber Raptor. Supposedly, it was the most destructive weapon ever made by human hands. Our tinkers were stationed in the portable control system.

The scenery around us flickered and shifted, providing the ghostly impression of a city abandoned by normal men. Only parahumans, and our biomonsters, existed here. It was illusory, a visual illusion created for our benefit, that we could see what was happening on Bet from the comfort and safety of our alternate dimension. The rest of us, waited and watched.

"Behemoth, probably," Rey spoke to Emma. She probably asked about the Endbringer, I decided. "Way too far from the shore to be Leviathan."

"I'll bet you money it's not Behemoth," Lisa responded.

"What makes you think Leviathan would come here?" Rey asked.

"I don't," Lisa answered. "I think we're about to see a fourth Endbringer." *Apprehension* *Realization*. "Taylor, fan the Zerg out to as many locations as possible. I've started issuing commands to the locals to avoid engaging the Endbringer. When this fight starts, we're going to be relying upon you alone. Force the new Endbringer to show as many of its tricks as possible before committing actual people to the battle."

*Certainty* *Anticipation*. "I can do that," she agreed.

A sonic boom announced the first Dragon battle suit arriving. Others, the bulkier and slower ones, would arrive eventually. Many carrying parahuman reinforcements. None would be in time to coordinate with the local. The Endbringer picked that moment to arrive. It came from nowhere, without warning or fanfare, one moment there was nothing and the next it stood in the midst of the defensive line.
It was only about twelve feet tall, significantly shorter than the nearest Gargant. It was, however, the biggest Endbringer in total mass, as it was a quadruped. The beast was black, not merely a dark color, but a total absence of light. It was impossible to determine features, but it could have been a wolf, in the same way Behemoth was a parody of a body builder, and Simurgh a parody of a woman. Nine long, almost swordlike spines extended from its back and shoulders. Three tails extended from it, each possessing a nasty, scythelike blade at the end.

A gargant slammed into its size, taking heavy damage as it impaled itself on a shoulder spike. The new Endbringer's scythe-tales wrapped around the gargant and flensed it, peeling flesh and external armor plating from Taylor's weapon. FocusDeterminationAnger.

"Well, we know it has a nasty close range weapon. All the others have had something that let them hurt outside a close range kill radius, what should we expect from this one?"

"Whatever features it has, it's likely to be safe from the weapons we used to destroy the Simurgh," Lisa spoke as we watched the holographic representation of the clash. Wow, that looks incredibly lifelike, I thought to myself.

"What makes you think that?" Rey asked.

"Because it's what I would do," she replied.
After shredding the Gargant, the beast vanished. *ConfusionWorry*. We didn't have long to wait, alerted by screaming. The buildings not-exactly-around-us exploded into rubble that rained down, and the monster appeared again in the ranks of the defensive line, its tails lashing out and killing nine capes.

"Destructive Teleporter?" Taylor asked.

"Space warper," Trevor responded. "It travels through the space between where it disappears and reappears."

"It's using my power," Missy concluded. "Only different. No Manton limit, to begin with."

"Not just yours," Lisa added. "All three of the Moirai. Its powerset is a combination. The tails are, functionally, the ribbon weapon we made for the cannon. It can use space warping to attack at any possible range. I bet it sees the way Lachesis can see through her power."

*DoubtDetermination*. "Then you'll just have to tell us how to beat your power," Taylor replied to Missy.

"Let me go in," Lily replied. "We know my power bypasses hers. I can fight that fucker in direct combat."

"Not yet," Lisa commanded. "It still has at least one more trick it hasn't revealed. If you go in now, it will kill you. Missy, help Zach. We'll see if that weapon works first. Taylor, same theory with the Razorbats." Lisa took flight, getting above the holographic battlefield.

Meanwhile, the creature had moved again, leaving another swath of destruction, and another nine dead.

The Razorbats were a nasty new weapon that I really wished we had time to build more of, and they started shunting through, near the creature. "Surround the area," Missy instructed. "Space them two feet apart and have them all detonate the moment it vanishes."

"Got it," Taylor replied, ignoring the dozen more that were slaughtered. I couldn't help but stare. There are no wounding strikes, I realized. Every attack is precise, each resulting in the decapitation of the victim. Not a single exception.
The creature vanished, and the Razorbats blossomed into a gray mist of nanothorns, disintegrating much of the area around them. I watched the cloud distort and part, leaving a disruptive imprint. The newest Endbringer manifested again, this time covered in rents, visible only in profile. Its insides were as dark as its skin layer. *ExcitementSatisfaction*. It then slaughtered another nine nearby capes.

The defenders had manage to orient themselves, and a dozen streams of energy caught the monster. There was no explosion, no reaction at all from the beast. All the energy vanished into nowhere.

The attackers didn't let up, as a pair of Gargants got into attack range, slamming into it from both sides with enough force that their nanofiber tusks sank into its flesh. Thankfully held in place, that left an opening, and Dragon's new anti-Endbringer artillery ship fired its Gatling cannons down on the trapped monster. Each had a short nanothorn explosion built in. They decimated the area, as the monster twisted to avoid them and break its grip. Both Gargants were chewed to pieces by the fire, but that was acceptable. They were disposable.

Freed of the Gargants, the Endbringer jumped again. It reappeared, this time missing one of its tails. With the remaining pair it lashed out and claimed six more capes the exact same way. *RealizationHorrorDisgust*.

"That telefragging fuck!" Zach cursed.

"Let me in this fight," Lily insisted. "My backup is only ten hours old, I'm not afraid of to play test dummy here."

"Not yet," Lisa insisted. "Trust me."

"Alexandria present," Dragon's com announced. We didn't have armbands, but we did have our mobile command center.

"Alexandria," Lisa spoke into her system. "It waits just slightly more than half a minute between jumps, you have about six seconds. Wait for its jump. Hit it immediately after Osiris. Osiris, sending coordinates. I want you there, expect it to appear almost right below you."

"Got it," Zach answered

They moved into position, and Lisa proved correct. Six more names came across the the announcements. I tried not to think too hard about the loss of lives, and how Lisa didn't warn the victims of their coming fate. Zach collided into the creature, releasing the single most powerful Nanothorn weapon ever designed. Reluctantly loaned to us by Defiant, after we demonstrated that we, at least, could use it more than once. A cylinder of grey mist thirty feet wide formed instantly vanished. The monster fell downward into the hundred foot deep hole left behind. *It can't fly, good to know.*
Alexandria plunged into the hole, holding her spear and trailed by a fifty foot long ivory colored rope. One of the weapons we'd built for her, using her own genetic material. A chain made of her own, cloned, bone tissue. Formed into a chain thin enough to be used for jewelry, and every bit as indestructible as she was. As long as she was holding it, at least. Once no longer in contact with her skin, it was as frail as anyone else's would have been.

Fortunately, we built her a system that let her grow as many of them as she needed, and hooked her up with the same kind of tech that Crystal had for her weapon summoning. It wasn't the best weapons we'd ever built, but it was the only real way we had to improve on Alexandria.

I couldn't see what happened inside the pit, but I was still holding my breath when she came out tugging on the chain several seconds later, the other end wrapped around this new Endbringer and the spear plunged deep into its throat. We could watch as the monster regenerated, where the white bone rope was being covered by newly generated solid black Endbringer tissue.

"Four seconds until it jumps again," Lisa announced. A stream of lasers hit the Endbringer, to no effect. Legend had arrived. The beast moved again, and Alexandria found herself dragged along with it. Six more died.

There was a brief glow around Alexandria and she skyrocketed into the air, carrying the Endbringer with her. *What kind of power was that?* Zach took the hint and followed, again detonating against the creature. We had, however, cut as deep as that weapon could allow. After a certain point, Endbringers became tougher than Alexandria, and we had confirmed that her weapons weren't damageable by the thorns.

Alexandria kept flying straight upward, pulling the monster as far above the city as possible. It was one of our agreed upon strategies for use of the chain, simply dragging the creatures from the battlefield.

"Can I go, yet?" Lily asked eagerly.

"No," Lisa answered. "The fucker is still holding back its trump card. Wait until it needs to jump again."

*Confusion* *Concern. "Needs to?" Taylor asked.

"It always jumps at the same moment, each time. It claims a set number of lives. What happens when that's impossible? What will it do?"

I blinked. *Good question*, I realized. I looked upward at the captive Endbringer above us. *We'll find
Blue lightning launched from the monster, dancing across the sky and trailing up the bone chain. *Legend Deceased. Alexandria Deceased*, Dragon’s system announced. The bone weaponry shattered, and the monster claimed three more lives.

==============

A/N- Endbringers: "because fuck you".
"Fuck me," Lily muttered. "Well, we've seen its fucking secret weapon, are you happy now?"

"No, there's still more," Lisa answered.

"How the fuck can there be more!?" Lily asked. "It just killed Legend and Alexandria!"

"Alexandria's not dead," Lisa replied. "Not yet, at least. Aceso, you'll have to clear a bit of ice out of her lungs, but she's alive, as long as you can get to her quickly."

"On it," Riley answered. "Khepri, I need you to help with a couple of the shadowcats."

"Thus far, this one's only been targeting capes," she continued. "It's not doing the kind of overall damage an Endbringer tends to do. It also proves a few things I've suspected about the Endbringers for a while now. Don't worry, I'll fill you in later."

Meanwhile the Endbringer had again been swarmed by the zerg. Taylor had stopped any semblance of holding back, throwing everything she had at it just to bury it under disposable bodies. It didn't appear to be working all that well, as the waves of frustration off Taylor indicated. It was easily fast enough to outrun any of the monsters we had available, and was powerful enough to kill them with relative ease, even down to one tail.

It vanished again, reappearing to kill three more capes. "Oh fucking christ no," Lisa muttered. She forgot to turn off our com before switching on the other. "Everyone! Fall back, take cover!" she shouted through the changeling. "Khepri, activate all the energy shunts!" _DreadDetermination._

The various anti-Behemoth systems, which had largely gone to waste in New Delhi, were deployed, blanketing the area with fans and sails and strings. The Endbringer then burst into a pulse of destructive energy, unleashing fire and electricity and sonic energy across the battlefield. Our hologram flickered out.

"Clarice is still functional," Riley announced to us. "Collecting all kinds of data. Heavy on the light spectrum, some other exotic energy effects. And a high power sonic effect that I'm having trouble interpreting.

"Transfer your feed," Emma instructed. "Let me have a look."

"The Endbringer appears to be gone," Taylor informed us. "It's hard to be certain, given its powers, but I think it retreated."
"Not a retreat," Lisa answered. "It did exactly what it came here to do. That's how this one will function every time. A battle lasting exactly five minutes and thirty three seconds. Fifty four capes decapitated. And then a fuck you bomb right at the end. It was following a script so obvious that everyone watching could figure it out. It's letting us know that they leave when they choose to leave, not because of anything we have done to force them to.

**HorrorDisgust.** I didn't say a thing. I couldn't think of any words to say.

....

Hundreds of gallons of Yggdrasil mass were shunted into the city, designed to squelch fires and reinforce streets. The city was damaged, but this wasn't like New Delhi. This could be rebuilt. A lot of capes were wounded, but not as many as one might have expected. The Protectorate hadn't even managed to deploy most of its forces, much less got them here on time. Dragon's personal ship hadn't even arrived, only a couple of her fast response drones.

"I remember during the Brockton Bay fight," Taylor spoke. "When they called Leviathan a 'good day' against an Endbringer. By that standard, this was the best Endbringer battle in history. Not enough people even managed to arrive here for the explosion to be really bad."

Eidolon arrived as we finally started shunting across.

Lisa looked at him. "You chose to sit this one out?" she asked.

"I... decided on a different course," he sighed. "Limited power, remember? I have to apply it where I can do the most actual good. Not knowing what this new Endbringer could do, I couldn't trust to select the right types of powers to fight it. Instead, I found one for the aftermath," he took to the sky as a bright blue green aura surrounded him. His arms outstretch, he waited until he was brighter then the sun, then clapped his hands together. The light burst washed over the city.

I felt the sudden presence of life amongst the people that my Yggdrasil had covered. "Holy fuck... he just brought back the dead," I informed the others. "All of them, as far as I can tell. Everyone the new Endbringer just killed."

**JoyRelief.** Taylor smiled for the first time since the battle started. "Then we can consider this one a real victory," she declared.

"In more ways than one," Lisa agreed.
"You figured something out, didn't you?" I asked.

"A few things," Lisa answered. "But I'd really prefer to not have to repeat myself. Let's wait for Dragon and the others."

....

We had managed, eventually, to gather the more directly important forces. Alexandria and the rest of the Triumvirate. Chevalier, who was the new head of the Protectorate. I wasn't sure what his powers were, but he carried an impressive as looking sword and armor of pristine white. And of course Dragon, Defiant and Narwhal from the Guild. It was staggering to imagine the kind of influence and power we were hosting right now.

"Impressive," Alexandria declared, looking across the area. "And am I wrong to believe that you've completely covered this world in Yggdrasil? No other forms of life on the entire planet but that which you've created for it?"

I felt a little self conscious at the clear S-class grade power that I had demonstrated. "It was a dead world when we found it," I offered lamely.

"You don't have to pretend you're surprised," Lisa replied. "We know you've spied on our planet before, maybe even crossed over into it. Right now, I suspect we're not the only groups on the planet truly capable of interdimensional travel, but we are both capable of it."

Alexandria nodded "Very well, I won't insult you by pretending otherwise," she agreed. "You were saying you determined something valuable about the Endbringers?"

"I can confirm they're controlled by a human intelligence," Lisa answered. HorrorAnger. "Maybe not in the literal sense. Probably more similar to Dragon's droneships than to our own bioconstructs."

"And you know this because?" Alexandria asked.

"I trust Eidolon's shared what he learned from us?" Lisa asked.

"About what you are calling Passengers, right?" Alexandria answered. Dragon shared a glance toward Defiant and then Narwhal.

"What 'Passengers'?" Chevalier asked.
"They are the source of all powers," Lisa answered. "Every parahuman has a Passenger."

"The Protectorate's researchers call them Agents," Alexandria added. "Although our understanding of them seems to differ from Pantheon's, we have come to a number of the same conclusions. Unfortunately, the information we do have is functionally useless."

"Is that what I see when I look at parahumans?" he asked. "These Passengers?"

_Shock/Curiousity_. "Wait, you can see our powers?"

"Not exactly," he replied. "It's a... like visual symbolism. An abstract of what the power can achieve, in a humanoid representation and left for me to try to interpret."

"What does my power look like?" I blurted out, before stopping to think.

"... Distracting..." he answered, looking away. "Yours and hers," he gestured at Taylor. "I'm not sure what my power is trying to tell me about your powers, but I can tell you that I'm trying very hard not to look." _Mortification/Worry/Pride_.

"I'd really like to study your power," Emma spoke up. The fact that Clarice was standing next to her prodding at her may have had something to do with it. "We're doing our best to learn more about how the Passengers function, and your ability would probably help a great deal."

"My power sight is, technically, classified," he answered. "I mentioned it only because you already seem to know more on the subject than I do."

"I'll bring the matter up with the Directors," Alexandria spoke. "I have some leverage. There may be some negotiations, but I suspect they'll demand that you share every scrap of information you learn on this matter with them. Now, let us move on to what you believe about the Endbringers."

"Initially I suspected that the Endbringers were Passengers as well. We know they're not human and do not think like humans. They can't comprehend most ideas that are instinctual to us. Although, to be fair, I doubt we could grasp the ebbs and flows of reality and dimensions, or all the insane complexities that our powers can perform. Different doesn't necessarily mean worse, and in this case probably means far superior."

"But it does mean that behaviors would change," Alexandria agreed. "It's the 'Rule of Three' that made you certain, wasn't it?"

"Of course," Lisa answered. "The thing waited exactly thirty three and a third seconds between its
jump attacks. Killing three people per tail per jump. Shedding a tail after every third jump, detonating after the ninth. The total length of the battle was exactly three hundred and thirty three seconds. That's hardly a coincidence. In addition, the Endbringer prediction software. If they were truly alien, if they came from the source of powers, it couldn't work on them.”

"Makes sense,” Dragon replied. "It might also explain why Rapture's technology was so valuable in improving our predictive software."

"In addition, they're still currently active,” she responded. "They watched our battle with the Simurgh. I might even suspect they were there during the battle, given the obvious Rule of Three pattern, and how the killing weapon was powered by three parahumans. But it's more likely they were watching through some remote viewing technology built into the Simurgh."

"Do you have any suspects on who the Endbringers' creator or creators might be?” Alexandria asked. "Or what they're trying to accomplish?"

"Not as such, no,” Lisa admitted.

=-=-=-=-=-=-=-=-=-=-=-=-

A/N- Yay! Chevalier! And one step closer to solving all the mysteries.
"So now that that's out of the way," Dragon responded. "We have to ask ourselves another set of questions. Namely: do we keep killing Endbringers? Clearly, when one dies, another is born to take its place. It poses a risk, to destroy one and risk that the next be even more deadly."

*ConcernDreadDetermination.* "We keep killing them," Taylor spoke with certainty. "Whatever force made them must have limits. The first two came a few years from each other, then the next a few more years later. This one almost a decade after that. They keep building them, we'll keep breaking them until they run out of whatever it is they need to build more."

"I am inclined to agree," Alexandria responded. "Even discounting the possibility of an endless stream of the creatures, this new Endbringer follows the trend of each being less destructive than the last. If the new Endbringers continue in that direction, it benefits all of humanity."

"The politicians won't see it that way," Lisa pointed out.

"Fuck them," Narwhal responded, speaking for the first time. I didn't know a lot about the giant of a woman, clothed only in her forcefields, but she seemed content to let Chevalier and Dragon speak for her. "If politicians want to complain, they can come out here and fight those monsters for themselves. Until then, they don't have the right to tell us what to do."

*AgreementCertainty.*

"We run a risk of an even more deadly Endbringer than the ones we've faced before, however," Chevalier pointed out.

"Then we destroy that one," Taylor countered. "We keep the weaker ones alive for now. Go after Behemoth and Leviathan. Leave... what are we calling this monster, anyway? It probably needs a name."

"A cursory internet search suggests the most suitable designations would be Fenrir or Barghest," Dragon responded. "Fenrir is a Norse myth, a giant wolf that was fated to slay Odin and be instrumental in their apocalypse mythology."

"I'd rather not give the Neo-Nazis the satisfaction of having one of their favorite naming sources validated with an Endbringer," I responded. Sure, we destroyed E88's largest chapter in the states, but the bastards were still out there with dozens of other teams and names. At least they opted to lay low after New Delhi, for the most part. "I'm voting for Barghest, and I don't even know what it is."
"I believe our PR guys would agree with you," Alexandria added. "I'd suggest we avoid any names of beings that succeed in destroying the world."

"Sometimes called the Black Hound, devil dog, and hellhound," Dragon informed us. "It's a spirit, known to hunt travelers and, much like ravens in North American lore, is strongly associated with death, both past and future."

"Appropriate," Alexandria agreed. There weren't any other suggestions offered, so we unofficially, at least, had our name.

"And now I have two questions," Lisa replied. "First... Eidolon's newfound power to raise the dead. What is it capable of?"

"I was inspired by Osiris' ability, for what I am sure are obvious reasons," he answered. "Naturally, I looked to see if I had something that might prove similar. I found one, and it's remarkably low energy considering what it's capable of."

"It has usage limits, I presume?"

"Yes," he admitted. "I have to 'tag' the people I wish to save ahead of time, though there doesn't seem to be an upper limit on how many I can select as long as they're all parahumans. It won't work on normal people, for whatever reason. Once I've selected the first target, the power waits exactly eight minutes, then instantly restores everyone I've tagged to the state they were in when I tagged them. After that, I lose grip on the power and have to wait for it to recharge. It's good exactly once per day."

"You can access it more than once?" Lisa asked.

"Yes," he replied. "It's not one of my high energy cost powers, and your tech is keeping it charged just enough that I won't lose access as long as it's dedicated to that power alone. This is one ability I don't intend to ever let go of, now that I have it."

"That's good to know," Lisa replied. InterestApproval. "Now, the next question is for Chevalier. Why is your sword made out of Simurgh parts?"

"How did you know that?" Chevalier asked.

"I didn't for sure until I asked," Lisa replied. "But it's immune to sensory powers, which limits it to Endbringers, and a number of parahumans I could count on one hand. Given its solid white coloration, and how none of the rest of you is immune, I made the most obvious guess."
"It's the strongest material known to exist," Chevalier answered. "Of course we'd make use of it."

"But how did you talk someone into letting you?" she replied.

"Classified," Chevalier replied.

"It's nothing she won't figure out on her own, if she hasn't already," Alexandria informed Chevalier, before turning back toward Lisa. "The Protectorate is learning from you. This concept of power synergies and customized tech to augment powers may be a novel one, I'll grant you. But now that we know it's possible, we've dedicated a fair amount of resources to achieving similar results on our own. With fewer capes and greater pressures than ever before, we either adapt or die."

"Well, they do say that imitation is the sincerest form of flattery," Lisa smiled. "Of course, this implies Chevalier's power interacts with Endbringer tissue. In addition to his power-sight. Making him, to my knowledge, the only parahuman on the planet that can do that." RealizationExcitementHope. I glanced over at Taylor.

"EEEEEEEeeeeeeeee." 

"Riley," I whispered into my suit's com. "Could you please stop squeeing?"

"Err... sorry..." she responded.

"What, exactly, is your power?" Lisa continued to talk to Chevalier as I dealt with Riley's imitation of a teakettle.

"I can overlay properties of one object onto another," he answered. "Giving it the size of one, the strength of another, the weight of a third and the shape of a fourth. I can also subtly adjust those properties to anywhere between the three," he lifted his sword, which was more decorative than practical, with a gun built into the hilt. Then it shimmered, growing in mass, though he seemed to have no trouble holding it up. "Some things take more effort than others, made easier the more similar the objects are. I have an easier time using a fifty foot long sword and my rapier than I would trying to cross, say, a fork and a hammer. In addition, it only seems to apply to solid nonliving tissue."

"And Endbringers," Lisa interrupted.

"Pardon?" Chevalier replied.
"And Endbringers," she repeated. "All evidence prior indicated they followed the normal rules of the Manton Effect, except they were treated as both living and nonliving, whichever was more beneficial to them. In addition, they have a large number of other immunities to shield them from certain powers. Like precognition, and any effects that might alter their bodies or powers. probably means our pipe dream of being able to teleport them to another dimension could never work. Not that we're going to stop trying, of course. You, somehow, have a power that bypasses something we had believed to be absolute."

"I... hadn't thought of it like that before..." Chevalier eventually spoke.

At some point during the conversation, Lisa locked eyes with Alexandria. *Pulling a Taylia, wasn't that what they called it? "I trust you recognize the importance of Chevalier's power,"* Lisa spoke.

"Yes, I do," Alexandria replied. "I'll do everything in my power to see that you get approval to run your tests."

==================

A/N- No. Seriously. Chevalier's power is the only canon power shown to work directly on Endbringers. It also straight up *lolnope'd* one of Scion's attacks.
"Only lost a total of fifty units," Taylor informed as as she started lining her forces back up. "Most of them directly against Barghest. The rest were the shunting units, a lot of which burned out during the attack. If it wasn't for the fact that they're the hardest ones to replace, I'd call this a net gain. Oh, and I'm almost done dragging all the corpses back. I should be able to use the remaining zerg to carry back the dead."

"Good," I replied. "Regrowing them enough 'muscle' that they can haul themselves back to base is a pain," I answered. It really was, too. I wouldn't even be doing this, except that a lot of their insides were tinkertech alloys. Stuff that I had been assured was really expensive and slow to make. Especially since there was no way to build an organic device to do it for us. The purely organic parts could be made easily and with no effort. But without the tinkertech, they weren't even fit to call decoy targets in a battle against an Endbringer.

"I got readings off of Clarice," Emma informed us, as she worked with Rey, Chariot and Clarice to pack up the mobile command center. The tinkers didn't want the rest of us touching their 'sensitive equipment', so we were mostly limited to watching. "That detonation was loosely ten kilotons. If we hadn't insulated the region, it would have been as destructive as a small atom bomb."

"Fucking christ," Lily muttered. "And every time that thing shows up, it's going to do the same thing? Kill fifty four people and drop a nuke in the middle of a city? All in five and a half minutes after its arrival?"

"That's the gist of it," Lisa agreed.

"And this is the one we're considering allowing it to live for fear that the next one will be worse?"

"I'm afraid so," Lisa answered. "Don't get me wrong, we're going to do our best to kill it. But that kill can't be done by any of the Moirai." *WorryConfusion.*

"Why? How is it suppose to stop me?" Lily asked.

"I don't know," Lisa admitted. "But this one was designed with you and your powers specifically in mind. Its design sacrificed a lot of other potential offensive abilities, making it the most apparently weak Endbringer. Solely so it could have a method to protect itself from your power. Knowing how Endbringers tend to function, that secret weapon would guarantee that if you were present on the battlefield, a lot of people would die. We know your power easily nullifies Zach's, and I'm fairly certain it would work equally well against Eidolon's resurrection. We cannot allow Barghast to get anywhere near you, for fear of what might happen."
Lily fell silent at that, and leaned into Sabah, who had rested an armored hand on her shoulder. I wasn't sure I could imagine how huge that was. The idea that an Endbringer may have been created with the sole purpose of being a counter to her.

"So, how long until you announce the engagement?" I asked Lisa as we started making our way back.

"What?" Crystal asked, and it earned the attention of everyone else.

Lisa just sighed. "Really?" she asked. "Nevermind, of course you would."

"Would what?" Missy asked.

Lisa turned toward the girl. "Amelia is implying that, because Alexandria and I can use our thinker powers to communicate rapidly with one another in a way that appears, in the most superficial of visual manners, to be similar to the Taylia bond, that that means I am somehow destined to become romantically involved with the woman," she explained in a dismissive tone. "Despite the fact that all possible logical thought disagrees."

Crystal laughed. "Actually, that sounds about perfect for you."

"It really doesn't," Lisa replied.

"No, it totally does," Crystal insisted. "She's possibly the only person on the planet that could out-smug you. Or is that the reason you can't be with her? Because you're afraid of having a relationship with someone who might actually be smarter than you think you are?"

"She's not smarter than me," Lisa insisted. "She just has a really unfair power that gives her the advantage."

_AmusementDismissal._ "Hey, Riley," Taylor spoke up. "Tell me something. Do you still have some of that anti-power drug?"

"I can make some more really easy," she answered. "We just haven't had much reason to use it. It doesn't even really work against people with the powers that are any kind of problem for our team to fight."
"I'm just thinking we give Lisa a dose, and see how smart she really is on a fair playing field," Taylor continued. I could hear the smile in her voice.

"Not that I'd mind," Riley responded. "But that's not a good idea. The drug can cause permanent damage that interferes with power use."

"She wasn't really going to do it anyway," Lisa informed us.

AmusedAnnoyed. "I might change my mind," Taylor suggested. "Still, I think you and Alexandria would be an adorable couple. You could just stand there and stare at each other for a couple minutes, then go back to your day smug in the knowledge that you just had a romantic moment worthy of an epic poem using nothing but body language so subtle that no one else on earth would know anything even happened. Truly a love story for the ages."

"Speaking of epic love stories," Lisa's smile broadened. "Did you notice Amelia checking out Narwhal?"

"I did not!" I insisted.

IrritationCertainty. "She didn't," Taylor supported me immediately. "And we all know I would have known if she had. Now stop trying to deflect attention away from yourself. Or at least try to do it in a less obvious and insulting way."

"Exactly," Lisa answered happily. "Your confirmed lesbian girlfriend was in the presence of a seven foot tall naked woman with the figure of an actual goddess, and she didn't even think to take good look at her? Out of the thirteen of us, only five can honestly say they didn't try for as much of an eyeful as they could possibly get away with. Incidentally, a few of you should be aware that I'm probably going to blackmail the piss out of you later. Just for fun."

RealizationLoveHappiness. I smiled, and fidgeted uncomfortably at the attention. "I... guess you have a point," I admitted. I looked over at Taylor and did allow myself to, as Lisa put it, 'get an eyeful'. PleasedConfident.

"Fifty bonus relationship points to my big sister."

"Riley, I can hear you on the com," I told her. "Who are you talking to?" Zach started laughing, followed quickly by Theo and Emma. Missy held out the longest, but she started laughing as well.

"Nevermind, I think I figured it out," I sighed.
The trip itself was both subjectively short and uneventful, merely slow. At least our conversation distracted us long enough for Taylor to send all her zerg through Missy's space warp to our base. There, the damaged ones would feed on Yggdrasil and regrow, while the ones that had been destroyed- whether temporarily or permanently- would be recycled and rebuilt. Possibly with improvements in mind. An additional Endbringer, and the potential threat of more meant we'd need to be even more battle ready than ever before.

....

*Confusion*Concern. I looked over at Taylor. "What's wrong?"

"Nothing, I think," she answered. "I think your sister wants to have a chat with you, however. She's waiting in the lounge."

I frowned. I have neglected her, lately, I admitted to myself. "Well, we had planned for the fight and cleanup to take a few hours. I suppose I could spend the extra time with Victoria. You don't mind, do you?"

*Confidence*Peace. "No, it's fine," she smiled. "I'll call Epoch and tell him how things went. He's probably as confused as everyone else who was hoping for a major show of force against the Endbringers."

"The Adept's really have been hoping to show off the full capabilities of their new armor systems, haven't they?" I smiled.

"I'm thinking we see if they want to cut loose against the Teeth," Taylor added as we approached the entrance to our base. I opened the direct path that would allow us enter the labs without bothering with the normal pathways. "It might even be better that way, showing that Pantheon and its allies are more than just a ceasefire arrangement. That we trust them to handle trouble on their own. Yeah, that sounds good."

We all stopped in the labs to take our armors off, and put the changelings back where they belonged. Some needed repairs, but every system needed stored away. Except Lily and Sabah, who just took theirs home with them.

Freed of the armor suits, Taylor gave me a peck on the cheek, and I headed up to talk to Victoria. By the time I got there, Zach, Theo and Missy had made it first and were talking to her. The four of them, along with Trevor and Clarice, had gotten to know each other pretty well at school. Not well enough to share Clarice's true identity, of course. But it was something. I paused when I saw Victoria. She was wearing her Glory Girl costume.*Curious*Concern.

"Hey, sis," Victoria smiled. "Guess what I can do!" she started to glow.
A/N- The plot twist that literally no one didn't see coming.
"Suckiest part about my powers is I can't even play in any sports," Zach complained. "Sure, I take a
gym class and it's the easiest credit in the world, but I'm not allowed to join anything because unfair
advantage." He emphasized the last words in the most sarcastic way possible.

"I know!" I exclaimed. "Sorry, you can benchpress a small car, therefore we can't let you play goalie
on a soccer team," I added my own mocking voice. *I don't even have my powers anymore, I added
silently. And I'm still forbidden from any sports.*

"Know what would be great?" he laughed. "All parahuman team. Then no one can bitch about
anything."

"Where are we going to find a ball that could survive that?" I asked.

"I heard something about people using decapitated heads on battlefields," he started.

"That's disgusting," I interrupted.

"Yeah, but we can use Endbringer heads," he suggested. "Most badass sport ever, of all time. Admit
it."

"That would be pretty badass," I admitted. I looked at the clock. *Almost six thirty.* "So, think Amy's
up and ready?" I asked. It had been a few days since I'd spoken to her. She always had something
else to worry about these days.

"Sorry," Zach replied. "She's probably still asleep. Today it'll be the morning meeting as always,
then a ten minute makeout session with Taylor, then chatting with R-ey and the rest of the nerd herd.
Then she'll probably have to have a phone call with the Mayor or the Commissioner or the Director
or whomever. I doubt she'll be free until this evening."

I frowned. "Doesn't anyone else do any of that?" I asked. "Isn't that Minerva's job? Isn't Taylor
suppose to share half the workload?" There's three of them, I wanted to add. I be she finds time to
just hang out with her girlfriend and replacement sister.

"Not really," Zach answered. "Minerva's doing her thing with Dinah and the new recruits from
Boston.* Meaning the fucking supervillains that my sister spends so much of her time with. "And
Taylor's got something to do with city planning. Everyone's busy. Except for us mooks who just
show up to do the fighting. For most of us, it's boring as fuck. I can tell Amy that you called,
though."
"You don't have to, I understand that she's busy," I lied. "Hey, since you have so much spare time, we should stick around after school and have a one on one game. I haven't played a game in forever, and I'm afraid I'll lose my skills if I don't get to some practice."

"And you can literally never get tired," I countered. "Sure, I'll score a lot more in the early game. But I'll start to slow down eventually, and if we keep going for an hour or so, you have a good chance of coming out ahead. All you have to do is wear me out, and then you can beat me easy."

"You do know how that sounds, don't you?" he teased. Boys.

"Yes," I deadpanned. "Now are you gonna be there or not? Or would you rather miss out on seeing my, as you just put it, 'perfect body' sweaty and panting?"

"Well, when you put it that way, how could I possibly say no?" he laughed.

"I thought you'd see it my way," I teased. "See you after school." Then I hung up and started getting dressed for school.

Zach was a good guy, smartass or not. I should talk to Theo and the others about doing something nice for him as a group. The winged bitch had ruined his birthday by showing up a week before it happened, and as much as he pretended it didn't matter to him, I didn't believe that for a second. Clarice got a surprise birthday in the wrong month, so why not Zach?

Yeah, I smiled. I'll talk to Trevor at lunch and let have him help with the planning. He could even help me pick out a birthday gift. Zach was into video games, and I didn't know jack about them, so that was perfect. Of course, then I'd have to do something to thank Trevor. Hmm... Mandy's single, maybe she'd be interested. She was kinda a bookworm type, reminded me a lot of Amy, back before everything changed so drastically. Then they could live happily ever after and make tons of nerdling babies.

....

"Are you feeling okay?" I asked as I stood in the doorway of the living room and talked to Dad. I hesitated to approach him. He didn't like to be bothered, on his bad days. He was never mean to me, and I never for a second was afraid of him. Mom would rip him in half if he did anything that would have hurt me or Amy physically. I could have dealt with that. What really hurt was how he didn't seem to care about me, or anything else for that matter.
He just... ignored me. There were days, sometimes even weeks, where he would barely even look at us. He sometimes didn't have the energy to go out and patrol. He used to love that, and would come back with all the exciting stories of how he punched one of Allfather's goons or blew up a Merchant drug stash. Then he'd play with me and Amy and let us pretend to be superheroes and he would pretend to be a bad guy. We'd play wrestle until it was time for dinner.

That almost never happened, anymore. Most days, he couldn't even pull up the energy needed to smile at me. He'd just mope about, or watch television, or spend twelve hours sleeping. Then he'd have insomnia that night and be too tired to pay attention to me or Amy in the morning. I did my best to remember what Mom told us. That he was sick, that it wasn't anything I did wrong. And I prayed each night that he'd get better, but he never did.

He smiled, and my heart jumped. "Sure," he said. "Come have a seat," He patted his knee. I happily ran in and sat on his leg. This is one of his good days. "So, what has you in such a tizzy?" he asked, laughing at my barely contained excitement.

"We made the championships!" I exclaimed.

"That's wonderful!" he declared.

"You'll be at the game right, Daddy?" I asked. I knew I was too old to be acting so childish, but I was really excited, and if that meant playing up the cute card to get him to show up and watch, then I was okay with that. I always was a daddy's girl. And when my own was too tired, I'd often spend time with Uncle Neil. "It's the championship game. You have to be there to cheer for me."
"Of course, firecracker," he smiled. "I'll be there."

I ran off to tell mom the news.

....

My phone beeped with a text. Not a lot of people had this number, so despite a rather disapproving look from my World History teacher, Mister Sloan, I pulled it out and read it. Zach had sent me the message.

'EB, ?loc'.

Fuck. I stood up and collected my books.

"Where are you going?" the teacher asked.
"Class is canceled," I told him as I rushed out the door. I didn't bother explaining. *An Endbringer? Now? It's way too soon for that*, I thought. They killed Simurgh in mid August, and it was now only late September. *A month and a half too early.*

I was almost to the front door when the principal made the announcement. A lot of the students would stay in school. Arcadia was well equipped enough to have televisions in the classrooms. Mostly for video presentations, but they could receive outside channels. The teachers would be watching the news, along with the many kids whose parents couldn't come for them. School may have been canceled, but that didn't mean all jobs were. Although the ones that stayed open probably wouldn't get much business done.

I didn't see any of the Pantheon kids leave through the front door, and there was no cell response. *They already left without me.* I turned and walked to my new sports car. Not nearly as fun as flying, but at least dad bought me a nice ride.

*With the signing bonus he got for leaving us,* I reminded myself. Suddenly, I liked my car an awful lot less.

==============

**A/N-** Chapter got way away from me. Is now a two parter.
"Aunt Sarah, what are you wearing?" I asked as I walked into the living room and saw her. She was in costume. Not even her own costume, but one that started yellow around her shoulders, shifted to light blue and and slowly transitioned to dark green by the time it reached her feet.

"Like it?" she asked. "It's one of Crystal's old suits, with a bit of a refit."

"Are you joining Pantheon, now?" I asked.

She laughed. "No, I don't think so. They don't need an old hag like me slowing them down. They just asked me to keep an eye out, in case someone tried to start trouble while they were gone."

"You could always try it on for size," Khepri's father suggested. "I even thought of a name for you." He leaned in close and whispered something. She laughed and then gave him a friendly slap across the chest with the back of her hand. I frowned. Uncle Neil was always my favorite. The one who'd been there for me when my own father couldn't. *He's gone, and Aunt Sarah had already replaced him. More than that, the father of the girl who had stolen my sister from me.*

I moved into the living room, to see my Mom and Dad sitting together on the couch. It was almost a happy moment, until I realized the pair of them were seated at opposite ends of a piece of furniture meant to hold five.

"Shouldn't you be going to the fight?" I asked Dad as I sat in the couch between the two. *Does this mean he changed his mind about the Protectorate?* I dared to hope.

"They're instituting new policies," he answered. "After New Delhi, well, the rules are changing. They're only sending the top tier capes, like the Triumvirate, to this one. Pantheon can build their disposable shock troops, and then let them die by the hundreds without blinking. Unless you rate a seven or eight, chances are they're not taking you. Your old man's barely a five. So I have to stay home and watch the fight on the news."

"When did they start showing Endbringer battles fights on the news?" I asked as I sat down between them.

"When your sister proved they can die," Dad answered with pride. I fought back the tears. I remember when he talked about me like that.

The cameras were high quality, but not well positioned.
An announcer spoke while we watched various giant monsters appear across the battlefield. Amy's creations, I recognized. Controlled in full by her girlfriend's power. "Channel Nine would like the audience to be aware that the images you are about to witness are likely to be extremely violent and disturbing to all audiences. Due to the nature of the footage, we will be unable to edit or censor any details. Viewer discretion is strongly advised.

"They're really covering their asses on this one, aren't they?" Dad laughed.

"Given the number of lawsuits there were last time?" Aunt Sarah replied. "Seems like the only person who's not suing is Pantheon."

"I'm surprised they were even willing to do it at all," Mom added. "Don't get me wrong, I am glad they're doing it, but I'm surprised. Most of the lawsuits were frivolous, but they were still funded and backed by government action. The PRT was blatantly punishing news organizations for showing the footage. Bullying them for showing what really happens, instead of cooperating with whatever garbage the bureaucrats wanted to sell people today."

_Not subtle, Mom_, I thought as I glanced over at Dad. He pretended not to notice. Or maybe he really didn't notice, I couldn't tell.

The television announcer was going on and on about how the zerg resembled, and how they differed from, the ones New Delhi fight. Mostly focused on how there were so many more this time than last. Then the Endbringer appeared.

"We have spotted an unknown creature on the field," the anchor spoke excitedly. "We are unsure what it is, but-." The monster vanished, reappearing near the camera. I watched as several people fell, their heads separated from their bodies. The anchorwoman shrieked in surprise.

Mom gasped, and Dad sat up, leaning toward the screen. "Sarah, Danny, it's started."

"The hell is that?" Khepri's father asked.

"It's a new Endbringer," I answered. _How could he be so dense? _"They killed the Simurgh, this is her replacement."

"-unknown creature," the reporter spoke. "Given the circumstances, it seems likely that this is a new, never before witnessed Endbringer. Its powers are currently unknown, but appear to include teleportation and superhuman reaction speed."

I watched as the Ultralisks collided into the sides of the monster, which seemed to do much less
damage to the monster than it did to the zerg. I gripped the cushion I was sitting on. *I should be out there. I should be helping them.* It vanished again, and there was more death.

"It's the fastest Endbringer," Sarah volunteered. "I thought Leviathan was fast, but I think this one's truly built to be a speedster."

"They all have some kind of mover powers," Carol added. "But this one does seem dedicated to it."

No one spoke until the gray mist bomb went off.

"What was that?" Dad asked. I smiled, *I know what that is, at least.*

"It's one of their new weapons," Khepri's father spoke before I had a chance. "Something they cooked up working with Dragon."

I kept quiet. I guess it didn't surprise me that she was telling her dad what they were up to.

We watched as it kept teleporting, and kept killing. Then the cameras exploded into fire.

"Fuck!" Mom exclaimed. This is the first time I can remember hearing her curse like that, I realized. "It's New Delhi all over again!"

My eyes went wide. *If that happened in Mexico City, the devastation could hit a large chunk of the United States.*

"They made it through last time," Aunt Sara spoke, her voice trembling. "They can do it again."

"That's right," Dad agreed. "They'll be fine."

The news went immediately to satellite images after the loss of the camera feed, showing the city from above. Not even close to as bad as New Delhi, I realized with relief. So did the news reporters, who were now speculating on an EMP weapon being part of the new Endbringer's arsenal.

Aunt Sarah's phone rang, and she answered it right away. "Yeah," she said after a moment, smiling broadly. "Yeah, they're all here. I'll make sure they know what happened. Okay, so you'll be home in a couple hours? Yeah, I'll tell them. Love you too."

She closed her phone and looked at us. "That was Crystal," she informed us. "The fight's already
"Already?" Dad cheered, and patted Khepri's father on the back. "That's our girls. Endbringer shows up for breakfast, and they kill it by lunchtime." Yeah, I thought. That's my sister out there, living the ultimate dream.

"Everyone got through it safely, right?" Mom asked.

"They're all fine," Sarah told us. "They're having an after battle conversation with a few of the bigwigs, probably about how the fight turned out, and what they can do better next time. New enemies, new strategies needed."

"As long as they stop making promises so readily," Mom complained. "Sometimes I feel like I'm going to have to carve 'we need to consult with our lawyer first' on the inside of their eyelids."

Khepri's dad chuckled. "That's my daughter, alright. I could go on for hours, but I'm afraid they'd bore you."

"Nonsense," Dad answered back. "You should hear some of the stuff Victoria's done. We should get together for a beer sometime and swap war stories."

Done, not does, I thought while watching the screen. Has done. Has been. I'm nothing, now. I don't matter. Dad has a new favorite, Uncle Neil's gone, Aunt Sarah has a new man. My family's either dead, or has moved on and left me behind. They don't care about me. Why should they? I'm worthless. I'm already dead.

....

"Get your head in the game, Dallon!" Becky shouted at me. I looked away from the stands. He's not here, I told myself. Dad's not coming.

I had to work extra hard to compete, being a freshman on the varsity team. In a school with a lot of competition. I was taller than a lot of the junior girls, and I trained harder and was in better shape than almost all of them. Of course I was. I was training for when I got my powers, and my competition was only training to be good at a sport.

We had gotten this far on so much hard work, I had gotten this far. And Dad couldn't even bother to show up for the championship game. It didn't help that it was an away game. It didn't help that the school we were up against was twice our size, and so could afford to be twice as picky over who they could put on their team. Almost all of them were seniors, and I suspected a couple of them were held back a year. We were holding on, just barely. I tried to smile, it would be one hell of an
underdog story, wouldn't it? I could do this.

The ball passed to me, and I managed dribble past one of the older girls on the other team. The next girl up to guard me was one I'd dealt with before. Not the most effective player, I was confident I could get past her..

Then she stepped into me, deliberately. Her shoulder catching me hard in the jaw. I dropped hard. "Watch it, shrimp," the girl mocked me as I sat there on the floor. I glanced over to the refs, but they didn't call the foul. Of course not, they're on the other team's side. There wasn't enough time on the clock I glanced back at the audience. They not on my side, either. Dad wasn't there for me, and he would never be. There's no reason to keep fighting.

....

The world collapsed around me. Them. A trail of impossibly beautiful gemstones, dancing in the void. I've seen them before. I know them. I know... what did I know?

"Sarah?" Khepri's dad asked, helping my Aunt, who had fallen in the excitement. Dizzy spell brought on by... something... no long term risk. "Sarah, are you okay? What happened?"

I looked around. Mom and Dad shook their heads. Mom's been overworking herself, I realized. Probably not sleeping much. Dad's in okay shape. Aunt Sarah... eww, I didn't need to know about that. I'd never be able to look her in the eyes again in my life.

Wait? How the fuck did I know all that? Oh, I realized. It happened again.

====================

A/N- And there you have it. "Fouled in basketball" resulting in a "Shaker" powerset (two of them, actually- both the aura/forcefield that sources all her other powers), and shakers are, according to WoG, "Environmental danger, ambient danger, often nonhuman or only abstractly human."

Debating over second gens aside, WoG makes it obvious there was more to Vicky's story than a Basketball foul- THAT would be a brute, striker, or maybe blaster power.
"Well, not Glory Girl's powers, no," she corrected as the light faded away. Her hair had changed colors to something more resembling a sunset, with yellows and oranges blending into blues and purples. "But yeah, Victoria is back and better than ever. I'll need a new name and probably a new costume and theme. The old one was nice and all, but... uh... Ames? Were you cut in half recently? Because it really looks like you were cut in half, and it's distracting me."

"Uh... blown up, actually," I admitted.

"Well, never let it be said we live in boring times," Vicky said cheerfully. "So where's your testing facility? I can't fly anymore, but I think I'm faster on foot now than I ever was in the air. We should totally find out."

"Uh... right this way," I answered, leading her to our gym area. It wasn't really a testing facility, but Clarice was pretty much a mobile analysis system. We'd just have to give her a place to work with.

"This is really neat," Clarice started. "So what are your powers?"

"Let's wait until L-Minerva's here to listen," I insisted. "She's our primary thinker, after all."

"I'm here," Lisa answered, coming into the room. She wasn't in costume. "Let's hear it."

"Combat thinker and war form," she answered happily. "I can sense weakpoints and I'm pretty sure I have short range precognition and some kind of echolocation, because I ran here with my eyes closed, and even dodged some traffic. And that was in my normal state."

Lisa's eyes narrowed. "Okay, nevermind the standard tests. Clarice, we're going to have a sparring match."

"This is going to be fun!" Clarice declared.

A half hour later, and the pair of them were still going at it. More than that, Victoria clearly had the
upper hand. To the point that it was a joke. Faster, stronger, and an overall better fighter. Eventually, Clarice simply froze and collapsed.

"I think I win," Vicky informed us smugly, standing on the collapsed changeling.

"So, umm, who did she get her power from?" Taylor asked.

Lisa frowned. "This is gonna sound insane, but, she got her powers from Clarice."

"Oh, don't worry," Vicky replied. "I knew she was fake the moment I saw her with my new eyes. Oh, by the way, I can hear you from over here. I also know you're fucking terrified of telling me who Clarice really is. I promise not to flip out. Seriously, Ames, you're already engaged to the bitch who fed me to bees," IrritationRegret. "And working alongside the even bigger bitch who shot me so the other one could feed me to bees. It can't possibly get any worse than... oh... fuck, it can get worse than that? How the fuck does it get worse than that?"

"I'd... really... Vicky, could you please not force me to answer?" I asked.

"It's better if you don't find out," Missy stepped up to defend me.

"Happened after my death," Victoria smirked. Her eyes were locked on Lisa's. "After the Slaughterhouse Nine. Connected to the Nine. Don't bother telling me when I figure it out, because I'm pretty sure my power works better than your power. Let's see, was already told Clarice was orphaned by the Nine. Okay, so that story happens to be true, but there's more to it than that."

"Bonesaw," Lisa sighed. "Clarice is a biomechanical puppet piloted by Bonesaw so she can interact with the world safely. The girl was kidnapped by the S9 when she was only six years old, and hadn't ever been able to experience what it's like to just live a normal life."

"Aww, and I was having so much fun doing the same thing to you that you did to me and Amy," Vicky pouted. "You remember that, don't you? Because I'm going to bet it hasn't sucked as much for you to be on the receiving end as it did for me."

"You might be surprised," Lisa retorted, looking down.

"Really?" Vicky's eyes widened in surprise before narrowing. "Good." She paused for a full thirty seconds. "Did you say Bonesaw?"
"Yes," Riley spoke up, walking into the room. "Hi, Vicky, it's nice to see you in person. I'd really prefer to be called Riley by the friends close enough to know who I really am. Hopefully you can be one of those friends?"

Vicky just stood there, staring at the girl. "Know what?" she laughed a little. "I think I just felt all the cares I have die simultaneously. Alderaan style. This is officially the weirdest possible thing in the universe, and the part of me that can be bothered by that has gone on vacation." She walked up to Riley and extended her hand. "It's good to meet you, Riley. Thank you for giving me my new powers."

"My pleasure," Riley responded and shook Vicky's hand like it was a perfectly normal business meeting.

"Okay, now what's this about her getting Clarice's powers, instead of, y'know, Riley's like would make logical sense?" Emma asked.

"I don't suppose any of you have heard of Acquired Characteristics theory?" she looked around, but none of us spoke up. "Figured. Basically, it was the theory of evolution before Darwin. The idea that an animal would do things. Like, say, a proto-giraffe reaching for leaves. And because of that, its offspring would inherit slightly longer necks for better reaching. Now, we've learned that doesn't work in normal earth life, because we run on genetics. But it's how Passengers evolve. They're shown how to do something by their hosts, then they reproduce and the offspring does something different. Incorporates those new ideas."

"That makes a lot of sense!" Emma declared excitedly. "Riley's Passenger is a biotinker... it knows how to be a biotinker. But thanks to Clarice, it was taught how to be a shapeshifting supersensory powered brute. So when it bred, the new Passenger was selected from those traits, to test the new evolutionary path."

"But don't Passengers choose people close to the original host?" Crystal asked. "Like family. Riley hasn't spent any time near Vicky."

"You need to redefine 'close'," Lisa smiled. "These things jump between dimensions like we change channels on the TV. They can reach to the other side of the world with no apparent effort while their real bodies remain hidden a thousand realities away from us. Do you really think physical proximity means anything to them? No, when they breed, they select a host that's close to the origin host on a mental level. So that they can protect and incubate their offspring directly. Riley's Passenger selected the living human that Riley paid the most attention to, cared the most about, that wasn't already a parahuman. Isn't that right, Riley?"

"Wasn't my power from Oni Lee?" Zach interrupted. "I'm pretty sure I never spent any time making friends with asian psychopaths."
"What Passengers do when a host dies is different," Lisa answered. "Then they just move on to a new one. This is about what happens when they breed. A baby Passenger set up to be guarded until it matures properly."

"It's true," Riley admitted. "She's my Big Sister's sister, after all. And Zach's friend. And my friend. And she's funny. Of course I am ready to protect her from harm. Plus I spent an awful lot of time figuring out all the details of her genetics from scratch. A tinker has to take pride in her work."

"Exactly," Lisa responded. "Now, her powers include a massive suite of sensory powers, including a few that you only include in some models because their energy and space requirements are too high to use together, and all the best of everything else you've ever packed into a Clarice body. Only better, because it's a Passenger doing the work instead of technology."

"What about her other power?" I asked. "The glow that accompanies her transformations?"

"Probably got it from one of the other Passengers. Whichever one, or ones, that Riley's selected as a 'mate'. Could be Zach's, he has a breaker state. Then there's her parents, Brandish and Flashbang are both are breakers as well. I'd put Brandish as the most likely. She transforms her body into energy. Victoria infuses her body with energy and uses that to manipulate and adjust details at will."

"So... I'm like if my mom had a baby with Bonesaw?" Vicky asked. "Know what? I lied. Now there is no way this day can get any weirder."

"This is awesome," Riley declared, smiling bright. She then glomped Victoria, hugging her hard as she could. "I always wanted to be a mommy!"

========

A/N- Riley will never stop being adorable.

Also- Tattletale isn't always right. Remember that, kids.
The 'kids' and the tinkers were distracting Vicky with all kinds of questions and plans. Which left us 'adults', minus Crystal and Rey, to compare notes.

"We can't keep her," Lisa said the moment we were sure we were out of earshot.

AgreementRelief. I gave an unhappy glance at Taylor. SheepishConcerned. And then locked my eyes back on Lisa. "Why the fuck not? She already knows the thing we need to be most afraid of getting out. That's how Emma got a pass. Or are you saying my own sister is less acceptable than Emma?"

Lisa smiled a lopsided grin. "Really? I think there's one more secret she has yet to ferret out. I also think it's the biggest one on the list, or I think Victoria will think that it is."

RealizationDread. "Yeah, that's the one," Lisa confirmed. "She has a cool power, sure. One that'd make her top tier on most teams. But it's not one we can really augment with our tech, and it's not good enough to be valid against Endbringers on its own. We can't use her, and she might decide to kill us someday."

I sighed. "Fuck," I muttered. Taylor put her hand on my shoulder. "We can't just tell her no," I argued. "You don't know my sister. She needs to be a hero. She'll fall apart without it. And that's without considering the whole Passenger mind fuckery."

"Then let her join the Protectorate," Lisa countered. "She's only got a few more months before she's eighteen, she can probably skip being a Ward entirely. They'd cry with joy to have her in New York or Chicago, even if the Teeth have been eliminated and the Adepts are nominally on their side now. Your dad's moving to Philadelphia, right? She can go with him. She's not good enough to be valid in the kind of wars that we fight, I don't care if she's basically Clarice on steroids, she's not good enough for this team."

I looked at Taylor. ConcernDread. "Taylor, please, she's my sister and she needs this."

"She's a security risk," Taylor said softly. "Plus she'll be an even bigger discipline nightmare than Lily. She hates me, she hates Lisa more. Maybe. She now has a thinker power and we all know how much of a pain in the ass thinkers can be when they think they're right. She remembers how you two used to be, and that means she may love you, but she sure as hell doesn't respect you. If we're lucky, she'll listen to Crystal. If we're lucky."

I sighed. "You're right," I admitted. ReliefSupport. "She's not going to be that effective. Plus, well, we don't do a lot of the kind of superhero stuff she likes. She's smarter than she pretends she is, but she's not what one would call a 'planner' in the field. We're all about spending days or weeks
planning, and then a few minutes of fighting. I doubt she'd be happy with how we do things.”

"Guys!" Riley spoke up through my com. "Vicky's power is awesome!"

ExasperationConcern. "Okay, what did you find out?" Taylor spoke

"She's a regenerative shapeshifter," she informed us. "Like Crawler, without all the icky bits. She's not quite on Crawler's level, but it makes her really really hard to kill. "

"And, more importantly," Emma added. "Her thinker power is 'easiest way to kill things', which is even more cool than it sounds since it applies to our bioconstructs. Seriously, she's pointing out so many weaknesses in our gear to be fixed. Especially since we also have Barghest to worry about. Proper reinforcement might make us better equipped for unit survival against it, and other Endbringers."

"And she can do the living battery thing, like Crystal," Riley interrupted. "Apparently she got my electrical attack mods, and they don't drain her batteries. But I can think of so many things we can use her for. You can totally put her on my team. Pleasepleaseplease."

AnnoyanceResignation. "No promises," I responded. I looked at the other two. "So... I don't think they're gonna give us much choice, are they?"

"Probably not," Lisa admitted. "Zach's hard to read, and Missy has finally started getting used to the idea of being more than just a child soldier. They both like Vicky a lot. Riley wouldn't push the issue, but Theo might, if prompted by the others. We know Crystal's going to argue on their side."

"Lily and Sabah are going to want to hear the reason we don't take her," Taylor added. "We could have used the discipline issue. I know they can spot how much Vicky doesn't like me, although I have to wonder if they wouldn't agree with her. After finding out about Bonesaw and Coil, well... we're going to have a hard enough time selling them on the Nilbog plan. And you know we don't have a choice but to tell them. If it were just the two of them, and if we could claim that Victoria's power wasn't good enough for us to use, we could get away with it. But strong power and we have enough members to break us up into teams and keep her away from our direct command."

"We really should consider creating dedicated teams," I agreed.

"So what do we do about your, uh, secret?" Taylor asked.

"Nothing, for now," Lisa sighed. "I think Taylia interferes with Vicky's new power. Maybe not the 'how to kill it' part, but the emotion reading side effect. She wasn't cold reading the two of you, she was reading me. Although that might have been to prove she could, quote, beat me at my own game,
I'm not certain. If she starts to suspect anything, well, we can improvise. Keep it a secret as long as possible, then tell her about how her aura fucked everything up. After that, she'll probably pretend nothing is wrong and never touch the subject again. The way she's doing for both of her trigger events."

*That's right, I realized. She just had a trigger, with all the trauma that comes with it.*

"Fuck," Taylor muttered. "She might be even better at compartmentalizing than I am."

*When you live with my family, you kinda have to be. I didn't say anything.*

....

"So, you girls have fun talking about me?" Vicky asked when we walked back in. "I know I'm not quite on par with the Endslayers or the Triumvirate or anything, but put me in the field and I can beat pretty much anything else."

"Yeah," I sighed. "Kinda talking about what team to put you on. You're probably going to be with Atropos and Clotho most of the time. You don't mind taking orders from Crystal, do you?"

"Hey, wait a second," Crystal responded. "When did I agree to be a team leader? Also, when did we start creating teams?"

"I thought I'd be on the team with Zach and Missy and the rest," Vicky argued.

"Clarice has about the same powers that you do," Taylor pointed out. "It would be redundant. And given their history, there's no way in hell we can put them on the same squad together. Having a thinker that can help make our blasters more effective on the field is incredibly valuable. Plus, you're the third member on the team that has a power that can let you double as a healer. Not nearly on Riley's level, but better than most."

"I don't have blaster powers," Vicky argued. "I can't even fly."

"Armor will take care of that," I pointed out. "You'll have a custom set pretty soon, I'm sure. Right, Riley?"

"I have sooo many ideas!" Riley practically sang. "We can give you a set of Radiant's weapons, but since you don't use a forcefield and have combat intuition, we can use that space to improve your speed and stealth features. I bet if I talk to Defiant I could find a way to miniaturize the shunt tech a little, and you could have two shunt drives for quick cross dimensional attacks. Maybe include a few
extra melee features. We could use more up close fighters."

"Why can't I work with my friends?" she pouted.

*Because that's why*, I thought. "We have to plan for effectiveness. I'm sure there will be plenty of missions where we put you together with one or more of your friends, but they can already do everything you can do. You're stronger with Crystal's team."

"When did I get a team?" Crystal asked again. "I thought Lisa was suppose to handle those two."

"Since we started getting more recruits," Lisa answered. "We have too many people to coordinate as a single unit. So now we have three. Four, if you include our tech team. We have the thinker group that stays back and coordinates. Then we have the blaster group. Then we have the frontline group. With a few people, like Riley and Taylor who do double or triple duty."

"And I get stuck with the group that can't be trusted to take care of themselves?" Crystal complained.

"Would you prefer to be the one in charge of the neurotic college kids, or the one in charge of the neurotic highschoolers?" Lisa asked.

"I'd rather not have to deal with being in charge at all," Crystal countered.

"It's cool, cuz," Vicky insisted. "You can let me handle everything and just say you're in charge. How's that sound?"

==============

A/N- Vicky: I'm halping!

Everyone else: know what? Fuck it. We don't even care anymore.
"You're the one with the combat precog, what kind of melee weapons do you think you'd be best with?" Riley asked cheerfully. "You can ribbon fighting like I do, or maybe something with an ax. No one use axes." Missy and Trevor had begged off a couple hours ago, insisting that they needed to get home before their respective parents went insane. Crystal said pretty much the same, going to deliver news of the Barghest fight to our family.

Zach and Theo remained here, of course. Talking about my new abilities and finding potential power synergies. Along with Emma, who I had never met before today. I'd seen her in pictures about Pantheon before, but we'd never been in the same room with each other. A Case 53 tinker, She was... distracting. Her physiology was a freakin' mess, and everything my power knew was telling me there was no way she should be alive, yet here she was, analyzing my power output and lifesigns while Riley discussed features for my armor.

Theo yawned loudly. "Sorry, guys," he said sheepishly. "But some of us actually need sleep. Riley, you should go to bed, too. Clarice acts weird... well, even more weird... when you pull an all nighter."

"Awww..." Riley whined. "But this is so cool! I almost never get to build new suits for my friends."

"I'll be here tomorrow," I smiled, giving her a pat on the head. The fuck? I am patting Bonesaw. When did this become my life? "But I need to go to bed, too," I lied. "I'm going to spend a few minutes with Amy and see about finding a bed somewhere. Then I'll see you at school tomorrow."

"Okay," she agreed, sounding childishly unhappy about it.

I hopped off the chair they had me in for the testing, and headed for the exit. "So, uh, someone want to tell me where Amy's room is?"

"I got it," Zach volunteered. I smiled, and while my new sight wasn't telepathy or anything like that, I knew he wasn't entirely thinking with the head on top of his shoulders. No surprise there. We spent a lot of time together talking, and I knew I was a looker. My sight flickered back to Emma as she watched him rush to help me out. Oh, that's something I didn't expect.

"So, what's the story between you and Emma?" I asked the moment the door sealed. I watched his heartrate jump and the subtle release of natural drugs into his system.

"We dated for a week or two, but it turned out she's a horrible bitch so I dumped her," he said, and for the first time since I met him, he didn't have a smile on his face. Even after Dream Girl, I remembered, he managed to force a smile. "End of story."
"If you insist," I replied, following him. "She's really pretty," I added, measuring his emotional reactions.

"So are most of the girls on this team," Zach countered. "Besides, you were a total babe before you got shapeshifting powers. And now you have shapeshifting powers. You have no need to be jealous over anyone."

Wait, he thinks I'm jealous? Cute. Vaguely insulting. But cute. "Who said I was jealous?" I smirked. "Maybe my sister and I have more in common than you realized?"

He coughed a couple times, and then dusted. Reforming a heartbeat later. "That was a really dirty trick," he insisted. "Even if Emma was into girls, you'd be better off with just about anyone else."

"Shapeshifter, remember? She doesn't need to be into girls," I teased. "Now why do you have such a problem with Emma?"

"Here's Amelia's room," he changed the subject. "Now if you need me, I'll be playing video games all night." He left quickly, taking his conflicting emotions with him. There was a lot of story going on there. Victoria Dallon, super sleuth, would be on that job later.

The door opened before I even tapped on it. Taylor was there sitting with her on the bed. "I didn't interrupt anything, I hope?" My senses confirmed that, if I did, it was only a conversation. None of the obvious tells were present.

"Not at all," Taylor answered, hints of aggressive chemicals hit her bloodstream as she prepared for a confrontation against me. And then they stopped seemingly for no reason. That's not how humans work, I thought. Maybe it has something to do with how her body's been altered to superhuman fitness levels. "I was about to go home, actually."

"I thought you lived here?" I asked.

"Seems like it, sometimes," she answered. "But I still live with my dad. It makes him happy to have me around to take care of once in a while."

"See you tomorrow," Amy kissed Taylor on the cheek. Awfully chaste for people who are engaged, I decided. I stepped aside as Taylor left the room. She's nervous about something. Hiding something. So is Amy.

"So, wanna tell me what's up with Emma and Zach?" I asked. I registered Amy's relief at the
question. And then an entirely different form of apprehension. Christ, Amy, I thought you quit doing hospitals to reduce the stress in your life.

"Why do you want to know?" Amy asked suspiciously.

"I'm not allowed to worry about the wellbeing of the rest of my team?" I asked defensively. "I bet if you won't tell me, then Crystal would be happy to." Amy's emotions jumped. She was annoyed by something. \textit{I win}. I also needed a better word than 'I win'. Checkmate, maybe? \textit{That sounds way too pretentious}, I decided almost immediately. "Why are you afraid to tell me?"

"Seriously, Vicky," Amy sighed. "I just... we have enough drama around here. Could you please just leave it alone?"

"You know I can't," I replied. "Just tell me. What did Emma do to Zach?"

"Nothing," she answered. \textit{She's telling the truth.}

"Buuuut," I prompted.

"But he hates her because of what she did to Taylor," Amy admitted. She looked at me. "Oh, you didn't hear about that before? Emma was Taylor's childhood friend. Then, for reasons I doubt anyone will ever be able to explain to me... well, Emma decided to bully and torture Taylor until she had a trigger event. Two trigger events, actually."

"Two?" I blinked. "How does that even work?"

"It happens," Amy answered. "I can tell the difference between people who've only had one trigger, and those who've had two. Taylor's had two, and since she didn't even realize it, they must have happened almost back to back. Double triggers. Probably a lot more common than second triggers."

"And you're working alongside her?" I asked. "Taylor didn't seem like Emma's biggest fan, but fuck, if it were me... I'd have gone Carrie all over Emma's face and then buried her in a corn field somewhere in Indiana."

"She had some time getting used to Riley first," Amy explained. "Compared to that, Emma's pretty small time. And Taylor's been trying to be more forgiving. She feels pretty guilty over what she did as Skitter. And Emma's been bending over backwards to prove she's sorry and should be forgiven. It... well, we've all done some pretty bad things."

Amy's emotions spiked. \textit{Guilt, something that she regrets enough to border on the suicidal. She won't tell me if I ask}, I realized.
"I guess," I agreed. "And Zach isn't exactly the forgiving type, is he?"

"Not about this," Amy added. "He doesn't really like to talk about his own feelings much"

_Something we have in common, I guess._ "Good to know. Aren't you going to do anything to fix that mess?"

"Not my business," Amy dismissed. "They're both doing their jobs. Emma's more worried about being friends with Riley and Taylor, and even Taylor's at least willing to try to work it out," _Huh, is that why Taylor seemed so... disinterested... in Amy? Does she have feelings for Emma? I will punt that bitch into the middle of the ocean if she's leading my sister on like that. _Zach's moved on to hitting on Crystal..."

"Really?" I interrupted. "And here she seemed so eager to send him my way."

"The only girls on the team he hasn't hit on at least once are Missy, who's dating his best bud. Lily, who's a lesbian with a power we're pretty certain can kill him for real. And Sabah, who's dating Lily," Amy explained. "Crystal probably wants someone a bit more, well, not a jackass."

"Her loss then," I smiled.

"What?" Amy exclaimed. "You can't seriously be interested in-"

The door opened, and a tired looking Riley walked in. "The dreams are back," was her only explanation as she climbed into Amy's bed.

"We'll talk about this later," Amy insisted as she reached over and rubbed the girl's shoulder.

"Sure," I lied before leaving the room. I wandered into the living area, where Zach was playing some kind of fighting game.

"How'd the chat go?" he asked, as one of the characters on the screen bloodily decapitated another.

"Pretty good," I answered as I walked over and plopped down next to him. "She gave me some idea of the history between you and Emma. Thinks there's some secret of your past that makes you hate her a disproportionate amount."
He sighed. "You're not going to let this go, are you? Well, talk all you want, I don't have to answer any question you ask."

"I was thinking of beating it out of you," I added just a hint of tease to my voice.

"That won't really work, either," he countered.

"We'll have a duel on it," I offered. "Any competition you want to have. The loser has to do anything the winner wants. For an hour. No complaining, no resisting, no stalling. No matter what it is."

He looked at me. "I dunno, I can think of a lot of 'anythings' to do in an hour."

I smiled and licked my lips slowly. "Hit me with your best shot."

--------------

A/N- Rez! Vicky turns out to be really flirty.

Also: I am aware she met Emma before. Readers be aware my characters aren't infallible.
I glanced over at the clock. 5:22 in the morning. *Well, guess I wake up a little early today.*

I took the time to clean up in the shower and shave. It was actually nice having a private shower. Not that I ever had to worry about sharing bathrooms with anyone, considering my family's wealth. But I heard stories from Missy about the nightmare that was only having one bathroom for a family of five. Definitely one of those things I was glad I never had to worry about. Having cleaned up, I got dressed and walked out into the hall. *Maybe I could kill a little time with Zach before school.*

He wasn't in the lounge area. *Strange, he's almost always* - I paused as I overheard voices in one of the halls.

"I let you talk me into that," Emma panted softly, even though her tone of voice said she was happy. "I've been under so much stress lately with my work that I totally forgot about taking care of myself."

"Told you you'd love it," Vicky declared. "Now just accept that I'm always right. Makes things easier that way."

Zach's voice followed the two girls. "It was only meant to be an hour!"

"Quit bitching, you loved it at least as much as she did," Vicky crowed. I blinked. *What?*

"Yeah, seriously," Emma agreed. "Don't act like it was some kind of chore. You may have been able to argue that if you quit after the hour was up, but the next five hours, you stayed in it like a champ." *What?*

"With the two of you there to mock me for not being able to keep it up?" Zach accused. "We'd all die of old age before you got done teasing me." I felt a little uncomfortable. *Is this something I shouldn't be listening to?*

"What's the matter, big boy?" Emma teased. "Did us girls wear you out?"

"The hell are you talking about?" Zach retorted. "You needed my help to deal with her!" he gestured at Victoria.

"Hey, not my fault I didn't get superhuman stamina," Emma defended. "Yeah, maybe I'm tougher than most because I can regenerate. But I'm nothing compared to the two of you. It's not fair to expect me to keep up."
"Don't sell yourself short," Victoria replied. "You have some great moves. You definitely done that before, I don't care what you claimed earlier."

"You don't spend as much time around Sophia as I did without picking up a few tricks," Emma admitted. "But compared to you? Well, you'd have eaten her alive. You took the both of us on like it was nothing."

"The advantage of experience," Vicky argued. "You two make a great team. If we didn't have our powers, I wouldn't be able to walk right now. We should totally do it again tonight. I promise I'll make it worth your while."

"No!" Emma declared. "Not tonight. Please, I'm so sore already."

"I understand," Vicky shrugged. "Give it a few weeks and your body will get accustomed to it. The two of you have lots of potential, though. Maybe you should practice on each other when I'm not able to stay over? Give you something to do in the middle of the night other than video games and lab tests."

"I don't really stay here every night, either," Emma pointed out. "Just... after the Endbringer fight, there's so much new stuff to study."

"Well, how about if I give the two of you pointers, then give you a chance to try it out?" She suggested. "Then, like, on the weekend we can all get together and you can show me how much you've managed to improve. How's that sound?"

Emma glanced at Zach and smiled. Wasn't hard to tell her opinion on the subject. Zach hesitated for a moment before smiling. "You know what?" he finally replied. "That actually sounds really fun."

"I knew you'd like that idea," Vicky bragged. "Now I'm going to hit the shower before school. Let the others know I can take them to school, Zach?"

"Sure," Zach agreed, then he spotted me. He smiled and brushed some of his messy hair out of his face. **Maybe I should considered growing out my hair.** My father always insisted I keep my hair military regulation short. **I should ask Missy what she'd prefer.** "Hey, Theo, could you let Riley know we'll be going with Vicky? I know I'm not suppose to get tired. But I'm actually tired. Best bet I've ever lost."

"She crashed in Amy's room," Victoria informed me.
"Fuck," Emma muttered. "She'd been getting so much better about that, too."

I frowned. I didn't know a lot about Riley's nightmares, only pieces from overheard conversations. As much as I liked Riley, I mean I quite literally owed her my life and so did Missy. Of course I considered her my friend, but she was still very much Missy's bestie more than especially close to me. We just didn't have a great deal in common beyond Missy and work. Given her history, maybe I didn't want to know more about them. Still, I worried for her, especially if she was having nightmares again. I'd tell Missy about it first class we had together.

....

Zach and Clarice occupied the back seat of Vicky's sports car, while I rode in the passenger side. I concentrated on not looking back at Clarice. Even with everything out in the open, and Missy's more than understanding stance on the subject, I didn't feel right having the... feelings... that I did toward the construct that Riley piloted. Made me feel like I was a pervert. Then again, if I was, I shared the status with a solid half of the school.

It also made me feel like I was doing something wrong. Unfair to Missy. Not for the first time, I considered asking Riley to go in and manually fixing whatever it was that Dream Girl did to me. Along with my personal promise that if she ever returned, I'd kill her myself.

I pulled my mind away from that line of thought, and looked over at Vicky. She seemed more than a little unnerved for some reason. *Maybe it had something to do with what she did with Zach and Emma?* I couldn't imagine what else she could have done since then. "Are... are you okay? Did something happen?"

"I... why didn't anyone warn me about the shower in the lab?" Vicky whimpered. Oh. *Oh god.*

"You used the lab!?!" Zach exclaimed. "Why!"

"Because I remembered Riley mentioning it having a shower, and I didn't know where anything else was!" Vicky cried.

"Isn't it wonderful?" Clarice asked happily. "It's like being massaged by thousands of adorable kitty tongues."

"That's because it *is* being massaged by thousands of kitty tongues!" Vicky exclaimed.

"They're not really," Clarice argued. "They're imitations made from Yggdrasil. I did my best to get everything exactly right, but there's all kinds of flaws. They don't have proper body temperature distribution, for one."
"I couldn't tell the difference," Victoria informed us. "I have superhuman senses, and I couldn't tell the difference between that so-called shower, and being covered in thousands of moving, disembodied, kitten tongues."

"Thank you!" Clarice replied. "I worked really really hard on that."

"She did, too," Zach informed us. "You have to admit she did an incredible job on that thing."

"I have never felt more clean in my life," Victoria whimpered.

============= 

A/N- At first glance, this chapter offers no story substance whatsoever. At second glance, it offers some significant plot points.
"Seems like an awful large force for a scouting mission," Victoria spoke up, leaning against the wall. "Especially with the dimension jumping tech."

"We're trying to impress on Haven that we're serious about this," Lisa sighed. "Smoking out the occasional drug or prostitution den has kept them from being too annoyed with us, but they want a legitimate win, here. The Fallen are stronger than ever, and the longer we put this off, the more likely they are to think we don't give a damn about them. What's the point in being allies with someone who won't back you up when it matters, right?"

"Still seems like a big force," Victoria argued. "I get Skitter," Amy flushed with irritation through our bond. "And Missy is kinda our chauffeur. But do we really need all three Endslayers, half our Tinkers, and thirty zerglings."

"Shadowcats," Amelia corrected. AnnoyanceImpatience. I nodded and stepped a little closer to her. Useful powers or not, her sister was a pain in the ass. She got along well enough with the others. Even Riley, strangely enough. She was one of the few people on the team who did get along with Lily. But she was still a fucking headache, and it was starting to bother Amelia. I placed my hand on my partner's back.

"Okay, fine," Lisa sighed. "This is a scouting mission, but we're still unloading a force for future engagements. And we're all freakin' bored as hell right now. You're having fun with your new powers and new gear, but in case you hadn't noticed, most of the team is getting restless. And we don't need a bunch of triumvirate tier parahumans getting bored right now. New York's finally stable, so it's time to move on to the next project."

"It's true," Lily agreed, talking to Vicky. To my surprise, Lily had mellowed out lately. Still wasn't friendly with any of us, but New York had an impact on her. "It's nice playing with you, but I need a real fight or I'm gonna go nuts. I'll settle for scouting and going after peripherals if I have to"

Sabah frowned. She was one of the ones that didn't like the violence and conflict, but went along with it because her girlfriend loved it. Maybe she was a factor in Lily's slightly less abrasive attitude of late.

"Fairly good odds you'll be able to pick off a few of their parahuman support. Baal and Lilith are still off the table, but if you have a target more than a couple miles away that you think you can take without much fuss, you're pre authorized," Lisa informed the girl that was our only real weapon against the Endbringers.

"I could use a trip to the beach, anyway," Zach replied. "Think we can stop by Miami after we're done?"
"It's October, Zach," Theo pointed out.

"And?" he asked. "Florida should still be nice, right? That's like five feet away to Missy."

Amy leaned in on my shoulder and whispered. "I still have to see you in that bikini," she whispered. I blushed, in spite of myself. AmusementDesire. I signaled back with a combination of embarrassment and happiness.

....

"Just you and I, huh?" Victoria spoke up as we approached Baal's suspected lair. Or our geoanalogue to it, at least. He was one of the scary ones that you tried not to fight, much like Lung had been in Brocton Bay. Maybe alone he wouldn't have been such a problem, but his partner Lilith was a precog and they pretty much never left each others' sides. She was suspected to have other powers, as well, but no one had ever gotten through Baal and forced her to use them.

"Yes," I answered. TrepidationProtective. Amelia is listening in on this conversation.

"I need to know the story of what's going on between you and Amy," she insisted.

"Talk to her about that," I just kept walking forward. Really? She had to do this now? Why couldn't she have just pulled me aside when I was walking home or something? Then again, it was probably better for me that it happened here.

"We both know that if I do, you'll be listening to every word," she accused.

"Not if Amelia asks me not to," I countered. IrritationSupport.

"Amy might believe that, but she always was too trusting," she argued.

"I would never betray her trust," I finally turned toward Victoria. ConcernCaution. "But if you're going to be so pig headed about this, fine. What is it that's more important than dealing with these sick fucks?"

"First, you're not gay," she pointed out.

"Oh, is that all?" I scoffed. "Amelia knows about that. Fuck, almost everyone knows about that. She
insists that it doesn’t matter and she’s okay with it.”

"You expect me to buy that?" she smirked.

"Some relationships are built on more than mere attraction," my tone darkened. "But, since you're that concerned... the subject's come up. We do have the tech needed to alter sexuality. Right there in the databanks along with the medical training, martial arts, Spanish, Hindi, Japanese, Korean and English as known by native speakers, military and police procedure, and a code language that Riley and Lisa are cooking up for us to use. We can change my inclinations with ease. We choose not to." FearSupportLove.

"That makes no fucking sense!" Victoria declared.

"You're the one with the lie detector powers," I pointed out. "You know I'm telling the truth on this."

"That brings up another thing," she exclaimed. "The fuck is up with the two of you? I get why Emma's so damn hard to read. Riley, too, but she had tech to do that. You and Amy confuse the hell out of my power. Your emotions change for no reason all the time."

"That would be Taylia," I answered, starting to smile. It was one more validation of our bond, how well it protected us from thinker powers. "It's... uh... let's just say Amelia's power and mine are really friendly with each other. We can, for lack of a better term, share our emotions directly. It's kind of impossible to describe. But I wouldn't give it up for the world, and neither would Amelia." CertaintySupportPride.

Victoria paused for a second, and I realized that I might have made a mistake telling her about the bond. Even though she could have asked almost anyone about it and known already. "Wait... so you're saying you have a psychic link where you can force my sister to feel things?"

"It cuts both ways," I insisted. "She can influence me just as much. And she's the one whose power created the link. She can undo it just as easily." ConcernGuilt. Why does she feel guilt over that? I wondered. Probably feels bad that she has the advantage in this relationship. It wasn't the first time she'd blamed herself for things that couldn't possibly be her fault.

"I don't like the idea of you being able to fuck with my sister's feelings," Victoria growled.

I resisted the urge to say anything. Considering what she'd done as Glory Girl? Fuck! She can read that. The thoughts were quashed quickly, but not quickly enough.

Her eyes narrowed. "What was that?"
"Nothing you want to know about," I answered, turning away.

She appeared in front of me almost too fast for me to realize she had moved in the first place. "No, I really think I do."

"Ask Crystal," I sighed, falling back on old habits. "Fuck, this is why I wanted you on her team. You're not going to listen to any of the rest of us. Riley and Emma may have their issues, but at least they're able to obey fucking orders. We have a job to do here, don't fuck it up just because this is the first time you and I have been alone together and you want to start a fight."

"Fine, I'm gone," She turned around.

What? "What?"

"You don't want me here, and we both know you never did," she pointed out. "Amy might, but it's putting all kinds of stress on the rest of you. I can go home, right now. You can go back to whatever you had going on. I've got great new powers and a completely badass armor. Thank you for magicking me back to life, lemme know what the bill for all this shit is. I'm sure I'll find someone willing to pay it to have me on the team."

"You're bluffing," I insisted. FearLoss.

"I am," she admitted. "But I'm also a stubborn bitch. I will follow through out of spite, and you know it."

"Can you just trust me on this one thing?" I asked. "I know we're not friends. I doubt we'll ever be friends, but this is not something you want me telling you about."

"You know something fucking huge," she asserted, turning and stepping right up to my face. PanicProtective. I pushed calming emotions into the link. She didn't need to step in, not like this. "Something you're more afraid of than me finding out about you having Bonesaw in your basement. Even more than that crazy plan with fucking Nilbog. So, yeah, I am not just taking your word on this. Or are you gonna say you wouldn't do the same if the positions were reversed?"

She met my gaze, and I looked right back. Then I relented. "Know what? Fuck it. You've made your point. I won't stop you from leaving."

She gripped my armor and brought up her fist. "I can do a lot of damage to you and leave you in a condition that Amy can bring back," she threatened. "Do you think you can stop me?"
"Not really," I answered. *DisappointmentAngerCertainty.* "But, then, I really don't have to."

She let go and stepped back, wrapping her arms around herself. "What the fuck!" she shouted.

=================

A/N- Vicky just needed a hug.
I struggled against the armor, even as it tightened its restraints against me. I activated my combat senses, trying to find a way to break out, but this suit had been designed for me. Able to absorb the energy I unleashed, to power its batteries. Able to withstand my superhuman strength. I reshaped my fingers into claws to dig my way out, but the armor regenerated faster than I could cut through.

"Vicky, how could you?" a voice, Amy's voice, asked me.

My eyes focused on Skitter for a second. A combination of fear and hesitation. Secrets she's afraid I've discovered. "Amy," I started. "You have to listen to me. She's controlling you. Some kind of emotion manipulation."

There was a hesitation. "Is that what you think's going on?"

"Think about it, Amy," I said gently. "Remember how you were so afraid to use your powers? Right after you got them, you made Aunt Sarah's cat glow. And that was the only time you ever did anything. From then on you refused to be anything more than a healer."

"I was afraid of being seen as the next Nilbog," she argued.

"I know, I know," I agreed. "But then you just change your mind one day. Not only that, but you did it in such a spectacular way. You built a super tree and living weapons to fight the Slaughterhouse Nine with."

"They needed to be stopped," she argued.

"Then you started working with the two people you hated most in the world," I continued. "Plus fucking Bonesaw."

"Who's been nothing but helpful and cooperative, if a bit weird," Amy countered.

"Riley's so nice it'd be creepy even if she wasn't guilty of crimes against humanity," I agreed. "Which should be a hint, Ames. You have freakin' Bonesaw on the team. And Missy, who was all 'serious business child soldier', and the son of Kaiser, and whatever the fuck the story is with Emma. Sure, they're all nice kids, but it's pretty fucking suspicious."

"Your group has some seriously scary brain rewriting tech. You can't trust your memories here, so think about it logically. You're engaged to a hetero girl and seem to be okay with that for no apparent
reason. You're chained up to her with some weird emotion manipulation power. You have to see how they might have done something to your mind, right? You have to trust me. Let me go so I can help you."

"Vicky, if they were going to do that, why didn't they do it to you?"

"They probably figured that since I wasn't going to have powers, they wouldn't need to," I pointed out. "You told me that even the best precogs can't see trigger events, and thanks to my new powers I don't think they can rewrite my brain. Your girlfriend has been hostile toward me from the beginning."

"She'd probably be a bit nicer if you weren't constantly calling her a supervillain all the time," Amy argued.

"Because she is!" I shouted. "Dammit, Ames, listen to me. It's a lot more than her just not liking me. I can see her emotions, and she's... fuck, she's afraid of me on a level thats more than some worry I might punch her. She's... there's even some jealousy in there, like she needs to protect you from me. She's hiding one hell of a fucking secret, and this fits all the evidence. You're being controlled by them. Just let me go, and I can get you away from her influence. I can save you. Please."

"Vicky, she's not controlling me," Amy sighed.

"Then why would she be so afraid of having me around you?" I argued. "She refuses to say because she knows I can tell if she's lying."

"Fine," Amy snapped. "You really want to know what we've been trying to keep from you? Fine. Vicky, remember how you had that fucking emotion manipulation aura?"

"I remember it," I confirmed. Then I ran through my memories from after being awoken, just in case they did plant something in my mind. *Yeah, it was a thing.*

"And how we thought I was immune?" she added.

"You were exposed enough times to be resistant," I agreed. "Just like mom and dad. Even Aunt Sarah and Uncle Neil were able to ignore it after a few seconds."

"We weren't," she corrected. "Your aura has a residual effect. Depending on how much we'd been exposed. The reason we were able to function around your power is because it never wore off for us. For mom, it's part of why she was able to be nice to you, even though she was so cold to everyone else. Dad, well, I don't suppose you would have noticed that he only ever smiled when you were there. And me? I went through puberty with your power constantly telling me to love you."
Oh fuck, I realized with slowly dawning disgust and fear.

"You're not wrong about Taylor being jealous," Amy continued. "It's for the perfectly normal reasons that anyone should feel like that. She's afraid I might still be influenced by... those feelings."

"You mean..." please tell me I'm understanding her wrong.

"Yeah, she's afraid I might still be in love with you."

"And... and are you?" I had to ask. I didn't want to, but I had to.

"I'm trying not to be," she admitted. "It's a lot easier to ignore than it was before, with your aura active. But four years of power enforced unrequited love doesn't just go away in a few months. Taylor knows that, and has been more understanding than I could have hoped, and that's just one of the reasons I love her. I can't say she's been all that accepting toward you, but under the circumstances, can you blame her?"

"So... fuck... all that time?" I asked, hesitantly. "Why didn't you tell me?"

"Tell you what?" she scoffed. "Hey, sis, I just had my first wet dream. Guess what you were doing in it! Yeah, that would have gone over wonderfully. Carol would have triggered with the ability to go back in time and undo ever adopting me in the first place."

"Well, as far as pickup lines go, it's not even close to the worst I've ever heard," I attempted to add a little humor to the situation. "Now if I promise to play nice, will you please release your control over my armor? I'm not a fan of being tied up like this."

"Are you going to apologize to Taylor?" she asked.

"Hey, she could have just told me what I asked the first time," I insisted. "She's a supervillain with mind control tech who's engaged to my sister. The burden is on her to prove she's not using it to take advantage of you."

"She's not taking advantage of me," Amy insisted yet again. "We can prove it, if you like."

"How?" I asked, suspiciously.
"That bond between us can be turned off," she informed. "We like it being on, for all kinds of reasons. Not the least of which is because it fucks with Thinkers like you and Lisa. It even works on precogs like Dinah. You can talk to her, without the bond."

"Yeah, I overheard the conversation," she said without any shame at spying on something that should have been private. Although now I could see her emotions for what they were, instead of filtered through that bond. 'Taylia', they called it. She was angry, jealous and insecure. I wasn't a mind reader, I only knew what they were feeling, I had to guess the why. Although in that case it seemed pretty obvious.

"Amelia and I joined forces to kill the last of the Nine and get revenge for the death of half my team, and you." True. "Riley was her idea. Yes, we have used the mind altering tech, more than once." True. "Never on Amelia." True. "I love her," True. "And if you dare imply otherwise again, I'll kick you off this team just so she doesn't have to. Is that good enough for your lie detection power? Can we get back to the actual mission? Or do we need to have a conversation about the residual effects of your love-me-field and all the relationship issues it's causing between me and my fiancée?"

"No," I conceded. She's telling the truth. I watched her relax and her tumultuous angry feelings broke and dissolved into a much happier, though still guarded, state. That's what Taylia's capable of? I asked myself. No fucking wonder I can't read them. "So what now?" I asked.

"Now we pretend this never happened," she commanded. "And go use your power to figure out a way to stop one of the biggest assholes on the continent that isn't currently in the birdcage. That's what we do."

"Uh... yeah," I agreed. "I can do that."

=============

A/N- Fridge Horror: there's no way you can be sure Vicky's wrong about all this.

Bonus Fridge Horror: Vicky actually HAS heard worse pickup lines.
Skitter turned and didn't speak another word as she walked into the holographic simulation of Baal's lair. It wasn't really a hologram so much as a ghost imprint involving something to do with allowing light to cross dimensions or something like that. Trevor and Emma tried to explain it to me a couple times, but despite who I apparently inherited my power from, I still had to sum up the whole conversation as 'tinker bullshit' and be done with it.

What I wouldn't give for them trying to explain it again, so I could ignore the news I just got. Amy was in love with me. My old power forced it to happen. I had no words for how fucked up that was. No wonder they didn't want to talk about it. Well, that made the next part simple: we wouldn't talk about it. Now I just needed a way to not have to think about it. Smashing the faces of a bunch of Endbringer worshiping psychopaths would be an excellent way to do that.

"Holy shit," Skitter growled as we passed through the wall and into the side of their compound. There were bones hanging from the walls, and it didn't take my powers to identify them as human. "Are those fake?" she asked, sounding unnerved for the first time since I met her.

"No," I replied. "Very real."

There were a number of people here, all armed to the teeth. "Where the hell did they get military guns?" I asked. I wasn't really a firearms expert, but living in Brockton Bay, you pick up at least a general idea of most weapons.

"There are ways," Skitter answered. "All it takes is money and knowing the right people. These fuckers have a lot of money."

We kept moving through the halls, sticking our heads through walls to find more information where we could, the Zerglings taking flanking positions around us for reasons I was fairly certain were subconscious on her part. They didn't have dimension jumping, after all. I found a large storehouse full of munitions. "They've got enough explosives in here to destroy the whole compound," I exclaimed.

"I could shunt over a Razorbat and set them off," Skitter suggested. Not to me, I realized. I could tell by her reaction that she didn't like the response she got from whomever was at mission control this time. Probably Tattletale. "Fuck, they have captives."

Of course they do, I sighed inwardly.

"It's just a scouting mission, anyway," she reminded me. "We're only here to gather info and see if your power knows a way to beat them. Dinah's power only tells us the odds, and Lisa's only comes
up with ideas."

We worked our way through the ghostly imitation of the compound. It was fairly large, all considered, and built almost entirely out of concrete. A fortress capable of withstanding almost anything short of a military assault, or parahumans. "Can't you use your freaky bug powers to find who we're looking for?" I asked.

"Not without alerting them," she answered. "Minerva's tried that angle, and she's pretty sure Lilith's power would detect it if I tried. The other most likely possibility is that there's a third parahuman in the compound that would spot it. Same with using a mapping scanner. We're not certain why watching from here doesn't set them off. Probably because their thinker can't reach across dimensional layers or something. Dinah says we're safe, the rest is just guesswork."

"Split up?" I suggested. "Lots of space to cover, and I can go a lot faster if I don't have to stay near you."

"Fine, but I expect you to report back to me if you find anything," she insisted.

"Yeah, sure," I turned and bolted, trusting my boosted senses to keep me informed despite my moving at over sixty miles an hour. Most of the compound was boring. There was a good amount of farmland outside the first building we entered, surprisingly enough. I didn't recognize the crops in question, but I did recognize slave labor when I saw it. There wasn't any other reason to have men armed with assault rifles threatening the workers. Pity sound didn't carry over to the side we were viewing. There's an idea. I hit the com system. "Hey, Riley?" I started. "Could you get lip reading into those knowledge upgrades?"

"That's a really smart idea!" Riley exclaimed happily. "How's the mission going?"

I was already moving to what appeared to be the largest building in this fortress. "Nothing we didn't know already," I answered. "Still looking."

"Okay, should I tell the others to go ahead with their missions?" she asked.

"Probably better to wait," I replied. No sense in letting them know we were coming early. I entered the large building. It was a warehouse of some sort, containing large bags full of what I was pretty sure was drugs. I watched as people walked to and fro. A man dressed up in an outfit of solid black, with three long ropes coming off his shoulders stood there. They're already imitating Barghest? I thought. It's only been a week and a half.

"Unknown parahuman, male, late twenties to early thirties," I informed over the coms, adding Tattletale and Emma to the conversation. I let my power go. Offensive strategy: attack from behind, punch him in the back of the head, he dies. "No special defense against surprise attacks, not a high
end regenerator." Defensive strategy: avoid ropes, stay out of range of ropes, stay out of line of sight. "Blaster or shaker of some kind. His costume is built to be a weapon or improve his power somehow, I think. He needs line of sight on his powers. Maybe mover, my power doesn't want me staying still for long near him."

"Never heard of him," Emma replied. "Too generic a power description, and the picture makes me believe he changed costumes."

"See if there's any Simurgh imitators that might fit," Tattletale suggested.

"Only a couple dozen," Emma retorted.

The man in black touched a crate and then vanished, taking the crate with him. "Fuck!" I exclaimed. "Teleporter. Powerful one."

"Seire," Emma replied almost immediately. "Touch range telekinetic, not too different than your old power. Teleportation of up to five hundred miles, confirmed. Likely more. Can use it rapidly enough to be effective in combat. Manton limited, but uses his power to strengthen his costume. Likes to mutilate his victims without killing them. Shouldn't be able to get through our battle armor, though."

"My power thinks he can get through mine," I informed.

"Sending Horus as backup. He should be a hard counter," Tattletale added.

I smiled. Yeah, that would work. My power's strategy for getting through Theo's armor was 'no'.

"Found them," Skitter said over the com. Her voice fluctuated in a way that let me know she was incredibly upset. I turned and bolted back that direction. Seire might come back, but I needed a look at the bosses.

I arrived at a tunnel in the Yggdrasil, and a swarm of insects pointing at the hole. I followed it down, and the scenery changed. In the dark, it was easier to see the other world. I arrived in what was, for all intents and purposes, a throne room out of a depiction of hell. Complete with bone furniture. That, at least, was fake. Although many decorations on the wall were not. I continued following the tunnel into a side area. A large bedroom. Baal and Lilith were there. _She does not have the body to be wearing something like that_, I decided immediately. A Simurgh-themed 'chainmail bikini' costume didn't belong on a 5'6, 250 pound, 40 year old woman.

Baal, on the other hand, looked like something out of a barbarian movie. Muscular to the point of near absurdity, and covered in a dark red armor with bits of brownish bone plating. His armor is the real thing. And, if my power was any indicator, it's still alive. Reading his physiology convinced me
that guessing his age would be impossible.

There were two other men, guards, one leading a girl out of the room, and another bringing a new girl in. Lilith gazed at her. "This one in ready, m'lord," she said with an attempt at a sultry voice that she couldn't pull off well, either. My stomach dropped.

"Ready for what," I asked Skitter hesitantly. The hormone and physiology information already told me the answer.

"Breeding," she answered angrily. "It's a breeding program. Like Heartbreaker."

"She's barely fourteen years old!" I exclaimed.

"I know..."

"I'm going in," I said.

"Wait!" she shouted. "This is a scouting mission."

"I'm not going to watch a child get raped," I growled.

"Can you disable them?" she asked.

"Her? Yes," I answered. "Him, I'll have to kill."

Lilith's head turned toward us even as Skitter gave the command. "Do it."

I shunted before she had a chance to speak. She dodged a burst of laser light with a shocking swiftness considering her age and physique, but she wasn't the one I was concerned about. At the same moment, my leg came up as hard as my strength would allow, right between Baal's legs. There was a wet crunch, as my armored foot sank into his flesh. I almost laughed at him, after my power was kind enough to tell me that, while such an injury would be temporary for him, he still had the ability to feel pain.

I dropped to the ground and rolled backward as Lilith fired a shot from some kind of tinker weapon. I didn't know the details, but my power made it clear I didn't want to take a hit from it. A splash of gore dropped from the hole my foot had left in Baal.
Meanwhile, I was listening to shouting and assault rifle fire from across the compound. They had, if my guess was correct, about fifty guards. We had thirty zerglings and countless modified insects. I took a couple more pot shots at Lilith, who evaded them almost casually. She's a better precog than I am, I realized as I struggled to avoid a couple more shots from her gun. I was only doing this well because I had superhuman speed backing me up.

Baal, meanwhile, had regenerated. I swapped out to the ice lance, and shot him in the crotch again. Sadly, that attack didn't leave a lot of nerves behind. He screamed, however, as his power started to undo the tissue damage. My power kindly informed me that I still had almost six and a half tons worth of human biomass to destroy before I would actually be able to do lasting damage to him. More importantly, I had to keep him fighting that whole time. If he decided to retreat, he could escape me. Or my power believed he could.

I dodged a couple more of Lilith's shots, then swapped to sonic and fired a wide burst toward her. The guards had started firing on me as well, but my armor was entirely bulletproof. It was, however, a distraction and one of Lilith's shots caught me in the shoulder. Fuck, I didn't want to do this so soon. I activated my war form. The breaker state undid my injury and adjusted my physiology. It even infused into my armor, which the tinkers had somehow bullshitted my power into thinking was a part of me. I mended the damage, moved forward and punched Baal in the head, sending him flying back. I fired a laser shot into his genitals. They caught fire.

I might be having too much fun with that, I thought. Then I flipped back to avoid another stream of energy from Lilith's gun. I swapped to EMP setting and activated the burst. Lilith, the guards, and the poor girl that was still in the room all screamed in pain. Contrary to popular imagination, EMPs fucking hurt. Other people.

She gasped as I closed in for a hit, and then my power warned me, so I moved back. My power was afraid to touch her, even through the armor. I wasn't sure why, but I would rather not find out.

"Fuck," she spat as she struggled to her feet. "You're a precog, too?"

"Guilty as charged," I quipped, my eyes glancing over to Baal. I resisted the urge to smirk as he had put multiple extra layers of his bioarmor over his crotch. "Of course, you're better at it," I admitted. Hopefully you're stupid about it, too.

She pulled a sword out from her position behind the bed, then rushed me. She was unnervingly fast for her size, but I was fast for anyone. I avoided her easily, only to be forced to duck and roll when Baal nearly got me with a spined tendril made from his armor. Lilith followed up by swiping at my shoulder, the one she'd shot before. The blade got through the weakened armor and sank into my flesh. She let the weapon go. Fuck.

I gripped the blade and shunted it out. Then, ignoring the injury, I twisted sideways and kicked outward, breaking Baal's knee. Thanks to the additional armor he used to protect the family jewels, he was a lot slower than he should have been with his powers. Slow enough for me to keep up with,
as was the plan all along. Lilith pulled another sword from another hiding place. *How paranoid do you have to be to hide all these weapons in your bedroom?* I wondered briefly. Then I swapped for my sonic blaster again.

Lilith stepped to the side and pointed the blade at the teenage girl's throat. "You know I can kill her before you can stop me," she warned. It was true, of course. I hesitated as Baal got to his feet. *Fuck.* The girl just sat there in wide eyed horror. And then Seire appeared in the bedroom. *Well, fuck me then."

Missy shunted in, near the door. Along with Theo. Zach appeared right in front of Lilith, who slapped him. He disintegrated. From just a slap? She has to have a scary touch power. The child vanished into dust a half second later, as Theo bull-rushed Seire, using gravity manipulation to help. Baal's legs exploded from underneath him, and I took a couple more shots at Lilith.

She moved toward Missy, and space warped around. It wouldn't work. Lilith's power let her follow the warp perfectly, getting her in touch range, where she grabbed Missy's arm. Lilith's arm started sinking into Missy's costume. Not in the usual sense of it, but more like when Lily uses her power to phase an object through another. Then Lilith screamed and stumbled back. Her arm was missing up to the shoulder.

I shunted out, moved a few feet, and shunted back in behind Seire. Cost me both of my jumps, but that was fine. I brought my claws into the man's back, using the cryo effect to weaken his armor and let me cut through. He vanished. I turned and clotheslined him as he reappeared. I definitely preferred fighting non-precogs. I also liked knowing we had healers, because I was pretty sure I just put the asshole into a coma he wouldn't come out of without parahuman help.

I turned back toward Baal. "So, want to surrender?"

"Fck ff," he muttered from through his altered jaw.

"Oh, thank you so much for saying that," I smiled, and moved. I shunted Lilith's sword back into this reality, dipped low, and shoved the thing up into his crotch yet again. Although, with the angle I used, it really did more damage to the intestines than anywhere else. Then I hit the weapon with the full extend of my electrical generation. He screamed as best he could while the metal heated to the point where it melted inside of him. *Not a very high quality blade,* I decided.

But, he recovered quickly nonetheless, even as everyone else retreated from the room. Missy took the teenager, while Theo carried the badly bleeding Lilith and Zach dragged Seire. *Wonder who gave that command?* Oh well, *I was fine here with Baal."

I stepped back and grabbed the other sword. *Nope, these are all replicas,* I realized. I fired another sonic blast, this time at full concentration. The back wall cracked as he slammed into it. I shunted out and returned standing on the ceiling above him. I jumped off of it and used all that force to send the
second sword down his throat, followed by yet another electrical surge. He dropped. My power told me that he was almost out of power.

I swapped to the ice lance, and aimed right for his heart, waiting for him to recover just enough to be aware of what was coming. His insides were reduced to near absolute zero. His eyes just stared at me in shock, and I watched as his power used the remainder of the stolen biomass of other human beings to recover. He was beaten, completely. He could recover, but would take years for him to restore his strength enough to be much of a threat. *I guess I can take him in alive*, I realized.

*Fuck that noise.* I kicked him in the chest, and he shattered to pieces.

==============

A/N- Vicky has issues.
Vicky and Taylor shunted over together, on the helipad of the Houston PRT office where I was waiting. "Where are the others?" I asked.

"Horus has business to take care of," Taylor informed me. "Aceso, Lachesis and Osiris opted to stay with him." Oh, he must have found Purity during the cleanup. Of course they'd want to talk while they had the chance. Purity's new identity may have been squeaky clean, but she hadn't been able to make real contact with Theo for whatever reasons that seemed overly paranoid in my opinion. It was good to give them a chance to catch up.

"I guess that's okay," I replied, trying to sound disinterested in the situation. "They're not necessary for the debriefing, after all. You're still monitoring them in case of unexpected trouble, of course?"

"Of course," she agreed. All part of the act.

"Umm... Vicky, how are you holding up?" I asked. There was a lot of things between us right now.

"Shoulder's sore," was her answer. "I think Lilith did something that's keeping me from regenerating properly. It can wait until after the meeting."

"I meant-" You finding out about my attraction. Me trapping you in your own armor. What happened between you and Taylor. What you saw in that compound that horrified even Taylor. "You've never had to kill anyone before," I finally settled on the safest of all the things I wanted to say. Concern Support.

I frowned. This was just like Vicky. If she couldn't hit the problem, or yell at it until she got her way, she'd pretend it wasn't a problem at all. Like Dad's depression, and Mom's general bitchiness, and her make up to break up relationship with Dean. Now that I think about it, she hasn't even mentioned Dean since she was brought back from the dead. Maybe she was more like Zach than I realized.

We made our way to the meeting relatively silently, led by a couple PRT troopers, who politely left us to our silent contemplation with nothing more than a "Please follow us, ma'ams."

We walked into a rather spacious office. Houston was a big city, big enough to field three Protectorate teams, plus six of the Haven capes, and still remain understaffed. And that was before New Delhi. This base was understandably massive for those reasons. Already present was Halo and
Prophet. We didn't know his powerset, but it was likely some type of precognition or high end thinker, based on the name.

Then there was Ranger, one of the 'makes others better' trumps, gifting superhuman accuracy and timing. He was the new head of the Houston Protectorate after Eidolon's pseudo-retirement to dedicate himself to the anti Endbringer efforts. Then of course the Director Lane, a middle aged man who reminded me of a significantly less obese, and slightly less masculine, Piggot.

"This was intended to be a scouting mission," the Director said with an attempt at neutrality that didn't match the accusatory language. We hadn't even had a chance to find our seats. He looked toward Victoria. "You're the one who killed Baal?"

"Ye-" Vicky started, but was cut off.

"It was my command," Taylor interrupted. "She informed me that she was confident her power trumped Baal's, but only if she was authorized to use lethal force. I authorized lethal force."

"And what gave you the authority to murder a suspect during a scouting mission?" he, again, kept calm. "You are not authorized law enforcement, and even if you were, you have no jurisdiction in this state."

"The fucker was going to rape a child!" Vicky shouted.

"Miss Dallon," he sighed theatrically. "If you can't restrain your temper, either leave or be escorted out."

"As if you could make me do anything," Vicky smirked.

"Vicky," I looked at her. "Please. For me?"

"Fine," she muttered.

"He's hostile for political leverage," Lisa informed us over the coms. "Afraid our alliance with Haven will do in Houston what we did in Brockton Bay, and our alliances in Boston and New York are doing there. Wants to make us look bad to Halo so he isn't willing to be too closely associated with us. Frankly, he probably doesn't need a lot of convincing. Our team name doesn't exactly inspire him to love us. Be apologetic about this, but not so much that it looks like weakness, that would be even worse than being proud of it. Couldn't hurt to imply that Lane would have left that girl to be abused. Buy me a few, I'm gonna make some phone calls."
"It was regrettable," I started. "But our only alternative would have been to let Baal rape and impregnate a fourteen year old girl. Khepri made the right decision."

"What are your powers?" Prophet asked, looking at Victoria.

"Brute, mover, striker, and combat thinker," Vicky answered without hesitation. "I can sense you using your power on me, by the way. My power's telling me that the longer I let you do that, the harder it will be for me to fight you in the future. Power detector? Analyzer? Wow, glad you're on our side."

"I would have liked to keep that a secret," he sighed. "Ironic, I guess. And your power is what made you believe you had to kill Baal to beat him?"

"He could have recovered from anything less," she answered. "My power said no to using containment foam on them, and ruled out all our other disabling options. It insisted that my options were kill, or let him go."

"Which fits with intel from other fights against them, as well as what we could learn from our own thinkers," Taylor added quickly. "Baal's escaped from foam before, and we now know that Lilith generates some kind of disintegration field through her skin."

"And that's why you dismembered Lilith?"

"She did that to herself," Taylor answered. "She attacked Lachesis, whose specialized armor is designed to use dimensional warping to disable attacks. You'd have to talk to our tinkers for details, but you have records on Vista and her power. Singularity was custom built to harness that. It even includes an anti-precog effect that likely explains why Lilith didn't know better."

"Beats my combat precognition, too," Vicky added. "Seriously, her power is so unfair. She is one of the Endslayers for a reason."

"And Seire?" the Director reminded us.

"Didn't have much choice," Vicky answered dismissively. "I hit him as hard as I had to to keep him from teleporting away, or we would never have found him. Ames will patch him up. Right, sis?"

"Of course," I frowned. This reminds me an awful lot of the E88 thugs before Leviathan. SurpriseConfidence. "Umm, this may sound like a non sequitur, but what do you think of the Railroad Bandits?" Taylor spoke up.
"Bunch of second rate thugs and vandals," the Director told us dismissively. "Not worth bringing up at this meeting."

"They play up a sort of noble thieves image," Halo added. "It's right there in their name, romanticizing tales of the Wild West and emphasizing anti big business and big government sentiment. In the interest of avoiding a long winded history lesson, it's easiest just to call it a southwestern version of the Robin Hood mythology. The Director's right when he says they're unimportant. Mostly guilty of nuisance crimes, and only against companies or groups that are politically unpopular. Certain vocal minorities even call them heroes. Why do you ask?"

"They found out we were in town," Taylor informed. "And have decided to preemptively surrender and offer join up. Apparently they smoked out one of the Fallen's drug dens and came away with a couple of the capes we hadn't found yet. Something about handing them over as a welcoming party gift. Minerva and our own public policy says we accept both of their offers. You can arrange the legal steps needed, right?"

Director Lane's skin changed to a lovely shade of scarlet. "You can't be serious!" he exclaimed.

"Hey, don't look at me," Taylor shrugged. "All we came here for was the Fallen. Seems our reputation preceded us." SmugHappyAmused. I smiled. We put a lot of work into that rep, it's nice to see it pay off.

"Is there anything else, Director?" I asked.

"We still haven't settled the matter of your subordinate," he emphasized the word, and I could imagine Vicky's response would be ugly. "And her premeditated execution of a man. A criminal, I'll grant you, but we don't take kindly to vigilante justice."

ConfidentCertainty. "Actually, Director Lane, we've taken the liberty of presenting our findings to Chief Director Costa-Brown," Taylor spoke up. "You should be receiving a call in three... two..."

A phone rang. Not taking his eyes off of us, Lane answered. "Yes?" "Yes Ma'am." "No, Ma'am." "I understand." "Sorry for the inconvenience." "Thank you, Ma'am." He hung up, and still hadn't stopped looking at us, though his expression had gotten even more unhappy as he listened to the woman on the other side of the conversation.

"It seems the Chief Director has, after receiving and confirming evidence of a forced parahuman breeding program, issued a kill order on Baal, retroactively." He informed us. Somehow, he made it sound like he had just given Hitler the Congressional Medal of Honor.
"Awesome!" Vicky said happily. "So, I have a feeling you guys have a lot to talk about. Since I'm not needed anymore, can I go scout out the eateries? I promise to bring you back something delicious. I hear great things about ribs around here."

"That's probably a good idea," Taylor agreed. "You're dismissed."

"Thanks!" Vicky exclaimed, and then simply vanished from the room.

"Little sisters," I offered apologetically.
"Now there's the next issue," Taylor added after Victoria left. "How are you planning to contain Seire and Lilith? They can't be held by anything resembling a conventional prison. In fact, it's likely they could escape even from the Birdcage."

The Director frowned. "We developed a method," he answered. "You'll have to speak to the Chief Director again, if you want the details."

"Say exactly what I say," Lisa spoke into my com. I knew through the link that she wasn't speaking to Taylor. I nodded slightly and started reciting.

"You've found a new master cape," I repeated. "One of Heartbreaker's kids."

"Not someone like Cherish or Hijack," I kept on script. "Emotion control powers have limits, this is hard mind control that doesn't require the parahuman who inflicts it to be involved after the fact. Or much at all, past the control process."

Halo was the one who broke silence. "It's as ethical as we can possibly make it," he insisted.

ConfrontationAnger. "What, exactly, are you doing?" Taylor insisted.

The Director sighed. "One of the Vasil children has a power that forces a form of OCD behavior. The victims of the power must complete a ritual before being able to take a given action. Prior uses involved being forced to recite poems before crossing any doorway, and counting before taking a bite of food. Once inflicted, it can't be changed except by applying the anti-master drug to the victim."

WaryRelief. "That sounds fairly benign so far," Taylor admitted.

"The other half is somewhat worse," Halo admitted. "They'll be fitted with a device. A twenty digit code they must enter while speaking aloud thanks to the compulsion, in order to access their power. Every button press involves a progressively more painful reaction. If they can make it to the tenth, which is highly improbable, it then exposes them to a number of tinker derived drugs that renders them unconscious. The fifteenth button, if they make it that far, is lethal. It shouldn't be able to get that far, since activating any part of the code instantly alerts the guards."
"We've tested the effect on volunteers, both normal and parahuman," the Director offered. "The only thing that lets them bypass the command, even temporarily, is if they are under the influence of yet another master's power."

"At which point, you have something far more serious to be concerned with," Taylor volunteered. "I must admit, I really don't like hearing about it this way, but it's as elegant a solution as one could hope for under the circumstances."

Our allies are going behind our backs, I thought to myself. I can't imagine why I'd be surprised by that. "Will this become a common type of punishment?" I asked.

"That you will need the Chief Director to answer," Director Lane replied. "After she gets done talking to the President, Congress, and the Supreme Court. Frankly, I doubt it. Voter backlash. Too many 'slippery slope' arguments to be made against it."

I nodded. "I understand."

We were hesitant to reveal our knowledge implant tech for similar reasons. Our nerve damage regenerating technology even managed to ruffle the feathers of some groups. Not enough to stop us, of course, but I was surprised by the number of death threats we got for it. A lot of them from the Deaf community after finding out we could heal almost all of them through this equipment. Pity it was still a few years away from legal approval by the medical tech boards. Even if Carol assured me that it was being heavily fast tracked compared to most experimental treatments.

"Now we just confirm the final arrangements," Taylor added. "Pantheon will publicly take credit, or blame if you prefer, for the attack on the Fallen's main compound, and the injuries resultant from it. It was my orders that turned this from a harassment and scout mission with a vague hope for an ambush opportunity into a full scale assault, after all. Haven and the PRT can take credit for the peripheral targets. We give the Railroad Bandits credit for their part as well, of course."

"We can accept that," Lane agreed. Of course he did. That was a lot more generous than our prior arrangement, and they knew it.

Where before it would have been called a joint operation across the board, which probably would have benefited us more than them, this made it look like they deserved full credit for the dozen other attacks that happened across the city, regardless of how much of that was handled by our team as well. Especially our Thinkers and Tinkers. Oh well, Baal was to Houston what Lung was to Brockton Bay and Heartbreaker was to Montreal. Everyone wanted him gone, but removing him would have caused more damage than ignoring him.

ShockSurpriseConfidence. "The last part, of course, is Haven's association with Pantheon," Taylor replied. "I believe it serves us both well to make our alliance official."
"That's bold, I thought. What did Taylor just find out?"

"Your conditions?" Halo asked.

"Same as all our core allies," Taylor responded. "We test your members' powers, allowing us to to discover potential power synergies. Much like what Gaea and I possess, and the combination we discovered between the Endslayers. We suspect a potential interaction between Rosary and one of the Adept, known as Shaman. If it works coupled with one of the devices we've developed with Dragon, it's possible we could have another Endslayer combination. Beyond that, we ask you to contact us for any A or S class threat missions. Coordinate with us for such missions."

"In exchange," I continued. It had somehow become our pattern for Taylor to give the demands while I make the offers. I don't know how or when that happened, but it worked out that way. "We can provide the generic battle armor, plus advanced variants for certain powers. It's especially likely with energy generation and telekinetic or matter manipulating powers. Then there's access to our healing technology and powers," *Including the ones we don't share with the public*, I added mentally. "And, of course, our support in any major conflict. I believe our ability to coordinate our allies is one of our finest advantages."

"I note none of your allies are here," the Director pointed out.

"Didn't need them here," Taylor replied dismissively. "The Adept and Ambassadors, as well as most of our own team, were sent on a series of other missions. The Teeth are losing their holdings in Tennessee, Georgia, and North Carolina. Granted, we probably won't get everything, spread as thin as we are for this mission, but the Directors of those areas have authorized their respective Protectorate and PRT forces in joint operations not unlike this one."

"I didn't hear anything about this," Lane replied in shock.

Taylor shrugged. "I'm sure most of the other Directors would ask you why you didn't tell them you were working with us on this as well. As Gaea said, coordination. And being willing to commit the resources necessary for a decisive victory with a single encounter."

"You... you planned to kill Baal from the beginning!" he accused.

"Not to kill," Taylor corrected. "We had Dinah Alcott tell us the combinations we needed to guarantee victory against Baal. I guess we forgot to specify between capture and kill. Something to keep in mind for the future."

"You're attributing his death to such an obvious oversight?" the Director asked incredulously.
"If we'd planned to kill him, Lilith would have foreseen danger. It was always meant to be a scouting mission, but our own precog changed her mind. You know how precogs jam each other. *Unless that precog is trying to jam Dinah, because she's stronger than them.* That's how we managed to turn that into a victory. Speaking of, the Savannah team's just finished the mop up."

"So late?" I asked. "Isn't that the Ambassadors? Accord's going to be annoyed to find out his team was last to finish."

"I think he'll be inclined to be forgiving here," Taylor replied. "Apparently they ran into a drug smuggling crew offshore. Three unexpected capes they think are from Haiti. I don't know how they caught a Tinker tech submarine in the ocean. Especially one that had a water manipulator, a forcefield generator, and the Tinker who built the sub on board, but that's exactly what they just did."

I blinked. *How the fuck?* "Impressive," was the only word I could come up with that didn't involve profanities.

"And that is what you get when you ally yourself with Pantheon," Taylor said as she looked back toward Halo. "You don't have to, but I believe the opportunity to be part of operations like this one, to make a real difference instead of fighting a losing battle against entropy, is worth the extra effort. Don't you?"

"Rapture did say you girls were very good at getting what you wanted," he smiled and extended his hand.

=============

A/N- Because more than just Pantheon members deserve to be badasses in this story.
"Nervous?" I asked Theo.

"A little," he admitted. "Mostly I'm just sorry I won't get to see Aster. I mean, I'm grateful they even worked out this loophole in the first place so I could see K-P-her, I just..." he trailed off, shrugging.

I nodded, understanding. I knew how hard it could be to not be able to see your family. "I'm sure they feel just as strongly," I assured him, leaning my head against his shoulder. I smiled up at him, only slightly annoyed by the fact that I couldn't even put my head on his shoulder when we were both standing, I had to lean against it. "It's a shame you're not dating someone who can literally force space to bend over backwards for you. You'd probably be able to talk her into taking you to visit every weekend with nothin more than a smile."

"Really?" he sounded relieved, though I couldn't really see him through the armor. Riley's right, I decided, he is cute. Even if he is a derp sometimes. "That would be awesome."

"Still gotta get through the mission, first," I pointed out, accepting his arm as it wrapped around my side. He's really bulked up, I realized. Not quite as big as Zach, but then Zach's power had advantages.

"We're just backup," Zach complained. "Shoulda sent us in against Baal. Use the same tactic that took down Hookwolf, and walk away with a smile."

"Dinah gave that one a ninety nine and eighty two," Emma pointed out. To my surprise, Zach didn't immediately react with disgust at her. The numbers were, in order, the odds of us walking away with no serious harm to the group, and the odds of us winning the fight decisively. None of that stupid getting away shit like always happened when I was a Ward. "And another forty three on the unacceptable consequences list."

That last number was always the big killer in our strategies. Very few enemies had much chance of winning against us. Thus far, the Ash Beast was the only threat we asked about that was likely to actually walk away from any serious attempt by us at a takedown. Dragon, in hypotheticals where we had to fight, actually came to an almost fifty percent chance of winning against us, making the two of them the only that went beyond twenty percent. With all the other big missions, it was always things like 'plague released, kills Pennsylvania' and 'sure, if you don't mind Moscow being depopulated'.

Likely had a lot to do with the fact that Pantheon only ever seemed to move on A and S class threats, plus or minus lesser threats that were just too fucked up to ignore, like most of the Fallen.
"Based on what we know, it's probably Lilith's precognition. If we move against Baal, she'll know and they'll have enough warning to prep a defense. Baal's compound is crawling with soldiers, and potential hostages." Trevor supplied. "Scouting mission only. We'll hit him if he leaves his compound to protect any of the Fallen's holdings. We just can't afford to go after him at home."

Zach sighed. "I know, I'm just f-bored is all," he glanced over at Riley, who was currently piloting her Aceso doll somewhere near Memphis. She seemed to ignore his near slip into profanity to this time. Must be busy, I decided.

"We're the emergency team," I reminded him. Technically, Theo was in charge of this particular team, but he either didn't like to confront people, or he didn't see the complaining as needing to be curbed in situations like this. That was a concern I'd bring up by proxy, let the bosses handle it if they felt it needed handled at all. Like a professional. "We'll bail anyone who needs it out. Between the five of us and Khepri's monsters, we cover just about every possible scenario. We're the ones being trusted to be able to handle it if the other teams can't."

Theo squeezed me a bit tighter. Probably not professional to cuddle in the middle of a mission, either, I reminded myself. But Zach's not wrong, it's boring here. And we had to keep our face masks on. The planet might be safe, long as you stayed out of the ocean, but the air was not fun to breath. Survivable, sure, but uncomfortable.

"Those sick fucks," Emma growled. She looked toward us. "Promise me that, if you deploy, you hurt them extra bad for me."

"Why?" Theo asked. At least he knew not to take people at face value.

"Forced breeding," she hissed through her teeth.

Theo's metal started forming around him, and his grip might have been painful if not for the suits between us. "Understood," he answered darkly. He didn't add any more words, but his battlestaff formed a nasty looking serrated blade at the top.

Zach swapped over to his acid burst weapon. Not even close to his most deadly option, but probably the least pleasant to be on the receiving end. I simply flicked my blaster up a notch. Less visible than the boys' toys. "Brute protocol approved," I spoke solely to my suit.

It was another minute before Emma made another announcement. "Houston mission is on. T-Khepri is calling you to her location. All of you. She's approved Vicky to fight Baal."

"One half digested rapist, coming right up," Zach's tone was, perhaps, even darker than Theo's.

As it turns out, however, Zach didn't get to cover Baal in acid. He had to rescue a hostage. I was the one who got to do some real damage. Two shots, the first he ignored. It was enough to kill a normal
person, but Baal's power made him really tough. So I set it to a level that was ordinarily reserved for bringing down small houses. Or, in his case, turning his lower half into paste.

The child was crying as I pulled her out into the hall. I half expected her to vomit on seeing the damage Taylor had done to the guards. I knew she held back, given than when she went all out, there wouldn't be bodies left to identify. But looking at the shredded forms of these men had sustained, you'd think they met a pissed off Hookwolf.

"You'll be okay," I tried to tell the girl. She didn't seem to listen, too busy caught up in her borderline hysterics. She's younger than I am, I was disgusted to realize. I extended my power bubble around us, locating an area with a lot of people clustered together. Other captives, I realized quickly. I warped us nearby, used a dialed back shot from around the corner to drop both of them with what was probably nonlethal amounts of internal bruising. I kicked in the door without ever stepping away from the girl clinging to me.

"We're here to rescue you," I told them, activating the armor's voice amplifiers. "Stay here for right now while we clear out the rest of the Fallen. Look after her," I pushed the child toward them. It may have been harsh, but I had other things to worry about right now.

The rest of the mission would have made Sophia proud of me. Probably would have made Gallant cry. I didn't kill anyone, but only because I only aimed for arms and legs. Each shot did damage like a hit from a sledgehammer. By the time the PRT managed to get their men into the compound, I had managed to cripple thirty one Fallen. Sadly, it didn't make me feel any better, but at least I knew they'd never truly recover from those injuries.

.....

"Horus," Purity spoke hesitantly. Her costume had changed, to match her new identity. I had to wonder if the red hair was a wig or a dye job, but either way it looked absolutely natural and matched her new mostly orange costume design. I stood back a bit, this wasn't really my place get too involved. Around us, the PRT was going about the business of collecting criminals and reuniting families. Rather the opposite of what was going on in front of me.

"Ma'am," Theo responded. "Good to meet you."

"You've grown," she volunteered. "I bet the girls are all over you, now."

He looked down. "Not really," he was adorable when he was embarrassed. "I do have a girlfriend."

"Rune's gonna be disappointed," Crusader chuckled.
"I wouldn't know," Theo replied. He didn't sound happy about that conversation topic.

"So, who's the lucky lady?" Purity changed the subject. She obviously saw the same discomfort I did. "Anyone we know?"

I moved the several feet of distance with a single step. "You could say that," I gave a small wave.

"Can't say I expected that," Crusader joked. "So, you and Vista, huh? Max would have a cow."

"My father's opinion means nothing to me," Theo stood straight, this time. "Assuming he even notices me from whatever pit in hell he got dumped into, he should be grateful I didn't decide to get a boyfriend simply to spite him."

Crusader paused. "Uh... fair enough..."

I resisted the urge to laugh. Although, actually, now that I think about it, that's something I wouldn't mind seeing once or twice.

Purity, on the other hand, smiled. "I'm glad to see you've finally started standing up for yourself," she beamed. "I really mean that. I always knew you'd grow up to be a fine man."

"Thank you, ma'am," he went back to being shy. "How's Aster doing?"

"She said her first words a couple weeks ago," Purity responded with a level of pride that I pretended I wasn't jealous of. "And now that she's discovered words, she's a nonstop chatterbox."

"That's wonderful," Theo said excitedly, though I could hear a hint of sadness in his voice. I briefly wondered what Bobby was up to. "I, um, gathered a lot of her things together. And a some other stuff. They're at the farmhouse, in case..." he trailed off.

"Always the thoughtful one," Purity said approvingly. "We'll figure something out."

"Don't mean to cut this short," Crusader spoke up. "But we should probably get to work. You can only pretend to debrief for so long before it looks suspicious."

Theo's shoulder's slumped a little. "You're right," he admitted.

"I'll find a way to make contact, probation be damned," Purity insisted, then she looked over to me.
"You keep him from getting too full of himself," she instructed. "Don’t be afraid to put him in his place."

I smiled. "Don't worry," I replied. "I can handle that."

A/N- Missy hasn't had a chapter in a while. Also, were I a better planner, this might have been written before the last chapter. It doesn’t detract from the story to be second, but still, I think it would have flowed a bit better.

And not revealing their new cape names is my "subtle" way of punishing my readers for never once guessing at their names. Because I am a dick like that.
"Food, as promised," Victoria announced, handing me a cardboard container that had gone cold a while ago. She passed another one over to Taylor. "You should have told me you'd be having a press conference after the meeting."

We pulled open the boxes. She wasn't joking about the ribs plan. Lukewarm food wasn't exactly my favorite, but considering Pantheon's schedule, it was a pretty common part of our diet. Still better than hospital food, at least.

"Lisa still doing her announcement?" I asked.

"Yup," Taylor sighed. "Since we..." she glanced at Vicky. "Retroactive kill order notwithstanding, we have to consider Houston a failure from a PR perspective."

"Are you saying we should have let that fucker get away with..." Vicky's face went hard. She killed someone, I thought for at least the fiftieth time today. My sister straight up killed someone.

"No," Taylor interrupted. "Put me in that situation a thousand times, and I'd do the same thing every one of them. I would have killed him myself, if his power wasn't such a hard counter to mine. We did the right thing."

"So what's the problem?" she asked. "Because this is looking like a pretty mixed message right now."

"It is a mixed message. Even worse than that, it's politics," Taylor sighed. FrustrationDisgust. "We have to be strong, without making normal people get scared of us. We just reminded them that we can, and will, use lethal force. It's bad enough that we're flaunting our Class S status so hard as a means of intimidation. We just carried out a mission across four states in one afternoon, in a bigger show of force than most countries can unleash. And in the process, we killed one of those parahumans that's supposedly damn near unkillable. That scares people, and scared people do stupid things."

"Welcome to the world stage," I sighed. "Watched by millions, perhaps even billions... and if we fuck up even once, it could result in a civilization ending crisis."

"Well, I always did want to be famous," Vicky smiled. "So what do we do now?"

"As little as possible," Taylor replied. "Now we mostly support our allies. Let them do the job of subduing what remains of criminal elements in their areas. Maybe do some community outreach
stuff. Nice, safe, stuff that doesn't frighten people. Build up for the next Endbringer. Unless we absolutely have to, that's our next important mission."

"So more of that hurry up and wait shit, huh?" she sighed. She stood there for a couple minutes, not saying anything as we ate. "I... um... wanted to say thanks for standing up for me after I killed Baal."

"I gave the command," Taylor replied. "Makes it my responsibility."

"We both know I would have gone in without your permission," she insisted.

"And I would have given the command even if you would have listened," Taylor countered. "We both played our roles. Dinah's prediction came true, as they tend to do. Yeah, our image took a bit of a hit from this, but it's really not that bad. We picked up Haven as official allies, a handful of other indie hero and small time villain groups in several cities, and it got rid of one of the worst excuses for a human being left on the continent. Like I said, I'd do it a thousand times out of a thousand."

"You could have thrown me under the bus, either way," Vicky pointed out. "After..." she hesitated. "After what happened earlier, I wouldn't be surprised."

"You were just trying to protect Amelia," she dismissed. "I've done a lot worse for a lot less." I smiled, but opted not to say anything. I spoke through my link, telling Taylor just how grateful I was to her for this. She wouldn't hear words, of course, but the message would be clear.

"Well, that was enormously easier than I thought it'd be," Vicky smiled. "I kinda expected you to be more pissed off about all of that mess."

"Read the press release," Taylor offered. "Pantheon's all about second chances. We founded ourselves on that idea. If I can give one to Emma, and any of us can give one to Riley, then fuck it, you're not so bad."

"We should probably talk about that," I said to Vicky. "I'm sorry about hiding it."

"No need," she interrupted. "I knew you were keeping a secret, and I wanted to know what it was because I was afraid it might hurt you. Now I know better and we can all go back to normal. Life goes on."

"It doesn't bother you?" I asked hesitantly.

"Honestly, Ames?" she sighed. "Not right now. Yeah, it's weird and all... but I've got other things to think about. Like wondering if every time my parents hugged me, was it only because my power
forced them to? Which of my friends were really friends? Did Dean ever actually love me? Did anyone? No offense, but I really have no idea what to think anymore."

Oh fuck. "Wow... when you put it that way," I muttered. "God, I must sound so egotistical." I stood up and moved toward Vicky, pulling her into a hug. She didn't resist, but didn't really hug back. I was vaguely aware that I was making both Taylor and Vicky uncomfortable, which of course made me uncomfortable. "Sorry," I said as I let go.

"No, it's fine," Vicky replied. She was lying, and I knew that from our contact. "It's not your fault that my old power fucked with you like that. And everyone. I should be apologizing for what I did to you."

I cringed inwardly. And then there's what I did right back to her, and I'm still lying to her about. "It's fine," I said lamely. Vicky ignored the lie just as I ignored hers. It very much was not fine, but we seemed to come to an unspoken agreement to just let it go.

"Yeah," she offered a half hearted smile. "Well, now that that's settled, I'm going to go talk to Riley and Emma. That fight gave me a few ideas for the armor, then I'll spend the rest of the evening with Mom."

Vicky left the room in a rush, and I looked back at Taylor, not knowing what to say. She didn't have any words, either, simply offering me a pulse of support and trust through the link. It was a good thing to have, under the circumstances. I simply walked over to her. She tossed both our carry out boxes onto the floor in the corner, where the Yggdrasil ate them. I sat down next to her and lay down on her lap.

"Are you okay?" she asked me, stroking my hair.

"Not really," I sighed. "God, this whole time I was afraid of what she'd think about me after she found out. I didn't even think about what this would mean to her. Mom and Dad. Everyone else. Fuck, how selfish am I?"

"You're the least selfish person I've ever met," Taylor insisted.

"Then I'm just stupid," I argued.

"Hardly," she scoffed. "But your sister's good at hiding her thoughts. A lot like Zach."

"I really wish people would stop saying that," I muttered.
AmusementAnticipation. "I think I have a way to cheer you up," she informed me.

Uh oh. "What?" I turned my head to look up at her.

"Give me a few minutes," she smiled. A short while later, there was a knock on the door, which I opened on reflex. Taylor's changeling walked in.

"Umm... Taylor?" I asked, as the doll started taking off its shirt. I looked away, embarrassed.

"Well, we never thought to change my body double to match my new figure," she pointed out. "Which means," she grabbed my head and turned it back to where the changeling was wearing a rather skimpy two piece bikini.

I couldn't help it, I laughed.

"You know," she whispered. "I can think of a lot of things I can do with two of me."

I felt the doll's hand rest on my lower leg. I was no longer laughing. "Like what?" I whispered back. My leg was held by the changeling, and it pressed its thumbs into my foot, eliciting a popping sensation. I gasped, and she smiled.

"I've been reading up on massage therapy," Taylor informed me.

========

A/N- See. Everything was totally innocent. Taylor knew that Amelia's feet hurt, and is just being considerate.
"How's the garden, Mushroom?" I asked Riley casually as I walked in.

"Got a full schedule today," she answered. "We got Battery coming to try out her armor, and then Chevalier will be here for his first series of tests. He's bringing the SEB sample. We... might have to keep Rey away from it." SEB, in this case, was our code for Simurgh's tissue samples, which we were going to replicate if at all possible.

"What for?" I asked. Rey always seemed pretty safe, as far as tinkers went.

"He... mentioned something about trying to clone a fully functioning copy with new instincts bred in to let us control it," she informed me.

"Okay..." Never mind. "Is that even possible?"

"Lisa says it's not," Riley answered. "That the material can't function properly without a core attached. Everyone else decided we weren't going to risk it. Big Sis threatened to tell Rapture about his ideas if he ever so much as thought of it again."

"We'll still be growing the samples, though, correct?" I asked.

She nodded emphatically. "Oh, yes, absolutely! It's an incredible material. We can build zerg armor that's exponentially more durable at a fraction of the weight. They'll even gain partial power resistance if it works like we hope."

"That would be insane," I moved toward where Capacitor was stored. It was mostly my project, after all. The most purely mechanical armor suit aside from Tapestry. My hand trembled a little as I thought of it seeing its first real test drive. It wouldn't be the strongest suit to have come from our combined work, but it was my personal project, and capable of taking Battery from a five or so to an easy eight, probably a nine. "So when's Emma expected, anyway?"

"You got about twenty minutes," Riley let me know as she started putting on her control system for Clarice. "Don't let her exceed quarter power for the first ten minutes, let the biosystems adapt to her power first."

"Got it," I acknowledged. I spent the time waiting scanning through the user notes. I was still reading when Emma arrived. She went yellow-shift as she approached. It was, after all, her most suitable powerset for working with Battery's power.
"So, you're that excited, huh?"

"Just got bored waiting for the eye candy to show up," I retorted. I looked around and feigned disappointment. "Lemme know if you see any." I went back to reading.

"Just for that, I'm hogging all the attention when Chevalier shows up." Emma threatened. "Maybe I'll even take a page out of Narwhal's playbook."

"Subtle," I smirked. "At this rate, it won't be long before you sneak into Zach's bedroom with a bunch of Sabah's best scarves and perform a belly dance to the Legend of Zelda soundtrack. There might also be handcuffs involved."

"Don't see it happening," she sighed. "Vicky came along and blew both me and Crystal out of the water."

"Hard to compete with a shapeshifter."

"Can't even be mad," she didn't bother looking up from the computer. "Vicky's awesome. You should totally seduce her. Then I'll have my opening."

"Don't think it works that way," I pointed out.

"You said it yourself: hard to compete with a shapeshifter."

....

Assault came with, to no one's surprise. "So, how's life treating you?" he asked me while Battery was busy suiting up. Her default costume couldn't be worn under the armor, and Emma had gone with to help her get it on for the first time. Once she got the hang of it, she wouldn't need any help, but it wasn't able to support the same merging systems that many other armors enjoyed. A limitation thanks to how her power augments worked.

"I really can't complain," I answered.

"Working with all these girls? I wouldn't be able to complain, either," he joked. I resisted the urge to roll my eyes.

"Not really," I avoided looking at him. "I don't get noticed much. Curse of the tinker, y'know?"
"Not really," he shrugged. "But don't let it get you down. Girls like brains, especially the smart ones. And tinker girls are wild in the sack."

"Guess whose top of the line A-class battle armor has enhanced hearing!" Battery shouted from the other room.

"Come on, puppy," Assault shouted back. "As long as you girls have been back there? I'm not saying anything you haven't already figured out for yourself."

I felt Capacitor's first test on my skin. Battery's exotic electromagnetism leaving its residue in the air as she moved so fast that she seemingly teleported into the room. "Don't listen to him when it comes to women," she instructed. Then she blinked. "Fuck that's fast."

"Your power disrupts relativity," I informed her. Putting your Passenger high on the list of possible tools that the Entities use for their star drives, I added silently. "Capacitor stores that influence and amplifies it. In addition, it takes the brunt of the stress generated. Meaning that once fully charged you could use your full abilities for extended periods without much more stress than jogging. Although going into redzone will be similarly painful as your natural maximum power output."

"But redzone is a lot stronger than what you can do naturally," Emma added quickly. "If you stay in yellow, you'll have your normal max, but without any of the usual side effects. Plus all the other stuff the suit can do."

"You can probably get away with using your power for field command," I suggested. "Being able to think twenty times faster than a normal person has a lot of potential in letting you emulate a pretty strong thinker power."

"What's the 'Disruptor'?" Battery asked. She must have seen it on the HUD options. "Your power weaponized," Emma volunteered. "It distorts the flow of time in whatever you shoot. Nothing we can use to accelerate others, at least not without more Tinkers to look at our data and figure something out. But it will create chaotic eddies of slowed and sped up time in a small area. Because of how unpredictable the weapon is, we can't create a nonlethal setting. Don't use it unless you're shooting at something you really want dead. Based on our research, it should even hurt Endbringers."

"Not quite Endslayer grade, however," I qualified. "No sense in making her take stupid risks."

She looked at Assault and smirked. "Don't worry, it's not an Endbringer I'm going to use this on."
"But Puppy," Assault pouted. "If you do that, then I won't be able to impart my wisdom in understanding women to the boy here," he put a hand on my shoulder.

"Not helping your case, here," Battery pointed out.

"Actually," I argued. "Assault's been a great help to me."

"Told you so," he smirked.

"I mean, if he can find someone, then anyone can."

....

Battery was obviously thrilled by her suit's capabilities. An overall upgrade to her power on every level, plus enough bells and whistles to make anyone happy. She would be one of the heaviest hitters in New York until we worked out some custom suits for the Adepts, at least. I retreated to my room after a bit, leaving Emma to do the final testing phase. I wasn't needed, and frankly I found Assault annoying. He meant well, I guess, but he was still annoying.

"Hey, Tevor," Victoria caught up to me. "Have a couple minutes?"

"Uh, sure," I agreed. "Chevalier won't be here for a while. What's up? Riley said something about you having upgrade ideas for your armor?"

"No," she answered. "Well, yes, but that's not what I wanted to bring up."

"Okay?" I prompted. Vicky was acting really weird since after her fight with Baal. Then again, she did have to kill someone, I reminded myself. That had to mess with her head.

"So what's the problem?"

"Do you have any plans for Friday?" she asked.

Wait, is she? "Umm, not really," I answered.

"Good, there's a new movie coming out," she started.
Oh god, she is. "Umm, Vicky, it's not that I'm not flattered, but aren't you kinda with Zach or something?"

Her face scrunched up in confusion for a second, and then she started laughing. "Oh, oh god," she covered her mouth. "You thought I was asking... no, no. I was trying to hook you up with a friend of mine. Mandy, I'm pretty sure you've met her a couple times."

I knew who she was talking about. Nice girl, if a bit too quiet. She probably would have been a target for bullying, if not for the stories about what happened to Taylor. Not many out there who wanted to risk annoying Khepri, and bullying the shy girl was just begging to earn the personal hate of the scariest person on the planet, so all the students who would otherwise cause trouble were afraid to try.

"I'm not interested," I informed Vicky.

"She's not my type," I insisted.

"Don't see why not," Vicky continued. "Sure, she's not a model, but you'll be surprised if you give her a chance."

"Umm, when I say she's not my type, I mean that she and I are more likely to be in competition than date," I offered.

"Competition? For what?" she asked. "Sure, she's smart, but she's not Tinker smart."

"No, I mean we're fishing in the same pond," I tried.

"Fishing? Okay, what?"

"Gay," I finally gave up. "I'm gay. As in, not attracted to girls."

She blinked. "Huh."

"Yeah, something like that," I agreed.
"Well," she asked. "I bet I can find you a cute guy, then."

"I'd really rather you didn't," I argued. "I plan on coming out, in costume, after I graduate. I also really don't want people drawing too many lines between my civilian life and my cape life. I already spend too much time around you and Zach at school. So let's just keep it in both closets, okay?"

She shrugged. "Okay, I guess that works," she reluctantly agreed. "Although if you want to throw people off, you might need to find yourself a girl to be your beard. That kid who never dated and then came out as gay after highschool is a clue people will notice."

"You... fuck, you're probably right," I reluctantly agreed.

"I'm always right," Vicky boasted. "Oh, and while I have your attention, I was trying to come up with a belated birthday gift for Zach, and kinda need advice."

=================

A/N- whee, expanding other characters!
Riley and I examined our samples of Simurgh material. The crystalline pseudo-organics were incredible. "Nothing in this should allow them to be alive," I informed the girl. She no doubt already figured it out, of course, but I was as much asking her to educate me as anything. As much as it galled me to admit it, sometimes, Riley was simply a stronger Tinker than I was. Besides, she was splitting her attention between this and watching as Emma and Chariot worked with Chevalier. I hadn't seen our bosses so excited about a power since Lily's anti-Endbringer capability was suspected.

"That confirms Lisa's suspicions," Riley responded. "Endbringer matter is merely a construct, and the real life form powering the creatures exist in another dimension."

"Like the Passengers?" I asked. I had long wanted to know where powers came from, and had read every transcript that Emma and Riley put out on the subject, as well as my own contributions to the theories and discussions. I wasn't as gifted as Riley, though I had Emma beat as far as Tinkers went. Her advantage was she didn't have the Taboo holding her back like the rest of us. Still, my part in the dialogue mattered, and helped our research move forward.

"Possibly," she answered. "Lisa's convinced that the Endbringers are controlled by people, not Scion."

"So unless someone's found a way to take control of Passengers, it's a parahuman power involved," I concluded. *I'll have to bring up the possibility with Ruth.*

"Power combination, most likely," she volunteered. "A team of powerful parahumans, like us."

"A team with nothing better to do than torture our entire world?" I asked. "What kind of sick fucks would do that?"

"The Slaughterhouse Nine," she whispered. *Congrats, Rey, would you like some ketchup for those feet?*

"Sorry," I don't know how to handle things like this. "I didn't mean to bring up bad memories." I wished I could talk to Ruth about this, but I couldn't imagine how she'd react to us keeping one of the most dangerous tinkers in the world like this. She was a wonderful woman, and I was prepared to even say that I loved her, but this was Bonesaw, here. That would be a bit much to ask her to accept.

"I'll be fine," she answered, going back to her work. I frowned. *There was a time when I thought she was far too childish to be the monster she was. Now it was the opposite. The child was far too young to act so old.*
I went back to my work as well. It wasn't my place to get involved. She had her friends, good ones, and they would take care of her. I just worked here. Side by side with some of the most powerful teenagers to have ever existed while solving the problem of a space whale virus god that would destroy the world a decade or two from now.

"Riley, come look at this," I spoke up after about an hour more work. I was watching the clone sample of SEB tissue.

"It's summoning mass from nowhere," she responded.

"A lot of it," I confirmed. "By my calculations, its current density is akin to a hundred pounds of mass, yet it's only consumed a couple gallons of nutrient fluid material."

"Which means it's still capable of breaking the laws of physics, even without a Passenger connection!" Riley declared. "It actually is Tinker tech!"

"It's like a nanotech assembly system that exists in multiple dimensions," I continued. "In fact, each nanite probably only exists partially in a single dimension, allowing them to..." I paused for a second. *What was I talking about?*

"The mass exists only partially in our own dimension," I continued. "But the properties of all its dimensions still exist in this one. In that way it is a lot like Chevalier's power, and even more like Theo's. His power does resemble the Endbringer mass, at least until a certain density is reached."

Riley's face darkened a little. "Theo's power looks like an Endbringer?"

"A little," I replied. "We know how shards evolve. Maybe one of the power synergies used to build them came from a Passenger that evolved from the same source."

"Maybe," she frowned. "We'll tell Lisa about the theory."

"Have to anyway," I informed her. "According to the computer, we tripped the Taboo at some point."

"Endbringers are Taboo?" she asked. "I always thought they were just power resistant. That's huge."

I pressed a couple buttons. "Flagged as priority," I informed Riley. "Lisa should get back to us right away on it."
"Taboo really sucks," Riley complained, going back to her computer. I went back to mine. This material was insane, and even if it had no other special features to exploit, there was no doubt the next generation of Zerg would be far more powerful. Especially now that we knew we could grow the tissue out of the amniotic gel, instead of expensive and hard to manufacture tinker metals. Granted, we still needed those components for shunting and power supplies, but now we only faced about a third of the expenses as before.

Of course, it would mean a new rebreeding program to adapt the zerg to their new physiologies, but at this point Khepri could do that on her own. There was no innovation to that process. Merely time and repetition. Building the new SEB growth shaping system would be far more complex. I started drawing up plans immediately while keeping an eye on the testing machinery. Powers testing would come later, as would 'breeding' it with other EB samples promised in the future, but we could give Emma a head start on her research into the energy properties of the materials.

I was still hard at work when Chevalier was finished with our battery of tests, six hours later. He looked exhausted when I came out, carrying the new weapon I'd grown for him. He looked up at me, then glanced at the gorgeous ivory sword. The SEB blade was flawless, and he wasn't even trying to hide his admiration.

"It is pretty," I said as I held it out for him.

"Very," he agreed.

"It's yours," I informed him. "One part apology for the ringer they put you through during testing, and another part proof of concept. Based upon our testing of your original weapon, this one's almost better even without your power behind it. A little heavier than your decorative ceramic sword, only slightly less durable than the giant blade. Its only real weakness, such as it is, is the size.

"Which is something I can easily fix," he concluded with a smile, taking the blade.

"Careful," I advised. "It's a lot sharper than your original weapon."

"Wait until you hear what else were gonna do for you," Emma's teasing could be mistaken for flirtatious. The girl had a tendency toward celebrity worship, and Chevalier was one of the big names. "Since all the durability is built into the SEB sword, we can replace your giant weapon with a tinker device."

"What would I be expecting out of it?" Chevalier asked, curiously.

"What do you want?" Emma replied. "The Protectorate's footing the bill for this baby, right? And I
can make it the size of a house and you'd still be able to make use of it. Which means I can set you up with forcefields, gravity sheaths, nanothorns, and have space to spare. How about a railgun? Adjustable output, of course, but it wouldn't be hard to build something awesome. Especially if you can use your power on the bullets. Depleted Uranium weight, plus Endbringer durability? In fact, I could probably make it rapid fire! I might have to create a secondary weapon-

"Umm, Emma?" I interrupted. "You're starting to fugue." Of all the Tinkers on the team, she was actually best about avoiding those, but she wasn't anywhere near immune.

"Uh, sorry," she blushed. Or, her body's equivalent to blushing. I doubted anyone who didn't know her would spot it.

"That's fine," Chevalier insisted, offering a winning smile to the pair of us. "I've worked with Tinkers, before. I remember the first time I saw Hero come up with something that excited him. But he never thought of using my power to accomplish something like this. I mean, it all seems so obvious now that you've started doing it, but all those years going by without anyone really thinking to build specialized equipment to harness powers this way. You've accomplished something incredible, here."

_The Taboo_, I recognized. That's why it wasn't until Amelia broke through that we started seeing Tinker-power augmentation, and power interactions. Of course, now that the idea had taken root in other organizations, it was only a matter of time until it became the norm instead of the exception. It made me nervous. Power interactions seemed vastly stronger than any individual parahuman. _What would we do when we were faced with enemies using strategies like our own?_

"Here," Emma offered him a card. "This has my personal email. I'll draw up a list of options for you, with a few estimates for costs and equipment requirements."

He accepted it. "Thank you, I'll get in touch immediately after I return home."

....

Ruth looked worse off than Chevalier did. The advantages and disadvantages of video calls. Tinker grade ones, no less. "Rough day?"

"Very," she agreed. "The Vasil children are starting to test their boundaries. Their father used fear to keep them under control, and that's wearing off. For some, it's a good thing. A chance for them to enjoy normalcy. Others are... well, we've started implementing the antimaster drug as a preventative instead of a treatment. It's getting to the point where some people are talking about giving up and locking them all away for life, instead of trying to help them."

"Masters scare people," I replied. "I should know, I am one."
"Fortunately, we haven't faced the nightmare scenario of one of them having a power on the order of Cherish or Heartbreaker himself in any of the children, it's basically the only reason this project still exists," she informed me. "We're trying to find homes for them within the Protectorate's system. So that when this implodes, hopefully there will be places for them to go."

"We came across one of those," I informed her. "Apparently they're implanting compulsions in criminals to stop them from using their powers. The bosses weren't happy to find out the way they did."

"That would be Florence," she sighed. "Tell them I'm sorry about that mess. It was part of our deal. Haven's taken responsibility for her and a few of the children who haven't had triggers. She's one of ones we have the most hope for."

"Well, that's a start, at least," I tried my best to sound compassionate. I was never good at conveying my feelings. Luckily, with Ruth I didn't need to be. Her powers meant that it literally was the thought that counted. She'd know what I meant, no matter how badly I bunged it up. Of course, it cut both ways. I couldn't fake anything past her even if I were the best liar in the world. "I know your powers make you a better expert than I could hope to be on psychology. But, one of the things they teach you early in med school is that you can't save everyone. You do your best, of course, but you have to find a way to come to terms with the idea that you're still human."

She smiled, genuinely. "A very smart, very good man said something like that to me before," she told me. "Thank you for reminding me."

"Hey," I said. "What kind of boyfriend would I be if I didn't share the wisdom I've accumulated? Just don't expect me to do it again, because that was all of it."

She laughed.

I hesitated, then asked anyway. "So... you know how we talked about Passengers, and how they try to compel us to use our powers to the fullest extent?"

"Yes," she responded, a little warily. Conversations on the subject tended to upset her a little, and she refused to share why.

"Lisa came to the idea that Endbringers have a human controller, or controllers, recently," I informed. "I was thinking, you could probably apply your power to how they work. You could probably get a lot of data off Dragon to help. It might help you relax some."

"If I can find the time," she quickly agreed.
A/N- Woo, Rey gets an interlude! Actually, I'm glad I did this one... more of the loose ends being tied up from the last couple arcs.
I watched Chevalier play with his sword for a bit. I resolved to get his autograph, but only after I had something to show him from my tech. The SEB sword was cool and all, for something took no real effort and was grown in a vat. Its weight, durability, and ease with which it cut, well, I imagined Taylor would be overjoyed to have zerg encased in claws and armor like that, and she deserves to be. But Chevalier's folded space power was incredible, and I could do so much with it. What I built for him would be the stuff to impress our namesakes.

I left the boys to play with their toys, and started playing with mine. With some exception to the mobile command system, I had yet to work with anything larger than the biosystems of the zerg, and those were mostly Rey and Riley's project. So little of that was my work. Granted, the best of it was, but it still was something I couldn't claim real recognition for.

This sword would be mine, almost exclusively. Endbringer matter belonged to no one on this team, at least. When Chevalier used this weapon, I would be able to point to it and say I made that. *I should really do some research on mythological swords for a name.*

I retreated to the hidden expanse of lab, and caught sight of Riley doing her part on the SEB tissue. I was still in biotech state, it was best suited for analyzing Chevalier's power, and I hadn't bothered changing out of it, and that meant I instantly knew she was upset. Something that had been happening a lot lately.

I sat down next to her. "So, how's the garden, Mushroom?"

"It's good," Riley answered. "Rey had some new theories on the Endbringers and how they're made. I'm testing the tissue for more clues. If we can find out how the Endbringers are built, then maybe we can find a way to shut them off."

*God damn it,* I sighed inwardly. *I start designing a new superweapon, and Riley goes straight to 'find Endbringer off switch'. I'll never achieve recognition at this rate. "In the same way you can black out Taylor's power?" I asked.*

"Kinda," she agreed. "Actually, that's a really good idea. We know they're controlled extradimensionally. Maybe we can reinforce the dimensional boundary and cut off their communications at the source!"

"Sounds like something you should send by Dragon," I suggested. "That doesn't seem like your specialty."

"I know," she admitted.
"What's really wrong?" I asked, putting a hand on the girl's shoulder.

"Nothing," I didn't need my powers to tell me she was lying. She might have needed her powers to realize she wasn't fooling me for a second. "I just... there's this boy I like."

What? "Anyone I know?" God have mercy on whatever poor boy drew Riley's attention. "Has he managed to snag that scarf of yours, yet?"

"It doesn't matter," she sighed. "He's not interested in me. Doesn't even look in my direction like that."

Okay, this is something I think I can handle. "If it's Trevor, I'm afraid you're pretty much out of luck."

"No," she looked toward me. "Trevor's nice, but he's not... up to my standards. I have a number of highly desirable traits for a mate and expect the same in return."

"Ah, yes," I nodded. "I know that story well. Normal people use a number system. One through ten, where ten is the perfect combination."

"Then he's an eleven," she answered the unspoken question without a moment of hesitation. Oh, damn, she's got it bad.

"Come on, Tinker-girl, use your objectivity on this one," I insisted. "He has to have some kind of flaw. Everyone does. Come on, find something. If nothing else, he can't be that smart if he doesn't notice you."

"His girlfriend is prettier than me," she answered unhappily. "And nicer. And doesn't kill people."

Nevermind, maybe I can't handle this. "Oh. I can relate to that," I told her. Minus the murder part. Although, with the stuff Vicky was showing me, and my powers, I could be pretty good at it. And what I did to Taylor came so close to being murder that I avoid the label by technicality alone.

"Really?" she asked, her eyes showing the dampness of tears soon to fall. "What did you do?"

"Depends," I answered. "There was a time when I'd have trashed the other girl's rep and walked away with the guy, just because I could get away with it."
"I won't do that," Riley's tears were replaced by an angry determination.

"Neither will I, now," I agreed. "You want him to be happy, too, right?"

"Of course," she answered.

"And he is happy with his current girlfriend," I continued.

"Yes, and if he's not, I'll make him regret it," she added. "She's a great person."

Well, that's narrowing down who we're talking about, at least. "You're not into Zach, are you?"

"What?" she looked at me like I'd just suggested eating live scorpions. And she wasn't Riley who probably wouldn't have a big problem with that idea. "No, I'm not into Zach. That's just gross."

"He's not gross," I argued. "He acts like a dumbass, but once you get to know him he's smart, and funny, and nice, and gentle. Maybe a bit too gentle, honestly. The boy could really learn to be more assertive. Learn than girls don't need to be treated like spun glass."

"And you're still into him," the girl parroted my earlier words.

"Yes I am," I sighed. "But he's interested in Vicky, now, and she's been nothing but good to both of us. The idea of getting in the way of that disgusts me. So I'll just stay out of their way and wish them all the happiness in the world."

"But it hurts," the girl complained.

"I know," I confirmed, pulling her into a hug. "On the plus side, this is what they invented triple fudge icecream for."

"That sounds really good," she mumbled into my shoulder.

Our efforts to eat away our sorrows gave way to the obvious complaining about everything else. For Riley, there wasn't a lot to complain about. She loved school, she loved her new family, and talking about her old life was well outside our impromptu pajama party. So it wasn't long until we distracted ourselves with something far more fun for both of us, allowing us to forget about things for a while and really enjoy ourselves with things that don't require boys.
By the time Chevalier's email came through that evening, we had built several graphical models of his new weaponry, complete with cost estimates and several optional features we might be able to include. There was no possible way we could build everything into a singular weapon. Really, there was enough there that we could build him three systems, and there wouldn't be a shared feature between them.

I could probably call up Kid Win and see what his theoretical modular tech specialty said about maybe creating a collection of systems for him to swap between when he deemed necessary. Then he could have all the options available for use. If, sadly, not at the same time. I mentioned that idea in my notes as well. Ultimately, the email turned out to be three pages worth of typed notes, and then two and a half gigabytes of attached schematics and designs, mostly in the form of 3D model images.

I left the computer labs near midnight, intent on seeing if Vicky or Zach were up for another late night session. Mom and Dad would just have to deal with me not coming home tonight, again.

"Sorry," Vicky's voice drifted from our exercise room. "You're a nice kid, but, it's not happening." I froze, shifting white. Superhuman hearing and the ability to suppress any noises I might make. Not the best stranger power in the world, but it's what I had to work with.

"Ouch," Zach responded. "May I ask why not?"

"Well, Emma, for one," Vicky insisted.

"Why?" he asked, and three bonus senses loosely related to hearing told me everything I needed to know about his feelings. "I don't want her. I want you." Ouch, indeed. Nothing I didn't already know, of course, but it sucks to hear.

"Living lie detector times a thousand, remember?" The undertones in her voice were more subtle, a result of her power. This hurt her, too. "You're cute in your own way, but I don't have feelings for you the way she does. She loves you. I don't. You're a good friend. That's the extent of it."

"But-"

"And you love her, too," Vicky interrupted. "So don't pretend this is some kind of hardship for you. I'm going to get changed for practice until five minutes after Emma shows up. You're going to apologize to her and she's going to take you back. Then you're going to tell me all about it and I'll congratulate both of you and mean every word of it. If not, there are three places on your body that I can use to make you wish I could kill you. Understood?"
"Uh... yeah," he agreed. Hints of concern and fear entering his voice.

I scrambled to hide around a corner as Vicky turned to walk out the door. "Just so we're clear. If you hurt him, I will punch you through the face."

=====================

A/N- Emma hasn't had an interlude in forever, either.

Vicky does a good deed.

And remember all the FOreshadowING I did before? A lot of it alludes to this arc.
I got to 'work' early, today. Not that I did much, really, but it was nice to show up and participate. All my classes were in the afternoon, anyway. I spotted Vicky laying down on the back of the couch, staring at the ceiling. "Hey, 'cuz," I said. "You know, there's this thing humans do with their furniture, known as sitting. I know, it sounds really strange, but you should totally try it."

"I'm good like this," she answered. She learned her head back and looked at me upside down. "Zach and Emma really wore me out last night."

I paused for a second. What? No, couldn't be. "Speaking of, how is Zach? I haven't had much chance to talk to him lately."

"Happy," she answered. "He finally made his move last night."

"It took him this long?" I dropped down in a chair. "Jeez, it took him all of three hours to try for the rest of us. He must really like you."

"I shot him down," she sighed.

"Why?" I asked. "I mean, I thought you-"

"I found out what I did to Amy," she spoke. Uh... fuck... maybe it's not what I'm thinking. Please don't be what I'm thinking "My old Glory Girl aura. How badly it messed her up." Oh holy fuck. "Ah, so how long did you know about that?"

"A while," I reluctantly admitted. "Found out somewhere late June, early July. It's been a hectic last few months and I can't quite remember."

"And now I'm thinking about Dean," she added. "You know, we never argued in person. It was always over the phone. That's when we'd fight over how much time he was spending in the Wards. That's when we'd break up over whatever stupid shit we broke up over that week. Then we'd just make up again once we met in person. I didn't even think it was my power. Now? It's the only thing I can think about. Except when I feel bad that I don't feel worse about what happened to Amy."

"Well, Amy did get over it," I offered. "And now she's engaged, world famous, and spends her days stomping whole cities worth of villains while worrying about how to kill an alien space whale virus god. Seriously, did you hear about Indianapolis?"
"No, what?" she asked.

"Apparently a few of the Fallen we missed were hiding out there," I told her. "The PRT found the bodies executed thanks to an anonymous tip. One had his face blown off, one was skinned, and one, well, someone worked him over with a sledgehammer or something like it. The investigators are pretty sure they were there to join one of the local crime bosses after we broke their organization, and he killed them as a sort of peace offering to us. Or at least a 'please don't come over here' offering."

"Really?" her eyes widened. "Fuck."

"Yeah. Fuck," I agreed. "It's really hard to feel sorry for Amy when she's the leader of a team that scares powerful crime lords like that."

"God, when did this happen?" she did a casual twist and rolled off the back of the couch onto her feet.

"Heard it on the news late last night," I told her. "It'll probably feature heavily in the morning meeting. I don't think we can let people get away with shit like that."

"Good, I could really use a new punching bag," Vicky answered. "See you on the battlefield."

"Not so fast, girl," I sighed. "We're not done talking about you and Zach."

"Really? Triple homocide and apparently I was mini-Heartbreaker, and you want to talk about relationship drama? C'mon, Crystal, you're the one who used to make fun of me for that stuff."

"Zach's a friend of mine," I argued. "And you're family. This is important. How'd he take it? Did you at least let him down gently?"

"Not really," she replied. "Both barrels of 'you're a nice guy' and 'we should remain friends.'" I flinched inwardly. "But, hey, at least I didn't use 'it's not you, it's me', right? That has to count for something."

"Something," I reluctantly agreed. **Seriously, Vicky, what the fuck?**

"I also pretty much shoved Emma onto his lap," she added. "Figuratively speaking."

**What?** "What?" I was stunned. "Why would you do that? Is this just so you don't have to feel bad about turning him down? Because that is either one of the nicest or bitchiest things I have ever heard
of in my life, and I can't figure out which."

"I was doing it anyway," she admitted. "Even before... finding out about Amy. I don't know how to
describe what it looks like to watch someone pretend to despise someone that they love, but I
couldn't just ignore it."

"Yeah, but... what about them just being friends?" I asked.

"And what?" she asked. "I still would have turned him down. Seriously, I mind raped my little sister
into lusting after me for years, I'll never know how Dean honestly felt about me, ever. I'm really not
interested in being in a relationship with anyone right now."

I put my hand on my cousin's shoulder. It was so rare to see her act like this. It'll get better. Zach
would have understood."

"I know," she agreed. "Maybe I'll regret this, later. Right now? At least this way he doesn't have to
be all mopey about it. I feel bad enough as it is, I can at least spare myself other people being
miserable around me." She looked me in the eyes. "If I tell you a secret, will you promise to not say
anything about it ever again? To anyone. You'll just pretend like it never happened?"

"As long as it doesn't hurt anyone," I agreed.

"I don't want to feel guilty for Zach hurting," she told me. "Or anyone. I can handle making people
annoyed or angry. I can handle killing sacks of shit like Baal. But... knowing how bad I hurt Amy...
that's enough guilt for one lifetime."

"It's not your fault," I told her. "You didn't know your aura worked like that, and Amy tends to hide
things. And even if you were at fault, you shouldn't feel like that needs to be a secret." I consoled.
"Feeling bad for doing bad things is fine. Riley does it all the time and it makes people want to hug
her."

"Amy would blame herself if she knew," Vicky pointed out. "And that'd just make me feel worse."

"Okay, that's a good reason to keep it from Amy," I agreed. "But maybe you should say that to
Taylor. I'm sure she'd appreciate knowing you feel bad for what happened. You really should try to
patch things up with her. She is your future sister in law and such."

"Probably," she agreed. "But I feel bad about that, too. If it wasn't for what I did, would Amy be
enganged to a straight girl?"
"I've asked that question a few times, myself," I admitted. "And I'm pretty sure the answer is yes."

"What makes you so sure?" she looked at me. Her eyes were a mix of hope and skepticism.

"Taylia," I answered. "They're together because of that link. And that comes from their powers, not anything you did. Whatever's going on with Amy, you didn't do anything like that to Taylor. She is, as you said, straight. And she's engaged to a lesbian. It'd be like if I were dating Legend."

"You would," she smirked.

"So would you!" I exclaimed. "Dude's goddamn hot. But the point is, if that happened, people would be wondering what was up with him, not me. Same deal. Lesbian dating another girl, that makes sense. Straight girl dating another girl, not so much. Taylia's strong enough to make that happen. Adorably, I might add. The two of them are so happy together that it sometimes makes me want to punch them both just so they do something other than smile at each other. So, yeah, that part isn't your fault. Or your aura's fault. Blame the fucking space whale virus gods that are going to blow up and eat our planet."

"That makes me feel a lot better," she sighed.

"Christ, Vicky, the way you were talking... you were planning something stupid, weren't you?"

She looked away. "I'm invoking the 'talk to no one, not even me' promise," she muttered.

"That was only if no one was going to get hurt," I argued. "This, this sounds like someone was going to get hurt."

"It's not going to happen, so don't worry about it," she argued. "It wasn't going to happen at all. Just the guilt speaking."

"You weren't going to kill yourself, were you?"

"What? No!" she exclaimed. "Fuck, how's that suppose to make anyone feel better? Besides, even if I wanted to Amy would just have me brought back anyway. And Riley would probably surgically install a chip in my brain to keep me from trying it again."

"Why don't you just tell me what it is?"

"Fine, but I mean it with that promise," she insisted. "You tell no fucking one, ever. Not even me."
"If it won't hurt anyone," I repeated.

"It'll never happen," she insisted. "I knew it was a bad idea the moment it popped into my head." She looked around. "Okay, now or never."

"Fine, I promise," I sighed. "We'll never speak of it again."

She clenched her hands together and lowered her head. "I thought that, since it was my fault she spent three years like that, with my aura. It'd be fair if I... umm... volunteered myself. Gave her what she wanted."

"What the hell, Victoria!" I exclaimed.

"I know! I told you it was a bad idea and I'd never do it!"

"I hope not! The only thing dumber than that would be if some retard tried to revive the dead Entity!"

=============

A/N- It's been a while since Crystal got an interlude, too.

Also: FORESHADOWING!!!
Crystal was the first to arrive, looking more than slightly shaken. Recently learned disturbing news. Won't make eye contact. Afraid I'll learn details. Afraid I'll use information. Doesn't relate to her. Relates to a friend. Afraid of information upsetting someone important. Afraid I would tell that person. Information will upset Taylor. Crystal's not conflicted in loyalties, doesn't perceive hiding it as a betrayal. Doesn't believe information will hurt the group. I let it drop. Crystal was one of the only people around here whose judgment I trusted. Her and, disturbingly enough, Riley. Says a lot about the rest of the team.

She sighed. "So, did you catch the news last night?"

"Indianapolis, right?"

"That'd be the one, got any ideas?"

"May as well wait for the others before we start that up," I answered. "It's boring, anyway. I know you have better to dish, just the two of us."

"And save you the joy of showing off how you already know?" she snarked. Nervous. Afraid I've discovered the secret. Certain I'll act on the information. Afraid it represents a threat to Pantheon as an organization if I do.

"You just don't want to admit I was right," I smiled broadly.

"About what?" she asked.

"Kinda want to hear it myself," Taylor said as she walked in, already costumed. I watched the color drain from Crystal's already fair skin tone.

"Zach and Emma got back together last night," I taunted. Relief flooded Crystal's face. Wow, I thought. Teasing like this might even be more fun than actually knowing all the answers. Probably not, though.

"Wow," Taylor chuckled. "Fifty bucks says it'll take Amelia and Riley days to put Emma back together once Vicky finds out."

"You're on!" I declared.
"That was not a real bet!" Taylor complained.

"Too late," I insisted. "Vicky's the reason they got back together. Isn't that right, Crystal?"

"Umm, yeah," she agreed just a little too quickly for it to sound casual. "Don't know all the details, but she decided she wants to be single for the time being. Something about, well, it's personal. So she took a page from Lisa's book and, I quote, 'shoved Emma into his lap, figuratively speaking'. Taylor's not surprised by Victoria's sudden choice of celibacy. Knows the cause. Learned during Houston mission. Victoria learned of her aura's effect on Amelia.

"She should have done it literally," I teased.

"Seriously, Lisa," Taylor sighed. "What is with you and trying to get Zach laid? Is he bribing you? Does he have a strangely specific low level master power that we don't know about?"

"I like a challenge?" I offered. Really, I just did it for the laughs. People get so worked up over relationship drama, and I couldn't help but dip my feet into that pool. And then kick the water at everyone else.

"That might even be more disturbing," Taylor sighed. "Amelia's going to be a bit late. Her other little sister has been moody lately, too." Riley's emotions have been in flux since after Dream Girl. No, somewhat before then. Upset, lonely, feels left out. Afraid of losing her place. Emma's improving as a tinker. The zerg project is nearing the limits of what Riley's knowledge can accomplish. Her new project is the brain tech and Taboo. Is frustrated at lack of recognition from Amelia for bringing Victoria back.

I rubbed my eyes a little. Using my power too much in planning missions. Moving on seven cities in four states simultaneously takes freakin' work. And I hadn't tapped my new power in so long that I may as well not even have it. "It's okay," I sighed. "We'll just wait for Emma, Lily and Rey to show up. Help yourself to the coffee."

Our morning meeting didn't start until after the kids had left for school, for a few reasons mostly revolving around the rest of us making sure we wouldn't miss it for some issue on that front. Lily arrived a bit ahead of schedule, as was her habit. Emma and Rey, just a little late. Amelia didn't show up by the time I started talking.

"So, first bit," I started. "Have you all heard the news about the Fallen members that were mutilated in Indianapolis?"

"No," Emma confessed. "Fuckers did something to deserve it, I'm sure."
"I heard," Taylor's voice went a little cold. "People killing in our name like that? We have to stop it."

"If it makes you feel better, I'm pretty sure it's bullshit," I offered.

"Pretty sure?" Crystal asked.

"Well, yeah, pretty sure. There's not enough material for me to really turn my power on," I explained. "But I can't imagine that any supposed criminal mastermind would do something this idiotic. I can think of a lot of scenarios, too many. Most of them involve this being a frame job. Either to draw our attention or to deflect it away. Could even be the Fallen, themselves, trying to fake their own deaths. I don't know. Like I said, too many possible ways this could be explained, and that's without factoring in any number of powers that can complicate matters."

"It does, of course, mean we do have to go there," Taylor concluded.

"Absolutely," I agreed. "We can't let people get away with this."

"Killing Fallen?" Lily asked. "If you saw the shit we saw in Tennessee, you'd be all for it. I thought E88's dog rings were fucked up..."

"I'm with her," Emma added. "We can't do worse to them than they've already done."

"The problem is using us as a justification," Crystal corrected. "That's dangerous. We act like we approve of this, for even half a second, and others are going to start doing the same thing. Sooner or later, someone's going to get hurt that doesn't deserve it."

"Yeah," Lily agreed. "I get it. I'm just saying if this is what it looks like, we should go easy on them. Might be better off running the recruitment strategy instead of just stomping on them until they stop moving."

Still blaming herself for Missy's injuries. More cautious now. Perhaps overly cautious, afraid to make a mistake. Wants to allow someone else to control her to free her from responsibility. Sabah. Sabah was deeply upset by what she saw. Lily wants to keep her away from further conflict for a while. Hoping for a peaceful resolution as much for that reason as any.

"I'll keep that in mind," Taylor agreed. "This will be a scouting mission, first and foremost. No decisions until we know exactly what we're dealing with." That earned a nods from Lily, Emma and Crystal.
"I had one of Accord's people write up a draft for you," I told Taylor. "You're on for an announcement at noon."

"God damn it," Taylor sighed. "Is it too late to go back to being a supervillain? I never had to give speeches then."

=============

A/N- Lisa hasn't had an interlude in a while, either.
"We're doing what!?!" Taylor exclaimed.

"You heard me," Lisa replied.

"I know I heard you, I just can't believe it," she retorted. "You're basically putting Victoria in charge of a team."

Amelia's head nodded in agreement. "Can you maybe elaborate a little?"

"She and Riley are ideal for the investigation," Lisa insisted. "So we let them handle it. Pantheon needs to show it has the ability to be subtle. Going out in full regalia is going to give people the impression that we found our hammer and are using it to smash everything we see."

"Vicky's not what I'd call subtle," I retorted, and the others looked at me. "I mean, she's cool to spend time with, but she's kinda... well... I'm not really one to talk, but she's a real hothead."

"Yeah," Amelia agreed. "There's gotta be a better choice for this."

"Who else?" she asked. "Can't send you or Taylor, you're too high profile. We have to focus on our lower hierarchy members. Of those we have Crystal, who's not equipped for this sort of thing. No offense."

"I'm not equipped to do something so stupid it borders on the insane?" Crystal snarked. "I'm taking that as a compliment. The part where you imply I'm 'lower' on the hierarchy than you? That's the insult."

"We can't send any of our other tinkers," she continued, ignoring Crystal's comments. "The stuff with Chevalier and the Zerg upgrades are too critical. Zach's staying because he won't be much help in the mission, and it would disrupt Emma since they're in that squishy happy phase of the relationship. Speaking of which," she looked directly at where Taylor and Amelia were sitting. "When are the two of you going to grow out of that?"

"When you stop being a deranged bitch?" Amelia suggested. Taylor gave her fiancee a half hearted backhand that was less a reprimand and more a show of support for the comment in and of itself.

"This is likely to take a couple days," Lisa continued. "Which means Missy's not really an option. We're on thin enough ice with her mother as is. Theo is an option, but we really shouldn't be putting
everything on him. He's a good leader, but others need to have their chance as well."

*She's right about that,* I agreed. Theo really came through for us after I fucked up. Putting him in charge would have made sense to me. Hell, I'd settle for dragging Lisa along and making her the leader for this.

"But Vicky?" Amelia asked.

"Trust me, she needs this," Lisa insisted. "We can send someone else with the group. Lily, would you like to go?"

*What?* "What?" I asked. Seriously, what the fuck?

"Yeah," Lisa insisted. "You're pretty good friends with Vicky, right? And you're the one advocating we do this the peaceful way. And you scare the hell out of people. When you say you're not there to fight, they'll respond with 'thank god'. You're perfect for this!"

"You're doing this to fuck with me on purpose, aren't you?" I glared at the blond. She was and I knew it. Eliminating all the better options and setting this up to make it so easy for something to go wrong. If I didn't go, there'd be an even bigger mess, and then Sabah would be even more worried. I shouldn't go, she needed me right now, and I sure as hell wasn't going to bring her along. *She's been through enough.*

"Would it make you feel better to know I already ran this past Dinah?" she smiled.

"We rely on her too much," Taylor complained, but I knew she'd already been persuaded.

"Fuck my life," I surrendered to the inevitable. "What's the plan?"

....

I held Sabah from behind, almost apologetically. "Really?" she asked. "Vicky? Why?"

"I guess she impressed them in Houston," I half lied. "And you have to admit, her powers make her really good for tracking and investigation work. Plus her powers mean she might even be better in a fight than I am."

"Then why do you have to go?" Sabah asked, turning in my arms to look up at me. "I don't want you getting hurt."
"If I go, there shouldn't be any fighting at all," I told her. I won't put you through that, I added silently. "Didn't you get the memo? You're being held by one of the deadliest parahumans on the planet."

"You're not scary at all," she smirked, then gave me a kiss. "Just a cute little kitten."

"Rawr," I whispered, then bit her bottom lip. "A tiger, maybe. I could eat you alive."

"Not if I don't let you," she teased back. I felt my clothes tighten as her power infused the fabric. I could have broken the hold at any time, since my power nullified hers unless I was very careful with how I used mine. But where was the fun in that?

"Seems I've caught the tiger," she put her hand on my chest and pushed me back onto her couch, then straddled my lap and leaned against me. Her next words were a whisper. "Don't worry, I'll still let you."

I smiled up at her. All games aside, I was going to protect her. *As long as I can fight, she won't have to.*

....

"So, are you excited?" Vicky asked me when I showed up. I glanced at the others. Riley and Theo. It was a well balanced team, I was forced to admit. High end on both offense and defense, a couple fairly powerful thinkers, and a healer if things did go south. I tried not to think to hard about again having to work with Bonesaw again. Naturally, I kept that detail from Sabah. She wouldn't understand.

There wasn't any point in trying to lie to the girl. "Nervous, honestly," I answered. "First time we've been given this level of autonomy on a mission. That takes a lot of trust." The last time was pretty much fed to me word by word. This was, as Lisa had put it, a kind of team building exercise. It probably was a good idea, except for the whole 'trial by fire' part. I really could live without that.

"Really?" Riley asked with a smile.

"Yeah," I confirmed, knowing my discomfort toward the girl was easily detectable by both her and Vicky. Fuck, Theo was smart, he probably knew it as well. If anything, that'd just make my words more meaningful. "This isn't like our missions against the Teeth and Fallen where we had side missions or direct supervision. This is just us on a mission that's going to be front page news no matter how it turns out. If we screw up it makes the whole team look bad. That takes trust."
"I hadn't thought of it like that," Vicky replied. "That's kinda big, isn't it?"

"Yeah." Well, that's a bit lame. "So I'm nervous." We all glanced at each other.

"Hey, don't let nerves get to you," Vicky insisted. "We're still a collection of crazy powerful badasses. We just have to find a killer and explain to them how badly they fucked up. The only hard part is they're only guilty of murdering Fallen. Who fucking deserve it."

"Without starting a small war," I reminded. "If this turns large scale violence, we failed our win condition."

"Shouldn't be so hard," Vicky replied. "I mean, look at us. No one wants to start a fight with us. All we really need to do is ask a few questions. Second anyone lies to us, we know where to look. Pretty easy, all considered."

=============  

A/N- Someone asked for a Lily chapter.

Also, I think I'm starting to get the hang of this telling the story around the main characters instead of through them experiment I've been doing lately. What do you think?

A/N/N- Sitting here, some hundred and fifty odd chapters later. I think I have come to ADORE this style of storytelling, and will use it in perpetuity.
Missy opened up the path for us, and led us through. While she didn't need to, it was easier for the others to follow the path if they were led. Maybe Victoria could have figured it out, thanks to the power she got from my Passenger, but it was easier to be led. Clarice followed me, of course.

Our world was finally comfortable to breathe without special help, now. Still a very warm environment, especially compared to the mid fall weather on the other side. That allowed Missy and Theo to say their goodbyes with their faces exposed.

"I'll miss you," Missy told Theo, giving him a quick hug.

"I'll miss you, too," he kissed her forehead. "With any luck, we'll only take a few hours."

"I can still miss you that long," she replied.

They're so cute together. I focused on what Emma told me, about being happy that they were happy. Missy and Theo were my friends, and I would be happy for them. Vicky stepped up near me and put her hand on my head, rubbing my hair. It was nice.

"You know," there wasn't room for doubt.

"Won't breathe a word of it," she answered, then she switched to the private com system. "I take it no one else does?"

"Emma," I informed her, following suit and going over to com. "Lisa, probably, but if she does then she's keeping it to herself."

"Probably doesn't," Vicky told me. "I know more about the flaws in Lisa's powers than she does. Her ability's pretty brute force. Like a battle axe. Lots of power for smashing through obstacles, in exchange for giving up a lot of efficiency and accuracy. Mine's more like a scimitar. I can't get as deep, but mine's faster and more effective at handling the things it can handle."

"How do you know about weapons like that?" I asked.

"Emma asked Zach and I to do her a favor and help her name Chevalier's new weapon," she shrugged. "Besides, with my powers it can't hurt to find a few ideas for weapons to use. Besides, you'd be amazed at how boring things can get with the lack of sleeping."
"I thought you liked Zach," I asked. "Why?"

She understood my meaning. "Hard to explain. Probably the same reasons you have. They're good together, and it just doesn't feel right to get in the way of that."

I smiled and looked at her. "You know, Emma said something a lot like that when she thought you and Zach were together."

She blinked "Really? I guess that means I made the right choice." She wrapped her arm around me. "For what it's worth, I think you did, too. I'm glad Amy decided to adopt you."

"You mean that?" I asked. I didn't need to, my own skills and info coming off Clarice confirmed she was telling the truth. She could hide from my tech, perhaps fool it, but not all of it at once, and not without me at least knowing she was trying to beat that tech.

"Yup," she gave a light squeeze. "Ever since Amy spontaneously grew up into a badass overlady, I've been missing a cute little sister to take on shopping trips and give advice about boys and life. Guess who just got drafted?"

"So, what's the plan, anyway?" Lily interrupted. "We should probably know how we're handling this before we go in." She was right, this was important. And they were trusting us with it. It wasn't because it was something only we can do, it was because Big Sis believed we could handle it.

"First, we go by the PRT and let them know what we're doing," Vicky answered, letting me go, but still staying near. It was a nice gesture. "As much fun as it would be to just solve the problem before anyone even knows we're here, that'd probably just fuck everything." I resisted the urge to tell Vicky to stop swearing. But she was older, so I'd just have to accept adults did that sort of thing, like Lisa told me.

Lily nodded. "Fair enough."

"If we're lucky, we can get permission to see the bodies and the crime scene," Vicky continued. "Between my powers and everything Clarice is capable of, that should give us everything we need. If not, well, I'll see if Lisa can talk the Chief Director into yelling at a few people."

"And if that doesn't work?"

"We go around asking all the gangs in town what they know," she concluded. "All our suits have lie detection tech, except mine. Not a lot of parahumans out there that can really threaten me or Clarice. You two play backup since your powers require a bit more concentration."
"We could use the dimensional viewing tech," I volunteered. "I can look at everything from this side and no one will even know I'm there."

"Wow," Vicky chuckled. "When the PRT calculates our ratings, do you think they even bother to use numbers anymore? Or do they just write 'good fucking luck' down next to our profiles because it's less intimidating that way?"

"Close enough," Lily laughed. "All of our profiles have six page long notations that come out to 'you can't run, you can't hide, and you can't fight back'. Half of us have our own individual trump ratings. Mine's a four for bypassing any possible defence."

"Awesome," Vicky approved, then she turned her head toward Theo and Missy. "Hey, Horus! I'd threaten to leave you behind, but I'm afraid the bosses would blame me for any unplanned pregnancies!"

My friends quickly broke their hug, and I couldn't help but giggle at how sheepish they looked. With one last glance at each other, Missy moved and vanished, taken hundreds of miles in a single step. Theo jogged over to us. "Sorry about that, ma'am," he apologized. "Won't happen again."

"Don't be so uptight," Vicky insisted. "I'm not mad at you. Hell, I used to do the same thing. So did Lily, here, right?"

"Yeah, kinda," she admitted.

"So, on to the Protectorate," Vicky's voice shifted to business. "Here's how we approach this..."

....

We manifested atop the roof of the Indianapolis HQ. Or everyone else did, at least. I sat behind in our hidden world controlling Clarice. Alerts went off as guns were drawn and pointed directly at us. A meaningless gesture from them, as Clarice was the only one in the group that could be threatened by a firearm, and it would need to be one with more power than what they were carrying.

"Relax," Vicky raised her hands. "We come in peace."

"Identify yourselves!" one of the PRT troopers demanded.

"Pantheon," Vicky answered, allowing her armor to project her voice. "I'm Victoria. I have Aceso,
Horus and Atropos with me," she gestured at us as she announced our names, and I watched the combat alerts adjust as the soldiers' attentions did.

"We weren't informed of Pantheon coming here," the man insisted.

"When a serial killer starts emulating our more public victories, it counts as an open invitation," she pointed out as if it was the most obvious thought in the world. "We just wanted to keep things quiet. I'd say we didn't want the perp to know we were coming, but he no doubt already knows. It'd take a real moron to not realize we'd have to show up for this. But we'd like to keep him from knowing we're already here."

"Pantheon could have sent a warning to us," the man replied.

"Not my responsibility," she replied dismissively. "It's an unofficial meeting, anyway. Just to let you know we're here before we start the investigation. We'll be on our way, now. Please keep this visit quiet."

"Wait!" the soldier shouted. "Director Nicholas would like to have a word with you before you go. He said to let you know it wouldn't take long."

"We can spare a few minutes," Lily suggested to Vicky.

"Very well," Vicky replied. "We're happy to accept."

We were led through the halls of local PRT building. It was still an impressive building, despite not being quite on par with what I'd seen in Brocton Bay or New York. But our trip didn't last very long. For reasons that I didn't understand, all the Directors like to keep their offices way up near the top. Which was stupid, making them less safe and meaning they had to travel further to get to work, unless they came in through the helipad entrance. I resolved to ask someone about that.

Clarice analyzed Director Nicholas quickly and easily. Age 44, or near enough to it. Excellent physical condition for his age, though clearly he'd been dealing with a lot of recent stress and little overall sleep for some months. Further back than the New Delhi crisis, even. I had no way of guessing the source of that stress, as it seemed a bit too recent to be a matter of the job alone.

"I must admit, I had expected Pantheon sooner," he replied. True. But wouldn't have said so if he hadn't heard Victoria's comments from earlier. "I also expected a phone call to let us know you were here."

"Sorry," Vicky replied. Lie. "As you might imagine, Pantheon is quite busy."
"Is that why Gaea chose not to come?" he asked.

"Gaea and Khepri felt their particular method would be a bit... heavy handed," she answered. "We only need to track down the guilty party. There's no need to startle the whole city over the actions of one or two dumb asses."

"No, I suppose not," the man responded. He had an admirable poker face, but Clarice knew he was disappointed. So did Victoria, I was certain. He was also more than a little annoyed with Vicky.

"Mind if we examine the bodies, sir?" Theo asked. He was fully sealed in his armor, which made his voice echo significantly, distorted into something deep and hollow. Coupled with his natural height and bulk, it was unlikely anyone would guess him still a teenager.

"I can arrange that," he agreed. "I'll let the coroner know to expect you, though it will likely be an hour before they're ready for you. We could have arranged it sooner, if we'd known you were coming." Untrue, Clarice told me. It wouldn't take long at all, he was just choosing to delay us. His disguised resentment of Victoria probably played a part of that. But, then, that was the plan from the beginning.

"We understand," Vicky replied. "Would you mind giving us a guide? We need to arrange for accommodations while we're here, and it would be nice to be brought up to speed on the local cape environment while we handle that."

"You expect to be here long?" he asked.

"As long as it takes to find the killer or killers," Vicky replied. "We can't just run around kicking down the doors of every two bit crook and torturing them for information, after all. That's not how we do things."

"I'll arrange something," he agreed.

============= A/N- And Riley's new chapter. 
The Director assigned us a rather unassuming looking hero by the name of 'Brain' to be our escort. Skinny, in his early thirties with a bit of a pot belly, and a little shorter than me. He was easily the least imposing person in the room, in his business suit styled costume that was just a little too plain to believe it wasn't on purpose. He would probably be the least imposing person in a gradeschool.

And my power was completely terrified of him. Every combat strategy involved 'shunt out, attack from other dimension', and even that didn't work so much as keep me alive. With Theo, my power simply told me I couldn't win. With Brain, it told me that I would lose. He was easily one of the most dangerous parahumans I'd ever met in person, and judging by his emotional disposition, he knew it.

"He doesn't," I answered quietly. "If he's in my range, then I'm in his."

"Good morning," he said with a slightly too wide grin. "I must admit this is something of a surprise." Partial truth. My power didn't give any insight further than that, but it was easy to guess he expected Pantheon, just not us specifically.

"It was something of a complicated decision," I claimed. "But we're more than up to the task."

"Yes, you were the one who killed Baal, were you not?" I sensed no ulterior motive, merely curiosity over my power. "Was that... difficult... killing someone like that? Under orders from a superior who couldn't do it themselves?"

"Khepri killed Siberian," I replied dismissively. "Baal was arguably just as bad, if not quite as famous. We had only intended to engage a scouting mission, perhaps lure him out of the compound and then destroy his base of operations while he wasn't able to defend it. My power made it clear I could beat him, if I was willing to kill him. Considering we were about to witness a child being raped, it was the right decision."

"Ah, right, you have different powers after you were restored from being transformed by Bakuda's weapon, correct? Some tactic to confuse me by changing subjects?"

"You've read up on us," Theo spoke up. He was slightly unnerved by the creepy man and his questions as well.

"Of course," he answered Theo. "You've made quite the splash. I've also read up on the Triumvirate
and almost every parahuman on the continent ranking an eight or above. One of my powers, you see,
superhuman learning rates." He turned back toward me, still smiling that creepy smile. "Speaking of,
may I ask your name?"

"Victoria," I replied easily. I watched with amusement at his confusion and annoyance.

"I'm afraid I may have misspoke," he replied. "I meant your cape name."

"Victoria," I repeated. "The Roman goddess of success in battle, from which the word 'victory'
originates. Appropriate for a combat precog, wouldn't you agree? My identity's already public, after
all."

"Ah, I see," he agreed cheerfully.

"The fact that it confuses everyone and forces them to ask, thus making you that much more
memorable, had absolutely nothing to do with it," Atropos added dryly. Over the com system, of
course.

"Not all of us can kill Endbringers to get famous," I quipped right back, still paying attention to our
guide. "So, what kind of powers are we expecting in town?"

"You don't know?" he asked.

"We know what's in the dossiers," I answered smoothly. "But it would be foolish to assume that's the
whole story. Every one of us here has one or more powers, ranking at least a five, that aren't on our
list." That shocked him, especially considering how high they put our ratings to begin with. "I'd like
to hear what we're going into down on the streets, if it even comes to that. Bad intel is the easiest
way to fail a mission."

We spent the next hour and a half getting the full story. It seems the city only really had one major
criminal organization with parahumans. A mafia outfit, no less. All other criminal parahumans were
either of the sort that didn't draw attention to themselves, or had already been recruited or driven out
of the city one way or another. Apparently, the boss had a very 'old school' way of doing things, and
claimed to be a blood relative of Capone. Brain expressed doubts about that. Apparently every
criminal in the midwestern states liked to pretend they had a famous crook ancestor.

All told, they had eleven known capes on their roster, covering every base. The scariest of which
went by the unlikely name of 'Playmate'. Unfortunately connotations aside, she was a shaker 8/master
4/trump 4 whose power was to create board game like scenarios and force people to obey the rules of
the game. These games could be incredibly unfair, but there was always a win condition of some
manner. She was under no obligation to tell you what it was, however. She even altered powers to
obey the rules of the game. She'd be rated higher, but the 'games' were mostly illusions. Dying just
meant you lost and were removed from the 'board', no real harm done.

We were also given the name of an excellent five star hotel in which to stay for free. Apparently the PRT permanently rents a few locations for guests. I politely turned Brain, and the PRT behind him, down. We instead rented our rooms from a generic low price hotel chain, much to our guide's confusion and annoyance.

"Trying to keep a low profile," I reminded the man. An answer he seemed less and less happy about every time I gave it. Anyone could see that they wanted our presence in town to be more visible, I just wasn't sure why, yet.

And, finally, we got permission to examine evidence. I sent Atropos and Aceso to the bodies. Riley's powers made her better suited for pulling information off corpses than I was, and as much as Lily may have still really disliked Riley, it was better than sending Theo that way. Riley's feelings for him, and the really weird emotions that Theo had toward Clarice, just screamed bad idea. Seriously, what was up with Theo and Clarice? And was Tattletale high when she decided this was the team to send?

Theo and I handled the crime scene, under the wary gaze of the actual investigators. We used our hover tech to keep from touching anything important, and maybe to show off a little. The three were killed in a bar, after hours. Minimal signs of a struggle. A shattered floor where the one was smashed downward into it. I let my power do what it could, running scenarios that would allow this to happen to these parahumans, and it found nothing. "They weren't killed here," I stated.

"You're certain?" the lead investigator asked. I could read the doubts in his emotions, but there was no certainty one way or the other.

"Impossible to be completely sure, when it comes to powers," I answered. "But the battle was decided before. Either they were killed and brought here to be mutilated, or they were subdued, brought here, and then executed."

"There's evidence of defensive wounds on the bodies," he pointed out. "And a great deal of physical damage in the area indicative of a fight."

"Faked," I answered. "The battle wouldn't have been carried out this way by these parahumans. They would have parted immediately after the conflict started, taking cover. Belthegor was a shaker with control over soil and stone, he didn't even use his power."

"He may have been killed first," Brain suggested from the corner.

"Maybe, but not from the direction the attacks would have had to approach, based on the rest of the scene," I countered, gesturing toward the corner of the bar where the attack would, presumably, have
come from. And they wouldn't have been here in the first place. Too vulnerable. They were placed here after being rendered unconscious."

*And the local Protectorate just happens to have a parahuman whose main power is damaging people's minds and rendering them functionally helpless.* Which was too fucking obvious to be trusted. Plus he didn't show any sign that he was involved. I tapped the private com. "Aceso, how's the autopsy going?"

"They were drugged before they were murdered," she informed me. "Theoretically untraceable substance, broken down into hydrocarbons and carbon dioxide. If it were anyone other than us, I think it would be the perfect murder."

"Except," I prompted.

"Except that's way too easy, because they knew it would be us," she continued. "Besides, I've seen this drug before. Or one nearly identical to it. A west coast chemical tinker produces it, along with super tear gas and a few other things. It breaks down too quickly to form addictive traits in the brain, so it never became popular as a street drug, but there are a number of wealthy individuals who keep the market alive."

"Good to know," I replied. "Look for evidence of where the were before they got to the crime scene. They were subdued and brought there." So it could be Brain running a double blind, or it could be someone who didn't have access to a mind influencing power. I could have asked him, but that might just piss him off, even if he's innocent.

"Something wrong?" the investigator asked.

"Our instruments discovered evidence of a tinker drug in the victims bodies," I informed him, speaking loud enough to be properly overheard. I noted the reactions of shock and concern from Brain. But, then, I saw very similar emotions in the investigator, and I was certain he didn't have anything to do with the crime. *Dammit, if I have to call Lisa and ask her for help because my power isn't good enough... I'd never live it down. She wouldn't let me.*

"I'm assuming these instruments are not approved and verified forensics technology that we can submit in court?" Brain asked.

"Afraid not," I sighed. "Luckily, we don't have to prove that they were murdered, just who did it. Unfortunately, now we've got a sudden overabundance of suspects. They could have been brought here from practically anywhere. Anyone with a moving van, some good knives and a sledgehammer could have done this."

I watched the emotions of frustration and disappointment hit both Brain and all the investigators that
had overheard. It was, again, impossible for me to know if that was a matter of a greater conspiracy, or simple realization that this crime might not be solvable.

==============

A/N- Murder mysteries are fun! They'd be more fun without super lie detectors everywhere. But still fun.

Also: no one guessed Vicky's cape name. Which still makes me sad
Victoria was really stealing the proverbial show. I'd seen it before, my father was a genius at it, and there was a time when I was younger when he had some hope of grooming me to continue the family business, and had given me a few tips. Even instructed Victor to do the same. Victoria was good at it. Not nearly to the level my father was, of course, and certainly not a match for Victor's stolen talents. But still, she was good.

There just wasn't much her talents could do here, besides look good while doing nothing. The battle occurred elsewhere, and we had no way of knowing where. We left disappointed, if not completely empty handed, to meet with Aceso and Atropos. But a fairly common, if expensive, drug was no kind of evidence.

"So, now that we know we have no leads, what do we do?" Atropos asked, and gave a wary glance at Brain. She and I had been warned that our powers wouldn't shield us from his attack. If it came to fighting him, Aceso was the only weapon we had which might work. It might not even be safe for Taylor's bugs to be in range of this guy. But, for all his power, he was still physically human.

I took advantage of my armor's more or less amorphous shape to look at Aceso covertly. Clarice. *She's unfairly beautiful*, my traitorous mind told me yet again. As all the other times, I forced myself to remember that she was not real. *She was never real.* And, as all the other times, it didn't work. It was like telling myself she was dead. *How did Zach cope? Oh, right, he didn't have to. She couldn't use this part of her power on him.*

I closed my eyes. *It's not his fault,* I told myself. *And he didn't get away unscathed, either.*

"Hey, you okay over there?" Victoria asked, tapping on the armor.

"Yeah, sorry," I tried to mean it. "Just lost in thought."

"We're going to stir up a couple hornet nests," Vicky told me. "If your head's not in the game, let us know. We're here for the weekend, we can take a bit of time to make sure things go the best they can go."

"No, I'm fine," I insisted. I wasn't going to slow us down just because of something like this.

"Taking your word for it," she responded. "Okay, so we're still trying to be covert about it. Suggestions?"

"I can show you some of their suspected safehouses," Brain suggested.
"That's certainly an option, any others?"

"Neutral ground," Aceso spoke up. "Every city has two or three of them. Big ones can have lots more. Locations where villains will meet up to discuss major problems, even inviting indie heroes and rogues if the situation's bad enough."

"Would revealing you're in town be considered 'bad enough' for them?" Brain suggested.

"Doubtful," I replied. "They'd rather go to ground and hope we pick off their enemies for them in situations like this. When they ally together, it's for things like a mad bomb tinker blowing up the city one block at a time."

"Our town doesn't have other villains or independents," Brain pointed out. "What would they do under those circumstances?"

"Should still have the neutral locations," I insisted. "Visiting out of towners, friends on the opposite side of the law. Usually the owners of such establishments are well liked by the villains. Even if there's no need to keep them, they'll remain out of sentimentality."

"They're supervillains," Brain scoffed. "They don't strike me as sentimental."

I couldn't help but smirk, fortunately it didn't show through my armor, nor would my tone carry through the echo my power created. "If anything, the criminals are more sentimental than normal people. It's part of the criminal culture. Or, at least, any criminal culture that manage to last. Lunatics like the Teeth and the Fallen play by their own set of rules, of course. But more established criminal groups like Empire Eighty Eight and the Mafia like to pretend they're civil and even cultured. They'll go to absurd lengths to keep that illusion alive."

"Horus is our resident psych expert," Vicky patted my shoulder. "There's a reason I brought him along to the crime scene."

"You have a parahuman psychologist?" Brain asked, sounding more than a little doubtful.

"Of course," Vicky answered. "Why not?"

"Just seems odd that you would have powerful parahumans doing mundane careers," he pointed out.

"Blame my mother for that," she dismissed. "She became a fairly successful lawyer in addition to her
career as a crime fighter with no secret identity. We have a doctor, a very skilled business executive, even a fashion designer. Just because you're a parahuman doesn't mean you can't have a normal job. In fact, Pantheon encourages it."

"Fascinating," Brain replied. "And how do you plan to locate one of these meeting places?"

"I'm sure there's a place suspected of money laundering that you haven't been able to prove, right?" I asked.

"A few," he admitted. "What do you have in mind?"

....

An 'Authentic Italian' restaurant owned by the mob, huh? I might have mocked them for playing up the stereotype, but E88's holdings mostly consisted of drug houses and dogfighting rings. Bribery or intimidating enough of the police that they didn't even need to hide it. We of course left Brain behind to return to his bosses. We didn't need the Protectorate here for this. They just didn't know how to think of villains as people.

The greeter's eyes widened. We must have been imposing in our costumes. Vicky and I might have been recognized, we'd been on the news often enough. Aceso probably was, she was a little media darling because she gave them some great sound bites. Atropos, I was certain was identified immediately. The Azrael armor was more well known than most countries. That's what happens when you're an Endslayer, after all.

The man was impressively quick on his feet. "How may I help you?" he asked.

"We're interested in ordering a table," I informed him. With my armor padding my figure and adding a few inches of height, I'm sure I cut an imposing figure. Vicky was letting me take the lead on this one. Criminal culture was something I'd been raised in, and I understood it intuitively. May as well put that understanding to use doing something decent.

"I- I'm sorry, sir, but we don't have any tables available," he lied fluidly. I didn't even need the tech, I could see into the establishment, and the place wasn't much more than half full. Although even that was impressive since it wasn't quite time for Saturday dinner to kick off. It'd be much busier later in the evening. A man with hard eyes watched me from one of the back tables. He's the one, I decided. Not because he was the only crook in the place, but because he was the one who looked confident. He was either a trusted member, or a parahuman. In E88, he would have to be both, but this group may not work the same.

"That's fine," I responded back. "We're willing to wait a while."
The greeter's lips thinned. He had hoped it was a coincidence, now he knew for certain we were there for a reason. "Perhaps it would be easier for you to make a reservation and return later?" he offered. Meanwhile, the scanners in my armor showed that he had hit a button beneath his podium. Some kind of panic button, most likely. They wouldn't attack us, not this openly, but they knew we were here now.

The man inside glanced somewhere I couldn't see a couple seconds later, and then got up and approached us. The social reading tech confirmed what I already knew, he got the permission he needed.

"How's it going?" he asked the greeter smoothly, with the smile of someone who knew he was in charge, and had done this before.

"I was just apologizing to these folks that we weren't ready to receive more guests at the moment," he replied. Also part of the act.

"They can come sit at my table, then," the man offered smoothly. "In fact, put their meal on my tab. Not every day I get to buy lunch for an Endslayer."

*Smart ploy,* I thought. *Something right out of Victor's playbook.* Taking food from him would create a subliminal rapport, even though I was aware of the tactic. In addition, accepting a meal from a suspect was basically idiotic, so he'd know how much he had to worry based on whether we accepted. And, for all I knew, his sentiment was genuine. You didn't need to be a good person to have a grudge against the Endbringers.

"That is most generous of you, sir," I answered. "Although we wouldn't want to impose on you and your friends." Of course I intended to accept, but you had to show the initial reluctance, that was just a matter of politeness.

"Nonsense, we'd be happy to have you," he smiled. He knew by my tone that I was accepting. *All part of the game.* "I'm Angie. Pleasure to meet all of you."

"Horus," I responded as I shook his hand. "This is Atropos, Victoria and Aceso. Apologies for using their costumed names."

"That's fine. I've seen enough capes come and go to understand the score," he smiled broadly as he shook all their hands. He even managed to be charming about it. He stopped at Atropos for an extra moment. "I hope it won't come off as me only doing this for selfish reasons, but would you mind signing an autograph. Y'see, Arianna, my niece, is gay, and it would mean a lot to her. You're one of her heroes." To my surprise, he was telling the truth.
"Oh," Lily hesitated, looking like she wanted to ask us if it was okay. Angie caught on immediately, and it probably didn't tell him anything he didn't already know.

"It can wait, of course," he added. "Let's get you fed first. I insist." He led us in and snatched a few menus with the practiced ease of someone who'd done this often. "You can meet my pals, Joel and Brick. Dunno what Brick's real name is. Not sure he does, either."

The men he named weren't especially notable, physically. Big, but not especially so. Barrel shaped, I think was the term. They wouldn't stand out in a crowd, but they had the same eyes that Angie had when he first looked at me. These are men who've killed before, I was certain of it. They were also clearly hangers on, perhaps even a little insecure in their positions as they glanced at our host for cues. They could be relied on to do exactly nothing but what they thought he wanted.

The next few minutes were mostly small talk about the food, of which he was both familiar and passionate. We made our orders, and Angie's companions were content to let him do all of the talking. Eventually we got to the important question. "So, I hope you don't think it's rude of me, may I ask why you're visiting our lovely city?"

"Probably not the best topic over a meal," I replied, feigning hesitation.

"We're big boys," he gave Brick's back a good smack. "I think we can handle it."

"Don't worry about us," Joel agreed.

"It's the murders of the Fallen," I answered with a quieter voice, as if I didn't want the other patrons to hear. In truth, I didn't care that much, more because I knew we had a place that would make it hard for others to listen in, and the wait staff wouldn't dare.

"That's what I figured," Angie nodded. "Is there a reason you came to this restaurant?"

"Lunch," it was a lie neither of us believed, of course, but such was the game. "We're faced with a bit of a problem. We want to get in touch with the local villains, to see if they have any clues as to who might be trying to frame them for this."

"You don't think they're responsible?" he asked. The suit told me he was shocked by that possibility, and really wanted to pump us for more information without making it too obvious that he was. He was also suspicious I was saying all this, of course.

"It's either a setup, or a single lunatic serial killer," I answered. "Possibly an out of town group hoping we'll come in and clear out the locals so they can move in on the suddenly open market. Hard to say for certain this early in the investigation, but that's why only us four are here, for the moment."
If we don't get what we need in a couple days, we might have to bring reinforcements. We cannot ignore a serial killer sending us a direct message like this, but it would be a tragedy to let someone manipulate us into giving them what they want by turning this into a major spectacle.

There was more suspicion than relief by my statement, but then I expected there to be. Still, I had achieved what I'd come here to achieve. My message would make it up the command chain, and someone would find a way to contact us. Probably tonight. No more conversation was had on the subject of heroes and villains, as we talked about stuff already public, like the Endbringer battles. The whole time ignoring our suits' alerts that we were being listened to by hidden microphones.

Angie really did go out of his way to charm Atropos, and in the end it earned him an autographed picture signed to his niece, and he promised she'd cherish it. The whole encounter only lasted at most thirty minutes, but it did seem faster than that.

"Hard to believe he's a criminal," Atropos observed as we left with our doggie bags, intended for Riley who of course missed out on the actual meal.

"I know," Vicky agreed.

"Exact opposite for me," I replied. "Everything about him screamed obvious crook. Of course, I grew up around men like that."

"He reminded me a lot of Jack," Riley whispered her agreement through the coms.

That ended any discussion on that subject.

=============

A/N- One day, I might write a Theo chapter I don't enjoy. This is not that day.
I rubbed my eyes, willing the sting of too many nights without sleep away. "Hey, Mags, how're things going in your section?"

"Slow," she answered. "There's just too much data here. Even with Richter's keys, decryption is going to take days."

"That's to be expected," I sighed. "We did just capture multiple terabytes worth of information." It had been a timing critical mission, targeting one of Dragon's servers in the middle of a data transfer to another server. To call it stealing would be wrong. In fact, Dragon would never be aware that we had the information, since she still retained a copy of her own. It was still a risk, but her code had changed in the last few months, faster and more chaotically than it should have. We needed to know why.

"Do we at least know what we're decoding?"

"We have the data on Pantheon, including subsections titled 'Avalon', 'Genesis', 'Nemesis' and 'Ragnarok'."

"Well, those names aren't ominous or anything," I muttered. "Put priority on Ragnarok and Nemesis, in that order."

....

"Geoff, you have to see this," Mags insisted.

I turned in my chair and rolled it over to her desk. "What's the news?"

"Looks like our Dragon is trying to build herself a human body," she replied, pulling up the schematics.

"That's not new," I told her. "She already has one."

"No, I mean an honest human body," she replied. "It seems one of the pieces of tech she's working on with Pantheon is capable of converting human neurology into data, and then transferring it into
another body. Most of it was memory implantation technology acquired from Toybox, but they've taken it well beyond its original applications. Coupled it with some other tinker tech. Dragon seems to be experimenting in ways to adapt it to her artificial mind, and implant that into a completely organic clone body."

"Why would she do that?" I asked.

Dobrynja chuckled. "Sounds to me like Richter's little Pinochio wants to become a real girl," he suggested.

" Seems she and Defiant are even talking about the possibility of a family," Mags informed us.

It's possible, I thought. But I don't trust it. "Would this let her bypass Richter's restrictions on multiple copies? Could that be her intentions?"

"Maybe," she replied. "Tough to say. I do know she's hit a roadblock in the process. She doesn't understand the tech well enough to adapt it for what she needs. She's trying to find a way to request Pantheon do it, without letting them know what they're doing."

"So she hasn't told them what she is?" I ran my hand over my forehead and through my hair. "That's good information to have. We might need to make them aware of just what they're working with. Look into what she knows about Pantheon. Maybe there's something more we can use."

....

"Y'know that blackmail material you wanted?" Dobrynja looked at me with that face he only shows when there's trouble. "Well, I found a couple of doozies. I'm pretty sure this is the block where Dragon keeps her blackmail material on them."

"Do share," I frowned.

"Turns out, they have another tinker," he answered. "Remember how they supposedly killed the Slaughterhouse Nine?"

*Oh fuck me.* "Please tell me it's Mannequin," I requested.

"Fraid not," he shrugged. "Turns out she's been on the team since the beginning. The social dynamic program Dragon's using theorizes that Gaea must have joined the Slaughterhouse Nine in order to take control of it from Jack Slash. Specifically in order to recruit Bonesaw for Pantheon. Possibly Cherish as well. She's the one member of the Nine that seems to have escaped Brockton Bay alive."
"Christ," I muttered. They have Bonesaw. "I guess I can't say I'm surprised. Look at the monsters they're using."

"We could use it against Pantheon," Mags suggested. "But considering the power and influence they have right now, I'm not sure it would be enough. They killed one Endbringer and made the fight with another almost trivial. All for the low low price of ignoring the fact that they're the most powerful Class S threat on the planet right now."

"And it would tip our hand," I added. "We do this, and Dragon will know we have this database. And we make an enemy of Pantheon."

"Fuck," Dobrynja cursed. "Even if the authorities wanted to do something about it, what options do they really have? They're buying their law enforcement tools from them. The Triumvirate has equipment built by them. If we had this information three months ago, we could have done something. But now?"

They're untouchable, I added silently. We can fight Dragon, we have the tools for that. But how do you fight the most powerful parahuman force on the planet?

....

"We missed our opportunity," Mags whispered in dread. "I've decoded Avalon. Ascalon won't work anymore."

My stomach dropped. "What?"

"Well, it will," she corrected. "But it won't make a difference. Pantheon has found a way to access other dimensions. Like Aleph, only with a portal that lets people through as well. They found a new world of their own to claim."

"They conquered another earth!?" Dobrynja exclaimed.

"Not exactly," she replied. "It appears the planet they picked was scoured of life millions of years ago. Some kind of massive solar flare or something. They used that Yggdrasil of theirs to completely cover the entire world and are restoring it to life. Building a garden out of ash and stone."

Dobrynja sighed. "Well, that's comforting at least. They can have all the lifeless rocks in the universe, far as I'm concerned. Now how does this apply to Ascalon?"
"She has a fully dedicated backup server there, and she's building another one," Mags informed us. "If we were to use Ascalon, it would purge her presence on our earth, but..."
